As already stated, the share of South-East Asia has never been large in the foreign trade of India. In 1938-39, these countries accounted for only about 9 per cent. of total exports of India and about 20 per cent. of total imports. It is significant to note that, in the post-war period, the share of this area has further declined in the total trade of India from 29 per cent. in 1938-39 to 13 per cent. in 1951-52. The decline is more pronounced in imports which has declined from 20 per cent. in 1938-39 to 6 per cent. in 1951-52 of their total imports. The following table shows the value of India's trade* with South-East Asia and its relation to total foreign trade of India:

(Value Rs. lakhs)

	South-East Asia				Percentage share of S. E.A. in India's Foreign trade		
Year ended March	Exports	Imports	Balance of trade favourable (+) unfavourable (−)	Total exports (excludes re-exports)	Percentage of S. E.A. to total exports	Total imports	Percentage of S. E.A. in total imports
1938-39	14,47	30,55	16,08	165,79	9	152,36	20
1946-47	16,92	11,82	− 5,10	301,27	6	300,65	4
1947-48	14,99	29,29	14,30	330,53	6	485,42	6
1948-49	22,46	10,78	− 11,68	416,11	5	672,96	2
1949-50	10,66	14,16	3,50	199,56	5	639,54	2
1950-51	67,51	16,99	− 50,52	506,52	12	695,45	2
1951-52	41,00	60,81	19,81	478,71	9	965,24	6
1952-53 (from April to August)	25,70	24,91	− 0,79	250,56	10	340,74	8

* By sea only and excludes re-exports.
† Includes Burma, Malaya, Singapore, Thailand, Indonesia, Indo-China, the Philippines and British Borneo.
‡ Exclusive of transit trade.

Burma, Singapore, Malaya and Thailand are the principal countries in India's trade with South-East Asia. In pre-war, Burma alone was responsible for 30 per cent. of imports into India from this area and accounted for 66 per cent. of India's total exports to this area. In post-war, the share of Burma has significantly declined while that of Malaya and Singapore and Thailand has increased as shown below:

Approximate percentage share of principal countries of South-East Asia in the foreign trade of India with S.-E.A.

Year ending March:	1938-39		1946-47		1947-48		1948-49		1949-50		1950-51		1951-52		1952-53 (Apr.-Aug.)	
	Imports	Exports	Imports	Exports	Imports	Exports	Imports	Exports	Imports	Exports	Imports	Exports	Imports	Exports	Imports	Exports
Burma	30	66	4	61	56	60	57	14	32	24	10	33	28	38	25	16
Singapore and Malaya	13	16	50	27	33	22	24	23	33	11	35	53	25	31	23	24
Thailand	N	5	6	N	8	4	14	11	28	10	17	6	19	17	22	16
Total percentage share of principal countries	93	87	60	88	97	86	95	78	93	88	92	92	92	86	98	86

N Negligible.

The composition of trade between India and S-E.A. has shown little changes in the post-war period as compared with pre-war. Jute manufactures and cotton textiles are the major commodities of export. Both these commodities are exported to almost every country. The following statistics explain:

Percentage share of major commodities exported to S.-E.A.

	1938-39	1946-47	1947-48	1950-51	1951-52
Cotton textiles	28	20	17	65	18
Jute manufactures	20	12	20	10	35
Coal	1	1	6	1	2
Vegetable oils, non-essential	3	12	8	6	7
Total percentage of major commodities	55	48	51	82	62

As regards imports into India, rice, which is mainly imported from Burma and Thailand, accounted for about 50 per cent. in 1950-51, as against 40 per cent. of total import in 1938-39. Next important item is petroleum oils which was about 17 per cent. and 9 per cent. of total imports in 1950-51 and 1951-52, respectively. The imports of metals approximate 8 per cent. in the post-war period, as compared with 3 per cent. in pre-war. Betelnuts continue to be about 5 per cent. of total imports. The percentage share of timber imports declined from 9 per cent. in 1938-39 to 4 per cent. in 1950-51 and 6 per cent. in 1951-52. The imports of rice, petroleum oils, metals and timber constituted about 60 per cent. in pre-war, 45 per cent. in 1946-47, 59 per cent. in 1947-48, 85 per cent. in 1950-51 and 71 per cent. in 1951-52, of total imports.

The demand for jute manufactures (gunny bags) has always been substantial and, because the economies of these countries are mainly agricultural and exports of the agricultural produce require bags, it can be reasonably expected that, with an increase in agricultural production and normal international trade relations, the demand for jute manufactures from this area will continue to be good. According to the Narielwala Mission, the estimated yearly demand for jute goods from Burma is 25,000 tons, from Indonesia 24,000 tons, and from Thailand 15,000 tons. This mission recommended that, while annual allotment of 20,000 tons would be sufficient for Indonesia, efforts should be made to meet the Burmese and Thai demand.

The demand for cotton manufactures in the markets of South-East Asia is excellent, and there is considerable scope for exports of cloth to this region. Exports of Indian cotton manufactures increased during and after the war, as a result of the disappearance of Japan, which was their principal supplier (about 55 per cent. of Japanese exports to this area were textiles). Since 1948, however, the recovery of Japanese textile industry has been remarkable and it has now caught India in the field of exports. It is also to be noted that Indonesia, Malaya and Singapore, all have taken more cotton cloth from Japan than from India. It has made particular headway in Malaya and Singapore, where Japanese cotton sales increased by not less than 260 per cent. between 1950 and the first quarter of 1952.

A rough estimate puts the consumption of cotton textiles in these countries at 1,200 million yards. The export target of 1,000 million yards for Indian mills could thus easily be reached by exports to these countries alone, if there is no competition. But competition in this area is becoming keen and, unless India produces cloth of good quality at competitive prices, and unless our export policy is a stable and a continuous one, it will be difficult for this country to establish large markets for its textile goods.

Although cotton textiles and jute manufactures constitute a large proportion of India's export trade with South-East Asian countries, a fair-sized list of miscellaneous articles (mostly consumers' goods) also figures in trade. Such goods are coir yarn, cordage and rope, hardware and cutlery, provisions and oilmanstores, rubber manufactures, haberdashery and millinery, electric goods, sewing machines and tobacco manufactures. All these commodities do not, of course, go to all these countries but only to specific ones. Nevertheless, the fact that such a large variety of goods figures in India's export trade with this region is significant, in that it shows that India can capture these markets if it is able to compete in quality and price. It is in the neighbouring markets that India has a golden opportunity to develop trade in surplus manufactured goods. India may, however, have to face Japanese competition in the export of rubber manufactures and glass and glassware to these markets. With regard to the export of boots and shoes, the U.K. is India's main rival, hence greater attention should be paid towards quality and price. There is sufficient scope in South-East Asia for agricultural machinery and tools, as there is a considerable degree of unfamiliarity with Japanese products. Burma and Thailand would be interested in rice milling machinery, while Indonesia in sugar machinery. Electric goods, including fans, switches, cables and electric motors are in good demand everywhere. The exports of electric fans from India to this area are a recent phenomenon and are proving quite encouraging. There is a great demand for Mangalore type of roofing tiles, especially in Malaya, Burma and Thailand. There is only limited scope for the export of coal, as there are no large-scale industries and inferior type of coal are produced by them. The prospects for soaps and toilet preparations are somewhat dim due to the establishment of a big factory by Lever Bros. in Malaya, who will have the advantage of lower prices of coconut oil in the producing countries and to the increasing competition from other countries. Paper, stationery and vegetable non-essential oils are in good demand. The prospects for the exports of aluminiumware are fairly bright. There is also a good demand for radio sets assembled in India; the only question is of price. Efforts should, therefore, be made to explore the market for radio sets at competitive prices.

If we export more, we have to import more and, as the Narielwala Mission pointed out, in the promotion of trade, there must be two-way traffic. India can have rice and timber from Burma and Thailand, non-ferrous metals from Burma, Malaya and Indonesia. Other goods that can be had from this area are palm oil, maize, tapioca, quinine and mineral oils. The import of tobacco wrappers from Indonesia deserves to be investigated, as cigars made with Indonesian wrappers have a good market in the Western countries.—*All Rights Reserved.*

Notices

W. H. BRADY & COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT THE Fortieth Ordinary General Meeting of the Company will be held at the Registered Office of the Company, Royal Insurance Buildings, 12/14, Veer Nariman Road, Bombay, on Monday, the 2nd day of March, 1953, at 11-30 a.m. (S.T.), to transact the following business:—

1. To receive and adopt the Directors' Report and Audited Statements of Accounts for the year ended 31st December, 1952.
2. To sanction the payment of a Dividend.
3. To ratify and confirm the appointments of Whole-time Service Directors and Technical Advisers of the Company.
4. Mr. R. S. Smith, Whole-time Service Director and Technical Adviser, retires, and being eligible, offers himself for re-election.
5. To confirm the appointment under Article 102 of the Articles of Association of Mr. E. F. Morrey as Whole-time Service Director and Technical Adviser of the Company. Mr. Morrey retires, and being eligible offers himself for re-election.
6. To appoint Auditors for the ensuing year and to fix their remuneration.

The Transfer Books of the Company will be closed from Friday, the 20th February, 1953, to Thursday, the 12th March, 1953, both days inclusive.

By Order of the Board,
JOSEPH KAY,
Managing Director.

BOMBAY, *6th February*, 1953.

To the Shareholders of W. H. Brady & Co., Ltd., and in particular to:—

W. J. Pearce, F. W. Bennetts, Mrs. A. A. Dickinson, Mrs. O. M. Sharpe, T. W. Bennetts, Mrs. L. B. Postlethwaite, Mrs. I. C. Foxley, Mrs. J. A. Shelton, Warren H. Brady, Mrs. E. O. Cock, Mrs. M. M. Katgara, Sir A. G. Gray, A. V. Crowle, S. J. Crowle, Mrs. B. J. Peek, S. I. Neuman.

THE EMPIRE DYEING AND MANUFACTURING COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT THE Fifty-third Ordinary General Meeting of the Shareholders of THE EMPIRE DYEING AND MANUFACTURING COMPANY, LIMITED, will be held at the Registered Office of the Company, Royal Insurance Buildings, 12/14, Veer Nariman Road, Fort, Bombay, on Monday, the 2nd day of March, 1953, at 12-15 p.m. (S.T.), to transact the following business:—

(1) To receive and adopt the Directors' Report and Audited Accounts for the year ended 31st December, 1952.
(2) To sanction the declaration of a Dividend.
(3) To confirm the appointment of Mr. J. Symon as a Director of the Company.
(4) To appoint Directors in place of Mr. J. L. B. Heale and Mr. Kantilal Nahalchand, who retire by rotation in accordance with Article 135 of the Articles of Association, but are eligible for re-election.
(5) To appoint Auditors for the current year and fix their remuneration.

The Transfer Books of the Company will be closed from Friday, the 20th February to Thursday, the 12th March, 1953, both days inclusive.

By Order of the Board,

A. C. CLARKE,
General Manager.

BOMBAY, *5th February*, 1953.

MONEY REMAINS FIRM

(From Our Own Correspondent)

BOMBAY, 4th *February*

In the short-term money market, the inter-bank call money rate remained firm at 3 per cent., among the Exchange Banks and large Indian banks, throughout the week under review, as the demand for money was somewhat heavier than in the previous week. It is, of course, true that some stray transactions passed at 2½ per cent. late on Saturday, but that rate cannot be considered as representative, for, usually on Saturdays, banks offer their idle funds at slightly lower rates. There was a continuous demand for funds from up-country centres, particularly from the Deccan. Smaller Indian banks were keen borrowers, but funds were not available in that section and they were, therefore, forced to meet their requirements by borrowing from the Reserve Bank of India.

Term money was bid at 3 per cent. for 1 to 5 months and at 2½ per cent. for 12 months.

The sale of three months' Government of India Treasury Bills this week brought a slightly better response than last week, but it was of no consequence so far as the cost of the Bills was concerned to the borrower. The amount tendered was Rs. 1.14 crores, as against a little over Rs. 1 crore in the previous week, in response to an invitation for Rs. 1 crore. The average rate of accepted tenders, however, remained unchanged at Rs. 2-7 per cent. per annum.

For the third week in succession, notes in circulation show a contraction, according to the statement of affairs of the Reserve Bank of India for the week ended 30th January, 1953, the exact fall as compared with the previous week being Rs. 3.82 crores. Notes held in the Banking Department, however, have improved by Rs. 4.05 crores. The net increase in total notes issued, which is of the order of Rs. 22.92 lakhs, is covered by a similar rise in rupee coin. On the liabilities side of the Banking Department, deposits of the Central Government disclose a decline of Rs. 96 lakhs, while those of the other Governments show an increase of Rs. 5.57 crores. Deposits of banks have fallen by Rs. 98.98 lakhs. On the assets side, cash balances show an enlargement of Rs. 4.08 crores, accompanied by a rise of Rs. 2.45 crores in balances held abroad. Loans and advances to Governments show a minor variation whereas other loans and advances are lower by Rs. 89.16 lakhs. There was no borrowing by banks against usance bills during the week under review also, nor has there been any repayment of loans taken earlier.

The consolidated statement of position of Scheduled Banks for the week ended 23rd January, 1953, as compared with that for the previous week, shows an expansion of Rs. 1.79 crores in demand deposits and a contraction of Rs. 50.46 lakhs in time deposits. Inter-bank borrowings have declined by Rs. 1.79 crores. Borrowings from the Reserve Bank and the Imperial Bank have both dropped by Rs. 26 lakhs and Rs. 70 lakhs, respectively. Advances have gone up by no more than Rs. 64.89 lakhs and bills purchased and discounted by Rs. 23.14 lakhs. Investments have declined by Rs. 1.09 crores. Cash-on-hand is lower by Rs. 81.20 lakhs, while balances with the Reserve Bank are better by Rs. 1.61 crores.

The Gilt-edged market presented a steady tone. Though the volume of business continued to be small, prices showed a tendency to look up.

3 per cent. 1953-55 was unchanged at Rs. 100¼ and 3 per cent. 1957 at Rs. 98-8. 3 per cent. 1958 was up by half-an-anna at Rs. 98-6½. 3 per cent. 1959-61 was in demand and rose by an anna to Rs. 96. There was a similar gain in 3 per cent. 1963-65 which finished at Rs. 92-8. 3 per cent. 1964 rose from Rs. 92-7 to Rs. 92-8, but 3 per cent. 1966-68 was stagnant at Rs. 90-7. 3 per cent. 1970-75, however, was wanted at Rs. 86-8½. 3 per cent. 1986 Conversion Loan hardened from Rs. 83-1 to Rs. 83-2, but closed at Rs. 83-1. Among the State loans, 4 per cent. 1964 Bombay dropped As. 2 to Rs. 100-14, as also 4 per cent. 1964 U.P. to Rs. 100-8. Among the Corporation loans, 4 per cent. 1964 Bombay was in favour and put on As. 2 to Rs. 100-4.

In the foreign exchange market, the rupee continued to harden further, albeit to a small extent, in terms of the U.S. dollar. There was an all-round increase of half-a-rupee for $100 in banks' selling rate, for both ready and forward deliveries, while the buying rate remained unchanged. This small improvement in the rupee-dollar rate was the result of the further improvement in sterling in New York, where the pound rose from $2.81⅝ to $2.81⅞ (for ready), a level which is only a fraction lower than the upper limit of the official cross rate, namely $2.82 for ready. In the forward section, three months' sterling rose from $2.81½ to $2.81-7/16 and six months' sterling from $2.80⅞ to $81-1/16. The following are the variations in the rupee-dollar rates during the week:

	27-1-53	2-2-53
SELLING	Rs.	Rs.
T.T./D.D. (other than B.C.'s) for amounts $2,000 and over:

,, ,, 6th ,, ...		

SPURT IN BULLION

(From Our Own Correspondent)

BOMBAY, 4th *February*

The firm trend in the silver section of the bullion market, noted in the previous week, gathered further momentum during the week under review, the sentiment having been favourably influenced by the continued good offtake, the decline in the floating stocks, and the revival of fear of war following the action taken by the U.S. Government regarding Formosa. Prices forged ahead on sustained speculative support and brisk short-covering. The pace of advance was, however, somewhat slow during the earlier part of the week, but towards the close the improvement was sharp, owing to a squeeze on bears who failed to give delivery of all their sales at the settlement which ran out yesterday. It was reported that the sellers, who had outstanding sales to the extent of 1,800 bars, could deliver only 1,000 bars. The plight of bears encouraged the bulls to pursue their part of the game vigorously and in this they were greatly assisted by disquieting reports about the developments in the Far East. Bullish fervour was thus strong, with the result that silver price soared to-day to fresh high levels not seen since May, 1952.

Gold, which had remained steady in the previous week, also looked up during the week in sympathy with silver.

There were no fresh developments in foreign bullion markets, except that the international free market price of gold tended to be soft. Both in New York and London, the price of silver was maintained at 85½ cents and 74d. per fine ounce, respectively. In Europe, the free market price of gold shaded off a little, from $37.80 to $37.55 but steadied up yesterday to $37.60.

In Bombay, silver for forward delivery in February settlement began on a firm note at Rs. 159-7, as against the previous week's closing of Rs. 158-11, and steadily advanced to Rs. 161-13 yesterday when the settlement ran out. The business for the next settlement was being carried on at a carry-forward charge of an anna against sellers at the close of last week. But the carry-forward charge widened to Rs. 2 yesterday. To-day, the March settlement opened at Rs. 161-13 and advanced sharply to as high as Rs. 164-4, the highest since 16th May, 1952, but closed at Rs. 163-6 on profit-taking.

Ready silver (.996 Mint) was quoted at a premium of As. 4 over the forward rate for the February settlement. This morning, the premium stood at Re. 1 over the new forward settlement and widened to Rs. 2 at the close. The floating stocks are placed at 2,000 bars. The daily average offtake was 40 bars.

Gold for forward delivery in February settlement began the week at Rs. 87-6 and rose to Rs. 88-6 on Saturday last when the settlement ran out. The carry-over charge for the next settlement, which stood at As. 6 to As. 7 against sellers at the close of the previous week, widened to Re. 1-1 on Saturday. Yesterday, regular business for March settlement began at Rs. 87-2 and softened to Rs. 86-13 due to poor offtake. The spurt in silver to-day favourably influenced gold also which was marked up to Rs. 90-10 before closing at Rs. 90-6.

Ready gold rose from Rs. 87-15 to Rs. 88-13 early in the week and, after moving narrowly, drifted lower to Rs. 87-14 yesterday. To-day, however, it advanced to Rs. 90-14 before winding up at Rs. 89-14. The floating stocks of gold are estimated at 35,000 tolas. The daily average arrivals were 10,000 tolas, while average offtake was no more than 6,000 tolas per day.

The following comparative table shows the trend of the market during the week under review:

	4-2-53	Highest	Lowest	28-1-53
GOLD	Rs. a.	Rs. a.	Rs. a.	Rs. a.

METALS DULL

(From Our Own Correspondent)

CALCUTTA, 3rd *February*

The local metal market remained dull during the week under review, and the lack of business took down quotations further. Electrolytic copper was quiet at Rs. 186, and the fire-refined material was offered at Rs. 172. Reports of poor offtake of copper by consumers in the United Kingdom affected sentiment, as also the lack of adequate support from factories engaged in the manufacture of copper products. However, stockists regard that the changing international atmosphere is bound to lead to better market sentiment and are, therefore, watching further developments. As such, the present depression in prices is causing no anxiety for them.

The quotation for mercury was depressed. Star metal antimony remained unchanged at Rs. 200 and despite traders' anxiety to lessen their stocks no business was reported. Encouraged by reports from the Far Eastern markets, tin improved from Rs. 628 to Rs. 631-8 and the news that during 1952 pig tin imported by India was only 2,094 tons, as against 2,764 tons in 1951, was encouragingly noted by stockists. Zinc at Rs. 65 was featureless as was pig lead at Rs. 61-8.

LESS DEMAND FOR FOREIGN COTTON

(From Our Own Correspondent)

BOMBAY, 4th *February*

The main interest of the cotton trade during this week was centred round the Egyptian Cotton Delegation which is visiting the South-East Asian countries to popularise the use of Egyptian cotton in this region. In Bombay, the delegation had informal talks with the Committee of the Cotton Buyers' Association when the question regarding the long-drawn-out controversy on the arbitration procedure and finding a place for the representatives of the Indian buyers of Egyptian cotton on the Arbitration Panel came up for discussion. At one time, it was believed that the assurance given for accommodating two representatives of buyers from India on this panel was authoritative and binding on the Egyptian Government. It seems, however, that the leader of this delegation only gave an assurance that he would convey the feelings of the buyers in India to the appropriate authorities at Cairo. He also gave an assurance on behalf of the Government that there will be no change in the export duty on Egyptian cotton during the current cotton year.

In the spot markets, in Bombay and up-country, there is good activity in all Indian varieties, especially Vijay and Surat-Navsari styles which are commanding good premia owing to demand by certain Bombay mills. On the other hand, this demand for Indian cotton is reducing the volume of enquiries for cottons of foreign growth. The general anticipation of the market is that there will be a much higher consumption of Indian cotton this year in the country and that to that extent, the use of the U.S. and other higher staple growth is bound to be reduced. The position with regard to imports of Pakistan cotton has remained the same. This position will not be clarified till the trade talks between the two countries end in some definite understanding. In the meanwhile, there is active opposition from Karachi trade circles to the move by the Pakistan Government of allowing private traders to enter into barter deals of certain specific commodities amongst which cotton is included. They argue that this would go to disorganise the established channels of trade and force traders to indulge in the taking up of lines about which they know nothing, at the same time depriving those established in the trade of their normal custom. In any case, the shadow of Pakistan cotton over the Indian markets is no longer there for the present and the forward market at Kalbadevi, after the recent shake-out, has once again resumed a vigorous bullish trend. On the opening day of this week there was good all-round support forthcoming for May delivery and prices advanced considerably. It looks as if the bulls who had tried to play this game with the February delivery during the earlier months, after the reopening of the market, will once again engage themselves in trying to acquire contracts. Prices are likely to remain fairly steady with an undertone of bullishness.

Things are very quiet both on the export and import fronts. The Government has decided indirectly to penalise those mills which have not honoured their contracts for the purchase of East African cotton bought last year under the joint India-R.C.C. bulk purchase scheme, by refusing to give them the balance of the allocations for Indian cotton. This will perhaps pave the way for the settlement of this controversy which stands in the path of further imports of this cotton. But as pointed out above, activity with regard to imports is bound to be on a small scale this year, both because of the greater carry-over of last year's imports and lower consumption of foreign styles during this.

The following are the latest quotations for the spot market: Bengal Deshi (old) Rs. 400; (new) Rs. 446; Berar Jarilla Rs. 675; Vijay Rs. 800; Moglai Rs. 740.

The following is the trend of prices in the forward market for the week ended 4th February:

	Opening	*High*	*Low*	*Closing*
	Rs.	Rs.	Rs.	Rs.
I.C.C., February ..	638	646	630	641¼
I.C.C., May	650	654	639	651¼
I.C.C., August ..	653¼	665	653¼	663¼

At Karachi, there has been no development of note during the week under review. The situation is still regarded as serious. Buyers from the U.K. are keeping away and no new buyers have appeared on the scene. The offtake is definitely poor. The trade there is now convinced that India is the most natural buyer for this cotton and that the exchange ratio as well as the export duties are standing in the way of the disposal of the large stocks of cotton accumulated at Karachi. It is believed that as this sentiment hardens, the authorities will have to take note of it to ease the embarrassing situation which might otherwise explode and affect the whole country's economy. There is also a demand for the removal of the minima for exports. The following are the latest quotations from the Karachi market:

Punjab *Deshi* Rs. 54½; Sind *Deshi* Rs. 55½; 4F Punjab R.G. Rs. 53; S.G. Rs. 56; 289F Punjab R.G. Rs. 59; S.G. Rs. 64; L.S.S. Punjab R.G. Rs. 56; S.G. Rs. 60; N.T. R.G. Rs. 56; S.G. Rs. 60.

At Alexandria, the Government is forging ahead with its measures for giving more facilities to foreign buyers. The latest of this is that of allowing free exports to all sterling areas with permission to the buyers to pay half the cost in sterling and the balance either in Egyptian currency or in goods of the same value. With the removal of the insistence of payment of a part of the price in dollars it is believed that Continental buyers as well as those from Asian countries will find it more attractive to buy Egyptian cotton, though so far, this has not resulted in any tangible increase in demand from abroad. Sales for export by the Cotton Commission are believed to amount only to 1,70,000 bales, which leaves a large gap between production and disposal so far. Local consumption also is on a small scale and spot market activity naturally is slightly on the decline.

An interesting development in the cotton world is the expectation of the reopening of the Liverpool forward cotton market in the very near future. A development, which is likely to help this outcome is that of the decision of the Liverpool Cotton Association last week-end to admit private limited liability companies to full membership of the Association and the drawing up of a scheme for daily settlement and the establishment of a clearing house for cotton trading. It is difficult to say at this stage what effect forward trading in cotton at Liverpool will have on the world cotton marketing situation, which is not very happy at present with all countries scrambling for markets.

At New York, the trend has been definitely more healthy than that witnessed during the last few weeks. Replacement buying by mills has been on a fairly active scale. A large stock of cotton has been withdrawn and pushed into loan, thus removing the threat of large-scale hedging. Bear covering was also the feature of the last week's activities and though the opening day of this week witnessed some reaction in the onward march of prices, the market sentiment is believed on the whole to be genuinely optimistic for the first time after a long interval. The possibility of the extension of the war zone in East Asia has also gone to lend support to this reversal in the price trend.

The following are the latest available quotations from New York as compared with those of a week and a fortnight before:

(In cents per lb.)

	3-2-1953	27-1-1953	20-1-1953
Spot	34.05	33.60	32.85
March	33.29	33.08	32.59
May	33.57	33.42	33.11
July	33.88	33.70	33.50
October	33.93	33.60	33.60

ART SILK YARN SHOOTS UP

(From Our Own Correspondent)

BOMBAY, 4th *February*

Under the stimulus of war fears, following the decision of the U.S. Government to decentralise Formosa, values of art silk yarn forged ahead this week to touch the highest levels not seen in the past four and a half months. The bullish fervour of the market was fanned further by fully firm advices from share, bullion and other commodity markets. Scarcity of floating stocks, marked rise in demand in ready section and expectations of poor arrivals of yarn from South Indian centres, as a result of additional power cut in Madras and Travancore-Cochin, too, strengthened the sentiment. Added to these was the improvement in cotton yarn prices, consequent on Government's permission to mills to export cotton yarn. Buying support that resulted took the quotations to higher levels, as stated already.

The upward trend in values was in marked evidence particularly in the forward section. 150D February contract stood as high as Rs. 795, as against Rs. 714 last week-end. March contract, in which business was opened at Rs. 760 on Monday, swiftly advanced to Rs. 792 to-day. In the ready section, 120 Italy rallied As. 9 to Rs. 4-1. 120 Japan Italy moved up from Rs. 3-9 to Rs. 4-1. 120 Japan was firm at Rs. 4-14, as against Rs. 4-9. 150 Japan gained an anna to Rs. 4-8.

In sympathy with the art silk yarn section, the staple fibre section remained fully firm during the week under review. Thus, 2 x 40 February contract gathered 19 points to Rs. 795. The improvement would have been more marked, but for the ceiling price of Rs. 800 fixed by the Yarn Merchants' Association.

The table below gives the prices of art silk and staple fibre yarns quoted to-day, as compared with those on the 28th and 21st inst.

	4-2-53 Rs. a.	28-1-53 Rs. a.	21-1-53 Rs. a.
Art Silk Yarn—			
150D January (per case of 200 lbs.)	—	713 0	705 0
150D February ,,	795 0	714 0	700 0
150D March ,,	—	—	—
120 Japan (per lb.)	4 14	4 9	4 6
150 Japan ,, ...	4 8	4 7	4 6
120 Japan ,, ...	4 12	4 3	4 2
120 Italy ,, ...	4 1	3 9	3 9
150 Italy ,, ...			
Staple Fibre Yarn—			
2 x 40 January (per bale of 400 lbs.)	—	800 0	785 0
2 x 40 February ,,	795 0	776 0	765 0

Traders are greatly intrigued at the Government of India's continued silence over art silk yarn import policy for the current half-year. The Yarn Merchants' Association, Bombay, in a communication addressed to the Chief Controller of Imports, has, once again, vigorously pleaded for an early grant of liberal licences to established importers of yarn for the January-June, 1953 period. The plea is based chiefly on the ground that the grant of licences direct to consumers has not enabled the latter to obtain their requirements at fair prices. The Association observes thus:

"It is difficult for a large number of consumers to anticipate the requirements far ahead to place orders for particular types and qualities of yarns and to consume the same on arrival of these goods. The consumers are compelled to change their style of cloth in accordance with the demand from consuming centres and they have, therefore, been obliged to dispose of their imported yarn and to make purchases of different deniers and qualities as required by them from the importers to suit the demand of particular type of cloth in the market. Further, some of the consumers are not in a position to finance their imports and, on many occasions, are not able to utilise their licences. For instance, several consumers' societies and also some of the art silk mills have been regularly selling their import licences at a premium ranging from 5 to 10 per cent., with the result that the cost of the imports to that extent becomes dearer and the ultimate consumers have to suffer by paying higher prices. There are also instances to show that several handloom weavers' societies have recently cropped up only for the purpose of securing import licences, as it has been the policy of the Government nowadays to issue licences to the so-called consumers' societies and have been giving preference to such societies in granting licences to the genuine importers who have been in the trade for the last 50 years and more."

Another ground on which the Association has based its plea is that the supply position in respect of yarn is not comfortable *vis-a-vis* demand. The total requirements of art silk yarn amount to about 50 million lbs., as against the import of 20 million lbs. in 1952. If, therefore, no licences are given to established importers, or if the granting of licences is delayed, there is, it is warned, every possibility of acute scarcity of yarn and sharp rise in prices. After all, the Association points out, it is only the importers who can regulate the market by arranging to keep sufficient stocks and by importing, from time to time, those types and qualities of yarn which are required by several categories of consumers, namely, silk mills, power-looms, handlooms, lace, tape and rope manufacturers, etc.

OILSEEDS FIRM

(From Our Own Correspondent)

BOMBAY, 4th *February*

The most important development during the week was the announcement of free exports of castor oil by the Government of India, with effect from 1st February, for the period ending 30th April next. While the announcement led to a fall in prices of the oil in the U.S. and the Continental markets, locally, quotations for castorseeds and oil firmed up, under the stimulus of disturbing international political situation, following the decision of the U.S. to withdraw its navy from the Formosan waters. Groundnuts and oil improved considerably, as a result, and on good demand from *vanaspati* interests. The linseed and oil section ruled in sympathy with others. The week-end quotations showed on balance sizable gains all round.

There was aggressive buying and hectic bear covering in the groundnuts section. Bears were caught napping by price increases, owing to inadequate supplies. Consequently, Bold ready improved from Rs. 34-12 to Rs. 35-12. Coromandals gained Re. 1 to Rs. 36. Khandesh quality improved from Rs. 35-4 to Rs. 36-4. Groundnut oil ready rallied As. 4 to Rs. 19 and Railway receipts As. 8 to Rs. 19. March and April deliveries were done at Rs. 19 and Rs. 19-3, as against Rs. 18-9 and Rs. 18-12, respectively. The rumour that the Government of India might reimpose export duty on groundnut oil did not have any material effect on the market.

Following the decision announcing free exports of castor oil on 31st January, castor oil prices in U.S. were done at 18c. per lb. for commercial February-March delivery and, in the Continent, at £155 per ton for B.S.S. Feb.-March delivery; the corresponding quotations prior to free exports were 18.5c. to 19c. and £158 to £159, respectively. But these had no effect on the local quotation, as prices spurted here on speculative activity. Castor oil B.S.S. was higher by As. 8 to Rs. 19-4 Commercials were done at Rs. 18-4, as against Rs. 17-12. In castorseeds May delivery, which opened at Rs. 138-12, as against Rs. 135-12, fluctuated between Rs. 143-12 and Rs. 134-12, before closing at Rs. 142-8. Madras quality changed hands at Rs. 31-4, as compared with Rs. 36-8.

Linseeds proved no exception to the general upward trend, with the operators still hoping reduction in export duties on linseed oil. Bold ready improved by As. 2 to Rs. 27. Linseed oil ready was done at Rs. 14, as against Rs. 13-8.

The following table shows the prices of oilseeds and oil on the 4th inst., as compared with those at the close of preceding two weeks.

	4-2-53	27-1-53	21-1-53
Groundnute—	Rs. a.	Rs. a.	Rs. a.
Bold Ready New (per cwt.) ..	35 12	34 12	33 4
Khandesh New (per cwt.) ..	36 4	35 4	33 12

Ex-mill Ready (per quarter)	19 0	18 12	18 4
Castor Oil—			
Commercial (per quarter) ..	18 4	17 12	18 2

PEPPER RISES ON U. S. BUYING

(Messrs. Parekh & Co.)

BOMBAY, 4th *February*

The pepper market during the week showed improving tendency in sympathy with other markets where bullish fervour was fanned on reports of tension in the international situation, following the change in the U.S. foreign policy. New York, which was so far haggling for a lower price, came to the market and bought a fairly large quantity for February shipment at prices ranging from $1.10 to $1.13 per lb. c. & f. New York. Bombay, Calicut and Alleppey markets recorded a rise ranging from Rs. 100 to Rs. 200 with sellers reserved. Any further deterioration in the Far Eastern situation is likely to bring fresh buying by grinders and dealers from the U.S.A. and the Continent who were so far buying hand to mouth because grinders, as usual with them, start buying and accumulate contracts only in rising markets. Growers in India, then in spite of increasing arrivals, are sure to ask for higher price for every next deal. Bulls among dealers at Cochin, Alleppey and Calicut will then naturally force bears to cover their short sales. Trade seems to have been surprised at the policy of reserved selling by Calicut planters even at this time of the beginning of the season. Garbled pepper is reported changing hands at Cochin at prices ranging from Rs. 425 to Rs. 430 for ready, Rs. 420 to Rs. 425 for February and from Rs. 415 to Rs. 420 for March delivery. The market at present is showing resistance and tendency is uncertain. Everybody is watching very closely the Far East situation which has now become more explosive. If anything untoward happens there, the market will repeat the buying scramble that was witnessed during the beginning of the Korean conflict.

Following are to-day's nominal quotations:— Ready delivery Rs. 2,250, February Rs. 2,155-85 and March Rs. 2,185-2,215 per candy of 5¼ cwts., and Calicut (ready) Rs. 2,550 and Alleppey (ready) Rs. 2,450 per candy of 6 cwts.

TEA DUSTS STRONG

(Messrs. Forbes, Ewart & Figgis Ltd.)

COCHIN, 31st *January*

Dust Sale 'B'.—Dust sale 'B' which was held on Tuesday, 27th January, consisted of approximately 2,10,000 lbs. At the outset, there was a strong general demand and prices for all types, with the exception of best liquoring dusts, were generally As. 2 to As. 3 dearer. Best liquoring dusts met with a poor demand and were As. 1 to As. 2 easier. Later in the sale, competition flagged and there were some withdrawals.

London Market.—Good general demand. All descriptions up to 3 market ½*d.* to 1*d.* dearer above fully firm to dearer.

Colombo Market.—6,000,000 lbs. Lowgrown unchanged, others again dearer.

Calcutta Market—Export.—55,000. Demand well sustained.

Dust.—15,000. Strong active demand, particularly for middle east types which were As. 2 to As. 4 dearer.

Export Quota.—The market opened at 3 pies, at which figure small business was done. The present tendency is slightly weaker.

Forthcoming Auctions.—Dust sale 'C' will be held on Tuesday, 10th February.

As we go to Press, Messrs. Forbes, Ewart and Figgis Ltd. wire as follows:

"Sale No. 3. 8,40,000 lbs. offered. Market opened very strongly, particularly for all fannings grades and low brokens which advanced in price, but as sale progressed demand slackened and closed about steady. Best liquoring dearer with improved quality."

JUTE GOODS LOOK UP

(From Our Own Correspondent)

CALCUTTA, 3rd *February*

Mainly owing to speculative support, the jute goods market was steady during the major part of this week, but the fractional gains thereby recorded were not maintained subsequently, in view of the lack of follow-up demand for real business. Moderate attention was shown to 40" 10 oz. hessian, and the rates of transactions varied between Rs. 42-14 and Rs. 42-4. The presence of some covering demand was noted with relief, and mills became reserved for a time. But as the covering demand was satisfied, the quotation eased to Rs. 42-4 over the week-end. However, an improvement to Rs. 42-12 was a feature of yesterday's trading, the f.o.b. rate being Rs. 51-3. Hessian 40" 8 oz. was quoted at Rs. 34-8 f.a.s. and at Rs. 41-4 f.o.b. Unless prices move up further, there is no point for mills to sell at current rates. Some business was put through for forward positions with shippers, but when this support was withdrawn the April-June position recorded a gradual decline to Rs. 42-8 from Rs. 43-4, and the February-March to Rs. 42-6 from Rs. 42-12. Reports that mills would soon decide to restrict production remained just rumours, but the information is that no such decision is contemplated for the time being at any rate. Presumably, before they consider any such proposal, mills would desire to wait for the budget speech of the Union Finance Minister this month-end in order to know whether the Government would propose a further reduction in the export duties; if a reduction is made naturally that would bring liveliness to the market and relieve stocks considerably; in which case the question of restricting production further would not arise at all.

There are ample signs to indicate that world demand for jute goods is increasing, because of the simple reason that this cannot be otherwise when gunny—the key of packaging materials—is in abundant supply. American consumption of burlap in December last increased to 75 million yards from 71 millions in November, and the report that the U.K. farmers are compelling animal food manufacturers to resume the use of jute bags is also cheerful news to the jute industry; it is arguably felt that if only Indian quotations are competitive, surely mills need not face the present problem of accumulating stocks. But at current rates mills find no enthusiasm for selling in view of the uneconomic nature of prices, even combined business in hessian and heavy goods is not a business proposition for mills. Unfortunately, nothing further is heard about the proposed enquiry into the working of the jute industry, but it will be interesting to watch what immediate measures Government would adopt so that jute goods would again be sold at competitive rates in world markets.

In the heavy goods section also, a better feeling was in evidence, and a feature was the interest shown by Australian buyers in cornsacks. A moderate quantity changed hands, the March-June goods realising between Rs. 89 and Rs. 91. Earlier in the week, rumours about a reduction in the export duty on sacking were strong, and

MARKET REPORTS

(*Concluded from page 217*)

caused B. twills to advance to Rs. 93-10. The closure yesterday was at Rs. 93 which compared with Rs. 92 over the week-end.

Although some buying was done by mills, the raw jute market could not be raised from the dol-drums into which it has fallen as a result of the continuance of depressed conditions for many weeks now. However, by about the end of this month, mills would have exhausted a good portion of their stocks of raw material, and they would have to buy raw jute to run their plants. This is the only hope of encouragement for stockists whose anxiety to sell pushed down quotations considerably yesterday. Thus business was sought at Rs. 21-8 in Assam bottoms for delivery this month as against Rs. 22 last Thursday. Murshidabad district tossa eased to Rs. 20, and *jungli* and *bimli* f.a.q. were offered at Rs. 17 and Rs. 16-8 respectively. Pakistani bottoms even at Rs. 26 could not meet with much buying support from mills. *Pucca* bales first marks ready were Rs. 130 sellers.

KIPS RULE FIRM

(From Our Own Correspondent)

MADRAS, *2nd Februdry*

Arrivals of kips have been on a moderate scale and prices have ruled firm due to shippers' buying. Enquiries from U.K. have been for seconds and run parcels and inferior fifths in light weights, at 2*d.* over last week levels. Demand for medium and heavy weights has been fair at 1*d.* over last rates. Tanned cow calf and buff calf also were in request, but buff heavies were neglected.

In the local bazaar, tanned goat and sheep skins have ruled firm, and arrivals have been moderate. In the January London public sales goat skins—prime tannages advanced by 6*d.* and others declined by 6*d.* to 15*d.* below December levels, and sheep skins—semi-prime were unchanged, while others declined upto 9*d.*

ARRIVALS OF HIDES AND SKINS SMALLER

(From Our Own Correspondent)

KANPUR, *1st February*

Conditions in the local hides and skins market during the week under review, remained more or less the same as those noted in the previous week. Comparatively speaking, supplies during the week were slightly smaller. The main parties behind the transactions were Cooper Allens and other local tanners. The latest quotations are as follows:

Wet salted cow, 1st grade: Rs. 350, 2nd grade: Rs. 300 and 3rd grade: Rs. 160 per score; wet salted buff, 1st grade: 1 lb. 10 ozs. and 2nd grade: 2 lbs. 4 ozs. per rupee; goat, 1st grade: Rs. 230 and 2nd grade: Rs. 200 per 100 pieces; and sheep: Rs. 240 per 100 pieces.

TEA PRICES HARDEN

(From Our Own Correspondent)

CALCUTTA, *3rd February*

Steady conditions were again a feature of yesterday's export sale No. 33 where the quantity offered aggregated 53,090 packages. Prices for leaf grades rose one anna above brokers' valuations, and common brokens, all bright liquoring varieties, and Assam C.T.C. fannings sold well. However, prices for orange fannings possessing poor liquors and B.O.Ps. eased fractionally. Thus, the quotations were: good Assam C.T.C. B.P. Re. 1-15, clean black pekoe Re. 1-7-6, clean common B.P. Re. 1 to Re. 1-0-6, and medium Assam B.P. Re. 1-1.

Offerings during last week's sale No. 32 amounted to 54,634 packages for export, and 15,129 and 1,781 packages of dusts and other grades respectively for internal consumption. The export market was well supported, and prices for fannings, mediums, low medium brokens, commons and black stylish leaf grades were bought at fractionally advancing rates. Assam C.T.Cs. possessing useful liquors were steady, but those representing a rains description were quiet. The rates were: Good Assam C.T.C. B.P. Re. 1-15, medium Assam B.P. Re. 1-1, clean black pekoe Re. 1-7, and clean common B.P. As. 15-6 to Re. 1.

Among dusts, the cleaner leafy varieties and commons attracted the keen attention of buyers, and prices rose by As. 2. Prices for bright liquoring Dooars and grain types were maintained. However, Darjeelings and powdery mediums eased by an anna. Thus good Assam C.T.Cs. were quoted at Re. 1-14-6, medium grainy Assams Re. 1-9 to Re. 1-9-6, and medium Dooars Re. 1-7 to Re. 1-8.

LIMITED BUSINESS IN LINSEED

(Messrs. A. Bradley & Co.)

CALCUTTA, *2nd February*

There is very little change to report and, whilst price levels have been maintained, the undertone appears to be fairly firm. Trading has been on a very limited scale with sellers extremely scarce for both near and forward deliveries. Enquiries from the local mills have been very feeble and buyers in general have been disinclined to make any commitments for the present. Conditions have ruled dull in the oil section and no fresh business has been reported. The latest quotation is as follows: Ready Rs. 20-3 per maund.

STOCK & SHARE QUOTATIONS

Abbreviations:—D=Deferred shares. G=Guaranteed shares. P=Preference shares. P.O.=Preferred Ordinary shares. R=Rebate shares. Y=Accounts published yearly. H=Accounts published Haf-yearly. Q=Accounts published once 15 months. T=Company has Debentures. R.L.=Reserve Liability on shares. N=Nominal Quotation. i=Interim Dividend. f=Dividend for first half-year, y=Dividend for the year. x=Ex. Dividend. c.d.=Cum. Dividend.

Shares:—If a company has different classes of shares—as, for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under "Paid-up Per Share."

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12 indicate the months of June and December, respectively "Reserves" includes general and other reserves and all other funds which a company may have as also depreciation on block items, when this is charged to separate account "Block" represents actual cost of land, buildings, machinery, and all such other items on which depreciation is allowed, less sales, if any, and stands for the gross figure except where otherwise indicated.

Dividends:—Dividends for completed years are calculated at per cent. per annum, but, where quoted for portion of a year, they represent percentages of the dividend on the paid-up share value. For companies closing the books half-yearly in the first three months of the year, and for companies closing their books yearly during the first half of the year dividends are shown as for the previous year.

• The following explanatory notes relate to the abbreviations and marks shown on page 228 in the debentures section:—

‡‡ Option to repay on six months' notice, on any interest date after 31st December, 1951, at 102 per cent Also redeemable out of a cumulative sinking fund of 1½ per cent. per annum (commencing in 1938) by drawings at 102 per cent. or by purchase at or 102 per cent.

(a) Option of repayment at any time at 3 per cent. premium.

(b) Bearer bonds of Rs. 1,000 each repayable at par.
Bearer bonds of Rs. 1,000 each repayable on 31st July, 1959.

(d) Bearer bonds of Rs. 1,000 each with option of redemption in whole or in part at par on 30th June, 1952, or on any subsequent interest date at one month's notice.

(e) Returnable on or after 31st July, 1950, at Rs. 102-8 or at par after 31st July, 1955, on six months notice in each case.

(f) Bearer bonds of Rs. 1,000 each with option of redeeming on 3 months' notice at ½ per cent premium, after 1st March, 1954, but before 1st March, 1957, and 1 per cent. premium on or after 1st March, 1957

(h) Option of redemption on or after 1st July, 1949, at par.

(i) Option of repayment at any time at par at any time on or after 30th June 1947 on six months notice.

METHODS OF SECURING INDUSTRIAL PEACE IN INDIA

(Concluded from page 199)

apprehend that the existence of a dispute may lead to breach of public peace, cause serious unemployment in an industry or affect adversely a large section of the community, it can refer the dispute to the arbitration of the Industrial Court without agreement of the parties to such arbitration. A representative union, whose constitution provides that it will not resort to strike unless all the methods provided by the Act are exhausted, can also refer a dispute directly to the Industrial Court for arbitration. The references by Government and by such representative unions fall under the category of compulsory arbitration. The Act also provides for arbitration by the Labour Court in matters under Standing Orders and matters like assignment of work and materials, reinstatement, compensation, etc., on the application of the employee concerned or the representative union. Provision is also made for reference of disputes requiring technical knowledge of the industry for their settlement to the Wage Boards.

It will thus be seen that this Act has provided, by successive stages, all the methods of industrial peace for settlement of disputes, namely, negotiation, conciliation, voluntary arbitration and compulsory arbitration.

The Industrial Disputes Act of the Central Government does not provide for negotiations as the first step towards the settlement of a dispute, nor does it provide for sending a notice of a statement of the facts of such a dispute by any of the parties to the Conciliation Officer, except in the case of a public utility service. A dispute arising out of any change made in the service conditions by the employer or out of the demands made by the union does not move through the successive stages of negotiation, conciliation and arbitration as in the Bombay Industrial Relations Act. Thus, except during the pendency of conciliation proceedings before a Conciliation Officer and arbitration proceedings before a Tribunal, when individual complaints can be adjudicated upon by these authorities, there is no provision in this Act for redress of individual grievances like discharge, dismissal or victimisation. In every such case, the worker cannot persuade his union to move Government to refer the dispute to a Tribunal for adjudication, nor would Government accept such a plea. This is an important lacuna in the Act. Objection has also been taken to the discretion given to the Government, under the Act, to refer some demands to adjudication and to refuse to refer others. It is contended that, if some of the demands are frivolous or mischievous, they will be rejected summarily by the Court. The Government should not arrogate that function to itself. A petition on this point has been submitted to the Bombay High Court and a decision will set the seal on this controversy.

Fundamental Defect

The fundamental defect in the Bombay Industrial Relations Act, according to some critics, is that, when there is a representative union in an industry in a local area, none else, except that representative union, can appear or act in any proceedings before the Court, on behalf of any employee in the industry. A union which has a membership of 15 per cent. or more of the total number of employees in an industry can be registered as a representative union. Thus, 85 per cent. of the total number of employees in that industry are likely to go without representation. It would be next to impossible to get 100 per cent. membership in an industry for a union. Therefore, it would be right to declare that union which has a larger percentage of membership as the representative union. But, taking, for example, a case where the representative union has a membership of 30 per cent. and another which has a membership of 25 per cent. of the total number of employees in the industry, it is contended by the critics that, in such a case, an important section of organised labour is prevented from appearing and arguing its case before the Court. They submit that it should be open to the Court to hear any person concerned in the dispute or his representative, according to its discretion, in the interests of justice.

Objection is also taken to the power given to a representative union, provided it decides to make strikes its last resort, to refer a dispute for the arbitration of the Industrial Court under section 73A of the Act *at any time*. It is pointed out that this delightfully vague phrase, "at any time," allows such a union to refer a matter to arbitration, without first attempting to negotiate with the employer or requesting the assistance of the conciliator. This can, of course, be remedied by providing that "a reference can be made under this section after failing to arrive at a settlement in conciliation proceedings and before completion of the conciliation proceedings, i.e., before the report of the conciliation is published by the Provincial Government." This will safeguard the union from its justifiable fear that the employer might carry out the change, without its being held illegal under section 46(1) (iii), immediately after the completion of the conciliation proceedings.

Another Lacuna

Another lacuna noticed in the Act is that, when an employer, desiring a change in any industrial matter included in Schedule II to the Act, gives a notice of change, he has to go through all the procedure of negotiation, conciliation and arbitration, but it is nowhere stated in the Act that it is incumbent upon a party to give such a notice. So that, if an employer brings about a change, without giving a notice, there is no provision for declaring it as an illegal change.

So far, we have discussed the merits and demerits of these two Acts. The Government of India had proposed, in the year 1950, to enact a comprehensive piece of legislation for the investigation and settlement of labour disputes, namely, the Labour Relations Bill, 1950. But that Bill, which had been reported upon and amended by the Select Committee in December, 1950, appears to have been dropped, and a new measure is now under contemplation. The Minister for Labour, Government of India, has recently promised to bring up this new Bill in the ensuing session of Parliament.

Achievements of Industrial Courts

During the past six years, the Court of Industrial Arbitration and the Industrial Tribunals have served their purpose well, as will be seen from a brief survey of their achievements in this article. In the beginning of the year 1947, Sir Harshidbhai Divatia had expressed a fear that "the extension of compulsory arbitration in normal times may, in certain circumstances, lead to a breach of the industrial peace by mass strikes which defy the penalties of the law and paralyse the administration of law and order." The experience of the past six years has not justified this fear. One such attempt of a showdown by sympathetic mass strikes in public utility and other concerns was made in Bombay in the case of the strike in the cotton textile industry in August, 1950. But this attempt did not succeed in its objective and public opinion has not taken kindly to such irresponsible methods of coercing the Government to accept the demands of recalcitrant unions. The course, generally followed by a union, in case of an award which it considers as unfavourable, is to make the best of it during the period of its operation and to agitate for its termination thereafter, with a view to getting the demands referred again for arbitration. Both the employers and the unions have also freely made use of the privilege of appealing against the decisions of the Tribunals after the establishment of the Labour Appellate Tribunal which, by laying down precedents and guiding principles in labour matters, has brought much needed uniformity in the decisions of the Tribunals.

The protagonists of collective bargaining propound various strong arguments against the retention of compulsory arbitration in India. They say that arbitration weakens trade unionism and makes the unions litigation-minded and more dependent upon courts than on their organisational strength. This is, of course, true to a certain extent. And the ultimate ideal of every society, both in civil as well as labour disputes, should be that both parties to a dispute should arrive at a settlement without the intervention of a third party. But, until that desirable ideal is achieved in this imperfect world, the necessity of an impartial judiciary to decide such disputes, in the last instance, cannot be gainsaid.

It is also said that an imposed solution by an arbitrator leaves bitterness in the minds of the disputants, and is not conducive to continuous happy relations between the employer and the employed. There does not appear to be much force in this contention. An impartial decision of an arbitrator, given after weighing the pros and cons of a dispute, though it may not please one of the parties, will at least be respected by both, but a decision arrived at as a result of negotiations will always be resented by the party, who has had to accept it because of its weaker bargaining power, for the time being.

Another strong argument advanced to discredit compulsory arbitration is as sharp and tricky as the horns of a dilemma. It is pointed out that the workers are against arbitration, because they fear that the arbitrators who are men of conservative views cannot understand progressive demands of labour and that, on the other hand, employers accuse the arbitrators with being too radical in appeasing labour. This could hardly be called condemnation of the system of arbitration. At the most, it may be a reflection upon too conservative or too radical labour judges. If the State takes care to see that the judges of the labour judiciary, especially those of the highest Tribunal, are men of broad vision and progressive outlook who, in laying down principles and precedents, will not lay their finger on the letter of the law and thus mistake the trees for the wood, but will aim at doing substantial justice between the parties, there is no reason why arbitrators should not gain the confidence of both the parties.

Another important point to be borne in mind is that the next few years will be years of planned economy in India, when targets of production for each year will have to be kept in view. It is the duty of the State to see that the material resources and human power is used in production, to the maximum benefit of the nation. If the free forces of bargaining, with its necessary concomitants like strikes and lockouts, are let loose in the best *laissez faire* manner, even in concerns which are not considered as public utility services, they may lead to enormous wastage of manpower and materials and are more likely to bring chaotic retrogression instead of planned progress.

Until the workers are educated in real and steady trade unionism, which imposes duties as well as confers rights and until trade union leadership in India learns the essentially British virtues of responsibility and compromise, it would not be safe to discard the well-tried and well-navigated channels of arbitration for the comparatively uncharted seas of collective bargaining.

SUGAR

(Concluded from page 200)

the Government to accelerate the pace of movement of sugar from factories to the consuming centres as a guard against any shortages. Quick movement of sugar is, therefore, the real problem. Unless facilities for quick movement are ensured by the Government, temporary shortages in this or that part of the country are bound to occur. For, more releases of quota or sale by factories cannot remove shortages and bring down prices, unless the stocks are actually moved to consuming centres. Moreover, there is so much time lag between the sale of sugar by factories and despatch of the same to the consuming centres. There are many factories who have already sold most of the stocks released to them and it would not be before long that they would be able to complete despatches. Further, sale by such factories, especially in view of transport uncertainty and frequent booking restrictions on different routes, has no significance. For it is difficult for the factories to know, at this stage, which routes will be open to them later on for despatching their stocks. This uncertainty prevents further sales till stock already sold have moved at least partly. This, however, should not be misconstrued as withholding of stocks.

"The Committee, therefore, hope that the Government would take immediate steps to ensure quick despatch of sugar from sugar-producing centres to consuming centres. The Committee will, however, reassure the Government that factories will not be failing in co-operating with any step the Government may take to ensure even supply of sugar throughout the country."

It is thus evident that artificial scarcity of sugar and the consequent rise in its prices can be avoided by freer movement of the commodity from the producing areas to consuming centres. It is gratifying to note that the Standing Committee of the Central Board of Transport has decided to accelerate the movement of sugar. At its meeting held in New Delhi last week, the Committee agreed that the allotment of wagons for transport of sugar on both the Northern and other Railways should continue to be based on the programme prepared by the Food and Agriculture Ministry and which was adopted last month. An assurance was given by the railways that they would do their best to implement it.

Incidentally, the Committee reviewed the position in regard to sugar transport, in the light of the complaints about the lack of adequate wagon facilities. According to the Committee, the volume of traffic in sugar offered for carriage by the railways during the months of October and November, 1952, was much below that carried during the same months in 1951, the chief factor responsible being the reluctance, on the part

BATTLE FOR SOIL FERTILITY

A NATION'S soil, like a nation's traditions, deserves to be conserved and protected. Indeed, the task of soil conservation is no less difficult than the conservation of the best traditions in a nation's past. And yet, both tasks, in their different fields, demand the same qualities—cautious and co-operative endeavour and an ever-present awareness of the danger of loss through negligence. Over large tracts in this country, man's vandalism, practised against nature, has caused countless thousands to mourn the loss of soil fertility. Forests have been cut down, thereby rendering the surrounding soil less fertile than it was. Animals too have contributed to the destruction of soil fertility. Uncontrolled and unrestricted grazing by cattle and sheep has been the cause of the ruin of many a land in this world and India has been no exception to this. Again, nature's agents, wind and rain, have, in the absence of man's constructive efforts to utilise them, also inflicted serious damage on the country's soil. In his address, at the first annual session of the Soil Conservation Society of India held in New Delhi last week, Mr. C. D. Deshmukh, Union Finance Minister, gave a vivid description of the immensity of the erosion problem. Travel over any part of the peninsular India or the Himalayan foothills, he said, would leave on the mind an "indelible image of a virtually desolate landscape: brown, bare, serrated hills follow in an almost endless succession." He added: "It is an awesome, and in a sense dreadful, impression, as it brings in vivid relief the story of the misuse of our land over the ages." Soil erosion, unlike a locust pest or plant disease, is not an emergency in the agricultural sphere: it is a continuing, ever-present danger that must call forth sustained effort and constant vigilance. There is, in fact, no end to the battle for the retention of soil fertility. That is what makes the battle so important a part of agricultural strategy.

Soil erosion may be briefly defined as the loss of fertile soil through the lessening of the soil from the bed and the transportation of soil material from one place to another. The soil profile is made up of: (1) top or surface layer, the most productive part of the soil, (2) subsoil and (3) parent material. Wind and run-off water move the top soil to places where it can be of no use to the tiller and leave the original soil in a desolate state. When the top soil is removed, it is only the less productive sub-soil that is exposed for cultivation. Rainfall does not soak into such soil, because the eroded soil, which is low in organic matter, cannot absorb large quantities of water. This results in water wastage. Droughts may become more serious than it would otherwise be. The water table may be lowered, resulting in the drying up of springs and wells.

Generally speaking, there are three types of erosion. First, there is sheet erosion, which occurs on flat cultivated lands and on uncultivated lands which have no plant cover. It is estimated that in Sholapur District, for instance, about 133 tons of soil per acre are lost per annum through sheet erosion. Secondly, there is gully erosion. This occurs in lands adjoining river banks and channels, where the land is cut up into ravines for long distances. Gullied land, it was once estimated, amounts to 5,000 square miles in the U.P., the Punjab and the N.W.F.P. "Vast expanses of deep alluvial soil of exceptional productivity in Northern India," according to an eminent authority, "have been converted into useless ravines on which a few goats or undersized cows pick up a precarious living." Thirdly, there is the erosion caused by wind, confined mainly to the drier parts of the country, such as Rajasthan and East Punjab.

The main cause of erosion is man's misuse of land. He cuts down trees for use as fuel. The land then has no protective cover to break the force of falling rains which carry away large masses of sand and silt. To quote the Planning Commission:

"The most important cause of erosion is destruction of forests and other vegetation from sloping lands, desert margins and other areas susceptible to erosion. Vegetation acts as a protective cover against the forces of wind and water, protecting the soil from being washed or blown away and preserving the hydrographic balance of nature. . . . But, when the protective cover of forests is destroyed, this natural balance is disturbed. Rain-water flows down the slopes unimpeded, at great speed, and carries away with it large quantities of soil and other loose material. The hill slopes are denuded of valuable soil and lands in the foothill zone where this unassorted mass of sand and gravel is deposited are in turn rendered unproductive. Most of the water flows away during the rainy periods with the result that, on the one hand, floods are more frequent and, on the other, little water is available during the dry periods. Ground water supplies are also reduced as much less water is absorbed in the soil than before."

A study of the chief causes of soil erosion itself suggests the appropriate remedies which must be applied to correct it. Broadly speaking, the measures for controlling erosion are: (1) regulation of land use; (2) afforestation; (3) improvement of land use practices; and (4) engineering measures. As there is a large number of different uses to which given pieces of land can be put, it is necessary to lay down in advance that certain zones should be sacred to certain types of development of a mutually compatible nature and to sort out, in an intelligent and impartial manner, the rival claims, as they arise. Thus, land not suited for the production of cultivated crops, such as steep or eroded slopes, may be reserved for establishing woods. If the soil can support a good grass cover, the land may be used for permanent grass-legume pasture, provided the slopes are not too steep. Again, lands in highly erodable areas may be retired from cultivation and brought under forests or grazing. Secondly, afforestation must be carried out in a systematic manner. In areas where agriculture is not practical, as the informative pamphlet, *Soil Conservation in India*, issued by the Indian Council of Agricultural Research, points out, the most effective method of checking and overcoming soil erosion

planting of trees. It is in this context that the true significance of the *Vanamahotsava*, the Festival of Trees, can be appreciated. It would, however, be wrong to confine the main function of the *Vanamahotsava* to the planting of trees only. Actually, it has a wider significance; it means both planting of new trees and the protection of the older trees. Selective cutting may, however, be practised, since it means the elimination of defective trees, leaving more scope for the growth of other trees.

The third remedy is the improvement in land use practices. This includes contour-farming and strip-cropping on sloping lands, crop rotation, application of adequate manures and care of fallows. Contour farming, which means ploughing or cultivating lands *across* the slopes, is an effective method of controlling erosion, since the rows of cultivated crops serve as small ridges to break the speed of run-off water. On long slopes, contour strip cropping is adopted; the field is divided into strips varying in width according to the soil and slope, some crop in rows in one strip being followed by a close-growing crop in the next strip. A proper rotation of crops is also effective in preventing erosion. Thus, a two-year rotation of maize, wheat, with grass or legumes as an inter-crop, it is stated, is satisfactory for level land in temperate climates. Again, green manure, it has been found, is helpful in restoring fertility to top soil.

Finally, there is a large number of measures, comprehensively termed "engineering measures" because of the constructional devices they involve, which are effective in preventing soil erosion. Thus, the construction of bunds and terraces, check dams, channels for drainage of surplus water, and gully-plugging goes a long way in conserving the fertility of soil. The essential objective of these devices is, however, the same, namely, the checking of the force of the run-off water. Terraces, for instance, are low ridges of earth, constructed across a slope to break a long slope into a series of shorter ones; they are designed to reduce the volume and speed of the run-off water.

It is not as if these remedies are new; they have been known and practised before. Some soil conservation work, such as contour bunding and terracing in Bombay, afforestation and control of hill torrents in the Punjab and reclamation of ravine lands in the U.P., has been done in this country. The Five-year Plan has provided a sum of Rs. 2 crores for financing the expenditure connected with soil conservation; this will supplement the provision that already exists in the States' plans for this purpose. Nevertheless, much still remains to be done. The Planning Commission has wisely recommended the establishment of a chain of research and demonstration centres, each located in a selected area of extensive soil erosion. That the work, done so far, is only a fraction of what has still to be achieved is the factor which invests the Soil Conservation Society of India with a fresh significance. But this body has necessarily to work in close co-operation with the Central and State Governments, which, we hope, will not be denied. The lines on which the Society wishes to be helped in discharging its task will be evident from the following extract from the resolution adopted by it:

> "The Society urges upon all its members and delegates from the various States to help in making an assessment, qualitative and quantitative, of the erosion problem in their respective States by determining the magnitude of the areas affected by various types of erosion and outlining the steps for soil conservation work.
>
> "The Society feels it to be a matter of great urgency that more work should be done towards the standardisation of methods of survey and collection of basic data for planning soil conservation projects, such as run-off of water, silt discharge, rainfall intensity and river-discharge reading, so that an adequate system of basic data is built up for the purpose."

It would be gross over-simplification of the problem of soil conservation if one were to think that it was only the concern of Governments. Improvements in farming practices, as Mr. Deshmukh pointed out, "depend entirely upon the cultivators." It is, therefore, a human problem. Immediate gains have to be sacrificed in the interests of the larger long-term gains. Changes in age-old agricultural practices and restrictions on land use are difficult to implement. Farmers are essentially conservative; Indian farmers are particularly hide-bound by traditions. Imposition of the least restriction on the improvident practices adopted by the peasants is "objected to, opposed and made a grievance of." But soil conservation is too serious a matter to be given up for the sake of appeasing our ignorant and hostile peasantry. It would be gross injustice to the succeeding generations, if the present generation failed to do what it could to conserve the fertility of the Indian soil. Hence, the need for treating the whole issue on national lines, that is, on a non-party basis. Here is a challenge to the constructive genius of all political parties. And it is to be hoped that the programme of soil conservation will not, as one of the officials of the Government feared, end in "soil conversation," and that agricultural administrators, public-spirited men and political leaders, will all combine to win the battle for the retention of soil fertility.

PLYWOOD INDUSTRY

FOR nearly six years now, the Indian plywood industry has enjoyed protection. Although opinions may vary on the question whether the industry has justified the protection given to it, there is no doubt that there has been considerable improvement—both qualitative and quantitative—in the products which the industry turns out. Because the industry is vitally connected with an important export industry, namely, tea, for which it provides the chests for packing tea, it is essential that the industry's progress should be watched with particular care and attention.

Since plywood products thus participate in the export trade of the country, the industry should be regarded as an export industry in effect. It would be unwise to condone inefficiency, even on patriotic grounds, for tea packed in chests of doubtful quality will fetch a lower price than it deserves. And tea is not now so happily placed in world markets as to dispense with the need for good packing material. Dr. B. V. Narayanaswamy Naidu, Member, Tariff Commission, was therefore, quite right in prefacing his address, at the opening of the enquiry, this week, into the question of continuance of protection to the plywood industry, by a reference to the "indissoluble link" between the plywood and tea industries.

The production figures, which Dr. Naidu cited in his opening address, reflect much credit on the industry. In 1947, there were only 43 factories, with an annual rated capacity of about 60 million square feet or 3.4 million sets of tea chests. In 1952, the number of approved factories was 67, with a capacity of 145 million sq. feet or 8.2 million sets of tea chests. Besides these factories, there is, of course, a large number of small factories which produce plywood products and tea chests. The actual production of the industry, which was estimated at 28.55 million sq. feet or 1.6 million sets in 1947, is now placed at over 78.87 million sq. feet or 4.4 million sets; the latter set of figures refers to January-November period of 1952. There is no reliable estimate of the demand for plywood products. Nor is such an estimate easy to make, considering that the demand for these products will vary with tea crop position and the state of the export trade in this commodity. In 1950, the Tariff Board estimated the demand at 5 to 5½ million chests of the standard size (19" x 19" x 24"). Other estimates vary as widely as from 3½ to 9 million chests. The capital invested in the industry, which employs some 6,000 workers, is placed at Rs. 3 crores.

A look at the estimated capacity, production and demand figures shows that the industry should be able to supply practically all the tea chests needed by the country. But this overall position conceals several important features. Not all the industry's products have come up to the correct standards of quality. Dr. Naidu, for instance, said: "The general opinion of the consumers is that the quality of indigenous plywood tea chests has definitely improved since 1950, though it is not yet comparable to that of the imported product." He revealed that some producers have taken steps to improve the quality of their products by establishing laboratories for testing both the raw materials and the finished products. There is, however, still considerable scope for improvement in the quality of the industry's products, considering that some tea producers complain that "many parcels have been found on arrival at the gardens to be unfit for use."

The problem of improving the quality has to be viewed from two angles—the raw material angle and the angle of the actual manufacturing process. The proper selection of timber, as Dr. Otto Kraemer, U.N. Plywood Expert, who is now in India, pointed out recently, will go a long way towards improving the quality of tea chests. Dr. Naidu revealed that arrangements had been made to get supplies of about 30,000 tons of plywood logs from the North Andaman Islands. This ought to ease the supply position, though the Government will do well to implement, as a long-term solution, Dr. Kraemer's suggestion, namely, reafforestation of softwood species. The Tariff Commission would be doing a service to the industry, if it urged upon the Government the need for providing for domestic production with suitable timber supplies. Because the cost of timber forms 50 per cent. of the cost of tea chests, it is necessary to see that the producers get their timber supplies at reasonable prices. The other important raw material is casein. Domestic production of this commodity is 800 tons, as against the internal demand of 2,000 tons. But imported casein is available at reasonable prices and as such the supply of this material is not a big problem.

From the "manufacturing" angle, the serious limiting factor to any improvement in the quality of plywood products is the presence of many small factories which cannot possibly introduce modern machinery. The tariff protection goes only to buttress their inefficiency. In this respect also, the Commission may usefully examine the practicability of Dr. Kraemer's suggestion that the "smaller units should combine themselves and buy the necessary machinery and use them jointly." In any case, it would be wrong to perpetuate inefficiency in an industry which is so intimately connected with such a vital export commodity as tea. It is better to have fewer well-equipped factories than to have a multitude of tiny ones, equipped with poor machinery, dotted all over the country. It is true that the industry has saved the country a sizable amount of foreign exchange which would otherwise have to be spent on imported tea chests; the value of imports was Rs. 132 lakhs in 1949-50, Rs. 51 lakhs in 1950-51; Rs. 30 lakhs during April-September, 1952. But that cannot be regarded as a vital consideration to give protection to this industry.

A feature of protection to the plywood industry is that it is doubly protected against foreign competition. Thus, importers are required to produce evidence to show that they have placed orders with approved producers of tea chests in India for certain proportion of their requirements. This condition gives the plywood industry an additional support through the assurance of a market for a part of its production, apart from the 31½ per cent. *ad valorem* protective duty which it enjoys at present. There are several difficulties in the way of the continuance of this method of double protection. Dr. Naidu referred to one such difficulty when he said that tea gardens feel that they are "unable to block their funds in advance purchase of indigenous tea chests." If this system must be continued at all, then either the Government or the plywood industry should be able to extend credit to the tea gardens. In the absence of such an arrangement, it is not reasonable to expect the tea producers, already hard hit by depression, to lend their support to the scheme of double protection for the plywood industry.

MR. N. G. AYYANGAR

THE death of Mr. N. Gopalaswami Ayyangar, Minister for Defence, removes from our midst an able and conscientious administrator and a far-sighted statesman at a time when the country can scarcely afford such a loss. Trained in the Provincial Civil Service, in Madras, Mr. Ayyangar was conversant with all aspects of administration. But it was his service in the Kashmir State as its Dewan and his services as one of the chief architects of the Indian Constitution and as a valued member of the Central Cabinet in different capacities, as Minister without portfolio, Minister for Railways and Minister for Defence, that enabled a wider public to appreciate his capacity for hard work and his sterling character. It is seldom that a person combines a mastery of detail with vision. And Mr. Ayyangar had both these qualities in abundance. He brought to bear on all that he undertook a disinterested attitude of mind, free from prejudices and inhibitions of any kind whatever, so that he was held in high esteem in the country.

BULLISH FERVOUR SUBSIDES

SCANDAL IN SILVER MARKET—BRITISH MISSION TO WASHINGTON

THURSDAY, 5 P.M.

THE strong bullish fervour witnessed in all the markets last week has subsided. The upward trend in prices of shares, bullion and commodities has not only been checked but actually reversed. In shares at least this may be attributed to the usual pre-budget hesitancy; but the fact that the bullish tendency in bullion and commodities also has not been sustained is an indication that speculators have become a timid lot. Evidently, with the experience of last March still fresh in their minds, they are chary of extending their commitments unduly. They seem to be content with small profits and anxious to book them as early as possible. They apparently realise that the offtake of goods, whether cotton or cloth, or bullion or oilseeds or sugar, is poor, while the supplies are relatively large as compared with a year or two ago and that it will, therefore, be difficult for them to rig up the markets continuously.

MARKET GOSSIP

* * * *

Another possible reason for the failure of the bullish fervour to persist is the realisation that the possible effects of President Eisenhower's action in regard to Formosa on the world political situation had been exaggerated. The stalemate in Korea had persisted so long that the slightest change in it had appeared to be a major development. On calm reflection, political observers feel that deneutralisation of Formosa by the U.S. is only a pin-prick to Communist China and that it may not, therefore, lead to any dangerous flare up in the Far East. Further, the Russians are realists so that they will not easily allow themselves to be provoked into any major action by such minor incidents. If the Berlin airlift did not turn out to be the mortal danger that everyone then thought it was, the removal of the American naval force from the Formosan waters, shrewed political observers contend, is unlikely to be regarded by Russia as a major threat to its security. After all, Formosa contains only an ill-equipped army of 350,000 men, which is a negligible force as compared with the strength of the Chinese Communists in the mainland. Perhaps, Mr. Eisenhower's move was designed to maintain the morale of the American people and nothing more. Be that as it may, in so far as the city markets are concerned, it has proved to be a damp squib. True, the bears have not yet mustered enough courage to come back to the ring and challenge the bulls. But the bulls have chosen to be on their guard.

* * * *

In the Share Market, the closing days of the week saw hurried liquidation by the bulls. It is reported that some of the prominent operators decided to square up their recent purchases. It is feared in certain circles that, contrary to the general belief, the Finance Minister, in his search for more revenue and in his anxiety to appease the Leftist elements in the country, might not hesitate to increase the direct taxes also. One reason for this fear is the report, which has now gained wide currency, that the minimum limit of exemption for purposes of estate duty will be no more than Rs. 75,000. Bazar rumour has it that that is the wish of the Prime Minister and that, even though there may be others in the Cabinet who feel that it is too low a limit, his desire will be respected. Whereas this part of the story—rather rumour—has been the subject of conversation in market circles for the past few days, another part of it, namely, that the rate of duty on lower slabs will not be excessive, has, surprisingly enough, not received much attention. According to one version, the rate of duty will vary between just one per cent. at the lowest slab to 50 per cent. on the highest slab, which is believed to be Rs. 10 lakhs and over. Anyway, these are only rumours and it is to be hoped that what the Finance Minister announces on the last day of this month will not be so bad as the rumour-mongers want us to believe. We have no doubt that Mr. Deshmukh is still a realist and that he knows that the burden of direct taxation in the country has reached a stage at which it is detrimental to individual initiative and productivity without which there can be no economic development even under a system of "mixed economy" which this country has chosen to follow.

* * * *

The week under review is a notable one for the Bombay bullion market. It is notable not because of the wide fluctuations in prices but because of the attempts that are being made to break the inviolability of contracts, a grave offence in the futures markets in other parts of the world but generously condoned in this country. This is, of course, not the first occasion when such an attempt is being made. It is well known that the bullion market in Bombay is a law unto itself. But at some time or other, this sorry state of affairs must be ended. It is stated the Board of Directors of the Bullion Association has, in response to a request from some members, "unanimously" declared that a state of emergency exists in the market. It will be interesting to know whether the representatives of the Government of Bombay and the Reserve Bank of India were also present at this Board meeting and, if so, whether they supported this decision. In any case, a general body meeting of the Association is due to take place to consider the Directors' decision. It will not be surprising if its verdict is in favour of the Board's decision. Then, the matter will rest with the Bombay Government. It is, perhaps, not too much to hope that the Government will carefully examine the position in consultation with the Governors of the Reserve Bank.

* * * *

The issue to be considered by them is whether the position of the market has deteriorated to such an extent as to treat it as a state of emergency. Declaration of emergency will lead to vesting in the Board of the Association special powers, including the power to fix maximum and minimum prices and to direct squaring up of the outstanding contracts at arbitrarily fixed rates. By exercising these powers in season and out of season, the authorities will be protecting those speculators whose actions constitute the basic cause of the market's present malady. In so far as we can see, there is no emergency in the market. There have been no less than four occasions between May and December, 1952 when the price of silver has fluctuated so widely as to put into operation the automatic margin system. For instance, between 8th May and 11th June, there was a quick drop of about Rs. 23 per 100 tolas of silver but no state of emergency was declared. Similarly, between 25th November and 6th December, silver declined by Rs. 8 per 100 tolas, but this too was not regarded as a state of emergency. On all the four occasions in the latter half of 1952, the movement was against the bulls. This time, the trend of prices has been against the bears though the range of fluctuations has been relatively modest. Is that the reason why the present position of the market is regarded as an emergency? It must, however, be noted that there has been no default by the bulls; they have paid the margins and taken delivery of the bars tendered against the contract. In these circumstances, the plea for declaration of a state of emergency is not convincing at all.

* * * *

The second stage of the battle for convertibility of sterling will begin at Washington in the first week of March, 1953 when Mr. Eden, the British Foreign Secretary, and Mr. Butler, Chancellor of the Exchequer, are scheduled to visit the American capital and have "exploratory discussions" with the U.S. administration on the ways and means of expanding world trade and achieving world-wide convertibility of currencies. Both Mr. Eden and Mr. Butler will be leaving London on 27th February. The discussions are expected to open on 4th March, 1953, and will presumably be concluded on 7th March, that is, in four days. It is stated that discussions will be mostly of a general nature and that there is no possibility of any specified proposal being discussed in detail. Consequently, the British delegation will be a small one and will not include any large number of technical experts. In any case, the forthcoming Anglo-American economic discussions are not expected to result in any concrete agreement between the two countries. It will at best provide an opportunity for the British Government to place its views and suggestions on the subject of balance of payments between the dollar and the sterling areas before the new administration in the U.S. and to know the latter's mind on it. Before taking any firm decisions, Britain has promised to consult the West European countries and then the Commonwealth countries. As no meeting with the latter is scheduled to take place before the Coronation in June, it would appear that no final scheme for achieving convertibility of currencies is likely to emerge before the next autumn.

* * * *

There are some who wonder whether the forthcoming Anglo-American talks are well-timed, because they feel that the new administration has scarcely had sufficient time to grapple with the economic problems and formulate a definite long-term policy in regard to the issues facing the "free nations" in the old hemisphere. It is true that President Eisenhower's State of the Union message makes a reference to these issues but the reference is considered as no more than mere broad statements. Moreover, there is at present a clevage of opinion between the two countries in regard to the policy to be followed for dealing with the political situation in Asia and the Far East and, as such, the present time is hardly regarded as propitious for a discussion on economic problems for the solution of which substantial assistance from the U.S. is necessary. There are, however, others who feel that the forthcoming meeting is well-timed for two main reasons. In the first place, sterling is now in a much stronger position than in the past several months and the trend of dollar and gold reserves is upward. It has been shown that, during the second half of 1952, Britain has been able to attain balance with the U.S. on payments account without any external aid. These developments place the British delegation in a psychologically strong position to bargain with the U.S. Secondly, it is desirable, so it is argued by this school of thought, to let the U.S. administration know well in advance what is expected of it by the Commonwealth and West European countries to promote world trade and thus to try to influence its economic policy even while the Americans are still making up their minds.

* * * *

In the meanwhile, the O.E.E.C. (Continental) countries appear to be nursing a grievance against Britain. They feel that Britain is trying to keep aloof as far as possible in the arrangements for defence and for economic integration of Europe. The British Government has, of course, assured these countries maximum co-operation and assistance in all these matters. It has also told them that it has no desire to take any unilateral action in regard to the future of sterling; indeed, Mr. Butler has repeatedly stated that it would not be prudent to attempt at convertibility of the pound sterling without knowing in advance as to what the other countries with which Britain has close trade relationship would do. Nevertheless, the Continental countries' grouse is that Britain is not consulting them on the Commonwealth Plan for sterling before presenting it to the U.S. and that it is doing so, because it wants to get additional favours from the U.S. for itself and the Commonwealth to the exclusion of them (the Continental countries). The one country which has strong misgivings about Britain's action is France. This is, perhaps, the chief reason why Mr. Eden and Mr. Butler propose to have talks with the French Prime Minister before they leave for Washington. But the truth of the Continental countries' grouse against Britain seems to lie in the fact that they are not very keen about convertibility of their currencies, because their present economic position, especially of France is not as good as that of Britain. Some evidence of this attitude is provided by the insistence of the O.E.E.C. countries that Britain should relax its import restrictions, now that its foreign exchange reserves have improved, instead of experimenting in convertibility. They have been trying to impress upon Britain for some time now that "it is more important for Europe to earn sterling than to allow it to spend sterling where it wants."

* * * *

Was any cut-and-dried plan evolved at all by the Commonwealth Prime Ministers when they met in London in November last for establishing freer trade and currencies? Mr. Butler emphatically denied, in the course of his speech at the House of Commons debate on the Commonwealth Economic Conference last week, that any such plan existed. "Even if it did," he added, "we could not put it into effect, without the co-operation of other countries, particularly in Europe. This co-operation, we certainly intend to seek." In fact, Mr. Butler's speech did not contain anything new; it was more or less an elucidation of the lengthy joint communique issued by the Commonwealth Prime Ministers soon after their conference. But it was a vigorous exposition of the points emphasised in this communique. He reiterated Britain's determination to build up its economic strength and to set an example for others by taking appropriate measures to curb inflation and so obtain a stable balance of payments. He expressed satisfaction at the progress made by Britain so far in this direction and was confident that the sterling area could look forward to a period of stability. Nevertheless, he warned that the position of Britain (perhaps, that of most of the other Commonwealth countries also, in our view) was not so secure that it could afford to go in for any significant relaxations or afford to sit back and relax in any degree whatever. Explaining this point further he said: "We have very large overseas commitments—there is repayment of debt, release of sterling balances already agreed upon and often required in relation to development projects, investments abroad by our export industries so that they can expand in foreign markets, and so on. We took the realistic view that our external capital commitments have to be paid for in exactly the same way as our imports. So to enable us to do so, and continue to build up our reserves, we need a surplus on the current external account. It is a formidable task and the more the country realises this the better. It is a formidable task, requiring from British industry competitive prices and delivery dates. Without it, we shall not achieve the great expansion of exports which we must have. This task will be much more difficult, unless we can create the right conditions in the world for our exports—conditions of expanding trade."

* * * *

Mr. Butler then defined the kind of international action that will be necessary to create conditions suitable for expanding trade and convertibility of currencies. And what he said in this respect did not add anything new to his earlier observations on this subject. It is all summed up in his now familiar phrase, "trade—not aid." It is not, therefore, necessary to summarise what exactly he said. Suffice it to say that Mr. Butler seemed to be satisfied with President Eisenhower's reference, in his message to the Congress, to the part the creditor nations could play in freeing world trade from the present restrictions. Does this mean that the U.S. President sees eye to eye with Mr. Butler in the latter's approach to world economic problems and that the forthcoming British mission to Washington will be a success? It is hazardous to say "yes" with confidence. It is true that Mr. Eisenhower is in favour of revising the U.S. customs regulations, extending the reciprocal trade agreements, increasing the flow of investments from the dollar area to the rest of the world, and encouraging imports, especially of raw materials, from other parts of the world. It is also true that there is no difference whatever between him and Mr. Butler as regards the basic objective, namely, expanding world trade. Nevertheless, the doubt arises because one does not know how he would react to specific proposals that may be put forward to attain these objectives and to what extent he would be able to carry his party with him in all these matters. One thing, however, looks almost certain, if his remarks on fiscal policy have any meaning. And that is that the present American administration will not accept any suggestion which is likely to have even a mild inflationary effect on the U.S. economy or which will upset the stability of the U.S. dollar. It is needless to add that the demand for an increase in the dollar price of gold falls within this category.

* * * *

Mr. Butler, however, disclosed that Britain would do its best to increase investment in Commonwealth countries. He announced two

(Continued on page 275)

EQUITIES RECEDE ON BUDGET FEARS

ACTIVITY DWINDLES

(From Our Own Correspondents)

BOMBAY, *12th February*

THE flutter on the Stock Exchange witnessed last week proved to be a tame and short-lived affair. For sustained support was not forthcoming this week, even though there was no change in the international situation which had provided the main prop of the market a week ago. Activity, therefore, dwindled during the week under review and prices reacted. Although there was no marked recession in prices, they provided an anti-climax to what appeared at one time to develop into a boom.

The U.S. President's announcement to withdraw the Seventh Fleet from Formosan waters did not precipitate any crisis, but it indicated the possibilities of a flare up in Korea. Rumours of a possible U.S. naval blockade of China, the Chinese Prime Minister's pronouncement that, if the U.S. did not want to end war, China was prepared to fight to the last, and reports of exchange of fire between Chinese Communist patrol boats and Kuomintang sea guerillas near Macao, were all factors which could sustain the bullish fervour in a market which was easily vulnerable to mild provocations. But these factors seemed to have worried operators in Dalal Street not so much as fears about the Budget outlook. The operators were particularly concerned about the Estate Duty which would be levied if the Bill was passed at the forthcoming Budget session. Besides, the weakness of other commodity markets also affected their sentiment. Fresh buyers were, therefore, scared away in the face of selling by a prominent bull operator. Values, as a consequence, receded and finished at the lowest levels of the week in most counters.

Feeble rallies were noted in the steel section early in the week owing to support from Calcutta for Indian Irons, but these failed to hold their own in the face of general desire to square up positions. Tata Deferreds opened confidently at Rs. 1,735 and touched Rs. 1,742-8 on renewed buying support and bear covering, but this recovery was short-lived and the scrips receded to Rs. 1,721-4 on Saturday. Monday this week saw them slightly hardening to Rs. 1,738-12, but even this could not be sustained, as on speculative selling by prominent operators on apprehensions about the Budget, the scrips dropped to Rs. 1,705 at the close, thereby losing more than what was gained earlier. Investment enquiries for Tata Ordinaries took the shares at one time during the week to Rs. 308, from last week's closing of Rs. 303-8, only to drift lower to Rs. 302 at the close. After several weeks, Indian Irons crossed the Rs. 25-mark to touch Rs. 25-3¼ early in the week. Towards the close, however, they shed part of their gains and closed at Rs. 24-6¼.

The strong revival and brisk advance in the textile section noted sast week received a setback this week, despite the persistent encouraging news from the cloth market. Bombay Dyeings, after an initial gain from Rs. 369-6 to Rs. 371-4, finished lower at Rs. 361-14 with a loss of Rs. 7-8 over the week. Kohinoors dropped Rs. 3 on balance to Rs. 280. Central Indias shed Rs. 2-8 to Rs. 145 Century Rs. 3-12 to Rs. 248-8, Finlays Rs. 2 to Rs. 290 and Gokaks Rs. 4 to Rs. 200-8. Despite the lower dividends announced last week, New Greats were better by Re. 1-8 at Rs. 155 and New City maintained Rs. 175. Simplex, on the other hand, registered a loss of Re. 1-8 at Rs. 174-8 and Svadeshis as much as Rs. 5 at Rs. 234. Tatas were taken down from Rs. 45-12 to Rs. 44-8. India United Ordinaries shed As. 3 to Rs. 8-8 and Deferreds a fraction to Re. 1-8½.

Imperial Bank shares continued to be in favour in the banking section, although the pace of advance was slower than in the previous week. The Fully Paid shares advanced by Rs. 32-8 to stand at Rs. 1,845 and the Contributories by Rs. 3-12 to Rs. 457. Centrals (Old) gained a rupee to Rs. 65-8, while the New shares lost a fraction to Rs. 67-8. Barodas receded by Rs. 2 to Rs. 114 and Indias by Re. 1-8 to Rs. 153-8. United Commercials responded well to scattered enquiries with a rise of Re. 1 to Rs. 35-4.

Barring a further small gain in Orientals and New Indias, insurance shares ruled dull, but the undertone was steady and the volume of business was small. Orientals hardened by Rs. 10 to Rs. 6,010 and New Indias by As. 4 to Rs. 40-12. Jupiters were quiet at Rs. 7. Empire of Indias failed to enthuse operators despite the announcement of a dividend of Rs. 20 per cent. for the year ended 31st December, 1952, after a break of two years. The shares were stagnant at Rs. 403-12.

Select scrips in the public utility section continued to attract investment enquiries. Andhra Valleys rose by Rs. 8-12 to Rs. 1,405 and Tata Powers by Rs. 6-4 to Rs. 1,497-8. Ahmedabad Electrics (Old), after receding from Rs. 114-11 to Rs. 113-12, recovered to Rs. 114-1, but the new scrips were quiet at Rs. 111-14. Surat Electrics were done As. 10 lower at Rs. 118-12 and Tata Hydros softened to Rs. 148 from Rs. 148-4.

In the miscellaneous industrial section, Belapurs were conspicuous with a rise of Rs. 4-8 to Rs. 222-8, in the absence of sellers and short-covering. Walchandnagars staged a spurt from Rs. 145 to Rs. 156-4 on expectation of higher dividend. Associated Cements were a little quiet at Rs. 168-4, as against Rs. 169-8. Bombay Burmahs did not evoke any interest and, on offer, they declined by Rs. 6-4 to Rs. 363-12. B.I.Cs hardened by As. 3 to Rs. 9-11 due to proximity of dividend. Killick Industries were lower by Re. 1-4 at Rs. 142. National Rayons induced some support on reports of higher prices of art silk yarn and the shares put on Re. 1 to Rs. 70. Tata Oils gained As. 8 to Rs. 33-8, but Tata Chemicals shed As. 5 to Rs. 9. Wimcos improved by Re. 1-14 to Rs. 221-14.

In the transport group, Air-Indias changed hands lower at Rs. 83 as against Rs. 85 and Air-India Internationals at Rs. 98-8, as against Rs. 100. Scindias, after improving from Rs. 14-14 to Rs. 15-0½, drifted lower to Rs. 14-10½. Bombay Steams were held at Rs. 32-8. Premier Automobiles were firm at Rs. 46-8 on reports that the current year's working of the Company would show an improvement.

In the mining and engineering group, B.B. Petrols were a fraction lower at Re. 1-3-6, while Indian Coppers were a shade better at Rs. 3-4. Alcocks put on Rs. 2-8 to Rs. 300, but Shivrajpurs were held at Rs. 54-8. Tata Locomotives were in demand at Rs. 92. Premier Constructions were dull at Rs. 84-4.

Calcutta Stock Exchange

(From Our Own Correspondent)

CALCUTTA, *11th February*

The Calcutta Stock Exchange experienced cheerful trading during the week under review, and, with enquiries broadening, impressive rises were recorded in almost all sections. The continuance of war fears coupled with reports that Chinese Nationalist troops had landed at Amoy in Southern China and that America was considering naval blockade of China was adequate incentive to attract more and more outside buying support to the market. Even then trading was cautious on pre-budget uncertainties. Consequently, the price increases were slow, and each stage of the upward movement carried with it a certain amount of stabilisation. The undertone was steady to firm despite profit-taking during the last two days.

The report that India's cloth exports were increasing and that if the rate of exports was maintained, the target of 1,000 million yards could be reached this year was a factor which helped operators to take a more hopeful view of the future, whether war fears materialised or not. The decision of the Assam Government to revise the Minimum Wages Act in order to meet the conflicting views of the tea industry and plantation labour about wages, bonus, food concession, dividends, etc., was cheerfully noted, while the announcement of the Government of India's decision to enquire into the cost and trade structure of the tea industry created disappointment in trade circles as it would mean delay in giving assistance to the industry which it badly needs.

Rise in the prices of jute goods was not impressive, but in sympathy with the general trend, jute shares also moved up. The maintenance of the improvement would, however, depend on an increase in the foreign demand for jute goods, and operators are anxiously awaiting the Budget speech of the Finance Minister in the hope that it would contain an announcement revising the export duties. Shares of mills having more hessian looms than sacking looms would appear to have received better attention, since mills could not be induced to sell sacking at the existing rates in view of their very uneconomic nature.

Textile shares were steady, but transactions were limited to the more popular counters. Thus Cawnpores were taken at Rs. 8-4, while Kesorams, after being higher at Rs. 17-14, eased to Rs. 17-10. Moderate attention was shown to Elgin Mills at Rs. 17-1, and Muir Mills maintained Rs. 215.

Transactions in the jute section were put through on a wider range of shares, and although the week's gains were substantial, they were partially erased on profit-taking during the last two days. From Rs. 19-7, Agarparas improved to Rs. 19-12 and after being lower at Rs. 19-8 closed better at Rs. 19-14. Deltas were, at one time, as high as Rs. 235, but closed lower at Rs. 233. Speculative Howrahs were pushed to Rs. 24 from Rs. 23-4, while Barnagores on balance lost one point to Rs. 159. Champadanys were better at Rs. 165-8, Indias at Rs. 129, and Budge Budges at Rs. 188.

Coals were wanted at increasing rates, and Bengals touched Rs. 529 from Rs. 522. Burrakurs maintained interest at the higher rate of Rs. 10-10 and Dhemo Mains advanced to Rs. 10-2 from Rs. 9-10. New Beerbhooms were an impressive feature for the rise to Rs. 21-8 from Rs. 19-8.

In the engineering section, greater attention to Indian Irons saw the rate rise steadily to Rs. 25-5 from Rs. 24-2, but owing to profit-taking, yesterday's closure was at Rs. 24-13. Jessops were traded at Rs. 22-7, Braithwaites receiving attention at Rs. 10-15 as against Rs. 10-12 earlier. Hooghly Dockings came to business at Rs. 68. Indian Galvanizings spurted to Rs. 14-6 from Rs. 13-8, and the new scrips to Rs. 14-6 from Rs. 13-14 following good buying. Texmacos invited attention at Rs. 4-6.

In the miscellaneous section, Sone Valleys were interesting counters, and rose to Rs. 6-13 from Rs. 6-8. Digwarrah Rubbers were counters of unusual activity and at Rs. 13-12 accounted for a rise by more than three points. Airways India were attracted to rise to Rs. 14-14 from Rs. 12-8 but the improvement could not be maintained in its entirety as the closure was at Rs. 14-8. B.I. Corporations were done at Rs. 9-12, and Rallis showed strength at Rs. 70. India Steamships were steady at Rs. 6-14, and Titaghur Papers advanced to Rs. 34-12 from Rs. 34-8. Metal Boxes changed hands at Rs. 20-5, Indian Coppers at Rs. 3-5, and Indian National Airways at Rs. 3-14.

Madras Stock Exchange

MADRAS, *10th February*

The Madras Stock Exchange remained closed to-day, as a mark of respect to Mr. N. Gopalaswamy Ayyangar, Union Defence Minister, who passed away this morning. During the remaining sessions of the week, textile scrips came in for selective support, on encouraging export enquiries for cloth. Among planting shares, teas improved, on reported demand for the leaf from the U.K., while coffees and rubbers were slightly easy, in the absence of encouraging developments. Miscellaneous scrips were dull, while banks came in for some enquiry. As a result, the volume of business done was small and there was a sprinkling of losses as well as gains over the week.

Indian textiles seem to be slowly gaining ground in the overseas markets. This induced some support for textile shares and small gains were, as a result, noted in some selective scrips. Thus, Dhanalakshmis improved from Rs. 178 to Rs. 181. Radhakrishnas rallied Re. 1 to Rs. 135. Metturs were done at Rs. 182, as against Rs. 181. Cambodias and Travancore Rayons were fractionally better at Rs. 10-4 and Rs. 3-6, respectively. Maduras changed hands As. 12 higher at Rs. 34-8 *cum-div.* Balasubrahmania 'B's, however, declined by Rs.8 to Rs. 49 and Pankajas by Rs. 3 to Rs. 63. Rajalakshmis were marked down by Re. 1 to Rs. 72.

Teas were steady. Favourable advices from London regarding tea sales slightly hardened the sentiment of operators. Haileyburias shot up by As. 10 to Rs. 13 and Twyfords by As. 8 to Rs. 11. T.R. and Ts. (tea and rubber) were higher by As. 3 at Rs. 6-10. Neelamalais were better at Rs. 3-5. Devasholas were done at Rs. 14, as against Rs. 15 *cum-div.*

Rubbers lacked demand, on reported accumulation of rubber stocks. Malankaras declined by As. 8 to Rs. 91-8. Be Bes were lower by an anna and a half at Re. 1-14½ and Cochin Malabars by an anna at Rs. 6-2. But Rajagiris gained As. 3 to Rs. 9-12 and Pullangodes an anna to Rs. 2-6¼.

Coffee scrips fared no better. Nil. Neergundis and Puthuthotams were marked down by an anna each to Rs. 3-5 and Rs. 4-11, respectively. Coffee Lands were fractionally lower at Rs. 9-4. Shevroys, however, improved by an anna to Re. 1-5.

Miscellaneous scrips were colourless. Mettur Chemicals and Mysore Chemicals and Fertilisers registered a loss of an anna each to Rs. 4-6 and Rs. 7-15 respectively. Spencers were done at Rs. 15 *cum-div.* as against Rs. 15-2. The Company has declared a final dividend of 10 per cent. for the year ended 30th June, 1952, making a total of 15 per cent. for the year, as against 10 per cent. paid for the previous year. Mysore Tobacco moved up by As. 2 to Rs. 9-5.

Barring a few scrips, banks were unchanged. On rumours of issue of bonus shares, Imperial Bank Rs. 500 Paid-ups shot up by Rs. 50 to Rs. 1,780 and Rs. 125 Paid-ups by Rs. 8-12 to Rs. 425. Bank of Mysores were done at Rs. 289 *cum-div.*, as against Rs. 290. The Bank has maintained the dividend of 12 per cent. and a bonus of 4 per cent. per annum for the year ended 31st December, 1952.

NEWS IN BRIEF

THE Government of India has decided to drop the proposed project for setting up a joint Japanese-Indian iron and steel plant.

The production of coal in India during 1952 reached an all-time record of 36.2 million tons, as against an output of 34.3 million tons in 1951.

The total area irrigated in India from all sources is a little less than 50 million acres or roughly 18 per cent. of the area cultivated in a year.

Indian post offices during 1951-52 handled monetary transactions, such as money orders, National Savings Certificates, etc., amounting to over Rs. 765 crores.

The Government of India has released a further quantity of 106,000 tons of sugar from the factories out of the current (1952-53) season's production for sale in the open market. This brings the total quantity so far released to 141,000 tons.

The pilot Project for mining lignite in South Arcot District is expected to be put into operation next week. The machinery required for this Rs. 60-lakh project, lent by the Government of India will commence working as the necessary personnel is now available.

The road transport service operated by the Bombay State Road Transport Corporation has been declared by the Government of Bombay as a public utility service for purposes of the Industrial Disputes Act, 1947, for a further period of six months ending 5th August, 1953.

Indo-Ceylon trade reached a new record figure of Rs. 24.91 crores in 1952, an increase of 5.6 per cent. over 1951. Exports from India to Ceylon were of the value of Rs. 21.18 crores, representing a rise of Rs. 2.4 crores or 12.8 per cent. over 1951. Imports from Ceylon into India, however, declined from Rs. 4.81 crores to Rs. 3.73 crores.

Well over 1,326 lakh c.ft. of earthwork excavation has been done at Bhakra Project, Rajasthan, upto the month of January, 1953. About 14,000 workers were pressed into service to carry out the excavation work, bringing relief to the scarcity-stricken area of Bhakra and Hanumangarh in the Bikaner Division of Rajasthan.

The Government of India proposes to set up an expert committee to review the policy and working of the Central Purchase Organisation, with a view to improving its efficiency. The Committee will enquire into the execution of the Government's stores purchase policy in relation to the assistance given to small-scale and cottage industries.

A consignment of compressed carbon black was received in Calcutta from the U.S. for use in the Dunlop factory. Carbon black consignments were hitherto packed in 50 lbs. paper or fabric bags, but shippers in the U.S. are now compressing this material and putting it into cardboard boxes. This new method of packing minimises the risk of damage in handling and saves on freight costs.

The Government of the Federation of Malaya has decided to settle Indian labour in Malaya on the land. A beginning will be made by starting immediately two pilot schemes, under which State and Estate lands will be made available to Indian labour. This decision of the Government of Malaya has been welcomed by the Government of India and is in accordance with the policy announced by General Templer, the British High Commissioner in Malaya, in November last year.

The Government of India has made a grant of Rs. 9.45 lakhs to the Orissa Textile Mills, Ltd., Chewdwar, Cuttack District, under the subsidised Industrial Housing Scheme, 1952-53, for building 560 single-storey one-room tenements. The cost of construction, accepted for sanctioning the subsidy and loan, at Rs. 2,700 per tenement, is Rs. 15,12.000. The subsidy, calculated at 25 per cent. of the cost, is Rs. 3,78,000 and the loan, at 37½ per cent., is Rs. 5,67,000. The mill has to execute an agreement and submit a monthly progress report.

The Government of Assam has relieved the tea gardens in Assam from the statutory obligation of supplying foodgrains at concessional rates to labourers with effect from the 10th inst. It has, on the other hand, increased the dearness allowance payable to labourers by one anna to two annas per head per day. The management will, however, supply foodstuff at controlled rates. No dividend will be declared and no commission will be paid by the tea companies owning these estates so long as the above rates remain in force.

The Advisory Committee on minimum wages appointed by the West Bengal Government has, it is stated, recommended that an increase of As. 2½ in the daily wages of labourers in Terai and Dooars tea gardens might be granted, but the existing food subsidy should be withdrawn. If the recommendations are approved by the Government, the daily wage rate will be raised from Re. 1-3 to Re. 1-5½ per labourer. But there will be a saving in the cost of foodgrains supplied to workers, as the latter will now be charged Rs. 15 per maund, instead of Rs. 5 per maund of foodgrains.

In view of the numerous complaints received in regard to difficult travel conditions and inadequate amenities for passengers on the ex-Assam Railway portion of the North-Eastern Railway, the Government of India has decided to appoint a committee of senior railway officers to study closely the travel conditions and passenger amenities on the ex-Assam Railway portion of the North-Eastern Railway, and to make recommendations with a view to bringing those up to the standard on other metre-gauge systems. The Committee will begin to function shortly and it is expected to submit its report in about a month's time.

The personnel and labour officers of the Tata group of concerns throughout India met at a three-day Conference in Bombay this week under the chairmanship of Mr. M. R. Masani. The Conference, which is the first of its kind, discussed a wide range of subjects, such as joint consultation, works committees, welfare, labour legislation, training and industrial health. The Conference invited, for an exchange of viewpoints, trade union spokesmen, belonging to the I.N.T.U.C. and the *Hind Mazdoor Sabha*, on the one hand, and managers of the local Tata factories, on the other.

The Government of India has sanctioned a grant of Rs. 91,080 to the Orissa Cement Ltd. for building 64 double-storeyed one-room tenements near their factory at Rajgangapur in Orissa State. The grant is made under the subsidised Industrial Housing Scheme, 1952-53. The total cost of construction, excluding the price of land, accepted for making the grant, is Rs. 1,45,728 at the rate of Rs. 2,277 per tenement. The subsidy, calculated at 25 per cent. of this figure, is Rs. 36,432 and the loan, at 37½ per cent., is Rs. 54,648. The grant is subject to the execution of an agreement by the Company. A monthly progress report has to be submitted by the Company to the Government.

The Eighth Annual Meeting and Thirteenth Ordinary Meeting of the Indian Central Tobacco Committee will be held in Madras on 19th inst., under the chairmanship of Mr. K. R. Damle, I.C.S., Additional Secretary, Central Ministry of Food and Agriculture. The meeting will consider progress reports and the programme of work of its various research, development and marketing schemes, and also several important proposals concerning tobacco cultivation and trade. A special meeting will also be held on the same day to amend the rules of the Committee to provide for the election of consumers' representatives by both the Houses of Parliament. Representatives of the Central and State Governments, besides those of growers and traders, will attend the meeting.

* * * *

From Abroad

The U.S. Department of Commerce has announced the relaxation of export controls on more than 50 commodities. This action to relax controls has been taken in line with the policy of easing controls as supplies improve.

Wage controls in the U.S. were withdrawn with effect from the 6th inst. under an order issued by President Eisenhower. The President also issued a series of orders under which all price controls will be removed in the coming weeks.

West Germany's industrial production in 1952 increased by 42.5 per cent. over the 1936 level and 7 per cent. over the 1951 level. Some industries more than doubled their pre-war output, but others did not reach even the pre-war level.

The International Wheat Council has announced that importing nations may buy their full quotas this year under the International Wheat Agreement, as Australia is now able to supply 85 million bushels of wheat for the current crop year.

The U.S. Government has revoked all controls over the use, sale, shipment and accumulation of tin, as the supply of tin contracted for and otherwise obtainable in world markets for use in the U.S. now is sufficient to balance against demands, both Government and civilian.

The world output of rubber for the first 11 months of 1952 amounted to 1,602,500 tons, which represented a decline of 7.4 per cent. from the 1951 production rate. The U.S. imported during the 11-month period of 1952, 727,849 tons, as compared with 689,235 tons in 1951.

World food supplies are now at record high levels, according to the U.S. Agricultural Department. Supplies are, nevertheless, not large enough to feed the world's population on the same scale as before World War II, because the population has increased by 13 per cent., as compared with a rise of 9 per cent. in food production.

World production of centrifugal cane and beet sugar during 1952-53 is expected to amount to 36.70 million short tons, or a decline of 4 per cent. from the record output of 38.17 million tons in 1951-52. The production of non-centrifugal sugar is expected to aggregate 6.66 million short tons in 1952-53, as compared with 6.60 million tons in 1951-52.

The Burmese Government opened this week talks for the allocation and price settlement of its exportable rice for the first half of this year. It is expected to announce its allocations to Japan, Indonesia, India, Okinawa, Ceylon and European countries. The latest estimate of Burmese rice crop shows that there will be an exportable surplus of 1.7 million tons.

Aerial spraying by countries of the Middle East and Asia for a period of five years more will virtually eliminate the locust pest in those areas, according to entomologists in Washington. The campaign against locust pest was initiated by Iran in 1951 with the co-operation of the U.S. Government and was extended last year to all the Middle East countries, India and Pakistan.

(Continued in next column)

PERSONAL

COLONEL Sir Alfred L. Mowat, Bart., Chairman, the English Card Clothing Co., Ltd., is on a visit to Bombay.

Mr. C. Ramasubban has been appointed an *Ad Hoc* Member of the Tariff Commission. He is expected to assume charge on Monday, the 16th inst.

Mr. Chimanlal B. Parekh of Messrs. C. Parekh & Co., Bombay, has been elected Vice-President of the Indian Merchants' Chamber, Bombay, for the year 1953.

Mr. P. J. Rodgers, Chief Engineer, Overseas Communications Service, has returned to India after a study tour of the U.K. and the U.S.A. on a U.N. fellowship.

Mr. Paul G. Hoffman, President of the Ford Foundation, has resigned his post to return to the automobile firm, Studebaker Corporation, as Chairman of its Board.

Mr. John D. Rockefeller III, Chairman of the Rockefeller Foundation, has commenced a two-month tour of Japan and South Asia to survey economic and social conditions.

Sir Douglas Copland, the noted economist of Australia, lately Vice-Chancellor of the National University, and now Australian High Commissioner-designate to Canada, will arrive in Bombay on Monday, the 16th inst. at 6 p.m.

Mr. H. Rowan Gaither, Jr., a lawyer of San Francisco has been appointed acting President of the Ford Foundation. He will direct the administration work of the Foundation until the trustees elect a successor to Mr. P. G. Hoffman.

Mr. C. C. Desai, Secretary, Works, Housing and Supply Ministry, Government of India, whose appointment as High Commissioner for India in Ceylon was officially announced last week, is expected to assume charge at Colombo early in March.

(Concluded from previous column)

The Factory Department of Britain's Ministry of Labour and National Service will organise a four-month course for four factory inspectors from India, who will arrive in the U.K. on 20th February, under the Technical Co-operation Scheme of the Colombo Plan. The course will cover factory inspection, administration of the Factories Act, a study of the theory and practice of safety training, etc.

Justice William O'Douglas of the Supreme Court of the U.S. has sent to the Prime Minister of India the $1,000 Sidney Hillman Award, as a gift to help advancement of labour in India. The Award, made annually by the Congress of Industrial Organisations of Clothing Workers for outstanding public service, was presented to Mr. Douglas in December last by the Sidney Hillman Foundation.

The Government of Ceylon intends to bring about gradually the domination of Ceylon's foreign trade by Ceylonese. Announcing this, at a party meeting last week-end, the Island's Minister for Trade and Commerce, complained that foreign-owned banks—mainly British—were inclined to assist only foreign big business in Ceylon. As an answer to this, he suggested that Ceylonese should withdraw their investments from foreign-owned banks and reinvest them in Ceylonese-owned banks. He, however, added that it was not the Government's intention to wipe out foreign-owned big business in Ceylon.

"COMMERCE" 1928

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, *11th February*

Stores Purchase

The system of purchase of stores by rupee tenders in India has, for the past few years, been persistently urged upon the Government of India by the Central Legislature. It is, therefore, of interest to learn from New Delhi that an important stage in the development of the rupee purchase policy has been reached by the Government of India's decision to establish, in India, a branch of the firm of consulting engineers to the High Commissioner. This decision has obtained the approval of the Standing Finance Committee of the Legislative Assembly, which has sanctioned nearly one lakh of rupees as an annual expenditure for a period of three years. It was explained to the Committee that considerable progress has been made in the direction of local purchase by the Indian Stores Department, which can be used by purchasing organisations in respect of many classes of goods, at least those commonly obtainable in India. Market difficulties, however, still exist in respect of large purchases of goods of foreign manufacture, such as plant and machinery for railway administrations. The Indian Stores Department and other organisations in India through which local stores purchases are affected are lacking in facilities for expert advice and do not possess the organisation which will enable the railways to ascertain the status and capacity of tendering firms in England and in Europe. Standardisation of railway equipment and material, which is now an imperative necessity, and for which the Indian railway system has greater facilities than any in the world, can only reach its greatest development, if it is carried out.

This Week's Survey

LABOUR MINISTERS' CONFERENCE

IT is doubtful whether the State Labour Ministers' Conference held at New Delhi last week, under the chairmanship of Mr. V. V. Giri, Union Labour Minister, could be pronounced an unqualified success, if the Conference was convened, as it ostensibly was, to discuss the "Giri approach" to labour problems. In essence, this approach lays emphasis on voluntary settlement of labour disputes in non-public utility concerns. Although it also envisages the reference of particular disputes to a tribunal by State Governments, it restricts the exercise of this right to an emergency and also makes prior consultation with the Central Government necessary before a reference is made. It is not clear whether these basic principles of this approach were accepted in full. It is true that the State Governments are reported to have agreed that adjudication should be the exception rather than the rule in non-public utility services. But report has it that they agreed to it only on the condition that the "discretion of the State Governments in the matter remained unfettered." This qualifying clause seems to take away the whole essence of the "Giri approach," for, if the State Governments cannot bring themselves to surrender their discretion in the matter of adjudication to the Centre, it is only reasonable to expect that there will be confusion in the States' labour policies, through some States following the "Giri approach," and some others, not doing so. Already, there is enough confusion arising from the lack of uniformity in labour awards by tribunals. The position would be rendered worse through the operation of another disintegrating influence, namely, the lack of uniformity in the observance of the "Giri approach" to labour questions. Surely, this is not what Mr. Giri could have bargained for. We shall, of course, be happy to be proved incorrect in our reading of the Conference's decisions. But then, all available evidence points to the conclusion that the State Governments are unwilling to give up their powers of control over both wings of industry, which the acceptance of the Giri ideology would imply.

There was, however, general agreement at the Conference on the various stages of settlement such as service of notice of change, collective bargaining with or without assistance of a conciliation officer, conciliation through a Conciliation Board and voluntary arbitration or compulsory adjudication. Some State Governments considered conciliation boards unnecessary and ineffective, while some others wanted labour courts for settling minor disputes.

The question of settlement of disputes in public utility concerns such as transport and electrical undertakings, is treated on a different footing because any dispute in this sector affects community interests more directly. Small wonder, therefore, that the Conference decided that compulsory adjudication should be resorted to in the settlement of disputes in these concerns. Perhaps, the success of the "Giri approach" in non-public utility concerns might ultimately pave the way for its adoption even in public utility concerns.

The recognition by the State Ministers that there should be a Central Act, with power for the State Governments to enact such supplementary legislation as were required to suit local conditions, is a step in the right direction. For Central legislation will provide a uniform standard of code for the whole of India. State Governments also agreed to a gradual repeal or adjustment of the existing laws in their States. As regards the scope of legislation, the general consensus of opinion was that the law should not apply to agriculture. This is a welcome decision for the labour problems of agriculture are different from those of industry as, for instance, the seasonal character of employment and the difficulties in the way of enforcement of legislation for the unemployed agricultural labour. Moreover, the relationship between employers and employees in agriculture is not so serious a problem as in industries. It is, however, not clear why small industrial undertakings are also sought to be exempted from the scope of legislation. Perhaps, one reason is that there are difficulties in the administration of the law in respect of smaller establishments. It was felt that commercial establishments like banks, insurance companies, etc., should be covered by the proposed labour legislation and that banks should be treated as public utility concerns. The decision to declare banks as public utility concerns is a sound one, but not the one to include them in an omnibus labour legislation. Banks are credit institutions and as such are not strictly comparable with ordinary industrial and commercial undertakings. It is to be hoped that at least a different set of sections will be introduced in the proposed legislation which will govern the workers in banks, taking note of the distinguishing features of these institutions.

There was a large volume of opinion in favour of prohibition of strikes and lockouts during the period of notice of change, conciliation, arbitration and adjudication, as well as during the operation of collective agreements and awards. Some Governments were of the view that strikes and lockouts should be banned not only in public utility undertakings but in others as well, during procedural stages.

So far as change in the conditions of serivce, discharges and dismissals during pendency of proceedings, the principle of restricting the protection only to specified categories of trade union officers was accepted. As otherwise, it is clear, it would help unscrupulous trade union leaders to take advantage of the protection granted by the law and to foment more trouble. It was also decided that the employer should be competent to keep a worker off work temporarily on payment of a month's wage, subject to his applying forthwith to the tribunal or other authority for permission to discharge him.

The consensus of opinion among Labour Ministers was that there should be only one representative union for each unit of industry, which could serve as a bargaining agent. Surely, collective bargaining can derive reality only through the organised strength of workers through a single bargaining agent over as large an area of industry as possible. There was some difference of opinion as to the best method of selecting the most representative union. The method of secret ballot did not find much favour. It was felt that selection should be made on the basis of fully-paid membership in good standing of at least three to six months.

E.C.A.F.E. SESSION

Dr. Raden Wilopo, Prime Minister of Indonesia, stated the truth without any exaggeration when he said in his address last week at the ninth session of the Economic Commission for Asia and the Far East (E.C.A.F.E.) at Bandoeng, that the economic problems of this region were very complex. He explained that it was no longer a question of combating inflation and maintaining stable relations. It is true that these were the urgent problems in the immediate post-war period. But now, the Asian countries are faced with a more challenging problem, the problem of effecting the "necessary changes in their economic structure."

The E.C.A.F.E. countries—and in fact all the countries of this region—are fully seized of the importance of making the "necessary changes" in the economic sphere. But the path to progress is difficult, even where it is clear. For instance, although it is well known that economic progress involves savings—large-scale savings—and bold investment, it has not been possible for the region to provide the necessary savings. And there is the danger that available savings might be frittered away in unprofitable ventures. From this point of view, the warning which the British delegate, Sir John Sterndale Bennet, gave the session may sound a wholesome one. Stating that a big economic difficulty in the area was not under-spending but over-spending, he argued that any programme which did not help increase output in the next two years should be cut down. But to us it looks as though Sir John was trying to be excessively cautious in his understandable anxiety to prevent reckless expenditure. There are vital programmes, such as the need for opening up communications, providing irrigation for agriculture, power and capital goods for industrialising this area, all of which would mean large-scale investment with no immediate prospects of a large return. But surely, it would be wrong to suggest that these programmes ought to be cut down, because they would not yield sizable returns in a short period. He was, however, correct when he recommended restriction of consumption and cutting down of expenditure on unproductive social welfare schemes, in order to leave more money for capital expenditure.

Mr. D. P. Karmarkar, who represented India at the E.C.A.F.E. session, recognised that economic development "could not be speeded up without a much greater level of investment than now." As internal capital resources in this region are strictly limited, achievements, so far, have not been impressive. From this point of view, it is heartening to note that the U.S.—a country which has rendered generous aid to an ailing Europe in the post-war years—is alive to the pressing needs of the underdeveloped areas. Speaking for the U.S. Government, Mr. Merrill Gay, the chief American delegate, promised that the advancement of underdeveloped countries would remain an important part of the U.S. foreign policy. He pointed out how his Government had made it a matter of fixed policy to give full consideration to the economic development needs of E.C.A.F.E. countries.

The E.C.A.F.E. countries face two different sets of problems. In the first place, they have to make up the leeway of several decades of economic stagnation through rapid industrialisation and scientific agriculture. Secondly, they have to arm themselves against the recurrence of the kind of recession which they witnessed after the collapse of the Korean boom. The collapse has caused, as the Survey of the economic conditions of the Asian countries by the E.C.A.F.E. points out, much serious damage to the economy of this region. The Survey says that, although industrial expansion made headway last year, the unfavourable changes in international trade are having a retarding effect. Thus, production continued to increase, although *per capita* volume remained below the pre-war level. Even food production, according to the Survey, was higher in 1951-52 than in the previous year. Raw material production expanded and industrial production benefited from the supply of new equipment. But the advance was uneven, and there are now signs of a slowing down in India and Japan. The drop in export prices made deep inroads into export earnings. The result is that, although domestic supplies expanded—thanks to the increase in production by domestic industries—the buying power failed to keep pace with the increase in home supplies. As the Survey significantly remarks, "the region's productive effort for export now gives a much lower return in terms of imported goods and services than the same effort gave a year or two ago." Governmental revenues have also shown a tendency to fall faster than could be made up by counter-measures, such as tapping new sources of revenue and cutting down expenditure. A general turn towards deflation, according to the Survey, is noticeable in most of the Asian countries.

The E.C.A.F.E. plays a notable role by assisting its member-countries to keep the chief economic problems under constant scrutiny. That it is not getting lost in economic discussion of a purely general character is evident from the fact that in the meetings of the ad hoc sub-committees many specific questions are examined in great detail. The annual session this year, for instance, was preceded by a conference of four of E.C.A.F.E's sub-committees which deal with: (1) railways, (2) inland waterways, (3) inland transport, and (4) industry and trade. Addressing the sessions of the E.C.A.F.E's sub-committee on railways and inland waterways, Dr. P. S. Lokanathan, the E.C.A.F.E's energetic executive secretary, drew attention to the scarcity of international rail connections in the region. The E.C.A.F.E. and the U.N. Technical Assistance Administration have decided to establish a railway training centre at Lahore, which, it is stated, will start functioning from 15th August next. Other questions, which were discussed at the meeting of the sub-committees, included pilot project on improved design and operation of craft vessels, use of firewood in locomotives, and standardisation of signalling methods. There is no doubt that the region will gain through closer contact and the exchange of technical information which comes through that contact, though significant improvements in any sphere of economic activity must depend on the efforts made by the countries themselves.

CULTIVATION OF RICE

The innumerable requests for fuller information on Japanese methods of growing rice in India, received by the Union Ministry of Agriculture, is an encouraging sign that the countryside is awakening to the need for adopting modern methods of agriculture. In arousing this universal interest, which has been conspicuous by its absence all these years, not a little credit goes to the crop competitions held by the Central Government in order to encourage sound agricultural practices calculated to raise the yield per acre. The popularity of these competitions is indicated by the rapid rise in the number of farmers who took part in them. In 1950-51, as many as 83,833 competitors participated, with some 47,327 acres. In the following year, the number of competing farmers shot up to 190,930 with 102,283 acres. Farmers from only 15 States took part in these competitions and it is hoped that all the States would enter the list in the coming year. It must, however, be noted that the significance of these competitions lies not so much in the number as in the performance of the winners, who were awarded "Krishi Pandit" certificates. These winners have taught their confreres the immense possibilities of increasing the per-acre yield of agricultural crops. The "Krishi Pandit" in potatoes was able to obtain as high as 735.24 maunds per acre, as against the country's average of 75.42 maunds. Similarly, the "Krishi Pandit" in wheat proved that a yield of 72.23 maunds per acre could be raised, as against the average of 6.76 maunds. Efforts in other crops revealed that the yield of gram per acre could be raised by intensive cultivation from 5.14 maunds to 46.2 maunds and of paddy from 7.66 maunds to 136.5 maunds. The difference between the average and the actual yield obtained by "Krishi Pandits" ranges from 9 to 18 times and this will give one an idea of the immense possibilities of expanding agricultural production in India.

This experience should augur well for the decision of the Government of India to launch a nation-wide campaign for a fortnight for carrying on propaganda for the Japanese methods of rice cultivation. The campaign is to commence on 15th March next and is expected to cover about 2.25 lakh villages. Literature explaining when manures are applied to lands under paddy cultivation, how the seed-bed should be prepared, the quantity and time of irrigation, time for transplanting and the cultural practices to be followed after transplantation and before harvesting, is, we learn, under preparation and will shortly be made available to cultivators in villages, so that they may adopt the methods in the coming *kharif* season. The State Governments have been requested to select 10 workers in each district and entrust 10 villages to each of them. In this way, it is hoped to cover about 250 districts in the first drive.

The aforesaid campaign is an ambitious one and its success will depend on how the workers carry on the publicity work for the Japanese method of rice cultivation. If they approach the villagers in the right spirit, they may not find it difficult to impress upon them as to what they should do. For, after all, there is nothing spectacular or mysterious about the Japanese method, as has been pointed out recently by Dr. Punjabrao Deshmukh, the Union Minister for Agriculture. What the system needs is intensive cultivation, that is, timely ploughing of the land, careful preparation of seed-beds with abundant manuring, removal of weeds, selection of the best seeds, sowing the seeds in line, keeping the bunds trim, and transplanting the seedlings in the field at the right time. This method is known to every good farmer, but lack of good seeds, want of timely finance and inadequate manure are his constant worries which have rendered him indifferent to the right kind of agricultural practices. These could be overcome by supplies of fertilisers from Sindri and grant of State loans to farmers. Arrangements have, of course, been made by the Government for these facilities, but the difficulty lies in carrying them to the farmer's door. Past experience shows that the official agencies to which this work is usually entrusted have not functioned properly. This is a snag which needs the attention of the Union and State authorities, if the present campaign is to succeed.

FURTHER U.S. AID TO INDIA

The Governments of India and the United States signed in New Delhi early this week two more operational agreements providing for economic assistance by the U.S. to India. The agreements are a part of the first supplementary agreement (under the Indo-American Technical Co-operation Pact) signed in November, 1952, under which the U.S. Government had offered assistance to the extent of $38.35 million (Rs. 18.33 crores). The two agreements cover, respectively, certain river valley projects and agricultural extension work. The joint cost of the two projects to be borne by the U.S. is $1,983,200, of which $1,850,000 are for river valley development and $133,200

OFF THE RECORD

(By "ROVER")

ONE of the most romantic and picturesque aspects of the old world outlawry and brigandage was portrayed in the legendary efforts of some of the highwaymen crudely to right social wrongs. Some of these high-spirited personages, who carried on a crusade against society and established authority, envisaged themselves in the role of public benefactors, when they robbed the evil rich and greedy and distributed their takings as largesse to the poor and the needy. They justified their high-handedness and apparent arbitrariness to themselves and their own conscience by pleading that they were promoting social justice and bringing about better and more equitable distribution of wealth, perhaps, in the same sophisticated manner as some of our present-day legislators and politicians do, by their ill-conceived and badly executed schemes of welfare.

The only difference between the two sets of robbers, old and new, is that, while, in the case of the former, such desperate conduct was motivated by some great, imagined or real, personal wrong, the new style social reformers are moved not so much by the misery of the poor which, after all the vaunted welfare measures, is as great, if not greater, to-day as before, but because they cannot bear the thought of somebody being more fortunate and rolling in greater physical comfort than themselves. The emphasis in the case of our public men of the post-independence era is on the destruction or plucking of those richly endowed with feathers and not on the distribution. In the case of the self-declared but chivalrous outlaws, the excitement, the pleasure and the gratification were just as much in giving away the booty and relieving distress as in humiliating and vanquishing the mighty. And there is, besides this, a far more significant distinction in the two pictures I have been trying to paint for your entertainment and social enlightenment. The law-breakers of the mediæval age ran great risks and carried their own lives in their hands when engaged in their reformist activities; our modern law-makers take good care to see that their hide is safe and that nothing can so much as scratch it. The legendary heroes of yesterday often paid with their lives for their social zeal; our more mild-mannered and non-violent heroes of to-day expect to be paid from the public exchequer for their missionary activities.

But I am not trying at present to tilt my lance at those engaged in drafting, promoting and passing expropriatory legislation, aimed at taxing those who can afford for the benefit of society as a whole or for those classes or cases which stand in need of public succour. This form of redistribution of the world's wealth has gone on progressively for centuries, either on a voluntary basis through charity and undertaking works of public utility through organised or individual benevolence or through the intervention of the State. It is all as it should be, provided it is not undertaken in such a crude and blind manner as to destroy or maim the wealth-producing agencies or to rule out incentives for savings. But for the social philosophy which encourages and engenders such effort leading to social progress, the social structure would either find itself torn asunder in strips by some cruel cataclysm or giving way at places because of harmful and unhealthy pressure on vulnerable parts. My only regret is that this task, very necessary for regenerating our static and tradition-ridden society, is not being attempted in a planned and constructive manner which would preserve the spirit of enterprise and the will to create and which will curb only the ugly manifestations of greed and acquisitiveness associated with these worthy qualities.

What has roused my ire on this occasion against the State Government of Bombay is a crude and unscientific attempt on their part, without the least regard or thought for the possible economic consequences and complications on a number of industries and agricultural activities, to emulate the exploits of the philanthropic brigands of the romatic age, in ameliorating distress resulting from the severe shortage of fodder in several parts of Maharashtra. Knowing the intensity of the present scarcity conditions, nobody in his senses would want either to minimise the need for popular and official measures for relief, nor to quarrel with the quantum of such relief. But one has a right to expect that, at least on the official side, the organisation of relief would follow some well-thought-out, well-integrated and rational plan and policy, with a proper estimate of its cost and a fair and just distribution of this necessary burden and sacrifice over all sections of society. Just as ends of justice in criminal jurisprudence are not met by getting hold of any likely man and hanging him out of hand for some crime that has been comitted, the aims of social responsibility for mitigating the consequences of a natural calamity in some part of the State are not achieved, by plundering one small section of trade and industry, for the only reason that, as a result of accident, it happens to be dealing in a commodity which might come in handy for supplementing the fodder supply and handing over the booty as the Government's contribution to relief and solution of the crisis that has overtaken the State.

But this is precisely what the present Bombay Government, untutored in the ways of public administration and scientific governance, has done by passing one of the most extraordinary executive orders for partial expropriation. In a manner, this also goes to disclose how rattled and nervous the Government is in the face of this calamity and how confused and intemperate is its thinking. By no stretch of imagination could groundnut cake be described as forming the bulk or the main item of fodder for draught or milch cattle. No amount of this cake could go to make up the real shortage of hay, straw, grass and *kadbi*. If the starving cattle were to be fed exclusively or mainly with this cake, instead of succumbing to starvation, they are sure to meet their end a little later in consequence of some disorder of the stomach or other. But instead of sitting down to prepare a scientific plan for augmenting the supply of suitable and customary fodder, the Government has come out in a mad rush with an order on all the oil crushing mills to the effect that half the stock of groundnut cake produced by them till June, 1953, will be acquired compulsorily by the Government at what amounts to a token price, for use as fodder in the famine and scarcity areas. In a strictly scientific scheme of famine relief, such an arbitrary and ad hoc measure, hardly affecting even a hundredth part of the problem, would and should have no place. Its only value, if it can be said to have any value at all, is that it might enable the Government to demonstrate to some of the illogical and emotional sections of the public that it was actively engaged in organising measures to save lakhs of these domestic animals and to feel a righteous, but spurious, sense of well-being which results from the performance of some good deed, not involving any sacrifice on one's own part.

Neither according to the established principles of political science nor according to the provisions of our Constitution, the responsibility for meeting the cost of famine or scarcity relief measures rests exclusively on those who happen to produce the commodity in short supply—fodder in this case—or on the consumers of this commodity. This responsibility, as universally recognised both on ethical and political grounds, is on the society or the State as a whole. All that the society or the State can claim from the producer or the general consumers is priority in supply for relieving distress. As such, there would have been nothing wrong if the Government had compulsorily acquired whatever stocks of groundnut cake it needed for use as supplementary fodder in famine areas at the prevailing market price or a price fixed on some economic basis. The injustice and the absurdity of the measure are centred in fixing a much lower price arbitrarily under an executive fiat.

Both logic and justice demand that the Government should purchase this cake on the same basis as they purchase fodder in other forms such as grass, *jawar* and *bajri* stalks, etc., in other parts of the State for despatch to the scarcity areas. In the alternative, the Government should not only requisition other articles of fodder at about half the normal prices but even the transport necessary for this at specially reduced rates. When the cost of official relief measures amounting to crores of rupees is to be borne ultimately by the general run of taxpayers in the State and the Union, there is no sense in creating one instance of glaring injustice in the case of one little section of industry, to save the bill for relief by, perhaps, a few thousands or lakhs.

If the Government had but stopped to consider the other economic complications resulting from this order, which is highly objectionable in principle inasmuch as it victimises only one small section of industry or consumers, if its general attitude had not been that putting extra burdens on industry and commerce is an act of great merit and piety, it might not have passed this order. In the first place, such unilateral sacrifice imposed on a by-product of a small industry, disturbs the balance between the price of oilseeds, oil and cake and disorganises both the inter-State and international trade in the first two. In the second place, it encourages industry to make a higher profit on the balance of the cake left with it, to make up for the loss sustained in the supply made to the Government. Having two sets of prices for the same commodity, a lower one for Government purchases and a higher one for the public, is vicious in principle and is about as immoral as having two sets of weights, one for selling and another for buying. And finally and in the last analysis, it is the real consumers of groundnut cake, namely, the cultivators of crops requiring this cake as manure, who suffer unnecessarily and vicariously. If the Government had not proved itself to be stubborn and extremely sensitive with regard to its precious prestige, I would have hoped that my mild castigations would bring about a cancellation of this order. It is only the strong and the great who can afford to admit that they have erred.—*All Rights Reserved.*

PROGRESS OF KAKRAPAR PROJECT

One-third of the work on the Kakrapar Weir and Canal Project, which is expected to irrigate about 5½ lakh acres in the Surat District of the Bombay State, has been executed so far. The weir has gone up to full height in a length of 700 feet out of a total of 2,038 feet. About 70 per cent. of foundation work in the remaining length has been completed. The regulator on the south bank has nearly reached its full height of 53 feet and the foundation of the regulator on the right bank has been completed. Including the length of the regulators, the total length of the weir will be 2,400 feet.

Of 850 miles of canals, branches and distributaries 600 miles have been dug. Work is now in progress on the south bank main canal where a layer of rock and a large quantity of hard moorum are to be excavated.

The Motichar Weir, an important cross drainage work on the south bank canal is nearing completion, while work on the earth dam across the Ratania Khari, which will block the Khari and divert its discharge to the Motichar Weir, through a cut, is now in hand.

INDIA LOSES AN ABLE ADMINISTRATOR

TEA INDUSTRY IN TROUBLE

(From A Special Correspondent)

NEW DELHI, *10th February*

DELHI LETTER

IT is with great regret that the Capital learned this morning of the passing away of Mr. N. Gopalaswami Ayyangar, Defence Minister to the Government of India. Although he had been ill for the last few months, very few expected that his end would be so sudden and near. He was not only an elder statesman of great ability but also an able administrator, held in supreme confidence alike by the former British Governors and Viceroys and the present rulers of the country. His colleagues in the Cabinet, particularly the Prime Minister, had considerable regard for his valued opinion and impartial judgment on many complex problems that faced the country during the last five years and more.

Mr. Gopalaswami Ayyangar was suddenly called from his retirement by the Prime Minister in September, 1947, when the refugee problem assumed gigantic and unwieldy proportions. He was a tower of strength to the Prime Minister at that time, holding the difficult portfolio of the Rehabilitation of Refugees, where he brought into play his keen intellect and analytical brain in evolving precedents and policies. After a short time, he was asked to hold the Railway portfolio. It was his sagacity and administrative skill that resulted in the speedier rehabilitation of the country's railways. He was also instrumental in bringing into existence the grouping system of the railways. After the demise of the great Sardar Patel, he was requested to handle the portfolio of States along with Railways. Besides, he worked close to the Prime Minister as a member of the Foreign Policy Sub-Committee of the Cabinet and represented India in the United Nations Organisation on the complex Kashmir problem. Although he expressed his desire, from time to time, to retire from the Ministership, he was requested to stay on, and only last year he was given the Defence portfolio. After the death of Sardar Patel and the departure of Mr. Rajagopalachari from the Capital, he became a trusty consultant for the Prime Minister on day-to-day problems. It is no exaggeration to say that the Prime Minister will find it considerably difficult to choose a successor of equal calibre, sagacity and administrative talents to replace the late Mr. Gopalaswami Ayyangar.

Problems of Tea Industry

The troubles of the tea industry continue to persist and they are particularly noticeable in so far as North Indian tea gardens are concerned. Despite a moderate improvement in the prices of tea at the Calcutta, Cochin and London auctions in recent weeks, many tea gardens are still reported to be unable to make both ends meet and it is likely that representatives from Assam and Bengal will be focussing the attention of Parliament during the coming weeks to the problems confronting the industry and to the necessity of finding suitable solutions.

It is perhaps to forestall Parliamentary criticism and to abate its intensity and vehemence that the Commerce and Industry Ministry has come forth with the announcement that it would shortly be appointing an expert committee to investigate the cost and trade structure of the tea industry. The Committee will be asked to suggest ways and means of revising the cost structure to bring it into line with the present price level and will ascertain the co-relation between the auction and retail prices of tea. The Government announcement states that the appointment of the Committee is in pursuance of the request made by representatives of the tea industry, employers and labour, who met Government spokesmen in December last at the time of the meeting of the Industrial Committee on Plantations.

The Government of India made a mistake, in May last, in appointing an official committee to probe into the problems of the tea industry. The members of this Committee could not go deep into the maladies confronting it and made many non-committal recommendations so that Government revenues should not suffer ultimately. The main grievances of the industry are the high export and excise duties and the heavy expenditure involved in the foodgrain concessions to tea garden labour. The representatives of the industry have been pleading that, as an emergency measure, relief should be given to the industry by way of refund of excise duty on some basis collected from the different parts of the country. Whatever be the arguments of the Central Government against such a request, it must be admitted that, ever since the abolition of the export duty on tea by the Pakistan Government, a stimulus has been provided for the export of tea from that country, the current rate of despatches showing a substantial increase over those a year ago. In view of the downward trend in Central revenues during recent months, the Central Government will not readily agree to a reduction in the export and excise duties on tea, but it has at least to announce its decision without delay on the foodgrain subsidy so that the fortunes of this leading export industry might be placed on a stable basis.

Accountancy Profession and Company Management

When the administration of company affairs, which was, until a year ago or so, under the jurisdiction of the Commerce Ministry, was transferred to the Finance Ministry, it was specifically done with a view to improving the efficiency of administration and preventing the leakage of Government revenues. The Institute of Chartered Accountants also came under the control of the latter as a result and was made as an autonomous body. Mr. C. D. Deshmukh, therefore, when he addressed the members of the Institute at the time of laying the foundation-stone for the Institute's building this week, had in mind the toning up of company management, the standard of which had declined considerably during recent years largely due to the influx of a new class of business men made rich by the war. The Finance Minister impressed on them the necessity for unceasing vigilance to ensure scrupulous discharge of their duties "without fear or favour in order to curb the malpractices in trade and business." He added: "The manipulations by which some of the companies are alleged to have defrauded the investing public must inevitably cast a reflection on the work of the Chartered Accountancy profession, whether they merit it or not, and for the sake of their own fair name, they have to endeavour to raise the tone of business morality, whatever the limitations of their statutory responsibility in the strictly legal sense." According to him, "the profession should make a determined stand against any kind of fraudulent practices in company accounts."

Mr. Deshmukh gave a hint that the legal responsibilities of auditors under the company law would be extended. However, as matters stand, it is not likely that the Company Law (Amending) Bill will be introduced during the current budget session of Parliament. All the same, the Finance Ministry has been taking steps to unify the company law administration in the country. Generally, it is expected to follow the pattern set up by the U.K. Board of Trade, especially in regard to inspection, presentation of accounts, holding of meetings, etc. All these, when effectively administered, will doubtless improve the tone of the management of joint-stock companies in the country.

Soil Erosion Problems

There is considerable significance in the inauguration of the first annual session of the Soil Conservation Society of India by Mr. C. D. Deshmukh, Finance Minister to the Government of India. It may be taken for granted that erosion problems and the prevention of the present damaging land-use practices, which have until now largely been in the discussion stage, will be tackled with some vigour and imagination and that the Finance Ministry will be making, in the coming years, the necessary financial allocations towards such a purpose. For the first time, this Society has succeeded in bringing officers in the different departments connected with soil conservation from the State Governments, workers in the field of soil conservation from the Universities and research institutions, representatives from the river valley authorities and other organisations together on a common platform.

Mr. V. T. Krishnamachari, Member of the Planning Commission, put the whole thing in a nutshell when he stated that problems like afforestation, etc., should not be confined to a few isolated areas. He was of the opinion that a whole river valley region should be taken up as one and dealt with on a comprehensive plan. In this connection, he drew the attention of the members present at the meeting to the recommendations of the Planning Commission which wanted that States should enact legislation, giving them powers to restrict practices which resulted in erosion, to execute works on private holdings and recover the costs thereof, and to constitute co-operative associations of farmers for soil conservation work. Mr. Krishnamachari also stressed the importance of organising research stations in a number of places in the country which should be looked after by the Soil Conservation Boards specially to be constituted for these purposes. The Five-year Plan has, it may be noted, earmarked a sum of Rs. 2 crores for this purpose, but we are told that, if more funds were needed, further allocations would be made. It was generally conceded that, if the whole scheme were to succeed, it should be based on co-operative effort and must be carried on in terms of a larger unit than that of individual farms. According to a F.A.O. expert, the improvement in the conservation capacity of grazing lands could be brought about only be necessary adjustments in the animal husbandry and fodder production policies. He remarked that "the duration and intensity of grazing on the natural grazing grounds must be reduced, while, at the same time, fodder production from arable land requires to be increased, with appropriate support by economic incentives." He further added: "Proper attention to these problems by crop and grass land agronomists, animal husbandry experts and foresters will be the greatest contribution which can be made to soil and water conservation in India."

DECONTROL OF FOOD

PRODUCERS FEAR CHEAP IMPORTS

(From Our Own Correspondent)

LONDON, *6th February*

SINCE the Government began its exercises in decontro, in the middle of the autumn it has moved rapidly from one commodity to another—first eggs, which are to be freed by early spring, then cereals including wheat and animal feed which are to be freed by the next harvest (though what that date will be is so far anybody's guess) and potatoes are also down for liberation after the next crop. The only major foodstuff which will then remain part of an elaborate Government system of purchase and distribution will be meat, and that is not likely to last much longer when the rest have gone. The fact that certain other commodities such as bacon, butter, margarine and sugar will still be rationed will be of much less significance for these commodities are produced and distributed by the private trade (though imports are likely to be on Government account) and the major controls are the rationing of consumption and the fixing of prices. The removal of these controls is a far simpler matter than the removal of controls which affect the producer.

LONDON LETTER

Eggs, the first of the major controlled foodstuffs due for liberation, are a good example of the problem. It is an easy matter if there are enough eggs to let prices find their own level and ration consumption by the purse instead of by coupons; but the farmers are guaranteed in the 1947 Agricultural Act an assured income from eggs among other commodities. The Government is thus obliged to steer a path between freedom at the consumer end yet assuring the producer his guaranteed price at the other end. In the first stage of decontrol, the Government has also announced that it intends to preserve control over imports. This will make it much easier for it to regulate the flow of imported eggs. But imported eggs account for over a quarter of total supplies and the proportion is likely to rise if importation is freed, for the foreigner, be he Dane or Australian, can produce eggs and land them in this country at a lower price than satisfies the British producer.

The producers accordingly see their prosperity threatened by a possible flow of cheap imports and are already making plans for a marketing system which will regulate imports along with home supplies and ensure them their guaranteed price. The decontrol of eggs cannot, therefore, mean a completely free market, and the conflict as to how to couple the freedom the Government desires with the security which the farmer demands is as yet unresolved. Sir James Turner, the President of the National Farmers' Union, put the paradox exquisitely in a recent statement when he gave an assurance that the National Farmers' Union were not *in principle* opposed to the complex operation of turning over from controls to a *free economy* but that it would "take some time to work out the best way of obtaining *guaranteed markets and assured prices* under the new system"!

The decontrol of cereals represents a similar problem, though the home growers have the satisfaction of knowing that the guaranteed prices they have hitherto been receiving have been *lower* than world prices. Decontrol for them does not, for the time being at least, carry the risk of lower prices. Moreover, world supplies of cereals are still inadequate to meet the demand—given the shortage of dollars. In any case, there was in operation before the war a simple system which guaranteed growers a minimum price for their wheat. This can be extended to cover the other grains, barley and oats, which are also guaranteed. Farmers market their cereals in this country on average in, say, three or four lots a year so that the system of paying the farmers a guaranteed price is mechanically much simpler than where commodities are marketed once a week.

The pattern of decontrol is similar for all the commodities which have been mentioned; the first stage is the removal of the subsidies. For eggs, these amount to about 1d. (say 20 per cent. of the market price) on the price of each egg and for animal feeding stuffs about £2 10*s.* per ton or well under 10 per cent. of the market price. The subsidies on eggs, animal feeding stuffs, and wheat are all to be removed at the end of March, although bread will have its subsidy increased in order to leave the retail price unchanged. The next stage is the abolition of rationing: there is no rationing for wheat; eggs will, however, be derationed at the same time as the subsidy is removed, while animal feeding stuffs will be derationed at the harvest. Last and most complicated comes the removal of the control over imports. Only cereals are to have their imports turned over to the private trade for the time being and even there, the freedom will not be complete, since a limited ration of dollars and E.P.U. currencies will have to be set aside for non-sterling area grain. The people most affected by this return of freedom will be the importers who for 14 years have either been out of business altogether or traded as Ministry agents, buying animal feed overseas and offering it to the Ministry of Food at fixed prices. It is the large firms which have been able to maintain their personnel and their know-how and, on the whole, these do not fear freedom, but many of the small firms are genuinely afraid that the return to competition will mean a final end to their business activities.—*All Rights Reserved.*

PAKISTAN NOTES

NEW COTTON POLICY

TRADE CRITICISES BARTER DEALS

THE Government of Pakistan has announced its decision to consider offers from firms in Pakistan and abroad, for the exchange of cotton (and other exportable commodities) with imports of a limited number of essential items such as machinery, iron and steel, chemicals, drugs and medicines, dyes, cotton and art silk yarns, sugar, coal, wheat, etc. The barter arrangements are, however, to be permitted only for a limited period and upto a certain value of imports. In the case of exports of new crop cotton, import licences will be issued upto a certain prescribed percentage of the value of such cotton exports, while, in that of old crop exports in possession of the Cotton Board, import licences may be issued up to the full values of exports of such cotton. The other salient features of the Government's decision are as follows:

If the exchange of commodities is settled with firms established outside Pakistan, import licences will be issued in favour of established importers of those items on the basis of their categories; to ensure that established importers buy goods only from the foreign firms concerned, the names of such firms as suppliers of goods to be imported will be mentioned on import licences. If the exchange of commodities is settled with firms established in Pakistan, licences for imports of essential items will be issued to exporters on condition that they agree to supply the imported items to established importers of such items according to the shares determined by the Chief Controller of Imports and Exports on production of permits issued by him in this behalf and at such prices as may be fixed by the Government. Any firm tendering or which has already tendered for the import of Government requirements exceeding Rs. 5 lakhs may inform the Commerce Ministry whether it is prepared to export cotton of equivalent value. If offers are received for the bulk export of commodities like tea, oilseeds, oilcakes, etc., to countries that do not normally import them against the import of essential items, other than cotton yarn and art silk yarn, from those countries, such offers will also be considered and import licences will be issued to established importers of items concerned up to the equivalent value of exports of such commodities. Offers involving export of minor items included in the export O.G.L. No. 7 against imports of equivalent value of certain minor items like onion, garlic, spices, conch shells, *biri* leaves, etc., will also be considered.

Removal of Export Floors Urged

The Government's decision to permit private barter arrangements has evoked much criticism from a considerable section of cotton traders. This section feels that the scheme to barter cotton against certain commodities, thanks to the changed trend in world trade, is not practicable. In fact, it fears that it is fraught with grave dangers to the present set-up of trade in Pakistan, for the scheme would only help the "chosen few" or the foreign exporters who have their offices in Karachi. Thus, the Karachi Cotton Association has urged the Pakistan Government to permit the trade to take its own course towards adjustment through the operations of laws of demand and supply. It has also vigorously pleaded for the removal of floor prices for cotton, on the ground that export floors, without internal support, are of no value.

The disquieting food situation that confronted Pakistan last year still persists, according to reports from Karachi. Despite the earnest efforts to augment food production, the supplies are insufficient to meet the total requirements. The chief factor responsible for this state of affairs is the shortage not of land but of water-supply. Be that as it may, Pakistan has been compelled to import large quantities of wheat. Last year, Pakistan had a deficit of about 950,000 tons of wheat. With a view to meeting the deficit, the Government had made arrangements to import 850,000 tons from various countries, the U.S.A., U.S.S.R., Canada and Turkey, in particular. Renewed efforts are being made by the Government to step up food production, in the light of the recommendations made by the Agricultural Inquiry Committee. Among the active measures taken by the Government, mention may be made of the supply of fertilisers to the cultivators for introducing scientific system of crop rotation and substitution of cash crops by food crops. An agricultural finance corporation is likely to be set up shortly.

Agricultural Corporation Formed

Efforts are also being made by private bodies to improve food production. For instance, an organisation, called the Pakistan Agricultural Corporation, has been formed in Karachi, with a view to offering all possible facilities for rehabilitating the refugee agriculturists and persons interested in agriculture. The Corporation is to procure loans from the Government on easy instalment basis and establish an agricultural colony on a scientific basis, as in European countries, "with co-operative feelings, brotherhood and idealism." The Corporation will also organise cattle breeding and poultry farms, dairy farms and veterinary hospitals.

Pakistan-Indonesian Trade

Considerable importance is attached to the recent visit of the six-man Indonesian Trade Mission to negotiate a trade agreement with Pakistan. There are, it is reported, "substantial chances" of improving trade between Pakistan and Indonesia. The trade has so far been very limited, owing mainly to shipping difficulties. The total value of trade between the two countries during the calendar year 1952, for instance was about Rs. 21 lakhs, with the balance of trade heavily in favour of Indonesia. Pakistan imported from Indonesia goods worth Rs. 2[illegible] lakhs, in return for Rs. 1,759 worth of exports. The chief item of imports were fuel and diesel oil, paraffin wax, cutlery and hardware, while chief exports were tops, musical instruments etc.

Indonesia, which has several cotton textile mills, can be a fair-sized importer of Pakistan cotton. Now that the prices of Pakistan cotton have receded to very low levels, *vis-a-vis* U.S. cotton, Indonesia is said to be keenly interested in it. Pakistan's brassware and sports goods also stand a good chance of finding a ready market in Indonesia. On the import side Indonesia is expected to offer to Pakistan among other items, tin and rubber.

Canada's Aid to Pakistan

A team of Canadian experts in co-operative and agricultural training has arrived in Pakistan to investigate the ways in which Canada can most usefully provide technical assistance to Pakistan. The team in now on tour of the different areas, visiting the centres of co-operative and agricultural training. It is particularly interested in co-operative training institutes, agricultural colleges in the various Provincial and rural development projects undertaken by the Government of Pakistan. The Canadian team will work in close co-operation with the U.N. Food and Agricultural Organisation and the I.L.O.

I.B.R.D. LOANS TO INDIA

IS THE RATE OF INTEREST HIGH?

THE latest loan of $19.5 million to the Damodar Valley Corporation by the International Bank for Reconstruction and Development, announced last month, is, as has been aptly described by a contemporary of ours, an expression of faith and confidence of this world body in the soundness of this much criticised venture in India. The loan will be utilised for financing a part of the construction of projects designed to protect this area against floods, to expand electric power capacity and to build canals for irrigation and transportation. These are key projects in a general plan for the development of the Damodar Valley. The present loan supplements a slightly smaller loan of $13.5 million to the Corporation made in April, 1950, for a steam power plant a Bokaro, a power transmission system and a storage dam at Konar.

The repayment of the loan is spread over a period of 25 years and bears interest at the rate of 4¾ per cent. per annum, including the one per cent. commission which, under the Bank's Articles of Agreement, is collected and paid into the Special Reserve Fund. Amortisation payment is to begin three years hence, that is, on 15th July, 1956, and the whole loan is to be liquidated by January, 1978.

The aforesaid loan was granted by the World Bank in quick succession to the loan sanctioned to the Indian Iron and Steel Company Ltd. (I.I.S.CO.) on 19th December, last. This loan, as readers are aware, is for a sum of $31.5 million to finance, in part, the expansion programme of the Company approved by the Government of India as part of its plan for increasing the output of iron and steel in this country. The loan will help the Company to carry out a five-year project for increasing its blast furnace capacity from 640,000 tons to 700,000 tons annually. When completed, the Company's programme will double the quantity of foundry iron now available from domestic sources in India, and will increase the country's present output of finished steel by about one-third. The total cost of this programme is estimated at approximately $73.5 million. More than half of the cost will be met out of I.I.S.CO's revenues and by loans and advances from the Government of India. The World Bank's loan of $31.5 million, mentioned above, will be used to pay for imported equipment and services.

