BRITISH TEXTILE INDUSTRY

THE criticism that the British cotton textile industry suffers from "complacency, apathy and lack of urgency in applying methods to raise the level of productivity," which has been made by the U.S. productivity team on the British industry, carries yet another piece of ready advice to which the British industry has been treated so frequently in the past. For more than two decades now, the industry has been told from time to time to set its house in order, to modernise its equipment. In 1930, the Clynes Committee emphasised the need for quicker introduction of improved machinery. In 1944, Sir Frank Platt drew the attention of the British textile industry to the relatively high levels of productivity reached in the U.S. and also emphasised the need for the use of better machinery. The Cotton Working Party, under the chairmanship of Sir George Schuster, made out again, a case for rapid modernisation in its report submitted in 1946. About two years later, the late Sir Stafford Cripps, then a member of the British Government, backed his advice to the industry by a scheme of subsidies for modernisation. In 1950, the reports of the British productivity teams that visited the U.S., sang the same refrain—the need for re-equipment and modernisation. Thus, the British textile industry has stood in no need of fresh advice. Rather, it has had a surfeit of it already.

A look at the words of well-meant advice, contained in the Report of the U.S. productivity team, shows that there is little that is new in this advice. The Report says that, although some firms are spending very large sums on modernisation, one cannot escape the conclusion that the British mills are "too apathetic to establish the conditions necessary for labour to work at high productivity," and that labour has not responded to the exhortations to appreciate the advantages of increased productivity. It would also appear that some firms have under way re-equipment projects which "do not seem to have been planned in the best way." Methods and standard engineering principles, according to the team, have not been applied to assure the advantage of the higher productivity attainable through use of modern machinery. The Report says that, although it was told that Britain's industry was horizontal in structure, the team could find "nothing in the present-day operation of the horizontal set-up that had any bearing on productivity, except where it resulted in loss of control of quality and contributed to waste." The U.S. team found that the system caused some unnecessary shipping and packing expenses, and therefore duplication of overhead expenses as compared with vertical operations.

All this criticism cannot be dismissed lightly, if only because the U.K. still earns a sizable part of its foreign exchange through cloth and yarn exports. The continued prosperity of its textile industry is vital to the U.K.'s economy. In 1951, for instance, the U.K. earned as much as £490 million through textile exports. It is, of course, true that at present domestic consumption absorbs a larger proportion of its total textile output than in the past, as will be seen from the following two tables, but exports are still quite large for a country of the size of the U.K. The table immediately below shows the balance of textiles left for home consumption:

(In million yards)

	Output	Imports	Total	Exports	Balance for home trade
1937 ..	3,640	50	3,690	1,921	1,769
1950 ..	2,123	287	2,410	822	1,588
1951 ..	2,201	377	2,578	865	1,713
1951 (nine months) ..	1,631	265	1,895	672	1,223
1952 ..	1,257	138	1,390	526	864

The following table gives the proportion of cotton textile production consumed in domestic and overseas markets to total production between 1910 and 1950:

	% of U.K. production exported	% of U.K. production consumed in home markets	U.K. % of world production	U.K. % of world exports
1910-13 ..	80	20	32.8	70.2
1926-28 ..	75	25	19.0	46.1
1936-38 ..	50	50	9.8	26.7
1950-51 ..	30	70	6.1	15.3

It will be seen from the tables above that the home market has begun to absorb an increasingly larger share of the U.K.'s textile output. Even the comparatively small exports that are now made are absorbed mainly by the markets where the U.K. enjoys a preferential advantage. Thus, out of 865.2 million square yards, which were exported abroad in 1951, the Commonwealth markets took 661.5 million yards, inclusive of West Africa (129.2 million square yards), South Africa (114.8 million square yards). Thus, the British textile industry is insulated from the world's markets to a larger extent than it was formerly. This is at once its strength and its weakness. Because of the sheltered market, it is likely to suffer less through a world economic recession. But the sheltered nature of the market is apt to engender in the industry a sense of complacency, so fatal to progress. That the industry is not satisfied with its present state of affairs, and is anxious to export larger quantities of textile goods is clear from the fact that it worked for the acceptance of a target of 1,350 million yards at the recent Buxton Conference.

If this target has to be translated into reality, then it is essential that the British textile industry must be more fully alive to the dangers of world competition. This is not to suggest that the industry merits all the criticism that has been made by the American team. The team spent only three weeks in Lancashire, and it is unlikely that it could have visited all the good mills. Many mills have already modernised their equipment; since the end of the war, the industry has spent nearly £60 million on its modernisation plans. Further, the physical limitations of space, and the lack of dollars make it difficult for the British industry to embark upon ambitious plans of reconstruction. Moreover, the British industry caters to a varied export market where diversity and quality, and not mere standardisation and mass production are the chief considerations. This characteristic feature of the markets for Lancashire goods places a limit on the use of highly developed technical equipment. And this also explains Lancashire's preference for mule spindles. The team has itself admitted that the British textile industry lacked no technical information that would increase productivity.

Nevertheless, it is true that the success of the British textile industry to meet the growing competition in world trade will depend on textile cures itself of "complacency, reluctance to depart from the things of the past and lack of duty incentives." But knowing the character of the British, as we do—the traits of practical, dogged perseverance, and ability to adapt cotton through evolutionary rather than revolutionary methods—we have no doubt that it will be long before the Lancashire mills organised in other selves into highly developed units and Indian of the world. It is necessary to sound this ing, lest the Report of the U.S. productivity should lull the Government and the millowners in India into the complacent belief that the technical efficiency of Lancashire mills is not as high as is generally supposed to be and that, as such, they need have no fear of effective competition from that quarter. Any such impression will amount to a gross underestimate of the

competitive capacity of the British textile mills. If proof of this were needed, it could be found in the rapid recovery of this industry from the slump in the first four months of 1952. The point to be borne in mind by the textile interests and the authorities in this country is that, while the mills in Lancashire may not be as efficient as the mills in the U.S., they are far more efficient and highly organised, in several respects, than the mills in India. If the same American productivity team that visited Lancashire were to examine the conditions of Indian mills, its findings would doubtless be more damaging than in the case of the British cotton mills.

SIR GEORGE SCHUSTER ON FIVE-YEAR PLAN

SIR George Schuster, who presided over the economic destiny of this country at one of the critical periods in its history, is in India again, at the request of the Federation of Indian Chambers of Commerce and Industry. Surely, his past experience entitles him, in a way, to judge, perhaps more correctly than many others, the economic situation in the country. If it is true that spectators see more of the game than the players, it is only reasonable to expect that this distinguished visitor, with his administrative experience, should be able to assess economic issues facing the country in a less passionate and, certainly, in a more detached manner than many others. It was, therefore, the more pleasant to be told by this ex-Finance Member of the Government of India that the Five-year Plan was a "first class example of an attempt to map out a general plan of action based on a realistic appreciation of the country's resources and requirements." Addressing the Bureau of Industrial Statistics at Calcutta, Sir George said that the Plan was an "intellectual achievement of which all Indians can justly be proud." This is high tribute. And it would be cynical in the extreme to dismiss it merely as a foreigner's well-meant attempt at praising the country which has chosen to play the host to him. But then, he was also critical in his appraisal of the task before the country. He did not, for instance, seek to minimise the complexity of the immense task which awaits this country. This is clear from his remark that the translation of the Plan into action demands that "all must gird themselves to a special effort as a nation does in war."

Although Sir George did not subject the entire Plan to an extensive critical examination —no one could have done it in a short public address—he did make certain remarks which deserve the attention of a much wider audience than the one to which they were addressed. The first main division of the Plan, the major Government projects, he stressed, should be kept under the "watchful eye of an enlightened public opinion." These projects, he urged, would have to be made a "pattern and example of high standards and progressive outlook." Presumably, his reference to "enlightened public opinion" stems from the recognition of the need for keeping Government expenditure under constant scrutiny without necessarily interfering too obtrusively with Government's initiative and drive. How alive he was to the need for flexibility and drive in governmental undertakings is clear from the emphasis he laid on the prevention of red-tape in the administration of development and community projects. He said:

"There can be no substantial economic advance, unless the standard of production for the agricultural masses is revised. It seems that the objectives of the community development projects are of overriding importance. ere one gets to a part of the task for which nan factors and human motives are all portant. It is a task which cannot be done n the Centre."

ts, however, the industrial part of the Plan, that evoked some of the most omments which Sir George made in his He recognised that there could be no ndation for industrial expansion unless l situation in the country could be put gain. he said, he did not like the "idea of small-scale industries unlimited support xing large-scale industrial undertakings." agreed that such a measure might sometimes have to be adopted, but warned that the "process should not be carried too far," since there were, after all, "other ways of assisting small-scale industries." It is to be hoped that this warning, coming as it does from a person who has no axe to grind, will turn our Central and State Governments away from the folly of their ways in dealing with the present controversy between the cottage and the large-scale power-driven industries.

A striking feature of the whole Plan, according to Sir George, was that, apart from the major projects which were so large as to require the mobilisation of Government resources, the development of industry was to be left to private enterprise. In this context, he sounded a warning and gave some advice to private enterprise, which need to be heeded by the business community in this country. He observed:

"Those who believe in private enterprise—as I do—and who are frightened—as I am—of the danger of the whole range of economic activity coming under the centralised direction of Government have got to recognise that the system of private enterprise is on trial for its life. This is its last chance."

This may sound a little ominous, if not frightful, but it is true. Either private enterprise comes out of this ordeal unscathed or it perishes. Since it was Sir George's view that it deserved to triumph, he was concerned with indicating the lines on which it should work. In the first place, private enterprise ought to be able to show that it could "render a service to the public better than any practicable alternative system." Secondly, it should recognise that it had to work "in conformity with Government plans, for the old ideas that they could do as they liked were outmoded." Thirdly, there was need to adopt "an entirely new outlook about the relations between management and labour." Fourthly, there was need in India, as in Britain, to devise a "new basis of co-operation between private enterprise and Government." Finally, he urged that it was in the interests of private enterprise to "work for the formation of a strong and responsible trade union movement."

These are wise words and no industrialist with a progressive outlook will dispute that view. It is by enlisting the support of—and not through opposition to—the chief economic interests, the Government, the consumers, and the workers, that private enterprise can vindicate itself before the bar of public opinion. Because of the constructive attitude which the British industrial leaders have adopted in the recent past, even the trade union leaders in that country, as Sir George pointed out, have recognised that "there can be no foundation for improving the standards of wages except by improving standards of the productive efficiency of labour." This is the reward of enlightened support of the labour movement by industrial management. Free enterprise in India has now been told by one of its experienced and enlightened confreres in another country, which believes in the same ideals that we in this country cherish, as to what it should do to earn for itself a coveted place in the country's economy. And it has also been warned of the penalty that it must pay for not facing the realities of the new era. Surely, if it still fails to read the writing on the wall, the fault will be its own.

SALES TAX IN SAURASHTRA

THE unconstitutional anti-sales tax agitation in the Saurashtra State has gone on for the past five weeks now. In the past few days, it has taken a grave turn. Peaceful means have yielded place to violent methods and even the fair sex has been drawn into this campaign. If this agitation means anything at all, it is no more than the fact that a set of misguided people has walked into the trap of mischief-mongers and reactionary elements. This attempt to tear laws made by the legislature, this scant respect for the constitution of the land, this unjust tendency to stage such violent protest even against a modest taxation measure deserves to be universally condemned, if the country has to achieve economic progress and establish democratic traditions. The irresponsible elements must be made to realise that payment of taxes constitutionally imposed is an inherent obligation which no citizen should try to escape and much more so the merchant.

The present agitation in certain urban areas of Saurashtra has as its target the coercion of the State Government into withdrawing the General Sales Tax Act passed by the State Legislative Assembly on 29th September, 1952 and given effect to from 1st December last year. The Act provides for a general sales tax, at the rate of six pies in the rupee, on all articles save those mentioned in the list of exceptions and a special tax of one anna in the rupee of luxury. The special tax is liquor, motor vehicles includi and cycles; motor parts and acc ing tyres and tubes, clocks, t watches and parts thereof, ciga table oil, cloth of all kinds not less than Rs. 3 per yard, domestic appliances other than torches, torch cells, bu and fans, photographic and other cameras, shoes and footware costing not less than Rs. 15 per pair, and certain luxury goods. The list of the exempted articles includes cereals and other foodstuff, cotton, cotton seed, yarn and cotton cloth woven on handlooms, medical drugs, articles of cottage industry produced in the State and a host of other articles of daily necessity.

From the foregoing account it will be noted that the sales tax law in Saurashtra follows closely the lines of that which was in force in this State before the recent introduction of the multi-point tax system. To those who are conversant with the present Bombay Sales Tax Act, the Saurashtra measure should doubtless appear to be a relatively more reasonable and practicable measure. It has none of the vexatious features of the sales tax levied in this State, namely, that it is multi-point, regressive, burdensome, and highly complicated. The Saurashtra measure, on the other hand, provides for a levy on sales at only one point and a list of exemptions which is, perhaps, the largest in India. The rules for the recovery of the tax are considered to be very liberal, as they have been framed by the authorities bearing in mind that direct taxation is a new thing to the people of the State. Further, the authorities seem to have fully taken into consideration the possibilities of effecting economies in the Administration, and it is reassuring to note that the Chief Minister has promised a further reduction in the expenses of Administration almost to the same extent as the increased revenue from the present sales tax which is estimated at no more than Rs. 50 or Rs. 60 lakhs. Having given his word thus, it behoves the Minister to keep it, as only then can be evoked the confidence of the public. The business community for its part should bear in mind that the tax is not an arbitrary impost to which it was accustomed before the merger of the State with the Indian Union. On the contrary, it must remember that the measure has now a statutory status given to it by the State Legislature, composing, as it does, of the accredited representatives of the people. The Legislative Assembly took nearly a week to affix the seal of its approval to the measure and any refusal to accept its verdict now tantamounts to flouting the authority of a constitutionally established Government. All those who feel that democracy should be firmly established in this country will, we have no doubt, decry the present agitation in Saurashtra, which until recently was a land of feudal lords. An important point that must be borne in mind here is that it has not even that moral ground, namely, taxes being pushed up to punitive levels which justify sympathy to the forms of protests that were recently adopted in the Bombay State against multi-point sales tax.

Again, those who are at the back of this agitation seem to underrate the significance of the object of the present tax measure. Under the old regime, the burden of taxation used to fall almost exclusively on the tiller of the soil, who forms the backbone of the economy, while, in the absence of direct taxation, the business community and rich people escaped lightly. This is a system under which no democratic Government can hope to build a sound and balanced economy with the willing co-operation of the majority of people. It is, therefore, quite appropriate that the State Government should bring about the required balance between the two sectors by modifying the taxation system. Secondly, Saurashtra is one of the economically backward States and no economic development will be possible without some additional taxation being imposed on the people. The Central Government cannot be expected to bear its share of cost of financing development schemes, unless the State itself does its level best to increase its revenues which it has now sought to do by means of the sales tax levy. When poorer States such as Assam and Orissa have a system of sales tax, a State like Saurashtra, with a prosperous mercantile community, can hardly be expected to abandon a measure calculated to rationalise its tax structure and help develop its economic resources. It is to be hoped that saner counsel will prevail on those who are responsible for the anti-sales tax campaign and make them accept the present measure which is by no means improper or unjust.

ORIENTAL LIFE TO BE MUTUALISED?

NEW CAPITAL ISSUE—SPURT IN BULLION—REDUCTION IN EXPORT DUTY ON TEXTILES

THURSDAY, 5 P.M.

THE New Year has begun well with all the markets. Although there has been no spectacular increase in prices in any of the markets, values are higher all round than they were three weeks ago. The Share Market is steady to firm, with the leading counters commanding better prices. The volume of business, of course, has not shown any sizable improvement, but support for some selected shares has been fairly good. The reduction in the export duty on coarse and medium cotton textiles from 25 per cent. to 10 per cent. soon after the commencement of the new year has imparted a certain amount of strength to the shares of mills like Bombay Dyeing which are well established in export markets. The bright possibility of a further increase in the ex-factory (retention) price of steel for the Tata Iron and Steel Co., Ltd., has given some stimulus to the shares of this Company. Any such increase will, however, only offset the rise in cost of production and freight and is, therefore, unlikely to result in any higher margin of profit to the Company. This is a point on which the Government seems to have more or less made up its mind, that is, that on no account should the margin of profit of the Company be allowed to increase further. It is, however, true that to the extent the rise in costs is offset by an increase in retention prices, there will be no diminution in the profit margin of the Company.

* * * *

Between Tata Deferreds and Tata Ordinaries, the former have, once again, been evoking more attention than the latter. This is due to renewed expectation that the ratio of conversion that may be recommended by the Mediator, who will be having a meeting with the spokesmen of both the classes of shareholders in the course of the next few days, may not be so low as was thought possible at one time in the immediate past. Unlike Tata Deferreds, Indian Irons have made no fresh headway; on the contrary, they are a shade quiet. In view of the low yield on these shares and the heavy increase in the volume of floating stocks of these, the chances of any appreciable rise in their value seem remote. A usually well-informed source places Rs. 25 as the ceiling for this scrip. Evidently, it feels that, whenever this scrip tends to go above this level, the company which is holding the large block of shares taken over from the SCOB will try to lighten its holdings.

* * * *

During the week under review, the shares of the Oriental Life Company registered a strident advance in refreshing contrast to the other scrips on the Stock Exchange. After remaining dull at about Rs. 4,500 for a long time till yesterday, these shares suddenly flared up to Rs. 5,000 to-day. Market circles observe that there was some buying by interested quarters, in this scrip ever since the beginning of the new year. The sudden rise to-day is attributed to revival of rumours that the Directors have approved of a scheme for converting the Company into a mutual undertaking and that the Company's management will soon approach the Government for its permission. This is not the first time that this rumour has engaged the attention of the market. It held the stage for a long time in the summer of 1951 and led to a sharp rise in the value of the Company's Rs. 100 paid-up ordinary shares. Thus, between 1st May 1951 and 5th June, 1951, these shares sky-rocketed from Rs. 4,650 to Rs. 5,700. Our enquiries reveal that this time the rumour is not without any foundation, and that more will be heard about it in the near future. There are many estimates in the market of the compensation payable to the shareholders of the Company, some placing it at as high as Rs. 9,000 per share. That seems to be an unduly optimistic estimate. It should not be forgotten, in this connection, that there are definite provisions in the insurance law which provide a basis for calculating such compensation. Further, the Indian Insurance Companies Act clearly lays down the procedure for the mutualisation of proprietary insurance companies. So, there need be no wild guesses about the compensation payable to shareholders. According to an estimate prepared by a competent authority the compensation may be anything between Rs. 6,500 and Rs. 7,000.

* * * *

Be that as it may, what is it that has induced the Directors of the Oriental Life to plump for mutualisation? Some wonder whether it is the broad hint given by the Prime Minister, in the course of his speech in the Council of States on the Five-year Plan, to the effect that socialisation of insurance and banking might be necessary to find the resources required for financing the Plan. There are, of course, many, belonging to the left wing group, in this country, who have been suggesting nationalisation of insurance and banking for a long time. The hint thrown by Mr. Nehru seems to have encouraged many others to support that suggestion. For instance, Mr. A. D. Gorwala, who needs no introduction to our readers, is one of them. Even Dr. V. K. R. V. Rao seems to hold that view. He feels that one way of obtaining additional resources for financing the Plan will be for the State to extend its activities to the sphere of trading. Thus, he states, in the course of his address delivered at the sixth session of the Indian Commerce Conference held in Delhi a few days ago, as follows:

"State trading is not only a means for more effectively operating controls and guiding the economy to travel in planned paths, but it will also enable Government to intercept at the source a good part of the surplus accruing from economic development. State trading may commence with important articles of exports and imports and later extend to those commodities which are most likely to rise in price as a result of the rise in purchasing power following development. A national chain of State-owned and State-operated consumer stores would provide the most effective means of tapping at the source the surplus necessary for financing development. My third suggestion is for the State, through the agency of the Reserve Bank or its subsidiary specially created for the purpose, to enter into the field of commercial banking and either take over some of the existing banks or start new ones. These extensions of the public sector, together with the existing ownership by the State of railways, communications, power plants and some basic industries, would enable the State to obtain at source an appreciable share of the national surplus accruing from economic development."

* * * *

It is possible that this new trend of thinking may have induced the Directors of the "Oriental" to give early effect to the idea of mutualisation with which some of them had been toying for quite a few years now. It is, of course, needless to add that mutualisation of insurance takes the wind out of the sails of those who have been pleading for socialisation of insurance. In fact, the principle underlining mutual insurance is more in keeping with the ideals of the Indian Constitution, which lays more emphasis on co-operation than on the principle of State-ownership. If our reading of the circumstances in which the Directors of the "Oriental" have decided to mutualise their concern is correct, then it can be safely expected that many other insurance companies will follow the lead given by the "Oriental." There are, of course, many other weighty reasons in favour of mutualisation of proprietary insurance companies with which insurance men are familiar and into which we do not propose to go here.

* * * *

In the money market, demand for bank credit has been steadily increasing since the middle of last month, with the result that to-day there are more borrowers than lenders in the short-term sector. Inter-bank call money is fetching as high a rate as 3 per cent., which is the same as that for three to six months. The Treasury Bill rate has gone up further to very nearly 2½ per cent., in spite of the Government reducing its offtake from Rs. 2 crores per week to Rs. 1 crore. There are, however, no signs of acute stringency yet, but it is still too early to say whether the present busy season will pass off without the business community feeling the pinch as it did last year. Already the floating supplies have shrunk to such an extent that a few of the banks have had to look to "the lender in the last resort," namely, the Reserve Bank, for some accommodation. Despite this state of affairs, the Gilt-edged market continues to remain fully steady, with all the 4 per cent. issues finding keen buyers. Some of the State loans issued last year have been in request even at a premium of As. 6 to As. 8 over their issue price. Since the commencement of the new year, the 4 per cent. Bombay Municipal 1964 Loan has gone up by As. 9 and that of Bombay State Transport by As. 6 to Rs. 99-9 and Rs. 99-6 respectively. Still, sellers are scarce; to-day, a broker was unable to get even Rs. 50,000 of Bombay State Transport issue. All this is due to paucity of stocks and search for sources of investment by those who are chary of investing their spare funds in equities, as they consider the outlook for industries uncertain. The same explanation holds good for the steady demand for first class fixed yielding industrial scrips, that is, debentures and cumulative preference shares.

* * * *

The Ahmedabad Municipality, we believe, will have the distinction of being the first local authority to offer, in the current year, a new issue to the long-term capital market. It would appear that recently this Municipality decided to raise a little over a crore of rupees for financing some urgently needed projects. Of this amount, it will be offering to the investment public Rs. 75 lakhs in a week's time. The issue carries interest at the rate of 4½ per cent. per annum, taxable, but guaranteed by the Bombay Government. It will be repayable in 10 to 15 years. The issue price will be at par. It would appear that no underwriting has been done, in view of the present encouraging state of affairs in the Gilt-edged market, and that many investors, who were informally approached, have agreed to take a substantial portion of the issue.

* * * *

The improvement in prices of bullion in the past three weeks has been far more impressive than in those of either shares or commodities, as will be seen from the following table:

	18-12-52	8-1-53	*Change*
	Rs. a.	Rs. a.	Rs. a.
Gold			
Ready	80 7	85 4	+4 13
Forward	80 1	84 2	+4 1
Silver			
Ready	150 6	153 8	+3 2
Forward	150 2	153 4	+3 2

The rise in bullion prices is only as it should be, for earlier they had been depressed to unduly low levels. The exact causes that led to this rise are explained in our Market Reports section. It is, therefore, needless to repeat them here. Nevertheless, attention must be drawn to the fact that the premium for ready gold over forward has widened to as much as Re. 1-2, which reflects, to a large extent, the fall in the volume of floating stocks of gold. Informed circles say that, although there are still some short-sales in gold as well as in silver, the volume of speculation is within reasonable limits.

* * * *

The substantial improvement in the price of gold, as noted above, is by no means confined to this country alone. In other parts of the world also, there has been a similar increase in the price of gold. In the international free markets, for instance, the value of gold in terms of U.S. dollars has shot up from $36⅛ in the middle of December, to as high as $37.90. At one time, on the 6th inst. to be precise, it had actually crossed the $38 level. At this price, gold is more expensive than it has been at any time since the early months of 1952. The extent of increase in prices in terms of rupees during the past 15 days is nearly Rs. 7-8 per fine ounce. As a result of this increase, the parity for smuggled gold into this country has also automatically gone up. According to market circles, even the current price of Rs. 85-4 for ready gold offers little incentive for smuggling gold into India. So long as this state of affairs continues, arrivals will fall short of offtake.

* * * *

London bullion circles have advanced three reasons for the rise in the free market price of gold. These are: (1) seasonal and technical factors, (2) heavy hoarding demand in France which has followed in the wake of the French political crisis; and (3) the growing belief that sooner or later there will be an increase in the official dollar price of gold. Explaining the third factor, the *Financial Times'* City Correspondent says:

"The *communique*, issued after the close of the Commonwealth Economic Conference, made no mention of the subject of gold. But it is generally believed that the Conference decided that the possibility of increasing the price to help the sterling area countries solve their dollar problem was one of the questions that should be raised during the coming discussions with the American authorities. And, whereas earlier on, there was a tendency to argue that nothing was likely to come of such an approach, the more popular view now seems to be that there is some hope that the Americans will be moved. The theory is that the new Republican administration may see, in an adjustment of the official gold price, a way of reducing foreign aid, without running the risk of materially weakening the economic position of sterling area countries. A substantial increase in the world price would, of course, have the effect of adding to the sterling area's dollar receipts, since well over one-half of the output of newly-mined gold originates within the area. And and this being so, such a change might make it possible for the sterling countries to make do with less direct dollar aid, though it should be noted in this connection that the main initial benefit of the change in terms of dollar income would fall on a country which does not fully participate in the sterling area dollar-pooling scheme—South Africa. Even, however, if the idea does make a sufficiently strong appeal to the Republican leaders, it may be some little while before the change becomes effective. The notion that has gained a hold on the international gold markets during the past day or two that an adjustment may take place immediately after Mr. Churchill's talks with Mr. Eisenhower need hardly be taken seriously."

* * * *

In keeping with the assurance given by the Commerce and Industry Minister at the recent meeting of the Export Advisory Council, the Government of India reconsidered the question of export duty on coarse and medium counts early this month and reduced it from 25 per cent. *ad valorem* to 10 per cent. *ad valorem*, with effect from the 5th inst. It will be recalled, in this connection, that this duty was increased in the first week of June, 1951, from 10 per cent. to 25 per cent. Accordingly, the reduction made by the Government this week takes the duty back to the level that was in force in the first half of 1951. The one question that is now being asked is whether this reduction is sufficient and whether it would not have been better if the entire duty had been abolished. There is, of course, a certain measure of satisfaction in the textile trade and industry over the Government's action. But that is due chiefly to the fact that the Government reduced the duty at a time when none was expected and partly to the feeling that something is always better than nothing. The correct answer to the question whether what the Government has done is adequate will, however, be apparent if the present state of world trade in textiles is compared with that which prevailed in the first half of 1951 when there was an export duty of 10 per cent. During this period, it will be recalled, the export trade in textiles was booming and the sellers' market was strong. But, to-day, the reverse is the case. It is true that prices of cotton have fallen since then, but so has it done all over the world. Further, a good part of the advantage flowing from relatively lower prices for Indian cotton has been neutralised by increase in other elements of cost. It would have, therefore, been more in consonance with the present trend of world textile markets had the Government abolished the entire export duty on medium counts and retained a duty of only 5 to 7½ per cent. on coarse counts all of which are made out of the low-priced Indian cotton. The relief now given by the Government is thus inadequate and, if the present state of affairs in the export markets was to persist for some time more, the clamour for a further reduction in or abolition of export duty would start once again, which, in turn, would have an unsettling effect on India's export trade in piecegoods.

CAUTIOUS TRADING IN SHARES

UNDERTONE REMAINS STEADY

(From Our Own Correspondents)

BOMBAY, *8th January*

THE Bombay Stock Exchange wound up the year 1952 on a subdued note. During the last week of trading, just before the market was closed for the Christmas and New Year holidays, activity thinned out. Business was mainly confined to squaring up operations. Occasionally, cheerful advices from Calcutta, where Indian Irons were concerned in some speculative deals, following the closure of the *jatka* market in jute, imparted bullishness in trading here. In the absence of sustained influences, however, the closing sessions witnessed some liquidation and equities finished the year with moderate losses all-round over the week.

The resumption of operations for the New Year after the holidays failed to arouse enthusiasm on the opening day. Activity was restricted because of settlement on the next day. Subsequently, however, firm advices from the Calcutta market, especially the steel section of the market, the reduction of export duty on cloth from 25 per cent. to 10 per cent. and the revival of talk of increased retention prices for steel gave an impetus to trading on the Stock Exchange. Equities rallied under the leadership of Tata Steel shares. Textiles also responded quickly on optimistic hopes of increased exports. Operators, however, became cautious on second thoughts about prospects of textile exports. Dwindling hopes of any substantial benefit from the reduction in duty restrained activity in textile shares. A feature of the trading in steel shares in the last three days was a sharp fall in Tata Ordinaries which were subjected to heavy pressure by a few operators who converted a sizable part of their holdings of Ordinaries to Deferreds. On balance, Tata Deferreds showed a fair gain, while the other equities disclosed minor variations.

In the steel section, Tata Deferreds, which closed at Rs. 1,710 on 18th December, rose to Rs. 1,728-12 the next day in sympathy with Indian Irons. But soon a downward trend was in evidence and the scrips closed the year at Rs. 1,695. On the opening day of the current year, (2nd January) Deferreds slipped down to Rs. 1,687-8, but renewed rumours of an increase in retention prices of steel lifted up the shares to Rs. 1,732-8 on Monday this week. The higher level attracted some liquidation and the scrips drifted lower to Rs. 1,700 yesterday. To-day, however, a slightly better feeling prevailed and Tata Deferreds finished at Rs. 1,718-12. Tata Ordinaries, which moved down from Rs. 367 to Rs. 302-8 in the last week of December, made a sharp recovery to Rs. 320 on the 5th inst., but reacted to Rs. 299-12, before closing at Rs. 301-12. Indian Irons showed a net drop of As. 10½ over the two weeks at Rs. 23-13.

Barring a short-lived cheerfulness immediately after the announcement of a reduction in export duty on cloth, textile shares were, in the main, featureless, but the undertone was steady. Bombay Dyeings dropped from Rs. 357-8 to Rs. 355 on 24th December, but after a recovery to Rs. 367-8 on the 5th inst. slipped back to Rs. 359-6 at the close to-day. Kohinoors closed at Rs. 263-12, as against Rs. 263 on 19th December. Central Indias were unchanged at Rs. 145. Century disclosed a loss of but Rs. 3-8 over the two weeks at Rs. 247-8. Finlays were better by a rupee at Rs. 281. New Greats were lower by Rs. 2-8 at Rs. 151. Simplex receded from Rs. 176 to Rs. 174-8. Standards were lower by Rs. 5 at Rs. 260, Svadeshis by Rs. 4 at Rs. 237. India United Deferreds were placed at Re. 1-8¾, as against Re. 1-9, and Ordinaries at Rs. 8-8, as compared with Rs. 8-10.

Bank shares ruled quiet with minor losses in almost all the counters. Centrals finished Re. 1-4 lower at Rs. 64 and their 'A' shares showed no change at Rs. 69. Imperial Fully Paids reacted from Rs. 1,792-8 to Rs. 1,775 and Contributories from Rs. 440 to Rs. 436-4. United Commercials were a fraction lower at Rs. 35. Barodas were unchanged at Rs. 117-8. Indias, on the other hand, were a shade better at Rs. 157-4.

A feature of trading in insurance shares was the sharp rise in Orientals to-day on revival of rumours about the mutualisation of the Company. The shares which had dropped from Rs. 4,690 to Rs. 4,475 at one time rallied to-day to Rs. 5,000. The other shares were generally quiet. Thus, New Indias moved down from Rs. 43-8 to Rs. 41-12. British India Generals lost As. 3 to Rs. 13-4. Vulcans were maintained at Rs. 11-2. Empires were unchanged at Rs. 450, while Indian Mercantiles looked up to Rs. 38 from Rs. 37-8.

Electric shares presented a mixed pattern. Ahmedabads rose from Rs. 108-2 to Rs. 110-10. Andhra Valleys advanced from Rs. 1,362-8 to Rs. 1,373-12. Tata Hydros were better by a rupee at Rs. 148, Bombay Suburban by As. 8 at Rs. 121-4, and Surat Electrics by As. 10 at Rs. 116-14. Tata Powers, on the other hand, disclosed a loss of Rs. 7-8 at Rs. 1,487-8 and Amalgamated Electrics As. 11 at Rs. 10-10.

In the miscellaneous section, Associated Cements were featureless, but steady. The shares closed with a fractional loss at Rs. 177-12 although at one time this week they touched a high of Rs. 179-12, Belapurs were a strong feature with a rise of Rs. 10 to Rs. 217, after the shares were listed *ex*-dividend on 24th December. On the basis of *cum*-dividend, the closing rate (at Rs. 233 *cum-div.*) compares well with Rs. 225 on 18th December. Bombay Burmahs which were taken up from Rs. 386-4 *cum-div.* to Rs. 391-4 *ex-div.* on the 5th inst. latterly found little support on suggestions that the Company would not be able to maintain the dividend this year. The quotations, therefore, dropped to Rs. 371-14 *ex-div.* at the close to-day. Scindias evinced good support and they were lifted to Rs. 15, after they had declined from Rs. 14-13 to Rs. 14-8. B.I.Cs. were steady around Rs. 9-4½. Indian Coppers were fractionally lower at Rs. 3-2½. National Rayons were in favour to go up from Rs. 61 to Rs. 64-8. Premier Constructions were steady round about Rs. 85-12. Tata Chemicals were done at Rs. 8-15, as against Rs. 9-1 on 18th December. Tata Oils drifted lower from Rs. 34-12 to Rs. 32-12, Wimcos were brought down from Rs. 216-14 to Rs. 215.

Calcutta Stock Exchange

CALCUTTA, *6th January,*

Dull conditions marked the closing of the old year, as well as the opening of the new year, on the Calcutta Stock Exchange. In tact during the long period after our last report, i.e., from 17th December up to now, only nominal interest was in evidence and this was no surprise at all since nothing remarkable occurred that could lead to a broadening of activity. Caution was writ large on the faces of operators, and transactions were naturally limited. Quotations just fluctuated at lower levels, and during the last two days a definite downtrend developed in the speculative counters, but the feature was the active interest shown in selected miscellaneous shares.

No doubt, the reduction in the export duty on cloth was welcome news but, in the present dullness and in the light of the slump in world textile markets, shares can pick up an upward trend only if the revision shows signs of increased export activity, because trade circles believe that the complete withdrawal of the duty is the need of the hour. The liberalised import policy for the current six months and the fixation of token quotas for certain items in which domestic production is self-sufficient mean that Indian industry should attach more and more importance to quality and price. Operators would take this factor into consideration when entering into long-term commitments.

Sectionally, during the week under review, which was short of two working days on account of the holidays on Wednesday and Thursday, textiles were shown some interest. Elgin mills improved fractionally from Rs. 14-14 to Rs. 15-8 last Friday, while Bengal Nagpurs gave way from Rs. 13-4 to Rs. 12-14. Bowreahs were transacted at Rs. 212.

Coals were quiet. Burrakurs remaining unchanged at Rs. 10-6. East Indias were hammered down from Rs. 20-11 to Rs. 20-4, while new Beerbhooms and Raneegunges recorded business at Rs. 18-4 and Rs. 7-2 respectively.

There was little activity in jute shares, and this was not surprising in view of the lack of a definite uptrend in the prices of jute goods. Howrahs were transacted yesterday at Rs. 24-1, as against Rs. 23-15 over the week-end. Chitavalsahs were yesterday slashed to Rs. 28-2 from a previous quotation of Rs. 30. Champdanies changed hands at Rs. 172, and Unions, at Rs. 189, showed a loss of eight points. However, Nationals were maintained at Rs. 25-7. The feature yesterday was the rise in Deltas from Rs. 242 to Rs. 245.

On bear-covering Indian Irons rose from Rs. 23-8 to Rs. 24-5, but eased to Rs. 23-11 yesterday. Braithwaites were done between Rs. 9-13 and Rs. 10. On good support Burn & Cos. were four points better at Rs. 247. Kumardhubis, on the other hand, eased from Rs. 7-11 to Rs. 7-8, Marshalls recorded business at Rs. 6-3, and Indian Galvanizing (New) at Rs. 10.

Advances in the quotations of selected counters in the miscellaneous group were a feature this week. Indian Cables received consistent support, and the rate improved to as high as Rs. 18-10 from Rs. 17-8 last Friday. The quotation on 17th December was Rs. 16-14. The advance since our last report was fractional at each successive stage, and it was remarkable that the push-up at each stage followed stabilisation. F. & C. Osiers at Rs. 3-12 represented an improvement of As. 10 since Friday last. Indian Wood Products were attended at Rs. 48-4, and India Steamships were steady at Rs. 6-5 following the encouraging note struck by the Company's Chairman at the recent meeting of shareholders.

Dunlop Rubbers were traded at Rs. 28-13 and Assam Saws were fractionally better at Rs. 6-4. Sone Valley Cements changed hands at Rs. 6-9 and Indian Coppers at Rs. 3-3. Titaghur Papers evinced interest at the improved rate of Rs. 34-2, but U.P. Sugars eased from Rs. 13-2 to Rs. 13. B.I. Corporations were around Rs. 9-5, while Martin Burns were fractionally lower at Rs. 18-6.

On Reports that the Government's Plan for the merger of the Indian airlines to form a nationalised Indian airways corporation would be implemented in a few months' time, shares of airways companies received moderate attention. Indian National Airways found buyers up to Rs. 3-2 from Rs. 2-12. Bharat Airways were sought at Rs. 2-12 and Airways India at Rs. 7.

Interest in tea shares was confined to selected counters at lower levels. Hantaparas realised Rs. 101 and Bisnauths changed hands at Rs. 20-2, as against a previous rate of Rs. 19-12. Brooke Bonds were asked for at Rs. 10-4, Tukvars at Rs. 4-12 and Rajgarhs at Rs. 17-6.

* * * *

Madras Stock Exchange

MADRAS, 6TH *January*

The notable developments which were of significance to the Madras Share Market during the past three weeks since we reported last on 16th December, 1952, were further relaxation of cloth controls and reduction in export duties on cloth. But these failed to enthuse operators even in the textile section, let alone others. For in the face of accumulated cloth stocks in consuming centres on lack of demand, textile shares sagged and prices disclosed sizable losses. In the circumstances, the other sections could not but sag in sympathy with textiles. Teas were the most depressed with very little buying activity in evidence. Rubbers, however, were barely steady. But coffees proved no exception to the generally bearish sentiment, especially in view of lower bids at pool auctions in India and in London. Miscellaneous scrips were dull. Banks, however, met with selective buying. As a result, volume of trading in these scrips was limited and prices generally were lower than they were three weeks ago.

During the period under review, textiles were almost out of favour. There was a feeling that the adverse effects of the power cut imposed recently would be far more than expected. As a result textile shares looked downwards. Radhakrishnas, Rs. 150 paid-ups, declined from Rs. 160 to Rs. 150 and Rs. 50 paid-ups from Rs. 80 to Rs. 75. Janardhanas sustained a loss of Rs. 10 to Rs. 58. Ashers feel from Rs. 76 to Rs. 72, following the declaration of a lower dividend of only 4 per cent. (tax-free) on the ordinary shares for the year ended 30th June, 1952, as against 6 per cent. (tax-free) for the previous year. Coimbatore Spinnings eased by Rs. 4-8 to Rs. 37-8, owing to passing over of dividend for the year ended 30th June, 1952. The only bright scrip in the market was Buckinghams, which put on Rs. 2-4 to Rs. 116-12.

On continued lack of adequate overseas demand and plans to cut next year's production, teas fell flat. Peermades had a fall of Re. 1 to Rs. 40 and Stanes Amalgamated of As. 12 to Rs. 9-6. Devashalas and Twyfords were lower by As. 8 each to Rs. 15 and Rs. 9-8 respectively. T.R. & Ts. went down by As. 4 to Rs. 6. Periakaramalais were enquired at Rs. 23-10 ex-div. as against Rs. 25-15 *cum-div.*

On reports that world production of rubber in 1952 was lower than in 1951, Malankaras in the rubber section gained As. 8 to Rs. 90. Cochin Malabars gathered As. 2 to Rs. 6-5. Thirumbadis were fractionally higher at Rs. 3-2½. Rajagiris, however, lost As. 3 to Rs. 9-13 and Anandamans As. 2 to Rs. 8-8. Vaikundams changed hands lower by an anna and a half to Rs. 14-13½. Be Bes were dealt in at Rs. 2-1 *ex-div.* as against Rs. 2-6 *cum-div.*

Coffees ruled dull on account of stalemate in coffee trade due to decline in selling prices and accumulation of stocks. Puthuthottams slipped by As. 3 to Rs. 4-15. Consolidated Coffees were done at Rs. 15-14 *ex-div.* as against Rs. 18 *cum-div.* and Coffee Lands at Rs. 9-5 *ex-div.* as compared with Rs. 10-6 *cum-div.*

With the exception of a few scrips, the rest in the miscellaneous section disclosed a downward trend. Singarenis declined by As. 4 to Rs. 6-8. Mettur Chemicals had a loss of As. 5 at Rs. 4-11 and India Cements As. 3 at Rs. 16-15. However, Andhra Cements 'A' were up by Rs. 3-12 to Rs. 90 and 'B' As. 6 to Rs. 9. Mysore Sugars were picked up at Rs. 42-12 *ex-div.* as against Rs. 44-12 *cum-div.* The Company has maintained the dividend of 20 per cent. for the year ended 30th June, 1953.

Banks put on a mixed trend. Bank of Mysore was higher by Rs. 4 to Rs. 297-8, and Indian Overseas by Rs. 3 to Rs. 94. Indian Banks Rs. 80 paid-ups gained Rs. 2 to Rs. 126, but Rs. 55 paid-ups lost Rs. 3-8 to Rs. 90-8. Indo-Commerce too dropped Rs. 2 to Rs. 87.

NEWS IN BRIEF

INDIA and Ceylon are negotiating a new trade agreement, the previous agreement having expired on 3rd December, 1952.

The P.E.P.S.U. Government has decided to set up its own tractor organisation to expedite reclamation of the States' vast tracts of waste land.

The Government of India has decided to continue free licensing of mustard oil exports to all permissible destinations including Pakistan upto June, 1953.

The Tariff Commission will hold a public enquiry in Bombay next week into the question of granting protection or assistance for the encouragement of the automobile industry in India.

At a meeting held recently at Cochin, the National Harbour Board is said to have recommended to the Government of India the inclusion of the Ganga Barrage Scheme in the First Five-year Plan for the protection of Calcutta Port.

Negotiations are in progress between the Standard-Vacuum Oil Co., Ltd., and the Government of India for oil prospecting operations in Bengal basin. An aerial survey of the region has revealed immense possibilities of oil deposits there and the Company has decided to invest Rs. 10 crores in prospecting the region in the next five years.

The Bombay State Rural Development Board has ceased to function. In view of the establishment of the District Development Boards, in all the districts, which are charged with the work of securing co-ordination of all development activities in the districts, the Government does not consider it necessary to continue the State Rural Development Board.

A supplementary Five-year Plan for Coorg costing Rs. 37 lakhs has been prepared by the State Government. The original Five-year Plan was estimated to cost Rs. 63 lakhs. The Government of India has agreed to raise the limit of expenditure in the Five-year Plan to Rs. one crore to the State. The additional schemes relate to expansion of dairying, pasteurisation of milk, seasoning of timber, provision of minor irrigation, expansion of rural communications etc.

The Government of Bombay has decided to organise training classes for labour leaders and industrial workers in the principles of co-operation in order to enable them to help and promote the co-operative movement among industrial workers. The training classes will be conducted by the Bombay Provincial Co-operative Institute, Bombay, in Bombay and Ahmedabad. The medium of instruction for the class in Bombay will be Marathi and for that in Ahmedabad Gujarati.

The Government of India has decided to purchase the Barsi Light Railway on 1st January, 1954. The entire length of this narrow gauge line is about 202 miles of which a section of 36 miles known as the 'Latur extension' belongs to the Government of India while the rest of the line is owned by the Barsi Light Railway Co., Ltd., of England. The line serves an important area of Maharashtra and is at present operated by the said British company to which a notice has accordingly been served.

Coorg will have electric power in about 30 months from now according to an agreement reached on the 5th inst. between the Governments of Mysore and Coorg. The work of extending the lines from Krishnarajanagar to Periyapatna on the Mysore-Coorg border will commence as soon as the agreement, which is initially for period of five years, is signed. The cost of laying the new lines is estimated at Rs. 20 lakhs which the Coorg Government will advance to Mysore.

The Government of Madras has appointed two executive engineers to carry out "further investigations" recently decided upon by the Planning Commission for the utilisation of Krishna waters. One of them has taken up the work relating to the investigation of the remodelling of the Kurnool-Cuddappah canal and the other the work relating to the canal system under the proposed Nandikonda dam. The Government may shortly depute a third executive engineer for the investigation of the construction of the dam on the Pennar river.

A three-day conference of agricultural engineers in various states and representatives of firms manufacturing agricultural implements in the country on agricultural implements and machinery began in New Delhi on the 8th inst. The Conference has been considering among other things, reasons for the disproportionately low use of improved agricultural implements in India, the steps taken for improving the implement industry, the scheme for mechanising rice cultivation, the progress made in the adoption of power-driven farm machinery and the need for introducing improved agricultural implements and popularising their use.

The recently appointed High Power Expert Famine Committee, with Mr. P. C. Bhattacharya as Chairman, will study the conditions in famine stricken areas, hear and receive representations from the public and pass them on to the Government of India. Speaking on the scope of the Committee at Cuddappah last week, the Chairman said that the Committee was interested only in examining suggestions and schemes which sought to eradicate famine and to provide for immediate and permanent relief. He revealed that the members of the Committee were no experts and as such its name was misleading.

The month-long discussions between civil aviation officials of India and Pakistan on the dispute over the Indian air services to Kabul are understood to have led to a tentative formula. The formula envisages a free corridor over Pakistan territory to enable Indian civil aircraft overfly Pakistan direct from Delhi to Kandahar (Afghanistan) and then to Kabul. It may mean an additional flight of only 135 miles as compared with the direct flight from Delhi to Kabul. The Government of India is said to have considered the present formula as a matter of considerable improvement on the existing position, whereby air services to Afghanistan follow a circuitous route involving an additional 1,700 miles flight which avoids flying over Pakistan altogether.

From Abroad

Trading in zinc on the London Metal Exchange was resumed on 2nd January after an interval of 13 years.

China took over the control of Changehun railway in Manchuria on 31st December, when the Soviet Union surrendered all its rights in the joint administration of the railway.

World oil production in 1952 is expected to have exceeded the 1951 output of 610 million metric tons by 30 million metric tons. Production in the U.S. alone accounted for more than half of the total for the year under reference.

There are at present more than four million tractors on American farms—twice the number in use in 1943. The largest percentage increase has taken place in south-eastern U.S., where Government projects have turned marginal lands into fertile fields.

The Ford Foundation has announced a new programme to help familiarise young Americans with the cultures of problems of the Near East and Asia. Fellowships, financing one to three years of training, will be granted to young persons having special interests in these areas.

The T.W.A. has made available added comfort and service to the travelling public on its Trans Atlantic and International flight routes. It has equipped a number of its Constellations with new seating arrangements which provide additional room for passengers to stretch out.

The U.S. Government has turned down requests by the copper industry to raise or suspend ceilings on domestic copper. This is due, according to Mr. Michael Disalle, the new Economic Stabiliser, to continuing critical shortage of this basic material and the favourable current earnings position of the industry.

The Canadian Pacific Airlines and the Air France have proposed to start jet services this year by introducing British made comets on their routes. The former will start its first jet air service between Honolulu and Australia and the latter has planned to fly jets along its routes in Europe, Africa, the Middle and the Far East.

Manganese-Nickel-Cobalt Committee of the International Raw Materials Conference has accepted a distribution plan for primary nickel and oxides for the first quarter of 1953. The Plan has been forwarded to all interested Governments for implementation. The estimated availability of nickel for the first quarter of 1953 is 37,270 metric tons which is 219 tons higher than the quota for the fourth quarter of 1952. The allocation still falls considerably short of requirements.

Steel production in the U.K. during November was at an annual rate of 17,951,000 tons. This is the highest rate recorded in the history of the industry. The previous best month was in November, 1950, when an annual rate of 17,472,000 tons was reached. Production is now being steadily maintained at above the previous peak rates established in 1950. This advance follows the progressive fulfilment of the industry's Post-war Development Plan which was started in 1946 and is due for completion by mid-1953.

Latest reports from Jakarta reveal that Indonesia has accepted full membership of the Colombo Plan—the Commonwealth's Programme for aid to underdeveloped countries. Indonesia is the sixth country outside the Commonwealth to join the Plan. The other five are Burma, Nepal, the Associated States of Indo-China, Laos, Cambodia and Vietnam. Already a party of five senior officials of the Indonesian Ministry of Labour is undergoing training in all aspects of labour relations in the U.K. under the Technical Co-operation Scheme of the Colombo Plan which extends training facilities even to countries which are not full members of the Plan. At present there are about 150 officers taking training in the U.K. under the Technical Co-operation Scheme. Of them 74 are Indians, 25 Pakistanis, 43 Ceylonese and one Nepali.

World output of natural rubber in 1952 is estimated at 1,750,000 tons or 125,000 tons below the post-war peak of 1,875,000 tons achieved in 1951. The output in 1950 was 1,860,000 tons. Consumption during the year under review is

PERSONAL

MR. J. V. Joshi, who is at present acting as Deputy Governor, Reserve Bank of India, in the place of Mr. Sundaresan, now on leave, will hold a new post, namely, Director in charge of Economic Affairs, Reserve Bank, when the latter resumes duty on the 12th inst.

Mr. P. M. Agerwala who handed over charge as General Manager of Bombay Telephones to Mr. M. Sundaram on 19th December, has again taken over as General Manager on Mr. Sundaram proceeding on leave preparatory to retirement.

Sir Harry Greenfield, C.S.I., C.I.E., a director of the Tobacco Securities Trust Co., Ltd., who was Chairman of the Indian Board of Revenue until 1947, has been elected a member of the Court of Directors of the Chartered Bank of India, Australia and China, in succession to Mr. Archibald Rose, C.I.E., who has retired.

Mr. John Marsh, Director of Industrial Welfare Society, London has arrived in India on a six-week-visit at the invitation of the Tata Iron and Steel Co., Ltd. He will study the Company's industrial relations and welfare arrangements and advise it on these subjects. Mr. Marsh has been the Director of the Industrial Welfare Society since 1950.

Mr. Robert Smith Simpson has assumed charge as the executive and political officer in the American Consulate General in Bombay. Prior to his assignment in Bombay, he was the first Secretary at the U.S. Embassy in Mexico city. An authority on labour problems, he was for sometime adviser to the international representative of the American Federation of Labour.

Mr. Rufus T. Burton has assumed charge as General Manager of the Standard-Vacuum Oil Company, India Division, following the retirement of Mr. M. H. Banks. Mr. Burton has served the Standard-Vacuum Oil Company in different capacities for a long time.

Mr. Harry F. Prioleau, whose appointment as President and Chief Executive Officer of the Standard-Vacuum Oil Company with effect from the beginning of this year, has been announced in New York, has been the Vice-President of the Company since 1949. A graduate of the University of Virginia, Mr. Prioleau has had 31 years of experience in international oil business. Following several years of work in the oil business in the U.S. itself, he went to The Hague in 1929 and in 1934 became the General Manager there for the Standard-Vacuum's Indonesian refining interests. After a short break of eight years, during which he was a Director of the Creole Petroleum Corporation, he rejoined Standard-Vacuum in 1949.

Mr. C. B. Marshall has been made Vice-Chairman of the Company's Executive Committee.

Both Mr. Prioleau and Mr. Marshall, it is noteworthy, are familiar with Indian conditions; the former having visited this country in November last to study at first-hand business conditions here and the latter having held the post of General Manager of the India Division.

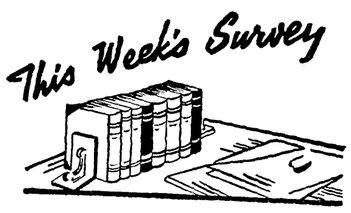
The retiring President, Mr. Philo W. Parker, has had a distinguished record of over 40 years' service in the oil business. He was elected President in 1934 and in 1946, became Chairman of the Board, which was, at that time, the chief executive post.

(Concluded from previous column)

expected to be 1,440,000 tons, some 60,000 tons less than the 1,500,000 million tons in 1951 and the post-war peak of 1,700,000 tons. Thus a surplus over commercial demand by 300,000 tons is indicated, but this is said to have been absorbed by the U.S. under its stockpile programme.

In the opinion of the Newsprint Association of Canada, world newsprint demand and supply have come into approximate balance. Based on data covering over 100 countries, with a combined newsprint consumption exceeding 10.5 million tons, the Association in its report newsprint data, estimates that the total 1952 supply is within 10,000 tons of apparent requirements. It foresees an increase of roughly 5.3 million tons in world requirements over the next 23 years to 1975, as compared with an increase of 5.2 million tons in the 1925-52 period.

Mr. Mulgrue, a spokesman of the Food and Agricultural Organisation, disclosed at a Press interview in London recently that the *indica* group of rice varieties of tropical areas gave a fair yield under high temperatures in India, Pakistan, Indonesia and Malaya, but did not respond well to the application of chemical fertiliser. The *Japonica* variety which was more suited to temperate conditions, gave very large yields and responded to fertiliser, but did not do well in tropical conditions. Referring to a scheme, in which F.A.O. was co-operating with the Government of India, for combining the qualities of the two groups, Mr. Mulgrue disclosed that a major difficulty standing in the way of the success of the scheme was that the two varieties grew at different dates and flowered at different dates. Experts had to synchronise flowering dates. He further said that over 120,000 rice flowers had already been crosspolinated. The first generation plants were also grown and the seeds from them sent back to contributing countries. From these hybrids, each country would select one that seemed to suit it best and it was hoped that, in the end, each country would have the highest possible yield from its rice and would have at the same time a breed resistant to various diseases and insects.



ASIAN ECONOMY

THE economy of the Asian countries is in a ferment. Awakened only recently from a long period of economic slumber, the nations which constitute this region have bestirred themselves with a new enthusiasm seldom seen in the past. Their new-found freedom has been to them a most exhilarating experience. It is only natural that they should want to use their energy, time and human resources, formerly utilised in an unequal contest with their political masters, towards the more constructive task of economic development. This explains why Mr. S. P. Jain devoted so large a part of his stimulating address, at the first session of the Commission on Asian and Far Eastern Affairs, held at Calcutta, to purely economic issues. The Commission, it may be mentioned here, was set up in April last under the ægis of the International Chamber of Commerce with a view to studying the problems of Asian and Far Eastern countries. The session under reference was inaugurated by Mr. T. T. Krishnamachari, Minister for Commerce and Industry, Government of India.

The depressingly low level of the living standards of the people of the region, which accounts for more than half the world's population and for only one-tenth of the world's national income, is a shocking example of the world's economic disequilibrium. Mr. Jain pointed out how Asia, Africa and South America, which have nearly two-thirds of the world's population, share between them only about one-sixth of the world's income. The North American Continent, on the other hand, accounts for nearly 45 per cent. of the world's national income, although it has less than 10 per cent. of the world's population. The rate of annual increase in production, both agricultural and industrial, is only of the order of 1½ to 2 per cent. in Asia, as compared with an increase in industrial production of 8 per cent. in the U.S. in 1951.

It is vital to the economy of this region, which is a major source of food and raw materials, that its present deficiency in food must be made good and that it should be assured of a stable level of reasonable prices. Before the war, it provided almost all the world's exports of jute and rubber, more than three-quarters of tea, almost two-thirds of tin and one-third of the oils and fats. Again, before the war, the region used to export about 8.2 million tons of cereals and import about 6.4 million tons, leaving an export balance of nearly two million tons. Now, this position has so changed that the region is a net importer of foodgrains—of rice alone to the tune of 2½ million tons. Mr. Jain rightly emphasised that this deficiency should first be corrected.

The next great problem is that of achieving some stability in prices. Mr. Jain recalled how the index of raw material prices fell from 100 in 1929 to 39 in 1935 and recovered only to 42.5 in 1938. Relatively speaking, the fall in prices of industrial articles was smaller, and the recovery more rapid. In post-war years, the region has witnessed "seeming prosperity," and has certainly had a better experience in balance of trade; in 1951, for instance, the region had a favourable balance of $770 million. But this prosperity has been largely founded on the quicksands of the Korean boom. And there is sufficient evidence to show that the boom has already tapered off. An important consideration for this region, as Mr. Jain recognised, is the achievement of a certain measure of stability in prices and a steady flow of essential capital goods necessary for securing a balanced economy by reducing its heavy dependence on agriculture.

The flow of capital goods will, however, depend on the ability of this region to absorb them, which, in its turn, is dependent upon the maintenance of a high level of savings and investment. The low level of incomes in this region precludes the possibility of large-scale investment. Mr. Jain pointed out how the U.S. invests 20 times as much as is proposed for India in the Colombo Plan. Hence the need for external aid. And the Asian region has unfortunately not figured very prominently as a recipient of external assistance. Out of the total foreign aid to the tune of $33 billion, provided by the U.S. in post-war years, the countries in Asia and the Pacific region received hardly $7 billion, the balance of over $30 million going chiefly to Europe. Even this small aid was shared largely by only three countries, Japan (about $2½ billion), China (about $2 billion) and Korea (about $½ million). Again, out of the total loans of $1,434 million granted by the I.B.R.D. upto July, 1952, no less than $1,105 million was granted to Europe, Asia and the Far East received only $266 million. Mr. Jain emphasised that it was not his intention to create the impression that there was "deliberate neglect" of the Asian region. Only, he stressed that a "much larger flow of foreign funds" was necessary if the "vast problem of poverty" in this region had to be tackled properly and quickly. In this connection, he pleaded for "some thought" to be given to the terms on which foreign capital could be secured—terms, favourable alike to the lenders and the borrowers—to the development of commercial relations within the region, and to the more extensive use of arbitration in the settlement of commercial disputes.

The comprehensive survey of the major economic problems of the Asian region attempted by Mr. Jain, led him to the conclusion that their very complexity makes it difficult to attempt a "simple or quick" solution. This is a major conclusion, not any the less important because it has been stated so frequently in the past. But those who talk, in heroic terms, of raising the standards of living in this region will do well to bear in mind the hard task that lies ahead of them. An equally important consideration—and one which has not received adequate emphasis, much less, adequate recognition—is that, in the solution of the region's economic problems, "private initiative and enterprise have as much a part to play as the Governments of the region." Mr. Jain deserves high praise indeed for his correct appraisal of a very difficult problem.

INDIAN SHIPPING

Three chief obstacles facing the development of the Indian shipping industry figured prominently in the illuminating address of Mr. A. Ramaswami Mudaliar, Chairman, at the annual general meeting of the Indian Steamship Company, Ltd., held recently in Calcutta. First, there has been intense competition along overseas routes following contraction of world maritime trade and restrictions on movement of cargo. There has also been some vexations over flag discrimination in this connection. Secondly, port facilities in the country, particularly at Calcutta, have been inadequate. Thirdly, the go-slow tactics of port and stevedore labour have created a difficult problem for the shipping industry.

The gradual shrinkage of world trade, coupled with the delay in turnround of ships at the various international ports and absence of any sizable decline in bunker charges, has accentuated the difficulties facing the Indian shipping industry. It is, however, hoped that the depression in the world maritime market is only a temporary phase and better conditions will return at an early date for, fundamentally, the demand for goods still remains unabated and the major reason for decrease in world trade is balance of payment difficulties which, however, are now slowly disappearing. It is encouraging to note that the Indian Steamship Company, Ltd., and the Scindia Steam Navigation Company Ltd., the only two Indian shipping companies engaged in India-U.K.-Continental trade, have come to an understanding whereby an integrated service, which enables the ships of the two companies to call more frequently at the various ports and thus give better service to shippers, has been organised. Evidently, much of the credit for this understanding goes to the Chairman of the India Steamship Company, Ltd. The Chairman condemned the attitude taken by established maritime countries towards new entrants and spiritedly denied the charges levelled against them in the name of "flag discrimination." He declared that newcomers in the shipping world had come to stay and that they would stay at all costs; he rightly favoured State intervention in cases where big shipping companies combined against new entrants.

That the Indian ports are inadequate to meet the demands of India's maritime requirements and that they need modernisation have been recognised long before. In fact, discussion on these subjects has been going on for some years past. Calcutta is the main port of India, being responsible for nearly 50 per cent. of the freight to and from India. But it is at this port that the delays in turnround of ships have been the heaviest. There is a woeful lack of facilities at the port for storage and other purposes. But these again may turn out to be things of the past in the near future. For the Government of India has already approved a Rs. 40-crore plan for rehabilitation and modernisation of the five major ports, namely, Bombay, Madras, Calcutta, Cochin and Visakhapatnam and for the construction of the major port of Kandla. It has also under consideration a scheme for financing intermediate and minor ports. In this connection, Mr. Mudaliar urged the Government to provide an opportunity for the shipping companies to discuss the Government's plans for modernisation of ports; he gave convincing reasons to support this suggestion.

The delays in the turnround of ships in Indian ports are largely due to the practice of go-slow tactics adopted by labour, both stevedore and port. The go-slow tactics are being adopted by labour, according to Mr. Mudaliar, not to get redress of legitimate grievances but to avoid retrenchment of surplus labour. The shipping companies, he declared, were ready to grant any reasonable amenities for labour. He requested the States and the Centre to take special note of port labour problems and to provide for measures whereby, "while labour is kept contented, the work-load of a labourer is fair and adequate." It is to be hoped that wiser counsels will prevail in labour ranks, and that they will help evolve a satisfactory solution of this problem.

MERGER OF AIRLINES

A Bill for integrating the civil aviation companies into a single corporation will, according to reports from New Delhi, be introduced in the forthcoming Budget session of Parliament. It is also stated that 1st April has been fixed as the date for taking over the control of all air transport companies by the Centre and bringing into existence the Indian Airways Corporation to operate India's civil airlines, both internal and external. Considering that no Press note has been issued by the Government so far, it would appear that it has no intention of letting the public know the scheme, just yet.

It is, however, only reasonable to expect that the proposed legislation will follow the recommendations of the Planning Commission, which has suggested the formation of a statutory corporation in which the shareholders of the existing companies might be allowed to participate *pro rata*, if they wished to do so, in exchange for their present holdings. The Commission has further recommended that the value of their holdings should be determined on an equitable basis. The Central Government's share, it has suggested, should be large enough to ensure control over the industry. In that case, it is proposed to give the shareholders of the existing companies, stocks with guaranteed interest in return for their present holdings. The amount required for payment of compensation is estimated, according to Press reports, at between Rs. 3.5 and Rs. 4.75 crores. The behaviour of the airline shares on the Stock Exchange to change in recent weeks shows that they have not been adversely affected by the merger proposals. On the contrary, some of the scrips have risen with some buying enquiry. This is evidently due to the feeling that reasonable compensation will be paid by the Government.

A study of the procedures adopted by the Governments in other countries for acquiring the assets of private companies shows that no single method has been followed for purposes of fixing the terms of compensation. Sometimes, compensation has been fixed on the basis of market quotations of shares on a specified date, and at other times, on their book values.

The proposal to merge air companies into a single corporation is viewed with mixed feelings. While the elimination of too many units is welcomed, it is feared that State control of civil aviation may not be in the country's interest. A leading economist, Prof. C. N. Vakil, has expressed the view that it is a wasteful investment on the part of the Government. It is so, obviously because payment of compensation for acquiring the assets of private companies would only stimulate avoidable inflationary forces. Surely, at a time when investment should be wholly and immediately productive, it is unwise to utilise large sums for nationalisation of private enterprise.

In any case, if the Government decides to take over the airlines, either completely or in

(Continued in next column)

partnership with the existing companies, it is necessary to emphasise the need for maintaining the spirit of commercial enterprise, for, as the Air Transport Enquiry Committee has rightly pointed out, "air transport, being a highly technical industry of a very highly specialised character, requires on the part of management maximum initiative and technical efficiency to keep pace with developments, exceptional readiness to take financial risks in replacing equipment and constant personal attendance on the part of staff dealing with the customer and an endeavour to please and serve him."

PRIVATE SECTOR

Mr. Begraj Gupta's address at the annual meeting of the Western India Chamber of Commerce contains a notable reaction to the Five-year Plan. Since he spoke as the President of the Chamber, Mr. Gupta's views deserve attention as representing those of an important section of the business community. And his address left no one in doubt as to where the community stands in relation to the Plan. He welcomed it. He admitted that the targets and priorities fixed by the Plan were "more realistic now" than they were in the Draft version. If he had any misgivings at all, they were primarily due to a fear that the private sector may not be left with sufficient resources to carry on its work of economic development. He said: "It is a moot point whether, after the Government have skimmed off the cream of available funds for investment by the measures envisaged by them for financing their scheme, adequate funds will be left over for the many industries which are to remain in the private sector." This is an impression which seems to be gaining ground in the country, despite some effective disclaimers by Government spokesmen. Thus, the Finance Minister stated in Parliament recently, that, out of the total resources of about Rs. 3,500-3,600 crores, available for investment, the development programme in the public sector would absorb a little over 50 per cent., leaving the balance of a little under 50 per cent. of the total resources for the private sector. If, despite this explanation, doubts continue to be expressed whether the private sector will ever be able to command the resources it needs, it is because of the belief that the Commission's estimate of resources is rather optimistic. Doubts have also been expressed as regards the validity of the Commission's assumptions relating to the arrears of depreciation in industry. The Finance Minister conceded that the estimate of Rs. 150 crores, in this connection, was only a "rough one," and that a "more detailed investigation" was necessary to assess the precise nature and magnitude of the problems of each industry. It is to be hoped that this investigation will not be delayed any longer, if only because it will set at rest the doubts that continue to be expressed about the availability of resources for the private sector. After all, if the private sector has to play its role effectively, it is only reasonable to expect that it should be given the facilities it needs.

Again, it is necessary that if, on further examination, the private sector is found to need more resources for development than are available to it, then it is clearly the duty of the Government to be more realistic in its attitude towards the demand for tax relief. On this question, Mr. Gupta offered quite a few suggestions. He pleaded for a more "human" approach to tax collection. He held the view that the evil of tax evasion cannot be checked through investing the income-tax officers with more powers than they possess now. The income-tax officers, he said, should be made to recognise that it is their duty to be "fair and just." This suggestion would have carried some weight had Mr. Gupta appealed, at the same time, to the business community not to evade taxes but pay them promptly and in full.

GOVERNOR'S APPEAL

Just after the cyclone which caused serious damage to several parts of the Madras State comes news of another calamity in the shape of one of the worst famines stalking 15 districts of the Deccan region in the Bombay State. Four and a half million people and a large number of cattle in the area have been affected severely by drought. The State Government has granted Rs. 1.75 crores for relief and in addition placed a sum of Rs. 2.85 crores to be utilised for granting *tacavi* loans to agriculturists in the area. Besides loans and relief, the scarcity region is in urgent need of medicines, nourishing food for

(Concluded from previous column)

children and fodder for cattle. As the procurement of these requirements is beyond the State Government's resources, the Governor of the State, Mr. G. S. Bajpai, has lost no time in organising a Central Committee for collecting funds for relief work. As Chairman of this Committee, he has made a fervent appeal to every citizen of Bombay to come forward and do his bit towards lightening the burden of the people stricken with famine. The appeal should meet with a generous response from one and all not only in this State but also in other parts of India. It is a call to which no one can fail to respond, for the call is for saving a section of our people in great distress for no fault of its own.

OFF THE RECORD

(By "ROVER")

I FEAR that something secret and sinister is being done to my meagre daily allowance of sugar. Being a rank layman, I cannot claim to understand anything about the intricacies of sugar manufacture or marketing. As such, I am also not able to fathom the complexities of controls. Apart from appreciating a liberal helping of it in my morning coffee and in my afternoon tea, I know precious little about this highly elusive and temperamental commodity; but it looks as if this little weakness of mine is being exploited to the utmost by all concerned—manufacturers, the traders and the Governments.

I remember having read some time ago in *Commerce* that we were supposed to have a huge surplus from our 1951-52 season's production. This surplus was also believed to have created a heavy headache both for the authorities and this industry. If my information be correct, it was held that this surplus was there only because the price of Indian sugar was too high for the impoverished consumers at home. With the best of intentions, therefore, our benevolent Food Minister, Mr. Rafi Ahmed Kidwai, had arranged things in such a way as to reduce the price of sugar of the new season's production.

The Government had, however, given a guarantee with regard to the price of the previous season's production and till this was exhausted the consumer was not likely to get any benefit from the ultimate reduction in price which was bound to come. To effect this transition smoothly now, instead of abruptly at some future date, from the high-priced sugar to the low-priced supply and to ease the situation immediately for us, consumers, the inventive brain of the Food Minister had devised an expedient of levying an additional excise duty, on sugar of 1952-53 season's production. From this income, he proposed to reimburse the sugar factories the difference between the price of sugar in 1951-52 and 1952-53 and to ask them forthwith to sell the old stocks at a reduced rate. Thus, without putting the Government to any extra expenditure and by asking us to pay a little more for our sugar during the whole of 1953, Mr. Kidwai's programme was to supply us sugar at lower rates immediately from 1st December, 1952.

The Food Minister was so confident of the success of his scheme that he announced repeatedly in the House of the People and the Council of States, at the time his Bill for additional excise duty was under fire there, that sugar would sell from 1st December at about rupees four per maund lower than the then current price. All who were credulous like me were impressed. A Minister's word naturally carried weight with the people. We all waited expectantly for this auspicious day to dawn. How bitter has been our disillusionment in this respect is now a matter of common knowledge. Instead of the price of sugar going down, as the month advanced, it began to mount up till it was higher by rupees four per maund instead of lower. Even though January and with it the new year is now a week old, there are no signs of sugar prices going down, at least in Western India.

There is no reason for us mere citizens to entertain any doubts regarding Mr. Kidwai's good intentions. He did really mean to do us a good turn. But it looks as if his good intentions happened to be just of the type with which hell is commonly believed to be paved. Poor Mr. Kidwai, it is obvious, was no match for the crass incompetence and ineptitude of his secretariat and for the clever machinations of a certain breed of business men, who have infested this country for the last ten years and brought untold misery for the people. The former planned their releases of sugar from factories in such a way that the markets in the west and the south of the country were virtually starved and placed at the mercy of the factories in U.P. and Bihar and the railway authorities. There was plenty of sugar with the factories in Maharashtra and in the south. But only a little of this was released for the markets by the Food Ministry, on some strange and inexplicable plea of maintaining stocks on a uniform basis of production with all the factories in the country. With the competition from this cheaper local sugar eliminated, the factories in the North found it to their advantage to restrict sales and supplies to these parts. Our national railways co-operated with them by allowing sugar to reach Bombay, Saurashtra and Travancore-Cochin in a small trickle.

So far all this was only a result of incompetence and lack of forethought and foresight. But it is now revealed that, about the last week of December a prominent business firm dealing in sugar had a brain wave. There was price control for sugar only so far as releases from the factories were concerned. There was no price control for the distribution trade. If the cheaper stocks from the nearby factories in the State of Bombay could be cornered, high prices could be maintained indefinitely for want of competition. This firm is, therefore, believed to have offered to the Food Ministry to take over the stocks with the Deccan factories at the old controlled rate and suggested to the Food Ministry that this would save it the subsidy equal to the difference in the old and the new reduced price, which it had agreed to pay to the factories. It was to pay this very subsidy that the excise duty on the new sugar had been enhanced. And this Ministry, working obviously against the policy of its Chief of bringing down the price of sugar in the country, walked into this clever trap. They thought they were getting something for nothing. I wonder whether all these highly paid officers in the Ministry of Food and Agriculture were so ignorant as to believe that a firm which offered to buy up large stocks of sugar at a price considerably higher than what they had fixed for it from 1st December, 1952, would sell it in the market at the same price at which this sugar would have been retailed in the market, if it had been released from the factories at the controlled price of Rs. 28 per maund.

This action of the Food Secretariat is clearly not only diametrically opposed to the announced policy of the Government in Parliament, but a virtual betrayal of the consumers. In the first place, they are asked to pay a higher excise duty on the 1953 sugar so that they may get the balance of the 1952 production at a lower price, and, on the other, a part of this very sugar, which was to be supplied to the public at a lower price, has been issued in a large block at a much higher price for a consideration, for retailing it to the public at whatever price this party chooses to charge. Two thousand years ago, Judas is believed to have sold his soul for thirty pieces of silver. These thirty silver coins would, perhaps, be equivalent to about two lakhs of rupees in purchasing power to-day. It is only for a couple of lakhs of rupees that the Government of India have traded their word to the public and to Parliament. The saving to the Government on this infamous deal at about rupees five per bag on forty thousand bags would be about two lakhs of rupees, but the people in Bombay and Western India would be robbed of over a crore or more, as it would prevent the price of sugar going down in these parts for yet another month, because this has induced the factories in Bombay also to apply for the release of the small balance still left with them on the same terms. They had to do this in sheer self-defence.—*All Rights Reserved.*

BUDGETARY POSITION AND PROSPECTS

LARGE DEFICIT SEEMS INEVITABLE

(From A Special Correspondent)

NEW DELHI, *6th January*

THE new year was ushered in in the capital with light winter rains, considered auspicious in these parts, inasmuch as they were timely and essential for the prosperous growth of the *rabi* crops. The good beginning is indicative of the fact that the Government of India is expected to pull through this crucial year in the economic sphere rather successfully. The new year is important in more than one respect. It is the third year of the Five-year Plan, the implementation of which could be assured only in case Government were able to carry out its development plans according to the schedule through necessary financial allocation. It also marks the commencement of a new constructive era in the history of the country, with the Government determined to proceed with its work on a planned basis, having been able to cross a number of hurdles during the last five years.

DELHI LETTER

The Government has begun the new year with a certain amount of confidence. There are already signs that the food problem is not after all intractable. The carry-over of foodgrains from last year, estimated at about 20 lakh tons, together with the already contracted imports amounting to about 25 lakh tons, is expected to stand in good stead and help the country to tide over the difficulties on the food front this year. Stocks of rice amounting to about 1.6 lakh tons can be regarded as satisfactory and the Government is confident of creating a reserve of at least 7.5 lakh tons, if not more, from the imports during the current year, supplying the deficit States from procurement within the country, particularly from the surplus States of U.P., West Bengal, Orissa and Madhya Pradesh where the outturn of rice this year is reported to be exceedingly good. By next year, the country's food position is expected to improve further, for, by then, many of the minor irrigation projects, which have been under execution during the last few years, will begin to yield results.

The headache in regard to raw jute supply from Pakistan has practically disappeared with the gradual increase in the output of raw jute in the Indian Union, which is now placed at 50 lakh bales. Further, with the sharp decline in the prices of raw jute during the course of the last six months, the value of the minimum raw jute imports from Pakistan will be considerably less. The supply position in respect of raw cotton has become comfortable and there will be no difficulty in securing good quality cotton from foreign countries at favourable prices. The balance of payments position continues to be comfortable, the total sterling balances having gone up by about Rs. 30 crores during the last six months. It is mainly this factor that induced the Government to liberalise its import policy to some extent for the current half-year. These favourable factors will enable the Government to implement its economic policy this year without much difficulty

No Bumper Revenues

On the financial front, however, the Government of India is not in a comfortable position. The days of bumper revenue are gone and it would not be surprising if it were to report at the end of 1952-53 a small deficit, as against a nominal surplus of Rs. 3.73 crores estimated in May last. On the revenue side, the total revenues were estimated at Rs. 494.98 crores as compared with Rs. 497.67 crores in 1951-52. Customs and Union excise were placed at Rs. 165 crores and Rs. 86 crores, respectively. For the first six months of 1952-53, the total customs revenue amounted to Rs. 93.07 crores. Taking into consideration the gradual shrinkage in imports during the second half of 1952-53 and the sharp reduction in the export duty on cloth, raw cotton, etc., the yield from customs is expected at about Rs. 75 crores for the second half-year, taking up the annual figure to Rs. 168 crores. The small surplus of about Rs. 3 crores in this respect is likely to be wiped out by the deficit under the Union excise. For instance, during the first six months of 1952-53, the yield from excise aggregated Rs. 41.41 crores as compared with Rs. 48.24 crores for the same period a year ago. If the downward trend were to continue during the current half-year, the total realisation under this head may recede to about Rs. 80 crores. Although the budget estimate for 1952-53 has provided for a lower realisation from income and corporation taxes at Rs. 164.16 crores, as against Rs. 122.30 crores in the preceding year, it is possible that, in view of the better industrial production trend and reduction in tax evasion, the yield from this source will show an improvement to the last year's level, indicating an increase of about Rs. 13 crores. Other sources of revenue may give a yield of Rs. 5 crores more from the estimated figure, with the result that the total revenue realisation during 1952-53 will exceed Rs. 425 crores.

Rise in Expenditure

On the expenditure side, actual expenses are expected to exceed, to some extent, the budget estimates, particularly in those concerning refugees, foodgrain subsidies and extraordinary items owing to the recurrence of famine in some parts of the country. The defence expenditure might not disclose any decline; on the other hand, it might have exceeded the original estimates by a few crores due to the continuance of the Kashmir tangle and the hostile attitude displayed by Pakistan from time to time on the other fronts. It is, therefore, possible that higher revenues derived from income and corporation taxes will be more than offset by the increased expenditure resulting in a small deficit. A year ago, when the total revenue was marked up to the record figure of Rs. 497.67 crores, the Government was able to report a substantial surplus of Rs. 92.61 crores.

Prospects of revenue for the next fiscal year are not promising. Now that imports into and exports from India have declined below the Rs. 40-crore mark each, the yield from customs will come down appreciably; perhaps it may be no more than Rs. 130 crores. Revenue by way of export duty alone may come down to about Rs. 30 crores only, that is, to about one-third of the actuals of 1951-52 when they stood at nearly Rs. 95 crores. The Union excise might also decline to some extent in case the Government were to decide to refund the excise duty on sugar in order to encourage the export of surplus sugar. There might be a moderate setback in respect of income and corporation taxes in view of the reduced profit margin of industry. It is, therefore, possible that the budget estimates will be framed taking the total revenues at Rs. 375 crores. On the expenditure side, unless the Government were able to effect a marked reduction in defence, it will have to show a substantial deficit.

Heavy Deficit and Capital Expenditure

On the capital account, the budget estimate may be expected to show a sizable deficit during 1953-54. In the course of his speech in the Council of States in mid-December on the Final Report of the Planning Commission, the Finance Minister, Mr. C. D. Deshmukh, stated that, during the planning period, the capital expenditure (Union and States) would increase by Rs. 50 crores per year, the figure for 1950-51, 1951-52 and 1952-53 being Rs. 232 crores, Rs. 285 crores and Rs. 346 crores, respectively. For the next year, the total sum may stand at Rs. 400 crores. Besides this expenditure, the Union Government will have to pay back Rs. 114.61 crores in respect of the 1953-55 loan. In view of the sizable loan repayment, it is doubtful whether

PAKISTAN NOTES

COTTON TEXTILE CONFERENCE

COST OF LIVING REMAINS STEADY

A HIGH-LEVEL Conference of the Government of Pakistan and the cotton mill industry was held in Karachi recently, under the chairmanship of the Minister for Industries, Sardar Abdur Rab Nishtar. Among the several questions discussed at the Conference, mention must be made of the reduction in the price of cloth and increase in the production of cotton yarn. Talks on the latter, it is reported, proved inconclusive as the suggestions put forward by the millowners did not find favour with the Minister. On the question of augmenting production of yarn, the Minister assured the Government's assistance to the industry.

In the course of the discussions at the Conference, the millowners emphasised the fact that, with 237,000 additional spindles which were shortly to start operations on three-shift basis, it would be possible to increase the aggregate output of yarn to about 5,00,000 bales per day. This quantity, it is stated, is sufficient to meet the requirements of the country on the basis of 10 yards of cloth per head.

Availing themselves of the opportunity provided by the Conference, the millowners submitted to the Government a detailed memorandum, drawing its attention to the several problems confronting them and suggesting measures for improvement. According to the memorandum, the price of yarn manufactured in Pakistan, which was formerly lower than imported Japanese yarn, has not increased by more than 16 per cent., despite the suspension of the O.G.L. Even this rise in prices would not have occurred, but for the anti-social activities indulged in by a section of traders. As a result of this, the handloom weavers have been made to pay higher prices for yarn supplied to them. With a view to enabling the weavers to get yarn at lower prices, the millowners have offered to give 5 per cent. discount and also to supply direct, thereby avoiding the middleman's profit.

The review of the progress of the cotton mill industry, as contained in the memorandum, reveals that the total number of spindles in production in Pakistan is at present 465,000, which compares with 176,000 at the time of Partition. Another 100,000 spindles are under installation at Karachi and Sind alone and these are expected to be in production by July next. The indigenous production is meeting the country's requirements of yarn to the extent of 40 per cent. If the installed capacity is fully utilised, it is claimed, it will meet 60 per cent. of the requirements immediately and the country's entire requirements in about six to seven months' time. The millowners urged the Government to adopt measures designed to increase production. These include permission to work the spindles on Sundays and free import of spare parts, raw materials, sizing materials, wool-tops, and dyes and chemicals. Replying to the memorandum, the Minister assured the millowners that his Government would give careful consideration to the suggestions.

Cost of Living

The most significant feature revealed by the latest official figures relating to the cost of living is that, in spite of occasional shortages in both domestic and imported commodities, the general trend in the cost of living in Pakistan since 1948 compares favourably with that in other countries. Thus, the index for Karachi in September, 1952, was 101, that is only one point above the base year 1948. In Lahore, it actually stood lower at 98. These compare with 142 for Colombo and 169 for Paris. In Narayanganj (East Pakistan), however, the index was higher at 114, due mainly to the rise in food costs. The chief factor responsible for the remarkable steadiness in the cost of living has been that the procurement and rations programme of domestic foodcrops have assisted in maintaining food costs within reasonable levels in most areas, although occasional scarcities have caused temporary rises in the local markets.

Iron Ore Deposits

The preliminary report of the German geologists, who recently investigated the extent of the iron ore deposits discovered in some of the districts of the Punjab, just submitted to the Government of Pakistan, has evinced more than ordinary interest. In the opinion of these experts, iron ore deposits at Kalabagh are well developed and contain thick seams—about 9 ft. on the average. The deposits are claimed to contain about 40 per cent. iron content. In the southern part of the area, 3.7 million tons of visible iron ore are said to exist. The experts estimate the deposits at 10 million tons. The deposits in the whole of the Kalabagh area are placed at 20 million tons.

The report is at present under the active consideration of the Pakistan Government. It is expected to decide shortly the question of undertaking a large-scale and intensive survey of the area, with a view to exploiting the iron ore deposits on a commercial scale.

Foreign Trade

In official circles, it is claimed that Pakistan has been able to pull itself out of the six-month old economic crisis and setback to its foreign trade, following the world-wide depression in commodity markets. This claim is based on the ground that the balance of trade on private account during recent months has been quite favourable. Thus, during November, 1952, Pakistan had a favourable balance of trade to the extent of Rs. 6.15 crores, with exports and imports accounting for Rs. 13.49 crores and Rs. 7.34 crores, respectively. In the previous month, the balance of trade was favourable to the extent of Rs. 2.42 crores. The improvement in trade position has been due chiefly to the steep rise in exports.

It is, however, difficult to say whether the happy position noted above holds good in respect of Pakistan's overall balance of trade. But there is one indication to suggest that it does not. For the imports on Government account of defence equipment, foodgrains, coal and sugar have been very heavy; the official figures relating to these imports are not made available. One can, therefore, expect that the heavy drain on foreign exchange resources still continues. Pakistan's external assets have declined from Rs. 82.84 crores as on 14th November, 1952, to Rs. 81.14 crores on 19th December last. This level compares unfavourably with that of Rs. 150.52 crores as on 4th January, 1952.

Be that as it may, for the 11 months of 1952, the seaborne trade exports (on private account) aggregated Rs. 142 crores and imports Rs. 147.57 crores. During the month of November, Pakistan exported 477,069 bales of jute valued at Rs. 5.7 crores and 116,463 bales of cotton worth Rs. 6.11 crores. Other principal exports were wool (Rs. 68 lakhs), tea (Rs. 38 lakhs), and hides and skins (Rs. 27 lakhs). On the imports side, machinery items led the list with Rs. 1.26 crores, followed by mineral oils with Rs. 93 lakhs. Cotton piecegoods accounted for Rs. 56 lakhs and cotton twist and yarn for Rs. 48 lakhs. It will be interesting to note that imports of these goods are very low as compared to those a year before, when they were valued at Rs. 2.33 crores and Rs. 2.63 crores. The Karachi Port handled Rs. 12.79 crores of cargo and Chittagong Rs. 5.66 crores.

Pakistan Railways

An integrated programme of rehabilitation, improvement and modernisation of Pakistan's railways is fast being executed. The programme, which has been accorded the highest priority in the development plans of the Pakistan Government, envisages the replacement of obsolete and worn-out locomotives and rolling stock and rehabilitation of track. Already, 23 diesel electric locomotives, 25 oil-burning locomotives, 45 modern carriages and 1,666 wagons have arrived in the country. Orders have been placed for 19 broad-gauge and 40 metre-gauge diesel electric locomotives, 235 modern carriages and about 6,000 wagons. During the financial year 1951-52, a sum of Rs. 4.66 crores was sanctioned for the rehabilitation of track and bridges on the North-Western Railway and the Eastern Bengal Railway.

It will be noted that Pakistan inherited a track of over 7,000 miles which was badly worn-out, due to severe operating conditions during the war. Intensive use of railways and lack of labour and material during the war period were responsible for the renewal of rails and sleepers having fallen in heavy arrears. Much of the usual maintenance was not carried out for years. After the Partition, the renewals of track became an immediate necessity and had to be given high priority in the rehabilitation programme.

On the North-Western Railway, which has a route mileage of over 5,000, Rs. 3.03 crores were earmarked for rehabilitation of track and Rs. 11,54,000 on the maintenance of bridges.

(*Continued in previous column*)

ECONOMIC OUTLOOK FOR THE STERLING AREA

SEVERAL DIFFICULT TASKS AHEAD

(By JOHN KINGSLEY)

THE year 1952 has seen the restoration of a balance in the sterling area's payments with the rest of the world and also of a surplus in the international payments of the United Kingdom. Consequently, the gold reserves of the sterling area will have risen by the end of the year to about $100 million above the dangerously low level reached in the middle of 1952, even after making the payments due at the end of the year, on account of the American and Canadian loans.

The United Kingdom's exports have recovered somewhat from the low level they reached in the middle of the year, largely because of the recent reversal of the earlier recession in world demand for textiles. British industrial production and employment have also, it seems, returned to about the level they were 12 months ago, before the decline set in. Although the indications are that most of the recent recovery has been in textiles and other industries catering mainly for the home market, the recent figures for iron and steel output and for car production give grounds for hope that production is rising also in some of those industries, upon which depend the United Kingdom's ability to expand its exports.

In short, the industrial picture in the United Kingdom at the end of 1952 is of a high level of employment and production; the task for 1953 is to ensure that manpower and output are primarily devoted to increasing those exports that the world wants to buy. The Chancellor of the Exchequer said recently that "we have now established a base camp from which we must start the really arduous climb back to security and prosperity." He also stated that, if the United Kingdom were to maintain her standard of living and, at the same time, to achieve an export surplus of the size that was essential for her future prosperity, United Kingdom exports would have to rise to a fifth above the volume they attained in 1951 (which probably means an even greater increase over the 1952 volume—though the figure for this is not yet known).

International Competition

This will be no small task in the face of growing international competition, from Germany and Japan, in particular. But, without a considerable increase in the U.K. exports of capital goods, the overseas sterling countries will not be able to expand their production of dollar-earning and dollar-saving commodities which the *communique*, issued after the recent Commonwealth Economic Conference, showed to be so essential.

The United Kingdom has expressed the intention of shouldering a large share in the financing of these developments in overseas sterling countries, and the City of London has shown its desire to contribute to this task by announcing plans for a Commonwealth Development Corporation which will help secure finance for important dollar-saving and dollar-earning developments in the Commonwealth. The World Bank has shown interest in this project and has also sent missions to several countries of the Commonwealth.

How far are the favourable changes of the last few months likely to be continued during 1953?

The improvement in the gold and dollar reserves has been brought about largely by reductions in the imports of the sterling countries from the dollar area and from Western Europe. It is to be hoped that 1953 will see a relaxation in U.K. restrictions against imports from Western European countries at any rate, for many of these have been hard hit by the fall in their exports to the sterling area in the second half of 1952.

In any event, there seems little likelihood of the sterling area earning gold from Europe in 1953 on the scale of the last few months. The improvement in the balance with the dollar area in recent months can only continue so long as the level of activity in the United States does not decline; the sterling area's reserves are still not high enough to withstand even the strain of only a small recession in the United States without a severe crisis resulting.

Immediate Prospects

Fortunately, the immediate prospects are fairly cheering; in particular, American demand for the two biggest dollar-earning commodities of the sterling area—rubber and wool—has been well maintained recently and their prices have risen somewhat. As the prosperity of the United Kingdom depends, to a considerable extent, upon that of the other sterling countries and of all of them upon the level of American imports of their products, this seems to afford grounds for a cautious prophet to say that the first half of 1953 seems likely to bring a world economic situation that is, at any rate, no less favourable than that of the second half of 1952.

The last few years have shown, however, how changes in the world economic weather can occur very suddenly and rapidly; he would be a foolish prophet, therefore, who would dare to rush in with a longer-term prophecy where the Commonwealth Economic Conference rightly refused to tread.

The outlook for 1953, then, will depend largely upon how far the United Kingdom and the other sterling countries can adapt themselves to the demands of the international economic situation. In terms of harsh fact, this means a readiness to forgo less important and less economic developments and immediate increases in their standard of living in order to increase their savings and thus release resources for building up essential primary production in the overseas sterling countries and the equally essential capital goods industries in the United Kingdom.

Striking Change

Perhaps the most striking single economic change in the United Kingdom during 1952 has been the dramatic fall in the level of bank advances to industry. But the disinflationary effect of this has been offset by the equally striking rise in Government expenditure on defence, housing and other purposes. The transfer of resources to the essential export industries is likely to prove very difficult so long as this state of affairs continues. But, perhaps, the recently announced slowing down of the rate of expansion of the rearmament programme may permit an increasing amount of savings to be devoted to increasing exports and to the no less essential task of maintaining and modernising British industry.

The year 1953 promises us a series of tasks, at least as difficult as any that have been faced since 1945. The prospects of facing these tasks successfully depend almost entirely upon the realism, the energy and the enterprise of the Government and individuals of the United Kingdom, as well as of the other sterling countries.

(*Concluded from next column*)

The E.B.R.—this has a route mileage of about 1,700—claimed Rs. 1.41 crores for track and Rs. 10,16,000 for bridges. During the five-year period ended March, 1952, the railways have spent about Rs. 11 crores on the rehabilitation of tracks and bridges.

RAW MATERIAL PRODUCTION IN BRITISH COLONIES

The large contribution that is being made by the British colonies to the world production of many important commodities is outlined in the *Economic Survey of Colonial Territories*, just published in London. The survey shows that Malaya produces two-thirds of the world supply of tin and over one-third of the world supply of rubber. Half the cocoa produced in the world comes from the Gold Coast and Nigeria; one-fifth of the bauxite for aluminium from British Guiana; nearly half of the sisal from British East Africa, and one-seventh of the production of diamonds from Tanganyika, the Gold Coast and British Guiana.

The Gold Coast is the largest exporter of manganese, supplying 15 per cent. of the total output. Nigeria produces almost the whole of the world's supply of niobium—an alloy used for jet engines—and Northern Rhodesia ranks third among world producers of copper.

Among the minor products of which the colonies are the main or sole suppliers are pimento (Jamaica), angostura bitters (Trinidad), cloves (Zanzibar), frankincense and myrrh (British Somaliland), and arrowroot (St. Vincent).

Exports of the main commodities produced in British colonial territories have been at a higher level than since before the war, and there was a rising trend in the volume of exports during 1947-50. The largest increases were in the production of bauxite, asbestos, rum, petroleum and timber. Malaya and British Borneo are among the main producers of "dragon's blood," a group of resins used in varnishes and lacquers.

RESERVE BANK APPOINTED BANKERS TO MYSORE STATE

ONE MORE STEP TOWARDS FINANCIAL MERGER

THE Government of Mysore is the latest among the Part 'B' States to appoint the Reserve Bank of India as its banker. Thus with effect from 1st January, 1953, the Reserve Bank of India has become the sole banker to the Government of Mysore. According to an agreement reached between the Bank and the Government, on 24th December last, the Bank will now conduct, on behalf of the Government of Mysore, all its money and banking transactions. Besides, it will be in charge of its remittance and exchange facilities, issue its new loans, if any, receive its cash balances and deposits and, when the need arises, grant the Government ways and means advances in accordance with the prescribed procedure. In order to enable the Reserve Bank to discharge some of these functions, the requisite number of currency chests will be gradually established in the State. The Reserve Bank also proposes to open a branch in Bangalore as early as possible. When this is done, all Government work will be taken over by it. At other centres in the State, the Treasury work will, for some time to come, be conducted by the State Government departmentally. Meanwhile, the existing arrangements for the conduct of the Government cash work at that centre will continue, according to certain transitional provisions made in the agreement. The purpose of these provisions is to see to it that *no sudden dislocation is caused in the normal activities of the Government.* It has also been agreed, in *principle, that the Bank of Mysore which was handling the State funds hitherto, will be appointed the agent of the Reserve Bank of* India in the State. The appointment will become effective as soon as certain preliminary arrangements are completed.

Rural Banking Enquiry Committee

The appointment of the Reserve Bank of India as the sole banker to one more State Government, namely, the Government of Mysore, takes the country a step further towards the achievement of its goal of federal financial integration. It may be noted that the Rural Banking Enquiry Committee had suggested in 1951, as part of the extension of banking facilities to rural areas, that proper environment should be created for (*a*) co-operative banks to extend their sphere beyond the town and the village and commercial banks beyond the bigger to the smaller towns; (b) the Imperial Bank to extend its operations beyond banking treasuries to non-banking treasuries, and (c) the Reserve Bank to extend beyond Part A States to Part B States. This threefold approach of the Committee was accepted by the Government and action has since been taken by the Reserve Bank of India. With regard to the third proposal, the Committee suggested a cautious approach on the part of the Reserve Bank authorities in persuading Part B States to appoint the Bank as their sole banker, lest any sudden change in the existing relations between the State Governments and banks in their jurisdiction should cause damage to public confidence in banking. In making a move in this direction, the Reserve Bank had to take note of the agreements between the former rulers of these States and the banks which operated in them. As the financial integration of these States meant taking over the cash work of the Governments concerned, it was suggested that arrangements should be made to carry on, for some time, the cash work with the existing machinery, effecting, in the meantime, only such adjustments as were incidental to federal financial integration and to the appointment of the Reserve Bank as banker to State Governments.

As a preliminary step to give effect to the suggestions of the Committee, section 21A of the Reserve Bank of India Act, 1934, was amended in 1951, so that the Bank may by agreement with the Government of any Part B State, undertake the functions of a sole banker of the State. Since then, the Bank has been carrying on negotiations with State Governments, on the one hand, and the existing banks doing the banking work of these States on the other, to bring about a smooth change-over from the existing set-up to the new set-up under the integrated plan. So far it has been able to effect agreement with only three State Governments, including the Mysore Government, mentioned at the outset. The other two are the Madhya Bharat and Travancore-Cochin Governments. Agreements with these States were reached last year and the new arrangement has been in operation since 1st July, 1952. In Madhya Bharat, the cash work of the Treasuries is still being conducted by the State Government in all places except Gwalior, Indore, Ratlam, and Ujjain where the Imperial Bank has branches. At these places, the Imperial Bank is functioning as the agent of the Reserve Bank under the general agreement between the two banks. In Travancore-Cochin, it has been agreed that the treasury work will be conducted by the State Government departmentally for a period of three years, after which the position will be reviewed. After this period, it is likely that the Travancore Bank would be appointed as the agent of the Reserve Bank in the State. Meanwhile, selected treasury officials of the States concerned have been trained in the procedure relating to ways and means advances, currency chests, etc. The training is conducted partly in convenient district treasuries of Part A States and partly in the appropriate departments of the Reserve Bank of India. It may be noted here in passing, that, whereas the Indian Constitution definitely lays down that all Part A States should have the Reserve Bank as their banker, it only says that Part B States *may appoint the Reserve Bank as their* banker.

Position in Hyderabad

Discussions are also being conducted with other Part B States, with a view to reaching a settlement on the different issues involved in the process of federal financial integration. A large measure of agreement is understood to have been reached with many of the remaining States. In fact, negotiations with the State Government of Hyderabad are stated to have been successfully concluded and according to the agreement, the Reserve Bank of India will assume the functions of sole banker to the State Government from 1st April next, the date on which the Government has declared its intention to withdraw the *Halli* currency, that is, coins and notes in circulation issued by the Nizam's Government under the old regime. On the same date, the State Bank of Hyderabad will act as the agent of the Reserve Bank and will be permitted to manage cash work at treasuries and sub-treasuries at centres where it has its branch. The cash work of the Government of India at Hyderabad and Secunderabad and the custody of the Reserve Bank chests at these places will be transferred from the Imperial Bank of India to the Hyderabad State Bank. In fact, the currency chests of the Reserve Bank have already been placed in the custody of the Bank at all its branches. These chests will have to be expanded further, as has been pointed out by D. G. S. Melkote, Finance Minister, Government of Hyderabad, in the course of his speech at the recent annual meeting of the Bank.

Saurashtra

Negotiations are stated to be in progress with the Saurashtra Government in order to bring the State under the financial integration scheme. The main difficulty in the way lies in the fact that the State Bank there, which was created under an ordinance of the State Government of the old regime, has certain legal drawbacks. Besides, the Bank has also no suitable constitution of its own and, therefore, the State Government of Saurashtra has been requested that the Bank should be converted into a joint-stock company. Accordingly the question of giving constitutional status to the Saurashtra State Bank either by converting it into a joint-stock bank or by means of special legislation passed for the purpose by the Central Government is now under the consideration of the authorities. As soon as a decision is reached, arrangements are expected to start for the Reserve Bank to take over the treasury work of the Saurashtra Government.

A somewhat similar difficulty is being experienced with regard to the PEPSU State. *The State Government's treasury work is being handled by the Bank of Patiala. This Bank,* too, has no separate constitutional status of its own, being a department of the State Government. *In this case, too, it has been suggested that the Bank should be given a legal existence* by converting it into a joint-stock company. This question as well as the question of appointing the Reserve Bank as the banker of the Government is still under the process of negotiations.

Rajasthan

As regards another Part B State, namely, Rajasthan, the State Government is experiencing certain difficulties owing to the existence, as has been pointed out in detail in an earlier issue of this journal (*vide Commerce* dated 6th September, 1952, page 431), of three different banks, namely, the Bank of Jaipur, the Bank of Bikaner and the Bank of Rajasthan Ltd. Keen competition among these Banks leading to heavy cost of operation, has reduced their capacity to spread out into the rural areas. Further, the State is unable to obtain short-term financial assistance directly from these Banks, for none of them is in a position to render such assistance individually. Even the Co-operative Movement has not been a success. In view of this, as well as of the other considerations mentioned by us in a previous issue, as already stated, it is being increasingly felt that an amalgamation of the three Rajasthan banks is not only imperative but urgent. Consequently, it is gratifying to hear that the Government of Rajasthan has already made a move in this direction. It is reported to have circulated to the three Banks concerned a scheme for their amalgamation, pointing out how a unified bank is necessary for the healthy growth of banking and for all-round development of the State. The Government is further understood to have intimated the banks concerned that the Reserve Bank of India is willing to appoint the proposed "United Bank of Rajasthan" as its agent to handle the treasury work of the State Government on the same terms as those offered to the Imperial Bank of India in other States. It is further learned that the Rajasthan Government's move to bring about an amalgamation of the three Banks has been fully supported by trade and industry in the State. The Rajasthan Chamber of Commerce, for instance, has passed a resolution favouring the integration of these banks. According to our information, while the Banks of Jaipur and Rajasthan are in favour of the suggestion, the Bank of Bikaner is not. It is said to be very reluctant to join the merger scheme. It is understood that the Reserve Bank authorities propose shortly to hold discussions with the three managements of the Banks to bring about a settlement. In view of the benefits that will accrue, as also of the prospect of keeping the treasury work of the State Government for themselves, it is to be hoped that the Banks concerned will lose no time in coming to a settlement on the terms of

A THOUGHT FOR 1953

Open a banking account with Lloyds Bank—that is a practical way of increasing your freedom from financial care. It helps you to avoid careless spending and your account will provide you with an accurate record of your monetary transactions.

The Bank is able and happy to place advisory services at the disposal of customers who may need advice and experienced counsel regarding financial matters.

BANKING IN TRAVANCORE-COCHIN

PLEA FOR RELAXATION OF LAW

THE unsuitability of the present banking legislation in India to the conditions prevailing in Travancore-Cochin was stressed by Mr. K. George Thomas, a Director of the Palai Central Bank Ltd., and President of the Travancore-Cochin Bankers' Association, while proposing the toast at a tea party to the delegates attending the All-India Economic Conference held at Trivandrum last month. He likened the effects of this legislation on the banking structure of the State to what would have happened if there had been one banking legislation "for the plains of Lombardy, for the Iberian Peninsula, for the basins of the Rhine and the Danube and for the isles north of the English Channel." It was against such a difficulty, he said, that the hundred and odd Travancore-Cochin joint-stock banks were up against, as a result of the present banking legislation for the country as a whole. He said that the problems of the country were diverse, different and difficult as one passed from State to State and from region to region. To find a fair equitable solution to them, one should aproach with an imaginative mind. "We know," he observed, "*chitties* were satisfying a social need for centuries together in Travancore. So were *kuries* in Cochin and *nidhis* in Tamil Nad. But *chitties, kuries* and *nidhis* should not be taboo simply because Adam Smith, Ricardo, or Marx did not mention them, or merely because these systems of rural credit did not find a place in the plans of Owen Young or Marshal." That, in brief, forms the grouse of Mr. George Thomas against the present banking law in the country.

Proceeding, the President of the Association mentioned above drew the attention of his audience to the work being done by the small banks in the State. With high percentage of education, it was possible, in the last four decades, to develop joint-stock banking in the Kerala State and to carry such banking into the remotest villages. The result was, he said, any villager in the area can walk into a banking office and obtain a loan on reasonable terms in a few minutes. As a result usurious moneylending, which in the past, caused the borrower to lose his honour and his homestead, had been eliminated in Kerala, he claimed. With the help of these institutions, there had been an all-round development of agriculture, trade and industry in the State. He asserted that the only region where banking had developed on any uniform and wholesome scale was Travancore-Cochin and this development was made possible without any bank failure. Yet no assistance was, he complained, being rendered to these small banks, although the Government showed favour to small units in other spheres such as cottage industries and co-operative credit societies. "We can definitely and unequivocally say," he declared, "that big banks can never go to and serve the Indian villages. Big banks could not do so for the last 76 years. Their large establishment charges, their stiffness of behaviour and ponderous accounting methods and their total inability to make personal contacts with the villagers will stand in their way of penetrating into our countrywide for many more decades to come."

The strong plea—with bitter disappointment as noted above—put forward on behalf of small banks in Travancore-Cochin by Mr. Thomas is compelling enough to attract the attention of those in authority. It is well known that these small banks have played a prominent role in building up the economy of Kerala as it exists at present and are capable of playing a still larger role, provided suitable assistance is forthcoming from the Centre. For, as has been pointed out by Mr. Thomas, the region grows rare spices known throughout the globe, namely, pepper, cardamom, ginger, lemon-grass, etc. No research has been tried in the cultivation of these, which can bring untold wealth. Again, the development of cashewnut is of comparatively recent origin needing financial assistance. Rubber grows only in this part of the Indian Peninsula and there is vast scope for its extension. Back water reclamation for paddy cultivation is considered to be an adventure in which the Kerala agriculturist is unrivalled. For the development of all these money is needed and this can be supplied through small banks. Unfortunately, it is held that the banking law now in force is against such assistance. In fact, this question figured prominently in the speech of Mr. C. R. Srinivasan, Chairman of the Local Board, Southern Circle, Reserve Bank of India, delivered at the recent annual meeting of the Association of which Mr. Thomas is the President. Mr. Srinivasan assured then that the authorities would certainly relax the law if a proper case was made out for such relaxation. From his speech it would appear that some of the banks are indulging in spheres beyond the capacity of their resources and are therefore exposing themselves to dangers of unsound banking practices. It is, therefore, necessary that they should desist from such practices at all costs. But it is also necessary that facilities must be provided for their sound functioning and further expansion. They seem to entertain a strong feeling, as is evident from Mr. Thomas's speech, that certain provisions of the existing law need to be modified. As correspondence is being carried on between the Reserve Bank and the Association, it is to be hoped that a way will be found to enable the banks to expand their activities within the framework of the banking legislation.

RECOVERY IN STERLING AREA RESERVES

The sterling area's gold and dollar reserves had a deficit of $40 million during December, 1952, due mainly to repayment of $181 million towards capital and interest on the U.S. and Canadian loans. This deficit was preceded by a surplus of $128 million in November, and of $82 million in October, thus making net surplus of $161 million for the last quarter of 1952.

The reserves stood at $1,846 million at the end of 1952. These compare with the year's low of $1,662 million on 30th April and with $2,335 million on 31st December, 1951.

During December Britain received $31 million from the U.S. as defence aid and $80 million from the European Payments Union, representing that part of the November surplus of £36.3 million which was settled in gold or dollars. A notable feature is that Britain's position in the European Payments Union improved again during December, when the U.K. recorded a surplus of £29.5 million. This surplus compares with that of £36.3 million in November and £34.2 million in October.

The United States defence aid to Britain in the second half of 1952 was only $89 million although the British Chancellor of the Exchequer had placed it at $322 million last July.

The following table shows the overall position of sterling area payments and receipts in the third and fourth quarters of 1952.

(Dollars in millions)

	3rd quarter	4th quarter	2nd half
Trade and payments	+ 19	+176	+195
U.S. aid	+133	+ 98	+231
Gold paid or received from E.P.U. ..	—127	+213	+ 86
Debt payments to U.S. and Canada ..	..	—181	—181
Commodity arbitrage cost in dollars ..	— 25	—145	—170
Sterling area gold and dollar surplus.. ..	..	+161	+161

It will be seen from the table above that the sterling area has ended the second half of 1952 with a surplus. The sterling area countries have also earned a surplus of $195 million in the fourth quarter of 1952, an improvement of $176 million on the result for the preceding three months at £19 million. The *Financial Times* says that, in spite of this improvement, "the sterling area still remains vulnerable, for some time to come, to a drop in its dollar income such as could be anticipated by an American business recession.

NATIONAL CITY BANK OF NEW YORK

Mr. Howard C. Shepherd has been appointed Chairman of the Board and Chief Executive Officer of the National City Bank of New York as also Chairman of the Board of Directors of the City Bank Farmers Trust Company, a trust affiliate of the former Bank. In holding both the appointments, Mr. Shepherd succeeds Mr. William Brady Jr. who is retiring as Director of the Bank and its affiliates.

Mr. Richard S. Perkins, President and Director of the City Bank Farmers Trust Company, has been appointed as a Director of the National City Bank of New York.

FLAX GOODS INDUSTRY IN INDIA

CLAIM FOR PROTECTION UNDER CONSIDERATION

THE Indian flax goods industry is the latest to be added to the list of industries seeking tariff protection. A public inquiry into this industry's demand was held in Bombay last week, Dr. B. V. Narayanaswamy Naidu Member of the Tariff Commission, presiding. In the course of his opening speech, Dr. Naidu made an informative survey of the developments in the sphere of flax goods and posed some of the most pressing problems confronting this sector of the textile industry.

The flax goods industry in India is of recent origin. It was only three years ago, in 1949, that the manufacture of flax goods was started, for the first time, by Messrs. Jay Shree Textiles Ltd., Calcutta, said to be the only factory equipped to manufacture flax goods. The progress of the industry during this brief period has not been inconsiderable. In fact, the industry may be said to have won for itself a place in the industrial economy of the country and can, as Dr. Naidu aptly put it, contribute towards meeting certain specific requirements of consumers. Thus, although the Indian textile industry is broadbased on two principal fibres, viz., cotton and jute, in certain lines and for certain specific uses, flax can hold its own. Flax twines and threads are put to a variety of industrial and other uses such as the manufacture of shoes, fishing nets, sports goods, stitching of canvas articles, making of jacquard harness, fastening of a variety of packages, etc. Flax canvas is used for the manufacture of tarpaulin, in making bags, tents, sails, as packing material and artist's canvas and in bookbinding. Flax piecegoods are used as household linen and dress material, especially where durability is important, as also for filtering in filter presses. Flax hose is used for fire-fighting, as well as for water-supply to roads, gardens, etc.

The foregoing brief account will indicate that prospects for the development of the flax goods industry are indeed bright. Despite this, the progress of the industry of late has not been satisfactory. This is mainly due, according to Dr. Naidu, to increasing competition from other types of textile goods. The world of textiles is often highly changeful and large shifts of demand can occur not only in response to price changes but also by the process of substitution over a wide area of demand and under the influence of changing prices. This aspect is of particular significance, now that the question of protection is under consideration, and it was but appropriate that Dr. Naidu should have stressed the importance of arriving at well-considered and balanced conclusions.

The Crucial Issue

In the considered opinion of Dr. Naidu, the crucial issue of the inquiry is the question of reducing the import duty on flax fibre. It has been represented by the indigenous industry that, although its principal competitors in the U.K. import flax fibres from the same countries from which the indigenous industry is getting, that is, Holland and Belgium, they have the advantage of importing it without paying any import duty. The industry, therefore, has asked fourfold protection or assistance through (1) abolition of customs duty on imported flax fibre—both line and tow,—(2) refund of import duty already paid, (3) imposition of a protective duty on all imports of finished flax goods at the rate of 45 per cent. *ad valorem*, and (4) imposition of restrictions on imports of flax goods.

The question whether or not protection to the indigenous flax goods industry is justified depends on satisfactory answers to a number of issues. For one thing—and this applies as much to any other industry—the question of protection arises only when it is clearly established that the present import duty on flax fibre is a handicap to the industry in expanding its production and increasing the sale of its products. In this connection, two aspects, to which Dr. Naidu drew particular reference, have to be considered. First, whether the import duty on flax fibre, by raising the price of the finished product, leads to consumers resistance? Secondly, whether it reduces the competitive capacity of flax goods with that of other types of textiles. Another related question is whether the removal or reduction of duty will enable the indigenous industry to seek and find markets in other countries. These are issues which merit the most careful consideration and there is no doubt that the Tariff Commission will be able, to quote Dr. Naidu, "to arrive at well-considered and balanced conclusions."

Incidentally, it may be noted that flax fibre is not produced in India at present; the requirements of the industry are being met entirely from imports, particularly from Belgium, Holland and Egypt. Dr. Naidu did well to stress the fact that the flax goods industry should have a raw material base. It is gratifying to be told that a beginning in this direction has already been made. Thus, the Jay Shree Textiles Ltd. has acquired 18,000 acres of land in the Mysore State for experimental cultivation of flax. Initial experiments, it is stated, have indicated that there is a possibility of having medium flax fibre grown in the country and large-scale cultivation is expected to be undertaken in about ten years' time, although it is considered doubtful whether flax of Grade 1 quality can be grown in India.

Present Position

As already stated, the flax goods industry is faced with several difficulties. The Jay Shree Textiles Ltd. has virtually suspended manufacture of flax goods and is utilising its machinery and equipment for the production of woollen and staple fibre goods. This raises the question of whether it is not necessary to assist and preserve the industry in the national interest. There is said to be a wide gap between the annual rated capacity and the actual production of Jay Shree Textiles. The annual rated capacity is estimated at 1.8 million lbs. for flax yarn and twine, 4.8 million lbs. for canvas buckram and other piecegoods, and 300,000 ft. for flax hose pipes. As against these, in 1951, the Company's actual production amounted to 252,813 lbs. flax yarn, 110,880 lbs. canvas, 11,110 lbs. piecegoods, 27,224 lbs. twines, etc., and 24,590 lbs. hose. Production during 1952 was on the downtrend; the actual output during the first 10 months was 87,192 lbs., 38,889 lbs., 119 lbs., 45,338 lbs., and 3,437 lbs., respectively.

In view of this wide gap between capacity and actual production, the question naturally arises whether there exists sufficient demand in the Indian market for all that the indigenous industry can produce under favourable conditions. The question also arises as to whether the industry could be developed, at least partially, as an export industry, catering, like jute or cotton, to overseas markets. As these questions are closely linked to the demand aspect, a reference to it may be made. According to Dr. Naidu, it is difficult to arrive at satisfactory estimates of demand for the different types of flax goods in India. A rough estimate has, however, to be made on the basis of imports. There have been virtually no imports of twist and yarn and piecegoods since 1950-51; imports of canvas were 133,000 yards in 1949-50 but dropped to a fractional amount in 1950-51 and amounted to only 54,000 yards in 1951-52.

The annual demand for flax canvas is placed by one importer at 10 lakh yards. As regards flax piecegoods, no satisfactory estimate is available, as imports are under a ban and indigenous production is meagre. The demand for fire hose, which was placed at 5 lakh running feet in 1947 by the former Tariff Board, is now estimated at 7.5 lakh ft. and is expected to increase to 10 lakh ft. in the next three years.

The question of demand depends, to a great extent, on quality. Referring to this, Dr. Naidu alluded to the opinions expressed by a large number of importers and consumers. These opinions generally showed that, except in the case of flax hose, the indigenous production had shown a steady improvement in quality, though it had not yet come up to the standards of the imported product in all cases. If, therefore, the indigenous product is to enjoy a broader market—indigenous and foreign—it is imperative that the industry should devote more attention to the question of enhancing the quality of its products than it does at present.

(*Concluded from next column*)

reduction of these imposts, the demand for mill cloth cannot be expected to register improvement. If this position is not corrected, the mills may be forced to effect a substantial curtailment of output. There is, however, one silver lining in the Government's latest cotton textile policy, namely, the substantial reduction in the export duty on cloth—a reference to which is made elsewhere in this issue. But the extent to which this will result in an improvement in the offtake of cloth by export markets cannot be assessed at present, in view of the changed and rapidly changing conditions on the world cotton textile front.

GOVERNMENT'S COTTON TEXTILE POLICY

CONTROLS RELAXED FURTHER

WITH the removal of price control in respect of twills, coatings, and the categories of superfine cloth falling within Groups XII, XIV and XV, with effect from the 1st inst., the Government of India's policy of restoring freedom of trade to the cotton textile industry may be said to have been carried a stage further. It will be recalled that the Government had lifted, on 1st October, 1952, the price control over a number of popular varieties, including *dhotis, saris*, mulls, voiles, poplins, crepes, drills, mazuri cloth, dosuti, bed-cloth, etc. The further relaxation made towards the close of 1952 is the result of a fresh review of the demand and supply position. Control at present is retained only in respect of five varieties of cloth, namely, sheetings, longcloth, shirtings, leopard cloth and suci. But the price control on all varieties of yarn is still being continued.

The above decision of the Government of India to relax control on cotton piecegoods further is no doubt to be welcomed as a step in the right direction. But, in itself, it does not go far enough, especially, in the present context of the buyers' market in textiles the world over. What is required is, therefore, not piecemeal removal of controls on the textile industry and trade, but complete decontrol. For it is only then that the industry would be able to adjust itself to the changed circumstances and place its production to suit the exact needs of the market. Now that the overall supply position of cloth is fairly comfortable and bids fair to be so in the coming months, one fails to understand why the Government of India should still hesitate to abolish all controls in respect of production, distribution and price of not only cloth but also of yarn.

Revision of Price Policy

If, however, the Government is not prepared to remove control over those varieties which are still under price control, for fear of a rise in prices, it should at least revise the prices of these goods in accordance with the Tariff Board formula. The Government's reluctance not to raise the prices of coarse and medium cloth made out of Indian cotton according to this formula is not understandable. It does not, as we pointed out on an earlier occasion, reflect well on the Government's sense of fairness to follow the Tariff Board formula only when a downward revision of prices is indicated and ignore that formula, under some pretext or other, whenever an upward revision of prices has to be made. The only reason which the Government has, once again, advanced for the non-application of the accepted formula is that it is no longer appropriate, as a very substantial proportion of all varieties of cloth has been decontrolled. This is indeed a strange argument. Rightly did Mr. Hanumanprasad Nevatia, Chairman of the Madhya Pradesh Millowners' Association, ask, in the course of his address at the Association's annual meeting held at Nagpur the other day: Is it seriously contended that the mills should cover up the loss on controlled varieties of cloth by putting up the prices of the decontrolled varieties? If the mills did it, would it be in the interest of consumers? What is the justification for the Government refusing the due increase in the prices of yarn? How does Government expect almost all the mills manufacturing surplus yarn to recoup the loss in supplying yarn at the arbitrarily enforced prices? Whichever way the issue is looked at, the Government's decision to withhold application of the formula is, to quote the Chairman's own words, "unjust and unilateral."

Moreover, the problem before the cotton textile industry is not only one of revision of prices or of decontrol. It also includes the issue of taxation on the industry. As Mr. G. D. Somani, Chairman of the Bombay Millowners' Association, rightly pointed out at Nagpur, while inaugurating the Madhya Pradesh Millowners' Association meeting, it is very unfair to load the prices of cloth with excise duty, sales tax, etc., on the present scale, and that at a time when the mill industry has been compelled to foot a heavier bill following the all-round rise in wages and manufacturing expenses. It is scarcely necessary to mention that the price factor has stood in the way of normal demand for mill cloth. There is no doubt that the various taxes levied by the Government have made cloth dearer to the consumer. Unless, therefore, immediate relief is given by way of

(*Continued in previous column*)

OUTLOOK FOR TEXTILE INDUSTRY

PROFITS FOR 1952 LIKELY TO BE LOWER

(From A Special Correspondent)

MANCHESTER, 23rd *December*

MANCHESTER LETTER

AS the year 1952 draws to a close traders in Lancashire and surrounding counties can legitimately feel that it has been a period which they do not wish to see repeated in a hurry. A year ago, the prospects were bleak and the impending storm was everywhere in evidence. Only a few optimistic spirits clung to the outside chance that some miracle would come along to divert the approaching catastrophe.

As events proved, they were, of course, far too hopeful. Extended stoppages over the Christmas holiday did little to ease the situation and in the first half of the year there were very few firms which were able to boast that they had worked full-time throughout that period. The history of widespread unemployment, empty order books and the inevitable drift from the mills needs no repetition here. It is preferable to turn to the future.

Two or three months ago it might have been possible to prophesy a more favourable outlook for 1953 than now appears on the surface. Since the late summer there has been a revival in activity which has been particularly noticeable in the rayon trade. Opportunities for extending order lists have again been offered and taken, and early in November the situation seemed to be clearing for the better.

Unfortunately, the lower trend of prices in the final weeks of the year has halted the progress which at one time looked like lifting the industry out of the depression which was so marked in earlier months. The confidence of buyers, which was slowly being regained, has now largely evaporated. As in the past, it will take some time for their cautious attitude to be changed.

Order Lists

There are a number of factors in the situation, however, which give rise to the possibility of more favourable conditions prevailing in Lancashire early next year. Despite the inevitability of further stoppages in the mills over the next week or two, the basis on which the industry is working is more stable than for some months back. Order lists are no longer extended out of all proportion as they were in the latter post-war years. Prices for raw materials are at a more equitable level, although they are still about six times as high as they were before the war. The industry recognises that an era of competition is ahead which may eventually be fiercer than that of 20 years ago.

Few traders anticipate that the coming months will see a startling improvement in the general position of the cotton and rayon industries, but the basis for some expansion in activity is there. The most important single factor is the course of raw material rates, which are now the exclusive prerogative of the New York cotton market. The majority of those countries which consume raw cotton have no say in the trend of prices and they must wait impatiently for stabilising influences before the confidence of buyers can be regained.

Fluctuations in values, however, are always more likely in the closing months of any year, as the reports on the progress of the American crop are received. The first quarter usually brings more steadiness, and if this can be achieved in 1953 the offtake in Lancashire-made yarn and cloth may well take a more favourable turn.

Cotton Mills' Earnings

From a first quick glance at preliminary details of the 1952 annual stocktakings of cotton mill companies it would appear that the picture will not look as gloomy as many people might have guessed. But first and foremost it must be recognised that the figures refer to company results announced during the past 12 months and, therefore, some of the earnings are those made at the peak of the post-war boom in 1951.

In addition, there is a preponderance of public companies in the spinning section of the industry which have maintained a profitable rate of trading, despite the accompanying depression. Final figures have not yet been drawn up but the general trend at the moment indicates that the 1951 profit average has been exceeded, and the average dividend paid by spinning mills has also been slightly higher than in the previous year.

In general, company reports have followed a similar pattern, at any rate in the second half of the year. Reduced trading profits have been to some extent offset by smaller provisions for taxation, but the net earnings of those firms whose accounts have covered the greater part of the slump period have been around the same level as two years ago. Dividends have been well maintained but smaller allocations have been placed to reserves. In nearly every instance, however, the balance carried forward has been larger than 12 months ago.

The experience of the leading spinning combines has followed the same trend as the rest of the trade, although those whose results are received late in the year have naturally shown a bigger decline in earnings. Out of 13 of these important concerns, only two have reduced their total dividend and their credit balances this year have, without exception, been higher than in 1951.

Although the producing sections of the trade have fared better during the slump than firms concentrating on distribution, it would be surprising if the present average profits were to be maintained next year. Not only will forthcoming figures reflect the lower level of trading by quantitative standards but the profitability of the industry is now running at a reduced level. Margins have been extensively trimmed and, although still enabling spinners to cover their costs, they no longer provide the handsome returns of recent years.

Direct Delivery

Since the Raw Cotton Commission has had to compete with private importers of the raw material, one of the factors which has weighed against the centralised buying organisation in comparing prices has been the persistence of the Commission in always passing its supplies through warehouses before transporting them to the ultimate consumer. A change in this policy has now been announced, and the Commission is offering terms to spinners providing for cotton to be delivered direct to the mill from the port.

According to the official memorandum circulated to contracting-in spinners, the normal saving in cost compared with the ex-warehouse contract will be from 50 to 90 points for American cotton and from 60 to 100 points for Egyptian styles. For the moment business on the new terms is restricted to American and Egyptian cotton only.

This alternative contract will enable spinners using the Commission to take advantage of the slightly cheaper price and will mainly be used when overseas shippers are prepared to offer cotton suited to the requirements of individual firms. It has its disadvantages in that any loss brought about by delays or irregularity in transit must be borne by the consumer. In the standard ex-warehouse contract all imports of cotton are examined, warehoused, and classed by the Commission, and the spinner is not bothered by quality disputes, arbitrations and the numerous formalities connected with the arrival of supplies at the port.

The move, however, should be welcomed as it provides an additional freedom for the consumer of cotton to choose how his supplies should be delivered. It has come about as a result of the advantage gained by contracting-out spinners who have been able to get cheaper cotton direct from the quay through the facilities offered by merchant firms.

Bank Advances Fall

Indebtedness to the banks among firms in the cotton industry is declining from the high levels recorded earlier in the year. According to the latest figures issued by the British Bankers' Association, advances to cotton companies in November amounted to £14,594,000 compared with the peak of £19,657,000 in May.

The current figure is only slightly more than the £13,780,000 owing to the banks which was recorded a year ago. At that time it represented 0.7 per cent. of the total indebtedness of the country and the present total is 0.8 per cent. of the whole. Since the beginning of this year the cotton trade's share of advances has been steady at 1 per cent. of the total.

Advances to industry in general have been declining since the beginning of 1952, borrowings in February totalling £2,055,763,000. This total has now fallen to £1,815,429,000. Among the main groups borrowing from the banks are agriculture and fishing with £194,456,000, the retail trades with £174,161,000 and engineering with £157,250,000.—*All Rights Reserved.*

E.I.C.A. PRESIDENT WARNS COTTON TRADE

ARTIFICIAL SUPPORT TO HANDLOOMS DEPLORED

IT was on the whole a wholesome and necessary warning that Mr. Purshotamdas Thakurdas gave, as the President of the East India Cotton Association, at its recent annual meeting, when he said that he would like to caution the trade that any "lapse on their part" would jeopardise the future of the cotton trade. Those who are acquainted with the past in the cotton trade and the recent events in the other forward markets, will appreciate both the timeliness and the significance of this warning. And when it comes from a person who has the best interests of the cotton trade at heart and the undisputed reputations of being a wise judge of men and things, of being a sage counsellor in matters economic, the warning deserves to receive the earnest attention of all those who are engaged in the country's cotton trade, for, if the newfound freedom to carry on futures trading in cotton must become the abiding possession of the cotton trade, it is vital that the men engaged in it should display a keen sense of realism, a sense of moderation and of social responsibility.

Appropriately enough, Mr. Purshotamdas prefaced his address by a reference to the unexpected bereavement, caused not only to the cotton trade but to the business community, through the death of Seth Ramdeo Podar. The cotton trade has special reasons to mourn his death, for almost the last great service that he rendered to it, in his life, was the evolution of an acceptable form of forward trade contract in cotton, in the making of which he gave himself so ungrudgingly as the Chairman of the Sub-Committee appointed for that purpose. Mr. Purshotamdas referred to the fact that Mr. Podar was "always ready to shoulder responsibilities and render constructive help." He spoke appreciatively of his work as Chairman of the Sub-Committee on new contract and of the Building Sub-Committee, and stated these were "only two of several services rendered by the late Raja Ramdeo." Many who have known the life and personality of the late Mr. Podar will readily reciprocate the fine sentiments which Mr. Purshotamdas expressed at the annual meeting and to which the resolution passed at the meeting also gives expression by referring to the "great distress" felt by the trade at the premature death of him who had given "ungrudging help" to the trade.

Review of Changes

Mr. Purshotamdas next reviewed the recent changes in the sphere of the cotton trade. With the experience of the previous two seasons, the Textile Commissioner's office, he said, had made preparations for exercising control in a more stringent manner. But in cotton, he added, "history did not repeat itself." He pointed out that there was a "useful lesson in this for those who plan in respect of commodities and prices." Explaining the point that no single administrative method will suit all occasions, he said:

"Within two months of the running of the season in Madhya Pradesh the nominee system had to go, and further in Broach and Surat the nominee system, so carefully devised, had to be given up. Measures had been taken to prevent the apprehended rush of buyers on cotton, but exactly the contrary happened; and in February-March this year, cotton, far from piercing the ceiling, threatened to—and in some places in the interior actually did—go to the 'floor' with the result that an entirely different set of measures had to be devised to remedy this situation. The complicated and unworkable licensing system, with the categories of A, B, C, had to be given up. Quotas to mills had to be liberalised—rather the Textile Commissioner's staff had to go out persuading the mills to take up the quotas, etc. The latest phase has been that the Government have made up their mind to relax the control on cotton. I have already had to say something about this before now.

"One would have thought that everybody in the cotton trade who had no personal interest to serve would approve of and support this step of Government, but as in everything else, there were vested interests in favour of the continuation of control which were created by the control itself. In spite of the objections which may have been raised by such interests, it is some consolation that the Minister in charge and the Textile Commissioner have been firm in their attitude and have substantially relaxed the control on cotton and also permitted trading in Hedge Contract. The absence of this latter facility has amply demonstrated how the smooth marketing of the country's cotton crop has suffered in the past on this score. I have, however, thought fit to take the first opportunity of cautioning the trade here and all over the country that any lapse on their part would be exaggerated and made much of by vested interests. I repeat that warning again with all deference."

This excellent summing up of the changes in the sphere of cotton controls, during recent months, carries its own moral for the administrators as well as the traders. If it is the duty of the former to exercise moderation in the use of the powers which law invests them with, it is also the duty of the traders to eschew unbridled speculation which will put an end to all efforts at building up a continuing form of forward trade in cotton, beneficial to all the interests concerned. It is, therefore, to be hoped that the traders will pay heed to this timely warning given by one who is rightly regarded as the doyen of the cotton trade in this country.

Target for Cotton

The ultimate solution to the problem of speculation in cotton, or, in fact, of the cotton problem itself, lies in increasing the output of cotton. And on this question, Mr. Purshotamdas said:

"India still has to a considerable extent to depend upon imports of cotton; its foreign exchange position and the maintenance of the price level in India also depend upon foreign supplies. It is for this reason that the Planning Commission has laid down the target for cotton production in India by 1955-56 at 42.2 lakhs of bales. In order to ensure realisation of this target, it is necessary for the Government of India not to make any more ill-conceived experiments with their cotton-growing policy or with the price policy in regard to cotton. They should go on lines which can be understood by the public so as to ensure the fullest co-operation of the cotton-grower in order to increase cotton production."

A pointed reference to the handloom *versus* mill industry controversy was also made by the President of the E.I.C.A. Although many will perhaps wonder whether the Association provides the right platform to make a critical review of this controversy, there is no doubt that, from the long-term standpoint of the cotton economy, any factor "which adversely affects the textile industry will adversely affect the cotton trade and the cotton grower." Mr. Purshotamdas rightly felt that the effect of the two measures, namely, the reservation of certain lines of manufacture for the handloom industry and the levy of a cess on the production of cloth produced by the mills, will cripple the future of the mill industry. In this connection, he said:

"Neither the Government of Madras nor the Central Government can be said to have short memories, but if they look up the records in their Secretariats they will find that this question of helping the handloom weavers has not been overlooked in the past. In fact, when the present Chief Minister was at the head of the Government of Madras in 1937-39, this question was certainly in existence and was in an equally parlous state then as it is to-day. Only, at that time, the handy threat of communism was not available. Attempts to bolster up the handloom industry by means of such remedies remind me of the time when the *Khaddar Movement* was at its height under the inspiration of Mahatma Gandhi and the people were so enthusiastic that they wanted to export all mill-made cloth and all stocks of foreign cloth lying in India. In spite of the best efforts of a very strong committee, with no less a person than the late F. E. Dinshaw on it, the idea had to be given up and those who backed it lost money. Attempts to support the handloom industry by handicapping the textile industry appear to me to be self-defeating in their nature, as sooner or later a crisis is bound to overtake the textile industry, partly owing to world conditions and partly owing to the increasing imposts heaped upon it."

Aid to Handlooms

Although Mr. Purshotamdas was thus extremely critical of the wisdom of these artificial measures to develop the handloom industry, he was anxious to point out that he was not opposed to the policy of helping the handloom weaver. Only, he was opposed to the policy of imposing a "handicap" on the mill industry in order to help the handloom weavers. After warning the Government against the unwisdom of burning the candle at both ends—one, by experimenting in prohibition and the other by experimenting in the revival of handloom industry on 'sentimental' grounds—and also against its playing the 'saviour' to the handloom industry at the expense of the mill industry, he said: "What odd irregularities this may lead to before long, I will not try to describe, but I would like to know in what other countries such effort has succeeded." He added:

"It has taken India the best part of half a century to be a respectable competitor with Lancashire and other countries regarding the quality and output in piecegoods. I think it would be a definite disservice, most short-sighted if I may say so, if the textile industry is to be artificially put back or rather pushed back on any ground. What the hand spinning and weaving industry needs most is well considered and sustained guidance in devising their administrative machinery, particularly in regard to finance, methods of production, and marketing."

It would be a pity if the Government were to persist in its erroneous policy of providing artificial stimulus to the handloom industry by inflicting a grave injury on the mill industry, which would definitely harm the future of the cotton economy in this country. Mr. Purshotamdas has done a real service to the country by crying halt to this quixotic experimentation in mediæval economy.

UGANDA COTTON

The estimate of the 1952-53 Uganda crop has been revised to 3,41,000 bales. The break-down by varieties is as under:

	Bales
A.R. B.P. 52	1,22,000
Busaga	65,000
Bukedi Budama	45,000
Jinja	92,000
West Nile	9,000
Bunyoro	8,000
	3,41,000

EAST AFRICAN COTTON

Out of the 15,000 bales of East African cotton earmarked for auctions on 17th December, at Kampala, about 8,000 bales have been sold, of which about 5,000 bales were bought by India, about 1,500 bales by the U.K., and the rest by Japan and other countries.

U.S. COTTON EXPORTS

U.S. cotton export prospects for the 1952-53 season, according to the International Cotton Advisory Committee, are not so favourable as a year ago. Private traders estimate exports to reach no higher than a bare four million bales level.

The total stock of cotton held by the Egyptian Government in the middle of December, 1952, was 223,676 bales, consisting of 93,965 bales Karnak, 89,440 bales Ashmouni, 15,518 bales Giza 30, 14,480 bales Zagora and 10,273 bales Menoufi.

4¼ PER CENT. DEBENTURES
Issue Price Rs. 99-8-0

Guaranteed by the Government of Madras

THE MADRAS CO-OPERATIVE CENTRAL LAND MORTGAGE BANK LIMITED

Post Box No. 609, Mylapore, Madras, 4

Paid-up Capital and Reserves . . . . . Over Rs. 53 Lakhs

President: **SRI BHOGARAJU VENKATARATNAM**

4¼% 1963-73 Debentures, Issue limited to Rs. 65 lakhs. The issue price is Rs. 99-8-0 per cent. The issue is open for subscription till 31-1-1953 and will be closed earlier when subscriptions amount to approximately Rs. 65 lakhs. Full amount to be remitted with application.

"The debentures are Trust Securities under the Indian Trusts Act and are also approved securities under the Insurance Act 1938, and the Banking Companies Act of 1949. A Redemption Fund will be constituted to pay off the debentures on maturity."

Other particulars and application forms can be had from the Secretary or any broker or Co-operative Central Banks in the State.

M. DATTATRAYULU, *Secretary.*

TATA IRON AND STEEL COMPANY

PROBLEM OF CONVERSION RATIO

(By Dr. Miss SHANTA PANANDIKAR)

THE question of reorganising the capital structure of the Tata Iron and Steel Company, Ltd., so as to eliminate deferred shares from it, first engaged the attention of the Board of Directors of the Company in 1941. Since that time, it has been felt that these shares have become one of the most speculative counters on the Stock Exchange and that, consequently, as long as this feature of the capital structure of the Company remains, it will be difficult for the Company to obtain the large capital needed for its expansion either from the capital market or from the Government. The question, however, has eluded solution for a decade. The reason is that, although the holders of the deferred shares are prepared for their conversion into ordinary shares of the Company, they have been demanding a ratio for conversion which has been regarded as too high by the holders of the ordinary shares. In the last three years, the solution of the question has come to be regarded as urgent, because the Company requires a large amount of additional capital for the urgently and vitally needed expansion in its production. In its report of 1949, the Tariff Board recommended the conversion of the deferred shares into ordinary ones at an early date and in its resolution dated 20th May, 1949, the Government of India indicated its acceptance of the recommendation. The question is no longer the concern merely of the shareholders of the Company. The public also is vitally interested in it, because the Company is a national asset, an expansion in the production of which is vitally needed for the nation. As, however, the holders of the deferred and ordinary shares have been unable to agree to a ratio for the conversion of the deferred shares into ordinary ones, Mr. M. C. Setalvad has been appointed as a Mediator by the Company. The holders of the two classes of shares have appointed two informal committees to place their respective cases before the Mediator. It is reported that the two Committees have submitted memoranda to the Mediator, that the Committee of deferred shareholders has proposed a ratio of 11 to 1 for conversion, that the Committee of ordinary shareholders has proposed a ratio of 5 to 1 and that their spokesmen will argue their respective cases before the Mediator in a few days. As the public also is vitally interested in the solution of the problem, it will be useful to consider the arguments that are reported to have been advanced by the two sides before the Mediator in support of the two ratios proposed by them.

Deferred Committee's Contention

The following arguments are said to have been urged before the Mediator on behalf of the holders of deferred shares in support of the 11-to-1 ratio:

(1) In raising the capital of the Company, the promoters maintained the ratio of 1 deferred share to 10 ordinary shares with regard to the allotment of shares.

(2) If the dividends paid on the two classes of shares from time to time are to be taken into account in determining the ratio, the proper basis for doing so would be not the amounts of dividends actually paid but the percentages of dividends paid on Rs. 75 representing the face value of each ordinary share and on Rs. 30 representing the face value of each deferred share. According to the Articles of Association, the ordinary shares receive 8 per cent. dividend, then the deferred shares receive 25 per cent. dividend and the balance of divisible profits is divided equally among ordinary and deferred shares. This means that, if a dividend of Rs. 30 is declared on an ordinary share, a deferred share would receive Rs. 179-12-11. The percentage of Rs. 30 dividend to the face value of Rs. 75 of an ordinary share is 40, while the percentage of Rs. 179-12-11 dividend to the face value of Rs. 30 of a deferred share is 600. This would give a ratio of 40 to 600, i.e., 1 to 15.

(3) Large amounts of the net profits of the Company have been carried to reserves and other funds every year or ploughed back in other ways into the Company. Had they been distributed, the difference between the amounts of the dividends received by each ordinary share and each deferred share would have been far greater and the difference between the percentages of the dividends on the two shares calculated in the way indicated above would have been still greater. Further, the very large reserves and other funds of the Company, built up out of undistributed profits at the expense of the holders of deferred shares, have increased greatly the capital assets of the Company, which in turn have increased the profits of the Company. This has enabled the ordinary shareholders to obtain higher dividends than they could have done otherwise. These considerations should be kept in mind in determining the ratio of conversion.

(4) The ratio between the market values of the ordinary and deferred shares can give no guidance for determining the ratio of the intrinsic values of the shares and the ratio of conversion, because the market values have fluctuated widely under the influence of several extraneous factors, such as the political situation, economic disturbances within and outside the country, changes in the budgetary policies of the Government of India (Liaquat Ali budget, for instance), Partition of the country, bull and bear raids, etc. Moreover, the market values of the two classes of shares have fluctuated without much relation to each other. Thus, the ratio of the market values has fluctuated as far between as 1 : 15.8 and 1 : 2.5. Furthermore, the market values have gone down heavily since August 1946, although the value of the assets of the Company has gone on increasing.

(5) According to the Memorandum of Association of the Company, if the Company is taken into liquidation, its surplus assets, after meeting all liabilities, must be divided between the holders of ordinary and deferred shares in the proportion of 40 per cent. to 60 per cent. As conversion of deferred shares into ordinary shares would mean extinction of the former shares and, therefore, liquidation of the Company so far as these shares are concerned, the correct way to find out the ratio of conversion would be to divide the surplus assets of the Company between the two classes of shares in the above proportion. The ratio between the amount of surplus assets and the paid-up value to which each ordinary share and each deferred share would be entitled would give the correct ratio of conversion.

Taking the valuation of the fixed assets of the Company, made by an American firm, and adding the valuation of the ore mines, quarries and collieries owned by the Company, and the valuation of the assets of the Company other than fixed assets and the goodwill of the Company, the total value of the assets of the Company would be about Rs. 150 crores. The total liabilities of the Company, including its capital, would be about Rs. 29 crores. The surplus assets divisible among the holders of ordinary and deferred shares would, therefore, be about Rs. 121 crores. If 40 per cent. of this amount is divided among holders of 350,000 ordinary shares and if the paid-up value of Rs. 75 of each share is added, each ordinary shareholder would receive Rs. 1,458. If 60 per cent. of the surplus assets are divided among holders of 48,750 deferred shares and if the paid-up value of Rs. 30 of each share is added, each deferred shareholder would receive Rs. 14,922. The ratio of conversion on the basis of the two figures would come to 1:10.2. This ratio does not take into account the value of minerals and coal contained in the mines and collieries of the Company.

(6) The holders of the deferred shares have borne very heavy risks of losing their entire capital from the inception of the Company, because the Company has had to face several severe crises. Although the paid-up value of each share is Rs. 30 only, a majority of the shares were subscribed to at a premium of Rs. 370 per share in 1917. Moreover, the present holders of a large proportion of the shares have acquired them subsequently at high prices prevailing in the market. All these circumstances should be taken into account in fixing the conversion ratio.

Ordinary Committee's Reply

The above arguments are said to have been challenged by the spokesmen of ordinary shareholders on the following grounds:

(1) The prospectus of the Company shows that one deferred share was offered with 10 ordinary or 20 preference shares. If, for this reason, one deferred share is to be regarded as equal to 10 ordinary shares, as suggested in the first argument mentioned above, it will have to be regarded as equal to 20 preference shares. But none can take the latter stand. What happened was merely that the Company, in order to sell the ordinary and preference capital, offered a deferred share to a person, only if he took up either 10 ordinary shares or 20 preference shares, so that the holders of deferred shares would have stakes also in the other capital of the Company.

(2) The principle of percentage of dividend to paid-up capital in ascertaining the value of a share, advocated in the second argument mentioned above, is fanciful and has no relation to reality, because the value of a share to the buyer depends upon the *amount* of dividend which he receives and not upon the percentage which the dividend bears to the paid-up value of the share.

(3) Reserves are a first charge on the profits of the Company, according to the contract included in its Memorandum and Articles, which have laid down that dividends are payable out of the profits available for distribution, after carrying necessary amounts to reserves. Hence, complaints regarding the creation of reserves, contained in the above third argument, are unjustified. Failure to build up adequate reserves would have reduced the profits of the Company and this would have adversely affected the dividends of deferred shares more than those of ordinary ones.

(4) As regards the fourth argument given above, it may be stated that the prices at which shares change hands in the ordinary course of business on the Stock Exchanges, when no abnormalities are affecting the market, are an indication of their true value. There have been several periods during which this has been true of the ordinary and deferred shares.

(5) As regards the fifth argument mentioned above, it may be asserted that the proper consideration in tackling the conversion problem is not an estimated valuation of separate assets of the Company. Replacement values or break-up values have no relevance in a scheme of conversion, which does not involve any sale or break-up of the Company. The proper consideration in the problem is the earning capacity and the trend of profits. Profits are likely to show a declining trend in the immediate future, as Government is not likely to make an adequate allowance for increasing cost of labour resulting from the grant of various benefits, in fixing retention prices of steel. Moreover, the figures given in the argument are merely a rough estimate of the costs of items and not a statement of replacement values of the Company's works, viz., replacement costs new less depreciation. Further, goodwill has no separate value here, because its advantages are reflected in the profits and because it produces nothing separately. Similarly, all the advantages of mines are comprised in the profits of the Company and the mines produce no separate profit. The deferred shareholders would not be prepared to buy the ordinary shares at anything like the value of Rs. 1,458 given to each of them in the above calculation.

(6) If 1 to 11 is adopted as the conversion ratio, grave injustice would be done to the holders of ordinary shares, because the dividends and market values of these shares would go down by one-third. At this ratio, 536,230 new ordinary shares would have to be issued in place of the existing 48,750 deferred shares. Thus, the total number of ordinary shares would go up to 886,250. Even if the Company's distributable profits do not decline in the future, the dividend on all the 886,250 ordinary shares would come to about Rs. 14-8 per share, as against Rs. 21 paid during the last two years. This reduction in the dividend by about one-third would bring down the market value of the shares roughly to the same extent. On the other hand, the holders of the existing deferred shares would get about Rs. 22 lakhs more by way of dividend and the market value of the 11 ordinary shares which they would obtain for 1 deferred share would be substantially greater than the present market value of a deferred share.

Ordinary Shareholders' Case

The following arguments are reported to have been advanced before the Mediator on behalf of the holders of ordinary shares in support of the 1-to-5 ratio:

(1) The ratio of total dividends paid so far by the Company on ordinary and deferred shares comes to 1 to 5.1.

(2) The ratio of market values of ordinary shares and deferred shares during the last 15 years, which have passed through good as well as bad periods, has fluctuated between 1 to 3.9 and 1 to 5.7. The Government in India, as well as in England, has paid for the shares of going companies acquired by it, on the basis of their stock market prices. Quotations of the sale of the ordinary and deferred shares of the Tata Company, with all rights attached to them, including those in the winding-up, on the Stock Exchanges over a number of years, month by month, are the best evidence or test of the fair value of the shares. Replacement value or break-up value cannot be taken as the basis, because the holders of the deferred shares do not have sufficient voting strength to take the Company into liquidation or to enforce a sale. Moreover, the Company is a gigantic concern and cannot have a fair buyer. A scheme of conversion involves neither a winding-up nor a sale of the concern. Even if a sale at replacement value is supposed, the Company will have to pay a huge amount by way of tax for the excess over the written-down values and compensation to managing agents and to the holders of preference shares, which will have to be valued for the purpose. These shareholders are entitled to high dividends and have enough voting rights to prevent a winding-up or a sale unless large compensation is paid to them.

(3) A scheme of conversion should be based on earning capacity, that is, the estimated future earnings based on past earnings adjusted reasonably to future contingencies affecting future earning capacity, because the value of a business is determined by its earning power, the object of an investment being to earn income. Assets have no importance apart from their earning capacity and their value depends upon this capacity.

(4) The published accounts of the Company show that, during the last 12 years, while the revenue has gone on increasing, the ratio of gross profits to revenue has been declining. The reason is that the expenses have increased more rapidly than the revenues, on account of increased payment to labour in the form of annual grade increases, bonus, dearness allowance and other benefits, and of higher prices of raw materials and stores. This declining trend in profits is likely to persist so long as the Company has to work under a regime of control. Further, the demands for depreciation, taxes and reserves for the modernisation of plant, industrial housing, etc., are likely to be higher in future. Furthermore, the new Provident Fund Act and the Employees' State Insurance Act will increase the expenses of the Company still further.

(5) The benefits in the form of the initial equity of 8 per cent. dividend and the larger voting rights enjoyed by the holders of ordinary shares must be taken into account in determining the ratio of conversion.

Deferred Committee's Reply

The above arguments may be challenged by the spokesmen of deferred shareholders on the following grounds:

(1) The answer to the first argument is contained in the second argument of the deferred

(Continued on page 51)

SOME PROBLEMS OF SUGAR INDUSTRY

IMPORTANCE OF RAISING SUGAR RECOVERY STRESSED

THE fear of a fall in sugar output during the current (1952-53) sugar season, expressed in many quarters, is clearly not shared by Mr. A. G. Bandi Gowda, Chairman and Managing Director of one of the most progressive sugar factories in India, namely, the Mysore Sugar Company Ltd. On the contrary, in the course of his address at the Company's annual general meeting held at Bangalore last week, Mr. Bandi Gowda struck an optimistic note regarding the future of the sugar industry in India. The Government of India's latest sugar policy, he maintained, contained several drastic changes and might be expected to succeed in maintaining production and restoring healthy conditions in the sugar market. He also held out the hope that the reduction in the price of sugarcane would enable the consumer to get sugar at a "considerably lower price" after the existing stock of dearer sugar was exhausted.

The above statement, however, should not be construed to mean that all is, and will be, well on the Indian sugar front. For, as the Mysore Sugar Company Chairman rightly remarked, with tariff protection gone, production outstripping internal demand necessitating exports to foreign countries, and a buyers' market ruling in the country, the hope of the Indian sugar industry lies in its ability to recover more and more sugar not only from the cane within the factory but also from the cane on the field. Thus, the country should aim at higher percentage of sugar recovery and also larger yield of cane from land. It is certainly gratifying to be told that the Mysore Sugar Company is aiming at this very objective. That their efforts have already met with success is borne out by the fact that the recovery percentage of sugar from cane in the factory during the previous season was as high as 11.51, which favourably compares with the all-India average figure of 9.78. Similarly, the yield of cane per acre obtained by the growers in the Mysore State amounted to 38 tons—the yield in one farm was as high as 104 tons—as against 12 tons in the U.P. and 10 tons in Bihar. It is to be hoped that the sugar factories elsewhere, more particularly in the U.P. and Bihar, would emulate the example of the Mysore Sugar factory for attaining a high degree of efficiency of operations and of the high sucrose content of cane.

Disposal of Stocks

Proceeding, Mr. Bandi Gowda referred to what he characterised as the most urgent problem facing the Indian sugar industry, namely, the "profitable disposal of the huge carry-over stock of the previous sugar season." There is, according to him, no ready internal demand for sugar and as such export offers the only solution. But the comparatively high price of sugar stands in the way and "not much headway," to quote him, "has been made in this direction so far." Citing the instance of such a small island as Cuba, which produces nearly 6.2 million tons of sugar per annum and which is able to export the major portion to foreign countries at competitive prices, Mr. Bandi Gowda pointed out that it should not be difficult for India to build an export market for its small surplus. This, of course, depends on whether the trend of production of sugar in the coming years will be maintained at the present rate of about 1.5 million tons per annum. Appropriately enough, Mr. Bandi Gowda remarked that the record output of sugar during the 1951-52 season, after a series of years of underproduction and scarcity of sugar, went to show to what height the industry was capable of rising, given favourable conditions.

A disquieting problem confronting the Mysore Sugar factory is the continued shortage of water-supplies for sugarcane cultivation, following the failure of the monsoon and the drying up of the Krishnarajasagar Reservoir. Fresh planting of sugarcane, we are told, has been stopped since September, 1952. There is still standing sugarcane crop over an area of 1,600 acres awaiting harvest and supply to the factory. The closure of the factory at this stage for want of water will result in a large amount of cane being condemned on the fields, causing heavy loss to the peasants. In view of the gravity of the situation, the irrigation authorities, it is noteworthy, have allowed the storage of water in some of the tanks in Mandya for the exclusive use of the factory. This, however, is only a temporary measure. As a permanent measure, the factory has undertaken the construction of what is called a spray pond. The construction of the tank, it is stated, also fits in with the long-range scheme of drawing the minimum quantity of water from the canal. In view of these measures, the factory's crushing operations may not suffer a serious setback during the current year. On the other hand, the year 1952-53 will, perhaps, turn out to be, as Mr. Bandi Gowda himself confidently expects, a normal one for the Mysore Sugar factory.

SUGAR DESPATCHES TO BE ACCELERATED

For some time past, a general shortage of sugar supplies is said to have been experienced in several consuming centres, particularly in the Bombay region and in South India. This is indeed surprising, considering the highly satisfactory stock position; the aggregate stocks of sugar lying unsold with the mills and the godowns are of the order of more than four lakh tons. What then are the factors responsible for the paradox of scarcity conditions in the midst of plentiful supplies? The chief factor is that, owing to transport difficulties, the movement of sugar from one centre to another has been adversely affected, resulting in an artificial scarcity in several centres. It is, therefore, gratifying to note that the Standing Committee of the Central Board of Transport has decided to accelerate the movement of sugar from factories to the different consuming centres.

Another important reason for the scarcity conditions in respect of sugar has been the eagerness, on the part of some traders, to replenish their depleted stocks. Yet another factor has been the general improvement in the offtake of sugar in all important centres. This is the result of an increase in demand for sugar both for domestic consumption and export trade. Some export business is reported to have been done with Japan, while negotiations are going on with Egypt for a barter deal of cotton and sugar; Egypt's requirements of sugar are said to be fairly large.

Because of the shortage of sugar, as noted above, sugar prices developed a hardening tendency recently. Thus, the price of sugar in Bombay swiftly advanced from Rs. 84 for ready delivery in the beginning of December to Rs. 90 towards the end of the month. The rate for *Maha* delivery, which had touched a low of Rs. 78-10 early in December, stood at Rs. 83-12 on 26th December. Similarly, in Calcutta, the free sugar market registered a swift advance in prices.

Following the rise in sugar prices, the Government of India released on Saturday last a further quantity of 104,000 tons of sugar from the controlled stocks of the 1951-52 production. This is in addition to the 99,470 tons released early last month. The quota now released is to be sold by the factories to buyers of their own choice at the reduced ex-factory control prices. The release of sugar is in accordance with the Government of India's policy, announced on 25th September, 1952, that, if the market prices of sugar tend to rise to unreasonably high levels, the Government will release sugar from the reserve stocks. Following the release of an additional quantity, the upward trend in the price of sugar has been arrested; in fact, there has been a decline. In Bombay, sugar is now being quoted at Rs. 89-3 for ready delivery and Rs. 82-12 for *Maha* delivery.

SUGARCANE PRICES

The following are the average prices of cane (per maund) paid by the sugar factories in the different regions during the month of November, 1952, as compared with the corresponding month in the previous year:

	Delivery at factory		*Actually received by grower*	
	Nov., 1952	Nov., 1951	Nov., 1952	Nov., 1951
	Rs. a. p.	Rs. a. p.	Rs. a. p.	Rs. a. p.
All-India ..	1 6 3	1 13 3	1 4 7	1 12 1
U.P.	1 6 10	1 13 6	1 4 5	1 11 9
Bihar	1 5 6	1 13 4	1 4 2	1 12 0
Bombay ..	1 7 6	1 12 2	1 5 0	1 13 10
Madras ..	1 5 0	1 12 0	1 5 0	1 12 0

It may be noted here that the minimum prices payable for sugarcane by the vacuum pan factories in the current season is fixed at Re. 1-5 per maund for gate delivery and Re. 1-3 for delivery at railway centres.

THE COLOUR OF "GUR"

The role of tannins present in cane juice in the development of colour in *gur* has been the subject of a research study undertaken at the Central Sugarcane Research Station, Pusa, Bihar, with the financial assistance, of the Bihar Government, and the Indian Central Sugarcane Committee. Colour is considered to be the most important factor in assessing the quality of *gur*. Manufacturers have not, however, succeeded in eliminating the colouring matter completely from the final product. Several reasons have been advanced for the development of colour. Sugarcane grown under heavy dressings of nitrogenous manures, it is suggested, yield *gur* of inferior quality. Another suggestion is that amino-acids and glucose present in the cane juice react with each other at the high temperatures obtaining during the boiling process to produce dark-coloured compounds. More recently, the colour of *gur* has been attributed to colloidal constituents present in the juice.

STOWING IN COAL MINES

HIGH COST OF TRANSPORT OF SAND, THE MAIN OBSTACLE

THE importance of stowing in coal mines in India not only as a means of conserving coal but also of preventing accidents arising from collapses, fires and mishaps, was stressed by Mr. K. C. Reddy, Minister for Production, Government of India, in his inaugural address to the Mining Conference and Exhibition of the National Association of Colliery Managers, held on 20th December last at Disergarh, near Asansol. He expressed concern at the absence of facilities for stowing in the majority of coal mines in India. At present, only 58 collieries are carrying on stowing, the total quantity of coal mined with the aid of stowing accounting for only 2.74 million tons out of an aggregate production of 34 million tons annually. This proportion is negligible in the case of metallurgical coal, the need for conservation of which is not questioned. Thus, out of 8 million tons of metallurgical coal produced in this country, only 0.8 million tons is met by stowing. Consequently, vast quantities of coal, especially high grade and metallurgical coal, are being wasted through the ordinary process of mining. The amount of coal that will be lost in the next few years, if suitable measures for stowing in all the collieries are not adopted, is estimated at quite a few million tons. The loss of coal, owing to inadequate stowing will be as high as 50 per cent. of the output; in the Jharia Coalfields the loss is said to be even more. It is needless, therefore, to stress that stowing should receive the urgent consideration of the authorities concerned.

That the progress of stowing in Indian coal mines has been poor will be evident when it is remembered that stowing was begun some four decades ago. To be precise, it was first introduced in Ballarpur Collieries in the Chanda District of Madhya Pradesh as far back as in 1914. Five years later, it came to be practised in the Jharia Coalfields. Till recently, it was mostly being used as a measure of safety. Latterly, however, a number of mines have been resorting to it for purposes of maximum extraction also. It is true that stowing adds to the cost of extraction, but mining interests have not been slow to recognise that without stowing only a small fraction of available coal resources in any mine could be extracted and that, as such, stowing is a profitable proposition in the long run.

Most Successful Technique

The most successful technique developed so far is hydraulic sand stowing. Sand has been found to be the most suitable material for stowing and lends itself particularly to hydraulic stowing. It is, however, a costly technique, inasmuch as sand has to be transported over wide distances. At times, the distances are so vast that it makes the use of sand for stowing purposes uneconomic. In fact, the cost of transport of sand to areas where it is needed most for stowing is a formidable obstacle to the widespread adoption of stowing, despite improvements in the methods of transport, as, for instance, the aerial ropeway system.

There is also one more difficulty to which attention needs to be drawn. Although the availability of sand for stowing at present is considerable, it is not unlimited. This is because of the time factor and the length of the bank or area from which it is to be gathered. The sand that is removed for stowing is replaceable only by rivers. The rate at which it can be gathered, therefore, depends on the rate at which it is replaced by rivers every year. This factor as well as the cost of transport, clearly spotlights the need for research to find out suitable and cheap materials to replace, wholly or partially, sand for stowing purposes. It is gratifying to note that Mr. Reddy recognised this need in his address to the Conference.

