In view of West Bengal's special problem of continued influx of refugees, and in view of the fact that its requirements would not be adequately met by its share of the divisible taxes and the grant-in-aid in lieu of the jute export duty, the Commission has recommended a grant-in-aid of Rs. 80 lakhs a year to West Bengal. In the case of Orissa, the present grant of Rs. 40 lakhs has been raised to Rs. 75 lakhs, as this State, in addition to the poor state of its financial resources, has had a large accession of "merged areas" having in them relatively backward territory. To Saurashtra, a sum of Rs. 40 lakhs has been recommended, as the budget of the State is not commensurate with its size. In view of the special responsibility of the Punjab Government in the sphere of law and order arising out of the Partition over and above the problem of coping with the disabilities created by it, a sum of Rs. 125 lakhs a year has been recommended to the Punjab. On account of special difficulties created by the Partition, Assam's present grant-in-aid has been raised from Rs. 30 lakhs to Rs. 1 crore.

Mysore and Travancore-Cochin are States with relatively limited resources and have, therefore, been recommended assistance to the extent of Rs. 40 lakhs and Rs. 45 lakhs, respectively.

As some of the States strongly desired the need for making large strides in the field of primary education, the Commission considers that, in the national interests, the Centre should allocate a part of its funds for the development of primary education in the States which are yet to cover a large leeway in the field of children's education. Accordingly, it has recommended distribution in each of the next four years, sums ranging from Rs. 150 lakhs in 1953-54 rising to Rs. 300 lakhs in 1956-57 to eight States on the strength of children attending primary schools. For details of this to the States, readers are required to consult the table published on page 323 of our issue dated 21st February, 1953.

The extent to which the purpose of this grant-in-aid is served has been left to be assessed by the subsequent Finance Commission when the finances of the States concerned for the next period come up for review. A suggestion has been made that the progress should be judged on the basis of the increase in the number of primary schools and the children attending them, the conversion of ordinary primary schools into basic schools, the improvement of facilities for the training of primary school teachers and measures adopted for the reduction of wastage in regard to primary education. The Government has been advised to obtain annual reports about the progress achieved in the expansion of primary education in the eight States mentioned, so that these reports may be available for examination by future Finance Commissions.

CANARA BANK, LIMITED

(INCORPORATED IN INDIA) — (LIABILITY OF MEMBERS IS LIMITED)
(ESTABLISHED 1906)

Registered Office: **MANGALORE** *General Manager's Office:* **BOMBAY**

AUDITOR'S REPORT.

1. I beg to report that I have examined the foregoing Balance Sheet of the Canara Bank, Ltd., as at 31st December, 1952, and the Profit and Loss Account for the year ended 31st December, 1952, with the books and vouchers of the Head Office and the certified returns from the branches and that I have visited the major branches of the Bank during the year and have examined the books and accounts and cash and securities as at the time of my visit and that I have obtained all the information and explanations I have required.

2. In my opinion such Balance Sheet and Profit and Loss Account are drawn up in conformity with the law, and the Balance Sheet exhibits a true and correct view of the state of affairs of the Bank according to the best of my information and the explanations given to me and as shown by the books of the Bank. Further, in my opinion, the books of accounts have been maintained by the Bank as required by Section 120 of the Indian Companies Act.

3. The information and explanations required by me have been found to be satisfactory.

4. The transactions of the Bank which have come to my notice have been within the powers of the Bank.

5. The returns received from the branch offices of the Bank have been found adequate for the purposes of the audit; and

6. The Profit and Loss Account shows a true balance of profit and loss for period covered by such account.

A. UMANATH RAO, B.A., F.C.A., Chartered Accountant, } Auditor.

MANGALORE, 12th January, 1953.

A. DAMODAR PAI, Chairman.

H. LAXMINARAYANA KAMATH, } Directors.
P. SARVOTHUM NAYAK, General Manager.

DEVELOPMENT OF CANE CULTIVATION

RESULTS OF RESEARCH SHOULD REACH THE FIELDS

WHEN Mr. K. R. Damle, Additional Secretary, Union Ministry of Food and Agriculture, declared, in the course of his address at the plenary session of the Indian Central Sugarcane Committee, held in New Delhi last week, that development of sugarcane should be regarded as a subject of prime importance if the sugar industry were to thrive and compete in the world market, he was merely echoing what has been stressed in these columns time and again. The main problem confronting the Indian sugar industry ever since its inception has been one of securing cane with high sucrose content at economic prices. At present, this problem is not very acute in the Deccan where high quality cane is being grown in adequate quantities under modern methods. But the problem still persists in the U.P. and Bihar, which account for the major portion of sugar produced in India, as well as in most parts of South India. One of the solutions for this problem is research in cane production and the application of the results of research to the field.

Despite the efforts of the Indian Central Sugarcane Committee—since its inception more than eight years ago, in November, 1944, to be precise—not to speak of the Cane Development Departments in the various States, cane cultivation has not registered any improvement. On the contrary, it has actually deteriorated. Clear evidence of this is provided by the marked decline in both yield of cane per acre and recovery percentage of cane. Thus, the average yield of sugarcane per acre, which was 382 maunds in 1943-44, declined to 341 maunds in 1951-52, and is expected to be still lower at 322 maunds during the current (1952-53) year. Likewise, the recovery percentage, which was above 10 per cent. during the period 1942-43 to 1945-46, fell to 9.57 per cent. in 1951-52, though it was 9.95 per cent. in 1952-53.

Trend of Cane Yield

The table below indicates the trend of sugarcane yield per acre during 1951-52 and 1952-53, as compared with 1943-44:

(In maunds)

	1943-44	1951-52	1952-53 *2nd estimate*
Assam	295	270	460
Bihar	281	160	150
Bombay	958	790	740
Hyderabad	524	490	550
Madras	724	740	680
Madhya Pradesh ..	404	330	300
Mysore	478	410	460
Orissa	554	490	490
Punjab	284	250	330
Uttar Pradesh ..	347	320	280
West Bengal	385	440	490
Other States	565	200	180
All-India average ..	382	341	322

It will be evident from the above table that, barring a few States such as Assam, Hyderabad, the Punjab, and West Bengal, the trend of sugarcane yield per acre has been downwards, which brings out the fact that adequate attention has not been paid to cane development work. Even the directive which the National Planning Commission issued to all the States a year ago, to focus attention on intensive development of agriculture, that is, raising higher yields of crops in the same area by enhancing the fertility of the soil, has not been of any avail, as is indicated by the following figures relating to the sugarcane crop during the current and previous season:

	1952-53 *2nd estimate*	1952-53 *2nd adjusted estimate*	1951-52 *Final*
Area (000 acres) ..	4,248	4,326	4,727
Yield (000 tons) ..	50,350	52,880	58,950

From the foregoing figures, it is seen that the aggregate yield of sugarcane during 1952-53 is estimated lower at 50.35 million tons—on the basis that 10 tons of sugarcane are equal to 1 ton of *gur*—as compared with 58.95 million tons during 1951-52, representing a decline of 17 per cent. There has also been a fall in the area from 4.73 million acres to 4.25 million acres. The decline in the yield, however, has been more than proportionate to the fall in acreage, thereby indicating, as already stated, the downward trend in the yield per acre. It is, therefore, difficult fully to agree with Mr. Damle's statement that the average yields of cane, before and after the initiation of the present development schemes—the implementation of the five-year development schemes began in 1948—have definitely tended to increase. At best, Mr. Damle's statement can be said to be only partly true, in that, in some areas, the yield per acre has improved. But the credit for this goes mostly to individual estates which have been endeavouring to raise the per-acre yield in their farms of their own accord and at their expense.

Intensive Cultivation

Few, however, would disagree with Mr. K. R. Damle's contention that much headway has yet to be made in increasing the output of cane per acre, so that India's expanding need for sugar and *gur* can be met by devoting a smaller area to cane than at present. By intensive cultivation, it is needless to add, the output of cane can be increased without having to raise the area under cane. The land thus saved can be diverted to the output of other commercial and food crops. What is wanted is, as Mr. Damle aptly stated, the necessary wherewithals, e.g., improved seed varieties and cane, adequate manures, fertilisers, and irrigation and plant protection facilities. But, if the provision of these facilities is to yield maximum results, the disadvantages arising from cultivation of cane in small plots of land with the aid of out-of-date implements must be removed. Even then, it must be recognised that sugarcane, being primarily a tropical crop, cannot thrive so well in the sub-tropical regions of U.P. and Bihar as it does in the tropical southern parts of this country.

The foregoing account will clearly show that the Indian Central Sugarcane Committee should devote more attention than hitherto to the question of improving sugarcane growing, besides serving the needs of the sugar mills in respect of sugar research, training of personnel and extension of advisory facilities in the efficient running of the mills. It is gratifying to be told that the technical programmes of the research stations and sub-stations have been carefully scrutinised and co-ordinated by the Committee, and useful varietal, cultural, irrigational, manurial and other schedules are being worked at these regional stations for the various soil and climatic conditions obtaining in this vast country. It is equally gratifying that intensive studies in the diseases and pests of sugarcane have been undertaken, both at the Central and State research stations, in order to combat and control the maladies affecting the sugarcane crop. Again, valuable work in evolving new and better varieties of cane continues to be done at the Sugarcane Breeding Station at Coimbatore and its sub-stations at Karnal. But, if the efforts of the Committee are to be crowned with 100 per cent. success, the need for carrying the results of the research now being done at the laboratories to the cultivator in the fields and convincing him of their advantages is of utmost importance.

(Concluded from next column)

The programme of development for the sugar industry during the period of the Plan is as below:

(Million tons)

	1950-51	1955-56
Number of factories	158	160
Annual rated capacity ...	1.54	1.55
Actual production	1.12	1.5

The plans for sugarcane cultivation envisage an increased output of sugarcane which can produce 703,000 tons of *gur*. Another recommendation is that some of the sugar factories at present located in areas where sufficient cane supplies are not available should shift to other areas in the same State or even outside the State where facilities for the supply of cane exist. In regard to new factories, consistent with the availability of adequate quantities of limestone at the new locations, the question of adopting the carbonisation process or any other technique which would reduce the requirements of sulphur should be examined. The other important recommendations of the Planning Commission are: (1) The State Governments should arrange to utilise the entire cess collected by the factories for cane development and help meet the full requirement of cane to the sugar factories, so that the industry could increase the number of working days to 120; (2) co-operative societies for cane supply should be organised; (3) facilities should be given to the industry to secure adequate supplies of machinery for replacement and maintenance; (4) the Government should periodically review the question of control over production, price and movement of *gur* and sugar; and (5) in the event of surplus cane being available in any area, after meeting the full requirements of the existing factories, specific schemes for new factories or substantial expansion of existing units may be permitted after careful examination of each case.

EXPANSION PLAN FOR SUGAR INDUSTRY

NO NEW UNITS ENVISAGED

AN increase of over 33 per cent. in the annual production of sugar in India by 1955-56, that is the last year of the Plan period, is envisaged in the development programme of the sugar industry, as indicated in the Industrial Programme of the First Five-year Plan just published. By maintaining the rate of progress in the supply of cane and gradually increasing the duration of the crushing season to 120 days, the production of sugar during 1955-56 is expected to be 1.5 million tons, as against 1.12 million tons in 1950-51. The Plan also contemplates increase in the production of sugarcane by intensive cultivation, which will raise the present production of *gur* by 703,000 tons.

As a result of the grant of protection in 1932, there has been remarkable development of the sugar industry. It is now one of the major industries in the country and has considerable influence on the agricultural economy. The sugar industry has so far developed in the private sector, either on a proprietary basis or with the help of the managing agency system, the only exception being in some of the former Indian States where the State Governments have substantially contributed to the development of the industry by financial participation and in other ways.

Of the total number of factories in existence, the number which was in operation during 1949-50 and 1950-51 was 138 and 141, respectively, the quantity of sugar produced being 975,000 tons and 1,160,000 tons. On the basis of an average operating season of 120 working days and assuming a recovery of 10 per cent. sugar, the rated capacity of the 158 factories in the country is estimated at 1,540,000 tons of sugar per annum. Up to 1950-51, actual production was far below the rated capacity of the industry. However, with the increased cane supply, on account of increased acreage and low *gur* prices, the output of sugar rose to a record level of 1,485,000 tons.

The size of the factories operating in the country varies widely from 50 tons to over 2,000 tons of cane crushing capacity per day. Factories with a minimum cane crushing capacity of 800 tons per day are considered as economic units. On this basis, there are, at present, 80 factories in India which should be regarded as uneconomic. The capital invested in the sugar industry is roughly estimated at Rs. 60 crores, of which about Rs. 20 crores constitute fixed capital and Rs. 40 crores working capital. Roughly, 135,000 skilled and unskilled workers are employed in the sugar factories.

The principal raw material required is sugarcane and its consumption in 1949-50 was about 10 million tons for producing 975,000 tons of sugar. The value of sugarcane so consumed was about Rs. 45 crores. Only about 20 to 25 per cent. of the total cane grown in the country is consumed in the manufacture of sugar, the rest being utilised for *gur* manufacture or miscellaneous purposes. Other important raw materials required for the industry include lime and limestone, sulphur, coal, coke and firewood. Except sulphur which has to be imported, all the other materials are of indigenous origin.

Imports and Exports

Imports of sugar into the country were large in the pre-protection period. Imports during 1929-30, for instance, were of the order of 940,000 tons. Subsequently, with the steady development of the industry, imports were almost completely stopped. However, to meet the acute shortage of sugar in the country, a quantity of 58,848 tons was imported during 1950-51 and 1,202 tons in April, 1951. The Government of India had permitted an export of 50,000 tons of sugar out of Government's controlled stocks held in factories, which were later increased to 200,000 tons. Exports have since been banned.

The *per capita* consumption of sugar in the pre-war period was 6.6 lbs. On the basis of a production of 1,100,000 tons consumed by a population of 335 million, the *per capita* consumption may be estimated higher at about 7 lbs. in 1950-51. In addition to this, *gur* amounting to nearly three times the quantity of sugar is also consumed in the country. Thus, the total *per capita* consumption of sugar and *gur* together is not much behind that of the sugar consumption in other countries. On the basis of a population of 385 million in 1955-56 and of a production of 1,500,000 tons of sugar by utilising the entire rated capacity available, the *per capita* availability of white sugar can be increased to 8.7 lbs.

Development Programme

In 1948, under the sugar industry expansion plan, the Government of India allotted to different State Governments 27 new sugar mills, the selection of sites and parties for the setting up of these new units being left to the respective Governments. Of these 27 new units allotted, seven have already commenced production and two more units are expected to commence operation in 1952-53, so as to increase the total annual rated capacity to 1,550,000 tons.

The problem of the industry is more of facilitating full production in the existing units than of establishing new ones, involving heavy capital expenditure. By maintaining the rate of progress in the supply of cane and gradually increasing the duration of the crushing season to 120 days, an annual production of 1.5 million tons of sugar with the existing rated capacity, as already stated, will be ensured.

(Continued in previous column)

COAL IN THE E.C.A.F.E. REGION

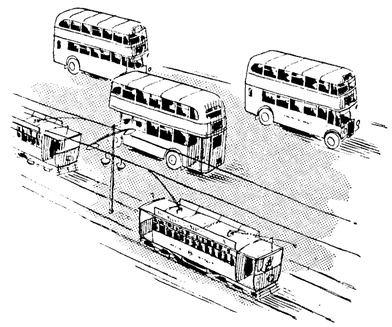
INDIA IS THE MAJOR SUPPLIER

LATTERLY, the coal resources of Asia and the Far East have been receiving growing attention because of the valuable part coal plays in the economic development of the region. *The Report of the Economic Commission for Asia and the Far East*, 1951 gives an interesting account of the position of coal during the past two decades. It discloses that the region's output of coal in 1951, though 10 per cent. higher than in 1950 and 8 per cent. higher than in 1938, constituted only 6.5 per cent. of the world production in 1951, as against 8 per cent. in 1938. In other words, the rate of expansion in the world output of coal outstripped the pace of progress in the production of coal in the E.C.A.F.E. region. Before the war (1938), the region produced annually some 114 million tons of coal of which Japan, China and India accounted for 41.8 million tons, 38.9 million tons and 28.8 million tons respectively or a combined share of 96 per cent. The war left coal production in Japan and China at very low levels, but Indian output was higher than pre-war. Since the war, both Japanese and Indian production has consistently increased and in 1951, it was 3.6 per cent. and 21 per cent., respectively, above the pre-war levels. The recovery was also rapid on the mainland of China since 1949. In 1951, China produced 40.0 million tons of coal. Although this was equal to only 69 per cent. of the record output in 1942, it was higher than the pre-war average output. The production of coal in Japan was 43 million in 1951. This is 13 per cent. higher than the output in 1950 and 3.6 per cent. higher than that in pre-war years. The rate of production in all the countries is reported to have been maintained in 1952 also.

The high level of production has been due to growing general industrial and intra-regional demand for development of industries, rationalisation in Japan, transport improvements in India and rehabilitation programmes on the mainland of China, among others. Despite the heavy damages suffered during the war, Japan has been able to maintain the status of being the leading producer and consumer of coal in the region. It has begun to depend on India especially for high grade coal, following the difficulty in getting shipments of coal from the mainland of China. India is slowly emerging as the main supplier of fuel to the E.C.A.F.E. region. It raised as much as 36 million tons in 1952 and exported a quantity far greater than ever before. Thus, India exported as much as 2.3 million tons during the 11 months ended November, 1952, as against 1.6 million tons in the same period of the previous year. It also exported 59,318 tons of coke during the same period in 1952, as compared with 21,187 tons in the 11 months ended November, 1951. These figures are exclusive of coal supplied to Pakistan through land. The main difficulty in the way of India's developing exports of coal has been the shortage of shipping space. The inability of railways to carry sufficient volume of coal and lack of storage facilities at ports are the other hurdles. Most of the coal raised in China is being absorbed by its own industries.

Although coal production during the post-war years has thus been making fairly satisfactory progress, it is still insignificant as compared with the needs of the E.C.A.F.E. region. The petroleum and electricity resources of this region being of a limited nature, the E.C.A.F.E. region has necessarily to depend upon its coal resources for fuel. Being convinced that the reserves of high grade and coking coal are woefully short, Dr. C. Y. Li, Officer-in-charge of Mineral Resources and Projects in Asia and the Far East, has been exploring the possibilities exploiting the lignite reserves of the region. The question of utilising the lignite resources will figure prominently again at the Mineral Resources Conference to be held under the auspices of the E.C.A.F.E. in Japan next April.

The role that India can play in developing the E.C.A.F.E. region is sizable. With considerable reserves of high grade coal and abundant reserves of lower grade coal, it can afford to export still larger quantities. Already, India has established itself sufficiently in the South and South-East Asian markets. It may be able to hold this position so long as China does not make a bid to enter the export trade in coal. Once China emerges as a competitor, India's position as an exporter of coal will depend on its ability to quote competitive rates, supply quality coal and ensure prompt delivery.



Keeping 'tabs' on 12,05,000 daily journeys

Every day, Bombay's *260* trams and *350* buses carry an average of *12,05,000* passengers. Every day, Bombay's Electric Supply and Transport Undertaking receives — through its Hollerith installation — closely analysed returns of this vast traffic: a contribution of inestimable value to the economy of a great Corporation serving a great community. Throughout Asia, Hollerith installations in leading industrial and commercial undertakings are contributing similarly to the promotion of efficiency and reduction of costs. JUTE INDUSTRY IN PROCESS OF TRANSITION

COMMITTEE TO ENQUIRE INTO JUTE GROWING

THE review of the jute industry in 1952 which Mr. W. B. Moncur made in his capacity as Chairman of the Indian Jute Mills' Association, at the Association's last annual meeting, throws a flood of light on the problems facing the industry. These problems centre round one chief factor, namely, marked diminution in the demand for jute goods. In analysing this problem, Mr. Moncur may be said to have given enough evidence that the industry was alive to the changes that were taking place in the jute goods market and that it was doing its best to adjust itself to these changes. His analysis fully reflected how 1952 proved to be a crucial year of rapid transition taking place in the industry.

The year 1952, unlike its predecessor, saw plentiful supplies of jute as a result of two of the largest harvests in the history of the trade. Prices of jute and jute goods were, according to Mr. Moncur, reduced to the lowest levels experienced in the post-war period. Though the supplies of raw material and its prices were comfortable, the jute industry continued to pass through difficult days, on account of fall in the demand for jute manufactures from many of its old markets. With the raw jute position no longer acute, the industry was in a position to meet any conceivable increase in the world's needs of jute goods, but no expansion of production commensurate with the increased supplies of raw jute did take place. This was because, as was pointed out by Mr. Moncur, demand from important markets faltered and weakened in recent months. This was noticeable in the offtake of both hessian and sacking.

Hessian Exports

Mr. Moncur's analysis of hessian exports in 1952 makes interesting reading. In the previous year, that is, in 1951, the total consumption of burlap in the U.S. fell to a record low level of 532 million yards or 268 million yards less than in the previous year. This fall was due to the increased sales of continental goods in America as also to the inroads made by the substitute packing materials in the U.S. markets, facilitated by higher prices of Indian manufactures. In 1952, however, with two reductions in the export duties in the first half of the year, the trend changed for the better. The total consumption for 1952 was calculated to be 827 million yards, representing a total increase of 295 million yards over 1951. The average monthly consumption, in the current year so far was, according to Mr. Moncur, 81 million yards, as compared with 41 million yards in the previous year. This improvement was due to expansion in U.S. economic activity and the outstanding prosperity and productivity of the agricultural sector during 1952.

The Chairman of the I.J.M.A. referred also to the position of Indian hessian in other export markets, notably Argentina, United Kingdom, Canada, etc. In these markets, demand continued to be low and offtake disappointing. So far as Argentina was concerned, there were special reasons, including failure of crops, which prevented the resumption of trade on a normal basis. In the U.K., the problem was one of liquidating heavy stocks purchased during the previous years.

Sacking

In the heavy goods section, the position was most disturbing. In response to the more satisfactory demand for hessian, there was a considerable changeover in the balance of production, but sacking still represented, as stated by Mr. Moncur, 55 per cent. of the industry's production. In the early months of 1952, the offtake was satisfactory, but demand tailed off in recent months and, as a result, the industry today was faced with a steady accumulation of stocks. In fact, we are told that mills have been making very heavy losses on their sacking manufacture for some months now and that the problem before them was to stimulate the offtake of heavy goods at more satisfactory prices.

Some specific causes would appear to have contributed to the poor demand for sacking in the Far East markets. In Australia, for instance, a combination of factors, such as increased import restrictions, the development of substitute packing materials, bulk handling and the need to liquidate the heavy stocks accumulated at the time of the Korean crisis, is stated to have been responsible for the dwindling offtake of sacking. In this context, Mr. Moncur's warning is quite timely. He said:

"It is apparent that some of these markets, which were formerly important consumers of sacking, may, for some time to come and, perhaps, permanently, have reduced requirements of this vital part of our production. This is a matter the seriousness of which cannot be overestimated and one which I think justifies prolonged and intensive study by the Association."

The concern about burlap and sacking losing their traditional markets is heightened by the fact that the adverse influences noticed in Australia are also present in the U.S., the U.K., and the various European countries. In the U.S., India's main market, adaption of bulk handling and of consumer packages would appear to have resulted in either eliminating or reducing the use of bags. Two offsetting factors to this tendency are, however, the possibility of a gradual increase in standard of living in other countries particularly the East and perhaps South America, and the development of agricultural production which may bring new demands for burlap and sacking. Mr. Moncur, who referred to these favourable and unfavourable factors, did well in pointing out that the industry should not sit quiet and leave matters to the play of these natural forces. He saw in the new influences which were diminishing the markets for Indian manufactures an opportunity for the industry to develop on new lines. It is most revealing to hear from Mr. Moncur that the jute fabric which the industry produced was in itself a raw material with a wide range of technical and commercial qualities. He said:

"Already some progress has been made by using it in combination with other packaging materials such as paper and plastics, and there is now evidence that there might be a wide field of development not in competition with substitutes but in co-operation with them. The war stimulated the development of many new uses for jute goods, and, though post-war difficulties and shortages in many cases slowed down or halted developmental experiments, it seems to me clear that the time in approaching when renewed attention must be given by the industry to a scientific and practical examination of new fields in which jute fabrics might be introduced."

In other words, Mr. Moncur desired that the industry should think of using jute fabric in the manufacture of paper and plastic bags. While the suggestion is indeed worth trying, it is inconceivable that sufficiently large outlet can be found in these new uses for all the jute goods that can be produced by the Calcutta mills.

The Chairman of the I.J.M.A. also dealt with another important aspect of the jute industry, namely, the quality of jute grown in India under the "grow-more-jute" campaign. His remarks need special attention. He welcomed the marked improvement in the output of raw jute in India, but felt that the result, judged qualitatively, was superficial. As a result of the investigations carried out by the Association and by the trade it was apparent, he said, that a good deal of the increase had come from areas where soil conditions, rainfall and water supplies available for retting led to the cultivation of jute, low in yield and unsatisfactory in quality. Cultivation and expansion of these areas will be justified only when abnormal prices and acute scarcity conditions prevail and not when prices are low and demand is poor. It is considered that there are still extensive areas in India where soil, climatic and water conditions would make it possible for a high and increasing jute yield to be obtained from the land. Mr. Moncur, in this connection, welcomed the suggestion of appointing a Commission of Enquiry to investigate the recent developments in jute cultivation.

It may be mentioned here that an Expert Committee to go into this question has since been appointed by the Government of India, under the chairmanship of Mr. K. R. Damle, President, Indian Central Jute Committee and Additional Secretary to the Government of India, Ministry of Food and Agriculture. On the Committee will serve as members Mr. I. G. Kennedy, Vice-President of the Indian Central Jute Committee; Dr. H. K. Nandi, Director of Agriculture, West Bengal; Dr. J. S. Patil, Director Agriculture, Bihar and Mr. B. C. Kundu, Director, Jute Agricultural Research Institute, Calcutta. Mr. K. C. Basak, Director, Economic Research, I.C.J.C., Calcutta, will be member-Secretary.

The Committee will enquire into the possibilities of increasing the acreage under jute

HEALTH OF TEA LABOUR

WARNING AGAINST RELAXATION OF CONTROLS OVER MALARIA

A PROBLEM of considerable importance which seems to receive only scant attention, perhaps because of the financial crisis faced by the Indian tea industry, is the health of tea labour. A large number of units of the tea industry is being compelled by circumstances to reduce their labour force to the minimum. But, at the same time, they are paying greater attention to fine plucking in order to improve the quality of tea produced. During the plucking season, all the available labour will have to be commissioned and in such circumstances, a healthy labour force becomes essential. If any section of the labour force becomes ill, plucking rounds automatically suffer, resulting in a deterioration in quality and fall in prices. It is to this aspect of tea labour problems that Mr. H. Mackay Tallack, Chairman of the Ross Institute of Tropical Hygiene, India and Pakistan Branch, drew attention in his speech, delivered at the annual general meeting of the Institute held recently.

It is gratifying to note from Mr. Tallack's address that the incidence of malaria among tea labour has recorded a marked decline in recent years. Between 1947 and 1951, he says, the number of persons affected by malaria has fallen from 181 to 70 per thousand in the Assam Valley and from 274 to 94 in the Dooars, while spleen rates have declined from 22 to 8 and from 46 to 14, respectively. The malaria attack rate in Madras estates has also gone down from 147 to 32. These satisfactory trends in tea labour health would appear to have given rise to an impression that malaria is now a relatively unimportant cause of ill-health on tea estate and as such the need for malarial control is no longer great. Mr. Tallack struck a note of warning against any such complacency, as the adverse effects of any relaxation over malaria attack would be far more dangerous than the original incidence of the attack. He said that the almost spectacular fall in the rate of malaria attack had been brought about entirely by the use of residual insecticides and, as a result of this, natural immunity which was gained only by constant re-infection, had been lost to be a great extent, so that any relaxation in control efforts would, without any doubt, be followed by an increase in malaria, with the resultant adverse effect on musters. As an example of what happens when malaria returns to a labour force which has lost its immunity, he pointed out that, during 1952, the rate of malaria attack in an estate in Upper Assam suddenly increased eightfold after being extinct for four years. The most likely reason for the relaxation of control, according to Mr. Tallack, was financial stringency. But it would be a most retrograde step to relax measures of malaria control and thus lose the ground which had been won during the past few years. Such a step, he pointed out, would be against the interests of the tea industry in its present difficulties.

Referring to the subject of general health of estate labour, Mr. Tallack drew attention to the fact that the birth rate on tea estates was about 42 per thousand which was far above the all-India rate. This showed that health conditions on estates were conducive to child bearing at a rate nearly double that of all-India. The high birth rate naturally gives room for greater incidence of malaria and as such tea planters will do well to give greater attention to the suggestion of Mr. Tallack not to relax the present efforts to improve the health of the labour force.

(Concluded from previous column)

in zones, where superior qualities can be grown, and of reducing the acreage where only inferior qualities of jute are grown. The Committee will also give estimates of the probable costs of the various measures suggested by it, and indicate how the cost should be met.

Mr. Moncur did well in availing himself of the opportunity provided by the annual meeting of the Indian Jute Mills' Association to dispel fears that mills were buying more freely Pakistani jute instead of encouraging the indigenous jute grower. Giving figures to show how the offtake of Pakistani jute had diminished in recent years, he observed: "The difference in the rate of exchange and the Pakistan export duty make Pakistan jute so expensive that mills are automatically forced to reduce their purchases to the minimum. That minimum is established by the need to maintain the quality of our products as far as possible by a mixture of superior quality of Pakistan jute." Few can deny the force of this convincing explanation.

DEVELOPMENT PROGRAMME FOR IRON AND STEEL INDUSTRY

PRODUCTION TO BE DOUBLED

THE development programme of the iron and steel industry, as indicated in the *Industrial Programmes Volume* of the first Five-year Plan just published, covers expansion of the existing units, as well as the setting up of a new steel plant. Against a total estimated requirement of steel of about 2.8 million tons by 1957, the implementation of the expansion schemes of the existing units would increase the capacity for finished steel to 1,650,000 tons. The shortfall is intended to be met partially from the proposed new plant. The total cost of the expansion programme of the existing units is estimated at Rs. 72 crores, while the new plant, which is to be completed in six years, will cost about Rs. 30 crores. During the Plan period, the expenditure on the new plant will be of the order of Rs. 30 crores of which the share of the Government of India will be about Rs. 15 crores. In addition to finished steel, the estimated requirements of pig iron by 1955-56 have been put down at 700,000 tons per annum. The expansion programmes recommended in the Plan is expected to meet the additional requirements of pig iron and would leave a little surplus which could be utilised for manufacturing steel billets required for re-rolling.

At present, steel and pig iron are produced by three main producers, namely, the Tata Iron and Steel Co., Ltd., the Indian Iron and Steel Co. (with which the Steel Corporation of Bengal has been merged) and the Mysore Iron and Steel Works. The total capacity of these producers is estimated at 1,878,000 tons of pig iron and 1,050,000 tons of finished steel. The actual production in 1951 was 287,209 tons of pig iron (available for sale) and 1,050,111 tons of finished steel. The total capital invested by the main producers is estimated at about Rs. 61 crores and the skilled and unskilled labour employed in the industry is about 60,000.

The iron and steel industry enjoys a particularly favourable position in India, mainly because most of the raw materials required are available internally. This has not only enabled India to become one of the cheapest producers of steel in the world, but it also indicates the possibility of further development on a substantial scale in future. The principal raw material of the industry, namely, iron ore, is plentiful in supply and is of a superior quality. The average iron content of the ore in India is between 60 and 69 per cent., as compared with 40 per cent. in Europe and 50 per cent. in the United States of America. The supply of metallurgical coal, which is required for steel production, is, however not unlimited which points to the need for its conservation.

Taking into view the different estimates made in the past about India's requirements of iron and steel, the Planning Commission considers that the total requirements of steel would be about 2.8 million tons in 1957. As regards pig iron demand, the requirements estimated on the basis of consumption envisaged in various industries which use pig iron have been put down at 700,000 tons per annum by 1955-56. This, of course, excludes the pig iron required for steel production.

Problems of Industry

The Commission has dealt with the problems that confront the industry and, in this connection, it lists finance as a "main difficulty." Among other problems, the continuous supply of good quality metallurgical coal is one. The existing supply, which is not unlimited, should be conserved for future use. Another problem is the excessive number of workers at present employed in the iron and steel industry which stand in the way of economy in the production of the material. The Plan suggests curtailment of the present compliment of labour in a manner that the surplus labour may be absorbed by the development schemes in the public and private sectors.

The recommendations of the Commission fall in two categories, (*a*) expansion programme already on hand, and (*b*) projected programmes. Among the programmes which were on hand before 1951-52 are the following:

(1) Programme of the Steel Corporation of Bengal and the Indian Iron and Steel Co. (now merged into IISCO) aimed at increasing the installed capacity for finished steel to 345,000 tons per annum by 1953-54. This expansion was undertaken by the IISCO-SCOB on the basis of the Central Government agreeing to advance a loan of Rs. 5 crores to the Company of which a sum of Rs. 2 crores had been paid by 1st April, 1951.

(2) The Mysore Iron and Steel Works schemes cover expansion of cement production, recovery of acetic acid as a by-product of the wood distillation plant and purchase of two electric furnaces for the production of pig iron based on the utilisation of power from the Jog Falls for the smelting of iron ore. By April, 1951, a sum of Rs. 2.16 crores was invested on these schemes.

In regard to the Mysore Works, the Plan recommends that a Committee should be set up to go into the organisation and administration of the works and the projects regarding the purchase of machinery on which commitments have not so far been made. A loan of Rs. 2.82 crores to the Company is recommended to be given after the Committee has examined the works. This loan is intended to help in the completion of the existing schemes and certain additional projects which are considered desirable from the standpoint of diversification of steel production which would enable the operations to be carried on, on an economic basis The implementation of the programme is expected to be achieved by the end of 1953 and will result in increasing the production of finished steel from the Mysore Works from 40,000 to 100,000 tons.

The projected programmes are:

(1) *Tata Iron and Steel Co.*—The Tata Iron and Steel Co., Ltd., has formulated a programme of expansion and modernisation of its works at a total cost of about Rs. 22.71 crores, apart from the normal capital expenditure for replacements and maintenance of collieries and works, etc., estimated to cost an additional expenditure of Rs. 10.21 crores. This programme is intended to be implemented by the end of 1957 when the capacity for finished steel would increase to 931,000 tons. Out of the total outlay of about Rs. 33 crores, the TISCO hopes to find about Rs. 22 crores from operations, leaving a balance of Rs. 11 crores to be provided otherwise.

(2) *The Indian Iron and Steel Co., Ltd.*—The projected expansion programme of IISCO will, on implementation, enable them to produce an additional 350,000 tons of finished steel and 400,000 tons of foundry iron or, alternatively, an additional 270,000 tons of finished steel and 500,000 tons of foundry iron. The capital expenditure on this scheme, spread over a period of four years, is estimated at Rs. 31.7 crores.

Recommendations

The main recommendations given in the Plan are:

(*a*) The Government should accord high priority to facilitating the expansion schemes of TISCO and IISCO. Finance is considered to be "the main bottleneck" and suggestions include, besides direct assistance, increase of the selling price of steel which would provide additional money to the equalisation fund. Already, the Central Government has increased the selling prices of steel and the Commission calculates that the quantum of assistance that would be available through these increases to TISCO and IISCO for their expansion projects would be of the order of Rs. 20 crores. As regards the rate of interest on loans from the equalisation fund and the terms thereof, the Commission observes that "the creation of additional capacity for iron and steel in the country is so important that concessions on rates of interest should be given for a specific period if found necessary." The main producers should be able to find Rs. 30 crores from their own operations, leaving a balance of about Rs. 22 crores which has to be found from elsewhere. In this connection, the Plan recommends obtaining assistance from the International Bank—a proposal which has already materialised. To the extent that assistance from the International Bank does not meet the full requirements, recourse should be had to domestic borrowings, restricting Government assistance to the barest minimum.

(*b*) *Merger of the SCOB and the IISCO.*— This proposition has already been implemented by the enactment of legislation by the Central Government.

(*c*) Government should claim a right to participate in the administration of the companies, through its nominees functioning as Directors, in view of the magnitude of the financial assistance rendered to them. Further, as the Government might have to stand guarantee for the loans that may be advanced by the International Bank—this is one of the conditions under which the International Bank has given a loan to the IISCO—it should provide in the loan agreement the necessary clauses to ensure its interests.

(*d*) Other recommendations made include extra output of billets for re-rolling industry, creation of additional transport facilities for the movement of raw materials and finished products, examination of the existing position regarding availability of refractories and economy in the consumption of steel by using alternative material, to the extent possible.

The implementation of the expansion schemes of the main producers visualised above, the Plan says, would increase the capacity for finished steel to 1,650,000 tons. Pig iron available for foundries would increase by 500,000 tons or alternatively there might be available an additional 200,000 tons of billets for re-rolling mills and 250,000 tons of pig iron for foundries.

New Steel Plant

As the above production does not meet with the estimated requirements and the shortfall is

(*Continued in next column*)

DEBATE ON RAILWAY BUDGET

FALL IN INCOME DEPLORED

THE discussion on the Indian Railway budget which terminated last week covered a number of interesting problems. They centred, among others, chiefly on the sharp fall in the earnings of railways, freight structure and capital development programmes. Speaker after speaker expressed concern at the big drop in earnings and the suggestions offered covered a wide range. Allegations were also made against the Railway Ministry to the effect that its decisions were being influenced more by political than practical considerations. There was a sharp exchange of words between the *Jan Sangh* leader, Dr. Shyama Prasad Mookherjee, and the acting leader of the Communist Party, Prof. Hiren Mukerjee. While the latter chose the working of the Chittaranjan Factory as the target of his criticism, rather calumny, Dr. Mookherjee assailed the arguments of the Communist Party with indefatigable logic. His plea to the Communist leader. "let us look at matters as Indians and not Russians for the time being," could not but carry tremendous appreciation of all, except the diehard communist. Mr. Lal Bahadur Shastri, replying to the discussions in both the Council of States and the House of the People, was calm and cautious.

A number of speakers suggested to the Railway Minister that he should carefully examine whether any reduction in passenger fares and freight rates would not result in attracting more traffic and thus earn larger revenues. The Railway Minister declared that the fall in railway earnings was not due to passenger fares and freight rates being too high. Analysing the passenger earnings, he disclosed that the number of third class passengers travelling between one to 50 miles was 750 million, from 51 to 150 miles 90 million, from 151 to 300 miles 23.6 million and over 300 miles 11.2 million. The passenger earnings were as follows: 1 to 50 miles Rs. 35 crores; 51 to 150 miles Rs. 21 crores; 151 to 300 miles Rs. 13 crores and over 300 miles Rs. 13.98 crores. Commenting on the suggestion that a committee to examine and recommend rationalisation of the rate structure, Mr. Shastri said that there was the Rates Tribunal which considered all complaints about unreasonable and preferential freight rates and the like. But he seemed to have forgotten that the Tribunal could decide only individual complaints against particular hardships and it was not the body with powers to examine the freight rates on an all-India scale and recommend suggestions for rationalisation, as demanded by the Opposition. Mr. Shastri, however, assured that the reasons for the fall in income would be enquired into.

Among capital development programmes, the Chittaranjan Locomotive and Perambur Coach factories came in for a good deal of bitter comment. Mr. Hiren Mukerjee condemned the Chittaranjan factory as a little more than an assembling plant under foreign domination. He decried equally the Perambur factory. The *Jan Sangh* leader questioned Mr. Mukerjee's assumption with regard to the Locomotive Factory and paid tributes to the work done there. Mr. Shastri admitted that there had been some technical defects in regard to the agreement with the Swiss to assist in making steel coaches at Perambur but there had been no fraud or embezzlement in the deal. He further disclosed that the cost of Indian-made coaches and wagons was cheaper than imported ones, and that ultimately locomotives produced in India would also be cheaper.

Regrouping of railways drew no small attention of the two Houses. Mr. Maghnad Shah contended that the Railway Administration had not contradicted the Press reports that the railways had suffered a loss of Rs. 25 crores as a result of regrouping. The Railway Minister was held at fault for not giving an assessment of the regrouping scheme in his budget speech. Mr. Shastri dismissed the subject by saying that the reports received so far in regard to the working of the regrouped railways had been encouraging, but he would like to wait for further reports and would place before Parliament all the relevant data required in the budget to be presented next year.

(*Concluded from previous column*)

of the order of about a million tons of steel, the Commission has suggested the establishment of a new iron and steel plant. It considers that the best method of financing and operating such a plant would be through collaboration between the State and an Indian concern with knowledge of and experience in the industry and ability to raise equity capital. Participation by foreign concerns as well as by the International Bank should also be invited. The share of the Government in the expenditure for the new steel plant which is expected to be completed in six years' time, the Commission estimates, would be of the order of Rs. 15 crores. The production programme of this plant will have to be linked with the final expansion programme of the SCOB and the IISCO in such matters as the provision of additional pig iron capacity and the nature of the finished steel products to be manufactured.

GUIDING PRINCIPLES OF SOCIAL SECURITY—I

CLASSIFICATION OF CONTINGENCIES

THE concept of social security does not date back to more than 50 years, although some early beginnings of this concept, inspired by purely altruistic and religious motives, could be traced to an earlier date. From this point of view, the present century may well be designated the century of the emancipation of the workers. Their rights have won increasing recognition, thanks to socialist movements in many countries, and to the realisation, on the part of the democratic countries, that a contented body of workers, free from cares of sickness and untimely death, is an asset to the nation. To this growth of the concept of social security, the International Labour Organisation (I.L.O.), the specialised agency of the United Nations, has contributed richly by providing information on labour subjects, and a forum where they might be discussed. The I.L.O., which is rightly described as the social conscience of the world, has now published the various conventions and recommendations on labour questions, adopted by it from time to time, during the period covered by 1919-51, in a form which makes ready reference both possible and easy. This publication, entitled *International Labour Code*,* published in two volumes, will therefore be welcomed by all those who, whether as employers, workers' leaders or labour administrators, are interested in labour problems.

Unique Prestige

The I.L.O. publication devotes an entire section to social security, under which the different recommendations and conventions relating to this topic have been listed in an orderly manner. But both conventions and recommendations of the I.L.O. are really in the nature of norms for social legislation. They are not binding in the sense national laws are. However, in view of the fact that they must receive two-thirds majority of delegates at the I.L.O. conferences, before they are accepted, they enjoy, as the publication says, the "unique prestige of having been approved by a two-thirds majority in a world industrial parliament in which Governments, employers and workers are all represented."

The first essential element in social security is the provision for security of income. The income security recommendation, which was accepted in 1944, states that income security schemes should relieve want and prevent destitution by restoring, up to a reasonable level, income which is lost by reason of inability to work (including old age) or to obtain remunerative work or by means of the death of a breadwinner. Income security should be organised, as far as possible, on the basis of compulsory social insurance, whereby insured persons fulfilling prescribed qualifying conditions are entitled, in consideration of the contributions they have paid to an insurance institution, to benefits payable at rates, and in contingencies defined by law. The contingencies which social insurance should cover are: (*a*) sickness, (*b*) maternity, (*c*) invalidity, (*d*) old age, (*e*) death of breadwinner, (*f*) unemployment, (*g*) emergency expenses, (*h*) employment injuries.

Among the contingencies listed above, three call for special explanation, namely, invalidity, old age, and emergency expenses. The contingency for which invalidity benefit should be paid is defined as inability to engage in any substantially gainful work, by reason of a chronic condition, due to disease or injury, or by reason of the loss of a member or function. The minimum age at which old-age benefit may be claimed should be fixed at not more than 65 in the case of men, and 60 in the case of women, though the relevant recommendation on the subject provides that a lower age may be fixed for persons who have worked for many years in arduous or unhealthy occupations. Emergency expenses are those expenses which are incurred in cases of sickness, maternity, invalidity and death. For instance, necessary domestic help, it is stated, should be provided during the hospitalisation of the mother of dependent children, if she is an insured woman or the wife of an insured man, and is not receiving any benefit in lieu of earnings. Other contingencies referred to under "emergency expenses" are child birth, at which a lump sum should be paid to insured women, and death, on the occurrence of which a lump sum should be paid to meet the cost of burial.

Different Contingencies

The recommendations of the I.L.O. on the subject of benefits to insured persons to meet different contingencies contain certain specific instructions. Thus, sickness and unemployment benefits, it is stated, should be not less than 40 per cent. of the previous net earnings of the insured person, if he has no dependents, or 60 per cent. thereof if he has a dependent wife, with special additions for children. Maternity benefit should be not less than 100 per cent. of the current net wage for female insured workers or 75 per cent. of the previous net earnings of the beneficiary, whichever is greater, but may be reduced by the amount of any child's allowance payable in respect of the child. Basic invalidity and old age benefits should be not less than 30 per cent. of the current wage commonly recognised for male unskilled workers, in the district in which the beneficiary resides, with additional benefits for dependent wife and children. A widow's basic benefit should be not less than 30 per cent. of the current minimum wage commonly recognised for male unskilled workers in the district in which the beneficiary resides, with special allowance for children. In the case of an orphan, the benefit should be not less than 20 per cent. of the current minimum wage. Finally, compensation for employment injuries should not be less than two-thirds of the wages lost, as the result of the injury.

As regards the cost of benefits, including the cost of administration, the I.L.O. recommendation says that it should be distributed among insured persons, employers and taxpayers in such a way as to be equitable to insured persons and to avoid hardship to insured persons of small means or any disturbance to production. A minimum absolute rate should be laid down for the insured person's contribution. Employers, on the other hand, should be required to contribute, particularly by subsidising the insurance of low-wage earners, not less than half the total cost of benefits confined to employed persons, excluding compensation for employment injuries. The entire cost of compensation for employment injuries should be contributed by employers. The cost of benefits; which cannot be met by contributions, should be covered by the community. The following are some elements of cost which may be appropriately charged to the community:

(1) Contribution deficit resulting from bringing persons into insurance when already elderly, (2) subsidies to insurance of self-employed persons of small means.

The following are some of the notable provisions relating to the administration of social insurance:

(1) The administration of social insurance should be unified or co-ordinated within a general system of social security services and contributors should, through their organisation, be represented on the bodies which determine or advise upon administration policy and propose legislation or frame regulations.

(2) Social insurance should be administered, under the direction of a single authority, subject, in federal countries, to the distribution of legislative competence; this authority should be associated with the authorities administering social assistance, medical care services and employment services in a co-ordinating body for matters of common interest, such as the certification of inability to work or to obtain work.

(3) Claimants should have a right of appeal in case of dispute with the administrative authority.

(4) Provision for uniformity of interpretation should be assured by a superior appeal tribunal.

It is noteworthy that the I.L.O's recommendations emphasise the value of employer-employee co-operation in the administration of social security measures, for it states that these two sectors of industry, management and labour, should be "closely associated" with their administration. Again, the I.L.O. has suggested that the entire law and regulations on the subject should be drafted in such a way that beneficiaries and contributors can easily understand their rights and duties.

U.K. FLOOD DISASTER

Writing on the subject of the extensive damage caused by the recent floods in the U.K. and other European countries, *The Post Magazine and Insurance Monitor* says:

"These events have demonstrated once more the serious difficulties which face the underwriter in attempting to measure and to rate the risk of flood. Insurance companies in the United States commissioned a firm of leading engineers not many months ago, following the great flood disasters in that country, to report objectively upon the nature of the risk so that full consideration might be given to the possibility of granting cover against flood by established insurance methods. The conclusion was adverse. The magnitude of the damage caused by even moderate floods, their unpredictability, changes wrought by the passage of years in land configuration, in the user of land and in meteorological and climatic conditions, all present an intricate problem to anyone who endeavours to formulate a scheme for insurance against flood by reasonable annual premium payments."

GOVERNMENT OF INDIA'S BUDGET

OVERALL DEFICIT OF RS. 140 CRORES

RS. 110 CRORES TO BE RAISED THROUGH TREASURY BILLS

A NOMINAL surplus of Rs. 45 lakhs on revenue account is disclosed by the Government of India's Budget for 1953-54, presented to Parliament by Mr. C. D. Deshmukh, Finance Minister, on 27th February, 1953. The revenue budget for next year (1953-54), based on the current rates of taxation, showed a deficit of Rs. 1.05 crores, but this was converted into a small surplus, as just indicated, by some minor adjustments in the existing levels of taxation and customs and by raising the cost of postal services for registration and insurance, to which a detailed reference is made later. Although a surplus on revenue account has been achieved, a large overall deficit of Rs. 140 crores is estimated, owing to heavy capital expenditure programmed for raising the living standard of the people. The Finance Minister proposes to cover this deficit by short-term borrowings to the tune of Rs. 110 crores and by drawing upon the existing cash balances to the tune of Rs. 30 crores.

The revised estimates for the current year, that is, for 1952-53, show a deficit of Rs. 3.79 crores, as against an estimated surplus of Rs. 3.73 crores. The following table shows the position of revenue and expenditure for 1951-52 (actuals), 1952-53 (budget and revised) and 1953-54 (budget):

(In crores of rupees)

	1951-52 (*Actuals*)	1952-53 (*Budget*)	1952-53 (*Revised*)	1953-54 (*Budget*)
Revenue ..	515.36	404.98	418.64	439.26
Expenditure ..	374.06	401.25	422.43	438.81
Surplus (+) or deficit (—)	+141.30	+ 3.73	— 3.79	+ 0.45

N.B.—The accounts for 1951-52 have not been finally closed. The actuals for this year shown above are, therefore, provisional and subject to readjustment. The budget figures for 1953-54 are the final figures taking into account the new taxation proposals made by the Finance Minister.

1952-53

It will be seen from the above table that the revised estimates for 1952-53 show increases both under revenue and expenditure. As the rise in the latter is greater than in the former, the estimated surplus has turned out to be a deficit. The improvement in revenue is due to better receipts under Customs and Income-tax. Under customs, while import duties are expected at Rs. 120 crores, registering a drop of Rs. 5 crores, export duties are now likely to be Rs. 55.5 crores, against a budget estimate of Rs. 40 crores. Income-tax is expected to show an improvement of Rs. 15 crores, while Union excise duties are likely to be short by Rs. 6 crores. The increase in expenditure by Rs. 21.18 crores would have been greater but for a fall of Rs. 5.22 crores in Defence expenditure, due mainly to the non-receipt of supplies from abroad to the extent anticipated a year before. For there has been a rise of as much as Rs. 26.4 crores under civil heads over the budget estimates. This has been due to additional payments to be made to the States under the Finance Commission's recommendations and increased expenditure on food subsidies by Rs. 6 crores. A provision of Rs. 16.42 crores has been made in the revised estimates for payment to the States as their share of the Union excise duties on tobacco, matches and vegetable products. Grants-in-aid to the States under Articles 273, 275 and 278 of the Constitution are expected to amount to Rs. 2.98 crores more than was provided for in the budget and will cover increased payments to the States recommended by the Commission.

1953-54

For next year, the revenue is expected to go up by Rs. 20.62 crores over the revised estimates for the current year. A glance at the table published at the centre of this page will show the principal heads under which taxes are expected to go up. Explaining the variations in the sources of revenue estimated in the Budget, the Finance Minister observed as follows in his speech:

"I have mentioned earlier the difficulty in making an estimate of the revenue from customs duties. Against the sum of Rs. 177 crores which we expect to collect in the current year, I have assumed Rs. 170 crores for the budget year. The revenue from import duties may be expected to be about the same as in the current year and to bring in Rs. 118 crores. The revenue from export duties this year was somewhat higher than expected and I do not think that, in present circumstances, it would be realistic to provide for the maintenance of the revenue at the level reached in the current year. I have assumed a drop of Rs. 4½ crores in the revenue from this source and have placed the total revenue from customs duties at Rs. 170 crores. Under Union excises, I have taken Rs. 94 crores, as against the revised estimate of Rs. 80 crores. The increase of Rs. 14 crores provides for Rs. 6 crores from the cess on mill-made cloth, levied for the benefit of the *khadi* and handloom industry, and Rs. 3 crores from the proceeds of the special excise on sugar which was recently imposed. An improvement of Rs. 3 crores in the revenue from the excise duty on cloth had also been assumed; small improvements under other heads account for the balance of Rs. 2 crores. The total revenue from income-tax has been placed at Rs. 160 crores, a drop of Rs. 10 crores on the revised estimates, which is mainly accounted for by the drop in the revenue from voluntary disclosures and the contraction in the post-war refunds of excess profits tax and the income-tax collected on them. Under currency and mint, the profits from the Reserve Bank are expected to amount to Rs. 12.5 crores, as against Rs. 7.5 crores this year. Credit has been taken for the recovery from Pakistan of two instalments (amounting to Rs. 18 crores) of its partition debt to India (shown in the revenue side of the table under extraordinary items), one instalment representing a carry-over (Rs. 9 crores) from the current year. The net surplus of the Posts and Telegraphs Department will also be Rs. 1 crore less. The estimates under the other heads largely follow the revised estimates."

Instructions from:

D. M. DESAI, Ex-Income Tax Officer,

Tax Adviser to Leading Business Houses.

Expenditure

Referring to the expenditure estimates for 1953-54, the Finance Minister stated:

"Expenditure met from revenue next year is estimated at Rs. 438.81 crores, an increase of Rs. 16.38 crores over the revised estimate for the current year. Expenditure on Defence services has been placed at Rs. 199.84 crores and Civil expenditure at Rs. 238.97 crores. Of the total expenditure of Rs. 199.84 crores next year on Defence services, Rs. 148.18 crores will be on the Army, Rs. 11.07 crores on the Navy, Rs. 25.2 crores on the Air Force and Rs. 15.39 crores on non-effective charges The increases over the revised estimates are mainly in respect of the Navy and the Air Force, which, as the House is aware, are expanding services.

"Civil expenditure next year is estimated at Rs. 238.97 crores, against Rs. 229.70 crores in the current year. The current year's estimate includes a provision of Rs. 21 crores for food subsidies and Rs. 4 crores for the payment of compensation to sugar factories to cover the reduction in price of stocks of the 1951-52 production. It has been decided not to subsidise food any longer from revenue and no provision is being made in the budget for next year on this account. Excluding these two special items, civil expenditure next year will be Rs. 34½ crores more than the corresponding figure in the current year. This increase is mainly due to larger provision for a number of development items. Among these, I would mention the provision of Rs. 2 crores for basic and social education, Rs. 6 crores for transfer to the fund for the development of the handloom industry, Rs. 1 crore for the development of small-scale industry, Rs. 4 crores for industrial housing, Rs. 6.33 crores for Community Projects, Rs 1 crore for the uplift of the backward classes, Rs. 3 crores for local works, Rs. 50 lakhs for the national extension organisation and Rs. 1.5 crores for grants to certain States for the expansion of primary education recommended by the Finance Commission. Expenditure on the relief of displaced persons is also expected to be about Rs. 1 crore more than in the current year. Increased provision has also been made for research expenditure, grants to the Council of Scientific and Industrial Research and grants for the development of scheduled areas and tribes."

Ways and Means Position

After referring to capital expenditure, to which a detailed reference is made elsewhere in this issue, the Finance Minister examined the ways and means position and indicated the manner in which he proposed to raise the funds needed for financing the capital expenditure. The following are the relevant extracts from his speech:

"The current year's Budget provided for an overall deficit of Rs. 76 crores to be met from the opening cash balance of Rs. 159 crores, leaving at the end of the year a balance of Rs. 83 crores. The revised estimates indicate that the overall deficit would be slightly higher at Rs. 83 crores, leaving a closing balance of Rs. 80 crores at the end of the year. No loans fell due for repayment in the current year and, although, in the Budget, credit had been taken for a market loan of Rs. 25 crores, no loan was actually floated, so as to leave the market free for the States to borrow for their development schemes. This shortfall in the estimate will, however, be more than offset by increased receipts from the proceeds of the American Wheat Loan and under the Colombo Plan and Technical Co-operation Administration Assistance. Receipts from small savings will, in the aggregate, be up to the original estimate. The ways and means position was also eased by the resumption of Treasury Bill sales to the market which are expected to yield a net sum of Rs. 5 crores or so this year.

"For next year, the Budget provides for an overall deficit of Rs. 140 crores. During the year, Government have the option of repaying the 3 per cent. loan 1953-55, with an outstanding balance of Rs. 115 crores. It is proposed to exercise this option and I have assumed, taking into account this discharge, that it would be possible to raise a market loan of the order of Rs. 100 crores. Credit has been taken for receipt through small savings of Rs. 45 crores, more or less on the same scale as at present, although steps are being taken to intensify the savings movement and achieve a bigger target. The benefit of any such increase will, however, accrue to the States and not to the Centre; at the recent Conference of Finance Ministers, it was agreed that the States should be assisted by the diversion to them of any part of the net receipts from small savings in excess of Rs. 45 crores.

"The overall deficit of Rs. 140 crores, which I just mentioned, would more than completely wipe out the closing balance for the current year. It is necessary, taking into account the volume of transactions involved, to have a minimum cash balance of at least Rs. 50 crores. It would, therefore, be necessary to reduce this deficit of Rs. 140 crores to Rs. 30 crores by means of additional borrowing. The method and manner in which this additional borrowing should be secured can be decided only during the course of the year and with reference to conditions as they develop. For purposes of the Budget, I have taken a credit of Rs. 110 crores under Treasury Bills, so as to leave an adequate closing balance at the end of the year.

Deficit Financing

"The question may be asked whether, in present conditions, it is wise to resort to deficit financing on the scale envisaged in the Budget for the coming year. I have given the matter the most careful consideration and I am satisfied that, taking all circumstances into account, we are not taking any undue risk. The development Plan for the country sets a limit of Rs. 300 crores or so over the five years covered by it to be met by deficit financing, an average of roughly Rs. 60 crores a year. In the first two years of the Plan taken together, the overall deficit will be of the order of Rs. 82 crores. If the programme of development laid down in the Plan has to be carried out, within the broad limits set for the raising of resources, it is necessary to increase the *tempo* of expenditure in the remaining three years of the Plan. Recent trends in the economic conditions of the country also indicate that the inflationary pressures, which had been the besetting difficulty, have been brought under control, and the climate seems suitable for raising the scale of developmental expenditure. The effect of this on the economy of the country will be kept under constant watch and I need hardly assure the House that appropriate measures will be taken to counteract any unhealthy development.

"Before I pass on to the Budget proposals, I would like to refer to the progress of the small savings movement. As I have more than once emphasised, we shall have to turn increasingly to the small saver for providing the finance required for development. We have endeavoured to get the States more actively interested in spreading the movement by giving them a financial interest in the proceeds from small savings. We are considering the extension of the system of authorised agents, which has been under experiment in three States, to all the States, and the matter is under discussion with the State Governments concerned. Steps are also being taken to interest voluntary social and women's organisations in the furtherance of the movement. I have every hope that these steps and the widening interest among the masses in the development plans of the country will bear fruitful results."

Taxation Enquiry Commission

After the above elucidation, the Finance Minister proceeded to announce his "Budget proposals," but, before he did so, he made the following important announcement:

"For some years, there has been a persistent demand both in the Legislature and outside, for a systematic enquiry into taxation and, as far back as 1946, the then Government of India decided that such an enquiry should be conducted. But this decision could not be implemented, owing to the impending constitutional changes, and, since independence, this had been further held up by more urgent preoccupations. But, as has been indicated more than once on the floor of this House, the idea had not been dropped. Government have now decided to set up a small compact Commission, with specialised knowledge, to conduct a comprehensive enquiry into taxation and I am glad to announce that Dr. John Matthai has accepted our invitation to be the Chairman of the Commission. The other members will be Mr. V. L. Mehta, till recently a member of the Finance Commission; Dr. V. K. R. V. Rao, of the Delhi School of Economics; Mr. K. R. K. Menon, Secretary, Finance Ministry; Mr. B. Venkatappiah, a former Finance Secretary of the Bombay Government, and Dr. B. K. Madan, Economic Adviser of the Reserve Bank. A senior officer from the Finance Ministry will be the Secretary of the Commission. The terms of reference of the Commission will be very comprehensive and will cover taxation in all its aspects, Central, State and local. It is Government's intention to associate with the Commission two foreign experts on taxation and public finance so as to make available to the Commission such expert advice as they may require from foreign experience. The Commission will also be free to co-opt additional members for short periods when considering specific problems. I expect the Commission will start functioning from next April and complete their work in about two years. I am sure that the labours of the Commission would assist in laying the foundations of a taxation system best fitted for the development of the economy of the country on a firm and sound basis.

Budget Proposals

The relatively small amount of the revenue deficit in the coming year has made my task, so far as it concerns the raising of additional revenue, somewhat easier than usual and I propose to confine myself largely to, what I may call, readjustments in taxation rather than to exploring avenues for additional taxation.

Reliefs in Taxation

"I shall first deal with reliefs in taxation. My first proposal is to reduce the export duty on jute sacking. While the prices of hessian have recently been looking up, the position in regard to sacking has been causing Government some concern. I propose a reduction in the export duty on sacking from Rs. 175 per ton to Rs. 80 per ton. Immediate effect is being given to this by a notification under the Sea Customs Act. I hope that this reduction will assist the industry in retaining its exports in the world markets. The loss in revenue is estimated at Rs. 3.5 crores.

"My second proposal is to raise the exemption limit for personal income-tax. The existing limit of Rs. 3,600 for individuals and Rs. 7,200 for Hindu undivided families will be raised to Rs. 4,200 for individuals and Rs. 8,400 for Hindu undivided families. This increase is made not merely as a measure of relief in taxation but also for securing some relief to the income-tax administration. I have felt for some time that far too much of the time of the Income-tax Department is being taken up by the relatively smaller assessments and, if the number of such assessments could be reduced, the Department would be able to give greater attention to the cases of the bigger assessees and improve the revenue from income-tax. The change proposed will have the effect of taking away a little over 70,000 assessments out of a total of nearly Rs. 8 lakhs. The loss in revenue is estimated at Rs. 82 lakhs, of which the Central share will be Rs. 40 lakhs. I feel that, in the long run, this loss to the exchequer would be more than offset by the improvement of income-tax collections.

"The two changes mentioned above will raise the deficit of Rs. 1.05 crores to Rs. 4.95 crores and I propose to cover this by certain readjustments in import duties and postal rates.

Changes in Import Duties

"The changes in import duties, which cover a number of items, mainly relate to semi-luxury items. The duty on toilet requisites, certain categories of textiles, crockery, and glass and earthenware tiles will be raised and a limited quota allowed for import. While this will bring in some additional revenue, the prices, including the duty, will be high enough to act as a deterrent to any undue expansion of consumption. The duty on certain other items like motor cars imported in an assembled condition is being raised, while duties are being imposed on the costlier type of horses and precious stones and pearls. These duties will bring in some revenue without any material increase in expenditure of foreign exchange. The duty on betel nut is also proposed to be increased by about As. 2 a pound. This will assist the indigenous grower in securing a more remunerative market for his crop.

"As part of the changes in the import tariff, I also propose to reduce the duties on penicillin, antibiotics and sulpha drugs, milk foods for infants and invalids, certain types of patent foods, scientific instruments and appliances, prints, engravings and pictures and works of art. These changes, which I am sure the House will welcome, are unlikely materially to affect the revenue.

"The net result of the changes in the import duties mentioned above will be an additional revenue of Rs. 3.5 crores which will just offset the loss in export duties from the reduction in the duty on sacking.

Changes in Union Excise Duties

"Certain readjustments are also being made in the excise duty on cloth. Before May, 1952, the rates of duty on fine and superfine cloth were 5 per cent. and 20 per cent. *ad valorem*, respectively. The heavy fall in the price of cloth of these categories last year made the assessment of the duty on the Textile Commissioner's ceiling prices onerous and it was decided to prescribe certain specific duties per yard as maximum duties, the duty being levied at these rates or at the *ad valorem* rates, whichever was less. The rates of specific duties were fixed at a level, which, it was believed at the time, would eliminate *ad valorem* assessments in most cases. The subsequent further fall in prices belied this expectation and led to the preponderance of *ad valorem* assessments, giving rise to administrative difficulties and continual friction between the mills and the assessing staff on the question of the adequacy of the declared prices. In order to overcome these difficulties, it has been decided to do away with *ad valorem* assessments altogether and to prescribe absolute specific duties. Superfine cloth will be charged a duty of 3 annas 3 pies a yard and fine cloth a duty of 1 anna 3 pies a yard, and the necessary provision is being included in the Finance Bill. This will not mean any increase or reduction in revenue, but will make the task of assessment and collection easier.

Changes in Postal Rates

"In recent years, the Posts and Telegraphs Department has been implementing a programme of expansion of postal facilities in the rural areas and, during the last five years, more than 16,000 post offices have been opened in villages with a population of 2,000 and over. Many of these post offices are not expected to be remunerative for some time. This, together with the adoption of the Pay Commission's recommendations and the other measures taken for the improvement of the service conditions, especially of the lower categories of staff, has resulted in a loss in the working of the postal services since 1948-49. In the four years ended March, 1952, the net loss of the postal branch amounted to Rs. 3.61 crores. The loss in the current year is estimated at Rs. 2.23 crores, while for next year it will be a little over Rs. 2.68 crores. A review has, therefore, been carried out of the existing scale of postal rates with reference to the cost of the service under each head and the charges levied in other countries. As a result of this review, it has been decided to increase the scale of fees for parcels, packets, registration and insurance. The existing rate of 6 annas for every 40 *tolas* for parcels will be raised to 8 annas. The postage on book pattern and sample packets will be raised from 9 pies for the first five *tolas* and 3 pies for every additional 2½ *tolas* to 1 anna and 6 pies, respectively. The registration fee will be raised from 4½ annas per article to 6 annas per article, while the fee for insurance will be raised from 4 annas to 6 annas for the first Rs. 100 and from 2 annas to 3 annas for every additional Rs. 100. These increases in rates are estimated to yield an additional revenue of Rs. 1.90 crores.

Net Effect of Proposals

"I shall now summarise the effect of the various changes mentioned above. The reduction in the export duty on sacking and the raising of the exemption limit for personal income-tax will involve a loss in revenue of Rs. 3.90 crores, which will raise the deficit from Rs. 1.05 crores to Rs. 4.95 crores. The changes in import duties will bring in Rs. 3.50 crores and the increases in postal rates Rs. 1.90 crores. This will leave a nominal surplus of Rs. 45 lakhs on revenue account.

Certain Changes in Income-tax Law

"Before I conclude, I should like to mention a few changes relating to income-tax which are being included in the Finance Bill for the coming year. The House will remember that, in the budget for 1948-49, provision was made for exempting from income-tax payments made to approved charities upto a maximum of Rs. 2½ lakhs or 10 per cent. of the income, whichever is less, to stimulate private assistance to charitable purposes. Experience has shown that this arrangement is not sufficiently flexible, particularly in regard to the charities to be benefited. We have now decided that the requirement in regard to the approval of the charity or the charitable institutions by the Central Government should be waived and the benefit given to any fund or charitable institution registered or under a trust or run by the Central or State Governments or a local authority. I trust that this modification will lead to a freer flow of assistance to deserving institutions. Simultaneously, we propose to reduce the limits from Rs. 2½ lakhs to Rs. 1 lakh and from 10 per cent. of the income to 5 per cent. Necessary amendments are being made to section 15B of the Income-tax Act.

"Some difficulty has been experienced by companies which invest their surplus funds in another company, as the investing company has to pay corporation tax on its dividends from the investment. In order to encourage such investment, it is proposed to exempt such dividends from corporation tax. This concession will be given to dividends of new undertakings engaged in certain selected industries.