First Direct Loan

While in the past the Bank has lent funds to private manufacturing enterprises, it has done so only through intermediary borrowers such as Central or development banks, who, in turn, have re-lent the proceeds to these enterprises. This loan to the I.I.S.C.O. is the first the Bank has made directly to a company belonging to private enterprise. The rate of interest on this loan is 4¾ per cent. per annum, including the one per cent. commission which, as stated already, will be credited to the Special Reserve Fund. The rate of interest on this loan is slightly lower than that on the latest loan to the D.V.C., but it should be noted that the former (the loan to I.I.S.C.O.) is repayable 11 years earlier than the latter, that is, on 15th October, 1967. Amortisation payments, however, are to begin on 15th April, 1959, that is, three years later than in the case of the D.V.C. In addition to having the Government of India's guarantee, the Bank's loan will be secured by a first fixed mortgage on the I.I.S.C.O's immovable property and by a first charge on the remainder of its assets. These are to rank equally with the I.I.S.C.O's existing first mortgage debentures, amounting to $1.1 million, held mostly by private investors in the U.K.

The World Bank loan issued to the Damodar Valley Corporation last month is the fifth loan to India from the Bank. Apart from the sum of $31.5 million loaned to the I.I.S.C.O., the Bank has issued a loan of $31.2 million for the rehabilitation of the Indian railways, $18.5 million for the development of power and irrigation in the Damodar Valley, and $7.5 million for land clearance in Central India. The Railways Rehabilitation Project has been completed, while the others are still being carried out. There is, besides, one more loan application pending before the World Bank and that is, the application from the Industrial Finance Corporation for a credit of $8 million. The total amount of all the loans so far granted by the Bank to India is of the order of $109.8 million. The details of the loans are indicated in the table below:

Purpose of the Loans	*Principal* amount in million Dollars*	*Rate of interest (including commission) per cent.*	*Date of Agreement*	*Date of Maturity*
Railway Rehabilitation (a)	31.0	4	18-8-1949	1950-61
Agricultural Development (b)	10.0	3¾	29-9-1949	1952-56
Electric Power Development	18.5	4	18-1-1950	1955-70
Expansion of Iron and Steel Production ..	31.5	4¾	18-12-1952	1959-67
D. V. A. Project ..	19.5	4¾	26-1-1953	1956-78
	113.5			

* *The principal amount includes cancellations and refunds amounting to $1.2 million and $2.5 million respectively in respect of two items (a) and (b) above. Consequently, the total loan outstanding is $109.8 million.*

With the loans so far taken, as above, India now figures as the fifth largest borrower from the Bank, the others preceding it being Brazil ($142.5 million), Australia ($150 million), Netherlands ($229 million) and France ($250 million). The countries that are now immediately below India in the rank of borrowers are Mexico (about $100 million) and Belgium ($86 million). It will be seen from the above table that the rate of interest at 4¾ per cent. charged on the loan of $19.5 million to the D.V.C. Project is the highest that India is now paying on its loans from the World Bank. In fact, it is also the highest rate charged by the World Bank on any of its loans issued since its inception. Lest this high rate should lead to any misgivings in the minds of the public as to the Bank's attitude towards India, it is necessary to point out here, in fairness to the Bank, that it is not unduly high considering the circumstances prevailing in the world money markets now. It may be noted that the rate of 4¾ per cent. includes the one per cent. commission under the Bank's Articles of Agreement which have been approved of by all the founder-members, of whom India is one. The proceeds of this commission are credited to the Special Reserve Fund meant for covering contingent liabilities arising from the Bank's operations as, for instance, bad debts. Ultimately, the benefit of this fund will be shared by India also as one of the participants in this great international co-operative organisation. If the basic rate of interest is higher than in the past, it is due to the high rate of interest the Bank has to pay on its borrowings from the world's capital markets. On its recent issues of bonds, the Bank had to pay no less than 3.65 per cent. per annum for 19 years. Considering this, the rate of 3.75 per cent. charged to India, excluding the loan commission of one per cent., is not excessive. The difference between the two rates, namely, 0.10 per cent., represents the Bank's margin which is scarcely sufficient to cover its expenditure. Besides, one should also bear in mind that the present ruling rate in India for debentures of organisations of the standing and type of the I.I.S.C.O. is 5 to 5½ per cent. Even if the D.V.C. were to borrow from the Indian market for a 25-year period, it would have to pay not less than 5 per cent., unless, of course, the borrowing is guaranteed by the Government of India, in which case the rate of interest might be slightly lower, say, at about 4.5 per cent. On these considerations, one has to admit that the rate of interest charged by the World Bank is a reasonable one.

More or less the same arguments hold good in regard to the rate of interest at 4¾ per cent. (including the loan commission) charged by the Bank on the loan to the I.I.S.C.O. It is in line with what the Bank charged last year for 15 to 20-year loans made to similar organisations for development purposes. For instance, the same rate was charged on a 17-year loan to Iceland for establishing a fertiliser plant and on a 18-year loan to Finland for developing electricity, wood products, etc. Turkey and Southern Rhodesia are the other two countries which are being charged at the rate of 4¾ per cent. on the loans sanctioned to them in the first half of last year. In these circumstances, it will be unrealistic to complain that the rates of interest charged by the World Bank on its loans to India are unduly high. It must be realised that, if this useful international financial organisation is to function satisfactorily and command the confidence of the world's capital markets, it will have to be run as a business organisation with its credit intact.

Lloyds Bank Limited — Incorporated in England 1677

18/0/53-1953

WORLD BANK'S PROFIT

Although the gross income of the International Bank for Reconstruction and Development during the six months ended 31st December, 1952, exclusive of loan commissions was higher at $20,896,715, as compared with $16,637,921 in the same period of 1951, the net income experienced a slight fall from $8,071,486 to $7,639,743. This fall in profit was due to the expenses incurred in connection with the issue of two loans in the last three months of 1952. The entire net income has been credited to the supplemental reserve against losses on loans and guarantees, increasing the amount of this reserve to $65,667,843. During the six months under review, the Bank earned a commission of $4,536,682 on loans which has been transferred to the Bank's special reserve, as required by the articles of agreement, increasing this reserve to $32,221,336. The total reserves of the Bank as at the end of 1952 stood at the impressive level of $97,889,179.

During the three months ended 31st December, 1952, the Bank successfully floated two bond issues: $60 million 19-year 3¼ per cent. Bond due 15th October, 1971, and Swiss francs 50,000,000 3¼ per cent. 10-year Bonds due 1st December, 1962. Expenses for the three-month period, amounting to $7,885,582, included bond issuance and other financial expenses of $2,331,480 in connection with the two issues, in the comparable period of 1951, such charges were nominal.

During the six-month period ended 31st December, 1952, the Bank gave six loans, aggregating $112,133,464, to Australia, Colombia, Finland, Iceland, India and Peru. These loans increased the total loans signed by the Bank to $1,524,266,464. Actual disbursements during the six-month period were $120,004,529, bringing the total disbursements to $996,508,662 on 31st December, 1952.

Repayments of principal which were received from borrowers as they fell due, amounted to $514,432. During the six-month period, the Bank also sold to private investors $9,292,220 of securities from its loan portfolio, $4,978,400 with its guarantee and $4,314,820 without. These transactions brought the total portfolio sales to $65,669,908, of which $46,477,401 were with the Bank's guarantee, and the rest, namely, $19,192,507, without.

France gave the Bank permission to use French francs equivalent to $180,000 from its paid-in franc subscription to the Bank's capital for any loan the Bank has made to Iceland. Italy gave similar permission for the use of its lire subscription in an amount equivalent to $519,000 for any loans made to Turkey. Sweden approved the use of 18,000,000 Swedish kronor ($3,479,484) from its paid-in subscription for the supplemental loan to Finland for the wood products industries, signed in November, 1952. The latest country to give permission to the Bank to use its national currency is the U.K. This country has allowed the Bank to make sterling loans to the extent of £60 million to Commonwealth countries for development programmes. The amount will be made available from Britain's subscription to the capital of the Bank over a period of at least six years. Commenting on this decision of the British Government, Mr. Eugene Black, the Bank's President, said that "it was a demonstration of the part that can be played by non-dollar capital in world economic development." He added that the availability of non-dollar capital to the Bank would enlarge its lending operations in countries whose foreign exchange earnings and capacity to repay external debt were mainly in non-dollar currencies.

EARNINGS OF LLOYDS BANK BETTER

DIVIDEND MAINTAINED—RESERVES STRENGTHENED

THE statement of accounts of Lloyds Bank Ltd. (Chairman: Lord Balfour of Burleigh, London) for the year ended 31st December, 1952, show that the Bank's results are in consonance with the general pattern of earnings of banks in the U.K. and in refreshing contrast to the experience of banks in India, in general. The results show that, notwithstanding the steep decline in the market value of the Gilt-edged securities during the first half of 1952 and the change in the direction of the flow of bank's resources from the private sector to the Governmental sector, the British banks have been able to fare better in 1952 than in the previous year. Fortunately for the British banks, the recovery in Gilt-edged values in the closing months of the year helped them to reduce considerably the capital losses on investments which, at one time, threatened to wipe off the increase in their earnings.

The net profit earned by Lloyds Bank during the year under review amounted to £1,964,665 which is £148,807 or 8.2 per cent. more than that earned in 1951. The profit figure has been arrived at, as in the previous year, after providing for taxation on the profit for the year and after making allocations to the contingency accounts, out of which full provision has been made for any diminution in value of assets. This method of arriving at net profit, which is the traditional feature of bank accounts, does not, of course, enable one to gauge the trend of banks' earnings with precision, the position in this regard having been rendered more complicated by the heavy fluctuations in value of Gilt-edged securities during the year under review. Nonetheless, it gives a fair indication of the pattern of bank earnings. And it will not be an exaggeration to say that the higher profit of Lloyds Bank for 1952 reflects the increase in its basic earnings due to higher interest rates on advances and larger income from investments. It is true that dearer money has had the effect of restricting the turnover of bank credits and pushing up the rate of interest on deposits. But the net result of higher interest rates has been favourable to banks as a whole and Lloyds, being one of the "Big Five" of Britain, could not have been an exception to this general experience.

Despite higher profit, the Directors of the Bank have not thought it prudent to raise the dividend and have merely maintained it at the rate of 12 per cent. per annum, less tax, a rate which has been repeated year after year since 1932. They are of opinion that, in view of the uncertain economic outlook and the wide fluctuations in value which have characterised the Gilt-edged market of late, it will be desirable and judicious to strengthen the external reserves of the Bank instead of paying a higher dividend. They have, accordingly, transferred a sum of £1.2 million from out of the net profit to the general reserve, an increase of £300,000 as compared with the sum of £900,000 allocated to the reserves for contingencies last year. In making these appropriations, they have had to draw a small sum from the unappropriated surplus of £596,803 of the previous year, leaving £418,242 to be carried over to next year.

The following comparative table brings out the salient features of the Bank's balance-sheet as at the close of the last four years:

(In thousands of £'s sterling)

	As on 31st December			
	1952	1951	1950	1949
Capital	15,810	15,810	15,810	15,810
Reserve fund	16,000	14,800	14,500	14,200
Undistributed surplus ..	418	597	624	601
Deposits	1,168,011	1,169,647	1,147,720	1,130,856
Acceptances, endorsements and guarantee (contra item) ..	121,770	164,524	96,153	67,354
Cash and money at call ..	252,165	254,524	264,317	228,346
Bills	195,664	188,980	236,104	195,234
T.D. Rs.	418	18,500	84,000	140,500
Items in transit	15,143	18,876	15,598	10,884
Investments—				
Gilt-edged	406,019	360,189	273,749	273,408
Trade	8,184	8,020	7,418	7,686
Loans and advances ..	309,778	341,904	288,958	271,909
Bank premises	7,956	7,537	7,850	7,013
Balance-sheet total ..	1,323,909	1,367,211	1,276,445	1,230,100
Ratio to deposits of—	%	%	%	%
Cash	21.6	21.7	23.0	20.2
Gilt-edged investments ..	34.8	30.8	23.8	24.1
Loans and advances ..	26.5	29.0	25.0	24.0

As will be seen from the foregoing table, the Bank's turnover has suffered a small shrinkage, as indicated by the drop in the balance-sheet total from £1,367.21 million as the end of 1951 to £1,323.91 million as on 31st December, 1952. The notable change on the liabilities side is the decline of £1.6 million in deposits. This decline, though insignificant, is a reversal of the trend noted in previous years. There has also been a decline to the tune of £42.75 million in the Bank's liability on account of acceptances, endorsements and guarantees (contra item) following the diminution of the Bank's foreign exchange business as a result of the restriction on imports. The changes on the assets side of the balance-sheet reflect the effect of the limitation on credit and the Government's funding operations. Thus, on the one hand, the Bank's loans and advances are lower by £32.12 million and British bills of exchange by £18.39 million. Acceptances, endorsements and guarantees have, as already noted, fallen by £42.75 million, raising the drop in the main forms of financing the private sector to £93.26 million. On the other hand, British Treasury Bills, which represent the financing of Government's expenditure, disclose an expansion of £28.30 million to £184.41 million and so also the investments in British Government securities which are higher by £47.34 million. In short, the total additional amount the Bank has lent to the Government during the year is £75.64 million. Thus, as against a contraction of £93.26 million in private financing there has been an expansion of £75.64 million in Government financing, which shows how far the Bank has followed with vigour the official policy of credit restriction. The Chairman's observations on the Bank's lending policy are noteworthy, as will be seen from the following extract from his statement to the shareholders:

"Our lending has, of course, been conducted in strict conformity with official policy. Substantial increases in advances to many industries essential to the well-being of the community have been considerably more than offset by reductions in other directions. With our large agricultural connections throughout the country and the urgent necessity for increasing the country's food production, we have been affording generous assistance to farmers and to agriculture's ancillary industries. The policy of credit restriction will, undoubtedly, have to be continued for some time and we cannot, therefore, look for any substantial expansion in what would normally be considered a banker's principal business."

The Bank's investments in British Government securities mature within 15 years, of which those maturing within 10 years constitute the major portion. The market value of these investments as on 31st December, 1952, was greater than that shown in the balance-sheet, that is, at or under cost and below redemption price.

INDIAN BANK LTD.

The working of the Indian Bank Ltd., Madras, during the year ended 31st December, 1952, resulted in a profit (subject to audit) of Rs. 14,17,700, which shows a drop of Rs. 2,63,900 from that of Rs. 16,81,500 for 1951. With the addition of Rs. 92,500 (Rs. 82,000) brought in from the previous year, the sum available for appropriation is Rs. 15,10,200, as against Rs. 17,63,500 in the previous year. The Directors have already paid an *ad-interim* dividend of 5 per cent. and a bonus of 1 per cent, (both free of income-tax) for the half-year ended 30th June, 1952, which are the same as those paid for the corresponding half-year of 1951. But this year's interim distribution absorbed a slightly higher sum at Rs. 3,23,000 (Rs. 3,18,000), on account of the increase in the Bank's paid-up capital. In April, 1952, it may be remembered, the Bank made a call of Rs. 5 each on its Rs. 75 and Rs. 50 partly paid-up shares. The Directors now propose to make a final distribution of a dividend of 5 per cent. and a bonus of 1 per cent. (both free of income-tax), thereby making a total distribution of 12 per cent. for the year. The distribution of this final dividend and bonus absorbs Rs. 3,33,000 (Rs. 3,18,000). The Directors have raised the provision for taxation from Rs. 2,60,000 to Rs. 3,90,000 and set aside a sum of Rs. 2,50,000 to the reserve fund which received nothing in the previous year, but reduced the addition to the sinking fund from Rs. 7,50,000 to Rs. 1,00,000 and that to the Bank's building account from Rs. 25,000 to Rs. 10,000, leaving to be carried forward Rs. 1,04,200 to the next year, as against Rs. 92,500 brought in.

The Osmania currency, familiarly known as *Hali Sicca*, will be demonetised in the Hyderabad State as from 1st April next. This does not mean that *Hali Sicca* will suddenly be withdrawn from circulation after that date. Complete withdrawal will be spread over a longer period. Thus it has been decided that its circulation might be allowed to continue for a certain period even after 1st April. But the Government will make all payments in Indian currency which will be legal tender in the State from the date of demonetisation of the *Hali* currency. Payments will, however, continue to be accepted in *Hali Sicca* also, the circulation of which in the State is estimated to be about Rs. 36 crores.

RESULTS OF HABIB BANK

PROFIT WELL MAINTAINED

IT is common knowledge now that 1952 was one of the worst years in the economic history of Pakistan. The economy of Pakistan being essentially an agricultural one, that country could not escape the severe shake-out brought about by the universal slump in commodity prices that emerged early last year. There was a marked fall in prices as well as in business turnover. In the circumstances, it should not be a matter for surprise if banks in Pakistan were to show a fall in their earnings. If, on the other hand, they have been able to increase their earnings, or even maintain them, it should be regarded as quite an achievement. The Habib Bank Ltd. (General Manager: Mr. Razak H. Mahomed, Karachi) belongs to this latter category of banks. The Bank's profit (before taxation) for the year, at Rs. 67.63 lakhs, constitutes a fresh record in the history of the Bank, representing a small increase of about Rs. 26,000 over that for the previous year. The Directors have had to raise the provision for taxation substantially, from Rs. 28 lakhs to Rs. 40 lakhs, but they have not provided anything to the reserve, which had received Rs. 15 lakhs in the previous year. As the Bank has already an impressive reserve fund Rs. 1 crore, equal to its paid-up capital, the absence of any addition to that account this year is not of much consequence. Moreover, the Directors could have easily added over Rs. 7.50 lakhs to the reserve fund if they had so desired, for the amount available for distribution was sufficient to permit such an addition. Instead, they have chosen to keep the undistributed surplus at a high level. The dividend has been maintained at the previous year's level of 20 per cent., to which it was raised from 10 per cent. paid for 1950 and 5½ per cent. for 1949. The Bank's dividend level, it may be noted here, is higher than the highest paid by any Scheduled Bank in India. The undistributed surplus to be carried forward to the next year, at Rs. 18.11 lakhs, is Rs. 7.63 lakhs more than the sum brought in.

The following comparative table gives the trend of the Bank's progress in the past three years:

(In lakhs of Pak rupees)

	For the year ended 31st December			
	1952	1951	1950	1949
Gross income	139.23	137.62	125.44	105.61
Interest paid	16.66	17.12	17.75	16.08
Expenses	52.67	50.82	49.64	41.25
Depreciation	2.28	2.31	3.76	1.09
Profit	67.63	67.37	54.29	48.24
Appropriations—				
Transfer to capital ..	..	..	..	20.00
Taxation	40.00	28.00	21.00	17.00
Transfer to reserve ..	..	15.00	17.50	7.50
Dividend	20.00	20.00	10.00	5.50
	(20%)	(20%)	(10%)	(5½%)
Carry forward	18.11	10.48	6.11	0.32

	As on 31st December			
	1952	1951	1950	1949
Capital	100.00	100.00	100.00	100.00
Reserve funds	100.00	100.00	50.00	32.50
Deposits	34,67.84	43,82.31	35,12.05	31,44.84
Advances and bills ..	7,72.56	11,45.20	8,99.65	5,19.05
Investments	20,24.89	23,11.41	22,81.81	23,54.88
Cash	9,82.81	13,33.76	6,95.90	8,13.07
Balance-sheet total ..	43,81.51	62,01.01	45,72.77	38,99.08
Ratio to deposits of—	%	%	%	%
Advances	22.3	26.1	25.6	16.5
Investments	58.5	52.7	63.5	74.9
Cash	28.4	30.4	19.6	16.3

As will be seen from the latter half of th table, there has been a sizable fall in th balance-sheet total, reflecting, as it does, the co traction in the Bank's turnover which is obviou ly the result of economic depression. The pr gressively upward trend in deposits in the pr vious years has been reversed during the ye under review, the exact decline during the ve being Rs. 9.24 crores or 21.1 per cent. In vie of the contraction in its resources, the Bank h been careful to restrict its advances to its clier which show a sizable fall over the year. Th advances and bills discounted have gone do by Rs. 3.72 crores to Rs. 7.73 crores, so that t ratio of advances to deposits is no more th 22.3 per cent. Such a low ratio is in distinct c trast to that of about 70 per cent. maintained banks in India. The Bank is usually noted its preference for a high liquidity ratio. T to this tradition, its investments and cash b a ratio of 86.9 per cent. to the deposits. Of total investments (shown in the orthodox m ner, namely, at cost or market value whiche is lower) amounting to Rs. 20.25 crores, Gove ment, Municipal and Trustee securities acco for Rs. 19.30 crores (as against Rs. 22.61 crore year before). Investments in shares of jo stock companies show an increase from Rs. 4 lakhs to Rs. 62.29 lakhs and those in bull from Rs. 9.27 lakhs to Rs. 32.09 lakhs.

N.B.—The rupees referred to in the foreg review are Pakistan rupees.

I.L.O. ON WORLD TEXTILE POSITION

NEED FOR RAISING CONSUMPTION IN UNDER-DEVELOPED COUNTRIES

LITTLE has yet been published about either the proceedings or the decisions of the Textile Committee of the International Labour Organisation, which met at Geneva on the 2nd inst. to survey the recent economic and social trends in the world textile industry. From the brief Press reports, however, it is gathered that the meeting was attended by workers', employers' and Government delegates from 23 member-countries, including India, the U.K., and the U.S. Japan, which is not a member of the Committee, was represented by observers. It would further appear that the problems that came up for particular examination at the meeting were those relating to guaranteed wages and female employment. The action taken by the Governments of the member-countries on the recommendations of the previous sessions was also reviewed.

The International Labour Office has, as usual, submitted to the meeting a report surveying the developments in the world textile industry and trade. The report has aroused little interest among the textile interests, whether in India or abroad. This is only to be expected, in view of the fact that much of the information contained in it has already been extensively covered in the report of the World Textile Conference held at Buxton (England) in September, 1952. Nevertheless, the report is notable for its emphasis on the consideration that the best hope for an expansion in world demand for textiles lies in raising the *per capita* consumption of cloth in the underdeveloped regions of the world.

This is a consideration which, as readers are aware, we have ourselves repeatedly stressed in recent months.

Thus, while reviewing the deliberations of the Buxton Conference, we observed—*vide* page 569 of *Commerce* dated 27th September, 1952—that the best course for securing expansion in world trade in textiles was to evolve measures, such as reduction in cost of production and aid to underdeveloped countries, for raising their living standards. The low consumption of textiles in the underdeveloped countries is largely a reflection of the "very low" purchasing power of the masses, on the one hand, and enormous rise in the price of cloth, on the other. The Continent of Asia, with over half the world's population, provides only a tenth of the world's income; the average *per capita* consumption of textile goods in the Asian countries is as low as 1.5 kilograms, as against 17.5 kilograms and 7.1 kilograms in the countries of North America and Europe, respectively. The price of cotton cloth quoted in the world market is to-day higher by as much as 500 per cent., on an average, as compared with those in 1938. In fact, it was 700 per cent. to 800 per cent. of the pre-war level during the immedaite post-Korean war boom.

The foregoing brief account will clearly reveal that, if incomes of people in the underdeveloped areas were increased and prices of textile goods lowered, the world demand for textiles could be considerably stepped up. Clearly, the fear that the scope for expansion in the demand for cloth is limited, frequently expressed by British millowners, is unfounded.

An Exaggeration

Some of the countries which were formerly importing textile goods, according to the report of the I.L.O. Textile Committee, have now become exporters and countries which had specialised in exporting textiles find their outlets dwindling, due to the appearance of new competitors. In this development, says the report, if there is any fall in demand, the first reaction is to increase protection for the domestic industries. This aggravates the situation so far as the exporting countries are concerned. There is some truth in this statement, but, in citing India as an example of this trend, the report makes the mistake of exaggerating a development, an error which is being blindly repeated by analysts of world trade in textiles. They all invariably fail correctly to assess the factors that have been responsible for the change in India's position in the world textile trade, as compared with the pre-war years. Before the war, India was not cut up into two. The quantity of cloth produced in undivided India then, as well as up to the Partition, was not sufficient fully to meet the domestic demand and, as such, imports of cloth were inevitable. The position, however, changed with the Partition of the country in August, 1947. Nearly a fourth of the aggregate area and population of undivided India now constitute Pakistan. Consequently, production of cloth in India has been more than the country's requirements on the basis, of course, of 12 yards *per capita*, and it is no wonder that India should have emerged as one of the world's leading exporters, though the relative increase in textile demand since the war and the fact that Japan was not an important factor in world textile markets were other contributory factors. On the other hand, that portion of pre-war India which now constitutes Pakistan still continues to import cloth, of which India's share is negligible. Even in the pre-war years, India had a sizable land-borne trade in cloth with foreign countries, besides a fair amount of exports by sea. So, the present position of the Indian sub-continent, including Pakistan, is not very much different from that in pre-war years. In fact, if allowance were made for the fall in *per capita* consumption of cloth in the Indian Union and Pakistan, it would be found that this sub-continent is still a net importer of cloth. It behoves international bodies such as the I.L.O. to take note of this fact and to cease from exaggerating India's emergence as an exporter of cloth; instead, they should view it in its proper perspective.

Re-equipment of Industry

The I.L.O. report is, however, right in saying that much of the equipment in use in the Indian cotton textile industry at present is old and needs replacement. It points to the danger of some surplus capacity arising from either a shortage of imported raw cotton or a fall in the high rate of exports. From the long-term point of view, however, the report holds out favourable prospects for the Indian textile industry. The home market will expand, following the rise in population and improvement in the standards of living. Further, the Indian industry has an advantage in being able to use relatively cheap short-staple varieties of local cotton. This advantage will avail the industry very little, if it does not modernise its equipment. Whether the industry is able to carry out technological improvements speedily enough will, of course, depend upon the Government's policy towards the industry. This policy leaves much to be desired. But the I.L.O. has, on its part, done well to emphasise the need for re-equipment on the part of the Indian textile industry.

Pattern of Development

The I.L.O. review of the world textile industry reveals that the number of spindles in Europe has fallen from 100 million in 1914 to 72.9 million in 1952 and from 31.5 million to 25.5 million in the U.S., while that in Asia has gone up from 10 million to 23.9 million. China, India and Japan are the main producers in Asia. China produces cloth mainly for the home market. Japan has traditionally played an important role in world exports of cotton textiles, silk and man-made fibres. Since Japan's exports to the neighbouring areas have declined, it has had to seek its markets in South-East Asia, Africa and other countries where Japanese exports have increased considerably. Pakistan is rapidly developing its own textile industry. At the time of the Partition, this country had 14 cotton mills, with a total of 165,684 spindles and 4,441 looms, producing about 10 per cent. of its requirements. By 1951, it had gone up to 336,810 spindles and 5,562 looms. It has fixed an ambitious target of 1,350,000 spindles to be reached by 1954-55.

Such, in brief, is the I.L.O. report on world textile industry. It is clear from this report that, whereas many countries which were formerly not reckoned as cloth producers are now textile producers, other countries, notably Pakistan, are making strenuous attempts at improving their cotton textile production. This means that, in the immediate future—that is,

THAT'S THE RATE AT WHICH
Firestone TYRES
ARE TESTED TO GIVE YOU GREATER SAFETY AND SERVICE

More then 25,000 passenger tyre test miles—a distance equivalent to the Earth's circumference at the Equator—are rolled off each day by Firestone's test fleet—to make tyres safer and longer wearing for you. On smooth highways, abrasive gravel roads, rutted dirt roads, tyres are tested at an average speed of 60 miles an hour, to get the performance records needed to make Firestone tyres a better buy in safety and long service.
These tests, supplementing laboratory findings, and the amazing record of 29 consecutive victories at the world famed Indianapolis Speedway, give further proof that Firestone represents "The Best Today—Still Better Tomorrow"

TEXTILE MACHINERY EXPORTS IN 1952

(From A Special Correspondent.)

MANCHESTER, *3rd February*

MANCHESTER LETTER

ACTION taken by the Liverpool Cotton Association to admit private limited companies to full membership has again focussed the attention of Lancashire traders on the raw cotton situation. Although the sponsors of the return to full free enterprise trading, including a futures market, are careful to stress that its reappearance is not an immediate possibility, it is obvious that they are taking steps to prepare the way ahead.

Faced with a resumption of private trading in a raw material which is still some six times dearer than it was before the war, the financial burden involved must be a distinct bar to progress. The new arrangement provides the means of entry for larger firms to participate in the futures market, and direct representation of spinning companies should follow.

It is increasingly clear that the current year will call for critical decisions to be made in connection with raw cotton policy which will have far-reaching implications. The experience of those spinning firms which contracted-out from the Raw Cotton Commission last September has already been closely studied. They have now had time to consider the pros and cons of contracting-out and the remainder of the spinning trade is pondering over its attitude towards this problem, which must be faced again this summer.

The general opinion is that the number of firms contracting-out from the Commission this year will be appreciably larger than in 1952, especially for American type cotton. Recent moves to assist the establishment of a spot market in non-sterling cotton provide the nucleus for an eventual return to trading in futures, but it is unlikely that anything as far-reaching as a full-scale restoration of free trading can be anticipated for some little time.

Trade Prospects

An "army" of 40,000 extra workers is needed to make good cotton's slump-time losses. To boost overseas textile sales by Lancashire, plans are being prepared in conjunction with the Board of Trade "*to try and* 'thaw' the export position." This was disclosed in a report to T.U.C. headquarters in London by Mr. Andrew Naesmith, General Secretary of the Amalgamated Weavers' Association. The weaving report is part of a progress dossier compiled by union chiefs in key North-West industries at the request of the T.U.C.'s production department. Mr. Naesmith says:

"During the past 10 weeks there has been a marked improvement in the productive activity of the textile industry. It is expected the revival will continue for some time as a result of demands for textile goods associated with the Coronation festivities and the clearing of the pipelines."

From 132,600 workers employed in weaving mills in December, 1951, the total had fallen by November, 1952, to 116,000. The same situation existed in spinning. Mr. Naesmith adds:

"The chief danger to the industry is caused by apprehension. Exports continue to lag, and there is no real solid basis of confidence to develop export markets because of the overwhelming problems of dollar-sterling exchange and balance of payments as between countries."

Unless Lancashire spinning mills can win back operatives who left the mills during the slump the industry will be in serious difficulty, warns Mr. A. C. C. Robertson, of Oldham, President of the Cardroom Workers' Amalgamation, in a report on spinning to the T.U.C. "Reasonably well employed" is the summing-up of Mr. A. Dawson, of Bury, District Secretary of the National Union of Dyers, Bleachers and Textile Workers, in a report on the textile finishing industry in the North-West. But workers engaged in the manufacture of mechanical cloth—machine clothing for the paper trade, printing and other industries—were experiencing "the worst period within memory."

In the North-West clothing industry there has been an improvement in all sections, says Miss Lily Hodson, Area Organiser of the National Union of Tailors and Garment Workers, in another report. She says: "On the raincoat side many employers are now seeking more labour and the heavy clothing section employers state that they too are in a position to take on more labour." Some factories were keen to train juvenile workers.

Productive Power

An industry which is adept at improvisation stands the best chance of survival at a time of severe competition, and it is along these lines that Lancashire men are thinking seriously at the moment. Since the war a good deal of improvisation has taken place in the mill towns, first because of labour shortages and later when raw cotton supplies in the United States failed to materialise.

In the first nine months of last year the number of workers on the books of spinning firms fell by 22,000 and although a small, steady drift back to the industry took place in the final quarter of the year, the net loss is about 15 per cent. of the total labour force, Mr. Alfred Roberts, Secretary of the Cardroom Workers' Amalgamation, has estimated that on the basis of the peak weekly production of around 22,500,000 lbs. in 1951, the highest figure which could be reached with the numbers now available would be some 19,000,000 lbs., a loss of 3,500,000 lbs. weekly.

In practice, however, the loss is likely to be much greater. Workers have not left the industry in an orderly sequence and keymen have disappeared, thereby severely unbalancing output in many mills, and reducing the potential productive capacity to an even larger extent. Labour, it is clear, will provide the dominant problem for some time to come.

After the war, when the industry was reviving on a floodtide of success, it was not difficult to obtain recruits from Continental countries, Ireland and from other industries in Britain. The much publicised slump last year created a lack of confidence which has by no means been dispersed, and the necessity of maintaining research into methods of redeployment is paramount. In this connection, the special conference called for later this month by the Cotton Board to discuss the wide implications of two-shift working assumes even greater significance.

Cotton and rayon cloth production in 1952 was only 77.4 per cent. of the total in the previous year, being 2,291,740,000 linear yards. Latest recruitment gains, according to the Cotton Board, have brought the industry's manpower total above 273,000, but the necessity of increasing productivity is still self-evident.

Plant Sales Record

By a small margin textile machinery exports last year topped the £50,000,000-mark for the first time, and the quantity of plant shipped abroad was the highest since 1929. This was the result of a year in which machinery manufacturers found progress in selling their products increasingly difficult. Redundancy in the works clouded the activity of earlier months.

Total shipments of 2,253,795 cwts. compared with 2,100,837 cwts. in 1951, the respective values being £50,446,766 and £43,646,652. The increase in volume came almost entirely from exports of spinning plant, which rose from 1,121,647 cwts. to 1,297,872 cwts. Weaving machine exports fell from 361,556 cwts. to 358,609 cwts.

India kept her place as the chief buyer of British textile plant, taking 395,244 cwts., against 304,501 cwts., and other important customers were Brazil with 265,138 cwts., Italy 224,922 cwts. and Pakistan 214,480 cwts. A feature of the year was the increased number of countries to which plant was sent, no fewer than 30 taking more than 10,000 cwts.

Imports of textile plant were curtailed last year. Arrivals totalled 133,864 cwts. against 147,390 cwts. in 1951, at a cost of £5,759,694 against £6,198,340. Most of the machinery bought abroad was for hosiery and knitting and the chief suppliers were the United States, Switzerland and Germany.

More Shift Work

Housewives' evening shifts have been introduced again at some cotton mills to cope with urgent orders, an employers' association covering 180 Lancashire cotton mills announced this week.

The Bolton Master Cotton Spinners' Association said in its Annual Report: "Since July there has been a continuous upward trend and activity is now about 85 per cent. of the 1951 figures. The flow of labour away from the industry in the early months of the year has been reversed and operatives are returning to their usual places of employment."

Raw Cotton Imports

Imports into the United Kingdom last week aggregated 16,856 bales, comprising 4,800 bales Mexican, 4,101 bales West African, 3,931 bales American, 1,700 bales Pakistan, 1,199 bales East African, 700 bales Sudan and 525 bales Indian.—*All Rights Reserved.*

PROCEEDINGS OF THE INDIAN CENTRAL COTTON COMMITTEE

EMPHASIS LAID ON BOTH QUALITY AND QUANTITY OF OUTPUT

ALTHOUGH India has made significant progress in cotton cultivation since the Partition of the country, there is still a long leeway to be made up before this country could attain complete self-sufficiency in cotton. It was, therefore, inevitable that the Indian Central Cotton Committee should still be found devoting its attention to the quantitative improvement in cotton production. Even at the recent meetings of the Committee, held last week in Bombay, the main subjects which figured prominently in the discussions were those that are connected with the increase in cotton output. But the Committee did not, of course, ignore the importance of quality of cotton, for it sanctioned several schemes which are designed to promote the cultivation of superior styles of cotton.

Both Dr. Punjabrao S. Deshmukh, Union Minister for Agriculture and Mr. K. R. Damle, Vice-President, Indian Council of Agricultural Research, emphasised the need for increasing the output of cotton. Dr. Deshmukh pointed out that, out of the fixed target of additional production of 1,258,000 bales of cotton over the production in 1950-51, the country has so far succeeded in producing an additional quantity of about 200,000 bales or 300,000 bales. The rest had to be achieved during the three years ending 1955-56. He drew pointed attention to the fact that, although India was the second most important cotton growing country in the world, it produced only 9 per cent. of the world's output of cotton, while India's acreage was about 20 per cent. of the world's acreage under cotton. This discrepancy between India's share in world's acreage under cotton and its share of the world's cotton production is, of course, due to the fact that India's per-acre yield is very low. Thus, the yield of cotton in India ranges from 60 to 90 lbs. per acre in rain-fed areas and 180 to 200 lbs. per acre in the irrigated areas, as against 267 lbs. in the U.S. and 390 lbs. in Egypt. Dr. Deshmukh suggested that future increases in cotton cultivation should be achieved mainly through intensive cultivation since a stage had now been reached when "further diversion of acreage from foodgrains to cotton will have a serious effect on the country's food supply."

Cotton Extension Work

Mr. Damle struck the same note of warning against diversion of land from food to cotton when he reminded the members how the Committee had, at its last meeting, arrived at the conclusion that such diversion would have a "serious repercussion on the country's food supplies." Reviewing the cotton extension work, which is being carried on under the supervision of the Government of India, he said:

"The cotton extension work is now in its third year. The target of additional production fixed for 1950-51 was about 600,000 bales and that for 1951-52 was 700,000 bales. Unfortunately, these targets have not been achieved on account of unfavourable seasonal conditions. The shortfall in 1951-52 would have been even greater had it not been for the exceptionally good conditions in Madhya Pradesh and Hyderabad. For the year 1952-53, we had planned for a production of 3,900,000 bales in the hope that the normal monsoon rains would be available. Conditions have, however, again been unfavourable in Uttar Pradesh, Madras, Madhya Bharat, Rajasthan, Hyderabad, Mysore, Madhya Pradesh, and West Bengal and the current season's production will probably be lower by 500,000 bales, as compared with the actual crop in the previous year."

The increase in cotton production, it was, of course, recognised, should be attempted without sacrificing quality. Indeed, Dr. Deshmukh emphasised that "in the years to come, the accent should be on quality rather than on quantity." He pointed out how about 55 per cent. of the total cotton area was under improved varieties of cotton as compared with only 13 per cent. in the pre-war period. He hoped that, if part of the three to four million acres of land which would be irrigated at the completion of the Five-year Plan were made available for superior varieties of cotton in the normal rotation of crops, the "day of India's self-sufficiency in respect of East Indian cotton could not be far off." He envisaged, for purposes of improving the quality of cotton, a steady expansion of the area under improved varieties of cotton, more intensive manuring in the irrigated cotton tracts and provision of irrigation, for about three million acres to enable irrigated cotton to be grown.

The entire question of increasing the cotton output has, ere now, been considered by the Indian Central Cotton Committee. The Committee has already emphasised the importance of a five-point drive towards the quantitative and qualitative improvement in cotton. The Committee's suggestions are: (1) Extension of the cultivation of improved varieties to all areas where they are not at present grown; (2) adoption of adequate plant protection measures; (3) manuring of cotton land; (4) provision of irrigation facilities for an additional three million acres by constructing minor irrigation works or by such other methods as are feasible; (5) provision of fertilisers and grant of necessary funds to agricultural classes for securing these facilities.

The Committee discussed, at its last week's meeting, the problem of planned production of cotton and the target for 1953-54 with special emphasis on quality. It was hoped that, in the absence of unfavourable weather conditions, the Planning Commission's target of increased production would be achieved. This target, it may be mentioned here, is 4,220,000 bales to be reached before 1955-56. The Committee decided that a comprehensive note comprising information on varieties of cotton grown in the country and the types of cotton required for consumption by the mill and handloom industries, with particular reference to the future trend of market demands, should be prepared for consideration at the next meeting of the Committee.

Fertilisers for Cotton

The question of manuring cotton lands is not, of course, a new one. It had been discussed even at the last meeting of the Committee, held in March. The fertiliser position, as Dr. Deshmukh pointed out, is easier now. But the offtake is less than the allotted quotas. It would appear that the Committee had requested the State Governments to find out the reasons for the poor offtake of sulphate of ammonia. Different explanations have been offered to explain the low offtake of fertilisers. The primary reason, however, seems to be that the use of fertilisers is profitable only in irrigated tracts and in areas which have an assured rainfall. If a piece of cotton land, to which manure has been applied, does not receive adequate water supply (whether through rain or irrigation sources), the succeeding cotton crop becomes adversely affected. Thus, the application of manure carries an element of risk. It must, however, be pointed out that the poor offtake of fertilisers is not wholly due to this reason. Perhaps, the late receipt of fertilisers is an important reason. Clearly, it is the Government's duty to make ammonium sulphate available to the farmers promptly enough in order to enable them to make the fullest use of this fertiliser. There is also a case, as the Agricultural Research Sub-Committee of the Indian Central Cotton Committee suggested, for reducing the price of fertiliser in order to make it more attractive to cotton growers.

Development Schemes

The progress of the various development schemes, which are under the continuous supervision of the Committee, was also reviewed by the Committee. The Agricultural Research Sub-Committee of the Committee divided itself into four sectional sub-committees which examined in detail the progress reports of the schemes financed by the Committee, proposals for new schemes and extensions of some of the old schemes. The recommendations of the sub-committees were later considered by the Indian Central Cotton Committee. Thus, the Committee approved the Cotton Forecast Sub-Committee's proposals for crop estimating surveys on cotton in the States of Hyderabad and Madhya Bharat for one year. The interim report of the Director, Technological Laboratory, for the six months ended November, 1952, and the progress report on the scheme for improvement of cotton ginning were considered and approved. The Committee sanctioned a scheme for investigating the production and utilisation of ramie fibre. It also approved schemes for multiplication and distribution of 320F American cotton in Ferozepore, Ludhiana, Jullundur and Amritsar districts of the Punjab State, for cotton strains K2, Madras Uganda-I and Madras Uganda-II, and Rayalaseema I in Madras State, and Vijay cotton in Middle Gujerat in Bombay State. A scheme for gradual substitution of *Jarilla*, which is susceptible to late rains, by a new variety in Madhya Pradesh received the Committee's approval. It would appear that the new variety, "Virnar", is also spreading in parts of Madhya Pradesh, because the farmers are convinced of the superior quality of this new variety.

New Cotton Strains

An important scheme, which has received the sanction of the Committee, is the one which relates to the evolution of a new strain of cotton through crossing *Deshi* cotton with American cotton. The breeding of *Deshi* and American cottons results, it is stated, in a promising new strain which is capable of spinning 50s or even 60s. The seeds of these new styles of cotton have been distributed to several States to find out which of the new varieties finds a hospitable climate and soil in each State.

Another scheme, which deserves special mention, is a five-year scheme for evolving a new strain of cotton by crossing American cotton with the Sea Island type. It may be mentioned, in this connection, that the Sea Island variety of cotton has the reputation of possessing the largest staple among all varieties of cotton grown in the world. But its output is only a few thousand bales. By crossing American and Sea Island cotton it is hoped to evolve a new strain which will be equivalent to the long-stapled Egyptian cottons. This is an important piece of research, inasmuch as all previous attempts at growing Egyptian cotton in India have invariably ended in complete failure. If the new research scheme for evolving a new variety, even roughly equivalent to the Egyptian styles, were to become successful, then this country would be assured of ample supply of long-stapled varieties of cotton, provided, of course, the new strain is extended from the laboratory to the fields. Research on crossing American with Sea Island has already yielded some promising results, though the results are still in a tentative stage. It is hoped that the five-year research scheme, which has now been sanctioned, will both confirm and improve the research already done in this field.

Sales Tax

Finally, the Committee did well to pass a resolution affirming the need for exempting cotton from sales tax. The resolution said:

"The Indian Central Cotton Committee recommends to the Central and State Governments that cotton should be exempted from the sales tax for the following reasons:

(i) Cotton has been declared an 'essential article, under the Central Government's Essential Goods (Tax on Sale) Act,

(ii) tax on cotton will adversely affect the return to the cotton grower, and thereby greatly retard the expansion of cotton production in the country, and

(iii) yarn and cloth manufactured from cotton are already taxed, and, therefore, the taxing of raw cotton is tantamount to double taxation."

Whatever may be the reasons which prompted the State Governments to impose a sales tax on cotton, there is no doubt that, in the rapidly changing conditions in the sphere of cotton and cotton textiles, not only in the domestic but also in the international field, there is a real and urgent need to consider the question *de novo*. It is unwise to subject an international commodity, such as cotton, to special imposts. But what renders this impost particularly reprehensible is the fact that it has not even the merit of being uniform throughout the country.

EGYPTIAN COTTON

Research is being conducted in Egypt, it is stated, with a view to evolving new varieties of cotton with greater strength and fineness. The experiments are expected to take another 10 years before the new varieties become finally established. The names of the new substitutes are Guiza 51, 56, 58 and 60.

Two changes have been made announced by the Egyptian Government in its cotton export policy: (1) The price of Ashmouni will now be only 5 per cent. above the preceding day's closing price of New York cotton, instead of 10 per cent. till now; (2) Egyptian cotton must be paid in 25 per cent. dollars or sterling and 75 per cent. Egyptian currency or goods. Formerly, the Government insisted on a 50-50 ratio (50 per cent. in dollars or sterling and 50 per cent. Egyptian currency).

A three-member goodwill mission from Egypt is now in the U.K., holding talks with the textile leaders in that country. Egypt seeks to increase its exports of raw cotton to the U.K., which took only 42,000 bales in 1952, as against 197,000 bales in 1951.

The Government of India has decided to permit persons holding export quotas of Mathias, Kalagins and Dhollars, Central India, C.P. I and II and Oomra *Deshi* cotton to export Bengal *Deshi* cotton instead to the extent of half such quotas. The Government, it may be recalled, announced in October, 1952, export quotas of cotton of 50,000 bales of Mathias, Kalagins and Dhollars and 50,000 bales of Central India, C.P. I and II and Oomra *Deshi*.

THE
CHARTERED BANK OF INDIA, AUSTRALIA AND CHINA
(Incorporated in England by Royal Charter, 1853)
(Liability of Shareholders Limited)
Capital (Paid-up) - £3,000,000
Reserve Fund - - £4,000,000
Branches throughout India, Pakistan and the East
AFFILIATED BANK IN INDIA & PAKISTAN:
THE ALLAHABAD BANK LTD., with over 70 offices in India & Pakistan.
The Bank offers a complete Overseas Banking Service and provides exceptional facilities for financing every description of trade with the East.
Deposits for Fixed Periods or repayable at call or at short notice are received at rates which may be ascertained on application.
The Bank's London Office undertakes Trusteeships and Executorships.
Head Office:
38, BISHOPSGATE, LONDON, E.C. 2
Branch: 28 Charles II St., Haymarket, London S.W.1.
Manchester Branch: 52 Mosley Street.

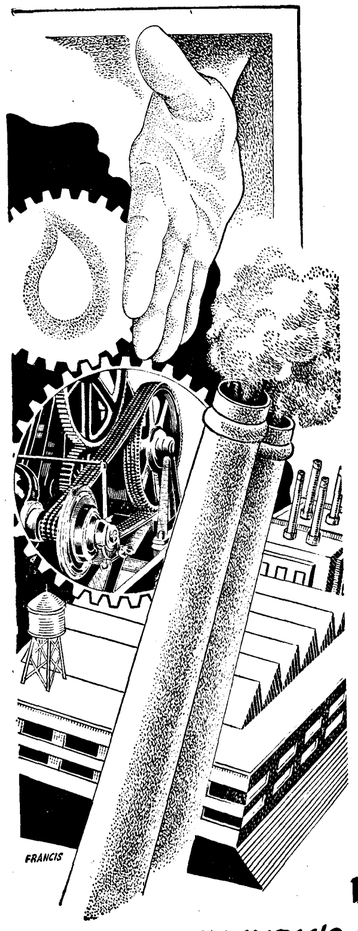
BARKIS IS WILLIN'
SO IS BURMAH-SHELL



Very willing indeed to give you advice on the economics and application of oil firing for all heating purposes. If you are at all doubtful about whether oil firing can be applied in your factory or whether it is going to cost more than solid fuel, consult Burmah-Shell. We won't lead you up the garden path; if it's going to be more expensive, we'll come clean and tell you so.
Our advice is free—and this is one of the rare occasions, so we have been told by many a pleased factory management of obtaining something worth-while free of charge.
BURMAH-SHELL ...

SUGAR INDUSTRY IN PAKISTAN

SIX NEW FACTORIES PLANNED

A SCHEME for the establishment of six sugar factories, which has been under the consideration of the Government of Pakistan for some time past, is now being finalised. The details of location, capacity, etc., of these factories are not known. According to information so far available, the Pakistan Government has learned from the experiences of India and is not going to repeat the mistake of U.P. and Bihar where factories have been allowed to spring up without having their own sugarcane farms. We are told that each one of the proposed factories will be allotted sufficient land on which it can grow its requirements of sugarcane, an advantage which has greatly contributed to the sustained progress of the sugar industry in the Deccan. A start with the implementation of the scheme will be made in the Punjab. The West Punjab Government has planned to set up, with the co-operation of the Centre, a sugar factory in the Thal development area.

When all the six new factories are established, Pakistan will become almost self-sufficient in sugar. At present, Pakistan is deficit in this commodity to a very considerable extent. The aggregate production of sugar is of the order of a little over 43,000 tons per annum, as against the country's requirements—on the basis of a per capita consumption of 7 lbs.—of about 265,000 tons. In other words, the indigenous industry is meeting the country's demand to the extent of only 16 per cent. The wide gap between its production and its requirements has compelled Pakistan to import considerable quantities of sugar, spending, every year, foreign exchange—mostly dollars—to the tune of Rs. 8 crores. During the past five years, imports of sugar into Pakistan aggregated 700,000 tons, of the value of Rs. 42 crores. In 1951 alone, its imports amounted to 197,000 tons, and in 1952, 112,771 tons.

With a view to achieving self-sufficiency in sugar, and thereby saving foreign exchange, efforts are being made by both the Governments—Central and Provincial—and the sugar interests to expand the size of the sugar industry through the addition of new units and expansion of the existing ones. This was one of the questions which was discussed by the Pakistan Industrial Advisory Committee for Food Industries. The Committee recently recommended to the Government of Pakistan—this recommendation has since been accepted—the setting up, during the next five years, of 10 more sugar-producing units, each with a daily cane-crushing capacity of 800-1,500 tons. The scheme for establishing six new sugar factories, now being finalised, as stated at the outset, is the first stage in the implementation of the recommendation.

Present Position

There are, at present, eight sugar factories in Pakistan, with an aggregate daily cane-crushing capacity of nearly 8,900 tons. Of these, four are in East Bengal and two each in the Punjab and the N.W.F.P. The biggest of these is the Premier Sugar Mills at Mardan, in the N.W.F.P., which commenced production on 19th December, 1950. The factory, it is claimed, has a rated cane-crushing capacity of 500,000 tons per annum, yielding about 50,000 tons of sugar. The capacity is expected to be increased, by 1954-55, to one million tons of cane, yielding 100,000 tons of sugar.

The progress of the sugar industry in Pakistan during the three years, 1948-49 to 1950-51, is indicated in the table below:

		1950-51	1949-50	1948-49
No. of factories		8	4	4
Production of sugar ..	.. (tons)	43,365	23,284	31,756
Cane crushed	.. (tons)	533,394	286,358	353,052
Recovery per cent. sugar		8.13	8.13	8.71
Average No. of days worked		98	..	..
Area under sugarcane	(000 acres)	700*	754	714
Yield of sugarcane ..	.. (tons)	874,000	1,039,000	1,017,000

* Figures include the area damaged or destroyed by excessive rains and heavy floods in the Punjab in September, 1950.

From the foregoing table, it will be seen that there has been a fall both in the yield of sugarcane and in the area under cane. This is attributed to unfavourable weather conditions prevailing throughout Pakistan at the time of planting. The final forecast of the sugarcane crop for the 1951-52 sugar season, however, places the area and the yield alike higher at 725,000 acres and 892,000 tons, respectively, which represent an increase of 3.6 per cent. and 2.0 per cent., respectively, as compared with the previous season. The increase in yield is thus less than proportionate to the rise in acreage, which indicates that the trend of average yield per acre must have been downwards. This means that adequate attention is not being paid to intensify cultivation of sugarcane.

The rise in sugar output during the past two years has resulted in the production of a large quantity of molasses, an important by-product of the sugar industry. But the quantity which is being actually used is very small. The only plant manufacturing industrial alcohol in Pakistan is at Darsana (East Pakistan). Another plant at the Takht Bhai Sugar Factory in the N.W.F.P. is nearing completion. In view of the schemes for expanding the production of sugar, erection of additional plants for power alcohol also is being contemplated.

FESTIVAL HOLIDAYS FOR SUGAR LABOUR

The U.P. Government has, under the U.P. Industrial Disputes Act, 1947, ordered all the vacuum-pan sugar factories in the State to allow 17 festival holidays with pay to their workmen, notwithstanding anything contained in the standing orders. "Wage" means the consolidated wage, exclusive of any overtime earnings and bonus, for the full day immediately preceding the festival holiday or holidays. If any factory was, in the calendar year 1947, allowing a larger number of holidays than that fixed, such number shall, it is clearly stated, not be decreased, but the remainder shall be specified by the factory at the commencement of the calendar year in consultation with, and with the consent of, the Regional Conciliation Officer of the area concerned. The contravention of the order, it is warned, will entail punishment with imprisonment extending up to three years or fine or both. The order will remain in force for a period of one year.

The principle of giving workers in the organised industries holidays with pay first came into prominence in India in 1940, that is, when it was approved by the first Conference of Labour Ministers convened by the Government of India. The details of the legislation necessary to give effect to this decision were discussed with the representatives of the Provincial (now State) Governments at two subsequent sessions, in 1941 and 1942, and with representatives of employers and workers at two meetings held in January, 1941 and January, 1942, respectively. The Factories (Amendment) Act (III) of 1945—which came into effect on 1st January, 1946—was a sequel to these developments. The section pertaining to holidays with pay in this Act, however, related only to workers employed in the perennial factories. Being a seasonal industry, the sugar industry could not come under the purview of the section. The lacuna was, however, filled by the U.P. Government and a specific clause providing for festival holidays with pay to workers in sugar factories was included in the Industrial Disputes Act, 1947.

REORGANISATION OF SUGAR INDUSTRY IN U.P.

The proposal for appointing a committee to examine the scheme for reorganising the sugar industry in Uttar Pradesh has been dropped by the U.P. Government. Instead, the scheme will be examined by a Government expert. The proposal, it will be recalled, was mooted at the U.P. Sugar Industry Tripartite Conference held at Naini Tal in September last. But it could not be given effect to immediately, owing to differences over the participation and nomination of labour representatives. The U.P. Government has, therefore, been compelled—according to its own Press Note issued recently—to take upon itself the responsibility of examining the standardisation scheme for the sugar industry. The industry has agreed to pay for the enquiry in the selected factories; a part of the funds has already been remitted to the Government.

The enquiry is to be held in two stages. First, the Government will depute consultants on this work "immediately" and direct its expert to keep in touch with the progress of these investigations. These will subsequently be examined by the expert, who will be called upon to submit detailed recommendations. The Government is anxious to finish the enquiry as quickly as possible. Needless to say that this will depend on the extent to which workers and managements are prepared to co-operate with the Government.

SALES TAX ON KHANDSARI

The Government of Uttar Pradesh has decided to impose sales tax on khandsari sugar and jaggery powder. These are at present exempt from sales tax, on the ground that they are "essential food commodities." This decision has evoked wide protest from the trade. The U.P. Gur and Khandsari Association has urged the Government to reconsider its decision and exempt them from the tax, as its incidence is high and involves hardship to the trade. According to the Association, the greatest difficulty is that, since a large percentage of khandsari sugar is exported outside the State, the tax will actually be realisable only from a fraction of the produce meant for internal consumption, the rest being exempt under the provisions of the Constitution. But all the same the entire industry, which is carried on in villages and cities on a small scale, will have to keep accounts.

COAL IN BIHAR

INCREASE IN CESS CONTEMPLATED

THE Government of Bihar is said to have sought the approval of the Government of India to enhance the cess on coal to As. 3-6 for every ton of coal despatched from the State. This is a bolt from the blue to the coal industry. That the Bihar Government should think of such a proposal, when the industry is faced with rising costs and statutorily fixed selling prices which have made the working of a number of mines uneconomical, is an instance to show how some of the Governments in this country are completely unmindful of the difficulties of industries and are concerned only with the task of augmenting their revenue. It was only some three weeks ago that the coal industry pleaded with the Central Ministry of Production to relieve it of the crushing burdens and thus avert the crisis it was heading for. The Bihar Government could not have chosen a worse time for mulcting something more from the coal industry. In proposing an increase in the cess on coal, the Government of Bihar has disregarded the interests of consumers whose purchasing power is day by day contracting. If a proportionate increase in the statutory selling prices of coal is not given, the adverse effects of such a levy on the industry will be perceptible. If the statutory selling prices were to be increased in addition to the relief for which the industry has been pleading with the Central Government, the cost of coal to consumers would go up to such an extent as to occasion a rise in the prices of other commodities.

The cess of As. 3-6 is sought by the Bihar Government under the Bihar Cess (Amendment) Act, 1952. It will be recalled that this Act was brought into force on 1st April, 1952. The Act authorises the State Government to levy a cess, through Local Boards in Bihar, at a rate not exceeding As. 4-6 per ton of annual despatches of coal and coke. But the actual rate of cess now in force is very much lower than this figure and varies from district to district. The Indian Mining Association was asked by the Government of Bihar in April last for suggestions as to the rates at which the various local cesses should be fixed under the Act. The Association examined the finances of the Local Boards concerned—Manbhum District Board, the Hazaribagh District Board and the Hazaribagh Mines Board—and concluded that the cess should be levied at a rate which would allow each Board to cover its previous average annual expenditure and leave a small surplus in hand. Accordingly, it recommended that the rates should be as follows (per ton of aggregate annual despatches):

1. Manbhum District Board—As. 1-2.
2. Hazaribagh District Board—As. 1-6.
3. Hazaribagh Mines Board—As. 1-2.

A jump from these rates to As. 3-6 is indeed unduly high. It behoves the Central Government, therefore, to critically examine the proposal of the Bihar Government and fix the cess at a rate which would not impair the finances of the collieries concerned. Any such cess should be within the capacity of the collieries to pay and should not lead to a sharp rise in selling prices. It is common knowledge that any marked rise in the statutory selling prices of coal will adversely affect all those industries in the cost of production of which coal figures prominently and will either give rise to a fresh wave of rising prices or accentuate the existing depression in industries.

COAL STATISTICS FOR DECEMBER 1952

Eight coke plants and 812 collieries worked during the month of December, 1952. On an average, 334,817 persons were employed daily and 8,565,927 man-shifts were worked. The overall percentage of absenteeism was 12.22. The output per man-shift for miners and loaders was 1.10 tons, for all persons employed in underground and open-workings 0.50 and for all persons employed 0.37. As much as 3,225,814 tons of coal were produced during the month under review. Besides 123,605 tons of soft coke, 184,614 tons of hard coke and 12,939 tons of other kinds of coke were manufactured. Despatches accounted for 2,745,730 tons of coal, 123,754 tons of soft coke, 39,842 tons of hard coke and 4,678 tons of other kinds of coke. The coal stocks at the collieries on the last day of the month were reported to be 3,019,795 tons.

The Government of India has announced the personnel of the eight-man Committee to examine and report on the problems relating to the establishment of coal washeries in India. Besides the Chairman, Mr. J. N. Mukherjee, the Committee consists of Messrs. S. C. Ghosh, P. N. Evans, S. W. Willett, M. V. Kanlani, H. M. N. Nandy and S. Mukherjee and the Director of the Fuel Research Institute, Dhanbad or his nominee. Mr. S. Mukherjee will act as member-Secretary to the Committee. The Committee is expected to submit its final report to the Government by March next.

NATIONALISATION OF AIR TRANSPORT

A PLEA FOR FAIR PLAY

(By "RUDDERBAR")

WHATEVER views are held on the desirability or otherwise of nationalising our air transport, nearly all will agree that fair compensation should be paid to private companies which have, over the past seven years, built up a fine service on a wide network of routes. It is, of course, easy to express such views but rather more difficult to determine the nature of compensation which would satisfy all parties, the companies, their shareholders, the public and the Government, as being just and equitable.

The bulk of the aircraft held by the various domestic operators is the Douglas Dakota and it follows that the bulk of stores, spare engines and equipment is for this type of aircraft. These aircraft were purchased originally from war surplus at an average cost of Rs. 80,000 each. Subsequent complete overhaul and conversion to passenger accommodation cost, on an average, a further Rs. 80,000, bringing the final outlay to an average, of Rs. 1,60,000 per aircraft.

All aircraft in use have been annually overhauled at an average cost of Rs. 50,000 per aircraft per year. Thus, the aircraft are continuously maintained and overhauled so as to keep them in perfect order. Quite apart from running maintenance, which is a costly item, the original cost of the aircraft plus six annual overhauls, will amount to some Rs. 4,60,000 to-day. It will be seen that the determination of depreciation of these aircraft should not, then, be on the basis of deterioration. They are substantially, from that point of view, as good as they were on first purchase. The determining factors should be the remaining life and the world market value.

It is not easy to assess the length of life remaining, because various factors have to be considered, as, for example, the increasing cost of annual overhaul as the years go by and the economic and competitive pressure occasioned by faster and more economical aircraft coming into the market. Without going into many details which would weary the layman, it is, and can be accepted as a statement of fact that the Dakotas at present in operation in India are good for another five to six years.

To corroborate this statement and as an additional yardstick to assess their value, world market prices must be considered. Here again it is not easy to obtain firm figures, but, so far as can be ascertained, the value of a converted Dakota with a full-term Certificate of Airworthiness, is to-day $80,000 in the United States and £23,500 in Europe. In Indian currency this amounts to Rs. 3,80,000 in the first instance and Rs. 3,13,000 in the second. In other words, it will be seen that the price of the aircraft has considerably appreciated since 1945-46, except in India, where there is still a surplus of such aircraft owing to the fact that no exports from India have been permitted.

On the one hand, then, we may assess the depreciated value of the aircraft in India, taking into consideration that it has completed approximately half of its useful life, as Rs. 80,000 or half the original cost. On the other hand, since it is within the power of Government, who is the purchasing party, to export and sell a number of these aircraft which will, in any case, be surplus when the single Corporation is formed, the world market value must also be taken into consideration.

It would not be unfair then to suggest that an average value of Rs. 1,60,000 be placed on each Dakota. The average value is given advisedly, because each aircraft will necessarily be of more or less value, in accordance with the stage of currency of its Certificate of Airworthiness. Using the same formula, the value of all other types of aircraft at present in operation, such as Skymasters and Vikings, can also be assessed.

Turning to spare engines, which cost originally an average of Rs. 31,000 each from war surplus supplies, the rate of depreciation can be determined more readily. An engine of the particular type mounted in Dakota aircraft runs for 800 hours between complete overhauls. Each complete overhaul costs, or has cost in the past, between Rs. 20,000 and Rs. 10,000. What the future costs will be is not predictable, because, as the life of the engine lengthens, the necessity to replace major components at each overhaul increases. The life of an engine is, therefore, more limited than the life of an aircraft. It would be fair then to assess annual depreciation at 15 per cent. and to add thereto an average value of Rs. 10,000 for a newly overhauled engine. From the sum thus arrived at should be deducted Rs. 12 for each hour that the engine has run since its last complete overhaul.

The stores and spare parts held by each company are of very considerable value. These stores are for the most part new. Taking into consideration, however, that a certain proportion are reconditioned but serviceable spares, it would not be unfair to take over the complete stores of each company at book value less 20%.

There remain such assets as workshop equipment, motor vehicles, office furniture and buildings. In these cases, it would be equitable to pay compensation at the written-down value on the income-tax system, with the proviso that companies may, if they so prefer, sell such non-specialised assets in the open market.

So much for the physical assets but what of the imponderables? Most of the air companies have been operating for upwards of six years. With the exception of one or two companies, they have made heavy losses. In an earlier article, this writer has shown that these losses were very largely due to Government's policy towards air transport. For example, the Air Transport Licensing Board issued route licences to far more companies than could, by any stretch of the imagination, operate with financial success on the meagre route mileage available, thus creating unnecessary, undesirable and most wasteful competition. The issue of licences was a matter entirely under Government control and the resulting situation should certainly have been foreseen. Another potent factor is the tax of 15 annas 9 pies on each gallon of aviation spirit. This is and has been a crushing burden on the air transport industry.

Had affairs been allowed to take their normal course, the weaker companies would have been eliminated by the inexorable law of economics and, indeed, this has already been the fate of a number of companies during the past four years. Government, however, has shown a nice sense of timing. Costs have been steadily rising and particularly in respect of petrol; traffic over the past year has shown a steep decline, owing to trade depression and lack of purchasing power in the country as a whole; fleets are becoming obsolescent and replacement by new aircraft cannot be stalled off indefinitely; probably no company made a profit for the year 1952. This was Government's obvious opportunity to catch the industry off balance and to nationalise it with the least possible resistance or financial outlay. It cannot, however, be said that the Government, by acquiring the physical assets of the industry, even at a fair price, has fully discharged its debt. The traffic, both passenger and freight, for which the air routes now cater has not been engendered by some bureaucratic formula. It is the result of six to seven years of hard work, of safe and efficient operation in difficult circumstances and with indifferent operational aids, by the private companies. It has meant to them, in nearly all cases, financial losses but losses which would, in the normal course of events, have been recouped in years to come.

Quite clearly, here is a case where compensation for goodwill is not only desirable but just. How such compensation should be assessed is a matter of opinion and it is suggested here that, in the case of losses, a fair proportion of these should be capitalised and, in the one or two cases, where profits have been systematically made over a period of not less than four years, the company should be recompensed by a sum totalling an average of four years' profits or an average of profits over the remaining years of its Route Term Licence, whichever is less. Such capitalisation of losses or compensation for goodwill would, on its return to the shareholders, undoubtedly find its way back into some other industry, thus serving national interests as a whole.

Whether the above or some other formula is chosen, there can be little doubt that compensation is rightly due to the industry for the goodwill created and the traffic engendered, which the nationalised Corporation will inherit.

It is not yet known with certainty how the Government will compensate the airline companies, but it is understood that present proposals are as follows:

In the case of aircraft, the original cost less 18 per cent. depreciation per annum on written-down values. It is interesting to note that an aircraft purchased in 1946 would thus fetch Rs. 78,000. In the case of engines, the original cost less 24 per cent. per annum on written-down values. In the case of equipment, vehicles, furniture and buildings, the written-down value of each in accordance with the income-tax system. In the case of stores and spares, the book value less a flat 20 per cent.

It will thus be seen that, save in the case of aircraft, the compensation under these proposals would not be inequitable so far as physical assets are concerned. There is, however, and so far as is at present known, no mention whatsoever of any compensation or payment for goodwill. For reasons already given, it is very earnestly to be hoped that this question will receive the fullest consideration and that before the proposals are finalised and accepted by Parliament, some fair compensation will be included for this imponderable item.

Nor, it is suggested, should interest in this matter be confined solely to the managements and shareholders of the airline companies. Is not the nationalisation of air transport a first step on a path which other industries may have, in due course of time, to tread? Such compensation as is given, therefore, may create a precedent, a fact which industrialists and other interested parties may do well to ponder.—*All Rights Reserved.*

YET ANOTHER COMMITTEE FOR TEA INDUSTRY

REQUEST FOR EXCISE DUTY REFUND REJECTED

THE appointment of a nine-man committee by the West Bengal Government last month for going into the question of revising the present wage structure of tea garden labour in the Terai area and the Dooars will doubtless be very much appreciated by the crisis-affected Indian tea industry. This Committee consists of the representatives of employers, employees and the Government. The appointment of this Committee coming, as it does, shortly after the establishment of a similar committee, with more or less the same objective in respect of tea gardens in the Darjeeling area, only demonstrates the awareness of the State Government to the seriousness of the problem facing the tea industry to-day. In fact, on the recommendations of this Darjeeling Committee, the Government moved very quickly to permit, under certain conditions, the planters in the Darjeeling area to sell rice to their employees at Rs. 17-8 per maund instead of at Rs. 5 per maund, thereby reducing the quantum of subsidy which the employers have been paying on rice supplies to tea workers in their estates. This concession was, however, only for a period of two months, on the condition that there should be no more closure of gardens, and that the gardens already closed down should be reopened and workers should be provided with work for six days a week. Unfortunately, the conditions in the Darjeeling area would appear to have deteriorated so badly that not only gardens that had closed earlier did not reopen, but another garden has only recently intimated its decision of closing down. This only reflects the seriousness of the situation.

The delayed concession shown by the West Bengal Government to the Darjeeling area seems to have encouraged the gardens of the Terai area and the Dooars to approach the Government that they too should be permitted to supply foodgrains to their labour at the same rates as those fixed by the Government for workers in the Darjeeling area. It is in response to this request that the West Bengal Government has appointed the nine-Committee mentioned at the outset. A point to be mentioned here is that, if the gardens concerned failed to reopen, the Government should not construe it as a breach of contract, as it actually did in respect of the Darjeeling gardens. At this time of the year, no tea gardens would prefer to remain closed. Some of the companies which have closed so far are not uneconomic units but old-established and well-run concerns which have operated soundly and profitably for decades. The closures are far from being seasonal and have been forced on them by the shortage of funds and non-availability of advances from banks to finance the garden operations. Besides, wages for tea garden workers are rigid and high; war-time bulk buying of tea has affected their standards; labour has been indisciplined; and heavy taxation has destroyed all possibility of making a profit. In tackling these multiple problems lies the key to the correct solution for the ills of the tea industry.

In this connection, it is only pertinent to recall here the observations made by Mr. E. A. Hutchinson, Chairman, Indian Tea Association, in his recent address to the planters of Dooars recently. He said: "The time has come when we must take steps which would bring the running costs of our gardens within the bounds of economic stability." He stated that that was the reason why the Association has recommended reduction in working days to five days a week from the beginning of this year. Commenting on the Rajarama Rao Committee report, he remarked that it scarcely touched the fringe of the industry's problems, and on matters of real significance, there were no specific recommendations for relief.

Heavy Losses

According to Mr. Hutchinson, the losses on foodgrain supply added As. 2¾ per lb. to the cost of production. As regards relief, he mentioned that the industry found itself in November, 1952, in virtually the same position as it was at the beginning of the year. As a result of their operations in 1952, the gardens in the Dooars alone had, he revealed, lost Rs. 5 crores. In the circumstances, he considered that the Government of India's intention to guarantee loans to the extent of 15 or 20 per cent. of the amounts repaid by the gardens on last year's loans was not of substantial help, as such a guarantee would be inadequate in many cases. "We shall only obtain the finance, if we can satisfy bankers that the gardens will not be run at a loss," he added. In other words, the crisis which the industry is facing is not so much due to lack of finance as to the inability of the planter to earn sufficient profits on account of the continuing high level of costs, and taxation at a time when prices have fallen from the high levels prevailing in recent years.

Viewed against this dismal background of the present position of the Indian tea industry, the latest move of the Government of India to appoint yet another committee at this late stage brings scarcely any credit to those in authority. Only recently we had a two-man committee, assisted by two cost accountants which went into the difficulties facing the industry. Much time and energy, as well as considerable resources, were expended by this Committee in touring the garden areas collecting material and preparing a report on the affairs of the industry. And now to be told that it did not furnish adequate data relating to the industry and labour and that, therefore, an expert committee should be appointed to investigate into the cost structure of the industry only suggests either a lamentable lack of appreciation on the part of the Central Government of the difficulties of Indian tea gardens or unwillingness on the part of the Government to face its responsibility to the industry. The move means that the industry, which has been waiting for long already for badly needed assistance, will have to wait for some more, perhaps indefinite, time till this new expert committee pronounces its verdict. This committee, of course, will take its own time to complete its work. Presumably, it will tour all the tea estates in North and South India, receive evidence by personal interview with the representatives of workers and planters, etc. What else will it do except to cover the same ground already traversed by the Rajaram Rao Committee? All this tantamounts to starting the setting up of an oxygen plant for supplying oxygen to a dying patient.

Expert Committee to be Appointed

The Government's decision to appoint the proposed expert Committee is a sequel to the recommendation of the Industrial Committee on Plantations which met on 19th and 20th December, 1952, to consider some of the recommendations of the Rajaram Rao Committee. This Committee requested the Government of India (*a*) to appoint a Tripartite Commission to investigate into the cost structure of the tea industry, and (*b*) to give, as an emergency measure, relief by way of refund of excise duty collected by the Central Government with effect from 1st April, 1952. It fixed the relief at As. 3 per pound for gardens in Cachar, Darjeeling and Tripura, As. 2 per pound for gardens in the Dooars, Terai, and Central Travancore, and one anna per pound for gardens in Assam and Madras States. While the Central Government has agreed with the Committee on the need for an investigation into the cost structure of the tea industry, albeit in a slightly different manner—instead of a Tripartite Commission, an Expert Committee has been appointed—it has conveniently refrained from giving effect to the recommendations of the Committee in regard to refund of excise duty. The terms of reference of this new committee include, it is stated, "investigation into the cost structure of the industry, with a view to suggesting ways and means for a revision of the cost structure to bring it in consonance with the present price level and also investigation into the trade structure of the industry to ascertain the co-relation between the auction prices and retail prices of tea to consumers."

The suggestion made by the Industrial Committee on Plantations in regard to relief to the industry from Central taxation was in itself a modest, though an imperfect one, falling far short of the industry's demand for the abolition of the export duty of As. 4 per lb. and a reduction in the excise duty. But even this suggestion has not met with the Government's approval. Its excuses for this are: first, such a recommendation calls upon the taxpayer alone to shoulder the burden unilaterally. Secondly, the Government of India does not favour the grant of indiscriminate relief to all gardens in a particular area without due regard to a garden having suffered a loss or not, or to the way in which it has been managed. The Government has, however, stated that other matters such as foodgrain concessions are being examined by it in consultation with the interests concerned. This is a small mercy, but, if it is to be of any assistance to the depressed sections of the industry, there should be no further delay in taking a decision on these matters and implementing it.

RESTRICTION OF TEA PRODUCTION

It is well-known that the tea growers' associations of North India have decided to start a scheme of voluntary restriction of crop production, in view of the prevailing slump in the industry caused by an excess of world production over world demand. The precise extent to which restriction will be carried out has not been stated, but it is thought that this would amount to about 40 to 50 million lbs. out of North India's annual production of about 500 million lbs. It is also believed that restriction will be effected either by resting the tea bushes over a period, or by a general all-round restriction in plucking of tea leaves. It is stated, in this connection, that the closure of a number of tea gardens in the past two or three months would, by itself, bring about a substantial reduction in the total North Indian crop of 1953.

An important section of the tea industry is stated to be opposed to the idea of crop restriction on the ground that any such reduction at this stage would only result in an increase in the unit cost of production. Whilst a regulated scheme of crop restriction might help the production of better quality teas, it is not thought that the increased price that may be obtained for such quality teas would cover the increase in the unit cost of production, above referred to. However, there is general acceptance of the suggestion that it is absolutely essential that the tea industry should concentrate on the production of better quality teas in order to fight the slump.

An important factor to be considered is the attitude that the other principal countries which produce tea will adopt towards the question of crop reduction. It would seem useless for India alone to attempt a reduction in output, if Ceylon, Indonesia and East Africa do not attempt any such reduction of their tea crops.

The first engine built at Chittaranjan

PROGRESS ON oiled WHEELS

The Locomotive Works of the Government at Chittaranjan and of Tata at Tatanagar, move, as might be expected, with the times. Both have installed Hollerith machines. At Chittaranjan they handle analysis of wages and stores. At Tatanagar, they handle every aspect of Cost and Stores Accounting. (There are some 12,000 items of stores.) These are but two typical Hollerith installations in a vital industry All over Asia, in industries heavy and light, in commerce, in Government Departments—Hollerith installations are at work, oiling the wheels of progress.

UTILISATION OF ATOMIC ENERGY FOR PEACEFUL PURPOSES

PRESENT RESEARCH AND THE FUTURE

SCIENTISTS predict that the day is not far off when atomic plants would produce abundant power for homes, business, industry and sea and air transport. Researches that are being conducted in the United Kingdom and the United States have already made vast progress. Mr. Duncan Sandys, the U.K. Minister of Supply disclosed recently to the House of Commons that the construction of an experimental atomic power station was under consideration. Although vast amounts of electrical power are produced in atomic reactions which take place inside an atomic pile, there are at present no direct means of harnessing this electricity for direct use. All developments for the utilisation of atomic energy for the production of electrical or other power depend on the drawing off of the heat produced in the pile during the reaction and the use of this energy outside the pile to operate a normal electrical generator or some other orthodox power-producing unit.

An experimental breeder pile has already been built at Arco, Idaho, by the U.S. Atomic Energy Commission, but it is not yet known if it is breeding successfully. The successful development of a breeder pile would mean that a vast amount of atomic power would be available at a cost that would not be prohibitive. It is too early yet to say, with any precision, how soon electricity generated with atomic energy would be available on a significant scale for industrial purposes. It is, however, interesting to note that a U.S. company, the Detroit Edison Company, announced recently that it might be ready to build an atomic power plant within a year. But the U.S. Atomic Energy Commission puts the time limit for such a plant at "a few years."

Although research in development of electricity from atomic energy is still being pursued, some notable results have already been achieved in certain fields. The achievements in the fields of radar and jet propulsion are significant and have captured the imagination of the world. By-products have been developed which have provided important tools for doctors, agriculturists, industrialists and research workers. New developments are continually being made to increase the use of radio-active isotopes which have been gaining significance in scientific research and industrial applications.

So far, the greatest benefits have been achieved through the use of radio-active isotopes. The latter are every valuable in tracing biological and chemical processes which cannot be observed as extensively by any other research tool known to man. It is in the field of disease research that radio-active isotopes offer the highest promise. Again, by using the radio-active isotopes to trace the processes by which plants use fertilisers, scientists have learned how to produce crops more cheaply and abundantly. Radio-active isotopes are being used in industry in the development of rubber tyres, engine lubricants, machine parts, textiles and many other products. The U.K. is the chief exporter of radio-active isotopes and India is one of the 36 countries which have been receiving supplies of radio-active isotopes from the Atomic Energy Research Establishment School, at Harwell, U.K. The other exporters are the U.S. and Canada.

Radio-active Carbon

Radio-active carbon is proving a valuable research tool in the study of agriculture's biggest riddle as to how plants use sunlight to turn water from the soil and carbon-dioxide of the air into starches through the process of photo-synthesis. If scientists were to solve the mysteries of this process and duplicate it on a large-scale, they would have found, it is held, the key to create virtually unlimited supplies of both food and fuel. In other words, it would relieve the problem of hunger from the face of the earth and help raise the standards of living in an astonishingly easy manner. Scientists remind us that atomic energy is one of the basic energies of the universe and it is the exploration of the ways of using its potentialities for peaceful purposes that is the challenge of history to man.

The chief difficulties in the way of utilising atomic energy for peaceful purposes are the restrictions placed in the way of free exchange of information between the scientists of the U.S. and others. This has created a good deal of misunderstanding among the members of the free world. It is true that the restrictions are due to the existing tension between the Democratic and the Communist blocs and the great importance of atomic power in times of war. Nevertheless, it is to be hoped that these restrictions would be things of the past before long and a new order would be ushered in and that atomic energy would contribute to the health and prosperity of the ailing world.

For ordinary people throughout the world, atomic energy has a sinister significance. It is linked too readily with atomic bombs. Everybody deplores the circumstances which have made the production of atomic bombs almost a necessity, though few are aware of its peaceful uses. Again, few are aware that the splitting of the atom is one of the supreme scientific achievements of all times. Atomic energy in itself is a great source of power and it can only be good or bad through the use to which it is put. Since atomic energy is a potential weapon in the hands of politicians, it is they that should be made aware of the obligation to utilise it for peaceful pursuits and not for devastation. Stories run that in the U.S.S.R. atomic power has been used to bombard certain points of the Ural Mountains and deviate the courses of rivers to turn the once dry lands into smiling pastures. It is difficult to dismiss them as fantastic Arabian tales, when daily new and astonishing uses of atomic power are being explored.

ATOM SMASHER

Details of the world's newest tool for studying what is inside the atom—a so-called atom-smashing "rifle"—have just been made public by Stanford University at Palo Alto, California. The machine is installed in the University's microwave laboratory. The new machine is the latest and most powerful atom smasher of the so-called linear accelerator type. This type of atom smasher shoots its beam of bombarding electrons in a straight line instead of in a circular path, as is the case with other types of atom smashers such as cyclotrons, synchrotrons or cosmotrons. All machines of this kind are designed for the purpose of disintegrating the nucleus of an atom. They accomplish this by bombarding a target of material composed of the the atoms to be disintegrated with very swiftly moving atomic "projectiles." The greater the speed, the more complete is the disintegration of the atom. The Stanford machine uses electrons for projectiles. These sub-microscopic particles are the "building blocks" of atoms and of the universe. Other machines use protons. One proton equals 2,000 electrons. When the projectiles hit the target, they smash or disintegrate atoms contained in it. The different particles contained within the atom, and their behaviour, can then be studied by the use of special devices.

The Stanford atom smasher shoots its electron "bullets" through a 200-foot long copper tube, increasing their speed along the way by "kicks" from 22 klystrons or extra-powerful vacuum tubes. When in full operation, these specially-built tubes, described as the most powerful in the world, put out as much electric power in a one-millionth of a second burst as a city with a population of nearly a million people would require during a similar period. When the new machine is in full operation, it will shoot its electron "bullets" at speeds that will be the greatest ever attained on earth, according to Stanford University physicists. They put the potential speed at 99.99999 per cent. of the speed of light, which travels at about 186,300 miles a second, the highest speed possible in the universe. At this speed, an electron "bullet" passing through the tube of the machine would be travelling fast enough to circle the earth 446 times in less than a minute. Up to the present time, the Stanford University apparatus for speeding up electrons has produced about 350,000,000 electron volts of energy. This is only about one-third of what it is expected to accomplish when the accelerator is completed and is 20 feet longer than at present.

Stanford physicists report that they have already been able to prove another phase of the famous Einstein theory of relativity by the use of the new atom smasher. This is the proposition that as electrons are speeded up to where they are travelling at the speed of light, the point is reached where further energy does not give them more speed, but adds to their weight instead. Thus, it is possible by the use of this machine to change energy over into matter. The research to be done with the machine will be directed chiefly toward such subjects as the size of the atomic nucleus and the spacing of particles in it, the study and production of new particles and the nature of electricity. There is still a very great deal to learn, physicists point out, about the interior of the atom and what it contains.

The characteristics of the high-energy electrons produced by the machine allow them to pass through the nucleus of an atom many times without dislodging any particles. At the same time, however, the electrons are deflected by striking particles within the nucleus with glancing blows. This is of great interest to physicists, for it will tell them a great deal about the characteristics, number and position of the particles struck. Other types of apparatus, using protons instead of electrons as bullets, are compared by the designers of the Stanford apparatus to workmen using a sledge hammer to drive small nails.

ENGINEERING EDUCATION

The importance of practical training in engineering industries, was stressed by Mr. T. S. Rao, Chief Engineer, B.E.S. & T. Undertaking, in a paper read and discussed at the symposium on "Engineering Education" held in Bombay recently, during the 33rd annual meeting of the Institution of Engineers (India).

Mr. Rao stated that much attention had been focussed in other countries on the reorganisation of the educational standards and practical training for engineers, supervisors and craftsmen. In India technical education was a State subject, but the speaker advocated the early implementation of the recommendations of the Advisory Committee on Technical Education and the University Education Commission to ensure a common standard of technical education throughout the country.

Dealing broadly with the problem of education and practical training for engineers, Mr. Rao said that no academic institution can produce a fully trained engineer who can, immediately after graduation, take up any position of technical responsibility in the engineering field, unless he has had prolonged systematic practical training. In other countries, there were two routes for acquiring professional status. One was the gaining of a university degree after three years' full-time college course, followed by two years' practical training; and the second was to undergo a five-year apprenticeship in industry, supplemented by an external degree or diploma obtained by passing the examination of professional institutions. He said that such facilities for the second course were not available in India at present.

Mr. Rao stated that the aim of university education should be to teach fundamental principles. It was, therefore, essential to devise a system to develop a broad scientific attitude, logical and commonsense reasoning, less specialisation and a good command of English. It was also essential that the curricula of engineering colleges should include economics, law and social sciences.

Referring to the education of supervisors and technicians, Mr. Rao stated that the number required was five times as large as that of professional engineers. The recruits for supervisory posts may be given full-time courses of training in engineering schools or polytechnics, with attached workshops, with short-time practical training in industrial undertakings during vacations. Alternatively, large undertakings may take student apprentices and give suitable practical training in the various branches of the industry, combined with part-time theoretical instructions either in a school attached to the industry or in a local technological institution.

Mr. Rao stated that, in the future expansion of engineering industries, the shortage of well-trained craftsmen may prove to be a serious bottleneck. Experience in other countries had proved that the best way of ensuring a regular supply of skilled craftsmen in industry was through comprehensive and systematic courses of apprenticeship, and what was required in this country was a scheme of apprentice training planned and organised on a national basis.

Referring to the practical training for engineers, the speaker said that it should be of the broadest possible nature during the first year, after which the graduate student should decide the branch he is best fitted to enter, and one or two further years of general training would be necessary before he could be permitted to occupy any specific and responsible post in the selected branch.

Dealing with the post-graduate courses, Mr. Rao said that these should be of full-time duration for a minimum of two years and should include advanced theoretical instructions on specialised subjects, combined with laboratory work and supplemented by systematic courses of lectures by recognised authorities. There should be close collaboration between the theoretical and scientific work carried out in the local college and the advanced practical work in the industry. Alluding to engineering research, the speaker suggested that the professorial staff, post-graduate students and graduate apprentices working in industries, should engage themselves on specific problems and keep in touch with the scientific developments and research in other advanced countries.

Mr. Rao advocated that promising young engineers, after a few years' experience in an engineering industry, should spend a further period of six months to one year away from their work and attend a properly drawn up refresher course for practicing engineers in a university college or institution. He suggested that college professors and teaching staff should also spend six months to one year every two or three years, in large engineering industries, to keep themselves in touch with up-to-date developments. It was also desirable that university colleges and technological institutions should have Standing Advisory Panels comprising senior engineers, business executives from industries and experienced educationalists to advise and guide the principal and professors in the problems which may arise in the engineering industries.

Mr. Rao referred to the role of teachers also and stated that, until recently, the teaching profession had worked in isolation from the industry, but it had since been realised that technical education in the main should be given by men possessing industrial experience and having natural aptitude for teaching, and that the remuneration should be such as to enable recruitment from senior posts in the industry.

GUARDS AT POWER STATIONS

Outwitting the thunderbolt is a task achieved by G-E Engineers. When a few million volts of lightning hit a transmission line, a high-voltage wave goes galloping along the wire. If it were allowed to surge into the power station or into the transformer at the end of the line, sparks would fly and expensive apparatus would be damaged. So G-E Engineers have built traps for this extra surge. They are called LIGHTNING ARRESTORS. They don't stop lightning, but merely shunt it out of the way to ground and harmlessly dispose of it.

G-E's THYRITE Station Type LIGHTNING ARRESTORS are on guard duty at most of the large power systems in India, namely, Tata Hydro, Mysore Government, the Madras Grid, Punjab Government, Damodar Valley Corporation and at several new projects under construction.

General Electric is the largest electrical manufacturing organization in the world with a production range of 200,000 different items—from tiny switches to giant generators, from lamps to locomotives. Inaugurated 75 years ago in U.S.A., when its parent company was first established, General Electric's unlimited resources, skill and research have been used and are available to India for the development of her natural resources.

This is General Electric's 50th Anniversary of Service in India

LAPSE RATIO IN LIFE POLICIES

NEED FOR CARE IN SELECTION

THE high rate of lapses in life policies issued by Indian insurers has for long been a subject of comment by writers on insurance in this country. Despite repeated criticisms, it is distressing to note that there is still a large number of insurers who write policies which do not survive even for three years. These lapses, which might be appropriately termed "infant mortality in policies," constitute a long-term loss to the insurers, though, in the short-term, they do not inflict any serious harm on them.

After all, a man whose policy has lapsed seldom revives it, and becomes indifferent to all further pleas for insurance. From the point of view of insurers he is a "dead loss," since it is extremely unlikely that he will again take out a policy on his life. Indeed, one does come across people who have allowed more than one policy on their lives to lapse, and become so unresponsive to any appeal for assuring their lives that they do themselves incalculable harm. Surely, insurers owe it to themselves and to the society which they serve to discourage lapses by by all available means.

The *Insurance Year Book*, 1952, gives, as usual, the statistical information relating to lapses in life policies, classified according to the mean duration of policies, the term "mean duration" being used to denote the calendar year of lapse less calendar year of entry. The following table gives the percentage of lapse (in sum assured) in respect of business done by a representative list of companies according to mean duration, out of the new business of specified years:

Percentage of Lapses in Sum Assured

Name of company	*Mean duration*		
	Two years		*O year*
	1949	1950	1951
Asian	48	37	6
Andhra	47	31	2
Bharat	49	24	5
Bombay Mutual	25	10	2
Calcutta	67	42	13
Empire of India	40	12	..
General Assurance Society	54	40	7
Hindusthan Co-operative	41	32	3
Ind. and Pru.	28	20	3
Jupiter	62	47	9
Lakshmi	49	35	6
Metropolitan	56	52	20
Nat. India	67	48	24
New Asiatic	65	42	9
New India	33	25	9
Oriental	29	18	1
Prithvi	48	37	13
Railway Employee	14	8	3
Ruby	49	41	8
United India	35	23	4
Western India	34	25	8

The above table shows the high rate of lapses which occur in the policies issued by Indian insurers, the companies selected being from among the better class of insurers. We have advisedly refrained from giving the lapse ratios among the lesser known insurers, for, though their lapse ratios are high, the lapses inflict a less serious harm, because the sums involved must be very small. Some of these insurers belong to the incorrigible group, with lapse ratios as high as 60 to 88 per cent. of the sum assured. But the point is that, even among the well-established insurers, the lapse ratios are high. It is, however, gratifying to find that the trend is distinctly downwards. Some insurers have, we are told, made special efforts to reduce lapses.

But policy lapses will not cease to be the unsatisfactory feature of Indian insurance it is to-day so long as they do not give up the mad craze for business—business at any cost. In this craze, quality is often sacrificed at the altar of quantity. At the close of the calendar year, the agents make a frantic bid to complete their quota; they induce the prospects to insure for larger sums than they can possibly pay for. Not infrequently, the agents part with a sizable part or even the whole of their commission in order to tempt the prospects to take out a heavy policy. But when the following year comes round, the policyholder finds himself unable to maintain the policy intact; it is too big for him. Overinsurance is thus at the root of the lapses in insurance. And it is a defect, which is certainly within the powers of the agents to remedy. Insurers, on their part, will do well to issue periodical instructions to agents, emphasising the need for guarding against the over-insurance of their clients.

Lapses may occur through sheer negligence—or even indifference—of the insured. Sometimes, the premium payments are not made on two or more consecutive due dates; the insured is then no longer in a mood to continue his policy. In such cases, the agent should be asked—most companies do, in fact, issue special instructions to their agents—to contact the defaulting client to advise him on the need for keeping alive his policy. This is by far the best method of tackling a "lapsed" policy holder.

Some foreign insurance companies write persuasive letters, with great emotional appeal, to the lapsed policy holders in order to bring them back to their fold. These letters emphasise the value of insurance cover and the great harm that he is doing to himself and to the family by allowing his policy to lapse. This has great psychological value. After all, a lapse is a lapse and it could and must be corrected. At least, more than one attempt should be made by insurers to correct it, before the case is pronounced "hopeless."

Finally, there is the more important question of preventing the repetition of a lapse—that is, a "relapse." It is vital that a person who has revived his policy should be prevented from allowing another lapse to occur. This can be done by investigating the causes of lapse and by finding remedies for eliminating them. If lapse is due—as it invariably is—to overinsurance, then the insured should be advised to reduce the policy amount to an appropriate lower figure. This will enable him to continue the policy. In this readjustment of policy amount, the agent should be able to help the insured arrive at a correct decision. Surely, an agent's duties do not stop when he has induced a person to insure; rather, he should be the insured person's guide in all his insurance problems.

(Concluded from next column)

include the storm and tempest risk. The more expensive type covers various perils not insured in the cheaper form, including storm and tempest, but excluding flood. Flood insurance, as such, is also effected, especially by the owners of property in those areas which are particularly vulnerable. It remains to be seen whether the insurers will look upon the extensive damage as one caused by flood or by storm and tempest. Possibly, they may refuse claims on policies which cover only storm and tempest. Perhaps, there will be quite a crop of litigation to settle the nice legal points involved.

Reports from London, however, emphasise that the insurers will not find it difficult to meet, in full, their liabilities. As the ultimate loss borne by any one company is reduced to normal proportions by reinsurance contracts, it is unlikely that insurers, as a class, will regard the claims as too heavy.

FLOOD DISASTER IN EUROPE

IMPLICATIONS TO INSURERS

THE flood disaster of last week, which caused the death of hundreds of people in the U.K., Holland, Switzerland and Germany, and the destruction of large properties and estates all over the places visited by the flood, will certainly mean a large liability to insurers in these countries. In the U.K., many villages were submerged under water; in Lincolnshire alone, an area of 100 square miles had to be cordoned off from visitors to enable the rescue operators to carry out their work. Gales and snow-storms have uprooted many a cottage, home and factory. Both Holland and Belgium reported considerable damage to life and property; parts of these two countries were declared to be under a state of emergency, the dyke-defences having broken down under the heavy weight of the surging sea. The disaster has been described as the worst in living memory.

Although the details of the losses caused by the floods are not yet available, the Chairman of the British Insurance Association revealed that hundreds of claims had already been received and that loss assessors were working in the flooded area to ensure that settlement might be made as promptly as possible. Many different types of claims are, of course, involved. Many lives have been lost, the number estimated being over 1,300 for the U.K. and other countries. Since many of them must have insured their lives, the dependents will now claim the amounts for which policies had been taken out. Possibly, many of them had insured their lives against accidental death by paying the small additional premium which the insurers charge for covering personal accidents. The losses under personal accident policies may be heavy, considering that there has been a considerable increase in the demand for accident insurance since the war.

Much damage has also been caused to vessels and craft. In the North Sea, 22 small ships have been reported missing or in peril. The effect of the storm damage on small craft moored, beached or laid up for the winter is expected to be severe. Here, losses are really of two kinds—the loss of ships and craft and the loss of property which they were carrying at the time they were destroyed. In one of the docks in the U.K., large stocks of paper, pulp and coal, it is stated, have been lost, along with the loss of ships. Considerable damage has also been caused to several dockyards. Many of these losses will have to be met by the insurers whose marine account, when they are published, will reflect the losses sustained by them this year.

It is much too early to assess the extent of damage to property. But there are at least four types of losses: (1) Damage to the buildings and contents of private houses and other residences, (2) similar damage to business and commercial premises and their content, (3) damage to motor vehicles of all kinds, (4) loss of cattle and other animals. Apart from these losses, some commercial firms will be covered in respect of consequential loss under loss of profits insurance.

It is unlikely that all the properties which have suffered damage have been insured against the particular kind of damage they have now suffered. Generally speaking, private houses are insured only against fire; this means that the owners will not be able to claim payment for damage through storm or tempest or flood. Industrial property is insured under either of the two different types of comprehensive policy. The cheaper type of comprehensive policy does not

EMPLOYEES' PROVIDENT FUNDS

MOVE TO DECENTRALISE ADMINISTRATION

LATTERLY, some important developments relating to Employees' Provident Funds Scheme under the 1952 Act have taken place. First of all, the Central Board of Trustees has taken over the administration of the Employees' Provident Funds Scheme from the Central Government. Secondly, the Government of India has decided to exempt factories, which have provident fund schemes that are better than the Provident Funds Scheme given by the Government under the provisions of the Employees' Provident Funds Act, 1952, and facilitate them to run such funds themselves. And thirdly, the Government of Bombay has proposed to extend the benefits of provident funds to factories employing 50 or more workers not covered by the Employees' Provident Funds Scheme, 1952.

The Employees' Provident Funds Scheme, 1952, though the biggest in South-East Asia, is a modest one. It is applicable, in the first instance, only to factories employing 50 or more persons in six major industries, namely, textiles, iron and steel, cement, engineering, paper and cigarettes. It covers 12 lakhs employees employed in 1,418 factories drawing pay not exceeding Rs. 300 per month. The full contribution of the employer is not payable to an employee until he has completed his membership for 20 years. The funds to be handled are of the order of Rs. 13 crores per annum.

Central Board of Trustees

The administration of the Funds, according to the scheme, is to be vested in a Central Board of Trustees at the Centre and similar Boards in each of the States. Accordingly, the administration was transferred from the Centre to the Board of Trustees on 5th February, 1952. The Central Board consists of a Chairman and three other persons nominated by the Central Government, nominees of State Governments and six persons each representing employers and employees, respectively, nominated by the Central Government in consultation with recognised organisations. A State Board will consist of a Chairman and two other persons nominated by the State Government and four persons each representing employers and employees. The Provident Funds will be administered by the Regional Boards until State Boards are constituted. The latest reports from New Delhi reveal that Regional Boards have been formed in 17 States which have factories in scheduled industries. These are Ajmer, Bhopal, Bihar, Bombay, Delhi, Hyderabad, Kutch, Madras, Madhya Bharat, Mysore, Punjab, P.E.P.S.U., Rajasthan, Saurashtra, Travancore-Cochin, Uttar Pradesh and West Bengal. A Regional Board is proposed to be opened in Orissa shortly. The Regional Boards will consist of a Chairman nominated by the Central Government, two other persons nominated by the Central Government on the recommendation of the State Governments and three representatives each of employers and employees. Addressing the first meeting of the Central Board of Trustees held in New Delhi on 5th February, Mr. V. K. R. Menon, Labour Secretary to the Government of India, hoped that the scheme would be transferred to the State Governments by about June next year (1954), with the Central Government retaining only powers for controlling investments and for co-ordinating policies. In other words, the administration of the Provident Funds Scheme is to be decentralised, as was contemplated when the scheme was first conceived.

The Central Government's decision to exempt factories whose Provident Funds facilities are better than those offered by the State scheme and to let them run their schemes is a step in the right direction. This decision is advantageous to the workers, inasmuch as the administration will be localised through individual boards for each factory in which the workers will have a direct voice, as against the Regional or State Boards as the case may be, on which they will only be indirectly represented. It is gratifying to learn that the representatives of employers and employees have arrived at an agreement whereby the representation to employees on the Boards of Trustees in every factory would be equal to that of employers. It is, however, learned that the final decision in the event of a tie is to be made not by the Chairman but by the Regional Provident Funds Commissioner. This would amount to unnecessary interference by the Government authorities and as such is contrary to the Government's new policy under which stress is being laid on as little interference by the State as possible in employer-employee relations with a view to encouraging mutual settlement of disputes. It is stated that in granting exemptions to factories with provident funds of their own, one of the main difficulties in the way is the conflict between the Income-tax and Employees' Provident Fund Acts. It is to be hoped that a satisfactory solution to this difficulty will be reached at an early date.

The Government of India is said to be intending to collect from the exempted factories a certain percentage of the cost of administrative charges of the State-run scheme. Such a levy, however small, cannot be justified. It is true that, owing to the Government's decision to exempt factories with well-established provident funds schemes, the units that would eventually come under the Central Government would be mostly the smaller units which might not be able to make sufficient contributions to cover the administrative expenses. But this consideration does not justify the taxation of exempted units, for that amounts to penalising the factories which have been progressive in their outlook. If the employers have, as is reported, agreed to the Government's proposal, it only shows their willingness to co-operate with the Government in order to make the scheme a success.

Extension of Benefits of the Scheme

The proposal to extend the benefits of the Provident Funds Scheme to workers in all the factories in the Bombay State employing 50 or more persons is unobjectionable in principle, for proper provision by a factory for its employees in their old age is an essential charge in its economy and should not be shirked by employers. But the Bombay Government's move is not timely. As is well known, even the Planning Commission has expressed the view that the Employees' Provident Funds Scheme should be extended to other industries only after some experience is gained. Only three months have passed since the Act came into force and as such it cannot be claimed that sufficient experience has been obtained to extend this amenity to workers in all the other industries. Further, there is a danger in extending the scheme to other industrial units, in that it may work hard on the marginal units. The need of the hour is provision of opportunity for increased employment but the imposition of additional burdens which the units may not be in a position to bear will restrict the existing opportunities for employment, as it may lead to the closure of the marginal units. And the loss through unemployment caused by such a contingency may be disproportionate to the benefits which the new proposal may confer on a few.

ELEVENTH REPORT OF DIRECTORS FOR THE YEAR ENDED 31st DECEMBER, 1952

To THE SHAREHOLDERS,

The Directors have pleasure in submitting herewith the Eleventh Balance Sheet and Profit and Loss Account of the Bank for the year ended 31st December, 1952, together with the Auditors' Report.

	Pak Rs.	a.	p.
Net profit for the year 1952	27,62,628	14	11
Amount brought forward from last year's account	10,48,195	13	10
Total .. Pak Rs.	38,10,824	12	9
Appropriations made during the year :—			
Interim Dividend paid at Rs. 2-0 per share on 5,00,000 shares	10,00,000	0	0
The Directors now propose :—			
Payment of final dividend for the year ended 31st December, 1952, at Rs. 2-0 per share on 5,00,000 shares	10,00,000	0	0
To carry forward to next year's account	18,10,824	12	9
Total .. Pak Rs.	38,10,824	12	9

By the Grace of God the Bank has shown good progress during the year.

In accordance with Article 91 of the Articles of Association, Mr. Dawood Ebrahim Parekh and Mr. Rahimali G. Chagla, Directors of the Bank, retire by rotation and, being eligible, offer themselves for re-election.

Under Article 83 of the Articles of Association, Mr. Yusuf Qasim, Mr. Fidahusein Ibrahim Haji and Mr. Yusuf Ahmed, Directors of the Bank, retire and, being eligible, offer themselves for re-election.

You are requested to appoint Auditors for the year 1953 and fix their remuneration.

The Directors place on record their appreciation of the enthusiasm, loyalty and devotion to duty of the officers and other members of the staff.

For the Board of Directors,
AHMED HABIB,
President.

NEW PUBLICATIONS

India in World Affairs (August 1947-January, 1950). By K. P. Karunakaran. Indian Council of World Affairs, New Delhi. Oxford University Press, Oxford House, Apollo Bunder, Bombay, 1. Price : Rs. 15.

SINCE the end of the Second World War, tremendous changes have occurred in the world political and economic situation. The changes have been particularly marked in India, thanks to the attainment of independence. Politically, the country has attained a high status among the comity of nations. In fact, India is to-day regarded as one of the important holders of the key to world peace and security ; the influence of India on the other nations of the world has been quite considerable. It is precisely this aspect that has been examined in the book *India in World Affairs*, the first of a series on current developments in India and other countries of Asia, published by the Indian Council of World Affairs.

In the publication, Mr. Karunakaran deals mainly with the many problems which confronted India during the first two and a half years of independence, that is, from 15th August, 1947, to 26th January, 1950, with special emphasis on the fundamental factors underlying its foreign policy. This factual review and objective interpretation of India's foreign policy, contained in the first two chapters, will provide a comforting answer to the carping critics who argue that India's foreign policy is irrational.

The awakening of Asia in recent times and the development in East Asia form the subject-matter of the next two chapters. In view of the close economic interdependence between India and Pakistan, the author has done well in devoting a special chapter to Indo-Pakistan relations. The vexed question of Indian nationals in South Africa is discussed in another chapter. Also dealt with are subjects like the U.N. and the freedom of the different people, "political matters" in the U.N., security problems in a divided world, and the economic reconstruction of Asia and the Far East. In the choice of topics covered, the guiding principle, according to Mr. H. N. Kunzru, President of the Council, has been to focus attention on those problems in which India has taken an active interest. The utility of the publication is enhanced by the inclusion of a select bibliography, which will be helpful to those who are new to this field or are desirous of getting more information on the various subjects discussed in the book.

The Indian Factories and Labour Manual. By R. Mathrubutham and R. Srinivasan. Publishers: The Madras Law Journal Office, Madras 4. Price: Rs. 18.

Now that Mr. V. V. Giri is at the helm of labour affairs in India, great changes in the field of labour relations are anticipated by the public. Following the lapse of the Labour Relations Bill steered by Mr. Jagjivan Ram, ex-Labour Minister, Mr. Giri has proposed a new Labour Relations Bill which seeks to replace compulsory arbitration by voluntary settlement. The new legislation will be based on an agreed formula between labour and capital. It will be difficult to get a clear understanding of Mr. Giri's proposals without a knowledge of the existing statutes on labour. Besides, as every one in some sense is an employer or/and employee of another, a knowledge of the existing, as well as the proposed statutes, it is all the more necessary. Viewed in this perspective, the second edition of the *Indian Factories and Labour Manual* is a welcome addition to the literature on the subject.

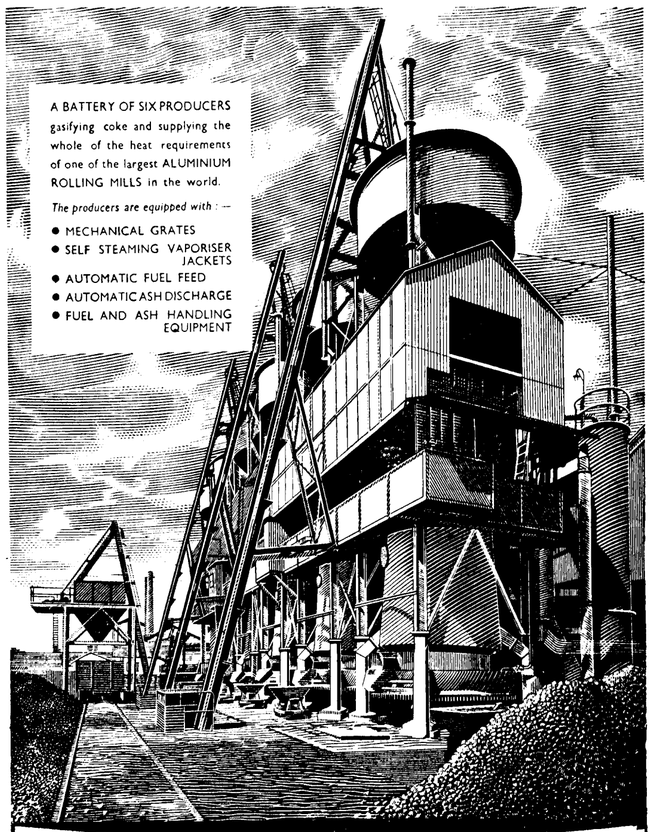
The *Manual* is an improvement over the original edition published in 1949. It covers all Acts since enacted, such as the Plantation Labour Act, 1951, and the laws relating to mines and boilers, which were not included in the original edition. Explanatory notes and case-law on all the more important enactments given in this volume are bound to be of great help to readers.

The volume, however, does not include State legislations, for they constitute a separate category from the all-India legislations relating to labour. While the Central legislations relate to labour in factories and mines, etc., the State legislations generally relate to shop assistants, man-power, factory labour, etc. Certain States have legislated separately on subjects covered by the Central enactments also. Certain other States have amended the Central Acts to suit local conditions. Again, even the various rules framed by the State Governments under the Central laws are so voluminous that it is impossible, as pointed by the authors, to include all of them in one volume. Moreover, the State rules are subject to frequent amendments which make it difficult to keep the laws up-to-date or exhaustive in a book of reference. The authors, therefore, feel that an all-India book of this nature should be supplemented by the relevant State rules and legislations. An attempt has, however, been made in the book under review to give all the State amendments to the Central enactments and also the references to all the State legislations on any particular subject covered by a Central Act. Certain State rules, which serve as models, have also been given. The book will be of considerable help to lawyers, industrialists, labour organisations and legislators alike.

Conciliation and Arbitration. By Dr. Miss Aloo Dinshaw Shroff. Publishers : The Popular Book Depot, Lamington Road, Bombay. Price : Rs. 16-4.

In the above book, Dr. Miss Shroff has traced quite successfully the evolution of the industrial society, the need for State intervention in industrial disputes, the nature of the industrial disputes which deal with employer and employee differences regarding working conditions, the inter-union rivalries due to jurisdictional conflicts and the consequences of industrial disputes. But it is while dealing with the nature of State intervention, either by compulsory conciliation or arbitration, that she seems to be overcome by the possible loss of the individual freedom of employers and employees. She, however, presumes that things would not be so bad and objectionable under a Socialist State, but fails to offer convincing reasons to sustain such presumption. This, at any rate, appears to be a half-hearted appreciation of the realities as to the necessity for compulsory intervention by the State in the settlement of industrial disputes. It is also difficult to understand the logic of the statement that "strike is not more injurious than the loss of moral and uncooperative behaviour that follows an arbitration award, not acceptable to workmen." The subtitle "Employers' Association" on page 25 appears to be a mistake, as the section deals with development of trade unions in the country. The discussion about strikes is rather tiresome and unproductive. Her description and analysis of the principles of conciliation, mediation and arbitration are, however, thorough. Though this chapter may appear to be a bit unduly long and elementary to students who have already some knowledge of the subject, it will be found interesting and informative to those who are new to labour problems. Her account of the Indian side of the picture will be found quite comprehensive even by serious students of labour problems. Her support to compulsory conciliation and arbitration towards the end of the book is well reasoned and sounds encouragingly realistic. On the whole, the book displays considerable painstaking work, careful collection of material and a neat presentation of facts.

PGC MECHANICAL GAS PRODUCERS



A BATTERY OF SIX PRODUCERS gasifying coke and supplying the whole of the heat requirements of one of the largest ALUMINIUM ROLLING MILLS in the world.

SINDRI OUTPUT NEARS TARGET

RADICAL CHANGE IN SALES METHOD NEEDED

DESPITE certain blemishes associated with it, the Sindri Fertiliser Factory is undoubtedly one of the remarkable achievements of the Government of India. It is, in fact, the first major State-owned enterprise to come to fruition since independence. When it was conceived some eight years ago, the construction of the factory was expected to cost no more than Rs. 10.7 crores. Revised from time to time, the cost estimate rose first to Rs. 12 crores, then to Rs. 15 crores and thereafter still higher to Rs. 18 crores. The total cost was even higher when it was finished, the exact amount being Rs. 23 crores.

The Sindri Factory, which went into production in October, 1951, is a great national asset, in that it not only makes up the country's deficiency in chemical fertilisers but saves a large amount of the much needed foreign currency. Some idea of this saving can be had from the fact that India has been importing about 400,000 tons of ammonium sulphate per annum at a cost of Rs. 9 to Rs. 10 crores. The Sindri Factory is expected to be in a position to produce very soon about 350,000 tons of this fertiliser per annum. It celebrated the first anniversary of its going into production on 31st October last, with a total production of 130,993 tons of ammonium sulphate to its credit. At that time, its daily average output was equal to about two-thirds of its rated capacity of 1,000 tons. There were occasions, we are told, when the daily output averaged about 1,100 tons for periods ranging from four to nine days at a stretch. The peak production reached on any single day so far has been 1,317 tons which is 117 tons more than the maximum capacity per day. The production on 31st January and 1st February, 1953, was 1,212 tons and 1,045 tons, respectively. The total production since its inception till 10th January, 1953, was 190,254 tons which means, according to official estimate, a saving of over Rs. 6 crores in foreign exchange.

Plans for By-products

Besides, the factory has plans for utilising its by-products when in full production, one of its by-products, namely, chalk (calcium carbonate sludge), is expected to amount to 900 tons per day. This by-product is used, as is well known, as the main raw material for the manufacture of cement. The Sindri Fertilisers and Chemicals Ltd., the Corporation which manages the Sindri Factory, has concluded an agreement with the Associated Cement Co., Ltd., for the sale of this by-product. The construction of the plant will soon begin; its initial production will be at the rate of 300 tons of cement per day, with plans for being increased to 600 tons later on. This plant, which is estimated to cost about Rs. 1½ crores, is expected to go into production by about 1955. It will be situated on a portion of the Sindri Factory estate with its own housing colony.

For its full operation, Sindri requires 500 to 600 tons of coke per day, according to the ash content of the coke. So far Sindri has been purchasing this raw material from the surplus production of a steel manufacturing concern. But, in view of the expanding steel production, supply from this source may not be available in the near future. In order to meet the situation and also to reduce the cost of coke, it has been decided to install a coke oven plant for the manufacture of 600 tons of coke per day. A contract has been entered into with a German firm for the supply and installation of the necessary plant. Preliminary work has already begun. This plant will have some special features. It will particularly suit the needs of the type of coal available in this country and will employ the stamping process which, by suitable blending of different varieties of coal, will make possible the manufacture of good quality gas or metallurgical coke from coals of high volatile content. The plant is expected to cost about Rs. 2½ crores. Apart from coke, the plant will produce the various by-products such as tar, motor benzol, pure benzine and increase in supplies of ammonium sulphate. The coke oven gases can be used for boiler firing and domestic and industrial heating. Further, a proposal to use these for the manufacture of 200 tons per day of urea, an organic fertiliser, has also been approved.

Training of Staff

Sindri needs a large number of suitably trained personnel. In order to meet this need, an apprentice training scheme has been worked out. Graduates in chemical, mechanical and electrical engineering will be trained for the supervisory posts and boys for such jobs as fitter, carpenter, electrician, smith, etc. Special courses, both practical and theoretical, are being arranged in co-operation with the Bihar Institute of Technology, for equipping the existing staff with better training.

Sindri's township is also growing fast, as any township must wherever big industries grow. More than 50 per cent. of the 800 residential quarters of different categories scheduled to be built under a one-year scheme have already been constructed and provided with roads, water-supply and sanitary services. The rest are expected to be completed by the end of May next. The foundation-stone was recently laid of a two-storey 100-bed hospital for providing increased medical facilities for the residents of Sindri.

All this about this great national asset, acclaimed to be Asia's largest State enterprise, makes very impressive reading. But it is only one side of the picture. There is also another side, namely, the distribution side of it. This side of the picture is not very pleasing at all. It looks as though the Sindri authorities, immersed, as they are, in planning and executing production, seem to have bestowed almost no attention at all on the sales aspect of their production. This is reflected in the accumulation of heavy stocks, estimated at between 50,000 and 60,000 tons. The Sindri venture cannot be considered as a success, unless its manufacture is made available to cultivators on the farm at prices which are remunerative for the ryot to grow his crop and which yield, at the same time, a reasonable rate of return on the capital invested. In this respect, the performance of the factory has been unsatisfactory.

Pool Price High

At present all fertilisers, whether produced in India or imported, are made over to a central pool operated by the Central Ministry of Food and Agriculture. The pool price, as well as the quotas for the various States, are fixed by the Ministry. Till the end of December, the price paid to the Sindri Factory was Rs. 350 per ton, as against the pool price of Rs. 380 and the landed cost of Rs. 400 per ton paid for the imported fertiliser. Owing to the general downward trend in prices, it was decided last month to reduce the Sindri and pool prices to Rs. 310 and Rs. 335 per ton, respectively. The reduction is undoubtedly welcome, but even when this reduced price is considered by the farmer as being very costly, the State Governments are still selling the fertilisers at inflated prices. In Bombay, for instance, the State Government has fixed the selling price at as high as Rs. 440 per ton. In Madras, it is higher still at Rs. 446-4. There is thus a difference of Rs. 105 to Rs. 110 per ton between the pool price and the price charged to the ultimate consumer in the Deccan and South. This wide difference needs to be explained by the authorities concerned. The freight per ton for the transport of this commodity to Bombay is stated to be no more than Rs. 47 per ton. Even allowing Rs. 5 per ton for handling charges, the Bombay Government is taking a margin of over Rs. 50 per ton on the sale of an essential raw material needed by agriculture. Are State Governments, who merely act as the distributing agents of the Central Government, justified in attempting to make such a large margin of profit? It will be relevant to mention here that even imported ammonium sulphate from a far off land as Japan, where the internal price is about Rs. 312 per ton as against Rs. 310 in India, could be purchased, we learn, and transported to India at Rs. 362 c.i.f. per ton, the transport charges being about Rs. 50 per ton. In these circumstances, the rate at which some of the State Governments are selling fertilisers is fantastically high. And it is not surprising that the offtake of this manure has been tending to fall.

Apparently, there is something radically wrong with the system of distribution of fertilisers. The present system is stated to be cumbersome and wasteful on account of overlapping of expenditure in transport, handling and sales tax. In fact, by the time the fertiliser reaches its ultimate destination, namely, the farm in certain areas, it will have borne the cost of warehousing, handling and sales tax at as many as three points. The ryot can hardly be expected, in these conditions, to equate the high cost of the fertiliser with the low price at which his food crops are being taken away from him under the system of monopoly procurement or under the levy system. The biggest snag in the organisation of sales of the Sindri fertiliser is that these sales depend on the State Departments of Agriculture, an agency which cannot be expected to show the same initiative and energy as private sales organisations can and do. Those in charge of the Sindri Factory will, therefore, do well to pay attention to the question of getting their product sold to the consumer more efficiently and cheaply than at present.

IKE'S "TRADE—NOT AID" PLANS OPPOSED

While the soft currency countries are eagerly awaiting a sympathetic response from the U.S. to the plea for "trade—not aid" principle, reports from Washington go to show that Trade Protectionists in Congress are organising stiff opposition to President Eisenhower's plans to help foreign manufacturers earn dollars by selling more in the U.S.

In his State of the Union message to Congress, the President, it will be noted, has specifically called for the extension of the Reciprocal Trade Agreements Act and a revision of the cumbersome U.S. customs procedures which are considered as serious trade barriers by foreign traders. The R.T.A. Act, which will expire on 12th June next, is designed to bring about lower tariffs in international trade through mutual bilateral agreements. The proposals to lower these tariffs further are now meeting with strong opposition from a section of Congress. A Republican Congressman from California, for instance, has introduced a Bill seeking to prevent the President from reducing tariffs below a certain point without the prior approval of the Congress. For the Act as it now stands, empowers the President to make tariff reductions without prior consultation. If, however, he makes reductions below a "peril point," fixed by the Tariff Commission to protect domestic industry, he is required to give reasons to Congress. As the proposed Bill seeks to check these powers, it is expected that the Bill would provoke a keen fight in Congress when it comes up for consideration.

The Republican Administration is reported to be working on a new Customs Simplifications Bill for submission to Congress later. Such attempts at simplifying customs procedure by ex-President Truman could not advance further than the Senate Committee stage on account of strong opposition from U.S. trade interests. One of the provisions in Mr. Truman's Bill sought to permit duty-free entry of individual mail-ordered articles costing less than $10. Retail organisations were then able to influence the receptive ears in Congress to throw out the Bill. It is not known whether a similar clause would be included in the proposed Customs Simplification Bill mentioned above.

THE BRITISH INDUSTRIES FAIR

1953 will be a coronation year for the United Kingdom. Her Majesty Queen Elizabeth II will be crowned in London on 2nd June next. For this great event, leaders of States or their representatives from nearly every country in the world will gather in London. Further, the Coronation will bring to Britain many thousands of visitors. With a view to availing themselves of this great opportunity as also to show their loyalty to the Crown, British designers, manufacturers and craftsmen have planned to produce an outstandingly attractive range of goods for display at the British Industries Fair this year.

The British Industries Fair, as readers are aware, is being organised by the Government of the United Kingdom in close collaboration with the Birmingham Chamber of Commerce. It will be held a month earlier than the Coronation, between 27th April and 8th May, 1953. The Fair will occupy three great exhibition buildings, namely, Earl's Court and the Olympia in London and Castle Bromwich near Birmingham. All the British leading manufacturers, numbering about 2,500, will show their products designed for home and export markets. A special feature of the Fair will be the representative displays by Commonwealth Governments in a Commonwealth section in Earl's Court. Extensive arrangements have been made for providing every comfort to trade buyers from overseas countries visiting the Fair. Literature containing detailed information about the exhibits, travel facilities, hotel accommodation and other amenities is being supplied in advance to known trade buyers throughout the world.

Since 1915, when the first British Industries Fair was held, the Fair has been providing the greatest annual opportunity for seeing the latest products of British manufacturing skill. It is expected that the coming Fair, the thirty-second of its kind, will be an exceptional one for the range and quality of its exhibits which will include, among others, a major display of textiles and clothing.

RAW FILM MANUFACTURE IN MYSORE

The scheme to establish a raw film factory at Belagula, in Mysore, has been referred to the Government of India for advice by the Mysore Government. The estimated capital of the scheme is Rs. 2 crores of which Rs. 1 crore is proposed to be issued to the public for subscription. Belagula, where the factory is proposed to be located, is an industrial town, 12 miles from Mysore City, near the Krishnarajasagar Dam, and has certain advantages. There is copious water-supply and certain chemicals and power supply are also readily available. Since the industry is a highly skilled and technical one, attempts are being made, it is stated, to obtain technical assistance of the highest kind available when the stage for implementation is reached, India being the second largest film producer in the world, the prospects for a few film producing factories should be regarded as being bright, theoretically at any rate.

The Government of Indonesia has reduced further the additional export duty on copra from 15 per cent. to 10 per cent. This reduction will be effective for the half-year ending 30th June, 1953. Copra was originally subject to a surtax of 25 per cent. This was lowered to 15 per cent. with effect from 1st August upto 31st December, 1952. The additional duty of 9 per cent. (which had been reduced from 15 per cent.) on palm oil and kernels has been completely abolished for the current half-year.

The Government of India has extended, upto 31st March next, the period of validity of O.G.L. XXVI for imports, which is applicable only to Pakistan. This O.G.L. was issued on 2nd September last and its period of validity was to have ended on 30th November last, but was extended to the end of January. The O.G.L. gives general permission for import, among other things, of poultry, fish, milk products, potatoes, vegetables, fruits, coconuts, spices, cigar wrapper leaf, lime and limestone, gypsum, indigenous drugs and medicines, exposed cinema film (from East Pakistan only) and asafœtida.

The Government of Pakistan has added another 56 items to its export O.G.L. list, thus bringing the total number of items on export O.G.L. to 94. Among the items added are soapstone, kaolin, clay, vegetable, turpentine, gelatine, glue, bones, crushed bonemeal and grist horns and hooves, tobacco other than virginia, surgical and veterinary instruments, furs and manufactures thereof, lampskins including *karakullis*, leather goods other than footwear, conch-shell products, buttons, sports goods, handkerchiefs, woollen carpets, and rugs, jute manufactures, cotton wastes, raw silk, cotton linters and yellow pickings.

At a conference of tobacco associations of Karnatak and Maharashtra, at Jarsingpur, Miraj, an appeal was made to the Government of India to introduce a flat rate of duty on all types of tobacco, without discrimination based on different uses of tobacco as at present.

RALLIS INDIA GOES OFF DIVIDEND LIST

EFFECT OF SLUMP IN COMMODITIES

THE slump in March-April, 1952, was characterised by three features. In the first place, it was sudden and few had anticipated it; secondly, the worst sufferers were the traders, especially large traders with world-wide connections; and, thirdly, commodities were hit harder than manufactured goods. In the light of these, it is not surprising to find that Rallis India Ltd. (Chairman and Managing Director: Mr. G. U. Euthymopulo, Calcutta), has sustained a heavy loss during the year ended 31st August, 1952. The loss has been so large that the Directors have found it necessary to pass over the dividend to ordinary shareholders. This must be very distressing, indeed, to the large body of investors who rushed to buy the Company's shares, even at a premium of 15 per cent., when they were offered to them in 1951. But that is the risk which an investor has to take when he decides to invest his savings in the shares of a trading company. Moreover, in the case of this company, investment in its shares was as good as investing in a new company, because the Company had just then been converted from a private limited concern into a public limited one, with no worthwhile reserves to fall back upon in the event of trading losses.

As compared with the results for 1950-51, the Company's trading profit for 1951-52 has declined from Rs. 181.31 lakhs to Rs. 107.64 lakhs. After meeting the establishment and other expenses and after providing for depreciation, there is a net loss of Rs. 2.75 lakhs, as against a net profit of Rs. 41.99 lakhs of the previous year. In view of this setback in results, the Directors have not been able to recommend any dividend on the ordinary shares. As a matter of fact, they have had to draw from the contingency reserve a sum of Rs. 2 lakhs to cover part of the dividend on the 6 per cent. cumulative preference shares.

The following comparative table will give one an idea of the Company's progress since its formal incorporation in India:

(In lakhs of rupees)

	Year ended 31st August			
	1952	1951	1950	1949
Sale proceeds	46,01.28	50,05.47	38,93.78	37,10.10
Stocks	5,83.06	6,18.88	6,23.91	4,13.90
Purchases and charges..	44,33.23	48,19.14	39,28.90	30,56.72
Trading profit	1,07.64	1,81.31	1,74.87	1,97.28
Other income	21.40	29.16	18.86	10.74
Establishment and other expenses	1,21.01	1,24.54	1,27.48	1,15.88
Provision for—				
Depreciation	10.78	10.09	8.90	8.40
Taxation	..	33.86	27.03	28.57
Net profit (+) or loss (—)	—2.75	+41.99	+30.34	+27.13
To reserves	0.30	15.75	7.75	4.00
Transfer from contingency reserve ..	2.00	..	..	..
Dividend—				
6% preference (less tax)	3.32	3.32	3.37	3.00
Ordinary	..	20.25 (9%)	19.12 (8½%)	18.00 (8%)
Carry forward	0.25	4.62	1.05	1.86

Referring to the causes that led to the adverse results disclosed by the above table, the Directors observe as follows:

"In this period, there occurred a sudden and substantial fall in world demand for commodities, in general, and consequently, a sudden drop in the price of raw materials, including those in which this Company does a large business. Between 28th February and the date of closing our accounts, the local prices of most of the articles in which we deal, fell substantially. For instance, jute, gunnies and shellac receded by about 25 per cent., cotton by about 7½ per cent. and bones by about 33 per cent. This resulted in considerable trading losses during the second half of the accounting year, although a reasonable profit had been earned in the first half of the year's trading."

The trading profit of Rs. 107.64 lakhs has been arrived at after taking into account a sum of Rs. 2.40 lakhs representing the provision for charges made in previous years, now written back. Last year, the Directors had provided a sum of Rs. 50,000 towards reserve for depreciation on investments and this year they have added to it Rs. 30,000 which has increased the deficit for the year to Rs. 3.05 lakhs. This deficit has, however, been more than covered by the undistributed surplus of Rs. 4.62 lakhs brought in from the previous year. The balance available, namely Rs. 1.57 lakhs, is not adequate to pay the dividend on preference shares which requires Rs. 3.32 lakhs. The Directors have thought fit not to keep this in arrears and have, accordingly, drawn, as already stated, Rs. 2 lakhs from the contingency reserve to pay off the preference dividend. This leaves a tiny surplus of Rs. 24,847 to be carried over to the next year.

The latest balance-sheet of the Company shows that its reserves and surplus stand at Rs. 25.43 lakhs, having fallen from Rs. 30.51 lakhs at the end of 1950-51, as against a paid-up capital of Rs. 3 crores. The provision for taxation amounts to Rs. 13.63 lakhs, as against Rs. 42.25 lakhs. Current liabilities have been reduced from Rs. 8.26 crores to Rs. 7.76 crores. There has been a gross addition of Rs. 9.56 lakhs, during the year, to the fixed capital expenditure, which amounts to Rs. 1.69 crores at cost. The book value stands at Rs. 1.52 crores, the depreciation provided so far being Rs. 37.33 lakhs. Current assets at Rs. 9.83 crores show a decline from Rs. 10.61 crores as at the end of the previous year, mainly due to the recession in stocks from Rs. 6.19 crores to Rs. 5.83 crores, in debts, deposits and advances from Rs. 3.52 crores to Rs. 3.29 crores and in cash from Rs. 40.47 lakhs to Rs. 31.86 lakhs. Nonetheless, the total of current assets is in excess of the current liabilities by a handsome margin of Rs. 1.93 crores.

DECCAN SUGAR AND ABKHARI CO., LTD.

During the last three decades (for which period only statistics are readily available with us) in the fifty-six years' history of the Deccan Sugar and Abkhari Co., Ltd. (Managing Agents: Messrs. Parry & Co., Ltd., Madras), the ordinary shareholders of the Company have had to go without any dividend only twice and both these occasions were in the last of the three decades. The first occasion was five years ago, when they did not receive a return for the year ended 31st December, 1947. The second one is now when they should have received a dividend for the year ended 31st May, 1952. The Company, it may be noted here, changed its financial year-end from 31st December to 31st May last year. In view of the long record of dividend, the shareholders of the Company should not be unduly disappointed over the non-receipt of dividend for the last financial year.

The Directors' decision to skip over the dividend was consequent on the net loss of Rs. 49,090 suffered during the twelve months under review, as compared with the net profit of Rs. 2,37,363 earned in the preceding seventeen months.

The profit on trading shows a shrinkage from Rs. 13.35 lakhs for the 17 months ended 31st May, 1951, to Rs. 7.31 lakhs. A part of this fall was, however, covered by crediting the profit and loss account with Rs. 1.02 lakhs, representing provisions no longer required and profit on sale of sundry assets. The depreciation account has been provided with Rs. 4.33 lakhs, as compared with Rs. 5.52 lakhs a year before. There is no liability on taxation or additional excise duty for the year under review, whereas a sum of Rs. 88,512 was provided for these two purposes last year. After meeting other expenses and managing agents' office allowance, there is a net loss of Rs. 49,090. This has been offset by debiting it against the surplus of Rs. 1,10,217 relating to the previous accounting period. Out of the balance of this surplus, the preference dividend at 7 per cent. per annum, absorbing Rs. 49,000, has been met, leaving to be carried over Rs. 12,127 to the next year.

The Company's production at its Samalkot factory during the 1951-52 season was somewhat lower at 5,037 tons of sugar, as compared with that of 5,945 tons. Owing to the late arrival of certain essential items of machinery, the season could not be started until 27th January, 1952, and it closed on 6th June, 1952, after crushing 58,666 tons of cane, whereas in the previous season the factory worked for over five months crushing 60,650 tons of cane. At the Pugaiur factory, during the 1951 special season, 32,244 tons of cane were crushed producing 2,602 tons of sugar, as compared with 37,868 tons of cane crushed and 3,057 tons of sugar bagged in the 1950 special season. During the 1951-52 main season the factory crushed 94,805 tons of cane, producing 7,777 tons of sugar, while in the corresponding season of 1950-51, 91,370 tons of cane were crushed which yielded 7,274 tons of sugar. The refining plant at Samalkot did not work during the year under review, owing to the impossibility of purchasing palmyrah jaggery at economic prices.

Referring to the trading conditions, the Directors' report says:

"As in the previous season the Government of India fixed both the purchase price of cane and the selling price of sugar for the 1951-52 season. While cane prices remained unaltered, the sugar

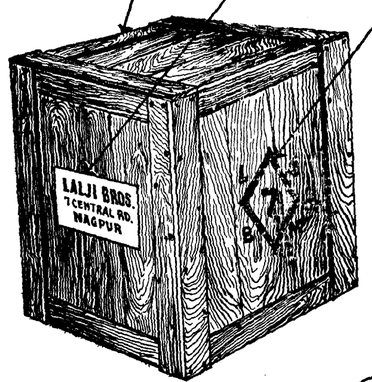
IT's Safe Transit FOR YOUR GOODS

with RLY Care

PACK SECURELY

LABEL CLEARLY

MARK CORRECTLY



If your goods sent by rail are to be delivered to the consignees speedily and intact, please ensure that they are PACKED SECURELY, in strong cases, bags or containers to withstand transit conditions; LABELLED CLEARLY by affixing fresh labels, addressed boldly & indelibly & all traces of obsolete labels removed; and MARKED CORRECTLY with the consignee's full address and station of destination in indelible ink.

CENTRAL RAILWAY

Points From The Chair

State Aid to Rubber Industry

"YOU must have known that, at the instance of the Central Government and against the agitation for a more economic price for raw rubber in the light of the statutorily aggravated expenses under minimum wages for plantation labour, the Tariff Commission went into costs of production and recommended the price finally adopted by Government, viz., Rs. 138 f.o.b. for 100 pounds of grade I raw rubber, with the usual differentials for the other grades. We are grateful for these small mercies, but it is difficult to forget that our prices were throttled down at starvation level for the benefit of manufacturers when phenomenal prices for raw rubber prevailed in the international markets—all under protection of rubber producers' interest! If we were treated a little generously then, we should now have been in such a position that rehabilitation and extension of areas under rubber to attain national self-sufficiency in the strategic commodity, should have been an easy domestic affair of the producing industry. Instead, thanks to protection, now, without State-aid, enlargement of areas or even rehabilitation of existing areas to international averages of productivity, has become impossible. I am not despairing that compensating co-operation may not be forthcoming. Only, I wish to bring out that direct State-aid or subsidy is only second best to indirect helping of the industry to help itself when the goings are specially favourable."

K. VENKATARAGHAVAN,
Rajagiri Rubber and Produce Co., Ltd.

Immediate Outlook for Indian Shipping

"The prospects for the current year are not as good as those of the last year, whether on the coast or in the adjacent trades. The Ceylon Government has decided to import Chinese rice in substantial quantities, thus reducing their intake of rice from Burma; the rates for the movement of rice from Burma to Ceylon and India have had to be substantially reduced; so, too, the rates for the movement of coastal salt. Moreover, there has been a noticeable fall in the volume of coastal cargo offered. Altogether, the results of coastal and near trades operations during the current year are likely to be comparatively poor. Inordinate delays in securing berths and loading coal at Calcutta, as also in discharging the same at various destinational ports on the coast, continues to be a matter of some concern. It has resulted in considerable wastage of operating days; and, while some improvement in loading position was noticeable at times, the situation again deteriorated considerably and has resulted in further heavy wastage of operating days during the current year."

SHRI DHARAMSEY M. KHATAU,
The Scindia Steam Navigation Co., Ltd.

Realistic View of Distress in Tea Needed

"At the present moment, markets are rather variable and the world surplus tea production makes further price reduction almost inevitable. The immediate prospects of the industry are, consequently, not altogether reassuring and it is a matter of great regret that the Rajaram Rao Committee has proved of so little assistance to the industry. Its recommendations scarcely touch the fringe of the difficulties which beset the less fortunate producers and I trust that the Industrial Committee on Plantations which, met on 19-20th December to consider the Rajaram Rao Report, will find a means of inducing the Government of India to take a more realistic view of the distress that afflicts and continues to threaten the poor-yielding properties."

W. W. KILGOUR,
Peria Karamalai Tea and Produce Co., Ltd.

(Concluded from previous page)

selling price in respect of both the Company's factories was reduced by Rs. 2-4 per maund. The policy of allowing a portion of the production for sale in the free market was continued by Government with slight modifications. Jaggery prices, during the 1951-52 season, were low and, owing to the better return obtainable by cultivators by delivering their sugarcane to our factories, there was no difficulty in obtaining the factories' full requirements of cane."

The following synopsis of the Company's latest balance-sheet reflects its financial position.

Liabilities	Rs.	Assets	Rs.
Capital ..	26,92,000	Gross block ..	98,90,558
Reserves and surplus..	16,83,803	Less—Depreciation ..	48,84,037
			50,15,821
Provision for taxation,	81,067	Net block ..	81,78,005
Liabilities ..	1,12,33,367	Stock-in-trade ..	21,46,459
		Stores, spares, etc.	
		Debts, deposits and advances ..	10,59,890
		Investments ..	32,880
		Cash ..	2,57,079
	Rs. 1,56,01,137		Rs. 1,56,01,137

During the year under review, a sum of Rs. 12.07 lakhs was spent on development of the fixed assets. The value of stocks and stores shows a considerable rise from Rs. 50.95 lakhs and Rs. 20.58 lakhs as on 31st May, 1951 to Rs. 61.78 lakhs and Rs. 31.46 lakhs, respectively. A considerable part of the Company's funds having thus been locked up, it had to resort to additional borrowings from its bankers, the outstanding loans from bank (secured by stocks and stores) at the end of the year amounting to Rs 64.97 lakhs, as against Rs. 40.11 lakhs a year before. Unsecured loans from the Managing Agency firm, however, were reduced from Rs. 13.46 lakhs to Rs. 7.94 lakhs.

TEXTILES

(Concluded from page 240)

without taking into account the effects of long-term programmes for improvement in living standards of underdeveloped countries—the competition in textile markets is bound to be keen, and a challenge to the world's textile producers.

PRODUCTIVITY IN INDIAN COTTON TEXTILE INDUSTRY

As readers are aware, a team of I.L.O. experts is now in India carrying out combined pilot projects in systems of payment by results and productivity studies in the cotton textile industry. This industry is one of those in which the need for raising productivity has assumed considerable importance, in view of the high levels to which cost of production has gone up. If labour is to enjoy the present level of wages and not suffer a diminution in its income, in view of the return of a buyers' market, then it must produce more per man-hour. Until recently, the data required for calculating labour productivity were not available. It was in 1946 that the first census of manufactures was carried out, which has been followed for the next four years. On the basis of the data published in the reports on the Census of Manufactures, an attempt was made to study the measurement of labour productivity in the cotton textile industry in India during the years 1946 to 1948. The results of this study are published in the December, 1952, issue of the *Indian Labour Gazette*.

A notable feature revealed by the study is that the productivity of workers in the cotton textile industry in 1948 was substantially higher, as compared with the two previous years. This was due partly to the incentive for higher production given by decontrol of cloth and partly to better industrial relations, following the adoption of the Industrial Truce Resolution of December, 1947, and the fixation of minimum wages and dearness allowance in most of the important centres. The results of the study are summarised in the table below:

(In thousands)

	1948	1947	1946
No. of labourers (daily average) ..	658	642	595
Labour in units of adult man-hours.	1,533,770	1,502,169	1,449,597
Gross value of production at constant prices .. .. (Rs.)	256,81.70	221,57.30	212,58.37
Value added .. .. (Rs.)	132,28,66	104,70,70	97,00,35
Output per man-year—			
Gross value .. .. (Rs.)	39,00 (109.1)	34,54 (96.6)	35.74 (100)
Value added .. .. (Rs.)	20,09 (123.2)	16,33 (100.1)	16,31 (100)
Output per man-hour—			
Gross value .. .. (Rs.)	1.674 (114.2)	1.475 (100.0)	1.466 (100)
Value added .. .. (Rs.)	0.862 (128.9)	0.697 (104.2)	0.669 (100)

(N.B.—Figures in brackets refer to indices, base for them being 100 in 1946.)

The foregoing figures show that productivity indices of output per man-year in 1948 were lower than those of output per man-hour. The explanation for this difference lies in the fact that, in August, 1946, the weekly hours of work were reduced from 54 to 48, under the amended Factories Act. The number of days worked during the year, which depends on several factors, such as strikes and lock-outs, might also have been responsible, to some extent, for the difference. Another point to be noted is that the productivity indices based on values added measure of output were appreciably higher in 1948 than that calculated on the basis of the gross value of production. This was the result of shifts in production from coarse to fine varieties (and, possibly, of better utilisation of raw materials and stores), as is indicated in the following list of category of piecegoods produced, showing the ratio of quantitative production in 1947 and 1948 to that in 1946, taken as the base year:

	1947	1948
Woven piecegoods (grey)—		
Cambrics, lawn, mulls and voiles	170	381
Khadi	141	156
Tussor and coatings	455	188
Woven piecegoods (fancy)—

Agents.

BOMBAY, *6th February*, 1953.

UNECONOMIC PRICES FOR JUTE GOODS AFFECT BIRD GROUP MILLS

ANGELO BROS. REDUCE DIVIDEND BY HALF

Dalhousie Jute Co., Ltd.

THE directors of the above Company (Managing Agents: *Messrs. Bird & Co., Ltd.*, Calcutta) submit the audited accounts of the Company for the half-year ended 30th September, 1952.

After providing Rs. 27,876 (Rs. 30,143) for depreciation the profit and loss account shows a loss of Rs. 2,00,493 (profit of Rs. 3,35,448 after providing for taxation Rs. 80,000), which is reduced by the amount brought forward from previous half-year Rs. 80,807 (Rs. 69,948), transfer from equalisation of dividends reserve Rs. 1,00,000 (*nil*); transfer from general reserve Rs. 1,25,000 (*nil*); leaving an available balance of Rs. 1,05,309 (Rs. 2,96,396 after transferring Rs. 1,60,000 to *general reserve*). The directors propose to dispose of this sum by paying a dividend on the preference shares at the rate of 7 (7) per cent. per annum, without any deduction for *income*-tax paid by the Company Rs. 52,500 (Rs. 52,500), paying a dividend on the ordinary shares of Re. 1 (Rs. 6) per share, without any deduction for income-tax paid by the Company Rs. 31,453 (Rs. 1,88,706) and carrying forward the balance Rs. 21,356 (Rs. 55,190).

Stocks of jute have been valued at market value and manufactured goods at contract or market rates.

In accordance with the Factories (Amendment) Act, 1946, and the working time agreement of the Indian Jute Mills Association, the mill worked 42½ hours a week with 12½ per cent. of total looms sealed during the period under review.

The increased expenses resulting from the implementation of the Omnibus Tribunal Award, which took effect from 10th December, 1951, have caused an appreciable increase in working costs and contributed to the comparatively poor financial results for the half-year. Throughout the period the labour complement at the mill was maintained at full strength.

The electrification of the mill is proceeding satisfactorily and it is expected that the scheme will be fully completed during the course of the current half year.

During the period under review, the general trend of prices of both raw jute and finished goods was downwards. On 6th May, the Government of India announced with immediate effect a reduction in the export duty on hessian from Rs. 750 to Rs. 275 per ton and on sacking from Rs. 350 to Rs. 175 per ton. Immediately following the announcement, America came into the market and business on quite a large scale was done at slightly higher rates. Prices, however, were not maintained and rates for both hessians and heavy goods receded. With prices of raw jute remaining relatively steady, mills were forced to dispose of their production at very substantial losses with mills with a large proportion of *sacking looms* suffering more than others, owing to the very low rates prevailing for sacking fabrics. It was not until late September, when the I.J.M.A. agreed to sell through the Government of India 40,000 tons of hessian to the Argentine, that prices rose and simultaneous business was again remunerative. Despite a substantial increase in U.S.A. consumption figures, prices, particularly those of heavy goods, have again dropped to uneconomic levels mainly on account of speculative operations and lack of overseas demand. Closure of the hessian *fatka* market on 19th December, however, has been generally approved by the industry and it is hoped that more stable prices will attract overseas buyers.

Raw jute, which, for a period, remained steady, fell to a certain extent in sympathy with the hessian and heavy goods markets and has now reached a level which the Government of India *considers to be* dangerously low bearing in mind the importance attached to increasing India's self-sufficiency in jute. Nevertheless, even at the present level of prices, mills cannot, at the time of writing, operate at a profit on simultaneous business.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	46,49,200	Block ...	55,63,778
Reserves ...	60,60,313	Work-in-progress ...	8,27,511

	Rs. 1,34,67,237		Rs. 1,34,67,237

Lawrence Jute Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Bird & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 30th September, 1952.

After providing Rs. 1,00,000 (Rs. 1,50,000) for taxation and Rs. 46,791 (Rs. 48,203) for depreciation the profit and loss account shows a profit of Rs. 1,54,267 (Rs. 4,63,436) to which is added the amount brought forward from previous half-year Rs. 32,655 (Rs. 44,057), provision against contingent loss on forward jute purchases no longer required Rs. 27,000 (*nil*). From this the directors have transferred to plant renovation reserve Rs. 50,000 (*nil*, but provided Rs. 1,00,000 to general reserve), leaving an available balance of Rs. 1,63,922 (Rs. 4,07,493). The directors propose to dispose of this in paying a dividend on the "A" preference shares at the rate of 7 (7) per cent. per annum, without any deduction for income-tax paid by the Company Rs. 17,500 (Rs. 17,500), in paying a dividend on the "B" preference shares at the rate of 5½ (5½) per cent. per annum, without any deduction for income-tax paid by the Company Rs. 27,500 (Rs. 27,500), in paying a dividend on the ordinary shares of Rs. 4 (Rs. 11) per share, without any deduction for income-tax paid by the Company Rs. 1,11,968 (Rs. 3,07,912) and in carrying forward Rs. 6,954 (Rs. 54,581).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.

Lansdowne Jute Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Bird & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 30th September, 1952.

After providing Rs. 85,000 (Rs. 1,10,000) for taxation and Rs. 12,000 (*nil*) for reserve for taxation contingencies and Rs. 87,222 (Rs. 89,986) for depreciation the profit and loss account shows a profit of Rs. 1,13,045 (Rs. 2,58,981) to which is added the amount brought forward from previous half-year Rs. 53,319 (Rs. 50,528), leaving an available balance of Rs. 1,66,364 (Rs. 3,09,509). The directors propose to dispose of this in paying a dividend on the preference shares at the rate of 7 (7) per cent. per annum, without any deduction for income-tax paid by the Company Rs. 52,500 (Rs. 52,000), in paying a dividend on the ordinary shares of Rs. 3 (Rs. 8) per share, without any deduction for income-tax paid by the Company Rs. 73,377 (*Rs. 1,95,664*) *and in carrying forward* Rs. 40,487 (Rs. 61,345).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	39,48,000	Block ...	58,45,878
Reserves ...	48,99,557	Work-in-progress ...	2,45,594
Provision for taxation ...	1,57,941	Stock ...	38,41,537
Liabilities ...	42,43,779	Stores, etc.	10,71,953
Profit and loss account ...	40,487	Debts, deposits and advances ...	21,14,791
		Investments	1,53,740
		Cash ...	16,271
	Rs. 1,32,89,764		Rs. 1,32,89,764

Angelo Bros., Ltd.

The directors of the above Company (Managing Agents: Messrs. Turner Morrison & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st August, 1952.

The profit for the year after providing for depreciation, directors' fees and taxation amounted *to Rs. 5,43,895 (Rs. 19,87,968), to which was* added the balance brought forward of Rs. 5,31,014 (Rs. 4,18,045), making a total of Rs. 10,74,909 (Rs. 24,06,013). After transferring to general reserve Rs. 1,75,000 (Rs. 6,00,000), stock reserve Rs. *nil* (Rs. 2,75,000), plant replacement reserve Rs. *nil* (Rs. 2,50,000), there remained a balance of Rs. 8,99,909 (Rs. 12,81,013). The directors disposed of this by paying a dividend of 12½ (25 including a bonus of 12½ per cent.) which absorbed Rs. 3,75,000 (Rs. 7,50,000), leaving a balance to be carried forward of Rs. 5,24,909 (Rs. 5,31,013).

The year under review was marked by a *heavy recession in business generally compared* with the boom period of 1950-51 and shellac was seriously affected in common with other commodities. Sales of the Company's products suffered accordingly, which was anticipated to some extent in the directors' last report, but the severity of the fall in prices was greater than expected by the trade. There are, however, signs of a revival of interest for shellac in the U.S.A. for industrial purposes at the lower level of prices, while competition from Siam lac has been noticeably less.

At the beginning of the season T.N. was quoted at Rs. 167 and Rs. 145 was seen at the end of December. From January onwards a steady decline set in and the price of T.N. at the end of the season was Rs. 70. At the time of writing this report the price was Rs. 65. The impact of this heavy decline has been felt throughout the industry and has caused many of the small factories upcountry to close down. Apart from the effect on stock values, the situation has been made more difficult by the fact that the fall in raw material prices has steadily lagged behind the declining shellac market and the margin of profit has progressively narrowed. In the circumstances, the result of the year's working may be viewed as satisfactory though much less than the previous year when record sales were made at much higher price levels. The opinion has been expressed in previous reports that high prices are not in the best interests of the industry and tend to stimulate competition from synthetic materials, but the *market has now reached* an uneconomic level *which* may discourage lac cultivation.

The factory, plant and buildings were maintained in good condition. Continuing the policy of replacing older sections of the plant with improved modern equipment, various items of new machinery and plant were installed, including new transformers for electric supply. Cold storage facilities have been extended in two existing buildings.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	30,00,000	Block ...	12,70,496
Reserves ...	34,50,000	Stock ...	22,52,680
Provision for taxation ...	17,20,081	Stores ...	4,78,087
Liabilities ...	12,29,258	Debts, deposits and advances ...	15,75,584
Profit and loss account ...	5,24,909	Investments	4,98,500
		Cash ...	38,48,901
	Rs. 99,24,248		Rs. 99,24,248

Benares Electric Light and Power Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Martin Burn Ltd., Calcutta) *submit* the audited accounts of the Company for the half-year ended 30th June, 1952.

Normal progress is being maintained as will be seen from the following schedule for the past three years.