CONSUMPTION OF COAL

As is generally known, due to the overall traffic requirements exceeding the present availability of wagons, considerable difficulty is being experienced by Government in meeting the requirements of coal of the various mills and manufacturing concerns in the country. The difficulty is being accentuated by the industrial units which have not been using coal suddenly changing their process of manufacture, involving increase in coal consumption, without ascertaining whether increased supplies could be had. The Government of India has, therefore, cautioned the industrial units against this practice which has on occasions resulted, and is likely to result, in disappointment to them due to their demands for increased supplies of coal not being met fully.

CLOSURE OF FUTURES TRADING IN JUTE GOODS

MEASURES TO STABILISE RAW JUTE PRICES

SINCE we last referred to the hectic behaviour of the trade in jute and jute goods in Calcutta (*vide* page 1083, *Commerce* dated 13th December, 1952), much water has flown in the Ganges. Reference must particularly be made here to two developments that took place since then, one relating to the Government of India's jute policy and the other the closure of the *fatka* market in Calcutta and subsequent events.

The steady fall in raw jute prices which had been noticed in November, 1952, and thereafter, had evoked fears that a further fall in prices might endanger the drive for self-sufficiency in jute. These fears found full expression in the Union Parliament which led to a statement of the Government of India's policy regarding the jute industry by the Minister for Commerce and Industry, Mr. T. T. Krishnamachari, on 19th December. He stated that the Government had been watching with concern the falling price of jute, and, as a first step to deal with the situation, decided that the *fatka* market in jute should immediately be closed. This would be followed, said the Minister, by other measures to cope with the situation and these included (1) a survey by the Indian Jute Mills' Association of the availability of jute in outlying areas, particularly in Bihar, (2) a readjustment of freights if possible, to assist the growers in relatively remote areas, and (3) a suggestion by the Government to the I.J.M.A., that the latter must increase its purchases of Indian raw jute in spite of the fact that it was in possession of about 10 week's stocks. As a result of these steps, the Minister hoped that prices of raw jute would materially improve. He further assured the House that the Government would not hesitate to take further steps if such became necessary. The behaviour of the market since then shows that, although prices of raw jute have not appreciably risen, the downward tendency has been arrested. Raw jute is now (4th January) being quoted at Rs. 24 as against Rs. 23-4 on the 21st December. In the jute goods section, hessians 40" × 10 oz. are ruling at Rs. 43-4 per 100 yards and B twills at Rs. 97 per 100 bags, as compared with Rs. 43-8 and Rs. 93-8, respectively, a fortnight before.

Now to return to the other points in the statement of the Minister. He gave statistics to deny that depression in prices was due to free imports from Pakistan. Thus, while the deliveries to mills from July to November in 1951, in India amounted to 14 lakh bales, imports from Pakistan aggregated 11 lakh bales. But during the same period of 1952, the delivery amounted to 17 lakh bales, of which Pakistani jute accounted for only about 5.75 lakh bales. He agreed that prices of jute had dropped in other areas. In the second fortnight of November, 1952, the price of raw jute in Bihar, for instance, had tumbled to Rs. 13-8 in Saharsa, and Rs. 15-8 in Darbhanga, though it was a little higher in Purnea. This was attributed by the Minister partly to quality and partly to freight and transport charges which from the outlying areas to Calcutta amounted to as much as Rs. 7 per maund. He stated further that the Government was asking the I.J.M.A. to send a representative to make a survey of the jute in outlying areas, especially in Bihar, so that direct contact might be established between mills and the growers. He revealed also that the railway administration was looking into the question of moving raw jute from the outlying areas and to see whether it was possible to adjust freight rates to assist the growers in remote areas. The various Ministries of the Government were considering the question whether growth of inferior jute such as *mesta* and *bimli* should be encouraged or not.

Asked if the Government had any idea of controlling the imports of jute from Pakistan, Mr. Krishnamachari stated that only half the quantity of raw jute imported in 1951 had been imported in 1952. In regard to better quality hessian, the Continental mills, which were obtaining their supply from Pakistan, would get an advantage over India, if this country did not import some of the high quality jute from Pakistan. It was this consideration that made the Government of India allow the import of jute from Pakistan, but, if subsequent events were to show that the import of jute from Pakistan interfered with the offtake of Indian jute, the Government would, he said, consider all steps necessary for the purpose. He, however, felt that according to present indications, no such steps were necessary. Asked about the economic price for raw jute, the Minister said that, if the price of rice was taken to determine the economic price of raw jute in Bengal, he understood that the economic price for the better quality of Assam jat bottom produced in India might be somewhere in the region of Rs. 22 to Rs. 24 per maund in Calcutta. He could not, however, say anything on the subject with authority. If as a result of the closure of the *fatka* market jute goods prices rose to the position that obtained before the hectic activity, then automatically the price for raw jute might rise to Rs. 27 per maund. That would be, he said, an economic price under the present conditions.

On the same day when Mr. Krishnamachari made his statement on jute policy as above, the Governor of West Bengal issued an ordinance in exercise of the powers conferred by sub-section (1) of section 3 of the West Bengal Jute Goods Act, 1950, prohibiting futures trading in jute goods. This was in response to the persistent demands from the trade for the closure of the *fatka* market on the ground that excessive speculation in that market was engineering violent fluctuations in prices in such a manner as to produce an unhealthy and artificial slump in the raw jute market, as well as to unsettle the overseas demand for jute manufactures. In fact, at a meeting of the hessian and gunny brokers held on 9th December, a resolution was passed calling upon the Government to suspend futures trading which had been reopened only in April, 1952 after a lapse of more than two and a half years.

The Ordinance, however, led to a piquant situation, because it failed to distinguish between forward delivery contracts and futures trading. This lapse on the part of the Government gave rise to doubts about the legality of forward delivery contracts and the jute mills were, therefore, unwilling to enter into such contracts. Further, there was a serious apprehension that, taking advantage of this position, the forward commitments which had already been entered into might be disowned by the opportunist elements in the trade. The West Bengal Government, however, soon realised its mistake and dispelled all doubts and confusion by issuing another ordinance—this was done on 23rd December, 1952—which added an appropriate explanation to the Act making clear, with retrospective effect, that normal forward contracts were not affected by the earlier ordinance. This action by the West Bengal Government enabled the jute goods market to function again, and forward business in delivery contracts, as distinguished from futures trading, was resumed again. The volume of business, however, has remained greatly restricted since then, as speculative futures operations are banned.

(*Concluded from next column*)

cumstances, but whatever happened, this stock must be available so that the Board could deal immediately with any mischievous speculative movement. In the present conditions of consumption and production it is doubtful if a buffer stock can be built up, unless, of course, exports are completely banned, at least till such time as internal production is considerably raised. The Minister, however, promised the Coffee Board that he would consider any proposal in this direction. Clearly, it is now the responsibility of the Board to submit proposals acceptable alike to the producers, consumers and the Governments.

Coffee dealers have, however, suffered somewhat through the swift fall in prices. The Indian Chamber of Commerce, Coimbatore, has made a representation to the Government urging the need for permitting the export of 2,500 tons of accumulated coffee stocks. This measure, it is held, would compensate the losses so far sustained by dealers. It is true that the dealers have suffered on the stocks they hold through the Board's rejection of higher bids at the auctions. But the remedy certainly does not lie in permitting exports, for it would curtail internal supply and raise prices. After all, the chief objective is to reduce coffee prices. The dealers will naturally do well to work on a lower margin of profit and hope for increased turnover.

BRINGING DOWN COFFEE PRICES

OFFICIAL POLICY OUTLINED

THE decline in coffee prices since October last from the peak levels touched in September, has been naturally enough greeted with a sigh of relief by the consumers all over the country. The prices of Plantation A and Arabica Cherry Flats, which had stood at Rs. 196-7 and Rs. 135-7 per cwt., respectively, in March last, touched a peak of Rs. 316-11 and Rs. 268-10 in September. In October, when the recession started, the price of Plantation A dropped by about Rs. 12 per cwt. and that of Arabica Cherry by Rs 9. The latest quotations available, as on 22nd December, 1952, show that Plantation A has declined as much as to Rs. 252-8 and Arabica Cherry Flats to a low of Rs. 165. This fall in coffee prices has been caused by two factors. In the first place, the Government did well to order the cancellation of the export quota of 2,000 tons reserved for 1952-53. The second factor was the adoption of the system of arbitrary selection and declaration of bids in coffee auctions by the Indian Coffee Board in recent months. Although coffee prices have declined by a fair measure, it is clear that they are, nevertheless, far above those that ruled in April. This explains why the decline has not yet been greeted with pronounced enthusiasm by consumers.

The question of preventing any rise in coffee prices and of bringing the prices to more reasonable levels was, therefore, discussed at an informal meeting of the Indian Coffee Board held in Bangalore last week. The meeting was also attended by Mr. T. T. Krishnamachari, Union Minister for Commerce and Industry. The details of the discussion that took place at the meeting are not, however, available, but at a Press interview in Madras, the Minister explained the Government's policy on coffee and indicated the lines on which the Government sought to approach this difficult question.

The basic cause for the rise in prices of coffee, during the months April to September, was the artificial scarcity created as a result of the export policy followed in the past, which was exploited by traders in coffee. But the Government of India would appear to have changed its export policy, as witness the cancellation of the export quota for 1952-53, as already indicated. This is further borne out by the Minister's statement that the Government's present policy was not to starve the local markets, even though the higher prices outside India might hold out temptations for export. This is a realistic policy in the interests of domestic consumers, for, as the Minister himself pointed out, they had suffered greatly by the recent rise in prices.

The decline in coffee prices naturally raises the question of an economic price for the producer. When this subject came up for discussion at the Coffee Board meeting, the Minister is stated to have impressed upon the Board that while the producer should get a fair price, the entire benefit of price reduction should go to the consumer, and in this process the intermediaries should have no place. At the same time, the Minister stressed the need for increasing the yield of coffee which had touched a low level. An idea of the disappointing yield of estates in India can be gained from the following statistics of the Coffee Board. The average yield of estates of 5 to 10 acres is only .87 cwt. of coffee per acre; 10 to 25 acres: .93 cwt.; 25 to 50 acres: 1.12 cwt.; 50 to 100 acres: 1.35 cwt.; 100 to 150 acres: 1.66 cwt.; 150 to 200 acres: 1.88 cwt.; 200 acres and above: 2.28 cwts. It may be noted that while the average yield of 2.28 cwts. from estates of 200 acres and above is itself disquieting, the vast majority of the estates in India have a small acreage.

The system of auctions has been the subject matter of public criticism since it is held that the system was mainly responsible for the high level of coffee prices. The continuation of this system is, therefore, undesirable if the object of the Government is to be achieved. The Commerce Minister, accordingly, called for alternative proposals from the Board, which would ensure some control over prices. No decision to fix an *ad hoc* price was taken at the meeting, though a number of suggestions was made towards that end. One of the suggestions made was to build up a buffer stock which would enable better control over prices. In this connection, it may be recalled that when a similar situation arose in 1948, it was agreed that a buffer stock of coffee should ordinarily be carried by the Board at the end of every surplus year to be released on the market as soon as this could safely be done. The volume of this stock was left to be decided according to cir-

(*Continued in previous column*)

PLASTICS INDUSTRY DURING 1952

DECLINE IN PRICES AFFECTS PRODUCTION

(*By R. C. SHAH*)

THE year 1952 has been a year of great many difficulties for the plastic industry in India. Though the raw material supply position eased considerably during the year, the demand for finished goods tapered off so substantially that a serious crisis has developed in the industry.

The liberal import policy for plastics raw materials, such as polystyrene, polyethylene, cellulose acetate, poly-vinyl chloride, etc., was extended during the first half of the year 1952. There was open general licence for these materials even from dollar areas. Also, the prices for these materials from the U.S. and Canada, which had soared to high levels in 1951, declined. There was a continuous fall in the prices of raw materials and by the beginning of 1952, prices came very near to pre-Korean war levels. However, because of the new dollar-rupee ratio, the prices in Indian money worked much higher than before. The supply position in the U.S. and Canada became very easy, on account of more and more styrene, which was formerly being utilised largely for the manufacture of synthetic rubber, was being made available for production of polystyrene. During the last two months of the year 1951 and the first two months of 1952, the imports of plastics raw materials from the United States and Canada have been the heaviest.

The manufacture of raw materials developed considerably in the U.K., and with advices for better supplies, and on account of deteriorated dollar exchange position, the open general licence for plastics raw materials was cancelled for dollar areas for the second half of the year 1952, and this was replaced by open general licence for soft currency areas only. As a result of this change, the imports of raw materials, which formerly came mainly from the U.S. and Canada, were now available from the U.K. The U.K. emerged during the second half of 1952 as the biggest exporter of plastics raw materials to India.

Heavy Imports

On account of unprecedented heavy imports of raw materials and easy supply position from soft currency areas, and due to fall in actual consumption, because of restricted demand, and slump conditions for finished goods, the prices, at times, for raw materials in India, declined to low levels and were even below actual landed cost.

Plastics raw materials, of late, are also being offered from Germany and Italy. Germany has replaced the U.K. in the European market and has made a formidable bid for the Indian market also. The following figures for imports of plastics raw materials from the U.S. and the U.K. are interesting:—

(In tons)

	U.S. 1951	U.K. 1950	U.K. 1951	U.S. Jan. to Aug., 1952
Alkayds	35	..	..	..
Vinyls	24	..	..	..
Phenolics	19	..	..	..
U.F. and melamine	6	..	..	..
Polystyrene	739	..	..	..
Cellulose acetate moulding powder	141	..	..	..
Other materials	17	..	..	..
Total	981	1,231	2,744	1,616

The demand for plastics goods shrunk considerably. The slump, which came during February-March, 1952, affected the plastics industry also. Because of the tight credit conditions, the carrying capacity of dealers suffered heavily, and the sales by the factories declined. Stocks in the market and with the dealers lasted from end of February to May, 1952, and during the period, the factories had very little sales.

Further, on account of the losses due to reduction in prices, suffered by the dealers, the merchants became very cautious and even when the trade was resumed, the actual offtake by the market has been substantially lower than usual. In face of losses suffered, the dealers refused to carry large stocks and risk, and the factories thus lost an important support.

Prices of Finished Goods

As a result of the slump, the prices for finished products went down further. The margins were reduced and even with reduced margins, the volume of turnover was very low.

These conditions created a difficult situation for the factories. Many factories faced financial crisis. Purchases of raw materials were planned in the usual way. But on account of the unforeseen slump, the sales ceased all of a sudden. It became difficult to take delivery of imported raw materials and to finance the purchases. The selling prices saw new 'lows,' while expenses continued to soar high. Stocks for finished goods accumulated. This made it impossible for factories to continue production. Consequently, many factories closed down, and all curtailed production.

The slump conditions also affected the production of P.F. moulding powder. The demand for P.F. moulding powder was also on a very low level. The thermoplastics goods, on account of new low level of prices, presented serious competition to thermosetting plastics goods; and the actual consumption for P.F. moulding powder has been very low. The units consuming this powder found it absolutely uneconomic to consume it, as the prices for finished products became totally unremunerative. As against the average production of 38,300 lbs. of P.F. powder per month in 1951, the average for locally produced P.F. powder for the year 1952 works out to about 50,000 lbs. The slight improvement in local manufacture is due to easy availability of raw materials, and restricted imports of foreign P.F. moulding powder. During the year, medium shock resistance P.F. moulding powder has been satisfactorily manufactured in the country. The Indian Standards Institute has convened a sub-committee to fix the standards for phenol formaldehyde moulding powder. As the initial task, the Committee has started collecting data for the locally manufactured P.F. moulding powders.

It has been possible to export plastics products to Ceylon, Burma, Indonesia and Africa. In May to September, there were better exports and they were much higher than in any previous year. There is good possibility of developing the export trade. However, to make Indian products competitive, it is very necessary to obtain a refund of duty on raw materials, which are used in the manufacture of exported items. The All-India Plastics Manufacturers' Association, at its annual meeting, held at Calcutta, drew the attention of the Government to the necessity of the refund of duty on raw materials used for exports and requested early and timely action, before the markets are lost to other countries.

The new Sales Tax Act, which has come into force in Bombay as from 1st November, 1952, has raised the tax on sale of plastics goods. Plastics goods are subjected to a special tax levy of 0·0-9 in a rupee. This new impost has been, in the context of continuous difficulties, like the last straw on the camel's back. The industry has no capacity to bear the additional burden. Because of this tax, Bombay has been losing ground as a distributing centre, and the trade is actually being directed to other States.

No Fresh Development

In the face of these difficulties, it is small wonder that there has been no new development. The manufacture of electrical accessories also received a setback on account of high foreign imports and unfavourable market conditions. Even in items like bottle caps, there has been new competition from the manufacturers of aluminium bottle caps. During 1952, a factory was started at Hyderabad for the manufacture of laminated sheets.

The need for better and new products has resulted in the wider use of cellulose acetate and polyethylene moulding powders in place of polystyrene. There has, on the whole, been no addition in injection and compression moulding capacity. No new plants and processes have been introduced. No new lines have been developed.

Outlook for the Industry

There is a possibility of getting urea technical from the Sindri Fertiliser Factory. This might facilitate the manufacture of urea formaldehyde moulding powder within the country. When the proposed oil refineries are finally set up, it may be possible to obtain phenol locally. If phenol is available locally, the production of P.F. moulding powders will be greatly helped. It might also prove to be a stepping stone for the development of P.F. resins and varnish industry. Again, when urea and phenol become available locally, the manufacture of urea and phenolic synthetic glues may be possible. These glues, it may be mentioned here, are widely used in bonding tea chests and plywood. There has been a large-scale increase in the fabrication of poly-vinyl chloride cloth and sheetings also. This line is also likely to be further developed.

The manufacture of plastics moulds, which is the foundation of the plastics industry, has shown good progress during the year. More and better moulds are produced locally. The question of protection to manufacture of moulds is likely to come up before the Tariff Commission at the time of the next enquiry, which is likely to be held in 1953. Research in high polymers and the suitability of indigenously available chemicals for use in the manufacture of plastics raw materials is being conducted at the National Chemical Laboratory at Poona. Because of bad conditions, the industry, by itself, has not been able to devote much attention to research. Difficult market conditions have compelled the manufacturers to explore new lines. With the possibility of development of other industries and with the prospect of opening up new lines, the plastics industry is likely to witness more and new developments in the new year.

HOUSING IN TROPICAL COUNTRIES

UTILISATION OF LOCAL MATERIALS EMPHASISED

THE symposium on scientific principles and their application to tropical building design and construction, organised recently under the joint auspices of the U.N.E.S.C.O., and the National Institute of Sciences at New Delhi, served as a refresher course to the engineers assembled from the South Asian region. The symposium was attended by consultants from the U.K., Holland and Israel and observers from the I.L.O., W.H.O., and the E.C.A.F.E., besides 150 delegates from Burma, Ceylon, Indonesia and various States of India. Dr. S. L. Hora, President of the National Institute of Sciences, presided over the occasion.

The symposium laid stress on the utilisation of local resources in materials as well as traditional knowledge in building houses in the South Asian region. It made it clear that planning should take into consideration not only the soil and climatic conditions but also the social and economic background of the persons for whom houses were to be built. This means that a study of human oecology should precede house building programmes. There was a general desire among the delegates that considerable research should be undertaken on the existing village huts and on the traditional materials that were being utilised in the villages. Nearly every one spotlighted the importance of ancillary services such as water-supply, drainage, sewage disposal, light, etc. They recommended that national committees should be formed in the various regions to co-ordinate research on housing.

Apart from these general conclusions, the delegates stressed the importance of layout in relation to physical features of the site, particularly contours, for economic and sanitary reasons and of the use of bamboo as a substitute for steel in reinforcing concrete and as building material for walling, etc. The utilisation of laminated and treated timber in building operations, it was held, ought to be encouraged. They also favoured research into soil conditions. It will be recalled that the Working Party of the E.C.A.F.E. on Housing and Housing Materials met in November, 1952, at New Delhi. The Party examined the possibilities of increasing the use of bamboo and secondary wood species as substitutes for steel and timber as well as of utilisation of forestry wastes like bagasse, saw dust and wood chips as substitute building materials and recommended two pilot plant operations—one for investigation into the treatment of bamboo and wood species in building houses and the other for the survey of clay suitable for making bricks and tiles. It is gratifying to note that experiments in the use of bamboo in reinforcing concrete are already being conducted in India. Prof. H. Neumann, one of the consultants of the U.N.E.S.C.O., from Israel, however, revealed that experiments conducted so far on the utilisation of bamboo in reinforcing concrete had unfortunately given only negative results. He conceded that if it proved to be a success in India, it would be a very important asset not only for India but also the South Asian countries in their house building programmes.

Provision of housing facilities is one of the chief problems facing the powers-that-be of South Asian countries. In India alone, even at a conservative estimate, about 3 million houses are required to house the population in the urban areas alone. What is standing in the way of more houses is not only lack of finance but also lack of designs for building houses at costs that are within the means of the countries concerned. Besides, there is also the problem of building houses that can withstand the climatic conditions of the regions. In the tropical regions bordering the equator the need of the hour is hurricane-resisting buildings. The disastrous effects of the hurricanes in Jamaica and Fiji, which occurred in 1951, are still fresh in our memory. It was proved then that only such houses as were provided with anti-hurricane shutters could stand the blasts of the hurricane to a considerable extent. In the prevention of hurricane damage a factor that is overlooked, according to Mr. Atkinson, the U.K. Colonial Liaison Officer at the Government's Building Research Station in London, is that "corrosion or rusting around nails is often considerable after a number of years." He says: "With corrosion comes lack of strength and particularly on the lee side of houses where there is considerable suction during a hurricane, walls can easily be torn away." Surprisingly, these aspects did not receive the proper attention they deserved. It is, however, noteworthy that these aspects are expected to occupy a prominent place on the agenda of the E.C.A.F.E. Conference on Tropical Buildings and Materials to be held in New Delhi in January, 1954.

Many of the South Asian countries are only just beginning to realise the importance of the use of local raw materials in building houses. It is true that the use of earth as a building material in the construction of cheap houses is not new, but its utility is being increasingly realised only latterly. Again, it was only during the recent war that soil stabilisation in the construction of airfields was used and the same principle of leavening the earth with cement is now being carried over to the sphere of building construction.

It is not possible to lay down absolute standards of housing for the South Asian region. For one thing, the specific requirements, which need to be met in order to safeguard health and to assure a given standard of health vary greatly in the different parts of South Asia and they are mainly dependent on weather conditions. And more important, what is regarded as an adequate standard of comfort will be determined according to local customs and local levels of income and changes in taste and social conscience. All these require on-the-spot study. Small wonder, therefore, that there is emphasis on the constitution of national committees in the region to conduct study of and research into housing problems, including habits, and tastes of the people.

The housing problem of South Asia can be solved only with the willing co-operation of the public. An important untapped potential factor for increasing the volume of house-building is self-aid housing programmes. Since approximately half the building costs is spent on labour, the utilisation of the spare time of the workers and of the available members of their family will have the effect of practically doubling the volume of house-building activity from a given supply of funds for housing. It is true that such self-help techniques may not be appropriate in the construction of apartment buildings in large cities but they do offer real possibilities in rural areas.

ANGLO-CANADIAN CO-OPERATION AIDS BOMBAY TRANSPORT

One of the contributions Canada is making to India under the Colombo Plan is a big fleet of transport vehicles for Bombay State. As a result, the people of the State and city will have an extra 450 buses, 70 tractors, 60 trailers, and 835 trucks. All these vehicles will be powered with British-made, six-cylindered diesel engines. One reason for the contract for the engines going to a United Kingdom company is that the existing transport system of Bombay is powered by its diesels.

The firm that is making these diesels is the biggest producer of this type of engine in Britain —perhaps in the world. It is S. Perkins, Ltd. of Peterborough, already a well-established firm when it built its new Eastfield works in 1947. The works opened in November of that year. In less than five years since, Perkins have made more than 100,000 six-cylindered diesel engines there. It is not only in the cold countries that these diesels give good service. In the heat of India and Africa, at sea in life-boats and other craft in the dust of the desert, and in all kinds of applications from excavators to crawler tractors and luxury coaches, they have a world-wide reputation for reliability and trouble-free running. They provide the power for many bus services in India quite apart from the State of Bombay. When the new fleet now being built for Bombay is complete it will be the largest of its kind running on Perkins diesels in the world. It will actually consist of about 2,150 passenger and goods vehicles.

The engines are to be mounted in Canadian-built vehicles—both buses and trucks—and will be finally assembled in Bombay. The engines will not meet their chassis until they arrive in Bombay for they are going direct from England just as the chassis are going direct from Canada. To ensure smooth and easy assembly in Bombay, representatives of the Perkins Company are in Canada for any consultation that may be necessary. The engines will be fitted into the vehicles by Perkins technicians.

The total cost of the scheme will be about four and a half million dollars, of which the cost of the engines will be about one and a quarter million dollars. Officials of the Bombay State Transport organisation visited the works of Perkins at Peterborough in April, 1952, to watch the progress of the scheme.

OVERSEAS COMMUNICATIONS

At a Press interview the other day in Poona, Mr. S. R. Kantabet, General Manager of the Overseas Communications Services, disclosed that a Rs. 1-crore scheme for the expansion of Overseas Communications Services over a period of five years had been planned by the Communications Department of the Government of India. He further said that top priority had been accorded to a transmission station at Calcutta which was expected to be put into operation early this year. A similar station at Madras was also likely to be completed by the end of the year.

Mr. Kantabet expressed the opinion that a vast country like India should have modernised stations at every important place. At present only Bombay and, to some extent, Delhi were able to transmit overseas telegrams but the pressure on these two stations was so heavy that it was desirable to build up regional stations at places like Bombay, Calcutta, Madras and Delhi.

Proceeding, he said that top priority was given to Calcutta in the matter of establishment of a direct overseas transmitting centre because jute and tea, two of India's greatest dollar earners, were the principal commercial commodities in the Calcutta market. At present inland telegrams are being sent from Calcutta to Bombay and from there to the U.S. and the U.K. involving considerable delay in transmission.

HIRAKUD DAM

The estimates of the cost of construction of the Hirakud Dam Project are likely to go up. It is stated that the first stage of the project, estimated to cost Rs. 69 crores, some time back, will now cost more than this figure. The second stage was estimated to cost Rs. 38 crores. The first stage envisages construction of a dam at Hirakud which provides facilities for irrigation for about 6 lakh acres in the Sambalpur District. But, if we are to exclude 2.5 lakh acres that would be submerged in the first stage, the net addition to the irrigation area will be 3.5 lakh acres. The second stage provides for irrigation facilities below Cuttack. The Government of India has decided, in view of past experience, that the question of taking up the second stage should be considered only after relevant data based on accurate facts and figures are gathered and estimates prepared on that basis. The data, it is stated, are now being gathered by a special investigating circle of engineers and the estimates of the entire project would be available in due course.

Meanwhile, it is understood that the reports of the departmental committees, which had gone into the question of financial and technical control of the Hirakud Dam Project and which had recommended that the engineers of the project should be able to incur expenditure without the intervention of a financial adviser have not been accepted by the Government of India. It is pointed out, in this connection, that the Government is in the meanwhile awaiting the report of the Public Accounts Committee which is at present enquiring into the Hirakud Project.

GENERAL ENGINEERING DRAWINGS

The draft of an Indian Standard Code of Practice for general engineering drawings has just been circulated for comments to industrial and engineering interests in the country by the Indian Standards Institution. The draft, which runs into 48 standard size printed pages, lays down recommendations for sizes and lay-outs of drawings; methods of projection; sectioning and sectional views; thickness of lines and sizes of lettering; dimensioning symbols for machining; surface finish for machining, surface finish and welding; conventions for drawing screw threads and rivets, graphs and abbreviations used in general engineering practice. The draft standard, one of the longest to be formulated, does not, however, cover detailed requirements peculiar to different branches of engineering. The draft code, apart from laying down its own standard sizes of drawings, also details alternative sizes of drawings which are being considered by the International Organization for Standardization.

Trans World Airlines are expected to begin their new service to Tokyo and other cities in the Far East by July, 1953. They are awaiting permission by the Civil Aeronautics Board to add the Bombay-Tokyo link to their certified route.

MACHINERY AND ERECTION INSURANCE SCHEME

ITS IMPORTANCE TO NATIONAL ECONOMY

IT is symptomatic of the times in which we live, in this country, of the growing consciousness of the need for rapid industrial expansion that two leading insurers, the New India Assurance Company, Ltd., and the Oriental Fire and General Insurance Company Ltd., have ventured to provide cover for risks which Indian insurers had not chosen to undertake hitherto. This new form of insurance is called the "Machinery and Erection Insurance Scheme." Although this scheme, a special variety of accident insurance, is a recognised method of protection against accidental breakdown of machinery, and has been in existence in the West for close upon half a century now, this is the first time that Indian insurers have made anything like a systematic attempt at covering the risks involved in the erection and maintenance of industrial equipment and machinery.

Inaugurating the new scheme at a special function, arranged recently by the management of the New India Assurance Company, Ltd., Mr. B. K. Shah, General Manager of the Company, pointed out how the scheme was designed to meet several hazards involved in the erection of machinery—the hazards which arise through sheer accident or through lack of training and experience of workers engaged in the erection of machinery. It is these risks that will be covered by the scheme. Mr. Shah emphasised that it was the intention of the management that the scheme should be organised as a national unit; that is, in co-operation with other insurers. He outlined three possible ways in which the scheme would, in course of time, acquire a national significance. In the first place, the management desires to maintain a research laboratory where the problems connected with the erection of machinery and causes of breakdown could be studied at expert level. Secondly, the management hopes to be able to undertake regular surveys of machinery breakdown which will provide the clue for prevention of such breakdown and for increase in production. Thirdly, it is the intention of the management to create a "brains trust" of expert engineers whose services will be available to the industrialists who are interested in setting up new factories.

The "Machinery and Erection Insurance Scheme" comprises, as the name itself suggests, two forms of insurance—machinery insurance and erection insurance. Machinery insurance covers machinery and plant already installed and in operation. The basic objects of a machinery insurance scheme are: (1) proper layout of plants, to reduce damage to the minimum, (2) full indemnity in case of loss or damage, and (3) investigation of all accidents of loss or damage to prevent their recurrence.

A modern machinery insurance policy gives, it is stated, comprehensive protection, guarding the machinery against almost every conceivable form of damage, other than normal wear and tear. Thus, it protects the industrialist against accidents caused by faults in casting and defective material, lack of skill in operation, explosion of boilers, sabotage, rupture due to centrifugal force. It is noteworthy that not only is the actual damage paid for by the insurer, but also such necessary incidental expenditure as that connected with the dismantling of machinery and freight charges to and from repair shops and re-erection.

OFFICE ACCOMMODATION IN NEW DELHI—1

About 15,000 sq. ft. space can be had in part or whole on the 2nd floor of Multi-storeyed, Lift-fitted, Modern Building under construction in the most central locality. Firms of standing or Commercial Sections of Embassies or Consulates will be accommodated on a selective basis only. Write P. O. Box No. 457, Bombay.

The importance of protection against risks to machinery can be illustrated by taking the specific example of electrical machinery. The scheme covers risks which arise, among others, from: (1) over voltage, (2) over-current, (3) arcing, (4) travelling waves, (5) shorted windings, (6) faults in insulation, (7) faulty working of measuring, regulating or protection devices, (8) vibrations, (9) insufficient or unsuitable oil, (10) atmospheric influences, (11) vermin and animals, and (12) the human element or any mishap which might occur in the course of the daily routine work.

Erection insurance, unlike machinery insurance, is a short-term proposition and operates only until the newly installed machinery is satisfactorily tested. Despite its short-term nature, erection insurance covers a large variety of risks. An erection insurance policy will cover against loss or damage caused by any of the following: (1) earthquake, (2) landslide, (3) rockslide, (4) flood, (5) inundation, (6) storm, (7) fire, (8) lightning, (9) explosion, (10) tearing of centrifugal forces, (11) short circuit, (12) riots, civil commotion, strikes and lockouts, (13) defects in casting and material, (14) faults of construction, (15) faults at workshop, (16) faults in erection, and (17) lack of skill, carelessness, sabotage, burglary and theft.

The importance of machinery and erection insurance to India's national economy will be readily understood when it is realised that this country imports about Rs. 100 crores worth of machinery every year. During 1951-52, India imported machinery worth Rs. 104.06 crores. The chief among the varieties of machinery imported by India were: Railway locomotive engines and parts, Rs. 2.11 crores; oil engines, Rs. 14.79 crores; electrical machinery of all kinds, Rs. 16.20 crores; agricultural machinery, Rs. 7.82 crores boilers, Rs. 4.11 crores; metal working machinery, Rs. 2.52 crores; mining machinery, Rs. 1.32 crores; paper mill machinery, Rs. 1.65 crores; pumping machinery, Rs. 2.23 crores; sugar machinery, Rs. 0.69 crore; and textile machinery, Rs. 13.34 crores; consisting, among others, of cotton textile machinery, Rs. 7.31 crores; jute machinery, Rs. 1.66 crores; and wool machinery, Rs. 0.43 crore.

These figures refer only to imports of machinery during the year 1951-52. The next few years will necessarily see much larger imports, thanks to the impetus which the Five-year Plan is bound to give to the country's industrial expansion. The possibility of financial loss due to defects in imported machinery or to defects in the erection of this machinery cannot be ruled out. Because it covers a variety of possible damage to all machinery, whether imported or locally manufactured, the machinery and erection insurance scheme is bound, as indeed it deserves, to commend itself to industrial managements.

PROFITS INSURANCE

Among the many benefits conferred by insurers on those engaged in the commercial life of a country there is no more notable example of genuine service than the insurance of profits. Although insurance of property against risks, such as fire or storm or riots, does confer considerable benefit to the person who takes out such insurance, it does not protect him against the consequential loss, that is, the loss of profit, caused through damage by fire or other unforeseen accident. The object of profits insurance is precisely to cover the loss of profits that may occur through damage caused by fire. Reviewing the scope and significance of the profits insurance scheme, now becoming popular in the U.K. and other countries, the *Investors' Chronicle* writes:

"The nature and extent of the insurance cover necessary to provide complete protection must vary according to the peculiarities of the particular business to be insured. Normally, a three-fold indemnity is provided: (a) loss of net profit; (b) payments in respect of standing charges; and (c) increase in cost of working due to the fire. If desired, however, any combination of these indemnities can be effected.

"An idea may have formed that, in order to take advantage of this essential protection, detailed information of an intimate character relating to a firm's business is required to be divulged. This is not so, for, in ascertaining the sum to be insured, the annual net profit and standing charges are added together and insured in one sum, so that there is no necessity to disclose particulars of salaries, mortgage interest, or actual net profits when effecting the insurance. It may also have been assumed that, by the nature of the insurance, it cannot be equitably adjusted to the requirements of a new and expanding business, or one subject to a seasonable trade, but it is only necessary to place a definite proposition before the insurance companies to appreciate the technique that they have brought to bear on this subject. Further, the policy is equally adaptable to the 'one-man' business or small retailer as it is to large manufacturing concerns.

"The net profit represents that part of the profit of the year from which dividends to shareholders and allocations to reserve are normally disbursed. It could be defined as the amount remaining after proper provision has been made for all standing and other charges, and for all items properly chargeable to capital and depreciation. The net profit figure can be based on the last financial year, or the average for the past two or three years, or, when previous results do not afford a reliable basis, an estimated figure will be accepted.

"Although standing charges must of necessity vary with individual circumstances, they will, in general, be made up from the following: (a) rent, rates and taxes; (b) mortage interest, interest on loans and debentures; (c) directors' fees; (d) salaries to permanent staff and wages to skilled employees; (e) advertising contracts, etc. Whatever the range required, the policy can be made to embrace them, provided they are specified and approved by the insuring company."

The foregoing account gives some idea of the immense benefit which accrues to the person or company who takes out a profits insurance policy.

CALCUTTA INSURANCE LTD.

The report of the valuation of the assets and liabilities of the Calcutta Insurance Ltd. (Manager: Mr. P. K. Sen, Calcutta), as at 31st December, 1951, reveals a surplus of Rs. 5.88 lakhs, being the excess of the balance of life assurance fund of Rs. 99.89 lakhs over the net liability of Rs. 94.01 lakhs. The Company's Actuary, Mr. T. Ghosh, has recommended the payment of a simple reversionary bonus of Rs. 9 per Rs. 1,000 assured for the calendar years 1948, 1949, 1950 and 1951 on all policies in full force on 31st December, 1951. This is certainly a creditable achievement, considering that no bonus was declared at the last valuation.

The report also discloses considerable improvement in new business, annual premium income, total business in force and life assurance fund during the intervaluation period under review, namely, 1st January, 1948, to 31st December, 1951, as the table below will show:

(Rs. in lakhs)

	Average sum assured per year	Average premium income	Business (a)	Life fund (a)
1-1-38 to 31-12-42 ..	21.82	24.92	99.73	23.38
1-1-43 to 31-12-47 ..	78.02	58.40	329.85	55.63
1-1-48 to 31-12-51 ..	130.82	87.47	473.51	99.89

(a) As at the end of each period.

The net rate of interest earned during the period varied from 3.42 per cent. to 3.77 per cent., the average for the whole period being 3.61 per cent. There was some rise in the expense ratio from 1948 to 1949 but thereafter the tendency was downward. The average renewal expense ratio for the 1948-51 period is 18.46 per cent. In 1951, the ratio was as low as 17.04 per cent., as compared with 19.16 per cent. in 1950 and 20.00 per cent. in 1949. The Actuary rightly considers the results of the valuation to be "highly satisfactory," and believes that, if expenses were kept under control, the next valuation will "produce even better results."

INSURANCE DIRECTORY

The 1952 edition of the *Life Insurance Directory* (edited by Mr. Ashutosh Banerjea, Calcutta, and published by Chaya Publications Ltd., 2/1, Mission Row, Calcutta, price Rs. 3-8), maintains the high informative quality of its predecessors. Besides the names and addresses of insurers working in India and the actuaries in this country, and the text of the Insurance Act, the *Directory* gives a summarised version of the working of each insurance company. Thus, it gives, in respect of each company, the names of directors, the conditions under which surrender value is quoted and loans against policies given and a summary of the latest available valuation report. It also gives the rates of premiums for whole life and endowment policies for ages 20-45. There is no doubt that the publication is a useful guide to all workers in the field of life insurance, as also to those who are generally interested in insurance whether for academic or personal reasons.

AMRUTANJAN LTD., BOMBAY, MADRAS & CALCUTTA

PAKISTAN'S ECONOMY IN 1952

ALL-ROUND SETBACK NOTED

(From A Correspondent)

DURING 1952, Pakistan's economy was principally dominated, as in 1951, by international developments. The stockpiling and rearmament programmes undertaken by the various nations, following the outbreak of war in Korea in June, 1950, and the consequent scramble for raw materials had brought unprecedented prosperity to Pakistan in 1951. The prices of her staple export commodities had also reached record levels in March/April, 1951. With the slackening in the demand for stockpiling purposes and the spreading of rearmament over a longer period, there was a reversal in the demand for Pakistan's exports. Their prices also fell appreciably. Between January and November, 1952, the prices of jute and cotton declined by some 45 per cent. and of hides and skins by 39 per cent. The price of wool also, which had crashed from its peak level of Rs. 300 per maund in April, 1951, to Rs. 131 by December, 1951, declined further to Rs. 100 in the first quarter of 1952, though it showed some steadiness subsequently.

This sharp fall in the demand for, and the prices of, Pakistan's exports resulted in considerably reducing the earnings of foreign exchange during 1952. Imports, on the other hand, showed only a moderate decline owing to the Government's economic policy. The Government not only did not cut down the imports till at a very late stage but, by sustaining internal incomes through their "support" schemes, actually helped to keep up the demand for them. Pakistan's balance of payments position, therefore, turned sharply adverse during the year. It may be remembered that, in 1951, Pakistan earned a huge surplus of Rs. 52 crores. As against this, in the first nine months of 1952 for which figures are available, Pakistan incurred a deficit to the tune of Rs. 78 crores. Moreover, as will be seen from the table below, this deficit was increasing from quarter to quarter and reached a record level of Rs. 40 crores in the quarter July-September, 1952.

Pakistan's Overall Balance of Payments

(In crores of rupees)

	1952		
	Jan.-Mar.	Apr.-June	July-Sept.
Exports	71.00	38.49	20.89
Other receipts	7.39	5.32	4.73
Total receipts ..	78.39	43.82	25.62
Import on private account ..	62.71	46.58	43.57
Imports on Government account ..	15.75	16.09	14.94
Other payments	9.99	8.48	7.08
Total payments ..	88.44	71.15	65.59
Deficit	—10.05	—27.33	—39.96
Level of gold, dollar and sterling reserves at the end of the period..	134.50	104.57	66.23

Budgetary Deficit

Such a sharp swing in the balance of payments has had far-reaching adverse effects on the entire economy of Pakistan. First and foremost, it reacted sharply on the budgetary position of the country. The decline in the demand for exports by itself would have normally resulted in reduced revenues from export duties. The growing unfavourable balance of payments made the position still worse, because it necessitated, in course of time, a substantial reduction (and in some cases even complete abolition) in the export duties in most of Pakistan's important export commodities. The reduction in imports also probably affected, to some extent, the income from import duties notwithstanding some increases in the duties on such items as textiles, vegetables, fruits, etc. The actual customs realisations were, therefore, much behind the levels contemplated in the Budget for 1952-53. What such a fall in the customs revenues means to the financial position of the Government would be better appreciated if it were mentioned that customs duties account for nearly 60 per cent. of the entire revenues of the Government of Pakistan. Moreover, the Government's "price support schemes" for cotton and jute involved the locking up of considerable funds and also some loss to the Treasury in view of the subsequent reduction in the prices of both jute and cotton. As a result of all these factors, the Central Government's balances with the State Bank, which stood at Rs. 58 crores at the beginning of the year, fell continuously and reached such a perilously low level at the end of September, 1952, that recourse had to be had to an advance of Rs. 15 crores from the State Bank. This was the first time that the Pakistan Government had to approach the State Bank for a loan. Further, it also appears that the recently floated 2½ per cent. Pakistan loan 1957-58, which was claimed to have been a complete success, was, in fact, subscribed by the State Bank itself. But for these extensions of credit, the level of the Government balances would have by now (end November) gone down to less than Rs. 15 crores. This compares with the figure of Rs. 65 crores reached at the end of March, 1952. The decrease of Rs. 50 crores over the period could, subject to a small adjustment, if any, for the money locked up in jute, be taken as a rough indicator of the magnitude of the budgetary deficit during the first eight months of the current financial year. It may be noted, in passing, that the budget for 1952-53 provided for an overall deficit of Rs. 32 crores.

Liquidity of the Banking System

The recession in exports had its repercussions on the banking system of the country which may now be briefly noticed. The following table brings together the necessary data to facilitate this study:

Scheduled Banks in Pakistan

(In crores of rupees)

	End of the period					
	June, 1950	Dec., 1950	June, 1951	Dec., 1951	June, 1952	Nov., 1952
Demand liabilities ..	101.9	94.8	111.2	121.2	114.7	112.7
Cash and balances with the State Bank ..	17.9	14.4	22.6	21.0	16.9	12.5
Excess of balances with the State Bank over the legal minimum	7.7	4.1	11.2	7.3	4.1	2.5
Advances and bills discounted ..	49.1	77.0	55.0	91.9	78.0	76.8
Advances and bills as percentages to total liabilities	40.2	65.3	39.5	61.3	55.9	55.4

It will be observed that, at the end of June, 1952, which could be regarded as the end of the slack season, a large portion of the advances extended by the Scheduled Banks in the preceding busy season remained unpaid owing mainly to the poor offtake of cotton and jute by foreign countries. Consequently, the busy season of 1952 started with a much higher level of advances. As a percentage to total liabilities, they stood at nearly 56 per cent. at the end of June, 1952, as compared with 39 and 40 per cent., respectively, at the end of June, 1951 and June, 1950. The Scheduled Banks' cash and balances with the State Bank also showed a decline of Rs. 6.6 crores over the year July-June, 1952, the excess of their balances with the State Bank over the required minimum being only Rs. 4 crores at the end of June, 1952, as against Rs. 11 crores a year earlier.

During the current busy season, the total advances of Scheduled Banks have not so far shown any rise partly because some of the advances made earlier have been perhaps cleared as and when the Cotton and Jute Boards made payment for their purchases of last year's crops of cotton and jute and partly because a part of the new crop of jute is being purchased by Government agencies, co-operative societies and the like. The Scheduled Banks' cash and balances position, however, has shown further deterioration.

Governmental Policy for Meeting the Crisis

Despite the rapidly deteriorating economic situation, the Government was hesitant for a long time to take the necessary steps to meet the crisis. In fact, their first steps—the price support schemes—only helped to worsen the situation by preventing the free play of economic forces which would have brought about a natural adjustment in prices. The prices at which support was extended by the Government to both cotton and jute were higher than those offered by other nations. Consequently, large stocks of cotton and jute which should have otherwise been exported to foreign countries at lower prices found their way to the godowns of the Cotton and Jute Boards. Exports, therefore, suffered. Further, assisted by the "price support," the internal boom and the high level of incomes continued. The demand for imports, therefore, was unabated.

The Government first of all tried to curb imports by introducing some monetary measures like the insistence on opening of letters of credit for all imports, asking for higher margins for opening letters of credit and for granting advances. These were found to be ineffective, partly because of the sustenance, as noticed earlier, of internal incomes by the "support" schemes and partly because of black market money. The Government then proceeded by stages to reduce the export duties and prices of both jute and cotton in order to stimulate exports and increase the foreign exchange earnings. Initially, the Government permitted cotton to be sold at 10 per cent. below the minimum price, itself undertaking to suffer the loss. Then, the duty on jute was cut down by about 50 per cent. Simultaneously, the minimum price of jute was reduced by Rs. 6 per maund, though in the case of India a special licensing fee of Rs. 2-8 per maund was imposed. In the beginning of September, the export duty on Desi varieties of raw cotton was completely abolished, while that on other varieties was reduced by 50 per cent. The price support scheme for cotton was also later discontinued. Meanwhile, imports under the O.G.L were slashed by about 50 per cent. and customs duties on textiles, which accounted for a sizable share of the total private imports, were raised by about 25-30 per cent. Towards the end of November, the O.G.L. was cancelled and all imports, including even such items as newspapers, were subjected to licence.

This brief review of Government's export-import policy during the year would indicate that in its actions the Government was halting and piecemeal. Apparently, the Government was reluctant to take any specific measure unless it was inevitable. Thus it reduced the export duties on jute and cotton only when the new crop started coming in. Meanwhile, it was saddled with substantial quantities of both jute and cotton which would only add to the difficulties of the current year. The Government was also very hesitant to slash down imports and did it only at a very late stage. The result was that, while income from exports fell steeply in the second and third quarters of the year, imports continued to come in on a fairly large scale.

Future Prospects

Pakistan is now facing, along with other primary producing countries, the problem of a buyers' market, increased consumer resistance and adverse terms of trade. Her position is highly vulnerable because of her dependence on only two commodities—jute and cotton—and large carry-overs of both of these from last year. The carry-over of jute at the end of June, 1952, was estimated at 15 lakh bales and of cotton at 4 lakh bales. The current year's production of jute and cotton is placed at 70 lakh bales and 19 lakh bales, respectively. The domestic consumption of cotton would be about 2 lakh bales and of jute practically nothing. The exportable surplus of jute and cotton during the current year is, therefore, of the order of 85 lakh bales and 21 lakh bales, respectively. At the end of November, it was reported that 34 lakh bales of jute had been either sold or contracted for, while practically the whole of the old cotton crop had been disposed of. If this claim is correct, then there are 51 lakh bales of jute and about 17 lakh bales of cotton awaiting disposal. As against this, the world demand for these commodities is now likely to be very limited in view of the general recessional tendencies.

Moreover, both Pakistan's foreign exchange reserves and the Central Government's balances have reached such a low level that it would not be possible to wait any longer for something to turn the corner. Only courageous and realistic policies would save the situation. It is inevitable that, in a recession of the kind which the world is facing to-day, primary producing countries will be the worst sufferers. But it is no use attempting to insulate the internal economy from the effects of such a recession as was sought to be done by the Pakistani authorities last year. Any such attempt merely has the effect of transferring the balance of payments deficit to the State revenues and this cannot be done indefinitely; nor is such a result advisable either. What is required is the adoption of more rational budgetary and economic policies. It is necessary to balance the budget even if it means cutting down the expenditure on development schemes. Imports have to be slashed at least to such a level as could be paid for by the earnings from exports. Finally, what is most important is that export policy and prices will have to be adjusted to the changing requirements. Old prejudices must be given up. Attempts at artificial diversification of trade will have to be modified and the old but natural pattern of trade restored.

ANNUAL MEETING OF DALMIA CEMENT LIMITED

MR. J. DALMIA ON INDUSTRIAL DEVELOPMENT UNDER FIVE-YEAR PLAN

THE recommendations of the Planning Commission, in its final version of the Five-year Plan, in regard to the industrial development, in general, and the expansion of the cement industry, in particular, were commented upon by Mr. J. Dalmia, Chairman of the Dalmia Cement Ltd., in the course of his address at the Fourteenth Annual General Meeting of the Company held at Dalmiapuram on 31st December, 1952. The initiative and responsibility for securing the necessary expansion of the bulk of industries having rested with private enterprise, under the Five-year Plan, the major question that arises in this context is the availability of finance needed for development in the private sector. In Mr. Dalmia's opinion, the Plan has overlooked the necessity for adequate incentive for stimulating capital formation. Further, the restrictions on distribution of profits and issue of bonus shares suggested in the Plan, Mr. Dalmia said, would further aggravate the difficulties of securing fresh capital.

Another question of topical interest which figured prominently in Mr. Dalmia's address was the selling price of cement. The recent reduction in the controlled selling price of cement in India was characterised by him as inopportune, as it resulted in a loss to the industry because of the large stocks of high-priced packing material held.

The following is the full text of Mr. Dalmia's address:

"GENTLEMEN,

"I welcome you to the Fourteenth Annual General Meeting of your Company. The balance-sheet and profit and loss account with the Report of your Directors for the year ended 31st December, 1951, are in your hands. You will agree that the working results for the year under review have been quite satisfactory.

Five-year Plan

"The Five-year Plan recently presented to the country has placed the cement industry high in the order of priorities of industrial development. The Plan anticipates additional demand for basic commodities like cement, as a result of the general development during the five-year period. Emphasis has been laid generally on the fuller utilisation of existing capacities and in respect of the cement industry, expansion of the capacity is also planned. The rated capacity and actual production of the industry according to the Planning Commission in the year 1950-51 have been 31.94 lakh tons and 26.92 lakh tons respectively and the target for expansion under the Plan is to attain by 1955-56, the rated capacity of 50.16 lakh tons and actual production of 45.50 lakh tons, involving an estimated investment of Rs. 15.4 crores. The cement industry has already registered a substantial increase in the production capacity and the rated capacity at present is approximately 40.25 lakh tons. Together with the rise in consumption of cement inside the country, it is estimated by the Planning Commission that the exports of cement will also increase from .30 lakh tons to 3 lakhs ton a year.

"Under the Five-year Plan, the initiative and responsibility for securing the necessary expansion over the bulk of the field of industry rests with private enterprise. The total capital investment needs for industrial expansion in private sector have been estimated at Rs. 233 crores, besides Rs. 150 crores required for replacement and modernisation of the existing plant capacity. The major question in this context is the availability of finance needed for development in the private sector.

Capital Formation Under The Plan

"The Plan appears to have overlooked to provide facility for capital formation. The recommendations of the Plan, placing restrictions on distribution of profits and issue of bonus shares, will further aggravate the difficulties of securing fresh capital. Such a policy is likely to make investment shy. Even the expectations of the Plan that new capital to the extent of Rs. 90 crores would be available, may not materialise in the absence of any constructive and positive attitude towards investment.

"The main source of finance according to the Plan is the accumulation of undistributed profits of corporate industry, which are estimated, exclusive of depreciation reserve, at Rs. 200 crores. The quantum of undistributed profits is expected to increase by exercise of restraint in dividend policies and by enforcing agreed price increases in selected lines. Considering the depression which has overcome the market and the increasing competition which the industry is facing, it is unsafe to expect that the industries will earn such profits that these may be accumulated and ploughed back in adequate measure in expansion schemes.

Labour Welfare Schemes

"Labour welfare schemes are good and they should be enforced, but the enormity of these schemes in such a short spell of time coupled with labour tribunals is giving a trying period to the industry. This strain on the industry can be substantially reduced if labour determines to improve efficiency and production. Otherwise, in the long run, both labour and capital are bound to suffer severely. The Plan accepts that the rate of progress has to be determined not only by the needs of workers but also by the limitations of the country's resources and that, too rapid changes or changes on a wide scale may result in financial, administrative and other difficulties which endanger new reforms and retard further development. It is, therefore, hoped that the Government will exercise care and caution and defer for at least the Plan period any new schemes likely to burden the industries with further expenditure.

"As already stated by me, the Plan has recommended agreed price increase in selected lines, as a means to increase the undistributed profits. While the recommendation is welcome and will be helpful, it may be pointed out that such increases can only be effected in respect of commodities which are under price control. Then there are also certain limitations upon the extent to which these increases can be sustained without affecting the consumption, which also has to be secured if the increased production is to be maintained.

Reduction in Price of Cement Inopportune

"Recent reduction in the controlled selling price of cement in India due to fall in prices of packing materials, has been inopportune and resulted in loss to the industry because of the large stocks of high-priced packing material held. The industry has represented to the Government regarding the increases in the production cost resulting from increased labour costs, compulsory statutory amenities, increase in raw material cost and transport freight, etc. The newly set up units and factories situated in the South are particularly hard hit. The Tariff Commission has now been entrusted with the fixation of fair selling price and all the cost increasing elements will be examined in detail by it. The industry is also placing before the Tariff Commission the need for making adequate reserves for replacement and modernisation of the old plant and equipment which has been subjected to heavy utilisation. In this connection the Plan has failed to envisage and has not made any recommendation for revision of the existing practice of allowing depreciation on the basis of original cost of the plant and equipment, even though the Plan has taken note of the high prices at which replacements have to be obtained, prices four times the original cost of the equipment. Thus, the industry is being taxed on the reserves needed for replacement which is against accepted principles of taxation besides being inequitable.

"It has also recommended the standardisation of wages in as large a field as possible. These measures, I am sure, will be conducive to the attainment of an industrial truce which is necessary for achieving the targets of production.

"The Plan has also taken notice of the imperative need to reduce costs by rationalising industrial processes. A major difficulty in the way of increased production is the large surplus of labour which is on the pay-roll of industries. Assistance should be forthcoming in implementing schemes of rationalisation. Recently, we were compelled to discharge about 125 workers at Dalmiapuram factory, who had been taken in temporary employment for hand-packing of cement. They were employed on the clear understanding that they will be discharged as soon as the packing machine was installed. Now, even though the machine is ready to function, the workers oppose the discharge of these temporary workers and even resorted to a stay-in strike without any notice. If the workers' unions are to serve the cause of labour in a sincere manner they should assist, rather than oppose, any scheme of rationalisation. The Five-year Plan has drawn pointed attention to the need for higher level of productivity and the responsibility of labour in achieving it. The Plan exhorts labour to accept greater regularity in attendance, disciplined behaviour and meticulous discharge of duties. I hope the workers of the country will act up to this advice and conduct themselves in a more responsible manner.

Industrial Tribunals

"There is general agreement that it is desirable to ensure avoidance of disputes by internal settlement, failing which voluntary arbitration may be accepted. The recommendation of the Plan regarding the recruitment and training of personnel of tribunals and the provision of technical help to them is welcome. Experience has shown that the existing tribunals manned by retired judicial personnel have been guided more by political thought than by the merits of the dispute in the adjudication proceedings. The personnel to be recruited and trained for the tribunals should be persons with sufficient insight into the problems of both labour and capital. If there are competent persons constituting the tribunals and they are kept free from executive interference and dependence the recommendation of the Plan limiting the right of appeals to exceptional cases, would be justified.

Plan Should be Made a Success

"Before I close my address, I would like to say that it is easy to find fault with any plan, but we must realise that with all its limitations it is the first planned effort towards the development of the country's resources and towards increasing the standard of living of our people and we must all strive hard and contribute our maximum effort towards the success of the Plan. It is the effort of each one of us which is needed to make our Five-year Plan a success. This Plan is the country's revolution. It is our ambition; the outside world is going to judge us by our achievement in this sphere. The country's reputation and prestige are involved in it and so are our welfare and prosperity.

"In the end, I would like to express the Company's sincere appreciation of the services rendered by our workers and staff in different factories and offices.

"I now move that the balance-sheet and profit and loss account and the Directors' report for the year ended 31st December, 1951, be approved and adopted by you."

INDIA STEAMSHIP COMPANY, LIMITED

SIR A. RAMASWAMI MUDALIAR'S ADDRESS AT ANNUAL GENERAL MEETING

APPEAL FOR FRATERNAL CO-OPERATION IN INTERNATIONAL SHIPPING

THE cause of new-comers to the shipping world in international trade was ably championed by Sir A. Ramaswami Mudaliar, K.C.S.I., D.C.L. (Oxon), Chairman, India Steamship Company Ltd., in the course of his address to the shareholders of the Company at their Annual General Meeting held in Calcutta on 30th December, 1952. He drew pointed attention to certain prejudices which a few 'irreconcilables' in the world Shipping Conferences had created against the new-comers. He showed how reluctant were the old-established shipping lines to give the new-comers a reasonable share in the carriage of world maritime trade. He felt that it was high time these Lines realised the change that had come over the world and agreed to let the new-comers have a fair share in world shipping trade. Appealing for reasonable understanding and a new approach to the problems of nascent shipping, he observed that the policy of "live and let live," enunciated many years ago, seemed to be still the correct and, indeed, the wisest policy.

Sir Ramaswami Mudaliar also referred to the inadequate facilities in the various Indian ports, particularly in Calcutta, and the delays that occur in ports, both in India and abroad, causing considerable loss to shipping companies.

The following is the full text of Sir Ramaswami's speech:

"GENTLEMEN,

"The audited accounts and the Directors' report for the period ended 31st March, 1952, have been in your possession for some time. With your permission, I shall take them as read.

"In my last annual address, I referred to the progress that the Company had made in getting admission to regular full membership of some of the Conferences. I emphasised the importance of membership of these Conferences and pointed out that, owing to the nature of the working of these Conferences, a non-member is affected adversely in several ways. I expressed the hope then that the right and privilege of becoming members of the Colombo-Continent Conference and the Colombo-U.K. Conference would be recognised by the other Lines very shortly. I pointed out that it was most anomalous that Indian vessels starting from Calcutta should not freely carry freight from Colombo to the U.K. ports and the Continent, having regard to the naturally close, geographical and other relationship between India and Ceylon and bearing in mind that the Ceylon ports were part of the Coastal Conference ports in the past. I regret I am unable to report any progress in the direction of our admission to these Conferences. On the other hand, there is a tendency to show preference to foreign Lines on the basis that, before the last war, they were carrying trade with these ports. I shall refer to this extremely unsatisfactory aspect of international shipping a little later.

Trading Experience

"I am glad to be able to report that the Company has progressively increased the amount of cargo that it has carried in spite of various difficulties and obstacles connected with international trade and the freight earnings have also tended to show an increase. The Directors' report shows that the freight earnings for the year under review amounted to Rs. 384 lakhs, an increase of more than a crore over the earnings of the previous year. It is true that conditions during the year were comparatively favourable, partly owing to the increase in freight rates and partly owing to the demand for shipping space as a result of the Korean situation. It must, however, be pointed out that delays and detentions at ports, both Indian and foreign, were longer than even in the previous year, with the result that a round voyage for a ship took much more time than was scheduled or was the case in the previous year. These delays are becoming an increasingly serious problem for all shipping companies and particularly for the Indian shipping companies which have as yet a very limited number of ships plying in the overseas trade.

"In spite of the difficulties mentioned above, I am in the happy position to state that the financial results of the year under review have been fairly satisfactory and the hope that I expressed last year that the Company had turned the corner has proved fairly accurate. It must be a source of gratification to you, as indeed it is to me as Chairman and to my fellow-Directors, that the Company is in a position to pay a dividend this year for the first time after setting apart various sums of money for depreciation and reserves and wiping out the losses of previous years. The cash resources of your Company being quite satisfactory, your Board has decided to redeem the entire series of the mortgage debentures of the face value of Rs. 25 lakhs and notice has already been given that they will all be paid on 1st March, 1953.

Coastal Trade

"Your Company, while mainly concerned with overseas trade, has not neglected the importance of the coastal trade which is now the sole concern of Indian-owned shipping companies. During the last few months, one of the ocean-going vessels, the *Indian Importer*, has been put on the coastal trade without, however, diminishing the number of vessels engaged in overseas trade. Your Company is a member of the Coastal Conference and hopes to play a more active part in the near future in the coastal trade.

Port Facilities and Delays

"The facilities afforded, according to modern ideas, to shipping companies in the various Indian ports, and particularly in Calcutta, has been the subject of comment for some years. Calcutta is the main port of India, catering for nearly 50 per cent. of the freight to and from India. Owing to lack of finances in the past, the modernisation of this port, which will continue to play a leading part, has been considerably delayed. It is a matter of gratification, therefore, that the Planning Commission has specifically referred to the need for improvement, modernisation and development of the major ports and has, in its Five-year Plan, set apart a fair sum for the purpose. I hope that, with this finance and with what the Port Authorities are expected to find out of their reserves and resources, the implementation of the proposals for modernisation and proper equipment at these ports will be effected speedily. While I recognise that the Port Authorities at various ports have expert knowledge and are qualified to suggest methods of improvement and while the Port Trust in each port is composed of unofficial advisers connected with commerce, industry and shipping, I would suggest that, before these plans for modernisation are finally accepted, an opportunity may be given for the representatives of shipping companies to discuss such plans and to suggest the directions of improvement to meet their special needs.

"Go Slow" Tactics

"I referred earlier to the delays that occur in ports both in India and abroad. Confining myself to these delays in Indian ports, I would like to point out that the policy adopted by some of the labour union leaders, particularly some of those connected with stevedore labour and port labour, is not conducive to the proper working of the port and severely militates against the interests of shipping companies and business concerns. The delays at some of these ports can be largely ascribed to the policy of 'go-slow' that some of this labour has adopted, unfortunately under wrong leadership. I made it clear, in my last speech, that any reasonable proposal for amenities to such labourers will be readily recognised by shipping companies and by stevedore agents but that the reason for such 'go-slow' tactics is not to get increased amenities but for different objectives altogether.

"It is, indeed, unfortunate that some leaders of labour, desiring to keep as many workers as possible on the employment roll in industry, have steadily advised their members to resort to such tactics without regard to the consequences. That this feature is not peculiar to the shipping industry but that it is to be found in some of the other industries where such kind of labour leaders have gained dominance makes it all the more necessary that the Governments, States and Central, should take special note of this fact and should provide measures whereby, while labour is kept contented, the work-load of the labourer is fair and adequate. I understand that experts on production problems in the country are now examining the problem and trying to ascertain the proper work-load which, under given conditions, a worker can undertake. Knowing the interest which the Minister of Labour has taken in this aspect of the question and the advice that he has given from time to time ever since he assumed office, I feel confident that a remedy may be found for the grave state of affairs that now exists in several ports so far as shipping is concerned, and in many industries all over the country.

Shipping Industry

"As a result of the recent General Elections, a new Minister is in charge of Transport in the Central Government. Transport includes shipping and I feel confident—in fact, the experience of the last few months proves—that the problems of shipping are receiving and will continue to receive increased attention both from the Minister and from the Secretariat of the Ministry. There have been two meetings of the Consultative Committee on Shipping under the presidentship of the Minister of Transport and the views of the representatives of Indian shipping companies have been freely expressed and I am glad to state that the Minister and his advisers have made every effort to understand the point of view of the shipping companies.

Government Decision

"The Planning Commission has stated that the total gross registered tonnage of Indian shipping should be about 600,000 tons by 1955-56. When it is remembered that the present tonnage is a little over 400,000, the increase proposed is extremely modest. We must be thankful to the Government that, at long last, a decision has been arrived at regarding the policy of granting loans and the terms and conditions under which such loans may be granted to Indian shipping companies who wish to augment their fleet by the purchase of second-hand ships or by ordering new ships both for the coastal and overseas trade. The loan is to be granted for a portion of the cost price at concessional rates. This request for loans at a concessional rate of interest has been pending before the Government for the last few years; and, without looking back on the past and reflecting on the great good that such a loan, if it had been granted a couple of years earlier, could have done, the Indian companies must still be thankful that, ultimately, this decision has been arrived at. Your Company proposes to take advantage of the offer of the Government and proposals for augmenting the fleet are under consideration before your Board. The details of how the tonnage should be acquired and how soon that tonnage will be available if the benefit of the loan from the Government is availed of, are matters which are receiving the earnest consideration of your Board.

International Competition

"The prospects for the current year are hopeful. Though it has been noticed that there has been some shrinkage of trade and restriction in the movement of cargo, it is the general impression that this is only a temporary phase, because, fundamentally, the demand for goods is still unabated. Your Company is being run as economically as possible and, on the operation side, every effort is being made to check and control the high cost of operations, but, in some items of expenditure, the Company is helpless, as these items are beyond its control. I would, however, like to emphasise that the difficulties which your Company and other Indian shipping companies are experiencing in the overseas trade are on the increase instead of diminishing. These difficulties are specially accentuated in a period when freights are not freely offering, when charges for bunkering do not show much decrease and delays in the turnround of ships and port and harbour dues show no sign of decline. It is at these times of competition that Indian shipping, with its small number of ships, finds itself at a peculiar disadvantage. The infrequency of services of Indian shipping at particular ports, the time taken for freight to move from the port to its ultimate destination and the number of ports at which such ships call are all factors which are utilised for adverse propaganda against Indian shipping.

"Your Company and the Scindia Steam Navigation Company are the two shipping companies that are engaged in the India-U.K.-Continental trade. With a view to overcome some of this propaganda and to give better service to shippers at certain of the Continental ports where competition is most keen, the managements of the two companies have come to an understanding whereby an integrated service enabling ships of the two companies to call more frequently at such ports has been arrived at.

"As Chairman of your Company, I have tried to foster the idea of friendly understanding and helpful co-operation between the two Indian shipping companies engaged in the overseas trade. It is a matter of personal satisfaction to me that this understanding has been arrived at and I would offer my congratulations to the management of both the companies on their wisdom in arriving at such an understanding and trust that this will be the precursor of even greater co-operation between the two companies.

Flag Discrimination

"I have referred only to one kind of propaganda regarding the frequency of service or delays in delivery of goods at destination. There are various other methods which are frequently resorted to by some of the Lines engaged in the competitive trade, which are not calculated further the healthy development of Indian shipping. I must refer particularly to accusations of flag discrimination which are freely made further at meetings of International Chambers of Commerce or of the International Shipping Federations where a majority of well established shipping companies show extreme concern at what they regard as flag discrimination. I should like to be quite frank on this subject, as it is true that the views held by the 'have-nots' in the shipping world should be as clear as those constantly expressed by the 'haves.' The prejudice against a new-comer into the shipping world is formidable and cannot be lightly regarded. It is sometimes pointed out that shipping companies, which have long carried on business with countries and have thereby fostered international trade and commerce, should be treated with grateful respect and that newcomers must have due regard to the many services that such old and well-established companies have rendered in the past. In fact, the new-comers are thought to be unreasonable, if they claim that they should have opportunities for a fair share in such trade. It may be true that well-established old shipping companies have promoted international trade but the exact nature of the truth depends very much on the angle of vision which one brings to bear on such questions. Another view is possible and may express the truth equally clearly, the view that old and well-established companies, having had a monopoly in the past of all the international trade of the country concerned, should now gracefully yield some place at least to newcomers who have a right as shipping companies of maritime countries or of countries which have a fair amount of export and import trade to partake to a reasonable and an ever-increasing extent in such trade. I have had opportunities of attending more than one Conference and I must confess sometimes to the depressing feeling that the *status quo* is too often desired by some at least of the well-established old shipping companies and the need and wisdom of providing a small niche in the shipping world for new entrants is often ignored. The world has changed enormously, not merely between the two world wars but more so after the Second World War. Kingdoms have disappeared, empires have disintegrated, colonial possessions have shrunk. A new international economic understanding and policy is being advocated by those who have the vision to see the trends of the future clearly and, in particular, the problem of the undeveloped and underdeveloped countries is rising more prominently on the horizon of the international world. It is somewhat disheartening to find on occasions the echo of the voice that 'as things were they should continue to be.' To make comparisons of pre-war tonnage of well-established shipping companies with their present tonnage and to express dissatisfaction that the present tonnage has not yet come up to the pre-war standard or, if it has come to that standard, to take umbrage at the fact that the percentage of freight carried is not as much as it was before the Second World War is to ignore the realities of the situation and naively to challenge the position of new-comers into the shipping world. I feel certain that the large body of shipowners of the international shipping world recognise that changes are inevitable and that new-comers have come to stay and must be reasonably accommodated. But it is the few irreconcilables that create the biggest obstacle to fraternal co-operation in international shipping.

Government Intervention

"I have struck this note not by way of criticism or complaint of any shipping company or any member of any Conference but by way of an appeal to all concerned for reasonable understanding and a new approach to the problems of nascent shipping all over the world. The policy of 'live and let live,' enunciated many years ago, seems to be still the correct and, indeed, the wisest policy. Indications are not wanting where a short-sighted approach to this problem, making it difficult for the nascent industry to develop, has resulted in some at least of the Governments concerned taking a more active part in the protection of their shipping and in nullifying thereby the policy which Conferences wish to adopt of commercial agreements alone functioning in this sphere of mutual adjustment.

"Business restrictive practices do not always come to the surface, their meandering ways being often difficult to expose. Intervention by Governments, on the other hand, are open and much more easily discernible, thanks particularly to the democratic forms of government and free publicity in legislatures. But discrimination through restrictive business practices are far from effective, particularly where a business community through years of experience, has become strongly unified and completely integrated. As Chairman of your Company, I share the feeling that, as far as possible, international shipping should be allowed to develop on the basis of its own resourceful activities, far-sighted management and devoted service and that satisfactory arrangements at a commercial level should be arrived at in a fair and equitable manner. I feel, however, that State intervention will be inevitable in many countries, if instead of such helpful and understanding agreements nascent shipping comes against a dead wall or prejudice either artificially created or prevalent almost as a habit among certain communities. If the chances of fair treatment are not bright, a state of affairs would arise which could only lead to the antidote of direct Governmental intervention.

Thanks

"I have already referred to the increased attention which the Ministry of Shipping is paying to the problems of Indian shipping, coastal and overseas. The Director-General of Shipping and his office have maintained their interest during the year and the Company has availed itself of the very generous and helpful advice that the Director-General and his staff have given from time to time. I should also refer to the co-operation that has been extended to us by the staff at various ports and particularly in Calcutta and the advice and assistance which the Chairman of the Calcutta Port Trust has in particular rendered to us. I would like to congratulate the Chairman of the Calcutta Port Trust on his well deserved promotion to the responsible office he will hold in the new year. The Shipping Industry will have in him a well-equipped and understanding official.

"If the results of the working of your Company during the last year have been satisfactory, the main credit goes to the shippers who have patronised our fleet, to the staff of your Company both overseas and on land and to your representatives abroad, general agents and port agents. All of them have shown even greater interest in your Company's affairs and I would like to record the thanks of your Directorate to all of them who have so consistently safeguarded and promoted the interest of your Company."

THE MYSORE SUGAR COMPANY, LIMITED

MR. A. G. BANDI GOWDA'S SPEECH AT ANNUAL GENERAL MEETING

POLICY OF SUGAR DECONTROL COMMENDED

THE Nineteenth Annual General Meeting of the Mysore Sugar Company, Limited, was held at the Company's Registered Office at Bangalore on Tuesday the 30th December, 1952, at 4-35 p.m. The following is the text of the speech made on the occasion by Mr. A. G. Bandi Gowda, B.A., B.L., Chairman and Managing Director of the Company:

"It gives me great pleasure to welcome you to this the nineteenth annual general meeting of the shareholders of the Mysore Sugar Company, Limited. From the Directors' report and audited statements of accounts, already in your hands, you would have observed, with satisfaction, how favourable the year was for your Company, especially when it is remembered that the year preceding had been a year of loss. The year has been an eventful one and I venture to say that it is bound to go down as probably the very best year in the history of the Company. The results obtained, both on the manufacturing side and on the trading side, have excelled all previous records.

"In accordance with usual practice, I shall now make a brief review of the more important events connected with the working of your Company during the year under report and of the conditions of the sugar industry, in general, as well as of the immediate problems confronting us.

"Sugarcane crushing operations in our Mandya factory started on 12th July, 1951, and lasted up to 24th March, 1952, spread over 341 milling days. Right from the commencement, the mills began to crush at over 1,500 tons of cane per day and, on many days, as much as 1,800 tons and more of cane was crushed and over 200 tons of sugar recovered. Cane supply was both abundant and steady and, over and above the contracted supplies, a considerable quantity of extra cane was purchased and milled with the object of maximising production of sugar, in consonance with the policy of the Central Government. The fixation of a ceiling price for jaggery, in parity with sugar price, and the subsequent slump in the jaggery market, following the general recession in prices from the early part of 1952, led to the factory getting more than adequate supply of sugarcane.

Higher Sugar Recovery

"The quality of the cane was also uniformly good and the yield showed a marked improvement, the average yield obtained by growers during the year being 38 tons per acre, as compared to the normal yield of 30 tons. This is an encouraging sign. The yield in our farms, too, registered an increase and you will be pleased to hear that a two-acre plot recently harvested in our Kodihally farm gave a yield of 104 tons per acre. During the year, a total quantity of 3,22,475 tons of cane was crushed. The quantity of sugar produced was 37,155 tons, which constitutes a record and amounts to 2½ per cent. of the total output of sugar by all the 138 sugar factories in the country. This high production of sugar is largely due to the exceptionally good recovery of 11.51 per cent of sugar from cane, which, in turn, speaks of the high degree of efficiency of operations and of the high sucrose content of the cane received at the factory.

"Out of the year's production of 37,155 tons of sugar, 32,040 tons were sold for controlled distribution and 960 tons were sold in the free market. The quota released for free sale was 3,075 tons. It would have been much higher, had it not been for the fact that the Ministry of Food and Agriculture, Government of India, reckoned our 1951-52 crushing season as from 1st November, 1951, to be in line with the normal crushing season in other parts of India. By this change in the reckoning of our official crushing season, we lost the benefit of free sale quota on the production from July to end of October, 1951. The minimum cane price fixed by the Government of India was Re. 1-12 per maund and, on this basis, a price of Rs. 47-10 per ton was paid on the entire quantity of cane purchased during the year. Over and above this, a cess at the rate of Rs. 6 per ton of cane was paid to the Government of Mysore.

Most Urgent Problem

"The policy of partial decontrol of sugar, in force during the season 1951-52, succeeded beyond all expectations in achieving the objective of increased sugar production. Indeed, the policy has succeeded so well that, to-day, there is a large surplus of sugar in the country, which has given rise to new and unexpected problems. Production touched the peak level of 15,00,000 tons, as against 11,14,000 tons in the preceding season. This record production, after a series of years of underproduction and scarcity of sugar, goes to show to what height the industry is capable of rising, given favourable conditions. Strangely enough, with plentiful supply of sugar in the country, demand failed to register an increase, with the result that the offtake has been poor and below expectations. This may be attributed to the availability of jaggery in abundance and at comparatively cheaper prices and to a certain amount of decline in the purchasing power of large sections of the population. The result is that the new 1952-53 season has started with a heavy carry-over stock of about 5 lakh tons of sugar. The most urgent problem facing the industry is the profitable disposal of this surplus, for which there is no ready internal demand. Export to foreign countries offers the only solution. But the comparatively high price of the sugar stands in the way and not much headway has been made in this direction so far. Even a small island country like Cuba produces nearly 62 lakh tons of sugar in a year and is able to export a major portion of it to foreign countries at competitive prices, and it should not be difficult for India to build an export market for her small surplus.

"The recently announced sugar policy for the season 1952-53 aims at correcting the situation that has arisen by the excess production in the previous season and the difficulty in its disposal by reason of its high cost, and lays emphasis on the export of two lakh tons out of the new season's cheaper sugar, or out of the carry-over stock on a replacement basis. The new policy contains several drastic changes and it is to be hoped that it will succeed in maintaining production and in restoring healthy conditions in the sugar market which is now undergoing a transition. Control over price and distribution of new season's sugar has been withdrawn, though control over releases from factories is continued so as to ensure a reserve stock of 3 lakh tons with the industry. The price of sugarcane is reduced from Re. 1-12 to Re. 1-5 per maund and the effect of this will be that the consumer will be able to get sugar at a considerably lower price after the existing stock of dearer sugar is exhausted.

Accumulation of Stocks

"The cane and sugar prices and the sugar control policy are fixed by the Government of India for each crushing season. As the practice with regard to sugarcane planting and harvesting in Mysore is different from what obtains in other parts of India, there has been a certain amount of confusion over the term 'crushing season.' Pending clarification of the position, the release of our sugar produced since 12th July, 1952, was deferred and this led to rapid accumulation of stocks in the factory, presenting serious storage problem. Fortunately, the timely action taken by the Central Government, to depute to Mandya the Joint Secretary of the Ministry of Food and Agriculture to study the situation on the spot, has helped to resolve a crisis which was causing anxiety not only to your Company but also to the cane-growers. The representative of the Central Government held discussions with the Government of Mysore, the representatives of the cane-growers, and the Company, as a result of which satisfactory decisions acceptable to all the parties have been arrived at. I tender our grateful thanks to the Government of India, as well as to the Government of Mysore and to others, for their kind and sympathetic assistance in this behalf.

Financial Results

"Gentlemen, I shall now say a few words about the financial results of the year's operations and the proposals for the appropriation of profits. Your Directors are indeed very happy to report that the manufacturing and trading operations of the Company during the year 1951-52 have yielded a gross profit of Rs. 72,70,218-7-1, which is nearly twice the highest profit realised in any year previously. The factors that have contributed to the earning of this handsome profit are the comparatively greater production and greater sales of sugar, the uniformly high rate of daily crush and the benefit of the higher sugar price of Rs. 33 per maund which the Ministry of Food and Agriculture was good enough to allow on our production up to 31st October, 1951, by treating it as part of the 1950-51 season. We are grateful to the Ministry for this concession, though the benefit was, to some extent, offset by the production during this period being excluded in determining our free sale quota. But it is the exceptionally high percentage of sugar recovered from cane during the year's crushing that is largely responsible for the profit shown in the accounts. I am sure this will be considered to be a creditable achievement. With tariff protection gone, production outstripping internal demand necessitating exports to foreign countries, and a buyers' market ruling in the country, the future hope of the industry lies in its ability to recover more and more of sugar not only from cane within the factory but from the cane on the field. That is to say, along with higher percentage of sugar recovery, higher tonnage of cane from land is to be raised. This is the objective which your Company is aiming at and the results obtained in both these directions are encouraging. The confectionery department, which earned a profit of Rs. 97,301 last year, was forced to remain idle for a major part of the year under review and its working has resulted in a loss. Similarly, the oil mill also had an unfavourable time. I am, however, glad to say that the distillery has done well and has given a profit of Rs. 5,55,272-6-7, the highest ever obtained from this department. This is largely due to the satisfactory sales of denatured spirits at favourable rates.

"After meeting management expenses and after providing for depreciation for two years, that is, the year under report and also the preceding year for which depreciation could not be provided for for want of profits, adding Rs. 4 lakhs to the reserve for bad and doubtful debts, and setting apart Rs. 32 lakhs towards payment of income and super taxes, there is a net profit of Rs. 25,29,266-6-3. We started the year with a deficit of Rs. 2,54,083-7-8, being the balance of net loss brought forward from the previous year and, after deducting this deficit, the amount of net profit available for distribution comes to Rs. 22,75,182-14-7.

Distribution of Profit

"Your Directors have given careful consideration to the question as to how to distribute the profit in the best manner. Consistent with their policy of maintaining dividend at a stable level, irrespective of fluctuations in the fortunes of the Company from year to year, your Directors recommend a dividend of 20 per cent. free of income-tax, for the year 1951-52. No doubt, this absorbs only a fraction of the distributable profit, but, bearing in mind the paramount need for consolidating the position of the Company to enable us to face the vicissitudes of the future, your Directors consider that it would be wise to utilise the surplus for augmenting the various reserves or for carrying forward to the next year to meet unforeseen contingencies. With this end in view, they propose, first, that the sum of Rs. 4,35,856 drawn from the dividend equalisation fund last year be put back into it, restoring the fund to its original level of Rs. 7,50,000. Secondly, they recommend the transfer of Rs. 3,26,174-9-6 to the general reserve, raising it to a round figure of Rs. 60 lakhs; and thirdly, the addition of Rs. 2,50,000 to the cane price stabilisation fund. As shareholders are aware, a cane price stabilisation fund has been in existence since the year 1942. The fund has been created with the object of ensuring to cane-growers a reasonable price in years when sugar prices are low. The fund now stands at Rs. 8,50,000 and it would be a good gesture on our part to strengthen it so as to infuse sufficient confidence in the minds of the cane-growers in the ability of the Company to safeguard their interests. There is still a balance of Rs. 8,27,296-5-1, which it would be well to carry forward to the next year.

Capitalisation of Reserves

"You will, perhaps, expect me to say something about the question of capitalisation of a portion of our reserves by the issue of bonus shares, to which I had made a reference in my speech last year. Well, it has not been possible to make any headway in regard to this matter and all that I can now say is that your Directors are fully alive to the urgency of this issue and hope to take up the matter for fresh consideration.

"In the balance-sheet presented to you last year, there was an item of bank overdraft to the extent of Rs. 22,19,284-6-2. You will be glad to note that we have been able to repay the entire loan in the course of the year under review.

Shortage of Water Supplies

"I would now like to touch upon a matter which is causing deep concern to your Directors. How intimately the fortunes of our industry are bound up with Nature was painfully brought home to us during the year 1950-51, when, due to failure of monsoon and the drying up of the Krishnarajasagar Reservoir, sugarcane crops in Mandya perished, resulting in closure of the factory and loss to our Company. Due to poor monsoon, the reservoir has failed to fill to its maximum capacity this year too, and fresh planting of cane had to be stopped from the month of September, 1952, on receipt of advice from the irrigation authorities about the precarious water-supply position. It is too early to say anything at this stage as to how this poor planting will affect the working of your Company in 1953-54, or as to what measures are proposed to be adopted to meet the threatened crisis. Operations during the current year, however, are not expected to be affected to any great extent and we can confidently hope that the year 1952-53 will turn out to be a normal one.

"The shortage of water in the reservoir has confronted us with an immediate problem. The north-east monsoon also having failed to bring sufficient inflow of water into the reservoir, the irrigation authorities have notified stoppage of water in the canal by the end of this month. There is still standing sugarcane crop over an area of 1,600 acres awaiting harvest and supply to the factory, and closure of the factory at this stage for want of water would result in a large amount of cane being condemned on the fields, causing heavy loss to the ryots. In view of the gravity of the situation, the irrigation authorities have been good enough to comply with our request to store water in some of the tanks in Mandya for the exclusive use of the factory, as a temporary measure. As a permanent measure aimed at solving the problem of water-supply to the factory, especially during times of crisis, your Directors have decided upon the construction of what is called a spray pond. The work is already under execution and is pushed through on top priority so as to make the tank available for use during the present emergency. It is almost nearing completion. The whole scheme, consisting of a huge tank measuring 250 ft.×150 ft.×3 ft. deep and gunited all over and fitted with necessary pumps, motors and pipes to facilitate cooling and circulation of the same water over and over again, is estimated to cost three and odd lakhs of rupees. This outlay, high as it is, will be money well spent, considering the uncertainty of water-supply to which the factory is subjected now and then. With the help of this tank, it is expected that all the 1951 planted cane will be crushed in the normal course. The construction of the tank also fits in with our long-range scheme of drawing the minimum quantity of water from the canal.

Plant Expansion

"The plan for the conversion of our factory so as to make it a balanced unit capable of dealing with 2,000 tons of cane per day has been finalised. The scheme is being taken up in stages and progress is being made according to schedule. The machinery required for the first and second stages has been ordered and is expected to be received before the end of 1953. Certain additional equipments intended to modernise the factory and to effect saving of time and labour are contemplated in the third and fourth stages spread over the next two or three years. The original 450-ton mill, which was intended to be transferred to Shimoga, is being retained at Mandya to form part of the expanded factory, as there appears to be no prospect of a new factory coming up at Shimoga under the present altered conditions of the sugar industry. A new 2,000-k.w. turbo-alternator has been ordered for delivery two years ahead to ensure adequate power supply to the expanded factory. It may here be added that the frequency of electric power supply to the factory has been changed from 25 to 50 cycles to fall in line with the universally adopted system of power generation. This change-over entailed considerable additional work in effecting necessary alterations to our existing 1,000-k.w. generator and in replacing or re-winding the coils of over 100 motors. It is remarkable that the whole operation was carried through smoothly during the last shut-down period, in addition to the normal shut-down jobs.

Labour Situation

"Before concluding, I wish to make a brief reference to the labour situation. Time and again, it has been made clear that it is the declared policy of the Company to see that everything possible is done to promote the welfare and contentment of our employees, and it is perhaps unnecessary for me now to detail the various measures we have taken, from time to time, to improve the service conditions and expand the amenities provided in the shape of housing, educational, medical and recreational facilities. A bonus of two months' pay was granted to all the employees during the year 1950-51, even though the year's operation showed a net loss of about Rs. 8 lakhs. Recently, certain demands have been put forward by the Employees' Association and these are now pending before the Industrial Tribunal. In this connection, it is gratifying to note that our Union Minister for Labour, Mr. V. V. Giri, who is himself a distinguished labour leader with life-long experience in this field, has set his heart on introducing a reorientation to the approach of labour problems, emphasis being laid on settlement of disputes by mutual negotiations and conciliation rather than by adjudication. It is to be hoped that the efforts made in this direction will result in simplifying the machinery for achieving swift settlement of industrial disputes and will ultimately lead to better employer-employee relationship.

"I take this opportunity to express my grateful thanks to my colleagues on the Board for the valuable advice and guidance that they have given me throughout. A special word of praise is due to our General Manager and to all the officers and staff, down to the humblest worker, both in the factory and in the other sections at Mandya as also in the head office at Bangalore, for their loyal and willing co-operation, which has contributed, in no small measure, to the successful working of the Company. Lastly, I wish to express the gratitude of the Company to the Ministers and various Departments of Government at the Centre and in the Mysore State for their sympathy and support. Particularly, we are deeply indebted to the Ministry of Food and Agriculture at New Delhi, the excise authorities and the authorities of the Southern Railways for their ready assistance at all times.

"Gentlemen, I have now great pleasure in moving the adoption of the report and accounts."

The meeting was attended by a large number of shareholders, who spoke in appreciative terms of the efficient management of the Company during the year under report. After the Chairman furnished the information required by some of the shareholders, the motion for the adoption of the report and accounts was unanimously passed.

Approval was also conveyed to the declaration of a dividend of 20 per cent. free of income-tax.

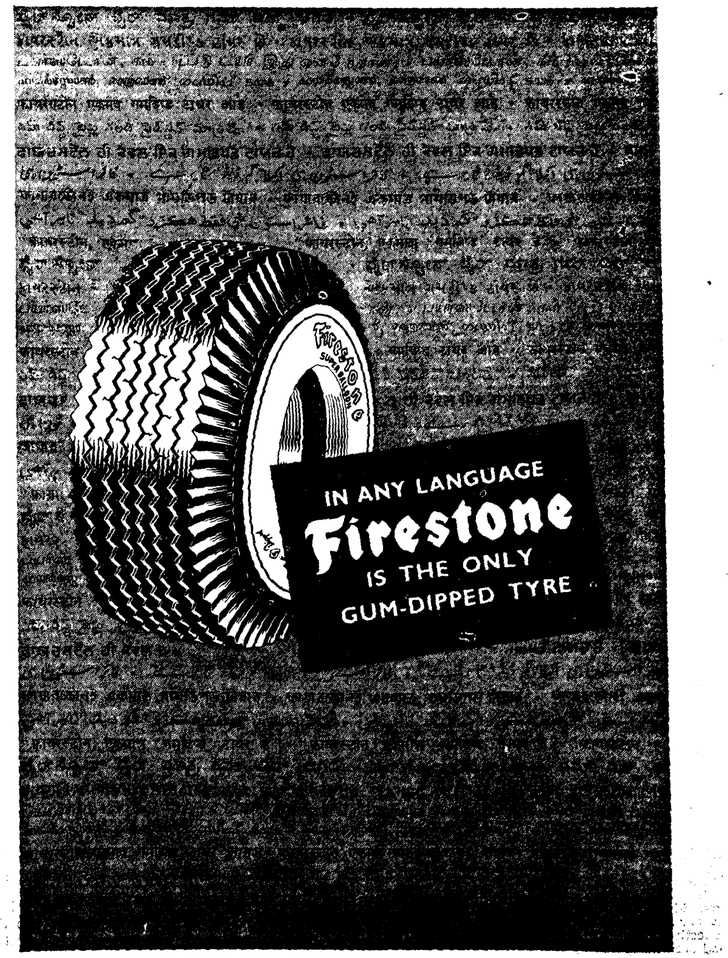
As a result of the poll, Mr. H. F. Marker, the retiring Director, was re-elected.

The existing Auditors, Messrs. B. K. Ramadhyani & Co., Mr. S. R. Mandre, and Messrs. Brahmayya & Co., were re-elected as Auditors for the year 1952-53 on a remuneration of Rs. 1,500 each.

The meeting terminated with a vote of thanks to the chair.

V. M. LINGIAH,
Secretary.

BANGALORE, 1st *January* 1953.



NEW PUBLICATIONS

Digest of Labour Law Cases. By Mr. V. B. Kher. Publishers: Messrs. Thacker & Co., Ltd., Bombay. Price: Rs. 20.

MR. V. B. Kher has done well in compiling a digest of labour law cases. This is, perhaps, the first comprehensive and serious attempt made to prepare a digest of labour law cases in a methodical manner. Small wonder then that the book has been praised by legal luminaries like Mr. Justice G. S. Rajadhyaksha, Sir Jamshedji B. Kanga and Sir Harsidhbhai Divatia, who have all expressed high opinions about the *Digest* and commended it as a useful book of reference to those interested in industrial relations.

The importance of such a digest as the one under review has been felt for a long time. The large volume of case law, built through the awards and decisions of statutory labour tribunals and courts, points to the need for a comprehensive digest for use by company and trade union officials as well as conciliation officers who are connected with the day-to-day maintenance of peaceful relations in industries. Mr. Kher's *Digest* presents the whole gamut of case law in a logical and straightforward manner. It is also characteristically thorough.

The *Digest* is divided into three parts. The first part covers the decisions under the Bombay Industrial Relations Act. This Act, which is the first of its kind in India, is of special interest to the textile industry in the Bombay State. It is noteworthy that a separate chapter has been devoted to this Act. The second part is devoted to the decisions under the Central Government's Industrial Disputes Act, 1947, and other State Acts (which to a large extent retain the provisions of the Central Act), the Payment of Wages Act and the Industrial Employment (Standing Orders) Act. The third part gives an abstract of the decisions of the Labour Appellate Tribunal. The decisions in the first and second parts have been brought up to July, 1951, while those in the third part have been brought up to February, 1952. The value of the *Digest* is enhanced by the addition of a series of appendices containing (1) table of awards classified industry-wise; (2) table of awards relating to standardisation of wages in the State of Bombay; (3) table of minimum wages paid at some industrial centres in the State of Bombay; (4) table of rates of dearness allowance at some industrial centres in the State of Bombay, and (5) table of awards in the matter of bonus in the cotton textile industry. The *Digest* is, indeed, an invaluable guide to those who are concerned with the problem of industrial relations.

In his brief foreword to the book, Mr. P. S. Bakhle, former member of the Industrial Court, Bombay, traces the history of labour legislation in India and discusses the question whether the time is opportune to give up compulsory arbitration by the State in favour of collective bargaining. Since the issue is of topical nature, in the context of what is popularly known as the "Giri approach," it is worthwhile quoting the views of Mr. Bakhle, who has had considerable experience in settling industrial disputes. Justifying the need for State interference in these disputes without the consent of the parties to the dispute, Mr. Bakhle observes:

> "Constant and increasing conflicts between the workers and the employers lead to severe dislocation and the public as consumers are directly affected thereby. The State cannot, therefore, remain unconcerned and has to see that such conflicts are prevented as far as possible. When parties to the dispute are not in a mood to settle their differences, the State must in the interest of the general public intervene and refer the dispute to compulsory arbitration."

Commenting on the issue of collective bargaining *vs.* compulsory arbitration, he remarks:

> "It may be argued that the State should have left the settlement of an industrial dispute to the parties themselves through collective bargaining. It cannot, however, be overlooked that for an efficient and successful working of collective bargaining, the parties to the dispute must possess equal or very nearly equal strength. There is no doubt that the employers have been sufficiently organised. The same cannot, however, be said of the workers. Notwithstanding the fact that it is now over 30 years since the trade union movement was started in India, the working classes have not been sufficiently organised. This would be clear from the fact that out of the cotton textile workers in Bombay, hardly 33 per cent. are members of one or the other unions of the textile workers in Bombay. Mr. Richard A. Lester has, in his book *Labour and Industrial Relations*, pointed out that collective bargaining on the railroads in the U.S., had been hampered by the existence of 21 standard craft unions with inter-union jealousies. The position in India is not very different. In the absence of a strong union, the most able labour leader would find himself powerless to enforce bargaining. It is, therefore, clear that compulsory arbitration in industrial disputes must remain for some time to come."

Economic Development of the United States. By John R. Craf. Published by Messrs. McGraw-Hill Book Co., Inc., New York. Price: $5.

The opulence of the United States has now become proverbial. Few can deny that but for the bountiful aid provided by the U.S., the economic and political structure of Europe outside the Iron Curtain would not have attained its present status. Small wonder, therefore, that there is keen interest, particularly among the educated populace of the free world, to know the factors that have been responsible for the economic strength of the U.S.

Economic Development of the United States serves this purpose creditably. Mr. John R. Craf presents, in an interesting and readable style, the factors that have made the United States a great nation. Being Professor of Economics in the University of Louisville, the author has kept the needs of the student in mind. The book thus covers development of transport, land policies, banking and finance, agriculture, industry, science and labour. The author has prefaced the book by an explanation of the basis of the American economy which includes mass production, distribution and other essentials, its advantages, shortcomings and peculiarities. At the end of each chapter he gives a summary and a few discussion questions and problems. The problems are intended to stimulate further study through use of reference material.

Mr. Craf has made an attempt to show how large-scale American business enterprise did not appear suddenly on the horizon but arose from the hard and sustained efforts of the settlers over several years. The book describes how the U.S. remained an agricultural nation for more than 200 years, and how the revolutionary war stimulated manufacturing in the United States. It further gives a brief account of the achievements of the U.S. in the twentieth century. It is in the twentieth century that the U.S. witnessed a rapid rise in the field of scientific development, as, for example, production of atomic energy, and advances in industry and agriculture which have improved the economic life of the U.S. in a countless number of ways. The book also includes a chapter on natural resources of the U.S. and their importance to its industrial economy. It further sets forth the rights and obligations imposed upon the Federal Government in relation to business, discusses the functions of the United Nations and explains the activities of its Economic and Social Council. Besides, it covers the influence of foreign events on the U.S. economy, particularly during and since World War II. The book is a valuable account of the economic progress of the U.S. and deserves to be widely read in this country which is aspiring to be the America of the East.

Income-tax Law and Practice (in Hindi). By C. B. Gupta. Publishers: Ram Prasad and Sons, Hospital Road, Agra. Price: Rs.15.

The assessment of personal incomes is, as is well known, beset with practical difficulties arising out of the conflicting interests of the assessor and the assessee. Anybody familiar with the working of income-tax law knows only too well that the soil is fertile with diverse controversies in and out of tribunals and courts. The present book, *Income-tax Law and Practice*, does not pretend to be a scholarly analysis of the subject, written as it is to cater to the needs of the student preparing for the degree course. It is a simple but clear exposition of the income-tax law as it exists in India and of its practical application and working. Opening with a background of the history of the levy, it proceeds to explain various concepts and definitions to make them intelligible to the unsophisticated reader and analyses the law, giving simple illustrations of a practical nature. The author has also explained the accounting procedure for assessment purposes in various circumstances. Oversimplication, especially in such complicated subjects like income-tax matters where the problems present worse confusions than the proverbial Gordian knot even to acclaimed experts, is bound to prove misleading. To that extent the book errs, like any other elementary introduction of its nature, where the method adopted and the purpose in view make such a commission of fault inevitable. But one can say Prof. Gupta has handled the exposition like a master with a firm grip on the subject. Along with his expert knowledge of the income-tax law he has brought to bear on the work his vast teaching experience.

The special merit of the book lies in the fact that its medium is the *lingua franca*. Hindi has yet to evolve an acceptable terminology for technical purposes like the present one. The 176 pages of the book would be a valuable contribution to Hindi literature in furthering this task and in giving the lead to similar work in allied fields.

The Law Relating to Service in India. Vol. I Master and Servant. By Messrs. N. Barwell and S. S. Kar. Published by Orient Longmans Ltd., Bombay. Price: Rs. 30.

The chief justification for the study of the law relating to service is that every person in some sense is employed by or is an employer of someone else in this modern industrial world. Messrs. N. Barwell and S. S. Kar have set themselves to the task of writing a comprehensive treatise, in three volumes, on the law relating to service in India. The first volume, published recently, deals with the general law of master and servant and allied topics of apprenticeship and the like. It explains the degree to which the Common Law of England has been adopted in this country to suit Indian conditions and the extent to which the Indian Statute Law has modified the Common Law doctrines. It is gratifying to note that the authors have tried to avoid, as far as possible, legal and technical phraseology which makes it difficult for the layman to understand the implications of the law on subjects which concern him.

The authors have also quoted extensively from important decisions. Where judicial interpretations on any given aspect of the law have been found to lack uniformity, the authors have sought to present, with fairness, the evidence of conflict and have also made their own assessment of the cases. The book is of value not only to trade unionists and social workers but also to students of law. We look forward with interest to the other two volumes (now under preparation) which relate to various aspects of the law relating to service in industry and under the State, respectively.

The "Eastern Economist"—Annual Number, 1952. Edited by Mr. E.P.W. da Costa. Published by "Eastern Economist" Ltd., 52, Queensway, New Delhi. Price: Rs. 5.

The chief feature of the *Eastern Economist—Annual Number*, 1952, is the presentation of almost every facet of Indian economy against the world background. Among the notable articles of the Annual Number, which is more in the nature of a world stocktaking, special mention must be made of "International Trade—a World Picture," "The Problem of Payments" and "Indian Industry in the World Scale." This sumptuous publication carries an interesting collection of tabulated economic data relating to a wide range of economic subjects, such as industrial and mineral production in the free world, world trade, and nutrition and food supply. The immense distance which India has still to traverse before it can catch up with the industrial West is everywhere emphasised; but at the same time, our contemporary is realistic enough to appreciate the "inevitability of gradualness," in economic progress. The Annual Number makes stimulating reading and is a most handy and useful reference work.

Records and Statistics—Quarterly Bulletin of the "Eastern Economist." Edited by Mr. R. V. Murthy and Published by the "Eastern Economist" Ltd., 52, Queensway, New Delhi. Price: Rs. 4.

The latest issue of *Records and Statistics*, the quarterly publication of the *Eastern Economist*, provides an interesting and varied statistical fare. Under the distinguished editorship of Mr. R. V. Murthy, this publication has gained both in bulk and in quality. The topics treated in this publication include agricultural and industrial production, trade, banking and other miscellaneous statistics. A notable feature of this valuable record is the graphical representation of several important statistical data, which enables the reader to get a clearer picture of the changes in the country's economic scene.

IMPORT POLICY FOR JANUARY-JUNE, 1953

MORE CONSUMER GOODS ALLOWED

LIBERALISATION of imports covering over a hundred items, some modification of the O.G.L., partial or full restoration of import quota cuts effected on a number of items in the preceding licensing periods, grant of token quota licences for certain consumers' goods for which no quota had been given for over a year, reduction in the import quotas of certain items in which there has been improvement in indigenous manufactures, and withholding announcement of import policy in respect of certain items, these are the main highlights of the import policy of the Government of India for the first half of the current year, namely, January-June, 1953. By and large, the new import policy for the half-year, announced in the *Gazette of India Extraordinary* dated 31st December, 1952, follows, broadly speaking, the pattern of the policy for the corresponding period in the last year and favours the consumers' interest generally. In evolving the policy for the current half-year, the Government seems to have taken into account trade prospects and improvements in indigenous manufactures as also the availability of goods in the country. The policy, as a whole, has been welcomed by the trade. Says Mr. Chinoobhai C. Javeri, President, All-India Importers' Association, Bombay: "On the whole, the Government has acted wisely in liberalising import, because now is the time to relax import controls, since the danger of foreign exchange being frittered away by excessive imports is remote due to the trade depression and shrinkage of the purchasing power of the people." He feels that the policy would have been appreciated by the trade even more, had the quotas for such items like lead pencils, primus stoves and parts thereof been increased and the continued ban for the last three consecutive periods of sago flour, which the textile industry and trade had resented, had also been lifted.

O.G.Ls. XIV and XVI expired on 31st December last. O.G.L. XXVII replaces O.G.L. XIV and in O.G.L. XXVIII an effort has been made to bring together all the essential items fied in O.G.Ls. XVI, XXIV and XXV requiring ing to s orders for long periods of delivery. Only Bombay ms have been dropped from the O.G.L. some indu ude ball bearings, power-driven dubay; (4) tal readle printing machines and some some indust stores. The import of these items and (5) tablated, be regulated on a quota basis. in the cotto indeed, an

A More Liberal Policy

concerned alysis of the policy statement shows relations. is a category of a hundred items over more liberal policy has been followed. In hared with that for the second half of Bakhle, esides, in view of substantial stocks in Bombay ntry and uncertain foreign exchange in Indi ts, import quotas for a number of items time been cut down in the preceding licensing arbi od. It is stated that it has now been possible b5 restore these cuts partially in some cases and fully in others, on account of the improvement in the balance of payments position in the last half of the year. Although the official payments for the second half of last year are not yet available, it is presumed from the trade figures that the large imports surplus of the first half must have been considerably reduced in the subsequent half of the last year. Published figures show that between July and October, 1952, India's total imports were approximately of the value of Rs. 212 crores, while exports were about Rs. 209 crores. The improvement in trade shown by these figures is expected to have been more or less maintained in the last quarter of the calendar year. It is, therefore, assumed that, with other receipts from invisibles, the second half of 1952 was a period of even balance in payments. It may even possibly indicate a small surplus as compared with a balance of payments deficit in the first half of 1952 of Rs. 98 crores. In entertaining these assumptions, account is taken of the fact that in the second half of 1952, there was a decline in the imports of food, raw cotton and raw jute, while exports of tea, cotton and textiles showed improvement over the figures of the previous half. It is further noted that there was also an improvement in the sterling balances which amounted to about Rs. 706 crores towards the close of 1952 as against Rs. 683 crores at the end of June that year. These considerations obviously explain the liberal import policy followed for the current half-year.

The cuts in imports which have been partially or fully restored relate in the main to items which are of importance to Indian industries. These items include twist drills and reamers, power-driven pumps, garage tools, machinery and parts thereof. Cuts have also been restored in the case of certain goods which are of interest to the general consumer. These include infant foods, writing and printing paper, drugs and medicines, blankets and rugs, building and engineering materials.

Of considerable importance to certain indigenous industries is the reduction in the import quota for goods the manufacture of which in the country has progressed sufficiently so as to satisfy the requirements of the domestic market. Thus, the favourable effect of industrialisation on the balance of payments position of the country is beginning to be felt. These include iron and steel structures, bolts, nuts, rivets, wire netting, wire mesh, leather belting, pruning knives, some items required for textile and jute industry such as shuttles, and cotton ropes and bindings, leather cloth, aluminium, tea chests linings, umbrella fittings, torch bulbs, brake fluids and geometry boxes. The industries concerned also stand to benefit by this action of the Government, inasmuch as it will help them to consolidate their position in the home market.

Token Imports

The Government has, however, decided to allow token imports of about 15 articles, the import of which had been banned before. These token imports, which form only a small percentage of the quantity allowed in the past, are intended not only for the use of discriminating consumers, but for serving a competitive purpose, namely, to bring about an improvement in the quality of the indigenous products. This policy of allowing imports with a view to influencing the quality and price of domestic manufactures in favour of consumers has been adopted for the first time since independence and is to be welcomed from the point of view of the consumer. In fact, it was long overdue. The list of items for which token quotas have been fixed is as follows: Confectionery, including chocolate covertures in 1½ lb. slabs, 5 per cent.; chocolates 5 per cent.; biscuits and cakes 5 per cent.; perfume spirits 10 per cent.; fireworks, 10 per cent.; translucent porcelainware 10 per cent.; brushes (excluding artists' brushes, toilet, paint and varnish brushes), 10 per cent.; playing cards and other sports goods 10 per cent.; games and sports requisites unspecified 10 per cent.; metal buttons 20 per cent.; smokers' requisites 20 per cent.; vulcanised fibre suit cases 10 per cent.

In addition to the above items, it has also been decided to grant licences to newcomers for the following items: Iron and steel valves, wood screws, asbestos manufactures, electrical instruments and accessories, safety lamps and parts, textile chemicals, spices, camphor, cotton thread including sewing and darning thread, glass building blocks, motor vehicle parts, motor cycles, scooters and auto-attachments, photographic goods, arms and ammunition, chemicals, glass wool, fibre, and products thereof.

The import policy for a few more items remains to be announced. These include ball bearings, diesel engines and tractors, flashlight cases, betel-nuts, cycles and parts, tea chests, caustic soda and soda ash, fibre boards and art silk yarn. It is stated that the position in regard to these items is under review and an announcement of policy will be made as soon as practicable. Most of these articles are on the protected list and the fact that the Government has not taken a decision makes one feel that the Government is administering import controls for purposes of protection—a procedure which is against its own profession or article of faith. In order to avoid the creation of such an impression, it will always do well to declare its policy in regard to these items along with the general announcement.

Over a large field, imports are proposed to be maintained at the July-December, 1952, level. The policy in respect of 70 per cent. of the items remains unchanged. These include non-ferrous metals, metal manufactures, motors and generators, cables and wires, spices, liquors, raw materials for paints, stationery, clocks and watches and motor cycles.

The procedure for the issue of import licences remains substantially unaltered. The only noteworthy change—which is in keeping with the promise made by the Minister for Commerce and Industry at the meeting of the Import Advisory Council early last month—is that established importers are no longer required to prove two years' imports as evidence to entitle them to grant of import licences. For the Government will now accept one year's imports as proof for issuing licences. Further, the list of items licensable to actual users has been enlarged and an opportunity has been given to newcomers to participate in the import trade of a wide variety of items, as stated already.

CENTRAL FERTILISER POOL

The Government of India has, according to a Press note, decided to continue the Central Fertiliser Pool during the current year. The Pool, which is operated by the Ministry of Food and Agriculture, meets the needs of State Governments and others in respect of chemical fertilisers, mainly sulphate of ammonia. Allocations are made on the basis of annual demands received from the State Governments and interests like tea estates in N.E. India, the United Planters' Association of South India and the Indian Coffee Board.

In view of the satisfactory supply position of sulphate of ammonia as a result of the Sindri production and imports, it was at one time felt that the Pool should be disbanded in 1953 and the Sindri factory be allowed to sell its production in the open market at reasonable rates. On further consideration of the matter it has now been finally decided to continue the Pool during 1953. The Pool price of sulphate of ammonia has been reduced from Rs. 365 to Rs. 335 per ton with effect from 1st January, 1953.

The phosphatic part of the Fertiliser Pool dealing with distribution of superphosphate has already been discontinued with effect from 15th August, 1952.

The major portion of supplies which will be available to the Pool for allotment during 1953 will be contributed by the Sindri factory, though some imports will also be necessary to supplement local production. As in 1952, allotment of Sindri sulphate of ammonia will be in favour of the State Governments who will furnish despatch instructions to the Sindri factory against their quotas. The retail distribution to the cultivators within States will be arranged by the State Governments. In view of this procedure, there will be no necessity, says the Press note, for the Food and Agriculture Ministry to appoint agents for Sindri sulphate of ammonia.

Press reports from New Delhi indicate that, out of the 1952 allocation, about 10,000 tons still remain to be lifted from the Pool. The reason for this poor offtake is stated to be the failure of the monsoon in the South. It is also pointed out that even after the reduction of Rs. 30 per ton in the Pool price as above, the Sindri fertiliser is costlier than the imported fertiliser, the Japanese material selling at Rs. 240 per ton. Among other causes for the accumulation of stocks is stated to be lack of co-ordination in respect of sale and distribution of fertilisers between the Ministries of Agriculture and Production.

IMPORT OF TRACTORS

The licensing policy for the import of agricultural tractors has been announced through a public notice in a *Gazette of India Extraordinary* dated 6th January, 1953. Until 31st December, 1952, agricultural tractors were being licensed under a special scheme, whereby blanket licences were issued to accredited agents of approved makes of tractors. It had become necessary to adopt this scheme of blanket licences, because, owing to meagre import of tractors in the past, the normal system of quota licensing to established importers would not have enabled the import of large numbers of tractors needed for meeting essential requirements. Now that imports at a fairly high level have been coming in for the past three years, it has been decided that, with effect from the licensing period January-June, 1953, import licences for agricultural tractors will be granted to importers on a quota basis.

Under the new policy, both general and soft currency licences will be granted on the basis of a quota of 100 per cent. of half of best year's imports from the dollar area and the soft currency area, respectively. The quota licences will be subject to certain conditions—these have been specified in the public notice—and will not be valid for import of makes of tractors other than those imported by the importers concerned in the past; for tractors having a h.p. of less than 15 at the draw bar and for tractors operated by petrol or gasoline. Similar conditions were applicable to the blanket licences issued under the special scheme.

The import policy in respect of tractor service tolls, tractor trailers, tractor attachments and spare parts of tractor trailers and tractor attachments, has also been announced.

MOTION PICTURE INDUSTRY IN INDIA

India has an investment of Rs. 42 crores in the motion-picture industry, of which Rs. 26 crores are in theatres, according to a report of the Indian Motion Picture Producers' Association.

About 3,500 motion-picture theatres were reported in operation, of which 800 are touring exhibitors. Total seating capacity of all theatres is estimated at 1,600,000, the average seating capacity per theatre being 630. Average daily attendance is estimated at 2,000,000, and the total annual gross box-office collections, including entertainment tax, was reported to be Rs. 25 crores.

Average annual imports of raw stock film amount to 200,000,000 feet, valued at Rs. 1.3 crores.

About 90,000 persons are employed in the industry. Sixty studios use 140 sound stages, on which some 300 producers turn out 250 feature films each year. Pictures produced in Bombay and Calcutta average 12,000 feet in length, and those completed in Madras average 15,000 feet.

The average production cost of a feature film ranges from Rs. 4 lakhs to Rs. 5 lakhs, and it takes from 6 to 12 months to complete a full-length feature.

HENLEY SERVICE FUSES

"HENLEY ISCO SERVICE FUSES embody all the essential features necessary to ensure simplicity in installation and reliability in service—the result of wide experience and scientific experiments extending over forty years. 1952-A

RESEARCH IN AGRICULTURAL ECONOMICS

WHAT IS WRONG WITH OUR UNIVERSITIES?

"IT is a tragedy that a country which is spending crores of rupees for the development of scientific and technological studies and research and can boast of some of the most imposing structures with the most well-equipped laboratories in the world, neglects the basic facts of our life in the field of agricultural economics and allows such vital problems to be the playthings of the politician, who thereby treats the vast mass of the population in the country as a living laboratory on which to experiment with his fads, which though exalted by the term practical wisdom, are sometimes based even on intuition." These strong remarks of Professor C. N. Vakil, in the course of his presidential address delivered at the Thirteenth Agricultural Economics Conference held at Trivandrum on the 26th ultimo, appear to be couched in very mild language considering the way in which research in agricultural economics has been neglected by those in authority. The country is predominantly agricultural. The population depending on this occupation is steadily growing. The problem of feeding the people, as also of supplying raw materials to industry, is assuming huge proportions. The country has now a Five-year Plan which proposes, among others, the use of more than 40 per cent. of the total expenditure on agricultural development, a new land policy, irrigation schemes and river valley projects. The implementation of all these measures for improving the agricultural economy needs to be kept under close and careful watch. The results need to be checked and measured. The economic policies must be suitably adjusted, if the progress aimed is to be achieved. But all this will only be possible, if correct data on all agricultural problems is systematically collected and analysed and interpreted on scientific lines. Besides, there must also be a continuous examination of the interrelationship of different agricultural problems *inter se* as well as with the other sectors of the economy. Unfortunately, in India research in agricultural economics has been greatly neglected by the Government. In drawing the attention of the public most spiritedly to this neglect of an important subject in the course of his address referred to above, Prof. C. N. Vakil has rendered a signal service to agriculture, the backbone of Indian economy.

The instances given by Prof. Vakil go to show how the question of collecting and interpreting the statistics relating to agriculture has been badly handled make sad reading. One of the instances given by him relates to the enquiry into the condition of agricultural workers which the Ministry of Labour, Government of India, undertook in June, 1949. This enquiry was intended to collect data regarding unemployment, earnings, cost and standard of living and indebtedness of agricultural workers. After a preliminary enquiry which covered 27 villages and 3,000 families, the method of enquiry was revised and the rest of the enquiry was conducted with the help of the State Governments. The total expenditure is stated to have exceeded Rs. 10 lakhs. The organisation created by the Ministry to conduct the survey was to ask university professors and students to give voluntary assistance in the collection of data, and the person in charge of the Bombay office of this organisation is said to have possessed neither the knowledge to deal with the enquiry nor the humility in seeking the assistance of the university authorities, some of whom are far better equipped to handle such enquiries than officials of the Government.

Weakness of Data Collecting Agencies

Apart from neglecting the proper channels for conducting agricultural economic research, the Government seems to have taken no serious steps to remove certain weaknesses in the existing organisation intended for the collection of basic information. The persons in charge of the work at the village level are ill-qualified and low paid. The work of collection and presentation is done by them mechanically. Further, in all this the research angle is completely absent. Referring to this feature in the present set-up, Prof. Vakil observes that there is a tendency among Government Departments to confuse collection of economic statistics with economic analysis and interpretation. Recently, a series of laws relating to agriculturists has been passed, but no attempt is being made to have a re-examination of the working and the effectiveness of these new laws. Instead, the Government has been following a trial-and-error method in formulating economic policies in the field of agriculture. In the circumstances, it is not at all surprising that Prof. Ashby, Director of the Oxford Institute of Agricultural Economics, who visited India in 1949 at the invitation of the Indian Society of Agricultural Economics, found it necessary to observe thus: "Having regard to (a) the area of agricultural land, (b) the size of the agricultural population, and (c) the importance of agriculture in the national economy—its actual and potential contributions to national wealth—I am appalled at the small provision made for investigation and research in agricultural economics. Recognising that India is a relatively poor country, it is still true that, in comparison with other applied sciences of agriculture, agricultural economics has been starved."

Government and Universities

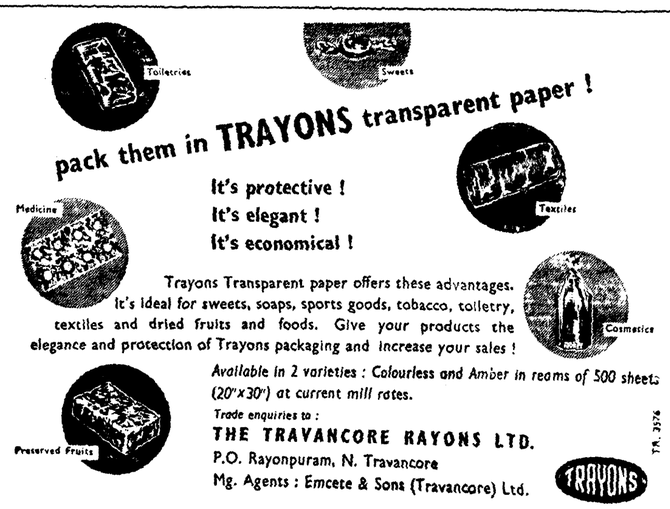
In the address mentioned above, Prof. Vakil has not only made some pointed remarks on the role of agricultural economics in the Indian economy but he has also made various suggestions calculated to bring about an improvement in the efficiency of statistical information and the quality of analysis which goes into the making of economic policy. With the broad point made in Prof. Vakil's argument, namely, that the policy-maker should be guided by more accurate knowledge and by more methodical analysis, no one can disagree. That the record of the Government of India and of certain State Governments in this respect has not been as good as could be wished for is also beyond dispute. That the Government has, on the whole, had more bias in favour of supporting research in natural sciences and has neglected giving the attention that is due to the development of social sciences in general and of economics in particular is also true. These are all matters on which Prof. Vakil will find several people to support his views warmly.

Proceeding from this to the various criticisms made by him in regard to certain specific instances of neglect of research or of the Government's neglect, generally, to take into account the resources available in the universities which could have been exploited for the purpose of obtaining better economic analysis, we wish we could agree with all the observations made by the learned Professor. Here he is undoubtedly on less sure ground. Since he has said things, some of which are worth saying in regard to the Government Departments and other research institutions, it would have been fair if he had also said something about the nature and quality of the research work that goes on in Indian universities. If his address is intended to illuminate the dark corners in various places outside the universities, he might have been objective enough to turn the light on to the so-called temples of learning themselves. It is true that, in one place Prof. Vakil admits that he is fully aware of the existing deficiencies in the universities. But that is hardly enough, especially when he has devoted so much of his address to the inefficiency of administration and the neglect of research in economics.

Responsibility of University Men.

We have no doubt that, in a properly organised society, the number of University Departments in Economics in our country ought to be made good use of by the Governments and it is important that this aim should be kept before them constantly, both in the States and in the Centre. We also agree that, in the more advanced Western countries, the degree of such co-operation between the Government and the universities is more intimate and fruitful than it is in India. To some extent, it is possible that a part of the explanation for this lack of co-operation in this country is the arrogance of the politician and the shortsightedness of departmental service men. Admitting this, we cannot altogether absolve the universities and the men in charge of the University Departments from responsibility for the sad state of affairs.

Our universities, although supposed to be temples of learning and are expected to cater purely for the promotion of academic excellence and objective research, do, in actuality, fall far short of expectations in regard to these matters. Particularly, in recent years, universities, like local boards, have become cesspools of personal, linguistic and communal politics and considerations other than those of academic excellence have seized hold of the thinking and behaviour of men in high places in a number of universities. No wonder that these places have ceased to be of interest to men of ability and conscience who for lack of opportunity for free expression in an atmosphere surcharged with these unholy purposes, have tended to depart from the life of the universities to other quarters. The level of graduates produced from the universities of late has deteriorated. The level of research work done, except in a few departments here and there, is almost of no proportionate significance to the size of the departments or the number of men engaged. In various ways, the lesser things in the university life like examinerships, elections to the university bodies, unthinking support of certain people and parties in and outside the universities and the desire to capture and dominate certain learned bodies and associations—these constitute the main preoccupations of some of our eminent University Professors. If the usefulness of the universities to the country is to be improved, there is need for getting rid of these elements in our university life. It is needless to add that the extent to which the universities can make themselves felt and indispensable to the needs of the nation will depend on their establishing a tradition for producing work of real quality and value. Such co-operation as is commanded on the solid foundation of merit and by the quality of work produced in the universities provides a more dignified basis for ensuring co-operation between the policy-makers and the University Departments rather than the straightforward demands, no matter how well-couched, which are mingled with some frustrated ire on unthinking Governments for not co-operating with universities. Some of these are not themselves doing much constructive thinking anyway.



RAMTIRTH BRAHMI OIL

SPECIAL No. 1

REGISTERED

(MEDICATED)

- ★ Strengthens nerves and muscles
- ★ Stops all headaches and earaches
- ★ Improves memory
- ★ Cures eye diseases and insures better eyesight

PROFITS OF A.C.C. WELL MAINTAINED

COSTS, HOWEVER, CONTINUE TO RISE

THE financial results of the Associated Cement Companies Ltd. (Managing Agents: Cement Agencies Ltd., Bombay) are of special significance for two reasons. One is that the Company constitutes the largest group of units scattered over the various parts of the country and, secondly, it has already launched its own master plan of development by modernisation of plants embracing all its units, the period of development being spread over five to seven years. Thanks to the expansion programme undertaken a few years ago, the Company has been able to report a progressive rise in its earnings from year to year. The results for the year ended 31st July, 1952, disclose a gross profit of Rs. 410.10 lakhs which surpasses the previous year's record profit, albeit by a small margin. In the previous year, it will be recalled, the profit had gone up from Rs. 322.15 lakhs for 1949-50 to a record level of Rs. 406.87 lakhs. Thus, the profit for the year under review exceeds the previous peak by about Rs. 4 lakhs.

A scrutiny of the Company's accounts, however, shows that the strident advance in earnings made in the previous year has been seriously impaired by sizable increase in expenses during the year under review. Nonetheless, the Company's reserves have been strengthened by a sum larger than that in the previous year and the dividend has been more than comfortably maintained at 9½ per cent., free of income-tax.

An idea of the striking progress made by the Company during the last three years can be had from the following comparative table:

(In lakhs of rupees)

	For the year ended 31st July			
	1952	1951	1950	1949
Sale proceeds	14,30.91	12,09.95	10,85.43	9,62.50
Stocks	37.62	35.96	41.37	48.09
Other income	39.33	40.99	37.32	35.56
Expenses	11,10.91	8,38.76	7,03.78	6,64.20
Gross profit	4,10.10	4,06.87	3,22.15	2,98.53
Managing Agents' commission	30.05	30.21	23.15	21.91
Provision for—				
Taxation	1,16.90	1,28.75	85.30	96.60
Depreciation	66.69	54.93	51.22	50.62
Net profit	1,96.46	1,92.98	1,62.48	1,29.49
Transfer—				
To reserves	60.10	55.09	55.26	34.91
To contribution to Gandhi Memorial Fund				3.15
To bonus to employees	31.00	38.10	17.30	15.00
Dividend	1,00.37	1,00.37	89.80	70.88
	(9.5%)	(9.5%)	(8.5%)	(7%)
Carry forward	7.09	2.09	2.67	2.58

The expansion programme taken in hand by the Company some years ago yielded results during the year under review in the shape of larger production. The offtake also was good. This is reflected in sale proceeds which have risen by Rs. 2.10 crores and the value of stocks which show practically no change, as will be seen from the foregoing table. The benefit of higher production was offset to a large extent by heavier working costs. It is true that for some years now the cost of production has been going up, but the increase during the year under review was far more steep than in the preceding year. This rise reflects the increase in railway freight rates since April, 1952, particularly on coal, and substantially higher prices the Company had to pay for jute bags, two factors over which the Company had no control. There was also an upward revision in the scales of basic wages and dearness allowance during the year. A breakdown of manufacturing costs reveals that the Company's operation expenses in the year amounted to Rs. 797.63 lakhs, as compared with Rs. 570.66 lakhs in the previous year and salaries and wages Rs. 221.42 lakhs, as against Rs. 192.51 lakhs.

It will be noted from the foregoing table that while the provision for taxation has been reduced by Rs. 11.85 lakhs, that for depreciation has been increased by nearly as much, so that the total allocation to these two essential provisions has remained unchanged at the previous year's level. The net profit, therefore, shows a small increase of Rs. 3.48 lakhs to stand at Rs. 196.46 lakhs. The transfer to the reserves has been raised from Rs. 55.09 lakhs to Rs. 60.10 lakhs. Of these, the reserve for plant reinstatement receives Rs. 5 lakhs more at Rs. 50 lakhs, while that for gratuities is unchanged at Rs. 10 lakhs. The provision for bonus to employees has been cut from Rs. 38.10 lakhs to Rs. 31 lakhs. But this does not mean that the amount of bonus relating to the year under review is smaller than that for the previous year. On the contrary, it is Rs. 1.50 lakhs more than that for the previous year. The additional sum of Rs. 8.60 lakhs provided last year represented the extra bonus relating to the year 1949-50.

The dividend has been comfortably covered, as witness the increase of Rs. 5 lakhs in the sum proposed to be carried over. Although the rate of dividend has been maintained at the 1950-51 level of 9.5 per cent., it actually shows a fall from 6.7 per cent. to 6.5 per cent. in terms of the invested capital. In 1936-37, it may be noted here, when the Company paid a dividend of only 7½ per cent., the return on capital invested was as high as 7.4 per cent. In other words, although the quantum of profit for the year under review is a fresh record in the history of the Company, the increase in profit has not been in consonance with the rise in the Company's productive capacity, as the profit margin per unit has been steadily falling.

The following summary of the Company's latest balance-sheet reflects the strength of its financial position:

LIABILITIES	Rs.	ASSETS	Rs.
Capital	10,56,20,438	Gross block	16,18,82,450
Reserves and surplus	5,02,15,850	Less—Depreciation	6,52,61,468
Reserve for taxation	2,44,79,284		
Liabilities	3,36,29,175	Net block	9,66,20,982
		Stores, spares, etc.	6,25,92,617
		Stock-in-trade	37,61,847
		Debts, deposits and advances	1,35,28,258
		Investments	2,85,50,220
		Cash	88,81,843
	Rs. 21,39,44,747		Rs. 21,39,44,747

The reserves and surplus include a sum of Rs. 175.44 lakhs representing the premium on shares. They also consist of general reserve Rs. 76 lakhs, reserve for plant replacement Rs. 190 lakhs, investment depreciation Rs. 17 lakhs and reserve for gratuities Rs. 35 lakhs. The reserve for taxation does not take into account the provision for tax on the amounts of initial and extra depreciation allowances. It includes the amount set aside from the year's profit less advance payments in India for the year 1950-51 and in Pakistan for 1951-52. During the year under review the additions to the fixed capital expenditure amounted to Rs. 131.01 lakhs.

An idea of the progress so far made in regard to the Company's development programme and the future plans can be had from the following extract from the Directors' report:

"Duplication of the Sevalia Cement Works, which went into production last year, was completed in April this year. The triplication of the Bhupendra Cement Works of the Patiala Cement Company, Ltd., as well as the modernisation of the Dwarka Works and the extension to the Lakheri Works, have been completed during the year. Work on the modernisation and expansion of the Shahabad Factory, undertaken last year, is making good progress. In addition, further expansion has been decided upon, which is expected to be completed by the end of 1954. As a result of continuous attention to replacements and renewals, it has been possible to keep the factories of the Company in good repair, thereby maintaining efficiency at the required high level. Further programme of large-scale rehabilitation of the works is at present engaging the attention of the Directors."

For some time past, the Company has been conducting negotiations with the Pakistan Industrial Development Corporation for the formation of a new company to take over its two factories in Pakistan. These negotiations have now reached the final stage and the Pakistan Industrial Development Corporation's reply is awaited and, if it is received in time and the terms are finalised, the matter will be placed before the shareholders at the forthcoming annual general meeting on 23rd January, 1953.

The Company's Rs. 100 paid-up ordinary shares are currently being quoted at Rs. 179, at which rate the proposed dividend gives a yield of 5.3 per cent. per annum, free of income-tax.

(Concluded from next column)

to effect retrenchment until the end of July. The sulphate recovery plant was running intermittently during the latter months of the half-year under review. Some teething troubles were experienced which prevented any reduction in chemical costs. The Directors are, however, confident that the difficulties so far encountered can be overcome. A disquieting fact disclosed by the Directors' report, which will have an important bearing on the Company's earnings for the half-year ended 31st December, 1952, is a sit-down strike by the labour which has led to the closure of the mills since mid-October.

The Rs. 25 paid-up ordinary shares of the Company are currently being quoted at Rs. 46-8, at which rate and on the basis of the latest dividend, the yield works out to 6.7 per cent. per annum, free of income-tax.

PRODUCTION OF BENGAL PAPER GOES UP

HIGH COSTS AND LABOUR TROUBLE AFFECT EARNINGS

THE statement of accounts of the Bengal Paper Mills Ltd. (Managing Agents: Messrs. Balmer Lawrie & Co., Ltd., Calcutta) for the half-year ended 30th June, 1952, discloses a decline of Rs. 3.67 lakhs in gross profit as compared with that for the previous half-year. The gross profit for the half-year ended 31st December, 1951 itself (at Rs. 12.30 lakhs) was lower by Rs. 1.30 lakhs than that for the preceding six months, so that the gross profit of Rs. 8.63 lakhs for the latest half-year represents a fall of Rs. 4.97 lakhs from that for the corresponding half-year of 1951. The net profit, at Rs. 3.76 lakhs, shows a drop of Rs. 1.67 lakhs, from that for the six months ended 31st December, 1951, and Rs. 2.62 lakhs from that for the first half of 1951. As a result of this shrinkage in profit, the Directors have not been able to set aside anything to the reserves. The return to shareholders has, however, been well maintained at 12½ per cent. per annum.

At first, the setback in profit, though not of a serious nature, may appear surprising in the context of substantially higher production which the Company achieved during the half-year. Thus, the output of paper during the half-year under review was 500 tons more than in the previous half-year and 100 tons more than in the corresponding period of 1951. The decline in profit, despite this encouraging rise in production, was due to a number of factors. In the first place, there was a fall in the demand for paper. The Directors say that sales were only equal to those in the previous period and that stocks at the close of the half-year were nearly 400 tons above normal owing to "go-slow" tactics by labour in the finishing houses. Secondly, the manufacturing costs were higher, by approximately Rs. 40 per ton than those for the previous half-year. This increase was almost entirely due to a rise in the cost of raw materials. Thirdly, the average sale price of paper produced by the Company declined by Rs. 17 per ton in consequence of the high proportion of paper made on the demand of the Government. It is true that there was an increase of 2½ pies per lb. in the provisional basic price of paper supplied to the Government early in the half-year under review, but this was more than offset by the large quantity of paper taken up by the Government. The prices of paper supplied for civilian consumption were, however, more remunerative than those paid by the Government.

The salient features of the Company's results are highlighted in the following comparative table against the background of those for the previous three half-years:

(In lakhs of rupees)

	For the half-year ended			
	30-6-52	31-12-51	30-6-51	31-12-50
Sale proceeds	86.16	86.05	87.47	82.37
Stocks	5.08	1.06	2.06	1.12
Expenses	81.44	72.74	74.81	67.09
Gross profit	8.63	12.30	12.60	6.05
Agents' commission	0.57	0.89	1.02	0.56
Provision for—				
Depreciation	3.50	4.12	4.08	4.05
Taxation	0.71	1.86	2.12	...
Net profit	3.76	5.43	6.38	1.44
Other income	...	0.86	...	2.01
Reserves	...	2.75	2.00	3.40
Dividend—				
7% preference	0.21	0.21	0.21	0.21
6% preference	0.60	0.60	0.60	0.60
Ordinary	2.81	2.81	2.81	2.25
	(12½% p.a.)	(12½% p.a.)	(12½% p.a.)	(10% p.a.)
Carry forward	3.22	3.08	3.16	3.02

The financial position of the Company is quite satisfactory. The latest balance-sheet discloses that the paid-up capital of Rs. 71 lakhs is supplemented by reserves and surplus amounting to Rs. 32.57 lakhs. Mortgage debentures, including interest accrued on them, amount to Rs. 5.36 lakhs. Current liabilities, including provision for taxation, aggregate Rs. 43.43 lakhs. The gross block of the value of Rs. 194.47 lakhs has been written down to Rs. 67.57 lakhs, that is, by nearly two-thirds. The current assets aggregating Rs. 84.79 lakhs are represented by stocks and stores of the value of Rs. 62.66 lakhs, debts, deposits and advances Rs. 20.06 lakhs, investments Rs. 84,408 and cash Rs. 1.20 lakhs. It will be noted from these figures that current assets exceed current liabilities by Rs. 41.36 lakhs.

The new grass and steam boiler plants of the Company are now said to be in full commission and working satisfactorily. This, however, resulted in a redundancy of the Company's labour force, but the management was not able

(Continued in previous column)

Points From The Chair

Prejudice Against New-comer in Shipping World

THE prejudice against a new-comer into the shipping world is formidable and cannot be lightly regarded. It is sometimes pointed out that shipping companies, which have long carried on business with countries and have thereby fostered international trade and commerce, should be treated with grateful respect and that new-comers must have due regard to the many services that such old and well-established companies have rendered in the past. In fact, the new-comers are thought to be unreasonable, if they claim that they should have opportunities of a fair share in such trade. It may be true that well-established old shipping companies have promoted international trade, but the exact nature of the truth depends very much on the angle of vision which one brings to bear on such questions. Another view that old and well-established companies, having had a monopoly in the past of all the international trade of the country concerned, should now gracefully yield some place at least to new-comers who have a right as shipping companies of maritime countries or of countries which have a fair amount of export and import trade to partake to a reasonable and an ever-increasing extent in such trade. I have had opportunities of attending more than one Conference and I must confess sometimes to the depressing feeling, that the status quo is too often desired by some at least of the well-established old shipping companies and the need and wisdom of providing a small niche in the shipping world for new entrants is often ignored."

SIR A. RAMASWAMI MUDALIAR,
India Steamship Co., Ltd.

Woes of Low-grown Tea Estates

"Much has already been written and said of the difficulties which the tea industry, and particularly producers of low-grown teas like ourselves, are suffering, and it was with some satisfaction that we saw the Government of India set up a committee to inquire into these difficulties with a view to obtaining recommendations as to how some form of relief could be granted to the industry. This satisfaction was certainly tempered when we read in the Press of statements made by different Ministers of Government, whilst the committee was conducting its inquiry, 'that neither would that committee make nor would Government accept any recommendation that would jeopardise the position of labour to the tiniest extent. This obviously meant that we could expect no relief whatever from the burden of high labour costs which have been the main cause of our cost of production rising to such alarming heights. The Committee's report and recommendations, which have recently been published, have justified our fears that this is, in fact, the case, and the reliefs suggested by them are woefully inadequate and betray a lack of appreciation of the seriousness of the crisis. Such reliefs as have been suggested are aimed at the reduction in future costs of production, whereas what we are concerned with is some form of assistance which will give immediate relief to the industry and will reduce current costs of production which are now completely out of line with the prices obtained for our teas. We have no desire to shirk our duties as employers of labour but obviously the stage has been reached where producers of low-grown tea are paying more than they can afford to labour, both by way of wages and other amenities. Therefore, Government must be prepared for wholesale unemployment arising from closure of estates or they must enable these poorer yielding estates to continue in business by giving them adequate protection immediately. Government cannot have it both ways and the sooner a realistic view of the critical position of low-yielding estates is taken, the better for all concerned."

W. W. KILGOUR,
Chembra Peak Estates, Ltd.

Sugar at Lower Price

"The recently announced sugar policy for the season 1952-53 aims at correcting the situation that has arisen by the excess production in the previous season and the difficulty in its disposal by reason of its high cost, and lays emphasis on the export of two lakh tons out of the new season's cheaper sugar, or out of the carry-over stock on a replacement basis. The new policy contains several drastic changes and it is to be hoped that it will succeed in maintaining production and in restoring healthy conditions in the sugar market which is now undergoing a transition. Control over price and distribution of new season's sugar has been withdrawn, though control over releases from factories is continued so as to ensure a reserve stock of 3 lakh tons with the industry. The price of sugarcane is reduced from Re. 1-12 to Re. 1-5 per maund and the effect of this will be that the consumer will be able to get sugar at a considerably lower price after the existing stock of dearer sugar is exhausted."

A. G. BANDI GOWDA,
Mysore Sugar Co., Ltd.

Five-year Plan Should be Worked

".... It is easy to find fault with any plan but we must realise that with all its limitations it is the first planned effort towards the development of the country's resources and towards increasing the standard of living of our people and we must all strive hard and contribute our maximum effort towards the success of the Plan. It is the effort of each one of us which is needed to make our Five-year Plan a success. This Plan is the country's revolution. It is our ambition; the outside world is going to judge us by our achievement in this sphere. The country's reputation and prestige is involved in it and so is our welfare and prosperity."

J. DALMIA,
Dalmia Cement Ltd.

O.G.L. XXVIII

The attention of the Government of India has been drawn to reports appearing in certain newspapers to the effect that Open General Licence No. XXVIII, published on 31st December, 1952, is not applicable to Japan. These reports, which are presumably based on the typographical error in the copy of the O.G.L. are not correct. The correct version of the O.G.L. No. XXVIII has been published in a *Gazette of India Extraordinary* issued on 31st December, 1952 and the typographical error found at page 171 of the Red Book has also been corrected in the *errata* published in Public Notice No. 144-ITC(PN)/52, dated 31st December, 1952, published in a *Gazette of India Extraordinary* of even date. The correct position, as notified for information, is that Japan is included in the soft currency area and O.G.L. XXVIII is applicable to imports from that country also.

RESULTS OF MYSORE SUGAR GOOD

INADEQUATE WAGON SUPPLIES AFFECT BIRD-HEILGERS GROUP COAL COMPANIES

Mysore Sugar Co., Ltd.

THE directors of the above Company (Managing Director: Mr. A. G. Bandi Gowda, Bangalore) submitted the audited accounts of the Company for the year ended 30th June, 1952.

The accounts disclose a net profit of Rs. 25,29,266 (Rs. 8,12,151) after setting apart the sums needed for depreciation of fixed assets and provision for taxation. They report that the balance of loss sustained during the year 1950-51 has been wiped out and, the depreciation for the year 1950-51 which was not provided for last year has now been provided for in addition to the depreciation for 1951-52. After deducting the balance of loss of last year amounting to Rs. 2,54,083 the surplus of Rs. 22,75,183 was disposed of as follows:

To declare a dividend of 20 (20) per cent. on the paid-up share capital of the Company, free of income-tax Rs. 4,35,856 (Rs. 4,35,856), to reimburse the dividend equalisation fund with the amount drawn therefrom last year to declare a dividend Rs. 4,35,856 (*nil*), to transfer to reserve fund raising the same to Rs. 60,00,000, Rs. 3,26,174 (*nil*), to transfer to the cane price stabilisation fund Rs. 2,50,000 (*nil*) and to carry forward Rs. 8,27,296 (deficit of Rs. 2,54,083).

The factory commenced crushing of cane on 12th July, 1951, and continued milling till 24th March, 1952, when it closed down for the annual overhaul, the total number of milling days being 243. The quantity of cane crushed during the period was 3,19,268 tons and that of sugar produced was 37,155 tons, giving a recovery of 11.51 per cent. The distillery continued to work satisfactorily during the year. The oil mill and confectionery sections did not work continuously owing to adverse conditions prevailing during the year. It is, however, hoped that they would show good results in the coming year.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	21,79,280	Block ...	34,99,547

Bharat Sugar Mills Ltd.

The directors of the above Company (Managing Agents: Messrs. The Cotton Agents, Ltd., Calcutta) submitted the report for the year ended 30th June, 1952, together with the audited statements of accounts. The profit and loss account, after payment of interest, managing agents' remuneration, providing for depreciation and taxation and after transferring Rs. 1,50,000 to general reserve (Rs. 4,00,000 to renewals and replacement reserve) and taking into account the balance of profit of the previous year, shows a net profit of Rs. 2,84,180 (Rs. 3,11,706). The directors propose to dispose of the amount as under:

Dividend on 5,000 C.R. Preference shares of Rs. 100 each at 5 per cent. subject to tax Rs. 18,437 (Rs. 18,437), dividend on 1,50,000 ordinary shares of Rs. 10 each at Rs. 1-8 per share free of tax Rs. 2,25,000 (Rs. 2,25,000) leaving to be carried forward Rs. 40,742 (Rs. 68,268).

Accounts in brief were as under:—

Rs.	69,18,330	Rs.	69,18,330

Elgin Mills Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Begg Sutherland & Co., Ltd., Kanpur) submitted the audited accounts of the Company for the year ended 30th September, 1952.

The result for the period, including the amount received (after deduction of income-tax) in respect of excess profits tax refund, Rs. 8,83,890 and after making the usual provisions, shows a profit of Rs. 26,05,262 (Rs. 26,55,001). From this has been deducted depreciation Rs. 5,50,000 (Rs. 7,00,000), rehabilitation reserve Rs. 10,00,000 (Rs. 6,00,000) and to which has to be added the carry forward from the previous year Rs. 1,22,091 (Rs. 1,21,090) leaving at credit of profit and loss account Rs. 11,77,353 (Rs. 11,76,091). This balance, the directors disposed of as follows:—

In payment of a dividend on the preference shares of 8 per cent. per annum for the year ended 30th September, 1952 Rs. 88,000 (Rs. 88,000), in payment of a dividend on the 'B' preference shares of 5 per cent. per annum free of income-tax, for the year ended 30th September, 1952 Rs. 21,000 (Rs. 21,000), in payment of a dividend at the rate of Re 1-8 (Re. 1-8) per share for the year ended 30th September 1952 Rs. 88,000 (Rs. 88,000), in shares Rs. 9,45,000 (Rs. 9,45,000) and carry forward to next account Rs. 1,23,353.

In the last report, reference was made to the creation of a rehabilitation reserve *in order to* meet the high replacement cost of plant and machinery. Out of this reserve, a sum of Rs. 8 lakhs was transferred to the capital reserve. In order to meet the cost of further capital replacements, the directors deemed it prudent to utilise the excess profits tax refunds and interest on E.P.T. deposits received during the year, by transferring from the profits for the year the round sum of Rs. 10 lakhs to rehabilitation reserve.

Raw materials and manufactured goods have been taken at (or under) cost or market value, whichever is the lower.

The Company's property has been maintained in a proper state of repair.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	78,20,000	Block ...	25,05,021

		Cash	1,27,914
Rs.	1,83,35,757	Rs.	1,83,35,757

Burrakur Coal Co., Ltd.

The directors of the above Company (Messrs. Bird & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the half-year ended 30th June, 1952.

5,26,900 tons of coal were raised and 4,81,989 tons were despatched in comparison with 4,88,187 tons raised and 5,04,332 tons despatched during the previous half-year. These figures reveal the seasonal fluctuations which are a regular feature in the coal industry. That is, the higher outputs in the first half of the year achieved by a stronger labour force were offset by a fall in the number of wagons made available for coal traffic.

The Loyabad Ropeway transported 2,95,358 tons of sand for stowing purposes compared with 3,64,397 tons in the previous half-year, and 2,74,299 tons during the same period of 1951. The excavation of sand from the bed of the Damodar River is more difficult during the dry-weather period.

Loyabad Coke Plant.—During the half-year 33,908 tons of coke were manufactured and 33,756 tons were despatched, in comparison with 33,307 tons manufactured and 34,641 tons despatched in the previous period. The plant *continued to* operate satisfactorily. The oven repairing programme was continued.

The daily average wagon-loading figure for the Bengal and Bihar coalfields in the period under review was 3,016, compared with 3,172 in the previous half-year. This drop in wagon availability was reflected in the heavy fall in stocks held by most important internal consumers, many of whom found themselves in a precarious condition owing to inadequate and irregular coal supplies caused solely by insufficient rail transport.

It may be pointed out that throughout this period of extreme stringency many consumers were compelled by the Coal Commissioner's organisation *to accept a proportion of inferior coal*, although ample supplies of the better grades were available. It is beyond argument that the transport of inferior, high-ash coal, often over long distances, represents a highly uneconomic use of transport facilities; it is undeniable that had consumers been permitted to purchase coals of their own choice, substantial numbers of wagons would thus have been released, and these would have gone far to relieve the shortage.

Attention is drawn here to the fact that although the railways were permitted to increase freights on the carriage of coal by an estimated average of Rs. 2-8 per ton, the industry's repeated requests for the restoration of the cut of As. 9 imposed by Government in 1949 on the controlled selling prices of coal have so far not been granted.

The rising trend of coal production referred to in the last report has continued. Unfortunately, although the demand for industry and exports has also risen, there is some room for apprehension that the present level of coal production in India is in excess of the actual demand. Moreover, present transport facilities are insufficient to move all the coal being produced, with the result that colliery stocks will inevitably rise above the current high level.

Although the integration of the railways serving the Bengal-Bihar coalfields may in the long run prove to have been beneficial, the only permanent solution of the chronic coal transport problem is the provision of more wagons, and the elimination of existing bottlenecks caused by inadequate junction and marshalling facilities at certain key-points. The authorities are understood to be fully aware of these factors, and it is to be hoped that early remedial action will be taken.

The demand from abroad for Indian coal was maintained, but could not be met in full owing to the transport difficulties referred to above. Not only did orders have to be refused but the regular flow of exports was hampered by a severe congestion of coal shipping in the Port of Calcutta. Owing to the shortage of wagons for carrying export coal the docks were not employed to their full capacity, and thus steamers were held up for long periods awaiting cargo.

The Company again shared in the export trade from Calcutta, but in common with other shippers was compelled to meet heavy demurrage claims from steamer owners.

Relations with the labour at the collieries were on the whole satisfactory, despite the anxiety for the future displayed by the workers at those collieries which have been subjected to Government's conservation plans.

The Ministry of Labour correctly continues to place increasing emphasis upon the necessity for housing labour. The Company has been in the lead in its efforts to provide new accommodation conforming to the standards laid down by the authorities, but here again Government's short-term conservation plans do not permit the Company to formulate schemes.

During the half-year *under review* the Coal Board and the industry were actively engaged in endeavouring to implement Government's policy on conserving metallurgical coal. The section of the industry most deeply involved, and to which the Company belongs, was unable to reach agreement with the Coal Board in these negotiations, chiefly because the industry required assurances for the future safeguarding of its interests which the Board were not prepared to give.

Subsequently, the Board took matters into its own hands, and issued orders restricting the level of production for 1952 at all collieries, raising selected grade coking coals. The output targets originally fixed for some of the Company's collieries were totally inadequate, and adherence to them would have involved the closure of these collieries before the end of the current year. Following representations by the Company, the Coal Board has twice granted increased targets in respect of the collieries concerned which will permit them to continue the present rate of output until the end of the year.

At the time of writing the Board's final intentions regarding 1953 and subsequent years have not been made known. It is hoped, however, that the Company's substantial contribution to conservation by the best method known, i.e., sand-stowing, will be appreciated by the Board, and that its future decisions will pay due regard to the necessity of permitting an economic level of output to collieries which are sand-stowing.

World rearmament has made the speedy replacement of machinery and plant a difficult matter, owing to the lengthy delivery periods stipulated by manufacturers abroad.

The profit and loss account, after providing Rs. 2,57,585 (Rs. 2,13,072) for depreciation, Rs. 4,25,207 (Rs. 5,50,298) for taxation, transferring Rs. 1,00,000 (Rs. 1,25,000) to tax contingency reserve, Rs. 50,000 (Rs. 50,000) to debenture redemption reserve, Rs. 50,000 (Rs. 50,000) to ropeway rope replacement reserve, Rs. 1,00,000 (Rs. 25,000) to bad debts reserve and Rs. 1,00,000 (*nil*) to general reserve, and including the sum of Rs. 1,93,860 (Rs. 2,06,058) brought forward from last half-year, shows an available balance of Rs. 5,86,120 (Rs. 6,43,731) which the directors disposed of as follows:—

In paying a dividend on the 1st preference shares of 7 per cent. per annum without any deduction for income-tax paid by the Company Rs. 30,493 (Rs. 30,493); in paying a dividend on the 2nd preference shares of 6 per cent. per annum after deduction of income-tax paid by the Company Rs. 9,956 (Rs. 9,956); in paying a dividend on the ordinary shares at the rate of 7½ (7½) per cent. per annum without any deduction for income-tax paid by the Company Rs. 3,40,968 (Rs. 3,40,968) and in carrying forward Rs. 1,54,703 (Rs. 2,12,314).

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	1,18,42,280	Block ...	2,43,29,008

Rs.	4,81,62,525	Rs.	4,81,62,525

Borrea Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. F. W. Heilgers & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the half-year ended 30th June, 1952.

81,634 tons of coal were raised and 81,216 tons were despatched in comparison with 79,302 tons raised and 79,398 tons despatched during the previous half-year. These figures reveal the seasonal fluctuations which are a regular feature in the coal industry. That is, the higher outputs in the first half of the year achieved by a stronger labour force were offset by a fall in the number of wagons made available for coal traffic.

The profit and loss account, after providing Rs. 42,747 (Rs. 42,691) for depreciation, Rs. 1,59,741 (Rs. 1,51,330) for taxation, transferring Rs. 5,000 (*nil*) to tax contingency reserve, Rs. 10,000 (Rs. 10,000) to stock adjustment reserve, Rs. 30,000 (Rs. 55,000) to development reserve and Rs. 25,000 (*nil*) to general reserve, and including the sum of Rs. 1,07,544 (Rs. 1,25,591) brought forward from last half-year, shows an available balance of Rs. 2,32,578 (Rs. 2,56,041) which the directors disposed of as follows:—

In paying a dividend on the preference shares at the rate of 6½ per cent. per annum without any deduction for income-tax paid by the Company Rs. 13,000 (Rs. 13,000); in paying a dividend on the ordinary shares at the rate of 20 (20) per cent. per annum without any deduction for income-tax paid by the Company Rs. 75,000 (Rs. 75,000); in paying a bonus of As. 8 (As. 8) per share on the ordinary shares without any deduction for income-tax paid by the Company Rs. 37,500 (Rs. 37,500) and in carrying forward Rs. 1,07,078 (Rs. 1,30,541).

Accounts in brief were as under:—

Rs.	44,33,669	Rs.	44,33,669

Bhulanbarace Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. F. W. Heilgers & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the half-year ended 30th June, 1952.

80,355 tons of coal were raised and 65,691 tons were despatched in comparison with 92,829 tons raised and 96,216 tons despatched during the previous half-year. These figures show how Government's policy of restricting the despatch of certain types of coal to non-metallurgical consumers has affected the working of a colliery which is following the best known method of conservation, namely, extraction with sand-stowing.

The profit and loss account, after providing Rs. 26,503 (Rs. 28,955) for depreciation, transferring Rs. 6,000 (*nil*) to tax contingency reserve, Rs. 15,000 (*nil*) to stores reserve, Rs. 10,000 (Rs. 10,000) to stock adjustment account, and including the sum of Rs. 8,270 (Rs. 22,488) brought forward from last half-year, shows an available balance of Rs. 21,312 (Rs. 34,539) which the directors disposed of in paying a dividend at the rate of 5 (5) per cent. per annum without any deduction for income-tax paid by the Company Rs. 17,875 (Rs. 17,875) and in carrying forward Rs. 3,437 (Rs. 16,664).

Accounts in brief were as under:—

Ondal Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. F. W. Heilgers & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the half-year ended 30th June, 1952.

The profit and loss account, after providing Rs. 1,09,517 (Rs. 60,645) for taxation, and including a sum of Rs. 1,49,680 (Rs. 1,81,140) brought forward from last half-year, shows an available balance of Rs. 2,05,352 (Rs. 2,65,156) which the directors disposed of as follows:—

In paying a dividend on the preference shares at the rate of 6¼ (6¼) per cent. per annum without any deduction for income-tax paid by the Company Rs. 6,500 (Rs. 6,500); in paying a dividend on the ordinary shares at the rate of 20 (D. 20 plus B. 5) per cent. per annum without any deduction for income-tax paid by the Company Rs. 75,000 (Rs. 93,750) and in carrying forward Rs. 1,23,852 (Rs. 1,64,906).

Accounts in brief were as under:—

Rs.	30,48,695	Rs.	30,48,695

Standard Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. F. W. Heilgers & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 30th June, 1952.

The programme of sand-stowing for safety referred to in the last report was completed during the half-year to the satisfaction of the Chief Inspector of Mines. All pits and openings were sealed, and removal of the remaining items of plant and equipment continued.

Plant and machinery to the value of nearly Rs. 3½ lakhs were sold during the half-year, and further sales are continuing.

The hearing before the Industrial Tribunal referred to in the last report has not yet been given, and as the appointment to the Dhanbad Tribunal is still vacant, it is impossible to forecast when the case will be disposed of finally.

After adjustment of over-provision for depreciation amounting to Rs. 22,982 the profit on sale of plant and machinery of Rs. 1,74,258 (net) has been transferred to capital reserve.

The profit and loss account, after providing Rs. 77,482 (Rs. 28,825) for taxation and including the sum of Rs. 4,903 (Rs. 40,495) brought forward from last half-year shows an available balance of Rs. 1,14,094 (Rs. 80,707) which the directors disposed of in paying a dividend at the rate of 10 (10) per cent. per annum without any deduction for income-tax paid by the Company Rs. 40,000 (Rs. 40,000) and in carrying forward Rs. 74,094 (Rs. 40,707).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	8,00,000	Block ...	13,39,303
Reserves ...	19,31,041	Stores ...	2,750
Provision for taxation ...	1,37,379	Investments	5,69,731
Liabilities ...	3,41,815	Debts, deposits and advances ...	12,49,589
Profit and loss account ...	74,094	Cash ...	1,22,956
Rs.	32,84,329	Rs.	32,84,329

Karanpura Development Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Bird & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the half-year ended 30th June, 1952.

The rising trend in income from coal property royalties was maintained during the half-year. This is a reflection of the increasing popularity of Karanpura coals owing to restrictions applied by Government in other fields.

Owing to higher labour costs the profit from sales of fireclay, lime and limestone shows a decrease.

The volume of analytical work carried out at the Company's laboratory has again increased, and a satisfactory profit has resulted.

The Company's appeal to the Supreme Court against the decision of the Patna High Court is still pending. Prior to the hearing of the case brought by the Raja of Ramgarh in the Hazaribagh Court for the execution of the Patna High Court's decree, the respondents applied for leave to withdraw the case pending the decision of the Supreme Court referred to above. Since the last report the Supreme Court has upheld the validity of the Bihar Land Reforms Act and in pursuance of this measure the Bihar Government has taken possession of the Ramgarh Estate.

During the half-year 4,04,771 tons of coal were raised and 4,06,331 tons were despatched.

Following previous practice and on advice of the Company's lawyers, the directors did not recommend the payment of any dividend. For the same reason the Managing Agents did not draw their commission for the half-year and the amount in question will be carried forward in suspense. The profit and loss account, after providing Rs. 5,987 (Rs. 6,780) for depreciation and Rs. 37,215 (Rs. 31,882) for taxation, and including the sum of Rs. 1,29,079 (Rs. 1,24,508) brought forward from last half-year, shows an available balance of Rs. 1,15,795 (Rs. 1,31,337) which was carried forward.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	20,00,000	Block ...	31,52,002
Reserves ...	26,66,878	Laboratory equipment	21,394
Provision for taxation ...	1,25,252	Investments	24,77,126
Liabilities ...	18,20,491	Debts and advances ...	10,21,771
Profit and loss account ...	1,15,795	Cash ...	56,123
Rs.	67,28,416	Rs.	67,28,416

N.B.—Figures within brackets relate to the corresponding period of the previous year.

METAL CORPORATION PAYS MAIDEN DIVIDEND

The Metal Corporation of India Ltd. (Managing Agents: The Eastern Smelting and Refining Co., Ltd., Calcutta), is one of the war-time ventures formed for the purpose of acquiring the assets of the Eastern Smelting and Refining Co., Ltd., and to carry on the business of lead ore mining and smelting and other non-ferrous mining and metallurgical operations. The smelting works of the Company is situated at Tundoo, near Katrasgarh, E.I. Railway. The factory is fully equipped for a regular production of about 6,000 tons of lead per annum. The Company is at present developing the extensive lead, zinc and silver deposits at Zawar in Udaipur, partially developed by the Central Government.

The Company's results for the 12 months ended 31st March, 1952, suggest that the year must have been a successful one. Production of flotation concentrates during the year amounted to 1,344 tons of lead and 2,571.6 tons of zinc, as compared with 365 tons and 937 tons respectively, in the preceding year. Lead ingots produced show an increase from 773.92 tons to 1,000.22 tons. The gross profit has risen from Rs. 3.06 lakhs to Rs. 17.12 lakhs. The profit for the year 1950-51 was just sufficient to provide a sum of Rs. 2.50 lakhs towards part of the depreciation and pay the dividend on the 5 per cent. cumulative preference shares. But the profit for the year under review permits of providing for arrears of depreciation and declaring a maiden dividend of 7½ per cent. on the ordinary shares and 20 per cent. on the deferred shares.