"At present, a foreign company operating through a wholly Indian subsidiary has often to pay a slightly larger tax than a foreign company working through its branches in India. This operates to the disadvantage of the Indian subsidiaries and provision is being made so that this disparity could be gradually reduced.

"Certain other changes are also proposed in the income-tax law. I need draw the attention of the House only to two somewhat important changes. The first is the provision designed to check the practice of buying up speculation losses. The Income-tax Investigation Commission re-

REPORT OF THE CENTRAL BOARD FOR THE YEAR ENDED 31st DECEMBER, 1952

The Directors report that, the usual and necessary provisions having been made, the net profit of the Bank for the half-year ended the 31st December, 1952, amounted to Rs. 63,27,683-1-0 which, with Rs. 46,40,589-10-9 brought forward from the half-year ended the 30th June, 1952, makes a total of Rs. 1,09,68,272-11-9.

This sum the Directors of the Bank have disposed of as follows :—

		Rs.	a.	p.
1.	In payment of a Dividend to the Shareholders at the rate of 16 per cent. per annum	45,00,000	0	0
2.	Transferred to Pension Funds	2,60,700	0	0
3.	Bonus to Staff	20,00,000	0	0
4.	Balance carried forward to the Profit and Loss Account	42,07,572	11	9
	Total .. Rs.	1,09,68,272	11	9

The Balance Sheet of the Bank as at the 31st December, 1952, and the Report of the Auditors are annexed, together with a statement of the Profit and Loss Account for the year ended the 31st December, 1952 (wherein the figures for the past half-year have been shown separately).

By Order of the Central Board,
A. R. CHISHOLM,
Managing Director.

CALCUTTA, *5th February*, 1953.

commended that the law should be amended so as to allow speculation losses to be set off only against speculation gains. This amendment was included in the Income-tax (Amendment) Bill, 1951, which lapsed. It is now proposed to make this amendment. The second is the provision empowering Government to negotiate agreements with foreign Governments, if necessary, for relief from or avoidance of double taxation. This removes a lacuna in the law, as, at present, Government have power to negotiate such arrangements only with certain countries.

Conclusion

"The budget for the coming year has been framed against the background of the Five-year Plan and I am sure the House would like to know to what extent progress would have been made by the end of the budget year in reaching the measure of development envisaged by the Plan. The expenditure proposed in the Plan covers the budgets of not only the Centre but also the States, and, although we are in the second year of the Plan, it is difficult to make a precise estimate of the progress achieved. As I mentioned earlier, on a rough estimate, the total expenditure by the Centre and the States together in the first two years of the Plan is expected to be of the order of Rs. 600 crores. This would be roughly equally divided between the Centre and the States. In the coming year, the provision in the Central budget for developmental expenditure is of the order of Rs. 225 crores, exclusive of Central assistance for financing the State Plans. If the level of developmental expenditure reached by the States in 1952-53 is maintained in the coming year, the total expenditure, taking the Centre and the States together, for the three years ending March, 1954, would have reached about Rs. 1,000 crores. Since the total expenditure envisaged by the Plan is Rs. 2,069 crores, this would leave a balance of Rs. 1,000 crores or so for the last two years of the Plan. When it is remembered that the level of expenditure in the earlier years of the Plan is bound to be somewhat lower, as expenditure on individual schemes takes some time to gather momentum, I think that it could be fairly said that the progress in implementing the Plan has not fallen short of the target to be reached in the first two years. I hope it will be possible, in the very near future, to make a complete survey of the progress made in the first two years of the Plan, in consultation with State Governments, so that the public may know the precise extent to which the Plan has been implemented. I know that there is a keen demand for this information, but it has to be remembered that the final outturn for the current year will take some time to become available and that it may be somewhat misleading at this stage to attempt an appreciation based on the revised estimates for this year.

"The fulfilment of a programme of planned economic development depends not merely on the laying down of policies and making the finance available but on efficient administration and public co-operation. The Five-year Plan, which, in the nature of things, is bound to be the first of many more plans, lays down the policy for the next three years in each major field of development. To carry through this policy and programme with the maximum amount of public co-operation is the main task before both the Centre and the State Governments. At the Centre, I believe I can justly claim that we have done our part in implementing the Plan. I am sure the State Governments are also animated by the same purpose, although I fear that some of them have not shown the necessary determination, matching their keenness, in raising the resources expected from them after full consultation. But it is also true that some of them have had to carry the strain of meeting substantial additional expenditure on account of scarcity. I hope that, in the remaining years of the Plan, the State Governments will find it possible to concentrate all their attention and energy on augmenting their resources, so that the completion of the development proposed by the Plan is not delayed. The transition from a regulatory to a Welfare State is never easy. It requires as much of inspired, informed and understanding leadership as a sense of discipline, a co-operative attitude and a spirit of sacrifice in the interest of the common good on the part of the community. The fostering of such leadership will be the supreme test of political wisdom and statesmanship. It will be for the Governments in the country, assisted by the Planning Commission, to furnish precise and definite guidance in regard to the direction and content of the public co-operation expected and, once such guidance is forthcoming, it will be for the people of the country to give of their best without stint, so that the Plan goes forward to the prosperity and greater glory of our motherland."

Review of Economic Conditions

At the very outset, the Finance Minister began his budget speech by giving a succinct review of the economic conditions in India. He stated that these conditions had witnessed a marked improvement in the past year, 1952. "Prices have, on the whole, remained steady at lower levels, industrial as well as agricultural production has shown an increase, while the balance of payments position has also been slightly more favourable than in the preceding year."

Analysing the variations in the price levels, the Finance Minister said that, after a somewhat precipitate drop during the first four months of 1952, the prices became more or less steady, the present fluctuations being within narrow limits. At the end of December, 1952, the general index of wholesale prices stood at 374.5 points, as against 432.2 a year back, representing a fall of 13 per cent. This fall has been shared by all commodities, more or less. In the case of food articles, the index at the middle of January this year fell to 355.6 points, as compared with 377.6 points in June, 1952.

Referring to the food situation, the Finance Minister said that the stock position during the year showed marked improvement. Certain relaxations in food controls were allowed. These relaxations, he emphasised, were only in the nature of adjustments within the framework of the basic policy and did not imply any departure from the policy of general control of foodgrains as long as pockets of scarcity persisted and the need for food imports continued.

Increase in Industrial Production

Industrial production during the year was satisfactory, increase being recorded in jute goods, cotton textiles, steel, cement, paper, caustic soda, power alcohol, plywood, rayon yarn and sewing machines. Jute goods recorded an increase of 69,000 tons, while cotton textile reached the record production figure of 4,600 million yards. Steel production rose to 1.15 million tons, while cement improved by 300,000 tons. Among essential raw materials, raw cotton and jute showed increase in yield, the figures being 31.3 lakh bales and 46.8 lakh bales, respectively.

While there was thus a general all-round increase in production, certain other industries, particularly handloom and tea, faced special difficulties during the year. The steps taken by the Government of India to provide assistance to these industries were briefly indicated by the Finance Minister.

Employment Situation

The effect of the fall in prices during the current year on the employment situation, as well as on production, was constantly being watched, the Finance Minister said. One inevitable consequence of the fall in prices was reduction of income in certain sectors, but, more significant, perhaps, was the fact that the possibilities of large or quick profits by traders and middlemen were reduced. "While with production at its present level," the Finance Minister observed, "there is little possibility of any unemployment in industrial labour, the contraction of profits in trade and commerce is perhaps, having the effect of creating

REPORT OF THE AUDITORS TO THE SHAREHOLDERS OF THE IMPERIAL BANK OF INDIA

We, the undersigned Auditors of the Imperial Bank of India, elected under Section 58 (1) of Schedule II of the Imperial Bank of India Act, 1920, do hereby report *to the shareholders upon* the Balance Sheet as at 31st December, 1952, and the Profit and Loss Accounts for the half-year and the year ended 31st December, 1952.

We have examined the above Balance Sheet (which contains the particulars prescribed by the Imperial Bank of India Act, 1920, and the Bye-laws of the Bank) and the Profit and Loss Accounts, and the Accounts relating thereto of the Central Office and of the Local Head Offices in which are incorporated the Returns submitted and certified by Branch Agents and report (i) that we have obtained all the information and explanations we have required and that they have been found to be satisfactory ; (ii) that the transactions of the Bank which have come to our notice have been within the powers of the Bank ; (iii) that the Returns received from Branch Agents have been found adequate for the purposes of our audit ; (iv) that in our opinion the Balance Sheet and Profit and Loss Accounts are drawn up in conformity with the law ; (v) that in our opinion the Balance Sheet is a full and fair one and is properly drawn up so as to exhibit a true and correct view of the state of the Bank's affairs according to the best of our information and the explanations given to us and as shown by the Books of the Bank ; (vi) that in our opinion the Profit and Loss Accounts show a true balance of profit for the period covered by the accounts ; and (vii) that in our opinion Books of Account have been kept by the Bank as required by law.

The audit of the Books and Accounts for the six months to 30th June, 1952 was carried out by Messrs. G. R. Crooks, B. S. Billimoria and J. S. F. Gibb. The accounts for that period have been accepted and incorporated for the purpose of the accounts for the year to 31st December, 1952.

The audit of the Books and Accounts of the Local Head Offices at Calcutta, Bombay and Madras, has been carried out by Messrs. A. K. Joscelyne, B. S. Billimoria and J. Deavin respectively.

some measure of unemployment in the urban areas. Agricultural labour has also not been materially affected by the fall in prices except in the tea gardens where some amount of unemployment seems inevitable, if the marginally uneconomic gardens have to close down." The Finance Minister assured the House that the "Government will do whatever they can to minimise the extent of distress in this field." Taking a somewhat longer view, he said, it might be hoped that, as the various development schemes got under way, increasing scope for employment would be provided.

Balance of Payments Position

The balance of payments position in the first half of 1952, as compared with the position in the previous year, showed an improvement, the deficit on current account having declined from Rs. 92 crores in the last six months of 1951 to Rs. 74 crores. This improvement was followed during the succeeding three months, when a surplus of Rs. 28 crores was struck. Figures for the subsequent months are not yet available, but the trend noticed in the third quarter of 1952 appears to have been maintained. Dollar position also recorded an improvement. Preliminary figures for the five months of the second half of 1952 (July-November) indicate that India contributed about $63 million to the Central Pool.

Among the reasons for improved balance of payments position were tighter credit policy, reduction in expenditure generally and positive steps to promote exports. As a result of the tighter credit policy, the expansion of bank credit during the busy season of 1951-52 amounted to Rs. 100 crores only which was a little over half that of the previous year. Steps to promote exports included reduction or removal, in certain cases, of export duties, liberalisation of export regulations and increase in the export quotas of certain commodities.

While the balance of payments position did improve during the current year, it was very likely, the Finance Minister said, that the position for the coming months might not be as favourable. He said: "The increase in the export earnings is partly due to a carry-over of orders from the previous period. There has been a further decline in the prices of our principal exports, particularly jute manufactures and oilseeds. A number of countries have also placed restrictions on imports. Lastly, the import policy for the first half of the current year allows for some liberalisation in the imports of a number of items which were restricted hitherto. Food purchases are also likely to increase our external payments."

External Finance

The Finance Minister referred to the decisions taken at the Commonwealth Prime Ministers' Conference. India's agreement to the decisions taken at the Conference, he observed, did not involve adoption of any new policy, as India's internal policies were already geared to the tasks laid down by the Conference. "The implementation of the Five-year Plan," he said, "is expected to enable India to play her part in the expansion of world trade and increasing her production. By helping herself, India will be helping not only the countries of the sterling area but also the rest of the world in the expansion of production and trade."

The Finance Minister referred to the progress made in India's loan negotiations with the International Bank for Reconstruction and Development and said that two loans—$31.5 million to the Indian Iron and Steel Company and $19.5 million for the Damodar Valley Corporation—were negotiated during the year. Negotiations for another loan—to the Industrial Finance Corporation—were expected to be concluded shortly.

The visit of the mission of technical experts from the International Monetary Fund was referred to by the Finance Minister. "I have no doubt," he said, "that their objective view of the efforts we are making to sustain the economy of the country and for its orderly development would help us to ensure that resources for implementing our Five-year Plan are raised in an optimum manner and may perhaps encourage external assistance on lines entirely acceptable to us."

The assistance received during 1952, consisting of $38.35 millions from the U.S.A., $20 millions from Canada, Australia and New Zealand under the Colombo Plan and Rs. 67 lakhs from Norway, were particularly mentioned by Mr. Deshmukh, who expressed his "appreciation to these friendly nations."

Debt Position of Government of India

The outstanding public debt of the Government of India is expected to go up from Rs. 2,082 crores at the end of March, 1953, to Rs. 2,173 crores by the close of March, 1954. The Finance Minister's statement on the ways and means position referred to above reveals that there will be a net reduction of about Rs. 16 crores in current loans, of Rs. 1.11 crores in the capital portion of railway annuities and of Rs. 98 lakhs in dollar loans. If, despite these reductions, the total debts are expected to go up, it is because of the large Treasury Bill borrowings contemplated in the capital Budget.

A broad analysis of the debt, as compared with that at the end of 1938-39, is given below:

(In lakhs of rupees)

	As on 31st March		
Rupee Loans—	1939	1953	1954
Current loans	437,87	1,405,58	1,389,58
Treasury Bills and ways and means advances ..	46,30	319,04	429,64
Treasury Deposit Receipts	..	15	..
Special floating loans	..	217,61	212,61
Expired loans	65	3,62	2,92
Total ..	484,82	1,941,00	2,034,15
Sterling Loans ..			
Current loans	396,50	1,29	1,15
War contribution ..	20,62	20,62	20,62
Capital portion of railway annuities	47,82	5,44	4,33
Expired loans	1	5	5
Total ..	464,95	27,31	26,15
Dollar Loans		113,74	112,76
Grand total ..	949,77	2,082,05	2,173,06

The liability for the British war loan continues to remain suspended, while, against the outstanding railway annuities, an equivalent deposit has been made with the U.K. Government which has undertaken to provide the necessary sterling as the payments fall due. Omitting these items, the total outstanding debt will be Rs. 2,056 crores at the end of the current year and Rs. 2,148 crores at the end of 1953-54, representing, at the end of the budget year, an increase of Rs. 1,266 crores over the corresponding figure at the end of 1938-39.

In addition, the Government is liable to repay the balances in the various provident funds, post office savings banks, post office cash and national savings certificates, depreciation and reserve funds of the railways, posts and telegraphs, etc., and certain other deposits, mainly relating to excess profits tax and income-tax. These balances are estimated to amount to Rs. 780 crores at the end of the current year and Rs. 819 crores at the end of 1953-54, after making a very rough allowance for Pakistan's probable share in them. Taking the regular debt and these liabilities together, the debt position of the Government of India will stand as follows:

(In lakhs of rupees)

	As on 31st March	
	1953	1954
Regular loans	2,082,05	2,173,06
Other liabilities	779,93	818,89
Less—British war loan and railway annuities	—29,06	—24,95
Total ..	2,835,92	2,967,00

This would represent an increase of Rs. 1,698 crores in the outstanding debt at the end of the current year and Rs. 1,829 crores at the end of next year, as compared with the outstanding debt at the end of 1938-39. This outstanding debt may be analysed in a different way with reference to the purpose for which it has been utilised or the assets by which it is covered. An analysis is given below:

(In crores of rupees)

	As on 31st March	
	1953	1954
Railways	952	971
Posts and Telegraphs and Other Commercial Departments ..	81	90
Loans and Advances (including outstanding loans from Burma) .	426	522
Purchase of Annuities for sterling pensions	186	179
Subscription to the International Monetary Fund and World Bank.	369	369
Debt due from Pakistan	300	300*
Cash and other investments ..	192	168
Total ..	2,506	2,599

* *Estimated.*

Allowing for these, the uncovered debt will amount to Rs. 368 crores at the end of the budget year, against the pre-war figure of Rs. 138 crores. The whole of this cannot, however, be called unproductive debt, for the large grants to States for development in recent years are not entirely unremunerative and, similarly, the large capital outlay on Central property, the value of which is either not shown at all in the Government's accounts or is shown as non-commercial (such as the capital outlay on New Delhi and Defence capital outlay), is not without value.

Interest-bearing Obligations

Out of the total debt noted above, the interest-bearing obligations of the Government of India are expected to stand at Rs. 2,776.37 crores by the end of 1953-54, as against Rs. 2,645.70 crores at the close of the current year and Rs. 1,205.76 crores at the end of 1938-39. The major portion of this liability is covered by interest-yielding assets, the actual amount of such as on 31st March, 1953, being Rs. 1,769.69 crores. This figure compares with Rs. 1,653.58 crores at the end of March, 1952 and Rs. 946.38 crores as on 31st March, 1939. The most important of these assets are railways, commercial departments, loans advanced to States, debt dues from Pakistan and Burma, and purchase of annuities for sterling pensions. The details of these items are given below:

(In lakhs of rupees)

	1938-39 Pre-war year	1952-53 Revised	1953-54 Budget
Capital advanced to railways	725,24	951,95	970,92
Capital advanced to other commercial departments .	27,42	81,25	90,34
Capital advanced to States..	123,28	317,60	389,31
Other interest-bearing loans.	20,71	59,87	84,48
Debt due from Burma ..	49,73	48,15	48,15
Deposits with the U.K. Government for redemption of railway annuities..	..	5,44	4,33
Purchase of annuities for sterling pensions	..	186,32	179,16
Debt due from Pakistan	..	3,00	3,00
Total ..	946,38	1,653,58	1,769,69

Besides the above interest-yielding assets, the Government has cash and securities on Treasury account. This item is placed lower at Rs. 106.53 crores as on 31st March, 1954, as against Rs. 136.10 crores as on 31st March, 1953. At the end of 1938-39, these were of the order of Rs. 30.30 crores. The interest-bearing obligations not covered by assets are expected to aggregate Rs. 900.15 crores by March, 1954, the corresponding figures for the current year and 1938-39 being Rs. 855.94 crores and Rs. 229.08 crores, respectively.

Interest Payments

The aggregate interest charges payable by the Government on ordinary debt, unfunded debt and other obligations during the ensuing year is expected to amount to Rs. 74.91 crores, which is Rs. 5.85 crores more than that in the current year (revised). The bulk of the interest charges is accounted for by interests on ordinary debt, amounting to Rs. 51.28 crores, as against Rs. 46.58 crores in 1952-53. Interest on unfunded and other obligations is placed at Rs. 23.63 crores, as against Rs. 22.48 crores. Of the total interest charges, the share (net) of the Government of India during 1953-54 is estimated at Rs. 32.17 crores, as compared with Rs. 30.03 crores during 1952-53. The balance, namely, Rs. 42.74 crores, is to be borne by Railways, Posts and Telegraphs, State Governments, Irrigation and other heads. The share of the railways is the biggest, accounting for Rs. 27.12 crores, as against Rs. 26.44 crores. As a result of this heavy payment, the contribution of the railways to the general revenues, amounting to Rs. 34.77 crores (Rs. 34.11 crores in the current year), will be reduced to Rs. 7.65 crores (Rs. 7.68 crores). The interest charges payable by the States during the coming year amount to Rs. 11.00 crores, as against Rs. 8.25 crores in 1952-53. The share of Posts and Telegraphs is Rs. 1.65 crores (Rs. 1.50 crores), of other heads Rs. 2.96 crores (Rs. 2.83 crores), and Irrigation Rs. 1 lakh (Rs. 1 lakh).

CENTRAL GOVERNMENT'S CAPITAL BUDGET

NET PRODUCTIVE CAPITAL EXPENDITURE ESTIMATED AT RS. 38.98 CRORES

THE Central Government's capital budget for 1953-54 provides for an outlay of Rs. 77 crores, as against Rs. 78.97 crores in 1952-53, which has now been revised to Rs. 75.86 crores. Provision has also been made in the 1953-54 budget for Rs. 131 crores for loans to State Governments, including loans from the Special Development Fund, as against Rs. 104 crores in the budget for 1952-53, now revised to Rs. 117 crores. The Special Development Fund has been built up with the net sale proceeds of foodgrains purchased from the U.S. under the wheat loan agreement. This fund is to be utilised only for financing development projects of both the Central and State Governments. The latter receive money from this Fund in the form of short and medium-term loans and, in special cases, in the form of grants.

The Government's capital budget, as is well known, is a self-contained statement of receipts and disbursements on capital account. It includes all transactions connected with loans raised by Government, Treasury Bills, ways and means advances, Post Office Savings Bank, all cash and savings certificate issued through post offices, all depreciation reserves and development fund, loans and advances by the Central Government, including loans to State Governments and special deposits like income-tax and excess profits tax deposits. It also includes receipts and payments on capital schemes financed by the Central Government and takes credit for the amount provided in the revenue budget for amortisation or reduction of debt.

Capital Receipts

Capital receipts for 1953-54 are placed at Rs. 279.59 crores, as against Rs. 102.89 crores in the revised budget for 1952-53. The main heads of capital receipts are:

(Rs. in lakhs)

	Revised Budget, 1952-53	Budget, 1953-54
New Loans	35,79	1,00,79
Treasury Bills	4,69	1,10,00
Post Office Savings Deposits ..	21,28	17,50
National Savings Certificates ..	19,49	21,93
Other unfunded debt	10,37	10,74
Repayment of loans by States ..	16,55	17,57
Other receipts	—5,28	1,06
Total ..	102,89	279,59

Capital Disbursements

As against the capital receipts of Rs. 279.59 crores mentioned above, the disbursements under capital account are estimated at Rs. 76.64 crores, as compared with Rs. 75.86 crores in the revised budget for 1952-53. The following are the items of capital disbursements in 1952-53 and 1953-54.

(In thousands of rupees)

Disbursements	Revised estimate, 1952-53	Budget estimate, 1953-54
Railway capital (as shown in Railway Budget)	14,12,26	18,97,27
Posts and Telegraphs	5,38,90	7,59,78
Forest	27,79	27,20
Security Printing Press	8,20	7,85
Irrigation	17,75	40,00
Agricultural Improvement and Research	9,44	43,85
Industrial Development	1,94,92	6,74,62
Civil Aviation	1,76,56	2,32,00
Broadcasting	25,00	47,27
Ports	2,12,64	3,25,30
Currency	40	2,41
Mint	32,64	50,37
Initial Expenditure on New Capital at Delhi	47,65	1,59,15
Multipurpose River Schemes ..	4,14,95	3,79,84
Civil Works	15,93,34	17,81,41
Capital Outlay on Electricity Schemes	32,09	44,82
Road and Water Transport Schemes	12,29	15,76
Payments of Commuted Value of Pensions	45,64	38,81
Capital Outlay on Sterling Pensions	—7,26,04	—7,15,66
Payments to Retrenched Personnel	1,24	1
Appropriation to the Contingency Fund	..	..
Transfer of the Sale Proceeds of American Loan Wheat	26,57,36	..
Defence Capital Outlay ..	8,71,44	15,00,00
Schemes of Government Trading..	—20,41	3,52,21
Total ..	75,86,05	76,64,27

The total provision on capital outlay is, as the table shows, of the order of Rs. 76.64 crores (net) in 1953-54. Of this total provision, Rs. 3.52 crores are for schemes of Government trading, mainly in foodgrains. Excluding this and the credit of Rs. 7.16 crores for sterling annuities, the exact capital outlay would amount to Rs. 80.28 crores. Of this sum, the revenue-earning items of expenditure (or productive expenditure) are those which relate to railways, ports and telegraphs, forests, irrigation, industrial development, security printing press, mint, multi-purpose river schemes, road and water transport schemes and electricity schemes, all of which absorb Rs. 38.98 crores.

The table relating to capital disbursements gives Rs. 6.75 crores for industrial development. This item includes expenditure on Government-owned factories. It includes expenditure of Rs. 2 lakhs on Government housing factory, Rs. 60 lakhs for grants to the Council of Scientific and Industrial Research, Rs. 11 lakhs for purchase of shares of the company to acquire Hopkins & Co. (Travancore) Ltd., Rs. 82 lakhs for Indian telephone industries, Rs. 34 lakhs for Hindusthan Shipyard Ltd., Rs. 64 lakhs for penicillin factory, Rs. 143 lakhs for machine tool factory, Rs. 70 lakhs for manufacture of dry core cable, Rs. 39 lakhs for national instruments factory, Rs. 33 lakhs for overseas communication service and Rs. 74 lakhs for the Eastern Shipping Corporation.

Loans to State Governments

Apart from the net capital outlay of Rs. 76.64 crores, referred to above, there are certain other items which are also capital disbursements, such as discharge of permanent debt (Rs. 119.62 crores in 1953-54 as against Rs. 6.19 crores in 1952-53), advances to State Governments, local bodies, port trusts and foreign Governments. The details of the loans to State Governments are as follows:

(Rs. lakhs)

	Revised 1952-53	Budget 1953-54
Irrigation loans	41,34	46,27
Miscellaneous development loans..	24,24	26,22
Loans for rehabilitation of displaced persons	13,79	10,30
Loans for grow-more-food schemes.	17,65	27,86
Loans for Community Development Projects	3,00	11,00
Loans for industrial housing schemes	1,95	4,84
Loans for relief work in natural calamities	6,00	3,00
Other loans	9,15	1,71
Total ..	117,12	131,20

The loans for development purposes to the extent of Rs. 24.12 crores and loans for Community Projects amounting to Rs. 3 crores this year will be met from the Special Development Fund—created out of the net sale proceeds of the foodgrains purchased from the American wheat loan and also from assistance under the agreements with the United States Technical Co-operation Administration. Next year the loans to be met from the Special Development Fund amount to Rs. 37.45 crores as follows:

(Rs. crores)

Development loans..	26.00
Community Development Projects	11.00
Other loans mainly for equipment, materials, etc., received under T.C.A.	0.45
Total ..	37.45

The total of the capital disbursements, that is, inclusive of the Central Government's capital outlay and loans and advances to State Governments and other items is Rs. 310.16 crores for 1953-54 and Rs. 181.38 crores for 1952-53. Thus, the excess of disbursements over receipts, that is the deficit, is Rs. 30.57 crores for 1953-54 and Rs. 78.49 crores for 1952-53. The deficit for 1953-54 will be covered by drawing upon the Central Government's opening cash balances. As a result of this, the Government's cash balances at the end of 1953-54 are expected to stand at Rs. 50 crores, an amount considered to be the minimum which the Government must always hold.

SPENCER & CO., LTD.

MR. S. W. EDWARDS' SPEECH AT ANNUAL MEETING

ADDRESSING the ordinary shareholders of Spencer & Co., Ltd., at their Fifty-fifth Ordinary General Meeting which was held on 27th February, 1953, at the Registered Office of the Company at Madras, Mr. S. W. Edwards, the Chairman of the Company, said:—

"In welcoming you here this morning, I would firstly like to introduce you to Mr. C. H. Bhabha who recently accepted our invitation to join the Board. You will later be asked to confirm that appointment and, I am sure, we are fortunate in having at our disposal the advice and assistance which he is so eminently able to give us.

"The accounts have been in your hands for some days now and record a picture of sustained effort and I venture to suggest 'success'—reflecting credit on all concerned, and I know you would wish to be associated with the Board in expressing its appreciation to those members of the staff whose loyal effort has so largely contributed to these results.

"Increased expenditure and reduction in the rate of gross profit has been offset by an encouraging increase in turnover. With the further cut in import quotas recently announced, it remains to be seen if this position can be maintained, but I am happy to record that the stock position has never been sounder and so far in the current year figures are most satisfactory.

Uncertainty and Lack of Confidence

"Unfortunately, the general uncertainty and lack of confidence, to which I referred last year, still exists in most markets and it would seem that so long as the international tension continues, trading must be on a somewhat restricted basis. This is a fact which has to be accepted and, in consequence, like most other countries, it has to be appreciated that India is more or less forced to maintain an import and export policy to suit her economic requirements. Although, in general, there is little of which we can complain, there are occasions when we consider the Government do not give the support to which the many sections of trade and commerce are entitled.

Restrictive Measures

"In so far as your Company is particularly affected, I would mention the catering section of this Company. My belief is that the Government are not giving the encouragement which the important hotel industry deserves. Although hoteliers are continually being pressed to improve the standard of service and amenities to be made available to tourists with the object of encouraging visitors to come to this country, even applications for licences to import small quantities of glassware and crockery are refused, even though the quality required is not yet available in India. There are also in many States restrictive measures regarding the types of food which can be served and, unfortunately, due to the prohibition policy many hotels, airport restaurants and all railway refreshment rooms and restaurant cars are denied the privilege of serving alcoholic beverages—an amenity which most foreign visitors desire and appreciate—in fact, I would go further and describe this service as an essentiality rather than an amenity.

Federation of Hotel Associations

"During the current year, this Company has been largely instrumental in forming the South India Hotels and Restaurants Association; similar organisations have been formed in Bombay, Delhi and Calcutta, and it is hoped that within the very near future a federation of all hotel associations will be formed. This federation of hotel associations will have its head office at Delhi and I think you will agree that it should prove of great value, as it will be in direct contact with the Central Government."

The accounts and balance-sheet as at 30th June, 1952, were unanimously approved and adopted. A further and final dividend of 10 per cent., free of income-tax, on the ordinary shares, as recommended by the Directors, was declared, making in all a total dividend of 15 per cent. free of income-tax, for the year.

INDUSTRIAL DEVELOPMENT PROGRAMMES UNDER FIVE-YEAR PLAN

TOTAL EXPENDITURE PLACED AT RS. 477 CRORES

DETAILS regarding production goals and amounts which would be spent in the public and private sectors of industry, under the Five-year Plan, have been published in a separate volume, entitled *Industrial Development Programmes*. This volume, which is to be treated as a supplement to the report on the Five-year Plan, refers to industrial development, in the public sector, under which are grouped the projects undertaken by the Central and State Governments, and in the private sector, under which the expansion programme of 42 principal industries is laid down.

Of the total expenditure of Rs. 477 crores, visualised in the industrial programme of the Five-year Plan, about Rs. 94 crores will be spent in the public sector, Rs. 233 crores in the private sector on expansion and new undertakings, and Rs. 150 crores, also in the private sector, on replacement and modernisation of machinery. The industries in the private sector are grouped, in the report, under the following main categories:

(*a*) Metallurgical industries, (*b*) mechanical engineering, (*c*) electrical engineering, (*d*) chemical and allied industries, (*e*) liquid fuels, (*f*) textile industries, (*g*) timber industries, and (*h*) food production industries.

Taking both the public and private sectors of industry together, about 26 per cent. of the total investment is to go into metallurgical industries (iron and steel and aluminium), 20 per cent. into petroleum refining, 16 per cent. into engineering industries and 8 per cent. into the manufacture of heavy chemicals, fertilisers and pharmaceuticals. Relatively smaller investments are envisaged in other industries, the textile industries (cotton, jute, rayon and wool) accounting for about 6 per cent., cement for about 5 per cent. and paper, paper board and newsprint for about 4 per cent.

Production Target

Under this programme, the production of major producer and capital goods would register *increases* as below:

	Tons
Heavy chemicals (sulphuric acid, caustic soda and soda ash)	156,000
Fertilisers (ammonium sulphate and superphosphate)	528,600
Iron and steel—	
(*a*) Pig iron (available for foundries)	310,000
(*b*) Steel	394,000
Aluminium	8,300
Cement	2,106,000
Locomotives	*150
Diesel engines	No. 44,500
Power driven pumps (No.)	45,700 to 50,700
Carding engines	No. 600
Spinning ring-frames	No. 440
Plain, semi and automatic looms	No. 4,100

* Plus 50 boilers.

In respect of consumer goods, substantial increases in production are expected in cloth, sugar, paper and paper board, salt, sheet glass and vegetable oils, as indicated below:

Cloth	Yards 1,872,000,000
Sugar	Tons 384,000
Salt	,, 429,000
Paper and paper board	,, 86,000
Sheet glass	,, 20,000
Vegetable oils	,, 182,000

Increases are also expected in respect of durable consumer goods like bicycles and sewing machines and of insecticides (benzene hexachloride and D.D.T.), antibiotics (penicillin, aureomycin, etc.) and other synthetic drugs.

Public and Private Sectors

In formulating the programmes of development, a distinction has been made between the public and private sectors of industry. The State, in the form of Central or State Governments or other public authorities, already owns a number of industrial enterprises in various fields and reserves certain industries, for example, the manufacture of arms and ammunition, exclusively to itself. In the case of certain other industries, e.g., coal, mineral oils, iron and steel, aircraft manufacture, shipbuilding, the manufacture of telephone, telegraph and wireless apparatus, the State is in future to be responsible for further development except to the extent that the co-operation of private enterprise is from time to time considered necessary. The rest of the industrial field is left open to private enterprise, individual as well as co-operative, but regulation and control by the Central Government are envisaged for certain industries of special importance and the State will intervene whenever the progress of any industry under private enterprise is found to be unsatisfactory.

In the public sector, the following statement gives an idea of the expansion programme:

(Rs. lakhs)

	Investment during plan period	*Year of completion of project*	*New or additional capacity (per annum) by 1955-56*
Central Government Projects			
Iron and steel project.	30,00.0	1957-58	350,000 tons pig iron by 1955-56.
Shipbuilding	14,08.0	1956-57	50,000 D.W.T.
Machine tool factory	9,63.8	1953-54	1,600 units.
Sindri fertiliser factory	9,03.0	October, 1951	350,000 tons ammonium sulphate.
Chittaranjan locomotive factory.	4,73.0	Manufacture started	100 locomotives.
Railway coach factory.	4,00.0	1955	50 units.
Penicillin factory	2,06.6	1954	4·8 million mega units.
National instruments factory.	1,82.0	Production started	Additional Rs. 64.4 lakhs worth instruments.
Indian telephone industries.	1,30.0	Assembly started	Rs. 2,00 lakhs worth telephones and other articles.
Hindustan Cables Ltd.	1,29.7	1953-54	Rs. 100 lakhs worth cables.
Mandi salt works	1,00.0	1954	61,000 tons salt.
Rare earth factory	54.0	June 1952	800 tons of rare earth compounds and 202 tons of thorium compounds in terms of thorium nitrate.
D.D.T. factory	39.1	1954	700 tons.
Existing salt works	50.0	1955-56	About 368,000 tons salt.
Housing factory	11.8	1952-53	....
Other projects	2,02.1	1955-56	....
Total	82,53.1		
State Government Projects			
Mysore Iron and Steel Works.	283.0	1954-55	Additional 60,000 tons finished steel.
U.P. Government cement factory.	230.5	1953-54	200,000 tons.
NEPA mills, Madhya Pradesh.	200.0	1954	30,000 tons newsprint (300 working days).
Sirsilk Ltd.	200.0	1953-54	16·5 million yards art silk (330 working days).
Sirpur Paper Mills	60.0	1953-54	Additional 8,000 tons.
U.P. precision instruments factory.	50.2	Expansion	12,000 watermeters and 300 microscopes.
Bihar Government superphosphate factory.	41.1	1953-54	16,500 tons superphosphate (330 working days).
Other projects	65.0	1955-56	....
Total	11,29.8		
Grand total Centre and States combined	93,82.9		

The total estimated expenditure on these projects amounts to Rs. 94 crores, of which about Rs. 83 crores constitute the Central expenditure. The participation of private capital, indigenous as well as foreign, is envisaged in respect of some of these projects. The estimated contribution of such private capital is about Rs. 20 crores.

The major industrial project in the public sector is a new iron and steel plant estimated to cost Rs. 80 crores, of which Rs. 30 crores will be spent during the period of the Plan. The estimated capacity of this plant will be about 800,000 tons of pig iron and at least 350,000 tons of steel. The Plan also provides for the completion of the Chittaranjan Locomotive Factory, the Machine Tool Factory at Jalahalli in Mysore State, for the expansion of the Sindri Fertiliser Factory and for the acquisition and development of the Vishakhapatnam shipbuilding yard. It is also proposed to set up a penicillin factory and a D.D.T. factory.

General Banking Business Transacted

MATHEW S. D'SOUZA, *General Manager*.

Among the projects of the State Governments, the Madhya Pradesh newsprint project, designed to produce 30,000 tons of newsprint annually, and the expansion of the Mysore Iron and Steel Works, which is expected to produce an additional 60,000 tons of finished steel by using for the first time in India the technique of electric smelting of iron ores, are the most important.

Private Sector

Of the 42 industries detailed programmes of expansion of which have been drawn up in the Report, separately, the following statement will give an estimate of the targets of production as compared with the production in 1950-51, the base year, and the estimated capital investment:

Industries		*Production* 1950-51	*Production* 1955-56	*Capital Investment* 1951-56 (Rs. lakhs)
A. Metallurgical:				43,00
Iron and Steel:				
Pig iron	Tons	1,572,000	1,950,000	
Finished steel (main producers only)	Tons	976,000	1,280,000	
Aluminium	Tons	3,677	12,000	900
B. Mechanical Engineering:				
Agricultural implements and machinery:				
Pumps (power-driven centrifugal).		34,310	80,000 to 85,000	120
Diesel engines		5,540	50,000	
Automobiles (manufacturing only).		4,077	30,000	3,00
Railway rolling stock:				
Locomotives		N.A.	*50	2,50
Underframes		N.A.	400	
Machine tools (graded) ..		1,101	3,000	20
Textile machinery:				150
Carding engines		....	600	
Spinning ring frames ..		260	700	
Looms, plain, semi and automatic.		1,894	6,000	
C. Light Engineering Industries:				525
Ball and roller bearings ..		87,000	1,200,000	
Bicycles		101,000	330,000	
Sewing machines		32,955	91,500	
Hurricane lanterns		3,240,000	6,000,000	
Grinding wheels ..	Tons	231	750 to 800	
Dry batteries	Millions	136·5	320	
Storage batteries	Lakhs	·2	4	
Electric cables and wires	Tons	1,674	5,000	
A.C.S.R. cables.				
Electric fans		194,000	320,000 to 350,000	
Electric lamps —				
G. S. L. lamps ..	Millions	15	30	
Miniature lamps ..	Millions	N.A.	16	
Electric motors ..	H.P.	99,000	320,000	
Electric transformers ..	K.V.A.	179,000	450,000	
Radio receivers		49,000	350,000	
D. Chemical and Allied Industries:				
Fertilisers —				
Ammonium sulphate ..	Tons	46,304	120,000	
Superphosphate	Tons	55,089	164,000	210
Heavy chemicals:				730
Sulphuric acid	Tons	99,000	192,000	
Soda ash	Tons	45,000	78,000	
Caustic soda	Tons	11,000	33,000	
Drugs and pharmaceuticals:				
Benzene hexachloride ..	Tons	..	500	
Sulpha drugs	Lbs.	..	400,000	350
Para amino-salicylic acid	Tons	..	48	
Calcium lactate	Tons	..	60	
Paints and varnishes:				
Ready mixed paint varnish, etc.	Tons	29,000	60,000	
Pigment (titanium dioxide)	Tons	..	1,800	50
Nitro-cellulose lacquers	Gals.	..	300,000	
Aluminium paste and powder	Tons	..	750	
Soap	Tons	106,000	200,000 (includes glycerine)	60
Tanning and footwear ..	Mil. pairs	85	91	00
Paper and paper board ..	Tons	114,000	188,000	5,35
Strawboard and other boards.	Tons	22,000	53,000	
Cement	Tons	2,692,000	4,515,000	15,40
Glass and glassware:				
Sheet glass	Tons	5,850	26,000	
Blownware and pressed-ware.	Tons	86,000	137,500 to 142,500	220
Bangles	Tons	16,000	16,000	
E. Liquid Fuels:				
Petroleum products:				64,00
Liquid petroleum products	Mil. gals.	N.A.	403†	
Bitumen	Tons	N.A.	37,500†	
Power alcohol:				120
Power alcohol	Mil. gals.	5	18	
Commercial spirit ..	Mil. gals.	N.A.	2	
F. Textile:				
Cotton:				
Yarn	Mil. lbs.	1,179	1,640	
Cloth (mill made) ..	Mil. yds.	3,713	4,700	900
Cloth (handloom) ..	Mil. yds.	810	1,700	
Jute	Tons	892,000	1,200,000	
Rayon:				15,10
Rayon filament ..	Mil. lbs.	1	18	
Staple fibre ..	Bales	..	28,000	
Cotton linters ..	Mil. lbs.	..	5	
Chemical pulp ..		..	N.A.	
Woollen	Mil. lbs.	18	25	
G. Timber:				
Match	Mil. gross boxes	29.1	35.3	50
Plywood tea chest ..	Mil. sq. ft.	4.94	100	60
H. Food:				
Salt	Tons	1,920,000	2,186,000	N.A.
Sugar	Tons	1,116,000	1,500,000	10
Vegetable oils	Tons	1,118,000	1,299,000	60
Vanaspati	Tons	153,000	300,000	50
Total ..				233,30

* Plus 50 boilers.

† Exclusive of the existing capacity.

Problems of Industry

Industrial development in India, it is stated, is faced with a number of problems of which the most serious and, certainly the most universal, is the shortage or high price of raw materials. The largest industry of all, the iron and steel industry, suffers no doubt from lack of capacity and not from shortage of raw materials. But the relative smallness of its output embarasses a whole series of other industries for which iron and steel are raw materials. Again, several industries, for example, jute, cotton textiles, paper and plywood industries, have been partially cut off by Partition from the sources of supply of raw materials which they consume. Others are handicapped by the country's deficiency in non-ferrous metals and others which require sulphuric acid as a raw material by the world shortage of sulphur.

It is of considerable importance, the Report says, that India should overcome these shortages by developing new or alternative sources of supply. In this connection, the various recommendations made include manufacture of sulphur from gypsum, use of cotton seeds by the vegetable oil industry and the exploitation of the fir forests in the remoter Himalayas for the production of newsprint and of chemical pulp for the rayon industry.

Another disadvantage from which Indian industries suffer is that some of them are too small to be really economic. This is conspicuously true of the cotton textile and sugar industries. There are others, for example aluminium and cement industries, which also suffer from the same defect in a greater or less degree. In these industries, it is pointed out, it is more important to bring the existing units to economic size and to renovate and modernise the plants than to establish entirely new units.

Order of Priorities

In drawing up the development programme the general order of priorities already indicated in the chapter on Industrial Development and Policy in the main report has been followed. This order is:

(1) Fuller utilisation of existing capacity in producer goods industries like jute and plywood and consumer goods industries like cotton textiles, sugar, soap, *vanaspati*, paints and varnishes.

(2) Expansion of capacity in capital and producer goods industries like iron and steel, aluminium, cement, fertilisers, heavy chemicals, machine tools, etc.

(3) Completion of industrial units on which a part of the capital expenditure has already been incurred.

(4) Establishment of new plants which would lend strength to the industrial structure by rectifying as far as resources permit the existing lacunæ and drawbacks, e.g., manufacture of sulphur from gypsum, chemical pulp for rayon, etc.

According to this scheme of priorities, an increase in the supply of consumer goods has to come mainly from a fuller utilisation of the existing capacity and the setting up of new plant and machinery for these industries has, for the present, a low priority. On the other hand, actual expansion of capacity in capital and producer goods industries is necessary both in order to meet additional demands on them on account of the development of agriculture, irrigation and electricity but also to establish a better balance in the industrial structure.

War Impetus

The war gave a considerable fillip to Indian industry. Established industries, such as iron and steel, cotton textiles, paper and cement, expanded and a whole range of new industries, e.g., the locomotive, shipbuilding, bicycle, automobile, diesel engine, electric motor, machine tools, textile machinery, roller bearing, radio receiver and rayon industries came into existence during or soon after the war.

Immediately after the war, conditions were favourable for the development of export markets for Indian manufactures owing to the backlog of unsatisfied demand and the temporary absence of Japanese competition. Exports of cotton textiles industry increased considerably and exports were developed of some new manufactured products such as rayon fabrics, sewing machines, batteries, cement, pharmaceuticals, etc. Attention has been given in the industrial programmes in the Plan to the importance of retaining and, if possible, expanding these markets, but to achieve this, there will be need for modernisation of plant and improvement in techniques and in the quality of finished products.

Export Targets

The export targets at the final year of the Five-year Plan as compared to the position in the base year (1950-51) given by the Commission are indicated below:—

	Unit	1950-51	1955-56
Cotton textiles—			
Cloth	Mil. yds.	1,235	1,000
Jute manufactures	'000 tons	650	1,000
Glass—			
Sheet glass		..	8
Blown and pressed wire	,,	..	3
Cement:	,,	..	3
Bicycles	,,	29	300
Sewing machines	Nos.	..	30,000
Batteries—		3,000	11,500
Storage	,,	..	..
Dry cells	,,	N.A.	50,000
Electric fans	Million	N.A.	20·0
Rayon fabrics	Nos.	N.A.	30,000
Sugar	Mil. yds.	6·99	10
Vegetable oils	'000 tons	2·5	10
Rare earth compounds	,,	120	170
	Rs. crores	..	1·0

NATIONAL INSTRUMENTS FACTORY

LAYING the foundation-stone of the National Instruments Factory at Jadavpur, Mr. K. C. Reddy, Union Minister for Production, declared recently that the national Government was anxious to see a vigorous and enterprising instruments industry developed in India. He assured, at the same time, all possible help by the Government to the industry, which plays a vital role both in peace and war.

The history of the factory makes interesting reading. The factory, originally known as the Mathematical Instruments Office, established as early as in 1830 as a small repair shop and service depot for the instruments used by the Survey of India, has grown gradually to its present position. It is the two world wars which provided an opportunity for the Office to develop into a full-fledged instruments factory for the production of surveying, drawing, mathematical and optical instruments. The factory produced during the last world war 20,000 prismatic binoculars, 1,200 telescopes, 4,000 prismatic liquid compasses and 34,000 sun compasses, besides a large number of sundry items such as thermometers. Among other lines of manufacture in the factory, mention may be made of excise apparatus, hydrometers, measuring cylinders, barometers and manometers. Some of the latest developments are the students' microscope, concentration eye-piece, Fortin's barometer, drafting machine and profile projector. The services of the factory are being availed of not only by the Centre and the various State Governments but also by Pakistan, Burma and Afghanistan.

Despite these achievements, the factory has still to cover a great deal of new ground. It produces at present about 250 broad types of instruments, which, however, represent only a small fraction of the wide range of instruments required by the country. It is not even self-sufficient in all the items of its production. It will be recalled that the committee which was appointed in December, 1947, to go into the working of the factory, recommended large-scale reorganisation of the factory and formulated a plan under two heads, short-term and long-term. In the short-term sector of the plan, it recommended that efforts should be made to treble the production of the factory within three years and that the development of new items of instruments should be taken up. The long-term sector of the plan provided for the development and manufacture of instruments required for health, education, defence, etc. It is heartening to note that the importance of these recommendations has been recognised by the Planning Commission, as is evident from the provision in the Plan for an aggregate expenditure of Rs. 182 lakhs in the period of the Plan for the reorganisation of the factory. Mr. Reddy disclosed that a proposal for the production of 25 tons of optical glass per annum was under the consideration of the Government of India.

There is a fear that the Government's Instruments factory would oust private manufacturers, scattered all over India, out of the industry. But this fear is clearly unfounded. For even the combined production of the Government Instruments Factory and of the private manufacturers constitutes only a fraction of the country's ever-increasing requirements. The Government factory, according to Mr. Reddy, will not compete with but set a standard for private instrument industrialists. Its workshops, he said, would be available for training engineers and workers of private industries. Also its experimental laboratories and development workshops would not hesitate to help the industries in the solution of their special technical problems and offer of any co-operation they might seek, he added.

PRESENT TRENDS IN INDIAN ECONOMY

SOME RECENT PRONOUNCEMENTS ANALYSED

THE downward trend in commodity prices since the first quarter of 1952 and the belief that deficit financing, in excess of the limit fixed by the Planning Commission, would have to be resorted to for financing the Five-year Plan, have together served to focuss public attention on the need for keeping a close watch on the present economic position of the country. Latterly, pronouncements on the current economic trends have been made by leading industrialists and business men as also by spokesmen of the Government. Dr. John Matthai, an ex-Finance Minister and Vice-Chairman of the Tata Iron and Steel Co., for instance, observed in the course of an article to a local daily thus:

"There are at present factors at work in India which render deficit finance not so dangerous as it might have been some time ago. Not merely has the upward movement of prices been checked, *but there are indications that we are probably at the beginning of a period of recession, if not of depression, and much of the deficit finance which may be adopted for carrying out the Plan may have no further effect than to counteract the fall in prices* (italics ours). A steep fall in the present condition is to be avoided, because the adjustment of costs to prices involves special difficulties in a country like India."

Views more or less similar to those above have been expressed also by Mr. Chintaman Deshmukh, Union Finance Minister, in his budget speech to Parliament on the 27th ultimo. He said that, while the all-round increase in production has been an encouraging development, it would be rash to assume that all these trends would continue in the future. "In the case of sugar," he continued, "a fall in production is already apprehended. The engineering industries need close attention, as they appear to be the first to be affected by any unfavourable trend. Certain industries in the country have also been facing special difficulties. The handloom industry, which provides livelihood for considerable sections of the population, particularly in the countryside, has been hit by a slump.... The tea industry is another industry which has been adversely affected by recent developments in the world markets."

After explaining the measures taken by the Government to assist the tea industry, the Finance Minister continued his review of the current economic trends and observed: "The fall in prices has had the inevitable consequences of reducing income in certain sectors but more significant perhaps, than this is the fact that the possibilities of large or quick profits by traders and middle-men have been reduced. While with production at its present level, there is little possibility of any unemployment in industrial labour, the contraction of profits in trade and commerce is, perhaps, having the effect of creating some measure of unemployment in the urban areas. Agricultural labour has also not been materially affected by the fall in prices except in tea gardens where some amount of unemployment seems inevitable, if the marginally uneconomic gardens have to close down. . . . It should be remembered that, while marginal changes in the employment situation come to notice and can, in some cases, be studied with a view to correction, *the basic situation in regard to employment and underemployment in the country is one that calls for long-term measures for its corrections.*" (Italics ours.)

Having in mind the foregoing trends, the Finance Minister, later on in his speech referred to above, remarked: "The question may be asked whether in the present conditions, it is wise to resort to deficit financing on the scale envisaged in the budget for the coming year. I have given the matter the most careful consideration and *I am satisfied that taking all circumstances into account, we are not taking any undue risk* (italics ours) . . . . Recent trends in the economic conditions of the country also indicate that the inflationary pressures, which had been a besetting difficulty, have been brought under control and the climate seems to be suitable for raising the scale of developmental expenditure."

Thus to both Dr. Matthai and Mr. Deshmukh, the present economic situation is not normal. For it needs for its correction, according to them, a weapon which is usually adopted as a last resort, namely, deficit financing. The difference in the approach between two persons is very slight. Dr. Matthai wants deficit financing to prevent the business recession from developing itself into a depression. To Mr. Deshmukh deficit financing is necessary for implementing the development programme of the country.

Apart from these two economists, there are two other leading spokesmen of industry and Government who also reviewed the present economic trends in India last week. These were Mr. Pranlal Devkaran Nanjee, ex-President of the Indian Merchants' Chamber, Bombay, and Mr. D. P. Karmarkar, Minister of Commerce, Government of India, both of whom expressed their views on the same subject in their respective addresses at the forty-fifth annual general meeting of the Chamber held on 26th February last. A reference to the views of these two notable persons here will be appropriate, because of the importance which the study of the present economic situation has acquired in view of the argument for resorting to deficit financing.

The present economic position seems to be of some concern to the ex-President of the Indian Merchants' Chamber too. He says that industries are at the moment faced with the problem of lack of adequate demand for their products to sustain the existing level of production, as a result of the diminution of the purchasing power of the general mass of the population. He fears that the recurrence of conditions of scarcity in several parts of the country and the growing threat of middle-class unemployment have to be reckoned as additional factors which would tend to reduce the volume of demand for manufactured goods. Unlike some, he, however, does not seem to believe that the credit situation in the country is causing serious difficulties. For he says:

"The setback caused to the availability of credit by the slump at the end of last year has comparatively eased, the Bank rate has been raised in several countries. . . . In India between the end of December, 1951, and the middle of December, 1952, the volume of currency in circulation has shrunk from Rs. 1,281.44 crores to Rs. 1,223.20 crores, that is, by Rs. 58.24 crores. The net deposit of Scheduled Banks has declined by about Rs. 8 crores from Rs. 846.2 crores to Rs. 838.34 crores. A fall in the volume of credit is also noticeable. Advances and bills discounted by Scheduled Banks have dropped from Rs. 543.47 crores to Rs. 456.3 crores, showing a decline of Rs. 87.17 crores." With these observations, he concludes that, viewed as a whole, "the credit situation in the country should not cause serious difficulties."

In the circumstances noted above, for a real remedy to correct the situation, Mr. Pranlal looks not to deficit financing, but to considerable relief in taxation. For him the position in the field of industry is just so bad as not to bear any additional taxation. To quote Mr. Pranlal: "As any additional taxation, at this juncture, would mean an addition to the cost price structure which, in turn, would mean a setback to the offtake of manufactured goods and to the consumption levels in the country, greater caution is necessary in formulating budgetary proposals for increasing revenue resources." Now that the budget which has since been presented to Parliament contains no proposal for additional taxation on industry as such, Mr. Pranlal should feel quite satisfied with the budget.

Mr. Karmarkar's views on the present situation caused by the fall in prices of commodities should dispel all fears of any apprehension regarding the future. Commenting on the fall in prices, he remarked that, after the downward trend in prices towards the end of 1951 and after a somewhat steep fall during the following three months, prices had, on the whole, showed a tendency to remain more or less stable, and, notwithstanding the slight fluctuations, the index number, since March, 1952, had remained in the neighbourhood of 377. Even this figure showed, he continued, a substantial fall as compared with the peak price level reached in 1951. But he opined that it was difficult to interpret the fall "as indicative of a depression." For, prices even to-day—and this is worth noting—are at a substantially high level as compared with the immediate post-war years. In order to substantiate this point, he remarked: "In 1947, the general index number stood at 297.4 and, as a result of internal shortages and the Korean war boom, it steadily increased from year to year to 439.3 in 1951. The annual average for the year 1952 was 386 and the latest index number stands at 377. *Prices, therefore, have not gone back to the pre-independence level*" (italics ours). This conclusion of Mr. Karmarkar supports our contention, made in the Market Gossip columns a fortnight ago, that various developments are being quoted that the country had been passing through deflation which is a "clear exaggeration of the present economic trend."

Incidentally, it will be interesting to refer here to one or two other points raised by Mr. Pranlal in his speech at the Indian Merchants' Chamber meeting mentioned above and Mr. Karmarkar's replies to these points. Mr. Pranlal gave vent to considerable apprehensions of the Government of India's policy regarding foreign capital. He quoted the instances of certain industries such as soaps, chocolates, steel equipment, typwriters, fountain pen, ink, dry and wet batteries, tooth paste, etc., in which, although the indigenous units had made progress, the Government had permitted the setting up of foreign-owned units. The Commerce Minister, commenting on these apprehensions, gave a convincing reply calculated to allay these fears. He said:

"In respect of the participation of foreign capital, the Statement on Industrial Policy laid on the table of the House in April, 1948, and the statement of the Hon'ble Prime Minister in April, 1949, still hold the field. Broadly speaking, the policy laid down in these statements welcomes the free flow of foreign capital as it would ensure the supply of capital goods and of technical know-how and thus help to secure rapid industrial development. With this end in view, Government's policy gives certain assurances in regard to non-discriminatory treatment, reasonable facilities for remittance of profits, repatriation of capital and equitable compensation in the event of nationalisation. At the same time, this policy fully safeguards the national interests by providing that the major interest in ownership and effective control should be in Indian hands and that arrangements will be made for the training of suitable Indian personnel for the purpose of eventually replacing the foreign experts. The Five-year Plan further lays down that the broad principle to be followed is that foreign investment should be permitted in spheres where new lines of production are to be developed or where special types of experience and technical skill are required or where the volume of domestic production is small in relation to demand and there is no expectation that the indigenous industry can expand at a sufficiently rapid pace. The existing policy thus provides enough safeguards for the prevention of unfair competition and the participation of foreign capital is not likely to cause any great hardship if the indigenous industry is organised on sound basis and run efficiently."

In conclusion, Mr. Karmarkar pointed out that the cause of industries started by nationals would be helped a great deal, if our manufacturing and trading classes realised the necessity of giving their best to the consumer by charging reasonable prices and ensuring supply of goods of standard quality. He had no doubt that if Indian producers and traders put the interests of the consumers foremost in their mind, the response from the public would be forthcoming on a much larger scale than was expected at present. Thus, the best safeguard for the *swadeshi* industries lies not in eliminating chances of healthy competition, but in producing quality goods and selling them at economic prices.

ROLE OF VANASPATI IN INDIAN ECONOMY

The Vanaspati Manufacturers' Association of India completed last week seven years of useful service to the industry. During these eventful years, the industry had had a trying time, passing through crisis after crisis. Extremely adverse factors such as price controls, high prices of raw materials, shortage of supplies, transport bottlenecks, increased costs of production, etc., all had their full measure of contribution in the creation of these crises. But the worst among them was the public prejudice, which threatened at one time the very existence of the industry. For, as stated in *Commerce* a fortnight ago, a blind belief that consumption of *vanaspati* was injurious to health spread like wild-fire and assumed such a dangerous proportion that a legislative move was engineered with a view to getting *vanaspati* manufacture totally suspended. It was in fighting this battle that the Association proved its true mettle. Not only did it seek to remove the prejudice by persistent publicity of the nutritive value of *vanaspati* but won the verdict of science in its favour. And to crown its efforts, it earned the positive support of the Government for the wholesomeness of the product last year, when the Prime Minister himself stated in Parliament that "the Government are quite clear and convinced of the fact that the use of *vanaspati* is not harmful to health. By repeated scientific and medical tests, it has been found that *vanaspati* or its like has been used in three-fourths of the world and nobody has suffered from it."

Having thus successfully emerged from the struggle, the industry is now looking forward to play increasing role in the economy of the country. In fact, it looks as though a stage has been set for the purpose. As was pointed out by Mr. C. S. Pettit, Chairman of the Association mentioned above, at its annual meeting held in the city on the 25th inst., two constructive recommendations of the Ghee Adulteration Committee relating to *vanaspati* have been accepted by the Government. One enjoins tighter enforcement of the Baudouin test, by which the adulteration of *ghee* by *vanaspati* may be detected. The other covers the fortification of *vanaspati* with synthetic vitamin A. Both these measures will be helpful not only to enhance the value of *vanaspati* but also to radicate the evil practices associated with the product.

Apart from these two beneficial measures, there were two more developments in 1952 which raised the industry to a high rank in the industrial structure of the country. *Vanaspati* was included in the list of industries scheduled in the Industries (Development and Regulation) Act, 1952. The purpose of this Act is to ensure the development of industries on sound lines. The benefits of this Act, if any, will also be available to *vanaspati*. Again, *vanaspati* has won the recognition of the Planning Commission, as it appears as one of the 42 industries examined in the Five-year Plan. The target of production fixed for the industry is three lakh tons, to be reached by 1955-56. Commenting on this target, Mr. Pettit said: "If business confidence returns and if Government plays its part in providing a proper background for development, I believe we shall hit the target in 1956."

MARKETING OF SESAMUM AND NIGER SEEDS

REGULATION ON MODERN LINES URGED

THE Report of the Directorate of Marketing and Inspection of the Ministry of Agriculture, Government of India, on the marketing of sesamum and niger seed in India, published last week, sets forth the chief directions in which improvement in marketing conditions and methods are required. The important measures suggested include, *inter alia*, establishment of regulated markets, use of standard grades for seeds and also an efficient and comprehensive price intelligence system, on modern lines.

The importance of the Report lies in the fact that, at present, the marketing of these two seeds and their oils is very defective. In common with the agricultural markets in India, the marketing facilities are inadequate and not conducive to efficient business. There is a conspicuous absence of storage facilities, market intelligence, standardised terms of sale, mechanical devices for weighing, assembling, loading and unloading purposes. Consequently, the producer too often does not get the proper share of the sale price. His share is estimated at 68.6 to 77.3 per cent. of the consumers price in certain cases. This state of affairs should not be allowed to persist long, if the output of these crops is to be developed to the advantage of not merely the producer but also the nation. Removal of the existing defects will help India improve its exports of these seeds and oils and earn a sizable quantity of foreign exchange. According to the seaborne statistics, India exported 2,268 tons of sesamum seeds, valued at Rs. 29 lakhs in 1951-52, as against 926 tons, valued at Rs. 12.24 lakhs in 1950-51. India has been a net exporter of sesamum seeds from early times. Exports of niger seed from India have always been small. During 1952-53, they must have been sizable, in view of the fact that licences for exports are being given freely since May, 1952, and of the abolition of export duty in March, 1952.

Niger and sesamum oils are used for cooking and painting the body and illuminating purposes, as well as for adulteration with the more valuable vegetable oils. Niger seed oil is also used in the manufacture of paints. Both sesamum and niger cakes are used as cattle feeds.

Quantity Available for Marketing

The quantity available for marketing depends upon the amount available after making allowances for seed and other purposes by the producers. This naturally varies from State to State and depends on the size of the crops. The production of sesamum seeds in 1951-52 was about 441,000 tons, harvested over an area of 5,731 acres, as against 453,000 tons in 1950-51, over an acreage of 5,629. The principal areas growing sesamum are Uttar Pradesh, Hyderabad, Madras and Rajasthan. Next to these in the order of importance are the States of Madhya Pradesh, Bombay and Orissa. Niger seed is a minor oilseed crop, as compared with sesamum seed. The acreage comes to about 17 per cent. of that under sesamum.

As already stated, the method of marketing is very ill-organised. The fixation of prices is generally made by one of the three methods: (a) "under cover," (b) auction and (c) by "private treaty." The first method is peculiar to India and is most common of the three under this system, the buyer or his broker clasps the hands of the *arhatiya* (the middle men) under the cover of a cloth, usually a small towel, and then presses a finger or fingers and thus indicates the rate he is prepared to pay. This system is very popular in Madhya Pradesh, Bombay and West Bengal. As regards the second, the auction may be closed by a single bid or repeated bids, the latter being customary in the markets in the Punjab (I), while the former is common in Madhya Pradesh and Bombay. The third system, known as private agreement, or the open bid, is also prevalent in many markets in India. This implies that individual buyers may come to the sellers and make their bids alone or in conjunction with other buyers. It is difficult to say as to which of these methods is the best. But the Report opines that it is desirable to replace the cover system by the auction system, as the cover system lacks competition stimulated by the auction system and is apt to make the seller a victim of his ignorance, besides increasing the scope for underhand practices by the *arhatiya*. There is yet another system known as the *dara* sales in which the commission agents sell lots belonging to different growers together and apportion the gross receipts among the various suppliers. This system is condemned as undesirable in the report, because of opportunities it affords to commission agents for favouritism and manipulation and the discount it puts on grading and quality.

Although sesamum seed is not graded in the producing areas, some attempts are being made by the trade to classify this seed on the basis of colour and refraction. There are no well-defined quality standards for the sale either of seeds or of oils. Like other vegetable oils, sesamum oil is scarcely had by consumers in its pure form, as it is invariably adulterated with linseed and groundnut oils. There are no doubt specifications for ensuring purity of the oil (*vide* Edible Oils and Marking Rules, 1939). But, due to various causes, voluntary grading has not made much headway. In view of the importance of this oil for edible purposes, the Report has urged some sort of compulsory grading to check adulteration and to give a fillip to foreign trade in this oil.

Merchandising Charges

The transactions in the agricultural markets in India are subject to a number of charges known as merchandising charges. These consist of (*a*) commission, (*b*) *dalai*, (*c*) *karda*, (*d*) handling, (*e*) charity and (*f*) miscellaneous. These charges are needlessly excessive and variable. It is true that the charges in regulated markets are fairly reasonable. But it is regrettable that, for various reasons, market regulation has not forged itself ahead to the requisite extent. This is a point to be looked into, according to the Report. Besides, the Report has urged legislation for regulated markets in the States where it does not exist.

One of the biggest stumbling blocks in the development of proper marketing of sesamum and niger seeds and their oils is the lack of an organisation that is capable of disseminating up-to-date and reliable information useful to producers and traders for guiding their marketing operations. The existing arrangements in this respect are far from satisfactory and far behind those prevailing in other countries where agriculture is not so predominant an occupation. This explains the reasons for the emphasis the Report lays on the constitution of a marketing intelligence service on modern lines.

It is not enough if the marketing practices are rationalised and regularised. Every attempt should be made to increase and improve the quality and quantity of the crops. India is an important producer of sesamum seed. Its share in world output works out to about 28, 47 and 25 per cent. during the pre-war, war and post-war years, respectively. Even though China devotes only a smaller acreage than India, it is the largest producer of sesamum in the world. Apart from India and China, sesamum is grown in Manchuria, Anglo-Egyptian Sudan, East and West Africa, Turkey, Greece, the Soviet Union and Mexico. Very little information is available regarding the production of niger seed in other countries of the world. This oil is very unimportant from the point of view of international trade, there being small exports only from India to the U.K. and certain other countries in Europe. But there is great scope for expansion.

(Concluded from next column)

exactly the extent of progress made by each sphere of development in each of the project areas. With a view to measuring the progress, certain norms of development should be set up and the areas should be graded according to different stages of development, so that the area which has shown slackness in development may receive increased attention at the hands of the Community Projects Administration. The success of the projects can be better ensured by going deep into the root causes of the slackness, if any, in any particular area and evolving the right type of remedies to eradicate them with the help of the people. If the Project Administration were to fight shy to owning these defects, as the various Government Departments usually do in their reports, then the whole movement of Community Projects will share the same fate which overtook the Grow-more-food campaign, about which much was said though little was achieved by it.

COMMUNITY PROJECTS IN INDIA

PROGRESS ENCOURAGING

EVERYONE in this country and many in the world outside are watching with keen interest the progress of the great socio-economic experiment in India, familiarly known as Community Projects. These projects, the first of their kind in the East, were inaugurated on 2nd October, 1952, as a mark of commemoration of the birthday of Mahatma Gandhi. The progress of the projects during the first quarter of their inception, in so far as it can be judged from the report made by the Community Projects Administration, shows that they have made a good start.

The community programme covered 81 development blocks in 55 projects all over the country. In line with the general conception of the programme, attention was concentrated on problems relating to agriculture, irrigation, animal husbandry, education, health, sanitation, roads, communications, social education, village arts and crafts and recreational facilities. We are told that, during the three-month period under review, scores of miles of village roads were constructed, dozens of co-operative societies and *panchayats* were formed, agricultural extension service took root in the project areas, a number of schools and health centres were opened, extensive veterinary service concentrating mainly on the protection of cattle against disease was undertaken, thousands of compost pits dug and a number of agricultural demonstration centres were started.

The report reveals a few other encouraging features which augur well for the success of these projects. First, people in most areas would appear to have evinced keen interest in the projects. Secondly, the experiment with *Shramadan* movement, that is, encouraging the gift of manual labour from among villagers, seems to have succeeded to a considerable extent, as is evident from the construction of "Jawahar Bal Mandirs" (village schools) started on the Prime Minister's Birthday in the various project areas. In Rajasthan alone a programme has been chalked out for the construction of 50 such schools. Since the progress depends on the availability of trained personnel, it is only as it should be that considerable part of the time was spent on the training of village level workers. About 23 centres were opened in the period under review and 362 persons were trained and posted in different areas and 1,196 persons were under training.