Half-year ended	*Units sold*	*Revenue* Rs.
31st December, 1949 ...	7,476,504	11,44,987
30th June, 1950	7,346,284	9,56,833
31st December, 1950 ...	7,881,723	11,40,343
30th June, 1951	8,243,843	11,12,177
31st December, 1951 ...	8,978,556	13,71,950
30th June, 1952	9,544,518	12,56,950

After complying with the provisions of the Electricity (Supply) Act, 1948, and making adequate provision for liabilities and reserving Rs. 15,000 (Rs. 25,000) for development and extensions, there remains a balance of Rs. 1,34,777 (Rs. 1,15,204), including Rs. 31,109 (Rs. 21,642) brought forward from the previous half-year available for distribution, and this the directors recommend be disposed of as follows:—

Payment of a dividend at the rate of 10 (10) per cent. per annum, free of income-tax, Rs. 84,995 (Rs. 84,995)), additional payment of As. 2 (*nil*) per share Rs. 21,249 (*nil*), and carry forward to next half-year Rs. 28,534 (Rs. 30,209).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	16,99,900	Block ...	43,01,811
Debentures	12,00,000	Stores, tools, etc. ...	8,86,340
Reserves ...	16,32,663	Work-in-progress ...	1,71,723
Provision for taxation ...	1,23,974	Other assets	54,296
Liabilities ...	20,32,586	Debts, deposits and advances ...	3,67,408
Profit and loss account ...	1,34,777	Investments	60,941
		Cash ...	9,81,381
	Rs. 68,23,900		Rs. 68,23,900

Britannia Building and Iron Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Holmes Wilson & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st March, 1952.

The net profit for the year was Rs. 52,276 (Rs. 2,06,618) after providing for depreciation Rs. 49,413 (Rs. 47,953), head office removal expenses Rs. 6,505 (Rs. 3,612), commission to managing agents Rs. 20,000 (Rs. 25,041) and directors' commission Rs. 1,617 (Rs. 7,164). From the total *amount of Rs. 57,978 (Rs. 2,15,702) including last* year's carry over of Rs. 5,702 (Rs. 9,084), a sum of Rs. 829 (*nil*) was adjusted, being short provision for taxation in respect of the year 1946-47 and a further sum of Rs. 50,000 (Rs. 95,000) was provided for income-tax reserve. The directors transferred the following amounts to general reserve:

Reserve against contracts Rs. 1,05,000 (Rs. 65,000), reserve against depreciation in value of stock Rs. 50,000 (*nil*), reserve for doubtful debts Rs. 5,000 (*nil*), forfeited dividend account Rs. 15,432 (*nil*), and from profit and loss account Rs. 2,567 (*nil*). All this, added to the general reserve, the reserve fund amounted to Rs. 5,00,000. The balance left to the credit of the profit and loss account was Rs. 4,582 (Rs. 55,702) after making the above adjustment.

The Company has filed a suit in the Hon'ble High Court of Calcutta against the National Cricket Club for recovery of the dues. The Company preferred claims against the Orissa Public Works Department and the Damodar Valley Corporation in connection with certain works executed for them.

The working results of the year under review have not been satisfactory mainly due to the general slump in the trade and due to difficulties faced in settlement of some contracts.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.

ANNUAL GENERAL MEETING OF BHOPAL SUGAR INDUSTRIES LTD.

MR. M. M. AMERSEY STRESSES IMPORTANCE OF LOWERING COST OF PRODUCTION

ADDRESSING the shareholders of the Bhopal Sugar Industries Ltd., at their Ninth Annual General Meeting held in Sehore (Bhopal) on 7th February, 1953, Mr. M. M. Amersey, Chairman of the Company, referred, in brief, to the problems of the sugar industry. He welcomed the Government's decision to reduce the price of cane for the 1952-53 season as a step in the right direction. He emphasised that it was essential to bring down the cost of production of sugar in India, as it was the only way to stimulate internal consumption.

The following are extracts from Mr. Amersey's speech:

"The policy of partial decontrol initiated by the ex-Food Minister, Shri K. M. Munshi, was continued with certain modifications and changes that were found necessary as a result of the actual working during the previous year. The dual policy of controlled distribution of a minimum quantity and open market for the excess quantity produced by the various units of the industry not only ensured availability of sugar at controlled and reasonable price but also provided the incentive to the industry to maximise production. As a result, there was a record production of about 14.9 lakh tons during the 1951-52 season. The target of 15 lakh tons, which the Planning Commission had laid down for achievement in 1954-55, was thus nearly achieved by the industry this year itself. This sudden spurt in production, after years of shortage and scarcity, brought in its wake new problems for the industry. The internal consumption in our country, as you are aware, had never exceeded 12 lakh tons in the past and the heavy production this year, therefore, has given rise to a huge carry-over of 4½ lakh tons and the urgent necessity of finding ways for disposal of this large stock.

"Although the Government has assured necessary assistance to the industry in the clearance of this stock by way of export, there are hardly any chances of exports materialising owing to the high cost of production. This high cost of production is mainly attributable to the very high rate paid by the industry for supplies of cane.

"In the changed circumstances and in the context of accumulation of large stocks, the Government has taken a bold decision to reduce the price of cane for the season 1952-53. The price of cane has been lowered to Re. 1-5 per maund from Re. 1-12 fixed last year. Whilst this reduction hits the cane-growers, there is no doubt that the step taken by the Government is in the right direction and, in the ultimate analysis, in the interest of cane-growers themselves. It is most essential to bring down the cost of production of sugar in the country which is very high and out of tune with the world market. With the surplus position in production, cutting down the cost of production is the only way to stimulate and increase the internal consumption of sugar in the country and removing the impediment of price factor which is blocking exports.

"Even with this reduction in the price of sugarcane, there is little chance of our being able to export sugar in the immediate future. It is, however, hoped that with the availability of sugar at cheaper rates the internal consumption in the country will go up. The production is also expected to fall and looking to the present position, it will not, in my opinion, exceed 12 lakh tons in the 1952-53 season. The increased consumption together with the expected fall in production in the 1952-53 season may alleviate the stock position and the industry, it is hoped, will not be confronted with huge carry-over stocks next season.

"For the 1952-53 season, the Government has decided not to exercise any price control on production, but to have some sort of control on distribution to ensure holding of a reserve stock of 3 lakh tons in the country. The Government's policy of maintaining buffer stocks to meet any shortfall in supply or rise in prices places the interest of the consumer well above all other considerations. Since sending my speech for print, the Government of India has banned the export of sugar from 31st January, 1953, onwards and this decision would, I am sure, be welcomed by all under the present circumstances.

"The reference I have made above to the fall in production must have made you anxious to learn more about it. Since 1948-49, when 52,313 bags were produced, there has been a continuous decline in production of the Company and during the year under report your factory produced only 36,289 bags. The main reason for decrease in production has been the shortage of rainfall in areas round about Sehore and short supply of cane by cultivators last year. The production was further affected by the very poor quality of cane supplied by the cultivators. The milling test of such cane showed that the recovery from cultivators' cane was less than 7.5 per cent. as against 10 per cent. obtained from cane grown on your Company's own farms. The Government of India and the Bhopal Government were naturally apprised of the bad quality of cane supplied by the cultivators, but I regret to say that nothing has been done so far to bring about improvement in quality.

"The policy of fixing a flat rate for supplies of cane irrespective of quality is very defective, as it leaves no incentive to the cultivator for improving the quality of his produce. If prices of cane are fixed according to the recovery obtained, the cultivator would attempt to improve the quality of his supplies in order to get a better rate for the same.

"Due to complete failure of rain during 1951-52, there was hardly any plantation of cane last year and, as mentioned last year, there will be no crushing during the 1952-53 season owing to non-availability of cane. However, you will be pleased to learn that the rainfall in the current year has been fairly satisfactory. The Bhopal Government and your Company are doing their best to distribute the available seed for multiplying the area under cane. Adequate sums of money have been made available by the Bhopal Government for purchasing cane seed and your Company, *together with the co-operative* societies, are endeavouring to distribute the available seed among the cultivators. Whilst it is too early to say what area will be available next year, it is hoped that the distribution of seed will help in restoring the area under cane and your factory will be able to work next year. Your Company would be planting in all 1,260 acres, including ratoon and adsali cane, on your own farms. The area under plantation this year would be slightly more than what it was in previous years.

"Then there are the outstanding matters such as the irrigation charges and octroi duty, to which references had been made last year. The Government of Bhopal have recently set off the amount payable to your Company for R.C.C. pipes against the irrigation charges stated to be due to them. The Company, as you are aware, has been persistently disputing the Bhopal Government's method of assessing irrigation charges. I fail to see how we can be expected to pay irrigation charges on some theoretically projected area which did not receive irrigation water. The Bhopal authorities are, however, holding on to their views and are insisting on charging irrigation rates as per projected figures for each of the tanks. The matter is still being pursued with a view to seeking remission for at least those years during which the rainfall failed partly or completely and the tanks were not filled to capacity.

"The question of levy of octroi duty by the Sehore Municipality on cane and other raw materials despatched to the factory is yet to be settled. The rate of octroi duty imposed by the Sehore Municipality, as you all know, is without parallel anywhere in the country. At those few places where the octroi duty does exist it is almost a fraction of what is being levied by the Sehore Municipality. It did not seem to have weighed with the Bhopal Government that this heavy taxation would impede the progress of the industry and make it difficult to market the finished product because of its higher cost. The sellers' market in sugar has already passed and keen competition is bound to prevail. I would again earnestly appeal to the Bhopal Government to consider seriously the incidence of octroi duty and the cost of sugar to be sold, and that too, in a competitive market and remove this impediment to the growth of the only sugar industry in the State."

SCINDIA STEAM NAVIGATION COMPANY LIMITED

MR. DHARAMSEY M. KHATAU'S SPEECH AT ANNUAL GENERAL MEETING

FLAG PROTECTION FOR INDIAN SHIPPING URGED

SPEAKING at the Thirty-third Ordinary General Meeting of the Scindia Steam Navigation Co., Ltd., held in Bombay on Wednesday, 11th February, 1953, Mr. Dharamsey M. Khatau, Chairman of the Company, deplored the growing tendency on the part of the powerfully entrenched shipping interests of certain countries to raise the cry of "flag discrimination" at the slightest sign of any attempt by the Government of a country, the shipping of which is ill-developed, to assist and encourage national shipping by appropriate regulating steps. The cry of "flag discrimination," Mr. Khatau declared, was a plain "last ditch" stand of the vested interests, whose tonnage was far more than their most generously conceived legitimate requirements to prevent the growth of national shipping in other maritime countries, the tonnage of which was insufficient. Referring to the development of the Indian mercantile marine, he stressed the imperative need for flag protection. "It is," to quote him, "flag protection that I seek for our national vessels operating in the field of our international trade, so that we may develop to our full stature in consonance with the legitimate needs of our country for an adequate merchant marine. I would much rather have flag protection than flag destruction masquerading under the guise of eliminating flag discrimination."

The following are extracts from Mr. Khatau's speech:

"GENTLEMEN,

"The results of the year's working yielded profits which were sufficient, after charging depreciation, to enable the Company to write off not only the heavy accumulated losses brought forward from preceding years but also the substantial loss incurred in the sale of the shipbuilding business of the Company to the Hindustan Shipyard Ltd., the new Government-sponsored shipbuilding concern at Visakhapatnam. The liquid resources of the Company have improved substantially. Furthermore, after the lapse of three years, it has been found possible to declare a modest dividend of eight annas per share. All these indications of a marked change in the Company's fortunes will, I am sure, be received by the shareholders with satisfaction.

Taxation

"As already stated in the Directors' Report, the E.P.T. assessments of the Company have not as yet been finalised. I cannot say as to when the various issues that are still pending will be decided and assessments completed. I may state, however, that, in view of the payments so far made and the double-income-tax relief due to the Company, any undetermined taxation liability is fully covered. This leaves only the question of making adequate provision for future taxation. You are aware that, under the provisions of the Income-tax Act, the Company is entitled to certain accelerated depreciation allowances, known as initial and additional depreciation in respect of new assets. Since the Company has been acquiring new tonnage for the last few years, substantial depreciation allowances have accumulated under these heads. While it is not possible for the Company to provide, from out of its current profits, any amount towards these special depreciation allowances, it is clearly necessary, as and when the Company makes profits, to provide each year, by way of reserve for deferred taxation, an amount equivalent to the tax that would otherwise have been payable and would have had to be provided for, had there been no such accelerated depreciation allowances. On this basis, a provision of Rs. 3 lakhs has been made this year. This procedure, I may add, is in accordance with the practice followed by the Company in the past, when, for the accounting year ended 30th June, 1947, the Company had provided Rs. 19 lakhs towards deferred taxation against the initial depreciation allowance due to the Company for that year. It would clearly be imprudent not to make adequate provision in this manner for a tax liability properly arising out of current profits which is merely deferred to subsequent years by virtue of (accelerated) depreciation being allowed now, instead of in those years.

"The results of the last year's working should be considered particularly satisfactory, in view of the fact that the aggregate volume of coastal trade, which was 26.56 lakh tons in 1950-51, registered a noticeable decline to 24.45 lakh tons in 1951-52. This was due mainly to a fall of nearly 2 lakh tons in the movement of coal from Calcutta.

"In the adjacent trades, namely, Burma-India, Burma-Ceylon, Pakistan-India, a similar decline occurred, mainly due to lesser intake of rice from Burma, both by India and Ceylon, and almost complete stoppage of trade between Pakistan and India.

"The effect of these decreases in the volume of coastal and the adjacent trades was reflected in the Company's aggregate cargo liftings in these trades, which fell from 12,43,200 tons in 1950-51, to 11,55,400 tons in 1951-52. Fortunately, however, the freight earned in 1951-52 amounted to Rs. 3,82,57,000, as compared with Rs. 3,31,48,000 in 1950-51. Much of this advantage, which resulted from the regular and planned employment of our ships at comparatively reasonable levels of freight rates, was considerably offset, however, by a continuing increase in the cost of handling cargoes and decrease in output at loading and discharging ports, to say nothing of delays in the turn-round of ships.

Immediate Outlook

"The prospects for the current year are not as good as those of the last year, whether on the coast or in the adjacent trades. The Ceylon Government has decided to import Chinese rice in substantial quantities, thus reducing their intake of rice from Burma; the rates for the movement of rice from Burma to Ceylon and India have had to be substantially reduced; so, too, the rates for the movement of coastal salt. Moreover, there has been a noticeable fall in the volume of coastal cargo offered. Altogether, the results of coastal and near trades operations during the current year are likely to be comparatively poor.

"Inordinate delays in securing berths and loading coal at Calcutta, as also in discharging the same at various destinational ports on the coast, continue to be a matter of some concern. It has resulted in considerable wastage of operating days; and, while some improvement in loading position was noticeable at times, the situation again deteriorated considerably and has resulted in further heavy wastage of operating days during the current year.

Overseas Trade—India-U.K.-Continent

"The two passenger ships, the s.s. *Jalazad* and the s.s. *Jal-Jawahar* have maintained their services regularly on the India-U.K. trade, except for an interruption of about two months in the case of the s.s. *Jalazad*, as a result of her grounding, whilst in the Suez Canal, on her way to the U.K.

"I have referred earlier to the good results which your Company has been able to show for the financial year under review. In the overseas trades, this was due mainly to the planned utilisation of our tonnage, as a result of rationalised sailing programmes, a more economic level of freight rates, and good cargo offerings. I would like, however, to add that cargoes are presently not as plentiful as they were last year, because trade is also not as brisk, with the result that the ships are not infrequently sailing with some space. There is, however, no significant change in the operating expenses; and if these do not go up, the result of the current year's working may not be as bad as I had at one time feared.

"You will be glad to learn that the two Indian companies, namely, ourselves and India Steamships, who are trading regularly between India and the U.K.-Continent, have decided to offer a joint service from the ports of Hamburg and Bremen to ports in India, Pakistan and Ceylon. By this arrangement, the Indian lines will jointly be able to provide a more frequent and regular service from these ports to India than has been possible heretofore. I trust this endeavour of the two Indian companies will be appreciated both by the shippers in Germany and the importers on this side.

Overseas Trade—India-U.S.A.

"During the financial year under review, our vessels engaged in the trade with the U.S.A. have shown exceptionally good results, due partly to increase in freight rates but mainly to the rationalised voyaging. Two of our vessels were employed on chartered terms from India to the Pacific Coast of America via Japan, thus allowing the loading of grain from the West Coast of the U.S.A., in addition to loadings from the East Coast where our steamers were normally employed.

"However, as grain rates have now fallen considerably as compared with last year, the results of this year are not expected to be equally profitable. Moreover, imports of food-grains have now diminished and there have been no grain shipments to India during the last few months from the East Coast of America. There is also considerable paucity of general cargo on this trade. Consequently, although there is good demand for space for bulk cargoes from India to the U.S.A., we are not able to load our vessels down to their marks from the other end.

"I regret to inform you that one of our vessels engaged in this trade, namely, the s.s. *Jalakanya*, was grounded at Dwarka Point during the monsoon in July, 1952. She is expected to resume service by the end of March or early in April, 1953.

Tonnage Position

"During the year under review, two old and altogether uneconomic ships, the s.s. *Jalabala* and the s.s. *Jalavijaya*, were sold; for the same reason, the s.s. *Englestan* was disposed of after the close of the year.

"Two second-hand cargo ships were purchased during the year as additions to the Company's coastal fleet. They have been renamed s.s. *Jalamohan* and s.s. *Jalayoti*. We have also acquired two more cargo ships, the s.s. *Jalapratap* and the s.s. *Jalapushpa*, built at Visakhapatnam. These were the last two of the second batch of three ships ordered by the Government from the Visakhapatnam Shipyard, before it was taken over by the Hindustan Shipyard Ltd. In addition to these purchases, orders have been placed with the Hindustan Shipyard Ltd. for the construction of five 7,000 d.w. tons cargo ships which are to be powered with diesel machinery. While everything possible is being done to expedite the progress of their construction, the unavailability of timely deliveries of steel may cause delay in the construction and completion of these ships. As far as I can say at present, provided no fresh difficulties arise, the keel of the first ship will be laid in June this year and the deliveries of the five ships will be spread over 1954-55, commencing from April, 1954, or so.

"I referred earlier in my speech to the improved position as regards our liquid resources, which are, at present, quite ample for our requirements. The plans for addition to coastal tonnage which I have just outlined will indicate that your Directors are quite alive to the need for the full and profitable utilisation of all our available resources. Mostly, these will be used in modernising our coastal fleet and in adding to it as and when suitable opportunities occur or the need arises.

"As regards our overseas fleet, there is need, on the one hand, to bring up our U.K.-Continental fleet to its full strength of twelve vessels agreed to by the India-Pak-U.K.-Continental Conferences, and, on the other, to place at least four fast modern vessels in our India-U.S.A. service. The way to achieve these targets has now been opened for us, so far as finance is concerned, by the provision which has been made in the First Five-year Plan for loans on attractive and easy terms for the purchase or building of vessels suitable for the overseas trades. In this matter, the Government of India, and, in particular, the Director-General of Shipping and the Ministry of Transport, merit the warmest commendation from the shipping industry; for I venture to prophesy that this will be a decision of far-reaching benefit to the development of shipping in this country. It is to be hoped, however, that the essential merit of this admirable step will not be whittled down in practice by procedural limitations, such as the total lapsing of grants at the end of each financial year. It is not easy, even when finance is readily available, to decide quickly about buying or building ships; and where it is a question of building a vessel, it generally takes even longer to reach final decisions, because the issues involved are so complex the investment so large and the market conditions, both as to freight rates and tonnage prices, not to mention cargo availabilities, so uncertain that quick decisions would almost certainly be wrong decisions.

Flag Discrimination

"I should like to refer, at this stage, to an important and disturbing trend of thought in certain international shipping circles that has gathered rapid momentum in recent months. It has an important bearing on the future growth of Indian shipping, which, at present, constitutes less than ½ per cent. of world tonnage, even though the overseas trade of India is about 4 per cent. of the total world trade.

"The trend to which I refer is the growing tendency on the part of certain powerfully entrenched shipping interests to raise the cry of 'flag discrimination' at the slightest sign of any attempt by the Government of a country, whose shipping is ill-developed, to assist and encourage national shipping by appropriate regulatory steps. Notwithstanding the total and unrepentant abandonment of *laissez faire* by *all* countries in almost *every* field of economic endeavour, a high level concerted attack is now being launched, under the guise of abolishing Governmental restrictive practices and barriers to the free movement of international trade, against every legitimate attempt to encourage and assist the development of national shipping by the Governments of those countries whose shipping is still backward and undeveloped in relation to the volume of their foreign trade. And the slogan for this attack is that it seeks to eliminate 'flag discrimination' in the field of international shipping. Discreetly, there is no attempt to define this term. Were it defined, it would be clear that what is really sought is the perpetuation of a 'free for all,' in which the weak would struggle in vain with the most powerful and in which, therefore, the few, but financially mighty, would soon crush the many, but financially puny.

"Such a doctrine of 'every one for himself and devil take the hindmost' has only to be stated to be at once rejected. We cannot accept it, and, I am sure, neither can the Government of India, however tender may be their susceptibilities against accusations of 'flag discrimination.' The positive case for fostering, by every legitimate means, the development of national shipping in consonance with the trade, defence and the general economic requirements of an independent country is too well known to need recapitulation. What is less well known is the vital part which a well developed national merchant marine can play in maintaining an equilibrium in a country's balance of payments and so the integrity of its currency. That this latter aspect is not so well known, as it should be, will be clear from the fact that not only the vast numbers of importers and exporters in this country but also the Governments themselves, particularly of the States, seem to be unaware of the urgent economic importance of buying f.o.b. and selling c.i.f.

"In such circumstances, the cry of 'flag discrimination' must be recognised for what it is, namely, a plain 'last ditch' stand couched in pious phraseology by the vested and powerfully entrenched shipping interests of certain countries, whose tonnage is far more than their most generously conceived legitimate requirements, to prevent the growth of national shipping in other maritime countries where the tonnage is at present insufficient.

Needs of the Industry

"By the same token, we must be prepared to state our own position in this respect plainly and in unequivocal terms. I may say that we have already done so, on the appropriate platform, through the Indian National Steamship Owners' Association. But, in view of some publicity which has been given to the opposite view in the U.K., in the course of which our stand has been belittled, I venture to recapitulate our standpoint here.

"In the first place, we agree that, except in the coastal trade, which may, of course, be wholly reserved for national shipping, there should be no discrimination in favour of vessels of the national flag in such matters as berthing or other port facilities, port dues, light dues, consular fees on commercial documents, etc. Secondly, the concept of 'flag discrimination' in all other fields needs to be carefully defined, nothing being deemed to be flag discrimination which is for the legitimate encouragement and development of, or assistance to, national shipping in countries whose merchant marine is backward and undeveloped in relation to the volume of their coastal and foreign trade, or which is necessary for purposes of defence, or for safeguarding the national economy, including, in particular, the integrity of national currency by way of redressing an unfavourable balance of external payments.

"Thirdly, it must not be overlooked that measures which may admittedly be discriminatory may nevertheless be justifiable as the only effective way of protecting national shipping against discriminatory action, (a) by other countries in favour of their own national shipping or in favour of shipping of other countries, or (b) by powerfully organised foreign trading interests who may unduly favour, to the point of unfair discrimination, their own national shipping under the ostensible cloak of 'customer preference.'

"This is our stand; and I make no apology for urging it in such explicit terms. It happens almost precisely to be the basis on which, over a century ago, British shipping was rapidly developed by appropriate action at Governmental level. What was good for them once is good for us now, even though it happens to be a thesis, which, in the years following the First World War, they seem to have abandoned. I am aware that this attitude of ours is sought to be brought into disrepute on the ground that it constitutes more a definition of 'flag protection' than of flag discrimination. Personally, I think 'flag protection' is an admirable way of describing what we want; for it is indeed protection that I seek for our national vessels operating in the field of our international trade, so that we may develop to our full stature in consonance with the legitimate needs of our country for an adequate merchant marine. I would much rather have flag protection than flag destruction masquerading under the guise of eliminating flag discrimination.

Hull Insurance

"In consonance with our tradition to be the pioneers in all shipping matters in India, we decided this year to entrust the hull insurance of our entire fleet of ships to Indian insurance companies, thus launching a hull insurance market in India for the first time. Our fleet insurance, which aggregates in value about Rs. 22 crores, was placed with a group of eight Indian insurance companies, of whom the New India Assurance Company, Ltd., was selected as the leader. I need hardly add that this step was taken after the most careful consideration to ensure that we should in no way be prejudiced either in the matter of rates or in the matter of prompt settlement of our claims.

"I hope that other Indian shipping companies will also endeavour to do their best to strengthen the Indian insurance market by placing their hull insurance also with Indian companies.

"Before I conclude, I should like to express the warm appreciation of the Scindia Company for the co-operation, assistance and advice which it has received on numerous occasions from the Ministry of Transport and Directorate-General of Shipping. I should like also to convey the thanks of the shareholders and the Directors to the management, the staff both ashore and afloat and the Agents of the Company at various ports for having discharged their responsibilities in a manner which has enabled the Company to achieve such excellent results."

MONEY RATES STEADY

(From Our Own Correspondent)

BOMBAY, 11th *February*

There were no outstanding developments in the short-term money market during the week under review. Activity was of a limited nature, but even this, in the face of shortage of floating funds in the market, was sufficient to hold the interest rates at the previous week's levels. Thus, inter-bank call money rate among the Exchange banks and big Indian banks remained at 3 per cent. except towards the week-end when it was a shade lower at 2¾ per cent. The rate of interest among the smaller Indian banks, however, remained unchanged fully at 3 per cent. per annum. Term money was taken up at 3 per cent. for 1 to 5 months and at 2½ per cent. for 12 months.

Though the busy season is now well on its way, demand for funds this season is considerably less than in the previous season. Whereas there used to be a daily turnover of Rs. 9 crores in the inter-bank call money section this time last year, it is now hardly Rs. 3 crores. This is substantiated by the fact that the inter-bank borrowings, repayable on demand, as shown by the latest Scheduled Banks' statement, are of the order of Rs. 12.29 crores, as compared with Rs. 30.45 crores a year ago. The reason for this state of affairs are not far to seek, as the middlemen, who buy commodities from villagers and resell them to consumers and exporters, are reluctant to take any big risk in the face of uncertain economic situation. Whatever little stocks of one commodity they buy are disposed of quickly and the funds borrowed from banks against these stocks are returned to banks within a short time only to be sought again when an opportunity for buying another or the same commodity presents itself. This reduces the volume of funds required for financing seasonal trade.

A notable feature of this week's sale of three months' Government of India Treasury Bills is the slight decline in the average rate of accepted tenders to Rs. 2-6-11 per cent. per annum from Rs. 2-7 per cent., a rate which had remained unchanged in the previous three weeks. The amount tendered, against the usual invitation for Rs. 1 crore, was slightly better, at Rs. 1.18 crores, as compared with the previous week's offering of Rs. 1.14 crores.

The statement of affairs of the Reserve Bank of India for the week ended 6th February, 1953, as compared with that for the previous week, discloses a large expansion of Rs. 17.55 crores in notes in circulation. This is in distinct contrast to the aggregate fall of Rs. 10.24 crores in the preceding three weeks. Notes held in the Banking Department are lower by Rs. 8.70 crores, the net expansion in total notes issued being Rs. 8.84 crores. This is covered by an increase of Rs. 10 crores in foreign securities and a decline of Rs. 1.15 crores in rupee coin. The increase in foreign securities has been brought about by reducing the balances held abroad. On the liabilities side of the Banking Department, deposits of the Central Government, other Governments and banks have all declined by Rs. 5.61 crores, to Rs. 6.02 crores and Rs. 3.36 crores, respectively. Deposits of others are higher by Rs. 1.16 crores. On the assets side, cash shows a contraction of Rs. 8.77 crores and balances held abroad Rs. 8.49 crores. Loans and advances to Governments show no worthwhile increase. Other loans and advances (which include the amount advanced to Scheduled Banks against usance bills) disclose a net increase of Rs. 2.31 crores. But there have been no fresh borrowings by the Scheduled Banks against usance bills during the week. On the other hand, some of them, to the tune of Rs. 24.75 lakhs, matured, the outstandings at the close of the week under review being Rs. 74.18 lakhs. This represents, we are told, the amount of advance taken by the Banks during the current year against these bills. This means that the Scheduled Banks have completely repaid the loans taken by them last year against usance bills and that the increase of Rs. 2.31 crores mentioned above represents loans taken by banks against Government securities. Most of these borrowers are probably small banks which are not eligible for discounting usance bills with the Reserve Bank.

The consolidated statement of position of Scheduled Banks for the week ended 30th January, 1953, as compared with that for the previous week, discloses an increase of Rs. 3.71 crores in demand deposits and a decline of Rs. 27.60 lakhs in time deposits. Inter-bank borrowings are higher by Rs. 72.05 lakhs. Borrowings from the Reserve Bank and Imperial Bank of India show an increase of Rs. 97 lakhs and Rs. 1.01 crores, respectively. As against these variations, advances disclose a fall of Rs. 4.21 crores, while bills purchased and discounted have gone up by Rs. 1.81 crores. Investments are better by Rs. 1.55 crores, whereas cash-on-hand and balances with the Reserve Bank are together lower by Rs. 2.78 crores. Money at call and short notice have risen by Rs. 1.65 crores.

The Gilt-edged market was featureless and the turnover was small. The rates were, however, well maintained and in some cases, they were a fraction better. The undertone remained fully steady. 3 per cent. 1953-55 was unchanged at Rs. 100-0½. 3 per cent. 1957 found buyers an anna better at Rs. 98-9 and 3 per cent. 1958 a fraction higher at Rs. 98-7. 3 per cent. 1959-61 remained at Rs. 96, 3 per cent. 1963-65 at Rs. 92-8 and 3 per cent. 1964 at Rs. 92-8. 3 per cent. 1966-68 was stagnant at Rs. 90-7. 3 per cent. 1970-75 was done a shade lower at Rs. 86-8. 3 per cent. 1986 Conversion loan stood at Rs. 83-1.

(Concluded from next column)

2 bales tanned snake skins; to the Continent: 7 bales tanned cow hides, 2 tanned buff calf, 376 tanned goat, 31 tanned sheep; to the U.S.A.: 118 bales tanned cow hides, 19 tanned cow calf, 138 tanned buff hides, 20 tanned buff calf, 77 tanned goat, 9 tanned sheep, 162 dry salted goat and 32 bales tanned snake skins.

EMERGENCY IN SILVER

(From Our Own Correspondent)

BOMBAY, 11th *February*

Wide fluctuations in silver characterised trading on the Bullion Exchange during the week under review. After an initial setback, the price of silver spiralled up to a level not recorded for many months, as the bulls raustered strength to squeeze the short-sellers. To a large extent they succeeded in their attempt and the price was rigged up on Monday to Rs. 167-13 for forward delivery, the highest level touched in Bombay since 10th May last. The continued rise in silver caused a flutter among some of the members and forced them to move the machinery for declaring an emergency in the market. The Board of the Bullion Association considered this request and declared on Tuesday that a state of emergency existed in the market. This decision and the President's warning to members had a salutary effect on the market and to-day the operators who had long positions liquidated a sizable part of their purchases. The result was that silver finished to-day with a gain of only Re. 1-3 per 100 tolas over the week.

The strength of silver and good offtake on account of the marriage season helped gold to acquire fresh strength, though the closing rate was a shade below the highest level for the week.

As already indicated, the Board of the Bullion Association considered, at an urgent meeting on Tuesday, the requisition sent by 150 members to declare a state of emergency and unanimously declared that a state of emergency existed in the market. The Board's decision will have to be confirmed by a general ballot of the members; the necessary meeting for this purpose will be held on the 13th inst. The Board also decided to impose a margin on every rise of Rs. 7 in silver and Rs. 4 in gold over the basic rates. The present level of margin, namely, Rs. 500 per bar silver, will also be doubled. The President of the Association, while administering a warning to the members that the Board would not hesitate to take strict action against excessive speculation, has appealed to them to square up their outstanding positions.

Price of silver in both New York and London was unchanged at 85½ cents and 74d. per fine ounce, respectively. The international free market price of gold in Europe, however, made a further small decline during the week from $37.60 on the 3rd inst. to $37.45 yesterday.

Silver for forward delivery in March settlement began the week at Rs. 163-2 and reacted to Rs. 162-4 on profit-taking on the initial day. Thereafter, the white metal regained strength and jumped up to Rs. 166-5 on Saturday. As the closing price on that day (Rs. 166-4) was more than Rs. 5 above the last clearing rate, a special clearing was held in both silver and gold and the clearing rates were fixed at Rs. 166-8 and Rs. 89-8, respectively. On Monday, silver forged ahead on persistent bull support and bear covering to touch a high of Rs. 167-13. After reacting to Rs. 166-14 yesterday morning, it jumped up once again to Rs. 167-9, only to go back to Rs. 164-9 at the close to-day.

Ready silver (.996 Mint) moved down from Rs. 165-6 to Rs. 164-5 early in the week, but spurted to Rs. 168-13 on Monday. The closing was, however, lower at Rs. 165-9. Thus, the premium for ready over forward, which stood at Rs. 2 early in the week, soon narrowed down to Re. 1 later in the week. The floating stocks of silver are estimated at 2,000 bars. The daily average offtake was 40 bars.

Gold for forward delivery in March opened at Rs. 89-1 and steadily edged forward to touch a high of Rs. 91-2, the highest level for the year so far, yesterday on reports of better offtake, but reacted to-day at Rs. 89-7 in sympathy with silver.

Ready gold advanced from Rs. 89-9 to Rs. 91-6, but finished at Rs. 89-13. The floating stocks of gold are placed at 30,000 bars. The daily arrivals and offtake averaged 5,500 tolas and 7,000 tolas respectively.

The following comparative table shows the trend of the market during the week under review:

	11-2-53	Highest	Lowest	4-2-53
	Rs. a.	Rs. a.	Rs. a.	Rs. a.
GOLD				
Ready (.99 fine				
Mint)	89 13	91 6	88 11	89 14

London Ready ..	74d.	—	—	74d.
London Forward ..	74d.	—	—	74d.
New York Ready ..	85½c.	—	—	85½c.

HIDES AND SKINS FIRM

(From Our Own Correspondent)

MADRAS, 9th *February*

The market for E.I. tanned cow hides and calf continued to remain firm. A fair volume of sales in kips was put through with the U.K. in all grades and weights at slightly higher prices. There was good demand for inferior fifths at 2d. over last week's levels. Prices of cow and cow calf advanced by As. 2 and that of buff calf by an anna per lb. Raw prices were very firm in North Indian centres. In the skins section also, prices of tanned goat skins were firm; sheep skins advanced by As. 4 due to purchases on Japanese account.

In the London public auctions, prices of sheep skins declined by 3d. to 12d. over December levels at the close.

Shipments during January, 1953 were: to the U.K. 3,893 bales tanned cow hides, 166 tanned cow calf, 179 tanned buff hides, 275 tanned buff calf, 624 tanned goat, 832 tanned sheep skins and

COTTON CROP OUTLOOK

(From Our Own Correspondent)

BOMBAY, 11th *February*

From the point of view of cotton, this week was important because questions relating to it came to be reviewed comprehensively by the Central Cotton Committee during its long session here last week. Both the Minister for Agriculture, Dr. Punjabrao Deshmukh and Mr. K. R. Damle, who presided over it, emphasised various aspects of cotton production and marketing. Both admitted that production for the current year was expected to be much lower, almost as much as half-a-million bales less than the original target of 39 lakh bales, because of unfavourable conditions in several important cotton-producing areas such as U.P., Madras, Madhya Bharat, Hyderabad, Madhya Pradesh, Rajasthan, Gujerat and West Bengal. The Committee was hopeful, however, with regard to the production in the coming season and believed that with normal rainfall and other conditions the country would be able to reach the target laid down by the Planning Commission. It was admitted that while an increase in production was imperative, it could be achieved not by any extension of acreage under this crop, because such a step would have undesirable repercussions on food production, but only by more intensive methods of cultivation.

Apart from the problems regarding production, the Committee passed a resolution with regard to the important question of sales tax by the State Governments on cotton. In the case of Bombay, its recommendation had been ignored by the Centre when the Bombay Sales Tax Act was submitted to the President for his prior approval. The Committee, however, considered it necessary to reiterate its stand on the question of sales tax on cotton. It remains to be seen how much weight the Governments concerned attach to this recommendation by so authoritative a body. Finally, Mr. Damle welcomed the reopening of the Bombay cotton futures market and said, "You will be happy to know that the futures market has once again started functioning satisfactorily."

Returning to the markets themselves, it is obvious that the trade as well as the textile industry are convinced about a much lower crop than even that computed by the authorities. Recent crop condition reports from the South are not very encouraging and demand for not only good varieties but even short-staple cotton has increased, with a corresponding rise in prices both in the ready and the forward markets. One of the reasons for increased demand for exportable varieties is the Government's decision to allow export of Bengal *Deshi* in place of licences issued for Mathias, Kalagins, Dholleras, Oomra and C.P.I. and C.P.II. This would mean that about 50,000 bales of Bengals can now be exported over and above the quota previously allowed. At the same time, it must be observed that the rise in prices is sentimental and in anticipation of a demand coming from shippers at a later date and not as a result of any tangible enquiries for Bengals received from abroad. In spite of the rise in prices of Indian styles, transactions in imported cotton are few and far between. The latest available quotations for the ready market are: Bengal *Deshi* Rs. 470; Bera *Jarilla* Rs. 680; Vijay Rs. 800; Mogalai Rs. 630-640.

The following is the trend of prices in the futures market over the week ended to-day:

	Opening	High	Low	Closing
I.C.C. Feb. (Rs.) ...	638½	662	638½	649
I.C.C. May (Rs.) ...	648	671	647½	657½
I.C.C. Aug. (Rs.) ...	660	682	660	669½

Though the cotton trade as a whole is against the scheme of private bartering of cotton against commodities required by Pakistan, official circles of Karachi appear to be very sanguine about the success of this scheme. It is announced that the Commerce Ministry of the Pakistan Government has received a large number of enquiries from foreign firms about such deals though it is not known how far any such transactions have materialised. There are, however, unconfirmed reports of such deals with Italy and Hongkong. In the meantime, the very fact that the Government has been forced to adopt such a measure of questionable economic value, which is clearly bound to work against the established trade in cotton at Karachi, points conclusively to the fact that the position with regard to the disposal of stocks is really very desperate. There are still more than a million bales to be disposed of and no amount of cajoling would enable the authorities to persuade Japan to take a large share of these stocks. As forward trading is allowed, it creates an illusion of some activity, but the real export business, which is the main business which counts at Karachi, is almost negligible. The price trend, on the whole, however, is being sustained in the hopes of the trade delegation, which is going to Japan, bringing some kind of a deal. Those who have any experience of doing business with Japan, however, discount this possibility and hold that even if Japan agrees to buy a big lot of Pakistan cotton, it will do so only after squeezing every possible advantage for its exports of textile and other goods to Pakistan at higher rates. The following are the latest quotations from the Karachi market: Punjab *Deshi* Rs. 58-59; 4F Punjab R.G. Rs. 56-57; S.G. Rs. 59½-60½; L.S.S. R.G. Rs. 58½ to Rs. 59; S.G. Rs. 63½ to Rs. 64; N.T. R.G. Rs. 59; S.G. Rs. 63; 289F R.G. Rs. 63; S.G. Rs. 69.

The Cairo Government are going all out to reorganise its whole machinery and procedure for the marketing of cotton. Suggestions from shippers have been invited by the authorities in this connection and it is believed in Alexandria that the new policy for the future for cotton marketing will be announced by the end of this week or the beginning of next. In the meantime, the conditions with regard to payment for cotton by the importing countries have been further relaxed and buyers will now be required to pay only 25 per cent. of the price in dollars or sterling and the balance could be paid either in Egyptian currency or in goods. Another step taken by the Government to encourage exports is to reduce the price of Ashmouni by pegging the premium over the preceding day's U.S. prices at 5 per cent. instead of 10 per cent. as originally laid down. A Japanese trade delegation which has been visiting Egypt is believed to have negotiated for the purchase of 40,000 bales from Alexandria. A comprehensive trade agreement embracing a number of other articles besides cotton between Japan and Egypt appears to be in the offing and there are plans also of Nippon holding a big trade exhibition in Cairo about the end of this year. On the whole, it is apparent that Alexandria is meeting with much greater success in its drive for selling its cotton than Karachi or even the Sudan.

Prices appear to be stabilising themselves at New York with fluctuations either way. The undercurrent, however, is not very steady. No large-scale fluctuations are likely at present till the March delivery is out of the way, but it is feared that as a result of heavy tenders in this delivery, the near positions might come to be depressed during the next few days. The international political situation, on the other hand, is not likely to relow an all-round depression in prices at present.

The following are the latest available quotations from New York as compared with those of a week and a fortnight before:

(In cents per lb)

ART SILK YARN REACTS AT CLOSE

(From Our Own Correspondent)

BOMBAY, 11th *February*

Continued good offtake, decline in floating stocks and renewed fears of revival of war, following the Chinese Prime Minister's statement that his people were fully prepared to fight the Korean war to the end, if truce talks were not resumed, fanned further the bullish fervour of operators noted last week in the art silk yarn market during the major part of the week under review. Sustained speculative support and brisk short-covering that ensued as a result took the prices upto new high levels. This firmness of the market persisted till Monday last. On Tuesday, however, the market suffered a setback, due to profit-taking and lack of support induced by technical considerations. There were, besides, weak advices from the local share and oilseeds markets. Consequently, values of art silk yarn drifted downwards, which continued to-day also, losing thereby the ground gained earlier. Closing prices were, however, slightly higher than those a week ago.

In the forward section, 150D February contract rallied 29 points to Rs. 824 on Monday, but reacted to close at Rs. 797 to-day, the net gain over the week being Rs. 2. March contract, after advancing from Rs. 792 to Rs. 824, finished lower at Rs. 794. Values in the ready section moved in sympathy with those in the forward section. Thus, 120 Japan and 120 Italy improved by As. 5 and As. 4 to Rs. 5-3 and Rs. 5, respectively, on the 9th inst., but to-day, on profit-taking, they registered a decline. 120 Japan finished at Rs. 5-2 and 120 Italy Rs. 4-14. 150 Japan and 150 Italy gained an anna each to Rs. 4-9 and Rs. 4-2, respectively, but only to lose it at the close.

In the staple fibre section, business transacted this week was limited. Staple fibre 2×40 February contract was fully firm at Rs. 800, that is, the ceiling fixed by the Yarn Merchants' Association.

The table below gives the prices of art silk and staple fibre yarns quoted to-day, as compared with those on the 4th inst. and 28th February, 1953.

	11-2-53	4-2-53	28-1-53
	Rs. a.	Rs. a.	Rs. a.

OILSEEDS IMPROVE

(From Our Own Correspondent)

BOMBAY, 11th *February*

The oil and oilseeds market ruled firm almost upto the end of the week under review. Groundnuts led the market, on better up-country advices which induced considerable short covering. Besides, scarce floating stocks and unofficial low estimates of groundnut kernel crop at 16 lakh tons, as against earlier expectations of 22 lakh tons, also contributed to the upward trend. Other sections moved in sympathy with groundnuts. Prices, therefore, shot up all round. But, at this level, selling pressure ensued on profit-taking. Values, as a result, declined, thus wiping out partially the earlier gains. On balance, prices in all sections stood sizably above those at the end of last week.

The firm trend witnessed in the groundnuts section last week gathered momentum this week. Bold ready shot up from Rs. 35-12 on the 4th instant to Rs. 38-8 yesterday. But it declined to-day, on profit-taking, to Rs. 37-8. Khandesh quality (ready) improved from Rs. 36-4 to Rs. 39-4, before closing at Rs. 38-4. Groundnut oil ready fluctuated between Rs. 19 and Rs. 20-6 and finally eased to close at Rs. 19-12. Railway receipts were done higher by As. 8 at Rs. 19-8. Good export enquiries were reported in groundnut oil. Hongkong was said to be quoting groundnut oil at £134 to £135 and the Continent at £132 to £137. The rumours that the Government of India would impose export duty on oil did not have any perceptible effect on the trend in oils. Almost 70 per cent. of the export quota for January-March has been exhausted.

In the castorseeds section, May 1953 came in for nervous covering. Opening at Rs. 140-12, as against Rs. 142-8, it advanced to as high as Rs. 154, before closing at Rs. 144-12. The lowest touched was Rs. 140-4. Madras quality, after moving up from Rs. 31-4 to Rs. 32-12, declined to Rs. 31. Castor oil Commercial, which was quoted at Rs. 18-4 early in the week, rallied As. 12 to Rs. 19 and, subsequently, closed at Rs. 18-10. Oil I Pressure gathered As. 6 to Rs. 19. Export advices were steady. The U.S. enquired Commercial quality at 18½ cents per pound for March-April delivery. The U.K. was interested at £149 per ton.

Linseed moved in sympathy with the rest. Bold ready rose from Rs. 27 to Rs. 28-8, but eased later to Rs. 27-8. Linseed oil ready was higher by As. 8 at Rs. 14-8. In the Continental markets, Uruguay and Argentina are keen competitors to India in linseed oil. It is reported than Indian prices are about £15 higher than those of other countries for oil. This strengthens the case of linseed interests for reduction in export duty on linseed oil.

The following table shows the prices of oilseeds and oil on the 11th inst., as compared with those at the close of preceding two weeks.

	11-2-53	4-2-53	27-1-53
	Rs. a.	Rs. a.	Rs. a.
Groundnuts—

SELLERS RESERVED IN PEPPER

(Messrs. Parekh & Co.)

BOMBAY, 11th *February*

Despite small foreign enquiries, values in pepper market during the week were steadily held both at Alleppey and at Bombay in sympathy with the improved sentiment in other commodities under the stimulus of war fears following the decision of the U.S. Government to demilitarise Formosa. Alleppey sold, though in a small quantity, almost daily at a price ranging from Rs. 2,400 to Rs. 2,450, without any anxiety on the part of growers to press sales. With any deterioration in the Formosan situation, the planters expect good demand from foreign dealers and also from foreign Governments, possibly for stockpiling for any emergency, and they are, therefore, maintaining a firm and reserved attitude. In Bombay, forwards for February delivery are quoted at Rs. 2,150 and Rs. 2,180 for March delivery under pressure of short-covering and owing to unwillingness on the part of outsiders to make fresh short-sales during the present war psychosis. In the ready section, there was some development in the demand from consuming centres like Delhi and Kanpur and a few parcels were sold at a price ranging from Rs. 300 to Rs. 320 per B.M.

In A.S.T.A. section, though New York is not willing to pay more than $1.12 for February shipment and $1.09 for March shipment, there are local buyers for February and March shipments at $1.14 and $1.11, respectively. Garbled in Cochin are showing improved tendency and few contracts are changing hands at Rs. 433 for February delivery and Rs. 432 for March delivery.

Following are to-day's nominal quotations:— Ready delivery (Bombay) Rs. 2,250, February delivery (Bombay) Rs. 2,150-80, and March delivery (Bombay) Rs. 2,180-2,210 per candy of 5½ cwts. Ready (Alleppey) Rs. 2,500 and Ready (Calicut) Rs. 2,650 per candy of 6¼ cwts.

BEST LIQUORING TEAS DEARER

(Messrs. Forbes, Ewart & Figgis Ltd.)

COCHIN, 7th *February*

Sale No. 3:—The offerings at sale 3, which was held on Tuesday, 3rd February, amounted to approximately 8,40,000 lbs. Quality again showed improvement and there were several invoices of high grown teas with very good flavour. The sale opened to a very strong demand and prices were generally dearer, particularly for low brokens and fannings. As the sale progressed the demand slackened and at the close prices were about steady on last rates. The best liquoring teas were As. 3 to As. 4 dearer, following the improved quality. There was slightly less demand for whole leaf grades and these must be quoted one anna easier.

The following were the quotations:—

	1953
	Rs. a. p.
Low grown Travancore B.O.P.	1 6 0
Medium Travancore B.O.P.	1 13 0
Anaimallais B.O.P.	2 4 0
Best liquoring Nilgiris B.O.P.	4 1 0
Well made black leaf O.P.	2 2 0

London Market.—Market generally firm with quotations unchanged, but Assam O.F's inclined to be irregularly easier.

Colombo Market.—4,500,000 lbs. Low grown slightly easier, following rise in duty. Others good demand. Best irregular.

Calcutta Market—Export.—With exception of medium Assam O.F's and some B.O.P's market was generally firm, particularly at the bottom.

Dust.—15,000. Middle East types and common firm to occasionally dearer. Medium Assams and C.T.C. irregularly lower by often an anna.

Export Quota.—The market has eased slightly and business has been done at 2¾ pies, at which figure there are sellers.

Forthcoming Auctions.—Sales No. 4 will be held on Tuesday, 17th February.

As we go to Press, Messrs. Forbes, Ewart and Figgis, Ltd., wire:—

"*Dust Sale C*:— 1,75,000 lbs. Fair demand. Milled and fine dusts As. 1 to As. 2 dearer; others about steady with some withdrawals."

TEA FIRMS UP ON GOOD DEMAND

(From Our Own Correspondent)

CALCUTTA, 10th *February*

During yesterday's export sale No. 34, offerings amounted to 54,300 packages, demand was moderate, and prices rose fractionally. Keen competition was offered for commons and commonest teas, prices for which improved. There was good demand for fannings, while the better liquoring Dooars and Assams were wanted at advanced rates. A firm tendency was in evidence for all other varieties. The rates were: good Assam C.T.C. B.P. Re. 1-15, clean black pekoe Re. 1-7-6, clean common B.P. Re. 1-0-6, and medium Assam B.P. Re. 1-1.

Conditions during last week's internal market were easy. Dusts offered aggregated 15,145 packages, of which the common and the commonest varieties and the leafy black dusts gained by ½ anna. Prices for all other offerings eased by ½ to ¾ anna. Good Assam C.T.Cs were quoted at Re. 1-14, medium Grainy Assams, Re. 1-9, and medium Dooars, Re. 1-7-6. Leaf offerings amounted to 940 packages, prices for which were maintained at previous levels.

MORE FOODGRAIN IMPORTS LIKELY

(From Our Own Correspondent)

HAPUR, 8th *February*

According to authoritative sources in New Delhi, the food prospects in India are not as bright now as they were thought to be some weeks ago. This is borne out by news of acute food scarcity received from a number of States, more particularly, Bombay and Rajasthan. It is assured that there are ample foodgrain stocks in the hands of the Government to meet every eventuality, but the target of imports fixed earlier for 1953 at 2.5 million tons may have to be raised to 3 million tons. Out of the total of 3 million tons of wheat will amount to 1.8 million tons, rice 6 lakh tons, while the balance will comprise millets and other coarse grains. A major portion of wheat, amounting to 1.5 million tons, will be obtained under the International Wheat Agreement. About 250,000 tons of wheat will come from Argentine. Burma under last year's five-year agreement is expected to supply 350,000 tons of rice. No other firm commitment has yet been made. Of the total of about 500,000 tons of millets 1 lakh tons is expected from U.S.A. and an equal amount from China for which negotiations are being conducted at present. Even if negotiations with China fructify, India's millets requirements for 1953 will not be fully met, as the total demands made to the Centre by different States amount to nearly 10 lakh tons.

The Delhi State Government is understood to be worried because of the reported intention of the Punjab Government not to supply the remaining quota of 32,000 tons of wheat to the State, as promised earlier. Punjab's plea is based on the poor prospects of the *rabi* crop. The Punjab Government has offered 56,000 tons of rice to other States out of the new crop. Of this, 27,461 tons have already been despatched; Madras getting 19,443 tons, Bombay 3,000 tons, Delhi 2,280 tons, and Hyderabad 1,988 tons. Of the 29,993 tons of rice offered out of the previous crop, the Government had despatched 29,816 tons till 15th January last. Foodgrains will be deratioued from March in four of the 19 rationed towns in Punjab as an experimental measure. The towns are Rewari, Gurgaon, Hoshiarpur and Hissar. Operations on the food-front in Punjab, will be highlighted during the economic year 1953-54, with an all out stress upon means of mechanical irrigation, modern agro-technique and use of tractors in the State; it is officially stated.

The Bihar State has requested the Central Government to allot Bihar 1.2 lakh tons wheat, 10,000 tons coarse grains, and 50,000 tons rice from surplus States during 1952-53. As the Centre may not be able to meet the demand for rice, the Government of Bihar proposes to procure at least 20,000 tons of rice within the State this year.

Over 1,350,000 people in 3,086 villages spread over nine districts in Madhya Pradesh have been affected by crop failure and scarcity of fodder and drinking water, it is officially stated. The worst affected are parts of Buldana and Nimar districts. The chronic water shortage in Berar has been aggravated owing to failure of rains. The State Government have already launched a series of relief measures to meet the situation.

According to information received by the Uttar Pradesh Government, the damage to standing crops as a result of hailstorms in the third week of January has been severe over limited tracts in the districts of Deoria, Gorakhpur, Mathura and Kanpur. There was late sowing of *rabi* this year in eastern districts. As the damage is greater to more mature crops, there is hope that the loss may not prove as severe in the final reckoning. The State Government have reintroduced austerity provisioning scheme in the hailstorm-affected areas in Basti, Gorakhpur, Deoria and Azamgarh districts. As a step towards arresting the rise in wheat prices and to ensure supplies, particularly to poor and middle classes, the U.P. Government has

(Continued on page 275)

STOCK & SHARE QUOTATIONS

Abbreviations:—D=Deferred shares. G=Guaranteed shares. P=Preference shares. P.O.=Preferred Ordinary shares. R=Rebate shares. Y=Accounts published yearly. H=Accounts published Haf-yearly. Q=Accounts published once 15 months. T=Company has Debentures. R.L.=Reserve Liability on shares. N=Nominal Quotation. i=Interim Dividend. f=Dividend for first half-year, y=Dividend for the year. x=Ex. Dividend. c.d.=Cum. Dividend.

Shares:—If a company has different classes of shares—as, for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under "Paid-up Per Share."

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12 indicate the months of June and December, respectively "Reserves" includes general and other reserves and all other funds which a company may have as also depreciation on block items, when this is charged to separate account "Block" represents actual cost of land, buildings, machinery, and all such other items on which depreciation is allowed, less sales, if any, and stands for the gross figure except where otherwise indicated.

Dividends:—Dividends for completed years are calculated at per cent. per annum, but, where quoted for portion of a year, they represent percentages of the dividend on the paid-up share value. For companies closing the books half-yearly in the first three months of the year, and for companies closing their books yearly during the first half of the year dividends are shown as for the previous year.

* The following explanatory notes relate to the abbreviations and marks shown on page 276 in the obentures section:—

N Option to repay on six months' notice, on any interest date after 31st December, 1951, at 102 per cent. Also redeemable out of a cumulative sinking fund of 1½ per cent. per annum (commencing in 1938) by drawings at 102 per cent. or by purchase at or 102 per cent.

(a) Option of repayment at any time at 3 per cent. premium.

(b) Bearer bonds of Rs. 1,000 each repayable at par.

Bearer bonds of Rs 1,000 each repayable on 31st July, 1959.

(d) Bearer bonds of Rs. 1,000 each with option of redemption in whole or in part at par on 30th June, 1952, or on any subsequent interest date at one month's notice.

(e) Returnable on or after 31st July, 1950, at Rs. 102-8 or at par after 31st July, 1955, on six months notice in each case.

Bearer bonds of Rs. 1,000 each with option of redeeming on 3 months' notice at ½ per cent premium, after 1st March, 1954, but before 1st March, 1957, and 1 per cent. premium on or after 1st March, 1957

(h) Option of redemption on or after 1st July, 1949, at par.

(f) Option of repayment at any time at par at any time on or after 30th June 1947 on six months' notice.

MARKET GOSSIP

(Concluded from page 231)

specific proposals in this connection. One was the permission given to the World Bank to lend to sterling area countries over a period of 6 years £60 million from the sterling portion of the U.K.'s subscription to the Bank's capital. Although this capital belongs to the Bank, under the Bank's charter, it cannot be used without the permission of the country concerned. So far, the U.K. has lent only £1.5 million in this way. The other proposal was to give requests for capital from Commonwealth countries for financing their development programmes equal priority with rearmament and exports. The only condition that he attached to this was that the capital required should be for purposes likely to improve the sterling area's balance of payments with the non-sterling world. The fact that Britain has now boldly come forward with these proposals, which are quite sound in principle, is an indication of its confidence that it can deliver the capital goods needed by countries, such as India with plans for economic development.

* * * *

Some unusually forthright remarks were made by Mr. Dharamsey M. Khatau on the question of "flag discrimination," in the course of his speech at the annual meeting of the Scindia Steam Navigation Co., Ltd., extracts from which are published elsewhere in this issue. A careful reading of his address will show that, if his remarks were strong, they were at least as just. He was referring to the criticism, often heard from certain Western countries, that the countries which do not find a place in the maritime map of the world, were practising "flag discrimination." Having developed their own maritime position by means both fair and not-so-fair, the leading maritime countries can now afford to preach the doctrine of laissez faire in shipping. The acceptance, rather the unqualified acceptance, of this doctrine in the sphere of shipping industry would put an end to all hopes of the less fortunate nations building up an adequate merchant marine. What renders the criticism so much more incongruous is the fact that these very nations, which now ask for laissez faire in shipping, were not averse to providing generous State assistance and aid when they had an infant shipping industry to foster.

* * * *

The countries referred to above are, of course, too careful to state their demand clearly. They use "flag discrimination" as a smoke-screen to cover their real intentions. Referring to this attitude, Mr. Khatau said: "Discreetly, there is no attempt to define this term. Were it defined, it would be clear that what is really sought is the perpetuation of a "free for all" in which the weak would struggle in vain with the most powerful and in which, therefore, the few, but financially mighty, would soon crush the many, but financially puny." For his part, Mr. Khatau defined the Indian shipping industry's stand in most unequivocal terms. In the first place, he agreed that there should be no discrimination in coastal trade. Secondly, nothing should be deemed "flag discrimination" which is for the legitimate encouragement and development of, or assistance to, national shipping in countries the merchant marine of which is backward and undeveloped in relation to the volume of their coastal and foreign trade, or which is necessary for purposes of defence, or for safeguarding the national economy, including, in particular, the integrity of national currency by way of redressing an unfavourable balance of external payments. Thirdly, he urged that retaliatory discriminatory action should be permissible, since retaliation becomes necessary either through the action of other countries or through the discriminatory action of powerfully organised foreign trading interests who may favour their national shipping under the ostensible cloak of customer preference. If India's aspirations in the sphere of shipping can be regarded as fair and reasonable, and we do not see how else it can be regarded, then the stand taken by Mr. Khatau is really unexceptionable. It is to be hoped that the industrially advanced Western countries will be convinced of the essential justice of India's claim for a decent share in the world maritime trade and that they will give up their obstructive tactics and help India to realise its legitimate aspirations.

* * * *

Interesting trends in the British coinage system in 1950 are revealed by the Report of the Royal Mint for the year. In that year, the Mint issued 369.9 million coins, as compared with 443.7 million in 1949. The Mint withdrew from circulation £11.5 million in silver coins made since 1920, and £46,279 worth of silver coins made before that year. The proportion of silver in Britain's coinage was first reduced as early as in 1920. An unprecedented rise in the price of silver in the early months of that year led the Government to pass an Act reducing the silver content of the coinage. Twenty-six years after, namely, in 1946, the issue of silver currency ceased. The need for repaying 88 million ounces of silver obtained from the U.S. under Lease-Lend during the war was partly responsible for the demonetisation of silver in that year.

* * * *

The place of silver currency was taken by coins made of cupro-nickel. Since 1946, the Mint has been experiencing great difficulty in obtaining sufficient nickel to meet even the 25 per cent. of that metal used in cupro-nickel coins, because of heavy world demand for it. This problem was solved by the Mint by buying 400 tons of unwanted cupro-nickel coins from various countries, the nickel content of which was the same as that used in the U.K. The big rise in metal prices came after the contracts were signed, and the Mint made considerably more than the 10 per cent. normally saved in cost by the use of second-hand metal. Estimated circulation of cupro-nickel coins rose from £65 million in 1938 to £145 million in 1948. Since then there has been a rise in the stocks of these with the banks; this indicates that the amount of coins in circulation is growing smaller.

* * * *

Another notable trend in the coinage system during the year under review was the surplus holdings of pennies with banks. The surplus was accounted for by the conversion of penny slot meters to shilling meters as well as by the fall in the purchasing power of money. Farthings were, on the contrary, in short supply. Although few people bothered about farthings, firms dealing in commodities priced in farthings continued to make fresh demands on the banks. This is considered to be hard on tax payers as the cost of making this coin of smallest denomination is more than a farthing. Many requests were received for the introduction of new kinds of coins, especially for 1½d. piece. The Report in this connection says: "Price fluctuations, however, are best met by a system which contains as few denominations as are consistent with a high degree of flexibility."

* * * *

The Mint also contributed to Britain's foreign exchange earnings during the year under review. Of the 369.9 million coins issued, as many as 214.6 million were of 51 denominations for 16 countries abroad. These coins included 1 millieme pieces for the Egyptian Government and £50,000 worth of cupro-nickel and bronze coins for Eire.

* * * *

The Mint's normal output of coins for a whole year is about 400 million pieces. The Report says that demand for existing coins would not diminish for many years and an additional burden would be thrown upon resources of labour and metal which are urgently required for other purposes.

SURVEY

(Concluded from page 235)

for agricultural extension work. The U.S. contributions will be supplemented by the Government of India's contributions, the amount actually earmarked for this purpose being Rs. 13 crores and Rs. 73,500, respectively.

The operational agreement on river valley projects is the supplement to the one signed on 14th June, 1952, under which some equipment for the Hirakud, Kakrapara, Mahi and Ghatprabha projects was agreed to be provided. The present agreement provides for technical assistance, equipment and supplies for the construction of dams, irrigation canals and power plants for the Hirakud, Tunga, Gangapur and Jawai projects, as well as for six river valley schemes in Saurashtra. With the completion of these projects, several thousands of acres of land, now lying uncultivated, will be brought under the plough and production of foodgrains and other agricultural crops will be stepped up.

Under the second operational agreement covering agricultural extension work, the printing and graphic materials required for the effective development work in the Community Project areas and for other agricultural extension work will be provided to village workers. Specialised equipment needed for the production, use and dissemination of such material is also to be provided. For this purpose, emphasis will be laid on producing simple pamphlets, folders, posters, flash-cards, flannel graphs and news-letters containing information regarding agricultural methods and techniques. The Indian Council of Agricultural Research will be responsible for the organisation and supervision. In order to ensure proper use of the equipments, a short training programme for operators will be organised, if found necessary.

Simultaneously with the above agreements, the Governments of India and the U.S. have signed a technical assistance agreement covering fertiliser production. Under this agreement, three Indian officials, assisted by a foreign specialist in fertiliser production, will be sent to Europe, the U.S. and Japan to study and observe the manufacturing processes of urea and ammonium nitrate, with a view to selecting the type of process and facilities suited to conditions in India. This project is in connection with the proposed expansion of the Sindri fertiliser plant. The U.S. Government will make available to India a sum not exceeding $10,000 for this purpose.

MARKET REPORTS

(Concluded from page 265)

directed all district officials to sell wheat from Government stocks at Rs. 22 a maund wherever market prices shoot beyond this. In towns where wheat is still available at Rs. 17-4 a maund from Government shops, despite the abolition of statutory rationing from 1st July, 1952, there is no special problem. But in a large number of small towns and other places having concentration of population, the problem has arisen, with wheat price shooting upto, and even beyond, Rs. 26 per maund.

Foodgrains prices in West U.P. mandies have remained more or less stationary. The present high wheat price level is ascribed to pre-harvest condition and to the fact that no purchases were permitted last year for trade stocks. Foodgrains purchases by the State Government were fairly heavy. With substantial fall in the demand for peas and arhar, their ready prices have fallen. The latest quotations are: Wheat: Rs. 23, gram: Rs. 19, barley: Rs. 16, bejhar: Rs. 15-8, rice bagmati: Rs. 35, hansraj: Rs. 31, sela: Rs. 29, coarse: Rs. 23, jowar: Rs. 12-12 to Rs. 13-12, gowar: Rs. 13, peas: Rs. 17-4 to Rs. 17-12, arhar: Rs. 17-4, urd: Rs. 22 and moong: Rs. 21.

SUGAR PRICES A SHADE EASY

(From Our Own Correspondent)

HAPUR, 8th February

Further release of controlled sugar for free sale with the imposition of ban on gur and sugar exports, have reacted bearishly on all the markets. Except for some markets in the South, where sugar stocks are still small, prices at other places have declined slightly.

The Central Food Ministry proposes to dissolve the Indian Sugarcane Committee in the near future. Plans for transferring the functions of the Sugarcane Committee to other Government departments have been finalised.

The latest quotations in the open markets are: Ambala: Rs. 30-4, Amritsar: Rs. 30-10, Delhi: Rs. 31-3, Jullundur: Rs. 29-10, Agra: Rs. 29-10, Hapur: Rs. 29-4, Kanpur: Rs. 28-8, Mathura: Rs. 29-15, Meerut: Rs. 29-10, Muzaffarnagar: Rs. 30, Patna: Rs. 30-12, Calcutta: Rs. 30-5, Cauhati: Rs. 36, Cocanada: Rs. 31, Madras: Rs. 34-6, Bombay: Rs. 32, Bhavnag

MADRAS GOVERNMENT

A FAIR AND JUST AWARD

THE Finance Commission has carried out the task allotted to it by the President of the Indian Union conscientiously, expeditiously and satisfactorily. This is the impression that we get after going through the full text of the report of the Commission released last week-end. It is not surprising that its recommendations, all of which have been accepted by the Government of India without any modification, have not pleased all the States, for it is just not possible to please every one of them in a matter which involves income. It is but natural that all the States should have asked for a maximum share in the revenues of the Centre. A perusal of the demands submitted by them to the Commission reveals that not even one of them paid any thought to the needs of the Centre. But the Commission has played the role of a fair-minded judge in reconciling the needs and responsibilities of the Centre with those of the States, in a country pledged to a policy of Welfare State, with remarkable consistency and understanding. In fact, it is no exaggeration to say that the Commission's award is the fairest that the country has had on the allocation of resources between the Centre and the States, an award based on certain recognised principles.

The Commission has, wisely, not been dogmatic in enunciating the principles of allocating the Federal revenues to the units and has recognised that there is scope for following alternative bases. But, at the same time, it has convincingly pointed out the practical limitations to the adoption of alternative bases in some cases. Considering the comprehensive nature of the task it was asked to perform and the lack of adequate data, the Commission has carried out its job fairly quickly. It had to ask for an extension of the initial term of office for one year by only one month. Few committees entrusted with responsibilities of similar magnitude have discharged their duties within such a short period and in such a business-like manner as this Commission. Another notable feature of the Commission's work is that it has taken pains to explain at length the basis on which it has framed its proposals. This marks an important departure from the previous awards on this question. Sir Otto Niemeyer, whose award held the field for eleven years without any fundamental modification, for instance, did not explain the reasons that prompted him to allocate the revenue resources between the Centre and the Provinces in the manner he did. He just gave the award; we were never told why he allocated 20 per cent. of the States' share in the Centre's revenue to Bombay and Bengal, while allocating only 15 per cent. to Madras and the United Provinces.

As required by the Constitution, the Finance Commission was appointed by the President to advise him on three fundamental matters. These were: (1) the distribution between the Union and the States of the net proceeds of taxes which are to be or may be divided between them and the allocation between the States of the respective shares of such proceeds; (2) the principles which should govern the grants-in-aid of the revenues of the States out of the total revenues of the Centre; and (3) the continuance or modification of the terms of any agreement entered into by the Government of India with the Government of any Part B States. The recommendations of the Commission on all these matters and their effect on the revenues of the Centre, as well as of the States, are summarised elsewhere in this issue. It is, therefore, not proposed to go into them here but only to examine the principles followed by the Commission in making its suggestions.

The Commission approached its task right from the beginning on the assumption that there was an imperative need for a substantial augmentation of the revenues available to the States. It has sought to fulfil this need in two ways, by widening the field of division by including a few excises and by increasing somewhat the States' share in the divisible pool of income-tax. The advantage of this recommendation to the States is not merely an increase in their total share of revenue raised by the Centre but also an addition of one more elastic source of revenue to them. It is common knowledge that, in the past decade, excises have turned out to be as elastic as income-taxes. And in choosing the excises on tobacco, matches and *vanaspati* for participation by the States, the Commission has picked up the best revenue-yielding items. Matches constitute an essential item which is bound to meet with a progressive improvement in demand. Tobacco, though not a necessary of life, is finding increasing use. Similarly, *vanaspati*, as an article of daily necessity, is growing in popularity. The inclusion of the excise duties on these goods in the divisible sources of Central revenue must, indeed, be quite welcome to the States. No longer can the States complain that, while their needs are growing, their revenues are inelastic. Besides income-tax, which has proved to be a remarkably elastic source of revenue, they have now a substantial share of 40 per cent. in the most lucrative three Central excises, sales tax and a few other revenue taxes such as State excises, stamps, entertainments, etc., all of which have been contributing progressively increasing amounts to the States' exchequer. If some of them are sacrificing State excises, in spite of well-intenticned advice from intelligent observers and administrators, it is their own fault and it is entirely unjust on the part of these States to expect others to make sacrifices in order to finance the costly experiments of some incorrigible faddists whom they have chosen to be at the helm of their affairs.

While the Commission has, of course, done well in meeting the unanimous demand for higher allocations from the Centre, it is to be hoped that the additional Rs. 20 crores, that are now being allotted to the States, will not induce a spirit of complacency among them about the need for raising their own resources by diversifying their tax structure and by effecting economy in their expenditure. But we are afraid that this will only be a fond hope and that the Finance Commission's recommendations will actually place a premium on the spendthrift habits of the States and strengthen their reluctance to raise additional taxes for fear of political unpopularity. The Centre seems to be helpless and has failed on a number of occasions in the past in its efforts to make the States toe its line. The two State budgets that have been presented up to the time of writing reveal large deficits in relation to their revenues. And it is likely that most of the other States may also do so, which is contrary to the financial scheme under the Five-year Plan and which means that even the increase of Rs. 20 crores in the States' share in Central revenues, as a result of the Commission's recommendations, has proved insufficient to cover their growing expenditure. No efforts are being made to bridge the gap in their budgets; on the contrary, increasing reliance is being placed by them on the Centre. Unless the Union Government has an effective voice over the policies and practices of the State Governments, the whole object of the Finance Commission's recommendations will be defeated.

There is little that is objectionable in the principles followed by the Commission in evolving the scheme of distribution of the share of individual States in either the income-tax or the three Central excises referred to above. In the case of the former, the Commission has proposed that 20 per cent. of a State's share should be on the basis of collections and 80 per cent. on the basis of population, according to the census of 1951. In the case of the latter, namely, excises, it has followed the basis of population. Considerations of space do not permit us to elucidate the impressive line of reasoning followed by the Commission in support of its decision. Suffice to say that all impartial critics will do well to read the Commission's report carefully before they draw their conclusions. The Commission has explained, in a convincing manner, how the bases chosen by them are the best that could be adopted by it in the present circumstances. The criticism against the Commission's stress on the population basis on the ground that it is not in tune with the widely recognised desirability of checking the growth of population is silly, to say the least. In the first place, the Finance Commission was not concerned with the population problem. And, secondly, the prospect of getting a few lakhs or even crores of rupees more from the Centre is not going to encourage a State to aggravate the problem of population, for the simple reason that it will create many other difficult problems for it. A point that may be added here is that, in regard to the distribution of excise revenue among the States, the Commission does feel that the basis of consumption will be more equitable than the population basis. Nevertheless, it has found it necessary to follow the latter basis, because there are no reliable statistics of consumption. The Commission has, accordingly, recommended that efforts should be made even from now on

to collect consumption statistics, so that the next Finance Commission at least may have sufficient data to change the basis of allocation of Central excises.

The principles advocated by the Commission for giving grants-in-aid of the revenues of the States out of the Consolidated Fund of India are unexceptionable and follow the best in the various Federal constitutions in other parts of the world. The special grants given to backward States for promoting primary education is justifiable in principle, but it is doubtful whether it will be utilised by the States for the purpose for which it is intended, for there are no effective means of checking it. There are several instances where taxes that are being collected by the States for specific purposes are not being used for such purposes and whenever anybody qualified to ask for an account of the expenditure of these special receipts does so, the State Governments are very adept in explaining away the whole thing.

An important recommendation of the Finance Commission pertains to the need for a small organisation, preferably as a part of the Secretariat of the President, to make a continuous study of the finances of State Governments and to build up the necessary data for the benefit of future Finance Commissions. The absence of adequate statistics was a great handicap to the Commission in its work and on account of which it had to spend considerable time and energy in collecting basic statistic material. Further, such an organisation will enable the Centre to know more intimately and accurately as to how the States are spending their resources and to verify, from time to time, whether the expenditure of States is in accordance with the overall plan for the economic development of the country. We, therefore, wholeheartedly support the Commission's suggestion that the question of setting up this organisation should be taken up by the Central Government without any delay.

RAILWAY BUDGET

PREPARATION of budgets is, at all events, not a simple task. Even so, the sharp drop of Rs. 14 crores to Rs. 9.48 crores in the Railway surplus for 1952-53 does not reflect much credit on the Railway Administration's ability to forecast earnings. In the Budget, which Mr. Lal Bahadur Shastri, Minister for Railways, presented to Parliament this week, the gross traffic receipts for the current year, which were originally estimated at Rs. 282.16 crores, have been revised downwards to Rs. 269.55 crores, while expenses, originally forecast at Rs. 187.69 crores, have moved up in the revised estimates to Rs. 188.85 crores. The original estimates are part of the Budget presented in February last, and confirmed in May when it was re-presented to the new Parliament practically in its original form. The country had run through a period of collapse in commodity markets between February and May. And it should certainly have been possible to revise the figures of receipts on the strength of the depressing evidence of the markets. But it was not done. The result is that the Railway Minister has to offer a laborious explanation for the shrinkage in the originally budgeted surplus from Rs. 23.47 crores to Rs. 9.48 crores for the current year.

The Minister said that passenger traffic had declined from Rs. 112.19 crores to Rs. 102.65 crores—a decline which might so easily have been anticipated when the Ministry had an opportunity of re-presenting its budget—and that goods traffic had declined from Rs. 145.66 crores to Rs. 144.56 crores. Total gross receipts are expected to be lower at Rs. 269.5 crores, as against the original estimate of Rs. 282.1 crores. While the estimate of revenue has turned out to be an overestimate, the estimate of expenditure has once again proved to be an underestimate. Thus, the expenditure in the revised budget for 1952-53 is placed higher at Rs. 189.1 crores, as against the original estimate of Rs. 187.9 crores. The increase is no doubt small and there is nothing unusual about it. But it becomes significant, in the context of the appreciable fall in revenues; it is a typical instance of the fact that costs in the country have become rigid and are not easily amenable to control in times of shrinking income, a point which some of our Ministers in the Centre and the States will do well to note when they champion the cause of labour. It is also a confirmation of the oft-repeated complaint of the Railway Audit that actual expenditure in the administration of the railways always tends to outrun estimates. Be that as it may, the net result of these changes is that the surplus, originally estimated at Rs. 23.47 crores, stands now, as already stated, at no more than Rs. 9.48 crores. The surplus has been arrived at after maintaining the allocation to depreciation reserve fund at Rs. 30 crores and the dividend to general revenues at Rs. 34.11 crores.

It is to be hoped that the Budget for 1953-54 has been framed with greater caution. Both traffic receipts and working expenses are placed higher at Rs. 272.28 crores and Rs. 191.20 crores, respectively. The anticipated increase of about Rs. 2.7 crores in traffic receipts is based on the grounds that there is a "steady healthy trend in industrial production" and that, with the "Five-year Plan coming into stride, industrial activity should further increase both in the public and the private sector." This assumption appears to be somewhat optimistic in the present atmosphere of falling demand for goods, falling agricultural prices and the gradually rising unemployment. But perhaps the Railway Minister knows something of what his colleague, the Finance Minister, is going to say next week when he presents the General Budget. There is no doubt that it lies in the hands of the Finance Minister either to stimulate the economic activity in the country or to depress it still further.

As regards the estimated expenditure for 1953-54, the increase in it is partly accounted for by the need for larger provision for overtaking the arrears of repairs and maintenance of rolling stock, track and other installations, and for meeting additional expenditure on staff. After providing for miscellaneous expenditure of Rs. 7 crores, for allocation to depreciation reserve fund of Rs. 30 crores, which is the same as that for 1952-53, and for contribution to general revenues of Rs. 34.77 crores, which is a shade higher, consequent on the small increase in capital at charge—this contribution is calculated at 4 per cent. on the capital at charge—the Budget for 1953-54 is expected to disclose a net surplus of Rs. 9.31 crores, as against the revised surplus of Rs. 9.48 crores for 1952-53.

The capital expenditure during the year 1952-53 is now placed at only Rs. 76.70 crores, as against the originally estimated figure of Rs. 79.10 crores. The saving, it is stated, is due mainly to the slow progress of certain works and a decrease in the stores holding by the Railways. For 1953-54, a provision of Rs. 79.61 crores has been made. Out of this sum, Rs. 42 crores will be spent on rolling stock and machinery, inclusive of Rs. 15 crores for new acquisition of these items (over and above the programmed deliveries). The total provision of Rs. 79.61 crores also includes Rs. 36.61 crores for works, including Rs. 6.70 crores for construction of new lines and for restoration of dismantled lines. The Minister disclosed that several new lines would be taken in hand in the next year, including the 186-mile Khandwa Hingole link at an anticipated cost of Rs. 7.5 crores and the 31-mile link between Gua-Barabil area to the Manharpur-Rourkela section in Bihar and Orissa, at an estimated cost of Rs. 3.5 crores. The Minister revealed that the construction of the integral coach building factory at Perambur, Madras, was going ahead and that a provision of Rs. 1.3 crores had been made for this project in the Budget. Reviewing the existing rolling stock position in the Railways, Mr. Shastri said:

> "It is a matter for gratification that our indigenous production is able to meet the normal annual requirements of the railways in regard to rails, wagons and coaches. I am anxious to ensure that our imports are reduced to the minimum. In fact, we have already decided not to import any more coaches except for the commitments already made. However, some wagons to make up our huge arrears, the overtaking of which can brook no further delay, have to be imported. Locomotives, too, will have to be obtained from abroad, but here also vigorous efforts are being made to make ourselves self-sufficient within a prescribed period."

All this reveals an encouraging picture, and, in fact, more encouraging than what has been indicated in the Report of the Planning Commission. Further, considering the necessity to maintain employment within the country, the Railway Minister's determination to rely less on imports and more on domestic production is commendable. But, when the Budget is considered, as a whole, in relation to the Five-year Plan, it reveals certain disconcerting features. Under the Plan, the Railways are themselves expected to find the greater proportion of the finance for development. Thus, out of the total sum of Rs. 400 crores, which the Railways would need for development under the Plan, they are themselves expected to find Rs. 320 crores; the balance will be made good from the Central revenues. It is not as if this level of expenditure will enable the Railways to effect vast improvements in the services which they are now rendering. Only, it will help them to wipe out, as the Planning Commission pointed out, accumulated arrears of maintenance and rehabilitation and to provide for an immediate programme of development for meeting the minimum obligation of the Railways as a public utility concern. But the Railways would find it extremely difficult to set apart sufficient funds for development and renewals, if the earnings, whether passenger or goods earnings, were to fall as they have done in 1952-53.

That despite the increase, amounting to 30 per cent. in coal freight, the increase in the freight rates for many other articles effected as part of the move for rationalisation of freights, and the 20-25 per cent. increase in passenger fares introduced in 1951, the upward trend in the revenue of Railways has not been maintained is disquieting and does not augur well for the success of the Five-year Plan. The special funds are not too plentiful either. Thus, the Depreciation Reserve Fund is expected to close the year 1952-53 with Rs. 108.6 crores to its credit, while the Fund at the end of 1953-54 is expected to be lower at Rs. 101.2 crores. Again, the Revenue Reserve Fund will have, at the end of the current financial year, Rs. 34.8 crores to its credit, and, at the end of 1953-54 no more than Rs. 35.9 crores to its credit. It would, however, be fatalistic to assume that the revenues of the Railways have crossed the peak and that nothing else could be done to increase them. It is hard to believe that by a more efficient utilisation of the available wagons and by systems of tourist travel facilities, the revenues of the Railways cannot be stepped up. It is gratifying to find that the Railway Administration has not made any attempt at increasing the fares and freights. Several industries are already feeling the pinch of the heavier transport costs and any further addition to them would have strengthened the present recession in business conditions. Surely, the Railways cannot hope to thrive at the expense of industrial development. They should plan to find the necessary resources for capital and other essential expenditure only through an increase in operational efficiency and adherence to strictest standards of economy

The Planning Commission, it may be mentioned here, has emphasised that the policy of the Railways during the period of the Plan should be "to keep down the working expenses to the lowest level compatible with efficiency and reasonable standard of service in order that the necessary surplus for financing the development programme becomes available." This is not so much an expression of pious wish as a clear directive. That this directive is not being followed is the opinion of many impartial observers. Glaring instances of financial irregularities have been brought to light by the Railway Audit Report. It is a pity that Mr. Shastri made no reference whatever to this Report in his speech. Thefts have been on the increase. In one year, during 1949-50, the Railways had to pay out Rs. 3.71 crores by way of compensation for goods lost or damaged. Perhaps, the compensation amount would have been larger, if all the claims had been passed or if all those who had lost their goods, had submitted their claims. This is a clear waste of public revenues. There is then the question of corruption which involves less monetary loss than loss of prestige. It is comforting to hear that a Parliamentary Committee will probe into the question. But the Railway Administration should not lose sight of larger issues—issues, such as economy in administration and the adoption of a rational system of priorities in expenditure. Perhaps, a slight reduction in constructional activities, inclusive of the construction of lavish buildings for unimportant stations, and in the standard of staff amenities, which are now somewhat higher than is available to comparable classes of workers in other sectors of industry and Governmental undertakings, will help the Railways to achieve some economy in capital expenditure. Further, it is not clear whether any improvement has been effected in the efficiency of the workers; the Kunzru Committee report had some uncomplimentary observations to make on this subject. Complacency and lack of economy, though inexcusable at any time, will cause irreparable damage to the Indian Railways in the future when earnings may conceivably shrink further and the Railways may find that expenditure cannot be readily pruned to reasonable levels. This is all the more reason why economy should be practised from right now, with vigour and steadfastness.

PROSPECTS FOR FIVE-YEAR PLAN BLEAK

NEW EXCISE ON CLOTH—APPELLATE TRIBUNAL IGNORED—SOCONY TO ISSUE DEBENTURES

THURSDAY, 5 P.M.

WITH just 10 days more for the Central Budget to be presented to Parliament, movements in share values are being dictated mainly by "budget gossip." There is, of course, no consistency in the gossip. A week ago, there were widespread fears that the Finance Minister might even increase the direct taxes partly to close the yawning gap in the Budget and partly to appease the leftists. But now the very same sources which spread these pessimistic rumours seem to be optimistic. They say that the Budget will contain no additional taxation of any direct consequence to the Share Market. In saying so, they are reverting to the thoughts they held a fortnight ago. They seem to be convinced more and more that Mr. Deshmukh will leave a large uncovered deficit to be filled in by creating fresh money. And in support of their hunch, they are citing a few convincing facts. Let us list them in their proper order.

MARKET GOSSIP

* * * *

First comes the statement of Mr. Deshmukh at Hyderabad, two weeks ago, to which a reference was made in these columns. Since Mr. Deshmukh has not contradicted the Press version of what he said in that outlying centre, market people think that he means what he is reported to have said. Secondly comes the Railway Budget. In spite of a sizable fall in the estimated surplus, no attempt has been made in it to impose fresh burdens on the public. Mr. Deshmukh could have asked his colleague, Mr. Lal Bahadur Shastri, so runs the contention of market circles, to use the opportunity offered by the fall in the Railway surplus to raise the fares and freights further. Thirdly, none of the two State budgets presented this week—the budgets of West Bengal and Bihar—contains any additional taxation of worthwhile nature, although it was expected that in accordance with the suggestions of the Planning Commission, the States would impose new taxes and show a revenue surplus. Fourthly, it is believed that the Bombay State also will show a deficit in its budget and remove some of the regressive features of sales tax. Fifthly, the Madras Finance Minister has also been saying that he will not be able to bridge the deficit in his budget. Sixthly, New Delhi advices are hinting at the possibility of Mr. Deshmukh not reintroducing the salt duty. In this connection, they point to the rebuff he has had at the hands of the Bombay Chief Minister, Revenue Minister and the chiefs of the Maharashtra and Baroda State Congress bodies to his suggestion for a review of the prohibition policy and draw the inference that the Congress Party in the Union Parliament will be opposed, on sentimental grounds, to the reintroduction of the salt duty. And, seventhly, there is a growing belief that the introduction of Estates Duty may be delayed. Mr. Deshmukh's request to Parliament to extend the time limit for the presentation of the Select Committee report on the Estates Duty Bill to 31st March, 1953, is evidently responsible for this feeling. In any case, the additional time wanted by the Select Committee to consider this measure has given rise to fresh hopes that this taxation measure will not be as stringent as many thought, last week, it would be.

* * * *

While the share market is considering the aforesaid conjectures from its own point of view, we would like to consider their implications to the Five-year Plan. If all the States, or even most of them, are going to show a deficit on their revenue account, if prohibition is to stay, if salt duty is not to be reintroduced and, above all, if India is to play the ambitious, and, perhaps, the fruitless, role of a peacemaker in the world, pulling the chestnuts of other nations out of the fire who are finding it very inconvenient for themselves to undertake that task, then the Five-year Plan is doomed to failure. The foreign policy that India has been following is undoubtedly an ideal one, but we must be prepared to pay a price for it. And the price will be poverty and tightening of the belt for some more years. India then should not formulate a plan which depends for its success on a large measure of foreign assistance. Let us face it as realists and resign ourselves to some more hardship. Mr. Deshmukh knows very well that the chances of India obtaining any substantial assistance from the U.S. or elsewhere are bleak. And having launched the Plan, the only way out is deficit financing. Perhaps, the I.M.F. experts who are in India now to advise him on this question will find it convenient to encourage Mr. Deshmukh to go ahead with deficit financing.

* * * *

We are not opposed to deficit financing, provided resort is had to it after fulfilling certain pre-requisites and provided it is used as a last resort. It is criminal to resort to this means of finance before exploring all other sources of revenue. And our contention is that this is not being done. Only a finance minister who does not know the art of raising finance will fall back upon this third degree method of finding funds for development. If Mr. Deshmukh were to do so, it would mean that he is not prepared to face the unpleasant consequences of the Congress Party not listening to his advice.

* * * *

Unfortunately, there seem to be many business men in this country who feel that deficit financing would be a good thing for ensuring a high level of economic activity. Some of the economists-cum-business men are also extending their support to this view. Much is being made out of the present recession in the level of economic activity in the country, the net fall in the volume of money supply as compared with a year ago, and the decline in employment in certain sectors. These developments are being quoted to support the argument that the country is passing through deflation and that it would soon be in the grip of depression, if nothing were done by the Government. This is a clear exaggeration of the present economic trend. The fall in money supply is not such an unhealthy symptom as to require the evil remedy of inflation. It is, on the contrary, a healthy achievement and so also the fall in prices from the peak levels to which they had moved up in the wake of the Korean War. There is no mass unemployment in the country and the little unemployment we are now witnessing is fractional in character and has certain advantages to the overall economy of the country as a whole. Certainly, the offtake of goods is poor at present, but, once the prices adjust themselves at slightly lower levels, the consumption will increase. Be that as it may, those business men who want the aid of inflation even at this stage, when cost of living and prices are still too high to be called normal, in order to keep themselves in a prosperous state, are indirectly asking for the re-imposition of controls and the re-emergence of the spiral of wages chasing prices. In fact, they are deluding themselves into thinking that inflation will bring prosperity; it will do nothing of the kind. They will, therefore, do well not to join hands with the Government in its rush for deficit financing and demand, instead, that the Government should help them in their drive to bring down the cost of production to stimulate consumption and the offtake of goods.

* * * *

The Central Government has promptly brought forward a Bill designed to carry out its already expressed intentions to levy a cess on mill industry for purposes of collecting a revenue to subsidise the *khadi* and handloom industry. So, the merry game of robbing Peter to pay Paul is on. Only, the cess will not be called a cess but an excise duty. Thus, the Bill proposes that an excise of three pies a yard should be imposed on mill-made cloth other than cloth exported out of India. The industry should be thankful to the Government for small mercies; the cloth exported is exempted from the levy. Surely, foreign consumers of Indian cloth cannot be expected to subsidise the handloom and *khadi* producers in this country. So this special excise will be collected on cloth produced for home consumption alone. But then, nobody knows precisely how this money will be spent. The Madras Provincial Handloom Weavers' Congress, which is never at a loss for new ideas, has, however, several important suggestions to offer. The Congress is not, of course, concerned with the practicability of its suggestions. It wants a finance corporation to finance the handloom industry. It has urged the State Government to set apart, for this purpose, a sum of Rs. 50 lakhs out of the grant of Rs. 1.25 crores, made by the Centre to the State.

* * * *

But even a finance corporation, the Congress is apparently convinced, will not solve all the problems of the handloom industry. It wants a clear subsidy of two per cent. of the value of cloth produced by weavers' societies. It is not, of course, clear how the value of the cloth will be determined, nor whether the amount at the disposal of the Government, would be sufficient to cover the subsidy after its other suggestions have been implemented. Nor do these two suggestions exhaust the organisation's fertility in ideas. The Congress would like to see an export corporation set up, and a factory for manufacture of dyes and chemicals established with a capital of Rs. 50 lakhs from out of the special excise collected by the Government. Can a dyes and chemical factory be successfully established with a capital of Rs. 50 lakhs? The dyes and chemicals organisations, with much larger resources at their command, are finding it difficult to make headway in the field of dyestuffs. Finally, it wants a State-owned spinning mill on the banks of the Krishna or the Godavari. Just why these two rivers were preferred for locating the mill is not known; nor is it known how another spinning mill will serve the needs of the handloom industry better, when there is no lack of yarn supplies in the market. But then, few can resist the temptation of suggesting good uses for other people's money.

* * * *

In the meantime, the collection of the special excise of three pies per yard on mill cloth has already begun. It was introduced early this week without much fanfare when nobody expected it. Everyone was under the impression that it would come into force only after the necessary legislation was passed by Parliament. Nobody thought that what was first proposed as a cess would be converted into an excise overnight and enforced so quietly. But the sudden introduction of this measure has meant considerable hardship to the regular middlemen engaged in the cloth trade. In a communication addressed to the Government of India, the Country Fancy and Grey Piecegoods Merchants' Association, Bombay, for instance, says that its members are alarmed by the sudden decision of the Government to collect additional excise duty of three pies per yard on all categories of cotton cloth, with effect from 15th inst., particularly because the authorities insist on recovering this additional duty even on cloth already cleared, and also on cloth paid for but not taken delivery of, by purchasers. The Association points out that the position of those varieties of cloth which are still subject to official control is anomalous, inasmuch as the new duty is not stamped on such cloth. It looks as though the Government, in its anxiety to begin collection of the cess without any further delay, has not examined all the administrative adjustments connected with this levy.

* * * *

The rejection of the Labour Appellate Tribunal's award on the question of retrenchment of the employees of the Tata Oil Mills Co., Ltd., Ernakulam, by the Government of Travancore-Cochin raises issues of far-reaching judicial and economic significance. The facts of the case are simple. Briefly, the management of the Company found, as far back as in 1950, that 79 monthly rated employees of the Company were "surplus" to the requirements of the Company. The employees sought the intervention of the Labour Minister of the State who referred the matter to the Industrial Tribunal at Ernakulam for adjudication. This Tribunal held that there was no "justifiable" necessity for the proposed retrenchment. Against this judgment, the management appealed to the Appellate Tribunal. During the pendency of this appeal, they showed a goodwill gesture by agreeing to retrench not more than 45 members of the staff, although a much larger number was really "surplus" to their requirements. The Appellate Tribunal rejected the contention of the States' Industrial Tribunal, and held that it was the function of the management to determine its labour force and to judge the number of workmen who would become "surplus." And here begins the real story. Normally, the matter should have rested there and the Company should have been allowed to carry out its retrenchment scheme. But on 15th December, 1952, the Chief Minister of Travancore-Cochin State called the Manager of the factory to appear before him. His request for a small extension of time on grounds of ill-health was not granted. Thereupon, the State Government passed an ex-parte order, rejecting the award of the Appellate Tribunal.

* * * *

All this raises some questions of vital importance. Is a State Government empowered to reject the award of the Appellate Tribunal? If it has that power, what becomes of the "appellate" character of that Tribunal? If the impression gets abroad that the judgment of the Tribunal is not binding on all parties to a dispute, it would put an end to all hopes of industrial peace in the country. So much for the legal, judicial or constitutional aspect. Leaving aside, for a moment, the constitutional aspect of the matter, to settle which there are enough legal *pundits* in the country, it is worthwhile examining the economic consequences of the rejection of the Labour Court's awards by State Governments. For one thing, it means that even justifiable retrenchment could be held up, if the aggrieved party has some political pull with the Government in power. If it should mean losses for the industrial unit through its having to carry the burden of surplus labour, would the particular State Government be prepared to shoulder the responsibility for the loss, which the factory might sustain? Further, industrial management would be too irksome a task, if every case of retrenchment had to be taken up to the highest Tribunal; and even then, if it was not certain that the Tribunal's voice would prevail. Surely, the managements should be allowed to determine, as the Appellate Tribunal rightly held, the question of the number of workers they ought to employ. After all, a private industrial unit has to exist in a competitive world and it cannot do so, if it has to pay surplus labour. The whole question of employer-employee relationship is being reduced to a mockery in this country through vexatious governmental interference with wages and employment standards in factories. Maybe, all this is being done with good intentions. But the inexorable laws of economics cannot be compelled to behave in accordance with the dictates of capricious Governments. It is time somebody cried halt to this insensate game of dictating employment standards to factories. Mr. Giri is trying hard to do this. It is the duty of all to strengthen his hands.

* * * *

It would appear that the issues, arising out of the Travancore-Cochin Government's rejection of the award by the Appellate Tribunal, have been referred to Mr. Giri by the Employers' Federation of India. His reactions to this case will be watched with interest, for, in many ways, it is a 'test' case; it will test the validity, the sanctity and the utility of possessing a complex and elaborate judicial structure for settling what are after all the day-to-day problems of strictly economic significance.

* * * *

Life insurance companies in India seem to be in for some trouble in the coming months with regard to the policy of investment of their funds. Under section 27A of the Insurance Act, life offices in India are required to keep invested 50 per cent. of their liabilities to policyholders in Government and approved securities. In actual practice, however, owing to the dormant condition of the capital market in the country and to the paucity of remunerative channels of approved investments, the life offices are now actually keeping their funds invested in Government and approved securities to the extent of about 70-72 per cent, as against the minimum limit of 50 per cent. This high percentage is attributed to the extraordinarily heavy investments in these securities by one of the biggest life offices. But for the share of this single life office, the total percentage of investments would have been, it is stated, at a considerably lower level. In view of the continued high percentage of funds already invested in Government and approved securities, the Government of India has, it is rumoured, under its consideration now a proposal to raise the statutory limit to as high as 80 per cent. In this connection, it is understood that the Government will propose the appointment of an Investment Board to manage the statutorily controlled life insurance funds on behalf of the Government. It is surmised that, before taking a final decision, the authorities are

EQUITIES CLOSE ON CAUTIOUS NOTE

UNDERTONE STEADY

(From Our Own Correspondents,

BOMBAY, *19th February*

AFTER last week's decline, the Bombay Stock Exchange managed to finish the week under review on a somewhat steady note. Trading was relatively more enlivened this week under the stimulus of a series of favourable factors. Revival of buying support was seen in steel shares, on rumours regarding a favourable T.I.S.C.O. award and an early announcement of higher retention prices. Textile scrips, too, were active, on account of encouraging advices from cloth export markets. Added to these was the absence of any fresh taxation measures in West Bengal and Bihar budgets, despite sizable deficits. In addition, the Railway budget contained no fresh burdens in the shape of freight rates and passenger fares. The cumulative effect of all these factors was that equities were not only well maintained but registered, in most cases, moderate gains. If the market did not make further headway, it was because of restrained activity on the Exchange, on account of continued Central Budget uncertainties. Rumours of a lower exemption limit for Estate Duty created a hesitant feeling. Besides, a section of operators was somewhat inclined to feel the possibility of a few additional tax proposals in the form of increases in the corporation tax and excise duty on cloth to cover a portion of reduced customs receipts and larger allocations from income-tax to State Governments, following the Finance Commission's recommendations.

Under the lead of Tata Deferreds, steel shares registered gains, which, however, were partly erased towards the close, due to lack of support and profit-taking. Tata Deferreds opened the new account on Monday at Rs. 1,703-12, as against Rs. 1,705. After gradually improving to Rs. 1,726-4, on fresh support and short-covering, the scrips softened to Rs. 1,720 towards the close to-day, the net gain over the week being Rs. 15. Tata Ordinaries advanced from Rs. 302 to Rs. 305-4 before finishing at Rs. 303-8. Indian Irons steadied up from Rs. 24-6-6 to Rs. 25-2, but shed part of the gain to finish at Rs. 24-14-6.

Textile shares came in for good business and recorded handsome improvement. Gokaks were the prominent feature, with a smart rise of Rs. 8-8 to Rs. 209, on expectation of higher dividend. Bombay Dyeings, Centurys and Standards firmed up, by Rs. 6-4 each, to Rs. 368-2, Rs. 254-12 and Rs. 282-8, respectively. Podar Mills gained strength from Rs. 120-10 to Rs. 126-4. Swadeshis were another bright spot, with a gain of Rs. 5-4 to Rs. 239-4. Finlays met with buying support and gathered Rs. 4 to Rs. 294. New Greats advanced by Rs. 3-8 to Rs. 158-8. Central Indias were taken higher at Rs. 368-2, as against Rs. 365-2. Kohinoors picked up Rs. 2-12 to Rs. 282-12. Khataus rose by Re. 1-14 to Rs. 168-2 and Simplex by Re. 1-8 to Rs. 176. Tata Mills and Vishnus registered a gain of Re. 1-4 each to Rs. 45-12 and Rs. 158-12, respectively. Swan Mills lost Rs. 2 to Rs. 395. Bharat Mills shed As. 8 to Rs. 25-4.

Bank shares attracted sufficient backing to hold ground. United Commercials spurted by Rs. 2-8 to Rs. 37-12. Bank of Indias staged an improvement of Rs. 2 each to Rs. 155-8. On proximity of dividends, Central Banks (new) shares rose from Rs. 65 to Rs. 67, while old shares went up from Rs. 65-8 to Rs. 67. Imperial Bank shares, however, finished the week lower, owing to profit-taking at higher levels. Thus, Contributories lost Rs. 10 to Rs. 447-8 and fully paid shares Rs. 5 to Rs. 1,840. Barodas were fully steady at Rs. 114.

Trading in insurance scrips was very much restricted, with values remaining generally steady. British India Generals gained As. 12 to Rs. 14. New Indias were unchanged at Rs. 40-12. Orientals, however, failed to elicit support and dropped 220 points to Rs. 5,790.

In the public utility section, selective buying enquiry was in evidence. Andhra Valleys hardened from Rs. 1,405 to Rs. 1,410, although, at one time, they had gone up to Rs. 1,416-4. Ahmedabad Advances were better at Rs. 113-12. Tata Powers changed hands at Rs. 1,497-8, Surat at Rs. 118-12 and Amalgamateds at Rs. 10-8. Bombay Suburbans, on the other hand, receded by Rs. 4-1 to Rs. 120-5.

The highlight of trading in the miscellaneous section was the spurt of Rs. 6-8 to Rs. 229 in the quotations of Belapur, consequent on short-covering as a result of higher backwardation charges. Associated Cements improved by Re. 1-8 to Rs. 169-12. Wimcos firmed up from Rs. 221-14 to Rs. 228-2, on expectation of capitalisation of reserves. National Rayons induced further support, on reports of higher prices of art silk yarn, and the shares put on Rs. 2-8 to Rs. 72-8. Tata Oils moved up from Rs. 33-8 to Rs. 35. Bombay Burmah Olds spurted by a like amount to Rs. 366-4. British India Corporations were a shade better at Rs. 9-12. Walchandnagars, however, lost As. 10 to Rs. 155-10.

In the transport group, Scindias, after improving from Rs. 14-10-6 to Rs. 14-12-6, reacted to close at Rs. 14-10. India Steamships rose by As. 3 to Rs. 6-10. Other shares were generally steady.

In the mining and engineering group, Alcocks elicited special buying and recorded a rise of Rs. 3-12 to Rs. 303-12. Premier Constructions and Shivarajpurs gained a rupee each to Rs. 85-4 and Rs. 55-8, respectively. B.B. Petrols and Indian Coppers were fully steady, the former at Rs. 1-4-3 and the latter at Rs. 3-4-6.

* * * *

Calcutta Stock Exchange

CALCUTTA, *18th February*

The week under review on the Calcutta Stock Exchange witnessed a setback in quotations. Lack of any fresh news, which could be said to justify the earlier war fears, coupled with the proximity of the Central Budget, encouraged operators to lessen their commitments and avail themselves of the opportunity to take the gains before it was late. There was, however, a change in sentiment yesterday, and gains were recorded in almost all counters, but these gains could not naturally erase the declines of the earlier days. There was no session on Thursday on account of *Mahasivarathri*.

While the West Bengal State budget has no proposal for any new taxation measure, fears are entertained regarding possible adverse proposals in the forthcoming Central Budget. It is accepted that the need for more funds at New Delhi is greater now than ever before, but it would indeed be a great blow to private enterprise, if it is asked to pay more to the Administration. The hesitant feeling created by these fears is expected to persist till the announcement of the Budget on the 27th inst.

Despite the general trend and easiness in quotations of jute shares, there is much cause in the expectation that this section would look up soon. The market anticipates that the Government would revise the export duties on jute goods. If this is only done, Indian hessian and sacking could become the favourites of foreign buyers, as the present tendency of Continental mills to under-quote Calcutta marginally only to secure business—even such a position is not supported by the cost for Pakistani jute—could completely be curbed. Already British buyers are reported to have complained about the quality of the Continental hessian.

In striking contrast with the general behaviour of the market, tea shares presented a cheerful appearance.

In the textile section, Cawnpores eased to Rs. 8-2, while New Victorias were maintained at Re. 1-9. Banares Cottons came to business at Rs. 2-4 as against a previous rate of Rs. 3-6, and Elgin Mills were fractionally lower at Rs. 16-14.

A feature in the coal section was the interest shown in New Beerbhooms following the declaration of a dividend of As. 8 for the six months ended October last, as against nothing in the previous three consecutive half-years. The shares were lifted up to Rs. 21-9 from Rs. 20-15. Dhemo Mains kept up interest at Rs. 10-2, and East Indians were steady at Rs. 22-6. Burrakurs were somewhat lower at Rs. 10-7 as were Bengals at Rs. 523. Central Indias were raised to Rs. 4-11 from Rs. 4-9 while Raneegunges lost ground to Rs. 8-4 from Rs. 8-8.

Up to Monday, rates in jutes declined, but yesterday an upward trend again set in, following the maintenance of the recent improvement in the prices of jute goods. During the week as a whole, the volume of transactions registered a perceptible decline compared to last week. After declining to Rs. 23-3 from an opening of Rs. 23-8 last Wednesday, speculative Howrahs closed better yesterday at Rs. 23-6. Champadanies were unchanged at Rs. 163, while Baranagores, after being quiet at Rs. 160, reached the opening rate of Rs. 162. Nuddeas changed hands at Rs. 47, but Indias were lower at Rs. 125. Kankanarrahs were bought at Rs. 152, as against Rs. 149 earlier. Deltas realised Rs. 230.

Support to the speculative counters in the engineering section was guarded. Indian Irons opened at Rs. 24-10, and on renewed offerings declined to Rs. 24-4. These counters were, however, better yesterday at Rs. 24-9. Kumardhubis changed hands at Rs. 7-12. Britannia Engineerings inviting business at Rs. 17-6. Indian Standard Wagons were shown interest at Rs. 82 and Jessops met with business at Rs. 22-4 as were Braithwaites at Rs. 11-1.

Teas were an exceptionally better market. Bishnauths at Rs. 26-10 showing a fractional improvement. At Rs. 18-4, East Indians this week added As. 6, but Nagaisurrees leaped to Rs. 112 from a previous rate of Rs. 139. Ethelbaris provided a feature in that the shares were dealt with at Rs. 5 as against Rs. 3-12 previously.

Miscellaneous shares were generally steady, although, for a time, they were affected by the general weakness. Titaghur Papers at Rs. 35 registered an improvement of As. 6, while Alkali Chemicals were impressed by a spurt to Rs. 15 from Rs. 13-8. Rallis at Rs. 71 share the section's steadiness. Sone Valleys advanced to Rs. 6-14 from Rs. 6-10, and Indian Wood Products were traded at Rs. 48-12.

Madras Stock Exchange

MADRAS, *17th February*

In marked contrast to the generally dull trend which existed for a considerable time now, trading on the Madras Stock Exchange witnessed some activity this week. All the sections came in to share the attention, despite uncertainties about the impending budgets. This was partly due to greater possibilities of worsening international tension and partly to favourable advices from Calcutta and Bombay Share Markets. Besides, the selective buying in textiles witnessed last week persisted this week on fair demand for cloth from the Middle East countries. In plantings, tea shares were in the lead on firm advices from the London and Cochin tea markets. The improvement in these two sections had a sympathetic effect on the rest. Rubbers were steady, though Coffees were quiet. Miscellaneous scrips met with scattered buying, and banks were cheerful. As a result, prices all round disclosed considerable gains and the volume of business was relatively better than in the last week.

Trading in textile shares was influenced by reports about some business in grey and bleached sheets reported done with Singapore. There were also reports of considerable demand for textiles from Aden and Sudan. This induced the persistence of selective support to the textile section this week. Bangalore Woollens rallied Rs. 7 to Rs. 222. Dhanalakshmis were higher by Rs. 2 at Rs. 183, and Coimbatore Spinnings by Re. 1 at Rs. 40. Buckinghams rose from Rs. 117-8 to Rs. 118-8. Travancore Rayons was up by As. 3 at Rs. 3-9, and Cambodias As. 2 at Rs. 10-6.

News regarding good demand for tea leaves from the U.S., U.K. and Canada enlarged the activity in teas. Consequently Nonsuch Teas advanced from Rs. 22 to Rs. 23, Twyfords were taken up by As. 8 to Rs. 11-8 and Devashola by As. 4 to Rs. 14-4. Coorg Teas were supported As. 5 higher at Rs. 5-8. Peermades, however, lost As. 4 to Rs. 37-12 and Stanes Amalgamated As. 2 to Rs. 9.

Among rubbers, business was done in Malankaras at Rs. 96 as against Rs. 91-8. Rajagiris hardened by As. 3 to Rs. 9-15. Cochin Malabars put on a similar amount to Rs. 6-5. Nenmenys gained As. 6 to Rs. 9-6. Be Bes were better at Re. 1-15½. Thirumbadis, however, were slightly lower at Rs. 3-4½.

Coffees were quiet. Consolidated Coffees lost an anna to Rs. 15-4. Coffee Lands were unchanged ed at Rs. 9-4 and Mysore Coffees at Re. 0-9½. Shevroys were on offer at Re. 1-5.

Miscellaneous scrips came in for scattered enquiry. Rallis improved by As. 8 to Rs. 70-8 and Nundydroog As. 3 to Rs. 4-5½. Spencers gathered As. 6 to Rs. 15-6 *cum-div.* and Indian Cements As. 2 to Rs. 17. Jeewanlals, however, lost Re. 1 to Rs. 9. Mettur Chemicals were offered As. 4 lower at Rs. 4-2 and F.A.C.Ts anna one at Rs. 3-10.

Banks were in fair demand. Imperial Banks (Rs. 500 paid ups) shot up by Rs. 15 to Rs. 1,795 and Contributories (Rs. 125 Paid-ups) by Rs. 3-12 to Rs. 428-12. Indian Banks (Rs. 80 Paid-ups) advanced by a rupee and As. 8 to Rs. 129. Indo-Commercial Banks 'B' and 'C' were done at Rs. 19-12 *cum-div.* and Rs. 40-4 *cum-div.*, as against Rs. 20-4 and Rs. 41, respectively. Indo-Commercials 'A' were quiet at Rs. 83. The Directors have recommended a final dividend of 3 per cent., thus making an aggregate of 6 per cent. for the year ended 31st December, 1952, on the 'A' 'B' and 'C' ordinary shares. The dividend for 1952 was 7½ per cent. on 'A' and 'B' shares and 6 per cent. on 'C' shares.

SOORAJMULL NAGARMULL

In the advertisement of Messrs. Soorajmull Nagarmull which appeared on the front cover page of our 1952 *Annual Review Number*, among the list of industries with which Messrs. Soorajmull Nagarmull are associated, is included glass works. We are now informed that glass works should be omitted from the list.—ED.

NEWS IN BRIEF

THE annual meeting of the Bengal Chamber of Commerce and Industry will be held at Calcutta on the 27th inst., when opportunity will be taken to celebrate the Chamber's centenary.

The Government of Bombay proposes to increase the maximum survey fees for each building site or any portion thereof held separately from the present rate of Rs. 10 to Rs. 20, by amending the Bombay Land Revenue Code, as the cost of surveys has increased enormously since 1913 when the present fee of Rs. 10 was fixed.

Two Indian shipping companies, the Scindia Steam Navigation Co., Ltd. and the India Steamship Co., Ltd., have decided to offer a joint service from the ports of Hamburg and Bremen to ports in India, Pakistan and Ceylon. By this arrangement, the Indian lines would jointly be able to provide a more frequent and regular service.

The total amount of aid allocated to India under the Indo-American Technical Co-operation Agreement for two years is $88.5 million and of this goods worth $50.45 million has been ordered. Six operational agreements have been signed so far involving the use of $23.5 million. Further operational agreements for the balance of the amount are under consideration.

The Government of India has decided to appoint a committee, under the chairmanship of Major-General S. L. Bhatia, Director, Medical Services, and Secretary, Medical Department, Hyderabad Government, to make a comprehensive enquiry into the various aspects of the pharmaceutical industry, with a view to considering what steps should be taken to place the industry on a sound basis.

During the last six months, 14 tea gardens in West Bengal, involving a labour force of 5,539, and 95 gardens in Assam, involving 40,704 workers, have been closed. This information was given by the Union Labour Minister in the House of the People last week. Three gardens have been closed in Tripura and one in Uttar Pradesh. No garden has been closed in the States of Madras, Bihar, Coorg or Himachal Pradesh.

The Government of India proposes to buy the Tirunelveli Tiruchendur Railway on 24th February, 1953, and the Barsi Light Railway on 1st January, 1954. The purchase price of these railways is Rs. 33.6 lakhs and Rs. 189 lakhs, respectively, the respective mileage being 38 and 166. The total mileage of all private-owned railways in India, numbering 20 at present, is 811. They are governed by agreements. There is no proposal to buy the suburban railways in Calcutta.

India and Pakistan have agreed to pursue certain suggestions made at the recent session of the Inter-sessional Committee of G.A.T.T., which considered India's complaint against the Pakistan export fee and duty on raw jute exported to India. They have expressed their willingness to hold consultations with a view to reaching a settlement of the dispute. The two parties have been asked to report the results of their consultations to the Chairman of the G.A.T.T. not later than 10th March next.

The Tariff Commission has prepared questionnaires for producers, importers and consumers in connection with its enquiry into the question of continuance of protection to the pencil industry beyond 31st December, 1953. Copies of the questionnaires may be obtained from the Secretary to the Commission, Contractor Building, Nicol Road, Ballard Estate, Bombay 1, specifying the interest represented, i.e., whether the party is a producer, importer or consumer.

The Deputy Minister for Railways refuted, in the House of the People last week, a suggestion that the new zonal system had caused transport difficulties. The overall loading both on the broad and metre-gauges was higher than during the previous year, he said. The loading of coal in 1952 was also higher by over 200 wagons a day, as compared with 1951. Better co-ordination in the movement of traffic had been secured on the regrouped railways. Earnings in 1951-52 had been higher than in any previous year, instead of being less.

The Government of India has decided to have two airways corporations to run the internal and external services. The total compensation to be paid to the shareholders of air companies in India has been fixed at Rs. 4.6 crores, it is learned. Mr. J. R. D. Tata, Chairman of Air-India and Air-India International, will be the Chairman of the Corporation which will run the external services, while Mr. K. C. Mahindra, of Messrs Mahindra and Mahindra, will be the Chairman of the Corporation in charge of internal services.

The Government of India has sanctioned a grant of Rs. 60,07,500, divided equally as subsidy and loan, to the Bombay State under the Subsidised Industrial Housing Scheme, 1952-53, for the construction of 900 multi-storey tenements in Bombay and 725 single-storey tenements in Ahmedabad. The cost of construction accepted for the purpose of calculating the grant at the rate of Rs. 4,500 per tenement in Bombay is Rs. 40,50,000 and at Rs. 2,700 per tenement in Ahmedabad Rs. 19,57,500. The Central Government has, as a special case, approved the rent of Rs. 21 per month for the tenements in Bombay and Rs. 13-8 per month for those in Ahmedabad.

The West Bengal Government has decided to increase the daily wages of tea gardens, at the same time allowing the planters in the Dooars and Terai areas to withdraw food concessions for labour, in accordance with the recommendation of the Minimum Wages Advisory Committee appointed by it. Under the revised terms, tea garden workers in these two areas will purchase food at Rs. 15 per maund in place of the existing rate of Rs. 5 per maund. The wages will be increased from Re. 1-3 to Re. 1-5-6 per day. The conditions attached to the terms are that workers would have to be provided with work for six days in a week. Planters should curtail overhead charges by 10 per cent. and there should be no retrenchment of workers or closure of gardens.

A Bill to amend the Voluntary Surrender of Salaries (Exemption from Taxation) Act, 1950 was introduced in the House of the People on the 14th inst. by the Union Minister for Revenue and Expenditure. According to the statement of objects and reasons of the Bill, the existing Voluntary Surrender of Salaries (Exemption from Taxation) Act, 1950, provides for the exemption from taxation of a portion of salaries voluntarily surrendered by holders of certain offices listed in section 2(2) of the Act. This list is, however, not exhaustive and does not include all holders of posts whose salary is fixed by the Constitution or is determined by any Central Act, State Act or Provincial Act. For this reason, the necessity arises of adding to the list of persons from time to time. With a view to avoiding this and to enabling all holders of such offices voluntarily to forgo their salary, the Bill seeks to substitute the existing sections 2 and 3 of the Act by a new section which would authorise exemption from taxation portions of salaries voluntarily surrendered by the holders of such offices.

From Abroad

The amount of U.S. economic aid alloted to the U.K. for the U.S. fiscal year ending 30th June, 1953, is $400 million, including $42 million which has been received under the Katz-Gaitskell Agreement.

The International Materials Conference has discontinued international allocations of copper with effect from the 15th inst. The position will, however, be reviewed again in March, when a further statement will be made.

The U.S. Government has removed the price control on the country's oil industry with effect from the 13th inst. The industry is now free to decide its selling prices for crude oil and all petroleum products, except No. 2 fuel oil which is used for home heating.

Owners of common stocks listed on the New York Stock Exchange received a record amount of cash dividends during 1952. The cash dividends aggregated $5,594.62 million, a gain of 1.8 per cent. over 1951. This compared with a previous record of $5,470.24 million in 1950.

The jute industry at Dundee has signified its willingness to give priority to production of sandbags over all other orders. Sack-sewers have also agreed to co-operate. Sack-sewers have received orders for 4.5 million bags from cloth held in stock in the U.K. by the Jute Control.

World output of natural rubber in 1952 amounted to 1,762,500 tons, the lowest since 1949, and compared with the all-time peak production of 1,875,000 tons in 1951, according to the Rubber Study Group Secretariat. Consumption, at 1,447,500 tons, was also the lowest for the last three years and compared with 1.5 million tons in 1951.

Pakistan has banned the export of untested wool. Exporters will have to secure a quality certificate from the Government Testing House before shipping wool of any variety. This step has been taken in view of the complaints received by the Government from overseas buyers against exports of poor quality wool. During 1952, Pakistan exported 100,000 bales of wool.

The incomes of American consumers rose steadily throughout 1952, but their real individual buying power changed little. Personal incomes reached a total of $268,400 million during the past year, a rise of 5½ per cent. from the $254,100 million total of 1951. The increase was closely in line with the advances in consumer prices and population after allowance is made for the effect of higher rate of taxation.

In response to suggestions made in and out of Congress that a check of the U.S. gold pile was important at the time of a change in the U.S. administration, a count of the world's largest gold pile was ordered in January. Upto the 13th inst., the counting of the $12,500 million gold bullion had been half completed. Two of the twenty-two compartments had been counted and the rest may be completed by the end of this month.

The Government of Uganda has purchased 3,000 acres of land from a private company at a cost of £400,000, as a first step in a big drive to increase the country's tea output. Farm experts are of the opinion that there is great scope for development of tea production in Uganda. The scheme is part of the Uganda Government's policy of encouraging Africans to raise their living standards by adopting up-to-date methods of cultivation. The land will be under the control of a board of governors who will supervise the agricultural activities of recognised experts who will actually farm the land.

PERSONAL

MR. V. T. Krishnamachari, Member, Planning Commission, has been appointed Deputy Chairman of the Planning Commission, *vice* Mr. Gulzarilal Nanda.

Mr. P. S. Vallabhdass, Chairman, Malabar Steamship Company, Ltd., has been elected to the Committee of the Indian Merchants' Chamber, Bombay.

Mr. N. Mazumdar, General Manager of the Prabha Mills Ltd., Viramgam, has been appointed Director of Production, Office of the Textile Commissioner to the Government of India, Bombay.

Dr. B. K. Madan, who was a Member of the Finance Commission, has been appointed Officer on Special Duty in connection with the proposed enquiry into the tax structure in India.

Mr. S. N. Mazumdar, Chairman of the Damodar Valley Corporation, and Mr. N. R. Chakravarthy, Financial Adviser to the Corporation, have returned to India after successfully negotiating a loan from the World Bank.

Mr. S. L. N. Simha, Deputy Director, Division of Monetary Research, Reserve Bank of India, has returned from Bandung (Indonesia), after attending the meeting of the Economic Commission for Asia and the Far East held there recently.

Mr. C. R. Natesan, Steel Controller to the Government of India, has been appointed a member of the Technical Mission recently set up by the Government to reassess its steel project. The two other members of the Mission are Mr. Rambert, an expert of the World Bank, and Mr. Hill of Messrs. Koppers Ltd., a famous steel firm of the U.S.

Mr. E. C. Givens, Vice-President of the International General Electric Company, New York, has arrived in India, in connection with the opening of the Bokara Steam Power Station of the Damodar Valley Corporation on the 21st inst. After attending this function, Mr. Givens is expected to make a tour of India.

Mr. H. L. Truman, Mr. J. E. O'Meara, Rev. M. J. McKinnon, and Mr. R. H. Trembley, Canadian specialists in co-operative and agricultural training, are due to arrive in New Delhi to-day. These experts will spend about a month in India. Mr. Truman will explore how Canada can help in training agricultural technicians, while Mr. O'Meara will explore the possibility of aiding the development of co-operative marketing. Rev. McKinnon will study co-operative education and Mr. Trembley rural savings.

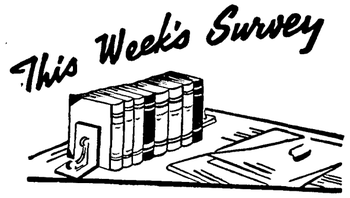
"COMMERCE" 1928

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, *18th February*

Indian Trade Prospects

The favourable conditions which marked the closing months of 1926 were not of a lasting nature and the prospects of trade in India in the early months of 1927 were not particularly good. Lowered commodity prices brought about by circumstances in other parts of the world destroyed much of the benefit that might have accrued from the comparatively favourable monsoon of 1926. Things were, however, not so bad in the first quarter of the year as in the last three. This was chiefly due to the nature of cotton crops both here and in America. The yield coming from America was very large but being the most part of an inferior grade, it offered sharp competition to Indian cotton here and elsewhere. Low prices resulted in a distinct holding movement of cotton and other local produce as well, from up-country and in Bombay. Like American cotton, the jute crop of 1926 also proved large and the attendant low prices intensified the holding movement. World factors, including the Japanese crisis, served, more than purely local causes, to render trade comparatively dull and to displace the optimism felt earlier. However, as the second half of the year wore on, a resurgence of this optimism took place inspired by rising world commodity prices, the favourable advancement of the monsoon, a greatly stimulated demand for Indian produce and stabilised currencies in India and abroad. The cumulative benefits of the foregoing factors were increasingly in evidence as the year closed. There is but one marring phase of the present bright outlook of India's trade and industry, namely, the cotton mills in Bombay. Their present situation is far from being a happy one. Unfortunately the recommendations of the Textile Tariff Enquiry Committee have not been rigidly followed. It is well to remember that, in present times, competition in all branches of industry throughout the world is developing at a very rapid pace, and this is especially true of textiles. For that reason, it is imperative that mills whether located in India or in any other country should operate on the most efficient basis possible, if their successful existence is to be assured.



CONTROLS IN THE U.S. GONE

PRESIDENT Eisenhower has already engaged himself in giving the "Republican" touch to the U.S. economic policy. In his "State of the Union" message to Congress, early this month, he asserted that the weight of evidence was against the continuation of controls. He has lost no time in following up this assertion by a series of executive orders designed to put the Republican faith in private enterprise and individual initiative into action. By an executive order he has ended wage controls. The President declared in this order that the "earliest possible return to freedom of collective bargaining will serve to strengthen the national economy and thereby the national security." This order was followed by another, issued by the Office of Price Stabilisation, which eliminated wholesale and retail price controls on most consumer non-food items, including leather goods, small appliances, clocks, etc. It also decontrolled meat, furniture, children's apparel, restaurant meals and household textiles. The National Production Authority revoked all controls over the use, sale, shipment and accumulation of tin.

In a "second round" of the new Administration's policy of removing controls, a larger list of items has been included. Among metals, zinc and most minor metals have been freed from control. The control on constructional services, fats and oils, soaps and detergents, paper, pulp and paper products, paints, varnishes, and lacquers, crude rubber, tyres and all rubber products has been removed. The U.S. oil industry is now free to decide its selling prices for crude oil and all petroleum products except No. 2 fuel oil, the grade used for home heating.

Along with the removal of physical controls, there has come about a change in the American attitude towards interest rates. Emphasis is being shifted from "cheaper" money to "dearer" money. Mr. George Humphrey, the Secretary of the Treasury, has now made it quite clear that in future no attempt will be made to keep interest rates artificially low in an effort to give the U.S. Treasury the advantages of cheap borrowing. Already, the discount rate has been stepped up. This has been followed by an attempt at shifting the National Debt from short to longer term issues. Thus the Treasury announced two weeks ago that it would redeem the $8,868 million of 1⅞ per cent. certificates, which matured on 15th February, by offering in exchange either the new 2¼ per cent. one-year certificates or 2½ per cent. bonds maturing in five or six years or a combination of both the new certificates and the bonds. Holders of maturing certificates were also given the choice of changing their certificates for cash. The rate of 2¼ per cent. offered on the one-year certificates is, it is stated, the highest interest rate quoted by the U.S. Treasury for one-year money for nearly 20 years.

The application of the Republican philosophy of non-interference in markets, wages and money rates to the agricultural sphere is, however, expected to be more difficult than its application has been to other spheres of economy. Farmers will most certainly oppose any scheme which is designed to whittle down the price support for agricultural produce, which is now an accepted part of American agricultural policy. It is not clear whether the present Government will be prepared to undo the last Administration's work in this sphere. But Mr. Ezra Benson, Secretary of Agriculture, declared recently that farm price supports should be used as "disaster insurance" and not to encourage "uneconomic production" leading to big surpluses and subsidies. He has also repeatedly emphasised that the farmers should produce for the free market, and not for Government bounty, and should have freedom to adjust production to changing consumer demands. These remarks have provoked a storm of Congressional protest, for the representatives of the predominantly agricultural States see in them a thin end of the wedge to remove, or at least to whittle down, price support advantages. In any circumstances, these remarks would be resented by American farmers. But what makes them particularly unwelcome to this American section is the fact that these "free market" ideas are being expressed at a time when agricultural prices have shown a marked tendency to fall. There is, however, no immediate danger of the withdrawal of price support scheme, for it will remain in force not only throughout the current year but also in 1954.

BOMBAY GOVERNOR'S ADDRESS

The Governor of Bombay, Mr. Mangaldas Pakvasa, had a good account of his Government's work to give, when he addressed the joint session of both Houses of the Legislature this week. If his opening remarks did nevertheless strike a somewhat jarring note, it was because he had necessarily to refer to the scarcity conditions in different parts of the State—conditions for which the Government is not responsible but to remedy which it is doing, we are told, all it can. Relief works, to the tune of Rs. 1.75 crores, have been opened. A sum of Rs. 2.85 crores has also been set apart for providing *tagai* loans. He also gave the assurance that no "single life" would be affected through lack of foodgrains. Arrangements have accordingly been made to meet the deficit in foodgrains, estimated at 1.2 million tons for 1953. If the Central Government gives the requested allotment of one million tons of foodgrains—, 200,000 tons of rice, 450,000 tons of wheat and 550,000 tons of coarse grains—and if procurement within the State reaches the target of 175,000 tons—125,000 tons for wheat and 50,000 tons for rice—there should be no difficulty in meeting the deficit in foodgrains.

The long-term remedies for meeting the food deficit are also being implemented. Good progress has been made in respect of the major irrigation works such as the Gangapur storage project, the Ghataprabha canal project, the Mahi canal project, the Ranand tank project, the Kolchi weir scheme and the Kakrapara weir project. The Five-year Plan envisages an outlay of Rs. 146 crores on the State's development programme. The industry's needs for power, Mr. Pakvasa said, would be met when the Rs. 33-crore project, the Koyna hydro-electric project, now fortunately included in the Plan, is completed. Apart from the major projects, the State has embarked upon a series of minor irrigation works. The Central Committee on Famine, appointed by the Government of India, has allotted to the State a sum of Rs. 1.17 crores, out of the total sum of Rs. 15 crores, for undertaking permanent remedial measures. The State Government now intends supplementing this grant by an additional sum of Rs. 1.50 crores from its own sources in order to undertake irrigation works. Tanks and wells are being repaired in many districts; new wells are being sunk. The supply of improved seeds and manure is also receiving the Government's attention.

This is a record of good work. And there is no doubt that, if nature had been less unkind to the State, the Government would have had even a better record to show. While it is certainly not our intention to belittle the good work which has been done, we would urge the Government to consider whether its past—impressive as it has been—could furnish a safe guide to the future. If revenues fall—as they well might—it would be difficult for the Government to implement even a modest fraction of what it would itself like to do for the State. Under the Five-year Plan, the State has to spend Rs. 146 crores. It has already incurred an expenditure of Rs. 52 crores. This leaves a sum of Rs. 94 crores to be found in the next three years. Nor is this all. Development expenditure, notably expenditure on education, public health and other activities, will increase. Mr. Pakvasa admitted that the State should "mobilise all our resources," to implement the Five-year Plan. Is the surrendering of lucrative sources, such as the excise revenue, the best way of mobilising resources This question needs to be pondered, not in the light of ideological considerations, but in the light of the admitted fact that the State has already exhausted the reserves carefully husbanded by the previous regime and, further, has reached the limits of taxable capacity and that there are many other reforms and projects which should enjoy higher priority than Prohibition.

GLUCOSE INDUSTRY

Nearly five years have elapsed since protection was granted to the Indian glucose industry. It was in 1948 that the Government of India, on the recommendations of the former Tariff Board, converted the revenue duty of 30 per cent. *ad valorem* into a protective duty. Protection was to remain in force till 31st March, 1950, but it was subsequently extended by a period of 21 months. As protection is due to expire at the end of this year, the industry submitted to the Government its claim for continuance of protection, which is now under the examination of the Tariff Commission.

The threefold demand of the Indian glucose industry is: (1) increase of 10 per cent. in the rate of protective duty on both liquid and crystal glucose; (2) abolition of customs duty on imported starch for a period of three years, or, alternatively, grant of refund equivalent to customs duty on the price of 11 tons of starch for every 10 tons of liquid glucose or 5.5 tons of crystal glucose manufactured by it; and (3) complete ban on imports. The first two claims of the Indian glucose industry deserve to be conceded, considering the fact that this industry has vast potentialities for development, as witness its importance not only for its medicinal value but also for its use in the confectionery, viscose, rayon, paper, textile and leather industries. It is but appropriate, therefore, that Dr. B. V. Narayanaswamy Naidu, Member, Tariff Commission, should have prefaced his address, at the enquiry, by a reference to the importance of preserving and expanding the glucose industry, either as an integral part or a close associate of the starch industry.

The consumers may, however, point out that protection, if continued and increased, would result in the sacrifice of consumers' interests. The grant of protection does not seem to have led to any striking improvement in the industry's production, as is evident from the wide gap between domestic demand and rated capacity, on the one hand, and between rated capacity and actual production, on the other. The result is that the industry is now meeting only a fraction of the country's total requirements of glucose. Thus, according to figures cited by Dr. Naidu, the rated capacity of the indigenous glucose industry—there are four producing units—is 6,700 tons of liquid glucose per annum. The actual production, which was 354.5 tons in 1947, has been at a much lower level in recent years, being hardly 27 tons in 1948, 77.4 tons in 1949, 219.15 tons in 1950, 156 tons in 1951 and 104.8 tons in 1952.

From these figures, one should not, however, rush to the conclusion that the Indian glucose industry has not justified the protection given to it. The chief reason for the failure of the indigenous industry fully to utilise its capacity has been the lack of adequate supplies of right quality raw material—starch is the most important—at an economic price. This clearly illustrates, as Dr. Naidu aptly remarked, how inadequate the grant of protection alone can be when an industry is hamstrung by non-availability of raw material "of the right quality in the required quantities at an economic price". If, therefore, the glucose industry is to make rapid progress in the future, it is imperative that not only adequate protection should be given for a few more years, but also supplies of raw materials at reasonable prices should be ensured. Given these, it will not be long before the Indian glucose industry can be expected to outgrow the need for protection.

The plea of the glucose industry for a complete ban on imports is, however, not justified. For such a ban will, especially when, as already stated, there is a wide gap between production and demand, tantamount to penalising the consumer who will have to pay exorbitant prices for their requirements of glucose. Moreover, a complete ban on import will take away the industry's incentive for improving the quality of its production. There is, however, some point in the suggestion—to which Dr. Naidu also alluded—that, as an incentive to indigenous glucose manufacturers, the actual user applicants for the import of liquid glucose should be advised to obtain at least 25 per cent. of their six months' requirements from indigenous sources.

JAPAN'S ENTRY INTO G.A.T.T.

The stage is being set for the entry of Japan into the General Agreement on Tariffs and Trade (G.A.T.T.). It will be recalled that at the seventh session of the Contracting Parties held at Geneva in October last, the consideration of Japan's application for membership was deferred, as some members, notably the U.K., had shown a certain reluctance to give their unconditional support to Japan's application. Their misgivings were due to the fear that Japan might resume the pre-war unfair trade practices in the field of international trade. The question to be decided, therefore, was whether additional safeguards against Japan would become necessary if this country were admitted as a member of the G.A.T.T. The full session of the Contracting Parties decided to refer this question to an inter-sessional committee composed of representatives from Australia, Belgium, Brazil, Canada, Chile, Cuba, Denmark, France, India, Italy, Pakistan, South Africa, the U.K., the U.S. and West Germany. This Committee met in Geneva on the 2nd inst. and considered the whole question at great length.

The Committee, we are now told, has held that the present G.A.T.T. provisions provide adequate protection against any contingency, such as the "sudden flooding" of markets and the consequent "violent disruption of trading conditions with serious repercussions for large sectors of production. "This contingency, which, it is feared, might arise if Japan were allowed entry into the G.A.T.T., could be met by Article 23 of the G.A.T.T., which could be invoked by declaring a state of emergency. This Article provides that, in an emergency, a member-country can be relieved from its obligation, if the situation is held to "impede the attainment of the General Agreement's objectives." Should the Contracting Parties fail to take a decision within 30 days, the applicant country would be free to act unilaterally pending their decision. The Committee has further pointed out that, if any additional safeguards were found necessary, they should be made applicable to all members, and not merely to the country protesting against unfair practices. The Committee has, however, done well to emphasise that the Contracting Parties could not seek to provide protection against genuine long-term efficient production.

All that the inter-sessional Committee has done is to declare that the G.A.T.T.'s Articles are flexible enough to permit the countries to protect themselves against any possible resumption of unfair trade practices by Japan. This has, no doubt, made the way smoother for Japan's entry into the world body. But, then, a few important hurdles still remain. The final decision on Japan's application can only be taken at a full session of the G.A.T.T. A special meeting of this body will, it is stated, be convened "as soon as possible," when the Committee's views will be considered. If Japan secures a majority vote at this meeting, it will then commence a series of bilateral negotiations. But it is only when it succeeds in concluding such negotiated agreements with two-thirds of the members of the G.A.T.T. that it will be assured of its membership of this body.

ASSISTANCE TO ASIAN COUNTRIES

In the present context of the efforts of the Asian countries to raise the depressingly low level of the living standards of their people, the E.C.A.F.E.'s call for an international finance corporation and special funds which would offer interest-free loans and grants-in-aid to help South-East Asia and the Far East, made in the report adopted by the Commission at the concluding session of its recent conference on Saturday last, is of special significance. The Asian countries have embarked upon economic development programmes, envisaging provision of irrigation for agriculture, of power and capital goods for industries, and of communication facilities for transport of goods and commodities. The pace of progress in implementing these schemes has unfortunately been slow, thanks to paucity of funds. In fact, several countries have been compelled to cut expenditure on development, because their financial resources have dwindled, following recession in prices of the raw materials they produce. It is clear that, without foreign assistance in the form of capital, equipment and experts, it would be difficult for the countries to make considerable progress. The E.C.A.F.E. has certainly done well to recommend the setting up of an international finance corporation and special funds for offering interest-free loans and grants-in-aid. It is to be hoped that the recommendation would receive the most careful consideration of the dustrially advanced countries, especially the U.S.

As already stated, sharp fluctuations in commodity prices have created a serious problem to the Asian countries. The recession in commodity prices have reduced their foreign exchange reserves. The difficulty has been particularly aggravated in the food-importing countries, consequent on the increase in rice prices. It is thus evident that, if the pace of economic development is not to be arrested, it is necessary that a certain measure of stability in prices should be achieved. As the E.C.A.F.E. has rightly stressed, there is need for measures to stabilise commodity prices and to create conditions in which the prices of capital goods and manufactured goods—which the area needs—bear a "just" relation to primary commodity prices.

OFF THE RECORD

(By "ROVER")

ONE of the biggest headaches for the harassed State Government of Bombay, since it first came into power in 1946, has been the acute shortage of housing in Bombay. It is, however, gratifying to learn that, within a matter of a year or so, the Government is to be relieved of a greater part of its anxiety on this score. A beginning of the end of this trouble was made, according to Press reports, last Monday, when no less a person than the acting Governor of Bombay Mr. Mangaldas Pakvasa, laid the foundation-stone of a huge building, estimated to cost Rs. 19 lakhs and intended to accommodate as many as 180 members of the State Legislature. Besides providing living quarters for this large number of M.L.As., this structure, which architecturally will be an imposing edifice, standing on one of the finest building sites in the city, will provide luxurious dining halls, a comfortable library and a number of reading rooms, spacious garages and commodious family quarters for even those who would have the good luck to be selected for waiting on our elected representatives. The building will be ready for occupation, as disclosed by the P.W.D. Minister, Mr. M. M. Naik-Nimbalkar, in about a year's time. When this is brought into commission, the housing problem in the City might be said to have been satisfactorily resolved.

It is not often that the Bombay Government displays such deep sense of proportion and perspective or pays regard to the order of priorities. Financial stringency will always be there for a Government wedded to the promotion of expensive fads. Famines and economic distress in the rural areas have persisted and are bound to recur at stated intervals. With more and still more children being born every year, inadequacy of hospitals and school buildings is sure to plague us for decades. Heaven knows when the shortage of building materials might end. It might not do so for another generation. After all, first things have to come first and you cannot put off such a highly constructive and nation-building scheme as the housing of the hard-working and sweating members of the Assembly and Council, in comfort and luxury, befitting their exalted status. A Welfare State needs must look after the welfare and well-being of those who help in running the State.

Besides, it is in the natural course of things for such blessings to begin at the top. By sheer force of gravity, they are bound to filter down, in the course of the ages, to the common man who finds himself huddled in a hovel with a dozen or more, or pushed out on the pavement. When the Assembly is not in session, when these poor dears go back to their homes, they have to rough it, like the rest of us, in overcrowded and noisy homes in dusty towns and villages. It is but right that they should have a taste of comfort and luxury, when they are actually engaged in doing the nation's work.

One would be wrong in imagining that the lot of an M.L.A. in the Council Hall is easy. Apart from making them from time to time, the strain of listening to dull and unending speeches for hours, when the after-lunch, drowsy feeling is so overpowering, is very great, in fact greater than the effect of the drone of heavy machinery in a factory. It is but meet and fair that a system, which condemns them to this fate for weeks on end several times a year, should provide recreation centres for these victims in healthy and peaceful surroundings, where they can repair the day's wear and tear and get themselves refreshed for the ensuing day's labours. For those of you, who are inclined to disagree with me on this point, I would suggest a visit to the Assembly on any one of the hot days ahead. Few would be able to survive it, without earning at least a severe headache, if not a protracted nervous breakdown. It takes grit to listen to a day's debate in the Assembly unmoved.

I am, therefore, all for this welfare project of the highest importance being given top priority. I am, in fact, surprised that the Planning Commission found no place for the provision of well-appointed mansions in the capitals of all the States and the country for housing the M.Ps., M.L.As., and M.L.Cs., in the Five-year Plan. My misgivings with regard to this project are not on the score of expense, priorities or social justice. I am sorely troubled about the possible breaches of the peace and the difficulties of maintaining law and order in these premises designed to harbour men of widely differing views. It takes a full-time Speaker and President to maintain order in the Assemblies and Councils in each State. I take it that neither of these dignitaries will be there to regulate the conduct of the inmates of this new house that is being put up for the residence of legislators on the foreshore of Bombay.

Our Governor, Mr. Pakvasa, in his innocence, believed that this throwing of the M.L.As. together informally would reduce the time taken in debates in the Assembly. So it might. It would also, perhaps, reduce the heat created in the formal sessions. But I wonder if the heat that would be generated in these quarters and the sparks that would fly about would not lead to a general conflagration in the otherwise peaceful area, inhabited by the high-ranking Secretariat officers. I would, therefore, suggest the addition in the plans for this building, when there is still time, of a wing on one side for locating a small fire brigade and another at the other end for a combined police station and an emergency ward of a hospital, by way of a necessary precaution.

Bengal Chamber's Centenary Volume

Had the political set-up in the country not been completely changed six years ago, I wonder what the reaction of the Indian business community would have been to the issue of a volume like that on the Centenary Survey (1853-1953) of the Bengal Chamber of Commerce and Industry. For the matter of that, I also wonder whether this really interesting book, so ably written by a journalist of rare discernment and great subtlety, would not have been entirely different in tone and temper, perspective and treatment from what it is. Six years ago, it was not possible for a Briton resident in India, however, impartial and objective in his outlook and thinking, to be just a business man, and administrator, a planter, a missionary or a member of one of the important professions—medicine, law, engineering, journalism, etc.

He was one or other of this, but subconsciously and without any awareness of it on his part, he was something more than this, a member of a race apart from amongst those he lived and worked with, which was, as if ordained by Providence, laid with the responsibility of governing the country well. For the first time in India, a British business man is his own real self, just as God, and not an Empire, made him. And I have discovered that he is a very likeable and sociable man, a man with whom it is a pleasure to do business or to be friends. It is only now, after about 200 years of physical proximity, that India has discovered the real Englishman. It would be equally true to say that the Britishers in India, had only now discovered India and its people after ruling over it for two centuries. Mr. Geoffrey Tyson is one of these discoverers and he has written this survey with the full light of this new discovery, even though he writes of years that have gone.

I am not engaged here in reviewing this book. I do not, therefore, feel called upon to summarise the subjects that it deals with or to mark the milestones on the hundred year's progress of this great and politically powerful institution. Powerful it was and more so politically than economically, even though the author certifies that it concerned itself with politics only reluctantly. It was also more influential than similar other institutions in Bombay and Madras. Perhaps, its location lent it this significance and importance. Perhaps, the mere accident of Calcutta being the capital of the country for a long period during the British regime gave Bengal its commercial and economic development. I have also no desire to comment on many of the once highly controversial but now dead issues with which this body had to deal in its long career and about which Mr. Tyson writes with an economy of words which I have rarely seen equalled.

While all this has a legitimate place in this record, which may or may not "prove imperishable," it would be idle on my part, for instance, to examine the attitude adopted by the Bengal Chamber of Commerce, exactly a generation ago, towards the original Haji Bill introduced in the Assembly to reserve coastal traffic for Indian Shipping or the more innocuous one redrafted by the Select Committee and recirculated for opinion in the following year (1929). Even Mr. Tyson has wisely and laconically slurred over this topic in his narrative. It would be equally fruitless for me to recall the spokes put by this and similar other bodies on every occasion for constitutional advance or the snub it received in 1942 on one such occasion at the hands of Sir Stafford Cripps.

What I have tried is to record, in the opening paragraph, the thoughts which emerged in my mind when I reached the end of this volume. And more than anything else, I want here to request whosoever is inclined to undertake a perusal of this book on my recommendation to concentrate on Chapter XIII headed "Approaching the Centenary." It is this summing up, which is in my opinion, a piece of inspired writing. It shows the touch of the master and an indelible mark of sincerity and sympathetic understanding. Mr. Tyson has not lived and worked in vain for many years in India. It shows that he has gained from and given much to this country. If his portrayal of the attitude of the Bengal Chamber of Commerce and Industry is correct, and if it lives up to this appraisal in the future, it will occupy an even more honourable place in the economy of this country than it had never had in the past.—*All Rights Reserved.*

DISEQUILIBRIUM IN THE BUDGETARY POSITION INTENSIFIED

HEAVY DEFICIT IN STORE FOR 1953-54

(From A Special Correspondent)

NEW DELHI, 17*th February*

THE weather in Delhi has become hotter for this time of the year, indicating perhaps the early advent of the much dreaded summer. It can, however, be considered pleasant, by those members of Parliament who hail from the south of the Vindhyas. The capital is now humming with political activity of all kinds with meetings and conferences galore. The political tempo has further been intensified by the three by-elections to the Delhi State Assembly in which the Opposition parties have scored a success.

DELHI LETTER

The position of the Finance Minister of the Government of India is somewhat unenviable, especially at this period of the country's fiscal history. On the one hand, he is being pressed hard by business and trade interests that adequate incentives should be provided for capital investment in risk-bearing enterprises and ploughing back for plant expansion. On the other hand, he is being compelled to allocate increased sums for the capital expenditure in regard to multi-purpose projects and other beneficial measures to strengthen the economy of the country. These requests are being made at a time when revenue resources are gradually shrinking.

Sizable Deficit in 1952-53

For the current fiscal year, namely, 1952-53, Mr. C. D. Deshmukh is expected to show a sizable deficit for more reasons than one. For the first nine months of the year, the returns from customs amounted to Rs. 131.44 crores and for the full year, it will amount to about Rs. 169 crores, as against the estimated figure of Rs. 165 crores. In regard to the Union excise, realisations are expected to decline by about Rs. 8 crores from the estimated figure of Rs. 86 crores. In other words, the total revenue from the above two heads will come to about Rs. 247 crores, as against the budget estimate of Rs. 251 crores. The yield from income and corporation taxes will, however, go up to nearly Rs. 130 crores, as compared with the original estimate of Rs. 104.16 crores. But the surplus under this head is likely to be more than offset by the food subsidy which is now expected to amount to the high figure of Rs. 50 crores, as against the budget estimate of Rs. 15 crores. The higher expenditure on East Bengal refugees, as also that on Defence, not to speak of higher allocations to capital expenditure on development account, is expected to intensify the disequilibrium of the budgetary position. A point to be noted here is that the Government has not realised a single pie from Pakistan, although Mr. Deshmukh had estimated that he would be getting Rs. 9 crores from that country on account of the pre-separation debt. As a part of the Partition arrangements, Pakistan was, it will be recalled, allowed a four years' moratorium in its debt repayment to India. As matters stand, it is likely that India may not get any amount from Pakistan on this or any other account for many many years to come. This apart, the Finance Commission's recommendation for a higher share for the States in the income-tax pool, grants-in-aid, etc., with retrospective effect, would have cost the Union Government another Rs. 20.81 crores for 1952-53. It will not, therefore, be surprising if the Finance Minister shows a deficit exceeding Rs. 70 crores for 1952-53, as against the nominal surplus of Rs. 3.73 crores estimated in May last.

Decline in Revenues

The position in regard to the forthcoming fiscal year (1953-54) is, indeed, not optimistic. The returns from customs and Union excise will be appreciably lower than in the previous year. Although industrial production in the country has been gradually moving up, the profit position has narrowed down to a marked extent. As a result, the yield from income and corporation taxes will decline considerably. During the last few months, many jute, tea and cotton mills—major contributors for income and corporation taxes—have been showing heavy losses and it is possible that their contribution during the forthcoming year will be markedly lower than in the recent past. In view of the increased allocations to States, the resources of the Centre will shrink appreciably. It is, therefore, possible that the Finance Minister will totally abolish the food subsidy and even try to effect some savings in the defence expenditure. In addition, he might resort to some indirect taxation to improve the financial position of the Centre, say, by the levy of salt duty and also by tightening up leakages in collection. Export taxes are likely to be reviewed to some extent. In view of the heavy increase in the stocks of jute goods, Mr. C. D. Deshmukh can be expected to reduce the export duty on sackings to some extent. In regard to linseed oil, the duty may not be retained, due to the improved supply position of this and other competing oils in the world. Duty on groundnut oil, however, may be reimposed, following the latest developments in the Far East and the receding possibilities of supply of groundnut from China. In these circumstances, the Finance Minister is not likely to show even a nominal surplus for 1953-54 as he was able to do a year ago.

Major Schemes to be Implemented

In the industrial sector, the Government is anxious to implement a number of major schemes with a view to strengthening and expanding the economic resources of the country. A three-member technical mission consisting of a representative each of the World Bank (Mr. Rambert), the famous American steel firm of Koppers and the Commerce and Industry Ministry is expected shortly to review and reassess the steel project which is to cost about Rs. 80 crores. An official steering committee consisting of Mr. H. V. R. Iengar, Secretary to the Ministry of Commerce and Industry, Mr. F. C. Badhwar, Chairman of the Railway Board, and Mr. A. K. Chanda, Secretary to the Ministry of Production, will assist the technical mission. The mission will be making recommendations on the location of the plant, the initial and ultimate capacity, the nature of technical aid, etc. It may be noted that the Government has earmarked a sum of Rs. 30 crores towards the establishment of this project under the Five-year Plan. The Government is now determined to go ahead with the erection of the third plant with or without foreign capital. It is, however, possible that Government will seek a loan from the World Bank, especially for such of the dollar expenditure as will be required for the purchase of the plant and machinery. This is indicated by the association of the representative of the World Bank in the formulation of the project. This apart, it was only last week that Government sanctioned a sum of Rs. 20 lakhs for the building up of a fourth berth in the Vizag yard. The representatives of the Standard Oil Company are in the capital discussing with Government spokesmen regarding the safeguards, etc., for the intensive exploration of the oil-bearing belt now located in the Gangetic delta of West Bengal. It is stated that prospects for oil in this area are considered satisfactory after the recent aerial survey. Since the intensive exploration requires a heavy investment, inherent in such risk-bearing enterprises, this foreign concern wants to secure from Government some assurances regarding profit-sharing, repatriation of interest, etc. The representatives of Caltex are also here, discussing with Government regarding the erection of the third oil refinery in the country, to be located on the East Coast, most probably in Vizag. The two other oil refineries are already under erection in Bombay costing a sum of £30 million. The total capacity of the above two plants is about 3.25 million tons.