Out of the gross profit of Rs. 17.12 lakhs, a sum of Rs. 1.67 lakhs has been provided for Managing Agents' commission and Rs. 4.25 lakhs for depreciation, including arrears. While no provision for taxation was made in the previous year, a sum of Rs. 5.25 lakhs has been set aside for this purpose this year. The Directors have also placed Rs. 3 lakhs to the credit of dividend fund. A sum of Rs. 1.78 lakhs has been utilised for preliminary expenses, share placing commission, etc., leaving Rs. 59,819 to be carried over. From the dividend fund, the Directors have paid the dividends on the preference, ordinary and deferred shares at the aforesaid rates.

The zinc concentrates produced by the Company were exported to European countries in terms of the Government notification. The Company enjoys credit facility from the Industrial Finance Corporation of India. It has taken in hand plans

to increase the crushing capacity of the mill, to raise the overall recovery of lead and to recover the silver content of pig lead which is said to be fairly high. Some of the machinery has already arrived. During the year, the Company conducted negotiations with the leading lead-zinc ore mining and smelting company of Japan for technical collaboration with it. As a result of this negotiation, the Company was able to secure the services of one of the most experienced mining engineers of the Japanese firm, as a first step towards technical collaboration. The Company has asked for a further loan of Rs. 20 lakhs from the Industrial Finance Corporation of India to enable it to buy additional power plants, ore-dressing machinery and additional mining machinery, which will enable it to increase the capacity of mining and milling to 500 tons per day by stages.

The following is a synopsis of the Company's latest balance-sheet:

Liabilities	Rs.	Assets	Rs.
Capital ...	35,63,350	Gross block ...	50,18,405
Debentures ...	35,00,000	*Less*—Depreciation ...	8,25,334

MONEY ACTIVE

(From Our Own Correspondent)

BOMBAY, *7th January*

Since our last report on the money market three weeks ago, slightly stringent conditions have come to prevail. Supplies of floating funds are short, while the demand has improved. As a result the inter-bank call money rate among the Exchange Banks and big Indian banks, which stood at 2 per cent. in the second week of December, soon shot up to 3 per cent. and is still standing at that level.

During the closing weeks of 1952 the tight position was accentuated to some extent by year-end requirements of banks. The turn of the year, however, has not eased the situation to any perceptible extent, as the seasonal demand has gathered further momentum. Notwithstanding the fact that there was no sale of Treasury Bills during two out of the three weeks and that during these two weeks there was actually an influx of Rs. 4 crores by way of maturing Treasuries, the supply of funds is short, there being more borrowers than lenders. In fact, a few banks have had to borrow sizable amounts from the Reserve Bank

The liberalisation of import restrictions for the half-year January-June, 1953, has not yet begun to have any effect on the money market. Nor is there much demand for funds for financing export business. Most of the present demand for funds is for meeting internal trade requirements.

House money is being offered 2¾ per cent. Short-term deposit rates are 3 per cent. for 1 to 6 months and at 2½ per cent. for 12 months.

There were no weekly sales of the Government of India three months' Treasury Bills during the latter half of December, 1952, the last sale having taken place on 16th December. When the sale was resumed yesterday, the amount offered was Rs. 1.45 crores, as against an invitation for Rs. 1 crore. At the previous sale, it may be remembered, the offerings amounted to Rs. 2.62 crores, against an invitation for Rs. 2 crores. The average rate of accepted tenders, which was Rs. 2-5-11 per cent. per annum at the previous sale, rose to Rs. 2-6-5 per cent. at yesterday's sale. The percentage of allotment at minimum rate declined from 88 per cent. to 55 per cent.

The statement of affairs of the Reserve Bank of India for the week ended 2nd January, 1953, as compared with that for the week ended 12th December, 1952, discloses a rise of Rs. 7.62 crores in notes in circulation. Notes held in the Banking Department are lower by Rs. 7.34 crores, so that the total notes issued are almost unchanged. On the liabilities side of the Banking Department, the deposits of the Central Government have risen during the three weeks under review by Rs. 12.58 crores, while those of other Governments have declined by Rs. 10.17 crores. Deposits of banks disclose an increase of only Rs. 51 lakhs and so also deposits of others of Rs. 3.47 crores. On the assets side, cash balances reveal a shrinkage of Rs. 7.42 crores. An improvement of Rs. 12.04 crores is noted in balances held abroad. Loans and advances to Governments are unchanged. Other loans and advances have gone up by Rs. 8.77 crores. This increase is probably due to borrowings by banks against Government securities, inasmuch as the outstanding loans against usance bills remain unchanged at the negligible level of Rs. 98.76 lakhs.

The Gilt-edged market presented a dull appearance throughout the past three weeks under review. Activity was at a very low ebb. In the absence of fresh buying support, some of the loans recorded small losses. 3 per cent. 1953-55 remained unchanged at Rs. 100-3. 3 per cent. 1957 was placed an anna lower at Rs. 98-9. 3 per cent. 1958 was stagnant at Rs. 98-6 and 3 per cent. 1959-61 at Rs. 96. 3 per cent. 1963-65 was maintained at Rs. 92-7. 3 per cent. 1964 had some sellers and lost an anna to stand at Rs. 92-7. 3 per cent. 1966-68, on the other hand, had enquiries at Rs. 90-7, as against Rs. 90-6. 3 per cent. 1970-75 declined by As. 6 to Rs. 86-10. 3 per cent. 1986 Conversion Loan moved down by As. 2 to Rs. 82-13.

SOFT TENDENCY IN PEPPER

(Messrs. Parekh & Co.)

BOMBAY, *7th January*

The pepper market during the last fortnight of the year 1952 showed a sagging tendency, with prices marking down from Rs. 2,650 to Rs. 2,300 at Alleppey and from Rs. 2,200 to Rs. 1,925 at Bombay, owing to poor enquiries from foreign countries where business remained dull and turnover poor owing to Christmas and New Year holidays. Pressure of sales in the primary markets, particularly from Travancore-Cochin areas, was more pronounced as the Christian growers there wanted cash for their Xmas and New Year festivities.

Since the beginning of the New Year, though sales in pepper in the primary markets have improved, as the exporters are covering their previous sales, the demand from foreign countries has, so far, failed to pick up. The prices are moving both ways without showing any definite trend. Growers, on the whole, are, however, expecting better demand during the coming week. New York showed some improvement in "spot price," owing to fear of impending Dock Strike, but business in forward remained dull with occasional business at lower limits. A clearer picture of the foreign market will be available during the next week when business there is expected to be resumed in a more serious mood. In A.S.T.A. section, some business was reported done at as low as $1.08 for January and $1.10 for the first half of January. Market at Cochin is showing heavy fluctuations almost daily, as speculators are reported active in the "garble." January and

(*Continued in next column*)

BULLION REACTS AT CLOSE

(From Our Own Correspondent)

BOMBAY, *7th January*

The Bombay bullion market opened the New Year very promisingly with bullish sentiment predominating in both silver and gold. There was active support and heavy short-covering during the major part of the week under review, and the values of silver and gold recorded sizable advances. But towards the close of the week, a slight setback was witnessed and the closing rates were well below the best levels of the week.

The earlier bullishness was attributed to reports of good offtake of silver in Kanpur and Delhi, news of heavy re-export of gold from Pondicherry to Indo-China and suggestions that the Commonwealth countries might bring pressure on the U.S. for raising the international price of gold. The increase in price of silver in the London market from 72¾*d.* to 72¾*d.* on the 3rd inst. and still further to 73*d.* on the 5th also aided the bullish sentiment.

During the preceding two weeks, that is, in the latter half of December, 1952, the trend of the market was irregular, though the undertone remained fairly steady due to recurrent speculative buying against sales in up-country markets.

Silver for forward delivery in January, which stood at Rs. 150-10 on 17th December, after touching Rs. 152-2 on 22nd December, reacted to a low of Rs. 147-12. Renewed bull support and short-covering helped a steady advance. As the closing rate on Tuesday, 30th December, at Rs. 151-15 was more than Rs. 5 above the previous clearing rate, an interim clearing in both silver and gold was enforced. The January settlement, however, ran out on 31st December at Rs. 151-11. The business in February settlement opened at Rs. 151-1 and a bullish sentiment was soon in evidence, resulting in a rise in the rate to Rs. 154-12 on Monday this week. But profit-taking at the bulge brought about a reaction to Rs. 151-10 today; the closing rate was a shade higher at Rs. 152.

Ready silver (.996 Mint) was quoted at a premium of As. 4 over the forward rates in both the settlements. The floating stocks in silver are placed at 2,500 bars. The daily average offtake was estimated at 80 bars.

After an initial reaction from Rs. 80-8 to Rs. 79-2, gold for forward delivery in January presented a steady tone with offtake and arrivals balancing each other. Towards the close of December, reports of large re-exports of gold from Pondicherry and a drop in arrivals imparted a bullish sentiment, and the yellow metal wound up the year at Rs. 82-11, at which rate the settlement also ran out. Business in new settlement opened on 2nd January at Rs. 82-9 and, after advancing to Rs. 85-1, the yellow metal reacted to Rs. 83-8 at the close to-day.

Ready gold, which commanded a premium of As. 6 over the forward on 17th December, came to be quoted at a premium of As. 13 at the close. The floating stocks of gold are estimated at 40,000 tolas. The daily average arrivals were 8,000 tolas and the offtake also was 8,000 tolas on an average.

The following comparative table shows the trend of the market during the week under review:

	7-1-53	Highest	Lowest	17-12-52
GOLD	Rs. a.	Rs. a.	Rs. a.	Rs. a.
Ready (.99 fine Mint)	84 5	85 11	79 7	80 14
Forward	83 8	85 1	79 2	80 8
Sovereign	58 12	59 4	57 0	57 8
SILVER				
Ready (.996 fine Mint)	152 4	155 0	148 0	150 14
Forward	152 0	154 12	147 12	150 10
London Ready ..	73*d.*	73*d.*	72¾*d.*	72¾*d.*
London Forward ..	73*d.*	73*d.*	72¾*d.*	72¾*d.*
New York Ready ..	83½c.	—	—	83½c.

HIDES AND SKINS DULL

(From Our Own Correspondent)

MADRAS, *5th January*

Dull conditions prevailed in the hides and skins market during the last fortnight, due partly to the Xmas and New Year holidays and partly to the failure of a prominent Indian shipper and to the U.K. importers' price resistance. Prices declined by a penny or two per lb., temporarily owing to lack of buying support. There were some enquiries for tanned cow calf, buff calf and buff hides but at 5 per cent. below Madras prices.

Tanned skins market ruled dull. Stocks are accumulating in the local bazaar, following limited offtake.

Shipment during December, 1952 were: To the U.K. 3,727 bales tanned cow hides, 206 tanned cow calf, 146 tanned buff hides, 152 tanned buff calf, 621 tanned goat, 881 tanned sheep, 24 D/S. goat and 2 bales tanned snake skins; to the Continent: 5 bales tanned buff hides, 5 tanned buff calf, 169 tanned goat, 69 tanned sheep and 6 bales D/S. goat skins; to the U.S. ports: 121 bales tanned cow hides, 5 tanned cow calf, 202 tanned buff hides, 48 tanned buff calf, 117 tanned goat, 20 tanned sheep, 287 D/S. goat and 32 bales tanned snake skins.

(*Concluded from previous column*)

February deliveries for the garbles are changing hands at price ranging from Rs. 435 to Rs. 420 and Rs. 410 to Rs. 420 per cwt. respectively. With the increase of arrivals in Alleppey and fear of competition from North Malabar, the tendency at present is soft and may become softer still, if no good demand is coming forth from the exporters.

Following are to-day's nominal quotations:—Ready delivery Rs. 2,000, January Rs. 2,015/45, and February Rs. 2,045/75 per candy of 5½ cwts.

FORWARD COTTON STEADY

(From Our Own Correspondent)

BOMBAY, *7th January*

With the turn of the year, things appear to be well with cotton. Prices have been very steady both in the forward and ready markets and they are likely to rule firm partly because of the reports of reduced crop yield from important cotton producing areas and increased consumption by textile mills during the coming months as a result of the reduction of export duty on cloth. Already, this announcement has had a highly bullish factor of lifting the rate in private last Sunday afternoon in the forward market by nearly Rs. 9 to Rs. 10, though the market gave way later on technical considerations. Spot prices being still higher, it is expected that forward rates would with technical reactions sooner or later go still higher during the coming months. There is a fear that a greater movement of crop in some of the production areas like Gujerat with higher hedge pressure might bring about a reaction in cotton prices. This is not likely to be the case as by that time pressure in other areas where cotton picking will be over will be reduced.

In spite of the warnings of the President of the E.I.C.A., the trend, at least during earlier months of the season, in the forward section is likely to be bullish, especially as Calcutta operators have started taking interest in the Bombay cotton futures market. This purely speculative interest is not likely to be a welcome feature of the forward market in cotton, because, as it is, there is enough speculative activity in this market to which Mr. Purshotamdas Thakurdas was constrained to refer in his address to the annual general meeting of the E.I.C.A. With the jute *fatka* operators invading this field, unhealthy conditions and combines are likely to be created at Kalbadevi at no distant date. Genuine operators in the market are disturbed by this development because they fear that the tempo of business as well as the morale might deteriorate to the level of those prevailing in the bullion market which is only a stone's throw from the cotton market. One should not be surprised if prices are pushed up at some stage to about Rs. 700 per candy in a mad rush for collecting contracts. The following is the trend of prices in the forward section since 2nd January.

	Opening	*High*	*Low*	*Closing*
I.C.C. Feb. (Rs.) ...	656½	666	640½	649½
I.C.C. *May* (Rs.) ...	665	679	669	662½

The latest quotations from the spot market are: Bengal *Deshi* (new) Rs. 450-500; (old) Rs. *380-415*; *Berar Jarilla* (old) Rs. 600; (new) Rs. 675; Vijay (new) Rs. 780.

On the export front, things have been naturally quiet, because of the Christmas holidays. But shippers are not discouraged by this lull, as they expect good business from the Continent in the coming weeks. The prices of exportable varieties have been steady, in spite of absence of enquiries from abroad, because of steadiness in the staple varieties in the spot markets. It has been the same with imports though the interest here is more broad-based so far as higher staple varieties are concerned. There is no demand for U.S. cotton, but mills have been active buyers of both Egyptian and East African cotton and this interest is likely to increase if the volume of export increases as a result of the Government's announcement regarding export duty on cloth. Internal consumption of cloth, however, is not rising even though cloth prices show some increases. Now that the prices in New York have reached fairly attractive levels for buyers, mill interest here is likely to revive in Californian cotton.

At Karachi, Europen buyers are slowly returning to the market. The U.K., which had stopped buying for a long time now, has made some purchases both in the staple and Deshi varieties, though the quantity so purchased are not substantial. Italy, Germany and France are also interested in Pakistan styles. But Pakistan's effort to find markets in the Eastern European countries do not seem to have materialised so far. Japan also, one of the biggest buyers of this cotton, has kept quiet. Now that the controversy regarding devaluation seems to have been temporarily suspended, it is likely that buyers might appear in the market for their immediate requirements. Prices after the recent fall are, therefore, likely to rule steady in the near future at Karachi. The latest available quotations are: N.T. R. G. Rs. 63-67; S.G. Rs. 67-71; Bengal *Deshi* Rs. 52-54; 4F Punjab R.G. Rs. 59; S.G. Rs. 62; L.S.S. Punjab R.G. Rs. 63; S.G. Rs. 66½.

At Alexandria also there has been a revival of interest from the Continent apart from the purchases made by India. The Egyptian Government is sending out a mission to India and East Asian countries to find markets for Egyptian cotton in this field. It is believed that the Government has already entered into some kind of a barter deal with Spain for supplying cotton against sugar. It is not known how far the efforts of the Government of India to strike a similar deal with Cairo for the supply of surplus sugar in India to Egypt have been successful. There is obviously a feeling of bitterness against the U.K. in Egyptian cotton and political circles because it is believed that the British Government are trying to disorganise Egyptian economy by withholding its customary support to the cotton market at Alexandria.

At New York, it is believed that the bearish trend has come to an end and revival of prices is expected in the New Year. It is believed that about a million bales will find their way into the Government loan scheme, if the prices don't look up soon. The real snag in the New York cotton market is the absence of foreign interests. Unless demand for exports shows appreciable increase, the New York market cannot maintain a sustained rally in prices. Another reason for a steadier price trend at New York is that the production next season will be of a similar volume.

The following are the latest available quotations from New York, as compared with those of a week and a fortnight before:

	(In cents per lb.)		
	6-1-53	31-12-52	24-12-52
Spot	33.10	33.60	33.75
March	33.13	33.78	33.97
May	33.66	34.14	34.42
July	34.02	34.54	34.69
October	33.73	34.22	34.39

ART SILK YARN IMPROVES

(From Our Own Correspondent)

BOMBAY, *7th January*

Since we reported last on the 17th ultimo, the values of art silk (and also staple fibre) yarn have registered distinct improvement, mainly on account of the delay in the announcement of policy governing import of art silk yarn. Good demand in the ready section, and removal, with effect from 22nd December, 1952, of all restrictions on trading, including floor prices and margins, by the Yarn Merchants' Association, have also hardened the sentiment of operators. The buying support that ensued as a consequence has taken up the quotations of yarn to levels higher than those prevailing three weeks ago.

The improvement in values has been in marked evidence particularly in the forward section. Thus, 150 January contract opened at Rs. 710 and swiftly advanced to Rs. 736 on the 5th inst., although, towards the close, it was slightly lower at Rs. 729. This compares with Rs. 667 quoted for the December contract on 17th December. February contract rose from Rs. 714 to Rs. 736, but finished slightly lower at Rs. 731. In the ready section, 120 Japan moved up from Rs. 4 to Rs. 4-6. 120 and 150 Italy gained As. 4 each to Rs. 4-2 and Rs. 3-10, respectively. 150 Japan was taken up to Rs. 4-5, as against Rs. 4-2.

The table below gives the prices of art silk yarn quoted in the local market to-day, as compared with those on the 31st and 17th December, 1952:

	7-1-53	31-12-52	17-12-52
	Rs. a.	Rs. a.	Rs. a.
150D January (per case of 200 lbs.) ..	729 0	710 0	—
150D February ,, ..	731 0	—	—
120 Japan .. (per lb.)	4 6	4 2	4 0
150 Japan .. ,,	4 5	4 4	4 2
120 Italy .. ,,	4 2	3 15	3 14
150 Italy .. ,,	3 10	3 9	3 6

The postponement of announcement of import policy in respect of art silk yarn for the January-June, 1953 period has utterly disappointed the trade. It feels that the stocks of yarn are at present very low. In a telegram addressed separately to the Secretary, Central Ministry of Commerce, and Chief Controller of Imports, the Yarn Merchants' Association has urged the grant of liberal licences to established importers for the import of art silk yarn. It thinks that, if no licences are given, the prices of yarn would shoot up, causing thereby difficulties for handloom weavers in getting supplies of their yarn requirements.

In sympathy with the art silk section, the staple fibre section also has remained fully firm in the last three weeks. The firmness is due to the Government's decision not to grant import licences to those other than actual users. Staple fibre (2 x 40) January and February contracts have recorded handsome improvement, from Rs. 701 and Rs. 690, respectively, on the 2nd inst., to Rs. 727 and Rs. 723. It will be interesting to note that the price of December contract was quoted as low as Rs. 651 a month before.

OILSEEDS STEADY

(From Our Own Correspondent)

BOMBAY, *7th January*

The oilseeds and oils market maintained a generally steady trend during the three weeks since we last reported on 17th ultimo. This was due to renewed demand from overseas countries following the announcement of export quotas. In addition, the groundnut section met with buying support on reports of a smaller crop from Moglai districts. Linseeds also were bright owing to scarcity of floating stocks and continued expectation of reduction in export duty on linseed oil. The castorseeds section too put on a bright appearance early in the period turned subsequently easy. The easiness was attributed to fears regarding Brazilian sales of castor oil abroad at free exchange rates rather than at official rates as such might render Indian castor oil to lose its advantage over that from Brazil. As a result, castorseeds showed a tendency to decline while prices in all sections recorded sizable gains.

The export quota in the groundnut section is considered to be more than market expectations. But, owing to heavy demand and low crop prospects, the steady trend is expected to continue in spite of heavy arrivals in terminal centres. During the period under review, Bold ready fluctuated between Rs. 31 and Rs. 33-2, before closing at Rs. 32-8. Khandesh quality was enquired at Rs. 32-12. Groundnut oil ready and railway receipts gathered As. 2 each to Rs. 17-4 and Rs. 17 respectively. January and February deliveries closed a gain of As. 5 and As. 4 to Rs. 16-15 and Rs. 17-1 respectively. On the Continent, groundnut oil is quoted at £129 per ton. Canada is interested in H.P.S. groundnuts at £130.

There have been no notable developments in the linseed section. The reduction in export duty on cloth has induced a feeling that export duty on linseed oil also will be shortly announced. Translated actions during the period revealed that Bold ready improved from Rs. 26-4 to Rs. 27-8 and Indores Rs. 26-8 to Rs. 27-10. Linseed oil was done higher by As. 4 at Rs. 14-8.

Following rumours that further export quota in castor oil would be announced in February, the market put on a bright appearance almost up to a couple of days back, when selling pressure set in. This was occasioned by the lack of interest among U.S. dealers in distant deliveries, that is beyond February. May delivery which opened at Rs. 148 as against Rs. 147, fluctuated between Rs. 138-8 and Rs. 152, and finally closed at Rs. 140-8. F.A.Q. eased by As. 12 to Rs. 31 and Madras As. 4 to Rs. 31-8. Castor Oil I Pressure and Commercials were enquired at Rs. 18-4 and Rs. 18 as against Rs. 18-14 and Rs. 18-4 respectively. The U.S. was interested in castor oil I Pressure at 20.5 cents and Commercial at 19.5 cents per pound.

The following table shows the prices of oilseeds and oil on the 7th inst., as compared with those at the close of preceding two weeks.

	7-1-53	31-12-52	24-12-52
	Rs. a.	Rs. a.	Rs. a.
Groundnuts—

JUTE GOODS IMPROVE

(From Our Own Correspondent)

CALCUTTA, *6th January*

Jute markets were dull throughout the period from 16th to 30th December, and although prices for raw jute were not searching further lower levels, the rates for finished goods suffered from a gradual decline. However, during the three working days of the New Year so far, the goods market firmed up due to moderate covering demand, especially for heavy goods. Shippers secured substantial quantities; quotations in heavy goods could not, however, go up to such a level as to enable mills to enter into business without incurring losses. B. twills closed on 30th December at Rs. 93-12 but after re-opening following the New Year holidays, an impressive recovery was made to Rs. 97-8, the January-March and April-June positions quoting Rs. 98 and Rs. 99 as against Rs. 93-8 and Rs. 94-8, respectively, a week ago. Hessian 40" 10 oz. ready sympathised by moving up by a point to Rs. 43-4. America and Canada gave moderate support.

The closure of the hessian futures market following a Government order has been welcomed both by the industry and the trade. The industry had expressed the undesirability of a futures market even when it was reopened early last year; despite this the *fatka* was permitted and although the functioning of the hedging system was in no way contributory to bring down prices of hessian to such low levels as existed prior to 19th December, yet the wide fluctuations, which were an impediment to stable prices, could have been avoided. Time and again, it has been proved that American buyers desire to enter into commitments after prices in offers are steady for a time. No doubt, opinions are conflicting as to whether the United States would have lifted more hessian in recent months than it had done, had the futures market not functioned.

The raw jute market ruled firm during the period since our last report. Although, no upward movement in prices was recorded, yet the maintenance of rates meant welcome relief to cultivators and stockists. Conditions in the goods market being as they were, mills could only give limited support to raw jute, but did not use the opportunity thus afforded to cause to impart a decline. Such a behaviour fully demonstrated that mills did desire that Indian cultivator should be given an economic price for his produce. No wonder, no more misinformed allegations that mills are buying Pakistani jute in preference to Indian are heard. Assam bottoms maintained Rs. 24 a maund for January delivery. Business in *Jungli* took place at Rs. 18-8, and *bimli f.a.q.* at Rs. 17-8.

LINSEED SUPPLIES SCARCE

(Messrs. A. Bradley & Co.)

CALCUTTA, *5th January*

Prices have remained almost unchanged during the past week, with a steady undertone prevailing, while small-scale trading is being recorded daily. Supplies of ready goods have been rather scarce; sellers appear to be more interested for forward delivery, but the local mills are showing very little interest at present and there has been limited daily turnover at lower rates. The oil section has been dull; present prices are still out of parity with overseas markets and only small local business has been reported. Latest quotation is Ready: Rs. 20 per maund.

MERCURY DEPRESSED

(From Our Own Correspondent)

CALCUTTA, *6th January*

The local metal market was quiet during the week under review and consumers limited their purchases to day-to-day requirements in expectation of a further decline in prices. It, however, remains to be seen whether this expectation would materialise in the light of news from Korea, from where, following the Russian Commander's reported visit to the battlefront, reports have originated regarding the forthcoming offensive under preparation by both sides. But consumers will not be in a hurry to begin to stock as much raw material as possible at the present low prices, since past experience has proved that forecasts from the Korean front invariably prove difficult of materialisation.

The feature during the week was the slight improvement recorded in the price for zinc, following encouraging advices from abroad. Electrolytic zinc was steady at Rs. 68, although business passing was limited and enquiries dwindled. Tin receded to Rs. 636 from Rs. 638. Following the change of hands of a moderate quantity for re-export commitments during recent weeks, mercury exhibited a note of quietness and the quotation was somewhat depressed at Rs. 525. Copper remained unchanged at Rs. 190 and lead at Rs. 68.

FANNINGS WELL SUPPORTED

(From Our Own Correspondent)

CALCUTTA, *6th January*

Demand for tea being moderate, prices during yesterday's export sale recorded increase. Offerings aggregated 48,600 chests, 50 per cent of which consisted of lots from previous offerings. Prices for fannings, especially for those possessing bright liquors or black leaf with some tip, advanced by As. 2 to As. 4 above brokers' valuations. Moderate attention was paid to commons and low mediums, which improved by As. 2 while those of the lots, having poorest leaf appearance, were featureless. Leaf grades were steady and those having stylish leaf commanded better attention. Moderate support was also given to best liquorings and prices advanced by As. 2. The rates were: good Assam C.T.C. B.P. Re. 1-13, medium Assam B.P. As. 15, clean black pekoe Re. 1-5, and clean common B.P. As. 14-6. Offerings during the next auction are expected to aggregate 55,000 chests.

HIDES EASY

(From Our Own Correspondent)

KANPUR, *4th January*

During the week under review, conditions in the local hides and skins market ruled easy. The sheep section, however, proved an exception. New arrivals were up to expectation. The main parties behind the transactions were the local tanneries and some Madras dealers.

The latest quotations are: Wet salted cow, 1st grade: Rs. 340 and 2nd grade: Rs. 300 per score; wet salted buff, 1st grade: 1 lb. 10 ozs. and 2nd grade: 2 lb. 2 ozs. per rupee; goat skins, 1st grade: Rs. 300 and 2nd grade: Rs. 260 per 100 pieces; sheep Rs. 275 per 100 pieces.

SUGAR STEADY

(From Our Our Correspondent)

HAPUR, *6th January*

Free sugar markets remained very steady. Owing to very restricted loading of sugar stocks from sugar mills in Northern India, sugar shortages developed in Madras, Assam and many other States. This resulted in a rise in price in those States, which, in turn, stimulated enquiry for sugar in surplus areas and there was increased offtake almost everywhere. The Government of India has released a further quantity of 104,000 tons of sugar from the controlled stocks of the 1951-52 season's production. The quantity released will be sold by factories to buyers of their own choice at the reduced ex-factory control prices.

The Standing Committee of the Central Board of Transport has decided to accelerate the movement of sugar from factories in Northern India to different consuming areas, where, for some time, general shortage has been experienced.

Free sugar market at Calcutta remained steady and there was brisk demand from Madras, Cochin, Tuticorin and Assam sides. Besides, stockholders there were eager to replenish their depleted stocks of sugar resulting in buying activities with considerable advance in both spot lot and ex-mill prices of sugar. Price of free sugar at Madras ruled high, due to low stocks. The Government of India has directed that the ex-factory price of E-27 grade of crystal sugar produced during 1951-52 season by the vacuum pan sugar factories in Madras State should be reduced to Rs. 28-1 per maund with effect from 1st December, 1952. At Bombay, free market ruled firm, due to the stocks having gone down. Demand was very good and an appreciable amount of sugar has been exported to Malabar and Calicut.

The second all-India estimate of sugarcane puts this year's acreage and production at 4,248,000 acres and 5,035,000 tons of raw sugar against the adjusted second estimate of 4,326,000 acres and 5,288,000 tons respectively for 1951-52.

The average wholesale prices of free sugar in different markets are: Ambala Rs. 29-11-7, Amritsar Rs. 30-10, Delhi Rs. 30-6, Jullundur Rs. 28-8, Agra Rs. 29-5, Hapur Rs. 28-4, Kanpur Rs. 28-12, Mathura Rs. 29-7, Meerut Rs. 29-6, Muzaffarnagar Rs. 27-12, Patna Rs. 29-12, Calcutta Rs. 29-12, Gauhati Rs. 35-1, Madras Rs. 35 and Bombay Rs. 33-12.

FOOD SUPPLY POSITION COMFORTABLE

(From Our Own Correspondent)

HAPUR, *6th January*

1953 has begun with a happy augury so far as foodgrains supplies in the country are concerned. There is a carry-over of about two million tons of foodgrains. Prices have been falling, as a result of higher production and the assurance of securing the bulk of the 2.5 million tons of imports, the target for the year. Nearly 3.9 million tons of grains, 2.5 million tons of wheat, 700,000 tons of rice and 600,000 tons of milo were imported during 1952. At one stage, it had been hoped to dispense with any millets imports in 1953, but now a million ton deficit is estimated now, owing to the failure of winter rains and the consequent dama

STOCK & SHARE QUOTATIONS

Abbreviations:—D=Deferred shares. G=Guaranteed shares. P=Preference shares. P.O.=Preferred Ordinary shares. R=Rebate shares. Y=Accounts published yearly. H=Accounts published Haf-yearly. Q=Accounts published once 15 months. T=Company has Debentures. R.L.=Reserve Liability on shares. N=Nominal Quotation. i=Interim Dividend. f=Dividend for first half-year, y=Dividend for the year. x=Ex. Dividend. c.d.=Cum. Dividend.

Shares:—If a company has different classes of shares—as, for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under "Paid-up Per Share."

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12 indicate the months of June and December, respectively. "Reserves" includes general and other reserves and all other funds which a company may have as also depreciation on block items, when this is charged to separate account "Block" represents actual cost of land, buildings, machinery, and all such other items on which depreciation is allowed, less sales, if any, and stands for the gross figure except where otherwise indicated.

Dividends:—Dividends for completed years are calculated at per cent. per annum, but, where quoted for portion of a year, they represent percentages of the dividend on the paid-up share value. For companies closing the books half-yearly in the first three months of the year, and for companies closing their books yearly during the first half of the year dividends are shown as for the previous year.

• The following explanatory notes relate to the abbreviations and marks shown on page 52 in the debentures section:—

(a) Option to repay on six months' notice, on any interest date after 31st December, 1951, at 102 per cent Also redeemable out of a cumulative sinking fund of 1½ per cent. per annum (commencing in 1938) by drawings at 102 per cent. or by purchase at or 102 per cent.

(c) Option of repayment at any time at 3 per cent. premium.

(b) Bearer bonds of Rs. 1,000 each repayable at par.

Bearer bonds of Rs. 1,000 each repayable on 31st July, 1959.

(d) Bearer bonds of Rs. 1,000 each with option of edemption in whole or in part at par on 30th June, 1952, or on any subsequent interest date at one month's notice.

(e) Returnable on or after 31st July, 1950, at Rs. 102-8 or at par after 31st July, 1955, on six months not in each case

(f) Bearer bonds of Rs. 1,000 each with option of redeeming on 3 months' notice at ½ per cent. premium, 1st March, 1954, but before 1st March, 1957, and 1 per cent. premium on or after 1st March, 1957

(h) Option of redemption on or after 1st July, 1949, at par.

(i) Option of repayment at any time at par at any time on or after 30th June 1947 on six months' notice.

ALL-INDIA ECONOMIC CONFERENCE

(From A Special Correspondent)

THE All-India Economic Conference, which concluded its thirty-fifth session, a few days ago in Trivandrum, under the presidentship of Prof. P. A. Wadia, was doubtless, a success. Prominent economists including Prof. C. N. Vakil, Dr. V. K. R. V. Rao, Prof. Karve, besides several representatives of the Central and State Governments, the Planning Commission and Universities attended the session. Important problems such as, productivity in industries, welfare State, incidence of taxation and decontrol of food were on the agenda of the Conference.

Mr. A. Ramaswami Mudaliar, Vice-Chancellor of the Travancore University, welcomed the delegates, while the Rajapramukh of Travancore-Cochin inaugurated the session. The Rajapramukh made a plea for the re-examination of the foundations and development of Western economic thought and its suitability to the conditions in India. Re-orientation of economic doctrines with a view to adopting them to the needs of under-developed countries was, according to him, necessary. Concluding, he said, "while it is highly essential to perfect the technique of analysis, it will be a self-defeating process, if the ends in view are lost sight of. The economist and the work he does will be judged by the economic man by his capacity to promote the well-being of the community. The task of the economist is to plan for a proper utilisation of our resources so that the standard of living of all our people may be raised."

The presidential address of Professor Wadia revealed erudition and covered as many as 26 pages. Even though, he is old and is the *guru* of veteran economists, his handling of the contemporary problems and their solution revealed that he was behind none in keeping himself abreast of current economic developments in the country. "All through the human history," he remarked "the one great problem that challenged man is the biological problem of adjusting the species to which he belongs to the environment." Referring to planning, he said that it implied organisation, the arrangement of parts in the service of a desired end.

He was very vehement in his emphasis on the need for centralisation of controls in planning. He referred to inter-State bans which have created comparative plenty in some places and scarcity and high prices in others, giving rise to a dangerous form of economic provincialism. He also emphasised the need for co-operation between the Government and agricultural population. Projects to be successful, should have the co-operation of the public. The policy of compulsory procurement had resulted in cultivators abstaining from producing more than their personal requirements. This according to him, accounted for the discrepancy in the yield per acre in different areas. He opined that procurement prices should be so high as to stimulate production, as after all the increase in the amount of subsidies may be less burdensome than the huge sums spent abroad in the purchase of grains. The need for disinterested co-operation of the personnel of the administrative machinery was also emphasised by him.

Papers were read on recent developments in welfare economics. In the discussion, Dr. D. T. Lakdawala (Bombay) observed that welfare economics was but an extension of the concept of positive economics. Dr. V. K. R. V. Rao said that it served as a norm for economic policy and formed the basis of planning, as, after all, it meant preference of one set of utilisation of resources to the other set, considering the larger interests of the people.

Productivity in Industries

On the subject of productivity, Dr. R. Balakrishna, Mr. S. D. Mehta, Dr. R. V. Rao, and several others read papers. Dr. Balakrishna gave figures relating to comparative productivity in a few industries. Dr. R. V. Rao, referred to the work of the I.L.O. in regard to studies relating to payments by results and productivities in industries.

The incidence of taxation was thoroughly discussed at the session. Papers were read by a number of economists including, Mr. N. K. Kulkarni, Dr. B. Singh and others. The discussion that ensued was of a high order. Prof. R. N. Puduval pointed out that India was a country of low taxation. Prof. J. J. Anjaria of the Planning Commission, on the other hand, remarked: "It will be correct to pay that the coverage of taxation is low. The incidence is higher in urban rather than in rural areas. Our income-tax does not cover a large enough sector. We should give up the idea that taxes on necessaries are bad." Referring to sales tax, he said that while the incidence falls on the consumers, he did not know why multi-point sales tax, which makes evasion difficult, is being opposed. He referred to the urgent need for State trading and capital formation. Prof. C. N. Vakil referred to the need for a comprehensive review of the incidence of taxation, in which direction he hoped that the National Income Committee and the National sample survey would give adequate information.

The next year's session will be held in Jaipur. The members unanimously elected Prof. S. Kesava Iyengar as President for the year and Dr. Lakdawala as Secretary. It was decided to run the *Indian Economic Journal* under the auspices of the Association from Bombay under the editorship of Prof. C. N. Vakil who, it must be said, is the guiding spirit behind the Association.

TATA IRON AND STEEL COMPANY

(Concluded from page 15)

shareholders, mentioned above, regarding the percentages which the dividends bear to the face value of the shares, and not the amounts of the dividends, being the proper basis for determining the ratio of conversion.

(2) The answer to the second argument is contained in the fourth argument of deferred shareholders, mentioned above. Moreover, the conditions and factors governing nationalisation of companies in England or India are not applicable to the problem of the conversion of the deferred shares into ordinary shares. Further, the quotations of shares on the Stock Exchanges do not represent a valuation of a company by reference to its assets and its earning potential. They result only from the actions and opinions of private and institutional investors all over the country, based on hope, well- or ill-informed guesswork, good or bad investment policy, etc. Furthermore, the quotations may move upwards or downwards, to a considerable extent, although no known changes may have taken place in the capital value or the earning potential of the assets, which they represent. Hence, the quotations cannot be a fair and equitable basis for determining the ratio of conversion. Again, the enforcement of any conversion scheme upon the deferred shareholders amounts to a liquidation of the deferred shares, and, therefore, to a liquidation of the Company, so far as these shares are concerned.

Neither the Company nor the shareholders would have to pay any taxes on the completion of the conversion scheme, because the Company would not be selling any part of its assets to any outsider. Besides, a company would have to pay tax only if, as a going concern, it sells some of its assets at a price above their written-down value, and not if it is first wound-up and ceases to carry on its business and then sells its assets. The question of paying compensation to the preference shareholders does not arise, because there would be no winding-up or sale of the Company.

(3) As regards the third argument, it may be asserted that the value of the net tangible assets of a company and the nature of its business are more important than its earning capacity and that not only the dividends declared but also the profits carried to reserve have to be taken into account.

(4) As regards the fourth argument, it may be asserted that the ratio of profits to paid-up capital should be taken into account and not the ratio of profits to revenue, because the latter ratio is likely to come down if the turnover is very quick. It may be stated that the former ratio in the case of the Tata Company has been upward. Further, there is the possibility of decontrol of the selling price of steel after some time and also of a fall in the cost of production due to trade recession.

The above arguments and counter-arguments of the spokesmen of the two classes of shareholders clearly show that the problem of determining the conversion ratio is a very complex one and that the task of the Mediator is by no means easy. In the midst of this complicated situation, the two practical factors which deserve to be taken into consideration in arriving at a fair ratio are the present book value of the net block of the Company plus the surplus of its liquid assets over its current liabilities and the profits of the Company. Mr. H. T. Parekh has worked out the ratio of conversion with reference to the first factor and has given it as 1 to 7 in an article published in the issue of *Commerce* dated 20th December, 1952. He has also calculated the ratio with reference to the second factor and has given it as 1 to 6. As the Committee of ordinary shareholders has suggested a ratio of 1 to 5, these shareholders should be prepared to accept a ratio which is a little more unfavourable to them than the one suggested by their spokesmen, as such a ratio seems to be warranted by relevant and practical considerations. The same considerations would probably make the deferred shareholders realise ultimately that the ratio suggested by their Committee, namely, 1 to 11, is unduly favourable to them and that they should accept a lower ratio. It is to be hoped that both the classes of shareholders would realise the necessity of placing national interests above their own interests and of accepting the ratio that might be awarded by the Mediator. If they do not do so voluntarily, there is a likelihood of the Government of India enforcing the Mediator's award by an ordinance.

DELHI LETTER

(Concluded from page 8)

Government will be able to canalise even a part of it back into some conversion loan, unless it tries to raise the rate of interest. Both for financing the heavy sums required for the implementation of the Plan and also to pay back the maturing 1953 loan, Government may have to resort to deficit financing during the forthcoming fiscal year.

The appointment of a compact committee under the chairmanship of Mrs. Kripalani, an Opposition leader, to probe into the charges of nepotism and favouritism in the grant of loans by the Industrial Finance Corporation, bespeaks high of Mr. C. D. Deshmukh, Finance Minister. It also indicates that he has nothing to hide from members of Parliament in regard to the transactions of the Corporation. During the last few years of its existence, the Corporation has granted loans to the extent of Rs. 14·03 crores to various industrial concerns. The cotton textile industry has secured Rs. 2.05 crores (the number of mills benefited by the loan being 14), while the chemical industry is the next in order, the loan granted to it being Rs. 1.86 crores. Textile machinery, mechanical engineering and electrical engineering industries have absorbed loans to the extent of Rs. 64 lakhs, Rs. 68 lakhs and Rs. 115 lakhs, respectively. Among other industries that have taken loans from the Corporation, mention may be made of woollen textiles, rayon, cement, ceramics and glass, light engineering, mining, aluminium, sugar, automobiles, electric power industries, etc. From these particulars, it will be seen that a number of consumer industries have been helped by the Corporation while machinery manufacturing industries and other key industries have not taken loans on a large scale, presumably because their capital requirements are large. Besides investigating the charges of favouritism, etc., the Committee will do well to examine afresh the role of the Corporation in financing the future industrialisation of the country.

MARKET REPORTS

(Concluded from page 41)

to crops in South India. Half of this deficit is to be met from increased internal procurement from the surplus States. The remaining half a million tons will have to be imported from the U.S. or China. The carryover of rice into 1953 is estimated at 160,000 tons—a record figure—and it is hoped to increase the internal procurement of rice by about a million tons.

The overall food position in the U.P. continued to be satisfactory during the last three weeks. There were light showers here and there, but, generally, rains were inadequate for standing crops the progress of which has not been quite satisfactory. The State Government has started purchasing rice from the free market, with a view to contributing as much as possible to the central pool. The Nepal Government has lifted restrictions on export of rice to India, following improved political situation. Further, the Government is believed to have fixed a quota of 25,000 tons of rice for Uttar Pradesh, which will be shortly made available.

Maharashtra is facing famine conditions; this is described as "unprecedented in scale in recent years" in at least eight districts. Bright prospects of *kharif* crop were entertained at the beginning of October, but the total absence of rains thereafter have presented a grim picture, with food crops being a total failure.

The Madhya Pradesh Government has increased the procurement price of *jowar* by Re. 1-10 per maund with effect from January.

ENQUIRY INTO WORK OF THE I.F.C.

The Government of India has appointed a committee with Mrs. Sucheta Kripalani, Member,

AUTOMOBILE INDUSTRY

AFTER facing, for several months past, extremely critical conditions bordering on a crisis, the Indian automobile industry appeared this week before the Tariff Commission with a request for grant of protection and assistance. The public enquiry into this question, which began on Monday this week, was preceded by a lengthy and closely reasoned address by the Commission's Chairman, Mr. M. D. Bhat, in which he elucidated the problems facing the industry and their causes. The Chairman stated, in so many words, that this infant industry was the most difficult of the problem-industries that had appeared before the Commission so far. It is now for the Commission to consider—and for the industry to help the Commission in the task—whether the industry has merely been a victim of circumstances over which it had no control and also to determine what measures are needed for ensuring healthy and rapid growth of this infant industry. This task is undoubtedly difficult. And it is not, therefore, surprising that Mr. Bhat found it necessary to preface his introduction by saying: "During the last eight years, the Indian Tariff Board and its successor, the Tariff Commission, have held enquiries into a large number of industries of various kinds, but I do not think they have had to deal with any industry which presented a complexity of structure or an intricacy of issues or a variety of problems as has been presented by the automobile industry."

It is unfortunate that the Indian automobile industry, the establishment of which was looked forward to with fervent national interest in the pre-war years, should have fallen on evil days, so soon after its birth. Perhaps, no Indian industry was watched with such keen interest; and there is certainly no industry which has disappointed the country more than the automobile industry. Although the first car was imported into India as far back as in 1898, it was only in 1920 that the first tentative attempt at assembling cars in this country was made. It took several years even for the assembly plants themselves to be firmly established. It was only in 1928 that General Motors India Ltd. commenced assembling trucks and cars from imported components and parts. This was followed by Ford Motor Co., Ltd., a Canadian subsidiary, two years later. The formation of a national venture with a programme for the complete manufacture of cars, mooted during the mid-thirties and seriously tried in 1940, was hotly opposed and discouraged by vested interests. There was a prolonged controversy between the Indian promoters and the powers-that-be then. It was only in 1944 that the Indian demand for establishing a motor car manufacturing industry in the country was conceded. Thus, in that year, Hindustan Motors Ltd., Calcutta, and Premier Automobiles Ltd., Bombay, were started with a programme for the manufacture of complete automobiles. Since then, several assembly plants of different sizes have also been set up. Along with these full-fledged assemblers and manufacturers, there has come to the fore a small ancillary industry which manufactures parts needed by the car manufacturers. Among the several units of this ancillary industry, mention must be made of the piston ring and cylinder liner industry.

The chief problem of the industry is the slow offtake of its goods. Demand for vehicles has fallen to a low ebb. Although no reliable estimate has been made of the demand for vehicles in this country, one estimate places it at 20,000 (divided equally between cars and commercial vehicles), as against the existing capacity for production of over 70,000 vehicles. This is an unenviable plight for an industry in which a capital of over Rs. 9 crores has so far been invested. There is no use casting wistful glances at the high level of automobile offtake in the U.S. and the U.K. and comparing it with the low level of the offtake in India. It is true that the number of persons served by one vehicle in India is on the average 1,350, as against 3 in the U.S., 15 in the U.K., 16 in France, 47 in New Zealand and 110 in Brazil. Again, the number of vehicles per 1,000 miles of road is 14.874 in the U.K., 12,144 in the U.S. and 829 in India. It is also true that the potential demand for cars in India is large; but it is the effective demand that counts.

The fact that the industry is before the Tariff Commission only just now does not mean that it has not been having any protection all along. Any such impression is clearly wrong. It will be recalled that, some three years ago, representations were made to the Government by companies with manufacturing programmes that, unless they were given sufficient protection against foreign competition, it would not be worthwhile to embark on manufacturing schemes. The Government of India examined this demand and, after scrutinising their manufacturing programmes, revised the import duties on automobile components in an upward direction. This, however, led to strong protests even in Parliament and, in June, 1950, the Government appointed an Expert Committee to go into this question. This Committee submitted its report in January, 1951, suggesting certain modifications in the Government's revised import duties. These modifications meant some reduction in duties but, by and large, they were still quite high. These were accepted by the Government in June, 1951, and the present high level of duties is in accordance with the recommendations of the Expert Committee.

Thus the industry has had the protection of high import duties for over a year and a half now. But it has not helped the manufacture of motor vehicles in India to any appreciable extent. A large part of the existing capacity still remains idle—clearly, a national waste—and the industry has again come forward with its claims for assistance and this time before the Tariff Commission. In view of this past experience, the terms of reference to the Commission are broad-based, giving the Commission a wide choice. Accordingly, it has been asked to examine almost every conceivable set of the industry's many problems. Apart from scrutinising the two chief producers' manufacturing programmes for their soundness and efficiency, the Commission will also examine the possibility of either integration or mutual assistance. The Commission has also been asked to consider whether any change in the rates of duties on components of motor vehicles is required. The suitability of the alternative of a subsidy has also to be examined and the conditions which should be attached to the grant of such subsidy have to be laid down. It is left to the Commission to examine whether a combination of these methods should be adopted. Further, the Commission has to look into the arrangements for the import of vehicles, accessories and raw materials necessary to meet the requirements of the industry and the public. Finally, it has to investigate and report on the economics of diesel-driven transport vehicles and the desirability of taking measures to restrict, regulate or co-ordinate their use with the use of petrol-driven vehicles. Each one of the issues, as Mr. Bhat rightly observed, embraces several knotty problems which are bound to tax the ingenuity of the Commission.

Whichever way the matter is looked at, there is no getting away from the fact that the

industry's chief problem is the low level of demand for cars. Mr. Bhat attributed this to three causes—the average low income of the people, the high cost of manufacture and the backwardness of the road system. To these he might have added the high incidence of taxation on motor vehicles. It is ironical that, while the inadequacy of roads affects the demand for motor vehicles, the vehicle-user is being forced to pay higher taxes to remedy this defect; and these higher taxes, in their turn, lower the demand for cars. Another reason for the industry's sad plight is that there are too many units, considering the limited nature of the domestic market. And it is a sad reflection on the administrative acumen of those in charge of licensing of industrial undertakings, that they should have brought the industry to a sorry pass by permitting more units to function than the country has need for. Now that several units have been started, the question is how best they may be protected both against each other and against foreign competition.

It would appear that some witnesses stressed the need for both subsidy and protection. It may be recalled that the Motor Vehicle Taxation Enquiry Committee argued in favour of a system of subsidies in view of the fact that the nation as a whole, and not merely, the motor vehicle user, as now, should pay for the cost of protection to the automobile industry. Mr. Bhat himself recognised the national importance of the industry when he emphasised the following considerations which compel the establishment of an automobile industry in India:

"(1) India spent during the five years ended 1951-52 foreign exchange exceeding Rs. 55 crores and Rs. 37 crores, respectively, on motor vehicles and motor parts. It goes without saying that, if the domestic industry is developed, a large portion of the foreign exchange can be saved and utilised for capital goods and machinery for the new industry. (2) The automobile industry will create a demand for products of a large number of engineering and other industries and accelerate the process of industrial development. (3) The automobile industry, besides opening up a fresh field of employment, will be in a position to provide the skill and technical knowledge for the establishment of other allied industries such as tractor manufacture, etc. (4) The automobile industry will serve as a medium to further national integration by providing facilities for communication between different parts of the country, thus increasing opportunities for contacts between rural and urban communities. (5) In times of national emergency the automobile industry can be switched over to the production of vehicles, ammunition, etc., required for defence."

It is, therefore, vital to India's national economy that the automobile industry should get more firmly established in this country. From this point of view, the present enquiry will be watched with keen interest all over the country.

Mr. Bhat outlined the broad lines on which the Commission would approach this question. Thus, the Commission would first consider "as to what might be a fair estimate of the total demand for motor vehicles." The Commission would next consider whether all the types and models, now in use, are needed by the country. The related question of diesel *versus* petrol engine will also be considered. The problem of co-ordination of manufacturing activities—if such co-ordination is possible, at all—would be taken up for discussion. Other questions which will be considered by the Commission are: (1) growth of ancillary industries, (2) the estimated cost of production of vehicles and their selling prices, (3) quality of vehicles and components, and (4) subsidies, import control and import duties. All this discussion, when it is completed, will, it is to be hoped, lead the Commission, which is being assisted by a German expert on technical issues, to arrive at some workable and sound scheme for the protection and assistance to the industry.

Conceivably, the Commission might find, at the end of its elaborate enquiry, that no mere alteration in duties or even in the method of protection will avail the industry anything. If it is conceded that, despite the control supposed to have been exercised by the Government, the industry has come to be established in a haphazard fashion and is oversized, it is obvious that either the various units must undergo a process of amalgamation—this would raise some engineering and financial problems—or the demand for cars should somehow be stimulated. Bound up with the question of stimulating the demand for vehicles are such thorny issues as nationalisation of road transport, motor vehicle taxation, and the consumers' prejudice against indigenous manufactures. Correct solutions to these problems must be evolved and enforced firmly. Considerations of loss of prestige, or of revenue, should not be allowed to stand in the way. Nor should vested interests and false notions of consumer interests. So long as the question is not tackled on these lines, the automobile industry will continue to remain the problem-child of the Indian economy.

FOOD POSITION

FOR nearly a decade now, the country has scraped through the food battle. With its belt tightened, it has lived all these days on a hand-to-mouth basis. Ordeals of high prices, poor quality of grains and inadequate supplies are all still there, at any rate in rationed urban areas which, however, are fewer than they were a year ago. Nature, too, has been unkind again, creating near-famine conditions in some areas of the country. Despite this picture, the position is not as hopeless as it was this time last year when it was generally felt that the country would require imports of no less than 5 million tons of foodgrains. It is, therefore, surprising to be told that the States Food Ministers' Conference, held at New Delhi on the 8th and 9th inst., was no better than its predecessors and that, while the deficit States continued to pitch their demand for supplies at high levels, the surplus States were reluctant to disclose the true position of their surpluses. Perhaps, the one redeeming feature of this Conference was that both the Prime Minister, Mr. Nehru, and the Minister for Food and Agriculture, Mr. Kidwai, took care to stress that the food position now was not so bad as that of last year.

Food statistics continue to be an enigma. Confusion has been worse confounded with the publication of the conclusions of the National Sample Survey (N.S.S.) conducted by the Indian Statistical Institute (I.S.I.). The N.S.S. has tentatively concluded that in the official estimates of domestic production of foodgrains, there is a discrepancy of anything between 12 and 16 million tons! It may be noted here that the official figures estimated the output for 1949-50 at 44 to 48 million tons, whereas the N.S.S. places it as high as 60 million tons! The difference between the two estimates is, however, not so disturbing as the reported discountenance of the N.S.S.'s conclusion by the Planning Commission and the Finance Minister. The work of verifying food statistics was entrusted to the I.S.I., the head of which is an acknowledged authority on statistics. After expending on this work large sums, time and energy, to be told now that its findings are not reliable and no better than the official estimates, is to strike at the root of confidence itself.

The confusing nature of food statistics in this country became obvious at the States Food Ministers' Conference also, at which the absurdity of some of the Ministers' estimates of surpluses and deficits were exposed by both Mr. Kidwai and Mr. Punjabrao Deshmukh, Minister for Agriculture. Let us take the demands of some States. Both in Assam and Bihar production of rice has been good; yet they pitched their requests for rice high. In 1952, Assam imported only 18,000 tons, but it wanted 30,000 tons for 1953. In the same year, Bihar imported 12,000 tons but asked for an allocation of 47,000 tons for 1953. Even the Bombay State was not free from this tendency. In 1952, Bombay distributed 2.74 lakh tons of rice, of which 1.55 lakh tons were locally procured. This year, the Government expects to procure 1.25 lakh tons or 1.49 lakh tons less than what it distributed last year. But it has a stock of 1.1 lakh tons. Its requirements should, therefore, be no more than 60,000 tons, but it demanded two lakh tons. Again, last year, forward promises of grain by surplus States to the Centre amounted to 3.7 lakh tons, as against which the actual offers were 5.5 lakh tons. Similarly, deficit States demanded 7.1 million tons but got on well with an allocation of 3.9 million tons. This divergence between the actuals and the estimated requirements discloses that, while preparing their estimates, the States were completely ignoring the previous actuals.

Why should the States continue to present exaggerated figures? It is due to the fear that, if they were to tell the Centre the

"The reference I have made above to the fall in production must have made you anxious to learn more about it. Since 1948-49, when 52,313 bags were produced, there has been a continuous decline in production of the Company and during the year under report your factory produced only 36,289 bags. The main reason for decrease in production has been the shortage of rainfall in areas round about Sehore and short supply of cane by cultivators last year. The production was further affected by the very poor quality of cane supplied by the cultivators. The milling test of such cane showed that the recovery from cultivators' cane was less than 7.5 per cent. as against 10 per cent. obtained from cane grown on your Company's own farms. The Government of India and the Bhopal Government were naturally apprised of the bad quality of cane supplied by the cultivators, but I regret to say that nothing has been done so far to bring about improvement in quality.

"The policy of fixing a flat rate for supplies of cane irrespective of quality is very defective, as it leaves no incentive to the cultivator for improving the quality of his produce. If prices of cane are fixed according to the recovery obtained, the cultivator would attempt to improve the quality of his supplies in order to get a better rate for the same.

"Due to complete failure of rain during 1951-52, there was hardly any plantation of cane last year and, as mentioned last year, there will be no crushing during the 1952-53 season owing to non-availability of cane. However, you will be pleased to learn that the rainfall in the current year has been fairly satisfactory. The Bhopal Government and your Company are doing their best to distribute the available seed for multiplying the area under cane. Adequate sums of money have been made available by the Bhopal Government for purchasing cane seed and your Company, together with the co-operative societies, are endeavouring to distribute the available seed among the cultivators. Whilst it is too early to say what area will be available next year, it is hoped that the distribution of seed will help in restoring the area under cane and your factory will be able to work next year. Your Company would be planting in all 1,260 acres, including ratoon and adsali cane, on your own farms. The area under plantation this year would be slightly more than what it was in previous years.

Generally speaking, bank earnings may be taken as an index of commercial prosperity. From this point of view, the year 1952 presents a paradox. The year was by no means the most prosperous one for trade and industry. Nevertheless, bank profits in the U.K.—a country which was as much affected by slump conditions as any other—have touched a high level. Thus, the profits of the seven leading British banks, the Big Five and the District and Martins, add up to £10.4 million for the year 1952, as compared with £9.7 million for 1951 and £9.8 million for 1950. The increase in profits, in the context of admittedly difficult conditions for trade and industry must be attributed to the hardening of interest rates, following the increase in the Bank rate. The table

(*Continued on page 95*)

It is encouraging to note that the Food Ministers from a number of States, in which controls have been relaxed, were able to state at the Conference that the results of their experiment had been one of general satisfaction among the people. It is stated that grain prices in open markets have shown a definite tendency to fall, as compared to the pre-relaxation period. This trend is daily being confirmed by reports in the Press from various States. In West Bengal, for instance, the downward trend in rice prices for some time now has led the State Government to withdraw the modified form of rationing in areas where such trends are in evidence. In Madras, in spite of offering rice at progressively reduced rates, merchants are not able to attract any worthwhile business. These tendencies must be comforting to the States concerned, especially as their policy of gradual relaxation of food controls had come in for bitter criticism at the hands of certain sections of the public in the name of planning. It is admitted on all hands that planned economic development presupposes certain measure of controls but these controls should not be such as to defeat the very purposes for which they are meant. The type of foodgrain controls we have had hitherto undoubtedly belonged to this category.

SHARE MARKET IN STALEMATE AGAIN

TREND OF STERLING—BRITISH BANK PROFITS

THURSDAY, 5 P.M.

THE mild enthusiasm, displayed by the bulls in Share Markets soon after the dawn of the New Year, seems to have ebbed out. The upward trend in equities has stopped, for want of fresh support. Excepting for a fractional fall in a few leading speculative counters, values, however, have managed to remain unaltered. Nevertheless, a feeling of uncertainty has come to prevail among operators over Budget prospects. Many of them are now proceeding on the assumption that the forthcoming Central budget will disclose a heavy deficit and that additional taxation, in some form or other, will be the lot of the public. More and more operators now seem to view the implications of the Five-year Plan to Share Markets on the same lines as those indicated in these columns a few weeks ago. They feel that at least the near-range prospects for the markets, under the Plan, are not bullish, as the volume of savings available for investment in shares in the next two or three years will show no worthwhile improvement over the existing state of affairs.

MARKET GOSSIP

* * * *

The keen interest evinced in the shares of Oriental Life in the past week has receded to the background. After going up from Rs. 5,000 last week to Rs. 5,500 early this week, these shares are being currently quoted at Rs. 5,400. To be precise, there are only sellers at this price, but buyers are willing to pay no more than Rs. 5,300. As the reports of the Company desiring to become a mutual concern have not been denied by the management, more credence is being attached to it now than in the past. If, in spite of it, the value of the shares has not gone up further, it is because of the realisation that the scope for further capital appreciation is not as large as it was popularly believed earlier.

* * * *

If "Orientals" had the distinction of recording a smart rise in price last week, that distinction goes to the shares of aviation companies this week. Thus, Air-India has gone up from Rs. 53-12 to Rs. 71, Air-India International from Rs. 78 to Rs. 90 and Air Services of India from Rs. 3 to Rs. 3-4, no sellers. This improvement reflects the belief in informed circles that the compensation payable by the Government to the shareholders of the civil airlines when they are taken over will be fairly satisfactory. Mr. J. R. D. Tata, who is reported to have had a hard time in convincing the Government of the fairness of the companies' compensation claim, himself advised the shareholders of the companies concerned, before he left for Europe early this week for a short holiday, not to part with their shares until the details of compensation were announced. While there is no news as yet about the exact terms of compensation, it is learned that the Government will pay such compensation in 3½ per cent. five-year bonds, which, it must be conceded, is a security quite popular with institutional investors.

* * * *

Unlike the Bombay Share Market, the Calcutta market has continued to be a little more active. There has been some enquiry for coal and tea shares. There are reports that the Government is making a more practical and less harmful approach to the problem of conservation of coking coal. It is stated that the Government has relaxed the restriction on the output of coking coal in the case of those factories which are taking steps to conserve their reserves by adopting the positive method of sand-stowing. Full particulars of this new approach of the Government are not available at the time of writing, but Calcutta advices suggest that the colliery interests are gratified at it. It is now believed that the prospects for the shares of companies producing coking coal have distinctly improved.

* * * *

There has been some selective buying in tea shares also. This is attributable partly to the slightly higher prices realised in the recent tea auctions and partly to the possibility of the Government providing some tangible relief to the tea industry. Already, the Bengal Government has relaxed some of the restrictions on tea gardens in regard to supply of rice to workers at concessional rates. Tea garden workers in Darjeeling, for instance, will be supplied rice at Rs. 17-8 per maund, instead of at Rs. 8 per maund, for two months from January. It is believed that a similar step may be taken by the Assam Government also, at least in respect of those gardens which have been hard hit. Then, there have been further consultations between the tea industry and the Government of India. Mr. H. V. R. Iyengar, the new Secretary of the Commerce and Industry Ministry, visited Calcutta last week and discussed with the representatives of the industry, the West Bengal Government and the tea trade, the problems facing the industry. Although Mr. Iyengar's visit to Calcutta is described to be a routine one, market circles feel that it may yield some encouraging results. One does not know whether this is just wishful thinking or is something based on inside information. Be that as it may, in the last sale of tea for export at Calcutta, keen demand was reported at hardening rates. In some cases, prices advanced by quite a few annas on the previous week's sale. In the sale for domestic consumption also, even the commonest sorts of tea gained As. 2 to As. 3 per lb. In the Cochin market also, prices realised in the latest auction were As. 5 to As. 7 above those in the previous auction in the case of high grown fannings and As. 2 to As. 4 in the case of B.O.P. Although even these improved prices are well below the cost of production, the fact that the downward trend has been reversed has itself been sufficient to lift the gloom that had descended over tea shares and evoke enquiries for first class scrips offering attractive yields at current prices. Another factor that has infused confidence among investors in tea shares is the decision of the tea industry to restrict voluntarily the crop for next season by 8 per cent. This restriction will mean a cut of 50 million lbs. in India's tea crop and is expected to stimulate buying demand for the balance of 1952 crop, a large proportion of which still remains to be sold.

* * * *

One of the explanations for the good export demand for tea is that Britain will require more tea in the current year than was anticipated a few months ago, in view of the large number of visitors expected in that country for the Coronation. Another explanation is that Egypt is now a good buyer of Indian tea, as it has not got enough foreign exchange to pay for Ceylon tea which was being favoured till recently. The spokesmen of the tea industry, however, point out that all these are only temporary factors and that the supply of tea in the world is still in excess of the demand. They, therefore, feel that no sustained benefit can be expected by the industry from these factors and that, as such, they do not in any way obviate the necessity for a reduction in the export duty on tea in order to increase its competitive capacity.

* * * *

Options in India are illegal, though quite a large number of people indulge in them daily in all the forward markets unofficially. There is a school of thought in this country which feels that, since the authorities have failed to stamp out this form of futures trading, considered to be unhealthy and undesirable, they will do well to recognise it as an inevitable concomitant of forward markets, so that they may at least get some revenue by way of stamp duty. This school will be interested to know that several operators on the London Stock Exchange are now making a fresh effort to revive option dealings which fell into disuse during the war through the peremptory closure of this business by the Defence regulations. For some time now, there has been a demand for the resumption of option dealings. Brokers are, of course, vitally interested in this, since it will bring in a larger volume of business. Option dealings are defended on other grounds too. It is held that option dealings restrict the margins within which fluctuations may take place, and that they are, therefore, a healthy form of speculation. A deputation of the broker-members of the Stock Exchange waited upon the Chairman of the Council of the London Stock Exchange recently and discussed the question with him. Because the whole question concerns banks also, without the co-operation of which it cannot certainly be decided, the deputation has held discussions on the resumption of option dealings with the Bank of England too. The intricate nature of this question, which is understood clearly only by the experts on Stock Exchange operations, makes it extremely difficult for any body of men, save the Council, to arrive at a correct decision. The brokers' campaign for option business is now being carried on on all fronts; presumably, the final decision will rest with the Treasury.

* * * *

There have been no outstanding developments in the money market since last week. Rates of interest for inter-bank call money and short-term deposits are the same as those a week ago. Demand for money is good and lenders are scarce. A feature of the trade demand for bank credit so far is that most of it is still from up-country centres. City traders as such are not yet very much interested in bank accommodation, evidently because they are still chary of entering into commitments on any large scale. Most of them are said to be buying or selling only on a hand-to-mouth basis, as they are labouring under the belief that a further fall in prices of commodities and manufactured goods cannot be completely ruled out. Whatever that might be, the supply of funds in the money market is limited and some of the banks have again found it necessary to approach the Reserve Bank for loans against Government securities. Banks prefer to borrow against these securities, despite the fact that the rate of interest on such loans is higher at 3½ per cent. per annum than that on loans against usance bills which carry interest at only 3 per cent. per annum, because the former loans can be repaid at any time and is more convenient. Banks are not yet certain as to how long the present demand for money will continue. It is true that loans against usance bills also can be repaid whenever the borrowing banks feel like doing so, but they (the banks) do not desire to ask their clients to draw these bills and discount them with the Reserve Bank only to find themselves again with surplus cash in a week or 10 days. It, therefore, looks as though the usance bills will come into vogue only if conditions in the money market become as stringent as they were this time last year.

How have the sterling area's gold and dollar reserves fared through the year 1952? It is needless to say that the maintenance of these reserves at a comfortably high level is vital to the economy of this region. From this point of view, there is comfort in the thought that the year 1952 left the reserves at $1,846 million. This figure is, no doubt, a far cry from the level of $3,867 million, which was touched in June, 1951, following the devaluation of sterling in September, 1949, and the Korean boom. But the level of $1,846 million, at which the area's gold and dollar reserves stood at the end of December, 1952, is certainly well above the level of $1,662 million touched in April, 1952. The reserves had then fallen to this low level from $2,036 million at which they stood towards the end of January, 1952. They were dark days for sterling. And there were many who predicted—and not without reason—that sterling would enter another round of devaluation. They had said it before in 1949 and had been proved right. This time, they were fortunately proved wrong. The reserves have since then looked up. During the eight months ended December, 1952, the reserves have risen at the end of every month, save at the end of August and December. In August, the fall was due to heavy payments by way of settlement with E.P.U. In December, it is indeed creditable that the fall was only $49 million, considering that a payment of $181 million had to be made for the service of the U.S. and Canadian lines of credit and the U.S. lend-lease loan and the E.R.P. loan. All indications, however, point to the conclusion that the worst is over. Lest too great a reliance on this improvement in the area's reserves should be placed by those who are unacquainted with the mechanism of the functioning of these reserves, it is necessary to point out that, during the year 1952, the area received American aid to the tune of $428 million.

* * * *

An index of the sterling area's economic strength is furnished by a study of the rates at which sterling is quoted in the free exchange markets. The spot rate for sterling in the New York market is quoted around $2.81, as against the lower limit of $2.78, at which it stood at the beginning of 1952. Transferable sterling, that is, "free" sterling, which most countries in the soft currency area, outside the U.K., use for trading among themselves and with the sterling area, is now quoted around $2.73, whereas, a year ago, it fetched only $2.43. Similarly, security, or switch sterling, has also improved from $2.33, early in 1952, to $2.63 now. These are encouraging signs. At any rate, they do strengthen the hands of those who would like to see sterling become convertible at no distant date. Discussing, in a recent issue of the *News Chronicle*, the question of convertibility of pound sterling, in the light of the recent movements in the exchange market for this currency, Mr. Oscar Hobson wrote:

"An essential condition of the restoration and maintenance of sterling convertibility is that the open market rate for transferable sterling should be substantially equal to the official rate. (If the discount on security sterling is also negligible that will be all to the good, since it will mean that there is no pressure of foreign capital invested here to escape.) To this extent the omens for the successful restoration, during 1953, of convertibility to sterling held by non-residents of the Sterling Area are good. This does not mean that all sterling owned by residents of this country or of the rest of the Sterling Area could likewise be made unconditionally convertible. Arrangements would have to be made for tying up the greater part of the £4,000 million of "sterling balances" held by the Commonwealth, Egypt, etc. That should be a very much easier task than it appeared in 1947; no doubt the means for accomplishing it were discussed by the recent Conference of Commonwealth Ministers.

"It may be asked whether the withdrawal of import restrictions must not precede the restoration of convertibility. I do not think that any unconditional answer to that question can be given. Convertibility hedged about by a virtually impenetrable wire entanglement of prohibitions and quotas would rightly be regarded as a mockery and a fraud. On the other hand, there is no such thing as absolute freedom of trade, I think the practical policy should be to remove the most irksome of the recently imposed restrictions first, and then to give precedence to convertibility. Other restrictions should then be withdrawn, as the establishment of full internal monetary control permits. If a flexible rate for sterling is adopted, that would enable somewhat greater risks to be taken in removing specific restrictions than otherwise. That is the main, perhaps the sole, justification for the floating rate. It could be no substitute for a genuinely balanced Budget and the cessation of the present inflationary 'spill over' from the public to the private sector. We may hope that, in April, when Budget time comes round, Mr. Butler will be able to announce a definite plan for convertibility—but only if his Budget itself is such as to create confidence."

LETHARGIC CONDITIONS IN SHARE MARKETS

GRIP OF PRE-BUDGET FEARS

(From Our Own Correspondent)

BOMBAY, 15*th January*

THE Stock Exchange is dominated by pre-Budget fears—as it usually is, at this time of the year. The forthcoming Budget is of greater significance than the earlier ones, inasmuch as this will be the first Budget following the publication of the final version of the Five-year Plan and is, therefore, likely to contain proposals for financing the Plan. There was, therefore, some understandable apprehensions about the forthcoming Budget in the share market during the week under review. In this process, the market even appeared to have revised its earlier ideas about the business outlook under the Five-year Plan. Prospects of heavier taxation, heavy death duties, regulation of profits and dividend, all these factors have chilled the enthusiasm of the operators on the Stock Exchange. The confident note, struck by the market during the opening week of the New Year, was conspicuous by its absence this week and lethargic conditions came to prevail. Investors were chary of extending support to the market. The market was, therefore, completely under the influence of a handful of professional operators. There was no enthusiasm on their part to enter into fresh commitments. Prices tended to be on the low side in most of the counters. There was, however, no short-sales. On balance, equities, over a wide front, disclosed small variations.

In the steel section, Tata Deferreds opened the week on a quiet note at Rs. 1.711-4, but recovered to Rs. 1.721-4 on Friday. Thereafter, a distinctly soft tendency developed which took the quotation down to Rs. 1,690 yesterday. To-day, there was small improvement on small speculative purchases and the shares finished at Rs. 1 701-4. Tata Ordinaries were relatively more steady and closed a fraction better at Rs. 302. Indian Irons were subjected to some selling pressure and steadily fell from Rs. 23-13 to Rs. 22-13 yesterday, but stabilised to-day at Rs. 23.

Barring a few select scrips, textile shares failed to attract sufficient backing to hold ground. However, renewed enquiries at lower levels helped them to minimise their losses. Bombay Dyeings improved from Rs. 359-6 to Rs. 363-2 early in the week, but reacted to Rs. 355-10 on Monday this week only to recover to Rs. 359-6 at the close to-day. Kohinoors were done upto Rs. 266 early in the week, as against the previous week's closing of Rs. 263-12. After receding to Rs. 263, the shares picked up strength to close at Rs. 266-4. It is stated that some of the operators who had earlier sold these shares and bought Central Indias were now selling their holdings of the latter shares to cover their earlier sales in Kohinoors. As a result, Central Indias declined over the week by Rs. 2 to Rs. 143. Centurys moved down from Rs. 247-8 to Rs. 245-8. New Great was a rupee lower at Rs. 150 and Simplex were fractionally lower at Rs. 174. Svadeshis receded from Rs. 237 to Rs. 234. Tatas declined by a rupee. India United Ordinaries shed As. 4¼ to Rs. 8-3¼ and Deferreds half an anna to Re 1-8. Khataus reacted from Rs. 170 to Rs. 162-8 and Swans by as much as Rs. 12 to Rs. 378. Gokaks were, however, a feature with a rise of Rs. 2-8 to Rs. 195. Bradbury gained Rs. 10 to Rs. 630, though Ahmedabad Advances receded from Rs. 137-8 to Rs. 131-14.

Conditions in the bank section were quiet, and in the absence of interest prices tended to drift downwards. To some extent, sentiment was affected by fears about a further rise in the British Bank rate. Centrals Old were done a rupee lower at Rs. 63 and the New scrips Rs. 2 down to Rs. 67. Indias lost As. 8 to Rs. 156-12 and United Commercials half a rupee to Rs. 34-8. Barodas were steady at Rs. 117-8. Imperials F.P., however, emerged Rs. 2-8 better at Rs. 1 777-8 and the Contributories advanced by Rs. 2-8 to Rs. 438-12.

Insurance shares found sellers on fears of nationalisation. British India Generals were marked down from Rs. 13-8 to Rs. 13-4, Empires dropped precipitously from Rs. 450 to Rs. 403-12. Jupiter drifted lower by a rupee to Rs. 7-4. New Indias after an initial uptrend from Rs. 41-12 to Rs. 42-4, slipped back to Rs. 41. Orientals which picked up considerable strength in the previous week advanced further to Rs. 5,500 this week, but reacted to Rs. 5,400.

A steady tone characterised trading in electric shares. Though the turnover was small, prices showed modest rises in most counters. Ahmedabad Electrics (old) moved up fractionally to Rs. 110-15 and the New shares to Rs. 107-8. Poona Electrics swung up from Rs. 116-14 to Rs. 121-4. Surat Electrics rose from Rs. 116-14 to Rs. 117-8. Andhra Valleys were unchanged at Rs. 1.373-12 in the absence of sellers. Tata Powers gained Rs. 2-8 to Rs. 1.490. Amalgamated Electrics were quiet at Rs. 10-8 and Bombay Suburbans at Rs. 120-10.

Small variations were noted in the miscellaneous shares. Associated Cements met some selling pressure and the quotations dropped by Rs. 2 to Rs. 175-12. Belapurs, after touching Rs. 219, moved down to Rs. 214-8, but towards the close gained strength to Rs. 217-4. Fears about the outlook for Bombay Burmah induced selling in these shares which sagged from Rs. 371-14 to Rs. 359-6, but recovered to Rs. 363-12 at the close. Their new shares shed Rs. 6-14 to Rs. 138-2. B.I.Cs. were maintained round about Rs. 9-6. Killick *Industries* were fractionally lower at Rs. 143-8 and National Rayons at Rs. 64. Tata Oils finished As. 4 lower at Rs. 33 and Tata Chemicals As. 5 down at Rs. 8-10. Winros *gained* Re. 1-4 to Rs. 216-4.

In the transport group, aviation shares continued to be in the limelight, Air-Indias registering an advance from Rs. 53-12 to Rs. 71 and Air-India Internationals from Rs. 78 to Rs. 90, on the encouraging statement by Mr. J. R. D. Tata who advised the investors in aviation shares not to part with their holdings. Scindia Steams were quiet at Rs. 14-14 and Bombay Steams lost Rs. 2 to Rs. 30-8. The Directors of the Bombay Steam have passed over the dividend for the year ended 30th June, 1952. India Steamships eased from Rs. 6-13¾ to Rs. 6-5. Bharat Lines eased fractionally to Rs. 84.

Among the mining and engineering shares, B.B. Petrols were firm with a rise of As. 2¾ to Re. 1-2¾, but Indian Coppers were quiet at Rs. 3-2. Shivrajpurs dropped a rupee to Rs. 53. Alcocks declined by Rs. 4-6 to Rs. 293-2. Premier Constructions moved down Re. 1-4 to Rs. 34-8. Tata Locomotives were in request at Rs. 92.

* * * *

Calcutta Stock Exchange

CALCUTTA, 14*th January*

Although quotations remained at lower levels, the feature on the Calcutta Stock Exchange during the week under review was a change in sentiment leading to an improvement in the volume of transactions. The market had witnessed downward levels for several months now, so that any recovery must necessarily be slow; but in this process, stabilisation at every stage of the recovery would be a redeeming feature.

The trend of the jute goods markets was far from cheerful, and jutes could not provide the customary leadership. The improvement in miscellaneous industrials and selected teas provided a general stimulus. The change of outlook for tea shares would appear to be due to expectations of further relief to the industry following the keen interest, which the new Secretary of the Commerce and Industry Ministry, Mr. H. V. R. Iengar, has been taking in the problems facing this industry. No doubt, the industry would consider only a reduction in the excise and export duties as relief which alone can stimulate foreign demand and reduce stocks in gardens and with exporters.

The Indian Commerce Minister's assurance, while speaking at the annual meeting of the Engineering Association of India here last week, that private enterprise would receive encouragement in the starting of new industries and in the expanding of existing ones also generally contributed to the sense of cheerfulness. However, Mr. Krishnamachari's reply to the demand for a reduction in taxes and export duties was a counter-demand on industrialists for a reduction of industrial overhead costs even temporarily! It remains to be seen, therefore, whether the forthcoming Central Budget would contain any relief measure to industry which feels that, without a revision in the duties, the rate of exports cannot even be maintained at current levels. Operators will naturally take this factor into consideration when entering into commitments.

The feature in the textiles section was a broadening of activity. Muir Mills jumped to Rs. 225 from Rs. 206, and New Victorias were wanted at Re. 1-5. Elgin Mills were maintained at Rs. 15-10 while Dunbars were a point lower at Rs. 123. Kesorams realised Rs. 18-6, and Swadeshis came to business at Rs. 9-12.

Notice

SRI KRISHNARAJENDRA MILLS LIMITED, MYSORE

INTERIM DIVIDEND FOR THE HALF-YEAR ENDED 30th SEPTEMBER, 1952

AT THE MEETING OF THE BOARD OF Directors held on 27th December, 1952, the Directors have resolved to pay an interim dividend at the rate of rupee one and annas eight per share, free of income-tax, for the period of six months ended 30th September, 1952.

The transfer books of the Company will be closed from 31st January, 1953, to 3rd February, 1953, both days inclusive.

The interim dividend warrants will be posted on and after 21st February, 1953, to all the shareholders whose names stand on the Register of Members of the Company on 31st January, 1953.

By Order of the Board,
B. S. VISWESWARAIYA,
Secretary.

MYSORE, 27*th December*, 1952.

In sympathy with the general improvement, coals were also better at the beginning of the week but later lacked enthusiasm. The Coal Board's decision to relax output ceilings on collieries carrying out stowing operations had a stimulating influence earlier in the week. New Beerbhoomi were raised to Rs. 18-12 from Rs. 17-11, and East Inmans varied between Rs. 20-7 and Rs. 20-11. Raneegunges, however, were stagnant at Rs. 7-2, and Burrakurs were dealt with at the lower level of Rs. 10-3. Talchers at Rs. 3 added As. 2, and Bengals were transacted at Rs. 508.

Interest in jute shares was at lower levels, and this was a natural sequence to the depression in the jute goods market following supply exceeding demand. Traders were indeed cautious. Speculative Howrahs opened at Rs. 23-14 and after being traded lower at Rs. 22-15 were entertained at Rs. 23-5. Nationals closing at Rs. 24 were 1¼ points lower on balance, and Indias were quiet at Rs. 122. Ganges were lowered to Rs. 68-8 from a previous rate of Rs. 81, and Unions were hammered down to Rs. 180 from Rs. 189. There were enquiries for Orients at the lower rate of Rs. 183, and Deltas eased to Rs. 231 from Rs. 240.

Although Indian Irons, after being steady earlier at Rs. 23-11, weakened to Rs. 23, general support was given to other coalers in the engineering section but this did not lead to any pronounced rises. Braithwaites, in transactions, were raised fractionally to Rs. 10-6. Jessops were attended at Rs. 22-12 while Texmacos, after being higher at Rs. 4-1, were pulled down to Rs. 3-15. Similarly, Indian Galvanizing (New) eased to Rs 13 from Rs. 13-8, while Indian Standard Wagons, picking up strength, improved to Rs. 82 from Rs. 79.

As stated earlier, support to tea shares was maintained this week also, and market men have noted New York reports relating to new efforts to increase tea consumption in the United States. From Rs. 5 Tukvars found their way up to Rs. 5-10, and Singtoms at Rs. 2 added As. 5. Hantaparas strengthened to Rs. 104 from Rs. 101-8, while Ethelbaris eased to Rs. 3-12 from Rs. 4-2. Rajathats were steady at Rs. 13-12. Bishnauths at Rs. 22, and Hasimaras at Rs. 22-4. Other counters of interest included Seajulis and Brooke Bonds, while Banarhats, East Indians, and Sonai Rivers were among those that eased fractionally.

Shares of airlines were again in the limelight, and accounted for impressive advances. Indian National Airways hardened to Rs. 3-4. Airways India finding buyers even at Rs. 6-6 as against Rs. 7 in the previous week. Bharat Airways were between Rs. 2-10 and Rs. 2-13.

Among miscellaneous shares, Indian Cables were dealt with at Rs. 18-10. Martin Burns recovering to Rs. 18-10 from Rs. 18-8. Calcutta Electrics found support at Rs. 13-10, India Steamships changing hands at Rs. 6-6. Titaghur Papers were unchanged at Rs. 34-2.

* * * *

Madras Stock Exchange

MADRAS, 13*th January*

The Madras Stock Exchange was closed to-day owing to *Sankranti* festival. During the remaining sessions of this week, the market displayed a slightly easy trend. Operators were in a restive mood and preferred to keep aloof from trading. There was also absence of the usual demand for cloth and other goods in important consuming centres at this time of year. The tea position too showed no improvement and the shares were quiet for lack of support. As a result, business activity all round was limited and prices generally looked downward and disclosed minor losses over the week.

In the absence of any encouraging development, textiles ruled almost sluggish. Vasantas lost Rs. 4-8 to Rs. 141 on lack of demand. Balasubramanias, Rs. 40 paid-ups, disclosed a loss of Re. 1 to Rs. 34 and Rs. 70 paid-ups, Re. 1-12 to Rs. 63. Ranga Vilas and Jawhars were fractionally lower at Rs. 45 and Rs. 5 respectively. Buckinghams, however, ruled bright and put on Re. 1 to Rs. 117. There is a feeling in certain sections that despite reduction in export duties, there seems to be no prospect of Indian textiles maintaining themselves against Japanese competition in the South and South-East Asian markets.

Operators in the tea section were inclined to await the outcome of the International Tea Conference, comprising the U.S. tea intersets and the Governments of Ceylon, India and Indonesia. The discussions of this Conference, which commenced on the 12th inst., are aimed at promoting larger consumption of tea in the U.S. But the underlying feeling that any immediate increase in U.S. purchases of tea, despite the Conference, is remote, induced some selling pressure. As a result, Fringfords lost As. 6 to Rs. 3 and Periakaramalais Rs. 4 to Rs. 23-8. T.R.T. and Chemras were slightly lower at Rs. 6-6½ and Rs. 2-10 respectively.

Rubbers ruled quietly steady. Although the Indian market is insulated from those of overseas, yet the report that the consumption of rubber in the U.S. was on the increase had a salutary effect on the trend in the market. Malankaras gained As. 8 to Rs. 90-8. Anandams were higher by As. 2 at Rs. 8-10. Pullangodes were unchanged at Rs. 2-4. But Rajagiris lost As. 2 to Rs. 9-11.

Coffees ruled easy. There seems to be no likelihood of prices firming up unless exports are allowed. Nil Neergundi had a fall of As. 5 to Rs. 3-7. Consolidated Coffees slipped by As. 2 to to Rs. 15-12. Coffee Lands, however, were unchanged at Rs. 9-5.

Miscellaneous shares met with selective buying. There was a woeful lack of demand for Vanaspati shares with the result that Madras Vanaspati declined from Rs. 25 to Rs. 20. Mettur Chemicals and Mysore Chemicals and Fertilisers were each lower by As. 2 to Rs. 4-9 and Rs. 8-8 respectively. Binnys were higher by Re. 1 to Rs. 119. Ballis gathered As. 8 to Rs. 76-8 and Mysore Tobaccos As. 2 to Rs. 9. Guntur Electrics rose by Rs. 5 to Rs. 65.

NEWS IN BRIEF

THE budget session of the House of the People will commence on 11th February, 1952.

The Deccan Airways will commence its Bangalore-Mangalore daily Air Services on 20th January, 1952.

Work on another batch of 55 blocks of community projects is expected to be started shortly in addition to 72 blocks on which work has already commenced.

The fourth annual meeting of the Indian Central Arecanut Committee will be held on 21st January at Calicut. Important schemes relating to agricultural research are expected to be discussed there.

The Government of West Bengal has decided to purchase cottage industry products in preference to manufactured goods of equal standards even if the price of the former is higher, but subject to a maximum of 15 per cent.

The Committee set up last year by the Government of India to examine the existing system of civil air pilot training in all its aspects and recommend measures for its improvement has now completed its report which will be submitted to the Government shortly.

A special delegation, consisting of the members of the Indian Central Coconut Committee, will shortly be in the Andamans to implement the coconut development scheme on the islands which was sanctioned at its annual meeting held recently. Under the scheme, a nursery will be started in the Andamans for the supply of quality seedlings. Propaganda and demonstrations will be conducted in order to impress on the islanders the importance of modern methods of coconut cultivation.

The High Power Committee constituted by the Madras Government for concerting measures of relief for handloom weavers has decided that the scheme of relief for handloom weavers now in force should be extended for another six months. The present scheme, which will expire on 31st January, provides for money advances to weavers to help them become members of weavers' co-operatives, supply of yarn to weavers on easy terms and payment of subsistence wages at As. 6 per knot to weavers which works out to Rs. 15 a month.

A technique for the extraction of sulphur from the low-grade pyrites found in Chitaldrug, Mysore State, has been elaborated by a research project undertaken at the National Metallurgical Laboratory, Jealgora, with the financial assistance of the Geological Survey of India. The sample from Chitaldrug assayed 34.69 per cent. sulphur. Indian consumption of sulphur is about 63,000 tons. As against this, the allocation from the International Materials Conference is about 44,000 tons only per year. India has no deposit of native sulphur.

The Madras Government is now prepared to implement that part of the Krishna-Pennar Project which will bring immediate relief to chronic famine areas of Rayalaseema, portions of Nellore and Guntur. It is of the considered opinion that a dam at Siddesvaram and a reservoir at Gandikota would be of very great benefit to Rayalaseema and portion of Nellore. It is not considering any project for carrying the waters from the Krishna and Pennar to any area in Tamilnad to the detriment of Rayalaseema and other Andhra areas.

It is learned that a factory for processing uranium ore and producing uranium and thorium compounds will be installed in Chota-Nagpur under the four-year plan of atomic development approved by the Government of India. The factory will be an adjunct to the uranium plant proposed to be installed first in Bombay. It is also said to have been decided to set up a reactor. Recent survey conducted by the Raw Materials Unit of the Atomic Energy Commission has disclosed extensive deposits of uranium and thorium in Bihar.

The tenth session of the Labour Ministers' Conference will be held in New Delhi on 6th and 7th February next. The agenda of the Conference will be (1) legislation on industrial relations and trade unions; (2) problem of surplus labour in tea plantations; (3) strengthening of factory inspectorates and appointment of medical inspectors of factories; and (4) uniform standards for national and festival paid holidays in private undertakings. The main item for consideration will, however, be "legislation on industrial relations and trade unions." The other items will be taken up in the order in which they have been placed on the agenda in case there is time for their consideration.

The State Government of Saurashtra is reported to have announced a series of concessions under the General Sales Tax Act to provide relief to the merchant community. Thus, with effect from the 10th inst., the annual turnover for compulsory registration has been raised from Rs. 15,000 to Rs. 30,000. Secondly, the list of exempted articles now includes edible oils, shoes, medical instruments, appliances and accessories. The sales tax on vanaspati has been reduced from one anna to six pies. The rate on cloth too is reduced to six pies in the rupee and on gold and silver ornaments to one-fourth per cent. Merchants are free to conduct business without obtaining a registration number, if their trade is confined to non-taxable goods.

* * * *

From Abroad

The Voekswagen Works Agency, the biggest motor vehicle manufacturers in Germany, hope to export 1,000 tons to Japan this year.

The anti-monopoly criminal proceedings against five major oil companies in the U.S. has been ordered to be dropped by President Truman, provided the companies co-operated with the Government on a civil action.

Trans World Airlines will inaugurate direct flights from New York to Colombo, Ceylon on 3rd February, 1953, subject to approval of a revised pattern filed on 8th January with the Civil Aeronautics Board.

Pakistan has decided to reduce production of jute from 6.8 million bales during the current season to 4.2 million bales in view of the big carry-over of the current season crop and the poor prices offered for jute by overseas buyers.

The South-East Asia Regional Conference of the International Civil Aviation Organisation will open next week at Melbourne. The Conference will discuss measures to facilitate air travel in South-East Asia.

The United Mutual Security Agency has announced a $20 million grant to Yugoslavia which is still suffering from last summer's drought to enable it to import more food. The drought destroyed almost half of Yugoslav's corn crop which is normally exported in exchange for many items of imports, including food.

Raw cotton production in the non-Communist world this season, according to the International Cotton Advisory Committee, will aggregate 28.1 million bales as against 26.5 million bales last season. The total free world supply is placed at 41.4 million bales or 2.4 million bales more than in the 1951-52 season.

The newly constructed Italian refinery at San Martino di Trecate, situated between Milan and Turin, has begun operations. This major refinery started with the co-operation of the U.S. organisation, Caltex, is owned by the Societe Azioni Raffinerie Padana Olii Minerali ("SARPOM") and the Fiat Company, the Italian partner of Caltex. The formal opening ceremony of the refinery is planned for the spring of this year.

The United States and Indonesia concluded, on the 12th instant, a new agreement covering only economic and technical assistance. This replaces the agreement entered into last January which included military aid also. Indonesia received from the U.S. technical and economic aid aggregating $16 million during the fiscal year 1951-52. Approximately $6 million had gone to increase food production and $4 million to improve public health.

Ceylon and China have concluded a long-term trade agreement which now awaits formal ratification by both the Governments. Under this agreement, China has reduced the price of rice from £56 to £54 a ton and made another important concession by agreeing to buy low grade sheet rubber which it had originally refused to take. The Ceylon Government will reserve the trade with China to nationals in keeping with its policy of Ceylonisation of trade.

The London Conference on Central African Federation decided on 5th January to set up a Working Party under the U.K.'s Lord President of the Council, Lord Salisbury, to "consider what arrangements would be necessary under the federal scheme during the period before the holding of the federal election and the installation of the federal Government. One of the questions the Working Party will study is whether to install a Governor-General or some other form of interim Government.

The Japanese Foreign Ministry has announced the renewal of the sterling payments agreement with Britain. The agreement, which was signed in August, 1951, was originally to last for 12 months, but last August, it was extended for a further four months at the request of Japan. The agreement provides for the settlement in sterling of payments between residents of Japan and of the sterling area. It was designed to pave the way for expanded trade between the two countries, and to relax payments restrictions between Japan and the sterling area. The Foreign Ministry said the agreement would be extended for 12 months until 1st December, 1953.

Egypt has entered into an agreement with the U.K. for sharing the cost of the Owen Falls dam which would control the source of the river Nile at Lake Victoria in East Africa. It is the first agreement to be signed since Egypt abrogated the Anglo-Egyptian Treaty in October, 1951. The construction of the dam will serve two purposes. First, it will provide Uganda with a source of hydro-electric power and, secondly, it will assist irrigation projects in the Sudan by enabling the flow of water from Lake Victoria to be regulated and the lake itself will be used as a reservoir. The agreement sets at rest the suspicion of Egypt that the U.K. was planning to maintain an imperialistic hold on Egypt through the control of the Nile waters in the Sudan.

PERSONAL

MR. J. R. D. Tata, chief of the House of Tatas, left for Europe on the 13th inst. for a short holiday.

Dr. Alberto Berio, presently Italian Ambassador at Santiago (Chile), has been appointed as Italian Ambassador to India, in succession to Mr. Sidney Prina Ricotti.

Mr. J. A. Thivy, Indian Commissioner in Mauritius, has been concurrently appointed Consul General in Madagascar. The Consulate General will be opened shortly and the staff will include a Vice-Consul.

Mr. H. C. Captain, Managing Director, Central Bank of India Ltd., who recently proceeded to London to make arrangements for the opening of a branch of the Bank in that city, returned to Bombay last week.

Mr. R. N. Philips, Deputy Secretary, Ministry of Commerce and Industry, who has been appointed Joint Chief Controller of Imports and Exports, will leave New Delhi for Bombay on the 19th inst. and take over charge from Mr. Kochar on 21st January. Mr. Kochar is expected to join the headquarters at New Delhi as Joint Chief Controller of Imports and Exports.

Dr. Alexander Fleming, discoverer of penicillin and a Nobel Prize winner, and Prof. Corneille Heymans of Ghent, Holland, who won a Nobel Prize for his work on respiration, will arrive in India in February next to give higher training to medical students in the universities of Bombay and Madras for two months under a scheme organised by the World Health Organisation.

Mr. Neville N. Wadia, Chairman of the Bombay Dyeing and Manufacturing Co., Ltd., has been elected Chairman of the Millowners' Association, Bombay, for the year 1953-54. Mr. Wadia has been a member of the Committee of the Association for no less than 18 years. He was its Deputy Chairman thrice, in 1948, 1949 and 1950.

Mr. Purshotamdas Thakurdas (Bombay), Mr. B. M. Birla (Calcutta), Lala Sri Ram (New Delhi) and Mr. C. R. Srinivasan (Madras) have been reappointed as Directors of the Central Board of the Reserve Bank of India.

The Directors of the four local Boards of the Bank are:

Western area: Messrs. Purshotamdas Thakurdas, M. M. Parekh, V. P. Varde, Mohanlal Tandan and K. C. Mahindra.

Eastern area: Messrs. B. M. Birla, Jiwan Krishna Mitter, O. T. Jenkins, Yyare Mukerji and Dr. Bimal Chura Law.

Northern area: Lala Sri Ram, Mr. Satypal Varman, Sahu Jagdish Prasad, Sardar Gurdal Singh Uppal and Rishi Narayan Shahstri.

Southern area: Messrs. C. R. Srinivasan, Ramanathan Chettiar, P. Suryanarayana, S. Anantaramakrishnan and Bikkini Venkata Ratnam Chowdhury.

"COMMERCE" 1928

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, 14*th January*

Banking in India

The time has now arrived for settling the broad outlines on which the future banking organisation of India should develop. In this connection, the writer of the Money Market article in the *Statesman* makes a suggestion which, in our opinion, goes to the root of the problem. According to the writer, "the Banking Commission, if and when appointed, would do well to bear in mind one fundamental fact which emerges from an impartial examination of the present banking situation, namely, that India has now enough of commercial banking facilities and that the real need is for a properly co-ordinated network of agricultural and co-operative banks, working, as far as possible, under local management and catering for local needs." Private enterprise in Indian banking has been tried and found wanting. For obvious reasons, it is undesirable to multiply commercial banks of the type which are functioning at present. They foster unhealthy competition by concentrating their activities in big cities which are already well equipped in regard to commercial banking amenities. They are either unable or unwilling to devote any serious attention to rural banking and, by their policy of dealing only with financial middlemen, are not in a position to render any help to the agriculturists and small industrialists who are groaning under the weight of chronic indebtedness. Banks of the future should, therefore, be started by the people and for the people. Government should declare it as their deliberate policy that they desire to see co-operative banks established in every town and village and should do everything in their power to further the object in view. The imperial Bank, in return for its employment as Government banker, should be made to render all possible assistance to co-operative banks on reasonable terms. This Bank was established for the specific purpose of developing banking in India on healthy lines and has already achieved the first stage of its objective by opening no less than one hundred new branches. It should now be allowed some breathing space to consolidate the ground it has already covered before being called upon to launch on a further programme of branch development.

This Week's Survey

TWO MORE RESEARCH INSTITUTES

THE Central Electro-Chemical Research Institute at Karaikudi and the Central Leather Research Institute at Madras, which were opened this week, are the latest—and also notable—additions to the network of research institutes created by the Council of Scientific and Industrial Research, under the direction of Dr. S. S. Bhatnagar. Electro-chemistry has an important bearing on industrial techniques. The need for a central institute for conducting research into the various aspects relating to this industry cannot be stressed too strongly. Thus, electro-chemical industry covers a wide field, including, as it does, the production of numerous basic materials such as aluminium, magnesium, zinc, electrolytic lead, caustic soda and chlorine, calcium carbide, fertilisers, abrasives, special steels, carbon and graphite products, dye-intermediaries, etc. These, in turn, serve as raw materials for tertiary industries, as, for example, aircraft, automobiles, locomotives, agricultural machinery, machine tools, paper, rayon and the like. The possibilities of the establishment and expansion of different electro-chemical industries in India are, indeed, bright, particularly because of the availability of the required raw materials in the country itself.

Appropriately enough, the field of activity of the Research Institute is broad-based. The Institute is to have a number of major divisions dealing with electro-metallurgy and electro-furnace products, electrolytic cells, electro-deposition and allied processes, electro-chemistry of gases, etc. Apart from the usual laboratory services and general chemical measuring instruments, the authorities propose to provide certain special work facilities and equipment, such as liquid air plant, X-ray diffraction equipment, and apparatus for repair and standardisation of precision instrument. Provision, too, has been made for a general workshop, a lecture theatre and a well-equipped library and space provision for accommodating an exhibition of products and equipment of interest to electro-chemists.

As in respect of the electro-chemical industry, so in that of the leather industry, the importance of a central research institute needs no emphasis. The leather industry plays a vital role in Indian economy. Besides giving employment to a large number of workers and meeting the domestic demand for leather products, the industry earns for the country precious foreign exchange to the tune of about Rs. 36 crores per annum. Despite its importance, it is unfortunate that the industry has, by and large, been allowed to remain backward, without access to modern methods of processing and manufacture. Proper tanning and finishing of leather will almost double the value of raw hides and skins. That apart, being a large exporter of hides, skins and semi-finished leather, India should improve the quality of leather, if it is to compete in foreign markets, which, incidentally, have had a lead of over a century and a half in scientific techniques of production. The biggest problem before the leather industry is, therefore, rationalisation. And it is gratifying that the Madras Institute has primarily been entrusted with this task.

Although the Institute was formally opened this week, the days that have gone by since the foundation-stone was laid on 24th April, 1948, have been days of intense research activity. Work on 26 research projects was started early and nine have already been successfully completed. The Institute has patented a chemical process for treating the mirobalan tannin extract, which not only gives a lustrous colour to leather but also protects the extract from fermentation. A number of synthetic tanning materials has also been prepared from extracts of bhilwan nuts and cashewnut shells and also from coal-tar distillation products. Research has also resulted in the preparation of highly basic aluminium sulphates. Methods have been evolved for the preparation of chrome-aluminium sulphates and other combination tanning agents. Research on tanning processes abroad has been adapted to suit Indian conditions. Methods have been worked out for the economic utilisation of divi-divi pods, which are rich in tannin, for eliminating waste in South Indian tanning processes, for the manufacture of East India tanned kips, goat and sheep skins for export, and also for rendering the tannery effluents clear and odourless. These are, indeed, creditable achievements attained during a brief span of about four years and for which the Institute can legitimately feel proud.

Since both the Institutes are manned by eminent scientists and research workers, there is no doubt that the Central Electro-Chemical and Leather Research Institutes will acquit themselves creditably. They should be the centres not only for research and training but also for the dissemination of technical knowledge to the industries, including the issue of technical bulletins, contributions of articles to scientific and trade journals and answering technical enquiries, etc. Needless to say that the success of these Institutes will be judged by the extent to which the results of scientific investigation conducted by them are applied to practical use, thereby bringing about an improvement in the economics of the existing industries.

CULTIVATION OF PADDY

The Japanese method of cultivation of paddy has attracted considerable interest in this country. This method has yielded 8,000 lbs. of paddy per acre, as against the normal 1,000 lbs. Last year, over 6,000 lbs. of paddy were obtained at the Agricultural School Farm at Kosbad in the Bombay State. High yields have also been obtained at Kora Gram Udyogic Kendra at Borivli, near Bombay. Addressing the Convocation of the Indian Council of Agricultural Research, held recently at New Delhi, Mr. Nehru exhorted the agricultural experts to study thoroughly the Japanese method of rice cultivation with a view to popularising it among agricultural labour. It is gratifying to note that the Gandhi National Memorial Trust and the Kasturba National Memorial Trust have set apart a sum of Rs. 9 lakhs for the popularisation and propagation of this system of cultivation among the farmers.

The tremendous success of the Japanese method of cultivation of paddy is due to the adoption of correct transplanting methods and to the use of adequate organic manures and fertilisers to the field. Inter-culturing and weeding also play a very great part in the success of this method. The Japanese method does not invoke costly foreign equipment and can be followed by any industrious farmer. Under it, the nursery area is usually ploughed to a depth of three or four inches. The plot is well weeded and farmyard manure at the rate of one cartload per 1/40th of an acre is added and well mixed into the soil. The seed beds are raised 2 to 3 inches above the field level in order to facilitate inter-culturing of the beds and also drainage of water from the beds. A bed prepared thus will promote growth of paddy seedlings in loose and pulverised soil. On top of the bed, compost is applied about an eighth of an inch in thickness. This will enable the roots of seedlings to remain in top soil, thereby facilitating easy pulling out for transplantation. Over the layer of compost, a thick layer of ash is spread, in order to promote the growth of seedlings. At the time of sowing, the seeds are mixed with manure in the proportion of 1:2. The seed rate adopted in Japan is 5 to 6 lbs. per acre sown in 1/40th to 1/27th of an acre of the bed.

Although India is the second largest rice-producing country in the world and has the largest area of over 76 million acres under rice, it is not self-sufficient in rice which is the staple diet of a large proportion of its population. It is true that, even in pre-war years, India was importing about 15 lakh tons of rice from Burma and other countries. But conditions have since changed and India finds it difficult to meet its deficit by foreign imports, partly because of the high price and partly because of non-availability of this grain. Even if this country can procure rice from other countries, the foreign exchange involved in importing rice will run into several crores. In 1951 alone, it was as high as Rs. 42.8 crores.

One of the reasons for India's rice shortage is the normally low yield of the crop. The urgent need to-day is, therefore, the improvement in cultural practices over as large an area as possible in the shortest possible time. The Japanese method is simple and cheap. It requires nothing more than heavy manuring, systematic cultivation and diligent labour. It should not be difficult for the Indian farmer to produce adequate quantities of compost, farmyard and green manures to meet his essential requirements. Following the establishment of the Fertiliser Factory at Sindri, his requirements of sulphate of ammonia can also be met in part from domestic production. In fact, India's position in regard to fertilisers has now considerably improved. But it is not only lack of purchasing power but ignorance of the new methods of cultivation that are the main obstacles to high productivity of paddy crop. Here is a challenge thrown to the powers-that-be not only to supply the finance required but also to dispel the ignorance and the traditional prejudice against new methods of cultivation.

U.S. BUDGET

The U.S. Federal Budget for the next financial year, ending 30th June, 1954, which the outgoing President, Mr. Truman, presented to the Congress this week, is dominated almost entirely by defence considerations. The budget provides for a total expenditure of $78,600 million, of which 73 per cent. will be spent at home or abroad on defence. If other expenditure, such as the sums spent on the care of veterans were included, the total sum spent on war and defence would reach $68,300 million or 87 per cent. of the budget. He said that defence expenditure this year should be $57,300 million, as compared with $53,200 million last year and $17,800 million in 1950. He proposed to spend $2,700 million on atomic development during the year, an increase of $700 million over the present year. He indicated that much of the cost of defence was for new weapons, including atomic weapons, and possibly hydrogen bombs, expensive equipment for aviation and guided missiles. Referring to off-shore purchases, which have incidentally provided dollar income to many countries experiencing dollar scarcity, he said that these would be doubled in the present fiscal year over last year and would increase still more in 1954. During the fiscal year 1952, contracts for off-shore procurement aggregated $621 million. He also outlined an expenditure of more than $8,000 million in the foreign field.

Mr. Truman admitted that, in the long run, the budget must be altered to allow more funds for the improvement of the social conditions of the people. He, however, thought that defence expenditure in 1954 might be the peak and that military cost would begin to drop by as much as $15,000 million after two or three years. Defending the large size of the defence budget, Mr. Truman emphasised the need for building military strength. Much progress had, according to him, been achieved in this sphere. But he warned that their "gratification at the progress of defence must be sobered by the realisation that parallel developments are undoubtedly under way behind the Iron Curtain." In defence of the large sums he demanded under the head "international security and foreign relations," Mr. Truman said that they were required to meet the most urgent needs of each individual country. Referring to foreign aid, he added: "In some instances it consists largely of weapons necessary for the expansion of military strength; in others, it takes the form of goods, services and technical skill needed to help millions of people in their struggle against poverty, disease and starvation—conditions which create unrest and invite subversion."

Mr. Truman struck the same happy note of the need for liberal aid to the rest of the free world in his final State of the Union message to the U.S. Congress. He spoke of the Marshall Plan as the "grand design" of the U.S. to set the free countries on their economic feet. He referred also to the Point Four Programme designed to help the economic progress of the underdeveloped countries. He contrasted the positive American approach to economic development of backward economies with the Russian attitude when he said:

> "The U.S. has sought to use its pre-eminent position of power to help other nations recover from the damage and dislocation of the war. We did not want satellites but partners. The Soviet Union, however, took exactly the opposite cause. Its rulers saw in the weakened condition of the world not an obligation to assist in the great work of reconstruction but an opportunity to exploit misery and suffering for the extension of their power."

Mr. Truman's budget proposals are, of course, subject to revision by the Congress. The Republican Party may conceivably effect alterations in the budget after Mr. Dwight Eisenhower takes control of the Government (on 20th January). Indeed, the party's fiscal specialists declared that the budget was "fantastic," and said that they would cut the budget and also reduce taxes. It is, however, believed that no sweeping changes will be made in the budget as now formulated by Mr. Truman, and that the Republican Party will consider the introduction of a new pattern for the budget only in the fiscal year 1954-55.

PRODUCTIVITY STUDIES

A team of international labour experts has been in Bombay for some days now and is conducting combined pilot projects in systems of payment-by-results and productivity studies in the textile industry of the State. The projects cover assistance for the introduction of systems of payment-by-results and for improvement where such systems are in vogue, with a view to increasing productivity. They also seek to provide help for the application of modern methods of work-study and organisation in a limited number of cases, where it would not be desirable to apply systems of payment-by-results. The team will make a thorough analysis on the existing organisation and methods of work, job classification and wage scales. Both the employers' and the workers' organisations have evinced keen interest in this move and have offered their full co-operation.

A substantial and continuing increase in productivity of workers is certainly essential for the development of economically underdeveloped countries like India. For a variety of reasons, the textile industry is likely to be one of the industries in which the greatest efforts will have to be made to raise productivity; in India, the textile industry gives direct employment to nearly 700,000 workers. A significant degree of success in the effort to increase productivity is bound to have a profound effect not only on the living standards of the underdeveloped countries but also on the pattern of world trade.

Systems of payment-by-results are now widely used in many countries. The recognition of the need to raise the productivity of labour has led to a growing interest in the possibilities of such systems. The essential characteristic of these systems is the direct linkage of earnings to output as against systems of payment-by-time. The results which should be taken as the basis for payment under a system of payment-by-results will depend upon the output, quality, machine utilisation and material usage which are directly under the influence of the individual or group of workers concerned. A system of payment-by-results will yield its full benefits only if all possible steps are taken, both before and during its application, to improve the production process, the layout of the plant and equipment and production control procedures. Available information the world over discloses that payment-by-results is being successfully applied, especially in the textile industry. The Indian textile industry represents a typical example of the cost conditions of textile industries in most of the less developed countries. Low productivity, accompanied by low wages, is a factor which helps neither the industry nor the workers. Systems of payment-by-results are now extensively adopted in the weaving departments. But these systems, it is stated, are not based on scientific principles. It is also held that the non-replacement of outmoded textile machinery is militating against higher productivity. Automatic looms have yet to become popular in the industry. But there is also opposition from labour to the extensive introduction of automatic looms for fear that it may lead to large-scale retrenchment.

Labour cost is an important element in total cost of production. It is one of the factors that determine differences in textile production costs in different countries and in particular the cost differences between the advanced industrial countries and the less developed countries. Adequate information regarding productivity in India is lacking and so it is not possible to make a systematic international comparison of unit of labour cost in the textile industry. It is, however, clear, from the way in which Indian textile goods are being priced out of overseas markets, that the Indian textile industry has yet to reach the minimum standards of efficiency. Basic wages of textile labour, in general, are determined in India by Industrial Courts and dearness allowances by the costs of living indices. They are not related to productivity in any way.

The I.L.O. team, it is gratifying to note, will analyse the existing levels of wages and methods of wage payment, with a view to suggesting improvements designed to increase efficiency and productivity and to improve working conditions. Already, the first meeting of the Joint Consultative Committee on Productivity in the Textile Industry in Bombay, Karnatak and Maharashtra regions, consisting of representatives of the millowners, the Government and the workers, has been held. It would appear that several problems relating to the work of the I.L.O. experts was discussed at this meeting. The experts will now engage themselves in an intensive study of the problem of productivity.

OFF THE RECORD

(By "ROVER")

THE United Kingdom has been traditionally regarded as a country losing almost all the battles but winning the war. Something akin to this can be discerned in India's relations with the U.S.A. On a large number of individual questions, essential as well as those of mere details, you will find India and the States ranged on the opposite side. But, in the main, the relations between the peoples of these two countries, as well as their Governments, in spite of this running stream of differences, have been very cordial and mutually helpful. In a way, this is a great testimony to the broadmindedness and basically humanitarian outlook of the two nations. This is highly remarkable, inasmuch as the people of India are still used to looking back to the traditions and teachings more than two thousand years old in subconsciously basing their response to new problems, while the Americans, though living in the nineteen-fifties, are stretching out their eyes and even their hands to A.D. 2000 and beyond. You will find nothing of this sort in the countries behind the Iron Curtain. Tolerance and understanding of the other fellow's mode of life and thought and absence of any desire for forcible imposition of one's own conceptions on others, which distinguish civilised man from the brutes living on an exclusively physical plane, are neither known nor appreciated and valued in the Communist half of the world.

Nevertheless, the necessity for minimising occasions for misunderstandings and differences of public opinion on important questions of policy in the free democratic world is imperative. It is being increasingly recognised that the U.S.A. amongst the Western nations and India amongst the Eastern half are the real bastions of this form of human freedom. The need for better and more harmonious adjustments on as many points as possible between these two leading peoples of the world and the lessening of superficial friction and causes for tension is, therefore, self-evident. There have been frequent squalls and tempests punctuating the last five years and threatening to disturb the otherwise amiable run of smooth and satisfactory, if not always very warm and cordial, Indo-U.S. relations, both on the political and cultural planes. More recently, however, such occasions have been fewer and much of the credit for this improvement must go to the tact and very transparent sincerity of the U.S. Ambassador to India, Mr. Chester Bowles. The greatest proof of this is that the Indian people have surprisingly overlooked the not very creditable part played by the U.S. delegation in the U.N. and the spokesman of the American Government on the Security Council on the Kashmir question and have not allowed it to mar these relations. It is a tribute as much to the head of the U.S. diplomatic mission at New Delhi as to the restraint usually exercised by the people of this country that, unlike Teheran or Cairo, there were no popular demonstrations or bitterness in the country's Press here against what amounted to not only unfair but unfriendly attitude of the Truman Administration at Washington on the Kashmir problem. Perhaps, this aspect of the question has been lost upon the State Department.

It is this background which makes a radical change of personnel at the American Embassy in India highly unfortunate just at present. Mr. Val Peterson, one-time Governor of Nebraska, who is authoritatively tipped as the new Ambassador, might prove an equally or even more successful successor to Mr. Chester Bowles, but, in diplomacy, personal equation counts for much. In any case, any new man would take some time to establish his standing with the people in India. He will necessarily have to begin from scratch and much of the fine work accomplished during the recent past is bound to be lost during the interruption that is inevitable. Neither the Government nor the people here would dream of our questioning the right of the new (Eisenhower) Administration to nominate its own representative in this country, so long as he was acceptable to our Ministry of Foreign Affairs. All the same, one cannot help observing that President Eisenhower would make a very good beginning so far as Indian public opinion is concerned, if he pays it the compliment of humouring it by retaining Mr. Chester Bowles in his present post. I know it for a fact from my usual contacts that the business community in India, though generally undemonstrative in such matters, is also solidly behind public opinion in this country in this respect. In any case, it would be advisable for the new U.S. Administration to defer taking a final decision on this important question, till after the intended visit of Mr. Dulles to India and other countries in South East Asia and the Middle East.

A Herd Of White Elephants!

I do not know whether it is because I am temperamentally so constituted that I cannot help being overwhelmed by a feeling of gloom and depression these days about the economic future of our country. But it is a fact that every step taken by the Government of India or State Governments which hold key positions in the economic set-up of the country appears to me as contributing to the inevitable disaster and break-up of morale on the business and industrial front at no very far off date. After all, it is the thousand and one small things that go to give shape to the economy of a country and not a few grandiose and ambitious schemes on paper, which are all going wrong when brought to the stage of implementation. I also find that this pessimism on my part is being shared by a number of prominent persons whom my occasions bring me in touch with frequently.

In view of my natural tendency, I am careful to record any evidence or opinion to the contrary for the benefit of the readers of this column, when I come across it, as a corrective to my own impression from which I cannot escape, however much I try. I did so once, a couple of months or so ago, when I heard Sir Joseph Kay, the head of the House of Brady, at a gathering of sugar manufacturers in Bombay. Sir Joseph was robustly optimistic about the future of Indian industry in the foreseeable future and deprecated all talk of depression round the corner, condemning it as likely to produce a psychological prelude to and cause of real depression. More recently, I happened to meet an old friend of mine, Mr. Lakshmipat Misra, who is exceptionally well placed, both by his present responsible position as head of one of the biggest automobile manufacturing concerns in the country and by his lifelong and intimate experience of the Indian railways, to have a more or less accurate gauge of the economic barometer and to sense any signs of an impending storm. I found Mr. Misra also very sanguine about the Indian economy in general.

Mr. Misra based his hopeful outlook for the future, first on the increased production in several important spheres of industry such as sugar, textiles, cement, steel. Another reason for his rosy dreams of the future was the large investment of about four hundred crores during the last five years in the private sector of industry, which, in its turn, must bring additional production and comparative prosperity to the people. Next, he enumerated to me all the new industries such as the machine tools factory at Ambarnath, opened that very day by the Prime Minister and the Chittaranjan Locomotive Works, being established by the Government, which would lead to a stoppage of drain on our foreign exchange and open up new and profitable avenues of employment for our younger people. In addition to all these, he asked me to visualise the development that would follow both in industry and agriculture after the completion of the various river valley projects and the additional wealth these would pour into the country.

It is very wholesome, indeed, to meet people of advanced age, who have resisted the entry of bitterness and the onset of disillusionment in their lives, which seem to be the common heritage of most of us in these days. For a while, I really felt ashamed of myself, because, though a younger man in comparison, I had succumbed to the devastating effect of the last five years and lost all my enthusiasm and robust outlook. For the time being, I was also infected by this unusual cheerfulness, because whatever might be the position with people engaged in other industries, one who had anything to do with the manufacture or assembly of motor cars and commercial vehicles had little to feel cheerful about. But, after I escaped from his contagious cheerfulness and had time to reflect on the dazzling treasures he had displayed before me which were to bring great prosperity to our unhappy land, I could not help reflecting that the owner of a large herd of white elephants was not necessarily a rich and prosperous man. If past experience is any guide, what we are breeding in the country may turn out to be not milch cows but costly and unremunerative white elephants. All the same, I really feel grateful to people like Sir Joseph Kay and Mr. Lakshmipat Misra for their well-meant efforts to keep up our morale, and for freeing us from an atmosphere of gloom and oppression, even though it be only for a short time.—*All Rights Reserved.*

TRUTH ABOUT FERTILISER PRICES

MORE LONG-STAPLE COTTON LIKELY TO BE GROWN IN 1953-54 SEASON

(From A Special Correspondent)

NEW DELHI, 12*th January*

DELHI LETTER

THERE was a certain amount of subdued confidence among Food Ministers who met in conference this week in the capital. Although the deficit States continued to exaggerate their demand from the Centre for an allocation of higher quantum of foodgrains and the surplus States were trying to scale down, in the same proportion, the availability of procured foodgrains in their areas, the atmosphere of the conference was totally free from anxiety and gloom as was the case a year or two ago. The conference held three sittings and, despite the fact that no clear-cut decisions were taken regarding the food budget, an understanding was arrived at to the effect that, in no circumstances, should the Central Government be made to import more than three million tons of foodgrains, including 600,000 tons of rice and 500,000 tons of milo and coarse grains during the current year. The Centre was somewhat keen that a moderate quantity of foodgrains should be earmarked to build up, during the course of the year, an emergency reserve and buffer stock of three million tons and more.

The Food Minister, Mr. Kidwai, could not effectively participate in the discussions on account of his illness. He, however, got circulated a note in which he drew the attention of State Ministers to the fact that the Indian Union produced enough foodgrains to satisfy the minimum requirements of the country and that, on account of defective distribution, a moderate quantity of imports had become necessary. He also impressed on State Ministers the necessity for taking adequate measures to prevent smuggling, hoarding and profiteering. The Prime Minister, Mr. Nehru, also addressed the conference and struck an optimistic note when he stated that, within the remaining three years of the duration of the Five-year Plan, the country would achieve self-sufficiency in foodgrains. He placed greater emphasis on intensive and scientific cultivation on a co-operative scale to augment the quantity of foodgrains. He echoed similar sentiments earlier when he presided over the convocation of the Indian Council of Agricultural Research to present a tractor and *Krishi Pandit* certificates to six farmers who had achieved unique success in producing maximum food crops in their respective fields.

The Food Conference did not evolve any new food policy. The Government is expected to extend its policy of establishing fair-price shops in respect of rice and wheat in a number of places where these foodgrains are sold over and above the ration to card holders at some profit. These shops are already in vogue in Delhi and Calcutta. It is also expected to consider favourably the policy of gradual food decontrol whenever and wherever feasible. By all these means, the Government is anxious to maintain a stable price level, and, if possible, to bring it down slowly in future.

Fertiliser for Rice

One notable announcement by the Central Food Minister related to the distribution of fertilisers. Mr. Kidwai stated that the Government would give rice cultivators any amount of fertilisers in exchange for an equal weight of rice to be collected after the harvest. According to the proposal, fertilisers, whether produced in the Sindri Factory or imported, would be given to the cultivator without either the cultivator or the State Government having to pay the Central Government anything except one maund of rice per acre at harvesting time. The proposal has a double objective, to produce more rice by intensive cultivation through the application of nitrogenous fertilisers and also to ensure a steady market for the growing output of ammonium sulphate from Sindri and other centres.

It may be mentioned here that, in recent weeks, the Agriculture Ministry of the Government of India has been faced with the problem of orderly distribution of nitrogenous fertilisers owing to a remarkable increase in the output. The Sindri Factory alone is now producing well over 1,000 tons per day, at times the output moving upto 107 per cent. of the installed capacity. Besides, other producers in the South and elsewhere have begun to produce increased quantity of ammonium sulphate. For the current year, the output from Sindri alone is placed at 300,000 tons, while other producers are expected to turn out another 100,000 tons. It is generally known that the U.S.A., under the Indo-Technical Agreement concluded last year, had agreed to supply about 175,000 tons of ammonium sulphate within a period of two years with a view to bringing about increased output of foodgrains and other commercial crops in the various Community Project centres. The U.S. has been able to purchase a substantial quantity of ammonium sulphate at relatively cheap prices from Japan, the c.i.f. rate at Madras being computed at between Rs. 235 and Rs. 240 per ton. It appears that Japan, with a view to earning more dollars, is stated to be selling this fertiliser far lower than its production cost in this country. It is also reported that a fairly large quantum of ammonium sulphate has been accumulating in various centres without being lifted by agriculturists.

In these circumstances, the reduction in the pool price of ammonium sulphate by Government from Rs. 365 to Rs. 335 per ton is not expected to cut much ice, since this rate is nearly 40 per cent. higher than that supplied by Japan. Even now some indigenous producers are not members of the Government pool not only because, until recently, their production has been negligible but also because they have been able to market their production profitably due to the prevalence of a sellers' market. Production costs of these factories are reported to be higher than the pool price and hence Government has now to evolve a scheme whereby production is kept at the maximum level and no producer is allowed to suspend the output of this vital raw material. While the Government has to restrict imports appreciably on account of the fact that the installed capacity of ammonium sulphate production is now standing at nearly five lakh-ton level as against the present absorbable capacity of about four lakh tons, it has to spread, by propaganda and other ways, the habit of the use of fertilisers among agriculturists. It is reported that even to-day the use of ammonium sulphate is confined only to a few areas and also to a few commercial crops, particularly tea, sugarcane, etc. The tea industry has now been hit by the sharp recession in prices during the last few months, with the result that it is not likely to absorb increased quantity of ammonium sulphate. The sugar industry's position too is not quite happy. The Government must, therefore, take adequate measures forthwith to popularise the use of this fertiliser with rice growers. At the same time, it should enlarge the pool and admit all the members who are willing to join the scheme, so as to maintain production at the maximum, at the same time taking other steps to increase the competitive capacity of the producers. The Government has already a precedent in the iron and steel industry, which it can apply with profit to the fertiliser industry as well.

India Loses Rank

The latest action of the Government of India to extend the period of free shipment in respect of cloth is an indication of its anxiety to safeguard the export trade in cloth. Only a few days ago, it reduced the export duty on cloth from 25 to 10 per cent. *ad valorem*. All the same, it is doubtful whether India will be able to step up cloth exports to about 1,000 million yards as desired by it a few months ago. It is generally known that, in 1950, India occupied the pride of place in the shipment of cloth, exporting well above 1,000 million yards. During 1951, its exports declined to 711 million yards and thus gave its place to Japan. During 1952, its exports declined still further, taking it down to the fourth place. Thus exports from Japan for 1952 are now placed at 769.13 million yards, as compared with the U.S. total of 754.00 million yards. Shipments from the U.K. are estimated to reach a total at 704.10 million yards, while India's exports are computed at about 570 million yards. Meanwhile, Japan has already begun to plan for the stabilisation of textile prices by the formation of an association consisting of leading producers in order to push up sales of cloth in foreign countries. It has therefore become imperative for the Government of India as well as for exporters of cloth to watch the whole situation carefully and to take necessary measures to ensure the competitive position of Indian cloth in the overseas markets.

More Long-staple Cotton in 1954

There is considerable significance in the report emanating from the Punjab Government that efforts are being made to make available the water from the Bhakra Dam to the cultivators from May next year, that is, ahead of the schedule by a year. Such an event will not only increase the output of wheat and other foodgrains in that area but also good-fibred cotton. For instance, it will be possible for the Punjab, PEPSU and Rajasthan to augment the output of long-staple 216F and 320F cottons substantially, from the next cotton season, that is, 1954-55. In the same season, long-staple cotton from the other newly irrigated areas of the Tungabadhra, Tapti, Bhavani, etc., will also become available to the country, with the result that the Planning Commission's target of 42 lakh bales will be more than achieved by that year. In the 1951-52 season, the output of cotton in the country was very near 39 lakh bales, while for the 1952-53 season, unofficial estimates are placing the outturn at about 36 lakh bales. From next year onwards, it will be possible for India not only to reduce imports of American cotton appreciably but also to export more of the much coveted Oomra cotton to Japan, European countries, etc.

(Concluded from next column)

cations to the availability of indigenous road materials and equipment), sending of a team of Pakistan specialists to the U.S., accompanied by the survey crew, to observe road building in areas which have similar climate and geographical characteristics to those of East Pakistan, and a comprehensive training of road building crews in actual construction and in care and maintenance of equipment, as also acquisition of sufficient road building equipment for such training. The U.S. will make available $1,100,000 and Pakistan Rs. 4,25,000 for the joint project.

PAKISTAN NOTES

PAK GOVERNMENT'S FINANCES

CUT IN EXPENDITURE LIKELY

THE Pakistan Government's finances seem to present a gloomy picture. Thus, if Press reports are correct, there has been a marked shrinkage in revenues, on the one hand, and a big rise in expenditure, on the other. The former is the result of a severe setback to the export trade, thanks to the world-wide recession in commodity markets. The rise in expenditure is necessitated by the huge imports on Government account, especially of military equipment and foodgrains. Consequently, the gap between the revenue receipts and expenditure of the Government of Pakistan is reported to have widened considerably. Not only will the surplus of Rs. 7.84 crores estimated for the current (1952-53) fiscal year not be realised, but, in fact, there is expected to be a sizable deficit. Incidentally, it may be noted that the estimates of revenue and expenditure for the year are placed at Rs. 174.73 crores and Rs. 168.89 crores, respectively.

The Central Government, according to a report from Karachi, is contemplating drastic cuts in expenditure, with a view to balancing the nation's "slump-ridden" economy. The economy programme is to have a fairly wide range, covering Government expenditure in both civil and other fields of administration. Among other measures, the Government is reported to be contemplating retrenchment of staff. While effecting retrenchment, care will be taken to see that efficiency of administration will not be adversely affected.

A number of industries, together estimated to cost about Rs. 2 crores, is proposed to be set up by the Hyderabad Trust in Pakistan, in order to rehabilitate the refugees. A match factory, at a cost of Rs. 80 lakhs, has already been started at Karachi. The factory is expected to produce about a million match boxes per annum; within the next few months, production will be stepped up to 3 million boxes. When the factory goes into full production, three-fourths of the match requirements of Pakistan will be met, thereby resulting in the saving of much precious foreign exchange. The imports of matches are at present of the order of Rs. 2.5 crores per annum. Among other industries proposed to be set up by the Hyderabad Trust are those for the manufacture of bicycles, ceramics and bricks. The expenditure involved in these projects amounts to Rs. 50 lakhs, Rs. 30 lakhs and Rs. 10 lakhs, respectively. The bicycle factory will be established at Karachi within the next six months. The capacity of this factory is 50 cycles per day, which will gradually be increased to 300 cycles. After five years, the factory will manufacture motor cycles also.

Crisis in Tea Industry

It is not the Indian tea industry alone that is passing through very critical times; the crisis has caught the tea industry in Pakistan too. According to reports from Sylhet (East Bengal), the tea growers there have decided to close down 23 tea estates during the next season. The chief factor responsible for this disquieting situation has been the marked fall in tea prices. Lack of adequate banking facilities is another problem. Despite the suspension, by the Pakistan Government, of the export duty on tea till the end of the current financial year, the tea industry continues to sell at a loss.

In view of these developments, the Pakistan Tea Association—this is claimed to represent 94 per cent. of all tea estates in East Pakistan—recently recommended to all the 107 membergardens to adopt economy measures, including reduction of dearness allowance to adult and child labourers by As. 2 and one anna, respectively, and to sell all foodstuffs to workers at landed cost. The supply of foodgrain at prices below what it costs to obtain has resulted in a loss of Rs. 10 lakhs per annum. The Association also suggested reduction of 5 per cent. in the basic salaries of managerial and clerical staff and of 10 per cent. in agency remuneration. These suggestions have been given effect to from the 1st inst.

Raw Jute Exports

During the first half of the current jute season (July-December, 1952), Pakistan sold nearly 38 lakh bales of raw jute to foreign buyers. Of this, 28 lakh bales have already been shipped, while firm commitments of sale stand against the balance. About 36 countries, including those in the dollar areas, were interested in the jute market during the period under review. India emerged as the largest buyer of jute, accounting for 11.25 lakh bales, followed by the U.K. with 4.5 lakh bales. Other important buyers of jute from Pakistan were Belgium, Italy, West Germany, France, and the U.S. The U.S.S.R. lifted 1.22 lakh bales under the jute-wheat barter pact. The quantity of jute which still remains to be marketed amounts to 30 lakh bales.

Road Development in East Bengal

The United States Technical Co-operation Administration has agreed to provide, under the Point Four Programme, technical assistance for development of roads in East Pakistan. The East Pakistan road development programme includes a review of the road building problems in delta and marsh areas by a U.S. survey crew, which will submit specifications of road building equipment needed for building roads in such areas (consideration will be given in preparing the specifi-

OUR AMERICAN LETTER

OUTLOOK FOR U.S. ECONOMY

BUSINESS SENTIMENT OPTIMISTIC

(From Our Special Correspondent)

NEW YORK, 3*rd January*

SINCE the nomination and election of General Dwight D. Eisenhower to the Presidency of the United States, business and financial psychology has improved immeasurably, and this sentiment is continuing, as the nation awaits the General's inauguration on 20th January. Underlying this changed attitude, have been the sound appointments to the new Cabinet which the President-elect has made.

Contributing factors were the correct handling of his trip to Korea, the constant consultations with leaders in all fields and also the statement by Premier Stalin of Soviet Russia that he would be willing to meet with the new head of the American Government. It may be remembered, in this connection, that General Eisenhower is well and favourably known in Moscow for his straight-forward co-operation with the Russian General Staff in the defeat of Nazi Germany.

Like often in the past, confidence in the future has a profound influence on people's actions in the United States. Thus, retail sales in the Christmas month of December are reported to have an estimated $16,400 million last year. After final figures are completed, American consumers will probably have bought $1,000 million more than they did in the corresponding holiday month of 1951.

Business Activity in 1953

Moreover, previous apprehensions regarding the future course in business in 1953 have been disappearing gradually. The other day, sustained high level of activity for the entire year was seen by the majority of distinguished economists participating in a forum held under the auspices of the National Industrial Conference Board.

According to present plans for defence spending and private, State and municipal building schedules, there is, indeed, no reason to expect anything in the way of a drastic decline throughout the year. What might happen, though, is that, in the first half, there will be an appreciable increase in activity, which is likely to decline in the second half, because of a levelling off in armament expenditures, so that, in twelve months from now, production indices may be back at levels where they are to-day. In no circumstances could such a development be regarded as being unfavourable.

Prospects are bright, in other words, and there is no reason for any apprehension in the outside world that a serious American recession should occur and have similar repercussions elsewhere.

In this connection, it may be well to point to a few year-end milestones by various American industries. Most railroads took in more in 1952 than in the year before, despite last summer's steel strike which cut freight traffic between 5 and 6 per cent., according to William T. Faricy, President of the Association of American Railroads. The some 130 Class I rail carriers netted about $775 million in 1952, against $693 million in 1951. This was equal to a return of about 4 per cent. on their net property investment, as compared with 3.69 per cent. for 1951.

So far as aluminium is concerned, there will be plenty of supplies for all who want them before the middle of 1953, unless there is an extension of hostilities, according to Richard S. Reynolds, Jr., President of Reynolds Metals Co. He predicted an easier situation than at any time since the Korean war began. Although 1952 production, estimated at close to 1,900 million pounds, sets a new peak and is 11 per cent. higher than the 1951 output, "it does not yet fully reflect the expansion already completed," he said.

Oil Industry Happy

The oil industry is also happy. Indications are that 1953 will be a good year, owing to adequate supplies and, apparently, vigorous demand. Eugene Holman, President of Standard Oil Co. (New Jersey), described 1952 as a satisfactory year for the industry as a whole, due, in large part, to successful efforts to provide a safety margin in most major products. However, a serious worry, internationally, is the possible reopening of the Persian oilfields. So much has been accomplished in making good the original deficiency caused by the shutdown of Abadan that, now, there is apprehension of what should be done with the surplus of petroleum, if Iranian production and refining should be consumed. Moreover, the 1952 increase in consumption was only 3 per cent., which is appreciably lower than in previous years.

Savings Rise

Savings continue to rise in the United States, which is a healthy economic omen. While savings banks and life insurance figures are available now till the end of November last, overall national statistics go back only to 30th September.

During the third quarter of last year, American individuals saved $5,600 million in so-called liquid form, according to quarterly estimates of the Securities and Exchange Commission. This includes checking and savings accounts, currency, United States savings bonds, life insurance, corporate and municipal securities, as well as share accounts in savings and loan associations. The savings of $5,600 million in those areas for the third quarter was the highest since the last three months of 1945. The S.E.C. attributes this large volume to "an increase in disposable income and to a moderate drop in consumer expenditures."

Another notable development is the gradual disappearance of most premium prices for non-ferrous metals. Owing to easier supplies, prices dropped in 1952 for aluminium, antimony, foreign copper and nickel. The only premium markets in existence to-day here are for steel castings, platinum, some nickel, and such exotic minerals as titanium. All of these, too, have dropped in price, however.

No major change in the money market is in the cards for 1953. The new regime of fiscal managers in the Eisenhower Administration are more orthodox than their predecessors. What they will probably attempt is to refund many short-term Government securities by long-term obligations, so that they may be withdrawn out of the commercial banking system where they have an inflationary impact, and so that they may be lodged with private and institutional investors where such funds may not be inflationary. The overall outlook for U.S. economy is thoroughly sound at this moment and facts are backed by a most favourable popular psychological attitude.—*All Rights Reserved.*

U.S. VIEWS ON GOLD PRICE

The key question for the U.S. bullion market is whether the official price of gold is to be changed, states Mocatta and Goldsmid, in its annual review. Discussing the prospects of any alteration, the review points out that the new Administration may not have such strongly preconceived notions as President Truman or Mr. Snyder. At the same time, in the absence of fresh emergency legislation, power to make a change rests with Congress and not with the President alone. The future of the gold-mining industry will largely turn on the visit to Washington of British representatives in the spring.

As regards the silver market, the review points out that industrial consumption in the U.K. and on the Continent has fallen and little new silver has been used in coinage. In addition, the Japanese Government has begun to liquidate its stock of silver, estimated at about 10 m. ozs. Some of this has come to London, but it has mainly gone to the U.S. With the market for foreign silver in New York freely supplied by Mexico and by Cuban demonetised silver, it appears that the tendency is likely to be downward. An incalculable element is the as yet unknown attitude of the U.S. Government to the difficulties involved in the return of 410 m. ozs. of silver supplied to Allied Governments on Lease Lend. Repayment is due five years from 28th April, 1952. If the U.S. Government insists on this repayment in kind, the review continues, it will have a violent effect on the market outside the Western Hemisphere.

(Concluded from next column)

ings from Coronation visitors, neither is there any reason why it should be any better—except the good psychological one that, in a cheerful atmosphere, things tend to get better by themselves! Any economists who try to prove otherwise for the time being will have difficulty in finding a receptive audience in Britain at the start of this New Year.—*All Rights Reserved.*

PROSPECTS FOR U.K.

WILL NEW YEAR BE HAPPY?

(From Our Own Correspondent)

LONDON, 2*nd January*

LONDON LETTER

IT seems that, for all Mr. Butler's deflation and for all the dismal news both from home and abroad which is all that the Press has been able to find for weeks past, the British public were determined to enjoy their Christmas. They showed this by making up for their shop-shyness earlier this year by spending in an unprecedented manner. The note circulation, as a result, hit a new "high" at £1,550 million, as compared with the Christmas peak of £1,438 million last year and £1,358 million the year before. Moreover, this new "high" represented an increase of £107 million over the post-holiday low point in October, which is substantially higher than the increase a year ago. But, a great deal of the extra money for this spending spree came out of savings, the net withdrawal of which over the year amounted to no less than £131 million or £40 million more than a year ago. However, the shopkeepers were not concerned with whether or not the public were spending wages or savings, and the general conclusion was that a good deal of the lag in retail sales, which so sadly distinguished the first ten months of this year (a shortfall of 8 per cent., as compared with the same period in 1951) had been made up by the time the shops shut on Christmas Eve.

The truth of the matter appears to be that the public have got so used to being told that they are living in grim days of crisis that they are beginning to take it all with a grain of salt, unless they have something positive to fasten their fears to. Earlier this year, there was the very real textile slump, prices had been advancing at a speed that set up a consumer's resistance, and unemployment had risen steeply to a total for Great Britain of 470,000 out of work in April. Since then, unemployment has decreased and ends the year with 406,000, or only 27,000 more than a year ago, while, even in the heavily-hit textile trades, employment is within 10 per cent. of its figure of a year ago. Drastic price cutting has been one thing helping to restore demand and big Government orders another.

Government Spending

Government spending indeed—in spite of the policy of deflation—has contributed to the recovery in the level of production to nearer the level of a year ago, for, oddly enough, the Government, by running a deficit for the first nine months of the financial year approaching £1,000 million (half as much again as a year ago) has reversed, in practice, a good deal of deflationary principle. It is true that, by the end of the year, the Government estimates that the overall deficit, including capital expenditure, will be less than in 1951-52 by some £125 million, but ordinary expenditure has already increased by £230 million for the nine months, against the budgetted increase of £130 million. On the other hand, income is down and looks likely to stay down, as a result of the business recession earlier in the year, and the delayed action of the tax changes in the last Budget.

So, though in the first full year of the new Government's credit restrictive policy, bank advances to business are down by £200 million or 9 per cent., the Government's own deficit is up by £350 million and, over the whole economy, there is very little deflation to be felt. The production index is now running within 5 per cent. of its level last year, commodity prices have dropped 10 per cent. over the year, retail prices have stopped rising, and even the industrial share index has been bumping happily along the top of its recovery to pretty near the level at the start of 1952. There is not much in this to stop either public or business men from going about their business in a reasonably hopeful spirit, and even the Government has been regaining some of its lost post-election popularity.

But what of the future? A good deal of the prosperity is based on rearmament and the fear of war itself threatens the prosperity. The cynics are inclined to say that, provided the cold war gets no hotter and the Government is content to boost industrial activity with just the right amount of rearmament and provided the U.S. continues to trickle dollars in, there is no reason why 1953 should be any worse than 1952. But, apart from the prospect of currency earn-

(Continued in previous column)

BANK ADVANCES IN SECOND QUARTER OF 1952

HIGHEST QUARTERLY REDUCTION FOR PAST THREE YEARS

THE customary survey of bank advances for the second quarter of 1952 prepared by the Reserve Bank of India's Research Department and published in the Bank's *Bulletin* for December, 1952, makes interesting reading. The highlight of the survey is the sharp decline of Rs. 69 crores to Rs. 606 crores in the total advances of commercial banks. This decline is the highest to be witnessed in any quarter for the past three years, and is the cumulative effect of a series of factors such as, the March slump, the cautious policy followed by banks in their lending operations and the early onset of the 1952 slack season. The fall was particularly heavy in advances to wholesale trade, which is only as it should be, considering the depressed state of markets in that period. Industrial advances also declined and the bulk of such decline was confined to cotton and jute manufacturing industries. Security-wise, the fall was the heaviest against merchandise, followed by those against "other" agricultural commodities and Government securities. Another feature revealed by the survey is the increase in bad and doubtful debts, probably reflecting the business difficulties arising from the fall in prices which had been particularly steep in the first quarter of the year. Thirdly, as the total deposits of commercial banks increased during the quarter by Rs. 23 crores, the ratio of advances to deposits dropped to a much greater extent than the volume of advances itself. Thus, from 77 per cent. in March, 1952, the ratio declined to 67 per cent. in June, 1952. Last but not the least is a rise of Rs. 9 crores in the documentary bills purchased and discounted, amounting to Rs. 67 crores. This rise compares with that of only Rs. 3 crores in the previous quarter and of Rs. 1 crore in the corresponding quarter a year ago and indicates conversion of some advance into bills under the new bill scheme introduced in January, 1952. Clean bills, on the other hand, declined by Rs. 12 crores to Rs. 10 crores.

Scheduled Banks

The total advances (including bills purchased and discounted) of Scheduled Banks alone declined, during the quarter under review, by Rs. 68 crores to Rs. 564 crores. A year before they stood at Rs. 584 crores. The ratio of advances and discounts to deposits came down to 67 per cent. from the record level of 77 per cent. in the previous quarter.

A purpose-wise analysis of these advances discloses that commercial advances fell substantially by Rs. 50 crores, as compared with a decline of Rs. 16 crores and Rs. 21 crores during the corresponding quarters of 1951 and 1950, respectively. Their proportion to total advances also declined, but only by three points from 50 per cent. to 47 per cent. There was a marked drop in advances to wholesale trade in agricultural commodities of Rs. 15 crores, in contrast to a rise of Rs. 7 crores in the corresponding quarter of 1951. Advances to shroffs fell by two-thirds to Rs. 4 crores and to banking and financial institutions by Rs. 9 crores to Rs. 25 crores. Advances to wholesale trade in non-agricultural commodities receded by Rs. 10 crores to Rs. 78 crores.

In the structure of Scheduled Bank credit, advances to industries are increasing in importance. Although during the quarter under review, the absolute volume of advances declined by Rs. 22 crores to Rs. 211 crores, their percentage to total advances rose from 35.7 to 37.4. The fall in advances to cotton and jute industries amounted to Rs. 8 crores. The drop was also visible in advances to other textiles and sugar industries. But there were minor increases of Rs. 1 crore each in advances to engineering, chemicals, dyes and paints industries and industries connected with public utility services. Agricultural (including plantation) advances formed 4 per cent. of the total, the bulk of them being against commercial crops. Personal and professional advances declined by Rs. 2 crores to about Rs. 41 crores.

The secured advances of Scheduled Banks formed 87.6 per cent. of the total, as against 88.8 per cent. at the end of June, 1951. Advances secured against merchandise receded by Rs. 30 crores to Rs. 315 crores. The fall was mainly noticed in respect of advances against "other" agricultural commodities and non-agricultural commodities. Advances against foodgrains rose by Rs. 5 crores to Rs. 20 crores. This is presumably due to greater recourse to banks in the wake of relaxation of food controls. Advances against Government securities dropped by Rs. 13 crores to Rs. 40 crores. Loans against shares of joint-stock companies were again lower by Rs. 4 crores. There was a rise in the number of borrowing accounts against ornaments, suggesting an expansion in the number of persons needing credit for consumption purposes. The volume of such advances, as well as those against gold and silver bullion, was, however, smaller.

Major Indian Scheduled Banks

As much as 62 per cent. of the total reduction in Scheduled Bank credit was accounted for by the 11 major Indian Scheduled Banks. The share of these banks in the total advances remained steady at 57 per cent. The actual fall in the advances of these banks was Rs. 25 crores to Rs. 130 crores. Half of this fall was in respect of advances to banks and financial institutions. The major banks' advances to industry represented 65 per cent. of the total Scheduled Bank credit to industry. They fell by Rs. 15 crores to Rs. 143 crores during the quarter. Personal and professional advances declined by Rs. 1 crore to Rs. 24 crores. Their advances against merchandise decreased by Rs. 18 crores to Rs. 187 crores. Their advances against Government and trust securities also declined by Rs. 12 crores to Rs. 36 crores. Unsecured advances went down by Rs. 8 crores, while advances against documentary bills rose by Rs. 15 crores to Rs. 34 crores.

Exchange Banks

Advances of Exchange Banks amounted to Rs. 179 crores, as against Rs. 199 crores at the end of March, 1952, a decline of Rs. 20 crores. Their share in the total Scheduled Bank advances, however, increased further by three points from 29 per cent. to 32 per cent. The ratio of loans and discounts to their deposits declined from 122 per cent. in the first quarter to 105 per cent. in the second quarter. This indicates the repayment of funds transferred earlier from abroad. The entire deduction in advances took place in commercial advances and that too mostly in advances to wholesale trade in cotton, and oilseeds. Advances to jute trade, however, increased from Rs. 8 crores to Rs. 12 crores, and to banks and financial institutions from Rs. 7.4 crores to Rs. 8.4 crores. Industrial advances, however, declined by Rs. 6 crores to Rs. 51 crores. The fall was mainly in respect of loans to cotton, jute and other textile industries. Production credit to agriculture doubled to Rs. 17 crores and formed 74 per cent. of the total Scheduled Bank credit to agriculture. This high percentage is due to the great interest taken by Exchange Banks in the plantation industry.

The percentage of secured advances to total advances was 82. Two-thirds were against merchandise, amounting to Rs. 107 crores. Documentary bills purchased and discounted by Exchange Banks declined by Rs. 7 crores to Rs. 29 crores and clean bills by Rs. 2 crores to Rs. 1 crore.

Advances made by smaller Scheduled Banks amounted to Rs. 65 crores, as against Rs. 71 crores in March, 1952. Their industrial advances were more or less steady, while commercial advances declined by Rs. 5 crores, chiefly under wholesale trade. Almost the entire increase in the number of borrowing accounts under "other" agricultural credit and personal and professional advances noticed in respect of Scheduled Banks, as a whole, is accounted for by these banks.

Non-scheduled Banks

Total advances of Non-scheduled Banks amounted to Rs. 41.4 crores or 7 per cent. of the total advances of all commercial banks. The ratio of their advances to deposits at 66 per cent. was more or less the same as for Scheduled Banks as a whole. Two-fifths of their advances were commercial, while industrial advances accounted for less than one-fifth. Commercial advances, were steady at Rs. 17 crores, while industrial advances declined by Rs. 148 lakhs to Rs. 7.6 crores. Advances to wholesale trade in agricultural commodities increased by Rs. 15 lakhs to Rs. 3.8 crores. A feature of note in the case of these banks is that although personal and professional advances remained unchanged at Rs. 11 crores, the number of borrowing accounts declined by Rs. 25,000. This suggests that these banks must have been following a more cautious policy in the extension of personal loans. Nearly three-fourths of their advances were secured. Their advances against merchandise declined by Rs. 19 lakhs to Rs. 8.1 crores. Their merchandise and real estate loans each accounted for one-fifth of their total advances and gold, silver and ornaments for about one-sixth.

By and large, the rates of interest charged by Exchange Banks hardened further, while those of major Indian Scheduled Banks remained steady. The increase in rates reported by Exchange Banks ranged from ½ to 1 per cent. in respect of advances against Government and trustee securities, shares, merchandise, real estate and fixed deposits with the lending banking company. Major Indian Scheduled Banks also reported higher rates of interest on loans against shares, real estate and fixed deposits, the general structure of rates, however, remaining unaltered. In spite of the increase during the quarter under review, the rates of interest charged by Exchange Banks on loans against all the principal types of securities were lower than those charged by Indian banks by ½ to 1 per cent., as will be seen from the following table:

(Rate Per cent.)

Type of Security	End of	Exchange Banks	Major Indian Banks
Government and Trustee Securities	June 1951	1¼–4	3½–6
	June 1952	4–6	4–6
Bullion including gold and silver ornaments	June 1951	2½–7½	4½–6
	June 1952	3½–6	4½–6
Shares of joint-stock companies	June 1951	3½–6	4½–7½
	June 1952	4½–6	4–6
Merchandise			5–6½
(i) Pledged	June 1951	3–5	3½–7
	June 1952	4–6	
(ii) Hypothecated	June 1951	3–6	4–7
	June 1952	3½–6	3½–6½
Real Estate: other properties	June 1951	4–6½	3½–7
	June 1952	4½–6	3½–7
Other secured advances	June 1951	3½–6	3½–8
	June 1952	3½–6	4–6
Clean advances	June 1951	1½–6	4–9
	June 1952	2½–6	4½–9

A THOUGHT FOR 1953

Open a banking account with Lloyds Bank—that is a practical way of increasing your freedom from financial care. It helps you to avoid careless spending and your account will provide you with an accurate record of your monetary transactions.

The Bank is able and happy to place advisory services at the disposal of customers who may need advice and experienced counsel regarding financial matters.

Let LLOYDS BANK look after *your* interests

Lloyds Bank Limited incorporated in England 1677

HONGKONG AND SHANGHAI BANKING CORPORATION

The Directors of the Hongkong and Shanghai Banking Corporation have, subject to audit, declared a final dividend of £3 per share, free of Hong Kong corporation profits tax, for the year ended 31st December, 1952, which is the same as that paid for the previous year. As in the previous year, a sum of H.K.$3,000,000 has been written off Bank premises, leaving to be carried forward about H.K.$9,489,000 to the next year.

HYDERABAD STATE BANK

MORE CREDIT EXTENDED TO AGRICULTURE

THE year 1952 may well be termed a period of difficult working conditions for banks in India, especially for banks with modest resources. The tight money conditions witnessed during the first four months of the year, the fall in commodity prices, the general shake-out of confidence among business men, the decline in the purchasing power of the public, the prolongation of the slack season, were all factors which were not conducive to increase the profitability of banking. The financial results of the Hyderabad State Bank (Managing Director: Mr. K. P. R. Menon, Hyderabad-Deccan) for the year ended 30th September, 1952 (which coincides with a major part of the year 1952), reflect to a large extent the effects of these factors. The gross profit of the Bank for the year under review shows a shrinkage from Rs. 26.41 lakhs for 1950-51 to Rs. 21.56 lakhs. The additions to the Bank's reserves have, therefore, to be reduced and the return to the shareholders pruned from 6 per cent., made up of a dividend of 5 per cent. and a bonus of 1 per cent., to a dividend of 5 per cent. which is the same as that paid for 1948-49.

The following comparative table presents the Bank's progress in recent years:

(In lakhs of O.S. rupees)

	For the year ended 30th September			
	1952	1951	1950	1949
Interest and discount	43.69	42.45	42.92	
Commission and exchange	11.65	8.67	6.83	N.A.
Interest paid	8.29	1.43	1.29	20.61
Expenses	25.33	23.31	22.59	16.94
Profit	21.56	26.41	25.87	1.03
Depreciation	1.38	0.98	0.85	1.75
Taxation	5.50	3.75	3.50	7.50
Reserve fund	7.50	13.25	13.00	
Pension fund	0.50	0.50	0.50	
Bonus to staff	2.70	3.15	3.15	3.18
Dividend	3.75	4.50	4.50	3.75
	(D. 5%)	(D. 5% + B. 1%)	(D. 5% + B. 1%)	(D. 5%)
Carry forward	1.50	1.37	1.09	0.73
	As on 30th September			
	1952	1951	1950	1949
Paid-up capital	75.00	75.00	75.00	75.00
Reserve fund	70.00	62.50	49.25	28.75
Deposits from—

Cash	4,73.23	6,45.47	7,02.36	6,48.01
Balance-sheet total	20,67.11	20,89.59	22,45.45	23,27.03

N.A.—Not available.

A study of the balance-sheet of the Bank, as on 30th September, 1950, the main particulars of which are given in the above table, and the Chairman's address to the shareholders, shows to what extent the activities of the Bank have been extended in order to help the agriculture and trade of the State. The deposits of the Bank as at the end of the year, show a contraction of Rs. 3.94 crores. The deposits from the public have fallen by Rs. 97.93 lakhs, while those of the Government have fallen much steeper, by Rs. 2.96 crores to be precise. This, according to the Chairman, Dr. G. S. Melkote, is due to the "manifold drafts on Government's financial resources which have had to be met and to the shorter supply of money." As a consequence and in order to maintain the Bank's ability to provide the finance, for which the agricultural and business community of the State are dependent upon the Bank, it had to borrow large sums from other banks, the outstandings on that account at the end of the year being Rs. 4 crores. These borrowings were all secured by the Bank's investments in Government securities.

The Bank's advances show a rise of Rs. 82.39 lakhs over the year. "Prudence and elasticity" characterise the Bank's lending policies in respect of advances in the districts for the finance of agricultural commodities. "Customers have been largely saved," we are told, "from the consequences of the steep fall in prices and have been enabled to meet their liabilities in full." Investments of the Bank are higher by Rs. 94.56 lakhs. Of the total investments of Rs. 6.37 crores, those of the State Government amount to Rs. 5.61 crores. Though the market for the State Government securities is limited, the Bank is endeavouring the make them popular over a wider area and some important measures in this direction will be taken in the current year. In the meantime, the Bank continues to purchase these securities, though on a very restricted scale, when it is satisfied that the sale is justified by the tenderer's personal circumstances. These securities at their present market rates are, it is stated, much superior, in point of yield, to Central Government and other State loans.

The future role of the Bank in the State is better described in the words of its Chairman, Dr. Melkote, who referred to it in his speech at the recent annual general meeting of the Bank:

"Government have declared that it is their intention to withdraw Halli currency as from the 1st April, 1953. This, of course, cannot be brought about merely by the saying and it will take some time. In the whole arrangement, the Hyderabad State Bank occupies the central position. I.G. Currency chests of the Reserve Bank have already been placed in the custody of the Bank at all its branches; these chests will have to be expanded. Further, the negotiations with the Reserve Bank of India mentioned by my predecessor last year on the basis of the Rural Banking Enquiry Committee's Report are now at an advanced state. Although I am not at present free to disclose the trend of these talks, I may assure you that the Bank will continue to have a very important place."

BANK PROFITS

The preliminary statements of bank profits of some leading banks for the year ended 31st December, 1952, published so far, confirm our conclusion, indicated in our latest *Annual Review Number*, namely, that profits, especially of big banks, for 1952 would not show any marked setback necessitating a cut in their dividends. It is true that the trend of profits is not uniform, but whatever the variation, such has not been marked. Thus, of the three banks, namely, the Imperial Bank of India, the Bank of India Ltd. and Devkaran Nanjee Banking Co., Ltd., which have published their results for 1952, only the Imperial Bank of India has been able to report a slightly higher profit, while the profits of the other two are a shade lower. But all of them have maintained their dividends at the rates paid for 1951.

Imperial Bank of India

Although the Imperial Bank of India publishes only half-yearly profit figures, a compilation of the figures for the whole of 1952 discloses that the profit has gone up by Rs. 3.27 lakhs, as compared with that for 1951. The profit for the half-year ended 31st December, 1952, amounts to Rs. 63,27,500, as compared with Rs. 62,36,700 for the corresponding half-year of 1951, thus bringing the profit for the whole of 1952 to Rs. 1,33,34,600 which compares well with Rs. 1,30,07,600 for 1951. With the sum of Rs. 43,17,000, as against Rs. 48,72,000 brought in from the previous year the distributable sum is, however, now lower at Rs. 1,76,51,600, as compared with Rs. 1,78,80,200 a year before.

The following statement reveals how the profits for the two years have been appropriated:

	1952 Rs.	1951 Rs.
Net profit	1,33,34,600	1,30,07,600
Brought in	43,17,000	48,72,600
Total ...	1,76,51,600	1,78,80,200
Reserve fund ...	—	2,50,000
Pension fund ...	5,44,200	5,63,200
Bonus to staff ...	39,00,000	37,50,000
Dividend	90,00,000 (16%)	90,00,000 (16%)
Carry forward ...	42,07,400	43,17,000

It will be noted that the Directors have not added anything to the reserve fund, whereas in the previous year they had added a sum of Rs. 2.50 lakhs out of the profit for the first half of 1951. For the third year in succession, the dividend has been maintained at 16 per cent. per annum.

Bank of India Ltd.

The profit of the Bank of India Ltd. amounts to Rs. 77,50,937 which falls short of that for the previous year, at Rs. 79,55,048, by Rs. 2,04,111. The provision for taxation has been raised from Rs. 25,00,000 to Rs. 31,00,000. The increase in the provision for tax, in spite of a fall in the profit, is probably due to the absence of any loss suffered by way of depreciation in the value of Government securities which in the previous year might have reduced the tax liability of the Bank. Whereas in the previous year the provision for investments in Government and other securities absorbed a sum of Rs. 12,00,000, there has been no such provision this year. The interim dividend of 6 per cent. paid for the half year ended 30th June, 1952, took up Rs. 15,00,000, that is, Rs. 3,00,000 more than that distributed for the corresponding period of 1951, on account of the increase in capital from Rs. 2 crores to Rs. 2.49 crores. The final dividend proposed for the half-year ended 31st December, 1952, is the same as that paid for the second half of 1951, but it is again on the increased capital of Rs. 2.50 crores, as against Rs. 2.49 crores, so that the amount required for this purpose is Rs. 20,00,000, or Rs. 14,970 more than that a year ago. A sum of Rs. 17,11,553 is proposed to be carried forward which compares with Rs. 5,60,616 brought in; but this is subject to the payment of bonus to staff, for which purpose a sum of Rs. 10,00,000 was utilised in the previous year.

Dena Bank

The profit of the Devkaran Nanjee Banking Co., Ltd., subject to audit, amounts to Rs. 6,14,969, which represents a decline of Rs. 41,626 from that for 1951. After bringing in Rs. 1,38,594 (Rs. 81,992), the Directors have appropriated the distributable sum by placing Rs. 1,50,000 (same as in the previous year) to the reserve fund, Rs. 50,000 (Rs. 50,000) to investment reserve, Rs. 25,000 (Rs. 25,000) to bank premises depreciation, Rs. 55,755 (Rs. 49,992) to furniture depreciation and Rs. 1,50,000 (Rs. 1,50,000) to taxation account. A sum of Rs. 1,75,000 is proposed to be utilised for paying a dividend of Re. 1-12 per share or 3¾ per cent. per annum, free of income-tax, which is the same as that paid for 1951. The sum left to be carried forward is Rs. 1,47,808 (Rs. 1,38,594).