Punjab

Of the many States which have sent in their reports, the Punjab would appear to have achieved a certain measure of progress. In this State, 20 model agricultural farms were set up for intensive cultivation. In Nawan Sahr a six-mile drainage canal was constructed in 21 days and the people contributed about Rs. 50,000 for completion of this work. In another backward area, 10,200 feet long channels were dug for using water from tube wells. Among the other States where progress achieved can be measured, are West Bengal, P.E.P.S.U., Coorg, Rajasthan, etc.

The Community Projects Administration has done well in acting promptly on the suggestions put forward by the Vice-Chairman of the Planning Commission, Mr. V. T. Krishnamachari, to take action for obtaining quick results of increasing food production in the country. In a circular issued to State Governments, the latter has laid emphasis on the need for the Administration, as well as State Departments of Agriculture, to take joint action in four directions to increase agricultural production in the coming *kharif* season itself. He has advised them to plan for providing service, material, administration and short-term credit and co-operation to the farmers in time through the Community Projects Programmes now under implementation. The Community Projects Administration has moved the State Governments in the matter and, if both the agencies join together in supplying seeds, fertilisers, implements, and credit to the agriculturists, considerable success can be achieved in raising the agricultural output in this country.

Although the Community Project schemes have had a good start and show promise of achieving something, one or two observations may be made here in regard to them. The quarterly report is couched in such general terms that they do not enable one to know

For the attention of

Far-sighted Industrialists

PAYMENT BY RESULTS IN INDIA

You have realised that the design of payment by result schemes in India offers problems which are now seldom met with in western countries. Here we have an under-industrialised country, with more men than jobs, and the fear of the worker that by doing more work he will leave fewer jobs for his relations and friends. Also you may hold the general impression that as long as a worker has enough for his immediate needs, he will not make the extra effort necessary to earn production bonuses. There is a further point of difference between India and western countries, technical rather than psychological, and that is the very wide disparities found here in the same plant; the productivity of the best groups usually being three times that of the worst. None of the standard western methods of incentive payment are applicable where, on daily wages, you are paying your best groups only one third as much per work unit as you are paying your worst groups. While you admit that there is no speedy solution to such problems, you feel nevertheless that there must be ways and means of establishing the principle of payment by results among your workers, and in this you are correct.

BANGALORE WOOLLEN CUTS DIVIDEND

FINANCIAL POSITION QUITE SOUND

A CONTRACTION of 39.5 per cent. in gross profit—from Rs. 51.79 lakhs to Rs. 31.30 lakhs to be precise—is disclosed by the statement of accounts of the Bangalore Woollen, Cotton and Silk Mills Co., Ltd. [Agents, Secretaries and Treasurers: Messrs. Binny & Co. (Madras) Ltd., Bangalore], for the year ended 31st December, 1952. Although the decline in profit is not surprising and is in consonance with the general anticipation, the extent of recession is not so steep as has been, or is expected to be, in the case of Bombay mills. The recession in profit has adversely affected the allocations to depreciation and reserves, as also the distribution to the ordinary shareholders. Thus, the dividend on ordinary shares has been reduced from 20 per cent. to 15 per cent. per annum, free of income-tax. On the whole, the Company's results for the year under review should be considered satisfactory, considering that trading conditions during 1952 were extremely difficult, particularly during the first six months when the Company suffered a loss.

The unsatisfactory results for the first half of 1952 were due mainly to substantial reductions in statutory prices for cotton cloth. In the preceding three years the inadequacy of ceiling prices was compensated for by better prices secured from exports, but, during the past year, there was a decline not only in the export demand but also in the prices quoted by overseas markets. So far as internal marketing was concerned, the adverse conditions referred to above yielded to somewhat better conditions during the second half of the year. There was a partial removal of the control on prices of cotton cloth as from 1st October. This, according to the Directors, enabled the Company to adjust prices for a substantial part of its production, hitherto sold in India at a loss, to levels which brought a fair return. There was, however, no noticeable improvement in the Company's export sales during the year. It was only early in January this year that exports of cloth received some encouragement following the reduction in export duty on coarse and medium cloth. The results for the year were also assisted by a recovery in the market for the Company's woollen and cotswol goods. In the preceding year there was a serious deterioration in the demand for woollen goods mainly due to a late cold weather in North India. Thus, the loss in the first half of 1952 was more than made good in the latter half of the year.

The trend of the Company's progress since 1949 is reflected in the following comparative table:

(In thousands of rupees)

	Year ended 31st December			
	1952	1951	1950	1949
Sale proceeds	450,20	431,77	360,90	Not
Stocks	18,30	31,89	9,98	avail-
Expenses	401,95	404,10	320,69	able
Gross profit	31,30	51,79	39,96	43,03
Provision for—				
Agents' commission	2,26	4,32	3,58	3,59
Depreciation	12,71	17,80	12,10	14,39
Taxation	7,00	15,17	11,25	13,63
Net profit	9,32	14,50	13,02	11,42
Transfer to reserves	2,86	5,50	5,40	5,00
Dividend—				
6% cum. preference	36	36	36	36
Ordinary	6,07 (15%)	8,10 (20%)	7,09 (17½%)	5,87 (14½%)
Carry forward	2,50	2,47	1,93	1,35

The profit for the year under review, shown in the table, has been arrived at after deducting the sum of Rs. 6.10 lakhs which the Directors have provided, but not declared and paid for the year 1952, as labour's claim for interim bonus for the first half of 1952, despite a trading loss for the company, is now under dispute. This adjustment has been made for purposes of comparison with the profits for the preceding years which had been arrived at after taking into consideration the amounts declared and paid as bonus. The provision for depreciation has been reduced by Rs. 5.10 lakhs. Whereas last year a sum of Rs. 5 lakhs had been set aside as additional depreciation based on replacement costs, no such extra provision has been made this year. Thus, the basic provision for depreciation has been almost maintained. The transfer to the reserves is made up of Rs. 1.24 lakhs to the general reserve (which received nothing in the previous year), Rs. 1.25 lakhs (as against Rs. 1.50 lakhs) to workpeople's housing reserve and Rs. 37,500 (as compared with Rs. 50,000) to officers' retiring fund. Raw materials fluctuation reserve and dividend equalisation reserve which received Rs. 1.50 lakhs and Rs. 1 lakh, respectively, have not been strengthened further this year. In view of the trading loss in the first six months of the year, the Directors did not declare any interim dividend, whereas in the previous year they made an interim distribution of 10 per cent. This has been made good to some extent by raising the final distribution from 10 per cent. to 15 per cent.

The Company possesses an excellent financial position. As against a paid-up capital of Rs. 46.50 lakhs, it has built up reserves and surplus to the extent of Rs. 99.41 lakhs, a sum equal to 213 per cent. of the paid-up capital. Current liabilities, including provision for taxation, stand reduced from Rs. 180.19 lakhs to Rs. 91.81 lakhs, mainly due to the repayment of loans from banks secured by stocks which stood at Rs. 76.24 lakhs at the close of 1951. The gross block of the value of Rs. 273.75 lakhs has been written down to a book value of Rs. 64.67 lakhs, the depreciation provided so far amounting to no less than Rs. 209.08 lakhs or over 76 per cent. During the year a sum of Rs. 16.68 lakhs was spent on additional machinery, buildings, etc. The current assets have declined from Rs. 263.22 lakhs to Rs. 173.05 lakhs, mainly due to the reduction in stock-in-trade, as well as in the investments, the former by Rs. 83.40 lakhs and the latter by Rs. 24.81 lakhs. During the year, the Company sold a considerable part of its investments in Government of India securities. The value of these securities which stood at Rs. 39.87 lakhs as on 31st December, 1951, stands at Rs. 13.35 lakhs in the latest balance-sheet. A sum of Rs. 1.50 lakhs is invested in British Government securities and the Government of Mysore securities have been raised from Rs. 2.30 lakhs to Rs. 2.61 lakhs. The reduction in stock-in-trade and the sale of investments have not only enabled the Company to pay off the loan taken from banks against stocks, as already noted, but also to strengthen its cash position. The cash balances as at the end of the year stand at Rs. 16.54 lakhs, as against only Rs. 58,974 at the close of 1951. The current assets at Rs. 173.05 lakhs cover the current liabilities by a wide margin of Rs. 81.24 lakhs.

The Company's Rs. 100 paid-up ordinary shares are currently being quoted at Rs. 230, at which rate the latest dividend gives a yield of 6.5 per cent. per annum, free of income-tax.

AMALGAMATED COAL'S LATEST DIVIDEND LOWEST FOR NINETEEN YEARS

For the third half-year in succession, the Directors of the Amalgamated Coalfields Ltd. (Managing Agents: Messrs. Shaw Wallace & Co., Ltd., Calcutta) have had to reduce the dividend to the shareholders. Thus, the dividend for the latest half-year, namely, the six months ended 30th September, 1952, at 10 per cent. per annum, compares with 12½ per cent. 15 per cent. and 20 per cent. per annum paid for the three preceding half-years, respectively. The dividend for the latest half-year, it may be interesting to note, is the lowest for the last 19 years.

The aforesaid cut in dividend is the result of a decline in earnings of the Company, the gross profit having gone down from Rs. 6.40 lakhs for the six months ended 31st March, 1952, to Rs. 5.75 lakhs. The gross profit, however, compares well with that of Rs. 5.02 lakhs for the corresponding half-year of 1951.

Raisings and despatches were well maintained during the half-year. The raisings at 3,35,863 tons compare favourably with those of 3,55,525 tons for the previous half-year and of 3,07,215 tons for the corresponding six months of 1951. Despatches during the half-year amounted to 3,52,808 tons, as against 3,44,795 tons and 3,18,056 tons for the preceding two half-years, respectively. These improvements have been achieved in spite of short and irregular supply of wagons. The Directors report that there has been no improvement in wagon supplies since the close of the half-year under review and heavy stocks have been accumulating at all collieries, as a result of which production has had to be restricted.

Reflecting the satisfactory output and slightly better despatches is the increase in sale proceeds from Rs. 52.77 lakhs in the half-year ended 31st March, 1952, to Rs. 53.96 lakhs in the half-year under review. If despite this, the gross profit shows a fall, as already indicated, it is clearly due to the rise of Rs. 1.24 lakhs to Rs. 48.90 lakhs in expenses. This increase, however, is not of the same order as that of Rs. 5.55 lakhs noted in the previous half-year. Out of the gross profit, agents' commission absorbs Rs. 88,966, as against Rs. 1.33 lakhs in the previous half-year. Provision for depreciation has been well maintained at Rs. 2.41 lakhs (Rs. 2.40 lakhs), while that for taxation has been reduced from Rs. 1.37 lakhs to Rs. 1.01 lakhs. The net profit, at Rs. 1.44 lakhs, however, is slightly higher by about Rs. 15,000. This has enabled the Directors to create machinery replacement reserve by transferring from out of the profit Rs. 25,000, the sum equivalent to that withdrawn by them six months ago from the dividend equalisation reserve for paying the dividend at the rate of 12½ per cent. per annum. Though the creation of this reserve has meant a further cut in dividend, the need for such a reserve is imperative, as the Company has plans for development and modernisation. The dividend at 10 per cent. per annum, free of income-tax, requires Rs. 1,27,500, leaving to be carried over Rs. 25,799, as compared with Rs. 33,891 brought in.

The balance-sheet, as on 30th September, 1952, discloses that, as against a paid-up capital of Rs. 25.50 lakhs, the reserves and surplus aggregate Rs. 16.01 lakhs. The gross block of the value of Rs. 64.99 lakhs has been written down to Rs. 19.50 lakhs, the depreciation provided so far being Rs. 45.49 lakhs. The current assets, at Rs. 48.93 lakhs exceed the current liabilities (Rs. 26.92 lakhs) by a wide margin of Rs. 22.01 lakhs.

The Company has incurred heavy capital expenditure during the past year and plans are in hand for further considerable development and modernisation. The Directors report that full advantage has been taken of taxation allowances in writing off heavy depreciation which, they expect, will assist in building up cash resources to finance further development.

ALKALI AND CHEMICAL'S GOOD PROGRESS

DIVIDEND REPEATED AT 6 PER CENT

THE dividend of 6 per cent. per annum, free of income-tax, on the ordinary shares of the Alkali and Chemical Corporation of India Ltd. (Secretaries: Imperial Chemical Industries (India) Ltd., Calcutta), which was paid for the year ended 30th September, 1951, is proposed to be repeated for the latest financial year of the Company. It will be recalled that, last year, the Directors of the Company raised the dividend from 4 per cent. which they had paid for 1949-50. The Directors could have paid more, as the profit was substantial, but they deliberately chose to pay only a modest dividend which could be maintained even if profits were to decline to some extent in future years. This cautious dividend policy has now been fully justified by the results for the year under review. The gross profit, for instance, has declined by Rs. 3.57 lakhs to Rs. 34.86 lakhs compared with that for the preceding year.

The sale proceeds have gone up by Rs. 8.07 lakhs to Rs. 168.66 lakhs but, at the same time, closing stocks also disclose an increase from Rs. 19.28 lakhs to Rs. 43.78 lakhs, indicating thereby that, while the Company's production was at a high level, the offtake was poor. The provision for depreciation has been raised from Rs. 7.27 lakhs to Rs. 8.22 lakhs, whereas that for taxation has been reduced from Rs. 13 lakhs to Rs. 10.83 lakhs. Besides this provision for tax liability, the Directors have transferred from out of the net profit a sum of Rs. 3.07 lakhs to the reserve for deferred income-tax liabilities due to initial allowances for depreciation, as against Rs. 1.64 lakhs provided last year. The allocation to the general reserve has been reduced from Rs. 9.47 lakhs to Rs. 3 lakhs. This reduction has been more than made good by the creation of a dividend equalisation reserve by transferring a sum of Rs. 7.50 lakhs from the year's profit. The Directors have taken credit for Rs. 1.73 lakhs (as against Rs. 84,695) being the provision for taxes no longer required. The 5 per cent. preference dividend takes up Rs. 1.55 lakhs and the ordinary dividend requires Rs. 3.72 lakhs, leaving a sum of Rs. 2.52 lakhs to be carried forward which is Rs. 1.30 lakhs less than the sum brought in.

The Company's chlorine-caustic soda and hydrochloric acid plants continued to run on maximum production during the year. The demand for hydrochloric acid was appreciably higher, owing to shortage of sulphuric acid. The Company had to meet severe competition in the sale of benzene hexachloride dusts. The additional benzene hexachloride formulation plant was completed and production of water dispersible powder began during the year. The crude benzene hexachloride plant was also completed and brought into experimental production during the year. Construction of the extension to the chlorine-caustic soda plant proceeded during the year and it is expected to come into production before the end of the current year.

In October, 1951, the Company took over from Imperial Chemical Industries (India) Ltd., a paints manufacturing unit which was in course of construction, at an estimated total investment of Rs. 44 lakhs, for manufacture of the well-known brands of nitrocellulose and synthetic finishes of I.C.I., London, under an agreement with the latter. The Directors considered this venture a profitable one. The construction of this unit was completed during the year under review and the plant is now stated to be in full production. The Company finds no difficulty in disposing of the products.

The Company's factory at Khewra (Pakistan) was maintained in full production during the year. The sale of this factory to the Khewra Soda Company, a new Pakistan company formed for the purpose, was, it may be recalled, confirmed at the last annual meeting of the shareholders and, in accordance with that, an agreement was entered into with the Pakistan company. It has, however, not yet been carried into effect as the consent of the Pakistan Government has yet to be received. Meanwhile, the profit made in Pakistan continues to accrue to the Company in India. With the permission of the Pakistan Exchange Control, all the profit earned by the Company in Pakistan upto 30th September, 1951, has been brought into India excepting for a small item which is still under negotiation.

Points From The Chair

Consumption of Tobacco in U.K.

"I SHOULD also like to refer to certain statements that are made from time to time suggesting that, because public expenditure on tobacco in the United Kingdom stands at such an enormous figure, the consumption is high in relation to that of other countries. It is necessary, I think, to put this matter in its proper perspective, and the following figures—which, although approximations, are subject only to a very small margin of error—are illuminating:

Public expenditure on tobacco:

	£ million
1938	177
1952	810

Annual consumption per adult:

	Lbs.
U.K. 1938	5.4
U.K. 1952	6.0
1951	
U.S.A.	10.2
Netherlands	9.0
New Zealand	7.6
Canada	6.7
Belgium	6.6
Switzerland	6.5
Australia	6.1

These figures speak for themselves, but I would like to stress three features. Firstly, while no one can deny that an expenditure of over £800 million per annum on tobacco is a truly immense sum, more than three-quarters of this is represented by duty revenue. Secondly, the increase in retail price over 1938, leaving duty out of account and after allowing for the relatively slight increase in consumption, is about 80 per cent. which, I suggest, compares very favourably with general price movements in this country. Thirdly, it does not at all follow from the very large expenditure, that the British public is being prodigal in its tobacco consumption: in fact, as the figures indicate, *per capita* consumption shows very little increase compared with pre-war and is appreciably lower than in a number of other countries."

SIR ROBERT SINCLAIR,
Imperial Tobacco Co., Ltd.

Tanning Industry in U.K.

"With regard to the future prospects it will be appreciated how difficult it is to form anything in the nature of a reliable forecast. Quite apart from the general decline in values, hides and leather prices have tended to wide fluctuations which have proved impossible to forecast and difficult to gauge. There is, particularly in the sole leather industry, the keenest competition; there has been some overproduction which, at times, has tended to dislocate the market by the distress sales of parcels of leather. The position, however, has greatly improved in recent months and there are indications that, if hides and leather can be maintained at approximately the present price levels, we may hope to enter upon a period of greater stability."

GEORGE W. ODEY,
Barrow Hepburn and Gale, Ltd.

Hotel Industry in India

"My belief is that the Government are not giving the encouragement which the important hotel industry deserves. Although hoteliers are continually being pressed to improve the standard of service and amenities to be made available to tourists with the object of encouraging visitors to come to this country, even applications for licences to import small quantities of glassware and crockery are refused, even though the quality required is not yet available in India. There are also in many States restrictive measures regarding the types of food which can be served and, unfortunately, due to the prohibition policy many hotels, airport restaurants and all railway refreshment rooms and restaurant cars are denied the privilege of serving alcoholic beverages—an amenity which most foreign visitors desire and appreciate—in fact, I would go farther and describe this service as an essentiality rather than an amenity."

S. W. EDWARDS,
Spencer & Co., Ltd.

(*Concluded from previous page*)

The following synopsis of the Company's latest balance-sheet gives an idea of its financial position:

LIABILITIES	Rs.	ASSETS	Rs.
Capital	93,00,000	Gross block ..	2,20,10,944
Reserves and surplus..	54,74,971	*Less*—Depreciation ..	55,06,051
Provision for taxation.	24,74,747		
Liabilities ..	1,94,47,845	Net block	1,65,04,893
		Stocks	43,77,588
		Stores, etc.	87,12,578
		Debts, deposits and advances	68,27,417
		Cash	2,75,087
	Rs. 3,66,97,563		Rs. 3,66,97,563

During the year, the Company has spent Rs. 62.18 lakhs on plant, buildings, etc. Such a large expenditure and the financing of stocks of manufactured goods and raw materials (stocks of finished goods show a rise from Rs. 19.28 lakhs to Rs. 43.78 lakhs and those of raw materials from Rs. 39.95 lakhs to Rs. 87.13 lakhs) have necessitated larger borrowings, the unsecured loans at the end of the year disclosing an increase from Rs. 50.50 lakhs to Rs. 156.50 lakhs.

Notices

THE UNITED COMMERCIAL BANK LIMITED

Registered Office:
BHAGIRATH PALACE, CHANDNI CHOWK, DELHI.

Head Office:
2, ROYAL EXCHANGE PLACE, CALCUTTA 1.

NOTICE

NOTICE IS HEREBY GIVEN that the TENTH ORDINARY GENERAL MEETING of the Shareholders of THE UNITED COMMERCIAL BANK, LIMITED, will be held at the Head Office of the Bank at 2, Royal Exchange Place, Calcutta, on Thursday the 26th March, 1953, at 4 p.m., to transact the following business:—

By Order of the Board,
ANDERSON WRIGHT LTD.,
Managing Agents.

CALCUTTA, 25*th February*, 1953.

THE SOUTH KARANPURA COAL COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT THE Sixtieth Ordinary General Meeting of the Shareholders of THE SOUTH KARANPURA COAL COMPANY, LIMITED, will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, on Tuesday the 24th March, 1953, at 11 a.m., for the purpose of receiving the Directors' Report, passing the Audited Accounts for the half-year ended 31st August, 1952, declaring the Dividend recommended by the Directors, and for transacting any other ordinary business of the Company.

The Share Transfer Register of the Company will be closed from the 10th to the 24th March, 1953, both days inclusive.

By Order of the Board,
BIRD & CO., LTD.,
Managing Agents.

CALCUTTA, 26*th February*, 1953.

Note.—Printed copies of Report and Accounts will be despatched to the Shareholders on or about the 5th March, 1953.

ORISSA MINERAL TREBLES DIVIDEND

MADURA MILLS REPORT LOWER PROFIT

Orissa Minerals Development Co., Ltd.

THE directors of the above Company (Managing Agents: Messrs. Bird & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 30th June, 1952.

Raisings of iron ore at 3,09,359 tons showed a decrease of 1,20,905 tons over the raisings in the previous half-year. Despatches at 2,85,693 tons showed a decrease of 1,41,751 tons on the previous half-year. Exports increased from 28,138 tons to 51,013 tons. The decrease raisings and despatches were due to reductions in the requirements of the indigenous steel works owing to excessive stocks having been built up in the previous half-year.

Permission having been granted by the Orissa Government in November, 1951 to resume work in the areas which were under dispute, considerable progress has been made in opening up and developing the mines. Sales, completed and despatched, of manganese ore and manganese dioxide were 12,491 tons and 1,327 tons, respectively, compared with 2,214 tons and 609 tons, respectively, during the previous half-year.

The demand for manganese ore, manganese dioxide and iron ore for export continued to be good. The anticipated deterioration in the market for low grade manganese ore did not arise during this accounts period, but there are again indications now of a lessening demand.

The Company is now endeavouring to regain its markets for manganese dioxide which were lost during the period when the Company was not permitted to operate the mines. No difficulty is being experienced in selling highest grades of dioxide, but there is severe competition in low grade crushed ore, which is mainly used by glass manufacturers in Europe. At one time the Company was the main supplier, but severe competition is now being experienced with African ore which is being sold at prices considerably below the Indian market rate.

With the reduction in demand for iron ore by indigenous industries the Gorakhpuri labour force has been steadily reduced to about 300.

For a short period the Company was permitted by Government to load a full train daily for direct shipment. This facility was, however, withdrawn after a short period and, although the railways have almost met the Company's quota of just over half a train per day, this is still far short of the Company's present potential output of 2 trains per day for export only.

The profit and loss account, after providing Rs. 1,22,809 (Rs. 29,883) for depreciation, Rs. 5,25,000 (Rs. 1,39,000) for taxation, taking Rs. 28,000 (Rs. 12,000) to tax contingency reserve, Rs. 50,000 (*nil*) to equalisation of dividend reserve, Rs. 1,50,000 (Rs. 75,000) to mechanisation reserve, Rs. 1,00,000 (Rs. 20,000) to buildings reserve, Rs. 1,00,000 (Rs. 10,000) to general reserve and including Rs. 42,938 (Rs. 18,598) brought forward from the previous half-year, shows a credit balance of Rs. 2,24,275 (Rs. 87,543). The directors propose to dispose of this sum in paying a dividend on the ordinary shares at the rate of 30 (10) per cent. per annum, without any deduction for income-tax paid by the Company Rs. 1,50,000 (Rs. 50,000), and in carrying forward Rs. 74,275 (Rs. 37,543).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	10,00,000	Block ..	13,45,740

		Cash ...	1,58,099
Rs.	68,04,215	Rs.	68,04,215

Madura Mills Co., Ltd.

The directors of the above Company (Managers: Messrs: A. & F. Harvey Ltd., Madural) submit the audited accounts of the Company for the year ended 31st December, 1952.

After allowing for taxation, depreciation and managers' commission, the year's working shows a net profit of Rs. 46,28,442 (Rs. 59,32,848). After taking into account the balance brought forward from the previous year, there is a balance of Rs. 58,90,590 (Rs. 72,62,644) at credit of profit and loss account.

A sum of Rs. 1,69,088 received from the Government of Madras as compensation for relinquishment of water rights at Ambasamudram has been credited to renewal and replacement reserve, to which has also been credited further post-war refund of excess profits tax amounting to Rs. 11,48,551 (net).

A sum of Rs. 15,00,000 (Rs. 25,00,000) has been transferred to general reserve. The directors recommend that a dividend of 20 (20) per cent. free of tax, be paid for the year and that the balance of Rs. 8,90,094 (Rs. 12,62,148) be carried forward.

If the directors' recommendation regarding dividend is accepted, 3 months' basic wages as bonus will be payable to workers and staff for the year ended 31st December, 1952 in accordance with the bonus agreement entered into by the management with the Unions in April, 1951. This bonus, costing about Rs. 26,00,000, will be treated as a charge against the trading results of the current year.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital	1,75,02,480	Block ...	1,04,62,725
Reserves	2,82,94,292	Stock ...	3,47,05,144

Brushware Ltd.

The directors of the above Company (Managing Agents: Messrs. Begg, Sutherland & Co., Ltd., Kanpur, U.P., submit the audited accounts of the Company for the year ended 30th November, 1952.

The results for the year, after making the usual charges including provision for taxation, and after taking into account Rs. 10,034 (*nil*) received (after deduction of *income-tax) in respect of excess* profits tax refund, show a profit of Rs. 38,950 (Rs. 45,281), from which has been deducted depreciation Rs. 7,500 (Rs. 10,000) and investments reserve Rs. 10,000 (Rs. 7,273), leaving a nalance of Rs. 21,450 (Rs. 28,008). To this sum has to be added the amount brought in from the previous year of Rs. 17,553 (Rs. 19,545), thus leaving at credit of profit and loss account Rs. 39,003 (Rs. 47,553). This balance, the directors recommend, should be disposed of in payment of a dividend of Rs. 2 (Rs. 3) per share, free of income-tax, for the year ended 30th November, 1952 absorbing Rs. 20,000 (30,000) and carry forward Rs. 19,003 (Rs. 17,553). The dividend on the ordinary shares complies with the requirements of Section 23A of the Indian Income-tax Act, 1922. The Company's property has, as usual, been maintained in good repair.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	1,00,000	Block ...	23,833
Reserves ...	3,10,000	Stock ...	1,03,493
Provision for taxation ...	3,884	Stores ...	92,434
Liabilities ...	27,024	Debts, deposits and advances ...	41,331
Profit and loss account ...	39,003	Investments	1,55,209
		Cash ...	63,611
Rs.	4,79,911	Rs.	4,79,911

Athimattam Rubber Co., Ltd.

The directors of the above Company (Managing Agent: Mr. Mathew Sebastian, Thodupuzha) submitted the audited accounts of the Company for the year ended 29th February, 1952.

There was a slight change in the total acreage owned by the Company, as 6.60 acres of cashew and 2.56 acres of rubber planted area were sold. Thus, the actual area on the date of the report was as follows:

	Acres
Rubber old plantations	358.44
Rubber 1944 planting	20.00
Rubber 1944 planting budded	20.00
Rubber 1945 planting budded	30.00
Rubber 1946 planting budded	10.00
Cashew plantation	18.40
Pepper and coconuts	45.00
Reserves	61.62
Total ...	563.46

The crop harvested during the year was 83,874 lbs., being 4,766 lbs. more than that of the previous year. The average sale price was 115.34 cents, as against 82.36 cents in the previous year. The cost of production for the year worked out to 78.70 cents, as against 67.91 cents last year.

The net profit for the year was Rs. 33,133 (Rs. 14,330), which, together with Rs. 8,445 (Rs. 7,207) brought in from last year's accounts, made a total profit of Rs. 41,579 (Rs. 21,537), which the directors disposed of as follows:

To provision for income-tax including short fall for the last year of Rs. 1,395, Rs. 10,395 (Rs. 5,592), and to sinking fund account Rs. 30,000 (*nil*) leaving to be carried forward a balance of Rs. 1,184 (Rs. 8,445).

Though the net profits of the Company were sufficient for the declaration of a good dividend, it was thought more necessary to clear the debenture debt immediately, as they were due to be cleared by April, 1953, as per the trust deed agreement. The auditors also recommended this procedure. The Company, thus, stands to gain from next year, the interest on debenture debt and the income-tax on the same.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	3,25,000	Block ...	4,06,701
Debentures	40,000	Stock ...	2,813
Reserves ...	20,000	Stores, etc.	7,779
Provision for income-tax	5,000	Advances ...	1,045
Liabilities ...	2,939	Investments	1,300
Profit and loss account ...	41,579	Cash ...	14,880
Rs.	4,34,518	Rs.	4,34,518

N.B.—Figures within brackets relate to the corresponding period of the previous year.

MONEY RATES HARDEN AGAIN

(From Our Own Correspondent)

BOMBAY, *4th March*

The comfortable conditions in the short-term money market reported last week continued during the earlier part of the week under review. With a further slackening in demand, money rates tended to soften, the inter-bank money being placed at 2½ per cent. among the Exchange banks and big Indian banks. Some stray transactions passed even at 2¼ per cent. also. But, from Monday onwards the position changed a bit in favour of lenders. There was a preponderance of borrowers and money rates tended to harden, with a rise to 2¾ to 3 per cent. for inter-bank call. Towards the close of the week, that is to-day, signs of shortage of funds became more perceptible due to demand from Calcutta and purchases of ready sterling on London by some of the Exchange banks. The call money rate among the smaller Indian banks was steady at 3 per cent. throughout the week.

While some of the Exchange banks are reported to be fully covered with their own funds, some of the big Indian banks who have their funds fully employed on advances against commodities are the main borrowers. Though funds from up-country centres have come back to some extent, the surplus funds have been utilised to meet fresh demands against exports of cloth.

Three months' deposits were occasionally taken up at 3 per cent. and four to five months' deposits at 2¾ to 3 per cent. according to the needs of the borrowers. House money fetched 2¾ to 3 per cent.

The response to the sale of three months' Government of India Treasury Bills was very lukewarm this week, the total amount offered being no more than Rs. 101.75 lakhs, against the invitation for Rs. 100 lakhs. This compares with Rs. 109.25 lakhs offered last week. The average rate of accepted tenders, however, remained, unchanged at Rs. 2-7 per cent. per annum.

For the second week in succession, notes in circulation have gone down, the statement of affairs of the Reserve Bank of India for the week ended 27th February, 1953, disclosing a fall of Rs. 1.54 crores. Notes held in the Banking Department, on the other hand, are higher by Rs. 1.65 crores, the net change in total notes issued being covered by a rise of Rs. 10.31 lakhs in rupee coin. On the liabilities side of the Banking Department, the declining trend in deposits of the Central Government persists, the exact decline during the week being Rs. 3.13 crores. Deposits of other Governments are, however, higher by Rs. 6.33 crores, whereas those of banks show a fall of Rs. 2.29 crores. Cash balances have improved by Rs. 1.66 crores, but balances held abroad have fallen by Rs. 1.27 crores. Loans and advances to Government disclose a decline of only Rs. 12 lakhs. After a break of five weeks, the Scheduled Banks have once again begun borrowing from the Reserve Bank against usance bills, the borrowings during the week being of the order of Rs. 1 crore. Treasury Bills purchased and discounted show a decline of Rs. 1.84 crores.

The consolidated statement of the position of Scheduled Banks for the week ended 20th February, 1953, as compared with that for the previous week, shows that the banks have had to go through a week of dull business, their portfolios showing only minor variations. Demand deposits disclose a rise of Rs. 89.71 lakhs and time deposits Rs. 55 lakhs. Borrowings from banks repayable on demand are lower by Rs. 51.44 lakhs, while those of a time nature are better by no more than Rs. 10 lakhs. Borrowings from the Reserve Bank have declined by Rs. 2.67 crores and those from the Imperial Bank by Rs. 1.72 crores, thus indicating that there was hardly any pressure on banks for funds. This is again reflected in the decline in advances to the extent of Rs. 74.66 lakhs and in bills purchased and discounted by Rs. 25.94 lakhs. A contraction of Rs. 2.75 crores is noted in cash-on-hand and balances with the Reserve Bank which is obviously due to the repayment of borrowings from the Reserve Bank and the Imperial Bank, as noted above. Money at call and short notice is higher by Rs. 1.89 crores. Investments are better by Rs. 23.76 lakhs.

The Gilt-edged market displayed a more confident tone during the week. Selective buying enquiries were in evidence and minor improvement in prices was recorded. The Government of India has the option to repay this year the 3 per cent. 1953-55 loan, with an outstanding balance of Rs. 114.61 crores. In his budget speech the Finance Minister announced the Government's decision to exercise this option and, taking into this discharge, he said, it would be possible to raise a loan of Rs. 100 crores in the market.

3 per cent. 1953-55 recorded a fractional rise to Rs. 100-0⅜. Due to proximity of interest payment, 3 per cent. 1957 was in favour early in the week and it rose from Rs. 98-10 to Rs. 98-12, but was placed at the close at Rs. 98-11 *ex-voucher*. 3 per cent. 1958 hardened by As. 2 to Rs. 98-7 and 3 per cent. 1959-61 improved by an anna to Rs. 96-1. 3 per cent. 1963-65 and 3 per cent. 1964 were each maintained at Rs. 92-9. 3 per cent. 1966-68 were lower by an anna at Rs. 90-6, but 3 per cent. 1970-75 was conspicuous with a rise of As. 3 to Rs. 86-9. 3 per cent. 1986 Conversion loan gained As. 2 to Rs. 82-12.

The foreign exchange section of the money market witnessed no activity during the week and the rupee-U.S. dollar rate was maintained at Rs. 475 per $100 (bank's selling) and Rs. 471¾ (bank's buying) for ready. There was, however, some softening of the sterling in the U.S. market. The ready rate for £ moved down from $2.81-15/16 —2.81-1/16 on 24th February to $2.81-11/16—2.81-13/16 yesterday and the forward rate for three months from $2.81⅞—2.81½ to $2.81¼—2.81⅝ and that for six months from $2.80¾—2.81 to $2.80-11/16 —2.80-13/16.

BULLION EASY

(From Our Own Correspondent)

BOMBAY, *4th March*

After four weeks of hectic activity, resulting in a deadlock, as was reported last week, trading on the Bullion Exchange had a smooth sailing this week. The deadlock was resolved on Thursday last, following an understanding reached between the *bulls and bears in regard to their* outstanding business in silver for the March settlement and activity was resumed in both March and April settlements the same day. The undertone of the market was distinctly easy throughout the week, except for a while in the initial days of the week. The recession in silver was steeper than in gold.

As a result of considerable persuasion by the Directors of the Bullion Association, the opposite parties agreed to square up their outstanding positions in March settlement at Rs. 168 upto 10 p.m. on Thursday, 26th February. If anybody wished to carry over his contracts to the next settlement, he was permitted to do so at Rs. 168. Accordingly, the bulls were reported to have liquidated about 2,500 bars at prices ranging from Rs. 167-8 to Rs. 167-14. Some of the sales remained unadjusted. Consequently, trading was suspended on Friday to enable the outstanding positions to be squared up. After this was done, trading was resumed on Saturday. The Board also permitted trading in April settlement, as from Thursday, 26th February, under the existing by-laws, as the proposed amendments to the by-laws which were submitted to the Bombay Government for approval, would take some time to be brought into effect.

Silver for forward delivery in March settlement began at Rs. 167-8 and after staging a spurt to Rs. 169-12 finished at Rs. 165-12 yesterday when the settlement ran out. Business in April settlement began on Thursday at Rs. 166-14 and moved forward to Rs. 170-4 on Saturday, but, thereafter, drifted lower to Rs. 165-13 at the close to-day.

Ready silver (.996 Mint) hardened from Rs. 168-13 to Rs. 170-8, but this recovery was short-lived, as it soon declined by quick steps to Rs. 165-13 at the close. The floating stocks of silver are reported to be 1,500 bars. The daily average offtake was 15 bars.

Gold for forward in March settlement opened at Rs. 89-6 and closed for that settlement at Rs. 88-8 on Saturday. The forward rate for the April settlement rose from Rs. 89-2 to Rs. 90-2, but finished the week lower at Rs. 88-5.

Ready gold, which closed at Rs. 88-12, after touching a high of Rs. 90-8, revealed a loss of a rupee on balance. The floating stocks of gold are placed at 30,000 tolas. The daily average arrivals were 5,000 tolas, while the offtake was of the order of 4,500 tolas.

The following comparative table shows the trend of the market during the week under review:

	4-3-53	Highest	Lowest	25-2-53
GOLD	Rs. a.	Rs. a.	Rs. a.	Rs. a.

LINSEED EASY

(Messrs. A. Bradley and Co.)

CALCUTTA, *2nd March*

Conditions in the linseed market were rather unsettled in the early sessions of the week, but a price reaction set in directly after the announcement of the Budget proposals and a quieter tendency, with appreciably lower values, marked the close. A very keen interest is being shown by sellers now, who had been reserved at higher prices earlier, and prices for both ready and forward deliveries have been discounted. A rather cautious attitude has been adopted by buyers who are now operating for their immediate requirements only. The oil section is fairly active and some local business has been reported for forward delivery. Export enquiries are at a standstill with Indian linseed oil still out of line with world markets.

Latest quotations are: Ready Rs. 20-12, March Rs. 20-4, April Rs. 19-8 and, May Rs. 19 per maund.

TRADING IN KIPS SLOW

(From Our Own Correspondent)

MADRAS, *2nd March*

Trading in kips has been slow, as the U.K. dressers are unable to get Madras asking prices from boots manufacturers and are not buying at last prices. Prices of kips have declined by 2*d.* in the U.K. but by ½*d.* locally. Cow calf and buff calf are in good demand but buff hides are dull.

The market for tanned skins has ruled dull. It is reported that Japan will shortly renew the licensing of lining sheep import and exporters are buying sheep in the local market. Prices of tanned goat common qualities are As. 2 less and semi primes are unchanged. Arrivals are small. Raw skins continue to be firm.

GOOD DEMAND FOR INDIAN COTTON

(From Our Own Correspondent)

BOMBAY, *4th March*

With the termination of the February delivery contract on the forward cotton market at Kalbadevi last week, the general belief among operators and others connected with the administration of this market is that the earlier fears entertained with regard to the behaviour of the market during the early months after reopening were unjustified. Except for a sharp warning once by the President of the E.I.C.A. with regard to speculative pushing up of rates at an early stage, the market, in spite of fairly heavy fluctuations and a net rise of nearly Rs. 75 per candy, has behaved well. Unless the feared shortage of supplies during the fag end of the season drives operators to a frenzy of buying, the working of the market might be taken as likely to run smooth for the rest of the season. The deliveries against outstanding transactions in February have been very moderate, short of 7,000 bales, which is about one-third of what was expected at one time.

The country's budget was not expected to affect cotton marketing in any way directly. There was a lurking hope among some operators that the export duty on varieties other than Bengal *Deshis* might be reduced and brought down to the same level as that on Bengals on this occasion. This hope, however, was not realised, though a flicker of it still continues and the trade appears to be confident that the Government will be compelled to take this step after a month or six weeks, to enable the balance of the exportable quotas of the other short-staple varieties to be exported, unless the Indian mills can manage to find some use for them in view of the shortage of staple varieties that is expected after July. But the indirect effect of the budget has been appreciable on cotton and prices have registered heavy appreciation both in the spot and forward markets. It is believed by the cotton trade that the consumption of both Indian and imported varieties will not only continue at the present rate but might be accelerated in future. This optimism has, therefore, led to an increased demand for Indian styles and for Egyptian, U.S.A., Sudanese and East African cottons also. A part of the scarcity experienced in the Bombay market is due not to absence of stocks in the country but to that of transport facilities and this has been experienced most keenly in the case of New Bengals for which shippers are paying high prices to keep their shipments within stipulated dates. Apart from this, consumer demand centres mostly round Vijay, Khandesh, and Surtis.

In the forward market, the fluctuations in prices over the week ended 4th March, were as follows:

	Opening	High	Low	Closing
I.C.C. May (Rs.) ...	673	698	673	690¼
I.C.C. Aug. (Rs.) ...	686¼	711½	686	704

In Sewri market, Bengal Deshi was quoted at Rs. 560-580; Berar Jarilla Rs. 30 on May; Vijay Rs. 150 on May; Moglai Rs. 20 off May and Khandesh Rs. 100 on May.

At Karachi, prices have been firm. The Cotton Board is believed to have lightened a good portion of its burden of the old crop against barter deals with Italy and Hongkong. Other continental centres including the U.K. have also been showing great interest in Pakistan-American seed cotton. The Pakistan Government has banned imports of textiles from this month and the underlying idea appears to be to use cotton as barter for the textile requirements of the country. The negotiations with Japan have not progressed sufficiently to make any announcement, but it is confidently believed that a bulk of the supplies for cloth will be met by Japan and a good portion of the cotton stocks from Karachi will find their way ultimately to this Far Eastern country. Whatever little interest India had evinced theoretically in Pakistan cotton as a possible source of future supply, if prices fell, has now disappeared, because with the general revival of world prices, the Karachi levels are not likely to be such as can attract Indian buyers. The latest available quotations from Karachi are:

Punjab Deshi Rs. 65-8; 4F Punjab R.G. Rs. 53 to Rs. 54-8; S.G. Rs. 57 to Rs. 58½; L.S.S. Punjab R.G. Rs. 57 to Rs. 57½; S.G. Rs. 62; N.T.R.G. Rs. 57; S.G. Rs. 63; 289F Punjab R.G. Rs. 63; S.G. Rs. 70.

An interesting development in the world supply position is the decision of the Uganda Lint Marketing Board to resume weekly auctions of cotton from next Wednesday. The quantity proposed to be disposed of is about 60,000 bales and the auctions will spread over the whole of March. On the other hand, the Sudan is tending to disappear from the picture.

At Alexandria, the scheme for marketing cotton during the coming season is still under consideration by the Egyptian Government. One of the points under consideration is the opening of the forward market. In the meantime, good business has been done in Ashmouni and Giza 30, while some demand appears to have revived also for Karnak from East European countries. Even the U.K. is showing more interest now in Egyptian cotton in view of the improved political atmosphere between the two countries and the deterioration in the quality of Sudanese cotton.

At New York, the most interesting development during the week under review has been the inclination of the authorities to use the barter method for encouraging export of cotton as a part of the drive for revision of the policy for marketing of farm products in general. The recent rise in prices recorded during the week is not, however, taken as any indication of higher export interest or internal consumer demand, but more as a correcting of the technical position resulting from the liquidation of the March contract. The quantum of export remains very low at nearly two million bales short of the corresponding figure for the same period in

1952. The future trend of prices is likely to be steady round the current level.

The following are the latest available quotations from New York as compared with those of a week and a fortnight before.

(In cents per lb.)

ART SILK YARN RECEDES

(From Our Own Correspondent)

BOMBAY, *4th March*

After an initial upward trend, the values of art silk yarn suffered a sharp break, which persisted almost till to-day. The initial improvement was brought about, in the main, by rumours of a favourable import policy for art silk yarn in the Budget. Besides, rapid depletion of stocks and extremely limited arrivals also favoured the trend. The buying support that ensued resulted in an all-round rise in values in the first two sessions of the week. The absence of any reference in the Budget to the import policy, as expected by the trade early, and marked decline in cotton yarn prices induced selling pressure and values drifted downwards. Not only the initial gains were fully lost, but also the closing rates were very much lower, as compared with those at the end of the previous week.

The 150D February contract, in the forward section, improved from Rs. 810 to Rs. 819 on Friday, only to react to Rs. 772 yesterday. On subsequent support at lower levels, the rate, however, improved to close at Rs. 801, the level at which the contract terminated yesterday. Business in this contract commenced at Rs. 714 on 2nd January, 1953. The highest level touched was Rs. 824 on 9th February and the lowest level was Rs. 687 on 23rd January. The net gain over the period of the contract was Rs. 87. March delivery contract opened at Rs. 813 and, after rising to Rs. 825 on the 27th inst., receded to Rs. 789 to-day, the net loss over the week being Rs. 24. Trading in April contract commenced at Rs. 802 on the 2nd inst. and the quotation moved down to Rs. 772 yesterday, but was somewhat higher at Rs. 790.

Values of yarn in the ready section moved in sympathy with those in the forward section. Thus, 120 Japan was fully steady at Rs. 5-2, as against Rs. 5, in the first three sessions of the week, but declined to Rs. 4-15 yesterday. To-day, however, it was slightly better at Rs. 5. 150 Japan opened the week at As. 2 higher at Rs. 4-8, but gradually receded to Rs. 4-5. 120 Italy fluctuated between Rs. 5 and Rs. 4-13, before closing at Rs. 4-10, the loss over the week being As. 6 150 Italy was firm at Rs. 4-3 on the opening day. Under the influence of selling pressure, it slided down to touch Rs. 4 to-day.

Traders in art silk yarn are greatly intrigued at the postponement of import policy by the Government of India. The stocks of yarn in the country are very low. In view of this it is feared that, if no licences are given to established traders to import art silk yarn in the near future, prices will shoot up, causing great inconvenience to consumers, particularly the small handlooms and powerlooms.

Owing to extremely low level of stocks, turnover in the staple fibre section was very small, buying being confined mainly to 2/40s. There were also some enquiries for 20s yarn and some limited business was reported done. In the context of acute scarcity of yarn, the Committee of the Yarn Merchants' Association has not allowed trading in fixed delivery (March or April) contracts in staple fibre yarn.

The table below gives the prices of art silk yarn quoted to-day, as compared with those on the 25th and 18th inst.

Art Silk Yarn—	4-3-53 Rs. a.	25-2-53 Rs. a.	18-2-53 Rs. a.
150D February (per case of 200 lbs.)	—	810 0	800 0

150 Italy ,, ...	4 0	4 1	4 1

GROUNDNUTS FIRM

(From Our Own Correspondent)

BOMBAY, *4th March*

The earlier expectations of the oilseeds and oils market that the Government of India would announce imposition of duty on exports of groundnut oil in the Budget proposals did not materialise. Neither did the hopes of relief in the duty on exports of linseed oil. To the market, the former was a bullish factor, whereas the latter turned out to be bearish. The cumulative effect of these two opposing factors was varied. The groundnut section firmed up and rallied major gains over the week, while the linseed section ruled easy and finished lower. The castorseeds section was, however, more or less steady with minor price variations.

Groundnut oil came in for a good deal of enquiry during the week under review. Business was reported done at £140 per ton (in bulk) in the Continent. Hongkong was interested in groundnut oil at £145 per ton (in drums). Consequently, groundnut oil ready firmed up from Rs. 19-14 to Rs. 21-8, and railway receipts from Rs. 19-12 to Rs. 21-6. March, April and May deliveries were done higher at Rs. 21-2, Rs. 21-4 and Rs. 21-7, as against Rs. 19-14, Rs. 20 and Rs. 20-3, respectively. Groundnuts reacted to the trend in oils. Bold ready gained as much as Rs. 1-12 to Rs. 39-8 and Khandesh quality Rs. 1-14 to Rs. 40. The linseed section came in for scant enquiry. Linseed oil was offered to Australia at £122 per ton, but there were practically no buyers. As a result, linseed oil declined from Rs. 15 to Rs. 14. The market viewed with disappointment the absence of any relief in export duty on oil in the Budget proposals. The seeds ruled in sympathy with oil. Bold ready eased from Rs. 28-12 to Rs. 28-4.

Overseas enquiries for castor oil were discouraging. Castor oil, Commercial quality, was quoted to the U.S. at 18¼c. per pound, but buyers were available only at 18c. I Pressures were quoted at 19½c. sellers as against 18¼c. buyers for small quantities. Consequently, Commercials were down by As. 8 at Rs. 18. I Pressures were done at Rs. 18-14 as against Rs. 19. In castorseeds, May delivery which opened at Rs. 146-4 as against Rs. 147-8, fluctuated between Rs. 143 and Rs. 150-8, before closing at Rs. 147. Madras quality was done steady at Rs. 31.

Niger and kardi seeds came in for some steady enquiry. Niger seeds ready F.A.Q. improved from Rs. 29-8 to Rs. 30-8 and Madras Rs. 30-8 to Rs. 31. Kardi Bolds were steady at Rs. 22-8.

The following table shows the prices of oilseeds and oil on the 4th inst., as compared with those at the close of preceding two weeks.

	4-3-53 Rs. a.	25-2-53 Rs. a.	18-2-53 Rs. a.
Groundnuts—			
Bold Ready New (per cwt.) ..	39 8	37 12	39 12

BRADFORD WOOL TOPS FIRM

(Messrs. J. Hardacre and Co.)

BOMBAY, *3rd March*

From one of the heaviest selling weeks of the Australian wool marketing season, raw material prices emerge, in some cases, higher than a week ago. The Bradford top market is firmer as a result. The most reasonably-priced wool has been found in Perth, where certain sub-standard types have moved at prices slightly favouring the buyer, but these wools are not suitable for all purposes and, in all Australian centres, good Bradford style fleece wools in 64s and finer qualities have moved against the buyer.

Buying limits, which gave a wide discretion to the operator, have produced much less wool than many importers had hoped for, and there are numerous firms in Bradford which are using wool faster than they are able to replace it. South African wools are also firmer at prices which top-makers cannot easily pay, if they are to be guided by obtainable top prices. New Zealand medium crossbreds are moving well at steady prices. The market is one of the strongest of the year and the continued firm behaviour of wool is bringing out further business in tops.

Machinery activity is, again, at one of the highest levels since the war and the volume of output is limited only by the available labour supply. The woollen section of the industry also maintains a good rate of activity.

Although it is not possible to sell tops on the full basis of wool costs, the firmer note in the Australian wool market is causing most top-makers to advance their quotations for all tops other than medium crossbreds by about 1*d.* per lb.

PEPPER BUOYANT

(Messrs. Parekh and Co.)

BOMBAY, *4th March*

Still further buoyancy in prices of Malabar black pepper was recorded during the week, in sympathy with New York. Advices from New York reveal that the erstwhile lethargic market there has been stimulated by repurchases by speculators and dealers who till recently refused to follow the advance in India, in expectation that there would be a fall in the Indian market on account of pressure of arrivals in both the primary markets of Alleppey and Calicut. Bears here and in New York were badly caught, as Indian planters became tight sellers particularly because of international political situation which contributed to lift the prices in almost all commodities in India. One of the Indian houses in New York is reported to have bought March shipment at as high as $1.37 and March-April-May shipment at prices ranging from $1.27 to $1.32 per lb. c. and f. New York. At Alleppey, exporters are reported to have bought in ready 275 candies at Rs. 3,000 each, while arrivals amounted to only 100 candies. Calicut also is reported to have sold at Rs. 3,200 with further buyers. In the delivery section, outside speculation in Bombay has almost dried up owing to recent rapid advance in prices, and on account of the present political uncertainty. In the A.S.T.A. section, there are buyers in local market for March shipment at $1.36 and April shipment at $1.35. At Alleppey, garbles are changing hands at price ranging from Rs. 490 to Rs. 520, daily turnover amounting to about 70 to 80 tons. Following are some of the factors which are reported to have contributed to push up the prices to the present new level in New York. (1) Expectation of some devaluation in dollar resulting from the talk between Mr. Eden and the new U.S. Administration; (2) purchases by tired bears here and in New York; (3) accumulation of big short interest in near and long forwards; (4) the present uncertainty in the world political situation; and (5) repurchases in ready and forward by Indian exporters in New York.

Since the beginning of the Indian season, there has been a regular tussle between Indian planters and New York importers, the former trying to push up the prices and the latter trying to bring them down. Formosan situation afforded a godsent opportunity to Indian planters, and they seem to have won the first round in the ring forcing the New York dealers to buy at high prices. Sentiments rarther than statistics work more in a most sensitive market such as pepper the world over.

Following are to-day's nominal quotations: Ready delivery Rs. 2,650, March Rs. 2,605/35, and April Rs. 2,625/35 per candy of 5¼ cwts.

METALS FIRM

(From Our Own Correspondent)

CALCUTTA, *3rd March*

Although business put through was small and there were no perceptible variations in prices, firm conditions were in evidence in the metal market during the week under review. This change in conditions was due to a number of enquiries for some of the principal metals. Opinion among the traders is not unanimous, but there is a feeling that, if enquiries continued at the present scale and moderate business resulted, the seriousness of the copper supply situation would be brought to the fore. Buyers may be expected to be cautious and not rush purchases.

Electrolytic copper ingots were firm at Rs. 186 with the fire-refined material realising as much as Rs. 170. Copper traders were more inclined to book business for forward deliveries than for near or immediate delivery positions, and this is indicative of the tightness of the present supply. Tin was firm at Rs. 634 and closed better at Rs. 636. This improvement was more a result of better advices from Singapore markets than due to local turnover. Antimony was quite at Rs. 200 and an enquiry for 20 tons was the only sign of activity that stockists could find. Despite better advices from Bombay, mercury remained quiet at Rs. 512-8. Lead sympathised with the steady conditions in the London market, pig lead quoting at Rs. 63 and the virgin at Rs. 66-8. Consumer interest in zinc was mainly for forward delivery, an enquiry for a moderate quantity for the prime western material in the March-April delivery position was satisfied. The rate realised was Rs. 60. Electrolytic material was earlier quoted at Rs. 63, but closed lower at Rs. 62.

HIDES STRONG

(From Our Own Correspondent)

KANPUR, *1st March*

The undertone of the hides and skins market continued to be strong during the week under review. Over new arrivals of bull and wet salted cow, there were ready transactions by local tanners. Madras dealers were lukewarm. Latest quotations are: Wet salted cow 1st grade Rs. 400, 2nd grade Rs. 300 and 3rd grade Rs. 135 per score; wet salted buff 1st grade 1 lb, 10 oz. and 2nd grade at 2 lbs. 4 oz. to 2 lbs. 6 oz. per rupee; goat 1st grade Rs. 240 and 2nd grade Rs. 210 per 100 pieces; and sheepskins Rs. 250 per 100 pieces.

EXPORT DUTY ON SACKING REDUCED

(From Our Own Correspondent)

CALCUTTA, *3rd March*

The outstanding feature of the Union Budget, as far as the Calcutta markets are concerned, is the reduction of the export duty on jute sacking to Rs. 80 a ton from Rs. 175. Although this announcement was expected for long in the markets and did not, therefore, cause any pleasant surprise, it was most cheerfully received last Friday. Trading in the market till that day kept more or less steady with prices showing a tendency to rise. Business passing was, however, small, as mills were reserved and wanted to make offers only after knowing the Budget details. As the details came in, it was evident that mills had waited usefully, and the reopening yesterday, after the holiday on Saturday on account of Holi, was on a very cheerful note, although fluctuations in prices were very narrow. Such a tendency should be considered healthy, as it indicates that the benefit of the reduced duty is being passed to the buyer in toto. Ready B twills were raised to Rs. 96-4 over the week-end from Rs. 94-2 last Friday, and were quoted yesterday at Rs. 95-4. In the coming weeks, much business in heavy goods is expected to be put through, as, following the rumours regarding the duty revision, shippers postponed their purchases for the better part of February. Moreover, it is known that foreign buyers would have to be in the market soon for meeting replacement requirements. If all goes well and if determination of prices is not entirely left to the speculative elements, mills can be expected to clear a good portion of their sacking stocks now with them.

A reduction in the hessian duty had been considered just a possibility; but this has not materialised. It is difficult to see how a decision in this regard can be postponed for long. Presumably, the Finance Minister would desire to wait and watch reactions of the trade to the present reduction of the duty on sacking goods. It is, therefore, desirable that traders pass over to the foreign buyers a reasonable portion of the benefit of the present reduction; perhaps this can be better achieved by mills selling direct to shippers. This would enable foreign buyers to take increasing quantities of sacking, following which a demand on New Delhi for a revision in the hessian duty would be perfectly justified and might be heeded. Ready 40″ 10 oz. hessian was yesterday quoted at the fractionally higher rate of Rs. 43-4 as against Rs. 43-2 last Friday. The f.o.b. rate was Rs. 51-11 as against Rs. 51-15 earlier. 40″ 8 oz. was yester-

STOCK & SHARE QUOTATIONS

Abbreviations:—D=Deferred shares. G=Guaranteed shares. P=Preference shares. P.O.=Preferred Ordinary shares. R=Rebate shares. Y=Accounts published yearly. H=Accounts published Haf-yearly. Q=Accounts published once 15 months. T=Company has Debentures. R.L.=Reserve Liability on shares. N=Nominal Quotation. i=Interim Dividend. f=Dividend for first half-year, y=Dividend for the year. x=Ex. Dividend c.d.=Cum. Dividend.

Shares:—If a company has different classes of shares—as, for example A shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under "Paid-up Per Share."

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12 indicate the months of June and December, respectively. "Reserves" includes general and other reserves and all other funds which a company may have as also depreciation on block items, when this is charged to separate account "Block" represents actual cost of land, buildings, machinery, and all such other items on which depreciation is allowed, less sales, if any, and stands for the gross figure except where otherwise indicated.

Dividends:—Dividends for completed years are calculated at per cent. per annum, but, where quoted for portion of a year, they represent percentages of the dividend on the paid-up share value. For companies closing the books half-yearly in the first three months of the year, and for companies closing their books yearly during the first half of the year dividends are shown as for the previous year.

• The following explanatory notes relate to the abbreviations and marks shown on page 424 in the debentures section:—

(a) Option to repay on six months' notice, on any interest date after 31st December, 1951, at 102 per cent. Also redeemable out of a cumulative sinking fund of 1½ per cent. per annum (commencing in 1938) by drawings at 102 per cent. or by purchase at or 102 per cent.

(c) Option of repayment at any time at 3 per cent. premium.

(b) Bearer bonds of Rs. 1,000 each repayable at par.

Bearer bonds of Rs. 1,000 each repayable on 31st July, 1959.

(d) Bearer bonds of Rs. 1,000 each with option of redemption in whole or in part at par on 30th June, 1952, or on any subsequent interest date at one month's notice.

(e) Returnable on or after 31st July, 1950, at Rs. 102-8 or at par after 31st July, 1955, on six months notice in each case.

Bearer bonds of Rs. 1,000 each with option of redeeming on 3 months' notice at ½ per cent. premium, after 1st March, 1954, but before 1st March, 1957, and 1 per cent. premium on or after 1st March, 1957

(h) Option of redemption on or after 1st July, 1949, at par.

(f) Option of repayment at any time at par at any time on or after 30th June 1947 on six months' notice.

MARKET GOSSIP

(Concluded from page 375)

respective export targets of 7-10 million and 2.6 million tons respectively, the competition in these world markets for steel is expected to grow much sharper, and prices to come down much lower in the coming year or so.

* * * *

As against this, another school of thought points to the fact that expansion plans are being implemented because steel makers of the world are taking an optimistic view of the growth of demand. This is because they consider that war-time destruction of capital equipment and arrears of industrial maintenance and development work have not yet been made good. Secondly, doubts are expressed about the U.S. ability to meet strong competition in export markets at its present level of high prices. American labour's demands for an increase in wages may take the prices still higher. Thirdly, hopes are also entertained by this section of exporting large quantities of steel to underdeveloped countries. Another theory is that excess capacity is a necessary preliminary to the stimulation of sufficient demand and with lower prices resulting therefrom steel would be put to innumerable new uses.

* * * *

Much light is thrown on the ways of tax-dodgers by the Income-tax Investigation Commission in its report for 1952. Although the *modus operandi* of the tax-dodgers varies with their ingenuity and the nature of their business, they do run true to a certain type. In the main, their activities are characterised by maintaining a set or sets of accounts, which are designed to deflate profits and inflate losses, and by running several lines of business in real or fictitious names so as to show that their own profits are less than what they really are. Instances, which have been quoted by the Commission, reveal the tax-dodgers' love of profits is matched by their accounting ingenuity. Accounts are written not so much to depict as to conceal the "true" state of the business. Thus, an "enterprising" firm of jewellers aroused suspicion, because it consistently made less profits than what others in the line were able to show. Investigation revealed that the firm had made secret profits by manipulating its accounts in many ways. It was found that cash sales had been recorded without any particulars of the materials sold or of the parties to whom they were sold. Large concealed profits were re-introduced into the business as borrowings and deposits from non-residents and third parties who were found merely to be *benamidars*. Part of the business was sought to be shown as belonging to another party in an Indian State. It was only when the assessee was confronted with a mass of evidence of a damaging character that he finally admitted the truth.

* * * *

In another instance, quoted by the Commission, a prominent business man, who had acquired control over certain mills, resorted, as a means of concealing income, to suppression of production, inclusion of false purchases of raw materials and stores and concealment of profits from sales of cloth. In this way, he had succeeded in concealing his profits. A number of investments made in the names of friends and relatives of the assessee were traced and were finally admitted by the assessee as his own.

* * * *

The Commission has quoted more than one case in which textile mill managements indulged in tax evasion. In one case, secret profits were earned by the assessees by showing lower prices in the books for the goods sold, by showing sales to dummy purchasers at controlled rates and, subsequently, selling them to the real purchasers at black market rates or at "on" prices. To conceal the real source of income, large sums were credited in the books as sale proceeds of gold and jewellery sold through banks. The whole "drama of alleged sale of jewellery through a bank was exposed," and the assessee was compelled to admit that what had actually happened was that secret profits had been introduced into business under cover of "sale of jewellery."

* * * *

In another instance, the managing agents of a textile mill were found to have evaded tax by showing the cloth manufactured by the mill as sold to nominees and intermediaries, who passed the same to other nominees before the goods reached the genuine dealers, the profits earned at each stage being "secreted and taken by the assessee." The consumption of stores also was "exaggerated." And the extra quantities, shown as having been consumed, were either sold away at black market prices or were later shown as having been purchased at higher prices by the mill. It was also noted that cotton, yarn and silk purchased for the mills were shown to have been sold away at less than market prices to nominees. In these cases, the differences between the nominal price and real price was always appropriated by the assessees. Secret commission was also obtained on the purchase of goods required for the mill and their prices were inflated. Further, a number of "mushroom concerns," managed by some nominees professing to carry on business under various names, mostly in Native States, were brought into existence by the assessee to help him in his tax-dodging devices.

* * * *

All this is a sad commentary on traders' sense of business ethics. It is true that a large majority of them are honest, fear the law and abide by it. But it should not be impossible for these men to expose those who stray from the "straight and narrow" path of commercial rectitude, in order that they themselves might not have to suffer through unequal competition from those who evade taxes. But the duty of protecting the law-abiding business man from the "lawless" men who compete with him clearly rests upon the State. It may be asked whether this duty was performed satisfactorily enough during the war, when there were many opportunities for tax evasion. The question, therefore, arises as to why the ordinary departmental officials failed to detect these cases of tax evasion and why the issues had to await investigation by the Commission. It might be worth while to investigate whether—and, if so, how far—tax evasion was practised with the connivance of the tax authorities. Again, it is also necessary to consider whether a higher rate of tax—this tempts people to evade taxes—is justified in a country which does not yet possess the commercial discipline of the Western countries which are themselves not free from problems of tax evasion. In the light of the Commission's report, it appears somewhat unwise to embark upon estate duty legislation—at least, to introduce a high rate of duty—considering that the chances of evading the duty are greater than those of evading income-tax.

BANKING

(Concluded from page 383)

complicated, if the very small shareholders are given the status of full shareholders by being supplied with annual reports and rights in new issues of shares.

The easier way of bringing risk investment within the reach of the smallest savers is through the medium of the unit trust. Such a trust holds a portfolio of securities and cash, against which units are issued to the public. Open-end trusts which, in all major respects, are similar to flexible unit trusts and which give the managers a wide discretion in their investment policy, have been very successful in the U.S.A. since the war. But the official policy in Britain has been to check and discourage them, because some of them did not satisfy the highest requirements of efficient management and sound investment. This policy should be reversed, subject to proper safeguards, because there is no doubt that the principle of the open-end trust or flexible unit trust is sound and, properly handled, is effective in garnering small savings. Banks must not merely act as custodians of the securities of such trusts, but, along with finance houses, must also take part in managing them and selling their units all over the country across counters.

MERCANTILE BANK OF INDIA LTD.

A final dividend of 8 per cent., less income-tax, has been recommended by the Board of Directors of the Mercantile Bank of India Ltd. for the year ended 31st December, 1952. This brings the total dividend for the year to 14 per cent., as against 12 per cent. for 1951. The interim dividend of 6 per cent. paid in September, 1952, was the same as that for 1951, but the final dividend now proposed represents an increase of 2 per cent. over that for the previous year.

MARKET REPORTS

(Concluded from page 413)

day offered at Rs. 34-12 f.a.s., and Rs. 41-8 f.o.b. In sympathy with B twills, hessian 40" 10 oz. was firm at Rs. 43-8 last Tuesday.

Stockists of raw jute expect that mills' demand for the raw material would increase between now and the time when the next crop begins to reach the market. If, as expected, more sacking is lifted by foreign buyers, this would mean considerable relief to stockists of the indigenous fibre. What have been left with them is considerable quantities of jute fit for the manufacture of jute goods. It was only a few months ago that the then prevailing dullness in the sacking market forced mills to transfer a portion of their looms, wherever possible, from sacking to the production of hessian. As a result of the present change in the duty, the prospects for a reversion are bright, and the raw jute market is full of expectations. Even before Friday, mills made keen enquiries for raw jute, and consequently, Assam bottoms were raised to Rs. 22 from Rs. 21-8. Sellers were reserved, but mills did not press their enquiries. Conditions were firm yesterday, and Assam bottoms were offered at Rs. 21-8. Murshidabad district tossa was available at Rs. 20-8, Kisanganj jute at Rs. 21-12, Bimli f.a.q. at Rs. 16-8, and *pucca* bales first marks ready at Rs. 130 a bale sellers.

TEA DUSTS IRREGULARLY EASY

(Messrs. Forbes, Ewart & Figgis Ltd.)

COCHIN, 28*th February*

Dust Sale 'D'.—The offerings in dust sale 'D' which was held on Tuesday, 24th February, amounted to 3,64,000 lbs. There was only a fair general demand and prices were irregularly easier. There was some competition for certain clean black dusts, but rates for other kinds must be quoted one anna easier. There were a number of withdrawals.

Colombo Market.—4,500,000 lbs. Opened easier; strengthened later. Low and medium declined five cents. Highgrowns irregular; dearer on improved quality.

Dust.—Strong general demand. Advances of As. 2 to As. 4 for leafy types. Others firm to dearer.

Export Quota.—The market opened at 2¼ pies and business was done. The present tendency is slightly easier.

As we go to Press, Messrs. Forbes, Ewart and Figgis Ltd. wire as follows:—

"*Sale No.* 5. 10,48,000 lbs. Good general demand. Best quality irregular and easier. Medium and low medium fully firm and often dearer. Commonest steady. Fannings weaker.'

MODERATE DEMAND IN TEA EXPORT SALE

(From Our Own Correspondent)

CALCUTTA, *3rd March*

There was moderate demand during yesterday's export sale where offerings aggregated 54,900 packages. Prices were generally higher, but there were some exceptions where easiness set in. Bright liquoring autumnal Dooars were very steady, and prices rose As. 5 to As. 6 above brokers' valuation. Clean common brokens and low medium brokens gained As. 3 each, and fannings were wanted at higher rates. Darjeelings offered were limited and realised satisfactory prices. Whole leaf grades and best liquoring Assams were, however, easy. The rates were: best Assam CTC BP Rs. 2-2, clean black pekoe Re. 1-7 to Re. 1-7-6, clean common B.P. Re. 1-6-6, and medium Assam BP Re. 1-7-6.