Tax Enquiry Committee

It is definitely known that Dr. John Matthai, former Finance Minister of the Government of India, will be appointed as the Chairman of the forthcoming Taxation Enquiry Committee. The personnel of the Committee, which will be either seven or nine, will be announced by Mr. C. D. Deshmukh on Budget day. The terms of the enquiry will cover a wide field and the members will be asked to examine the entire taxation structure of the country—Central, State and local. The Committee will be asked to pay particular attention to the incidence of taxation and the changes brought about by the war and the inflationary spiral on the different classes of society. In view of the numerous representations made to Government from time to time that the tax structure should be so modified as to provide adequate incentives for investment in risk-bearing enterprises and a steady expansion of plant and machinery in well established concerns, the Committee will be asked to examine this aspect of the problem. Again, the relationship between taxation and investment and the question of stimulus to saving will also be looked into by the Committee. In view of the recent controversies relating to the multi-point sales tax, the examination of the incidence of this form of tax on the consumer will be one of the references. The Committee will also go into the question of the spheres of taxation between the Centre and States on the one hand and between States and local authorities, on the other. However, those who think that, as a result of the findings of the Tax Enquiry Committee, the burden of taxation will be lightened, will be entirely mistaken, inasmuch as the realisation of the ideal of Welfare State requires large resources.

EUROPEAN COAL-STEEL CARTEL

WILL IT SURVIVE?

(From Our Own Correspondent)

LONDON, 14*th February*

THIS week 'C' in Europe stood officially for Community, or Common Market, but unofficially for Cartel. On 10th February, the Coal and Steel Community of the Schuman Plan, formed under the 50-year agreement of the six West European nations, went into action. From that date, France, Italy, Western Germany, and the three Benelux countries (Belgium, Holland, Luxemburg) took the first step to create a common market with common prices, transport, and selling arrangements for coal, iron ore, scrap, and steel.

LONDON LETTER

Although all restrictions on all four commodities are not abolished forthwith (in particular, scrap does not come into the scheme for another month and steel for another two months), for coal and iron ore the restrictions removed include customs duties, quotas export duties, discriminatory transport rates, and discriminatory domestic prices, as compared with export prices. Coal is, however, still being allocated between the six countries under E.C.E. (Economic Commission for Europe) arrangements, although these are supposed to expire at the end of March. Maximum prices continue to be determined, however, by the High Authority which is the governing body of the Coal and Steel Community, but otherwise the trade in coal will be free and on the same terms for all six countries. For iron ore, the common market is most truly complete since there will be no control over prices.

How far the foregoing is immediately being translated into practice is hard to determine and no clear picture from the six countries has yet emerged. Even in coal, there are all sorts of complications which the High Authority has to resolve and over which it is prepared to move slowly. For instance, the Belgian coal mines are high-cost producers and are subsidised by their Government. In France and Holland, a levy is raised on low-cost coal to equalise the price of the output of high-cost mines. In Holland, the Limburg mines pay a levy to offset the cost of high-priced American imports. There are similar complications in the coke market supplying the steel industries. National subsidies, producer agreements, and so forth, are all contrary to the spirit of the common market, but it is understood that compromises and intermediate measures will be permitted for, perhaps, seven years. The true free coal market may, therefore, not exist in Europe until 1960.

The difficulties existing in raw materials such as coal will be enormously multiplied when it comes to creating a free market in steel. A hint of what these difficulties may be is already available from the German attitude on coal. Germany wishes to prefer certain classes of domestic industrial consumers for low prices—this would be all very well if all six countries adopted the same technique, but, otherwise, the price of coal in the other five countries would be kept unnecessarily high in order to subsidise Germany's preferred industries. Similarly, German prices are out of line with the six-country prices, because they have decided to raise their export prices into line with their domestic prices instead of striking a mean. Finally, the Germans are out for an export tax on coal. All these difficulties may be ironed out, but they indicate that the six countries have not yet reconciled themselves to the true principles of the common market towards which the High Authority is working. It will be interesting to see how these same difficulties are tackled in the case of steel, but there is no doubt that it would be a mistake to expect any spectacular developments. Given time, the intentions of the High Authority will no doubt be carried out.

There is a final risk against which the High Authority will have to guard. The principle behind the common market is to enable an integration of economic systems, a rationalisation of the industries concerned, and an improvement in efficiency and a reduction in price. The powers which are necessary to ensure control over prices and output are just the powers which enable a cartel to work against the interests of the community, and it remains to be seen how the commercial interests concerned reconcile themselves to the ideals of the community plan.—*All Rights Reserved.*

AMERICAN LETTER

EISENHOWER'S FOREIGN POLICY DYNAMIC

NO ECONOMIC UPSETS LIKELY FOR SOME MONTHS

(From Our Own Correspondent)

NEW YORK, 11*th February*

THE great controversy occupying America these days are the attempts of the new Eisenhower Administration to assume a more positive policy both in Asia and Europe. So far as the Far East is concerned, the dispute centres around two main points. One concerns the changed instructions for the Seventh American Fleet which has been in Formosan waters under orders of the Truman Administration. Its objective was two-fold—to guard the Chinese Nationalists from being attacked by the Communists and to prevent the Nationalists from attacking the Communists. The latest plan of the Eisenhower Administration is to have that fleet still stand by and guard the Nationalists, but do nothing in case forces under the command of General Chiang Kai-shek should make raids on the Chinese mainland in either a Northern or Southern direction.

Just what such a policy is to accomplish is not too clear except for one aspect. That is that it restores a semblance of initiative to Western world leadership. In the past seven years, both Washington and London, as well as the other world capitals, have followed and parried every move made by Moscow, but they started nothing.

In other words, the decision is the first measure which is trying to be positive and active rather than passive. American public opinion seems to feel that the Eisenhower Administration is entitled to try this new approach in an endeavour to end the East-West stalemate and the Korean War.

Indeed, at the bottom of all these considerations is the Korean War which the American public have never been able to quite understand except in two terms. One is that the U.S. was more or less the godfather of the South Korean Republic and, therefore, was honour-bound to protect it, and the second is that, in 1938 and 1939, the Western powers did nothing but give in to the forces of aggression, but this time they have the nerve to oppose these elements in a limited way at least.

Both thoughts, however, do not remove the general sense of frustration over the fact that there seems no possibility to win the war or end it in another way. There is also a good deal of discussion about a possible blockade of China. This would, of course, conflict with British interests and might lead to a deterioration of Anglo-American relationships, but it might be another positive rather than passive action, as suggested above.

Asian Problem

Along the same lines, there is a lot of discussion about the Asian problem itself. Dr. Chang, the Korean Ambassador here, favours the new orders for the Seventh American Fleet. He thinks Chinese Nationalist raids on Communist China may be of sufficient strength to divert troops and equipment from North Korea. But he does not want Nationalist Chinese troops in Korea and he does not believe that increasingly larger raids on the China coast will eventually lead to a second front—Chinese fighting Chinese and Asians fighting Asians.

In this attitude, there is also a dualism of thought and thus a conflict. On one hand, the South Korean Republic wants American troops withdrawn, but at the same time it wants its fight against Communism understood as a United Nations' venture, not a Korean one.

As a practical matter, U.S. opinion seems to veer to the line that the United States is bearing the brunt of the fighting, of the casualties and other costs in Korea and are, therefore, entitled to take whatever steps are necessary to resolve the present stalemate.

Up to a point, this is, obviously, recognised as a valid argument in other United Nations' capitals as well. It is also felt here that the continual official emphasis on "avoiding World War III" has provided considerable ammunition to Soviet propagandists who probably do not want war either but never say so and by this method drive the Western powers into a defensive position.

A similar situation is confronting the United States in Europe. Secretary of State Dulles and Mutual Security Administrator Stassen have just returned from a European fact-finding trip and indications are that, in this part of the world, they have also adopted a positive rather than passive attitude. They have warned that, unless steps towards common European defence and unity are taken, the Washington aid programme may be changed.

This new policy might well bear watching in foreign countries and their capitals, because it will not only affect international relations, but social objectives and economics as well. How far Congress will go along with this new line of executive thinking remains to be seen but the chances are that the confidence honeymoon for Eisenhower is strong enough to let him try almost anything reasonable in trying to solve America's foreign and domestic problems. It might be added, the spirit of the new Administration is such that no sensible proposals will be turned down without the most careful examinations of all facts.

Line of Positive Action

The line of positive action rather than a passive one has also been followed domestically. Most price and wage controls are scheduled to expire since most goods and materials are now in ample supply. The new Treasury policy, as exemplified by the first conversion offer of certificates, represents an honest desire to get the bank-held inflationary debt as much as possible out of those hands and replace it with bonds held by institutional investors who do not increase the money supply.

The Government authorities are well aware that they have to compete with the private capital markets in raising money, but they are doing it cautiously by offering not unduly high rates to attract speculators, but sufficiently high ones to sell their wares.

Fiscal managers have also assured me that they recognise the possibility that a reduction of the money supply in a deflationary cycle may well produce effects which are highly undesirable in contracting credit. Obviously, everyone concerned will continue to proceed with extreme caution.

So far, there are no danger clouds on the horizon. For the next five to six months, the U.S. economy is likely to hum at its present pace. Economic academicians still predict a decline of volume when defence spending will taper off later in the year, but these views are still being opposed by those who point to the great unfulfilled projects of States and municipalities waiting for a proper time to make their influence felt. So far as present conditions are concerned, the dynamism of the Eisenhower Administration reigns uncontestedly. The prospects are it will continue to do so for some time to come.—*All Rights Reserved.*

PAKISTAN NOTES

VILLAGE AID PLAN

U.S. OFFERS $7.6 MILLION

THE Government of Pakistan has decided to go ahead with its Village Aid Programme In this task, the Government is to be assisted by the U.S. Technical Assistance Administration, which has already granted $7.6 million This aid will help the purchase of the much needed machinery and equipment, fertilisers transport, propaganda films, etc. The Programme is expected to be more or less on the same lines as that in India and Japan. A 27 man official Pakistan delegation, headed by Mr. A. K. Malik, Development Commissioner of the Punjab, it may be recalled, recently visited India and Japan to study the village community projects in these countries.

The need for a Village Aid Programme cannot be over-emphasised. The bulk of Pakistan population—to the extent of nearly 80 per cent.—lives in villages. It has not, since the creation of Pakistan, received any direct benefit from the general economic development of the country. Consequently, the rural people continue to live in poverty, hunger, disease and ignorance, indulging, more often than not, in ruinous litigation and feuds. It is, therefore, high time, as Mr. Malik aptly stressed at Lahore the other day, that "concentrated and sincere" efforts were made to ameliorate the misery and to shake off the centuries-old apathy. The decision of the Pakistan Government to go ahead with its Village Aid Programme might well be regarded as a major step in this direction.

The implementation of the Programme will be undertaken by specially qualified persons, persons with the requisite enthusiasm and confidence. Two training centres will be set up in the Punjab, of which one will be at Qaidabad in the Thal region. The Qaidabad centre will impart proper training for administrative workers for six months. One worker will be put in charge of five villages. Initially, the Programme will be launched in 600 villages in the Province. The proposed village uplift scheme envisages instruction in better methods of cultivation. The scheme also envisages improvement in health conditions, education facilities, better supply of drinking water and provision of recreation facilities.

Price Support for Cotton

The Government of Pakistan has decided, according to a report from Karachi, to reintroduce the price support scheme for cotton. The fixation of prices for the various qualities of cotton has not yet been finalised. An official announcement to this effect is expected "very soon." Under the price support scheme, the Pakistan Cotton Board will be under the obligation to purchase, at the officially fixed price, any quantity of cotton offered by traders, whenever the price of cotton shows a tendency to fall below fixed price levels.

The reported decision of the Pakistan Government to reintroduce price support scheme for cotton is a sequel to the series of representations made by a considerable section of the cotton trade. It will be recalled that the cotton price support scheme, which had been introduced in the 1951-52 season, was withdrawn on 31st August, 1952. Subsequent to the withdrawal, the Pakistan cotton trade received a setback, due mainly to the slackness in export demand. Stocks of cotton accumulated with the trade and prices registered a sharp decline. Forced by circumstances thus and with a view to solving the most critical position of Pakistan's silver fibre, the Government first announced floor prices for export sales in the different varieties of cotton, which was later followed by the announcement permitting private barter arrangements involving exchange of Pakistan cotton with imports of a limited number of essential items such as iron and steel, chemicals, drugs and medicines, dyes, cotton and art silk yarns, sugar, coal, wheat, etc.

These two steps do not appear to have had any effect and the prices of cotton registered a further decline, which lent growing support to the plea for the reintroduction of the support scheme. The Government's efforts to help the cotton trade by fixing export prices or allowing barter arrangements, it was asserted, would not succeed, if nothing was done to stabilise local prices. To what extent a price support scheme will help stabilise cotton prices remains to be seen, for there are indications which suggest that, unless there is a dramatic improvement in demand, the efforts of the Pakistan Government are bound to end in failure. In

(Continued in previous column)

(Concluded from next column)

this context, the cotton traders in Pakistan welcome Lancashire's re-entry into the Pakistan cotton market this week, after a long absence, with the purchase of 25,000 bales. Opportunities of buying more Pakistan cotton are regarded favourable in Lancashire. It is felt that prospects of bilateral trade between the two countries will be improved, if larger quantities of raw cotton are procured by the U.K. Pakistan is known to be in need of cotton yarns and there is said to be good scope for widening sale in Pakistan of piecegoods and finished cloths of Lancashire origin. During 1952, shipments of Pakistan cotton to Lancashire aggregated barely 85,000 bales, as compared with 120,000 in 1951. The Raw Cotton Commission has made only limited purchases of Pakistan cotton, as sufficient American types had been available from other sources. In the meantime, there is a section of cotton trade in Pakistan which strongly feels that the Government should leave the market alone and allow the prices to adjust themselves according to forces of supply and demand.

A public limited company, with a capital of Rs. 3 crores, is being floated to run the several industrial concerns in the Thal Area (Punjab). Of the total investment, 51 per cent. is to be made by the Government and the remaining by the Thal Development Authority and the public.

HAS THE INFLATIONARY PHASE ENDED IN INDIA?

CERTAIN TRENDS IN ECONOMY ANALYSED

THE trend of commodity prices since the sharp recession in the first half of 1952 has not been such as to improve generally the business sentiment in India. The slump touched its nadir in May that year when the general index number of wholesale prices stood at 367 (base 1939=100). This was, in fact, the lowest figure not only for 1952 but for the whole of the post-war period. After May, prices recovered primarily as a reaction to the previous sharp decline, with the index number rising gradually to 389 in September. Since then there has, once again, been a recession which has persisted till December with the index figure touching a low of 373.

The recession in the last quarter of 1952, which is a common occurrence at year-ends on account of expected arrival of agricultural commodities, has made many a business man think whether the decline is a temporary one or a renewal of the slump leading to depression. While opinion is divided on the question, it will be interesting, as also appropriate; to refer here briefly to the views of the *Tata Quarterly* on the subject. In an article entitled "End of Post-war Inflation," which appears in its January issue, the *Quarterly* feels that the persistent weakness of commodity prices calls for a fresh assessment of the general economic situation. Accordingly, it has surveyed the various economic trends and arrives at the conclusion that these trends "point to the end of the inflationary phase in India." Its views on these trends, summarised below, may be read with interest, although one may not agree with them.

The article under review sets out to examine the effects which the decline in prices noted above is likely to have produced on consumer income. This study is prompted by the assumption that, if money incomes are contracting, the effective demand for goods and services might, in due course, fall further, although for the time being the reduced level of prices might appear to have secured a balance between demand and supply. In the transition from a high-priced to a low-priced economy, the downward trend of income too must not be allowed to get out of control. The position would naturally be influenced by the basic trends of money supply, private investment, budgetary policy, overseas demand, etc. But, in the absence of a strong counteracting force, the interaction between falling prices and contracting incomes could, the *Quarterly* says, lead to a general slump in production, trade and employment.

With these preliminary remarks, the *Quarterly* proceeds to trace the trend of prices since the Korean War till the end of December, and finds that the basic trend of prices since the middle of 1951 has been in the downward direction. None of the principal commodity markets has been able to escape this downward trend. Even such commodities as foodgrains, ferrous metals and cement which are believed to be in short supply were no exception, their prices in the open market having fallen much below their levels as compared with a year ago. What is more, the trend of these is still downward. Chemicals, raw cotton and piecegoods have been below ceilings owing to improvement in supply. Oilseeds and vegetables are still in doldrums owing to contraction in overseas demand and their prices are lower by 20 to 40 per cent. than a year before. The prices of export commodities such as tea and jute and consumer goods such as sugar and *vanaspati* have continued to decline and are now well below the levels touched in the general slump. A substantial increase in supply in the case of these goods has been accompanied by static or decreasing consumption.

The obvious inference drawn from the downward trend noted above is that demand has weakened relatively to supply. What is the explanation for this change in the relationship between demand and supply? With a view to finding an answer to this question, the magazine has examined how far it is due to the contraction in the purchasing power in the country. As a theoretical exposition of the problem is not possible on account of lack of fundamental data, it has made an attempt at describing the general situation in rural and urban areas. The trend of income in rural areas is sought to be determined from the trend of prices of cash crops only. It has not taken into account the prices of food crops, as they are unlikely to show much variation, in view of the official control. The average wholesale prices in 1952-53 as compared with 1951-52 show a fall of 17 per cent. for cotton, 49 per cent. for jute, 37 per cent. for *gur*, 20 per cent. for groundnut and 29 per cent. for linseed. The *Quarterly* considers that the reduced prices are likely to bring down rural income in this and the next crop year substantially below that in the recent past, which will in turn affect the demand for the products of domestic industry.

The trend of income in urban areas is dependent on the volume of employment and earnings in industry, commercial establishments and Government offices. A review of the trend of income of large-scale industry shows that, except in a few industries such as cotton textiles, sugar, chemicals and cement, many industries in the country had to reduce production because of accumulation of stocks and fall in demand. The same declining trend, with perhaps greater intensity, is presumed to have prevailed in small-scale industries and trade. Although it is difficult to say how far the general slackening of industrial and trade activity in both the spheres has already reacted on the volume of employment, the statistics of Employment Exchanges have been relied upon by the journal for coming to the conclusion that there must have been a sizable fall in employment in 1952. Besides, attention is also drawn to the recent survey carried out by the Directorate of Resettlement of the Government of India which indicates that unemployment among the educated people is on the increase.

Analysing the trend of income in the various business sectors, the journal points out that the continuing fall in the price level is bound to result in substantial reductions in profits of those engaged in both foreign and domestic trade and in industries. The reduction in the incomes of trades and industrialists does not lead, according to it, to an equal reduction in the demand for consumer goods. But the fall in the income earned in small-scale industry and agriculture would, it observes, directly affect consumer demand. "Correlating all these factors," it says, "it is apparent that the recession in prices since the middle of 1951 has been accompanied by a contraction of consumer income besides a fall in the margin of profit."

Future Trend

The *Quarterly* then proceeds to consider the future economic outlook. This, according to it, will depend on several other factors, both external and internal. The situation overseas is unlikely to make any marked improvement in the export trade. Internally, fixed capital investment in the private sector, as reflected in the imports of machinery and millwork, shows signs of stagnation. The imports of capital goods increased from Rs. 40 crores in 1946-47 to Rs. 106 crores in 1949-50, but declined to Rs. 84 crores in 1950-51 though they rose again to Rs. 101 crores in the following year. Says the journal: "It may be that the quantum of import of machinery by the private sector has now ceased growing or is even declining."

As regards finance, it is stated that unless deliberate steps are taken to adapt monetary policy to the changed economic situation, money will continue to be tight. Owing to the increase in the supply of trade bills which has taken place since November, 1951, the difficulties of seasonal finance are likely to be smaller than anticipated. But it cannot be said, remarks the *Quarterly*, whether the Reserve Bank would go further and resume open market operations in order to counteract any sagging tendency that might be noticed in prices, trade and production. If the Bank does not undertake to expand the note issue when necessary, with its open market operations, it will be difficult for the private sector to improve its overall liquidity, even if business sentiment improves and demand for short-term and long-term investment broadens. The supply of money then will not show any lasting increase except for two possible developments, namely, (1) deficit budgeting necessitating loans from the Reserve Bank for meeting disbursements in India, and (2) a favourable balance of payments. On the contrary, the supply of money may decrease, if the fall in Gilt-edged prices, accompanied by unattractiveness of other outlets for funds, induce banks and other institutions to purchase securities from the Reserve Bank.

The contraction in money supply is indicated by the fact that, in the first completed year of the present policy, note circulation shows a net fall of Rs. 50 crores to Rs. 1,084 crores. This has been accompanied by a moderate disinvestment by the Reserve Bank (Rs. 22 crores) and a sharp unfavourable balance of payments (Rs. 91 crores). Side by side, Government deposits declined by Rs. 50 crores which was an inflationary factor so far as the Government itself bought securities or foreign exchange from the Reserve Bank.

In view of the contraction in money supply, the writer welcomes deficit budgeting of the order of Rs. 290 crores as envisaged in the Five-year Plan. Examining the inflationary implication of this deficit, the *Quarterly* observes:

"The direct foreign expenditure involved in the Government's investment programme for the period is estimated at Rs. 400 crores. This means that even if the overall budget deficits add up to Rs. 290 crores, Government transactions in India would yield a surplus of Rs. 110 crores (Rs. 400 crores minus Rs. 290 crores). Since it is only internal budget deficits which are a stimulating factor adding to the supply of money within the country, it is difficult to see how, on the basis now adopted, deficit budgeting in the Plan would be an inflationary force counteracting the depressing tendencies evident in the private sector."

For some years, a substantial adverse balance in overseas trade was an important deflationary force in the country. It tended to decrease the money supply. The position has been rectified since the middle of 1952 by means of drastic cut in imports. This stimulates activity only in regard to the goods previously imported and competing with domestic production. The value of exports, however, has also slumped and, therefore, the balance of payments is not large enough to be a major inflationary force. Consequently, it is considered that an adverse balance of payments on current account might actually be planned for, as being the only practicable way of utilising sterling balances and other foreign loans that India may get. Foreign aid of the usual kind does not make a change to the balance of payments directly, for this "extra foreign exchange" is generally accompanied by "extra imports." But import of capital and gifts of foreign capital goods give rise to local capital expenditures and are, therefore, a stimulating factor. No estimates are available about the volume of foreign aid or the volume of inflow of capital and aid coming in the form of capital goods. However, the foreign aid which is likely to be received by India cannot be counted upon to alter materially the effects which overseas merchandise trade is expected to produce on the economy.

From the aforesaid analysis of price trends and money supply, the *Quarterly* concludes that "the principal currents in the economic stream point to the end of the inflationary phase in India" and comments as follows:

"There are certain incalculable elements, particularly in the impact of world developments on India, but, so far the position can be analysed, the economy appears to be poised for a downward movement in business activity, in which the propelling force is likely to be a contraction of purchasing power in rural and urban areas. This seems to call for a reconsideration of the hypothesis on which official programmes and policies have so far been based. At the moment, unemployment in cities may not have reached serious proportions; in many lines, the fall in prices that has taken place may be taken to be desirable; and the slump in cash crops may be welcomed for the impetus it gives for the cultivation of more food crops. Economic policy has, however, to be related not merely to the situation at a given point of time but also to the underlying trends which may reasonably be expected to assert themselves in due course. From this angle, the time would appear to have come at least for thinking out, in advance and in practical terms, the changes in policy that may be required."

WORLD BANK'S LOAN TO YUGOSLAVIA

The International Bank for Reconstruction and Development announced last week a loan to Yugoslavia which will help finance the completion of key projects in seven major sectors of the Yugoslav economy. The projects will bring about early increases in industrial production and substantially improve Yugoslavia's international trade position. No dollars are to be loaned. The loan will be in ten European currencies in an amount equivalent to $30,000,000. The currencies are Austrian schillings, Belgian francs, British pounds sterling, French francs, German marks, Italian lire, Netherlands guilders, Norwegian kroner, Swedish kronor and Swiss francs. Most of the funds required for the loan are being made available by these Governments from their domestic currency subscriptions to the Bank's capital. The Swiss francs, however, were obtained from the sales of Bank securities in Switzerland, which is not a member of the Bank.

The loan will pay for the import of equipment needed for 27 projects in seven sectors of the Yugoslav economy: electric power generation and distribution; coal mining; extraction and processing of non-ferrous metals; iron and steel production; other manufacturing industries; forestry and transportation. These projects are designed to make more extensive use of Yugoslavia's considerable natural resources and to help provide supporting services such as, electric power and transportation. Agricultural production is the main field of Yugoslavia's economic activity and will remain so for some time to come. The country, however, has plentiful resources of timber, coal, iron and a wide variety of non-ferrous ores including copper, zinc and bauxite.

Most of the projects which the Bank's loan will help to finance are expected to be completed within the next year or two, and all should be in operation by 1956. They will make important contributions to the 30 per cent. overall increase in industrial production expected by 1955. The projects being financed under the loan will increase the production capacity of iron ore by 900,000 tons annually; pig iron by 260,000 tons; steel ingots by 275,000 tons; and finished steel products by 195,000 tons. New processing plants will make it possible for Yugosalvia to produce an additional 60,000 tons of alumina and 15,000 tons of aluminum. Other plants will enable Yugoslavia to manufacture its own copper wire and cable. Agriculture will benefit by the production of 120,000 tons of phosphatic fertiliser and 30,000 tons of starch. New forest areas will be opened and a plant for the production of 20,000 tons of newsprint will be built. Increased coal production, greater availability of electric power, and small but important additions to transport facilities will eliminate obstacles in these fields and enable Yugoslavia to keep pace with growing industrial needs.

The projects are expected to improve Yugoslavia's balance of payments position by the equivalent of $50 million a year. Increased exports of such items as aluminum, steel tubes, copper wire and cable and coal will account for more than half the amount; savings through reduction of imports of iron and steel products, non-ferrous metals and newsprint will account for the rest. Additional benefits will come from increased industrial efficiency, a reduction of man-power requirements, and lower production costs.

The loan is for a term of 25 years with interest of 4¾ per cent. including the 1 per cent. commission which, in accordance with the Bank's Articles of Agreement, is allocated to a special reserve. Repayment of the loan is to be made in semi-annual payments which begin 15th August, 1956, and are calculated to retire the loan by maturity on 15th February, 1978.

CAPITAL CONTROL IN U.K. TO BE REMOVED?

Addressing one of the local associations in London on the 11th inst., Mr. R. A. Butler, Chancellor of the Exchequer, was confident that the improvement in the sterling area's balance of payments position would continue for some months more, possibly for the greater part of this year, and that it would be possible for the working out an application of policies for long-term progress without any obstructions by immediate crises. This declaration has been followed by a decision by the Government to grant licences for office buildings in the city upto a total of £10 million. This has been taken as a sign that a new policy in regard to investments is in the offing. London financial circles are of the view that the Government might have taken a decision to relax materially the restrictions imposed on capital investments at the end of 1951. It is now believed that Mr. Butler would take an early opportunity to announce this decision, probably in his Budget Statement.

Hopes of relaxation of controls on investments are engendered by marked improvement in the steel supply situation and by Mr. Butler's own remarks on the subject. He said in Parliament on the 11th inst.: "Now that more steel is available, we are deliberately issuing more licences for factories, and the Government now expect that the work done in 1953 will be nearly 10 per cent. higher than in 1951. That, with the general level of industrial investment—which is high—should prove that we mean business in supporting the fine efforts of manufacturing production." The priority for capital investment which aims at increasing exports, especially to the dollar area, is however, expected to remain in force.

It is felt that the mere removal of control of capital investment may not result in an increase in such investment. Industries in Britain are said to be less keen than in 1951 to expand their productive capacity. For the recession last year and the difficulties facing export industries have induced many firms to revise their capital investment programmes in a downward direction. Further, higher interest rates and tighter money conditions are expected to keep down the volume of capital investment even after the restrictions are removed.

MR. EUGENE BLACK VISITS MIDDLE EAST COUNTRIES

Mr. Eugene Black, President of the World Bank, who is now on a seven-week tour of the Middle East countries, while at London this week, had private talks with the British Chancellor of the Exchequer, Mr. R. A. Butler. The discussions are understood to have related to British plans to help the industrial and agricultural development of the Commonwealth countries and British colonies. It will be recalled that Britain was allowed to use an extra £60 million from the British quota for granting loans for economic development in the overseas area. The loan is for a period of six years and would be made partly in dollars. During the talks, Mr. Black would appear to have sounded the views of Britain regarding the use of the £60 million by the Bank. It is believed that the Bank's loans to sterling countries may take several months.

Mr. Black's present tour will take him to Egypt, the Lebanon, Jordan, Iraq, Syria, Ethiopia and Turkey.

Mr. Black is taking this trip to acquaint himself, at first hand, with problems of economic development in some of the Bank's member-nations. He will discuss these problems with officials and other persons concerned, and will visit some of the development projects being carried out in the countries he is visiting. Mr. Black paid similar visits to some of the Bank's member-countries in Latin America in 1951, and in 1952 visited Pakistan, India, Ceylon, Thailand and Australia.

BANK OF BHOPAL LTD.

The results of working of the Bank of Bhopal Ltd. (General Manager: Mr. V. S. Mani, Bhopal) during the year ended 31st December, 1952, are somewhat gratifying, inasmuch as the Bank has been able to earn a profit sufficient to wipe off the previous year's deficit, to add a small slice of the profit to the reserve fund and to pay a tiny dividend to the shareholders who have had to remain without any return on their investments since 1948.

The Bank has earned a profit of Rs. 60,394 for 1952, against which has been debited the loss of Rs. 5,877 brought in from the previous year, leaving a balance of Rs. 54,517 for appropriation. Out of this, the Directors propose to make a provision of Rs. 7,500 for taxation, transfer to the reserve fund Rs. 12,500 and set aside Rs. 5,500 for paying bonus to staff. They have also proposed a dividend at the rate of 2 per cent. free of income-tax, which requires Rs. 25,000, leaving to be carried over Rs. 4,017. It may be added that the last occasion when the shareholders received any dividend was in respect of 1948, the rate being 3 per cent., the same as that paid for 1947.

Interest and discount earned shows a decline from Rs. 1,41,338 to Rs. 1,28,141, but this has been more than offset by the increase of Rs. 3,156 in commission and exchange and Rs. 17,661 in other receipts. A decline of Rs. 8,145 to Rs. 10,503 is noted in interest paid on deposits and borrowings. There has also been a small, but welcome, decline in expenses from Rs. 86,397 to Rs. 83,938.

The Bank has no reserves worth the name, except the small sum provided out of the profit for 1952. It may be recalled that the entire reserves at the end of 1951 had been utilised for reducing the loss on sale and revaluation of investments. Total deposits have fallen from Rs. 9,46,168 to Rs. 8,59,299. An analysis of the different types of deposits shows that fixed and savings deposits have gone up from Rs. 84,641 and Rs. 2,16,758 to Rs. 1,29,232 and Rs. 2,67,891, respectively, while current and other accounts have declined from Rs. 6,44,769 to Rs. 4,62,175. The Bank's liability in respect of its former Pakistan Branch at Karachi has been reduced from Rs. 3,37,088 to Rs. 2,87,913. The Bank's branch at Karachi, it may be remembered, was closed in 1951, having been ordered into provisional liquidation by the Chief Court of Sind at the end of August, 1951. Advances and bills discounted and purchased show an increase from Rs. 12,85,153 to Rs. 16,03,062. Investments remain unchanged at Rs. 6,16,430, the market value of which is higher at Rs. 6,20,297. But the whole of these investments (of the value of Rs. 6,70,000) are held in Pakistan as security against the Bank's Karachi branch borrowings in that country. Cash balances are lower at Rs. 1,16,224, as against Rs. 1,62,981. The sale of the Bank's premises in Bhopal realised a sum of Rs. 3,43,000 which helped the Bank to replenish its liquid resources at a time when its coffers were almost empty.

The Directors have given no particulars about the position of the Bank's assets and liabilities in Karachi.

IMPERIAL BANK OF INDIA

A decline of Rs. 73.63 lakhs in deposits and other accounts is disclosed by the statement of affairs of the Imperial Bank of India for the week ended 13th February, 1953, as compared with that for the previous week. Bills payable, however, have improved by Rs. 88.96 lakhs. Other liabilities are also higher by Rs. 15.94 lakhs. On the assets side, advances have gone up by Rs. 2.07 crores. Cash and other balances have increased by Rs. 1.70 crores. Investments, on the other hand, have receded by Rs. 3.54 crores.

DEPOSITS OF MUNICIPAL CORPORATIONS

The Bombay Provincial Municipal Corporation Act, 1949, is shortly to be amended so as to authorise municipal corporations in the State to deposit their funds in any Scheduled Bank of their choice. Under the provisions of the Act, as it stands at present, a municipal corporation is required to deposit its funds with the Imperial Bank of India. But if it wants to deposit with any other bank, it can do so only with the previous sanction of the State Government. It is found that a corporation is required to approach Government frequently for permission to deposit its fund in banks other than the Imperial Bank of India, and hence the proposed amendment to the Act. The amending Bill has been published in the *Bombay Government Gazette*, dated the 13th inst.

BANKERS FOR HYDERABAD STATE

It has been decided that the Reserve Bank of India should be appointed as the sole bankers to the State Government of Hyderabad with effect from 1st April, 1953. The Reserve Bank will, in turn, appoint the Hyderabad State Bank as its agent within the Hyderabad State. Under the arrangement, the Reserve Bank would offer to the State Government the same facilities which are at present enjoyed by, or may in future be offered to, Part A States. The State Bank would occupy the same status which the Imperial Bank of India enjoys in Part A States.

It is stated that a move is afoot to merge the Mercantile Bank of Hyderabad with the Hyderabad State Bank. The former Bank is a Scheduled Bank floated by the leading business men of Hyderabad, with the help and co-operation of the State. It has been making slow but steady progress. But, because of the interest which the State holds in the capital of this Bank and with a view to consolidating the progress it has made so far, it is being felt that it is desirable to amalgamate the Bank with the bigger institution, namely, the State Bank of Hyderabad. It is not yet clear whether this integration of banking in the State will be brought about by amalgamation or absorption; negotiations are still proceeding. We are, however, told that the Reserve Bank's operation in Hyderabad will not wait for the integration of these two units but will begin on 1st April next, as scheduled.

The appointment of the Reserve Bank as the sole banker to the Hyderabad Government is another step forward towards the achievement of federal financial integration. It may be recalled that the States of Madhya Bharat, Travancore-Cochin and Mysore have already appointed the Reserve Bank as their bankers and negotiations are progressing with the other Part B States for completing this aspect of the financial integration of India (*vide Commerce* dated 10th January, 1953). It is understood that the negotiations for the merger of the three Rajasthan banks are continuing and that the chances of an agreement have improved.

COTTON THREAD INDUSTRY IN INDIA

NEW MODERN FACTORY OPENED

A NOTABLE development in the sphere of the cotton textile industry in India this week was the formal opening, on Monday last, of the Chalakudi Thread Mill at Koratti (Travancore-Cochin), belonging to the Jumna Thread Mills Ltd., an associate of Messrs. J. & P. Coats Ltd., England. Although the factory has been formally opened, it will be going into full production only this time next year. Full details of the new factory are not yet available. But from the little that has been provided to the Press, it is gathered that the factory, when completed, will have a productive capacity sufficient to cover more than 50 per cent. of India's requirements of cotton thread, both for domestic and industrial uses. In fact, it is claimed that the factory will be the largest cotton thread manufacturing unit in India.

A striking feature of the new venture is that the factory is equipped to produce almost all its requirements of yarn—the raw material for sewing thread—except some of the finest varieties. In short, the project is a complete thread mill providing for all the processes in the manufacture of thread, right from spinning to finishing, and of wooden spools. The steam required for processing purposes will be raised by oil-fired boilers and a comprehensive fire protection system is being installed, incorporating a special sprinkler arrangement in all the principal buildings.

The new cotton thread factory is being erected by the Jumna Thread Mills Ltd., in association with the world-famous cotton thread producers, namely, Messrs. J. & P. Coats Ltd., Paisley (Scotland). Prior to the Second World War, it will be recalled, the Jumna Thread Mills Ltd. commenced production of cotton thread on a limited scale. It was only after the war that steps were taken to develop the industry. Plans were accordingly drawn up, towards the end of 1950, for erecting a large-scale cotton thread factory in India. The establishment of the Chalakudi Thread Mill is a sequel to these plans. The factory is located at Koratti in the Travancore-Cochin State, a place which is said to be eminently suited for the production of cotton thread. Thus, it has sufficient and suitable water-supply for process work, availability of adequate electric power, railway and road transport facilities, and proximity of a growing port, namely, Cochin.

Importance

The importance of a large modern cotton thread producing unit, such as the one under reference, hardly needs to be stressed. Despite the fact that India is the world's second biggest cotton textile producer—next to the U.S.—possessing as many as 453 cotton mills with 11.43 million spindles, it is not self-sufficient in cotton thread. There are, of course, one or two mills which have specialised in this line, the most outstanding among them being the Kohinoor Mills Co., Ltd., which has expanded its productive capacity of cotton thread in recent years. There are also numerous small units, spread all over the country, but these are no more than reeling machines run on a cottage-industry basis. Moreover, a large part of the thread produced in India, it is stated, is of the two-ply variety and as such not suitable for use on high-speed stitching machines, which often operate at a speed of 4,000 stitches per minute.

The quality of thread produced by these factories falls far short of the requirements. Consequently, India has been importing considerable quantities of cotton thread. During the calendar year 1951, for instance, India imported 1,134,577 lbs. of thread worth Rs. 1.55 crores; during the first 10 months of 1952, imports were 970,344 lbs. worth Rs. 1.19 crores. Incidentally, it may be noted that the principal supplier of cotton thread to India has been the U.K., the imports from which during 1951 were 945,348 lbs. valued at Rs. 1.31 crores. Of late, however, imports have been on the downward trend, the quantity actually imported during the first 10 months of 1952 being only 660,283 lbs. worth Rs. 83.76 lakhs. This is due partly to the rise in the indigenous production of thread, exact figures relating to which are not available, and, perhaps, partly to the competition from Italy and other countries. An indication of the latter point is provided by the enormous increase in imports of Italian thread from 20,708 lbs. (Rs. 3.00 lakhs) in 1950 to 103,121 lbs. (Rs. 15.20 lakhs) in 1951 and still further to 174,992 lbs. (Rs. 18.24 lakhs) during the January-October, 1952 period.

The completion of the Chalakudi Mill and its full operation will ensure adequate supplies of sewing thread for meeting India's growing demand for both domestic and industrial uses. It will reassure the consumers that the famous quality brands, on which they have placed so much reliance, can be produced in India in sufficient quantities to ensure their availability for the increasing needs of the country. Quality thread in India finds a particular commercial application in the shoe and leather industry, as also in the garment industries which have considerably expanded in recent years.

AID TO HANDLOOMS

A suggestion for the establishment of a finance corporation in every State to render financial assistance to the handloom industry has been put forward by the Madras Provincial Handloom Weavers' Congress, in the course of a memorandum submitted to the Government of Madras recently. The suggestion is based chiefly on the ground that there are at present no regular institutions to finance the activities of the handloom industry, barring, however, the co-operative central banks. Even these societies, it is pointed out, refuse financial accommodation during the dull seasons, that is, when stocks accumulate with them. On such occasions, the weavers' co-operative societies suffer huge losses. The Congress has accordingly suggested the setting up of a finance corporation, consisting of the representatives of the industry, the Government and the Reserve Bank of India. The establishment of such a corporation requires large-scale finance. Referring to this point, the Congress has proposed that a sum of Rs. 50 lakhs, out of the Rs. 1.25 crores which the Madras Government will receive from the Centre from out of the proceeds of the proposed cess on mill-made cloth, may be set apart every year towards the capital of the Corporation.

With regard to internal marketing, the Weavers' Congress feels that the "popular prejudice" that handloom cloth is costlier than mill-made cloth should be removed. "To effect a change in public opinion," the Congress observes, "the consumer should be shown a marked difference in prices between handloom cloth and mill cloth, for which widespread propaganda is necessary. In order to enable the producing institutions to carry on propaganda, the Government may give a subsidy at the rate of 2 per cent. on the value of cloth produced by weavers' societies and other registered concerns. Such a step would operate as a sort of price support for handloom cloth."

An important suggestion of the Weavers' Congress relates to the establishment of a factory for the manufacture of dyes and chemicals required by the handlooms. The State Government should allot Rs. 50 lakhs from out of the cess fund towards the capital of the concern. The other suggestions of the Congress include the creation of an export corporation to undertake foreign trade in handloom cloth, setting up of a State-owned spinning mill on the banks of the Krishna or the Godavari, and encouragement to practical research on problems of weaving, dyeing and designing, etc.

DRAFT STANDARD FOR RAW SILK

A series of 21 draft Indian standards on raw silk has recently been formulated by the Textile Standards Sectional Committee of the Indian Standards Institution. The series covers a method of grading raw silk of categories I and II, and methods for evaluating specified characteristics of silk of the two categories and grading them on the basis of the evaluation. The characteristics covered, one in each draft standard, are of size deviation, evenness, cleanness, neatness, tenacity and elongation, cohesion, etc. The results of determining the values of all these characteristics together form the basis of grading.

Raw silk is made up of several cocoon filaments which are combined by 'reeling' to form the thread. Well-reeled silk is uniform in thickness and practically lawless, with all hanks of uniform length and weight. Since defective reeling and packing makes a large percentage of otherwise satisfactory silk "unlenderable," according to internationally accepted system of grading, raw silk has been divided into two categories. This series of draft standards, therefore, consists of two separate sets, one for each category of raw silk, category I complying with requirements of international trade and category II being silk not reeled and packed to international standards, but acceptable in internal trade. Generally speaking, however, the two categories of silk are such that they can easily be differentiated by visual examination of external characteristics.

INDUSTRIAL USES OF RAYON

That the prospects for the development of rayon industry are bright will be evident from the marked expansion in the industrial uses of rayon of late. The latest report of the British Rayon and Synthetic Fibres Federation provides a clear testimony to this fact. According to the report, out of the total deliveries of yarn amounting to 153.56 million lbs. made in the U.K. in 1952, as much as 43.71 million lbs., or 28.5 per cent., were delivered for industrial purposes, as compared with 25.65 million lbs. out of 138 million lbs., or 16.2 per cent., in 1948. The improvement would, perhaps, have been more noticeable but for the world-wide recession in commodity markets. Thus, the weaving branch of the textile industry, the major consumer of rayon, took only 57.16 million lbs. of rayon yarn, as against 93.41 million lbs. in 1951. Yarn exports were down, and the hosiery and warp knitting trades consumed much less. The smaller consumers such as the lace industry, narrow fabrics and sundry users, also absorbed less.

Much of the success of the rayon filament in the industrial field, as noted above, has been due to the supremacy of rayon as a tyre yarn, especially for heavy-duty vehicles. Large quantities of rayon filament are also being used in conveyor belts for the coal and other industries in both flat and 'V' belt drive, in hose-pipes, and several other articles of fabrics, alone or bonded with rubber. For instance, liner cloth is used in the rubber industry to prevent layers of rubber from sticking together. In this and many other directions, the scope for expansion is said to be considerable. Indeed, it will not be surprising to see, in the coming years, a progressive rise in the industrial uses of rayon, even if the other branches of the textile trade fully recover.

VALUABLE ANNUAL ON WOOL AND WOOLLEN GOODS

The book, *India and Pakistan Wool, Hosiery and Fabrics*, is the fourth annual review of the wool and hosiery industries in India and Pakistan, by the well-known firm of Messrs. John Worrall Ltd., Oldham, England, specialists in the field of textile publicity (Agents in India: Messrs. W. H. Brady & Co., Ltd., Royal Insurance Buildings, Veer Nariman Road, Fort, Bombay. Price: Rs. 7 per copy. The review is a very comprehensive one, inasmuch as it surveys the developments in all the sectors of the woollen industry, namely, the wool, worsted, carpet and hosiery sections. It also covers raw wool production, classification, marketing, import and export, yarn production, knitting and manufacturing, processing, distribution and marketing.

The utility of the publication is particularly enhanced by the wealth of statistical material on various aspects of the wool and woollen industries in India and Pakistan, as also by the directory of individual firms, factories and associations connected with these industries. Also given at the end is an illustrated list of advertisers' trade marks and designs and alphabetical lists of trade and brand names. Indeed, the latest edition has brought up-to-date all the essential features which characterised the earlier editions. There is no doubt that the publication is an invaluable guide for both the buyer and the seller of wool and woollen goods.

CHEMICAL FIBRES

The new man-made fibres—chemical fibres, as they are called—introduced in recent years, it is said, hold out excellent prospects of development in the sphere of the textile industry. This at least is the view of Mr. J. B. Quig of E.I. du Pont de Nemours & Co., Inc., U.S. In the course of his address at a recent convention of the Association of American Soap and Glycerine Producers, held at Wall Street, Mr. Quig said that the new chemical fibres, after the present period of dissemination and assessment is over, would open new fields and broaden the scope of the textile industry. New fibres could be designed to meet specific textile needs, when used alone or in blends. In his opinion, to rely entirely on the old fibres would close many avenues of enterprise, which otherwise would be open to textile manufacturers.

MODERNISATION OF JAPANESE TEXTILE MACHINERY

With a view to enhancing technical efficiency and improving quality, the leading cotton spinning firms in Japan are now engaged in modernising their equipment. The Kurashiki Spinning Company is the first to import an automatic spooler from the U.S. and has also ordered the "continuous bleaching machine." The other spinners are following suit. The Toyo Spinning Company is already operating four automatic spoolers for manufacturing sanforized textiles; these spoolers, it is claimed, are four times as speedy as the former Japanese equipment. Other leading spinners are currently engaged in the rationalisation drive by means of either or both of the sanforised and everglaze techniques.

PRESIDENT OF M.C.C. ON BRITISH TEXTILE INDUSTRY

DECLINE IN RAYON OUTPUT

(From A Special Correspondent)

MANCHESTER, 10*th February*

A DENIAL that the textile industry was no longer of major importance to Britain's economy was made by the President of the Manchester Chamber of Commerce, Mr. Benjamin Pickup, at the annual meeting this week. Of late, he said, there had been a tendency in some quarters to delegate textiles to a secondary place when viewing the result of British industrial effort as a whole. Mr. Pickup went on: "I for one am not so easily misled. I take full account of the unusual circumstances of the recent past and am confident that British textiles generally will once more come back into full prominence and continue to hold a foremost place in the international trade of this country." He did not say this in any sense of complacency, and all in the textile industry would need to be on the alert to sense changes and to apply techniques of production and marketing to their fullest extent.

MANCHESTER LETTER

Referring to intensified competition from other nations, Mr. Pickup said an inescapable fact was that whatever Lancashire did to bring costs down to the minimum could overnight be nullified by the selling policy of competitors like Japan. The industry was thus living constantly under conditions of great uncertainty which made long-term planning most difficult. Mr. Pickup added: "If Japan fails to appreciate that others are entitled to participate in world trade under reasonably competitive conditions she has only herself to blame if stiff defences are once more raised against her."

On the return of a buyers' market, the President said under the changing conditions of international trade, the individual firm and its personnel must be ready to step in and seize each and every opportunity open to them. To the aid of leadership must be brought up-to-date methods of production, competitive prices, firm delivery dates and, above all, good quality merchandise.

Supplies and Output

About three months ago it was pointed out that on the then available statistics the drop in ratio of cotton cloth exports from Britain last year was not as large as the decline in supplies remaining for the home trade. The annual totals now show that the trend of the earlier part of 1952 was further emphasised in the final quarter.

Sufficient quantities of cloth to satisfy home needs are still available, added to supplies already in stock, but the table below illustrates how the balance has shifted over the past 12 months:—

(In million yards)

Year	Output (a)	Imports (b)	Total (a & b)	Exports	Balance for home trade
1937	3,640	50	3,690	1,921	1,769
1947	1,623	155	1,778	533	1,245
1948	1,933	223	2,156	792	1,364
1949	2,004	348	2,352	903	1,449
1950	2,123	287	2,410	822	1,588
1951	2,201	377	2,578	865	1,713
1952	1,691	144	1,835	711	1,124

The inevitable fall in production during so difficult a year as 1952 meant a substantial reduction in the total quantity of cloth available for distribution. In addition, the drastic curb on imports, which may well be continued, made further inroads on supplies. Considering the state of trade, the fall in exports of about 18 per cent. was much better than might have been anticipated earlier in the year. In contrast, the surplus for home use dropped by about 35 per cent. compared with 1951 and was the lowest for at least six years back.

Since trade began to pick up in the last few months of 1952, activity has been almost entirely centred on home trade requirements. Were it not for the steady replacement buying which took place before Christmas the mills would already be feeling the pinch of short-time working once more. Overseas buyers have been reluctant to place contracts of any bulk.

Cotton Stocks Fall

World-wide depression in textiles and the cautious attitude of buyers toward incurring fresh commitments have been the main factors in curbing consumption of raw cotton so far this season. All the producing countries have experienced the lack of foreign interest in greater or lesser degree. Lancashire mills have called for smaller supplies and in view of the large stocks held by the Raw Cotton Commission, which were at one time said to be equivalent to more than a year's consumption, there has been no need to replenish them unduly.

As a result, imports of the raw material for the first half of the current season into Britain have been less than half those in the corresponding period a year ago. The following table shows the position (in bales):—

Growth	Six months to 31st January 1953	1952	Season to 31-7-1952
American	186,604	453,478	654,835
Argentine	80,336	778	778
Mexican	14,426	73,904	100,313
Brazilian	—	176,245	176,245
Peruvian	26,228	73,779	90,554
Egyptian	7,982	37,736	47,910
West African	87,188	59,283	156,522
East African	56,894	83,345	151,416
Indian	3,164	—	5,558
Pakistan	4,342	4,548	87,969
Sudan	46,089	193,386	356,230
Sundries	20,545	26,835	97,727
Total ..	533,798	1,183,397	1,926,057

Only in the case of West African and Argentine cotton has there been any appreciable increase in imports this season compared with last, and in several other cases there has already been a substantial decline in shipments. The drop in takings of American varieties has been sharp and the total cessation of arrivals from Brazil is, of course, due to the high prices ruling for this cotton.

The Raw Cotton Commission has never divulged details of the particular types of cotton held in stock and only the total supplies are made public. At the end of October last the quantities held amounted to 250,000 tons, the lowest figure for several years past. The Commission's stocks have been kept fairly constant at between 250,000 and 300,000 tons since its inception in 1948, the recent peak being 292,000 tons in April last year. Since then supplies in hand have progressively declined and it is clear that a curtailed buying programme is being carried out.

Rayon's Year

Man-made fibres suffered the same fate as natural growths in the textile depression of 1952 and output and consumption of rayon and synthetics in Britain were severely reduced. Total production of rayon for the year at 283,000,000 lbs. was 26 per cent. below the 1951 level. The fall in output of continuous filament yarn was slightly greater than the reduction in staple fibre.

Yarn deliveries last year dropped by 28 per cent., the home trade bearing the brunt of the decline. Export deliveries were 19 per cent. lower. Users of continuous filament rayon yarn all took smaller quantities than in 1951 but the drop in consumption for industrial purposes was only 2 per cent. below the previous year. Record deliveries in the first quarter, however, were followed by a substantial decline and in the final three months of 1952 industrial yarn takings were 22 per cent. below the corresponding period of 1951.

Rayon yarn shipments last year declined from 28,188,764 lbs. to 20,879,106 lbs., the respective values being £11,495,293 and £8,229,004. Australia was by far the largest consumer, absorbing more than 5,000,000 lbs., other chief buyers being Canada and India.

Rayon cloth exports also slumped during the year to 149,823,240 square yards against 217,206,050 square yards in the previous 12 months. Earnings dropped from £40,736,726 to £25,296,438. As in the case of cotton cloth, West Africa proved by far the best customer, receiving more than 33,000,000 square yards of cloth, against less than 20,000,000 yards in the previous year. Australia absorbed more than 15,000,000 yards and South Africa 12,500,000 yards.

Egyptian Cotton

Four members of the Egyptian "goodwill" cotton mission were in Lancashire last week for an exchange of views and an endeavour to promote larger Anglo-Egyptian trade in raw cotton. After meeting leaders of the Master Spinners' Federation in Manchester, it was stated that the mission was "very happy" with the work it had accomplished.

It was stated that violent fluctuations in Egyptian raw cotton prices, about which there have been complaints from Lancashire in the past, would be eliminated by a new marketing system. The Egyptians are to visit eight other countries, starting with Finland, for similar talks.—*All Rights Reserved.*

ENCOURAGING SUPPLY POSITION IN COTTON

GREATER COMPETITION FORECAST

NOW that it is becoming increasingly clearer that the world supply position of cotton is more comfortable than it ever was in the post-war period, the question that is engaging the attention of cotton men all over the world is the future pattern of the competition in this commodity. It is now asserted that quality considerations will assume—rather re-assume—a fresh significance. The days when quality differences had little marked effect on prices are now regarded as practically numbered. Also price differentials between comparable varieties of cotton, depending upon the currency—hard or soft—in which it was to be paid for, have narrowed considerably. This is yet another indication of the more comfortable supply position in this commodity.

The supply of cotton in the "free" world—that is, exclusive of the supplies in the U.S.S.R., China and Eastern Europe—is now placed at 41.3 million bales (of 478 lbs. each) for the current season. This level, which constitutes a post-war record, is in excess of the supply position in the 1951-52 season when the total supply in the free world aggregated 39.0 million bales. The following table gives the supply and distribution of cotton, as estimated by the International Cotton Advisory Committee, in the non-Communist world in 1950-51, 1951-52 and 1952-53:

(In million bales of 478 lbs. each)

	1950-51	1951-52	1952-53*
Stocks (1st August) ..	15.3	10.3	13.1
Production	22.1	28.7	28.2
Total supply ..	37.4	39.0	41.3
Consumption	26.5	25.0	25.0
Destroyed	0.2	0.2	0.2
Exports to Communist countries	0.4	0.7	0.8
End-season stocks ..	10.3	13.1	15.3

* Preliminary estimates.

The following table gives the world cotton production in 1952-53 and 1951-52:

World Cotton Production

(In thousands of bales of 478 lbs. each)

Country	1951-52	1952-53*
U.S.	15,150†	14,895
Mexico	1,370	1,175
Other N. American	112	87
India	3,160	2,700
Iran	125	165
Pakistan	1,300	1,475
Syria	225	225
Turkey	615	785
Other Asian	301	260
Sudan	285	325
Belgian Congo	220	225
Egypt	1,673	1,955
French Africa	145	150
Mozambique	130	135
Nigeria	110	115
Uganda	310	295
Other African	155	188
Argentina	600	550
Brazil	2,000	1,750
Peru	405	420
Other S. American	146	146
Others	199	200
Total free world ..	28,736	28,221
U.S.S.R.	3,800	3,900
China	3,000	2,800
Eastern Europe	95	105
Total world ..	35,631	34,926

* Preliminary. † Adjusted.

It will be clear from the above two tables that the 1952-53 output of cotton, whether only in the free world or in the world as a whole, is lower than the cotton production in 1951-52. But the total supply position is placed higher than in the last season because of the larger stocks that were brought into the current season.

In assessing the prospects of competition in raw cotton, due consideration should, however, be given not only to the supply position but also to the pattern of cotton consumption. Cotton consumption in 1951-52 was 25.0 million bales, as against 26.5 million bales in 1950-51. Over the first three of the 1952-53 season, consumption was running some 6 per cent. below last season's rate. Preliminary full season estimates, which have been made for nearly all consuming countries, show that free world consumption in the 1952-53 season will be roughly the same as in the 1951-52 season. Referring to the consumption position, the Committee says:

"The textile industries throughout the world are undoubtedly recovering in varying degrees from the effects of the trade recession earlier in the year. This general conclusion not only applies to cotton but also to wool and rayon. As a result, consumption of these fibres is again on the increase although still under a year ago."

The following figures show how cotton consumption has been improving in recent months:

World Cotton Consumption

Monthly average—	Rate (Million bales)	Index
1938-39	22.9	96
1949-50	23.8	100
1950-51	26.6	112
1951-52	25.1	105
1952-53—		
August	24.1	102
September	25.6	108
October	26.0	110
November	28.3	119

The improvement in the consumption of cotton, as seen in the above figures, will become more evident when it is realised that in May, June, and July, 1952, the consumption was 22.9 million bales, 23.3 million bales and 21.1 million bales respectively. The latest available estimate refers to November, 1952, when consumption was the highest in recent months at 28.3 million bales.

Although cotton consumption is thus showing an encouraging trend, the Committee places the world consumption in the current season at only 25 million bales, or the same as that in the last season. At this rate, stocks of cotton at the end of the current season, it is estimated, will be of the order of 15.3 million bales, an increase of over two million bales, as compared with the stocks brought in at the commencement of the current season.

Normally, these stocks will exert a certain pressure on prices. But there is also a danger in drawing very broad conclusions from the fact that the world is likely to witness a larger stocks position. In this connection, the Committee observes:

"It must be pointed out that, even in a surplus situation, supply and demand may be more nearly in equilibrium in respect to certain of the better grades and staples and, therefore, end-season stocks could contain a fair volume of cotton for which there is no ready demand. This point illustrates the danger of overemphasising the present cotton surplus."

To sum up, cotton prices are subjected to pull in two opposite directions. In the first place, there is the fact of a larger supply position. Secondly, there is the improvement in cotton consumption. The first factor will not depress cotton prices unduly, if consumption is maintained at a fairly high level. Again, whether the comfortable supply position will exert its pressure on prices at all will depend on the varieties which go to make up the supply. Possibly, the popular varieties will continue to command a good market.

PAKISTAN COTTON

Within a few days after its announcement permitting private barter of cotton against a variety of foreign goods, the Government of Pakistan has found it necessary to admit that the scheme requires readjustments. The Commerce Minister, Mr. Fazlur Rehman, has agreed to announce modifications at an early date. The Government has, in the meantime, announced that only old crop cotton should be allowed to be bartered, and that too only against yarn, iron and steel. By this decision, private barters have become a virtual impossibility, inasmuch as the Government holds practically all the supplies of old crop cotton. Presumably, the Government's decision to modify its private barter scheme stems from its realisation that it cannot fix export prices, as it has done, and also disown responsibility for supporting cotton at the prices which are fixed by it.

It is, however, gratifying to note that Pakistan has been able to sell sizable quantities of cotton to the U.K. and Spain. Exports from Karachi from 1st September, 1952 to 5th February, 1953, were 638,703 bales, as compared with 570,902 bales in the corresponding period of 1951-52. It is not known whether these figures are exclusive of the offtake of cotton by Hongkong which is reported to have lifted about 40,000 bales against cotton yarn. Italy, it is further reported, has agreed to take 40,000 bales against art silk and rayon yarn. Possibly, Italy has surplus art silk to dispose of and Pakistan has found the prices attractive.

So far as India is concerned, there is no disposition in this country to view imports from Pakistan as being within the bounds of possibility. Apart from the question of exchange rate, there are Pakistan's export duty of Pak. Rs. 90 per bale, and the import duty of about (Indian) Rs. 100 per candy, imposed by the Government, both of which are payable by the Indian importers. It is stated that Pakistan American growths, for instance, are about Rs. 320 per candy higher than the equivalent varieties of Indian cotton. This precludes the possibility of importing Pakistan cotton. An additional deterrent factor is that the Government has made it clear that it will not recognise, for purposes of cloth control, prices of Pakistan cotton, unless they are in line with the comparable varieties of Indian cotton.

COTTON FOR JET AIRCRAFT

Brazil has, as is well known, been desperately trying to find buyers for its surplus stocks of cotton. It has also advertised in the London Press for tenders for the purchase of cotton. But the chief difficulty which has been responsible for the poor offtake of Brazilian cotton is its high price. Brazil has, however, been negotiating for a long time now, for a barter deal with the U.K. to supply its cotton for British jet aircraft. But the negotiations did not for one reason or another, reach a successful stage. It is now learned that the deal has been completed. Under the terms of this deal, the total value of which is £4.24 million, Brazil will sell 15,000 tons of cotton to the Raw Cotton Commission and buy in exchange 70 Meter jet fighters from Gloster Aircraft Company. The Commission will establish a credit in London, from sales of the cotton to the home market, and the aircraft company will draw on this credit as the aircraft are delivered to Brazil. In the course of these negotiations, Brazil, according to a report from London, reduced the price of its cotton from about 47d. per pound to about 31d. per pound. Even this level, it is stated, is above the world price at which the Cotton Commission will sell to U.K. spinners. The aircraft have been sold to Brazil at about £40,000 each and delivery will be completed before October this year. Shipments of cotton from Brazil will be completed by the end of March. The chief advantages to Britain from this deal are stated to be: (1) The U.K. gets a market for its aircraft, for in the absence of this market, there would be some unemployment in its aircraft industry. (2) An opportunity is now available to the U.K. to pick the best among the available varieties of cotton. Nevertheless, the deal has been criticised on the ground that it does not solve the problem of commercial arrears which Brazil owes to Britain and which are estimated at £40 million.

EGYPTIAN COTTON

Egypt has been able to export larger quantities of cotton than was at one time thought possible, thanks to the energetic measures taken by the new Government. Thus, shipments of Egyptian cotton from 1st September, 1952, to 4th February, 1953, aggregated 326,744 bales, as against 313,344 bales in the corresponding period of 1951-52. Of this quantity, India, however, took only 32,217 bales as compared with 45,189 bales in the previous season.

UGANDA COTTON

The Lint Marketing Board of Uganda has sold so far about 260,000 bales, of which about 220,000 bales have been bought by overseas buyers. India is the leading buyer of Uganda cotton as the following list of the buyers of this cotton will show: India 120,000 bales, U.K. 50,000 bales, Germany 30,000 bales, Holland 8,000 bales, Japan 3,000 bales, Hongkong 3,000 bales, and other countries 6,000 bales—total 220,000 bales.

In the context of the criticism which Indian importers of Egyptian cotton have made about the frequent changes in its cotton export policy by the Egyptian Government, it is gratifying to note that Mr. Ismail Kamel, the Egyptian Ambassador to India, conveyed the assurance of his Government to the Indian cotton importers that there would not be any change in export duty on cotton till the end of the current season. Referring to Indian importers' request for representation on the proposed Alexandria Arbitration Panel, Mr. Kamel said: "We have conveyed the Indian view to the Commission in Egypt and I feel that there will be no objection to the request.

SALIENT FEATURES OF RAILWAY BUDGET

SURPLUS SHRINKS—CAPITAL EXPENDITURE MAINTAINED AT HIGH LEVEL

A FALL in passenger traffic, accompanied by an increase in working expenses, maintenance of the provision for depreciation, as well as of of transfer to general revenues, and a high level of expenditure on development are the highlights of the Railway Budget for 1953-54, presented by Mr. Lal Bahadur Shastri, Minister for Railways and Transport, to Parliament on Wednesday this week. The net surplus estimated for 1953-54 is Rs. 9.31 crores, which is substantially smaller than that budgetted for 1952-53 but practically the same as the surplus disclosed by the revised estimates for that year. In other words, the Railway Minister anticipates that the setback in passenger revenue suffered since the budget for 1952-53 was prepared a year ago in the passenger sector would not go further during the next year (1953-54). The Railway Minister's statement discloses that the Government is determined to implement the development programme, despite lower level of receipts; as many as 12 new lines will be taken in hand next year.

The following table shows at a glance the salient features of the Railways' receipts and expenditure, as well as the allocation of the total net revenue:

(Rupees in crores)

	Actuals, 1951-52	Budget, 1952-53	Revised estimate, 1952-53	Budget, 1953-54
Gross traffic receipts ..	290.82	282.16	269.55	272.28
Working expenses ..	194.35	187.93	189.10	191.20
Net miscellaneous expenditure	4.72	6.76	6.86	7.00
Appropriation to depreciation reserve fund ..	30.00	30.00	30.00	30.00
Total	229.07	224.69	225.96	228.20
Net railway revenues ..	61.75	57.47	43.59	44.08
Dividend to general revenues	33.41	34.00	34.11	34.77
Net surplus	28.34	23.47	9.48	9.31

In presenting to Parliament the railway budget for 1953-54, Mr. Lal Bahadur Shastri, Minister for Railways and Transport, referred to the death of Mr. Gopalaswami Ayyangar and paid tributes to his statesmanship, ripe wisdom and administrative ability, particularly as Minister-in-charge of the vast railway undertaking during four years of considerable stress and strain. The Minister disclosed that against a surplus of Rs. 23.47 crores estimated in May, 1952, in the budget of the current year, the surplus now anticipated is Rs. 9.48 crores only, a drop of almost Rs. 14 crores. This drop is chiefly due to a decrease of Rs. 12.61 crores in earnings and an increase of Rs. 1.16 crores in working expenses. The decrease in earnings is mainly accounted for by a fall of Rs. 10.14 crores under passenger earnings and Rs. 1.10 crores under goods. Mr. Lal Bahadur Shastri observed that passenger traffic which had reached its peak in 1950-51 is adjusting itself to a normal level along with the restoration of the post-war inflationary economy of the country to equilibrium.

As regards the budget for 1953-54, in view of a fairly good crop this year, the extension of railway lines and the anticipated economic development in various fields with the Five-year Plan coming into stride, passenger earnings have been kept at more or less the same level as the revised estimates of 1952-53. For the same reasons, the estimate of goods earnings has been placed at about Rs. 3 crores or 2 per cent. above the revised estimate of the current year. The working expenses for next year are estimated at about Rs. 2 crores more than the revised estimate of the current year. The dividend payable to general revenues is also more by Rs. 66 lakhs. Thus, the budget estimate for 1953-54 provides for a surplus of Rs. 9.31 crores, which is about the same as that anticipated in the revised estimate of the current year.

Development Programme

In spite of a decline in railway prosperity in the current year, the pace of rehabilitation and development of rail facilities has not only been maintained but is being actually accelerated in the coming year. The capital budget of the railways for 1953-54 has been placed at Rs. 79.61 crores against Rs. 76.70 crores in the revised estimate of the current year. The following developmental works have been either completed or taken up during the current year:

Deesa-Gandhidham section of the Western Railway opened in October, 1952; Bijnor-Chandpur Sian section of the Northern Railway restored and opened to traffic in November, 1952; Vasad-Kathana line on the Western Railway expected to be completed this year; Quilon-Ernakulam metre-gauge link on the Southern Railway commenced in December, 1952; and extension of Kalyan Power House on the Central Railway, at a cost of Rs. 3 crores, opened in December, 1952.

Another important event in the current year is the resumption of work on the rail-cum-road bridge over the Ganga near Mokameh, which was suspended in 1949. The construction of the integral coach building factory at Perambur, Madras, is going ahead and a provision of Rs. 1.3 crores has been made for this project in the budget.

The Minister disclosed that the following new lines will be taken in hand in the next year:

Khandwa-Hingoli link in Madhya Pradesh, 186 miles long with a total anticipated cost of Rs. 7.50 crores; rail connection from Gua-Barabil area to Manharpur-Rourkela section in Bihar and Orissa, 31 miles long at an estimated cost of Rs. 3.5 crores; Champa-Korba line in Madhya Pradesh, 22 miles long with an anticipated cost of Rs. 88 lakhs; Gandhidham-Kandla link in Kutch, 7 miles long with an anticipated cost of Rs. 57 lakhs; Gop-Katkola line in Saurashtra, 21 miles long at a cost of Rs. 34 lakhs; and conversion of Tezpur-Balipara line in Assam on the North-Eastern Railway, from narrow-gauge to metre-gauge, 20 miles long at a cost of Rs. 40 lakhs.

In addition, surveys of seven other projects will also be undertaken in 1953-54 with a view to deciding upon their construction in the near future. These are:

Deva-Dasgaon line in Bombay; electrification of Calcutta suburban section in West Bengal; Mangalore-Hassan line in Madras and Mysore States; rail connection to Etah in Uttar Pradesh; rail connection to Chandigarh in the Punjab; Tildanga-Khojuria-Malda branch in West Bengal; and Fatehpur-Churu line in Rajasthan.

The survey of Bhavnagar-Tarapur and reconnaissance surveys of broad-gauge lines to Indore in Madhya Bharat and between Barabil and Sambalpur in Orissa have already been undertaken in the current year.

The total provision made in the budget for 1953-54 for new lines and restoration of dismantled lines is Rs. 6.70 crores. "This programme," the Minister said, "is an indication of the Government's earnestness to go ahead with the construction of new lines for economic development in spite of the pressing needs of rehabilitation." He also added that special attention is being paid to removal of bottlenecks in respect of movement of traffic beyond Bezwada towards Madras and the transhipment difficulties on some of the break of gauge junctions like Sabarmati, as well as to augmentation of line capacity on some sections to facilitate increased movements of iron and steel.

Passenger Amenities

A sum of Rs. 3 crores has, as usual, been provided in the next year for passenger amenities. The Minister said that a substantial portion of this allotment will be devoted towards improving passenger amenities at comparatively smaller stations which had been rather neglected in the past.

Travel Concessions

Referring to the question of restoration of travel concessions, which were withdrawn during the period of the war, the Minister said that it is not yet possible to restore all those concessions. The railways, however, have been asked to examine the question of providing concession return tickets and introduce them wherever justifiable, without worsening the state of overcrowding.

In addition, the following concessions are proposed to be introduced with effect from 1st April, 1953: (1) To parties of teachers of recognised schools when they go on educational tours. Students are already entitled to such concessions; (2) concession tickets to volunteers working on Community Projects; (3) "Travel-as-you-like" tickets for third class passengers for a fortnight during the first half of April, coinciding with the Railway Centenary celebrations.

Consultative Committees

The existing local Advisory Committees, which are not sufficiently representative in the context of regrouping of railways into larger units, are being replaced by (1) Railway Users' Consultative Committes at the regional or divisional levels; (2) a zonal Railway Users' Consultative Committee at the headquarters of each railway; and (3) a national Railway Users' Consultative Council at the Centre. The first named Committee will represent the local users in the territory served by the railway, including agricultural interests, and is a new addition which, the Minister said, should prove fruitful as it would give wider representation to different sections and various interests.

He informed the House that first class accommodation has already been withdrawn from all branch lines except those which form links between two important main lines. This class will be withdrawn from all trains with effect from 1st April, 1953, except in some of the express and mail trains. It is intended to withdraw first class accommodation completely by October next.

Thefts of Railway Property

In regard to compensation claims for goods lost or damaged, the Minister said that, while the machinery for settlement of claims has been considerably improved by the railways, the number of new claims arising has not shown any appreciable reduction and a greater proportion of these claims was due to continued and organised gang thefts on railways, both in running trains and yards and station.

He informed the House that, in consultation with the Minister for Home Affairs, it has been decided to depute a senior official of the Home Ministry to the headquarters of the six railway systems with a view to devising effective preventive measures to combat this menace, after consultation with the General Managers and States Government officials.

Labour Relations

Referring to staff questions, the Minister said that the relations with staff have been cordial during the year. Their grievances are receiving constant attention and being addressed wherever possible. While congratulating the All India Railwaymen's Federation and the Indian National Railway Workers' Federation for their helppful and co-operative attitude, he also said that there are groups who have not hesitated to embitter relations and have tried to inflame the workers and have even gone to the length of instigating lightening strikes.

The Minister said that he was painfully conscious of the conditions in which some of the staff are at present living, for instance, in wagons being used as quarters at Sealdah station in Calcutta. He hoped to speed up the construction of houses for all workers and said that 8,000 quarters will be constructed in the coming year. He also said that medical facilities available to railway workers in railway hospitals and dispensaries are being augmented. There are mobile dispensaries working on some railways which are doing useful work at wayside stations.

The Minister also referred to a few important matters concerning the staff, viz., (1) promotion by seniority, (2) grievances of staff in regard to delays in payment of their dues and sanctioning of leave and passes, (3) class II services, and (4) *ad hoc* tribunal. In regard to (1), the Minister said it has been decided that up to a certain level, promotions will go solely by seniority subject, of course, to an employee not being declared unsuitable. Beyond this, promotions will be made on the basis of merit through Selection Boards. Steps are also being taken to put on a satisfactory basis the procedure of Selection Boards. As regards (2), a committee of the Directors of the Railway Board has been set up to enquire into these complaints and suggest ways and means for avoiding these delays. Regarding (3), the Minister assured that the promotion quota of 25 per cent., which had not been fully implemented in the past, will be completed as early as possible. Further, the quota has been increased from 25 per cent. to 33 1/3 per cent., to facilitate promotions for a larger number. He also stated that those class II officers who have been officiating in senior scale for more than three years, will not be reverted. In regard to (4), there is a permanent negotiating machinery in three tiers for settling disputes between organised labour and railway administrations. Issues which are not settled by discussion between the Railway Board and the Federations are required to be taken to an *ad hoc* tribunal. The actual mechanics of setting up of the tribunal and the selection of the chairman are under consideration and it will be possible to announce the personnel and the subjects to be referred thereto very soon.

Referring to corruption among railway staff, the Minister said that this was still widely

(Continued on page 323)

MAINTENANCE OF REASONABLE SUGAR PRICES

MR. KIDWAI'S POINTER TO THE INDUSTRY

MR. Rafi Ahmed Kidwai, Union Food and Agriculture Minister, emphasised, once again, in the course of his address at the twentieth annual general meeting of the Indian Sugar Mills' Association (I.S.M.A.), held in New Delhi last week, the need for maintaining the price of sugar at a reasonable level. This is a well-worn-out but pertinent point which, as readers are aware, has ere now been repeatedly stressed in these columns. Even at the risk of repetition, it may be stated that the price of sugar must be stabilised at a level which will be within the reach of the masses, and that is the only sure way of ensuring increased consumption in the country. That, despite the protection enjoyed by the industry for such a long period as eighteen years, Indian sugar should still be priced high *vis-a-vis* that produced elsewhere, is indeed, unfortunate. The consumer who has had to pay high prices all these years can, therefore, legitimately ask: "Is it not time that utmost attention was paid to the question of reducing the price of sugar?"

The high level of sugar prices, it must be conceded, is the result of a rigid cost structure of the industry and not due to any designs by the manufacturers. The figures relating to the different elements entering into the cost of sugar production (during the 1951-52 sugar season), as cited by Mr. R. P. Nevatia, the I.S.M.A. President, while presiding over the meeting, will clearly bear out the force of this contention. Here are the figures:

Items	*Cost* Rs. a. p.	*Percentage to total cost*
Price of sugarcane ...	18 10 6	61.0
Tax—excise, cane cess and co-operative societies' commission ...	5 2 0	17.0
Salary, wages and packing	3 8 0	11.4
Manufacturing charges, including power, fuel, stores, repairs and renewals	1 9 2	5.0
Overhead charges and profit	1 11 10	5.0
	30 9 6	
Less for molasses ...	0 1 6	
Ex-factory price	30 8 0	100.0

The foregoing figures clearly reveal that sugarcane accounts for as much as 61 per cent. of the cost of sugar production. It is obvious, therefore, that, if the price of sugar is to be lower, the cost of cane should be cheaper. And the cost of cane can be reduced, only if the yield of sugarcane and the quality of cane is increased. The answer to the basic question lies, therefore, in improving the methods and practices of sugarcane cultivation. That is where the major sugar-producing areas in India, namely, U.P. and Bihar, have been lagging behind and nothing is being done to remedy this basic weakness of the sugar industry.

Tax Relief and Lower Freight

It is no doubt true that the Government of India has reduced the price of sugarcane from Re. 1-12 to Re. 1-5 per maund in the current season. But we are having in mind such artificial means of influencing the prices of sugarcane, a method which rewards the inefficient producer of cane and does not offer any incentive to the efficient producer; in short, a method which treats both the efficient and inefficient producer alike. What is required is a more scientific form of determining the prices of cane. Be that as it may, even the benefit of the reduction in prices of cane for the current year has been offset, to some extent, by the increase in sugarcane freight charges recently effected on the various railways. Moreover, the Government taxes are still at a high level, accounting for 17 per cent. of the cost. If, therefore, the price of sugar is to be reduced, it is imperative that not only should the freight charges on sugarcane be reduced but the various taxes also should be lowered. It was precisely to this aspect that Mr. Nevatia drew pointed attention in his address, and he minced no words while speaking on this issue. He said that the sugar factories were working under a rigid cost structure which did not leave any large scope for them to reduce the cost further. The Food and Agriculture Minister, however, did not appear to share this view in full, as witness his remark that the sugar industry should co-operate with the Government in maintaining a reasonable price for its product within the country.

In the light of what we have stated above and Mr. Nevatia's analysis of the cost structure of sugar, this statement of the Minister is meaningless. The only way in which the industry can help keep down the price of sugar is to thwart the attempts of speculators to keep prices up by manipulating the market. But the industry's hands are tied down by controls on the releases of sugar to such an extent that there is not much that the industry can do even in this respect.

Mr. Kidwai was, however, perfectly right when he maintained that, if the agriculturists could be helped to produce better quality sugarcane and improve the yield per acre, then it would be easy for the industry to produce sugar that could compete in the world market. To quote his own words: "So long as the cane yield per acre is low, as it normally is, and the recovery of sugar also is low, our cost of production will remain high. It is, therefore, in the interest of the industry and the Government jointly to work for the development of cane cultivation." In this connection, Mr. Kidwai commended to the sugar factories the example of the mills in the Deccan owning their own farms, as a result of which they have been able to increase cane production—both in quality and quantity. The statement that the Government of India would help in the matter, if the factories took the initiative, is certainly reassuring.

Mills Should Take Initiative

It is, however, not enough, if the Centre alone is prepared to help, for, without the assistance of the U.P. and Bihar Governments, not much can be done in this respect. We know that Mr. Kidwai has tremendous influence over these State Governments; we hope he will use it to remove the basic weakness of the sugar industry in these two States. The factories in these areas will do well to follow up Mr. Kidwai's hint and work out a scheme for improving the quality of cane grown in their respective areas. Concrete suggestions for this purpose have been put forward by the Tariff Board in its report submitted to the Government in 1950. All that the factories have to do in this connection is to put forward proposals for translating these suggestions into actual practice. It is high time some move was made in this direction. Since the State Governments concerned have been sleeping over this issue, let the sugar mills take the initiative in this respect and prove that the organising ability of private enterprise is superior to that of the State enterprise.

Referring to sugar exports, the Food and Agriculture Minister justified the imposition of the ban on the score that, despite the Government releases of more than 300,000 tons of sugar during the months of December, 1952, and January, 1953, sugar was not available at reasonable prices in certain parts of the country. In fact, he complained that a few factories (and also a section of the trade) did not play their part well. This complaint of Mr. Kidwai is only partly true. But the main factor for the high prices of sugar is the bungling by the Government itself, as was pointed out in this journal a few weeks ago. The quantity of sugar lying unlifted with the factories at present amounts to more than 5 lakh tons, of which 3 lakh tons represent the quantity held as Government reserve. This, according to the I.S.M.A. President, has involved the sugar industry into an additional financial liability running to nearly Rs. 33 crores. Surely, the factories cannot afford to lock up such huge funds, especially when they have to continue crushing operations and pay for the new crop. The difficulty has been aggravated further by the peculiar nature of the working of the sugar industry, as will be evident from the following extract from Mr. Nevatia's speech:

"Unlike other industries, crushing operations in a sugar factory cannot be determined solely by commercial considerations. The highly perishable nature of the raw material and the close association between the factory and the growers are other vital factors. For the crushing has to be planned according to the maturity of cane, if maximum sugar recovery is to be achieved. Alongside, all the available cane, at least in the factory zones, must be consumed. Failing this, the growers would develop an adverse psychology and might curtail cane plantings in future."

Representations have been made to the Government, urging it to help the sugar industry in the critical times. The Government has no doubt appreciated the financial difficulties of the factories. In fact, it announced, as early as in September, 1952, that special financial arrangements would be made for the industry. It is unfortunate that the Government has still not announced the details of this assistance. It is equally unfortunate that the Minister should have evaded this question in his address to the I.S.M.A. meeting. For, alluding to this aspect, he merely said that, by the close of the current season, the carry-over would be reduced. The offtake of sugar in the country had gone up, partly on account of reduced prices and partly because production of *khandsari* sugar had gone down. More and more sugar was, therefore, being taken up by the consumer, so much so that, by the end of the current season, sugar stocks with the industry "would not be much more than three lakh tons."

Immediate Financial Assistance

Even supposing that this view of Mr. Kidwai is correct, it is only a long-term remedy. What is urgently required by the sugar industry is, as Mr. Nevatia rightly stressed, an early announcement of the details of arrangements for rendering financial assistance to the industry, the principle of which has been unequivocally accepted by the Government. If financial assistance is not provided to the factories, they will not be able to purchase sugarcane. Consequently, the sugarcane growers who have no holding capacity will be tempted to dispose of their crop to manufacturers. This will mean that the cane supplies available to the mills will ultimately suffer.

In conclusion, Mr. Kidwai reiterated his ambition to see that sugar figured prominently in India's export trade, thereby contributing the valuable foreign exchange needed by the country. To quote him: "My attempt will be to produce more sugar than the country can consume and find methods of exporting it. That can only be done when all of you co-operate to maintain reasonable prices within the country." Referring to this subject, the I.S.M.A. President was rather inclined to feel—he did not, of course, say so in so many words—that the ban on exports was not justified. For he said that there was no reason for any apprehension of sugar shortage. According to his calculations, after allowing for a fall of 240,000 tons in production in the current year and providing for a rise of 80,000 tons in offtake, the carry-over at the end of the current season would be of the order of 480,000 tons, which is only 20,000 tons less than that of last year, as against a normal carry-over of 150,000 to 200,000 tons. But, since the whole issue of exports of Indian sugar is only of academic importance, let us leave each one to have his say on it. What is really relevant here is the fact that the price of Indian sugar is not competitive and it will remain so, so long as this commodity is considered as the milch cow by the Bombay Government and a pawn in the hands of the U.P. and Bihar politicians. Further, before Mr. Kidwai thinks of realising his ambition of converting the Indian sugar industry into an export industry, let him fulfil his modest promise of supplying cheap sugar to the domestic consumer.

INDIAN CONFECTIONERY INDUSTRY

PLEA FOR TAX RELIEF

ALTHOUGH the confectionery industry in India is claimed to be fully equipped with the most up-to-date technical resources, to meet not only the domestic needs but also the export demand, all does not seem to be well with the industry. In fact, it is said that the industry is to-day faced with a most "serious" situation. Several causes are said to be responsible for this state of affairs, such, for instance, as high cost of production due to high prices of raw materials and packing materials—tin plate, wrapping paper, etc.—fall in internal demand, loss of export trade on account of foreign competition, and competition in the internal market from low-priced sweets of inferior quality. These problems were spotlighted by Mr. D. Allerton, President of the Indian Confectionery Manufacturers' Association, in the course of his address at the seventh annual general meeting of that body held in New Delhi on Saturday last.

In the considered opinion of Mr. Allerton, the most urgent need of the hour is to bring down the cost of confectionery, while maintaining, at the same time, high quality, in order to stimulate consumers' demand in the country and to re-establish export trade. The high cost of confectionery manufacture is due primarily to the high cost of sugar, basic raw material, which accounts for 40 per cent. of the aggregate cost, thanks to heavy incidence of taxes like excise duty on sugar and cane cess. Reduction in the cost of production would, therefore, be possible if, as Mr. Allerton pointed out, the taxes were remitted on all sugar consumed in the manufacture of factory-made quality confectionery. After all, by doing so, the Government will only be removing the taxes on raw material.

Export Prospects

With regard to exports, the biggest stumbling block in the way has been, naturally enough, the price factor. The competitive capacity of Indian confectionery *vis-a-vis* that produced elsewhere is very low for the same reason as the one mentioned above, namely, heavy incidence of taxes. On high quality, wrapped and boiled sweets exported, for instance, the amount of tax paid in the form of customs duty, excise, local cesses, according to Mr. Allerton, comes to about Rs. 315 per ton or As. 2-3 per lb. Surely, if this large amount were refunded to the manufacturer, it might be possible to compete with other exporting countries in world confectionery markets, especially in the immediate neighbouring countries like Pakistan, Ceylon and Burma.

The only concession that the Government of India has accorded to the confectionery industry is the refund of excise duty on sugar used in production for export. But even this, we are told, has not conferred any substantial benefit on the confectionery industry. For the conditions under which the refund has to be claimed are said to be "so onerous as to be impracticable." It is to be hoped that the Government would relax these restrictions and evolve a more simple formula for assessing the refund. The main difficulty in the way of evolving such a formula is the existence of a large variety of confectionery products—boiled sweets, pan sweets, lozenges, toffees and caramels, etc. This difficulty, Mr. Allerton, however, felt, could be solved by drawing up average formulæ for the different groups—perhaps, a dozen in all—on the basis of which refund of duty can readily be assessed against proof of shipment. Simpler still would be, he said, to determine one overall average formula, which is the system adopted in the U.K. A useful suggestion which Mr. Allerton made, in this connection, relates to the appointment of a committee by the Government to work with the Association in drawing up the necessary formula or formulæ.

While on the production of inferior sweets under totally inadequate hygienic conditions, the President drew attention to the serious effects on the health of the nation and urged the Government to take immediate steps to curb this. Manufacture of confectionery, he declared, should be permitted only under licence and periodic inspection by qualified food inspectors, so as to ensure that adequate standards of quality and hygiene were maintained. Mr. Allerton also criticised the Government of India's policy of allowing imports of confectionery products. The criticism is based chiefly on the ground that the Indian industry has the equipment and technical knowledge to produce confectionery of a standard which is comparable with the foreign product in all respects.

Giant Dam
Bhakra Nangal

Built to last with ACC cement

This new giant dam is being built with ACC Cement. When completed it will make available millions of gallons of precious water . . . water that will irrigate the land and make it fertile, make it bring forth the food that the nation needs.

Cement means better living for everyone—and the A.C.C. continues to make more and more *quality* Cement.

PLANTERS' CRITICISM OF NEW BILLS

GREATER GOVERNMENT CONTROL DEPLORED

THE objections of South India planters to some of the provisions of the Tea Bill, 1952, the Coffee Market Expansion (Amendment) Bill, 1952, and the Rubber (Production and Marketing) Amendment Bill, 1952, are detailed in a memorandum addressed by the United Planters' Association of Southern India to the Minister for Commerce and Industry, Government of India.

According to the memorandum, the Association and its affiliated district associations represent about 93 per cent. of the tea industry and 38 per cent. and 51 per cent., respectively, of the coffee and rubber industries of South India, and it claims the position of the premier representative organisation of the plantation industries of South India. Referring to the main purpose of the new legislation which, according to it, is to provide for greater control of these industries by Government, the memorandum says that the Association is unable to appreciate the reasons for such an important change in the Government's policy. "In fact it was only the other day," says the memorandum, "when the final Five-year Plan was published, that Government observed that private enterprise has a definite part to play in a large sector of the country's economy. It would appear that Government could only have reached that conclusion, because they were convinced that the methods of private enterprise are generally more suitable for certain types of industries than are those of Government. Moreover, experience has shown that industries which are free from Government control are generally better able to adjust themselves to the changing conditions than are industries which are completely under Government control. The proposals now made for the control of the tea and other plantation industries have the effect of transferring them from the private to the public sector against Government's earlier intentions and without Government assuming any of the financial responsibilities which they are required to assume under the Five-year Plan in the case of industries coming within the public sector."

Referring to the clauses in the tea, coffee and rubber Bills which declare the Government's intention to take under its control the industries concerned, the memorandum points out that this is in substitution of the provision in the existing legislation that the Union Government should take under its control the development of those industries. The Association represents that there does not appear to be any reason for the change proposed. In the case of tea, says the memorandum, this country has a well-organised industry, controlled and directed by persons of mature experience, and the industry is not only fully capable of looking after its affairs but is far more likely to be able to play its full part in achieving the desired improvements in India's national economy if its own experts are left unhampered to look after the industry's interests in accordance with national policy. Referring also to the fact that the intention behind the new legislation in respect of coffee and rubber is the development of the coffee and rubber industries, the memorandum urges that, in all these cases, the amendments proposed are unnecessary and that the existing provision that the Union should take under its control the development of the industries concerned should be allowed to stand.

The memorandum then refers to the provisions for the reconstitution of the Tea, Coffee and Rubber Boards, and says that, in the existing legislation, there is a specific provision made for the nomination of growers' representatives by recognised associations of growers. By this provision, the growers are enabled to nominate to the Boards concerned representatives having a personal and complete knowledge of the growers' problems and these representatives are responsible to the associations concerned. The Association is gravely perturbed by the proposal to alter this common democratic practice and to authorise Government to nominate persons who, in its opinion, are capable of representing the growers. In essence, says the memorandum, the proposal implies a complete violation of the principle of representation; it proposes government without the consent of the governed. The Association, therefore, strongly urges that the *status quo* in the matter of appointment of representatives of growers should continue to be observed. If Government is, however, unable to accede to this request, the Association hopes that the clauses would at least be amended in such a way that Government will only choose the representatives of growers out of a panel of names to be submitted by the different recognised associations of growers.

The memorandum also criticises the proposal to reduce the number of growers' representatives on the new Boards. The development of the tea, coffee and rubber industries, says the memorandum, implies the necessity for retaining the maximum possible representation by growers' representatives on these Boards. It submits that decreased representation by producers could only result in a strengthening of the influence of the various pressure groups whose purpose appears to be to get something out of the industry without any intention of improving its efficiency.

The Association strongly disapproves of the proposal to divest the Boards of a large part of their executive powers and to transfer them to Government. Such a proposal, says the memorandum, hardly conduces to efficiency and it is not improbable that the Board, with their powers thus curtailed, will find much greater difficulty in making important decisions on emergency matters than has been the case so far. Apart from this, the Association also strongly deprecates the proposal to give up the present practice of consulting the Boards in several important matters, as this will reduce the status of the Boards to that of quasi-Government departments without any authority even of such a body.

As regards the Government's proposal to credit the various customs proceeds from tea, coffee and rubber to the general funds of Government instead of handing over the whole of the proceeds directly to the Boards concerned, as is the practice now, the Association urges that a provision should be made whereby the whole of such proceeds will be earmarked for the benefit of the industries concerned, and that no part would be utilised for any other object or purpose.

SURPLUS LABOUR IN TEA GARDENS

The problem of surplus labour in tea plantations was a subject on the agenda of the tenth session of the Labour Ministers' Conference, held in New Delhi on the 6th and 7th inst. The Conference, however, decided that this subject should be discussed at a special meeting of the Standing Plantations Committee in Shillong on the 26th and 27th inst.

The situation in respect of surplus labour has been worsening, as a result of the closure of gardens. According to information so far available, more than 100 gardens have been closed in Assam and West Bengal and about 50,000 workers thrown out of employment.

The Committee may consider the situation arising out of the closure of tea gardens. The Committee may also consider what action should be taken to deal with surplus labour. The following suggestions may be examined in this connection:

(1) Inter-garden movement of workers should be encouraged for adjusting local surpluses and shortages. This may be done through the Tea Districts Labour Association. (2) Recruitment of outside labour should be stopped and such of the surplus workers as are emigrant labourers should be repatriated in accordance with the provisions of the Tea Districts Emigrant Labour Act. (3) Schemes for the development of cultivable waste land should be undertaken for absorbing surplus labour. (4) Cottage industries should be opened so that surplus labour may be gainfully employed. (5) Surplus labour may also be diverted to employment on public works projects.

(Concluded from next column)

the problem of lowering the cost of raw material to the jute industry.

According to Mr. K. R. Damle, Vice-Chairman, Indian Council of Agricultural Research and Additional Secretary of the Ministry of Food and Agriculture, 80 per cent. of the cost of jute consists of human labour. Of this 80 per cent., weeding operations, on which the growth of jute depended, covered 40 per cent. If the production of jute is to be economic, then the cost of weeding must be reduced. Mr. Damle, who also addressed the gathering on the occasion of laying the foundation-stone mentioned above, revealed that the Research Institute was at present engaged in the development of a machine designed to carry on weeding operations on jute fields. This piece of encouraging news is welcome, in that, if the design proved successful, it would result in a considerable reduction in the cost of production of raw jute in India.

RESEARCH IN RAW JUTE

BID TO REDUCE COSTS

THE Jute Agricultural Research Institute will soon have a house of its own consequent on the construction of a new building which began last week. It may be remembered that after the Partition, the nucleus of the Institute was set up in a rented house at Hooghly with a 50-acre farm at Chinsurah, temporarily provided by the West Bengal Government for tiding over the immediate difficult situation facing the Institute then. From 1949 to 1951, the Institute functioned there. But this arrangement with the experimental farm in one place and its laboratories and the farm godowns at another, was hardly conducive to the smooth running of research activities. The Central Jute Committee then obtained a 98-acre plot of land in Nilgunj, a village about 18 miles from Calcutta and four miles from Barrackpore town, for establishing the Institute on a permanent basis. The land is a free gift of the West Bengal Government. At the time when it was taken into possession by the I.C.J.C., the land was in a neglected condition and a good deal of spade-work had to be done to bring the land under the plough and to give it a farm shape. In order to facilitate the farm activities on this land, early in 1952, the laboratories and the office were shifted to another rented house at Barrackpore and the farm to the new site instead of at Chinsurah.

The expenditure on the Institute building, for which the foundation-stone was laid on the 9th inst. by Mr. Rafi Ahmed Kidwai, Minister for Food and Agriculture, is Rs. 2.5 lakhs. A sum of Rs. 3 lakhs will be spent on building staff quarters and a sum of Rs. 1.5 lakhs has been provided for amenities like water-supply, drainage and electric installation. The building will, therefore, cost Rs. 7 lakhs for the ground floor alone for which plans have been approved so far. At a future date, the Institute may need Rs. 10 lakhs more for the construction of the second floor and the remaining staff quarters.

The useful role of the Institute in helping the jute industry in India was emphasised by Mr. Kidwai in his speech, while laying the foundation-stone of the building referred to above. He said: "Violent fluctuations in prices naturally affect the industry as well as the grower. Unless the industry gets a fair price for its jute products, it cannot step up production. Unless the grower gets a remunerative price taking into account his cost of cultivation, he will not be interested in increasing the production of raw materials. Thus, sometimes we move in a vicious circle. It is in this respect that agricultural research offers to suggest a solution." Continuing, he stated that India could command a major portion of the world trade in spite of competition, if it offered its goods at reasonable prices. This, he remarked, could be done only if through research, it produced better quality of the fibre at as low a cost as possible. He stressed that agricultural research had thus a very important role to play in helping India to maintain the leadership of the world trade in jute goods. He called upon the research workers to bear in mind that the Institute was principally meant for the benefit of the grower in order to enable him to produce better crop at as low a cost as possible.

Describing jute as the second largest industry in India and one of the principal sources of earning foreign exchange, Mr. Kidwai paid tribute to the valuable work done by the Jute Committee in stepping up raw jute production. As a result, the country was no longer, he observed, in the depressing position in which it was left after the Partition in 1947-48 with regard to supply of raw material to the jute mills. Since the Partition which left 80 per cent. of the jute-growing areas of India on the other side of the boundary, jute production in the Indian Union was, he said, steadily going up, and the Planning Commission's target of producing internally 85 per cent. of the total requirements of the jute industry by 1955-56 was almost within reach. In 1951-52 Indian supplies alone accounted for 76 per cent. of the country's requirements. Mr. Kidwai was, however, not complacent with this progress. Because, he did not fail to remind the research workers that the country cannot think of increasing production of jute by diverting paddy fields to growing jute. "We have to increase the yield," he declared, "in the existing jute tracts. Agricultural research can do much to improve the quality of the fibre produced and to develop varieties which are resistant to disease and pests." This is a point which has been obvious for a long time and repeated times without number. Yet that is the only solution to

(Continued in previous column)

WORKING OF RAILWAY COLLIERIES

SATISFACTORY RESULTS FOR 1951-52

THE Report of the Railway Board on Indian Railways for 1951-52, Vol. I, published last week, throws some light on the working of railway collieries. The aggregate output and despatches of these collieries disclose notable increases. Thus, as compared with 1950-51, the aggregate output of coal during 1951-52 was higher by 548,318 tons at 3,155,671 tons. The aggregate despatches were 2,395,644 tons in 1951-52, as against 2,342,545 tons in the previous year. Of these, the amount of despatches to Indian railways was of the order of 2,335,107 tons during 1951-52, as compared with 2,308,139 tons in 1950-51. Still, this represents only 21.6 per cent. of the railways' total consumption of coal during the year and compares unfavourably with 22.2 per cent. in the previous year. The actual amount of coal consumed by Classes I, II and III railways were 10,807,461 tons in 1951-52, the corresponding figure for 1950-51 being 10,404,213 tons. A gratifying feature is that the consumption of both selected A and B grades of coal declined, the former from 1,070,104 tons to 1,009,064 tons and the latter from 2,637,866 tons to 2,515,582 tons.

The credit for the good performance of the railway collieries during the year under review, goes as much to labour as to the management. The relation between labour and the administration was most cordial. There was also an all-round reduction in expenditure. The cumulative effect of all these factors was that the working of the collieries during the year disclosed a net profit of Rs. 11,29,475, as against a loss of Rs. 69,98,743. The profit, however, is negligible, considering that the capital outlay on these collieries is no less than Rs. 7.38 crores. It is stated that the net profit would have been higher, had it not been for the surplus of 5,000 labourers in these collieries, who accounted for an expenditure of Rs. 50 lakhs. Thus, the Government's policy against any large-scale retrenchment of surplus labour itself has been responsible for the meagre profit on such a huge capital investment.

A review of labour conditions in the collieries under reference reveals that the general health of labour was good throughout the year. The railways provided a number of amenities during the year, including (1) putting into operation the Jewel filter plant in Kargali Colliery, (2) the inauguration of the Jewel rapid gravity filter in the Bokaro Colliery, (3) the maintenance of three primary schools from the Labour Welfare Fund, and (4) the construction of miners' houses, creches, pithead baths, etc. Twenty-eight women workers in Argada Colliery were paid maternity benefits.

COAL MINING MACHINE

The Carbide and Carbon Chemicals Division of the Union Carbide and Carbon Corporation of America has designed an electrically controlled coal mining machine for working out crop coal seams. It is claimed to bore out a stream of coal from upto 700 feet into the side of a hill. The machine has four inter-mesh rotary cutting heads mounted in front. It is moved forward on tractor treads and carves three-foot by ten-foot holes in the coal seam. It is said that the machine can mine up to 1½ tons of coal per minute. The coal is automatically transported from the cutting blades by a conveyor belt which is drawn into the mine up to 1½ tons of coal per minute. The whole process is controlled from a movable two-storey rig mounted on a platform carved out of the side of the hill, and the operators remain above ground throughout the whole operation. The machine is steered by watching two oscilloscopes, which record the responses of two electrical sensing devices mounted on the outer cutting teeth. An irregularity on the oscilloscope is recorded each time the machine cuts through anything harder than coal.

FALL IN INDIA'S COAL EXPORTS

The exports of coal from India dropped from 259,118 tons in December, 1952, to 199,374 tons in January, 1953. This is attributed to shortage of shipping space at the Calcutta port. Coal was shipped in 32 steamers, both foreign and coastal, in January, as against 42 in December, 1952. Fifteen foreign ships called at the port in January as compared with 22 in the previous month. The number of coastal ships came down to 14 last month from 17 in the preceding month. It is stated that the programme of coastal shipments was being upset, on account of steamers not being ready on their declared dates of readiness. The Commissioners have, therefore, stressed the need for greater accuracy in declaration of dates for coastal coal ships. Shippers have also been advised to send in their applications for allocations of space by the 15th of each month for the next month's allocations.

Every minute of every day someone, somewhere, needs G.E.C. electrical equipment. Everything which is operated by electricity or for the generation of electric power, can be obtained from the G.E.C. — the largest British electrical manufacturing organization.

FINANCING ROAD DEVELOPMENT

NEED FOR NON-LAPSABLE FUNDS

THE presidential address of Mr. T. Mitra, Chief Engineer, West Bengal, to the seventeenth annual session of the Indian Roads and Transport Development Association, held in Madras last week, is important chiefly for the three notable considerations which he sought to emphasise in that address. First, he stressed the need for the institution of a Central Road Fund and State Road Funds on a non-lapsable basis. Secondly, he stressed the United States method of financing roads which have amply demonstrated that "the main highways can be made self-supporting, if the revenues from road-users are devoted exclusively for highway improvement." Thirdly, as construction of roads could not be financed completely out of revenues, he emphasised the need for raising capital resources.

These suggestions have, no doubt, been made before. Even so, it is necessary to emphasise the need for their acceptance by Government, so long as they are not implemented. Thus, the need for non-lapsable funds was suggested even by the Motor Vehicle Taxation Enquiry Committee of 1950. At present, grants are given for road works on a yearly basis and the unspent money lapses at the end of the financial year. Such annual grants, again, are subject to curtailment, before allotments are actually disbursed. Moreover, allotments, made late in the year often entail wasteful and uneconomic execution, for fear of lapse. The Indian Roads Congress has been urging for several years now the need for constituting a Central Road Fund and State Road Funds and that all money made available for roads expenditure by various administrative authorities be credited to such non-lapsable funds. This arrangement will enable the authorities responsible for roads to undertake road planning without fear of lapse of funds. They will also be tolerably sure of their road budget for a number of years ahead. The authorities in the U.S. know two years in advance, before work on a project commenced, as to what federal grants would be available for the purpose. Such grants, once announced, could be taken on a "matching basis"—the State authorities undertaking to raise equivalent funds from their own resources within three years after constructions actually commence. And it is noteworthy that the grants are not allowed to lapse but are made available for expenditure till the particular project is completed.

Growth of Highways in the U.S.

The rapid growth of highways in the U.S. is attributable to two factors. First, the enormous increase in motor traffic in the country, bringing with it large revenues on account of registration fees and the gasolene taxes. Secondly, the State and the Federal Governments devote all but 10 per cent. of such special "user taxes" to the improvement of the highways over which the motor vehicles operate. In India, the number of motor vehicles has not reached even the figure that the U.S. reached nearly 40 years ago. An increase in the number of motor vehicles however, will not avail the country anything, if there is insufficient road mileage and further, if the existing roads are incapable of bearing any appreciable volume of motor traffic.

That more funds than what could be provided from existing revenues are necessary is indisputable. The Motor Vehicle Taxation Enquiry Committee suggested that finances for the construction programme of roads should be found from a "ways and means fund" made up of savings, surpluses, additional "development" grants from the general revenues and of loans raised for the purpose. For, surely the execution of a construction programme of the magnitude envisaged in the Nagpur Plan cannot be financed entirely from the revenues. The road plan under the Five-year Plan is, however, modest compared to the Nagpur Plan. Even so, the Five-year Plan envisages an expenditure of Rs. 105 crores during 1951-56. Again, even this, it is to be feared, cannot be met entirely from the States' revenues.

Objections are often raised to the financing of road construction works from capital sources. Road works, it is argued, are unproductive inasmuch as they do not produce 'goods' themselves. This view is fallacious and needs examination and refutation. Mr. Mitra compared an effective system of roads to a well-planned business and added that a road system was a long-term investment. He pointed to the survey conducted by the Indian Roads and Transport Development Association some years ago, which revealed that the financial benefits from road development in the area examined amounted to Rs. 11.97 lakhs a year, whereas the cost of construction and maintenance of the roads in this region aggregated only Rs. 4.32 lakhs annually. This indicates that for every Rs. 100 spent on roads, the return to the community through various other benefits amounts to Rs. 277. Better communications would undoubtedly bring about a direct increase in national wealth and a considerable increase in revenues.

PROGRESS OF CIVIL AVIATION

More route mileage was covered and more passengers and mail were carried by Indian air services during the first half of 1952, than in the previous half-year. For the first time an Indian air service connected Indonesia with India. The Government of India acquired an effective interest in an airline company operating internal services.

Comparative details of load and passengers carried and mileage flown by aircraft during the period 1st January to 30th June, 1952, as compared with those during the period 1st July to 31st December, 1951, by aircraft operating scheduled air services were as follows:

	July-Dec., 1951	*Jan.-June, 1952*
Route mileage	28,213	29,235
Aircraft miles flown	9,878,797	9,659,630
Capacity operated (in ton miles).	29,504,011	28,116,708
Passengers	213,821	224,282
Mails .. .. (in lbs.)	3,752,882	3,967,906
Freight .. .. (in lbs.)	47,222,134	36,275,365
Newspapers .. (in lbs.)	2,289,925	2,242,805

The total number of miles flown by Indian aircraft in non-scheduled operations rose from 2,964,284 in the first half of 1952 to 2,988,734 during the period under review. The number of passengers and the volume of freight carried also increased from 35,157 lbs. and 57,985,071 lbs. to 37,498 lbs. and 68,696,090 lbs., respectively.

In response to the representations made by the Air Transport Association of India, Government decided to postpone the introduction of the new scheme of subsidy based on "standard costs" from 1st October, 1951, to 1st January, 1952, and to continue for the intervening period of three months the subsidy at the rate of As. 8 per gallon of petrol used by Indian companies operating scheduled air services.

The total number of aircraft registered in India at the end of June, 1952, was 677 and 203 aircraft held current certificates of airworthiness. The number of ground engineers holding current Indian licences increased from 520 in December, 1951, to 557 in June, 1952, while that of "A" licence pilots went up from 558 to 592. The number of A1 and B licence holders decreased from 20 and 474 to 19 and 429, respectively.

During this period, 13 trainees completed the flying training course, 2 the assistant pilots' instructors course, 19 the pilots' ground training course, 19 the air traffic control officers' course, 22 the aerodrome operators' course, 16 the radio technicians' advanced refresher course, 21 the radio operators' advanced refresher course, 11 the communication officers' refresher course and 8 the radio operators' long-range course. At the end of June, 1952, 175 trainees were under training at the Centre.

Nineteen notifiable accidents occurred in India during this period, five of which resulted in 21 fatalities.

The Radio Construction and Development Unit designed the following: (i) a V.H.F. link working on a frequency of 87.3 mc/s. to replace land links between control tower and remote transmitting and receiving stations; (ii) a circularly polarised antenna which was installed for carrying out operational tests; and (iii) a crystal comparator to enable rapid and accurate measurement of small differences in frequency between two similary ground crystals. The frequency range of this comparator is 600 kc/s. to 8 mc/s.

NEW IRON AND STEEL PLANT

While Government of India has been in touch with different parties, including the World Bank and some Japanese interests, for technical and financial collaboration in the setting up of a new steel plant, it is not committed to such assistance being obtained from any particular country. It is its declared policy that the new plant will be State-controlled, though Government may obtain some assistance from outside in the initial stages. It has been decided that a Technical Mission should re-examine the project reports prepared in 1948 and prepare a fresh project report for a new iron and steel plant and decide on its location. The Mission consists of an expert from the World Bank, an expert from the Government of India and an engineer from Messrs. Koppers Co. of the U.S., who have been appointed Government's consultants in this regard. The Mission has already assembled in Delhi. It is only after this project report is in hand and the location of the new iron and steel plant has been decided, that Government will consider afresh the necessity of obtaining financial and technical assistance from abroad, consistent with the policy of retaining the overall control of the State in the new venture. All reports, suggesting Government's decision to entrust the project to any particular country, are, therefore, inaccurate.

TECHNICAL EDUCATION

DECISIONS OF ALL-INDIA COUNCIL

IT was only a fortnight ago that we referred, in these columns, to the vital role which the technical experts play in the sphere of economic development and stated that the success of the Five-year Plan depended on how best technical education was provided. The deliberations of the eighth annual meeting of the All-India Council of Technical Education, held at New Delhi the other day, clearly bears out the force of this contention. At the meeting, the Council took several decisions of far-reaching significance. These cover a five-year plan for technical education and research, School of Planning for training in graphic arts, Board of Assessment for recognition of professional and technical qualifications, and apprentice training in industry.

The Council, it will be recalled, had set up, at its previous meeting, a seven-man committee to discuss with the Planning Commission and to prepare a five-year plan for the development of technical education in the country. A formula was accordingly formulated which was incorporated in the Five-year Plan. As, however, only general lines of development were indicated by the Committee, the need for formulating a detailed plan for implementing the recommendation of the Committee has come to the fore. This aspect was stressed by Maulana Abdul Kalam Azad, Minister for Education, Government of India, in the course of his address while presiding over the Council's meeting this week.

The Council has done well to set up expert committees to work out details. It is to be hoped that the committees will complete the task allotted to them at an early date. Almost the first problem which the committees will have to consider relates to facilities in technological study at the post-graduate level. The facilities that now exist are inadequate and, even though the two institutes at Kharagpur and Bangalore will go some way towards meeting our requirements, a large number of students will still have to be sent abroad for training. Appropriately enough, Maulana Azad maintained that it must be one of the first priorities in our programme of expansion to develop these facilities within the country itself. It is needless to point out that top priority should be given to the task of strengthening those institutions in the country which give the training available only in Western countries.

Considering the importance of technical education, it is indeed gratifying to note that the provision for the development of technical education has been increased by an additional Rs. 2 crores for the remaining period of the Five-year Plan. Apart from the schemes already in operation—the Indian Institute of Technology at Kharagpur and the Indian Institute of Science at Bangalore—and the grant to existing non-Government engineering and technological institutions, as recommended by the Council earlier, the Planning Commission has earmarked Rs. 3.55 crores for new projects. The general outline lays—this is only as it should be—emphasis on providing for post-gradate courses and facilities for advanced work and research, for special subjects such as printing technology and town and regional planning, and for part-time courses for those already engaged in industry.

Another important decision taken by the Council relates to the establishment of a School of Planning for the training of suitably qualified planners required for the projects. The need for this cannot be overemphasised, especially in the present context of large-scale planning of cities, towns and villages, and in view of the importance attached to industrial labour housing, transport development, etc. Yet another important decision of the Council has been to set up a Board of Assessment, consisting of the Union Public Service Commission, professional bodies, outside experts and State Governments, to evolve a uniform practice in the matter of recognition of degrees, diplomas, certificates and other awards in technical and professional subjects. The establishment of such a central machinery will undoubtedly put an end to the confusion that now exists in regard to the recognition of the numerous qualifications and awards for purposes of employment in Government service, as also in industries and trade.

Spain has decided to build a new iron and steel works in Asturias, the first stage of which will be in operation towards the end of 1956 or early in 1957. The output of the proposed works will amount to 350,000 tons of steel a year, which is almost half as much again as Spain's present total production. Orders for equipment valued at approximately £6 million have been placed with engineering firms in the U.K.

DISCRIMINATING PRACTICES IN TRANSPORT INSURANCE

U.N. SECRETARIAT'S REPORT

THE discrimination practised by certain countries against foreign insurance companies in the sphere of transport insurance has come in for some criticism at the hands of the United Nations' Transport and Communications Commission. It is only natural that this body should be sorely exercised over the whole issue, for unhealthy discrimination in the insurance sphere must affect international trade, for the promotion of which the United Nations is striving hard through its various specialised agencies. The Commission remarks that such discrimination "must ultimately have a harmful effect" on international shippers.

The U.N. Secretariat was prompted to undertake a survey of restrictions enforced by many countries in the sphere of transport insurance by the complaints lodged by the International Chamber of Commerce, which cited the names of certain countries, which in its opinion practised such discrimination. The countries named by the Chamber were: Argentina, Brazil, Colombia, Chile, Cuba, Haiti, Iran, Peru, Austria, France, Italy and the Netherlands. An enquiry by the Secretariat reveals that there are five main types of discrimination:

1. Regulations compelling goods entering or leaving a country to be insured with domestic companies.

2. Heavy taxation on contracts between national and foreign ship insurance companies.

3. Discrimination through Government control of foreign exchange.

4. Regulations discouraging foreign insurers from doing business, such as a requirement that a certain amount of capital be owned by nationals or that nationals hold executive positions.

5. Restrictive laws by Governments which have nationalised insurance to assure the prosperity of their insurance industry.

These restrictions, according to the report, affect the whole mechanism of international insurance and tend to drive premiums up. They affect international credit arrangements, and often lead to retaliatory measures. They may have "various harmful effects, with repercussions on international trade rather than directly on international transport." The remedy, according to the report, lies in bilateral negotiations between countries which feel their interests are being damaged and the discriminating countries. If these negotiations do not succeed, the report says, the "appropriate forum" might be the General Agreement on Tariffs and Trade.

It will be seen that India has not been cited as being among the countries which practise discrimination against foreign insurers. But this does not mean that India is not interested in this matter. Although it is not interested in discrimination, as such—that is, in discrimination, for its own sake—it is necessary that this country ought to examine why discrimination is practised and, still more, to examine when it would be justifiable. Generally speaking, discrimination is practised by certain countries against foreign insurers, because these countries feel that their own insurance companies cannot prosper without some Governmental aid in the shape of placing its own business with national concerns. Further, in order to ensure that their nationals find suitable opportunities of employment, the Governments of certain countries may find it necessary to insist on the foreign companies operating, or seeking to operate, in their area, taking their nationals in their employment and training them to hold responsible positions. Normally, such action would be justifiable under three conditions. In the first place, if discrimination is undertaken for balance of payment considerations, discrimination deserves to be forgiven. After all, a country must live within its means. And if it finds that the stoppage of invisible imports such as foreign shipping and foreign insurance has a healthy effect on its balance of payments position, it ought to be allowed to practise some reasonable discrimination. Secondly, if foreign insurers use their influence with other foreign firms in a particular country to undermine the position of the insurers in that country, it is only reasonable to expect that the Government of that country should give its support to its own insurers. Thirdly, each country should be allowed to give some discriminating protection to its own insurers and also to practise retaliatory discrimination against other countries which practise discrimination against it.

These are, of course broad considerations. Their application, in each particular case, will have to be made with considerable caution. Many insurers in this country have felt, for a long time now, that they are not getting a fair share of the transport insurance. Again, India's balance of payments position has not been very happy either. And yet, the Government of India has not practised any discrimination against foreign insurers. The Import Control Enquiry Committee, however, recommended that the Government might examine the suggestion that the importers, who utilise Indian shipping and Indian insurance, should be given an additional quota for imports. Again, Mr. T. T. Krishnamachari, Minister for Commerce and Industry, stated recently in Calcutta that foreign firms working in this country will do well to give 50 per cent. of their insurance business to Indian insurance companies. There was, however, no mention of any statutory restrictions. Indeed, we emphasised then that changes were best implemented through mutual consultation and negotiations, and not through legal compulsion. After all, Indian insurers are also working in foreign countries. It would be unwise to place statutory restrictions on the business which other foreign insurers do in this country, and thereby provoke certain other countries into retaliatory steps. Nevertheless, it is the duty of the Government to protect the legitimate interests of Indian insurers, preferably through non-legal means, and to enable them to get an adequate share in the transport insurance business.

HULL INSURANCE

Hull insurance, as is well known, has not made much headway in this country. It was only last year that the first attempt at creating a hull insurance market in India was made by the Scindia Steam Navigation Co., Ltd., the management of which entrusted the insurance of its entire fleet to the Indian market. Appropriately enough, Mr. Dharamsey M. Khatau, Chairman of Scindias, emphasised, in the course of his address at the annual meeting of the Company, held last week, the need for developing a hull insurance market in this country. He said:

"In consonance with our tradition to be the pioneers in all shipping matters in India, we decided this year to entrust the hull insurance of our entire fleet of ships to Indian insurance companies, thus launching a hull insurance market in India for the first time. Our fleet insurance which aggregates in value about Rs. 22 crores was placed with a group of eight Indian insurance companies, of whom the New India Assurance Co., Ltd., was selected as the leader. I need hardly add that this step was taken after the most careful consideration to ensure that we should in no way be prejudiced either in the matter of rates or in the matter of prompt settlement of our claims. I hope other Indian shipping companies will also endeavour to do their best to strengthen the Indian insurance market by placing their hull insurance also with the Indian companies."

INSURANCE THROUGH CO-OPERATION

I.L.O.'S REVIEW

ALTHOUGH insurance is itself a co-operative endeavour and represents the co-operative effort of a community to protect individual members against risks such as accident, death or old age, insurance is not always organised as a co-operative institution. In all countries where insurance has made considerable progress, the largest measure of achievement is claimed only by insurance companies which are organised on a joint-stock basis. Nevertheless, it is recognised that the co-operative movement may be utilised to mobilise the resources of millions of people of small means and to undertake a variety of activities designed to raise the level of their productivity and purchasing power. It is further recognised that insurance is one of those activities which could be organised on co-operative principles.

A recent review of the co-operative organisation in different countries, made by the I.L.O., shows that increasing attention is everywhere being given to the application of the co-operative principle to every form of economic activity, notably to insurance. A co-operative insurance society is essentially a voluntary organisation with unrestricted membership and collectively-owned funds, comprising individuals or organisations of small producers in town and country. Further, the co-operative insurance enterprise is built on democratic basis of equality, common interest and collective management, for the satisfaction of the future probable needs of members and for grouping and offsetting the risks to which they are exposed.

A co-operative insurance society is able to make a significant contribution towards saving, by reason of the fact that it creates a sense of security through the removal of the need for uneconomic saving by distributing the burden of such saving among many persons who are exposed to the same uncertainties.

Reviewing the developments in the field of co-operative insurance in two countries, namely, Australia and the U.S., the I.L.O. publication says that, in Australia, the Australian Mutual Provident Society has been a pioneer in the field of co-operative life assurance. Founded in 1849, it had, at the end of its first year, a credit of only £93. But now, the total sum assured by the Society is of the order of £540 million, covering 2.30 million policies. Reversionary bonuses attaching to existing policies amount to £74.5 million. The total amount of cash bonuses, allotted by the Society since its inception, is £97.39 million in the ordinary department and £7.83 million in the industrial department.

Spectacular progress has also been made by the co-operative insurance societies in the U.S. It is computed that there are over 2,400 companies which transact fire insurance on a "mutual" basis. They have a premium income of over $440 million, while their admitted assets aggregate over $847 million. These figures refer to 1948. Possibly, these insurance companies have been able to build up larger assets since that date.

Generally speaking, a co-operative insurance society caters to the needs of men of small means. The society provides its own incentive to saving, it is claimed, by enabling these men to cover risks which, by their own individual saving, they would not be able to undertake. Essentially, it is a method of group saving, rather than individual saving, and one in which capital is mobilised and invested in such a manner as to be able to meet the obligations which it has contracted in favour of its members. In rural areas, co-operative insurance, therefore, plays—at least, deserves to play—an important part as a mobiliser of rural savings.

How hull insurance offers valuable protection to shipowners will be clear from the fact that the owners of the 21,000-ton Canadian Pacific liner, *Empress of Canada*, which was recently damaged near Liverpool, will now get from their insurers £1.2 million, which was the sum for which it had been insured. The owners will also get, it is stated, an additional £300,000 insurance to cover various other disbursements. British insurers, who have underwritten the major part of the value of this liner, describe the loss as a "constructive total loss." This phrase is used to distinguish the loss from a "total loss." If a ship sinks beyond salvage, the loss is designated a total loss. If it can be salvaged, then, the loss is deemed a "constructive total loss," because the insurers can then get back at least some part of the loss they pay out.

THE BANK OF BHOPAL LIMITED, BHOPAL

(INCORPORATED IN BHOPAL IN 1944.) (LIABILITY OF MEMBERS IS LIMITED.)

EIGHTH REPORT OF THE BOARD OF DIRECTORS

The Directors beg to submit to the shareholders the Audited Balance Sheet of the Bank as on and Profit and Loss Account for the year ended 31st December, 1952.

The Bank's working during the year including a loss of Rs. 5,877-2-4 brought forward from the previous year's account yielded a net profit of Rs. 54,517-5-3.

The Directors propose to make the following appropriations out of the net profit:—

		Rs.	a.	p.
1.	To be transferred to the Reserve fund and under section 17 of the Banking Companies Act 1949	12,500	0	0
2.	To provide for taxation	7,500	0	0
3.	To staff bonus Fund account	5,500	0	0
4.	To pay a dividend at the rate of two per cent. free of tax, i.e. at Rs. 5 per share on 5,000 shares (Rs. 500 each Rs. 250 paid up) for the year ended 1952	25,000	0	0
5.	To be carried forward to next year's account	4,017	5	3
	Rs.	54,517	5	3

The Bank's Building at Bhopal has been sold in the month of March 1952, and the City Office of the Bank has been amalgamated with the Head office as mentioned in last year's report.

In spite of acute money conditions throughout the year, the Bank's working has been satisfactory.

The Directors are thankful to the shareholders and clients of the Bank for their continued support.

The Directors place on record their appreciation of the work done by the Chairman Col. B. M. Vencoba Rao, the General Manager Mr. V. S. Mani, and all members of the staff for their able and efficient services to the Bank.

Under Articles 102 and 103 of the Articles of Association, one-third of the Directors, except the Government Directors, from among those who have been longest in office since their last election retire. They are eligible for re-election under Article 103 of the Articles of Association of the Bank.

The Shareholders are requested to appoint Auditors for the year ending 1953 and to fix their remuneration.

BHOPAL, 31st January, 1953

By Order of the Board,
B. M. VENCOBA RAO,
Chairman.

BALANCE SHEET AS AT 31st DECEMBER, 1952.

REPORT OF THE AUDITORS.

We have audited the annexed Balance Sheet of the Bank of Bhopal, Limited, as at 31st December, 1952, and also the annexed Profit and Loss Account of the Bank for the year ended 31st December, 1952, in which are incorporated certified Returns from Sehore Branch in India, but the Returns from Karachi Branch have not been incorporated as the Returns have not been received from the State Bank of Pakistan which has taken possession of that Branch, and report that:—

(a) We have obtained all the information and explanations that we have required and have found them to be satisfactory;
(b) The transactions of the Bank which have come to our notice have been within the powers of the Bank;
(c) That returns received from Sehore Branch of the Bank in India have been found adequate for the purposes of the audit;
(d) In our opinion the annexed Balance Sheet and Profit and Loss Account are drawn up in conformity with the Law;
(e) Such Profit and Loss Account shows a true balance of Profit for the year;
(f) Such Balance Sheet exhibits a true and correct view of the state of the affairs of the Bank according to the best of our information and the explanations given to us and as shown by the Books of the Bank; and
(g) In our opinion Books of Account have been kept by the Bank as required by Section 130 of the Indian Companies Act, 1913.

BOMBAY, 5th February, 1953.

DEATH DUTIES AS AN ITEM OF REVENUE

EFFECT ON SAVINGS DISCUSSED

(By N. R. BHATWADEKAR)

ANY proposal for a new tax impost generally receives a one-way reception and that is opposition. But the reception to the Estate Duty Bill in the Indian Parliament was quite a happy one. There was, of course, opposition to it, but it was meagre and came from sections whose ideologies are based on religion. The Finance Minister drew richly upon old Sanskrit writings to give sound foundation to this tax proposal. In any case, the fact remains that in all the major democracies of to-day the tax has come to stay. In the beginning, there was fierce opposition. But now it is found in every democratic community and it is everywhere becoming of increasing fiscal and social importance. The first and the foremost objective of any tax is to get revenue for the State. But apart from its utility as a source of revenue, every tax has other effects, whether they are intended or not. In Britain in 1894, Harcourt disdained any "ulterior aims" in his reforms of the death duties. But "ulterior effects" were visible. There was a definite breakdown of large estates. In this country, after the tax comes into force, a detailed study will have to be undertaken to find out whether the tax initiators "had" any "ulterior motives" in view.

The characteristic of a good tax system is to rely on a few substantial taxes for the bulk of the revenue. If it is desired to tax the rich, income and inheritance taxes are the best. If it is desired to tax the poor, taxes on some commodities, particularly of wide consumption, are the best.

Two Kinds

There are, as is well known, two entirely distinct categories. The State may tax the inheritance as a whole by what is known as an estate tax or may tax the separate shares going to the recipients of the inheritance. In England, both the systems operate. In the U.S.A., the Federal Government limits itself to the estate tax, while most States levy only a share tax. Various theories have been forwarded in the defence of these two taxes. The share accruing to an heir can just be treated as "income" and taxed just as income is taxed in the usual manner. But for practical reasons, the inheritance is not included in the taxable income but is taxed separately, just as in some countries there are separate taxes for gifts and capital gains. In this way, a "share tax" can be defended on the grounds of "accidental income argument." In defence of the "estate tax," Bentham promulgates the argument that the conception of the right of bequest involves a social privilege for which some compensation is rightfully demanded. Mr. Andrew Carnegie puts forth the argument of the "co-partnership of the State" idea and concludes that "the legislators would fail in their duties if they do not exact a tremendous share; a progressive share." While a "share tax" can be called an "individual" obligation, an "estate-tax" can be called a "social" obligation. Everyone must realise that if he wants Government services, he must pay for them.

To promote tax consciousness, income-tax is the best tax. Death taxes are not so effective because, unlike income-tax (which is paid every year), they are not paid every year but only once. Moreover, in contrast with the income-tax, almost all those—the deceased and the beneficiaries—who bear the burden of the death taxes are, in any one year, a new group who have not paid the tax before; or at least, not for many years. Naturally, death taxes create more tax consciousness. But unlike income-tax, the time of payment is remote and indefinite. So the intensity is not so great. In the U.S.A., the Federal Government limits itself to the "estate tax," while most States levy only a "share-tax", although in a few States both "the right to transfer as well as the right to receive the transfer" are taxed.

The oldest objection raised against death duties is that they are a tax on capital. The fact is that a tax on capital is not in itself any more reprehensible than a tax on income. Ill-chosen and ill-administered tax, whether on income or on capital, would equally destroy wealth. Moreover, the fundamental issue is as regards the utilisation of the proceeds. It is possible that the State may use the proceeds in a way beneficial to the society, and that the beneficiary might have squandered the money. In Britain, this taxation has been in existence for the last so many years. Curiously enough, the capital wealth of the country increased simultaneously with the increase in the proceeds from death duties. So, death duties will not decrease capital wealth of a community but will actually increase it, if the proceeds are well utilised.

Effect on Capital

In England, it was feared, death duties and income-tax would drive capital abroad. But the English tax laws were so framed as to leave no temptation for capital export. The British death duties fall equally upon property, whether situated in England or abroad, of the persons resident in Britain. To avoid them the man must be prepared to leave the country. Naturally, such cases would be rare. Moreover, it is possible, a tax on capital is paid out of income. During depressions, death duties possess a peculiar fascination for the "finance ministers." During such periods, there is an epidemic of unbalanced budgets. As prices fall, the yield of taxes, which are based on the prices of goods, falls. Income-tax yields are lowered as incomes are low. Taxes such as stamp duties, etc., yield less as value and volume of business transactions shrink. The rate of interest is low. As debts mature, debt conversions are facilitated. The value of Gilt-edged securities is raised. The yield of taxes, based on capital values (death duties), is raised. But these are insufficient compensations to the tottering budgets.

The tax is generally "progressive." It is graduated in various ways. As per the Rignano Scheme, the tax is graduated as per the number of times the property has already changed hands. The idea of the "unearned wealth" can be pursued and the inherited wealth of the deceased taxed at a higher rate than the property he has acquired. This sort of graduation has one salutary effect. The person works and saves more in order to provide for his heirs. Had there been no death duties, this stimulation (or, say, necessity) would be totally lacking. Moreover, had there been no death taxes, the heirs would be less willing to work and might even run into debt. Mill had a proposal; it was to fix a maximum over which no one should inherit. In Britain, a scheme of terminable annuities was suggested some years ago. Some proportion of every estate was to be exchanged for terminable annuities, to be issued by the Treasury. The period of annuities was to be either the life of the inheritor or a fixed number of years, say, 20 years. This scheme was devised to make the inheritors work. The inheritors would be working, as the annuities were to expire sooner or later. The better basis for the graduation would be to take into account the amounts received by the inheritor as well as the wealth he already possesses. Attempts to incorporate these principles failed in Italy and Germany, mainly because of administrative difficulties. In Britain, the estate duty is graduated progressively according to the total value of the property passing at death. British legacy and succession duties graduate progressively according to the remoteness of relationship; in fact, they are regressive because, generally speaking, people give their property to their nearest relatives.

Relationship of Heirs

In the U.S.A., death duties are based on the value of the deceased's estate, as a whole, and inheritance tax is based on the share received by the beneficiary. States tax a son less and a nephew more. If a person wants to give the same amounts to both—the "will" is changed and the nephew is given more. The reverse of this is also possible. To avoid the tax he may give the nephew less. This burden (to work more and spend less) is on him and not on the nephew. It is possible to base the progressive rate of inheritance on the wealth and income of the heir. In the U.S.A., some exemptions are made, if the family is dependent on the legacy. Otherwise, it is considered a tax on windfalls. But very few inheritances are windfalls in the real sense of the word. Practically all inheritances are expected—at least, partially. Again, in the U.S.A., some exemptions are made, if the tax is paid in quick succession; the Federal Government exempts the estate that has paid estate or inheritance tax within five years. Some States have similar provisions too. Sometimes, the older the beneficiary, the less is the tax, though this is not in practice in the U.S.A. Attempts to integrate the death tax with the entire personal situation of the beneficiary may some day lead to the inclusion of inheritances as a part of the income, subject to income-tax.

Scientific Basis

Even if the Rignano Scheme is not brought into practice *in toto*, the proposal that a higher rate should be levied for the property that has passed through two or more generations is worth considering. The most scientific basis for progression would be to take into account individual inheritances and the wealth of the inheritors. It is possible that a rich man may get a small, and a poor man a big, inheritance. Usually, however, big inheritances go to the already rich. It is always better to have a higher rate on a few taxpayers than to have a lower rate on many. Again, to increase revenue from this source, the State should lower the exemptions rather than have a higher rate. High rates of death duties and income-tax tend to prevent the accumulation of large taxable fortunes and, consequently, decrease the number of large taxable incomes.

Whenever a new tax is introduced, it is essential to take into consideration the parties who may be required to bear the burden of the impost. An inheritance tax is often less keenly felt than might be supposed. The payment is often made through the executors. Moreover, at such times, the considerations of tax-payments are generally in the background. Take, for instance, a deceased person who has no (even remote) relatives. The property will naturally revert to the State. Will the incidence be on the predecessor or on the successor? Clearly, on the successor, as the predecessor is dead.

What are the effects of death duties on savings? It is generally feared that the man who knows that a portion of what he saves will be going to the State in the form of death duties, is generally reluctant to save. As per the Rignano Scheme, the desire to work and save is checked less as the tax is graduated according to the number of times it has already changed hands.

Insurance Device

Generally speaking, inheritance and income-tax, yielding the same revenue, check savings to the same extent. Saving is checked less by inheritance taxes as the tax payment is remote. Nowadays, the device of insuring is becoming quite common. If insurance is resorted to, the check to saving is still less. As regards the beneficiaries, the tax reduces their expectations and so they are stimulated to work and save. The higher the rate, the greater will be this stimulus. If there are no death duties, the inheritors would be less willing to work and save; in fact, they are likely to be extravagant and they may even run into debt. The taxation of an estate or of an inheritance may or may not lead to a decrease in the nation's savings. If the private capitalistic system is to function, people must be induced to risk the money. The taxes, which are most commonly accused of weakening the willingness to risk, are income-taxes, death duties and gift taxes, when they are levied at progressive rates. But if the rates are so high as to approach confiscation, savings are definitely checked.

In general, it is assumed that death and gift taxes are not shifted. But some variation has been assumed, not because of shifting but because of changes in the ownership of the property and income within the family. Along with personal income-tax and the excess profits tax, the estate and the gift tax are obviously not supposed to be passed on in business transactions. In contrast with the personal income-tax, the death tax and the gift tax, the amount of the tax on socially undesirable gains is determined without regard to the personal situation of the taxpayer—the tax is the same, whether the taxpayer is rich or poor, whether he is having a large family or not, etc. A poor man may not pay death duty or an inheritance tax, but he may use the dwellings liable to these taxes. Naturally, these taxes enter the rent he is paying. In the U.S.A., the existing Federal and State income-tax laws do not take into account the tax-paying ability represented by a gift or an inheritance. Whether they can be designed to do so is debatable.

It is generally supposed that death duties directly redistribute wealth. It is no doubt true that at times investments (viz., securities) must be sold to pay the tax. But it is not redistribution of wealth in the sense in which the term is usually understood. In one sense, it may be, but it is neither direct redistribution to recipients of Government services nor bounties. Redistribution of existing wealth can be accomplished by a capital levy in kind, followed by a distribution of the wealth thus acquired.

Payment of Duty

The payment of death duties presents a problem. It is possible that there may be no hard cash to pay the tax. In Britain, in 1906, there was a proposal to allow the landowner to pay the tax in the form of land. It was soon ridiculed. Who knows? The distillers may demand the privilege to be allowed to pay the tax in the form of whisky. Since 1919, in the U.K., Victory bonds were accepted in payment of the tax. But it was a definite loss to the Government as the market value of these bonds was lower than the par value. If there is no cash, securities must be sold. It is possible that such sales might create bad market repercussions. Fortunately, the custom of insurance is growing rapidly. Again, it is possible to make payment less burdensome by introducing the privilege of payment in instalments. In this way, the annual tax will almost never take more than the income of the estate.

Any discussion of death duties would be incomplete without due consideration of the gift tax. Mankind, as it stands, abhors taxation. Every tax brings in its wake an "escape"—a lawyer's device. To avoid payment of death duties, gifts are given during the lifetime of the donor. Gifts from the living should be treated in the same way as gifts from the dead. In the U.S.A., the gift tax is considered a "policeman" tax. It is the child of the death duties. In the U.S.A., the Federal gift tax is not adequately co-ordinated with the death tax. By the first gifts (when the rate of gift tax is low) that he makes, the donor escapes the top rates that would apply to his estate under the death tax and he pays only low rates in the first brackets of the gift tax. As a rule, the rates of gift tax are lower. The donor's loss of interest in the gift tax, thus paid in advance of death, is sometimes given as a cause for the relatively low gift tax rates. In the U.S.A. the yield from gift tax was far more than was anticipated. It is possible to include gifts received by a beneficiary in his income and to bring them under the purview of the general income-tax. But, generally speaking, gifts are treated separately, as they do not constitute regular income. Moreover, it is obvious that gifts would generally be given to those who are to inherit them later.

Experience in U.S.

Although it might appear premature, it would not be out of place to review here the experience gained in America to find out the possible future duplication of taxation in this country. Estate tax was first introduced in the U.S.A. in 1916. In the First World War, it was unimportant from the point of view of war financing. In part, this reflects the claim of "States" to a vested right in death duties. The fiscal history of the U.S.A. reveals that there was in the beginning a strict separation of sources. The Federal Government contented itself with the indirect (mainly customs) taxes while the "States" relied on the direct (mainly property tax) taxes. As the needs of the Government went on increasing, the Federal Government slowly but steadily went on encroaching upon the sources, considered till then as reserved for the States. Incidentally, it can be seen that the necessities of the States grew, though slowly, as compared with those of the Federal Government. One by one, particularly since the last war, other Federal States (like the U.S.A.) have given up the separation of sources, characteristic of their earlier history. It became obvious that the inheritance tax was to be increasingly important. In fact, the German law of 1924 reserved the entire proceeds of the inheritance tax to the Federal Government. If the Federal Government was to encroach upon the sources of the States, naturally the question of uniformity came to the forefront. The Australian Royal Commission on Taxation (1921-22) favoured reservation of inheritance tax for the separate States. But in return, the Federal (or the Commonwealth) Government was to have complete monopoly of income-taxes.

Uniformity in Taxation

In the U.S.A., the States found that they could no more demand the exclusive use of either the income or the inheritance tax. Many devices were explored to bring about uniformity in taxation in the U.S.A. Inter-State agreements were not favoured as so many agreements would be necessary. Moreover, there was no suitable criterion to steer clear through the divergent economic interests of the States. Regional or sectional agreements were suggested as a first step. The passage of a Federal law, designed to regulate the conditions of uniformity, was also not feasible, because it would encounter constitutional obstacles. In America, the Supreme Court makes law no less than the Congress. But the Supreme Court could not be expected to bring about uniformity as it would have required the Supreme Court to formulate a set of economic principles. Delay was another reason. And, as a rule, the Court decides the particular case on its own merits, but does not like to mortgage the future. It was realised that if every other expedient failed, only a Federal system of taxation could bring about the desired uniformity. There would be a comprehensive Federal inheritance tax with a division of the yield between the States and the nation.

Fortunately, in recent years, co-operation among the States is progressing. Even before the series of Supreme Court decisions, reciprocal agreements for inheritance taxes eliminated much serious overlapping. However, despite Supreme Court decisions, unfortunately some problems of double taxation of intangibles still remain. The Federal-State co-ordination in death taxation is shown by the Federal crediting provision which allows the taxpayer to subtract from the Federal tax, otherwise due, the death taxes paid to the States within certain limits. But since the adoption of the crediting device for death taxes in 1924, the Federal Government has made little effort to exercise such limited control as it might have done in order to reduce this conflict—the conflict between State and State. Federal taxation (and a division) need not scare the States. A better administration would increase the proceeds. Consequently, the States would also get more. However for income and inheritance taxes, Roswell Magill favours decentralised administration as thereby time would be saved. Moreover, while admitting the divergent economic interests of the States, no one can really defend the action once taken by Florida (in 1924—later repealed) in using inheritance tax in inter-State competition favouring certain types of activities. Greater co-operation amongst the States is quite necessary. Death taxes, and stock transfer taxes as in a few States are instances of overlapping taxes; both the States and the Federal Government levy them.

New Chapter

The introduction of this tax will open a new chapter in the history of Indian taxation. Economic inequalities may be due to the inequalities either of the income one earns or of the wealth one inherits. The inequalities of the inherited wealths may often be responsible for the inequalities of the earned incomes. A man who inherits a good fortune has every chance to earn a handsome income. Death duties, it is hoped, will eventually eliminate, or at any rate reduce, inequalities of inherited wealth. While condemning it as a calamity, one member of the Indian Parliament likened it to plague and cholera. It will, of course, be a headache to some. But, at least in the beginning, it will not affect many. And those who would be affected by it would, not feel the pinch, as the exemptions are expected to be quite sufficient. Now the fiscal needs of the Indian Government will always be increasing. Accordingly, death duties will assume an ever-increasing importance. Even in America, death duties still have important possibilities, as a source of revenue, both in the Federal and the State spheres. It has been found, from American experience, that if increased revenue is desired, it is better to lower the exemptions rather than increase the rates. Be that as it may, the new tax is shortly to come in this country. It is hoped that the tax will contribute towards India's prosperity.

ECONOMIC PROBLEMS OF "FREE WORLD"

VIEWS OF PROF. LIONEL ROBBINS

ALTHOUGH our country has become politically independent of Great Britain since August, 1947, we are still greatly interested in the economic problems of that country, because it is the head of the sterling area, of which our country is a member, and because our commercial and financial relations with it are still important. An article on "The International Economic Problem" by Prof. Lionel Robbins, Professor of Economics at the University of London, published in the January 1953 issue of *Lloyds Bank Review* would, therefore, interest the readers of *Commerce*, even though the article has been written from the viewpoint of promoting the political unity and strength of the free countries of the West, which have formed the Western Alliance. Prof. Robbins has applied this test to his proposals for solving the international economic problem, because, in his opinion, the only hope of the free Western countries avoiding actual war with the Soviet bloc is provided by the former making it clear to the latter that they are strong and united enough to give no chance of success to the other side, if it creates an armed conflict.

Disequilibrium Not Inevitable

The Western Alliance cannot become strong and effective if the regional blocs, which compose it, barricade themselves against one another's goods. Adequate political unity among them can be established and maintained only if their economic relations are mutually harmonious. Such relations can be established only if the countries of Western Europe achieve a trading position with the U.S.A. and Canada under which the equilibrium of their balance of payments does not depend on a continuous flow of gifts and a barricade of quantitative restrictions against goods from the U.S.A. and Canada.

Prof. Robbins discusses the following three main possibilities, which may frustrate any effort of the rest of the world to get into equilibrium with the dollar area:

(1) A persistent increase in the U.S. tariff or other obstacles to trade *pari passu* with any potential improvement in exports to the dollar area.

(2) An endemic tendency to severe deflationary collapse in the dollar area.

(3) Money income failing to rise commensurately with productivity in the dollar area.

But he points out that the following facts have belied the possibilities:

(1) The U.S. tariff has tended to go down in recent years.

(2) Far from there being any tendency to deflation in the U.S. economy, money incomes have risen more than productivity.

(3) Hence, the conditions of international equilibrium have not been such as to need a contraction of money incomes in other countries. The trouble has been rather that, in the countries where the advance of productivity has been less than in the U.S.A., the advance of money incomes has tended to be excessive.

Limits of Imperial Preference

These facts show that disequilibrium between the dollar area and the rest of the world is not inevitable and that there is no need to form regional blocs. But regional grouping of the Commonwealth countries for the operation of Imperial Preference has been in existence since long before the advent of the dollar problem. The question now is whether Imperial Preference can be developed further. Prof. Robbins' answer is in the negative, because, in his opinion, there is practically no support from any of the Commonwealth countries for its extension. The reason is that preferences are attractive only if on balance, the area within which they prevail is an importer of the commodities affected. But this is the reverse of the case with most of the staples in which the Commonwealth countries are interested. In this sphere, the Commonwealth is on balance an exporter. It follows, therefore, that from the viewpoint of the Commonwealth countries, the gain of special privileges in the U.K. markets is liable to be offset by losses in markets elsewhere, and the game is hardly worth playing.

Turning to more comprehensive schemes of monetary and financial autonomy for the sterling area, Prof. Robbins finds the prospects still less pleasing, because all such schemes would necessarily involve the exclusion of Canada, which, although it is a very important member of the Commonwealth, it is not a member of the sterling area. Any scheme which, in the interests of sterling area solidarity and the provision of some counterpoise to other powers, pushes Canada further towards the U.S.A., would be short-sighted. Further, it is not to be expected that the U.S.A. and Canada would continue their gifts and their loans at reduced rates of interest to the Commonwealth, if they find that all this aid is being used to build up an area from which they are to be excluded permanently. But the majority of the advocates of an insulated sterling bloc are not prepared to recommend the severe restriction of local standards of consumption and other hardships which unaided development would involve. For these reasons, there is little prospect of Commonwealth countries accepting any such scheme.

Similar considerations apply to the more ambitious schemes of creating a large economic bloc comprising both the sterling area and Western Europe. Who is to finance this bloc? It has been difficult enough for the U.K. since the war to finance the needs of the sterling area, even with the vast assistance received from North America in the form of Marshall Aid and loans. It cannot meet the financial needs of Europe, in addition, without imposing very severe restrictions on its own development. Nor can the North American Continent be expected to supply year after year the needs of an area from which it is to be excluded.

Freer Trade Union of N.A.T.O. Powers

Such objections would not apply to any scheme of forming a freer trade union for the North Atlantic Treaty Organisation group, enlarged to include the relevant colonial dependencies and such other members of the Commonwealth as are interested in the defence of the West. In this connection, Prof. Robbins has propounded the following two principles: (1) The U.K. is greatly interested in negotiations for securing reduction in the tariff against its exports; (2) it is still more interested in securing the removal of quantitative restrictions and other rigid obstacles to trade, because, of all the great trading nations, it stands to lose the most if the use of such restrictions becomes permanent and universal.

These principles lead to the conclusion that, failing some larger plan for the N.A.T.O. nations and their associates, the U.K. should support not only the maintenance of the arrangements made by the General Agreement on Trade and Tariffs, but also any attempts which may be made by the U.S.A. to make big *ad valorem* cuts all round in existing obstacles and to pave the way for clearance on a truly multilateral basis.

Internal Finance and External Equilibrium

But trade policy, however enlightened, cannot by itself bring equilibrium, if the financial policy is not sound. In this connection, Prof. Robbins points out that, as prices and incomes in the U.S.A. have risen sharply, what was necessary for restoring equilibrium was that prices and incomes in the deficit countries should be restrained. On the contrary, prices and incomes in the non-dollar area tended to rise and in many cases they rose much more than those in the dollar area. In such circumstances, the persistence of dollar shortage was inevitable. This indicates that the first desideratum of financial policy for all countries suffering difficulties regarding their balance of payments is to stop inflation, by adopting both fiscal and monetary measures.

Where, however, the local expansion of currency and credit has outstripped that in the U.S.A. and where there has been no commensurate adjustment of the rate of exchange, mere cessation of inflation will not suffice to restore equilibrium and the appropriate policy will be a change in the rate of exchange rather than positive financial contraction. It was to meet just such a situation that provisions for alteration of the exchange rates were included in the statutes of the International Monetary Fund. An examination of the relative rates of inflation in different countries since 1949 shows that, in some countries, advantage of these provisions will have to be taken sooner or later. Relative inflation of 20 or 30 per cent. cannot cure itself merely if prices are prevented from rising further.

Sterling Convertibility

Next arises the question of convertibility of sterling. There is no doubt that, if the pound is not eventually made convertible, its position as an international currency will suffer. If money cannot be placed in the sterling area in the full expectation that, whenever needed, it can be withdrawn with as little formality as is needed for withdrawing it from the U.S.A. or Switzerland, the flow of capital that is desirable for development will not occur. If the various members of the sterling area come to feel that, when they have any money in London, they cannot be sure of withdrawing it at their will, they will tend to keep their funds elsewhere. But Prof. Robbins feels that, if any attempt to make sterling convertible were made before certain fundamental conditions are satisfied, it would have to be speedily reversed and Britain would be further away from the desired goal.

The reasons for caution in the matter are several. First, the latest favourable turn in Britain's balance of payments and the increase in its reserves have been achieved by a degree of import restrictions which the country does not wish to maintain indefinitely. Before proceeding further towards convertibility, Prof. Robbins desires the country to see how it sustains some relaxation of import restrictions. He wants Britain to be sure of a reasonable hope of achieving a continuing surplus for a considerable period ahead.

Secondly, the reserves of Britain must be large enough to sustain it in the event of a general worsening of the situation owing to some general slackening of demand, e.g., mild recessions of the kind which came in 1949 and which may come again on a much larger scale. Britain would be running an unjustifiable risk if it were to proceed much further towards convertibility until its reserves are much larger than their present magnitude. If Britain can be sure of securing an adequate reinforcement by international negotiations, which do not involve it in intolerable burdens in other respects, it can proceed further towards the goal of full convertibility, much faster. But, if it cannot make sure of this, it will have to proceed with adequate caution.

The final reason for great circumspection is the possibility of inaction on the part of other countries. If Britain declares convertibility, while other countries fail to do so, it would expose itself to a strain from which it is free at present and which may prove excessive for it, unless its position becomes much stronger than it is at present. If sterling becomes convertible, any country suffering from a dollar shortage may be tempted to impose additional restrictions upon imports from the U.K. Hence, in Prof. Robbins' opinion, it would be unwise for Britain to make a unilateral declaration of convertibility and its negotiations should be directed to securing a multilateral declaration of convertibility.

A. F. JUDD, *Manager*

The measures considered above, if carried out resolutely, would help to restore some balance and stability in the world provided that expenditure remains approximately stable, that is, free from any serious curtailment and tending to increase along with the advance of population and production, but not more rapidly. In the fulfilment of this proviso, a very special responsibility rests with the financial authorities of the U.S.A., because the volume of expenditure which they control is very large relatively to the rest of the world. If they keep the money incomes of the American people roughly in step with their own increase in production, a severe collapse of aggregate demand elsewhere is unlikely, although local inflations, which produce adverse effects on international balance and stability, may not be avoided altogether. Concerted international attempts, especially through the central banks, to achieve this objective, are greatly needed.

In recent months, there has been much talk of plans for the stabilisation of the prices of staple foods and raw materials. But experience has shown Prof. Robbins that this path to stabilisation is beset with dangers of restrictionism and the consolidation of sectional interests. He has much better hope of action based upon the existing beginnings of arrangements for co-ordination of purchase of strategic materials. But the main effort in the direction of general stabilisation must be made in the sphere of finance, through central banking arrangements for the entire free world. This, Prof. Robbins admits, would be a difficult matter in a world full of political divisions.

Functioning of I.M.F.

Prof. Robbins then goes on to examine the functioning of the International Monetary Fund. He states that the negligible volume of business which it has done hitherto, either on account of the disinclination of some members to have recourse to it or the disinclination of the governing body to risk its funds, is incapable of producing any stabilising influence in the world. In his opinion, four things are necessary before the Fund can begin to perform the functions that are necessary, if something like central banking arrangements for the Western world are gradually to come into being. First, there must be some modification of the absurd system of government, whereby the most delicate and the most responsible business of the Fund is conducted by a large board of directors or their alternates, sitting in almost continuous session. The conduct of the Fund's affairs should be concentrated in the hands of a small number of trusted persons, with full authority to go for weeks or months at a time, with negotiations which they need report to the governing body only after they have been completed. Secondly, if the Fund is to perform large functions of international stabilisation it will need more money. Thirdly, if the Fund is to lend more, it is necessary to modify the provision made in the statutes of the Fund that its officials cannot comment on the business of the members or take into account domestic policies, when deciding on eligibility for credit facilities. Finally, the two biggest members of the Fund, namely, the U.S.A. and Great Britain, should determine to work together harmoniously to make the Fund work actively and become an instrument of common policy.