SAVINGS AND INCENTIVES

NEW IDEA MOOTED IN BRITAIN

(*From Our Own Correspondent*)

LONDON, 10*th January*

RECENTLY, the *Economist* has begun a campaign on the importance of additional savings to the industrial development of the country and this campaign has been taken up in several other journalistic quarters. The crux of the argument is that national investment last year was under £2,000 million gross, approximately 15 per cent. of the total national income and that this amount was by no means sufficient to provide all the additional industrial equipment which the nation needs, particularly to maintain its competitive efficiency in exports. Similarly, it is low, as compared with the estimated volume of national investment in, for example, the United States of America and the U.S.S.R.

It is argued that there is a growing danger that investment will come increasingly out of Government budget surpluses; but, although the *Economist* saw a danger here that funds would be available for nationalised industries to the exclusion of other forms of enterprise, this is not so, for a budget surplus is used automatically in the redemption of one form or another of Government debt. Accordingly—unless the Government wishes to supply funds directly to some other purpose—the money represented by the surplus finds its way to the money market, using this phrase in its widest sense. That is, a Government budget surplus automatically means the replacement of debt in the hands of the public by funds. From a national point of view, there is, therefore, nothing disadvantageous about this form of forced saving. The Government is, in fact, saying to the nation that one way in which it can be sure that money will be saved is to do the saving itself out of taxation and then, by drawing on Government debt, oblige the former holders of that debt to think again as to where they shall put their money.

The second principal form of savings to-day is institutional saving which is necessarily made out of the residue of taxed profits. This saving is one of the principal ways in which companies finance their own development and naturally it is not an important contributor to the capital of industries other than those in which the saving takes place.

We are finally left with savings by private individuals which may take the form of Stock Exchange investment, but, the small savings usually take the form of investment through the Post Office or one or other of the Government channels provided. It is this form of saving which the *Economist* wants to see expanded. Money saved through these channels naturally can only find its way to industry in the same way as money saved through a budget surplus and it is somewhat illogical to find the *Economist* decrying the first form while advocating the second.

New Idea

What does cause general concern is that this last form of national savings is at present negative. In the nine months April/December of 1951, dis-saving under this head totalled £90 million, and, in the same period of 1952, £120 million, principally as a result of withdrawals from Post Office savings greater than new savings. There are two reasons for this lack of interest in saving. The first is the obvious one, that the public have not enough spare cash to save; but the second is that the incentives to save are absent at a time of rising prices. The National Savings movement in this country is constantly advocating greater and greater savings, but, in the last five years since 1947, the cost of living has risen by one-third, reducing the capital value of £100 savings to £67 and more than wiping out the interest accumulated over that period (£12½). At a time of rising prices, there is a natural reluctance to hold on to savings which are a depreciating asset and the suggestion has been put forward, from time to time, that the best way to encourage small savings through Government channels is by linking them to a cost of living index so that their capital value, should they be realised, can be calculated periodically to relate them to changes in the cost of living. Thus, the £100 invested at the end of the war would now be repaid as £133, the extra £33 being treated as capital and not as income. After all, saving is a matter of weighing the advantages of holding on to money against the desirability of spending it and an incentive which ensured that the money saved would not depreciate in value might be a remarkable impetus to new savings.

OUTLOOK FOR WOOL BRIGHT

RISING TREND IN WORLD CONSUMPTION

THE wool textile industry had to face till recently depressed conditions. The offtake had not been particularly encouraging. Apparently, this situation has already changed for the better, considering that the expert body, the International Wool Study Group, which met recently in London, was unwilling to concede that there was any urgent problem to be solved. This decision has no doubt been prompted by the improvement in the demand for wool, which has been perceptible in more recent weeks. Presumably, the Group takes a more optimistic view of the future, at least of the immediate future of the wool textile industry.

The consumption of wool, according to the latest figures available, has been running at an annual rate of 2,260 million lbs. (clean), which compares with 2,050 million lbs. per annum in the third quarter of 1951. Wool consumption in the 11 chief manufacturing countries, which had touched the lowest point, namely, 338 million lbs. during the recession in the third quarter of 1951, rose to 380 million lbs. in the same period last year. At that point, world consumption was officially estimated at 16 per cent. more than the annual average for five years before the war, but 16 per cent. below the peak year of 1950.

Consequent on the improvement in the world demand for wool, conditions in the world market for wool have remained fully firm. Thus, the first half of the Australian wool selling season has closed on a very strong note, while South African wools are extremely firm and New Zealand cross breds are now back to the strong opening levels of early November, 1952. Against such firm raw material background, the Bradford market for tops and yarns is one of the strongest seen this season and has been displaying a progressive price trend against buyers. Yorkshire had led the world buyers during the past four months, followed by the Continent and Japan. The market has shown "generally firm and stable" conditions, despite the fact that the U.S. buying influence has been less powerful. The wool textile business in Britain is reported to be staging a progressive, though unsensational, recovery, for mill output is sold for several months ahead. The price for oilcombed tops at Bradford on 22nd December, 1952, was, on an average, 24 per cent. above that on 20th March, 1952, but, as compared with the peak levels prevailing in March, 1951, they were still lower by as much as 64 per cent.

It will, however, be difficult to say precisely whether the present trend in world wool prices will be maintained for long. Equally difficult is the task of predicting whether or to what extent there will be a further recovery in prices. In the immediate future, however, the stability of the wool market will be determined by the rate of liquidation of the South American stocks. Argentine and Uruguay together are believed to hold about 200 million lbs. (clean) of wool in excess of their normal carry-over. This, coupled with the current (1952-53) season's wool clip of 2,325 million lbs., will result in the total supplies available rising to over 2,500 million lbs., as against the present rate of consumption of 2,350 million lbs. Thus, only a modest further increase in consumption is needed to maintain the balance between production and consumption.

Will this balance be maintained? There are some indications to suggest that it will be. For instance, stocks of wool, especially Dominion wool, have been reduced. Wool warehouses in consuming countries carry less than their normal requirements, as importers, having lost large sums of money on stocks during the period of the fall in prices, are extremely cautious in their approach to the market. One result of this is that many firms may not be able to obtain delivery as quickly as they wish and this very fact will tend to stimulate further demand. The quantity that will be purchased by the stockholders to replenish their stocks is estimated at about 50 million lbs.

Another factor that reflects a rise in the demand for wool is the rising tide of trade and employment in wool textiles. Thus, the wool textile industry of Britain has found it necessary to recruit several thousand more workers. Further, at the close of 1952, many mills were found selling their output up to the middle of 1953 and, in some cases, even beyond. This, it is claimed, represents a return to more seasonal buying. To quote the International Wool Secretariat, "the British wool textile industry is as well employed as at any stage of the previous two years and orders already on the books ensure healthy activity for some months ahead. This situation has its counterpart in several other of the leading wool consuming countries, though not in all instances is the improvement as marked as in Britain." Incidentally, it may be noted that the British Government intends to buy about 50—60 million lbs. of wool for its stockpile. This will certainly help bridge the gap between world consumption and supplies of wool.

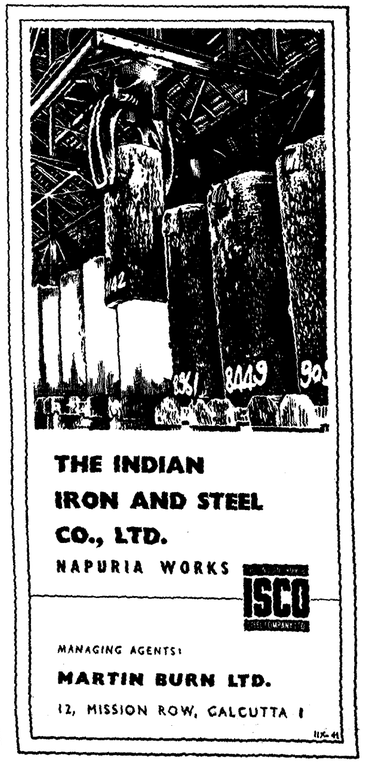
But to revert to the trend of world wool consumption. The total quantity of wool consumed during the year 1952 amounted to 2,250 million lbs. (clean). The U.S. remains the world's largest area of wool, with an estimated consumption of 468 million lbs. per quarter. The U.K. takes second place with 368 million lbs., followed by France with 188 million lbs. For the next three places, there is close competition between Japan, the German Republic and Italy, which account for 118 million lbs., 115 million lbs. and 106 million lbs., respectively. The rise in the consumption of wool in Japan has been very rapid, the rate of consumption being almost double that in early 1951. Among the other important wool consuming countries are: Belgium (54 million lbs.), Australia (34 million lbs.), the Netherlands (26 million lbs.), Canada (25 million lbs.) and Sweden (11 million lbs.).

An interesting feature of the increases in world consumption of wool is that it does not necessarily imply an exactly similar increase in the world output of wool textile products. For the latter has been accompanied by a somewhat corresponding fall in the use of alternative fibres by the wool textile industry. The inference here is that, as wool prices have subsided to lower and more attractive commercial levels, the wool textile industry has used larger proportions of virgin wool in its products and smaller quantities of alternative fibres which are usually used as "cheapening elements" during the period of extremely high wool prices.

EXPORT OF CLOTH

The Government of India has extended the duration of the free licensing of cloth for exports by a further period of three months, that is, upto the end of June next. This decision is one more indication to suggest—it was only the other day that the export duty on coarse and medium cloth was reduced from 25 per cent. to 10 per cent. ad valorem—that the Government is anxious that exports should reach the target of 1,000 million yards.

The chief consideration which has weighed with the Government in taking the above decision is evidently the considerable improvement in the internal cloth supply position. The production of all varieties of cloth has been very much better and this trend may be expected to be maintained in the coming months, thanks to the possibilities of raw cotton supplies being available in sufficient quantities. In view of this, and also of the buyers' market the world over, there is little danger of cloth supply falling below demand or of prices rising to higher levels. It is, therefore, strange that the Government of India should have limited the duration of the free export policy only up to the end of June next. The Government will do well to examine the question of continuing the present policy even beyond that date. An early announcement to this effect will enable Indian exporters of cloth to book, in advance, large orders for cloth in overseas markets.



JAPAN'S TEXTILE EXPORTS

Renewed efforts are being made, by both the Government of Japan and the cotton mill industry in that country, to regain the predominant position which Japan once held in the world textile trade. One of these efforts relates to the establishment of a Government "purchasing agency", with a view to stabilising textile prices and promoting exports. The proposed agency, according to Mr. Kojiro Abe, Chairman of the Japan Cotton Spinners Association, is to be "unlimited partnership", composed of the "Big Ten" spinning companies and others. The agency will be entrusted with the sole task of purchasing cotton goods; it will specialise in purchasing and not financing. For conducting its operation, the agency will require, it is estimated, about 10,000 million yen. This amount will be raised through commercial channels, as the Government credit is said to be not available immediately.

Simultaneously with the above decision, the Japanese Government has also announced its policy in regard to raw cotton purchases for the current year (beginning July, 1952). Accordingly, the original schedule of raw cotton purchases has been lowered by 50,000 bales to 1,800,000 bales. The reduction applies only to American cotton, the quantity to be purchased being 1,050,000 bales, as against 1,150,000 originally fixed. The purchase target for non-American cotton, however, has been placed higher at 750,000 bales, as against 700,000 bales. This target comprises 400,000 bales of Pakistani cotton, 80,000 bales of Brazilian, 20,000 bales of Argentinian, and 250,000 bales of Egyptian, Indian and other varieties. An important change in the procedure governing imports of non-American cotton has been made (with retrospective effect from 26th October, 1952) namely, the transfer of authority from the automatic import approval system to the foreign exchange allocation system.

It will be interesting to note, in this connection, that, despite the heavy and continued fall in sales, Japan is reported to have topped the list of world cotton cloth exports in 1952. The aggregate quantity which this country exported in 1952 is estimated at 789.13 million yards, which compares with 754.00 million yards by the U.S., 704.10 million yards by Britain, and 467.70 million yards by India.

TEXTILE STORES AND MACHINERY DIRECTORY, 1952-53

So scattered is the information relating to textile stores and machinery that to bring out an all-India directory, dealing with the various subjects connected with this important sector of textile economy, is by no means an easy task. The efforts of the Association of Merchants and Manufacturers of Textile Stores and Machinery, India (Bombay), in publishing a directory of this kind are, therefore, very commendable. The *Directory* is a comprehensive publication on the subject, inasmuch as it covers, not merely the stores and machinery aspect, but the whole of the textile industry itself, cotton, wool and silk. The special articles contributed to this *Directory* fall under three categories, namely, the general section, the trade and industry section, and the section devoted to the study of technical subjects. Among articles in the general section, special mention must be made of two interesting ones on textile finance and handloom industry, written by Mr. R. V. Murthy and Dr. B. V. Narayanswamy Naidu, respectively.

The *Directory* contains a comprehensive article-wise list of manufacturers and sellers of textile stores and machinery, classified according to countries. The utility of the publication is also enhanced by the inclusion of trade information relating to associations, technical institutions, banks, insurance and steamship companies, etc. Indeed, the *Directory*, besides being an addition to the already existing literature, is also a useful book of reference on textile stores and machinery. Copies of the *Directory* (Price: Rs. 15) can be had from the Association of Merchants and Manufacturers of Textile Stores and Machinery, India, Wadia Building, Dalal Street, Bombay, 1.

The Government of India has informed the Madras Government that the latter's share from the proceeds of the cess on mill cloth for assistance to the handloom industry will amount to Rs. 1.25 crores. The State Government has been asked to utilise the amount for promoting research, investigating methods of popularising handloom products by introducing new patterns and popular designs and varieties. Subject to this requirement, the Government of Madras, it is stated, will be free to draw up schemes and take steps for the utilisation of the funds.

REACTIONS TO U.S. PRODUCTIVITY TEAM'S REPORT

SPINNERS SHOW BETTER PROFITS THAN WEAVING FIRMS

(From A Special Correspondent)

MANCHESTER LETTER

MANCHESTER, 6th January

HOWEVER accustomed they are to native bluntness and freedom of speech in criticising each other, many traders in Lancashire were indignant over the comments made by the American productivity team, whose report on our local industry was published immediately after the Christmas holiday. The first impression of the document was that the United States visitors had seen only the bad and none of the good in the industry. This opinion was emphasised by the rather one-sided reports which were available before the document itself came into the hands of the trade.

Now that the comments of the American team have been more widely digested, a more moderate view on the report can be taken. It certainly pulls no punches and the visitors state quite clearly what they think about parts of the Lancashire industry which, to their eyes, seem hopelessly out of date and opposed to change.

Whether the report contains constructive criticism is a point which the leaders of the Lancashire industry have questioned. Many people feel that the Americans have confined themselves too much to generalities and have failed to appreciate many of the problems which have arisen in a country beset by economic difficulties arising to a large extent from the aftermath of war. It is easy to criticise the absence of automatic weaving machinery in Lancashire, but even if the machines themselves could be obtained quickly, the finance to install them is beyond the reach of a trade which up to a dozen years ago was labouring through very adverse circumstances. The heavy burden of taxation in post-war Britain and the necessity to maintain an armaments programme of the present magnitude is a natural deterrent to unlimited spending of assets.

The different outlook among management and workers in American industry has been stressed in practically every productivity team report from Britain which visited the United States. It is, therefore, not surprising that the first team making the return trip sees the situation in reverse. They are alarmed at the "inertia" which they say they found in Lancashire. They comment on the "protection of the least efficient producers and the preservation of antiquated arrangements." Maybe there is some truth in these arguments, but the attitude of mind of men who spend a quick three weeks looking on the surface of our mills must of necessity be very different to the viewpoint of those who vividly remember the 20 years of depression which still haunts the cotton towns from the days before the war.

Not So Simple

Considering the difficulties involved, Lancashire has made a very commendable effort in re-equipping her staple industry in the post-war years. Mill profits have been high during this period but so has taxation, and managements have naturally wanted to build up reserves after the grim experience of the 1930's. It is not as simple a matter as our visitors from across the Atlantic seem to believe to scrap an industry based on non-automatic machinery in the weaving branch and on a very substantial proportion of mule spindles in spinning, and simultaneously replace the outmoded plant with new machinery. Both financially and from the viewpoint of production, it is an impossible project.

Despite the criticism which the report has aroused in certain quarters, it should not be thought that the Americans are wholly dissatisfied with what they saw. Their visit was necessarily a short one and in the time at their disposal the team could only visit a limited number of mills.

Average Profits

Despite the textile slump, average profits announced during 1952 by Britain's cotton spinning mills were almost as high as in the record-breaking year of 1951, and the average dividend paid out was bigger than in any year since 1920.

Average profits remained at £20,000 per company above the 1950 level and were more than double the gains made in 1949. This was mainly the result of good returns at the beginning of the year reflecting the final stages of the post-war boom. Reports in the second half of 1952 showed a sharp drop in earnings due to short-time and mill stoppages.

An analysis of trading results of cotton companies shows that the average profit of 83 spinning firms was £55,154 per company in 1952 compared with an average of £55,541 for 80 companies in 1951 and £35,166 for 74 concerns in 1950. The average dividend of 87 spinning mills last year was 21.51 per cent. against 21.26 per cent. for 86 companies in 1951. For the first time for many years all the mills concerned paid dividends.

Average dividend paid by 17 concerns combining spinning and weaving was 19.98 per cent. last year against 23.03 per cent. for the same companies in 1951. The whole of the 104 firms made an average distribution of 21.26 per cent. in 1952 against 21.68 per cent. in the previous year. All these companies now have credit balances aggregating £11,651,320, an average of £112,032. In 1951, 99 firms had credit balances amounting to £8,165,027 an average of £82,475.

That spinning companies weathered the textile storm better than purely weaving firms is shown by an analysis of 21 manufacturing firms whose total profits last year amounted to £1,676,574 against £2,530,369 in 1951. Average profits were £79,837 per company compared with £120,494 per company.

Dividends paid by these weaving concerns averaged 24.99 per cent. last year against 31.79 per cent. in 1951. Credit balances amounted to £1,963,012 against £1,720,972, an average of £93,477 per company compared with £81,951.

Earnings of the 13 leading cotton spinning and weaving combines and their subsidiaries fell last year from an overall total of £9,654,210 in 1951 to £6,942,055 in 1952. Average profit made by these groups, controlling more than 200 mills, was £534,004 last year, against £742,632. Their average dividend was 17.42 per cent. against 18 per cent., and credit balances amounted to £5,283,657 against £4,458,192.

Keeping Exports Up

Earnings from British cotton goods exports in November amounted to £10,963,131, a slight drop on the previous month and very substantially below the £18,442,283 recorded a year previously. For the 11 months exports of cotton yarns and manufactured goods were valued at £136,893,469 against £194,937,858 in the same part of 1951.

Overseas sales of piecegoods continued the revival noted since August by shipping 63,004,000 square yards of cloth in November. The total for 11 months reached 650,195,000 square yards, valued at £93,270,401, compared with 812,912,000 square yards worth £123,236,925 a year previously. The table below gives details:

Monthly average—	Piecegoods Sq. yds.	Value £	Average price per sq. yd. d.
1939	116,115,000	2,565,000	5.51
1949	75,298,000	8,869,000	28.07
1950	68,539,000	8,358,000	29.26
1951	72,096,000	11,595,000	38.67
1952 (11 months' average)	59,108,000	8,470,127	34.43
January	77,171,000	12,224,452	38.20
February	64,159,000	9,904,063	37.08
March	70,316,000	10,919,994	37.27
April	59,224,000	9,039,895	36.63
May	50,765,000	7,941,401	37.54
June	52,257,000	7,950,884	34.73
July	60,125,000	8,080,460	32.25
August	41,710,000	5,859,023	33.71
September	49,711,000	6,265,326	29.96
October	61,331,000	7,950,302	29.47
November	63,004,000	7,666,061	29.20

Empire markets continued to dominate the consumer field and main buyers for the 11 months were (in square yards, with 1951 comparisons): West Africa 155,351,000 (117,557,000); Australia 70,081,000 (156,359,000); South Africa 53,597,000 (110,588,000); Pakistan 41,465,000 (38,187,000) and New Zealand 29,192,000 (41,654,000).

Overseas Yarn Trade

Yarn shipments in November tended to fall away, although they remained better than the very low figures recorded in the middle of the year. Exports of 2,812,000 lbs. brought the 11-month total to 32,418,800 lbs., valued at £16,281,580—only just over half the 61,709,300 lbs., recorded a year previously when the value was £29,713,764. Latest position is shown below:

Monthly average—	Yarn Lbs.	Value £	Average price per lb. d.
1939	9,471,800	745,500	18.89
1949	6,838,400	1,962,500	68.86
1950	5,915,300	2,127,900	86.33
1951	5,547,900	2,548,500	110.46
1952 (11 months' average)	2,947,200	1,480,144	120.53
January	4,408,200	2,280,168	124.14
February	3,953,700	2,151,012	130.57
March	3,828,600	2,004,504	125.68
April	3,021,600	1,621,651	128.80
May	2,364,100	1,276,440	129.56
June	1,944,500	938,188	115.79
July	2,125,000	991,259	111.95
August	1,963,300	970,050	118.55
September	2,577,200	1,284,420	115.14
October	3,235,200	1,458,712	108.21
November	2,812,000	1,246,823	106.41

Main buyers of yarn spun in Lancashire mills for the 11 months were (with 1951 comparisons): Irish Republic 2,876,400 lbs. (4,802,300 lbs.); Pakistan 2,784,100 lbs. (3,268,000 lbs.); Australia 2,655,200 lbs. (9,158,900 lbs.); India 2,080,200 lbs. (452,200 lbs.) and West Africa 2,003,600 lbs. (1,887,500 lbs.).

Drastic measures to curtail imports have now caused arrivals of cotton grey cloth to shrink to around the level recorded before the post-war scheme of purchasing material abroad for processing in this country was established. In November imports were only 2,795,000 square yards, the lowest monthly total since May, 1947.

Imports in the 11 months totalled 142,028,000 square yards compared with 323,322,000 square yards a year previously. The current total is around the same quantity of cloth as was imported in 1947 and the suppliers are not dissimilar to that year. Japan has so far provided 68,382,000 square yards, Germany 21,712,000 square yards and Belgium 11,528,000 square yards. Supplies from India fell from 104,796,000 square yards in 11 months of 1951 to 9,872,000 square yards in 1952.

Imports of yarn have been equally restricted, arrivals in November being only 125,282 lbs., bringing the total for the 11 months to just over 7,000,000 lbs. compared with nearly 30,000,000 lbs. in the corresponding period of 1951. These imports cost below £2,000,000, whereas in the previous year they were worth nearly £10,000,000.—*All Rights Reserved.*

WORK OF EMPIRE COTTON GROWING CORPORATION

EMPHASIS LAID BOTH ON QUALITY AND QUANTITY OF CROP

THE impressive record of work carried out by the Empire Cotton Growing Corporation, during the last 31 years (it was first established in 1921) shows clearly that the Corporation has fulfilled, in ample measure, the high expectations with which it was brought into existence by the far-sighted pioneers in the cause of cotton. Although the Corporation was founded primarily to increase the quality and supply of cotton in Empire territories, in Africa in particular, it is noteworthy that the Corporation's work, especially in the research field, is of wider significance, in that it has proved of value to the cotton economy as a whole.

Some idea of the immense amount of good work which the Corporation has been able to do during the three decades of its existence, is provided by an illustrated pamphlet, *Empire Cotton Growing Corporation*, brought out by the Secretary to the organisation. Describing the genesis of this organisation, the pamphlet refers to the early years of the 20th century when the U.S. dominated the cotton position to an even greater extent than it does now. During 1902-06, the U.S. produced annually some 11.86 million bales or 82 per cent. of the total world production of 19.2 million bales of cotton. The only other producers of any note were India with 3.7 million bales, and Egypt with 1.26 million bales. Production in Africa, apart from Egypt, was only 8,000 bales or less than 0.05 per cent. of the world production.

It was to correct the excessive dependence of Lancashire on U.S. cotton that the Empire Cotton Growing Corporation was established in 1921 by a Royal Charter. It was stated in this charter that the Corporation was being established with the "object of extending and promoting, in the interests of our Empire, the growing and cultivation of cotton in our Dominions, Colonies, Protectorates, Protected States and in any country or place over which we have or may have any mandate or control." Thus, the Corporation's two main objectives are: (1) to increase production of cotton in the Empire, (2) to reduce the U.K.'s dependence on the U.S. for supplies of cotton. The Corporation has succeeded in achieving both these objectives. The production of cotton in countries, with which the Corporation is connected, has expanded to seven times the output in the period before the establishment of the Corporation as the table below will show:

(In bales of 400 lbs. each)

Years	Production
1918-21	117,000
1921-24	183,000
1924-27	382,000
1927-30	411,000
1930-33	459,000
1933-36	680,000
1936-39	829,000
1939-42	766,000
1942-45	595,000
1945-48	578,000
1948-51	923,000

The production of cotton, as the table above shows, increased steadily up to the outbreak of war, the reduction during and immediately afterwards being due to the need for devoting more land to foodcrops. The upward trend has since been resumed, however, and, in the year 1950-51, production was over a million bales for the first time on record. The following table shows the output of cotton in individual Empire countries with which the Corporation is connected:

(In bales of 400 lbs. each)

Territory	Production in 1950-51
Sudan	526,500
Uganda	346,400
Tanganyika	44,500
Kenya	13,800
Nyasaland	3,800
N. Rhodesia	*Nil*
S. Rhodesia	4,100
S. Africa and Swaziland ...	16,500
Nigeria	76,600
West Indies	6,100
Other Areas	14,700
Total ...	1,053,000

The increase in the output of Empire cotton, together with the increase in the cotton output in other countries, has reduced the dependence of the U.K. on American cotton supplies. Imports of cotton into the U.K. from the U.S at the beginning of the century represented some 75 per cent. of the total imports. This figure fell to an average of 64 per cent. in the five years 1921-25 and to 52 per cent. in 1928-32. Since the war, when financial considerations played such an important part, the reduction has been more marked. Imports from the U.S. during 1946-50 were only 27 per cent. of the U.K.'s total cotton imports. The importance of the territories with which the Corporation is concerned as a supplier of cotton to the U.K. has increased steadily with years, as will be clear from the fact that, whereas they supplied only 1 to 2 per cent. of the U.K.'s cotton requirements in 1921, they contributed no less than 23 per cent. of these requirements during the year ended 31st July, 1951.

The Corporation's total expenditure in the 31 years since it was first established has amounted to nearly £2½ million, of which some three-quarters of a million was contributed by the cotton industry by means of a levy, or in the form of a grant from the Cotton Board. Of the total of £2½ million, some £150,000 has been spent on cotton development in Sudan, £189,000 in East Africa (excluding the cost of the new Research Station), £250,000 in Central Africa, £73,000 in Nigeria and £25,000 in Australia; while the cost of the long-range research work in Trinidad amounted to £220,000 and that of the experimental and plant breeding work in South Africa was £418,000. Grants have also been made to research institutions in the U.K., where basic work is being undertaken which is likely to benefit agriculturists overseas. The Corporation, however, is not the only source of supply of funds for the development of cotton, for the Colonial Government themselves set apart funds for the improvement in cotton cultivation.

The Corporation is, of course, not interested only in increasing output of cotton. Its aim is to improve the quality of cotton also. On this aspect of the Corporation's work, the pamphlet says:

"The ultimate aim of the Corporation is to increase the yield of cotton lint whilst retaining the lint quality unchanged where it already meets the market demand, and improving quality where it does not do so. Much of the work of the Corporation has dealt with the production of new strains and there is good reason for this. Farmers everywhere, and the African is no exception to this, are quite naturally reluctant to adopt new methods, until they are certain in their own minds that they are an improvement on their present well-tried practice. It is, therefore, a slow and laborious task, involving much propaganda and supervision, to persuade the African peasant to change his method of cultivation, to use farmyard or artificial manures, or to spray or dust his cotton to reduce the damage from pests or disease. On the other hand, the introduction of a new and higher yielding variety calls for no change at all in existing methods, and as in Africa the seed is in nearly every case distributed free of charge by the Government, no question of extra cost to the farmer arises. Such methods, therefore, especially in the early stages, offer the greatest chance of an immediate return with the least dislocation to existing arrangements.

"Whenever new strains are being produced, it is essential to make sure that the lint will be suitable for the requirements of spinners and samples are sent to the Shirley Institute for spinning tests and reports on fibre characteristics. The results of these tests enable the cotton breeders to eliminate plants with poor lint and to concentrate their efforts on the most promising strains."

Such, in brief, are the activities of the Empire Cotton Growing Corporation which, during the three decades of its existence, has been able to make a notable contribution to the world's cotton economy. A special feature of this work is the emphasis on the quality of cotton, produced in the territories with which the Corporation is concerned, and this has been widely recognised by the requests which have been received for members of the staff to make advisory visits to report on cotton prospects or problems.

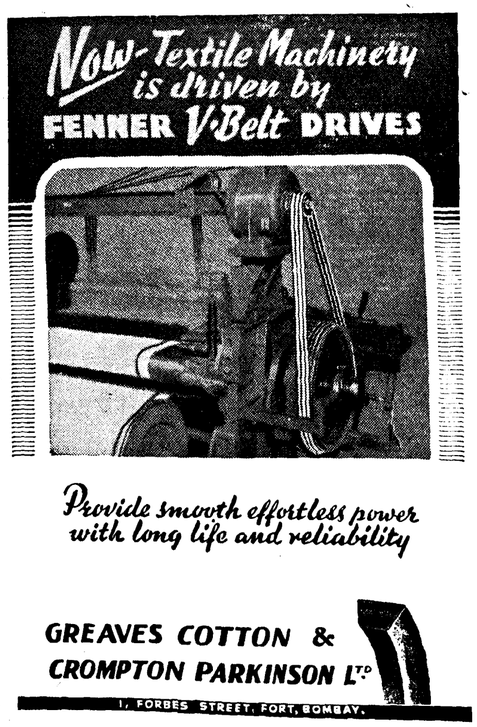
INDIAN COTTON CROP

The area under cotton for the 1952-53 season, according to the second estimate of the Ministry of Food and Agriculture, Government of India, is 12,304,000 acres, as against 12,343,000 acres of the adjusted corresponding second estimate for last year. Details, according to trade descriptions, for the current and last year, are as under:

(000's omitted)

Variety	1952-53	1951-52
Bengals	1,112	1,007
Americans	643	656
Oomras	4,287	4,097
Broach	853	810
Surti	489	367
Dholleras	1,314	1,170
Others	3,606	4,236
Total ...	12,304	12,343

The decrease in acreage under cotton has been shared mainly by Hyderabad, Madhya Bharat and Mysore and has been attributed to some decline in sowings due to lack of adequate rains from the middle of July to the third week of September, 1952. The decrease in acreage has, however, been offset considerably by increases registered mainly in Madhya Pradesh, Bombay, Uttar Pradesh, Saurashtra, Punjab and PEPSU, due partly to the efforts made to grow more cotton under the Integrated Production Programme and partly to favourable weather conditions at the time of sowing. This estimate mostly covers the period upto the end of September, 1952.



PROBLEMS FACING BRITAIN AND INDIA

SIR GEORGE SCHUSTER DRAWS PARALLEL AND SUGGESTS LINES OF CO-OPERATION

IT is seldom that this country gets the benefit of the impressions which a former British administrator of this country forms during his second visit. Not many of those old administrators visit India; and when they do, it is not always that they view our problems in the correct perspective and even if they do so, they do not give public expression to their views in this country. But Sir George Schuster, the ex-Finance Member of the Government of India, who is here again, seems to be a rare exception. His speeches in Calcutta and Bombay in the last few days entitle him to the distinction of one who knows this country and is capable of taking a detached view of Indian affairs, especially its economic affairs.

Here is a foreigner, who is aware of the enormity of our problems, and who is rightly unwilling to minimise it. But he is by no means a pessimist who believes that the problems cannot be solved merely because they are complex. Speaking at the Rotary Club, Bombay, this week on "India and Britain in the Modern World," Sir George addressed himself to three questions: Where do we stand? Where do we want to go? Can we help each other? He stated the problems which both countries face simply, frankly and in a forthright manner. He offered no quick solutions, no "cure-all" remedies. Both India and Britain, according to him, need to "become working communities and be guided by a philosophy of life which sees in work well done, the surest foundation for human happiness."

Where Do We Stand?

Answering the question, where Britain and India stand to-day, he referred to the abnormal transitional period through which both the countries had passed. He said:

"We both stand to-day at the end of an abnormal transitional period and at the beginning of a new phase. We both stand confronted with the need to make a supreme effort in conditions which may be different from those of the last few years. So far as concerns India, you have had a double transition—first, the transition from the old regime to Independence, secondly, the transition from war to peace conditions. You have had to contend with an overwhelming load of special problems: the problems of setting up a new system of administration throughout this vast sub-continent, the problems created by Partition, the problem of the refugees with its crippling financial burden, and all these on top of the accumulated arrears of tasks, resulting from the years of war and their effects on the indian economy. In spite of all this, your Government has produced order out of chaos, has maintained orderly administration and has been able not only to cope with the day-to-day tasks, but also to give profound and constructive thought to planning for the future. This, I feel, represents an achievement which deserves the admiration of the world, and which should give you confidence in your power to face new problems.

"But when one turns to economic results, one must remember that the conditions of post-war shortages and sellers' markets have provided during these last years opportunities for high profits and for the easy disposal of every kind of product, which cannot be regarded as normal. In the new period, which lies ahead, profitable operation will be much more difficult, and this will determine the character of your economic tasks in the new period which lies before you.

"To turn to the position of Britain. I do not want to weary you with a lot of figures, but I do wish to put before you a broad picture of the British achievement in these post-war years. Sometimes, we have been regarded by outside observers as a 'tired old country.' This is a totally wrong view. We have, in these last years, shouldered immense burdens—the burdens resulting from the war, the burdens of a most costly programme of social services, and the burdens of a vast programme of rearmament. We have shouldered these burdens and simultaneously we have accomplished something like a second Industrial Revolution.

"While some of our older industries such as cotton textiles have suffered a decline, both in production and exports, there has been a complete transformation in the group which I can describe as the metal using industries. In agricultural machinery, for example, something like a new industry has been created—output has been increased ten times (agricultural tractors from 18,000 to nearly 180,000 tractors, drawn ploughs from 6,000 to 62,000, and so on). Or, take the whole vehicle industry export figures. For commercial vehicles, annual exports have increased from 13,500 to 164,000, passenger cars from 54,000 to 410,000. Then there is the creation of a vast new oil refining industry, with all the ancillary developments for producing petroleum chemicals, solvents, detergents, plastics, new synthetic fibres, etc. Enterprise and initiative has not been confined to new industries. Steel production has been increased by nearly 50 per cent. over pre-war and our oldest industry—shipbuilding—has been very progressive. In agriculture, too, there has been revolutionary change. In 1939, we had 18 million acres of grassland and 13 million of arable; now the figures are exactly reversed, with 18 million of arable and 13 million grass. Finally, to complete the picture, we have been able to work up to an increase in exports of about 75 per cent. in volume over pre-war figures; the increase in value, of course, has been many times greater. These are not the achievements of a tired old country. They are the signs of energy and enterprise as great as any that we have shown in the past.

"But—and here I come to the crucial point—all this has been achieved in the abnormal post-war years when the whole world was short of goods and every producer could enjoy the easy conditions of a sellers' market. Now we stand at the beginning of a new era, and we have to ask ourselves: Can we maintain the volume of exports (on which our very life depends) in the conditions which lie ahead? And so I come to the close parallel between your position and ours when I try to answer my first question 'Where do we now stand?.' We both stand now confronted by the need to make a supreme intensive effort in the next few years."

Difference Between U.K. and India

Although Sir George agreed that there was a close parallel between India's position and Britain's, there was yet a difference, he pointed out, for India's problems were essentially 'internal,' whereas Britain's were essentially 'external.' He said:

"You in India, have essentially an internal problem. You have got to make a gigantic effort to build a new structure of production and lift yourselves up through a full and fruitful utilisation of your man-power to a higher standard of living. We, in Britain, have essentially an external and international trading problem and we have got to make a gigantic effort to improve and reorientate our existing structure of production to meet new conditions in our relations with the external world.

"In both cases, our two countries have managed to surmount a series of special problems in the abnormal conditions of the post-war years, but, in both cases, we stand now face to face with our fundamental problem which can no longer be evaded. Both of us have got to realise that present conditions have given a dominating significance to the need for improving material production and that we cannot meet this need unless we can organise an integrated national effort which will ensure the best utilisation of all our available resources."

Welfare State

Proceeding, Sir George pointed out how both countries wanted to establish a "welfare State," the destination to which both the countries wanted to travel. In this connection, he urged that the danger to-day was that welfare might be interpreted merely in terms of "material welfare." Giving his own ideas of a "welfare State," he remarked:

"I believe that the true meaning is best brought out by considering the contrast between 'Welfare States' and 'Power States.' The Power State thinks in terms of the greatness and power of the State; the Welfare State in terms of the welfare or happiness of its individual citizens. The danger to-day is that 'welfare' should be interpreted merely in terms of material welfare—that it should be regarded as a static condition which can have no reality unless a certain material *standard* is reached. Of course, certain minimum standards are necessary, and a great effort is now needed (especially in India) to improve material standards. But the essential spirit of a Welfare State can start to work even in a very poor country; and that essential spirit may be destroyed in a very rich one. According to my conception, a poor country in which every individual citizen is consciously and freely playing a worthy part in a collaborative effort to improve material conditions for the community, is much more truly a 'Welfare State' than a rich country in which high standards of material benefits are distributed to all by a Government acting as a beneficent Providence. We in Britain have certainly erred on the side of the second interpretation; but I think we are beginning now to move away from that error."

Emphasising the importance of what he called the dynamic conception of a welfare State and the dangers inherent in the static conception of mere material welfare, he said:

"The dangers are indeed of two kinds. The first is obvious and practical. If we start by laying down standards of material welfare, which—although they may be quite reasonable—may nevertheless involve an expenditure which is more than what a country is—at that stage—actually earning, then we may, at the very outset, bring our countries to economic ruin. Attempts to build a structure of social benefits before the economic foundations are soundly laid can bring nothing but disaster. The second danger goes deeper. If we concentrate only on material welfare, if all our actions are governed by purely materialistic conceptions, then, however successful we may be, we may destroy all that gives true meaning and purpose to human life—individual liberty, human affections and the appreciation of spiritual values.

"When I talk like this, I clearly get into the realm of ideas which cannot be adequately covered by easy and commonplace general phrases such as I have used. But I believe you will understand what I mean. And then I think you will agree with me that, on this matter, your people and mine have fundamentally the same outlook. We both think that the objective of Government should be conceived in terms of welfare of the individual citizens rather than of the power and greatness of the State. We both feel that true 'welfare' means something much more than mere material possessions."

Growing Population

Both Britain and India are faced with the problem of feeding their growing populations. Here is another parallel problem. Elucidating it, Sir George said:

"You have a population which is increasing at the rate of 4½ millions a year. You have no room to employ more people in agriculture and yet you are not to-day producing enough food to feed your existing population. If you cannot provide fruitful employment in industry for the working class of the 4½ millions that are added every year and produce the food on which they can live, then India must come to disaster. That would be true even if there were no threat of communism in the world. We in Britain have a comparable problem. We have to support 50 million people in our small island. We cannot live on our present basis, unless we can maintain a vast flow of exports to pay for our essential imports and, owing to our war losses, our exports need to be 75 per cent. greater in volume than pre-war. So for both of us, our bare living is at stake; for both of us, the problem of improving our material production must so dominate all our activities as to set the pattern of our culture and our society."

The problem gives rise to two questions. Stating these and answering them, our former Finance Member observed:

"The first (question) is: How can we concentrate all our energies on our material tasks, without becoming so obsessed with them that we neglect higher values—spiritual values? The second is: How can we ensure the co-ordination of the whole national effort, which is necessary if we are to make the best of our resources without creating rigid over-centralised control which will destroy individual enterprise and initiative?

"How to answer these two questions? First, and above all, there is a need for a complete change of outlook, especially for new outlook on productive work. This must be seen not as a mere sordid money-making business. People must see in productive work, including manual work, opportunities for personal achievement and public service just as honourable as can be found in any other activity. Our countries need the best qualities of intelligence, education and character to go into this work. And they need it for a double purpose; first, for the sake of the efficiency of the work, and, secondly—and this, in a way, is even more important—so as to ensure that the work is handled in a way which affords the basis for a worthy human life.

"Both India and Britain to-day need to become working communities and to be guided by a philosophy of life which sees in work well done, the surest foundation for human happiness. My belief, therefore, is that it is only by concentrating on how to meet this need that we can get on to the road to the right conception of the Welfare State."

Sir George emphasised that the practical measures that were necessary for producing the "co-ordinated national effort," fell under three main heads: (1) right relations between Government and private enterprise, (2) right conception of the functions of private enterprise, and (3) education. He said that private enterprise had no chance of survival unless it could effectively collaborate with Government in the fulfilment of national purposes. It must also adopt progressive methods for improving productive efficiency, including right handling of human relations in industry. The Government must, on its part, create conditions in which it would be possible for private enterprise to collaborate with it. The educational system should be so reorganised as to create a closer and more understanding contact between the world of education and the world of practical business.

Indo-British Co-operation

Finally, Sir George dealt with the question whether both the countries could help each other and said:

"In the first place, I believe we can help you by the lessons of our experience in regard to the problems which I have just been discussing. During these last years, there has in Britain been considerable progress in dealing with such matters as education, training, and selection for all the different kinds of work involved in industry. In the handling of human relations generally, there have been many interesting experiments in developing what I can describe broadly as methods of 'Industrial Democracy.' Above all, there has been a great advance in the understanding by the Trade Union leaders of our national economic problems and all that is involved in the improvement of productive efficiency as a foundation for higher standards of wages. On all these matters, I believe that you are likely to find in British experience lessons which

(*Continued on page 95*)

QUALITY OF SUGAR IN INDIA

IMPROVEMENT WELL MAINTAINED

THE efforts of the Bureau of Sugar Standards —a body established as far back as in 1935 to specify standards for sugar produced and to advise the factories to conform to specifications laid down by it—to secure an improvement in the quality of sugar have met with not inconsiderable success. Evidence of this is provided in the distinct improvement in the production of sugar of superior quality in respect both of colour and grain size. The improvement has been particularly marked in the past two years, as is indicated by the latest review by the Director of the Indian Institute of Sugar Technology, Kanpur, covering the sugar seasons 1950-51 and 1951-52.

According to the review, the share of I.S.S. colour grade No. 29, the highest colour standard, in the aggregate production of sugar during 1951-52 was substantially high at 20.46 per cent., as compared with 13.5 per cent. in 1950-51. The quantity of sugar of this grade actually produced was 3,01,589 tons, out of a total output of 14,73,982 tons, as against 1,45,505 tons, out of a total of 10,91,497 tons, in the previous season. I.S.S. colour grade No. 28 continued to be the most predominant type of sugar produced during 1951-52. Thus, although its share in the total was slightly lower at 51.08 per cent., as against 55.90 per cent., the quantity produced rose from 6,10,101 tons to 7,52,845 tons. The next grade of sugar in 1951-52 was the I.S.S. No. 27; the production of this type amounted to 3,48,390 tons or 23.6 per cent. of the total, as compared with 3,15,308 tons or 28.9 per cent.

The table below gives the comparative figures relating to the production of different colour grades of sugar in the past two seasons:

I.S.S. colour grade	Quantity 1951-52	Quantity 1950-51	Percentage 1951-52	Percentage 1950-51
	Tons	Tons		
29	3,01,589	1,45,505	20.5	13.4
28	7,52,845	6,10,101	51.1	55.9
27	3,48,390	3,15,308	23.6	28.9
26	48,023	17,209	3.3	1.6
Below 26	11,863	1,171	0.8	0.1
Kori and other ungraded sugar	10,889	771	0.7	0.1
Crushed sugar	378	1,129	..	0.1

It will be seen from the above table that production of sugar of colour standards below I.S.S. 26 staged a rise during the 1951-52 season, as compared with the previous season. Although these have been dropped from the schedule of Indian Sugar Standards since 1949-50, a number of factories still continues to report production of this low grade sugar, the actual figure for the season under review being 36. As regards unsold sugar, the production which had been progressively falling for some years, declined further during the season under review. Production of upgraded sugar (*kori*, dust and others), on the other hand, shows an increase, although its share in the total is negligible. The total quantity of sugar of low grades, however, constitutes only a negligible percentage of the total. If, in terms of volume, it is a little higher than in the previous year, it is mainly because of the large increase in the total output itself.

Sugar in Grain Sizes

As already stated, the progress towards production of better qualities of sugar was in evidence in respect of grain size also, although there was no marked deviation from the previous season's record. The bulk of production continued to be represented by I.S.S. grain sizes C, D and E, which together accounted for as much as 95 per cent. of the total production. There was a small decrease in the share of production under I.S.S. grain D and E, i.e., from 50.84 per cent. and 15.32 per cent. in 1950-51 to 48.18 per cent. and 14.93 per cent., respectively, in 1951-52. There was, however, a rise in the percentage share of production of I.S.S. grain E, which is inferior in quality as compared with the previous two grades, from 28.68 per cent. in 1950-51 to 31.90 per cent. in 1951-52. The quantity and the percentage share of sugar of different grain sizes produced during the season under review, as compared with the previous season, are given below:

I.S.S. grain size	Production 1951-52 Tons	Production 1950-51 Tons	Percentage 1951-52	Percentage 1950-51
AA	292	..	..	..
A	15,108	11,171	1.0	1.0
B	35,571	35,295	2.4	3.2
C	2,20,000	1,67,174	14.9	15.3
D	7,10,089	5,54,981	48.2	50.8
E	4,70,199	3,12,986	31.9	28.7
F	9,010	7,956	1	1
G	2,446	36	..	..

As regards the number of grades of sugar produced, the position in 1951-52 shows an improvement over that in the preceding season. The largest number of grades produced was only 15, as against 23. Twelve factories produced only one grade of sugar. The number producing five grades of sugar was the highest, such being 25, as against 22 in the previous season.

Checking up Quality

The one conclusion that emerges from the foregoing account is that sustained efforts are being made by the sugar factories to improve their technical efficiency, with a view to producing better quality sugar. In fact, the quality of sugar produced at present in the country is claimed to compare favourably with that produced elsewhere. Nevertheless, much remains to be done, especially in the present context when India has to fight for a share in world sugar trade. It is here that the role of the scientists and technologists connected with the sugar industry assumes special significance. Further, there is need for maintaining the accuracy and consistency in regard to the quality of sugar supplied by the factories to consumers. Numerous instances have been cited to show that the sugar supplied by the factories does not, in many cases, conform to the grade paid for. A section of the sugar trade, therefore, feels that arrangement must be made for setting up an organisation in certain important centres, such as Bombay, Madras and Calcutta, to check the quality of sugar by drawing samples from bags.

SUGAR PRODUCTION AND STOCKS

The total production and despatches of sugar for the season 1952-53 (up to 15th December, 1953) amounted to 113,264 and 111,721 tons, respectively, as against 165,355 and 98,834 tons in the corresponding period of the previous season.

The opening stock, production, despatches and closing stock of sugar during the fortnight ended 15th December, 1952, were 457,119, 68,013, 44,948 and 480,184 tons, respectively. The figures for the corresponding fortnight of the previous season were 164,066, 96,256, 36,013 and 224,309 tons respectively. Figures for the current fortnight relate to 133 factories, representing 97.44 per cent. of the total cane crushing capacity, while those for the previous year relate to 129 factories, representing 94.67 per cent. of the total cane crushing capacity.

(Concluded from next column)

consumption. Considering that the industry cannot raise the capital needed, he has made out a case for Government loans or taxation relief to industrial concerns to do away with their obsolete equipment, causing heavy fuel or energy consumption. The Government of the U.K., it will be recalled, has proposed to arrange for one year in the first place, at full commercial rates, a loan of £1 million to firms which are not in a position to finance installation fuel-saving equipments.

After giving a brief review of the measures needed for a plan of fuel economy, Dr. Sanjana discussed the composition and the scope of the central body required to implement it. In the U.S. as well as in various European countries, the central organisations are assisted by competent fuel engineers, who have not only academical qualifications but also practical experience in responsible positions of the industry. Dr. Sanjana feels that India needs a central organisation with sub-offices in every State in order to ensure that the picture of fuel economy is viewed from an all-India angle and the chances of the policy being influenced by any local interest are eliminated. The central organisation, he opines, must have under its jurisdiction all matters pertaining to fuels—solid, liquid and gaseous.

If the fuel economy policy were to succeed, the railways should render better service than they are doing now. It is true that, during the last two years, it has improved its services, but a good deal still remains to be done. When coal is stocked at pitheads for want of wagons, thereby rendering large amounts of capital stagnant, and when both capital and labour suffer due to non-availability of coal, one is bound to feel pessimistic about the future of industrial development of India. It is to be hoped that shortage of wagons will be overcome in a short time and that railways will function more efficiently than hitherto in moving the coal to consumers spread all over this big country.

IMPORTANCE OF FUEL ECONOMY

WANTED A NATIONAL POLICY

THE presidential address of Dr. J. S. Sanjana, Chief Fuel Engineer, Messrs. Tata Iron and Steel Co., Ltd., to the annual general meeting of the Mining, Geological and Metallurgical Institute, held recently at Calcutta, on fuel economy—a subject which is much discussed in Europe but rarely dealt with in India—was highly illuminating. Dr. Sanjana made a fervent plea for the enunciation of a national fuel policy and the constitution of a central unified organisation to enforce that policy. He strengthened his plea by drawing pointed attention to the findings of the Mahendra Committee, 1946, which recommended, among others, the need for the creation of a new central department of fuel and power.

The need for economising the use of fuel is not confined to India alone but extends to the whole world. In Germany, for instance, fuel economy measures were initiated as far back as 35 years ago, following the loss of a number of collieries in the Saar, Upper Silesia and elsewhere. The necessity to supply an appreciable amount of coal as reparations to allied nations was another reason that forced that country to take measures of economy in the use of coal. The 1939-45 war brought home to the rest of the European countries—both the victor and the vanquished—that, without fuel economy, the nations, in general, were bound to suffer. It is high time, therefore, as was observed by Dr. Sanjana, that India recognised the importance of economising fuel utilisation and evolved measures for it.

The importance of fuel as an essential commodity for the industrial development of a nation in particular needs no emphasis. And fuel is a wasting asset. There is, therefore, a bounden obligation on the part of the present generation to the future to see that it is not hard hit by the present short-sighted policies of squandering fuels that are being followed in many of the countries.

Absence of Deposits of Oil

So far as India is concerned, there are as yet no known deposits of oil in sizable quantities. It is true that there are innumerable rivers, the waters of which can be harnessed to generate electric energy, but the utility of rivers for this purpose is dependent upon monsoons especially in the Deccan area, which in recent years have been behaving in an erratic fashion. India is, however, blessed with considerable quantities of coal resources, but there is danger of their depletion at an alarming rate, unless fuel economy measures are initiated without any further delay.

The general object of a national fuel policy is clearly the optimum utilisation of a given unit of fuel. It involves also economic recovery of the fuels concerned. The experiences gathered in European and other industrialised countries, including the U.S., disclose that, if a national policy of fuel economy were to be of any utility, it should make allowance for the following:

(1) Proper treatment of coal at pits. It is true that this involves a large investment. Dr. Sanjana is not unaware of it, but he feels that it is worthwhile, for, in the long run, it will be a paying proposition;

(2) provision for proper equipment. This involves ban on import of obsolete industrial equipment. The approval of the central authority must be obtained to enable any private or public concern to purchase industrial equipment which absorbs heavy consumption of any type of fuel;

(3) utilisation of existing equipment at its highest efficiency. This can be achieved through propaganda as to the way in which the existing machinery can be used to optimum advantage;

(4) instrumentation of industrial fuel consuming furnaces;

(5) prevention of costly transport of low grade fuel and consumption of low-grade fuels for combustion purposes. The recent development of boiler design has proved that there is no solid fuel bad enough for combustion. One has only to choose the proper type of boiler and any solid fuel can be burnt;

(6) electrification of railways and use of oil in locomotives where electrification cannot be had;

(7) carbonisation of coal; and

(8) research designed to increase the efficiency of fuel consumption and to widen the use of particular grades and sizes of coal.

Dr. Sanjana did not stop at merely indicating the measures needed for economising fuel

REPORT OF THE AUDITORS.

TO THE SHAREHOLDERS,
OF THE HYDERABAD STATE BANK.

We, the undersigned Auditors of the Hyderabad State Bank, elected under Regulation 58 (1) of the Hyderabad State Bank Act of 1941 (1350 F.), do hereby report to the Shareholders upon the Balance Sheet and Accounts of the Bank as at 30th September, 1952 (30th Aban, 1361 F.).

We have examined the above Balance Sheet as at 30th September, 1952 (30th Aban, 1361 F.), and the Profit and Loss Account for the period ended upon that date with the accounts and vouchers relating thereto and with the Returns submitted and certified by the Branch Managers which Returns are of Head Office and incorporated in the above Balance Sheet, and report (i) that we have obtained all the information and explanations we have required and that they have been found to be satisfactory; (ii) that the transactions of the Bank which have come to our notice have been within the powers of the Bank; (iii) that the Returns received from Branch Managers have been found adequate for the purposes of our audit; (iv) that in our opinion the Balance Sheet and Profit and Loss Account are drawn up in conformity with the law; (v) that correct view of the state of the Bank's affairs according to the best of our information and explanations given to us and as shown by the Books and Returns of the Bank; (vi) that in our opinion the Profit and Loss Account shows a true balance of profit for the period covered by the account; and (vii) that in our opinion Books of Account have been kept by the Bank as required by law.

PAKISTAN JUTE EXPORTS TO INDIA

TRADE FIGURES SHOW STEADY DECLINE

SOME interesting trends are disclosed by the latest figures relating to raw jute arrivals in Calcutta and mill stations during the July-November period of the current season as compared with the corresponding period of the preceding two seasons, namely, 1951-52 and 1950-51. Thus, total arrivals of raw jute of both domestic and Pakistani origin in the five-month period under review aggregated 22.90 lakh bales, as against 23.79 lakh bales in 1951-52 and 23.22 lakh bales in 1950-51. These figures reveal that the offtake of raw jute in the period this season was lower than that in the preceding two seasons. The lower offtake is due to high prices of raw jute which rose in sympathy with the speculative increase in the *fatka* market for jute goods. Secondly, in view of the improved supply position of raw jute, mills were not anxious to go long in jute, especially as orders for jute goods from overseas countries early this season were most discouraging.

A source-wise analysis of the arrivals during the five-month period under review discloses that, of the total of 22.90 lakh bales, Indian jute accounted for as much as 16.82 lakh bales and Pakistan jute for 6.08 lakh bales. The shares of the two countries in 1951-52 were 12.16 lakh bales and 11.63 lakh bales and in 1950-51, 8.64 lakh bales and 14.58 lakh bales, respectively. A significant feature of these figures is that, while the offtake of Pakistani jute has gradually declined in the three periods, that of Indian jute has steadily increased. This will be even more clear from the table below:

Imports of Raw Jute into Calcutta and Mill Stations

(In lakh bales)

Months.	1952-53		1951-52		1950-51	
	India	*Pakistan*	*India*	*Pakistan*	*India*	*Pakistan*
July	2.69	0.22	0.37	1.92	0.44	2.47
August ..	2.37	0.58	1.18	2.13	0.88	4.08
September ..	3.31	0.46	2.00	2.93	1.26	3.01
October ..	4.07	2.20	4.47	2.51	2.69	3.26
November ..	4.38	2.62	4.14	2.41	3.37	1.75
Total ..	**16.82**	6.08	**12.16**	11.63	**8.64**	14.58

It will be noted from the table above that, in the five-month periods of the three years, while the offtake of Pakistani jute has declined by as much as 58.2 per cent., that is, from 14.58 lakh bales in July-November 1950-51 to 6.08 lakh bales in the corresponding period of 1952-53, the purchases of Indian jute have shot up by 94.6 per cent., that is, from 8.64 lakh bales to 16.82 lakh bales. The reasons for this change in the trend of offtake of jute are not far to seek. It is worthwhile recalling them here, although at the risk of some repetition. For against the background of the huge jute crop in 1952-53, they underline the distinctly opposite trends of State policy of jute adopted in both Pakistan and India. The seeds of the policy were sown by the Partition.

Effect of Partition

The Partition meant parting of the ways of mills in India and raw jute in East Bengal. The mills then had to depend on indigenous sources of raw jute, as the Government was not willing to allow a free flow of jute to India, owing to political prejudices. The production of jute in the Indian Union was then only 20.5 lakh bales. With a view to becoming independent of Pakistan supplies, a policy of self-sufficiency aiming at growing more jute in different areas of the country was followed. In the result, in 1951-52, the production rose to 47 lakh bales. In this season, it is expected to amount to at least 48 lakh tons, if not more. This leaves the country still in want of about 10 to 12 lakh bales, especially of the superior variety of jute. In fact, some gap has always existed, although the necessity to rush to Pakistan for buying jute is not so urgent now as it was in 1948-49. Consequently, the Government of India has always taken care to impose no impediments in the way of supplies of jute from Pakistan. Although, in recent months, the price of raw jute has been so low as to adversely affect the Indian grower, the Government, as stated by the Commerce Minister in Parliament last month, does not propose taking any action to control jute imports from Pakistan. Meanwhile, it has also tried to accommodate, as liberally as possible, Pakistan's requirements from India under the series of trade agreements signed between the two countries during the past four or five years. Of course, Pakistan has a grouse against India on the ground of surcharge on exports of coal to Pakistan; but this owes its origin to the need for offsetting exchange disadvantages, arising out of the devaluation of the Indian rupee and non-devaluation of the Pakistan rupee.

Pakistan's jute policy in so far as trade with India was considered was just the reverse of that of India towards the trade with Pakistan. During the past two or three seasons production of jute in Pakistan maintained an upward trend. It was 44.5 lakh bales in 1950-51, 63.31 lakh bales in the following season and 68.23 lakh bales estimated for the current season. Carry-over too remained high, such at the commencement of this season being as high as 15 lakh bales. Thus, the quantity available for disposal this season is 83.23 lakh bales. This quantity, along with Indian production of 48 lakh bales, gives a total availability of jute from these two countries in this season of about 131.23 lakh bales. In the light of these substantial stocks, Pakistan should have, in sheer self-interest, provided inducements instead of impediments in the way of exports to such an important customer as India. Instead, it is seen that political prejudices are allowed to override people's safety and the economic well-being of Pakistan. In order to cause as much injury to the economy of India, the Pakistan Government has not kept its promises; trade agreements have not been fulfilled, flow of jute has been impeded or arrested, and discriminatory imposts amounting to P. Rs. 3-4 or Rs. 5 per maund in Indian currency on jute exports to India, contravening the G.A.T.T. terms, have been levied. All this was done to make Pakistan jute dearer to Indian than to its competitors. In this attempt at hurting India, Pakistan itself has now been badly bruised. Thus, its stocks have accumulated, price support policy has failed, raw jute prices have sunk, the grower is on the verge of ruin and the country has suffered a heavy loss of foreign exchange. Even in spite of all these repercussions on its economy, as a result of following a policy of spite against India, there seems to be no indication of a change in the policy of the Pakistan Government for the better.

EXPORT DUTY ON JUTE GOODS

The Gunny Trades Association of Calcutta has urged the Government of India to reduce the export duty on jute goods "and restore their competitive power."

According to Mr. Ramsunder Kanoria, President of the Association, the present duty of Rs. 275 per ton on hessians and Rs. 175 per ton on sacking constituted about 18 per cent. of the value of the goods. Stocks of jute goods with Indian mills, were, he said, rising at an alarming rate, and godowns were "jammed to capacity". Stocks at the end of December, 1952, were the highest for the last three years. Foreign demand was falling and the holding power of the gunny market had been smashed by repeated slumps in prices. Continental jute mills were buying raw jute from Pakistan at a much lower rate than India was. For a ton of Pakistani raw jute, India had to pay Rs. 129 (Indian) more than her Continental competitors.

CONTROL OVER TEA INDUSTRY

SALIENT FEATURES OF CENTRAL ACT

THE Bill to enact the Tea Act, 1952, which was recently introduced in the House of the People and is now before the Select Committee, seeks, in essence, to replace the two existing enactments relating to the Indian tea industry, namely, the Indian Tea Control Act, 1938, and the Central Tea Board Act, 1949. The Indian Tea Control Act, 1938, provides for control over export and extension of the cultivation of tea, while the Central Tea Board Act covers the development of the tea industry under Central control. As the objects of both these enactments are inter-related, the former being "in a sense ancillary to the latter," the Government of India has sought to combine the provisions of the two existing enactments, with a view to achieving simplicity and administrative convenience.

The Bill provides for the constitution of a statutory board, called the Tea Board, which will be entrusted with the functions now assigned to the Indian Tea Licensing Committee and the Central Tea Board under the existing Acts, as well as few additional functions, such as the regulation and control of tea sold by auction or otherwise, the registration and licensing of brokers and blenders and the implementation of quality control. The Board will promote the development of the tea industry under the control of the Central Government, by promoting the sale and increasing the consumption in India and elsewhere of Indian tea by carrying on propaganda for that purpose. At the same time, the Board will also undertake such measures as to increase the production of tea in India. With a view to achieving these objects, the Board will assist the producers in the control of insects and other pests and diseases affecting tea, as also promote co-operative efforts among growers and manufacturers of tea. Remunerative returns to the growers and manufacturers are essential parts of the promotion of sale and this will be ensured by the Tea Board. Another important function of the Board is to control the quality of tea and to license blending. It will, at the same time, fix grade standards and provide training in tea tasting. Registration and licensing of manufacturers, brokers and tea waste dealers and regulation of sales and auctions form part of the functions of the Board. The Board has also been entrusted with the tasks of improving the marketing of tea in India and elsewhere, preventing unfair competition, regulating and controlling the sale of tea for internal consumption or export, whether by auction or otherwise. The Board will promote the adoption of measures for increasing the productivity of labour, including measures for securing safer and better working conditions, and the provision of incentives and improvement of amenities for workers.

One of the objects of the Bill is, as already stated, to exercise control over the extension of the cultivation of tea. Under the provisions of the Bill, no one will be permitted to plant tea on any land not planted with tea on the date of commencement of this legislation, without the permission of the Tea Board in writing. No tea area will be allowed to be replaced by planting tea on area not planted with tea, unless permission is granted by the Board. However, in-filling or supplying of vacancies on land planted with tea on the date of commencement of the Act or the replanting of tea will be permitted, provided the land was planted with tea either on 31st March, 1950, or on 31st March, 1948, and from which the original bushes have been uprooted. The total area of land in respect of which permission will be granted will not exceed such an area as may be determined by the Board with the previous approval of the Central Government. The Board will publish the total area determined for India, as well as the total areas determined for the various States by notification in the *Gazette of India*.

Under the proposed Act, the Tea Board will retain control over the export of tea and tea seed. No tea will be allowed to be exported, unless covered by a licence issued by the Board. No tea seed can be exported without a permit issued therefor by the Central Government. The Central Government will, after consultations with the Tea Board, and paying due regard to all interests concerned and to the standard export figure, declare by notification in the *Gazette*, the export allotment for each financial year. The Central Government may,

ENGINEERING INDUSTRY IN INDIA

SOME IMPORTANT PROBLEMS

THE problems facing the infant engineering industry were limelighted by Mr. P. R. Bagri in his capacity as President of the Engineering Association of India at its seventh annual session held in Calcutta last week. The chief of them relate to slackening demand for engineering products, the import and export policy of the Government of India and control over steel. He was critical of the Government's export policy in regard to scrap and deplored the apathy of the defence services towards the Indian engineering industry. He condemned the stores purchase policy of the Government of India which, he alleged, had undergone a change, of late, in so far as preferential treatment to Indian products was concerned. He stated that the Government was placing large orders for manufactures in overseas countries which could as well be obtained locally. The Commerce and Industry Minister, Mr. T. T. Krishnamachari, who inaugurated the session, met most of the criticisms of Mr. Bagri in his inimitable style of informality.

The engineering industry is almost in a state of depression, due partly to slackening of demand for its products consequent on the slowing down of rearmament programmes in the U.S. and Europe and partly, according to Mr. Bagri, to liberal imports of competing manufactured goods. Thus, the automobile industry is faced with a crisis. The nut and bolt manufacturers have had to resort to a programme of large-scale retrenchment. The manufacturers of diesel engines and power-driven pumps have almost reached the stage when they are faced with prospects of having to close down. The foundry industry is working only to half of its capacity. Giving an instance where large imports have adversely affected the domestic industries, Mr. Bagri pointed to the recent orders for 500 deep tube wells placed with some overseas countries, as well as to the large overseas orders by the Defence Ministry for its engineering requirements.

Import and Export Policy

The situation is, indeed, disquieting. Some way must be found to save the indigenous Indian industry. In Mr. Bagri's opinion, a way can be found by suitably revising the Centre's import and export policy. The import policy should be so framed as to divert purchasing power of the consumers from foreign to local-made manufactures. Exports should be encouraged through (1) simplification of export procedure, (2) refund of import duties on raw materials and of excise duties on finished goods actually exported, (3) a preferential allocation of additional raw material purely for the purpose of export, (4) abolition of such export duties as are detrimental to increased exports and (5) formation of export promotion groups to study local conditions and foreign markets for developing exports.

Mr. Krishnamachari conceded that the engineering industry was passing through critical days, but he asked the interests concerned not to be unduly perturbed over it and hoped that the future would not be as bad as some imagined. He said that the Government's import and export policy was based on a consideration not merely of the interests of producers but also of those of the consumers, the merchants and the country as a whole. He said that the industry was partly responsible for the present critical situation by deplorably failing to effect reduction in costs. He cited the instance of the automobile industry, which when it started production expected the price per car to be Rs. 5,000, but actually the completed car cost Rs. 10,000. He added that this was a case of local production stifling demand instead of aiding further production. He wanted the industry to reduce its overhead costs and be prepared to reduce the profit-margin even to "vanishing point" if conditions demanded it. After all, there were bound to be periods of plenty and scarcity, he said, and it was almost a natural phenomenon. It should not be beyond the competence of private enterprise to overcome them, he added. Alluding to the import of tube wells, he said that they came under foreign aid programme and observed that gift-horses had to be accepted without looking in their mouths. Answering the criticisms on the Government's export policy, the Commerce and Industry Minister said that recently the Government had agreed to liberalise export of articles manufactured out of iron and steel. The supply of these articles was very limited, but, while the Government did encourage such exports, he declared that it could not altogether starve the internal market. Iron and steel, for instance, was in short supply and if they were to be imported, a "terriffic price" would have to be paid. The moment there was an abundant supply of iron and steel articles, their export would be liberalised.

Exports of Scrap

The Centre's policy relating to exports of scrap came in for strong criticism at the hands of Mr. Bagri. Expressing alarm at the rate of export of iron and steel melting scrap, he said that, while all the important countries of the world were conducting vigorous campaigns for the collection of steel scrap in their regions to feed their steel plants, India was following a very dangerous policy of encouraging exports of such scrap. Small trading gains, he maintained, were blinding the vision to the potential loss of future electric steel production which ran at present to nearly 50,000 to 60,000 tons per year. Before the export drive was started, steel melting scrap was freely available in adequate quantities at about Rs. 60 per ton at the ports, but nothing could be had now from the free market even at three times the price—a development which, the President maintained, had made the future prospects of electric furnace industry very insecure. Only due to undeclared surplus stocks of steel scraps in the hands of railways, this industry, he said, had been enabled to continue its working, but the days were not far off, he opined, when the country would have the important source of steel production almost completely closed, if the exports of steel scrap continued at the present rate. He, therefore, pleaded for a contraction in the exports of scrap usable in the country. Replying to these remarks, Mr. Krishnamachari claimed that the Government's scrap export policy was not inconsiderate. In this, it was quite likely, he felt that the Government had not been properly advised by the interests concerned. Trading interests wanted greater export of scrap while industries were against it. He, however, assured the latter that the Government would tighten the controls over scrap exports after reviewing the situation.

Another important aspect Mr. Bagri referred to was steel controls. While controls had been the subject of much criticism, sometimes well-deserved, he had no hesitation to say that the iron and steel control as a whole had worked more efficiently than many others. Nevertheless, he offered a few suggestions on the policy underlining the control. They were that representation should be given to the engineering industry on the Steel Allocation Committee, that distribution control should be revised so as to leave distribution at the stockist stage free from restrictions of permits and quota-certificates, that allotment of tinplates to individual factories should be based on productive capacity as in the case of other steel processing industries and the like. From the reported version of the speech of Mr. Krishnamachari, it is not clear whether he dealt with this aspect at all.

Finally, Mr. Bagri dealt with the problems of special steels industry. The tool and alloy steels industry has not got adequate productive capacity to meet the existing demand. The development of the automobile, the ball bearing, the electrical and machine tools units, among many others, the importance of which has been appreciated by the Planning Commission, will need more of these steels. As the Government was not anxious to enter this field directly, there is some scope for private enterprise to develop it. Mr. Bagri suggested that the Industrial Finance Corporation should extend its helping hand. The Government, too, should create a climate suitable for the private *entrepreneur* to enter this rather difficult field by giving an assurance of suitable assistance and patronage at all stages of its development.

BALL BEARINGS AND STEEL BALLS INDUSTRY

The Government of India's resolution on the Tariff Commission's report on the ball bearings and steel balls industry has been published in the *Gazette of India* dated 10th January, 1953. The Government has accepted the recommendation of the Commission that protection to the ball bearings industry be granted for a period of two years by (i) converting into protective duties the existing revenue duties on ball bearings not exceeding 2" bore diameter and adapted for use as parts and accessories of motor vehicles other than motor cycles and motor scooters, and (ii) imposing a protective duty of 94½ per cent. *ad valorem* on ball bearings not exceeding 2" bore excluding those specified above.

The rate of duty on adapter bearings not exceeding 2" bore diameter which are specially designed for use exclusively with power-driven machinery has also been increased to 10 per cent. *ad valorem* and converted into protective duty, following the recommendation of the Tariff Commission.

The Government has also agreed with the Tariff Commission that as the existing rate of import duty on steel balls combined with import restrictions obtaining at present adequately safeguards the position of steel balls industry, no protection need be granted to this item.

CRUDE STEEL PRODUCTION

Crude steel production in Europe (excluding the Soviet Union) established a new record in 1952 at 73,870,000 metric tons. The break up of the figure shows that production in Western Europe increased from 58,103,000 tons in 1951 to 62,970,000 tons in 1952, an increase of 8 per cent. In Eastern Europe, the extent of increase in steel output was higher, being 14 per cent., that is from 9,536,000 tons in 1951 to 10,900,000 tons in 1952.

The production of steel in the U.S., however, was more than 10 per cent. below the 1951 level owing to prolonged strike in the industry during summer. Current U.S. steel otutput is, however, estimated at an annual rate of 105 million tons, the highest on record.

Crude steel production in Soviet Union is estimated to have increased from 31 million tons in 1951 to 35 million tons in 1952, a 12 per cent. increase.

ALCOHOL-PETROL BLENDS AS FUELS

Conflicting reports have appeared from time to time with regard to the use of alcohol as motor fuel. With a view to assessing the correct position, an investigation by the Central Laboratories for Scientific and Industrial Research, Hyderabad (Dn.), was undertaken to determine the performance of alcohol-petrol blends as fuel in I.C. engines without altering the engine setting. The results of this investigation reveal that the maximum power output is nearly the same for pure petrol and 20 per cent. blend; it is about 15 per cent. less for blends containing higher amounts of alcohol. The specific fuel consumption decreases slightly up to 20 per cent. alcohol in the blend, and then gradually registers about 4-6 per cent. increase for every 10 per cent. increase of alcohol in the blend. The starting and acceleration of the engine are satisfactory with blends containing alcohol up to a maximum of 40 per cent.

The desire for self-sufficiency with respect to liquid fuels, on the part of countries deficient in indigenous petroleum resources, has assumed importance in recent years and has brought the problem of alcohol-petrol blends as fuel in I.C. engine to the forefront. Thus, countries like England, Germany, France, Italy, Sweden, Japan and India have all encouraged the admixture of alcohol with petrol for use as fuel and it is estimated that alcohol thus used the world over amounts to more than 200 million gallons. India produces over 5 million gallons of power alcohol annually, out of which about 4 million gallons are used for blending with petrol. The production of alcohol from molasses and agricultural wastes can provide an immediate cash return, apart from cutting down imports of petrol.

TRAINING NAVIGATION APPRENTICES IN SWEDEN

A special edition of the *Swedish Shipping Gazette* recently issued commemorates 10 years of training navigation or engine room apprentices on board the specially built Albatross, private training ship of the Gothenburg Brostrom Group. The Albatross, which is unique in design and rigging, represents the latest trends in modern economic cargo ship design and is fitted with an auxiliary engine big enough to class it as a full-powered motorship. During its 10 years it has sailed about 236,000 miles,—a little more than the distance between the earth and the moon—and has visited 98 ports. It has trained 119 would-be navigating officers and 87 engine room officers. The idea of imparting training on board the Albatross was originally based on the desire to achieve improved relations between the navigating and the engine room departments and to provide better training facilities for boys with restricted economical resources. No fees whatsoever are charged on board, and the apprentices receive a fair amount of pocket money. Notwithstanding the considerable economic consequences involved, the Brostrom people think that what they have achieved with this vessel was worth the sacrifices.

SUPERPHONE
INTER-COMMUNICATION TELEPHONES

The most economical system for your office, factories, stores. Available in 2, 3, 5, 10, 15 and 20 lines. No operator or exchange; batteries or mains operated. Backed by one year guarantee.

BENEFITS OF MUTUAL INSURANCE

NEED FOR EDUCATING POLICYHOLDERS

THE reported move of the management of the Oriental Government Security Life Assurance Co., Ltd., to convert the company into a mutual company follows closely the modern trend towards mutualisation, which is to be found in many countries. Even so, if this Company were to mutualise itself it would be the first instance of a really important proprietary insurance company going mutual. And it is needless to emphasise that it will have far-reaching repercussions on the insurance structure in the country.

Although the importance of forming mutual insurance companies has been known in this country for a long time now, it is a fact that mutual insurers form only a small proportion of the total number of insurers in the country. Thus, out of about 270 insurers, only 35 are mutual insurance companies or co-operative insurance societies. Many of the mutual insurers included in this list are not active members, and transact only a small volume of business. The accession of the "Oriental" to their list will mean a tower of strength to the mutual insurers.

The *raison d'etre* for mutualisation of insurance lies in the argument that the business transacted by an insurer is out of all proportion to the share capital, and that the policyholders have, therefore, a more vital stake in the management of the company than the shareholders. Again, it must be emphasised that mutualisation is often the best answer to the clamour for nationalisation. For, if insurance is organised on a "mutual" basis, and not from a profit or dividend motive, the argument that, as insurance is a social service, it must come under Government control, loses the greater part of its force. If the policyholders, who have the largest and the only real, stake in the company, decide to manage the affairs of the Company in the way they think best, the argument that the State should take over insurance ceases to carry any conviction. After all, State ownership of insurance, with all its red-tape and administrative rigidity, is hardly a substitute for control by the policyholders themselves. Again, it will be fatal, to the progress of this social service, if political influences are brought to bear on insurance. And there is no getting away from the fact that nationalisation of insurance means the invasion of insurance by politicians who, through their inexperience or their anxiety to promote political ends, may cause irreparable damage to the savings of millions of small families, accumulated through decades of self-denial.

Its Advantages

So much for the significance of mutualisation, and its advantages. Now about the method of carrying mutualisation into effect. The Indian Insurance Act provides for the conversion of a company limited by shares into a company limited by guarantee. Section 6C of the Act provides that, where a public company limited by shares carrying on insurance business, has passed a special resolution for converting itself into a public company limited by guarantee, it may apply to the Central Government with a scheme for putting the special resolution into effect, including any provision for the alteration of the memorandum or articles of association in so far as it may be necessary for this purpose. The Central Government will give its sanction to the scheme provided it is satisfied with regard to the following considerations:

(1) The scheme makes a suitable provision with respect to the repayment, conversion or liquidation of the paid-up capital of the company;

(2) the consent of the creditors has been obtained, or suitable provisions have been made for discharging, determining or securing the debts or claims of such creditors; and

(3) the scheme is otherwise reasonable.

The Act also provides that any person who feels "aggrieved" by the conversion scheme may, within 90 days of the date of the order sanctioning the scheme, prefer an appeal to the "High Court within whose jurisdiction the registered office of the insurer is situate." The decision of the High Court where an appeal has been preferred to it or of the Central Government where no such appeal has been preferred shall be final and binding on all persons concerned.

The legal formalities involved in the conversion of a limited insurance company into a mutual company are fairly simple, though the actual scheme for extinguishing the share capital may present some knotty problems. If the "Oriental" decides to mutualise itself, the scheme, which it may evolve for the taking over of the share capital, will naturally enough be studied with interest, since it may well provide the model for similar efforts which other insurers may choose to make.

It must, however, be pointed out, in this connection, that a mutual insurance company is not necessarily an improvement on a company limited by shares if the policyholders do not take a lively interest in the Company's affairs. After all, there is much to be said in favour of continuity of management, which is ensured through keeping a company limited by shares. And the Insurance Act imposes, fortunately, many healthy restrictions on the management of insurance companies, which are clearly designed to prevent misuse of funds. Mutual insurance can, therefore, become popular, only if it combines its "no profit" motive with efficient and continuous management. This demands that the policyholders should be educated into a sense of their responsibility so that they may elect the right type of Directors. Otherwise, the control of mutual insurance company may pass into the hands of undesirable elements among policyholders and the Company may lose the prestige it possessed before it was mutualised. It is to be hoped that, if the "Oriental" is mutualised, the present management, which has managed the affairs of the Company so successfully till now, will be returned by its policyholders with a thumping majority to continue its good work.

BRITISH INSURANCE

British insurance withstood immense claims in 1952, a year of 10 major accidents. Yet such is its wealth and resilience that it remained unshaken.

Insurance firms are expecting to pay out over £500,000 (Rs. 67 lakhs) on the Harrow rail smash. Underwriters have already settled a £160,000 (Rs. 21 lakhs) claim on the *Flying Enterprise* and another £150,000 (Rs. 20 lakhs)) on the big mail-bag robbery.

British insurance has an annual premium income of some £1,000,000,000 (Rs. 1,333 crores). Lloyd's underwriters alone deal with business worth £190,000,000 (Rs. 253 crores).

On the credit side, American commerce has placed insurance worth $600,000,000 (Rs. 286 crores) in the City. This confidence stems from the Great Fire of San Francisco in 1906, when British firms paid up with a promptness not matched by their American competitors.

(*Concluded from next column*)

charge of Community Development Projects bring home to the areas which they serve the value and utility of buying insurance.

The pamphlet describes the growth of Indian insurance—of its teething troubles, of its conflict with foreign companies, and of the part the *Swadeshi* Movement played in the development of insurance. This saga of Indian insurance does certainly make stimulating reading, particularly because the place which it has won to-day in the Indian economy, is largely due to its own efforts. The pamphlet says:

"All other infant industries get Government protection. Tariff walls are raised to nurse them in the face of competition. But Indian insurance never got that understanding sympathy from the authorities. It was left to fend for itself. Not only that. The Government went to the other extreme of burdening the industry even to the extent of the proverbial last straw. In the circumstances, the industry is more or less forced to depend upon the patriotism of the people. It must be said to their credit that though the Government denied it protection, the people extended their preferences to Indian insurance. It is only as it should be. Cheap insurance cannot be a substitute for your own insurance."

The pamphlet makes an appeal to the patriotic sense of the people and urges them to support Indian insurance. While there is no doubt that Indian insurance has developed largely through patriotic support, which the people gave to it in early stages, it would be unwise to lean too heavily on this support. Indian insurance should, in fact, now learn to stand on its feet. After all, insurers in this country also are now going abroad to find a market for themselves. In these countries, they cannot count upon the support of the people, if the domestic insurers also invoked the patriotic fervour of the people to get business for themselves. The best way to get more business is to learn to offer efficient, sympathetic and prompt service. There is no doubt that the Indian insurers, who have practically passed the stage of infancy, will eventually be able to hold their own against their rivals.

VALUE OF INSURANCE PUBLICITY

CUT IN ADVERTISEMENTS SHORT-SIGHTED POLICY

ALTHOUGH it is now over five years since the Post-war Sub-Committee of the Insurance Advisory Committee (Chairman: Mr. L. S. Vaidyanathan) emphasised the need for undertaking an extensive campaign of insurance publicity, it is a pity that no genuine effort has been made in this direction. It is true that advertisements are being inserted in the leading Indian journals and newspapers to further the cause of Indian insurance but even these are being steadily curtailed as a part of insurers' efforts to reduce their expenses. Further, no sustained effort has been made to enable the public to appreciate the value of Indian insurance. We, therefore, gladly welcome the well-written pamphlet, entitled "Buy Indian Insurance," issued by the Indian Insurance Institute, Calcutta, with a view to popularising insurance.

Even the countries which have a very well developed insurance service to cater to all the widely divergent needs of human society, find it necessary to publicise the value of insurance. This is because insurance is a commodity which has to be sold—and sold from door to door—and which cannot be expected to be bought even by those people who need it and have the means to pay for it. If there is, therefore, any commodity, the utility of which deserves to be widely publicised, it is insurance. The need for such publicity is the more urgent in this country where insurance is still in its infancy. Referring to the importance of insurance publicity, the Post-war Sub-Committee, for instance, said:

"Of all the civilised countries of this world, India has the lowest *per capita* insurance. While this is no doubt due mainly to the poor economic condition of the masses, the fact that the general population has not been well informed about the benefits of insurance is also a contributory factor. Concerted measures are, therefore, necessary to make the public acquainted with benefits of insurance and to make them more 'insurance-minded'."

It is unfortunate that, despite this sound advice, the space taken up by most of the insurers in newspapers and journals should have been curtailed in order to save something in expenditure. Almost the first victim of the statutory limitation on expenses has been insurance advertisements in the Press. As anyone who knows the value of publicity will readily admit, this is a short-sighted policy and is not at all conducive to the achievement of an insurer's main objective of selling maximum amount of insurance. Economy in expenditure is, of course, important but that should be effected by curtailing other expenses. After all, the amount spent on publicity constitutes only a small percentage of the total expenses of an insurer. To effect a substantial cut even in that item of expenditure, primarily designed to ensure a steadily expanding market, tantamounts to cutting the market itself.

To return to the pamphlet "Buy Indian Insurance," it sets forth, at the outset, the value of insurance as such. Life assurance, it says, is a landmark in the progress of human society and is the "greatest social service, universal in appeal and application." Nevertheless, it is a fact that, in this country, people have to be persuaded to purchase this personal need. This is largely due to the low level of personal incomes in this country. An index of the prosperity of a nation is the *per capita* insurance in that country. From this point of view, it is noteworthy that, while the *per capita* insurance is Rs. 1,600 in the U.K. and Rs. 7,100 in the U.S., it is only Rs. 22 in India. In this connection, the pamphlet says:

"While it may be confidently expected that an increase in the *per capita* income of the people will, in due course, be reflected in a corresponding increase in the *per capita* insurance, the fact remains that poverty should not be allowed to stand in the way of consumption of insurance on a more generous scale. Poverty can be largely liquidated through insurance.... This is exactly why the rural people in India should profit through insurance. This would enable them to make an egg of their small savings."

The special emphasis which the pamphlet places on the need for spreading the gospel of insurance in rural areas is noteworthy, because the implementation of the Five-year Plan is bound to result in higher personal incomes for the people in the rural region. It should, therefore, be possible to enlist their support in the cause of insurance. Indeed, it would greatly add to the property of the people if those in

(*Continued in previous column*)

IMPORTANCE OF MACHINERY AND ERECTION INSURANCE

ITS VALUE TO INDUSTRIES STRESSED

(By T. K. DESAI)

IN this age of industrialisation, insurance institutions have the responsibility of guarding industrial organisations against the occurrence of losses from a variety of causes. The more popular forms of insurance thus take care of the normal hazards which an industry has usually to face. There are a number of risks in respect of his plant and machinery which an industrialist would prefer to be cared for by insurers.

However vigilant a manufacturer may be or however skilful his operators may be, numerous accidents take place in factories and power plants due to an unfortunate combination of unforeseen circumstances. These occurrences are a source of anxiety to the management of the enterprise as they will not only disorganise the working but bring disaster to the undertaking. It is beyond the capacity of an individual manufacturer to carry these risks himself. These risks are best cared for by insurers so that the industrialist could conduct his activities freed from the fear that his plans will not be upset by any unforeseen occurrence.

The importance of comprehensive machinery insurance has been readily recognised in Western countries where a special form of insurance is obtainable for the plant and machinery of industrial undertakings. In India, proper facilities to secure insurance protection do not exist at present. The establishment of machinery insurance with all its incidental services is already long overdue. This is largely due to an absence of an organised effort, as the business is recognisedly highly technical and calls for expert skill for its successful working.

Certain leading Indian insurers have now decided to embark on machinery insurance in the same manner as is done in Western countries. Their present move is accompanied by a plan to provide the full technical service which is much appreciated by industries. For this purpose, these Indian companies have secured the aid of foreign experts, who, with the assistance of well-qualified Indian engineers, will look after the technical aspects of the business.

The value of machinery insurance should be appreciated by industrialists because its underlying objectives are:

(a) To provide an effective inspection of plant and machinery at expert hands before granting insurance to reduce the possibility of accidents to a minimum;

(b) to offer indemnity to the industrialist in respect of any loss caused to the machinery by unforeseen circumstances;

(c) to investigate fully into the causes of accidents to prevent their recurrence.

Thus, machinery insurance will not only provide proper indemnity, but will be a potent agency for the prevention of accidents and consequent national wastage. It will be a valuable aid to the proper function of plants and to stabilised production. Its technical services will be of a high standard which will be of great assistance to industrialists in the rationalisation and reorganisation of their plants.

Loss Prevention

Isolated cases of unforeseen occurrences are taken as inevitable by industrialists. A machinery insurer operating with the above objective and carrying out detailed investigations both at the time of effecting insurance and when claims arise comes into possession of considerable data from various industries for scrutiny by its experts. For instance, in a country where machinery insurance is popular, a leading insurer is called upon to handle over 15,000 claims in a single year. An analysis of these claims goes to the root of the problem of loss prevention. These investigations are backed by a scientific approach with all available means of modern material testing such as spectral analysis, magnetic flooding, ultra-sound waves, etc. The elimination of accidents in industry resulting from these efforts will doubtless mean greater efficiency and greater production. Machinery insurance will thus play an important role in industrial progress.

The cover granted by a modern machinery policy is comprehensive. It covers the plants against all unforeseen damage or sudden physical loss and excludes normal wear and tear which is inherent in the working of the machinery. For example, it offers insurance protection against loss or damage by:

Faults in costing and material; faulty construction; faults at workshop or in erection; lack of skill and carelessness; sabotage; shortage of water in case of boilers; explosion of boilers; tearing apart on account of centrifugal forces; any kind of circuit; storm and tempest of every intensity.

The cover is thus wide and well planned and has been adjusted to meet the needs of our country. In order that this new branch of insurance may not encroach upon the more popular forms of insurance for which wide facilities for cover already exist, risks such as fire, riot and lightning or earthquake are excluded. The only other exclusions relate to the risks of war and similar events which are really uninsurable except at Governmental level.

Machinery insurance not only pays for the damage caused but also the cost of dismantling, freight charges to and from repair shops, and re-erection costs. Where new parts are required to be replaced in the place of old ones, they are paid for without making any deduction for depreciation thereon. This is a valuable help to the industrialist in these days of inflation when the normal depreciation provisions are grossly inadequate to meet depreciation. When a machine is totally destroyed, in order to uphold the principle of indemnity, the settlement is on the basis of the actual value of the machine that is destroyed. The sum required to be insured for machinery insurance is the replacement value on the commencement of the policy, including freight, customs duty, if any, and erection cost.

Machinery insurance is a useful addition to the popular forms of cover. It is being undertaken by certain Indian insurance companies with the special object of providing a comprehensive insurance service to the industry. At a time when various new industries are being established, machinery insurance is the real need of the time and whilst Indian insurance companies have rightly come forward to play their role, industries will not lag behind in taking full advantage of its benefit.

Erection Insurance

Closely allied to machinery insurance is erection insurance. One of the major difficulties that an industrialist has to face whilst ordering his plant is that the supplier is reluctant to offer reasonable quotations on account of his ignorance of the conditions under which the plant would be required to be erected. If the supplier were assured that the various risks of which he hears so much could be guarded against by an erection policy, he would not overload his price out of extraneous considerations. The machinery department of the Indian companies, therefore, cater for erection insurance and facilitate installation of plants at economic prices.

An erection policy insures the manufacturers of machines or steel construction firms, or any other firm making such plant or machinery against all damages arising from and occurring during erection work. Erection insurance covers loss or damage through:

Earthquake; subsidence; landslide; rockslide; flood; inundation; storm; fire; lightning; explosion; tearing by centrifugal forces; short circuit; riots; civil commotion; strikers; locked-out workers; defects in casting and material; faults of construction; faults at workshops; faults in erection; lack of skill; carelessness; sabotage; burglary and theft.

Extensive Coverage

The insurer practically pays all loss or damage which may occur during erection. The enumeration of the above possibilities of loss or damage does not mean that all of them may occur on every erection site. They are listed by way of examples to show how extensive and complete is the insurance cover. The erection policy can be extended to include insurance cover against third party claims upto the maximum amount insured on such risks.

If desired, the insurance can also include the costs arising out of debris clearance as a consequence of loss or damage. Generally the erection policy is to commence after the individual parts have arrived and been unloaded at the erection site. It is to end only after the test operation or the test load which is limited to four weeks has been completed.

This insurance covers all costs to be incurred in order to restore the damaged machine or steel construction to its state immediately before the occurrence of the damage. Included in these costs are—just as in the case of machinery insurance—repair costs, freight charges, customs duty, if any, and re-erection costs. The sum insured for this kind of insurance should always be the full cost price including all freight, customs duty and erection costs. It is hoped that these two types of insurance which are new to our country will soon gain a position in our insurance economy, which they deserve on the strength of their scope and importance.

REPLACEMENT COSTS IN INDUSTRY

GOVERNMENT AID NECESSARY

PRODUCTIVITY in industry depends considerably on the working condition of plant and machinery in factories. Wear and tear caused by high pressure operation without essential repairs or timely replacements and renewals renders machinery inefficient, and, with it output declines, costs increase and competitive ability suffers. In India, intensive war effort, deferred repairs, difficulty of obtaining timely supplies and abnormal rise in costs have considerably affected the work of renewals and replacement of plant and machinery. Besides, big sums, already spent on partial replacements in certain cases, have resulted in the utilisation of existing funds. The widening gap between original costs and replacement costs, on the one hand, and the depleted reserves, on the other, have caused the problem of finding finance for replacement programmes in industry a baffling one. The difficulties confronting industries have compelled many to give considerable thought to the subject of assessing the actual financial needs of the industrial sector as a whole.

The Planning Commission also has bestowed some attention on the question of assessing the amount required by industry, both in the public and the private sectors, for carrying out replacement and renewal programmes in the Plan. The estimates made by it are based on certain preliminary studies undertaken by it. It says that, so far, no systematic enquiry has been undertaken in regard to the needs of industry for replacement and modernisation. Only in regard to the Indian textile industry, it observes, this question was examined by the Working Party connected with cotton textiles. The Commission, however, considers that, in view of the inadequacy of resources and the high cost of machinery and capital goods, it might not be possible, within the period of the Plan, to clear all the arrears of replacement and to carry through modernisation to the fullest extent necessary.

The Commission has estimated the total investment necessary for financing the expansion plan in the public and the private sectors at Rs. 327 crores. Of this, the public sector accounts for Rs. 94 crores and the private sector for Rs. 233 crores. In addition, the expenditure on replacement of plant and machinery and modernisation in the various industries which have a large backlog of arrears of depreciation to make up is placed on rough estimates at about Rs. 150 crores for the five-year period ending March 1956. The aggregate requirements by way of finance for fixed capital thus work out to Rs. 477 crores. The industry would also require, according to the Commission, considerable sums by way of working capital and for covering current depreciation. These have been placed at Rs. 230 crores, taking the total estimated requirements to Rs. 707 crores.

The Commission has also suggested the ways and means of covering the requirements. The investment in the public sector, that is, Rs. 94 crores, is to be met out of its own resources supplemented by a measure of foreign investment and domestic private resources. The estimated foreign investment in industries is placed tentatively at Rs. 100 crores. In the private sector, the profits of corporate enterprises engaged in industries assessed to income-tax in 1950-51, were about Rs. 98 crores. Of this, after allowing for tax and dividends, about Rs. 34 crores are estimated to have been ploughed back. The Commission considers that with the better availability of raw materials and the higher level of production envisaged in the Plan, the undistributed profits of corporate enterprises are likely to go up. Accordingly, for the Plan period these savings have been estimated at Rs. 200 crores. (This estimate is arrived at on the understanding that there should be agreed price increases in selected lines and restraint in dividend policies.) These savings are expected to be supplemented by new issues of the order of Rs. 90 crores, loans from Government and Industrial Finance Corporation to the extent of about Rs. 25 crores, refunds of E.P.T. deposits of the order of Rs. 60 crores, banks and other sources of short-term finance, Rs. 150 crores. The Commission thinks that, although the above estimates are only approximations, the targets indicated by them are capable of achievement.

The staff of the Federation of Indian Chambers of Commerce and Industry has also made an attempt at assessing the replacement of machinery plant and industry. The study relates to the balance-sheets of 138 companies. These companies represent about 20 per cent. of the private industrial sector. On the basis of this sample study, the Federation has estimated that, over a period of five years ended 1949-50, capital investments by industry in India as a whole rose by Rs. 233 crores and working capital by Rs. 252 crores. This total expenditure of Rs. 485 crores was financed by (*a*) capital resources (including transfers to reserves but excluding appreciation reserve) to the extent of Rs. 133 crores and (*b*) by depreciation funds (including transfers to reserves but excluding depreciation reserve) to the extent of Rs. 130 crores. The balance was met from (*c*) depletion of cash resources and investment amounting to Rs. 60 crores and (*d*) current finance, borrowing and credits to Rs. 156 crores. While further availability of resources under items (*c*) and (*d*) are limited, the need for additional capital resources is expected to be higher because of backlog in replacement. Assuming that the increase in expenditure on replacement of assets or otherwise on account of higher prices offsets any advantage that might arise from reduced requirements of working capital, the aggregate fresh capital requirements of Indian industries over the next few years is estimated at Rs. 100 crores per annum. The study of balance-sheets referred to above also indicates that, if the replacement requirements are spread over the next 12 years, the annual requirements of additional finance over and above depreciation allowed under existing income-tax rules will be between Rs. 50 and Rs. 65 crores, a sum which industry cannot cope with, unless assistance from the Government is forthcoming.

On the strength of these studies, the Federation has appealed to the Government for assistance. The following is a summary of the main points of the suggestions made by the Federation:

"The Committee (of the Federation) realise that any assistance that can be sought from Government should be justifiable on grounds of public interest. They also realise that while the burden of rehabilitation of plant and machinery must remain the prime responsibility of industry under normal circumstances, they can ask for governmental assistance only to the extent justified by the rise in prices of the fixed assets. Even this will have to be qualified by a number of other considerations which are dealt with below.

"It is necessary first of all to make a distinction between needs which are strictly replacement needs and needs which are more in the nature of expansion of existing units. It is only with regard to the former that the Committee recommend that Government should come to the aid of industry. Further, such assistance should be limited to the replacement of pre-1947 assets only; and even in those cases, assistance need not be for the entire difference between original and replacement costs. In normal circumstances the replacement of an asset involves, in addition to the original cost, a certain element of obsolescence due to technical progress. In the absence of a significant change in the level of prices, the additional finance required for replacing an older asset by a new and improved one is legitimately a charge on industry itself. The Committee believe that an addition to the original cost to the extent of about 50 per cent. on this account would be a legitimate one to be borne by industry. At present, however, the prices of capital equipment are nearly three to four times the pre-war level. Government assistance, therefore, is to be sought only with regard to what may be termed as the 'net differential cost' of replacement at the present level of prices, i.e., replacement cost minus (original cost+50 per cent.).

"As regards the form of assistance, the Committee feel that no one method alone will suffice inasmuch as the requirements would be different in the case of different industries, different units, and the varying age of the machinery to be replaced. While in all cases, it will be necessary to grant additional depreciation allowances on a tax-free basis, at least to the extent of half the net differential cost, something will have to be done towards the ways and means problem for immediate replacement of assets which have been written down completely since the additional depreciation allowances will be earned only over a period.

"Such replacement loans may be charged at the normal borrowing rate of Government and the terms of repayment should be such as would enable industry to make repayment without undue financial strain. The fact that the industries concerned are willing to borrow from Government for replacement requirement would by itself be an assurance that the needs of funds for the purposes of rehabilitation are genuine. Moreover, if the grant of such loans were canalised through the Industrial Finance Corporation, the Government of India could ensure that they were granted only in proper cases and only upto the limit already indicated; the Corporation could also ensure that the loans were expended only for replacement of plant and not for expansion or other purposes.

"In respect of assets on which full depreciation allowances have not been drawn and the replacement problem does not arise until some years later, assistance in the form of loans would have to be extended when the time comes for actual replacement and funds available are inadequate. The extent of such assistance would be comparatively small as additional depreciation allowances would have been earned. The Committee also suggest that any net relief out of tax-free additional depreciation allowances may remain with Government to be made available to the units concerned only for the purpose of replacing the assets. This can be done as in the case of refunds of E.P.T. deposits. Besides loans and higher depreciation allowance Government may also consider giving assistance to industry generally by charging a lower rate of tax on any profits ploughed back into industry. Government are now giving a rebate of one anna in the rupee on such undistributed profits. It will encourage further ploughing back of profits into industry if relief to a more substantial degree is granted to profits retained by the company."

A similar plea has also been put forward by the Employers' Association, Calcutta, in a pamphlet published this week. This pamphlet, entitled *Depreciation Allowances and Replacement Costs*, also deals with 138 companies referred to in the Federation's Study above, and emphasises that: "In order to be able to maintain the rate of progress achieved in 1947-52 and help the industries to reduce costs through rationalisation, there is need for immediate action on the part of the Government."

IMPORT-EXPORT TRADE CONTROL OFFICE FOR COCHIN

The Government of India has decided to establish a separate import-export trade control office at the Port of Cochin. This office will work under a Deputy Controller of Imports and Exports and will start functioning from this week (15th inst.). The jurisdiction of the office will extend to the State of Travancore-Cochin and the districts of Malabar, South Canara and Coimbatore in the Madras State. Applications for import licences from these areas should be sent to this office and not to the office at Madras as hitherto. The Madras office will be transferring all applications from this area pending disposal to the Cochin office.

It has also been decided to transfer the jurisdiction over Hyderabad area from the Joint Chief Controller of Imports, Bombay, to the Deputy Chief Controller of Imports, Madras. Applications for the period January-June, 1953, will be disposed off by the Madras office, while applications for previous periods will continue to be handled by the Bombay office.

These decisions will be welcomed by trade and industry in India, as they are designed to secure quick disposal of applications. They will also give some relief to the Bombay office which had been put to severe strain on account of heavy concentration of applications. They are undoubtedly an important step forward in the direction of decentralisation of trade controls which began a few years ago when the Port Offices were started at Calcutta, Bombay and Madras.

PLEA FOR MORE PEPPER PRODUCTION

An appeal to the Government of India for taking steps to intensify the production of pepper in India was made by Mr. Vallabhdas V. Mariwala, President, the Pepper and Ginger Merchants' Association, Bombay, at its thirteenth annual meeting held on the 10th inst. Unless pepper production showed improvement, there were no prospects, said Mr. Mariwala, of this country enhancing its exports from India. The Planning Commission has placed an export target of 300,000 cwts. or 15,000 tons of pepper per annum to be achieved by 1955-56. Mr. Mariwala referred to this point and stated that the target was actually hit in 1950-51 and that exports in subsequent years were well maintained around these levels. He said that it was not a question of reaching the target but maintaining it and striving further to increase it by producing more pepper at lower cost to the benefit of the country.

Alluding to the question of introducing compulsory inspection of pepper before shipment, Mr. Mariwala stated that such questions had been discussed many times in the past and the idea had been abandoned in the case of several other articles which figure in India's export trade. He was opposed to any invidious treatment to pepper exports alone, especially as the standard of deliveries in this commodity had been exceptionally high and, if statistics were collected and compared, it would be realised, he declared, that the percentage of bad deliveries would be fractional and much lower than in other commodities. "If, therefore, there is no case for compulsory inspection for other articles of export," he remarked, "there is no case for bringing pepper under compulsory inspection." He feared that, if such inspection system were introduced, it might lead to red-tapism and administrative delays, ultimately affecting the quality of the produce which had so far been maintained at a high level. He wanted the Government to abandon the proposal.

In this context, Mr. Mariwala referred to the stricter scrutiny to which pepper shipments from India were put last year by the Food and Drug Administration of the U.S.A. As a result of this, almost all consignments of pepper were detained and subjected to recleaning at a heavy expense to the shippers and caused a loss of about Rs. 9 to Rs. 10 lakhs. This question was discussed at a conference at Cochin to find out ways and means of preventing the recurrence of infestation of pepper with psocids and mites. A Standing Committee was appointed to contact the American Spices Trade Association and adopt measures, in consultation with it, to eliminate chances of exporting contaminated pepper. Mr. Mariwala drew the attention of the trade to the need for refraining from trading during the monsoons, unless they were sure of the dry condition of their stuff which should not contain more than 9 to 10 per cent. moisture.

POWER FOR BOMBAY'S HOMES & INDUSTRIES
Nestled in the hills of the Western Ghats the Andhra Valley Power Station supplies power for Bombay's homes and industries. In 1922 General Electric equipped and installed 60,000 kw capacity generators, transformers, switchgear and other electrical equipment. For 31 years this installation has been in continuous service, a major contribution to the ever increasing power demands from an expanding city.
There are many other major installations in India with large G-E generators including those at Sivasamudram, Shimsha and Jog in Mysore, and Mahora in Kashmir.
General Electric is the largest electrical manufacturing organization in the world with a production range of 200,000 different items—from tiny switches to giant generators, from lamps to locomotives.
Inaugurated 75 years ago in U.S.A., when its parent company was first established, General Electric's unlimited resources, skill and research have been used and are available to India for the development of her natural resources.

For the attention of
Far-sighted Industrialists
HAVING LABOUR TROUBLE?
When you find you are having continuous labour trouble in one of your plants, you are not likely to put all of it down to subversive influences, within or without. You realise that these influences make their presence most felt where there is already an undercurrent of dissatisfaction based on genuine grievances. If you are satisfied with the personal qualities of your management, you next ask yourself if your Labour Department is organised to act effectively in dealing with complaints from the Labour Union, and whether its service records are adequate to prevent nepotism and anomalies arising out of increments and promotions. Then you study your wage structure to see if each job is being paid at its true relative worth, and that sufficient channels of promotion are open to the ambitious. If any incentive schemes are in use, you review their working, as you realise that haphazard schemes can cause very serious trouble. Only when you have seen to the removal of weaknesses in the administration of your plant, can you honestly blame any remaining unrest on others.

HOLIDAYS WITH PAY

NEW RECOMMENDATION IN THE OFFING

THE International Labour Organisation has brought out a report* on the subject of holidays with pay which is the fourth item on the agenda at the next session of the International Labour Conference. The I.L.O. is also preparing another report, on the basis of replies received to a questionnaire which it circulated some time back, eliciting the views of the various States the world over on the question, whether or not there is need for a new Recommendation on holidays with pay. The forthcoming conference will discuss the report under reference, as well as the one under preparation, in the light of the various replies received and then evolve a new Recommendation, if found necessary.

The present report discusses the law and practice relating to holidays for workers in different countries and gives detailed information on the scope of holiday provisions, the duration of the holidays, the qualifying period of service for holidays, the remuneration for the holidays and various other questions including special provisions for certain categories of workers such as young persons, apprentices and workers in dangerous or unhealthy occupations. The report further surveys the facilities existing in the various countries which help the workers enjoy their holidays.

The practice of allowing employees several consecutive days of rest each year without loss of earnings has become a widely recognised condition of employment to-day. The practice has grown from the privilege of a few at the beginning of the century to a popular measure of welfare enjoyed by tens of millions. It is true that still many workers are not receiving this benefit as, for instance, certain workers who are unorganised or employed in small undertakings or working in areas where the system of annual holidays with pay has not been introduced. Nevertheless, the Convention adopted in 1936 as a standard for future achievement is in operation in several parts of the world. In fact, following the achievement of political independence, a large number of countries have more than fulfilled the requirements of this Convention.

The introduction of paid holidays for workers both in law and in practice is based on the workers' right to leisure and to the opportunity of developing his personality on the one hand and on the necessity of preserving or restoring his health and strength in the interests of production, on the other. As to the first aspect, it is a well-known fact that, if holidays with pay are properly utilised, it may provide a real escape from the monotonous environment in which one is normally obliged to work. Workers generally undertake factory work, because of the necessity for existence, and it is outside their work that true liberty begins in which the individual can devote himself to that cultivation of talents and personality which is his proper end. As to the second aspect of the subject, it has been proved that workers return to their jobs with fresh enthusiasm and renewed reserves of strength after spending their holidays under suitable restful conditions. This is confirmed by the conclusions reached in many recent studies of the physiology and psychology of work, especially in the field of productivity. The quicker industrial rhythm and the monotony of work caused by modern mechanisation render it essential to grant regular rest periods if workers are not to succumb to physical overstrain and to weakening of their moral and if their health and working capacity are to be preserved.

Although the workers' right to holidays with pay has come to be widely recognised, there are certain difficulties in the way of the proper utilisation of paid holidays for the purpose for which they were introduced. The income of workers' families, in the first place, is not often such as to encourage the saving which is necessary in order to meet the expenses of a holiday. Secondly, when such savings are made, their effective utilisation for the purpose of true physical and mental relaxation meets a common obstacle in the uncertainty of many people as to the real usefulness of such expenditure, how and under what conditions it should be made. Thirdly, the question of providing cheap and comfortable transport and accommodation for workers who want to enjoy their holidays in areas a little far away from their residence is formidable. Finally, there is need to see that workers enjoy ample and real freedom of choice among the various ways of spending their holidays which are not harmful to his health.

Various measures are being taken to see that the workers have the necessary resources and facilities for enjoying their holidays to the maximum possible extent. Some of the measures, so far as resources are concerned, relate to creation of trade union funds fed by the resources of their members—which are drawn upon at the time of holidays or which are used for the payment of holiday bonuses or credits to certain of their members, or else for several similar purposes at the same time. There are also measures which make for grant of credit repayable in several instalments and the like. In certain countries, measures again are being taken to provide suitable accommodation, cheaper and comfortable transport by organising travel under special conditions, or providing workers with facilities for travel abroad and the like. But these fall far short of requirements.

It is too early to forecast the nature of the Recommendation likely to be adopted at the ensuing session of the International Labour Conference. If, however, a new Recommendation on holidays with pay were to be adopted, it would take into account the variations in national conditions and suggest principles of action to suit these differing conditions. In addition, it may give more specific recognition to the importance of holidays with pay provisions in collective agreements and arbitration awards as a means of extending the benefits of holidays with pay, step by step, to increasing number of workers. The recommendation may also suggest that, where holidays are regulated by collective agreements, full consideration should be given to the principles enunciated in the Collective Agreements Recommendation adopted in 1951, which deals with machinery for collective bargaining and in particular with the interpretation, supervision and extension of collective agreements.

WORLD LABOUR STATISTICS

A study of the *Year Book of Labour Statistics for* 1951-52, recently published by the International Labour Organisation, discloses that about a tenth of the world's population enjoys some kind of social security protection. About 150 million bread-winners in 45 countries have insurance policies covering old age and invalidity; about 125 million workers are protected against loss of income resulting from sickness or maternity; about 90 million persons are entitled to unemployment compensation; and about 200 million persons have the right to medical care. Allowances are being paid at present for more than 35 million children in 24 countries.

BUMPER PROFIT OF PERIA KARAMALAI TEA AND PRODUCE COMPANY

RECORD DIVIDEND ON HIGHER CAPITAL

THE distribution of a bonus scrip and a higher dividend on the enhanced capital, these undoubtedly constitute a generous treatment that any company could extend to its shareholders. The shareholders of the Peria Karamalai Tea and Produce Co., Ltd. (Managing Agents: Messrs. Peirce Leslie & Co., Ltd., Kozhikode, Malabar), have been fortunate enough to receive such rare treatment recently, following the excellent financial results for the year ended 31st March, 1952. Early in the year under review, in April, 1951 to be more precise, the Directors capitalised a sum of Rs. 10.86 lakhs out of the amount standing to the credit of the Company's general reserve by the issue of 1,44,872 ordinary shares of Rs. 7-8 each, at a *pro rata* basis of one share for every two held by the then existing shareholders. The final dividend of 25 per cent. for the year 1950-51 itself was paid on the capital thus increased, namely Rs. 32.60 lakhs, the interim dividend of 10 per cent. having been on the old capital of Rs. 21.73 lakhs. For the year under review, the Directors paid two interim dividends of 10 per cent. each and a final one of 25 per cent. making a total of 45 per cent. for the whole year; all these distributions were on the enhanced capital. It may incidentally be noted that this was the third time that the capital of the Company was raised by capitalisation of reserves and issue of bonus shares and that the latest dividend is a record one in the history of the Company.

The distribution of a higher dividend on the increased capital was facilitated by a substantial rise in earnings, the gross profit showing a rise from Rs. 22.05 lakhs (for 1950-51) to a record high of Rs. 34.52 lakhs, that is, a rise of 56.5 per cent. Even after providing larger sums for depreciation and taxation, the net profit, at Rs. 23.06 lakhs, is Rs. 8.45 lakhs more than that for the previous year. The reserves have been considerably strengthened, the amount of Rs. 7 lakhs added now being Rs. 3 lakhs more than that set aside out of the previous year's profit.

Many favourable factors combined together to yield the bumper results as noted above. In the first instance, the tea crop for the year, at 36.25 lakh lbs. was a record one, and represented an increase of 7.77 lakh lbs. over the previous year's output. As a result, the yield per acre has gone up from 836 lbs. to 1,069 lbs. This speaks very highly of the cultural methods employed by the Company at the present day and is a typical example of what can be achieved in the sphere of Indian agriculture, if care and attention is paid to methods of increasing the yield per acre. Secondly, the cost of production of tea was lower at As. 15.35 per lb., as compared with As. 16.63 per lb. for the year 1950-51. Thirdly, the Company was able to get a better price for its tea. Thus, the average price realised on sale of tea showed an increase from As. 29.36 to As. 31.04 per lb. Fourthly, the coffee produced by the Company, though slightly less in output, fetched a sizably higher price. Thus, the coffee output amounted to 190 cwts., as against 210 cwts., for which the average price realised was Rs. 179 per cwt., as compared with Rs. 152.92.

The following comparative table highlights the Company's results for the year against the background of those for the previous three years.

	For the year ended 31st March			
	1952 Rs.	1951 Rs.	1950 Rs.	1949 Rs.
Sale proceeds	59,58,111	49,21,898	42,03,078	34,13,439
Expenditure on estates..	36,68,591	30,73,563	28,82,234	23,65,355
Gross profit	34,52,036	22,04,834	17,68,923	13,66,990
Managing Agents' commission ..	1,23,458	1,03,857	84,931	77,664
Other expenses	3,68,160	1,68,615	1,22,795	86,169
Depreciation	2,00,322	1,97,233	1,58,856	1,05,251
Taxation	4,80,000	3,00,000	1,75,000	1,50,000
Net profit	23,06,409	14,61,722	12,36,714	9,75,566
Reserves	7,00,000	4,00,000	4,50,000	4,50,000
Pension fund	30,000	30,000	30,000	30,000
Dividend	14,66,829 (45%)	10,32,213 (35%)	8,69,282 (40%)	5,21,539 (24%)
Carry forward	1,81,295	71,715	72,206	1,84,724
Tea crop in lbs. ..	36,25,059	28,47,665	28,58,417	24,12,829
Coffee crop in cwts. ..	190	210	265	..
Cost of production per lb. of tea	As. 15.35	As. 16.63	As. 15.71	As. 16.66
Average price realised— Tea per lb. ..	31.04	29.36	25.52	23.71
Coffee per cwt. Rs.	179	152.92	148 02	..

The foregoing table reflects the excellent progress made by the Company in recent years, in terms of both output and profit margin. Thus, the output of tea has gone up by more than 50 per cent. in the course of the last three years and the average price realised has steadily advanced year after year by 31 per cent. Another feature disclosed by the table is that cost of production is a shade lower. This is, however, due to an increase in production. There has been no fall in the rate of expenditure pound for pound. On the contrary, it has been, according to the Company's Chairman, higher, and a considerable increase in it must be expected in the current year, reflecting the effect of minimum wages. The coffee crop, no doubt, shows a decline, but the fall has been offset by the increase in price realised. The estate expenditure has gone up by nearly 56 per cent. and other expenditure more that four times. The gross profit has gone up by about 153 per cent. The increases in essential provisions, such as depreciation and taxation, are only in consonance with the improvement in earnings. It will also be noted that sizable sums have been utilised to strengthen the reserves during the last four years. The shareholders also have been benefited to a considerable extent.

The Company's financial position is quite comfortable. The latest balance-sheet shows that even after the issue of bonus shares in April, 1951, the reserves and surplus stand at Rs. 17.45 lakhs or nearly 54 per cent. of the paid-up capital of Rs. 32.60 lakhs. There is also a 5 per cent. debenture capital of the value of Rs. 10 lakhs. Taxation reserve amounts to Rs. 2.42 lakhs and other current liabilities to Rs. 22.18 lakhs. The gross block of the value of Rs. 57.29 lakhs has been written down by Rs. 14.94 lakhs. The current assets aggregating Rs. 42.29 lakhs provide ample cover to current liabilities.

As regards the outlook for the Company, the following extracts from the Chairman's speech at the annual meeting will give some indications:

"In the current season, markets for common teas slumped badly during the period April-September but I am pleased to inform you that our teas sold fairly easily throughout and have secured an average price of As. 27.72 to date which excludes the season's quality teas.

"At the present moment markets are rather variable and the world surplus tea production makes further price reduction almost inevitable. The immediate prospects of the industry are consequently not altogether reassuring . . . .

"In the new season I am pleased to say that crop is again coming in in fine fashion and gives promise of exceeding even last year's record performance. At end November, crop secured was 27,31,934 lbs. ahead of estimate. We were unable to fix any forward contract for our exportable grades in the current year. This arrangement appears to be paying us and the Company's reputation in the Cochin market has been well maintained. A sample break from each estate was tried out in the London auctions, but proved unprofitable, and, although we have not again patronised Mincing Lane, these markets are carefully observed, and teas sold to the best advantage. Dust and fannings grades have again been sold on forward contract at favourable prices."

The Company's Rs. 7-8 paid-up ordinary shares are currently being quoted at Rs. 23-10 *ex-div.* at which rate the dividend for the year gives a yield of 14.3 per cent. per annum, free of income-tax.

(Concluded from next column)

The balance-sheet as on 31st December, 1951, shows that the Company's reserves and surplus stand at Rs. 21.39 lakhs, as against a paid-up capital of Rs. 150.22 lakhs. Reserve for taxation amounts to Rs. 27.08 lakhs. The gross block of the value of Rs. 145.62 lakhs has been written down to Rs. 71.16 lakhs. Current assets aggregating Rs. 296.61 lakhs more than adequately cover the current liabilities at Rs. 142.08 lakhs. They include stock-in-trade of the value of Rs. 11.06 lakhs, stores, etc., Rs. 40.27 lakhs, debts, deposits and advances Rs. 194.09 lakhs, investments Rs. 2.09 lakhs and cash balance Rs. 49.10 lakhs. The aforesaid debts, deposits and advances include a sum of Rs. 125.98 lakhs due from Dalmia Cement (Bharat) Ltd., the new company formed for transferring the assets and liabilities of the Dalmia Cement Ltd. The scheme of transfer was sanctioned by the Madras High Court on 4th December, 1951, and the adjustments consequential to exchange of shares for shares in Dalmia Cement (Bharat) Ltd. were effected in 1952.

The Directors have now changed the accounting period of the Company to end on 30th September, instead of 31st December, so that the statement of accounts for the period ended 30th September, 1952, might be attached to those of Dalmia Cement (Bharat) Ltd. for the year ended 31st December, 1952. This process will continue so long as Dalmia Cement Ltd. remains the subsidiary of the other.

RESULTS OF DALMIA CEMENT FOR 1951

DIVIDEND LEVEL RAISED

THE striking progress made by the Dalmia Cement Ltd. (Managing Agents: Messrs. Hari Brothers Ltd., New Delhi) in 1950 was well maintained during the subsequent year, namely, the year ended 31st December, 1951, also. Indeed, 1951 was the most prosperous year so far experienced by the Company. The Company's gross profit (before providing for depreciation and taxation), which had gone up from Rs. 28.70 lakhs for 1949 to Rs. 63.57 lakhs in 1950, made an *impressive rise to a record level* of Rs. 91.82 lakhs in the year under review, the increase over the previous year being 44.4 per cent. The net profit of Rs. 27.26 lakhs also compares well with that of Rs. 17.45 lakhs for 1950 and is in distinct contrast to a deficit of Rs. 4.69 lakhs for 1949. This encouraging result enabled the Company to add to the reserves a sizable sum of Rs. 18.50 lakhs, as compared with a mere Rs. 1 lakh set aside last year, and also to enhance, at the same time, the dividend level from 5 per cent., paid for 1950, to 6¼ per cent. Though the gross profit for the year under review is a record one, the dividend on the ordinary shares, however, falls short of the 7½ per cent. paid for the years 1944, 1945 and 1946.

The smart improvement in profit, as noted above, was essentially due to the expansion of the Company's factory at Dalmiapuram (South India) and the better utilisation of the productive capacities of all the factories. The Dalmiapuram factory was expanded towards the close of 1949 to raise the rated capacity from 250 tons to 750 tons per day. The old plant, as well as the new one, worked to their respective capacities during the period they remained under operation. The factory could have been worked to the fullest possible extent but for the power cut in South India. The working of the Company's factories in Pakistan was at its best, since Partition, during the year under review. The demand for cement in both Pakistan and India, coupled with increase in the selling price of packed cement granted by the Government of India during the year, also contributed to the Company's prosperity in the year under review. The increased production and higher prices are reflected in the substantial rise in sale proceeds from Rs. 228.20 lakhs to Rs. 358.97 lakhs.

The following table brings out clearly the salient features of the Company's working during 1951, as compared with those for the previous three years:

(In lakhs of rupees)

	For the year ended 31st December			
	1951	1950	1949	1948
Sale proceeds	358.97	228.20	186.92	190 91
Other receipts	11.41	2.87	11.08	2.96
Stock	22.88	36.12	23.41	22.89
Manufacturing cost ..	253.73	174.11	155.74	138.21
Other expenses ..	5.12	8.76	9.46	10.52
Gross profit	91.82	63.57	28.70	27.87
Managing Agents' commission ..	6.47	3.72	..	2.44
Depreciation	31.09	30.41	33.39	7 44

Reserves	18.50	1.00	..	3.00
Dividend— 6% cum. preference ..	3.53	7.05*	..	3.53
Ordinary	5.41 (6¼%)†	4.32 (5%)	..	4.32 (5%)
Carry forward	0.01	0.78	—4.28	0.41

* Includes arrears of dividend for the year 1949.
† Represents interim dividend. Final dividend *nil*.

One of the features disclosed by the foregoing table is the sharp rise in manufacturing cost, due to increases in cost of stores, materials, transport and labour. The provision for depreciation was not raised to any worthwhile extent, but taxation absorbed Rs. 15 lakhs more than in 1950. As regards the taxation on the Company's income in Pakistan, the final assessment for the year 1946 only has been completed, following the agreement between the members of the two-man committees appointed by the Governments of India and Pakistan over the principles to allocate profits of the Company between the two countries for purposes of income-tax assessment. The percentage of income assessed for the year 1946 (assessment year 1947-48) in India and Pakistan was 28.90 and 71.10, respectively.

Out of the net profit of Rs. 27.26 lakhs, as much as Rs. 15 lakhs were transferred to the general reserve and Rs. 3.50 lakhs to reserve for bad and doubtful debts, as against Rs. 1 lakh provided last year. No sum was added to the general reserve in the previous two years. The dividend of 6¼ per cent. paid on the ordinary shares was the interim one paid in August, 1952. The Directors did not wish to pay any further dividend for the year under review, in the absence of remittance of funds from Pakistan.

(Continued in previous column)

SUBSTANTIAL RISE IN EARNINGS OF SCINDIA STEAM

ACCUMULATED DEFICIT WIPED OUT—PAYMENT OF DIVIDEND RESUMED

QUITE favourable results are disclosed by the audited accounts of the Scindia Steam Navigation Co., Ltd. (Agents: Messrs. Narottam Morarjee & Co., Bombay) for the year ended 30th June, 1952. The Company's gross profit for the year shows a sharp increase from Rs. 88.03 lakhs for 1950-51 to Rs. 242.79 lakhs.. After providing Rs. 72.68 lakhs (as against Rs. 64.47 lakhs in the previous year) for depreciation and Rs. 10 lakhs (Rs. 10 lakhs) for debenture sinking fund, the net profit works out to Rs. 143.10 lakhs, as compared with a mere Rs. 4.75 lakhs for the preceding year. The profit for the year under review stands in more refreshing contrast to the net losses of Rs. 38.73 lakhs and Rs. 58.28 lakhs suffered in the years 1949-50 and 1948-49, respectively. As a result of the impressive performance, the Company has been able to wipe off the accumulated deficit of Rs. 89.05 lakhs brought forward from the previous year, write off the loss of Rs. 41.02 lakhs on the sale of the Company's shipyard to the Government of India and pay a dividend of As. 8 per share after a break of three years, but not without taking credit for Rs. 10.55 lakhs being the provision for taxation no longer required.

The encouraging results of the Company for the year under review are due, in the main, to (1) adequate employment of the Company's fleet, (2) employment of tonnage in the Pacific for bringing foodgrains and (3) general increase in freight rates, particularly for carriage of bulk cargo. The total cargo lifted was actually lower at 17,22,559 tons, as compared with 18,44,934 tons in the previous year, but the freight earned increased from Rs. 6.99 crores to Rs. 8.74 crores, following the upward revision in freight rates in the U.K. and the U.S. services in March, 1951 and in the coastal services in May, 1951. There was no worthwhile increase in passage money, but the shipyard revenue declined from Rs. 172.49 lakhs to Rs. 112.81 lakhs. Although the total expenses show a slight drop from Rs. 855.69 lakhs to Rs. 823.67 lakhs, operating costs in respect of wages, oil, stores, repairs and insurance were higher. The average cost of fuel oil rose by Rs. 20 per ton. There was an increase of over Rs. 8 lakhs in management expenses mainly on account of increase in the salaries and wages account. The increase on these accounts was, however, more than offset by a sizable drop of Rs. 48.87 lakhs in hire of chartered steamers, etc.

Results Compared

The following comparative table presents the salient features of the year's results, as compared with those for the previous three years:

(In lakhs of rupees)

	For the year ended 30th June			
	1952	1951	1950	1949

Carry forward				

N.B.—Expenses include the amounts transferred to capital account which are: Rs. 1.52 lakhs, Rs. 2.54 lakhs, Rs. 82.60 lakhs and Rs. 85.45 lakhs for the years 1951-52, 1950-51, 1949-50 and 1948-49.

The profit for the year under review is arrived at after taking into consideration the sum of Rs. 7.27 lakhs being the commission forgone by the Managing Agents on the amount of depreciation provided. The assessments of the Company for E.P.T. have not yet been finalised, as there are certain questions still to be decided. Meanwhile, the Company had made a representation to the Central Board of Revenue in respect of its claim for deferred repairs, against which a substantial relief was sanctioned. Taking this and other factors into consideration, the Directors found that the balance that remained at the credit of provision for taxation at the close of the year was no longer required. Accordingly, they decided to appropriate the entire balance in that account by transferring Rs. 20 lakhs to fleet replacement reserve, Rs. 3 lakhs to deferred taxation reserve and Rs. 10.55 lakhs to the profit and loss account. As already indicated, the Directors had to write off a loss of Rs. 41.02 lakhs on account of the sale of its shipyard to the Government of India. According to the agreement with the Government of India, the assets of the shipyard were to be valued at their written down value calculated in accordance with the Income-tax Act, i.e., after taking into account the entire depreciation admissible under the Act. It was not, however, the Company's practice to provide any initial or double normal depreciation. Accordingly, the difference between the normal depreciation actually provided by the Company and the depreciation calculated on the aforesaid basis, amounting to Rs. 41.82 lakhs, had to be written off by drawing on the profit for 1951-52. The dividend of As. 8 per share proposed to be paid for the year under review is the same as that paid in 1948, but the dividend for 1948 was on the lower capital before the issue of new shares in 1947.

Financial Position

The following synopsis of the Company's latest balance-sheet reflects its financial position:

Liabilities	Rs.	Assets	Rs.
Capital ..	6,59,62,018	Gross block	12,98.97,421
Reserves and surplus ..	6.87,57,618	*Less*—Depreciation ..	3,04,50,000
Debentures	5,07,72,650	Net block ..	9,94,47,421
Provision for taxation	—	Stores and spares ..	37,62.100
Liabilities ..	3,82,42,048	Investments	3,77,17,002
		Debenture Trustees account	82,40,728
		Debts, deposits and advances ..	5,00.03,124
		Cash ..	2,26,00,272
Rs.	22,37,34,334	Rs.	22,37,34,334

The Company's reserves have been considerably strengthened, the increase over the year being Rs. 147.05 lakhs, of which fleet replacement reserve accounts for an increase of Rs. 128.89 lakhs, made up of Rs. 80 lakhs being the sum received from the Government of India by way of construction subsidy in the form of an ex-gratia capital grant, Rs. 28.89 lakhs being the excess over the written-down value of ships sold during the year and Rs. 20 lakhs being the transfer from the provision for taxation. The gross block account, at Rs. 12.99 crores, shows a decline of Rs. 1.48 crores, in the main due to sale of ships, slipways, wharf buildings, plants and machinery and labour colony, despite the additions to the Company's fleet to the extent of Rs. 1.53 crores. During the year under review, four ships were added to the Company's fleet, two of them having been built at Visakhapatnam and the other two purchased in the U.K. as second-hand ships. Three ships were sold during the year, one of them being an old passenger ship. Orders have been placed with the Hindustan Shipyard Ltd. for five motor vessels of 7,000 dw.t. each. Out of the amount of Rs. 5 crores shown under debts, deposits and advances, Rs. 2.73 crores are due from the Hindustan Shipyard Ltd. This due is secured to the extent of Rs. 1.67 crores and the balance unsecured.

The Rs. 15 paid-up shares are currently being quoted at Rs. 14-15 each, at which rate the proposed dividend gives a yield of about 3.35 per cent. per annum, free of income-tax.

ONE COMPLETE VANASPATI PLANT

in running condition, Capacity 15 tons Vanaspati and 10 tons of Refined Oil per day, with eight Expellers, Tin Plant, Soap Plant and Workshop with up-to-date equipment, situated at Davangere, big Groundnut, Seeds and Oil centre in Mysore State, is available for sale or being let out on suitable terms. Enquiries solicited.

DAVANGERE VANASPATI VEGETABLE OIL CO., LTD.

DAVANGERE CITY (MYSORE STATE)

Points From The Chair

Government Expenditure Needs to be Cut

"THE Government has to find ways and means of reducing expenditure in order to ease the burden of taxation and I am sure most of us who are in contact with Government departments, are of the opinion that substantial economies can be made in administration. So far, the Government seems unwilling to face this, but even in our comparatively small sphere of activity, we know of many instances of flagrant waste of public money. Further, we cannot afford the luxury of hosts of so-called experts and administrative officers who are engaged in profitless studies which can never be used and are often out of date before they are even completed. I would admit that industry itself can and does suffer on occasions from these self-same failings, but the very necessity of having to make a profit draws attention to these matters. Unpleasant and unpalatable as it may be, the Government must give this matter attention or necessity will force the issue in due course, but meanwhile the nation and industry suffer."

J. L. BROCKHOUSE,
J. Brockhouse & Co., Ltd.

Export Trade of Indian Textiles

"Our export market in textiles has largely dried up. I do not wish to enter into the details of any controversy as to the need for abolishing the export duty on cloth or as to the alleged large margin of profits on our export trade because of the low price of Indian cotton. Not that the industry has no case on these points; but I do suggest that, on a long view, an export duty on what is not a monopoly cannot be sustained. Anyway, we cannot afford to forget the fact that with the partition of Pakistan, the pattern of Indian trade has changed permanently, and that India must export manufactured goods if she is to survive. Obviously, cotton textiles must be an important item in such exports, and all possible steps should be taken to foster the trade. The Planning Commission themselves, I understand, have envisaged this development. It should, for instance, be possible, quite apart from other justifiable relief, to give a rebate of custom duty on exports of manufactured articles from imported cotton. One can foresee administrative difficulties in a matter of the kind, but they cannot be insuperable. Export business is not only subject to risks but involves extra cost in ensuring quality, e.g., cloth free from faults. I do hope that the Government will do something for the export trade before powerful competitors like Japan and the U.K. extinguish it."

LALA SHRI RAM,
Delhi Cloth and General Mills Co., Ltd.

Trading Conditions in U.K. Woollen Industry

"Even now trade in the industry is not normal. To a large extent, heavy commitments which have not yet been fully absorbed, have had the effect of stopping or seriously curtailing normal forward buying, especially in the home trade. The export trade, which has recently tended to improve, is very competitive and in some markets is severely handicapped by import restrictions of one kind or another. Then, too, and perhaps this is the most serious problem, while, on the one hand, there is a definite reluctance to place orders for cloth very far in advance of requirements, on the other hand, manufacturers, such as ourselves, have to order some six months ahead of delivery, with yarn prices by no means stable—they have risen by some shillings a pound during the past few months. You will appreciate the element of risk involved in such a position, but you may be sure that your Directors have this aspect continually under review."

C. J. WILSON,
Wilson, Smith & Sutcliffe Ltd.

Importance of Tramp Shipping

"The important role that tramp shipping plays in the economies of advanced maritime countries, such as the U.K., is well known and development of tramp shipping should, therefore, be given due recognition by the Government. There cannot be two opinions on the need for the growth of tramp shipping. These ships play a useful role in peacetime and their undoubted importance in emergencies for movement of foodgrains and other vitally essential requirements cannot be overemphasised. The criteria for making finance available for the purchase of 'overseas ships' should not, therefore, be that these ships should be operated only on overseas liner routes. The finance should be made available freely also to those who want to purchase ships for tramping in overseas trades. It is hoped that this will be borne in mind whilst deciding allocation of finance for the purchase of 'overseas ships.'"

A. H. BHIWANDIWALLA,
Great Eastern Shipping Co., Ltd

Canada's Potential Wealth

"Canada needs very large sums indeed of capital to develop her vast potential wealth; she is in equal need of men—of population. Only with the building up of these two essential elements can she attain to that high degree of commercial prosperity to which she is destined by virtue of her mineral and other wealth. Such a building up is not accomplished within one year or in two—it is a much more lengthy process; and in the meantime caution must be the watchword where investment is concerned."

PHILIP B. FRERE,
Berkeley Property and Investment Co., Ltd

BOMBAY STEAM NAVIGATION WIPES OFF LOSS

KALAPAHARI COAL MAINTAINS DIVIDEND

Bombay Steam Navigation Co., Ltd.

THE directors of the above Company (Managing Agents: Scindia Steam Navigation Co., Ltd., Bombay) submit the audited accounts of the Company for the year ended 30th June, 1952.

The directors are glad to report that the Company's working during the year under review has resulted in a profit of Rs. 14,32,504 (Rs. 2,84,596), after providing Rs. 18,43,644 (Rs. 19,00,255) as normal depreciation and Rs. 10,50,000 (*nil*) as deferred taxation reserve. Adjusting the loss of Rs. 13,98,897 (Rs. 16,83,493) brought forward from last year, the balance of profit amounting to Rs. 53,607 (loss Rs. 13,98,897) is proposed to be carried forward.

The Managing Agents have been good enough to forgo 50 per cent. of the commission due to them. The directors are grateful to them for this generous gesture on their part.

Some of the ships of the Company had to be diverted, under instructions from the Government of India, for purposes of refugee evacuation from Pakistan to India; and the Company had submitted a claim for compensation in respect of this. The directors are glad to report that the Government have, after protracted negotiations, ultimately sanctioned an ex-gratia payment of Rs. 7,00,000 during the year under review.

The year under review recorded a further rise in operational costs, especially in fuel and stores.

Due to the reduced traffic on the Konkan lines and in the Harbour services, the directors laid up not only the s.s. *Xavier* but also some of the launches, viz., *Bajune*, *Sita*, *Vijaylaxmi* and *Kankeshwar*. Passenger traffic and earnings on the cargo-cum-passenger lines, viz., the Karachi, Mangalore and Saurashtra lines, have also continued to decrease. The directors have, therefore, taken necessary action with a view to rationalise the passenger services on these lines also.

The workshop revenues of the Company for the year have increased, as compared with the last year; and it is hoped that this trend will continue with the expansion and modernisation of the workshop and with more and more repair work of the Scindia Company coming to it.

The Company's fleet has been insured for Rs. 4,52,79,000 against both marine and war risks.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	74,89,550	Block ...	2,41,93,997

Kalapahari Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the half-year ended 31st August, 1952.

The accounts show that, after providing Rs. 7,500 (Rs. 7,000) for depreciation, Rs. 20,000 (Rs. 35,000) for cesses and Rs. 50,000 (Rs. 1,15,000) for taxation, there is a balance of Rs. 1,01,357 (Rs. 1,00,091) at the credit of profit and loss account, out of which the directors paid a dividend of Re. 1 (Re. 1) per share and a bonus of As. 12 per share, absorbing Rs. 61,250 (Rs. 61,250) leaving to be carried forward Rs. 40,107 (Rs. 38,841).

Raisings during the half-year were 40,148 tons, as compared with 47,969 tons during the previous half-year and despatches were 36,666 tons, as against 46,465 tons.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	3,50,000	Block ...	6,40,493
Reserves ...	5,50,000	Stock ...	59,373
Provision for taxation and cesses ...	5,16,021	Stores ...	41,248
Liabilities ...	4,26,716	Debts, deposits and advances ...	7,43,074
Profit and loss account ...	40,107	Investments	3,85,848
		Cash ...	12,808
Rs.	18,82,844	Rs.	18,82,844

Investment and Finance Co., Ltd.

The directors of the above Company (Secretaries: Messrs. Bird & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st August, 1952.

Including the sum of Rs. 14,239 (Rs. 19,104) brought forward from the previous half-year, providing Rs. 3,500 (Rs. 1,000) for taxation and special reserve and utilising Rs. 29,818 (Rs. 13,658) to write off depreciation on investments, there is an available balance of Rs. 33,579 (Rs. 41,157). It is proposed to dispose of the available balance as follows:

In paying a dividend on the first cumulative preference shares at the rate of 5 per cent. per annum, without any deduction for income-tax paid by the Company Rs. 5,000 (Rs. 5,000); in paying a dividend on the second cumulative preference shares at the rate of 6 per cent. per annum less income-tax at 48 pies plus 5 per cent. surcharge on income-tax Rs. 4,425 (Rs. 4,425); in paying a dividend on the ordinary shares at the rate of 5 (5) per cent. per annum without any deduction for income-tax paid by the Company Rs. 12,500 (Rs. 12,500); and in carrying forward Rs. 11,654 (Rs. 19,232).

The downward trend of share prices, indicated in the previous report, continued throughout the period under review. Numerous factors contributed towards this recess and still persist, resulting in a low level of activity on the Stock Exchange. The Company's portfolio stands at a conservative figure and book values have been written down to market values wherever necessary.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	9,00,000	Investments	10,58,631
Reserves ...	1,29,500	Debts ...	2,069
Reserve for taxation ...	24,304	Cash ...	42,690
Liabilities ...	37,932		
Profit and loss account ...	11,654		
Rs.	11,03,390	Rs.	11,03,390

General Investment and Trust Co., Ltd.

The directors of the above Company (Secretaries: Messrs. Bird & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st August, 1952.

Including the sum of Rs. 1,590 (Rs. 1,724) brought forward from the previous half-year, providing Rs. 5,500 (*nil*) for taxation and special reserve and utilising Rs. 10,337 (Rs. 7,587) to write off depreciation on investments, there is an available balance of Rs. 13,275 (Rs. 11,404). It is proposed to dispose of the available balance as follows:

In paying a dividend on the first cumulative preference shares at the rate of 5 per cent. per annum, without any deduction for income-tax paid by the Company Rs. 2,500 (Rs. 2,500); in paying a dividend on the second cumulative preference shares at the rate of 6 per cent. per annum less income-tax at 48 pies plus 5 per cent. surcharge on income-tax Rs. 2,212 (Rs. 2,212); in paying a dividend on the ordinary shares at the rate of 5 (5) per cent. per annum, without any deduction for income-tax paid by the Company Rs. 5,625 (Rs. 5,625); and in carrying forward Rs. 2,938 (Rs. 1,067).

The downward trend of share prices, indicated in the previous report, continued throughout the period under review. Numerous factors contributed towards this recess and still persist, resulting in a low level of activity on the Stock Exchange. The Company's portfolio stands at a conservative figure and book values have been written down to market values wherever necessary.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	4,25,000	Investments	4,48,910

Rs.	4,87,178	Rs.	4,87,178

Dehri-Rohtas Light Railway Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Sahu Jain Ltd., Calcutta) submitted the audited accounts of the Company for the half-year ended 31st March, 1952.

The gross earnings amounted to Rs. 11,35,824 (Rs. 7,59,999) and working expenses to Rs. 5,07,133 (Rs. 4,61,288) leaving a surplus of Rs. 6,28,691 (Rs. 2,98,711) and by adding Rs. 483 (Rs. 2,209) as interest from banks, etc., the amount came to Rs. 6,29,174 (Rs. 3,00,926). After deducting managing agents allowance Rs. 9,000 (Rs. 8,500); directors fees Rs. 384 (Rs. 646); depreciation reserve Rs. 4,22,092 (Rs. 1,04,222); debenture interest Rs. 39,375 (Rs. 39,375); other interest Rs. 9,250 (*nil*); bad debt Rs. 74 (*nil*); Rohtas-Rohtas-Fort extension written off Rs. 55,777 (*nil*); Government cess Rs. 16,628 (Rs. 16,496) and managing agents commission Rs. 45,207 (Rs. 24,512), there remained a balance of Rs. 31,386 (Rs. 1,07,170). Adding the sum of Rs. 2,47,950 (Rs. 53,952), being the balance of last account, the total at the credit of profit and loss account as on 31st March, 1952, amounted to Rs. 2,79,336 (Rs. 1,61,122) and after providing Rs. 90,000 (Rs. 25,000) for income-tax, the balance was Rs. 1,89,336 (Rs. 1,36,122) which the directors disposed of as follows:

Payment of dividend at As. 10 (As. 8) per share on 2,25,000 shares of Rs. 10 each, free of income-tax for the year ended 31st March, 1952 Rs. 1,40,625 (Rs. 1,12,500), transfer to general reserve Rs. 45,000 (*nil*) and balance carried forward Rs. 3,711 (Rs. 23,622).

The goods traffic during half-year ended 31st March, 1952 reached to 3,41,000 tons and during half-year ended September, 1952 to 2,71,000 tons. The directors hope the traffic will be maintained at about 6,00,000 tons per year. The Company has got 14 locomotives and 480 goods wagons on line and because some of the old locos are getting out of age, the directors thought it wise to place order for two new Z.B. locomotives, delivery of which is expected by the end of December, 1953. The Company has also paid attention to the better amenities for the passenger traffic by making improvements at several stations and three more passenger coaches are under construction. To maintain rolling stock in better working order, the Company has been trying to have a still better equipped workshop and several modern machineries have been added to the workshop. The directors hope that the improvements will be kept up.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.

Teekoy Rubbers (India), Ltd.

The directors of the above Company (Managing Agents: East India Agencies Ltd., Palai, Travancore) submitted the audited accounts of the Company for the year ended 31st March, 1952.

The area of the Company's properties was unchanged, viz., 1,178 acres seedling rubber, 276 acres budded rubber and 416 acres reserve land. Production during the year amounted to 5,10,018 lbs. rubber—an increase of 64,217 lbs. compared to the previous year. The average price obtained was Rs. 126-8 per 100 lbs. The price obtained last year was Rs. 122-4. Estate expenditure increased from Rs. 57 per 100 lbs. last year to Rs. 57-8 this year.

After meeting all charges and expenses, the net profit available was Rs. 2,55,187 (Rs. 3,72,478). Including Rs. 34,499 (Rs. 1,021) brought forward from the previous year's account a sum of Rs. 2,89,686 (Rs. 3,73,499) was available for disposal. Out of this, the directors paid Rs. 36,000 (Rs. 36,000) as dividend on preference shares for the year ended 31st March, 1952. They also provided Rs. 87,750 (Rs. 1,28,000) towards taxes. The balance left was Rs. 1,65,936 (Rs. 2,09,499) from which the following appropriations were made:—

To dividend at 9 (7½) per cent. on ordinary shares Rs. 90,000 (Rs. 75,000); to debenture redemption fund Rs. 75,000 (Rs. 1,00,000); and to carry forward Rs. 936 (Rs. 34,499).

Rubber reached the peak price of Rs. 4 per lb. in March 1951 in the world market. Now it remains stationary at around Re. 1-4 per lb. Such varied landscapes of peaks and valleys have been a common feature in the history of rubber. But basing on an inevitable rising consumption, world demand should absorb all available new rubber. In support of this, one has only to realise the many thousands of tons of rubber that will be called for by the slightest rise in *per capita* consumption, or by some relatively new application of the commodity, such as rubber on roads.

Rubber production in India is still short of indigenous manufacturing requirements by 6,000 tons a year. So whatever the production and consumption figures outside be, the Indian producer has an assured market for several years to come. With effect from 28th October, 1952, Government of India fixed the price of rubber at Rs. 138 per 100 lbs. This price holds good for three years.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	16,00,000	Block ...	20,55,034
Reserves ...	2,34,600	Stock-in-trade	5,19,861
Debentures	2,63,300	Stores and spares ...	42,683
Reserve for taxation ...	2,11,467	Debts, deposits and advances ...	20,074
Liabilities ...	3,54,063	Investments	1,08,897
Profit and loss account ...	1,65,936	Cash ...	82,817
Rs.	28,29,366	Rs.	28,29,366

Sendra Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. F. W. Heilgers & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the half-year ended 30th June, 1952.

75,461 tons of coal were raised and 65,889 tons were despatched in comparison with 69,091 tons raised and 74,036 tons despatched during the previous half-year. These figures reveal the seasonal fluctuations which are a regular feature in the coal industry. That is, the higher outputs in the first half of the year achieved by a stronger labour force were offset by a fall in the number of wagons made available for coal traffic.

The profit and loss account, after providing Rs. 25,333 (Rs. 30,444) for depreciation, Rs. 5,000 (*nil*) for tax contingency reserve, and including the credit balance of Rs. 17,899 (Rs. 27,779) brought forward from last half-year, show an available balance of Rs. 10,379 (Rs. 25,966) which the directors carried forward.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	8,00,000	Block ...	11,08,961
Reserves ...	8,68,370	Stock ...	1,90,658
Debentures	2,00,000	Stores ...	1,71,523
Provision for taxation ...	44,908	Debts, deposits and advances ...	7,44,221
Liabilities ...	4,70,367	Investments	1,75,000
Profit and loss account ...	10,379	Cash ...	3,661
Rs.	23,94,024	Rs.	23,94,024

N.B.—Figures within brackets relate to the corresponding period of the previous year.

(Concluded from next column)

demand. If warehousing accommodation could be increased, priority for sale of teas which are more favoured by overseas buyers would be possible and this in turn will help quick shipment of teas, whilst they are in good condition. Dusts and poorer quality brokens, which have limited overseas appeal, but are taken up in internal markets, could be spread for auction evenly throughout the whole year without in any way adversely affecting the interests of the producers of such teas.

PLANTING

(Concluded from page 70)

by subsequent notification at any time during the financial year, alter the export allotment. Each tea estate will receive an export quota, subject to alteration in accordance with the change in export allotment. The total of export quotas allotted to tea estates at any time during any financial year will not exceed the export allotment for the time being for that year. Special export licences will also be granted in cases where the tea, in respect of which an export licence has been granted under the Act, has not been exported before the end of the financial year. The licence will be granted only to cover the unexported quantity of tea.

As regards the finances required by the Board, the Bill seeks to continue the existing practice of collecting a cess not exceeding Rs. 2 per 100 lbs. on all exports from India, that is, a little less than 4 pies per lb. The net proceeds of this cess will be credited to a fund called Tea Improvement Fund. All fees levied and collected in respect of licences, permits and permissions issued under the Act and any other fee that may be levied and collected under the Act will also be credited to the Fund, which will be utilised, as its name itself indicates, for development of tea industry under the ægis of the Board, as mentioned above.

The Central Government takes power, under the Act in the offing, to fix the wholesale and retail prices at which tea may be sold. It will fix the price or prices at which tea may be sold wholesale or retail, by auction or otherwise, whether for the Indian market or for export. The Central Government will issue directions to the Tea Board, so that it may function as an effective machinery for implementing Government policies. All acts and proceedings of the Board will be subject to the control of the Central Government.

TEA OUTPUT TO BE CUT

A decision of considerable import to the future of Indian tea was taken by tea producers in this country last month. At a conference of all North and South Indian Tea Associations held on 18th December, 1952, the representatives of tea producers unanimously accepted the principle of voluntary crop restriction for the year 1953 by about 8 per cent. of last year's production. As the production during the year 1952 is about 620 million lbs., this decision means that the output in 1953 will be reduced to about 570 million lbs. The principle of voluntary reduction was accepted in order to prevent overproduction and improve the quality of the tea manufactured.

It is common knowledge that tea producers are passing through a difficult period and that their products are fetching prices which are not sufficient even to meet the cost of production. In recent weeks, a considerable portion of the offerings in auctions had actually to be withdrawn. In the circumstances, the foregoing decision to reduce production is understandable. It is, however, to be hoped that it is only a temporary measure and that there will be no need to continue it once the present emergency comes to an end. From the experience of the tea market in recent months when prices dropped considerably, it can be reasonably concluded that good quality tea will always be in good demand and can be marketed at reasonable prices. Accordingly, the need for such a negative solution as restriction on production will not arise, if care is taken to produce good quality tea. Producers of tea must, therefore, concentrate their attention on improving the quality of their product. That apart, continuation of this negative solution will result in placing a premium on inefficient and uneconomic units. As such, it will not be in the long-range interests of the industry.

Quality tea is in demand not only in foreign markets but also in domestic markets. Although most of the teas taken up by the internal market consists of dust varieties, the thick liquoring Assam dusts are said to be popular with hotels and hot tea shop trades and fetch a good price. Further, there is ample scope for expanding consumption in the internal market, because of the higher cost of other beverages. There is thus fair prospects of a better offtake by external as well as internal markets.

Besides improving the quality of tea, there is also the need for better marketing arrangements. At present, for want of warehousing accommodation, teas are imprinted for auction in the order of their arrival in the warehouses, irrespective of the nature and extent of current

(Continued in previous column)

Notices

THE ASSOCIATED CEMENT COMPANIES, LIMITED

NOTICE

THE SIXTEENTH ANNUAL GENERAL MEETING of the Shareholders of THE ASSOCIATED CEMENT COMPANIES, LIMITED, will be held at the Registered Office of the Company at 1, Queen's Road (opposite Churchgate Railway Station), Fort, Bombay, on Friday, the 23rd January, 1953, at 3-30 p.m., to transact the following business:—

1. To receive and adopt the Directors' Report and Audited Statement of Accounts for the year ended 31st July, 1952.
2. To sanction the declaration of a Dividend.

E. C. CALDWELL,
Registrar.

KANPUR, 8*th January*, 1953.

MONEY RATES STEADY

(From Our Own Correspondent)

BOMBAY, 14th *January*

During the week under review, there was no notable change in the conditions of the short-term money market described in this column last week. Interest rates remained steady. Thus, the inter-bank call money rate was the same as that in the previous week, namely, 3 per cent. The same rate was offered for one to six months' deposits, and 2½ per cent. for 12 months. House money was quoted at 2¾ per cent.

From Monday this week onwards, banks appeared to be able to meet the demand from the trade either out of their previous borrowings from the Reserve Bank or out of their funds in overseas offices, as in the case of some of the Exchange Banks. Thus, the position was fairly comfortable.

If the result of this week's sale of three months' Government of India Treasury Bills is any indication, the response to these bills seems to be gradually waning. As against an invitation for Rs. 1 crore, as in the previous week, the amount offered was no more than Rs. 1.21 crores, which fell short of that tendered last week by about Rs. 24,000. The average rate of accepted tenders was Rs. 2-6-9 per cent. per annum, which compares with Rs. 2-6-5 in the preceding week.

A sharp expansion of Rs. 17.32 crores in notes in circulation is the outstanding feature of the statement of affairs of the Reserve Bank of India for the week ended 9th January, 1953, as compared with that for the previous week. Notes held in the Banking Department too show a rise of Rs. 1.59 crores. The consequent increase of Rs. 18.91 crores in total notes issued is covered on the assets side by an increase of Rs. 20 crores in foreign securities and a decline of Rs. 1.09 crores in rupee coin. The rise in the former has been brought about by a reduction in balances abroad. In the Banking Department, the liabilities side reveals a decline in deposits of Governments, those of the Central Government going down by Rs. 2.33 crores and those of the other Governments by Rs. 2.04 crores. A fall of Rs. 4.66 crores in deposits of banks also is disclosed which is obviously due to the spurt in demand for funds on banks. Deposits of others, on the other hand, have gone up by Rs. 1.42 crores. On the assets side, cash balances have improved by Rs. 1.65 crores. Balances held abroad show a depletion of Rs. 16.19 crores. Loans and advances to Governments do not show any worthwhile variation, but other loans and advances have dropped by Rs. 2.54 crores.

The consolidated statement of position of Scheduled Banks for the week ended 2nd January, 1953, as compared with that for the previous week, discloses an increase of Rs. 1.14 crores in demand deposits and a decline of Rs. 1.25 crores in time deposits. Inter-bank borrowings repayable on demand have dropped by Rs. 37.16 lakhs and those of a time nature by Rs. 1.85 crores. Advances have risen by Rs. 4.31 crores and inland bills purchased and discounted by Rs. 3.25 crores. This follows the increases of Rs. 4.68 crores and Rs. 1.85 crores, respectively, noted in the previous week. Investments, which fell by Rs. 5.75 crores in the previous week, have further gone down by Rs. 2.83 crores in the week under review. Cash on hand is higher by Rs. 42.56 lakhs and balances with the Reserve Bank by Rs. 2.49 crores.

The Gilt-edged market was in a cheerless mood during the week under review also. There was no institutional enquiry and business was restricted, with prices generally showing a tendency to decline. 3 per cent. 1953-55 did not make any headway despite the payment of interest to-morrow, the issue was unchanged at Rs. 100-3. 3 per cent. 1957 was placed an anna lower at Rs. 98-8. 3 per cent. 1958, 3 per cent. 1959-61 and 3 per cent. 1963-65 were unchanged at Rs. 98-6, Rs. 96 and Rs. 92-7, respectively. 3 per cent. 1964 was stagnant at Rs. 92-7 and 3 per cent. 1966-68 at Rs. 90-7. 3 per cent. 1970-75 encountered some selling and fell by As. 3 to Rs. 86-7. 3 per cent. 1986 Conversion Loan was unchanged at Rs. 82-13. Some of the State loans, which have been in demand for some time now, however, continued to evoke some enquiries. 4 per cent. 1964 Bombay and Madras loans were an anna better at Rs. 100-6. 4 per cent. 1964 U.P. improved by an anna to Rs. 100-2. Among the Corporation bonds, 4 per cent. 1974 Bombay spurted by As. 8 to Rs 99 and 4 per cent. 1964 by Rs. 7 to Rs. 99-10. 3½ per cent. 1977 rose by As. 8 to Rs. 85. 4 per cent. Bombay State Transport 1964 loan advanced by As. 4 to Rs. 96-6.

In the foreign exchange market, there were some minor variations in the rupee-U.S. dollar rates but, on balance, the rupee showed a little strength. This gain, however, was in consonance with the trend of sterling in the New York market, where the pound improved from $2.80⅜ on 23rd December last to $2.80⅞ on the 6th inst. and, after a setback, to $2.80⅝ on the 8th, regained to stand at $2.81-1/16 yesterday. The rupee, in consequence, showed the following variations:

	23-12-52	8-1-53	9-1-53	13-1-53
SELLING	Rs.	Rs.	Rs.	Rs.

SPURT IN GOLD

(From Our Own Correspondent)

BOMBAY, 14th *January*

The bullion market displayed an extremely bullish trend during the week under review. The strength was more pronounced in gold than in silver. This was due to the dwindling stocks of gold, good demand for gold throughout the country and absence of arrival of smuggled gold. The Commissioner for French India gave permission to the Banque De L'Indo-Chine of Pondicherry for re-export of 1,107,083 ozs. of fine gold imported earlier into the settlement. Further, the French India Government announced that, in future, it would not allot any foreign exchange for the import of gold. Foreign advices indicated that there was a fresh spurt in gold prices in international free markets, the European price for gold, for instance, going up from $37.85 on the 8th inst., to $38.10 per oz. on the 13th inst. All these factors accentuated the bullish fervour that began in the previous week and forced the short-sellers to cover their outstandings. In the result, forward gold rose by Rs. 3 per tola over the week and ready gold by nearly Rs. 4. On account of this spectacular rise in gold, bulls were at one time forced to pay margin and an automatic clearing was also ordered.

Silver also recorded a sizable rise of Rs. 3-3 per 100 tolas over the week, in sympathy with gold and on reports of better offtake in upcountry centres. The increase in price of silver in the New York market to-day from 83¼ cents to 83¾ cents also aided the bullish sentiment.

Silver for forward delivery (February settlement) began in a promising way with a jump from Rs. 152 to Rs. 153-7 and steadily advanced to a high of Rs. 156-10 to-day, the highest level to be touched since 28th October last. The higher level, however, induced some profit-taking and the white metal finished the week at Rs. 155-3.

Ready silver (.996 Mint) was quoted at a premium of As. 4 over the forward rate throughout the week. The floating stocks of silver are estimated at 2,400 bars. The daily average offtake was 35 bars.

Gold for forward delivery in February opened at Rs. 83-13, as against the previous closing of Rs. 83-8, and touched a high of Rs. 85 the very next day. As the closing rate on that day, that is, Rs. 84-14 was more than Rs. 5 above the starting rate of Rs. 79-13 for the current settlement, automatic margin came into force on that day. This, however, did not halt the advance; on the contrary, gold forged ahead further to Rs. 86-6 on Saturday. After a setback to Rs. 84-15 on Monday, it soon resumed its uptrend and moved up to Rs. 87-11 yesterday. With the spurt in prices, automatic clearing was enforced yesterday in both gold and silver and the clearing rates were fixed at Rs. 85-12 for gold and Rs. 155 for silver. To-day, there was a further rise to Rs. 87-15, the highest since 13th October last, but the closing was slightly lower at Rs. 86-8.

Ready gold, which was quoted at a premium of As. 13 over the forward at the close of last week, came to be quoted at a premium of Rs. 2 this morning. But, at the close, the premium narrowed down a little to Re. 1-12. The floating stocks of gold are estimated at 25,000 tolas. The daily average arrivals were 8,000 tolas, while the offtake was 10,000 tolas on an average.

The following comparative table shows the trend of the market during the week under review:

	14-1-53	Highest	Lowest	7-1-53
GOLD	Rs. a.	Rs. a.	Rs. a.	Rs. a.
Ready (.99 fine Mint)	88 4	89 15	84 12	84 5

LEAF GRADES IN GOOD REQUEST

(From Our Own Correspondent)

CALCUTTA, 13th *January*

Steady conditions prevailed during yesterday's export auction where offerings aggregated 54,374 packages. The feature was that, while there were impressive price advances in respect of some types, at the same time others realised values below their output costs. Leaf grades, particularly those with stylish leaf, were in good demand and prices for these were up by an anna. Orange fannings and medium B.O.Ps. were raised by As. 3 from last rates, while commons and low mediums were firm. Thus, good Assam C.T.C. B.Ps. were quoted at Re. 1-14 to Re. 1-15 clean black pekoe Re. 1-6, clean common B.P. As. 14-6 to As. 15, and medium Assam B.P. As. 15-6.