Strong demand pushed up prices of almost all varieties of teas at the internal sale held last week. Dusts offered amounted to 19,900 packages, and leaf grades 450. In the dusts market, buyers' favourites were the commonest offerings and clean leafy varieties, prices for both of which recorded impressive gains. Prices for the bright liquoring medium grainy grades were taken up by As. 2, while good liquoring CTC varieties and flavoury Darjeelings were very steady. Prices of all other varieties recorded gains of As. 1 to As. 1½. The quotations were: good Assam CTCs Re. 1-13-6 to Re. 1-14, medium Grainy Assams Re. 1-8 to Re. 1-8-6, and medium Dooars Re. 1-7 to Re. 1-7-6.

Notices

THE CENTRAL BANK OF INDIA LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Forty-second Ordinary General Meeting of the Shareholders of The Central Bank of India, Limited, will be held at the Central Bank Building, Mahatma Gandhi Road, Fort, Bombay, on Thursday the 26th day of March, 1953, at 4 p.m. (S.T.), to transact the following business:—

1. To receive the Report of the Directors and the Audited Accounts for the period ended 31st December, 1952.
2. To declare a Dividend.
3. To elect Sir Homi Mody who vacates his seat as a Director under Article 84 of the Articles of Association and who is eligible and offers himself for re-election.
4. To elect three Directors in place of Mr. Dinshaw D. Romer, Mr. Dharamsey M. Khatau and Mr. Manmohandas M. Amersey who retire by rotation under Article 92 of the Articles of Association read with Regulation 78 Table "A" of the Indian Companies Act and who are eligible for re-election.
5. To appoint Auditors and to fix their remuneration.

By Order of the Board,
H. C. CAPTAIN,
Managing Director.

BOMBAY, *3rd March*, 1953.

N.B.—The Transfer Books of the Bank will be closed from Monday the 9th day of March, 1953, to Thursday the 26th day of March, 1953 (both days inclusive).

N.B.—Dividend Warrants for the half-year ended 31st December, 1952, will be posted to the Shareholders at their registered address on and after the 28th day of March, 1953. Shareholders are requested to intimate the Bank their change of address, if any, immediately.

JARDINE HENDERSON, LIMITED

NOTICE IS HEREBY GIVEN THAT AN Interim Dividend at the rate of 2½ per cent. per annum, less Indian Income-tax thereon, will be paid to the Registered holders as on the 6th April, 1953, of the 50,000 Cumulative Preference Shares of Rs. 100 each in the Company in respect of the year ending 31st March, 1953.

The Share Transfer Books of the Preference Shares will be closed from the 23rd March, 1953, to the 6th April, 1953, both days inclusive.

By Order of the Board,
D. FORDWOOD,
Secretary.

DEMAND FOR MORE AID TO INDUSTRY

LATELY there has been a welcome change in the attitude of the Indian business community towards the Government and its policies. Leaders of industry were hitherto known for their indulgence in vehement criticism of the Government's policies which they disapproved and for turning a blind eye to the brighter side of its policies. This negative attitude appears to be gradually yielding place to one of responsive co-operation. And striking evidence of this change is to be found in the presidential address delivered by Mr. Shanti Prasad Jain at the annual meeting of the Federation of Indian Chambers of Commerce and Industry, held last week at New Delhi. The change in the attitude is revealing, in that an attempt is made to focus public attention not on the shortcomings of Government policies, but on its record of achievements in the past few years. Thus, the opening of the Tilaiya Dam and the Bokaro Power Station is, for instance, quoted as "encouraging proofs for the future." The tribute paid to the Government in this behalf is, indeed, an indication of industry's faith in the Government's ability to implement the Plan. Mr. Jain remarked: "It must be admitted that to-day we have a basically strong and healthier economy. Take any criterion—the rate of investment in the country, or the increase in production, or the balance of payments position, or the internal price level—the Indian economy has a record of achievement which deserves to be acknowledged." This acceptance of the soundness of the country's economy in unequivocal terms is in contrast with the carping criticisms which used to mark the utterances of the commercial community and is, doubtless, a proof of the changed attitude towards the Government and its policies. What is more, Mr. Nehru too was less critical of business men this time, and in fact, made certain significant remarks which showed that private enterprise would be given considerable freedom. This should not only help knit closer the relations between industry and Government but also inspire confidence in the public.

Not infrequently, one comes across gloomy forebodings about the role of private enterprise in the Indian economy. These stem from an insufficient appreciation of its achievements in India's industrial and commercial field. Mr. Jain did well to emphasise the contribution that private enterprise had made to the economic reconstruction of the country. Although its accomplishments during the last five or six years appear small, as compared with the magnitude of the task ahead, they are nevertheless undoubtedly impressive. Thus, since 1946, the total investments in the private corporate sector has been of the order of Rs. 490 crores which represent 25 per cent. of the total value of fixed assets estimated at Rs. 2,000 crores. In the past six years, the value of industrial production has gone up by Rs. 370 crores to Rs. 1,400 crores and that of agricultural production by Rs. 200 crores to Rs. 2,400 crores. Again, between 1947 and 1951, fresh employment of workers in factories has gone up by 3 lakhs and employment in other factories by one lakh, taking the increase to 15 per cent. of the total. The average income of the worker has risen significantly, in that the wage bill of workers having a monthly income of below Rs. 200 rose by over 47 per cent., a trend which compares favourably with that in the U.S.A., Britain and the U.S.S.R. In certain other aspects, too, such as working hours, holidays, etc., the position of the working classes in India, according to Mr. Jain, is better than in Russia. The progress achieved in these directions, and under democratic conditions, is indeed heartening. Private enterprise can be expected to do even better, provided suitable climate is created for greater industrial activity.

Creation of favourable conditions for industrial expansion is also necessary for tackling the most pressing economic issue to-day, namely, unemployment. The Planning Commission's rough estimates place the additional employment at the end of the five-year period at five millions, or about one million a year. As this falls far short of the requirements of a working population estimated at 133 millions, private industry must be encouraged by suitable adjustments in Government policies, to open out new vistas of employment. At present, the private sector needs assistance in several ways in order to enable it to assume this responsibility. The Government's attention needs to be drawn to the prerequisites for greater industrial activity emphasised by Mr. Jain. These include (*a*) finance for renovation and expansion of existing industries, (*b*) development of basic industries, (*c*) adjustment of tax policies to suit capital formation, (*d*) removal of impediments in the way of expanding markets, (*e*) expansion of transport facilities, (*f*) a more realistic attitude towards encouraging cottage industries, and (*g*) inculcation of the spirit of *swadeshi* in the country. The suggestions made by Mr. Jain in regard to these facilities are more or less in line with accepted principles, and hence, it should not be difficult for the Government to adopt them, if need be, with certain modifications. However, it is necessary to deal here with some of the points raised by Mr. Jain in making these suggestions.

An important aspect of Mr. Jain's speech is his references to the tax policy of the Government regarding depreciation allowances for replacement of plant and machinery. They acquire special significance in view of the appointment of the Taxation Enquiry Commission which is sure to go into the question. Industry's case is so convincing that the Commission is unlikely to find any difficulty in endorsing the claims regarding allowances against depreciation of assets. The present method is based on historic costs. It leads to the creation of a gap between the sums built up on account of wasting assets and the sums actually required to replace them. In addition, it leaves, on the one hand, net profits of business liable to tax exaggerated to the extent of the sum equivalent to the gap, and, on the other, compels industry to resort to other methods to make good the arrears of depreciation. Industry has endeavoured to cover the gap by several methods, such as ploughing back of profits, raising additional capital, reducing cash balances and liquidating investments. In the result, industry's capacity for production and for employment of labour has diminished gradually. If the process were allowed to continue unchecked, it would mean the ultimate extinction of marginally placed firms. Industry's claim for special consideration of its demand for liberal depreciation allowance, or ultimately, relief in taxation to enable it to meet the higher costs of replacement of assets gains additional significance, in the light of the fact that the Government has accepted, in the case of the Railways, the principle of treating higher cost of replacement as a charge on revenues. There is now no justification for not extending the application of the same principle to private industry. But the Railways, being a monopoly industry, could meet the higher replacement costs by the simple expedient of raising fares and freights. Private industry has, perforce, to look to the Government for special reliefs, since it cannot, in the context of the rapidly developing buyers' market, raise the prices of the goods it produces. The Government may properly gather the fruit, but it is suicidal, as a financier remarked once, to fell the tree branch by branch year by year until it ceases to bear at all.

The question of paucity of finance for replacements has been hanging fire for nearly a decade now. In the past, industry's appeal to the Government for relief has not succeeded. Undaunted by previous failures, attempts are being made to convince the Government of the need for assistance. The latest move in the direction has been that of the Federation which recently submitted a memorandum to the Government in the matter. The Federation does not want the assistance to cover the entire difference between the original cost and the replacement costs. For it has assured the Government that it would bear a part of the burden, but what it needs is a helping hand. This may be in the shape of additional tax-free depreciation allowance, advance of loans at the Government's normal borrowing rate and lower rate of tax on undistributed profits ploughed back into industry. Mr. Jain's observations, in this connection, are noteworthy. He said: "The relief granted in this way will cost Government little, as the total relief would be spread over a period of years and would be contingent on profits.

It will, in the final analysis, actually amount to a fraction of industry's needs. But the little the Government does will afford valuable incentive to the various industries and create psychologically favourable atmosphere for private enterprise to obtain additional funds from the capital market. Furthermore, any loss of revenue caused to the State will only be temporary, since earnings would increase as a result of higher production and larger profits." This is a convincing exposition of industry's case for relief which deserves to be considered by the Government.

The Finance Minister has found in Mr. Jain a doughty champion of "deficit financing." Mr. Jain is apparently convinced that if deficits are incurred not for consumption, but for creative productive equipment, such will result in the creation of employment and additional wealth for the nation. He feels that deficit financing will not have a harmful effect to the extent that the additional employment and consequent rise in the purchasing power are matched by an increase in the supply of goods and services. All this is very convincing in theory. But the question is: Will it work that way in practice? For, in actual practice, there is bound to occur many a slip between the actual spending of the new money and the actual creation of real wealth. What guarantee is there—the administration being what it is, as witness the waste and the extravagance associated with the various projects undertaken by the Government—that the Government will be able successfully to prevent the flow of created money into channels where its effects are the most harmful? After all, similar experiments made elsewhere in the world—Chile for instance—show how, in spite of all the necessary precaution which the Governments took before embarking upon deficit financing, they have failed to prevent misuse of money or the horrible effects of inflation resulting therefrom. It is the knowledge of these unhappy consequences of deficit financing in other countries which compels many economists to utter a word of warning against unorthodox means of financing development expenditure in this country, at any rate, in the present set of circumstances.

CULT OF "SWADESHI"

FROM many quarters there has come a welcome plea for the revival of the *Swadeshi* movement in the country. More attention, it is rightly urged, should be paid to the question of publicising the country's industrial products and of persuading the Government and the people to patronise Indian-made goods. This demand found fresh expression in the resolution adopted by the Federation of Indian Chambers of Commerce and Industry at its annual session held last week, which urged the Government, the business community and the people to make a "concerted and co-ordinated effort" to popularise *Swadeshi* goods. A similar plea, it may be recalled, was made by Mr. Pranlal Devkaran Nanjee at the recent annual meeting of the Indian Merchants' Chamber, Bombay.

The demand for the revival of the *Swadeshi* spirit will, it is to be hoped, evoke widespread support in the country. Because the *Swadeshi* movement was, for a long time, associated with the demand for national independence, there is a feeling in the public mind that the movement has served its purpose, now that freedom has been won. This is, of course, far from the truth. Whatever might have been the past political affinities of this movement, there is no gainsaying the fact that it has left some lasting effects on the Indian economy. Thus, many of our industries, notably the Indian textile industry, owe both their origin and development to the *Swadeshi* movement. Its revival would, in fact, serve a more definite purpose; for, it is no longer necessary to suffer from political inhibitions in supporting this movement. From this point of view, the *Swadeshi League* which has been started at the initiative of the Indian Merchants' Chamber, deserves the support of all sections of public opinion in the country.

What is now necessary is to see that constructive suggestions are placed before the Government and the public to elicit their wholehearted co-operation. The Federation of Indian Chambers of Commerce and Industry, according to its President, Mr. S. P. Jain, is now engaged in "studying the import trade and in assessing the lines of activity in which indigenous production can be undertaken to replace imports." He suggested the need for scrutinising the list of 800 broad items in the import schedule with a view to examining how many of them are, or could be, manufactured in the country. The move should find active support of the Government which has special responsibility to see to it that its purchases are confined, as far as possible, to goods of Indian origin. Although this principle has been accepted by the Government, there have been complaints that it is not as scrupulously observed as it should be.

There are, however, three connected problems which deserve some unprejudiced examination. In the first place, there is the question of specification for Government purchases. It would be wrong to suggest that they should be watered down to artificially low levels, for that means paving the way for the production of shoddy and indifferent articles. Secondly, there is the demand that imports should be totally banned where the articles concerned are available within the country. This demand becomes, in effect, a plea for protection by the "back door" and reduces the Tariff Commission itself to a mockery. In recent years, consumers have been adversely affected by a total ban on imports of certain goods. Elsewhere in this issue, we have discussed the effects of the ban on imports of starch on the mill industry. A total ban on imports of goods is, therefore, justified only when the Indian industry is capable of meeting the domestic demand through quality goods. Thirdly, there is the demand that Indian units in a particular industry should be encouraged and supported at the expense of the foreign-owned units in that industry. This demand offends against the spirit of the Government's industrial policy which has held out the assurance that foreign capital would not be discriminated against. India cannot expect foreign capital, which it needs now more than at any time in the past, to flow freely into this country, if its business men insist on discrimination against foreign-controlled units

Finally, it is necessary to see that the cult of *Swadeshi* does not degenerate into a dogma and that it is based on the production of goods of right quality. Mr. Jain rightly held that if Indian industry must produce "quality goods if the cult of *Swadeshi* is to have a wide appeal." It would be unwise to base the *Swadeshi* movement on mere sentiment; its appeal ought to be more substantially based on reasonably high standards of industrial performance, ensuring goods of quality and purity at low costs. If *swadeshism* is not carried to the point of economic autarchy—Mr. Jain rightly warned against such a development—and, if further, the inevitability of certain gradualness in industrial reconstruction—no progress could be achieved overnight—is recognised, the *Swadeshi* movement should be able to provide a wide and steadily expanding sphere of economic activity.

POINT FOUR

THE conference of the officers of the U.S. Point Four Technical Co-operation Programme in six South-East Asian countries, which concluded last week at Bangalore, has served a useful purpose. It has enabled the officers to get the different problems which they are called upon to tackle into a clearer perspective. There has also been a valuable interchange of ideas and experiences. A notable outcome of the conference is the realisation that any programme of external aid should be based on the efforts of the countries which receive that aid. The conference, it is stated, agreed that, in the field of economic development, it was the planning by the host Government that permitted technical co-operation to be applied to those areas of development where American technical experience and, in some cases, supplies and equipment, could best strengthen the host country's own effort. This is a valuable conclusion, in that it stresses the importance of self-effort as a first essential step towards deriving full benefit from any possible external assistance.

It is now four years since President Truman enunciated the now famous Point Four Programme. In 1949, Mr. Truman said that his Government was pledged to unfaltering support to the U.N., to the continuance of European Recovery Programme, and to the strengthening of North Atlantic nations. The fourth point that he emphasised was the need for a "bold new" programme for making available the benefits of scientific advance and industrial progress to underdeveloped areas. It is this point that has now come to be known as "Point Four." The spirit of the Point Four Programme is being implemented by the United Nations through its technical aid programme, by the U.S.A. through its Technical Co-operation Administration, by joint national efforts such as the Colombo Plan, and by certain private foundations and trusts, such as the Ford Foundation. It is not clear whether there has been any slackening of the efforts made in the direction of technical assistance. It would, however, appear that although 65 Governments pledged to give $19 million towards the cost of technical assistance to underdeveloped countries, only a sum of about $12 million has actually been paid so far.

Apart from the monetary aspect of this Programme, it is necessary to bear in mind the consideration that the success of the Programme will depend upon how best the highly evolved industrial techniques of the advanced Western countries are adapted to suit the conditions in underdeveloped countries. In the sphere of technical assistance, as in any other sphere of economic activity, the emphasis should be on "adaptation" rather than on "adoption." This would require intelligent application of modern techniques of production in the context of the admittedly low level of demand for manufactured goods in underdeveloped countries and of the lack of trained personnel in these regions. Because Asian and South-East Asian countries face the same set of problems, it is quite possible that the solutions which have been successfully developed to meet a particular set of economic problems in one country might be found useful in other countries too. In this connection, it is interesting to note that Mr. Haldore Hanson, Assistant Administrator for Asian development of the U.S. Technical Co-operation Administration, revealed that the Bangalore conference brought out a number of possibilities for the exchange of training facilities among the Asian countries themselves. He said that India, with a broad agricultural programme, was ahead of other countries in clearing of jungle grass with heavy tractors, an important agricultural problem. Burma, on the other hand, had developed outstanding construction methods in low-cost public housing. Indonesia was ahead of others in the motorisation of sea-fishing. It should be possible to work out, as Mr. Hanson suggested, regional exchanges of skill. The conference has not been held in vain, if it has brought to the fore the possibility of mutual collaboration among the Asian countries themselves. The conference has, however, done more: it has provided a forum where the experienced administrators of the Point Four Programme could exchange notes. It is also noteworthy that Mr. Hanson said that the U.S. technicians in all these countries look forward to turning over their duties to local skilled workers as soon as possible. After all, it is essential that the good work, which has been done by American technicians, should be continued, when they leave for their own country. And it is best carried on by the people of the "host" countries themselves.

STALIN

WITH the death of Stalin, the world is deprived of a great leader who, along with the late Mr. Franklin Roosevelt, and Mr. Winston Churchill still happily with us, was responsible for moulding world history at a most critical period. It is true the end of the war which brought these three men together saw the parting of the ways—the Western allies bound to each other by democratic ties following a path different from the one which the Russian leader chose to tread. But, few will deny that Stalin's contribution to the success of the Allies in the bitter struggle of the last war was immense. He brought to the war a titanic force and worked unceasingly till victory was won. To those who hoped that this unique partnership would continue, in however attenuated form, even after the war ended, post-war events have been a source of no small disappointment.

As one of the chief architects of the Russian Revolution and as head of the first Socialist Government in the world and as leader of a vast mass of people who worshipped him in a way that bordered on idolatry, he will go down in world history as one of the most remarkable figures. We are perhaps too close to his death and to the times in which he worked to judge him aright. If he was respected by his party men, both in his own country and abroad, there are also large sections of sensitive people in the world to whom his ruthlessness, his stifling of intellectual freedom, his party's cynical disregard of personal and civic liberties and his aggressive interference in other countries' affairs were revolting to a degree. To say that he was as much adored as he was hated is not to deny the greatness of the man who was, and will for long remain, a controversial figure in world history.

OUTLOOK BRIGHT FOR GILT-EDGED

MONEY IN DEMAND—SPURT IN SEEDS—ANGLO-AMERICAN TALKS

THURSDAY, 5 P.M.

THE buoyant tone in shares noticed last week has since subsided to limit itself to the steel section. Under alternate bouts of bull buying and bear selling, steel shares have irregularly moved up to touch fresh high levels, Tata Defds., for instance, after declining from a high of Rs. 1,883-12 on the 6th inst. to Rs. 1,848-12 on the 10th, have rallied under continued speculative bull support to Rs. 1,895. Although they finished a shade lower at Rs. 1,582-8 to-day, the sentiment in this section appears to be bullish, owing to expectations of an imminent rise in the retention prices of steel. The textile section which displayed great enthusiasm last week, has staged a retreat under a spell of continued pressure, with the speculative scrips revealing minor losses over the week. The miscellaneous section too has done no better, moving in sympathy with textiles. The undertone, however, remains steady.

MARKET GOSSIP

* * * *

The Gilt-edged market has shown notable strength since the announcement of the budget on the 27th ultimo. The Gilt-edged barometer has been rising persistently and the tone remains firm. The table below shows how Gilt-edgeds have reacted to the budget.

Securities	12 3-1953	26 2 1953	*Increase over the period*
	Rs. a. p.	Rs. a. p.	Rs. a. p.
3% 1953-55 ..	100 1 0	100 0 6	0 0 6
3% 1957	98 12 0	98 11 0	0 1 0
3% 1958	98 7 0	98 4 0	0 3 0
3% 1959-61 ..	96 2 0	96 0 0	0 2 0
3% 1963-65 ..	92 10 0	92 9 0	0 1 0
3% 1964	92 9 0	92 9 0	.. ..
3% 1966-68 ..	90 9 0	90 7 0	0 2 0
3% 1970-75 ..	86 9 0	86 8 0	0 1 0
3% 1986 Conversion	83 1 0	82 9 0	0 8 0
2½% 1960	93 7 0	93 6 0	0 1 0
2½% 1962	91 7 0	91 4 0	0 3 0

The firmness in Gilt-edged may be attributed to a number of helpful factors. First, the budget speech of the Finance Minister contained no jitters for the market. On the contrary, it revived the confidence of investors in the strength of the Government's finances and indicated that the Government can successfully finance the Five-year Plan. Moreover, it confirmed the market's belief that fresh borrowings by the Union Government from the open market will be comparatively limited, and that every endeavour would be made to stabilise the yields on Gilt-edged securities at the current levels. This paved the way for those financial institutions and trusts, which hesitated to enter the market in the pre-budget weeks, to reappear on the market for investment in the securities. Secondly, the Reserve Bank has stepped up its selling rates for certain loans this week. Thus, 2½ per cent. 1960 and 1962 loans have each been offered by the Bank an anna higher at Rs. 93-7 and Rs. 91-7 respectively. 3 per cent. 1963-65 has been put up by a similar fraction to Rs. 92-10. 3 per cent. 1966-68 is now offered at Rs. 90-9 as against Rs. 90-7 previously. The Bank's policy in raising its selling rates is taken as an indication that it is preparing the ground for a loan offer against the repayment of the 3 per cent. 1953-55 loan due on 15th July next. Speculation as to the form which the repayment of this loan would take has not abated in market circles. The consensus of opinion favours the possible issue of 3½ per cent. cash-*cum*-conversion loan maturing in 1964. For that is the year in which the Government has to repay only a small sum of Rs. 30.3 crores on the redemption of 3 per cent. 1964 loan. This sum along with the amount required for repayment of the proposed 1964 loan will not be a heavy burden for the Government. A section, however, feels that the Government may repay the 1953-55 loan in cash, and follow it up with the issue of a new 3½ per cent. 1964 loan for subscription. It is pointed out that by following this method the Government would save a month's interest which it would have to pay if it were to float a cash-*cum*-conversion loan. These considerations, indicating a possible further rise in Gilt-edged securities, have been responsible for the improvement in sentiment. Another contributing factor is that the floating stocks are meagre; and in the absence of any selling pressure, prices of Gilt-edged securities have tended to look up.

* * * *

What is the possible effect of the Five-year Plan on the Gilt-edged market? Will there be a further increase in interest rate on Government borrowings? Will the Central and State Governments be able to raise loans without difficulty? These and other related questions are certainly of more than academic interest in view of their relevance to the behaviour of the Gilt-edged market noted above. From this point of view, much interest attaches to the latest circular letter, issued by Messrs. Batlivala and Karani, the well-known firm of share, stock, finance and exchange brokers, for it carries a critical examination of the factors which are likely to influence Gilt-edged rates and prices, in the near future. It is not, of course, possible to be dogmatic about the distant future. But, in so far as the immediate future is concerned, the letter takes an optimistic view of the ability of the Central and State Governments to raise funds in the Gilt-edged market.

* * * *

Examining the recent past in the Gilt-edged market, the letter draws attention to the success of the loans of the various State Governments in 1952. This success strengthened the belief that the "Government of India would succeed in stabilising the rate of interest on its borrowings around the level of 3½ per cent. to 3¾ per cent.," provided it issued loans of short or medium-term duration. Referring to long-dated issues, the letter says that it was felt that they "would be unpopular," and adds: "They still are, and we would go to the extent of saying that for some years ahead they would continue to remain so." The letter contrasts the fact that the Central and State Governments have had to raise, during the last six years, the rates on their loans from 2½ per cent. to 4 per cent. with the experience of private industrial concerns which have been able to raise, during the same period, adequate funds around 5 to 5½ per cent.

* * * *

It is against this background that the letter discusses the possible impact of the Five-year Plan on the Gilt-edged market. The letter observes that it is now not so much the Central as the State Governments that will come to the Gilt-edged market; for the Plan provides for a Central borrowing of only Rs. 36 crores over the next three years, as against a sum of Rs. 79 crores which the States, under the Plan, are expected to borrow. The Central Government will, however, be required to repay, during the next three years, about Rs. 252 crores, made up of: Rs. 114.60 crores 3 per cent. 1953-55 (July); Rs. 35.06 crores 2½ per cent. 1954 (November); Rs. 12.87 crores 3½ per cent. 1954-59 (December); Rs. 9.06 crores 4½ per cent. 1955-60 (September); Rs. 60.45 crores 2½ per cent. 1955 (August). However, the Central Government should not find it difficult to repay these loans, considering that recent experience shows a paucity of floating stocks. A large portion of the existing debt of the Central Government is held by institutions such as banks and insurance companies, which will have to replace their holdings, when they mature, by others. The Finance Minister has announced his intention to repay the 3 per cent. 1953-55 loan of Rs. 114.60 crores. The repayment of the loan should not present any great difficulty, considering that the Reserve Bank holds as much as Rs. 70 to Rs. 75 crores of this loan. The letter says that, if the Government decides to replace the maturing loans by short or medium-dated loans, the "repayment of the entire debt could be arranged to take place in a smooth manner." In this connection, it draws attention to the fact that the provident funds of industrial workers, to the tune of Rs. 36 crores, would require to be invested in Gilt-edged securities during the period of the Plan, and that insurance companies might be expected to absorb at least another Rs. 30 crores over the period.

* * * *

So far as the State Governments are concerned, they too should not find it difficult to borrow the Rs. 79 crores under the Plan, considering that, in 1952, they succeeded in getting Rs. 13¾ crores without much difficulty. In fact, they have evolved a technique of prevailing upon small investors, through local bodies, in order to participate in their loans. The drive for small savings, too, according to the letter, should prove successful. The letter observes that since a deficit of Rs. 110 crores on capital account has been left uncovered in the Central Budget for 1953-54, it is quite possible that a part of the deficit might be covered through additional borrowings—at least, after the 3 per cent. 1953-55 loan has been repaid.

* * * *

Money rates have tended to harden lately. Inter-bank call money rate among the Exchange banks and the bigger Indian banks is currently quoted at 2¾ to 3 per cent., as against 2¼ to 2½ per cent. at the end of last week. Generally speaking, the smaller Indian banks have been continuous borrowers at 3 per cent. The rate for one to five months' renewals, stands at 3 per cent. and for fresh deposits at 2¾ per cent. Twelve months money is quoted at between 2 and 2¼ per cent. It is stated that banks are not keen bidders. Money is thus dearer to-day than what it was, say, 10 or 12 days ago. There is, however, no acute shortage of funds. In fact, the market is stated to have received house money and other surplus funds to the tune of Rs. 3 crores this week. But, owing to a broadened demand on account of expanded trading activity, the surplus funds have been absorbed well enough. But the high rates have tended to make money comparatively less usable. What is more, money is likely to be still more stringent in the coming fortnight. For heavy withdrawals from banks are bound to take place for payment of income-tax. Moreover, the banks also anticipate withdrawals, in the next two weeks, of funds lent to them by local self-governing bodies, which will fall due in a fortnight's time. The squeeze for funds is not, however, expected to be very severe, in view of the fact that the interest on certain Government loans falls due for payment on 15th March.

* * * *

At the moment, the City banks seem to be much perturbed over the prevailing high rate of interest on deposits. The margin between their borrowing and lending rates is stated to be so thin that they are not in a position to meet their overhead charges. It is pointed out that, last year, the rates were maintained at this high level, because of imports of American cotton and other trade activities of an emergent nature. This year, however, similar outlets for surplus funds are not open and, with trade having suffered a setback, borrowers from banks would appear to be unwilling to pay high rates charged by banks on their advances. In this connection, some of the larger banks seem to be considering measures designed to bring down their borrowing rates, so that they might be enabled to meet their clients' demand for funds at lower interest rates. They seem to feel that a united move on their part to reduce the rate would provide a possible solution, but the success of such a move depends, we are told, on the attitude of the Exchange banks and the smaller Indian banks.

* * * *

There has been a hectic rise in the oil and oilseeds market since the Union Budget was presented on 27th February. The trend is more pronounced in groundnut seeds and oil. Thus, groundnut Bold ready and groundnut oil *ex*-mill are now quoted at as high as Rs. 42-8 and Rs. 22-6, respectively, as against Rs. 38-12 and Rs. 20-8 on 27th February. This inordinate rise has been due not merely to the agreeable disappointment through the non-imposition of export duty on groundnut oil but also to a variety of other causes. The chief among them are the expected short groundnut crop during the present season and the Bombay Government's requisitioning, with effect from 19th January, of 50 per cent. of groundnut cake at Rs. 100 per ton, as against the free market price of Rs. 230.

* * * *

It is rumoured in market circles that the Government is already seized of the situation and contemplating the imposition of a ban on exports of groundnut oil and of restrictions on the production of *vanaspati* products in order to arrest the rising trend in the market. Enquiries reveal that, although the Government might possibly resort to a ban on exports, it is extremely unlikely that there will be any ban or restriction on *vanaspati* production. Already, the *vanaspati* industry, in the first place, is working below its capacity. Secondly, the Government would not risk unemployment that would follow restriction on *vanaspati* manufacture. At best, there could be a ban on the export of *vanaspati* products; this commodity is, however, not exported in large quantities.

* * * *

A rational study of the situation discloses that the rising trend of prices cannot be arrested by a mere ban on exports of groundnut oil and of *vanaspati* products alone. For with an estimated crop of 14½ lakh tons of groundnuts—groundnuts account for 75 per cent. of the oilseeds produced in India—as against 20 lakh tons last season, it is impossible to meet the existing demand for this commodity. The prices can be brought down to normal levels by a ban on export of all oils and oilseeds and by placing coconut oil and copra on the Open General Licence. These measures should be supplemented by a reduction in import duties. Again, the system of placing imports of palm oil on O.G.L., which expires on 31st March, should be continued and the *ad valorem* duty on this oil of 43 per cent. should be reduced considerably. Besides, the price at which the Bombay Government is requisitioning groundnut cake should be more reasonable than the present price of Rs. 100 per ton. Unless these measures are taken, it would be difficult to arrest rising prices. But the adoption of these means, it should be clear, will mean a loss in revenue to the Government. It remains to be seen whether the Government considers it worthwhile to take the risk.

* * * *

Of particular interest to the sterling area is the way in which the U.S. is likely to modify its foreign trade policy in the light of the recent Washington talks between the representatives of the U.K. and the U.S. Mr. Eden and Mr. Butler, on behalf of the U.K., went to Washington for exploratory talks about Anglo-American economic collaboration. No concrete proposal has emerged from these discussions. The Anglo-American *communique*, issued from Washington, is delightfully vague about specific issues. The U.K. representatives, it is, however, stated, explained the suggestions which emerged from the conference of the Commonwealth Prime Ministers, held in London in December of last year. But it is not known whether any specific issues were discussed. The representatives of the two Governments agreed on the need for sound internal policies, for free and expanding world trade. On the financial side, the objective, it was recognised, should be the eventual convertibility of sterling and other currencies and the gradual removal of restrictions on payments. All this is as vague as it could possibly be.

* * * *

It is nevertheless noteworthy that the U.S. has "emphasised its intention to encourage the flow of investment abroad." The *communique* stated that the Government of the U.S. will "undertake and continue over the next several months an intensive examination and review of the general subjects discussed at the first meeting, including the suggestions resulting from the Commonwealth Economic Conference." It is, therefore, clear that apart from the recognition of the need for further exploration of the economic problems of the free world, particularly the sterling area, the Anglo-American talks have brought no tangible result, though it is to be wondered whether the mere recognition of such a need could be regarded as "tangible" at all. The only suggestion, which could be regarded as having some immediate impact on world trade, is the U.K.'s promise to the U.S. that it—that is, the U.K.—will tighten up its shipping controls on the movement of strategic materials to Communist China. Another issue that was discussed was the Anglo-Iranian oil dispute.

SHARE VALUES MOVE IRREGULARLY

STEELS ADVANCE TO NEW HIGH

(From Our Own Correspondents)

BOMBAY, 12*th March*

AN irregular movement in prices was the outstanding feature of trading on the Stock Exchange during the week under review. The great enthusiasm which the market displayed in the previous week under the stimulus of the Union Budget proposals did not develop into any boom this week, as operators chose to be rather cautious in extending their wholehearted support. There was, therefore, some corrective recessions at every bulge. This was more in evidence in textile shares and miscellaneous industrial equities which showed minor losses over the week except in some counters. The undertone, however, remained steady. The market's interest, however, centred round steel shares which haltingly advanced to fresh high levels. But this was due to speculative activity in anticipation of favourable recommendations of the Tariff Commission on the retention prices of steel to be made shortly. The strength of the steel shares, however, helped the market maintain a steady undertone.

In the steel section, Tata Deferreds made a firm opening with a rise from the previous week's closing of Rs. 1,851-4 to Rs. 1,883-12, but failed to maintain the upward trend due to lack of buying interest. After moving irregularly, they slipped back to Rs. 1,847-8 yesterday morning, but on renewed speculative support made a handsome recovery to Rs. 1,895 to-day before closing at Rs. 1,852-8. Tata Ordinaries could gather but Re. 1-8 over the week to close at Rs. 328. Indian Irons were concerned in some strong speculative buying and were taken up from Rs. 25-10½ to Rs. 26-10 before closing at Rs. 26-8.

Activity in the textile group remained moderate due to lack of aggressive buying. Speculative counters made a bid for recovery but failed to gain ground in most cases. Progress was generally retarded by sporadic selling pressure, but select scrips displayed strength for special reasons. Interest in Bombay Dyeings was paltry and after an initial advance from Rs. 402-8 to Rs. 407-8 reacted to Rs. 395 yesterday. After a bid to regain, in which process they came up to Rs. 405 to-day, they moved down to Rs. 397-8 at the close. Kohinoors fluctuated between Rs. 317-8 and Rs. 308-8, but surrendered on balance Rs. 2 at Rs. 312. Central Indias shed Re. 1 to Rs. 166. Century were in favour and advanced by Rs. 4 to Rs. 286-8, on rumours that the Company would declare a final dividend of Rs. 12 per share (which is the same as in the previous year) together with a bonus of Rs. 4, bringing the total distribution for the year 1952 to Rs. 24, as against Rs. 20 for 1951. Finlays gained a rupee to Rs. 316. Gokaks lost Rs. 2 to Rs. 228. New Greats Re. 1 to Rs. 167. Svadeshis Rs. 2-8 to Rs. 256-8, Standards Rs. 6-4 to Rs. 293-12 and Simplex as much as Rs. 8 to Rs. 185-8. Tata Mills were on offer on rumours that the dividend for the year 1952 would be reduced from Rs. 4 paid for 1951 to Rs. 2-8. As a result, the shares lost Rs. 2 to Rs. 49-8. Swans were conspicuous with a sharp rise of Rs. 30 to Rs. 440 on favourable dividend prospects.

Bank shares shaped well with useful gains over the week. Imperial Fully Paids were better by Rs. 30 at Rs. 1,862-8 and Contributories by Rs. 11-4 at Rs. 461-4. Bank of Indias were again a bright feature with a rise of Rs. 3 to Rs. 162. Centrals put on Re. 1 to Rs. 69-8. Barodas gained but As. 4 to Rs. 115. United Commercials were, however, unchanged at Rs. 38.

Barring a fresh spurt in Orientals on reports that the mutualisation proposals were being finalised, the insurance section was featureless. Orientals advanced by as much as Rs. 725 to Rs. 6,785. New Indias were steady round about Rs. 42-4.

Interest in public utility shares was selective, but the section, as a whole, remained steady with the recent improvement in prices well secured. Ahmedabad Electrics were unchanged, the Old shares at Rs. 115 and the New scrips at Rs. 114-1. Bombay Suburbans were steady at Rs. 124-6. Poona Electrics and Surat Electrics each gathered As. 10 to Rs. 121-14. Andhra Valleys improved by Rs. 12-8 to Rs. 1,427-8, Tata Hydros by Re. 1-4 to Rs. 149-12 and Tata Powers by Rs. 27-8 to Rs. 1,535.

The miscellaneous section showed a mixed trend, but gains or losses in most of the shares were minor. Associated Cements could gather only As. 4 over the week at Rs. 174. Belapurs, after moving between Rs. 242-8 and Rs. 235-12, closed at Rs. 239-8 with a fractional loss of As. 8. Bombay Burmahs Old, which came into the limelight last week, failed to gather strength and finished with a loss of Rs. 2-8 at Rs. 390, but the New shares improved by As. 10 to Rs. 141-14. B.I.Cs. were dull at Rs. 9-10½. National Rayons found sellers at Rs. 78 at which they disclosed a loss of Rs. 4-8. Tata Chemicals met with enquiry and rose by As. 8 to Rs. 10, but Tata Oils lacked support and drifted lower by Re. 1-8 to Rs. 35-4. Walchandnagars were in request on prospects of higher dividend and improved by Rs. 6-4 to Rs. 162-8. Wimcos were marked up by Re. 1-4 at Rs. 231-4.

Among transport shares, Scindias were quiet at Rs. 14-13¾ *ex-div.* as against Rs. 15-10 *cum-div.* Bombay Steams, on the other hand, put on Re. 1 to Rs. 36. Bharat Lines were in favour to go up from Rs. 91 to Rs. 94. Air-Indias lacked support and receded by Rs. 2 to Rs. 81, but Air-India Internationals were picked a rupee higher at Rs. 101. Hindustan Motors were steady at Rs. 4-3 and Premier Automobiles at Rs. 45.

In the mining and engineering group, Indian Coppers were quiet at Rs. 3-3, and B.B. Petrols at Re. 1-2½, but Shivrajpurs were steady at Rs. 63-8.

* * * *

Calcutta Stock Exchange

CALCUTTA, 11*th March*

The feature of trading on the Calcutta Stock Exchange during the week under review was an increase in the volume of transactions coupled with a tendency for rates to move up. The gains were moderate, and there was sizable investment support from insurance companies. Trading was, however, on a cautious note, particularly yesterday, as, with the American Secretary of State sharing the feeling, the view that Marshal Stalin's death paved the way for international peace gained further emphasis. Every stage of the rise was noted with a pause and on occasions even a lower trend was in evidence. This suggested that, although operators desired to sell scrips bought at higher rates and desired to take advantage of present conditions, the maintenance of which is by no means certain, rates were being stabilised. No doubt, it is the Budget which has changed the investment outlook and is inviting "shy" funds to the market, but the maintenance of healthy conditions on the Exchange would depend on a number of factors, national and international. On the national sphere, anxiety is being felt regarding political developments, while the exact implications in Korea following the change of leadership in Moscow remain to be watched. The allocation of large sums of money for industrial development and the increasing *tempo* of industrial activity in the private sector, all suggest cheerful notes for the market, at least as far as the immediate outlook is concerned.

Coals were in good demand. Burrakurs hardened to Rs. 11-1. One of the best features was provided by Central Indias which, on moderate turnover, gained nearly a point to Rs. 5-9. Another feature was New Beerbhooms which improved from Rs. 20-14 to Rs. 21-11. Bengals were transacted at Rs. 528, Dhemo Mains met with business at Rs. 11-2, as against Rs. 11 earlier.

Jutes were given the pride of place, and recorded a moderate increase in the volume of transactions. The sacking duty cut has enabled jutes to give the customary leadership to the market. Trading was, however, cautious yesterday, and part of the gains were affected. Howrahs opened at Rs. 24-12 last Wednesday and after moving narrowly on either side hardened to close at Rs. 25-1 yesterday. Anglo-Indias were around Rs. 230, while Indias were placed at Rs. 133.

Fair activity marked trading in engineering shares, and the speculative counter, Indian Irons, reached a high of Rs. 26-5. However, profit-taking yesterday took the quotation down to Rs. 25-15, as compared with the opening rate last Wednesday of Rs. 26.

Keen attention was paid to the miscellaneous section, and selected counters hardened. Indian Cables opening at Rs. 18-8 were raised to Rs. 19-2, the closure yesterday being at Rs. 18-15.

* * * *

Madras Stock Exchange

MADRAS, 10*th March*

The Madras Stock Exchange continued to rule bright this week also, post-budget buoyancy still persisting. Textiles firmed up on encouraging advices from cloth markets. In plantings, teas put on a cheerful tone, on good demand from the U.K. for tea leaves. Coffee scrips met with good support in sympathy with a rise in the price of coffee in world markets. Rubbers proved no exception to the general trend. Miscellaneous scrips met with some enquiry, while banks were fairly active. As a result, the volume of business done was sizable and prices practically in all sections forged ahead, thereby disclosing considerable gains over the week.

The textile scrips continued to display an upward trend. Thus Bangalore Woollens improved from Rs. 240 to Rs. 243 *cum-div.* Radhakrishnas Rs. 100 paid ups gained Rs. 4 to Rs. 144 and Rs. 50 paid ups (B) Rs. 2 to Rs. 72. Coimbatore Spinnings were higher by Rs. 3 to Rs. 43. Coimbatore Pioneers and Lakshmis were higher by Re. 1 each to Rs. 99 and Rs. 72, respectively. Dhanalakshmis, however, lost Re. 1-8 to Rs. 189, and Sitarams Re. 1 to Rs. 39.

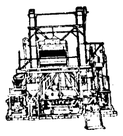
Rubbers continued to be in favour. Malankaras rallied Re. 1-4 to Rs. 99-4. Nenmenys were enquired As. 2 higher at Rs. 9-8. Pullangodes and T. R. and Ts. put on an anna each to Rs. 2-8 and Rs. 7-1, respectively.

Tea shares which have been in favour for some time past continued to attract fresh attention. Twyford rose by As. 12 to Rs. 12-4 and Haileyburias As. 6 to Rs. 13-14. Highland Producers were better by As. 4 to Rs. 9-8 and Talyar Teas As. 3 to Rs. 8-9. Parksides were done at Rs. 11-12, as against Rs. 11-14 *cum-div.* Periakaramalais gathered As. 8 to Rs. 24-4.

Coffees revealed considerable activity with prominent scrips registering fair gains. Consolidated Coffees displayed remarkable strength with a rise from Rs. 15-4 to Rs. 17-2 and Coffee Lands from Rs. 9 to Rs. 9-8 Stanes Amalgamateds, however, lost As. 2 to Rs. 8-12 and Puthuthottams an anna to Rs. 4-13.

Miscellaneous scrips met with selective enquiry. Rallis advanced by a rupee to Rs. 71-8. Mysore Stonewares recorded a rise of As. 5 to Rs. 9-8 and Spencers As. 4 to Rs. 14-12.

In the banking section, Imperial Banks spurted from Rs. 1,795 to Rs. 1,825 and Contributories from Rs. 432 to Rs. 440. Bank of Mysores were done at Rs. 281, as against Rs. 289 *cum-div.* Indo-Commercials 'A', however, lost Rs. 2 to Rs. 80. Travancore Banks were slightly lower at Rs. 10-4.



On Government list of approved Contractors.

MARKET GOSSIP

(Concluded from previous page)

The U.S. Government, it is stated, has declared that Britain's proposals for a settlement of the Anglo-Iranian oil nationalisation dispute (announced on 20th February, 1953) are "reasonable and fair."

* * * *

The spot sterling rate has declined to a low of $2.81½-⅝. The fall has caused some surprise, for it was only a month ago that the rate was nearer the official ceiling of $2.82 than it had ever been before. Surely, no adverse factor has developed in the short period to explain, satisfactorily enough, the decline in the sterling rate. Financial observers in London, however, point out that the decline is only a modest reaction which follows a swift rise in the rate and that it will not last long. It would appear that there was keen American buying in February and that since the American interests have already bought more than their requirements of sterling there is now less keen demand for the British pound. This explains, in a way, the slight and temporary setback in the spot rate for sterling in terms of the American dollar.

* * * *

The figures relating to the sterling area's gold and dollar reserves, at the end of February, 1953, which have now been released, confirm the view that there is no need to be alarmed by the temporary setback in the sterling's dollar rate. The area's gold and dollar reserves have now climbed to an impressive total of $2,103 million, which is the best figure since December, 1951. The level of $2,103 million compares with $1,978 million at the end of January, 1953 and with $1,662 million, the lowest level touched in April, 1952. The increase in reserves during February, 1953, is thus $125 million. But it is necessary to point out here that the improvement is partly due to seasonal factors, since the first quarter of the year, generally speaking, is a period of good demand for sterling area products, such as wool and cocoa. Also, February happened to be a month in which sterling was strong *vis-a-vis* the dollar, which indicates that some short-term money must have moved to London. Finally, the improvement is also due to American aid which accounted for $33 million. In this connection, it may be noted that the U.S. has placed off-shore orders to the value of $167 million. These orders should result in a steady inflow of dollars to the sterling area, as deliveries against American purchases begin to take place.

NEWS IN BRIEF

ALL towns in India with a population of 50,000 and above and a majority of those with a population of 20,000 and above are supplied with electricity.

The Government of Bihar proposes to establish a State Transport Corporation to take over the administration of nationalised transport services in the State.

The Standard-Vacuum Oil Company has submitted proposals for prospecting for oil in West Bengal. These are under the consideration of the Government.

The Government of Bombay has directed that no octroi or terminal tax should be levied by any municipality in the State on newspapers imported into the municipal limits.

The total number of depositors in the savings banks of the several post offices in India was 44 lakhs at the end of March, 1952, with a total deposit amounting to Rs. 200 crores.

While India has approached China for the supply of rice this year, the latter has not yet agreed to supply the rice. The Government of India is negotiating with it and is pressing for a reply.

Following the availability of power supply from the Mahatma Gandhi Hydro-electric Station, the Mysore Government has restored the power cut in Bangalore, imposed in January this year, to the extent of 40 per cent.

The Indian Coffee Board has decided not to accept the Government of India's proposal to reduce the pool basic price of coffee by 6¼ per cent. in respect of allotment to societies and propaganda units from the existing release price of Rs. 2-4 per unit.

The Government has decided to limit the production of the better qualities of metallurgical coal only. The limit is prescribed for A and B grades coal during 1953 at 7.4 million tons. It is not proposed to restrict the production of non-metallurgical coal.

The Government of India proposes to introduce cheque system for deposits and withdrawals in the post office savings banks. This is said to be part of a scheme drawn up by the Communications Ministry for improving the postal savings bank facilities in India.

During 1952 India imported 147,700 tons of rice from China, 375,600 tons from Burma, 184,500 from Thailand and 13,700 tons from Pakistan. The respective figures for 1951 were 65,800, 304,200, 216,200 and 1,57,800 tons. India is likely to be self-sufficient in rice in 1953.

If the Bill to amend the Hyderabad Tenancy and Agriculture Lands Act, 1950 now before the State Assembly were passed and implemented, about 8 to 10 lakh acres of land, out of the 3 crores of cultivable land in the State, might be available for distribution for co-operative farming and among landless people.

The construction of the D.D.T. Factory in Delhi will commence shortly and will be completed before the end of 1953. The output from the factory is expected to meet the demands in the country partially. The Government contemplates increasing the productive capacity of the factory itself as well as setting up other units.

The Trustees of the Bombay Port Trust have decided not to increase the surcharge on the rates and charges levied at the docks and bunders. The Chairman of the Port Trust had suggested, in his Budget estimates, the raising of the surcharge from the existing rate of 33⅓ per cent. to 66⅔ per cent. to meet the additional expenditure due to development schemes.

The Commodity Controls Committee met the representatives of the Federation of Indian Chambers of Commerce and Industry in New Delhi last week. The detailed memorandum submitted by the Federation to the Committee was discussed and among the important subjects, around which the discussion centred round at the meeting, were the continuance of the Essential Supplies Act and controls on some commodities like iron and steel, jute, cotton, textiles, coal, sugar, etc.

The total gross sea and land customs revenue collected in India during November, 1952 amounted to Rs. 12.35 crores, as compared with Rs. 21.08 crores in the corresponding month of 1951. The total gross collection of Union excise duties amounted to Rs. 4.61 crores, as against Rs. 7.72 crores. These bring the total gross customs and Union excise revenue for the 8 months, April to November, 1952, to Rs. 171.11 crores, as compared with Rs. 218.46 crores during the corresponding period of the preceding year.

The second session of the I.L.O. Committee on Work on Plantations will be held at Havana (Cuba) from the 16th to 28th inst. The Committee will consider (1) general report, dealing particularly with the action taken in various countries, in the light of the conclusions of the first session, the steps taken by the I.L.O. to follow up the studies and enquiries proposed by the Committee, and the recent events and developments affecting work on plantations, (2) definition of the term 'plantations,' (3) regulation of wages on plantations and (4) health and social services on plantations.

The Government of India has decided to liberalise the terms of exemption under the Employees' Provident Fund Scheme and allow a further chance to factories that have not applied so far for exemptions. First, not only factories that have provident funds but also such other factories as would like to institute their own funds and run them in accordance with the scheme can apply for exemption. Secondly, non-recognition of a provident fund by the income-tax authorities so far need not stand in the way to any applicant factory. It is proposed to secure centrally recognition of the income-tax authorities for the provident funds in all exempted factories. Thirdly, even if a factory has had provident fund for a section of its employees, it can apply for exemption after framing rules for the remaining sections of its employees. The basic condition for application is that the factory should revise its own scheme or form a fresh scheme in accordance with the statutory scheme. The rules should be framed or revised before making the application. These relaxations involve certain modifications in the Act and the Scheme. Steps are being taken to effect these modifications. The time-limit for the fresh applications has been fixed as 15th April, 1953. This limit does not apply to infant factories or factories which have yet to come under the scheme otherwise. To avoid any hardships in individual difficult cases, however, the Regional Provident Fund Commissioner is being authorised to allow, at his discretion, some further reasonable time.

From Abroad

The U.S. Government has removed price controls on motor cars, copper, chemicals and cocoa and cocoa products.

A World Bank Mission, headed by Sir S. R. Cope, Assistant Director of the Department of Operations for Europe, Africa and Australasia, is shortly visiting Germany to study that country's general economic situation and investment plans. This is the Bank's first mission to Germany.

The Egyptian Government has decided to establish an iron and steel factory with an initial annual capacity of 150,000 tons. The proposed factory will use Egyptian iron ore. The project will be run by an Egyptian joint-stock company. About 51 per cent. of the capital is to be contributed by the Government.

Under Brazil's free exchange law, new foreign investments are not subject to control for tax purposes. Accordingly, the foreign currency coming into Brazil, to be incorporated in the capital of firms operating there, whether involving new investments or the reinstatement of investments, is not liable to any taxation.

With a view to encouraging savings, the Bank Leumi le'Israel (formerly Anglo-Palestine Bank), which handles the greater part of the country's banking business and at present acts as Bank of Issue, has raised the interest rates on deposit accounts with effect from the 1st inst. The increase averages 1 per cent., bringing the rate on fixed deposits for three months to 1½ per cent., that on six-month accounts to 2 per cent., and on one-year accounts to 2½ per cent.

Despite the heavy burden of financing flood damage repair and compensation, the Government of Holland has proposed to reduce taxes on trade. The reduction is expected to aggregate Fls. 250 million (£25 million) and will primarily benefit the companies. There will be a considerable rebate of taxes for private investment in new equipment, while the compensation of losses will be allowed for a longer period than hitherto.

The Government of Pakistan has announced a new import policy. Under the policy, imports from the dollar area have been drastically curtailed, the number of items permitted to be imported being only 53, while those from Japan and non-dollar area are restricted to 215 items. Imports from all areas are to be licensed and there will be no O.G.L. The new import policy does not permit imports of motor cars, cycles and scooters from the dollar area. Imports of silk yarn and thread, woollen yarn, cotton thread, cotton twist and yarn, and artificial silk yarn and thread will be permitted only from Japan and the non-dollar area.

PERSONAL

MR. J. J. S. Garner, until recently Deputy U. K. High Commissioner in New Delhi, left for London to take up a new assignment.

Mr. A. D. Shroff, a Director of Messrs. Tata Sons Ltd., who had been to Japan and other South-East Asian countries on a business tour, returned to Bombay on Tuesday last.

Sir William Currie, Chairman of the P. & O. and B.I.S.N. Companies, who was on an inspection tour of the offices of the agencies in India, left for London last week.

Mr. M. K. Vellodi, Counsellor to Hyderabad State, has been appointed Secretary to the Union Ministry of Housing and Supply. He will join his new post early next month.

Mr. S. Gopalan, Deputy Director-General, All-India Radio, has been appointed Secretary to the Press Commission in place of Mr. M. L. Chowla who died recently.

Dr. Joza Vilfan, Yugoslav Ambassador to India, left New Delhi for Belgrade on Tuesday last, on completion of his term here. He has been succeeded by Dr. Gojko Nikolis.

Mr. Sankalchand G. Shah and Mr. Purshottamdas R. Ashar have been elected President and Vice-President, respectively, of the All-India Exporters' Association for the current year.

Mr. H. K. S. Lindsay of Metal Box Company of India Ltd., Mr. T. Sardanha of Zenith Tin Works, and Mr. R. N. Dutt of Metal Press Works have been elected Chairman, Vice-Chairman and Secretary, respectively, of the Indian Can-makers' Association.

Nawab Ali Yavar Jung, India's Ambassador to Argentina, is likely to represent India at the 15th session of the U.N. Economic and Social Council, beginning in New York on the 31st inst. Mr. Arthur Lall, India's Consul-General in New York, is also expected to be one of the Indian delegates to the session.

Mr. R. G. Saraiya, Vice-Chairman, Messrs. Narandas Rajaram and Co., Ltd., and Mr. B. M. Birla, Director, Hindustan Motors Ltd., have been elected President and Vice-President, respectively, of the Federation of the Indian Chambers of Commerce and Industry. The other elected members of the Executive Committee are: Mr. D. N. Sen (Honorary Treasurer), Mr. K. P. Goenka (textile mills), Mr. B. G. Agarwalla (mining), Mr. D. C. Kothari (tea, coffee and rubber industries), Mr. R. B. Amin (other industries not specified), Mr. Madanmohan R. Ruia, Mr. P. M. Chinai, Mr. Bawa Bachittar Singh (other trade and commerce not specified), Mr. G. D. Somani, Mr. G. D. Binani and Mr. Purushottamdas Singhania (to represent associate members). The following have also been co-opted to the Committee. Messrs. S. P. Jain, Ratilal M. Gandhi, B. P. Singh Roy, Pranlal Devakaran Nanjee, G. M. Modi, Ramnath Poddar, L. N. Birla and Chandulal P. Parikh.

OBITUARY

We deeply regret to record the sad demise of Prof. K. T. Shah. Prof. Shah had a long record of useful and active service. Prof. Shah, who was one of India's leading economists, has contributed much to the advancement of economic studies. There are as many as 29 books on economics to his credit. He was the Head of the Department of Economics, University of Bombay, from 1924 to 1931. He played a valuable part in the deliberations of the National Planning Committee as its energetic Secretary. As an elected member of the Constituent Assembly, he made a contribution to the making of the Indian Constitution. In the death of Prof. Shah the country has lost a leading economist, a great educationist and an able legislator.

Hume Pipes for

WATER MAINS AND DISTRIBUTION WITH READY-MADE FERRULES For CONNECTIONS—WITH PERMANENT LIFE

Features:

★ Most suitable for Water.
★ No Rust, No Encrustation.
★ Bore improves with use.
★ Can be used elsewhere in perfect condition after several years.
★ No bursts.
★ Cheaper cost and more durable.
★ Excellent Test and Testimonials.

Factories all over India and Colombo.

MORE DEFICIT BUDGETS

IT was only last week that we observed in these columns that the tendency of budgeting for a deficit had persisted in the current year also. That this conclusion was not at all unfounded is evident from the deficit budgets presented by the Finance Ministers of some more States in the past two weeks. Thus, despite the improvement in revenue receipts, thanks to larger shares in the allocation of revenue, following the Finance Commission's recommendations, the financial statements of Assam, Mysore, Orissa, Saurashtra, Hyderabad, the Punjab, Madhya Bharat, and Travancore-Cochin disclose deficits. The size of the deficit varies from as much as Rs. 1.96 crores for Orissa to Rs. 14 lakhs for Travancore-Cochin. These deficits relate to the revenue accounts only. If the deficits on capital account—the exact extent of which is not contained in the Press version of the budget statements—are also taken into account, the overall deficits of the State Governments should be quite sizable.

In the context of deficit budgets, it is indeed gratifying to note that the budget of Madhya Pradesh reveals, as in the previous year, a surplus and, what is more significant, contains no fresh tax imposts. On the other hand, concessions in the matter of payment of sales tax have been given to the cottage and handloom industry. The taxable quantum in relation to manufactures is to be raised from Rs. 5,000 to Rs. 10,000 and handloom *saris, dhotis* and *lungis*, the price of which does not exceed Re. 1 per yard, are to be exempted from payment of sales tax.

An idea of the financial position (budget estimates only) of the State Governments under review can be had from the following table:

(In crores of rupees)

	1952-53			1953-54		
	Revenue receipts	*Expenditure*	*Surplus (+) or deficit (−)*	*Revenue receipts*	*Expenditure*	*Surplus (+) or deficit (−)*
Hyderabad ..	21.78	27.36	−2.58	27.90	28.22	−0.32
Madhya Pradesh ..	21.89	20.82	+1.07	25.06	24.52	+0.54
Mysore ..	20.02	21.03	−1.01	20.62	22.20	−1.58
Punjab ..	17.05	17.48	−0.43	19.74	20.05	−0.31
Travancore-Cochin ..	16.85	16.93	−0.08	17.14	17.28	−0.14
Madhya Bharat ..	13.03	13.18	−0.15	14.30	14.40	−0.10
Assam ..	10.05	12.60	−2.55	13.01	14.97	−1.96
Orissa ..	11.78	11.68	+0.10	13.57	14.46	−0.89
Saurashtra ..	8.73	8.72	+0.01	9.42	9.95	−0.53

In the above table, it will be seen that, with the singular exception of Madhya Pradesh—the Finance Minister of which is known for his prudence in handling cautiously the finances of the State—the budgets of all others show deficits. Not only could these deficits have been avoided but their finances improved, had they only paid attention to the question of augmenting their resources by giving up their social schemes such as prohibition, and by exploring new sources of taxation to which reference has been made in these columns on many occasions in the past. Instead, some of the States are seen relying for their additional income on the existing sources which are already heavily taxed.

While for some time now the State Governments have shown a general tendency not to extend their existing programmes of prohibition, we find the Finance Minister of Orissa announcing that his Government would extend prohibition of liquor, including country spirit and toddy, to all rural areas of Cuttack, Puri and Balasore Districts from the beginning of the next financial year. The loss of revenue on this account will certainly tell upon the receipts of the Government in the budget year. Verily, there is none so blind as those who refuse to see. Besides, one wonders if these Governments could not have also curtailed expenditure on some of the non-essential items and this lends support to the view of the Union Finance Minister, Mr. Chintaman Deshmukh, that some of the States "have not shown the necessary determination, matching their keenness, in raising the resources."

Be that as it may, with a view to covering their respective deficits, the Finance Ministers of Mysore, Hyderabad, Madhya Bharat and Travancore-Cochin have proposed new taxation measures. Thus, the Finance Minister of Mysore has proposed to raise the rate of health cess by 50 per cent., increase education cess to one and half annas on all items of revenue on which local cess is leviable, enhance petrol tax to As. 6 per gallon and alter the tax structure of motor vehicles. In Hyderabad, the sales tax on petrol is to be raised from As. 3 (O.S.) to As. 3 (I.G.) per gallon. The various taxes and fees, now paid in Osmania currency under the motor vehicle rules, are to be paid in I.G. currency. A cess of Rs. 2 (I.G.) per ton is to be imposed on sugarcane produced and crushed in the sugar factories. The deficit in the Madhya Bharat budget is to be converted into a surplus of Rs. 1.12 lakhs by enhancing irrigation rates, sales tax on petrol, and registration fees. In the case of Travancore-Cochin, a betterment levy is proposed to be imposed on lands which have appreciated in value, following the completion of irrigation projects.

The sizable deficit of Rs. 53 lakhs revealed in the Saurashtra budget for 1953-54 is claimed to be "only apparent", as, according to the Finance Minister of the State, no credit has been taken for grants and subsidies to be received during the year from the Central assistance boards for schemes included in the State's Five-year Plan. When the assistance, expected to be about Rs. 6 crores, is credited to the revenues, the deficit will be greatly reduced. The remaining small amount is expected to be wiped out by taking "suitable measures without recourse to new taxation." One would like to know what these measures are. In fact, the Finance Minister would have done well if he had indicated what they would be like.

As against the surplus of Rs. 2.33 crores (revised estimates) expected in the current year, the 1953-54 budget for the Punjab discloses a deficit of Rs. 31 lakhs. Despite the deficit, the Finance Minister of the State does not propose —this is noteworthy—any new taxation measures. And the explanation given by him sounds fully convincing. Said he: "It is not possible or desirable in the interests of the economy of the State to impose any fresh taxation at present or to enhance the rates of existing taxes; considerable additional taxation has been put through since the Partition and some breathing space for adjustment and revival is now indicated. Other means of endeavouring to reduce the deficit have, therefore, had to be explored. These include (1) voluntary cut in the salaries of Ministers, Speakers of the Assembly and Chairman of the Council, dispensing of the appointment of five Deputy Ministers, nine Parliamentary Secretaries and four Private Parliamentary Secretaries, (2) abolition of dearness allowance for higher-paid employees, and (3) change-over in the class of travel by Ministers and others."

The brief survey of the budgets of the States is more than sufficient to indicate that the financial picture of the Governments is none too happy. With taxes heavily loaded and with expenditure on so-called schemes of Welfare State steadily mounting up, there is little for the Finance Ministers to feel elated at the budgets they have presented. Surely, the State Governments are having a trying time and it is difficult to say to what extent the implementation of the Five-year Plan will prove a success. What is imperative in the present context, therefore, is an earnest effort, on the part of the Governments, to prune down non-essential expenditure, on the one hand, and augment resources, on the other. This is possible only if the financial policies of the State Governments are guided by strict principles of public finance and not vitiated by principles of morality.

BOMBAY SALES TAX

A Bill to consolidate and amend the law relating to levy of sales tax in the Bombay State was introduced in the Legislative Assembly this week. The Bill is intended, as a temporary measure, to replace the Bombay Sales Tax (No. 2) Ordinance promulgated on 24th December last. It is to be in existence, on approval by the State Legislature, only for a year, ending on 31st March, 1954. Evidently, this short term of its tenure is to enable the State Legislature to accommodate new rulings, if any, in regard to the State Government's sales tax appeal now pending before the Supreme Court. It will be recalled that the Court has already heard the arguments in the case is expected to deliver judgment any time now.

A brief review of the Bill discloses that there is nothing exhilarating about its provisions. It incorporates practically all the provisions of the Ordinance excepting a few changes rendered necessary by the recent decision of the High Court of Bombay invalidating the Sales Tax Act, 1952. The definition of 'sale' in the present Bill is the same as in the Ordinance. Under clause 5 of the Bill, dealers who are liable to pay general tax under the Ordinance continue to be liable under the present Bill when it becomes an Act. The Finance Minister, Dr. Jivraj Mehta, disclosed, while introducing the Bill, that all the rules framed under the Ordinance would be continued under the new legislation. He, however, indicated that it might become necessary to amend some of the rules after the announcement of the Supreme Court's decision.

The main change proposed in the Bill relates to the withdrawal of the exemption from general tax on sales of tobacco. From 1st April, when the Bill is expected to be implemented in its enacted form, tobacco in any form, whether manufactured or not, will be subject to general tax at 3 pies in a rupee. This is consequent on the termination of the arrangement between the Bombay Government and the Government of India under which the former was receiving compensation in consideration of not levying any tax on tobacco. Another change proposed in the Bill subjects cigars, cheroots, and pipe tobacco (other than *hooka* tobacco) to special tax at 9 pies in the rupee.

The Bill has come in for severe criticism both at the hands of the members of the Legislative Assembly as well as the public outside. It is contended that the definition of sale in the Bill comes within the prohibition contained in the judgment of the Bombay High Court. Again, the Bill is said to contravene Article 14 of the Constitution, as it provides for a limit of Rs. 30,000 in respect of a dealer who paid general tax and Rs. 5,000 in respect of another dealer who paid special tax. It is also alleged that clause 7 of the Bill, prescribing the method of assessing taxable turnover was bad in law by reason of imposing a liability on a dealer to register, if his turnover exceeded Rs. 30,000. The continued liability of a dealer to pay sales tax for an indefinite period, even after he ceased to be liable to pay sales tax, as a result of sub-clause 3 of clause 5 and sub-clause 4 of clause 10, is feared to be *ultra vires* the Legislature. The provision in the Bill which compels a dealer to get himself registered or to take out a licence to make returns and keep accounts, even though he might be a dealer only in import-export business, is alleged to offend Article 19 of the Constitution. Thus, it appears that the Bill may not have a smooth passage in the Assembly. And it is doubtful whether the Bill, after it becomes law in its present form, will not be contested in the High Court on account of legal defects.

MARKETING PRACTICES OF JUTE INDUSTRY

The decision of the Government of India to institute an enquiry into the marketing practices of jute manufactures and raw jute sounds strange, in view of the fact that there exists already voluminous literature on the subject. There is, for instance, the Report of the Indian Central Jute Committee on the Marketing of Jute and Jute Products. Although it was published as early as in 1941, it has been brought up to date in the revised edition published last year. Then, there is the Report of the Export Promotion Committee which deals considerably with the practices in the *fatka* market, among others. Further, the memorandum on the futures market subscribed to by all sections of the jute trade and industry and submitted to Sir John Anderson, when he was Governor of Bengal, is also a very useful document. And then there are two reports of Prof. Todd dealing with the same subject. We wonder, therefore, what useful purpose will be served by another enquiry.

Latest reports indicate that the Government of India would entrust the enquiry to a High Court Judge. Although the terms of reference are yet to be announced, it is believed that they will cover all transactions that take place from the time the jute fibre is extracted from jute plants (by wetting them in water) till it is processed and loaded on board ship for export.

The proposed enquiry will, however, be mainly centred on trading in the *fatka* market because there are varied opinions on its utility in helping the development of the jute industry. Some allege that the market serves no other purpose than encouraging gambling orgies. Others hold a different opinion in that it aids the healthy development of the industry. The hectic highs and the sharp downs they attribute to over-sensitiveness of the market, which, they allege, is not in itself a defect. Unless the futures market is sensitive and even over-sensitive, they maintain, it cannot record the ever-changing sentiment of the market.

Whatever these conflicting views on trade in the futures market are, the record of working of the market in India has not been smooth. The futures market which was closed, following the report of the Export Promotion Committee, was opened in April, 1952. But hardly eight months had passed, that is in December last, when trading was again suspended, because of the low prices of raw jute received by growers and the uncertain export markets. And now there is again a clamour for reopening the market.

The jute industry, being a dollar earner, has contributed not a little to the economic betterment of India. And at a time when Pakistan is determined to ruin the Indian jute industry and the overseas demand for jute goods is discouraging, the affairs of the industry no doubt need careful handling.