As regards the International Bank, Prof. Robbins thinks that it is the only international institution which has justified reasonable expectations that were entertained about it when it was created. It is true that the amount it has lent has not been large, but it has been quite as much as the Bank could have lent prudently. If, as time goes on, larger openings present themselves, beyond its present capacity to finance, the very fact that so far it has lent its funds carefully, will make it easier to arrange the necessary extensions of its facilities. But Prof. Robbins takes the view that expenditure of this sort should be looked upon as a consequence rather than a cause of the establishment of reasonable international balance. He thinks that given confidence and a demonstration of the willingness and ability of the various Governments of the free world to pay their debts and to provide for the reasonable treatment of funds which are invested within their borders, the provision of development finance should not be a matter of great difficulty. However, confidence will not be re-established, unless there is political stability in the world. And political stability in the world cannot be attained, unless the Western Alliance is strong and united. It is, therefore, obvious that there must be closer understanding between the Western powers not only on political issues but also on the economic policies to be pursued by them.

NEW PUBLICATIONS

Location of Indian Industries. By Dr. M. M. Mehta. Publishers: Friends' Book Depot, 12, University Road, Allahabad. Price: Rs. 2.

IN this book, Dr. Mehta has enunciated the principles governing the location of manufacturing industries and, in the light of these principles, has sought to consider whether the distribution of industrial activity in India is conducive to the attainment of greater economy and efficiency. The industries which the author has selected for his study are cotton textiles, jute, iron and steel, sugar, paper, cement and coal. The analytical survey of these Indian industries clearly reveals that the distribution of productive activity is extremely uneven, both absolutely and in relation to the distribution of industrial population. In the opinion of the author, there is need for a wider dispersal of productive activity. According to him, the two guiding principles that should govern the location of an industry are: (1) maximum economy in production and distribution and (2) avoidance of excessive concentration of industrial activity in a few important centres.

Although these principles are by no means new, Dr. Mehta has done well to drive home, once again, the fact that, unless the individual units are so located that the cost of production tends to be as low as possible, the efficiency and competitive power of industry will be seriously impaired. A systematic exposition of the theory of industrial location, as Dr. Mehta has pertinently remarked, is essential both for understanding the present pattern of industrial distribution and for formulating a correct policy of locational planning based on broader economic, social and strategic considerations.

Elements of Indian Company Law. By Sohrab R. Davar. Published by the Progressive Corporation Ltd., Jehangir Wadia Building, Esplanade Road, Bombay. Price: Rs. 11.

This is the fifth edition of this very popular book which, it may be mentioned, was published as early as in 1921. Indeed, the book is looked upon as an excellent treatise on company law, both statute and case law—Indian and English.

In the revised edition, Mr. Khorshed D. P. Madon has brought the book up to date by incorporating the modifications made in the company law, in India and England, in the past four years. The most important change in England has been the complete overhauling which the Companies Act went through in 1948. In India, the Banking Companies (Amendment) Act, 1950, and the Indian Companies (Amendment) Act, 1951, have brought about marked changes in the statutes governing operations of corporations, since the passing of the Indian Companies (Amendment) Act, 1936. All these changes have been incorporated in the publication under review. Important recent cases have also been added. The utility of the publication is enhanced by the reference to the vital points of difference between the English and the Indian law and inclusion of selected questions. The book also contains the full text of the Indian Companies Act, 1913, as amended to date. There is no doubt that the publication will continue to be of immense use not merely to the students of Company Law but also to the commercial public.

The Principle and Problems of Inheritance Taxation. By R. N. Bhargava. Published by Nand Kishore and Bros., Banaras. Price: Rs. 3-8.

This book is a welcome addition to the scanty literature available in this country on death duties and inheritance taxes. It is also welcome for the reason that it is so topical, now that the Government of India has sponsored legislation for levying estate duty. Appropriately enough, the author discusses the subject of inheritance taxes from two points of view—from the purely theoretical aspect (covered in the first part of the book) and from the aspect of the special difficulties in India (covered in the second part). He defends inheritance taxes against its critics, but says that, although the effect of these taxes is to reduce inequalities in wealth, this should not be made the sole criterion for their levy. In the second part, which is really the more important part of this book, he subjects the proposed levy of death duties to a careful scrutiny. Among his many suggestions, mention must be made of his plea for earmarking the revenue from death duties for developmental activities such as education and public health. He makes this suggestion with a view to minimising the opposition to these taxes. He would place the initial exemption limit for estate duties at Rs. 1 lakh. He emphasises—rightly enough—the need for educating public opinion and for establishing an "efficient and honest tax-collecting organisation."

Petroleum Measurement (British Edition). Prepared jointly by the American Society for Testing Materials and the Institute of Petroleum. Published by the Institute of Petroleum, 26, Portland Place, London, W. 1. Price: £2 10s. (post free).

These tables have been prepared to meet a demand from the petroleum industry, and also from those using and handling petroleum products, for authoritative tables in computing oil quantities in British (Imperial) units of weights and measures. The tables form part of a trilogy which includes volumes covering the United States and the Metric systems. When complete, the three volumes will, therefore, form a comprehensive collection of oil measurement tables, based on the latest scientific data.

The British volume includes full and accurate tables for specific gravity and volume reduction to 60° F., and for weights per unit volume and volumes per unit weight, over the specific gravity range 0.500 to 1.100, generally at intervals of 0.001. Thus, the tables published by the Institute of Petroleum in 1945 have been extended both in the gravity and temperature ranges, the latter now covering 0° to 250° or 300° F. as required. Additional useful tables have also been included in this new volume. Each table is preceded by its own introductory notes showing the purpose of the table and giving examples of its use.

The number of significant figures retained in printing is sufficient to ensure that the accuracy attainable in practical measurement is not lost in subsequent arithmetical calculation.

The Tabulator. Published by Hollerith (India) Ltd., Liberty House, Marine Lines, Bombay 1.

This is a journal devoted to Hollerith punched card accounting, and published by Hollerith (India) Ltd., the Indian counterpart of the renowned British Tabulating Co., Ltd. All users of Hollerith machines, which have done so much to save labour and achieve precision in accounting methods, will welcome this journal. Hollerith machinery, as Mr. Gordhandas G. Morarji points out in his message to this journal, help keep pace not only with the demand of modern accounting, with its ever-increasing *tempo* and complexity, but also with the voluminous increase in work brought about by the rapid growth and expansion of large commercial undertakings. The journal carries, among other articles, a pen-portrait of the distinguished Chairman of Hollerith (India) Ltd., Mr. V. N. Chandavarkar, and a description of the use of Hollerith punched card in the leading textile mill, the Bangalore Woollen, Cotton and Silk Mills. The journal is a valuable part of the contribution which the British Tabulating Company is making to the cause of efficient industrial and commercial management in this country.

Hyderabad in Maps. Prepared and Issued by the Bureau of Economics and Statistics, Government of Hyderabad, Hyderabad (Deccan). Price: Re. 1-8.

The book, *Hyderabad in Maps*, is a pictorial presentation of the essential features of the State's economy. There are 25 maps with brief surveys depicting different aspects such as physical features, soils and rainfall, population, agriculture, livestock, irrigation, geological features and minerals, industries, transport, credit facilities and social services. A glance at these maps will enable one to get a bird's-eye view of the composition of the State's economy and will also enable one to form a comparative estimate of the different regions within the State. The efforts of the Bureau of Economics and Statistics (Government of Hyderabad) in bringing out this much useful publication are, indeed, commendable.

LIBERALISATION OF IMPORT CONTROLS

TRADE CALLED TO MOVE WITH THE TIMES

THE composition and distribution of trade have undergone substantial changes in the world since the war. Countries of the world have been striving to become self-sufficient in essential commodities which in turn is having a restrictive effect on the volume of trade. Foreign trade is being shaped and adjusted to suit the availability of foreign exchange resources, through bilateral trade agreements and import restrictions. India's foreign trade has been no exception to this general trend of world trade. Further, it has been affected by its own trade policy designed to bring down domestic price levels, to maintain wage levels and to ensure full employment. In the result, to-day this country is exporting finished goods and importing raw materials from abroad, while it was the reverse in the pre-independence period. The partition of the country itself has been the main cause for this shift in the composition of India's foreign trade. Further changes in the composition of this country's foreign trade can be expected to take place with the implementation of the principles of foreign trade now laid down by the Planning Commission. These principles are: fulfilment of the production and consumption targets set in the Plan, (2) maintenance of high level of exports, (3) keeping the deficits within the limit of foreign exchange resources of the country, (4) framing the composition of imports and exports to fit in the price policies required to implement the Plan and, lastly, continuation of the trade policy in such a way as not to disturb either the trade relations with other countries or the plans of domestic industry and trade. The Commission has emphasised that the Government should adhere to these principles and adapt them, whenever necessary, to the changes in volume, composition and direction of foreign trade that may be brought about in the period of the Plan by factors beyond the control of this country.

Change in Attitude

The changes that are thus taking place in the field of India's foreign trade call for a complete change in the attitude of those engaged in both the import and export trades of India. Both sectors of trade must bear in mind that vital changes are taking place in the economy of the country. Thus, new industries are rising, old ones are expanding; the pattern of import trade is changing gradually to assist these industries in their expansion programmes; controls—industrial and otherwise—are being administered to suit their welfare; they are being supported and sheltered by protective tariffs; with the increase in the output of these industries, the imports of the goods concerned are being curtailed; facilities are being provided for the expansion of their products. The import trade, particularly, should now feel that, in view of the large sums staked in the domestic industry and the service which they are rendering to the country by offering fresh opportunities of employment, it should stand by the new industries, establish contacts with them, advise them on the requirements of markets and encourage them to produce quality goods rather than trying to find fault with them and bring discredit to their goods. The indifference to the indigenous product on the part of established importers will be the cause of their extinction, because somebody else will take their place by associating themselves with the indigenous manufacturers. This danger of being ultimately ousted from the trade should arouse them to the need for an adjustment in their attitude towards industries and import controls.

Viewed against this background, some of the remarks made by Mr. Chonoobhai C. Zaveri, President, All-India Importers' Association, in his address at the annual general meeting of that body held on the 13th inst., at Bombay, will be considered quite timely. Although he did not explain, in so many words, what we have stated above, he did well in advising the trade to move with the times and adapt itself to new conditions. He told them that the promotion of industrialisation of the country, protective tariffs to products of indigenous industries, the issuance of special licences to actual users, the unfavourable foreign exchange position, a relatively small increase in imports as envisaged in the Five-year Plan were all factors which portended continuation of controls. He wanted the trade to remember that controls in some shape or other had come to stay and that the trade should reconcile itself to them.

Although Mr. Zaveri has not referred to the role of the trade in the implementation of the Five-year Plan, his remarks on the Plan give us an idea of the reactions of the import trade to it. He seems to think that by enforcing a high standard of efficiency in all spheres of work, the standard of living visualised in the Plan can be raised and sustained. He considers that it is not an impossible task, if all the available resources are judiciously tapped and harnessed. In this context, he feels that reduction in taxation for stimulating savings and economies in administrative expenditure are also necessary for the successful implementation of the Plan. He is, however, conscious that the increased money incomes generated by the Plan will raise the volume of effective demand for consumer goods which can be met only by a larger volume of imports from abroad until such time as the new production is made available for consumption. Again, with the increased earnings, higher standard of living and growing population, the demand for consumer goods would, according to him, further increase, and he opines that, if the import of these goods were curtailed, there would be inflation. These factors, he says, call for a rational, well-regulated, far-sighted import policy to hold down prices and keep the wolf of shortages from the door.

Abuse of Licences

The one common complaint against the issue of actual users' licences all these days has been the abuse of these licences by the user-importers. Mr. Zaveri reveals now another defect in this system, and the root cause of it is the manner in which the licences are being recommended by the State Governments. The actual users' licences are granted on the strength of certificates issued by the Director of Industries of the State where the factories are situated after verifying the factories' manufacturing capacity and their actual requirements. This provides another avenue for corruption. In Bombay, for instance, we are told that licences for an astounding quantity of art cards for printing presses—a quantity which is considered to be impossible for any printing press to consume within a single licensing period—have been issued. In another case, a firm has been granted "an import licence for an exceptionally large amount for manufacturing paper bags for packing intended for a cement company which, it is reported, never received them." Licences are also issued to fictitious firms which are not in existence or to those whose whereabouts are untraceable. These are, if true, glaring instances of gross misuse of authority given to State Governments. This is attributed to the recommendations of Inspectors of Weights and Measures who are blissfully ignorant of the trade but the requirements of which they are required to testify. These allegations deserve to be looked into by the import control authorities.

The President of the A.I.I.A. has no doubt welcomed the liberalisation of the new import policy. He, however, feels that the policy of holding back the announcement of import policy of certain items at the time of general declaration of policy is not in the interest of the trade. For it invariably induces speculation in these items, pushing up their rates to dizzy heights sometimes, as in the case of zip fasteners. He suggests, therefore, that the Government should announce the policy of all such items simultaneously with others one month prior to the commencement of the next licensing period, after thoroughly examining the stock position, etc., of such commodities. The suggestion is sound and as such should be acceptable to the Government.

Another point raised by Mr. Zaveri relates to the different interpretations of import policy by different import control authorities in different ports. It is stated, for instance, that the imports of sewing machine needles, Wincarnis, gripe water, and Listerine are being given quite the opposite interpretation in the three different ports. The confusion caused thereby is worse confounded by a fourth interpretation by the Customs authorities. What is needed, therefore, is uniformity in interpretation of the Government's policy for all imported items. One, perhaps the most effective, way of bringing about this improvement, is to hold periodical conferences of the Regional Import Controllers, preferably immediately after the announcement of a new policy. This will give them an opportunity to get their doubts cleared and to obtain an insight into the Government's policy.

U.K.'S TRADE WITH INDIA IN 1952

CLOSE RELATIONS MAINTAINED

THE most striking feature disclosed by the figures relating to Indo-British trade in 1952, revealed by the *Trade and Navigation Accounts of the U.K.*, is the high rank occupied by India in the foreign trade of the U.K. Thus, while India ranked sixth as a market for the U.K.'s exports, it held the seventh place as a supplier of the goods required by the U.K. This reflects how the two countries are closely knit together, both economically and commercially. A detailed analysis of the figures reveal more significantly the economic interdependence of the one on the other.

The total value of mutual trade between the United Kingdom and India in 1952 was £227 million, as compared with £268 million in 1951 and £195 million in 1950. Of this total, U.K. imports from India accounted for £115 million and U.K. exports to that country for £112 million. The respective figures for 1951 were £153 million and £115 million. Thus, as compared with the figure for 1951, U.K.'s offtake from India declined by 24 per cent. while its despatches were lower by only 2 per cent.

U.K. Exports to India

In 1952, India received 4.3 per cent. of the total U.K. exports to all countries, as compared with 4.4 per cent. in 1951 and 1950. Yet India ranked as the sixth best customer of the U.K., though in the previous year, it held the fifth rank. Another notable feature is that U.K. exports to India, in the first half of the year, were higher than in the second half. The monthly average of total exports in the first half was £9.8 million which declined to £8.8 million in the second half.

The table below gives the comparative performance of the various items of U.K. exports to India in the years 1951 and 1952.

(£, 000's omitted)

	1951	1952
Total all exports	115,189	112,149
Of which :—		
Machinery	34,169	35,626
Vehicles (including ships and locomotives)	22,846	16,823
Iron and steel and manufactures	6,724	7,799
Pottery, glass, abrasives, etc.	2,032	1,885
Non-ferrous metals and manufactures	2,501	2,351
Cutlery, hardware, implements and instruments	3,983	3,572
Electrical goods and apparatus	8,022	11,391
Cotton yarns and manufactures	2,721	3,481
Woollen and worsted yarns and manufactures	4,808	4,840
Silk and artificial silk yarns and manufactures	1,150	691
Chemicals, drugs, dyes and colours	11,545	9,967
Paper, cardboard, etc.	2,129	2,128

From the table above, it will be seen that machinery continued to dominate the picture during both the years. In 1952, India's imports of machinery from the U.K. amounted to £35.6 million, accounting for a tenth of the total machinery exports of the U.K. Again, they were 5 per cent. above the 1951 figure. In terms of volume, the total machinery despatched to India amounted to 96,000 tons, as against 104,000 tons in the previous year. This country was, in fact, a large and important market for U.K. machinery, being its second largest customer. Further, the year under review was a record one for the value of British textile machinery sent abroad, with India easily heading the list. Britain sent to India 19 800 tons worth £8.6 million, as against 15,200 tons valued at £6.2 million in 1951. Exports of combustion engines to India came next, valued at £1.3 million, as against £1.4 million. The value of exports of electric generators followed closely at £1.2 million, as against a like amount in the previous year. Other items included electrical machinery of other descriptions (£3.6 million), agricultural machinery (£460,000), boilers and boiler-house plant (£1.4 million) and mechanical handling equipment (£1.0 million).

The second largest item of U.K. exports to India, next to machinery, composed vehicles including ships and locomotives. These, in value, amounted to £16.8 million, as against £22.8 million in 1951. India received more British locomotives during the year than any other country, the total being 193, valued at £2 million. Britain also sent £1.5 million worth of locomotive parts. Among other vehicles were 6,400 cars worth just over £2 million, 370 commercial vehicles at £244,000 and 1,800 chassis for motor vehicles other than car type at £198,000. As many as 220 000 bicycles were also received by India in 1952, as against 277,000 in the previous year. Exports of parts and accessories of bicycles to India, however, rose from £432,000 to £646,000 during the year under review.

The value of electrical goods exports to India took third place at £11.3 million, as against £8.0 million in the preceding year. Chemicals, drugs, dyes and colours ranked fourth at £9.9 million as against £11.5 million in 1951.

Other exports of British goods to India included iron and steel and their manufactures worth £7.8 million, woollen and worsted yarns worth £4.8 million, cutlery, hardware, implements and insulators valued at £3.6 million. Exports of cotton yarns and manufactures were of the order of £3.4 million.

British Imports from India

An idea of India's place in the imports of the United Kingdom can be had from the fact that over 60 per cent. of the tea, 84 per cent. of the jute piecegoods, 90 per cent. of the jute sacks, bags, etc., and 63 per cent. of the unmanufactured stripped tobacco which Britain imported in 1952 came from this country.

The total imports of British goods from India during the year, as stated already, amounted to £115 million or 24 per cent. less than in 1951. The following table gives the comparative figures relating to the main items of British imports from India during 1951 and 1952.

(£, 000's omitted)

	1951	1952
Total all imports	153,396	114,554
Of which :—		
Tea	44,401	48,732
Tobacco	6,925	6,956
Non-metalliferous mining and quarry products other than coal	2,672	2,761
Non-ferrous metalliferous ores and scrap*	1,993	3,199
Raw cotton and cotton waste	4,212	2,301
Wool, raw and waste and woollen rags	5,210	3,449
Seeds and nuts for oil, oils, fats, resins and gums	7,135	6,144
Hides and skins, undressed	1,978	538
Woollen and worsted yarns and manufactures†	4,597	1,231
Coir mats and matting	2,346	1,216
Jute manufactures	25,492	13,256
Oils, fats and resins, manufactured	2,085	1,230
Leather and manufactures	19,785	9,284

* Mainly manganese ore.
† Mainly carpets, floor rugs, etc.

The table above discloses that, by far the largest import item was tea, valued at £48.7 million, 11 per cent. higher than that in 1951. Tea accounted for 42 per cent. of the total imports from India. The quantity of tea imported rose from 276 million lbs. in 1951 to 304 million lbs. in 1952. India's share in the total imports of tea by the U.K. was 61 per cent. as against 60 per cent. in 1951.

The second largest item was jute manufactures, valued at £13.2 million, showing, however, a fall of 48 per cent. as compared with the imports in the previous year. The fall reflects the effect of high prices and the high level of export duties which continued till May, 1952.

Leather and leather manufactures figure as the third biggest item in Indian exports to the U.K. Although these declined from £19.8 million to £9.3 million, India continued to remain Britain's biggest supplier of leather and manufactures.

Imports of tobacco at £6.9 million in 1952 showed little change from those in 1951. The £6.14 million worth of imports under the heading "seeds and nuts for oil, oils, fats, resins and gums," which Britain took from India during the year, included 6,600 tons of shellac, seed lac and stick lac to the value of £1.8 million.

A 50 per cent. increase was recorded in imports of non-ferrous metallic ores and scrap which were valued at £3 million, as against £2 million in 1951.

Substantial declines were recorded in the U.K.'s imports of raw cotton and cotton waste, and wool, raw and waste and woollen rags from £4.2 million and £5.2 million to £2.3 million and £3.4 million respectively. Imports of hides and skins undressed revealed a marked fall from £1.9 million to £538,000. Imports of coir mats and matting also receded markedly from £2.3 million to £1.2 million.

IMPORT POLICY FOR 13 ITEMS ANNOUNCED

The import policy covering 13 of the items held over during the declaration of the policy in December last for the current half-year was announced by the Government of India last week. A chief feature of this announcement is the grant of a quota of 20 per cent. for cycles, entire or in sections. It may be recalled, in this connection, that no quota had been granted for cycles for the period July-December, 1952, although, in the first half of 1952, a 40 per cent. quota was allotted. The absence of any quota for the second half of the year and the postponement of the decision last December had raised a chorus of protests from cycle dealers all over the country. The present announcement will undoubtedly remove the uncertainty in the trade which had been prevailing so far; nevertheless, the fact remains that the delay in announcing this is inexcusable. No quotas for the current half-year have been granted for cycle parts and old newspapers. The 30 per cent. quota given to chicory in the last half-year has now been removed.

Among other items, zip fasteners with celluloid teeth have been given a quota of 20 per cent. against nil in the last half-year. For zip fasteners with metal teeth, however, the quota has been reduced from 20 to 10 per cent.

The items for which quotas have been cut include betelnuts which get a quota of 33⅓ per cent. instead of 50 per cent. formerly, and spindle tape 20 per cent. instead of 50 per cent. For flashlights, too, the quota has been reduced from 25 to 10 per cent., for fibre-board from 50 to 25 per cent. Paste-board has received an allotment of 5 per cent. as against 12½ per cent. in the last half-year. The quotas for some types of ball bearings have also been cut.

BUILDERS' HARDWARE INDUSTRY

A vigorous plea for a complete ban on imports of steel hinges for giving protection to the indigenous industry was put forward by Mr. Ajoyendu Paul in his presidential address at the first annual general meeting of the Builders' Hardware Industries Association of India held early this week in Calcutta. He urged the Government of India to make available raw materials in sufficient quantities and do away with the restrictions relating to end-use of steel. He regretted that although the industry requested the Government to refer its claims to protection to the Tariff Commission as far back as in 1952, no action had so far been taken.

The Government of India's indifference to the claims for tariff protection of the builders' hardware industry appears to be rather strange in view of the present developed position of the industry as depicted by Mr. Paul. The industry, according to him, is fairly established in India. It was in the thirties that the first units of the industry were started. And since then it has had a creditable growth. At present, there are 54 factories employing about 10,000 men. It is claimed that the industry has attained self-sufficiency in the production of many items such as tower-bolts, pad-bolts, padlocks, etc. It is heartening also to learn that their quality is comparable with foreign manufactures and that the price of tower-bolts and pad-bolts are the cheapest in the world. Further, although the capacity of the industry regarding the production of steel hinges is sufficient to meet the requirements of the industry, it is alleged that liberal and, at times, indiscriminate imports had affected production adversely. The imports during 1951-52 were of the value of Rs. 53 lakhs, as against Rs. 24 lakhs in 1950-51, and Rs. 32 lakhs, in 1949-50. The Government had placed imports of hinges on the free licensing list in 1951. Following representations against these indiscriminate imports, the Government, however, instituted a system of confirmation of licences during January-June 1952, continuing at the same time the policy of free licensing system. During July-December, 1952, however, it did not issue licences. But for January-June, 1953, it has allowed 10 per cent. of imports. Even this 10 per cent. is considered unfair by Mr. Paul who desires that it should be banned, as at present the importers have with them huge stocks of hinges left unsold.

The builders' hardware industry would appear to be experiencing two difficulties in regard to the supply of raw materials. First, the quantity of steel allocated is inadequate and, secondly, the available quota is not supplied in the form of sheets, as the industry needs sheets as its raw material. Of the 54 units, 16 are receiving their quota from the Central Government and the rest from the State Governments. The Central allocation is about 2,500 tons per annum, while no reliable figures are available about the allocations by the State Governments. Mr. Paul averred that these quotas would hardly set in motion 50 per cent. of the installed capacity. He, therefore, pleaded for liberal allocations of sheets, as the industry was mainly a sheet consuming industry. Any stipulations with regard to steel acquisition, the President remarked, would hit the industry hard.

Another difficulty which the industry is facing relates to end-use of steel. In the context of reduced demand and depressed market conditions, restrictions on end-use have created an anomalous situation, inasmuch as manufacturers having steel for a particular end-use for which there is no demand cannot change over to other uses. The President felt that option should be given to the manufacturers to use the allotted steel for the manufacture of any item for which there was demand.

NUTRITION VALUE OF "VANASPATI"

The findings of the research on the nutritive value of *vanaspati* have been published by the Government of India. They are based on comprehensive investigations, covering animal experiments, human metabolism studies, and institution feeding experiments according to a plan laid down by an expert committee. The data collected was statistically analysed at the All-India Institute of Hygiene and Public Health, Calcutta. The findings place *ghee* as the best in regard to nutritive value. Raw groundnut oil, refined groundnut oil and *vanaspati* of melting point 37 degrees C. fall into one group and are next best to *ghee* in so far as their nutritive values go. *Vanaspati* of melting point 41 degrees C. figures third in nutritive value.

The research on nutritive value was undertaken just over six years ago on account of pressure being brought to bear upon the Government of India to suspend the manufacture of *vanaspati* in the country on the ground that its consumption was injurious to human health. The agitation went so far as to get a Bill introduced in Parliament to that effect. It was not, however, proceeded with, as the Government assured Parliament that the use of *vanaspati* was not injurious to health as the results of the research initiated by it had proved.

It may be recalled here that, at a meeting of the Technical Panel of the Department of Food in November, 1946, it was decided that a comprehensive and critical scientific investigation of the nutritive value of *vanaspati* should be undertaken. The Technical Panel formed a *Vanaspati* Research Planning Committee of scientific workers, representing different laboratories interested in food and nutrition problems. The object of this Committee was to co-ordinate experiments at a number of centres and to present a precise and authoritative report on the subject. The findings on *vanaspati* noted above were as a result of these experiments, and have been recorded in a book entitled *Investigations on the Composition and Nutritive value of Vanaspati*, published under the joint auspices of the Central Ministry of Food and the Council of Industrial Agricultural Research. With the publication of this book, all suspicions regarding the food value of *vanaspati* would, it is to be hoped, be laid at rest.

COMMERCE
ANNUAL NUMBER 1952
On Sale Now

Price Rs. 7/8 only

This Number contains a comprehensive review of important developments in the sphere of Finance, Industry and Commerce during 1952, besides 45 feature articles by leading economists and eminent business men. The Number is invaluable to all business men, economists and students of economics.

RECOMMENDATIONS OF FINANCE COMMISSION

ALLOCATIONS TO STATES RAISED SUBSTANTIALLY

A SUBSTANTIAL transfer of resources from the Centre to the States has been recommended by the Finance Commission in its report which was presented to Parliament by the Finance Minister on the 13th inst. Under the Commission's recommendations, which have been accepted by the Government of India, the total amount of Central grants and devolution of revenue to the State Governments will be of the order of nearly Rs. 86 crores annually, as against an average annual sum of Rs. 65 crores for the three-year period 1949-50 to 1951-52.

The main recommendations of the Commission are:

(a) increase in the percentage, from 50 to 55, of the net proceeds of income-tax to be assigned to the States;

(b) increase in the grants-in-aid by the Centre to the four States of Assam, Bihar, Orissa and West Bengal in lieu of their share of the export duty on jute and jute products;

(c) allocation to the States of a share in certain Union excise duties, namely, tobacco, matches and vegetable products;

(d) increased and additional grants to certain States which are considered by the Commission in need of assistance, and

(e) grants to certain less developed States for expansion of primary education.

The Commission has also laid down certain general principles to regulate grants-in-aid to States from the Centre.

The Finance Commission was appointed by the President under Article 280 of the Constitution. The Commission assumed office on 30th November, 1951, and submitted its report to the President on 31st December, 1952. As, after the constitution of the Finance Commission, the President has to take into consideration its recommendations before prescribing the grants payable to States under Articles 273 and 275 of the Constitution and in the allocation of revenue between the Centre and the States, the Commission had made an interim recommendation in December, 1951, suggesting the continuance of the then existing arrangements for the year 1952-53 also, pending formulation of its final recommendations. The Commission has now suggested that, except on two points, its recommendations should take effect from 1st April, 1952.

Need for Increasing States' Resources

The Commission considers that the resources of the State Governments need to be augmented. The various memoranda submitted by the State Governments, as well as the discussions that the Commission had with the representatives of the States, have left it in no doubt, the Commission observes, "about the imperative need for a substantial augmentation of the revenues now available" to the State Governments. "We had, however, to take into account not merely the needs of the States but the ability of the Centre as well to assist the States by the transfer of a large portion of its revenues."

In making its recommendations, the Commission has kept three main considerations in view. Firstly, the additional transfer of resources from the Centre must be such as the Centre could bear without undue strain on its resources, taking into account its responsibility for such vital matters as the defence of the country and the stability of its economy. Secondly, the principles for the distribution of grants-in-aid must be uniformly applied to all A and B States. Lastly, the scheme of distribution should attempt to lessen the inequalities between States.

Allocation of Income-tax

Under Article 270 of the Constitution, the Commission is required to make recommendations to the President in regard to three matters concerning income-tax, namely, (a) the percentage of the net proceeds of income-tax which may be assigned to the States, (b) the manner in which the share so assigned shall be distributed among the States, and (c) the percentage of the net proceeds of the tax which shall be deemed to represent proceeds of the tax attributable to Part C States.

At present, 50 per cent. of the net proceeds of income-tax is assigned to the States. The Commission has recommended its increase to 55. The percentage which should be deemed to represent the share of the Part C States has been fixed at 2.75.

The Commission has suggested that the States' share of income-tax should be distributed as follows:

States	Commission's recommendation	States	Commission's recommendation
	Per cent.		Per cent.
Assam ..	2.25	Orissa ..	3.50
Bihar ..	9.75	P.E.P.S.U. ..	0.75
Bombay ..	17.50	Punjab ..	3.25
Hyderabad ..	4.50	Rajasthan ..	3.50
Madhya Bharat ..	1.75	Saurashtra ..	1.00
Madhya Pradesh ..	5.25	Travancore-Cochin	
Madras	15.25	Cochin ..	2.50
Mysore	2.25	Uttar Pradesh ..	15.75
		West Bengal ..	11.25

The Commission points out that there was an "almost unanimous demand" from the States for an increased share in income-tax. While it is undesirable, according to the Commission, to concentrate on income-tax as a balancing factor in the adjustment of resources between the Centre and the units, nevertheless, on a consideration of various factors, it feels that some increase in the share assignable to the States is justified.

Criteria of Distribution

The Commission analyses exhaustively the claims advanced by the States for an increased share of income-tax and the bases suggested for its distribution and comes to the conclusion that the following should be the main considerations in determining distribution of income-tax:

(a) A general measure of needs, furnished by population and (b) contribution.

On a broad view of the position, the Commission proposes that 20 per cent. of the States' share of the divisible pool of income-tax should be distributed among the States on the basis of the relative collections of States and 80 per cent. on the basis of their relative population according to the census of 1951. Applying this formula to the collections during the three years beginning March, 1951, with certain adjustments for the Part B States, the Commission has recommended the fixed percentages mentioned earlier.

In making the allocation to the States, the Commission has taken into account the population and collections of the "merged areas" (former Indian States) included in the various Part A States. As these States will be receiving their share of divisible taxes on a common basis with all the other States, the Commission has suggested that "the revenue gap grants" which the States of Bihar, Bombay, Madhya Pradesh, and West Bengal are now receiving in respect of "merged areas" should be discontinued with effect from 1st April, 1952. Part B States will, however, receive their share of revenue or the guaranteed revenue gap grants, whichever is more.

Union Excise Duties

As part of its scheme of assistance, the Commission has made certain specific recommendations for distributing duties. These recommendations can be implemented only when the necessary legislation is enacted by Parliament.

Distribution of Union excise duties was not specifically included in the Commission's terms of reference but the Commission was convinced that it was open to it to suggest such distribution as part of its plan of assistance. A number of State Governments had raised this claim before the Commission.

The Commission, however, does not consider it desirable, at any rate for the present, to distribute all Union excise duties. Three such items —tobacco including cigarettes, cigars, etc., matches, and vegetable products—are considered by the Commission most suitable for distribution on the ground that they are of commodities which are of common and widespread consumption and which yield a sizable sum of revenue for distribution. It has been recommended that 40 per cent. of the net proceeds of these duties should be allocated to the States and distribution among them should be made in proportion to their population. The shares of the individual States will be:

States	Per cent.	States	Per cent.
Assam ..	2.61	Orissa ..	4.22
Bihar ..	11.60	P.E.P.S.U. ..	1.00
Bombay ..	10.37	Punjab ..	3.66
Hyderabad ..	5.39	Rajasthan ..	4.41
Madhya Bharat ..	2.29	Saurashtra ..	1.19
Madhya Pradesh ..	6.13	Travancore-Cochin	2.68
Madras	16.44	Uttar Pradesh ..	18.23
Mysore	2.62	West Bengal ..	7.16

As a corollary to this recommendation, the Commission suggests that the present arrangement, whereby certain States, namely, Bombay, Madras and Madhya Pradesh, do not levy taxes on tobacco and receive in lieu some compensation from the Centre, should be discontinued with effect from 1st April, 1953. The States concerned should be left free to levy such taxes as they like.

The Commission has suggested that action to promote the necessary legislation for the implementation of these recommendations should be taken at the earliest possible date and the legislation should be given effect from 1st April, 1952.

Jute Export Duty

Under the Government of India Act 1935, 62½ per cent. of the net proceeds of the export duty on jute and jute products were allocated to the jute-growing Provinces. After the Partition, which resulted in considerable parts of the jute-growing area of undivided India being included in Pakistan, the share was reduced to 20 per cent. The Expert Committee on financial provisions of the Union Constitution suggested that the export duty should not be shared but grants-in-aid should be given to the Provinces in lieu of the duty for a transitional period.

Under Article 273 of the Constitution, grants-in-aid have to be paid for a transitional period to the States of Assam, Bihar, Orissa and West Bengal, in lieu of their share of the export duty on jute and jute products. The Deshmukh Award fixed the grants-in-aid to the concerned States at:

(Rs. lakhs)

West Bengal ..	105	Bihar	35
Assam	40	Orissa	5

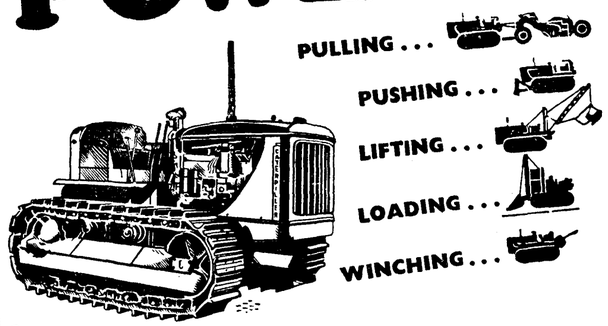
POWER FOR



'CATERPILLAR' DIESEL TRACTORS

The "Caterpillar" Diesel Tractor has as many profitable uses as there are power jobs! You can harness its horsepower to pull, push, lift or load.

All 5 sizes (32 to 130 drawbar HP) are built to carry the super-imposed loads—and to withstand the operating stresses of front, rear or side mounted equipment. And world-proved matched equipment —dozers, power control units, side-booms, loaders, winches, scrapers—built expressly to team with this power, enables us to fit your specialized needs.

Ask one of our engineers to size-up your equipment needs, and estimate for you the advantages of "Caterpillar" Diesel Tractors.

Compare these advantages of "Caterpillar" Diesel Tractors

- Clean, efficient combustion of fuel.
- Air-cooled lubricating oil.
- Exclusive absorbent-type fuel filters.
- Positive, low-effort starting.
- Dust-proof metal-bellows final drive seals.
- Track rollers protected with bellows-seals.
- Simple and comfortable to operate.
- Metallic clutch facings throughout.
- 100% "Caterpillar" built engine, fuel system, tractor.
- Backed by unequalled dealer service organisation.

PRODUCTIVITY IN INDIA

The term 'Productivity' has been brought into prominence by the Anglo-American Council on Productivity which defines it as the ratio of production of wealth (goods, services and human satisfaction) to human effort expendable.

You will agree that on the basis of this definition, the Indian worker lags far behind the equivalent American. It has been accepted that low productivity is due to the Indian factory worker not being mechanised to the same extent as the American, and also that he seldom exerts himself to make the best use of the equipment he has; his efforts are spasmodic, with the consequence that his measurable idle time generally amounts to more than four hours a shift.

You recognise that to re-equip to American standards may be desirable, but to do so is costly and, in existing trade conditions, difficult. It has, however, been observed that productivity can be greatly increased, even with existing equipment, if the active co-operation of the worker can be obtained. The idle time can be reduced substantially by setting up, through the co-operation of labour unions, rational graded wage structures, and production incentives based on time study.

RESULTS OF BRADY GROUP COTTON MILLS

PRECIPITOUS FALL IN PROFIT

IF the experience of the two textile mills under the management of Messrs. W. H. Brady & Co., Ltd. Bombay,—the New Great Eastern Spinning and Weaving Co., Ltd., and the New City of Bombay Manufacturing Co., Ltd.—during the year ended 31st December, 1952, is any indication, as, indeed, they had been in the past, the year 1952 may well turn out to be the leanest one in the war and post-war periods for the majority of cotton mills in Bombay. This may seem a paradox in the context of the record production for the post-war period achieved by the textile mills in India during the year. But it will not come as a surprise to a discerning observer of the fortunes of the cloth and cotton trade in the year under review.

As was hinted by us two weeks ago, the profits of the New Great Eastern and the New City alike for 1952 have shrunk considerably. The gross profit (after meeting all expenses, but before providing for Managing Agents' commission, taxation and depreciation) of the New Great shows a fall from Rs. 15.29 lakhs for 1951 to Rs. 2.68 lakhs, or 82.5 per cent. In the case of New City, the decline is far steeper than in that of New Great. To mention the exact figures, the gross profit of New City has dwindled from Rs. 20.94 lakhs to a mere Rs. 97,165, a contraction of no less than 95.4 per cent. It will be interesting to note here that the profit of New Great for 1952 is the lowest since 1939 when the Company earned Rs. 2.07 lakhs. In the case of New City, not since 1936 has the Company seen such a low profit. For 1936, it may be added here, the profit was Rs. 91,858.

The profits of both the mills, as will be noted from the tables appended below, are not sufficient even to provide for depreciation. Fortunately for these Companies, however, the E.P.T. refunds made by the Government, after deduction of income-tax due on them, came in handy for providing for depreciation and averting what might otherwise have been net losses. As already mentioned in an earlier issue of this journal, the Directors have reduced the dividend on the ordinary shares of New Great from Rs. 12½ per share of Rs. 100 to Rs. 10 or by 25 per cent. and that of New City from Rs. 15 per share of Rs. 100 to Rs. 10 or by 33⅓ per cent. It is needless to add that even the reduced rates of dividends would not have been possible but for the refund of E.P.T. As these refunds are no more than reserves built up from out of the profits for the previous years, the payment of dividends for the year under review actually amounts to distribution from past reserves.

Giving a convincing explanation of the causes for the adverse results of the year under review, the Directors of the Companies observe as follows:

"The manufacturing results for the year have been adversely affected by the consumption of certain quantities of high-priced foreign cottons purchased through the medium of Government offices, which we were compelled to take up, and use, at a time when selling prices of both cloth and yarn registered serious declines which coincided with a considerable slackening of the demand from both the home and overseas' markets, with the result that certain classes of goods had to be marketed at a loss."

It will be noted from the above quotation that the adverse results were due, to a considerable extent, to defective controls exercised by the authorities over whom the Directors of the Companies have no control. Had the industry been left free from official controls, the Companies might have fared better than they have done.

New Great Eastern

The following comparative table shows at a glance the results of the New Great Eastern for the last four years:

(In lakhs of rupees)

	Year ended 31st December			
	1952	1951	1950	1949
Sale proceeds (net)	192.40	230.04	169.10	188.90
Expenses	190.26	214.99	160.58	181.46
Gross profit	2.68	15.29	8.77	7.78
E.P.T. refund (less tax) ..	3.90	..	..	..
Total profit available ..	6.58	15.29	8.77	7.78
Secretaries' and Agents' commission	1.11	1.83	1.05	0.92
Provision for—				
Taxation	..	5.50	2.25	3.00
Depreciation	1.77	1.62	1.30	1.20
To reserves	0.25	1.70	0.75	..
To dividends—				
5½% cum. preference	0.44	0.44	0.44	0.44
Ordinary	3.00 (10%)	3.75 (12½%)	3.00 (10%)	3.00 (10%)
Carry forward	0.70	0.68	0.24	0.56

The decline in sale proceeds reflects the contraction in demand for cloth and yarn and sale of certain classes of goods at uneconomic prices. It will be noted that expenses have gone up, reflecting higher production and higher costs of raw materials. Two other factors which have contributed to the increase in expenses during the year are the Employees' State Insurance Scheme and the Workers' Provident Fund, to which the Company has contributed Rs. 30,474 (as against *nil* in the previous year) and Rs. 70,572 (Rs. 25,891), respectively. The Directors say that the introduction of the State Insurance Scheme and the Workers' Provident Fund during the year under review will add to the steadily increasing manufacturing charges and will be an additional burden for the mills to carry. As regards the appropriations, the Directors have transferred to the employees' pension, gratuity and welfare fund Rs. 25,000, which is only half of the sum added last year. They have not set aside anything for the general reserve and depreciation on investment which had received Rs. 1 lakh and Rs. 20,000, respectively, last year. There is no provision for taxation, evidently because there is no profit on which taxes are to be paid.

The financial position of the Company is quite satisfactory. As against a paid-up capital of Rs. 38 lakhs, the reserves and surplus aggregate Rs. 22.42 lakhs or 74.7 per cent. of the paid-up capital. The provision for taxation and current liabilities aggregate Rs. 41.57 lakhs. The gross value of the block amounts to Rs. 86.82 lakhs, which includes the additions made during the year at a cost of Rs. 9.19 lakhs. The book value of the block is only Rs. 28.75 lakhs, which means that the fixed assets have been written down by 66.9 per cent. The current assets aggregate Rs. 75.02 lakhs which cover the current liabilities by a wide margin of Rs. 33.45 lakhs.

The Company's Rs. 100 fully paid-up ordinary shares are currently being quoted at Rs. 155 each, at which rate and on the basis of the latest dividend, the yield works out to 6.45 per cent. per annum, free of income-tax.

New City of Bombay

The progress of the New City during the past three years is indicated by the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1952	1951	1950	1949
Sale proceeds (net)	149.24	182.52	131.88	132.80
Expenses	148.74	161.67	120.74	123.60
Gross profit	0.97	20.94	11.23	9.33
E.P.T. refund (less tax) ..	4.40	..	..	..
Total profit available ..	5.37	20.94	11.23	9.33
Managing Agents' commission ..	0.10	2.09	1.12	0.93
Provision for—				
Taxation	..	8.60	4.00	3.50
Depreciation	2.52	2.72	1.80	1.80
To reserves	0.75	3.95	1.50	0.50
Dividend	2.40 (10%)	3.60 (15%)	3.00 (12½%)	2.64 (11%)
Carry forward	0.42	0.82	0.23	0.42

During the year, the Company paid Rs. 19,616 for the Employees' State Insurance Scheme and raised its contribution to the Workers' Provident Fund from Rs. 17,220 to Rs. 44,499. The Directors have placed Rs. 75,000 to the reserve for rehabilitation which is the same as that set aside in the previous year, when, in addition, a sum of Rs. 2 lakhs was transferred for the general reserve, Rs. 1 lakh to contingency reserve and Rs. 20,000 to pension, gratuity and welfare fund. None of these three last mentioned items has received anything this year.

The Company's financial position is more impressive than that of New Great. The paid-up capital of Rs. 24 lakhs is supplemented by reserves and surplus amounting to Rs. 27.12 lakhs. The gross block of the value of Rs. 71.23 lakhs has been written down by Rs. 39.68 lakhs to a book value of Rs. 31.55 lakhs. The current assets amount to Rs. 48.56 lakhs, while the current liabilities are no more than Rs. 26.47 lakhs. During the year, the Directors had expended a sum of Rs. 7.44 lakhs on keeping the plant up-to-date and on making additions to the machinery. This is mainly responsible for the decline in cash balances from Rs. 16.28 lakhs to Rs. 6.64 lakhs.

The Company's Rs. 100 fully paid-up ordinary shares are currently being quoted at Rs. 175, at which rate the latest dividend gives a yield of 5.7 per cent. per annum, free of income-tax.

ELECTRIC COMPANIES

NEED FOR HIGHER RETURN ON CAPITAL EMPLOYED

AS readers are aware, the electricity undertakings have been urging upon the Government of India for a long time the necessity for amending the Electricity (Supply) Act of 1948. Since this legislation was passed, great many changes have taken place in the economy of this country, rendering some of the provisions of the Act obsolete. The provisions relating to the undertaking is one of them. At the time this return on capital invested in an electricity Act was framed, the Government used to swear by its cheap money policy and fixed the rate of return on capital employed at a low level. But the Government found it impossible to maintain the cheap money policy and openly reversed its policy in November, 1951. Even before that, the Government had been gradually losing ground on the cheap money front, with the result that cheap money policy ceased to be in force even a year or two before the Bank rate was raised. Thus, the assumption in the Act that the rate of return on the capital of electricity undertakings mentioned therein was reasonable, lost its ground even before the ink on the legislation dried. After considerable agitation and argument, the authorities saw the force of the contention of the electricity undertakings and agreed to amend the Act. The interests concerned were given to understand that the amendment will be put through the current session of Parliament. It is now reported, in a section of the Press, that this promise is not likely to be fulfilled by the Government, the proposed amendment not figuring in the list of Bills to be introduced in the present sittings of Parliament. This has naturally disappointed the electricity undertakings.

If the report is true, then the Government is ill-serving the public. It is common knowledge that, for a number of reasons, the States themselves are unable to take the responsibility for the extension of power supply. The decision of the Bombay Government to entrust the thermal power project at Trombay to Tatas and that of the Madras Government not to proceed further with the nationalisation of electricity undertakings, in spite of assuming powers for doing so nearly four years before, are proofs of this statement, if any proofs were at all needed. Further, the Five-year Plan has fixed a target for post-war expansion under the auspices of private enterprise, the estimated capital expenditure to hit this target being Rs. 30 crores. How is the private sector to raise this large sum, unless it can offer adequate incentive to investors? The Government owes an answer to the public to this question, if the reported delay in amending the Act is true.

That the Central Government is not unaware of the needs of the electricity industry is evident from the fact that it formulated, as early as in July, 1950 alone, proposals for amending the Act. The Federation of Electricity Undertakings of India submitted its comments on the proposals in August, 1950. Thereafter, the Government revised the Bill and forwarded it to the Federation in August, 1951, for comments, which were submitted in November the same year. Delegations from the industry also waited upon the Government in February and December, 1951. The Federation even suggested that an ordinance be promulgated embodying important proposals to amend the Act, but this suggestion fell on deaf ears. And now comes the news that even the leisurely manner in which the amendment was sought to be introduced has been delayed indefinitely. Small wonder that the Federation is perturbed over the delaying tactics of the Government. If the authorities are unable to undertake a detailed amendment of the Act for want of time, they could, as suggested by the Federation, introduce at least a short Bill to rectify those provisions of the Act which are standing in the way of speedy expansion of power production and distribution. In the opinion of the Federation of Electricity Undertakings, the Act should be amended in the following respects without any further delay.

(1) Upgrading the standard rate on capital employed from the existing rate of 5 per cent. per annum to 6 per cent. per annum;

(2) clarification of licensees' rights to adjust rates within the framework of the sixth schedule;

(3) permissive provision for the creation of a deferred taxation reserve; and

(4) the creation of a rehabilitation reserve.

The return to the investor is the most important aspect that deserves consideration from the point of view of expansion of the industry. At present, the return on capital employed is

(*Continued on page* 311)

Points From The Chair

Deterioration in Quality of Sugarcane in Travancore

"IN my statement last year, I warned the shareholders that although the quantity of cane crushed was expected, during the season under review, to be greater than in previous years, the quality of the cane was showing distressing deterioration. This deterioration was even more serious than considered possible and was very largely due to extremely heavy and unusual floods in October. ... The quality of the cane, which had not been good prior to the floods, unfortunately, continued to deteriorate after the floods, instead of showing the normal seasonal improvement with the result that the recovery for the season was only 6.58 per cent., against 8.21 per cent. for the previous year and a normal average recovery of over 9.5 per cent. for the rest of India .... Growing conditions for cane in the area from which the factory obtains its supplies are different from other areas in India and I must, unfortunately, again warn you that it may take time to replace the existing varieties of cane which have in the last two seasons shown such deterioration and unsuitability for factory use. It is not an uncomon phenomena for cane varieties to deteriorate, but normally factories can replace such varieties with others proved successful in other similar areas. Unfortunately, conditions, as I have pointed out, are almost unique in Central Travancore so that the results of experiments carried out elsewhere have little value to us."

H. I. WONFOR,

Travancore Sugars and Chemicals Ltd.

Outlook for Indian Tea

"..... the good fortune, which tea enjoyed in the matter of prices last year and the year before, has become ancient history. The prices obtained now are so meagre that in many estates the cost of production is higher than the sale price obtained. In fact, you must have known that some of the estates, particularly in Upper India, have been compelled to shut down because of the uneconomic price, on the one hand, and the heavily mounting cost, on the other. Our fortunes, however, have not been so seriously crippled in that our high productivity, averaging more than 1,168 lbs per acre, has sustained us and is keeping us going. I have no pretensions to be a knowledgeable person of wide experience in the fortunes that await this industry, but something tells me that estates which are capable of producing anywhere between 800 to 1,100 lbs. per acre may alone be able to withstand this great slump in the industry. The attention of Government has been focussed on this calamitous state of the industry and something is being endeavoured to step up sales at reasonable levels of prices. What would exactly be the outcome of these plans of the industry and the Government conjointly, it is too premature to anticipate now. But even so, when the stock position in the U.K., which appears to be very generous to me, gets lowered or eased, the good demand for this beverage in foreign countries will stage a recovery and the considerable sales resistance at economic prices, which is apparent, may also get eased."

K. NAGENDRA PRABHU,

Nelliampathy Tea and Produce Co., Ltd.

Price of Copper Highly Vulnerable

"During the year the prices of a number of raw materials fell but, unfortunately, this did not refer to copper—the Company's principal commodity—and the current controlled price is actually £58 per ton higher than a year ago, an increase of more than 25 per cent. No less than £50 per ton increase was imposed overnight by the Ministry of Supply in order to march in step with the U.S.A. As copper represents such a large proportion of the prime cost of cables, the addition had to be passed on to the consumer and this cancelled out most of the benefits of earlier reductions in selling prices. To be precise, prices were forced up by the Government's bulk-buying policy. Although the complications and complexities of copper supplies are appreciated, it is difficult to understand the reason why they should be related to our domestic affairs in such a marked degree, especially as it carries such unfortunate repercussions on the export trade. In any case, the present copper price level would appear to be highly vulnerable to any marginal improvement in supplies. Judging from what has happened in freeing other materials from price control, a recession in the copper price could occur on a scale which would create a serious problem for the industry and one which it is almost impossible to guard against."

C. W. R. PANTLIN,

General Cable Manufacturing Co., Ltd.

Depreciation Allowances for Replacements

"In America, where the allowances made for depreciation before charging tax are much higher than in this country, and to a lesser extent in other countries, we see huge schemes of capital investment, the effect of which is going to be very serious to the economy of this country in a few years' time. The maintenance of the whole economy of our country and our standard of living depends upon our ability to compete technically and economically, and this ability, in turn, depends upon continued and increased capital expenditure on both machinery and research. While official quarters often express the hope that more expansion and modernisation will take place in industry, the finance necessary for this purpose is being taken away from us by penal taxation. For many years past, most of the profits we have made have been used to extend and improve our plant and equipment, and while we are able to do so we shall continue to follow this course, but it is doubtful how much longer this can be done if present conditions continue."

G. WILTON LEE,

Arthur Lee and Sons, Ltd.

NATIONAL INCOME OF CEYLON

PLANTATIONS, THE MAIN SOURCE OF WEALTH

ACCORDING to the report on the national income of Ceylon, published by the Government of Ceylon recently, the gross national product—this represents the sum total of the value of goods and services produced in Ceylon during 1951—is estimated at Rs. 462 crores. On the basis of the population of 7,743,000, the *per capita* income of a Ceylonese citizen works out to Rs. 597. The largest item contributing to the gross national income is "plantation products" for exports (after allowing for the use of imported material), which account for as much as 38.5 per cent. of the total, its actual share in the total being Rs. 177.9 crores—this includes Rs. 4.5 crores of imported materials such as fertilisers, tea chests, and acetic and formic acid. The bulk of this is represented by tea (Rs. 80 crores), followed by rubber (Rs. 58.2 crores), coconut (Rs. 3.73 crores), and others (Rs. 6.9 crores).

Next in importance to plantation products come the commodities which are produced and consumed locally. These account for Rs. 108 crores. The individual items comprising this group are as follows:

(In crores of Rs.)

Rice	20.0
Other food crops	26.9
Coconut and coconut oil	16.6
Tea	3.4
Tobacco	0.7
Livestock products	12.0
Fish	4.8
Betel and arecanuts	3.4
Firewood	1.2
Others	3.1
Industrial products	15.9

It will be noted from the above that the contribution by industrial production to the national income is relatively small as compared with the agricultural commodities. Consequently, the economy of Ceylon is predominantly agricultural. The total of industrial products includes the *ex*-factory value (Rs. 8.7 crores) of output in 27 major industries, a large part of which is Government-owned. The two most important industries are cigarettes and soap, their products accounting for Rs. 2 crores and Rs. 1.9 crores, respectively. Other industrial products are manufactured mostly by the cottage industries.

Among the other items making up the gross national product are transport and distribution (Rs. 56.6 crores), capital development industries (Rs. 39 crores), Government (Rs. 36.3 crores), professions and personal and domestic services (Rs. 32.6 crores), rent (Rs. 6.8 crores), and income from abroad (Rs. 4.7 crores). The item "capital development industries" includes the output of such industries as bricks and cement. Out of the total of Rs. 39 crores under this head, Rs. 20.1 crores are attributed to Government expenditure on capital development and Rs. 18.9 crores to private enterprise.

Gross National Expenditure

The main items on which money was spent in Ceylon during 1951 are shown below:

(In crores of Rs.)

Imports of food and other consumer goods	152.4
Private consumption of local produce—	
Rice	29.5
Other food crops	40.6
Coconut and coconut oil	18.8
Tea	3.9
Tobacco	1.3
Livestock products	15.6
Fish	7.2
Industrial products	31.6
Betel and arecanut	4.9
Firewood	1.7
Other commodities	4.4
Less Government purchases ..	−4.1
Total	155.4
Personal and domestic service ..	31.9
Rent	6.1
Transport	5.4
Government expenditure	41.1
Remittance and travel abroad ..	23.1
Gross capital formation at home ..	53.9
Net change in foreign assets ..	10.9
Net import and excise duties net of subsidies	−16.3
Gross national expenditure ..	463.9

It will be seen from the above figures that imports of food and other consumer goods into Ceylon account for 31.6 per cent. of the total and are only Rs. 3 crores less than the total consumption of local produce. The figure of Rs. 53.9 crores against gross capital formation includes Government expenditure of Rs. 22.4 crores and private spending of Rs. 31.5 crores. Capital formation by the Government is taken as the total of loan fund expenditure (Rs. 14.67 crores) plus repairs and maintenance (Rs. 7.17 crores) and expenditure of Rs. 54 lakhs on the Ceylon University buildings.

The study of the gross national product and expenditure discloses a difference between the

(*Continued in next column*)

(*Concluded from previous column*)

two to the extent of Rs. 2 crores. This is attributed to statistical discrepancies.

As already stated, the economy of Ceylon is predominantly agrarian in character. Nevertheless, it is highly deficit in foodgrains. The Government of Ceylon has, therefore, accorded top priority to food production. Out of the aggregate capital outlay of Rs. 320 crores under the programme of economic development (1952-57), as much as Rs. 90 crores, or 28 per cent. of the total, are earmarked for agriculture and multi-purpose projects. The allocations made to other sectors are given below:

	Cost (Rs. crores)	*Per cent. of total*
Transport and communications	60.0	19
Fuel and power	15.0	5
Industry	20.0	6
Social capital	75.8	24
Rural development	40.0	12
Research /	2.5	1
Miscellaneous	16.7	5

Ceylon's programme of economic development, it is claimed, aims at increased economic stability by reducing the country's vulnerability to changes in other parts of the world.

Notices

CALCUTTA JUTE MANUFACTURING COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT THE Forty-second Ordinary General Meeting of the Shareholders will be held at "Stephen House," Fourth Floor, No. 4, Dalhousie Square East, Calcutta, at 3 p.m. on Wednesday the 4th March, 1953, for the purpose of receiving and passing the Report of the Directors and the Managing Agents for the half-year ended 31st December, 1951, declaring a dividend and transacting such other business as may be brought forward.

The Transfer Register will be closed from 21st February to 4th March, 1953, both days inclusive, and it is notified that Dividend Warrants will be issued and posted to the registered shareholders only on application. Persons holding shares under blank transfer are advised to effect registration of scrip to their names as soon as possible but not later than 21st February, 1953.

By Order of the Board,
DAYARAM & SONS,
Managing Agents.

"STEPHEN HOUSE" 4TH FLOOR,
4, DALHOUSIE SQUARE EAST,
CALCUTTA, 11*th February*, 1953.

THE BANK OF BHOPAL LIMITED
CHOWK, BHOPAL

NOTICE

NOTICE IS HEREBY GIVEN THAT THE EIGHTH ORDINARY GENERAL MEETING of the Shareholders of THE BANK OF BHOPAL LIMITED will be held at the Registered Office of the Bank at Chowk, Bhopal, on Sunday, the 15th March, 1953, at 4 p.m., to transact the following business:—

1. To receive the report of the Directors and the Audited Balance Sheet as at, and Profit and Loss Account for, the year ended 31st December, 1952.
2. To sanction the declaration of a Dividend.
3. To elect Directors in place of those who have been longest in office and who retire under Articles 102 and 103 of the Articles of Association of the Bank.
4. To appoint Auditors for the current year and to fix their remuneration.
5. To transact such other business as the Directors may place in the Meeting.

By Order of the Board,
V. S. MANI,
General Manager.

BHOPAL, 31*st January*, 1953.

N.B.—The Transfer Books of the Bank will be closed from the 2nd March, 1953, to the 14th March, 1953, both days inclusive.

SPENCERS RAISES DIVIDEND

SETBACK IN RESULTS OF TRAVANCORE SUGARS AND CHEMICALS

Spencer and Co., Ltd.

THE directors of the above Company (Secretary: Mr. C. W. Stephenson, Madras) submit the audited accounts of the Company for the year ended 30th June, 1952.

The net profit for the year, after charging all expenses other than depreciation and taxation, is Rs. 23,45,166 (Rs. 29,10,715) from which the directors have provided depreciation Rs. 5,21,288 (Rs. 5,25,199), provision for taxation Rs. 10,50,000 (Rs. 11,50,000), leaving a balance of Rs. 7,73,878 (Rs. 12,35,516). To this sum have been added the amount brought forward from the last account of Rs. 6,61,628 (Rs. 6,73,610), and provisions made in previous years no longer required Rs. 4,00,024 (Rs. 85,000), making available for distribution Rs. 18,35,530 (Rs. 19,94,126). The directors had already paid, out of this sum, the dividends on "A" and "B" preference shares absorbing Rs. 3,23,409 (Rs. 3,07,498), and ad-interim on ordinary shares at 5 (*nil*) per cent. free of income-tax Rs. 2,00 000 (*nil*), leaving available for further distribution a sum of Rs. 13,12,121 (*Rs. 16,86,628*). The directors recommend that the above amount be dealt with as follows:—

Payment of a final dividend for the year of 10 (10) per cent. (free of income-tax) on the ordinary shares Rs. 4,00,000 (Rs. 4,00,000), transfer to general reserve Rs. 1,75,569 (Rs. 1,00,000), transfer to dividend equalisation reserve Rs. 2,00,000 (Rs. 2,00,000) and carry forward Rs. 5,36,552 (Rs. 6,61,628).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	1,00,00,000	Block ...	48,95,626
Reserves ...	82,73,064	Stock ...	83,84,610
Provision for taxation ...	1,50,000	Stores, tools, etc. ...	7,03,362
Liabilities ...	52,89,174	Debts, deposits and advances ...	54,20,686
Profit and loss account ...	5,36,552	Investments	11,77,550
		Cash ...	36,66,956
	Rs. 2,42,48,790		Rs. 2,42,48,790

Travancore Sugars and Chemicals Ltd.

The directors of the above Company (Secretaries and Treasurers: Messrs. Parry & Co., Ltd., Tiruvalla) submitted the audited accounts of the Company for the year ended 31st July, 1952.

The result of the year's working, after providing Rs. 2,84,420 (Rs. 3,59,553) for depreciation, is a profit of Rs. 50,904 (Rs. 2,30,042), to which is added the credit balance on the profit and loss appropriation account brought forward from 1950-51 of Rs. 45,076 (Rs. 39,437), making a total of Rs. 95,980 (Rs. 2,69,479). The directors have paid a dividend on the cumulative preference shares at the rate of 5 (5) per cent. without deduction of income-tax Rs. 75,000 (Rs. 74,869) and have carried forward the balance of Rs. 20 980 (Rs. 45,076).

The directors regret that the balance available in the profit and loss account is insufficient for payment of any dividend on the Company's ordinary share capital. During the year under review, all forfeited ordinary and preference shares were re-issued, resulting in a profit to the Company of Rs. 4,997. The reserves remain unchanged at capital reserve Rs. 6,50,000 (Rs. 6,50 000) and general reserve Rs. 4,20,000 (Rs. 4,20 000). Adequate depreciation has been provided in respect of the Company's fixed assets and the efficiency of the buildings, and plant and machinery has been fully maintained. During the year the Company's property at Thuckalay was disposed of resulting in a profit of Rs. 49,811. Negotiations are in progress for the sale of the Company's properties at Nagercoil and Trivandrum. The pharmaceutical works has been moved from Trivandrum and is in course of re-erection at the Pamba River Factory where it will soon be in production.

Consequent on the closing down of our Trivandrum Office, the Registered Office of the Company has been moved to our Pamba River Factory and the correct postal address is:—

The Travancore Sugars and Chemicals Ltd.,
Pamba River Factory,
Tiruvalla,
United State of Travancore-Cochin.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	45,00,000	Block ...	45,61,189
Reserves ...	10,73,392	Stock ...	4,28,679
Provision for taxation ...	14,100	Stores, etc. ...	7,96,071
Liabilities ...	11,24,397	Other assets	38,317
Profit and loss account ...	20,980	Debts, deposits and advances ...	8,74,472
		Cash ...	34,141
	Rs. 67,32,869		Rs. 67,32,869

Empire Dyeing and Manufacturing Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. W. H. Brady & Co., Ltd., Bombay) submit the audited accounts of the Company for the year ended 31st December, 1952.

The accounts show a net profit on the year's working, after writing off depreciation of Rs. 44,617 (Rs. 40,744) on machinery and plant, etc., setting aside Rs. 90,000 (Rs. 50,000) for taxation and charging the managing agents' commission amounting to Rs. 31,991 (Rs. 22,468) of Rs. 1,50 587 (Rs. 1,10,477) which together with the balance brought forward from last year's account of Rs. 3,859 (Rs. 8 382) gives an amount for disposal of Rs. 1,54,446 (Rs. 1,18,859). This sum the directors propose to dispose of as follows:—

Dividend of Rs. 3 (Rs. 3) per share on 30,000 shares of the Company, free of income-tax Rs. 90,000 (Rs. 90,000), to transfer to reserve for rehabilitation of machinery and plant Rs. 20,000 (Rs. 10,000), to staff gratuity fund Rs. 25,000 (Rs. 15,000) and to reserve for depreciation of securities Rs. 10,000 (*nil*), leaving a balance to carry forward to next year's account of Rs. 9,446 (Rs. 1,15,000).

The total output for the year remained steady at about the previous year's figure, with the result that the cloth and yarn dyeing plant only worked well below its capacity.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	4,50,000	Block ...	5,95,046
Reserves ...	9,90,629	Stock ...	43,643
Provision for taxation ...	2,49,430	Stores and spare gear	1,66,715
Liabilities ...	3,81,719	Debts, deposits and advances ...	1,82,633
Profit and loss account ...	1,54,446	Investments	3,19,153
		Cash ...	9,19,034
	Rs. 22,26,224		Rs. 22,26,224

G. Claridge and Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. W. H. Brady & Co., Ltd., Bombay) submit the audited accounts of the Company for the year ended 31st December, 1952.

The accounts after charging Rs. 64,188 (Rs. 70,623) for depreciation and providing Rs. 3,00,000 (Rs. 3,20,000) for taxation, show a net profit of Rs. 1,50,283 (Rs. 1,56,767), which together with the balance of Rs. 5,516 (Rs. 8,749) brought forward from last year's profit and loss account, gives Rs. 1,55,799 (Rs. 1,65,516) and this the directors propose to dispose of as follows:

To pay a dividend of Rs. 12-8 (Rs. 12-8) per share on 8,000 shares of the Company, free of income-tax Rs. 1,00,000 (Rs. 1,00,000), to transfer to general reserve Rs. 25,000 (Rs. 25,000), and to transfer to rehabilitation of plant fund Rs. 25,000 (Rs. 10,000) leaving a balance to be carried forward to next year's account of Rs. 5,799 (Rs. 5,516).

Competition became noticeably keener during the year, but progress in high class work was generally maintained.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	8,00,000	Block ...	3,85,662
Reserves ...	7,29,950	Stock ...	15,63,393
Provision for taxation ...	9,05,628	Debts, deposits and advances ...	6,39,332
Liabilities ...	6,14,572	Investments	500
Profit and loss account ...	1,55,799	Cash ...	5,97,062
	Rs. 32,05,949		Rs. 32,05,949

Sutlej Cotton Mills Ltd.

The directors of the above Company (Managing Agents: Messrs. Birla Brothers, Ltd., Delhi) submitted the audited accounts of the Company for the year ended 31st March, 1952.

The accounts showed, after providing for interest, managing agents' commission, depreciation and reserve for taxation a net profit in India and Pakistan of Rs. 29,83,941 (Rs. 30 64,525) (which included the profits of the Company's branches formerly in Indian States, not transferred to India). This amount together with the balance of previous years made a total of Rs. 64,49,305 (Rs. 60,65,364) (which included the amount of Company's branches formerly in Indian States not transferred to India), which the directors disposed of in payment of a dividend on 1,50,000 ordinary shares at Rs. 4 (Rs. 4) per share Rs. 6,00,000 (Rs. 6,00 000) and carried forward Rs. 58,49,305 (Rs. 34,65,364).

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	15,00,000	Block ...	21,82,315
Reserves ...	87,37,038	Stock ...	56,28,507
Provision for taxation ...	86,89,881	Stores, etc.	7,04,729
E.P.T. refund account B/F	8,56,755	Debts, deposits and advances ...	77,45,060
Liabilities ...	53,35,259	Investments	44,16 396
Profit and loss account ...	64,49,305	Cash ...	1,08,91,231
	Rs. 3,15,68,238		Rs. 3,15,68,238

Pench Valley Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Shaw Wallace & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the half-year ended 31st August, 1952.

The Company's profit for the half-year after the inclusion of the amount brought forward of Rs. 22,099 (Rs. 33,376) amounted to Rs. 3,30,433 (Rs. 84,803), and after making provision for taxation of Rs. 1,25,000 (Rs. 10,000), there remained a balance of Rs. 2,05,433 (Rs. 74,803). Out of this the directors placed to general reserve account Rs. 75,000 (*nil*), and paid a dividend at the rate of 12½ (7½) per cent. per annum, free of income-tax Rs. 98,436 (Rs. 59 063), leaving to be carried forward Rs. 31,995 (Rs. 15,740).

Output and despatch of steam and other grades of coal for the last three half-years are as follows:—

Half-year ended	*Raisings* Tons	*Despatches* Tons
31st August, 1952	1,97,226	2,00,821
29th February, 1952 ...	2,07,139	2,04,969
31st August, 1951	1,69,852	1,73,339

There was a slight drop in production and despatches during the half-year due to short and irregular supplies of wagons.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	15,75,000	Block ...	13,25,000
Reserves ...	8,75,000	Stock ...	34,957
Provision for taxation ...	2,60,000	Stores ...	7,93,557
Liabilities ...	17,13,871	Debts, deposits and advances ...	17,46,538
Profit and loss account ...	31,995	Investments	4,07,240
		Cash ...	1,48,574
	Rs. 44,55,866		Rs. 44,55,866

Gwalior Sugar Co., Ltd.

The directors of the above Company (Managing Agents: Sir J. P. Srivastava and Sons (Madhya Bharat) Ltd., Dabra) submitted the audited accounts of the Company for the year ended 30th June, 1952.

The accounts show a net profit of Rs. 2,16,805 (Rs. 4,19,650). To this sum was added Rs. 9,275 (Rs. 8,819), being the amount carried over from the last year, thus making a total amount of Rs. 2,26,080 (Rs. 4,28,469), which the directors disposed of as follows:—

Dividend at 7 (7) per cent. on 6,750 redeemable cumulative preference shares of Rs. 100 each for the year ended 30th June, 1952 Rs. 47,250 (Rs. 47,250), dividend at 7 (7) per cent. on 5,000 cumulative preference shares of Rs. 100 each for the year ended 30th June, 1952 Rs. 35,000 (Rs. 35,000), dividend at 3 (5) per cent. on 15,939 ordinary shares of Rs. 100 each for the year ended 30th June, 1952, Rs. 47,817 (Rs. 79,695), provision for bonus Rs. 75,000 (Rs. 75,000), and carry over to next year Rs. 21,013 (Rs. 9,274).

During the period under review the factory carried out crushing operations for a period of 149 days from 27th November, 1951 to 23rd April, 1952, as against 103 days during the previous year. The quantity of cane crushed was 27,30,486 maunds compared to previous year's 17,70,445 maunds and the recovery at 9.56 per cent. was also higher than that of last year, which was at 9.20 per cent. Owing to these favourable circumstances, it was expected that very substantial profits would be made this year, but unfortunately profits were considerably reduced owing to a steep fall in the prices of free sugar and also owing to heavy losses in the sale of some quotas of controlled sugar which were not lifted and had to be sold in the open market at prices below cost of production. The market prices are very erratic and owing to the general depression prevailing in all markets, it is highly probable that the market price of sugar may fall lower than the prices ruling to-day.

The directors are making every effort to continue the improvement in the working of the factory. They are also making efforts to ensure supplies of better quality cane from areas near the factory and they have every hope that the results of their efforts would go a long way towards reducing the cost of production.

Owing to increased costs and heavy stocks the directors had to borrow in excess of the paid-up capital of the Company; therefore, they sought the confirmation of the borrowings by the shareholders.

The Company continued the cane development work in the depot areas by supplying fertilisers and manures at cheap rates and by supplying better varieties of seed cane which resulted in much better supplies from depot areas and at the gate. But its efforts for development work have received a setback due to inadequate irrigation facilities at the tail-ends of the canals. This matter has been taken up with Government without whose active assistance no progress in this direction is possible.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	27,68,900	Block ...	21,61,740
Reserves ...	2,51,646	Stock ...	41,65,532
Provision for taxation ...	1,00,000	Stores, tools, etc. ...	6,53,618
Liabilities ...	52,03,379	Debts, deposits and advances ...	10,63,117
Profit and loss account ...	2,26,080	Investment	1,70,000
		Cash ...	3,35,998
	Rs. 85,50,005		Rs. 85,50,005

Midnapore Zamindari Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 13th April, 1952.

Total collections amounted to Rs. 33,30,902 excluding *selami* and were Rs. 3,27,573 (Rs. 2,22,727) lower than last year, but including *selami* the total amount at the credit of profit and loss account was Rs. 8,18,989 (Rs. 90,052).

As last reported, the East Bengal Government took over the rent-receiving interests of the Company's Neeschindepore, Goldar, Katli, Rajahpore and Sonaicoondy concerns in Pakistan with *kutcheries* on the 17th December, 1951, and those of the Turtipore and Bauleah concerns on 14th April, 1952, leaving only the bungalows and *khas* lands in the Company's possession; and this accounted for the lower collections. Thus, all the Company's rent-receiving interests and *kutcheries* in Pakistan have now been acquired. The East Bengal Government also took over all the papers and staff, which caused the delay in the preparation of the accounts.

All possible information has been supplied to the East Bengal Government, but as yet no compensation has been paid by that Government to the Company. In addition, the Barabhum concern of the Company in Bihar was taken over by the Bihar Government on 12th June, 1952, under the Bihar Land Reforms Act, 1950, and no compensation has yet been received for this property either.

A sum of Rs. 5,38,018 (Rs. 3,82,001) has been transferred from premium lease reserve to provision for taxation, this being the estimated additional tax payable by the Company if all the *selami* is to be subject to taxation. The Company continues to contend that the major portion of *selami* received is of a capital nature, and this contention now awaits the decision of the Courts. The Company has to provide Rs. 6,80,000 (Rs. 3,82,001) for taxation although the profit is only Rs. 8,18,989 (Rs. 90,052). After providing for taxation and for the preference dividend there remained at the credit of profit and loss account a sum of Rs. 1,92,608 (Rs. 93,984) (including Rs. 93,984 (Rs. 26,693) brought forward from last year) from which the directors paid a dividend to ordinary shareholders of Rs. 2 (Rs. 3) per share absorbing Rs. 1,88,000 (Rs. 2,82,000 paid out of capital reserve), leaving Rs. 4,608 (Rs. 93,984) to be carried forward.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	1,02,76,200	Block ...	97,11,223
Reserves ...	49,72,620	Stock and stores	88,532
Provision for taxation ...	22,79,342	Debts, deposits and advances ...	36,62,613
Liabilities ...	9,86,686	Investments	34,19,095
Profit and loss account ...	4,609	Cash ...	16,37,994
	Rs. 1,85,19,457		Rs. 1,85,19,457

N.B.—Figures within brackets relate to the corresponding period of the previous year.

COMPANY AFFAIRS

(Concluded from page 308)

limited to 5 per cent. It is true that some licensees are able to pay dividends higher than the standard rate of 5 per cent. This is because they had in the past built up a sound financial position by retaining in the business a proportion of the profits earned each year. This cannot continue for long, for the simple reason that every new capital issue made after the passage of the Act has the effect of reducing the gap between net blocks and the issued share and loan capitals. This has led to reluctance on the part of shareholders to increase their investment. This is the practical difficulty involved in raising additional capital by the existing undertakings. But that is not the only consideration that justifies the industry's demand for a higher rate of return on capital employed. An equally important consideration is, as mentioned at the outset, the increase in interest rates in the capital market, since the rate of 5 per cent. was assumed in the Act five years before. Even the State Governments which were paying 3 per cent. then, on their borrowings, are now offering a little more than 4 per cent. The Government of India itself has found it necessary to pay 4¼ per cent. to the World Bank on the loan taken for D.V.C. last month, as against 4 per cent. in 1950, that is, an increase of ¼ per cent. In these circumstances, the demand of the industry to raise the standard rate of return by mere one per cent. is modest and highly reasonable.

The question of clarification of licensees' rights to adjust rates deserves immediate attention. The sixth schedule to the Act lays down a rigid formula for purposes of working out the return to the investor. It is left to the licensee himself to so adjust his rates as not to produce a clear profit in excess of the reasonable return. The intention behind the Act appears to be that licencees are to be left free to formulate tariffs, irrespective of the limitations laid down in the licences, to suit individual circumstances so long as they were within the four corners of the legislation. Some States, however, maintained that the upper limits laid down in the licences still hold good. This explains the need for clarification of licensees' rights to adjust rates.

The industry's demand for provision for deferred taxation arises from the concession allowed to companies, which have recently invested crores of rupees on new plants, through deferring the period of payment of taxation. If provision for deferred taxation were not made, the incidence of taxation, when it comes to be paid, will be very heavy on consumers, through heavily increased charges of power. It is, therefore, only prudent that the incidence of deferred taxation should be spread over a period by means of advance provision for deferred taxation now.

At a time when the investment market is shy, the best method of encouraging installation of new plants is by making provision for rehabilitation reserve. This is a method adopted in most of the industrial countries of the West. The industry's demand that a sum not exceeding 1½ per cent. of the capital employed be allowed as a reserve for rehabilitation, therefore, deserves sympathetic consideration at the hands of the authorities.

COMPANY MEETINGS AND DIVIDENDS

RALLIS INDIA LTD. Annual General Meeting, Calcutta, 23rd February, 1953. Dividend: *Nil*. Transfer books closed from 9th to 23rd February, 1953, both days inclusive.

ALBION JUTE MILLS Co., LTD. Half-yearly General Meeting, Calcutta, 24th February, 1953. Dividend: Rs. 8 per share. Transfer books closed from 18th to 24th February, 1953, both days inclusive.

NEW CENTRAL JUTE MILLS Co., LTD. Half-yearly General Meeting, Calcutta, 24th February, 1953. Dividend: Rs. 10 per share. Transfer books closed from 18th to 24th February, 1953, both days inclusive.

BENARES ELECTRIC LIGHT AND POWER Co., LTD. Half-yearly General Meeting, Calcutta, 27th February, 1953. Dividend: As. 10 per share. Transfer books closed from 21st to 27th February, 1953, both days inclusive.

CHEMICAL, INDUSTRIAL AND PHARMACEUTICAL LABORATORIES LTD. Annual General Meeting, Bombay, 27th February, 1953. Transfer books closed from 11th to 28th February, 1953, both days inclusive.

SPENCER AND Co., LTD. Annual General Meeting, Madras, 27th February, 1953. Dividend: Re. 1 per share (final), free of income-tax. Transfer books closed from 20th to 27th February, 1953, both days inclusive.

NEW GREAT EASTERN SPINNING AND WEAVING Co., LTD. Annual General Meeting, Bombay, 2nd March, 1953. Dividend: Rs. 10 per share. Transfer books closed from 20th February to 12th March, 1953, both days inclusive.

NEW CITY OF BOMBAY MANUFACTURING Co., LTD. Annual General Meeting, Bombay, 2nd March, 1953. Dividend: Rs. 10 per share. Transfer books closed from 20th February to 12th March, 1953, both days inclusive.

G. CLARIDGE & Co., LTD. Annual General Meeting, Bombay, 2nd March, 1953. Dividend: Rs. 12-8 per share. Transfer books closed from 20th February to 12th March, 1953, both days inclusive.

EMPIRE DYEING AND MANUFACTURING Co., LTD. Annual General Meeting, Bombay, 2nd March, 1953. Dividend: Rs. 3 per share. Transfer books closed from 20th February to 12th March, 1953, both days inclusive.

TIDE WATER OIL Co. (INDIA) LTD. Half-yearly General Meeting, Calcutta, 2nd March, 1953. Dividend: As. 8 per share. Transfer books close from 23rd February to 2nd March, 1953, both days inclusive.

FORT GLOSTER JUTE MANUFACTURING Co., LTD. Half-yearly General Meeting, Calcutta, 3rd March, 1953. Dividend: *Nil*. Transfer books closed from 21st February to 3rd March, 1953, both days inclusive.

ALKALI AND CHEMICAL CORPORATION OF INDIA LTD. Annual General Meeting, Calcutta, 12th March, 1953. Transfer books close from 26th February to 12th March, 1953, both days inclusive.

MUNDULPOOR COAL Co., LTD. Half-yearly General Meeting, Calcutta, 24th March, 1953. Transfer books closed from 16th February, 1953.

BRITISH INDIA CORPORATION LTD. Annual General Meeting, Kanpur, 28th March, 1953. Transfer books close from 26th February to 28th March, 1953, both days inclusive.

COMPANY REGISTRATIONS

AMBIKA PICTURES LTD. (First Director: Mr. H. B. Murgod.) Business: Producers, Distributors, Exhibitors and Manufacturers of Cinematographic Films. Authorised capital: Rs. 10,00,000. Private company. Address: 317, Thalakwadi, Belgaum.

AGFA INDIA LTD. (First Director: Mr. P. Sreenivasan.) Business: Manufacturers, Producers, Importers, Exporters and Distributors of Cameras, Films, Plates, Photographic Paper, Chemicals, etc. Authorised capital: Rs. 5,00,000. Private company. Address: Industrial Assurance Building, opposite Churchgate Station, Fort, Bombay.

BUILDERS PUBLICATIONS OF INDIA LTD. (First Director: Dr. G. S. Dugal.) Business: Publishers, Printers, Lithographers, Stenographers, Photographic Printers, etc. Authorised capital: Rs. 5,00,000. Private company. Address: Janmabhoomi Chambers, Fort Street, Ballard Estate, Bombay.

OJAS AGENCIES LTD. (First Director: Mr. H. M. Kashiparekh.) Business: Manufacturers and Dealers in Iron, Hardware, Machinery, Cement, Pipes, Mill Gin Stores, etc. Authorised capital: Rs. 5,00 000. Private company. Address: 675, Sakar Bazar Cross Lane, Chinubhai Building, Ahmedabad.

P. N. FILMS LTD. (First Director: Mr. Prem Nath Malhotra.) Business: Cinematograph Trade and Industry, and all its Allied Trades, Film Producers, Distributors, etc. Authorised capital: Rs. 5,00 000. Private company. Address: Famous Cine Laboratories and Studios, Haines Road, Bombay 11.

QUESTION HOUR IN PARLIAMENT

Food Position in India

THE present overall food position in the country is generally satisfactory. The stock of foodgrains in the hands of the Central and State Governments on 24th January, 1953, amounted to 18.5 lakh tons, as compared with 16.1 lakh tons on about the same date last year. The crop prospects are also generally better than the last two years, except in certain parts of Bombay, Madras, Mysore, Hyderabad and Travancore-Cocnin.

* * * *

Food Prices

Generally, the open market prices of rice are either declining or steady; millet prices are steady and wheat prices firm, except in Bihar where they are declining. Procurement and issue prices of foodgrains have been raised in a few cases at the request of the State Governments concerned.

* * * *

Rice From Burma

1,40,000 tons of rice were purchased from Burma during the period August-December, 1952 on Government-to-Government basis.

—Minister for Food and Agriculture

Indo-Pakistan Air Agreement

The discussions between civil aviation officers of India and Pakistan in respect of the dispute over Indian air service to Kabul across Pakistan territory have ended in some concrete undertakings. The Government of Pakistan has agreed to open two corridors across that territory to enable India to operate air services to Afghanistan across the prohibited area in West Pakistan. The routes agreed are: (1) India-Lahore—thence along a 20-mile wide corridor on a direct flight towards Kandanar, but with right of the Indian aircraft, on leaving Pakistan territory, to fly direct to Kabul, and (2) India-Karachi—thence along a 20-mile side corridor on a direct flight to Kandanar. Pakistan has also agreed to release for export to Afghanistan sufficient aviation fuel to enable Indian aircraft to refuel there.

* * * *

Nationalisation of Air Companies

The Government of India proposes to take over the entire ownership of the various air transport companies. A scheme for the reorganisation of civil air transport operations in the country is under examination and a Bill on the subject is proposed to be introduced in Parliament during the current session. It is not proposed to retrench any workers who are in employment at present in the airlines. On the contrary, the Government contemplates that every person who is at present *bona fide* in the employ of any air company should be continued in employment when the proposed State Corporation takes over the undertaking of the company. The Government is aware of the Conference of Aviation Workers' Unions held in Delhi on 10th, 11th and 12th January, 1953, and the decisions of the conference taken therein and the Unions have submitted a memorandum to Government. The views of the unions will be taken into consideration while finalising the scheme.

—Deputy Minister of Communications

Tea Industry Tripartite Conference

The important decisions arrived at in the Tripartite Conference on tea industry, which met in Calcutta on 19th and 20th December, 1952 are: (i) a tripartite commission, with regional subcommittees, should be appointed by Government immediately to investigate into the cost structure of the tea industry; (ii) pending the report of the Commission, relief, by way of refund of the duty collected by the Central Government, should be given at specified rates to tea gardens in the different regions; (iii) gardens which have suffered loss during the year 1951 and/or 1952 should be granted relief by way of long term loans to the extent of the shortfall during this period; (iv) there should be no revision of the Minimum Wages Awards to the detriment of labour after the above proposals have been accepted and during the pendency of the enquiry by the Tripartite Commission. These conclusions are embodied in a resolution adopted by the Committee. The Government is, however, not a party to this resolution.

—Minister for Labour

Credit Facilities to Tea Gardens

Neither the Government of India nor the Reserve Bank of India have any scheme to provide credit facilities direct to tea gardens. The Reserve Bank can pride re-discounting facilities to Scheduled and State co-operative banks under section 17(2) (b) and 4 (c) of the Reserve Bank of India Act, for the purpose of cultivation and marketing of tea crop. The Government of India, in their notification No. F.7(101)-F.1/52, dated 27th December, 1952, published in the *Gazette of India Extraordinary* dated 29th December, 1952, announced a scheme of limited guarantee to Scheduled Banks and State co-operative banks in respect of their advances to tea gardens during the 1953-54 tea season. The amount of Government guarantee will be limited to 20 per cent. of the total repayments made by the borrowing garden to the Scheduled Bank or the State co-operative bank concerned in discharge of the loans or advances availed of by it for financing the 1952-53 tea season, if the borrowing tea garden is situated in Cachar, Tripura, Dooars, and Terai and to 15 per cent. of such amounts of repayments, if the borrowing tea garden is situated in other areas. So far, a sum of Rs. 97,61,000 has been advanced by Scheduled Banks and a sum of Rs. 42,92,000 has been advanced by the Assam State Co-operative Apex Bank to tea gardens for the 1953-54 tea season under the Government limited guarantee scheme.

—Minister for Finance

MONEY RATES UNCHANGED

(From Our Own Correspondent)

BOMBAY, 18th *February*

During the earlier part of the week, the short-term money market was a little more active than in the previous one, but, as the week advanced, the pull on the market was less perceptible, there being more lenders in the inter-bank call money section. In the initial days, demand for funds from up-country agricultural centres was somewhat heavier, as a result of which there was keen bidding for funds in the inter-bank section, but lenders were not freely forthcoming. On Monday this week, however, the situation was somewhat eased by a leading industrial concern offering a fairly large sum by way of term deposits. There was no appreciable change in the inter-bank call money rate which kept on varying between 2¾ per cent. and 3 per cent. among the Exchange Banks and big Indian banks. If at all there was any change, it was this: while in the earlier part of the week there were only a few lenders at 2¾ per cent., there were quite a number of them at this rate towards the close of the week. The rate among the smaller Indian banks remained unchanged at 3 per cent. with more borrowers than lenders. Term deposits for three months were offered at 3 per cent. Some banks were disinclined to pay 3 per cent. for six months; while others did not mind offering that rate for good clients.

The week's sale of three months' Government of India Treasury Bills brought a slightly better response than in the previous week, the amount offered at Rs. 1.39 crores comparing favourably with that of Rs. 1.18 crores. The average rate of accepted tenders, however, hardened slightly from Rs. 2-6-11 to Rs. 2-7 per cent. per annum.

Following the rise of Rs. 17.55 crores in notes in circulation noted in the week ended 6th February, 1953, there has been a further expansion in active notes to the extent of Rs. 5.28 crores, according to the statement of affairs of the Reserve Bank of India for the week ended 13th February, 1953. Notes held in the Banking Department, on the other hand, disclose a fall of Rs. 5.87 crores, so that there has been a net contraction of the order of Rs. 60.04 lakhs in total notes issued. This is balanced on the assets side by a fall of Rs. 40.8 lakhs in rupee coin and of Rs. 19.86 lakhs in rupee securities. The deposits of the Central Government do not disclose any change, but those of other Governments are lower by Rs. 5.68 crores. Deposits of banks have improved by Rs. 3.74 crores. Cash balances show a contraction of Rs. 5.85 crores, but balances held abroad are better by only Rs. 52.44 lakhs. Loans and advances to Governments have risen by Rs. 98 lakhs and other loans and advances by Rs. 63.30 lakhs. There have been no borrowings by Scheduled Banks against usance bills. Government Treasury Bills purchased and discounted, which had gone up by Rs. 1.71 crores in the previous week, have further risen by Rs. 3.30 crores in the week under review.

A decline of Rs. 4.19 crores in the demand deposits of Scheduled Banks is disclosed by their consolidated statement of position for the week ended 6th February, 1953, as compared with that for the previous week. Minor variations are noted in time deposits, and inter-bank borrowings. Borrowings from the Reserve Bank show an increase of Rs. 2.22 crores and those from the Imperial Bank of Rs. 62 lakhs. Cash on hand and balances with the Reserve Bank have shrunk by Rs. 86.93 lakhs and Rs. 2.75 crores, respectively. Balances with other banks in current account are higher by Rs. 16.27 lakhs, while money at call and short notice is lower by Rs. 1.22 crores. Investments have gone down by Rs. 3.93 crores.

The Gilt-edged market presented a steady trend on enquiries for select issues. Although price movements were small, they were generally in favour of holders. General interest was, however, slack and the turnover was restricted. 3 per cent. 1953-55 was unchanged at Rs. 100-0½. 3 per cent. 1957 met with some demand and the issue put on an anna to Rs. 98-10. 3 per cent. 1958 which was well held at Rs. 98-7 until the 16th inst. was listed *ex-voucher* on that date, the rate being Rs. 98–5. 3 per cent. 1959-61, which was listed *ex-voucher* on the 15th, was placed at Rs. 95-15 *ex-voucher*, but hardened by an anna to Rs. 96 *ex-voucher* at the close. 3 per cent. 1963-65 was taken up Rs. 92-9, as also 3 per cent. 1964 at Rs. 92-9, both showing a gain of one anna. 3 per cent. 1970-75 had buyers at Rs. 86-9, as against Rs. 86-8. The only exception to the general trend was provided by the 3 per cent. 1986 Conversion Loan which fell by As. 4 to Rs. 82-11.

The foreign exchange section of the money market was dull and for the second week in succession the rupee-U.S. dollar exchange rate remained unchanged, though some minor variations in the sterling-dollar rate were reported from New York. In the New York market, the spot rate for sterling declined from $2.81¼-$2.82 per £ on the 10th to $2.81¾-$2.81¾ on the 16th, but improved to $2.81-13/16-$2.81-15/16 yesterday.

PEPPER FIRM ON U. S. BUYING

(Messrs. Parekh & Co.)

BOMBAY, 18th *February*

Pepper in all primary markets ruled firm owing to fairly large buyings for February shipment by New York interests, who are reported to have accepted all offers from $1.15 to $1.17 from India during the earlier part of the week. In the later part, however, both America and Europe after taking sizable quantity are now reported to have reduced their buying limit with a view to testing the sellers and in expectation of some reaction after the recent rapid rise of about Rs. 200 both at Alleppey and at Calicut. The Formosan situation seems to have changed the entire sentiment of the planters, and in spite of frequent slackness in foreign demand, they refuse to reduce their price. Calicut is reported firm at Rs. 2,800, while Alleppey is very steady at Rs. 2,600, with sellers reserved. In A.S.T.A. section, in Bombay, New York is reported bidding February shipment at about $1.15, while sellers are unwilling to give anything at less than $1.18, there being local buyers for March and April shipment at $1.18 and $1.19 per lb. c. and f. New York respectively. In the delivery section, prices are firmly held with small interest on the part of sellers to go in for any new short sales.

Following are to-day's nominal quotations: Ready delivery Rs. 2,300, February delivery Rs. 2,200-30 and March delivery Rs. 2 230-60 per candy of 5¼ cwts. Ready at Alleppey Rs. 2,600 per candy of 6 cwts. Ready at Calicut Rs. 2,800 per candy of 6½ cwts.

BULLISH FERVOUR REVIVES IN SILVER

(From Our Own Correspondent)

BOMBAY, 18th *February*

The reversal of the bullish trend in silver noted towards the close of last week proved to be a short-lived affair, as, once again the price of silver moved up to higher levels this week. The efforts of the Board of the Bullion Association to curb the bullish fervour proved futile, as they failed to get the support of the required majority in the general ballot held on Friday last for ratifying its earlier declaration of an emergency in the market. This strengthened the hands of the "longs" who, even after liquidating towards the close of last week a considerable portion of their purchases, were still reported to have control over the stocks. As a result, the price of silver advanced by over Rs. 5 above last week's closing rate.

There was no outstanding development in the gold section. The price movements were narrow, but the undertone remained steady due to the strength of silver.

A meeting of the general body of the Bombay Bullion Association was held on Friday last to consider the Board's decision declaring a state of emergency in the market. Under the rules of the Association, any decision of the Board of Directors must be referred to a general body meeting of members. At this meeting, at least a minimum of 250 members must participate in the voting on the Board's decision. And, if the proposition is to hold good, it must secure, in the first place, a two-thirds majority in this voting and, secondly, the consent of the Bombay Government. But in the referendum held on the 13th inst., only 169 members voted, that is, 81 less than the minimum required. Thus, the Board's decision was not ratified by the General Body. Another point where the Board failed in its attempt to check the bulls was that legal opinion was not in favour of its decision to impose margin on every rise of Rs. 7 per 100 tolas in silver and of Rs. 4 per tola in gold over the basic rates. At a meeting held this morning the Board of the Bullion Association is reported to have decided not to take any further steps for the present.

The international free market price of gold was a shade lower, the rate in Europe receding from $37.45 to $37.40.

In the local market, silver for forward delivery in March opened on Friday (Thursday was a holiday on account of *Mahasivarathri*) at Rs. 164-15 and remained dull pending the decision of the General Body over the Board's emergency resolution. Following the rejection of the resolution at the referendum, the white metal started on its upward trend and soon touched Rs. 167-15 on Saturday. On fears that the Board would take further steps to deal with the bullish fervour, there was a mild reaction on Monday to Rs. 165-10, but these fears having proved unfounded, speculative buying and short-covering once again lifted up the rate to Rs. 169-10 to-day just before the market finished at Rs. 168-14.

Ready silver (.996 Mint) advanced from Rs. 165-9 to Rs. 169-14, thus maintaining its premium over the forward rate at Re. 1. The floating stocks of silver are placed at 1,500 bars. The daily average offtake was 30 bars.

Gold for forward delivery in March began at Rs. 89-7 and moved up to Rs. 90-10 on Saturday, following reports of better offtake. But, during the next two sessions, the trend was somewhat quiet and the rate declined to Rs. 88-14, due to larger arrivals unaccompanied by a corresponding increase in demand. To-day it tended to harden to Rs. 90-10, only to give way to Rs. 89-14 at the close.

Ready gold moved ahead from Rs. 89-13 to Rs. 91-4 early in the week, but failed to hold the ground, the rate declining to Rs. 89-6 yesterday. To-day, it looked up to Rs. 91-2 and closed at Rs. 90-6.

The floating stocks of gold are estimated at 30,000 tolas. The daily average arrivals were 7,000 tolas, but the offtake was 6,000 tolas on an average.

The following comparative table shows the trend of the market during the week under review:

	18-2-53	Highest	Lowest	11-2-53
GOLD	Rs. a.	Rs. a.	Rs. a.	Rs. a.
Ready (.99 fine Mint)	90 6	91 4	89 6	89 13

Forward	168 14	169 10	164 2	164 9
London Ready ..	74*d.*	—	—	74*d.*
London Forward ..	74*d.*	—	—	74*d.*
New York Ready ..	85½c.	—	—	85½c.

FORWARD COTTON ERRATIC

(From Our Own Correspondent)

BOMBAY, 18th *February*

It is surprising that the general sentiment in the spot market should be different from that at Kalbadevi. One of the greatest weaknesses of the commodity forward markets in India is their tendency to ignore some of the important realities of the spot markets and to conduct trading based on sentiment, rumours and the personal standing in the trade of those reported to be buying or selling. The forward markets tend thus to resemble a flock of sheep where if a leader turns right, a hundred will follow unthinkingly. The forward market in cotton in Bombay in these days seems to be operating with an uncertain and wavering mind. One of the reasons for these was disclosed to me the other day by a prominent professional operator in several markets. He said that the new recruitment in all these forward markets was from the ranks of the literate unemployed; those who could not find a job took themselves sooner or later to Dalal Street, Kalbadevi, Sheik Memon Street or Masjid Bunder.

This is a grave development which our Government will have to study carefully with a view to putting some check on this drift of the educated to take to the profession of pure speculation. Much as one hates the entry of the executive into the markets by the back-door of the procedure of licensing, it may be necessary ultimately, in the interest of forward trading and marketing of commodities and equities, to invite the Government to issue licences not only to brokers but operators as well after subjecting them to some kind of test both with regard to financial resources and enlightenment regarding economic matters. We just cannot idly watch hundreds of promising young men ruining themselves at the beginning of their active lives by being forced through circumstances into blind alleys and becoming a burden on society instead of turning into useful productive units.

The forward market is working out its perplexities by way of a see-saw movement, with prices going up and down alternately, in an effort to correct the anomalies of the technical situation. The actual offerings for delivery against February contract so far have been poor, not amounting to more than a couple of thousand bales compared to the volume of outstanding business at the end of January.

The sentiment in the spot market, on the other hand, is fairly healthy, with a more realistic appraisal of the position with regard to future demand and availability of stocks. Good useful varieties have found buyers at rising rates and Vijay and good Jarillas are finding their way into strong hands. A new development during the week under review has been a revival of enquiry for some of the foreign cottons also. Sudan, which had so far failed to attract any notice from Indian mills, has come to the front, though it is not likely to find increasing favour from actual consumers because the crop this year is not reported to be of the standard quality and the prices so far have been above the Egyptian parity.

Another development in the spot market is with regard to the growing demand for Bengals, both the old and the new crop, for purposes of export. The genuine shippers are believed to be short of licences, while enquiry both from the West and the East for Bengals are still there, because of the slight advantage which Indian prices still hold over the corresponding Pakistan varieties. The rise in prices of Bengals, however, is likely to be arrested about the present levels, because any further rise would neutralise this advantage.

The following are the latest quotations for the Sewri market: Bengal *Deshi* Rs. 490-550; Berar Jarilla Rs. 700-725; Vijay Rs. 800-810; Moglai Rs. 640-650; Khandesh Rs. 735-750.

The following is the fluctuation in prices in the forward market over the week ended 18th February:

	Opening	*High*	*Low*	*Closing*
I.C.C. Feb. (Rs.)	647½	656	641½	653
I.C.C. May. (Rs.)	657	666½	650	664
I.C.C. Aug. (Rs.)	668½	679	662	676½

At Karachi there is a distinct improvement both in the tone and the sentiment of the market. One important development is the revival of U.K. interest resulting in transactions of moderate quantities during the week. There is a slight change also amongst Continental buyers, who have now been paying some attention to Karachi, which was exclusively centred during the last few weeks at Alexandria. There is possibility of a substantial deal with Japan on a barter basis as a result of an exchange of trade delegations from each country to the other during the coming weeks. The Government has in the meantime modified its barter scheme with regard to cotton almost to the extent of cancelling it, as a result of trade representation, as anticipated in this column last week. In spite of this improvement, however, anxieties continue with regard to the ultimate disposal of half a million bales which are expected to remain unshipped at the end of the season. In any case, as buoyant as that disclosed by the present ruling prices which are as under: Punjab *Deshi* Rs. 59; Rs. 55-55½; S.G. Rs. 60-60½; N.T. R.G. Rs. 55; S.G. Rs. 61; 289F. R.G. Rs. 59; S.G. Rs. 66½.

At Alexandria, there is a slight lull in activities, though the internal turnover amongst operators in the spot market has been encouraging in anticipation of increased demand from Japan, India and some countries on the Continent. The expected announcement with regard to the future policy for cotton from the Egyptian Government has not yet come and the future activity in the market will depend largely on this announcement. Perhaps, the present lull is also due to this suspense.

At New York, there have been spurts in prices which could not sustain themselves. Every increase in price seems to bring about immediate profit-taking and more hedge trading. While there is a slight improvement in the effective enquiries from the U.S. textile industry, there is no such improvement in the case of demand for export from shippers and the price level in the absence of the latter is likely to hover round about the 33 cent level.

The following are the latest available quotations from New York as compared with those of a week and a fortnight before:

(In cents per lb.)

	17-2-53	10-2-53	3-2-53
Spot	33.60	33.65	34.05
March	32.70	32.89	33.29
May	33.12	33.23	33.37
July	33.42	33.58	33.68
October	33.63	33.68	33.93

ART SILK YARN FINISHES HIGHER

(From Our Own Correspondent)

BOMBAY, 18th *February*

Depressed conditions prevailed in the art silk yarn market during the first few sessions of the week. Buyers were scared away by rumours of an early announcement of import policy for art silk yarn for the current half-year and by arrivals of yarn previously contracted for. Besides, longs preferred to unload their holdings and this led to a sharp break in values. The downward trend persisted almost till Monday last. But, on Tuesday, the market put on a cheerful tone, following reports of an increase of 3*d.* per lb. in the price of Japanese yarns and possibility of an increase of 6*d.* per lb. in the price of European yarns. Renewed expectation of extension of Korean War also favourably influenced the sentiment of operators. Buying support and short-covering that ensued as a consequence, resulted in a distinct improvement in prices. Not only were the previous losses fully recovered but further gains in prices were noted. Part of the gain, however, was lost to-day on profit-taking. But on balance over the week, prices were slightly higher.

In the forward section, 150D February contract, after receding by 30 points to Rs. 767 on Monday, gradually improved to Rs. 810 to-day. Towards the close, however, there was profit-taking and it finished lower at Rs. 800. Likewise, March contract, which stood at Rs. 794 last week, was quoted as low as Rs. 764 on the 16th inst. Thereafter, it recovered to Rs. 807 to-day, only to stage a recession to Rs. 796.

Values of yarn in the ready section moved in sympathy with those in the forward section. Thus, 150 Japan lost As. 2 to Rs. 4-6 on Monday. A part of the loss was made up to-day, when the quotation stood at Rs. 4-7. 150 Italy slided down from Rs. 4-1 to Rs. 3-14 on the 16th inst., but, on good support, rose to Rs. 4-1 to-day. 120 Italy lost an anna to Rs. 4-13 which was, however, recovered to-day. 120 Japan was fully steady at Rs. 5-2 throughout the week.

The staple fibre section was fully active, under the influence of good demand and scarcity of supplies. Volume of business done was fairly large and prices recorded handsome improvement. This was particularly in marked evidence in staple fibre of 2 x 40s (ready). In the forward section, staple fibre 2 x 40 February contract remained fully steady at Rs. 800, that is, the ceiling fixed by the Yarn Merchants' Association.

The table below gives the prices of art silk and staple fibre yarns quoted to-day, as compared with those on the 11th and 4th inst.

	18-2-53 Rs. a.	11-2-53 Rs. a.	4-2-53 Rs. a.
Art Silk Yarn—			
150D February (per case of 200 lbs.)	800 0	707 0	705 0
150D March	706 0	704 0	702 0
120 Japan (per lb.)	5 8	5 2	4 14

SPURT IN GROUNDNUTS

(From Our Own Correspondent)

BOMBAY, 18th *February*

The oilseeds market continued to rule bright during the week under review also. Groundnuts were firm, on the decision of the Government of India to allow export of handpicked selected groundnut kernel to soft currency areas over and above the quotas for hard currency areas announced in December last. There was also good demand from *vanaspati* interests for groundnuts. Overseas enquiries for groundnut oil too were encouraging. Castorseeds also put on a cheerful tone, despite the generally discouraging foreign advices. This was attributed to buying by shippers to fulfil large contracts pending shipment to U.S. Linseed ruled in sympathy with the above two sections. As a result, prices in all the sections forged ahead, under the leadership of groundnuts, recording sizable gains over those at the end of last week.

The upward trend in groundnuts noticed for some time past gathered momentum this week on heavy purchases by a leading *vanaspati* manufacturer. Enquiries from the Continent for groundnut oil were placed at £143-144 and for Bombay Bold (H.P.S.) at £92-93. Consequently, Bombay Bolds firmed up from Rs. 37-8 to Rs. 39-12. Khandesh quality had a gain of Rs. 2-4 at Rs. 40-8. Groundnut oil ready and railway receipt rallied Re 1 each to Rs. 20-12 and Rs. 20-8, respectively. March and April deliveries were done at Rs. 20-5 and Rs. 20-8, as against Rs. 19-7 and Rs. 19-9, respectively. The rumour that export duty will be levied on groundnut oil was discounted, in the absence of substantial evidence.

The castorseeds section witnessed active buying. May 1953 opened at Rs. 144-8, as against Rs. 144-12, and gradually advanced to finish at Rs. 151-8. F.A.Q. put on As. 12 to Rs. 37-8 and Madras As. 8 to Rs. 31-8. Castoroil Commercial quality and First Pressure hardened by As. 8 each to Rs. 19-2 and Rs. 19-14, respectively. U.S. quoted Commercial quality at 18¼ cents for March-April delivery, but this price was considerably lower than the local quotations. The Continent was interested at £148 for Commercial quality March-April delivery.

In the linseed section, Bold ready moved from Rs. 27-8 to Rs. 29, on speculative demand. Linseed oil ready was done at Rs. 15, as against Rs. 14-8 end of last week. In the absence of reduction of export duty on linseed oil, there is no prospect of Indian linseed oil entering overseas markets.

Niger and kardi seeds too were cheerful. Niger F.A.Q. was up by Re. 1-4 to Rs. 30 and kardi seeds ready Bold by Re. 1 to Rs. 23-8.

The following table shows the prices of oilseeds and oil on the 18th inst., as compared with those at the close of preceding two weeks.

	18-2-53 Rs. a.	11-2-53 Rs. a.	4-2-53 Rs. a.

DEMAND FOR TEA DUSTS FAIR

(Messrs. Forbes, Ewart & Figgis Ltd.)

COCHIN, 14th *February*

Dust Sale 'C'.—The offerings at Dust sale 'C', which was held on Tuesday, 10th February, amounted to approximately 1,75 000 lbs. There was only a fair demand and buying was erratic. Milled dusts and fine dusts were well supported and advanced by As. 1 to As. 2. Well made dusts met only a fair demand and there were a number of withdrawals, several of these have since been taken up. Best liquoring dusts were steady at last rates.

London Market.—Common tea firm to dearer; others generally steady, though sometimes irregular.

Colombo Market.—4,50.000 lbs. Lowgrown firm; others dearer, but finest irregular.

Calcutta Market—Export.—Market generally firm to dearer, particularly price teas.

Dust.—Commons and commonest dearer; others irregularly As. 1 to As. 2 easier.

Export Quota.—Although some business was done early in the week at 2¼ pies, the market has since declined and the present quotation stands at 2/2¼ pies.

Forthcoming Auctions.—Dust sale 'D' will be held on Tuesday, 24th February.

As we go to press Messrs. Forbes, Ewart and Figgis Ltd. wire as follows:—

Sale No. 4.—9 lakh lbs. Good general demand, particularly for low medium brokens and fannings, which were often dearer. Best liquoring about steady following quality.

JUTE GOODS STEADY

(From Our Own Correspondent)

CALCUTTA, 17th *February*

Despite increased stocks of jute goods with mills, prices in the jute goods market remained steady this week. The steadiness was due to considerable speculative activity induced by rumours of a possible reduction in the export duty on jute goods by about the end of the month. The sentiment was further assisted by the expectation of a Government order for hessian to meet domestic needs. The belief that China and Argentina would shortly be in the market for 90,000 bales of sacking and 20.000 tons of hessian respectively also helped to impart a steadier feeling. It was not, therefore, surprising that 40" 10 ozs. hessian closed better yesterday at Rs. 43-14, at which rate the week's gain was a substantial sum of twelve annas. The move during the week was always upward but slow. The f.o.b. quotation was also steady at Rs. 52-9. The f.a.s. rate for 40" 8 ozs. hessian was Rs. 35-8, with the f.o.b. being Rs. 42-4. The denial by the Indian Embassy at Buenos Aires that, to its knowledge, a new barter agreement for the exchange of 80,000,000 yards of hessian for Argentine wheat had been proposed did not cause any easiness on local quotations, although the market was prepared to disregard the earlier report.

It will be recalled that much business in hessian diverted itself from this country to Continental manufacturers, who, on the expectation that Pakistani jute prices would fall steeply in view of the need for East Bengal to dispose a highly satisfactory crop, under-quoted the Calcutta rates for several months last year. The orders so placed on the Continent are being executed now, but it is reported that British buyers have complained about the quality of hessian, which is stated to be inferior even to the poorest qualities shipped from Calcutta! Complaints of shortage of rolls as well as their length have also been heard. Such a stage of affairs would appear to have resulted in the determination of British buyers, to look to Calcutta for future supplies of hessians, even if its quotations happened to be higher than those for the Continental products. The market noted these reports cheerfully, and Indian mills could justifiably shake off their earlier disappointment when they lost some business to their Continental counter-parts.

The sacking market presented a perceptibly better trend, and the steadiness of the quotations was in no small measure due to the enthusiasm of speculators, although business taking place with shippers was not large. Exporters were not prepared to follow the up-trend. A fair quantity of B. twills changed hands in the bazar. Ready offers opening at Rs. 92-12 soon forged their way ahead to Rs. 94 but declined to Rs. 93-4 on Thursday. However, the steady trend again returned and the rate was taken up to Rs. 94-8. Sellers showed no inclination to discount rates.

The improved trend in the prices of jute goods had no effect in the raw jute market, as mills did not show any desire to accept offers. Assam bottoms were easy at Rs. 21, Murshidabad district tossa declining to Rs. 20 from Rs. 20-8. Pucca bales first marks ready were quoted at Rs. 130 a bale.

BRIGHT LIQUORING TEAS FIRM

(From Our Own Correspondent)

CALCUTTA, 17th *February*

Steady conditions were witnessed during yesterday's export sale, as demand was more than satisfactory. Offerings aggregated 53,800 packages. Medium B.O.Ps. and leaf grades were bought at firm rates, and bright liquoring autumnal teas provided the best feature of the auction as prices for the same were raised strikingly above brokers' valuations. A two-anna rise in prices was recorded for brokens, medium brokens and fannings grades. The market was not devoid of its weak spot. Thus Assam C.T.C. varieties possessing poor liquors were below brokers' valuations. Quotations were: good Assam C.T.C. B.P. Re. 1-15, clean black pekoe Re. 1-7 to Re. 1-7-6, clean common B.P. Re. 1-1-6 to Re. 1-2, and medium Assam B.P. Re. 1-2-6.

Conditions were dull during last week's internal sale, and prices were generally easy. Dusts offered amounted to 19,850 packages. There were, however, exceptions to the general trend. Darjeelings with flavour realised brokers' valuations, and the black leafy varieties and commonest types were firm. Prices for Assam C.T.Cs. fell by as much as As. 2, while the rest of the offerings lost ground by an anna. Thus good Assam C.T.Cs. were quoted at Re. 1-12-6 to Rs. 1-13, medium Doors Re. 1-7, and medium grainy Assams Re. 1-8-6. Leaf grades offered aggregated 870 packages.

METALS RULE EASY

(From Our Own Correspondent)

CALCUTTA, 17th *February*

The local metal market ruled perceptibly easy during the week under review, as consumer demand was poor and reports from foreign markets were uninspiring. The lack of any surprising news following the withdrawal of the American 7th fleet from the Formosan waters was also a factor why consumer purchases were cautious and covered only day-to-day requirements. Tin eased from Rs. 639 to Rs. 637. Some quantity changed hands. The American announcement removing all controls over tin is interpreted as a sign of the comfortable supply position, and as such it is only natural that consumers would like to keep away stocks.

Electrolytic copper closed lower at Rs. 186, representing a loss of one point during the week. If Chile succeeds in raising its copper price, it will perhaps lead to a rise in price here; but such a rise could only remain purely temporary. For certainly consumers would not be prepared to follow the improvement. The fire-refined material fell by as much as seven points to Rs. 165. Mercury was quoted at Rs. 522 per flask, but activity was low. There were some inquiries for electrolytic zinc which was quoted at Rs. 65. Virgin lead was available at Rs. 67-8. Star metal antimony remained unchanged at Rs. 200 because of lack of demand.

BETTER RICE CROP EXPECTED

(From Our Own Correspondent)

HAPUR, 16th *February*

There has been steady improvement in the overall food position in the country. Efforts are being made to rush foodgrains to scarcity-stricken areas in some of the States. There was a sudden rise in the locust swarm activity in the western parts of Bombay State, Kutch and Rajasthan during the fortnight ended 31st January, 1953.

A better rice crop in most of the rice-producing States is reflected in higher procurement figures during the current crop year, November, 1952 to October, 1953, as compared with last year. Till the end of the third week of January, 1953, Assam had procured 36,000 tons, as against half this quantity during the corresponding period last year; Bombay 102,000 tons, as against 77,000 tons; Madhya Pradesh 94,000 tons, as against 56 000 tons; Orissa 31,000 tons, as against 9,000 tons; The Punjab 93,000 tons, as against 42.000 tons; and West Bengal 707,000 tons, as against 95.000 tons.

Latest reports from Madras indicate that, although the offtake of foodgrains from the fair-price shops has decreased and the price level in the free market is also showing a tendency to go down, the Government would generally continue the running of fair-price shops for some months to come and watch the situation further. It is officially stated that the Madras State has now a stock of 158 000 tons of rice. Out of the total allotment to this State of 250,000 tons of rice by the Centre 75,000 tons have been earmarked for imports from Madhya Pradesh and Orissa. Of this, 30,000 tons have already been received. The procurement of rice inside the State under the levy system is going ahead and it is stated that 42,000 tons have already been procured. The target of procurement is about 250.000 tons.

The Government of Travancore-Cochin will be forced to increase the price of rice in the State, if food subsidy from the Centre is not urgently rushed to the State. The loss suffered by the Government in selling rice at lower rates is proposed to be met by the Central subsidy.

With rice procurement on a record level, the Madhya Pradesh Government has released 55.000 tons in January for despatch to deficit areas. Out of this, 35,000 tons have been allotted to Madras and 10.000 tons to Bombay. Another 10.000 tons are kept in reserve for allotment by the Govern-

MARKET REPORTS

(Concluded from page 313)

ment of India. If procurement is maintained at this rate, it is stated, Madhya Pradesh can despatch about 200,000 tons of foodgrains to deficit areas during 1953.

With a view to preventing smuggling of *jowar* to the neighbouring States of Bombay, Madhya Pradesh, and the U.P., the Government of Madhya Bharat has prohibited movement of the commodity from the producing areas to the five border districts of Bhind, Morena, Ratlam, Ghabua and Nimai without the previous permission of the Food Department.

The Rajasthan Government has decided not to remove control on foodgrains. For some measure of control, it is stated, is necessary for an equitable distribution of foodgrains.

Foodgrain markets in Uttar Pradesh remained steady. The U.P. Additional Development Commissioner has reported that over 1,700 villages in three scarcity stricken eastern districts—Gorakhpur, Deona and Azamgarh—have been hard hit by hail-storm in January last. The report says that the present position of crop needs closer observation, as there is fair chance of at least 25 per cent. of the crop reviving. Recent reports aver that wheat prices in some important markets have tended to rise beyond specified limits. The rise is quite steep at Agra, where the price has shot up to Rs. 25-8. The reason for this is reported to be that wheat arrivals on the whole are very small. The upward trend has been halted, to some extent, by the issue of Government stocks and selling wheat at Rs. 20 per maund on no-profit-no-loss basis

Wheat output in U.P. has declined by 389,000 tons in 1951-52, as compared with the preceding year, while the acreage had increased by 160,000 acres bringing the total area under wheat to 8,200,000 acres. The wheat production in the State has also fallen by nearly 800,000 tons in the past three years and stood at 1,580,000 tons in 1951-52. The acreage under rice also went down by 500,000 acres that is from 9,000,000 acres in 1950-51 to 8,500,000 acres in 1951-52.

The following are the latest quotations in the Hapur market: Wheat Rs. 22-8, gram Rs. 20, barley Rs. 16, *bejhar* Rs. 15-8, maize Rs. 14-6, *bajra* Rs. 14-4, *jowar* Rs. 12-12 to Rs. 13-12, *gwar* Rs. 13, rice: *basmati* Rs. 35-8, *hansraj* Rs. 21, *sela* Rs. 29, and coarse Rs. 22-8, peas Rs. 17, *arhar* Rs. 17, *urd* Rs. 21-8 to Rs. 22, and *moong* Rs. 20 to Rs. 22.

SUGAR SUPPLIES IMPROVE

(From Our Own Correspondent)

HAPUR, 16*th February*

Sugar markets remained slightly bearish this week, due to an all-round improvement in supplies position. The release of over 150,000 tons of sugar from the 1952-53 output for free sale, coupled with better wagon supply helped to bridge the disparity in prices at Kanpur, Bombay and Madras. Sugar stocks have begun to move to the South. Sugar factories of North Bihar are reported to be faced with a critical situation. If nothing is done promptly to expedite movement of old stocks of sugar and make space for new production, it is feared, some of them at least may have to close down simply for want of storage space.

The U.P. Co-operative Conference has called for co-operative control of sugar factories which fail to set their financial house in order. The Conference has viewed with grave concern the increasing tendency of sugar factories to withhold cane price and commission of cane supplies which cause great hardship and economic distress to cane growers and the cane unions and has, therefore, urged the Government to take measures effectively to ensure prompt and timely payment of cane price and commission.

The latest mill delivery quotations in the local market are: Mansoorpur Rs. 29-8, Daurala Rs. 30, Meerut Rs. 28-8, Mawana Rs. 28-8, Amroha Rs. 27-8, and Simbhauli Rs. 29.

MADRAS HIDES ACTIVE

(From Our Own Correspondent)

MADRAS, 16th *February*

There has been more activity in the local hides and skins market. U.K. buyers were offering 1d. to 2d. lower than last week, but Periamet market has ruled 2d. over last week due to shippers' competitive buying. This applies to cow hides, cow calf and buff calf. Price of buff hides has also advanced by half anna, due to moderate demand from U.K.

In the tanned skins section, prices of goat skins advanced by As. 3 and lining sheep by As. 12 per lb. Shippers to U.K. and Japan have been active. It is rumoured that over 600 bales of tanned skins *ex s.s. Clan Macintosh* were damaged in the floods, and the U.K. buyers will have to replace part of the stock.

STRONG DEMAND FOR HIDES

(From Our Own Correspondent)

KANPUR, 15*th February*

The local hides and skins market displayed strong undertone during the week under review. There was a good demand for items of almost all categories of goods. Wet salted cow, however, was the special favourite. The main purchasers were the local tanners. The latest quotations are as follows:—

Wet salted cow 1st grade at Rs. 400 and 2nd grade at Rs. 300 per score; wet salted buff 1st grade: 1 lb. 10 ozs. and 2nd grade: 2 lbs. 4 ozs. per rupee; goat skins 1st grade at Rs. 240 and 2nd grade at Rs. 220 per 100 pieces; and sheep at Rs. 250 per 100 pieces.

LINSEED ADVANCES

(Messrs. A. Bradley & Co.)

CALCUTTA, 16th *February*

Prices have been maintained throughout the past week and a steady undertone prevails, whilst trading has been reported on a small scale. Prices have been well maintained up-country, and despatches to this centre have been limited. Sellers are very reserved and pries for forward delivery have also advanced. There have been keen enquiries from local crushers for all positions, but business has been on a very small scale; prices appear to be on the upward trend. Firm conditions prevail in the oil section owing to small local enquiries, but *there has been no further interest from overseas.* The latest quotations are as follows: February Rs. 21 and May Rs. 20 per maund.

STOCK & SHARE QUOTATIONS

Abbreviations:—D=Deferred shares. G=Guaranteed shares. P=Preference shares. P.O.=Preferred Ordinary shares. R=Rebate shares. Y=Accounts published yearly. H=Accounts published Haf-yearly. Q=Accounts published once 15 months. T=Company has Debentures. R.L.=Reserve Liability on shares. N=Nominal Quotation. i=Interim Dividend. f=Dividend for first half-year, y=Dividend for the year. x=Ex. Dividend. c.d.=Cum. Dividend

Shares:—If a company has different classes of shares—is, for example, 'A' shares and 'B' shares—these are distinguished by the same letters 'A' and 'B' under "Paid-up Per Share."

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12 indicate the months of June and December, respectively "Reserves" includes general and other reserves and all other funds which a company may have as also depreciation on block items, when this is charged to separate account "Block" represents actual cost of land, buildings, machinery, and all such other items on which depreciation is allowed, less sales, if any, and stands for the gross figure except where otherwise indicated.

Dividends:—Dividends for completed years are calculated at per cent. per annum, but where quoted for portion of a year, they represent percentages of the dividend on the paid-up share value. For companies closing the books half-yearly in the first three months of the year, and for companies closing their books yearly during the first half of the year dividends are shown as for the previous year.

* The following explanatory notes relate to the abbreviations and marks shown on page 324 in the debentures section:—

‡‡ Option to repay on six months' notice, on any interest date after 31st December, 1951, at 102 per cent. Also redeemable out of a cumulative sinking fund of 1½ per cent. per annum (commencing in 1938) by drawings at 102 per cent. or by purchase at or 102 per cent.

(a) Option of repayment at any time at 3 per cent. premium.

(b) Bearer bonds of Rs. 1,000 each repayable at par.

Bearer bonds of Rs 1,000 each repayable on 31st July, 1959.

(d) Bearer bonds of Rs. 1,000 each with option of redemption in whole or in part at par on 30th June, 1952, or on any subsequent interest date at one month's notice.

(e) Returnable on or after 31st July, 1950, at Rs. 102-8 or at par after 31st July, 1955, on six months notice in each case.

Bearer bonds of Rs. 1,000 each with option of redeeming on 3 months' notice at ½ per cent premium, after 1st March, 1954, but before 1st March, 1957, and 1 per cent. premium on or after 1st March, 1957

(h) Option of redemption on or after 1st July, 1949, at par.

(i) Option of repayment at any time at par at any time on or after 30th June 1947 on six months' notice

MARKET GOSSIP

(Concluded from page 279)

anxious to carry with them the support and co-operation of the life offices. With this end in view, the Government seems to have gone so far as to hint at the possibility of fixing the rate of interest on such funds at 4 per cent. tax-free. Insurance circles are understood to be divided in their opinion on the Government's move, as certain sections seem to be chary of forgoing their freedom —albeit restricted under the law—to invest their funds in the most advantageous manner possible. The move is particularly opposed in industrial circles, as it would ultimately dry up one of the principal sources of finance for the industries in the private sector.

* * *

It is reliably understood that the Standard-Vacuum Oil Company, which is proceeding with its project of installing a refinery in Bombay, is contemplating to issue debentures in India to the tune of Rs. 4 crores. These debentures will be guaranteed by the parent company in the U.S. The rate of interest is likely to be 5½ per cent. and the issue price at par. The debentures will be for a period of 15 years, but will be repaid in instalments of 20 per cent. after the end of 10 years. It is reported that institutional investors in two foreign countries are also keen on participating in this issue, a feature which will be welcome to the Government of India. It is possible that the share that will be available for investors in India will be less than Rs. 2 crores. The approval of the Government of India for making this investment eligible for support from insurance companies is being sought.

* * * *

Most of the non-ferrous metals have been taking a downward plunge in the last few months. Thus, tin, lead and zinc are all considerably lower than what they were in mid-1951, when they had touched record high levels. In the London market, tin is quoted at £971 per ton as against £1,482½ per ton, the price touched in February, 1951. Lead, which had touched £180 per ton in mid-1951, is now lower at £94. Zinc is now available at £81 per ton, as against the 'high' of £190 during the early part of the post-Korean boom. It will thus be evident that the prices of the metals are only about one-half of their highest levels. The high prices which prevailed for these metals in 1951 provided the necessary incentive to many marginal zinc and lead mines to produce these metals. The supplies from these mines helped materially to bring down prices, apart from the general post-Korean recession in markets. But the recession in the prices of these metals has again made the working of the marginal mines an uneconomic proposition. Supplies, however, are fairly plentiful so that the fact that the marginal mines have ceased to work will not produce, it is stated, any marked effect on prices, for the present at any rate. Tin supplies are also regarded as adequate; this explains why the U.S. authorities chose tin for decontrol almost in the very first round of their new policy of removing restrictions on commodities.

* * * *

As we go to press, we understand that there is no truth in the recent rumour that the Imperial Bank of India will be capitalising a part of its reserves.

* * * *

It is also learned that Mr. M. C. Setalvad is likely to announce his award on the conversion of Tata Deferreds into Ordinaries in the second week of next month.

SALIENT FEATURES OF RAILWAY BUDGET

(Concluded from page 291)

prevalent and, in addition to the Special Police Establishment functioning under the aegis of the Home Ministry, an anti-corruption organisation has been set up on almost all railways to track down and bring to book staff who commit these offences.

The Minister said that the Government recognised that even these additional steps have not succeeded in eliminating corruption to the extent expected and, with a view to ascertaining what additional measures should be taken to achieve the complete elimination of this evil, it has been decided to appoint a committee of Members of Parliament and a few others to investigate into this problem and report to Government. The terms of reference of the Committee would be:

(1) Extent of corruption prevalent among various categories of railway staff in their dealings with the public, (2) methods adopted by the staff concerned, (3) causes of corruption, (4) responsibility of the using public, (5) defects, if any, in rules and regulations which leave loopholes for corruption, and (6) remedial measures, both administrative and legal, to eradicate this evil in all its aspects.

In conclusion, the Minister impressed on railwaymen that it is their duty to look to the needs and comforts of the public by their courteous behaviour, tact and good manners. He appealed to them to live and work in peace and to have no doubt in their minds regarding any possible lack of will on his part to find out reasonable solutions of their problems. He said that the next three years, the remaining period of the Plan, are crucial and the railways cannot afford to lag behind other developmental activities of the country. The railwaymen have great responsibility of building anew the country's economy and they must play their rightful role in the task the country has set before itself.

RECOMMENDATIONS OF THE FINANCE COMMISSION

(Concluded from page 306)

Under the Commission's recommendations, the grants-in-aid will be:

(Rs. lakhs)

West Bengal ..	150	Bihar	75		
Assam	75	Orissa	15		

The Commission suggest that these grants-in-aid should be paid to the States with effect from 1952-53.

Grants-in-aid

Important recommendations have been made by the Commission on the principles that should govern grants-in-aid by the Centre. The Commission analyses the various reasons for which grants-in-aid are made including (a) deficiency of States' resources, (b) importance of augmenting welfare services and development projects, (c) developing some activities like unemployment activities, insurance, social security, etc., and other factors. Historically speaking, the most important factor governing grants-in-aid, the Commission says, has been the deficient resources of the States "at a time when the impact of a rapidly changing economic situation created large and insistent demands for new Governmental services."

Both conditional and unconditional grants have their place. Unconditional grants, the Commission says, should reinforce the general resources of the State Governments which would be free to allocate such grants among competing purposes according to their best judgment, subject to the usual administrative and parliamentary checks. Conditional grants—which may be for broad purposes—may be given to stimulate expansion of particular categories of services rather than specific schemes under those categories.

Principles

Discussing the principles under which grants-in-aid should be made, the most important criterion that the Commission prescribes is the extent of self-help that a State practises. This should determine the eligibility for, as well as the amount of, help from the Centre. Secondly, the method of extending financial assistance should be such as to avoid any suggestion that the Central Government has taken upon itself the responsibility for helping the States to balance their budgets from year to year. "If the amount of grants-in-aid were to be merely in proportion to the financial plight of a State, a direct premium might be placed on impecunious policy and a penalty imposed on financial prudence. On the other hand, if a State is eligible for a grant on other grounds it should not be precluded from this benefit merely because its budget is in order as a result of its sound financial management."

Economy in expenditure practised by the States is another test recommended. Other principles suggested by the Commission are:

(a) Grants-in-aid should assist in equalising standards of basic social services. Factors like the area of a State in relation to its population, economic backwardness, etc., would be reflected in the level of social services and the standard of development of a State and these should be taken into account; (b) a State may be helped to meet a special burden or obligations of national concern, though they may arise within the State's sphere, for example, the strain on the economy and the administration of the State as a consequence of the Partition, increased responsibility in respect of security, etc.; and (c) beneficent services of primary importance for which assistance to less advanced States is in the national interest.

These principles had been kept in view by the Commission while formulating their recommendations.

Primary Education

The Commission has made a new departure in the pattern of general grants-in-aid to the States; special grants-in-aid have been recommended for expansion of primary education in some of the States the need for which became apparent during its discussions with the Governments concerned. It has suggested a "modest beginning" in this direction by helping those States where a large leeway has to be made up. The following States in which primary education is at present comparatively backward have been recommended assistance in the next four years on a gradually rising scale:

(Rs. lakhs)

	1953-54	1954-55	1955-56	1956-57
Bihar	41	55	69	83
Madhya Pradesh ..	25	33	42	50
Hyderabad	20	27	33	40
Rajasthan	20	26	33	40
Orissa	16	22	27	32
Punjab	14	19	23	28
Madhya Bharat ..	9	12	15	18
P.E.P.S.U.	5	6	8	9
Total ..	150	200	250	300

The table below gives a comparative estimate of what each State might, on an average, expect to receive annually under *all* the recommendations made by the Finance Commission together with corresponding sums the Part A States received during the three years ended 1951-52 and Part B States during the two years ended 1951-52.

(In crores of rupees)

States	Average for three years ended 1951-52	Average under Commission's scheme
Assam	2.21	3.45
Bihar	6.55	8.55
Bombay	11.60	11.25
Hyderabad	1.25	3.59
Madhya Bharat	0.06	1.46
Madhya Pradesh	3.35	4.20
Madras	8.56	11.10
Mysore	3.45	3.68
Orissa	2.01	3.74
P.E.P.S.U.	0.16	0.65
Punjab	3.43	3.82
Rajasthan	0.10	2.89
Saurashtra	2.75	3.02
Travancore-Cochin	3.22	3.23
Uttar Pradesh	8.88	11.70
West Bengal	7.54	9.60
Total ..	65.12	85.93

The actual sums accruing by way of devolution of revenue will obviously vary from year to year. The sums given in the above table are only by way of indication of the order of sums likely to be received under the Finance Commission's scheme on the present estimates of the yield from the divisible taxes.

The Commission has assumed that its recommendations, if given effect to, would be operative for a period of five years ending 31st March, 1957.

The following table shows State-wise the break-down figures of the amount receivable by each State from the Centre under the various heads as well as the total.

(In lakhs of rupees)

States	Share of income-tax and Union excise	Grants-in-aid under Article 273	General grants-in-aid under substantive portion of Article 275 (1)	Revenue gap grants	Primary education grants	Grand total
Assam ..	1,70	75	1,00	..	..	3,45
Bihar ..	7,30	75	..	..

William Blake

VOL. LXXXVI. No. 2194 BOMBAY, 28 FEBRUARY, 1953 PRICE Rs. 1/8

FINANCES OF BOMBAY STATE

A DEPLORABLE feature of the speech delivered by Dr. Jivraj N. Mehta, Finance Minister, Government of Bombay, while presenting the budget estimates for 1953-54 to the Bombay State Legislative Assembly last week-end, is the lack of adequate information about the Budget proper. This seems to have escaped the attention of many, presumably because they were carried away by the pleasant surprise which this doctor of medicine sprang on an expectant public by not proposing any additional taxation and by showing an insignificantly small surplus on the revenue account when everyone was expecting him to reveal a big deficit. In a long speech, running into 27 pages of closely printed matter, the analysis of the budget estimates of revenue and expenditure and the explanation of the revised estimates for the current year have taken up such little space that it looks as though the Finance Minister was concerned more with detailing the achievements of the Bombay Government under the Congress regime—a task that was admirably carried out in the Governor's opening address—than with explaining the finances of the State. In fact, even the slight reference he made to the Budget marks a departure from the customary practice, in that he has given no clear account of the main heads of revenue and expenditure and has thrown no light on the Government's ways and means position and its cash balances.

It is true that all the relevant information is available in the Explanatory Memorandum to the Budget, as well as in the Civil Budget Estimates, both of which are bulkier in size than in the previous year. But how many people have access to these volumes? And, even if they have, how many of them can make out anything from the mass of statistics given there? We wonder whether even all the members of both the State Assemblies themselves will be able to analyse the statistics given in these volumes and make a critical study of the estimates. It is the primary duty of a Finance Minister to present in his budget speech a cogent and simple analysis of the financial position of the State and offer convincing explanations for the variations in at least the principal items of expenditure and sources of revenue. Dr. Jivraj Mehta has failed to discharge this duty. It is not for us to say whether this lapse on his part is intentional or unintentional. But the fact is that such an analysis will disclose many features not quite complimentary to the present administration.

Great relief has been expressed at the fact that the Government has not chosen to levy any fresh taxation. While one should, of course, be thankful to the powers-that-be for this small mercy, one cannot help remarking that it does not bring much credit to the Government. Nor does the fact that the Finance Minister has been able to present the Budget for 1953-54 with a small surplus of Rs. 7.49 lakhs. The Government has chosen not to impose any additional taxation because it knows that there is little scope for it to increase the taxes on the urban population and the trade any more and because it is not prepared, for political reasons, to explore new sources of taxes in the rural areas. The present level of taxation in the urban areas is so high that the law of diminishing returns has begun to operate. In such a situation, a wise Finance Minister will reduce the level of taxation, because he knows that any such reduction will not necessarily be followed by a fall in revenues, but, on the contrary, will actually bring a larger revenue as a result of the stimulus given to trade by the lower rate of taxation. By pushing up the various taxes, especially the taxes on sale of commodities and on vehicles, to penal levels, Dr. Jivraj Mehta has not only driven out a good part of the trade from this State but also killed the incentive among the traders to make more profit and compelled them to resort to all sorts of measures to evade the taxes. Again, a wise Finance Minister who wants to raise sufficient funds to implement the ambitious plans of his Government will not forgo sources of taxation, as Bombay is doing now by sticking to its dry laws. Nor will he lack the courage to raise additional taxation from sources which can very well afford to carry a certain amount of extra burden. There is scarcely any justification, for instance, for the Government dropping the surcharge on land revenue which it had proposed last summer. If it was felt that the exact manner in which the land revenue was sought to be increased was crude and unscientific, the solution was modification and improvement of the proposal and not complete abandonment of it.

After having raised some of the taxes to unbearable limits in the last Budget, the small surplus of Rs. 7.49 lakhs on revenue account is not a great achievement. In other words, this surplus is not consistent with the high level of indirect taxation to which the people of the State are being subjected; it ought to be very much more. If that is not so, it is because there has been no significant reduction in expenditure and, secondly, there has been an underestimate of the revenue from sales taxes. Even after converting the single-point sales tax into a multi-point tax, the Finance Minister does not hope to get more than Rs. 14 crores, as against Rs. 10.6 crores in the revised estimates. It is true that there has been a recession in business, but it was there even when the new sales tax was introduced. Further, in 1952-53, collection of sales tax suffered a setback, owing to the Government's bungling, about which everyone knows. Unless the tax were to be substantially modified later in the light of the Supreme Court's judgment, expected in a few days, the yield from this tax will be much more than Rs. 14 crores, prvoided the Government effectively enforces it, as we believe it will.

While on the subject of sales tax, it is necessary to draw the attention of the Bombay Government to a minor but an important point. Sales tax to-day is the single largest source of revenue. Including the tax on sale of motor spirit, it is expected to bring in as much as Rs. 15.92 crores (out of a total revenue of Rs. 67.83 crores) next year, as against Rs. 10.31 crores by way of income-tax and Rs. 6.67 crores by way of land revenue. And yet in the budget estimates it is not given a separate place under the "principal heads of revenue," but is clubbed together with "other taxes and duties," whereas income-tax and land revenue are shown separately. One cannot know the exact contribution made by this principal source of revenue unless one carefully studies the Civil Budget Estimates. Surely, this is an anomaly which must be corrected at least in the next budget estimates by showing the sales tax as the first item under the principal heads of revenue.

The most disquieting feature of Bombay's finances is the continuing high level of revenue expenditure. From Rs. 62.57 crores in 1951-52, the expenditure has gone up to Rs. 68.24 crores in 1952-53 (revised estimates). For the next year, the Budget places it a shade lower at Rs. 67.76 crores, a drop of no more than Rs. 46 lakhs. But, if experience in recent years is any guide, the revised estimates for the next year can be expected to exceed the budget estimates, as has happened in the current year. Even the small decline revealed by the budget estimates is the result of lower provision for famine relief at Rs. 47.25 lakhs, as compared with Rs. 158.56 lakhs in the revised estimates for the current year. Actually, all the principal items of expenditure such as general administration, police, education, health, revenue administration, debt services are either actually higher or lower by only a fraction. The cost under every one of these items is still at record high levels. Dr. Mehta's speech gives no room to believe that the Government is conscious of the need for making an effective reduction in expenditure.

Information about the results of State trading, in which this State is perhaps involved to a much greater extent than any other State in the Indian Union, is not readily available either in the budget estimates or in the Minister's speech. As large amounts have been invested by the Government in State trading and as there have been frequent references in the Press about the huge losses or profits made by the State undertakings, the Finance Minister would have done well to take the public into confidence by stating clearly the position and the results of the commercial activities of the Government. In fact, in fairness to the taxpayer, the budget speech of the Finance Minister must, in future, contain adequate information on this aspect. If these undertakings are being successfully run, there is no reason why the Minister should not exploit that point to win the confidence of the taxpayer.

The Government has provided for a large capital expenditure of Rs. 17.81 crores, excluding expenditure on State trading schemes. The major portion of this expenditure covers productive projects, irrigation and electricity schemes alone accounting for Rs. 5.21 crores and Rs. 4.97 crores, respectively. Of the remainder, Rs. 3.15 crores are for housing schemes and Rs. 1.05 crores are for tube wells. As regards the funds for meeting the development expenditure, the Government hopes to receive a little over Rs. 10 crores by way of loans from the Centre and is withdrawing Rs. 2.5 crores from the fast shrinking reserves built up in the past. For the rest, it will have to depend upon borrowings from the markets. It remains to be seen whether the Government will be successful in borrowing Rs. 5 or Rs. 6 crores, especially because almost all States are now counting upon the capital market.

As just mentioned, the reserves of the Government have been declining fast. At the end of 1951-52, they were of the order of Rs. 20.17 crores, but, by the close of this year, they will be no more than Rs. 16.37 crores and will be still lower at Rs. 11.97 crores by the end of March, 1954. These are the aggregate reserves of the Government, including depreciation, sugarcane, insurance, road, contingency funds, etc. The fund specifically earmarked for purposes of development will be only a little over Rs. 6 crores, as against about Rs. 11.50 crores at the close of March, 1953. While the reserves are thus shrinking at a rapid pace, the State's indebtedness to others is expanding markedly. The total outstanding debts, which stood at Rs. 48.14 crores on 1st April, 1952, are expected to be as high as Rs. 64.39 crores at the end of March, 1954, excluding the proposed open market borrowings in the coming year; they would be nearly Rs. 70 crores, if the latter also were taken into account. In addition to this, the State Government proposes to have a floating debt of Rs. 4 crores, presumably by way of borrowings from the Reserve Bank, as against Rs. 2 crores in 1951-52. These particulars provide an indication of the low level of the Government's cash balances and the consequent need for ways and means advances. Yet Mr. Morarji Desai says that Bombay is in a far happier position than many of the States which are having dry laws. Either he does not know what he is talking about or he is deliberately deluding himself.

Dr. Jivraj Mehta's speech is, however, notable for one good feature, in that it gives a clear, though a little exaggerated, picture of the Bombay Government's expenditure on nation-building activities. He has impressively brought out the fact that the amount spent by this State on social services is greater than the expenditure incurred by any other State in the Union. The expenditure, under revenue account, on socio-economic development has gone up from a mere Rs. 4.61 crores in 1937-38 to as much as Rs. 36.62 crores in 1952-53 and, under capital account, from Rs. 13 lakhs to Rs. 9.30 crores. Even after allowing for the fall in the purchasing power of the rupee since 1937-38, there is no doubt that these figures give one a fairly approximate idea of the zeal with which the present administration has been trying to improve the living conditions of the people. The great bulk of the amounts quoted above reflects the expenditure on education and health. There is, of course, no index to measure the results of this large expenditure on social services. Nor is there any means of knowing the extent of wastage incurred in the dispersal of such large amounts. But Dr. Mehta's disclosure that the death rate in the Bombay State has fallen from 26 per thousand in 1946 to 15.91 per thousand in 1951 and that the rate of infant mortality has likewise dropped from 162.78 per thousand of live births to 117.17 per thousand is not only revealing but also impressive.

BOMBAY BUDGET AT A GLANCE

(In lakhs of rupees)

	Accounts for 1951-52	Budget Estimates, 1952-53, as presented in January 1952 session	Modified Budget Estimates, 1952-53, as mentioned in Budget Speech of June 1952	Revised Estimates, 1952-53	Budget Estimates, 1953-54
Revenue Receipts	62,69.66	61,54.49	67,53.09	64,33.77	67,83.58

Revenue Surplus (+) or Deficit (—)	+ 12.02	—1,63.13	+ 2.19	—3,90.36	+ 7.49
Capital Expenditure (excluding expenditure on State Trading Schemes)	10,80.40	13,20.26	13,93.24	11,80.11	17,81.09

INDO-PAKISTAN WATER DISPUTE

THE Pakistan Government has launched yet another propaganda campaign against India. This time, it is neither Kashmir, nor refugees, nor evacuee property, but the sharing of the canal waters that forms the subject of the campaign. In a White Paper, published two weeks ago, Pakistan has attributed all its economic troubles to India's alleged action in stopping the canal waters which flow into Pakistan from Indian territory. Pakistan to-day faces, the White Paper says, "starvation and economic ruin by a process of slow strangulation at the hands of India," and an "unparalleled threat, namely, the starvation of 76 millions" through deprivation of the waters of the Indus basin. The water shortage caused by India through "illegal" appropriation of water, according to the Pakistan Government's White Paper, is the "most important cause of the foreign exchange problems which, in recent months, have caused grave concern to the Government of Pakistan," since it "means less cotton to earn foreign exchange and at the same time, heavy increased purchases of food from abroad to feed both East and West Pakistan."

So, a convenient scapegoat has been found for Pakistan's economic troubles—India's "abuse" of its control of canal waters flowing into Pakistan territory. This old dispute has been dressed up anew by the present regime and is being paraded as the chief cause for that country's economic ills for no other reason than to divert the attention of the people who are now becoming restive as a result of their miserable economic plight brought about by the serious mistakes of their administrators. It is not any calculated attempt on the part of India that is responsible for the failure of food crops in Pakistan and for its balance of payments difficulties. The real causes are the unchecked boom in cotton prices, which encouraged farmers to switch over from food crops to cotton and the failure of the Pakistan Government to devalue its currency immediately after the Korean War boom came to an end. Perhaps, nature too was a little unkind to Pakistan in the last rainy season, as it was in India.

Now to revert to the water dispute. The background to this dispute, which is at least as old as the Partition, is easily summed up. On the Partition of the country, the East Punjab State of the Indian Union was left with 60 per cent. of the area irrigated by the Upper Bari Doab Canal, the rest of the area forming part of West Punjab (Pakistan). Also, the Ferozepur head-works lies in East Punjab, although the Depalpur Canal and the Sutlej Valley Canal, which take water from the Ferozepur head-works, are in West Punjab. The dispute relates only to the Upper Bari Doab Canal, which is shared by the two States, and the control over the Ferozepur head-works, which feed two canals lying in Pakistan territory. A standstill agreement between the two countries, reached in December, 1947, was replaced by another agreement, in May 1948, by which the East Punjab Government gave the assurance that, without prejudice to its legal rights in the matter, it has "no intention to withhold water from the West Punjab without giving it time to tap alternative sources." Pakistan, which was receiving water under this agreement from year to year, repudiated the agreement unilaterally in December, 1950. India, on its part, however, has continued to supply the water under the agreement and Pakistan's allegation that it has been starved of water-supply to its canals is baseless.

Before Pakistan finally decides to bolster up this dispute into a war-slogan, it will do well to address itself to a few questions. Why did Pakistan take the extreme step of denouncing the agreement in a unilateral manner? Is it not a sign of India's spirit of accommodation and goodwill to Pakistan that it abides by an agreement even though the other party (Pakistan) has repudiated it? In September, 1951, the Government of India formally proposed to the Government of Pakistan that the question of the validity of the 1948 agreement be referred to arbitration. Why did Pakistan refuse to countenance this proposal? India has been giving water to the canals, which lie in Pakistan, in accordance with programmes which are communicated to it before the commencement of each sowing season. The Pakistan White Paper on this subject contains a long history of grievances against India. If the grievances are both real and old, why did it not lodge any protest whatsoever with the Government of India in the past?

On the initiative of the World Bank, Indian and Pakistani engineers have been engaged, since May, 1952, in preparing a comprehensive plan for the development of the waters of the Indus Basin, designed to solve the water dispute between the two countries. Both countries reached an understanding that, while the talks were in progress, all unnecessary controversy should be avoided. Why has Pakistan, in utter disregard of this understanding, launched the propaganda campaign against India? Again, India suggested, apart from the joint survey, that a tribunal, consisting of two Indian judges and two Pakistani judges, be asked to go into the dispute, and that any point of difference between the judges be referred to any international authority, for arbitration. Why was this proposal for arbitration also turned down?

To get the whole dispute between the two countries into a clearer perspective, it is necessary to remember that, on the Partition of the country, the Indian Union was left with 48 million acres of irrigated land and Pakistan with 22 million acres. But the proportion of irrigated area to net area sown is 45 per cent. in Pakistan and only 24.5 per cent. in India. A more relevant consideration is to examine how Partition affected the Indus Basin, covered by the Punjab and Sind. East Punjab was left with only 4.6 million acres of irrigated land, as against 12.7 million acres of irrigated land in West Punjab, 2 million acres in Bhawalpur, and 5.7 million acres in Sind. Again, it is necessary to remember that, out of the 16 canal systems in undivided Punjab, 12 went entirely to Pakistan, three lie wholly in India and one is common to both India and Pakistan. Of the total flow of the six rivers of the Indus system, Pakistan utilises 40 per cent., India utilises 5 per cent., whereas the rest—about 55 per cent. of the total flow—empties itself into the seas.

India's contention has all along been that there is sufficient water for Pakistan to meet all its development plans and that a joint survey of the entire Indus Basin would help both countries to exploit the system to mutual advantage. Pakistan has, in fact, been making plans for further utilisation of its river waters. The Kotri Barrage, near Hyderabad, which is nearing completion, will alone irrigate two million acres, whereas the construction of two other barrages, near Dera Ghazi Khan and Upper Sind, for which blue-prints are ready, will irrigate another two million acres. Other canal schemes are also under way. Surely, it is not necessary that Pakistan should attribute all its economic ills to an imaginary reduction in water-supply in the inter-Dominion canals, which form a very minor part of its irrigation system. If there has been any reduction in the water-supply at all, it is due to drought which has affected both the countries of this sub-continent.

Clearly, it would be in the interest of both India and Pakistan to evolve some joint plan for the utilisation of the waters of the Indus Basin. And it would avail Pakistan nothing if it were to eschew the path of reason. Pakistan has, in its White Paper, indicated its anxiety to take the matter to the International Court of Justice, saying that India is unwilling to let the matter go to an international tribunal. That this charge is unfounded should be clear from Mr. Nehru's statement in Parliament, last week, that India had "no objection to any international authority." International law on the subject of the utilisation of river waters for irrigational purposes, as distinguished from navigational purposes, is not very clear. But it is significant that, in a dispute between the U.S. and Mexico over the use of river water, originating in the U.S., the U.S. Government never admitted the right of Mexico, the lower State, to prevent the construction of dams and the diversion of water for American use. A sovereign nation, according to an American authority, has a right to direct its waters to all profitable uses in its area, and the neighbouring country, if it lies below it, can claim no rights to these waters either by tradition, past usage or for its own requirements. The U.S., however, agreed, in its dispute with Mexico, that, as a matter of comity and equity—and not as of right—the reasonable needs of Mexico should be met. This precedent, as well as another in Eritrea, fortifies India's legal position against Pakistan. But then, India has not exercised its right to deal with its river waters as it pleases, but has entered into an agreement with Pakistan, without prejudice to its undoubted rights. For Pakistan, wisdom lies in strengthening this agreement and in evolving an agreed plan for the exploitation of the Indus Basin, and not in invoking international law.

SHARE MARKETS MILDLY OPTIMISTIC

POLICY FOR BANK DIVIDENDS—LABOUR LAWS AND ENGINEERING INDUSTRY

THURSDAY, 5 P.M.