Although moderate demand featured the opening of last week's internal sale, where dusts offered amounted to 14,119 packages, at the time of closing prices moved down. In the result, rates were irregular generally. While the clean grainy and the small neat leafy types of dusts were raised by As. 2 to As. 3, commonest varieties fell by As. 3. Flavoury Darjeelings were steady. Thus, good medium Assam CTC types were quoted at Re. 1-13 to Re. 1-14, medium grainy Assams Re. 1-9, and medium Dooars Re. 1-5-6. Leafy grades were throughout steady, offerings totalling 3,245 packages. Green teas were buyers' favourites.

SPOT COTTON STEADY

(From Our Own Correspondent)

BOMBAY, 13th *January*

It is now a month since the forward market in cotton resumed trading at Kalbadevi. The behaviour of the market, though not disappointing, has certainly been very baffling during the course of this month. While fluctuations have been wide and often erratic, those responsible for controlling its general activity are naturally gratified that the market has not developed a tendency, as feared at one time, of either running away with the prices or hammering them down to the floor levels. In the early stages, the bullish tendency looked as if it would take the bit between its teeth and bolt, but the wise words of the E.I.C.A. President, Mr. Purshotamdas Thakurdas, arrested this development at a very psychological moment. At this stage, there was a reactionary effort to hammer down prices, but this also was arrested and prices have again resumed a more healthy steadiness than on previous occasions. After the February settlement passes off smoothly, the market is likely to stabilise itself and trading in futures is likely to be of a much less hectic nature than during the opening period.

In the spot market, steady demand has continued even though the tendency on the part of some mills not to overburden themselves with stocks of cotton so early in the season is visible. The supply position during the year is not likely to be so easy as to cause a withdrawal of this demand and it is expected that both the supply and the demand will be well regulated over the whole season. The spot dealers, who had entertained hopes of a rapid advance in prices, due to fears of shortage of supplies owing to a much smaller crop than anticipated, are naturally disappointed at the absence of a scramble for cotton on the part of textile mills. From the point of view of distribution and marketing, however, it is a sign of health to have a consistently visible demand all over the season than a rush for buying at one stage with its absence later on. With no imports coming from the dollar areas, steadiness in the spot cotton market is bound to continue for some time. It may be that if Karachi can adopt a more sensible currency and exchange policy with India, there may be a good market in this country once again for American seed varieties grown in Pakistan.

There is little activity on the export front. Because apart from Bengals there is no enquiry for the other exportable varieties. Once the quota for Bengals for export is disposed of, the Government will find it necessary to reduce export duty on Dholleras, Mathias and Oomras also, if it is really keen on exports of these. With export duties reduced, as in the case of Bengals, these varieties are also likely to find ready buyers in certain selected centres abroad. The Government would be well advised, in view of the fall in prices all round, to take this step when a modest demand is still there for these varieties.

The trend of prices in the forward section over the week ended to-day was as follows:

	Opening	High	Low	Closing
I.C.C. Feb. (Rs.) ...	650	661	647½	652
I.C.C. May (Rs.) ...	668	671½	661½	664

The following are the latest quotations from the Sewri market: Vijay (new) Rs. 800; Berar Jarilla (new) Rs. 450-500 (old) Rs. 380-415.

There have been interesting developments also in Uganda. Kampala has considered it necessary to offer more concessions to foreign countries interested in its cotton. The Lint Marketing Board at Kampala has now adopted a new system of sales on a "on call" basis, under which buyers will be able to hedge their purchases at Kampala in the New York market. This new hedging facility, which will allow buyers to make provisional contracts with the actual price-fixing taking place at the buyers' choice at the time of delivery, based on the difference in the U.S. price during the time the contract has been in force, will naturally minimise the risk of buyers in the present highly fluctuating state of world markets and attract more buyers from abroad for the quarter of a million bales still remaining unsold with the Board. Having already bought about 60,000 bales from this source, India's participation in this new system may not be as great as in the previous months, but the U.K. is likely to take advantage of this facility on a much larger scale.

With cotton futures tumbling headlong at New York and cotton producing countries like Egypt, Uganda, Brazil trying to push their cotton in the world markets and giving concessions for it, the Government of Pakistan are hard put to it to devise ways and means of disposing of its cotton at economic rates. With about a lakh of bales of old cotton, which are still left with the Cotton Board of Pakistan for which there are no buyers except at very low rates, this season's cotton is finding it difficult to make any headway. The U.K.'s interest is confined only to one or two varieties and is of a very limited nature. The other Continental countries are all being drawn by Brazil because of the special exchange facilities given by it to buyers of cotton. France has even refused permission for the import of cotton already purchased by its nationals at Karachi. Eastern European countries have also become very lukewarm because of the nearness of the Egyptian market. Karachi has, therefore, once again to court buyers in China and Japan who are cleverly playing Karachi against Alexandria to hammer down prices. With these bleak prospects for Karachi cotton during 1953, the day is not far off when prices there might crash to levels which alone can make large stocks of cotton saleable. The following are the latest quotations from the Karachi market:

N.T. R.G. Rs. 56; S.G. Rs. 59; 289F R.G. Rs. 59; S.G. Rs. 63½; L.S.S. R.G. Rs. 55; S.G. Rs. 58½; 4F R.G. Rs. 54; S.G. Rs. 57; Sind *Deshi* Rs. 50½; Punjab *Deshi* Rs. 49½-50.

From the Indian point of view, the most important development at Alexandria is the reported decision of the Egyptian Government to allow Indian mills as purchasers of Egyptian cotton to have a say in the Alexandria Cotton Arbitration Committee. It is believed that the Government, in order to induce Indian mills to use more Egyptian cotton, would soon agree to have two representatives of the Indian purchasers and consumers of Egyptian cotton to be on the Committee. Compared to Pakistan, the Cairo Government are meeting with greater success in their efforts to popularise Egyptian cotton in other countries. A barter deal with Spain was already reported in this column last week. China is likely to be another big buyer of Egyptian cotton on a barter basis. This form of trading is also likely to be extended to Russia, Eastern Germany and Czechoslovakia. The statistical position with regard to exports at Alexandria so far is satisfactory and it is likely to improve, it some of the deals mentioned above materialise. If the political tangle over the Middle East Defence Organisation is satisfactorily resolved, the U.K.'s interest in Egyptian cotton may also revive in the future. In any case, it looks as if the Egyptian cotton market has turned the corner.

There has been a veritable slump in prices at New York during the week under review. The appraisal of the economic situation which is likely to result from the transition of the Democratic Administration to a Republican one, with sharp internal differences amongst the leaders of the latter party on important economic questions of policy, has led to a feeling of depression. This coupled with absence of export enquiry is mainly responsible for this crash.

The following are the latest available quotations from New York, as compared with those of a week and a fortnight before:

(In cents per lb.)	14-1-53	6-1-53	31-12-52
Spot	32.55	33.10	33.60
March	32.40	33.13	33.78
May	32.94	33.66	34.14
July	33.30	34.02	34.54
October	33.50	33.73	34.22

ART SILK YARN REACTS AT CLOSE

(From Our Own Correspondent)

BOMBAY, 14th *January*

After remaining firm during the first three sessions of the week, the forward section of the art silk yarn market reacted towards the close. Postponement in the announcement of import policy for art silk yarn, strong continental and Japanese advices, reduction of export duty on cloth and encouraging reports from almost all consuming centres provided stimulus to the market in the initial stages. Buying support, as a consequence, ensued and yarn prices rallied substantially.

The improvement noted above could not, however, persist long. For, on Saturday, reaction set in under pressure of profit-taking and reported poor offtake in rayon cloth market. Not only were the previous gains lost, but the closing quotations to-day stood slightly lower than those at the end of last week. 150D January contract advanced from Rs. 729 to Rs. 742 on the 10th inst., but reacted to close lower at Rs. 778, the loss over the week being a rupee. Likewise, February contract, after rising by Rs. 14 to Rs. 745, receded to Rs. 730 to-day.

In the ready section, values remained fully steady. 120 Japan was slightly up by As. 2 to Rs. 4-7, 150 Italy was a shade higher at Rs. 3-10½, 150 Italy and 120 Italy were steady at Rs. 4-5 and Rs. 4-2, respectively.

The import policy for art silk yarn has not yet been announced. The Government, it is reported, is closely studying the situation, in the light of the arrivals of yarn imported against confirmed, but unutilised, licences worth about Rs. 2 crores, and also of yarn to be imported by the Art Silk Mills' Associations. Market expectation is that the import policy will not be declared at least for the next several weeks.

In contrast with the trend of the art silk section, the staple fibre section was in a cheerful mood practically throughout the week. Staple fibre (2×40) January contract rallied 33 points to Rs. 760, although, at one time, it had touched even Rs. 767. February contract firmed up from Rs. 723 to Rs. 740.

The table below gives the prices of art silk and staple fibre yarns quoted to-day, as compared with those on the 7th inst. and 31st December, 1952:

	14-1-53 Rs. a.	7-1-53 Rs. a.	31-12-52 Rs. a.
Art Silk Yarn—			
150D January (per case of 200 lbs.)	728 0	729 0	710 0

2×40 January (per case of 200 lbs.)	760 0	727 0	.. ..
2×40 February ,,	740 0	723 0	.. ..

CASTORSEEDS EASY

(From Our Own Correspondent)

BOMBAY, 14th *January*

As was anticipated, the Government of Brazil decided to free its exchange rate. The decision nerved operators in the castorseeds and oil section in the Bombay market as it did in other Continental markets. The only moderating influence was the reported approximation between the black market rates (prevailing for some time past at which Brazilian exports have been alleged to be taking place in considerable volume) and the free market rates. In other words, there would be no radical change in prices of exports as a result of the decision to free the exchange rate which would become effective shortly. But for this disturbing development, there was no other notable event in the market. Operators were reluctant to enter into commitments, and, therefore, a steep decline was witnessed in castorseeds. Other sections moved in sympathy with these seeds. Consequently, prices disclosed small losses all-round while oil ruled quietly steady.

On exaggerated fears that the Brazilian castor-oil and seeds would seriously compete with those of Indian castor oil in the U.S. and Continental markets, May, 1953, delivery staged a precipitous fall from Rs. 140-8 to Rs. 130-8 thereby registering a loss of Rs. 10 over the week. Madras quality sustained a loss of Re. 1-2 to Rs. 30-6 and F.A.Q. Re. 1 to Rs. 31. There were reports that shippers had sold castor oil commercial quality at 19.20 cents to U.S. and at £166 for B.S.S. and at £154 for commercial quality to the Continent. Operators awaited the U.S. and Continental reactions to the Brazilian decision to free its exchange rate. It was felt that the Government of India should keep a close watch on the developments and be ready to reduce export duty on castor oil, if Brazilian competition were to turn as acute as to undermine Indian exports. Castor oil I Pressure was placed at Rs. 18-4, as against Rs. 18-14 and Commercials at Rs. 17-4, as compared with Rs. 18.

The groundnuts section ruled quiet. Bold ready lost As. 4 to Rs. 32-4. Business in Khandesh quality was done at Rs. 32-8, as against Rs. 32-12. There is, however, no prospect of the easiness developing further in view of the small crop and encouraging export demand. Business in H.P.S. was being put through with Canada. It is gathered that a major portion of the groundnut oil quota for the first quarter has been covered. Groundnut oil ready ruled steady at Rs. 17-4 and railway receipts at Rs. 17.

Business in linseeds was very limited. Operators have become tired of representing to the Government regarding the need for reduction in export duties and have almost reconciled to the situation. Bold ready fell by As. 2 to Rs. 27-8. Satnas were lower by As. 4 to Rs. 26-12. Linseed oil was, however, unchanged at Rs. 14-8.

The following table shows the prices of oil-seeds and oil on the 13th inst., as compared with those at the close of preceding two weeks.

	13-1-53 Rs. a.	7-1-53 Rs. a.	31-12-52 Rs. a.
Groundnuts—			
Bold Ready New (per cwt.) ..	32 4	32 8	32 8
Khandesh New (per cwt.) ..	32 8	32 12	33 0
Linseed—			
Bold Ready (per cwt.) ..	27 6	27 8	27 0
Castorseeds—			
May (per candy of 5 cwts.) ..	130 8	140 8	143 0
Madras (per cwt.)	30 6	31 8	33 0
Groundnut oil—			
Ex-mill Ready (per quarter)	17 4	17 4	16 14

STRONG GENERAL DEMAND FOR TEA

(Messrs. Forbes, Ewart and Figgis Ltd.)

COCHIN, 10th *January*

Sale No. 1.—There were approximately 13,00,000 lbs. on offer in sale No. 1 which was held on Tuesday, 6th January. Quality generally showed improvement and there were some useful flavoury high-grown teas on offer. From the outset there was a very strong general demand for all types. Commonest kinds advanced by As. 2 to As. 3, whilst medium brokens were irregularly As. 3 to As. 4 dearer. Good liquoring brokens were As. 2 to As. 3 dearer, with improved quality sometimes as much as As. 8 above last prices. Fannings met a particularly keen market and were occasionally as much as As. 5 dearer. Whole leaf teas were well supported at rates As. 2 to As. 3 higher than last prices.

The following were the quotations:—

	1953 Rs. a.
Low grown Travancore B.O.P.	1 2
Medium grown Travancore B.O.P.	1 8
Anaimallais B.O.P.	1 14
Best liquoring Nilgiris B.O.P.	3 2
Well-made black leaf	2 1 to 2 2

London Market:—Strong demand all descriptions. Medium Assam brokens 3*d.* dearer. Common brokens and fannings generally 3*d.* to 6*d.* higher.

Colombo Market: 5,250,000 lbs. Quality improving. Active and dearer demand all grades. Tip very strong.

Calcutta Market.—Export.—48,000 packages. Good general demand with exception of Assam broken pekoe. Rates generally dearer, especially fannings, tippy teas and whole leaf grades, which were often As. 2 to As. 3 higher. Where Egyptian demand was pronounced rates were even higher.

Dust.—14,000. Stronger general demand. Most types are irregular As. 1 to As. 1-6 dearer.

Export Quota.—Although business has been done in the past week at 3 pies to-day's quotation stands at 3½ pies sellers, 3 pies buyers.

Forthcoming Auctions.—Sale No. 2 will be held on Tuesday, 20th January, 1953.

As we go to Press, Messrs. Forbes, Ewart and Figgis wire:

"*Dust Sale A.*—3,75,000 lbs. Market irregular. Milled and fine dusts As. 2 to As. 3 dearer, others about steady."

JUTE PRICES LOWER

(From Our Own Correspondent)

CALCUTTA, 13th *January*

Mills gave limited support to the raw jute market during the week under review, but prices remained at low levels. Assam bottoms changed hands at Rs. 23 for January-February delivery, Pakistan jute being quoted at Rs. 28. Murshidabad tossa was dealt in at Rs. 21, *jungli* being enquired at Rs. 18-4 and *bimli* at Rs. 17-8. Pucca bales firsts were priced at Rs. 140. Stockists and cultivators would welcome a greater measure of support, but the position of mills themselves is embarrassing. They have got stocks of the raw material for about two months' consumption, and the fact that a portion of the daily output of mills is going to stocks, controls purchases of the raw material by mills. Faced with such a situation, there seems no surprise in the demand put forward by the Jute Balers' Association for permitting exports of raw jute. The Association's demand carries with it a sense of fairness and modesty in that it only asks the Government to withdraw the export ban as far as *bimli* and *mesta* qualities are concerned.

Bimli and *mesta* varieties are two of the poorer qualities available in plentiful quantities in this country, and are generally mixed with superior types before mills can consume them. Since the availability of these two varieties can be said to exceed domestic requirements, the fixation of a small export quota will be considered a great relief both to the balers and cultivators, in addition to earning foreign exchange. If and when exports are permitted, there is, of course, the danger of superior varieties being mixed with *bimli* and *mesta* and exported as the two inferior types. Such a situation can be prevented by a suitable administrative machinery which should scrutinise consignments minutely at the port of embarkation. Costs for the functioning of such a system can be met from the export duties. Foreign requirements of these two varieties would also be small, so that whether an export quota is fixed or not, large exports are overruled and no domestic shortage can develop on this account.

The jute goods market was equally weak, and in the absence of business, the recovery reported in our last report proved only a temporary phase, as during the week under review, rates stuck to a declining trend. From Rs. 97-8 B twills leaped down to Rs. 94-8 and forward quotations eased by two points. Hessians 40" 10 oz. 11 porters ready were transacted yesterday at Rs. 42-2 f.a.s., representing a decline of Re. 1-4 during the week. The f.o.b. rate was Rs. 50-10. Nine porters 40" 8 oz. could interest buyers only at Rs. 34 f.a.s. and at Rs. 40-14 f.o.b. The publication of December-end stock figures of jute goods with mills which at 115,500 tons showed an increase of 11,100 tons compared to the previous month, was an additional factor which invited dullness and made buyers hesitate.

That stocks of jute goods are increasing and foreign buyers are not taking as much as they should or could have been cited as conclusive causes resulting in a demand for a reduction of the export duties, put forward by the Gunny Trades Association. The case for revision has naturally been put forward, and before turning down the same Government would be advised to give weight to all aspects of the current trends in the gunny trade. No doubt, on the last occasion when a drastic revision to Rs. 275 a ton on hessian and Rs. 175 a ton on sacking took place, Government had made the market understand that that revision was final. However, circumstances have considerably changed since then, and the desperate situation now prevailing needs a desperate remedy. A reduction in the duties even for a temporary period would, therefore, be welcome.

METALS DULL

(From Our Own Correspondent)

CALCUTTA, 13th *January*

Dull conditions prevailed in the local metal market during the week under review, and prices moved down. Lack of business and of consumers' interest was the main cause while the fluctuations in the prices of zinc in the London market was a factor which made operators to adopt a policy of buy less and watch. Mercury at Rs. 520 a flask showed a further decline, but the recession should be considered natural after the recent weeks of hectic activity. It is quite possible that the rate may again move up following a correct appreciation of the unutilised portion of the re-export quota. Electrolytic copper eased to Rs. 184 from Rs. 187, but stockists were not alarmed at this decline which was attributed to the satisfactory stock position of consumers for meeting their day-to-day requirements. Tin at Rs. 626 lost as much as ten points. Star metal antimony, although lower at Rs. 225, failed to attract buyers' attention. Dealers in zinc were alarmed at the falling rates in London, and the local quotation was featureless at Rs. 66-8. Lead fell to Rs. 68 from Rs. 69.

BOMBAY'S FOOD POSITION DISQUIETING

(From Our Own Correspondent)

HAPUR, 12th *January*

The long-awaited State Food Ministers' Conference was held this week and dispersed on the second day. According to responsible quarters, it did not produce any finality regarding the "food budget" for the current year. Mr. Kidwai evidently won the second round in the food battle. The Conference unanimously endorsed his policy of relaxation of food controls, wherever possible. All the Ministers seemed to agree that this policy, fathered by Mr. Kidwai in the teeth of the opposition of the Planning Commission and orthodox economic opinion, had conferred real benefit on the people. It is reported to have been agreed that the import target, is not to exceed, in any case, a maximum of 30 lakh tons, including 6 lakh tons rice and 5 lakh tons milo and coarse grains. The rice imports are exclusively for building up reserves and so, only 24 lakh tons of imports plus whatever is forthcoming from the surplus States—only 3.7 lakh tons have been offered so far—will be available for allocation to the deficit areas.

Addressing the Conference, the Prime Minister said that, though the need for imports still existed and near-famine conditions prevailed in some areas, by and large, the position was much more hopeful than it was a year ago. He was hopeful that, within the remaining three years of the duration of the Five-year Plan, the country would have completed the task of self-sufficiency in food.

The food position in U.P. continues to be quite satisfactory, but, recently, there has been steady

STOCK & SHARE QUOTATIONS

Abbreviations:—D=Deferred shares. G=Guaranteed shares. P=Preference shares. P.O.=Preferred Ordinary shares. R=Rebate shares. Y=Accounts published yearly. H=Accounts published Half-yearly. Q=Accounts published once 15 months. T=Company has Debentures. R.L.=Reserve Liability on shares. N=Nominal Quotation. i=Interim Dividend. f=Dividend for first half-year, y=Dividend for the year. x=Ex. Dividend. c.d.=Cum. Dividend.

Shares:—If a company has different classes of shares—as, for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under "Paid-up Per Share."

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12 indicate the months of June and December, respectively "Reserves" includes general and other reserves and all other funds which a company may have as also depreciation on block items, when this is charged to separate account "Block" represents actual cost of land, buildings, machinery, and all such other items on which depreciation is allowed, less sales, if any, and stands for the gross figure except where otherwise indicated.

Dividends:—Dividends for completed years are calculated at per cent. per annum, but, where quoted for portion of a year, they represent percentages of the dividend on the paid-up share value. For companies closing the books half-yearly in the first three months of the year, and for companies closing their books yearly during the first half of the year dividends are shown as for the previous year.

* The following explanatory notes relate to the abbreviations and marks shown on page 96 in the debentures section:—

(a) Option to repay on six months' notice, on any interest date after 31st December, 1951, at 102 per cent Also redeemable out of a cumulative sinking fund of 1½ per cent. per annum (commencing in 1938) by drawings at 102 per cent. or by purchase at or 102 per cent.

(a) Option of repayment at any time at 3 per cent. premium.

(b) Bearer bonds of Rs. 1,000 each repayable at par.

Bearer bonds of Rs. 1,000 each repayable on 31st July, 1959.

(d) Bearer bonds of Rs. 1,000 each with option of redemption in whole or in part at par on 30th June, 1952, or on any subsequent interest date at one month's notice.

(e) Returnable on or after 31st July, 1950, at Rs. 102-8 or at par after 31st July, 1955, on six months notice in each case

(f) Bearer bonds of Rs. 1,000 each with option of redeeming on 3 months' notice at ½ per cent. premium, after 1st March, 1954, but before 1st March, 1957, and 1 per cent. premium on or after 1st March, 1957

(h) Option of redemption on or after 1st July, 1949, at par.

(i) Option of repayment at any time at par at any time on or after 30th June 1947 on six months' notice

MARKET GOSSIP

(Concluded from page 55)

below gives the profits of the individual banks included in the group total:

(£ million)

	Bank			Profits Dis.	1952	1951	1950
Barclays				(14 p.c.)	2.14	1.91	1.97
Lloyds				(12 p.c.)*	1.96	1.81	1.76
Midland				(16 p.c.)	2.07	1.92	1.99
Nat. Prov.				(16 p.c.)†	1.53	1.47	1.45
Westminster				(18 p.c.)	1.44	1.41	1.47
District				(18¾ p.c.)	0.52	0.51	0.51
Martins				(15 p.c.)	0.74	0.72	0.73
				Total	10.41	9.76	9.89

* 12 per cent. on 'A' shares and 5 per cent. on 'B' stock.
† 15 per cent. in earlier years.

* * * *

Despite the increase in profits, the British banks, true to their tradition, have followed a conservative dividend policy; they have only maintained the dividends. The solitary exception to this general tendency is, however, provided by the National Provincial which has increased its dividend rate from 15 per cent. to 16 per cent. This created quite a flutter on the London Stock Exchange, for the operators were inclined to see in this decision some hopes of an increase in the dividends of Midlands and Lloyds which came out with their results only a few days later. When these two banks announced the same dividends, the operators were, of course, disappointed. But then, the National Provincial's decision to raise the dividend has created a controversy. Many hold that it was unwise, and that since the banks are creators of credit, they ought not to take advantage of a rise in interest rates, which the Government takes in the national interest, to distribute higher dividends. Those who support the National Provincial, however, ask why banks' shareholders alone should be compelled to remain content with fixed dividends, while all other classes of shareholders are allowed to reap the harvest of higher returns when the going is good.

* * * *

The Government of Brazil has upset the trend of at least two commodity markets in the world by juggling with its foreign exchange rates in order to facilitate disposal of its large stocks of cotton and castorseeds and oil. The Brazilian Government proposes to so amend its foreign exchange rules as to permit the sale of these two commodities at lower prices, under a system of multiple exchange rates. Total stocks of cotton with that country are believed to be as large 900,000 bales of 500 lbs. each and, if these are to be offered at attractive rates, it is bound to tell on the offtake of American cotton. It is this possibility that took the prices of cotton in New York to a low level early in the week, when March position touched 32.29 cents per lb. Currently, the rate is a shade higher at 32.88 cents. but, over the week, it shows a loss of 0.47 cent and the tone of the market is quiet. The loss is as high as one full cent per lb., or $5 per bale, as compared with the rate at the close of 1952. The drop in U.S. cotton has adversely affected the other cotton markets, more especially the Karachi market, where the rates have touched new low levels for the past five years. Still buyers are holding back in the belief that, with the supply of cotton in Pakistan being very large and with the Pakistan Government's capacity to support the market having been crippled, there is bound to be a further fall in prices.

* * * *

Although the present prices of cotton in Karachi are the lowest since Pakistan came into being, they are not attractive enough to Indian mills, the only prospective buyers now who can absorb a good part of Pakistan cotton. The rates are still about Rs. 330 to Rs. 400 higher than those for the comparable varieties of Indian cotton. It is true they are a little cheaper than East African cotton but the latter is far superior in quality to Pakistan cotton. The only way, therefore, that Pakistan can dispose of its huge surplus of cotton is to devalue its rupee and bring it in par with the Indian rupee. The earlier it does so the better, for delay may result in the loss of the Indian market also, for the Indian mills may, in the meantime, cover their needs with other countries. In the domestic cotton market, prices of better staple varieties have hardened a little, in refreshing contrast to the general downward trend in other parts of the world. This is due to the cessation of issue of licences by the Government of India for imports of cotton from the dollar area and to the increase in the output of cloth to a record high level—426 million yards—in December, 1952. Further, it is stated that stocks of Indian cotton with mills are not large and that the 1952-53 crop will not be more than 33 lakh bales. These considerations too have helped the spot section for better varieties of Indian cotton to rule firm. The futures market, however, has been ruling a shade quiet, because the supply of tenderable varieties of cotton is relatively greater than the demand. Export enquiries for the permitted varieties of short-staple cotton continue to be poor, in view of the fact that the comparable varieties of Pakistan cotton are cheaper. Certain sections of the trade have, therefore, renewed their agitation for a reduction in the export duty on varieties other than Bengals also, such as Mathias and C.P. Oomras.

MARKET REPORTS

(Concluded from page 85)

rise in wheat, gram, peas and rice prices. Since the U.P. Government's start of rice procurement, there has been slight advance in prices. Wheat supplies in the free markets continue to be poor. Peas and grain stocks in West U.P. are poor, while there is good demand for both. [illegible] while there is good demand. The food position in West Bengal in 1953 is expected to be definitely more comfortable as compared to last year. The new levy system of procurement, which came into operation from the 1st inst., has eliminated many irksome aspects of the previous system.

Reports from Madras indicate a steady decline in prices. This is officially explained as being due to a bumper rice crop in some parts of the State and free flow of rice in the free market zones constituted as a result of decontrol.

GOOD DEMAND FOR SUGAR

(From Our Own Correspondent)

HAPUR, 12th January

Free sugar markets remained generally steady and very active. Demand was good. The recent release of a big quota of sugar for free sale and the Government's efforts to accelerate movement of sugar stocks have tempted stockists in deficit areas to replenish their depleted stocks. Railway loading difficulties still continue at some places, but there is the hope that sugar scarcity patches will be removed before long.

Local stocks of free sugar at Calcutta were meagre and sellers were anxious to liquidate their old commitments as early as possible. Buyers for Madras were reported to be active; but most of the purchases were confined to near needs, as a large quantity of North Indian sugar was expected to reach there shortly. The release of free sale quota had a very damping effect on the Bombay sugar market.

The following are the average quotations in different markets: Ambala Rs. 29-15, Amritsar Rs. 30-3, Delhi Rs. 30-10, Jullundur Rs. 28-11, Agra Rs. 29-15, Hapur Rs. 28-8, Kanpur Rs. 21-1, Mathura Rs. 29-11, Meerut Rs. 28-10, Muzaffarnagar Rs. 27-12, Patna Rs. 29-7, Calcutta Rs. 29-12, Gauhati Rs. 35-8, Madras Rs. 32-14 and Bombay Rs. 34-3.

Gur markets remained quiet to steady. Production is in full swing these days and there are normal arrivals in the markets. There has not been any big stock building in West U.P. *mandies* and despatches have been fairly regular. Since the sugarcane crop was extensively damaged in the western districts, it is expected that *gur* arrivals may not be maintained at present level for any length of time. The latest quotations in different markets are: Delhi Rs. 12 to Rs. 13, Mogha Pansera Rs. 13 to Rs. 13-8, Khurpapar Rs. 13-12, *desi* Rs. 12 to Rs. 12-12, Ludhiana Pansera Rs. 13 to Rs. 14, Meerut Pansera Rs. 12-4 to Rs. 12-8, Khurpapar Rs. 12-8 to Rs. 12-12, Khurja Rs. 12 to Rs. 12-12, Agra Rs. 14, Hatras Rs. 12 to Rs. 13-8, Kanpur Rs. 12-8 to Rs. 13, Ghaziabad Rs. 12-12 to Rs. 13, and Hapur Rs. 12-14.

KIPS STEADY

(From Our Own Correspondent)

MADRAS, 12th January

Arrivals of kips have been moderate and the market has ruled steady. Clearances have been small. Enquiries have been selective and superior marks have met with good call. Arrivals of buff calf have increased, but demand has been poor. There was some demand for tanned cow calf and buff hides at reduced prices from the U.K. and for buff calf and lights from the U.S.

Prices of tanned goat and sheep have been dull, despite heavy clearance by shippers. In the next London Public Auctions, which commence on the 26th inst., 330,000 tanned goat skins and 450,000 sheep will be available for sale. Raw skins market has ruled steady.

HIDES PRICES RECEDE

(From Our Own Correspondent)

KANPUR, 11th January

During the week under review, there was a downward tendency in prices of all the important categories of hides and skins. This was the result of the prevailing general slump in the market. The arrivals were up to expectations. The fall in the prices of wet salted cow is of particular significance, because, already, the fresh weekly supplies have been comparatively small, in view of the movement for banning cow slaughter. Latest quotations are: Wet salted cow 1st grade Rs. 290, 2nd grade Rs. 200 and 3rd grade Rs. 160 per score; wet salted buff 1st grade 1 lb. 13 ozs., 2nd grade 2 lbs. 4 ozs. per rupee; goat skins 1st grade Rs. 270 and 2nd grade Rs. 230 per 100 pieces; sheep skins Rs. 250 per 100 pieces.

LINSEED STEADY

(Messrs. A. Bradley & Co.)

CALCUTTA, 12th January

Trading has been reported on a fair scale and a steadier tendency has prevailed during the past week with a generally firm undertone apparent throughout. Upcountry markets are keeping steady and arrivals to this centre have been rather scarce; ready stocks are, therefore, low, and sellers appear to be reserved even for forward delivery. Local crushers have been showing a fairly keen interest, but trading has, on the whole, been limited. Activity in the oil section has been exceedingly small and confined to small requirements from local buyers.

The latest quotation is as follows: Ready Rs. 20-8 per maund.

PROBLEMS FACING BRITAIN AND INDIA

(Concluded from page 67)

are more in harmony with your own atmosphere and problems than would be the case with experience in the United States and other countries.

"Beyond this, there are the possibilities of direct practical help. As to these, I will only give a bare statement of some of my own personal beliefs. I believe that our two countries can greatly help each other by working for some measure of co-ordination in their economic and production policies over the next few years. I believe, further, that it will be of advantage to both if this co-ordination extends over the whole sterling area. I believe it will be of advantage to India to remain a member of the sterling area, and I believe it will be of advantage to the sterling area countries that she should do so.

"I believe that the pace of industrial development in the Five-year Plan will be greatly affected by the extent of the facilities which will be available for the import of capital goods. I believe, further, that Britain—in spite of the tremendous strain imposed now upon her economy by the rearmament programme—will be able, over the next few years, to develop strength to help India with the supply of capital goods for Indian industrial development. I believe it is of true benefit to India that some of our first-class industrial companies—and I do not want to see any but our really first-class people coming here—should continue the process of establishing themselves in India, since I believe that to have them working side by side with you will give your people the benefit of learning something from what is best in the practical experience and methods which the best of our industrial companies have developed.

"Finally, I see a more significant way in which our mutual interests are interconnected. I believe, in fact, that the chief way in which we can help each other is by each of us making a success of our own form of society. We are both of us striving to develop the same system—a system which one can call a mixed economy. We are both of us trying to ensure central direction for the sake of a clearly conceived national purpose, while, at the same time, preserving scope for individual enterprise and initiative. For both of us, success depends on two things—first, the extent to which central direction can be given, without imposing over-centralised rigid controls, and, secondly, the extent to which individual enterprise and initiative is ready of its own free will to work for the national purpose.

"We are both seeking a middle way between two extremes on either side. I believe profoundly it is the right way—the way which offers the best hope for true progress in the modern world. We are both seeking, too, to preserve a right scale of values and to put material production in its proper place, not as an end in itself but merely as one of the conditions for true social progress.

"I will venture one concluding reflection. We, in Britain, have no longer the leadership in power and wealth which marked our position in the past, but, looking back over the nineteenth century, I believe it was only partly because of our power and wealth that our ideas and systems had such an influence on the world. It was also because of the very vigour of those ideas and the intensity of the life which produced them.

"Looking around to-day and casting one's eyes towards the future, it seems to me that a new path of opportunity is opening up. I believe that, if we in Britain can find a way of sympathetic collaboration with the new Independent India, if working as friends together, interchanging our ideas, and sharing our ideals for human liberty and spiritual values, we can together find workable solutions for the material problems of our times, then we can build something quite new in human history and influence the civilisation of the whole world—a world in which the old racial divisions will be forever gone. That is a chance which our past history—whatever faults and errors it may contain—has given us. Let us not throw that chance away."

NEW MACHINE TOOL FACTORY

The Machine Tool Prototype Factory, which was opened at Ambarnath, Bombay, early in the week by the Prime Minister, Mr. Nehru, has a vital role to play in the development of new defence weapons and equipment in India. It is claimed that it is not only the first of its kind in India but that it compares favourably with similar factories in Europe and America both in design and equipment. It will help save the large amount of foreign exchange now being spent on imports of machine tools for defence purposes.

The erection of this factory within a period of three years is a notable ach

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent Who else must sweat and toil and gain but scanty fare."
William Blake

VOL. LXXXVI. No. 2190 BOMBAY, 31 JANUARY, 1953 PRICE Rs. 1/8

SOME PROBLEMS OF COAL INDUSTRY

IF there is any industry in India to-day which is unanimously of the opinion that price control over its product should not be abolished on any account, it is the coal industry. This may sound surprising to many, especially because producers have been complaining that the prices fixed by the Government are unremunerative, two main reasons which are generally mentioned in support of the case for abolition of controls. But anyone who carefully studies the present economic position of the coal industry will find that there is considerable force in the industry's plea for the continuation of price control. And to those who are keen on knowing the relevant facts about this industry we commend the memorandum submitted by the Indian Mining Association (I.M.A.), Calcutta, to the Government of India last week.

The main reason why coal producers want the retention of price control is that their experience under a controlled economy has been far happier than under free economy. Ever since price control was introduced about a decade ago, this basic industry has been enjoying a large measure of stability, in refreshing contrast to the cut-throat competition and constant price fluctuations which characterised the affairs of the coal industry during the pre-war years. But for this relative stability, it is doubtful whether production would have recorded a progressive increase as it has done. Ten years ago, production of coal was just under 23 million tons; now, it is running at the rate of 36 million tons per annum, an increase of 13 million tons or 56.5 per cent. It is true that a large part of this increase includes coal of lower grades which the consumers have had to accept, thanks to the control on distribution also. But that is a price which the country has to pay in the interest of the utilisation of the available coal resources and of maintaining employment of labour. It is, perhaps, not sufficiently known that much of the coal found in this country is a good deal inferior to what is mined in the principal coal-producing countries in the world. That is what Nature has endowed us with and there is no getting away from the fact that we will have to make the best use of it.

If the existing controls, more especially price control, were removed, the industry would again be involved, as the I.M.A. has rightly warned the Government, in a vicious circle of depression, collieries exploiting their resources in a reckless fashion and increasing production in order to lower rising costs, the lower costs leading in turn to fiercer competition and reduced selling prices and the circle being completed by the encouraging effect of lower prices on further exploitation and yet fiercer competition. As a result of this competition, consumers of coal will doubtless benefit, but the benefit will only be temporary. For, in the competition that will ensue, uneconomic and marginal units will finally succumb and production will shrink, resulting, once again, in scarcity of coal and that at a time when the country will require more coal to meet the needs of increased production in all spheres under the Five-year Plan. And when output of coal declines below the demand, prices will rise again compelling reintroduction of controls. Then, there is also the human factor to be taken into consideration. Competition of the type referred to above will ultimately lead to heavy unemployment and suffering to workers engaged in this industry. Considering all this, even consumers of coal will admit that the continuation of price controls on the industry is the lesser of the two evils.

It would, however, appear that the industry's anxiety to see that price control is not abolished and its notable production performance are being exploited by the Government. Otherwise, it is difficult to appreciate the failure of the authorities to comply with the request of the industry for the restoration of the cut in prices which was voluntarily agreed to by it in November, 1949, in response to an appeal from the Government for assistance in its efforts to combat the inflationary pressure then prevailing. This request has been put forward by the industry several times before and, though the Government has recognised the justice of this demand, it has so far failed to restore the cut. Nor has the Government fulfilled its promise to give relief in such matters as the rationalisation of foodgrain concessions to colliery labour. Moreover, while the Government has restored similar cuts undertaken by other controlled industries, notably cotton textiles, it persists in refusing the coal industry's demand. This is doubtless unfair discrimination. The injustice of it has been enhanced by the fact that the cost of production of coal has increased very considerably since the cut in selling price was effected in November, 1949. The main factors that have led to this increase in costs are: (a) sharp rise in the cost of distributing foodgrains at concession prices to colliery labour and their families and dependents, the difference between purchase price and issue price of foodgrains being as much as Rs. 18 per maund; this is resulting in a loss to the industry of Rs. 6 or Rs. 7 lakhs per week, that is, about Rs. 3.5 crores a year; (b) increase in the cost of benefits following liberal interpretations of the provisions of the Conciliation Board Award; (c) an increase of about eight or nine annas per ton in the price of colliery stores; (d) higher railway charges; and (e) the burden of State taxes and cesses. It will thus be seen that the industry's case for the restoration of the cut in prices is irrefutable.

The economic position of the coal industry has deteriorated to such an extent that it cannot now bear the cost of liberal concessions in regard to the supply of foodgrains which it undertook to provide during the war years as part of its contribution to war effort, and the generous bonus scheme, agreed to in the relatively more prosperous days of 1947, both of which constitute a great drain upon the industry's resources. Further, these facilities are being provided to labour in a manner which has no bearing on the output per worker. Rations at concession rates are being issued not only to the worker but also to his dependents. This has led to an enormous influx into the colliery areas of hangers-on who are there merely for the benefit of food concession; in fact, this amounts to the worker and his family being fed at the colliery's expense. The second defect in the present practice is that foodgrain concessions are linked only to attendance and not to output. This has, to a large extent, destroyed the will to work and boosted the turnover of labour, thereby directly contributing to diminishing output per man-shift. Consequently, the I.M.A. feels convinced that the only effective answer to this problem is to link the issue of foodgrains to production. There need be no difficulty, in its opinion, in evolving an equitable and workable formula for this purpose. Indeed, it has a formula ready which is on the following lines:

"A basic minimum wage will require to be averaged by the labourer during the working week. The worker will receive one day's cash concession and free rice (subject to a maximum of six such payments in a week) for every unit of basic wages earned in the week, irrespective of the number of days he works, i.e., an overburden coolie on an assumed basic of As. 8 will receive cash concession and free rice for every As. 8 basic he earns. If he works hard and achieves the figures in four days, he will still get the full week's cash concession and free rice. It is, of course, clearly understood that no worker will be penalised for not producing a basic minimum by reason of non-supply of tubs, breakdowns, etc."

The foregoing proposal is based on the principle that "a worker should be asked to do a fair day's work for a fair remuneration"—a principle which is at once equitable and just. This very same principle underlines the I.M.A.'s demand that bonus to colliery labour should be linked directly to production and should be paid annually instead of quarterly. These suggestions will, of course, not be agreeable to workers. Nevertheless, it is to be hoped that labour will recognise that everyone has to make some sacrifice, if the Five-year Plan has to succeed, and that its refusal to collaborate with management in improving productivity and bringing down costs will bring disaster to itself and to the country as a whole. It will do well to appreciate that, at one time, the employers obliged it by agreeing to the present methods of paying foodgrain concessions and bonus, even though they knew full well that they were accepting something which was wrong in principle. The time has now come for labour to reciprocate this spirit of accommodation. The alternative will be loss of occupation for a large number of workers. Already many collieries are working at a loss and, unless the Governments, which have been imposing more and more burdens on the industry without regard to its capacity to bear, and the workers, who are not putting forth their best, realise that there is a buyers' market now and suitably readjust their demands on the industry, these units will eventually be forced to close down. It may be that some units are still working at a profit and paying decent dividends. But these are exceptions and, therefore, the experience of these companies should not delude one into the belief that the industry is prosperous. It must be borne in mind that the industry's margin of profit should be sufficient not only to pay a

reasonable dividend to shareholders but also to provide adequate sums for investment on development. If this criterion is applied to the coal industry, it will be found that the industry is "most unprosperous" at present. A recent analysis of the working results of 50 coal companies made by the I.M.A. revealed, we are told, that the ordinary dividends paid by them amounted to no more than 2½ per cent. of their total working funds. If this state of affairs is allowed to continue in the case of an industry the assets of which are of a wasting nature, there is no exaggeration in the I.M.A.'s melancholy conclusion that the coal industry "seems destined for permanent depression and impoverishment."

INSURANCE IN 1951

FOR Indian insurers, the year 1951, as the *Indian Insurance Year Book* 1952, published this week, shows, was by no means a prosperous one. New life business declined, as compared with 1950, by Rs. 1.92 crores to Rs. 116.46 crores; consequently, the premium income from this business was also lower by Rs. 8 lakhs at Rs. 6.38 crores. It is significant that, during the same period, the foreign insurers were able to show an increase of Rs. 2.76 crores in their new life business which improved to Rs. 16.46 crores, yielding a premium income of Rs. 96 lakhs, an improvement of Rs. 14 lakhs over premium income from new business in 1950. The net effect of these changes is that new business done in 1951 reached a total of Rs. 132.9 crores, as against Rs. 132.1 crores in the previous year. It now looks as though the new life business will not again reach, in the foreseeable future, the record level of Rs. 144.3 crores, touched in 1946, unless there is a steady improvement in economic conditions in the country, especially in the incomes of the middle class.

Indian insurers had, at the end of 1951, on their books a total life business of Rs. 677.02 crores, with a premium income of Rs. 33.32 crores. The corresponding figures for non-Indian insurance companies are Rs. 115.92 crores and Rs. 6.42 crores, respectively. This is by no means a very high level for a country of India's size. Actually, this level gives a low *per capita* insurance of about Rs. 25, as against Rs. 1,600 in the U.K. or Rs. 7,100 in the U.S. It is not, of course, true that insurance levels between countries are strictly comparable, in view of the fact that there may be large sections of people who just do not take out insurance because they are oblivious of its benefits. At any rate, this is true of the underdeveloped countries where insurance companies have to face two sets of problems—the problem of low living standards which prevent the people from taking out insurance on their lives or on the lives of their dependents, and of selling insurance in outlying areas to people who have neither knowledge nor appreciation of the value of insurance.

Against this background, the question of making insurance attractive to the prospects through cheapening the premium rates assumes special significance. The movement towards lower premium rate is gaining momentum in the West. Whether a similar movement could be initiated at all in this country would depend on three factors which influence premium rates, namely, mortality experience, interest yield and expense ratio. Some of the recent valuation reports of the more well established Indian insurers shows that their mortality experience is much better than what it was formerly. The latest *Year Book* throws, as usual, some new light on the changes in interest yield and expense ratio. Experience in respect of both these factors is definitely encouraging. The net rate of interest realised on mean life insurance funds by Indian insurers in 1951 was as much as Rs. 3.30 per cent. as compared with Rs. 3.16 per cent. and Rs. 3.05 per cent. in 1950 and 1949, respectively. Their expense ratio was also lower at 26.8 per cent. as compared with 28.9 per cent. in 1950 and 29.2 per cent. in 1949. It is noteworthy that the smaller Indian insurers have been able to effect much larger reductions in their expense ratio, thanks to the statutory restrictions on expenses. Thus, the average expense ratio of the smaller insurers—that is, after excluding the expense ratios of six insurers having the largest premium income—was 28.2 per cent. in 1951, as against 32.5 per cent. in 1950 and 33.2 per cent. in 1949. All available indications suggest that the experience of insurers in 1952 in respect of both interest yield and expense ratio must have been even better.

The assets of Indian insurers of all classes have now reached an impressive total of Rs. 249.82 crores, of which the major portion, namely, Rs. 141.09 crores is held in Government securities and Municipal and Port Trust and Improvement Trust securities, the investments in Indian Government securities alone being Rs. 121.60 crores. The balance represents other investments, such as mortgages on property, investment in shares of Indian companies and in land and house property, cash and deposits.

Although the report deals almost exclusively with the trends in insurance business during the year 1951, the section dealing with the number of insurance companies registered under the Insurance Act gives relatively more recent information. Thus, the number of insurance companies, as on 7th October, 1952, was 324, of which 222 were Indian and the rest non-Indian companies. Of the Indian companies, 49 were engaged in life and other classes of business and 59 in purely non-life business. Unlike in the life business, Indian general insurers were able to secure a larger volume of business than in 1950 in all branches of general insurance business—fire, marine and miscellaneous insurance. Thus, the fire income improved from Rs. 5.54 crores to Rs. 7.12 crores, marine income from Rs. 2.03 crores to Rs. 2.48 crores, and miscellaneous income from Rs. 2.98 crores to Rs. 3.49 crores. The experience of non-Indian insurers in the field of general insurance, however, was not so happy as in the sphere of life insurance. Thus, as compared with 1951, the volume of business secured by them declined from Rs. 2.45 crores to Rs. 2.27 crores in fire business, from Rs. 1.80 crores to Rs. 1.64 crores in marine business and from Rs. 1.81 crores to Rs. 1.24 crores in miscellaneous business. The income of all insurers, both Indian and non-Indian, from each of these three sources was Rs. 9.39 crores, Rs. 4.12 crores and Rs. 4.85 crores, respectively. The claims experience in fire insurance was unchanged; the claims ratio was 31 per cent., the same as in 1950. In both marine and miscellaneous insurance, it was distinctly unsatisfactory, the claims ratio in the former having gone up from 37 per cent. to 55 per cent. and in the latter from 45 per cent. to 51 per cent.

The broad picture that emerges from this survey is that, while life insurance business seems stationary, general insurance business is steadily expanding. The 1951 figures are, of course, not the correct basis for predicting trends, inasmuch as the year 1952 was in many ways different from 1951, while the current year is more like the year 1952 than like the year 1951. There would, therefore, be little surprise if most of the insurers fail to maintain in 1952 their earlier records in turnover. On these and other intricate problems of Indian insurance, the authors of the *Year Book* do not throw any light. The *Year Book* continues to be a dull and drab document of unexplained figures. One may legitimately look for some guidance, or at least a more systematic review of the trend in insurance and the problems of insurance companies in a document which comes from the office of the Controller of Insurance, equipped with men of sufficient experience and knowledge. But neither guidance nor adequate information is vouchsafed to us. Figures are not even strictly comparable, for there is still a large number of insurers who do not submit their returns. It is not clear whether any action is being taken against the habitual offenders. Surely, some more information about other vital aspects of insurance could be collected and presented every year in a readable form. The relative popularity of whole life and endowment policies and of the public limited, and mutual and co-operative insurers, review of mortality experience and of premium rates, analysis of new trends in insurance such as pension schemes, children's policies, marriage or educational policies, enquiry into motor accident insurance—these are only a few of the many diverse subjects which a central organisation such as the Controller's Office should be able to study and report on. There is not even a special section on the affairs of companies which are under Administrators' control, a matter of great public interest. One need only compare the Annual Report on banking in India, which the Reserve Bank is statutorily required to publish every year, with this *Year Book* to know the world of difference between the two publications. Insurance, it is needless to add, is as important as banking. Yet the manner in which the concerned department of the Government is neglecting this essential service to the public is simply appalling. In fine, the *Indian Insurance Year Book* is one of those blue books, issued from New Delhi, which refuse obstinately to improve the quality or quantum of information which they supply. We thought that, with the transfer of this subject to the Finance Department things would improve, but we are disappointed to find that the *status quo* persists, even when such an able administrator as Mr. Deshmukh is in charge of this Department. Indeed, the jibe seems to be fully justified that, if a person finds that his actuarial knowledge is an inconvenient part of his intellectual equipment, he may well get rid of it by joining the office of the Controller of Insurance, New Delhi.

DEMISE OF CONTROLS IN U. K.

THE U.K. Government's decision to end the 14-year-old controls on prices and supplies of cereals and feeding stuffs is perhaps the biggest nail that has been driven into the coffin of controls. The Government has announced that it will end the subsidy on food and feeding stuffs with effect from 1st April, 1953. The imports of cereals and feeding stuffs will be returned to private trading. It would appear that 22 trade associations connected with the grain trade were consulted on this policy and that the overwhelming majority of these associations have accepted the broad principle of decontrol. It is stated that a major consideration which has weighed with the Government is that the longer the delay in the restoration of cereal trading and cereal importing to private trade the more difficult it would be for the trade to resume its pre-war activity, in view of the fact that for 14 years now the traders have never had a chance of conducting their business with a full measure of individual responsibility.

The U.K. imports every year about 17 million tons of food and feeding stuffs—India imports on an average three million tons of foodgrains per annum, the import trade being handled by the Government alone—of which feeding stuffs account for 3½ million tons. The value of this trade is estimated at £1,308 million, of which the value of feeding stuff imports is placed at £275 million. It is this trade, that is, the trade in food and feeding stuffs, which will now revert to private hands. The Government, however, will retain the control over imports of cereals from outside the sterling area with a view to safeguarding the country's balance of payments position. The Government hopes to keep a strict watch over prices. Thus, it will permit ample supply from the dollar area if it finds that its restrictions on imports of dollar cereals lead to a rise in the cereal prices in non-dollar countries. An incidental consequence of the decontrol decision is that the Government hopes to effect a large saving on the staff—the saving is estimated at over £1,500 000—who are now being employed on the importation and control of cereals and feeding stuffs.

The decision to end the price control on food is the latest—even as it is the most important—of the series of decisions which the British Government has taken towards a decontrolled economy. In the beginning of 1952, the Government returned the import of softwood to private trade. On 1st July, 1952, private trade was asked to handle the imports of fertilisers. On 1st October, lead joined tin, which had been freed earlier, and since then, zinc has been returned to private trading. The system of allowing cotton spinners to contract out of bulk buying was introduced last year. Tea was derationed and decontrolled on 5th October. In August, private traders were permitted to take over coffee imports. More recently, the tallow trade and the trade in bananas have ceased to be a Government monopoly. The Government is no longer the sole buyer of aluminium produced in the U.K. The utility cloth scheme has been abandoned. Many of the restrictions on the use of non-ferrous metals have been given up. In August last, the price control on newsprint was ended. This was followed by the removal of control on jute goods in September.

The demise of controls in the U.K. has naturally enough, been accompanied by the withdrawal of a large number of Governmental notifications. It was stated, in October last, that 1,024 Statutory Instruments of general application had lapsed. Both trade and industry are now coming into their own. No longer need the decontrolled sector be obsessed by the fear of offending some regulation or other. No longer need it spend innumerable number of man hours in filling up forms required by the control authorities. With the freedom and leisure to trade and industry has come a new responsibility—the responsibility for meeting the challenge of a buyers' market. There is no doubt that the grant of this long-denied freedom will enable the concerned trades and industries to brace themselves up for a vigorous battle for survival and expansion.

INCREASE IN DIRECT TAXES UNLIKELY

TATA DEFERRED CONVERSION—NO PAR VALUE SHARES—F.B.I. ON TAX RELIEF

THURSDAY, 5 P.M.

STALEMATE in share markets continues for the third week in succession, but the trend is fairly steady. In the absence of any fresh developments, speculators are idle. Price fluctuations are narrow and the volume of business negligible. There is some selective buying in textile shares, with Kohinoors in the lead. Steels are a shade quiet. Among public utilities, electric shares have locked up a bit, on some small investment enquiry. In Calcutta, jute and coal scrips are quiet, while good tea shares are still in favour. On the whole, the Calcutta Share Market is more listless than the Bombay market. In neither of the markets has any speculation about the forthcoming budget started yet. The consensus of opinion is that the budget will show a heavy deficit and contain additional taxation.

MARKET GOSSIP

* * * *

The prospect of additional taxation, however, is not having any depressing effect. One explanation for this is probably the feeling that the additional taxation will be in the form of indirect taxes rather than direct taxes. If that is the market's hunch, it is a good guess, in our opinion. There is little scope for further direct taxation. The death duty is, of course, certain. Perhaps, Mr. Deshmukh may impress upon the State Governments the need for subjecting the land to some additional taxation, as has been recommended by the Planning Commission. Those State Governments which are strong and confident enough to face the initial opposition to such a measure are bound to make a move in that direction. Barring these two forms of direct taxes, none seems likely.

* * * *

That Mr. Deshmukh is thinking mostly in terms of indirect taxation is obvious from his reference to Prohibition in his Press Conference at Poona yesterday. Evidently, he sees nothing wrong in taking off or modifying substantially the Prohibition programme. If Bombay and Madras take away Prohibition, his task will be considerably lightened. He can give a larger quota of foreign exchange for imports of liquor which will help to raise his customs revenue, now considerably reduced. Now that Mr. Deshmukh has started advising the Bombay Government to reconsider its Prohibition policy, one can justifiably presume that he must be favourably inclined to reintroduce the salt duty. It is just possible that he may decide to brave the sentiment-dominated Parliament with that proposal. A few more taxes on consumption must be expected, especially now that his advocacy of physical controls has not received much support except from inconsequential economists. His search for goods which he can tax further will naturally turn to luxury articles. He may decide to tax tobacco further. He may not even hesitate to impose further burden on fine and superfine cloth.

* * * *

The Gilt-edged market is colourless. Here, too, the forthcoming budget has not yet cast its shadow. Market circles do not expect the Finance Minister to throw any significant light on his borrowing programme in his budget speech, apart from a broad hint at the amount he hopes to borrow this year both by way of small savings and issue of new loans. It is, however, certain that the Government of India will have to approach the capital market this year, at least in connection with the repayment of the 3 per cent. 1953-55 loan, the outstandings of which are as large as Rs. 114.60 crores. It is said that half of this is already with the Reserve Bank, so that the actual additional capital required will be about Rs. 60 crores. This is not too big a sum to tax the ingenuity of Mr. Deshmukh and Mr. N. Sundaresan, the Deputy Governor of the Reserve Bank, who is in charge of the Bank's open market operations. Nevertheless, they cannot hope to borrow without offering something better than the yields prevailing at the time of the issue. The nearest and convenient years which are free from heavy maturities are 1958 and 1964. In the former year, there is a maturity of Rs. 50 crores, while, in the latter, it is even less at Rs. 30.33 crores. It should, therefore, be possible for the Government to offer a short- as well as a medium-dated loan. The existing loans of these maturities are now yielding about 3.4 per cent. and 3.80 per cent., respectively. Even making allowance for the ability of the Reserve Bank to pull up the market before the issue of new loans, it looks very doubtful whether the Government can hope to borrow at rates of interest which will be appreciably below the current yields referred to above. In fact, it will not be surprising if it finds that it has to pay an effective rate of 4 per cent. for a medium-dated loan and 3.5 per cent. for a short-dated loan.

* * * *

It is, however, absolutely too early to discuss the rates of interest on Government's new borrowings which are not likely to be known before June or July next. That the market is not bothering itself now with this question is evident from the continued enquiry for the 4 per cent. State and Municipal loans, some of which are now so well above their par value that the yields on them are distinctly below 4 per cent. The Bombay State Loan, for instance, is at present standing at Rs. 101, yielding 3.90 per cent. Much of this demand is on account of provident funds which are steadily increasing in number. In fact, the turnover in 4 per cent. loans would appear to be greater than even in Government of India loans. Another reason for this is that it pays the dealers also to keep some stock of the 4 per cent. loans, for they can get finance for this purpose from banks at a cost of 3.5 per cent. In view of all this, it looks as though the new Ahmedabad Municipal Loan, offering 4.25 per cent., announced this week will be a success. The demand for fixed-yield first class securities has evidently encouraged the Britannia Biscuit Co., Ltd., to come out with a debenture issue of Rs. 15 lakhs. The rate of interest offered is 5½ per cent. for 1963-68, the issue price being at par.

* * * *

Last week saw the conclusion of the hearings by the mediator on the question of the conversion of Deferred shares of the Tata Iron and Steel Co., Ltd., into Ordinary shares. The Committees of the shareholders of both classes of shares put forward their respective case through their counsel. After the hearings were over, Mr. M. C. Setalvad, the mediator, left for New Delhi. Before he left, he advised the chairmen of both the Committees to get together and see whether they could not hit upon a mutually agreed ratio for conversion. Nobody expects anything to come out of it. Indeed, it will be a miracle if something good materialises from this meeting. Perhaps, it is just a formality or an attempt to show to the public that one more chance was given to the shareholders to reach a mutual agreement. It is not known when the mediator will give his award, but it is generally expected that it will be in the second or the third week of next month. Of course, only the mediator knows what he is going to say. Nevertheless, rumour-mongers are busy. It is said, for instance, that the mediator was very much impressed with the arguments advanced by the Committee of the Ordinary shareholders and that even the demand by the Deferred shareholders' Committee for a ratio of 1:7 failed to make him feel that it was a reasonable one. The popular expectation is that the mediator may fix the ratio at 1:6. There are, however, some who feel that it may be a little higher, either 1:6.25 or 1:6.5. This figure has been arrived at on the basis of the recent market value of both the shares which works out to a ratio of about 1:5.7 *plus* 15 per cent. by way of compensation to deferred shareholders for acquiring by the Company of their rights under the Company's Articles of Association. It is presumed by this school of thought that the mediator will approach the task before him as though the ordinary shareholders are acquiring the rights of deferred shareholders. Viewed thus, the compensation payable will be calculated on the basis of the market value of deferred shares *plus* a fixed percentage. This school of thought has taken the figure of 15 per cent. for this purpose, since that is what is usually allowed by the Government whenever it acquires land.

* * * *

There is both in this country and abroad, an insufficient appreciation of the difference between share capital and real resources, employed by a company. Trained accountants and balance-sheet analysts do, of course, know that a company's earnings are determined as much by the share capital as by the working funds employed by it in its business. Leftist propagandists often press attacks on "exorbitant" profit of companies, little realising that very often, the profits form only a small percentage of the company's working capital, although the profits, expressed as a percentage of the share capital, may appear large. The Indian Mining Association has spotlighted this species of erroneous calculation by a sample survey of the results of coal companies. The Association's memorandum on the economic position of the coal industry draws attention to the fact that the high dividends, declared by certain coal companies, are no real indication of their prosperity. It says: "They are old-established companies, some of them a century or more old, and, in course of many years, have re-invested large profits in their enterprises, with the result that to-day the face value of their share capital bears no relation to the money actively employed in their business; their dividends, therefore, expressed as a percentage of their share value, give a totally false idea of their earning capacity." It would appear that the Association made an analysis of the working results of 50 coal companies and found that the ordinary dividends which they paid amounted to only 2½ per cent. of their total working funds.

* * * *

Working funds are always larger than the paid-up capital. They may consist of capital, reserves and borrowings. In the case of well-established companies, the difference between paid-up capital and working capital is generally made up of reserves, representing the past sacrifices of the shareholders who have built them through years of self-denial. It is only fair and just that the shareholders should, in a subsequent period, when the results of their companies are favourable, be entitled to a reward for their past sacrifices. But, if they lay public, uninstructed in the details of company finance, cannot appreciate the difference between "share capital" and "real resources," then something must be done to correct the distorted view which one gets through expressing the dividend as a percentage of the paid-up value of the share. A happy solution to this problem is the issue of no par value shares, or n.p.v. shares, for short. Such shares have already become popular in the U.S. and Canada, though, in other countries, they have not made much headway. In the U.K., n.p.v. shares have for long been dismissed as a new-fangled idea. The question did come up before the Cohen Committee, the report of which (in 1945) formed the basis of legislation for the Companies Act, 1948. At that time, the Cohen Committee felt that there was "little demand for, and considerable opposition" to the legislation for shares of no par value. In February, 1952, a private Bill to make the issue of n.p.v. shares permissible in the U.K. was "talked out" in the British Parliament. But now, the subject is once again receiving some attention and support, largely because the vast majority of shareholders feel that the n.p.v. shares are an effective reply to the misleading socialist propaganda against "exorbitant" dividend. The British Government has decided to appoint a committee, with Mr. Montague Gedge as Chairman, to consider whether it is desirable to permit the issue of shares of no par value and, if so, to suggest what safeguards would be necessary in the public interest.

* * * *

To those in this country, who are unacquainted with this new device in company finance, namely, n.p.v. shares, it may be pointed out that, if a company seeks to change over from share capital to n.p.v. shares, the shareholder's interest remains what it was: he will receive so many shares of *no par value instead of the same number of shares* of a fixed denomination. He will have the same rights as before. Only, dividends will no longer be expressed as percentage of paid-up capital but in terms of money per no par value share. The value of the share will, of course, fluctuate on the Stock Exchange. But there is no question of its being quoted at a premium or discount, in relation to its paid-up value, for there is no paid-up value as such. The shareholder has 100 or 200 shares of a company: he becomes entitled to the dividend which will be declared as so many rupees per share.

* * * *

The U.K. Government's decision to appoint a committee to go into the question of n.p.v. shares is a new development of much interest to the London Stock Exchange. The Stock Exchange men are apparently willing to absorb new ideas from the new world. But they are, of course, not willing to give up their tried old practices either. For instance, they are agitating for the restarting of the option business. The question of the resumption of option dealings has, as we stated in these columns recently, assumed a new importance in the London Stock Exchange in view of the fact that the supporters of the demand for option business have discussed it in all its aspects with the principal authorities, the Council of the Stock Exchange and the Bank of England officials. It is now held likely that option dealings will be resumed at no distant date. Since the "option mechanism" has lain idle for thirteen years in the U.K., the following account of the working of the mechanism, given by the London *Economist*, will be read with interest:

"Briefly, before the war, investors were allowed to purchase an optional right to buy or sell a specific security within a given period (usually of three months) at a fixed price, known as the "striking price." A "call" option gave the investor the right to buy, a "put" option the right to sell, and a "put or call" option the right to do either. More complicated facilities were provided by the "call and more" and the "put or more" options, but dealings in these options were not very common. The "striking price" represented the market price of the security at the time the option was secured, plus a premium to cover the contango cost of delaying purchase or sale over the life of the option. In fixing the price of the option, known as "option money," a dealer took account of his own commitments and of his estimate of the probable fluctuations in the price of the security during the life of the option."

* * * *

The Government of India has not enhanced its reputation for foresight by declaring, at first, the abolition of the excise duty on tea waste and then withdrawing this concession about nine weeks later. On 18th November, 1952, it announced the abolition of the duty; this measure was adopted to *give some direct and immediate relief* to the producer of the poorer quality tea and was withdrawn on 23rd January, 1953, because the Government found that this "relief" had the totally unintended effect of encouraging the export of stalky tea. Surely, the Government might itself have foreseen the consequences of its action. Or, it might have consulted the tea interests, before announcing the concession. That this measure would lead to the export of undesirable tea, under the pretext of tea waste exports, was the opinion expressed by the tea interests, as soon as it was announced. But the point is that the Government failed to appreciate, before it embarked on this "relief," the effect of its action. That the Government has learned wisdom at least after the event does not, of course, take away the truth of the criticism that it might have so easily foreseen the result of its action, so obvious even to a layman with some common sense. What has now suffered is not only the Government's reputation for foresight but also the Indian tea's reputation for quality. This is another instance of loss to the country arising from interference in the affairs of trade by a Government which has neither adequate knowledge of the intricacies of business nor the desire to consult others who are well versed in them.

Attention needs to be drawn to two developments in the sphere of cotton during the week under review. One is the allotment of quotas to mills up to 100 per cent. of their purchases in the basic year. This has stopped the downward trend in prices in the local market, though mill buying has not been on any appreciable scale. The second development which has also had a steadying influence on the market, especially on the Con-

(Continued on page 183)

DULL CONDITIONS PERSIST ON STOCK EXCHANGE

ELECTRIC SHARES IN FAVOUR

(From Our Own Correspondents)

BOMBAY, 29*th January*

THE Stock Exchange failed to shake off its lethargic tendency this week also. Of course, there were feeble rallies backed up by professional support on possibilities of increased trade between India and Pakistan following the reported correspondence between the two Governments on Indo-Pakistan trade relationship. Some improvement was also visible in textile shares, as some buying was induced by the slump in the cotton market and the announcement regarding grant of limited export quota of cotton yarn to mills. In spite of the mild rally, conditions were not strong enough to give pep to the market. In the face of general reluctance to follow up, progress was very slow. Baseless rumours that the ratio of conversion of Tata Deferreds into Ordinaries would be less favourable to the Deferred holders than expected earlier had a restraining influence. Operators were restrained in entering into commitments. The turnover, therefore, continued to be small and fluctuations were confined to a narrow groove. The undertone, however, remained steady with aviation scrips making further smart advances. Electric shares too were seen persisting in their slow and steady rise noted in the past several weeks.

In the steel section, Tata Deferreds opened at Rs. 1,705, with a small overnight gain, but failed to hold ground and declined to Rs. 1,690. After a minor rally to Rs. 1,695, the scrips receded to Rs. 1,677-8 yesterday on rumours about unfavourable conversion ratio. To-day, however, they displayed a slight hardening tendency with a rise to Rs. 1,687-8 at the close. Tata Ordinaries came up to Rs. 300-4, after a mid-week recession to Rs. 297 from Rs. 298-8, but wound up the week at Rs. 299-8. Indian Irons closed at Rs. 23-1½ with a fractional loss over the week, after being done up to Rs. 23-6.

Textiles presented a steady front. Bombay Dyeings dropped from Rs. 358-2 to Rs. 355-10, but regained to Rs. 358-2 at the close. Kohinoors finished with a gain of Rs. 2 at Rs. 271-4, Finlays were marked up by a rupee, on balance, to Rs. 287, and Gokaks by as much as Rs. 4 to Rs. 200. Indore Malwas changed hands Rs. 2-8 higher at Rs. 87-8, and Morarjis Rs. 3-2 higher at Rs. 155-10. Centurys put on no more than As. 8 to Rs. 246, but Simplex hardened by Re. 1-12 to Rs. 173-12 and Standards by Re. 1-4 to Rs. 263-12. Sholapoors staged a spurt on small enquiry from Rs. 1,600 to Rs. 1,695. Swans responded well to a fresh enquiry with a rise of Rs. 16 to Rs. 394. Central Indias were quiet at Rs. 144, as against Rs. 145-8. Dawns found sellers to go down by Rs. 3-4 to Rs. 56-4 and Phoenix by Re. 1-4 to Rs. 121-4. New Greats were a shade lower at Rs. 150-8. Sassoon Cottons met with some demand and, therefore, strengthened by Rs. 3 to Rs. 23-12. Sassoon Silks were, however, weak at Rs. 21-8, as against Rs. 23-2.

Bank shares were in the background with small recessions in some of the counters. Barodas were lower by As. 8, at Rs. 116. Centrals were a shade better at Rs. 63-8, while their New shares were maintained at Rs. 66-12. Imperials Fully Paids finished Rs. 2-8 lower at Rs. 1,735, but the Contributories were better by as much at Rs. 423-12. Indias showed no variation at Rs. 155, while United Commercials disclosed a loss of As. 8 at Rs. 34. Hindustan Commercials were marked down from Rs. 10-8 to Rs. 8-12.

The insurance section was noted for a small turnover and restricted movements. Orientals, however, provided a notable exception with a smart rise of Rs. 220 to Rs. 5,710. New Indias were quiet at Rs. 40-4. Vulcans dropped a fraction to Rs. 11-2. Jupiters were maintained at Rs. 7-4, as also Empires at Rs. 403-12.

In the public utility section, a revival of investment demand for Ahmedabad Electrics lifted the old shares from Rs. 112-3 to Rs. 113-2 and the new ones from Rs. 109-1 to Rs. 110-10. Andhra Valleys advanced from Rs. 1,372-12 to Rs. 1,392-8, Bombay Suburbans hardened from Rs. 121-4 to Rs. 121-14, and Surats from Rs. 117-8 to Rs. 118-2. Tata Hydros, however, shaded off from Rs. 147 to Rs. 146. Tata Powers were marked down from Rs. 1,487-8 to Rs. 1,482-8.

Dull conditions characterised trading in miscellaneous shares. But Associated Cements displayed slightly hardening tendency with a rise from Rs. 175-12 to Rs. 176-8, before being listed *ex*-dividend to-day at Rs. 167. Belapurs advanced from Rs. 215 to Rs. 217 before receding to Rs. 215-8 at the close. Bombay Burmahs Old put on Rs. 3-12 to Rs. 363-12, but the New shares were stagnant at Rs. 140. National Rayons were strong with a rise of Rs. 3 to Rs. 69, on account of the delay in the announcement of import policy in regard to art silk yarn and short supplies of yarn in the local market. Tata Chemicals were a fraction up at Rs. 8-13¼, but Tata Oils were down by As. 12 at Rs. 32-8. Wimcos were higher by Re. 1-4 at Rs. 215. Ralli's slumped from Rs. 76 to Rs. 67, following the Directors' decision to pass over the dividend for the year ended 31st August, 1952.

In the transport group, Air-Indias, after receding from Rs. 84 to Rs. 82, recovered to Rs. 85. Air-India Internationals rose by Rs. 5 to Rs. 102. Scindias were steady round about Rs. 14-10, India Steamships at Rs. 6-4 and Bombay Steams at Rs. 31-8. Hindustan Motors were taken at Rs. 3-12.

Among the mining and engineering shares, Alcocks were stagnant at Rs. 291-4, but B.B. Petrols were quiet at Re. 1-5. Indian Coppers were steady at Rs. 3-2 and Shivrajpurs at Rs. 33. Premier Constructions lost As. 12 to Rs. 82, but Tata Locomotives had buyers at Rs. 92.

* * * *

Calcutta Stock Exchange

CALCUTTA, 28*th January*

Two holidays, one on Friday and the other on Monday, made the week under review a short one. During the remaining working days, buying interest was at a low ebb, and quotations, excepting for selected miscellaneous shares, teas and steels were marked down. There was hardly any activity in yesterday's session, which was short owing to the death of Mr. N. R. Sarkar last Sunday. Note was taken of the reports of Indo-Pakistani correspondence for including jute, cotton and coal in the trade pact between the two countries. If cotton is included, it would mean cheaper imports from Pakistan, since the export price there would have to be revised in view of the mounting stocks in Pakistan and the declining price-trend for cotton in world markets. Less interest is attached to the possibility of inclusion of jute and coal, since India has plenty of the former and Pakistan is getting plenty of Indian coal, despite its non-inclusion in the existing trade agreement. Reports of increased industrial production during the better part of 1952 could not provide any stimulus in view of the existing buyers' markets.

In the textile section, Elgin Mills were again a feature and rose to Rs. 16-8 from Rs. 16, Basantis remaining unchanged at Rs. 3-14. Cawnpores came to business at Rs. 8-5, and Kesorams were sought at Rs. 17-5.

There was a reduction in the volume of transactions in the coal section. Burrakurs were traded at the lower level of Rs. 10-3, while East Indians forged ahead to Rs. 20-14 from Rs. 20-8. South Karanpuras were quiet at Rs. 12-12 as were New Beerbhooms at Rs. 18-8. Equitables were interested at Rs. 39-2 and Bharat Collieries at Rs. 6-1.

Only nominal interest was seen in jute shares, and the depression in the prices of jute goods and the lack of adequate overseas enquiries explain why jutes could not provide the customary leadership to the market. Howrahs hovered around Rs. 22-3, and Ganges were lowered to Rs. 69 from a previous quotation of Rs. 74-8. Kinnisons at Rs. 202 lost three points, and Orients were dull at Rs. 181, as against Rs. 183 previously. Anglo-Indias, at Rs. 214, shed five points, but Fort Glosters were a feature for their steadiness at Rs. 271, representing an improvement of Rs. 2 over the week.

In the engineering section, Indian Irons opened at Rs. 23-1 and improved to Rs. 23-5 over the week-end but yesterday were down at Rs. 23-2. Braithwaites were noted for a further improvement to Rs. 10-11 and Burn & Cos. were interested at Rs. 250. Indian Galvanizing (New) changed hands at Rs. 13-2, while India Machineries came to business at Re. 1-4.

Tea shares maintained their liveliness, but in view of the general dullness only a lower volume of transactions could be put through. The Prime Minister's interest in the foodgrains supply position to tea estates has been noted. The steady demand for tea in the export auctions and the consequent upward trend in prices also contributed to the cheerfulness in shares. Hasimaras were better at the higher rate of Rs. 24-4, and Tezpurs climbed to Rs. 15-4 from Rs. 14-8.

Miscellaneous shares maintained their usual steadiness, and airlines again provided the features. Airways India were bought at Rs. 9 as against Rs. 8-7 a week ago. Indian National Airways maintained the improvement at Rs. 3-8. Indian Wool Products attracted buying at the higher rate of Rs. 49. Assam Saws showing moderate strength at Rs. 6-9. Titaghur Papers were fractionally better at Rs. 34-6. In the mining section, Indian Coppers were put through at Rs. 3-2 and great interest was shown in Burma Mines at Re. 1-6, and Non-ferrous Metals at As. 15.

* * * *

Madras Stock Exchange

MADRAS, 27*th January*

Trading on the Madras Stock Exchange was lifeless during the week under review. Textiles came in for selling pressure on reports of accumulation of stocks of yarn with the various mills owing to lack of demand from handloom weavers. In plantings, rubbers and coffees ruled virtually quiet, in the absence of any encouraging factors. Teas, however, met with some selective buying on consistent improvement in the prices of tea at auctions in Calcutta and Cochin both for internal and external consumption. A considerable improvement in London auctions also helped the trend. But the miscellaneous section proved no exception to the generally easy trend of the market. The cumulative effect was an almost all-round decline in prices on balance.

The easiness witnessed last week in textiles gathered further momentum. Radhakrishnas lost Rs. 10 to Rs. 140 for lack of buying support. Pankajas fell by Rs. 6 to Rs. 66. Coimbatore Pioneers changed hands at Rs. 90, as against Rs. 97. Bargains were, however, struck in Buckinghams, which gained As. 8 to Rs. 117-8. Venkateshas were also higher by a similar fraction to close at Rs. 66-8.

Tea shares emerged slightly better on fair export demand for tea. Talyars improved from Rs. 7 to Rs. 8. Kil Kotagiris rallied an anna to Rs. 4-14. Neelamalais was slightly higher at Rs. 3-6. Stanes Amalgamated and Periakaramalais were, however, lower by As. 4 and As. 2 at Rs. 9-2 and Rs. 23-2 respectively.

Among rubbers, Vaikundams and Thirumbadis rallied As. 2 each to Rs. 15 and Rs. 3-5½ respectively. Pullangodes were fractionally better at Rs. 2-5½. With the exception of these, the rest of the scrips in this section were dull. Thus, Cochin Malabars were unchanged at Rs. 6-5, Be Bes at Re. 1-15 and Malankaras at Rs. 91.

Coffee shares remained neglected. Puthuthottams sustained a loss of As. 2 to Rs. 4-12 and Nilgiri Nirgundies an anna to Rs. 3-6. Consolidated Coffees were slightly lower at Rs. 15-7. Coffee Lands were quiet at Rs. 9-5 and Shevroys at Re. 1-4.

Miscellaneous scrips came in to share no better fate. For Rallis fell from Rs. 75-8 to Rs. 69. Andhra Cements 'B' eased by As. 2 to Rs. 3-14. Spencers were enquired As. 2 lower at Rs. 15-8. Mettur Chemicals lost an anna at Rs. 4-8. India Cements were a shade down at Rs. 16-14 and F.A.C.Ts at Rs. 3-11.

MANAGING AGENCY OF CENTURY MILLS

The Government of India has modified the draft agreement between the Century Spinning and Manufacturing Co., Ltd., Bombay, and Messrs. Birla Brothers Ltd., appointing the latter as the managing agents of the former Company. The draft agreement, it will be recalled, was approved by the shareholders of the Company in November last, subject to the approval of the Central Government. The revised draft agreement, embodying the suggestions made by the Government, will again be placed before the shareholders at an extraordinary general meeting to be held on 7th February, 1953.

In a circular to the shareholders, the Company says that the modifications required to be made by the Government are more in favour of the Company than the provisions contained in the draft agreement approved earlier by the shareholders. For one of the modifications suggested by the Government is the reduction in the tenure of office of the managing agents from 20 years to 10 years. Again, the Government's approval of the terms of remuneration is subject to the condition that the managing agents will not supplement their earnings with buying or selling commissions or otherwise even with the sanction of the Company at its general meeting. The appointment of Messrs. Birla Brothers Ltd. as managing agents of the Company, on the terms of the said revised draft agreement, has also been approved by the Government.

ANDHRA BANK LTD.

The net profit of the Andhra Bank Ltd. for the year ended 31st December, 1952 (subject to audit), after payment of half a month's salary as bonus to staff, amounts to Rs. 3,68,253, as compared with Rs. 5,15,322 in the previous year. The *ad-interim* dividend at 6 per cent. per annum, free of income-tax, paid for the half-year ended 30th June, 1952, absorbed Rs. 75,000, the same as in the previous year. Together with the sum of Rs. 3,977 (as against Rs. 25,982) brought in from the previous year, the amount available for final appropriation is Rs. 2,97,231, as compared with Rs. 4,66,305 in the previous year.

NEWS IN BRIEF

THE Travancore State coins will be demonetised with effect from 1st April, 1953.

The hydro-electric power station of the Koyna Project is expected to be an underground one.

The Government of India has withdrawn the exemption from excise duty granted to tea waste in November last. The exemption is stated to have encouraged production and export of inferior tea.

The P.E.P.S.U. Utilisation of Lands Act and the P.E.P.S.U. Reclamation of Lands Act, which were passed during the last session of the State Legislature, came into force on 21st January, 1953.

The rice crop in the recent *kharif* season in Uttar Pradesh is estimated to yield about 300,000 tons, that is 20 per cent. more than last year's yield, though the area under paddy cultivation is lower by about 9 per cent.

A research scheme for better utilisation of the by-products of arecanut has been undertaken by the Gauhati University. The scheme is sponsored by the Indian Central Arecanut Committee and is estimated to cost Rs. 15,000.

The Government of India is reported to have agreed to advance a loan of Rs. 2 crores to the Madhya Pradesh State for minor irrigation works. The demand made by the State Government for this purpose was Rs. 3.38 crores.

The Seventh Annual General Meeting of the Indian Confectionery Manufacturers' Association Calcutta, will be held in New Delhi on 14th February, 1953. Mr. D. Allerton, President of the Association, will preside over the meeting.

The Government of India is expected to constitute two State-owned aviation corporations instead of one as was orginally proposed, to administer, organise and develop separately Indian international and internal air services.

The twenty-sixth annual meeting of the Federation of Indian Chambers of Commerce and Industry will be held in New Delhi, on 7th and 8th March, 1953. Mr. Jawaharlal Nehru, Prime Minister, will deliver the inaugural address.

A team of French experts, representing the French firm with which the Government of India has signed an agreement for technical assistance in setting up a wireless products factory, has arrived in New Delhi for preliminary talks with the Defence Ministry.

The Kanpur Electricity Supply Administration, U.P.'s largest nationalised undertaking, has commissioned its thirteenth boiler. The boiler, costing Rs. 32.27 lakhs, is expected to generate 15,000 kilowatts of electricity which will go a long way towards meeting the increasing demand of the city.

The West Bengal Government has appointed a nine-man Committee to investigate the possibility of revising the minimum wages of tea garden labour in Terai and Dooars districts. The Committee will also examine whether the present food concessions given by the managements should be continued.

The West Bengal Government has decided to set up a statutory Corporation for the management and running of the State Transport Services in Calcutta and its suburbs. The service, limited only to the running of buses, has been showing considerable loss to the Government since its introduction about three years ago.

The Twentieth Annual General Meeting of the Indian Sugar Mills' Association, Calcutta, will be held in New Delhi on 13th February, 1953. Mr. R. P. Nevatia, M.P., President of the Association, will preside over the meeting which will be inaugurated by Mr. Rafi Ahmed Kidwai, Minister for Food and Agriculture, Government of India.

A Bill, known as the West Bengal Jute Goods (Amendment) Bill, 1953, seeking to ban *fatka* markets in jute goods with a view to checking speculation and fluctuation in prices, will be introduced in the State Legislature during the ensuing session in order to replace the Ordinance issued towards the close of last year.

The possibility of underdeveloped countries not receiving assistance from the F.A.O. on the same scale as before was indicated by Sir Herbert Broadley, Deputy Director-General of F.A.O., in Lucknow last week. Countries and States already included in the F.A.O.'s programme, however, would not be affected by the proposed cut.

A new kind of mineral, very rich in the radio-active elements, thorium and uranium, has been discovered in India. The mineral contains 31 per cent. thorium oxide and 4 per cent. uranium oxide. The mineral is named Cheralite, after Chera, the ancient name for the State of Travancore, where it was found. The deposit of the mineral is, however, much too small to be of any commercial importance.

In a communication to the Union Ministry of Commerce and Industry, the All-India Starch Manufacturers' Association, Bombay, states that any import of sago and foreign starches at this juncture will toll the death-knell of the national industry manufacturing maize starch. The temporary shortage of maize starch in Bombay, it adds, is due entirely to the railway booking difficulties and the short-sighted purchase policy followed by some textile mills.

The Government of India has decided to grant to established importers of unset and uncut diamonds licences for the import of these goods from the soft currency area on the basis of a quota of 20 per cent. of the best year's imports of diamonds, unset and uncut, during the basic period 1945-46 to 1951-52. This is subject to the condition that each licensee enters into a bond to export processed diamonds, after cutting and polishing, of the value equal to the imports, within the following half-year.

The total value of minerals produced in the Indian Union during the year 1948 was over Rs. 70 crores and that of metals manufactured was of the order of Rs. 40 crores, as compared with Rs. 21.5 crores and Rs. 18.2 crores, respectively in 1939. The corresponding figures for 1947 were Rs. 64 crores and Rs. 31 crores. These figures are contained in the *Mineral Production of the Indian Union during* 1948, just published by the Geological Survey of India.

The Government of India has asked the Madras Government to ascertain from pepper merchants whether they are willing to set up fumigation plants. Otherwise, the Government will set up such plants and recover the cost from exporters by a compulsory levy. The cost of a fumigation plant is estimated at Rs. 20,000 to Rs. 30,000. This move on the part of the Central Government has been prompted by complaints from U.S. importers that certain Indian pepper consignments contained live or dead insects.

A seven-man official trade delegation from Indonesia is now holding trade talks with the representatives of the Government of India. The Indonesian delegation is headed by Dr. R. A. Asmaun, head of the Directorate of Foreign Economic Relations of the Indonesian Government. Mr. H. V. R. Iengar, Secretary, Commerce and Industry Ministry, is the head of the Indian delegation which includes representatives of the Ministers of External Affairs, Finance, Defence, Transport, Production, Works, Housing and Supply and Railways and the Planning Commission. The previous trade agreement with Indonesia expired in June, 1951.

* * * *

From Abroad

A 10-day trade promotion conference, sponsored by the E.C.A.F.E., will open at Manila on 23rd February, 1953. The Conference will mainly discuss means of increasing trade among Asian nations and between Asia and the rest of the world.

Purchases of new life insurance by Americans reached a new yearly record of $33 billion in 1952. This represented an increase of 12 per cent. over 1951. Benefits paid by life insurance companies to policyholders and beneficiaries also set a new record of more than $5 billion. About 88 million policyholders had a record $275 billion of life insurance in force at the end of 1952.

The Standing Finance Committee of the Pakistan Constituent Assembly (Legislature) has approved a scheme for the development of Chittagong port, to provide water supply, drains and market places in the port area. Other schemes approved by it include the establishment of a food processing industry and the formation of an electrical division for East Pakistan at Dacca.

The French India Representative Assembly has asked the local administration to approach the French Government at Paris for financial aid to the extent of Fr. 500 million per annum to tide over the economic crisis in French India. The commerce and industry of the French settlement are stated to have been completely paralysed and the agricultural population impoverished due to failure of the monsoon.

The Turkish Government has signed a contract with an American firm for the construction of a refinery at Ramadagh (Turkey). The new refinery will be constructed within two years at a cost of about $7 million. It will have a refining capacity of 6,250 barrels of crude oil daily, from which will be obtained paraffin, petrol, jet fuel gas, oil bitumine and fuel oil for local consumption.

Long-term credits granted by Sweden to foreign countries showed an increase of Kr. 51.6 million to Kr. 1,325.1 million (£91.3 million) in 1952. Of the total credits, the Soviet Union accounted for Kr. 555.1 million under the 1946 credit agreement, Finland for Kr. 455.1 million, Denmark for Kr. 144.4 million and Norway for Kr. 125 million. Smaller credits were granted to Poland and France. The Netherlands and Ethiopia fully repaid their post-war loans through their 1952 amortisation payments.

The restrictions on alcohol consumption at present in force in Sweden are to be revised and relaxed, following the recommendations of the Committee set up in 1944 to investigate Swedish drinking habits. The prevailing rationing system has failed to prevent the spread of the drinking habit, especially to young people, according to the Committee. It has recommended a large-scale "re-armament" of temperance and social welfare organisations in order to tackle the problem of abuse.

The Department of Commerce, U.S., announced last week its steel, copper and aluminium export quotas for the second quarter of 1953. The second quarter quota for carbon steel (exclusive of tin-plate) is 757,000 short tons; for alloy steel (excluding stainless) 20,850 short tons; for stainless steel 1,754,000 lbs., for copper and copper base alloy products 11,785,000 lbs. and for aluminium 8,750,000 lbs.

PERSONAL

MR. Chinubhai Kilachand, of Messrs. Kilachand Devchand & Co., has been elected Vice-President of the Cotton Buyers' Association, Bombay.

Mr. M. G. Kapadia, Managing Director, Merchants' Steam Navigation Co. has been elected President of the National Steamship Owners' Association.

Mr. Jwalaprasad Tiwari has been re-elected President and Mr. Haryantlal Narandas Sonavala Vice-President of the Bombay Bullion Association for the current year.

Mr. Richard Lyman, Director of the Asian Field Office of the I.L.O. at Bangalore, returned from Geneva after attending the meeting of the I.L.O. Field Directors held there recently.

Mr. Jain Narain Vyas, Chief Minister of Rajasthan, has taken over the portfolio of Finance, which was until recently held by the State's Education Minister, Mr. Nathu Ram Mirdha.

Mr. D. N. Shroff and Mr. Murarji J. Vaidya have been elected President (*vice* the late Mr. Ramdeo A. Podar) and Vice-President, respectively, of the Silk and Art Silk Mills' Association, Bombay.

Dr. Horace Thornton, Consultant in Food Hygiene to the W.H.O. and the F.A.O., has arrived in India to advise the Government of India on the introduction of modern and scientific approach to the inspection of foods of animal origin, slaughter house construction and food market practices.

Mr. G. S. Bajpai, Governor of Bombay, will leave for Geneva to-morrow to lead the Indian delegation at the Kashmir demilitarisation talks to be held there. Mr. Mangaldas Pakwasa, former Governor of Madhya Pradesh, will act as Governor of Bombay.

Mr. C. P. N. Singh, a former Vice-Chancellor of the Patna University and India's Ambassador at Kathmandu until recently, has been appointed Governor of the Punjab(I). It is understood that Mr. Singh will serve only for a short period and not the full term of five years.

Mr. S. K. Sen, Chairman of Sen-Raleigh Industries Limited, left for Bandoeng (Indonesia) to represent the Commission of Asian and Far Eastern Affairs of the International Chamber of Commerce at the Ninth Conference of the E.C.A.F.E. commencing there on 6th February, 1953.

Mr. J. C. Jain, General Manager, Messrs. Bennett Coleman & Co., Ltd., and Mr. S. N. Guha-Ray of Calcutta, have been elected President and Vice-President, respectively, of the All-India Federation of Master Printers. Mr. Parmanand Sugnomal Mehra and Mr. K. C. Raman have been elected General Secretaries.

Dr. V. Subramanyam, Director, Central Food Technical Research Institute, Mysore, left for the U.K. last week to study the availability of suitable machines for processing Indian materials, tapioca, and peanut cake flour for the production of synthetic rice. Dr. Subramanyam is also to visit the several synthetic rice manufacturing units on the Continent, particularly in Switzerland and Italy.

Messrs. Neville N. Wadia (Chairman), Vithal N. Chandavarkar, (Dy. Chairman), T. V. Baddeley, Dharamsey Mulraj Khatau, Krishnaraj M. D. Thackersey, J. C. Burns, G. D. Somani, L. F. H. Goodwin, Ramnath A. Podar, R. S. Khaitan, Radhakrishna Ramnarain Ruia, M. L. Tapuriah, S. P. Jain, E. D. Sheppard, Pratap Bhogilal, R. W. Bullock, F. Edwards, Arvind N. Mafatlal, Naval H. Tata, and B. L. Bubna have been elected to serve on the Committee of the Millowners' Association, Bombay, for the year 1953.

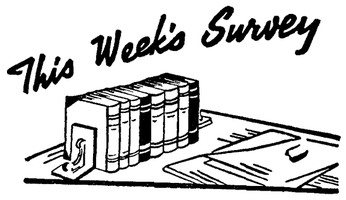
"COMMERCE" 1928

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, 28*th January*

Trade Prospects for 1928

Although the Indian Trade Commissioner's report for the past financial year, issued early this month, caused considerable anxieties as to the loss sustained by Great Britain in her trade in India, optimism prevails with regard to British trade prospects in general for 1928, the encouraging features being increase in exports, decrease in unemployment, and atmosphere of greater trust and friendliness between employers and the employed. Reports available for guidance indicate that, following the disastrous period in 1926, when prolonged industrial troubles caused a severe setback to the trade of the country and the few months of stagnation which were experienced last year, after the accumulation of old orders had been worked off, signs of improvement became apparent about last August. We must also take into consideration the fact that the volume of exports of British produce and manufactures in the year 1913 marked the culmination of one of the greatest periods of trade expansion in the economic history of the country. Yet the volume for the first nine months of 1927 was 77.4 per cent. of that period in 1913. The falling-off in volume needs also to be qualified by the consideration that any given quantity of textile goods now exchanges far more of other goods than before the war; cotton, wool, silk and flax having all advanced notably in price, as compared with raw materials in general. Thus, while there has been a marked improvement in secondary industries, the depression continues in some principal branches of the nation's industrial activity, notably in the cotton trade.



PRINTING INDUSTRY

MR. J. C. Jain, President of the All-India Printers' Conference, which held its first session in Bombay last week, was certainly not exaggerating the importance of the printing industry when he said that the "invention of printing, like the art of lighting a fire, is one of those basic achievements of the human mind on which the whole edifice of modern civilisation and culture really rests." In India, the printing industry owes its development to the pioneering efforts of Missionary institutions. Even so, the size, though impressive in absolute terms, is small when measured against the needs of the country's large population. There are now about 100,000 printing presses. By any test, India's literacy standards are dismally low. And when these standards improve, more presses will be needed to cope with the demand for almost every conceivable variety of printed word in this multi-lingual country. The printing industry has no mere academic interest in the spread of literacy; its future and its fortunes are vitally linked with the literacy standards of the country.

The deliberations of the First Printers' Conference show that the industry is becoming alive to its social responsibility. At this Conference was formed the All-India Master Printers' Federation, with Mr. J. C. Jain as President. The Federation will, it is to be hoped, give a real lead to the industry, unify the industry under its banner and promote its welfare. That it has a very difficult task ahead will be clear from the topics covered by the Conference. Technical training, imports of machinery and equipment, manufacture of printing machinery and allocation of Government's printing orders were some of the subjects which figured prominently in the resolutions passed at the Conference. Thus, the Conference pleaded for "adequately equipped" printing schools and technological institutions, for a central research association on the lines of the Printing and Allied Trades Research Association of the U.S. and for a well regulated system of apprenticeships in printing. It called upon the Government to permit the importation of sufficient quantities of printing materials such as paper, bonds, inks and machinery, though it recognised the need for adequate protection to manufacturers of these products in India. It suggested that the Government should render "substantial assistance, through the Industrial Finance Corporation or otherwise, for the rehabilitation and modernisation of the machinery and equipment and for the expansion of the industry."

An important resolution dealt with the question of the manufacture of printing machinery. It urged the Government "to establish or encourage the establishment of industries for the manufacture of printing machines and such other equipment and material needed by the industry in India," and also to incorporate a special schedule in the import regulations so as to bring all printing machinery and spare parts under one heading. The Conference made two other important suggestions for the expansion of the volume of business handled by the printing industry. In the first place, it suggested that the foreign firms working in India should not be allowed to import books, price lists, cartons, labels, calendars and other promotion literature. Secondly, it asked the Central and State Governments and other public bodies to distribute, in consultation with the Federation, their printing orders on a "rational" basis.

As the development of the printing industry along scientific lines is vital to the country's progress, it is to be hoped that the many constructive suggestions made by the Conference will receive the attention of the Central and State Governments. The industry, on its part, will do well to modernise its equipment, to strike out new and bold lines of improvement in all branches of this ancient craft so that Indian "print" may gain both in freshness and individuality.

CEMENT INDUSTRY

Mr. Dharamsey M. Khatau has again emphasised the difficulties of industrial expansion and rehabilitation of equipment in the face of the high cost of replacement of machinery and the heavy incidence of taxation. This time, he has done so in his capacity as Chairman of the Associated Cement Companies Ltd. Speaking at the annual meeting of the Company, held in Bombay last week, Mr. Khatau deplored that depreciation for taxation purposes was related to the originally installed costs of machinery rather than to "present-day replacement costs," and that in spite of the "transparent necessity to correct this state of affairs," nothing had yet been done by the Government. Mr. Khatau had special reasons to feel sore over the continued neglect of this problem by the Government. He has pleaded before—and pleaded in vain—for liberal relief in taxation which alone will facilitate the transfer of funds for replacement purposes. Also, the A.C.C. has a special extension programme which it finds it cannot carry out without setting apart an unduly large portion of its profit for purposes of replacement. During the past year, the Company had spent Rs. 1.49 crores as an "initial start to this programme," under which its production is to be raised to 31.3 lakh tons by 1960-61, an increase of 9.35 lakh tons and 6.78 lakh tons over the production in 1950-51 and 1951-52, respectively. This year, the Company has set apart Rs. 50 lakhs as plant reinstatement reserve.

Whether the A.C.C.—or, for that matter, other cement producing units—is able to complete its modernisation programme with relatively less sacrifice by the shareholders will depend on at least two factors. In the first place, much will depend on the question of cement prices. Secondly, there is the wider question of tax relief to enable the units to plough back their profits into capital equipment. The more immediate issue is, of course, cement prices. With a promptness which it seldom shows on other occasions, the Government revised, with effect from 1st December, 1952, the price chargeable to consumers of packing materials; this step was taken, following the downward trend in the jute market. The A.C.C. Chairman pointed out that this measure had resulted in a substantial loss to the Company on the large stocks of bags held by it. Apart from this loss, the Company has had to face a rise in other elements of costs of cement production. The upward revision of the basic wages and dearness allowance has cost the Company Rs. 19 lakhs. Prices of raw materials have gone up. Fuel oil has gone up during the last few years by over 100 per cent. The burden of the 45 per cent. increase in coal freight on the Company is estimated at Rs. 38 lakhs. Surely, these shifts in costs deserve to be taken into account in the case of a controlled industry, to which class the cement industry belongs. It is to be hoped that the Tariff Commission, to which the question of cement prices has been referred by the Government, will examine the question from the point of view of both the rise in manufacturing costs and the need for enabling the industry to retain sufficient funds for purposes of rehabilitation and expansion.

CONCRETE ASSOCIATION

The forethought with which the Concrete Association of India was established in 1927, as a technical service organisation of the A.C.C., has been paying good dividends. If Portland cement has established itself as the principal construction material in India, it is due as much to the quality of the Indian cement as to the Concrete Association's sustained publicity campaign on behalf of Indian cement. The popularity of the Indian cement is also due to the co-operation of the engineering profession in India in utilising Indian-made cement and thereby helping to fight the prejudice against Indian manufacture. Appropriately enough, the Silver Jubilee Celebrations of this organisation were held simultaneously with the annual general meeting of the Institution of Indian Engineers.

The Concrete Association of India has been rendering valuable service to the cement industry through its free technical advice to consumers. The Association has carried on considerable work in development of new techniques, improved designs and construction methods and thereby opened new fields of application for concrete. It is gratifying to note that the Association's activities have been expanded by the formation of a Research and Development Department. A development which shows great promise for the future of concrete construction is the use of prestressed concrete in construction. The Association, therefore, initiated last week a Pre-stressed Concrete Development Group. The Association is also conducting experiments in shock concrete—a process of manufacturing exceptionally strong precast concrete components of houses and buildings.

A notable activity of the Association is its work in connection with village improvement schemes. It will be recalled that, in 1945, it carried out the pilot survey for the Indian Roads and Transport Development Association and demonstrated how the opening up of roads could bring prosperity to the country. The survey showed that the return to the community would be 277 per cent. of the cost of developing new roads in the rural areas. The Association has contributed towards the establishment of engineering standards and codes, too, in co-operation with the Indian Standards Institution, the Institution of Engineers and other bodies. With a number of multi-purpose projects and other constructional works already under way and with more of these awaiting execution, cement has an important role to play in India's Five-year Plan. The Association has, therefore, plenty of scope for useful work.

RE-ROLLING INDUSTRY

The problems relating to steel re-rolling industry figured prominently at the annual meeting of the Steel Re-rolling Mills Association of India, held on Tuesday last at New Delhi. Inaugurating the meeting, Mr. D. P. Karmarkar, Minister for Commerce, Indian Union, urged that greater attention should be paid to self-sufficiency in the supply of billets; this implies the acceptance of the need for the establishment of open hearth furnaces and the collection of suitable scrap to feed them.

The re-rolling mill industry in India is yet in the infant stage. Although the registered section of the industry was able to establish during 1951 a production level of about 110,000 tons of bars and rods, which was a very significant advance over that in 1947, it represented only a small part of India's requirements. The production of the main producers of billets is just sufficient to feed their own rolling mills. It is high time, therefore, that self-sufficiency in the supply of billets is achieved without undue dependence on main producers. Mr. Karmarkar advised the re-rollers collectively to set up their own open hearths or electric furnaces at suitable locations for producing their own billets and assured them all possible aid by the Government. This will facilitate the utilisation of regional "arisings" of suitable melting scrap, against the exports of which both the Association and other interests have been protesting. The experiences of Japan in this regard might be studied with advantage. The Japanese industry is in a position to satisfy domestic requirements of different sizes of reinforcing bars and rods. This position, which has been achieved by setting up small open hearths for producing raw material from scrap, has placed the industry at an advantage over the large integrated steel plants.

The re-rolling industry has a bright future before it, provided it is based on sound foundations. As is common knowledge, the major portion of the development envisaged in the Five-year Plan pertains to the field of agriculture and this is bound to give, in due course, great fillip to the production of various types of agricultural implements all over the country. Thus, the Plan provides the re-rolling industry an opportunity to expand its capacity, provided it is equipped with its own raw material producing capacity. Clearly, it would be a waste of railway carrying capacity in the country, if the demand for steel sections from the many small manufacturers of agricultural implements, who are established in several small centres, has to be met by the main producers; this will involve long railway haulage. The industry has a significant advantage over the main producers in its capacity to adapt its production schedules to meet small demands for unusual sections and shapes which the main producers cannot hope to satisfy as economically as the small re-rolling units can do.

U. S. AID TO INDIA

The inaugural address of President Eisenhower is of some special significance to India, inasmuch as he assured, in the course of that address, that the new Republican Administration would carry on the Point Four Programme. He promised to follow policies which would encourage the productivity and profitable trade of the Free World. And, according to officials of the U.S. Technical Co-operative Administration, the general pattern of this address is favourable to technical co-operation with friendly countries; in fact, Mr. Eisenhower's views on this subject are expected to strengthen the case for technical aid appropriation in the Congress.

The U.S. technical co-operation with India is of considerable importance, in view of the fact that it represents an effective aid to this country's economy. Again, this measure will, as has been pertinently remarked by the officials referred to above, demonstrate to all the free Asian countries "the possibilities of building a society based on democratic institutions and an expanding productive economy." This remark must be viewed against the background of the enormous population which will benefit through the aid programme; the population of India alone represents almost a third of the total population of the underdeveloped areas of the world which the U.S. Technical Aid Programme is designed to assist. It is no wonder, therefore, that India should have been regarded as the keystone in the U.S. efforts to help democracy in Asia. A striking testimony to this is borne out by the notable progress of the Point Four Programme in India during the last three years. Initiated on a modest scale in the fiscal year ended June, 1950, with an allocation of a bare $600,000 (Rs. 28.50 lakhs), the Programme has expanded during the subsequent two years, with allocations amounting to $53 million (Rs. 25.01 crores) and $45 million (Rs. 20.26 crores), respectively. The Government of India has supplemented the U.S. aid by rupee equivalents.

The Programme lays primary emphasis on the "balanced development" of villages, with priority given to improving agricultural efficiency. This is only as it should be, in view of the extreme backwardness of the rural areas, especially in the agricultural sphere. Thus, in October, 1952, the Government of India and the Point Four Administration launched 55 projects, covering about 16,500 villages with a total population of about 11 million. The projects amply provide for teaching and demonstration in agriculture, health, education and village industries. Under the Point Four Programme, the U.S. Government is helping India to augment output of fertilisers as a means of raising food production, particularly in the village development areas. It is drilling 2,000 deep wells, with a view to improving water-supply, and providing steel to village workshops for the production of small farm implements, besides giving technical advice for improved designs and workers' efficiency. It is also assisting in the development of the fishing industry.

The economic aid so far received by India from the U.S. Government has no doubt served to supplement India's efforts to implement the Five-year Plan. But, considering the enormous resources required, the extent of U.S. aid, it must be admitted, has not been considerable.

MR. N. R. SARKER

In the death of Mr. Nalini Ranjan Sarker on Sunday the 25th inst. at Calcutta, the country has lost a great business man and an able statesman. It is not often that the business community in this country produces a person of Mr. Sarker's versatile abilities; he was an economic thinker, a bold administrator, a tried political leader and a sound business organiser. Although Mr. Sarker owed his early reputation to his position as the President of the Hindustan Co-operative Insurance Society, Calcutta, to the great progress of which he had so largely contributed, his many-sided personality was not to be contained within the confines of an insurance office. Whether as Mayor of Calcutta (1934), or as the first Finance Minister of undivided Bengal under Provincial Autonomy (1937), or as Member of the Viceroy's Executive Council in charge of Commerce, Industry and Food, or as Finance Minister of the present Bengal Government, Mr. Sarker always displayed administrative abilities of a very high order. Even after he retired from public life mainly owing to ill-health, he did not remain idle, but continued to bestow thought on the problems facing the country, although his health was by no means good enough for undertaking such tasks. Readers of *Commerce* will recall the article on "The Pattern of India's Tax Structure"—a most painstaking, comprehensive and intelligent survey of India's fiscal problems—which he wrote for the last *Annual Number* of this journal. It was not the last of his contributions to any paper or journal. Shortly after that, he wrote a very well-balanced article on the financing of the Five-year Plan for the *Statesman* and followed it up by another on "Deficit Financing" for the same paper. He wrote these articles in spite of his delicate health, which few would have cared to do. And the articles were none the worse for it. They are the latest instances to show that he was a person of remarkable sobriety of judgment.

OFF THE RECORD

(By "ROVER")

THAT the Indian automobile industry, or whatever there is of it, is passing through a critical stage has become patent, with the reference of the question of protection and assistance to it by the Government of India to the Tariff Commission. This inquiry has been on a fairly comprehensive scale and it is likely to be concluded this week, if it did not do so by the end of last week. The question, so far as I could gather from the various aspects dealt with during that portion of it which was open to the public, is being examined with the customary thoroughness and open-mindedness characteristic of all such tasks undertaken by this important body in the past. Both the Commission's review of the industry and its recommendations in the case of this basic and key industry are naturally being eagerly awaited by the business community, in general, and the large number of investors who have courageously put in their money in it, in particular.

But apart from those immediately concerned professionally, technically or economically, interest in the proper establishment and functioning of this industry should not be confined only to those who are actively associated with it. Never having had any say in the matter for hundreds of years, it is too early to expect the ordinary citizen in the country to be defence-conscious or to be interested in and informed about the basic aspects of the country's defence organisation. At the same time, the impenetrable barriers that used to stand between the public and the armed forces of the country have not only gone, but the people are getting enthusiastic about our *jawans*. For this transformation from the dread and distrust of, to pride in, the national army, the army itself and more than anyone else, individually, General Cariappa, the first Indian Commander-in-Chief of the Indian Army, who retired recently, deserve all the credit. But this is not enough. As citizens of the Republic, it is necessary that we should be more enlightened and better informed about the needs of the defence forces. There is a woeful ignorance about these matters not only amongst the people, but even State Governments and Central legislators are indifferent to them.

Even industry has its responsibility to discharge in the matter of suitably equipping the armed forces, with the thousand things they need, apart from arms and ammunition. One of the most important items of this equipment, and one, on which the efficiency and usefulness of the army at a time of crisis depend, is the motor vehicle for the quick transport of men and materials. An army which has to depend for the supply of its transport vehicles and motor spirit on other countries is as good as immobile, whenever the world is engaged in a major conflict. In any such crisis, the number of peace-time vehicles with the forces are not enough. As many as possible have to be requisitioned for this purpose from those used for civil needs. In the final analysis, therefore, after all other relevant facts and aspects have been considered, it is imperative that the nature, the type, the size and the pattern of passenger and goods vehicles generally to be adopted, encouraged and used in the country should be such as could be dovetailed into the requirements of the Army, Navy and the Air Force.

Purely economical and theoretical considerations cannot be allowed to decide these important issues. Just as self-preservation must precede individual saving, economics only begins where defence ends. I have, therefore, always opposed the use of diesel vehicles by the State and municipal road transport services, not only because they are not really economical in the long run, if you consider the total cost of their use to the country and not merely to the user, but because diesel vehicles, as a rule, are of no use for defence purposes. I was, however, not very much surprised when the Tariff Commission allowed so much time and importance to the discussion on this controversy, at the time of the public enquiry last week, because it had, perhaps, to do so under its terms of reference. The controversy should have been set at rest long ago by the Central Executive by taking a firm decision on this question and informing the State Governments and City Corporations, which aspire to undertake these services about it. Even where such services are in private hands, the system of licensing of such vehicles should aim at the early elimination of diesel vehicles from the roads and their replacement by petrol-motived buses and trucks of a size and pattern conforming to the standards prescribed by the Defence Ministry. In all such matters, the last word must always be with the Defence authorities and the utilitarian considerations of cost and convenience must give way to those of emergency.

Similarly, for a country like ours, standing only at the threshold of industrial development, the variety of size, pattern and quality of cars and other road vehicles is bewildering and wasteful. These should have been standardised and restricted to a very narrow circle a long time ago. The longer we allow the imports or assembly of varying patterns and makes of vehicles in the country, the longer and more difficult it would be for us to create and promote a truly national automobile industry. Technically and economically, there is really little to choose between the various makes and patterns of these imported and assembled vehicles, just as there is little to choose between fifty brands of washing and toilet soaps within a given price pattern. It is more a matter of indulging in individual fancy or social fashions, the same as we do in the matter of dress.

Even industrially advanced countries like the U.K., Germany, Japan, do not allow this perpetual fashion parade of vehicles on its national highways. It is symptomatic of our chaotic and unregulated economic thinking to make this restriction in the choice of transport vehicles an issue either of individual civic liberty or of our catholicity of tastes and an open door-for-all hospitality to foreign manufacturers of motor vehicles. It is all very well to give free play to our fancy for the cut and colour and style with regard to coat, bush shirt or bodice. Such pageantry in apparel may be classed as harmless, though it does not make for the growth of national sentiment and unity. But, in the field of road transport, this licence, which has led to the appearance on our roads of a few units of every make and shape of motor cars and buses and trucks ever made in any country on earth, has hampered the growth of an important key industry and will go on doing so, till the time we wake up to the need for strict standardisation and austerity.

If we seriously mean to build up an automobile industry, which we must purely out of consideration for the defence requirements of the country, the first step which we have to take out of the present chaos is to restrict henceforth the licensing of motor vehicles for any purpose to a few set makes and types. With regard to motor cars, this should prove very easy. I cannot see why just three types should not do for us; a small run-about for professionals in the towns and cities, a medium-sized family car and an expensive and roomy one for our Ministers, millowners and millionaires in general, whose class-consciousness makes them stand aloof from us commoners. Imagine how it would simplify the manufacture and distribution of motor cars and vehicle parts in the country and reduce the capital required to be invested in the industry. It would also tend to make them cheaper for the users, which is no small consideration in this age of suave, scholarly but highly acquisitive and predatory Finance Ministers, who lie awake every night thinking of the ways and means of extracting all the loose change left with us, citizens, after they have helped themselves to the bulk of our meagre earnings. The field for choice might have to be a little more extensive in the matter of commercial vehicles with regard to size and power, but, even here, there is ample scope for pruning of needless variety.

And now I come to the nature of protection and assistance necessary for the rapid growth of the automobile industry in the country. If we take all the frills and frivolities off, if we concentrate on the purely utilitarian aspects of the question and forget, for the time being all the theoretical niceties of abstract justice and international susceptibilities, our path is straight and clear in this direction as well. Our past experience has taught us that tariff barriers in the form of high duties on imports of cars or parts for the assembly plants here have not been of much avail even for the slow and gradual building up of this industry. The latitude shown about this in the past four years has only complicated the situation further and resulted in draining away the resources of the couple of concerns concentrating on the manufacturing of parts.

We have been unduly tender to importers in the past; we have given them enough time and more to progress along the line of manufacturing important parts. Henceforth, work of assembling imported parts must only be allowed to those plants which have genuinely striven to increase their manufacturing activity and which put forth a guaranteed plan for making not a 60 per cent. Indian-made motor car or commercial vehicle but a cent per cent one, within a stipulated period. The rest must close down or take to specialising in the manufacture of some selected parts of duly standardised vehicles for supply to those licensed to manufacture and assemble. This will give them an honoured, honourable and useful part in the industry as a whole and allow them to keep on functioning, with only a little change in mechanical equipment and to keep their individual identity intact and their staff and workers in employment. We need not be frightened by the bogey of resulting unemployment if they are forced to close down, because the volume of employment both for the technical and trained personnel and for manual workers will actually increase to the extent that the purely assembled vehicles will be replaced by those partly manufactured and only partly assembled from imported parts. What is wanted is a ruthless and unswerving implementation of the policy already evolved and accepted by our Government in this respect at the very outset, undeflected by any sentimental considerations or the combined pressure from vested interests, national as well as non-national. If this is done, there will be ample protection afforded to our already partly established industry which has so far given a good account of itself.

There is no need to pamper it further with subsidies which would only turn out to be so many chimeras and would be easily set at naught by powerful producer corporations abroad, while proving a burden to the already overtaxed citizen. Timely adjustment of subsidies and/or import duties to suit the steps taken by manufacturers of motor cars abroad from time to time to get round these protective measures would not be possible and the infant industry here will be required always to run to the Government to press its case for making these adjustments, instead of paying undivided attention to its appointed task of manufacture. It will not, therefore, be in a position to plan ahead in an assured manner for increased production. On the other hand, an assured and effective output of twenty thousand vehicles a year of a few restricted patterns, together with the number required by the Defence services annually, should give full scope and protection to the two or three units which come forward to push on with its manufacturing side, without any additional bait of increased import duties or substantial subsidies. This policy, to my mind, will protect all—the industry, the consumer and the public exchequer.

BUSINESS BEFORE PARLIAMENT

TRADE NEGOTIATIONS WITH INDONESIA

(From A Special Correspondent)

NEW DELHI, *27th January*

DELHI LETTER

THE Capital has been in a festive mood. The Republic Day celebrations have passed off well, the colourful and pompous pageantry of the innumerable folklore dancing styles representing the diverse types of immemorial Indian culture, being the outstanding feature of the day. The interlude provided by these festivities, and previously by the Congress session at Nanalnagar, Hyderabad State, would appear to have provided the necessary diversion to the Ministers from the routine and prepared them to face the strenuous work in the impending budget session of Parliament.

Parliament is scheduled to begin on 11th February, when the President of the Indian Union will address both the Houses. There will be a separate sitting of the Lower House on that day for the transaction of Government business only for about half an hour after the conclusion of the President's address. In the present context, the President is not expected to traverse much new ground in his forthcoming address to Parliament. Apart from giving a brief resume of the work awaiting the members of Parliament, the President will presumably reiterate what he spoke on the eve of Republic Day. He would probably emphasise that every Indian should take an active part in the "new era of national reconstruction and regeneration" as embodied in the Five-year Plan and work for its success.

The President observed in his broadcast speech on the eve of the Republic Day: "There has been silent but steady progress in the expansion and improvement of our transport, industrial and irrigational systems during 1952. Such inaccessible parts as Cutch have now been connected to the main railway system of our country. Steady improvement continues to be made in the position of locomotives and rolling stock not only by imports from abroad but also by manufacture in the country itself. Similarly, our industrial production has been growing. The production of sugar, cloth, cement and steel has increased and we have succeeded in making larger quantities of these available for the consumption of the people. In the matter of the production of jute and cotton also, we have made a great headway towards self-sufficiency."

Important Bills

For the present, the House of the People is scheduled to sit from 11th February to 8th May next. It is possible that it may be asked to sit for a few days more to complete the official business. Only four days have been allotted to private business. The Commerce and Industry Ministry has seven Bills, out of which six have been pending before the House. The Tea Bill is now in the Select Committee stage while Amendment Bills relating to the Coffee Market Expansion Board, the Rubber (Production and Marketing) Board and the Central Silk Board, the Industries (Development and Regulation) Bill, the Collection of Statistics Bill and *khadi* and other Handloom Industries (Development) Cess Bill are in different stages. The Indian Tariff (Amendment) Bill will come before Parliament in order to obtain the assent of the House for the grant of protection to the ball bearings industry. Other Bills in connection with the Iron and Steel Control, Control of Royalties, the Coir Board and a Bill to amend the Indian Patents and Designs Act, 1911, are in the preparatory stage.

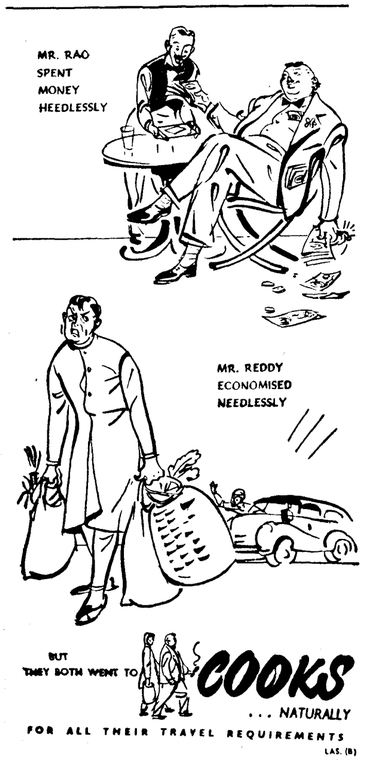
Besides the above, important pending Bills relating to other Ministries are the Estate Duty Bill, the Income-tax (Amendment) Bill, the Food Adulteration Bill, the Rehabilitation Finance Administration (Amendment) Bill, and the Administration of Evacuee Property (Amendment) Bill.

New Steel Plant Still in Discussion Stage

Indications are that there will be a considerable delay in the establishment of the new steel plant in the country. A year ago, the Central Budget provided a token sum of Rs. 1.75 crores for the early implementation of a steel plant with a view to producing more iron ore, in the first instance, to feed the country's steel rolling mills. The last one year has been spent only in discussions with Krupps, Japanese interests, etc., and the final outcome of these talks has been the inability of the Government to agree to their demands in the matter of control, profits, remuneration for technical advice, etc. Now that the negotiations with the Japanese firm have broken off, the Government now seems to be considering whether it will be worthwhile, in the present high prices for plant and machinery, to take up the venture of establishing the new mill at its own cost initially and then to approach the World Bank for adequate help for making the whole scheme a success. For this purpose, the Government has decided to appoint a technical mission to investigate and submit recommendations regarding the size and scope of the proposed plant. The members of the mission, apart from Government personnel, will include, for the present, nominees of Messrs. Koppers of the U.S.A., the World Bank, etc. They will advise the Government on its location, capital cost, cost of production, etc. In these circumstances, it will be many more months before the whole scheme takes a definite shape.

Jute Under Difficulty

The problems of the jute industry continue to draw the attention of the Government of India. Despite the fact that the industry has been working only on the basis of 42 hours per week, stocks of jute goods with the mills have been mounting up. In the sacking section, export demand has not been up to the mark. In the meanwhile, a section of the trade has begun to demand an appreciable reduction in the export duty on jute goods. Perhaps, if the present dull conditions continue to stagnate the industry and trade in the coming weeks, it may be that Government might reconsider the whole question at the time of the presentation of the Central Budget. The industry has also been considering the question of modernisation of its plant and machinery at a cost of Rs. 80 to Rs. 100 crores spread over a period of ten years. Further, the Planning Commission has fixed the target for jute goods at 12 lakh tons, but, in view of the difficulties experienced by the industry during the last few months, even to market its limited output, it is doubtful as to whether the industry will be able to reach the target, especially as it has to face growing competition from the Continental and Pakistani manufacturers.



Problems concerning raw jute have also to be looked into. Despite the fact that the Government of India had taken steps to bring in more area under jute in the 1952-53 season, the result has been a moderate decline in the area for the period under reference. A year ago, prices of raw jute were well above 100 per cent. over the current rates, although they were markedly lower than the peak levels of May and June, 1951. In view of the sharp decline in the present prices of raw jute, it is doubtful whether the jute growing States will be successful in inducing their cultivators to produce more jute without providing some fresh incentives. Now that there has not been any decline in the price of rice, it is unlikely that peasants will take to jute cultivation in preference to the more profitable rice. Further, during the last season, jute growers are stated to have experienced great difficulty in marketing their produce at the opportune moment. In order to suggest ways and means to solve the problems confronting this premier exchange earning industry, the Government of India will be shortly appointing a small expert committee. It may be mentioned here that most of present troubles of this industry have been largely due to the disproportionate rise in the prices of raw jute and jute goods during the hectic days following the Korean War.

Indonesian Trade Delegation

Trade negotiations are now being carried on by the Commerce and Industry Ministry with the Indonesian delegation which arrived in the capital a few days ago. Although India has a close understanding and friendship with Indonesia on the political plane, the economic ties between these two countries are not as close as it should be. Perhaps, they are due to the fact that the economy of both these countries are largely agrarian in character. Again, in the pre-war period, Indonesia had close trade relationship with Japan and Holland which used to supply it with most of its requirements of manufactured goods. During 1951-52, India's imports from Indonesia amounted to Rs. 3.07 crores, as compared with its exports valued at Rs. 4.5 crores. It must, however, be noted here that a part of India's exports to the free port of Singapore finds its way into Indonesia ultimately.

As a result of the present discussions, both countries may be able to enlarge their trade items to their mutual advantage. India is now in a position to supply more cotton piecegoods, in view of the sharp increase in its output, as well as jute sacks, rubber tyres and manufactures, some chemicals, constructional cement, porcelain ware, diesel engines, electric motors, and various other types of machinery. It can import from Indonesia valuable raw materials such as copra and coconut oil, palm oil, raw hides and skins, quinine, tin, petroleum, etc. Instead of trade flowing through the free port of Singapore, it will be advantageous to both the countries if more direct trade relationship is established between the two. The limited success of the previous trade agreement, it needs to be mentioned here, was due primarily to trade contacts and direct lines of communications. It will be in the interest of both countries to find out the reasons for the limited volume of trade between them and to devise remedial measures.

Trade with Egypt

Among other countries that are likely to come to an understanding with India in the sphere of trade, mention may be made of Egypt. In view of the shortage of sterling, that country appears to be interested in the conclusion of a barter deal with the Government of India. An indication of this is already provided by the sudden spurt in the prices of black tea both in Calcutta and Cochin auctions since Egypt used to import this particular type of tea from Ceylon. If reasonable prices are quoted, India can import nearly five lakh bales of long-staple cotton from that country and relieve it of a part of its heavy stocks. India can now supply sugar and many other consumer articles to Egypt at competitive rates. In all these, the ultimate result will be decided by the price factor. Meanwhile, there are reports of resumption of trade talks between India and Pakistan. At present, India's bargaining position is a little better than before, in view of the adequate supply position in cotton and jute, while Pakistan has been carrying heavy stocks of these goods. Unless and until Pakistan abandons its unilateral policy in regard to the levy of a licence fee on the export of raw jute to India and quotes a reasonable price in respect of raw cotton, the chances of a trade agreement between the two countries are remote.

PAKISTAN NOTES

CRISIS IN PAKISTAN TEA INDUSTRY

NEED FOR AVERTING IT STRESSED

THE crisis which the Pakistan tea industry, in common with the industry in other tea-producing countries, is facing to-day was spotlighted by Mr. I. T. Carmichael, Chairman of the Pakistan Tea Association, in the course of his address at the Association's annual meeting held recently in Chittagong. The Pakistan tea industry, Mr. Carmichael, declared, was in the midst of a crisis, the like of which had never been known before; in fact, the very existence of many tea gardens was at stake.

That this statement is not at all exaggerated will be evident from the reported decision of the tea growers in Sylhet (East Bengal), to close down 23 tea estates during the ensuing season (1953-54). The crisis has been brought about, on the one hand, by the precipitous fall in tea prices and, on the other, by the enormous rise in the cost of production, thanks to larger expenditure on labour in the form of wages, dearness allowance, food concessions, medical welfare and the like. The conditions are so critical that they call for drastic remedies. It is precisely this consideration that weighed with the Pakistan Tea Association to recommend to all its members to adopt—with effect from the 1st inst.—measures such as reduction (by As. 2) in the labourers' daily dearness allowance, sale of foodstuffs by gardens at cost price, instead of at concession rates, and 5 per cent. reduction in managerial and clerical staff salaries and of 10 per cent. in agency remuneration.

These economy measures cannot by themselves remedy the ills of the Pakistan tea industry. The real solution, it is stated, lies in either a further reduction in costs or a substantial rise in prices. If, however, prices of tea do not meet, or preferably exceed, the cost of production, what are the tea companies to do? This is the difficult question now posed before the tea industry and the authorities in Pakistan. According to the Pakistan Tea Association Chairman, there are only two alternatives: the companies must either go into liquidation or "further reduce costs to arrive at a figure roughly parallel to that which they receive for their teas." The former course of action is certainly undesirable, inasmuch as it will lead to widespread unemployment. For reduciton in costs, the scope seems somewhat limited. The tea gardens in Pakistan, it is stated, are now undertaking only those works which are absolutely essential for the production of the 1953 crop.

Government Assistance

In the circumstances, one naturally expects the Government to come to the rescue of the tea industry. There are several ways in which such assistance could be given and these were particularly stressed by the Chairman. They include (1) continuance of suspension of export duty on tea beyond 31st March, 1953, (2) relaxation of controls within the border area and the shouldering of responsibility by the Government for the feeding of tea garden labour, (3) supply of rice and salt to the Association on a no-profit-no-loss basis in the event of section 144 remaining in force, (4) abolition of import duty and sales tax on tea chests—these account for a total levy of 43 per cent. on the landed cost of the article, (5) downward revision of the present rates of freight for tea as applicable on the E.B. Railway, and (6) suspension of cess on tea (Re. 1-6 per 100 lbs.).

Referring to these suggestions, East Bengal's Commerce and Industry Minister gave the assurance that if there was no improvement in the outlook for tea, it was quite likely that the export duty might be suspended for a further period. As for the abolition of import duty on tea chests, he said that the Pakistan Tea Board had already recommended it to the Centre and the matter was under the Government's active consideration. While on the suspension of tea cess, the Minister pointed out that the cess was intended for the financing of the Licensing Committee, the establishment of a research station and for purposes of tea propaganda. Besides, the Tea Board, which was carrying on intensive publicity both at home and abroad, was being financed entirely from the cess. The Minister emphasised the need for tea producers effecting further economies, but, at the same time, warned that if reduction in costs were to tell on the efficiency of those employed in production, it would be doubtful wisdom to introduce such measures.

Mr. Carmichael pointed out that the world surplus of tea was small and that it might be eliminated before long. He warned, however, that it should not lead the industry into a sense of complacency, since the elimination of surplus tea did not necessarily mean that the producers were going to get fancy prices for tea. In his considered opinion, the accent now is most definitely on quality, without, if possible, any appreciable loss of crop; with the experience of the last two years, it should be obvious to all tea producers concerned that a clear, well-made tea always fetches a reasonable price.

Training of Village Project Personnel

Eight institutes for the training of village project personnel are to be established in Pakistan shortly. A decision to this effect was taken at an inter-Ministerial meeting held in Karachi recently. Of the proposed institutes, three will be located in East Pakistan, two in the Punjab and one each in Sind, the N.W.F.P., and Baluchistan. An evaluation unit is also proposed to be set up to evaluate the progress of each project area. The first batch of trainees is expected to be ready by the end of this year; these will be sent out to 2,400 villages covered by either project areas.

The meeting also considered further steps for the implementation of the village Agricultural Industrial Development Programme. Discussions centred round the procedure to be adopted for finalising the shape of the Programme and the proposed allocation of expenditure between the Central and Provincial Governments. More details are being worked out and a further meeting of the Central Committee is expected to be held in the second week of next month.

Export Policy Liberalised

With a view to stimulating exports, the Government of Pakistan has further liberalised the export policy. The scope of the open general licence has accordingly been widened to include as many as 56 items, bringing the total number of items on the O.G.L. to 94. These include soap, raw silk, cotton linters, woollen carpets and rugs, leather goods other than footwear, conchshell products, surgical and veterinary instruments, furs and manufactures thereof, sports goods, etc.

Farm Labour Conditions

The Government of Pakistan and the I.L.O. have signed an agreement under which the I.L.O. has agreed to make available to Pakistan the services of an expert who will survey the economic and working conditions of agricultural labour. The expert is no other than Sir Malcolm Darling. Sir Malcolm is not new to Pakistan; he had spent a considerable time in the Punjab and is the author of a number of reports on various agricultural and co-operative problems. The proposed survey, although to be handled separately, is complementary to the survey of industrial workers, which has already been carried out by a team of I.L.O. experts whose report is expected to be ready shortly. The results of these two surveys will fully reflect the labour conditions in Pakistan as a whole and form the basis of the Pakistan Government's labour policies in future.

The Pakistan Government believe, according to an official Press Note, that there is no further scope for the establishment of woollen and worsted mills of any size in Pakistan. The aggregate quantity of raw wool annually available in the country is not more than 30 million lbs. and the quality of indigenous wool is unsuitable for the production of worsted yarn or fabrics.

(Concluded from next column)

tible. Saving is too low and taxation is too high. That also is fact. Unless the State is to take responsibility more and more for production (the capital for which can then be found out of taxation), private saving must be made possible —and it is not made possible under a system which takes 47 per cent. upwards of all company profits and gives unrealistic obsolescence allowances on capital. If the Bank speeches give the political exponents of private enterprise who are now in power, the material for some hard thinking before Budget day, they will not have been in vain as a contribution towards a sounder capitalist economy.—*All Rights Reserved.*

TOWARDS SOUNDER CAPITALIST ECONOMY

BRITISH BANKERS' CONTRIBUTION

(From Our Own Correspondent)

LONDON, *24th January*

LONDON LETTER

THE City limelight this week has been stolen by the Chairmen of the joint-stock banks who have made their annual surveys of the state of the nation. Though they had much to say on the advantages of convertibility—which is generally favoured—and looked anxiously on the slow building-up of the sterling area reserves, with scarcely an exception the substance of their speeches was the Welfare State. Not that it was anywhere mentioned by name, but they were against it and raised aloft the banners of rugged individualism in a "back to 1939" crusade.

All roads led swiftly to this conclusion. There was the National Provincial spokesman who dwelt on convertibility and pointed out that this involved and active export balance which was only possible with lowered prices and increased efficiency. But the latter would only be obtained through higher private investment which was not possible without reduced taxation. At present, taxation was absorbing 40 per cent. of the national income and this had got to be reduced. The logic of this argument is impeccable (on the premises given) and the conclusions inescapable.

The Chairman of Barclays made his approach through the dangers of inflation. While he had welcomed the Chancellor's approach to deflation and approved the strengthening of the 4 per cent. Bank rate, he feared that the continued rise in Bank deposits indicated that economies in other directions were being more than offset by increased Government spending. This imperilled the recent movement towards lowered prices and was particularly dangerous in the face of rising export competition—from Germany which worked hard and from Japan which worked cheaply. Our answer must be increased technical efficiency which required additional investment and investors have to have confidence. The problem was how to give investors sufficient confidence.

Doing Too Much With Resources

The Midland Chairman saw our economy overloaded by our attempts to do too much with our resources. Either production must be increased or consumption reduced—and increased production meant more new capital. Moreover the excessive competition for resources arose from excessive taxation (which permitted the Government to spend more than it ought from the point of view of the private and productive sector of industry) which in turn caused undersaving. The whole world required more investment—that is, more risk capital; but an excess of social security, combined with high taxation reduced both the attractiveness and the ability to save.

The District Bank's speech made an even more direct approach: taxation to-day was penal, but the re-equipment of the national productive machine demanded higher investment. There was a need to increase both personal and corporate saving, which in itself would combat inflation and reduce costs. The worry of inflation also governed the very forthright speech from Lloyds. What was the use of a high Bank Rate if the budget was "soft"? (This implied that, when the Chancellor cut some of the social expenditure, he gave it back in benefits in other directions.) Consumption was maintained high and investment kept low. Indeed savings now came only from high company profits—which in turn were highly taxed. If we were to have more capital goods—both for export and for investment—the productive industries must be encouraged to renew plant and wipe out obsolescent equipment. This meant drastic economies in national spending in favour of these industries. Subsidies must be cut and "free" services paid for. "Full employment" was not to mean that workers must be tied to complete job security—they must move where the economy required.

There is great substance in these arguments —although, as will be seen, they did not point directly the combative question: Can the Welfare State exist in a capitalist economy? Britain's need is for increased exports and for more capital investment: that is incontrovertible.

(Continued in previous column)

RISING GOVERNMENTAL EXPENDITURE IN BRITAIN

BANKERS ON PREREQUISITES FOR CONVERTIBILITY

THE annual statements of British bank Chairmen to their shareholders, circulated last week, are, as usual, notable for their comments on current economic problems. The observations of these bankers are of interest not merely to the British public but to a much wider public in many parts of the world in view of the fact that sterling is an international currency ranking next only to the U.S. dollar. Further, they are of especial importance to all Commonwealth countries in view of their close relations with Britain politically and economically. The studied remarks of the British bankers, known for their caution, keen sense of economic realism and insight into international developments, are eagerly looked forward to by students of economics and business men in this country. A reference here to the salient features of these statements will not, therefore, be out of place.

We have so far received the statements of Lord Balfour of Burleigh of Lloyds Bank, Sir Eric A. Carpenter of William Deacon's Bank, Mr. A. W. Tuke of Barclays Bank, Mr. A. Harold Bibby of Martins Bank, and Sir Thomas D. Barlow of the District Bank. All these Chairmen have expressed satisfaction over the performance of Britain in many economic spheres under the leadership of the Conservative Government. They are particularly gratified at the accession of strength to the pound sterling. They are, however, unanimous in their view that there is no room for complacency and that much yet remains to be done to restore the pound sterling to its pre-war status. All of them have welcomed the rise in the Bank rate and appear to be keen on impressing upon the country how, in their loan policy, they have responded in full to the call of the Treasury for caution. Again, all of them are rather critical of the increase in Government expenditure which they fear would, if it were to persist, neutralise the beneficial effects of the steps taken so far to check inflation. Another subject on which they are all agreed is convertibility of sterling. They all feel that convertibility is essential but they do not minimise the enormity of the task in reaching this cherished goal. There is no indication in their statements to suggest that they are nursing any illusions about it. They would appear to agree that there is no short cut for Britain to achieve convertibility.

Lord Balfour concedes that the achievements of Britain last year were great. Thus the alarming drain on gold reserves ceased earlier than was expected. In the first half of the year, the country was able to restore balance in its overseas accounts and the world-wide fears of a collapse of sterling were dispelled. These are, according to Lord Balfour, important gains. He seems to be confident that, so far, there are no signs of losing the ground that has already been gained, provided the country did not slacken its efforts. In line with Lord Balfour's views are those of Sir Eric, who observes that it is comforting to look back over the last six months and see the small but steady improvement each month in the gold and dollar reserves. He, however, sounds a note of caution that there is no room for the slightest complacency.

The need for caution in the future has been well brought out by Lord Balfour. He says that, as one turns to the future, the picture is less pleasing. The sterling area gold reserves touched the bottom of $1,662 million in April 1952, the losses in the preceding 10 months being as much as $2,205 million. It is true that by the end of the year the area had recovered something, after meeting the payments towards American and Canadian debts, but the gain was no more than $184 million, a fraction of what had been lost earlier. The reserves at the end of the year were, according to Lord Balfour, not only wholly inadequate to free the sterling and make it a world currency but inadequate even for safety, if the tide were to turn against the country. He desires the necessity to bear in mind—and this piece of advice is intended for those who are socialists—that Britain's progress so far has been limited and that even this restricted improvement rests not on secure foundations of "fundamental changes of policy" but on a favourable change in world conditions and on stop-gap expedients resorted to by the Government to stem the tide—a first-aid treatment but not a cure for restoring the patient to health.

This takes Lord Balfour to the change in monetary policy made by the present Government towards the end of 1951 and pursued further in the following year. He says that the raising of the Bank rate dampened the demand for bank accommodation and thus checked inflation. If account is also taken of the sharp reduction in the clearing banks' holdings of commercial bills, some £300 million of credit were withdrawn over a period of a few months. In spite of this withdrawal, in November, 1952, the combined deposits of clearing banks were almost exactly unchanged on the year. This means that the initial contraction during the first six months of the new policy had been completely reversed by fresh creation of credit during the second six months. "It is, in fact, the case," says Lord Balfour, "that during the summer, for every pound of credit that the banks were in the process of withdrawing from the private sector of the economy, they were required to extend nearly two pounds of additional credit to the Government." In the result, the decline in bank advances and commercial bill portfolios was more than offset by fresh acquisition of Treasury Bills, and deposits rose instead of falling.

Describing in a more detailed manner the process referred to above, Mr. Tuke pertinently points out that, as the Government expenditure had been outrunning estimates so pronouncedly, it was found necessary in October, 1952, to make a further issue of short-term funding stocks in order to remove some of the additional Treasury Bills and to reduce the liquidity of the banks more nearly to its traditional proportions. "This had the effect of increasing," he remarks, "our ratio of investments to deposits to an unprecedented level, the final figure for the year being 34.8 per cent., but owing to our low ratio of advances our liquidity ratio is still high at 40.2 per cent. or at 35.8 per cent., if we exclude cheques in course of collection from other banks."

Commenting on Government expenditure, Mr. Harold Bibby states that the Government revenue and expenditure account for the first nine months of 1952-53 shows an overall deficit of £951 million. Twice within 13 months Government expenditure has, he says, outrun its income and the floating debt has had to be funded. He insists that the Government should initiate drastic cuts in its expenditure and provide relief in taxation to industry to re-equip itself, a conclusion which is strongly emphasised by Lord Balfour too.

The increase in deposits resulting from expansion in Governmental expenditure has forced Lord Balfour to think of the future trend of bank deposits. He feels that deposits may fall in the coming peak season this year, but the question which appears to worry him is what is to happen after the peak season; "whether the new financial year will bring further massive demands for short-term finance on the part of the Treasury, or whether on this occasion the basic volume of deposits can be held stable or reduced?" The answer to this, he says, depends on a strong budgetary policy quite different from the one followed by the Government last year, when preferences to stop building factories yielded place to that of building houses for pleasing the consumer. "This policy of maintaining consumption," he observes, "while allowing our industrial capital to run down is a mere stop-gap. It could not be repeated without jeopardising our ability to compete in world markets."

Lord Balfour points out that the Chancellor's task in the next budget should be to help increase savings and cause capital to flow to export industries, especially the engineering industry. In fine, he should create the right financial climate in which enterprise can, once again, flourish. This can be achieved by a drastic cut in Government expenditure, by a reduction in taxes and by basing taxable profits not upon the cost of acquiring capital goods at some time in the past, but upon the cost of replacing them at current prices. His considered opinion, with which every industrialist will agree, is that, unless adequate allowance is made for depreciation, many industries cannot hope to maintain their physical capital, far less to improve their productive apparatus.

The question of the convertibility of sterling has, as is only to be expected, received prominent attention at the hands of the Chairmen of some of the Banks referred to above. A striking feature of their observations on this subject is that everybody sees the need for building up adequate reserves before freeing the sterling. Lord Balfour emphasises that no task is more urgent than the rebuilding of the exchange reserves of the sterling area as a prelude to the restoration of convertibility. He, along with Sir Eric, welcomes the decisions of the Commonwealth Conference held in London last December and stresses the importance of freeing foreign trade from restrictions. Says Sir Eric: "We must applaud the agreement for each member to work for internal stability and to concentrate on developing those projects which will improve the area's balance of payments with the rest of the world. It is to be hoped that the policies agreed upon will, in fact, lead to an increase in the reserves of the area during 1953, an indispensable prerequisite for the exploration of the possibility of convertibility." Commenting on the same problem, Mr. Tuke observes that convertibility cannot be undertaken with any hope of lasting success until a firm equilibrium on current account is achieved by the sterling area. He thinks that this problem is related to sterling balances, on account of the war debts being intermixed with outstanding balances of current trade and states that more information is needed as to the share of each in the total sterling liabilities of the area, now running at £4,000 million.

As the building up of foreign exchange reserves is closely associated with exports, attention is also focussed not only on encouraging the flow of savings into export industries, as stated already, but also on the necessity for producing more goods which the foreigner wishes to buy at prices which he is willing to pay. In this connection, both Mr. Bibby and Mr. Tuke remind Britain of the prospect of keen competition from Germany and Japan. As regards increased trade with the United States, the consensus of opinion among bank Chairmen favours the views of the U.K. Chancellor of the Exchequer, Mr. Butler, who has compressed them in one phrase, namely, "trade, not aid." Mr. Tuke particularly thinks that although the U.S. standard of living is already high, there is no reason why it should not be higher still. By lowering customs tariffs, the U.S. can pave the way for the flow of more goods from Europe, so that the latter may earn more dollars it needs. In this context, it is necessary to refer here to the views of Lord Balfour, for the simple reason that he does not share the view, generally held in many parts of the sterling area, that the U.S. is mainly responsible for the balance of payments difficulties of the area in 1951-52. He observes:

"It simply is not true that the supply of dollars created by American purchases of goods and services has been so constricted as to cause the outside world grave inconvenience. In 1951, the dollar supply created by such purchases was of the order of $15,000 millions—about half as much again as in 1948 although in the meantime the total of money incomes in the United States had risen by only about a quarter. And those dollars were sufficient to enable the outside world to buy more than twice as much from the United States as before the war.

"Nor is it true that American policies have been placing pressure on the monetary reserves of the rest of the world. Towards the end of 1952, the U.S. monetary gold stock was a little lower than in the middle of 1948. Over the same period, the sterling area also lost exchange reserves on balance: but other countries, taken as a group, increased their reserves by some 20 per cent. This fact alone should suggest that the sterling area's problem is not entirely of American origin."

Realising that all talk of real freedom of trade or convertibility without adequate reserves will be idle talk, Lord Balfour draws attention to the need for establishing a clearing union. He draws attention, in this connection, to the useful lessons learned from the working of the European Payments Union, in which member-countries are assigned "quotas" which might be regarded as an attempt to supplement inadequate gold reserves by mutual extension of credit. The advantages of such a clearing union are described by him as follows:

"The secret of that success is surely the fact that in a clearing union the sanctions against persistent creditors can be made as effective as those against persistent debtors. In any system based purely on gold, there lurks a certain danger of deflation; for, while countries losing gold are placed under strong pressure to improve their trade balance, there is no correspondingly strong pressure upon the recipients of the gold to increase their imports. Success in the working of such a system depends upon creditors no less than debtors observing the rules of the game. In recent years, as I have pointed out, we cannot complain of any reluctance on the part of the United States to allow money incomes to expand; but many people would breathe more easily, if world prosperity could be made less directly dependent upon the continuance of expansionary policies within the U.S.A.

"In a clearing union, the sanctions for deficit and surplus countries can be more evenly balanced. While debtor countries are spared the full rigours of the gold standard, the obligation to cover some proportion of a deficit in gold gives them an incentive to put their house in order, without encroaching on their sovereignty. On the other hand, creditors receive only part payment in gold, but a country running a persistent surplus and unwilling to extend further credit always has the remedy in its own hands; it can liquidate its claim at any time by increasing its purchases from the remaining members of the system."

A THOUGHT FOR 1953

Open a banking account with Lloyds Bank—that is a practical way of increasing your freedom from financial care. It helps you to avoid careless spending and your account will provide you with an accurate record of your monetary transactions.

The Bank is able and happy to place advisory services at the disposal of customers who may need advice and experienced counsel regarding financial matters.

Let LLOYDS BANK look after *your* interests

Lloyds Bank Limited 1677 Incorporated in England

THE DOLLAR PRICE OF GOLD

SHOULD IT BE RAISED?

SINCE the end of the Second World War, rumours have been spread again and again in the civilised world about an impending increase in the U.S. official price of gold of $35 per ounce, in spite of repeated denials by the U.S. Treasury authorities. Since the end of the British Commonwealth Economic Conference in London last month, the rumour has been revived once again. Consequently, prices of gold shares have risen, some central banks have converted a portion of their dollar holdings into gold in order to protect themselves, and the U.S. monetary gold stock fell by $150 million during the fortnight ended 23rd December, 1952. Although gold production is important to South Africa, Australia, Canada and Southern Rhodesia, the Conference referred to above did not issue any official statement in favour of raising the price of gold, on account of a regard for possible unfavourable repercussions on American opinion and the impending change in the U.S. Administration, the views of the Republican Party on the question being undeclared.

A higher gold price is being advocated on the ground that it would increase international liquidity by building up the value of monetary gold stocks in the hands of central banks and Governments. It is maintained that gold reserves of central banks and new production of gold have failed to keep pace with the great expansion of incomes and bank credit and the rise in prices of commodities that have taken place since the Second World War. Hence, it is argued that there is not enough gold to support this superstructure of credit and prices and that, therefore, a higher price of gold is necessary to avoid world-wide depression.

It is contended that a higher price of gold would help to build up world monetary gold stocks by (1) increasing the value of existing monetary reserves, (2) increasing the value of annual gold production and stimulating production, and (3) discouraging private hoarding of gold, which in 1951 absorbed three-quarters of the world output, and encouraging disgorgement of the large private stocks held in Western Europe, the Middle East and India.

In order to examine the international liquidity argument, the January, 1953, *Monthly Letter* of the National City Bank of New York gives the following table on the assumption that the official price of one ounce of gold is raised from $35 to $52, that is, an increase of 50 per cent. which is not only far above the current free market price of bar "transit" gold on the Continent but even above the level at which gold coins have been selling lately in Paris.

(In millions of dollars)

	September, 1952

The above table shows that if the price of gold is increased from $35 to $52 per ounce, the increase in the value of gold reserves held in countries other than the U.S.A. would be $5.4 billion. While this would be a substantial increase, it would be only a fraction of the amount of dollars supplied by the U.S.A. to the other countries by means of loans and grants-in-aid since the end of the war. More important than this is the consideration that the gains would accrue principally to countries which possess large stocks of gold but which are not necessarily the most in need. It will be seen from the above table that about 40 per cent. of the gold held outside the U.S.A. is in the possession of Canada, the countries of Latin America belonging to the dollar area and Switzerland, Belgium and Portugal which are the hard currency countries of Europe. The value of the gold stocks of the sterling area would increase by about $1.1 billion. France, Italy and other countries of the European Continent would gain little, certainly less than the amounts which they have received annually through various forms of economic aid from the U.S.A.

The table below compares gold production by major areas in the peak year, 1940, with the 1951 figures, valued both at $35 and $52 an ounce.

* Including the Philippines.

This table shows that the increase in the price of gold applied to the output in 1951 would increase the value of the annual output of gold in countries other than the U.S.A. only by about $380 million. Even if it is assumed that the increase in the price of gold would stimulate the production to the peak level of 1940, the increase in the value of the output in countries other than the U.S.A. would amount to $880 million per annum. Even this amount would be far short of the grants-in-aid amounting to $4.5 billion annually given by the U.S. Government during the last two years. Further, only a part of this hypothetical increase would be available for export to the U.S. Furthermore, the purchasing power of these extra dollars would probably not be proportionate to their number, because the devaluation of the dollar would probably lower its purchasing power.

Position of Sterling Area

Then there is the question of the distribution of the possible benefits accruing from an increase in the price of gold. The above table shows that about 60 per cent. of the world gold production originates in the sterling area, chiefly South Africa. But the bulk of South African gold is sold in free markets or is sent to the U.S. in payment of dollar imports and does not go to the sterling area pool. The sterling area's ability to secure this gold depends on Britain's ability to supply that Dominion with appropriate goods. It is very doubtful whether Britain has these goods and, even if she has them, whether she can supply them in sufficient quantities, especially if the price of gold is raised.

Again, the above table shows that about one-third of the world output of gold is provided by countries which have more or less freely convertible currencies and which have no general balance of payments problems, viz., Canada, the U.S.A., Latin America and Belgian Congo. Countries of Continental Europe would not benefit from an increase in the price of gold, as they produce little or no gold. Like Britain, they too would have to pay more in goods for gold purchased from other sources. Thus, apart from South Africa, Russia, which is a large gold producer, would be one of the principal beneficiaries of a higher gold price.

It is very doubtful whether an increase in the price of gold would discourage hoarding and encourage dishoarding. The dishoarding in India and other Asian countries in 1934, following upon the increase in the price of gold, was due to the distress caused by the very low prices of commodities. But now the bulk of hoarded gold is held not in India, but in France and other countries of Continental Europe which are threatened by inflation. The people of these countries, having seen increases in the price of gold several times in the past, would regard a further increase as only a prelude to yet another increase and would, therefore, distrust their paper currencies all the more. The only way to coax gold from them would be to show them, by means of firm policies, that there would be no further increase in the price of gold.

Dr. J. M. Williams, Professor of Political Economy at Harvard University and adviser to the Federal Reserve Bank of New York, has pointed out that the real cause of the world currency disequilibrium, of which the dollar problem is a manifestation, is the failure of several countries to readjust their pattern of production, so as to be able to offer the goods that the outside world is now willing to buy from them and to offer the goods at suitable delivery dates, in the right markets and with the right degree of persistent sales pressure. The real solution of the problem lies not in the magic of raising the price of gold but in suppression of inflation, a fundamental reshaping of the composition of production and trade, willingness on the part of creditor nations to accept payment in goods and services and encouragement of a favourable climate for international investment. Britain, for instance, should move away from textiles and the light consumer goods, whose production tends to be multiplied in the younger countries, and towards the engineering industries, whose products are in great demand by countries seeking to industrialise. The overseas sterling area should expand the production of raw materials for sale in the American market. On the contrary, an increase in the price of gold, by applying the poultice of inflation to the world disequilibrium, would discourage efforts to apply the true solution indicated above.

The reasoning that the price of gold must be raised because there is not enough gold to go round at its present price is not sound. Gold provides a means of settling temporary differences in an international system of exchange in which goods and services essentially pay for each other. Its role cannot be that of settling huge differences that persistently run in one direction. Great Britain managed the old international Gold Standard up to the First World War with small reserves amounting to no more than £35 million ($170 million at that time). This shows how little gold is required when conditions are in harmony with the principle that trade must settle itself. In recent times, unfortunately, the world has ignored this principle. Hence, the huge amounts of dollars provided in international loans and grants have been swallowed up and the cry is for still more dollars.

One of the factors which enabled Great Britain to manage the old Gold Standard with a small gold reserve was the maintenance by other countries of a large part of their currency reserves in the form of sterling balances. They did so because sterling, being universally acceptable, was equivalent to gold. To-day, the dollar has taken the place of sterling in performing the same function of economising gold. Hence, it is necessary to maintain international confidence in the stability of the value of this key currency. Any increase in the dollar price of gold would impair this confidence. Further, if the price of gold, which serves as the standard for measuring the prices of all other commodities, is raised, because other prices have risen, gold ceases to be a good standard of value.

Effects on U.S.A.

So far we have considered the effects of an increase in the price of gold on countries other than the U.S. Let us now examine the effects on the U.S.

First, an increase in the price of gold would provide the U.S. Treasury with a huge windfall "profit" on its present gold holdings and would also encourage far larger imports of gold by the Treasury. Both would expand the monetary base and supply increased potential for inflation. In theory, such inflationary potential could be offset by keeping the Treasury gold profit untouched and by Federal Reserve open market operations in Government securities. In practice, however, this would be difficult on account of the temptation to Congress to spend all available funds and the complicating effects of heavy Federal Reserve open market operations on the management of the national debt. In fact, some advocates of raising the price of gold propose to use the Treasury profit as a "painless" way of extending foreign aid.

It is also urged that the increased purchasing power made available to the countries selling gold to the U.S. would serve as a "painless" substitute for aid to them by the U.S. The answers to this argument are that, firstly, no method that results in inflation is painless and, secondly, so long as the U.S. has to give aid to other countries, she should determine the apportionment and should not allow it to be determined by the amounts of gold held and produced by the other countries, including Russia.

Secondly, the psychological effects of a further increase in the price of gold and devaluation of the dollar may be such as to start a new inflationary conflagration. The

(*Continued on page 183*)

COTTON MILL INDUSTRY IN INDIA

FURTHER EXPANSION IN SIZE

THE cotton year ended August, 1952, was yet another year of expansion for the Indian cotton mill industry which began in the wake of the Second World War. The extent of such expansion was, however, smaller than in the preceding year. The increase in the number of mills working during the year under review, according to the customary annual Mill Statement published by the Millowners' Association, Bombay, was only eight, as against as many as 20 in 1950-51; the increase is accounted for solely by new mills erected. This has resulted in a fall in the number of mills in course of erection and/or registered from 26 at the end of the 1950-51 season to 22 at the end of the 1951-52 season.

As a result of the fewer additions to the list of mills working, and also of the slow pace of expansion of the units already existing, the number of spindles installed during the year under review was higher by a bare 186,399, which is less than half of the increase, namely, 391,609 spindles, in the year ended August, 1951. Similarly, the increase in the number of looms installed was only 2,302, as against 2,709 in the previous year. The expansion in the size of the mill industry was also accompanied by an increase in the paid-up capital of the mills, from Rs. 103.89 crores in 1950-51 to Rs. 106.93 crores in 1951-52. Almost the whole of this addition must have been due to capitalisation of reserves.

The table below shows the details of the expansion of the cotton mill industry during the year under review, as compared with the previous year:

	As on 31st August		
	1952	1951	1950
No. of mills	453	445	425
Paid-up capital (in crores of Rs.) ..	106.93	103.89	97.24
Spindles installed	11,427,034	11,240,035	10,849,026
Spindles working	10,104,719	9,798,260	9,517,980
Looms installed	203,786	201,484	199,775
Looms working	187,282	183,045	181,196
Quantity of cotton consumed (bales)	4,132,632	3,687,154	3,739,494
No. of hands employed (day shift)	432,588	425,032	433,816

It will be interesting to note, in this connection, that, next to the U.K. and the U.S., India possesses the largest number of spindles in the world. Out of the aggregate world cotton spindleage amounting to more than 128 million, India accounts for nearly 11.5 million spindles, against 28 million spindles for the U.K. and 23 million spindles for the U.S.

Trend of Expansion

A study of the expansion in the size of the cotton mill industry during 1951-52, as compared with that in the previous year, discloses that much of the expansion took place in Madras and West Bengal. The number of new mills in the Madras State increased from 85, with 1,894,178 spindles and 8,295 looms in 1950-51, to 90, with 1,968,590 spindles and 8,520 looms. The net additions to the spindles and looms installed during the year were thus 64,412 and 225, respectively. Similarly, West Bengal accounted for a sizable expansion, with the number of mills rising from 33 to 36. Spindles installed were higher by 36,895 at 469,830 and looms by 500 at 9,862. These figures indicate that the expansion in the size of the cotton mill industry in Madras was more on the side of spinning, while that in West Bengal on the side of weaving. In the State of Bombay, although the number of mills (212) during the year under review was the same as in the previous year, spindles and looms installed registered a rise of 23,435 and 196 to 6,362,451 and 135,251, respectively. This increase was accounted for solely by mills in Ahmedabad. In the case of Bombay City and Island, however, there was actually a fall in the spindles and looms installed, the former from 2,939,162 to 2,920,509 and the latter from 65,384 to 65,379. But the average number of spindles and looms at work daily was higher at 2,688,330 and 61,690, respectively, as against 2,655,637 and 60,874 in 1950-51. While the fall in spindles and looms installed suggests that worn-out machinery must have been scrapped, the rise in the daily average of spindles and looms working reflects the absence of any such major strike in the city as the one which was witnessed between 15th August, 1950, and in mid-October, 1950, and the increase in production facilitated by favourable trading conditions.

Among the other States which recorded a rise in the number of spindles installed during 1951-52 were Punjab(I) and Delhi (+18,000), Bihar and Orissa (+14,798), Mysore (+11,935), U.P. (+10,432), Hyderabad (+8,848), and Madhya Bharat and Bhopal (+4,342). With regard to looms, Rajasthan, Ajmer and the P.E.P.S.U. witnessed a rise of 298, Bihar and Orissa 254, Travancore-Cochin 225, Mysore 176, Madhya Bharat 165 and Punjab and Delhi 97.

Utilisation of Capacity

The increase in the installed capacity of the cotton mill industry in India witnessed during the year under review was followed by a rise in the capacity actually utilised. Thus, the number of spindles and looms (working) increased from 9,798,260 to 10,104,719 and from 183,045 to 187,282, respectively. These increases reflect an impressive rise in the production of yarn and cloth due to several encouraging factors to which we referred in these columns only last week. It is gratifying to note that the number of idle mills also recorded a fall from 26 on 31st August, 1951, to 19 on 31st August, 1952. Of the latter, Uttar Pradesh accounted for six as against seven in the previous year, and Bombay for seven, as against as many as 10. In West Bengal, there were no idle mills at all, whereas, in 1950-51 there were three of them.

The marked rise in production of cloth and yarn is indicated by the quantity of cotton consumed, which, during 1951-52, amounted to 4,132,632 bales (of 392 lbs. each), as compared with 3,687,154 bales in the previous year. The average number of workers engaged in the day shift alone increased from 425,032 to 432,588, that is, a rise of 7,556.

The pattern of distribution of cotton textile mills in the different areas, as on 31st August, 1952, is indicated below:

Situation	No. of mills	Spindles installed	Looms installed	Average No. of hands employed
Bombay—				
Bombay City and Island	65	2,920,509	65,379	112,468
Ahmedabad	74	2,023,552	42,371	73,235
Saurashtra	12	157,368	3,253	7,479
Other areas	61	1,261,022	24,248	50,416
Total Bombay State ..	212	6,362,451	135,251	243,598
Madras	90	1,968,590	8,520	55,007
W. Bengal	36	469,830	9,862	21,454
U.P.	29	807,406	13,068	26,253
Madhya Pradesh ..	11	369,538	7,179	17,765
Rajasthan, Ajmer and P.E.P.S.U. ..	12	162,464	3,707	8,576
Punjab (I.)	11	209 900	5,038	7,039
Mysore	11	223,028	3,052	11,912
Travancore-Cochin ..	10	133,265	726	3,384
Hyderabad	7	122,444	2,055	7,163
Bihar and Orissa ..	3	75,732	1,431	2,937
Pondicherry	3	83,228	1,992	5,238
Grand Total ..	453*	11,427,034	203,786	432,588

* The figure does not include 22 mills which have been registered and/or are in course of erection. Nineteen mills were not working.