MR. COWASJI JEHANGIR ON DEFICIT FINANCING

Deficit financing has, as expected, figured prominently in Parliamentary discussions on the Finance Member's latest Budget proposals. These discussions have provided an occasion for further elucidation of the views of the Finance Minister, Mr. C. D. Deshmukh. Dealing with this burning topic of the day, the Minister, in the course of his reply to the Budget on the 6th inst., reiterated the stand taken by him in his Budget speech. "We are satisfied that, as things stand," he observed, "we are not likely to do very much harm, if we resort to the deficit finance indicated in the Budget."

Explaining his point further, the Finance Minister drew attention to the fact that in 1951-52, the Central Budget showed a surplus, while in 1952 there was a deficit of about Rs. 82 crores. For the two years together, there was a deficit of Rs. 82 crores. As against this, the country had a balance of payments deficit of Rs. 194 crores. So, it was clear, he pointed out, that in the last two years the method which the Government had adopted for financing the Plan would not have done very much harm by way of encouraging inflation.

Elaborating the point still further, Mr. Deshmukh stated that it was not all the money that went into circulation that was spent. He considered it was possible that part of it might be held in notes or in Government securities and so on. He could not, however, predict—nor the science of economics—what the result of any particular measure of deficit finance was going to be. "To the best of my judgment," he assured, "against the background of world conditions, and what the Planning Commission has recommended, it seems to me that we are not taking any undue risk." Asked whether Rs. 290 crores, as visualised by the Planning Commission, would still be the limit of deficit financing in spite of the provision, in the coming year, for a development expenditure of Rs. 225 crores, the Minister replied in the positive, hoping that some of the money he was putting out would come back in the way of taxes and other revenues.

Although the Finance Minister appears to be confident of succeeding in his experiment with deficit financing, there is a section of leading public opinion—a growing one at that—which fails to see eye to eye with the Minister. The latest to join the ranks of this section is that able and experienced industrialist and banker, Mr. Cowasji Jehangir. Presiding over the annual meeting of the Bank of India Ltd. on the 5th inst., Mr. Cowasji expressed his misgivings over the fact that the country was embarking upon a career of deficit financing and that such policy might continue indefinitely. He had not the slightest objection to financing posterity by the issue of Government loans on suitable and equitable terms. If the country could not borrow overseas, and if its people would not or could not subscribe to Government issues, deficit financing, then, meant overtime work for the Nasik Printing Press, or, in other words, further issues of notes and a new twist to the inflationary spiral.

Two good reasons would appear to have made him doubt the success of this unorthodox method of financing development plans. One is the possible failure on the part of a successor to Mr. Deshmukh to handle the weapon with the same dexterity as the present Finance Minister, who is known for his conservative outlook, and to see that such a policy does not get out of hand. The other reason is that although the Planning Commission has set a limit for deficit financing, Mr. Cowasji Jehangir feels that thre is no guarantee that the recommendation of the Commission might not be disregarded at some time in the future. These considerations make him utter a warning thus: "I have read about this deficit financing with consternation, if not with actual foreboding, and it seems suitable for me to utter a word of warning and caution at this our annual general meeting. This warning, in my humble opinion, becomes all the more necessary due to speculative tendencies of many in this city and country. Although there is no new taxation I do not feel so optimistic, as many appear to be, and looking to the future, it would be wise to be cautious and to go slowly." These words deserve to be pondered over by all those who feel elated at the idea of the country embarking upon an era of inflation.

OFF THE RECORD

(By "ROVER")

IT is generally held that, by the time a fellow degenerates into the ranks of columnists, he has outlived whatever human qualities he might have been endowed with by nature or Providence. I do not know if this belief among the readers of newspapers and periodicals is wholly justified. But I can testify that whatever might be the case with regard to the nobler categories of human qualities, some of the baser attributes of *homo sapiens* still cling to a man even after his descent into Hades, i.e., the subterranean world of journalism. And vanity is one of those human weaknesses, which thrives on a diet of newsprint and printers' ink. A columnist may not, perhaps cannot, afford to be very human; but he is human enough to be vain.

You shall, therefore, take this as an apology and not expect me to demean myself once again, if I hark back to what I wrote last year soon after the annual general meeting of the Federation of Indian Chambers of Commerce and Industry in this column, in the issue of 5th April, 1952, on the implications and significance of that still-born session, or quote rather extensively from it. I make no bones of the fact that in doing so, I am mainly moved by gratified vanity, and not by any exaltation of spirit, at noting a marked improvement in the atmosphere, at the general meeting of this body last week at New Delhi, or that in the approach of both the Prime Minister of the country, who inaugurated the proceedings, and the members of the Federation who took part in them. From the tenor of the speeches all round and the absence of aloofness and none-too-well concealed contempt on one side and petty-mindedness coupled with sordid acquisitiveness on the other, it is evident to me that some of the pointed shafts aimed at either side by me had found their respective targets and had resulted in a wound which heals ultimately.

About the long perorations last year, I had observed that they, when put together, "failed to link up and evolve a unity of understanding or purpose, not to say anything of even a glimpse of the picture of the Indian economy as a whole, with some dominating central idea round which it is to be built up by the co-operative and co-ordinated effort of all the elements of the populace." Similarly, about the resolutions passed, I was constrained to observe: "Apart from registering complaints or asking for more of this or that, there was no common purpose or scheme, not even a constructive common approach, to enliven the problems viewed in severe isolation."

How very different it was this year! It was obvious that those who attended this important session of the Federation, which, let us hope, marks a turning point in the career of this august body, did not go to it, as on the previous occasion, with the sole aim in view of voicing their grievances and wringing concessions from a reluctant Government. In any case, with whatever misgivings or doubts they went to the meeting, a majority of them came back with greater enlightenment regarding what the country, as a whole, required of the business community by means of its contribution and with a better understanding of the nature of the contribution, they are resolved to make as a body, to build up the prosperity of the country.

And what is still more important, the two days' session during the last week-end, helped in reducing the distressing and all-too-evident friction and estrangement between those who have come to monopolise political power and those still clinging tenaciously to economic resources and means of industrial production, cornered by them under an obliging and comfortable system of unchecked individual enterprise, named by the more subtle French as *laissez faire*. For full five years and more, almost till yesterday, this bitterness between those two powerful sections of society (I am aware that the politicians are apt to consider their class as commensurate with society) had been growing deeper. But, just in time, sanity, realism, moderation and tolerance seem to have re-established their sway over passions and prejudices, agreed and selfishness, in the counsels of both the camps.

In dividing the credit for this happy turn of events, I am inclined to apportion the lion's share to the Prime Minister. When a whole populace pushes a man on a high pedestal and burns incense at its feet, it is difficult for him to descend from it and mix with the crowds. Even this year, when he addressed this gathering, he sounded a little distant, a little superior, but he thawed as he went along and warmed up to his subject. Unlike last year he did not preach and he did not condemn. He did not ask for surrender either. He tried to explain and to enlist support and he seemed ready and willing to understand. Both his tone and approach were different and even though not exactly marked by a becoming humility, it was not marred by an exhibition of superiority or displeasure. He took great pains to put across his concept of a Welfare State and define his objective of securing social equality. And he did it in his old fascinating manner of thinking aloud and asking his audience to share in his search, which of late is less and less in evidence both in Parliament and outside it.

Though he began his address as the Prime Minister of the country, he soon forgot it and began to talk as the intensely human Mr. Nehru, who is always eager to understand and to sympathise. Almost unconsciously, perhaps, because he was in a very good mood, he seemed to avoid any word or phrase which would irritate, hurt or antagonise his hearers. He was frankly tolerant of their limitations and accommodating to their weaknesses. What could have been more reassuring to this frightened community than his acceptance of the private sector of industry, which, though expected, broadly speaking, to run for the social purpose, had its own way of functioning, and his open admission that "to try to maintain a private sector and hamstring it and try to ask it to behave otherwise than it is capable of behaving, means that the private sector does not function satisfactorily"? The Lord be praised for this dawning of wisdom, belated though it be. I have pleaded again, and once again, in these columns that, if you decide to have the private sector of industry, you should give it enough elbow room to turn round and operate. When the whole structure is based on the profit motive, and when it is obvious that this machinery would cease to run if one were to remove this "kingpin," there is little point in sneering at it.

But if Mr. Nehru was more sympathetic and understanding (I see the influence of Mr. C. D. Deshmukh in this change in him), Mr. Shanti Prasad Jain deserves great credit for the tact with which he put forth the case for commerce and industry. Last year, I had to be unduly harsh in my comments on the attitude of the leaders of the business community throughout the session. I could not help blaming them then for failing to understand the significance of the occasion and to devise a new definition of their place and function in the new social order that was in the process of being born.

With a degree of subtlety and tact, not usually associated with business magnates, Mr. Jain eschewed all petty controversies and went all out to understand the economic objectives pursued by the Government. He did not ask for concessions and incentives. He did not put forth petty grievances. Magnanimously, he welcomed the partiality shown by the Government towards small-scale industry and concentrated his attention on the problem of unemployment and underemployment. Instead of indulging in picking holes in the Five-year Plan, he expressed the wholehearted support of his community for it and made a number of constructive suggestions designed to help in its implementation. At the same time, he did voice a number of important difficulties in the way of the private sector of industry, and asked for their removal. But he did it in a manner so unexceptionable that nobody could accuse him of seeking gain or concessions for business men. He was careful enough to show that these were difficulties in the way of reaching the targets laid down by the Plan and not obstacles which reduced their profits. And finally he paid a graceful and well deserved tribute to the Finance Minister for his able stewarding of the country's finances and his realistic approach to the various problems confronting the country. It is, indeed, gratifying to note that almost all the speeches, also of those who moved the various resolutions or spoke in support of them, were on an equally high plane, which go to show that, in spite of all the abuse that they receive from public men, the community has registered a remarkable growth in its outlook, activity and sense of social responsibility.—*All Rights Reserved.*

DEFICIT FINANCING DEFENDED

RAILWAY CENTENARY EXHIBITION

(From A Special Correspondent)

NEW DELHI, 10th *March*

THE highlight of this week in Parliament was the able defence put forward by Mr. Chintaman Deshmukh on Government's policy of deficit financing for the purpose of implementing the Five-year Plan. Most of the criticisms offered by the Opposition centred round the fact that deficit financing would aggravate the inflationary spiral, that it would exercise heavier burden on the poorer section of the community, that the living costs in the country had not declined despite a moderate recession in the wholesale prices index number and that the Government should seek other measures, such as modification of prohibition policy, tax on gifts, levy on salt, etc., to finance the Plan. It was argued that deficit financing would step up prices of commercial crops and thus upset the food targets. Industries, which expanded under the artificial stimulus of inflation, would soon get into difficulties as the capacity of the consumer to buy in the face of rising cost of living and shrinking incomes would be reduced.

DELHI LETTER

No Undue Risks

In his reply to the debate, the Finance Minister pointed out that the country would not be taking "any undue risks" in undertaking deficit financing to the extent envisaged in the Budget. He stated that in 1951-52 there was a net surplus of one crore of rupees while in 1952-53 the deficit worked out to Rs. 83 crores. For the two years put together, there was a deficit of Rs. 82 crores. As against this there was a balance of payments deficit of Rs. 194 crores. Therefore, he contended that this quantum of deficit financing had not done any harm to the economy of the country during this period. On the other hand, prices of commodities, especially in the export sphere, were marked down appreciably on account of the operation of world factors in 1952-53. Mr. Deshmukh stated that in the budget for 1953-54, there was to be an overall deficit of Rs. 140 crores and adding the Rs. 82 crores of the last two years, a figure of Rs. 222 crores was obtained. As against this, the Finance Minister pointed out, if the rate of Rs. 50 crores annually was taken for the release of sterling balances, a balance of payments deficit of Rs. 240 crores was obtained. This factor proved, in effect, to be anti-inflationary in character, totally cancelling the effects of deficit financing on the country's economy.

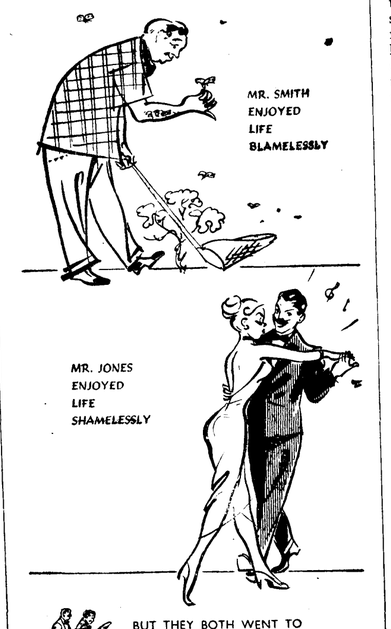
Subdued Optimism

Generally speaking, opinion in Government circles is one of subdued confidence on the effect of deficit financing on Indian economy in the coming years. It is felt that there may not be any sharp upward trend in commodity prices in the country. True, last year, in the first week of March, the wholesale commodity index declined to the low level of 364.9 as against the latest figure of 381.7 (third week of February). It is also possible that the index may go up to some extent during the off-season period of this year —June-July. However, from the last quarter of the year, prices are likely to show a gradual recession for more reasons than one. The food-grain supply position in the world has been steadily improving. The U.S.A. has been pursuing a policy of decontrol in respect of a number of commodities and may modify, to some extent, its farm support policy. In our country also, the food supply position is definitely better than that of a year or two ago, despite the present devastating famine in Maharashtra and the continued failure of rains for the past five years in South India. With the determination of the present Food Minister of the Government of India to supply rice to the deficit areas from internal procurement and to use imported rice as reserve stocks against contingencies, indications are that Government has been able to tackle the food problem in the right direction. An encouraging development in this connection is the steady rise in the procurement of rice within the country during the last two or three months. As against the procurement target of 1.54 million tons of rice for the current rice year, a quantum of 558,000 tons is stated to have been procured during the first quarter of the year. If the present progress is maintained the target is expected to be fulfilled without any difficulty. Orissa, Madhya Pradesh, West Bengal, Punjab, etc., have done remarkably well in this connection.

It may be noted that the Finance Minister even went to the extent of saying that besides deficit financing to meet the programme of expenditure for the public sector, Government must also take note of the deficit in the private sector. "Deficit financing may have to be developed further," he added. In case the experts from the International Monetary Fund now on tour in the country were to recommend a higher target for deficit financing, the Government of India will adopt this course in order to quicken the pace of economic development of the country, if possible.

Progress of Self-sufficiency

The Centenary Exhibition of Indian railways has been attracting thousands of visitors daily during the last few days. Inaugurating the exhibition, the Prime Minister, who was in a contemplative mood, referred to the excitement he had got in seeing all over India mighty work going ahead, changes taking place. He said: "In fact, the new India of our dream is gradually taking place." The Railway Minister, Mr. Lal Bahadur Shastri, stated in the course of a brief speech that the main object of the exhibition was to tell the people how the railways were progressing step by step towards achieving self-sufficiency. There are a number of exhibits of historical interest attracting the attention of the visitors, but the most instructive among the exhibits are those innumerable and complicated machinery, parts and equipment, which are manufactured domestically—for instance, locomotives, wagons, coaches, rails, etc.—and others which are still imported from abroad. The purpose of this section of the exhibition is to attract the attention of Indian manufacturers to this deficiency so that they might be persuaded to undertake these lines of production. The Chairman of the Railway Board, Mr. Badhwar, stated that by 1956, 86 per cent. of all the railway requirements would be produced within the country. By 1960, this percentage was expected to go up to 95.



THE ECONOMICS OF STALINISM

TRADE WITH RUSSIA POSSIBLE

(From Our Own Correspondent)

LONDON, 7th *March*

STALIN must smile if he can look down on the Western world and see the consternation his death appears to have caused. In this country, the Press immediately asked itself and its readers—"Is it a good thing or a bad thing?" The American Press, from all reports, has taken a similar line. Nowhere was it sufficient to weigh, in obituary notices, the good or ill the ruler of the Russian State had done. To the *Economist* the news was "deeply disturbing"; more moderate journals decided that whether the news was good or ill "time alone would tell"!

LONDON LETTER

The reason for the consternation, or the queries, rests on the belief that Stalin held in his hands absolutely the reins of peace or war and that, while he had decided for the cold war, his successors might opt for hot war, or for intensified economic efforts, to disrupt Western Europe. But this attitude is based on the persistent over-simplification of the Russian Party and State machine of which so many commentators are guilty. One of the greatest strengths of Stalin lay in his powers of organisation and his ability to absorb and to synthesise many different points of view, before coming down in favour of the decision which he believed would prove right. Only recently, the Russian equivalent of a Cabinet structure-cum-Parliamentary Committee was streamlined in the light of 25 years' experience, while the system of checks and balances in the Russian hierarchy is every bit as safeguarding of the Constitution as is the American Government machine. Stalin's powers derived from his own personality in much the same way that Mr. Churchill's do. Both men could get away—when they wished—with putting over lines of policy in a way that lesser Premiers could not have done.

Exchange of Goods

If one can leave aside these crude fears about peace and war and the melodrama about personal struggles for power, is there anything to be seen in the passing away of Stalin, of significance to the relations between the Communist and non-Communist worlds? Stalin himself was an economist-philosopher-politician, and his survey of 1951 has probably set the pattern both for Soviet economic thought and for the economic relations of the Communist countries to the outside world. But the Soviet State has often in the past had to adapt its policies when the line it had previously pursued proved unprofitable. After all, Russian economic non-co-operation dates from that day in 1947 when Mr. Molotov, with an extensive entourage, returned home from Paris declaring that the Marshall Plan was not for Russia. Since then the Soviet economy has recovered from the war and the country has become the second industrial giant in the world. It is a mistake because the Soviet Press publicises the things that go wrong in the economy to assume that little goes right. The Communist alternative to the "Marshall Plan" has knit together all the countries east of the Elbe. Yet the Russian, Polish and Chinese desire to trade with the U.K. and other Western countries remains unabated. Their economic realism makes them seek the best equipment and prepared to sell their own foodstuffs and raw materials in exchange. The reduction of trade with the Eastern countries has been brought about, mainly, as a result of the American interpretation of "strategic materials" in connection with their aid to O.E.E.C. and later to N.A.T.O. If it is true that the American Administration sees, in Stalin's passing, an opportunity to weaken the bond between Communist countries by being prepared to trade with them more freely, then there would be real hope of the cold war dying quietly away. The British Government, in spite of its share of American defence aid, could take an initiative. Its slogan with the U.S. is "trade not aid"; there is no reason why with the Communist countries, it should not become "trade instead of cold war." It is possible that the Russians would respond to such a change. There is no need of conferences to achieve this end—it would be a question of seeking every opportunity to expand the exchange of goods which both groups of countries want.—*All Rights Reserved.*

INDIAN BUSINESS MEN OPTIMISTIC OF COUNTRY'S ECONOMY

PRIVATE ENTERPRISE ASSURED OF FREEDOM OF ACTION

(From Our Special Representative)

THE prominent business men from all parts of India, who gathered in New Delhi to participate in the twenty-sixth session of the Federation of Indian Chambers of Commerce and Industry held last week, dispersed in a jubilant mood for two reasons. In the first place, they found that there was a large measure of accord between the Federation and the Government and, secondly, the Prime Minister, Mr. Jawaharlal Nehru, who inaugurated the session as in the previous years, said no harsh words against them. The unpleasant remarks made by the Prime Minister last year about private enterprise were still fresh in the minds of the delegates and visitors to the Conference and before the session began, the delegates were rather afraid that the Prime Minister might, once again, assume the role of a critic of private enterprise and admonish them for their omissions and commissions, for their pettiness, for their lack of foresight and so on. It was, therefore, a pleasant surprise to them when the Prime Minister addressed them in an affiable and reassuring manner.

Observers wondered whether this agreeable change in the Prime Minister's mood was the result of his anger having been diverted against the *Hindu Mahasabha* and its allied organisations which had chosen, only on the previous day, to defy the lawfully established Government, or of a conscious appreciation on Mr. Nehru's part that private enterprise had an important part to play in the economic development of the country. Considering that the Prime Minister is a man of moods, this doubt is, of course, justifiable. But your correspondent, who listened to him, got the impression that Mr. Nehru was sure in his mind of what he was saying. If he was less critical of business men than last year, it was presumably because the retiring President of the Chamber, Mr. Shanti Prasad Jain, was more tactful in his presidential address than his predecessor, who was needlessly provocative. Mr. Jain's wholehearted support to the Plan, on behalf of the business community, and to the policy of deficit financing enunciated by the Finance Minister in his Budget speech might have pleased the Prime Minister. Mr. Jain, of course, did catalogue a number of "musts" by the Government. But Mr. Nehru brushed them aside by saying that they were all matters of detail to which he could not reply and that he would confine himself only to broad issues of policy. He added that, generally speaking, he was in agreement with Mr. Jain's speech.

Mr. Nehru's Views Analysed

Although Mr. Nehru spoke only in general terms, he did make some important points, with which business men found themselves in full agreement. He stressed that the most vital problem of the day was one of providing employment for all. The right to work by every citizen of the country was a fundamental one and opportunity must be provided for all to realise this right. This feeling was echoed by Mr. Jain in his speech, while supporting the Plan. The second point made by Mr. Nehru related to controls. On this subject, he was even more clear than when he spoke last time in Parliament. Though Planning meant controls and direction by the Government, said Mr. Nehru, it did not mean control of every activity. There was no need, according to him, for a multitude of controls all over the place but only broad directional *controls, for ensuring that first* things were done first, and for preventing haphazard economic development of the country. The third point made by Mr. Nehru related to the place of private enterprise. He clearly recognised that, as the Plan was based on mixed economy, private enterprise had a distinct role to play, though in a Welfare State the old nineteenth century doctrine of *laissez faire* could not be followed. He went a step further and observed that, if the private sector was to play its part effectively, it must be allowed to function in its own way. "To try to maintain a private sector and hamstring it all over the place and to ask it to behave otherwise than it is capable of behaving will mean that the private sector cannot function satisfactorily." In other words, the Prime Minister appreciated the necessity for a certain measure of freedom of action for private enterprise from economic controls. Incidentally, he explained how he found it necessary to keep private enterprise alive and work for a mixed economy. This explanation is important, because it comes from a genuine socialist that Mr. Nehru is. "Planning in India," said Mr. Nehru, "is being done not only under a democratic constitution, but generally speaking, with certain democratic objective in view. Therefore, however much we may socialise our economy, we do want to keep democracy there. In a planned economy, there is an obvious tendency for too much collectivism and for democracy to go by the board. Therefore, if one values that background of democracy, one wants to retain it and, as a result, you get what is called a mixed economy." The fourth important point made by Mr. Nehru related to support to indigenous production, a point that was stressed by the Federation's retiring President also. He regretted that after independence, the *swadeshi* spirit, namely, the spirit of self-reliance, had weakened perceptibly. He felt that people ought to buy more and more of Indian-produced goods. This, of course, did not mean that he was in favour of India living in isolation. He believed in the fullest co-operation with other countries of the world in every sphere. He only wanted this country not to be dependent on others.

The business men were quite pleased with all the above observations of Mr. Nehru. It is true that the specific points referred to by Mr. Jain were not answered by the Prime Minister but they knew very well that they could not expect him to do so.

Swadeshism

A number of resolutions on current economic developments and problems were adopted by the Federation in its meeting. The resolution on *swadeshi* spirit sought (*a*) the support of the Governments, both Central and States, to goods and services of Indian origin in preference to foreign, (*b*) deprecated the Government accepting aid from foreign countries in foreign manufactured goods when such goods were being produced in India in adequate quantity and enjoined upon Indian business men to take the lead in the matter by utilising increasingly and in every possible respect Indian services, such as banking, insurance and shipping, and Indian-made goods. The mover and some of the supporters of this resolution, of course, took care to emphasise the need for improving the quality of the Indian goods. But a number of others went to extreme limits. One of the latter group, for instance, contended that people should buy Indian goods even if they were inferior in quality to foreign, because India could not afford to use up-to-date and modern plant and machinery for some years to come. Another belonging to this group wanted the restrictions on imports to be tightened further.

The impression that some of the speakers created was that they were more concerned with producers than with consumers. No searching of hearts was done as to why nowadays consumers increasingly preferred to buy foreign goods. Nor was it realised that having fervently supported deficit financing, the demand for restriction on imports which they were putting forward, ran counter to the need for creating an import surplus. The truism that foreign trade is not a one-way traffic was also ignored. Not one speaker cared to examine whether Indian manufacturers were doing all they could to popularise the use of their products. The general tendency among them was to blame the Government and its import country policy and to demand a completely closed market for themselves. This is scarcely an attitude which can be regarded as progressive. The best way to popularise the *swadeshi* habit is to produce quality goods, cheapen their cost and to undertake widespread sales propaganda through all possible media. The way in which some of the business men supported this resolution suggested that, having been accustomed to a sellers' market all these days, they have forgotten the art of selling their products in a buyers' market. To a large extent, this mentality is the basic reason for the warm welcome they have accorded to the policy of deficit financing. In their anxiety to see that more purchasing power is put into the hands of the people, they do not seem to have cared to realise that deficit financing would keep the costs high and ultimately bring about such a violent disequilibrium in the country's economy as to force a further devaluation of the rupee.

Cause of the Small Man

The Federation broke new ground by adopting a resolution championing the cause of small-scale industries and small traders. By doing this, the Federation has demonstrated, in principle at least, that it is an organisation interested not only in the welfare of big industries but also in small industries and middle-class business men engaged in trading activities on a small scale. Neither the resolution nor those who spoke in support of it, however, indicated in concrete terms the manner in which the small industries could be helped by the big industries. Similarly, the anxiety expressed by the resolution over the growing unemployment among the middle-class people did not square with the hardship which this class would have to undergo, as a result of deficit financing which all the leading members of the Federation fervently advocated.

The resolution relating to sales tax, suggesting, among others, the enactment of a model Sales Tax Act by the Central Government makes interesting reading. It indicates a way out of the constitutional difficulty in bringing about uniformity in the sales tax legislations in the country and of the controversies which centre round them. But, if this model legislation is to be of any utility and serve the object the Federation has in view, it must secure the consent and co-operation of the State Governments. It is, however, a moot point whether these will be forthcoming. The last States Finance Ministers' Conference clearly revealed that the State Governments were in no mood to modify their Acts in any manner, if such modification meant loss of revenue to them. In any case, there is no chance of the Federation's suggestion receiving any attention at the hands of the Government at present, inasmuch as, in the last States Ministers' Conference, it was more or less agreed that the question of achieving uniformity in the rate and mode of taxation should be referred to the Taxation Enquiry Committee.

Income-tax Law

There is nothing new in the Federation's resolution on the revision of income-tax law. It is, however, worthwhile recording this resolution here, in view of its importance to the business community. While welcoming the appointment of the Taxation Enquiry Commission under the chairmanship of Dr. John Matthai, the Federation pertinently points out that changes in income-tax law, which are long overdue and essential from the point of view of assessees, should not be held up till the Commission reports its findings, as its labours will, in all probability, be of a protracted nature. In its resolution, the Federation has drawn attention to the following matters:

(1) Granting additional depreciation allowances on replacement cost basis, or otherwise assist industry to facilitate replacement of worn-out plant and machinery;

(2) removing Appellate Assistant Commissioners from the administrative control of the Central Board of Revenue and placing them under the Appellate Tribunal, thereby upholding the accepted and salutary principle of the separation of the judiciary from the executive;

(3) abolishing the system of advance payments of income-tax under section 18A, which was introduced as a war-time measure, but which has outlived its usefulness, thereby enabling the early completion of final assessments and avoiding inordinate delays in assessments;

(4) deleting section 23A of the Indian Income-tax Act or at least amending the section so that private companies will be allowed to plough back their profits for the expansion of the companies without being compelled to distribute 60 per cent. of their assessable profits among the shareholders and also removing the hardships that have been apparent in the working of this section, and

(5) amending sections 42 and 43 of the Indian Income-tax Act so that only income arising out of trading in India is taxed and that no vicarious liability attaches to the agent of a non-resident.

The Federation has also urged that certain amendments to the Income-tax Act proposed in the Finance Bill, 1953, be modified so that—

(1) The relief in corporation tax accorded to companies on dividends from investments in certain specified industries formed and registered after the 28th day of February, 1953, is extended to all company investments,

(2) the scope of exemption of donations to charitable institutions is extended to all institutions and funds which satisfy one or other of the conditions mentioned and further to all *bona fide* charitable institutions and funds whether registered or not, and

(3) the provision that speculative losses can be set off against speculative gains only is revised and amended, so as not to place any handicap on the normal functioning of trade and day-to-day activities in the different recognised forward markets and Stock Exchanges.

The main resolution on which the Federation spent over half a day was the one on the Five-year Plan, pledging its wholehearted support to the Plan. Several delegates spoke on this resolution. In a well-prepared and neatly delivered speech (published elsewhere in this issue—Ed.) Mr. B. M. Birla indicated how modest this Plan was as compared with India's needs and brought out some of its shortcomings. The striking point he made in his speech was that most of the targets allotted to industries in the private sector had already been hit. What was, therefore, needed for this sector was a long-term plan. Mr. Kasturbhai Lalbhai, who also spoke on this resolution, traced, in a realistic manner supported by facts and figures, the achievements of India in the sphere of new industries during the last few years and expressed the view that, despite the apparent scarcity of capital in the country, the pace of industrialisation could be kept up, if the Government were to give such assistance as guarantee of return on investments in industries considered essential and expeditious disposal of the applications for protection before the Tariff Commission, etc. In an eloquent speech the veteran orator, Mr. A. Ramaswami Mudaliar, brought out the economic and political philosophy underlining the Plan. He congratulated the Planning Commission and the Congress Party for trying to plan the economic development of the country in a democratic manner, by preserving the rights of individuals and avoiding the temptation of regimenting the economy inherent in all planning. Mr. Mudaliar was realistic enough to admit that planning for development in the democratic way meant slow and steady progress. He, however, preferred this slow progress under a democracy to swift progress under a collective system.

LAND MORTGAGE BANKS IN INDIA

MR. VENKATAPPIAH URGES RATIONALISATION

IN the context of the emphasis laid on agricultural development by the Planning Commission, the promotion of long-term agricultural credit is of special significance to the country to-day. Unfortunately, financing of long-term requirements of agriculture has suffered grievously from long neglect in India. It is true that the State Governments and land mortgage banks have for a few decades now sought to tackle the problem, but the progress in the direction has not been as satisfactory as it should have been. For certain disquieting features characterise the dispensation of long-term credit by both these agencies. Thus, funds have not been in ample supply. Requests for aid is growing in volume, but the flow of credit has not kept pace with it. Delays in sanctioning loans have been common; interest rates are relatively high, and where loans are granted, their purpose has been more to discharge prior debts than to improve the land. Repayment of loans by the borrower has been a tardy and slow process, and what is more, matters are known to have gone worse when drought and famine occur which unfortunately, in recent years, have become a hardy annual.

That the adverse features of long-term financing of agriculture have not undergone any marked change in their complexion is evident from the proceedings of the twenty-third Conference of Co-operative Land Mortgage Banks held last week at Madras. For, among the problems discussed, the question of delay in sanctioning loans figured prominently. Many factors would appear to have been responsible for the delay in scrutinising applications and sanctioning them. Increase in the number of applications for loans, paucity of adequate trained staff to scrutinise them, ignorance of the agriculturist regarding the requirements of eligibility for loans, imperfect maintenance of the necessary documents of title by owners of land and diffusion of ownership resulting from fragmentation and subdivision of land have all been cumulatively responsible for the delay, which generally occurs, in sanctioning loans. Although the remedy for these drawbacks is a long-term one, requiring educational progress and reformation of land ownership and tenure, the urgency of the problem demands that other short-term measures should be adopted by land mortgage banks in India. The approach to this problem by the Central Land Mortgage Bank, Madras, in publishing a pamphlet indicating, in simple words, what one has to do before applying for a loan, is on right lines. The appointment of an adequately trained staff in banks and of approved agents in rural areas for discriminatory information about the nature of requirements which must be fulfilled before loans are applied for can be of immense help in the speedy disposal of applications. Mr. S. Venkataratnam, in his Presidential address at the conference mentioned, suggested that there must be legislative protection to the effect that "under certain specified circumstances the change on the land created in favour of a Land Mortgage Bank is binding on the property." It is true that the acceptance of this suggestion would greatly facilitate the speedy disposal of loan applications. But it might be wondered whether the suggestion will find favour with landowning classes. For one thing it might restrict their borrowing capacity, and for another, there is the possibility that these banks might become the ultimate owners of land. In the latter event, the Bank would, in course of time, lose its "mortgage" character.

In view of the fact that increase in agricultural production is a problem of national importance, the purpose for which long-term loans should be granted by the land mortgage banks assumes additional importance. Unfortunately, in India the bulk of land mortgage loans is given for redemption of old debts. It is stated that in 1950-51 loans for the discharge of prior debts constituted the largest single item representing Rs. 72 lakhs out of a total of Rs. 84 lakhs sanctioned by primary mortgage banks in India. This was followed by loans for improvement of land amounting to Rs. 6.8 lakhs, loans for the purchase of land in order to round off holdings to Rs. one lakh and loans of a miscellaneous or unclassified nature to Rs. 4.5 lakhs.

The predominance of unproductive debt owes its origin to the depression of the thirties when land mortgage banks were primarily organised to provide funds for agriculturists to pay off the dues of their creditors during the critical period. Since then conditions have, no doubt, changed; debt relief measures have been introduced by State Governments and rise in agricultural prices has improved the position of ryots in rural areas. One would expect that these changes would result in a lower percentage of loans granted to ryots for redemption of old debts. But the practice of granting loans liberally for unproductive purposes has persisted. In the result, the case of loans for land improvement which should naturally receive top priority has gone by default.

In this connection, it is noteworthy that Mr. B. Venkatappiah, Executive Director, Reserve Bank of India, in the course of his inaugural address at the Conference, emphasised the need for aiding moderation effort in agriculture. Drawing the attention of the co-operators to the existence of an admittedly wide gap between the funds likely to be available as loan money on reasonable terms and the credit requirements of the agriculturists, Mr. Venkatappiah insisted on the need for adhering to a well-thought-out scheme of priorities by the banks. He said: "Consistently with the principal objectives of the Five-year Plan, we should recognise that assistance rendered by way of credit has to be related to certain broadly defined sectors of productive effort. Considered from this standpoint of priorities, it is evident that the funds available should be increasingly utilised in a manner calculated to step up agricultural production and to help create the very savings out of which old debts may be discharged."

Mr. Venkatappiah's address contains much thoughtful advice, capable of being put to advantageous use by the land mortgage banks in India. We would like to refer here, in particular, to his observations on the practice of issuing second and third loans to borrowers. The principles followed in this regard are not on sound lines. For, the purpose of these subsequent loans ought to be directly productive as it was when these loans were first started, instead it is in many cases found to-day that loans are being granted for unproductive purposes and that too, without any limit imposed on the amount so granted. Secondly, all these loans are being granted invariably for a period of 20 years bearing the same rate of interest. Far from being rational and scientific, these practices run counter to the sound principles followed by land mortgage banks in other advanced countries. Not only do the second and third loans, in these countries, bear a higher rate of interest than that of the first loan, but their duration is limited relatively to shorter periods according to the purpose, the amount involved and the repaying capacity of the borrower. Rationalisation of the present lending system in India on these lines, as Mr. Venkatappiah rightly insisted, is absolutely necessary.

The advantages of such a rationalised system are many. First, it prevents increased income—resulting from land improvements effected in a period shorter than the full period of 20 years of the loan—from being diverted to purposes other than repayment of the loan. Secondly, the early repayment of loans enables land mortgage banks to enlarge their lending operations to cover a wider circle of borrowers besides providing the much needed relief to the debtors. Thirdly, the Banks will be able to issue medium-dated debentures at lower rates of interest, which have a stronger appeal to financial institutions. The reorientation of the lending system on these lines no doubt calls for changes in the current methods of investments, of collections and of constituting sinking funds, etc.

Now to turn to the land mortgage banks in the Madras State. They have had to face serious difficulties over their advances thanks to the fact that drought and famine have continuously afflicted certain areas in the State for nearly five years now. The banks have received requests for postponement of instalments on loans. The volume of loan arrears has been on the increase. To a considerable extent the position has been eased by the timely assistance of the Government of Madras in placing at the disposal of the Central Mortgage Bank an amount equal to the total of the instalment in respect of which postponement has been sanctioned subject to a maximum of Rs. 5 lakhs. A point, however, to be noted, in this connection,

DENA BANK'S RESULTS SATISFACTORY

LIQUIDITY RATIO AT HIGH LEVEL

THE Devkaran Nanjee Banking Co., Ltd. (Managing Director: Mr. Pravinchandra V. Gandhi, Bombay), has had another year of satisfactory working during the 12 months ended 31st December, 1952. Despite the depressing effect of the slump in commodity markets which occurred during the year and the Government's new monetary policy (initiated in November, 1951) on banking activity in the country, it is noteworthy that the Dena Bank was able to extend its services over a wider area, as witness the increase in the number of its branches and accounts. Thus, two more branches were opened during the year, one at Patan (Gujarat) and the other at Sidhpur (Gujarat), bringing the total number of the Bank's offices to 57 at the end of 1952, and the number of accounts from 74,500 to 76,000. If the effect of this expansion in activity is not reflected in the deposits of the Bank or in its profits which are a shade lower for the year, as compared with those for the previous year, such is due to factors beyond the control of the Bank's management.

The following comparative table brings out clearly the progress of the Bank's working during the last three years:

(In thousands of rupees)

	For the year ended 31st December			
	1952	1951	1950	1949
Interest and discount earned.	25,31	26,56	25,47	22,39
Commission and exchange ..	4,87	5,27	3,70	2,03
Gross income	34,83	36,23	32,94	28,41
Interest paid ..	7,61	9,45	6,79	6,54
Expenses	21,07	20,22	17,34	14,86
Loss on sale of securities and shares	..	..	1,69	2,17
Profit	6,15	6,57	7,12	4,84
Transfer to—				
Taxation	1,50	1,50	2,75	4,75
Reserves	2,00	2,00	2,00	1,50
Depreciation	81	75	71	69
Dividend	1,75 (3½%)	1,75 (3½%)	1,50 (3%)	1,50 (3%)
Carry forward	1,48	1,39	82	66

	As on 31st December			
	1952	1951	1950	1949
Capital	50,00	50,00	50,00	50,00
Reserve fund	24,00	22,00	20,00	18,00
Deposits	8,04,40	8,37,01	7,68,93	6,86,98
Borrowings from other banks.	..	..	42,00	..
Advances and bills	2,77,37	3,20,04	3,38,02	2,21,49
Investments	4,17,70	3,77,80	3,69,52	3,63,03
Cash	1,83,01	2,24,41	1,88,43	1,58,27
Balance-sheet total	9,86,01	10,41,26	10,09,74	8,29,63
Ratio to deposits of—	%	%	%	%
Advances	34·5	38·2	44·0	32·2
Investments	51·9	45·1	43·8*	52·8
Cash	22·8	26·8	24·5	23·0

* The ratio is arrived at after taking into account the securities earmarked against part of the borrowings from other banks.

It will be noted that there has been a decline in earnings from the main sources of income to the Bank, namely, interest, discount, exchange and commission to the extent of Rs. 1.65 lakhs, but this has been more than made good by the saving of Rs. 1.84 lakhs in interest paid. There has been an increase of about Rs. 85,000 in expenses, but it is gratifying to note that the rise is small compared to the increase in expenses in the previous two years.

Deposits have declined by Rs. 33.41 lakhs, but a fall in deposits is a common feature of the working of all banks during the year under review. Advances and bills discounted and purchased also have dropped by Rs. 42.67 lakhs, which is more than that in deposits, so that the advance ratio stands at 34.5 per cent. at the end of the year, as against 38.2 per cent. a year ago. This shows that with the fall in deposits, as also in keeping with the official policy of credit restrictions, the Bank must have exercised commendable caution in making advances. This policy has enabled the Bank to strengthen its liquidity position. This is indicated by the rise in the liquidity ratio from 71.9 per cent. to 74.7 per cent. Investments have risen by Rs. 39.90 lakhs. No doubt, there has been a contraction of Rs. 41.37 lakhs in cash balances, but that is presumably due to the management's desire to invest the Bank's idle funds in remunerative avenues, such as investments in Government securities.

(Concluded from previous column)

is that, while a land mortgage bank can extend the period of repayment of loan of its borrowers, it cannot ask for an extension from its creditor, the debenture holder. To overcome the difficulty, Mr. Venkatappiah drew the attention of the co-operators to the suggestion of the Madras Committee on co-operation that the banks should float debentures of slightly longer duration than the corresponding loans so that provision could be made for short extensions. It is, however, problematic whether the banks would succeed in implementing this suggestion under the morbid conditions now prevailing in the capital market, unless they are prepared to pay a relatively attractive rate of interest on the proposed debenture loan.

TARGETS UNDER THE FIVE-YEAR PLAN

PLEA FOR ACCELERATING PACE OF PROGRESS

(By B. M. BIRLA)

[Moving the resolution on the Five-year Plan at the meeting of the Federation of Indian Chambers of Commerce and Industry, on the 8th inst., Mr. B. M. Birla, the well-known industrialist, assured the wholehearted support of the business community in India to the Government in its implementation of the Plan. As planning is dynamic, he had no reason to think that targets could not be revised from time to time, but considered that it is necessary to know beforehand what the targets to be achieved are. He dealt at length with the requirements of the country in respect of food, housing, transport, etc., and made certain constructive suggestions on which action should be taken in achieving the targets, in as short a time as possible. Below is given the text of Mr. Birla's speech.—Ed.]

"THE main aim of planning is how to remove certain economic defects in the society in as short a time as possible. Other countries have done it, but they achieved the same objective over a long period. Time cannot wait for us and, therefore, we have to accelerate the progress and achieve the result in as short a time as possible. It is because of this that in the modern society, there is a lot of talk on planning to achieve results in the quickest possible time.

"Before we proceed to plan, we have to make a broad conception of what we want. In a country like India which is hardly developed, the limit of expansion is sky high. But even then we have to give priority to certain objectives, the most important of which is food. Unless people have food they cannot live. We can never think of importing food continuously, and it is for this reason that the Five-year Plan puts great emphasis on the agricultural side of it. I am glad to say that by and large the Plan meets that objective, and I hope when the projects contemplated under the Plan are completed, there will be no appreciable shortage of food in India.

"Food, as everything else, also is such a commodity which may not keep the country fed for long—because our population is constantly increasing and, therefore, though food will be sufficient soon after the Five-year Plan —yet if the population continues to rise, we will be again faced with the same problem before long. We will, therefore, have to continue to expand our production of food by better methods of irrigation, manure, etc. I am happy to say that the Government does recognise this, as some of the projects will be taken in hand in this first five-year period, although the projects will possibly be completed in the next period of the Plan. As the Prime Minister and the Finance Minister have often referred to this question, planning is a dynamic conception, and it can never be static. I hope, therefore, that that conception will continue to rule and progress will continue to be made in that direction.

Proper Approach

"I am very happy to see that the Planning Commission has left most of the industrial sector to the private enterprise to be developed. In this connection, there are certain criticisms from various types of people. Some feel that the targets are not sufficiently high, while others feel that it may not be possible to achieve the targets. I think that this is academic at this stage. As I have previously said, since the Plan is dynamic, there should be no reason to think that the targets cannot be revised from time to time. But if I may say so, we must be clear as to what exactly it is that we want. It seems the Planning Commission has started on the basis as to how much funds they can find to implement the Plan in the first five years. The proper approach should have been as to what we want to achieve instead of trying to limit the Plan to the funds available. It is possible that we may not have been able to achieve all what we want, but then the country would have known what our target is, which, I must say, is lacking at this stage.

"In a country like India where the *per capita* income is a little above Rs. 250 at the present level of prices, one can imagine how great is the scope for advancing in production. In the United States, last year, the national income was something like 370 billion dollars, which means every person was earning 2,200 dollars on average, or approximately, Rs. 10,500 per year. When we say that a person was earning so much, it is not the money content of it which is important, but it is the amount of commodities and services which a person is thereby enabled to use which is important. We should have, therefore, tried to evaluate and measure what we needed in this country. I am glad to say that to the extent of food to be produced, the Planning Commission has tried to evaluate the demand. But in other sectors apart from food, the Commission has not worked out the figures as to what we should have tried to achieve.

Housing

"After food, the next things in order are housing, clothing, roads and various other amenities. As far as housing is concerned, I am sorry to say that practically nothing is suggested. A few lakhs of houses are supposed to be built in the next five years. But I ask, is that going to be sufficient? We have a population of 35 crores of whom one can say that about six crores have some sort of housing which could be called *pucca* houses. The remaining 30 crores have only mud houses. Now in case of housing, we know very well that we do not need to import things from abroad. Clay or sand is available, limestone is available in plenty and coal is there to burn the bricks. I wonder what prevented us from going for this amenity in a bolder way than what we have thought of. One may argue that it would result in inflation. However, inflation starts when you are spending 'created' money on non-productive projects. To a certain extent the argument is correct. But if we have to house this population which is ever increasing we will need at least 75 million houses. Even if we were to build a million houses a year, it will take us 75 years to complete the housing programme. I cannot imagine that even after 75 years, we would have completed the buildings, because most of the houses built would have to be replaced and, therefore, this process will have to continue. Even in a country like the U.S.A., in spite of nearly a million houses being built every year, the people are short of houses. I am also unable to understand how we can expect the present generation, or the next three generations, to be without houses. People describe that our Prime Minister is flying sky high; but I think what we do need is flying in the clouds and not crawling. Unless we have imagination of the type with which the Prime Minister is endowed and try to convert the Prime Minister's dream into action, we will never succeed. I, therefore, submit that we need houses to this extent; and unless that problem is fully recognised by every section, we will never be able to achieve that objective. I say that there is no reason why the programme of houses cannot be accelerated.

"The Prime Minister yesterday emphasised the problem of unemployment. He emphasised the necessity of utilising these unemployed for some good purpose. Here is a case where men are idle and spread all over the country. The question should be examined whether we cannot utilise them for building houses. There is an advantage in doing so because houses will be built almost in every rural area and to that extent there will be no question of migration of population from one place to another. They could be found work on the spot with material in most cases to be produced on the spot and thus achieve the object as the Prime Minister described. I do not want to say how soon it can be done, but investigation in this direction is desirable.

Transport

"The second problem is that we must evaluate the sheer quantities of various commodities which will need to be transported, if the Plan is to receive momentum to produce something more in the next five-year programme. It is said that this Plan will only lay the foundation for the coming few years. It is very good if it happens so. But I have my doubts in some directions. The transport of this country is extremely backward, and unless something radical is done with the transport system, any plan of any important magnitude will fail. About Rs. 500 crores are supposed to be used in the planning period on transport. But in spite of that the railways' carrying capacity would not be appreciably increased. We have hardly any river transport worth the name and we have nearly killed the road transport. Suppose, if the *per capita* income increases even up to 10 per cent. or 15 per cent. the big question is would our railways be able to carry the extra traffic. I am told that the railways are unable to use more funds even if placed at their disposal. I can only say this, that in this case somebody is not giving proper attention to the matter. Let us analyse how the railways would have to spend money, if it is necessary to provide more facilities. They will first start earthwork for railway lines, secondly stone ballast for the lines, and, thirdly, railway lines with sleepers, etc. Of the three, we do not need any material from outside for the first two. By the time these two actions have been taken, then if necessary, steel should be imported to lay the railway lines. I agree that a very large quantity of steel may be necessary. But unless this is done we will never be able to improve our transport system. The rolling stock including locomotives is in a terrible condition. One has only to travel by railways to see what kind of rolling stock exists to-day. Either they do not have lights or do not have fans or switches are not working. Can you imagine that we will achieve the Plan with this kind of transport system? I submit that something drastic must be done about the railways to improve their carrying capacity, and it should not be merely with a view to meeting the daily requirement, but our present capacity should be at least doubled so that the next five-year plan may not have to wait on account of our transport system.

Industrial Sector

"The third thing which is most important is the industrial sector. We, business men, have been given a big task to achieve it. It is expected that industries will find finance from various sources to the extent of Rs. 600 crores. It includes finance for replacement as well as for expansion. I must say that except one or two industries, such as oil and steel, others are expected only to meet finance for replacement or for small expansion. While it is true that most of the industrial targets laid down have already been reached except in very few industries, but the question of replacement of machinery, etc., is very vital. I cannot imagine that under the present circumstances, these industries will be able to renovate their plants with the resources supposed to be at their disposal. It will be interesting to note that during the war and the immediate post-war period, in spite of the boom through which industry was passing, the total paid-up capital of the entire corporate sector went up from approximately Rs. 300 crores to Rs. 500 crores, a net increase of Rs. 200 crores. Of course, besides this, industries were able to save some money which was put into reserve fund, etc. I am talking only of the new flotation of capital. If only Rs. 200 crores could be found during the war and the post-war period, besides depreciation and reserve fund for increasing paid-up capital of the corporate sector, how is it that we expect now industry to find at least Rs. 600 crores for renovation and expansion? I think the estimates are too high, and unless conditions are created whereby industry and persons can save money, it is impossible to find this Rs. 600 crores. I suggest that positive action should be taken to encourage individuals and corporations to enable them to save money by giving various reliefs in taxes or otherwise to be able to find money.

Further Expansion

"Then the next question is, having achieved this Five-year Plan, would we be in a position further to expand our industries and productive capacity all round? The basis of expansion of our future industrial production is steel, as without it, we will not be able to make any progress. A country like America uses 1,300 lbs. of steel *per capita* per annum. It is a country which is far more developed than any other country in the world. If that country needs after so many years of development, this much steel *per capita*, how are we going to be able to manage to develop with 10 lbs. or 12 lbs. of steel *per capita*? This will be our greatest bottleneck. We are producing to-day about a million tons of steel. In pre-war years we were using approximately two million tons of steel per year. Our proposals are to expand our steel capacity to two million tons. It means we are only creating production as much as we were consuming in the pre-war days. Does anybody seriously think that this is going to be of any use in our expansion of productive capacity or development of the country? I feel, urgent step must be taken in this direction, and we must straightaway plan for expansion on a much higher scale.

"The United States of America is considered to be the richest country to-day. No doubt it has very large resources compared to any other country. We always talk of India as a poor country. It is unfortunate that we have created that notion in our people. Poverty to-day is there, because we have done nothing to

(Continued on page 475)

IMPORTS OF STARCH INTO INDIA

MILLOWNERS URGE EARLY REVISION OF POLICY

WHILE few will take exception to the grant of tariff protection to the Indian starch industry, many will be rather intrigued at the Government of India's persistence in continuing the ban on imports of starch into the country. The ban has adversely affected the internal supply position of starch, resulting in a marked rise in prices. The situation has been particularly aggravated by the recent downward trends in production of this commodity. Consequently, the Indian cotton textile industry—one of the principal consumers of starch—has been finding it extremely difficult to secure adequate quantities of starch at reasonable prices. A vigorous plea for an "immediate radical change" in the import policy for starch has, once again, been put forward by the Millowners' Association, Bombay, in the course of a communication addressed to the Government of India.

The Association's plea is based on two chief grounds. First, while evolving the import policy for starch, the Government did not consult the cotton textile industry. Even the series of representations made by the industry, drawing the Government's attention to the serious effects of a complete ban in starch imports, were ignored by the Government. Secondly, the Government's policy has "reacted to the detriment of the Indian textile industry and is really hurting it." There is, according to the Association, on the one hand, a steady shrinkage in internal stocks of starch and, on the other, a steady rise in prices. Thus, the stocks of all starches and sago with the cotton mills at the end of December, 1952, were reported to be 6,400 tons, representing a little under two months' consumption, which at once shows that some mills are now drawing on their last few bags. The stocks with the indigenous starch manufacturers were reported to be about 2,700 tons at the end of January last and are still less to-day.

Thanks to the none too happy position in regard to starch supplies, as noted above, and the continued ban on imports, the prices of starch have registered a marked rise *vis-a-vis* that quoted by overseas starch manufacturers. The price quoted in Bombay is as much as Rs. 70 per cwt., as against the landed cost of imported starch of Rs. 35-9, including the import duty of 31.5 per cent. Even at this price, it is stated, not more than 200 bags can be collected in India.

Maize Starch

The situation in respect of maize starch is no better. The trend of starch prices in overseas markets has been downwards. The price of maize starch produced in Holland, for instance, is to-day Rs. 45 per long ton (f.o.b.) Rotterdam, which compares with Rs. 65-7-6 on 9th June, 1951. The actual selling prices in Bombay, on the other hand, have gone up. What is worse, imported maize starch, which could be had at about Rs. 50 to Rs. 54 per ton in 1951, cannot be obtained to-day at any price. Even the nominal quotations are very much higher than the f.o.b. prices in Rotterdam, converted into Indian prices with the cost of insurance, freight, and duty and the usual margin added. In the case of indigenous starches, tamarind seed powder, which was freely available at Rs. 12 to Rs. 14 per cwt. eight months ago, is not available at less than Rs. 27. Tapioca, which was quoted at Rs. 12 a year before, is now quoted at Rs. 24.

From the foregoing account, it will be evident that the complete ban on imports of starch is not justified. But the Government may feel that removal of ban on starch imports would adversely affect the indigenous industry. It is, however, difficult fully to appreciate this line of reasoning. For the crux of the Indian starch industry's problem is not so much foreign competition as supply of raw material, namely, maize. The quantity of maize required by the industry is of the order of about 50,000 tons per annum. In view of this material not being easily available from abroad and of the fact that its cost is very high, the Indian starch industry has been compelled to depend more on indigenous production of maize. Alluding to this problem, the Millowners' Association observes thus:

"In the famine conditions prevailing to-day in certain regions of India, the possibility of maize and other edible grains being made available to starch manufacturers from India itself seems to be remote. The alternative is to import grain from abroad, which is bound up with the question of dollar exchange which is not freely available to-day. The conclusion, therefore, seems irresistible that any large-scale operation of our starch factories is out of the question, for the time being at any rate, and, if Government agree with this analysis of the situation, then their present import policy in the matter of starch calls for an immediate radical change in the interest of production in the cotton textile industry."

If, however, it is the Government's intention to continue the ban on imports of starch or sago, the cotton textile industry, naturally enough, should at least be told what plans the Government has or proposes to have to supply the industry's requirements of starch and sago "in reasonable quantities and at fair prices." This is of particular importance in the present context of rapid depletion of starch stocks and swift rise in prices.

HANDLOOM INDUSTRY IN U.P.

Inaugurating the first meeting of the newly constituted U.P. Handloom Board held at Lucknow last week, Mr. Govind Vallabh Pant, Chief Minister of Uttar Pradesh, stressed the need for expanding the handloom industry both for the solution of the unemployment problem and for ensuring production of cloth suited to varying tastes. He also advised the Board to chalk out a scheme by which the industry could ultimately stand on its own feet irrespective of the consideration of competition with mills.

The issue that needs to be faced by all those who champion the cause of the handlooms is that the major sector of the handloom industry is an uneconomic unit, in that the cost of its manufactures is beyond the capacity of the average consumer to pay. Unless, therefore, this fundamental defect of the handloom industry is remedied in a realistic manner, there can be no salvation for those engaged in the industry. It is, indeed, gratifying to note that Mr. Pant should have acknowledged the force of this contention, as witness the following remarks of his:

"The Government of India's decision to reduce the production of *dhotis* by mills by 40 per cent. may not yield appreciable advantage to the handloom industry, as I am told that production of *dhotis* through handlooms is not much. They are employed largely in the production of other varieties of cloth like markin, sheets, table covers, etc., and, therefore, what is necessary is that they should have a scheme for the improvement and development mainly of the varieties produced generally by the handloom industry. The greatest need is that they should have a plan under which the handloom industry could stand on its own feet, unaffected by the rise or fall of prices of mill-made cloth. To this end, I suggest a strong research section, which could find out better designs and methods of printing, etc., and also improve handlooms and other implements. The mills can produce only set varieties, but handloom industry is capable of producing varieties suited to different tastes. Mills cannot compete with handlooms in that matter. I feel that, if they can improve handloom production, the industry can be developed appreciably, in spite of competition with mills. I advocate formation of weavers' co-operatives, which can greatly help in the expansion of the industry on right lines."

According to the Chief Minister there are 250,000 handlooms in Uttar Pradesh, the number of weavers engaged being 800,000. The total quantity of cloth produced is of the order of 30 million yards, valued at Rs. 25 to Rs. 30 lakhs, per annum. The handloom industry employs men and women many times more than the mills. In his opinion, if the handloom industry receives a setback, the unemployment problem in the industry is bound to be more serious than in the mill industry.

BRITISH RAYON OUTPUT

The outlook for the British rayon industry seems to be quite bright. An indication to this is provided by the steady rise in output in recent months. The production of staple fibre, for instance, reached a new record of 17.1 million lbs. in January, 1953. Coming so soon after the drastic cut last summer, this is considered to be a remarkable achievement; for the previous record of 16.7 million lbs.—attained in November, 1951—had been regarded as nearing if not reaching, the peak output from the plant available. The improvement in staple fibre output is considered to be a great achievement also because of the fact that such has been registered despite labour difficulties. The output of filament yarn, too, has been rising, the quantity actually produced in January being higher by 14.3 million lbs., as compared with the previous month. The aggregate rayon output during the month under review was 34.4 million lbs., which is only 1.6 million lbs. below the peak reached in November, 1951.

The improvement in the output of rayon goods in the past few months has been more marked in the case of staple fibre than in filament yarn. This is said to be due to three factors. First, more labour is needed for the production of filament. Secondly, the dislocation of production caused by last year's cuts affected 11 producers and more factories, while, for the overwhelming percentage of staple output, the effect fell on one factory—Courtaulds at Greenfield. Thirdly, filament is supplied to weaving concerns, more often than not, in ready beamed or pirned form and, presumably, the additional preparatory processes influence the rate of increase in production. Although the rayon production figures include nylon (those for staple since May, 1950, include nylon staple), they apparently do not include output of other synthetic fibres. Production of "Ardil" and "Terylene" is relatively small, but it would help swell the grand total of man-made fibres. The output of "Terylene" is at present about 600,000 lbs. annually and, by the end of 1954, when the Wifton plants come into production, the output is expected to be at a rate of 11 million lbs. per annum. The capacity of "Ardil", the I.C.I. protein fibre, is 20 million lbs. annually. Nylon production next year, it is stated, should be at a rate of 30 million lbs. per annum.

OUTLOOK FOR RAYON

A question that has frequently been asked for some time past is: How long will the present strong buying for rayon continue? This question has evoked considerable interest in India, especially in the present context of the expansion scheme for the rayon industry. There is a section of opinion which feels that there is a bright future for the rayon industry. It points out that not only is rayon relatively cheap in price but that its prices are absolutely stable and that these factors are inducing the manufacturing and distributive trades to devote larger attention to rayon goods. It also anticipates a good demand for this commodity for a considerable time to come.

Some others, however, do not agree with this view. And they ask: With cotton being cheaper than it was during 1951, why should rayon now appear to be more attractive? The answer to this is that, as long as all the available cotton and rayon find a ready sale, the price factor plays an insignificant part. Moreover, rayon is more widely spread among the different "end" uses and many uses which had been left untried are now being developed on a commercial scale. This is especially true of rayon staple, as the spun rayon yarns, instead of being mainly used in 100 per cent. rayon plain dress materials, are now being used in mixtures with filament rayon and are being taken up for shirtings, suitings, furnishing fabrics, drills and sheetings.

FURTHER POWER CUT TO MADRAS MILLS

With effect from the 1st inst., the supply of power to the area served by the Papanasam-Pykara-Mettur Hydro-electric Grid has been cut further by 66⅔ per cent., raising the total cut to 50 per cent. Following this, the textile mills in the Coimbatore region, numbering 35 and employing 30,000 workers, it is reported, have proportionately reduced the working hours. The production of cloth and yarn is, therefore, expected to be substantially lower, to the extent of 50 per cent., according to one estimate. The normal production of cloth and yarn is of the order of 2,300,000 bales and 15,000 bales, respectively, per month.

Forced by the power cut and with a view to maintaining production, some of the textile mills are making efforts to find alternative sources of power supply. About 35 diesel power-generating sets, capable of producing 250 kw. of electricity per hour, a Press report avers, are to be installed in different textile mills at an estimated cost of Rs. 50 lakhs. Already 10 sets have started functioning and four or five more are expected to be ready in the next few days.

NATIONAL SAVINGS BANK LIMITED

(Established in 1941)

A SCHEDULED BANK TRANSACTING ALL KINDS OF BANKING BUSINESS

Head Office: **43/45, Apollo Street, Fort, BOMBAY**

Other Local Offices:

Kalbadevi, Mandvi, Zaveri Bazar, Ghatkopar and Bandra

Mofussil Branches:

Ahmedabad (Maskati Market and Manek Chowk), Baroda, Patan, Dabhoi and Poona

SAVINGS BANK DEPOSITS

Rate of interest on Savings Bank Deposits increased to 2½% P. A. on monthly minimum balances with effect from 1-8-1952. Withdrawals by cheques upto Rs. 500/- each ALLOWED TWICE A WEEK

SAFE DEPOSIT LOCKERS AVAILABLE AT MODERATE RATES AT

Head Office, Kalbadevi, Mandvi, Ghatkopar, Bandra, Manek Chowk (Ahmedabad) and Baroda Branches

Remittance and collection facilities arranged on all important centres all over the country

IMPORTING RAW COTTON THROUGH PRIVATE CHANNELS

NEW APPROACH TO TEXTILE EXPORTS

(From A Special Correspondent)

MANCHESTER, *3rd March*

EVENTS are now moving swiftly in connection with the importation of raw cotton through private channels into Britain. When buying was freed last September for the first time for more than 10 years, it was stated that about 30 per cent. of Lancashire's supplies would be procured by Liverpool and Manchester raw cotton merchant firms. When the opportunity to contract-out from the State-sponsored Raw Cotton Commission is again offered this summer it is now thought likely that a much bigger percentage will elect to acquire their cotton privately.

MANCHESTER LETTER

In the next three months, therefore, spinners have to make up their minds what attitude they intend to adopt. The outlook has been somewhat clouded by the unknown factor of what cover protection will be provided if the Raw Cotton Commission is left with only a minority of firms within its organisation. In an effort to reach a solution to this problem meetings have taken place between the President of the Board of Trade and the Minister of Materials and separate deputations representing spinners, raw cotton merchants, the trade unions and other sections of the industry. An official statement on behalf of the Government is expected later this week.

The significance of these talks is obvious. The final recommendation of the committee which investigated raw cotton supplies under the chairmanship of Sir Richard Hopkins last year was: "There should at the appropriate time be a further review of the situation." The members of this committee probably did not anticipate that such a review would be required quite so quickly.

Final Goal

It is now known that at least two of the big spinning combines are ready to take all their mills out of the Raw Cotton Commission this year if an adequate cover scheme to avoid losses due to fluctuations in price is available. The Lancashire Cotton Corporation, the main group using American type cotton, and Combined Egyptian Mills, controlling some 30 mills in the Egyptian type section, have both announced this decision. The eventual goal is, of course, the re-establishment of the Liverpool futures market and already efforts are being made to set up a spot market by building up supplies. Currency difficulties are the chief problem in creating a free market and it is felt that the most likely arrangement is that the Commission should remain in being to act as a buffer against price fluctuations for spinners.

Exports—A New Approach

A new approach to the problem of bulk selling of Lancashire cotton fabrics to Colonial markets has been entrusted to Sir Frank Platt, war-time Cotton Controller, and now Vice-Chairman and Managing Director of the Lancashire Cotton Corporation Ltd., the world's largest spinning combine, controlling 50 mills.

He has been called into the consultations at the direct request of Mr. Peter Thorneycroft, President of the Board of Trade, with the first objective of ensuring continuity of supplies of Lancashire textile goods for Nigeria, in the face of possible Japanese competition. Last year Lancashire shippers increased their cloth exports to Nigeria from below 65,000,000 square yards to more than 115,000,000 square yards, but Mr. A. C. Nwapa, Nigerian Minister of Commerce, who visited Lancashire last summer, said there were opportunities for supplying about 200,000,000 square yards of cotton and rayon cloth to his country.

This fresh move to ensure that the needs of British Colonial markets are met from Lancashire mills, follows the failure of earlier plans to draw up a scheme backed by all sections of the British cotton industry. Sir Frank has the task of breaking down inter-sectional rivalry between spinners, manufacturers, finishers and merchants which hampered progress in establishing a joint drive for increased trade in overseas markets by making special cloths in long runs at highly competitive prices.

So far Sir Frank is believed to have had a reasonable response to his efforts. Manufacturers experienced in weaving the types of cloth suitable for distribution in Nigeria have been approached and in general have signified their readiness to make supplies available. The orders would keep a proportion of Lancashire's machinery busy for at least the rest of this year.

Former efforts to carry this plan into effect have largely fallen down, due to snags which have arisen in the distributing end of the deal. Again the response of the merchants to Sir Frank's approaches has been satisfactory and the attitude of buyers in West Africa is now awaited to the terms which have been put forward.

Dependent on the success of the current attempt to divert Lancashire products to particular markets, the system may be expanded to provide cloth for other territories in Africa which are considered likely targets for an export drive. There is no reason why similar schemes should not be put into operation to extend trade with other countries, particularly in cases where manufacturers can be assured of long runs.

Second Thoughts on Shifts

Since the Cotton Board's conference on the subject many traders have had time to have second thoughts on the extension of double-shift working, which has now been officially advocated by the Government. So many problems are raised by the adoption of the system in cotton mills that many people might be inclined to think that the difficulties outweigh the possible advantages. Despite some facts and figures which have been put forward, any management considering the proposal would have to think very carefully before introducing this social upheaval unless it is perfectly obvious that much lower costs would result.

Union leaders at St. Annes made it abundantly clear that there was no intention of allowing the introduction of shift work at mills which did not contain modernised machinery. This being the case, any contraction in size of the industry, due to the widespread adoption of the system, would presumably mean the elimination of mills with older plant.

Meanwhile, the efforts of the industry to put its house in order in other directions have not been relaxed. The policy statement issued by the Master Spinners' Federation on two-shift working emphasised that whatever was done in that direction there should be no slackening in the movement towards the better utilisation of labour and modernisation of machinery. In the past year a further 20 spinning mills have introduced work study techniques and the total so doing now comprises one-third of the Federation's membership.

Trend of Cloth Prices

Some indication of the fall in Lancashire cotton cloth prices in the past 18 months can be obtained from the official figures issued by the Board of Trade in terms of index numbers reflecting price changes over a wide variety of cotton fabrics. Taking the basis of 100 points as the price ruling in June, 1949, the highest subsequent level of quotations was in June, 1951, when prices reached 194.4 points.

There was a drastic reduction in quotations early last year as machinery in the mills began to stop. The index number fell by 15 points between January and February and a further 12 points in the following month. Subsequently, the decline became more regular and there was even a slight increase in prices in September.

The latest figure for January, 1953, shows that the decline has not yet been halted, the current level being exactly 120 points. In such circumstances, with a constantly easing market, it is not to be wondered at that customers are feeling their way.