MARKET GOSSIP

ALL market men are keenly awaiting the Union Budget that will be presented to Parliament by Mr. C. D. Deshmukh in another 24 hours. Interest in the Budget has been roused by the curiosity to know how exactly Mr. Deshmukh proposes to finance the Plan and what new economic policy he is going to pursue. Hitherto Mr. Deshmukh was known for his conservatism which he had learned as the head of the central banking institution of this country for well-nigh a decade. Has he now changed, under the pressure of circumstances and in tune with his new environments? His Budget speech to-morrow will provide the answer. In the meanwhile, the share market is cautiously optimistic. The main prop of this optimism is the widespread belief that deficit financing will be the main plank on which the Plan will be executed and that there will be no significant increase in those forms of taxes that will directly tell on the Share Market. In the main speculative counters, the bears seem to have covered their outstanding position. Consequently, it is felt that the market has become somewhat more vulnerable to adverse factors than last week.

* * * *

Little attention is being paid to the Budget in the bullion market; but, among the commodities, oilseeds have become the victim of pre-budget rumours. In spite of smaller crop estimates and good buying by domestic consumers, prices have declined, owing to the rumour that the Finance Minister would impose a levy on exports of both seeds and oils, especially groundnuts. As the prices of these commodities are higher than their export parity, we do not see how an export duty on them will be of any use to the Government, unless the intention is to throw some cold water on the speculators in order to curb their bullish sentiment. But even for this purpose, it will not be good expedient, for it will have no sustained effect.

* * * *

Excessive speculation in silver, referred to in these columns a fortnight back, had brought about a deadlock in the bullion market this week for some days, but this has now ended. Forward trading was at a standstill from last Friday until to-day, as a large section of traders refrained from doing any business, as it thought that the Board of the Bullion Association was not fair to them. The primary object of their decision to go on strike, as it were, was to escape cheaply from their commitments which brought them into a loss. And they seem to have succeeded in their attempt, as we shall presently show.

* * * *

The major portion of operations in the Bombay bullion market represents speculation of the worst type. This is particularly so in silver. Invariably, there are more bears than bulls, because it is less easy to sell silver than buy it. This explains why, as against a floating stock of only 2,000 bars in the Bombay market, the total volume of business runs into 17,000 to 18,000 bars. Naturally, when conditions are somewhat favourable for the bulls, they try to squeeze the bears by demanding delivery and by keeping a tight hold over the floating stocks. If the squeeze turns out to be a little strong, the bears, who are in the majority, raise a hue and cry, demand a declaration of emergency and try to bully the Board to take action against the bulls who are always fewer in number. What happened during the past two or three weeks was one of these periodical outbursts of the bears. When they failed in their attempts to get a state of emergency declared, they staged a strike. Usually, when such a large number decides to non-co-operate, the minority has little choice except to yield. And the bulls have yielded this time by agreeing to a sort of compromise. They have agreed to provide cover to the "shorts" at a fixed rate of Rs. 168 per 100 tolas for the current settlement. They have also agreed not to take more than Rs. 2 by way of penalty from those who are not able to square up their commitments or who want to "carry forward" them. And, at the time of writing, the evening up of the outstanding business is being done on the basis of this agreement. Evidently, the bulls do not want to kill the goose that lays the golden eggs. Their refusal to compromise may lead to the closure of the forward market, in which case they will lose the machinery through which they are able to make money. It is in their own interest, therefore, to agree to accommodate the bears; after all, the bulls too are speculators. Accordingly, if futures markets are to function in a healthy manner and serve the purpose for which they are intended, such compromises, even if mutually entered into, should not be permitted.

* * * *

A notable feature of this year's annual meetings of British banks—a feature common to all of them—has been the demand for a higher rate of dividend. This demand is the result of the departure from the traditional conservative dividend policy of the banks by the National Provincial Bank, a member of the Big Five, which increased its dividend from 15 per cent. to 16 per cent. after an interval of 20 years. Shareholders of this Bank expressed their appreciation of the payment of a higher dividend. At the meetings of other banks, the shareholders questioned the propriety of sticking to the same level of dividends—Barclays at 14 per cent., Lloyds at 12 per cent., Midland at 16 per cent. and Westminster at 18 per cent. Sir John Barlow, M.P., a shareholder of Barclays Bank, for instance, was extremely critical of the Bank's dividend policy. He said that many people had held their shares over a long period and had received the same nominal return in money of diminishing value. The pound now had a purchasing value of only 45 per cent. as compared with 1938, and taxation was higher. He argued that, although the possibility of nationalisation of banks was not a political issue at the moment, it might become so in future, when it might be too late to take necessary action. He warned: "I believe that the Board is assuming great and serious responsibilities in withholding what some of us consider reasonable dividends."

• • • •

That sums up the case, neatly enough, for a higher dividend rate. Although the case was not as well expounded at other meetings of the banks, the demand for a higher dividend was made by the shareholders. In this country too, the banks follow a conservative dividend policy, which reflects the British impact on the Indian banking system. There is, of course, something to be said for a conservative dividend policy. The banks are primarily credit institutions. They must guard themselves against an erratic dividend policy which might harm their reputation. In the minds of depositors as well as investors, a bank denotes some stability, some solidity, some conservatism, which are not generally associated with other institutions. A lapse from these qualities, which might be excusable in others, would be a grave fault in a bank. Replying to suggestions for a higher dividend distribution, Lord Harlech, Chairman of the Midland Bank, said: "Bank shares have come to be regarded by trustees and public bodies as almost akin to Gilt-edged securities. There is a good deal to be said for stability of dividend through good years and bad. Accordingly, your Directors would not feel justified in raising the rate unless they were confident that any higher dividend could be assuredly maintained over years to come." This seems to sum up the case for a conservative dividend policy.

• • • •

Where then, does the truth lie? Perhaps, it lies somewhere between Sir John Barlow's reasoned plea for an increase in dividend rate and Lord Harlech's equally reasoned plea for an unchanged dividend rate through years, good and bad. There is certainly no reason why the bank shareholder alone should be content with a low dividend while other shareholders and other income-receivers do generally get a proportionately higher income when the going is good. After all, bank shares, despite all their nearness to Gilt-edged, are equities. If this means anything at all, it means that the shareholder of a bank does take a risk with his money. There is no use saying that the risk is small. It is never too small to invest bank shares with the status of a gilt-edged. A modest increase in dividend when the profits are good, would certainly do little harm to a bank's financial position, if the allocations to reserves and all other appropriations are maintained at reasonable levels. Nobody, of course, suggests that banks should provide frequent, let alone annual, surprises by changing their dividends. But it is carrying conservatism a little too far to argue that no level of prosperity warrants a higher distribution of dividends by banks.

* * * *

Commenting on this issue, the *Financial Times*, London, also takes a similar view, as will be seen from the following extract from that paper:

"Few will deny that the banks occupy a special position in the financial and economic life of the country. They have a duty to protect the deposits entrusted to them—and currently running at record levels. In view of the difficult world conditions, the further strengthening of reserves mentioned by Lord Harlech is an understandable desire. They have also to allow for the possibility of a fall in income in the event of trade recession. Then, too, there is the operation of the distributed profits tax, which automatically adds to the total cost of raising a dividend. Accepting these arguments, there remains, however, one inescapable fact, and that is that Bank shares have not ceased to be equities. The chief characteristic of the equity share is that it is capital put up at risk—prepared for setbacks but hoping for a gradual growth of income and capital appreciation. No one would expect the banks, in view of their public responsibility, to provide any great surprises either way. Indeed, the investment status of Bank shares is acknowledged by yields akin to those on gilt-edged. But there seems no reason why, barring major setbacks, the banks should not be able to consider modest increases in dividends at intervals on the lines followed by their near-neighbours in the financial world, the insurance companies. It is certainly hard to believe that if the "Big Five" did start paying higher dividends their shares would become, as Lord Harlech suggests, "gambling counters" on the Stock Exchange."

* * * *

The old Liberal doctrine that that Government governs the best which governs the least is unfortunately discredited the world over. Legislation has invaded almost every sphere of human activity. Even so, it is worthwhile considering whether legislation has not been overdone in this country. In any case, this seems to be true in the sphere of labour matters. Mr. Frank Gumley, Chairman of the Indian Engineering Association, Bombay Branch, deplored, at the annual meeting of the Association held this week, that "attempts have been made to legislate for every eventuality, with nothing being left to the sense of fair play of any branch of the industry." He pointed out how while the Factory Act in the U.K. was a mere "pamphlet," the Factory Act in this country was a "volume." Surely, if the size of legislation were the major criterion of efficiency and of industrial peace, this country, which yields to none in legislative exuberance, should have been in the forefront of labour productivity and welfare.

* * * *

Nevertheless, it is known that labour legislation, for all its many provisions to meet every conceivable contingency, has not yielded results commensurate with the labour involved in going through the complicated procedure of this legislation. A question which deserves to be examined in this connection, is whether the same set of labour laws is applicable to all industries. On this question, Mr. Gumley made some notable observations. In non-engineering industries, any increase in costs, resulting from the awards of industrial courts, could be recovered from the consumer by charging him a higher price. This could not, however, be done in the engineering industry, since this industry, which generally works on contract basis, has its costs fixed in advance. The result is that there is "less money left on completion of the work to be used for further development or for financing further work."

* * * *

Again, the application of a set of regulations, developed in the context of one industry, cannot be applied straightaway to other industries. Mr. Gumley brought out the essential truth of this statement by urging that the model standing orders, which were based on the experience gained in the textile industry where manual dexterity, but not technical skill and knowledge, was an important consideration, could not be applied to the engineering industry. If a length of cloth becomes "faulty" in a textile mill, due to the negligence of the worker, it could at least be sold as second quality cloth. In structural engineering works, a slight fault might cost lives. He also regretted that these standing orders, by their emphasis on the principle of "last in, first out" for retrenchment purposes, had not given sufficient thought to considerations of technical skill or ability which alone should determine the question of rejection of personnel in an establishment.

ALL-ROUND GAINS IN EQUITIES

RESTRICTED ACTIVITY AT CLOSE

(From Our Own Correspondents)

BOMBAY, 26*th February*

TRADING on the Stock Exchange during the week under review was enlivened with activity. Last week's buying movement gathered further momentum under the stimulus of fresh enquiries. Most of the equities, as a result, moved into a higher plane. But the buoyant trend did not persist throughout the week, as towards the close operators preferred to exercise caution in view of the Central Budget proposals which are due to be presented to Parliament to-morrow. Moreover, end-of-account considerations also alerted them. There was, therefore, some profit-taking which clipped off a part of the earlier gains, although equities finished with sizable gains on balance.

The market seemed to be bereft of any foreknowledge of the budget proposals. In fact, the cautious trend to-day amply bore out the fact that the budget had been a closely guarded secret. The one notable feature about the market's reaction to-day was that there was no nervousness among operators. On the other hand, they seemed to have given up their earlier pessimism about the budget and turned to believe that there would not be any more direct taxation. They appeared to base their conclusion on the absence of fresh taxation in some of the State budgets which had been presented so far. Considering deficit financing a certainty, the market was only interested in guessing how far deficit financing would be resorted to and what the repercussions thereof would be on the economy. But even here opinion appeared to be divided.

Apart from budget considerations, there were other factors which were responsible for the enlivenment reflected in share prices early in the week. There were rumours that the Estate Duty Bill would be postponed and that the exemption limit would be raised. But it was expected that the Finance Minister would announce the schedule of duties when the Bill became law. Favourable reports about export demand for cloth and optimistic expectations about dividends of some of the textile mills and a few other industrial concerns also warmed the operators' enthusiasm.

Steel shares displayed considerable liveliness during the major part of the week on active speculative buying and short-covering. Tata Deferreds advanced from Rs. 1,720 to Rs. 1,765 on Tuesday this week, but reacted to close at Rs. 1,740. Tata Ordinaries hardened from Rs. 303-8 to Rs. 308-12, but finished a little lower at Rs. 307. Modest support to Indian Irons lifted them from Rs. 24-14½ to Rs. 25-2½ on Tuesday. Latterly, Calcutta operators came out as consistent sellers of these scrips and, therefore, they drifted lower to Rs. 24-12.

Prospects of better earning by textile mills spurred fresh buying in textiles and the speculative counters received considerable attention, although some profit-taking was in evidence towards the close. Bombay Dyeings were taken up from Rs. 368-2 to Rs. 381-4, but eventually slipped back to close at Rs. 376-4. Kohinoors scored a net gain of Rs. 5-12 at Rs. 288-8, Central Indias Rs. 5 at Rs. 153, Century Rs. 6 at Rs. 261-4 and Finlays Rs. 3 at Rs. 297. Optimism regarding a higher dividend gave strength to Gokaks which put on Rs. 6 to Rs. 215. Simplex moved up by Rs. 4-8 to Rs. 180-8 and Svadeshis by Rs. 4-4 to Rs. 243-8. New Greats closed with a gain of As. 8 at Rs. 159.

Enquiries for bank shares were selective. Central Banks (Old) rose by As. 8 to Rs. 67-8 and the New shares by as much to Rs. 70. Bank of Indias improved by a rupee to Rs. 156-8. Imperial Fully Paids declined by Rs. 20 to Rs. 1,820 and the Contributories by Re. 1-4 to Rs. 446-4. But United Commercials, which were in the limelight with a spurt of Rs. 2-8 to Rs. 37-12 last week, were quiet at Rs. 37-8. Barodas shed As. 8 to Rs. 113-8.

Miscellaneous industrials provided a few good features. Belapurs were conspicuous with a rise of Rs. 8 to Rs. 237 on short covering. Associated Cements were steady with a rise of Re. 1 to Rs. 170-12. Alcocks were better by As. 10 at Rs. 304-6. Bombay Burmahs were steady at Rs. 366-4. National Rayons staged a smart rise of Rs. 5-8 to Rs. 78. Port Cannings were keenly sought after and the shares advanced by Rs. 5-8 to Rs. 29. On suggestions that the dividend would be stepped up from Rs. 3-8 to Rs. 6 (including a bonus of Re. 1) per share, Shivrajpurs spurted from Rs. 54-8 to Rs. 62. Premier Constructions were in enquiry and moved up by Rs. 4-4 to Rs. 89-8. B.I.Cs looked up a little to Rs. 9-13, but on advices from Calcutta that the dividend would be reduced from As. 12 to As. 10 per share, the shares slipped back to Rs. 9-10½.

* * * *

Calcutta Stock Exchange

CALCUTTA, 25*th February*

With speculators showing a keen desire to enter into commitments in the more popular counters, steady conditions were in evidence on the Calcutta Stock Exchange during the week under review, and impressive rises were recorded in engineering shares and miscellaneous industrials, which were keenly sought. Usually, during the pre-budget period of a few weeks, the Exchange remains dull, and although such a tendency was witnessed this year also between spells of interesting activity, this week's change in sentiment would appear to be due to a firm belief in the market that the Budget would not contain any unpleasant surprises to the commercial community. This cheerful hope about the future was further assisted by the continuance of steady conditions in the commodities markets. The expectation of a reduction in export duties on jute goods was a further ground for optimism, although this fact was not much played in trading in jutes. Although the Government's silence on market rumours of an imminent reduction in the duties was indicated as a favourable sign, it was realised that substantial benefits to industry would depend on the extent of the revision. Uncertainty in this regard explains why jute shares were not able to participate in this week's change to any appreciable extent.

The changed outlook for the textile industry in the light of increasing exports of piecegoods has been a standing factor for imparting strength to textile shares during recent weeks, and, although business was limited during this week, the counters that changed hands registered advances. Thus, Kesorams at Rs. 19-12 were higher by one rupee, and New Victorias were fractionally better at Re. 1-9. Cawnpores were firmly held at Rs. 8-1.

The expectation that Pakistan would be able to accept India's conditional offer to sell coal at the lowest price at which India would sell to any country—even at the existing prices Indian coal is the cheapest Pakistan secures from abroad—and that Indian coal exports to Pakistan would increase greatly was an adequate incentive for active interest being shown in coal shares at advancing rates. Opening at Rs. 526, Bengals were taken to Rs. 530, and New Manbhooms at Rs. 11-2, were up by As. 10. Burrakurs were steady throughout and changed hands at Rs. 10-10. Rancegunges, after improving to Rs. 3-3, were pushed back to Rs. 8-5.

Lack of moderate business with foreign buyers of jute goods resulted in limited support to jutes and operators showed reluctance to enter into commitments. Despite such a trend, quotations did not recede, but were maintained at previous levels. Thus, Howrahs changed hands at Rs. 23-10, while Indias declined from Rs. 126 to Rs. 123 only to recover to Rs. 127.

Engineering shares were steady, and the best feature was provided by Braithwaites which at Rs. 12-8 accounted for a steady improvement by Re. 1. Jessops advanced from Rs. 22-8 to Rs. 23-4, on dividend prospects. Activity in Indian Irons was a source of powerful support to the section as a whole, and these counters opening at Rs. 24-13 improved to Rs. 25-2.

* * * *

Madras Stock Exchange

MADRAS, 24*th February*

The Madras Stock Exchange continued to rule unusually cheerful with fair enquiry in evidence, despite impending budget uncertainties. Textiles led the market. There was considerable broadening of activity on reports regarding continued export demand for cloth from the Middle East. Plantings were generally steady. The tone of operators was influenced to some extent by the steadier trend in the Continental tea, rubber and coffee markets, although rubber and coffee markets in India have been insulated from the trends in the world commodity markets. Miscellaneous scrips met with scattered enquiry, while banks were active. The cumulative effect of all these factors was a considerable increase in the prices of shares over a broad front.

The steady trend in the textile section witnessed last week persisted during this week also. A few favourite scrips displayed some brisk activity. Buckinghams improved from Rs. 118-8 to Rs. 121. Vasantas gathered Rs. 3-4 to Rs. 143-4. Lakshmis disclosed a gain of Re. 1 to Rs. 70.

Teas continued to receive selective support. Cootands (tea and rubber) shot up by Re. 1-2 to Rs. 9-12. Haileyburias improved by As. 4 to Rs. 13-8 and Chembras As. 2 at Rs. 2-13. Kil Kotagiris and Ouchterloneys were fractionally higher at Rs. 4-14 and Rs. 3-14, respectively. Ceermades, however, eased by As. 4 to Rs. 37-8. Devasholas were unchanged at Rs. 14-4. Parksides were done at Rs. 11-14 *cum-div.* The Directors have recommended an interim dividend of 5 per cent. free of income-tax for the year ending 30th June, 1953. The dividend for the previous year was 15 per cent.

Rubbers were steady on speculative demand. Malankaras advanced from Rs. 96 to Rs. 97 and Rajagiris from Rs. 9-15 to Rs. 10-6. Vaikundams rallied As. 4 to Rs. 15-4 and Midlands As. 2 to Rs. 9-2.

Among coffee scrips, Neelamalais were up by As. 1-6 to Rs. 3-8-6. Puthuthottams hardened by As. 2 to Rs. 7-12. Balmadies were slightly higher at Rs. 2-5. Shevroys, however, were fractionally lower at Re. 1-4½.

Miscellaneous scrips were generally quiet. Mysore Tobaccos gained As. 5 to Rs. 9-10 and Papers an anna to Rs. 12-13. Andhra Cements 'B' moved up by As. 2 to Rs. 9. Spencers were done higher by As. 2 at Rs. 15-8 *cum-div.* Sugars lost As. 12 to Rs. 23-8 and Andhra Scientifics As. 8 to Rs. 3-9.

Banks were generally bright. Imperial Bank Contributories put on Rs. 3-4 to Rs. 432. Indian Banks Rs. 80 and Rs. 55 paid-ups were higher by Rs. 2-8 and Rs. 2 at Rs. 131-8 and Rs. 94, respectively. Indian Overseas, however, lost Re. 1 to to Rs. 98 *cum-div.* and Travancore Banks As. 8 to Rs. 11.

NEW GREAT INSURANCE TO RECONSTRUCT CAPITAL STRUCTURE

The Directors of the New Great Insurance Company of India, Ltd., Bombay, have proposed a scheme for the reconstruction of the Company's capital structure so as to conform to the provisions of section 6A(1) of the Insurance Act, 1938, as amended in 1950. The scheme will be placed before the Company's shareholders at a meeting to be held in Baroda on 4th March, 1953, for their consideration and opinion, as required under section 6B(1) of the said Act.

Section 6A(1) of the Insurance Act requires (*a*) that all insurance companies limited by shares should have only ordinary shares each of which having a single face value, and (*b*) that the paid-up amount is the same for all shares whether existing or new. In the case of a company which had, prior to the commencement of the Insurance (Amendment) Act, 1950, issued any shares other than ordinary shares, each of which has a single face value, or any shares the paid-up amount whereof is not the same for all of them, the Act has allowed a period of three years from the date of commencement of the Act for such a company to bring the capital structure in line with the requirements of section 6A(1). This period expires on 31st May, 1953.

The New Great Insurance Company, which has, accordingly, decided to reconstruct its capital structure, as stated at the outset, has an issued capital of Rs. 1,25,00,000 made up of 25,000 4 per cent. cumulative redeemable preference shares of Rs. 100 each and 1,00,000 ordinary shares of Rs. 100 each. On the preference shares only Rs. 50 have been called up on each share, and on the ordinary shares Rs. 20 each. Thus, there are two classes of shares with different proportion of paid-up amounts, although the face value of both classes of shares is the same.

The Company's preference shares are due for redemption on 1st January, 1954. The Directors, therefore, propose to call up the uncalled amount of Rs. 50 per share on the preference shares, which amount is payable on or before 30th April, 1953, so as to make them fully paid-up, as, under section 6B(1) of the Act, the scheme of capital reconstruction should not involve any diminution of the liability of the shareholders in respect of unpaid-up share capital. After 31st May, 1953, the entire preference capital of Rs. 25 lakhs will be formed into a fund and will be repaid to the preference shareholders on or after 1st January, 1954. Thus, during the period 1st June, 1953 and 31st December, 1953, or till the date of repayment of the sum as aforesaid, the liability of the Company in respect of this sum will be only one of repayment to an ordinary creditor and not to a person holding any redeemable preference shares of the Company. During this period such creditors will be entitled to interest at the rate of 4 per cent. per annum. The preference shareholders cease to have the benefit of rights to guaranteed dividend or to accumulate such dividends, if any, in arrears, after 31st May, 1953. The arrears of dividend up to 31st May, 1953, shall become payable in future and will be a first charge on the future surpluses disclosed by valuation.

The scheme after being considered by the shareholders will be submitted to an officer appointed by the Central Government for that purpose who will invite objections and suggestions in respect of the scheme. After considering these objections and suggestions, he will sanction the scheme with such modifications as he may consider necessary.

SUPERPHONE

INTER - COMMUNICATION TELEPHONES

Make your work easier and more pleasant with this useful and economical system. Designed for convenient use; in office, factory, store, etc. Operates with batteries or mains, and does not require operator or exchange. Available with one year's guarantee, in 2, 3, 5, 10, 15 and 20 lines.

NEWS IN BRIEF

THE extension of the Bombay Dockyard is expected to be completed in 15 years at a cost of Rs. 24 crores.

The recently-built third slipway at the Hindustan Shipyard in Visakhapatnam will be ready to lay a keel by about the middle of this year.

The Orissa Government proposes to spend Rs. 195 lakhs within the next three years towards the implementation of Community Project Schemes in the State.

The Madras Government has decided to employ the Japanese method of paddy cultivation in nine paddy research stations in the State in the ensuing season.

The operations of only one internal airline, namely, Airways India, resulted in profit during 1951. The amount of subsidy paid to companies which were running at a loss during 1951 was Rs. 31,15,566.

The preliminary work in connection with the establishment of an oil refinery by the Caltex Oil Company commenced last week at Visakhapatnam. A representative of the Central Government held discussions with the authorities of the Naval Base and the Hindustan Shipyard on the location of the refinery.

The revision and reclassification of the Import Trade Control Schedule have been nearly completed. Mr. P. M. Mukerji, former Director-General of Commercial Intelligence and Statistics, who was placed on special duty for this purpose, is expected to submit his report to the Government of India early next month.

As a result of the work of the Income-tax Investigation Commission up to the end of 1952, the tax raised was Rs. 23.72 crores and the amount collected was Rs. 6.10 crores. As regards the voluntary disclosure scheme, 20,709 voluntary disclosures were made and the amount of taxable income disclosed was Rs. 74.69 crores.

The Famine Enquiry Commission, under the chairmanship of Mr. S. V. Ramamurthi, has recommended to the Government of India to give top priority to the second stage of the Ghataprabha Valley Project, if necessary by readjusting the cost of the scheme in the Five-year Plan. The whole project is estimated to cost Rs. 9 crores.

The co-ordinated utilisation of stocks of railway stores, introduced last year, and the rationalisation of procurement on the lines of the recommendation of the Railway Stores Enquiry Committee, has resulted in a saving of Rs. 4 crores. The provisional value of stocks by the end of March, 1952, was over Rs. 63 crores. The Committee recommended that the stores balances should be reduced by about Rs. 10 crores.

The transport bottlenecks on the Northern Railway are stated to have seriously affected Uttar Pradesh's export trade. Large stocks of goods have accumulated in different centres. Despite normal trade enquiry from many importing centres, several thousands of maunds of *gur* have accumulated at Muzaffarnagar, Meerut, Hapur and other smaller *mandies*, and *gur* prices have, as a result, fallen.

The Government of India has released a further quantity of 125,000 tons of sugar out of the 1952-53 production of sugar factories. This brings the total quantity so far released to 266,000 tons. Of the quantity now released, 100,000 tons are for general sale in the free market and the balance for the States of Madhya Bharat, Rajasthan, Saurashtra, Kutch and Ahmer, where the supply position is reported to be not quite satisfactory. This special quota of 25,000 tons has been released from factories in western U.P., from where these States normally draw their requirements of sugar.

The Government of India's proposal of exchanging one maund of rice for one maund of fertiliser has been accepted by West Bengal. Uttar Pradesh has expressed doubts about its feasibility, while replies from the other State Governments are awaited. The main feature of the deal is to supply fertilisers like sulphate of ammonia to cultivators on credit and recover the cost at harvest, either in cash or in kind, depending upon the convenience of the farmer. The quantity of fertilisers expected to be pooled is estimated at about 4,70,000 tons. Out of this quantity about 80,000 tons may go for cash crops and the balance 3,90,000 tons may be available for food crops on credit basis.

The total acreage reclaimed by the Central Tractor Organisation till the end of 1951 and during 1952 are 4,65,336 and 2,55,534 respectively. Almost the entire area reclaimed is under actual cultivation according to available information. Exact figures have not so far been received from the State Governments concerned. No part of the reclaimed area in Madhya Pradesh, Madhya Bharat and Bhopal has so far been taken up by the State Governments for mechanical cultivation. Information regarding Uttar Pradesh and the Punjab is awaited from the State Governments. An expenditure of Rs. 4,72,64,140 has been incurred on the purchase of tractors, equipment, office building, etc., for starting the land reclamation scheme of the Central Tractor Organisation.

From Abroad

The estimated population of Norway on 1st January, 1953, was 3,341,000. Live births in 1952 were 62,262 and deaths 27,738.

The aggregate amount of sterling released so far to Egypt under the Anglo-Egyptian Financial Agreement, 1951, is nearly £65 million.

As a result of the greatly increased dollar income in 1952, Denmark has proposed to pay off $10 million foreign debt this year as compared with $6 million in each of the previous years.

The Government of Belgium has decided to raise income-tax by 5 per cent., to continue the excess profits tax and to increase the betting tax. The object is to raise funds for the repair of public buildings which have suffered flood damage.

Air-France has proposed to spend £5 million in re-equipping its air fleet with the U.K.'s turbine-engined aircraft and spares. It has announced that the 12 Viscount air-liners to be delivered in the spring would be used on European tourists services.

The popular features of the Canadian budget, presented to the Canadian House of Commons on the 20th inst., are lower income-tax, abolition of radio licenses and repeal of sales tax on all materials—including newsprint—used exclusively in newspaper and magazine production.

It is understood that the Pakistan Government is appointing a Commission to examine the existing company law with a view to revising it to suit modern conditions. The Commission is likely to be presided over by Mr. C. M. Lobo, former Sind Chief Court Judge.

Experts of the U.N. Transport Communications Commission have worked out proposals for a uniform system of road signs and signals and sent them to the U.N. Economic and Social Council for possible future ratification by member countries. The proposals are designed to simplify international travel and transport.

The gap between price demands of wheat importing and exporting countries, which has constituted a major obstacle to the signing of a new international wheat agreement, is reported to have been narrowed down. It is said that the U.S., the major exporting country, has accepted a new ceiling price of $2.05 (about 14*s.* 6*d.*) a bushel for wheat instead of its original demand of $2.50 (about 17*s.* 7*d.*). The new ceiling price is the same as that sought by two other exporting countries, namely, Canada and Australia. Importing countries including the U.K. had said that they were prepared to raise the ceiling price from the old price of $1.80 (about 12*s.* 8*d.*) to $2 (about 14*s.*) a bushel.

PERSONAL

MR. George V. Allen, until recently U.S. Envoy in Yugoslavia, has been appointed U.S. Ambassador to India.

Mr. F. Yates, Head of the Statistical Section of the Rothamsted Experimental Station, Hertfordshire (England), has joined the Indian Council of Agricultural Research as an expert of the F.A.O.

Mr. D. P. Karmarkar, Minister for Commerce, Government of India, and leader of the Indian delegation to the ninth session of the E.C.A.F.E., held recently at Bandung (Indonesia), has returned.

Mr. Naval H. Tata, Director of Tata Sons Ltd., and Mr. Hariharnath Shastri, General Secretary of the Indian National Trade Union Congress, left for Geneva to attend the meeting of the I.L.O. Governing Body.

Mr. Sidney Prina Ricotti, Ambassador for Italy in India, left New Delhi for Rome on the termination of his mission in India. Dr. G. B. Toffolo, Counsellor of the Embassy, is now acting as *Charge d'Affaires* ad interim of Italy in India.

Mr. D. Allerton and Mr. Khanchand J. Pamnani have been elected President and Vice-President, respectively, of the Indian Confectionery Manufacturers' Association, for 1952-53. The other members of the Committee are: Messrs. A. L. Goenka, P. Mohanlal, A. Bose, B. M. Khanna and S. N. Gundu Rao.

Mr. E. M. Bernstein, Director, Research Department of the International Monetary Fund, who has been invited by the Government of India to examine the financial and monetary aspects of the Five-year Plan, arrived in New Delhi on Saturday last. During his stay in India, Mr. Bernstein will visit the important centres of industry and commerce and meet the leading economists and men in public life before returning to New York during the third week of next month.

Mr. D. R. Narang, Director, Nawabganj Sugar Mills Co., Ltd., has been elected President of the Indian Sugar Mills Association for the year 1952-53. Mr. T. G. Armstrong, Vice-Chairman, Messrs. Parry & Co., Ltd., and Mr. Gulabchand Hirachand, Chairman, Walchandnagar Industries Ltd., have been elected Senior and Junior Vice-Presidents, respectively. The other members of the Committee are: Messrs. R. P. Nevatia, K. K. Birla, Karamchand Thapar, S. P. Jain, R. L. Nopany, P. A. F. Lugg, and Hari Raj Swarup.

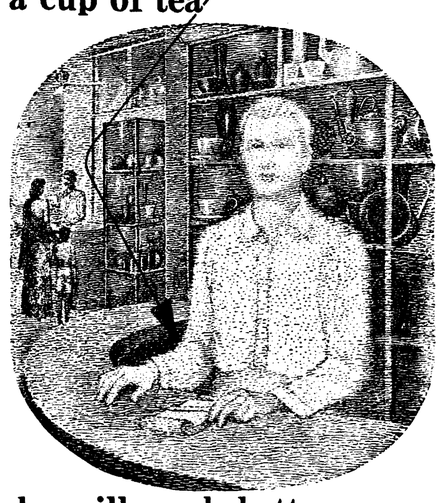
Give the salesman a cup of tea

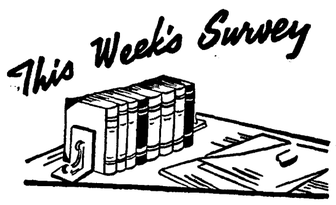


he will work better...

Your salesman's is a trying job: it calls for infinite tact and cheerfulness. On how he sells depend largely the prestige and prosperity of your firm. Help him in his day's work by providing a timely cup of tea... because tea drives tiredness away and has the remarkable quality of cheering one up. Employers should write to us for free advice on serving tea in office canteens.

TEA *for zest and efficiency*

ISSUED BY CENTRAL TEA BOARD 27 & 29 BRABOURNE ROAD, CALCUTTA.



DEFICIT BUDGETS

SURVEYING the financial position of the States some time last year, we observed that budgeting for a deficit had become the order of the day. This tendency has again persisted this year. The financial statements of the three States, namely, Uttar Pradesh, West Bengal and Bihar—the Bombay budget is discussed in detail elsewhere in this issue—so far presented disclose deficits, some of them sizable too. Thus, the U.P. budget for 1953-54 discloses an overall deficit of Rs. 7.76 crores, of which the deficit on revenue account amounts to as much as Rs. 4.42 crores. The budgets for West Bengal and Bihar also show deficits of Rs. 6.41 crores and Rs. 1.42 crores, respectively, deficits on revenue account being Rs. 5.11 crores and Rs. 0.34 crore. The deficit in the budget of Uttar Pradesh would have been very much larger but for the wise decision of the Government to curtail expenditure on State trading, including grain-supply scheme, by as much as Rs. 11.17 crores during the ensuing (1953-54) year, as compared with the current (1952-53) year. It is significant that, despite the strain on the finances of the State caused by food scarcity and near-famine conditions that started in September, 1950, and continued till a few months ago, the Finance Minister of Bihar has managed to avoid a big deficit. The table below gives an idea of the financial position (budget estimates only) of the State Governments under review.

(In crores of rupees)

	U.P.		W. Bengal		Bihar	
	1952-53	1953-54	1952-53	1953-54	1952-53	1953-54
Revenue receipts ..	60.99	74.33	36.37	38.16	31.29	33.00
Revenue expenditure.	65.23	78.80	42.04	43.27	29.80	33.34
Deficit on revenue account ..	4.24	4.42	5.67	5.11	+1.49	0.34
Capital expenditure ..	20.74	7.09	23.68	21.02	7.81	11.01
Overall deficit ..	5.30	7.76	6.42	6.41	2.68	1.42

It will be evident from the above table that, despite the increase in revenue receipts expected for the ensuing year, the budgets of all the three States show deficits, thanks to the marked rise in expenditure. One wonders if the Finance Ministers could not have avoided deficit budgets by effecting economy in expenditure. This policy of cutting the coat according to the cloth has apparently not found favour with them. It is, however, gratifying to be told that the U.P. Government has decided to appoint another Economy Committee to scrutinise further its expenditure side. This might have been done in other States too. That there is considerable scope for economy in expenditure cannot be stressed too strongly. Any amount saved by such economy, it is also needless to add, could be profitably used for development schemes. And to this extent fresh imposts, resulting in additional burden on the community, might be avoided.

Of the three States under reference, namely, U.P., Bihar, and West Bengal, U.P. has proposed to enhance irrigation rates by 50 per cent. and to raise the rate of sales tax on certain commodities. These are expected to yield an additional revenue of Rs. 3.64 crores. The Finance Minister of Bihar, does not propose imposition of any new tax now but on this score he cannot feel elated. For the Government had decided, as early as in December last, on certain measures of additional taxation. These cover increase in sales tax on certain luxury articles and in water rates in the Sone and Tribeni Canal areas, as also in the areas served by tube-well irrigation, levy of toll on certain important bridges recently constructed out of State funds, cess on molasses, and increase in the cess on sugarcane by three pies per maund. The West Bengal budget, it is noteworthy, does not contain any new tax proposals or alterations in the existing rates. Perhaps, the gap in the budget would be covered partly by setting off the opening balance of Rs. 2 crores and partly by drawing on the cash balances. An indication of the latter is provided in the statement of Dr. B. C. Roy, Chief Minister of the State and Minister in charge of Finance, that "the next financial year will close with a negative balance of over Rs. 4 crores."

The one common feature revealed in the speeches of the Finance Ministers of Uttar Pradesh, West Bengal and Bihar is the growing anxiety to better the lot of the common man through development schemes. The work on the Five-year Plan in the States, it is claimed, is proceeding according to the Governments programmes. The States, however, seem to feel that, if the pace of progress is to be maintained in future financial assistance on a larger than now provided by the Centre is necessary. In view of this, they have expressed—this is only to be expected—their dissatisfaction at the Finance Commission's recommendations.

The chances of larger financial assistance from the Centre are not very bright, thanks to the fact that the Centre itself is in a none too happy budgetary position. The Governments of the States are, naturally enough, perturbed by the problem of raising funds required for meeting development expenditure. By their earlier experience, the Government know that not much could be raised through public loans. Nevertheless, the Governments of Uttar Pradesh and West Bengal have decided to float, during the ensuing year, medium-term loans to the tune of Rs. 4 crores and Rs. 2 crores, respectively. No reference to any specific loan is, however, contained in the Press version of Bihar's Finance Minister's speech. But the Finance Minister has admitted that his Government is considering the ways and means of raising additional loans for financing the development projects, which are productive and expected to yield adequate revenue.

BURMA'S EIGHT-YEAR PLAN

Burma has demonstrated that it is possible to depart from the traditional five-year period for economic planning. It has evolved an eight-year plan. And, from Press reports, the Plan makes encouraging reading. It is noteworthy that the planning function was not undertaken by the Government but was assigned to an American firm of economic and engineering consultants, though the Plan was later approved of by the Government. Apparently, planning is now acquiring the status of a new profession.

That it requires some expert skill to plan for Burma must be clear to those who have known this country's unhappy past. Overrun by the Japanese during the war, and hampered in its economic progress by a very severe inflation, Burma has had a difficult time in setting its house in order. Nor were these the only problems with which it had to contend, for the rebel groups within the country have inflicted serious damage on its economy. The index number of prices touched a peak of 772 in 1949, based on pre-war levels, though it has reacted to lower levels recently. Agricultural output in this predominantly agricultural country is no more than 73 per cent. pre-war. Rice exports, which form so vital a part of Burmese economy, are now only about one-half of what they were in pre-war years.

It is against this background that the cost of the new Rs. 7,500 million (that is, Rs. 750 crores) Plan must be assessed. This is not a modest plan, as compared with the Indian Plan (Rs. 2,050 crores), if allowance were made for the relative difference in the size of the two countries. But then, Burma has large mineral and other resources which would need large-scale capital investment before they could be exploited.

Details of the break-up figures of the sum of Rs. 7,500 million, which the planners hope to spend in the next eight years, are not known. From the little information that is available, it looks as though mining and agriculture will receive top priority. It is stated that during the next two years Burma plans to spend Rs. 1,000 million in the field of agriculture, mining and industry. Details of investments are: Mining Rs. 40 million, irrigation Rs. 250 million, communications Rs. 30 million, railways Rs. 200 million and road transport Rs. 190 million. The Government's programme includes the development of oil, antimony, wolfram, lead and silver deposits in the country. Work is already under way to rehabilitate the war-crippled Rangoon port. Burma has recently initiated coastal shipping to link its coastal areas and is expected to start trans-ocean shipping by 1954. The Burma Government hopes that the execution of the Plan will double the country's national output and raise Burma's *per capita* income from Rs. 182 to Rs. 340. It also hopes to raise agricultural production from Rs. 1,500 million to Rs. 2,230 million in 1956 and to Rs. 2,650 million in 1960.

Of the Rs. 7,500 million required for investment during the eight-year period, about Rs. 5,000 million will be needed for meeting internal expenditure. The balance, namely, Rs. 2,500 million, it is stated, will be needed in the form of foreign exchange for purposes of purchasing plant, machinery and capital goods. Although a part of this foreign exchange can be met from Burma's own exchange earnings, it is conceded that the bulk of its requirements of foreign exchange would have to be borrowed from international sources or from foreign Governments. The Burma Government is not perturbed by the prospect of its having to find Rs. 5,000 million for the Plan, although this involves the trebling of the country's capital formation from the pre-war Rs. 300-350 million to about Rs. 1,000 million. The revenue of the Burma Government is of the order of Rs. 580 million but expenditure has tended to outgrow this figure by a very wide margin. It remains to be seen whether the Government can practise economy in its expenditure so as to release larger sums for developmental purposes. This seems particularly indicated, because the scope for taxation is not very large. Also, the assumption that capital formation could be trebled easily does not square with the experience of other underdeveloped areas.

Whether foreign capital, on the scale envisaged in the Plan, will flow into Burma remains to be seen. In the past, the Government of Burma had scared away many a foreign investor by its commitments in regard to nationalisation of industries. But now the Government has, according to Press reports, decided to change its attitude towards foreign capital. Amendments to the Burmese Constitution, in order to enable foreign capital to participate in the economic development of the country in co-operation with domestic investors, it is stated, will be introduced shortly in the Burmese Parliament. Seven conditions, it is further stated, have been laid down for foreign investors. These are:

(1) Foreign enterprises should be self-sufficient as regards foreign exchange. They will be permitted to take out money from the country for the purchase of capital equipment and renewal; foreign enterprises will also be allowed to export a certain percentage of current money subject to the general foreign exchange position of the country.

(2) No import of unskilled labour from abroad will be allowed.

(3) The Government will undertake not to nationalise the concerns for a period determined by the ratio of the initial capital outlay to the annual value of the turnover.

(4) The period of guarantee may be renewed except in the case of extractive industries like minerals.

(5) Protection may or may not be given, depending on the position which the industry occupies in the economy of the country.

(6) The Government will welcome proposals for partnership or other such mutual beneficial proposals.

(7) Whenever Burma can supply candidates with required qualifications, these enterprises must undertake to train them.

These conditions represent an improvement on the present policy. Even so, some of these conditions, notably No. 3, are too vague. It is unlikely that they will elicit wholehearted response from foreign investors.

MALAYAN IRON ORE

Following the breakdown of negotiations to set up a joint Indo-Japanese iron and steel plant in India, Japan has now diverted its attention to the exploitation of Malayan iron ores. The Mutual Security Agency, according to reports from Washington, seems to have blessed Japan's intentions. The Agency is said to have chalked out a plan for submission to the Congress for approval this year as part of the U.S. foreign economic aid programme. If this programme were to be sanctioned, the exploitation of iron ore, it is held, might turn out to be the largest industry in Malaya. Under the plan, part of the finance for the project will be made available by the Mutual Security Agency, while the remainder is expected to be provided by private interests from other countries.

The fact that the U.S. has undertaken to invest its capital in a country in which political conditions are far from stable indicates that it is prepared to take some risk in order to get the much needed iron ore for the steel industry of Japan, one of its allies. It is common knowledge that Japan's interest in the Indian plan too was to obtain iron ore for its steel industry in exchange for its services and investment in the form of plant. The cessation of iron ore supplies from China, its traditional source, has adversely affected the development of Japan's iron and steel industry. At present, Japan is getting about half a million tons of iron ore from Malaya. This is expected to be raised to two million tons a year, if the plan for further development of Malayan iron ores were implemented.

The Mutual Security Agency has agreed to assist the exploitation of Malayan iron ores as part of its development plans for enlarged production of raw materials by the underdeveloped countries. It is stated that the Agency is also convinced of Japan's need of iron ore supplies. The terms and conditions on which capital will be invested by the Mutual Security Agency will be the same as those which govern similar plans for the economic development of other countries.

Expansion in the output of iron ore in Malaya is bound to stimulate its economic progress. Large deposits of iron ore of fair quality are found in many parts of the Peninsula but there is no smelting of iron ore in the country. In 1940, almost 2 million tons were exported to Japan, but from the time of reoccupation until 1949, no large quantities were mined, although some quantity was exported from stock-piles. In December, 1949, the Bukit Besi Mine, about 18 miles west of Kuala Dungun, came into operation. The output of about 500,000 tons in 1950 was nearly all sent to Japan.

Malaya, at present, occupies a very important place as a dollar earner of the sterling area, thanks mainly to its exports of rubber and tin to the U.S. The increase in the range and quantity of goods which the U.K. and other Commonwealth and soft-currency suppliers have been able to offer to Malaya has helped that country to reduce its dollar expenditure. The exploitation of its iron ore reserves would increase its foreign exchange earnings—though not dollar earnings—and enable it to increase its purchases from sterling and other soft currency countries.

WOOD SCREW INDUSTRY

The Tariff Commission is now enquiring into the claim of the wood screw industry for continuing protection which the industry has been enjoying since 1946. The industry has based its claim on the ground that it has made fair progress during the past few years of protection. The industry could not make more rapid progress for want of adequate and proper specification steel wire. The spokesmen of the industry have pleaded for a complete ban on imports of wood screws, particularly cheap wood screws from Japan, which it is alleged has been responsible for retarding the development of the indigenous industry.

From a review of the existing position and problems of the wood screw industry, which was given by Dr. B. V. Narayanaswamy Naidu, Member, Tariff Commission, in the course of his address at this inquiry into the industry's case for protection, this week, it is clear that the claim for continuance of protection is justifiable. There are at present 26 factories, with an estimated aggregate annual rated capacity of 3,328 tons and an average annual production based on production figures during the last three years of 450 tons. Thus, there is a large gap between actual production and the capacity of the industry. The demand for wooden screws is estimated at about 3,500 tons. The quality of the Indian product is stated to be reasonably good. This is a creditable record for an industry which was hit by Partition, owing to greater localisation of the industry in Punjab. These facts disclose that the indigenous demand and rated capacity provide for greater scope for enlarging production. Also, there is need to improve the quality of the product, so that it may withstand competition from the overseas products, at an early date.

The chief factor in the way of development of the industry is the insufficient supply of steel wire of required specifications. The Screw Manufacturers' Association, Calcutta, stated that the wood screw industry has not been able to get steel wire required by it even for one-shift working, though even one-shift working of the factories is uneconomical. It contends that the supply of wire to the industry on two-shift basis should not be difficult, as it forms only a negligible proportion of the total production of steel in India. The steel wire requirements of the industry are placed at 4,146 tons for one shift. As against this only 1,090 tons were supplied during 1952. This makes out a case for increased supply of steel wire, either from indigenous resources or from overseas countries. Surely, the development of the industry should not be handicapped for want of raw materials. The quality of steel wire depends on the supply of the right type of steel billets by the indigenous steel producers to Indian Steel and Wire Products, Indranagar. It

OFF THE RECORD

(By "ROVER")

PHEW! What a week? The poor, hapless and helpless citizen has been assailed by a veritable *blitzkreig* of budgets from all sides. The Hon'ble Mr. Lal Bahadur Shastri, a Minister reputed to be a man of peace, began a moderate barrage, under cover of which the State and the Central Finance Ministers could advance to positions of advantage, outflanking the common man in the street, bewildered and confounded as ever. They could then encircle him by cutting off his line of communications and retreat. And even if a narrow, little lane were left for him to back into, where is the poor wretch to go, unless it be into the yawning jaws of the money-lenders and profiteers waiting to take his shirt off him, if the Ministers have left it on him in their mercy? No wonder he has become apathetic and wholly indifferent to his fate. He is in the happy position of one who has already been stripped of all his worldly goods and so stands in no fear of *thugs* and *pindaris*. It is to his credit, and we should be glad that he has not thought seriously of turning into one himself considering his desperate state.

Highly sophisticated people like Mr. K. M. Munshi, Maulana Abul Kalam Azad, and Rajkumari Amrit Kaur have been talking a lot of *moonshine* about Indian culture. If you want to see the real Indian culture in its undiluted and original form you can see it through the transparency of the great, little common man in India, who, unlike many of us, who make a profession of serving him, though shocked and stunned by all that is going on around him, has refused to give way to the devastation caused by a series of political and economic *blitzkreigs* or to be demoralised by a cheaply won independence. He is the embodiment of the oft-distilled essence of Indian culture and philosophy, who plods his weary way in a spirit of resignation, listless alike to the songs of the sirens on his left and to the threats of the soldiers of independence on his right.

He knows that he, and not the strutting and shouting politicians and officials in the Union and State capitals or the greedy millionaires in the air-conditioned offices in the industrial and commercial establishments scattered all over the expanding urban areas in the country, is India personified. He also knows that he has something which no Finance Minister, however astute, or company promoter, however wily, could rob him of, despite all their depredations. In all this rot that has overtaken us in six short years, it is this equilibrium and readiness to give on the part of the impoverished and yet rich common man which have sustained my faith in the country and its ultimate future and kept it alive against great odds. I do not care if this earns me your derision as a sentimentalist. It is his due and I must render him this homage.

But, if I am to keep my job and not to exasperate the Editor into a state bordering on rage and despair, I must not forget that I am supposed to be writing about the budgets. But, when you look at these hardy annuals, you soon discover that there is precious little you could write about them. Budgets, domestic, State or national, invariably attempt to hide with only indifferent success vast ungainly areas of fat ugliness, behind a facade of colourful but shoddy and ill-fitting garments, cut by amateurs and stitched by apprentices of no great skill. As if all this were not enough, they are now attaining a state of inebriety, when they have ceased to be even moderately dependable. When first presented to the audience, in all the glory of paint and make-up on the stage, they look promising enough like some of the second-rate actors and actresses. But later, when you meet them back-stage, denuded of all the artificial aids, they look disappointing and bedraggled, not unlike the headache one has on the morning after.

This is the first thing I have noticed in the railway budget as also in the Bombay State budget for 1953-54. Last year, when he was new to the job and full of cheery optimism after his party's success at the polls, Mr. Lal Bahadur Shastri told us, in his first budget, that he expected his lines to earn as much as Rs. 282.16 crores by way of traffic receipts. New converts are always more fanatic than those born in any particular religion and a lot could be forgiven to neophytes. Many in the House and many more outside it tried to tip him then that, in view of the heavy trade depression that had preceded the budget and the fall in passenger traffic which had set in a couple of years earlier, together with the sharp increases effected by his predecessor in passenger fares, his rosy dream about abundant revenues was likely to remain unrealised. Being uninitiated in the mysteries of figures and being in a mood to set the placid and sluggish Jamuna on fire, he refused to listen to this advice and has, therefore, naturally come a cropper.

A more sober and subdued edition of the Railway Minister had to admit in the House last week that, from what he had been able to earn during the last ten months or so of his new job as a salesman of freight and travel, he expected to gather about Rs. 12.61 crores less than he had fondly anticipated. He also had to confess that, while the business community had tried to give him as much support as possible, in spite of the depression and all the dangers of an unwelcome peace overtaking this belligerent world, by giving him as much goods as he could carry and more, it was the ungrateful and lazy ordinary citizen who had let him down badly by turning a stay-at-home. This fellow, it seems, had successfully resisted all the lure of the holy places and had refused to wash out his sins by going on pilgrimages. Even his love for attending marriages and visiting friends and relatives in the off season seems to have cooled, as love has a way of doing when the purse is empty. It is a good augury that Mr. Shastri is trying to stem this drift to materialism of our citizens, by offering them some inducements to visit the holy shrines and to improve their minds by travel in general.

I do not know why it is so, but, whenever I try to wade through the slough of an official budget, my attention is riveted not so much on the budget proper, i.e., the estimates of income and expenditure for the coming year, but on the difference between the budgeted figures and the revised figures for the current year. With economic and political uncertainties mounting up, the former (the budget proper) has lost much of its value and I wonder why the business community, in general, and the stock exchanges, in particular, lose so much of their sleep over it, apart from any changes in the taxes proposed to be levied. As a case in point, I might refer to Dr. Jivraj Mehta's budget for 1953-54 for the State of Bombay. The learned doctor, as well as his Chief, Mr. Morarji Desai, were reported to be dressed heavily in smiles, apart from the yards of *khaddar* which they had wrapped themselves in last Saturday, after the State Budget had been revealed to an eager and anxious Assembly, because their Government, unlike many other more honest ones, had prepared a surplus budget.

My old lady at home, who exercises her right of emptying my pockets at the beginning of every month when I draw my wages, performs this feat in jugglery on New Year Day. She too wears all her captivating smiles and a number of good resolutions, like these Ministers, besides all her fineries. She always budgets for a good surplus, but it is I who am made to face the ever-increasing deficit at the end of every year, forcing me to dip into our meagre past savings, put by in the old days when merchants were more honest and Finance Ministers less rapacious. I have no more faith in the imaginary surplus of seven and a half lakhs of rupees dangled before our eyes by the amiable physician, who in his retirement has taken to feeling our purses, when for long years he was interested only in our pulse and respirations, than in the surplus of six hundred rupees which my sanguine wife anticipates every year.

What faith could you have in the promise of a man, who only last June assured us of a surplus of two lakhs and now comes and tells us that he expects to close the financial year on 31st March, with a sizable deficit of only ten lakhs short of the good round sum of four crores. I for one am preparing for a deficit in the finances of our State of seven and a half crores instead of a surplus of as many lakhs at the close of 1953-54 and I shall consider myself lucky, if the year does not end with a much bigger deficit. With these two instances of undependable budgets, you must pardon me if I do not indulge in anticipations about what Mr. C. D. Deshmukh has in store for us this week. And, in any case, no anticipations of mine would be of any service to you, as this perpetration of mine would appear on Saturday morning, when the worst would have been known to you.—*All Rights Reserved.*

TEXTILE MACHINERY CONFERENCE

INDO-PAKISTAN WATER DISPUTE

(From A Special Correspondent)

NEW DELHI, 24*th February*

DELHI LETTER

THE conference of textile machinery makers and millowners, convened to-day by the Commerce and Industry Ministry, will enable the Government not only to assess the exact growth of the textile machinery industry but also to decide its policy in regard to imports of textile machinery. There are at present more than half a dozen firms manufacturing one part or another, at times in competition, while the major part of the machinery required by the industry, a part of which could at least be manufactured in the country itself, has to be imported from abroad. In order to minimise imports and increase the output internally, the Government called this conference, consisting of representatives of the textile industry and textile machinery manufacturers. The spokesmen of the Government of India have also been participating in it and its importance can be seen from the fact that its deliberations are being guided by the Minister himself.

It may be noted here that imports of textile machinery form an important item in the machinery imports into the country. In 1949-50, the value of these imports set up a high record of Rs. 14.1 crores. Although it has dropped to about Rs. 7 to Rs. 8 crores per annum during the last one or two years, an appreciable reduction in this respect is considered possible in case some co-ordination and rationalisation are introduced in production through a policy of co-operation. It is generally known that at times some factories manufacturing one item or the other have either to curtail the output or to close down in view of the lack of demand. If rationalisation is brought about, it may be possible for these factories not only to increase production but also to keep themselves fully employed, at the same time enabling curtailment of imports to a marked extent.

This policy of co-ordination and rationalisation is expected to be put into effect in regard to a number of other industries in due course. The Government is stated to be considering the desirability of making a general survey of the existing industrial capacity of the country from all angles, with a view to achieving economy in the production of various component parts of machines, etc., turned out by many factories in the country. It is well known that even in the advanced industrialised countries such as the U.S.A. and the U.K., leading manufacturers do not undertake to produce every part themselves but are content to use a substantial quantity produced by other concerns. The Government of India is desirous of appointing an experienced committee of highly qualified technical personnel from abroad in association with some Indian members in order to study the production methods in various industries from different angles and suggest ways and means of bringing about co-ordination and economy in industrial production. This enquiry committee will be something similar to the Roger or Grady Missions that came to India during World War II.

According to a leading expert of the International Labour Organisation, during a period of industrial growth, such as the one through which India is now passing, "productivity studies can be carried out with the greatest effect and with the least disturbance of industrial relations. This is because new opportunities for jobs are being created at the same time as productivity of workers is being raised." If Mr. T. T. Krishnamachari, Minister for Commerce and Industry, were able to implement this plan and bring about an increase in the industrial productivity of the country by reducing production costs and improving efficiency, he will doubtless have achieved a fine job of his portfolio.

Desultory Debate on Railway Budget

The debate on the Railway Budget was generally desultory. Vigorous and constructive criticism was often lacking. Dr. H. N. Kunzru, however, made some pertinent remarks about the absence of relevant information regarding the working of the regrouping scheme. He rightly pointed out that the railways should cope with increased traffic, not by using more engines but by increasing engine-miles. Though some progress had been made in this, he said, the target of 90 engine-miles per day, recommended by the Railway Enquiry Committee, was nowhere near. He further stated that the recommendations of the above Committee in regard to pooling of engines had not been given effect to. According to him, only a combination of the system of extended engine runs and straight routes for pooling could reduce operation costs.

The official side was complacently optimistic that the efficiency of the railways would continue to show a progressive improvement during the coming years. The Deputy Minister for Railways, Mr. Alagesan, for instance, reiterated that the Government would put into service 11,000 wagons this year and another 12,000 wagons next year. "With all these additional wagons," he said, "and with the removal of bottlenecks in various places and the line capacity increase we hope to bring about, we will move more goods and earn more." He quoted some figures to prove his contention in regard to the steady improvement in the earnings of the railways in recent years. Goods earnings which stood at Rs. 96.29 crores in 1948-49, moved up to Rs. 114.37 crores in 1949-50 and to Rs. 127.1 crores in 1950-51. There was a further improvement in 1951-52 to Rs. 141.71 crores, and the revised estimate for the current year worked out to Rs. 144.56 crores. The estimate for the forthcoming year was placed slightly higher at Rs. 147.60 crores.

Mr. Lal Bahadur Shastri, Minister for Railways, clarified the position of the Chittaranjan Locomotive Factory. The manufacturing programme at Chittaranjan provided for the progressive reduction in the number of parts to be imported. At present, the parts imported were: main frames, boiler plates wider than six feet (for which there was no rolling capacity in the country), large and complicated steel castings and certain manufactured items like boiler tubes. But experimental orders, we are told, had been placed with Indian manufacturers so as to develop capacity within the country. Redesigning was also in progress in order to enable the use of parts manufactured within the country.

Dispute with Pakistan

The Government of India's Press Note refuting Pakistan's complaint on the supply of canal waters is not as informative as it should be. Not only has Pakistan complained about the gradual reduction in the supply of these waters but also hurled a charge against India that it has been building up the huge Bhakra and Harike Projects with a view to securing greater utilisation of the Sutlej waters. The Press Note in question makes a passing reference only in regard to the increased area that is being brought under cultivation in Pakistan, but has failed to provide details which will show to the world that the irrigated area in that country watered by the Indus and its tributaries has been increasing at a greater pace than in India during the last few years.

For instance, the Kotri Barrage, on the river Indus near Hyderabad, is nearing completion and will provide irrigation for two million acres of new land in Sind. The Taunsa Barrage near Dera Ghazi Khan and the Upper Sind Barrage, also on the Indus, have been sanctioned. These together will bring under cultivation about two million acres of land in addition to the areas at present irrigated by inundation canals which will also get assured supplies over a longer period. A dam and a canal are being built on the river Kurram near Bannu. Much preliminary work has also been done on the Earsak dam on the river Kabul. In the West Punjab, it is stated, a new link canal has been completed since the Partition from the Upper Chenab Canal near Gujranwala leading to the river Ravi which it crosses by syphon. Then, running along the border, it commands the channels at present receiving waters from the Upper Bari Doab Canal, emanating in India. Another canal linking up the Ravi with the Sutlej having a capacity of 15,000 cusecs is being built at great speed to feed the lower Sutlej Valley. It takes off at Balloki and will join the Sutlej at Suleimanki. In these circumstances, the Government of India, after proper intimation to Pakistan, will have to expedite its Harike projects and utilise the combined waters of the Sutlej and the Beas for purposes of irrigating the arid deserts of Rajasthan.

CAPITAL INVESTMENT IN INDUSTRY

THE NEED FOR EXPANSION RECOGNISED

(From Our Own Correspondent)

LONDON, 21*st February*

LONDON LETTER

THE year 1952 saw capital investment in industrial building squeezed down to its lowest level for recent years, in order to fit the policy of diverting resources to exports and arms, but, during the latter part of the year, Government policy changed. The Government found that pockets of unemployment were being thrown up, partly as a result of the too severe restrictions on new building, and, instead of welcoming such unemployment as providing the man-power which might ultimately be diverted to other activities, they began taking stop-gap measures to expand building in the areas affected. In short, the Government, when it came to the point, abandoned the theory that unemployed building labourers would find their way into the engineering industries.

Other factors, including severe restrictions on credit, began to take some of the pressure off the demand for new building and, with the disappearance of much of the inflation in the economy, the Government began to reconsider its whole attitude to industrial building. The upshot has been that, for the current year, the programme has been increased to a point at which it is no longer having any severely restrictive effect. Thus, at the close of a year of Draconian measures against new building, we find the Government almost having to encourage industry to invest.

It is not surprising that, in these circumstances, the housing programme which has received top-priority has continued to climb steadily from the 200,000 a year mark, where the Socialists left it, to the 300,000 a year level to which the Conservatives committed themselves at the election. Their opponents declared that this figure could never be reached, but they were postulating a normal level of industrial investment in 1952 and none of Mr. Butler's deflation.

Defence Programme

Apart from housing, the defence programme has also been creeping up and the budget for the coming financial year is to show a still further increase from some £1,500 million in the year just ending to £1,636 million. Of these figures, some £650 million represent the production of armaments—a sum equivalent to about one-third of the annual capital investment in industry.

It will be recalled that the coming year was to have been the fourth in the original £4,700 million arms programme. This programme has been steadily protracted and the Government have now removed any target date for its completion. But, although the programme will not have been completed, the money will have been spent in less time than four years, as a result of steadily increasing costs. Indeed, it is the burden of the arms programme that has forced the Government to cut it back, in real terms, to an industrial level that the economy can afford.

The Government have now turned their attention to means of stimulating capital investment in industry, as the necessary corollary of cost production at home and for the export trade. Building resources are no longer a bar to expansion (because of the drop in demand), while plant-making resources are limiting only to a degree, because of the slackening in the rate of expansion of exports. Encouragement must, therefore, take a fiscal form, and, while the Chancellor may find it difficult to reduce general taxation this year—although company taxation has many penal characteristics which could be removed—he may be able to increase the depreciation allowance on new investment in the first year. At one time, this was as high as 60 per cent. of the total capital expenditure and gave a substantial fillip to new investment, even though the total rate of allowance over the life of the plant was unchanged. If some means could be found of reducing taxation on profits ploughed back into development, that also would be a substantial encouragement.—*All Rights Reserved.*

NINTH SESSION OF THE E.C.A.F.E.

REVIEW OF DELIBERATIONS AND DECISIONS

FROM scattered Press reports relating to the deliberations of the ninth session of the Economic Commission for Asia and the Far East, held at Bandung (Indonesia) from the 6th to 14th inst.—a detailed official account is not available yet—it would appear that the session covered a very wide and useful ground of economic topics. Thus, the series of subjects discussed at the session and the valuable recommendations made indicate that renewed efforts were made by the Commission to strengthen, against a world-wide background, the regional economic consciousness among the countries of the region. The need for this is especially great in the present context of the efforts to raise the depressingly low level of the living standards of the people.

An important decision taken by the Commission at its recent session relates to the need for measures to stabilise commodity prices and to create conditions in which the prices of primary commodities bear a "just" relation to those of capital goods and manufactured goods which the area needs. This is only as it should be, considering the fact that the economic conditions in several countries of the region have been adversely affected by fluctuations in external demand for exports, the effects of which have overshadowed the changes brought about by international factors. The prices of several principal export commodities have registered a sharp fall, leading to serious balance of trade and budgetary difficulties. An idea of the gravity of the situation can be had from the fact that the surplus of $1,130 million in the balance of trade of the E.C.A.F.E. region in the first half of 1951 was converted into a deficit of $350 million in the second half of that year. The situation was still worse in 1952. It was only appropriate, therefore, that the Commission should have laid utmost stress on the need for preventing a recurrence of wide fluctuations in the demand for and prices of raw materials.

World commodity agreements have no doubt frequently been proposed as the most effective method of bringing about stabilisation of prices. But there are several difficulties in the way of concluding such agreements. For instance, the primary producing countries may not favour such agreements which would stereotype the existing relations between primary and industrial prices, as they may wish to take advantage of the future trends in terms of trade, though, on present indications, they do not appear to be very much in favour of primary producers. Moreover, unless commodity agreements cover a considerable number of items, the results will not be appreciable. The E.C.A.F.E., therefore, has emphasised that there was urgent need for ensuring a fair degree of stability in the prices of raw materials, on the one hand, and a "just" relation between the prices of primary commodity and capital goods, on the other. It is gratifying to be told that the United Nations is already engaged in this task.

Closely allied to the question of stability of prices is that relating to the maintenance of the volume of investment. The Commission has put forward a vigorous plea for ensuring a more adequate flow of foreign capital for economic development, so that planned capital expenditure of the countries can be maintained in periods of reduced foreign exchange income. In this connection, it has called for an international finance corporation and special funds which would offer interest-free loans and grants-in-aid to the countries of the region. It has also emphasised the need for "flexible" economic policies, aiming at a larger measure of internal stability in times of fluctuations in demand and prices in world markets, with a view to increasing, if possible, foreign exchange reserves in times of export booms, so as to reduce fluctuations in imports in times of declining export earnings.

The question of enlarging the terms of references of the E.C.A.F.E. in such a way as to facilitate the transfer of associate member States to full member States, notwithstanding their failure, for one reason or another—veto, for example—to get admission as members of the U.N. was considered at the meeting. A resolution to this effect, as moved by the Cambodian delegate and amended by the Pakistan delegate, was adopted, with the U.S.S.R. being the only country to oppose it. The proposal of the Philippine delegation for shifting the headquarters of the E.C.A.F.E. from Bangkok to Manila was also taken up for consideration. No definite decision, however, was taken, the meeting having merely empowered the U.N. Secretary-General to decide the issue. The Commission considered the series of reports submitted by its subsidiary bodies dealing with questions relating to industry and trade, inland transport, and flood control.

A refreshing feature revealed at the meeting was the whole-hearted co-operation that existed between the Indian and Pakistan delegations on most of the issues.

The Committee on Industry and Trade was in session at Bandung from 26th January to 2nd February, 1953. India was represented by Mr. S. L. N. Simha, Deputy Director, Division of Monetary Research, Reserve Bank of India. The Committee considered a number of subjects and these included: (1) Mineral resources development; (2) training of personnel; (3) housing and building materials; (4) small-scale industries and handicraft marketing; (5) production and use of power alcohol; (6) supply of capital goods and raw and semi-finished materials; (7) electric power development; (8) trade promotion activities; (9) mobilisation of domestic capital; and (10) financial aspects of economic development programmes.

There was no detailed discussion on these subjects, because these had been considered in detail before by the various Committees, Working Parties and Seminars on which all the members and associate members had been represented. Only the reports and documents, which had been previously prepared, were considered. A great part of the discussion was devoted to re-emphasising what had already been stated. For instance, while discussing the report on electric power development, particular attention was focussed on the question of rural electrification, especially for the purpose of agricultural operations. In the field of mineral resources development, great importance was attached to the exploitation of lignite and kaolin deposits, while on training of personnel, the need for establishing managerial institutions and organising seminars was stressed. Special mention was made of the need for replacing, as early as possible, the foreign experts with indigenous personnel. With regard to housing and building materials, it was felt that the best use should be made of the locally available resources. In order to consider details regarding this aspect, a regional seminar on housing and building materials will be held in New Delhi some time next year. It is also proposed to hold, on that occasion, an international exhibition. The Committee also felt the need for a special division on housing in the E.C.A.F.E. Secretariat. On development of power alcohol, it merely endorsed the recommendations made at the E.C.A.F.E. Seminar on Power Alcohol held at Lucknow in October last.

The subject of handicrafts and small-scale industries came in for some examination. Recognising the need for encouraging these industries, the Committee called for greater assistance from the U.N. Technical Co-operation Administration. Speaking on the subject, the Russian delegate stated that foreign competition was hampering the progress of small-scale industries and handicrafts. This statement was, however, refuted by several delegates, on the score that, if progress had been arrested, such was due not to foreign competition but to the rapid pace of progress in the large-scale industries.

As regards the supply of capital goods, the general feeling was that it had greatly improved. Many representatives admitted that a large part of their requirements was being met. A few capital goods exporting countries, such as the U.K., cited figures to show that they were taking steps to augment supplies of capital goods to the E.C.A.F.E. countries, while others, such as Australia and France, expressed their desire to ensure larger supplies of capital goods in the coming months. The main difficulty of the importing countries, however, is lack of finance.

The questions relating to the mobilisation of domestic capital and the financial aspects of economic development programmes together came in for considerable discussion. Most countries that participated were agreed on the need for avoiding, as far as possible, deficit financing, although it was recognised that, in certain circumstances, deficit financing need not be inflationary. The importance of mobilisation of domestic capital was throughout stressed; but it was felt that it had its own limitations. Accordingly, several countries laid greater stress on the need for a more liberal flow of foreign capital. Countries like Burma preferred foreign capital through international agencies to that through national channels. During the course of the discussion on the financial aspects of the development programmes, the Indian delegate sought to impress upon the members the need for a correct idea of the concepts employed. An important decision taken by the Committee was that the E.C.A.F.E. should work in collaboration with the Colombo Plan Consultative Sub-Committee in the implementation of the programmes in the different countries. This, it was felt, would avoid duplication of work. The Committee also urged greater measure of co-operation between the E.C.A.F.E. Secretariat and other agencies.

THE
UNITED COMMERCIAL
BANK LTD.

HEAD OFFICE: CALCUTTA

Authorised Capital	... Rs.	8 Crores
Subscribed Capital	... Rs.	4 Crores
Paid-Up Capital	... Rs.	2 Crores
Reserve Fund	... Rs	75 Lacs

FOREIGN BRANCHES:

IN PAKISTAN	Chittagong, Karachi.
IN BURMA	Rangoon, Moulmein, Akyab, Mandalay.
IN MALAYA	Singapore, Penang.
ALSO AT	Pondicherry, Hongkong.
AGENTS	Throughout the world—Europe, America, Africa, Asia, Australia.

BUSINESS & SERVICE:

The Bank receives deposits, gives advances against approved securities, purchases bills, sells drafts and telegraphic transfers and transacts all types of Foreign Exchange business. Through its internal and external net-work of branches and world-wide arrangements it provides every kind of banking service.

G. D. BIRLA, Chairman. B. T. THAKUR, General Manager.

ASP

RESULTS OF BANK OF INDIA SATISFACTORY

EARNINGS NOT SERIOUSLY AFFECTED BY SLUMP

THE financial results of the Bank of India Ltd. (General Manager: Mr. A. C. Clarke, Bombay) for the year ended 31st December, 1952, convincingly show that the Bank had a satisfactory period of working, despite the difficult business conditions that prevailed during the year. The earnings of the Bank have not been seriously affected by the slump in commodity prices. Evidently the adverse effects of the shrinkage in business turnover which dearer money conditions brought about and of the slump on the Bank's working must have been offset by the higher rate of interest earned on advances.

The Bank's profit for the year amounts to Rs. 77.51 lakhs, which represents a fall of only Rs. 2.04 lakhs or 2.5 per cent. from that for the previous year at Rs. 79.55 lakhs. But it is higher than that for 1950 by Rs. 2.47 lakhs. Notwithstanding the small decline in profit as compared with 1951, the Directors have made a larger provision for taxation which, at Rs. 31 lakhs, is Rs. 6 lakhs more than that provided a year ago. Though the rate of dividend is proposed to be maintained at 14 per cent. free of income-tax, it requires Rs. 3.15 lakhs more than that paid out last year. That is so, because of the increase in the Bank's paid-up capital from Rs. 200 lakhs to Rs. 250 lakhs.

The following comparative table brings out the progress of the Bank since 1949.

(In lakhs of rupees)

	For the year ended 31st December			
	1952	1951	1950	1949
Interest and discount earned	175.99	151.06	154.59	154.02
Commission and exchange	40.44	42.72	16.06	11.49
Gross income	223.63	200.26	174.29	167.69
Interest paid	46.23	32.88	27.38	34.66
Expenses	99.09	87.35	71.87	62.52
Depreciation on Bank's property	0.80	0.48	0.58	1.55
Profit	77.51	79.55	75.04	70.51
Taxation	31.00	25.00	23.00	20.00
To property fund	..	..	7.50	5.00
,, investment reserve ..	..	12.00	7.50	10.00
,, bonus to staff ..	10.75	10.00	9.55	8.10
Dividend	35.00	31.85	28.00	27.91
	(14%)	(14%)	(14%)	(14%)
Carry forward	6.36	5.61	4.90	5.42

	As on 31st December			
	1952	1951	1950	1949
Paid-up capital ..	2,50.00	2,48.86	2,00.00	1,99.37

Investments	34.9	23.8*	32.4	46.1
Cash	18.7	13.4	14.3	13.5

* The ratio is arrived at after taking into account the investments earmarked against borrowings from other banks.

It will be noted that the interest and discount earned have risen by Rs. 24.93 lakhs in the face of a decline in the Bank's advances and bill discounted. This is evidently due to higher interest rates obtained on these advances. The fall in other inland and foreign bills business is reflected in the drop of Rs. 2.28 lakhs in commission and discount. The increase of Rs. 3.35 lakhs in interest paid is mainly due to the increase in fixed deposits with the Bank on which higher rates of interest had to be paid. A matter of much concern to banks in India in recent years is the rising spiral of expenses, which trend did not show any sign of abatement during the year under review. In the case of the Bank of India, the increase under this item has been of the order of Rs. 11.74 lakhs. The only comforting feature of it is that the pace of increase has not been the same as that (Rs. 15.48 lakhs) in 1951. Of the increase of Rs. 11.74 lakhs during the year 1952, salaries and allowance and provident fund alone account for Rs. 10.03 lakhs. A sum of Rs. 12 lakhs was added last year to the investment reserve, but this year no provision has been made on this account. The Bank's dividend distribution needs some explanation. Whereas last year's interim dividend of 6 per cent. was on a capital of Rs. 200 lakhs and the final one on the capital of Rs. 248.86 lakhs increased in April, 1951, the dividend for 1952 (both interim and final) is on the enhanced capital of Rs. 250 lakhs for the whole year.

There has been an increase of Rs. 2.24 lakhs in the reserves, and this is accounted for by the premium on new shares and the transfer of a tiny sum from contingencies. Thus, the present reserves standing at Rs. 3.52 crores provide a buttress to the paid-up capital of Rs. 2.50 crores and bear ample testimony to the solidity of the Bank. Total deposits show a decrease of Rs. 1.67 crores. In common with the general trend, while fixed deposits have risen, by Rs. 31.41 lakhs, as also savings deposits, by Rs. 2.09 lakhs, current deposits, including contingency accounts, have recorded a fall of Rs. 2 crores. There are no outstandings as at the close of the year under review on account of borrowings from other banking companies, which had stood at Rs. 1.75 crores at the end of 1951. But it is not known whether the Bank had borrowed anything during the course of the year either against Government securities or against usance bills. The only other items which have shown marked declines are the bills for collection and acceptances (not shown in the table). These contra items have declined from Rs. 131.09 lakhs and Rs. 14.28 crores to Rs. 43.10 lakhs and Rs. 7.69 crores, respectively, indicating thereby a fall in the bills business of the Bank, which is not surprising considering the fall in the volume of India's foreign trade, in the financing of which the Bank has a sizable share now. Advances and bills discounted and purchased have also recorded a significant fall of Rs. 10.21 crores, in distinct contrast to the increase of Rs. 6.09 crores in the preceding year. This is presumably due to caution exercised by the Bank in the matter of commercial credits, in addition to the general lull in business conditions. The fall in advances has in a way helped the Bank to consolidate its position and strengthen its liquid resources. This is amply borne out by the increase in the liquidity ratio. The increase of Rs. 4.09 crores in investments mainly reflects the Bank's subscription to the Government of India Treasury Bills, the sale of which was resumed in the second week of October, 1952, and the outstandings of which on the books of the Bank at the end of 1952 were Rs. 4.12 crores. Thus, out of a total of Rs. 20 crores offered during the ten weeks in 1952, the Bank of India alone had taken up more than a fifth. This shows that the Bank was not keen on buying any Government loans, which is but natural considering what the banks had to suffer in the previous year by way of capital depreciation on these investments. Cash balances, as at the close of the year, show a marked increase of Rs. 2.71 crores, raising the cash coverage to deposits from 13.4 per cent. to 18.7 per cent.

MYSORE BANK'S PROFIT SHRINKS

DIVIDEND, HOWEVER, MAINTAINED

THE slump in commodity prices during the past year, as well as the cautious policy followed by banks in their lending operations in keeping with the Government of India's monetary policy initiated in November, 1951, has affected the financial results of banks in varying degrees. The profits of banks in general for 1952 are lower, but, in some cases, especially in the case of those which thought it fit to tell the whole truth to their shareholders, the extent of fall is somewhat substantial. The results of the Bank of Mysore Ltd. (General Manager: Mr. B. V. Narayana Reddy, Bangalore), for the year ended 31st December, 1952, provide a case in point. The profit of this Bank for the year under review has suffered a contraction of Rs. 4.55 lakhs or 20.8 per cent. from the record level of Rs. 21.85 lakhs earned in the previous year. But, as compared with 1950, the profit for 1952, at Rs. 17.30 lakhs, is Rs. 3.14 lakhs more and constitutes the second highest profit in the history of the Bank. The decline in profit, as compared with 1951, has, however, necessitated the withdrawal of Rs. 1 lakh from the dividend equalisation fund to maintain the distribution to the shareholders at 16 per cent. per annum, including a bonus of 4 per cent., a rate which has been consistently repeated since 1947.

The gross income of the Bank has dropped from Rs. 50.09 lakhs to Rs. 49.18 lakhs only, though it contrasts with the increase of Rs. 12.30 lakhs noted in the previous year. But if the profit has declined sharply by Rs. 4.55 lakhs, it is because of the rise in expenses. There has been an increase of Rs. 2.64 lakhs in interest paid on deposits and borrowings. This is evidently due to the substantial increase in fixed deposits and thrift and savings bank accounts. Administrative and other expenses, too, have gone up by Rs. 1.60 lakhs. Despite this fall in profit, the provision for taxation has been raised by Rs. 1.10 lakhs to Rs. 6 lakhs. The provision for depreciation on investments has, however, been reduced from Rs. 5.41 lakhs to Rs. 2.81 lakhs. This is because of the comparatively small depreciation in the value of investments during the year under review. No addition has been made to the reserves, while, a year ago, a sum of Rs. 50,000 was transferred to the reserve fund and Rs. 1 lakh to the dividend equalisation fund. But this addition to the latter fund has now been drawn back, as already noted, to maintain the return to the shareholders.

The following comparative table sets the results of the Bank for the past year against the background of those for the previous three years:

(In lakhs of rupees)

	Year ended 31st December

* Before providing for depreciation on investments.
† Includes a bonus of 4 per cent. per annum.
‡ Includes Rs. 1 lakh drawn from dividend equalisation fund.

It will be noted from the above table that the progressive expansion in deposits in the previous two years suffered a reversal during the year. But the decline has not occurred in all classes of deposits. It is only the current account deposits, which constitute the bulk of business accounts, that have declined, from Rs. 6.11 crores to Rs. 4.52 crores, to be precise. This is only as it should be, in view of the disinflationary policy followed by the authorities. Demand deposits of banks are bound to fall

(*Continued on page 371*)

ALLOCATION OF INCOME-TAX TO STATES

FINANCE COMMISSION'S VIEWS ANALYSED

ONE of the important functions which the President of India has to discharge under the Constitution is to make arrangements from time to time for the allocation of revenues between the Union and the State Governments. The President is required to constitute, under Article 280(1) of the Constitution, a Finance Commission within two years of the commencement of the Constitution and thereafter at the expiration of every fifth year or at such earlier time, as he may consider necessary, for making recommendations to him regarding the principles which should govern the allocation of revenues.

Accordingly, the President, Dr. Rajendra Prasad, appointed the First Finance Commission on 22nd November, 1951, under the chairmanship of Mr. K. C. Neogy, Mr. V. P. Menon, Mr. Justice R. Kaushalendra Rao and Dr. B. K. Madan were appointed as members to serve on the Commission, with Mr. M. V. Rangachari as member-Secretary. Mr. Menon having resigned his office in February, 1952, Mr. V. L. Mehta was appointed in his place. The Commission was requested to make recommendations to the President in regard to the following:

(a) The distribution between the Union and the States of the net proceeds of taxes which are to be or may be divided between them under the provisions of Chapter I of Part XII of the Constitution and the allocation between the States of the respective shares of such proceeds;

(b) the principles which should govern the grants-in-aid of the revenues of the States out of the Consolidated Fund of India;

(c) the continuance or modification of the terms of any agreement entered into by the Government of India with the Government of any Part B State, and

(d) any other matter referred to the Commission by the President in the interest of sound finance.

In its work, the Commission felt somewhat handicapped by the lack or inadequacy of factual and statistical data in regard to certain matters such as national income, the structure and incidence of taxation—Central, State and local—the standards and availability of social services in various States, the distribution of responsibility in certain spheres between the States and local bodies and so on. With a view to overcoming these drawbacks, the Commission has recommended the setting up of a small organisation as part of the Secretariat of the President, to make a continuous study of the finances of the State Governments. Such an organisation would make available to the future Commissions sufficient material at the very commencement of their enquiry. This organisation should work in close liaison with the Finance Ministry and should make a study of the budgets of the State Governments, the changes in their finances from time to time, the rates of taxes in operation, the effects of the further measures of taxation undertaken by them, the working of their commercial enterprises, and their effect on State finances and cognate matters. It should not only study the Administration Reports of State Governments and Proceedings of State Assemblies, but also information in regard to the progress of various social services such as education, medical and public health. The results of these studies should be embodied in periodical papers, copies of which should be made available to the future Commissions.

In drawing its scheme of assistance to the States, the Finance Commission has kept three main considerations in view. First, the additional transfer of resources from the Centre must be such as the Centre could bear without undue strain on its resources, taking into account its responsibility for such vital matters as the defence of the country and the stability of the economy. Secondly, the principles for the distribution of revenues between the States and the determination of the grants-in-aid must be uniformally applied to all the States. Lastly, the scheme of distribution should attempt to lessen the inequalities among the various States. At the outset, the Commission has made it clear that the scheme should be considered as an integrated whole. Any modifications in the individual recommendations would, it has emphasised, affect the balance of the scheme. This explains the acceptance *in toto* by the Government of India of all the recommendations of the Commission.

Distribution of Income-tax

The Commission's scheme may be summarised broadly under three heads, namely, (i) distribution of income-tax, (ii) division of Union excises, and (iii) grants-in-aid of the revenues of the States out of the Consolidated Fund of India. In this and in the next issue of *Commerce*, it is proposed to bring out the main views of the Commission on all these subjects, as it was not possible to include them in the summary of the Commission's recommendations published in our last issue. To begin with the views of the Commission on the distribution of income-tax. These fall under three divisions, namely, (a) the percentage of the net proceeds of income-tax to be assigned to the States, (b) the manner in which the share assigned to the States should be distributed among the individual States, and (c) the percentage of the net proceeds attributable to the Part C States.

The position before the Finance Commission's recommendations came into force was that 50 per cent. of the net proceeds of the income-tax (here income-tax means only income-tax and super-tax and does not include corporation tax) exclusive of (1) the proceeds attributable to Part C States and (2) the proceeds of taxes payable in respect of Union emoluments was assigned to the States. Again, as a transitional arrangement, out of the sums so assigned, each Part B State was entitled to receive 50 per cent. of the net proceeds of the tax levied and collected in that State, while each Part A State, which had absorbed former Indian States, was entitled to receive 50 per cent. of the net proceeds of the tax levied and collected in the merged territories with that State. The balance was allocated and distributed among Part A States in the following percentages: Assam 3; Bihar 12.5; Bombay 21; Madhya Pradesh 6; Madras 17.5; Orissa 3; Punjab 5.5; Uttar Pradesh 19; and West Bengal 13.5. For the purpose of working out the divisible pool, one per cent. of the net proceeds was deemed to be the tax attributable to Part C States.

In order to devise the new scheme of distribution, the Finance Commission has had to take into account the Part A States as reconstituted after the merger of the former Indian States, and the Part B States which were entitled to share in the proceeds of income-tax. Out of the eight Part B States, seven became eligible to be treated on equal footing with Part A States. These were: Hyderabad, Madhya Bharat, Mysore, P.E.P.S.U., Rajasthan, Saurashtra, and Travancore-Cochin. The eighth State is Jammu and Kashmir. Although this State is a part of the Indian Union, it has not been included in the Finance Commission's scheme because the provisions of the Indian Income-tax Act do not apply to it.

The various States advanced heavy claims in their representations to the Finance Commission. These related particularly to two of the points on which the Commission has had to make recommendations. One is the percentage of the net proceeds of income-tax to be assigned to the States, and the other, the basis of distribution of the share among them. With regard to the first point, all Part A States, except Orissa, suggested an increase in the divisible pool from 50 per cent. to at least 60 per cent. Among Part B States, some urged that it should be raised to 70 per cent. On the second issue, namely, the basis of distribution, a variety of suggestions was presented by them.

West Bengal Government's View

The West Bengal Government took an altogether different view from others in stating that each State should get back out of the net proceeds of income-tax attributable to it, the percentage of share assigned to the State as a whole. It contended that the money raised in one State could not be made available to another State. It interpreted the term "within which the tax is available" in Article 270 of the Constitution to mean that the President, after retaining the Centre's share of the income-tax, should place the balance in the hands of the Governments in whose territories the taxes have been levied or to whom they were attributable to be disposed of under the control of their legislatives. In short, the Central Government's right to dispose of the proceeds of income-tax on any principle of merit was questioned by the West Bengal Government.

It is evident, *prima facie*, that the stand taken by the West Bengal Government is not tenable for various reasons. The reasons given by the Finance Commission amply bear testimony to the futility of that State Government's reasoning. The phase "within which the tax is leviable" as interpreted by the Commission stands to reason. It only means, says the Commission, no more than the simple expression, "that a State in which the tax is not leviable has no right to a share at all. Take, for instance, Jammu and Kashmir. This State is now a State of the Indian Union but it is not entitled to any share in the income-tax, because it does not levy any income-tax. The Bengal Government's views on the manner of distribution, namely, to return to each State a proportion of the revenue collected in each area, are also not tenable. For they mean that there is only one method of distribution and that is to return to each State the proportionate share of the tax collected in its area. This interpretation is not correct, because the manner of distribution about which the Commission is asked to make suggestions is different from the manner of making actual payments about which there is a specific provision in Article 279(2). Thirdly, the scheme of allocation and the distribution of income-tax has been in existence ever since the Government of India (Distribution of Revenues) Order, 1936, came into force. Till now no State had challenged this scheme as the Government of Bengal had sought to do. Fourthly, the Constitution does not recognise that any State has a right to the income-tax collected or even arising in its area. Fifthly, a State acquires the right to a definite amount of the divisible pool only after the manner of distribution has been prescribed by the President. Sixthly, until a State acquires the right to participate in the division, there is no question of transfer of money belonging to one State to another. Seventhly, a right of concurrent taxation in the income-tax field was never enjoyed by any Part A State; of course, the former Indian States had an independent right to tax incomes, but this right was lost under the Constitution after the integration of these States with the Union.

Divisible Pool

In the previous schemes of allocation of revenues between the Centre and the Units, a few awards had insisted that income-tax should be a balancing factor in the adjustment of resources between the Centre and the Units. The Commission has rejected this theory, as it feels that an increase in the States' share of this tax should not be used as a major factor in the devolution of future revenues to the States.

The Commission next proceeds to consider the claims of the States for an increased share. It examines the case for an increase from four aspects. First, there are now 16 States, instead of nine as hitherto, to participate in the division of the States' share of the divisible income-tax pool. Secondly, some Part B States are given a concession in regard to the application of the full rates of income-tax for the transitional period; their revenues from income-tax may, therefore, be smaller than otherwise, while the distribution to all the participating States will have to be on uniform principles. Thirdly, the increase in the number of Part C States has underlined the need for a somewhat larger percentage than at present of the net proceeds of income-tax as attributable to Part C States. And fourthly, the cost of collection allocable to income-tax is also likely to be slightly more than at present. These four factors cumulatively cause a reduction in the amount of the divisible pool. In view of these considerations, the Commission has decided to recommend an increase in the share assignable to the State from 50 per cent. to 55 per cent.

Distribution of States' Share

Several bases were suggested by the various States for the distribution of the share of income-tax allocated to the States. These include the bases of collection, origin of the income, resident, population, industrial labour, *per capita* income, and economic conditions of the State concerned. Each State put forward those bases which were quite advantageous to it. But, broadly speaking, the main controversy centres round two schools of thought. One is that the tax should be distributed on the basis of contribution, if not collection, and the other on the basis of needs of the States measured by the population within their jurisdiction. The Finance Commission has admitted the relevance of contribution as a basis of distribution, but has rejected collection as the sole or even a major factor in the distribution of the tax. For, the two States of Bombay and West Bengal between them account for nearly 75 per cent. of the collections of income-tax in the country. Again, of these collections, 75 per cent. is made within the cities of Bombay and Calcutta. But the collections within the limits of these two cities do not arise on account of activities which are confined to these limits. They are due to the fact that these cities are the entrepots of the country's export and import trade. As regards the basis of residence or origin, the Commission is of the view that neither of them is likely to give proper results in the allocation of a Central tax like income-tax among the units. Another argument in giving the collection basis some importance in the distribution of income-tax is the heavy responsibilities of States

COTTON INDUSTRY IN ASIA AND THE FAR EAST

PRE-WAR PATTERN BEING RESTORED

AN interesting review of the developments in the sphere of the cotton textile industry in the Asian and the Far Eastern region is contained in the latest (1951) economic survey of the region, prepared by the Secretariat of the E.C.A.F.E. Although the review is a little out of date in that it relates to a period which is more than a year old, namely, 1951, it is important chiefly for two reasons. First, the review clearly reveals the vital role played by the cotton textile industry in the economy of Asia and the Far East, especially Japan, India and China. Secondly, it indicates how the relative importance of the three major cotton textile producers has changed greatly since the war, although recent trends are towards the restoration of the pre-war pattern.

The aggregate quantity of yarn produced in the E.C.A.F.E. region, during 1951, according to the review, was substantially higher at 2,171 million lbs., as compared with 1,812 million lbs. in 1950 and 1,781 million lbs. in 1949. Production of cotton fabrics rose to about 6,332 million yards, as against 5,105 million yards and 4,875 million yards in the two preceding years, respectively. As compared with the pre-war figure of 7,685 million yards, however, the output for the year under review was lower by as much as 1,353 million yards. Yarn production in 1938 was 2,847 million lbs. A conclusion which can be drawn from these figures is that, assuming that the pace of advance witnessed in 1951 continued in 1952—there are indications to suggest that it did—and will do so in the coming years, it will not be long before production reaches not only the pre-war figure but exceeds it.

Trend of Production

The following table indicates the trend of cotton textile production in several countries during 1951, as compared with the three preceding years and also with 1938:

Cotton Yarn (million lbs.)	1938	1948	1949	1950	1951
India	1,324	1,478.8	1,351.2	1,176.9	1,318.2
Japan	1,466	279.1	352.8	533.7	754.4
Korea (South) ..	51	13.2	28.7	22.2	10.8
Hongkong	..	..	24.2	53.4	64.9
Pakistan	..	21.7	21.7	13.7	19.7
Ceylon ..	2	1.6	1.8	1.6	1.8
Philippines ..	4	.2	0.4	0.7	0.7
Total ..	2,847	1,794.6	1,781.8	1,812.2	2,170.5
Cotton Fabrics (million yards)					
India	4,271	4,424	3,807	3,616	4,167
Japan* ..	3,198	746	900	1,312	1,993
Korea (South)	198	28	63	54	25
Pakistan	..	89	93	106	128
Phillippines ..	11	8	4	10	11
Ceylon*	7	8	8	7	8
Total ..	7,685	5,305	4,875	5,105	6,332

* Approximate estimates.

The year 1951 was a satisfactory one for the Indian cotton mill industry. Production of cotton yarn and piecegoods was higher by 10 per cent., as compared with 1950. The increase in output would have been greater, but for the unexpected shortage of power in Bombay State and the time-lag in revising the ceiling prices of yarn and cloth by the authorities in accordance with the market situation. Four factors were responsible for improvement in output during 1951: (1) Better cotton supply, thanks to substantial imports from the U.S., and effective cotton control enabling the industry to get home-grown cotton at or near ceiling prices, (2) higher prices for cloth in domestic and export markets, (3) spinning of a larger quantity of fine and superfine cotton, giving more yardage than coarse and medium counts, (4) improvement in labour situation.

The pace of expansion in output of cotton textiles, it may be noted here, gathered further momentum during 1952. The production of cloth amounted to 4,609 million yards, a level which exceeds the previous post-war record of 4,422 million yards, attained in 1948, by 186 million yards. The increase in yarn output, as compared with the previous year, was also marked, although it was not more striking than the previous record output. Thus, in 1952, yarn output was 1,441 million lbs., as against 1,289 million lbs. in 1951 and 1,456 million lbs. in 1948. The improvement in cotton textile output during 1952 was the cumulative effect of a number of favourable factors such as continued comfortable raw cotton supply position, further improvement in labour situation, better transport facilities, and, more than these, relaxation of restrictions on distribution and exports.

In the field of exports, however, the performance was rather disappointing. Thanks to increased export duty and abolition of rebate of import duty on raw cotton, not to speak of the decline in the world demand during the later months of 1951, the export trade in cloth in 1951 suffered a severe setback. The quantity actually exported was not more than 712 million yards, as against the record output of 1,102 million yards in 1950. In 1950, it may be noted, India was the world's largest exporter of cotton goods. There was a further setback to India's cloth export trade during 1952, the quantity of cloth actually shipped being not more than 600 million yards.

Cotton Industry in Japan

Production of cotton yarn and cloth in Japan during 1951, despite shortage of electric power, was substantially higher by as much as 40 per cent., as compared with the previous year. This improvement was due mainly to increased demand from abroad and also partly to the relatively adequate supply of textile machinery and raw materials. The suspension of Government control over raw cotton and cotton products also helped in raising output. The spinning capacity underwent a huge increase, from 4.3 million spindles at the end of 1950 to 6.4 million spindles by the end of 1951. Consumption of cotton showed a large increase. Owing to dollar shortage, U.S. cotton consumed during the later months of 1951 fell to 43 per cent. of the total consumption, as against 70 per cent. in 1950, while that from non-dollar sources increased.

Japan exported 27.43 million lbs. of cotton yarn and 1,050 million yards of cloth in 1951, representing an increase in yarn but a decrease in cloth, as compared with the previous year. While shipments of cotton goods were increasing during the first half of 1951, they declined during the second half of the year, owing to the general weakening of overseas demand and the increased prospective supply in world markets resulting from improved cotton crops in the U.S. Pakistan and Indonesia cancelled a number of contracts for a large volume of cotton cloth, which had been ordered at high prices earlier in the year, and this resulted in a sharp decrease in Japanese cloth exports, in spite of the continued increase in output. The leading customers for Japanese textile goods were Pakistan (61 per cent. of total exports), Burma (17 per cent.), Indonesia (9 per cent.), and China (8 per cent.).

During 1952, however, the export trade in Japanese cloth received a setback, following the emergence of a buyers' market in textiles. The aggregate quantity which this country exported is estimated lower, at 769.13 million yards.

On the mainland of China, the cotton textile industry advanced rapidly during the years 1950 and 1951, the output of yarn and cloth exceeding previous peak levels. In the first half of 1951, production of yarn rose by 30 per cent. and that of cloth by 25 per cent., as compared with 1950. Apart from the increase in employment and the installation of new plants, there was a significant improvement in productivity. Thus, in most textile establishments, the output per unit of loom or spindle is reported to have gone up by 20-45 per cent. in 1951, as compared with the two preceding years. Textile production, however, was still largely governed by the availability of raw cotton. Imports of U.S. cotton were practically *nil*, but these were made good by supplies from Pakistan and the remarkable rise in indigenous output in 1950-51 and 1951-52. In China (Taiwan) also, the year 1951 witnessed an appreciable rise in cotton textile output, the quantity actually produced being 320 per cent. higher than that in 1950 and 566 per cent. higher than that in 1949. The number of cotton spindles and looms (automatic) existing was 950,000 and 5,392, with an annual rate of output of 62 million yards of cloth and 22 million lbs. of yarn.

Significant developments in the sphere of cotton textile industry is also reported in the other countries of the region. In Pakistan, for instance, the number of cotton spindles in operation increased from 175,000 at the time of Partition to 350,000 and, according to the Six-year Plan, another 250,000 spindles are expected to be installed. The total annual cloth production of the existing mills increased to 106 million yards in 1950, which compares favourably with 92 million yards in 1949 and 89 million yards in 1948. In Ceylon, preliminary work has commenced for establishing a State-owned textile factory with 25,000 spindles and 500 automatic looms. It is proposed that one-fifth of the yarn output of this factory will be supplied to handlooms which have encountered difficulties in getting yarn. In the Philippines, production of both cotton yarn and piecegoods continued to increase in the first half of 1951 to 413,000 lbs. and 5.4 million yards, respectively. In Burma, the cottage weaving industry suffered from a shortage of yarn, but the situation improved during the second half of the year. In May, 1951, a Government cotton spinning and weaving factory, using locally produced cotton, was opened with 20,000 spindles and 200 looms. Its production is expected to supply 20 per cent. of the country's requirement of yarn and 7 per cent. of cloth. In Hong Kong, the industry was confronted with shortage of raw cotton and competition from Japanese exports. In Indonesia, Japanese competition and strikes caused the closing down of some establishments. At the same time, however, the Government proceeded to establish a spinning mill under the Economic Development Plan. In South Korea and Viet Nam, war and disturbed conditions continued to handicap production.

EXPORT TRADE IN CLOTH

The question of export duty on cloth figured prominently in the speech of Mr. Naranji L. Kara, President of the All-India Exporters' Association at the tenth annual meeting of the Association. He said that "on no grounds should cloth or any article meant for export be burdened or shackled with all kinds of imposts, such as export duty, cess and sales tax." This is too sweeping a statement to commend itself even to Mr. Kara's own colleagues, for there are occasions when an export duty has to be levied to protect the internal economy against external inflation. An export duty on cloth, for instance, is perfectly justifiable when the export trade in this commodity is booming and the sellers' market is strong. But it has to be promptly reduced or abolished according to the trend of world trade in textiles. The Government, of course, reduced the duty ere now, but it was too slow in doing so; and even when it reduced the duty, it did not cut it down sufficiently. As for the sales tax, the Constitution does not permit the levy of this tax on exports. So, there Mr. Kara was perfectly right. Mr. Kara was also right when he suggested that the Government should give a rebate of the import duty on raw materials used in manufacturing cloth meant for export, as, otherwise, it would place the Indian mills at a disadvantage *vis-a-vis* its competitors who are not paying such a duty on their raw material.

Mr. Kara was optimistic that the export target of 1,000 million yards, fixed at the Buxton Conference, would not be a difficult task for India, "provided a far-sighted, consistent and liberal policy was pursued by the Government simplifying procedure, and removing unnecessary restrictions and handicaps." In this connection, he urged the Government of India to emulate the example of the Japanese Government. To quote Mr. Kara: "The Japanese Government, unlike ours, did not hanker after false and unattainable ideologies in the beginning and lick the feet afterwards. It did not attempt hair-splitting over nationalisation and State control and thus delayed rehabilitation and expansion schemes, but provided all facilities to private enterprise to go ahead with its various development plans. The Japanese tax system contributed to this recovery in no less degree because, being anything but rigorous, it made possible ploughing back a considerable part of profit and capitalisation of industry's own earnings."

Mr. Kara wanted the Government to remove restrictions on export of mineral khaki, *lungi*, *pseudofine* cloth and such other varieties which were in good demand in foreign countries. To what extent this plea is justified it is difficult to say, in view of the non-availability of statistics regarding the supply position, demand, etc. The chief factor which seems to have weighed with the authorities in restricting the export of mineral khaki is the paramount importance of meeting Defence requirements. With regard to exports of *pseudofine* cloth, however, there seems to be no points in continuing the ban. The export of this cloth was banned, because the cloth, classified as fine cloth, escaped from export duty levied on medium cloth. If that was the only "hitch", Mr. Kara wondered why the Government should not accept his suggestion that *pseudofine* cloth might be allowed for export subject to payment of the present export duty.

An important aspect of the export trade in cloth, to which Mr. Kara drew particular attention, relates to the large forward purchases of certain varieties of cloth made by some exporters from the mills. This, he maintained, could not be called speculative buying, since it was based on proper study of the exact requirements of their clients and intelligent anticipation of prospective demand from them. Such exporters as were catering to the specific requirements of their regular overseas clients had very often to take risks in business, in order to book orders as and when received. Mr. Kara sought to drive home the fact, in this connection, that the purchases were made, not for diversion to internal markets—even if prices ruled higher later—but for export only. "This sort of forward buying," to quote him, "is an integral part of the pattern of the export trade in normal times." He added that the method of effecting a purchase from a textile mill, only when one had an overseas order in hand, could not be strictly followed in the prevailing conditions of a buyers' market and free licensing procedure of the Government.

TEXTILE WORKERS TO LAUNCH CAMPAIGN FOR WAGE INCREASE

SURVEY OF CLOTH EXPORT TRADE

(From A Special Correspondent)

MANCHESTER, *17th February*

MANCHESTER LETTER

AFTER expressing "profound dissatisfaction" at last month's rejection by the Industrial Disputes Tribunal of their £7,000,000-a-year wage claim, leaders of all Lancashire's cotton trade unions decided this week to launch a fresh campaign for wage increases. The new claim—affecting 280,000 workers in spinning and weaving mills—will not be tabled immediately.

The decision to press a fresh claim was taken by 50 representatives at a joint conference of the Northern Counties' Textile Trades' Federation, the Cardroom Workers' Amalgamation and the Operative Spinners' Amalgamation. The conference had been summoned to decide future policy in the light of the Tribunal's outright rejection of the demand for an all-round increase of 10 per cent. on current earnings.

Afterwards Mr. A. C. C. Robertson, President of the Cardroom Workers' Amalgamation, said: "The operatives' representatives are not prepared to remain content with the decision. The whole position is being reviewed and on completion of the review steps will be taken to apply to the employers' associations for an increase in wages." He added: "We observed that many wage applications are being conceded and this makes the social position of our members relatively worse than when our application was formulated." Union leaders said they could not estimate how long the review would take. The amount of the new claim will be decided later.

Commonwealth Trade

Nearly five months have elapsed since the international cotton talks took place at Buxton when the British team produced a target of 1,350 million square yards of cloth for Lancashire's exports this year. In the meantime, there has been singularly little evidence of how such a vast task is to be approached and in view of the widespread lack of confidence among buyers the world over, the prospects of achieving the object seem perilously thin, even so early in 1953.

Various reasons were put forward at the time as to why Lancashire's delegates should propose what appeared to be an unrealistic figure. Statistically, on the basis of past performances, such a target is not completely out of reach, but in present-day circumstances its attainment is highly improbable. A graduated scale of increasing exports over the next two or three years is the best that can be hoped for.

The table below shows the record of trade in British cotton piecegoods with Commonwealth markets in recent years:—

(In million sq. yds.)

	1938	1950	1951	1952
Malta and Gozo ..	1.8	1.5	1.7	1.1
Cyprus	2.4	2.9	1.5	2.3
West Africa	70.5	138.8	129.2	175.5
South Africa	109.5	82.3	114.8	59.4
Northern Rhodesia ..	0.6	4.9	4.5	4.8
Southern Rhodesia ..	14.7	17.0	21.1	14.1
East Africa	6.6	14.5	15.0	21.1
Aden	2.7	2.1	3.0	5.5
India	273.3	6.0	7.0	6.0
Pakistan	..	67.1	39.4	42.1
Malaya	39.0	36.6	48.5	33.4
Ceylon	18.3	11.9	10.8	8.8
Hong Kong	6.8	5.2	5.3	4.0
Australia	145.9	114.7	167.8	73.0
New Zealand	26.6	48.4	45.4	30.5
Canada	64.5	22.1	14.2	17.1
British West Indies ..	22.3	12.6	9.3	12.2
British Guiana	4.4	3.1	1.7	2.7
Sudan	1.7	6.8	9.9	11.5
Other Commonwealth ..	11.9	9.7	11.4	11.5
Total to Commonwealth.	823.5	608.2	661.5	536.6
Total cloth exports ..	1,396.2	822.4	865.2	710.8

The proportion of shipments to Commonwealth markets has remained fairly constant at around 75 per cent. for some years past but the quantities absorbed by the individual countries have varied appreciably. Last year, while Lancashire's total sales abroad fell by about 155 million square yards, shipments to the Commonwealth were 125 million yards lower than in 1951.

The bigger the market the bigger was the variation in consumption, as South Africa and Australia together accounted for a fall of 150 million square yards, whereas Nigeria alone took an extra 50 million square yards from Lancashire. Such transformations in trading relationships can throw out of gear the best-laid plans for the future, but some progress has been made in shipping supplies to some of the smaller markets.

Bulk Selling Plans

Although the progress of actual schemes to expand overseas trade is excessively slow, moves are under consideration, which may easily develop trade between Lancashire and certain areas where it is felt prospects are encouraging. In Africa, for example, there is believed to be scope for a sustained drive to ensure that local requirements are fully catered for by Lancashire manufacturers in direct competition with rival textile industries.

Towards the end of last year there were hopes that a scheme to provide standard cloths at fixed margins for special areas would receive the backing of all sections of the industry and that producers, finishers and distributors would collaborate in a scheme on similar lines to that proposed by the Central Rayon Office. Negotiations have been so long-drawn-out that it is now unlikely that a plan of the full magnitude originally drawn up will be put into operation. The sponsors of the project, however, have not given up hope of getting support for the venture from a smaller number of firms. In this way the initial impetus may grow and, if successful, may stimulate others to follow the example.

Barter Cotton

First supplies of the 85,000 bales of Brazilian cotton bought by the Raw Cotton Commission as part of the jets-for-cotton barter deal will be used in Lancashire spinning mills early in April. The Commission has announced that quantities of this cotton are now on offer for delivery in April and May at prices ranging from 27.90*d.* to 29.60*d.* per lb., according to grade and staple.

Actual samples of the finest types will not arrive until April and supplies of these grades will not be sold until then. On average, the Brazilian cotton is believed to have cost the Commission around 31*d.* per lb. so that Lancashire spinners will get the benefit of cheaper supplies than their rivals in other cotton-manufacturing countries. The difference is being made up in the price charged for the 70 Meteor jet fighters which are being exchanged for the cotton by the Gloster Aircraft Co., a subsidiary of the Hawker-Siddeley Group.

Importance of Textiles

The need for developing Britain's ultra-modern industries, such as jet-aircraft manufacture, must not be allowed to overshadow the importance of the textile industry to the nation's economy, said Sir Raymond Streat, Chairman of the Cotton Board, speaking to hosiery manufacturers at Nottingham. Everything possible should be done to aid these modern developments, he continued, but the contribution of the established staple industries to exports and saving imports must not be overlooked. He said: "I cannot envisage the time when the many-sided textile industry of Britain will cease to be one of the main props of the economy of Britain."

Sir Raymond said all textiles would gain from more being heard about them, and the time had come when the textile industry must impress more upon the public the virtues of cotton. He added: "Our competitors in other industries are doing rather more than we can allow to pass without notice, and we should enter into competition with them."

Raw Cotton Imports

Supplies of raw cotton from Pakistan made up the majority of imports into Britain last week. Cargoes of 8,647 bales arrived out of total imports from all quarters of 14,401 bales. Other suppliers included the United States, the Argentine, India and East Africa. A total of 5,542 bales was imported on Raw Cotton Commission account.

Among nearly 59,000 bales of cotton still at sea for Lancashire mills are 15,581 bales from East Africa, 13,999 bales from Pakistan and 11,695 bales from the United States.—*All Rights Reserved.*

REPORT OF THE DIRECTORS TO BE PRESENTED TO SHAREHOLDERS AT THE FORTIETH ANNUAL GENERAL MEETING TO BE HELD AT THE REGISTERED OFFICE OF THE BANK IN BANGALORE CITY

The Directors have pleasure in submitting to the Shareholders the Balance Sheet and Profit and Loss Statement as at 31st December 1952.

The result of the Bank's working for the year ended 31st December 1952 is a surplus of Rs. 14,48,744-13-0, which sum, together with Rs. 1,62,550-1-9 brought forward from 31st December 1951, aggregates Rs. 16,11,296-14-9 after providing a sum of Rs. 2,81,000 on account of Depreciation on investments due to fall in the market prices.

The following appropriations have been made:—

	Rs.	a.	p.
An Interim Dividend at the rate of 12 per cent. per annum and a Bonus at the rate of 4 per cent. per annum, free of Income-Tax, was paid for the half-year ended 30th June 1952, which absorbed	4,00,000	0	0
Transferred to Reserve for Income-Tax and Super-Tax	3,50,000	0	0
The Directors now propose:			
To pay a final Dividend at the rate of 12 per cent. and a Bonus of 4 per cent. per annum for the year ended 31st December 1952, free of Income-Tax, which will absorb Rs. 4,00,000 less Rs. 1,00,000 to be appropriated from Dividend Equalization Fund	3,00,000	0	0
To provide for Income-Tax and Super-Tax	2,50,000	0	0
To pay a Bonus to Staff of three months' salary, about	2,25,000	0	0
To carry forward to next account	86,296	14	9
Total Rs. ..	16,11,296	14	9

The Head Office accounts and the returns from the Branches, as at 30th June and 31st December 1952 have been audited by Messrs. Fraser and Ross, Chartered Accountants, while the accounts of the Branches have been audited by Messrs. S. R. Mandre, Chartered Accountant, B. K. Ramadhyani & Co., Chartered Accountants, and Brahmayya & Co., Chartered Accountants. Sri. R. V. Subramanyam, Deputy Comptroller, has examined the accounts for the year on behalf of the Government of Mysore.

Dharmaprakasa Rao Bahadur K. Kuppuswamy and Sri. B. N. Gupta are the two Directors who retire on this occasion. They are eligible for re-election. Dharmaprakasa Rao Bahadur K. Kuppuswamy offers himself for re-election. Sri. B. N. Gupta has intimated that he does not seek re-election.

The Auditors, Messrs. Fraser and Ross, S. R. Mandre, B. K. Ramadhyani & Co., and Brahmayya & Co., also retire and offer themselves for re-appointment.

The Dividend, when sanctioned, will be payable on and after 12th March 1953.

By Order of the Board,
B. V. NARAYANA REDDY,
General Manager.

THE BANK OF MYSORE, LIMITED,
AVENUE ROAD, BANGALORE CITY.
2nd February, 1953.

BALANCE SHEET AS AT 31st DECEMBER, 1952.

COTTON CULTIVATION IN HYDERABAD

INCREASE IN ACREAGE AND OUTPUT

ALTHOUGH the Hyderabad State, accounting as it does for nearly one-fifth of the total area under cotton in the Indian Union, is an important cotton-growing tract, the figures relating to the output of this commodity have not been published in a regular form. Much light is, however, thrown on the cultivation and outturn of cotton in the State by the publication, *Hyderabad in Maps*, brought out by the State's Bureau of Economics and Statistics. It is interesting to note from the published figures that the acreage under this chief commercial crop of the State has expanded from year to year, in recent years, though it has not yet regained the record acreage in 1943-44 when over 41,00,000 acres were sown to cotton.

The following table gives the acreage and outturn of cotton in Hyderabad State from 1942-43 to 1951-52:

Cotton Output

	Acres	*Outturn Bales*
1942-43	31,17,013	5,08,000
1943-44	41,04,973	5,65,000
1944-45	19,57,130	2,47,869
1945-46	21,56,177	2,51,219
1946-47	22,42,461	2,67,383
1947-48	19,06,560	2,57,327
1948-49	20,47,969	2,33,577
1949-50	22,23,315	2,79,645
1950-51	24,18,071	2,60,368
1951-52	31,37,341	4,30,012

It will be seen from the above table that, between 1950-51 and 1951-52, the outturn of cotton expanded by nearly 1,70,000 bales to 4,30,000 bales. This level is, however, below the record level of 5,65,000 bales, touched in 1943-44. A part of the decline in cotton output from 1944-45 onwards is attributable to restrictions on cash crop which came into force from that year.

The following table gives the acreage and outturn of cotton in the different districts of the Hyderabad State.

Acreage and Outturn—1951-52

	Acreage		*Outturn*	
	Acres	*Percentage of total acreage*	*Bales*	*Percentage of total outturn*
Hyderabad	3	..	..	..
Mahbubnagar	2,313	0.1	150	..
Raichur	6,94,808	22.2	53,185	12.4
Gulbarga	1,49,054	4.8	14,308	3.3
Bidar	2,05,076	6.5	28,495	6.6
Osmanabad	1,17,393	3.7	17,256	4.0
Bhir	2,52,091	8.0	31,213	7.3
Aurangabad	4,74,518	15.1	87,237	20.3
Parbhani	4,94,473	15.8	69,746	16.2
Nanded	4,60,082	14.7	80,025	18.6
Adilabad	2,41,481	7.7	44,291	10.3
Nizamabad	10,748	0.3	824	0.2
Karimnagar	18,337	0.6	1,898	0.5
Other districts	16,971	0.5	1,386	0.3
Total ..	31,37,341	100.0	4,30,012	100.0

In 1951-52, cotton accounted for 12 per cent. of the total cropped area and for 34 per cent. of the area under non-food crops. Among the different districts of the State, the chief cotton-growing districts are Aurangabad, Nanded, Bhir, Osmanabad, Bidar, Gulbarga and Raichur Districts, which account for nearly 90 per cent. of the total cotton area in the State.

The *kharif* crop is the more important cotton crop in the State. About 74 per cent. of the total area under cotton is confined to *kharif* crop. *Rabi* cotton crop is grown largely in Raichur and Gulbarga Districts which together account for 95 per cent. of the total area under *rabi* crop. It may be mentioned here that *kharif* crop is sown from June to mid-July and harvested from the end of October to the beginning of February, whereas *rabi* cotton is sown in September and early in October and harvested from February to April. Both the crops are grown under dry conditions in the State.

The chief factors, which effect the yield of cotton adversely, are heavy rains immediately after sowing and at the time of flowering, pests such as boll-worms, and diseases such as wilt. These factors effect, as they do in other parts of the country, the outturn of cotton in the State. During 1951-52, climatic factors were so favourable that a bumper crop was harvested. It is noteworthy that about 78 per cent. of the total outturn, as a glance at the above table will show, came from the Raichur, Adilabad, Parbhani, Nanded and Aurangabad Districts of the State.

Among the different trade varieties of cotton grown in the State, the most important are Hyderabad Gaorani, Hyderabad Oomras, Hyderabad Americans, Kumptas and Jaiwant. Hyderabad Gaorani is grown in Nanded, Bidar, parts of Adilabad, Bhir and Osmanabad Districts and occupies 32 per cent. of the total area under cotton in the State. Hyderabad Oomra is grown in Parbhani, Aurangabad and Bhir Districts and occupies about 28 per cent. of the total area. Hyderabad American is largely found in Aurangabad and Adilabad Districts. Kumpta and Jaiwant are purely *rabi* varieties and are grown only in Raichur and Gulbarga Districts; they account for 20 per cent. of the total area in the State.

Although Hyderabad produces a significant proportion of the cotton output in the Indian Union, its consumption of cotton is only a small fraction of the total consumption. In 1951-52, for instance, Hyderabad consumed only about 75,000 bales of cotton, as against its production of over 4,30,000 bales. It is, therefore, clear that Hyderabad exports the greater proportion of its cotton to other parts of the Indian Union, mainly to the Bombay region.

U.S. COTTON

Mr. Ezra Benson, U.S. Secretary of Agriculture, has appealed to American farmers to restrict cotton production this year to not more than 12.5 million bales. He suggested that cotton plantings, on a national basis, be reduced by about 18 per cent. from the 1952 output. This statement will be viewed with misgivings by the overseas countries which are dependent on U.S. cotton, because, if Mr. Benson's suggestion were implemented, it would certainly mean higher prices for U.S. cotton. A crop of 12.5 million bales, as suggested by Mr. Benson, would mean considerable reduction of cotton production, as compared with the 1952-53 crop, which is estimated at 15.04 million bales.

In this connection, it is interesting to note that the International Cotton Advisory Committee, in the latest issue (February) of its bulletin, quotes the estimate of a private survey which places the 1953-54 U.S. crop at 14 million bales. This estimate was, however, made before Mr. Benson's statement. Even so, the Committee's observations on the next U.S. cotton crop will be read with interest, because Mr. Benson's appeal to the farmers is not mandatory and as such the farmers cannot be compelled to grow less. The Committee says:

"Consideration is now being given in trade circles to the probable size of the next season's cotton crop in the United States. A private survey recently undertaken concludes that farmers intend to plant 23.3 million acres. This compares with an estimated harvested acreage of 25.0 million acres for 1952-53. With no change in yields and with average abandonment, a planted acreage of 23.3 million acres would produce a crop of very roughly 14 million bales which would be 9 million bales in excess of the voluntary production target recommended by the Department of Agriculture (under the regime of Democrates).

"The figures quoted in this report for the individual States are, perhaps, more significant. They show that any reduction in total acreage appears likely to occur in the lower yielding States; cotton acreage in the high yielding areas of California, Arizona and New Mexico will apparently be well maintained. Although it would be unwise to place too much reliance on these findings at this stage, it does seem to indicate that there is not likely to be too drastic a decline in United States acreage next season. In support of this it must be pointed out that growers may be influenced by the fact that, under the present legislation, the 1953-54 acreage would be included in the base years should acreage allocations prove necessary for the 1954-55 season's cotton crop.

"Weather reports from the early planting areas in the Rio Grande Valley, and in West Texas and Oklahoma indicate an insufficiency of sub-soil moisture. In other parts of the Belt, rainfall appears to have been adequate but the milder weather so far this winter may increase the emergence of the boll weevil next spring."

DAMAGED U.S. COTTON

Indian and London underwriters have filed suits in the U.S., claiming over one million dollars against 20 U.S., Japanese and continental steamship lines, seeking indemnity in respect of shipments of damaged Californian cotton to India. It may be recalled that, of the large quantities of American cotton which were received by this country last year, about two lakh bales were in a highly damaged state. But shipping companies disowned all responsibility for the damage, saying that the damage was of pre-shipment variety. Indian and other insurers, who had underwritten this cotton, have paid the claims submitted by importers at this end. The loss is estimated at Rs. 1 crore. They are now taking recourse to legal means for recovering the amounts they have paid to importers. The underwriters have alleged that damaged cotton was delivered by the steamship lines to consignees while clean bills of lading were issued by the carriers to the shippers. This, according to the underwriters, makes the steamship companies liable for payment. Although the suits, which have been filed in New York, Houston, San Francisco, Portland, Oregon, and Seattle, now involve only the steamship lines, it is believed that they, in their turn, will make the shippers party to the suit.

THE BANK OF MYSORE, LIMITED—*(Continued)*

PROFIT AND LOSS ACCOUNT FOR THE YEAR ENDED 31st DECEMBER, 1952

REPORT OF THE AUDITORS TO THE SHAREHOLDERS OF THE BANK OF MYSORE, LIMITED

We have audited the Balance Sheet of the Bank of Mysore, Ltd., as at 31st December 1952, and the Profit and Loss Account for the year ended that date and report that:—

(a) We have obtained all the information and explanations we have required.
(b) Such information and explanations have been found to be satisfactory.
(c) The transactions of the Bank as have come to our notice have been, in our opinion, within the powers of the Bank.
(d) The returns received from the branches have been found adequate for the purpose of our audit.
(e) In our opinion the Profit and Loss Account shows a true balance of profit and loss for the period covered by the audit.
(f) In our opinion the Balance Sheet and Profit and Loss Account are drawn up in conformity with the Law and the Balance Sheet exhibits a true and correct view of the state of affairs of the Bank according to the best of our information and the explanations given us and as shown by the books of the Bank.
(g) We are further of the opinion that the books of account have been maintained in accordance with the Law.

WORLD SUGAR POSITION

LOWER OUTPUT DURING 1952-53 EXPECTED

A STRIKING feature disclosed by the latest review of the world sugar position, prepared by the U.S. Department of Agriculture, is the decline in the estimated world production during the current (1952-53) season. Thus, the aggregate output of sugar—centrifugal cane and beet—is estimated at 36.70 million tons (raw value), as against the record output of 38.17 million tons in 1951-52, that is a fall of 4 per cent. As compared with the pre-war average annual rate of 28.53 million tons or of 27.44 million tons during the immediate post-war period, namely, 1945-49, however, the output during the current season will be higher by as much as 29 per cent. and 34 per cent., respectively.

Although the world total output is expected to be lower, the output of sugar in the non-dollar area, especially in Europe, is expected to show an increase. That this should be so, despite the unpleasant experience of heavy stocks and recession in prices the world over, is, indeed, significant, in that it indicates the determination of the non-dollar countries to reduce their dependence on dollar sugar and thereby save much precious foreign exchange.

The lower world sugar output expected for the current season is due entirely to the marked fall in the production of centrifugal sugar, from 24.16 million tons in 1951-52 to 22.64 million tons, a decline of more than 6 per cent. The estimate of beet sugar output, however, is placed 44,000 tons higher at 14.06 million tons.

Trend of Output

The trend of sugar output—centrifugal cane and beet—during 1952-53, as compared with that during the pre-war, war and immediate post-war periods, is indicated in the table given below:

(In million tons—raw value)

	1952-53	1951-52	1945-49 average	1935-39 average
Cane sugar	22.64	24.16	18.05	16.75
Beet sugar	14.06	14.01	9.38	6.21

The decline in the production of centrifugal sugar is accounted for solely by North America. Production in this Continent during the season under review is expected to be substantially lower at 12.81 million tons, as against 15.06 million tons in the previous season, or a decline of as much as 15 per cent. The production is, however, higher, as compared with the average output of 11.93 million tons during 1945-49 and of 8.74 million tons during 1935-39. The bulk of the fall in output in North America is expected to take place in the U.S. Incidentally, it may be noted that a large part of the sugar output in the U.S. represents refined sugar produced out of raw sugar imported from Cuba. In Cuba itself, the output of raw sugar is expected to decline, from the record production of 7.0 million tons in 1951-52 to 5.0 million tons, so that less will be available to be refined in the U.S. than in the previous season. Lower sugar output in the U.S. may also be due partly to lower sugarcane crop and damage to beet crop by pests.

Production of sugar in all the other Continents, as already stated, are expected to be higher during the current season, as compared with the previous season, as will be evident from the following table:

(In million tons—raw value)

	1952-53	1951-52	1945-49 average	1935-39 average
Europe	12.08	11.98	7.59	10.04
Asia	4.86	4.65	2.51	5.24
S. America	3.99	3.82	2.99	2.11
Africa	1.79	1.71	1.45	1.29
Oceania	1.18	0.96	0.96	1.11

It will be seen from the above table that production of sugar in Asia in 1952-53 is expected to be higher by only 212,000 tons. The production would have been downwards but for the increase in output in countries other than India. In India, as readers are aware, the aggregate sugar production in 1952-53 is expected to be lower at 1.31 million tons, as against the actual record production of 1.48 million tons in the preceding season. This expectation is based on the official returns of sugar output upto 15th January, 1953, and also on the latest crop forecast relating to sugarcane. The total quantity of sugar produced in India during the current season (upto 15th January, 1953) amounted to 390,217 tons, as compared with 465,437 tons in the corresponding period of the previous season. These figures, however, exclude the production of *gur* which amounts to about 2.50 million tons. The aggregate production of sugar and *gur* thus comes to 3.81 million tons, a quantity which is equal to more than 10 per cent. of the world output.

Sugar in Australia

Europe is expected to register a rise in sugar output during the current season, the chief factor responsible for the increase being favourable weather conditions. South America and Africa are also expected to have higher sugar output. Australia, too, will have larger production. This is, indeed, significant, considering the fact that prolonged drought in Queensland had seriously affected the sugarcane crop, and also the several difficulties lying in the way of providing sufficient fertiliser and seasonal labour for the farms and in expanding mills, of transport and storage facilities. These factors have led to a rise in costs of production. Australia, it may be noted, in this connection, is one of the major sugar producers in the Commonwealth and one of the chief suppliers to the U.K., the quota to Australia under the Commonwealth Sugar Agreement being 600,000 tons. Sugar producers in Australia are assured of markets—internal and foreign—for the bulk of the projected increase in production. Moreover, prices for the major part are based on production costs. Nevertheless, a significant portion of the target output receives only ruling world prices which are at present downwards. In view of this and with a view to stabilising the conditions in the sugar industry, much importance is attached to the problem of ensuring that "costs do not run out of line with world conditions."

Despite the increase in sugar production in the non-dollar region, some of the countries in this region may still have to import considerable quantities from the dollar markets. The demand for sugar in the underdeveloped countries also is expected to rise. In spite of all this, there may not be any perceptible rise in the price of sugar in the world markets, for there is still said to be a huge surplus held by sugar exporting countries—to be more accurate, by one country, Cuba, the world's largest sugar producer. It is, no doubt, true that Cuba has already curtailed its output and decided to do so during the ensuing season also. But it is pointed out that Cuba cannot hope to gain much from such unilateral crop restriction for any length of time. It is, therefore, understandable that Cuba should be continuing to press most for an early agreement on world production and prices of sugar.

PLEA FOR FREE SUGAR TRADE

Speaking at the eighth annual meeting of the Bombay Sugar Merchants' Association held here last week, Mr. Maneklal Ujamshi, President of the Association, deprecated any tendency on the part of the Government and the factories to monopolise sugar distribution. Mr. Ujamshi voiced this criticism in reply to the statement made by the Union Food and Agriculture Minister, in the course of the latter's address at the recent meeting of the Indian Sugar Mills' Association, that the Government would sympathetically consider any scheme that might be offered by millowners for marketing sugar. Recalling the bitter experience of the consumers a few years ago, as a result of the anti-social activities indulged in by the Indian Sugar Syndicate, the President urged the Government not to encourage any monopolistic organisation for sugar but to smoothen the course of free trading in the commodity which has just begun after a lapse of nearly 10 years. He is not alone in holding that view and we have ourselves emphasised, on more than one occasion, the need for leaving the sugar industry and trade to adjust themselves to the laws of supply and demand. Surely, that will go a long way towards stabilising sugar prices.

Alleging that false grading and marking of sugar by certain factories still continued, Mr. M. Ujamshi said: "During the last three months, whatever sugar produced in the 1951-52 season has come in the market and inspected, shows that a large part of it has been falsely graded. Some mills do not put any marks or grades on the bags, although it is an offence not to put proper marks on the sugar bags. It is for the Government to confiscate such sugar as it is not marked quality-wise or is fraudulently graded. They should also levy heavy penalties for such offences. Unless the Government passes suitable legislation to enforce the abovementioned penal measures, these malpractices would continue. There is an Excise Inspector for every factory. It should be made statutorily compulsory for the factories to obtain a certificate from the Excise Inspector as to quality, whilst taking the sugar out of the godowns and to despatch it to the buyers with railway receipts. The non-observance of the above procedure should be made a legal offence."

What made Mr. Ujamshi to be bitter against such mills was their refusal to grant a survey of sugar of defective quality, making it difficult for the trade to prove its claim in a court of law. He, therefore, suggested that the trade itself should establish an independent Arbitration Board and intimate the mills, when they buy sugar from them, that any complaint about the quality of sugar would be surveyed by this Arbitration Board.

Another problem of the sugar trade which Mr. Ujamshi chose for special comment related to the practice of some of the factories selling sugar to their *benamies* and favourites. According to him, these *benamies* and favourites were pocketing their full margin of profit and selling sugar in the market at high prices. In his opinion, the Government should carry out a thorough and searching enquiry into these malpractices. It should also withhold the differential rebate bills of "suspect factories" till it was satisfied that the transactions were genuine.

BENZOLE FROM COAL

GROWING USE AS MOTOR FUEL

LATTERLY, production of liquid fuel from coal has been assuming growing importance in most of the Western countries having large deposits of coal. This is of significance to India, in that this country does not have oil-bearing deposits, except in Assam even where they are negligible. The question of manufacturing, in India, liquid fuel from coal was in the limelight during the years 1950 and 1951, when there was a sharp cleavage of opinion on the feasibility of setting up a plant for the extraction of oil from coal *vis-a-vis* erection of oil refineries. Subsequently also, there were talks about establishing a synthetic oil plant in Orissa. But, with the programmes for erecting oil refineries in progress, all talk about the extraction of liquid fuel from coal have now receded to the background. But the day may not be far off when the idea of extraction of oil from coal would again be revived, in view of the rapid progress that is being made in the development of a plant which would be within the reach of underdeveloped countries such as India. The latest developments abroad in the techniques of extracting liquid fuel from coal would, therefore, be worth noting.

Liquid fuel from coal can be produced not merely by plants designed for the purpose, but also as by-product in several other cases. Reports from the U.K. disclose that production of motor spirit from coal has increased since the end of the last war. Output of benzole—a liquid fuel generated when coal is processed to produce coke and gas—by the 260 gas-making plants established all over the U.K. is now 27 million gallons. There will be at least another 11 million gallons a year available in the near future from the new coking plant of the National Coal Board and a number of new benzole refineries and coking plants in several parts of that country. It is estimated that, if benzole were not recovered from coke ovens, the cost of coke would rise by about 7*s.* a ton at present prices which would, in turn, affect the price of gas.

Extraction

The extraction of benzole in the U.K. begins as far back as 1914-18 when large installations were erected for the purpose. It was highly useful during the 1914-18 war in the manufacture of explosives, etc. It was then discovered that benzole, the hydro-carbon by-product of coal, was an ideal motor spirit. A marketing organisation—the National Benzole Co. which is owned and controlled by four basic industries, namely, gas, steel, coal and chemicals—was set up. During the Second World War, benzole was used for a host of other uses, including the manufacture of synthetic rubber and in detergents, insecticides, solvents and dyestuffs. As the use of pure benzole as a motor fuel would be too costly, it is blended with petrol.

Benzole, like petrol, is a mixture of hydro-carbons, but the structure is much less complicated. Benzole is a mixture of three aromatics—benzene, toluene and xylene, while only about 20 per cent. of petrol consists of aromatics. Benzene has the lowest boiling point of all the aromatics and is given a high anti-knock rating. The anti-knock properties of motor fuel can be raised by cat-cracking, the addition of lead tetra-ethyl or by blending with benzole.

In cat-cracking, the more gaseous hydro-carbons in petrol are converted into more useful forms of hydro-carbons including aromatics, which are good anti-knock substances. Addition of benzole to petrol increases the aromatic content. Lead, tetra-ethyl, though not in itself of any use as fuel, has an appreciable effect upon anti-knock properties of the fuel with which it is blended.

JUTE GOODS IN JANUARY, 1953

ACCUMULATION OF STOCKS CONTINUES

THE production of jute manufactures in January, 1953, registered a fall of 7.3 per cent. over that in the previous month, and, as compared with the output in January, 1952, the fall was as high as 20.4 per cent. The exact volume of jute goods produced in the month under review was 72,995 tons, as against 78,799 tons in December, 1952 and 91,712 tons in January, 1952. The consumption of raw jute by the mills, calculated on the basis of production during the month, can be placed at 423,371 bales as against 457,034 bales in the previous month.

With the output of jute manufactures in the month under review, the total production during the seven months of the jute season 1952-53, aggregated 528,912 tons, as against 540,686 tons. The consumption of raw jute during the seven-month period may be put at 3,067,689 bales, as compared with 2,954,713 bales. It will be seen from these figures that, during the current season, the mills have consumed more jute to produce an output relatively lower than in the previous season, namely, 1951-52. This disparity is evidently due to the utilisation of low quality jute containing the admixture of the substitute fibres, *mesta* or *bimli* used by the mills in the month under review.

If the production of jute goods has not made much headway in the current season, such is due to the inability of the mills to utilise their full complement for the manufacture of these varieties owing to uneconomic prices for them and to the accumulation of stocks with them for lack of orders even at the current low rates.

The table below gives the output of jute goods during each of the three months ended January, 1953, as also during January, 1952.

(In tons)

	January, 1953	December, 1952	November, 1952	January, 1952
Civil				
Hessian	28,251	29,025	24,214	28,750
Sacking	39,338	43,267	40,332	58,443
Others	2,834	3,327	3,450	2,703
Total ..	70,423	75,619	67,996	89,896
Government				
Hessian	2,083	2,757	2,483	47
Sacking	422	376	1,710	1,769
Others	67	47	1	..
Total ..	2,572	3,180	4,194	1,816
Grand total ..	72,995	78,799	72,190	91,712

The table discloses that the decrease in production is shared by all the three varieties of goods, namely, hessian, sacking and others. The output of hessians declined from 31,782 tons to 30,334 tons. Sacking production dropped steeply from 43,643 tons to 39,760, while the output of other varieties was slightly lower at 2,901 tons, as against 3,374 tons in the previous month.

Figures relating to stocks held by the mills, as at the end of January, 1953, reveal a disquieting trend. The stocks held at the end of the month showed a sharp increase from 114,938 tons to 128,435 tons. Here also, as in the sphere of production, the increase was shared by all the three varieties of goods. But the extent of increase was more marked in sacking than in others, the total stocks of sackings rising from 78,187 tons to 88,446 tons, a total which accounts for 69.1 per cent. of the total stocks held. Hessian stocks at 37,303 tons were higher by 3,896 tons. The percentage of hessian stocks to the total was 29.1. The balance of 2,686 tons consisted of other goods. The increase in sacking stocks of the order of 10,261 tons evidently reflects the paucity of orders for sackings from abroad.

The summary of the detailed position of jute goods stocks with the mills as at the end of January, 1953, as compared with the two preceding months and January, 1952, is given below.

(In tons)

	As at 31-1-53	31-12-52	30-11-52	31-1-52
Civil				
Hessian	36,449	33,636	29,801	32,420
Sacking	85,394	73,969	67,274	43,920
Others	2,530	2,475	2,288	1,927
Total ..	1,24,373	1,10,080	99,363	78,267
Government				
Hessian	854	571	654	2,418
Sacking	3,052	4,218	4,416	7,045
Others	156	69	..	72
Total ..	4,062	4,858	5,070	10,135
Grand total ..	1,28,435	1,14,938	1,04,433	88,402

Commenting on the stocks of jute goods in the mills' godowns, the Indian Jute Mills Association, Calcutta, makes a notable suggestion for giving relief to the mills. It observes: "The holding power of the mills is limited and, sooner or later, saturation point will be reached beyond which they will no longer be able to make goods for stock, which is what a number of mills have been doing. The persistently low level of overseas demand has revived discussion of the export duties, which constitute about 20 per cent. of the present value of goods. There is a case for reduction of both the hessian and sacking duties, but, in the present circumstances of the trade, the revision of the sacking duty is the more immediate." In fact, there are already rumours in the market that the Government might reduce the duty on sackings. In view of the serious situation facing the industry, the Finance Ministry will do well to avail itself of the opportunity of the forthcoming general Budget to announce a cut in the duties on sackings. The announcement can be expected to stimulate enquiries from importing countries. Of course, latterly, there has been some revival of demand for cornsacks and wool packs from Australia and New Zealand but, generally speaking, overseas buyers are still inclined to hold out for quotations to go below the current rates. In hessians, too, the American business has been on a scale which is too meagre to bring about a change in the sentiment. Hessian orders from the U.K. and Australia have also been negligible.

COMMONWEALTH OUTPUT OF PLANTATION PRODUCTS

The major part of the world's tea, about half of the world's rubber and over half of the world's cocoa are produced by Commonwealth countries. This is revealed in *Plantation Crops*, a publication just issued in London by the Commonwealth Economic Committee. Covering, in the main, the first six post-war years, the publication records that the world rubber output for 1951 marked an 80 per cent. increase over the pre-war rate, while sugar and tea had risen 25 per cent. World exports of sugar and coffee in 1951, while under the post-war peak, were still greater than before the war, but cocoa exports had not yet reached the pre-war volume.

In comparison, Commonwealth output of tea and rubber in 1951 marked a 50 per cent. increase over the pre-war level, while Commonwealth production of sugar increased by a third. Shipments of Commonwealth rubber and tea had expanded 50 per cent., those of sugar and coffee by 25 per cent., and tobacco by nearly 250 per cent. The United Kingdom remained the world's largest market for tea and tobacco, with the U.S.A. as chief importer of sugar, coffee, cocoa and rubber. Commonwealth countries supplied practically all the United Kingdom's tea, cocoa and rubber.

World exports of tea from the principal exporting countries in 1951 are given as 980,000,000 lbs. Of these, 827,000,000 lbs. came from Commonwealth countries, India accounting for 445,000,000 lbs., Ceylon 305,000,000 lbs. and Pakistan 47,000,000 lbs.

Figures for *net* exports of natural rubber from the principal exporting countries in 1951 show that those for the two chief Commonwealth exporters, Malaya and Ceylon, were 608,000 and 102,000 tons, respectively, and for the two leading foreign exporters, Indonesia 794,000 and Thailand 109,000 tons.

A table setting out the distribution of rubber exports from the principal exporting countries shows that the chief importer, the United States, took 359,800 tons(gross) from Malaya in 1951, 20,800 tons from Ceylon, 163,400 tons from Indonesia and 13,200 tons from Indo-China. Of the United Kingdom's rubber imports that year, 280,800 tons (gross) came from Malaya, 31,600 tons from Ceylon, 32,400 tons from Indonesia, and 3,900 tons from Indo-China.

The summary shows that India was the leading Commonwealth producer of leaf tobacco, with 589,000,000 lbs. in 1951, Pakistan second with 161,000,000 lbs. and Canada next with 154,000,000 lbs. Leading foreign producers were the United States, 2,329 million lbs., China 1,100 million lbs. (estimated) and Brazil 257 million lbs. India is easily the biggest Commonwealth exporter of unmanufactured tobacco, its sea-borne exports under this head in 1951 amounting to 109,000,000 lbs. In addition, its land-borne exports of tobacco that year amounted to 12,000,000 lbs., of which 11,000,000 lbs. went to Pakistan.

TEA PRODUCTION IN SOUTH INDIA

The output of tea in South Indian gardens during the year (January-December) 1952 aggregated 112.76 million lbs. (subject to revision), as compared with 114.94 million lbs. in 1951. As already reported, shipments from Cochin during the past year amounted to 71.58 million lbs., as against 64.99 million lbs. in the preceding year. Shipments during January, 1953, amounting to 5.28 million lbs., show a considerable fall from 8.51 million lbs. in January, 1952.

(*Concluded from next column*)

all planters will follow this advice scrupulously. Now that the prices realised in the auctions are hardening, tea producers in low elevation estates should guard themselves against the temptation of producing more cheap varieties of tea which has been one of the causes of the last depression in tea trade.

TREND OF TEA PRICES ENCOURAGING

OUTLOOK FOR QUALITY TEA BRIGHT

TEA producers in India have reason to derive some encouragement from the fair measure of stability attained by tea prices in the auctions held so far during the current year, as compared with the severe recession in prices experienced in the second half of 1952. From this one cannot jump to the conclusion that the tea producers are out of the wood and that they are making a profit in the tea auctions. But it should be conceded that, in many cases, the gap between the cost of production and the price fetched at the auctions has narrowed down from what at one time appeared to spell ruin to one of the biggest industries of India. A large quantity of tea is still being sold below the cost of production. An idea of the improvement in prices can be gained from the following comparative table relating to auctions held in Calcutta both for export trade and internal consumption:

	Latest Auction No. 25 16-2-1953 Per lb. Rs. a. p.	Low touched in November 1952 Per lb. Rs. a. p.	Auction No. 25 25-2-1952 Per lb. Rs. a. p.
Export			
Clean B.P.	1 7 6 to 1 5 0	1 4 6	1 8 0 (Nom.)
Clean Common B.P. ..	1 1 6 to 1 2 0	0 11 0	1 6 6 (Nom.)
Medium Assam B.P. ..	1 1 6 to 1 2 0	0 12 0	1 10 0 to 1 11 0
Good Assam B.P.	1 15 0	1 10 0 (Nom.)	2 4 0 to 2 8 0
Consumption in India			
Medium Dooars dust ..	1 7 0 to 1 8 6	1 0 0 to 1 5 6	.. ..
Medium Assam grainy dust	1 8 6	1 5 6	..
Best Assam C.T.C. dust ..	1 12 6 to 1 13 0	1 13 6	..
Clean grainy black Dooars dust ..	..	..	1 9 6 (Nom.)
Good liquoring red Assam dust ..	..	..	2 12 0 to 2 13 0

It will be noted from the foregoing that the current level of prices is well below those fetched a year ago. The improvement in prices noted since November last is due to marked rise in the offtake. Thus, the quantity of tea sold in Calcutta for export during January, 1953 amounted to 258,242 chests against an offering of 278,846 chests. This compares favourably with 168,017 chests sold in November, 1952, against an offering of 224,009 chests.

At the London auctions also, prices have been reacting favourably and the improvement in consumer demand, noted towards the end of 1952, is being maintained and good quality teas are fetching better prices.

The tea traders in London feel that there is no world surplus of good quality tea, that is, well-plucked and well-manufactured leaf. It is not considered beyond the capacity of most of the estates to produce such quality tea. If stalks are eliminated from such production, the quantity offered for sale will be less, which itself will induce better demand. It is stated that a fictitious stock position was built up in Britain last year by heavy shipments of stalky tea from producing countries, some of which was almost unsaleable. Most of these stocks of tea have now been cleared by shipping them to various Continental countries. Some cheaper blends are also finding a market in Britain purely on price factor, but they are not seriously competing with the better known blends.

From the above account of the trend of markets, it is quite clear that consumers are becoming more discriminatory and are insisting on fine quality teas. Indian tea producers will do well to take a lesson from this and seize the present opportunity to produce good quality tea. It is gratifying to find that there is general appreciation of this need among the planters. By a unanimous decision, the tea producers in North and South India announced in December last a scheme to cut voluntarily the output of tea in 1953 by 8 per cent., to 570 million lbs. This is to be accomplished by finer plucking and by the abandonment of marginal areas, so that the production of low grade teas, which are difficult to be marketed, will be reduced. This policy is being extended further. At a conference held early this week, in Calcutta, the representatives of the planters of Assam, West Bengal, Tripura and Purnea have announced a cut of 12½ per cent. in the output of their gardens this year on the basis of the best year's crop during the period 1947 to 1952. It is not known whether this 12½ per cent. is inclusive of the 8 per cent. cut agreed to in December last or in addition to it. But it is stated that the effect of this decision will be a reduction in North-East India's output from 506 million lbs. in 1952 to 466 million lbs. in the current year. This meeting reiterated the special emphasis upon the necessity for finer plucking made on the previous occasion. It is to be hoped that

DEVELOPMENT EXPENDITURE OF RAILWAYS

FINANCIAL PROVISION FOR 1953-54 INCREASED

THE most noteworthy feature of the capital budget of the railways for 1953-54 is that the provision for development expenditure has been stepped up notwithstanding the sizable fall in revenue and the limited size of the reserves. Thus, as much as Rs. 79.61 crores have been provided in the 1953-54 budget for the modernisation and extension of railway facilities in India, as against Rs. 76.70 crores shown in the revised estimates for 1952-53. Of the total provision for next year, about Rs. 42 crores are for rolling stock and machinery and Rs. 36.61 crores are for works including Rs. 6.70 crores for construction of new lines and restoration of dismantled lines. A sum of Rs. 1 crore has been set apart for investment in road services. A brief reference was made in these columns last week to development works either completed or taken in hand in 1952-53, as well as to the new lines proposed to be constructed during 1953-54. It is, therefore, proposed to indicate here the programme relating to rolling stock.

Mr. Shastri disclosed that indigenous production was able to meet the normal annual requirements of railways in regard to rails, wagons and coaches and expressed his anxiety to ensure that imports were reduced to the minimum possible. The Government has already decided not to import any more coaches except for the commitments already made. Some wagons, however, have to be imported in order to make up India's huge arrears, the overtaking of which can brook no delay. Locomotives too would have to be obtained from abroad but here also vigorous efforts are being made to make India self-sufficient in the shortest possible time.

Rolling Stock

A sum of Rs. 39.30 crores is proposed to be spent on rolling stock during 1953-54, which sum is distributed among the different categories of stock separately under "new acquisitions" and programme deliveries as shown in the table below:

(In crores of rupees)

Particulars	*Programmed deliveries*	*New acquisitions*
Locomotives ...	6.02	2.07
Boilers	1.89	0.16
Carriages ...	11.22	4.71
Wagons	4.71	7.81
Ferries	0.68	0.03
Total	24.52	14.78
Grand total	39.30	

The programme for new acquisitions includes provision for the following:

Particulars	*As proposed Nos.*
Locomotives	245
Boilers	179
Carriages	1,384
Wagons	10,663
Cranes	19
Ferries	7

Out of the above, about 150 locomotives, 63 boilers, 1,121 carriages and 6,834 wagons are expected to be produced in the country and the rest will have to be imported from abroad.

Out of 239 locomotives purchased or expected to be purchased in the current year (1952-53), the Chittaranjan Works account for 36 locomotives. This factory has altogether produced 49 broad-gauge engines upto the end of December, 1952. The actual outturn has been somewhat less than the target originally fixed, the reason for it being difficulties in procurement of certain spare parts which cannot yet be manufactured in India. Chittaranjan is at present making about 70 per cent. of the components required for a complete locomotive, and the remaining 30 per cent. are still being imported. It is expected that, by the end of 1954, all the components, except some proprietary and special items, would be manufactured at Chittaranjan. The Tata Locomotive Engineering Co., Ltd., which is at present producing only metre-gauge locomotives, had turned out 35 locomotives upto the end of January, 1953. When both the Chittaranjan Locomotive Works and the Tata Locomotive Engineering Co., Ltd., reach full production, they will be in a position to manufacture all the steam locomotives required to cover the normal annual replacements of Indian railways. Neither the Minister's speech nor the explanatory memorandum throws any light on the cost of the locomotives manufactured in this country and how such compares with that of the imported ones. Unless relevant information on this question is made available, it will not be possible to gauge the cost of self-sufficiency to the taxpayer.

The question of additions to passenger coach stock has been receiving constant attention. In 1952-53 as many as 771 new coaches were put into service, as compared with 479 in the preceding year. In order to augment the production of passenger coaches, work in connection with the construction of a new coach building factory at Perambur was started in January, 1952. When this factory attains full production, it is expected to turn out 350 all-steel light-weight integral type coach body shells per annum in single-shift working. This will add considerably to the indigenous carriage building capacity. One of the chief ways in which quick relief can be given to Class III passengers, who contribute the major share of the railways' revenue, is the provision of better and more accommodation. Therefore, work on coach building needs to be given high priority and expedited. It may be noted, in this connection, that the Hindustan Aircraft Ltd. has done more than anyone else to relieve the hardship of Class III passengers by supplying the railways as expeditiously as possible with coaches of better quality and greater comfort.

Wagons

The manufacture of wagons is now well established in India for over 30 years and wagons produced in Calcutta are comparable with the best manufactured abroad. For the budget year 1953-54, out of about 11,000 wagons for which provision has been made, about 7,000 will be fabricated in the country and 4,000 procured from abroad. Experimental orders for the manufacture of some general purpose types of wagons have also been placed on some other Indian firms, which are new to this work, but have structural engineering experience. If they can successfully execute these experimental orders, they will be used to help in bridging the gap between the existing indigenous capacity and India's annual requirements of wagons.

The operating efficiency of the railways, it is gratifying to find, is being maintained during the current year and, in some respects, performance has actually been better than in the previous year. According to the composite index of operating efficiency, the broad-gauge railways have recorded an improvement from 100.7 in 1950-51 to 102.8 in 1951-52, while, on the metre-gauge, the index of 92.4 in 1950-51 has moved upto 93.6 in 1951-52. In regard to punctuality, the percentage of trains not losing time on broad-gauge railways was higher at 78.4 in the first half of 1952 as against 77.1 in the corresponding period of the previous year. The corresponding figure for metre-gauge was 81 in 1952, as against 74.3 in 1951. The wagon and locomotive usage in 1952 had also been better on the broad-gauge than in 1951 but, in this respect, there had been a slight setback on the metre-gauge. Generally speaking, the standard of performance of some of the metre-gauge sections has not yet come up to the mark but this defect is receiving, we are told, the special attention of the Railway Ministry. The railways are also devoting special attention to the removal of bottlenecks in respect of movement of traffic beyond Bezwada towards Madras and the transhipment difficulties on some of the break gauge junctions like Sabarmati, as well as augmentation of line capacity on some sections, to assist increased movement of coal, iron and steel. This is important not only for operational reasons but also from the point of view of trade and commerce.