The above table clearly brings out the important place which Bombay occupies on the textile map of India. The share of this State in the country's aggregate spindles and looms is of the order of 50 per cent. and 60 per cent., respectively, the number of mills actually working being 212. This explains why the mills in Bombay account for the largest production of both yarn and cloth. Bombay also accounts for the largest labour force, the actual proportion to the total being as much as 56 per cent. An interesting feature revealed by the table is that the mills in Madras are predominantly yarn-producing units.

Progress in Pakistan

The rapid pace at which the cotton mill industry in Pakistan expanded during the cotton year ended August, 1951, was well maintained during the year under review also, although no new mills was added to the list of 27. Thus, the number of spindles and looms installed in 1951-52 was higher at 362,148—according to more recent figures (unofficial), the number is placed at 465,000—and 5,895, respectively, which compare with 336,810 and 5,562 in the previous year. The industry's paid-up capital increased from Rs. 3.07 crores to Rs. 3.38 crores. The capacity actually utilised was also larger, the spindles and looms working advancing from 176,507 and 4,641 to 207,818 and 5,099, respectively. Consequently, there was an increase in the mill consumption of cotton, from 43,568 candies to 48,929 candies.

The expansion in the size of the Pakistan cotton mill industry is fully reflected in the marked rise in the improvement of production of cloth. Cotton mills in Pakistan are at present producing at a rate of nearly 130 million yards per annum, as against 88 million yards four years ago. There is, besides, the production of cloth by handlooms—numbering about 500,000—which amounts to 70 million yards. The aggregate production of cloth thus comes to about 200 million yards per annum (the quantity actually produced during the first seven months of 1952 was 96 million yards), which falls short

(*Continued on page* 183)

SERICULTURE INDUSTRY

SOME OF ITS PROBLEMS STATED

DESPITE Government protection and the liberal grants-in-aid given by the Central Silk Board, the Indian sericulture industry does not seem to have come out of the wood yet. In fact, the industry, it is complained, is passing through very difficult times. Foreign competition, fall in demand for silk goods, lack of proper organisation of the filature section, absence of legislation for compulsory testing, and inclusion of silk reelers and handloom silk fabrics within the purview of the Sales Tax Acts are some of the chief causes for the depressed state of the industry. These aspects of the industry figured prominently in the discussions at the second Mysore Silk Conference held in Bangalore last week.

Welcoming the delegates to the Conference, Mr. H. Siddaveerappa, Mysore's Home Minister, drew particular attention, in the course of his address, to foreign competition and pleaded for a temporary ban on raw silk imports. In the absence of a detailed version of the speech of Mr. Siddaveerappa, it is difficult to say on what grounds this plea has been based. Considering, however, the wide gap between the estimated domestic demand for 4 million lbs. of raw silk per annum and the actual indigenous production of 2.1 million lbs., the demand for a total ban on imports is untenable. Moreover, a certain amount of raw silk imports is necessary, at least as a stabilising factor for the markets of raw silk in the country. After all, imports of silk (raw and cocoons) have not been large, in spite of the fact that the import duty has been reduced, with effect from 1st April, 1952, from 30 per cent. *ad valorem* plus Rs. 6-8 per lb. plus 5 per cent. of the total duty to 30 per cent. *ad valorem* plus Rs. 3-14 per maund. Thus, during the six months ended September, 1952, these imports amounted to 144,162 lbs., valued at Rs. 32,10,394, as against 506,265 lbs., valued at Rs. 1.20 crores, in the corresponding period of the previous year.

It is not surprising, therefore, that the suggestion for imposing a ban on raw silk imports has not found favour with the Government of India, which has rightly laid greater emphasis on stabilising the sericulture industry. Presiding over the Mysore Silk Conference, Mr. D. P. Karmarkar, Central Minister for Commerce, emphasised that the sericulture industry should stabilise itself. He hoped that a day might soon come when there would be no need for imports of silk. He assured, in this connection, that protection would be continued as long as it was necessary.

Efficiency to be Raised

Protection itself, it is needless to add, cannot solve the problems of the sericulture industry. What is urgently required is an improvement in the industry's efficiency to reasonable levels within a certain period of time. Mr. Karmarkar, therefore, did well to stress that the industry has to reach its goal of comparable efficiency in production as early as possible, so that its product may be in a position to compete with that imported from abroad. It is only then that the industry can be said to have attained a healthy standard. The Commerce Minister's assurance that the Government would only be too happy to do all that it could to promote the development of sericulture is, indeed, reassuring.

But the initiative in this respect rests largely with the State Governments concerned. The Government of Mysore has been showing keen interest in the development of the sericulture industry. This is only as it should be, in view of the important place which Mysore occupies as a producer of silk. The State accounts for the production of a substantial amount of silk in India. Out of a total of 4,636 filature basins, Mysore claims 1,236 and, out of a total of 7,233 *charkas*, 5,000 are to be found in Mysore. The share of Mysore in the aggregate annual production capacity of 3,321,400 lbs. is about 1,650,000 lbs. The development of the sericulture industry in Mysore (and in India) is imperative also on account of the employment which the industry affords to a large number of people engaged in it; over 55,000 families, we are told, owe their livelihood to this industry.

A new record for foreign earnings from exports of textile machinery made in Lancashire and Yorkshire engineering works was established in 1952, when shipments were valued at over £50 million. The chief buyers of British-made textile plant were India with 19,762 tons, Brazil with 13,257 tons, Italy with 11,246 tons, and Pakistan with 10,774 tons. The quantity of textile machinery shipped abroad aggregated 112,690 tons—the largest volume since 1929. This was an increase of over 7,000 tons, as compared with the 1951 total.

SLUMP AFFECTS TEXTILE OUTPUT

GUARDED OPTIMISM REGARDING PROSPECTS FOR CURRENT YEAR

(From A Special Correspondent)

MANCHESTER, 20*th January*

LAST year's depression overtook the weaving trade in Lancashire later than the spinning branch, but its effect so far as profit margins are concerned was more serious. There are signs that the labour force in weaving sheds is being rebuilt more slowly than in the spinning trade.

MANCHESTER LETTER

The following table shows weekly average output of cotton, rayon and mixture cloths during the first 11 months of last year and the comparative figures for 1951. The sharp decline in the labour force available for employers in spinning, doubling and weaving in the first six months of 1952 is also displayed, together with the subsequent revival.

(Production in 100 yards)

Month	No. of weeks	Production Weekly average 1952	Production Weekly average 1951	Man-power in Spinning Doubling and Weaving 1952	Man-power in Spinning Doubling and Weaving 1951
January ..	5	55,220	53,700	313,030	315,660
February ..	4	55,480	58,530	304,130	316,320
March ..	4	52,820	55,030	293,170	316,840
April ..	5	42,330	60,920	281,370	316,840
May ..	4	42,750	57,720	270,210	315,870
June ..	4	36,390	60,830	265,050	314,920
July ..	5	27,190	47,750	262,800	315,030
August ..	4	39,000	56,610	263,250	317,650
September ..	4	40,350	56,200	265,880	319,700
October ..	5	46,450	62,600	269,030	320,880
November ..	4	48,480	62,800	272,000	320,460

In weaving alone the number of operatives on the books of employers at the beginning of last year was almost 155,000. By the end of August, manpower in this section had fallen by about 25,000 but in the following three months a net gain of nearly 4,000 in the labour force was recorded, the figure at the end of November being 134,370.

The full effect of the slump on output last year can now be more accurately assessed. Yarn production aggregated 770,670,000 lbs., against 1,076,700,000 lbs. in 1951, representing 71.6 per cent. of output in that peak post-war year. Estimates put the cloth output total at nearly 700,000,000 yards below 1951 as in the first 11 months the aggregate was 2,110,490,000 linear yards against 2,750,440,000 yards a year previously.

Few Failures

It would have been strange if such a year as 1952 had been allowed to pass without any financial difficulties concerning textile firms in Britain. The industry, considering the state of trade, did well to avoid more trouble and in fact the total number of bankruptcies, deeds of arrangement, liquidations and receiverships during the year was 68, which compared with 22 liquidations in 1951 and 45 in 1950.

For the first time since 1941 bankruptcies were experienced, there being three such failures, all affecting merchants and agents. In the same branch of the trade one deed of arrangement was made and one receiver was appointed. Among company liquidations four were compulsory, the same number as in 1951, and again the merchanting section of the trade provided three of these, the other being under the heading of miscellaneous traders.

Creditors' voluntary liquidations last year numbered 12, against none in 1951, affecting one firm of spinners and manufacturers and 11 merchant companies. Members' voluntary liquidations totalled 46, against 18 in the previous year and mainly concerned 19 finishing firms and 14 manufacturers. In the past two or three years the number of voluntary liquidations in the finishing section of the industry has increased, owing to the action of the Redundancy Boards, which have been set up to rationalise the textile dyeing, bleaching and printing trades.

While some companies have been disappearing from the lists, the number of registrations of new limited companies has increased from 164 in 1951 to 197 last year. The nominal capital involved, however, has been very much smaller at £883,200 against £2,054,825 in 1951. The majority of firms seeking registration were merchants and agents, numbering 168 against 125 in the previous year.

Overseas Prospects

Surveys of the trade position, annually rendered to members of the various sections of the Manchester Chamber of Commerce, provide a useful background to events of the previous year. Twelve months ago the reports were almost uniformly foreboding and their gloomy forecasts were fully borne out in subsequent events. The general trend of this year's documents is one of guarded optimism about the future after comment on the depth of depression reached early last year.

Individual reports can put on record a slight improvement in trade in cotton goods with particular markets. The growth of business with British West Africa is a source for satisfaction and the increased spending power of the natives in this area has created the possibility of further expansion if Lancashire goods can be provided at competitive prices and on reasonable delivery terms. The findings of the recent Lancashire mission to West Africa will be studied with great interest by all concerned with this market.

Another area where sales of British textiles have increased in the past year has been the Middle East. It is believed that the authorities are increasingly anxious to stimulate trade in this direction, and although the quantities so far involved are not large there is scope for freer operations. A better offtake for Turkey, Iran and Jordan has offset restricted imports into Egypt, Greece and other countries in this part of the world.

The position of India as a consumer and also a supplier of cotton goods still causes concern in Lancashire, although any hope of reviving the former facilities for shipments is now completely gone. Yet in view of the enormous population in the Indian sub-continent even its limited purchasing power should be sufficient to create demand for a modest quantity of Lancashire cloth, particularly the better grade qualities. Shipments of little more than 5,000,000 yards annually to India seem grotesque when the possibilities are considered, should import restrictions be withdrawn.

A small increase in export cloth sales to Pakistan took place last year, but Japan remains the chief supplier of cotton goods to this market, sending more than four times as much cloth as Lancashire. The inroads made by Japan into other eastern markets such as Malaya are clearly indicated in the sectional reports. Lancashire supplies were halved and there was also a severe decline in imports from India, but the Japanese maintained their trade with the area in spite of very much reduced total imports.

Most damaging of all interferences with normal trading last year were the import controls imposed by Australia and New Zealand. Reports since the beginning of this year indicate that the Australian Government may be considering some relaxation of its restrictions in view of the country's more favourable economic position. Any change for the better will, of course, be welcomed in Lancashire, but it will take a considerable time for the lost ground to be recovered.

Trade with the Continent last year declined to only half the 1951 level and competition between the various producing countries became intense. In many cases export incentive schemes, which were in effect an indirect subsidy, assisted European countries not only to sell goods to each other but to attack other markets outside the Continent. In particular, such trading methods were widely used to stimulate business with the United States in the eternal quest for dollars.

Mill Shift-work

Two-shift working in the mills—advocated by several leading figures in the industry as a means of lowering prices to more competitive levels—is to be discussed by leading representatives of both sides of the Lancashire cotton industry. The talks may lead to more widespread adoption of the two-shift system, now operated in only a few Lancashire mills.

The Cotton Board announced this week that its 1953 work-study conference, to be held at St. Annes from 20th to 22nd February, is to be devoted to double day-shift working. Sir Walter Monckton, the Minister of Labour, will address the opening session and papers on their experiences of double shifts in spinning, weaving and doubling will be given by qualified speakers from the industry. Mr. H. A. Clegg, a Fellow of Nuffield College, Oxford, who presented a paper on the subject to the Cotton Board's 1952 Harrogate Conference, will preside at an open forum.

Lancashire's three main rivals in world textile markets—Japan, India and America—all operate on a shift basis but wider application of shift working in Lancashire has made little headway because of the family life upset it would cause in an industry where a high percentage of the operatives are married women.—*All Rights Reserved.*

WORK OF COTTON TECHNOLOGICAL LABORATORY

INCREASE IN QUALITY TESTS

THE Technological Laboratory of the Indian Central Cotton Committee, which has played a notable role in the past as a technical adjunct to the Committee, continues to render good and efficient service to cotton growers and consumers in the country. The Laboratory is designed to test the staple length and other spinning qualities of the different varieties of cotton grown in India. The results of these tests, carried out under expert supervision of the Laboratory's highly qualified staff, provide the Government, the cotton growers and other cotton interests, the basis for correct judgment of the qualities of the different styles of cotton.

During the year ended 31st May, 1952, the Laboratory received more than two thousand samples of cotton for testing their fibre properties and spinning characteristics. This was an increase of 17 per cent. over the previous year and of 61 per cent. over the number of samples received in 1949-50. Most of the testing work related to new strains and to improved varieties sent by State Agricultural Departments and the cotton trade. The Laboratory's assistance was also sought for selecting suitable strains for further propagation.

The tests conducted at the Laboratory included experiments on crossing perennials with annuals with a view to inducing productivity, improved quality and longevity. Two of the promising strains, local x 135 and 9-3 S1, were spun to 60s which gave a lea test of 36 lbs. and 34 lbs. respectively. The latter hybrid, when raised from budgraft, was also found to be longer in staple and gave better lea test when raised from the seed. The Raichur naked perennial was found suitable for spinning 60s standard counts. Sea Brook and Sea Island varieties, which are being grown at Hawalbagh (Almora), had a mean length of 1.28" and gave a lea test of 30 lbs. for 60s yarn. Sea Islands grown in the west coast of Madras State are slowly spreading and mill tests are being done on them. Tests, which were made on all improved varieties from distributed seed at various stages of multiplication, showed that most of them had nearly maintained the same quality up to the fifth stage; *Jarilla*, Laxmi, Jayadhar and Madras Uganda, however, had shown a small decline in quality in the later stages.

Technological bulletins on standard Indian cotton grown in experimental stations and on trade varieties of fair average quality were, as formerly, published for general information. These bulletins have been of considerable help to the mills and the cotton trade. Both the cotton mill industry and the cotton trade continued to take full advantage of the facilities offered by the testing house of the Laboratory. Numerous enquiries from mills and textile firms seeking expert advice on the difficulties encountered by them in processing cotton were successfully tackled by the Laboratory staff. These enquiries related, among others, to the improvement in spinning quality by spraying a patent liquid, causes of tendering in cloth, classification of cotton waste and air permeability of parachute cloth. The total number of fibre, yarn and fabric samples and various miscellaneous products made of other fibres handled by the Testing House was as high as 588.

A conference between the representatives of carders, spinners and mill managers nominated by the Bombay Millowners' Association and the research staff of the Laboratory was held during the year under review. This conference was of mutual benefit to the Laboratory and the mill industry, inasmuch as several topics of technical importance figured prominently at this conference. There was also free exchange of technical information.

Among the technological investigations, which were carried out at the Laboratory, mention must be made of pre-cleaning and ginning tests which were carried out on Laxmi and Karunganni cottons with a view to arriving at the best settings in ginning operation. Preliminary tests carried out on double action single-roller gin when converted to single action showed that, for long-staple cottons, single action would be beneficial from the point of view of outturn. A lint cleaner for economically cleaning lint after ginning is also being designed.

Experiments for determining the strength of attachment of fibre to the seed were conducted with an apparatus specially designed for the purpose. Regression formulæ connecting the spinning value of irrigated cottons grown in the Punjab and Madras with their chief fibre-properties are being worked out at present. For the measurement of fibre-bundle strength at different twists and gauge lengths, a special device to hold the Pressley clamps has been designed. Tests were made on the produce obtained from individual plants with a view to ascertaining the behaviour of their progenies in respect of neppiness. A technique for counting neps in raw cotton is being standardised.

The Laboratory has successfully fabricated a simple machine for spinning small samples. This consists of a small ring frame with eight spindles, capable of spinning yarn direct from finisher draw frame sliver. A miniature card is also being fabricated. Considerable progress was made in the main problem of the Laboratory—the evaluation of spinning value of cotton from its fibre properties. The causes for the failure of the existing formulæ to give correct estimation of spinning value were examined in detail. The applicability of a general theoretical method to cotton is being studied by making suitable tests.

Other investigations carried out by the Laboratory included the determination of fibre-maturity of cotton by differential dyeing methods. Experiments on the sugar contents of Indian cottons indicated that it varied from 0.03 per cent. to 0.25 per cent., depending on the variety of cotton.

COTTON YIELDS

In most cotton-growing regions, cotton, as is well known, is grown by the farmers after they have raised some other crop in the off-season. An interesting experiment was conducted by Mr. N. N. Bhide, Institute of Plant Industry, Indore, with a view to finding what varieties of crops, when grown before cotton is sown, give better yields of cotton. The experiment was also designed to estimate the effect of phosphate manuring to previous leguminous crops on the yield of the succeeding cotton crop. The results of this experiment, which have been published in the October, 1952, issue of the *Indian Cotton Growing Review*, Journal of the Indian Central Cotton Committee, show that nearly all leguminous crops, when grown before cotton is sown, have the effect of increasing the yield of cotton. A comparison of the effects of previous legumes on the succeeding cotton crop shows that all the leguminous crops increase the yield of cotton over that of cotton following *juar* on both poor and rich soils but the increase was significant only in the case of the rich field. It is also interesting to note that on both soils the cotton yields were highest when grown after soya-bean, groundnut and cowpea which are relatively shallow rooted legumes. With regard to residual effect of phosphate manure applied to previous legumes on the succeeding cotton crop, it was found that, in a poor field, there was a significant increase in the yield of cotton, while, in the case of a rich field, the increase in yield was not significant. Among different legumes, cotton following groundnut and cowpea gave increased yield on both rich and poor soils owing to the residual effect of the phosphate applied previously. Direct application of nitrogen to cotton also increased the yield significantly.

IMPORTS OF U.S. COTTON

The Government of India announced, early this month, that no application for licences to import raw cotton from the dollar area would be entertained. This decision is attributed to the fact that mills and traders are unwilling to avail themselves of the permission, given recently, to import two lakh bales of American cotton. The Government has, however, extended the shipment period to June, 1953, in respect of last year's unshipped balance of some 140,000 bales of U.S. cotton. It would appear that the arrivals of U.S. cotton against last year's import target of 900,000 bales (500 lbs. each) aggregate about 760,000 bales. The Government has also permitted the conversion of the import licences relating to outstanding quantity of American cotton for importing equivalent quantities of cotton from the sterling area.

"RAYALASEEMA I"

The new cotton strain, 881F, has been renamed "Rayalaseema I." This new strain was evolved under the Indian Central Cotton Committee's scheme for improvement of Mungari cotton in Madras State. In the year 1951-52, the strain yielded 13 per cent. more than the local Mungari. As the new strain has shown very promising results, there is a great demand for its seed from the cultivators. Arrangements have been made by the Government to multiply the seeds on a larger scale than hitherto at Panjam where 200 acres of land have been set apart for this purpose.

DECLINE IN KARACHI COTTON MARKET

GOVERNMENT FIXES FLOOR PRICES

THE Pakistan Government's decision to fix floor prices for export sales in the different varieties of cotton grown in the country is of a piece with the attempts made by the Governments of several other cotton-growing countries to protect the cotton prices from slumping below what they consider to be fair levels. In Egypt, in Brazil and in many other countries, the Governments are faced with the problem of maintaining the cotton prices at reasonably high levels. And each country is, in its own way, trying to protect its economy from collapse through a rapid fall in cotton prices. But all available indications are that, unless there is a dramatic improvement in demand, their efforts are bound to end in failure.

After watching patiently the slow decline in cotton prices in the Karachi market over the last three months, the Government of Pakistan announced last week a schedule of prices, below which it will not permit export sales. The floor prices (per maund) are: 4F R.G. Rs. 58; N.T. R.G. Rs. 58; 289F R.G. Rs. 61. The premium for saw-ginned varieties is Rs. 3 per maund. It is announced that the State Bank of Pakistan will not register, under the export price check procedure, any transactions at prices below those fixed by the Government. There is, however, no guarantee that the Government of Pakistan will take up cotton at these prices as it did in the previous season. Since the Government is thus not willing to back the minimum prices with its promise to buy and no export sales will be allowed at below the minimum prices, the holders of cotton must be in a difficult position. There is no means by which they can cover against a further slump in future. The effects of such an artificial barrier against the world-wide downtrend in cotton markets on producers and merchants of cotton in Pakistan may turn out to be disastrous.

Be that as it may, the afforesaid prices are slightly above the levels at which cotton was being quoted in the Karachi market prior to price fixation, though they are well below the levels at which cotton was being quoted in the early part of the present cotton season. Thus, N.T. R.G. was then being quoted at as high a level as Rs. 104 per maund, as against the present controlled price of Rs. 58. Again, 4F R.G. was, at the beginning of the season, being sold at Rs. 94 as compared with the present price of Rs. 58. This comparison will show the steep fall which has occurred in the last three months.

Although some indications of a fall in prices were available even at the beginning of the present cotton season, the Government of Pakistan had evidently hoped that it would be possible to hold the prices at reasonable levels through the adoption of certain well-conceived measures, such as the abolition of export duty on certain varieties and reduction in that of others. Thus, when the Government announced, on 10th September, 1952, its new cotton policy for 1952-53, it abolished the export duty on Comillas and other *Deshi* cotton, and reduced the duty on other varieties from Rs. 180 per bale to Rs. 90 per bale. There was no mention whatever of floor prices for cotton. Apparently, the Government thought that it would be able to weather the storm in the cotton market without resorting to such a device.

The Government's hopes, it is now clear, had no real foundation. At any rate, events have proved them false. All the world over, cotton prices are declining. Export availability of cotton in the free world is now estimated at 15.6 million bales (of 478 lbs. each) as compared with the actual exports of 11.1 million bales in 1951-52. Pakistan itself has a surplus of 1.45 million bales (of 478 lbs.) as against its actual exports of 0.92 million bales.

The pressure of cotton supply is now acting as the chief depressing influence on cotton prices. It is now felt that, unless there is good export demand, it will be difficult to maintain the prices at the levels at which they have now been fixed. China and Japan are mentioned as possible buyers. But it remains to be seen whether these two countries will lift substantial quantities of cotton and help maintain cotton prices in Pakistan, because these countries are now being wooed by other countries too.

The Government of India has decided to give cotton textile mills 100 per cent. quota of cotton on the basis of the 1951-52 consumption, it is stated. This decision, it is further stated, is prompted by a desire to check the present downward trend in cotton prices in the country.

WORLD CRUDE OIL POSITION

OUTPUT TOUCHES A RECORD OF 618 MILLION TONS

WORLD crude oil production in 1952 increased by 5 per cent., or about 31 million metric tons, reaching a new record of 618 million tons, as compared with 587 million tons in 1951. The climb continued throughout the year, notwithstanding fluctuations in various countries. About 302 million tons were produced in the first half of 1952 and 316 million tons in the second half. The rate of production, which, early in 1952, was equivalent to only 600 million tons a year, reached nearly 640 million tons towards the end of the year. The free world's production rose from 537.1 to 562.9 million tons, or by 4.9 per cent., and accounted for five-sixths of the world increase; the Communist countries' output rose by over 5 million tons to 55.3 million tons.

Excepting Persia, where Anglo-Iranian's operations ceased in mid-1951, none of the world's 44 oil-producing countries produced substantially less in 1952 than in 1951. Many increased their output and the three foremost producing areas—the U.S.A., the Caribbean area and the Middle East—which, for a long time past, have accounted for over nine-tenths of the free world's total petroleum production, were responsible for slightly under nine-tenths of the free world's production gains last year. Despite the continued loss of Persian production, formerly at a rate of 32 million tons a year, the total output in the Middle East rose by a further 9 million tons (over 9 per cent.), which represents an increase of 20 million tons, 50 million tons, and 70 million tons as compared with 1950, 1948 and 1946, respectively. Production went up by more than 7 million tons in the U.S.A. and by about 6 million in the Caribbean area. Over the whole post-war period (1946-1952), production has trebled in the Middle East, increased by two-thirds in the Caribbean area, and by one-third in the U.S.A.; in absolute figures, the increase in the U.S.A.—76 million tons—was the largest, but was closely followed by that in the Middle East. But, during 1946-1952, oil production in the Middle East countries, excluding Persia, has, in fact, gone up by 90 million tons a year. Outside these three main areas, the U.S.S.R. achieved last year the next largest increase, estimated at 4.6 million tons, followed by Canada with an increase of 1½ million tons.

Still Higher Production Expected in 1953

The overall increase of 31 million tons in the world production of oil in 1952, was less than the average annual increase in the preceding five-year period of about 42 million tons, and was less than half the record increase of 63½ million tons attained in 1951. The flattening of the upward curve was, however, to be expected with the tailing-off of post-war reconstruction and the gradual slowing-down of the Korean War boom. The *Petroleum Press Service*, in its leading article a year ago, forecast an overall increase in world production of 35 million tons during 1952, of which 30 million tons was in the free world; the increase in the free world was, in fact, over 25 million tons. Taking into account the developments now under way and the likely course of demand, an increase of output in the free world in 1953 of about the same order as in 1952 may be expected.

Petroleum production after the Second World War (in 1946) was about 40 per cent. higher than in 1937-38, though the level of production in manufacturing and mining industries as a whole was not very much above the pre-war record reached in 1937. But, from 1946 onwards, the rates of growth of crude oil production and of general industrial production have been moving on almost exactly parallel lines. The index (Base: 1948=100) for crude oil production rose from 81 in 1946 to 127 in the second quarter of 1952, while that for industrial production from 82 to 125 over the same period.

With oil imports also at a record level, the U.S.A. again achieved a new production record for the year, the quantity actually produced being 310 million tons, though its share in world production declined from 52 per cent. in 1951 to 50 per cent. in 1952, as compared with over 60 per cent. both before and immediately after the Second World War. The U.S. reached, late in November, a new peak level of crude oil output of about 6,600,000 barrels daily. The effects of the few weeks' strike of refinery workers in May and of the steel workers' strike in June and July have, however, been fully overcome. Stocks are at high levels and, thanks to State regulation, total crude oil production is still far short of the potential of the country as a whole. But, in California, the second largest oil producing State, production has almost ceased to expand. The sustained growth of the U.S.A.'s already massive output of oil over so many years is a remarkable performance, which, however, will be considerably exceeded in future, when continued expansion to considerably higher levels is expected to occur.

Western Canada now ranks as the world's eighth oil producer. Output in this country rose by 1½ million tons to 8 million tons in 1952, and has recently been running at a rate of nearly 10 million tons a year. With the opening of the pipeline from Edmonton (Alberta) to Lake Superior in May, 1951, production rose sharply and there will be another substantial leap forward next spring when the new pipeline to Vancouver will come into use.

The increase of 6 million tons in oil production in the Caribbean area in 1952 is chiefly accounted for by Venezuela, where production in the spring attained—in keeping with earlier forecasts—a rate equivalent to over 100 million tons a year. Venezuela's oil output is always closely affected by seasonal and other developments in the U.S.A. and it suffered, to some extent, from last year's U.S. refinery strike, when production temporarily fell below a rate of 90 million tons a year. The rise of current output by 40 million tons a year, as compared with that in 1946, has occurred, despite the fact that no new concessions have been granted by the Government since 1945.

There was little change last year in the level of output in other Latin American countries. Last year's increase in Mexico was barely 100,000 tons, or less than one per cent. Past increases have come mainly from the rich Poza Rica field, output of which is now expected to remain stationary. Output has now virtually reached the maximum level possible from existing fields. New fields are not likely to keep pace with rising inland demand and a decline in exports seems inevitable.

Production in Middle East

Towards the end of 1952, the Middle East reached a production rate equivalent to well over 110 million tons per annum, as compared with about 105 million tons in the Caribbean area. It is again, as was before the Persian crisis, the world's largest oil-producing region outside North America. Last year's production in the Middle East, excluding Persia, rose by nearly 25 million tons, that is, from 80.3 million tons in 1951 to 105.1 million tons in 1952. This followed a similar jump forward during 1951. Persia is now producing oil for its own use at a probable rate of 1 million tons a year, which compares with Anglo-Iranian's output of over 32 million tons in 1950. Out of the increase in the Middle Eastern oil production (outside Persia), Saudi Arabia accounted for 3½ million tons, Kuwait for over 9 million tons, Iraq for over 10 million tons, and in Qatar for one million tons. In Saudi Arabia, output has risen from only 1 million tons in 1945 to 41½ million tons in 1952. This is the area's largest producer, followed by Kuwait—with an output of 37½ million tons last year—which only joined the ranks of oil-producing countries in 1946 and still draws all its production from a single field—Burgan. The rate of production in mid-1952 both in Saudi Arabia and Kuwait was somewhat higher than that of the year's total. An increasing proportion of Saudi Arabia's output now comes from the new large oilfields of Ain Dar and Ithmaniya.

Development in Iraq is now in full swing. With the opening of the new pipeline to the new Mediterranean terminal at Banias (Syria), output from the prolific Kirkuk field leapt ahead and, as already mentioned, the country's production rose by over 10 million tons within the year—a performance, which, incidentally, also occurred in both Saudi Arabia and Kuwait in 1951. Iraq's total production is at present running at a rate of over 25 million tons per annum and a rate of 30 million tons may be expected by the end of 1953.

Among the smaller oil producers of the Middle East, only Qatar made any substantial gain last year, reaching, in the last few months, a production rate of about 3½ million tons. Production in Bahrein and Egypt remained virtually unchanged. In Egypt, the existing fields are expected to go into decline in the near future, while exploration work is unfortunately at a standstill in view of the unfavourable legislation.

Oil in the Far East

In the Far East, Indonesia achieved an increase of about 1 million tons, partly as a result of the opening of the Minas field in central Sumatra. Total output is now at a rate of about 9 million tons per annum, as compared with the highest pre-war output of 8 million tons, but a further half to one million tons of crude a year could be available, if the fields in northern Sumatra were to be brought back into production. Production in British Borneo—mainly Brunei—remains at about 5 million tons a year, and there have been no major changes in the smaller oil-producing countries of the Far East—Japan, India, Pakistan, Burma and Western New Guinea.

Production in the European area, outside the Iron Curtain, is now slightly above 3 million tons. Thanks to intensive prospecting, output in West Germany is now approaching a rate of 2 million tons per annum. Production in the Netherlands remained virtually unchanged, while that in Metropolitan France, Morocco and Algeria went up by 125,000 tons to reach a total figure of 500,000 tons. Contrary to official forecasts, Yugoslavia's 1951 level of production of about 150,000 tons was barely maintained last year, though the authorities continue to be optimistic with regard to the future.

Production in the U.S.S.R. is officially stated to have risen to about 47 million tons, during the year under review, as compared with about 42½ million tons in 1951, 21½ million tons in 1946 and 31 million tons in 1940. This increase comes mainly from the "eastern districts," share of which in the country's oil production has risen from 12 per cent. in 1940 to over 50 per cent. in 1952. The share of the Second Baku area—the largest of the eastern districts—amounted to 40 per cent. of the country's production. The current Five-year Plan, which started in 1951, foresees an output of 70 million tons by 1955.

Crude oil production in Rumania is believed to be slowly decreasing, but that in Austria—all in the Eastern Zone and under direct control of the U.S.S.R.—continues to expand sharply, as a result of the development of three new fields discovered in 1949-51. Production last year, at 3 million tons, was approximately twice that of 1950 and, if present trends continue, Austria may before long take Rumania's place as the largest oil producer in Europe west of the U.S.S.R. Hungary's production now appears to be virtually stable at about 500,000 tons a year. Production in Poland, Albania and Czechoslovakia is much smaller, but is increasing.

China's Oil Output

Recent statements of the Chinese Communist Government indicate that oil production—presumably including both crude oil and shale oil—has substantially risen during the past few years and will increase four-fold in 1953. Production of oil from all sources, which may be estimated at 250,000 tons for 1951 and somewhat higher for 1952, may, therefore, be over 1 million tons in 1953. This goal appears highly optimistic, though a substantial increase in shale oil production appears feasible.

The foregoing reveals not only a few notable developments in world oil production in 1952 but the promise of continued expansion in some areas in 1953. In the world's two main exporting regions—the Middle East and the Caribbean—the oil reserves are abundant and the technical conditions for rise in output are excellent. This would also apply to Persia. But, as the Persian episode shows, a suitable political setting is an equally indispensable factor. At present, the free world's oil importing countries as a whole now depend upon the output of four countries—Venezuela, Saudi Arabia, Kuwait and Iraq—for nearly nine-tenths of their imported supplies. In to-day's conditions, more widely spread sources of oil supply are obviously desirable and the greatest support is, therefore, needed for exploration work wherever promising conditions exist.

PARIS-LE HAVRE OIL PIPELINE

The first important pipeline ever built in West Europe, with the exception of the famous war-time "Pluto," is to come into operation between Le Havre and Paris shortly. The pipeline, which will be some 150 miles long with a diameter of 10", will connect the three oil refineries of the Havre region (Shell, Standard Oil and Ste. Francaise des Petroles) with the storage depots of Paris. Its annual capacity will be in the neighbourhood of 1.5 million tons of petrol, gas-oil and crude oil—a quantity which represents more than the consumption of the Paris region—but it could be easily expanded to 2 to 3 million tons simply by increasing the speed at which the fuel is pumped through the pipeline. According to present plans, the pipeline will operate at a speed of between 2 and 3 miles an hour only, which still represents a gain in time, as compared with traditional transport by means of river barges.

The building of the Paris-Le Havre pipeline was first contemplated in the Monnet Plan in 1946, but work on it did not start until five years later—in 1951. The sponsors of the venture emphasise the many advantages of a pipeline, in particular, the lower cost of transport (33 per cent. on the basis of 1 million tons of petroleum products carried every year). It is calculated that, otherwise, it would have been necessary to expand the barge fleet by some 50 per cent., or 70,000 tons, so as to cover the consumption needs of the Paris region and that, since demand has considerable seasonal variations, it would be impossible to run such an increased fleet economically. The existing barges will henceforth be used almost exclusively for the transport of heavy oils. The total cost of the construction of the pipeline is estimated at Frs. 4,000 million. (£4 million).

French petroleum experts visualise the construction of other pipelines at a later stage. They contemplate, in particular, a pipeline which will connect the refineries of the Marseilles region (on the etang de Berre) with Lyons.

WHY ARE SUGAR PRICES STILL HIGH?

MUDDLE OVER RELEASES OF STOCKS

FOR some days now, sugar has been in the news again. The reason for this is that, despite heavy stocks of this commodity, certain parts of the country have been experiencing scarcity of supplies and higher prices. Who is responsible for this extraordinary state of affairs? Three weeks ago, our columnist, "Rover," discussed this question in his inimitable style and came to the conclusion that it was due chiefly to bungling by the Ministry of Food at the Centre and partly to the clever manipulations of a group of sugar merchants. Shortly after we went to press last week, an explanation for this muddle appeared in the daily Press. This explanation is attributed to an "official spokesman." One does not know why this official spokesman chose to remain anonymous. Why is it that the Food Ministry itself has not come forward with a Press statement explaining the reasons for this development? Surely, there is no need for secrecy in these matters. Further, even the explanation by the so-called "official spokesman" is by no means satisfactory and does not answer some of the most important points. In view of all this, the explanation under reference has given rise to the impression that it is a move on the part of some official to cover his actions, in anticipation of some inconvenient questions being asked in the forthcoming session of Parliament on the developments leading to higher prices for sugar.

The reported explanation of the official spokesman does not answer the question: Why did the Government of India sell a large block of sugar, believed to be about 34,000 tons, out of controlled stocks at a price higher than the price which it said should prevail from 1st December, 1952? Was not this action against the declared policy of bringing down the price of sugar? While selling this sugar at a higher price, did not the Government realise (a) that the group of merchants buying it would pass on that additional cost to consumers, (b) that, if the biggest holder of stocks were to demand a price slightly higher than the previously declared price, it would lead to a bullish fervour in the market, and (c) that, if the Government itself were to demand a higher price for its stocks, the factories and merchants would be encouraged to do the same? Having thus given a bullish twist to the sugar situation and whetted the appetite for hoarding, what is the point in pointing an accusing finger at the sugar mills and saying that some of them are refusing to part with the stocks held by them, in spite of issue of release orders?

We have no idea whether any of the mills are deliberately withholding delivery of sugar to the merchants. But considering that the mills have all along been complaining of heavy stocks, of their inability to finance them, etc., it sounds rather odd to hear of this complaint against the mills. Are we to believe that the stock position of sugar in this country has eased to such an extent as to permit the industry to indulge in hoarding practices? Or are we to believe that the storage and financial capacity of the sugar industry has improved to such an extent as to enable them to withhold large stocks in expectation of higher prices? It is common knowledge that in U.P. sugar factories have had to delay crushing of sugarcane this season by a month for want of finance and place for storing their production. In raising all these points, we have not the least intention of trying to protect those mills that want to resort, once again, to anti-social activities. If any of them are trying to do so, they must, of course, be firmly dealt with. Our anxiety, however, is only to make sure that the official spokesman is not trying to cover his questionable actions by throwing the blame on the sugar mills. It is easy to blame the sugar mills nowadays and expect the public to believe in such accusations, in view of the fact that the name of the industry has been besmirched by the anti-social activities of a section of it on a number of occasions in the past.

Another typical instance of the official spokesman's attempt at explaining away the whole incident is provided by his reference to prices. Answering the criticism that, instead of prices of sugar declining by Rs. 4 per maund, they have actually gone up, this spokesman observes that it was wrong to have expected a uniform decline of Rs. 4 in the price of sugar all over India. Everybody connected with the sugar industry knew that. And there was no need for this spokesman to mention it, as though the public was not aware of it. The real point here, which the official has not answered, is that, instead of prices going down, as they were expected to do, they actually went up. Thus, as against a low of Rs. 80 per bag in the beginning of December and the control price of Rs. 82-6 per bag (including railway freight, town duty, standing and carting charges aggregating Rs. 4-4), the price of sugar in the Bombay market touched a high of Rs. 100 per bag early this month. Even now, after the release of the entire Government-guaranteed stocks of last season's sugar, amounting to 304,470 tons in all, and the steps taken by the Government to accelerate the movement of sugar stocks, the average price of sugar in the Bombay market is in the neighbourhood of Rs. 90 per bag. This upward trend in prices has been contrary to the expectation of not only the public and the sugar industry but also of the Bombay Government. Expecting that prices would go down, this Government had sold away, to certain sections of the trade, not only all the stocks it had but also something more, with the result that it has had to cover its excess sales at a loss. As to why the Bombay Government sold in excess of its stocks is another question with which we are not concerned here. It may be a question of inefficiency so common with our Governments.

Another point that emerges from the present state of the sugar market and to which there is no answer in the statement of the "official spokesman" referred to at the outset is that, even after the large releases of Government-controlled sugar, prices are standing at a level higher than the controlled price. We are told that the present high prices, coupled with reports that the production of sugar in the next two seasons would be lower than the estimated consumption in the country, have tempted some of the stockists in deficit areas to replenish their depleted stocks even by paying a premium over the control prices. Whatever the reason for it, does not the continuation of high prices mean that the method followed by the Government for keeping down the price of sugar through sales from its buffer stock is defective? The answer is obvious. It cannot but be in the affirmative. Apparently, the Government seems to have thought that the very fact that the country had large stocks of sugar would be sufficient to keep prices down. That it was a complacent attitude to take is now crystal clear. In fact, that should have been clear to the Government even when the prices started moving up a few weeks ago. The authorities, while releasing the quotas for sale in the free market, should have taken steps to ensure that the factories would sell their stocks of sugar at the reduced ex-factory control price. Failure to do so, coupled with the freedom given to the mills to sell sugar to buyers of their own choice, has provided an easy way to some of the mills to sell at higher prices. There is, of course, no justification for the mills doing so, inasmuch as the Government is paying to all the factories the difference between the previous control price and the reduced price. The Government of India has, of course, realised its mistake now in a way and has warned the factories to withhold sale of sugar to any dealers who have an unsold balance in stock with them. Any mill which does so will be doing so at the risk of losing the subsidy. The Government has also taken, according to a news agency message, certain effective steps to prevent hoarding of sugar by factories. But the mischief has alrady been done and we do not know to what extent this warning and the other reported measures can undo it. As usual, the Government has come to lock the stable after the horse has bolted.

SUGAR PRODUCTION AND STOCKS

The aggregate production and despatches of sugar for the season 1952-53 cut to the end of December, 1952, amounted to 240,943 and 167,907 tons, respectively, as against 302,796 tons and 140,546 tons during the corresponding period of the previous season.

The opening stock, production, despatches and closing stocks of sugar during the fortnight ended 31st December, 1952, were 451,392 tons, 127,325 tons, 55,379 tons, and 523,338 tons, respectively. The figures for the corresponding fortnight of the previous season were 233,035 tons, 135,767 tons, 41,829 tons, and 306,973 tons. Figures for the current fortnight relate to 126 factories representing 91.32 per cent. of the total cane-crushing capacity, while those for the previous year relate to 127 factories representing 90.57 per cent. of the total cane-crushing capacity.

UTILISATION OF COAL

SOME THOUGHTS OF A FUEL TECHNOLOGIST

THERE are few addresses on the utilisation of coal that have come in for so much criticism as that of Dr. S. K. Sircar, a fuel technologist and chemical engineer, delivered at the recent Lucknow session of the Engineering and Metallurgy Section of the Indian Science Congress in his capacity as its President. We do not have the full text of his speech, but it is clear from Press reports that some of his categorical statements are conflicting with each other. One is, therefore, not able to understand what exactly was the subject of his address.

At one place, Dr. Sircar says that he is concerned more with the energy contained in coal in the form of heat units than with the coal itself irrespective of whether it is of X or Y or Z class. This statement gives one an impression that he is for the utilisation of low grade coal so long as it contains sufficient units of heat. But, in another place in his address, he condemns low grade coal in no mild terms. He even goes to the extent of saying that it would be better to use muck instead of low grade coal. He criticises, in very strong terms, the attempts that are being made by lower grade collieries to make out a case in favour of the use of low grade coal by railways. This sounds strange, in view of the fact that it has been clearly established that, with certain changes in boiler design, etc., low grade coals could be utilised by railway locomotives with no adverse effects on them. Does Dr. Sircar mean to suggest that this established fact is not beyond dispute? It would not be surprising if, in view of these conflicting statements in the body of the same address, the audience were confounded as to what was the thesis of Dr. Sircar's speech.

It is true that the reserves of high grade coal in India are not such as to cause any anxiety. But it is also equally true that this impression should not lead to the indiscriminate use of high grade coal and that, wherever feasible, the use of such coal should be replaced by coal of lower grades. Throughout the world, it is more or less the policy of Governments to conserve the high grade coal and encourage the maximum use of lower grade coal. Dr. Sircar also recognises this in one place of his address. He says, "to a properly trained fuel engineer or technician, no quality of coal is worthless or unsuitable as long as he can apply proper method and as long as economic considerations are not beyond his control."

Dr. Sircar makes certain recommendations with regard to the use of coal with which there will be general agreement. The chief of them are that coal should be beneficiated to the extent possible; that super-power plants should be set up throughout the coalfields, wherever conditions permit but not far off from railways, in order to utilise washery sludge and part of the middlings from coal-cleaning plants most conveniently placed; that such power stations should be linked in the form of a grid to supply power for traction to railways, and that power thus generated should be made available over wide areas to replace coal to the maximum extent. Other suggestions of Dr. Sircar relate to the setting up of low temperature carbonisation plants, utilisation of surplus gas, elimination of steam locomotive traction as far as possible and utilisation of coke breeze for gasification and steam rising on a much wider scale.

Dr. Sircar condemns restriction on the output of metallurgical coal as a negative way of securing conservation of coal. He emphasises that the right way of conserving this precious variety of coal lies in proper methods of stowing and beneficiation of lower grade coal. He, therefore, feels that the Government should encourage proper research for this purpose, so that the most economic ways of following these methods can be found.

COAL STATISTICS FOR NOVEMBER, 1952

Eight coke plants and 811 collieries worked during the month of November, 1952. On an average, 323,482 persons were employed daily and 7,855,905 man-shifts were worked. The overall percentage of absenteeism was 12.85. The output per man-shift for miners and loaders was 1.12 ton, for all persons employed in underground and open-working 0.59 ton and for all persons employed 0.36. As much as 2,884,368 tons of coal were produced during the month. Besides, 111,131 tons of soft coke, 178,801 tons of hard coke and 13,335 tons of other kinds of coke were manufactured. Despatches during the month accounted for 2,684,362 tons of coal, 107,068 tons of soft coke, 43,663 tons of hard coke and 3,720 tons of other kinds of coke. The coal stocks at the collieries on the last day of the month were 2,976,253 tons.

TREND OF JUTE GOODS MARKET

SUPPLIES EXCEED DEMAND

(From Our Calcutta Correspondent)

FOR the jute goods and the raw jute markets, the year 1952 was remarkable, in that the prices returned to natural levels for the first time after the last World War. Supply of jute goods exceeded world demands, and selling in international markets was subject to keen competition. For a time, Indian jute goods were not wanted by foreign consumers on account of the high export duties levied by the Government of India. It took rather a long time for New Delhi to accede to the demand of the trade for slashing the duties to realistic levels. In the process of gradual revision of the duties, Indian hessians and heavy goods lost considerable ground in foreign markets. However, after the reductions, Indian goods are again slowly capturing lost markets, and in this the assistance which the Indian Jute Mills Association is able to provide by way of publicity in foreign countries is much appreciated by both the Government and the trade. The following tables show how prices moved during the 12 months of the year under review.

TABLE I

Price Trends of Jute Goods During 1952

	Ready hessian 40" 10 oz. Per 100 yards		*Ready B. twills Per 100 bags*	
Opening on 2-1-1952 ..	Rs. 77-8		Rs. 258-0	
	Rs. a. H.	Rs. a. L.	Rs. a. H.	Rs. a. L.
January	77 8	64 0	258 0	212 0
February	65 4	57 8	211 0	165 0
March	59 0	46 0	174 0	137 0
April	53 8	46 4	159 0	143 0
May	49 14	43 0	141 0	114 0
June	48 0	45 0	127 0	114 0
July	45 8	40 8	112 0	93 0
August	47 8	42 0	114 0	98 0
September ..	51 4	46 13	120 0	112 8
October	54 12	49 5	118 8	113 8
November	50 14	47 8	117 8	93 8
December	49 4	42 0	97 8	87 0

H. = Highest. L. = Lowest.

TABLE II

Prices of Jute Goods During 1952

	Opening on 2-1-52	*Highest*	*Lowest*	*Closing on 30-12-52*	*Loss*
	Rs. a.	Rs. a.	Rs. a.	Rs. a.	Rs. a.
Ready hessian 40" 10 oz. (per 100 yards) ..	77 8	77 8	40 8	42 8	— 35 0
Ready B. twills (per 100 bags)	258 0	258 0	87 0	93 12	—164 4

In January the markets opened on a firm note, and expectations that America would soon be requiring a huge quantity of hessian encouraged speculative enthusiasm. Hessians 40" 10 oz. were dealt with at Rs. 77-8 and B. twills at Rs. 258 which, it may be noted, were the highest rates for the year. However, firmness was only a temporary phase and the expected business with the United States did not take place. Quotations searched for lower levels, and on the last day of the month hessians were down at Rs. 64 and B. twills at Rs. 212. These conditions were reflected in raw jute, and Assam bottoms closing at Rs. 37-8 accounted for a loss of Re. 1-8. The fall in raw jute would have been even more pronounced, but cultivators, who were able to fall back on the moderate funds they had made previously as a result of buoyant conditions, were holding on to their stocks in anticipation of an increase in raw jute prices. Mills, however, knew that this would not happen, and they, therefore, gave only limited support to the market.

Export Duties Reduced

February, on the whole, turned out to be a better month, and although quotations did not cross January's opening levels, some headway was made from the lowest rates. This was only possible following the reduction of the export duty on hessian from Rs. 1,500 to Rs. 750 a ton, and although this did not revive American demand, expectations of increased business aided the market sentiment. Meanwhile, production showed a tendency to increase, following the resumption of full working hours by mills. This made mills eager to secure business, and buyers put on a hesitant feeling. Quotations were, therefore, naturally marked down.

March witnessed a further recession in the prices of both raw material and goods. The jute trade and industry were of the same view, that a healthy revival of foreign demand could only follow a further reduction in the hessian duty and a revision to a reasonable level in the duty of heavy goods which, remaining at Rs. 350 a ton, compared with Rs. 50 in force in 1950. No time was lost in making strong representations to New Delhi which was, however, reluctant to agree to the trade demand. In the meantime, market conditions took a turn for the worse, and mills took all steps in their power to ensure that prices did not fall below the economic levels. With this end in view, mills cut short their working hours to 42½ a week as from 31st March. This announcement put up prices for a time; but Americans were not moved to enter the market and were not worried by the coming reduction in production. This was because Continental mills continued to under-cut Indian quotations, and high export duties were a standing hindrance against mills' attempts to dispose of stocks which at the end of February were as high as 105,169 tons, representing an increase of 16,767 tons compared to the figure at the end of January. Stocks at 111,600 tons in March showed a further increase. Towards the end of March, Assam bottoms gained ten points to Rs. 40, as sellers became reserved, following the fixation of minimum prices in East Bengal.

The Government of India's continued silence in regard to the trade demand for a sizable reduction in the duties caused surprise to market circles. What was, however, more amazing was official statements which indicated that the recession in American demand was a normal feature of trading during this part of the year, and that an order for ten million yards of hessian which was placed by the United States on Continental manufacturers during April was nothing unusual, since, as the Minister of State for Finance put it, the hessian ordered was a Continental speciality and was not manufactured in this country. However, traders took a different view and stated that the hessian ordered was for making camouflage strips and that previously Indian hessian had been bought in America for the very same purpose. The trade, therefore, stated that at least a part of the huge order could have been secured by India, had lower duties been in force. Foreign buyers were confident that a reduction in Indian duties should come about, and that was why Indian quotations were not responded to. In the middle of April, a note of steadiness was, however, in evidence, following New York advices that, for the first time since the hessian duty was halved, quotations for Indian burlap were competitive compared to those for osnaburg cloth. Hessian 40" 10 oz. firmed up to Rs. 53-8, and B. twills to Rs. 153. At the end of April, speculators cheerfully noted the resumption of trading in jute goods at the East Indian Jute and Hessian Exchange after the lifting of the ban against futures transactions by the West Bengal Government. Raw jute prices were easy, as arrivals from up-country were increasing, and the balers' request to Government for permission to export some raw jute was not granted by New Delhi for good reasons. Assam bottoms fell to Rs. 34 from Rs. 38.

At long last, it was early in May when the Government of India reduced the duty on hessian to Rs. 275 a ton and that on sacking to Rs. 175 a ton. The announcement was hailed in the market. The immediate reaction was an uptrend and 40" 10 oz. hessian moved to Rs. 49-14 and B. twills to Rs. 141. However, lack of moderate business with foreign buyers imparted an easy feeling and quotations tumbled to Rs. 43 and to Rs. 118, respectively. U.S. buyers realising that only limited purchases would keep down quotations, gave restricted support to the market; however, stockists were not alarmed and mills also were reluctant to offer at the low rates. It was noted that the announcement, unlike the previous ones, clearly indicated that there was no likelihood of a further revision, since the revised duties were stated to be the appropriate levels of normal revenue duties. This sense of finality was welcome relief to the market, since prior to the final revision buyers had postponed entering into commitments in anticipation of the duty reduction.

U.S. Demand

Conditions in both the goods and the raw jute markets in June were steady, and a larger quantity changed hands. There were ample signs of a forthcoming increase in the American demand, and for this reason speculators began to increase their stocks. Mills were anxious that speculators should not raise quotations to such levels as to make the Indian goods again to be priced-out of world markets. Mills realised that market conditions could become normal to them only after they had disposed of the stocks processed from raw jute purchased at higher levels prior to the decline in prices. There were talks of the possibility of mills resuming normal working hours. But many realised that this would be possible only if mills could make sure that foreign demand would be maintained at the higher level. Plenty of raw jute was available in the market, as hoarders realised that no useful purpose would be served by holding on to stocks and that there was no possibility of a spectacular rise in prices. Assam bottoms were offered at Rs. 28 a maund. In East Bengal, markets were uneventful as support from Indian mills was insignificant in view of the fact that Indian jute was much cheaper. It was expected that Karachi would soon revise the export prices, as this was the only method by which East Bengal could dispose of the huge stocks of raw jute. Karachi was, however silent apparently because there was a feeling that the chances of the Jute Board incurring huge losses would be more in the event of a revision, as it had purchased a moderate quantity at higher prices.

The Pakistani Government announced, early in July, its new policy on jute which reduced the minimum prices and lowered the export duty. Naturally, sellers in East Bengal put through moderate business with foreign buyers. Business with Indian mills came to a standstill, as mills desired that, before they could purchase from East Bengal, the discriminating export fee on all jute, except cuttings, sent to this country, should be discontinued. With plentiful quantities of the indigenous jute being available, Indian mills advised New Delhi that the abolition of the special licensing fee could only be the basis of inclusion of raw jute in another Indo-Pakistani trade agreement for which negotiations were proceeding in the capital. Following Pakistan's insistence on its own terms and India's reluctance to accept same, raw jute was not included in the trade pact which followed the negotiations. This naturally imparted a steadier sentiment to the raw jute market in August. Mills were, however, cautious in purchases lest prices should reach levels uneconomic for manufacture. In August, the goods market was also steady. Purchases by foreign importers were satisfactory, and 40" 10 oz. hessian shot up to Rs. 46-8 from Rs. 42-8, and B. twills to Rs. 116 from Rs. 100. Pakistan's announcement that, in view of the possibility of a large carry-over of jute to the next season, jute acreage would be cut down drastically did not have any effect on mills which had taken note of the possibility of the 1952-53 Indian crop reaching near self-sufficiency.

September was a month of firm conditions for all markets. It was during this month that the continued rumours of a huge order on behalf of Argentina became a reality. The order was for 40,000 tons of hessian. The fact that the order went to mills directly instead of through the market, damped speculative enthusiasm. On the announcement of the order, 40" 10 oz. hessian looked up at Rs. 51-4 which, was, however, pulled down to Rs. 49-12 owing to bull liquidation. Mills had practically little or nothing to offer for the near delivery position, and forward goods for both hessian and heavy goods carried a premium. The insistence of Pakistan on continuing the discriminatory licensing fee on jute exports to India lent strength to the local market where stockists noted cheerfully the changing prospects for the jute industry. This naturally encouraged cultivators also to release stocks in small quantities. Pakistani official spoksemen made it abundantly clear that the licensing fee was discriminatory both in character and substance as, in the words of the Pakistani Commerce Minister, Pakistan could not consider India as a "reliable" buyer of the East Bengal fibre, since India was attempting self-sufficiency in raw jute.

Two lively items of news were cheerfully noted in the market in October. Figures of the stock position of mills as at the end of September showed that hessian had fallen by 3,400 tons to 32,800 and as against anticipations of a moderate increase, sacking stocks were only up by 1,900 tons to 58,300. News from America indicated that during September, burlap consumption in that country amounted to 91.5 million yards representing an impressive increase of 5.5 million yards over the figure for August. The increase in consumption for the three quarters ended September was stated to be 59 million yards at 590 million yards. The expectation that Indian mills were unlikely to face competition from the Continent during the period to December, inasmuch as the production of the Continental mills, up to the end of the year had been covered up by orders, was also a factor which made both hessian and heavy goods look up. Hessian 40" 10 ozs. rose to Rs. 54-12 and B. twills to Rs. 118-12.

Prices Decline

Conditions in all sections of the market in November were far from active. Prices for both hessian and heavy goods fell, those for the former more markedly than for the latter. There was temporary enthusiasm following cabled advices from New York that burlap consumption in America during October aggregated 88 million yards which, although lower by 3.5 million yards compared to September, was higher than earlier expectations of the market. It should be said that, despite the declining tendency in hessian, business with America was on a moderate scale.

The feature during the month of December was the closure of the hessian futures market as from the 19th December, following an edict of the West Bengal Government to that effect. This was welcomed both by the mills and the trade, as the wide fluctuations in the prices of hessian had been attributed to the functioning of the hedging system. Although this allegation may not be entirely correct, and opinions on the same are conflicting, it has to be recognised that hedging can play a useful role, especially when goods are in abundant supply, only if operators follow healthy trade practices and eschew the idea of making big profits in as short a time as possible. Overseas importers preferred to buy from a stabilised market, and thus wide fluctuations in prices at home prevented them from entering the market for fear of heavy losses at one time or another. During the month, jute goods were subject to moderate activity. The interest shown in hessian and sacking by America and Britain respectively was considered satisfactory. Heavy goods, for a time, carried impressive gains, and B. twills rose to Rs. 97-8 from Rs. 87 although the closing for the month was at Rs. 93-12. As the month was approaching its end, support to the market was guarded in view of the holidays; but the earlier support encouraged mills to buy a moderate quantity of Indian raw jute. Raw jute prices, which had at the beginning of the month touched very low uneconomic levels and which were a source of anxiety to the mills, cultivators and the Government alike, recorded some fractional gains. Assam bottoms, January delivery, advanced to Rs. 24-8 from Rs. 21 a maund. It was recognised on all hands that the maintenance of a fair price for raw jute was alone a guarantee to ensure that cultivators would not change over to other commercial crops and foodgrains but that they would attempt to increase the existing acreage under jute. Mills had repeatedly stated that they were only eager to buy as much Indian jute as possible, and it was unfortunate that certain sources had stated that mills were buying jute from East Bengal in preference to Indian jute. The fact that mills bought a considerable quantity of Indian jute during the month at a time when support to the market was desperately needed, disproved, if proof was needed, the earlier allegation.

Production of both hessian and sacking has outpaced the demand, and as such any possibility of mills resuming full working hours is ruled out. The availability of good quality jute of Indian origin is limited, and a premium has to be paid for the superior variety of East Bengal jute the E.P.C. prices of which have been raised. Anxiety over the raw material position would continue till the next Indian crop comes to the market. In the meantime, it is to be hoped that Pakistan would make it possible for Indian mills to purchase more raw jute than at present.

THE
CHARTERED BANK OF INDIA, AUSTRALIA AND CHINA
(Incorporated in England by Royal Charter, 1853)
(Liability of Shareholders Limited)
Capital (Paid-up) - £3,000,000
Reserve Fund - - £4,000,000
Branches throughout India, Pakistan and the East
AFFILIATED BANK IN INDIA & PAKISTAN:
THE ALLAHABAD BANK LTD., with over 70 offices in India & Pakistan.
The Bank offers a complete Overseas Banking Service and provides exceptional facilities for financing every description of trade with the East.
Deposits for Fixed Periods or repayable at call or at short notice are received at rates which may be ascertained on application.
The Bank's London Office undertakes Trusteeships and Executorships.
Head Office:

NATIONALISATION OF ELECTRICITY UNDERTAKINGS

VIEWS OF MR. RAJAGOPALACHARI

THE Chief Minister of Madras, Mr. C. Rajagopalachari, spoke with refreshing candour on the subject of nationalisation of electricity undertakings while addressing the Madras Presidency Electricity Licensees' Conference held at Madras last week. He elucidated the theory of nationalisation both from the philosophical and the practical angle in a notable manner. An analysis of his speech confirms the doubts of the industry and the intelligent public about the wisdom of rushing through nationalisation of public utility undertakings at a time when economic and political conditions were not conducive for it. He expressed his considered view that there was no need to hurry through nationalisation, especially in Madras, and predicted, as a "pavement astrologer," to quote his own words, that when the Andhra State was being born and the residuary State would have suffered the pangs of child-birth and would be in the state of a mother left behind in the lying room, they could not expect the State to find funds to pay compensation and take over electricity undertakings. He was, of course, modest enough to add that he was making that prediction only in his individual capacity, because nothing was certain in this world, especially in places where democracy has established or almost established itself.

These remarks on nationalisation of electricity undertakings, which were in response to the request of Mr. P. Natesan, President of the Conference, to make a statement of the Madras Government's policy in this regard, represent the honest conviction of the Chief Minister, based on the study of the "climate" of the times. Speaking with particular reference to the undertakings in Madras, Rajaji said: "It is not the whims and fancies of ministers that decide policies but the circumstances of the country and the particular part of the country in which we live. If there is no climate for nationalisation, it does not matter how fond the Government is of nationalisation, nationalisation will not come." This statement is, however, to be taken with a pinch of salt, at least in regard to other States and the Centre. For, although the economic climate in these States as well as in the Centre is by no means better than that in Madras, they seem to be bent upon pursuing the policy of nationalisation. How else can one view the move of the Central Government to nationalise civil aviation, especially when the far more important projects like multi-purpose river valley schemes and the like are wanting funds. Again, it may be asked as to what justification there is for the Government of Bombay to proceed further with the nationalisation of road transport when it has no money even to consolidate the progress which it has already made. In these cases, it is, indeed, the whims and fancies of certain individuals rather than practical considerations or priority of needs that seem to be the determining factors in regard to nationalisation. It, therefore, looks as though the predictions of this "pavement astrologer" will not prove correct so far as these States are concerned.

The Philosophy

The most brilliant part of Rajaji's speech was that pertaining to the philosophy of nationalisation. He said that, if he were master of himself and the world accepted his view, he would say there was no hurry for nationalisation. The world was marching forward and he might be left behind. The world believed in and, everybody talked of, nationalisation. Because some undertakings gave large profits, many public men thought they could reap all the profits by nationalisation. It was a hurried conclusion. If in an industry, proper amenities were not provided for the workers, there was a belief that once such industries were nationalised, everybody would get proper amenities. Also, if any industry was badly managed, people thought Government management would be good. As against these, there were other points for consideration, observed Rajaji. Generally public management was not so vigilant, or watchful every moment, as private management was. Public management depended for its success on the civic sense of those who looked after the undertakings. In private management, greed was working all the time—to make as much as possible and to give as little as possible. So it happened that "everyman's business was no man's business." If the proper staff was found and if that staff was patriotic and became as good as *Bhagavad Gita* wanted people to become, believing in the doctrine that work was in itself an end, then they could have nationalisation. "Nationalisation or Socialism or Communism depends upon the full assimilation of the doctrine of the *Gita* by every citizen. Otherwise it will be defective nationalisation, Socialism or Communism." The people had not yet adopted the *Gita* doctrine. That time might come and nationalisation might advance as against private management. The *Gita* wanted everything to be done for the community and wanted the man born to his work to get early training in the particular work to which he was to be attached, because there was no question of private or self interest. Speaking in a humorous vein, the Chief Minister of Madras added that some public men thought that, by eating the goose, they themselves would lay the golden eggs. That was the reasoning behind the nationalisation of industries. Women did not lay golden eggs. They brought forth children, and added to their problems. Men, of course, could lay no eggs. Therefore, the goose was dead and there was no golden egg to come. "It is a humorous way of looking at it; but nevertheless true."

Danger of Nationalisation

Looking at nationalisation "philosophically and analytically," Mr. Rajagopalachari asked what it was they hoped to achieve by nationalisation. They would be asking the people to invest money in Government securities in order that the Government might run nationalised industries. In this process, they tried to make citizens moneylenders and technicians Government employees. Was it good? People would become moneylender-minded and would not be satisfied with 3 per cent. or even 4 per cent. interest. By everybody becoming Government servants, there would be no sense of freedom. That was a dangerous thing for the Government also. It would be like putting all the eggs in one basket. "Let us, therefore," said Rajaji "distribute our risks and worries among a number of people. Secondly, let us decentralise vigilance also. Decentralised responsibility and risks—that is the case for private undertakings. I do not say the Government hold that view. We may have to adopt a different policy and wait till the legislators learnt the result of that policy. The Government are likely to follow a middle path; they would be careful and watchful."

Finally, Mr. Rajagopalachari gave a piece of sound advice to private enterprise. Making particular reference to private enterprise engaged in electricity production and distribution, he cited the example of Tatas, who had shown to the public how efficiently and cheaply power could be supplied by private enterprise. If private enterprise worked honestly and efficiently and eschewed the greed for excessive profit, there would be no case for nationalisation. If they (private enterprise) did their best with a sense of consciousness, there would be no need to beg of the Government. If the undertakings were well managed, the Government would be at their doors. He expressed the hope that "this Government or any succeeding Government" would be sensible enough to make full use of the private enterprise's "spirit of adventure," its "capacity to manage" and its "ability to be vigilant, watchful and honest."

MERCHANT FLEET TONNAGE

Japan, Italy and Germany added more ships to their merchant fleet in the year ended July, 1952, than any other country, according to statistics published by Lloyds Register of Shipping last week. Japan added 605,000 tons, raising its total merchant shipping to 2,787,000 tons; Italy 372,000 tons, bringing its total to 3,289,000 tons, and Germany 367,000 tons, making its merchant fleet total 1,398,000 tons. But both Japan and Germany had less ships in service than in 1939, when the former accounted for 5,630,000 tons and the latter 4,483,000 tons. Among others, the U.K. increased its merchant fleet by 73,000 tons while the U.S. decreased its by 87,000 tons. The U.S., however, was still well ahead of the rest of the world in its aggregate tonnage which amounted to 27,245,000 though, of this an estimated 12.5 million tons were in the reserve "moth ball" fleet not in commission. The U.K. has most of its 18,624,000 tons in commission. The Commonwealth, including the U.K., increased its tonnage by 163,000, thereby making a total of 22,327,000 tons.

PROBLEM OF TRANSPORT CO-ORDINATION

ADVISORY COUNCIL'S DECISIONS

TWO principal items were discussed at the Annual Session of the Transport Advisory Council held last week in New Delhi. First, proposals for the amendment of the Motor Vehicles Bill, 1939, were considered with a view to bringing it up to date in the light of developments in road transport. Secondly, the report of the Technical Committee of the Council on the recommendations of the Motor Vehicles Taxation Enquiry Committee, 1950, were considered. The main object of the session was to make recommendations towards developing a co-ordinated transport system in the country.

The details of the Motor Vehicles (Amendment) Bill, submitted for consideration by the Council's Sub-Committee consisting of representatives of ten State Governments under the chairmanship of Dr. Jivraj Mehta, Minister of Finance, Bombay, have not yet been made available to the public. But it is reported that the draft Bill, as revised by the Council, will be circulated to all State Governments before it is finalised for introduction in Parliament. The amendment to the present Act has become necessary in order to close certain loopholes in the Act which have led to a number of malpractices. These malpractices are alleged to be impeding the efficient working of transport in a few parts of the country. It is pointed out that in their zeal to serve the State Transport Corporations some Regional Transport Authorities have been acting in contravention of the provisions of the Act and to the detriment of private enterprise. It is argued that the intention behind the Act, namely, to provide State and Regional Transport Authorities independent powers for all purposes and thereby facilitate the issue of permits free from political considerations, has been defeated to a great extent.

Taxation of Motor Vehicles

The recommendations of the Technical Committee of the Council, appointed to suggest ways and means for implementing the report of the Motor Vehicle Taxation Enquiry Committee, have also not been published. Reports from New Delhi reveal that, in view of the controversial nature of the issues involved, affecting, as they do, the finances of both the Central and State Governments, the Council decided to refer the recommendations of this Committee for a detailed examination by another committee of the Council consisting of 16 State Ministers. This Committee is expected to meet in Bombay shortly.

The Council adopted the recommendations of its Technical Committee on standardisation of bus-body designs which can be adapted in the interest of economy and the promotion of the indigenous bus-body building industry. The Technical Committee is said to have recognised the need for variations in design in order to suit the peculiar conditions of the regions where owing to hilly nature of the country or other conditions, such are necessary.

The question of mode of operation of nationalised road transport undertakings was also discussed by the Council. It came to the conclusion that operation of these undertakings should be through the Road Transport Corporation Act of 1950. It decided that, so far as the question of restricting the types of transport vehicles in the light of the manufacturing capacity available in India is concerned, the existing practice should continue till the report of the Tariff Commission, now enquiring into the matter, became available. As, however, certain State Governments have not had the opportunity of presenting their view to the Tariff Commission, it was agreed that a Committee of nine members of the Council should collect and forward them to the Tariff Commission after correlation. The Council also agreed upon certain measures for the simplification of procedure for (*a*) countersigning permits for vehicles proceeding from one State to another, (b) reciprocal arrangements with contiguous States for the operation of services on common routes, and (c) provision of special facilities for the benefit of tourists.

DAMODAR VALLEY PROJECT

The World Bank has announced a loan of $19.5 million for further development of the Damodar Valley Project. The loan is for a term of 25 years and bears interest at the rate of 4½ per cent. It will be recalled that the Bank had advanced, in 1950, a loan of $18.5 million for a steam power plant at Bokhara, a transmission system and a storage dam at Konar. The present loan will be utilised for the construction of two multi-purpose dams, each with a hydro-electric plant and an extension of irrigation system. The primary purpose of these multi-purpose dams is flood control.

NATIONALISATION OF AIRLINES

IS IT NECESSARY?—IS THERE NO ALTERNATIVE?

(By RUDDERBAR)

ALTHOUGH one of the avowed objectives of the present Congress Government is to make India a Welfare State and progressively to take under State control various commercial and industrial activities in the country, yet it also proclaims its adherence to a "mixed economy," leaving a certain field of enterprise to private capital and initiative. Why then, one may ask, this rush to nationalise air transportation, a field which up to date has been exclusively in the hands of private enterprise?

The answer surely lies in political motives. The aviation industry is, comparatively speaking, very small. It is also at its lowest ebb financially. To nationalise it at this juncture presents few, if any, difficulties and will involve very little finance. At the same time, it can be made to appear a major step forward in the implementation of Socialist, or, if you prefer it, Welfare State policy. Moreover, it is the first step on that road and it is the first step that counts. Industry in general should note the writing on the wall and all that it betides.

It is, of course, true that the air transport industry itself is facing a crisis. The present fleet of Viking and Dakota aircraft cannot last indefinitely. The time-lag between order and delivery of new aircraft is to-day prodigious. If, therefore, replacement is to be effected within the next three to five years, or even if the process of replacement is to commence on a small scale within that period, orders will have to be placed almost immediately. Modern aircraft are extremely expensive and a small order for, say 10 new aircraft, against the 80 or so aircraft employed to-day, will involve a sum approximating four to five crores of rupees, which the industry, in its present straits, is in no position to find.

Reasons For Industry's Plight

It is probably equally true to say that the main reasons for the present financial situation of the air companies are attributable to Government policies. In the first place, far too many companies were originally licensed to operate scheduled air services, with the result that, even during the boom years from 1945 to 1949, very few companies were able to establish themselves on a sound foundation and all, in one degree or another, suffered from the effects of wasteful and unnecessary competition.

Secondly, the levy of a tax of nearly one rupee per gallon on aviation spirit has proved to be a heavy burden on the industry as a whole, bearable during the early years after the war, when traffic was good and aviation spirit approximately one rupee cheaper per gallon than it is to-day, but crushing now, as traffic has fallen off and all costs of operation have risen. Had a reasonable number, perhaps three or four companies only, been licensed to operate, each with an adequate route mileage, then, by this date, they would all have been firmly established and if not making large profits would at least be financially sound. Under those circumstances, they would probably have had no difficulty in raising the additional finance necessary for replacement of fleet over the next four to seven years.

As it is, the Government is obviously taking advantage of a situation which has arisen almost entirely as a result of its own mishandling of the air transport industry, on the one hand, and its unreasonable demand for petrol duty, on the other. If some take exception to the word "unreasonable" as applied to Government's collection of duty on aviation spirit, they should refer to facts regarding the aid given by other Governments towards the establishment of civil air transport, both domestic and international, and whether under private enterprise or nationalised. They would, perhaps, be surprised at the vast sums of money spent towards this objective.

In this connection, it is useful to recall that the Government of India itself recognised, in 1949, the necessity to alleviate this burden of petrol duty by giving a rebate of nine annas out of the 15 annas nine pies paid in such duty per gallon of petrol. If this was necessary, and it certainly was, in 1949, when traffic was some 25 per cent. better than it is to-day and when petrol was at least 11 annas per gallon cheaper than it is to-day, it is difficult to appreciate the reasoning behind the gradual reduction of this rebate to eight annas in 1951 and six annas in 1952.

An Alternative

Be that as it may, the fact still remains that nationalisation of the industry is only one possible path out of the present situation. There are other solutions of which the most obvious are as follows:

(1) The partial nationalisation of the industry, leaving those units strong enough to survive, even in present circumstances, under private enterprise.

(2) Abolition of the present customs duty on aviation spirit.

(3) Loans to operators, considered to be financially sound, for the purpose of gradual fleet replacement.

A judicial mixture of these solutions would provide good results. For example, Government might amalgamate into one unit and, at the same time, nationalise four of the existing eight operators. This would leave one domestic and one international operator in Bombay, who could conveniently form one complete unit, particularly as these two companies already operate under one management.

The remaining two companies could either continue to operate as separate units or combine as one company, still under private enterprise. These measures would result in three, or at the most four, separate companies for whom adequate route mileage would be available. These measures would also have other advantages. The nationalised section of the industry would provide a useful yardstick for the measurement of efficiency *vis-a-vis* the two or three private enterprise companies. In addition, there would be no monopoly of air transport operation and healthy competition would be maintained, thus ensuring to the public the lowest possible fares and the best possible service.

Political Move

The fact that Government did not call the leaders of the industry together to discuss these and other alternatives seems to substantiate the charge that nationalisation is a political move. Indeed, it is understood on good authority that, when Government did see fit to consult the industry on the question of nationalisation, no discussion or criticism of the policy was permitted. The industry was told that it had to accept nationalisation and was invited only to offer suggestions as to how this was to be brought about expeditiously.

The reasons advanced by Government spokesmen, so far as any Government spokesmen have condescended to illuminate the situation, are founded on the prevailing uneconomical circumstances of the various companies with partciular emphasis on the need of fresh capital for fleet replacement. That these circumstances exist has already been stated. In the light of the circumstances mentioned above, that the industry to-day could raise fresh capital is, of course, out of the question. When, however, it is sought to show that the integration of the airlines into one corporation and their complete nationalisation is the only possible course to pursue, then issue must be joined.

Very lately the airlines in Brazil faced exactly similar circumstances. The situation was met, however, by Government loans and increased aid to the industry and nationalisation, although considered, was discarded. Various courses which might profitably be pursued here have already been outlined and it is not proposed to dilate further on that subject.

The patient reader who has reached this point may well ask: "What's wrong with nationalisation any way? It's as good a solution of the difficulty as any other." Well, possibly it is, but opinions on this subject are bound to differ widely. This writer confesses his fundamental dislike of any form of nationalisation. He believes, as so aptly summed up by Melville, that "the only duty of a Government is to preserve peace and observe contracts." What, after all, is sacrosanct about nationalisation? The people do not really own a nationalised industry and, indeed, they have less opportunity to conduct the affairs of a nationalised concern than those of private enterprise, where, as shareholders, they have a voice in policy. Nationalisation of certain forms of industry can certainly be defended on the grounds that Government control is an essential factor if Government planning is to be effective. The politician's soothing syrup regarding public ownership is, however, pure humbug.

Some Instances

Turning to practical considerations, it surely cannot be claimed that nationalisation elsewhere has proved to be resoundingly successful. Take railways in the U.K., for example, or, for that matter, airways. The general complaint regarding the former is that fares have steadily mounted since nationalisation and service has steadily deteriorated. Regarding airways, the British taxpayer has had to find millions of pounds to cover losses made by the two nationalised Corporations and the end of such losses is not yet in sight. Private enterprise companies, on the other hand, have made astonishing progress and that despite the manifold disadvantages under which they suffer. This is not to decry the services of the nationalised Corporations which are undoubtedly efficient. It is, however, to say that private enterprise could have done it just as well and far more economically.

It is, moreover, becoming increasingly evident that labour is no better off under nationalisation than under well-run private enterprise. Trades union leaders, indeed, appear to be awakening to the fact that Trades Unionism and nationalisation are not compatible. These trends are clear for all to see and may have a profound effect on the next general election in Britain.

In these circumstances and with these examples before us, it is strange that nationalisation still seems to exert such fascination on our political leaders, as if it were the end all and be all of national existence. It seems to this writer that it and similar policies, which tend to make the whole population dependent on the State for employment, are in reality the "end all" of initiative, character and that independence of spirit on which, in the final analysis, the whole existence and welfare of the State must and does depend.

Heavy Retrenchment will Follow

To return to practical matters, it can be argued, with justice, that the integration and nationalisation of our airlines will at least lead to profitable working. This is beyond dispute. One corporation operating on the domestic routes in India will certainly make a profit. The point is, however, whether it will be run as economically and efficiently as under private enterprise. A further point is whether it is necessary to be so drastic. Could not three or even four companies operate with profit, thereby increasing the potential defence reserves of the country and providing more employment in the industry? As it is, the integration of all the scheduled airlines into one or even two corporations is bound to lead to a very large measure of retrenchment among present employees, probably in the order of 30 per cent.

It is at any rate good news to hear that Government have listened to the advice of the top-ranking leader of Indian aviation and have agreed, or so it is understood, to form not one corporation but two and have also agreed that both corporations will be run as fully autonomous entities, with, it is hoped, the very minimum of Government interference. Had Government decided to run the Corporation or Corporations departmentally, that indeed would have been the end.—*All Rights Reserved.*

ALUMINIUM AIRCRAFT HANGAR

Finishing touches are now being put to an aluminium aircraft hanger with a clear span of 200 ft.—the world's largest in aluminium—at the Hatfield works of de Havilland, makers of the Comet, as part of the Company's expansion plans. With an area of 66,000 sq. ft. it can comfortably accommodate six or seven of the great airliners. It was built by the British firm of structural engineers which also built the 342 ft. span of the Dome of Discovery for the Festival of Britain in 1951, as well as the three-bag hangar at London Airport with three 150 ft. spans.

Aluminium alloy was chosen for the new hangar because of the economic advantage that that metal offers in relation to other materials. In a span of this width, the structural weight is only about one-seventh that of an equivalent steel structure. Moreover, apart from the saving in material, the light weight of the structure permits the fabrication and transport of very large subassemblies, and their erection with a minimum of labour and equipment. The main structure of the new Comet hangar was erected by 18 men in 13 weeks, using only two 5-ton hand-operated cranes, practically without scaffolding.

ALARMING INCREASE IN WATCH SMUGGLING

Smuggling and illicit trading in watches has, says a news report, become one of the most serious problems facing the customs authorities in India. It is officially announced that the number of watches confiscated during 1950-51 amounted to nearly 60,000. Trade circles apprehend that the year 1952-53 may show an even greater increase.

One watch dealer commented—"Black market peddlers and 'private enterprise' smugglers devote themselves assiduously to providing the public with the products it wants, but cannot legitimately have. Such law-breakers are faced with prosecution and punishment, the animosity of the retail trade and the distrust of buyers, but such is the demand for watches that they are not deterred." Unfair competition from persons having little or no knowledge of watches and no sense of responsibility to their gullible customers has become a serious threat to the established watch trade, this dealer added.

EXPENDITURE-PATTERN OF RURAL HOUSEHOLDS IN INDIA

NATIONAL SAMPLE SURVEY'S ESTIMATES

STATISTICALLY speaking, India's rural areas have, for long, remained an unexplored territory. Isolated attempts at surveying a village or a group of villages have no doubt been made by some of the University authorities or the State Governments. But no organised survey, on an all-India scale, has ever been undertaken. Perhaps, the first significant attempt at studying the rural economic conditions was the one made recently by the Government of India to compile a series of rural price index numbers. But even this information is strictly limited in scope. For this reason as well as for the reason that no economic picture of this country could be regarded as complete unless it dealt with the rural areas where over 65 per cent. of the population live, the report of the National Sample Survey (N.S.S.), which deals exclusively with these areas, will be widely welcomed. This article, which is based on the N.S.S. Report, noticed editorially by us last week, seeks to summarise briefly the results of that nation-wide survey.

The scheme for organising the survey, which is described as the biggest and the most comprehensive enquiry undertaken in any country in the world, was approved by the Government of India early in 1950. Actual work on the survey started in October, 1950. In the first round of investigations, a sample of 1,633 villages was selected. These villages were divided into two groups, the first group of 1,189 villages being covered by the Indian Statistical Institute and the second group of 644 villages by the Gokhale Institute of Politics and Economics, Poona. The present report relates to the former group, and deals with the year ending June, 1950. Although information has been obtained on many subjects, such as land utilisation, agricultural prices, demographic conditions, and economic and employment statistics, the report gives only a few results of major importance.

The survey of rural households discloses that each household consists, on an average, of 5.21 persons, of whom a little over one-fourth are earners, one-sixth earning dependents and more than half non-earning dependents. The consumer expenditure in rural areas was about Rs. 220 per person per year in 1949-50. The following table reveals the expenditure-pattern in an average rural household and also expenditure per person.

TABLE 1
Consumer Expenditure

Items	Rs. per household	Rs. per person	Percentage of total
Foodgrains	442.61	85.03	38.70
Pulses	40.89	7.86	3.58
Edible oil	43.31	8.32	3.79
Vegetables	26.72	5.13	2.34
Milk and its products	88.82	17.06	7.77
Meat, egg and fish	24.57	4.72	2.15
Fruits	12.15	2.33	1.06
Refreshments	14.10	2.71	1.23
Salt	4.82	0.93	0.42
Spices	31.00	5.95	2.71
Sugar	29.28	5.62	2.56
Food total ..	758.27	145.66	66.31
Pan	9.17	1.76	0.80
Tobacco	20.46	3.93	1.79
Intoxicants	8.96	1.72	0.78
Fuel and light	37.14	7.14	3.25
Men's clothing	36.01	6.92	3.16
Women's clothing	42.36	8.14	3.70
Children's clothing	9.84	1.89	0.86
Miscellaneous clothing	6.35	1.22	0.56
Head-gear	4.61	0.89	0.40
Bedding	9.92	1.91	0.87
Tailoring	11.43	2.20	1.00
Footwear	9.66	1.86	0.84
Cobbler service	1.12	0.21	0.10
Toilet	3.35	0.64	0.29
Toilet service	5.74	1.10	0.50
Amusements	6.04	1.16	0.53
Education	2.92	0.56	0.26
Educational service	4.95	0.95	0.43
Newspapers, etc.	0.50	0.10	0.04
Medical expense	9.19	1.77	0.80
Medical service	5.35	1.03	0.47
Miscellaneous household articles ..	8.25	1.59	0.72
Domestic service	10.41	2.00	0.91
Food service	1.68	0.32	0.15
Furniture	2.87	0.55	0.25
Furniture service	0.73	0.14	0.06
Utensils	7.24	1.39	0.63
Ceremonials	82.46	15.84	7.21
Non-recurring expenses	3.01	0.58	0.26
Miscellaneous	17.20	3.30	1.50
House rent and taxes	6.51	1.25	0.57
Total ..	1,143.70	219.72	100.00

Although the average expenditure per person works out to Rs. 220, there are, of course, wide differences. It varies from Rs. 313.88 in North-West India to Rs. 197.73 in Central India. In North India it is Rs. 205.11, in East India Rs. 210.44, in West India Rs. 253.01 and in South India Rs. 202.82. It will be seen from the table above that food, clothing and ceremonials account for 84.07 per cent. of the total expenditure, and that, if house rent and taxes are added, the proportion of these three items is 84.64 per cent. of the total expenditure. This shows how little is left for other items such as better education or better food or more furniture or even utensils, the items which are indicators of a higher standard of living.

The expenditure on food item varies from zone to zone. The all-India average of 66.31 per cent. of total expenditure is the average of 69.65 per cent. for North India, 71.01 per cent. for East India, 67.37 per cent. for South India, 54.01 per cent. for West India, 62.79 per cent. for Central India and 67.94 per cent. for North-West India. Based on the replies received from the households, the estimated consumption of foodgrains was 26.38 maunds (0.97 ton) per household, whereas the estimated production was 19.86 maunds (0.73 ton). This discrepancy, according to the report, is "palpably absurd." The report says that the growers must have underestimated the production figures. Further, it estimates the consumption of foodgrains in India at 63.17 million tons for 1949-50. Deducting from this figure the net supply of foreign foodgrains of 3.01 million tons, the production of foodgrains in India is estimated at about 60 million tons. The official figures place foodgrain production at 44 million tons. These figures, according to the report, are "underestimates by something between roughly 20 and 25 per cent. in round numbers."

Because milk, sugar and edible oils are universally regarded as energy-giving items of food, it would be instructive to subject the figures relating to their consumption to some scrutiny. The value of consumption of milk and milk products per person per annum is nearly Rs. 60 in North-West India, Rs. 25 in West India, Rs. 18 in North India, Rs. 14 in Central India, Rs. 9 in South India and only Rs. 7 in East India. The all-India average of milk consumed per person per year is 21.9 seers (or less than 2 seers per month). Milk consumption was highest, 66.1 seers per year in North-West India, and lowest in East India where it was only 11.7 seers per person. In West India it was 30.1 seers, in North India 24.2 seers, in Central India 18.1 seers and in South India 13.1 seers. The following table gives the consumption of milk and milk products in different zones:

TABLE 2
Milk and Milk Products

Zones	Rs. per household	Rs. per person	Percentage of total expenditure
North India	96.53	18.32	8.93
East India	37.41	6.98	3.52
South India	45.20	9.08	4.48
West India	134.86	24.67	9.76
Central India	70.85	14.23	7.20
North-West India	314.70	59.71	19.03
All-India	88.82	17.06	7.77

The value of the all-India consumption of sugar per person per year is Rs. 5.62. But this figure should be interpreted with caution, in view of the fact that "sugar" here includes *gur* also. The following table gives the consumption of sugar, including *gur*, in different zones:

TABLE 3
Sugar Consumption

	Rs. per household	Rs. per person	Percentage of total expenditure
North India	31.80	6.03	2.94
East India	14.74	2.75	1.31
South India	22.72	4.57	2.25
West India	61.53	11.26	4.45
Central India	24.29	4.88	2.47
North-West India	53.45	10.14	3.23
All-India	29.28	5.62	2.56

The consumption of vegetable oils, which constitute a fairly cheap source of fat for the villagers, is relatively high in West India. This item includes vegetable oils like mustard oil, coconut oil, *til* oil, groundnut oil and also vegetable oil products like *vanaspati*. Ghee has been excluded from the group and treated as a milk product. The following table gives the value of consumption of edible oils in different zones:

TABLE 4
Edible Oils

	Rs. per household	Rs. per person	Percentage of total expenditure
North India	41.88	7.95	3.87
East India	43.09	8.05	3.82
South India	47.79	9.61	4.74
West India	57.56	10.53	4.16
Central India	34.80	6.99	3.54
North-West India	35.02	6.64	2.12
All-India	43.31	8.32	3.79

Salt occupies a relatively minor place in the food expenditure of the people. The expenditure of salt forms only 0.42 per cent. of the total expenditure. On food as a whole, a person in rural areas spends Rs. 145.66 per year. Of this amount, the money spent on salt is only Re. 0.93. Surely, if other items of food such as sugar, foodgrains, pulses, and edible oils, are subject to sales tax and other imposts, there is no reason why salt should be treated differently, considering that it occupies a minor place in the expenditure-pattern of the people and that a duty on this commodity can be a good source of revenue. Here, sentiment and political considerations, rather than reason, seem to influence official policies. The average quantity of salt consumed per household is 39.09 seers and per person it is 7.51 seers. The following table gives the expenditure on salt in different zones.

TABLE 5
Consumption of Salt

	Rs. per household	Rs. per person	Percentage of total expenditure
North India	4.24	0.80	0.39
East India	5.43	1.01	0.48
South India	5.05	1.01	0.50
West India	3.76	0.69	0.27
Central India	4.97	1.00	0.51
North-West India	4.57	0.87	0.28
All-India	4.82	0.93	0.42

The minor place which salt occupies in the expenditure-pattern of the rural household will become clear when expenditure on salt is compared with *pan*. The value of the consumption of *pan* per household is Rs. 9.17 or Rs. 1.76 per person. It constitutes 0.80 per cent. of the total expenditure, as against the 0.42 per cent. for which salt accounts.

Even tobacco is a costlier item, accounting, as it does, for 1.79 per cent. of the total expenditure. The following table gives the value of the consumption of tobacco (in all its forms—chewing, snuff, cigarettes and *bidis*):

TABLE 6
Consumption of Tobacco

	Rs. per household	Rs. per person	Percentage of total expenditure
North India	19.34	3.67	1.79
East India	17.24	3.22	1.58
South India	23.05	4.63	2.28
West India	28.69	5.25	2.07
Central India	17.03	3.42	1.73
North-West India	22.91	4.35	1.38
All-India	20.46	3.93	1.79

An analysis of the expenditure on clothing reveals certain interesting features. Women's clothing is, as a reference to Table I shows, costlier than men's. So, the traditional jibe that the woman spends more on her wardrobe than man seems to be true of the Indian villagers too. Bedding is a costlier item than even children's clothing, though, in most parts of India, a mattress often serves both as a bed and as a floor-spread for guests. Tailoring service is, as in towns, a very costly item. It costs more than even children's clothing. It may be possible to reduce the cost of this item if the villagers are themselves taught to do a little sewing in their spare time.

There is unmistakable evidence to show that the importance of handloom cloth as an item of wearing apparel is not so great as is sometimes claimed for it. Handloom cloth accounts for only 20.43 per cent. of the total expenditure on cloth, whereas mill-made cloth accounts for 74.01 per cent. of such expenditure. *Khaddar* has ceased to be an important item; it accounts for only 2.81 per cent. of the expenditure on cloth. The following table gives the expenditure on cloth:

TABLE 7
Expenditure on Clothing
(Per household)

	Mill-made cloth	Handloom	Khaddar	Other types	Total
North India .. Rs.	85.38	6.33	5.49	4.24	101.44
Percentage of total ..	(84.17)	(6.24)	(5.41)	(4.18)	(100)
East India .. Rs.	64.78	16.11	0.37	1.59	82.85
Percentage of total ..	(78.19)	(19.44)	(0.45)	(1.92)	(100)
South India .. Rs.	53.54	42.52	0.05	1.10	97.21
Percentage of total ..	(55.08)	(43.74)	(0.05)	(1.13)	(100)
West India .. Rs.	135.21	28.77	3.16	4.55	171.69
Percentage of total ..	(78.75)	(16.76)	(1.84)	(2.65)	(100)
Central India .. Rs.	74.95	24.42	1.47	2.51	103.35
Percentage of total ..	(72.52)	(23.63)	(1.42)	(2.43)	(100.0)
North-West India .. Rs.	126.74	13.20	16.14	8.37	165.15
Percentage of total ..	(76.74)	(7.99)	(10.20)	(5.07)	(100.0)
All-India .. Rs.	80.74	22.20	3.06	3.00	109.00
Percentage of total ..	(74.01)	(20.45)	(2.81)	(2.75)	(100.00)

Great care was taken to collect the statistics relating to intoxicants. It would appear that the investigators were instructed "not to ask the question bluntly right at the beginning but to raise the issue in a general way first." The report is not certain that the estimates are really correct. Under "intoxicants" were clubbed together such items as toddy, *ganja*, opium, country liquor of all sorts and foreign liquor. The expenditure per household on this item comes to Rs. 8.96 (or Rs. 1.72 per person) and accounts for only 0.78 per cent. of the total expenditure. The highest expenditure per household on intoxicants seems to be in North-West India (Rs. 17.37) and the lowest in West

(*Continued on next page*)

ASSOCIATED CEMENT COMPANIES LIMITED

MR. DHARAMSEY KHATAU'S SPEECH AT ANNUAL MEETING

PRESENT HIGH LEVEL OF TAXATION NEEDS TO BE LOWERED

THE Sixteenth Annual General Meeting of the Associated Cement Companies Ltd. was held on Friday, 23rd January, 1953, at the Company's premises at 1 Queen's Road, Bombay. Speaking at this meeting, Mr. Dharamsey M. Khatau, Chairman of the Company, referred to the issue of plant reinstatement, and said:

"It will be seen from the statement of accounts that a sum of Rs. 50 lakhs has been set aside from the profits made this year as plant reinstatement reserve. This reserve is necessary for providing the additional finance required for replacing old machinery and equipment as and when they become worn out. I have, in previous years, referred to the high prices of new machinery, and to the increasing price gap between the cost of the originally installed machine and the machine which has to take its place when the former has completed its useful life. The first duty of industry is to maintain the operation of its plant at the highest peak of mechanical and organisational efficiency, and naturally the first charge that should legitimately be made against the trading profits of a company is the setting aside of adequate finance to enable this peak of mechanical efficiency to be maintained. At present, however, depreciation for taxation purposes is still related to the originally installed costs of machinery rather than the present-day replacement costs, while the appropriation to plant reinstatement reserve has to be met from the profits after they have been taxed. The attention of the Government has been drawn to this anomalous position but nothing has yet been done. I submit that, if industry is to maintain, and increase its present level of production and efficiency, then Government must give this matter their immediate and serious consideration. Unless there is some easing in the present high level of taxation, and a realistic approach to this vital question of making available the requisite finances to replace old and worn out machines with modern and up-to-date ones, then it is difficult to see how industry can be expected to play the part which it is anxious and eager to do in the development and progress of our country."

Production and Despatches

Reviewing the rapid progress of the cement industry in India and A.C.C.'s contribution towards it, the Chairman said: "The total cement production in India has more than doubled during this period —from 14.8 lakh tons in the 1947-48 to nearly 34 lakh tons during 1951-52. In this rapid growth of the industry, your Company has naturally played a prominent role. Our production, excluding our factories in Pakistan, but including the Bhupendra factory, our subsidiary, has risen from 12.91 lakh tons to 20.17 lakh tons during the same period. In fact, it is in a large measure due to your Company's policy of continuous expansion that the industry is to-day able to meet the demands made on it by the Government and the public."

After referring to the pre-eminent position cement enjoys among building materials, the Chairman continued: "I consider that the demand for cement in India is likely to go on increasing. Large quantities of cement will be required for the development projects included in the Five-year Plan. Moreover, with the increase in population and the development of a higher standard of life in the country, there will be a constant demand for new and better houses. It is the intention and the determination of your Company to achieve the target set in the Five-year Plan, especially in so far as it deals with the requirement of cement."

"In order to provide for the increased requirements of cement which I have enumerated above, your Company has planned a programme of rehabilitation, modernisation and expansion to be implemented over a period of ten years. This programme will be implemented by stages, each stage having been determined in order to achieve a definite objective, and in accordance with the finances which we hope will be available to us. I am glad to be able to report to you that, during the past year, we have spent Rs. 1.49 crores as an initial start to this programme, and that, as a result, our effective capacity has increased from 21.95 lakh tons to 24.52 lakh tons."

The Chairman then referred to the successful conclusion of the negotiations with the Government of India regarding the new cement factory at Sindri and said that this new Works, when finally completed, will add another 2 lakh tons to the A.C.C.'s rated capacity. "With the completion of this programme of modernisation, plant rehabilitation and expansion," the Chairman said, "we hope to raise our capacity to 31.3 lakh tons by 1960-61."

Five-year Plan

Alluding to the Five-year Plan, the Chairman said: "The Plan is essentially a democratic approach to the solution of the complex economic problems confronting the country, and a well-thought-out effort towards building a new economic structure on a sound basis. It is in this perspective that we should view this plan for national development and work wholeheartedly towards fulfilment of the targets set by it."

Cement Prices

Coming to the question of cement prices, the Chairman said: "The price increase granted by the Government of India to compensate for the steep rise in the cost of packing materials was operative throughout the year 1951-52. Recently, following the downward trend in the jute market, the Central Government revised the price chargeable to consumers for packing materials with effect from 1st December, 1952. This has resulted in a substantial loss to the Company on the large quantities of bags which are normally held in stock. Further, the Government has not taken into consideration the increase in cost which has recently taken place in the manufacture of cement.

"In spite of increased production and despatches and despite all efforts of the management to keep the cost of production in check, there has been a further rise this year in the manufacturing cost of cement, on account of factors totally beyond our control. The prices of raw materials and consumable stores and spares have substantially increased. The railway freight on coal has gone up by about 45 per cent. since April, 1952, and we estimate that the burden of this increase alone is of the order of Rs. 38 lakhs per annum at our present level of production. Also, during last few years, fuel oil has registered an increase of over 100 per cent. There has also been an upward revision in the scale of basic wages and dearness allowances by about 12 per cent. As these increases in costs affect the whole industry, all the different interests in the industry have been obliged to approach Government for a suitable adjustment in the selling price of cement and the question has been referred by Government to the Tariff Commission for enquiry.

Labour Relations and Welfare

"During the year under review, welfare activities were undertaken on the usual scale. Your Company's policy of providing modern amenities such as houses, hospitals, canteens, clubs for its employees, is continuing and their maintenance costs your Company considerable sums of money year after year. The true measure of all these amenities to workers and your Company's concern for their welfare is best reflected in the increase in the *per capita* income of our workers and in the general improvement in their living standards. Judged purely in terms of wages earned by our workers, you will be happy to learn that there has been an increase of over 24 per cent. in the minimum average earnings per month of unskilled workers in your factories between the years 1949-50 and 1951-52.

"Unfortunately, our labour relations during the year could not be described as altogether satisfactory. We had our share of labour disputes, strikes, and adjudications. There are, however, signs of improvement in industrial relations in the country, thanks to the new approach to the labour problems—the shift of emphasis from legislative action to voluntary settlement in industrial disputes and the correlation of workers' responsibilities to benefits secured by them. If workers want higher wages and greater benefits and welfare measures, they must also recognise that their Company cannot give these, unless they provide the Company with the means—in the shape of increased production. It should also be borne in mind that the advantage of every economy, invention, new tool, or capital expenditure cannot be claimed exclusively for the benefit of labour but has to be shared by the various contributing factors, such as investors, management, workers and the consumers. Let us hope that the will to work hard will replace mere material incentives, so that the prosperity of our country and the consequential rise in our national standard of living may be attained. Your Company has all along advocated this progressive labour policy and it is heartening to note that we have, in our Union Labour Minister, a champion of voluntary settlement of disputes."

The Chairman then announced that "the Board has recommended this year the payment of a bonus equivalent to three months' basic earnings to all its employees" and concluded by referring to the Company's appreciation of the loyalty and efficiency of the staff and operatives.

The report and the audited statement of accounts for the year ended 31st July, 1952, were then adopted.

EXPENDITURE-PATTERN OF RURAL HOUSEHOLDS IN INDIA

(*Concluded from previous page*)

India (Re. 0.06). It was Rs. 2.67 in North India, Rs. 16.60 in East India, Rs. 5.85 in South India, and Rs. 8.60 in Central India. Even if there has been an underestimate in these figures, it seems as though the expenditure on intoxicants is grossly exaggerated in quarters which are wedded to the policy of Prohibition.

If footwear, toilet articles, utensils and furniture are regarded as items which are an index of higher living standards, it is noteworthy that the expenditure on these items forms only a very small part of the rural household's expenditure. This shows that little surplus income is left after money has been spent on essential items such as food and clothing. Footwear accounts for 0.84 per cent. of the total expenditure, utensils for 0.63 per cent. and furniture for 0.25 per cent. The expenditure on utensils was the highest in South India, where it was Rs. 10.43 per household, and the lowest in North India, where it was Rs. 3.94. Perhaps the relative popularity of cheap aluminium utensils in North India accounts for the low level of expenditure on this item in the North. The annual expenditure on toilet articles is only Rs. 3.35 in an average rural household, or a little over one-quarter per cent. of the total expenditure. Central India shows the highest expenditure on toilet products, about 0.33 per cent. The lowest expenditure on this item is to be found in North-West India (about 0.20 per cent.). In other zones, it varies from 0.28 to 0.31 per cent.

A very clear picture of a rural household emerges from these figures. It is a household where most of the income earned by the chief bread-winners of the family is spent on providing the admittedly low standards of food and clothing. The household cannot afford any of such modern amenities as the radio, nor even the modern semi-necessary equipment like a bicycle. This is a depressing picture. But there it is. Unless the rural household is lifted out of its low living standard, there is no hope of building up industrial prosperity. If the rural household could, on the other hand, be enabled to consume a couple of pounds more sugar every year, buy a couple of yards more cloth or cover their feet with another pair of *chappals* or wash themselves with an extra cake of soap it would make a tremendous difference to the fortunes of India's industries. It remains to be seen whether even this modest improvement would be realised in the near future. But the organisers of the National Sample Survey must be congratulated on their efforts at bringing out a report which shows clearly where we stand now. That we stand very low in the economic and social scale should spur us to greater endeavour.

FUTURE OF ECONOMIC CONTROLS

MODIFICATIONS TO SUIT PRESENT CONDITIONS URGED

THE questionnaire issued by the Commodity Controls Committee, in order to ascertain the views of the various institutions and individuals on the present position of controls on trade and industry in India, has evoked some valuable comments and suggestions from the Federation of Indian Chambers of Commerce and Industry, New Delhi. It will be recalled that last year the Government of India appointed this Committee to examine and review the working of the three Acts, namely, (*a*) the Essential Supplies (Temporary Powers) Act, 1946, (*b*) the Supply and Prices of Goods Act, 1950, and (*c*) the Drugs (Control) Act, 1950. Welcoming the appointment of this Committee, the Federation, in the course of its reply to the questionnaire, has not only drawn the attention of the Committee to some of the problems which need detailed examination but has offered certain well-thought-out suggestions for its consideration. The mass of details with which the Federation has sought to substantiate its suggestions is doubtless the result of keeping a careful track of the developments which have followed the various orders passed by the Governments. Even those who examine the suggestions of the Federation with a critical eye, bearing in mind the changes which have taken place in the sphere of production, distribution, prices and transport since the introduction of these controls, will find it hard to disagree with the well-reasoned conclusions of the Federation on the future of controls. In fact, its views may be said to echo not only the voice of industry and trade but also of the thinking section of public opinion.

At the outset, the Federation has made it clear that it is not at all for complete freedom from all controls. It concedes that some of the controls have been helpful to increased production in the country. Its emphasis is more on the necessity for simplifying and modifying the various control orders issued by the State and Central Governments than on abolition of all controls. It has drawn the attention of the Commodity Controls Committee to the changes that have taken place in the country's economy, rendering many provisions of the various Acts obsolete. The increase in agricultural and industrial production, existence of more rigid monetary controls, the continued stringency in the money market, and the low purchasing power of the people are some of the factors in the present situation that require to be taken note of in arriving at any decisions on the future of controls. There are also a few more notable factors to be taken into consideration. First, controls were, to a certain extent, necessitated, by transport bottlenecks. Now, there has been a marked improvement in internal transport, as well as in international shipping. Secondly, the supply position in the international commodity markets too is favourable and could help in fighting inflationary tendencies. The country is thus emerging from a shortage economy to an economy of relatively plenty. Instead of too much money chasing too few goods, there is at present a definite lack of effective demand for the increased availability of goods. In fact, the position to-day is such that the Government may have to adopt schemes for discriminatory price support to some of the commodities such as raw cotton and raw jute. The question at present is one of marketing production rather than of measures designed to prevent increase in prices and to curtail consumption.

Indirect Controls

In view of this change in the economy of the country, the Federation rightly feels that the controls which are still necessary should be of the indirect type and not of the direct type which involves the maintenance of an expensive machinery, breeds corruption, aggravates red-tapism, kills initiative and enterprise and impedes production. In other words, the time has come when the economy of the country could be easily regulated through appropriate changes, from time to time, in the fiscal monetary and commercial policies of the Government. A few controls on some items of production, movement and allocation may be necessary to maximise utilisation of scarce supplies and to ensure the realisation of approved plans for economic development. But even these, as the Federation has taken care to add, should be subject to periodical review in the light of changed conditions. While endorsing the Planning Commission's view that planning presupposes controls, the Federation pertinently remarks that the types of commodity controls needed in a planned economy will be substantially different from the present controls.

The Federation has done well in singling out for some special comment the Planning Commission's views regarding the expansion of public enterprise in the field of distributive trade. The Federation thinks that the existence of control should not be regarded as a sound reason for nationalising a distributive trade. The reasons given by it in support of this stand are convincing enough. The incursion by the State into the trade will cause great hardship and harassment to the people engaged in it, without giving relief to the consumer. It will not serve the object of checking a diversion of investment on a large scale to trade from other sectors where it is needed. Profit margins of distributive trade at present are by no means large and not commensurate with the difficulties of administering an extensive system of controls. There is a dearth of efficient personnel to handle the schemes under the Five-year Plan, let alone the requirements of the trade. The Federation, therefore, strongly feels that the Government should not embark on nationalising any sector of the distributive trade.

Overlapping to be Avoided

Dealing with the Essential Supplies (Temporary Powers) Act, 1946, the Federation says that, besides this Central order, there are other similar Acts passed by certain States. These Acts include the Bombay Essential Commodities and Cattle (Control) Act, 1946, the Madras Essential Articles (Control and Requisitioning) Act, 1949, and the U.P. Control of Supplies (Temporary Powers) Act, 1947. Besides, there are certain Acts in respect of specific commodities such as the West Bengal Jute Goods Act, 1950. The provision of these various State Acts overlap with those of the Centre and cause confusion. The Commodity Controls Committee has accordingly been requested to go into these controls in detail and suggest ways and means for simplifying them. It has taken strong exception to the practice of using the Essential Supplies (Temporary Powers) Act for State trading by some State Governments, as in the case of trading in milk powder and oilcakes by the Government of Bombay.

The Federation is definitely of the view that the Supply and Prices of Goods Act, 1950, need not be continued. In support of this view, the Federation states that most of the controls exercised under this Act were designed to meet temporary situations due to a sudden price spurt as a result of the deterioration in the international situation. Since the position in this respect has considerably improved, the Federation feels that the Act can be replaced by suitable adjustments in the import policy of the Government and by necessary arrangements in respect of distribution of certain essential raw materials with the interests concerned. As suitable adjustments in the import policy of Government and the necessary arrangements in respect of distribution of certain essential raw materials can, it is stated, be devised in consultation with the interests concerned, the Act may be discontinued. For our part, however, we feel that the total repeal of this Act at present is not advisable. In the past this legislation has served the interests of industry as well, a fact admitted by the Federation itself. In this uncertain world, no one can say with certainty that similar situations will not arise again. Consequently, the Government will do well to retain this Act on the Statute Book and use it sparingly whenever an emergency arises and warrants its use. These observations apply with equal force to the Drugs (Control) Act as well. But the Federation feels that the Commodity Controls Committee should examine the feasibility of recommending the repeal of the Act. As an alternative, the Committee is requested to investigate the possibility of enacting a Central Drug Control legislation applicable to all parts of the country.

Improve Efficiency of Controls

In conclusion, the Federation has laid emphasis, rightly in our view, on the need for improving the efficiency of controls wherever their retention is found necessary. It has also advocated the continuation of the existing Advisory Committees for specific commodities and the revival of the Iron and Steel Advisory Committee. These Advisory Committees, in the opinion of the Federation, are doing useful work and are essential to secure the co-operation of the commercial community in the administration of controls and to ensure efficient working. Besides the proper functioning of these Advisory Committees, the Federation feels that controls should be administered, wherever possible, through recognised associations, or at least in full co-operation with them.

Recognising that much of the criticism against controls has emerged from the failure of the Government to fix just and fair prices, after taking into account the frequent changes in cost of production, the Federation has urged upon the Committee the necessity for fixing prices on a rational basis. This is a very pertinent point, because there are numerous instances where the Government has followed the policy of "heads I win, tails you lose" in the matter of fixing prices of controlled articles. There are cases as, for instance, textiles, where even the recommendations of an impartial body like the Tariff Commission have been ignored by the Government for political reasons. There are also cases as, for example, sugarcane, where the Government has been more liberal than need be, again for political reasons. Then, there are several instances where the State Governments have not hesitated to use economic controls for purposes of augmenting their revenue. All these unfair practices should cease once and for all, if controls on trade and industry are to be retained as an instrument for stimulating the economic development of this country.

FLY TWA

to and across the U.S.A.

Cairo, Rome, Milan, Zurich, Geneva, Frankfurt, Madrid, Lisbon, Paris, London*, New York and 60 U.S. cities are only a few hours away when you fly TWA. Flights leave Bombay direct for Europe and the U.S.A. on Mondays, Wednesdays and Fridays. The Monday flight is fully equipped with Sleeper-Seats for your greater comfort but at standard airline fares.

"TRADE, NOT AID" POLICY

MR. R. A. BUTLER'S OBSERVATIONS

ALL eyes are now turned towards the U.S., for everybody is anxious to know what sort of economic policy the new Administration, under the Presidency of Mr. Eisenhower, will follow in the coming months. It is common knowledge that the shape of economy of the "free world" will depend on what the U.S. does. Of course, each country has to play its own part in setting its house in order. But the economy of the rest of the "free world" is so closely related to that of the U.S. that whatever happens in that country or whatever is done by it has widespread repercussions on others. The Commonwealth countries, for their part, have resolved so to order their internal economies as to get high production, high savings and a surplus on overseas trade account. But this requires a certain measure of co-operation and assistance from the U.S. The ways and means of securing them will figure prominently in the forthcoming discussions which Mr. Anthony Eden, British Foreign Secretary (and possibly also Mr. R. A. Butler, Chancellor of the Exchequer) proposes to hold with the new U.S. Administration in Washington. In view of these proposed discussions on economic matters, considerable importance is attached to Britain's new thesis, "Trade, not aid." Explaining this thesis in an interview published in a recent issue of the *U.S. News and World Report*, Mr. Butler made a few interesting observations, extracts of which are given below:

"The slogan 'trade, not aid', does symbolise my conviction that economic aid is neither a sound nor enduring basis for co-operation between the U.S.A. and the United Kingdom. For the success of 'trade, not aid', we need the right atmosphere in the world; and the right policies in debtor countries and in America. The right atmosphere is one of expanding trade and production; and that would require, among other things, a high level of activity in the U.S.A., since it is the giant which can rock—or steady—the whole boat. The right policies for a creditor country like the U.S.A., include readiness to receive imports and to let foreign goods compete in their domestic markets without artificial obstructions.

U.S. Investment in the Commonwealth

"We hope to see a great deal more of it. Reasonably steady American purchases of raw materials at reasonably stable and economic prices would be a very great help in maintaining equilibrium between the U.S.A. and the rest of the world. So the 'trade, not aid' policy can certainly be made a reality, but this requires some very strenuous efforts by the debtor countries and some bold decisions by the creditor one. New policies and new trade patterns cannot be brought into full effectiveness overnight. But the results of those policies, if they were adopted, would be very striking in the not-so-very-long run. And I have reason to think that debtor countries, like Great Britain, will be ready to play their part."

To the suggestion that Britain is devoting 10 per cent. of the gross national product to defence and the U.S.A. 17 per cent., Mr. Butler stated: "If you have a figure of 17 per cent. for the U.S.A., the comparable figure for Britain's present effort would be about 12 or 13 per cent., not 10. In the U.S.A., the national income per head of population is two or three times as large as in Britain. Perhaps the more practical way of comparing the relative efforts of the two countries is to consider the impact of rearmament on their economies and on their civilian standards. The U.S. economy is so strong and self-contained, with such vast resources for expansion, that it has been able to take a tremendous rearmament programme in its stride without seriously interfering with civilian production, though some temporary shortages were experienced in the early stages. The result is that civilian consumption and investment are both higher than before the Korean War, with plenty left for export. In Britain, on the other hand, rearmament has left the Government no alternative but to impose severe restraints on civilian uses of resources at home in the interest of the overseas balance of payment. Civilian consumption this year is expected to be two or three per cent. lower than 1950, while civilian investment has had to be held down at about the 1950 level, in spite of the urgent need for development and modernisation, if industries are to remain competitive. Even so, the U.K.'s most promising export industries—producing capital goods—have been badly obstructed. Never forget the big difference between our two countries. With the U.S.A., external trade is relatively unimportant. But the whole of our economy, industry and food depend upon imports and, therefore, upon a high level of exports.

"On British commitments, Korea is only one item. There are nearly five divisions permanently stationed in Western Europe. In the Middle East, we are the only Western power with the strength to protect the area from external aggression. If we dropped that burden, the southern flank of the N.A.T.O. Command would be wide open to attack. . . . The cost of maintaining bases here is a heavy annual item and we spend a good deal too on social and economic development to help maintain stability in the area. Forces maintained in Malaya, also essential to the defence of the free world, were also costly. And apart from military efforts, Britain has done a great deal to foster the economic development of South and South-East Asia. Months before the Korean War began, we started to work out the Colombo Plan for that area.

"All our outlay on military activity is not only a burden on our budget, but falls on the economy at its weakest point, the balance of payments. It is an important reason why we must earn by exports a great deal more than we spend on imports. It is a weighty element in British 'austerity.'

"Rearmament uses the resources of precisely those industries in which our best export prospects lie. The amount of resources used for defence in the metal-using industries would be enough, if we could use them for exports, to increase the total exports by about 20 per cent.—which would solve our balance of payments problem comfortably.

Changes in Output

"The largest fall in industrial output was in the consumer goods industries (the same industries suffered in other countries), but the capital goods industries, whose products are so badly needed for exports, defence and expansion at home, continued on the whole to increase their output, though more slowly than they would have done if they had not been short of steel. But the steel difficulty has been corrected by our own efforts and imports from the U.S.A. and the latest steel production figures are a record. So, we can expect a healthy rise in the output of the metal-using industries and, with some signs of recovery in consumption goods, we enter 1953 with a better general situation than we had six months ago. Already, the fall in industrial production has been stopped and our total output is nearly back to 1951.

"Our aim under the plan referred to in last month's *communique* (issued after the Commonwealth Conference) would be to move, by stages, towards a greater freedom of currencies and trade . . . the success of such a plan would lead ultimately to a progressive removal of import restrictions on American goods. The rate of the removal must depend on the rate of the advance towards a lasting balance between the U.S.A. and the rest of the world.

"Britain has incurred debts of about $12 billion to finance the war and has sold overseas investments of over $4 billion. To use capital of the remaining investments for current needs or regard them as usable would be 'eating the seedcorn.'

"With regard to the competitive power of Britain's exports, I see plenty of reason to keep on our toes, but none for despondency. There is one important field where overseas demand remains very buoyant—in capital goods. Our export prices for plant and equipment are fully competitive. The recent award of a contract for over one million dollars' worth of electrical equipment for the North Dakota Dam Project to a British firm is a good illustration. Prices are not, of course, the whole story. Quality and delivery dates are both a part of competitive power."

Foreign Competitors

"The Germans were formidable rivals and the relative freedom of their industry from defence burdens helps them. But, in recent months, Britain has secured many important export orders on the strength of her very competitive prices, even in the face of earlier delivery dates and longer credit terms offered by her competitors.

"Britain is not at all afraid of competition. What we are afraid of, though, is action taken by other countries to limit the field of free competition to our disadvantage. Take, for instance, the question of money loaned through a Government institution, like your Export-Import Bank, which is tied to the purchase of goods from the lending country. Tied loans of this kind have had the effect of protecting commercial interests in the U.S.A. against free commercial competition from their rivals in Britain and other countries, and they have seriously limited the opportunties for our exporters to enter some of the dollar markets, for instance, in Central and South America. I won't here go into the extraordinarily long credit terms offered by the same institutions on behalf of American exporters.

"If a satisfactory solution is to be found for the dollar problem through 'trade, not aid,' it is vitally important that dollars put out into the world in the form of U.S. loans and of grants to under-developed countries, should be put out in ways that would give Britain and other countries a fair opportunity to compete for them.

Inflation Control

"The facts suggest little, if any, inflation in British economy to-day. . . . Available facts taken together point to the conclusion that good progress has been made towards a sound domestic economy in the U.K. and that this progress is being maintained. We hope that the total civil spending will be no higher this year than the last, in spite of the fact that prices average nearly 10 per cent. higher.

"We expect total welfare spending in the wide sense to be held this year at a point well below the level that would reflect the 10 per cent. increase in prices."

(*Concluded from next column*)

a method which any small manufacturer of Europe can adopt for selling his wares in the U.S. Trade paper advertising is another channel in extensive use, as it is considered powerful, effective and respected. The real secret of the continuous success of the small manufacturer in the U.S. is, however, considered to be his ability to plan his sales and distribution on a local basis. In other words, instead of trying to cover every market in every region in every State, he localises his sales and advertising efforts.

INDUSTRIAL UNITS IN THE U.S.

95.8 PER CENT. COMPOSED OF SMALL FACTORIES

FIGURES representing any sphere of industrial activity in the U.S. commonly run not in six or seven digits but in troops. This has been responsible for conveying a world-wide impression that anything done in America is always on a gigantic scale. This feeling is pronounced especially in regard to American industry. The industrial system there is particularly taken to mean that it consists of huge factories employing thousands of men. The frequent use of the term "American big business," is also responsible for the belief that industries in America are of giant stature. But how this impression is far from the real position there is evident from the analysis conducted by the Foreign Business Promotion Department of the *New York Times*. This leading daily paper of the U.S., which has been conducting a continuous campaign abroad to show foreign business men as to how they can sell their goods in the American market, recently published certain facts in a booklet entitled *The Business Climate of America* to impress upon the world the simple truth that "American business is small business."

The contents of this booklet are of special topical significance, in view of the pronouncement reported to have been made by Mr. Jawaharlal Nehru, decrying the importance of small units by stating that the odd little factories now dotting the country were money-making propositions for individuals, that they did not add to the nation's wealth and that, therefore, he was not interested in them.

The analysis conducted by our American daily contemporary reveals that 95.8 per cent. of the American manufacturing plants employ less than 250 people. What is more, the manufacturing establishments in the United States employing less than ten people constitute half of all the manufacturing establishments. The actual dollar value of the products turned out by them is phenomenal. Plants employing less than 250 employees account for $29,392 billion of the value added by manufacture. Incidentally, value added by manufacture is the value added to the product from the time it comes into the plant until it leaves the plant. The value added by plants with more than 1,000 employees each was just $5 billion less at $24.389 billion.

Considered industry-wise, the figures are equally revealing. In the brewing industry there are 440 breweries producing approximately 80 million barrels of ale and beer a year. Only four breweries produce 4 million barrels each, the remaining 72 million barrels being produced by 336 companies. Again, in the wearing apparel industry, more than 59 per cent. of the manufacturers employ fewer than 20 people. These examples are stated to be typical of practically every industry in America.

The story does not end there. The Ford Motor Company is a striking example to show how "odd little factories" too are contributing to the wealth of the nation. For 30 years the name "Ford" has been synonymous with "big" business. But the Company buys $700 million worth of products from more than 7,000 independent manufacturers and dealers in 43 States throughout America. The booklet observes in this connection: "So we see, the phrase 'American business' really means small business. And the American business man, the small American manufacturer—and retailer for that matter—is not much different from the small manufacturer in Europe when it comes to selling his merchandise in the U.S."

Explaining further the similarity between the manufacturer in Europe and his counterpart in Portland, Oregon, in the Far West of America, with regard to selling their respective wares in New York, the booklet says that problems of sale are the same in both cases. Time and space, once formidable obstacles to both, are no longer the serious problems to either of the two. There is little basic difference in their approach to selling to the agent, selling to the wholesaler, selling to the retail shop, or even in selling to the ultimate consumer, except that the manufacturer in Europe may have a currency and import duty problem which the manufacturer in Portland does not have. It is beyond the ability of both to conduct large market surveys, and adopt extensive sales promotion measures and similar steps to make their selling more profitable. The small manufacturer in the U.S., however, uses direct-selling methods, that is, having his own sales office at the centre,

(*Continued in previous column*)

PROGRESS OF LLOYDS BANK LIMITED

LORD BALFOUR OF BURLEIGH'S STATEMENT

THE Annual General Meeting of Lloyds Bank Limited will be held in London on 13th February, 1953.

In his statement accompanying the Report and Balance-sheet of the Bank, the Chairman, the Rt. Hon. Lord Balfour of Burleigh, D.C.L., D.L., states that "the profit for 1952 is £148,807 higher, at £1,964,665. Increased earnings have been to an appreciable extent offset by higher running expenses and by the increase in the rate of interest allowed on deposits. In view of the uncertain economic outlook and the wide fluctuations which we have experienced in the Gilt-edged market, it has been considered desirable and prudent to strengthen the external reserves of the Bank. A sum of £1,200,000 has, therefore, been allocated to general reserve which, together with the share premium account, will make the total reserve fund £16,000,000. Current, deposit and other accounts, at £1,169 million, show a reduction of less than £2 million.

"Loans and Advances have decreased by £32 million, substantial increases in advances to many industries essential to the well-being of the community having been more than considerably offset by reductions in other directions.

India, Pakistan and Burma

"The year 1952 proved a difficult one for our Eastern Branches as a result of the heavy fall in price of the primary products upon the export of which both India and Pakistan so largely depend; Pakistan suffered, particularly, through the lack of demand for her large jute and cotton crops, which made it necessary for her to impose stringent import restrictions. The reduced *tempo* of business activity was naturally reflected in a reduced demand for the services of the Exchange Banks; nevertheless, our branches in both India and Pakistan have fully maintained their position.

"There is little to report about Burma; politically the country is more settled, but our business in Rangoon, although maintained, shows little expansion.

"Once again, I should like to offer my warm thanks to the officials and staff of all our branches in the East for the standard of service they have maintained during a year of more than usually difficult conditions."

Important Ground Gained

Recalling the critical state of the U.K.'s affairs a year ago, Lord Balfour of Burleigh observes, "we must be thankful for the progress made during 1952. Important ground has been gained and there is, moreover, no sign of its being lost again in the immediate future. Unfortunately, the evidence suggests that in the recovery of the past year far too large a part has been played by purely stop-gap expedients and a favourable change in world conditions, far too little by fundamental changes of policy.

"There can be no doubt, to my mind, that the raising of the Bank Rate dealt a psychological shock to the domestic public that could not have been administered half so effectively in any other way. This alone helped to dissipate a great deal of inflationary froth, damped down the demand for bank accommodation for the less essential purposes, and so made it far easier for the banks to restrict its supply. Moreover, this move convinced overseas opinion, as nothing else could have done, of the new Government's determination to put our financial house in order, and so helped to break the speculative movement against sterling in world markets."

A great deal of the good done by monetary policy has so far been undone by Government spending. There can be no hope of keeping a tight rein on the supply of money unless the Government is able to keep its own finances in order. "If the new monetary policy is to fulfil its purpose, it requires the support of a strong budgetary policy; yet it will be much more difficult this year to produce a balanced budget."

The Chancellor's Task

"Our greatest need is to speed up the production of those capital goods—mainly engineering products—so urgently required, both for export and for the modernisation of our own factories. To promote the necessary shift of resources and to create the necessary saving are, therefore, the supreme tasks of financial policy at this juncture.

"In a country which still spends nearly three times as much on drink, tobacco and amusements as on rent, it is absurd to suggest that the mass of the people would suffer real hardship if they had to pay more as consumers for various benefits now provided 'free' or at subsidised prices, and paid less for them as taxpayers."

Drastic economies—and they must be drastic—are a prior condition of any lightening of the load of taxation. It is equally clear that productive industry has the prior claim to any tax concessions which are thereby made possible. So far as personal incomes are concerned, relief from taxation must come mainly from a reduction in public expenditure, though, in addition, it should be possible to devise concessions that would promote additional saving rather than additional spending.

Inflationary Symptoms

"There was a perceptible slackening of inflationary pressures during the spring and summer. In the later months of the year, however, the picture was rather different. Consumer expenditure seems to be running at fully the same level as a year ago, the consumer trades are picking up again and manpower is moving back into the same employments from which it was released earlier in the year.

"The thesis that inflation has now been definitely mastered cannot be squared with some other features of the situation, such as the severe limitation of imports, the forcible diversion of goods to the export market, the long delays still imposed on some of our overseas customers. Most significant of all is the admitted fact that a wages spiral is still a real danger. So long as that is true, the country must, indeed, feel great thankfulness for the restraint and deep sense of responsibility exhibited by the leaders of the trade union movement. That such restraint is necessary, however, is itself proof of the persistence of inflation.

"A real policy of disinflation is still the central need, if we are to put our economy in proper shape; but there will remain one problem which cannot be solved by our own efforts alone. For Britain and for the world at large, no task can be more urgent than to rebuild the exchange reserves of the sterling area, as a prelude to the restoration of convertibility, and, for this, a capital operation of some kind is indispensable.

Essentials for Prosperity

"Our vital need now is to rebuild our financial and economic strength so that we may with certainty pay our way abroad and earn our keep, and that can only be through increased and more efficient production of the right things.

"But as long as our solvency is menaced by excessive expenditure, as long as our industry is strangled and incentive choked by overtaxation, and as long as our people remain unaware that they are now sacrificing the future to the present, so long will our standard of living, including the maintenance of our social services, continue to be in mortal danger.

"For future prosperity," Lord Balfour of Burleigh concludes, "some painful decisions are now necessary. The question is whether modern democratic party leaders dare have the strength of purpose to take them. I am optimistic to believe that the sound sense of the British people would accept any required temporary sacrifice, the necessity for which they could be made to understand. And only so can our country's future be made secure."

RISE IN NEPAL RUPEE EXCHANGE RATE

The Nepal-Indian rupee exchange rate is reported to have firmed up last week-end to Rs. 152 (Nepal) to Rs. 100 (Indian), which is Rs. 24 more than the official exchange rate of Rs. 128 (Nepal) to Rs. 100 (Indian). The main cause for this rise, according to reports from Kathmandu, is the flow of money from import trade to speculation in the exchange market. The other reasons are stated to be the heavy drawing on Indian currency by air companies, hoarding of Indian currency by local traders, flight of capital from Nepal in the form of Indian currency, and increasing imports of luxury goods and foreign liquor. As a result of this in unofficial exchange rate, the prices of commodities are said to have risen by 15 per cent. The Finance Ministry of Nepal Government has decided to check the records of importers and action will be taken against those found investing money in speculation.

LABOUR MINISTERS' CONFERENCE

THREE VITAL ISSUES ON AGENDA

THREE important problems will be discussed at the Labour Ministers' Conference to be held at Delhi next week. The first one relates to settlement of industrial disputes through negotiation, conciliation and voluntary adjudication instead of through compulsory arbitration. The second one refers to reorganisation of trade unions with a view to basing them on sound foundations. The third one relates to legislation for enforcing awards of labour tribunals on employers.

The settlement of labour disputes through methods other than compulsory adjudication is still a subject of high controversy. While some have extolled its virtues, others have expressed certain misgivings over it. Mr. V. V. Giri, the propounder of this new approach to labour problems in India, is of the opinion that industrial disputes, like the more familiar ones in the domestic sphere, are invariably unsuited for settlement by a third party, let alone a judicial authority. Compulsory arbitration encourages, according to him, litigation and forces the parties to the dispute to run from pillar to post and from tribunal to tribunal. There is, however, another school of thought which considers that the situation in the country is not suitable for changing the present system of dealing with industrial disputes. Mr. P. S. Bakhle, a former member of the Industrial Court, Bombay, for instance, opines that compulsory arbitration cannot be ruled out, on the ground that whereas the employers are sufficiently organised, labour is not so. Mr. Richard A. Lester, a well-known authority on industrial disputes, points out in his book *Labour and Industrial Relations* that collective bargaining on the railroads in the U.S. has been hampered by the existence of 21 standard craft-unions with inter-union jealousies. In these circumstances, it is no wonder that the Tripartite Conference held at Naini Tal in October last failed to arrive at an agreed solution on the question of enacting a new labour law seeking to eschew compulsory arbitration except for a few industries and services of public utility type. It is, however, gratifying to note that the differences between employers and labour on this question have been narrowed down following the efforts of the Committee constituted at the Naini Tal Conference.

The reorganisation of trade unions is one of the knottiest problems facing India. The Trade Union movement has been disrupted by a number of rival central associations. First of all, there is the Indian National Trade Union Congress (I.N.T.U.C.) affiliated to the International Conference of Federation of Trade Unions. Then, there is the All-India Trade Union Congress dominated by the Communists and affiliated to the World Federation of Trade Union Congress. Again, there is the *Hind Mazdoor Sabha*, run by the Socialist Party. Besides, there are several other minor unions. The Trade Union leaders are mostly political figures who have been utilising the unions more for their own political and selfish ends than for the utility of the workers as a whole. It is after seeing this state of affairs that the leaders of the U.K. trade unions who visited India last year, strongly advised the unions to disentangle themselves from political alignments and base their ethics on purely economic considerations. All these must have doubtless influenced Mr. Giri to propose a new trade union law, which would serve the unions and the nation as a whole better.

In the course of a statement at Coimbatore last week, Mr. Abid Ali Jafferbhoy, Deputy Minister for Labour, Government of India, is reported to have stated that the forthcoming Conference of Labour Ministers would finalise a Central legislation for enforcing awards of Labour Tribunals on employees. We wonder whether Mr. Abid Ali has been correctly reported. But, if the report is correct, then we should say that we do not see the necessity for any such legislation. Are there any instances where employers have refused to implement the decision of a tribunal? Or does Mr. Abid Ali anticipate any such possibility in future and wants to provide against it? This leads us to the question whether there are any loopholes in the present labour laws through which an employer can seek to evade the decision of a tribunal.

A careful review of the Industrial (Appellate Tribunal) Act, 1950 and the Industrial Disputes Act, 1947, as amended in 1951 and again in 1952, discloses that, so far as any money is due from an employer as a result of

PROCEEDINGS OF THE A.C.C. MEETING

POSITION OF PAKISTAN FACTORIES EXPLAINED

THE annual general meeting of the Associated Cement Companies Ltd., held on Friday the 23rd inst., was, as usual, a lively one and well attended. A large number of shareholders evinced keen interest on the working of, and the prospects for, the Company. The meeting lasted well-nigh three hours. The shareholders sought elucidation on a number of points which the Chairman, Mr. Dharamsey M. Khatau, had referred to earlier in his address to them. The most important of these related to the financing of the Company's expansion programme, the future of the Company's factories in Pakistan, the investment in the Burma Cement Company, the loss to the Company on account of the revision of prices for packed cement, etc. The shareholders also elicited information from the Chairman on a number of other points, such as the issue of bonus shares, the dividend policy, getting higher price for cement produced at the Sindri factory, the higher profit margin of the Patiala Cement Company. The Chairman did his best to satisfy the shareholders and gave useful information to enable them to assess the Company's future.

Mr. Khatau's detailed reference, in his address, to the Company's expansion and modernisation programme naturally raised the curiosity of the shareholders about the finances required for the purpose. Some of them wanted to know whether the Directors had any idea of borrowing from the World Bank. Mr. Khatau told them that the expansion programme was planned to be spread over a period of ten years and that the expenditure would aggregate Rs. 11.5 crores. He made it clear that the Directors did not like to borrow funds required for this purpose from sources outside India, if they could help it. The Company would rely on its own resources and on borrowings from within the country.

Pakistan Factories

The future of the company's two factories in Pakistan was briefly referred to by the Chairman in his address. He said that for some time past, negotiations had been proceeding with the Pakistan Industrial Development Corporation for the formation of a new company there, which would take over the Company's undertakings in that country. He added that negotiations would soon be completed and the matter would be placed before the shareholders at an extraordinary general meeting. In reply to questions from more than one shareholder about the nature of the negotiations, Mr. Khatau threw considerable light on this point. He informed them that the Pakistan Government wanted to take over the assets of the Company's two factories at their written-down book value. A new company would be formed for that purpose and shares of that company would be issued to the A.C.C. to the extent of the assets taken over. The Pakistan Industrial Development Corporation would hold the majority of shares of that company and would be the managing agents of the new company. The P.I.D.C. would, however, enter into an agreement with the Cement Agencies Ltd.—the Managing Agents of the A.C.C. —under which the Cement Agencies Ltd. would act as agents of the P.I.D.C. for the purpose of looking after the factories. The shareholders expressed their concern over the question of remission of dividend from Pakistan to India. They doubted whether the remittance of dividends would be freely allowed by the Pakistan Government and urged upon the Chairman that any agreement with the Pakistan Government should be subject to this facility. The Chairman assured them that this point would be pressed during the negotiations.

The Chairman told the shareholders that considerable progress had been made towards the Burma Government's participation in the financial reconstruction of the Burma Cement Co., Ltd. The factory had gone into production and had despatched cement to the extent of about 55 to 60 per cent. of its capacity during the last calendar year. It may be noted here that the A.C.C's investment in the Burma Cement Co., Ltd., amounts to Rs. 15 lakhs. This investment, Mr. Khatau assured the shareholders, was safer than before, but the Directors were looking at it cautiously. It was, therefore, necessary to keep the investment reserve intact which was created when the Burma Company was in difficulties.

Loss on Jute Bags

The downward revision of price chargeable to consumers for packing materials with effect from 1st December, 1952, would, according to the Chairman, result a loss of Rs. 8 lakhs to the Company during 1952-53 on the large quantities of bags which were normally held in stock.

In answer to the shareholders' queries on rumours regarding the formation of a joint marketing union and the Company's case for higher price for its cement, Mr. Khatau chose to remain silent on the first. As regards the second, he said that he could not deal with it at length as the matter was now before the Tariff Commission. He, however, disclosed that it was agreed among the various cement interests that each company should submit its case separately to the Tariff Commission. As regards the question of higher price for the cement produced at Sindri, Mr. Khatau said it was not possible, as the price would be fixed for the whole company and not for individual units.

As in the previous year, the shareholders raised this year also the question of issuing bonus shares out of the premium on shares account. The Chairman reiterated that this was being kept in mind by the Directors and that, when a suitable opportunity presented itself, the amount would be disbursed in the form of bonus shares or in any other suitable form.

Dividend Policy

The Directors' dividend policy was criticised by many a shareholder. They contended that the Directors could have easily raised the dividend by half a rupee, which would mean the absorption of another Rs. 5.28 lakhs or so out of the profit, instead of carrying over as large a sum as Rs. 7.09 lakhs. But Mr. Khatau very politely commended to their consideration the need for a cautious policy in the matter of dividend. It was the Directors' policy, he said, to maintain a steady dividend, instead of raising it in one year when the profit permitted such a step and reducing it in another year when the profit was lower. This year, in particular, the Directors had to carry over a large sum in view of the reduction in the price of cement, and the rise in costs mentioned in Mr. Khatau's speech, extracts from which are published elsewhere. In this connection, he welcomed the suggestion of a shareholder to create a dividend equalisation reserve.

One of the shareholders drew the attention of the Chairman to the higher profit margin of the Patiala Cement Co., Ltd. *vis-a-vis* that of the A.C.C. To this, Mr. Khatau replied that the former Company was a separate entity by itself and its overhead charges were proportionately less than that of the A.C.C. which comprises several new and old units.

In reply to a shareholder who wanted to know the difference in prices of Indian cement and foreign cement and whether cement could be exported, Mr. Khatau said that the price of cement in foreign countries was higher, except in the U.K., where it was Rs. 61 per ton. In the U.S., it was Rs. 97 per ton, in Bangkok, Rs. 120 per ton and in Japan Rs. 114 per ton. Export of Indian cement was not possible on a large scale as demand within the country continued to exceed production. However, some small quantity of cement was being exported by the Company in order to maintain contacts with the neighbouring countries. The difference in prices between the Indian cement and foreign cement could not be strictly assessed, he added, unless India was in a position to be competitive.

(Concluded from next column)

orders have recently been placed with machinery makers in the United Kingdom for the requisite items of plant. The cost of this rehabilitation programme is about Rs. 50,00,000, which together with the order for new machinery for Wellington Mill, referred to above, will involve the Company in a total capital outlay of some Rs. 70,00,000 which will be found from the Company's own resources."

The Company enjoys a sound financial position, thanks to the judicious policy of appropriation of profits followed by the management in the past. The reserves and surplus, amounting to Rs. 106.59 lakhs (made up of a capital reserve of Rs. 75.71 lakhs, rehabilitation reserve of Rs. 20 lakhs and other reserves and surplus Rs. 10.88 lakhs), is nearly 180 per cent. of the paid-up capital of Rs. 59.16 lakhs. The loans from banks, amounting to Rs. 25.90 lakhs, outstanding at the close of March, 1952, have been completely repaid, thanks to the substantial improvement in the liquid resources of the Company. The gross block, of the value of Rs. 162.22 lakhs, has been written down to nearly a third, that is, Rs. 56.19 lakhs to be more precise. The current assets aggregate Rs. 163.40 lakhs, of which cash balances amount to Rs. 67.80 lakhs. These cash balances alone more than adequately cover the current liabilities (including provision for taxation amounting to Rs. 25.50 lakhs) aggregating Rs. 53.84 lakhs. Six months before, the cash balances stood at no more than Rs. 83,170, the substantial improvement that has taken place in the course of the year under review being due to a decline in stocks of jute and manufactured goods, as well as in book debts.

The outlook for the industry as a whole, and the Company in particular, is described by the Company's Directors as follows:

"Owing to the fall in demand for the Company's manufactures from overseas markets and the consequent general recession in prices for jute manufactures coupled with the fact that this fall in rates has depressed the price of raw jute to generally uneconomic levels for the primary producer of the raw commodity, the outlook for the industry in India, as a whole, is once again passing through a phase of uncertainty."

The Rs. 100 fully paid up shares of the Company are being currently quoted at Rs. 169, at which rate the latest dividend gives a yield of 9.5 per cent. per annum.

HEARTENING RESULTS OF CHAMPDANY JUTE

DIVIDEND ENHANCED

THE Directors' report and audited accounts of the Champdany Jute Co., Ltd. (Managing Agents: Messrs. James Finlay & Co., Ltd., Calcutta) for the half-year ended 30th September, 1952, make refreshing reading, for the results disclosed by them show a substantial improvement over those for the previous half-year, which is in distinct contrast to the results of some of the jute mills to which we referred in these columns last week. The Company was able to secure, during the half-year under review, adequate quantities of raw jute of the qualities required and maintain production at a profitable level. The gross profit, which had dwindled from Rs. 21.70 lakhs to Rs. 13.53 lakhs in the previous half-year, has risen to Rs. 17.99 lakhs in the six months under review. The net profit has jumped up from Rs. 4.22 lakhs (excluding the sum of Rs. 2.50 lakhs which the Directors took into account in arriving at the profits for the six months ended 31st March, 1952) to Rs. 8.20 lakhs, representing an increase of nearly 95 per cent. The Directors have availed themselves of this opportunity to make sizable additions to the reserves. At the same time, they have also allowed the shareholders to enjoy the benefits of higher profit by raising the dividend from 14 per cent. to 16 per cent. per annum.

The comparative table below sets out the results of the Company for the half-year under review, against the background of those for the previous three half-years:

(In lakhs of rupees)

	For the half-year ended			
	30-9-52	31-3-52	30-9-51	31-3-51
Sale proceeds	222 47	220.18	244 89	160 83
Stocks of gunnies ..	14 68	34 30	10 69	7 39
Manufacturing expenses.	149 23	186 10	203 76	112 64
Other expenses	35.93	35.15	31.34	30.50
Gross profit	17.99	13.53	21.70	6.84
Provision for—				
Managing Agents' remuneration ..	3 88	4 43	4 45	2.77
Depreciation	1 28	1 35	1 34	1 34
Taxation	4 58	3 85	6 25	1.35
Net profit	8 20	6.72†	8 27	1 62
To reserves	3 00	3 21	2 05	..
Dividend	4 73 (16% p.a.)	4 14 (14% p.a.)	4 14 (14% p.a.)	2 06 (10% p.a.)
Carry forward	1.35	0.88	1.52	0.05

† Includes E.P.T. post-war refund Rs. 2.50 lakhs.

The most striking feature disclosed by the above table is that the manufacturing expenses, which had declined considerably in the half-year ended 31st March, 1952, have gone down further during the six months under review. Sale proceeds, however, have gone up as compared with those for the previous half-year. A part of this increase reflects the reduction in the stocks brought in from the preceding half-year, as is evident from the fall in closing stock figures. Other expenses, the major portion of which represents salaries and wages, have gone up slightly in distinct contrast to the fall in manufacturing expenses, brought about mainly by the recession in the cost of raw material. On the whole, the profit margin during the half-year under review has been better than in the previous half-year. On a comparison with the results for the corresponding half-year of 1951, the experience of the Company during the half-year under review is not so favourable, as will be seen from the table above.

It is noteworthy that the Managing Agents have again voluntarily decided to forgo a sum of Rs. 1.25 lakhs from the remuneration due to them, despite the improvement in the earnings. The net profit shown in the foregoing table has been arrived at after taking into consideration this sacrifice by the Managing Agents. This sum, together with a sum of Rs. 1.75 lakhs from the profit, making in all Rs. 3 lakhs, has been placed to the rehabilitation reserve so as to help conserve the Company's resources to meet the expected cost of the capital replacements which the Directors have decided to undertake and to which a reference is made below. In the previous half-year a sum of Rs. 3.05 lakhs was added to this specific reserve from out of the post-war refund of E.P.T. and interest thereon.

The following extract from the Directors' report gives an account of the rehabilitation programme which the Directors propose to undertake:

"The new machinery on order for Wellington Mill is expected to arrive during the second half of 1953. Bearing in mind the need to reduce the cost of production in order to meet the stiffer competition expected in the future, it has been decided to install new machines to replace very largely the old and obsolete units in the preparing and spinning sections of the Champdany Mill and

(Continued in previous column)

Points From The Chair

Responsibility of Workers

"THERE are, however, signs of improvement in industrial relations in the country, thanks to the new approach to labour problems—the shift of emphasis from legislative action to voluntary settlement in industrial disputes and the correlation of workers' responsibilities to benefits secured by them. If workers want higher wages and greater benefits and welfare measures, they must also recognise that their company cannot give these unless they provide the company with the means—in the shape of increased production. It should be also borne in mind that the advantage of every economy, invention, new tool, or capital expenditure cannot be claimed exclusively for the benefit of labour, but has to be shared by the various contributing factors, such as investors, management, workers and consumers. Let us hope that the will to work hard will replace mere material incentives, so that the prosperity of our country, and consequential rise in our national standard of living, may be attained."

DHARAMSEY M. KHATAU,
Associated Cement Cos., Ltd.

U.S. Economy

"Throughout that period the United States has enjoyed fabulous prosperity and for the greater part of the time has been in the throes of an inflationary boom. In itself, nothing could be more favourable to the expansion of world trade than the growth of American production on a rising price level. And other countries are scarcely entitled to call upon the United States to inflate still more rapidly, in order that they in turn may follow inflationary courses in greater comfort. In any case, it simply is not true that the supply of dollars created by American purchases of goods and services has been so constricted as to cause the outside world grave inconvenience. In 1951, the dollar supply created by such purchases was of the order of $15,000 millions—about half as much again as in 1948 although in the meantime the total of money incomes in the United States had risen by sufficient to enable the outside world to buy more than twice as much from the United States as before the war."

RT. HON. LORD BALFOUR OF BURLEIGH,
Lloyds Bank Ltd.

Commonwealth Finance Corporation

"That the city and industry are interested in the Commonwealth Finance Corporation demonstrates that this country sees the urgent need for channelling the flow of savings into investment, so that sound development plans may get quickly under way. Since the World Bank is said to be sympathetic towards the aims of the new project for merging British and foreign capital, it is a good augury for development planning becoming an accomplished fact. But, assuming that we are able to find the requisite finance, the translation of this into exports will have its complications, unless there is a mutual adjustment to avoid economic strain. As the Commonwealth looks to us for so large a part of its capital equipment, even the most acceptable development plans, those relating to natural resources and food, will make heavy demands on our capital goods industries. To allow too great a concentration of demand in this section would, however, lead to such congestion that we should be unable to supply what was needed quickly enough."

SIR THOMAS D. BARLOW,
District Bank Ltd.

Every One Should Become a Skilled Worker

"If we are to take full advantage of our higher intellectual abilities, every one who has the required intelligence should become a skilled worker, as the unskilled worker produces little more than his unskilled brother worker abroad and, economically, does not earn any higher standard of living. The old apprentice principle must be increased and encouraged so that the vast majority of the population of these islands become skilled craftsmen capable of producing high-grade products which are beyond the capabilities of their less skilled competitors. In engineering, in all its many branches, in farming and practically every trade, science, and mechanisation demand from those engaged in these industries a much higher degree of study, knowledge and application than ever before. The old prayer, 'Oh Lord, give me knowledge and wisdom to apply it' could never be more urgent than it is to-day."

A. HAROLD BIBBY,
Martins Bank Ltd.

Germany and Japan Competitors to U.K.

"Increasing our exports involves our producing more goods which the foreigner wishes to buy at prices which he is willing to pay. This is, in any case, a difficult proposition when the world is no longer in a sellers' market, and the prospect is not made any brighter by the likelihood, indeed the certainty, of increased competition from Germany and Japan, who are sure, for different reasons, soon to be formidable competitors in many of our export markets; Germany, because she works so hard, and Japan, because she works so cheaply."

A. W. TUKE,
Barclays Bank, Ltd.

AGRARIAN REFORMS IN BOMBAY

THE Bombay Tenancy and Agricultural Lands (Amendment) Act, 1952, has been published in the *Bombay Government Gazette* dated 12th January. The Amendment Act provides for the automatic continuance of a tenancy after every 10 years, except when the landlord terminates it at the end of such a period on grounds of personal cultivation. It also requires the landlord to give three months' notice before terminating a tenancy. Thus, the Act protects the tenants against illegal evictions by landlords who try to deprive the tenants of their tenancy rights by taking advantage of the loopholes in the Bombay Tenancy and Agricultural Lands Act, 1948.

The Amendment Act is the latest of the land reforms enacted by the State of Bombay. This Act regularises the relations between the landlord and the tenant, while the other enactments, legislated since India attained independent status, relate chiefly to abolition of intermediaries between the Government and the tiller of the soil and all alienation in land and cash with the exception of *devasthanam* and *dharmada* grants. Although land in Bombay State is mostly governed by the *ryotwari* system, under which the State is the ultimate owner and the occupant pays the rent, there have been non-*ryotwari* systems which provide ample scope for rack-renting and landlordism. The policy of the State Government in regard to these systems of tenure, known as *bhagadari, narwadari, maleki, mehwasi, talukdari, khoti* (Konkan) salsette *khoti, inams, watans,* etc., has been to end the special rights and privileges in land and land tenure. These privileges include semi-proprietary rights in waste lands, share of revenues realised in any area, the privilege to appoint *talatis* (revenue officers of the rank of *patwaris*), etc. A number of legislative measures have been taken—and a few more are contemplated—with a view to abolishing these special tenures. Mention may be made of a few of them such as the Bombay *Bhagadari* and *Narwadari Tenures* Abolition Act, 1949, the Bombay *Khoti* Abolition Act, 1949, the Salsette Estates (Land Revenue Exemption) Abolition Act, 1951, and the Bombay Personal *Inams* Abolition Bill, 1952.

A gratifying feature with regard to abolition of the special rights and privileges of landlords in Bombay is that the question of compensation has not proved as great an obstacle as in other States. Compensation has been and is being paid in cash, annuities and non-transferable bonds.

An analysis of the progress of land legislations in Bombay discloses that, whereas *there was practically no difficulty in the abolition of bhagadari* and *nawadari* tenures since they were merely a mode of collecting revenues, the abolition of Panchmahals *mehwassi* tenures was a somewhat complicated issue. Compensation had to be awarded to meet *mehwasdars* claims. The question of compensation in the case of *maleki* tenure is being enquired into. Work is going on with the abolition *talukdari* tenure on all estates, except the three in respect of which the *talukdars* have obtained a stay order from the Supreme Court. There are no impediments at present to the implementation of the *Khoti* Abolition Act, except a civil suit filed by the Kolaba *khots*. Claims for compensation in regard to the abolition of *vajifdari* rights in Watwa (Ahmedabad District) are also under investigation. The work of replacement of *kulkarnis,* under the Bombay *Pargana* and *Kulkarni Watans* Abolition Act, is practically completed. The survey and settlement needed for the implementation of the Salsette Estates (Land Revenue Exemption) Abolition Act, 1951, is yet to be introduced. Recently, the Government has issued the rules for resumption of saranjam and political *inams* in the pre-merger Bombay State with effect from 1st November, 1953. The Bill to abolish personal *inams* in Bombay State is awaiting the President's assent. More recently, a scheme has been drawn up with a view to framing legislative proposals for the abolition of the special land and *inam* tenures in the States which have been merged with Bombay.

These measures, when fully implemented, are bound to have far-reaching effects. They will stabilise the relations between the Government and landlord and also remove intermediaries between the Government and ryots. They are at the same time expected to increase agricultural production. But tenancy reform by itself will not bring about increase in agricultural output. This will depend on whether or not the tenants have the necessary resources and intelligence for implementing other measures for increasing the yield from land.

LABOUR

(Concluded from page 166)

an award, it can be recovered as land revenue. This will be clear from section 20(I) of the Appellate Tribunal Act which provides that "any money due from an employer under any award or decision of an industrial tribunal may be recovered as land revenue by the appropriate Government on an application made to it by the person entitled to the money under that award or decision." The Industrial Disputes (Amendment) Act, 1952, also contains a similar provision. As regards other offences involving breach of settlement or award, the Industrial Disputes Act provides for conviction. Section 29 reads thus: "If any person commits a breach of any term of any settlement or award, which is binding on him under this Act, he shall, on his first conviction therefor, be punishable with fine which may extend to two hundred rupees and, in the event of a second or subsequent conviction, with fine which may extend to five hundred rupees."

Are there any loopholes in these provisions through which an employer can try to evade the implementation of an award? A correct answer to this can be provided only by a legal luminary and we have no hesitation in saying that we are not one. But we can say this much. We have so far not heard of any instance where an employer has disobeyed an award of the Tribunal. An employer knows that in spite of the fact that an award is against his interest, it is better to obey it in the interest of maintaining peaceful relations between himself and the employees on the one hand and the Government concerned on the other than reject it and face all the unpleasant consequences. If anyone has disregarded an industrial award, it is a State Government. We have particularly in mind here the recent decision of the Travancore-Cochin State Government to set aside the award of the Appellate Tribunal on retrenchment of 45 workmen employed by the Tata Oil Mills Ltd. The State Government has, of course, powers to do so. Nevertheless, the action of the T.-C. Government is the first instance of that type and tantamounts to breach of a well-established convention.

In the absence of full details of Mr. Abid Ali's statement, it is not possible for us to say what exactly he had in his mind or what exactly is the proposal of the Government. Perhaps, he might have meant the enhancement of the status of the awards to that of a civil decree which is directly enforceable by the Court, without having to wait for the consent of the Government. In other words, this will mean raising the status of labour tribunals themselves to that of civil courts.

RALLIS INDIA LIMITED

NOTICE OF MEETING

NOTICE IS HEREBY GIVEN THAT THE Fourth Ordinary General Meeting of the Shareholders of the above Company will be held at the Registered Office, No. 16, Hare Street, Calcutta, on Monday, 23rd February, at 3-30 o'clock in the afternoon, for the following purposes:—

(1) To receive and adopt the Directors' Report and the Audited Accounts for the year ended 31st August, 1952, and the Balance Sheet as at that date.
(2) To declare a Dividend on Preference Shares.
(3) To elect Directors.
(4) To appoint Auditors and to fix their remuneration.
(5) To transact such other competent business as may be brought before the meeting.

The Share Transfer Books of the Company will be closed from the 9th February, 1953, to the 23rd February, 1953, both days included.

By Order of the Board,
K. SHEPPARD,
Secretary.

16, HARE STREET,
CALCUTTA, 22nd January, 1953.

Note.—Dividend Warrants will be issued and posted to Registered Shareholders or their mandatees only. Persons holding shares on blank transfers are advised to submit their shares for registration in their names before 9th February, 1953.

HIGH COST OF SULPHUR AFFECTS INDIA PAPER PULP

SUBSTANTIAL FALL IN PROFITS OF CAWNPORE AND PURTABPORE SUGARS

India Paper Pulp Co., Ltd.

THE directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 30th September, 1952.

During the half-year the Company received an E.P.T. post-war refund amounting, less income-tax, to Rs. 2,25,452 (*nil*). After transferring this refund to repairs and replacements reserves and after providing Rs. 90,000 (Rs. 95,000) for depreciation and Rs. 85,000 (Rs. 2,30,000) for taxation and transferring Rs. 50,000 (Rs. 50,000) to reserve, there is a balance at the credit of profit and loss account of Rs. 1,63,439 (Rs. 1,29,690), to which falls to be added the balance brought forward of Rs. 1,00,750 (Rs. 1,16,059). The directors recommend the payment of a dividend of Rs. 5 (Rs. 5) per share, absorbing Rs. 1,50,000 (Rs. 1,50,000) and leaving Rs. 1,14,188 (Rs. 95,749) to be carried forward.

Although production and sales were satisfactory the results for the half-year were seriously affected by high sulphur costs. The sulphur supply position has recently shown signs of improvement and prices have fallen considerably.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	30,00,000	Block ...	21,98,726
Reserves ...	25,44,805	Stocks ...	16,48,806
Provision for taxation ...	1,95,225	Coal and stores ...	14,09,585
Liabilities ...	12,64,421	Goods in transit ...	77,079
Profit and loss account ...	1,14,189	Debts, deposits and advances ...	17,31,327
		Cash ...	53,117
Rs.	71,18,640	Rs.	71,18,640

Cawnpore Sugar Works Ltd.

The directors of the above Company (Managing Agents: Messrs. Begg Sutherland & Co., Ltd., Kanpur) submit the audited accounts of the Company for the year ended 31st October, 1952.

The results for the year, after making the usual charges, including provision for taxation, show a profit of Rs. 8,35,655 (Rs. 23,01,463). From this has been deducted depreciation Rs. 3,00,000 (Rs. 5,00,000); rehabilitation reserve Rs. 2,00,000 (*nil*); stock and stores reserve Rs. 1,00,000 (*nil*); capital reserve *nil* (Rs. 6,69,800); general reserve *nil* (Rs. 5,50,000) and book debts and advances reserve *nil* (Rs. 1,00,000); and to which has to be added transfer from equalisation of dividends reserve Rs. 1,50,000 (*nil*) and carry forward from the previous year Rs. 26,236 (Rs. 74,573) leaving at credit of profit and loss account Rs. 4,11,891 (Rs. 5,56,236). This balance, the directors recommend, should be disposed of as follows:—

In payment of a dividend on the preference shares at 8 per cent. per annum, for the year ended 31st October, 1952, free of income-tax, Rs. 80,000 (Rs. 80,000); in payment of a dividend on the ordinary shares of Rs. 2 (Rs. 3) per share, free of income-tax, Rs. 3,00,000 (Rs. 4,50,000); and carry forward Rs. 31,891 (Rs. 26,236).

While the quantity of cane crushed in Marhowrah Factory in the year under review was much less than that crushed in the season 1950-51, it was more than that crushed in many of the preceding seasons. This fact, coupled with an improvement in the sugar recovery, resulted in a sugar production only 67,000 maunds less than that of the previous season. In Gauri Factory, the quantity of cane crushed was the highest in the past nine years. The actual figures were as follows:

	Cane crushed Maunds	*Yield* Per cent.
Marhowrah Factory ...	29,22,907	10.60
Gauri Factory	17,88,214	10.57

The improvement in the quality of cane was in a large measure a reflection of the satisfactory quality of seed supplied from the Company's estates.

Marhowrah Factory started crushing operations on 3rd December, 1951 and finished on 30th April, 1952; while Gauri Factory started on the same date and finished on 9th March, 1952. The cane price and the sugar price fixed by the Government of India remained the same as in the previous year. A modified scheme of partial decontrol was again introduced in the hope of stimulating production. The slump in general commodity prices which occurred in the early part of 1952 was responsible for diverting large quantities of cane from *gur* manufacture to the sugar factories, and this, in part, explains the larger crops taken off.

The modified system of partial decontrol, combined with excessive production of white sugar in India, tended to make the market nervous. Government nominees in many cases failed to take up their allotments, and such sugar was, at the option of the factories, diverted to the free market. Lack of confidence in the market, particularly in view of the announcement by Government that the control price of sugar would be reduced from some Rs. 31 per maund to Rs. 27 per maund, forced the Company's factories to sell free sugar at prices below the control rates.

The Company's distilleries worked intermittently throughout the year. In the early part of the year, the Cawnpore distillery was short of molasses used as raw material, but later the Excise Commissioner increased the molasses allotment. Both distilleries, however, were compelled to stop production at various times during the year when the spirit sales declined as a result of Government's preference for spirit produced from power alcohol distilleries.