Raw Cotton Imports

Imports into the United Kingdom last week aggregated 25,187 bales, comprising 8,199 American, 3,570 East African, 2,621 Indian, 2,015 Pakistan, 1,888 Egyptian, 466 West African, 422 Mexican, 108 Argentine and 5,898 bales sundries.—*All Rights Reserved.*

ANNUAL GENERAL MEETING OF INDIAN MINING ASSOCIATION

MR. W. H. S. MICHELMORE ON PROBLEMS OF COAL INDUSTRY

UPWARD REVISION IN PRICES URGED

PRESIDING over the Annual General Meeting of the Indian Mining Association, held at Calcutta on Thursday, 12th March, 1953, Mr. W. H. S. Michelmore, Chairman of the Association, chose for special comments certain outstanding problems confronting the Indian coal industry. Mr. Michelmore drew particular attention, among others, to sand-stowing in metallurgical collieries. He stated that stowing inevitably involved a sharp rise in cost of production and, accordingly, urged an upward revision in the controlled selling prices of coking coal. He also doubted whether adequate supplies of sand would continue to be available after the completion of the Damodar Valley Project. As regards coal washing, he stressed the need for the adoption of a correct policy. In his opinion, the right policy would be to make a start with washing of the better coking coals. Incidentally, he pleaded for a higher price for washed coal produced from inferior seams than for similar coal arising from better seams. Another aspect of the coal industry which Mr. Michelmore chose for special comment related to the increasing burdens imposed by the Union and State Governments. In this connection, he alluded to the peculiar economics of mining and emphasised that, to attract money to mining ventures, two prerequisites were essential. First, there should be a better-than-average return on the sums invested. Secondly, the Government should grant some special type of tax concession, designed to allow a company to write off the value of its property within its working life.

The following is the full text of Mr. Michelmore's address:

"GENTLEMEN,

"It has been the practice hitherto for the Chairman to devote the greater part of his speech to a review of the past year's events. On this occasion, as I shall be vacating the chair at the end of this meeting, and as we have so many and pressing problems still ahead of us, it may perhaps be appropriate, if I address myself rather more to the future than to the past. The Committee's report, which is before you, deals very fully with all the problems which have beset us during the year, but, perhaps, some of you have not yet had the opportunity to study it as closely as you would wish and, in any event, there are one or two items to which I cannot but make specific reference.

Conservation of Metallurgical Coal

"Our biggest preoccupation has undoubtedly been the conservation of metallurgical coal; this is a subject with which I personally have been intimately concerned for several years past, having served on the Conservation Committee which started work no less than four years ago. Ever since the cry of conservation was raised, it has been my constant endeavour to curb what I regard as the destructive aim of the conservationists, by which I mean the proposal that a drastic reduction in present output should be arbitrarily imposed on collieries which are producing first-class metallurgical coal. It has always been my view that a far greater measure of conservation could be achieved by sand-stowing, washing and blending than by severe restriction. During the past year, the controversy on conservation reached a crisis, caused by the Government's announcement of its decision to reduce the output of selected 'A' and 'B' grades of coking coal from 7.9 million tons in 1950 to 5.5 million tons by 1956, but, later, modified by a reversal of this policy, thanks to the Association's representations, to one of pegging the output of these coals to a maximum based on a little over the 1950 output.

Pegging Coal Output

"The whole subject has received the most constant consideration of the Committee during the past year and I think it is only right that attention should be focussed on the compromise proposals we suggested a year ago, the details of which are fully described in the report. In these, the principle was conceded that output should be pegged at around present levels, but we also pressed that lower grades should additionally be included, and, in particular, the Government collieries producing metallurgical coal. At the time the Government refused to agree to this, but it is satisfactory that this important point of policy has since been admitted, and all collieries producing coking coal to as low a grade as grade II, including both the Government collieries and the 'captive' collieries of the Steel Works, are now to be included in the pegging scheme.

"For 1952 then, we agreed rather reluctantly that output should be pegged on the basis of 7.9 million tons of selected 'A' and 'B' grades, but, at the same time, we made it clear that, if this policy were rigidly applied, there would be cases of individual hardship, besides a number of instances where retrenchment of labour would be inevitable. As a result of our representations, the Government agreed that special consideration should be given to difficult cases, and a Technical Advisory Committee (Mining), which includes two non-Government mining engineers, is now in session to consider such cases. For 1952, increased individual targets were granted where these seemed necessary and no reports have been received so far of any drastic retrenchment or loss owing to the conservation policy.

Sensible Policy

"In respect of the current year, fresh targets have been issued to collieries based on an overall output of 7.4 million tons, but, here again, hardship cases are to be specially considered, and it is to be hoped that acute dislocation will be avoided. Meantime, Government are understood to be carrying out a fresh appreciation of the whole position, in the light of the projected expansion of India's steel industry, and it seems likely that the probable demand for metallurgical coal in five or six years' time will be found to be not far short of the present production. If that be the case, it would be manifestly unwise to dislocate production in order to save a few million tons in these intervening years and the sensible policy is to allow production to continue at its present level which appears appropriate to the near future, plus a cushion to allow for inevitable seasonal and other fluctuations.

Sand-stowing

"Attention is rightly being given to the extended use of sand-stowing in the metallurgical collieries and it is satisfactory that Government assistance has now been extended to stowing for conservation, in addition to stowing for safety, to which it was limited previously. I should like, if I may, to stress here two points in connection with sand-stowing. The first is that stowing inevitably involves a sharp rise in the cost of production; Government assistance is in any event limited to 75 per cent. of the actual cost of stowing and it is open to question whether the economics of the industry can bear any such increase as would be involved by a wide extension of stowing operations. I am inclined to the view that an upward revision of the controlled selling prices of coking coal is inevitable. Secondly, I feel I must raise, once again, the doubt which has long been in my mind whether adequate supplies of sand will continue to be available after the completion of the Damodar Valley Project. As I understand it, two of the main objectives of the project are the prevention of flood and the avoidance of soil erosion; these are praiseworthy objects indeed, which no one can possibly quarrel, but, in their wake, they give rise to the problem of where the sand, which is the direct product of erosion and flood, will in future be found for the needs of the coal industry. I have grave doubts as to its future availability and, although alternative materials have been tried, I believe the general opinion of mining engineers in this country is that nothing else will quite take its place. This is a problem which should engage the serious attention of Government.

"An allied subject of importance is coal washing. Much research has been carried out on this and the Tata Iron and Steel Co., Ltd., have earned the gratitude of the country for their pioneer work in washery installation. Any past doubts about the washability of Indian coals have been set at rest. It now remains to decide which coals should be washed and what the economics of washing will be. All of this is receiving the attention of a committee appointed by Government for the purpose, but it may be helpful, if I make a few observations on the subject as seen from the viewpoint of the colliery owner. It is well that we should first get clear in our minds what the purpose of coal washing is. As I see it, there are several advantages to be gained by washing. First, we can beneficiate the inferior coals of which there are such large reserves to a degree which cannot be achieved by manual or other means and make them fit for metallurgical and other uses. Secondly, we can improve the better coals also so as to enable them to be despatched to a higher and more consistent quality, eliminating the variations in specification which occur even under the best of existing methods of screening and preparation; in achieving this, we can assure to the consumer a better and more suitable fuel of guaranteed quality. And, lastly, we can provide for the Steel Works a consistent blend of coking coal, which is something of such great value to the blast furnace operator as can hardly by measured in terms of actual money.

"In this context and that of the present capacity of the industry, what is the correct washing policy to be adopted? I believe some persons hold the view that a start should be made with washing the inferior coals, but here we should bear in mind that, as I have already said, the output of good metallurgical coal to-day is already in excess of the current needs of the steel industry and the coke ovens, so that, to make available more of that quality by washing, the lower seams would only increase this excess still further. It seems to me that the right policy would be to make a start with washing of the *better* coking coals, which will give us valuable experience and would undoubtedly be of benefit to consumers generally and the steel industry in particular, but with the proviso that encouragement should be given to the mixing in and blending of some of the lower seams at the same time. I would also like to see some brave pioneer start in on the washing of some of the less good non-metallurgical coals, say, the Jambad-Kajoras or the Karanpuras.

Economics of Coal Washing

"Let us now turn to the economic aspect and here I think it needs to be emphasised that, if coal washing is to expand—as, indeed, it should for the long-term benefit of the country—it must be made *attractive* to the colliery owner. A coal washery is an expensive plant, and the figures quoted by the Conservation Committee show that a 100-ton per hour plant, would cost around Rs. 15 lakhs and a 200-ton plant Rs. 24 lakhs. There are big figures, and the state of the coal industry is such that colliery owners have little hope of finding such sums within their own resources. Moreover, the present absence of capital formation throughout the country will make it very difficult to raise such finance from the market. It is imperative, therefore, that coal washing should be given a high place in the list of priorities for which finance will be provided by the Industrial Finance Corporation. Even then, the servicing and amortisation of the capital involved will be an appreciable element in the true cost of washing. As regards what might be termed the operating economics of the subject, the actual cost of operation, maintenance and supervision can be determined fairly accurately in advance, and it is well established that the cost of operation is inversely proportional to the size of the plant. But the crux of the whole matter is the yield. A washery *can* be made to turn out clean coal to almost any specification, but, obviously, the economics of it must depend on two factors, the price to be paid by the consumer for the clean coal and the percentage of clean coal recovered to raw coal put in. This subject, I say, is now engaging the attention of the Committee, but I am sure they will find that, to make washing attractive, it will be necessary to pay a bonus of something like Rs. 2 or Rs. 3 per ton above the present controlled prices. Another possibility is to revise the present price structure in such a way as to reflect more correctly the relative fuel values of the various grades, that is to say, the selling prices of the lower grades should be appreciably increased, and those of the lower grades reduced. This reform is indeed is long overdue.

"There is one aspect of washed coal which raises a difficult problem and that is the nature of the raw coal from which the washed coal is to be produced. If the desired quality of clean coal were 15 per cent. ash, it might take, say, 120 tons of good quality raw coal to produce 100 tons of washed coal of this quality, whereas, if inferior coal were being washed, it might need 130 or even 140 tons of raw coal to yield this tonnage. Now the cost of mining the raw unwashed coal varies little, other things being equal, as between the better and the inferior grades, so paradoxically to secure an adequate return to the colliery owner, a higher price should in theory be paid to him for washed coal produced from inferior seams than for similar coal arising from the better seams. But the value to the consumer is identical. I am not attempting to give you the answer to this enigma, but I think it will serve to illustrate what a very complicated economic problem this is.

Transport and Wagon Supply

"Transport and wagon supply is always a matter of vital interest to the coal industry. Speaking on this subject a year ago, I congratulated the Railways on a year of exceptional service to the industry. Since then, even the previous year's record has been surpassed and, during 1952, the average coal loadings for Bengal and Bihar were no less than 3,163 wagons daily, or 130 wagons a day better than the previous year. This we must regard as a signal achievement, and we have been encouraged to learn lately that the Railways are planning for an even greater movement of coal during 1953. During the past year, the regrouping of railways was consummated and, while this was a subject on which we had grave doubts at the time and while there are various disturbing rumours circulating about cracks and creaks in the railway administration, the proof of the pudding is in the despatches and it would be difficult to argue from the figures I have quoted that the regrouping has had any adverse effect on the coal industry. On the contrary, I may, however, be permitted to introduce here a note of interrogation and that is whether the regrouping has, in fact, been as complete as we have been led to believe. Collieries suffered for many years from the restriction that B.N.R. collieries could only despatch to B.N.R. destinations and E.I.R. to E.I.R.; many of us thought that, when both of these were integrated into the Eastern Railway, these restrictions would disappear. However, they still seem to exist and colliery owners feel that either regrouping has not been fully achieved, or else the facility of despatch in all directions which should have been possible has not been extended to collieries.

"Looking to the future and viewing it in the mirror of the performance of the past, the coal industry cannot but have in mind a chronic shortage of wagons for coal loading. This we have experienced for years, but let me say at once that I fully appreciate that the absence of wagons in the siding of a colliery that wants to despatch coal is not necessarily due to a physical deficiency of wagons on the railway system. It may well be due to a shortage of locos, staff, water, crossing stations, or any one of the many other items which go to make up the complicated structure of an efficient transportation system. But the shortage of wagons in his siding is what hits the colliery owner and he cannot be content until that is eliminated. The output of coal and the market for it must vary during the year. Similarly, the general traffic of the railways must be conditioned by climate, seasons and crops, and India, by its very nature, must be subject to wide seasonal variations. It is my considered opinion, however, that the forward progress of the country will always be limited, if the transport system is only geared to the average traffic throughout the year. What is needed, for real progress, is that the transportation system should be designed to carry the *maximum* traffic of the year—whether it be grain, coal or other merchandise—so that no market need be starved of its immediate seasonal demands and the full requirements of an expanding economy can be met throughout the year.

Rationalisation

"The rationalisation of coal transport is a subject which has been receiving a good deal of attention lately and the laudable aim is that every consumer should draw his coal from the nearest source of supply. Now this must *prima facie* achieve considerable economy of transport, but a word of warning should be sounded against the over-simplification of this issue. If the outlying coalfields be extensively developed to supply adjacent consumers previously supplied by Bengal and Bihar, there will obviously be acute dislocation and unemployment in these latter coalfields, if they are deprived arbitrarily of the markets which they have served for half a century. Again, there are many consumers who, for technical reasons, require special types of fuel which may not be available from the coalfields geographically closest to them and, therefore, need to be specially exempted from any general rationalisation edict. The subject then is one which cannot be rushed and must be closely examined in all its implications before any arbitrary directions are imposed.

"Doubts are sometimes expressed about the adequacy of the country's reserves of good quality non-metallurgical coal. As far as I know, the doubters have not brought forward any figures to substantiate the theory that these reserves are inadequate and it may be that this is just another instance of interested propaganda by those who are trying to force on the consumer supplies of inferior coal which he does not want. Possibly, this impression is the result of ignorance and may be based on a lack of genuine knowledge of the subject. It so happens that I am in the position of being able to throw some light on one small section of this controversial subject. One of the companies with which I am connected has held for thirty years or so prospecting licences over the North and South Karanpura coalfields and, during that period, has spent many lakhs of rupees in prospecting, drilling and detailed surveying of the coal reserves. I have referred lately to two official publications which record the reserves in these fields; the first is Dr. Fox in 1934 in his 'Memoir on the Lower Gondwana Coalfields of India,' who quotes 750 million tons of available coal for South Karanpura; the second is Dr. Gee, who records, as recently as 1945, 750 million tons for both North *and* South Karanpura, described as 'all good quality coal.' Against this, our own detailed proving operations to which I have referred have established that there are at least 2,000 million tons in South Karanpura and over 1,000 million tons in North Karanpura, a grand total of 3,000 millions, all classifiable as good quality coal well proved and estimated to a depth not greater than 1,500 feet. Now this is just a single instance within my own personal knowledge, but I hope it will serve to substantiate the Association's opinion that there is no shortage whatever in this country of good quality non-metallurgical coal.

Controls

"Since the close of the year, we have submitted a lengthy memorandum to the Government on the present condition and future prospects of our industry. There is no need for me to recapitulate here all that we have said, but, I should like to make it quite clear that your Committee have been and are very gravely concerned at recent trends. I think we can say, without fear of contradiction, that we are the most controlled industry in India to-day. We have standards statutorily imposed on us by Government relating to wages, housing, pithead baths, creches, bonuses, provident fund, free food, cheap food and a host of other privileges accorded to our labour. Now, as I said to you a year ago, I don't quarrel for a moment with the Government's policy of ensuring fair treatment and equitable wages and conditions of service for the miner in his difficult and hazardous employment. But it is essential that such conditions be within the capacity of the industry to pay. And it should be remembered that not a single wagon-load of our production can be despatched without a sanction from the coal control, nor are we allowed to sell a ton of coal except at the controlled prices laid down by Government. At the same time, increasing burdens are laid on us by the Union and State Governments—in the former case often by Ministries which are not directly responsible for our prosperity—but any attempt to have our controlled selling prices increased to compensate for the added burdens always meets with the strongest opposition. Since the present wage and price structure was imposed in 1947, many additional burdens have fallen on the industry which have substantially increased the cost of production. The most serious of these has been the steep rise in the price of foodgrains which have to be supplied partly free of charge and partly at concessional prices to colliery labour; this has cost the industry crores of rupees a year, which, under the present control, cannot be recovered from either the labour or the coal consumer. New and enhanced standards of housing have been compulsorily introduced for collieries, the financing of which cannot but cause grave concern; a small subsidy is indeed available from the Coal Mines Welfare Fund for approved housing, but the bulk of the heavy cost falls on the colliery owner and, if the Government find progress in re-housing disappointingly slow, we might remind them that coal is one of the few industries in India which accepts the liability for housing the whole of its labour force—there are many which provide not a single house. A big increase has lately been imposed by the Government of Bihar (the biggest coal-producing State in the country) in the local cesses payable by collieries on despatches of coal and which are not recoverable from the consumer. The Union Government are planning to bring the coal industry's provident fund into line with the funds of other industries by basing the employers' contribution on basic wages plus dearness allowance and the cash value of food concessions, instead of on basic wages only as hitherto. Meantime, there is constant pressure by labour for the reopening of the Conciliation Board Award and for fresh wage and other concessions.

"These items which I have enumerated have between them resulted in an ever-rising cost of production and it would be rational to expect that our controlled selling prices would have been steadily increased to compensate for them. This unfortunately has not been the case, but, on the contrary, prices have actually been reduced. The sad story of the nine-anna price cut of 1949 has been told so often that I do not need to repeat it now and it will suffice if I remind you that that emergency measure which was imposed for a limited period of a year is still in force nearly three and a half years later, long after the emergency has passed.

Depletion Allowances

"There are aspects of the economics of mining which are apt to be overlooked. One is that the mining of any mineral is by its very nature a hazardous industry and the risk is always there that the workings may be overwhelmed by fire, flood, collapse or other calamity. Furthermore, when a vein or seam is opened out, it can never be more than a wasting asset, with a life limited by its physical occurrence and drawing inevitably to its close within a certain period of years. It is not like a mill or a factory which, subject to adequate maintenance and renewals, can go on almost indefinitely, buying its raw materials, processing them, and selling its

finished products. To attract money to mining ventures then, there are two essential prerequisites; the first is a better than average return on the sum invested, in order to attract capital to what is essentially a risk venture and the second is some special type of tax concession in the shape of an amortisation allowance, designed to allow a company to write off the value of its property within its working life. Such a system is already in existence in the U.S.A., Australia and other countries of granting what are known as percentage depletion allowances. Briefly, these are a percentage of a mining company's gross receipts or net income which is taken as being equivalent to the exhaustion of its mineral resources and which is treated as being free of tax. In some countries, percentage depletion allowances amount to as much as one-third of a mining company's income and I would strongly commend some such system to the consideration of the Government of India.

A Misconception

"It is sometimes argued that the dividends paid by some coal companies are so high that it cannot possibly be contended that the industry is in any condition but one of extreme prosperity. I am afraid that these arguments are based on very wrong premises indeed. It may well be that a few dividends paid appear high when expressed as a percentage on the *original* capital of the company; but it is often forgotten that some of these companies are a hundred years or so old, they have for many years been ploughing back their profits into the business, instead of wantonly distributing them, and, therefore, the original capital bears no relation whatever to the sums actually employed in the business to-day. We recently made an analysis of the balance-sheets of 51 coal companies with an ordinary paid-up capital of approximately Rs. 8¼ crores. We found that, owing partly to the enormous rise in working costs during recent years, the total working fund was just under Rs. 29½ crores; in other words, the capital needed to finance the activities was well over three times their share capital. As I have indicated, some part of this consists of undistributed profits ploughed back into the industry, but the salient point is that it is quite misleading to think of the dividends in terms of the original paid-up capital of the companies. The correct yard-stick is the total working funds actually employed in the business and, on this basis, the profits of these 51 companies—and I mean the total profits, not merely those distributed to shareholders—amounted to no more than 2½ per cent. of the total working funds.

"A return as low as this cannot but be regarded as uneconomic and I repeat that the future of the industry gives rise to very grave concern indeed and it is my considered opinion that, unless urgent remedial action is taken by the Government—I hope I have made it clear that it is only they who are in a position to do anything—this vital industry is likely to decline rapidly into a state of collapse. What then can be done to improve matters? The first and easiest step is obviously the restoration of the nine-anna price cut. The second step should deal with food; all colliery owners and managers would breathe a sigh of relief, if they could be absolved of the responsibility of feeding their labour, which was only introduced as a war emergency measure. If this be impracticable, it should surely be possible with the improved food position in the country to assure to the industry supplies of cheap indigenous rice, rather than the extremely costly and often unsuitable imported grains which we have been compelled reluctantly to buy in the past. Next, measures should be adopted to ensure that the concessions enjoyed by the labour are actually *earned* by them by dint of work and not just paid out regardless; what I have in mind is that the so-called production bonus (which in fact is an attendance bonus) should be based on annual results, which was the original verdict of the Conciliation Board, instead of being paid quarterly. And, secondly, that the food concessions to which the labour are entitled should be linked to production, thereby abolishing the present inequitable system whereby the labourer becomes entitled to his free food and cheap food just by signing on at the colliery in the morning and quite regardless of the work which he actually does. Lastly, I think that the incidence on cost of production of the additional burdens, to which I have already referred, should be examined with a view to compensating colliery owners with an increased selling price. At the risk of repeating myself, I would say, once again, that early action is imperative, if disaster is to be avoided; many collieries are already running at a loss and that cannot be allowed to continue.

Coal Board

"I made reference a year ago to the lack of any commercial representation on the Coal Board and in the general control and administration by Government of the industry. I repeat that, as long as the bulk of the industry remains in private ownership and not nationalised, it is not only desirable but essential that commercial interests should be associated with the Board. The current policy in regard to conservation, the introduction of coal washing, the extension of sand-stowing, all of these raise a host of economic and business problems with which public servants are not accustomed to deal. The industry had always hoped that there would be commercial representation on the Board, as envisaged by the Mahindra Committee of 1946, and I am very doubtful of the administration working smoothly and efficiently or of its securing the confidence of the industry, unless some such representation is provided. I still regret the passing of the old Coal Mines Stowing Board, in which members of the industry had direct responsibility for the most important administration of sand-stowing, and, while it is satisfactory that our Association has been given two seats on the Stowing Advisory Committee, I would remind you first that this Committee is purely advisory and not executive and, secondly, that, although it is eighteen months since the Stowing Board was abolished, not a single meeting of the Advisory Committee has yet been held.

"I think many of you are aware that, last year the Association celebrated its diamond jubilee, and I feel that the passage of sixty years calls for some special comment. When the Association was first started in 1892, it had thirteen members and the total coal production of India was only four million tons a year. Since then the growth and importance of both the Association and the industry have gone along hand in hand, until to-day we have a membership of 129 companies and the country's total production is 36 million tons. Of this total our members produce 70 per cent. of the output which is raised by non-Government collieries.

A Justifiable Pride

"The Indian Mining Association can be justifiably proud of the position which it holds in this important industry. The aim of our members has always been, and still is, to provide the optimum service to the consumer in the shape of supplies of the coal most suited to his needs and at the lowest price consistent with the proper discharge of our obligations to the labour we employ and a fair and reasonable margin of profit.

"And here I should like to say that the member-collieries of our Association have always been to the fore in voluntarily introducing improved amenities for the labour force besides readily co-operating with Government in attempting to implement any amelioration in conditions which they have thought fit to impose. There are other minor but vocal sections of the industry who make little serious attempt to comply with the accepted standards of employers' obligations, and yet it is these interests who are most insistent in demanding from Government an increased share of transport, or Government orders, or protected quotas, or anything else which they think likely to give them a sheltered market. Before granting them any special concessions of this nature, I suggest that Government should satisfy themselves that these interests have in fact merited special consideration by complying with the Government's accepted standards of employment, housing, quality of despatches and so on. It seems only reasonable that employers who are found defective of these standards should be denied special assistance from Government in other directions.

"I repeat that it is the aim of the Association, as well as of our members, to co-operate with the Government in any measures calculated to improve the lot of the country; and I think it is a tribute to this attitude of ours that the Government have always been ready to listen to us and to ascertain our views on any matter of policy vitally affecting the conduct of the industry. On occasions when we have differed from the Government, we have always told them frankly of our doubts and difficulties; and even when our representations have been overruled it has never been our policy to obstruct; on the contrary, we recognise the importance to the country of the smooth running of her basic industries. In short, I feel that we may congratulate both the Government and ourselves that so strict a control has on the whole worked so harmoniously and I am sure that you, gentlemen, will support me when I declare the wholehearted co-operation of the Association and its members with the Government in its ambitious plans for the development of this great country."

Extending
OUR SERVICES
We have been financing a large volume of India's Imports and Exports. To increase our usefulness to our expanding Clientele interested in Foreign Trade, we have great pleasure in announcing the opening of our

INDIA'S PLACE IN WORLD COTTON ECONOMY

OFFICIAL PUBLICATION GIVES DETAILS

INDIA occupies an important position in the world cotton economy inasmuch as it not only produces a significant proportion of the global output of cotton but also consumes a sizable portion of this output. As a producer, Indian output is exceeded only by the American, and possibly by that of the U.S.S.R., while, as a consumer, its consumption is second only to that of the U.S. The publication, *Indian Cotton Statistics*, issued by the Union Ministry of Food and Agriculture, brings out the salient features of India's cotton economy and its position in the world economy in a series of tabulated data. The third edition of this booklet, which has now been published, brings together in a single compass all available statistical information relating to cotton. Although the data, drawn from a variety of sources, do not all possess, as Mr. S. R. Sen, Economic and Statistical Adviser to the Ministry, points out in his preface, the same degree of accuracy, the data themselves will enable one to appreciate India's large stake in the world cotton economy.

The following table shows the production of cotton in different countries of the world during 1950-51, the figures within brackets showing the average cotton output in 1934-35 to 1938-39:

Cotton Output

(In 000 bales of 478 lbs.)

Mexico 1,156 (318); U.S. 9,877 (12,147); China 2,330 (3,136); India 2,400 (3,400); Iran 130 (157); Korea 93 (171); Pakistan 1,065 (1,331); Turkey 560 (240); Greece 118 (74); U.S.S.R. 3,300 (2,975); Argentina 500 (277); Anglo-Egyptian Sudan 450 (244); Belgian Congo 205 (152); Egypt 1,762 (1,845); French Africa 100 (37); Mozambique 120 (28); Nigeria 85 (37); Tanganyika 42 (46); Uganda 290 (272). World total 27,698 (30,671).

The following table gives the consumption of cotton in the different cotton consuming countries of the world in 1938-39, 1948-49 and 1949-50:

*Mill Consumption of Cotton by Countries**

‡ Less than 500 bales.

India grows a large number of varieties of cotton, though, in trade parlance, these are grouped under some major heads. The following are the chief varieties of cotton grown in India:

Cotton Calendar

Variety	Sowing season	Picking season	Marketing season	Regions in which grown
Dholleras	July to August	January to April	January to August	Ahmedabad, Mehsana and Amreli districts and parts of Saurashtra.
Broach	June to July	January to April	February to July	Broach (excluding Ankleshwar Taluka), Panech Mahals, Baroda and Kaira districts and parts of Saurashtra.
Oomras	June to July	October to January	October to August	Madhya Pradesh, Madhya Bharat, Khandesh, Nasik and Hyderabad State.
Kumpta	August to September	March to May	April to August	Southern parts of Bombay State and Northern districts of Madras.
Dharwar-American.	August to September	February to April	October to July	Dharwar district.
Westerns	August to September	February to April	January to August	Northern part of Madras and Southern part of Hyderabad.
Bengals	April to July	September to January	October to July	Almost the whole of Northern India from West Bengal to the Punjab including Rajasthan.
Karunganni	October to December	April to July	April to December	Madura, Ramnad, Tinnevelly and Coimbatore districts.
Cambodias	September to October	April to July	May to January	Madura, Ramnad, Tinnevelly, Trichirapolly, South Arcot and Salem districts and Irwin Canal Tract of Mysore State.
Tinnevellys.	October to November	March to August	April to December	Madura, Ramnad, Tinnevelly and Coimbatore districts.

Among the different varieties of Indian cotton, Oomras rank quantitatively as the most important single variety of cotton, as the following table shows:

Indian Cotton Styles

(Area in 000's acres; yield in 000's bales of 392 lbs. each)

§ Including Buri.
¶ Below 500 bales.

The chief defect of the Indian cotton economy is the preponderance of short and medium-staple varieties and the relatively small output of long-staple varieties. Thus, in 1950-51 short-staple varieties accounted for 9,58,000 bales, medium-staple varieties for only 557,000 bales.

Yet another defect of the Indian cotton economy is the low per-acre yield of cotton. The following table gives the per-acre yield of cotton in different countries of the world during 1934-35 to 1938-39 and in 1948-49:

Cotton Yield

(lbs. per acre)

Country	Year beginning August 1	
	Average 1934-35 to 1938-39	1948-49
Mexico	150	174*
United States	144	210
China	93*	108*
India	78	61
Iran	132	114
Korea	102	84
Pakistan	177	146
Turkey	126	150
Greece	162	156
U.S.S.R.	192	N.A.
Argentina	114	108
Brazil	108	90
Paraguay	126	126
Peru	294	240
Anglo-Egyptian Sudan	286	204
Belgian Congo	60	96*
Egypt	324	396
French Equatorial Africa	30	N.A.
Mozambique	54	54
Nigeria	60	N.A.
Tanganyika	60	108
Uganda	60	66

* Unofficial figures. N.A.—Not available.

It will be seen from the above table that India's per-acre yield of cotton is one of the lowest in the world. The overall figure of the yield of cotton, however, conceals many bright spots, for there are large tracts in the country, which yield a high output of cotton per-acre, as the following table will show:

Average Yield per acre of Cotton

(In lbs.)

States	Average 1936-37 to 1938-39	1950-51
Assam	171	163
Bihar	70	78

All India	78	83

Generally speaking, India consumes most of the cotton it produces and also some foreign cotton, exporting, in the main, its short-staple varieties. The following table gives the consumption of different varieties of cotton by the Indian mills:

Mill Consumption of Cotton Varieties

('000 bales of 400 lbs. gross or 392 lbs. net)

Year ending 31st July—	Indian	American	Egyptian	Sundries	Total
1938	2,933	55	63	351	3,402
1939	3,036	180	60	358	3,554
1948	3,456	2	177	318	3,953
1949	3,547	8	215	280	4,050

In this connection, it is interesting to note that, yard for yard, *chadars*, among the varieties of cloth turned out by Indian mills, account for the maximum consumption of cotton. The following table shows the consumption per yard of different varieties of cloth manufactured by the Indian mills:

Variety of manufactured products	Quantity of raw cotton used in one yard of cloth
Longcloth (standard quality) 37"×37½"yds.	3.84 oz.
Domestics 35"×40" yds.	4.80 oz.
Chadars 50"×6" yds.	6.0 oz. (one *chadar* 2¼ lbs.)
Dhotis (up to ¼" Nakhi border) 32"×9" yds.	3.11 oz. (one *dhoti* 1¼ lbs.)
Dhotis (Calcutta) 44"×10" yds.	2.7 oz. (one *dhoti* 1½ lbs.)

This rapid review of the Indian cotton economy brings out the fact that this country occupies a prominent place in the world cotton map. There are, however, serious gaps to be filled, such, for instance, as the low per-acre yield of cotton and the relatively small output of superior styles of cotton. These two problems have received, and are receiving, the earnest attention of the cotton administrators in the country. It is to be hoped that their efforts will result in considerable improvement, though any successful effort in this direction should obviously be based on the provision of adequate economic incentives to the Indian cotton farmer.

'dupliphot' has a hundred uses*

Gevaert 'dupliphot' is a very useful apparatus proving its value to-day in several modern offices where reproduction of important documents is a frequent necessity. Easy to operate and maintain 'dupliphot' is a photographic device with which copies of any kind of printed or written document can be taken out on a special kind of sensitised paper within 6 minutes. Photographic reproduction is the most accurate, the cheapest and the quickest – and 'dupliphot' is the best machine yet designed for the purpose.

EXPANSION PLAN FOR POWER ALCOHOL

PRODUCTION TARGET OF 18 MILLION GALLONS SET

AN intricate problem which confronts the Indian sugar industry is the very high cost of production *vis-a-vis* production costs in other sugar-producing countries. In fact, it is this high cost that has been responsible for the low level of consumption. If, therefore, consumption is to be stepped up, every endeavour should be made to reduce the cost of sugar manufacture to a level which suits the pockets of the masses. One of the means of bringing about such reduction, apart from lowering sugarcane prices, is the maximum utilisation of the several by-products of sugar. Of these, molasses are easily the most important, from which could be produced power alcohol and food yeast. There is admittedly an urgent need for developing the power alcohol industry, with a view to utilising the surplus molasses produced by the sugar factories, which are wasted at present. Such utilisation will undoubtedly help reduce the cost of sugar manufacture and meet the requirements of liquid fuel, in which commodity India is not well supplied. It is, therefore, gratifying to note that the Planning Commission has recognised this need, as witness the great importance attached to the expansion of the power alcohol industry in its programmes of industrial development (1951-56).

The expansion plan for the power alcohol industry envisages a rise in the annual rated capacity to 21.12 million gallons (excludes 2.95 million gallons of commercial spirit) by 1955-56, and in the actual production to 18 million gallons (excluding 2 million gallons of commercial spirit), as compared with 12.87 million gallons and 4.72 million gallons, respectively, in 1950-51. The expansion in the rated capacity is to be achieved not only by the installation of 12 new distilleries with an aggregate annual installed capacity of over seven million gallons, but also by full utilisation of the capacity of the existing units. The establishment of new units will be in two stages, namely, 1951-53 and 1953-56, the number that will actually be set up being five and seven, respectively. The Planning Commission attaches special importance to the need for enabling the existing distillers to work to their full capacity. This, it is emphasised, can be achieved in three ways, first, by extending the use of petrol-alcohol mixtures to all the areas adjoining the manufacturing units to the maximum extent possible—high priority being given to the provision of additional mixing depots and storage facilities and distribution arrangements—secondly, by facilitating the transport of molasses from the sugar factories to the distilleries and of power alcohol from the distilleries to the consuming centres, and thirdly, by ensuring proper distribution of power alcohol both within and outside the States. The establishment of the new units envisaged and the expansion programme of the exporting units will together require, it is stated, about Rs. 60 to Rs. 65 lakhs.

The development programme for the power alcohol industry is indicated below:

	1950-51	1955-56
Number of units ...	19	31
Installed capacity (million gallons)—		
Power alcohol	12.87	21.12
Commercial spirit ...	12.65	2.95*
Actual production (million gallons)—		
Power alcohol	4.72	18.00
Commercial spirit ...	3.50	2.00

*Refers to power alcohol distilleries only.

Of the five power alcohol manufacturing units envisaged for the 1950-53 period, four are to be set up in Madras and one in Madhya Bharat. The four units in Madras—at Nellikuppam, Vuyuur, Visakhapatnam and Hospet—will have an aggregate rated capacity of 1.45 million tons per annum. These are expected to come into operation in 1952-53. The total capital investment of the project is estimated at Rs. 20 lakhs. The power alcohol distillery at Jaora in Madhya Bharat State has a rated capacity of 500,000 gallons per annum. The distillery was to have been set up with the financial assistance of the State Government but it is now found necessary for it to be put up entirely by private enterprise.

Simultaneously with the installation of the above distilleries, it is necessary to expedite the work in progress in the matter of extending the use of power alcohol to suitable regions in Uttar Pradesh, the Punjab, and the neighbouring areas. This is of particular importance, because the use of power alcohol has so far been restricted to certain areas only, thanks to the absence of necessary extensive arrangements for blending and for distribution over larger areas. The Planning Commission expects that the arrangements now being made in this direction will be completed in the course of the next few months, so that, with the coming into existence of the additional storage and distribution facilities, more areas in and around Uttar Pradesh, the Punjab, P.E.P.S.U. and Rajasthan would begin to consume larger quantities of power alcohol.

As already stated, seven power alcohol distilleries are proposed to be set up during 1953-56. Four of them, having a combined annual productive capacity of 3.6 million gallons, it is suggested, may be located in Bihar and the remaining three, with an aggregate capacity of 1.5 million gallons, in Bombay, care being taken to locate them either in conjunction with, or in proximity to, the sugar factories. Apart from the fact that power alcohol plants must necessarily be located near petrol depots in order to facilitate mixture and distribution, the actual location of the plants will also have to be considered in the light of the suggestion for the shifting of sugar factories, which have been made in the Plan for the sugar industry.

Some of the power alcohol distilleries situated in areas where supplies of molasses cannot easily be had may have to be shifted to more suitable location. The particular instance which requires to be mentioned here is that of a distillery in P.E.P.S.U. The U.P. Government should examine the possibility of making the requisite amount of molasses available. If it is unable to do so, facilities should be provided for shifting this distillery to a more suitable location. A certain amount of molasses is sold by the U.P. Government to private traders and to other States. The question of utilising such resources for enabling the fuller operation of the existing distilleries in neighbouring areas or for expanding the capacities of some of the distilleries in U.P. to secure an additional production of 1.2 million gallons should be examined in detail. This requires close correlation with the plans for the shifting of sugar factories from areas where cane is not available in sufficient quantities to more suitable places within the States or outside.

With the expansion in the output of power alcohol, as envisaged in the development programme, one naturally expects a corresponding rise in consumption. The present arrangement for the purchase of power alcohol from the distilleries by the individual State Governments and the distribution of the mixture at the same price as neat petrol by the petroleum companies are militating against wider adoption of power alcohol as motor fuel. It is but appropriate that the Planning Commission should have devoted special attention to this question and offered a very valuable solution to the difficulty. In the opinion of the Commission, the Government of India should examine the present arrangement between the distilleries and the State Governments for taking over the product and getting it distributed through petroleum companies. In this connection, the need for the establishment of an all-India agency for acquiring the output of all the distilleries and making necessary arrangements for its distribution in the form of petrol-alcohol mixtures through petroleum companies is stressed. Such, it is felt, will help expand use of the mixture and step up consumption of power alcohol. This, however, is a long-term solution. What is urgently required is, as the Planning Commission has rightly emphasised, some form of encouragement—as, for example, rebate of excise duty on alcohol—to popularise the use of denatured alcohol in trucks, agricultural tractors and other internal combustion engines.

Perhaps the biggest problem confronting the power alcohol industry is the high cost of production. This is due partly to high fuel consumption and partly to the low grade of molasses supplied by a number of sugar factories. In this connection, the Planning Commission rightly points out that, if molasses could be "universally" stored in covered storage tanks and the operation of the distilleries made continuous and carefully regulated, it should be possible to bring down the cost of production.

UNDERGROUND WORK IN COAL MINES

EMPLOYMENT OF YOUNG PERSONS DEPRECATED

THE International Labour Organisation (I.L.O.) will consider, at its general conference to be opened on 4th June next at Geneva, the adoption of a formal recommendation that young persons under 16 should not be employed underground in coal mines. It will be recalled that the I.L.O., at its general conference last year, discussed this question. The delegates at the conference approved a resolution suggesting standards for the employment of young persons in underground coal mining. The proposed recommendation for the ensuing conference has been drafted by the International Labour Office on the basis of the 1952 resolution and the replies received by the I.L.O. member-Governments to a questionnaire issued by the I.L.O. to them.

The proposed recommendation urges the Governments concerned to prohibit, as rapidly as possible in their respective countries, the employment of persons below 16 years of age to work underground in coal mines. It also prohibits persons above the age of 16 but below 18 years from being employed for work underground in coal mines except (a) for purposes of apprenticeship or other systematic vocational training, provided under adequate supervision by competent persons with technical and practical experience of the work; or (b) under conditions determined by a competent authority prescribing the places of work and occupations permitted and the measures of systematic medical supervision to be applied.

The need for the abolition of underground mining work for young boys has been recognised already by a number of countries. The employment, for instance, of children below 18 for underground mining is prohibited in India. The question of prohibition of employment of young persons in underground mining in all those countries where no regulation exists at present, deserves consideration from both the physiological and psychological points of view. The hazards and strains of underground coal mining are too much for the yet developing body to bear. And the overstrain undermines the health of the young workers. Psychologically, it weakens his morale. There is nothing tragic to young workers than the disillusionment caused by these two factors. And when young workers are the most valuable assets of the nation, any sacrifice of their welfare is fraught with dire consequences. After all, the end and aim of human effort is not production alone, but also improvement of human welfare.

COAL STATISTICS FOR JANUARY 1953

During January 1953, as many as 818 collieries and 8 coke plants were in operation in India. On an average, 365,462 persons were employed daily and 9,229,482 man-shifts were worked. The overall percentage of absenteeism was 12.77. The output per man-shift for miners and loaders was 1.06 tons, for all persons employed in underground and open-workings 0.57, and for all persons employed 0.33. As much as 3,110,214 tons of coal were produced and 124,079 tons of soft coke, 182,305 tons of hard coke and 13,659 tons of other kinds of coke were manufactured. Of these, 2,638,564 tons of coal, 126,376 tons of soft coke, 47,182 tons of hard coke and 4,402 tons of other kinds of coke were despatched during the month under review. The coal stocks at the collieries on the last day of the month were reported to be 3,031,244 tons.

MINING IN NEW COAL MINES

Answering an interpolation during question hour in Parliament, the other day, Mr. V. V. Giri, Union Minister for Labour, stated that new coal seams found in North Karanpura, Koraba and Raniganj coalfields had been mapped by the Geological Survey and prospected, but had not yet been exploited. Replying to another question whether, owing to unscientific mining in the major coalfields, there had been premature collapses underground, he said that, during the last ten years, there had been a few premature collapses underground and where they had occurred they were in workings made many years ago. In 1939, certain regulations were introduced to control the dimensions of pillars and galleries and the method of extraction. No premature collapses had occurred in workings made according to these regulations. Stipulations intended to ensure scientific working from the beginning were also made when permission to open new mines were granted.

Coal production during 1952 is expected to be nearly 3,600,000 tons or 22.2 per cent. more than in 1951 based on the latest forecast of a total of 18,900,000 tons of coal for the year. During 1953 coal production is scheduled to rise by 4,600,000 tons, equal to an increase of 24 per cent. This will include a 50 per cent. increase in the mining of coking coal.

CONTROL OVER TEA INDUSTRY

SELECT COMMITTEE'S REPORT ON GOVERNMENT BILL

THE Select Committee, to which the Bill to provide for the control of the tea industry by the Union Government was referred in December, 1952, has since submitted its report. The Minister for Commerce and Industry duly presented this report to the House of the People on 14th February, 1953. Tea planters in India, who have voiced their protest against the provisions of the original Bill, which sought to confer on the Government powers to wield a larger measure of control over the industry than hitherto, have reason to feel disappointed with the Select Committee's report. For the changes made by the Committee in the Bill, instead of seeking to relax the proposed control, are directed to have more effective control over this important industry. The Bill, as amended by the Select Committee, is sure to meet with little opposition in the House as the general principles on which the report is based have the unanimous support of all the parties represented on the Committee. A point to be noted here, however, is that the planters' main criticism of the general principle of the Bill, namely, the need for increased control over the tea industry by the Government, remains still unanswered by the Select Committee's report.

The Select Committee has amended the title of the Bill in order to make the control of the tea industry in some respects to fall in line with the requirements of the International Tea Agreement. Accordingly, the Bill, as amended by the Committee, provides for the Union Government's control over the tea industry in respect of (*a*) the cultivation of tea in India, and (*b*) the export of tea from this country in pursuance of the International Agreement. And for this purpose, provision is also made in the Bill to establish a Tea Board and levy a customs duty on tea exported from India. Further, the original Bill excluded tea waste from the definition of tea, but the Select Committee has so amended it as to conform to the international definition. Accordingly, tea includes all varieties of the product commercially known as tea, including green tea and tea waste.

Constitution of Tea Board

One of the important provisions of the Bill relates to the establishment and constitution of the Tea Board. The Select Committee seems to have approved of the Government's proposal in the Bill to "appoint" members to the Board rather than to give freedom to the various interests enumerated in the Bill to nominate their representatives. But the Committee is of the view that there is no need for the Central Government to be represented on the Board, as the Board will work under the general control and supervision of the Central Government. It also feels, at the same time, that the Board should be apprised of the views of the Central Government before taking any decision. Moreover, it has recommended a provision to be added for enabling any officer deputed by the Central Government to attend the meetings of the Board and take part in its proceedings without the right to vote. This provision has been strongly criticised by planters, because the Government takes power to "appoint" members to represent various interests and thereby deprives the tea growers of the right, as is the case now, to nominate representatives of their choice on the Board.

The Central Government has, under the Bill, power to control the extension of tea cultivation. One of the methods by which it seeks to achieve this object is by restricting the area under tea to the acreage under cultivation on the date of commencement of the Act. Under the proviso to clause 14(3) of the Bill which confers this power, the Government will not grant permission for extension of the area to a tea estate owned by a limited liability company, if the area planted with tea in the estate exceeds three hundred acres, and to an estate owned by an individual proprietor or proprietors, if the area planted with tea exceeds 150 acres. The Select Committee feels that this proviso is unduly restrictive and that the distinction contemplated in that proviso between a limited liability company and an individual proprietor should go. This will, no doubt, be welcomed by the planters. But the same cannot be said of the other recommendation of the Committee, namely, that the rules under the Act should provide that previous approval of the Government should be obtained where the area planted with tea exceeds 500 acres. Because this amounts to discrimination against larger units.

Under this existing law, the proceeds of the tea cess are directly credited to the Tea Board. In the new Bill, however, the proceeds of the customs duty on export of tea will accrue to the general revenues of the Government. The latter is required to pay in each financial year, to the Board, a sum not exceeding the proceeds of such duties collected during the preceding financial year, after deducting the expenses of collection. The Select Committee has felt that such a procedure is inconsistent with the existing legal and constitutional position, and has, accordingly, recommended that the proceeds of customs duties should be credited to the Consolidated Fund of India under the item "Tea Fund." It says that the Central Government may thereafter, from time to time, pay to the Board from and out of such proceeds such sums of money as it may think fit, after deducting the expenses of collection. Tea planters, however, feel that the proceeds should be entirely earmarked for the benefit of the industry, and are opposed to any part of the proceeds being spent otherwise.

Another important provision of the Bill deals with the fixation of prices for sale, whether for internal market or for export. But it has no specific provision for controlling sales. It was left to the Select Committee to take a decision on the question. The Committee has felt that an effective control over the industry can be better exercised by the Government by controlling not only prices but also distribution of tea. The Committee has, accordingly, amended the relevant clause in the Bill, seeking to fix (1) maximum or minimum prices which may be charged by a grower/manufacturer/dealer; (2) maximum quantity which may, in one transaction, be sold to any person; and (3) different prices for different classes of dealers or for growers or manufacturers in different localities. Instead of specifying the price or prices to be charged, the Government may prescribe the manner in which price or prices should be computed. The amendment above also seeks to (1) prohibit the disposal of tea or tea waste except under certain circumstances, (2) direct the sale of the whole or a specified part of the stock of tea or tea waste at such prices and to such persons or class of persons or in such circumstances as specified by the Government; and (3) to regulate by licences, permits or otherwise, the production, storage, transport or distribution of tea or tea waste. It is clear from these restrictions that initiative and enterprise are bound to suffer in tea estates.

AUTOMOBILE INDUSTRY IN INDIA

RECOMMENDATIONS OF PLANNING COMMISSION

THE need for concentration of the production of motor vehicles in a few manufacturing units, continuation of the policy of weighted imports in favour of the manufacturing units, development of ancillary and subsidiary industries, the standardisation of various types of components and a co-ordinated manufacturing programme for motor vehicles is emphasised by the Planning Commission in its report on the automobile industry, which forms part of the programme for the development of 42 industries, it has drawn up. The Planning Commission has also urged the examination of manufacturing programmes of the Hindustan Motors and the Premier Automobiles to ascertain whether they are technically sound and whether their implementation would result in the manufacture of vehicles at a price which would permit of an expanding demand. The Commission has also urged the need for an enquiry into the economics of diesel vehicles and the desirability of taking measures to restrict, regulate or co-ordinate their use with the use of petrol-driven vehicles. It is gratifying to note that several of these recommendations have been included in the terms of reference of the Tariff Commission. The recommendations of the Tariff Commission, we are told, are awaited for chalking out a detailed development programme for the industry.

The significance of these recommendations will be evident when the strategic importance of the industry is realised. Apart from the fact that the industry is vital to the development of road transport, it is rightly regarded as an important defence industry in all countries. But, unfortunately, the industry is still in its infancy in India. It has so far developed on the basis of assembling vehicles from imported components, but is gradually changing over to the manufacture of components and functional parts. There are 12 assembling firms in India. Of them, five have plans to undertake manufacture of components and, finally, complete vehicles. Of these five, however, only two, namely, the Hindustan Motors Ltd. (Calcutta) and the Premier Automobiles Ltd. (Bombay) have made appreciable progress in the direction of the manufacturue of components. The aggregate assembling capacity of the industry is estimated at 70,700 units. Of this total, the assembling capacity of the Hindustan Motors and the Premier Automobiles is sufficient to give an annual output of 18/19,000 and 12,000 automobiles, respectively. Actual production of all assemblers, however, is below capacity. It was 23,576 in 1951-52, as against 16,519 in 1950-51 and 29,183 in 1948-49. The total paid-up capital of the industry (both assembling and manufacturing units) is about Rs. 9.3 crores. Of this, the Hindustan and the Premier Automobiles account for Rs. 7 crores. It is considered that a further investment of the order of Rs. 3 crores is necessary to enable them to complete their programmes of manufacturing an increasing percentage of components within the country. The aggregate labour employed by the industry is about 8,000, of which nearly a third are employed by the Hindustan Motors and the Premier Automobiles.

The main obstacle to the development of the industry is the limited demand for automobiles in the country. This is chiefly due to high price of automobiles. This explains why the Planning Commission wants to know whether the implementation of the manufacturing programmes (present and proposed) of the Hindustan Motors and the Premier Automobiles would result in the manufacture of vehicles at a price which would permit of an expanding demand. The limited size of the Indian market for motor vehicles also explains the need for concentrating production on a few manufacturing units instead of dispersing production capacity among a large number of uneconomic units. It is estimated that the demand for motor cars and vehicles is only about 25,000, excluding the requirements of the Defence Ministry. In view of the limited demand for motor vehicles, the Planning Commission has done well to suggest the reduction in the number of models and makes of vehicles allowed for use in the country. The Commission has further suggested that the State Governments and other principal consumers should be advised to limit their purchases to such models and makes of vehicles as are manufactured by units with approved manufacturing programmes.

The second problem facing the development of the industry is the absence of ancillary industries. In other countries, the automobile manufacturer, as a rule, does not himself produce more than a certain percentage of the components. He obtains his requirements from the ancillary industries. A majority of such producers are small units acting as "feeders" to the automobile industry. In India, the absence of such "feeders" compels the manufacturer either to produce such components in small quantities or to import them. The limited demand for components owing to limited development of the automobile industry and the absence of standardisation, have been a serious obstacle to the growth of ancillary industries. Appropriately enough, the Commission has recommended development of ancillary industries through "suitable measures" and standardisation of various types of components. The development of ancillary industries would, it might be noted, help produce automobiles at a lower cost. The Commission has further observed that the possibilities of either integration or mutual assistance and co-operation of the existing manufacturers and assemblers should be examined with a view to utilising the aggregate capacity to the best advantage and promoting the development of the industry as a whole. It has urged the continuation of the policy of weighted imports in favour of manufactures so that imports of those units which are engaged in assembly work alone are progressively reduced and eliminated. All these point to the need for a co-ordinating manufacturing programme for motor vehicles.

There is, again, another obstacle to the development of the petrol-driven motor vehicle industry, namely, the one which arises from competition from diesel vehicles. Diesel vehicles are cheaper and it is claimed that their maintenance costs are also lower. The Commission has, therefore, recommended that the economies of diesel vehicles and the desirability of taking measures to restrict, regulate or co-ordinate their use with petrol-driven vehicles should be examined.

SELF-ERECTING PILE DRIVING PLANT

An interesting recent innovation in pile driving equipment is a self-erecting, readily transportable pile driving plant developed by a British firm. The outstanding feature of this equipment is that the pile frame need not be dismantled into sections or the winch removed from the frame base for transport from one site to another. The plant has been so designed that it can be moved as a complete unit on a low loading vehicle, the superstructure folding back over the base during transport. Upon arrival on the site, it can be quickly re-erected by power applied to the raking screws from a diesel engine-driven winch, which is part of the complete unit. In this way the 50-ft. frame, which can be raked back to 1 in 3 or forward to 1 in 10, is ready for action within a matter of a few hours after arrival, thereby saving valuable time as well as the cost of labourious assembly. The plant is equipped with a 2½-ton drop hammer and is suitable for piles up to 45 ft. long and 6 tons in weight.

(Concluded from next column)

penalty that might be imposed on the shipowners in cases of pretended jettisoning. Touching on this point, Mr. Buch declared that the deposit of Rs. 100 per vessel, insisted upon, was not too heavy, and pointed out that it was insisted upon since in many cases both the *tindals* and the owners did not turn up during an enquiry.

SAILING VESSELS INDUSTRY

CONCERN OVER RISING COSTS AND DECLINING FREIGHTS

ADDRESSING the members of the Kanara Vessel Owners' Association recently at Mangalore, Mr. C. A. Buch, Officer on Special Duty (Sailing Vessels), Government of India, discussed the various problems facing the sailing vessels industry. The discussion was a sequel to a memorandum submitted to him by the Association. The memorandum referred to the main problems facing the industry, namely, rising cost of operation, declining freight rates and the hardship caused by the dual control by the port and customs authorities over the vessels regarding entry and clearance in minor ports. Besides, it urged the need for the introduction of a scheme of hull insurance sponsored by the State for the industry. It also held that the present deposits insisted upon by the customs authorities in regard to jettisoning was heavy.

With the cost of operation increasing and freight rates decreasing by more than 50 per cent., compared with the war-time period, the sailing vessels transport trade is finding it quite uneconomic to operate. The situation, it is feared, would deteriorate, unless the Government came to the rescue by fixing a minimum freight rate or by reserving certain specified classes of goods for country-craft. As part of assistance, the Association went so far as to make out a case for the supply of coir, sail cloth, nails and other requirements to the vessel owners at concessional rates to reduce the cost of operation. The Association also desired that the present towing and lighting charges should be reduced. Adverting to this question, Mr. Buch pointed out that it was very difficult for the Government to fix the rates of freights as it had done during the last war. For the special conditions that existed during war-time did not prevail now, and any interference with freight rates now would amount to unnecessary interference with the normal trade. The real remedy lay, according to the Special Officer, in the sailing vessels industry organising itself on an all-India basis and regulating its trade through it. This does not mean, he assured, that the Government was shirking its responsibility. If it was found absolutely necessary, the Government, he declared, would not hesitate to interfere with the rates. The Special Officer said that the suggestion to make available to vessel owners coir, sail cloth, etc., at concessional rates would be examined by the Government. He, however, asked them to realise that the coir workers had also to live during these days of high cost of living and hence the high prices for coir were unavoidable to a certain extent. He disclosed further that the Union Government was considering the question of reducing towing and lighting charges and of advising the State Governments in this matter. The Government was also considering the question of reserving certain types of commodities for carriage by sailing vessels in case the vessels were found seaworthy, he added.

Regarding the dual control over vessels in minor ports by the port and customs authorities, the Association represented, as stated already, that it was causing too much hardship to the industry. Speaking on this aspect, Mr. Buch said that barring in major ports, both the functions of port and customs authorities were being exercised by a single office with the exception of the ports in Madras State. He proposed to take up this matter with the Madras Government. The major ports, he stated, were triple-controlled under the Port Trust, the Port Officer and the Customs Officer and revealed that Mangalore, which was expected to become a major port, would shortly become a sub-major port with the constitution of a Port Trust.

Referring to the vessel owners' plea for the introduction of hull insurance sponsored by the State, Mr. Buch said that the Government could not take up hull insurance. He, however, assured that the Government would prescribe standards of sea-worthiness and get the vessels surveyed by Government surveyors, with a view to facilitating private insurance companies covering those vessels.

With regard to jettisoning, the memorandum had pointed out that the present practice of insisting upon large deposits from the vessel owners and *tindals* by the customs authorities caused great inconvenience. It was suggested that a nominal deposit was sufficient since after enquiry the Government could recover the

(Continued in previous column)

RESERVATION SCHEME IN TEXTILE INDUSTRY

NEITHER CONSUMER NOR HANDLOOM WEAVER STANDS TO BENEFIT

(Contributed)

SINCE the Fact-Finding Committee (Handloom and Mills) made its recommendations over a decade ago, public and official interest in the *khadi* and handloom industry has grown considerably. Even apart from sentimental considerations, the industry has a legitimate claim on the State for its rehabilitation. The men and women employed in it are counted in millions and, in the absence of other occupational outlets, it is important that they should be firmly established in their vocation. The Planning Commission has rightly emphasised that the survival of village industries is a national necessity. The Government has, accordingly, adopted two important measures for the development of the handloom industry in India. These are: (1) reservation of certain fields of production for handlooms, and (2) imposition of an additional excise duty of three pies per yard on mill-made cloth, with effect from 15th February, 1953. The new levy is expected to yield an annual revenue of over Rs. 5 crores which will be utilised for the purposes defined in section 4 of the *Khadi* and Other Handloom Industries Development (Additional Excise Duty on Cloth) Bill, 1953. We are concerned here with a discussion of the reservation scheme, which is believed to give a great impetus to handloom production.

The Government seems to have convinced itself that by curtailing mill production through reservation, there will be an increase in handloom output and a wider demand for handloom goods. By a notification, issued on 1st June, 1950, the Government prohibited mills and powerlooms from manufacturing certain varieties of cloth, including *dhotis* with border exceeding 1/4" and *dhotis* with borders having *zari* or *muga* or artificial silk yarn. By another notification, it extended, with effect from 1st July, 1950, the scope of reservation to certain types of *saris*. This reservation, coupled with the unremunerative prices thrown up under the cotton textiles control, resulted in a serious curtailment of production in respect of *dhotis* and *saris*. Thus the output of *dhotis* from April to December, 1949, was of the order of 339,252 bales which worked out to 37,695 bales per month. In the year 1950 (January-December), the total production of *dhotis* dropped to 199,602 bales only, the average per month being 16,633 bales. Early in 1951, the production went down still further, it being 8,390 bales in January and 13,466 bales in February.

The alarming fall in the output of mill *dhotis* set the Government thinking furiously, and, as a result, it directed mills to reserve 50 per cent. of their wide-width looms for the production of *dhotis* and *saris* and at least 30 per cent. thereof for manufacturing *dhotis* only. This order, which was passed in February, 1951, had the desired effect on *dhoti* production which went up to 472,053 bales from March to December, 1951, averaging 47,205 bales per month. This level of production was maintained in 1952, bringing with it a greater availability of *dhotis* for the consumer. Accordingly, the restriction on the reservation of looms was somewhat relaxed in April, 1952, when only 40 per cent. of the wide-width looms were required to be reserved for the production of *dhotis* or *saris* or both.

40 Per Cent. Cut Means Scarcity

Presumably because of this improved situation, the Government considered that no harm would be done to the mill industry by limiting, with effect from 1st December, 1952, the manufacture of *dhotis* to 60 per cent. of the average quantity packed for sale in India per month during the year, April 1951 to March, 1952, which amounted to 596,102 bales. Through the enforcement of a 40 per cent. cut, the mills are thus required to confine their production of *dhotis* to 29,805 bales per month on an average, as against the monthly average of 37,695 bales in the period prior to the shortage experienced by the country in the year 1950, of 47,000 bales in the period immediately after the institution of the loom-reservation scheme, and of 46,000 bales in the year 1952 prior to the introduction of the 40 per cent. cut. In these circumstances, it will not be surprising, if the country reverts to the scarcity period of 1950 when *dhotis* had to be bought by the consumer by sometimes paying a hundred per cent. premium, assuming that the Government will continue to enforce the 40 per cent. cut on the production of *dhotis* by mills.

Apart from the fluid and unpredictable character of the Government's reservation policy, it is not clear who precisely are its beneficiaries. Reservation, in fact, seriously hampers mill production. It unjustly places the mill industry at a great disadvantage. Composite mills, in particular, are handicapped in formulating their production programmes, on a long-term basis. Many of them have, by specialising in the production of *dhotis* over a long period of time established firm markets for their manufactures. A drastic curtailment of production in this line compels them either to keep a number of their wide-width looms idle or to employ them in the manufacture of other varieties. Since it is not economical to keep their looms unemployed, the mills have switched over to other lines of production. Apart from the real problem of securing for these varieties the same popular demand as is enjoyed by *dhotis*, there is the additional risk of all similarly placed mills being forced to concentrate on manufacturing the same sorts. In that case, there will be a glut of these varieties in the market, with the consequent financial embarrassment to the mills. Such frequent changes in the lines of production cannot conduce to an economical or efficient running of the industry.

No Advantage to Handlooms

Perhaps, there would have been some justification for demanding these sacrifices from the mill industry, if they could be proved to bring real benefits to the handloom weaver. There is, however, nothing to show that he stands to gain by the reservation scheme. In spite of the preferential treatment accorded to his industry, it is still far from becoming self-supporting. It is noteworthy that, although it enjoys complete immunity from "competition" in the manufacture of gauze and bandage cloth, it has failed to give a good account of itself. In fact, a little over two years ago, the Textile Commissioner felt constrained to draw the attention of State Governments to the complaints of hospitals that the bandage cloth produced on handlooms was poor in quality, expensive and inadequate to meet their requirements. He went a step further and indicated that, if the situation failed to improve, he might have to assume that the handloom industry was no longer interested in having the production of these varieties reserved for it.

More Realistic Approach

A more realistic approach to the problem of the handloom industry would appear to be frankly to acknowledge its limitations. By its very structure, it is incapable of entering into fields where mass production alone is economical. This is borne out by the fact that, while mills can manufacture about 40 yards per day per loom, the corresponding output of a handloom per day is 9 to 10 yards only. The new excise duty Bill tacitly admits this fact when it says that the *khadi* and handloom industry has "to cater to certain special markets and to individual tastes." The great disparity in the rate of production betwen the handlooms and the looms in mills should be given due weight when assessing the principle underlying the reservation scheme. The Government would like to see the nation adequately clothed, but this goal can be reached only through lower prices and a greater availability of cloth. The reservation scheme is not calculated to promote this end.

It is also necessary to remember that the final arbiters are neither the Government nor the manufacturers, but the consumers, who have, under the pressure of economic necessity, made radical changes in their dress habits. Today the emphasis is on cheapness and simplicity

SIXTEENTH REPORT—DIRECTORS' REPORT FOR THE YEAR ENDED 31st DECEMBER 1952.

To

THE MEMBERS OF DEVKARAN NANJEE BANKING CO., LTD.

1. Your Directors beg to submit herewith the audited Balance Sheet as on 31st December, 1952, and Profit and Loss Account for the year ended 31st December, 1952. The Auditors' Report is also annexed.

2. The bank has, during the year, maintained its progress generally. Two branches at Patan (Gujarat) and Sidhpur (Gujarat) were opened, bringing the total number of our offices to 57 at the end of 1952. The number of our Safe Deposit Vaults remained at eleven, though the capacity of some of them was augmented. In spite of the depression witnessed during the year, the activity of the bank increased. The number of accounts at the end of the year totalled about 76,000, the deposits about Rs. 8.04 crores, and the total working funds about Rs. 9.86 crores.

3. The bank has made a net profit of Rs. 6,14,969-2-2, which, together with Rs. 1,38,593-14-5 brought forward from last year's account amounts to Rs. 7,53,563-0-7. Out of this your Directors have made the following appropriations :—

	Rs.	a.	p.
To Reserve Fund Account under Section 17 of the Banking Companies Act	1,50,000	0	0
To Investment Reserve Account	50,000	0	0
To Bank Premises Depreciation Account	25,000	0	0
To Furniture Depreciation Account	55,178	6	0
To Library Depreciation Account	577	0	0
To Provision for Taxation Account	1,50,000	0	0

and propose to appropriate the balance as under :

	Rs.	a.	p.
To pay Dividend for the year at Rs. 1-12-0 per share (free of income-tax) on 1,00,000 shares	1,75,000	0	0
and to carry forward	1,47,807	10	7
Total	Rs. 7,53,563	0	7

4. During the year, Rajmitra R. S. Mane Patil, C.I.E., and Mr. Harshadrai B. Parekh were appointed additional Directors on the Board. In accordance with Article 95 of the Articles of Association, they cease to hold office as Directors but being eligible offer themselves for re-election. In accordance with Article 100 of the Articles of Association, Mr. Pranlal Devkaran Nanjee, Mr. Pirojsha N. Mehta, Mr. Jayantilal R. Trivedi and Mr. Laxmikant S. Dabholkar, J.P., retire from the Board of Directors by rotation but being eligible offer themselves for re-election.

5. You are requested to appoint Auditors for the ensuing year and to fix their remuneration.

Yours faithfully,
For the Board of Directors,
PRANLAL DEVKARAN NANJEE,
Chairman.

BOMBAY, *5th February*, 1953.

Balance Sheet as at 31st December, 1952.

CAPITAL AND LIABILITIES	Rs.	a.	p.	Rs.	a.	p.

(viii) Maximum total amount of advances, including temporary advances granted during the year to the companies or firms in which the directors of the banking company are interested as directors, partners or managing agents or, in the case of private companies, as members	20,03,928	0	0			
(ix) Due from banking companies	1,83,520	13	6			
Carried forward	Rs.					8,78,11,017 9 1

and no production plan can succeed unless it fully takes into account the predilections of the consumer. It is possible that the handloom industry will be able to put large quantities of *dhotis* in the market, but since its products are not economical, the consumer will avoid buying the expensive hand-woven *dhotis*. In the result, the 40 per cent. gap in the availability of *dhotis* will remain unbridged. Rather than buy the high-priced handloom *dhoti*, the consumer may opt for mulls and convert them into *dhotis*, as he did before the last war. We should not forget that he is no longer prepared to pay inflated prices for his *dhoti* or for any other item of clothing. Should he decide to discard the *dhoti* altogether, as he well might if he has to pay more for it, then such a development will be a serious blow to the handloom industry.

Natural Forces

It is useless to quarrel with these forces, for it is they, and not executive orders, that will ultimately determine the spheres of production. This is not to say that the handloom industry has no future at all, for there will always be an assured market for the goods in which it specialises. The remarks of the Minister for Commerce and Industry on the subject are relevant. In reply to the clamour for the complete reservation of *dhotis* and *saris* for the handloom industry, Mr. Krishnamachari declared in September, 1952: "It seems that consumers all over India want mill cloth which is cheaper. We cannot ignore the consumers' interest, which is the primary one with which we are concerned. We cannot ignore it, particularly at a time when he wants more cloth, and we cannot reject this aspect of the question and accept a narrower view." The Minister went on to say that the consumer could not be forced to purchase handloom cloth which "costs anything up to 25 to 30 per cent. more in price." He recalled that consumer resistance was becoming "very visible" and that it could not be overcome by "transferring the manufacture from one set of people to another, even if that were possible, particularly when by so doing, we put up the cost to the consumer." This is a remarkably candid admission that the reservation policy is not calculated to advance anybody's interests. The consumer is already experiencing the adverse effects of the 40 per cent. cut on the production of *dhotis* in mills. A large-scale hoarding of *dhotis* is understood to be in progress in Calcutta, while elsewhere the prices have gone up.

Mill Industry in State of Flux

The handloom industry certainly deserves every legitimate help, but its prosperity should not be at the expense of the mills which are rendering no small service to it by making over one-third of their total yarn production for hand-weaving. To-day the affairs of the mill industry are in a state of flux. Since the last war it has had no time to stabilise its position. The enormous calls made on its manufacturing capacity during war years have imposed a severe strain upon its plants and machinery, 90 per cent. of which are believed to be more than 25 years old. Its present resources are too meagre to meet replacement costs. Moreover, the partition of India was a severe blow to the industry which lost some 1.6 million bales of cotton as a result of some of the most fertile cotton-growing areas falling within the jurisdiction of Pakistan. This has necessitated the industry to pay heavily, year after year, for imported cotton.