SUPPLY OF SPARES AND AFTER-SALES SERVICING OF TRACTORS

The Government of India has set up a committee, with Mr. C. V. Narasimhan, I.C.S., Chairman of the Central Tractor Organisation and Joint Secretary, Union Ministry of Food and Agriculture, as Chairman, to suggest remedies for difficulties experienced by tractor users both in regard to spare parts and service facilities. The terms of reference of the Committee relate to (i) the standard of after-sales service which tractor importers and dealers should be required to possess and the standard charges for such service, (ii) the minimum stocks of spare parts required to be kept by tractor importers and dealers and the price structure for the various kinds of spares, (iii) the facilities to be provided by tractor importers and dealers for training tractor operators, and (iv) the possibility of starting the manufacture of tractor implement parts in India.

HARNESSING THE DAMODAR

D.V.C. FORGES AHEAD

WITH the opening of the Tilaiya dam and the Bokaro steam power station on 21st February, 1953, by Mr. Jawaharlal Nehru, Prime Minister of India, a part of India's dream to harness the capricious Damodar for the benefit of man has been fulfilled. It will be recalled that the question of controlling the Damodar river came to the forefront in 1943, when it inundated its banks, causing interruption to war effort and serious damage to public and private property estimated at Rs. 25 crores, though a scheme to control floods was approved of by the consultants of the Government of India only in 1946. It was felt that the work on this project would be finished in five years. Later, because of financial and other considerations, this view was revised and the scheme was split into two phases, one involving the construction of four dams and other three dams. There was also some difficulty in carrying with the Centre the two State Governments, namely, West Bengal and Bihar, vitally interested in the project. After prolonged negotiations with these two States, the Damodar Valley Corporation Act was passed in 1948 for the setting up of an autonomous body to execute the scheme on the basis of the Tennessee Valley Authority in the U.S. The first phase of Damodar development is expected to cost Rs. 83.89 crores. Its benefits are the provision of much needed water to 1,025,000 acres of land and of 300,000 kw. of installed power. The details of the second stage of the Damodar Valley Project are yet to be worked out.

The Tilaiya dam is one of the four to be built under the first phase of development of Damodar Valley, the other three dams being the Konar, Maithan and Panchet hill. The first phase also includes the construction of a barrage at Durgapur and a 90-mile irrigation-*cum*-navigation channel which will link Howrah with the coalfields of West Bengal. The Tilaiya dam reservoir submerges an area of 14,600 acres and stores 320,000 acre feet of water. During the *rabi* season, it will help irrigate 75,000 acres and during the *kharif* 24,000 acres. Power generation will be 22,770,000 kilowatt hours per annum. The completion of this part of the Tilaiya project will take some more time.

Konar Dam

The Konar dam will have a storage capacity of 260,000 acre feet and submerge an area of 6,600 acres. The area that will be irrigated by it is placed at 104,000 acres, 68,000 during the *rabi* season and 36,000 during the *kharif*. The Bokaro power station will be supplied with cooling water from this project to the extent of 400 cusecs daily. This dam is expected to be completed by the end of the current year. The Maithan project will store 1,104,000 acre feet of water, of which 725,000 acre feet will be controlled flood storage. Power plant attached to this part of the scheme will have an installed capacity of 40,000 kw. The area to be irrigated will be 270,000 acres. The dam is scheduled to be completed in 1954. Engulfing an area of 22,800 acres, the storage volume of the reservoir will be 1,214,000 acre feet providing perennial irrigation to 683,850 acres. The installed capacity of the plant power generation erected in this dam will be 40,000 kw. The barrage design and engineering of the Durgapur barrage and irrigation system is well under way. Surveying of canals and ditches is in progress and construction machinery is available at the barrage site. The whole of this project is expected to be completed by the end of 1954-55.

Bokaro Thermal Power Station

The Bokaro thermal power station, which Mr. Nehru declared open last week-end, is the biggest of the plants in the East, designed and constructed by the well-known power plant manufacturers in the world, namely, International General Electric Company, U.S.A. The Indian subsidiary of this American Company, namely, International General Electric Co. (India), Ltd., signed an agreement with the D.V.A. early in 1949 and has successfully fulfilled its contract in a record time of 39 months.

Starting with a unit of 50,000 kw., this power project will be equipped with another two units, each of the same capacity, by June, 1953. A fourth unit of 50,000 kw. will be installed at a later stage. The aggregate capacity of the station will be 200,000 kw. The plant will run on low-grade coal obtainable at the Corporation's own mines, five miles away, and brought to the site by an aerial ropeway. The energy produced will be distributed an area of 25,000 sq. miles.

In accordance with modern practice, the power station is designed around the unit system. Each of the General Electric, U.S.A. turbo-generator sets has impulse type, multi-stage condensing turbine directly connected with a hydrogen-cooled electrical generator. It may be noted here that hydrogen-cooled generators are being introduced for the first time in India. Each generator and its associated equipment constitutes a unit and is independent of the other units of the project. Following the unit system, each generating set has two boilers. The dual coal handling system of belt conveyor type is being used. Boilers are designed to use inferior grade coal having an ash content of 26 to 30 per cent. obtained from open cut mining of the Bermo seam belonging to the Corporation.

The main objects of constructing a thermal power station at Bokaro are two. First, it provides economical operation of the hydro-electric power that is to be developed in stages. The thermal power station is expected to take the main load during the dry season and the peak load during the rainy season. This facilitates generation of electric power in sufficient quantities throughout the year, being uninfluenced by seasonal variations in stored water. The second object is the utilisation of low grade coal found in abundance in the Damodar Valley.

The Damodar Valley region is rich in mineral resources but such has not been fully exploited because of lack of power. The area contains 80 per cent. of India's coal, 94 per cent. of iron ore, 100 per cent. of copper, 70 per cent. of chromite, 70 per cent. of mica, 100 per cent. of kyanite and 45 per cent. of china-clay and asbestos. With the full development of the area's mineral resources, as well as its soil, it will be no exaggeration to say that the Valley would be to India what the Land of the Five Rivers is to Pakistan.

ELECTRONICS INDUSTRY TO BE STARTED

India will have by 1956, a large-scale industry for the manufacture of a wide range of wireless equipment capable of meeting major requirements of the three Armed Services as well as of other Ministries of the Central Government and States. Following the signing of the agreement in December last between the Government of India and a French firm, a technical team headed by Dr. Ponte, Director-General of the firm, visited India towards the end of January. The company's experts had preliminary discussions in New Delhi and also visited Bangalore where the factory is likely to be located. On the basis of these discussions detailed plans for the construction of the factory and other aspects of the project are now being worked out. The project is estimated to cost approximately Rs. 7 crores. The proposed industry will be mainly concerned with the manufacture of specialised equipment for Government use, such as, transmitters of all types, communication receivers, trans-receivers for fixed and mobile operations and other equipment. There is no proposal at present to manufacture broadcast receivers and amplifiers. The Government at the same time will also aim at co-ordinating the present resources in the country so as to utilise them to the fullest advantage.

SUBSIDISED HOUSING SCHEME

The Government of India has sanctioned grants aggregating Rs. 20,86,937 under the Subsidised Industrial Housing Scheme 1952-53. A sum of Rs. 18,65,250, divided equally as subsidy and loan, has been granted to the Madhya Pradesh Housing Board for the construction of 750 tenements in Nagpur and three other places, Rs. 1,56,937 to Messrs. K. C. P. Ltd., Vuyyuru (Krishna), for 100 single-storey one-room tenements near their factory at Vuyyuru, and Rs. 64,750 to Messrs. S. P. Viramani and Sons, Ltd., lessees of Jawala Flour Mills, Amritsar, for 40 single-storey one-room tenements near their factory at Amritsar. The cost of construction, including the price of land, accepted for the purposes of loan and subsidy in the case of Messrs. K. C. P., Ltd., is Rs. 2,51,100 and of Messrs. S. P. Viramani and Sons. Ltd., Rs. 1,03,600. The subsidy and loan have been calculated at 25 per cent. and 37½ per cent. of the cost respectively. The grant is subject to the execution of required agreements by the firms.

NEW 150-SEAT JET PLANES

Another jet aircraft is to be added to Britain's growing fleet of gas-turbine-powered airliners. It is the civilian version of the new 150-seat jet military transport plane which Vickers Armstrongs have been authorised to build by the British Ministry of Supply. It is understood that for the time being the military transport will be known as Vickers 1,000 and the airliner as V.C.7. Both will be low-wing monoplanes with swept-back wings totally enclosing the engine. Derived to some extent from the R.A.F.'s super-priority jet bomber, the Valiant, both the new aircraft will be powered by four Rolls-Royce Conway by-pass engines which are still on the secret list. It is likely that the new aircraft will be used on the North Atlantic routes and they will also be suitable for shorter stages with increased passenger loads.

BRITISH AIRCRAFT EXPORTS

Record exports were achieved by the British Aircraft industry in 1952. Figures just published disclose that they reached a value of £43,900,000 as against £41,900,000 in the previous year. Since 1947 exports have almost doubled. In December 1952 the value of sales rose to over £4,500,000, the highest monthly figure ever recorded. In the next few years the industry is expected to reap in full the benefits of having pioneered the gas-turbine airliner. Sales of jets and turbo-props are only just beginning and have as yet hardly begun to appear in the statistics. Already orders for these airliners have been placed for as far ahead as 1957.

NATIONALISED AIR CORPORATIONS

A PLEA FOR SANITY

(By "RUDDERBAR")

VERY little authentic information has so far reached the public regarding the formation of the nationalised Air Corporations. It is possible that, when the proposed Bill is submitted to Parliament, a debate may ensue which should provide some enlightenment. In the meantime it has been authentically announced that there will be two Corporations, one for international routes and one for our domestic routes. We are still on fairly safe ground when we accept as correct Press statements to the effect that a well-known industrialist has accepted the chairmanship of the International Corporation, on the condition that it will be entirely autonomous and will not be subject to departmental control or interference. Finally, so far as authentic information is concerned, we have the statement of the Deputy Minister for Communications in the House of the People, in the course of which he is reported to have said that there would be no retrenchment whatsoever of aviation personnel at present employed by private companies, when the nationalised Corporations were formed. In fact, he said that "all *bona fide* employees will be absorbed," whatever *bona fide* may mean in this particular context.

If these three pieces of information are considered together, an immediate contradiction is apparent. There are to be two Corporations. These are to be completely autonomous. Yet, the Deputy Minister states, in the House of the People, that all present employees in the industry will be absorbed into the Corporations. In other words, the Deputy Minister has already committed the Corporations to an employment policy, which shows no regard for hard facts and which may be totally opposed to the policies of the two Chairmen. If this is autonomy, then it bears no relation to the definition of the word in any of the dictionaries.

This writer would be the last person to desire retrenchment of aviation technicians. Theirs is a highly skilled trade, and one, moreover, that requires constantly to be exercised, if technique is to be kept up to date or skill is to be retained. The fact is, however, that, when Government decided to integrate all the existing scheduled operators into one or two corporations, the fate of a large number of aviation employees was automatically sealed. Except in cuckoo land, a policy of integration entails retrenchment and particularly so when the reason for integration is the uneconomic working of a number of small units. Even were it to be supposed that each of the present private enterprise companies has so ordered its affairs as to employ only the exact number of men required for its operations, even then, on the integration of seven or eight of these companies into one unit, a significant proportion of the combined personnel would be entirely surplus to requirements.

Nor does the matter end there. It is to be assumed that one of the first acts of the domestic corporation will be to rationalise the present operational network. There is great scope here for improvement and economy of operation. The result of such rationalisation, and this presupposes that all places now on the air network will continue to be served, will be economy in the number of aircraft employed. In turn, this will effect economy in both flying personnel and maintenance personnel. It would appear then that the reported statement of the Deputy Minister can lead only to one of two results, both equally to be deplored. Either the Chairmen of the Corporations will assert their undoubted right under autonomy to man their Corporations as prudence and economy dictate or they will be committed to employ far more men than are actually required. In the first alternative, the Deputy Minister may have to eat his words and, moreover, the Chairmen of the Corporations will be faced with labour friction at the very outset of their task. In the second alternative, there will be created a situation which, in the long run, can only be harmful to the interests of the Corporations and their employees. Moreover, economic working will be difficult, if not impossible, to achieve.

If the formation of the Corporations is to proceed on such haphazard lines, then it would be far better to drop the whole thing before matters go further awry. If, on the other hand, it is in fact the intention of the Government of India to make these two air corporations autonomous, then surely the best and the only procedure would be to appoint a chairman for each Corporation. The Chairmen, once appointed, could then proceed to select their key personnel. The immediate task before the staff thus created would be to plan each corporation in detail, commencing with the route network to be operated, which is, in fact, the basis on which all other planning must rest. The Planning and production of a preliminary organisation will take from four to six months, and during this time the *status quo* of the present scheduled operators should remain undisturbed.

It is, of course, implicit in the reorganisation that all personnel should be selected prior to the actual birth of the Corporations. It is suggested that the fairest way to do this would be for the Corporation's planning staff to decide the percentage of presently serving employees required by trades. The various companies would then be informed of the percentage of each trade which the Corporations would absorb, the scales of pay and the terms and conditions of service. Each company would then prepare a list of personnel to be taken over by the Corporation on definite and agreed scales of pay and conditions of service. The remainder of the personnel, that is, those not selected or not agreeable to serve in the Corporations would be paid off under each company's individual retrenchment benefit rules. Thus, on a given date, the Corporations would come into being complete with staff, aircraft, equipment, offices, etc., in a planned and orderly manner. A further period of six months would see the rough corners rounded off, the square pegs removed from round holes, and, by and large, two vital, going concerns well and truly launched. On the other hand if, as is at present believed, the Government intends to take over all air companies in their present form on an arbitrary date, and then attempts to form two corporations from the huggermugger thus created, the imagination boggles at the probable results.

Consider the implications. The personnel of each present company serve on different terms, conditions, salary and wage scales. Sorting this out and introducing a uniform scale of wages and salaries will cause much heart-burning if not major labour trouble. If, on top of this, retrenchment is also to be effected, as this writer believes, then the first year or 18 months of the Corporations' existence will be mainly concerned with large-scale labour disputes the aftermath of which may embitter management-labour relations for a long time.

If the intention of the Government really is to give reasonable autonomy to the two nationalised Corporations, and if the Government really means steadfastly to resist the obvious temptation to plan and run the Corporations departmentally, a function of which the present Directorate of Civil Aviation is quite incapable, then there is obviously no time to waste. Let a start be made where all things should start, namely, at the beginning. Let the chairmen be appointed and let those chairmen select their key personnel, so that affairs can proceed in a proper, orderly and planned fashion. In the meantime, it is suggested that Ministerial statements, however well intentioned, should not so cloud and vitiate the issues as to render the task more difficult than it need be.—*All Rights Reserved.*

BRITISH ISOTOPE EXPORTS

British exports of radioactive isotopes for peaceful purposes are increasing rapidly, and some 4,000 consignments are expected to be sent abroad this year, compared with only 23 in 1948. The number of consignments rose to 220 in 1949, 1,290 in 1950 and 2,210 in 1951. As the world's largest exporter of radioactive isotopes—which in Britain are products of the atomic pile at Harwell and are used for a wide variety of medical and industrial purposes—the United Kingdom has led the way in devising the most efficient way of transporting these precious, but potentially dangerous, exports. Many are flown to South America and South Africa in a fleet of B.O.A.C. Argonauts specially converted to carry the materials in their wing tips—far enough away from the fuselage to ensure that the people aboard are completely out of danger from radiation. Others are enclosed in heavy lead containers and flown in freight holds. The economic advantage of transport in wing tips is, however, very great, as it is possible to dispense with the heavy lead packs and thus reduce transport costs by as much as 60 per cent.

INVESTMENTS OF LIFE INSURANCE COMPANIES

GOVERNMENT SECURITIES FORM MAJOR PORTION

LAST week, we referred to the reported move of the Government of India to come to some agreement with the life insurers in this country to induce the latter to keep invested a larger proportion of their funds in Government securities than they do now. In this context, it is worthwhile examining the character of life insurers' investments in this country, particularly with a view to determining whether there is scope for extending the insurers' investments in Government securities. There is no doubt that, if this move were to succeed, even the little support that the insurers are now giving to the equities and fixed-yielding industries in this country would be whittled down, which is bound to have serious repercussions on the share market.

The regulations governing the investment of controlled funds of insurance companies constitute a most complicated piece of legislation which prescribes, more minutely than in most other countries where insurance investments are similarly controlled, the manner in which the investments should be made. The two sections which regulate the investments of insurers are, as all those who are familiar with the provisions of the Insurance Act know, sections 27 and 27A. Section 27 prescribes that the insurer shall invest and at all times keep invested assets equivalent to his liabilities in respect of holders of life insurance policies *in the following manner*:

1. 25 per cent. of the sum in Government securities,

2. A further 25 per cent. of the sum in Government securities or other approved securities and the balance in any of the approved investments specified in sub-section (1) of section 27A or, subject to the limitations, conditions and restrictions specified in sub-section (2) of that section, in any other investment.

Section 27A

Now, section 27A, to which a reference is made in section 27 describes the manner in which the "controlled funds" of an insurance company should be invested. It may be mentioned here that "controlled funds" means all the funds of a life insurance company, if it carries on no other class of insurance business, or all the funds appertaining to life insurance business if the company carries on some other class of insurance business also. In the case of any other insurer, who carries on life insurance business, this phrase means all his funds in India, if he carries on only life business, or all the funds in India appertaining to life insurance business if he carries on some other class of insurance business also. These "controlled funds" should be invested, according to section 27A, in the following approved investments, namely: (a) approved securities, that is securities which may be approved by the Government from time to time; (b) securities of, or guaranteed as to principal and interest by the Government of the U.K.; (c) and (d) debentures or other securities, issued by any municipality or a housing authority in a State by the permission of the State Government; (e) to (l) first mortgage on immovable property under any housing or building schemes of the insurer, approved by the Central or State Government, similar debentures by a company which has paid interest in full for five years immediately preceding or for at least five out of the six or seven years immediately preceding on such or similar debentures, preference shares of a company subject to certain conditions, ordinary shares of a company subject to certain conditions ; (m) first mortgages on immovable property, subject to certain conditions; (n) immovable property, subject to certain conditions; (o) and (p) loans on life interests or on life policies within their surrender value or life interests; (q) fixed deposits with approved banks and co-operative societies; (r) debentures of, or shares in co-operative societies; and (s) such other investments as may be approved by the Government.

Rigour of the Law

This is, of course, a bald summary of section 27A. In fact, the section is more stringent than what might appear from the summary. Thus, although preference shares of companies are eligible to form the investment portfolio of an insurance company, they must be the preference shares of a company which has paid dividends on its ordinary shares for the five years immediately preceding or for at least five out of the six or seven years immediately preceding. Again, insurers may invest in ordinary shares, but the law prescribes that they must be shares of any company on which dividends of not less than four per cent., including bonus, have been paid for the seven years immediately preceding or for at least seven out of the eight or nine years immediately preceding.

It will, therefore, be clear that the choice of eligible investible securities is strictly limited for the insurers. Small wonder, then, that the insurers prefer generally the Central and State Government securities. By this way, they are not only assuring themselves of the safety of their investments but are also on the "safe" side of the law. The result is that the type of investments which is covered by the classification (a) and (b) predominates over all other types or classes of investments.

The following table gives the investment pattern of life assurance companies, both Indian and foreign, during 1951:

Investment of Controlled Funds

(In thousands of rupees)

	* Indian insurers		* Non-Indian insurers	
Approved investments classified according to clauses of sub-section (1) of section 27A—	*Amount* Rs.	*Percentage*	*Amount* Rs.	*Percentage*
1. (a) and (b) ..	1,42,21,37	67	38,54,11	82
2. (c) and (d) ..	1,08,56	..	1,22	..
3. (e) to (l) ..	23,47,18	11	2,33,07	5
4. (m)	12,37,09	6	16	..
5. (n)	11,90,81	6	67,78	1
6. (o) and (p) ..	12,90,12	6	4,03,26	8
7. (q)	2,66,99	1	28,16	1
8. (r) and (s) ..	51,16	..	17,28	..
Total of approved investments ..	2,06,23,28	97	46,04,99	98
Total of non-approved investments	6,95,99	3	83,89	2
Total of all investments..	2,13,19,27	100	46,88,88	100

* Information is not available in respect of 12 Indian insurer and one non-Indian insurer.

It will be seen from the above table that as much as 67 per cent. of the controlled funds of insurance companies are in Government securities. Even other classes of investment, such as those classified under (c) and (d), are also quasi-Government securities. It is, therefore, clear that the scope for investment in the shares of private companies is already strictly limited and that for all practical purposes, the major portion of insurance companies' funds are tied up in Government securities. In these circumstances, no special purpose will be served by statutorily extending the scope of insurers' investment in these securities.

EMPLOYEES' STATE INSURANCE

Delay in the extension of the scheme of Employees' State Insurance, it is officially stated, is due not only to financial and administrative difficulties advanced by State Governments but also because workers themselves feel that the benefits accruing from it fall short of what they expect in return for their contribution. The scheme, it may be recalled, was inaugurated by the Prime Minister on 24th February, 1952. The scheme is now confined to industrial workers in Kanpur and Delhi; other industrial areas will be gradually brought under the scheme. Explaining the delay in the extension of the scheme to other areas, the Labour Ministry says that it is not caused by the present system of control, nor is it due to non-filling of important posts in the Corporation for a long period, as has been alleged in certain quarters. The control exercised by the Ministry of Labour is stated to be in conformity with the provisions of the Act. The Government has, therefore, no intention of making any changes, legislative or otherwise, which will result in relaxation of the control over the Corporation.

LAPSE RATIO

Apropos of our article on "lapse ratio" in our issue dated the 14th inst., an insurance underwriter, Mr. N. H. Lalwani, makes the suggestion that agents should be provided special incentive to produce 'quality' business so that lapses might be kept down to a minimum. He says:

"(1) The law provides no incentive to an agent to produce quality business. He gets the same 35 per cent. commission whether his lapse ratio is, say, 46 per cent. or 0.3 per cent. In America and Canada, an agent having a satisfactory lapse ratio is rewarded by extra commission. (2) Admittedly, Indian offices have a mad craze for new business but if quality business is rewarded, I am sure that lapse ratio can be improved materially. (3) Companies should feel that lapses are a loss to them because the principal aim of a life company is to add business. The cost on new business being six times that on renewal business, they should make greater efforts to revive lapsed business. (4) Companies should have intelligent personnel in the lapse department and if the agent who produced the policy is not able to revive it, some other good agent of the company should be selected and entrusted to follow up such lapses. Companies should not sleep away, as most of them do now, after having received the premium. It is the duty of the company to explore all possible avenues to get the overdue interest and evidence of good health and not be content with holding the premium in suspense and earning interest on it in case the policy is not revived through negligence of the assured.

"The conservation departments of American companies use pictorial letters, with great emotional appeal, with the result that a high percentage of policies are revived. Such methods should be adopted here also. If the companies were to realise that their principal aim is to increase their business and that it costs them six times more to replace a lapsed policy by a new one, then they should not hesitate to spend money in employing intelligent personnel in their conservation departments and to use pictorial letters to win their clients. As I have said in para 1, if the life offices in India want quality agents, they should reward them by some extra remuneration. Will the Indian offices approach the authorities to amend the law to enable them to do this?"

Addressing a meeting held under the Indian Medical Association in Bombay, Mr. Aneurin Bevan, a British Labour Member of Parliament and chief author of the U.K. National Health Services, now in India, urged Indian doctors to co-operate with the Government in successfully implementing the Health Insurance Scheme which it had planned for its industrial population. He quoted Abraham Lincoln to say that it is the duty of the State to do for the people what the people need to have but which they cannot do for themselves. National health insurance was based upon this principle.

WORKING OF INDIAN INSURANCE POOL

NEED FOR AN ENDURING STRUCTURE

FEW factors in the growth of general insurance business during the war and post-war years have been of greater significance than the establishment of the Indian Insurance Companies Association Pool for taking over the business of insuring Government property in this country. From small beginnings, the Pool's volume of business has grown to substantial dimensions; its activities have extended to every class of non-life business which the Central and State Governments are in a position to offer. This development, without undermining the healthy spirit of competition which exists among the companies for securing non-governmental business, has added much to the power and prestige of the Indian insurance companies. Indeed, the Pool has now come of age.

Genesis of "Pool" Idea

The organised transaction of governmental insurance—to be more precise, the insurance of governmental property—does not go back to more than 15 years. The year 1938 is a landmark in the progress of Indian insurance, for it was in that year that the Indian Insurance Act was passed. At that time, the field of general insurance was dominated by foreign interests, so that Indian companies found it difficult to develop their business in their own country. When the Act was on the legislative anvil, the redoubtable champion of Indian interests, the late Mr. S. Satyamurthi, moved an amendment which was designed to give effective assistance to Indian insurance companies. He urged that the Government should place whatever insurance business it could give only with Indian companies. The late Sir Nripendra Sircar, the then Law Member, who was piloting the Insurance Bill, was convinced of the obvious strength of the case for Indian insurance. He made a statement to the effect that whatever business the Government of India controlled would be given to the Indian insurance companies. He could not, of course, speak for the Provincial Governments. Nevertheless, he made it clear that there was nothing to prevent the Provinces from insuring with Indian insurers.

It was this assurance of governmental support for Indian insurance companies that gave birth to the idea of the formation of the "Pool." In 1938, the Indian Insurance Companies' Pool was formed with a view to ensuring valuable support from Government business to all Indian insurance companies. The organisers of the Pool realised that the existence of the Pool would enhance the prestige of Indian insurance in the public eye and would lead to rapid progress and development of Indian insurance. The Government of Bombay was the first State Government to be approached by the Pool for placing all its business with this body. It must be said to the credit of this Government that it was also the first State Government to realise the value of placing its insurance business with the Pool.

Pool's Members

Since 1938, when the Pool was first constituted, the number of general insurance companies has grown from 12 to 68, so that the task of allocation of the available business is not as simple as it was in the early years of the Pool's existence. By the very nature of its constitution, the Pool could not, under the provisions of the Indian Companies Act, contain more than 20 members. But the number of companies, which were entitled to take over the available governmental business, was far larger than 20. The basis of the Pool has had to be revised so that the number, constituting this body, might be kept at 20, the other insurance companies being allowed to participate in the Pool's business, in an indirect manner, by becoming attached to the 20 members who constitute the Pool. These 20 members of the Pool are:

(1) The New Indian Assurance Co., Ltd., (2) the New Great Insurance Company of India Ltd., (3) the Vulcan Insurance Co., Ltd., (4) the British India General Insurance Co., Ltd., (5) the Indian Globe Insurance Co., Ltd., (6) the Indian Mercantile Insurance Co., Ltd., (7) the Jayabharat Insurance Co., Ltd., (8) the Universal Fire and General Insurance Co., Ltd., (9) the Oriental Fire and General Insurance Co., Ltd., (10) the Jupiter General Insurance Co., Ltd., (11) the Vishwabharati Insurance Co., Ltd., (12) the Standard General Assurance Co., Ltd., (13) the Hindusthan General Insurance Society Ltd., (14) the National Insurance Co., Ltd., (15) the Concord of India Insurance Co., Ltd., (16) the Bharat Fire and General Insurance Ltd., (17) the Ruby General Insurance Co., Ltd., (18) the New Asiatic Insurance Co., Ltd., (19) the Prithvi Insurance Co., Ltd., and (20) the United India Fire and General Insurance Co., Ltd.

Agreement

In January, 1952, a fresh agreement among the members of the Pool was signed, whereby it was agreed that fire, marine (excluding hull) and accident (excluding aircraft) insurance business, directly or indirectly under the control of Government, municipalities, local bodies, housing societies, co-operative or otherwise, aided by Government, should be transacted in a Pool under the following (among other) conditions:

(1) The Pool shall have only 20 members, and the parties to the agreement shall be only members of the Pool;

(2) the principal office of the Pool shall be located in Bombay;

(3) the Pool shall be administered by a Central Committee, consisting of eight members—four members from the Bombay area, three members from the Calcutta area, and one member from the Madras area;

(4) the Central Committee shall arrange for the election of regional committees at Bombay, Calcutta, and Madras, consisting of members of the Pool for the purpose of managing and conducting the business of the Pool in the respective areas;

(5) the Central Committee shall decide policy matters, arrange for re-insurance, keep accounts of the business of the Pool, create a reserve fund out of the premium written by the Pool in a sum not exceeding 20 per cent. of the total premium earned by the Pool during each accounting year (year ending 31st December) and look after the investments of funds;

(6) the period of the Agreement shall be two years from 1st January, 1952, subject to extension and renewal through mutual consent and also subject to the condition that, notwithstanding the expiry of the agreement, the parties are bound to carry out their obligations in respect of the policies entrusted to them;

(7) the business of the Pool shall be distributed in the following manner: (a) *Fire Insurance*: 15 per cent. of each risk shall be allocated to "New India" and the balance of such risk, not exceeding Rs. 50 lakhs, shall be equally allocated among other companies. If the balance—that is, 85 per cent. of the risk—exceeds Rs. 50 lakhs, the excess shall be distributed among all parties, except New India, in proportion to the total premium income of each such party for the calendar year 1949, (b) *Marine (excluding hull) Insurance*: 15 per cent. of each risk shall be allocated to "New India" and the balance, namely, 85 per cent. of the risk, not exceeding Rs. 25 lakhs, shall be equally shared by companies other than "New India." Any excess of such balance of risk of 85 per cent. over Rs. 25 lakhs shall be allocated among other parties, except "New India", in proportion to the total insurance premium income of each such party for the calendar year 1949, (c) *Accident (excluding aircraft) Insurance*: 15 per cent. on each risk shall be allocated to "New India" and the balance shall be divided among other parties in equal shares;

(8) no party shall place any part of its business in foreign centres by way of facultative reinsurance. But it shall replace such part with the Pool itself, which shall make appropriate arrangements for its reinsurance;

(9) if any party fails to meet its obligations issued under this Pool arrangement, the other parties shall be liable to meet the obligations and liabilities of the defaulting member in proportion to their respective shares in the business of the Pool;

(10) each party shall pay to the Pool 20 per cent. of the gross premium income earned by it in respect of the fire, marine and accident business allotted to it under the arrangement for purposes of meeting the cost of the management of the Pool.

Regional Committees

Such, in brief, are the conditions under which the Pool works at present. The Pool works, as a study of the conditions stated above will show, under the guidance of its Central Committee. Mr. Vijay Singh Govindji is the Chairman of the Pool, the office of which is located in Bombay, the Secretary to the organisation being Mr. T. R. Krishnaswamy, who has been associated with the Pool ever since its inception. The Pool issues a joint policy on behalf of the participating companies, which is regularly accepted by the Central and various State Governments. Apart from the Central Committee, regional committees have been formed at Bombay, Calcutta, Madras and Delhi for the purpose of managing and conducting the affairs of the Pool in their respective areas. A branch of the Pool has been opened at Hyderabad (Dn.)—although, under the scheme of geographical distribution of areas, this centre comes under the Bombay Area—since the Hyderabad State has agreed to place the business, in respect of its various industries under its control, with the Pool.

A feature of the working of the Pool, which deserves special emphasis, is that, although the Pool has been formed and worked in accordance with the principles which have been approved by the Government of India, there is no official control, as such, of the Pool's affairs. It is gratifying to note that, despite this absence of such control—partisans of private enterprise will, of course, say, because of such absence—the Pool's affairs have, for long, been remarkably well conducted. The Pool's expenses of management do not amount to more than 8 per cent. of premium income. Its claims experience is known to be good. Its premium income, which was a mere Rs. 50,000 in 1938, improved to Rs. 16 lakhs in 1951; it has now exceeded Rs. 21 lakhs for 1952.

Government's Sympathy

The Pool, however, owes its success to the sympathetic manner in which the Central and some of the State Governments have agreed to assist it. Thus, the Government of India has issued, it is learnt, a circular to all Ministries urging them that any insurance that they might effect might be placed with the Pool, though the concerned Ministers might take such steps as might be necessary to alter, in a suitable manner, the terms of contracts. The Government has also accepted, it is learnt, the principle that it should give the insurance of its own property or property under its control to Indian insurers, although, normally speaking, the Government does not insure but carries its own risks. It is also learnt that the Pool has agreed to quote special concessional rates for insurance business of governmental origin and also to make necessary arrangements for the Pool's representation at any foreign centre at which the Government might ask the Pool to provide representation. The Pool already possesses, it might be mentioned here, representatives in the U.K., France and the U.S.; it has agents for purposes of survey and claims settlement in London and Liverpool, in the U.K., Bordeaux, Havre, Paris and Marseilles in France and in New York in the U.S.

In view of the fact that both the Central and State Governments have accepted the principle that all State undertakings should be conducted on a strictly commercial basis, it is only reasonable to expect that the Pool will be patronised to an increasing extent by the Governments in this country. Already, the Pool is covering certain major industrial undertakings of the Central and State Governments, such as the Sindri Fertiliser Factory, the Damodar Valley Project, Hindusthan Aircraft, Indian Telephone Factory, Indian Coffee Board, Delhi Electricity Board, and Madhya Pradesh Electricity Board. The insurance business of the Machine Tool Factory is expected to be finalised shortly. The Pool is also engaged in negotiations with the Governments of Mysore and Travancore-Cochin for the business connected with the insurable risks under their control.

States and Pool

Many Indian States had, prior to their integration with the Indian Union, their own arrangements for insuring their property. These States do possess certain rights in this matter. Presumably, some oral assurances were given to them by the then Central Government at the time the States were induced to join the Indian Union. The exact legal position, in respect of insurance matters, is not of course very clear. Over-riding the merely juridical considerations is the important consideration that it is the duty of these State Governments to do all they can to aid, foster and develop Indian insurance. From this point of view, it is only reasonable to expect that the State Governments would be willing—nay, anxious—to place all their insurance business with the Pool.

In the meanwhile, the Pool requires to be placed on a firmer basis. Surely, it cannot be expected to function smoothly if its organisation has to depend upon the conclusion of annual or bi-annual agreements among its members. A draft charter for the organisation of the Pool on a permanent basis is, we are told, ready for submission to the Government; the present agreement, under which the Pool works, will expire by the end of this year. It is to be hoped that Parliament, despite the busy legislative season ahead of it, will find time to take preliminary notice of this charter, this year. If Parliament cannot find the time to look into this charter, the present agreement will have to be renewed for a further period.

ANNUAL REPORT

To be submitted to the Shareholders at the Forty-seventh Annual Ordinary General Meeting to be held at the Registered Office of the Bank, Mahatma Gandhi Road, Fort, Bombay, on Thursday, the 5th March, 1953, at 4 o'clock, in the afternoon (Standard Time).

Directors' Report for the year ended 31st December, 1952.

The Directors submit to the Shareholders the BALANCE SHEET AND PROFIT AND LOSS ACCOUNT for the year ended 31st December, 1952. The Auditors' Report is also annexed.

	Rs.	a.	p.
The transactions for the past year, including the balance brought forward from the previous year, Rs. 5,60,616-1-11, have resulted in a profit of	83,11,553	4	6
An interim dividend was paid for the half-year ended 30th June, 1952, at the rate of 6 per cent. free of Income-tax on the Paid-up Capital of Rs. 2,50,00,000, which absorbed	15,00,000	0	0
Provision made for Income-tax and Super-tax for the year	31,00,000	0	0
Bonus to Staff	10,75,000	0	0
The Directors now propose:— To pay a final dividend for the half-year ended 31st December, 1952, at the rate of 8 per cent. free of Income-tax, making 14 per cent. for the year, on the Paid-up Capital of Rs. 2,50,00,000, which will absorb	20,00,000	0	0
To carry forward to the next account	6,36,553	4	6
Total .. Rs.	83,11,553	4	6

The Bank's business continued to function satisfactorily.

The Official Bank Rate remained stationary at 3½ per cent.

Before the close of the year the sum of Rs. 856 was transferred from internal reserves to the Re Fund of the Bank, which now amounts to Rs. 3,52,00,000.

The Bank of India (U.K.) Nominees Limited, a subsidiary Company, was incorporated in the Ui Kingdom on 19th January, 1952, and in accordance with Statutory obligations the first Balance Sheet o Company is annexed.

In accordance with Article 92, read with Regulation 78 of Table "A" of the Indian Companies Sir Joseph Kay, K.B.E., Mr. Dinsha K. Daji and Mr. Ramniwas Ramnarain retire from the Board by rota but are eligible and offer themselves for re-election.

The Shareholders are requested to appoint Auditors for the ensuing year and to fix their remunera

COWASJEE JEHANGIR, *Chairman*.

WAGES FOR MEN AND WOMEN

IS EQUALITY IN INDUSTRY AND AGRICULTURE DESIRABLE?

(By GULABCHAND HIRACHAND)

WHEN the Government of India and the State Governments are considering the question of a revision of the present legislation for regulating industrial relations, one of the points which deserves notice is in connection with the proportion which wages paid to women workers should bear to those paid to male workers. Looked at from a sentimental or theoretical point of view, the ordinary reaction to this question is towards equalising wage scales for men and women workers. In fact, there is a provision to this effect in the Minimum Wages Act. It is, however, necessary to arrive at a more realistic and scientific appraisal of this question, because of its effect on both the agricultural and industrial economy of the country as well as domestic economy in millions of homes.

In those professions and civil employ in Government offices or even commercial establishments such as banks, insurance companies. etc., where skill and intellectual qualifications go to form the test for the usefulness and the cutturn of an employee, it can be conceded that salaries of male and female employees may be the same. Even here the sociological aspect of the question would suggest some differentiation, inasmuch as, in a large number of cases of women employees, the responsibility for the maintenance of a family is not there as in the case of men and to the extent that salaries have to be related to the ability of the worker to discharge his minimum social responsibilities some differentiation even here will be justified and might be found to be necessary.

But it must be admitted that wages in industry and agriculture must be co-related with the quality and quantity of work of each individual worker engaged in any economic operation. Wage is not ordinarily a substitute for a subsistence allowance and so has to be regulated broadly by the amount of work done by each class of employees. Even admitting that there are some operations in some industries such as textiles where the position might be that there is no appreciable difference between the output of work by men and women workers, it has, at the same time, to be recognised that there are other operations where physical strength and endurance are important factors in the output of work and, in the case of such operations, the difference in work has to be reflected in the relative proportion of wages paid to either of the categories of workers.

Agricultural Labour

This difference is more marked in the case of agricultural labour. There are heavy operations which women and children are not strong enough to undertake. These have to be reserved for men. On the other hand, there are a large number of operations connected with agriculture which can be undertaken by both men and women, but the output of work, because of the relative difference in their strength, is glaringly dissimilar, and when men and women are employed on such activities, wages have got to be adjusted accordingly. Unless this adjustment is made, either the male worker will have to be paid a much lower wage to bring it at par with that paid to women or the employment of women will automatically have to be eliminated from such operations, even though the nature of the work makes women also eligible for employment.

Agriculture is the one industry which offers very great scope for the employment of women, because of the varieties of activities carried on in it. Any legal provision to equalise wages of men and women workers in agriculture, therefore, is bound to have very undesirable results both on agricultural economy and on the domestic economy amongst a large number of people living in the rural areas. The cost of agriculture will definitely be increased appreciably if the same wages are required to be paid to women workers for hundreds of light jobs which are today managed by women. On the other hand, farmers and agriculturists would be more inclined to engage men for all these operations and to refuse work to women.

In a large number of cases amongst the rural population, a woman's wage is regarded as supplementary to the general income of the family. The main earner in the family is a male or a number of males, but whenever work of a type which can be done by women is available several times in the season, women workers are enabled to secure this extra income and this helps in maintaining the standard of life of agricultural workers at the present level. Only in very few cases are women regarded as the main supporters of the family and, if opportunities of earning some money at frequent intervals is denied to women, even the present standard of life in the villages of those classes intimately associated with work in fields will be adversely affected. In a few cases, where women are maintaining their homes with their own work, it would make it almost impossible for such families to live. This would disrupt the whole rural economy.

Sociological Aspect

Sociologically also, any effort to equalise women's wages with those of men in rural areas will have a detrimental effect. As one who is able to contribute some share in the families' earnings, women and girls enjoy a certain status and importance and receive some degree of recognition in the family set up. If opportunities for doing work is denied to them and women are gradually displaced by men from work in the fields, their status and position in the family will deteriorate and they will be looked upon as a budren on the male members of the family as in the case of the middle class.

As it is, agricultural economy is unbalanced and precarious. If a large number of women in the villages are rendered unproductive and are replaced by men, this economy will be rendered still more unstable. As such, this question requires a more careful attention than what appears to be necessary superficially before a final decision is reached. It would be advantageous if the Government were to carry out or conduct a number of sociological and economic studies in sample areas, both in industrial towns and in the rural areas, before laying a legal obligation on employers to pay equal wages to men and women workers, especially in those cases where the difference in their individual output is both apparent and appreciable because of physiological factors.—*All Rights Reserved.*

REPORT OF THE AUDITORS TO THE SHAREHOLDERS.

We have audited the foregoing Balance Sheet of the Bank of India Limited, as at 31st December, 1952 and also the foregoing Profit and Loss Account of the Bank for the year ended upon that date, in which are corporated the authenticated returns from Branches, and report that:—

(a) we have obtained all the information and explanations we have required and have found them to be satisfactory;

(b) the transactions of the Bank which have come to our notice have been within the powers of the Bank;

(c) the returns received from Branch Offices of the Bank have been found adequate for the purpose of the audit;

(d) in our opinion, the foregoing Balance Sheet and Profit and Loss Account are drawn up in conformity with the law;

(e) such Profit and Loss Account shows a true balance of profit for the year;

(f) such Balance Sheet exhibits a true and correct view of the state of the affairs of the Bank according to the best of our information and the explanations given to us and as shown by the books of the Bank, and

(g) in our opinion, books of account have been kept by the Bank as required by Section 130 of the Indian Companies Act, 1913.

A. F. FERGUSON & CO., *Chartered Accountants.* B. B. BILLIMORIA & CO., *Chartered Accountants*

Statement pursuant to Section 132-A of the Indian Companies Act of 1913 as amended by Act XXII of 1936.

The Profit and Loss Account of the Bank of India Limited for the year ended 31st December, 1952, es not include any profit or loss of its subsidiary, the Bank of India (U.K.) Nominees Limited (a Nominee mpany operating in the United Kingdom), as no profit was made and no loss was sustained by that bsidiary. All expenses incurred were borne and paid by the Bank.

THE BANK OF INDIA (U. K.) NOMINEES LIMITED.

Balance Sheet 31st December, 1952.

Capital Authorised and Fully Paid Up— 100 Ordinary Shares of £1 each	£100	Cash at Bankers	£100
	£100		£100

Signed on behalf of the Board,
J. DONALDSON,
S. H. BRADFORD, } *Directors.*

We have examined the above Balance Sheet of the Company which is in agreement with the books of account. We have obtained all the information which was necessary for the purposes of our audit. In our opinion and to the best of our information the Balance Sheet shows a true and fair view of the state of the Company's affairs at 31st December, 1952. No Profit and Loss Account has been prepared as the Company has no income and the expenses are paid by the Holding Company.

27, Old Broad Street, LONDON, E.C. 2.
2nd *January*, 1953.

LABOUR LEGISLATION IN INDIA

DEPLORABLE LACK OF UNIFORMITY IN MANY RESPECTS

(By DHARMA GHOSH)

LABOUR legislation in India has made some rapid strides since its early beginnings towards the end of the nineteenth century and particularly, after the Treaty of Versailles, when India became one of the founder-members of the International Labour Organisation. But still the labour laws are incomplete, inadequately supervised and lack uniformity and co-ordination.

The first Factory Act and the first Mining Act were passed in 1881 and 1891 respectively. But both these were subsequently amended several times to protect the interests of labour. The Factory Act was amended in 1922, 1934 and 1948, reducing the number of weekly hours of work to 48, providing for 14 days leave with pay, weekly holidays, welfare facilities, medical aid and inspection by State Governments. The Indian Mining Act was amended in 1923, 1936, 1937, 1940, and 1946 for reducing the hours of work to 10, prohibiting the employment of women underground, providing of fresh water and shower-baths near the pits, etc. But, due to the inadequacy of staff to inspect the increasing number of factories, employers have the unfortunate tendency to side-track the Act on occasions or to circumvent its provisions. Notwithstanding all the efforts made by the Government to keep pace with the increase in the number of factories, 17.4 per cent. of the factories and 30.6 per cent. of the mines went uninspected even as late as 1948. Plantation labour was gradually brought under legislative protection from 1865 to 1933 by passing the Tea District Emigration Act, abolishing indentured labour under certain conditions. But, the Act was very limited in scope and did not protect labour from the exploitation of the management in the matter of wages, hours of work, etc. The Indian Railway Act of 1890 was amended in 1930 to regulate the hours of work and other service conditions. Since 1946, the Chief Labour Commissioner, the central conciliation officers and the labour inspectors have been administering the Act. The award of Justice Rajyadhyaksha is also being slowly implemented.

In the sphere of transport, a time and motion study of the railway jobs was also said to be in progress. It is important to see that the transport system of the country is not paralysed by any short-sighted misuse of trade union powers. It is a matter for gratification that the Government seems to be contemplating the creation of a Railway Tribunal for the settlement of disputes. The Merchant Shipping Act of 1923 was amended in 1949 to regulate supply and working conditions of maritime labour by opening recruitment offices at ports and by insisting on the masters of British seagoing ships entering into agreements with Indian seamen with regard to their working conditions, hours of work, medical facilities, repatriation home in case of discharge, certificate of good work, and fine for shipping masters for contravention of these provisions. Still, there is much scope for improvement even here. The Indian Seamen's Federation has been agitating for a decasual scheme, application of the social security scheme, etc. The Dock Workers' Regulation Act of 1948 is intended, through a tripartite body of 15 members, for the regulation of employment of workers where employment is of a casual nature. A decasualisation scheme has been formed with the assistance of a tripartite body consisting of 6 members, for fixation of wages, leave rules, and for recruitment of stevedore labour. The scheme of the Bombay Port Trust is intended to be a model for other ports with suitable modifications. But, here also there is considerable dissatisfaction and rivalry among trade unions to capture the rank and file.

The Coal Mines Provident Fund Scheme and Bonus Act of 1948 insisted on the managements in Bengal, Madhya Pradesh and Orissa paying on every ton of coke dug a cess of As. 6, to be paid by the mine-owners for spending on schemes of labour welfare. In order to protect the labour in mica mines, an Act was passed in 1946 by which 6¼ per cent. *ad valorem* duty on all mica exported out of India is collected in Madras and Bihar. The Minimum Wages Act of 1948 for the 12 sweated industries in addition to agriculture is in the process of implementation in several States, employers resisting it in every possible way. The Act could, with advantage, be applied to several other trades like salt pans, hotels and restaurants, boarding and lodging houses, etc.

A beginning has been made in the field of social security with the introduction of the Provident Fund Act and the Employees' State Insurance Act which covers labour earning upto Rs. 400. The Indian Trade Union Act of 1926, amended in 1947, is not much effective, as it does not make it obligatory on the management to recognise a trade union even after its registration, with the result that several recalcitrant employers get away from the obligation of discussing the genuine grievances of workmen with their chosen members, very often on the plea that they do not like to discuss their affairs with a rank outsider. At the same time, they do not hesitate to victimise their employees, if they themselves approach them. Even the existing industrial relations machinery is not able to help to a very great extent, if employers prove too obdurate. The existance of compulsory conciliation and adjudication alone could decide several disputes which otherwise would have ended in prolonged strikes or lockouts. The prevailing tempers of employers and employees have to be directed towards more favourable circumstances, in which there would be adequate scope for frank and fearless discussion between the two.

There is still much to be done before we can talk of a contented and well disciplined labour force in the country, which is very essential if its development plans are to succeed. India has large man-power, which also carries with it a good deal of unemployment, open and disguised. There is no comprehensive employment organisation nor are all the jobs, as well as the personnel, available for these jobs registered. No efforts are made to give pre- and post-employment training on any wide scale in the country. The absence of any apprentice scheme for training of labour, the lack of any productivity studies, better methods of ensuring regularity of attendance, for reducing absenteeism and increasing labour turnover, scientific system of training and job analysis, have made the Indian labour world restive. These are some of the major problems which call for solution and it is the incompleteness of labour legislation that is responsible for these and most allied evils.

Lack of uniformity of labour legislation is another handicap. The Shops and Establishments Act, Payment of Wages Act, Maternity Benefits Act, Workmen's Compensation Act and Acts for the settlement of industrial disputes exist in each State. But their scope and jurisdiction vary from State to State. Even an Act like the Industrial Disputes Act of 1947 has been followed in different States in different ways. The same is the case with the employment standing orders. These legislative enactments, introduced in the name of provincial autonomy, contain a plethora of diverse provisions and have led to different administrative practices throughout the country.

The Shops and Establishments Act was first passed in Bombay in 1939 to protect the interests of employees of commercial establishments. Bengal and Punjab passed similar legislations in 1940, Delhi in 1942, U.P., C.P. and Madras in 1947. The provisions of the Acts are different from State to State, as will be seen from the following. The hours of work in shops, from instance, are 8 in Madras and U.P., 9 in Assam, Bombay, C.P. and Berar, and 10 in the Punjab and Bengal. Rest intervals are only ½ hour after 6 hours of work in the Punjab; ½ hour after 5 hours of work in U.P. and Bengal, 1 hour after 5 hours of work in Bombay, C.P. and Berar, while it is 1 hour after every 4 hours of work in Madras. The daily hours of work in commercial establishments are 10 in Punjab, 9 in Bombay and 8 in Madras. U.P., Assam and Bengal allow 1½ days paid holidays per week, while in Bombay, C.P., Berar, Madras, Punjab, U.P., the weekly off is only one day. 16 days' privilege leave is given in Assam, without the right of accumulation. But it is only 14 days in Bengal, Bombay, C.P. and Berar, Madras and the Punjab. Uttar Pradesh gives 15 days for all workers but 30 days for watchmen. Bombay, C.P. and Berar and the Punjab give no casual leave, while Assam and U.P. allow 10 days' casual leave with pay, Madras 12 days with pay and Bengal 10 days on half pay. Sick leave is not given in Bengal, Bombay, C.P. and Berar and the Punjab, while Assam gives 12 days on half pay after 12 months of continuous service, Madras 12 days on half pay after 12 months of continuous service, U.P. 15 days on full pay after 6 months of continuous service. Three holidays are allowed in Assam and U.P., while there is no such facility in other States.

Again, the Payment of Wages Act is made applicable to shops and establishments, but the period of wage payment and overtime payment rates vary from State to State. The overtime rates are twice the normal rates in the Punjab, U.P. and Madras, 1¼ times in Bengal and 1½ times in C.P. and Berar. In Bombay, commercial establishments pay 1½ times the wages for overtime, while hotels and restaurants pay twice the normal rate. The wage period should not exceed one month in U.P. and Madras, while it should not be more than a fortnight in the Punjab. After the due date, they should be paid within 10 days in Bengal and Assam, 7 days in U.P. and 5 days in Madras. The notice period too varies from 14 days to 30 days in a month. In U.P., the employee should also give 15 days' notice to the employer. In Madras, the Act is administered by the Deputy Chief Inspector of Factories, Assistant Commissioner of Labour, Inspector of Factories, labour officers, industrial officers, municipal commissioners, executive officers of *panchayats*, *thasildars* and Deputy *thasildars*. In Bombay, the Act is administered by Shop Inpectors under the Municipality.

Special provision is made for the protection of the employment of children in all the States except in Bengal. In Assam, Bombay, Central Provinces and Berar, the minimum age for employment is 12, while in Madras and U.P. it is 14. In Bombay and Uttar Pradesh, the hours of work for children are 6 per day, in Madras and the Punjab, 7 per day and 42 per week, and in C.P. and Berar, 7 per day but only 36 per week. Children are permitted to work between 6 a.m. and 7 p.m. in Assam and Madras, 7 a.m. and 9 p.m. in C.P. and Berar, and 8 a.m. and 7 p.m. in the Punjab. The rest interval is ½ hour after 3 hours of continuous work in Bombay, 1 hour after 4 hours' work in C.P. and Berar and ½ hour after 3 hours' continuous work in the Punjab.

The Workmen's Compensation Act of 1923 was amended in 1924, 1926, 1929, 1934 and 1946, raising the wage limit of a worker coming under the Act from Rs. 300 to Rs. 400. But the administration of this Act too is different from State to State. In Madras, Bengal and Bihar, the duties are carried out by the labour commissioners. In Bombay, the Government has appointed one commissioner for the important areas, while for other areas it has appointed sub-judges as ex-officio commissioners. In other States, the district magistrates and district judges perform the task. In Assam, the Act is administered by the police and political officials.

The Maternity Benefits Act is another labour welfare measure in which the payments differ from State to State. Bombay passed the first Maternity Benefits Act in 1929, C.P. and Berar in 1930, Madras in 1934, U.P. in 1938, Bengal in 1939, the Punjab in 1943 and Assam in 1944. The Bombay Act is being followed in Ajmer and Delhi with some modifications. The Bombay, Assam, C.P. and Berar Acts cover women employed by the regulated factories only. Further, in Bombay, the Act applies only to notified districts and towns. Only women employed in plantations in Assam and West Bengal are entitled to maternity benefits. The Mines Maternity Benefit Act is again limited to the mines covered by the Indian Mines Act. The qualifying period, the rate and duration of the payment also vary from State to State. In Assam, 150 days' service during the period of 12 months immediately preceding the date of notice qualifies a pregnant woman worker to receive benefit at the rate of one rupee per week for the first 8 weeks and Re. 1-4 per week after confinement. In Bihar, a woman with 6 months' service prior to the notice, gets 8 week's average daily earnings, or As. 8 per day, whichever is greater. In the Bombay State, 9 months of service preceding the date of notice is required by a woman to qualify herself for maternity benefit lasting 8 weeks at As. 8 per day in Bombay City and Ahmedabad, and As. 8 or average daily earnings whichever is less in other districts. In Madhya Pradesh, too, the qualifying period is the same as in Bombay, but As. 8 per day or average daily earnings is paid whichever is less. Madras pays for 7 weeks at the rate of As. 8 per day after a qualified service of 240 days prior to the notice period. The Punjab pays As. 12 per day or average daily earnings whichever is less after a period of 3 months' service. U.P. and Bengal pay after 6 and 9 months' service, respectively, for a period of 8 weeks, average daily earnings or As. 8 per day whichever is greater. The administration of the Act is mostly in the hands of the factory inspectors in every State. As already stated, the Indian Trade Union Act of 1926, amended in 1947, is still mostly ineffective, as there is no provision made for the inspection of accounts by the Registrar and for the compulsory recognition of the registered unions by managements.

The present employment standing orders apply only to concerns employing 100 or more persons and to that extent are limited in scope. There is no reason why they should not be made applicable to all the undertakings covered by the Factory Act. Even as it is, the administration of the Employment Standing Orders Act varies from State to State. The certifying officers are usually the labour commissioners, while the appellate authority varies from State to State. In Bombay it is the Industrial Court, in Ajmer-Merwar, it is the Deputy Commissioner, in Assam it is the Development Commissioner, in Bihar, the Chairman of the Industrial Tribunal, in Coorg the Chief Commissioner, in Delhi the Director of Industries, in Madras the Industrial Tribunals under the Industrial Disputes Act, 1947, in Orissa the District Judges of Cuttack, Ganjam, Puri, and Additional Judges of Koraput, in U.P., a High Court Judge and in West Bengal, the Workmen's Compensation Commissioner for Calcutta and suburbs. Even the machinery for settlement of industrial disputes is different from State to State, in spite of the Central Industrial Disputes Act of 1947, providing for conciliators, industrial tribunals and works committees. The recommendations of the Royal Commission on Labour with regard to protection of workers from indebtedness have been carried out only a few States like the Punjab, Central Provinces, Bengal and Bihar.

Thus, labour legislation in India for the time being suffers from a multitude of defects such as incompleteness, inadequacy, irregularity in supervision, lack of uniformity in many of the provisions of the Act, in the matter of benefits for the labour and disparity in the methods of settling industrial disputes. But it is only the last mentioned of these that has been attracting much prominent public attention of late, since the new Labour Minister in the Centre started reviewing the position, with a view to trying a new deal by way of voluntary conciliation and arbitration in place of the present compulsory intervention of States. Though the objective under the new scheme is doubtless laudable, it is very difficult to predict the success of the new experiment, unless there is a thorough change in the present outlook of the employers and the strength of the trade unions and their status as competent bargaining agents in the industry. For the maintenance of happy industrial relations and promotion of a contented labour force, some attention to the existing inequalities in labour laws needs to be paid by the powers-that-be both at the Centre and in the States.

in Delhi... they know that

more motorists use triple-action Mobiloil

than any other motor oil in the world!

Where Delhi now stands, no fewer than eight cities have flourished before it, capitals of most of India's rulers. It is noted for its gates, historic buildings and wise statesmen.

While previous generations perforce contented themselves with pachydermatous* and equine** transport, the statesmen of today go about the nation's business in motor vehicles – and demonstrate their wisdom by driving to the sign of the Flying Red Horse for lubrication. Like motorists all over the world, they know that Mobiloil is a *Heavy-Duty* oil, giving greater protection than regular or premium-type oils – also that it ...

SAVES ON WEAR *by preventing harmful carbon deposits in the engine;*

SAVES ON REPAIRS *by lubricating properly at all temperatures;*

SAVES ON PETROL *by preventing acids eating away the metal parts.*

* Fancy word for elephant
** Ditto for horse

Stop at the sign of the Flying Red Horse

The Flying Red Horse is the sign of helpful service for your car. Go there for regular Mobilubrication – the *complete* motor service – and for Standard-Vacuum products backed by 87 years of leadership in the oil industry.

STANDARD-VACUUM OIL COMPANY
(The Liability of the Members of the Company is Limited)

INDIA'S FOREIGN TRADE IN APRIL-NOVEMBER, 1952

ADVERSE BALANCE REGISTERS DECLINE

THE effects of the restrictions on imports as also of the slump in commodity prices, witnessed during February-May last year, are reflected in the accounts of India's foreign (sea, air and land) trade and navigation during the first eight months, namely, April to November, 1952. As compared with the corresponding period of 1951, the accounts show that there has been a marked recession in the value of total foreign trade of this country from Rs. 1,098.43 crores in the eight-month period of 1951 to Rs. 879.14 crores in the same period of 1952. The fall in the total value of the trade is shared by both exports and imports. The value of exports declined during the period from Rs. 501.87 crores to Rs. 399.74 crores. Similarly, the value of imports fell even more steeply from Rs. 596.56 crores to Rs. 479.40 crores. In the result, the adverse balance of trade showed some improvement, in that it declined from Rs. 94.69 crores to Rs. 79.66 crores during the period under review.

The total value of India's foreign trade by all routes (sea, air and land) and its overall visible balance of trade in merchandise and treasure for the eight months, April to November, 1952, as compared with the corresponding period of 1951, is given below:

(Rs. in crores)

	Eight months—April to November					
	1951			1952		
	By sea and air	By land	Total	By sea and air	By land	Total
Exports	484.31	14.60	498.91	384.17	15.99	397.16
Re-exports*	2.96	..	2.96	2.58	..	2.58
Total exports*	487.27	14.60	501.87	383.75	15.99	399.74
Total imports*	533.36	63.20	596.56	463.45	15.95	479.40
Balance of trade in merchandise	—46.09	—48.60	—94.69	—79.70	+.4	—79.66
Balance of trade in gold and silver	—0.13	..	—0.13	—0.04	..	—0.04
Total overall visible balance of trade	—46.22	—48.60	—94.82	—79.74	+.4	—79.70

* Figures are arrived at after making allowance for transit trade through India from overseas countries to East Pakistan, Nepal, Bhutan and Tibet.

As complete amalgamation of the two sets of statistics, namely, (a) India's sea- and air-borne foreign trade, and (b) land frontier trade of India, has not been feasible yet, owing to lack of uniformity, one has to look into the sea- and air-borne accounts only, for a detailed analysis, both commodity-wise and country-wise, of the trade of India. The comparative table below gives a summary of the foreign trade of India by sea and air only during November, 1952—the latest month for which figures are available—as also the figures for the eight-month period already referred to.

(Rs. in crores)

	November		Eight months—April to November	
	1951	1952	1951	1952
Exports	61.91	40.02	484.31	381.17
Re-exports	0.39	0.40	11.68	3.14
Total exports	62.30	40.42	495.99	384.31
Total imports	68.28	39.87	533.93	407.72
Balance of trade (+) or (—)	—5.98	+0.55	—38.54	—78.41

It will be seen from the table above that the value of total exports during the month under review at Rs. 40.42 crores was substantially lower than that in the same month a year ago when it was Rs. 62.30 crores. But the fall in the value of imports in the month under review was even more heavy, from as high as Rs. 68.28 crores in November, 1951, to as low as Rs. 39.87 crores or by 41.6 per cent. Consequently, the balance of trade was favourable to India to the extent of Rs. 55 lakhs, as compared with an adverse balance of trade of the order of Rs. 5.98 crores in November, 1951.

The table below will give an idea of the value of India's exports and imports during each of the eight months ended November, 1952.

(Rs. in crores)

Name of month in 1952—	Total exports	Total imports	Balance of trade (+) or (—)
April	41.54	79.37	—37.83
May	47.78	77.12	—29.34
June	48.43	60.47	—12.04
July	51.81	57.75	— 5.94
August	53.17	56.99	— 3.82
September	46.73	46.84	— 0.11
October	53.35	43.33	+10.02
November	40.42	39.87	+ 0.55

A glance at the table above will show that the value of imports suffered a progressive decline month after month from a high of Rs. 79.37 crores in April to a low of Rs. 39.87 crores in November, 1952. This decline is attributed not only to a tightening of import policy but also to lower offtake of cotton, raw jute and foodgrains and to a decline generally in prices of commodities imported during the period. The decline in prices is fully reflected in the index number of average unit values which from 135.4 (1948-49=100) in April came down to 119 in October, the latest month for which the figure is available. The decline would have been steeper still, but for a rise of 6.4 points to 141.0 in the index figure for imports under the group "raw materials and produce." The index figure for "food, drink and tobacco" and for "articles, wholly or mainly manufactured," however, showed a fall, the former from 141.1 to 103.6 and the latter from 130 to 110.7.

In regard to exports of Indian merchandise, however, the trend was upward from April to August. Thus it rose from Rs. 41.54 crores in April to Rs. 53.17 crores in August. Thereafter the trend was irregular. It dropped to Rs. 46.73 crores in September, but recovered to Rs. 53.35 crores in the following month only to drop to Rs. 40.42 crores, the lowest level for any month, in the period under review. Increased industrial production, liberal export quotas and the Government's policy of reduction of duties on exports of various commodities such as jute goods, oils, etc., may be said to have been generally responsible for the improvement in the export trade of India during the period under review. But export prices were not favourable to India. Thus the index number of average unit declared values of exports declined from 150.2 in April to 122.7 in October, 1952. The index number for exports under the food group, which experienced a decline throughout April to August from 145.1 to 130.9, showed a recovery in the following two months to stand at 145.9 for October, 1952. In the other two groups, namely, raw materials and manufactured articles, which are the most important, the index number showed a fall during the period as a whole. The former dropped from 145.7 to 141.8 and the latter rather steeply from 154.2 to 103.6.

Considered commodity-wise, imports of grains, pulses and flour in the month under review were lower at Rs. 4.68 crores, as against Rs. 17.05 crores in the same month in 1951. Raw cotton imports were also lower at Rs. 3.31 crores, as compared with Rs. 7.19 crores. Petroleum oil imports were higher by Rs. 1.01 crores at Rs. 2.85 crores and imports of fuel oil by Rs. 75 lakhs at Rs. 1.94 crores. Kerosene oil imports too stood high by Rs. 74 lakhs at Rs. 1.30 crores. Paper imports rose by Rs. 25 lakhs to Rs. 1.13 crores, while the offtake of electrical machinery dropped by Rs. 20 lakhs to Rs. 1.07 crores. Purchases of chemicals too declined by Rs. 70 lakhs to Rs. 1.02 crores.

Among exports, black tea topped the list, although during the month despatches dropped by as much as Rs. 6.05 crores to Rs. 6.39 crores in November, as compared with the same month a year ago. Exports of gunny cloth and bag too showed a drop of Rs. 13.68 crores to Rs. 6.74 crores. Shipments of cotton piecegoods, however, improved by Rs. 43 lakhs to Rs. 4.57 crores. Despatches of tanned and hide skins were lower by Rs. 87 lakhs at Rs. 2.17 crores, while those of manganese ore registered an improvement of Rs. 39 lakhs to Rs. 1.90 crores.

(Concluded from next column)

of indigenous tobacco in U.P. to the respective Governments. The Committee has sanctioned a scheme for the establishment of an exploratory marketing centre at Bhagawanpur in Bihar, as also a scheme for the demonstration of better handling of leaf during flue-curing in two more centres. The Government of India has been requested to supply two lakh tons of coal for flue-curing barns in Madras State. The Railway Board has been approached for adequate priority for allotting wagons for hauling tobacco meant for export, as any delay in its movement would adversely affect the quality of the leaf.

The West Bengal Government is stated to have given the Committee 43.64 acres of land for the establishment of the Wrapper Tobacco Research Station. The work is expected to commence soon for producing the much needed wrapper tobacco in the country.

EXPORTS OF INDIAN TOBACCO

CENTRAL COMMITTEE SPONSORS MEASURES

THE role of tobacco in the Indian economy was spotlighted by Mr. K. R. Damle, Additional Secretary, Ministry of Food and Agriculture, Government of India, in his presidential address at the annual meeting of the Indian Central Tobacco Committee held at Madras on the 19th inst. His analysis clearly brings out the importance of this commodity as one of the sources of foreign exchange. In recent years, exports of this commodity have been increasing, while imports of the same have been declining. In 1949-50, India exported tobacco of the order of 96 million lbs. Two years after, that is, in 1951-52, these exports stood at as high as 122 million lbs. As against this, imports which amounted to 8 million lbs. in 1949-50 dropped to 5 million lbs. in 1951-52. In the latter year, certain new-comers such as Russia, Hongkong and Japan showed keen interest in Indian tobacco. It now rests with those engaged in the production and distribution of tobacco and its products to see to it that not only this growing interest of foreign countries is sustained but also improved further by supplying the right type of tobacco. Referring to this question, Mr. Damle said: "We should constantly endeavour to maintain and expand our eastern markets which are important for the sale of our medium and low grades of tobacco. Of late the demand for bidi tobacco from the neighbouring countries of Pakistan, Ceylon and Burma is not encouraging."

These observations provide the background for some of the decisions taken by the Central Tobacco Committee. The Committee has decided to move the Government of India to sponsor a mission to Eastern countries, and has favoured the continuation of the present system of compulsory certification of quality control of tobacco intended for export. It has recommended the appointment of a tobacco sales officer at Paris, and intensification of export promotion in tobacco in the various Continental countries.

Besides playing a significant role as an export commodity, tobacco has a role in the internal economy too. It contributes, as was pointed out by Mr. Damle, about Rs. 34 crores annually to the Central Exchequer in the form of excise duties and provides employment to thousands of people. Improvement in its quality and higher yield per acre can make the commodity to play a still better role in the internal economy. Endeavours in these two directions by means of intensive and scientific cultivation of tobacco are, as in the case of any other agricultural commodity, the urgent need of the day, for the simple reason that more land is needed for growing foodcrops in the country. The Committee's decision to hold crop competitions in tobacco, therefore, is on right lines, especially as these competitions have already proved fruitful in respect of cereals.

The Central Tobacco Committee's programme of work relating to research, development and marketing of tobacco in India to be carried out during the next three years deserves the support of both the Central and State Governments. The State Governments have to take an active part in the implementation of the programme. They have been requested to organise co-operative societies for cultivation, grading and marketing of tobacco. They should devote their attention to the work more earnestly than at present, as Mr. Damle has complained that "in spite of the importance of the commodity, many State Governments have not sent subjects for the consideration of the Committee, for they are either occupied with other activities like grow-more-food campaign and irrigation projects or have no funds to spare for this important crop." It is to be hoped that this apathy will soon disappear and that the Committee will get from the States the wholehearted co-operation that is needed. The States would do well to note that the Committee is prepared to meet half the cost of any workable schemes submitted by the States in respect of societies engaged in the work of cultivation and marketing of tobacco. Now that the Finance Commission has recommended that 40 per cent. of the net proceeds of the Union duties of excise on tobacco (including cigarettes, etc.) should be made over to the States, it will be in their own interest to encourage schemes for efficient and increased cultivation of tobacco.

The Committee has, it is interesting to note, recommended schemes for the production of cigarette tobacco in Assam and for improvement

FOREIGN AID IN FIVE-YEAR PLAN

ASSISTANCE RECEIVED BY INDIA REVIEWED

INTERNATIONAL economic co-operation, which is a new feature of the post-war era, has brought into prominence the place of external assistance in the implementation of India's Five-year Plan. In fact, while assessing the resources for the Plan, the Planning Commission points out that the gap between the availability of funds and the requirements of the Plan can be met by external assistance, failing which further tightening of the belt would be necessary. A review of the external assistance, both financial and technical, so far received by India against the background of the Five-year Plan, is made below.

Against a total estimated expenditure of Rs. 2,069 crores for the Five-year Plan, the Planning Commission has suggested raising of internal resources to the extent of Rs. 1,258 crores and utilisation of external assistance already received of the order of Rs. 156 crores, leaving a gap of Rs. 655 crores. This gap, the Commission says, has to be met from further external assistance, or, in the absence of it, by additional measures of taxation and borrowing and by deficit financing which is visualised to the extent of Rs. 290 crores.

Help From World Bank

So far, India has received assistance from world organisations, as well as from some of the advanced countries on a bilateral basis. This assistance is of two forms, (*a*) financial, and (*b*) technical. From the World Bank, India has so far taken a total amount of $109.8 million as loan consisting of the following:

Projects and date of loan	Amount of loan ($ Million)	Period of repayment (No. of years)	Rate of interest (including 1 per cent. commission of the Bank) Per cent.	Purpose of the loan
Railway project (August, 1949).	32.8	15	4	Purchase of locomotives, boilers and spare parts.
Agricultural machinery project (September, 1949).	7.5	7	3½	Purchase of tractors and spare parts for the land reclamation scheme carried out by the Central Tractor Organisation.
Bokaro-Konar Project (April, 1950).	18.5	20	4	Purchase of plant and equipment for Bokaro Thermal Power House and the transmission system of the Damodar Valley Corporation.
India Iron and Steel Co., Ltd. (December, 1952).	31.5	15	4½	To step up the output of I.I.S.C.O. to approximately 700,000 tons of steel and 400,000 tons of pig iron.
D. V. C. (January, 1953).	19.5	25	4½	Protection of the area against floods, expansion of electric power capacity and building of canals.

Another loan from the World Bank for the Industrial Finance Corporation, amounting to $8 million, is under negotiation at present.

From the United Nations and its specialised agencies, India had till 1st November, 1952, received 69 experts and training facilities for 61 Indians. The Organisations, besides the U.N., which provided the assistance were the F.A.O., the U.N.E.S.C.O., the I.C.A.O., the W.H.O., and the I.L.O.

Recently, India has received economic assistance from Norway and a tripartite agreement between the Government of India, the United Nations and the Government of Norway was signed in New Delhi on 24th January, 1953, whereby the Government of Norway agreed to provide an amount of Rs. 27 lakhs for implementing a fishery community development scheme in Travancore-Cochin. The joint cost of this project will be Rs. 37.6 lakhs, India's contribution being Rs. 10.6 lakhs. This agreement is a supplementary to the main agreement signed at New York on 17th October, 1952, by the three parties under which the Government of Norway agreed to provide an initial amount of 10 million Norwegian Kronars (about Rs. 67 lakhs) for economic development in India.

With the U.S., the first bilateral agreement on Point-four assistance was entered into by India on 28th December, 1950. The assistance has since been continued and, in addition, India received economic assistance from the U.S. in two instalments last year. The number of experts so far received by India under Point-four aid is 71 and that of Indians sent to the U.S. for training is 82. Economic assistance received from the U.S. in two instalments last year amounted to $88.35 million. The first Indo-U.S. Technical Co-operation Agreement in which India received $50 million was signed on 5th January, 1952. Subsequently, on 3rd November, 1952, there was a supplementary agreement under which funds amounting to $38.35 million were provided. The U.S. contribution is being utilised for various projects jointly financed by India and the U.S., in accordance with the several Operational Agreements signed by the designated representatives of the two Governments. In pursuance of the first agreement, 11 Operational Agreements were concluded, involving a joint cost of $50 million (U.S. contribution) and Rs. 41.01 crores. The details of the schemes are as below:

	U.S. contribution $	Indian expenditure Rs.
Supply of fertilisers	10,650,000	4,400,000
Supply of Iron and Steel	8,385,000	1,200,000
Locust control	230,000	248,000
Research on soil and use of fertilisers	2,00,000	842,540
Development of marine fisheries	2,462,000	6,895,000
Groundwater irrigation (2,000 tubewells)	13,700,000	44,450,000
Training of village level workers	166,000	7,537,000
Community Development Programmes	8,671,000	343,834,000
Malaria control	648,000	37,350
Forest research and desert control	104,000	208,000
River valley schemes	4,784,000	500,000
Total	50,000,000	410,151,890

According to the Supplementary Agreement of November, 1952, whereby the U.S. Government provided $38.35 million, the contribution of the Government of India for the current financial year ending 31st March, 1953, will be Rs. 65 crores. The Fund thus created will be utilised for the extension of certain existing projects and the execution of such additional projects as may be agreed upon in pursuance of this agreement. Already, under the Supplementary Agreement, four Operational Agreements have been signed. These relate to:

(Dollars in millions; Rs. in lakhs)

	U.S. contribution $	India's cost Rs.
Iron and steel	8.5	32.36
Community Development Programmes (addition of 55 more blocks)	1.925	7.33
Purchase and distribution of fertilisers	6	27.06
Malaria control programme	5.2	1.49

In addition, during 1951, India received from the U.S. Government a loan of $190 million for the purchase of 2 million tons of foodgrains from the U.S. This loan carries interest at 2½ per cent. per annum and is repayable in semi-annual instalments over a period of 30 years commencing June, 1957. Purchases under this loan agreement were completed by the end of June, 1952. Although conceived primarily in relation to India's emergency food needs, this loan has, in fact, contributed to the implementation of the country's development programme. The counterpart funds realised by the Government of India from the sale of foodgrains purchased out of this loan are credited to a Special Development Fund, to be utilised for financing development schemes, and for assisting State Governments by short- and medium-term loans for their development schemes.

Aid Under Colombo Plan

Under the Colombo Plan, India has received technical, as well as economic, assistance from the member-countries. The economic assistance has been provided by Australia, Canada and New Zealand. The Australian contribution for the year ended 30th June, 1952, was £4.2 million, of which £3.7 million were for supply of wheat and flour and £5 million for equipment for the development projects. The entire quantity of wheat and flour has been received and the sale proceeds credited to a Special Development Fund. This amount is to be utilised for part of the expenditure on the Tungabhadra Project (Hyderabad State). The Australian contribution for the year ending 30th June, 1953, is £3 million, of which £2 million are to be utilised for the purchase of a part of the equipment for the Tungabhadra Project. The rest of the amount will be used for other approved schemes. The Canadian contribution for the year ended 30th June, 1953, was $15 million, of which $10 million were utilised for obtaining 114,000 tons of wheat. The sale proceeds of the wheat have been credited to a Special Development Fund and the amount utilised for part of the expenditure on the Mayurakshi Project of West Bengal. The balance of the Canadian contribution, to the extent of $4.5 million, was utilised for obtaining chassis and engines for the Bombay State Transport Corporation. The Canadian Government's contribution for the year 1953 is $13.8 million, of which $5 million are to be utilised for purchase of wheat and the balance for equipment. The rest of the contribution will be utilised for procuring part of the equipment for the Mayurakshi Project and for certain other schemes now under discussion. The contribution of the Government of New Zealand amounted to £250,000 in 1952. For 1953, a sum of £375,000 has been earmarked. Both the contributions, which are in cash, are to be utilised for meeting a part of the cost of the All-India Medical Institute.

Technical assistance, by way of provision of experts or training facilities to Indian students, has also been received by India under the Technical Co-operation Scheme of the Colombo Plan. The total number of experts so far received is 36 and that of Indian students for whom training facilities have been provided is 235. The fields in which experts and training facilities have been provided include agriculture, communications, irrigation and power, minerals, scientific research, health, labour, education, industry, railways and printing. Technical assistance, in the form of specialised equipment, has also been offered. The Australian Government has agreed to provide £65,000 for supply of equipment to four institutes of all-India importance, while the U.K. Government is supplying equipment worth £35,000 for the tool room of the machine workshop of the Indian Institute of Technology, Kharagpur.

Assistance From Ford Foundation

The Ford Foundation (U.S.A.) has offered technical assistance to India under an agreement signed with the Government of India on 19th January, 1952. The initial programme for which the Foundation will provide assistance under this Agreement forms a part of the intensive rural development programme of the Five-year Plan. The Foundation has agreed to assist the Government of India and the States in establishing 15 pilot extension projects and five centres for training key personnel for these projects. The financial aid expected to be received from the Foundation for this purpose at present is estimated at $1,200,000. The Foundation has also offered to consider financial assistance for extension training programme at a few higher educational institutions and to suitable persons with capacity for effective work in the rural development programme for study in the U.S. and other countries. The Ford Foundation has agreed to bear the entire cost of the five centres for training key personnel during the first three years and has expressed willingness to consider the extension of this assistance for a further period of two to four years in the light of the experience gained, as also of the 15 development projects for a period of two years and to share one-third of the expenditure on them during the third year. The remaining two-thirds of the cost of the 15 development projects for the third year and their entire cost in the fourth and the fifth year will be met by the Government of India and the State Government concerned on 50 : 50 basis.

Recently, another agreement was signed between the Government of India and the Ford Foundation, whereby the latter provided about $230,000 for setting up a Programme Evaluation Organisation, primarily to assess the results of the Community Development Programme.

India's Contribution

In fulfilment of its obligation as a member-country of the Colombo Plan, India has also provided technical assistance to some of the countries in South and South-East Asia. This contribution has been by way of provision of experts and training facilities to students from some of the member-countries. Special funds have been set apart for the construction of a hostel at the Central Rice Research Institute for accommodating students from foreign countries. Three experts were provided to the Government of Ceylon—one for setting up a caustic soda plant and two for helping in the establishment of a steel plant and irrigation works.

Training facilities were provided mainly on subjects such as statistics, sugar production, broadcasting, tele-communications, dam construction, etc. Students from the following countries received training facilities in India: Ceylon (14); Burma (4); Indonesia (2); Malaya (1); Nepal (17); Pakistan (14); Philippines (8); and Thailand (6). In addition, last year, India made a general offer of 55 scholarships and fellowships, of which 20 places have so far been taken up.

RESULTS OF BIRD-HEILGERS JUTE GROUP

ALL-ROUND CUT IN DIVIDENDS

THE fortunes of the Indian jute industry have been fluctuating in the past five years. In the first three or four years, the lack of stability was the result of the truculent behaviour of Pakistan on which India was dependent for its raw jute requirements to a considerable extent. In the past one or two years, however, India became nearly self-sufficient in jute. Yet, the jute mills have attained no stability in their financial results. That has been so, because of the uncertain conditions in the market for manufactured goods which in turn is dependent upon the trend of world commodity markets. In short, the fortunes of the jute goods industry are dictated not only by the availability or otherwise of raw jute but also by the trend of world business conditions. If this point is borne in mind, it will not be difficult to appreciate the setback sustained by some of the jute companies in the last half-year. The results of working of the nine jute mills under the management of Messrs. Bird & Co., Ltd., and Messrs. F. W. Heilgers & Co., Ltd., Calcutta, during the half-year ended 30th September, 1952, must be viewed against the background described above. The table appended at the bottom of this page gives the salient features of the results of individual companies for the half-year under review, as compared with their results for the corresponding six months of the previous year. The trading profit of the group, as a whole, shows a substantial fall from Rs. 67.96 lakhs for the half-year ended 30th September, 1951, to Rs. 24.31 lakhs for the six months under review, a drop of 64.2 per cent. With the exception of the Auckland Jute Co., Ltd., all the companies in the group have suffered a setback in profits, the decline in some cases being more drastic than in others; in fact, four of them have actually sustained a loss. Auckland Jute's profit on trading account, however, has registered a rise from Rs. 4.33 lakhs to Rs. 7.09 lakhs. The combined net profit of the group has contracted from as much as Rs. 32.16 lakhs to so small as Rs. 5.12 lakhs. Taking the companies individually, the Auckland Jute alone has registered a rise in net profit. Among those which have incurred losses, the net loss of the Naihati Jute Mills is the largest and as such, the Directors have had to skip over the dividend on both preference and ordinary shares. All the others have reduced their dividends on ordinary shares, three of these paying no more than a token dividend of 2 per cent. per annum.

Explaining the reasons for the adverse results for the half-year under review, the Directors observe in their report to the shareholders as follows:

"During the period under review the general trend of prices of both raw jute and finished goods was downwards. On 6th May, the Government of India announced with immediate effect a reduction in the export duty on hessian from Rs. 750 to Rs. 275 per ton and on sacking from Rs. 350 to Rs. 175 per ton. Immediately following the announcement, America came into the market and business on quite a large scale was done at slightly higher rates. Prices, however, were not maintained and rates for both hessians and heavy goods receded. With prices of raw jute remaining relatively steady, mills were forced to dispose of their production at very substantial losses with mills with a large proportion of sacking looms suffering more than others owing to the very low rates prevailing for sacking fabrics. It was not until late September, when the I.J.M.A. agreed to sell through the Government of India 40,000 tons of hessian to the Argentine, that prices rose and simultaneous business was again remunerative. Despite a substantial increase in U.S.A. consumption figures, prices, particularly those of heavy goods, have again dropped to uneconomic levels mainly on account of speculative operations and lack of overseas demand."

The sale proceeds of all the companies are uniformly lower, the combined figure disclosing a decrease from Rs. 16.60 crores to Rs. 10.96 crores. Manufacturing and trading expenses have declined from Rs. 15.16 crores to Rs. 9.38 crores, most of this decline reflecting the fall in the cost of raw material. Closing stocks of manufactured goods in all cases, except three, are higher, reflecting the poor offtake of finished goods. Depreciation has been very nearly maintained by all the companies, at a total of Rs. 8.85 lakhs, as against Rs. 9.58 lakhs, a year before. Provision for taxation is naturally lower at Rs. 8.45 lakhs as compared with Rs. 14.75 lakhs. Barring three companies which have made small additions to the reserves, none of them has been able to strengthen its reserves. An interesting feature of these results is that only one company—the Naihati Jute—has found it necessary to carry forward a debit balance.

The Naihati Jute has decided to modernise its sacking warp section and to complete the modernisation of the sacking weft section with modern sliver spinning machinery. This involves an expenditure of Rs. 20 lakhs. The new machinery is expected to be delivered in April-May, 1954. It has also been decided to proceed with the full electrification of the mill at an approximate cost of Rs. 13 lakhs. The Directors propose to finance the modernisation programme partly from the reserves of the Company and partly from the recent issue of a debenture loan of Rs. 25 lakhs carrying interest at the rate of 5½ per cent. per annum. A part of this debenture issue represents the reissue of Rs. 12 lakhs of 4½ per cent. debentures, which were due for redemption on 30th June, 1952. The Directors feel satisfied that the above expenditure is essential to make the mill a fully efficient one. The electrification of the mill of the Dalhousie Jute is proceeding satisfactorily and it is expected that the scheme will be fully completed in the course of the current half-year. The Directors of the Lansdowne Jute redeemed the 4½ per cent. mortgage debenture bonds of the value of Rs. 10 lakhs due for redemption on 30th June, 1952 out of the Company's liquid resources.

INDIAN WOOD PRODUCTS TO ISSUE BONUS SHARES

Elsewhere in this issue readers will find the notice of an Extraordinary General Meeting of the shareholders of the Indian Wood Products Co., Ltd. (Managing Agents: Messrs. Gillanders Arbuthnot & Co., Ltd., Calcutta), to be held in Calcutta on 17th March, 1953, for the purpose of considering the Directors' decision to capitalise part of the amount standing to the credit of the Company's general reserve. The Directors propose to capitalise a sum of Rs. 5 lakhs from out of the said general reserve, which has a sum of Rs. 8.5 lakhs to its credit, and distribute the same to the holders of the existing 1,50,000 ordinary shares of Rs. 10 each, in the form of 50,000 new ordinary shares of Rs. 10 each in the proportion of one new ordinary share for every three shares held by them on 17th March, 1953. The new shares will rank in all respects *pari passu* with the existing ordinary shares.

The implementation of the above proposal requires the raising of the present authorised capital of Rs. 15 lakhs, made up of 1,50,000 ordinary shares of Rs. 10 each. The Directors propose to increase the same to Rs. 30 lakhs by the creation of 1,50,000 ordinary shares of Rs. 10 each.

This is the second time that the Company is capitalising a part of its reserves and issuing bonus shares. The last occasion when it did so was in June 1948, when the then issued and paid-up capital of Rs. 12 lakhs was raised to Rs. 15 lakhs by capitalising a sum of Rs. 3 lakhs and issuing bonus shares in the form of 30,000 ordinary shares of Rs. 10 each in the proportion of one new share for every four shares held by the then existing shareholders.

The Company has a good dividend record. It had raised its dividend level steadily from 13 per cent. per annum, paid for the years ended 30th September, 1942 and 1943 to 30 per cent. for the year 1946-47 on the paid-up capital of Rs. 12 lakhs. This was reduced to 17½ per cent. in the following year, that is, after the first issue of bonus shares, referred to above. Since then the dividend has once again been stepped up to 25 per cent. in the first instance, for the year ended 30th September, 1949, and to 35 per cent. for 1949-50, which rate was repeated for 1950-51 also.

The Company had a very satisfactory trading period during the year ended 30th September, 1951 and production was maintained at about the same level as in the previous year. Its trading profit for that year amounted to Rs. 17.63 lakhs (as against Rs. 17.69 lakhs for 1949-50) which was 117.5 per cent. of its paid-up capital. The Company's Rs. 10 fully paid-up ordinary shares are currently being quoted at Rs. 49-6. On the basis of the last dividend, the yield works out to 7.1 per cent. per annum.

NATIONALISATION OF TELCO ADVOCATED

The fifth report on the Appropriation Accounts (Railways) for 1949-50 of the Public Accounts Committee, contains some observations of considerable significance to the future of the Tata Engineering and Locomotive Co., Ltd. (TELCO). The Committee has recommended that the Government should come to an early decision on the advisability of its taking over from the Company the manufacture of boilers and locomotives and running it as a State-owned industry. Proceeding, the Committee observes:

"If necessary, the Government can invite participation of private capital in such State-owned concerns in the shape of debentures. It is most unsatisfactory that payments made to TELCO over a period of seven years are still treated as provisional and the actual cost of production of locomotive boilers has not yet been worked out and accepted by Government. If there are difficulties in reaching agreement on cost, the matter must be referred for arbitration. As TELCO also manufactures road-rollers, under-frames, etc., the need for an efficient and accurate cost-accounting and their check on behalf of Government is all the more necessary so that the costs are properly allocated among the several contracts. In the case of an industry which caters entirely for Government purposes, such as locomotives or the ammunition factory, there is obviously a strong case for State-ownership and management of such industry."

FOREIGN FIRMS IN INDIA

The subject of employment of Indians in foreign firms in India figured in the House of the People during the question hour on Friday last. In response to the Government's questionnaire on the same, 75 per cent. of the foreign-controlled firms and companies in India have sent returns of Indians employed, according to the Minister for Commerce and Industry. "It is the declared policy of the Government," the Minister added, "to encourage the employment of Indians in an increasing measure in such foreign concerns. The Government will certainly do all that is possible and use such influence as it possesses to make these concerns employ as many Indians as possible." The Government had no intention to bring any legislation to secure statutorily Indianisation in foreign firms with good working conditions.

HINDUSTAN MACHINE TOOL COMPANY

The first meeting of the Board of Directors of the Hindustan Machine Tools Limited was held in New Delhi on the 19th inst., a Press Note issued by the Ministry of Production said. The Company was registered as a private limited company with the Registrar of Joint Stock Companies at Bangalore on 7th February, 1953.

Mr. A. K. Chanda, Secretary, Ministry of Production, is the Chairman of the Board. The other Government Directors are: Mr. P. C. Bhattacharya, Financial Commissioner, Railways, Mr. N. N. Wanchoo, Joint Secretary, Ministry of Defence, Mr. K. R. P. Iyengar, Joint Secretary, Ministry of Finance, and Mr. Aftab Rai; who is also the Managing Director of the Company. The other Directors are: Dr. A. Gerber and Dr. Otto Wenger, appointed by the Oerlikon Machine Tool Works, Buehrle and Co., Zurich, Switzerland.

Points From The Chair

Fortunes of Textile Industry

"THE change in the fortunes of the textile industry has, in my opinion, been brought about mainly by Government interference at home and abroad. . . . Let us not forget that for generations this fine industry has put up a wonderful performance and has always found ways and means of surmounting difficulties without Government assistance, and it will do so again, if left to work out its own salvation. The requirements of the masses are still unsatisfied, but cannot be met because of crippling legislation which prevents the wheels of industry rotating at anything approaching a reasonable speed. The system of manufacturers' products being allotted by quotas to their customers has gone. The practice of retailers placing orders for delivery many months ahead and carrying large stocks has also gone. In recent years, the consumer, schooled by scarcities, tended to buy and hold goods in excess of immediate needs. This habit has also gone by the board. The change from a sellers' market to a buyers' market was most pronounced, and profit margins in consequence disappeared. The sooner restrictive controls follow suit, the better it will be for the industry. The present tendency is for prices to be determined by what the market will bear and prices fixed by the Board of Trade are a thing of the past. Political considerations are too often divorced from practical business managements."

PERCY C. FISH,

J. F. & H. Roberts Ltd. (London)

Solicitude for Workers' Welfare

"In this particular sphere (pensions) I would remind you that Carreras has always been at the forefront of industry in making provision for retirement after long and devoted service. I need not burden you with a complete recapitulation of the details of the schemes we have had in force hitherto, but I think it will be sufficient for me to say that it was as long ago as 1923, when such provisions were rare for work-people, that we instituted our superannuation fund. Later on, we made provision for those in receipt of salaries over and above the limit imposed by that fund and also provided non-contributory benefits on a smaller scale for female workers. A group life insurance scheme for all men in our employ and limited death benefits for women were later added. It has been recognised in recent years that, with the rise in remuneration to compensate for the drop in real values, some upward adjustments would have to be made in the benefits payable under all these schemes. Pending any such action, we have made special allowances to our pensioners, where necessary, so as to avoid the hardship which had arisen in many cases, especially to those who retired when real money values were very much higher."

SIR EDWARD BARON,

Carreras, Ltd. (U.K.)

Cost of Welfare State

"There has grown up, in the last few years, the Welfare State and, as a result thereof, there is a tendency on the part of many to look to the State for benefits, and the majority of these are essential to the well-being of the nation. It is apt to be forgotten, however, that these benefits must be paid for through taxation by the individuals who make up the State. There is no objection to such benefits, provided they are not abused and the individual realises his responsibilities for their cost. The continuation of the prosperity of the Welfare State is dependent upon the national income rising and the proportion of taxation thereon forming a smaller part. This can only be brought about by an increase in production and the lowering of prices and, therefore, it is up to all of us—workers and management—to increase our productive efficiency."

RT. HON. LORD BRABAZON,

Associated Commercial Vehicles Ltd. (London).

Octroi Duty on Sugar

"The question of levy of octroi duty by the Sehore Municipality on cane and other raw materials despatched to the factory is yet to be settled. The rate of octroi duty imposed by the Sehore Municipality, as you all know, is without a parallel anywhere in the country. At those few places where the octroi duty does exist it is almost a fraction of what is being levied by the Sehore Municipality. It did not seem to have weighed with the Bhopal Government that this heavy taxation would impede the progress of the industry and make it difficult to market the finished product because of its higher cost. The sellers' market in sugar has already passed and keen competition is bound to prevail. I would again earnestly appeal to the Bhopal Government to consider seriously the incidence of octroi duty and the cost of sugar to be sold, and that too, in a competitive market, and remove this impediment to the growth of the only sugar industry in the State."

M. M. AMERSEY,

Bhopal Sugar Industries Ltd.

SCHUMAN PLAN IN ACTION

EFFECT ON BRITISH STEEL INDUSTRY

WITH the formal establishment, on the 10th inst., of a common market for coal and iron ore under the Schuman Plan, the first concrete step towards a European Federation has been taken. This development is the result of six months' deliberations to start common markets for coal, iron ore, scrap and steel. At present, the plan relating to the first two commodities only is being implemented, while the inauguration of the plan covering steel and scrap will follow later. The credit for this development goes not only to M. Jean Monnet, the President and his band of international civil servants at Luxembourg, but also to the Parliaments of the member-countries of the Schuman Plan, namely, France, Germany, Belgium, Holland, Luxembourg and Italy.

It will be recalled that it was on 9th May, 1950, that M. Robert Schuman put forth his daring proposal to pool the coal and steel industries of France and Germany and for entrusting the control of production to a supra-national High Authority. The rapid growth of sense of solidarity in West Europe, as a result of the efforts of O.E.E.C. to solve the diverse European problems, ultimately committed Europe to a common policy aimed at integration—the political and economic unification of West Europe. By 16th June, the Schuman Plan had been ratified by the Parliaments of all the countries mentioned above.

Officially, coal and iron ore are freed from all restrictions on trade between the six European countries from the 10th inst. But, unfortunately, the first stage of realisation of the Schuman Plan has led to a dispute between Germany and other members about the interpretation of the term "common market." According to Dr. Preussker, Vice-President of the Schuman Plan Assembly's Marketing Committee, the dispute, though raised over the export price of German coal, concerns a matter of principle which would become far more important when the common market in steel is introduced in course of time. The coal-importing countries, which had viewed with acute misgivings the recent increase in German coal prices by D.M.5 (8s. 4d.) to D.M.60 per ton, had asked that the German coal price should at least be reduced by D.M.2.40, corresponding to the 4 per cent. turnover tax refunded to exporters. West Germany has refused to do this and the matter has been referred back to the expert committee. It is particularly concerned about the French practice of imposing on German steel the equivalent of its own production tax of 16 per cent., while refunding this tax to its own steel exporters. The French refusal is regarded by the Germans as an expression of the former's desire to get cheap German coal but to keep the prices of German steel high in its market. West Germany, therefore, wants a real common market with no taxes levied or refunded, when the commodities cross the frontier. The two positions are based on two different interpretations of the term "common market." The German claim is that the prices of coal and steel should be determined everywhere by the taxes in the producing country, while the French assert that costs should correspond to the taxation level of the country which is using these materials for manufacture.

Common Market

Thus a common market exists in the case of coal and iron ore for all theoretical purpcses, while in reality it does not. Surely, creating a common market, as observed by M. Monnet, is not like opening a bridge. It will have to be practically realised through a gradual process of piecemeal negotiations between the interests concerned. It is difficult to reconcile easily the divergent national interests. Nevertheless, in spite of all these awkward problems, the work of the High Authority cannot be underrated. It has achieved tremendous success in dealing with the problems of import duties and freights. A start has been given to move coal and iron ore freely in West Europe, without any import or export restrictions, quotas or currency restrictions. Railway freight discriminations have been cancelled. The High Authority is working towards removing price controls on iron ore. It is trying to fix maximum prices for coal as from 1st March. It will also control allocations. It is hopeful of success in these directions.

The main object of the Schuman Plan is to rationalise production and to increase productive efficiency substantially in West Europe. So far, coal, iron ore and scrap are all in short supply. The question is: How to make these scarce commodities available at lower prices? In regard to steel, the common market for which will be established about two months later, there is, however, a clear threat of a supply exceeding demand even at present prices. Here the question is: How will the authority behave? Will it arbitrate as to which country has to lose markets and suffer capital supply for development in the event of absence of sufficient demand for steel produced by the Schuman Community?

The Schuman Community is the prototype on which the European Defence Community has been modelled, and the basis of the proposed European Political Community through which it is hoped to bring a United Europe into being. If, as its creators hope, the Community were to become the foundation of a new large free trade area, it is bound to be a source of economic and political stability to West Europe. It must, however, be remembered that the advantages to the Community and the outside world would be lessened, if the six countries were to adopt a concerted policy of high protection.

U.K.'s Interest

The U.K. is keenly watching the developments of the Schuman Plan. It is on account of the adoption in the Schuman Plan of the supra-national principle that the U.K., with its links with the Commonwealth, has not been able to assume membership of the Schuman Community. But short of actual membership, it has assured its fullest support and practical technical assistance to the Community. It is, however, feared that, if the Schuman Community succeeds in rationalising its production and reducing its costs of coal and steel, it may undermine the U.K.'s present price advantage and lead to keen competition for markets, especially when the expected large surplus materialises.

Examining what exactly will be the effect of the formation of the Schuman Community on the British coal and steel industries, Mr. Oscar Hobson writes in the *News Chronicle*, London, as follows:

"Immediately, at any rate, it will mean very little. Both in coal and steel our prices are lower than those prevailing in the member countries of the European Coal and Steel Community. (For hard or steam coal at pit head, for example, approximate current prices are France 93s. a ton, Belgium 100s., Germany 85s., and Britain 57s. 6d.). We are at present fully competitive. As regards iron ore and scrap, the other raw materials of steel, we might (since the Community will naturally tend to direct such supplies to members) be disadvantaged but for two things. The first is that our imports of German scrap are now, in any case, shrinking so rapidly that it would not greatly matter if the Authority used its powers to limit them still further. And the second and much the more important is that French North Africa stands outside the Community. Our supplies of iron ore from Morocco will not be affected, unless and until North Africa is brought within the ambit of the Schuman Community.

"All this, however, does not mean that the establishment of the European Pool may not in the long run have important repercussions on us. Indeed, it cannot but have repercussions seeing that the Community will be disposing of production of coal practically equal to our own and a tonnage of steel double ours, and will be serving a direct market containing a population three times that of these islands. Much will depend on how successful the Community is in rationalising production within its area and much, too, will depend on the state of demand for coal and steel over the coming years. A substantial increase in productive efficiency achieved by the Community might undermine our present price advantage. Improvements in efficiency in heavy industry are not normally capable of rapid achievement.

"On the other hand, demand can at times shrink with alarming speed. And the steel experts of the Economic Committee for Europe, whose prophecy three years ago that in 1953 Europe would have 8 million tons steel capacity in excess of demand was thrown to the winds by Korea, are now returning to the charge. They are foretelling "too much steel," particularly too much sheet steel rolled on too many continuous rolling mills. It does not seem unlikely, and if it comes the battle will be joined in earnest between the British industry and the European Community.

"Well, if it comes it will be in the natural and, perhaps, inevitable course of events. There is no reason why we should fear it unduly, provided we fulfil one condition.

"It is this, that, if and when the time for a curtailment of production comes, it must be the high-cost plants that suffer the curtailment and the efficient plants are left in full production. To that end, the remnants of the war-time system of levies and subsidies which still remain must be got rid of betimes."

BIRDS INVESTMENTS' RESULTS SATISFACTORY

FORT GLOSTER JUTE MAINTAINS DIVIDEND

Birds Investments Ltd.

THE directors of the above Company (Secretaries: Messrs. Lovelock & Lewes, Calcutta) submitted the audited accounts of the Company for the year ended 30th September, 1952.

The profit of the Company for the year showed an increase of approximately Rs. 23,000, as compared with the results of the previous year, which the directors considered as satisfactory. It is to be noted, however, that there is likely to be a fall in income during the current year, particularly in respect of dividends from the jute mills.

The profit and loss account showed a credit balance of Rs. 5,47,730 (Rs. 5,15,478), including Rs. 93,128 (Rs. 83,680) brought in from last year. After transferring Rs. 75,000 (Rs. 75,000) to general reserve, there was a balance of Rs. 4,72,730 (Rs. 4,40,478) available, which was disposed of thus:

In paying a dividend of 5½ (5½) per cent. per annum, less income-tax, on preference shares for the year to 30th September, 1952 Rs. 97,350 (Rs. 97,350), and in payment of a dividend of 12½ (12½) per cent. on ordinary shares for the year to 30th September, 1932, without deduction of income-tax Rs. 2,50,000 (Rs. 2,50,000) leaving to be carried forward Rs. 1,25,380 (Rs. 93,128).

The company's portfolio is representative of investments which are quoted on the Calcutta and Colombo Stock Exchanges, with the exception of certain shares costing Rs. 7,96,505 (Rs. 7,47,760) for which no quotations are available. The market value of the investments, for which quotations are available, exceeds the book value at 30th September, 1952, by Rs. 20,08,560 (Rs. 30,10,109). In the opinion of the directors, the total value of the investments, for which quotations are not available, is not less than their cost price.

The following statement shows the distribution of the Company's portfolio:—

	Per cent.
Jute mills	28.96
Electricity	1.95
Iron, steel and engineering	3.73
Collieries	21.94
Paper mills	4.67
Investment companies	9.09
Tea companies	2.52
Mining other than collieries	5.33
Transport	.18
Miscellaneous	20.23
Ceylon tea shares	1.40
	100.00

Summary

Debentures	6.24
Preference shares	16.17
Equity shares	77.59
	100.00

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital	44,00,000	Investments	54,05,998
Reserves	3,38,806	Debts, deposits and advances	9,77,872
Provision for taxation	1,49,816	Cash	35,470
Liabilities	9,05,338		
Profit and loss account	1,25,380		
	Rs. 64,19,340		Rs. 64,19,340

Fort Gloster Jute Manufacturing Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Kettlewell Bullen & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 30th September, 1952.

The accounts, after transferring from stock reserve Rs. 2,75,000 (*nil*), show a loss of Rs. 9,32,399 (profit of Rs. 4,45,187), from which has to be deducted the balance brought in from the last account, namely, Rs. 25,701 (Rs. 18,286) leaving a debit balance of Rs. 9,06,699 (credit of Rs. 4,63,472). There has been transferred from reserve account Rs. 9,75,000 (nil), resulting in a credit balance available for disposal of Rs. 68,301 (Rs. 3,43,472), which the directors recommend to be dealt with as follows:—

To pay a dividend on the 7 (7) per cent. preference shares for the half-year ended 30th September, 1952 at Rs. 3-8 (Rs. 3-8) per share without any deduction for income-tax payable by the Company Rs. 49,000 (Rs. 49,000), and to pay a dividend on the 2nd preference shares for the half-year ended 30th September, 1952 at Rs. 2-8 (Rs. 2-8), per share without any deduction for income-tax payable by the Company Rs. 17,500 (Rs. 17,500), leaving to be carried forward Rs. 1,801 (Rs. 14,472).

No reservation for depreciation has been considered necessary, as, in the opinion of the directors, adequate provision has been made in previous accounting periods. The renewals and extensions account has now been combined with the general reserve account of the Company, as it is felt that no useful purpose is served in continuing the distinction. The additions to block account include the cost of a new economiser for the boiler plant at the North Mill, new bag hemming machines and the sinking of three new tube wells.

In accordance with the working time agreement of the Indian Jute Mills Association 12½ per cent. of the total looms remained sealed and the Mills worked 42½ hours per week throughout the half-year.

The period under review witnessed a further extremely steep decline in the value of both jute and manufactured goods. Whilst prices for the raw material followed fairly closely, the natural laws of supply and demand, hessians, unfortunately, became the object of intense speculative activity towards the close of the half-year, which had the effect ultimately of depressing prices to a point at which mills could only operate at a loss and, in December, the Government of Bengal was forced, in the general interest of the trade, to prohibit further dealings in the local futures market; this speculation was the more to be deplored, as it coincided with encouraging signs of a sustained expansion in world consumption of hessians. Demand for sacking goods which constitute the major portion of the Mill's outturn, was disappointing throughout the entire half-year and prices were for the most part unremunerative. It is to be regretted that, up to the time of writing, there is no sign of any improvement in either section of the goods market.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital	42,00,000	Block	85,29,052
Reserves	57,78,540	Stock	36,57,702
Provision for taxation	12,276	Stores, etc.	25,27,998
Liabilities	59,72,765	Debts, deposits and advances	10,10,838
Profit and loss account	68,301	Investments	1,82,769
		Cash	1,23,523
	Rs. 1,60,31,882		Rs. 1,60,31,882

Standard Jute Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Bird & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the half-year ended 30th September, 1952.

After providing Rs. 20,915 (Rs. 20,966) for depreciation, the profit and loss account showed a loss of Rs. 1,84,766 (profit of Rs. 3,99,452) which was reduced (added) by the amount brought forward from previous half-year of Rs. 1,24,587 (Rs. 40,466), transfer from reserve for roof repairs Rs. 1,00,000 (Rs. 1,00,000) and transfer from equalisation of dividend reserve Rs. 25,000 (*nil*), leaving an available balance of Rs. 64,821 (Rs. 2,64,918) for disposal. The directors disposed of this amount as follows:—

In paying a dividend on the preference shares at the rate of 6 (6) per cent. per annum, without any deduction for income-tax paid by the Company Rs. 27,000 (Rs. 27,000) and in paying a dividend on the ordinary shares of Re. 1 (Rs. 8) per share, without any deduction for income-tax paid by the Company Rs. 25,156 (Rs. 2,01,224), leaving to be carried forward Rs. 12,665 (Rs. 36,694).

Stocks of jute were valued at market value and manufactured goods at *contract rates*. In accordance with the Factories (Amendment) Act, 1946 and the working time agreement of the Indian Jute Mills Association, the mill worked 42½ hours a week, with 12½ per cent. of total looms sealed during the period under review.

The increased expenses resulting from the implementation of the Omnibus Tribunal Award, which took effect from 10th December, 1951, caused an appreciable increase in working costs and contributed to the comparatively poor financial results for the half-year. Throughout the period, the labour complement at the mill was maintained at full strength. During the period under review, the general trend of prices of both raw jute and finished goods was downwards. On 6th May, the Government of India announced, with immediate effect, a reduction in the export duty on hessian from Rs. 750 to Rs. 275 per ton and on sacking from Rs. 350 to Rs. 175 per ton. Immediately following the announcement, America came into the market and business on quite a large scale was done at slightly higher rates. Prices, however, were not maintained and rates for both hessians and heavy goods receded. With prices of raw jute remaining relatively steady, mills were forced to dispose of their production at very substantial losses with mills with a large proportion of sacking looms suffering more than others, owing to the very low rates prevailing for sacking fabrics. It was not until late September, when the I.J.M.A. agreed to sell through the Government of India 40,000 tons of hessian to Argentine, that prices rose and simultaneous business was again remunerative. Despite a substantial increase in the U.S. consumption figures, prices, particularly those of heavy goods, again dropped to uneconomic levels, mainly on account of speculative operations and lack of overseas demand. Closure of the hessian Fatka market on 19th December, however, has been generally approved by the industry and it is hoped that more stable prices will attract overseas buyers.

Raw jute, which, for a period, remained steady, fell to a certain extent, in sympathy with the hessian and heavy goods markets and has now reached a level which the Government of India considers to be dangerously low, bearing in mind the importance attached to increasing India's self-sufficiency in jute. Nevertheless, even at the present level of prices, mills cannot, at the time of writing, operate at a profit on simultaneous business.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital	34,19,600	Block	38,64,299
Reserves	50,42,610	Stock	28,53,882
Provision for taxation	2,33,938	Stores, etc.	3,03,579
Liabilities	24,35,655	Debts, deposits and advances	13,03,831
Profit and loss account	12,665	Investments	6,41,216
		Cash	16,81,811
	Rs. 1,11,48,618		Rs. 1,11,48,618

Northbrook Jute Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Bird & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the half-year ended 30th September, 1952.

After providing Rs. 67,000 (Rs. 5,60,000) for reserve for taxation contingencies and Rs. 2,08,794 (Rs. 2,05,348) for depreciation the profit and loss account showed a loss of Rs. 18,193 (profit of Rs. 5,93,548), which was reduced (added) by the amount brought forward from previous half-year of Rs. 75,380 (Rs. 36,213), and provision against contingent loss on forward jute purchases no longer required Rs. 32,000 (*nil*) leaving an available balance of Rs. 89,187 (Rs. 3,79,761) for disposal. The directors disposed of this amount as follows:—

In paying a dividend on the preference shares at the rate of 5½ (5½) per cent. per annum, without any deduction for income-tax paid by the Company Rs. 41,250 (Rs. 1,65,000 for four half-years) and in paying a dividend on the ordinary shares of As. 4 (Re. 1) per share, without any deduction for income-tax paid by the Company Rs. 41,983 (Rs. 1,67,928) leaving to be carried forward Rs. 5,954 (Rs. 46,833).

Accounts in brief were as under:—

Liabilities	Rs	Assets	Rs
Capital	31,79,880	Block	66,56,698
Debentures	20,00,000	Stock	30,91,654
Reserves	45,98,276	Stores, etc.	5,66,023
Provision for taxation	80,711	Debts, deposits and advances	20,19,146
Liabilities	28,80,365	Investments	1,90,110
Profit and loss account	5,954	Cash	2,21,355
	Rs. 1,27,45,186		Rs. 1,27,45,186

New India Sugar Mills Ltd

The directors of the above Company (Managing Agents: The Cotton Agents, Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 30th June, 1952.

The profit and loss account, after payment of interest, managing agents' remuneration, providing for depreciation and taxation, and after transferring Rs. 7,50,000 (Rs. 3,00,000) to general reserve and taking into account the balance of profit of the previous year, showed a net profit of Rs. 3,57,263 (Rs. 4,34,239). The directors disposed of this amount as under:

Dividend on 486 cumulative preference shares of Rs. 100 each at 9 (9) per cent. free of tax Rs. 4,374 (Rs. 4,374), dividend on 10,000 cumulative redeemable preference shares of Rs. 100 each at 5¼ (5¼) per cent. subject to tax Rs. 40,562 (Rs. 40,562), and dividend on 78,910 ordinary shares of Rs. 10 each at Rs. 2-8 (Rs. 2-8) per share free of tax Rs. 1,97,275 (Rs. 1,97,275), leaving to be carried forward Rs. 1,15,051 (Rs. 1,92,028).

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital	18,37,700	Block	11,42,353
Reserves	17,03,054	Stock	41,30,421
Provision for taxation	11,97,952	Stores	7,11,293
Liabilities	36,53,081	Debts, deposits and advances	9,80,124
Profit and loss account	1,15,051	Investments	14,35,384
		Cash	1,07,263
	Rs. 85,06,838		Rs. 85,06,838

Tide Water Oil Co. (India), Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st October, 1952.

After providing depreciation, transferring Rs. 17,000 (*nil*), from special reserve and Rs. 30,000 (*nil*) from reserve for equalisation of dividends and bringing in the balance from the previous half-year, there is a balance of Rs. 30,316 (Rs. 1,04,887) at the credit of profit and loss account, which the directors propose to dispose of as follows:

To pay dividend of As. 8 (Re. 1) per share Rs. 30,000 (Rs. 60,000) and to carry forward Rs. 316 (Rs. 44,887).

Supplies from the U.S.A. were adequate during the accounting period, but there was an appreciable fall in the demand for lubricants. This is reflected in the trading results and in the increased stocks at the close of the half-year.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital	6,00,000	Block	1,17,938
Reserves	8,95,900	Goodwill	2,00,000
Provision for taxation	4,38,483	Stock	26,21,666
Liabilities	27,81,842	Debts, deposits and advances	15,25,920
Profit and loss account	316	Cash	2,50,997
	Rs. 47,16,541		Rs. 47,16,541

N.B.—Figures within brackets relate to the corresponding period of the previous year.

QUESTION HOUR IN PARLIAMENT

Uniformity in Sales Tax Levy

THE Committee of officials of the Central and State Governments appointed during the Chief Ministers' Conference to go into the question of bringing about uniformity in the levy of sales tax throughout India has not come to any definite conclusions. The matter is still under consideration in consultation with the State Governments. It will be possible to come to any definite conclusions only when an authoritative interpretation of the Supreme Court is available regarding the interpretation of clauses (1) and (2) of Article 286 of the Constitution.

—*Minister for Revenue and Expenditure*

Drycore Paper and Telephone Cable Factory

The drycore paper and insulated telephone cable factory at Mihijan (West Bengal) is expected to be completed by the middle of this year. The factory is estimated to cost Rs. 110 lakhs and it will produce the entire requirements of the country estimated at between 1,000 miles and 1,200 miles of insulated wire of the approximate value of Rs. 2 crores.

—*Minister for Production*

Foreign Investment

Since 1948, the total foreign investment has been of the order of Rs. 8.03 crores. This does not include (a) foreign investment in the shape of goods, etc. and (b) re-investment of profits of existing investments. The country-wise distribution of such investment is as follows: U.K. Rs. 6.74 crores; U.S.A. Rs. 7.87 lakhs; Canada Rs. 16.60 lakhs; Switzerland Rs. 46.65 lakhs; other countries Rs. 58.12 lakhs.

• • • •

Ford Foundation Gift

The Ford Foundation has agreed to give a sum of Rs. 1,69,38,562, out of which Rs. 60,46,260 has been received so far. The Fund is allotted for the establishment of (i) 10 pilot development projects; (ii) 5 training-*cum*-development projects, and (iii) 5 extension wings attached to agricultural colleges and (iv) 25 extension training centres. The amount received is kept in a deposit account with the Accountant-General, Central Revenues, who keeps the accounts. The allocation of amounts to individual schemes under the above sectors is made by the Government in consultation with the Foundation representative in India.

• • • •

Loans to States

Loans sanctioned by the Central Government to various State Governments in the first nine months of the current financial year aggregated Rs. 39.55 crores. Of this amount, loans for the purpose of river valley projects accounted for Rs. 19.44 crores, grow-more-food schemes Rs. 11.44 crores, industrial housing schemes Rs. 78 lakhs and other development schemes Rs. 7.89 crores. Madras received the largest amount, namely, Rs. 810 lakhs, Punjab Rs. 771 lakhs; Bombay Rs. 145 lakhs; West Bengal Rs. 675 lakhs; Bihar Rs. 272 lakhs; Madhya Pradesh Rs. 166 lakhs; Orissa Rs. 398 lakhs; U.P. Rs. 259 lakhs and Hyderabad Rs. 131 lakhs. Other States received loans varying from Rs. 10 lakhs to Rs. 90 lakhs.

—*Finance Minister*

Import of Rice

The Government of India is at present negotiating a barter deal with the Burma Government for importing 500,000 tons of rice. Under the present contract with the Burma Government, India is entitled to import from Burma 350,000 tons of rice—250,000 tons on Government-to-Government account and 100,000 tons through trade. The contract does not provide for a specific price. This year, India may have to pay 10 per cent. more than what it paid last year for Burmese rice. The Government of India is, however, negotiating with the Burma Government a barter agreement, according to which India may get 500,000 tons of rice. The Government of India hopes to import 700,000 tons of rice this year and if the barter deal goes through, India will have to get only 200,000 tons from other countries like Siam. Pakistan has to return 22,000 tons of rice against 30,000 tons of wheat which India had supplied last year.

• • • •

Foodgrain Imports

The import programme for foodgrains for 1953 has not been finalised. It is, however, estimated that imports might be up to 2,900,000 tons. Prices this year are not likely to be lower than last year's in the case of rice and milo. The landed cost of wheat will be less than last year. India will be getting 1,500,000 tons of wheat by the end of July next under the International Wheat Agreement, the price for which has already been fixed. This will not, therefore, be affected by the stalemate in the International Wheat Conference in regard to wheat price. The Government had no intention, a few months ago, of importing any milo this year, but, on account of the failure of millet crops in Madras, Mysore, Maharashtra and Saurashtra, the policy in this regard has had to be revised. The price of imported milo is, however, higher than that of imported wheat.

Notice

THE INDIAN WOOD PRODUCTS COMPANY, LIMITED

"Consent of the Central Government has been obtained to this issue by an order of which a complete copy is open to public inspection at the Head Office of the Company. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any schemes or for the correctness of any of the Statements made or opinions expressed with regard to them."

NOTICE IS HEREBY GIVEN THAT AN Extraordinary General Meeting of the Members of the abovenamed Company will be held at the Registered Office of the Company, Clive Buildings, Netaji Subhas Road, Calcutta, on Tuesday, the seventeenth day of March, 1953, at 12-30 p.m., to consider and if thought fit to pass, with or without modification, the following resolutions, namely:—

1. That the authorised capital of the Company be increased from Rs. 15,00,000 to Rs. 30,00,000 by the creation of 1,50,000 Ordinary Shares of Rs. 10 each.

2. (*As a Special Resolution*). That the Articles of Association of the Company be altered in manner following:—

Article 4 shall be deleted and the following substituted therefor:—

"4. The Capital of the Company is Rs. 30,00,000 divided into 3,00,000 Ordinary Shares of Rs. 10 each."

3. (*a*) That it is desirable to capitalise a sum of Rs. 5,00,000 being part of the undivided profits of the Company standing at the credit of the General Reserve Account and accordingly that the said sum of Rs. 5,00,000 be capitalised and that this amount be used as a capital bonus which shall be applied on behalf of the persons who are on the seventeenth day of March, 1953, holders of the 1,50,000 issued Ordinary Shares of the Company of Rs. 10 each in payment in full for 50,000 new Ordinary Shares of Rs. 10 each and that such 50,000 new Ordinary Shares credited as fully paid, shall be accordingly allotted to such persons respectively in the proportion of 1 new Ordinary Share for every 3 issued Ordinary Shares held on the said seventeenth day of March, 1953, by such persons respectively and that the said new Ordinary Shares so distributed shall rank in all respects *pari passu* with the existing Ordinary Shares and shall also be treated for all purposes as an increase of the nominal amount of the capital of the Company held by each such Ordinary Shareholder and not as income.

(*b*) That Fractional Certificates in respect of shares which would be distributable in fractions shall not be issued but such shares shall be allotted to the Chairman of the Meeting as Trustee on behalf of those shareholders entitled thereto and shall be sold by the Chairman and the proceeds of sale distributed to the shareholders who would have been entitled to a fraction of a share.

(*c*) That pursuant to the above resolution and in satisfaction of the said special capital bonus the Directors be and they are hereby directed to allot and distribute 50,000 new Ordinary Shares credited as fully paid up amongst the persons who are on the seventeenth day of March, 1953, holders of the 1,50,000 issued Ordinary Shares of the Company in proportion to the issued Ordinary Shares held by them.

(*d*) That the draft of the Agreement providing for the allotment of the said new Ordinary Shares in satisfaction of the said capital bonus submitted to this Meeting and signed in the margin by the Chairman thereof by way of identification be and the same is hereby approved and that the Directors be authorised to affix the Seal of the Company to duplicate engrossments of such Agreement as and when the same shall have been signed on behalf of the members holding Ordinary Shares in the Company on the seventeenth day of March, 1953, by some persons to be appointed by the Directors in that behalf under Article 174 of the Articles of Association of the Company.

The Share Transfer Book of the Company will be closed from the 6th March, 1953, to the 17th March, 1953, both days inclusive.

By Order of the Board,
For GILLANDERS ARBUTHNOT & CO., LTD.,
P. E. G. W. PARISH,
Managing Director,
Managing Agents.

CALCUTTA 17*th February*, 1953.

To the shareholders of the Indian Wood Products Co., Ltd., and in particular to:—
Mr. G. Bogie; Capt. R. G. Burnell; Mr. F. G.

(*Continued in previous column*)

COMFORTABLE CONDITIONS IN MONEY

(From Our Own Correspondent)

BOMBAY, 25th *February*

The short-term money market experienced distinctly comfortable conditions during the week under review, with the pressure on funds easing to a perceptible degree. Exchange banks in particular were reported to be having ample funds, as only very few foreign trade bills were available. The return of funds from interior commercial centres was earlier than expected, as movement of commodities was faster. Consequently, the big Indian banks, which had advanced against commodities, were also well supplied with funds. The inter-bank call money rate among the Exchange banks and big Indian banks, therefore, tended to ease from 3 per cent. to 2½ per cent. and at times even to 2¼ per cent. The smaller Indian banks were, however, still reported to be borrowers at 3 per cent. There was no fall in the rate for term deposit rate, with 3 per cent. being the rate for one to three months, but banks were not keen bidders.

The Treasury Bill results, however, were not in consonance with the aforesaid description of the market. The response was smaller than last week, though there was no rise in the rate of interest. The amount offered was no more than Rs. 109.25 lakhs, as compared with Rs. 129.50 lakhs tendered last week. The average rate of accepted tenders was unchanged at Rs. 2-7 per cent. per annum.

A contraction of Rs. 7.84 crores in notes in circulation is disclosed by the statement of affairs of the Reserve Bank of India for the week ended 20th February, 1953. This is in distinct contrast to the expansion noted in the previous two weeks. Notes held in the Banking Department, however, show an increase of Rs. 8.12 crores. The net change in total notes issued is, therefore, a rise of Rs. 28.43 lakhs, which is covered by a similar rise in rupee coin. In the Banking Department, the deposits of the Central Government have fallen by Rs. 4.28 crores, while those of other Governments have risen by Rs. 4.05 crores. Deposits of banks show no notable change, but those of others are lower by Rs. 61.88 lakhs. Cash balances have expanded by Rs. 8.13 crores and balances held abroad by Rs. 1.53 crores. Loans and advances to Governments have declined by Rs. 1.06 crores and other loans and advances by Rs. 3.33 crores. Government Treasury Bills purchased and discounted are lower by Rs. 2.76 crores.

The consolidated statement of position of the Scheduled Banks for the week ended 13th February, 1953, as compared with that for the previous week, discloses an increase of Rs. 2.45 crores in demand deposits and a decline of Rs. 47.98 lakhs in time deposits. Inter-bank borrowings, repayable on demand, have recorded a decline of Rs. 80.65 lakhs, while there is no change in those of a time nature. Borrowings from the Reserve Bank are higher by Rs. 55 lakhs. For the first time this year so far, advances of the Banks show a decline to the extent of Rs. 3.83 crores. But this recession has been more than offset by a sharp rise of Rs. 6.94 crores in bills purchased and discounted. Investments have declined by Rs. 5.63 crores. Cash on hand and balances with the Reserve Bank are together higher by Rs. 4.87 crores. Balances with other banks in current account are also better by Rs. 45.79 lakhs, while money at call has fallen by Rs. 1.82 crores.

The Gilt-edged market presented a dull picture with the turn-over remaining poor. Values were, however, well held in most of the issues, the only exceptions being 3 per cent. 1970-75 loan and 3 per cent. 1986 Conversion loan. The former issue found sellers and declined to Rs. 86-6. The latter too experienced some selling pressure and fell from Rs. 82-13 to Rs. 82-9, but, as the pressure eased towards the close of the week, there was a slight hardening to Rs. 82-10. Other loans remained unchanged.

The foreign exchange section was listless, with no change in the rupee-U.S. dollar exchange rate, though there was some hardening of sterling in the New York market. The spot rate for sterling in that market improved from $2.81-13/16—2.81-15/16 on the 18th inst. to $2.81-15/16—2.82-1/16 yesterday. The forward rates for three months and to six months also rose, the former from $.81-5/16—2.81-7/16 to $2.81⅜—2.81½ and the latter from $2.80⅜—2.80⅝ to $2.80¾—2.81.

LONDON WOOL FIRM

(Messrs. J. Hardacre and Co.)

BOMBAY, 24th *February*

The London February sales in wool opened yesterday on a very satisfactory note. A notable feature of the sales was strength of the competition, resulting in firm prices for all descriptions. The selection of merinos from Australia sold very well, the finer qualities being 5 per cent. dearer than the rates at the close of the January sales, while prices of other quality wools were very firm. There was a good supply of greasy comeback and crossbred clips which were in very good demand and for which prices were 5 per cent. higher than those in January last. New Zealand greasy merinos, halfbreds and crossbreds were in good demand, prices being 2½ per cent. higher than those in January.

Reports from primary markets indicate fully firm conditions, with a slightly rising tendency.

Bradford top market is passing through a quiet spell. Delivery dates continue to be an important factor and prices are very firm, especially for early delivery. In merinos and fine crossbreds, the usual delivery dates on new orders are as far ahead as June, 1953.

There was no new feature in the noil market. Prices remain substantially the same as last week. Supplies from topmakers are not considerable and most of the output is earmarked against standing contracts. The rag markets is also unchanged since our last report.

DEADLOCK IN BULLION

(From Our Own Correspondent)

BOMBAY, 25th *February*

The most outstanding development in the bullion market during the week under review was the deadlock. Trading came to a standstill from Friday onwards, although the market was officially open. A certain section of the market refused to transact business as a protest against the Board's decision not to enforce its earlier proposal to levy a margin on every rise of Rs. 7 per 100 tolas in silver and Rs. 4 per tola in gold over the basic rates, as it ran counter to the rules of the Association. The provocation for the decision of a number of traders to go on strike, as it were, was the revival of the bullish fervour in silver following the failure of the Board's earlier decision to declare an emergency to get the approval at the general body meeting, as already reported in these columns last week. The Bullion Board President's explanation of the Board's position did not convince them and they demanded that an emergency should be declared in the market. At the time of writing, the Board was reported to be considering certain proposals for bringing about a compromise among members so far as the current settlement was concerned.

In view of the deadlock in the market, the Board decided to postpone the commencement of business for the next settlement till to-day. It is not known whether trading will be resumed tomorrow. In the meantime, the Board is stated to be seeking more powers to meet any possible emergency in the next settlement. It has formulated certain terms and conditions under which the business for that settlement should be begun. It has sought the Bombay Government's approval of these powers before placing them before the general body.

During the only day in which forward business was carried on during the week, namely, on the 19th inst., the sentiment was bullish, the forward rate in silver having gone up from Rs. 168-14 to Rs. 170-12 and that in gold from Rs. 89-14 to Rs. 90-14. Ready silver advanced from Rs. 169-14 to Rs. 171-12 and ready gold from Rs. 90-6 to Rs. 91-6. Subsequent to the voluntary suspension of forward business, the sentiment in the ready section was somewhat quiet, silver being quoted today at Rs. 168 and gold at Rs. 89-8.

In the foreign markets, silver remained unchanged at 85¼ cents per fine ounce in New York and at 74d. per oz. for spot as well as forward in London. The international free market price of gold remained stationary at $37.40 in Europe.

The following comparative table shows the trend of the market during the week under review:

	25-2-53	Highest	Lowest	18-2-53
	Rs. a.	Rs. a.	Rs. a.	Rs. a.

FURTHER RISE IN PEPPER

(Messrs. Parekh & Co.)

BOMBAY, 25th *February*

Pepper market continued to make further headway, the highest reached for ready being Rs. 2,900 at Alleppey, Rs. 3,000 at Calicut, while Rs 2,560 at Bombay in forward for April delivery. Knowledgeable source attributes the present rise to the following among other reasons:

1. Prices rose in sympathy with the advance in the American market which was more or less due to repurchases in New York by Indian interests followed by grinders' demand; and 2. there was short covering at Alleppey and Calicut by those who sold in foreign countries against their purchase of garbles in Cochin. Some of the parties who sold short in garbles at Cochin are reported to be in difficulty, and they refused to give delivery. All the outstanding business in garble at Cochin is, therefore, reported to have been squared up at Rs. 470 per cwt. Cochin market in garble is reported closed, until the settlement of account which is said to be still under dispute.

New York, after having purchased some quantity at $1.25 for February-March is reported to have withdrawn as buyers, Indian sellers indicating 1 to 2 cents higher than the last purchased price. Planters being stiff sellers, no exporters are willing to sell at less than $1.26 per lb. c and f New York, March shipment, and at this price, fair quantity is reported changing hands at Bombay as inter-bazar business. Forward trading in garbles is reported to have been started at Alleppey, and every day 30 to 40 tons are changing hands at price ranging from Rs. 480 to Rs. 490 per cwt.

Following are to-day's nominal quotations:—Ready delivery Rs. 2,500, March delivery Rs. 2,490-2,520 and April delivery Rs. 2,515-2,545 per candy of 5½ cwts. Ready at Alleppey Rs. 2,850 per candy of 6 cwts., and Ready at Calicut Rs. 3,000 per candy of 6¼ cwts.

GOOD DEMAND FOR SPOT COTTON

(From Our Own Correspondent)

BOMBAY, 25th *February*

The chief topic of interest in the cotton trade at present is the applicability of the provisions of the Sales Tax Ordinance to cotton transactions in imported cotton and on sales of cotton figuring in inter-State trade. A deputation of the Cotton Buyers' Association had conferred with the Collector of Sales Tax on several of the points raised regarding such transactions in view of the proximity of the period for submitting returns and paying the tax to the Government. While clear-cut directions have been given in some cases, the officials themselves appeared to be hazy about some others and, in any case, the dealers are not satisfied with some of the directions and interpretations. The general trend in the trade at present is to pay the tax under protest and to await the outcome of the result of the appeal before the Supreme Court on this issue. More may be heard about this after judgment is delivered in the appeal.

In this respect, the plight of the importers of foreign cotton is most noticeable. Even though these imports in most cases were as a result of sales made previously to specific mills, the licences were issued in the name of the importers by the Government of India. Now the Bombay Government has come out with the interpretation that these sales to the mills by the importers are subject to sales tax if the documents regarding imports were not assigned to the buyers before the arrival of the cotton in port. As is well known, one of the reasons for the mills importing cotton through the trade instead of doing so directly is the stringency in the money market and the inability of the mills to pay for the whole of the cotton the moment it is received. It is a kind of pay-as-you-consume arrangement to suit the conditions obtaining in the industry. But in essence, the cotton is imported by the consuming mills. The prevailing feeling in the trade is that the Government of Bombay is trying to take advantage of a mere technicality which would either upset the accepted procedure for cotton imports or drive the trade out of Bombay. It is openly being stated that what has happened in the case of crossword competitions will gradually take place in the case of cotton textiles and other trades. If the Government had planned to kill the commerce of Bombay, it could not have done so in a more efficient manner than this.

An interesting development during the week with regard to imported cotton from the U.S. is the action taken by some of the insurance companies in the U.K. and India in the civil courts against the shipping companies which gave clean bills of lading to the shippers in the U.S. for cotton which obviously were country-damaged. This is likely to prove a long-drawn-out affair and the respondent shipping companies are likely to insist upon the shippers being made parties to these suits.

The spot market has remained active with mills as keen buyers for all varieties, with special attention being paid to Bengal *Deshi* by shippers. The steady tone in the world cotton markets also was reflected here both in the spot and forward markets, with the latter recording a big rise both in the May and August deliveries on the opening day of this week. It is believed that there will be paucity of good varieties during the fag end of the season and the gap between the May and the August deliveries has widened considerably as a result of this belief. On the other hand, it should not be forgotten that the demand for Indian cotton is not likely to remain at the present level during the coming months, with higher consumption of foreign cotton being noticeable already. While prices might remain at a high level the gap between the two deliveries is likely to be reduced as this becomes more noticeable. Tenders against February delivery amount so far to less than 5,000 bales.

The following are the latest quotations from the spot market: Bengal *Deshi* Rs. 530-570; Berar *Jarilla* Rs. 700; Vijay Rs. 820; Moglai Rs. 650; Khandesh Rs. 750.

The following is the trend of prices in the futures market over the week ended 25th February 1953:

	Opening Rs.	*High* Rs.	*Low* Rs.	*Closing* Rs.
I. C. C. February ..	655	669	655	669
I. C. C. May	663	675	660½	673½
I. C. C. August ..	677	688½	673	686½

At Karachi, the revival in demand is more apparent than real. There is no doubt that enquiries from the U.K. and other centres have increased, but a very few of them result in actual firm transactions. The R.C.C. in the U.K. is more interested in the *Deshi* varieties than in the staple varieties at Pakistan. Some legal complications are also likely to arise in connection with the business conducted by the Cotton Board. The following are the latest quotations from Karachi market:

Punjab *Deshi* Rs. 62; 4F Punjab R.G. Rs. 52½ to Rs. 54; S.G. Rs. 56½ to Rs. 58; L.S.S. Punjab R.G. Rs. 55½; S.G. Rs. 60½; N.T. R.G. Rs. 56; S.G. Rs. 62; 289F. Punjab R.G. Rs. 61; S.G. Rs. 68.

At Alexandria, the spot market has registered good transactions in the medium-staple varieties. With the increase in the official price of Giza, demand which was fairly active for this type has subsided. Some of this has been switched over to Ashmouni which is comparatively cheaper on parity and is drawing the attention of consumers both in Egypt as well as abroad. An interesting development in the export trade at Alexandria is the anxiety of the Egyptian Government to discourage the growing tendency amongst Continental buyers of reshipping their purchases from their home ports to the U.S. because of the exchange position and the earlier restrictions imposed by the Egyptian Government with regard to the mode of payment. One of the reasons for concessions offered with regard to payment in kind and in Egyptian currency was that it might tend to discourage this tendency and encourage the buyers in the U.S. to deal directly with Alexandria.

At New York, the factor which affected trading on a large scale during the week under review was the recommendation by the Agricultural Department to reduce the acreage under cotton for the next season by about 2.5 million acres. Though this is only a suggestion and does not carry the force of a directive, the growers are naturally likely to be influenced to a certain extent by this official advice, in view of the reduction in price that has taken place during the last few months and the decrease in exports. As cotton production increases in other parts of the world, the volume of production in the U.S. is bound to be affected inasmuch as the prices there are controlled as much by foreign demand as by local consumption. The upward reaction in prices which this announcement brought forward may not be of an enduring nature because of the pressure of stocks, but it is bound to reassert itself in the long run and on the distant deliveries. This has also resulted in inducing foreign buyers, who had been sitting on the fence for a long time watching the position, to come forward and to book their indents for their requirements of U.S. cotton for the rest of the year. On the whole, the trend of prices at New York and at several important U.S. markets during the coming weeks is likely to be more steady than in the immediate past.

The following are the latest available quotations from New York as compared with those of a week and a fortnight before:

(In cents per lb.)

	24-2-53	17-2-53	10-2-53
Spot	..	33.60	33.65
March	33.18	32.70	32.89
May	33.38	33.12	33.23
July	33.70	33.42	33.58
October	33.74	33.63	33.68

WIDE FLUCTUATIONS IN ART SILK YARN

(From Our Own Correspondent)

BOMBAY, 25th *February*

The firm conditions in the art silk yarn market, witnessed towards the close of last week, gathered further momentum during the first three sessions of the week under review. Under the impetus of rumours about confining the issue of import quota only to actual users for the current licensing period, values of art silk yarn forged ahead to new high levels in recent weeks. Heavy demand in the ready section, following sustained improvement in rayon cloth market, and depletion of stocks also assisted the upward trend in prices. This tendency, however, was checked on Monday, when, owing to reports of large arrivals of imported yarn previously contracted for, values suffered a sharp break. Much of the previous gains were thus erased, although the closing rates to-day were higher than those last week.

In the forward section, 150D February delivery contract opened higher at Rs. 811, as against Rs. 800, and advanced swiftly to Rs. 830 on Saturday. The profit-selling that ensued at the close brought down the quotation to Rs. 800 before finishing higher at Rs. 810. The net gain over the week was thus Rs. 10. March contract rallied 36 points to Rs. 832, but reacted to close at Rs. 813; at one time it had even gone down to Rs. 803. In the ready section, 120 Japan rose from Rs. 5-2 to Rs. 5-6 on Monday. The gain was completely lost during the next two sessions. In fact, it was substantially lower at Rs. 5 to-day. 150 Japan advanced by As. 2 to Rs. 4-9 on the 21st inst. and, after fluctuating between Rs. 4-7 and Rs. 4-9, finished the week lower at Rs. 4-6. 120 Japan moved up by As. 2 to Rs. 5 on Monday. After receding to Rs. 4-12 yesterday, it again recovered to Rs. 5 today. 150 Italy gained As. 2 to Rs. 4-3 yesterday, which gain was, however, lost to-day.

Renewed demand and acute shortage of supplies, especially of well-known deniers and qualities, were responsible for the staple fibre section remaining fully firm this week. Staple fibre 2x40 February contract was steady at Rs. 800. The value would have registered a perceptible rise, but for the ceiling fixed by the Yarn Merchants' Association. Reviewing the trend of the staple fibre section, Messrs. Sankalchand G. Shah & Co., Ltd., observe in their latest market report thus: "Demand for raw staple fibre continues satisfactory as before, but shortage is keenly felt for well-known deniers and qualities and higher prices are being paid to the extent of about As. 2 per lb. during the week (ended 20th February). There has been plenty of stocks of unsuitable and unsatisfactory qualities, but hardly any mills are interested in the same. At the same time, granting of licences for imports of raw staple fibre during January-June, 1953 period is considerably delayed and, naturally, mills find it extremely difficult to secure their requirements in suitable qualities at reasonable prices. It will be in the interests of the industry and trade, if Government expedite the grant of licences to the mills at an early date."

The table below gives the prices of art silk and staple fibre yarns quoted to-day, as compared with those on the 18th and 11th inst.

	25-2-53	18-2-53	11-2-53

OILSEEDS EASY

(From Our Own Correspondent)

BOMBAY, 25th *February*

The oilseeds market presented a hesitant tone this week, as operators were inclined to await anxiously the forthcoming Union budget. There were strong rumours that duty would be reimposed on exports of groundnut oil as well as *kardi* and *niger* seeds. The market further expected the Brazilian official announcement freeing its exchange any moment. As a result, the steady trend witnessed during the first few sessions of the week in the market yielded place to easier tendency. Prices revealed losses all round, such being pronounced in groundnuts.

The Government of India, it will be recalled, abolished export duties on *niger* and *kardi* seeds and groundnut oil on 17th March, 1952, as a sequel to persistent agitation by the oilseeds trade in India ever since the duties were revised in July, 1951. The duties on various seeds and oils since 17th March, 1952, have been allowed to remain as follows:

Export duty per ton

	Rs.
Groundnuts	150
Linseed	100
Castorseed	150
Linseed oil	200
Other oils	300

Groundnuts led the market this week. Buying from *vanaspati* interests and short crop during the year, which imparted a steady tone during the first three sessions of the week, were subsequently eclipsed by fears of reimposition of export duty in the ensuing Central budget. Bold ready declined from Rs. 39-12 to Rs. 37-12 and Khandesh quality from Rs. 40-8 to Rs. 38-4. Coromandals were done at Rs. 37-12, as against Rs. 39-15. Groundnut oil ready disclosed a loss of As. 14 to Rs. 19-14. Railway receipts fell from Rs. 20-8 to Rs. 19-12. March and April deliveries were lower by As. 7 and As. 8 at Rs. 19-14 and Rs. 20, respectively. May delivery was done at Rs. 20-3. Groundnut oil is quoted in the Continental markets at £145.

Overseas advices for castor oil were discouraging. Castor oil commercial quality, was on offer in the U.S. at 19½ cents, but buyers were available only at 18¾ cents. Castor oil in the Continent was enquired at £155 to £159. Consequently, castor oil commercial quality declined from Rs. 19-2 to Rs. 18-8. Castor oil first Pressure eased by As. 14 to Rs. 19. Castorseeds reacted to the trend in castor oil. May delivery, which opened at Rs. 152 as against Rs. 151-8, fluctuated between Rs. 155-4 and Rs. 146-4, before closing at Rs. 147-8. Madras quality suffered Re. 1-4 to Rs. 31.

The world linseed markets continued to be in favour of buyers. Canadian linseed oil is reportedly quoted at £108 to £110 per ton, as against the quotations for Indian linseed oil at £125. Business was reported done in Uruguay linseed oil at £87 per ton. But, as Indian oil has been out of the world markets for a long time, the trend there did not have any notable effect. Linseed oil was quoted at Rs. 15, as against Rs. 15-2 earlier. Linseed Bold ready disclosed a loss of As. 4 to Rs. 28-12.

Niger and *kardi* seeds were no exception to the general downtrend of the market. *Niger* ready declined from Rs. 30 to Rs. 29-8 and Madras quality from Rs. 30-12 to Rs. 30-8. *Kardi* seeds were done at Rs. 22-6, as against Rs. 23-8.

The following table shows the prices of oilseeds and oil on the 25th inst., as compared with those at the close of preceding two weeks.

	25-2-53	18-2-53	11-2-53

LOW MEDIUM BROKEN TEA DEARER

(Messrs. Forbes, Ewart and Figgis Ltd.)

COCHIN, 21st *February*

Sale No. 4.—The offerings in Sale No. 4 which was held on Tuesday, 17th February, amounted to approximately 9,00,000 lbs. Quality was generally fully maintained and in some cases showed improvement. There were some attractive, bright liquoring low medium and medium teas on offer. There was a good general demand for all types, particularly low medium brokens which were often As. 1 to As. 2 dearer. Medium and good medium descriptions were fully firm at last rates and occasionally dearer. Best liquoring teas were well supported and buyers followed quality. There was a slightly easier tendency for any teas which showed a decline in quality. There was slightly more demand for whole leaf grades and these remained steady. Fannings sold well at firm prices.

Quotations	1953 Rs. a. p.
Low grown Travancore B.O.P.	1 8 0
Medium Travancore B.O.P.	1 15 6
Anaimallais B.O.P.	2 4 0
Best liquoring Nilgiris B.O.P. ..	4 1 0
Well made black leaf O.P.	2 2 0

London Market.—Common and low mediums generally one penny dearer. Others fully firm.

Colombo Market.—Five millions. Market easier, particularly best sorts, where quality

Calcutta Market—Export.—45,000. Good general demand; market dearer by one to one and half annas for commons and low mediums.

Dust.—Strong, but irregular demand. Good liquoring Assams dearer. Strong support for export types. Others a half to one anna easier.

Export Quota.—The market opened at 2¾ pies, but weakened to 2 pies which remains to-day's quotation. A certain amount of business has been done at this figure.

Forthcoming auctions.—Sale No. 5 will be held on Tuesday, 3rd March, 1953.

Dust Sale D.—3,64,000 lbs. Fair general demand; prices irregular and generally easier.

JUTE GOODS STEADY

(From Our Own Correspondent)

CALCUTTA, 24th *February*

Although quotations for jute goods did not make any pronounced headway during the week under review, and business with foreign buyers was not substantial, the market was in a jubilant mood. This was due to the persistence of rumours of an imminent reduction in the rate of export duties. According to these reports, the revision on sacking duty would apppear to be a certainty, and that on hessian duty a possibility. Anyway, one will have to wait till next Friday, when the Finance Minister will present the Budget proposals to Parliament. The fact that only limited business was put through with foreign buyers is understandable, as note has been taken of New Delhi's pronounced silence on the rumours which are continuing, despite being about four weeks old. If, as anticipated in the market, the duties are revised in order to enable hessian and sacking to have a distinct price advantage over the Continental products in foreign markets, it is expected that, unlike the previous two occasions when the duties were revised and buyers did not rush to the market with orders, moderate business with exporters could be put through. For, much remains yet to be bought for replacement requirements. Demand could, however, be maintained at a higher level, if only the full benefit of the expected reduction in duties is passed to the buyer; but such a price level could be struck and stabilised only after periods of buy-and-wait.

B. twills were quoted at Rs. 95-4 for most part of the week, the highest level for the week being Rs. 95-8. Mills were reserved. Australia was a prominent buyer of heavy goods. Business in hessian took place both with America and the United Kingdom, and shippers were interested in some covering business. Britain was particularly interested in wide hessian and narrow hessian bags. After being lower at Rs. 43-4, 40" 10 oz. hessian was pushed up to Rs. 43-10 which could not be maintained and dropped to the lower level. The f.o.b. rate at Rs. 41-8 was lower by four annas. Eight oz. was Rs. 34-12 f.a.s. and Rs. 41-8 f.o.b.

Conditions remained unchanged in the raw jute market, and prices were maintained. Mills were not inclined to give support to the market, but stockists, noting the steadiness in the prices of jute goods, were against lowering their rates. Assam bottoms were offered at Rs. 21-8, Murshidabad district tossa being quoted at Rs. 20-8. Kissanganj jute was priced at Rs. 20-8. Dalcola at Rs. 22-8, and Bimli F.A.Q. at Rs. 16-8. A demand for fixing minimum prices for raw jute has been put forward in the West Bengal Assembly, and this measure is suggested in order to provide the farmer sufficient incentive to grow more jute. The mill industry strongly feels that the present need is the cultivation of the superior quality of jute in greater quantities, and that such an aim can best be achieved, if the farmer is taught better cultivation methods and is provided with fertilisers at a cheaper rate.

FOODGRAIN PRICES ADVANCE

(From Our Own Correspondent)

HAPUR, 24th *February*

The Indian Food Minister declared in the House of the People the other day that Indian stocks of foodgrains had increased last year and prices had since been generally either steady or declining. It has been claimed that the food position was generally satisfactory and the crop prospects were also somewhat better than they had been in the last two years, except in certain parts of Bombay, Madras, Mysore, Hyderabad and Travancore-Cochin. It is now revealed that the recent Food Ministers' Conference had agreed (*a*) to restrict imports of foodgrains to the minimum and limit the allotments from the Centre only to highly deficit areas, (*b*) to launch a strict drive against hoarding, (*c*) to attempt to bring more and more waste lands into cultivation, and (*d*) to make the process of distribution of fertilisers to the peasants more direct.

Reviewing the crop prospects in the different States, the Union Agricultural Minister stated that there was still need for continued imports but not on the same scale as during the two preceding years. The provisional target for 1953 had been set at 2.9 million tons, as against the actual imports of 3.9 million tons in 1952 and 4.2 million tons in 1951. The proposed target for 1953 consists of rice 6 lakh tons, wheat 18 lakh tons, and milo 5 lakh tons; if milo is available at a relative price.

A total quantity of 872,000 tons of rice has tentatively been allocated to seven States during the year 1953. Travancore-Cochin gets 300,000 tons, Madras 250,000, West Bengal 150,000, Bombay 125,000, Hyderabad 20,000 Mysore 15,000, and Delhi 12,000 tons. As regards wheat, the allocations will be finalised only after the prospects of the present wheat crops were clearly known. In the case of millets, certain demands have been put forward by different State Governments and supply will be made to them according to the availabilities against demands.

It is reliably learned that the U.P. Govern-

STOCK & SHARE QUOTATIONS

Abbreviations:—D=Deferred shares. G=Guaranteed shares. P=Preference shares. P.O.=Preferred Ordinary shares. R=Rebate shares. Y=Accounts published yearly. H=Accounts published Haf-yearly. Q=Accounts published once 15 months. T=Company has Debentures. R.L.=Reserve Liability on shares. N=Nominal Quotation. i=Interim Dividend. f=Dividend for first half-year, y=Dividend for the year. x=Ex. Dividend. c.d.=Cum. Dividend.

Shares:—If a company has different classes of shares—as, for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under "Paid-up Per Share."

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12 indicate the months of June and December, respectively. "Reserves" includes general and other reserves and all other funds which a company may have as also depreciation on block items, when this is charged to separate account "Block" represents actual cost of land, buildings, machinery, and all such other items on which depreciation is allowed, less sales, if any, and stands for the gross figure except where otherwise indicated.

Dividends:—Dividends for completed years are calculated at per cent. per annum, but, where quoted for portion of a year, they represent percentages of the dividend on the paid-up share value. For companies closing the books half-yearly in the first three months of the year, and for companies closing their books yearly during the first half of the year dividends are shown as for the previous year.

* The following explanatory notes relate to the abbreviations and marks shown on page 372 in the debentures section:—

■ Option to repay on six months' notice, on any interest date after 31st December, 1951, at 102 per cent. Also redeemable out of a cumulative sinking fund of 1½ per cent. per annum (commencing in 1938) by drawings at 102 per cent. or by purchase at or 102 per cent.

(a) Option of repayment at any time at 3 per cent. premium.

(b) Bearer bonds of Rs. 1,000 each repayable at par.

Bearer bonds of Rs. 1,000 each repayable on 31st July, 1959.

(c) Bearer bonds of Rs. 1,000 each with option of redemption in whole or in part at par on 30th June, 1952, or on any subsequent interest date at one month's notice.

(e) Returnable on or after 31st July, 1950, at Rs. 102-8 or at par after 31st July, 1955, on six months' notice in each case.

Bearer bonds of Rs. 1,000 each with option of redeeming on 3 months' notice at ½ per cent. premium on 1st March, 1954, but before 1st March, 1957, and 1 per cent. premium on or after 1st March, 1957

(h) Option of redemption on or after 1st July, 1949, at par.