Reference was made in the last report, to the creation of a rehabilitation reserve. The directors have deemed it prudent, under the powers conferred by Regulation No. 155 of the Articles of Association, to transfer Rs. 2,00,000 from the profits for the year under report to rehabilitation reserve. A sum of Rs. 2,66,203 representing the expenditure on capital account incurred during the year under report has been transferred from the rehabilitation reserve to the capital reserve.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	25,00,000	Block ...	20,93,802
Reserves ...	55,34,712	Stock-in-trade	58,21,948
Provision for taxation ...	4,74,205	Stores, spares, etc. ...	27,59,656
Liabilities ...	51,96,990	Debts, deposits and advances ...	24,28,634
Profit and loss account ...	4,11,891	Investments ...	7,87,934
		Cash ...	2,25,804
Rs.	1,41,17,798	Rs.	1,41,17,798

Purtabpore Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Begg, Sutherland & Co., Ltd., Kanpur) submit the audited accounts of the Company for the year ended 31st October, 1952.

The results for the year, after making the usual charges, including provision for taxation and taking into account obsolete stores consumed during the year now written back amounting to Rs. 99,472, show a profit of Rs. 2,08,186 (Rs. 9,95,641) from which has been deducted depreciation Rs. 65,000 (Rs. 1,00,000), addition to reserves *nil* (Rs. 6,55,403) and to which has to be added the amount brought forward from the previous year Rs. 26,249 (Rs. 26,011) leaving at credit of profit and loss account Rs. 1,69,435 (Rs. 2,66,249). This balance, the directors recommend, should be disposed of in payment of a dividend of 10 (10) per cent. on the preference shares, free of income-tax, for the year ended 31st October, 1952 Rs. 60,000 (Rs. 60,000), in payment of a dividend of Re. 1 (Rs. 2 per share free of income-tax, on the ordinary shares for the year ended 31st October, 1952 Rs. 90,000 (Rs. 1,80,000) and in carrying forward Rs. 19,435 (Rs. 26,249).

The factory commenced crushing operations on the 3rd December, 1951 and finished on 27th March, 1952, having crushed a normal quantity of cane amounting to 19,04,375 maunds, with an extraction only slightly less than that recorded in the previous year, viz., 10.32 per cent. Supplies of cane from the Company's Estates assisted materially in maintaining the quality of cane supplied to the Mill.

Excessive production of sugar in India, along with the heavy carry-over of sugar stocks from the previous season, resulted in a revision of the Government of India's policy of partial decontrol. Thereafter, all controlled sugar allotted to Government nominees and not taken up, was diverted, at the option of the factory, to the free market, and this tended to have a depressing effect on sugar prices.

The Government of India announced in November last that the price of sugar would be reduced from 1st December, 1952 to Rs. 27 per maund. The Government has undertaken to compensate factories for losses arising from stocks of controlled sugar held at that date from an additional excise duty on sugar which is being levied in the current season. The Company will, however, have to face the depreciation in value on stocks of free sugar held on 31st October, 1952.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	15,00,000	Block ...	5,93,714
Reserves ...	14,71,701	Stock-in-trade	23,74,323
Provision for taxation ...	2,12,536	Stores, spares, etc. ...	10,05,517
Liabilities ...	13,50,113	Debts, deposits and advances ...	6,15,504
Profit and loss account ...	1,69,435	Investments	63,286
		Cash ...	51,441
Rs.	47,03,785	Rs.	47,03,785

Bhopal Sugar Industries Ltd.

The directors of the above Company [Managing Agents: Messrs. A. H. Bhiwandiwalla & Co. (Bombay) Ltd., Sehore (Bhopal)] submit the audited accounts of the Company for the year ended 30th September, 1952.

The accounts show a net profit of Rs. 4,23,869 (Rs. 2,84,361) subject to taxation. Adding to this the sum of Rs. 36,550 (Rs. 1,08,440) being the balance brought forward from last year's account, the total comes to Rs. 4,60,419 (Rs. 3,92,800) which the directors propose to dispose of as follows:—

Dividend on preference shares at 5 per cent., free of income-tax, Rs. 62,500 (Rs. 62,500); dividend on ordinary shares at Re. 1 (Re. 1-4) per share free of income-tax Rs. 1,75,000 (Rs. 2,18,750); provision for income-tax Rs. 75,000 (Rs. 75,000); transfer to general reserve Rs. 1,00,000 (*nil*); and balance to be carried forward to next year Rs. 47,919 (Rs. 36,550).

In spite of reduced production, the profits of the Company have been maintained due to the fact that all the accumulated stock of molasses was disposed of by the Company during the year, after it was released by the Court, as a result of the settlement of the suit with Central India Chemicals Ltd. The entire sale proceeds of this molasses, amounting to Rs. 1,36,094 has been credited during the accounting year.

Incidentally, the directors mention that the suit with C.I.C. Ltd. has been very satisfactorily settled without the Company having to pay anything to the plaintiff Company and the large item of contingent liability which appeared in the previous balance-sheet has now been cleared and now there is no such liability against the Company.

During the year, the Company has sold cut old machinery and old car, cycle, etc., for Rs 7,919.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	30,00,000	Block ...	13,20,341
Reserves ...	12,25,000	Crop-in-progress ...	1,34,808

Profit and loss account ...	4,60,419	Debts, deposits and advances ...	4,73,578
		Investments ...	7,96,605
		Cash ...	7,73,441
Rs.	53,47,564	Rs.	53,47,564

North-West Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 30th September, 1952.

After providing Rs. 15,000 (Rs. 10,000) for depreciation and Rs. 3,000 (*nil*) for taxation and cesses and transferring Rs. 15,000 (*nil*) to dividend equalisation reserve, there remains a balance at the credit of the profit and loss account of Rs 19,050 (Rs. 14,407 after bringing in Rs. 35,000 from provision for cesses no longer required) out of which the directors recommend a dividend at 5 (5) per cent. per annum absorbing Rs. 6,813 (Rs. 6,813) leaving to be carried forward Rs. 12,237 (Rs. 7,594).

Raisings during the half year were 45,720 tons compared with 46,758 tons and despatches 35,587 tons, as compared with 26,150 tons during the last half year.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	2,72,500	Block ...	5,26,378
Reserves ...	3,51,003	Stock ...	1,33,757
Provision for taxation ...	13,469	Stores ...	99,748
Liabilities ...	8,50,865	Debts, deposits and advances ...	4,32,735
Profit and loss account ...	12,238	Cash ...	7,457
Rs.	15,00,075	Rs.	15,00,075

Churulia Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. F. W. Heilgers & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the half-year ended 30th June, 1952.

Karanpura Mining Syndicate.—During the year ended 31st March, 1952, 1,34,015 tons were raised and 1,30,909 tons were despatched in comparison with 1,15,387 tons raised and 1,17,556 tons despatched in the previous twelve-month period.

The Secretaries again report disappointing wagon supplies for a colliery fitted out to raise and despatch almost twice the tonnages shown above. In view of the fact that it is Government's policy to relieve the transport congestion in the two main coalfields by obtaining supplies from outlying areas, pressure is being maintained on the authorities which it is hoped will give better results in the near future.

The Secretaries decided to forgo their office allowance of Rs. 12,000 for the year.

The profit and loss account, after including the sum of Rs. 24,215 brought forward from last half-year, shows an available balance of Rs. 33,606 (Rs. 26,128) which the directors disposed of in paying a dividend of 6 ps. (6 ps.) per share without any deduction for income-tax paid by the Company Rs. 4,688 (Rs. 4,688) and in carrying forward Rs. 28,918 (Rs. 21,440).

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	6,00,000	Investments	7,51,245
Reserve ...	1,40,000	Debts ...	17,741
Provision for taxation ...	19,664	Cash ...	34,038
Liabilities ...	14,442		
Profit and loss account ...	28,918		
Rs.	8,03,024	Rs.	8,03,024

Port Canning and Land Improvement Co., Ltd.

The directors of the above Company (Secretaries, Treasurers and Agents: Messrs. David Sassoon & Co., Ltd., Bombay) submitted the audited accounts of the Company for the year ended 30th April, 1952.

In the year under review the rains started later than in the previous year and, consequently, cultivation operations were delayed. Throughout the year the rains were very scanty and the cultivation suffered a good deal for want of rains. As a result of drought, about 42,899 *bighas*, as against 8 870 *bighas* in the previous year, of cultivable lands in both the divisions remained fallow. There was also no cultivation in the inundated Lot 56. The yield of crop was very poor and the price of paddy ruled low due to Government control and transport restrictions. These factors were naturally reflected in the Company's collections which amounted to Rs. 6,67,000, as against Rs. 8,67,000 during the previous year. Salami realised also showed a fall of nearly Rs. 54,000, as compared with last year, on account of the smaller number of settlements of *khas* lands due to the poor quality of lands now available for settlement and people being unwilling to take up lands owing to the pending acquisition of *zamindaries* by Government. The figure of salami this year amounts to Rs. 38,379 and has, as usual, been transferred to the reserve fund.

During the year under review the Company's profit has shown an increase to the extent of Rs. 53,441 over that of last year. Adequate precautions have, however, been taken for the safety of the estates against any eventuality that may arise due to the silting up and the changing course of rivers particularly in the Sunderban area. During the year under review the directors succeeded in their efforts in recovering the payment of capital gains tax amounting to Rs. 91,578, paid under protest on salami receipts.

As assured by the Chairman at the last annual meeting and in view of the fact that there was constant and inordinate delay in getting replies from Canning office to the queries sent from head office and with a view to establish a greater direct contact between the head office and the Canning office, the directors decided to arrange for more frequent visits to the estates. With this purpose in view, in all four visits have been paid up to now to the estates by a member of the Board and the representatives of the head office. As a result of these visits the directors found that the working of the Canning office was not satisfactory. The directors also invited a representative of the Calcutta auditors' firm for a discussion on the affairs of the Canning office. After a long discussion with him the directors came to the conclusion that it was necessary to have a more detailed enquiry into the working of the Canning office, for which suitable steps are being taken.

After making provisions of Rs. 56,000 (Rs. 81,000) for taxation, Rs. 7,319 (*nil*) for gratuities, and Rs. 6,000 (Rs. 6,000) for depreciation of buildings at Canning, the accounts show a profit amounting to Rs. 68,009 (Rs. 89,569 after transferring Rs. 75,000 from the reserve fund) and after adding to this figure the balance of Rs. 277 (Rs. 708) brought forward from the last year's account, the total figure of profit comes to Rs. 68,286 (Rs. 90,277). From this the directors paid a dividend (free of tax) for the year ended 30th April, 1952 at the rate of Re. 1 (Re. 1-8) per share, which absorbed Rs. 60,000 (Rs. 90,000) and left a balance of Rs. 8,286 (Rs. 277) and the directors transferred this amount to the tube-well sinking and contingency fund in order to build up a fund to meet any possible contingent liability that may arise in respect of lands admeasuring about Bgs. 697-10-10, leaving to be carried forward *nil* (Rs. 277).

The directors report that the land leases purchase account has been further reduced by Rs. 757 as they have been able to resettle land to that extent, which was previously purchased by the Company for *khas* cultivation in auction through the courts.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	60,00,000	Block ...	83,61,045

Reserve for taxation ...	2,78,508	Debts, deposits and advances ...	7,94,978
Liabilities ...	2,02,978	Investments ...	5,08,357
Profit and loss account ...	68,286	Cash ...	3,46,877
Rs.	1,00,17,507	Rs.	1,00,17,507

Rampur Distillery and Chemical Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Govan Bros. (Rampur) Ltd., Rampur, U.P.) submitted the audited accounts of the Company for the year ended 31st March, 1952. The net profit for the year under review after meeting all the working expenses and deducting Rs. 1,10,634 for depreciation, amounted to Rs. 1,27,050. This was appropriated towards the loss of Rs. 1,16,553 brought forward from the last year's account, thereby leaving a net surplus of Rs. 10,497 which the Directors carried forward to the next year's accounts.

During the year under review the distillery had a run of 280 days, as compared to 264 days during the year 1950-51. The stoppages during the year under review, exclusive of the usual stoppages for boiler inspection, cleaning and repairs extending to a period of 16 days were due to want of storage space for weaker spirits for a temporary period only. As against last year there was no shortage of molasses during the year under review.

During the year under review 2,57,128 maunds of molasses were consumed with a total production of 4,95,668 bulk gallons of rectified spirit including power alcohol giving an average yield of 1.93 bulk gallons per maund of molasses and an overall efficiency of 75.9 per cent. The run showed an average daily production of 1,770 bulk gallons, as against 1,747 bulk gallons last year.

As already reported last year, during the year under review the company continued to make supplies of bottled rum to military personnel through the Canteen Stores Department, Bombay, as also bulk and bottled rum to the Defence Services through the Ministry of Food and Agriculture, Government of India.

Supplies of country liquor, including spiced spirit, continued during the year under review to the bonded warehouses in the districts of Garhwal, Bijnor and Rampur.

Supplies of medicines and pharmaceuticals were made from the Company's pharmaceutical section to hospitals and dispensaries of Uttar Pradesh Government. Two new areas, viz., States of Bombay and Saurashtra for supply of the Company's pharmaceuticals were opened up on 1st March, 1952 by entering into an agency agreement with a big stockist there, and sales of pharmaceuticals during the current year to these two States, as also in Delhi and Uttar Pradesh, increased.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	19,98,725	Block ...	12,17,205
Reserves ...	4,62,063	Stock ...	2,26,920
Liabilities ...	2,47,044	Stores, spares, etc. ...	3,71,610
Profit and loss account ...	10,497	Debts, deposits and advances ...	3,68,246
		Investments	3,36,984
		Cash ...	1,97,364
Rs.	27,18,329	Rs.	27,18,329

Coimbatore Spinning and Weaving Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. R. G. S. Naidu & Co., Coimbatore) submitted the audited accounts of the Company for the period ended 30th June, 1952.

The year's trading without providing for depreciation on the assets of the Company and after reducing the value of the stock of cotton on 30th June, 1952 by more than Rs. 10 lakhs resulted in a net loss of Rs. 2,73,634 (profit Rs. 9,77,131) and deducting therefrom Rs. 2,635-6-8 (the previous year's balance profit), the balance was net loss of Rs. 2,70,999 (profit Rs. 9,85,325) which the directors carried forward to next year. The Directors regret to report that extraordinary circumstances prevailed during the year; the Company had purchased American and Egyptian cotton at fairly very high rates which had come down considerably low at the end of the year which had absorbed almost all the profits of the Company made during the year under review. The usual expenses had to be incurred and in the face of all these circumstances which were beyond the control, the Directors feel that the loss as shown in the balance-sheet is fairly very low. Further, the Directors report that substantial initial depreciation and vi (a) depreciation had been provided for in the previous year; but as there are no sufficient profits during the year, no depreciation has been provided for on the assets of the Company this year. The Directors are now glad to report that in view of having valued the cotton at market rate there are every chances of making some decent profits during the coming year provided the market conditions improve. Further, the prices of yarn are also coming down and in certain counts of yarn the prices are ruling much below the ceiling rates.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.

Reliance Firebrick and Pottery Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the half-year ended 31st August, 1952.

After transferring Rs. 90,000 (Rs. 45,000) to reserve for replacements and providing Rs. 95,000 (Rs. 39,000) for taxation and Rs. 52,109 (Rs. 83,850) for depreciation, there was a balance of Rs. 47,379 (Rs. 57,941) at the credit of profit and loss account. The Directors paid a dividend of As. 8 (As. 8) per share, absorbing Rs. 30,000 (Rs. 30,000) leaving a balance of Rs. 17,379 (Rs. 27,941) to be carried forward.

Production for the half-year again showed improvement, being 2,261 tons higher than the previous half-year and the net value of sales also showed an increase.

Accounts in brief were as under:—

COMPANY MEETINGS AND DIVIDENDS

PURTABPORE CO., LTD. Annual General Meeting, Kanpur, 6th February, 1953. Dividend: Re. 1 per share. Transfer books closed from 21st January to 6th February, 1953, both days inclusive.

NORTH-WEST COAL CO., LTD. Half-yearly General Meeting, Calcutta, 9th February, 1953. Dividend: As. 4 per share of Rs. 10 fully paid-up and As. 3 per share of Rs. 7-8 paid-up. Transfer books close from 1st to 9th February, 1953, both days inclusive.

CAWNPORE SUGAR WORKS LTD. Annual General Meeting, Kanpur, 10th February, 1953. Dividend: Rs. 2 per share. Transfer books closed from 24th January to 10th February, 1953, both days inclusive.

INDIA PAPER PULP CO., LTD. Half-yearly General Meeting, Calcutta, 12th February, 1953. Dividend: Rs. 5 per share. Transfer books closed from 30th January to 12th February, 1953, both days inclusive.

RALLIS INDIA LTD. Annual General Meeting, Calcutta, 23rd February, 1953. Transfer books close from 9th to 23rd February, 1953, both days inclusive.

MADURA MILLS CO., LTD. Dividend: Rs. 3 per share for the year ended 31st December, 1952.

ALUMINIUM INDUSTRIES LTD. *Ad-interim* dividend: As. 10 per share for the year ending 31st March, 1953. Transfer books close from 14th to 28th February, 1953, both days inclusive.

DECCAN SUGAR AND ABKHARI CO., LTD. Dividend: *Nil* for the year ended 31st May, 1952.

DEVASHOLA (NILGIRI) TEA ESTATES CO., LTD. *Ad-interim* dividend Re. 1 per share for the year ended 31st December, 1952. Transfer books closed from 28th January to 3rd February, 1953, both days inclusive.

BUDGE-BUDGE JUTE MILLS CO., LTD. Dividend: Rs. 6-8 per share for the half-year ended 31st October, 1952.

NATIONAL CO., LTD. Dividend: Re. 1 per share for the half-year ended 31st October, 1952.

ORIENT JUTE MILLS CO., LTD. Dividend: Rs. 6 per share for the half-year ended 30th November, 1952.

CHEVIOT MILLS CO., LTD. Dividend: Rs. 6 per share for the half-year ended 30th November, 1952.

DELTA JUTE MILLS CO., LTD. Dividend: Rs. 10 per share for the half-year ended 30th November, 1952.

CALEDONIAN JUTE MILLS CO., LTD. Dividend: Rs. 6 per share for the half-year ended 30th November, 1952.

COMPANY REGISTRATIONS

MEATTLES AGENCIES (INDIA) LTD. (First Director: Shri Bisheshar Dayal Meattle.) Business: Exporters, Importers, General Merchants and Commission Agents. Authorised capital: Rs. 5,00,000. Private company. Address: Krishna Mahal, 63, Marine Drive, Bombay 1.

HARSHADRAY LTD. (First Director: Mr. B. P. Shah.) Business: Manufacturers, Repairers and Dealers in Diesel Engines, Dynamos, Motors, Armateurs, Boilers, Turbines, etc. Authorised capital: Rs. 5,00,000. Private company. Address: Advani Chambers, Sir Phirozshah Mehta Road, Fort, Bombay.

SAHEB SINGH AGENCIES (BOMBAY) LTD. (First Director: Sirdar Shamsher Singh.) Business: Manufacturers, Agents, Distributors, Dealers, Exporters and Importers of Stores, Consumable Articles, Beauty Aids, Perfumery, Toilet, Patent Medicines, General Merchandise, etc. Authorised capital: Rs. 5,00,000. Private company. Address: Jiwan Vihar, 72, Marine Drive, Bombay.

INDIAN INSULATION INDUSTRIES LTD. (First Director: Shri Percy Jal Vakil.) Business: Manufacturers and Dealers in Insulation Wires and Heavy and other Cables from Copper, Aluminium, etc., and Paints, Varnishes, Oils, etc. Authorised capital: Rs. 5,00,000. Private company. Address: Raja Bahadur Bansilal Mansion 22, Apollo Street, Fort, Bombay.

MONEY STEADY BUT DULL

(From Our Own Correspondent)

BOMBAY, 28*th January*

The short-term money market was steady, but dull, during the week under review. The inter-bank call money rate among the Exchange banks and big Indian banks slightly hardened from 2½ per cent. to 3 per cent. with borrowers over. Among the smaller Indian banks the rate stood at 3 per cent. Trade demand for funds did not improve to any appreciable extent during the week, but still outstripped the limited volume of floating funds in the market. As a result, some of the banks had to seek funds from the Reserve Bank. Short-term deposits were in request at 3 per cent. for one to five months and at 2½ per cent. for over 6 months. House money fetched 3 per cent.

This week's sale of three months' Government of India Treasury Bills held yesterday brought an offer of no more than Rs. 100.25 lakhs, as against an invitation for Rs. 100 lakhs. The amount offered was lower by Rs. 23 lakhs than the sum tendered last week. The average rate of accepted tenders was, however, unchanged at Rs. 2-7 per cent. per annum. Tenders at Rs. 99-6-3 were accepted.

The statement of affairs of the Reserve Bank of India for the week ended 23rd January, 1953, as compared with that for the previous week, discloses a contraction of Rs. 5.15 crores in notes in circulation. This follows the decline of Rs. 1.27 crores in the previous week. The decline during the week has been more than offset by an expansion of Rs. 5.30 crores in notes held in the Banking Department, so that the total notes issued is higher by Rs. 14.72 lakhs. This is covered on the assets side by a corresponding increase in rupee coin. The decline in deposits of the Central Government, noted in the previous two weeks, persists, the fall during the week under review being Rs. 6.19 crores. Deposits of other Governments, on the other hand, are higher by Rs. 4.78 crores. Deposits of banks are lower by Rs. 98.37 lakhs, while those of others are better by Rs. 90.94 lakhs. On the assets side, cash balances show an improvement of Rs. 5.30 crores, but balances held abroad have dropped by Rs. 1.70 crores. Loans and advances to Governments have gone down by Rs. 90 lakhs and other loans and advances by Rs. 58.66 lakhs. There have again been no fresh borrowings by Scheduled Banks against usance bills in the week under review, nor has there been any maturity of these bills. Investments are better by Rs. 51.82 lakhs.

The consolidated statement of position of Scheduled Banks for the week ended 16th January, 1953, as compared with that for the previous week, shows a rise of Rs. 1.61 crores in demand deposits and Rs. 76.99 lakhs in time deposits. Inter-bank borrowings also have risen, those repayable on demand by Rs. 1.44 crores and those of a time nature by Rs. 31 lakhs. Borrowings from the Reserve Bank have declined by Rs. 2.68 crores, but those from the Imperial Bank have gone up by no more than Rs. 18 lakhs. Advances are almost unchanged, but inland bills purchased and discounted are lower by Rs. 86.86 lakhs. Investments, which had been declining in the previous three weeks, have further dropped by Rs. 5.06 crores. Cash-on-hand shows an improvement of Rs. 77.62 lakhs, balances with the Reserve Bank of Rs. 1.97 crores, balances with other banks in current account of Rs. 76.97 lakhs and money at call and short notice of Rs. 2.05 crores.

The Gilt-edged market was devoid of any outstanding development during the week under review, except for slightly better rates for long-dated and undated issues and selective buying for some State and Municipal loans. 3 per cent. 1959-55 was a shade quiet at Rs. 100-0½. 3 per cent. 1957 and 3 per cent. 1958 were unchanged at Rs. 98-8 and Rs. 98-6, respectively. 3 per cent. 1959-61 was an anna lower at Rs. 95-15. 3 per cent. 1963-65 and 3 per cent. 1964 were both maintained at Rs. 92-7, as also 3 per cent. 1966-68 at Rs. 90-7. 3 per cent. 1970-75 put on an anna to Rs. 86-8. 3 per cent. 1986 Conversion Loan rose by As. 4 to Rs. 83-1. 4 per cent. 1964 Bombay was enquired up to Rs. 101, that is As. 4 over the previous week's closing. Both 4 per cent. 1964 West Bengal and 4 per cent. U.P. were better by As. 2 at Rs. 100-10.

In the foreign exchange market, there was a further slight hardening of the rupee in terms of the U.S. dollar, in banks' selling rate, by half-a-rupee per $100 for ready delivery and by a quarter rupee for forward deliveries upto six months, as the table appended below shows. The banks' buying rate, however, remained unchanged. The improvement was in sympathy with the continued accession of strength to sterling in the New York market, where this week the pound went up from $2.81.7/16 to $2.81.9/16 for ready and from $2.81½ to $2.81.3/16 for three months. The rate for six months, however, receded a bit from $2.81.1/16 to $2.80⅞.

SILVER FIRM

(From Our Own Correspondent)

BOMBAY, 28*th January*

Trading on the Bullion Exchange during the week under review was characterised by the revival of bullish fervour in silver, which was rather very pronounced in the last two days. The firmness of the white metal was attributed to speculative buying by professionals induced by an expansion in offtake. This forced the shorts to cover their sales. In the result, the white metal made a brisk advance to touch (to-day) a high of Rs. 158-13 (for forward delivery), which is Rs. 4-5 more than the previous week's closing of Rs. 154-8. Incidentally, it may be noted that this is the highest level to be seen since 22nd October last. As the closing rate for forward delivery, namely, Rs. 158-11 was well over Rs. 7 above the opening rate of Rs. 150-8 for the current settlement, the automatic margin system came into operation to-day.

In distinct contrast to silver, the upward trend in gold, noted in the previous few weeks, was checked during the week under review. In fact, the yellow metal finished the week a shade lower than a week ago. This was due to the weakness of the ready section, which, in turn, was adversely affected by an expansion in arrivals. This state of affairs is reflected in the narrowing down of the premium which the ready position commanded over the forward, from Re. 1-8 early in the week to As. 14 at the close.

The decline in gold prices, albeit small, was not the feature of the Bombay market alone. Even in Europe, the international free market price of gold experienced a slight setback from $37.95 on the 21st inst. to $37.80 on the 23rd, at which level it stood till yesterday.

Silver for forward delivery in February settlement opened the week at Rs. 154-3 and staged a rise to Rs. 155-12 on Friday (23rd inst.), following reports of better offtake. After a temporary recession to Rs. 154-8, it picked up strength, on short covering, to touch successively fresh high levels every day, until it reached Rs. 158-13 to-day, before closing at Rs. 158-11. Business in the March settlement was being done during the week at a carry forward rate of As. 1 to As. 2 in favour of bulls.

Ready silver (.996 Mint) commanded a premium of As. 4 over the forward rate for the February settlement. The floating stocks of silver are estimated at 2,000 bars. The daily average offtake was of the order of 45 bars.

Gold for forward delivery in February settlement began the week at Rs. 87-5 and, after moving up to Rs. 88-4 on Friday, receded to a low of Rs. 86-6 yesterday. To-day, however, it tended to look up a little, in sympathy with silver, and touched Rs. 87-5, but closed a shade lower at Rs. 87-1. Business in March settlement was put through at a carry forward charge of As. 14 in favour of bulls early in the week. As the week progressed, however, the carry forward charge fell to As. 6 in favour of bulls.

Ready gold, which was done at Re. 1-8 over the forward at the close of last week, came to be quoted at a premium of only As. 12 this morning, but, just at the close, the premium again widened to As. 14. The floating stocks of gold are estimated at 20,000 tolas. The daily average arrivals were 10,000 tolas. The offtake was no more than 8,000 tolas on an average.

The following comparative table shows the trend of the market during the week under review:

	28-1-53	Highest	Lowest	21-1-53
GOLD	Rs. a.	Rs. a.	Rs. a.	Rs. a.
Ready (.99 fine Mint)	87 15	89 11	87 3	88 14

GOAT AND SHEEP SKINS FIRM

(From Our Own Correspondent)

MADRAS, 27*th January*

Arrivals of kips, and also clearance, have been moderate. Enquiries have been selective and sellers are reserved, in view of the excesses involved which will remain unsold for some time or be sold at poor prices. Demand for cow calf and buff calf has been patchy, while that for buffs negligible.

The market for tanned goat skins has ruled firm, with prices advancing by As. 2 per lb. Tanned sheep skins were also in good demand, with prices rising by As. 4 per lb. The London public sales commenced yesterday, and prices of goat skins declined by 6*d.* to 15*d.*, as compared with the December 1952 levels; this decline has already been discounted in the prices now current in the Periamet *bazaar*.

HIDES FEATURELESS

(From Our Own Correspondent)

KANPUR, 25*th January*

The hides and skins market was rather featureless this week. Upper grade cow and buff were readily disposed of. New arrivals were considerable. The main purchasers were Madras dealers and local tanners. The country tanners went in mainly for dead *sukti* items.

Latest quotations are: Wet salted cow 1st grade Rs. 300 and 2nd grade Rs. 250 per score; wet salted buff 1st grade 1 lb. 10 ozs. and 2nd grade 2 lbs. 2 ozs. per rupee; goat 1st grade Rs. 300 and 2nd grade Rs. 250 per 100 pieces; and sheep Rs. 225 per 100 pieces.

MODERATE DEMAND FOR SPOT COTTON

(From Our Own Correspondent)

BOMBAY, 28*th January*

The hour before dawn is the darkest. Though there is little concrete evidence which can be pointed to, to support the contention that the cotton markets all over the world have turned the corner and that the worst for the time being is over, the observation is, nevertheless, true. Demand for cotton all over the Continent, induced by rockbottom prices, has revived. Spain, France, Germany, Italy and even the U.K. have started making purchases beyong their immediate needs. There is more activity in Alexandria. East Africa has very nearly sold its crop for this year. Interest in Sudanese cotton, absent during the last few weeks, has revived. South American countries, such as Brazil and Peru, are more in the picture with some constructive schemes for the disposal of their sluggishly moving crops. Turkey and Syria are also finding buyers and the crash at Karachi has also been averted for the time being, with the timely assistance of some of the purchasers in the U.K. Barter deals between cotton producing and consuming countries are also on the increase. All these signs, though each one in itself insignificant, go to show that the shadow of gloom and depression over the cotton markets is being gradually lifted. However, it must be admitted that this is only an impression and not a statement of tangible fact.

It would be interesting to compare conditions in the Indian markets in view of the improving trends abroad. Judging by prices, the market here seems to be disorganised, if not actually demoralised. This is more evident in the forward market than in the spot market and to that extent it can be interpreted as a good sign. Consumption of Indian cotton by the mills continues apace and though this is not reflected in the demand for contracts in the forward market, the selected styles are being enquired for in the spot market at Sewri. Perhaps, the grounds for slump in prices in the forward market are more technical and temporary.

Once the February settlement is over, trading will not be subjected to the same pressure as at present and will to that extent be more normal, even though the danger of overtrading in this highly speculative market will always be there. Even a 33 lakh bales crop, considering the requirements of the industry here, need not depress prices. But such a result is inevitable when contracts are held by weak parties who are in no position to take deliveries. Wide fluctuations in prices bearing no relation to actual stock position and demand can only point to unhealthy conditions in the market, against which the newly started forward market in cotton has to guard constantly. Perhaps, the opening of forward trading in cotton at Indore which has been applied for by the Bada Saraf Cotton Association there might provide some corrective to the trading at Kalbadevi in Bombay.

There is little activity on the import and export fronts. The pressure of existing stocks of imported cotton is still being felt and so long as these stocks are there, interest in foreign cotton is bound to be slack. Perhaps, a position will arise when India may ignore fresh purchases when rates are low and then rush later in the season to acquire cotton in outside markets when stocks are depleted and prices high. There is obviously a lack of planning on the part of the industry, trade and the authorities in the matter of foreign purchases of cotton. On the export front also things are naturally very quiet, especially with Karachi once again coming into the picture.

Amongst official measures, mention must be made of the withdrawal by the Government of India of the concession allowing conversion of unutilised balance of licences issued for import of U.S. cotton into that of equivalent quantities of cotton from any non-dollar areas. These outstanding licences will remain valid for shipment only of U.S. cotton up to the end of June. So far as East African cotton is concerned, imports will be permitted freely within the overall ceiling fixed for import of cotton from non-dollar areas and such imports will not be debited to the ceiling fixed for each importer, importing cotton on his own account.

The following is the trend of prices in the forward section of the market over the week ended to-day:

	Open	*High*	*Low*	*Closing*
I.C.C. Feb (Rs.) ...	626	638½	625½	636½
I.C.C. Sept. (Rs.) ...	639½	651	638½	646

The following are the latest quotations for the Sewri market: Bengal *Deshi* (new) Rs. 440; Berar Jarilla (new) Rs. 660; Vijay (old) Rs. 710; (new) Rs. 790; Khandesh (old) Rs 650; (new) Rs. 720; Mogalai Rs. 600.

At Karachi, the downward slide in prices has been interrupted by the Government fixing minimum prices for exports. Curiously enough, instead of discouraging buyers from abroad this measure has brought forth certain tentative enquiries. There are talks of expanding the scope of the trade agreement between India and Pakistan. But it must be pointed out that in the articles mentioned for such trade, cotton does not figure. The following are the latest quotations from the Karachi market: 4F Punjab R.G. Rs. 51¼ to Rs. 52½; S.G. Rs. 54½ to Rs. 55½; L.S.S Punjab R.G. Rs. 54½; S.G. Rs. 58; N.T. R.G. Rs. 54½; S.G. Rs. 56½ to Rs. 57½; 289F Punjab R.G. Rs. 58; S.G. Rs. 63 Punjab Deshi Rs. 55½.

Alexandria reports more activity in the spot market than in exports. But the Government machinery dealing with cotton is slow in functioning and as the process for the passing of cotton from the grower via the private buyers to the Government and from it again via the shippers to the outside world has become complicated and smothered in red-tape, and is slow and cumbersome, transactions naturally are fewer than in a market functioning normally. However, the movement has started and now that New York can be said also to have turned the corner, it is likely to gather some momentum. India has on the whole given good support to the Egyptian cotton market when others appeared to have deserted it. There is appreciation of this support at Alexandria, both amongst official and trade circles, resulting in the removal of India's grievances with regard to the arbitration proceedings in case of differences of opinion.

At New York, there is a feeling of revived steadiness in the cotton markets after the change in the Administration which took place last week. This revival appears to be healthy inasmuch as it is not entirely of a speculative nature, but backed by mills and shippers to a certain extent, though a bulk of it could be attributed to bear-covering. As usual, the persistence of the withdrawal of this improving trend will depend largely on whether there is fresh foreign buying of cotton in the U.S.A., cotton markets or not during the next few days.

The following are the latest available quotations from New York as compared with those of a week and a fortnight before:

(In cents per lb.)

	27-1-53	20-1-53	14-1-53
Spot	33.60	32.85	32.55
March	33.08	32.59	32.40
May	33.42	33.11	32.94
July	33.70	33.50	33.30
October	33.60	33.60	33.50

CEILING FOR STAPLE FIBRE YARN

(From Our Own Correspondent)

BOMBAY, 28*th January*

The most outstanding development in the staple fibre yarn market during the week under review was the fixation of a ceiling for 2 × 40 variety, at Rs. 800 per bale of 400 lbs., by the Committee of the Yarn Merchants' Association. This was a sequel to the meteoric rise in prices of the yarn during the past three weeks, following speculative buying, occasioned by depletion of stocks in the market, consequent on persistent offtake and poor supplies from South Indian markets. Thus, the value of 2 × 40 staple fibre yarn January contract, which was as low as Rs. 701 early in the month, gradually advanced to touch a high of Rs. 805 on the 22nd inst. During the same period, February contract rallied from Rs. 690 to Rs. 775.

With a view to arresting a further rise in prices, the Committee of the Yarn Merchants' Association decided, as stated at the outset, to fix a ceiling with effect from Saturday last. It also decided to postpone commencement of business in March contract. These decisions would not appear to have had any effect on the market; to-day's closing quotations were more or less at the same levels which prevailed prior to the fixation of ceiling prices. Thus, 2 × 40 January contract rose from Rs. 785 to Rs. 805 on Saturday. After the ceiling was fixed, it declined to Rs. 795 yesterday, but finished higher at Rs. 800 to-day. February contract fluctuated between Rs. 761 and Rs. 775 before ending the week at Rs. 776.

The art silk yarn section was, on the contrary, distinctly bearish during the first two sessions of the week, on reports of a reduction in yarn prices effected by the Italian producers in the deal recently signed with the Silk and Art Silk Mills' Association, Bombay, under the latter's bulk purchase system. This led to a sharp break in prices on Friday. The sentiment of the market, however, changed for the better during the subsequent sessions and values registered a gradual improvement, which persisted till the close to-day. The improvement was brought about by good demand in the ready section, rise in cotton yarn prices, and firm conditions in the staple fibre yarn section. There was also the expectation of the non-availability of the actual supplies of Italian yarn, now contracted for, at least for the next few weeks. Consequently, not only the previous losses were recovered but the closing rates stood higher than those at the end of last week.

In the forward section, 150D January contract receded from Rs. 705 to Rs. 682 on the 23rd inst., but gradually picked up strength to close at Rs. 713, the net gain over the week being Rs. 8. Likewise, February contract, after losing Rs. 22 to Rs. 687, finished higher at Rs. 714. In the ready section, 120 Japan was specially favoured and registered a rise of As. 3 to Rs. 4-9. 150 Japan and 120 Italy gained an anna each to Rs. 4-7 and Rs. 4-3, respectively. 150 Italy was steady at Rs. 3-9, although, at one time, it had gone down to Rs. 3-7.

The table below gives the prices of art silk and staple fibre yarns quoted to-day, as compared with those on the 21st and 14th inst.

	28-1-53 Rs. a.	21-1-53 Rs. a.	14-1-53 Rs. a.
Art Silk Yarn—			
150D January (per case of 200 lbs.)	713 0	705 0	723 0
150D February ,,	714 0	709 0	730 0
120 Japan (per lb.)	4 9	4 6	4 7
150 Japan ,, ...	4 7	4 6	4 5
120 Italy ,, ...	4 3	4 2	4 2
150 Italy ,, ...	3 9	3 9	3 10½
Staple Fibre Yarn—			
2×40 January (per bale of 400 lbs.)	800 0	785 0	760 0
2×40 February ,,	776 0	765 0	740 0

As was briefly reported last week that the Silk and Art Silk Mills' Association has finalised a deal with an Italian firm of producers—Itaviscosa —for the bulk purchase of 41*d.* per lb. (for second yarn at a reduced rate of 41*d.* per lb. (for second quality yarn of 120D and 150D), which is more or less the same price prevailing prior to the Korean war. It is interesting to note here that the price of 120D yarn quoted by Italian producers in November, 1952, was as high as 52*d.* per lb. Under the agreement, the Italian firm has agreed to supply the deniers, qualities and make up as required by the member mills. Besides, over and above 1½ per cent. usual discount, it has agreed to give to the Association a special discount of 3 per cent., the Fall Clause and even several other facilities to the member mills, such as to cancel and reject the ordered goods within a certain period after arrival in Bombay and also to store the same.

GROUNDNUTS FIRM

(From Our Own Correspondent)

BOMBAY, 28*th January*

The three principal sections of the oilseeds market depicted three distinctly different trends during the week under review. The groundnuts section ruled firm, following heavy demand for seeds from *vanaspati* interests and inadequate stocks. There were also enquiries from Hong Kong for groundnut oil. Prices, therefore, moved forward. But in the castorseeds section, a more or less steady tone was visible in the absence of encouraging overseas advices. Bull operators were reluctant to commit themselves, in the face of increased arrivals, while shorts pressed sales. Linseed were a shade easy on bleak prospects of any reduction in the export duty on oil.

The upward trend in groundnuts noticed last week gathered further momentum. Support from crushers and *vanaspati* interests induced hectic bear-covering in a rising market. Consequently, Bold readys improved from Rs. 33-4 to Rs. 34-12. Khandesh quality had a gain of Re. 1-8 to Rs. 35-4. Groundnut oil ready rallied As. 8 to Rs. 18-12 and Railway receipts As. 4 to Rs. 18-8. Hong Kong was interested in groundnut oil at £131 to £132. The Bombay Government's decision to acquire 50 per cent. of groundnut oil cake at Rs. 100 per ton was strongly resented by the trade interests. The Seed Crushers' Association has urged the withdrawal of the decision and offered to provide 5,000 tons of oilcake per month as cattle feed at Rs. 25 less than the prevailing market rates.

Quiet U.S. advices for castor oil softened the trend in the castorseeds section this week. The expected demand for the oil from the Continent did not also materialise. May delivery, which opened at Rs. 136-4 as against Rs. 135, fluctuated between Rs. 133 and Rs. 137-8 before closing at Rs. 135-12. Madras delivery, however, lost As. 8 to Rs. 31. F.A.Q. was steady at Rs. 30-8. Castor oil Commercials, were quoted at Rs. 17-12, as against Rs. 18-2. U.S. advices for commercial oil were placed at 19.5 cents for February delivery, 18.5 cents for April and 19 cents for March delivery.

The Linseed section spent a dull week. Operators have lost all hopes of Indian linseed entering again the overseas market at competitive rates. Bold ready lost As. 2 to Rs. 26-14. Indores changed hands at Rs. 27, as against Rs. 27-4. Linseed oil ready eased by As. 8 to Rs. 13-8.

The following table shows the prices of oilseeds and oil on the 28th inst., as compared with those at the close of preceding two weeks.

	27-1-53 Rs. a.	21-1-53 Rs. a.	13-1-53 Rs. a.
Groundnuts—			
Bold Ready New (per cwt.) ..	34 12	33 4	32 4

Castor Oil—			
Commercial (per quarter) ..	17 12	18 2	17 4

NARROW MOVEMENTS IN PEPPER

(Messrs. Parekh & Co.)

BOMBAY, 28*th January*

Pepper market during the week under report moved within a narrow grove both at Alleppey and at Bombay. Whenever exporters are in the market, the growers generally are disposed to raise their price by Rs. 50 to Rs. 100, according to the tempo of demand. Conversely on the withdrawal of buyers, growers, in order to attract business again are willing to lower their price, with the result that the market at the end of the week fails to show any gain in the price. The undertone of the market, therefore, appears to be indecisive but suggests that there is a resistance at a price line of Rs. 2,250 to Rs. 2,300 at Alleppey. Obsessed with certain sets of rules based on precedents, such as that the market in Malabar should go down during February of each year, given normal conditions, because the month is considered a period of competition between Alleppey and Tellicherry varieties, American buyers are reported waiting for a still lower price before putting in a fresh large buying. As against this growers know that if they can maintain a certain price line during February or the latest in the early part of March, foreign buying should come at sellers' price. Therefore, in spite of poor foreign enquiries, big planters who are basically always bullish, are sitting tight allowing small growers who are in need of cash to liquidate their stock. In delivery section, the price for the month of January is now being quoted at discount of Rs. 40 from the price for February, as bulls are reported liquidating for fear of heavy tenders on fresh arrivals of Pepper to the extent of about 2,000 bags from the Coast.

In A.S.T.A. section, there was very small business reported done during the week as New York is reported to have withdrawn, after doing fair buyings for January shipment during the earlier part of the week. Indian exporters are reported sellers for January or early February at $1.07 but so far no business is reported. March is neglected by both buyers in New York and sellers in India.

Indian exporters seem to be hesitating to make large bear sales at the present price, owing to uncertain policy of the new President with regard to the Korean war. If New York decides for a stern action towards China or Russia to put a stop to the present Cold War there is a possibility of a buying spree as was witnessed during the beginning of the Korean conflict.

Following are to-day's nominal quotations:—Ready delivery Rs. 2,100, January Rs. 1,940-70 and February delivery Rs. 1,980-2,010 per candy of 5¼ cwts.

MEDIUM TEAS STRONG

(Messrs. Forbes, Ewart & Figgis Ltd.)

COCHIN, 24*th January*

The offerings at Sale No. 2, which was held on Tuesday, 20th January, 1953, amounted to 9,15,000 lbs.

Quality from all districts again showed some improvement, particularly amongst the high grown teas.

From the outset, there was a very strong and excited demand for all types. Common and low medium brokens advanced by As. 2 to As. 4, while low fannings were generally As. 4 to As. 5 dearer. Medium teas met a very strong market and all grades advanced by As. 6. Good medium brokens and fannings were irregularly As. 2 dearer, but best liquoring teas met extremely keen competition and sold up to As. 8 to As. 10 above last prices. Whole leaf grades were fairly well supported and were occasionally dearer. The quotations are: Low grown Travancore B.O.P. Re. 1-5, Medium Travancore B.O.P. Re. 1-13, Anaimallais B.O.P. Rs. 2-0-6, Best liquoring Nilgiris B.O.P. Rs. 3-12 and Well made black leaf O.P. Rs. 2-3.

London Market.—Market dearer. Medium fannings about steady. Medium Assam brokens and common teas generally 1*d.* to 3*d.* dearer.

Colombo Market.—About 4¾ million lbs. Low grown occasionally dearer. Others quality improving. Sharp advance in the prices of leaf and lower grades.

Calcutta Market—Export.—About 55,000 lbs. Market firm to dearer. Strongest features were the whole leaf grades and common tea. C.T.C. fannings were irregularly dearer and appreciable increases in price obtained.

Dust.—About 15,352 lbs. With the exception of good liquoring and powdery sorts which were about firm, all descriptions showed an irregular advance.

Export Quota.—The market remains steady at 3 pies and small business has been done.

Forthcoming Auctions.—Sale No. 3 will be held on Tuesday, 3rd February, 1953.

As we go to Press, Messrs. Forbes, Ewart and Figgis Ltd., wire as follows:

"103 dust sale B 220,000 lbs. Market opened strongly. Prices generally As. 2 to As. 3 up, but closed irregular."

FOODGRAINS ARRIVALS POOR

(From Our Own Correspondent)

HAPUR, 26*th January*

Contrary to the past practice, annual food allocations are not being made now. The same position is expected to continue in future also, according to New Delhi reports. It is understood that supplies will be sent to needy States, as and when demanded, after a scrutiny of their claims, keeping in view the Centre's overall supply target of 2.4 million tons for the year.

In the meantime, the Government of India has decided, in consultation with some State Governments, to co-ordinate all arrangements for the purchase and despatch of surplus coarse grains on behalf of deficit States. This decision will eliminate the danger of uncontrolled and unco-ordinated purchases by deficient State Governments in a surplus State. As a result of relaxation in control of millets and other coarse grains, there will be no restriction on their movement within a State, though inter-State cordons will continue to exist. States in need of coarse grains are Madras, Bombay, Mysore and Saurashtra, while those which are said to be surplus are Madhya Pradesh, Orissa, Hyderabad, P.E.P.S.U. and the Punjab (I).

Mr. Rafi Ahmed Kidwai, India's Food Minister, toured the famine-affected areas this week. The districts of Bijapur, Banaskantha and Ahmedabad seemed worst affected. The Food Minister has indicated that, as enough milo is not available from America this year too, the Government is forced to issue more wheat and cut down the quantum of coarse grains in cities still under statutory rationing. It has been decided to give *jowar*, *bajra* and other cheap coarse grains to labourers employed in the scarcity works in the State of Bombay.

In the Punjab State, the recent rains are expected to benefit all the standing crops of wheat and grain, but they cannot make good the loss due to reduced sowings. Two months ago, the State had contributed 29,000 tons of wheat to the central pool, out of its total commitment of 60,000 tons. Before the rains came, the drought upset all calculations and it is said to be impossible for the State now to spare the balance.

Procurement operations in West Bengal are yielding excellent results. About 22,425 tons of paddy have been procured upto 17th January, 1953. Out of this, 9,913 tons account for procurement by levy and 12,512 tons for that on voluntary basis. Last year, during the same period, 14,653 tons had been procured.

Rabi crops in east Uttar Pradesh districts have suffered great damage by severe hailstorms. The districts which have been worst hit, according to

STOCK & SHARE QUOTATIONS

Abbreviations:—D = Deferred shares. G = Guaranteed shares. P = Preference shares. P.O. = Preferred Ordinary shares. R = Rebate shares. Y = Accounts published yearly. H = Accounts published Haf-yearly. Q = Accounts published once 15 months. T = Company has Debentures. R.L. = Reserve Liability on shares. N = Nominal Quotation. i = Interim Dividend. f = Dividend for first half-year. y = Dividend for the year. x = Ex. Dividend. c.d. = Cum. Dividend.

Shares:—If a company has different classes of shares—as, for example A shares and 'B shares—these are indicated by the same letters 'A' and 'B under "Paid-up Per Share"

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12 indicate the months of June and December, respectively. "Reserves" includes general and other reserves and all other funds which a company may have as also depreciation on block items, when this is charged to separate account. "Block" represents actual cost of land, buildings, machinery, and all such other items on which depreciation is allowed, less sales, if any, and stands for the gross figure except where otherwise indicated.

Dividends:—Dividends for completed years are calculated at per cent. per annum, but, where quoted for portion of a year, they represent percentages of the dividend on the paid-up share value. For companies closing the books half-yearly in the first three months of the year, and for companies closing their books yearly during the first half of the year dividends are shown as for the previous year.

• The following explanatory notes relate to the abbreviations and marks shown on page 182 in the debentures section:—

(a) Option to repay on six months' notice, on any interest date after 31st December, 1951, at 102 per cent. Also redeemable out of a cumulative sinking fund of 1½ per cent. per annum (commencing in 1938) by drawings at 102 per cent. or by purchase at or 102 per cent.

(c) Option of repayment at any time at 3 per cent. premium.

(b) Bearer bonds of Rs. 1,000 each repayable at par.

Bearer bonds of Rs. 1,000 each repayable on 31st July, 1959.

(d) Bearer bonds of Rs. 1,000 each with option of redemption in whole or in part at par on 30th June, 1952, or on any subsequent interest date at one month's notice.

(e) Returnable on or after 31st July, 1950, at Rs. 102-8 or at par after 31st July, 1955, on six months no in each case.

(f) Bearer bonds of Rs. 1,000 each with option of redeeming on 3 months' notice at ½ per cent. premium, 1st March, 1954, but before 1st March, 1957, and 1 per cent. premium on or after 1st March, 1957

(h) Option of redemption on or after 1st July, 1949, at par.

(j) Option of repayment at any time at par at any time on or after 30th June 1947 on six months' notice.

MARKET GOSSIP

(Concluded from page 143)

tract, is the fixation of tender basis for various qualities at levels calculated to discourage large tenders against the February delivery. A section of the trade complains that the Rates Committee has fixed the room rates Rs. 30 to Rs. 35 below the rates prevailing in the ready market. A number of appeals have been preferred to the Board against the decision of the Rates Committee.

* * * *

In the Karachi cotton market, the fixation of minimum rates for export sales has not prevented the downward trend. The ruling rates are some Rs. 50 below the minima, the difference being still wider in the interior. Another interesting feature of this market which arises directly from the ridiculous attempt of the Pakistan Government to dictate prices to importing countries in a buyers' market is that the prices of better staple cotton are lower than even those of short-staple *deshi* cotton. Thus, while Sind and Punjab *deshis* the staple length of which is no higher than 5/8", are commanding a price of Rs. 55 to Rs. 56 per maund, N.Ts. and 4F., the staple length of which is about 7/8", are going abegging at Rs. 52 to Rs. 53 per maund. If this state of affairs were to continue for long, it would have a disastrous effect on the quality of Pakistan cotton next year. The least that the Pakistan Government should do to end this anomaly is to abolish the export duty on the staple varieties as well.

* * * *

Elsewhere in this issue will be found a closely-reasoned plea by Mr. Dharamsey M. Khatau, Chairman of the A.C.C., for tax relief, which alone will facilitate the expansion of industries. From London comes the report that a nearly identical demand has been made by the spokesmen of British industry. A statement, issued jointly by the Federation of British Industries and the National Union of Manufacturers, points out that British goods are facing keen competition at a time when the vital need is for increased exports. With the "fullest sense of responsibility," the statement says that a permanent increase in production and exports will not be achieved until taxation has been materially reduced. It adds: "Taxation is so exacting into profits as to leave industry with insufficient funds efficiently to maintain even the existing scale of operations, because of the inability to set aside enough to replace fixed assets at enhanced costs and find the working capital to match the rise in price levels." It sums up the whole position by saying that, under the present fiscal system, the net return for successful ventures is low, whereas for unsuccessful ventures the "consequences may be disastrous."

* * * *

A similar note was struck by the Right Hon. The Earl of Selborne, Chairman of the National Provincial Bank, when he said, at the recent annual meeting of the Bank, that the present level of taxation, which absorbed about 40 per cent. of the U.K.'s national income, should be reduced—and reduced substantially—if "we are to re-establish a sound and solvent economy." Perhaps, one explanation for the renewed vigour with which the spokesmen of British industry are representing the case for relief in taxation—apart from the fact that a new budget is now shortly to be presented—is that the U.K. is more than ever convinced that the new administration in the U.S. will be averse to the grant of aid. Already, the British slogan is "Trade, not aid"; the emphasis is on facilities for trade. If such facilities are given, British industry should be prepared to compete on equal terms with American industry. And here, British industry is at a serious disadvantage because it is unable to re-equip and modernise itself as fast as American industry is doing. Analysing the figures relating to the U.K.'s national income and capital formation, Mr. S. P. Chambers, a Deputy Chairman of Imperial Chemical Industries, says that, although "gross" capital formation in the U.K. appears to be as high as £3,349 million, out of the national income of £13 000 million, a closer scrutiny of the former figure shows that it is largely fictitious. By a series of calculations, in which he makes allowances for such factors as extensions in mere trading activity, increase in value of stocks resulting from an increase in prices, replacement of worn-out machinery and plant, he arrives at a figure of some £1,000 million, which represents, according to him, the "true increase in the amount of fixed capital in British industry." This level, he regards, is "much too small, if British industry is to keep its place in the hard competitive conditions of the modern world." He draws particular attention to the fact that American industry invests per worker no less than ten times the amount of extra capital invested per person in the U.K. The relative backwardness of capital formation in the U.K., he says, is due to high taxation. In conclusion, he observes: "The year 1952 has shown that the world is no longer hungry for British goods and we must hurry up, if we are to beat our competitors."

* * * *

Although similar calculations have not been made in this country, the Planning Commission estimates that the re-equipment of industry would demand about Rs. 150 crores. Industry's spokesmen have dismissed this figure as a serious underestimate. In any case, India has to face both sets of problems—the immediate problem of merely keeping the productive efficiency intact through replacement of worn-out machinery, and the less immediate but no less important problem of expansion. Perhaps a serious defect of the Five-Year Plan is that in its preoccupation with the needs of the public sector, no attempt has been made to gauge, much less to provide for, the requirements in the private sector.

MARKET REPORTS

(Concluded from page 173)

reports received, are Gorakhpur, Deoria, Basti, Azamgarh and Gauda.

The local market quotations are: Wheat Rs. 22-8, gram Rs. 18-8, barley Rs. 16-8, *bejhar* Rs 16-8, maize Rs. 14, *bajra* Rs. 14, *jowar* Rs. 12-4 to Rs. 13, *guwar* Rs. 13, rice: *basmati* Rs. 34, *hansraj* Rs. 30, sela Rs. 28 and coarse Rs. 22, peas Rs. 18-8, *arhar* Rs. 18, *urd* Rs. 22 and *moong* Rs. 23.

SUGAR QUIETLY STEADY

(From Our Own Correspondent)

HAPUR, 27*th January*

Sugar markets remained quietly steady during the week under review. The recent rise in the free market prices of sugar, particularly in the South, is attributed to the delay in the replacement of ready stocks in deficit areas, caused, among other factors, by the unavailability of adequate number of wagons. Those *mandis* which were far removed from the purchasing centres experienced shortage of sugar. It was officially stated this week that this rise in prices was not due to restricted releases by the Government of India. The State Government, it is reported, had ample stocks with them last month, and there were not able to clear their stocks of controlled sugar owing to transport bottleneck.

The following were the free market quotations: Ambala Rs. 30-10, Amritsar Rs. 30-8, Delhi Rs. 31-2, Jullundur Rs. 29-8, Agra Rs. 29, Hapur Rs. 29-2, Kanpur Rs. 28-12, Mathura Rs. 30, Meerut Rs. 29-8, Muzaffarnagar Rs. 28-14, Patna Rs. 30-14, Calcutta Rs. 29-15, Gauhati Rs. 35-14, Madras Rs. 32-10, Bombay Rs. 33-2, and Bhavnagar Rs. 34-11.

DUSTS IN KEEN DEMAND

(From Our Own Correspondent)

CALCUTTA, 27*th January*

Keen competition was a feature of last week's internal sale No. 31, where dusts offered amounted to 14,932 packages and other grades 779. Prices for all varieties rose satisfactorily, and dusts were quoted as follows: good Assam C.T.C. Re. 1-14-6, medium grainy Assam Re. 1-9-6 to Re. 1-10, and medium Dooars Re. 1-7. Darjeelings were favourites of buyers, and prices advanced As. 2 above brokers' valuations. There was a steady demand for the black grainy varieties, and C.T.C. types. Good medium powdery teas were firm, and prices for leafy commons and mediums were well maintained. The leaf market was also steady.

JUTE DULL AGAIN

(From Our Own Correspondent)

CALCUTTA, 27*th January*

Jute markets were again dull during the week under review, which was made short by three holidays on last Tuesday and Friday and yesterday. Rather than sitting tight watching inactive markets, sellers preferred the holidays with the hope that the accumulated demand during the holidays would change the sentiment for the better on re-opening. Even if this expectation materialises, it is hardly likely that any upward trend in prices, both for raw jute and the finished products, would be pronounced.

During the week, hessian 40" 10 oz. ready remained at Rs. 41-12 throughout, the February-March offers being fractionally better at Rs. 41-14 and the April-June at Rs. 42. B. twills were quiet at Rs. 91-8. Specialities received buyers' attention, and, at lower rates, changed hands.

With a satisfactory stock position of raw jute with mills and with the need for stockists and cultivators to dispose of their large holdings, markets evinced little or no interest in the Karachi report about correspondence between the Indian and the Pakistani Governments for an extension of the trade pact to include jute among other commodities. No doubt, high grade jute is hardly available in India now, but mills would show interest only if prices in East Bengal declined or jute goods here firmed up. Prices for raw jute were featureless, and sellers could not meet with any business. Assam Bottoms were, therefore, nominally placed at Rs. 22-8.

TEXTILES

(Concluded from page 152)

of the country's total annual requirements, on the basis of 18 yards *per capita*, amounting to 1,211 million yards, by more than a thousand million yards. The wide gap between its production and its requirements has compelled Pakistan to import considerable quantities of cotton textiles, spending, every year, foreign exchange to the tune of Rs. 30 crores.

With a view to achieving self-sufficiency in cloth, earnest efforts are being made by the cotton textile interests in Pakistan to expand the size of the industry through the addition of new units and expansion of the existing ones. The Central and Provincial Governments, it is stated, have been giving active encouragement and assistance to the industry. The overall target for spindleage has been raised from 1 million to 2 million, the target to be reached in the next five years. Already, 237,000 additional spindles are shortly to start operations on a three-shift basis. Another 100,000 spindles are being installed at Karachi and Sind alone; these are expected to go into production by July next. These additions, it is estimated, will raise the aggregate output of yarn to about 500,000 bales per day.

To revert to the Mill Statement issued by the Millowners' Association. Priced at Rs. 5 each, the Statement contains the names of cotton spinning and weaving mills—erected or projected—in the two countries, as also those of agents or owners, particulars of share capital, number of looms and spindles erected and the number actually working in each equipped mill, quantity of cotton consumed and average daily number of hands employed and the number of days worked by each mill during the year. The utility of the Statement is also enhanced by the statistical summaries showing the growth of the industry in India as a whole, with particular reference to the growth in Bombay City and Island, Ahmedabad, and the rest of the State, since 1910.

BANKING

(Concluded from page 151)

increase would encourage the speculator and discourage the business man, the saver and millions of ordinary persons already struggling to pay their monthly bills. Most of the people would not attach any value to the contention that inflation could be controlled in spite of debasement of the dollar. A great reduction in the sale of U.S. savings bonds and increase in their redemption, refusal of the public to purchase U.S. Government obligations and other fixed income investments, a new flight of capital and a hectic search for hedges against inflation, with consequent forcing up of prices of commodities, equity securities and real estate, are likely to be the results. If Government becomes unable to finance its needs, including large refunding operations, it would have to rely greatly upon the banking system, thereby bringing about inflation of b

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent
Who else must sweat and toil and gain but scanty fare."
William Blake

VOL. LXXXVI. No. 2191 BOMBAY, 7 FEBRUARY, 1953 PRICE Rs. 1/8

KHADI ECONOMICS

THE inaugural meeting of the All-India Khadi and Village Industries Board, which was held in New Delhi this week, found the Government spokesmen in one of those expansive moods in which they permit themselves to express some inconsequential inanities. In his message to the meeting, the Union President, Dr. Rajendra Prasad, described the hand-spinning and hand-weaving industry as the "miraculous fountain from which flowed the river of gold and silver" into this country for centuries until it was ruined by alien rulers. Mr. Krishnamachari, Union Minister for Commerce and Industry, said that "Khadi and work in regard to Khadi" will have to be there for a "long time to come in this country." Mr. Jawaharlal Nehru, Prime Minister of India, was emphatic that the *charkha* had "tremendous potentialities" as a weapon with which to fight unemployment.

In the past, many extravagant claims, such as those that were made at the meeting of the Board, have been made for Khaddar. So long as it was a political symbol, associated with the name of the trusted leader of the country, Mahatma Gandhi, few, however, ever cared to examine too minutely the economics of this cloth. But then, the very fervour with which Khaddar is now being defended by Government spokesmen shows that it requires all the external aid which the Government can give it to enable it to commend itself to the public. But it is doubtful whether with all this support Khaddar will be able to survive for long. Already, it is fighting a losing battle. And the day may not be far off when it will be regarded as an anachronistic survival, sustained by only a few sentimentalists and blind followers of Mahatma Gandhi. Clearly, it was unnecessary for the Government to dig up the old arguments in its favour which no longer hold good and to dress them anew for the solemn occasion of the inaugural ceremony of the Khadi Board.

None of the arguments referred to above will stand the test of economic logic. There is, however, one argument which deserves to be countered, because it has a semblance of reason to commend it. Khadi, it is asserted, gives employment to people. In a sense, this is true. But then, if the provision of employment—and employment, at any cost—is the sole aim of the Government, it might just as well ask the whole country to go back to the days of the bullock cart when there were no means of power locomotion. The use of machinery for any purpose or in any form leads to displacement of labour. So why use machinery at all? Elimination of the use of machinery will certainly provide plenty of scope for employment. Only, it would be a monstrous distortion of the principle of full employment. Employment means—at least, ought to mean—productive and efficient employment and the goods produced by such effort should be cheap and durable. By no stretch of logic could Khaddar production be included under this category. Its production involves an extravagant waste of human energy.

The price of Khaddar is simply beyond the means of the common man, despite the fact that its production is exempt from the many duties, taxes and special imposts to which the mill cloth is subjected. Its finish is poor and unsatisfactory to all, except perhaps to ascetics. And in durability, it is very much inferior to mill-made cloth; in fact, it requires to be replaced more often than mill-made or handloom cloth. Accordingly, even if it is conceded, for argument's sake, that some great social advantage is to be gained through the propagation of Khaddar, there is little doubt that it will not be preferred by the vast majority of the people of this country. There is enough evidence to show that the rural folk will have none of it. The National Sample Survey, for instance, reveals that, in rural areas, Khaddar accounts for no more than 2.81 per cent. of the total expenditure on cloth. The urban citizens, already suffering from high costs of living, cannot certainly be induced to prefer Khaddar to mill cloth, even though, in the past, a sizeable percentage of them used to patronise Khaddar in their zeal for achieving freedom from alien rule. These are simple facts which should be obvious even to a layman with some common sense. It is, therefore, difficult to believe that the top-ranking leaders who are in charge of the administration are so innocent and ignorant as not to realise them. Yet, if they still choose to propagate production of Khaddar, as though it could be made a commercially economic proposition, and decide to spend large sums as subsidy at a heavy cost to the consumer, one is forced to draw the irresistible conclusion that they have not the courage of their conviction.

If the Government's policy towards Khadi were only an isolated instance of indulgence in antediluvian economics, it would be less tragic. But it seems to be part of a wider confusion in policy-making. Strenuous attempts are being made to put the clock of economic progress backwards. The handloom industry is being subsidised at the expense of the mill industry, and the *ghani* industry at the expense of the oil-crushing industry. In every country, the Government creates the right climate in which the efficient producer may come on top. But in this country, the efficient producer is penalised for being efficient. There is a naive assumption that all this will promote employment. And yet, the Government, which swears by employment standards, is steadily closing the avenues of employment through nationalisation of transport, through controls over commodities and through attempts at State trading. Nor does the Government seem to be certain that it must aid the small men in trade and industry. Mr. Nehru declared the other day that he had no sympathy for the small industries which were dotted all over the country. Further, the Government is very slow and slipshod in implementing schemes which it has drawn up for providing employment and increasing production. In Uttar Pradesh, Bihar and the Punjab (I), for instance, we are told that over 500 tube wells out of a total of 965 in the first tube-well scheme have been sunk. But, surprisingly enough, only 33 of these have been energised, the rest remaining unused and probably deteriorating due to silting. The reason for this deplorable state of affairs is that the other steps for the utilisation of these wells, such as acquiring of land for transmission lines and power houses, are being taken slowly and in a leisurely fashion. What a waste of resources, time and manpower!

While the Government is thus not alert and energetic in regard to the implementation of measures which are sure to increase the fruitful sources of employment, it is wasting its time and resources in evolving policies and making pronouncements of dubious value. It is not yet clear, for instance, whether the Government stands for cottage industries, small-scale industries, or for big industries. It has so far succeeded in creating the impression that it is everything to everybody. Its industrial policy, despite many statements and reports, lacks clarity: it is neither fish nor fowl nor good red herring. And this certainly does not augur well for the country's economic future.

STERLING STRONG

THE strength of the pound sterling in recent weeks has been remarkable. There has been a steady improvement in the spot rate of exchange both in London and New York, since the conclusion of the Commonwealth Economic Conference in London in November last. From the beginning of November till the third week of December, the spot rate ruled quite steady at about $2.80. But, ever since the beginning of the New Year, it has been gradually edging forward and, after being held steady in the neighbourhood of $2.81⅝ by the Exchange Equalisation Fund last week, it touched the upper gold point of $2.82 yesterday, that is, the level at which the Bank of England is under an obligation to buy all dollars offered to it for sterling. What is remarkable about this is that the ceiling has been touched, despite the widespread belief that the Exchange Equalisation Fund intervened in the market last week and bid for dollars at slightly below the upper point. This means that the demand for sterling against dollars has been stronger than that expected by the authorities.

The improvement has not been confined to spot sterling alone but has extended to the various types of cheap sterling also. The rate for transferable sterling, for instance, which stood at $2.44 at the beginning of 1952 and which had gone down to $2.40 a year ago, has steadily risen to $2.68½. It is true that, early in January, this sterling was bid up to as high as $2.73½ and that, since then, there has been a fall in it. But this slight decline does not, in any way, run counter to the strength of spot sterling, for it only reflects the narrowing down of the scope for the use of transferable sterling by the would-be commodity-shunters in Europe. The point that needs

to be noted here is that the discount on transferable sterling is only about 4 per cent, which is not large enough for the Continental operators to make commodity shunting a paying proposition. Another form of cheap sterling supply, security sterling, has made an even more striking recovery, the rate for it having risen from $2.34 a year ago to $2.63½.

The improvement as noted above reflects the complete return of confidence in sterling among the Continental and American operators. A part of the rise may have been due to bear covering. But a good part of it must be attributed to a distinct improvement in Britain's balance of payments position. A few days ago, Mr. R. A. Butler, Chancellor of the Exchequer, confidently stated at Leeds that there was good reason to hope that, in the second half of 1952, Britain had achieved a balance in its current account not only with the rest of the sterling area but also with the non-sterling area as a whole, and that too, after excluding American aid. This is an achievement of which Britain can justly feel proud, considering the serious crisis that faced it this time last year. Two factors have helped Britain to establish this record. One was the effective cut in imports and the other a substantial improvement in the terms of trade, especially in Britain's trade with the non-sterling world. An interesting point that deserves to be noted, in this connection, is that, whereas the principal dollar area commodities have been experiencing a slump in recent months, the sterling area commodities such as wool, rubber, tin, cocoa and tea, that are exported to the dollar area, have staged a slight recovery since the last quarter of 1952.

While the strength of sterling reflects a fundamental improvement in Britain's foreign trade position, there are quite a few other causes for the continued firmness of this currency. One is the seasonal factor. Usually, at this time of year, there is heavy demand for sterling to cover purchases of the sterling area commodities. Another is the relaxation of economic controls and the reopening of some of the commodity and metal exchanges, both of which have helped London to regain a part of its pre-war importance as a great Clearing House for Europe's foreign trade. This has led to greater "usability" of sterling, to use the phrase of the Midland Bank's Chairman, which marks a stage further to complete convertibility. This point has been very convincingly brought out by Dr. Per Jacobson, the well-known Swedish economist who regularly contributes to the *Quarterly Review* of the Skandinaviska Banken. He observes that, in the pre-war years, sterling used to be held by foreigners not primarily as a means of obtaining dollars of gold, but as a means of buying commodities in London and sterling area markets. Now that the British commodity markets are opening again, he says, "it may well happen that, through the functioning of these markets, sterling will almost imperceptibly attain a position in which it becomes *de facto* convertible."

A third reason for the strength of sterling is the growing belief that the sterling area will be greatly helped by the U.S. and the World Bank in its efforts at increasing production of raw materials and finished goods which will reduce the dependence of this area on dollar imports. The World Bank's two recent loans to India, aggregating 51 million dollars, for the development of the iron and steel industry and power and irrigation developments, are instances which support this view. The World Bank is also reported to be interested in providing funds for the development of railways in Northern Rhodesia which will help Britain to implement its plan for exploiting the large mining resources of copper, cobalt and chrome. And, finally, the fourth factor contributing to the advance in sterling-dollar exchange rate is the substantial increase of $132 million during January, 1953 in the sterling area's gold and dollar reserves, bringing the total reserves to $1,978 million. Of the increase registered last month—the largest gain for any month in 1952—defence aid from the U.S. accounted for $44 million and gold receipts from the E.P.U. for $48 million, leaving a net addition of $40 million as the result of trade surplus with the dollar area. Although it looks as though this favourable trend will continue in the coming months also, the position is still not comfortable enough for restoring free convertibility to sterling. For, even if the present level of reserves were to double itself in the course of this year, it would still be not far above the level that prevailed just before the Korean war. Accordingly, convertibility can be attempted only if some clear understanding is reached with the U.S. on the role which it will have to play as the world's biggest creditor country.

INDIAN SPICES INDUSTRY

THE emergence of pepper as an important dollar earner in the post-war period seems to have opened the eyes of the Central Government to the importance of the spices industry in the West Coast to the economy of this country. This is evident from the appointment of the Cash Crop (Spices) Committee, now familiarly known as the Spices Enquiry Committee. The object of this Committee is to examine the problems of rationalisation of cultivation and trade and to devise means for augmenting production, improving market practices, enforcing quality control and regulating the trade in such small plantation crops as pepper, cashewnuts, lemongrass, ginger, and cardamom. The Committee, headed by Mr. K. R. Damle, Vice-Chairman of the Indian Council of Agricultural Research, has finished its tour of Travancore-Cochin, Coorg, Mysore and Madras States and has now reached almost the concluding stages of the task allotted to it. Its report to the Government of India is expected to be submitted by about the end of March next. The findings and the recommendations of this Committee are being eagerly awaited by the interests concerned, especially because for some months now these industries have been passing through lean days. The recommendations of the Committee will also be of some interest to the country in general, inasmuch as these crops are one of India's best dollar earners.

The cash crops of Malabar, namely, pepper, cardamom, cashewnuts, ginger, turmeric and lemongrass are among the chief sources of livelihood for the bulk of the rural population in the West Coast of the Peninsula. Unfortunately, like their confreres in other agricultural areas of the country, the growers of spices too are not organised. Cultivation is still being carried on on primitive lines, and the small uneconomic plots hardly lend themselves to the adoption of extensive as well as intensive cultivation necessary for improving the crop. The quality is generally poor and the yield is comparatively too low to make cultivation a gainful occupation. As in other areas, the spice cultivators in the West Coast are handicapped by want of finance which, in turn, forces them into the hands of middlemen who generally reap the advantage of high prices. Despite these handicaps, two of these crops, namely, pepper and cashewnuts, have been able to figure prominently in India's export trade in post-war years.

At present India and Indonesia are the only two countries supplying these cash crops, particularly pepper and cashewnuts, to the world markets. An idea of India's place in these markets can be had from the fact that, of the total demand for 60,000 tons of the two crops, as much as 40,000 tons, or two-thirds of the total, are accounted for by India. In fact, in the season 1950-51 (November to October), Indian exports of pepper reached the peak of over 320,000 cwts. valued at nearly Rs. 24 crores. In the following season, that is, 1951-52, however, the exports declined to 270,000 cwts. valued at about Rs. 19 crores. This decline is attributed to both poor quality and competition from Indonesia. In the case of cashewnuts, on the contrary, the export position appears to be encouraging, but it is capable of further expansion. Both in volume and in value, cashewnut exports have shown a steady improvement during the past three seasons. Thus, from 23,000 tons valued at Rs. 7.21 crores in 1949-50, the exports rose to 24,000 tons worth Rs. 9.54 crores in 1950-51 and to 25,000 tons valued at Rs. 11.45 crores in 1951-52. In spite of this increase, the demand for cashewnuts in the world markets remained unsatiated.

Lack of complete statistics of the cash crops of the West Coast prevents a precise assessment of the contribution of these crops to the wealth of the area. Of course, official figures are available in the *Agricultural Situation in India*, but such relate only to the production of black pepper and ginger. The output of the latter in 1951-52, estimated at 15,000 tons, is the same as in the previous year, suggesting thereby no improvement in production. With regard to pepper, however, there is wide disparity between the official figures and trade estimates. While the former place the production of pepper at about 30,000 tons this season, trade estimates of it vary between 18,000 and 24,000 tons. For other cash crops such as cashewnuts, lemongrass, etc., no reliable figures for the country as a whole are available. However, the figures for the six districts of Madras, namely, Malabar, South Kanara, Salem, Coimbatore, Nilgiris and North Arcot, furnished to the Spice Enquiry Committee, will give an idea of the production of these commodities. According to the Malabar Chamber of Commerce, the annual production of pepper is 8,000 to 10,000 tons, ginger 4,000 tons, cashewnuts 23,000 tons, lemongrass 80 tons, cardamom 100 tons, and turmeric 15,500 tons. These figures exclude the output in the other States, namely, Coorg, Mysore, and Travancore-Cochin. In view of the incomplete nature of statistics, it is hardly possible to evolve the right kind of policies. Consequently, one of the chief problems to be solved by the Spices Enquiry Committee is to suggest measures for the collection of correct data regarding spices in India.

The primary task before the Spices Enquiry Committee, however, is to recommend measures necessary for increasing the production of the West Coast cash crops. As already stated, there is a large demand for these crops, as also for some of their by-products, both from internal and external markets. Although exports of pepper from Indonesia have tended to improve, they are still far below their pre-war volume and with political and economic conditions in that country still not being normal, the prospects are that Indian pepper will be in good demand and that India can easily manage to retain the place it has won in recent years, provided steps are taken to improve the quality and quantity of pepper. Cashewnuts too can hope to sustain the mark it has attained in the export trade of India. But this also requires an increase in supplies. Not only the domestic production needs to be increased but also the facilities for processing the nuts imported from Africa for re-export. Lemongrass, a valuable raw material for perfumery and aromatic industry, is grown widely in Malabar, Travancore-Cochin and in South Kanara, but the prices now prevailing are so low that they are below the cost of production. In order to make this crop remunerative, its cultivation on scientific lines has to be encouraged. Cardamom, besides being an important spice for domestic consumption, is a raw material for the essential oils industry, with considerable export demand. As regards ginger, the country is in an ironical position. It is importing ginger oil and oyleo resin ginger for preparing ginger beer out of extracts from ginger exported from India to foreign countries. There is no reason why this state of affairs should not be ended, by encouraging the manufacture of these by-products within the country. There is also considerable scope for the distillation of essential oil from rejected pepper berries which contain all the qualities of pepper. As the development of all these essential oils industries in the area depends to a large extent on the quality and quantity of these crops, there is every need to see to it that they are cultivated on scientific methods of agriculture. Even otherwise, there is no reason why efforts should not be concentrated on securing better and more production, as it will mean a more remunerative return to those who are engaged in it.

The consensus of opinion among those interested in the West Coast cash crops favours the establishment of a Spices Board on the lines of the Indian Coffee Board. The economic importance of the crops underlines the need for some such organisation to look after their interests and the appointment of a Spices Board answers this need. To this Board can be entrusted the work of bringing about an increase in production and improvement in the quality of these crops. There is plenty of land now lying fallow in the West Coast. It is stated that about 28,000 acres of abandoned coffee area could be conveniently utilised for cultivation of pepper. In other words, the increase in acreage for spices will hardly interfere with production of food crops. Besides, bunding and terracing of land on hills can be of much help in augmenting the acreage under spices. Production on these lands can be improved by adopting methods of intensive cultivation such as selective manuring, growing of good vines, and preventing the incidence of pests and diseases, which are by no means a few, by encouraging the use of pest-resisting seeds.

Frequent booms and depressions have been the bane of the trade in spices. Prices have violently fluctuated, causing a good deal of harm to the grower. Several illegal trade practices have been responsible for these unhealthy oscillations in values. Such can be brought under control by bringing the commodities under the Madras Commercial Crops Act which has considerably assisted growers in getting the benefit of higher prices. A Marketing Committee should be set up under the supervision of the proposed Board, in order to improve marketing facilities and to eliminate undesirable practices such as adulteration, underweight, etc. The proposed Spices Board can also organise research on cultivation of spices and arrange for timely financial assistance through co-operatives and State *taccavi* loans. Given these facilities, one can look forward to a substantial increase in the value of the spices industry to the country's economy.

IKE SCARES BEARS IN MARKETS

TWO MILL DIVIDENDS—FUNCTIONS OF STOCK EXCHANGE—FUTURE OF LIVERPOOL COTTON TRADE

THURSDAY, 5 P.M.

MARKET GOSSIP

THE credit for ending the stalemate on the stock exchanges goes to the U.S. President, Mr. Eisenhower, whose pronouncements on Formosa and the Far East, in the course of his State of the Union message, have revived the war scare not only in this country but also in many others. More than the stock exchanges, it is the other markets which have reacted sharply and perceptibly to Mr. Eisenhower's speech. The bulls in bullion derived considerable inspiration from this speech and made a determined attempt to exploit the technical position of the market to their advantage. Mr. Eisenhower may or may not have scared the Russian bear and its companion in China, but there is no doubt that he has scared the bears in the bullion market. The bears in the other markets also are on the defensive and playing for safety. The talk of peace by the Chinese Prime Minister shortly after Ike's statement has made some of the bulls to pause a little, but, as there is no indication that he really means peace, the general feeling is that chances of the cold war turning out a bit warm are still there. Consequently, the bullish fervour persists in almost all the markets.

* * * *

Despite the excitement created by Mr. Eisenhower's statement, some of the market-men have been careful enough not to ignore the significant remarks of Mr. C. D. Deshmukh at Hyderabad early this week. In the course of an interview to the Press, the Finance Minister indicated that the revised estimates for the current year may show a deficit of Rs. 74 to Rs. 75 crores and stated that revenue receipts were falling everywhere and that even railways were now earning very much less than expected. His observations on the state of the capital market, interest rates, money circulation and price levels suggested that he was trying to reconcile himself to the necessity of having to resort to deficit financing on a larger scale than envisaged in the Five-year Plan. It looked as though he was preparing the public to face such a prospect. Thus, he is reported to have stated: "There is, perhaps, a certain amount of deflation at the moment. It is not apparent over all sectors of national activity, but it is sufficient to affect the success of loan flotations. The only remedy is expenditure on development." Proceeding, he is said to have remarked that conditions would not be the same this year as last year and that next year "we may be able to put more money into circulation and, perhaps, there will be more money for floating loans." If these remarks mean anything, it is that, by next year, the little deflation that we see now will disappear and that there will be inflation again. In other words, prices will go up again. These hints of Mr. Deshmukh have also been responsible for the buoyancy of markets, especially of the bullion and commodity markets, and it looks as though speculators will have pushed up the prices even before Mr. Deshmukh's deficit financing begins to have its effect. Look at what is happening in sugar. The pity of it is that the Government itself is greatly responsible for the high level of prices by keeping back more than 500,000 tons of sugar from the markets, which in turn is accentuating artificial scarcity of sugar in certain parts of the country.

* * * *

The Brady Group cotton mills have always had the distinction of being the first among the Bombay mills to announce their dividend results. True to this tradition, the Directors of New Great and New City decided, at their meeting held today, on the dividends for 1952 which they would recommend at the forthcoming annual meetings of these companies. The ordinary shareholders of both the companies will get, according to the Directors' proposal, a dividend of Rs. 10 per share (of Rs. 100 each). As compared with the dividends for 1951, this represents a fall of Rs. 2-8 per share for the shareholders of New Great and Rs. 5 per share for those of New City. In terms of percentage, the decline is 20 in the case of New Great and 33⅓ in the case of New City. A comparison with the previous dividend records of these companies shows that, in the case of New Great, the proposed dividend is the same as that paid for 1949 and 1950, while, in the case of New City, it is the lowest since 1948, as will be seen from the following figures:

	(Per share of Rs. 100 each)	
	New Great	*New City*
	Rs. a.	Rs. a.
1947	10 0	10 0
1948	8 1*	11 0
1949	10 0	11 0
1950	10 0	12 8
1951	12 8	15 0
1952	10 0	10 0

* Capital was doubled in this year by the issue of bonus shares and the dividend for this year and subsequent years are on the increased capital.

* * *

The reduction in the dividends of these two companies could hardly be regarded as surprising, considering the heavy losses suffered by the industry consequent on the slump in March-April, 1952, as well as in September of the same year. In fact, if there is anything surprising about it at all, it is that the cut in dividend is not as sharp as was expected. Our own information is that it would have been so, had the Directors decided to base the dividends on the actual profit earned by the companies. It is understood that the profits of New Great and New City have sustained a shrinkage of no less than 55 per cent. and 68 per cent., respectively. If, in spite of such a big recession in profit, they have made only a modest reduction in dividend, it is obvious that they must have drawn from the undistributed surplus of the previous years. They may have done this either by a straight withdrawal from the reserves or by crediting the refund of E.P.T. to the appropriation account. When the full statements of accounts of these companies are published, we will know what exactly they have done.

* * * *

News about the Brady group dividends, referred to above, has, however, had no effect on the textile section of the Stock Exchange. The value of New City has remained unchanged, evidently because these shares are well held. New Great has lost Rs. 2-8, from Rs. 157, the rate prevailing just before the dividend was known to the market, to Rs. 154-8, the day's closing rate. As regards other textile shares, the trend has actually been upward. Apart from the general improvement in the tone of the market engendered by fears of the extension of the Korean war to other countries in South-East Asia, the chief reason for the spurt in textile shares is the encouraging report about the trend of the cloth market. It is stated that the offtake of cloth is gradually improving and that the current prices of cloth and yarn offer a fairly reasonable margin of profit. Export enquiries from Australia, New Zealand, Burma, and some of the Middle East countries, it is further stated, have revived. Market circles, are of the view that the possibility of lower dividends by mills for 1952 has already been discounted and that the market is now looking ahead.

* * *

Occasionally, one hears it suggested in this country that a stock exchange serves no social purpose and that it is only a gamblers' den. Although there can be no arguing with those who will not only refuse to be convinced but will regard their ignorance of financial institutions as a virtue in itself, a clear account of the major functions of a stock exchange is available for disinterested students in the address, which Mr. John Braithwaite, Chairman of the London Stock Exchange, delivered in London. Being the Chairman of the foremost of the world's stock exchanges and also the oldest—the London Stock Exchange, on which 10,000 different securities of the value of £25.000 million are quoted, had several years of unorganised existence before it occupied its present site in Throngmorton Street, in 1801—Mr. Braithwaite is certainly well qualified to speak with authority on the immensely beneficial role which an institution, such as the stock exchange, plays in the national economy. Referring to the London Stock Exchange, Mr. Braithwaite said that its chief functions were: (1) to provide a market and market facilities for keeping in efficient circulation the great mass of existing securities; (2) to provide facilities and assistance in the raising of fresh capital for Government and industry; and (3) to assist the assessment and the collection of Estate Duty. Now, all these functions do serve a social purpose. If there were no marketability for shares, people would not risk their savings by investing them in shares. The stock exchange, as Mr. Braithwaite said, is a very big part of the machinery through which the public provided new capital. Again even the socialist agitators against stock exchanges must realise that the State would find it extremely difficult to collect Estate Duty, if there were no stock exchanges. It is the official list of quotations that provides an index for the valuation of estates. The stock exchange provides the market through which the estate could be liquidated and the money raised to pay the duties. Thus, if governments find it easy to wield the great weapon, the Estate Duty, it is because there is a stock market where investments could be assessed and sold, if necessary.

* * * *

Will the Liverpool cotton market be reopened? The recent decision of the Association to admit private limited liability companies to full trading membership of the Association has raised the hope that this Association, closed for over a decade now, may re-open for trading. In a circular addressed to the members, the Directors of the Association said: "The first step should be taken now as a matter of urgency to give potential new trading members time to reorganise their affairs in readiness for a possible reopening of the futures market, which, in rapidly changing world conditions, might come with unexpected suddenness." The Directors have now followed up this circular letter by getting the members agree to their proposal to admit limited liability companies to membership of the Association. The importance of this change will be clear when it is realised that the Association has, in the past, limited its membership to partnerships. This restriction was intended to ensure personal financial responsibility for business transacted in the market. But it is now felt that, unless the Association has a broader financial base, it cannot possibly work a futures market successfully enough. Individual traders, who were the backbone of the futures trade in cotton, have now either left the trade or are too poor to take up personal financial responsibility. Also, cotton is now a much dearer commodity than it was in pre-war years and trading in cotton, therefore, demands larger financial resources than in the past. These two factors explain the change that has been effected in the Constitution of the Association—the change, which now permits limited liability companies to become its members. Another change, which has been effected, is the one which relates to settlements. There will be daily settlements, in contrast with the weekly settlements which prevailed in pre-war years. This change, it is believed, will provide the necessary safeguard to replace the former personal responsibility.

* * * *

Liverpool, it may be recalled, was one of the vertices of the cotton triangle in pre-war years; the other two being New York in the West and Bombay in the East. The New York cotton market has, despite frequent interruptions, continued to function through the war and post-war years. The Bombay cotton market had a chequered career during this period but was finally re-opened early this year. The Liverpool cotton market, closed since 1942, is the only important cotton market of the pre-war years, which has not yet been re-opened. Although cotton has remained a controlled commodity in the U.K. for over a decade now, many steps have been taken to give greater freedom for trading in that commodity. Last year, spinners were allowed to make their own arrangements for importing their cotton requirements; they were allowed to "opt out" of the Raw Cotton Commission. Free imports of cotton were permitted in September, 1952. Now, the users of about 30 per cent. of the cotton requirements of the British textile mills have exercised their right to make their own arrangements for the import of cotton. And it is now confidently predicted that more and more spinners will leave the tender fold of the R.C.C. Early this year, the Government followed up its earlier measures, designed to give freedom to cotton trade, by announcing that private merchants would be permitted to build up reserve supplies of non-sterling cotton for contracting-out spinners. Thus, the trend is towards gradual decontrol of cotton. Judging by this trend and also by the more general desire of the present British Government to restore freedom to trade and industry, it seems as though it will not be long before the Liverpool cotton market begins functioning. The one factor, which, however, seems to deter the British Government from agreeing straightaway to this starting of a futures market in cotton, is the fact that for the U.K., as for many other cotton-consuming countries, cotton is primarily a dollar commodity. Any large imports of cotton will constitute a serious threat to the country's dollar reserves. If sterling gathers more strength—or the dollar becomes less scarce than now—the Government will be in a much better position to take a favourable decision on this question of the resumption of forward trading in the Liverpool cotton market.

* * * *

Brazil is now desperately trying to find buyers for its cotton stocks. Although no precise figures of the stocks which that country's cotton marketing authority, the Bank of Brazil, holds are known, it is estimated that the Bank has over 400,000 bales of unsold 1951-52 cotton. Another 1,600,000 bales are anticipated from the current crop. The Bank has advertised its readiness to sell abroad supplies of the 1951-52 cotton crop. In London, it has advertised in the Press inviting tenders for the purchase of cotton. Last year, the U.K. took only 2,500 bales of Brazilian cotton, as against 300,000 bales in 1951. It was reported recently that Brazil was negotiating for a barter deal with the U.K. for the supply of aircraft against its own cotton. From recent reports, it would appear that the barter deal has not yet been concluded. The quantity of cotton involved in this deal is only 80,000 bales, so that, even if the deal were concluded, it would still leave Brazil with sizable stocks to dispose of. The chief difficulty with Brazilian cotton is its price. The cotton held by the Bank has been quoted at prices some 50-60 per cent. above world parity. Brazil's customers paid high prices so long as there was a world scarcity in cotton supplies. But now, the world supply position has improved. Among others, Pakistan and Turkey have large stocks to dispose of. It is, therefore, unlikely that Brazil will be able to realise any premium over world parity levels, even if its advertisement for tenders finds an adequate response from British cotton merchants. Pakistan too is trying to arrange barter deals for disposing of its huge cotton stocks, but these too will not succeed, since everyone knows the desperate position in which it finds itself to-day. Feelers are being sent across the borders to India and reports of a trade agreement are in the air. India should not fall a victim again to the manœuvres of the Pakistan Government. The Indian Government should keep aloof and allow the trade between the two countries to take place in the normal course; and there is no doubt that it will take place when conditions for it become favourable. There is, in any case, no great urgency for India to enter into a trade agreement with Pakistan.

* * * *

Men engaged in India's foreign trade and others abroad, who have business relations with India, will be delighted to learn that Indian insurers are now providing better facilities—and that, over a wider area—than formerly. Because foreign business, transacted by Indian insurers, constitutes an important part of invisible earnings which accrue to this country, any attempt made by the insurers to develop this business deserves to be welcomed. It is, of course, essential that only the best organised among our insurers should be allowed to go abroad, if they are to fulfil their role as the unofficial ambassadors of this country. If an Indian concern failed abroad, it would give a serious setback to our country's commercial reputation. From this point of view, it is, perhaps, just as well that it is the leading Indian insurer, the New India, that has ventured into foreign fields, formerly unknown to Indian insurers. Addressing its last annual meeting, the Company's Chairman, Mr. A. D. Shroff, said: "I am happy to inform you that the response for New India in all the countries where we have entered has been most encouraging." It is learned that Mr. Shroff, who is on a business tour of the Eastern and Far Eastern countries will inspect the business operations of the Company. It is further learned that the management will soon widen its present network of foreign branches and agencies by opening new branches in Germany and Italy and by placing its present services in Indonesia on a firmer basis.

STOCK EXCHANGE ACTIVE

SPURT IN IMPERIALS TEXTILES FIRM

(From Our Own Correspondents)

BOMBAY, *5th February*

THE three-week old spell of listlessness on the Stock Exchange was thrown off during the week under review which was shorter by two sessions when the market did not function. Thus, on Friday the 30th January, it observed the death anniversary of Mahatma Gandhi, and Saturday, being the day following the fortnightly settlement, it remained closed. In the remaining sessions the market displayed a buoyant tone under the stimulus of several helpful influences. The chief bullish factor was the fear of a possible war, as indicated by President Eisenhower's dramatic announcement that he was ordering the withdrawal of the U.S. Seventh Fleet from Formosa and that he would denounce the Yalta Pact. Besides, bright prospects of an early trade agreement between India and Pakistan resulting in exchange of Indian cotton textiles and coal for Pakistani jute and cotton also aided the bullish sentiment. Good enquiries for textile shares on reports of substantial improvement in offtake and from some foreign countries imparted additional strength to the market. Bulls lending fresh support and bears coming in to cover their sales, a fairly brisk trading set in and equities advanced smartly over a wide front. Advices from Calcutta that the market at that centre was also responding favourably fanned the enthusiasm of speculators.

There was, however, no spectacular and unhesitating advance, as at high levels profit-taking set in to prune the top values. This was more in evidence in the course of to-day's trading because of the new cease-fire move in Korea, proposed this time by the Chinese Prime Minister. Equities, therefore, finished the week below the best levels of the week. Nonetheless, the list recorded fairly useful gains on balance.

In the steel section, Tata Deferreds opened the new account on Monday with a striking advance from Rs. 1,687-8 to Rs. 1,701-4 on rumours about a favourable conversion ratio. Further headway was made to Rs. 1,720 on short-covering and fresh support. After softening again to Rs. 1,712-8, the scrips gained fresh ground to Rs. 1,735 yesterday. But to-day they chose to close quiet at Rs. 1,725. Tata Ordinaries gained strength from Rs. 299-8 to Rs. 305 before finishing at Rs. 303-8. Indian Irons firmed up from Rs. 23-1¼ to Rs. 24-9, but shed part of the gain to close at Rs. 24-4.

Textile shares formed the most conspicuous section with spirited advances in active trading. Bombay Dyeings exhibited considerable cheerfulness with a rise from Rs. 358-2 to Rs. 373-12, before closing at Rs. 369-6. Kohinoors provided the best feature, having been concerned in some fresh buying orders and spurted from Rs. 271-4 to Rs. 284-8, but closed at Rs. 283. Century appreciated by Rs. 6-4 to Rs. 252, Central Indias by Rs. 3-8 to Rs. 147-8, Finlays by Rs. 5 to Rs. 292 and Gokaks by Rs. 4-8 to Rs. 204-8. Simplex gained Rs. 2-4 to Rs. 176, but Standards were more prominent with a gain of Rs. 11-4 to Rs. 275, as also Svadeshis which rallied from Rs. 229-8 to Rs. 239. New Greats, after being done up to Rs. 157, closed at Rs. 153-8, with a gain of Rs. 3 over the week. Indore Malwas gathered Re. 1-4 to Rs. 88-12, Tata Mills Re. 1-8 to Rs. 45-12. New Citys were, however, dormant at Rs. 175. Sholapurs which came into the limelight last week met with some profit-taking and shed Rs. 45 to Rs. 1,650. Favourable reports that the art silk mills had been able to clear off their accumulated stock gave fresh life to Sassoon Silks which hardened by Re. 1 to Rs. 22-8.

The spotlight in the bank section was provided by Imperial Banks, which strengthened on revival of rumours about issue of bonus shares. As a consequence, the Fully Paid scrips at one time touched a high of Rs. 1,860 yesterday, as against the previous week's closing of Rs. 1,735, but reacted to Rs. 1,812-8. The Contributories rallied from Rs. 423-12 to Rs. 461-4, but finished lower at Rs. 453-12. Centrals (Old) recorded a gain of Re. 1 to Rs. 64-8 and the New shares Re. 1-4 to Rs. 68. Bank of Indias disclosed no change at Rs. 155, as also Barodas at Rs. 116. United Commercials gained As. 4 to Rs. 34-4.

In the insurance section, the upward trend in Orientals noted in the last two weeks gathered considerable momentum this week with a further rise of Rs. 290 to Rs. 6,000. New Indias were better by As. 4 at Rs. 40-8. British India Generals were steady at Rs. 13-4. Jupiters were quiet at Rs. 7-2.

Sustained investment support to select scrips was a feature of the electric shares. Ahmedabad Electrics were well favoured and they rose by Re. 1-6 to Rs. 114-6, Andhra Valleys hardened from Rs. 1,392-8 to Rs. 1,396-4, Tata Hydros from Rs. 146 to Rs. 148-4 and Tata Powers from Rs. 1,482-8 to Rs. 1,491-4. Bombay Suburbans moved ahead from Rs. 121-14 to Rs. 124-6 and Surat Electrics from Rs. 118-2 to Rs. 119-6.

Miscellaneous industrials also participated in the general buoyancy with fair gains all round. Alcocks put on Rs. 6-4 to Rs. 297-8, Associated Cements Rs. 2-8 to Rs. 169-8, Belapurs Rs. 2-8 to Rs. 218 and Bombay Burmahs Rs. 6-4 to Rs. 370. B.I.C.'s gathered As. 3 to Rs. 9-8, Indian Coppers As. 1½ to Rs. 3-3½ and Premier Constructions Rs. 2-8 to Rs. 84-8. Shivrajpurs were taken up from Rs. 52 to Rs. 54-8. Tata Chemicals changed hands higher at Rs. 9-5, as against Rs. 8-13½, and Tata Oils looked up from Rs. 32-8 to Rs. 33. Wimcos were bid Rs. 5 higher at Rs. 220.

* * * *

Calcutta Stock Exchange

CALCUTTA, 4*th February*

Trading during Saturday and the last two days on the Calcutta Stock Exchange presented a cheerful appearance, and although the volume of transactions was limited, gains recorded, especially yesterday, wiped out the losses witnessed on Wednesday and Thursday last. In some cases, yesterday's quotations were the highest for the week. Friday was observed as a holiday in view of the lunar eclipse. One of the major incentives for the change in sentiment would appear to be fears of a possible war following the withdrawal of the American fleet from the Formosan waters.

Anticipations of a revision in the export duties on jute goods were reflected in a slight rise in jute shares. The improvement was however, not very pronounced, as operators were cautious in buying. Even if the national exchequer were to take a decision to revise the duty on sacking or hessian or both, an immediate announcement to that effect is overruled since, with the Budget so near, the Finance Minister would naturally like to include any such announcement in his budget speech to Parliament on 27th February.

The Government of India's decision to extend the free licensing period for export of cotton piecegoods up to the end of June caused a mild upward trend in the textile section. Business was sought in Elgin Mills up to Rs. 17-2, and Muir Mills held firm ground at Rs. 215. New Victorias realised Re. 1-4, but Cawnpores were easy at Rs. 8.

A feature in coals was the jump in Bengals to Rs. 520 from Rs. 305. Burrakurs, which had earlier been smashed to Rs. 10-1, gradually rose to Rs. 10-10 during the last three sessions.

Yesterday proved to be a hectic day for jutes, and a good number of shares changed hands at advancing rates. The gains in comparison with the previous easiness should be described as modest. Speculative Howrahs closed yesterday at Rs. 23-8, showing a gain of Re. 1-4 during the week. Anglo-Indias had buyers at the higher rate of Rs. 226 as against Rs. 214 earlier, while Barnagores were rushed to Rs. 158 from Rs. 149. Dalhousies ascended by two points to Rs. 233, Orients were steady at Rs. 183 and Nationals were wanted at Rs. 24 as against Rs. 23-10 earlier. Kinnisons were better at Rs. 199 as were Champadanies at Rs. 162-8. From Rs. 18-14, Agarparas improved to Rs. 19.

Indian Irons, in the engineering section, were strongly supported yesterday, and the improvement to Rs. 23-14 from Rs. 23-8 was impressive; the opening last Wednesday was Rs. 22-14 and the week-end closed at Rs. 23-3.

Tea shares were steady. Hantaparas advanced to Rs. 118 from Rs. 113-8, and Tezpurs at Rs. 15-10 added As. 8. Hasimaras remained unchanged at Rs. 24-4, East Indias coming to business at Rs. 16-14. Interest was shown in Basmatias at Rs. 22, and Dufflaghurs featured with a rise to Rs. 29-4 from Rs. 27-14.

In the miscellaneous section, Airways India further spurted to a high of Rs. 10-15 from Rs. 9-12, and Indian National Airways advanced impressively to Rs. 3-14 from Rs. 3-7. Rallis received attention at Rs. 71, while Indian Cables were steady at Rs. 18.

* * * *

Madras Stock Exchange

MADRAS, 3*rd February*

Following the announcement of a further power cut by 15 per cent. (aggregating in all 50 per cent.) from 1st Fsbruary, in areas served by the Papanasam-Pykara-Mettur hydroelectric grid, the Madras Stock Exchange presented colourless conditions. Textiles having been adversely affected by the cut, ruled easy. Lack of demand for cloth from important consuming centres was an additional depressing factor in this section. Coffees and rubbers too remained featureless in the absence of any encouraging developments. Tea shares, however, came in for some selective buying on encouraging demand for good quality teas from the U.S., Canada and the Continent. But miscellaneous shares lacked strength for want of enquiries. On balance, a general decline in prices in almost all sections was noticeable, with the volume of business done being relatively small.

Despite the announcement of export quotas in yarn for mills, textile scrips sagged. This was because the quantity allowed for export is considered to be not large enough to benefit the textile mills. As a result, Radhakrishnas, Rs. 100 paid-ups, declined by Rs. 6 to Rs. 134 and Rs. 50 paid-ups by Rs. 2-8 to Rs. 67-8. Dhanalakshmis and Balasubrahmanias were lower by Rs. 2 each to Rs. 178 and Rs. 28 respectively. Rangavilas lost Re. 1 to Rs. 41-8. Maduras were lower only by As. 6 to Rs. 33-12, although the mills are unaffected by the power cut, being rumby steam. Metturs, however, put on Rs. 2-8 to Rs. 181 and Bangalore Woollens Re. 1 to Rs. 215.

There has been greater demand for better quality teas not only for export but also for internal consumption. The demand was reflected in Nonsuch Teas which gathered As. 4 to Rs. 22, Periakaramalais and Haileyburias were each higher by As. 2 to Rs. 23-4 and Rs. 12-6 respectively. Chembras were better at Rs. 2-9½.

But for a few scrips which spurted on speculative demand, rubbers generally ruled almost quiet on reports of accumulation of stocks in growing centres. Nemmenys lost As. 2 to Rs. 9 and Cochin Malabars an anna to Rs. 6-3.

PUNJAB NATIONAL BANK LTD.

The Punjab National Bank Ltd. has earned a profit (subject to audit) of Rs. 34,12,477 for the year ended 31st December, 1952, thus almost maintaining the profit for 1951, which amounted to Rs. 34,17,567. Out of this sum, the Directors have paid Rs. 5,48,462 as bonus to staff, which compares with Rs. 377,201 paid for 1951. The sum set apart for charity has been enhanced from Rs. 20,374 to Rs. 42,256. The amount utilised for scaling down Pakistan assets, under the Displaced Persons (Debts Adjustments) Act, 1951, is Rs. 7,92,275, as against Rs. 8,98,673 appropriated in the previous year. Last year, the Directors placed, it may be recalled, a sum of Rs. 10,67,864 for reducing the book value of the Bank's investments in Government securities and debentures and Rs. 1,25,208 for writing down the other assets. A sum of Rs. 10,00,000 has been set aside for taxation, which is Rs. 9,00,000 more than what was provided a year ago. An *ad-interim* dividend of 6 per cent. per annum, free of income-tax, was paid for the half-year ended 30th June, 1952, which absorbed Rs. 2,62,500. No interim distribution was made last year or, for that matter, in any of the years since 1946 when an interim dividend of 12 per cent. per annum was paid. The appropriations now made, leave a sum of Rs. 7,66,983 which, together with the unappropriated surplus of Rs. 5,33,829 (Rs. 55,583) brought in from the previous year, makes available a sum of Rs. 13,00,812 (Rs. 8,83,829) to be further appropriated.

GILLANDERS ARBUTHNOT AND CO., LTD.

The accounts of the Pakistan subsidiary of Messrs. Gillanders Arbuthnot and Co., Ltd. will be closed, in future, on 31st December every year, instead of on 31st March as hitherto, and not the accounts of the Indian Company, as was reported on page 126 of our issue of 24th January, 1953. This will enable the Indian Company to submit its accounts, which are closed as on 31st March, very much earlier than in the past.

NEWS IN BRIEF

A SPECIAL conference of General Managers of Railways will be held in New Delhi on 5th and 6th March, 1953.

Twenty-five pending Bills will be discussed and 41 new Bills will be introduced in the Budget session of Parliament.

Supply of electricity to all industrial loads in Travancore-Cochin State has been cut by 20 per cent. with effect from the 1st inst.

The P.E.P.S.U. Government expects to complete its programme of consolidation of land holdings in the State by the end of the year 1955-56.

The Himalayan Airways Ltd. will shortly be starting a weekly air service to Teheran from Bombay. The necessary permission has been granted by the Government of India.

The Community Development Programme will be extended during the next financial year to 55 more development blocks, in addition to the 75 blocks in which field operations began all over the country on 2nd October, 1952.

The North-Eastern Railway has decided to give top priority for transportation of tea in and out of Assam and has agreed to take immediate steps to clear the surplus stocks of tea now lying in different centres for want of proper transport facilities.

The U.P. Government proposes to install an animal-driven electricity generating machine in the community project areas of Gazipur and Azamgarh Districts. This will generate about 2 kw. of electricity if driven by a goat and about 8 kw. if driven by a bullock or camel.

The U.N. Technical Assistance Administration Board has offered to the Government of India the services of two Canadian experts to advise the Transport Ministry on problems connected with the dredging of minor ports and their approaches. The Government is considering the offer.

The Union Finance Ministry is taking steps to strengthen its organisation dealing with economic problems and company and insurance administration. It proposes to set up a full-fledged Economic Adviser's organisation to advise the Ministry on matters affecting the daily life of the country.

The Government of Assam has decided to take over all *zamindaris* of the Goalpara District from 15th April, 1953, under the Assam Management of Estates Act. This will be the first stage of liquidation of *zamindaris* in Assam. The annual income of the *zamindaris* in the aforesaid district is Rs. 35 lakhs.

The Central Food and Technological Research Institute, Mysore, has evolved a process of manufacture of blended curd which will cost less than As. 10 per seer. It has also evolved a process for manufacturing synthetic milk which will have all the qualities of milk. It will cost As. 3 to As. 4 per seer.

The Punjab (I) Government has announced the establishment of an Industrial Finance Corporation. The Corporation will have an authorised capital of Rs. 2 crores, of which Rs. 1 crore will form the issue capital. It will start functioning at Jullundur shortly and will make available medium and long-term credit to new industries, as well as the existing ones.

A draft Bill seeking to abolish *Jagirdari* in Bhopal State has been submitted to the Union President for his assent. The *Jagirdari* Abolition Committee, set up last year by the Government of India, has recommended payment of compensation to hereditary *jagirdars* in one lump sum on a sliding scale, and to those holding life tenure *jagirs* in cash grants during their lifetime.

The Orissa High Court held last week that the Orissa Estates Abolition Act, taken in its whole aspect, was valid and not open to any constitutional objections which were raised in the writ applications filed by eight *zamindars* of Ganjam District. The Court granted leave to the *zamindars* to appeal to the Supreme Court against the High Court's dismissal of their applications.

The Government of Assam has issued a circular to private and Government contractors asking them to stop recruiting workers from outside Assam and to employ for their work the surplus tea labourers from various tea estates of the State. The Government itself will try to absorb surplus labour in their new road and other construction projects. It is also encouraging inter-garden movement of tea labourers, so that those gardens that experience labour-deficit might absorb the jobless tea labourers, instead of recruiting from outside the State.

The Government of India will extend the period of implementation of the Minimum Wages Act in respect of scheduled employments, other than agriculture, by one year, that is, upto 31st December, 1953. The date has already expired on 31st December, 1952. An amending Bill for this purpose will be introduced in the Budget session of Parliament. With the exception of a few, many of the States have fixed minimum wages for employments under the Act. In regard to fixation of minimum wages for agricultural labour, the date has already been extended upto 31st December, 1953.

The Hyderabad Government will shortly constitute a seven-man land commission to advise it on fixing the extent of basic and family holdings under the Hyderabad Tenancy and Agricultural Land (Amendment) Bill, 1953. The Bill will be discussed in the ensuing Budget session of the State Assembly. The Bill defines the holding of a family of five members, including the agriculturist himself, as an area that could be cultivated by it personally and which will yield a net income of Rs. 800 per annum, according to the price levels prevailing at the time of determination. The rent payable by a tenant to his landlord is fixed at four to five times the land revenue. The Bill enables a protected tenant to purchase the land and become the owner by paying to the landholder compensation 15 times the rent in the case of dry land and 12 times in the case of other lands. The minimum area of an economic holding is defined as three times the area of a family holding.

Indian plywood products are technically good and the industry, as a whole, has a bright future, according to Dr. Drotto Kraemer, Plywood Expert of the United Nations, who has just completed a visit to all the plywood factories in India at the invitation of the Government of India. His suggestions for upgrading the Indian plywood products are: (1) care should be taken in the selection of timber used for manufacturing tea chests; (2) Government should take steps for reafforestation of softwood species for plywood and reserve suitable ply logs for the industry; (3) a training centre should be established near Baliapatam where training in different branches of the industry could be imparted; (4) it would be better to have fewer but well-equipped units instead of tiny uneconomical ones; and (5) the bigger units could produce quality plywood and compete successfully with foreign manufacturers and smaller units could combine themselves and buy the necessary machinery and use them jointly.

From Abroad

Newsprint production in Canada reached a record level of 5,687,051 tons during 1952. This quantity compares with 5,516,279 tons produced in 1951. Output during 1953 is expected to go up further to 5,722,640 tons. The U.S.A. imported 4,835,065 tons from Canada last year.

The International Bank for Reconstruction and Development has granted a loan of 18 million Swedish Crowns ($3.15 million) to Finland for the purchase of woodworking machinery. This is the fourth loan that Finland has received from the World Bank. The first loan of $2.3 million has been re-paid.

The British Government proposes to seek sanction of Parliament for £500,000 as contribution this year to the United Nations' extended programme of technical assistance to underdeveloped countries. The contribution will be in addition to the technical aid Britain will furnish to overseas territories and to members of the Colombo Plan.

The K.L.M. airlines will introduce cheap tourist-class fares on all its European air routes next summer. These fares, which have been fixed by the International Air Transport Association and are from 5 to 25 per cent. lower than the standard fares, will come into force on 1st April this year, subject to the approval by the Governments concerned.

The fifth German Handicraft and Trade Fair will be held in Munich from 9th to 19th April, 1953. The railway managements of 10 foreign countries are granting a fare reduction of 25 to 50 per cent. to visitors on presentation of the Fair pass. The German railways are granting to the exhibitors a 50 per cent. reduction for the return freight of their goods.

Natural gas constitutes four-fifths of all U.S. gas supply. U.S. gets its supply of natural gas from an area, which is one per cent. of the total area of the U.S., through a network of pipelines 325,000 miles long and costing $3,000 million. Two out of every five homes and more than 1,250,000 commercial and industrial establishments are being served with natural gas.

Trans World Airlines inaugurated this week the first direct air service between the U.S. and Ceylon. T.W.A. is the only U.S. airline now serving Ceylon. The service will serve Bombay also. The first East-bound flight began on Tuesday last from New York, arriving in Colombo on Thursday. The West-bound flight began on Friday and will reach New York on Sunday morning.

Burma has signed an agreement with the U.S. under which the former will get $1.2 million under Point-Four aid for five new projects in 1953. $950,000 will be spent on public health schemes, $40,000 for equipping an agricultural college, and $41,000 for survey of mineral resources. Burma has already spent $216,000 of American aid for survey of Kalewa Coalfields in Lower Chidwin in Central Burma. The survey has shown the possibility of Burma becoming self-sufficient in its coal requirements.

A general economic survey mission organised by the International Bank for Reconstruction and Development left for British Guiana last week. It will undertake a study of the territory's economic potentialities, and will make recommendations designed to help the Government formulate and carry out a long-term development programme. The mission was organised at the request of the Governor of British Guiana. Mr. E. Harrison Clark, of the Bank's Department of Operations for the Western Hemisphere, will be the mission chief. The mission also includes two other members of the Bank's staff; a consultant on water resources; a transportation expert; and three agricultural specialists. The Food and Agriculture Organisation nominated the agricultural specialists and is sharing the cost of their services. Three of the mission members are American; two are British, two are Dutch and one is French.

PERSONAL

SIR George Schuster, former Finance Member of the Viceroy's Executive Council, who was on a six weeks' visit to India, left for London last week.

Mr. Francois-Didier Gregh of France has been appointed Director of the World Bank's Department of Operations for Asia and the Middle East.

Mr. J. N. Bhan has been elected President of the Indian Non-Ferrous Metals Manufacturers' Association for 1952-53, in place of Mr. G. L. Gabriel.

Dr. Marcolino Candau of Brazil has been nominated as the Director-General of the World Health Organisation, *vice* Dr. Brock Chisholm who has resigned.

Messrs. M. V. Krishnamurthy and M. V. Veerappa have been elected President and Vice-President of the Mysore Chamber of Commerce for the year 1953.

Mr. Cyril Havker, Chief Accountant of the Bank of England, arrived in Bombay last weekend for routine talks with officials of the Reserve Bank of India.

Mr. Vinayaklal Damodardas Jariwala and Mr. Vajeram Reshamwala have been elected President and Vice-President, respectively, of the Surat Chamber of Commerce for 1953.

Mr. R. S. Mani, until recently Counsellor in the Indian High Commission in London and for some time *Charge d'Affaires* in the Indian Embassy at Rome, has been appointed Joint Secretary in the Ministry of External Affairs.

Mr. Pranlal Patel of the Malleable Iron and Steel Castings Co., Ltd., and Mr. Sankalchand G. Shah of the Bharat Tool Manufacturing Co., Ltd., have been elected Chairman and Vice-Chairman, respectively, of the Engineering Association of India, Bombay Region, for the year 1953.

Mr. D. P. Karmarkar, Minister for Commerce, Government of India, left Delhi on Tuesday last to join the Indian Delegation to the fifth meeting of the Committee on Industry and Trade and the ninth session of the Economic Commission for Asia and the Far East, which opened at Bandoeng on 26th January. Mr. Karmarkar is the leader of the delegation.

Mr. I. P. Coats and Mr. C. H. Mackenzie, two Directors of Messrs. J. & P. Coats, Ltd., the well-known thread manufacturers of the U.K., have arrived in Bombay, in connection with the official opening of the Jumra Thread Mills' new factory at Koratti in the State of Travancore-Cochin, on 16th inst. This new factory has been established in co-operation with Messrs. J. & P. Coats, Ltd.

Dr. S. S. Bhatnagar, Secretary, Ministry of Education and Natural Resources and Scientific Research, is the Chairman and Government Director of the Hindustan Housing Factory, New Delhi, which was incorporated as a private limited company on 27th January, 1953. Mr. K. R. P. Aiyangar, Joint Secretary, Ministry of Works, Housing and Supply, is the other Government Director. The representatives of the Indo-Swedish firm on the Board of Directors are Sardar Basaka Singh and Sardar Daya Singh.

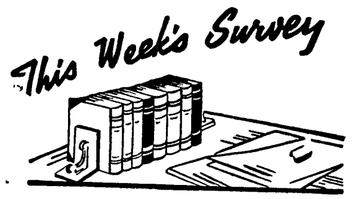
"COMMERCE" 1928

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, 4*th February*

Protection for Petroleum

In view of the proposal that is being seriously mooted for granting protection to the Indian oil companies, it is worth our while to enquire into the form it can take and the resources we have at our command. The companies concerned can seek only one form of protection, namely, an import duty on oil and petrol. It may, however, be assumed that, before any protective duty could be imposed, the question would be examined by the Indian Tariff Board which exists to determine if, and what measure of, State aid should be vouchsafed to any particular industry. The first question which Sir George Rainy, the Commerce Member, will have to decide is whether a case for such an enquiry exists at present. The position of the smaller oil companies is no doubt serious, owing to the rate-war which is straining their powers of competition, but the interests of the consumer who depends more upon imported than indigenous production cannot be left out of consideration by the Government. Let us, therefore, turn our attention to our resources. The figure published last year as the world production of petroleum in 1925—over 151¼ million tons—proved to be an overestimate, the revised figure working out at 147,746,251 tons. The estimate for 1926 is thought to approximate to 150 million tons; of this, India contributed not quite 0.8 per cent. India is now ninth on the list of petroleum-producing countries, but is being rapidly overtaken by the Argentine. One of the features of the year was the advent of the new prolific sands of the Seminole field of Oklahoma. This, combined with an enormous expansion in the amount of light petroleum distillates obtained by cracking and from casing-head sources, was the cause of an almost unprecedented overproduction in the United States and a consequent fall in the world's price levels.



U. S. ECONOMIC POLICY

PRESIDENT Eisenhower has certainly not started off very well in his new career as President of the U.S., considering the storm of protest which has greeted his proposal for the neutralisation of Formosa. But his "State of the Union" message to the Congress where he gave public expression to this proposal was not, on that account, bereft of all idealism. On most other issues, of vital importance to the "free" world, he expressed himself with commendable earnestness of purpose, becoming the great military leader. His statement that the U.S. would "never acquiesce in the enslavement of any people in order to purchase fancied gain for ourselves" will be read with satisfaction by the now greatly diminished colonial peoples of the world who are still fighting their battles of freedom. It is, however, doubtful whether the President had these people in mind, or was merely referring to possible or actual invasion by countries dominated by Communist ideology. In any case, it is a noble sentiment, and is in perfect accord with the American traditions of sympathy for the politically oppressed people.

Mr. Eisenhower's other references, especially his reference to foreign and domestic economic policies, were, as could be expected from a Republican leader, marked by great caution. He said that the U.S. foreign policy would recognise the importance of "profitable and equitable trade." But he seemed to think that other countries, notably Europe, could give a lead by creating "broader markets and more dependable currencies to allow a greater exchange of goods and services among themselves." Evidently, by this he meant that the European countries should make their currencies freely convertible. It is significant that the only help he promised was a revision of the U.S. "customs regulations to remove procedural obstacles to profitable trade." There was no reference to tariff revision—the sort of help which those anxious to sell their goods to the U.S. have been clamouring for. He was, however, willing to recommend to the Congress the study of the Reciprocal Trade Agreement Act and its extension by appropriate legislation. He also pledged his Government's help to stimulate private American investments abroad, though he qualified his statement by reference to the need for other countries to create a "hospitable climate for such investment." The U.S. would also encourage the economical production of manufactured articles abroad. But he hedged this promise with two conditions: the articles should be such as are needed for mutual defence and as are not competitive with the normal peace-time production in the U.S.

On the domestic economic front, Mr. Eisenhower was less circumspect, more direct and definitely more realistic. The "first order" of business will be the elimination of the annual deficit which, in the budget presented by his predecessor, runs to $5.9 billion. The other aspects of the new Government's economic policy will be: (1) proper handling of the burden of defence debt and other obligations, (2) checking inflation, (3) reducing tax burden, (4) evolving constructive plans to encourage the "initiative of our citizens." He said: "As the budget is balanced and inflation checked, the tax burden that to-day stifles initiative can and must be eased." He revealed that the Government was undertaking a study of the entire tax structure and added:

"We must develop a system of taxation which will impose the least possible obstacle to the dynamic growth of the country. This includes, particularly, real opportunity for the growth of small business. Many readjustments in existing taxes will be necessary to serve these objectives and also to remove existing inequalities. Clarification and simplification in the tax laws as well as the regulations will be undertaken."

The American President outlined the basis of the new agricultural and labour policy he proposed to pursue. He would aim at economic stability and full parity of income for American farmers. Only, it would be achieved with minimum "Governmental interference in the farmers' affairs." and through encouraging farmers to use their initiative in meeting changing economic conditions. The emphasis will shift, he said in so many words, from a mere price support programme to the provision of facilities for credit, marketing, rural electrification, soil conservation and other measures of assistance to agricultural economy. Referring to labour policy, he said:

"Especially must we remember that the institution of trade unionism and collective bargaining are monuments to the freedom that must prevail in our industrial life. They have a century of honourable achievement behind them. Our faith in them is proven, firm and final. Government can do a great deal to aid the settlement of labour disputes without allowing itself to be employed as an ally of either side. Its proper role in industrial strife is to encourage the processes of mediation and conciliation. These processes can successfully be directed only by a Government free from the taint of any suspicion that it is partial or punitive."

Such, in brief, is the new economic policy which is being initiated in the U.S. It is not difficult to discern its distinguishing feature—its emphasis on minimum Governmental interference, on simplification of commercial laws, on rationalisation and simplification of tax structure and on reduction of tax burdens. Mr. Eisenhower's address may well be regarded as a model of cautious "rightist" approach to economic problems. If this approach is to be described in one sentence, it cannot be better expressed than in the President's own words, for, he said: "We are concerned with the encouragement of competitive enterprise and individual initiative, purely because we know them to be our nation's abiding sources of strength."

ROLE OF TECHNICAL EXPERTS

India's industrial progress has suffered in the past for lack of facilities for technical training. India would have done well to learn from the West, where technical science has been applied to every aspect of economic life—production, distribution and transport of goods. Indeed, technological progress and technical training are the root causes for the improvement in the standard of living of Western countries. Dr. J. C. Ghosh, Director, Indian Institute of Technology, Kanpur, was certainly not exaggerating the role of technicians when he said, at the twelfth annual general meeting of the Association of Principals of the Technical Institutions of India held at Hyderabad early this week, that "in creating a world of plenty, whether under free enterprise or under mixed economy, no body of men can play a more important part than experts in production engineering and in industrial management."

According to Dr. Ghosh, the soundness of the American system of blending technological education with science and the humanities in the undergraduate stage is proved by the steady advancement of engineering graduates through positions preponderantly technical in nature to those involving administrative and executive responsibility. In fact, more than 80 per cent. of administrative jobs in industry in the U.S. is now held by men who are basically students of technology. Industrial administration in the U.S. is recognised as a profession for which training is necessary and the best background of such a training is a "liberal" engineering education.

The success of India's Five-year Plan depends on how best technical education is provided for the workers. After all, for translating the Plan into action, as Dr. Ghosh aptly remarked, they must have men and women to implement it; it is as much a "human" problem as a problem in supply of physical equipment. No one will deny the fact that, in the field of industrial administration, efforts have not gone beyond the stage of discussion. It was only recently that Sir George Schuster, a former Finance Minister of India, laid particular stress on the need for a proper administrative cadre in India for rapidly expanding industry and emphasised that industrial organisations should develop good recruitment techniques and proper training methods. Dr. Ghosh did well to refer to this aspect and minced no words when he said that the industrial organisation must introduce promotion policies which recognised merit and eliminated favouritism. It was only by following such methods that Indian industry could hope to secure the right type of leadership.

The learned doctor emphasised, in this connection, the need for rapid Indianisation of superior staff of non-Indian concerns in India. He suggested that the representative industrial organisations and educational authorities should come together and take steps to create facilities for studies in industrial administration. In his considered opinion, the present-day world of free enterprise was being assailed by new ideologies and, in self-defence, was developing new doctrines. Industries could not survive in this competitive world, if they were not improved by "continued research." Stressing the importance of the managerial side of industry, Dr. Ghosh hoped that the I.L.O. Expert Committee, constituted with Prof. Mathews as Chairman to examine the efficiency of Indian textile and engineering industries, would suggest steps for not only industrial efficiency but also proper training of staff engaged in production and administration. It is gratifying to be told that the Kharagpur Institute of Technology would offer, with effect from August, 1953, a full-time one-year course in industrial engineering. A useful beginning could be made by other engineering institutions by enlarging the course in industrial economics, which many of the institutions now give as part of engineering education, so as to include industrial administration.

FOOD INDUSTRIES

Inaugurating the symposium on technical aid to food industries, held at Mysore on Wednesday last under the auspices of the Central Food and Technological Research Institute, Mr. K. D. Malaviya, Deputy Minister for Natural Resources and Scientific Research, Government of India, subjected the problems facing the different food industries to a critical review. Technical aid to food industries, Mr Malaviya said, should be planned in such a way that the urgent problems could be approached in an objective manner. Specific problems facing the industries—fruit preservation or biscuit or bakery or meat and fish processing or discovery of new synthetic food—should be investigated, as Mr. Malaviya rightly suggested, from a "practical point of view."

The need for developing the food industries cannot be stressed too strongly, considering the overall deficiency in respect of food supplies. Earnest efforts have been, and are being, made to solve the food crisis, but these have not met with adequate success. On top of this, there is the rapid increase in population, which has brought to the fore the need for bringing larger area under food crops. The basic problem of increasing the land under cereals to meet the demands of a growing population which is almost exclusively dependent on cereals is further complicated by the people's adherence to outmoded conventional methods of cultivation. To effect all the changes needed to meet this problem will require vast sums of money. But financial resources are strictly limited. The scientist could certainly help, if he could provide some short cut, as it were, to the goal of self-sufficiency in food. Explaining the challenge which the food scientist had to meet, Mr. Malaviya said: "Scientific knowledge can alone solve the riddle by processing the unused food materials, using waste products for converting them into edible forms, and by increasing the general nutritive level of our national diet."

Mr. Malaviya made a particular reference to the synthetic rice and hoped that all doubts about its practical utility and nutritive quality would be removed and that there would be a universal acceptance of this nutritive and palatable food. In this connection, he referred to the objection against calling the synthetic product by the name 'rice,' and said that, if anything in the shape of rice possessed the food value and the taste of rice, there was no reason why it should not be called rice. Besides this synthetic rice, the Research Institute has also produced a nutritious drink, "milk", with an agricultural base. The Institute also proposes to effect nutritive improvement in *vanaspati* ghee by compulsory provision of adding vitamin 'A' to this vegetable product. It is now established that vegetable ghee does not contain any harmful element and that it is not injurious to health. In fact, pure *vanaspati* ghee, as Mr. Malaviya said, is "far more beneficial and dependable than impure and adulterated ghee." Naturally enough, he asked as to why we should "not then accept *vanaspati* and be happy about it."

The Deputy Minister for Natural Resources and Scientific Research exhorted the scientists and technologists to consider the score of issues relating to the expansion of the food industry. There are, for instance, issues like the provision of cheaper and more nutritious biscuit for the poor and school-going children and of "cheap and ready energy food" for the worker by blending yeast with cereals and vegetables in a palatable and presentable form. Fruit canning and preservation industry has to be developed in such a way as would make available cheaper and nutritious products. These problems are no doubt being tackled by the Institute. Even so, there is need for carrying the results of its research to factories so as to improve the quality and variety of the products turned out by the food industry.

FILM INDUSTRY

Dr. B. V. Keskar, Union Minister for Information and Broadcasting, referred, in his address to the South Indian Film Chamber of Commerce, Madras, last week, to the film industry's problems and also elucidated the Government's policy towards this industry. He revealed that the Government was considering the suggestions of the Film Enquiry Committee relating to the constitution of a Film Council and a Production Code. He explained, too, the difficulties which stood in the way of establishing a Film Finance Corporation and of introducing a uniform system of tax on entertainments throughout the country.

That the film industry is in a disorganised state is now common knowledge. The Patil Committee on the Indian Film Industry, which submitted its report early in 1951, suggested measures to place the industry on a firm basis. It is a pity that, even after nearly two years, no decisive action has been taken on its recommendations. This is unfortunate, considering that the film industry is a major industry and that it contributes so largely to the revenues of the Central and State Governments.

The need for a Film Council is born of a desire to have a central authority to superintend and regulate the film industry and advise the Central and State Governments on the various problems of the industry on its organisational side. Such a Council, representative of the interests concerned, is expected to assist the progress of the industry on healthy lines. Dr. Keskar explained that the setting up of such a body as the Council involved certain complications, legal and otherwise. But they will not prove insurmountable, if the Government is really interested in the proposal.

The establishment of a Production Code, similar to the one in the U.S., will help evolve certain standards, social customs and conventions. The film industry has made a beginning to export its films to countries in the Middle East, South East and the Far East. If Indian culture is to be properly represented, it is of utmost importance that strict control should be exercised on the quality of films exported. It must not be forgotten that visual impressions are far more difficult to erase than the impressions created by other forms of publicity.

The idea of a Film Finance Corporation for the industry is gaining an increasing volume of support. The Film industry is unable to finance production. Box office collections are dwindling. And many producers are compelled to borrow at very high rates of interest. This position is aggravated by the fact that the cost of film production has increased. Dr. Keskar explained how the Government could not, in the context of its present financial position, be expected to set apart Rs. 1 crore for the purpose of setting up a Film Finance Corporation. Perhaps, the industry would itself be well advised to make a beginning in this direction and thereby strengthen its claim for Governmental assistance.

The demand for a uniform system of entertainment tax throughout the country has been made for a long time now. The entertainment tax is a purely State subject and the Centre cannot be expected to influence the States in this matter. Further, it is a debatable point whether uniformity in entertainment taxes throughout the country is possible at all, considering that there is no uniformity in the purchasing power of the people in different parts of the country. If what the industry demands is the acceptance of certain norms in this sphere by the State Governments, it is a reasonable demand. But then, it is up to the representatives of the industry to place concrete proposals before the State Governments for their approval and support.

(Concluded from third column)

Ceylon, Burma and Malaya has deteriorated considerably. Besides, Mr. Jawaharlal Nehru has to carry a heavy burden of work and responsibility as the Prime Minister and President of the Congress, apart from his daily work at the Ministry of External Affairs. So long as he is there, the Ministry is bound to be more preoccupied with the fate of the Koreans or the aspirations of the Moroccans and Tunisians than the difficulties of the Indians settled abroad. If Mr. Rajagopalachari is destined to stage a return to New Delhi and to all-India politics, why not entrust him with the work of this Ministry. As a realist, with his feet firmly planted on the soil of India, he may restore this much needed balance at the Ministry of External Affairs.

OFF THE RECORD

(By "ROVER")

WHEN those who have to fill in allotted columns in newspapers and periodicals, day after day or week after week, fail to find a suitable topic to comment on, they fall back on the highly interesting and speculative pastime of reconstructing a State or the Central Cabinet. Apart from helping them to do the required number of words for their column in a highly irresponsible and because of that the only enjoyable manner, this game gives us, columnists, a fleeting illusion of both political power and social position. Ministry-making, to a Prime Minister or a Chief Minister, must be a real headache, because, to him, it is anything but a pastime. It is a task, just as much as playing cricket, soccer or tennis is dull drudgery and not a game to the professional. I have seen tiny girls bathing and dressing their dolls and putting them to bed with great ecstasy and rare absorption, growing up into angular and frustrated young matrons scolding and spanking their progeny. On the other hand, I have an old friend, who, creaking in every joint at sixty-five, puts in more laborious and concentrated work in his garden than his own sullen scamp of a paid gardener and getting great joy out of his exertions, which cannot but be painful physically.

But, if Ministry-making is a hard and back-breaking job for a harassed politician, there is one thing even harder and more hazardous as well. This is reconstituting a Ministry which is already made and in harness. An average potter can easily make a workable pot out of a lump of clay. I have yet to come across a potter who can put together a broken pot or render a cracked one sound. But, oddly enough, we columnists take a greater delight in the make-believe game of repairing an unsound and ill-functioning Cabinet than putting together a new one. Perhaps, the reason for this lies in the fact that, while you indulge in playing Government-making only at rare and long intervals, there is nothing to prevent you from engaging in the nursery game of re-arranging the portfolios of some of the pompous do-nothings or sending out a couple of duds as Governors or Ambassadors and adding a favourite man or two of your choice into nice little sinecures at New Delhi, at any time during the long interval between the general elections.

Though, individually, our Ministers are too cold-blooded or much too tightly glued to their chairs of office to resign merely because some of their pet policies are reversed or some of their choice adventures in welfare legislation declared *ultra vires* the Constitution or as beyond their competence or that of their easily controlled party majorities in the legislatures, death and illness are no respecters of persons and potentates and offer us welcome opportunities for kite-flying from time to time. When one's heart is set on some engaging pursuit, any pretext is good enough to serve as an occasion. You must, therefore, not take it amiss if I stray for a while into an idyllic fairyland and indulge in day-dreams. Writing about money is far more boring and taxing than making it and one, who is forced by his circumstances to do this spartan and unsavoury job, deserves a good deal of latitude, when his soul rises in revolt and wants to run away from the sight, smell, rustle or sound of rupees, or even dollars, as purely algebraic entities and not something on which he can lay his hands and decamp with on a grand spree. And, in any case, I am not at all selfish about it but propose to take you also on the jaunt to share in my day-dreams.

Besides, there is already a touch of spring in the air, which, whatever it might do to young men's fancies, is known to have stimulating effect on the speculative faculties of persons like me, who are beyond their prime and who are incorrigibly interested in the affairs of other people. Fortunately, Mr. N. Gopalaswami Ayyangar, the Defence Minister at the Centre, has provided an excuse for the speculative reconstruction of the Union Ministry by his prolonged illness. Mr. K. N. Katju, too, is reported to be keeping indifferent health, and straining at his leash. He is also believed to be not feeling quite happy about the way affairs are going in the Government of India and credited with a desire to seek an honourable exist without having to adopt the course taken by Dr. John Matthai or Dr. S. P. Mookerjee. Mr. Kidwai is already feeling restless, because the Food Ministry does not offer him enough room for political manœuvring, while the quiet-looking Mr. Lal Bahadur Shastri is nothing if not ambitious and regards the Transport Ministry as only a stepping stone for his vaulting ambitions. And finally there is a powerful section seeking promotion for Bombay's Chief Minister, Mr. Morarji Desai, not out of any feelings of personal regard or esteem for him, but to free Bombay from his baleful and baneful influence. All this provides enough ammunition for clever sniping and taking a few pot-shots at high celebrities, whom their very eminence make good targets.

Habit dies hard and my eyes turn first to the Finance Ministry and then on to that of Commerce and Industry. With regard to the former, nobody, not even those who cannot bring themselves to see eye to eye with Mr. C. D. Deshmukh on many an important aspect of public finance, desires a change. Mr. Deshmukh may not have pleased many; few Finance Ministers can. But he has never given offence to any and that is a great thing in democratic politics. It is greatly to his credit that even dyed-in-the-wool Congressmen have reconciled themselves to his occupying one of the key-posts in the official hierarchy. At any rate, they do not try to ambush him, as they did his predecessors in office or, perhaps, he is too wary to give them a chance to assail him. Besides, there is hardly anybody in the motley crowd who would dare to draw upon himself the ire of the Prime Minister by throwing stones at his right-hand man.

Mr. T. T. Krishnamachari, on the other hand, believes in aggressiveness, but is ready to cave in if he meets with formidable opponents. For a politician, he speaks too much and too often, but, on the whole, the business community has more to complain against the words he utters than against his actions. Bombay is his *bete noire* and he is unwisely apt to frown upon the textile trade and, to a certain extent, even on the textile industry. But, on the whole, he is a harmless man and certainly less negative than his predecessor. Mr. Nehru has made him his Commerce and Industry Minister, so let him be.

Mr. Rafi Ahmed Kidwai has not done at all badly, even though the elements have been dead against him. In any case, he has got all the State Governments on a string, which is more than any of the Food Ministers could do. If Mr. Deshmukh could take a tip or two from him about getting the State Finance Ministers to fall in line with him and to listen to his wise advice, the country's economy would certainly be greatly benefited. But Mr. Kidwai wants something more important than the Ministry of Food and Agriculture; he is sure to get it in his own silent way. I doubt if he wants to go back to his first love, the Railways. I very much suspect that he will not feel happy till he is installed in the Home Ministry and he has enough influence with the Prime Minister to get him to bestow it on him, if Mr. Katju really wants to be relieved of this burden. One would, however, wish Mr. Kidwai to continue for some time more at this rather difficult post, though one would, at the same time, wish that he would not be guided so implicitly by the voice of his secretariat in important administrative matters.

Mr. Lal Bahadur Shastri is a comparatively younger man, though one must concede that, unlike many Congress leaders, he is also an able and conscientious administrator. A little more polish and a little more punctuality in his public engagements might even shape him later into a good politician as well. But he can certainly afford to wait and, in his own interest, he should not be in a hurry to climb up higher. Many people go to the top of the Kutub Minar near Delhi, but all come down and some who get badly rattled by the height, are even known to come down more precipitately than safely.

And having disposed of the Ministries more intimately allied to the economy of the country, let me look at the others, since there is still some space left at my disposal. Being innocent of any myself and *Commerce* not being interested in it, I do not feel competent or called upon to evaluate the policies and the activities of the Ministry which deals mainly with Culture. Education being in the States' Schedule, I cannot imagine why a whole independent Ministry should be maintained for this illusive and indefinable entity called Culture, but then Maulana Abdul Kalam Azad has naturally to be provided for and he certainly is out of harm's way in this Ministry. The same might be said of the Ministry of Health and the gracious lady who presides over it. With so much talk these days of an artistic revival in the country, one must not grudge a little æsthetic touch even to the Government of India and few would question that the Maulana and the Rajkumari do provide it, even though it be at considerable expense. When there is so much waste all round, a few crores on knick-knacks would not make an appreciable difference.

Every day brings in a fresh name for the Ministry of Defence. There are already six kites flying in the sky. I, therefore, do not see any reason why I should not add one more of my own, as it would in no way overcrowd the heavens. If Bombay is to be robbed of the services of Mr. Morarji Desai and if New Delhi is really enamoured of him, the ideal place for him would be the Defence Ministry. Though he claims to be a man of peace, temperamentally he should feel more at home in the more circumscribed world of the three defence services. While the strong and well established conditions of armed forces would be able to keep some of his fervour in check, Western India, in general, and Bombay, in particular, will experience some relief and regain a part both of its lost gaiety and glory. Commerce and Industry, too, will escape the feeling of asphyxia and be able to breathe more freely and function more normally. Now that there are really two candidates in the field to lead the Bombay Ministry—Mr. S. K. Patil and Mr. N. V. Gadgil—Mr. Desai also will be able to leave with an easy mind, unobsessed by his own indispensability. It would be cruel to ask Mr. V. T. Krishnamachari to shoulder the burden of an important Ministry like that of Defence at his age and the right recognition for his great services during the last five years would be to make him a Governor of one of the major States. Mr. Chandulal Trivedi, on the other hand, though ideally fitted to be Home Minister, is just the man for the Planning Commission for seeing that the Plan does not go all awry.

It is not without a good deal of misgiving and trepidation that I approach the most august of all the Ministries of the Government. The Ministry of External Affairs has undoubtedly worked wonders with regard to the enhancing of our country's prestige abroad. The Prime Minister is, however, too much of an internationalist by early training and convictions, not to devote himself more to general questions of war and peace in the world than to look after the interests of the Indian nationals living in foreign and none-too-friendly countries. While India's prestige in the comity of nations has gone up, the condition of Indians in Pakistan, South Africa, East Africa,

WATER DISPUTE WITH PAKISTAN LIKELY TO BE SETTLED

INDIANISATION OF STAFF IN FOREIGN FIRMS

(From A Special Correspondent)

NEW DELHI, *3rd February*

DELHI LETTER

THE conclusions of the tripartite talks between the representatives of India, Pakistan and the World Bank this week on the exploitation of the water resources of the Indus Basin, when released for publication, will go a long way towards the removal of misunderstanding between the two countries on this particular issue. Although it is stated that a joint Press *communique* would be issued shortly by both the countries, it will be more appropriate if the Government of India were to give wide publicity to the full report along with maps and necessary particulars, so that the public and the politicians of Pakistan will get themselves fully apprised of the whole problem from different angles. At any rate, the world at large will know that the fulminations of Pakistan on this issue, as also on many others, are not only unfounded but greatly magnified and exaggerated.

Among the many Indo-Pakistan disputes, three issues stand out prominently. These are: Kashmir, refugee property and the division of the water resources of the Indus Basin. While the first is largely a political issue, the latter two are mainly economic, affecting millions of destitute refugees, and in respect of which Pakistan has been enjoying a preponderant advantage. It is mainly as a result of this that the Pakistan Government is extremely reluctant to come to a reasonable settlement on these questions. It is obvious that, once Pakistan agrees to a reasonable agreement, it will have to pay Indian refugees many hundreds of crores of rupees by way of compensation.

Canal Water Dispute

Take, for instance, the canal water dispute. As a result of the Partition, the irrigated area in the Indus Basin that fell to the share of the Indian Union amounted to scarcely 4 million acres, as compared with 18 million acres to Pakistan. Not only this: more than 80 per cent. of these irrigated lands were owned by the prosperous Sikh and Hindu peasantry. These lands have been and are being exploited by the Pakistanis for the last five years without paying a single pie by way of compensation or rent.

Be that as it may. According to the available statistical data, Pakistan is now using nearly 39.3 per cent. of the Indus waters for purposes of irrigation, as against hardly 6 per cent. utilised by the Indian Union. After the completion of the Bhakra Dam and allied projects, the percentage of the utilisation by India will go up to about 20 per cent. of the total, which will still be half of Pakistan's present usage. Allowing for seepage, etc., of the running rivers through the Pakistan territory, estimated at about 12 per cent. of the total, the balance of water-supplies available for exploitation, by both Pakistan and India at a future date, works out to slightly above 28 per cent. There is, therefore, no meaning in Pakistan crying hoarse on the construction of the Bhakra Dam for the expansion of irrigation in East Punjab. On the contrary India has every reason to plan for the greater utilisation of the Indus waters and this can be done without injuring the interests of Pakistan.

Waterlogging in West Pakistan

There is another aspect of the problem which both the Governments have to take into account on the division of the Indus waters. For instance, one of the serious problems which West Punjab has been facing during the last decade and more is what is known as waterlogging. As a result of plentiful supplies of underground water, only a few feet below surface, cultivation is being hampered, valuable fertile land is being laid waste and, what is worse, this waterlogging is gradually spreading, to the considerable anxiety and annoyance of thoughtful Pakistan statesmen and engineers.

The only way to prevent waterlogging by Pakistan is to construct hundreds of tube wells for pumping this water out and utilising it for irrigation. Pakistan need not depend on water from Madhopur and Ferozhpur headwork canals, the former taking from the Ravi and the latter from the Sutlej on the Indian side. It can, with little effort, supplement these sources from canals constructed from the Chenab, the Jhelum and the Indus. Thus, it can bring more area under irrigation without unnecessarily accusing India. The Indian Union can also help towards this desideratum by supplying electric power to Pakistan tube wells at nominal costs from the Nangal and Bhakra Dams. In this way, India can be in a position to utilise fully the waters of the Sutlej, the Beas and the Ravi, all tributaries of the Indus from the Indian side. This solution will enable India to bring in under irrigation vast areas of desert lands in the Bikaner, Jodhpur and other divisions of Rajasthan. Since the public in India is still ignorant of the whole aspect of the canal dispute, it will be useful if the Government of India brings out a small handbook, presenting the Indian standpoint from all angles.

Obligations on Foreign Firms

The Commerce and Industry Ministry will, in the coming months, be taking some constructive measures with a view to promoting the policy of Indianisation in foreign firms. The Ministry has recently been able to obtain relevant statistics regarding the employment of Indians in the higher ranks in these firms and has found that the percentage is extremely negligible. It will be remembered that, at the recent annual meeting of the Associated Chambers of Commerce in Calcutta, the Commerce and Industry Minister, Mr. Krishnamachari, did some plain speaking to the foreign business community. He then drew the attention of the gathering to the fact that the granting of rights by the Government to non-nationals also imposed obligations on the recipients of those rights. He urged that non-Indian firms should go ahead with the Indianisation of their staff, both technical and administrative, and that they should "encourage Indian firms engaged in insurance, shipping and in the manufacture of ancillary products which can be used by the industries they control." In regard to insurance and shipping, he desired that at least 50 per cent. of the business should go to Indian concerns. Although it may take some time for the Government to implement its policy fully on these lines, a hint has already been given that foreign firms seeking licences and permits from Government will be required in future to give an undertaking that they will not recruit any more foreigners on their staff except with the permission of the Government. Employment of foreign technical personnel is expected to be restricted on a contract basis for a stipulated period, so that foreign firms will be induced to accelerate the pace of training well qualified Indians in positions of responsibility and skill. The whole subject is expected to crop up during the forthcoming session of Parliament when the Citizenship Bill is discussed. It is understood that this aspect of the question in British firms was informally discussed with Sir George Schuster, the late Finance Member of the Government of India, and it is possible that an understanding will be reached between the Government and the British firms. If this materialises, as, indeed, it should, there will be a gradual increase in the number of people employed in the higher ranks of these firms.

Commission For Backward Classes

The appointment of a ten-member Commission by the Government of India, to investigate into the conditions and difficulties of the backward classes of the country, is in pursuance of its policy to provide facilities for their economic development. The Commission is to be presided over by Mr. Kalelkar. Its functions are to determine the criteria on the basis of which any particular class or section of people can be described as "socially or educationally backward"; to prepare a list of such backward classes for the whole of India; to examine the conditions and difficulties of such classes and make specific recommendations as to the steps which the Central Government or State Governments should take to remove those disabilities and to improve the condition of the backward classes in general. Among other things, the recommendations of the Commission will contain some indication of the financial assistance that should be given in the form of grants by the Central and State Governments for the uplift of the backward classes.

PAKISTAN NOTES

NEW STEPS TO MEET COTTON CRISIS

PRIVATE BARTER ARRANGEMENTS CONTEMPLATED

A PROPOSAL to permit private barter arrangements involving import of cotton yarn, artificial silk, sugar, coal, iron and steel, etc., in exchange for cotton exports is, according to reports from Karachi, under the consideration of the Pakistan Government. The proposal will apply to both the dollar and sterling areas. An official announcement to this effect is expected shortly.

The foregoing proposal is one more step—it was only recently that fixation of floor prices for export sales in cotton was announced—in the Government's efforts to solve the most critical position of Pakistan's silver fibre. The quantity of cotton now lying unsold with the traders is as large as 1,500,000 bales (of 478 lbs.). With foreign buyers holding off and internal prices having dropped to very low levels, the cotton trade is faced with an acute crisis. When the Government announced floor prices for export, it was hoped that the banks would assist the trade by liberalising credits and reducing the credit margin from 25 to 10 or 15 per cent. This hope is reported to have since been belied; the banks have expressed their unwillingness to undertake the responsibility until the Government gives guarantee against losses. Large stocks of cotton are also expected to arrive in Karachi from up-country centres, which will further aggravate the already strained storage facilities. Consequently, the holding power of the trade has been reduced.

In the circumstances, the plea for the reintroduction of the Support Scheme has found growing support from the public. There is a section of trade which feels that the Government's efforts to help the cotton trade by fixing export prices, cannot succeed, if nothing is done to stabilise local prices. These suggestions are, however, reported to have been rejected by the authorities who seem to feel that private barter agreements would have a salutary effect on the cotton market and boost up prices.

Assistance to Tea Estates

In our last week's notes, a reference was made to the crisis through which the Pakistan tea industry has been passing. It has since been reported that the Regional Office of the Pakistan Agricultural Development Finance Corporation at Dacca is busy working out preliminaries to give financial assistance, in the form of loans, to the "unencumbered" tea estates. Even those tea estates which, though mortgaged, have a margin for a further charge on their assets are expected to be eligible for obtaining loans. The Corporation will also grant loans for purposes of general agriculture on lands which form part of the tea estates but are not required for tea cultivation, provided, of course, conditions relating to security are fulfilled.

Fertiliser Factory

Arrangements are being made, it is stated, for setting up a fertiliser factory at Daud Khel (Multan Division) in the Punjab. The construction work of the factory, which is to be taken in hand by the Pakistan Industrial Development Corporation shortly, is expected to be completed within three years. The cost of the factory is estimated at Rs. 5.5 crores. The U.S. Technical Co-operative Administration will provide $4 million initially to finance the project. In West Pakistan, it is pointed out, there are large coal and good quality gypsum deposits which will provide the raw materials for the manufacture of fertilisers.

A Pakistan trade mission is expected to leave for Japan shortly to negotiate a trade agreement with that country. The prospects of a trade agreement between Pakistan and Japan are considered to be bright. Japan, it is stated, has been eager to retain its market in Pakistan for cotton piecegoods and yarn, while Pakistan is interested in selling its raw cotton.

About Rs. 30 crores have, according to the latest figures available, so far been spent on refugee rehabilitation by the Central and Provincial Governments. This, however, does not include the cost of evacuation and the sums advanced by Provincial Governments and the Pakistan Refugee Finance Corporation as *taccavi* and loans, respectively. A housing finance Corporation has also been set up by the Pakistan Government with a capital of Rs. 5 crores, which would advance loans to individuals for construction of houses.

AMERICAN LETTER

WAVE OF OPTIMISM IN EISENHOWER ADMINISTRATION

WILL LABOUR CO-OPERATE?

(From Our Own Correspondent)

NEW YORK, *28th January*

THE United States is experiencing at the present time an Eisenhower confidence boom, very similar to the wave of confidence which followed the election of Franklin D. Roosevelt to the Presidency in 1933.

The different status of the U.S. now and then, can readily be seen from the two inaugural addresses. General Eisenhower's speech, in its main emphasis, was international which is in line with both the Korean war and the new world role America has to play.

President Roosevelt's speech, during the depth of the great depression, centered around the theme "the only thing we have to fear is fear itself." Hitler was just coming to power then, too, and war clouds were indiscernible below the horizon.

The General's inaugural message was very well received. In the eyes of Americans, it should have dispelled any fear abroad that the internationalist foreign policy of Washington would be superseded by a certain degree of isolationism. It should have also removed any apprehensions that the previous protectionist policy of the Republican Party would be revived.

Both, it is felt, were valid reasons for the world at large to look with caution upon the new Administration. The hope here is, therefore, that the domestic confidence boom for Eisenhower will develop into a similar international movement throughout the Western world.

It may be enquired: "On what is the American wave of optimism based?"

In the first place, it's essentially a honeymoon feeling. A new man, new surroundings, new leadership, new ideas. Beyond that, General Eisenhower's past accomplishments are such that future hopes are naturally great.

Really encouraging at the moment is the fact that all constructively thinking elements in the United States, individually and collectively, plead for a sane economic policy.

For example, it is becoming more and more evident that the economic and financial leaders of the new Administration are rejecting emphatically the previously held conviction that only a continual spiral of mild inflation can satisfy labour, business and Government revenue.

The new ideas are exemplified by Allan Sproul, President of the Federal Reserve Bank of New York, who advocates an economy which emphasises increased productivity, "taking some related ups and downs in its stride and fitting into place those economic and social improvements which the rate of growth of productivity permits."

It is based on the history of American mass production. The theory is that by greater output, prices can be reduced and goods can be made available for more people. At the same time, profits may rise and permit higher wages.

The practice in the past twenty years has been for Washington to encourage the unions to ask for higher wages which led to a permanent cycle of price inflation. In many phases, productivity was unable to catch up, until the next round of wage raises was granted and only emergency output has made that possible.

In other words, the Republicans propose to put the production horse before the wage cart and they are willing to provide incentives such as lower taxes in order to stimulate civilian output in all lines.

To supplement this plan, and to prove that the previous official inflationary bias is a thing of the past, the new leaders in the United States Treasury are inclined to refund a part of the huge short-term bank-held debt with long-term obligations to be placed in the hands of individual and institutional savers. Obviously, this would reduce the money supply and have a disinflationary effect. In order to achieve this end, the Treasury management seems quite prepared to adjust its rates to that of the market which would mean probably that a new 3 per cent. Government loan may be floated in the near future.

Since my last despatch, the twelve Federal Reserve Banks, with approval of the Board of Governors of the Federal Reserve System, have raised the re-discount rate from 1½ to 2 per cent. It was done before the inauguration of President Eisenhower, but I assured myself that it was done with full approval of the incoming Administration.

Not that consent was necessary since the Federal Reserve System, as the watchdog of the country's credit, is supposed to act independently from political considerations of the Treasury, but the fact is that the new Treasury officials liked it, because it plays into their hands by reducing the inflationary Government debt of the banks and putting an ever so mild damper on commercial borrowings as well.

So far, these developments have found the full approval of nearly everyone in the country. There is also a well sustained move for U.S. tariff reductions and adjustments regardless of individual consequences on the theory, "trade is less expensive in the long run than aid." How individual industries will testify before Congress in specific instances of duty cuts, remains to be seen, of course. But the general acknowledgement is encouraging just the same. It is all part of the confidence boom and honeymoon.

How long will this boom last? It seems to me that that will depend on the President's legislative proposals to Congress and on the overall policy as it may unfold itself over the next few weeks and months.

To my mind, one big question mark will be labour. While millions of workers must have voted for the General in order for him to be elected so overwhelmingly, labour organisations, with few exceptions, were for the Democratic Party, not the Republicans and leaders follow Republican moves with some apprehension. Moreover, the powerful Congress of Industrial Organisations (C.I.O.) which was the White House favourite for the past twenty years, has now been superseded in this role by the more conservative American Federation of Labour (A.F.L.). One member of the latter group, in fact, has been appointed Secretary of Labour in the new Cabinet.

Theoretically, labour could cause a lot of trouble. U.S. trade union balance-sheets total some $500 million. In other words, there are ample strike funds if fights should loom. And relentless pressure for higher wages all around before higher productivity is achieved, could well upset the Republican economic problem. That's why the possibility of a fight cannot be ruled out.—*All Rights Reserved.*

BRITISH BANKING BALANCE SHEET

NO FALL IN VOLUME OF MONEY SUPPLY

(From Our Own Correspondent)

LONDON, *31st January*

LONDON LETTER

THIS week, the last of the "Big Five" Bank Chairmen made his speech, and running true to form brought out the necessity, time and time again, of reducing the consumer subsidies in order to get the economy back on a normal price level and enable taxation to be reduced and thus increase national savings—and, as a corollary, capital investment. This argument followed the same general lines as that of the Chairman's other banking colleagues. Like the others, he also had a good deal to say on exchange control and the desirability of making sterling convertible. He introduced, however, a curious point regarding the U.K.'s dollar payments: we are now repaying annually the interest on the dollar loans incurred since 1946 and Lord Aldenham, the Chairman, declared that we should not request, while our gold and dollar reserves are low, to be allowed to buy "1 oz. of tobacco, 1 ft. of cinema film, $1 worth of non-essential goods," where these purchases might imperil our ability to meet the debt payment. He seemed to ignore the uproar that would arise in the United States if the U.K. were indeed to place an embargo on staple American exports. This country has had quite enough difficulty in making some cuts in tobacco and film imports (non-essential goods have been more easily dealt with and their flow reduced to a token level), but the trade in these goods is so important to the United States that they would prefer to see it carried on and to defer the debt payments if that were necessary.

Changes in Bank Assets

The publication of the Westminster Bank's accounts now enable one to prepare a balance-sheet for all the "Big Five" Banks put together. Total deposits at the end of 1952 were £5,542 million—an increase of well over £100 million from the year before, so that the drive against inflation has not succeeded in reducing the total volume of money available. The reason for this is ascribed to increased Government spending. It is interesting to see the changes that have taken place in bank assets over the past year. The following table picks out the main items:—

(In £ million)

	End 1952	*End* 1951
Cash	470	454
Call money	424	466
Bills	1,098	885
Total liquid assets	1,992	1,805
Investments	1,809	1,753
Advances	1,516	1,674
Total non-liquid assets ...	3,325	3,427

Over the year, the cash ratio rose slightly from 8.4 to 8.5 per cent., though call money dropped from 8.5 to 7.6 per cent. The big rise—and this is indicative of Government borrowing—was that of £213 million in bills; however, these being liquid assets, the total of liquid assets to deposits rose over the year from 33 to 36 per cent. This increase in liquidity could have caused a rise in the longer term investments and it is only because the banks have rigorously applied the Chancellor's restrictions that this has not happened. Advances indeed have fallen from about 31 per cent. on deposits to 27 per cent. As a matter of historical interest, one form of Government borrowing introduced during the war—the Treasury Deposit Receipt—which was straight borrowing from the banks against what amounted to a Treasury note-of-hand has now been dropped.

Summarising the above, cash, call money and advances, that is, commercial and financial business, have gone down £183 million, and, on the other hand, bills and investments, that is Government business, have gone up £267 million, the difference, plus an additional £2(million or so on other assets, going to swel deposits and raising them to an all time "high." Seen this way, it is clear that the deflation in the business world has, indeed, been matched by excess spending on public account.—*All Rights Reserved.*

OWNERSHIP OF BANK DEPOSITS

HALF THE TOTAL HELD BY BUSINESS CONCERNS

THE Reserve Bank of India's study of the trends in ownership of bank deposits makes illuminating reading. And incidentally, it provides also an interesting illustration as to how the statistics collected under the Banking Companies Act are being put to good use. The study, which forms the subject matter of the article in the Bank's *Bulletin* for January, is comprehensive in both scope and coverage. As compared with earlier studies the present survey, dealing, as it does, with eight half-year periods ended December, 1951, reveals that there has been an increase in the number not only of the banks covered but also of the categories of ownership of deposits included in it. Thus, the survey as at the end of December, 1947, related to only 89 Scheduled Banks, while the latest survey, as at December, 1951, deals with 85 Scheduled Banks and as many as 125 Non-scheduled Banks. Further, the earlier survey was restricted only to demand deposits other than inter-bank deposits of Scheduled Banks, whereas the present study includes the demand liability portion of savings deposits, saving deposits and time deposits, with elaborate ownership classification. In the result we are to-day in a better position to know the variations in cash balances of individuals and companies and how they influence consumption pattern and the level of prices.