In addition, it lost a vast and assured market through partition. If there had been no division of the country, the areas comprising Pakistan would have absorbed some 960 million yards of cloth on the *per capita* basis of 12 yards per annum. The following figures relating to exports of mill-made cotton piecegoods from India to Pakistan vividly explain the extent of the loss suffered by the industry through partition :

(In million yards)

1948	142.7
1949	38.1
1950	50.4
1951	9.0
1952 (for ten months)	52.9

Surely, nothing will be lost if reservation is abolished at least till the industry is in a position to solve some of its most serious problems. The mills and handlooms have, to quote the Fact-Finding Committee (Handloom and Mills), "a great many common interests to safeguard, and by careful planning, their interests can be made more compatible than they are to-day." The newly appointed Cotton Textile Enquiry Committee, which is now in the midst of its labours, will be rendering an inestimable service to the country's textile industry as a whole, if it succeeds in convincing the Government that, in order to nurse the ancient crafts, symbolised by *khadi* and handloom weaving, it is not at all necessary to hurt the interests of the mill industry.

GUIDING PRINCIPLES OF SOCIAL SECURITY—II

PENSION AND UNEMPLOYMENT SCHEMES OUTLINED

LAST week, we dealt with some of the important I.L.O. recommendations and conventions relating to income security and social assistance in these columns. In this article, the guiding principles and the salient recommendations which have been made by the I.L.O. in respect of pension insurance and unemployment insurance are stated. It is not, of course, possible to give more than a very brief account of these recommendations, for the I.L.O. literature on this subject is too voluminous, too detailed to be even satisfactorily summarised. Nevertheless, some idea of the importance which the I.L.O. rightly attaches to the question of social security can be obtained by a rapid review of the few leading recommendations of this body on the subject.

Pension Insurance

Pension insurance conventions apply only to countries which have ratified them. In these countries, the scheme of pension insurance, it is stated, should provide compulsory old-age insurance for manual and non-manual workers, including apprentices, employed in industrial or commercial undertakings or in the liberal professions, and for outworkers and domestic servants. The convention relating to pension insurance will also apply to agricultural workers in countries in which the Old-age Insurance (Agriculture) Convention is in force. An insured person is entitled to an old-age pension at an age which may be determined by national laws but which, in the case of insurance schemes for employed persons, should not exceed 65. But the members of the I.L.O. are free to make such exceptions from liability to insurance as they deem necessary in respect of (among others):

(a) Workers whose remuneration exceeds a prescribed amount and, where national laws or regulations do not make this exception general in its application, any non-manual worker engaged in occupations which are ordinarily considered as liberal professions and (b) workers who are not paid in money wage.

Although a definite age is prescribed for claiming pensions, it is agreed, according to the 1933 Convention, that an insured person who becomes generally incapacitated and thereby unable to earn an appreciable remuneration should be entitled to an invalidity pension. It is also agreed by the members that the widows and orphans insurance scheme should as a minimum confer pension rights on widows who have not remarried and the children of a deceased insured or pensioned person.

Unemployment

Because unemployment is an evil which persists in all societies to a greater or lesser degree, it is only natural that a comprehensive scheme of social security should take into account this factor. The Unemployment Provision Convention, 1934, has been framed with a view to providing against this evil. This convention states that each member shall maintain a scheme ensuring to all persons habitually employed for wages or salary, other than persons in respect of whom exceptions are made, who are involuntarily unemployed:

(a) benefit, by which is meant a payment related to contributions paid in respect of the beneficiary's employment whether under a compulsory or a voluntary scheme; or (b) an allowance, by which is meant provision being neither benefit nor a grant under the ordinary arrangements for the relief of destitution, but which may be remuneration for employment on relief works organised for this purpose, or (c) a combination of benefit and an allowance.

Subject to this scheme ensuring to all persons habitually employed for wages or salary, other than persons in respect of whom exceptions are made, the benefit or allowance required by the scheme may be:

(a) A compulsory insurance scheme; (b) a voluntary insurance scheme; (c) a combination of compulsory and voluntary insurance schemes; or (d) any of the above alternative combined with a complementary assistance scheme.

The conditions under which unemployed persons shall pass from benefit to allowances, if the occasion arises, shall be determined by national laws or regulations.

Exceptions

Any member may in its national laws or regulations make such exceptions to the requirements of the scheme as it deems necessary in respect of:

(a) persons employed in domestic service; (b) homeworkers; (c) workers whose employment is of a permanent character in the service of the Government, a local authority or a public utility undertaking; (d) non-manual workers whose earnings are considered by the competent authority to be sufficiently high for them to ensure their own protection against the risk of unemployment; (e) workers whose employment is of a seasonal character, if the season is normally of less than six months' duration and they are not ordinarily employed during the remainder of the year in other employment covered by this section; (f) young workers under a prescribed age; (g) workers who exceed a prescribed age and are in receipt of a retiring or old-age pension; (h) persons engaged only occasionally or subsidiarily in employment covered by this section; (i) members of the employer's family; and (j) exceptional classes of workers in whose cases there are special features which make it unnecessary or impracticable to apply to them the provisions of this section.

This section does not apply to seamen, seafishermen, or agricultural workers as these categories may be defined by national laws or regulations.

Disqualifications

Since unemployment benefit should be given only to those who suffer from involuntary unemployment, the Committee rightly asserts:

A claimant may be disqualified for the receipt of benefit or an allowance for an appropriate period if he refuses an offer of suitable employment. Employment shall not be deemed to be suitable:

(a) if acceptance of it would involve residence in a district in which suitable accommodation is not available;

(b) if the rate of wages offered is lower, or the other conditions of employment are less favourable: (i) where the employment offered is employment in the claimant's usual occupation and in the district where he was last ordinarily employed, than those which he might reasonably have expected to obtain, having regard to those which he habitually obtained in his usual occupation in that district or would have obtained if he had continued to be so employed; (ii) in all other cases, than the standard generally observed at the time in the occupation and district in which the employment is offered;

(c) if the situation offered is vacant in consequence of a stoppage of work due to a trade dispute;

(d) if, for any other reason, having regard to all the considerations involved including the personal circumstances of the claimant, its refusal by the claimant is not unreasonable.

A claimant may also be disqualified for the receipt of benefit or an allowance for an appropriate period:

(a) if he has lost his employment as a direct result of a stoppage of work due to a trade dispute;

(b) if he has lost his employment through his own misconduct or has left it voluntarily without just cause;

(c) if he has tried to obtain fraudulently any benefit or allowance; or

(d) if he fails to comply with the instructions of a public employment exchange or other competent authority with regard to applying for employment, or if it is proved by the competent authority that he has failed or neglected to avail himself of a reasonable opportunity of suitable employment.

A claimant who, on leaving his employment, has received from his employer in virtue of his contract of service compensation for and substantially equal to his loss of earnings for a certain period may be disqualified for the duration of that period for the receipt of benefit or of an allowance. A discharge allowance provided for by national laws or regulations, it is laid down, should not be deemed to be such compensation.

LIGNITE MINING IN SOUTH ARCOT

PILOT PROJECT INAUGURATED

THE inauguration of the pilot lignite project at Neiville by Dr. U. S. Krishna Rao, Minister for Industries, Madras State, last week, marked a significant step towards the collection of certain data which are essential for planning the commercial exploitation of lignite bed in South Arcot. If the project were to prove successful, it would herald an era of industrial prosperity to South India. For the development of industries in South India is handicapped by the lack of sufficient quantities of fuel at economic prices. It is estimated that the present deficit in the supply of coal to industries in South India is to the tune of a million tons a year. The price of coal in South India is exorbitantly high owing to high transport costs from the Bengal and Bihar coalfields. The coal transported from these coalfields costs as much as Rs. 70 per ton at Madras, as against Rs. 17-8 per ton at pit-heads. It is stated that lignite mined in South Arcot would cost only Rs. 25 per ton. The commercial exploitation of lignite would not only reduce the heavy strain on transport but conform to the plan for regionalisation of coal supply. Water released during mining lignite would be available for agricultural purposes. Investigations have revealed that lignite deposits in South Arcot are sandwiched between two water-bearing beds.

The project, estimated to cost about Rs. 79 lakhs, is the culmination of a series of investigations extending over a period of 10 years. It it true that the existence of lignite deposits in South Arcot first came to notice as early as in 1937 in the course of boring artesian wells in South Arcot. But nothing worth mentioning was done to explore the possibilities of extracting commercially the potential energy lying under the earth for ages, until 1943, when acute shortage of fuel compelled prospecting operations by the Geological Survey of India. Since 1947, the Madras State has been taking an active interest in the project. The project is scheduled to be completed before the end of the current year. The regular mining of lignite on a commercial scale may take three to five years thereafter, as special types of large-sized excavators have to be manufactured to suit the conditions found during the experimental quarrying project. For the pilot project just inaugurated the Government of India is furnishing most of the excavating machinery from its railway collieries at Bokharo.

Lignite is soft and woody in character and loses moisture on airing. A week's air drying reduces the moisture content to about 20 per cent. and this finally stabilises at about 15 per cent. Investigations so far have revealed the existence of 2,000 million tons of good quality lignite in an area of approximately 100 sq. miles. Lignite mined during the investigations has disclosed the following approximate composition: Moisture 40 per cent., volatile 35 per cent., fixed carbon 21 per cent., ash 3 per cent., sulphur 1 per cent., heat value 5,000 calories and phosphorus traces.

Lignite when quarried can, in the first place, be substituted for coal, with the best varieties of which it compares favourably. It is anticipated that in the direct run-off-the-mine state, it can be used in industrial boilers, glass industry, nitrate industry, cement industry and for brick burning. In boilers, it can be used for the generation of power. In pulverised form, lignite can be used for fuel firing boilers, mills firing boilers and in gas turbines. In briquetted form it can be used in industrial boilers and for domestic purposes. As carbonised briquettes, lignite can also be used in blast furnaces for smelting iron ore. An experiment was conducted by Lurgi in Germany to prepare metallurgical coke by mixture of lignite with low grade iron ore. The report was very favourable. Among other uses of lignite, it may be mentioned that by suitable treatment, the phenolic body can yield plastics. By carbonisation and hydrogenation, motor fuels and other light and heavy oils can be produced. By oxidisation, various acids can be obtained. The tar obtained yields countless by-products. The montan wax is capable of many uses. The clay that is found above the lignite in South Arcot is found suitable for ceramics, firebricks, etc., and provided a market can be found, it is expected to cover the greater part of the cost of running the lignite project. The water, the clay and the lignite, which are the subject of operations at South Arcot are, therefore, all valuable assets of the region.

While on this subject, it may be pointed out that fine lignite does not tend to bind together on the firebars and large quantities readily fall through them unburnt. The high volatile nature of lignite renders controlled combustion more difficult in the combustion space normally available. The high percentage of sulphur in some of the lignite deposits is liable to cause corrosion of furnace installations. These, together with many other factors, make special designing of combustion appliances necessary. As lignites generally oxidise more rapidly than coal when exposed to air, it causes heating of the exposed parts of seams, thereby resulting in spontaneous combustion. Especially in hot climates, lignite has a tendency to get hot when stacked or in transit. Special measures must, therefore, be taken to avoid fires in stacks or in railway wagons. For the same heat value, larger quantities of lignite than high grade coals are required. To minimise transport costs, it is advisable to build power generating stations as close to the mines as possible.

DIAMOND MINES IN ANDHRA DISTRICTS

Diamonds appear to be sparsely distributed in the alluvium and conglomerates in some places in Cuddapah, Guntur, Bellary, Godavari, Krishna, Kurnool and Anantapur districts. In Kurnool, certain diamond bearing conglomerates were recently recorded, but its potentialities could be determined only by detailed prospecting, he said. According to geological records, Kollur in Guntur district was a famous diamond mining centre in India in the 16th and 17th centuries. Over 60,000 persons were working on diamond-mining at Kollur in the year 1645, according to the well-known geologist, M. Tarenuier. These mines were then situated on the right bank of the Krishna river between the river and the range of high mountains. Pits were dug from 12 to 14 feet deep at these places but quarrying was not carried below the level of sub-soil water. The great Moghul diamond, the largest known Indian stone, presented by Mir Jumla to the Emperor Shah Jehan in 1656 according to these records, was said to have been found in 1650 in the alluvial workings on the banks of the Krishna river at Kollur. This diamond in its rough state, weighed 900 *ratis*, or 787½ carats but in the process of cutting, it was reduced to 280 carats. After certain portions of it had been lost by utilation, it was removed to England in 1849 and cut to form the present "Kohinoor", weighing 106 carats. This diamond mining centre, gradually dwindled into inactivity by the year 1677 owing to exhaustion of surface yield. In Atmalavaram, another ancient diamond mining centre, deserted pits are still in evidence.

GYPSUM RESOURCES OF INDIA

The reserves of gypsum in the more important deposits of India that have been examined recently come to over 74 million tons. This total is contributed by 50,903,000 tons in Rajasthan; 16,300,000 tons in Madras; 4,466,000 tons in Saurashtra; 2,071,000 tons in Cutch; 383,000 tons in Himachal Pradesh and 206,000 tons in Uttar Pradesh. The best resources in India lie in Rajasthan, Madras and Saurashtra. Deposits are also known to occur in Kashmir, Central India, Western India and Bhutan.

To help meet the demand for more power, the world's largest turbine plant was completed in 1949 at Schenectady at a cost of about 15 crores of Rupees. This plant is producing turbine-generators ranging in size from 20,000 kilowatts to 200,000 kilowatts, and has an annual capacity of over 4,000,000 kilowatts. The plant covers 20 acres, with 1,000,000 sq. ft. of floor space and employs 5,000 workers.

In 1886 in a small shop at Schenectady near the Mohawk River General Electric had a modest beginning. Today the Schenectady Works cover more than 600 acres with 240 buildings and the production facilities of General Electric consist of 122 plants in the United States containing 57,300,000 sq. ft. of floor space and a total staff of 210,000 workers.

General Electric's products, which are distributed all over the world, have done much to lighten the burden of man and improve his standard of living. G-E's unlimited resources, skill and research have been used and are available to India for the development of her natural resources.

This is G-E's 50th Anniversary of Service in India

FERTILISER INDUSTRY IN INDIA

FURTHER EXPANSION OF SINDRI ENVISAGED

IN the context of the growing need for augmenting agricultural production in India, expansion of the fertiliser industry assumes special significance. For, for maintaining soil fertility and preventing soil erosion, application of adequate quantities of synthetic fertilisers, in addition to organic manures, is essential. The principal inorganic fertiliser constituents are nitrogen, phosphorus and potash. While the benefits of utilisation of nitrogen—in the form of ammonium sulphate—are sufficiently known in the country, as indicated by continued rise in the demand, the consumption of phosphatic fertilisers—the more important of the two for preventing soil erosion—is still very small. Potash fertilisers are generally applied with nitrogenous and phosphatic fertilisers and are mainly confined to tobacco, coconut, sugarcane and fruit trees. It is in the light of these considerations that the Planning Commission has drawn up the five-year expansion plan for the fertiliser industry. The development of the fertiliser industry is dealt with in three sections relating, respectively, to nitrogenous, phosphatic and potash industries.

The programme for the nitrogenous fertilisers sector is on the following lines:

	1950-51	1955-56
Number of factories	6	7
	Tons	*Tons*
Annual rated capacity	78,670	481,270
Actual production	46,304	450,000
Estimated consumption	250,000	600,000

It is thus seen that the target of production is placed at 450,000 tons for 1955-56, as against 46,304 tons produced in 1950-51. With consumption estimated at 600,000 tons at the end of the Plan period, there would be a gap of about 150,000 tons which would have to be made good by imports. If, however, the scheme for the expansion of fertiliser production at Sindri, now taken up under the T.C.A. Programme, is completed before the end of the Plan period, the need for imports will be considerably reduced. This scheme, which is estimated to cost Rs. 8.55 crores, envisages production of 100 tons of urea and 110 tons of ammonium nitrate per day.

A sum of Rs. 9.03 crores has been provided for the Sindri Fertiliser Factory during the period of the Plan. A coke-oven plant, with a daily production capacity of 600 tons, is recommended to be put up at the Factory at a cost of Rs. 2.35 crores. When the Sindri Factory goes into full production, calcium carbonate sludge equivalent to 1,000 tons per day will be produced and will be utilised through the establishment, in the private sector, of a cement plant at a cost of about Rs. 2 crores. Mysore Chemicals and Fertilisers Ltd. has a project for the increase in the production of ammonium sulphate from 6,600 tons to 13,200 tons per annum and F.A.C.T. Ltd. (Fertilisers and Chemicals, Travancore Ltd.) has a plan to increase the production of nitrogenous fertilisers by 46,000 tons per annum. Part of this output is to be in the form of ammonium chloride by making use of chlorine and hydrogen which will become available from the caustic soda plant of the Travancore Mettur Chemicals Ltd. These projects are together expected to cost Rs. 1.25 crores.

The expansion plan for nitrogenous fertilisers entails use of a considerably larger quantity of gypsum. In view of the limited resources of gypsum and also of the competing demands from cement and sulphuric acid industries, the Planning Commission has done well to lay special stress on the need for ensuring, before expanding the ammonium sulphate capacity, the present requirements of the Sindri Factory in full, and husbanding carefully the limited resources of gypsum till geological prospecting proves the occurrence of large deposits of gypsum or pyrites or alternative methods are developed for producing ammonium sulphate from other sulphur compounds available in the country. Since nitrogenous fertilisers, other than ammonium sulphate, are proposed to be introduced in the country, early investigation, it is suggested, should be undertaken by the Indian Council of Agricultural Research for collecting comparative data regarding the efficiency of different nitrogenous fertilisers, such as ammonium nitrate, nitro prills and nitro-chalk, ammonium chloride, etc., under different soil conditions and for different crops. The feasibility of manufacturing these alternatives at suitable places in the country, it is further suggested, should be investigated.

The other recommendations made by the Planning Commission are: (1) The Ministry of Agriculture should take in hand the question of the full utilisation of the larger production of ammonium sulphate by encouraging the use of such fertilisers in connection with the Grow-more-food schemes and demonstration in private and Government farms; (2) the industry should be given adequate facilities to maintain full production and bring down costs; (3) the National Chemical Laboratory should investigate the development of processes for utilising, if possible, indigenous raw materials, such as magnesium sulphate and sodium sulphate, for the manufacture of ammonium sulphate; and (4) the Geological Survey of India should undertake detailed prospecting and estimation of available resources of gypsum and pyrites in different parts of the country.

The programme of development for the phosphatic fertilisers sector is indicated below:

	1950-51	1955-56
Number of factories	14	17
	Tons	*Tons*
Annual rated capacity	123,460	209,355
Actual production	55,089	180,000
Consumption	58,400	200,000

The projects of expansion under implementation and the new schemes envisaged will raise the rated capacity of the phosphatic fertilisers sector to 209,355 tons and actual production to 180,000 tons. The extent to which the implementation of the projects will succeed, however, depends on availability of adequate supplies of sulphur at reasonable price. The two pressing problems of the super-phosphate industry are shortage of sulphur and high cost of production.

The estimated annual requirements of potash fertilisers—on the basis of using them only for the most essential crops—is about 37,500 tons. As the demand may increase gradually, it is recommended, that efforts should be made to encourage the bigger salt manufacturers to put up by-product recovery plants and make the required quantities of potassium chloride available for fertiliser and other purposes. The State Governments of Bihar, Uttar Pradesh, Rajasthan and P.E.P.S.U. should take the necessary steps to organise, on a co-operative basis, cottage-scale manufacture of potassium nitrate, so as to increase output and reduce cost. Suggestions have also been made to recover potassium salts from molasses, as well as distillery slops and flue gases of cement furnaces.

The expansion schemes above are certainly welcome. For, in the long run, they make the country self-sufficient in inorganic fertilisers and save foreign exchange. However, it must be mentioned here that the schemes will not bring much benefit, until they aim at producing fertilisers at relatively lower costs which render cultivation of crops a remunerative occupation. For the fertilisers now being manufactured at Sindri are considered to be very costly at present, as pointed out in *Commerce* dated 14th February last. Besides, those in charge of the Sindri Factory seem to have paid no attention to the organisation of proper distribution agencies for the sale of the fertilisers. As the present system is defective, it is also necessary to plan for marketing the fertilisers on efficient lines.

IMPORT POLICY FURTHER LIBERALISED

The Government of India's decision to extend the token import quota and to liberalise the import of a large number of items during the current half-year, January-July, 1953, is certainly to be welcomed. These changes in import policy, effected in the light of the taxation proposals contained in the Finance Minister's budget speech, have the twofold objective of stimulating standardisation of quality in the production of similar goods within the country and of helping to keep the rise in prices under check, besides improving the revenue yields from import duties to the Exchequer. It is emphasised, at the same time, that such changes as have now been made, as also those contained in the Red Book, will not adversely affect the development of Indian industries.

About 51 items are affected by the changes in the import policy. While the quotas are invariably increased, there are cases in which they have been doubled. No licences have, however, been granted in one or two items, as in the case of soda ash (light) and certain types of chaff cutters.

The import quotas for biscuits and cakes have been increased from 5 per cent. to 15 per cent., and those for fruit juices, squashes, cordials, canned vegetables and canned fruits from 20 to 30 per cent. The quota for toilet requisites has been doubled. In addition, the existing restrictions of import of certain categories of toilet requisites have been removed. Perfumes have been allotted a quota of 10 per cent., while old newspapers, the import of which has hitherto been banned, will now be licensed at 30 per cent. The quota for lead pencils is raised from 20 to 30 per cent., but the value limit is retained at Rs. 16 per gross.

A 10 per cent. quota is given for imports of cotton and silk piecegoods, socks and stockings, boots and shoes, parasols and umbrellas, and buttons other than metal. Velvets and velveteens have an increased quota from 20 to 30 per cent., while a 10 per cent. quota is permitted for sateens other than italians of sateen weave and embroidered allovers. China and porcelain of all sorts, not otherwise specified, are permitted to be imported up to 20 per cent. without any restriction, whereas, formerly, they had only a 10 per cent. quota, and sanitaryware will get from 50 to 75 per cent. In the latter case, it is specified that licences will not be valid for certain types. The quotas for feeding bottles and vacuum flasks are doubled from 25 to 50 per cent. and 15 to 30 per cent., respectively. The quota for patent and proprietary medicines is on the same conditions as are contained in the Red Book.

Under the import policy for caustic soda, established importers will be given a quota of 10 per cent., while actual users will be granted licence for half of their certified six-monthly requirements only. Actual users will also be given licences for their full six-monthly requirements of rayon-grade caustic soda.

No licences will be granted for the import of soda ash (light). Applications for the import of heavy (natural) soda ash from the soft currency areas will, however, be considered *ad hoc*. Licences for lithopone will be granted *ad hoc* to actual users only, after considering the quantity of stocks and whether the actual user is using indigenous titanium dioxide. No licences will be given to established importers or newcomers.

Parts of power-driven agricultural machinery, previously on the O.G.L. from soft currency areas upto 31st December, 1952, have been given a 15 per cent. quota. No quotas have been given for chaff cutters other than power-driven and for sugarcane crushers. Applications for special types of ploughs and ploughshares and cultivators, which are not being manufactured in India, will be considered *ad hoc* by the Chief Controller of Imports. There is a 10 per cent. general quota for sprayers and spare parts and for dusters and parts. The soft currency quotas are 33⅓ per cent. for sprayers and parts and 25 per cent. for dusters and parts. For chaff cutter knives, the quota is 100 per cent. (soft). For manual or animal-driven agricultural machinery and parts not otherwise specified the quota is 100 per cent. (general) and 100 per cent. (for soft currency areas).

FUMIGATION OF PEPPER BEFORE EXPORT

The Government of India is reported to have under its active consideration a scheme for fumigation of pepper before export. This is a sequel to the series of complaints made by importers in the U.S., the chief customer for India's pepper, that the consignments of Indian pepper contain live and dead insects, rodent excreta, etc. Consequently, the U.S. Food Administration has been condemning, every year, numerous shipments of pepper from India. As an immediate remedy against infestation, the Government of India is, as already stated, considering a scheme for providing facilities for fumigation of pepper before export. The salient features of the scheme are as follows:

The cost of setting up plants capable of fumigating about 4,000 tons annually would be between Rs. 20,000 and Rs. 30,000. The running expenses would be about Rs. 25,000 per annum and the plant would have a normal life of about five years. Ordinarily, the trade should, in its own interest, put up the money for these plants, but, since it is unwilling to do so, it is suggested that facilities may be organised on a co-operative basis. The exporters and merchants are, therefore, asked to consider the question of setting up fumigation plants at the Ports of Cochin, Alleppey and Calicut on a co-operative basis. If they are not willing to do even this, the only alternative is to set up fumigation plants as State enterprise and recover the entire expenditure, including the initial cost, from exporters in the shape of fumigation fee. In the event of exporters not agreeing to start co-operative fumigation, the State Government may install these plants at Cochin, Alleppey, and Calicut and reimburse themselves by a suitable levy and on each bag that is exported.

Inasmuch as pepper is a valuable earner of foreign exchange—the total value of exports has been of the order of more than Rs. 20 crores per annum—it is but appropriate that the Government of India should have focussed attention on improving the export trade in pepper. "Pepper," to quote the Government, "earns U.S. dollars and the trade cannot be allowed to languish, on account of infestation of berries for lack of care and attention."

The pepper exporters no doubt appreciate the Government's anxiety to improve the pepper export trade. But they feel that the circumstances that now exist do not favour installation of costly equipment for fumigation. Thus, in the course of a communication addressed to the Government of India, the All-India Pepper Exporters' Conference Standing Committee has drawn attention to the lack of adequate reliable data relating to questions like the use of chemicals, temperature conditions, and effect of fumigation on the flavour of pepper and its volatile oil content. In the opinion of the Committee, what is urgently required is employment of mechanical methods for drying pepper as a measure of moisture control.

INDIAN PAINT INDUSTRY

A pressing problem confronting the Indian paint industry is said to be the anomalous nature of the sales tax levy. Thus, while the State Governments demand tax on paints sold to the Centre, the latter repudiates the claim, with the result that the industry has been made to bear the tax itself. Mr. P. C. Chanda, President of the Indian Paint Manufacturers' Association, was, therefore, perfectly right, when, in the course of his address at the eleventh annual general meeting of the Association held at Calcutta last week, he asked: "Should not the dispute between the Central and State Government over the issue of sales tax be settled once for all, thereby preventing the industry being victimised?" He was also right when he remarked that, till the issue was settled, the State Governments should not insist on payment of sales tax by the industry.

Mr. Chanda referred in his address to another grievance, namely, the method of purchase of paints by the Government of India, in that it discriminates between the indigenous concerns and foreign-owned concerns manufacturing paints. In this context, he suggested that the Government of India should pool its requirements of paints, varnishes, etc., and place orders for the entire quantity with the indigenous industry, taking into account the latter's non-Government business. This suggestion is, however, difficult to accept, in that it restricts the freedom of the Government to buy the quality product it wants. Besides, one cannot expect the Government to purchase whatever paint is offered to it irrespective of quality. This is especially so when the quality of paints manufactured by some of the factories is known to be very much below the standard and does not compare favourably with either the imported products or those produced by the more efficient factories in the country, including the members of the Association. Moreover, such a pooling arrangement has a tendency to take away from the factories the incentive to improve quality.

Mr. Chanda would have done well if he had given some idea of the statistical position of the Indian paint industry, in the spheres of production and consumption, raw material supply, and the like, if only to stimulate public interest in the affairs of the industry. He would have also done well if he had indicated the possible lines on which the paint industry could be expanded. Only Mr. Chanda expressed regret at the fact that paints had not found any place in the Five-year Plan. Nevertheless, he appealed to his fellow paint producers to strive hard and see to it that "every drop of paint which will be required for nation-building is made and supplied by the country's nationals."

DEVELOPMENT COUNCILS

Two Development Councils for the heavy chemicals (acids and fertilisers) and the internal combustion engines and power-driven pumps industries, respectively, have been set up by the Government of India. The constitution of these Councils is in accordance with the Industries (Development and Regulation) Act, 1951, due representation being given to all the interests, namely, industrialists, labour, consumers and technical experts. As recommended by the Central Advisory Council for Industries at the meeting held in May last, the Development Councils have, for the present, been assigned seven functions and these are: (1) recommending targets for production, co-ordinating production programmes and reviewing progress from time to time; (2) suggesting norms of efficiency, with a view to eliminating waste, obtaining maximum production, improving quality and reducing costs; (3) recommending measures for securing fuller utilisation of installed capacity and for improving the working of the industry, particularly of the less efficient units; (4) promoting arrangements for better marketing and helping in the devising of a system of distribution and sale of the produce of the industry which would be satisfactory to the consumer; (5) promoting standardisation of products; (6) promoting or undertaking the collection and formulation of statistics; and (7) promoting the adoption of measures for increasing the productivity of labour, including measures for securing safer and better working conditions and the provision and improvement of amenities and incentives for workers.

The Heavy Chemicals (Acids and Fertilisers) Development Council consists of 12 members, with Dr. M. D. Parekh as Chairman. The members are Mr. V. Seshasayee, Mr. L. Gupta, Lala Charat Ram, Mr. S. G. Davis, Dr. I. H. Grimm, Mr. N. Adhikari, Dr. L. A. Bhatt, Mr. R. S. Mishra, Mr. Manohar B Bandewdekar and Mr. Mahendra Nath Barua. One more member is yet to be appointed.

The Development Council for Internal Combustion Engines and Power-driven Pumps has as its Chairman Mr. G. R. Damodaran and consists, besides, of 12 members. They are Messrs. S. L. Kirloskar, A. J. Lund, L. P. Shah, N. B. Amin, G. Parsad, Michael John, Pitamchand Agarwal, Vishwanath Rai and M. S. Patel, and Dr. H. A. Havemann. Two other members representing the interests of consumers are to be appointed later.

The **TEXMACO** Automatic Loom ensures weaving of perfect and faultless cloth and the various motions are specially designed and simplified so that Indian labour can operate these looms without any difficulty.

The foundry, the designing section and the machine shop are manned by expert and experienced European technicians and Engineers.

EMPLOYMENT OF WOMEN IN ASIA

PROTECTION AGAINST EXPLOITATION EMPHASISED

PROTECTION of women employed in agriculture, industry and trade in Asian countries from exploitation has come to assume growing importance for some years now. The protection of women from exploitation needs special attention, because they are physiologically and psychologically not suited to certain types of work, for instance, employment in heavy and unskilled work. Again, there is the question of maternity. But it is feared that, unlike in Western countries, any enforcement of legislation designed to protect women might have the undesirable effect of reducing the opportunities for women's employment. The employment of women is highly practised in Asia because of the comparatively lower wages paid to them as compared to men.

The protection of women from exploitation in Asia has been engaging the attention of the International Labour Organisation for a sufficiently long time now. It will be recalled that as far back as 1950, the Asian Regional Conference of the I.L.O., which met at Nuwara Eliya (Ceylon), adopted a resolution requesting the I.L.O. to undertake a detailed study of the problem of the undesirable effects which enforcement of legislation for the protection of women workers might have upon the employment possibilities for women and the manner in which this problem was being solved in the industrially advanced countries. The I.L.O. recently submitted a Report which makes a preliminary study of the general trends in women's employment in Asia. This Report is expected to help a further detailed study of the problem of protecting women from exploitation.

A brief review of the general trend of employment of women in Asian countries as depicted by the Report shows that the great majority of women is engaged in agriculture either as wage earners or unpaid family workers. Women constitute a large proportion of the labour power employed on plantations. A relatively high proportion of women is engaged also in handicrafts. Although the proportion of women in the total labour force may sometimes appear low, employment of women as wage earners or as unpaid family workers is widespread. The participation of women in economic activity is directly related to the economic needs of the family. Accurate statistics, however, are not available, but rough estimates of the I.L.O. statistics for 10 important countries in Asia show that the economically active population of women constitutes, on an average, about 27 per cent., as against 50 per cent. males.

Parallel with the progressive industrialisation of the Asian countries, the employment of women is increasing both in actual numbers and relatively in non-agricultural activities. The preliminary study discloses that the rate of increase, however, varies from country to country. It reveals that the employment opportunities for women are tending to widen, especially in industry and trade. But the disquieting feature is the employment of a large number of women in heavy and unskilled work, despite the fact that women are unsuited to that type.

The International Labour Organisation is expected to devote greater attention to the problems relating to employment of women labour in Asian countries in the days to come. Briefly analysed, the question facing the Asian countries is: how to promote rational utilisation of female labour, especially when vast masses of unemployed and underemployed male population await employment? But without widening opportunities for women for gainful employment, it is difficult to raise the standard of living of the family. Also there is the need to protect the health of women not only in their interest but also in the interest of the national health as a whole. The I.L.O. Report referred to above considers that the employment of women should be studied through three essential standpoints: (1) Development of women's vocational qualifications and earning capacity; (2) distribution of female labour on more rational efficient lines; and (3) improvement of working conditions for women.

The improvement of women's working conditions involves, invariably, the adoption of legislation concerning health and protection as well as better utilisation and distribution of female labour. Where the study shows that, in particular cases, legislation might have undesirable consequences in this respect, it would seem that a search should be made for solutions which would protect women's health and economic interest and also promote their employment in conditions which would conform both to national interest and to the interest of the employer concerned.

India has not been slow in recognising the need to protect women from exploitation. A number of measures has been adopted to ameliorate the working conditions of women in India. The chief of them relate to prohibition of underground work for women in mines, maternity benefits in the various States, prohibition of night work in tea gardens, etc. It is true that the measures so far adopted do not as yet stand favourable comparison with the measures in the highly industrialised West. But they are only expected to be a beginning in the direction of affording greater protection to women from exploitation.

LABOUR TRIBUNAL'S AWARD

Apropos of our article headed "Labour Ministers' Conference," in the issue of *Commerce* dated 31st January, 1953, we have received a communication from Mr. G. Ramanujam, General Secretary, Indian National Trade Union Congress, Tamil Nad, wherein the writer quotes an instance to show how the Appellate Tribunal's award has been disregarded by certain employers. The following is the relevant extract from the letter:

"Some 32 mills in the Coimbatore District were parties to an industrial dispute in respect of (1) bonus for 1948, (2) implementation of an agreement entered into between the Coimbatore District Textile Mills Staff Union and the Southern India Millowners' Association on 14th May, 1948, in respect of salary, dearness allowance, etc., (3) night allowance to staffs, (4) payment of compensation to workers discharged as a result of the implementation of the Standardisation Committee's Recommendation in 1948, (5) payment of gratuity, and (6) terms of employment of *maistries*. The Industrial Tribunal, Coimbatore, gave an award in December, 1951. Against this award, all the 32 mills preferred an appeal before the Labour Appellate Tribunal of India and also applied to the Labour Appellate Tribunal for staying the award of the Industrial Tribunal. The Appellate Tribunal stayed only the bonus part of the award and that too for the unpaid balance of two months' wages. The other items under the award were not stayed. The order refusing stay for the other items covered by the award was passed by the Appellate Tribunal in February, 1952, and we are now in February, 1953, but still the unstayed part of the award has not been implemented by many of the mills.

"A claim petition filed in one mill as a test case in July, 1952, is still pending and, by present indications, it appears that it will drag on for another year. You will appreciate that the employers in question are a law unto themselves and have reduced the Labour Appellate Tribunal to a farce. To put it mildly, they are abusing their position of vantage by taking the law into their own hands. Even a notice from the Government asking these employers to show cause why they should not be prosecuted for failure to implement the award has not made them see reason. It is necessary that not only the striking power of the law should be made quick and effective but such employers also should turn a new leaf."

AMENDMENTS TO EMPLOYEES' PROVIDENT FUNDS SCHEME

At the first meeting of the Central Board of Trustees of the Employees' Provident Funds Scheme held at New Delhi on 5th February, 1953, it was decided that the members of the Central Board should also be included in the regional committees. In the light of this decision, the Government of India has amended paragraph 4 of the Employees Provident Funds Scheme, 1952, so that the non-official members of the Central Board ordinarily resident in the State shall become members of the regional committees.

Paragraph 2(f)(iii) of the Employees' Provident Funds Scheme, 1952 has also been so amended, by the Government of India, that the workers, employed through a contractor, who get their wages directly or indirectly from an employer and in respect of whom the employer retains control in the matter of discharge, dismissal and reinstatement shall not be deemed to have been employed by a contractor, and as such they shall come under the purview of the Employees' Provident Funds Act, 1952 and the scheme framed thereunder.

MARKED FALL IN THE EARNINGS OF BUCKINGHAM AND CARNATIC MILLS

DISTRIBUTION TO SHAREHOLDERS REDUCED

THE reduction of the dividend from 7½ per cent. to 4 per cent. by the Buckingham and Carnatic Mills Co., Ltd. [Managing Agents: Messrs. Binny & Co. (Madras) Ltd., Madras] for the year ended 31st December, 1952, following a sharp decline of nearly 80 per cent. in the earnings, may not surprise the shareholders of the Company if they will only recall the strikingly contrasting trend in trading conditions that prevailed during the past year, as compared with those in the preceding year. They have, on the other hand, every reason to feel gratified over the modest return they would be getting, in view of the fact that for nine months in the past year the Company worked at a loss which necessitated the passing over of the interim dividend for the first half of the year, while they had received an interim distribution of 3¾ per cent. for the corresponding half-year of 1951. In effect, the proposed dividend of 4 per cent. for 1952 represents the final and also the total distribution for the year and is a quarter per cent. more than that they had received as a final one for 1951. This final dividend has been rendered possible by the substantial improvement in the Company's earnings, during the closing months of the year, which has enabled it to make good the loss incurred earlier.

The Company's gross profit for the year under review amounts to Rs. 12.98 lakhs, as compared with Rs. 64.56 lakhs for 1951. That the Company was able to earn a profit of Rs. 12.98 lakhs in the last three months of the year after eliminating the loss in the first nine months is a heartening feature. As was explained by the Directors in their circular letter to the shareholders dated 25th August, 1952, the Company had to incur a loss in the first six months of 1952 due mainly to the substantial reductions in Government ceiling prices for cloth. Whereas in the preceding three years the inadequacy of ceiling prices in the internal market was compensated for by the better prices obtained in overseas markets, there was, during 1952, a decline in overseas demand and a consequent fall in the prices fetched in those markets. The shortage of water-supply in Madras, which was not relieved until good rains came in May, 1952, added appreciably to the working expenses of the Company, thus contributing to its loss. Though the water shortage ended in May, the Company's trading loss increased during the third quarter of the year by the continuance of inadequate ceiling prices for cloth. Fortunately, the Government's removal of control over the prices of a number of varieties of cloth with effect from 1st October, 1952, enabled the Company to adjust suitably its selling prices of many of its products. Moreover, the Government relaxed, at about the same time, the total ban on the export of mineral khaki cloth and this enabled the Company to re-engage in this important part of its established export trade.

The salient features of the Company's results of working during the year under review are compared with those for the previous three years in the following comparative table:

(In thousands of rupees)

	Year ended 31st December			
	1952	1951	1950	1949
Sale proceeds	8,32,85	8,85,60	7,58,28	7,60,37
Stocks	95,43	67,53	78,62	72,21
Other income	7,47	6,64	5,45	3,53
Expenses	8,55,24	8,16,60	7,03,49	7,86,64
Gross profit	12,98	64,56	66,64	52,16
To provision for—				
Managing Agents' commission	90	6,17	6,44	4,55
Depreciation	11,70	16,53	16,66	18,01
Taxation		25,00	27,00	17,30
Net profit	38	16,86	14,53	12,30
Provision for taxation no longer required	20,00	..	..	..
To debenture redemption fund	3,00	..	..	..
To discount on debenture issue written off	3,00	..	..	..
To general reserve	5,50	..	..	..
To officers' superannuation fund	14	67	65	49
Dividend—				
7½% cum. preference ..	1,60	1,60	1,60	1,60
Ordinary	7,14 (4%)	13,39 (7½%)	12,27 (6¾%)	11,15 (6¼%)
Carry forward	2,40	2,39	1,18	1,17

It will be noted that the provision for depreciation has been reduced by Rs. 4.83 lakhs. The extra provision of Rs. 5 lakhs which the Directors had made last year for increased replacement costs of building and machinery has not been provided this year. No provision for taxation has been made this year, whereas a sum of Rs. 25 lakhs was set apart for this purpose last year. On the question of the Company's liability for taxation the Directors observe, in their report to the shareholders, as follows:

"The Directors are now in a position more accurately to assess the extent of the Company's liability for taxation, as all assessments upto the accounting year ended 31st December, 1951, have recently been settled, with the exception of the business profits tax assessments, against which provisional payments have been made. It must be remembered that in the latter years of the war the tax liabilities of the Company were considerable and it was not possible at that time to estimate with any degree of accuracy the extent of taxation liabilities, owing to delays in the settlement of assessments, the effect of excess profits tax and the complexities of taxation law. Now that the assessments have been completed, it is possible to determine the excess tax provision and the extent to which it represents reliefs obtained from taxation of profits through the operation of allowances for initial and extra normal depreciation. Your Directors take the view that these reliefs should be utilised for the purpose for which they were intended by the Government of India, that is, to finance expansion or reconstruction programmes. The reliefs up to 31st December, 1952, are Rs. 10 lakhs and this amount has, in accordance with the principle mentioned above, been directly transferred from the taxation reserve to the provision for increased replacement costs of buildings and machinery."

The Directors have also transferred from taxation reserve to profit and loss account a sum of Rs. 20 lakhs which is the excess provision for taxation made in previous years and which is no longer required. This adventitious income has enabled the Directors to supplement the Company's net profit for the year which is only about Rs. 38,000 and make the appropriations as shown in the foregoing table. The Directors feel that the disposal of the excess provision for taxation is justified. They, however, bear in mind the need to conserve the finance necessary for the considerable capital commitments which the Company has entered into and for the gradual repayment of the recent debenture issue. The debenture redemption fund is in connection with the debentures of the value of Rs. 1 crore issued in March, 1952, for the purpose of financing the Company's reconstruction programme. They carry interest of 5 per cent. and were issued at 97 per cent. The discount on the issue, amounting to Rs. 3 lakhs, has now been completely written off.

The following synopsis of the Company's latest balance-sheet reveals its financial strength:

Liabilities	Rs.	Assets	Rs.
Capital ...	1,99,78,000	Gross block	5,14,83,572
Reserve and surplus ...	1,60,35,486	*Less*—Depreciation ...	2,64,81,555
Debentures	1,00,00,000	Net block ...	2,50,02,017
Provision for taxation ...	6,65,974	Stock-in-trade	2,00,51,408

INDIA GENERAL NAVIGATION AND RAILWAY CO., LTD.

The Directors of the India General Navigation and Railway Co., Ltd. (Managing Agents: Messrs. Kilburn & Co., Ltd., Calcutta), have declared an *ad interim* dividend, on the Company's preference stock, of 3 per cent. less income-tax at 9s. 6d. for the year ended 31st December, 1952. The dividend is payable in sterling to stockholders on the Company's register on 10th April, 1953.

STANDARD JUTE TO ISSUE DEBENTURES

The Directors of the Standard Jute Co., Ltd. (Managing Agents: Messrs. Bird & Co., Ltd., Calcutta), have decided to issue debentures of the value of Rs. 25 lakhs, the necessary official sanction for which having been obtained. The issue, which will be open for subscription on 18th March, 1953, will be issued at Rs. 100 per cent. and will carry interest of 5½ per cent., taxable. The debentures are redeemable in 15 years. The Company has, however, the right to redeem the entire debenture issue after 10 years at Rs. 101 per cent. or after 12 years at Rs. 100-8 per cent. If, at the end of 10 years, the Company desires to repay only a part of the issue, it has the right to buy in the open market at par or under, or it can redeem a percentage by drawings in private by a Notary Public at Rs. 101 per cent. after 10 years or at Rs. 100-8 per cent. after 12 years.

Interest is payable half-yearly on 31st March and 30th September. The Company will institute a sinking fund with an annual contribution of

THIRUMBADI RUBBER'S STEADY PROGRESS

FINANCIAL POSITION COMFORTABLE

THE most striking feature of the audited accounts of the Thirumbadi Rubber Co., Ltd. (Agents and Secretaries: Messrs. Peirce Leslie & Co., Ltd., Kozhikode, Malabar), for the year ended 30th September, 1952, is that the rising trend in earnings of the Company, noted in the previous three years, is maintained in the year under review also, although the improvement in earnings for the latest year is somewhat of a lesser degree than that recorded in 1950-51. Thus, the trading profit for 1951-52 amounts to Rs. 1,80,453, as compared with Rs. 1,54,570 for the previous year and Rs. 77,250 for 1949-50. The improvement in profit has not been utilised to raise the dividend from 25 per cent. paid for 1950-51, to which level it was stepped up gradually from 15 per cent. paid for 1947-48. On the other hand, it has been utilised to increase the allocation to the reserve by Rs. 25,000.

The following comparative table brings out the salient features of the Company's results for the past four years:

	For the year ended 30th September			
	1952	1951	1950	1949
	Rs.	Rs.	Rs.	Rs.
Proceeds of rubber ..	3,06,121	2,58,625	2,05,612	1,02,914
Stocks ..	97,981	88,586	46,938	23,579
Estate expenditure ..	2,24,200	1,94,243	1,79,376	1,54,975
Trading profit ..	1,80,453	1,54,570	77,250	64,693
Other expenses ..	12,600	16,556	10,005	9,047
Loss on sale of Government securities ..	10,999	..	..	..
Agents' and Secretaries' remuneration ..	3,952	3,096	2,295	2,257
Depreciation	8,167	6,310	4,741	3,225
Contribution	..	..	..	2,000
Taxation	1,45,305	1,32,614	64,573	51,070
Net profit	75,000	50,000	25,000	25,000
Transfer to reserves ..	76,275	76,275	61,020	53,393
Dividend	(25%)	(25%)	(20%)	(17½%)
Carry forward ..	31,510	37,480	31,141	52,588
Crop harvested in lbs. ..	3,25,000	3,03,879	3,09,140	2,62,750
	As.	As.	As.	As.
Cost of production per lb. ..	11·04	10·23	9·21	9·44
Average sale price per lb. ..	19·63	17·90	13·03	12·97

It will be noted from the foregoing table that the improved earning for the year under review is due to the combined effect of larger output and higher prices realised. The crop harvested shows an improvement of 21,121 lbs. and has more than made good the decline in output for the previous year. The average price realised at As. 19.63 per lb. compares favourably with As. 17.90 per lb. for 1950-51. The increase in price realised is due to the fact that whereas the benefit of the enhanced price fixed in May, 1951, was derived only for a little over four months during the Company's financial year 1950-51, it was available throughout the year 1951-52. The benefit of the latest revision of rubber prices will, however, be available only during the current year, as it was made only with effect from 28th October, 1952. A part of the increase in price realised has been offset by the rise in cost of production.

As in the previous two years, no provision for taxation has been made, but that for depreciation has been raised by Rs. 1,857, presumably because of the additions to the fixed assets made during the year. The net profit shows an increase of only Rs. 12,691. It would have been higher but for the loss of Rs. 10,999 which the Company has incurred on its sale of Government securities. Nonetheless, the Directors have wisely strengthened the reserves by a sum of Rs. 75,000 which is Rs. 25,000 more than that added last year.

The following is a synopsis of the Company's balance-sheet as on 30th September, 1952:

Liabilities	Rs.	Assets	Rs.
Capital ..	3,05,100	Gross block ..	6,03,723
Reserves and surplus..	4,86,615	*Less*—Depreciation ..	46,545
Liabilities	1,13,702	Net block ..	5,57,178
		Stock-in-trade ..	97,981
		Stores, spares, etc. ..	65,946
		Debts, deposits and advances ..	9,748
		Investments ..	50,855
		Cash	1,33,709
Rs.	9,05,417	Rs.	9,05,417

The above balance-sheet reveals a comfortable financial position. The reserves and surplus amounting to Rs. 4.87 lakhs represent nearly 160 per cent. of the paid-up capital. Of the gross block of Rs. 6.04 lakhs, as much as Rs. 3.80 lakhs represent development expenditure. On the balance of Rs. 2.24 lakhs, the depreciation provided amounts to Rs. 46,544. A sum of Rs. 46,896 has been spent on development and Rs. 34,299 on additions to buildings and machinery during the year. The current liabilities at Rs. 1.14 lakhs are well covered by current assets aggregating Rs. 3.48 lakhs.

The ordinary stocks in units of Re. 1 of the Company are being currently quoted at Rs. 3-3 *cum-div.* On an *ex-div.* basis, the proposed dividend gives a yield of 8.5 per cent. per annum.

Points From The Chair

Warning Against Deficit Financing

"I HAVE not the slightest objection to financing posterity by the issue of Government loans on suitable and equitable terms; but, if we cannot borrow from overseas, and if our own people will not, or cannot, subscribe for Government issues, deficit finance means overtime work for the Nasik Printing Press, by which I mean further issues of notes and a new twist to the inflationary spiral. Even this can be supported to a moderate extent and our present Finance Minister, who is well known for his conservative and thrifty ways, would not let such a policy get out of hand, but what about his successor—can we be sure that the successor would be equally cautious? I am aware that the Planning Commission has laid down a limit for deficit financing, but I would remind you that the recommendations are not the laws of the Medes and Persians and they can be disregarded at any time in the future. I have read about this deficit financing with consternation, if not with actual foreboding, and it seems suitable for me to utter a word of warning and caution at this our Annual General Meeting."

SIR COWASJI JEHANGIR, BART.,
Bank of India Ltd.

Industrialisation of the East

"It is true that for some years the United States has been able to point with justifiable pride to the work of the Point Four Programme of the Mutual Security Agency and of the Technical Co-operation Administration, for which the East is duly grateful. But such generous and helpful aid has hitherto only scratched the surface of what is needed. The Chancellor of the Exchequer invented the slogan 'Trade not Aid,' which has been adopted as Government policy. If the basic principle, as stated by the Chancellor, were to be accepted and adopted by authoritative circles in the United States (as it is indeed being accepted by many far-seeing Americans and apparently by the Paley Commission) not only would the dollar gap be less menacing but there would be also better prospects for improvement of the standards of living in South-east Asia. I deliberately use the words, 'better prospects' because more is needed than just external action to improve the trading and commodity outlook. The Governments of the East need to play their part and that is a vital one, but one thing I would urge most strongly, that no attempt should be made to introduce industrialisation on a rapid or large scale. It would be far wiser to concentrate all available capital and energies on food and agricultural production and on those ancillary industries which depend upon the raw materials available in the country concerned."

HON. SIR ARTHUR MORSE,
Hongkong and Shanghai Banking Corporation.

Trend of Savings in U.K.

"The amounts which are held in national saving, in building societies, in accumulated life assurance premiums, and in payments to friendly societies, trade unions, superannuation funds, and so on, are really quite impressive. The total balances in these various forms at the end of 1938 was £4,260 million. At the end of 1947 they stood at £10,080 million, and at the end of 1950 had further increased to £10,940 million. The amount which is being added net each year at present is not large, but this can be attributed not to a decline in the amount invested, but to the large volume of withdrawals which is taking place. Especially does this apply to the national savings group, which comprises savings certificates, post office and trustee savings banks, and defence bonds. The amount flowing into national savings in 1952 was £931 million, compared with £238 million in 1938—a fourfold increase in the flow of savings. On the other hand, withdrawals totalled £1,018 million, compared with £208 million for 1938. Notwithstanding changed money values, it is evident from these figures alone that there is plenty of money being put away by people who are in the habit of using these classes of savings media. And this applies equally to life assurance premium payments and to other popular forms of saving. If only so much were not being taken out!"

HARRY L. SCORE,
Co-operative Permanent Building Society.

(*Concluded from previous page*)

Rs. 1 lakh commencing three years after the date of issue. The debentures will be secured by floating charges on all assets, subject to the National Bank of India's charge on stocks of jute and finished goods, and a fixed charge on the immovable properties. The issue is an approved investment under section 27 (A) and (H) of the Insurance Act.

The following is the Company's latest financial position as on 30th September, 1952:

Liabilities	Rs.	Assets	Rs.
Capital ...	34,19,600	Gross block ...	94,42,650
Reserves and surplus ...	51,20,275	*Less*—Depreciation ...	55,78,351
Provision for taxation ...	2,38,088	Net block ...	38,64,299
Liabilities ...	23,70,655	Stock-in-trade	28,53,882
		Stores, spares, etc. ...	8,03,579
		Debts, deposits and advances ...	13,03,831
		Investments	6,41,216
		Cash ...	16,81,811

LOTHIAN JUTE CUTS DIVIDEND

BHARAT COLLIERIES' PROFIT WELL MAINTAINED

Lothian Jute Mills Co., Ltd.

THE directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta), submit the audited accounts for the half-year ended 30th November, 1952.

After providing Rs. 4,15,000 (Rs. 4,10,000) for taxation, transferring Rs. 3,00,000 (Rs. 2,00,000) to general reserve and Rs. 1,00,000 (Rs. 1,00,000) to dividend equalisation reserve, there is a balance of Rs. 2,49,167 (Rs. 2,65,471) at the credit of profit and loss account, from which the directors recommend payment as follows:—

Dividends on preference shares at Rs. 3-8 (Rs. 3-8) per share Rs. 35,000 (Rs. 35,000) and on ordinary shares at Rs. 15 (Rs. 17-8) per share Rs. 1,50,000 (Rs. 1,75,000), leaving Rs. 64,167 (Rs. 55,471) to be carried forward.

During the whole of this accounting period the mills remained leased to Albion Jute Mills Co., Ltd.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	20,00,000	Block ...	15,45,276
Reserves ...	35,51,301	Debts, deposits and advances ...	17,63,655
Provision for taxation ...	14,63,065	Investments ...	13,84,374
Liabilities ...	4,61,172	Cash ...	28,46,400
Profit and loss account ...	64,167		
Rs.	75,39,705	Rs.	75,39,705

Bharat Collieries Ltd.

The directors of the above Company (Managing Agents: Messrs. Sahu Jain Ltd., Dalmianagar) submit the audited accounts of the Company for the year ended 30th June, 1952.

The revenue profit for the year ended 30th June, 1952, amounts to Rs. 14,61,888 (Rs. 14,53,498). After providing depreciation of Rs. 6,60,569 (Rs. 6,45,874), there remains a profit of Rs. 8,01,319 (Rs. 8,09,687) to which is added Rs. 19,183 (Rs. 6,184) being the last year's balance, making a total of Rs. 8,20,501 (Rs. 8,15,870). The directors make the following recommendations:—

Payment of dividend on or after 16th April, 1953, on cumulative preferenec shares at 5½ (5½) per cent. less income-tax for the year ended 30th June, 1952, Rs. 1,21,687 (Rs. 1,21,687), on 4,00,000 ordinary shares at As. 10 (As. 10) per share, i.e. 6¼ (6¼) per cent. for the year ended 30th June, 1952, Rs. 2,50,000 (Rs. 2,50,000), transfer to reserve for taxation Rs. 3,75,000 (Rs. 3,75,000), and transfer to general reserve Rs. 50,000 (Rs. 50,000), leaving the balance of Rs. 23,814 (Rs. 19,183) to be carried forward. The prospects of the Company continues to be favourable.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	69,99,952	Block ...	61,09,645
Debentures ...	30,00,000	Stock ...	16,85,810
Reserves ...	13,31,010	Stores, etc. ...	15,99,910
Provision for taxation ...	3,47,872	Debts, deposits and advances ...	34,95,050
Liabilities ...	16,60,881	Investments ...	5,48,314
Profit and loss account ...	8,20,501	Cash ...	7,21,487
Rs.	1,41,60,216	Rs.	1,41,60,216

Lakurka Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. H. V. Low & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 30th April, 1952.

After meeting all expenses and providing Rs. 30,000 for depreciation, there was a balance of Rs. 1,06,049 at the credit of profit and loss account, which included a credit balance of Rs. 11,945 brought forward from the last account and from this the directors paid a dividend of As. 12 per share free of income-tax, absorbing Rs. 67,500 and transferred a sum of Rs. 25,000 to general reserve fund, leaving a balance of Rs. 13,549 to be carried forward to the next account.

During the year under review 92,949 tons of coal were raised and 92,352 tons despatched, as compared with 1,15,663 tons raised and 94,455 tons despatched during the previous year.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	9,00,000	Block ...	5,98,217
Reserves ...	11,25,000	Stock ...	1,29,644
Provision for taxation ...	1,98,015	Stores, etc. ...	9,188
Liabilities ...	2,06,014	Debts, deposits and advances ...	8,51,586
Profit and loss account ...	1,06,049	Investments ...	7,27,020
		Cash ...	2,19,423
Rs.	25,35,078	Rs.	25,35,078

Central Distillery and Chemical Works Ltd.

The directors of the above Company (Managing Agents: Messrs. Krishna Gupta & Devalal, Meerut Cantt.) submitted the audited accounts of the Company for the year ended 30th September, 1952.

The working during the year was very satisfactory and the net profit for the year, after providing for taxation, depreciation, etc., amounted to Rs. 1,01,995 (Rs. 80,924). To this was added the amount brought forward from the preceding year, of Rs. 5,857 (Rs. 8,218), making a total of Rs. 1,07,852 (Rs. 89,142). From this the directors paid the following dividends, free of income-tax.

On ordinary shares at Rs. 10 (Rs. 10) per cent. Rs. 43,551 (Rs. 43,551), on preference shares at Rs. 9-3-1 (Rs. 9-3-1) per cent. Rs. 16,712 (Rs. 16,712), and on deferred shares at Rs. 23-3-7 (Rs. 23-3-7) per cent. Rs. 5,807 (Rs. 5,807).

(The fraction of pies was ignored and on final calculations, they were rounded-up in annas. Six pies were ignored, and over six pies were counted one anna). To meet this a sum of Rs. 66,070 (Rs. 66,070) was taken from the net available amount. A sum of Rs. 25,000 (Rs. 17,217) was taken to the general reserve account and the balance of Rs. 16,782 (Rs. 8,218) was carried forward.

Last year the directors applied for the extension of the plant of the distillery. But in view of the scarcity of molasses on this part of U.P. the Government did not allow the Company to extend the capacity of the plant for the present. However, the Government has assured the Company to reconsider its decision in April-May of 1953. A greater part of fermentation plant of the factory has been repaired or replaced. The directors propose to repair completely, as far as possible, the distillation plant of the Distillery. The directors are grateful for the help, co-operation and sympathetic consideration extended to them by the U.P. Government and excise commissioner, U.P. and his Department.

Under the auspicious of U.N.E.C.A.F.E., a seminar on power alcohol was held at Lucknow, and important discussions regarding the production and utilisation of power alcohol were held. The technical report of this Seminar is under consideration. The directors report that no immediate solution for the economic use or disposal of spent wash has been found by the seminar.

Owing to the quality of manufacture, the products of the Distillery are in great demand all over India. The Distillery improving on the quality of rum and propose to supply 3 years minimum matured guaranteed rum.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	6,42,310	Block ...	2,29,128

Liabilities ...	1,37,122	Investments ...	1,00,058
Profit and loss account ...	1,07,852	Cash ...	1,99,315
Rs.	13,39,331	Rs.	13,39,331

Humayan Properties Ltd.

The directors of the above Company (Mr. S. A. Basil and five others, Calcutta), submit the audited accounts of the Company for the year ended 30th September, 1952.

The profit amounts to Rs. 3,60,458. Out of this, there has been set aside:—for income-tax and super tax Rs. 1,18,000, for depreciation Rs. 1,20,000, for preference dividend for the year Rs. 72,000 and for ordinary dividend at 5 per cent. per annum Rs. 50,039, leaving a balance to be carried forward amounting to Rs. 419. The division of the profits for the year ended 30th September, 1952 is therefore, as follows:—

Preference shareholders' dividend account Rs. 72,000 and ordinary shareholders' dividend account Rs. 50,039.

The directors propose that the balance at the credit of the respective dividend account be disposed of as follows:—

Preference Shareholders' Dividend Account as at 30th September, 1951 Rs. 36,000, amount allotted as above as at 30th September, 1952 Rs. 72,000, total Rs. 1,08,000, less: dividend for the year ended 31st March, 1952 paid during the year Rs. 72,000 and to be carried forward Rs. 36,000.

Ordinary Shareholders' Dividend Account as at 30th September, 1951 Rs. 207, amount allotted as above, as at 30th September, 1952 Rs. 50,039, total Rs. 50,246, less: in paying a dividend at 5 per cent. (free of income-tax) Rs. 50,039, and to be carried forward Rs. 207.

Deferred Shareholders' Dividend Account as at 30th September, 1951 Rs. 3 and to be carried forward Rs. 3.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	24,00,780	Block ...	24,24,209
Reserves ...	6,02,582	Stock ...	1,60,342

Profit and loss account ...	86,458	Cash ...	4,32,343
Rs.	34,03,807	Rs.	34,03,807

New Central Jute Mills Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Sahu Jain Ltd., Calcutta) submitted the audited accounts of the Company for the half-year ended 30th June, 1952.

The half-year's working after writing off depreciation resulted in a profit of Rs. 44,765, to which was added balance brought forward from the last half-year of Rs. 1,16,973, making a total of Rs. 1,61,738. The directors made payments of dividends (without any deduction for income-tax paid by the Company) for the half-year ended June, 1952:—

On preference shares at Rs. 3-8 each Rs. 49,000, and on ordinary shares at Rs. 10 each Rs. 1,05,000, leaving a balance of Rs. 7,738, to be carried forward.

In accordance with the working time agreement of the Indian Jute Mills Association, the Mills worked 48 hours per week until 29th March, 1952 and thereafter 42½ hours for the remaining of the half-year. Throughout the period 12½ per cent. of the total complement of looms remained sealed.

Jute stocks as at the end of the half-year were shown at under cost. Reduction in value of the same adversely affected the working profit for the half-year.

During the half-year trading conditions were difficult and there was steady decline in the prices of raw jute and manufactured goods. Government export duties were reduced on hessian by Rs. 750 per ton and Rs. 475 per ton during February and May respectively, and on sacking by Rs. 175 per ton. The results of the subsequent half-year are better. Prices of manufactured goods have, however, now declined to uneconomic levels. A fee of Pak. Rs. 2-8 per maund imposed by the Pakistan Government on jute export to India only and Indian export duties enable the continental manufacturers to sell burlap in the American market at prices uneconomic to Indian mills.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	24,50,000	Block ...	22,09,479

Albion Jute Mills Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Sahu Jain Ltd., Calcutta) submitted the audited accounts of the Company for the half-year ended 31st May, 1952.

After writing off depreciation and payment of Rs. 10,00,000 rent for the lease of Lothian Jute Mills, the working of the Company resulted in a loss of Rs. 8,98,048. A sum of Rs. 9,52,135 was transferred from the general reserve to the profit and loss account leaving a sum of Rs. 17,00,000 at the credit of general reserve. This resulted in a balance of Rs. 1,44,022 to the credit of profit and loss account. The directors paid dividends (without any deduction for income-tax paid by the Company) for the half-year ended May, 1952:—

On preference shares at Rs. 3-8 each Rs. 31,500, and on ordinary shares at Rs. 8 each Rs. 96,000 and carried forward the balance of Rs. 16,522.

Jute stocks as at the end of the half-year are shown at under cost. Reduction in value of the same, has adversely affected the working profit for the half-year.

During the half-year, trading conditions were difficult and there was steady decline in the prices of raw jute and manufactured goods. Government export duties were reduced on hessian by Rs. 750 per ton and Rs. 475 per ton during February and May, respectively and on sacking by Rs. 175 per ton. The results of the subsequent half-year are better. Prices of manufactured goods have, however, now declined to uneconomic levels. A license fee of Pak. Rs. 2-8 per maund imposed by the Pakistan Government on jute export to India only, and Indian export duties enable the continental manufacturers to sell burlap in the American market at prices uneconomic to Indian mills.

In accordance with the Working Time Agreement of Indian Jute Mills Association the Mills worked for 42½ hours per week upto 9th December, 1951. Working hours were increased to 48 per week from 10th December, 1951 and so continued until 29th March, 1952 when the same were again reduced to 42½. Throughout the period 12½ per cent. of the total complement of looms remained sealed.

Accounts in brief were as under:—

QUESTION HOUR IN PARLIAMENT

U.S. Technicians for D.V.C.

FIFTEEN U.S. technicians are to be recruited for operating the machinery bought in the U.S.A. for the D.V.C. Project. The recruitment is being done in India with the co-operation of the U.S. Technical Assistance Administration. So far seven technicians have been recruited.

• • • •

I.M.F. Mission

A mission of technical experts from the International Monetary Fund has already arrived in India. Such visits are arranged by mutual consent. The mission will collect and study statistical and other data pertaining to the fiscal, monetary and other economic policies of the Government of India, which may include a broad assessment of such policies in relation to the Five-year Plan. It will eventually submit its report to the Fund, and the Government of India will be apprised of the same through its Executive Director.

• • • •

Indo-Pakistan Agreement

No overall agreement was reached at the last conference between the Finance Ministers of India and Pakistan, held in May, 1951, and it was then decided to adjourn the discussion and resume the conference at a later date. Owing to a variety of causes, such as the General Elections and the heavy programme of legislative work in recent months, it has not been possible to resume this conference. A number of outstanding matters were, however, informally, discussed with Pakistan officers by two Indian officials at Karachi last April. These discussions are expected to be resumed as soon as the current Parliament session is over.

• • • •

Famine Relief Projects

The Central Government has provided an increased allocation to the Tungabhadra Project of Rs. 1 crore and to minor irrigation works in Bombay of Rs. 111 lakhs, in order to provide relief works in distress areas. The recommendations of the team of officers sent to the famine-affected areas of Mysore, Hyderabad, Bombay and Madras are now under examination. The team recommended how relief should be provided by means of projects. Its terms of reference were to study, in detail, the nature and extent of the distress in the affected areas and recommend suitable measures of providing relief on a permanent and semi-permanent basis. The Government will soon place on the table of the House a statement indicating the action taken by the Government on the recommendations of the team along with the recommendations themselves. Accepting the initial recommendations, the Government has sanctioned certain works—four in Mysore, one in Bombay and one in Hyderabad.

—Finance Minister

Loan to Damodar Valley Corporation

A $38 million loan had so far been granted by the International Bank for Reconstruction and Development to the D.V.C. The D.V.C. recently obtained a loan of $19.5 million for financing the foreign exchange costs of the remaining projects of the first phase. The loan is for a period of 25 years, the rate of interest being 4½ per cent. per annum. Out of the first loan to the D.V.C. of $18.5 million, $13.19 million has so far been drawn and spent on the purchase of electrical equipment from the U.S.A. for the Bokaro-Konar Project.

—Parliamentary Secretary to Finance Minister

Titanium Factory

The titanium factory in Travancore-Cochin State applied for a loan to the Industrial Finance Corporation. The Corporation found that the manufacturing cost of the goods was not low enough to enable the Company to compete with foreign supplies. On that ground the Corporation thought it fit not to grant a loan to the Company. The Commerce and Industry Minister has already referred the industry to the Tariff Commission which will recommend whether it deserves any sort of protection or not. The Commerce and Industry Ministry itself has made certain proposals designed to bring down the cost of production, but the Company has not accepted those suggestions.

—Minister for Revenue and Expenditure

Trade with Pakistan

India had an adverse trade balance, as on 15th January, 1953, with Pakistan, roughly of the order of Rs. 1.71 crores. The total value of imports, under the latest Indo-Pakistan Trade Agreement was Rs. 1,47,78,566 under Schedule B and Rs. 7,16,58,094 under Schedule A, amounting to Rs. 8,64,36,600. Exports from India were Rs. 1,87,02,926 under Schedule A and Rs. 5,06,16,887 under Schedule B, aggregating Rs. 6,93,19,113. There are talks going on between the Government of India and the Government of Pakistan with a view to revising the Trade Agreement which would enlarge its scope. The talks are still in an exploratory stage.