(l) Option of repayment at any time at par at any time on or after 30th June 1947 on six months' notice

MARKET GOSSIP

(Concluded from page 327)

That these issues are not academic ones but live issues of practical significance will be clear from the two illustrations which he cited. In the first place, the Bombay engineering industry has been rendered a high cost industry, thanks to the effect of awards by industrial courts. Wages in the engineering industry in Bombay, he said, were 50 per cent. higher than in Calcutta, and added: "I have been informed by the Marine Superintendent of one of the companies concerned that work can be carried out on the Continent or in the U.K. at 30 per cent. less than it can be carried out in Bombay." He pointed out how ships of Indian shipping companies, even of Government shipping companies, were being sent to European countries for repairs and reconditioning. He warned: "Work is going elsewhere, orders are going elsewhere." This is a serious matter, which deserves the consideration of the Government. To appreciate this warning, one has only to place it alongside a similar warning by Bombay traders, who point out that multi-point sales tax is driving Bombay's trade away to other centres. Secondly, the present system of labour regulations affects the volume of employment. Unemployment and casual employment, Mr. Gumley warned, was on the increase in the engineering industry in Bombay. He cited an instance of a small foundry in which the management was contemplating complete closure of the unit, because it was prevented from sending out the categories of workers it did not need, without offending the principle of "last in, first out."

• • • •

It is hardly surprising that Mr. Gumley should have come to the conclusion—the only conclusion to which one is irresistibly driven by the economic effects of labour laws—that the present increase in unemployment was due largely to the Government's labour policy, and industrial court awards, resulting from that policy. Naturally, therefore, he fervently observed: "I look forward to the day when industrial courts will be abolished in favour of collective bargaining." The Government of India has, at long last realised that no labour legislation, however elaborate and well-conceived it might be, is an effective substitute for collective bargaining. But the way to the abolition of vexatious labour legislation is beset by obstacles such as interested labour leadership and the unwillingness of State Governments to relax control over labour matters, purely for political reasons.

• • • •

The Planning Commission has released that portion of its report, which deals with industrial programme. The bare outlines of the programme were given in the original report, published last month. A detailed survey of the needs and projected expenditure in the industrial sphere, both public and private, is furnished by this report, entitled *Programmes of Industrial Development*. The total expenditure visualised in both the sectors is of the order of Rs. 477 crores, of which Rs. 94 crores will be spent in the public sector and the rest in the private sector. Of the total estimated capital investment in the private sector, Rs. 233 crores are for purposes of expansion, the balance of Rs. 150 crores being for replacement and modernisation of the existing plant and machinery.

• • • •

The aforesaid estimates should be considered, bearing in mind two considerations. In the first place, the mere fact that the Commission sets down the amounts that ought to be spent in the private sector does not carry the guarantee that it will be enabled to spend them. Secondly, the men engaged in the private sector have serious misgivings about the figure, Rs. 150 crores, as the amount needed for modernisation and equipment, which they regard as an under-estimate. But the Commission, on its part, has done well to make certain helpful recommendations. Thus, the Commission recognises that the textile industry, for instance, might find it difficult to finance its re-equipment plans. It reveals that the Government has under consideration the question of granting loans to the industry at 4 per cent. interest; this suggestion, it is stated, was made to the Government by the Working Party. Referring to the need for shifting some of the country's sugar factories to regions in which they could function more efficiently, it reveals that the question of granting these factories the necessary facilities, inclusive of financial help, is under the examination of the Government. Thus, within the overall limitations imposed by its preoccupation with the public sector, the Commission has tried to view sympathetically the problems of the private sector.

SURVEY

(Concluded from page 331)

is gratifying to note that the Iron and Steel Controller has already taken steps to ensure that the steel producers supply the right type of billets.

So long as indigenous production does not meet local demand, there is need for imports. The producers have now represented that their capacity is more than sufficient to meet domestic requirements and that imports should be completely banned, particularly the imports of cheap wood screws from Japan as they are likely to ruin the indigenous industry. But the rated capacity at 3,328 tons, is lower—even as it is—by 352 tons than the estimated demand of 3,680 tons in 1951-52. Also, the industry seems to have ignored the consideration that there might be an increase in demand in the coming years. These considerations call for a clear study of the expected trend of demand. Anyway, a complete ban on imports seems inadvisable, for private industry can thrive well only when there is some competition. A complete ban on imports will take away the incentive to improve quality. All that is needed, therefore, is a measure of control on imports in such a way as not to affect the development of the indigenous industry adversely.

BANKING

(Concluded from page 334)

determined attempt to bring about a fall in the when the Government of a country makes a money supply. Fixed deposits and thrift and savings bank deposits, however, have improved from Rs. 2.22 crores and Rs. 1.59 crores to Rs. 2.59 crores and Rs. 1.67 crores, respectively. There seems to have been a small improvement in the Bank's commercial bills business during the year, as witness the increase in bills receivable from Rs. 52.77 lakhs to Rs. 54.64 lakhs and in acceptances and endorsements from Rs. 3.40 lakhs to Rs. 4.77 lakhs.

A contraction of Rs. 1.19 crores in advances and bills purchased and discounted is the most notable feature on the assets side. As this decline is slightly steeper than that in deposits, the ratio of advances to deposits is lower at 68.78 per cent., as against 72.84 per cent. at the end of 1951. Availing itself of the opportunity presented by the general business conditions, the Bank has raised its investments from Rs. 285.15 lakhs to Rs. 300.34 lakhs. The increase is noted mainly in debentures and municipal loans which have gone up from Rs. 9.70 lakhs to Rs. 24.78 lakhs. As in the previous year, the investments are shown at or below cost. The market value of these investments being lower, it is shown in the inner column. But full provision to the extent of Rs. 10.09 lakhs for the difference between the market value and the cost of the investments has been provided. Cash balances also have been strengthened by Rs. 8.57 lakhs, so that the combined ratio of investments and cash to deposits stand at the impressive level of 49.68 per cent.

ALLOCATION OF INCOME-TAX TO STATES

(Concluded from page 335)

where large collections are made to look after the problems of law and order and welfare in respect of industrial labour. The Commission has rebutted this argument by pointing out that the very concentration of industries and businesses leads to increased receipts in the States concerned in the form of stamp fees, sales taxes, entertainment duties, etc.

Among the other bases, the needs basis is suitable for application in the distribution of the proceeds of a shared tax to a limited extent in so far as it relates to the population of the State. The volume of industrial labour basis is considered to be a partial index of either contribution or needs. In regard to the suggested criterion of *per capita* income, apart from other considerations, the non-availability of statistics for individual States itself renders it useless.

Taking all these factors into consideration, the Commission has come to the conclusion that two elements should enter into the appropriate scheme of distribution of income-tax. These are (1) a general measure of needs furnished by the population, and (2) contribution. On a broad view, it has recommended that 20 per cent. of the States' share of the divisible pool should be distributed among the States on the basis of relative collections of States and 80 per cent. on the basis of their relative population according to the census of 1951. In fixing the proportion at 20 per cent. on the basis of collection and 80 per cent. on the basis of population, the Commission has, of course, not gone into the details of the question of allocation. The arbitrary fixation of this proportion is likely to undergo a closer scrutiny at the hands of future Finance Commissions in the light of experience gained by adopting these proportions.

On the basis of the above formula, the share of each State expressed in terms of percentage is as follows:

Assam 2.5; Bihar 9.75; Bombay 17.50; Hyderabad 4.50; Madhya Bharat 1.75; Madhya Pradesh 5.25; Madras 15.25; Mysore 2.25; Orissa 3.50; P.E.P.S.U. 0.75; Punjab 3.25; Rajasthan 3.50; Saurashtra 1.0; Travancore-Cochin 2.5; Uttar Pradesh 15.75 and West Bengal 11.25.

As regards the share of Part C States, the Commission has recommended that it should be 2.75 per cent. of the net proceeds of income-tax instead of at one per cent. as at present. The Commission has arrived at this figure by allocating to the Part C States taken together the share which would have accrued to them collectively had they been entitled to a share of income-tax on the same basis as that adopted by it for the Part A and Part B States.

The Commission has recommended that the States of Bihar, Bombay, Madhya Pradesh and West Bengal, which are receiving "revenue gap grants" in respect of "merged areas," are not to receive these grants. For the percentages assigned to each of these States have been arrived at after taking into account the population of and the collection in the merged areas.

MARKET REPORTS

(Concluded from page 361)

mitments to only 18 big towns having a population of over one lakh.

Foodgrains in markets in Uttar Pradesh continued very steady and there was some further rise in wheat, rice and gram prices. Free market supplies were very small and this accounted for the steadier market tone. The latest quotations in the Hapur market are: Wheat Rs. 23, gram Rs. 20, rice: *basmati* Rs. 34-8, sela Rs. 29, and coarse Rs. 23, barley Rs. 16, *bejhar* Rs. 16, maize Rs. 14-12, *bajra* Rs. 14-8, *juwar* Rs. 13-2 to Rs. 13-12, *guwar* Rs. 13-4, peas Rs. 17, *arhar* Rs. 17, *urd* Rs. 21-8 and *moong* Rs. 22.

SUGAR DULL

(From Our Own Correspondent)

HAPUR, 24*th February*

Sugar markets in west U.P. remained very dull and quiet. There was very little demand from consuming centres. Railway booking to all sides was difficult. Prices remained stationary.

Local mill delivery quotations are: Jaswant Rs. 28, Modi Rs. 28 to Rs. 28-4, Daurala Rs. 29-4, Mansoorpur Rs. 29-2, Buland (Rampur) Rs. 30, Raza (Rampur) Rs. 29-12, Amroha Rs. 27-6, and Simbhauli Rs. 28-8. The monthly (January, 1953) average wholesale prices of sugar in different markets were: Ambala Rs. 30-6-6, Amritsar Rs. 30-8-6, Delhi Rs. 31-1, Jullundur Rs. 29-5, Agra 29-8, Hapur Rs. 29-2, Kanpur Rs. 28-14, Mathura Rs. 30, Meerut Rs. 29-6, Muzaffarnagar Rs. 28-13, Patna Rs. 30-11, Calcutta Rs. 29-14, Gauhati Rs. 35-14, Cocanada Rs. 30-12, Madras Rs. 33-8, Bombay Rs. 33, Bhavanagar Rs. 33-10, Nagpur Rs. 32-10, and Indore Rs. 29-12.

LINSEED ADVANCES

(Messrs. A. Bradley & Co.)

CALCUTTA, 23*rd February*

With a firm undertone prevailing throughout the past week, trading in linseed has broadened slightly and prices have registered an advance. Up-country markets are steady and supplies are not freely available. Local sellers, therefore, are reserved and forward delivery is now quoted at a higher level, with buyers rather reserved at these enhanced rates, although local crushers for early as well as forward delivery have shown a fairly keen interest. The oil section has been firm and activity has slightly improved, owing to small enquiry from Australia, with prices somewhat increased. Latest quotations are: February-March Rs. 22 and May Rs. 20-4 per maund.

HIDES AND SKINS UNCHANGED

(From Our Own Correspondent)

MADRAS, 23*rd February*

Trading in hides and skins has remained more or less unchanged. Demand has not been very assertive, despite several enquiries. Importers have kept out of the market, beyond making a few selective purchases at sellers' limits. Top grades and lowest grades have continued to attract attention. Dressers report that leather prices are low and expect easier tendency in the kip market. There has been good demand for tanned cow calf for early shipment. Buff calf and buff heavies are neglected.

In the tanned skins section, the withdrawal of the import licences in Japan has upset the tanned sheep market and prices have declined by As. 4. In sympathy, prices of tanned goat also have declined by As. 2.

Notices

THE SVADESHI MILLS COMPANY LIMITED

NOTICE

THE TRANSFER BOOKS OF THE SVADESHI Mills Co., Ltd., will be closed from Tuesday the 24th March to Wednesday the 22nd April, 1953, both days inclusive.

By Order of the Board of Directors,
TATA INDUSTRIES LTD.,
Managing Agents,
T. V. BADDELEY,
Director.

BOMBAY, 23*rd February*, 1953.

THE TATA MILLS, LIMITED

NOTICE

THE TRANSFER BOOKS OF THE TATA Mills Limited will be closed from Tuesday the 24th March to Wednesday the 22nd April, 1953, both days inclusive.

By Order of the Board of Directors,
TATA INDUSTRIES LTD.,
Managing Agents,

UNION BUDGET FOR 1953-54

THE Government of India's Budget for 1953-54, presented to Parliament last week by our distinguished Finance Minister, Mr. Chintaman Deshmukh, was not without a few surprises. The biggest of them was that he was able to present a surplus revenue budget at a time when he was expected to show a big deficit. But, on an analysis of the Budget, one finds that the achievement is not a creditable one after all, for the surplus is quite unreal, being the result of window-dressing. A certain amount of window-dressing is a customary feature of all budgets, but usually this art is so adroitly practised that the extent of manipulation of figures will not generally be known, until the revised estimates, for the year for which the budgets are presented, become available. In the case of the Budget under reference, Mr. Deshmukh cannot claim credit even for this, because the window-dressing has been so poorly done that even a layman who cares to study the budget statement will notice it. If Mr. Deshmukh could not display much skill in this respect, it is no reflection on his ability; it is a striking commentary on the state of the country's finances and the enormous task which the present Government has taken upon its shoulders.

The fictitious nature of the surplus on revenue account has become so very obvious, because of the inclusion under receipts of a doubtful, though not necessarily bad, debt, amounting to as large a sum as Rs. 18 crores, representing the two instalments of debts due from Pakistan under the Indo-Pakistan financial settlement on the public debt of undivided India. To treat repayment of capital debt in instalments as a revenue receipt, instead of regarding it as a capital item, is itself a wrong procedure and a bad precedent. At best, only the interest due on this debt can be regarded as a revenue receipt. The fact that this procedure was followed last year is no excuse for its repetition. It may be argued, with some justification, that, if the annual instalments due from Pakistan are not taken into account in India's budget, the Pakistan Government might think that India is not keen on recovering the debt due to it and that it has itself written off the whole thing as a bad debt. But that purpose could very well be served by including it under the capital account. Incidentally, this shows that there is no clear cut distinction between the revenue budget and the capital budget and that it is expediency rather than logic or set principles that determines the inclusion of a particular item under either of these two divisions.

If due consideration is given to the present state of world trade and domestic business conditions, one may be inclined to feel that Mr. Deshmukh has erred on the side of optimism in estimating the revenue by way of customs, and income and corporation taxes. He has, of course, provided for a drop of Rs. 7 crores under customs and of about Rs. 10 crores under taxes on income, over the revised estimates for the current year. The general view is that the drop may be more. One cannot, however, be dogmatic about these matters, because there are so many imponderable factors, including the fickle-minded monsoons, to be taken into account. In so far as the taxes on income are concerned, despite the recession in business, it should be possible to collect the amount Mr. Deshmukh has estimated, provided the tax collecting machinery is honest, active and efficient enough to reduce the extent of tax evasion that is going on in this country. Perhaps, Mr. Deshmukh is confident that he can effectively whip up his tax collectors. His keen desire to close the loop-holes through which the Centre loses income-tax revenue is evident from the inclusion in the Finance Bill of a suitable provision for preventing people from buying up speculative losses. This provision is, of course, there in the Income-tax Amendment Bill, but he is not prepared to wait till this measure is duly passed by Parliament. His impatience in this respect is understandable, not only because of the Government's need for more money, but also because, in the past year, which is the year that matters so far as the Budget is concerned, there have been heavy speculative losses which may be utilised by the assessees as a set-off against their normal trading profit. Mr. Deshmukh, therefore, deserves to be supported in introducing, in the Finance Bill, this amendment to the Income-tax Act which is long overdue. It is good for the country as a whole, as it will help keep down excessive speculation.

The absence of additional imposts of a heavy nature in the Budget, the small relief afforded to the low income group and the reduction in the export duty on sackings have won for the Budget a large measure of support from a wide section of the public. But the public memory is short. It was only a few months back that the Government imposed additional taxation of the order of Rs. 10 crores by way of an increase in the excise duty on sugar and by introducing a special excise of 3 pies on all varieties of cloth. It looks as though Finance Ministers are now following a new technique, namely, to introduce measures for new or additional taxes in stages in the course of the year and to make only minor changes in their Budgets to show to the public that they are very considerate to it. If one takes into account the increases in the sugar and cloth excises, the proposed increases in some of the postal charges which, fortunately, do not affect the man-in-the-street very much and the adjustments made in the import duties, all of which are detailed elsewhere in this issue, one will find that the additions to the existing burden of taxation are nearly Rs. 16 crores. Actually, it will be more than that, because the readjustment of the excise duty on cloth from *ad valorem* or specific duties to specific duties only has been made in such a way as to raise the rate of excise on fine counts by more than 100 per cent., that is, from about 7 pies per yard to 15 pies per yard. Inasmuch as the fine count goods manufactured by the textile mills constitute a substantial percentage of the total production, the Finance Minister will net in more money from this source than he has estimated. Further, by withdrawing the option to the mills to pay either on the basis of *ad valorem* or specific rates, whichever is lower, the Finance Minister has been clever enough to protect the Exchequer, to a considerable extent, against the downward trend in prices of cloth.

By raising the exemption limit for personal income-tax from Rs. 3,600 for individuals and Rs. 7,200 for Hindu undivided families to Rs. 4,200 and Rs. 8,400, respectively, the Finance Minister has tried to render some assistance to the lower income group in the middle class. But the extent of relief is only negligible, the loss of revenue to the Government being no more than Rs. 82 lakhs. In the long run, even this loss, according to the Finance Minister himself, will be more than made good by improvement in tax collections as the change proposed will give some relief to the Income-tax Department and enable it to devote more time to examine the cases of bigger assessees. This explanation of the Finance Minister, we may add in passing, is not so convincing to many, inasmuch as the task involved in collecting taxes from this range of taxable income group is not onerous, the tax being deducted at the source by employers and promptly paid into the Government's coffers. Be that as it may, to the individual within this income slab, the relief works out to about Rs. 100 per year, but this might be more than offset if the method chosen by the Finance Minister for financing the development programme were to result in higher level of prices, as it threatens to do. The reduction in the export duty on sacking from Rs. 175 per ton to Rs 80 per ton is undoubtedly a welcome step and should stimulate overseas demand for this manufacture. The jute mills, for their part, must reciprocate this prompt gesture of the Government by taking steps to improve the quality of their sackings which has considerably deteriorated in recent months, if not years, partly due to the poor quality of raw material used and partly to the anxiety of manufacturers to reduce the cost of production.

The object of the Finance Minister in effecting a few changes in import duties on luxury and semi-luxury goods is said to be to get some additional revenues and, in order to realise this object, he has relaxed the restrictions on imports of these items to some extent. An incidental advantage of this step is, it is stated, that it will act as a stimulus to the indigenous manufacturers of the same goods to improve the quality of their product. It is doubtful whether both these objectives will be realised in full. In the first place, the duties on these goods have been stepped up to such high levels that their import may not materialise even to the limited extent envisaged by Mr. Deshmukh. Secondly, the indigenous manufacturers of these goods may raise their prices to the extent of 50 per cent., if not more, of the increase in the import duty and thus try to take advantage of what is literally a closed market for them. The relief in the import duties on certain types of essential drugs, infant food, etc., is a step in the right direction. The enhancement of the postal fees for parcels, packets, registration and insurance may add to the cost of postage to the business sector, but it must be conceded that the Finance Minister has provided a convincing case for placing this impost on it.

The most disturbing trend of the Budget estimates is the rising level of expenditure. There seems to be no end to the upward curve of expenses. The effect of the abolition of food subsidy, resulting in a saving of Rs. 21 crores and of the additional taxation to the tune of Rs. 16 crores, on the budgetary position of the Government should have been a real surplus of Rs. 37 crores. Instead of that, we have an unreal surplus of only Rs. 45 lakhs. Why has this been so? A reference to the Finance Minister's speech, published elsewhere in this issue, will provide the explanation. It will be noted therefrom that the great bulk of the increase in civil expenditure is of an unproductive nature which the country can hardly afford at this juncture. A typical instance of this is the subsidy of Rs. 6 crores for the development of the handloom industry and of Rs. 6.33 crores for Community Projects. The benefits of such large expenditure to the community as a whole are of a dubious nature. The experience that one has gained so far in these matters leads to the conclusion that the beneficiaries in most of these cases are the middle men posing themselves as selfless social workers and co-operators. Instead of throwing away good money on such schemes of doubtful utility, the Government will do well either to utilise it for implementing projects which promise tangible results in the form of increased production of wealth or for giving relief to the private sector which is sorely in need of resources for development and which can more effectively and efficiently increase the wealth of the country.

Apart from the developmental expenditure, more than half of which is unproductive, the expenditure on administration and defence continues to remain on the high side. The latter alone accounts for a little less than 50 per cent. of the total. If the large amounts that are being spent on police by the States are added to this amount, it will be seen that the country is paying a heavy price for ensuring security. Perhaps, all this is inevitable in the present international and internal situation. It is not possible for us to say to what extent this expenditure should or could be curtailed, except to stress the importance of the need for constantly exploring ways and means of reducing the monetary cost of security for the people against aggression. But, so far as the civil administrative expenditure is concerned, there is both need and scope for applying the axe by the Centre and the States alike. In saying this, we know that we are knocking ourselves against a concrete wall, for no Government in this country is willing to take to this unpopular course. Yet, we cannot help saying it, because the question of economy is as important as that of raising resources for the implementation of the Five-year Plan. The least that the Governments can do is to ensure that the money that they are spending now is well spent and that wastage is avoided. This requires an effective check on the expenditure of Governments, a feature conspicuous by its absence, especially at State levels.

If the Budget is viewed in the context of the Five-year Plan, it results in mixed feelings. Mr. Deshmukh claims that the Centre has done its part in implementing the Plan. This is only partly true. He has undoubtedly succeeded in maintaining the level of the budgetary resources of the Centre as envisaged in the Plan, even after making allowance for the inclusion of a doubtful source of receipt, namely, the repayment of the debt due from Pakistan. But here he could have done better. He could have, for instance, reintroduced the salt duty and thereby given a lead to the States that are holding on to Prohibition, and also to others for exploring new sources of taxation. On the expenditure side, he should have echewed additions to developmental expenditure which are not immediately productive. He should have given more positive reliefs to the private industrial sector so that the latter could be enabled to save, and invest such savings for increasing the country's productive capacity. This could have been done by rationalising the taxation structure and by reducing Governmental expenditure on administration, as well as on social services. We may be told that all this is politically inexpedient. Political considerations are important, but they should not become so paramount as they are at present. No political structure will endure, unless it is based on sound economic considerations. Unfortunately, the large majority which the Congress Party now commands in Parliament and the State Legislatures has made it blind to this realism. It looks as though it will become, sooner or later, a victim of its own false notions of a Welfare State and meaningless fads.

The relationship between the capital expenditure, as provided in the Budget, and the Five-year Plan is not quite clear, except the vague indication by the Finance Minister that the capital expenditure broadly follows the Plan suggested by the Planning Commission. Perhaps, he will throw some light on this in the course of his reply to the Budget debate. In one respect at least, the Budget is not in consonance with the Plan, namely, in regard to the scale of deficit financing to be incurred in the coming year. So much has already been said on this subject, not only in this journal but also elsewhere, that there is hardly anything fresh to add to it. Suffice it to say that there is no justification for resorting to this form of inflationary finance on so large a scale as Rs. 140 crores in the next year. The present economic conditions in the country are by no means so comfortable as to absorb such a large dose of additional purchasing power, without seriously upsetting the fair amount of stability that has been achieved after several years of severe hardship. The temporary fillip it may give to trade and industry will soon be offset by a rise in the cost of production which in turn will have adverse effects on the country's balance of payments position, ultimately undermining the external value of the rupee.

By providing for deficit financing of the aforesaid magnitude even in the third year of the Plan, when there are sources of revenue which, if tapped, will reduce this deficit to a manageable proportion, the Government has clearly indicated that it proposes to follow the easy, but the most costly, method of financing the Plan. This is all the more clear from the long period of two years given to the newly appointed Taxation Enquiry Committee to submit its recommendations. This will offer a convenient excuse to the authorities either for not tapping additional sources of revenue or for not giving any relief to the deserving sectors in the country's economy. To raise finance by exercising the right of the State to create money is the easiest thing to do for the powers-that-be, but its cost to the public will be terrible. It is the most inequitous form of taxation, in that it will make the rich richer and the poor poorer. The irony of it is that this weapon of taxation is being wielded by the Party which has as its objective the levelling down of the great disparity in incomes and possession of wealth in this country. We are, of course, assured by the Finance Minister that he will keep a constant watch over the effects of deficit financing on the economy of the country. But the situation may get out of hand in spite of his best efforts, for, even if we concede, for argument's sake, that the economic climate is somewhat favourable for deficit financing, the political climate is not. If development through deficit financing is to succeed, the administrative machinery must be highly efficient and incorruptible, the public must be ready to co-operate, and the State Governments should not pull in opposite directions but be amenable to control by the Centre. These prerequisites are not there, at any rate not to the extent that is absolutely necessary, as is evident from the concluding paras of the speech of the Finance Minister himself. If the Government comes to the conclusion that it cannot, for political, sentimental and ideological reasons, raise additional resources by exploring new sources of taxation and by rationalising the existing tax structure, and if it realises that sufficient assistance will not be forthcoming from foreign countries, it will be well advised to revise the Plan for the economic development of the country rather than resort to large doses of inflation which will surely imperil the stability of the country's economy.

INDIANS IN FOREIGN FIRMS

THE figures of the survey of Indians in non-Indian firms, released this week, belie the fearful description of the conditions in these firms, which found expression through a memorandum submitted by the Indian employees of these firms. These returns, which have been received from 1,060 predominantly foreign-controlled concerns, show that, in 1952, although more than 75 per cent. of the superior posts carrying a salary of Rs. 1,000 and above were occupied by non-Indians, the position was better in the two lower income groups, namely, Rs. 300-499 and Rs. 500-999, in which Indians formed 99 per cent. and 85 per cent., respectively, of the total incumbents. It is also gratifying to note that there has been a gradual increase in the percentage of Indians employed in foreign-controlled companies since 1947. Between 1947 and 1952 the percentage of Indians employed in these firms increased from 96 to 99 in the lowest salary group, from 58 to 85 in the middle salary group and from 7.5 to 24.3 in the highest salary group, that is, the group carrying a salary of Rs. 1,000 and above.

The actual percentage of non-Indians employed in the highest salary group in the various trades and industries in 1952 over the corresponding percentage in 1947 was as follows, with the figures in brackets showing the position in 1947: Banking, 86 (98); insurance, 72 (87); transit and transport, 72 (95); automobile, 57 (82); printing, publishing, etc., 67 (85); chemicals, drugs, etc., 68 (91); metals, etc., 66 (100); machinery, engineering, etc., 70 (92); leather and rubber, 57 (84); public utility companies, 52 (85); managing agencies, 75 (90); merchants, agents, etc., 80 (93); cotton mills and presses, 77 (98); planting companies, 93 (99); coal companies, 63 (80); oil companies, 60 (87); other minerals, building materials, etc., 77 (99); sugar and breweries, 84 (97); all other companies, 72 (87). It will be seen that in all the occupations the position has improved in favour of Indians.

A point to be noted here is that some 300 foreign-controlled firms did not submit their returns in response to the Government's request. These are mostly trading and agency firms, planting companies, insurance companies, etc. About 90 per cent. of non-Indians employed in foreign concerns are U.K. nationals. Americans and Swiss account for another 5 per cent. and the rest consist of several other nationalities, mostly Europeans. The number of non-Indians (under all the three groups) increased from 7,162 in 1947 to 7,653 in 1952. The number of U.K. nationals employed in these companies increased from 6,495 in 1947 to 6,820 in 1952.

It is against the above background that the question must be viewed in its correct perspective. Three considerations call for notice, in this connection. In the first place, the number of Indians in the highest salary group is increasing. There were only 451 Indians (5,507 non-Indians) in this group in 1947; in 1952, there were, in this group, 2,137 Indians and 6,661 non-Indians. It is true that the number of non-Indians employed in this country has gone up, but it is also equally true that the increase in the number of Indians employed is greater than that in the case of non-Indians. Secondly, it is not as if the problem is one of supreme national importance, since the number of non-Indians in the highest grade is not very large, considering the size of this country. Their replacement by Indians is not going to mean any great increase in national prosperity. Thirdly, commercial employment, unlike Government employment, is governed by certain standards of conservative tradition and efficiency. It is not possible to effect changes as frequently or as rapidly as in a Government department. The change-over from non-Indian personnel to Indian personnel has necessarily to be slow. And the change, as we have emphasised in the past, is not best effected through legislative compulsion or omnibus Government restriction. Mr. T. T. Krishnamachari rightly said, in reply to a question in Parliament last week, that, although the Government's policy was to encourage the employment of Indians in foreign concerns, it was "rather difficult for Government to tell a firm to promote A or demote B or ask them to put C in a different category." After all, commercial firms must be allowed the right of choice of personnel, for they know best what is best for them. But, within these obvious limits, much could nevertheless be done through persuasion to encourage the firms to appoint Indian personnel of suitable type to an increasing extent in positions of responsibility. The foreign managements, on their part, will be well advised to strengthen the hands of the Government in allaying public agitation by promoting Indian personnel having the requisite qualifications and experience to higher positions, as and when the opportunities for such promotion present themselves. There might be difficulties in implementing this suggestion straightaway, since experienced men, in whom the managements could safely repose confidence, might not always be available. But it should certainly be possible to recruit able young men and train them to occupy higher positions in due course, for there is no dearth of talent in the country. It is, however, heartening to note that many of these firms understand as well as appreciate the need for effecting Indianisation of the superior posts.

SHARES REACT FAVOURABLY TO BUDGET

CURB ON SPECULATION—RELIEF TO INVESTING COMPANIES—OUTLOOK FOR STEEL

THURSDAY, 5 P.M.

MARKET GOSSIP

THE great enthusiasm with which the Share Market greeted the Budget indicates that most of the operators were pleasantly surprised by the absence of any new taxation and the extent to which deficit financing is contemplated by the Finance Minister. Although it was more than once indicated, in these columns, that the Budget was unlikely to contain any new taxation and that deficit financing would be the main plank on which the Plan would be implemented, operators were not ready to believe it. In other words, the market was quite prepared for some additional taxation, although it does not mean that any such increase would have been welcome to it. The inference which the market has drawn from the latest Budget proposals is that the Finance Minister is unlikely to tax the private sector any further to implement the Plan and, as such, the fears generated by the proposals contained in the Five-year Plan are unwarranted.

* * * *

The market further feels that, once a beginning is made with inflationary financing, it will be difficult for the authorities to stop it, until the projects begun with such finance are completed. On this line of reasoning, some in the market are of the view that equities must steadily harden. Theoretically speaking, this argument has logic in it. But it ignores the possibility of the Government taking corrective measures when the full impact of deficit financing comes to be felt. If, for instance, the Government finds that industries are making large profits, as a result of its developmental expenditure, it may introduce appropriate measures to mop off the surplus profit, as it did during the war years. It may statutorily check the level of dividends and raise the rates of taxation. It may reintroduce price and production controls. Already, the Government has fired the first shot against speculators, by including a provision in the Finance Bill which seeks to prevent them from buying up speculative losses. This has created considerable consternation among the speculators, as we shall presently show. One must, therefore, proceed cautiously in anticipating the effects of deficit financing on investments in shares and stocks. In fact, it is just possible that the Government will be sensible enough not to resort to deficit financing on a scale which will seriously injure the economy of the country. In any case, it will be several months before the signs of inflation come to be noticed again.

* * * *

The Finance Minister's explanation of the ways and means borrowings of the Government is rather vague. It is clear that the 3 per cent. 1953-55 loan will be repaid. The outstandings of this loan amount to Rs. 115 crores. As against this, he has provided for a borrowing of only Rs. 100 crores. This means that he is prepared for a net outgo of Rs. 15 crores. He will, however, try to rope in this amount also by offering a cash-*cum*-conversion loan, if conditions in the market are favourable for this purpose. He may even try to borrow more, but, if he fails to do so, he will resort to the issue of Treasury Bills. This does not necessarily mean that he will confine his short-term borrowings to the commercial banks alone. A sum of Rs. 110 crores is too large to be raised from the banking sector, unless business conditions happen to be very poor, which is very unlikely. The great bulk of this borrowing will, therefore, have to be from the Reserve Bank, in which case it will be inflation, pure and simple. If this process is carried too far, money may become cheap again. But, if the creation of new money is confined only to Rs. 100 crores, it may not have any appreciable effect on the present level of yields on Government securities. At best, it may have a slightly steadying influence, unless the State Governments are allowed to borrow at higher rates of interest. The yields on equities also may stabilise in the neighbourhood of 6 per cent. for first class shares, for, having seen higher yields in the past one year or so and having suffered heavy capital depreciation in recent years, investors may not readily come forward to pay appreciably higher prices. A point that needs to be noted here is that much of the rise in prices, witnessed after the introduction of the budget, has been due to speculative activity, with investment buying being next to nothing. And such gains are generally of a short-term nature only.

* * * *

The provision in the Finance Bill, which relates to speculative losses, has, naturally enough, been received with misgivings in market circles. The net effect of this provision is that losses, arising from speculation will not be allowed to be set off against profits and gains of business, profession or vocation, other than the profits arising from speculation itself. Two explanations are added to the relevant clause in the Bill. They are:

"*Explanation* 1.—Where the speculative transactions carried on are of such a nature as to constitute a business, the business shall be deemed to be distinct and separate from any other business.

"*Explanation* 2.—A speculative transaction means a transaction in which a contract for purchase and sale of any commodity including stocks and shares is periodically or ultimately settled otherwise than by the actual delivery or transfer of the commodity or scrips.

"Provided that a contract in respect of raw materials or merchandise entered into by a person in the course of his manufacturing or merchanting business to guard against loss through future price fluctuations in respect of his contracts for actual delivery of goods manufactured by him or merchandise sold by him shall not be deemed to be a speculative transaction."

* * * *

If market men take exception to this proposal, it is because they are afraid that it will reduce still further the already limited flow of funds to the market. The objections to this proposal have been summed up by the Bombay Stock Exchange which, in a memorandum submitted to the Finance Minister, says that the proposal is repugnant to the general scheme of the Income-tax Act which conforms to the generally accepted principle that income, profits and gains, no matter what their source, really accrue to one and the same person and should be treated as a single unit for purposes of taxation. It recognises that the proposal is intended to remedy the evil of the buying up of speculative losses, practised by tax-dodgers. But it insists that the evil is not so rampant as it was formerly, and that, in any case, it is wrong to penalise market operators for the sins of a few tax-dodgers. It questions the validity of the definition of speculation (*vide* explanation 2 above) and says that assessees might enter into forward contracts and decide, only when the contracts mature, whether to take delivery or not, and that they frequently arrange to take delivery in respect of admittedly speculative business. Referring to certain drafting ambiguities in the Bill, it says that although the amendment provides that a speculative loss can be carried forward, it is not clear whether such loss can be set off against speculative profit in the same trade or in other trades. It also wonders whether the proviso to explanation 2 will cover all *bona fide* hedge contracts.

* * * *

The Stock Exchange memorandum lists three "harmful consequences" of the proposed amendment. In the first place, it will "kill all business initiative." Secondly, people will not be inclined to enter the stock market, because their capital resources will be exhausted, if the loss they suffer is not allowed to be set off against their other income. Thirdly, it will affect the brokers' business since their freedom to "trade and do business wherever and whenever an opportunity for profit exists in the market" is taken away from them.

* * * *

A notable provision in the Finance Bill, 1953, relates to the exemption from super-tax, which is sought to be given to certain companies, under specified circumstances. This provision, which is being introduced as section 50A of the Income-tax Act, states:

"*Exemption from super-tax of certain dividends*: (1) No super-tax shall be payable by a company on such part of its total income as consists of dividends received from an Indian company formed and registered after the 28th day of February, 1953, where

"(i) the Central Government is satisfied that the Indian company is wholly or mainly engaged in an industry for the manufacture or production of any one or more of the following, namely:

"(1) Coal, including coke and other derivatives; (2) iron and steel; (3) motor and aviation fuel, kerosene, crude oils and synthetic oils (not being oil exploration); (4) heavy chemicals, including fertilisers; (5) heavy machinery used in industry including ball and roller bearing and gear wheels and parts thereof, boilers and steam generating equipment; (6) machinery and equipment for the generation, transmission and distribution of electric energy; (7) non-ferrous metals including alloys; (8) paper including newsprint and paper board; (9) internal combustion engines; and (10) power-driven pumps as specified in the First Schedule to the Industries (Development and Regulation) Act, 1951, and

"(ii) the income of the Indian company would have been exempt under the operation of section 15-C if the provisions of that section had been applicable thereto.

"(2) The exemption specified in sub-section (1) shall apply also to dividends payable to a company in respect of any fresh capital raised by an Indian company after the 28th day of February, 1953, by public subscription for the purpose of increasing the production of, or starting a separate unit of, any one or more of the items specified in clause (i) of sub-section (1)."

* * * *

The tax relief contemplated in the Bill will benefit, as a study of the above will show, a number of companies engaged in the production of vital commodities and equipment. Although this concession deserves to be widely welcomed, there will be regret that it refers only to a small group of industries. In its memorandum on the Budget, the Indian Merchants' Chamber has raised this issue, and points out that the relief is unduly restrictive in scope. Under the present arrangement, the dividends from the investment made by joint-stock companies in other companies bear "double" corporation tax, in that both, the company paying the dividend and the investing company which receives it, have to pay corporation tax. It rightly urges that this procedure, which constitutes "double taxation" of the same income, is contrary to accepted ideas of taxation. It says: "Both for removing this tax-inequity and in order to encourage increased investment by joint-stock companies in the capital of industrial joint-stock undertakings, the relief should be extended in such a manner as to exempt completely all dividends earned by the investing company from corporation tax. There should also be no question of the relief being confined to selected industries, for such invidious distinctions in the matter of tax relief are undesirable."

* * * *

There has been a spate of dividend announcements on textile shares this week. Of the three textile dividends for 1952, announced this week, one represents a notable increase, another a notable decline, while, in the third case, the level has been maintained. A distribution of a dividend of Rs. 12 together with a bonus of Rs. 5 per share of Rs. 100 each has been recommended by the Directors of the Gokak Mills, Ltd., for the year ended 31st December, 1952. This compares with a dividend of Rs. 14 paid for 1951 and Rs. 10 for 1950. The dividend part of the return to the shareholders has thus been reduced from Rs. 14 to Rs. 12. In thus splitting the distribution into dividend and bonus for 1952, the Directors have made a departure from the practice they had followed in the previous four years. The last occasion when they declared dividend and bonus was for the year 1947. Nonetheless, the total return for the shareholders for the past year is higher than for the previous four years and is restored to the 1947 level when they paid a dividend of Rs. 14 and a bonus of Rs. 3 per share. Another interesting feature about the distribution for 1952 is that the dividend has been enhanced when textile mills are generally expected to have experienced adverse business conditions in 1952. It is, therefore, not surprising that the share market has responded well to the announcement with a rise of Rs. 15 in these shares to Rs. 230. A final dividend of Rs. 12 per share of Rs. 100 has been declared on Kohinoor Mills' shares for the year 1952, which, with the interim distribution of Rs. 6 paid in September, 1952, brings the total distribution for the year to Rs. 18 per share which represents a reduction of Rs. 7 from that paid for 1951. This additional distribution of Rs. 7 paid for the previous year represented a bonus distribution. The latest dividend announcement is from the Directors of the Bombay Dyeing and Manufacturing Co., Ltd., who have decided to maintain the final dividend on the Company's shares for the year ended 31st December, 1952 at Rs. 12-8 per share of Rs. 250 each. The interim dividend of Rs. 7-8 per share paid in September, 1952 was also the same as that for 1951, so that the total dividend of Rs. 20 per share is being repeated.

* * * *

There has, of late been some decline in steel prices. For instance, Belgian export prices of steel, which are the most sensitive barometer of the market trends, are now quoted at around $85 a ton as against $140 a ton at the top of the boom, and $92 at the end of 1952. The fall, however, has so far not created any anxiety in the Belgian markets, for several reasons. First, Belgian exports have continued to hold up well, as American importers are still buying motor body sheet from Belgium. Germany too has been purchasing steel from Belgium and, what is more, there are still orders on the Belgian books. Although the rate of fresh orders has been coming down, and delivery periods offered by Belgian exporters have been reduced to a maximum of two to three months, the Belgian steel trade seems to be interpreting the trends more as adjustment of normal levels than as any indication of a coming recession. This view has set many shrewd observers in the European market to examine the outlook for world steel. There appears to be considerable difference of opinion among them.

* * * *

One school of thought appears to be bearish. It points to the rapid increase in the world steel production in recent years. It has risen by over 70 million long tons in recent years to 208 million tons in 1952. If the present steel plans of different countries come to fruition, the total may go up to 270 million tons by 1957. Secondly, in the U.S.A., the steel-making facilities have begun to outpace demand and in the next two or three years, it is believed that the world market may feel the pressure of American surplus steel. The first markets to be affected by this surplus are considered to be Canada and Latin America, both of which are now a good market for European steel. The withdrawal of these countries is expected to affect adversely the European markets. Besides, if German domestic steel output increases by over 2 million tons, as now planned, and if the European Coal-Steel Community and Britain succeed in achieving their

SHARE MARKETS ACTIVE

BULLISH REACTION TO BUDGET PROPOSALS

(From Our Own Correspondents)

BOMBAY, *5th March*

THE Stock Exchange buzzed with activity during the week under review. The Union Budget proposals for 1953-54 being in accordance with the market's earlier expectations, the pre-budget lull on Thursday last gave place to mild buoyancy in the regular noon session itself on Friday just before the announcement. In fact, the buying support which was in full evidence then reflected with optimistic attitude towards the Budget proposals. In the after-budget session that day there was almost a scramble for shares, as the operators construed favourably the absence of any fresh direct taxation and the emphasis on deficit financing. As a result, spectacular rises were recorded in every section of the market. In the subsquent sessions of the week, equities moved to new high levels on strong speculative buying accompanied by nervous covering by some short sellers. It is reported that one of the erstwhile leading bull operators in bullion who had liquidated his holdings in that market entered the Stock Exchange and gave good support to the market. Some of the leading bull operators who saw smart gains in a short period were inclined to book profit. But it is stated public support was still not forthcoming. On balance, however, the entire list of equities recorded spectacular gains.

Hectic buying and feverish short-covering characterised trading in steel shares which, in values, rose to new high levels not seen for several months. Tata Defds. were lifted up from Rs. 1,740 to Rs. 1,825 on Monday this week. After a setback to Rs. 1,805 on Tuesday, they regained fresh strength to move up to Rs. 1,853-12—the highest level since 3rd March, 1952—before winding up at Rs. 1,851-4. Tata Ordinaries recorded a gain of Rs. 19-8 at Rs. 326-8. Indian Irons closed at Rs. 25-10½, after having risen from Rs. 24-12 to Rs. 26.

There was a resurgence of buying activity in textile shares. Strident advances were recorded in almost every scrip. Bombay Dyeings displayed remarkable strength with a rise from Rs. 376-4 to Rs. 402-8, a gain of Rs. 26-4 over the week. The Directors of the Company propose to maintain the final dividend for the year 1952 at Rs. 12-8 per share. Kohinoors rebounded from Rs. 288-8 to Rs. 314. The final dividend of Rs. 12 on these shares paid for 1951 is proposed to be maintained for 1952 also, making the total dividend for the year Rs. 18 per share. Central Indias jumped by Rs. 14 to Rs. 167, Centurys by Rs. 21-4 to Rs. 282-8 and Finlays by Rs. 18 to Rs. 315. Gokaks rallied from Rs. 215 to Rs. 230, reflecting the market's reaction to the stepping up of the dividend for 1952 from Rs. 14 to Rs. 17 per share, inclusive of a bonus of Rs. 5. Indore-Malwas scored a gain of Rs. 8-12 to Rs. 95, Khataus Rs. 21-4 to Rs. 192-8, New Greats Rs. 9 to Rs. 168 and Simplex Rs. 13 to Rs. 193-8. Standards were lifted up from Rs. 285 to Rs. 300 and Svadeshis from Rs. 243-8 to Rs. 259. Bradburys spurted by Rs. 58-12 to Rs. 725. Swans shaped well with a rise of Rs. 10 to Rs. 410 and Tatas recorded a gain of Rs. 5-4 at Rs. 51-8.

Bank shares also moved up with the general pattern of the market. Proximity of dividend induced some buying in Central Banks the Old and New shares each recording a rise of Re. 1 to Rs. 68-8 and Rs. 71, respectively. Barodas were up by Re. 1-4 at Rs. 114-12. Bank of Indias were bid up to Rs. 159, a rise of Rs. 2-8 over the week. United Commercials added As. 8 to Rs. 38. Imperial Fully Paids gained Rs. 12-8 to Rs. 1,832-8 and the Contributories Rs. 3-12 to Rs. 460.

Electricity shares, which had been in favour for some time past, attracted fresh attention during the week. Ahmedabad Electrics Old improved by As. 10 to Rs. 115, Surat Electricity by Rs. 3-8 to Rs. 121-4 and Bombay Suburbans by Rs. 3-2 to Rs. 124-6. Andhra Valleys rose by Rs. 7-8 to Rs. 1,415 and Tata Powers by Rs. 5 to Rs. 1,507-8.

The miscellaneous section revealed an impressive performance with prominent industrial scrips registering fair gains. Associated Cements improved by Rs. 3 to Rs. 173-12. Shortage of floating stock was responsible for a further gain of Rs. 3 to Rs. 240 in Belapurs. Bombay Burmahs which had been dormant for a long time came into the limelight, the Old shares staging a spurt of Rs. 26-4 to Rs. 402-8 and the New scrips Re. 1-14 to Rs. 141-4. Killick Industries were better by Rs. 2 at Rs. 145. National Rayons were in good demand and they put on Rs. 4-8 to Rs. 82-8. Port Cannings met with enquiries and they advanced by Rs. 3 to Rs. 32. Tata Chemicals added As. 4 and closed at Rs. 9-8 and Tata Oils finished with a gain of Rs. 36-12. Wimcos recorded a rise of Rs. 3-2 to Rs. 230.

In the transport section, Scindias were conspicuous with an advance of Re. 1-1 to Rs. 15-10. Bombay Steams were better by Re. 1-8 at Rs. 35. Bharat Lines were marked up by a rupee at Rs. 91. India Steamships added As. 2-6 to close at Rs. 6-12. Air transport shares were neglected on rumours that the Bill to nationalise air companies would be postponed on account of delay in deciding the valuation of shares. Air-Indias were dull at Rs. 82 and Air-India Internationals at Rs. 98.

Among mining and engineering shares, Alcocks put on Rs. 6-14 to Rs. 311-4. Premier Constructions were in keen demand and rose by Rs. 6 to Rs. 95-8. Shivrajpurs were steady at Rs. 61. The Company has declared a dividend of Rs. 5 and a bonus of Rs. 2 for the year ended 30th November, 1952, as against Rs. 3-8 for 1951. Tata Locomotives had sellers at Rs. 88.

* * *

Calcutta Stock Exchange

CALCUTTA, *4th March*

The reaction to the Budget proposals announced last Friday has been very favourable to the Calcutta Stock Exchange. In fact, the Budget has surpassed earlier anticipations. With the need for more finance for development schemes, there was a lurking fear that Mr. Chintaman Deshmukh might probably increase the level of direct taxation, thereby imposing additional burdens on private enterprise, which is, by all means, already overtaxed. The absence of any such burdens has enlivened trading on the Exchange. Besides the reduction of export duty on jute sacking to Rs. 80 a ton from Rs. 175, the proposal to raise the exemption limit for personal income-tax, which is a great relief to about 70,000 assessees, and the absence of any reference to Estate duties in the Budget have all cumulatively led to harden the sentiment of operators. Trading was also assisted by suggestions of deficit financing which would lead to great inflation.

The market remained closed on Friday and Saturday on account of the Doljatra festival, but a special session was held late on Friday to enable the market to record its first impressions of the Budget. Trading was cheerful, and gains were registered in almost all counters that changed hands. The behaviour of the Exchange during the last two days have only confirmed the first impressions.

Coals were steady throughout the week. From Rs. 526 Bengals were favoured up to Rs. 533 and were wanted at Rs. 580 *ex-div.* Dhemo Mains were pushed to Rs. 11 from Rs. 10-12, and Burrakurs at Rs. 11 gained As. 8.

The outlook for jute shares has changed for the better with the reduction in the export duty on sacking goods. Naturally, operators tended to show preference for shares of mills with sizable quantities of sacking left with them. On Friday night, Howrahs were raised to Rs. 25-2 from an overnight quotation of Rs. 23-14, but profit-taking soon followed and the rate closed steady at Rs. 24-12. On Monday, the uptrend again set in and the quotation reached Rs. 25-1 but were lower yesterday at Rs. 24-11. Indias were pushed to as high as Rs. 136 from Rs. 126 last Thursday, while Agarparas were sought at Rs. 20.

On Friday night, Indian Irons advanced to Rs. 25-10 from Rs. 25 and on Monday realised Rs. 25-12. However, profit-taking intervened yesterday, and the rate was lower at Rs. 25-6. Jessops further advanced to Rs. 24-1 and Kumardhubis were a feature with an improvement to Rs. 8-7 from Rs. 7-14. Texmacos at Rs. 5-8 were better by As. 8, while Braithwaites were steady at Rs. 12-6.

Operators paid keen attention to miscellaneous industrials. F. and C. Oslers at Rs. 5-2 were a shade higher, Indian Cables remaining unchanged at Rs. 18-10. Shree Gopal Papers were favoured at the higher, rate of Rs. 17-5, Sone Valley Cements realising Rs. 17-2. Assam Saws were attended at Rs. 6-14 India Steamships at Rs. 6-11, and Indian National Airways at Rs. 4-1.

* * * *

Madras Stock Exchange

MADRAS, *3rd March*

Despite the increase in power cut from 50 per cent. to 66⅔ per cent. with effect from 1st March, last week's bright conditions persisted this week also. This was due to favourable Union budget proposals which did not inflict any additional burdens on industries generally. The relief in income-tax and the exemption of certain types of dividends from corporation tax were welcomed by the market. There were favourable overseas advices for cloth and tea. Consequently, business done was encouraging and prices were generally upward. The undertone was steady.

The improvement noticed last week in the textile section gathered further momentum. There were encouraging enquiries from Hong Kong, Australia and Sudan for textiles. In view of the trade agreement concluded recently between India and Indonesia, operators expected considerable demand for textiles for direct shipment from India. As a result, Vasantas shot up from Rs. 143-4 to Rs. 150. Radhakrishnas rallied Rs. 3 to Rs. 140 and Metturs Rs. 3-8 to Rs. 185-8. Dhanalakshmis gained Re. 1-8 to Rs. 190-8, and Coimbatore Pioneers Re. 1 to Rs. 98. Bangalore Woollens were done at Rs. 240 *cum-div.*, as against Rs. 222. The Directors have recommended payment of a dividend of 15 per cent. free of income-tax on the ordinary shares for the year ended 31st December, 1952. The dividend for 1951 was 20 per cent. free of income-tax.

Rubbers met with considerable buying. Malankaras gained Re. 1 to Rs. 98. Anandams were done higher by As. 4 at Rs. 9 and Tharmapallys by As. 3 at Rs. 12-6. Kailas and Pullangodes were slightly better at Rs. 3-4 and Rs. 2-7. Teekoys, however, lost As. 4 to Rs. 6-12 and Cochin Malabars As. 2 to Rs. 6-4.

Teas were steady. Devasholas improved from Rs. 14-4 to Rs. 14-8 and Nonsuch Teas from Rs. 23 to Rs. 23-4. Nilgiri Teas gained As. 2 to Rs. 16-8. Fringfords, however, lost As. 8 to Rs. 2-8. Haileyburias and Highland Produces were unchanged at Rs. 13-8 and Rs 9-4, respectively.

Coffees were generally dull. Balmadies and Puthuthottams were higher by an anna each to Rs. 2-6 and Rs. 4-14, respectively. Shevroys, however, lost an anna to Rs. 1-3½. Consolidated Coffees were unchanged at Rs. 15-4 and Kadur Coffees at Re. 1-8.

Miscellaneous scrips came in for some enquiry. Andhra Cements were up by As. 8 to Rs. 90. Mysore Tobaccos rallied As. 4 to Rs. 9-14 and Indian Cements As. 2 to Rs. 17-2. Aluminium Industries were done at Rs. 11-4 *cum-div.* as against Rs. 11 and Spencers Rs. 14-8 *ex-div.* as against Rs. 15-8 *cum-div.* Dalmia Cements, Mettur Chemicals and F.A.C.Ts. were each fractionally lower at Rs. 6-2, Rs. 4-1 and Rs. 3-9, respectively.

CHARTERED BANK TO ISSUE BONUS STOCK

At the annual general meeting of the stockholders of The Chartered Bank of India, Australia and China to be held in London on 1st April, 1953, the Court of Directors will recommend a final dividend of 7 per cent. actual, subject to income-tax, making 14 per cent. for the year 1952.

It has also been announced that the Court of Directors will recommend a special Centenary dividend bonus of 2 per cent. actual, subject to income-tax.

The following allocations have been made:—

	£
Pension Fund	125,000
Widows and Orphans Fund	20,000
Bank Premises	200,000
Contingencies	100,000
Carried forward	399,215

Before closing the books for the year 1953 the Court of Directors authorised a transfer of £1,000,000 from the contingency account to the reserve fund, raising the latter to £5,000,000.

An extraordinary general meeting of the stockholders will be held on the 1st April to authorise the capitalisation of £500,000 of the reserve fund. This new stock will be distributed to the shareholders on the register at the close of business on 21st February, 1953, in proportion of the present holdings. The new stock will rank *pari passu* with the existing stock.

Notices

SRI KRISHNARAJENDRA MILLS LIMITED

MYSORE

WANTED AN EXPERIENCED AND COMpetent General Manager to be in charge of the Spinning, Weaving, etc., Departments of the above Cotton Mills. Salary according to qualifications and experience.

Applications giving full details of qualifications, previous administrative and technical experience, age, ability to control labour, present employment, position and salary, should reach the above Company on or before 18th March, 1953.

NOTICE IS HEREBY GIVEN THAT THIS Company will pay on the 31st March, 1953, to the Registered holders as at that date, interest due on the Preference Shares for the year ended that date at the rate of 6 per cent. per annum.

Preference Share Transfer Register will be closed from 28th March, 1953, to 31st March, 1953, both days inclusive.

By Order of the Board,
ASPINWALL & CO., LTD.,
Managing Agents.

COCHIN, *2nd March*, 1953.

NEWS IN BRIEF

THE Government of India has reduced the price of imported wheat, supplied to the States after the 1st inst., by a rupee, to Rs. 17-8 per *maund*.

During 1952, India imported 375,600 tons of rice from Burma, 184,500 tons from Thailand, 147,000 tons from China and 13,700 tons from Pakistan.

Fifteen American technicians to man the machinery bought in the U.S.A. for the Damodar Valley Project are to be recruited. Recruitment is being done in India with the co-operation of the U.S. Technical Assistance Administration. So far, seven technicians have been recruited.

The estimated reserves of gypsum in the more important deposits of India are placed at 75 million tons. Of this, Rajasthan accounts for 50,903,000 tons, Madras for 16,300,000 tons, Saurashtra for 4,466,000 tons, Kutch for 2,071,000 tons, Himachal Pradesh for 383,000 tons, and Uttar Pradesh for 206,000 tons.

The Government of India has decided that umbrella cloth packed by mills in July, 1952, and earlier months may be kept in unopened condition and offered for sale with the old stampings up to and including 31st March, 1953. After that date, such bales will have to be opened up and re-stamped with fresh markings.

In view of the considerable measure of relaxation effected in price and distribution control of mill-made cloth, the Government of India has decided to permit mills to sell all varieties of cloth which are not subject to price and distribution control, as well as all "free sale" cloth to any licensed dealer, irrespective of the class of licence held by the dealer. Further, any class of licensed dealer may sell such cloth to any other class of licensed dealer.

The Madras Government proposes to levy, with effect from 1st April, 1953, sales tax on tobacco at the rate of three pies in the rupee on the annual turnover of Rs. 10,000 and above. The proposed levy is expected to yield about Rs. 60 to Rs. 70 lakhs per annum. This is in accordance with the Finance Commission's recommendations, under which the Central Government has given freedom to the States to levy tax on sale of tobacco, in lieu of compensation for the collection of excise duty on tobacco.

The Government of India has decided that all cloth packed by mills during the month of July, 1952, and later, which is required to be opened and repacked with new stampings, may be kept in unopened condition and offered for sale with the old stampings upto and inclusive of 31st March, 1953. The Government of India has also decided that no further extension of time for the disposal of these bales by mills with their old stampings should be granted. The mills that will have in their possession such bales after the 31st inst. will have to open and re-stamp these bales with new prices.

The estimated ex-factory cost of one ton of synthetic rice would be Rs. 535, according to the present price of raw materials required for its production. It is also stated that consumer trials have been conducted in Mysore and other centres with preparations made from synthetic rice and that most of the consumers have found the product readily acceptable and easily digestible. The Government of India has sent the Director of the Central Food Technological Research Institute abroad (the U.K. and the Continent) to study in detail the possibilities of large-scale production of synthetic rice generally and, more particularly, the nature of equipment required, its cost and working conditions.

The report of the Export Committee (Excise) has been considered by Government, which is in general agreement with the recommendations made by it. As a number of recommendations of the Committee is constitutionally for the State Governments to implement, the Government of India is not in a position to take a decision itself on such recommendations. In regard to these, the State Governments concerned have, therefore, been addressed. The chief recommendation in which the Central Government is directly concerned relates to fixation of uniform rates of duty on medicinal and toilet preparations containing alcohol, regarding which the question of formulating legislation is already under Government's consideration. Practically all the State Governments have already fixed, in pursuance of an interim recommendation of the Committee, uniform rates of duty for the "restricted" and "unrestricted" categories of medicinal and toilet preparations containing spirit, and no changes would be made in the list of preparations falling under each of these categories without the approval of the Government of India.

* * * *

From Abroad

The U.S. Government has lifted price controls over copper, aluminium, cigarettes, and nearly all dry groceries, such as cereals.

The State Bank of Pakistan has withdrawn all restrictions which required importers to open letters of credit with 75 per cent. margin on O.G.L. items and 50 per cent. margin on licensable items.

The Japanese Government intends to ask Britain and other sterling area countries to ease import restriction on Japanese goods. Japan is reported to be pressing for imports into the sterling area of goods worth £220 million per annum.

The next meeting of the O.E.E.C. Ministers is scheduled to be held at Paris on the 23rd and 24th inst. Mr. Anthony Eden, Britain's Foreign Minister, is expected to announce his Government's monetary plans and also reveal the first U.S. reactions to them in the light of his Washington talks.

The aggregate value of export from the U.S. during 1952 was $15,200 million, which was a record in the history of U.S. trade. The value of imports was $10,700 million. The difference of $4,500 million, however, conceals exports of military items under aid programmes, amounting to $1,980 million.

Production of goods and services in the U.S. during the year 1952 was of the value of $346,000 million, which represents a rise of 5 per cent. as compared with the previous year. Price increases accounted for half of this rise. Thus, the actual expansion in physical volume was to the extent of 2.5 per cent.

The total number of companies which received the consent of the Pakistan Government for capital issue in 1952 was 129, the amount involved being Rs. 32.5 crores, as against 89 companies with an aggregate capital of Rs. 13.7 crores in 1951. Of these, 12 companies are foreign—mostly British—with an aggregate capital of Rs. 5 crores, as against 7 companies with Rs. 3 crores.

Under a Point Four Agreement signed between the U.S. and Egyptian Governments, a joint council is to be set up for the industrialisation of Egypt. The agreements will bring the experts of the two countries together in order to assess the industrial potentialities of Egypt and to study the position regarding raw materials, markets, communications and power supply.

The Government of Pakistan has announced its food policy for the next *rabi* year. Under this policy, the procurement price of wheat has been raised by Rs. 2-10 per maund. Commercial exports of foodgrains will continue to be banned. Movement of wheat or its products from one Province or State to another will not be permitted, except on Government account.

The French Government is preparing a new Bill which seeks to reform taxation. The adoption of a "pay-as-you-earn" system, along the lines of the British example, is one of the main features of the proposed Bill. It will also include the provisions of the tax reform proposed by the previous Government, especially the unification of production and turnover taxes. The new reforms are expected to be enacted with effect from 1st June, 1953.

PERSONAL

SIR Alexander Korda, a leading British film producer and Chairman of the London Film Productions, Ltd., arrived in Bombay on the 2nd inst.

Mr. P. N. Thapar, Chief Administrator, Chandigarh, is expected shortly to join the Planning Commission as Regional Adviser for the northern zone.

Mr. J. B. McMillan and Mr. E. B. Pratt have been elected Master and Deputy Master, respectively, of the Bombay Presidency Trades Association for the current year.

Mr. Carl Friedmann, Director-in-charge of the Overseas Division of Mather and Crowther Limited, the well-known British advertising agency, is now in Bombay for consultations with the Trans World Airlines.

Mr. B. N. Jha, until recently Chief Secretary to the Uttar Pradesh Government, has taken over charge as Secretary to the Central Ministry of Communications vice Mr. A. V. Pai, who has been appointed Secretary to the Ministry of Home Affairs.

Mr. G. E. Longdin, Director, British India Corporation Ltd., has been elected President of the Upper India Chamber of Commerce for the year 1953. The other elected members of the Committee are Messrs. A. H. Buckland, W. H. J. Christie, J. M. Heeramanek, H. Hill, Ram Harain and P. K. Sahgal.

Mr. S. C. Kothari, a leading business man of Madras, and Mr. R. L. Harts, of Calcutta, will be the employers' delegates to the forthcoming session of the Plantation Committee of the I.L.O. to be held at Havana on the 16th inst. Mr. K. P. Tripathi and Mr. Padmanabhan will represent the workers.

Mr. E. J. Pakes, Chairman and Managing Director of Mackinnon Mackenzie & Co., Ltd., and the Allahabad Bank Ltd., has been elected President of the Bengal Chamber of Commerce and Industry for 1953-54. Mr. G. M. Mackinlay has been elected Vice-President. The other members of the Committee are Sir Anthony J. Elkins and Messrs. R. H. D. Campbell, N. D. Harris, O. T. Jenkins, D. D. MacGregor, A. S. Officer and G. A. S. Sim.

DOUBLE TAXATION IN THE U.K.

THE Royal Commission on Taxation of Profits and Income, which has been appointed by the British Government, has issued, on the special request of the Government, an interim report which deals with the question of "double taxation" of British firms. It may be useful to set down here a few considerations relating to "double taxation" before referring to the interim recommendations of the Commission. International usage allows that a country in which profits arise has a prior right to tax those profits as against the country in which the owner resides. This usage is respected by all countries which allow tax concessions on the profits earned by their nationals through their overseas operations. This is also done as a measure of economic policy designed to stimulate overseas investment, since such investment helps to bring invisible income to the investing country. Thus, Australia, South Africa and Switzerland exempt profits earned in foreign countries by their nationals. Special reduced rates of tax are charged by the U.S. and Belgian Governments on foreign profits made by their nationals.

The U.K. Government, however, does not exempt the overseas profits of British traders. Instead, it has entered into agreements with other countries whereby British nationals are protected from "double" taxation—that is, taxation on the same income both by the U.K. and by the foreign country in which the profits are made. By these agreements, the U.K. taxpayer is allowed credit for the tax he has paid in overseas countries. The net effect of these agreements is that, if the overseas tax is at least as high as the U.K. tax, then the trader pays no U.K. tax, but, if the foreign tax is lower than the tax in the U.K., he pays the difference between the two rates to the U.K. Government. If the overseas tax is higher than the U.K. tax—this is seldom or never the case—he pays no tax in the U.K. In effect, he pays the higher of the two tax rates, namely, the tax rate in the U.K. and the tax rate in the foreign country. But British nationals operate both in countries with which the U.K. Government has "double taxation" agreements and in those with which it has no such agreement. In the absence such agreement the British trader pays on his foreign profits one-half of the U.K. tax or one-quarter of the tax if the profits are made in Commonwealth countries.

This arrangement has been criticised by British traders on the ground that they do not receive from their Government the facilities which their confreres in other countries get, and that they are at a disadvantage, as compared with firms of Australian or Swiss origin, which work in overseas countries. In this connection, the Royal Commission has made three important recommendations. In the first place, it has recommended that the U.K. firms should get the same taxation relief on their earnings from countries with which the U.K. has no double taxation agreement as from countries with which such an agreement is in operation. The U.K. is now negotiating a large number of double taxation agreements with India, Pakistan and certain other countries. The effect of the Commission's recommendation, if accepted by the Government, would be that all the U.K. traders, who operate in overseas countries, will get credit for taxes paid in these countries, irrespective of whether the U.K. Government has double taxation agreements with those countries or not.

The Commission's second recommendation relates to firms which are unable to bring their income to the home country under local currency restrictions. The Commission has recommended that the trader should have the option of excluding from his assessment such part of his overseas profits as is shown to be unremittable. But it will be assessed when remittance is made possible or when the firm finds other use for its "blocked currency." Thirdly, the Commission has suggested that the Government should be empowered to conclude agreements with other Governments under which any tax relief given to U.K. firms by such Governments should be exempt also from U.K. taxation. This recommendation is designed to help U.K. firms which work in certain British colonies. Some of these colonies grant concessions to new industrial undertakings. The colonies are naturally annoyed by the fact that, although they themselves grant concessions to these firms, the British taxation system subjects the firms to a high rate of tax, all the same. Thus, the colonies find that the benefit of the concession, granted in order to promote industrial development, is nullified by the U.K., and they are making sacrifices for the benefit of the British Exchequer. The Commission's third recommendation referred to above is designed to remove this anomaly. If the above recommendations are implemented, the Exchequer will lose, it is estimated about £5 million to £10 million. Further, they will encourage the flow of private investments to other countries.

COAL DEARER IN THE U.K.

The increase in the inland price of coal in the U.K. by 10 per cent., announced with effect from 20th February, 1953, must serve as an eye-opener to all coal-producing countries in the world, especially India. It discloses how growing wages and increased labour amenities, unaccompanied by a proportionate rise in productivity, must lead to higher prices. It is, however, true that the increase in the price of coal for the home market is not a great burden for the U.K. consumers, for, even after this increase, the domestic price works out to below average cost of production. This is possible because of the premium which still can be charged for coal to the export market. When conditions in the export markets change, it may not be possible for U.K. coal consumers to get their needs of coal at the current price.

The increase in the price of coal, the biggest since nationalisation, has been due, according to the Coal Board, to increased wages and better conditions of work for junior officials as well as lower output per man-shift. The recruitment of "green" labour during 1952 is said to have contributed substantially to the lower output per man-shift. The wages bill has continued to rise as have costs in other directions. The 6s. increase for day wage men awarded earlier in February would cost about £6 million. Certain concessions on bonus payments under the five-day week agreement have been made and an extra day will be lost through the Coronation holiday. Moreover, a year's standstill on piece-work pay increases ended last November and new concessions may be negotiated in that sphere. There has been a reduction in the proceeds from exports. Though in quantity, these will be increased to 15 million tons in 1953, the previous export premium of 25s. to 30s. a ton has declined with the stiffening attitude of buyers in a more plentifully supplied European market. All these factors indicate that, in the absence of realising a higher price for coal in the export market, there is no possibility of supplying coal to inland consumers at a price lower than the average cost of production. And unless the increased wage and social amenity bill is followed by a corresponding rise in productivity, it will be impossible to reduce the average production costs.

The increase in the inland price of coal is bound to be reflected in the price of commodities to which coal as fuel contributes substantially. Already, the Iron and Steel Corporation has asked Mr. Duncan Sandys, Minister of Supply, to authorise an immediate increase in the maximum iron and steel prices. The railways use 14½ million tons of coal annually and their costs will accordingly rise by £4 million a year. If price increases are not granted, the increased cost of coal will cut the profits and thereby reduce the resources for investment. A higher price for coal will, however, provide a great incentive to economise the use of fuel and thereby save more coal than now for export.

The conditions in the Indian coal industry are worse than those in the U.K. or, for that matter, any other Western country. The cost of production is increasing, with the rising burden of social benefits to workers. There has been a good amount of surplus labour which cannot be retrenched under statutory orders. The continuance of food concessions is a heavy burden and the lower output per man-shift a constant headache. Small wonder, then, that a number of collieries are running at a loss and the few that are breaking even and making small profits are also threatened. Surely, if the increase in costs is not covered through an increase in statutory prices or the restoration of the cut in prices which was voluntarily agreed to by the industry in November, 1949, it would not be long before the industry is faced with a plight similar to the one the tea industry faces to-day. There is no doubt that an increase in coal prices would lead to a spiral of increasing prices of a number of commodities. The best remedy, therefore, lies in a vigorous drive towards increasing the productivity of workers which would permit sizable reduction in production costs.

BOMBAY PORT TRUST

The Budget estimates of the Bombay Port Trust for the year 1953-54 disclose a steep fall in its surplus earnings. Thus, it is estimated that the surplus will be as low as Rs. 96,700, as against the revised estimates of Rs. 12.15 lakhs for 1952-53 and the actuals of Rs. 183.91 lakhs for 1951-52. Receipts under the general account are estimated at Rs. 583.04 lakhs for 1953-54, as compared with the revised estimate of Rs. 627.69 lakhs for 1952-53 and actuals of Rs. 691.16 lakhs in 1951-52. The expenditure in 1953-54, 1952-53 and 1951-52 is estimated at Rs. 582.07 lakhs, Rs. 615.54 lakhs and Rs. 507.26 lakhs (actuals), respectively.

These figures show that so far as the year 1951-52 is concerned, the Port authorities' expectations were more than fulfilled. But the revised estimates for 1952-53 tell a different tale, while the estimates for 1953-54 are discouraging. The estimated decline in earnings in 1952-53 is attributable to recession in trade which still persists. The aggregate imports handled in the docks and bunders during the eight months ended November, 1952, were 3.1 million tons, as against 3.6 million tons during the corresponding period of the previous year. It is true that there has been some improvement in exports, following increased foreign offtake of manganese ore and scrap iron. But the improvement has so far been insufficient to counterbalance the decrease in imports.

On present evidence, it looks as though the recession in trade will persist for some time. Imports of wheat next year are expected to be smaller than in the current year, such being placed at not more than one million tons which works out to 30 per cent. of imports of 1951-52. There are still large stocks of East African cotton bought last year. This coupled with better cotton crop prospects during the current season, points to a probable further decline in imports of cotton. All this explains why the general receipts for 1953-54 are estimated lower at Rs. 583.04 lakhs as against the revised estimate of Rs. 627.69 lakhs for 1952-53. A gratifying feature of the budget estimates for 1953-54 is the estimated decline in expenditure. Thus, the expenditure for 1953-54 is estimated at Rs. 582.07 lakhs, as against the revised estimates of Rs. 615.54 lakhs for 1952-53. The decline by as much as Rs. 33.47 lakhs is attributable, among other causes, to the cumulative effect of the various economies effected from time to time. The revised expenditure for 1952-53 is, however, higher by Rs. 15.38 lakhs over the originals. This is due to payment of certain arrears of pay and allowances to staff, to the purchase of new launches for the use of port police and to the allocation of service allowance to the same heads of account as the basic wages are charged to, instead of debiting *en bloc* to the relative major heads, as was being done before.

The capital budget for 1953-54 provides for an expenditure of Rs. 797.61 lakhs as against the revised estimate of Rs. 190.58 lakhs for 1952-53 and the actuals of Rs. 66.27 lakhs for the year 1951-52. Now that the proposal to increase the rate of surcharge on certain rates and charges levied at the docks and bunders from the present 33⅓ per cent. to 66⅔ per cent. to meet a part of capital expenditure has been rejected by the authorities, the only sources left, in the absence of a favourable climate to raise loans from the public at reasonable terms, are loans by the Government and appropriation from the Revenue Reserve Fund.

A CASCADE OF LAWS

With amazing rapidity, statute has followed upon statute in the industrial sphere. Labour laws, State Insurance Act, Provident Fund Act, Industries (Development and Regulation) Act, and a host of other measures have inundated the industrial field. Mr. G. E. Longdin, who last week addressed the Upper India Chamber of Commerce as its President, said: "A positive cascade of Acts, Bills and Expert Committee Reports has descended upon us." He might as well have called a veritable "avalanche," considering how chilling some of these laws could be. Each of them, taken individually, constitutes a small burden. But their cumulative effect is crushing to a degree. To take only two of the new schemes, the State Insurance Scheme and the Employees' Provident Fund Scheme, the cost of the former is estimated at 4½ per cent. of the wage bill and of the latter at 6¼ per cent. of the bill, plus a contribution for administration charges amounting to 3 per cent. of total contributions. Mr. Longdin conceded that the lot of the common man in India must be raised. But he rightly wondered where the "unrelenting force" of all this legislation would drive the industrial ship.

A more pertinent question was whether the Government was justified in devoting all its attention—legislative and others—to industrial labour which only forms a small part of the country's population. Increased labour amenities will normally be reflected in higher prices. The consumer has ultimately to pay for them. It is difficult, in this context, not to appreciate Mr. Longdin's logic that the Government is not justified in making further demands on the "major agricultural part of the population in order to subsidise the standard of living of the minor industrial part." It is also equally difficult for us to withhold our consent to and approval of the view that the "time has come for all Governments, State and Central, to pause for an interval to consolidate the gains achieved, and to assess their effects on industry."

This is sage advice. To admit the need for a curb on the legislative ardour of the Central and State Governments is not necessarily to admit that there is no scope for legislative reform in the industrial field. There is. But wisdom lies in matching this ardour by a consideration of economic realities. After all, even labour amenities have to be earned. They must be paid for. And somebody—the consumer—must be capable of paying for them. There is certainly no virtue in more speed—speed of legislation. Unfortunately, the Central and State Governments have succeeded in giving the impression—at least, in the economic field, this is true—that they are more conscious of speed than of direction. And mere speed, in the absence of direction, could be disastrous. An instance of how haste in legislation impedes administration of measures is provided by the fact that the date of inauguration of the Provident Fund Scheme had to be postponed before it was actually introduced. Such delays could be prevented if the Government were to evolve better methods of consulting the concerned interests, before they introduce measures which have a bearing on industrial management. But the Government again errs on the side of haste, as Mr. Longdin pointed out in so many words, by calling upon commercial bodies to submit their views on proposed legislations without giving them sufficient time to study these measures.

INCOME-TAX COMMISSION

Few commissions have had to tax their brains and their patience more than the Income-tax Investigation Commission which found itself confronted, as its latest report says, by "some of the acutest brains in the country." Tax evasion has been developed into a fine art. And when practised hands, aided by all the available legal and accounting ingenuity, indulge in this pastime, the result, as can be easily expected, must be a serious leakage in revenue. For more than five years now, the Commission—it began functioning in December, 1947—has been engaged in unearthing concealed incomes which were, till the Commission came on the scene, inaccessible to the arms of the law. The Commission's task was by no means easy. Although there were a few assessees who could be persuaded to reveal the truth, there were many who contested the assessments at every stage. Their cases, backed as they were by the highest legal talent in the land, involved prolonged and sustained investigation. But, by and large, the Commission has been successful. In 1949, the Commission was able to bring to light a total concealment of Rs. 2.88 crores, involving a tax of Rs. 2.18 crores; in 1950, the corresponding amounts were respectively Rs. 8.11 crores and Rs. 4.90 crores and in 1951, Rs. 18.12 crores and Rs. 3.80 crores. In 1952, the total concealment traced was Rs. 10.88 crores.

The Commission has been continuously engaged in tackling only the bigger cases, for they give better 'value' for the attention expended. These cases have been divided into two groups which are very influential, having "far-flung ramifications throughout the country." Investigations into these cases has, therefore, been necessarily slow. The Commission, however, hopes that, when these major cases are settled, progress will become more rapid. An interesting feature of the working of the Commission is that its work has been accomplished at a low cost. The average expenditure on the Commission for the three years ended 1951 was only 1.4 per cent. of the extra tax which became leviable through its activities. Thus, the large amounts of concealed incomes have been discovered, as the Commission says, at no greater cost than that involved in the upkeep of the regular income-tax assessment machinery, in spite of the fact that a very large percentage of the amounts assessed by the ordinary department officials are declared by the assessees themselves, whereas the Commission has to unearth concealed income after the lapse of some years and with great difficulty.

OFF THE RECORD

(By "ROVER")

AND still one more budget! And a budget, however much one might like to run away from and forget all about it, one just cannot afford to do so. For two pins, I would prefer to write on any other subject, even on the urgent need for establishing comfortable and congenial homes for stray cats in New Delhi, Bombay and Calcutta, to dealing with Mr. Deshmukh's budget, about which every other man I meet seems to be talking as much with appropriate gestures as vocally. It is so amorphous, so very nebulous, that I find it difficult to pinch it in some projecting spot and make that a starting point for my vapourings.

Besides, our Finance Minister, unlike so many poorer specimens of this breed, is so suave and takes such pains to appear reasonable while really having his own way all the time, that he often disarms criticism in advance and makes me feel disinclined to mouth my belligerency. And still, I know it for a fact that he is most dangerous, when he coos most sweetly. Besides, he is a deadly foe of columnists and critics, because he always manoeuvres cleverly to confine the fight to a plane and weapons of his own choosing. And he has an exasperating trick of showing them up as wrong and misguided, when in reality he and not his critics is at fault. And finally, in spite of his quiet and unobtrusive ways, he is a great artist as well as a stage manager. He knows to a nicety the value of light and shade and tones in theatrical production.

Mr. Deshmukh casts his speeches, especially his budget speeches, in such a mould that, by the time he really comes to the controversial parts of his proposals, he has already put his visible and invisible audience in a state of semi-somnolence by some alchemy of soporifics in the first third of his address. By the time you are awake, sit up and begin to take note of a bomb or two he has hurled at you, he has got over this penultimate and explosive third of his peroration and reached the soothing finale, when he begins to purr again. You are left, when he resumed his seat or when you have put aside his printed speech, in a confused and bewildered state, with warring ideas whirling in your own brain with such swiftness that you are more concerned for the time being with restoring peace within your own being than to take up cudgels with this charmer for the couple of heavy punches he has landed on your nose or chin by taking you unawares.

Frankly and honestly, I do not like Finance Ministers, or, for the matter of that, any minister of Mr. Deshmukh's type, who, with a great show of benevolence and open-heartedness, presents you with a copper coin having a big hole in it and take a rupee off you in the name of some of his own pet charities. I like to cross swords with Central Ministers like Messrs. T. T. Krishnamachari or Mr. Jagjivan Ram or those in the States like Messrs. C. Rajagopalachari and Morarji Desai, or Drs. B. C. Roy and Jivraj Mehta, because of their forthrightness and bluntness. They offer you chinks in their armour and it is a joy to make a well-timed and well-aimed thrust, to pierce their guard and to run your blade through their flesh and sinews. Mr. Deshmukh does not don any armour but clothes himself in a smile, with some lace trimmings of sweet reasonableness, which are harder than chain or mail to penetrate. And though he is a bigger and bolder brigand than all the rest of them put together, there is little joy and still less glory in wounding him and drawing blood. I shall, therefore, not be wrong in leaving him to be mauled by the Editor. Sometimes, there is more excitement in watching a skirmish than in engaging oneself in it.

Having thus dexterously and successfully evaded all the important issues raised in the budget by the Union Finance Minister last week, even that of deficit financing which is likely to cause some convulsions in the body economic and to rock the share markets in the country with a severe tremor, I feel that I must earn my keep by commenting leisurely on one or two extra-budgetary topics, dealt with by him in his budget speech. Like some of our cities, our tax structure has grown in an unplanned and unscientific manner. Such haphazard, unstudied and unregulated growth might present a picturesque appearance, but it is bound to cover a lot of slums and plague spots and create a number of anomalies, arresting healthy growth and functioning. It is a surprise to me that the present tax structure of ours has not caused a severe economic epidemic. But it has given rise to enough diseases which have become endemic and the casualties from these are both numerous and tragic.

Apart from the urgent need of a proper and just distribution of the burden of taxation on the various sections of society, there is as much need to-day for establishing some kind of balance between the loads placed on the back of the citizen by a number of authorities in the country. There has to be some system even for arranging weights on a scraggy pack horse, if you want the beast to transport them without a breakdown and without developing a sore and ulcered back. There must also be some upward limit to the total load the poor animal is asked to carry. The taxable capacity of the citizen does not increase with the number and the needs of the authorities taxing him. If one takes more than its share, the other must either prevent him from doing so or reduce his own demand. The lot of the citizen in the State of Bombay in this respect is the most unfortunate and needs more immediate attention than Mr. Deshmukh's Taxation Inquiry Commission, scheduled to work in a leisurely manner during the next two years, can provide him.

While I have no quarrel with the personnel of the Commission and while the selection of its President has rightly met with approbation and acclamation everywhere, I do think that, with the wealth of data already collected by the Finance Commission, it should be possible for it to complete its work within a quarter of the time allowed it by the Government. People are not so patient now as they used to be when an extreme form of undiluted capitalism was the accepted creed, and the alternatives were only of academic interest. Both the war and the sensitiveness born from national independence have rendered people less patient. This was one of the first enquiries that should have been undertaken after August, 1947. It is imperative that either some interim action anticipating the recommendations of the proposed Commission be taken immediately or the Commission be asked to expedite its work in time for the Central and State budgets for 1954-55. Delay in this matter will be fraught with great risks and dangers. What happened in Saurashtra about the sales tax might raise its ugly head in several other parts of the country as well. There are anti-social elements ready enough to fan these sporadic fires.

Mr. Deshmukh wound up his budget speech in the approved fashion of to-day by appealing for the co-operation of the public and thereby laying indirectly the burden of the responsibility for a probable failure of the Five-year Plan, if any, on the shoulders of the citizen. In keeping with his usual air of sweet reasonableness and fair dealing, he, unlike many others of his colleagues, has tried to divide this burden evenly between the leadership and the people. The leadership has failed signally, if not miserably, during the two years of working of the Plan and the spending of about a third of the amount estimated as its cost. Mr. Deshmukh talks glibly of "the Governments in the country, assisted by the Planning Commission," providing "precise and specific guidance in regard to the directions and contents of the public co-operation expected." I see no trace of such guidance from any of the Governments, apart from mere vague demands for co-operation and enthusiasm. There is a lack of full co-operation even between the Central and some of the State Governments in this respect, as gently hinted at by the Central Finance Minister. I fear that, in view of this contretemps, it might prove ultimately to be a case of the blind leading the blind in the spending or squandering of 2,000 crores of rupees or more.—*All Rights Reserved.*

DEVELOPMENT PLANS AND THE BUDGET

MR. DESHMUKH MAKES A PSYCHOLOGICAL APPROACH

(From A Special Correspondent)

NEW DELHI, *3rd March*

DELHI LETTER

THE consensus of opinion in the capital about the latest Budget proposals is that Mr. Chintaman Deshmukh has been able to make the best of a bad job. A cursory reading of the budget speech will convince even a confirmed sceptic that Mr. Deshmukh has been actuated by the lofty motive of the implementation of the Five-year Plan. His speech bears the impress of one who is anxious to carry the public with him and, in order to create the necessary psychology, he has taken extraordinary pains to explain that the economic position of the country is, on the whole, satisfactory and moving in the right direction.

In the framing of the 1953-54 budget proposals, especially on the revenue side, Mr. Deshmukh would appear to have intentionally made up his mind not to scare away the public by showing a heavy deficit. The Finance Minister hopes, for instance, to receive Rs. 18 crores from Pakistan, being the first and second instalments of its pre-Partition debt to India. As matters stand, it is doubtful whether Pakistan has either the intention or the ability to pay during the next year any appreciable sum. Perhaps, it may even take cover under the fact that its balance of payments position has been showing considerable deterioration during the last few months. Further, the assumption that he would be able to realise a total sum of Rs. 159.18 crores by way of corporation and income taxes, as against Rs. 170 crores in the current year, is not likely to prove correct, especially if the results of many joint-stock companies, published in recent months, are any indication of the assessable profits for the next year. In respect of these two items alone, the 1953-54 revenue has been overestimated by about Rs. 30 crores. Mr. Deshmukh could not be unaware of these, but he has done so with a purpose lest any large deficit should generate pessimism in the main markets of the country.

The Finance Minister stated that, on a rough estimate, the total expenditure by the Centre and the States together in the first two years of the Plan would be of the order of Rs. 600 crores. He further observed that "if the level of development expenditure reached by the States in 1952-53 is maintained in the coming year, the total expenditure, taking the Centre and the States together, for the three years ending March, 1954, would have reached about Rs. 1,000 crores." In other words, the development expenditure under the Plan will go up to Rs. 400 crores in the next year which must have to be stepped up to Rs. 500 crores in the fourth year and to about Rs. 600 crores in the fifth year for its successful implementation. Although Mr. Deshmukh was of the view that the State Governments should find it possible to concentrate all their attention and energy in augmenting their resources for the completion of the development under the Plan, it is a doubtful proposition whether the States would go ahead in levying fresh taxation. The main burden, therefore, has to be borne by the Centre which has no other way but to resort to the method of deficit financing. Mr. Deshmukh was, however, over-confident when he stated that "the recent trends in the economic conditions of the country indicate that the inflationary pressures, which had been the besetting difficulty, have been brought under control, and the climate seems suitable for raising the scale of developmental expenditure."

Steel Expansion Plans

Mr. Deshmukh has provided Rs. 225 crores for developmental expenditure in 1953-54, exclusive of Central assistance for financing the State plans. Due attention has been paid by Government to the establishment of a number of key industries. In the absence of the final decision regarding the financial and technical arrangements for the proposed new steel plant, the budget has provided a token sum of Rs. 10 lakhs for this purpose. Now that prices of steel in Europe has been showing a downward trend and, since by the end of 1953, the supply position in respect of steel is expected to ease appreciably, it may be possible for the Government to secure competitive rates in regard to the supply of machinery for the establishment of the steel plant. We are told that a provision of Rs. 15 crores has been made in the Five-year Plan for this item during the Plan period. A plan has been drawn up to develop the Vizag shipbuilding yard with a view to making it an economic unit. Among other things, the Plan provides for the manufacture of engines and boilers in the workshop at the yard and also for expansion of berths for building ships. A provision of Rs. 65.84 lakhs has been made in the budget estimate, 1953-54, to meet the expenditure in this regard. This sum is likely to be paid to the Hindustan Shipyard Ltd. by way of a debenture loan.

Heavy Electrical Plant

The Government of India's machine tool factory at Jalahalli (Bangalore) will go into initial production towards the end of 1953 and full production by 1955-56. In the first stage, production will be confined to the manufacture of 400 lathes of 8½" size per annum. A provision of Rs. 119 lakhs has been made in the revised estimates for 1952-53 and Rs. 143.50 lakhs in the Budget estimates for 1952-54, respectively, in respect of this project, the total estimated cost of which is Rs. 8.37 crores. The establishment of a heavy electrical power plant industry has now been taken up by Government since the schemes of hydro-electric development have made considerable headway and large-scale electrification of railways to increase line capacity is becoming a necessity. The demand for a heavy electrical power plant is, we are told, bound to develop further at the end of the first Five-year Plan and the necessity for making the country self-sufficient in this regard has become more compelling. The Government will be providing a sum of Rs. 7 crores for this project out of the lumpsum provision of Rs. 50 crores in the Five-year Plan for basic industries and transport. A token provision of Rs. 10 lakhs has been made in the budget estimates for 1953-54 for preliminary investigation about the project.

Mysore's Steel Industry

Provision has been made for a number of other development projects in the 1953-54 budget. A sum of Rs. 4 crores is included to be given as loan to the Indian Iron and Steel Co. and to the Tata Iron and Steel Co., Ltd., for enabling them to implement their expansion schemes. This was in addition to Rs. 5 crores granted to the SCOB and the IISCO before their amalgamation into a single company last year. The expansion scheme financed by the loans mentioned above is expected to be completed by 1954 and to raise the production of finished steel by these companies from two lakh tons to four lakh tons per annum. For stepping up the output of the Mysore Iron and Steel Co., a sum of Rs. 80 lakhs has been earmarked as loan for the current year while the provision for 1953-54 is Rs. 100 lakhs. Construction of two electric furnaces (each with a capacity of 100-110 tons of pig iron per day) has already been completed and trial operations have begun. When they come into full production, an additional quantity of nearly 70,000 tons of pig iron will be available per annum. It is proposed to place orders immediately for a Bessemer Electric Duplex Plant (estimated cost Rs. 100 lakhs) and a Billet and Light Structural Mill (estimated cost Rs. 155 lakhs).

Loans to Shipping Concerns

Besides the above, a sum of Rs. 3 crores has been provided in the budget for 1953-54 as loans to Indian shipping companies for purchase of fresh tonnage for both the coastal and overseas trades. In order to strengthen the Eastern Shipping Corporation—a Government-sponsored concern, Rs. 74 lakhs have been set apart being Government's share in the proposed additional capital. Among the other expansion projects, mention may be made of the Indian Telephone Industries which are expected to be in full production by the end of 1953. Steps for the manufacture of dials and condensers (the only two items which are not so far being manufactured in India) are being laid. The construction and development of national highways will be absorbing Rs. 5.5 crores in 1953-54, while the total budget estimates for the previous two years have amounted to Rs. 8.19 crores. For development of roads in Part C States, a sum of Rs. 111.74 lakhs has been included in the budget for 1953-54. Government has provided Rs. 25 lakhs for investment in the form of preference shares in the Machinery Manufacturers' Corporation, Ltd., which, it is stated, is the only firm in the country manufacturing carding engines required by the textile industry. The manufacture of optical glass is being undertaken, the budget provisions for 1952-53 and 1953-54 being Rs. 10 lakhs and Rs. 39 lakhs, respectively. The Telephone Cable Factory, Rupnarainpur, is to go into initial production by June, 1953, and full production by December next. A provision of Rs. 33 lakhs has been made in the revised estimates for 1952-53 and Rs. 70 lakhs in the budget estimates for 1953-54 in respect of this project. The factory is designed to produce annually about 470 miles of cable length of different specifications. Other developments that have received the attention of Government are the Penicillin factory, Pimpri, the D.D.T. factory, Delhi, electricity schemes in Himachal Pradesh, Bhopal, Tripura, Vindhya Pradesh, etc.

FOREIGN INVESTMENT IN INDIA

Details of remittances received from foreign countries for investment in India were furnished by the Finance Minister, Mr. C. D. Deshmukh, in a written reply to a question in the House of the People recently. In furnishing these figures, the Finance Minister pointed out that they did not give a full picture of foreign investment, because they did not include (*a*) foreign investment in the shape of goods, etc., and (b) re-investment of profits of existing investments. Since 1948, the total foreign investment has been of the order of Rs. 8.03 crores. This, of course, does not include (*a*) and (b) mentioned above. The country-wise distribution of such investment is given below:

(In lakhs of Rs.)

U.K.	674.00
U.S.A.	7.87
Canada	16.60

AMERICAN LETTER

NEW ADMINISTRATION'S ECONOMIC POLICIES

TAX CUTS AND TARIFF REDUCTIONS URGED

(From Our Own Correspondent)

NEW YORK, *18th February*

AMERICAN business and industry, as well as the general public, are still trying to adjust themselves to the new Administration at Washington and the latter, in turn, is proceeding very cautiously in formulating basic policies to be pursued in both domestic and foreign fields.

Three fundamental issues have been debated upon, particularly in the past few weeks, namely, taxation, labour policy and foreign trade. So far as Federal taxes are concerned, exuberant legislators in Congress have introduced Bills which would cut individual and corporation income-tax levies and they would also let the excess profits tax expire on 30th June, 1953. Administration spokesmen have promptly put a damper on this move, with the statement that tax reductions would be possible only after Government expenditures have been cut and a budget balance has been achieved.

After all is said and done on this score, however, tax cuts in major areas are regarded as inevitable, since "budget balance" is an elusive term. President Eisenhower is known to be sympathetic to tax cuts, basically for the purpose of increasing incentive to work. Moreover, there is quite a difference between the cash and the book-keeping budget. The former is very little out of balance and expenditure reductions of as little as $5,000 million, which are thoroughly feasible, would accomplish the balance.

The book-keeping budget is out of greater balance, because it takes into account the operations of Government trust funds, transfers for accumulating social security funds, etc., which *per se* do not influence the economy up or down. Since the prospect for a cash balance is excellent, tax reductions are likely to appear soon.

So far as labour policy is concerned, the leading spokesmen of the industry and the trade unions have been called together with the assignment to work out a compromise in amending the much disputed Taft-Hartley Act. Over a period of years, the latter became a symbol of labour leaders' opposition to the Republican Party, because Senator Robert Taft was one of the co-authors of the legislation. Whether or not anything will be accomplished remains to be seen. At any rate, the approach to the problem appears correct and nobody can possibly criticise President Eisenhower, or any of his lieutenants, for trying to straighten out the controversy in this manner.

Trade Policy

So far as foreign trade is concerned, the great cry of the Republican Party for months has been "trade, not aid." As a matter of tradition, the Republicans were always known as protectionists, i.e., as those favouring protection for American manufacturers in the form of tariffs or other import restrictions.

The new Republican Administration is somewhat different. The other day, the question came up officially about the duty on Briar pipes. Recommendations to and by the Tariff Commission advocated higher protectionist rates, but the Eisenhower Administration turned down this first test case, "pending further study on the matter," for fear of creating a precedent which might be followed in other foreign trade decisions. In addition, such men as Henry Ford (2nd) and the head of Burroughs Adding Machine Company, have come out with outright demands for drastic tariff reductions. Mr. Ford is willing even to scrap all duties and let manufacturers stand on their own feet in free international competition.

All this shows a new and fresh approach to the burning questions of the day and it is being welcomed by nearly everyone in the country, including Mr. Adlai Stevenson, Democratic Presidential candidate, who lost the election to General Eisenhower. Mr. Stevenson, who has left on an extended tour of the Orient, said, before he left, that the new Administration deserved a chance to prove or disprove its theories. As the opposition leader, Mr. Stevenson objected chiefly to the fact that so many business men had been appointed to so many prominent positions in the new regime, on the ground that spokesmen of the executive branch of the Government were overwhelmingly on one side of the fence and the whole structure, thus, lacked balance. Yet, he admitted, the experiment was worth trying. It may be added, in passing, that the Republicans said the same thing about the last Democratic Administration which was often referred to as an out and out Labour Government.

Margin Requirements in Stock Trading Reduced

In the meantime, the financial community is pleased about the action of the Federal Reserve Board which reduced margin requirements in stock trading from 75 to 50 per cent. It was regarded as a step long overdue, because stock trading nowadays has grown to be more and more a professional, rather than a popular, pastime. In other words, speculation is negligible and there are hardly any fears of a runaway movement of the stock markets in either direction.

The greatest apprehension, naturally, still centres round a break of stock prices. Plenty of opportunity for this to happen was at hand many times in the last two years. The reasons, again, are almost self-evident.

Private pension and trust funds are accumulating at the rate of about $2,500 million a year, or about $50 million a week. In every market dip, private investors may sell and run for cover, but shrewd institutional investors buy to average the purchase price of their holdings for balance-sheet purposes. This has occurred for the past few years and it will be true, no doubt, for the years to come. It is one of the most powerful factors counteracting a real depression in stock prices.

Elsewhere in the American economy, few changes are in the offing. Employment and pay-rolls continue at peak levels. There is a little recession in Government securities' prices at the present time, but this happens every February, when corporations, instead of buying short- or long-term bonds, accumulate cash towards the fatal 15th March tax date.

Retail trade has shown no particular signs of slump or gain and the decontrol of prices, instituted by the Eisenhower Administration, has had no effect on the basic price structure of the U.S. The only real soft spot, which is causing some apprehension, is that in falling quotes for agricultural commodities. Meat prices have dropped sharply, because of oversupply. This is pleasing to consumers, but it irks farmers and Congressmen, and Senators from the farm States, naturally, demand that Government do something and protect their constituents. While none of the farm-support programme can be dropped from the statute books until next year, the new regime has let it be known that, in the long run, it would much prefer to let the general price structure balance itself by supply and demand, rather than by such artificial stimuli as subsidies which have been employed in the last 20 years. So far, all is well here.—*All Rights Reserved.*

ELECTRONIC "BRAIN"

Development of a new electronic "brain" that may make it possible to apply automatic processing to a large oil refinery or chemical plant has just been announced by the Remington Rand, Inc., U.S.A. The new computer, known as Era 1103, weighs 10 tons, uses 4,500 electron tubes and provides storage capacity up to 17,408 super-speed registers plus vast supplementary tape bulk storage, high-operating speed (60 microseconds per unit of addition) and broad versatility. The computer is expected to be available for commercial use next year.

As applied to refineries and chemical plants, the computer would receive data on processing through "sensing" devices at various stages in the operation. The data would be processed in the computer in accordance with instructions previously fed it, governing such variants as temperature, press, time and mixture. The computer, it is claimed, could receive data based on the analysis of crude oil being processed and, in turn, regulate the process, so that the refinery will produce the highest dollar volume obtainable. Complete control of the plant could be affected by the computer, producing the optimum refinery output in relation to varying economic and industrial processing conditions.

Among other possible applications listed are air traffic control at large metropolitan airfields and air defence, general industrial and economic planning, and scientific-mathematical computation. The most important application, however, is said to be the automatic process control for factories.

CHANCELLOR'S VISIT TO THE U.S.

STERLING LOOKS STRONG

(From Our Own Correspondent)

LONDON, *28th February*

LONDON LETTER

THE Chancellor of the Exchequer and the Foreign Secretary are on their way to Washington to follow up the conclusions of the Commonwealth Economic Conference regarding the strengthening of sterling. Are they really going to discuss arrangements to make sterling convertible? Or are they going to explain to the new Administration their long-term aims and aspirations and seek some immediate practical help? In spite of the speculation about the so-called "convertibility plan," the second is the most probable explanation.

This "convertibility plan" is really a sort of first step towards freedom. It is proposed to set the rate of exchange free to find and hold its own level (which is nothing much different from the present position since imports would continue to be severely restricted, in order not to flood the market with sterling) and to back this with a dollar guarantee fund to avoid speculation. The only true convertibility in this scheme would apply to certain earnings by dollar countries and conversion rights for some sterling balances. Subject to what this last item would really mean in practice, there is nothing much to worry about in this plan, except that it seeks to secure the shadow of freedom in an unpegged rate of exchange without the substance of freedom of dollar imports.

At the present time, sterling looks very strong. For the past four months, the dollar rate has been creeping up from the level of 2.78 to the peak of 2.82 (top margin of the "swing"). It would have reached this level sooner, if the Bank had not been selling sterling—a measure it is continuing to take to hold the rate at 2.82. But all this means is that the Treasury has succeeded in cutting off commercial supplies of sterling at source through its restrictive import policy. Indeed, January showed a trade surplus in gold and dollars of £11 million, apart from the E.P.U surplus of £21 million. These sums, coupled with £16 million of U.S. Defence Aid contribution, brought the net gold and dollar receipts of the sterling area to £47 million and raised the gold reserves to £706 million, as compared with their level of only £600 million six months ago. All this is very encouraging, but it must be seen against a background of the positive restrictions on overseas trade, with the constant query in mind whether the countries whose imports we are restricting may not start to impose further handicaps on our own exports to them.

Chancellor's Policy

The Chancellor tried to put his trip in the right perspective in a letter he sent to the Trades Union Congress just before he sailed. He pointed out that his policy was to see (1) the strengthening of the economies of the sterling area countries, (2) the general adoption of measures conducive to the expansion of world trade, and (3) the possibility of adequate financial support. Until all the conditions precedent to convertibility existed, he did not propose to try to convert. In the meantime, he looked to every possible measure to expand world production and trade.

It can accordingly be assumed that Mr. Butler is going to try to convince the U.S. Administration that there is a great deal they can do towards helping his general aims. In particular, they can revise the U.S. customs regulations, which are admitted to be more of a practical barrier to the entry of goods into America than the actual duties, encourage dollar investments in the rest of the world, buy military equipment from the N.A.T.O. countries (much more sensible would be to give the straight dollar aid and leave these countries with the equipment they make or let them devote more of their engineering resources to exports), buy more raw materials abroad, and extend reciprocal trade agreements. A little help under each of these heads—with the customs regulation point at the top of the list as something entirely within the competence of the Administration—would be of greater value to the cause of convertibility than all the American pressure that the pound should be freed through a major dose of deflation throughout the Commonwealth.—*All Rights Reserved.*

EARNINGS OF IMPERIAL BANK OF INDIA BETTER

DEPOSITS LOWEST IN TEN YEARS

IF the year 1951 had been an eventful one in the history of banking in India during recent years, the following year, that is 1952, was an equally noteworthy one, though for a different reason. The events of the latter year, so far as banks were concerned, were more or less the reverse of those of the previous year. The unprecedented rise in demand for bank credit, occasioned by the all-round increase in price levels noted in 1951, gave way during the subsequent year, except for a short period in earlier months, thanks to the combined effect of the slump in commodities and the new monetary policy of the Government of India initiated in November, 1951. The past year was also noteworthy in another respect in that it represented the first full year of working of banks after the end of the cheap money era, which received official recognition through the rise in Bank rate in November, 1951.

Studied against this background, the results of banks in India for 1952 have shown that the benefits of dearer money have been more than offset by the adverse business conditions. The results of the Imperial Bank of India (Managing Director: Sir Roderick Chisholm) for the past year provide an exception to the general trend, although the full accounts show that the Bank was not immune to the effects of the aforesaid factors. The profit, at Rs. 133.35 lakhs, shows a small increase of Rs. 3.28 lakhs, thus establishing a fresh record. The dividend is proposed to be maintained at 16 per cent. per annum, a rate which had been paid for the previous two years.

The following comparative table shows the trend in the Bank's earnings in the last four years and the allocations thereof:

(In lakhs of rupees)

	For the year ended 31st December			
	1952	1951	1950	1949
Gross income	7,90.54	6,92.38	6,43.85	6,06.75
Interest and discount earned	5,52.10	4,98.21	4,79.03	4,50.09
Commission and exchange	2,05.29	1,91.23	1,62.58	1,54.72
Interest paid	1,70.13	1,29.08	1,20.91	1,22.26
Expenses	4,43.53	4,29.11	3,90.26	3,54.94
Depreciation	13.53	13.11	7.25	6.70
Profit	1,33.35	1,30.07	1,25.46	1,22.84
Transfer to—				
Reserve fund			2.50	2.50
Pension fund	5.44	5.63	5.65	3.36
Bonus to staff	39.00	37.50	33.50	31.00
Dividend	90.00	90.00	90.00	78.74
	(16%)	(16%)	(16%)	(14%)
Carry forward	42.08	43.17	48.73	54.92

Of the increase of Rs. 68.16 lakhs in gross income, interest and discount earned account for Rs. 53.89 lakhs. This is evidently due to the substantially higher level of advances and bills discounted during the first half of the year and the higher rate of interest charged on advances. To a large extent this has been offset by the increase of Rs. 41.55 lakhs in interest paid on deposits and borrowings, which, in its turn, is again due to "dearer" money conditions. The rising spiral of expenses, as was pointed out last week in these columns, does not seem to have reached its bounds, as witness the further increase of Rs. 23.42 lakhs in the expenditure of the Bank under review. Of this increase in the Bank's expenditure, salaries and allowances and provident fund account for Rs. 16.99 lakhs. Despite the rise in profit, the Bank has not added anything to the reserve fund which had received Rs. 2.50 lakhs last year. As against this, the provision for bonus has been raised by Rs. 1.50 lakhs to Rs. 39 lakhs.

The main items of assets and liabilities of the Bank at the close of the year under review are compared with those at the end of the previous three years in the following table:

(In lakhs of rupees)

	As on 31st December			
	1952	1951	1950	1949
Capital	5,62.50	5,62.50	5,62.50	5,62.50
Reserve fund	6,35.00	6,35.00	6,32.50	6,30.00
Deposits	206,08.81	231,16.57	231,64.48	250,72.90
Borrowings from other banks	15,62.37	13,00.00	3,33.00	
Advances and bills	111,87.99	139,44.27	98,66.28	90,31.28
Investments—				
Government securities	82,70.11	71,00.93	109,17.63	98,42.31
Others*	14,44.46	14,15.85	12,37.90	9,92.10
Cash	26,74.74	32,60.00	31,47.38	68,38.39
Fixed assets	1,63.90	1,59.24	1,60.16	1,57.92
Balance-sheet total	239,31.28	261,74.85	254,99.42	268,63.93
Ratio to deposits of—	%	%	%	%
Advances	54.3	60.3	42.6	36.0
Investments	39.5‡	31.2‡	51.0‡	42.9
Cash	13.0	14.1	13.3	27.3

* Include Pakistan and other Government securities.
‡ Ratio arrived at after taking into consideration the securities deposited against loans from banks.

The decline in deposits during the year is much steeper than in the preceding year and this is only in conformity with the general trend of bank deposits, because of the contraction in money supply during the year. The level of deposits, at Rs. 206.09 crores, as on 31st December, 1952 is the lowest since 1942. Advances and bills purchased and discounted show a fall of Rs. 27.56 crores on balance, but this does not mean that the general level of advances was lower throughout the year. Reflecting the seasonal trend in trade and business, there was an unprecedented demand for bank finance during the first half of 1952. Advances and bills of the Imperial Bank established a fresh record during that six months. At the end of June, 1952, these stood at Rs. 145.26 crores as compared with Rs. 139.44 crores at the end of December, 1951, and only Rs. 98.66 crores at the end of June, 1951. The decline in advances and bills during the second half of 1952 was much steeper than the rise during the first half, so that they stood at the end of the year very much lower than at the close of 1951. The larger demand on the Bank for accommodation in the earlier half of 1952 necessitated larger borrowings from other banks and these rose from Rs. 13 crores to Rs. 20.03 crores at the end of June, but have declined to Rs. 15.62 crores at the end of the year. The outstandings at the end of 1951 and 1952 were secured by the Bank's investments in Government securities, while those at the end of June, 1952 were covered by both securities and usance bills. In other words, the Bank utilised the facilities provided under the bill market scheme to the maximum extent possible in the first six months of the year, and repaid the borrowings during the latter half. Of the sum of Rs. 15.62 crores representing outstanding borrowings, Rs. 10 crores are those borrowed in India and the balance outside India, whereas the entire Rs. 13 crores at the close of 1951 were borrowings in India.

The Bank's investments show a significant rise of Rs. 11.98 crores and, as will be clear from the foregoing table, excepting for a small part of these, the whole of this increase is in Central and State Government securities, Treasury Bills, etc., in India. A good part of this increase is presumably due to subscriptions to the Government of India Treasury Bills, the sale of which was resumed in October, 1952. Of the total investments, those of a face value of Indian Rs. 12.50 crores and of Pak. Rs. 5.65 crores are pledged against borrowings from other banks, agents, etc. Evidently, because of the prolonged slack season of 1952, the Bank has had to seek

CANARA BANK REPORTS RECORD PROFIT

9 PER CENT DIVIDEND MAINTAINED

A RECORD profit of Rs. 7.54 lakhs is the most outstanding feature of the audited accounts of the Canara Bank Ltd. (General Manager: Mr. P. S. Nayak, Mangalore) for the year ended 31st December, 1952. Though the profit is only a shade better than that of Rs. 7.39 lakhs earned in 1951, it is in refreshing contrast to the drop in profits of the majority of Scheduled Banks for that year. What is more heartening is that such a record profit has been made in the face of adverse business conditions. The dividend is being maintained at 9 per cent. per annum, after maintaining the allocation to general reserve and providing a small sum for contingency reserve.

The salient features of the Bank's profit and loss account and balance-sheet for the past four years are compared in the following table, which discloses the Bank's progress:

(In lakhs of rupees)

	For the year ended 31st December			
	1952	1951	1950	1949
Interest and discount earned	24.39	21.27	21.24	20.73
Commission and exchange	8.25	8.74	6.42	4.48
Gross income	34.80	32.65	29.65	27.15
Interest paid	8.86	8.80	8.14	7.96
Expenses	17.73	15.91	13.54	11.42
Depreciation	0.66	0.55	0.40	0.31
Profit	7.54	7.39	6.98	5.98
Provision for—				
Taxation	3.10	3.40	3.10	1.90
Reserves	2.06	1.50	1.50	1.00
Bonus to staff	0.75	0.65	0.49	0.58
Dividend—				
5% preference	0.52	0.52	0.52	0.48
Ordinary	1.35	1.35	1.35	1.35
	(9%)	(9%)	(9%)	(9%)
Carry forward	0.09	0.33	0.37	0.35

	As on 31st December			
	1952	1951	1950	1949
Capital	29.00	29.00	29.00	29.00
Reserves	16.50	15.00	13.50	12.00
Deposits	7,31.85	7,48.07	7,49.55	7,06.81
Advances	2,82.18	3,20.88	3,46.57	2,82.19
Investments	1,97.46	2,20.93	2,20.97	2,18.17
Cash	1,93.98	2,74.05	2,15.55	2,16.39
Balance-sheet total	9,19.31	9,57.19	9,15.63	8,21.37
Ratio to deposits of—	%	%	%	%
Advances	38.5	42.9	46.2	39.9
Investments	27.0	29.5	29.5	30.9
Cash	26.5	36.6	28.8	30.6

It is interesting to note that the Bank's earnings by way of interest and discount, which did not show any worthwhile increase in the previous year, have been markedly higher in 1952, while those from commission and exchange are fractionally lower, in contrast to increases noted in 1951. Thus, while commission and exchange had made a significant contribution to the improvement in earnings in 1951, it is the interest and discount that have been mainly responsible for increase in gross income. It is also noteworthy that the pace of increase in interest paid on deposits and borrowings has considerably slowed down in 1952. Presumably, the Bank did not resort to any large-scale borrowings in order to meet the unprecedented demand for money during the busy season. The only other factor which has offset to a large extent the higher earning is the rise in administrative expenses which, of course, is not a feature of the working of this Bank alone. The contribution to the general reserve is maintained at Rs. 1.50 lakhs, but an additional sum of Rs. 56,000 has been taken to the inner reserve.

Traditionally, the Bank is noted for adopting a cautious policy in the matter of advances and for maintaining an advance ratio very much lower than the average for all Scheduled Banks. Such a policy has been all the more scrupulously followed in the past year, particularly in the face of a fall in resources. Thus, while deposits have declined by Rs. 16.22 lakhs, advances and bills discounted and purchased have gone down by Rs. 38.70 lakhs, so that the advance ratio at 38.5 per cent. compares with 56.4 per cent. for all Scheduled Banks at the end of the year. Investments are lower by Rs. 23.47 lakhs. Investments in Central and State Government securities and Trustee securities have gone down from Rs. 214.37 lakhs to Rs. 183.21 lakhs, while those in municipal debentures and loans show a rise from Rs. 1.30 lakhs to Rs. 8.99 lakhs. Investments are shown at cost, but the market value of the Government securities, which form the bulk of the investments, is well above the book value. Cash balances too have declined by Rs. 80.07 lakhs, so that the cash coverage to deposits is 26.5 per cent., that is 10 per cent lower than that at the end of 1951, but it still compares very well with the all-India average of 11.6 per cent.

(*Concluded from previous column*)

a remunerative outlet for its idle funds. This is again reflected in the contraction of Rs. 5.85 crores in its cash balances at the close of the year.

FORMATION OF SAVINGS AND RISK CAPITAL

SOME LESSONS FOR INDIA FROM BRITAIN'S EXPERIENCE

INDIA'S Five-year Plan assigns an important role to the private sector of India's economy. Yet, savings and formation of risk capital in the country are not only very inadequate, but, according to well-informed opinion, have also been going down recently. Ways and means, therefore, are being considered to stimulate them. A study of the analysis made in a series of three articles in the issues of *The Economist*, London, dated 7th, 14th and 21st February, 1953, of the problem of savings and capital formation in Great Britain in recent years would, therefore, be found very interesting by many in this country.

Britain achieved industrial and commercial supremacy in the nineteenth century on the basis of allowing its capitalists to accumulate savings and to seek ceaselessly for the most productive and most profitable outlets for investment, while, in many other countries, savings either piled up in the hands of apathetic landlords or did not accumulate at all. But, during the last five years, sales of securities on the London Stock Exchange by private investors have exceeded the purchases made by them, and there has been no net personal investment, in spite of the fact that the earlier part of this period was characterised by conditions of boom. An analysis of the available official statistics indicates that the private investor is dead.

During the four years 1948-51, the personal savings in Britain amounted to £456 million, to which should be added £408 million of depreciation allowances granted to unincorporated businesses, £97 million of additions to their tax reserves and £386 million of war damage and other capital payments to private persons and unincorporated businesses, giving a total of £1,347 million, over and above the amounts spent on current consumption and payment of income-tax. During the same four years, death duties and the special contribution imposed on investment incomes in the 1948 budget amounted to £853 million, gross capital formation (including stock building) of unincorporated businesses amounted to £1,298 million, the life and annuity funds of British insurance offices increased by over £500 million, shares and deposits of building societies by over £400 million, the national savings movement showed an excess of receipts over deposits of £87 million, and the increase in gross personal deposits at the clearing banks exceeded gross personal borrowing from them by over £200 million. All these items give a total of over £3,300 million, that is, £2,000 million more than the £1,347 million available. Apart from any net new borrowings from lenders other than banks, the shortage must have been financed by personal sales of financial assets, and especially of Stock Exchange securities. These sales and the entire new issues have had to be absorbed by corporate investors and Government funds such as the national insurance funds. Some confirmation of this statement is provided by the facts that the value of Stock Exchange securities shown in the balance-sheets of British insurance companies rose by £426 million during the three years 1948-51 and that the net purchases of Government securities by Government departments amounted to £568 million during the two years 1948 and 1949.

Private Investor Crushed

The private investor was crushed to death by high taxation and rising prices. In 1938-39, there were 74,000 persons with incomes of over £2,000 a year, after payment of tax; their aggregate disposable income amounted to £277 million or over 10 per cent. of the total of £2,663 million of net incomes assessed for tax in that year. The enjoyment of a standard of living equal to that afforded by the pre-war £2,000 a year would require a disposable income of well over £4,000 a year at present. In 1950-51, however, there were less than 5,400 persons who were left with a disposable income of over £4,000 net, and their total disposable income amounted to less than £24 million, that is, 0.3 per cent. of all net incomes assessed for tax in that year.

It is true that all investors do not belong to this vanishing class of the well-to-do. Over one-third of all dividends and interest paid out in 1949-50, including interest on various types of small savings, went to persons with less than £1,000 a year. Further, more than 5,250,000 persons in Britain received some sort of investment or property income in 1949-50. But nearly 1,090,000 of them and more than half of the poorest among them, were single females or widows. None can believe that this large number of old and poor women are actuated by the spirit of a continuous search for profitable but risky investment outlets.

Who has provided risk capital for British industry in the past 20 years? The death duty statistics show that over 50 per cent. of all privately held ordinary shares are owned by persons with fortunes exceeding £50,000. This means that the market for industrial capital will be squeezed alarmingly in the next generation. The majority of fortunes over £50,000 belong to people who have reached or passed middle age and a large proportion of them will, therefore, be subjected to death duties within the next 25 years. When this happens, anything between 35 per cent. (for estates of £50,000) and 80 per cent. (for estates of over £1,000,000) will be struck off their capital value by the tax collectors. While existing fortunes of over £50,000 are being destroyed in this way, few, if any new ones will be built up, because the high rate of surtax allows only 60 people in the entire country to have more than £6,000 a year, after paying tax.

Shortage Concealed

During the last few years, the shortage of risk capital caused by this murder of the private investor has been partially concealed by three coincidences: glut of liquid resources accumulated by many companies during the war, the gradual shifting of a substantial portion of the investments of insurance companies and other institutions from Gilt-edged securities to preference and ordinary shares and the transfer of over £2,000 million from equities to Gilt-edged securities resulting from the nationalisations of 1945-51. All these factors have already begun to lose their importance and, during the next few years, the plight of the market for risk capital is bound to become extremely difficult.

Transfer of industries from the private to the public sector is no remedy for this situation, because the British electorate and even the Labour Party do not at present want any new nationalisations. The party in power cannot advocate the remedy of giving tax reliefs to the rich for fear of losing popular support. The only practical remedy, therefore, seems to be to induce a much larger proportion of the 14 million persons, earning between £250 and £2,000 net annually to invest in risk capital. The latest inland revenue figures show that persons in this income group handle nearly 80 per cent. of disposable incomes in Britain at present. The Government should encourage this middle income group to increase its savings and to invest them in risk capital by giving it tax relief in respect of investments in industrial securities in the same way as the relief already being given in respect of investments in national savings certificates. Government can do this by curtailing its own expenditure.

Role of Stock Exchange

The City and Stock Exchange also will have to play their part and conduct publicity in order to make the public realise that the dearth of investment in risk capital is a major threat to Britain's industrial future and, therefore, to the nation's standard of living and that an active Stock Exchange is the indispensable pipeline through which savings must flow to secure the replenishment of industry. Further, the City will have to court the goodwill of the trade unions. This will not be an easy matter, because some of the trade union leaders will regard any scheme for spreading the ownership of industry among all classes as a threat to their concept of socialism. Fortunately, however, there are thoughtful people in the Labour movement, who recognise that the country must remain partially capitalist for many years and cannot survive without risk capital.

Furthermore, changes in the practices of the Stock Exchange and public companies are necessary to induce people to invest. The great need is to explain to the entire public by means of the Press, cinema, radio and television, how the Stock Exchange works and what economic benefits it confers on the public. More statistics on investment are needed to provide ready answers to a number of questions. Why do share prices move up and down? What do profit and loss accounts and balance-sheets mean? What rights does a shareholder possess? How can money be invested and how much will it cost? The efforts of the Council of the Stock Exchange will have to be backed up by those of the members of the Exchange; both will have to resort to widespread advertising.

Investments in Risk Capital

A large share in any campaign to popularise investment in risk capital will have to be undertaken by the public companies themselves. A good product should imply a progressive company in which all classes of investors would be happy to have a stake. It is no accident that shares like Woolworths are held by many investors of the most modest means as well as by big institutions. Directors of companies are slowly realising that a widely spread distribution of shareholdings has advantages far beyond a quiet time at the annual general meetings. But there are still many directors and managers who treat shareholders as little more than necessary nuisances. This easy assumption, born of the managerial revolution, has undoubtedly helped the Government campaign for dividend restraint and also played into the hands of political critics who desire to treat shareholders as disenfranchised deferred creditors.

A quick way of making investment in risk capital familiar to more people would be to encourage employees to take up shares in the companies for which they work. Workers in a factory are in a better position than outside investors to judge efficiency of management, which is one of the factors on which investment decisions rest. The American practice of distributing annual reports among employees and creating special classes of employees' shares deserves to be copied in other countries. The linking of a part of the employees' earnings directly with profits is so common that the interests of outside shareholders would not suffer if employees sometimes take out their equity by buying shares even on privileged terms.

Most persons, however, will continue to have to base their investment decisions on published accounts, as on-the-spot information will not be available to them. Education, and even propaganda, through the medium of the annual report should, therefore, be carried on by every public company. Since it will be education of lay persons, the carefully detailed accounts required by law must be followed up by simple statements, which can be easily understood. These statements should show precisely and clearly how the profits were earned and allocated and emphasise the most important relationships and ratios of the constituent items. In these matters, reports of American companies set a standard which companies in other countries should follow. The reports are supplemented by illustrations, charts and graphs.

Finally, steps must be taken to combine the innumerable small savings into a big river, which will flow effectively towards risk investment. The capital market will have to make itself accessible to persons possessing small incomes if it is to collect their small savings.

Shares in Penny Units

The scheme of Mr. J. R. Kinross to sell industrial shares in penny units across the counters of banks as easily as postage stamps or packets of cigarettes has attracted wide attention in Britain. Government should help any organisation that may be set up to attract the custom of the wage and salary earners, by charging tax at a reduced rate on dividends which are distributed among small investors subject to a limit of investment. Taxation at 5s. in the pound and an invested limit of £500 would be appropriate in Britain. Government should also exempt the limited investments of the small savers from the 2 per cent. stamp duty.

The management of any organisation set up to cater for the needs of the small and unskilled investor would have to be first rate and its facilities would have to be nation-wide. The Stock Exchange and the banks, with their extensive system of branches, may form a non-profit-making trust company, its capital carrying a maximum rate of dividend. This Trust would prepare a selected list of equities and buy the shares through the market in the ordinary way. The Trust would then split each share into units of a very small value. These small units could then be bought and sold through the branches of banks. But a Trust of this sort is bound to be troublesome to run. It would become more expensive and far more

(*Continued on page 423*)

TARGET FOR TEXTILE INDUSTRIES

HANDLOOM SECTOR RECEIVES SPECIAL EMPHASIS

A STRIKING feature of the development programme for the textile industries drawn up by the National Planning Commission, is the relatively greater importance attached to the expansion in the handloom sector, as distinguished from the mill sector, as a means for increasing cotton textile output. This emphasis on handloom industry, it is stated, is due to the fact that rural employment and underemployment, "would be aggravated, to a certain extent, as a result of measures taken to achieve rationalisation of agriculture." A clear indication of the Government's policy of aiding the handloom industry is provided by the reservation of a larger sphere of production of cloth to the handlooms. Thus, the target of production in the handloom sector is placed substantially higher at 1,700 million yards by 1955-56, as compared with 810 million yards in 1950-51 (basic year of the Plan), while that of the output in the mill sector is placed only slightly higher at 4,779 million yards, as against 4,744 million yards. Even the slight increase in cloth output by the mills is to be achieved, not by the establishment of any new composite mill, but by enhancing the efficiency of the existing units.

The anxiety on the part of the Planning Commission to improve the lot of the handloom industry is so great that it recommends the installation of new spinning plants, in spite of the fact that the spindleage already existing, when fully utilised, will be sufficient to produce the required quantity of yarn. The explanation given by the Commission in support of this recommendation is as follows:

"The necessity for fostering industrial development in backward areas, the desirability of bringing into existence co-operative spinning mills with the object of enabling handloom weavers to achieve independence of external sources of yarn supplies, and the need to rehabilitate displaced persons provide the *raison d'etre* for new spinning mills. Further, new small-scale spinning units like the Garabo and Tokubo units and Kale's spinning unit, which have great potentialities for the development of small-scale industries in rural areas favourably situated in regard to cotton supplies, are expected to be established during the period of the Plan. However, these developments have to be conceived on a moderate scale, considering the limitations that would be set by supplies of cotton. Taking all factors into consideration, it is our view that the installation of 350,000 spindles (apart from additions in existing mills for the expansion of units to economic size) during the period of the Plan would meet the requirements from all points of view. The capital investment on this expansion would be of the order of Rs. 800 to Rs. 900 lakhs."

Utilisation of Rated Capacity

The programme of production for the mill industry envisages fuller utilisation of the rated capacity so as to produce 1,640 million lbs. of yarn and 4,779 million yards of cloth by 1955-56, which compare with 1,179 million lbs. and 3,718 million yards, respectively, for the base year. The production of cloth by the mills is to be supplemented by output of handlooms, which is estimated at 1,700 million yards for 1955-56, as against 810 million yards for 1950-51. For achieving this output, the handloom industry requires 380 million lbs. of yarn. It is presumed that, with full utilisation of the spindleage in existence and under installation, the mills would be able to supply the requirements of handlooms, apart from providing some quantity of yarn for power looms and other miscellaneous industries.

The programme of development for the cotton textile industry during the period of the Plan is indicated below:

		1950-51	1952-53	1955-56
Rated capacity of mill industry:				
Spindles	..	10,942,241	11,175,283	11,292,241
Yarn	(mil. lbs.)	1,668.7	1,704.2	1,722.0
Looms	..	194,411	195,84	195,849
Cloth	(mil. yds.)	4,743.6	4,778.7	4,778.7
Actual production:				
Yarn	(mil. lbs.)	1,179	1,510	1,610
Mill cloth ..	(mil. yds.)	3,718	4,600	4,700
Handloom cloth..	(mil. yds.)	810	1,300	1,700
Exports:				
Yarn	(mil. lbs.)	74.5	..	..
Cloth	(mil. yds.)	1,269.5	1,000	1,000
Requirements of raw cotton	(mil. bales)	3.5	4.5	4.9

From the above figures, it will be seen that, in suggesting the programme of production, the Planning Commission has fully taken into account the need for maintaining a high level of exports of cotton piecegoods, besides increasing the availability of cloth in the domestic market. The export target has, accordingly, been placed at about 1,000 million yards from 1952-53 onwards; the actual quota each year, it is emphasised, is to be determined in advance, immediately after the cotton supply position is known and after providing for the minimum *per capita* requirements in the domestic market. In this connection, particular stress is laid on efforts to retain the export markets already established by increasing the competitive strength of the industry and by permitting only the export of goods of proper quality. The *per capita* consumption of cloth in the country is envisaged to rise to a minimum of 15 yards by 1955-56, as compared with 13 yards during 1952-53.

Uneconomic Units

One of the most important problems of the cotton mill industry is the existence of as many as 150 inefficient and uneconomic units. Of these, 25 units closed some time ago, 35 are operating at a loss, and 90 are working at marginal or only slightly above marginal efficiency. The necessity of modernising such units and/or helping them to increase their capacities to economic sizes needs no emphasis. Facilities in the form of foreign exchange and other types of assistance are, therefore, required. Replacements for modernisation purposes and some expansion for conversion of uneconomic units to economic sizes must be visualised in the interest of increasing the efficiency of the industry and its competitive strength. For determining the programme of such modernisation or alterations, the Planning Commission has suggested the appointment of an expert committee. The findings and the recommendations of this Committee should form the basis for necessary action by the mills. If the mills fail to take the necessary action, the Government, it is suggested, will have to intervene and take specific measures for improving production.

Role of Handloom Industry

As already mentioned, an important role has been visualised for the handloom industry. The Planning Commission has put forward a number of suggestions for the development of this sector of the cotton textile industry. These suggestions include:

(1) Organisation of the handloom workers on a proper co-operative basis for securing adequate supplies of raw materials and adequate offtake of the finished products should be ensured;

(2) sufficient supplies of yarn through co-operative societies on a credit basis should be arranged, so that the handloom worker is always provided with sufficient yarn;

(3) the State Governments should employ expert designers who would maintain a constant flow of designs which would be distinctive, if manufactured on the handloom and which it is not possible for the mills to produce;

(4) all exports of yarn, other than for meeting the commitments under trade agreements, should be banned and, in the event of domestic yarn production being found inadequate due to cotton shortage, etc., the question of providing facilities for importing yarn, especially for meeting the requirements of the handloom industry, should be considered;

(5) so long as the output of handloom cloth in the spheres already reserved is below normal and there is room for stepping up production of such types of cloth, there might be no necessity for reserving additional fields. But, as soon as production in the reserved fields exceeds demands and the industry is in a position to increase cloth production further, it may be necessary to extend the spheres reserved for handloom production;

(6) full facilities should be created for undertaking investigation into the development of new types of hand-spinning and hand-weaving equipment, so as to improve the efficiency of handloom operations and to achieve a large output per man;

(7) machinery should be set up to render technical advice to the handloom industry so as to secure greater output per loom;

(8) facilities should be provided for the handloom industry to capture and maintain export markets to an increasing extent;

(9) in addition to encouragement to the weaving section of the handloom industry, the question of helping it to undertake processing of textiles should also be given adequate consideration; and

(10) as electric power becomes available to an increasing extent in rural areas with the development of hydro-electric and other power projects, the handloom industry should be encouraged to take advantage of power and gradually change over to small powerlooms. Encouragement should be given to the use of small power-operated spinning and weaving units on a wider scale so as to step up output per man and improve the economies of this section of the industry.

The development programme for the rayon sector of the textile industry is on following lines:

		1950-51	1952-53	1955-56
Rayon filament and staple fibre:				
Number of units ..	.. ..	1	2	4
Rated capacity ..	(mil. lbs.)	4.0	9.6	22.0*
Production ..	(mil. lbs.)	0.4	9.6	22.0*
Chemical pulp:				
Number of units ..	.. ..	..	..	1
Rated capacity ..	.. (tons)	..	..	11,500
Production ..	.. (tons)	..	..	..
Cotton linters—				
Number of units ..	.. ..	..	..	3
Rated capacity ..	(mil. lbs.)	..	..	5.0
Production ..	(mil. lbs.)	..	..	5.0

* Plus 28,000 bales staple fibre.

The fulfilment of the production programme for the rayon section should be given first priority by facilitating completion of units under construction and expansion projects envisaged, as well as by importation of necessary quantities of raw materials. The attention of the Travancore Rayons and the National Rayon Corporation is currently concentrated on achieving full production, though provision of building space has been made at both the places for possible expansion. The National Rayon Corporation contemplates expansion of its plant so as to increase the capacity to 7.0 million lbs. per annum by the end of 1953 and to 14.0 million lbs. per annum by 1955-56. The capital investment on these two stages of expansion is estimated at Rs. 50 lakhs and Rs. 500 lakhs, respectively. The expansions would provide additional employment to about 650 persons ultimately. As a result of the coming into operation of all the four rayon factories and the expansion project of the National Rayon Corporation, the rated capacity of the rayon filament industry would reach 22.0 million lbs., of which 4.0 million lbs. would be consumed by Sirsilk Ltd. within the factory in weaving rayon fabric, so that 18.0 million lbs. would be available for the rayon fabric industry from indigenous sources. In addition, rayon staple, equivalent to 11.2 million lbs., would also be available from within the country for the spinning and weaving industry. The total additional capital expenditure for achieving all the above developments is estimated at Rs. 10.5 crores.

The development programme brings about a reduction in the imports of staple fibre and filament yarn corresponding to about Rs. 5.0 crores in 1952-53 and Rs. 12.1 crores in 1955-56 on the basis of 1950-51 c.i.f. prices. This reduction would be offset by the necessity to import the raw materials of the rayon industry (caustic soda, sulphur, pulp, etc.) valued at Rs. 1.30 crores in 1952-53 and Rs. 3.78 crores by 1955-56. Exports of rayon piecegoods would earn foreign exchange equivalent to Rs. 68.0 lakhs in 1952-53 and Rs. 136.0 lakhs in 1955-56.

Instead of allowing additional finance to be diverted into further development of the rayon and staple fibre sector during the period of the Plan, efforts should be made to reduce dependence on imports of cellulosic raw materials, viz., chemical pulp and cotton linters. The capital requirements of the chemical pulp project—to be taken up in the second part of the period of the Plan (1952-56)—are estimated at Rs. 6 crores. The scheme might be financed jointly by the rayon and paper industries and, if such collaboration is forthcoming, the Government should accord all reasonable encouragement. The cotton linters industry should be integrated with the production of cottonseed oil and a few plants may be established at suitable places in Madras, Hyderabad, Madhya Pradesh, etc. The capital investment of plants required for achieving the suggested production of cotton linters (as also oil and cake) is estimated at Rs. 60 lakhs.

Woollen Textiles

In the sphere of woollen textiles (mechanical section), the programme of expansion is as follows:

		1950-51	1955-56
Number of spindles ..	.. ..	116,800	140,800
Rated capacity of cloth on single shift	(mil. lbs.)	20.15	20.15
Production ..	.. .. (mil. lbs.)	18.00	25.00
Estimated requirements ..	.. (mil. lbs.)	20.00	23.00

Two new units, which were under construction in 1950, went into production in 1951. Two other units are likely to be established for manufacturing woollen goods, besides installation of spinning plants for additional production of worsted yarn. In view of the fact that indigenous demand, which is estimated at 23 million lbs. of woollen manufactures by 1955-56, can be satisfied, if some of the mills work double shifts and the existing capacity is fully utilised, the Commission thinks that the establishment of new weaving units is not necessary. The Commission, however, concedes that it may be necessary to install 30,000 additional spindles for the production of fine yarn. In this connection, it is considered worthwhile to investigate the possibility of having additional spindleage on a co-operative basis, in which the consumers of yarn will themselves be the owners of the enterprise.

DOUBLE DAY-SHIFT WORKING IN MILLS TO BE EXTENDED

CLOTH AND YARN EXPORT TRADE

(From A Special Correspondent)

MANCHESTER, *24th February*

MANCHESTER LETTER

THE possibility of extending the use of double day-shift working in Lancashire cotton mills—and in British industry generally—has been considered this week. The Minister of Labour, Sir Walter Monckton, spoke at the opening session of a Cotton Board week-end conference, held at the Lancashire coastal resort of St. Annes, and announced that the National Joint Advisory Council had been called together to consider the wider use of the system throughout the country.

He said: "The time is now ripe for a renewed examination of the possibilities of extending double-shift working." He added: "The question is one which both sides of industry as a whole will be asked to review in co-operation with my department." The National Joint Advisory Council, he continued, could only discuss and consider general principles but if they came to the conclusion that double day shift working had advantages, the question would doubtless be remitted to various industries recommending that the possibility of introducing or extending the system should be examined in detail.

If Britain was to restore its economic position more products must be sold abroad, Sir Walter went on. All possible steps must be taken to improve the nation's competitive position, and to reduce selling prices costs must also be reduced, by making full use of the country's productive capacity.

Praising the Lancashire textile industry's contribution to the national economy, Sir Walter said:

"Even in 1952—a year of uncertainty and recession for textile industries throughout the world—United Kingdom exports of cotton yarns and manufactures amounted to all but £150,000,000 and in the previous year they exceeded £200,000,000.

"Although the advantages of shift working must vary from mill to mill, its adoption in cases where new and expensive machinery was installed would bring great benefits in individual industries and for the national economy. We should increase the yield from the nation's store of capital goods at a time when we cannot afford to invest as much as we should like in industrial plant and equipment; we should reduce costs at a time when this is of the greatest importance; we should be better able to hold our own in export markets and to develop new markets; and, looking further ahead, we should put ourselves in a better position to keep in the vanguard of industrial efficiency."

A problem likely to arise if the double-shift system became more widely adopted, requiring an increase in the labour force, was the difficulty of obtaining skilled men. "I want to emphasise the importance of training in general," said Sir Walter, "both the training of new entrants and the training of labour already available. We should constantly bear in mind the aim of increasing the quality of our man-power. If we do, we shall inevitably improve our productivity."

Cotton Trade Views

During the two-day discussions on double day shift working in the cotton trade, somewhat conflicting views were expressed by employers and trade union leaders at the conference. The subject was fully debated and many points were raised from the cost of introducing the system to the social implications of the move.

For the millowners, Mr. George Hasty, Master Spinners' Federation President, said:

"Our policy is evolution not revolution. We believe the system will spread and its gradual introduction into the mills will benefit all concerned. Spinners must examine the possibility of working evening shifts on a larger scale but agreement must be reached with the trade unions to ensure that at least a 40-hour week is worked on double day shift."

Union leaders were not in favour of the proposals because they said it would disturb family life in an industry manned largely by women, many of whom were married. Miss Alice Foley, Bolton Weavers' official and one of the few women at the conference, said:

"Less than one per cent. of those here will be affected by double-shift working. There are nearly 200,000 women in the industry and those I know don't want to work shifts and upset all their family arrangements."

The general impression of the conference was that double-shift working would be introduced "gradually." Sir Raymond Streat, Cotton Board Chairman, summed up by saying: "Double-shift working is not a single sovereign remedy for Lancashire's ills and it can only be a gradual process. It is one of the many factors which have to play their part in the new challenge which faces the industry."

Overseas Trade

The first quarter of the year normally brings an increase in export returns and January in particular has been an encouraging month for some time past. On this occasion the totals have been lower than a year ago but they remain the best monthly figures since March, 1952. The value of all British cotton goods shipped abroad in January was £11,660,993 compared with £18,226,892 in the same month last year.

Exports of nearly 65,000,000 square yards last month compare with the average of 59,234,000 square yards monthly in 1952. This total was only exceeded twice last year—in January and March. The following table shows recent annual totals and comparative January shipments of cotton piecegoods:—

		Sq. yds.	£
1939	..	1,393,375,000	31,982,988
1949	..	903,578,000	105,706,322
1950	..	822,473,000	100,296,504
1951	..	865,153,000	132,191,722
1952	..	710,803,000	100,855,759
1950 January ..	..	72,311,000	8,370,633
1951 January ..	..	92,245,000	12,389,753
1952 January ..	..	77,171,000	12,284,452
1953 January ..	..	64,796,000	8,223,374

A similar improvement was recorded in yarn exports last month, which were also the highest recorded since the previous March. The total of nearly 3,500,000 lbs. compares with an average of 2,977,000 lbs. monthly last year. The following table gives comparative details:

		Lbs.	£
1939	..	113,661,700	8,946,246
1949	..	82,061,000	23,550,385

Grey cloth imports, although higher than in the previous two months, remained at the low figure of 4,568,000 square yards. Chief suppliers were Germany, with 1,751,000 square yards, and Japan with 971,000 square yards.

Seeing for Themselves

Sharp criticisms of the wisdom of inviting Japanese textile leaders to Lancashire and providing them with statistics and an insight into new productions were made by Mr. Percy C. Fish, Chairman of the large textile manufacturing, merchanting and exporting firm of J. F. & H. Roberts, Ltd., at the annual meeting in Manchester last week.

Declaring that Britain had handled to the Japanese statistics and estimates "on a silver plate, free, gratis and for nothing," Mr. Fish said: "It is reasonable to believe that if the Japanese were shown anything they considered useful to them it would be copied with the minimum of delay."

Japanese delegates had been conducted through several mills and shown over style and fashion centres illustrating the presentation of Lancashire's "ultra modern" productions. Yet the Japanese, by their consistent actions, had made it clear that their one ambition was to annihilate every decent competitor who endeavoured to get a share of world markets. Mr. Fish was criticising the inclusion of Japanese representatives in the International Cotton Conference held by the Cotton Board at Buxton last Autumn. He said:

"Healthy competition is good for all of us and an interchange of ideas with countries who are willing to trade with each other can be very beneficial. But to offer the same facilities to a foreign competitor whose known reputation is of such an unenviable nature can only lead to nowhere. Nice words and wretched actions are not the sort of foundation on which to build the textile industry."

Unions' Policy Probe

A fresh declaration of policy on problems affecting the future of the Lancashire cotton industry—the first for 10 years—is to be drawn up by trade union leaders with the assistance of Mr. Harold Wilson, M.P., a former Labour President of the Board of Trade.

Mr. Wilson has been invited to compile the policy statement by the Legislative Council of the United Textile Factory Workers' Association, the central assembly of cotton trade unions. After a meeting with the Council in Manchester this week, Mr. Wilson said: "We have considered a whole range of problems, including raw materials, markets, efficiency of the industry, the financial situation of the industry, merchanting and exports."—*All Rights Reserved.*

GRANTS-IN-AID TO STATES

PRINCIPLES OF DISTRIBUTION FOLLOWED BY FINANCE COMMISSION

READERS will recall that in *Commerce* last week was given a summary of the principles followed by the Finance Commission for allocating income-tax revenue between the Centre and the units. The Commission, it may be noted as stated last week, was also requested by the President to submit its recommendations also on (*a*) grants-in-aid in lieu of jute export duty to the four jute-growing States, and (*b*) grants-in-aid to the States from the Consolidated Fund of India. The Commission's recommendations on these two questions are dealt with here.

The Constitution of India, under Article 275, provides for the payment of such sums as Parliament may by law give as grants-in-aid to States which are in need of assistance. The first proviso of this Article enjoins that the Centre should provide help to a State in order to enable it to meet the cost of development schemes for promoting the welfare of scheduled tribes in the States or to raise the level of administration of the Scheduled areas to that of the rest. The second proviso requires the payment of grant-in-aid equivalent to the average revenue deficit of the State during the two years preceding the commencement of the Constitution in respect of the tribal area in the State or raising the level of administration. Lastly, provision is also made in the Constitution to give grants to the four States of Assam, Bihar, Orissa and West Bengal in lieu of their share in the net proceeds of the export duty on jute and jute goods. These grants refer only to revenue grants and not to assistance that may be rendered by the Centre to the States by way of loans for economic development or by way of special grants in such emergence as, for instance, famine. These latter grants are outside the scope of the Commission's recommendations.

Now to take first the Commission's recommendations relating to the last type of grant, namely, the allocation of export duty on jute and jute goods to the four jute-growing provinces. The export duty on jute was first levied in 1916. It became divisible between the Centre and the States under the Government of India Act, 1935. Sir Otto Niemeyer, to whom the question of allocation was referred, fixed the States' share at 62½ per cent. of the net proceeds. The division of Bengal and Assam—following the partition of the country, causing the loss of about 70 per cent. of the jute-growing areas—altered the circumstances. The share of the jute export duty allocable to jute-growing provinces was, therefore, reduced from 62½ per cent. of the net proceeds to 20 per cent., the basis of allocation continuing to be the amount of jute grown in each State. This adversely affected the finances of the States, particularly West Bengal. The Government of India, therefore, sanctioned to West Bengal *ad hoc* grants of Rs. 40 lakhs in 1947-48, and Rs. 50 lakhs in each of the years 1948-49 and 1949-50. Later on, the Expert Committee on the Financial Provisions of the Union Constitution, under the chairmanship of the late Mr. N. R. Sarker, suggested a grant of Rs. 100 lakhs to West Bengal, Rs. 15 lakhs to Assam, Rs. 17 lakhs to Bihar and Rs. 3 lakhs to Orissa. In November, 1949, Mr. C. D. Deshmukh who was requested to give an interim award pending the appointment of the Finance Commission, fixed the grants as follows: West Bengal Rs. 105 lakhs; Assam Rs. 40 lakhs; Bihar Rs. 35 lakhs; and Orissa Rs. 5 lakhs. These grants were paid in 1950-51 and 1951-52.

An important point to be noted here is that there is no provision in the Constitution for the sharing of export duties between the Union and the States. The principle of compensation, for a transitional period, to the four jute-growing States was specified in Article 273, reading as follows:

"There shall be charged on the Consolidated Fund of India in each year as grants-in-aid of the revenues of the States of Assam, Bihar, Orissa and West Bengal, in lieu of assignment of any share of the net proceeds in each year of export duty on jute and jute products to those States, such sums as may be prescribed.

"The sums so prescribed shall continue to be charged on the Consolidated Fund of India so long as any export duty on jute or jute products continues to be levied by the Government of India or until the expiration of ten years from the commencement of this Constitution, whichever is earlier."

The Finance Commission, which was requested by the President to submit its recommendations on this question, examined the question whether the grants in lieu of the share in jute duties to be related to the net proceeds of the duty in each year, as a suggestion to that effect was put forward by the West Bengal Government. Its conclusion, as a result of its study, was that grants-in-aid should not be related to the amount of the revenue in each year subsequent to the commencement of the Constitution. Several considerations would appear to have prompted the Commission to reach this conclusion. First, if it were the intention of the Constitution to maintain the right of the four States to a share equivalent to that of the export duty on jute, it would have specially mentioned so. Secondly, the provision requires the President to prescribe *sums* of money for each State and not *shares* of revenue. Thirdly, jute is grown in States other than the four States and, therefore, it could not be the intention of the Constitution to limit the grants to these four States only, except on the basis of compensation of an item of revenue which had accrued to them in the past. Fourthly, the term "in lieu of a share in the export duty" appearing in the relevant section of the Constitution should be construed not as a continuing right to a share of duty, but as indicating the reason for which grants-in-aid are to be made. Again, the Constitution does not establish any direct relation between the amount of the grant and the revenue collected in each year, but it limits the payment of the grant to the period during which the duty itself continues.

Having decided thus—rightly in our view—that grants should not be related to the amount of the revenue from jute duties on exports, the Commission accepts the view that grants payable to the States will have to be in the form of fixed sums. It selected 1949-50—the last year in which the States were entitled to a share of the jute export duty—as the base year for determining the shares of each State, out of the allocation on the basis of 62½ per cent. of net proceeds of the export duty on jute and jute products fixed under the Government of India Act, 1935, that is, before it was modified in 1947.

In 1949-50, the net proceeds of the export duty were Rs. 968 lakhs and the divisible pool for that year at 62½ per cent. would amount to Rs. 605 lakhs. The total quantity of raw jute exported was 2.01 lakh tons and the raw jute used in the manufactured goods exported in that year was 8.38 lakh tons. During the year the production of raw jute in the four States were: West Bengal 2.59 lakh tons, Bihar 1.29 lakh tons, Assam 1.29 lakh tons, and Orissa 0.26 lakh tons, or a total of 5.42 lakh tons. As the basis of distribution of the grant is the amount of jute grown, these four States cannot, in equity, lay claim to the whole of the divisible pool, for a much larger quantity of jute than grown in these States went into the total exports (10.39 lakh tons=2.01 lakh tons raw jute +8.38 lakh tons jute goods) that year. Even on the assumption that the entire production of 5.42 lakh tons of jute went into exports in the year, and that the demand for local consumption of jute goods was met entirely from other sources, the *pro rata* share of these States in the divisible pool for that year would amount to no more than Rs. 150 lakhs for West Bengal, Rs. 75 lakhs for Bihar, Rs. 75 lakhs for Assam and Rs. 15 lakhs for Orissa. Accordingly, the Commission has recommended that these sums shall be paid to the four States as special annual grants-in-aid in lieu of the export duty on jute and jute goods, with effect from 1952-53.

Grants-in-aid of the Revenues

The term "grants-in-aid of the revenues" is not defined in the Constitution of India. The Finance Commission has, however, interpreted the term to mean that it should not be limited solely to grants-in-aid which are unconditional but to grants directed to broad and well defined purposes also.

In the past there were several types of grants. One of the categories of grants was known as unconditional grants, given by the Centre for placing the finances of the provinces on an even keel. Besides, there were also specific type of grants. In 1945-46 the Centre gave, for instance, West Bengal Rs. 18 crores to assist expenditure on famine. From 1944-45 onwards, assistance was given to States to finance grow-more-food schemes. Another important category of grants was the post-war development grant, relating to specific schemes of development. Then, there was special development grant of Rs. 3 crores to the four States of Saurashtra, Madhya Bharat, Rajasthan and Patiala and P.E.P.S.U. for two years towards financing specific development schemes to remove their special backwardness. Further, Article 275 of the Constitution provided for the backward area grants to Assam. Latterly has come a new category of grants relating to Community Projects.

The Finance Commission considers that both the methods of grants, namely, conditional and unconditional, should be followed in the scheme of assistance by the Centre. Unconditional grants should, it observes, reinforce the general resources of the State Governments which they would be free to allocate among competing purposes according to their best judgment, subject to the usual and Parliamentary checks. On the other hand, grants for broad purposes may be given to stimulate the expansion of particular categories of services rather than specified schemes under those categories.

With these preliminary observations, the Commission sets out to lay down principles which should govern grants-in-aid to States. Budgetary needs are considered to be an important criterion for determining the eligibility of a State for grant-in-aid. All budgets of States should be so adjusted as to place them on a comparable basis. Adjustments are considered necessary in respect of any abnormal or unusual and non-recurrent items of receipts or expenditure which may vitiate comparisons. Secondly, a State which is prepared to raise the maximum amount of revenue through taxation is considered to be better entitled to central assistance than a State which does not. Thirdly, an allowance is to be made for possibility of economy in expenditure. In other words, the State should utilise its existing resources to good account, before claiming assistance from the Centre. Fourthly, grants-in-aid may also be given to assist in equalising standards of basic social services. Factors such as the area of a State in relation to its population, economic backwardness, etc., would be reflected in the level of social services and the standard of development of a State and, therefore, would have to be taken into account. Fifthly, grants-in-aid may be given to help a State to meet special burdens or obligations of national concern. Sixthly, independently of budgetary criterion, grants may be given to further any beneficial service of primary importance in regard to which it is in the national interest to assist the less advanced States to go forward.

The broad considerations mentioned above have been borne in mind by the Commission, while assessing the needs of the States and formulating recommendations in regard to sums to be paid as grants-in-aid to States. The Commission has considered the budgetary position of the States and the probable amount which would accrue to them under its plan for the devolution of revenue from income-tax and Union excises which were referred to in the last issue of this journal. The additional burdens resulting from the Partition have also been taken into consideration, as also the case of less developed States needing special grants for purposes of raising their standards of one of the important social services, namely, primary education. Although it has not been possible for the Commission to meet all the demands placed before it, we are told that, as a result of the scheme, many of the States will receive more resources than they did in the past.

On the criteria mentioned above the Commission has recommended that Madras, Uttar Pradesh, Bihar, Madhya Pradesh, Hyderabad, Rajasthan, Madhya Bharat and the P.E.P.S.U. cannot be considered as being in need of assistance. Bombay, West Bengal, Orissa and Saurashtra are classed as marginal States, while Punjab and Assam need assistance definitely. The cases of Mysore and Travancore-Cochin have been treated separately.

So far as Bombay is concerned, the proposed withdrawal of the present restriction on taxing tobacco will, it is stated, leave the State free to raise additional revenue from this source by way of sales tax. Considering, moreover, the well-developed economy of the State, the size of its budget, and the resilience of its resources, the Commission has not recommended any grant-in-aid.