The total deposits, comprising (a) demand, (b) savings and (c) time deposits as at the end of December, 1949, stood at Rs. 826.4 crores. In the following two half-years, they advanced steadily, to Rs. 840.1 crores as at 30th June, 1950, and to Rs. 849.4 crores at the end of December that year. The rise of Rs. 23 crores in the total deposits over the year was mainly due to improvement in the balance of payments position arising out of (a) reimposition of import controls in May, 1949, (b) increased exports after the devaluation of the rupee in September, 1949, and (c) the emergence of inflationary pressure all over the world following the outbreak of the Korean War. Besides, speculative withholding of stocks by traders became widespread and the cost of living rose as, for instance, in Bombay where it touched 321 in June, 1951, as compared with 297 in June, 1950. In the subsequent two half-years, that is, six months ended 30th June, 1951 and 31st December, 1951, a reaction followed. The balance of payments position turned adverse and with that the total deposits dropped by as much as Rs. 27.8 crores to Rs. 821.6 crores. The fall would have been steeper still had there not been an improvement in time deposits which in this period rose by as much as Rs. 14 crores from Rs. 226.8 crores to Rs. 230 crores. This marked rise in time deposits is attributed to the higher rates of interest offered by banks on time deposits and also to the uncertain outlook for Gilt-edged securities that prevailed towards the close of 1951.

Demand Deposits of Scheduled Banks

Of the total Scheduled Banks' deposits of Rs. 821.6 crores, demand deposits accounted for as much as Rs. 456.3 crores or 55.5 per cent. Of the remaining deposits, the share of savings deposits was Rs. 135.4 crores and of time deposits Rs. 230 crores, or 16.5 per cent. and 28 per cent. respectively, of the total.

An analysis of the ownership of Scheduled Bank demand deposits (classified under (1) business, (2) personal, (3) others and (4) accounts of less than Rs. 500) as at the end of December, 1951, discloses that business deposits account for as much as Rs. 235.79 crores or 51.67 per cent. of the total demand deposits. The percentage share of the total, however, shows a decline, as compared with 52.40 at the end of December, 1950, and 52.02 at the end of the previous half. Of these business deposits, those owned by trading concerns accounted for 25.18 per cent. or Rs. 114.89 crores, an overwhelming portion of these, namely, Rs. 73.53 crores, being held by trading concerns "other" than companies. Next in importance to trading concerns were the financial concerns (banks, insurance companies, co-operative societies and others) which accounted for Rs. 52.37 crores or 25.18 per cent. of the total demand deposits. Of these, the share of banking companies was the highest at Rs. 30.84 crores or 6.76 per cent. of the total. Demand deposits held by insurance companies amounted to Rs. 10.57 crores. A notable feature is that the share of these companies has been registering a steady increase from 1.43 per cent. of the total in June, 1949, to 2.32 per cent. in December, 1951. This increase reflects the uncertainty of investment prospects that prevailed during this period. Demand deposits owned by manufacturing concerns accounted for Rs. 49.26 crores or 10.80 per cent. of the total, the share of companies engaged in manufacturing being as high as Rs. 42.38 crores. Among other categories of owners of business demand deposits are public utility concerns with a share of Rs. 8.10 crores, mining concerns with Rs. 3.49 crores and plantation companies with Rs. 7.68 crores.

The major portion of the non-business demand deposits consisted of personal deposits. At Rs. 238.43 crores, such deposits represented nearly 40 per cent. of all demand deposits in December, 1947. In the four years from that date, personal demand deposits had fallen by as much as Rs. 114.51 crores, while unclassified demand deposits, that is, deposits in accounts of less than Rs. 500 which were mostly personal dropped by only Rs. 9.85 crores. The greater part of the decline in these items is attributed to the exclusion of demand liability portion of savings deposits from demand deposits which from December, 1949 onwards, were shown under savings deposits most of which were personal. After making the necessary adjustments, the fall in the two items together works out to about Rs. 42 crores. This decline is presumably taken to represent withdrawals of deposits by individuals, particularly by those who were affected by changing business conditions.

Demand deposits held by "others," that is, clubs, local authorities, etc., on the other hand, increased relatively to the total from 11.29 per cent. in 1947 to 18.93 per cent. in 1951, when their share stood at Rs. 86.39 crores. Unclassified deposits (consisting of accounts below Rs. 500) rose from Rs. 20.06 crores in December, 1947, to Rs. 28.94 crores in June, 1949.

Savings Deposits

Contrary to the general belief about the trend of savings in the country, savings deposits displayed a remarkable stability during the period under review, the amount varying within a narrow margin, between Rs. 134 crores and Rs. 137 crores. Since almost the whole of these deposits are personal deposits, this trend may be taken as an indication that there has been no fall in savings by the middle classes, in spite of the high cost of living and high rates of taxes.

Time Deposits

This conclusion is strengthened by the trend of time deposits owned by individuals. The major portion of time deposits as at the end of December, 1951—53 per cent. to be precise—constituted personal deposits and they fell, as compared with December, 1949, by only Rs. 4 crores to stand at Rs. 122.97 crores. This fall is negligible as compared with the rise in cost of living during the two-year period.

There was a rise of 6 per cent. in the total of time deposits between the end of 1949 and of 1951. The whole of this increase was accounted for business time deposits, which went up by Rs. 14 crores to a total of Rs. 64.59 crores. Of these, the share of trading concerns amounted to Rs. 45.49 crores or 70 per cent. The share of financial concerns increased during the two years by Rs 5 crores. Time deposits of other business concerns, including manufacturing, etc., rose by Rs. 5.43 crores to Rs. 13.34 crores by the end of June, 1951. Subsequently, however, they declined to stand at Rs. 7.33 crores by December, 1951. Other time deposits stood at Rs. 41.01 crores.

Deposits Held by Class of Banks

Of the total deposits of Scheduled Banks in December, 1951, amounting to Rs. 822 crores, as much as Rs. 500 crores, or 61 per cent., were held by eight major Indian Scheduled Banks. Deposits of Rs. 164 crores were held by 15 Exchange Banks, while other Scheduled Banks accounted for the balance.

In December, 1949, out of total demand deposits of Rs. 478 crores, as much as Rs. 282 crores were with the major Indian Scheduled Banks, Rs. 119 crores with Exchange Banks and about Rs. 78 crores with other Scheduled Banks. In other words, although the volume of demand deposits held by all the three groups of banks declined, the fall was quite substantial in the case of the major Indian Scheduled Banks and the other Scheduled Banks only, such in the case of Exchange Banks being negligible, hardly a crore of rupees.

Most of the savings deposits as at the end of December, 1951, were held by Indian banks (major banks Rs. 97.60 crores and others Rs. 27.49 crores), the Exchange Banks' share being about 7 per cent. of the total or Rs. 10.26 crores. In respect of time deposits also, Indian banks predominated over their foreign counterparts, the exact share of major Indian banks, Exchange Banks and other banks being Rs. 137.68 crores, Rs. 35.86 crores and Rs. 56.42 crores respectively. Further, the demand deposits of both Exchange Banks and major Indian Scheduled Banks were larger than their savings and time deposits put together. Demand deposits of other Scheduled Banks, however, were slightly smaller than their savings and time deposits.

As compared with December, 1949, while the savings deposits of the major Indian banks and other Indian Scheduled Banks show only a fractional improvement, those of exchange banks reveal a relatively better rate of improvement. The time deposits of all the groups of banks disclose an improvement, but, here again, the extent of increase is relatively greater in the case of Exchange Banks than in the case of the two groups of Indian banks. Thus, whereas the time deposits of the major Indian Scheduled Banks and other Indian Scheduled Banks rose from Rs. 133.78 crores and Rs. 53.90 crores in December, 1949, to Rs. 137.68 crores and Rs. 56.42 crores, respectively, in December, 1951, those of Exchange Banks shot up from Rs. 26.43 crores to Rs. 35.86 crores. The better experience of Exchange Banks thus is, perhaps, the result of the relatively higher rates of interest offered by them for time deposits.

Deposits by Accounts

In December, 1951, total demand deposits amounting to Rs. 456.31 crores were held in 10,17,045 accounts. Of this, about Rs. 205 crores were held in 5,496 large-sized accounts, about Rs. 152 crores in 61,456 medium-sized accounts and about Rs. 99 crores in 9,50,693 small-sized accounts. The tendency has been for deposits in smaller accounts to increase and in bigger ones to decline in the two years between 1949 and 1951. Saving deposits are mostly held in accounts of over Rs. 500. In time deposits, too, small-sized accounts predominated. These trends are in consonance with the popular belief about the change in the distribution of income in the country.

Non-Scheduled Banks

Contrary to the pattern of Scheduled Bank deposits, demand deposits of Non-scheduled Banks account for a much smaller figure than do time and savings deposits of these banks. Their demand deposits declined almost continuously from 29 per cent. of total deposits in December, 1949, to 22 per cent. in December, 1951. The proportion of time deposits, however, rose correspondingly from 53 per cent. to 61 per cent. Savings deposits maintained their position at between 17—19 per cent. of the total. This seems to indicate that, in the case of Non-scheduled Banks, the depositors' preference for time deposits was governed by the facilities and return offered by these banks.

The total deposits of Non-scheduled Banks as at December, 1951, amounted to Rs. 28.40 crores. Of these, the share of time deposits amounted to Rs. 17.26 crores or 60.77 per cent. Of the remainder, the share of demand deposits was of the order of Rs. 6.37 crores or 22.43 per cent. and that of savings deposits was Rs. 4.77 crores. About 46 per cent. of the total deposits were business deposits and a third personal, and the rest unclassified and other deposits. Out of the business deposits, more than half was accounted for by trading concerns, mostly small traders, and another one-fifth by financial concerns.

NATIONAL SAVINGS FORTNIGHT

The National Savings Fortnight, organised by the Provincial Savings Organisation, Madras, was inaugurated on the 2nd inst. by Mr. C. Subramaniam, Minister of Food and Finance. Addressing the gathering, the Provincial National Savings Officer stated that the net investments under the first seven months of the current financial year was Rs. 24.7 crores and that collections in the Madras State during April to December, 1952, amounted to Rs. 2.1 crores. In order to popularise the scheme in rural areas, steps were being taken to appoint extra-departmental branch postmasters as authorised agents for the sale of 12-year National Savings Certificates.

It may be mentioned here that out of the Rs. 2,069 crores of capital required during the five years to implement the Five-year Plan, not less than Rs. 250 crores are expected to come from the small savings of the people. It is not known whether a drive for small savings, such as the one undertaken in Madras, is being made in other States.

MERCHANT BANK OF SCHACHT

The Merchant Bank of Schacht & Co. was opened on 29th January last by Dr. Hjalmar Schacht, the former Finance Minister of Hitlerite Germany, in Dusseldorf, the industrial and financial capital of Western Germany. It would appear that Dr. Schacht wanted to start this bank in Hamburg, but the Senate refused him permit.

The Merchant Bank of Schacht has its first branch started already in a small town of Aumuhle, only a few miles outside the city. This will act as the link between the new bank in Dusseldorf and the overseas markets which he proposes to tap, particularly in the Middle East. Dr. Schacht hopes to finance the development of iron-ore mines in Syria. Preliminary investigations have shown that there are sufficient quantities of high-grade ore to make their development a commercial proposition. His talks with the Egyptian Government are reported to have revolved round the possibility of an exchange of German machinery for Egyptian cotton.

PRINCIPLE OF "TRADE—NOT AID"

LARGE MEASURE OF AGREEMENT BETWEEN THE U.S. AND THE U.K.

(In our last issue, we published an account of the British Chancellor of the Exchequer, Mr. R. A. Butler's exposition of his new phrase "trade—not aid". He indicated therein as to what was expected of the creditor and debtor countries for depending less on charity and more on trade as a basis for balancing international payments account. In the article published on this page, the Guaranty Survey, published by the Guaranty Trust Company of New York, examines the implications to the U.S. and other free nations of the world of the new approach to the balance of payments problem. The views expressed therein are reasonable and practicable and may be taken as representative of the attitude taken by the enlightened section of Americans. On a comparison of the views stated in this article with those of Mr. Butler, it will be seen that there is a large measure of agreement between the two.—Ed.)

"TRADE—Not Aid" is a summary phrase much used in current discussions of what the foreign economic policy of the United States should be under the incoming Federal Administration. The new Government will face few problems more complex than this. Obviously, the solution will have vital importance, not only for its bearing on global economic welfare but also because of its political overtones affecting the defence of the free world.

"Trade—not aid" sloganises what seems to be a consensus in business and Governmental circles here and abroad that further continuation of the practice of subsidising American exports by means of dollar grants to other nations would be unsound and mutually disadvantageous in the long run. To-day a more normal, healthy basis of trade relationships is needed, even though the transition may involve some temporary adverse effects and uncertainties. Like other forms of Governmental intervention, foreign assistance illustrates the broad truth that it is easier to become embroiled in artificial and unwholesome situations than it is to escape from them. The problem now is to balance the good and bad features, short-term and long-term, of alternative plans.

The magnitude of the problem and the harm that could be done by wrong decisions are clear enough. During the last seven years, exports from the United States have exceeded imports by roughly $5 billion annually, on the average. Net aid to foreign nations has amounted to approximately the same figure. The total for the seven years, $35 billion, is equal to more than 11 per cent. of all Federal revenues and more than 10½ per cent. of all Federal expenditures for the period.

These figures mean that almost all of the American export surplus since World War II has been unreal in the sense that it has not been sold but given away. It has been given by the American taxpayer to the foreign consumer and has accounted for about one-ninth of the total Federal tax burden in the United States.

Obviously, this is not a foundation upon which a sound and lasting structure of foreign trade can be built. It was defensible, as an emergency device, to save Europe from dire hardship, threatening totalitarian domination, with economic and political isolation of the United States. No such emergency now exists. Military assistance under the collective-security programme may still be needed, but economic aid should be discontinued as quickly as possible. Unless it is, what began as a temporary relief programme may become an ingrained habit of dependence, and the longer such a habit continues the harder it will be to break.

Europeans, as well as Americans, recognise the need for a change. Ivar Rooth, Managing Director of the International Monetary Fund, recently told the National Foreign Trade Convention that the problem of the dollar deficit "has been held at bay throughout the post-war period by extremely generous aid from the United States Government. . . It is clear, however, that the solution to the problem cannot be found in the continuation of United States aid. This aid is at best a scaffolding to assist in the erection of a permanent structure."

The dollar deficit still exists, of course, in the sense that many foreign countries would still like to import more American goods than they are able to pay for. The responsibility for this situation has been the subject of controversy and some mutual recrimination, with a measure of truth on both sides.

Foreigners (and some Americans) stress that the United States has become a creditor nation, yet has clung to attitudes and practices appropriate to a debtor nation. As evidence they cite the persistent reluctance to accept larger imports and the disinclination of most Americans to invest abroad.

Americans (and some foreigners) reply that the United States has made substantial foreign investments, that it is creating enough dollar exchange by importing to pay for about twice as much in exports as before the war, that industrial production in Western Europe in 1951 was about a third greater than in 1938, and that the apparent dollar deficit is due, in large measure, to arbitrary insistence upon standards of living which national economies cannot support, and especially upon social programmes that Governments find politically difficult to give up.

The United States cannot and should not assume sole responsibility for the world-wide supply or shortage of dollars. The problem facing this country is to decide, in the light of intelligent self-interest and with due regard to the international obligations of a leading commercial nation, what policies will be most conducive to an orderly and not too painful transition from the regime of "aid" to one of "trade."

Three broad types of solution would seem to be available. One would be to let exports decline to the level of imports. Another would be to allow imports to rise to the level of exports. The third would be to maintain an export surplus by means of foreign investments.

Smaller Exports or Larger Imports?

The chief argument in favour of letting exports fall to the level of imports is that this course would avoid the necessity of exposing American industries to increased foreign competition. In other respects, it would be an unsatisfactory alternative. It would injure export industries, which are geared to a high level of foreign demand. Such injury would presumably be offset, to some extent, by the additional domestic purchasing power made available by the cessation of foreign aid. Not all of the new purchasing power, however, would be used for buying the products that had lost their foreign markets.

Letting exports drop would deprive foreign countries of badly needed American goods, besides preventing American consumers from buying in the cheapest market. It would be a step toward economic isolation, a denial of the advantages of international trade. It would make the United States unpopular abroad and would probably provoke retaliation, with a tendency toward higher trade barriers generally. It would weaken foreign economies and reduce the strength of the free world.

Most of these objectionable consequences of a drop in exports would be avoided by the second alternative—to permit a rise in imports. This would be a step toward freer and more natural trade conditions throughout the world. It would enable the United States and foreign countries to enjoy the advantages inherent in international trade. The chief objection to it has just been mentioned: It would expose American industries to increased foreign competition, which would be relieved, to some extent, by the additional domestic purchasing power due to the cessation of foreign aid.

The question of increasing imports into the United States is not one for the United States to face alone. The limited exporting capacity of foreign countries is due in part to the insistence of such countries upon "social gains" which restrict output, raise costs of production, and weaken their competitive position in world markets. This is a problem that must be solved by the foreign countries themselves, not by Americans.

The question facing the United States is—conditions being what they are—to what extent would it be in this country's interest to lower its trade barriers in order to admit more imports? In considering this question, it is a grievous error to think of the United States' self-interest solely in terms of the domestic market for domestic products, as some extreme protectionists tend to do. The United States cannot close its domestic market to foreign goods, without, at the same time, and to the same extent, closing foreign markets to American goods. Unless this basic fact is recognised, no intelligent consideration of the foreign-trade problem is possible.

Re-stated, the question becomes: Is it in this country's interest to encourage or restrict its *two-way* foreign trade? It is necessary to bear in mind that sustained prosperity in the United States depends to a large extent on a generally strong and healthy world-wide economic situation.

To permit a substantial rise in imports, legislative action would probably be necessary. Some help is likely to be obtained from enactment of the Customs-Simplification Bill, which almost passed at the last session of Congress. Another constructive step would be to repeal the "Buy-American" Act, which raises the cost of rearmament, besides weakening and irritating America's allies. A third would be to abolish import quotas. A fourth would be to broaden Executive authority under the reciprocal-trade programme, which has done good service in combating the trend toward international trade restrictions but which seems to have exhausted most of its usefulness under the law as it now stands. If all these measures should prove inadequate, the question of general tariff reduction could be considered.

The statement that exports and imports must balance contains one possibly important loophole. The United States could maintain an export surplus in commodity trade for some time if Americans could and would invest more heavily abroad. In some respects, this is the most desirable alternative of all. It cannot provide a permanent solution of the trade problem as it now exists, because income from the foreign investments would ultimately increase the pressure upon the United States to accept larger imports—would, in fact, eventually result in an almost unavoidable import surplus. Nevertheless, sufficiently large foreign investment would temporarily meet the trade problem and, at the same time, would contribute to global economic development.

Unfortunately, the obstacles to large-scale capital investment at present are formidable and, for the most part, are beyond the control of the United States. Extreme nationalism, which is rampant in many parts of the world, fears and distrusts outside capital. Debtor nations have compiled an unhappy record of expropriation and nationalisation of resources in recent years, to the serious detriment of foreign investors as well as their own industrial development.

This is a problem to be solved by foreign nations that desire to promote their economic development with the aid of American capital. The "climate" for international investment has been improved, in some cases, by treaties guaranteeing certain types of fair treatment of foreign capital by debtor countries. Progress in this direction thus far has not been sufficient to produce a really large-scale flow of capital, and it is questionable whether such a flow could take place in the present disturbed state of international relations.

The most likely prospect seems to be that a new trade equilibrium will emerge from a combination of the three alternative readjustments just outlined—smaller exports, larger imports, and heavier foreign investment. In any case, the transition will probably involve some difficulty. An untenable situation has been allowed to develop, and it is too much to expect that a painless way out can be found. The challenging (this article was written and published before President Eisenhower assumed office—Ed.) task that faces the incoming Federal Administration is to promote, in so far as it can, a solution that will entail as little immediate damage as possible and that will assist the free peoples in their continuing struggle against authoritarian encroachment from within and from without.

HIND BANK LTD.

The preliminary results of the working of the Hind Bank Ltd. during the year ended 31st December, 1952, disclose that the profit for the year, as compared with that for 1951, has declined to the extent of 28.7 per cent. This recession is only in consonance with the general trend of bank profits for 1952. Thus, the profit of the Bank for the year under review amounts to Rs. 6,74,923, as compared with Rs. 9,47,813 for the preceding year. With the sum of Rs. 86,262, brought in from the previous year's accounts (as against Rs. 68,449), the amount available for appropriation is Rs. 7,61,185, which compares with Rs. 10,16,262 of the previous year. The Directors have raised the appropriation for taxation from Rs. 2,70,000 to Rs. 2,90,000 and for reserve fund from Rs. 2,25,000 to Rs. 2,50,000. Whereas a sum of Rs. 3,35,000 was transferred to investment account in the previous year, no provision has been made now. Bonus to staff has been provided with Rs. 35,000 (*nil*). The Directors propose to maintain the dividend at Re. 1 (free of income-tax) per share of Rs. 50 each which will absorb Rs. 1,00,000, leaving to be carried over Rs. 86,185, as compared with Rs. 86,262 brought in.

EXPORTS OF COTTON YARN

QUOTA SYSTEM ANNOUNCED

THE Government of India has decided to allow, upto 31st August next, exports of cotton yarn on a quota basis. The allotments of quotas are, however, to be made only to mills and the quotas for them will be on the basis of yarn sold by them in the internal market during the calendar year 1952, as indicated below.

In the case of counts upto and including 36s (including doubled yarn), the quota will be 2.5 per cent. of the deliveries given upto 3,000 bales; where deliveries were over 3,000 bales but upto 6,000 bales, the quota will be 3.5 per cent. of such excess deliveries, and where deliveries were over 6,000 bales, 4 per cent. of such excess deliveries.

In the case of counts from 37s to 78s (including doubled yarn), the quotas will be as follows: Deliveries upto 750 bales, 5 per cent., deliveries over 750 bales but upto 1,800 bales, 6¼ per cent. of such excess deliveries; and deliveries over 1,800 bales, 7½ per cent. of such excess deliveries.

The allotments of quotas to the mills will be made for the licensing period January-June, 1953, the last date for effecting shipment being 31st August, 1953. With a view to facilitating the mills utilising their quotas, restrictions on packings for exports have been relaxed from 12½ per cent. to 25 per cent. Restrictions on count groups have also been removed. The mills may export either directly or through exporters nominated by them upto the limit of their quotas. The last date for applying for quotas is 21st of this month. The composite mills which have not sold in the market, during the calendar year 1952, the quantities of yarn required to be sold under clause 12(1) of the Cotton Textile (Control) Order, 1948, will not be eligible for receiving any export quotas whatsoever. Exports will be allowed to any permissible destination other than Nepal, Tibet, Portuguese and French Possessions in India for which separate licensing procedures already exist.

Needs of Handlooms

The needs of the handloom industry have always weighed with the Government in allowing exports of yarn. This feature dominates the Government's latest decision also, as is evident from the quota being based on yarn sold in the internal market. By linking the quota to the sale made in the country, the Government seeks to ensure a steady flow of yarn for handlooms. There is, of course, nothing new in this method. It was followed in 1950; only the method adopted then was far more simple than the present one. It is, however, an improvement over the practice that was being followed upto now, since May, 1952, when a beginning was made in exports of yarn again, after a break of 16 months. It will be recalled here that the Government had completely stopped exports of yarn from early January, 1951 to the beginning of May, 1952, with a view to conserving the supply of all available free yarn for the use of handlooms. The slump in March-April, 1952, however, forced the authorities to remove the ban a little and allow small quantities of yarn. Permission was first given in May, 1952, to export a limited quantity of yarn produced out of foreign cotton. In June, 1952, this concession was extended to certain varieties of yarn manufactured out of Indian cotton also. In subsequent months, exports of foreign cotton yarn were freely licensed but only after carefully ensuring that the domestic demand had been fully met. This was sought to be done by giving licences only for those yarns that were packed months earlier and lying unsold in the market.

The present decision marks an improvement over the one in force till now not only in the matter of procedure followed for permitting exports of yarn but also in regard to the quantity available for export. Under the method just discarded, only those varieties of yarn for which there was no demand from the domestic consumers were available for export. These were mostly old, inferior in quality and unwanted stocks, with the result that the export demand for them was limited and halting. The quantity of yarn exported upto the end of October, 1952, was, therefore, only 18 million lbs., as against 65 million lbs. in the first ten months of 1950, when exports of yarn were regulated on a more simple and scientific basis. But now that a mill can sell a certain quantity of all varieties of free yarn as and when they are produced, the importing countries may evince greater interest in Indian yarn.

The main factors responsible for the liberalisation of restrictions on exports of yarn are the increase in production and continued poor demand from handloom weavers, resulting in accumulation of heavy stocks. The average monthly production of yarn is now as much as 135 million lbs., as compared with 117 million lbs. in 1951 and 97 million lbs. in 1950. The quantity of yarn actually produced during 1952 was as high as 1,448 million lbs., which compares with 1,289 million lbs. and 1,175 million lbs. in the preceding two years, respectively. The rise in yarn output has not been followed by a corresponding increase in offtake; in fact, the offtake of yarn by handlooms is reported to have been poor, thanks to poor demand for handloom cloth *vis-a-vis* mill-made cloth. Consequently, stocks of yarn have accumulated with the mills.

Exporters' Suggestion

As is only to be expected, the Government's decision to give export quotas for yarn only to mills (or their nominees) has caused great disappointment among exporters. This decision, it is pointed out, is highly discriminatory and harmful to the long-established trade channels which have been instrumental in building up trade connections with overseas market for the past several years. It is contended that the present policy of the Government may encourage those mills which are not exporting directly to quote exorbitant prices to exporters. It is feared that, owing to the cumbersome procedure involved, it will be difficult to develop export markets. In their opinion, the Government would have done well, had it given an equal opportunity to established exporters to cater to the needs of export markets. Incidentally, enquiries made in a section of the mill industry reveals that the mills will have no objection to the Government revising the yarn export policy in such a way as to include established exporters also. One of the methods suggested, in this connection, is the fixation of an overall export target of 30,000 bales—a quantity almost equal to the one now envisaged —and allotting quotas on first-come-first-served basis, subject, if need be, to the stipulation that the actual shipment should be made within a specified period.

The implementation of this suggestion may, however, lead to some complications in regard to the distribution of quotas to the various mills which are eligible for selling a part of their surplus yarn for export markets. The best thing to do will be to revert to the simple scheme that was being followed in 1950 and early in 1951. It is not clear as to why the Government chose to prefer the latest method to the former one which was quite consistent with its desire to secure for the handlooms the major part of the "free" yarn available from the mills.

EXPORT OF CLOTH

The Government of India, while announcing its decision on 10th January, 1953, to extend the duration of the free licensing of cloth export by a further period of three months, upto the end of June, 1953, had merely stated that all varieties of cloth would be licensed freely for shipment. The Joint Chief Controller of Exports has since announced details of the licensing procedure governing cloth exports. The scope of the free licensing policy covers all varieties of mill-made and powerloom cloth other than certain specified exceptions. These exceptions are: (1) olive green cloth of all shades; (2) any fine or superfine cloth (other than flannelette and furnishing fabrics made up of folded yarn of fine counts for warp and yarn of coarse or medium counts for weft), where the count of warp and weft yarn does not conform to certain specifications given in the notification; (3) *lungi* cloth of 42" to 48" width; (4) filter cloth; (5) mineral khaki cloth; (6) mosquito netting; and (7) umbrella cloth of coarse and medium counts.

It may be noted, in this connection, that the export of the first three aforesaid varieties of cloth was already under ban. Export of filter cloth is allowed freely up to the end of this month. As regards mineral khaki cloth, exports are being allowed only up to 25 per cent. of the production. In the case of mosquito netting, 2,000 nets had been allowed for export during the second half of 1952. With regard to umbrella cloth of coarse and medium counts, exports had been banned till the end of August, 1952. A slight relaxation was made subsequently, under which exports were allowed in respect of cloth purchased from the State Textile Controller.

As regards cotton apparel, the only variety that has been banned for export is that made out of olive green cloth of all shades. The variety of apparel which is restricted for export is the one produced from mineral khaki cloth, for which a separate licensing procedure exists. All other items of apparel will continue to be licensed freely for export up to 30th June, 1953.

The free licensing policy is not, however, applicable to exports to Nepal, Tibet and Portuguese and French possessions in India. The Deputy Chief Controller of Exports for Madras or Cochin will be the licensing authority for the export of cloth to French possessions. As regards exports to Portuguese possessions, a separate procedure already exists. With regard to exports to Tibet, the licensing procedure is expected to be announced shortly. The licensing procedure for Nepal is still under consideration.

FURTHER POWER CUT TO MADRAS MILLS

Thanks to the depletion of water in the hydro-electric system, following the continued failure of the monsoon, the Government of Madras has cut, with effect from the 1st inst., the power supply to the area served by the Papanasam-Pykara-Mettur hydro-electric grid by a further 15 per cent., raising the total cut to 50 per cent. This cut in power supply will severely affect the textile mills in Madras, resulting in underemployment to 30 per cent. of the 20,000 textile workers employed in the local spinning mills. The production of yarn will fall by 10 to 15 per cent. About 2,500 textile workers in the smaller mills will suffer a wage-cut to the extent of nearly 50 per cent.

There are, however, certain mills in Madura which will not be affected by the power cut. These include the Madura Mill and the Meenakshi Mill. The former, which employs 14,000 workers, is run by steam. Similarly, the units of the Madura Mill at Ambasamudram and Tuticorin, which together have 11,000 workers, also will not be affected, since they have their own power generators. The Meenakshi Mill—this employs 2,500 workers—has recently installed two generating sets which has enabled it to make up half the power cut. Two more are expected to be erected and these, it is said, will start working by the beginning of next month.

The effect of the power cut has, however, been severe in the case of mills in the Coimbatore District. As many as 35 mills, with 30,000 workers, have slashed their working hours by 50 per cent. Production, as a consequence, is expected to fall by almost half. Great concern has, therefore, been caused among the management of textile mills and workers. Representatives have, once again, been made to the authorities to install thermal plants in this region for keeping the mills running at full load.

DEVELOPMENT OF HANDLOOMS

It will be recalled that the reconstituted All-India Handloom Board had elected, at its inaugural meeting held in Bombay on 13th December, 1952, a Standing Committee to examine, in detail, the series of development schemes submitted by the States, and also the scheme relating to the development of markets—indigenous and foreign—for handloom products. With a view to discussing the same, the Standing Committee held a meeting here last week, with Mr. T. Swaminathan, Textile Commission to the Government of India, presiding. The most important question that came up for consideration was that of developing foreign markets for Indian handloom products. The Committee approved the principle underlining this and, as the first step in the implementation of the same, agreed to the appointment of four commercial travellers in the Middle East and South-East Asian countries. It also approved the schemes for the development of internal markets for handloom products, with special reference to their marketing the organisation of the various elements in the industry, rationalisation and standardisation of production, and consolidation of existing markets, besides emphasising the need for exploring fresh avenues for consumption of handloom products.

This Committee further approved a few schemes of certain State Governments—together costing Rs. 3 crores—while, in respect of others, it called for more details. Commending the steps taken by the Madras Government to relieve the present hardships of handloom weavers, the Committee decided to address, on behalf of the Board, the other State Governments suggesting the adoption of similar measures.

DEMAND FOR WAGE RISE REJECTED

REPLY TO U.S. CRITICS OF BRITISH TEXTILE INDUSTRY

(From A Special Correspondent)

MANCHESTER, *27th January*

THE demand by Lancashire's 270,000 cotton spinning and weaving operatives for a wage rise of 10 per cent. on current earnings has been rejected by the Industrial Disputes Tribunal, London. The Tribunal's decision, announced to employers and trade unions at the week-end, came as a shock to union leaders who were confident that an arbitration award would be made in their favour. An official announcement said: "The Tribunal has given careful consideration to the statements and finds that the claim has not at present been established."

MANCHESTER LETTER

The dispute was referred to the Tribunal when negotiations between millowners and unions reached deadlock on 18th November last. The millowners had rejected the claim outright. More than 30 representatives of millowners and workers travelled to London on 13th January to give evidence before the Tribunal.

Union leaders argued that the cost of living had risen by more than 7 per cent. since the cotton workers' last increase. Millowners claimed that with a return to tougher selling conditions in world markets and keener competition from overseas rivals a further wage increase at the present time would create serious difficulties for the textile industry. If the full claim had been granted it would have added an average of 15*s.* 6*d.* weekly to the pay packets of men in weaving mills and 10*s.* 4*d.* of women. In spinning, the amount claimed was equal to 14*s.* 6*d.* for men and 8*s.* 8*d.* for women.

Exports in 1952

Lancashire's reputation as a manufacturer of cotton goods, built up in years of plenty when the world clamoured for its products, was established upon its export trade. It is only in recent years that the quantities of cloth for the home market have exceeded shipments overseas—and in more recent days still, imports of foreign cloth have been accepted in Britain in any quantity.

In hard facts, Lancashire's export business last year declined still further from the post-war peak reached in 1949. The value of cotton yarns and manufactured goods was £148,071,860, against £209,356,216 in the previous year. Cotton cloth shipments amounted to 710,803,000 square yards, valued at £100,855,759, and yarn exports totalled 35,721,900 lbs., worth £17,749,951.

In December, overseas trade was fairly well maintained, shipments of cotton cloth being 60,872,000 square yards at a value of £7,650,644, the final quarter of the year being the best since the first three months. The following table shows annual exports of piecegoods in recent years:—

	Piecegoods (in 000 sq. yds.)	*Value* £	*Average price per sq. yd.* d.
1938	1,336,235	31,961,174	5.53
1939	1,393,375	31,982,988	5.51
1940	975,778	32,142,055	7.90
1941	783,109	29,912,910	9.17
1942	485,250	24,395,037	12.07
1943	374,278	20,279,765	13.00
1944	434,231	24,162,772	13.36
1945	441,095	28,778,816	15.66
1946	514,505	40,384,004	18.84
1947	522,887	49,677,616	22.37
1948	761,565	85,701,945	27.03
1949	903,578	105,706,322	28.07
1950	822,473	100,296,904	29.26
1951	864,375	132,153,774	36.69
1952	710,803	100,855,759	34.05

The most striking achievement by Lancashire exporters of cotton cloth last year was the big expansion of business with Nigeria, to which market 115,421,000 square yards were sent, compared with 64,794,000 square yards in 1951.

In view of the continued interruption in trade with these major consuming areas, the advances secured in other smaller outlets were not sufficient to offset the general decline. Bigger sales, however, were recorded for British East Africa, Pakistan, Canada, the West Indies and the Sudan. In general, European countries took smaller quantities of cloth from Lancashire, although 1951's trade with Turkey was doubled at 15,252,000 square yards. Twice as much cloth was also shipped to French West Africa, the total being 14,920,000 square yards.

The chief markets for Lancashire cotton cloth in 1952 were (in square yards, with 1951 comparisons):—British West Africa 175,491,000 (149,142,000); Australia 72,963,000 (167,252,000); South Africa 59,413,000 (114,509,000); Pakistan 42,144,000 (39,523,000); Malaya 33,354,000 (48,524,000) and New Zealand 30,493,000 (45,286,000).

Yarn Shipments Halved

Overseas trade in cotton yarn is still suffering from the effects of the restrictions placed upon it by the Government early in 1951. At that time trade with foreign countries was lost which would now be extremely valuable to Lancashire mills. The declining tendency in shipments first noted in 1950 was accentuated last year when total exports barely exceeded half the volume of 1951, as the table below shows:—

	Yarn lbs.	*Value* £	*Average price per lb.* d.
1938	122,950,200	9,674,911	18.88
1939	113,661,700	8,946,248	18.89
1940	66,706,100	7,446,238	26.79
1941	23,851,800	4,483,002	37.29
1942	18,751,700	3,394,346	43.44
1943	19,216,800	3,342,329	41.74
1944	19,619,000	3,986,395	40.20
1945	16,102,500	2,915,856	43.47
1946	19,371,100	3,783,422	46.88
1947	26,666,500	6,767,214	61.09
1948	59,018,000	16,747,785	68.10
1949	82,061,000	23,550,385	68.88
1950	70,986,000	25,534,372	86.33
1951	65,491,100	31,777,004	116.46
1952	35,721,900	17,749,951	119.25

The principal markets for Lancashire cotton yarn in 1952 were (with 1951 comparisons):—Irish Republic 3,199,200 lbs. (5,183,900 lbs.); Australia 2,942,800 lbs. (9,993,000 lbs.); Pakistan 2,801,000 lbs. (3,667,300 lbs.); India 2,363,200 lbs. (535,500 lbs.); Hong Kong 2,186,900 lbs. (1,540,200 lbs.); British West Africa 2,175,900 lbs. (2,012,600 lbs.) and Canada 2,132,600 lbs. (3,616,300 lbs.).

Curb on Imports

Twelve months ago, when the industry was considering the export returns for 1951, imports of foreign grey cloth were arriving at such a pace that producers in Lancashire were rising in protest, particularly as their own machinery was widely stopped due to shortage of orders. Subsequently the position has changed and although exports in 1952 failed by some 150,000,000 square yards to reach the 1951 totals, the quantity of imports has fallen to a much larger degree.

Mainly as a result of the restrictions imposed on arrivals of cloth from abroad, the imports of unbleached cotton fabric in 1952 were only 144,272,000 square yards, against 339,988,000 square yards in the previous 12 months. Nearly 100,000,000 square yards of these imports arrived in the first half of last year.

From the balance of payments viewpoint the rise in cost of these goods is unfortunate, as despite the cut in quantity, the value of all types of cotton yarn and manufactured goods imported last year was £40,548,945 against £56,259,206 in 1951. Of this, grey cloth accounted for nearly £24,500,000 compared with £32,000,000 in the previous year.

Japan was the leading supplier of grey cloth, sending 68,534,000 square yards, against 84,981,000 yards, but shipments from India fell from 105,573,000 square yards in 1951 to only 10,079,000 square yards last year. German manufacturers provided 22,123,000 square yards and Belgium 11,534,000 yards.

In line with the drastic reduction in imports of every kind, supplies of cotton yarn from abroad fell substantially, particularly in the closing months of the year. In 1952, imports totalled only 7,264,674 lbs., valued at £2,037,353, compared with 31,666,945 lbs., costing £10,447,472 in the previous year.

U.S. Critics Attacked

Defending the Lancashire cotton industry against recent criticisms by an American textile productivity team, Sir John Grey, Chairman of the Lancashire Cotton Corporation, the world's largest spinning group, at the annual meeting in Manchester this week called for the United States to remove their tariffs on all textiles. He said:

"These critics come from a country which is protected by high tariff walls. They have a population which can itself absorb more than 90 per cent. of the production from its own cotton industry. Their industry was not closed down by a third to assist the last war effort, nor did they have the kind of continuous slump suffered by Lancashire in the 1930's. The losses then incurred in this country absorbed the industry's assets and did not permit the purchase of new machinery, nor could this be bought until the end of the last war.

"These facts should be recognised by critics who arise from feather beds. Let the United States remove its tariffs on all textiles and see what the effect of this so-called Lancashire inertia will do for them."

Sir John said the Lancashire cotton industry had been subject to more enquiries, investigations, criticisms and strictures than any other over the past 25 years. He suggested that the industry be left alone and allowed to work out its own salvation free from interference by those on the fringe who had no responsibility

EGYPTIAN COTTON MISSION COMES TO INDIA

FACTORS LEADING TO RESTRICTED BUYING

AN outstanding event of the last week, from the point of view of the country's cotton economy, is the tour of the Egyptian Cotton Goodwill Mission headed by Mr. Hassan Mawardi. This mission which is primarily interested in promoting Egypt's cotton exports to this country, has already met the leading spokesmen of the cotton trade and textile interests in this country. The mission has been told, as is only to be expected, that, while India is generally interested in Egyptian cotton, any further expansion in Indo-Egyptian trade in cotton will materialise only if the Egyptian Government follows a realistic policy in regard to prices and export duties on cotton. Indeed, these two questions, according to all reports, figured prominently in the formal as well as the informal talks which the mission has had with the cotton interests in India.

Although India is even to-day an important customer of Egyptian cotton, the consumption of that country's cotton has declined heavily in the recent past. Thus, during the 1951-52 season, the consumption of Egyptian cotton by the Indian mills aggregated no more than 157,524 bales, as compared with over three lakh bales in the previous season. Again, the imports of Egyptian cotton from the beginning of the present season up to 24th December, 1952, are estimated at only 14,000 bales, as compared with 24,300 bales during the same period last season. The decline in the consumption and imports of Egyptian cotton is due to several factors. In the first place, the majority of the Indian mills, which were spinning superfine counts in the past, has now switched over to the manufacture of coarse and medium counts. It is true that enquiry for superfine goods does flare up occasionally. But, by and large, Indian mills interest in Egyptian cotton has tended to decline because the demand for superfine goods has fallen appreciably and this is due mostly to the high price of the raw material and also to the high excise duty on superfine cloth, to some extent. Secondly, the frequent changes in Egypt's cotton policy, and more particularly in the policy which relates to the export of cotton, are a serious deterrent to the purchase of Egyptian cotton.

Methods of Control

Many and varied have been the methods by which the Egyptian Government has interfered with the free functioning of the cotton market mechanism. But its latest measure, closing down the Alexandria market, with effect from 23rd November, until further notice, beats all previous records of interference with the cotton market. The Government fixed arbitrary prices for cotton, and announced that it would buy the cotton offered to it at these prices. The Government also announced that it would sell its stocks to exporters at reserve prices which would be based on the previous New York middling 15/16" Spot closing prices, increased by 10 per cent. for Ashmouni and 30 per cent. for Karnak, minus the respective export taxes. It was also announced that the Government would fix, from time to time, differentials for other grades.

These measures were taken after other methods at controlling cotton prices had failed. Actually, cotton prices in Egypt were declining to reasonable levels before these Government measures for cotton were announced. Perhaps, if world forces had been allowed to exert their influence on the prices of cotton in the Alexandria market, these prices would have by now reached a level at which they would have become competitive and induced the outside world to purchase more Egyptian cotton. The fact of the matter seems to be that, whereas the Government is generally inactive when cotton prices are abnormally high, it is quick to seize every opportunity to maintain prices at artificial levels when the prices tend to adjust themselves to world conditions. This is hardly the policy which should be adopted in the case of cotton, the exports of which are vital to the Egyptian economy. It is to be hoped that, at least now, the Egyptian Government will view the cotton export problem in the light of the altered world conditions which are now less favourable to the maintenance of high prices, whether for cotton, or for any other commodity. Another reason, which should compel the Government to take a realistic view of its cotton problems, is the fact that it still has on hand large stocks of cotton, for which buyers have to be found. A recent estimate placed these stocks at over 200,000 bales, inclusive of about 90,000 bales each of Karnak and Ashmouni. And more stocks are also being acquired.

Barter Deals

Strenuous attempts are no doubt being made to dispose of these stocks. Barter deals are also being conducted with other countries; exchanging cotton for other commodities. A helpful decision, from the viewpoint of the customers of Egypt's cotton, is the one which permits the sterling area countries now to pay half the price of Egyptian cotton they purchase, in sterling and the other half either in Egyptian currency on an export account or in barter-goods. This marks a departure from, and on improvement upon, the Government's earlier decision which allowed the export of cotton and other Egyptian products against payment of half the price in dollars and the other half in Egyptian pounds on an export account.

Mr. Hassan, the leader of the Egyptian Cotton Mission in India, said last week, at a Press Conference in Bombay, that Egyptian cotton was of exceptional quality and that the demand for it had increased considerably of late. He added: "We are confident of disposing normally all the cotton as we have managed to do in the past. If some of our customers have restricted their purchases this season, fortunately others have bought and will buy more." Referring to the relatively high prices of the Egyptian cotton, Mr. Hassan said:

"We have no need to point out to our Indian friends the fact that the spinning value of Egyptian cotton, compared to practically any other foreign growth, is higher and it definitely pays them to pay the small difference in price.

"We have to point out that there is no advantage in price likely to be gained by further delaying purchases. Nobody has now any control on the prices of Egyptian cotton.

"Naturally, economic factors will have a bearing on the future policy of production in Egypt as anywhere else. The Egyptian Government being this year the holder of most of the present supply, the offer of sales will be more in harmony with demand."

Emphasis on Quality

Mr. Hassan's emphasis on the quality of Egyptian cotton was, of course, unnecessary, for this is a factor which needs no special publicity nor emphasis. It has been conceded by spinners all over the world. But the spinners cannot certainly pay too high a premium for this one consideration, a premium fixed arbitrarily by the Egyptian Government. This point was rightly stressed by Mr. N. Shrodhan, Vice-Chairman, Ahmedabad Millowners' Association, who told the Egyptian Mission at Ahmedabad that, if free marketing facilities were accorded and prices stabilised according to the laws of supply and demand, there would be a "greater buying" of Egyptian cotton in India. He said that this country might have consumed a "lot more" of Egyptian cotton in the last two years had it not been for the "artificial and varying levels of prices, maintained by vested interests in Egypt," which had resulted in India importing a million bales from the U.S. He also protested against the Egyptian Government's policy of revising the export duty on cotton "in season and out of season."

Apart from these two questions, the question of correct prices and that of export duties —there is another problem which stands in the way of larger offtake of Egyptian cotton by India. This is the problem of evolving an acceptable arbitration machinery—that is, acceptable alike to the buyers and the sellers. Last year the Egyptian cotton exporters decided that all arbitration would be done only in Alexandria. This unilateral decision was naturally enough resented by the cotton interests in this country. It is contrary to established international practice under which the buyer has the option to get his cotton arbitrated at any place in mutual agreement with the seller. Leading cotton importers in the city are, it is stated, examining the whole question of evolving an acceptable machinery of arbitration. It would appear that the Egyptian Mission has expressed its desire to accommodate Indian opinion on this issue. Broadly speaking, Indian importers would like to see that this country is represented adequately on the bodies which deal with arbitration in cotton disputes. Thus, they would like to see that Indian buyers are allowed to nominate an additional member to the three-member Arbitration Board which the Egyptian Government proposes to set up. Again, they would like to see that Indian buyers are represented by an addition of two more members in the five-member Appeal Board, which the Egyptian Government proposes to set up. The representatives of Indian interests on these bodies will be selected from a group of leading Egyptian firms of cotton exporters. The scheme, which the Indian interests are sponsoring, envisages that the representatives will work on these two bodies by rotation as and when cotton is surveyed prior to shipment or as and when any quality dispute is submitted by Indian buyers for arbitration in Alexandria. But, if the representatives are themselves interested in the cotton under dispute, they will not, of course, be present at the time the arbitration issue is being discussed. Again, the representatives of Indian interests will be chosen only if they answer the qualifications which are laid down for the representative of the International Federation of Master Cotton Spinners and Manufacturers' Association on these two bodies. It is, however, stipulated that, if an Indian firm opens a branch in Alexandria, at any time in future, this firm should be given preference in the matter of representation on the arbitration bodies. It is to be hoped that the scheme, or a similar scheme, will commend itself to the Egyptian authorities. In any case, it must be clear that any failure to accord recognition to India, which is the second largest buyer of Egyptian cotton, in the arbitration bodies, would certainly act as a serious deterrent to Indian offtake of that country's cotton.

WORLD CONSUMPTION OF COTTON

The average monthly rate of consumption of cotton in the "free" world during the first three months of the 1952-53 season, which begins on 1st August, was, according to the International Cotton Advisory Committee, 25.1 million bales, which compares with 26.1 million bales in the corresponding period of the previous season. The following table gives the consumption of cotton in the leading cotton consuming countries of the "free" world:

Cotton Consumption
(In 000 bales of 478 lbs. each)

	1948-49	1950-51	1951-52	1952-53 Aug.	Sept.	Oct.
Canada	22	40	29	23	29	36
U.S.	572	876	766	782	793	842
France	108	101	101	63	102	106
W. Germany	96	87	80	67	86	
Italy	55	82	74	11	77	78
U.K.	224	178	141	93	116	126
India	255	245	275	301	295	294
Japan	223	133	151	161	169	172
World (million bales)	22.9	26.6	25.4	23.9	25.5	25.9

It may be noted here that the world consumption of cotton in the later months of 1952 was distinctly better than in July of that year, when cotton consumption was as low as 21.1 million bales. Discussing the prospects of the consumption of cotton in the January issue of its monthly review, *Cotton*, the Committee says:

"Demand for raw cotton over the long period depends on the level of cotton consumption, which in turn is governed by the demand for cotton textiles. In this respect, the outlook is still uncertain but the recovery initiated at the beginning of the present season, although cautious, continues. International trade in 1953, according to the recent Textile Conference, should rise somewhat, while most countries expect domestic demand to be at a fairly high level, in view of the high level of employment and investment. On present prospects, therefore, cotton consumption in the free world during the 1952-53 season is not expected to vary much from the 25.1 million bales consumed last season, unless there is a very radical change in the economic and political scene. A final point on cotton demand in the long period is that the future competitive position of cotton *vis-a-vis* rayon is greatly improved by the decline in world cotton prices. Cotton in many countries is now selling at a heavy discount on rayon and cotton in many instances is now a cheaper raw material, even if allowance is made for the waste factor in spinning cotton. This change in relative values should be important in the drive towards greater sales promotion in cotton textiles."

SUDAN COTTON

Sudan's 1952-53 cotton crop is estimated by the Ministry of Agriculture at 1.8 million kantars as against 1.2 million kantars in the 1951-52 season.

METHODS OF SECURING INDUSTRIAL PEACE IN INDIA

COLLECTIVE BARGAINING VS. COMPULSORY ARBITRATION

(By "LIBRA")

THE growing *tempo* of industrial expansion in India has brought in its wake all the attendant evils and problems. The greatest of them all is the problem of the human factor in production. It is no more than a platitude to say that, although theoretically labour as an agent of production is free to offer its services and withdraw them whenever it likes, in practice, this freedom, in a capitalist society, only means freedom to starve. Effective organisation of labour is the only safeguard against victimisation by the powerful employer. It is only thus that the worker can bargain on terms of equality with his employer.

It is no wonder then that, during its chequered career of 30 years, the Indian trade unions have neither gathered the strength nor the prestige which unions in Western countries with a much earlier start have achieved. The reasons for this state of affairs are legion and this is not the place for their exhaustive enumeration. The most important of these reasons, of course, is that the trade union movement is still dominated by the "outside agitator" who is more intent on attaining his political ambitions than on the welfare of the worker. The Indian worker wants quick results and, unless he is assured of a quick wage increase or other monetary benefits by his union, he will migrate to a rival union or will save his subscription for more fruitful purposes. Thus the unions, which have to justify their existence by ceaseless demands on the employers, have functioned more as strike committees than as welfare organisations for the uplift of the worker. There are, of course, rare exceptions, like the Textile Labour Association of Ahmedabad, which has started co-operative housing societies, co-operative credit societies, hospitals, dispensaries, etc., and has thus materially contributed towards the raising of the standard of living of its members.

It would not be far from the truth to say that, until the advent of the era of Industrial Courts and Industrial Tribunals, Indian unions had little to show by way of achievement and that little was achieved by strikes which wasted enormous human energy and caused misery and travail to thousands. The weakness of the unions was exploited by the employers and it was hardly, if ever, that an employer recognised a union. Recourse had, therefore, to be taken to a trial of strength.

Compulsory Arbitration

The Bombay Industrial Disputes Act, 1938, which introduced compulsory arbitration in India for the first time in the case of disputes, the continuance of which were likely to cause serious or prolonged hardship to a large section of the community, or seriously affect an industry and the scope for employment in it or cause a breach of public peace, also brought compulsory recognition by employers to the union which commanded a membership of 25 per cent. of the total number of workers employed in an occupation or an industry. The Bombay Industrial Court, constituted under this Act, has set up a tradition of progressive judgments and has justified itself as the pioneer institution of its kind in India. It has brought into realisation the cardinal principle of compulsory arbitration enunciated by the International Labour Organisation, namely, that "its object is not the application of existing rules of law but the creation of new law for the parties."

The award of the Bombay Industrial Court, made in the month of June of 1947, fixing minimum basic wages for the least skilled workers in the cotton textile industry of Bombay, has served as a guiding star to the adjudicators in various parts of the country in fixing minimum wages in various industries. Its dictum on the grant of bonus that, "so long as the living wage standard has not been attained, the bonus partakes primarily of the character of the satisfaction, often partial and temporary, of the deficiency in the legitimate income of the average worker in an industry, and that, once such income has been attained, it would also partake of the character of profit-sharing," has had far-reaching influence on the concept of bonus in the country and has been quoted with approval by the Labour Appellate Tribunal. Wages in the cotton textile industry in the Bombay State have been standardised by the Court; wages in the silk textile industry standardised by awards of the Wage Board are now before the Court for consideration in appeal; and references regarding standardisation of wages in the sugar industry are also pending before the Court. Principles regarding retrenchment, compensation, reinstatement, dearness allowance, night-shift allowance, etc., have now been well settled by judicial pronouncements, so far as the industries over which the jurisdiction of the Bombay Industrial Court extends under the Bombay Industrial Relations Act, 1946, namely, cotton textile, silk textile and woollen textile industries, sugar industry, B.E.S.&T. Undertaking and banks which do not have branches outside the State of Bombay.

The Industrial Tribunals constituted under the Industrial Disputes Act of the Central Government which governs the labour-management relations in the industries not covered by the Bombay Industrial Relations Act in Bombay State and other Provincial Acts in other States, have also formulated and laid down guiding principles regarding wages, dearness allowance, bonus, retrenchment, provident fund, gratuity, leave and various other matters of vital import in industrial relations.

Duty of the State

Thus, it will be seen that what the trade unions could not achieve during the past 25 years with the greatest weapon in their armoury, has been achieved by the awards of the Courts and the Tribunals within the narrow span of six years. There is no attempt, in this statement, to belittle the value of the unions in adjusting human relations in industry. Negotiations between the employer and the union representing the workers should, of course, be the first step towards settling of disputes in an undertaking or an industry. But, if the employers and the unions do not arrive at peaceful and amicable settlements, culminating into trade agreements, it is the duty of the Government to intervene and not to allow them to dislocate the industry by their trial of strength to the detriment of the interests of the consumer, the public and national production.

Strike, as a weapon, may succeed during a boom period, but, during periods of recession and depression, it is likely to rebound like a "boomerang" on the workers and sometimes may even be deliberately exploited by the employers to discredit a union. The untold misery and loss of morale that a fizzled strike entails are more harmful than anything else to the trade union movement. The service of mediation offered by the Government is thus a face-saving device to both parties. A mediator does not determine the rights and wrongs of a situation and pass judgment on it. His function is to coax the parties to arrive at some mutually acceptable, though not always mutually satisfactory, adjustment. Employers, who are adamant towards union representatives for fear that easy concession on one demand may lead to further demands, are generally agreeable to give in when goaded by an impartial Government official. Experience also shows that union leaders are prepared to modify their demands before a conciliator rather than during negotiations with the employers, as, in the latter case, they would be liable to be dubbed "turn-coats" sponsoring "yellow dog" agreements.

The next two stages in the achievement of industrial peace are: voluntary arbitration and compulsory arbitration. In voluntary arbitration, the parties agree to submit their dispute to the adjudication of an impartial adjudicator. The acceptance of the award of the arbitrator is purely voluntary, unless the agreement provides for its compulsory acceptance. In compulsory arbitration, the legislature empowers the Government to refer a dispute to an arbitrator, whenever it finds, or its attention is drawn to, the existence of such a dispute. During the period of adjudication the parties are prevented from indulging in strikes or lockouts.

Blind Imitation of West

The habit of drawing inspiration from Western countries in all matters, which is so strong in us, is likely to be a deceptive and tricky guide, especially due to the human factor involved in industrial disputes. Transplanting methods from the West which may not be suited to the social and economic climate of India will only bring failure and disaster. In education, outlook, race, historical development and standard of living, the Indian worker is miles behind his Western counterpart. Broadly speaking, the union leadership does not also come up to Western standards. There is also a great deal of diversity in the national characteristics. Blind following by one country of institutions in another country has proved to be unsuccessful even in the West. Britain has been pre-eminently successful in settling its industrial disputes by negotiations and mediation. But, in the words of Prof. Kirkaldy, "the U.S.A. is, perhaps, the only country which has endeavoured to achieve most in the shortest time in the field of collective bargaining and, in its haste, has failed to realise that a willing spirit cannot be inculcated by an Act of Congress."

Compulsory arbitration has functioned satisfactorily in Australia and New Zealand. According to Professors Watkins and Dodd, "the machinery of compulsory arbitration does not prove disadvantageous to the workers in the Australasian countries, because there, a strong Labour Party is often in active control of the Government and is always a powerful opposition when not actually in control." A strong Labour Party is also functioning in Great Britain to-day, but that has not changed its reliance on collective bargaining as the chief method of prevention and settlement of industrial disputes.

Just as in the case of any other piece of social legislation, the framers of industrial legislation must, therefore, take into account the characteristics and the genius of a people, whose behaviour and relations they seek to regulate; and, in doing this, it is always necessary to tread warily in drawing parallels and similarities. Prof. Kirkaldy has aptly illustrated this point in his book *The Spirit of Industrial Relations*. He says, "Possibly the two countries which are closest in ancestry and thought, are the United States of America and Britain; ... yet what works and works reasonably well in Britain has failed in America; methods which have been tried and which have succeeded in the United States would undoubtedly fail in Britain. It is, therefore, important to avoid slavish imitation of the methods and procedures of other peoples ... without first examining whether the methods and procedures are the best suited to the stage of industrial and political development in one's own country."

Position in India

In India, to-day, the two most important pieces of industrial legislation for the settlement of disputes are the Bombay Industrial Relations Act, 1946, and the Industrial Disputes Act, 1947, of the Central Government. Under both these Acts, the final step in the settlement of disputes is compulsory adjudication. Of the two Acts, the Bombay Industrial Relations Act is undoubtedly the more comprehensive. In fact, with a few modifications, it would be an ideal Act. But, according to some critics, these modifications are of a fundamental character. It is proposed to consider them at a later stage after briefly enumerating the salient features of the Act.

The Act secures recognition for a union which has a membership of not less than 15 per cent. of the total number of employees employed in an industry in any local area as a representative union for the industry in such local area. Any employer intending to effect any change concerning retrenchment, rationalisation, withdrawal of recognition to unions, wages, hours of work, and other matters mentioned in the Second Schedule attached to the Act, has to give notice of his intention to the representative union. An employee or a representative union, desiring a change in these matters will also have to give a notice to the employer. The parties are free to arrive at an agreement after negotiations. If, within a fixed time-limit an agreement is not arrived at, the party which gave the notice can forward a statement of its case to the conciliator, who will have to direct his efforts towards inducing the parties to arrive at a fair and amicable settlement. During the conciliation or thereafter, the parties may agree to submit their dispute to the arbitration of the Labour Court or the Industrial Court. This is a form of acceptance of voluntary arbitration. If, however, Government

SUGAR AND "GUR" EXPORTS BANNED

GOVERNMENT'S EXPLANATION LEAST CONVINCING

THERE seems to be something radically wrong somewhere in the Ministry of Food at the Centre, as will be clear from the way in which the sugar policy is now being handled. It was only some four weeks ago that the Food Ministry advised the sugar factories that they could sell sugar for export at specially reduced prices, the extent of reduction allowed being Rs. 2 per maund or Rs. 54-8 per ton. In communicating this decision to the factories, it had clearly expressed the hope that "this concession will result in *appreciable* (italics ours) exports of sugar". But now the Ministry has decided to ban exports of sugar, as well as *gur*; the ban, however, does not apply to cases where firm commitments have already been made. The chief consideration that has weighed with the authorities in taking this decision, we are told, is the fear of the production of sugar during the current (1952-53) sugar season being less than that originally estimated. This fear, we are further told, is reinforced by the prevailing high prices of sugar and *gur*.

Whether or not the ban on sugar exports is really justified is a different question and will be dealt with presently. But the point we want to make here is that the Government is a poor judge of business conditions. This point needs to be driven home, because there are some who believe that the State should take to trading activities in order to earn enough money for implementing the Five-year Plan. The Government observes that it expects a fall in sugar output during this season. This expectation is perfectly right. But one would like to ask as to why this consideration did not weigh with the Government when it reduced the export price of sugar four weeks ago and expressed the hope that there would be an "appreciable" export. Surely, even at that time, the Government must have had an idea of what the production of sugar this season would be like. The aggregate output of sugar for 1952-53 up to the end of December, 1952, when the Government decided to encourage exports by offering a subsidy, was 240,943 tons, as compared with 302,796 tons during the corresponding period of the previous season. In fact, during the fortnight ended 31st December, 1952 itself, the production was as low as 127,325 tons, as against 233,035 tons in the corresponding fortnight ended 31st December, 1951.

High Prices

The Government's explanation for the prevailing high prices of sugar and *gur* is not at all convincing. These high prices, as was clearly pointed out in these columns last week, are the result, not of the total supplies of sugar being lower than demand, nor of the expectation of a fall in sugar output this season, but mostly of the Food Ministry's own bungling over the releases of stocks and partly of the clever manipulations of a group of sugar merchants. It was not, in any case, due to the Government's decision to encourage exports of sugar by paying a subsidy, because there was hardly any demand for export even at the reduced price.

In criticising the Government thus, we should not be misunderstood to mean that the Government's present decision to ban exports of sugar is ill-advised, though we have our own doubts whether it was wise in banning the exports of *gur*. The statistical position of sugar may not support the Government's decision to ban exports of white sugar. For even supposing that the production of sugar in the current season would be no more than 1,200,000 tons, as one section of the sugar industry estimates, the supply position might not be so very uncomfortable as to require a complete ban on exports. On the basis of a production (estimated) of 1,200,000 tons, plus the sizable surplus of 468,108 tons brought in from the previous season, the total supply of sugar available during the current season will aggregate 1,668,000 tons, against the country's estimated requirements of 1,300,000 tons. There will thus be, at the end of the season, a surplus of 368,000 tons. Allowing for a margin of 300,000 tons which the Government desires to hold as a buffer stock, there is a balance of some 68,000 tons which can be exported. It is true that some sugar has been exported but, even after making allowance for it, there is scope, from the supply point of view, for exporting another 50,000 tons. But all this argument is only of academical importance, because, with prices of sugar in the world markets going down, it is doubtful whether India can export any sugar at all. It is, however, just possible that, if it is made known to the public that the Government will not permit any export of sugar it may have a psychological effect on the market and discourage hoarding by speculators. Moreover, in view of the possibilities of sugar production in the 1953-54 season being lower than even those of the current season, it will be prudent for the Government to conserve supplies and keep a firm hold over the market. Viewed thus, the Government's decision to ban exports of sugar will be welcomed.

In so far as exports of *gur* are concerned, there is no need to ban them. The supply of cane during the current season is expected to be as large as in the past season, while the production of white sugar will be smaller than last season. This means that more cane will be available for *gur* making than in the past season. That being so, it is not understood why the authorities have extended the export ban to *gur* also. *Gur* is after all a cottage industry and, if there are any chances of helping that industry by developing export markets, the authorities should exploit such chances to the fullest advantage.

FIRST SUGAR PRODUCTION ESTIMATE

The total production of sugar in India during the current (1952-53) sugar season is estimated at 13.1 lakh tons, as against the actual production of 14.8 lakh tons in the preceding season, according to the first forecast of the production of sugar directly from cane. The total quantity of cane to be crushed is, therefore, estimated lower, at about 132 lakh tons, as against 155 lakh tons. These estimates for the current season are likely to go down still further, as the factories started late during the season by about three weeks, as compared with the previous season. An all-round decrease in production is expected, except in Bihar, Hyderabad and West Bengal.

The percentage recovery of sugar from cane is expected to be higher during this season in all the States, except in Bihar, P.E.P.S.U., Mysore and Orissa. The all-India figure for the recovery is thus estimated at 9.95, as against 9.57 in 1951-52.

Out of the 155 existing sugar factories in India, 136 factories are expected to work during the current season, as against 139 that actually worked in the preceding season. Two factories in Madhya Bharat and one each in Rajasthan and Bhopal are reported to be not working, while one more factory is working in Madras.

The duration of the crushing season is expected to be shorter in almost every State, except in Bihar, Bengal and Hyderabad. In U.P., only 26 factories had started crushing by 5th December, 1952, as against as many as 60 on the corresponding date last season. Similarly, the closing of the season is also expected to be earlier this year; by 5th May, 1953, all except 16 factories are likely to finish off their season in the whole of India, as against 58 in the preceding season. The all-India duration of the season is put at 113 days, as against 133 days in the last season.

COMPLAINT AGAINST SUGAR MILLS BASELESS

Referring to the factors responsible for the artificial scarcity and high prices of sugar in some parts of the country, we observed in these columns last week that the complaint of the sugar mills deliberately withholding delivery of sugar stocks to merchants was baseless. That this conclusion was not unfounded is evident from the convincing reasons, given by the Committee of the Indian Sugar Mills' Association, Calcutta, in the course of a statement issued to the Press recently, extracts from which are reproduced below:

". . . . The Committee are rather surprised at the above imputations, which, they feel, are entirely uncalled for. Because the factories have nothing to gain by withholding sale of sugar. On the contrary, they are very much keen on selling not only the last season's stock but also the current season's production, if that is at all feasible. For it is only through quick disposal of their stocks that they can have the necessary finance and storage facilities to maintain current season's production. As a matter of fact, the factories have been reporting the difficulties they are faced with, due to accumulation of stocks, both to the Government and this Association. It is, therefore, unfortunate that the factories have been wrongly associated with this phenomenon of short supply and rise in prices of sugar at certain consuming centres. As has been pointed out in the Press report, there has recently been a large quantity of sugar released for sale. Between 1st December and 16th January, more than 400,000 tons of sugar have been released which should be more than sufficient to meet the requirements of the country.

"But slight rise in prices of sugar in the South and some other consuming centres was due to short supply. This shortage has been owing to transport difficulties, and the industry itself has for some time past been trying to impress upon

(*Continued on page 227*)

PROVIDENT FUND FOR COAL MINERS

CONTRIBUTION TO BE RAISED?

THE unanimous decision of the Board of Trustees of the Coal Mines Provident Fund, under the chairmanship of Mr. V. K. R. Menon, Secretary to the Ministry of Labour, on 28th January, to lift the Coal Mines Provident Fund Scheme to a level on par with the Employees' Provident Funds Scheme is regretted by the industry. For this means that the contribution to the provident fund of coal workers will in future be on the basis of basic wage plus dearness allowance. At present, the contribution is based on basic wage only. The increase in cost to the industry as a result of the Board's decision will be anything between 125 per cent. and 130 per cent. It is variedly estimated that the payment will increase the cost of raising of coal by about As. 2½ to As. 3½. This burden, at a time when the industry is already passing through difficult times is, indeed, unjustifiable. It was only last week that pointed attention was drawn in this journal to the state of economic conditions in the industry. It would have been noted therefrom that already a large number of collieries are working at a loss and that the industry requires the restoration of the voluntary price cut agreed to in November, 1949, and relief in foodgrain concessions which are costing the industry heavily. If the latest proposal in regard to the contribution to provident fund were to be implemented, it would require a further rise in the price of coal, in addition to the restoration of the voluntary price cut. But such a development will affect all the industries where coal constitutes a major factor in the cost of their production and give rise either to a fresh wave of rising prices or accentuate the depression in industries. The increase in freight on coal effected last year has already led to a series of claims for price increases in the various industrial sectors. The principal industries that will be affected are steel, cement, ceramics and shipping.

Adverse Effect

If the implementation of the proposal of the Board of Trustees of Coal Mines Provident Fund were not followed by a proportionate increase in the price of coal, even granting that the voluntary 1949 price cut is restored, the adverse effect of such a development on the coal industry would be considerable. Reports from Bengal and Bihar disclose that there are many marginal units which are on the verge of closure, if no immediate relief is given. But, instead of giving relief, the present burden will only precipitate their crash. It is, therefore, to be hoped that the Government will not give its consent to the decision of the Board of Trustees.

It is not suggested that better amenities for labour should not be provided. They should, of course, get all the benefits that help rise their standard of living. But the capacity of the industry and the interests of the consumer too should be taken into consideration in determining such benefits. Further, such benefits should bear some relation to the efficiency of workers also.

Incidentally, it may be mentioned that the coal industry has been complaining about the employers' obligations to bear the entire administrative charges of the provident fund. At present, the employer and worker are each contributing 6¼ per cent. of basic wages to the fund; the employer has to pay, in addition, an administrative charge of 5 per cent. of the aggregate contribution. The Indian Mining Association contends that "it is unfair that the onus of paying the entire administrative charges should be placed on the employer alone, for in effect it means that he pays 10 per cent. of his own contribution." It has, therefore, urged that the administrative charges should be debited to the fund and paid out of the interest accruing, as is done in all private provident funds. Alternatively, it has suggested that the charges could be shared equally by the employer and the worker each paying a set percentage of his contribution. A pertinent point to be noted here is that the charge proposed under the recently introduced Employees' Provident Funds Scheme, which applies to various sectors of industry, is only 3 per cent. It is, therefore, not understandable as to why the coal industry alone should be subjected to a service charge which is very much higher than that collected from other industries.

Industrial Progress In India

When the 18th turned into the 19th century one of Calcutta's best known citizens was William Hickey, whose fascinating memoirs enable us to relive those almost unbelievable times.

Judging by his memoirs he seems to have known nearly everybody in the city at that time. He may well have been acquainted with Colonel Swinton or James Rolt, who were at that time quietly and unobtrusively laying foundations upon which has been built what is now one of the oldest, largest, and soundest industrial and commercial organizations in the eastern hemisphere.

Today the name of Martin Burn Ltd. is the first to come to mind when requirements for building, engineering, and machinery are considered. This organization's long participation in the industrial and civic progress of India gives it a unique insight into the needs of every form of development. The story of the growth of the Martin Burn organization is the story of India's industrialization and the expansion of her civic amenities.

For many years there can have been few major projects undertaken in India in which Martin Burn have not played a part at one of the many stages from the planning to the conclusion of the enterprise. The extension of the supply of electricity; the many railways; the provision of adequate water supplies; the design and building of civic, religious and commercial buildings — all have been assisted by the Martin Burn organization.

JUTE CROP IN 1952-53

SMALL INCREASE REPORTED

THE final forecast of the outturn of jute crop for the season 1952-53, released last week, discloses a fall of 6 per cent. in area and a rise of 0.4 per cent. in production. The acreage devoted to jute during the season aggregated 1,834,979 which compares with 1,951,148 acres in the previous season. The estimated output for 1952-53 is 4,694,954 bales (of 400 lbs. each), as against 4,677,541 bales for the preceding season.

Official sources attribute the decline in acreage under jute during the current year to the general depression in the loose jute market prior to sowing and to want of timely rains from the middle of June to the third week of July, 1952. The fall is reported to have taken place in Orissa, West Bengal, Bihar, Assam and Tripura. There was, however, some increase in Uttar Pradesh.

It is noteworthy that in spite of the decrease in the total acreage, there has been a small increase of 17,413 bales in production of jute during 1952-53 over the output of the preceding season. This increase, therefore, reflects an improvement in the yield per acre and is shared by Assam, West Bengal and the U.P. Official circles attribute the increase partly to the efforts made to grow more jute under the integrated production programme and partly to better climatic conditions towards the end of August 1952. This increase in outturn would have been much more than what it is but for decrease registered in Orissa, Bihar and Tripura owing partly to a fall in area and partly to scarcity of rains towards the end of October, 1952. In parts of Assam and West Bengal, the crop also suffered, it is stated, to some extent by insect pests.

The area under jute cultivation in West Bengal is officially estimated at 836,300 acres, a decrease of 49,800 acres over that in the previous year. The total yield of the crop is estimated at 2,412,600 bales, as against 2,330,000 bales last year. The average yield per acre is estimated at 2.88 bales. In Assam, the jute crop was lower by 16,350 bales, the average yield being about 2.6 bales per acre.

For the whole country, the average yield on the basis of the final estimate, works out to 2.56 bales per acre. This compares favourably with 2.18 bales per acre for 1951-52 and 2.24 bales for 1950-51. Although the increase is welcome it must be pointed out that the average yield is still far below the yield in East Pakistan, estimated at 3.56 bales per acre. It may be that there is some exaggeration in the latter figure. Nevertheless, one should admit that that is the level which may be considered as satisfactory for making jute cultivation a profitable venture in India. Further, the average yields for West Bengal and Assam at 2.88 bales and 2.6 bales per acre, respectively, are disappointing considering that they are the two States where the real jute is grown. Unless further intensive efforts are made to raise the yield per acre of jute and to supply the raw material at relatively more remunerative prices, Indian mills can scarcely be expected to compete with the Continental mills in world jute goods markets. Besides, it must be noted that the quality of the jute supplied is not of a high order and when mixed with substitute fibres such as *mesta* and *bimli*, the finished product compares unfavourably with the Continental product made of superior Pakistan jute. There is, therefore, need for far more vigorous efforts from the Indian Central Jute Committee to increase the yield than at present.

The current season's output placed at 4.7 million bales, along with a carry-over of 1.15 million bales at the commencement of the season, makes the total availability of raw jute to mills within India 5.85 million bales. To this should be added receipts from Pakistan which upto the end of January amounted to 877,000 bales, although India has purchased 1.15 million bales from that country. Granting that all the purchases made so far reach the country, the total availability will be of the order of 7 million bales which are considerably larger than the requirements of the mills, estimated at 6.18 million bales. The supply position of raw jute is thus comfortable.

It is against this background of jute supply position that one should view the reports envisaging a new Indo-Pakistan trade pact which will include jute. It is stated that a compromise formula for a long-term Indo-Pakistan trade pact, now under the consideration of the Pakistan Government, envisages the abolition of the discriminating cess on India-bound raw jute. In return for this gesture, the Government of India is expected to rationalise the system of surcharge on coal exports to Pakistan. It is not known how far these reports are correct. They may be no more than just wishful thinking on the part of some in Pakistan, from where these reports have emanated, or at best an indication of the latest inclination of the Pakistan Government. But the fact is that the latter has done nothing so far to meet India's complaint of discrimination lodged with the G.A.T.T. at the seventh session held in Geneva last October. The complaint will, therefore, be heard at the current sittings of the Inter-sessional Committee which began on Monday this week. According to a Geneva report, this dispute will probably be turned over to a working party which may report back to the Committee or to the next full meeting of the G.A.T.T. which may be held some time next month or in April.

While thus the charge against Pakistan is still pending, reports from East Bengal speak of continued distress in jute trade. There is still in Pakistan about 5 million bales of raw jute unsold out of a total estimated supply of about 9 million bales. So far the country has sold only 4.1 million bales of which a little over 3 million bales have left the country. With still five months to go in the current season, Pakistan expects to sell about another 3 million bales. However, as a result of the heavy stocks, the ruling price for raw jute is about Rs. (P) 14 to Rs. (P) 15 per maund, as against the minimum price fixed by the Government at Rs. (P) 23 per maund. The adverse effects of this crisis could have been considerably mitigated had the Government followed a realistic jute policy in the earlier years by not ignoring the interests of the single largest market for its jute, namely, India.

With jute's return to its competitive cheapness as a packaging material, U.K. farmers are compelling animal food manufacturers to revert to the use of jute bags, says the Indian Central Jute Committee.

Large animal feeding-stuff manufacturers throughout the country have intimated, it is stated, the jute trade that they will require jute bags as soon as their present stocks of emergency substitute bags are exhausted. Four main reasons are given for this step: Jute bags have a resale value; they can be used time after time, and, therefore, in the long run are cheaper; they can withstand rough usage and bad weather; they can be repaired quickly and returned to circulation.

(Concluded from next column)

mand which has developed in recent weeks. A similar trend at Cochin auctions has been noticed, where U.S. and Canadian buyers have been most active. The British and the Continental tea markets have also been reported to be keen buyers.

Statistics of shipments of South Indian tea from Cochin during the year (January-December) 1952 are now available. These statistics show that so far as shipments from Cochin are concerned, Indian tea has done exceedingly well during the past year. Thus, the quantity of tea shipped in 1952 amounted to 71.6 million lbs., as compared with 65 million in 1951 and 60.4 million in 1950. The rise of 6.6 million lbs. in exports during 1952 compares very favourably with that of 4.6 million in 1951. Exports to U.K., which had risen from 31.13 million lbs. in 1950 to 39.27 million lbs. in 1951, rose further to 46.6 million lbs. in 1952. Australia, which reduced its offtake of South Indian tea from 7.44 million lbs. in 1950 to 2.05 million lbs. in 1951, showed a preference for Indian tea with an increase in its offtake to 3.67 million lbs. in 1952. All other foreign countries took less than what they had bought in the previous year. Among these, U.S.A. accounted for 8.20 million lbs., as against 8.31 million lbs. in 1951, Canada for 6.24 million lbs. (6.60 million), Ceylon 12,156 lbs. (211,180 lbs.) and other countries 2.44 million los. (3.14 million). Shipments to other Indian ports declined from 5.42 million lbs. to 4.44 million lbs.

In distinct contrast to this trend in shipments of South Indian tea, North Indian tea shipments have slackened. Thus, tea shipments during the period 1st April, 1952, to 17th January, 1953, amounted to 269.17 million lbs., as compared with 278.69 million lbs. and 301.65 million lbs. in the corresponding periods of 1951-52 and 1950-51. The following table shows the offtake of Indian tea by its chief customers during the last three years:

(In million lbs.)

	1st April to 17th January		
	1952-53	1951-52	1950-51
Britain	184.32	193.64	204.66
Australia	6.03	3.20	8.05
Canada	11.98	9.60	11.50
U.S.	16.09	12.67	20.42
Eire	8.98	19.82	24.10
Persian Gulf ...	10.37	4.60	9.32
Red Sea Ports ...	7.54	2.18	3.33

It will be noted that the offtake by Australia shows a marked rise in the current year. The U.S., Canada, Persian Gulf countries and Red Sea ports have shown encouraging preference for North Indian tea.

RUBBER OUTPUT AT PEAK LEVEL

FALL IN CONSUMPTION

THE production of raw rubber in India reached a record level of 19,863 tons during 1952, representing an increase of 2,715 tons or 16 per cent. over that in 1951. As compared with the output in 1950, the latest production shows an impressive rise of 4,264 tons or 27.3 per cent. This uptrend in production is satisfactory in itself, inasmuch as it has exceeded the Tariff Commission's estimate of 19,000 tons. Indeed, the producers themselves were not hopeful of being able to raise production to the high level which it has touched now, despite the fact that an increase in price of raw rubber was then anticipated. This record level of production, it is noteworthy, will go a long way to meet the entire demand for rubber in this country.

The improvement in production, however, has brought in its wake a severe slump, thanks to the accumulation of heavy stocks with both the producers and manufacturers who held between them 10,351 tons at the end of 1952. Of this, 6,181 tons were held by growers and dealers, and 4,170 tons by manufacturers. Stocks of raw rubber accumulated mainly because rubber consumption has not kept pace with the marked increase in production. Thus, rubber consumption, during the year 1952 amounted to 21,061 tons, as against 22,427 tons in 1951 and 17,735 tons in 1950. The Tariff Commission, at its enquiry in August, 1952, however, estimated that the consumption would aggregate 25,300 tons in 1952. The Commission's estimate of consumption, which was the same as that of the Tariff Board which conducted the previous enquiry in 1951, was based on the statements of monthly consumption since January, 1951 submitted by the Indian Rubber Board. But the consumption of rubber in 1952 has not only been lower than the previous year's level but has also fallen very much short of the Tariff Commission's estimate. The lack of sufficient offtake from manufacturers is understandable in view of the fall in demand for manufactured goods and the heavy accumulation of stocks at factories.

Planters in Travancore are very much concerned over the situation that has arisen as a result of the accumulated stocks of raw rubber. They are stated to have been greatly handicapped in raising the necessary finance for running their estates and to pay taxes and other commitments. The Association of Planters of Travancore has, therefore, sought the permission of the Union Government for immediate export of 1,500 tons of raw rubber from India to counteract the artificial slump created by the lack of demand for rubber within the country at controlled rates. Many producers and dealers have, according to the Association, been forced to resort to distress selling at prices well below the statutorily fixed prices, in order to raise funds for immediate requirements. Even the larger estates are now reported to be finding it difficult to hold their stocks. The situation in the rubber market is described as "serious." In these circumstances, the Association says, immediate export of the accumulated stock in india will enable the rubber industry to tide over the present artificial slump.

Though the accumulation of stocks may prove to be a handicap for rubber producers, it may be doubted whether the export of rubber would materialise at all, considering that Indian rubber prices are not competitive *vis-a-vis* foreign prices. Thus, in London the latest quotation for spot rubber, stands at 23*d.* per lb. *c.i.f.* London or Rs. 127 per 100 lbs., as compared with the Indian price of Rs. 138 *f.o.b.* Cochin for Grade I rubber. In the U.S., the current quotation is 28 cents per lb. for March delivery or about Rs. 134 per 100 lbs. and in Singapore it is quoted at 22d. per lb. *f.o.b.* February or Rs. 122 per 100 lbs.

A special meeting of the Indian Board is scheduled to be held this week to consider the situation arising out of the present slump in the rubber market. The Indian Rubber Board is reported to have decided not to recommend any further import of foreign rubber for the current half-year. If the rubber imports are to be banned, then India will become self-sufficient in rubber provided the present trend in production is maintained. In this connection, Mr. A. V. George, Vice-Chairman of the Indian Rubber Board, says that despite the prevailing slump in the raw rubber market owing to increased production and fall in demand, the current year promises to be an "eventful" one in the annals of the raw rubber industry. The gap between production and consumption has narrowed and if the present level is maintained, he adds, the country will be self-sufficient in this strategic commodity this year and it will not have to depend on imports as hitherto. There is no doubt that this increase in production is a notable achievement, of which the raw rubber industry may well be proud. Only, it is to be hoped that this level will be maintained, and that the Government wil assist the industry to tide over the slump so as to enable it to maintain current production levels.

TEA EXPORTS

During the past few weeks, Indian tea has been shaping well, with substantial recovery in prices both in export sales and internal sales. Thus, at the last export auctions held in Calcutta clean black pekoe fetched Re. 1-6½ to Re. 1-7, as against Re. 1-4½ early in December. Clean common broken pekoe showed a recovery from As. 12 to As. 15½ and medium Assam broken pekoe from As. 12 to Re. 1-1. In the internal auctions, medium Doars dust was placed at Re. 1-7, as against Re. 1-1½, medium Assam grainy dust at Re. 1-10 (Re. 1-6½) and best Assam C.T.C. dust Re. 1-14½ (Re. 1-12½). The recovery in prices is attributed to strong de-

CLAIM FOR PROTECTION TO AUTOMOBILE INDUSTRY

IS SUBSIDY PREFERABLE TO HIGH TARIFFS?

THE three-day public enquiry by the Indian Tariff Commission into the question of granting protection and/or assistance to the Indian automobile industry, held recently in Bombay, disclosed a variety of views on the subject. While there was general agreement on the need to develop the automobile industry, there were two prominent schools of thought on the method to be adopted for the purpose of such development. One school advocated the slow method and the other the quick method. Those who advocated the former contended that there was not sufficient volume of demand for undertaking complete manufacturing of motor vehicles in India at a reasonable price. They were of the view that assembly of vehicles imported from abroad should continue until the volume of demand increased to such an extent as to make the manufacture of complete motor vehicles economical. They suggested that, in the meantime, ancillary industry should be followed and encouraged for the manufacture of as many components and parts as possible and that the manufacturers and assemblers should be required to use these components and parts in motor vehicles assembled by them. They also suggested that import duties on cars and parts of cars should be reduced substantially so that motor vehicles could be sold at prices lower than they are at present.

On the other hand, those who advocated the quick method contended that there were already well-established units for the manufacture of motor vehicles in India and that, if necessary assistance and protection were given to those units, it should be possible for them to manufacture motor vehicles at a reasonable price. They felt that, though the volume of demand was low, it was bound to expand in the coming years, consequent on the efforts that are being made to raise the living standards in the country. They were also in favour of taking steps for the promotion of as many ancillary industries as possible. There were also sharp differences of opinion among those who took part in the enquiry regarding the types of models to be manufactured in India and the encouragement that is being given to diesel-engined vehicles.

Keen Controversy

The controversy over the question of imposition of high import duties *vs.* low import duties and subsidies was very keen. Mr. Lalchand Hirachand, of Premier Automobiles Ltd., and a host of other interests connected with automobile manufacturing units defended the existing import duties; under the classification of parts, as adopted by the Government of India in 1950, high level of protection is ensured particularly to items under Customs Schedule 75(10) through a duty of 90 per cent. plus a surcharge. Justifying the maintenance of the duties on this group of parts at the present high level, Mr. Penday, of the Automobile Manufacturing Association, pointed out that revenue from import duties was only Rs. 2 crores, as compared with Rs. 52 crores from internal taxation. He was evidently trying to prove that it was not the high level of import duty that constituted so much burden on users of vehicles as the penal level of internal taxation. Stressing this point, Mr. S. L. Kirloskar of Kirloskar Bros. Ltd. held that the need of the hour was reduction in internal taxation rather than reduction in import duties. He advocated a stable import policy which provided for gradual restriction of imports until a total ban was imposed on the import of foreign vehicles over a period of three years. Mr. L. P. Misra of Hindustan Motors expressed the view that the present high price of automobiles partly manufactured in India could be brought down, if the industry was given an opportunity to produce to its maximum capacity over a period of years. Mr. Lalchand Hirachand agreed with this view.

Subsidies Favoured

There were others who held that a reduction in the import tariff was necessary in order to bring down the initial price of motor vehicles and to give relief to motor vehicle users from the crushing incidence of taxes they now have to bear. They favoured subsidies to indigenous manufacturers and quoted, in support of their case, the views of the Fiscal Commission (1950) which had observed:

"Instead of raising the price of the imported commodity to the level of the fair selling price of the domestic product through a protective duty, Government may choose to reimburse the domestic producer through a subsidy for any loss that he may sustain by having to sell his product at the landed cost of imports. As a general rule, subsidies would be preferable to tariff protection in the following cases:

(1) When domestic production meets only a small fraction of domestic demand;
(2) When the commodities concerned are essential raw materials or adjuncts of production. . .

it is possible to reduce the burden on the exchequer by combining subsidy with a low protective duty. The rate of the protective duty should be so fixed and regulated from time to time that its yield is sufficient to cover the subsidy."

Dealing with this question, Mr. J. M. Benzimra, of French Motors, pleaded for a reduction in both the import duties and internal taxation on vehicles and said: "India has in human beings a great potential—give them an inexpensive product by reducing import tariffs and internal taxation." Mr. Lobo Prabhu, Secretary for Development, Government of Madras, who agreed with Mr. G. W. Withell of Ford Motors, said that the Government should enunciate a long-term policy. He wanted complete exemption of duties on parts which cannot be manufactured in India. He was of the opinion that the present time was not conducive to embark on the manufacture of automobiles.

Development of Ancillary Industries

The importance of the development of ancillary or subsidiary industries received considerable attention at the hands of those who participated in the public enquiry. Some warned against attempts towards complete manufacture of motor vehicles without establishing ancillary industries. It was pointed out that any attempt at manufacturing all the components of vehicles—although theoretically feasible—would keep the cost of production at such high levels that very few could afford to buy the finished product. Mr. Mahindra, of Mahindra and Mahindra Ltd., opined that it would be unwise to force the pace of the growth of ancillary industries and that they would develop of their own accord when the main industry was developed. Mr. Lalchand Hirachand assured all co-operation in aiding the ancillary industries.

The question of restricting the number of models attracted a good deal of attention. Mr. Misra held that, only by the elimination of too many models and by restricting them to the minimum necessary, would it be possible to render any effective assistance for the growth of automobile industry. Extending a helping hand to Mr. Misra, Mr. Mandlekar, Deputy Director of Industries, Government of Bombay, said that, in Sweden, the models of indigenous manufacture were restricted to two only. Mr. N. J. Stork of General Motors India Ltd. said that it was unfair to force upon the consumer the manufacturers' choice. He felt that the consumer should have the freedom of choice. He further observed that restriction of models was a retrograde step and would kill competition which alone could give the necessary fillip to the industry.

Diesel-engined Vehicles

Finally, the encouragement now being given to the use of diesel-engined vehicles came in for considerable discussion. Referring to the vehicles India received under the Colombo Plan, Mr. Lalchand said: "The merits and demerits of diesel oil and petrol engines are still a matter for discussion and the undue patronage extended to the former is slowly killing the petrol car industry." Mr. G. Morarji, Chairman of the B.E.S.T. Company, stated that diesel oil engines had been found to be more economic to run and had been found suitable in all respects for services which were required to be operated for the convenience of the public. He urged that the Government must encourage the manufacture of diesel oil engines equally, as they would in the case of petrol engines. Mr. Staples, of Messrs. Simpson & Co., Madras, could not understand why there should be any prejudice against diesel oil engines. He revealed that his Company was engaged in the progressive manufacture of diesel engines.

An agreement was signed, in New Delhi on 31st January, between representatives of the Punjab and P.E.P.S.U. State Governments and Messrs. Harold T. Smith (Inc.) of Washington for the construction of a total of 355 tubewells in these two States. An agreement with the U.P. Government for the construction of 200 tubewells was signed at Lucknow on 4th February. The construction of the total number of 755 tubewells in the three States will be completed by 31st December, 1955.

NON-FERROUS METALS INDUSTRY

PLEA FOR A STABILISED METAL MARKET

ADDRESSING the sixth annual general meeting of the Indian Non-ferrous Metals Manufactures' Association, Mr. G. L. Gabriel, the outgoing President, made a few thought-provoking suggestions for the establishment of non-ferrous metals industry in India on sound lines. He first stressed the need for building up a strong metal market. Secondly, he pleaded for subsidising the aluminium and lead industry and imposing a ban on imports of anti-friction bearing metals which are being manufactured in sufficient quantities in India. Finally, he spotlighted the need for improving the quality of products manufactured in India.

The non-ferrous metals industry is still in a nebulous stage. The production in 1952 in the main section of the industry, with the exception of virgin lead, was far below that in 1951. The production of copper, antimony and aluminium were 6,079 tons, 161 tons and 3,564 tons, as against 7,083 tons, 328 tons and 3,867 tons in the previous year. Lead production, however, rose from 838 tons in 1951 to 1,124 tons in 1952.

The chief factor for the fall in output was the decline in demand, brought about by a cut in the periodical indents of various Government departments for non-ferrous alloys, restrictions on credit and hasty imports under a liberal exports policy. Small wonder then that the metal market during the year came under a general spell of bearish activity. Indigenous copper accumulated in large quantities even though it is well known that copper produced in India is not enough to meet the demand. There were also reports of accumulation of stocks of antimony and aluminium.

Few would deny the need for a stable metal market, especially when the industry is still in an infant stage. Mr. Gabriel held that a liberal export policy for manufactured and semi-manufactured items as well as for scraps and pure metals would go a long way towards ensuring a stable market in India. He also expressed the view that the Government, by regular purchases from the market, could contribute to the building up of a stable market. He further felt that the creation of a regulated and strong metal market would be facilitated greatly by the formation of single organisation of all sections of industry and trade in metals.

Demand

With industrialisation making steady progress in India, the demand for non-ferrous metals and its products is bound to increase. The Five-year Plan recommends a thorough examination of all occurrences of copper, lead, zinc and tin ores in India. Mr. Gabriel urged upon the Government to expedite the implementation of this suggestion and added that prospecting and exploration work should also include efforts at establishing workable deposits of antimony in the country. The President further suggested that the Government proposal for the establishment of a refinery for refining ore scraps and residues should be proceeded with taking care of India's present bare needs and future requirements.

Dealing with the question of protection to the indigenous industry, Mr. Gabriel said that there was, unfortunately, still some prejudice against indigenous products in India. He did not find any reason as to why there should not be a complete ban on imports of items, the indigenous capacity of which was sufficient to meet home demand. Under this category came anti-friction bearing metals, namely, rosin-cored solders, aluminium foils, aluminium paste, rods, tubes and sections of copper and brass. In regard to primary aluminium, in respect of which considerable further development is visualised at private initiative, the policy should be to ensure an adequate return on the capital already invested and to be invested further. This, the President felt, called for subsidies on a heavy scale for some time to come. He also expressed his considered opinion that the production of existing lead producing plant should be similarly accentuated.

The question of improving the quality of products produced should receive constant attention in the face of world developments. Mr. Gabriel urged the various units of non-ferrous metals industry to co-operate more and more with the Indian Standards Institution in maintaining and improving standards in manufacture and trade. He further added that testing facilities available at the Government Test House should be manned by adequate technical personnel so that test results could be made available speedily.

BASIS FOR VALUING GILT-EDGED

ADOPTION OF BOOK VALUE METHOD

THERE is one problem which is common to both banks and insurance companies. It is the problem of the correct method of the valuation of Government securities for balance-sheet purposes. Among commercial institutions, both banks and insurers hold a large part of their investments in Gilt-edged securities. The controversy relating to the valuation of Gilt-edged securities centres round the question whether the valuation of these securities should be made at book value or at market prices (as on the date on which the balance-sheet is drawn up). Indian insurers have for some time now been complaining that they are compelled to value their Gilt-edged investments at market prices, although this value is largely fictitious in view of the fact that they are likely to hold these securities till the date of maturity when they will be able to realise the face value in full. And the cause of their complaint arises, as readers are aware, from the fact that they have to provide from their current profits, a large sum to meet any depreciation which such valuation may show. They accordingly contend that the market price is an irrelevant consideration. They will, therefore, be interested to learn that the leading British banks, which have till now followed the traditional method of valuing the investments at market prices, have now broken the tradition and are now showing their Gilt-edged investments at their book value, though the market price is also shown as a footnote to the balance-sheet. This, of course, is the basis which the banks have to follow in this country, under the provisions of the Banking Companies Act. But since this represents a clean break with tradition, followed by the British banks for decades and decades, the Chairmen of some of these leading banks have availed themselves of the opportunity presented by their annual statements to their shareholders, to explain at length the reasons which prompted them to effect the change in the method of valuation.

The arguments by which this change in accounting practice is defended by the bank chairmen may be urged with equal, if not greater, force by the insurers also. In view of the great importance of this question, it would be useful to set down in brief the reasons which are given by the chairmen of the banks for changing over from the market price method of valuation of Gilt-edged securities to the book value method.

Change in Accounting Practice

Of all the chairmen of the British banks, Lord Harlech, Chairman of the Midland Bank, has taken great pains to justify the change in accounting practice relating to the method of valuation of Government securities for balance-sheet purposes. He points out how the market price of these securities has suffered a steady decline in recent years. It is a striking fact, he says, that, whereas, over the 5½ years to the middle of 1952, the nominal amount of the British Government securities quoted on the London Stock Exchange increased by more than 26 per cent., the aggregate value thereof, on the basis of recorded prices, actually declined by 2 per cent. The magnitude of this fall will be apparent when it is realised that, while the total volume of these securities increased by more than £3,400 million, their aggregate market value fell by £300 million. The banks have naturally been among the worst sufferers from this fall since the major portion of their investment portfolio consists of Government securities. It is this factor—the continuous fall in the prices of Government securities—that has prompted them to reconsider the question of the valuation of these assets. Analysing the problem of the fall in the value of these securities and its relation to the method of valuing them for balance-sheet purposes, Lord Harlech said:

"The records show that, in recent post-war years the Gilt-edged market has proved to be more erratic, more irrational in the short-term variations of supply and demand, and more incalculable in its price fluctuations than it formerly was. Further, the return to conditions in which the fact or the possibility of fluctuations in bank rate had to be reckoned with increased the hazards to which any substantial holder of Gilt-edged investments is subjected—hazards which, however, are largely irrelevant to the position of a holder until maturity. We cannot be sure that this uncertainty of the market is a passing phase; it is traceable largely to factors already mentioned, but experts attribute it in part also—to quote one authoritative statement—to a 'new sensitivity in private investors,' whose relatively small but irregular operations, now one way and now another, have an effect on prices grossly disproportionate to their size. The inability of the free market to smooth out these fluctuations, as was its natural function in times past, results in part from the vast expansion of the total value of Government debt, and also from the diminished power of jobbers, with capital resources depleted by severe taxation to absorb stock on a falling market with the expectation of releasing it on any upward turn. All these elements in a situation of marked fluidity showed the absurdity of attaching to a British Government security, held by a bank and having a date of maturity quite near at hand or only a few years ahead, a value for accounting purposes fixed by the accident of the ebb and flow of Stock Exchange business on a particular day, twice a year—a value determined largely by factors almost entirely unrelated to the real value of the security in the portfolio of a bank.

"It is difficult to see what practical purpose is to be served nowadays by the process of writing down, which had been followed for many years by tradition and established accounting practice. The practice had no particluar harm in it under former conditions, but had become unsettling and therefore something worse than purposeless under the conditions now prevailing. More particularly, it came to entail heavy drafts, to cover nominal losses; on internal reserves which ought to be held available to meet, in case of need, far more real contingencies.

"It was with all these considerations in mind that we decided, in common with other banks, to find a method of valuation for balance-sheet purposes which, while strictly in accord with the spirit and the letter of the law, would avoid the disadvantages of the old system and be better suited to modern conditions. The method adopted has the result of giving the public, in fact, more information than before, for when—as at 30th June last—the total value at which the investments stand in our books is above the total computed at market prices on the stated date both the figures are plainly shown. As already explained, the difference between the two totals has little or no significance for the Bank as a healthy, going concern, and, by reason of past writing down, the book value of the securities is well below the redemption value. Nevertheless, it is thought right thus to reveal the existence, and the amount, of even nominal 'depreciation.' If, on the other hand, as at the end of 1952, the market value should be above book value, then the fact will be stated.

"I have thought proper to set forth this full explanation of the change in practice, to which only one thing need be added. Unlike some of the banks which adopted the new basis of valuation of investments last June, we felt it to be a logical extension of the step to refrain from making any allocation, either from reserves or from current profits, to writing down their book values. It seemed to us that a clean break should be made with the old system, and that it was more important to fortify our inner reserves against real contingencies than to minimise the difference shown between market and book values on a particular date. As events turned out, the end of June happened to coincide with the lowest level of values recorded during the entire year, and the book value of our investments on 30th June was shown to be £13 million above their market value; since then, however, the trend has been upward, so that in the past six months the difference between market and book value has been entirely wiped out, without, however, altering by one penny the revenue derived from the investments or affecting in the slightest degree their redemption value. Recent developments have thus further underlined the objections in both principle and practice to valuation on a basis that is more accidental than real."

Such, in brief, are the reasons which have prompted the British banks to alter the basis of the method of valuing their securities. And these reasons might, with equal force, be urged in the case of insurance companies. The old and traditional practice of showing Government securities at their market price and of providing for their fall, when it occurs, through reserves for depreciation of investments may, however, be defended on the ground that this practice helps to build up secret reserves—a consideration which is as important to insurance companies as to banks.

FIRE LOSSES IN U.S.

Fire losses in the U.S. during November, 1952, amounted to $65,129,000, according to the estimate of the National Board of Fire Underwriters. This figure compares with $63,958,000 in October, 1952 and $60,064,000 in November, 1951, bringing the total for the past 12 months to $779,032,000, compared with $730,019,000 in the previous twelve months, an increase of $49,013,000 or 6.7 per cent.

(*Concluded from next column*)

foreign business is only a fraction of their total business. Even so, it is interesting to note that their foreign business is a steadily expanding portfolio. Thus, the net premium income from their business outside India increased from Rs. 4,84 lakhs in 1950 to Rs. 6,32 lakhs in 1951. Many of the Indian offices have been taking particular care to develop their foreign business. And it would not be surprising if their income from this source shows a further increase in future.

PROGRESS OF GENERAL INSURANCE

SIZABLE EXPANSION IN FIRE INCOME

AN analysis of the expansion of the business of general insurers in this country during the year 1951, for which year complete statistics are now available in the latest *Insurance Year Book*—the *Year Book* for 1952—reveals that there has been a significant increase in their income, particularly under fire. Thus, as compared with 1950, the net premium income from fire business increased by as much as Rs. 139.72 lakhs to Rs. 939.44 lakhs in 1951. Although the increase in their marine insurance business and in their miscellaneous insurance business was less spectacular, it is noteworthy that the incomes from these two classes of business showed a slight improvement. Thus, the income from marine insurance moved up by Rs. 28.62 lakhs to Rs. 411.78 lakhs and from miscellaneous insurance by Rs. 4.91 lakhs to Rs. 484.76 lakhs.

The claims experience of general insurers was also relatively more favourable in fire business than in either marine or miscellaneous business. The following table gives the claims ratio, commission ratio and expense ratio of general insurers:

Insurers constituted in	*Claim ratio* 1951	*Commission ratio* 1951	*Expense ratio* 1951
FIRE INSURANCE			
India	31	14	27

Total ..	51	15	27
	(45)	(17)	(27)

Figures in brackets show the corresponding ratios in 1950.

The table above shows how the claim ratio in the fire business remained unchanged at 31 per cent. whereas the same ratios in the marine and miscellaneous business were higher at 55 per cent. and 51 per cent. respectively. General insurers the world over have experienced an increase in the claims ratio in miscellaneous insurance. That Indian general insurers are no exception to this rule need cause no surprise.

The main items under the "income" and "outgo" for the fire business of Indian insurers, which constitutes the most important class of general insurance business, were as follows:

Fire Insurance Income and Outgo

(For 1951)

(Rs. in 000)

INCOME	
Reserves at the beginning of year	3,29,94
Premium income in India	2,98,57
Premium income outside India	4,13,83
Net interest, dividends, etc.	6,84
Other receipts	1,07
Loss transferred to profit and loss account ..	2,97
Claims less re-insurances	2,21,65
Commission	1,02,60
OUTGO	
Expenses of management	1,89,97
Miscellaneous	8,43
Profit transferred to profit and loss account ..	1,28,42
Reserves at end of year—	
Reserve for unexpired risks	3,12,78
Additional reserve	89,37

The figures corresponding to those given above are not available for non-Indian insurers. But it is known that their income through premium (less re-insurance) was Rs. 2,27 lakhs. The claims (less re-insurance paid and outstanding), commission and expenses of management were respectively Rs. 66 lakhs, Rs. 16 lakhs and Rs. 86 lakhs.

Several Indian insurers, as is well known, operate outside India too. It is true that their

SUGGESTIONS FOR WORLD TRADE PROMOTION

DISABILITIES OF INDIAN BUSINESS MEN IN E.C.A.F.E. REGION

(By S. K. SEN)

THE change from a sellers' to a buyers' market does not promise a good outlook for world trade unless the basis of prices and profits is changed in the European and American exporting countries. While on the one hand the prices of raw materials supplied by the Asiatic countries are being brought down, sometimes through artificial means, the prices of export commodities and consumer goods are being continually increased and shortages created, even artificially. The strength of their banking institutions, their organised auction markets, their unified shipping confederations, and all their centuries-old trading experience are utilised to depreciate prices of raw materials and to increase prices of manufactured goods, machinery and capital goods. Unless a rational and legitimate basis of profit is adhered to, international business is bound, in the long run, to suffer, since every country would try for autarchy or self-sufficiency, even if the particular industries they specialise in may not suit their economy.

It is, therefore, incumbent on all those who wish to encourage free international trade to ponder over this problem. If the buying power of the Asiatic countries and the countries offering raw materials to the industrial countries is to be reduced by paying insufficient purchase prices, how do these developed countries expect to sell their goods to underdeveloped countries or prevent them from producing those goods in order to avoid having to pay exorbitant prices for the commodities manufactured in the industrially advanced countries?

Stabilising Prices

A rational long-term system of stabilising prices of raw products, consistent with maintaining a decent standard of living and with giving the workers a chance to increase their purchasing power, is therefore indicated. Something on the lines of the "Cocoa Reserve" from the Gold Coast and West Africa may be adopted for the raw materials from the Eastern and the Asiatic countries, such as jute, tea, rubber, tin, mica, shellac, oilseeds, cotton, hides and other products, for which the West is mainly dependent on the East. In the same way, if, at a time of high prices, export duties are charged by any Government, they should be considered as a reserve to cover losses to the agricultural interests in times of depression. Actually, both depression and excess profits should be discouraged and a long-term stability should be the aim. The trade outlook can improve, only when the exporting countries meet the requirements of the underdeveloped importing countries at prices within the purchasing power of these countries through increased production and reduction in costs. They must also stick to legitimate profits, and should not create artificially high prices.

Larger and Freer Trade

The restrictions, imposed on Japan and Germany during the last five years on their production and on their use of raw materials, helped Europe and America to maintain high prices for their manufactures and created a shortage of supplies owing to the lack of exports from these two countries. Again, the artificial currency restriction and multipliers, which were used to bring prices to the level of the occupation countries, made export difficult for these two countries, thus creating a vacuum in supplies. I am not concerned with the rights or wrongs of this method, nor with its political aspects but only wish to consider the cause of high prices and shortage of supplies. I, therefore, hope that now that five years have elapsed since the armistice, we will get together and see how we can get to a larger international trade and freer trade, and attain it through rational methods.

To increase the trade with Europe and the U.S.A., the first essential step is to supplement the Government efforts with the efforts of the manufacturers and exporters. A method, which may be employed, is to have an organisation which follows up enquiries, secures business, helps importers in foreign countries and carries full range of samples and which is responsible for a complete publicity programme. Such an organisation might be built up by one manufacturer from each group, combining together and maintaining an outpost, as it were. There may be individual organisations, several such organisations; in the case of big manufacturers, their own, and in the case of small manufacturers, several organisations, each of them financed by a particular group of manufacturers.

The manufacturers in the region of the E.C.A.F.E. (Economic Commission for Asia and Far East) should show that they can produce as good articles as are produced in Europe and America. It is also essential that the banking activities of the Indian banks should be extended to foreign countries in the E.C.A.F.E. region. Shipping and insurance companies should also be able to help the manufacturers. Again, all foreign branches of the Indian or C.A.F.E.A. companies should, as far as possible, keep in touch with each other; there should be a group of banking, shipping, insurance, import and export companies. The methods, by which certain countries have small community centres, consisting of these companies, along with barbers, bakers, doctors, lawyers, dentists, laundries, general merchandise shops, restaurants and tea shops and a small colony of their own, might be usefully adopted. This method was adopted by Japan and Germany in pre-World War I days. A reciprocal international arrangement could also be made.

Quality Goods

The production of quality goods and maintenance of correct standards and quality are essential for this purpose. Selected firms and experienced firms should be given preference to open branches in foreign countries and necessary currency permits should be provided. At present, the paucity of currency even for business men is a great deterrent to any extension of trade; it prevents people from undertaking travel in foreign countries. While in Europe, as much as £10 a day is given to business men when touring foreign countries for business, the niggardly way that foreign currency is doled out to business men does not enable any traveller to do justice to his business. Developing business in foreign countries may often be a losing concern during the first year, when expenses run disproportionately to the business obtained, but this early work pays in the long run. To expect immediate results is to be too optimistic.

If it is not possible to have a group or community settlement in a foreign country, experienced men may be sent out to organise local agents. This is a less expensive and more popular method with certain exporting countries, and the local importers or representatives derive considerable benefit thereby. This also can be developed much more fruitfully. Handbooks on each special trade or raw material exported, with full information of the trade in each country, are often found very useful. Special export journals, advertising the products of principal manufacturers, are useful in securing trade from overseas countries, if they contain interesting information about manufacturers and manufactures.

The Government should allow more facilities for samples to be imported or exported, either with nominal duties or duty-free, provided these are not for sale. Less stringent passport regulations and less difficulty in obtaining visas is necessary. For approved business men, there may be less formalities in the grant of visas and permits. In many cases, it takes even three weeks to get an ordinary visa to attend international conferences of the I.C.C., and that too, after taking out as many as seven photographs and spending heavy charges for air mail or cable expenses. For one country, the fingerprints of all the fingers seems to be necessary. These are some of the defects which should be remedied, if international trade is to be free and better results are to be obtained. The Government should encourage foreign travel for business men, render assistance through their commercial attaches in foreign countries, ease the visa and passport regulations, make more liberal currency allotments for business men and develop growth of communities in foreign countries to increase mutual knowledge and develop business. I do not ignore cultural contacts; there should be a cultural organisation.

Disabilities in Other Countries

The disabilities of Indian business men in the E.C.A.F.E. region are many. To mention one country, Pakistan, the Evacuee Act, with its retrospective effect on registered companies and on Indian nationals, discriminates against Indian nationals. In Malaya, Burma, and Ceylon there are also many disabilities. These are matters which must be tackled by the Government.

The Indian delegation should ask for complete reciprocity and freedom in trade and for facilities to go about freely and stay for such length of time as they need in order to develop and establish their business. They should also adopt or ask for: (i) Uniform arbitration rules to apply equally to all E.C.A.F.E. countries, (ii) security of capital without discrimination and remittance of profits, subject to the laws for their own nationals; (iii) reciprocity in transport, air and shipping rules; (iv) freedom of trade, subject only to any currency control due to balance of payments or tariff findings to protect nascent industries; (v) acceptance of G.A.T.T. agreements; (vi) facilities for railway and transport traffic through different countries in the C.A.F.E.A. (Commission on Asia and Far Eastern Affairs) or E.C.A.F.E. region; (vii) fixing of more reasonable insurance rates; (viii) uniform practices for bills of lading, Consular certificates and other Government control measures. These may be developed for the E.C.A.F.E. region, on International Chamber of Commerce lines, by the C.A.F.E.A.

For the attention of

Far-sighted Industrialists

COSTING

You are well aware that success in business largely depends on correctly determining the economic selling price of your products. The first thing you want to know then is the true cost of manufacture, after proper distribution of overheads. Accurate costing will also tell you whether it is advisable for you to manufacture a particular product at all.

Costing is not merely a matter of accountancy. To set up a sound costing system, it requires not only a knowledge of accounting procedures but also a thorough technical grasp of the processes to be costed.

SALT CONTROLS IN INDIA

NEED FOR MODIFICATION

THE question of salt controls acquires some special importance now that the Commodity Controls Committee is reviewing the position of all economic controls in India. Salt controls, as they are being administered both by the Central and State Governments, have given rise to a number of difficulties and it is only appropriate that the attention of the Controls Committee should be drawn to them, so that the Committee may make suitable recommendations to the Government for the elimination of the irksome features of these controls. In fact, the supply position of salt in the country is now so comfortable that some of these controls have become superfluous, while the rest need to be modified to suit the present conditions. There has been a progressive increase in the production of salt in recent years. Thus, it has increased from 55.6 million maunds in 1949 to 71.3 million maunds in 1950, and to 74.4 million maunds in 1951. In 1952, it is expected to have reached a record figure of 90 million maunds. As against this production, consumption in the country is estimated at no more that 70 million maunds. India, in fact, has been exporting large quantities of salt to Pakistan, Burma, Japan, etc. In the seven months ended October, 1952, despatches of Indian salt, both by land and sea amounted to about 166,000 tons valued at about Rs. 45 lakhs, as against 10,000 tons worth Rs. 3.85 lakhs in the corresponding period of the previous year. The latest indications are that the offtake of Indian salt this year would be relatively lower in view of the competition from Aden, Egypt and Spain. The main problem of the salt industry to-day, therefore, is one of finding markets for its increased production by improving the quality, and a solution to this problem will be difficult so long as the industry's hands are tied by unsuitable controls. The table below gives a picture of the availability of salt in 1952, as estimated by the Secretary, the Salt Merchants' Association Ltd., Sambhar Lake:

(In lakh maunds)

	Government factories	Percentage to total	Private factories	Percentage to total
Opening stock (1-1-52) ...	103	32.8	211	67.2
Production during the year ...	152	19.9	613	80.1
Total available stock in 1952 ...	255	23.6	824	76.4
Despatches including exports ...	156	21.3	577	78.7
Carry over at the end of 1952 ...	99	28.6	247	71.4

It will be seen from the table above that slightly over 80 per cent. of the salt produced in India is from private factories, while the Government factories account for slightly under 20 per cent. The Government factories include the salt sources of Sambhar Lake, Pachbadra and Didwana (in Rajasthan) and Kharagodha (in Ahmedabad district). Prior to 28th April 1950, the entire supplies of salt from the Government factories were despatched, by the Salt Department, through the limited companies of the locally registered salt merchants, at a fixed rate of commission to the State's nominees. Early in 1950, the Salt Advisory Committee, taking into consideration the rising production of salt, recommended the ending of registration of firms at Government salt sources and the district nominee system in the consuming markets so that complete free trade could be resorted. The first part of the recommendation was accepted by the Government but the nominee system was retained. This decision was given effect to as from 28th April, 1950.

The private factories are, however, allowed to despatch their salt to dealers of their own choice, if the receiving State has no salt control in its borders. But, in States where statutory control on salt exists, the private factories have to send their output to the Government nominees who account for an offtake of 25 per cent. of the private production.

The nominee system prevails in quite a few States including Assam, U.P., Bihar, Punjab, etc. In the U.P., the Government does not grant nominee licences to persons who are residents of other States, even though such persons have been in the trade for over a long time. The nominee system has thus given rise to a sort of monopoly in salt trade which in some cases is confined only to a select few. It is true that there are differences of opinion on this question, but there is no doubt that the nominee system wherever it exists has prevented sale of salt to the consumer at competitive rates at a time when salt supply is plentiful. The Commodity Controls Committee should, therefore, go into this question in detail and see whether there is any need at all for continuing the nominee system prevailing in the various States. The Federation of Chambers of Commerce and Industry which recently studied the position is of the opinion that, with a view to creating competitive conditions, at least "some percentage of quota allowed to the State nominees may be made free to the general traders as is done in Madhya Pradesh." The Chamber further feels that the Government of India should only have an overall control on the movement of salt to guard against scarcity in certain areas served by the metre-gauge of the O.T.R. and Assam Rail Link.

Another type of central control on salt is the salt (Reserve Stocks) Order issued in March, 1950. This order enjoins importers of salt at Calcutta to store always 25 per cent. of their imports in the Government depot at Calcutta as reserves. This salt is permitted to be removed only after the sanction of the Salt Controller. This order, which owes its origin to the days of salt scarcity early in 1950, still continues even though there has been a marked rise in supply. The importer is required to bear the godown rent and other incidental expenses and a part of his capital remains blocked, thereby putting him to some inconvenience. It is, therefore, felt that the order should be withdrawn as early as possible. As the stock position in the country is comfortable, thanks to the improvement in the production of salt, the continuation of any order seems to be superfluous and unnecessary.

The zonal scheme of distribution of salt, on the basis of which wagon allocations are made by the Salt Controller, is another order to which the salt trade has been opposed for a long time. This order was introduced in 1949 and there was considerable justification for it then, when the wagon position was very bad. But now that transportation has improved, it is felt that the scheme requires some modification. It is stated that, under the scheme of movement control, after meeting the zonal requirements, salt factories are allowed to move their surplus production by rail on ordinary booking but this concession, we are told, could be hardly availed of by the trade, as consuming markets have not been placing regular indents even for the zonal quota. The Commodity Controls Committee should examine this question also and suggest suitable means whereby the zonal controls do not stand in the way of competitive markets in salt coming into existence in all parts of the country.

INDO-INDONESIAN TRADE PACT

A trade agreement was signed between India and Indonesia last week. The agreement will be retrospective from 1st January, 1953, and will come into force after exchange of notes to that effect between the two Governments. It will remain in force till the end of December, 1953, and for such successive periods as may be mutually agreed upon before its expiry.

The schedule of exports from India includes jute goods, tobacco manufactured and unmanufactured, handloom goods, cotton piecegoods, woollen piecegoods, coal, cement, soap, chemicals and pharmaceutical products, tea chests, sports goods, industrial machinery, handicrafts, etc. The schedule of imports from Indonesia includes copra, coconut oil, palm oil, spices, betelnuts, timber, tin, rubber, barks for tanning, tobacco wrappers, etc.

India's exports to Indonesia during the seven months ended April to October, 1952, amounted in value to Rs. 310.45 lakhs, as against Rs. 268.07 lakhs and Rs. 116.19 lakhs in the corresponding periods of 1951 and 1950, respectively.

The value of imports of merchandise from Indonesia during April-October, 1952, at Rs. 35.69 lakhs was far below that of goods imported in the corresponding period of 1951 when such aggregated Rs. 189.73 lakhs. In the same period of 1950, the value of imports was Rs. 153.17 lakhs.

CHANGES IN TARIFF VALUES OF COPRA AND CERTAIN OTHER ARTICLES

The Government of India has announced certain changes in the tariff values of certain commodities. Of considerable interest to the Indian soap industry is the change in tariff values of copra and copra oil. At present, the tariff values of copra and copra oil are Rs. 64 and Rs. 96, respectively, per cwt. It has now been decided to reduce, as from the 1st inst., the tariff value of copra to Rs. 50 per cwt. and that of copra oil to Rs. 75 per cwt. This reduction to the extent of 21.8 per cent. in the tariff value will be welcomed by the Indian soap industry, as it will reduce the incidence of import which is based on the tariff value.

The tariff values of coconuts have, however, been increased from Rs. 160 to Rs. 170 per thousand for those imports from Ceylon and from Rs. 150 to Rs. 160 for others, except the Maldives. The increase will be welcome to the indigenous coconut grower, inasmuch as it provides him with slightly greater protection against imports than before.

Among the other changes, mention must be made of a reduction in the tariff values of almonds from Rs. 240 to Rs. 200 per cwt. for almonds without shell and from Rs. 90 to Rs. 70 per cwt. for other almonds. But the tariff value of soft-shell almonds has been raised from Rs. 110 to Rs. 120 per cwt.

Similarly, the tariff value for cloves has been raised from Rs. 280 to Rs. 325 per cwt; for naked diesel oil in bulk from Rs. 160 to Rs. 175 per ton; for naked furnace oil in bulk from Rs. 80 to Rs. 100 per ton; for caustic soda from Rs. 26 to Rs. 28 per cwt. and for soda ash from Rs. 13-8 to Rs. 16 per cwt.

The tariff value for nutmegs has, however, been halved from Rs. 3 to Re. 1-8 for those in shell and from Rs. 4 to Rs. 2 for those without shell.

For the first time, tariff values have been announced for moist alizarine exceeding 20 per cent. powder vats, black sulphur, azodyes and ultra zols.

Usually new tariff values take effect from the beginning of every calendar year, but this year there has been a month's delay.

F.B.I. OVERSEAS SCHOLARSHIPS SCHEME

The first Indian to go to Britain for training under the Federation of British Industries (F.B.I.) overseas scholarships scheme has just begun his two-year course. He is Mr. L. S. Srinath, 26, an engineering graduate from Bombay, whose subject is aircraft design and construction, and he is being trained at the works of Blackburn and General Aircraft Ltd. at Brough, Yorkshire.

Two other Indian engineers are expected to arrive in Britain shortly for training under the scheme. They are Mr. C. Bose, from Calcutta, who will be going to the Metropolitan-Vickers Electrical Company at Manchester; and Mr. A. S. Sanyal, of Bombay, also an electrical engineer, who will spend a year with the British Electricity Authority and a year with the General Electric Company. In addition, arrangements are being made for a fourth Indian student to take up training in the near future.

It was about four years ago that the F.B.I. decided to establish an overseas scholarships scheme which would include graduates from countries which are now in process of development. With the ready co-operation of British engineering firms, supplemented by a grant from the Board of Trade, those taking part in the scheme may receive scholarships of a value approaching £1,000 each for a two-year course.

Industry's contribution consists of a minimum payment of £300 a year for the maintenance of each scholar, plus the administration and provision of the necessary training facilities. Under the original provisions of the scheme, the total industrial contribution is some £20,000 a year, and the Board of Trade makes a maximum grant of £10,000 for each of the first five years, conditional on a minimum number of scholarships being awarded each year.

It is hoped eventually to train every year in British engineering works from 150 to 250 selected overseas graduates. Pakistan was the first Commonwealth country to take advantage of the scheme. In May, 1950, it sent four students, who will thus be completing their training with British firms in four months' time, and, in the second half of last year, two more Pakistanis went over.

BOMBAY SALES TAX RULES AMENDED

The Government of Bombay has amended the Bombay Sales Tax Rules, 1952, contained in the Bombay Sales Tax (No. 2) Ordinance, 1952, by a notification which has appeared in the Bombay Government Gazette, of 2nd February, 1952.

Rule 5 has been amended to allow commission agents a maximum commission of 2½ per cent., excluding incidental charges in respect of brokerage when paid to a person employed as a broker, loading and unloading, cost of packing, storage and transport, insurance during storage, telegrams, telephones, local taxes and dues, freight or postal charges for consigning the goods, insurance on such consignment and interest up to 9 per cent. per annum. Certain changes have also been made in Form I of the authorisation for commission agents under Rule 7. Other amendments include exemption from general tax for (i) sales of bullion to a registered dealer for refining where the bullion is sold back to the same dealer and is despatched by him to another dealer in India outside the State of Bombay; (ii) sales by canteen contractors to members of armed forces; (iii) sales of crude oil, diesel oil, fuel oil for bitumen by Burmah-Shell Refineries Ltd. to Burmah-Shell and Standard-Vacuum Oil Companies, and (iv) sales of yarn for manufacture of bleached, dyed or twisted yarn.

Rule 6 has been amended to exempt from special tax (i) sales of all special goods to licensed dealers buying for exporting the goods outside India or for selling the goods to dealers carrying on business in other States of India; (ii) sales of raw silk, raw wool, wool-tops and silk or woollen yarn for preparing cleaned wool, silk or woollen yarn, bleached, dyed or twisted yarn; and (iii) sales of special goods to licensed dealers intended for re-sale after processing or for use as raw materials or component parts in the manufacture of any special goods for sale.

A new Rule 51-A has been inserted to provide for refund of tax paid in excess where a revised return has been furnished showing a smaller amount of tax as due. It, is, however, provided that one-fourth of the excess amount or Rs. 100, whichever is more, would not be refunded; and the refund of the balance would be subject to any order of assessment passed under section 14 or 15.

Entry 37 in Schedule II of the Ordinance has been amended to exempt from special tax articles made of stainless steel used as parts of industrial machinery or plant.

PRESSURE OF POPULATION ON LAND IN INDIA

INCREASE IN YIELD PER ACRE MAIN SOLUTION

THE most important problem facing Indian economy is the pressure of population on land. The continuous rise in the growth of population during the past five decades has been alarming indeed. The population of the Indian Union was 235.50 million in 1901. It shot up by 13.55 per cent. to 249.05 million in 1911. Owing to the epidemic of influenza the rate of increase, however, declined to 0.87 per cent. in the next decade, the total population in 1921 being 248.18 million. Since then, there has been a rapid rise in the rate of growth. At 275.52 million in 1931, the total population represented a rise of 27.34 per cent. over the previous census. The rising trend not only persisted but made alarming strides in the following two decades, to reach a total of 314.88 million in 1941 and 356.83 million in 1951, an increase of 39.36 per cent. and 41.95 per cent. respectively, over the figures for the immediately preceding censuses. It is estimated that the population may very well reach the figure of 450 million in the next two decades. Commenting on this rise in the rate of growth, Dr. S. R. Sen, Economic and Statistical Adviser, Ministry of Food and Agriculture, Government of India, observed, in the course of his address at the eighth session of the International Conference of Agricultural Economics held at East Lansing, U.S.A., last year: "What is really disturbing, however, is the huge absolute increment on the top of the very massive existing population. The addition of about 109 million mouths during the last 30 years and the prospect of greater increments in the future cannot but cause most serious misgivings."

The reasons for this tremendous growth of population are well known to need any detailed discussion. Suffice it to say here that it is due, in large measure, to political stability for several decades, control of famines, introduction of modern public health services and the absence of concerted preventive measures to check the growth. In fact, it is the relatively greater fall in the death rate which is responsible for the rise in the population of the Union.

Consequence of Pressure

The consequence of the prolific increase in population has worked itself out on the land economy of the country with relentless pressure. To quote Dr. Sen, "Land became increasingly chopped up into smaller and smaller fragments. The law of diminishing returns tended to manifest itself more and more strongly and the class of landless labourers swelled in numbers. Density of population to-day amounts to as much as 281 persons per square mile which may be lower than the density in some of the industrial countries such as Japan, but is certainly very high relative to the present state of Indian economic development." This average density of population is not, however, a good economic criterion, because of the wide divergence of density between State and State. Thus, it is 34 per person per square mile in Kutch and as high as 1,015 persons in Travancore-Cochin. Density is also influenced by numerous factors such as soil fertility, amount of rainfall, irrigation facilities and general development of agricultural resources. On account of the difference in these resources, Kutch, with a density of 34 persons only, has a very low standard of living. This is due to small rainfall and poor yield per acre. On the contrary, in West Bengal, where all the factors noted above are present, the standard of living is comparatively higher than that of Kutch, although West Bengal has a density of 806 persons per square mile.

A study of correlation of the density of farm population per acre of "standard farm land" with agricultural productivity reveals certain interesting facts. Although agriculture is the main occupation in all the States, the distribution of farm population as related to the "standard farm land" among the different States is very uneven. The density varies from 35.91 persons per hundred acres of "standard farm land" in P.E.P.S.U. to 98.95 persons per hundred acres of "standard farm land" in Bihar. There seems to be also a definite inverse correlation between agricultural productivity and density of farm population per acre of "standard farm land." With every increase in the density of farm population, there is known to be a fall in productivity per acre.

Increasing Dependence on Agriculture

Dr. Sen's study, referred to above, deals also with the changes in the proportion of the The nomi dependent on agriculture for livelisort of mor ough a straight answer is not cases is confi es has not been uniform, an attempt that there are at arriving at certain general conquestion, but th from 1911 to 1921, the proportion system wherev rs dependent on agriculture insalt to the cor 82 per cent. to 71.61 per cent. The time when sal lassification, while the 1941 census modity Contro cupational distribution of populainto this ques g to the 1951 census, 70 per cent. of the total population still depends upon agriculture for its livelihood. "This shows a rather alarming trend" says Dr. Sen, "because, although, in 1951, the percentage may be almost the same as it was in 1901, the total number dependent on agriculture is much larger. This only proves that all the industrialisation and urbanisation during the last 50 years have not really been able to reduce the pressure on land in the slightest degree, although it must be admitted that the situation might have been worse but for the secondary and tertiary employment which was thus created." A study, in this connection, based on the comparable figures available for eight major States of the Indian Union shows that net area sown *per capita* of population dependent on agriculture declined from 1.1 acres in 1901 to one acre in 1951.

The increasing pressure of population on land has led to two social and economic consequences. First, it has caused a deterioration in the position of the actual tiller of the soil. The reason for this is that the farmer is not organised and the systems of land tenure gives him no special protection. There is keen competition for land, and by far the largest share of the income from land goes into the hands of middlemen such as merchants, moneylenders and landlords. There is thus little improvement in the technique of production, the standard of cultivation and in the economic position of the ryot. The second consequence is the creation of a host of problems by the settlement of land and the numerous gradation of rights on the soil. The upper layers of society have lost organic touch with the actual production and contented themselves with the collection of their share of the produce without performing corresponding service, while the actual tiller has lost the will and capacity and the capital to improve the land.

Low Yields

A recent study made by the Indian Council of Agricultural Research shows that the yield per acre has tended to remain stationary during the last few decades. While in the case of cash crops, there is clear evidence of a general increase in the yield per acre, in the case of food crops in particular the yields do not show any definite trend either way. "The only valid conclusion," observes Dr. Sen, "is that, while the fertility of the soil or standard of husbandry has not perhaps gone down, it has also not gone up either. All the attempts at agricultural improvement during the last few decades have been able merely to postpone the diminishing returns which inevitably follow increasing pressure of population on land."

The Five-year Plan, which has given priority to agriculture over other schemes, is considered primarily as a basic plan for clearing the decks and laying the foundation for more fruitful plans in the future. Of course, in carrying out the Plan, there are certain basic difficulties. Thus, the area available for cultivation per head is low. The yield per acre is much lower than in many other countries with comparable climatic and soil conditions. Limitations on availability of water have been the greatest single factor responsible for the low yield. Of the total 266 million acres under cultivation, only 49 million are under controlled irrigation. On account of long successive cropping, the soil, too, has a low level of fertility. The bulk of the cattle dung is used for burning. These factors can, however, be gradually overcome by planning over a certain number of years. For experiments all over India have shown that the application of nitrogenous and phosphatic fertilisers either singly or in combination may increase yields by as much as 20 to 100 per cent. Improving the yield per acre is absolutely necessary, because there are no more than 10 million acres capable of being brought under the plough in the near future. For, although statistical tables show that large areas are culturable, bulk of these areas cannot be brought under the plough owing to the various difficulties such as transport, water-supply, nature of the soil, etc. Moreover, increasing the yield per acre becomes an urgent task, in view of the fact that India's population is expected to reach a mark of 450 million by 1971. The country will then require about 63 million tons of cereal at the rate of 14 ozs. per adult per day and about 72 million tons at the rate of 16 ozs. per adult per day.

The solution of the food problem is not the real solution to the problem of India's population. For there is the pressing problem of surplus labour, estimated, on a conservative basis, at about 15 to 20 million agricultural workers. This problem has to be tackled not only by means of large-scale industrialisation but by means of establishing small-scale agro-industries all over the country. This work needs to be supplemented by the encouragement of family planning on a country-wide scale.

(Concluded from next column)

seas. He also recommends international conventions and the adoption of an international migratory code. Racial discrimination has been condemned as a wrong and unsound approach. A "spirit of mutual sympathy and understanding" and "a spirit of toleration," as has been pointed out in the concluding paragraphs of the volume, can alone be of avail in the final analysis.

NEW PUBLICATIONS

Indians Overseas (1838-1949). By C. Kondapi. Published by the Indian Council of World Affairs. Price: Rs. 20.

MUTUAL needs have always brought men closer and movements of populations have taken place mainly because of economic and commercial needs. It was especially so in the case of the traditionally conservative and home-loving Indians who migrated to other countries when their own homeland no longer could provide them with the means of sustenance and when the plantation owners had to find an alternative to slave labour after its abolition during the early decades of the last century. No doubt, early emigration of Indians was largely engendered by high commercial or cultural motives. In striking contrast, the later movements disclose a pathetic picture, because Indians were driven to plantations in British, French and Dutch colonies by famines, decline of handicrafts and lack of protection to their tenancy rights. The emigrant population has had to face considerable difficulties in the countries to which they emigrated. Attempts were made to suppress the Indians from demanding equality of rights and rights of citizenship. From the start, systematic suppression was resorted to deny any privileges to these people who were wanted only as labourers, but never as free men. The chief object of the labour policies in the immigree countries has been the maintenance of the cheap production methods of European settlers in tropical and sub-tropical regions. Gradual change-over from the primitive economy in colonies, resultant competitive rivalries, rise of native classes, growing unemployment in colonial countries, fear of economic and political domination and racial corruption by Indians, aggravated by assumption of racial and hence socio-cultural superiority by Europeans and unfortunate political subordination of India till recently, have all created surprisingly diverse problems ranging from parliamentary representation to that of ceremonial cremation.

For over a century, the conditions of labour have been intolerable both in regard to wage rates and minor matters of social welfare. Educational facilities have been either denied or discriminated against Indians. They have been suffering under various disabilities with regard to settlement and occupation on land, marketing and trading, employment and service, and other matters of religious and social customs, such as marriage and cremation. Except in certain countries like the U.K., U.S., Canada or New Zealand, where the immigrant Indian population is almost microscopic and non-labouring, Indians have been denied the right of domicile in one way or another and excluded from any political status as free citizens. Latterly, in these countries, with the ending of the open door policy of immigration, Indians (and non-Europeans) have been singled out for unjustifiable restrictions on entry. The most blatant manifestation of this is the South African *apartheid*. But pressure of progressive world opinion is causing systematic colour bar to disappear in the rest of the world.

The book under review must be read against this background. The first nine chapters trace this sad story from the beginnings of the Indian emigration till the first two years of independent India. These chapters, as indeed, the rest of the book, are a testimony to Mr. Kondapi's painstaking research into the subject which he first took up as far back as 1940.

Experience gained over subsequent years, in his capacity as Assistant Secretary of the Indian Council of World Affairs and in various international fields, has lent authority and weight to the book. The last chapter sets out some suggestions in broad outline as solutions to the problems. While believing that emigration does not offer a solution to the country's population problem, the author advocates the moulding of labour policies in immigree countries to enable and promote permanent settlement of emigrant Indians and abolition of present systems of recruitment and control. As a more positive and effective means, he recommends effective control on emigration by the Government of India the conclusion of bilateral treaties and agreements and the imposition of reciprocal restrictions, where necessary, as effective bargaining weapons to secure fair and equitable treatment to Indians over-

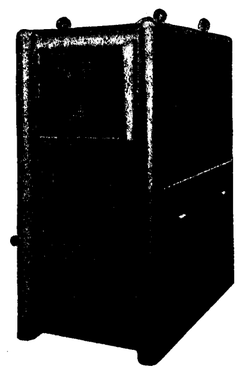
FURNACES



Whether you are a small manufacturer or a big industrialist, supplying and servicing of all types of furnaces ranging from a small muffle to a large industrial plant, either electric or oil, gas and solid fuel fired furnaces, is our speciality.

WILD-BARFIELD Muffles, Ovens and standard heat-treatment furnaces, and FOSTER temperature measuring instruments available ex-stock.

THERMIC Brand Oil or Fuel Fired Furnaces are supplied and serviced.

Above :—WILD-BARFIELD General Purpose Electric Furnace, Model HWP2, having maximum operating temperature of 1050°C. Applications :—Preheating, Hardening, Normalising and Annealing, Carburising and Vitreous Enamelling.

Delivery : From an incoming consignment in about 2 months.

SETBACK IN EARNINGS OF B.E.S.T. UNDERTAKING

LOSS ON TRAMWAYS CAUSES CONCERN

THE year ended 31st March, 1952, was the fourth full year of working of the Bombay Electric Supply and Transport Undertaking since these services were municipalised in August, 1947. The financial results of the Undertaking for the year under review reflects the great strain to which all the three services, namely, electric supply, tram and omnibus, were put to by the unprecedented growth of population and expansion of industries in the city of Bombay and the merged areas of Greater Bombay, during the post-war period and more particularly in the last four years. Nonetheless, the results reveal that the Undertaking has been able not only to balance its budget but also to contribute to the municipal exchequer a handsome sum and strengthen its own resources for providing better and useful services to the public.

The working of the Undertaking during the year 1951-52 resulted in a surplus of Rs. 70.87 lakhs (after providing for depreciation and debt charges), as against Rs. 84.10 lakhs in 1950-51, representing a fall of Rs. 13.23 lakhs or 15.7 per cent. As compared with the estimated surplus of Rs. 37.78 lakhs under the budget for 1951-52, the actual surplus for the year shows an impressive rise of Rs. 33.09 lakhs. This surplus of Rs. 70.87 lakhs, however, represents a return of no more than 5.2 per cent. on the capital expenditure. This would be very much less—approximately 3 per cent.—if the Undertaking were to pay taxation just as any other commercial concern under the management of private enterprise. The loss to the Central Government as a result of the municipalisation of the Undertaking, according to our estimate, is of the order of Rs. 50 lakhs per annum, if not more. That is one of the disadvantages to the public consequent on the transfer of the Undertaking from the hands of private enterprise.

Despite the shrinkage in surplus, as noted above, the Undertaking has had to contribute to the municipal funds, under its statutory obligation, no less a sum than Rs. 28 lakhs, that is, Rs. 3 lakhs more than that transferred last year. In accordance with the B.E.S.T. Committee's decision to make available larger provisions for depreciation in order to cover the deficiency in depreciation allowance made in earlier years on the original purchase price of the Undertaking, a sum of Rs. 21.50 lakhs was set aside last year towards additional depreciation. But this allocation has had to be reduced sizably to Rs. 16.70 lakhs in the year under review. This policy of allocation of surpluses is certainly injurious to the long-term interest of the Undertaking. Full provision for depreciation should be the first charge and it is only thereafter that the Municipality's claim on the surplus should be met. Any other policy would amount to living on capital, a policy which will ultimately lead to bankruptcy.

The following comparative table gives an idea of the Undertaking's progress since 1948-49.

(In lakhs of rupees)

	For the year			
	1951-52	1950-51	1949-50	1948-49
Income—				
Electric Supply	252.05	260.06	241.75	213.39
Tramways	142.61	131.49	121.77	106.89
Omnibuses	234.54	197.49	166.98	117.77
Total ..	629.20	589.04	530.50	438.05
Working expenditure	409.01	375.02	320.82	284.94
Depreciation and debt charges ..	149.32	129.92	124.34	91.88
Excess of income over expenditure	70.87	84.10	85.32	61.22
Statutory payment to municipal fund	28.00	25.00	10.00	10.00
Additional depreciation ..	16.70	21.50	..	..
Other essential appropriation ..	29.44	24.92	64.80	45.83
To other statutory funds ..	5.04	5.04	7.89	5.39
Carry forward	2.97	11.28	3.64	1.00

The fall in the Undertaking's income from electric supply was due to the rationing of power supply introduced in September, 1951, for the first time in the history of Bombay's electric supply. Following this, stricter controls and curtailment in the development of all classes of load were introduced. The result was that, in addition to the unpleasant task of implementnig Government orders on rationing at enormous cost, the B.E.S.T. Undertaking suffered an average reduction of about 25 per cent. in the consumption of electricity with a corresponding loss of revenue. It will be observed from the foregoing table that a significant part of the increase in the Undertaking's total income was contributed by the encouraging working of the omnibus section. Of the total working expenditure of Rs. 409.01 lakhs, which records a rise of Rs. 34 lakhs over the previous year, that on electric supply accounted for Rs. 130.23 lakhs (as against Rs. 128.73 lakhs), tramways for Rs. 127.01 lakhs (Rs. 116.70 lakhs), and omnibus for Rs. 151.75 lakhs (Rs. 129.60 lakhs). The depreciation and debt charges on account of the three sections were Rs. 68.71 lakhs, Rs. 41.35 lakhs and Rs. 39.86 lakhs, respectively. The working of the electric supply and omnibus departments in 1951-52 resulted in a surplus of Rs. 53.70 lakhs and Rs. 42.92 lakhs, the corresponding figures for the previous year being Rs. 74.11 lakhs and Rs. 30.17 lakhs. The working of the tramways section resulted in a deficit of Rs. 25.75 lakhs, as compared with that of Rs. 20.19 lakhs for 1950-51. Thus, the shrinkage in total surplus from Rs. 84.10 lakhs to Rs. 70.87 lakhs, as noted at the outset, is directly attributable to the drop in the surplus of the electricity supply department and the widening of the deficit in the tramways section. It may incidentally be noted that not a single year had passed, since the municipalisation of the three services, without the Undertaking incurring a loss on its tramways. It is, therefore, not surprising to be told that the financial losses on the tramways are causing grave concern to the B.E.S.T. Committee.

The efforts of the B.E.S.T. Undertaking to maintain the three essential services and expand the same, ever since these services came under the control of the Municipal Corporation, is reflected in the successful financial working of the Undertaking during the last few years. The total net cost of capital expenditure during the last four years, taking into account the major works only, amounted to Rs. 4.34 crores, out of the total fixed capital expenditure of Rs. 13.55 crores as on 31st March, 1952, the expenditure during the year under review alone being Rs. 66.41 lakhs. It is gratifying to note that the entire capital works programme in the year 1951-52 was financed from its internal funds, although provision for a public loan of Rs. 175 lakhs was made in the budget estimates for the year under loan works. As against the total capital expenditure of Rs. 13.55 crores at the end of the year 1951-52, a depreciation fund of Rs. 2.69 crores has been built up. Besides this large depreciation fund, the Undertaking has conserved an internal fund of Rs. 2.31 crores. In other words, the Undertaking has saved from its revenue by the end of 1951-52, as large a sum as Rs. 5 crores, representing depreciation and other internal funds, besides accumulating a sinking fund of Rs. 86 lakhs, a loan redemption fund of Rs. 42.75 lakhs and other funds amounting to Rs. 50.03 lakhs, all these after contributing to the municipal exchequer no less a sum than Rs. 81.53 lakhs, after the services were municipalised. The Undertaking's loan funds amount to Rs. 11.01 crores, of which Rs. 9.50 crores represent borrowings for the purpose of taking over the assets of the B.E.S.T. Co., Ltd., and Rs. 1.51 crores, outstandings on borrowings for capital expenditure. Besides these loans, the Undertaking has so far borrowed from its own internal funds a sum of Rs. 3.31 crores, of which Rs. 2.67 crores represent the advance for capital expenditure and Rs. 63.74 lakhs for part-payment of the purchase price paid to the B.E.S.T. Co., Ltd.

The Undertaking's statutory contribution to the municipal funds, which is to be stepped up to Rs. 40 lakhs in the course of the next four years by an annual increment of Rs. 3 lakhs from its present level of Rs. 28 lakhs, constitutes a heavy drain on the resources of the Undertaking. The contribution was raised from Rs. 10 lakhs which were paid in 1948-49 and 1949-50, to Rs. 25 lakhs in 1950-51. The Chairman's plea, made last year for refixing this to the original sum of Rs. 10 lakhs, together with such additional sum based on a percentage of the surplus that remains after making necessary adequate provision towards depreciation and other essential provisions, by amending the Municipal Corporation Act, remains unimplemented. It is, however, understood that the question of amending the Act is receiving the attention of the authorities.

The possibility of a further fall in the surplus of the Undertaking is indicated by Mr. G. G. Morarji, Chairman of the B.E.S.T. Committee, in his review on the Administration Report for the year 1951-52. He thus observes:

"It would appear, however, that certain adverse factors affecting the electric supply department and omnibus sections, such as (1) the proposed amendment of the Indian Electricity Act restricting the net profit to 5½ per cent. of the capital base, and (2) the recent enhancement of motor vehicles taxation, etc., will drastically reduce the surplus of the Undertaking, with the consequence that we shall no longer have any surpluses on the electric supply department and omnibus section to compensate for the large recurrent deficits of the tramways; we might even be compelled to withhold our annual contribution of about Rs. 40 lakhs to the municipal exchequer."

The Undertaking, it may be remembered, expressed its opposition last year against the aforesaid proposal to amend the Indian Electricity Act restricting the net profit to 5½ per cent. of the capital base. But so far no action has been taken by the Government of India to exclude the municipal undertaking from such a restriction.

SHREE CHANGDEO SUGAR MILLS LTD.

Heartening results are disclosed by the audited accounts of the Shree Changdeo Sugar Mills Ltd. (Managing Agents: Messrs. A. H. Bhiwandiwalla & Co., Bombay) for the year ended 30th September, 1952. The gross profit of the Company has jumped up from Rs. 13.58 lakhs to Rs. 18.93 lakhs, or by nearly 40 per cent. The net profit, after providing for depreciation and taxation, has advanced from Rs. 6.48 lakhs to Rs. 9.49 lakhs. These results are in consonance with the general trend of the profits of sugar mills in India during the last sugar season which happened to be the most prosperous one in the history of Indian sugar.

The foregoing excellent results are undoubtedly due to the substantial improvement in the Company's production. The sharp rise in profit noted above has enabled the Directors to put by a sizable sum to the reserves and to enhance, at the same time, the dividend from 12 per cent. paid for 1950-51 to a generous one of 60 per cent.

The following comparative table gives one an idea of the Company's progress in the last three years:

(In lakhs of rupees)

	For the year ended 30th September			
	1952	1951	1950	1949
Sale proceeds of—				
Sugar	58.31	28.74	34.55	38.91
Molasses	1.07	0.68	0.42	0.95
Stocks	8.83	6.72	0.48	0.06
Other income	1.07	1.15	0.65	0.32
Expenditure	43.62	23.24	23.42	28.89
Gross profit	18.93	13.58	12.33	10.74
Depreciation	3.44	3.56	4.15	1.37
Managing Agent's and promoters' remuneration	2.00	1.27	1.07	1.22
Provision for taxation ..	4.00	2.00	1.50	2.83
Net profit	9.49	6.48	5.60	5.31
To general reserve	3.00	..	4.00	3.50
,, investment reserve ..	..	..	..	0.50
,, pref. share redemption fund ..	1.50	6.00	..	..
Dividend—				
5% preference	0.37	0.37	0.37	0.37
Ordinary	1.50* (60%)	0.90* (12%)	0.90 (6%)	0.90 (6%)
Carried over	0.42	0.31	1.10	0.77

* Dividend on the capital reduced from Rs. 15 lakhs (made up of 60,000 shares of Rs. 25 each) to Rs. 7.50 lakhs (made up of 60,000 shares of Rs. 12-8 each), pursuant to the special resolution passed on 20th January, 1951 and sanctioned by the High Court, Bombay on 20th August, 1951.

The Company's production during the year under review was 192,742 maunds which, as compared with that in 1950-51, shows an increase of 76,128 maunds. The quantity of cane crushed was 1,667,515 maunds, as compared with 963,200 maunds in the previous year. The recovery was, however, fractionally lower at 11.54 per cent., as against 12.13 per cent. in 1950-51. Reflecting this sizable improvement in production are the increase in sale proceeds, stocks and expenditure. The Directors, who did not set aside anything to the general reserve last year, have now added Rs. 3 lakhs to it. The Company's preference share capital, amounting to Rs. 7.50 lakhs, is redeemable after 30th September, 1952, at the option of the Directors, after giving six months' notice. These shares carry interest at 5 per cent. per annum. It was for this purpose that they created last year a preference shares redemption fund and allotted to it Rs. 6 lakhs from the profit for 1950-51. This has been further strengthened by Rs. 1.50 lakhs from out of the profit for the year under review. In view of the substantial improvement in profit, the Directors paid in September, 1952, an *ad-interim* dividend of Rs. 6 per share of Rs. 12-8 and now proposes to pay a final one of Re. 1-8 per share, making a total of Rs. 7-8 per share for the year, as against Re. 1-8 paid in 1950-51.

The Company's ordinary capital was reduced from Rs. 15 lakhs to Rs. 7.50 lakhs, as per special resolution adopted by the shareholders in January, 1951, and sanctioned by the High Court of Bombay, in August, 1951. The outstanding due on account of return of capital at the end of September, 1951, was repaid during the year under review. The preference capital, amounting to Rs. 7.50 lakhs, was issued as bonus shares to the ordinary shareholders without payment being received in cash, in February, 1948, and the Company has built up a reserve to repay this within a space of five years after it was issued.

The latest balance-sheet shows a satisfactory financial position. As against a paid-up capital of Rs. 15 lakhs, the reserves and surplus aggregate Rs. 26.29 lakhs. The reserve for income-tax amounts to Rs. 13 lakhs. The gross value of the block, at Rs. 35.42 lakhs, has been written down to a book value of Rs. 10.87 lakhs. The current assets, at Rs. 55.67 lakhs, cover the current liabilities at Rs. 12.26 lakhs, by a very wide margin.

OUTLOOK FOR ATTOCK OIL CO., LTD.

In his statement accompanying the accounts of the Attock Oil Co., Ltd., for the year ended 31st December, 1951, the Company's Chairman had forecast recently an improvement in the results for 1952 on account of the new strike of oil at depth at Dhulian. As it will take a considerable time for the accounts relating to the year 1952 to be completed, the Directors have issued a statement reviewing, in brief, the developments that have taken place since the Chairman made his last annual statement. The preliminary estimates for 1952 indicate, according to the Directors' statement, a marked increase in the profit for 1952 over that for 1951. The production for the year amounts to 989,545 barrels, as compared with 672,740 barrels for 1951, or an increase of 47 per cent. This was the effect of the additional production from the new oil horizon at Dhulian. So far three wells have been struck, the third having been brought on to production on 27th November, 1952. This latest strike indicates that the new producing area will be at least equal to the former main horizon in extent, thus making Dhulian once again an important producing field. Preparations are going on for striking another well. In order to take advantage of the increased production, the Directors observe, considerable capital expenditure will be required. It is anticipated that the Company will be able to provide this from its own funds.

DIVIDEND PAYMENTS IN U.S. DURING 1952

Dividends paid by the U.S. industrial concerns during the year 1952 reached a record level, according to the Department of Commerce. Despite a decline in December, 1952, from 1951 levels and higher taxes throughout the year, the publicly reported cash dividends in 1952 aggregated $8,277.4 million, representing an increase of 2 per cent. over those paid in 1951. Together with the dividends that were not publicly reported, the total distribution came to $9,300 million. Manufacturing companies paid a little less than in 1951, but mining, finance, utility, railroad and communication companies paid more. If the change in the purchasing power of the dollar between 1929 and 1952 is taken into account, the dividend payments in 1952 fell short of those made in 1929. Thus, dividends in 1929 amounted to $5,800 million, which, on the basis of 1952 prices, were equal to $9,600 million.

Points From The Chair

Currency Depreciation Should be Averted

"THE first of these tasks, calling for all the ingenuity that can be mustered in the field of monetary policy and mechanics, is to work out means whereby currencies can be safeguarded against further depreciation, with all that that process entails by way of disturbance of contractual relations, falsification of effective social provisions and the erosion of fixed capital assets. The second, closely associated, task is to find ways of ensuring a sufficient flow of capital, from real savings, to finance new economic development and social improvement on a scale to match the needs of our age. The close relationship between these two problems is clear. To mention just one of the more obvious connections, currency depreciation is a powerful deterrent to personal saving, which undermines the will and the desire to save. To round the circle, a shortage of saving at a time when large new capital expenditure is needed is a certain generator of inflation, and, therefore, of the very process that frustrates the maintenance of adequate saving for investment."

THE RT. HON. LORD HARLECH,
Midland Bank Ltd.

Convertibility of Currency

"It is true that convertibility can only be realised by stages. But we must take active steps to reach that objective. We cannot hope to gain our livelihood in this country, or to maintain the benefits we enjoy from the association of the sterling area on the basis of an inconvertible £. A currency which is not convertible ceases to fulfil the primary purpose of money as a medium for the exchange of goods and as a stable store of value. We have been too long lulled by the deceptive influence of the system of exchange control, which falsifies all the price mechanism. No one knows what our money is really worth under this system. Some of our best known economists were recently arguing that sterling was undervalued at the official parity with the dollar. Now other critics are maintaining that if sterling is made freely convertible into dollars, our export trade will collapse, and our customers will flock *en masse* to the American market. Who shall decide when doctors disagree? If it is the case that our exports are so uncompetitive, it shows how deeply the system of exchange control has corroded our economy and sapped our efficiency."

THE RT. HON. THE EARL OF SELBORNE,
National Provincial Bank Ltd.

Future of Tin

"In my opinion the best hope of future development within the industry lies in locating and proving big low-grade deposits suitable for dredging, and lode tin or primary deposits. Both of these call for heavy capital outlay, and although I believe that Malayan production will fall over the next few years, and that it is unlikely again to reach a level approaching the immediate pre-war rate, nevertheless, I also believe that, if the U.K. and Federation Governments are prepared to make their contribution on the lines which I have indicated, Malayan producers can be relied upon fully to develop the industry so that a production rate of possibly between 50,000 and 60,000 tons per annum may be maintained for some years to come. But it should be remembered that it took nine years after the seriousness of the fall in production in 1918 was recognised before the position was restored, and conditions then were more favourable than at present."

G. W. SIMMS,
Sungei Besi Mines, Ltd. and Ayer Hitam Tin Dredging, Ltd.

Housing

"Critics of the Government's housing policy arise from every side, from their political friends as well as from their political foes. Many economists are busy explaining that we cannot afford so much labour and materials to be expended in the provision of houses, however necessary these may appear to be. At the same time, many of the same economists deplore the lack of any incentive for the working man. Surely the Government is right to give housing a very high priority. What greater incentive can a man have to work, and work hard, than the opportunity of housing himself and his family decently, and when the house is acquired, to pay for it as speedily as possible. The man who buys his own house is a constructive citizen. He saves himself and his fellows part of the burden of housing subsidies which, otherwise, would have to be found by taxation or rates out of his own and his fellows' earnings, and by his savings he creates a capital asset for himself and a valuable stake in the country, which must surely lead to a greater sense of responsibility and good citizenship."

SIR BERNARD DOCKER,
Metropolitan Railway Country Estates, Ltd.

Export Position of the U.K.

"This leads to consideration of our present export position. Whereas a year ago our ability to fulfil overseas orders was largely governed by the rate at which we were able to produce, various factors—including import cuts by Commonwealth countries, scarcity of sterling available to other countries and increasing competition from Germany and Japan—have combined to alter the situation materially. We have encountered during the past 12 months some recession in trade, and now we must intensify our efforts to compete successfully in foreign markets, if our balance of payments is to remain favourable. Our ability to effect the required improvement in exports is, of course, essentially bound up with our internal position and I gravely doubt whether effective control of Government expenditure has moved sufficiently in line with the dearer money policy now pursued."

RT. HON. LORD ROTHERWICK OF TYLNEY,
Commercial Bank of Scotland.

Notices

'CIPLA'

THE CHEMICAL, INDUSTRIAL AND PHARMACEUTICAL LABORATORIES LIMITED

289, Bellasis Road, Byculla
BOMBAY

NOTICE

NOTICE IS HEREBY GIVEN THAT THE SEVENTEENTH ORDINARY GENERAL MEETING of the Shareholders of the Chemical, Industrial and Pharmaceutical Laboratories Limited, will be held at the Registered Office of the Company, 289, Bellasis Road, Byculla, Bombay, at 3 p.m. on Friday the 27th February, 1953, to transact the following business:

1. To receive and adopt the Directors' Report and Audited Statement of Accounts for the year ended 31st October, 1952.

BANGALORE MACHINE TOOLS FACTORY

The memorandum and articles of association for the incorporation of the Hindustan Machine Tools Ltd. were signed last week by Mr. A. K. Chanda, Secretary, Ministry of Production, on behalf of the President and Mr. E. G. Buehrle, Proprietor of Oerlikon Machine Tool Works, Buehrle & Co., Zurich (Switzerland), on behalf of the Company.

Messrs. Oerlikons are a Swiss firm of machine tool manufacturers with international reputation and were responsible, in association with the Defence Ministry, for the construction and equipment of the Ambarnath Machine Tool Factory, which was recently opened by the Prime Minister.

The authorised capital of the Company is Rs. 12 crores and its production programme covers the manufacture of high speed lathes, heavy duty drilling machines, shaping machines, milling machines, etc. Considerable progress has been made in construction of the factory buildings at Jalahalli, near Bangalore, and the procurement and installation of capital equipment. The factory is expected to go into production towards the end of the year. With the factory in production, India would have attained self-sufficiency in high quality general purpose machine tools.

INDIA'S TRADE WITH SOUTH-EAST ASIA

SCOPE FOR EXPANSION GOOD

(By R. P. S. VERMA)

THE changing pattern of India's foreign trade, from that of primarily an exporter of agricultural products to that of a large exporter of manufactured goods, makes it imperative on its part to look for such outlets where it can have a ready market for its manufactured goods and at the same time may obtain the requirements of its growing industries. In 1951-52, exports of manufactured goods formed 56 per cent. of the total exports of India, as compared with only 30 per cent. before the war. On the other hand, the percentage share of imports of food articles in the total imports has risen from 14.1 in pre-war to 26.9 in 1951-52 and that of raw materials from 22.7 to 36.5, while that of manufactured goods has declined from 61.6 to 35.8 during the same period. India cannot find a market in Europe or America for its manufactured goods. However, a ready market for manufactured goods and sources of raw materials for its secondary industries, which have developed since the war, exists just near at hand, in Burma, Malaya (including Singapore), Indo-China, the Philippines and British Borneo.

The importance of South-East Asia has only grown with time. Its immense resources in tin, rubber, rice and oils and in other essential materials have made S.-E.A. one of the vital areas of world economy. The area was responsible, in pre-war, for about 90 per cent. and 60 per cent. of the world production of rubber and tin, respectively. Tungsten, manganese ore and sugar were other important items of production and practically the whole of manila hemp and 90 per cent. of quinine salts came from this area. Indonesia alone was responsible for about 90 per cent. of cinchona, 85 per cent. of pepper and 75 per cent. of tapioca of world exports. The economy of these countries, broadly speaking, was based on double system—native agricultural economy, characterised by low yield, and the economy of plantations agriculture on a scientific basis and large-scale mining. Most of these countries export a few staple commodities like rice (Burma and Thailand), spices (Malaya and Indonesia), and tin and rubber (Malaya and Indonesia), while they import manufactured goods. In the post-war period, machinery has also been imported to rehabilitate the devastated economies of these countries. As a result of specialisation in one or two crops for earning foreign exchanges, they prosper in times of boom, while they are hit hard in times of depression. This was inevitable during colonial rule, but, as some of the countries like Burma, Indonesia and the Philippines have already gained their independence and others are following suit, a diversified and balanced economy should be the ultimate aim which will enable the standard of living in these areas to be raised.

During World War II, the South-East Asian countries suffered heavy losses and their economies were dislocated and disorganised. The increasing industrialisation of India offers a good opportunity for the economic recovery of this area, while, in turn, they can supply India their raw materials and food. If a satisfactory economy has to be developed for South-East Asia, it can only be a "co-prosperity sphere," based on the interdependence between India and these countries. Though the markets of South-East Asia, at present, are not very important in the total foreign trade of India, they present great potentialities for the future. It is, however, needless to mention that the economies of both India and South-East countries, to a large extent, are complementary and supplementary and not competitive and there is a possibility of both intra-regional and multilateral trade.