• • • •

Export Duty on Textiles

It is too early now to estimate the results of the reduction in the export duty on textiles. The stocks held by the mills at the end of 1952 were 150,000 bales of yarn and 264,000 bales of cloth. Seventeen mills stopped working, either totally or partially, on account of accumulation of stocks for different periods during 1952. The loss of production was 0.21 per cent. in respect of cloth and 0.41 per cent. in respect of yarn.

MONEY RATES FIRM

(From Our Own Correspondent)

BOMBAY, 11*th March*

The stringent conditions which developed in the short-term money market towards the latter half of last week (that is, since the 2nd inst.) persisted during the week under review also, due to a broadening of demand for funds. Money rates, as a result, remained firm. Inter-bank call money was taken up at 2½ to 3 per cent, among the Exchange banks and big Indian banks. The rate among the smaller Indian banks stood at 3 per cent. No doubt fresh funds were in supply to the tune of Rs. 3 crores from some industrial houses and banks who released their surplus funds, but they were well absorbed by the market. On occasions, therefore, the market experienced shortage of floating funds.

Three months' deposits were offered at 3 per cent, for renewals and 2¾ per cent, for fresh money and twelve months' deposits were taken up at 2 to 2½ per cent.

This week's sale of three months' Government of India Treasury Bills brought an offer of Rs. 116.50 lakhs against the usual invitation for Rs. 100 lakhs and compared with Rs. 101.75 lakhs offered last week. The average rate of accepted tenders, however, eased a little to Rs. 2-6-11 per cent, per annum after remaining unchanged at Rs. 2-7-0 per cent. in the previous three weeks.

An increase of Rs. 16.30 crores in notes in circulation is the outstanding feature of the statement of affairs of the Reserve Bank of India for the week ended 6th March, 1953. Notes held in the Banking Department, on the other hand, disclose a contraction of Rs. 7.52 crores. The expansion of Rs. 8.78 crores in total notes issued, as a consequence, is covered, on the assets side, by a rise of Rs. 10 crores in foreign securities and a fall of Rs. 1.22 crores in rupee coin. On the liabilities side of the Banking Department, there has been a further decline of Rs. 10.27 crores in deposits of the Central Government, the total fall since the beginning of the year being Rs. 36.35 crores. Deposits of other Governments also have gone down during the week under review by Rs. 91.81 lakhs. Deposits of banks are higher by Rs. 26.74 lakhs and those of others by Rs. 56.94 lakhs. On the assets side, cash balances have shrunk by Rs. 7.57 crores and balances held abroad by Rs. 6.03 crores. There has been no change in loans and advances to Governments, but other loans and advances disclose a rise of Rs. 5.21 crores. There has been a fresh advance of Rs. 1.50 crores this week to Scheduled Banks against usance bills. Government Treasury Bills purchased and discounted have declined by Rs. 1.19 crores.

The Scheduled Banks' statement for the week ended 27th February, 1953, reveals a fall of Rs. 2.65 crores in the Banks' demand deposits and Rs. 11.19 lakhs in their time deposits. Inter-bank borrowings have gone up by Rs. 1.54 crores, as also borrowings from the Reserve Bank against usance bills by Rs. 1 crore and those from the Imperial Bank by Rs. 1.22 crores. As against these variations on the liabilities side, the assets side show a fall of Rs. 30.14 lakhs in advances and a rise of Rs. 5.45 crores in inland bills purchased and discounted. Investments are lower by Rs. 84.03 lakhs. Cash on hand and balances with the Reserve Bank show a shrinkage of Rs. 2.44 crores.

The Gilt-edged market showed distinct signs of revival and values moved upwards further owing to emergence of investment enquiry. 3 per cent. 1953-55 hardened a fraction to Rs. 100-1. 3 per cent. 1957 was taken up an anna better at Rs. 98-12 and 3 per cent. 1958 improved by As. 2 to Rs. 98-9. 3 per cent. 1959-61 put on an anna to Rs. 96-2, as also 3 per cent. 1963-65 to Rs. 92-10. 3 per cent. 1964 was unchanged at Rs. 92-9, but 3 per cent. 1966-68 advanced by As. 5 to Rs. 90-9. 3 per cent. 1970-75 was held at Rs. 86-9, while 3 per cent. 1986 Conversion Loan evoked support due to proximity of interest payment and rose by As. 5 to Rs. 83-1.

The Saurashtra Central Co-operative Land Mortgage Bank Ltd., Rajkot, has decided to issue the first series of 4 per cent. 1958-60 debentures for Rs. 1 crore. The debentures are to be issued at par and are guaranteed by the Saurashtra Government in respect of both principal and interest. The issue will be open for public subscription on 12th March, 1953, and will be closed not later than 19th March, 1953.

The foreign exchange section of the money market continued to rule dull, but the rupee ruled a shade easy in terms of the U.S. dollar. The change is, however, noted in the selling rates of banks, as the table below will show. This is presumably in sympathy with the slight weakening of sterling in the New York market from $2.81 11/16-2.81 13/16 per £ for ready on the 3rd inst. to $2.81¾-2.81⅞ yesterday. The rate for 3 months likewise declined from $2.81¾-2.81⅞ to $2.81 1/16-2.81 3-16 and that for six months from $2.80 11/16-2.81 13/16 to $2.80¼-2.80⅜.

BULLION IRREGULAR

(From Our Own Correspondent)

BOMBAY, 11*th March*

There was no outstanding development in the Bullion market during the week under review. Activity was at a low ebb and price variations were of a minor nature. Though a hesitant feeling was noted throughout the week, silver emerged better with a small advance of Re. 1-4 per 100 tolas on balance. Gold, on the other hand, was a bit influenced by larger arrivals and finished the week with a fractional loss.

Silver for forward delivery in April opened quiet at Rs. 165-11 and crept up hesitantly to Rs. 168-8 on Monday this week, but reacted to Rs. 166-4 yesterday. On renewed support, the white metal recovered to Rs. 167-1 at the close today.

Ready silver (.996 Mint) improved from Rs. 165-11 to Rs. 168-10 on Monday, at which level the premium of ready over the forward stood at Re. 1-2, as against Re. 1 earlier. But this improvement was not maintained for long, as there was a reaction to Rs. 166-6 yesterday. But expectations of a better offtake induced support at lower levels lifting up the price to Rs. 167-1 at the close. The premium of ready metal over forward once again narrowed to Re. 1. The floating stocks of silver are placed at 1,700 bars. The daily average offtake was 15 bars.

Gold for forward delivery advanced early in the week from Rs. 88-5 to Rs. 89 on reports of an early introduction of the Estate Duty Bill. But factors such as anticipations of an early peace, receding prospects for increase in international price of gold and larger arrivals induced selling pressure and the yellow metal drifted lower to Rs. 87-7 to-day before finishing at Rs. 87-13.

Ready gold closed at Rs. 88-3 with a loss of As. 9 over the week, after touching a high of Rs. 89-8 early in the week. The floating stocks of gold are estimated at 30,000 tolas. The daily average arrivals were 8,000 tolas, while the offtake was no more than 6,000 tolas on an average.

In the international free markets the European price of gold declined from $37.25 per oz. on the 3rd inst. to $37.10 yesterday.

The following comparative table shows the trend of the market during the week under review:

	11-3-53	Highest	Lowest	4-3-53

COMMONEST TEAS FIRM

(Messrs. Forbes, Ewart & Figgis Ltd.)

COCHIN, 7*th March*

Sale No. 5.—The offerings in sale No. 5, which was held on Tuesday, 3rd March, amounted to approximately 10,48,000 lbs. Quality showed an all-round improvement, particularly among the high grown Nilgiri teas and some medium Travancore teas. The sale opened to a good general demand, although best liquoring teas were only wanted at prices which were irregularly easier, despite the improvement in quality. Commonest kinds remained fully firm and were well supported. Low medium and medium brokens met with keen competition and were often As. 1 to As. 2 dearer. Good medium brokens were steady at last rates. Fannings were irregular and inclined easier with the exception of clean black types. The strongest feature of the sale were pekoes, flowery pekoes and B.P.S. and these were generally As. 2 to As. 4 dearer. O.Ps. were fully firm and inclined dearer. The following are the quotations:

	1953 Rs. a. p.
Low grown Travancore B.O.P.	1 9 6
Medium Travancore B.O.P.	2 1 0
Anaimallais B.O.P.	2 5 0
Best liquoring Nilgiri B.O.P.	4 1 0
Well made black leaf O.P.	2 2 6

London Market.—Upto the 3rd inst. the market was 1d. to 2d. dearer, though best Assam fannings inclined easier. Wednesday's market for commons and low medium 1d. to 2d. dearer than Monday.

Colombo Market.—4,000,000 lbs. Best brokens irregular, low-growns steady, others dearer, particularly medium brokens, and fannings easier.

Calcutta Market—Export.—55,000. Again very good general demand. Whole leaf grades steady. Others dearer, brokens by about As. 2, fannings As. 3, sometimes more.

Dust.—22,000 packages. Good general demand. Prices firm to often dearer, especially Middle East types.

Export Quota.—The quotation remains at 2 pies, at which business has been done and there are sellers.

Forthcoming Auctions.—Sale No. 6 will be held on Tuesday, 17th March.

As we go to press, Messrs. Forbes, Ewart and Figgis Ltd., wire as follows:

"*Dust Sale E.*—3,62,000 lbs. Fair demand. Market generally As. 2 easier all round."

EXPORT DEMAND FOR COTTON

(From Our Own Correspondent)

BOMBAY, 11*th March*

The post-budget enthusiasm, though still there, is a little on the wane. In the spot market mills having satisfied their requirements for the near future were not as keen buyers as they appeared to be a week before, even though the volume of business has been fairly well maintained at Sewri. However, the demand was not so much on internal consumption account as for export and so confined in a large measure to Bengals, bringing about a further rise in the price of this variety. The mills are diverting their attention from local varieties to longer staple imported cotton as they expect a higher demand for superfine cloth. On the whole, the week under review has displayed steady conditions in the spot market both in Bombay and in up-country centres.

In the forward market, the wave of buying receded as profit-taking came in, by about 10 points or more than the highest peak reached during the previous week. This should not, however, be interpreted as a weakness in the forward market. As observed in a previous issue, this market, unlike the spot market, works spasmodically and finally adjusts itself to realistic levels. The under-current in the forward market is still steady and spurts may be expected just as much as occasional price recessions. The gap between May and August has perceptibly widened and it stands as high as Rs. 13-8. A little while ago this difference stood at Rs. 10.

With rise in prices of *Deshi* varieties at Karachi and non-availability of stocks, attention of the consumers abroad of short-staple cotton has once again turned to India. The export market is, on the whole, lively with enquiries pouring in at better rates. The difficulty in this connection appears to be not so much about available stocks as about railway wagons for moving the crop to ports. It now appears likely that gradually the whole of the export quota will be disposed of without much difficulty, even with the present rate of export duty on *Deshi* varieties, other than Bengals. The market is counting on a further allocation for export of Bengal *Deshi* in the near future. There was nothing of interest on the import side during the week. Perhaps this interest will revive with the commencement of auctions at Kampala from to-day. The latest available quotations in the spot market are:

Bengal *Deshi* Rs. 550-610; Berar *Jarilla* Rs. 20-30 on I.C.C. May; Vijay Rs. 140-150 on May; Moglai Rs. 20 off May; Khandesh Rs. 70-110 on May; Oomras Rs. 600-610.

The following is the trend of prices in the forward market over the week ended 11th March, 1953:

	Opening	*High*	*Low*	*Closing*
I.C.C. May (Rs.) ...	691	694	681	691
I.C.C. August (Rs.) ...	702½	708½	694½	696

Although prices are ruling firm at Karachi, the pressure of stocks continues unabated because fresh arrivals from up-country into Karachi go to replace the quantities shipped. On the whole, however, the atmosphere in the cotton market appears to be a little more hopeful and a belief is gaining ground that instead of open market transactions, the Government is more inclined to use cotton for barter purposes for obtaining imports of consumer and capital goods that the country needs. There are inherent difficulties in this method of trade, but Karachi expects to overcome them. No further progress in the negotiations with Japan is reported but even if there are developments along this line, it is not likely that any official anouncement will be made till some definite agreement has been reached. The recent sales to the Continent have not been followed by fresh enquiries from these countries. The latest available prices in the Karachi market are:

289F Punjab R.G. Rs. 72-8; N.T. R.G. Rs. 66; L.S.S. Punjab R.G. Rs. 66; 4F Punjab R.G. Rs. 63; Sind *Deshi* Rs. 80.

At Alexandria, the Egyptian Cotton Commission has raised its selling prices, but this has not affected the turnover in the market. It is now freely admitted that the new policy for cotton will not be announced for some time to come. The main issue at Alexandria at present is with regard to the reopening of the forward market. There is a definite cleavage of opinion on this point with the shippers ranged on the side of reopening and the other dealers in cotton supporting the present arrangement. So far, France, has been the biggest foreign buyer at Alexandria in place of the U.K.

At New York, the prices have been gradually creeping up in spite of both-sided fluctuation. The change in the international political atmosphere after the demise of M. Stalin does not appear to have exerted any pronounced influence on the cotton market. It looks more as if prices will hover round the present levels without any upheavals.

The following are the latest available quotations from New York as compared with those of a week and a fortnight before.

(In cents per lb.)

	10-3-53	3-3-53	24-2-53

October	33.92	33.90	33.74

ART SILK YARN EASY

(From Our Own Correspondent)

BOMBAY, 11*th March*

Art silk yarn staged further sharp setback this week, under pressure of reports of early large arrivals of imported yarns and rumours regarding grant of 20 per cent. licences to established importers for the current half-year. Prices sank slowly to low levels. Renewed fall in cotton yarn prices and slackness in demand in the ready section also aided the decline. The tendency to reduce one's commitments was therefore, pronounced and, with buyers remaining aloof, support was lacking. Consequently, the quotations to-day could not but close lower than those at the end of last week.

The recession in values was more marked in the forward section. 150D March contract lost 13 points to Rs. 776. April contract was down at Rs. 779, as against Rs. 790. In sympathy with the forward section, values of yarn in the ready section registered decline. 120 Italy was the worst sufferer with a loss of As. 7 to Rs. 4-3. 120 Japan fell from Rs. 5 to Rs. 4-13. 150 Italy was lower by an anna at Rs. 3-15. 150 Japan, on the other hand, was steady at Rs. 4-5, although, at one time, it had lost an anna.

The table below gives the prices of art silk yarn quoted to-day, as compared with those on the 4th inst. and 25th February, 1953.

	11-3-53 Rs. a.	4-3-53 Rs. a.	25-2-53 Rs. a.
Art Silk Yarn—			
150D March (per case of 200 lbs.)	776 0	789 0	813 0
150D April ,, ..	790 0	790 0	—
120 Japan (per lb.)	4 13	5 0	5 0
150 Japan ,, ...	4 5	4 5	4 6
120 Italy ,, ...	4 3	4 10	5 0
150 Italy ,, ...	3 15	4 0	4 1

The absence of any reference to art silk yarn in the import policy for the reserved items recently announced by the Government of India has disappointed the traders. In view of the liberalised nature of the import policy for other items, a section of traders, however, feels that the same will also mark the policy for art silk yarn imports. If, according to expectations, import licences are granted, prices of yarn would recede still further. In fact, it is averred that the era of higher prices is definitely over and a buyers' market has set in.

Trading in the staple fibre section continued to be restricted, thanks to scarce stocks. There were renewed enquiries for 20s. In the cases of 30s and 40s, no demand was forthcoming. Business in forward contracts in staple fibre yarn remains still suspended. As a result of acute scarcity of supplies and delay in the grant of import licences, several mills are said to have been compelled to use rather unsatisfactory lots of staple fibre and that at enhanced prices. The mills, to quote one report, are compelled to pay fancy prices when they are able to get supplies from foreign countries at As. 12 per lb. cheaper for well-known and most satisfactory qualities.

GROUNDNUTS FORGE AHEAD

(From Our Own Correspondent)

BOMBAY, 11*th March*

The most notable development in the oilseeds market this week was the hectic rise in the price of groundnuts. There was aggressive buying by vanaspati manufactures and crushers especially in the latter part of the week. Linseeds ruled unusually gay on reports of business in linseed oil done to the extent of 200 tons with Australia at £120 per ton. The castorseeds section moved in sympathy with the rest. As a result, the volume of transactions done during the week was sizable and prices, especially in the groundnuts and linseed sections, disclosed substantial gains.

There were strong rumours that the Government of India may ban exports of groundnut oil with a view to checking the still rising trend of prices. Bold ready shot up from Rs. 39-8 to Rs. 41-4. Khandesh quality gained Re. 1-4 to Rs. 41-4. Groundnut oil ready was done at Rs. 22-6, as against Rs. 21-8. April and May deliveries were quoted at Rs. 22-4 and Rs. 22-6, as compared with Rs. 21-4 and Rs. 21-7, respectively, at the end of last week. Groundnut oil was in persistent enquiry between £140 to £142 per ton from the Continent.

Overseas advices for linseed oil were better. There was also speculative buying from domestic consumers. Consequently, Bold ready gathered Re. 1-12 to close at Rs. 30 and April-May deliveries Re. 1-2 to Rs. 29-12. Linseed oil rallied As. 14 to Rs. 14-14.

There was no development worth mentioning in the castorseeds section. It was rumoured that the U.S. had purchased castor oil commercial at 18¾ cents for April delivery. Continent was interested in castor oil B.S.S. at £160 and Commercial quality at £148. Castor oil B.S.S. and Commercial quality improved by As. 4 and As. 8 to Rs. 19-8 and Rs. 18-8, respectively. Among seeds, May delivery which opened at Rs. 144-8 as against Rs. 147 fluctuated between Rs. 154 and Rs. 144, before closing at Rs. 150-12. Madras quality was higher by As. 12 at Rs. 31-12.

Kardi and *Niger* seeds were in good demand. *Kardi* seeds Bold ready rallied Re. 1 to Rs. 23-8. *Niger* F.A.Q. gained a similar amount to Rs. 32.

The following table shows the prices of oilseeds and oil on the 11th inst., as compared with those at the close of preceding two weeks.

	11-3-53 Rs. a.	4-3-53 Rs. a.	25-2-53 Rs. a.
Groundnuts—			
Bold Ready New (per cwt.) ..	41 4	39 8	37 12

Commercial (per quarter) ..	18 8	18 0	18 8

LONDON WOOL FIRM

(Messrs. J. Hardacre & Co.)

BOMBAY, 9*th March*

The course of events in oversea markets continues to be an important factor and Bradford quotations for tops, although they do not fully reflect changes which have taken place in wool values, are influenced by the general trend. The advance in quotations for merino tops on Monday are fully maintained and any further changes have been against the buyer. The comparatively high prices paid for English wool at Leicester this week have resulted in higher quotations for English tops, advance being to the extent of 1d. to 2d. per lb. for a 50s carded.

The current series of wool sales at Melbourne closed yesterday with wool values fully firm, as compared with the best values of the week. Any change was in sellers' favour. At Sydney, all descriptions of wool closed fully firm. At East London, the market was fully firm, being in sellers' favour. Values were up by 2½ per cent. at this week's sale at Durban.

The situation at the moment displays all the best features of a steady market, such as good competition and clearances at the primary sales, and no immediate change is anticipated, owing to paucity of stocks and supplies.

The approximate prices of Bradford oilcombed tops (per lb. c.i.f. Bombay) are given below:

48s carded 80*d.* (April-May, 1953), and 58s super 118*d.* (April-May, 1953), 60s super 140*d.* (May 1953) 64s super 160*d.* (May, 1953), and 70s super 174*d.* (May, 1953), and fibro (3*d.* 4") 43½*d.* (April-May, 1953.)

48s scoured clothing wool type 114 71*d.* (April-May, 1953).

PEPPER ADVANCES

(Messrs. Parekh & Co.)

BOMBAY, 11*th March*

Black pepper continued to advance during the week, reflecting firmer advices from New York, where heavy speculative purchases by leading dealers coupled with short coverings against February sales are reported. Thinking that the Indian market should go down during the month of February under pressure of movements in the Malabar new crop, the grinders and the dealers in New York who were buying on a hand to mouth basis are said to be in the market on a rather more extensive scale, as Indian growers showed continued resistance to lower prices and markets of cocoa, coffee and rubber in New York showed improved sentiment. The yield in Wynaad, the main pepper cultivating centre of North Malabar, being about half the normal, the expected competition from that source with Travancore-Cochin product, did not materialise, and consequently, the bears in India, and their counter-parts in New York, were forced to cover. Grinders in New York who once wanted to time their purchases of Malabar black when it reached a safe level of $0.90 or $1.00 are now reported to have revised their idea, and according to one of the market observers in New York, they are now expected to put in aggressive inquiries, if spot market once again comes down to between $1.25 and $1.30 per lb. c. and f. New York. Looking to the poorer exports so far, the Indian growers, however, are likely to remain soft sellers at every advance, but looking to their holding capacity, they are not likely to come out to press sales on an unwilling market at least during the coming couple of months, as they think they have world monopoly of pepper supply until Sarawak or Lampong new crop comes on the market some time in July. Reports of a few advance sales of Sarawak or Lampong by New York or by Indonesia or by Singapore interests have so far failed to affect the bullish sentiment of the growers in India, as they think that these sales are rather speculative, and done with a motive to soften their firm attitude. Alleppey, after touching the new high level of Rs. 3,200, is now quoting to sell at Rs. 3,150. Calicut is quoting Rs. 3,250 with reserved sellers. Indian exporters are believed to have sold at a single stroke about 200 tons for March shipment at $1.39 per lb. c. and f. New York.

In A.S.T.A. section, some lots have changed hands locally at $1.40 for March and $1.41 for April shipment. New York is reported to be further buyer for March shipment at $1.39 but sellers in India are asking for higher price. At Cochin a small quantity of garbles changed hands at Rs. 537 to Rs. 540. In Alleppey, the business in garbles is reported to have been closed at present, as some of the bears refused to pay clearing.

Following are to-day's nominal quotations: Ready delivery Rs. 2,700, March Rs. 2,620/50 and April Rs. 2,660-90 per candy of 5¼ cwts.

RAW JUTE QUIET

(From Our Own Correspondent)

CALCUTTA, 10*th March*

The manufactured goods market received more support from bazar dealers than from foreign buyers during the week under review. Fair business was put through in hessian with exporters, but rates fluctuated only within narrow limits. Rates for hessian cannot be expected to go further, so long as the quotations of Continental manufacturers remain at current levels. Ready 40" 10 oz. hessian opening at Rs. 43-3 on Tuesday last was, at one time, dealt in at Rs. 43-10, but when it was found that foreign buyers were hesitant to enter into commitments, following an expectation that prices would move down, the rate declined to Rs. 42-6, the closure during the week-end being on a slightly improved note at Rs. 42-10. Expectations of lower prices followed reports that Pakistan was considering a reduction in the duty on raw jute shipments to this country. As these rumours continued, the rate came down to Rs. 42 yesterday with Rs. 50-7 f.o.b. During the week as a whole, 40" 8 oz., hessian at Rs. 43-8 f.a.s. lost Re. 1-4, and the f.o.b. rate was reduced to Rs. 40-4 from Rs. 41-8.

The trend in the sacking market followed a different pattern. The lack of adequate enquiries from foreign buyers should be attributed to the huge stocks which mills have accumulated. For importers in foreign countries are aware that, in view of the excess of supply over demand, there is no need to rush to the market and take up the required quantities. Their attitude is due to a desire on their part to see that traders pass over to the former the full benefit of the export duty cut. In fact, what business took place during the week was at rates which compared favourably with those prevalent prior to the duty revision last month-end.

B. twills were yesterday quiet at Rs. 93 per 100 bags. The opening last Tuesday was at Rs. 95 which soon declined to Rs. 92-6. At this stage some business was put through with Australia and West Indies, and the quotation locked up at Rs. 94. Green heavy cess were transacted at Rs. 106-10 for some covering demand, with heavy cees plains being quoted at Rs. 94-4. D.W. flour bags declined to Rs. 121 from Rs. 123, while cornsacks were wanted for the near delivery position to meet some covering demand.

The raw jute market was extremely quiet following rumours that Pakistan was to remove, at least partially, the discrimination against India in the matter of the export duty on raw jute. Assam bottoms were quoted at Rs. 20-8.

FOODGRAINS PRICES RECEDE

(From Our Own Correspondent)

HAPUR, 9*th March*

The Government of India has reiterated its faith that India is likely to be self-sufficient in rice in 1953. It is disclosed that, while India has approached China for supply of rice this year, China has not yet agreed to do so. During 1952, India imported 147,700 tons of rice from China, as against 65,800 tons in 1951. The finishing touches are now being given to the nation-wide campaign to popularise the Japanese method of rice cultivation which is due to be launched on the 15th inst.

As a result of the steps taken by the U.P. Government to push up sales of wheat and coarse grains from the stocks held on Government account at economic cost and the continued operation of the austerity provisioning schemes in the eastern districts, foodgrains prices have registered a decline this week. Confidence is seemingly being restored and this may discourage the hoarding tendency which was raising its head some time ago. There has been slight fall in prices of wheat, gram and almost all coarse grains, millets and barley. The standing *rabi* crop gives promise of good yield. Harvesting may start very shortly. Peas arrivals had begun some time earlier in eastern districts and have begun here also in small parcels. The latest quotations in the local market are: Wheat Rs. 20, gram Rs. 17, peas new Rs. 13-12, maize Rs. 13-12, *bajra* Rs. 13-2, *juwar* Rs. 12-8 to Rs. 11-8, Rice *basmati* Rs. 34, sela Rs. 29 and coarse Rs. 23.

The Bihar Government has taken steps to bring down the market prices of foodgrains. There is no statutorily controlled price of foodgrains within the State. All district officers have been instructed to buy rice or paddy wherever available within the ceilings prescribed. Stocks purchased are to be kept in the area of procurement to meet local needs. These stocks would be distributed on cards through fair price shops whenever prices rise above Government wholesale issue rates and would serve to bring down the market prices to reasonable levels.

SUGAR DEPRESSED

(From Our Own Correspondent)

HAPUR, 9*th March*

The Indian sugar markets have remained very quiet and depressed during the week under review and prices have generally shown a downward trend. The Government of India's ban on exports of sugar during the current season has taken the sails out of the hands of the hoarders and industrialists, while the release of three big sugar quotas for free sale have increased supplies in the markets throughout the country. The present offtake is not aggressive. With slight improvement in the transport of sugar stocks from North Indian factories to the South and other needy areas, the overall position has improved.

The Bihar Government is amending the Sugar Factories Control Act, 1937, to ensure that sugarcane is supplied to factories only through co-operative societies. An official spokesman said that the proposed legislation would eliminate middlemen between the factories and the growers and give an impetus to the co-operative movement.

The U.P. Government has fixed the tax rates chargeable on the sugarcane imported for crushing in factories within the limits of the Municipal Boards in the State. A circular to all Divisional Commissioners states that local bodies situated in the State will not levy toll on sugarcane imported for consumption in sugar factories situated within the limits of their respective Municipal Boards at rates higher than those fixed by the Government. These rates vary from one anna and six pies for eight maund load of sugarcane to Rs. 2 for 140 to 160 maunds load of sugarcane.

The average sugar prices in different markets are: Ambala Rs. 29-14, Amritsar Rs. 30-10, Delhi Rs. 30-8, Jullundur Rs. 29, Agra Rs. 29-8, Hapur Rs. 29-1, Kanpur Rs. 27-14 Mathura Rs. 30.

MARKET REPORTS

(*Concluded from page 465*)

Meerut Rs. 29-4, Muzaffarnagar Rs. 30, Patna Rs. 30-14, Calcutta Rs. 29-4, Gauhati Rs. 32-8, Cocanada Rs. 31-8, Madras Rs. 32, Bombay Rs. 32-14, Bhavnagar Rs. 32, Nagpur Rs. 32-4, and Indore Rs. 29-4.

The *gur* markets remained quietly steady.

The latest quotations in the markets are: *Gur*: Ambala Rs. 12-8, Delhi Rs. 14, Amritsar Rs. 13, Jullundur Rs. 12-4, Agra Rs. 14-4, Hapur Rs. 14, Kanpur Rs. 13-9, Meerut Rs. 13-8, Mathura Rs. 12-10, Muzaffarnagar Rs. 13-8, Patna Rs. 12-14, Calcutta Rs. 13-14, Gauhati Rs. 16-4, and Madras Rs. 19.

METAL PRICES DECLINE

(From Our Own Correspondent)

CALCUTTA, *10th March*

The news of Marshal Stalin's death affected sentiment in the metal market in a pronounced manner during the week under review, and the consequent bearish influence resulted in a decline in prices. Even at the lowest levels, consumers' interest was only limited. Electrolytic copper was quoted at Rs. 185, but consumers paid more attention to copper scrap which was bought at about Rs. 167. The fire-refined copper ingots were priced at Rs. 170. Although the copper supply position should by no means be considered satisfactory, consumers noted reports that a fair tonnage was expected to reach India shortly. On the expectation that prices would ease further, they were reluctant to enter into commitments.

Tin was far from active and reacted from Rs. 635-8 to Rs. 631. Mercury was quiet at Rs. 518 a flask, and the speculative activity in Bombay did not have any effect in the local market. Antimony remained unchanged at Rs. 200, and the lack of demand was attributed as the main reason why during the last month domestic production was *nil*. Electrolytic zinc declined from Rs. 62 to Rs. 60, and although fair quantities were taken up by consumers the easiness was due to the extremely satisfactory supply position.

MODERATE DEMAND FOR TEA

(From Our Own Correspondent)

CALCUTTA, *10th March*

Export offerings during yesterday's sale amounted to 53,700 packages. Although there was moderate demand, the extent of rise in quotations was insignificant compared to last week. Leaf grades were steady, but accounted for only small gains. As. 1 to As. 2 was gained in prices of clean commons, low mediums and commonest varieties. The prices of Darjeelings remained unchanged. The rates were: best C.T.C. Assam B.P. Rs. 2 to Rs. 2-1 (nominal), medium Assam B.P. Re. 1-9, clean black pekoe Re. 1-7 to Re. 1-7-6, and clean common B.P. Re. 1-8.

Conditions during last week's sale for domestic consumption were very steady, dusts offered aggregating 20,000 packages and other grades 1,500. There was an impressive rise in prices. In the dust market, buyers showed a keen inclination to buy clean black leafy varieties fit for shipment, and prices for these rose by As. 4 above brokers' valuations. There was moderate support for teas possessing autumnal liquors, and prices for best liquoring Assam C.T.Cs., commonest kinds, and bright liquoring Dooars, were pushed up by As. 2. Among the Darjeelings on offer, the flavoury types were taken at improved rates. The rates were: good Assam C.T.C. Re. 1-14, medium Dooars Re. 1-7 to Re. 1-7-6, and medium grainy Assams Re. 1-8-6 to Re. 1-9. The leaf market was firm.

TANNED SKINS STRONG

(From Our Own Correspondent)

MADRAS, *9th March*

There has been no sign of weakness in the hides and skins market. Arrivals have met with ready demand and prices have ruled firm. Buyers have paid enhanced prices, especially for medium and heavy weight kips and also for cow calf. Locally, sellers are firm and prices rule at 2d. above importers' levels. Tanned buff calf and buff heavies have remained steady.

In the tanned skins section, prices of sheep skins have advanced sharply, probably due to speculative buying, and of goat skins by As. 2 due to enquiries from the U.S. and the Continent. Prices in the next London auctions, which commence on the 23rd inst., are expected to rise, and the quantities available for sale are 260,000 tanned goat skins and 460,000 sheep skins.

HEAVY ARRIVALS OF HIDES

(From Our Own Correspondent)

CAWNPORE, *8th March*

During the week under review the local hides and skins market was featureless. Keeping in view the present day standards the fresh arrivals were considerable. These were readily disposed of through transactions mainly with the local tanners. The Madrasee dealers were eager buyers of lower grade cow, goat and sheep. The latest quotations are as follows:

Wet salted cow, first grade: Rs. 400, second grade: Rs. 300 and third grade: Rs. 280 per score; wet salted buff, first grade: 1 lb. 10 ozs. and second grade: 2 lbs. 4 ozs. per rupee; goat, first grade: Rs. 240, and second grade: Rs. 210 per 100 pieces; and sheep: Rs. 250 per 100 pieces.

LINSEED PRICES EASE

(Messrs. A. Bradley & Co.)

CALCUTTA, *9th March*

Prices have been somewhat easier during the past week with the undertone of the market rather dull; the daily turnover has been fair. Buyers are in the market for forward as well as ready deliveries to cover their immediate needs and sellers have been fairly keen at more attractive rates. There have been fair enquiries from local buyers for oil and crushers have, therefore, come into the market; there are no fresh enquiries from overseas buyers. The latest quotations are as follows:

Ready Rs. 20-4, March Rs. 19-8, April Rs. 19 and May Rs. 18-8 per maund.

STOCK & SHARE QUOTATIONS

Abbreviations:—D=Deferred shares. G=Guaranteed shares. P=Preference shares. P.O.=Preferred Ordinary shares. R=Rebate shares. Y=Accounts published yearly. H=Accounts published Haf-yearly. Q=Accounts published once 15 months. T=Company has Debentures. R.L.=Reserve Liability on shares. N=Nominal Quotation. i=Interim Dividend. f=Dividend for first half-year, y=Dividend for the year. x=Ex. Dividend c.d.=Cum. Dividend.

Shares:—If a company has different classes of shares—as, for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under "Paid-up Per Share."

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12 indicate the months of June and December, respectively. 'Reserves' includes general and other reserves and all other funds which a company may have as also depreciation on block items, when this is charged to separate account "Block" represents actual cost of land, buildings, machinery, and all such other items on which depreciation is allowed, less sales, if any, and stands for the gross figure except where otherwise indicated.

Dividends:—Dividends for completed years are calculated at per cent. per annum, but, where quoted for portion of a year, they represent percentages of the dividend on the paid-up share value. For companies closing the books half-yearly in the first three months of the year, and for companies closing their books yearly during the first half of the year dividends are shown as for the previous year.

(e) Returnable on or after 31st July, 1950, at Rs. 102-8 or at par after 31st July, 1955, on six months notice in each case

Bearer bonds of Rs. 1,000 each with option of redeeming on 3 months' notice at ½ per cent. premium after 1st March, 1954, but before 1st March, 1957, and 1 per cent. premium on or after 1st March, 1957

(h) Option of redemption on or after 1st July, 1949, at par.

(f) Option ofrepayment at any time at par at any time on or after 30th June 1947 on six months' notice

TARGETS UNDER THE FIVE-YEAR PLAN

(*Concluded from page 435*)

remove it. It can be removed by planning on a much bigger scale than what has been thought of, and by putting that plan into action. The United States of America is to-day big, because of what it has achieved. It will be interesting to note here the *per capita* investment of this country. The *per capita* investment in the U.S.A. is approximately 100,000 dollars. It means an investment of 150,000 billion dollars. As against this, investment in India is approximately Rs. 2,000 *per capita*. In the United States investment is not merely in factories and buildings; money has also been spent lavishly on all sorts of social services. There are over three million miles of roads and the railway system is one of the finest in the world. Factories and plants have been developed to such an extent that billions and billions have been spent on them. Every man is housed, on which again in turn billions have been spent, and this is how they have been able to achieve this result. If we are to make any progress from our Rs. 2,000 *per capita* investment to any appreciable figure, we would have to run and not crawl. Our present proposal is to spend Rs. 60 *per capita* in the next five years. After all, we do not produce anything without spending something. On Rs. 60, what return can you expect? At the most, in a country like ours which spends most of the money in development projects you can expect Rs. 20 or one-third of what you invest. In the United States, the return is only 2½ per cent. It is so because they have provided so many services which do not yield any return. For many years to come, any investment in India will be mostly on production items, which, at the most, may result in 33 per cent. yield per year, but it will depend on how much money we are able to spend per year.

"Our Prime Minister emphasises that the next five to ten years are going to be the crucial years. He is extremely critical of the unemployment situation. I think, we should examine the question from the angle of employing as many people as possible and accelerating our development scheme to such an extent that the limit is set by the material resources available and not merely by finance. A beginning has been made this year by the Finance Minister who has rightly described the present conditions as favourable for deficit financing, which I would call development financing. To the extent we are able to create new wealth continuously year after year from that development finance, to that extent it will not allow any inflation. If any inflation occurs, it will be entirely temporary and will be more than offset by increased production. The Finance Minister is, therefore, right in enunciating his policy and the country, should, therefore, pursue its production programme as much as possible, depending, of course, on the material resources it can command. To the extent resources can be developed in the country, it will make our task easier. Therefore, we must concentrate more on basic industries, as the Prime Minister has suggested, so that we are able to develop our country as quickly as possible. I do not suggest that we should not take care of consumer goods industries at all, because when money is spent, unless consumer goods are available, it may create shortage of the necessities of life. We must guard against that by developing also consumer goods industries. But the essential thing is to accelerate the whole development programme as much as possible. Since the next five to ten years are crucial, not only from the angle of world situation, but also from our own political situation, development programmes should be pushed up as much as possible to create a stable and healthy situation whereby the number of unemployed may be reduced to the minimum possible.

"We should think in large, not niggardly, terms and in that way so modify the Plan from time to time as to enable us to achieve higher standard. In this task, the business community would play its role, as it has done in the past, and we are here to help the Government in every possible way. In the last few years, we have achieved great increases in production. As the Federation has previously stated, the industry set up after the war has come into production and its product is almost worth Rs. 400 crores a year. To-day the problem with industry is not that it cannot produce, but the problem is that it cannot sell its product. If the Government wants us to produce more, we will very gladly do so, but any extra production will depend on the purchasing power of the people, and if to that extent, the Government takes care of that sector, we have no reason to think why production cannot be expanded. Any effort which the Government makes in that direction and in the direction of production will have the wholehearted support of the business community, and from that point of view we fully support the Plan."

Notices

THE HURRILADIH COAL COMPANY LIMITED

NOTICE

THE EIGHTY-THIRD ORDINARY GENERAL Meeting of the Shareholders will be held at the Registered Office of the Company, No. 2, Fairlie Place, Calcutta, on Thursday, 26th March, 1953, at 11-05 a.m.

BOMBAY CHAMBER OF COMMERCE ANNUAL MEETING

A PLEASANT feature of recent times is the shrinkage in the area of differences of opinion, especially on fundamental issues, between business men and the Government of India. A striking evidence of this was found at the last annual meeting of the Federation of Indian Chambers of Commerce and Industry, New Delhi. Further evidence was provided by the annual meeting of the Bombay Chamber of Commerce held on Wednesday this week. It is true that the outgoing and incoming Presidents of this Chamber are usually more realistic and constructive in their analysis of the Government's policies than those of most other commercial bodies in this country. But the speeches delivered at this year's annual meeting of the Chamber are less critical and even more constructive than those a year ago. There are, of course, a few criticisms in the addresses of both Mr. J. C. Burns and Mr. E. L. C. Gwilt, the retiring and the new President of the Chamber, respectively. These criticisms, however, relate to some of the old policies of the Government which have been criticised so often. The fact that there is nothing new in these criticisms reflects the absence of any new provocation by the Government. That is undoubtedly a distinct gain in the relationship between the Government and business men.

Mr. Burns' reference to the Five-year Plan shows that he is in full agreement with its objectives and approach. He welcomes the emphasis laid by the Plan on agriculture and community development. As a farsighted business man, he appreciates the importance of a developing and profitable agricultural industry to manufacturing industry, both as a source of raw material and as a market for manufactured goods. As every practical-minded business man has taken care to caution the authorities in charge of the Plan, Mr. Burns too urges them to give high priority to the need for increasing the yield per acre and pushing ahead the irrigation and land development schemes with utmost speed. It is in this context that he welcomes the move to popularise the use of the Japanese method of paddy cultivation as a practical approach to the problem of increased production of food. It is the application of such simple, practical, farm level schemes that will do, according to him, more to help than anything else can.

While Mr. Burns is keen that the Plan must be implemented, he is doubtful about the Planning Commission's assumptions regarding financial resources. He wonders whether the requisite funds would be available and seems to feel that the increase in the outlay from Rs. 1,493 crores in the draft Plan to Rs. 2,069 crores in the final Plan is quite substantial. "If this large sum of money is to be forthcoming, a realistic approach to all the problems facing this country will be essential," says Mr. Burns. Are the Governments making such a realistic approach? He feels that they are not, and there is sufficient reason to think that he is right. Take, for instance, the question of attracting foreign capital to India. While Mr. Burns is not opposed to the Government's view that no political strings should be attached to foreign capital coming into this country, he is of the opinion that India should do something positive to encourage the flow of foreign capital. "I cannot see," says he, "that enough is being done to-day in that direction. Rather would I say that, in some respects, the opposite is the case, because one notices certain inconsistencies in the smaller policy matters." As these are the views of a representative of foreign investors in this country, the authorities will do well to elicit from him, or from the Chamber he represents, the exact reasons which make him feel the way he does and to see how best the climate can be rendered more congenial for the flow of foreign capital into this country.

Surprisingly enough, the retiring President of the Bombay Chamber chose to remain silent on the controversial issue of deficit financing. Apart from indicating the quantum of deficit financing envisaged in the Plan, he did not say whether deficit financing was good or bad. From his emphasis on the need for India securing more foreign capital, one can, perhaps, justifiably infer that he is not in favour of deficit financing. Nevertheless, the absence of a direct reference in his speech to this important aspect of the Five-year Plan gives rise to the feeling that Mr. Burns' observations on the Plan are incomplete.

The subject of labour relations figured prominently in the speech of Mr. Burns. His observations are indicative of the progressive outlook of the Chamber in these matters. The change in the Central Government's approach to this problem brought about by Mr. Giri has heartened all employers, including those represented by the Chamber. As readers are aware, the essence of Mr. Giri's approach is that voluntary negotiations, as opposed to compulsory adjudication, should apply in the settlement of all matters coming under industrial relations. Direct negotiations between employers and labour organisations to settle all disputes are to be preferred, as the results of such amicable sett

He is now working hard on a scheme which will be acceptable to both employers and employees.

Mr. Burns alluded to two specific issues of labour relations, namely, employees' State insurance and provident fund for workers. He reiterated the now familiar criticism that the legislations in respect of both these matters were enacted in undue haste, without proper thought and adequate preparation for implementing them. He was, of course, not content with the mere repetition of this well-merited criticism. He actually made two constructive suggestions. These are: (1) as reports about the working of the State insurance scheme in Delhi and Kanpur, where it is being tried as an experiment, are not altogether reassuring—there are, it is said, many complaints by workers coming under the scheme that they are not getting from it what they had been led to expect—it would be a great mistake to hurry the application of it to other centres, until it has proved itself in Delhi and Kanpur. Some delay at this time would be a much lesser evil than the introduction of the scheme in large industrial centres such as Bombay and Calcutta before the necessary machinery begins functioning properly; (2) the present Provident Fund Act and the scheme framed under it are both ill-conceived and unnecessary. As employers as a whole are not opposed to the institution of provident funds for their workers, the object of the Government could be served in a more easy and correct way than the present scheme. The Government should lay down that every factory employing more than a certain number of workers should be statutorily required to set up a provident fund for those workers within a specified period. To ensure uniformity, model rules could be drafted. The administration of the funds should be left entirely to the employers and employees concerned, to be carried out under properly constituted trusts.

Considering that the aforesaid suggestions have been put forward to ensure smooth working of the schemes and not to postpone or evade the responsibility of employers, the authorities will be well advised to listen to Mr. Burns. The Government must remember that the State insurance scheme now being tried in Delhi and Kanpur is only a pilot project. It should not, therefore, extend the scheme to other centres until the defects revealed by the working of the pilot projects are rectified and care is taken to see that they will not recur when introduced in other industrial centres. The second suggestion, namely, that relating to provident funds, made by Mr. Burns is also equally sensible. It is, indeed, so simple and practical that the Government stands to lose nothing by implementing it. The fact that the Government itself is already contemplating to hand over the control of its provident fund scheme to factories employing more than 300 workers is proof enough to show, if proof were needed, that its scheme is quite complicated, if not utterly impractical. The best way of giving effect to Mr. Burns' suggestion is for the Government to repeal the present Act and pass another on the lines indicated by him, making it obligatory for provident funds to be constituted in all factories employing more than a specified number of workers. It is never too late to correct a mistake and it is to be hoped that this eminently practical suggestion will appeal to the present Labour Minister at the Centre.

The survey of business trends in the past year made by Mr. Burns was brief and factual. It is, however, refreshing to find that, unlike many business men in this country, he feels that the fall in prices last year was not a matter for regret. It was, on the contrary, all to the good, he said, as the prices of a number of commodities had been too high. Being intimately associated with the textile industry, Mr. Burns could not, perhaps, refrain himself from making a brief reference to India's trade in cotton piecegoods. He maintained, and that very rightly, that this industry must be enabled to reach the export target of 1,000 million yards for 1953. Unless the industry exported this quantity of cloth, it would not be able to maintain production at the current level and provide employment to workers at the present level. This naturally led him to the question of export duties and to make the following observation:

> "The use of such a duty to equate internal and external prices when there is a wide disparity is not of great importance when the total quantity of any commodity permitted to be exported is strongly controlled. The levy of export duties in recent years for the specific purpose of preventing inflation of the internal price level was justified, but the levy of them purely for revenue purposes or to absorb legitimate trade profits which would ordinarily go to exporters in this country is a very different matter. We are glad, therefore, to be able to record that, on 4th January, the export duty on cotton cloth (coarse and medium varieties) was reduced from 25 per cent. to 10 per cent. All I wish to do to-day is to urge upon Government the importance of not deferring too long the next move, namely, the abolition of this duty or such reduction in it as may be necessary, so that there may be no check on exports this year, at least until the target of 1,000 million yards has been reached."

As the importance of a buoyant textile industry to the general economy of this country is a matter of common knowledge, comment on the aforesaid observations of Mr. Burns will be superfluous. Suffice it to say that he has put forward the industry's case in a manner that should be quite acceptable to the authorities concerned.

ECONOMICS OF COAL CONSERVATION

EVER since the need for conservation of good quality coking coal was recognised by the Government and accepted, with certain reservations, by the coal industry, the question, which has been continuously posed, is whether conservation should be treated merely as a problem in physical limitation of output. There is a danger that, in emphasising the need for conservation, a far too narrow and restricted view of the problem might be taken and the real problem of conservation masked by an exaggerated emphasis on the curtailment of coal production. Surely, a far greater measure of conservation, as Mr. W. H. S. Michelmore, Chairman, Indian Mining Association, pointed out at the recent annual general meeting of the Association, at Calcutta, could be achieved by "sand-stowing, washing and blending than by severe restriction." The essential soundness of this principle has apparently found ready acceptance by the Planning Commission, considering that its principal recommendations on this subject include the need for carrying through a programme of legal enforcement of stowing, blending and washing, and for gradual replacement of superior varieties of coal in railways by non-metallurgical coal. Indeed, the passing of the Coal Mines (Conservation and Safety) Act, 1952, is itself, in a sense, the recognition of the stand that mere physical limitation of good quality coal is no solution to the problem of conservation, for the Act provides for the adoption of a more comprehensive policy of conservation. After all, conservation ought to mean elimination of avoidable waste, employment of best methods of extraction and economic utilisation of coal. Moreover, conservation ought to be a dynamic concept, for as new seams are discovered, or as our ideas of reserves change with more systematic survey and as fuel technology widens the scope of the utilisation of coal, it is necessary that our ideas of conservation too should change. The discovery of lignite in South Arcot, Madras State, for instance, is a notable development, for the reserves of this mineral, which, it is claimed, compares favourably with the best varieties of coal, are estimated at as much as 2,000 million tons. But then, no discovery of fresh deposits is any excuse for improvident use of available resources of coal, seeing that even in the U.K., a country generously endowed with first class coal reserves by nature, there is a continuous movement to conserve the use of good coal and stimulate the use of every ounce of low grade coal.

This switch in emphasis, from a mere curtailment of coal output to the adoption of scientific devices as a means of conserving coal, does not, of course, make the problem less easy to tackle. On the contrary, it brings to the fore the complicated nature of the problem. If the problem is to be solved, its complicated nature must be candidly recognised. This will enable the Government and the industry to work out, patiently and over a period of time, a solution that is at once satisfactory to all the parties concerned and also capable of speedy implementation. And here is the rub. The two principal elements in a conservation policy, namely, stowing and washing, involve capital outlay and additional expenditure. And coal is a controlled commodity. Conservation is thus as much a problem of finance as a technological one.

There is no need to labour the obvious importance of stowing and washing. Stowing assists recovery of coals, while washing ensures both consistency and low ash content in coals. Both processes are desirable—desirable from the point of view of the producer and the consumer. But both involve rise in production costs. It is this aspect of the problem which deserves to receive the urgent attention of the authorities, for no sermon on conservation will be of any avail, if the proper economic climate in which it can be practised systematically is not provided. Mr. Michelmore pointed out how stowing inevitably involves a sharp rise in the cost of production. Since Government assistance is in any event limited to 75 per cent. of the actual cost of stowing, he said that it was open to question whether the "economics of the industry can bear any such increase as would be involved by a wide expansion of stowing operations." There is also the problem of sand supplies, for Mr. Michelmore doubted whether adequate supplies of sand would continue to be available after the completion of the Damodar Valley Project which is designed rightly to prevent flood and soil erosion but which also raises the problem of where all the sand, so improvidently scattered by the Damodar, could be found once the river water is harnessed by the Project. Perhaps, sand would have to be hauled over a longer distance to the coal mines, which would only add to production costs. In these circumstances, it is difficult not to agree with Mr. Michelmore's view that an upward revision of the controlled selling prices of coking coal is "inevitable."

Coal washing is a twice-blessed proposition. To the producer it means the beneficiation of inferior coals in order to make them do the work of better grade coals. To the consumer it means a "better and more suitable fuel of guaranteed quality." To the steel producer it provides, as Mr. Michelmore revealed, a "consistent blend of coking coal, which is something of such great value to the blast furnace operator as can hardly be measured in terms of actual money." If coal washing thus confers so much benefit on the producer and the consumer of coal, its adoption also implies additional expenditure. Mr. Michelmore quoted figures to show that a coal washery, with a capacity of 100 tons per hour, would cost Rs. 15 lakhs and a washery with double this capacity at least Rs. 24 lakhs. Here are involved two problems: (1) raising the money needed for setting up the washeries, and (2) meeting the cost of washing the coals. Mr. Michelmore suggested that coal washing should be given a high place in the list of priorities for which finance is provided by the Industrial Finance Corporation; and also that it would be necessary, in order to make washing attractive, to pay a bonus of something like Rs. 2 to Rs. 3 per ton above the present controlled prices. The payment of bonus will, however, raise many practical difficulties, considering that the quantity of coal which is needed to produce a given quantity of clean coal depends on the quality of the coal that is treated by washing. As mining costs are not affected by the quality of coal mined, a higher price, Mr. Michelmore said, should, in theory, be paid to the owner of a colliery producing inferior coal, in order to enable him to turn out washed coal, although the value to the consumer is not affected by the consideration whether it is inferior coal or superior coal that has been processed by the washery. Mr. Michelmore said: "I am not attempting to give you the answer to this enigma, but I think it will serve to illustrate what a very complicated economic problem this is."

Enigmatic or not, the problem has to be faced—the problem of adequate compensation to the colliery owners for the higher costs that must result from the adoption of conservation methods. It is no use shirking the issue in an unrealistic manner by saying that the country is willing to have conservation but is afraid of the costs. Some way must and probably could be found to keep the rise in costs within a reasonable minimum. It cannot certainly be beyond the wit of the Government, the industry and the workers to arrive at a workable solution of the admittedly complicated problem of coal conservation. And no solution can be developed in isolation, that is, free from consideration of what the consumer will pay. The solution for this problem of national significance must proceed from an agreed basis of a gradual reduction in costs, through lightening of the burdens on the industry. It is on this basis that conservation costs should be erected, if the entire cost structure of the industry were to avoid a precipitate collapse through an ambitious attempt to combine elaborate labour welfare measures with grandiose schemes for conservation. It is wise to keep these schemes within bounds of possible achievement.

FEAR OF NATIONALISATION BASELESS

POUND STERLING—RETURN ON ELECTRICITY—NEW OPEN GENERAL LICENCES

THURSDAY, 5 P.M.

THE upward trend in equities, witnessed since the presentation of the Central Budget for 1953-54, progressed a little further during the major part of the week, though in an irregular fashion. Tata Deferreds crossed, for the first time in the current year, the Rs. 1,900-mark on Monday and touched a peak of Rs. 1,915 yesterday. Similarly, Bombay Dyeings pierced the Rs. 400-mark early in the week and climbed up to Rs. 413-2, a level which few expected to see in the beginning of this year. Most of the other equities also recorded fresh gains in the first six days of the week. But, to-day, a reaction set in in almost all the counters, wiping out a good part of the earlier gains. This is not surprising, considering the impressive improvement in values in the past three weeks. In fact, the setback is a good thing, as the advance made in recent days requires to be consolidated. A further fall in prices is even possible, as much of the recent rise in prices was the result of speculative buying, unaccompanied by any sizable investment support, and of a fair amount of bear covering. But the bullish sentiment that began to dominate the market soon after the introduction of the Budget has not undergone any change for the worse. If anything, the optimism persists more strongly than in the previous week.

MARKET GOSSIP

* * * *

How far is this optimism justified? No clear-cut answer to this poser is possible, but a series of explanations can be offered. In the first place, the sentiment not only of speculators but also of business men has changed for the better, for purely psychological reasons. The rising trend of prices in almost all sectors of business, except in jute and jute manufactures, has dispelled fears of depression that prevailed before the Budget. The offtake of cloth, coal, sugar, steel, cotton, oilseeds, tea and several other commodities has tended to increase and the profit-margins of producers of these manufactures and commodities are to-day considerably better than they were six months ago. It is true that the retention prices of steel have not yet been increased but many feel that this is only a question of time.

* * * *

Then, there is the psychology of inflation, generated by the Government's decision to step up the volume of deficit financing in the coming 12 months. This psychology works in two ways. The first is the belief that, as the purchasing power of the rupee falls, the value of tangible assets will go up. The second is that, when the volume of money supply expands, the cost of credit, that is, rate of interest will decline, in which case the yields on investments in both equities and Gilt-edged should decline. In theory, this will be the effect, but, in actual practice, much will depend on the quantum of inflation, and the measures taken to counter inflation. At this stage, it is not possible to express an opinion on these two points with any degree of accuracy, because there are a number of imponderable factors. Generally speaking, the supply of goods in the country is still substantially larger than a year before and quite in excess of consumption at current level of prices. If prices tend to go up still further, consumer resistance may begin to reassert itself. Further, the trend of business in other parts of the world is by no means conducive to any belief that domestic manufacturers can earn a large margin of profits. Moreover, it is yet too early to presume that the authorities will, once again, pursue the war-time practice of inflation and deliberate cheapening of the cost of money. There is, however, some justification to feel that the possibility of the Government of India offering higher rates of interest than those prevailing at present has receded to a considerable extent. Sufficient indication has been provided by the Finance Minister in the past two months or so to show that he is not interested in offering higher rates of interest on Government borrowings.

* * * *

There are also sufficient grounds to feel that the Government of India is not likely to make any fresh move in regard to nationalisation of any sector of private enterprise. The speeches of Mr. Jawaharlal Nehru and Mr. V. T. Krishnamachari, Vice-Chairman of the Planning Commission, at the last annual meeting of the Federation of Chambers of Commerce and Industry, clearly show that the Government is keen on securing the co-operation of private enterprise for the implementation of the Five-year Plan. Our own enquiries in high Government circles reveal that the Ministers are quite aware that the Government machinery is not efficient enough to undertake additional responsibility in the sphere of trade and industry. There is absolutely no move to nationalise or socialise either banking or insurance, and no change is being contemplated in the existing regulations in regard to these companies. If any changes were at all to be made in them, they would be such as to make the credit institutions more useful for promoting industrial development in the country under the auspices of private enterprise, as indicated in the Plan. We also understand that, although the Public Accounts Committee has favoured nationalisation of the Tata Locomotive Engineering Co., Ltd., the Government has no intention of implementing that suggestion, unless, of course, Tatas fail to deliver the goods. It has been reported in a section of the Press that the Technical Sub-Committee, appointed by the Government to examine the feasibility of its project for establishing an iron and steel plant under State ownership, has recommended that the project should be left to be implemented by the Indian Iron and Steel Co., Ltd. While we have no idea as to how far this report is correct, our own impression is that the Government will find the task beyond its ability, if not resources, and that, ultimately, it will have to take the assistance of private enterprise to bring into existence another iron and steel plant in this country. It is just possible that the Government may form an entirely new company, with provision for participation in its capital by private enterprise, for the execution of this project.

* * * *

After an initial break, the pound sterling seems to be coming into its own, though it has not yet reached the high levels touched previous to its break. In the last week of February, it was bouncing against the ceiling of $2.82; the sterling-dollar rate was as high as $2.81-15/16—2.82-11/16. By the end of the first week of March it had declined to $2.81¼—2.81⅜. It has partially recovered the loss, the latest available rate being $2.81-9/16—2.81-11/16. Although the rate is not as near the ceiling as it was in February, it is noteworthy that it is still holding its own. It would appear that there is still a certain amount of commercial demand for dollars. Because this demand has not yet had any perceptible influence on sterling-dollar rate, financial observers are inclined to believe that the inherent strength of sterling has distinctly improved. The fact that forward sterling does not show any significant variation is also held as an indication of the essential soundness of sterling. It suggests, it is stated, that the sterling area's balance of payments position with the dollar countries is running along favourable lines.

* * * *

The Bombay region which accounts for a large share of the production and consumption of power generated in the country is vitally interested in the provision of adequate facilities for the expansion of the electricity industry. By 1956, the demand for electrical energy in this region, according to Mr. E. L. C. Gwilt, President-elect of the Bombay Chamber of Commerce, will have reached 365,000 kw. When the projected thermal and other generating stations go into production, it is anticipated that it will be possible to meet this demand for power. But this estimate makes no allowance for possible breakdowns in production, or for the vagaries of the monsoon which might conceivably throw the supply position out of gear. Consequently, it is very necessary that the supply position should be pitched at a comfortably high level. Does the present legislation regarding electricity undertakings provide the necessary incentive for the expansion of the industry? The Electricity (Supply) Act has certainly erred on the low side by keeping the standard rate on capital employed at 5 per cent. Mr. Gwilt referred to the resolution which was passed at the last annual meeting of the Associated Chambers of Commerce, Calcutta, emphasising the need for amending the Act, with a view to raising the standard rate from 5 to 6 per cent. He added: "I need say no more about that now, except to urge upon the Government of India the necessity of giving very early consideration to this, because the rate of interest on the loan granted to the Indian Iron and Steel Company by the International Bank was by no means low." Now that both the Central and State Governments have reconciled themselves to higher interest rates, and have shown no great anxiety to nationalise electricity undertakings, it is reasonable to expect that they will recognise the need for providing the necessary stimulus for private investors to participate in the capital expansion programmes of the existing undertakings or to invest in new ones that might be started.

* * * *

During the week under review, the Government of India issued three important notifications regarding imports of goods from abroad. Of these, two relate to new O.G.Ls., while one relates to the modification of an existing O.G.L. The main effect of these notifications is that a large variety of goods, the imports of which were being freely allowed under O.G.L., is now subject to licensing. In other words, their imports will be restricted and regulated, according to availability of supplies in the country and of foreign exchange. The Government has done this, presumably because the supply of these goods within the country has improved. The reason may even be that the supply position in respect of these goods in the world markets has eased to such an extent that they may flood the Indian market, unless their imports are regulated.

* * * *

The two new O.G.Ls. that have now been issued are XXIX and XXX which replace the current O.G.Ls. XXIV and XXV expiring on 31st March, 1953. Both the new O.G.Ls. are valid upto the end of September next. The former permits imports from all countries of the world, except South Africa, while the latter permits imports from soft currency areas only. A few items, e.g., certain non-ferrous metal manufactures and semi-manufactures, aluminium ingots, tallow, rock phosphate and sodium nitrate, rotary tillers, and urea formaldehyde moulding powder, D.D.T. and machine cloth have been removed from the scope of the existing O.G.Ls. The O.G.L. No. XXVII, which allows imports of certain articles from Persian Gulf Sheikdoms and Portuguese possessions in India, has also been extended upto the end of September. The O.G.L. XXIX, it may be noted here, contains a list of goods considered essential, numbering well above 150, which could be imported from all parts of the world, except South Africa. Prominent in this list are goods such as non-ferrous metals (ingot, pig and scrap), iron and steel buffers for locomotives, Manila hemp, roller bearings, specific parts for diesel engines, power-driven pumps, paper insulated power cables, a number of important drugs and medicines, important articles for use in laboratories and for other scientific purposes, special types of refractories, a number of chemicals, sulphur, wood-pulp, spare parts for agricultural tractors, a number of electric instruments, apparatus, etc., scientific and surgical instruments, specified optical instruments, raw asbestos, fluorspar, etc. Among the goods that could be imported from soft currency areas mention may be made of bifurcated rivets, a few items of steel manufactures, tin block, raw sisal fibre, aloe fibre, aluminium, electrodes, cashewnuts, dates, wattle bark and its extracts, stick lac, palm oil, a few drugs and medicines, hides and skins, raw and salted, mercury, fishing hooks, gram and pulses, industrial diamonds, casein, etc. The goods which have been removed from the O.G.L. and for which licences are required, are: some items of non-ferrous manufactures, china-clay, some chemicals, malt extracts, etc. The following articles have been newly added to the O.G.L. XXIX: molybdenum wire, aluminium lead winged glazing bars, porcelain crucibles with lids, diffusion vacuum pumps, laboratory furnaces, micro-cardrum hearing aids, silica triangle on nichrome wire, etc.

* * * *

Generally, the Government of India's policy as embodied in the O.G.Ls. can be taken as indicating that the commodities and manufactured goods included under O.G.Ls. are in short supply in the world and that the Indian economy would be benefited by their free imports. In order to conserve hard currency, O.G.L. XXX has been notified in respect of goods which could be had from soft currency areas at competitive prices. When Government publishes its Red Book (Import Control) early in the year or early in July, the list of goods for which licences are necessary, as also restrictions in regard to percentages, etc., is published. For purposes of administrative convenience and also for maintaining a certain amount of flexibility, adjustability, etc., in the import policy of the Government, the O.G.L. items are issued to the public about two or three months after the publication of the Red Book. The O.G.Ls. now announced are in accordance with this practice. It may be noted that, on 3rd March, the Government liberalised imports of certain goods mentioned in the Red Book, with a view to earning more customs revenue. On the 7th inst., it issued its policy regarding the import of caustic soda, agricultural machinery and implements. These licences are valid for the period January-June, 1953, while O.G.Ls. are valid from April to September.

* * * *

A strange anomaly in income-tax law has been brought to light by the recent Supreme Court's judgment in the case of *Anglo-French Textile Co., Ltd.* vs. *C.I.T., Madras*, which has been reviewed elsewhere in this issue, by an esteemed contributor. The net effect of this judgment is that a loss sustained by an assessee cannot be set off for tax purposes, against his profit in the succeeding year or years, unless he has more than one head of income. The relevant portion of the Act is section 24, sub-sections (1) and (2). Section 24 (1) provides that an assessee may set off his loss against any income under any other head mentioned in section 6. Section 24 (2) provides that an assessee may carry forward a loss, sustained in one business, for a period of six years. The underlying assumption here is that an assessee, who has not been able to recoup his past losses, cannot naturally be expected to possess any taxable capacity. Now, the Supreme Court has held that section 24 (1) comes into play only when an assessee has more than one head of income. Again, since section 24 (2) provides for carrying forward of a loss which cannot be wholly set off under sub-section (1), the Supreme Court has held, in effect, that no loss can be carried forward, unless the assessee has more than one head of income. This tantamounts to a prevention of carrying forward of losses in one and the same business. And it should be clear that such a view, as our contributor points out, will inflict serious damage to the fortunes of the owners of single businesses in general, and of inurance companies, in particular. The situation, created by the judgment, calls for expert examination and speedy remedy, in order to rectify what appears after all to be a legal flaw. The Government will, it is to be hoped, either issue an ordinance or take the opportunity, presented by the debate on the Finance Bill, to incorporate the necessary amendments in the Income-tax Act, with a view to rectifying the position created by the Supreme Court's judgment.

* * * *

Textile exporters to Australia, particularly British textile exporters who supply so large a part of Australia's textile requirements, are naturally perturbed by the authorities' move to raise the tariff on imports of piecegoods. The preferential tariff on textile fabrics, it is stated, is sought to be raised from 12½ per cent. to 30 per cent. *ad valorem* (less 2½d. a square yard). The particular types of goods that are reported to be involved in this move are sheetings, sheets and pillow cases. Australia is not the only country which seeks thus to lend protection to domestic textile industry. South Africa too is now examining the rate of protective duties that should be levied on imports of furnishings, curtaining and upholstery materials. Commenting on these developments, the Manchester Chamber of Commerce says that enthusiasm in the development of local textile industries should not "proceed too rapidly and under conditions akin to those of a hot-house." Proceeding, it observes: "It is hoped that the Governments concerned and those responsible for the developments taking place will ensure that the young industries are established on lines which offer the best prospects for sound and economic production."

EQUITIES DRIFT LOWER

SELLING IN STEEL SHARES

(From Our Own Correspondents)

BOMBAY, 19*th March*

AN irregularly lower trend in prices of equities was in evidence on the Stock Exchange during the week under review. Speculative counters, particularly steel shares, made frequent bids to stage a rally on recurrent buying spree, and in the process, fresh high levels were established. But ultimately such gains could not be consolidated in the face of heavy selling pressure brought about by several factors. Thus, operators involved in shares as well as in bullion came out to sell Tata Deferreds to cover their losses in bullion. Heavy drop in jute and gunny prices in Calcutta brought about large offerings of Indian Irons from that centre. Further, unfounded fears about the outcome of the decontrol of steel in the U.S. disheartened holders of steel scrips. On the political front also, the news of the Soviet Premier's assurance of firm peace policy and the possibility of Congress-Praja-Socialist Party coalition in India (though the talks in this regard between the respective party leaders have since failed) were not to the liking of bulls. The market as a result lacked support and values tended to look down. Equities, on balance, disclosed small losses over a wide front.

In the steel section, Tata Deferreds opened cautiously on end-of-account considerations, at Rs. 1,876-4, as against the previous week's closing of Rs. 1,832-8 and after an irregularly narrow movement finished at Rs. 1,887-8. Subsequently, they edged forward to Rs. 1,902-8 in the new account on Monday morning. Owing to lack of follow-up support and renewed offerings the shares backed away to Rs. 1,877-8 on Tuesday. Trading on Wednesday opened with a spurt to Rs. 1,915, but the break in bullion prices and the weakness of Indian Irons, coupled with fears about the decontrol of steel in the U.S, brought the quotations down to Rs. 1,876-4, at the close to-day. Tata Ordinaries moved in sympathy with Deferreds and finished the week at Rs. 326-4 with a loss of Re. 1-12, after touching a high of Rs. 332 yesterday. After alternate bouts of buying and selling, in which process Indian Irons touched a high of Rs. 27-1 at one time, on reports that the Company might receive another big loan, sellers gained the upper hand and the scrips fell to Rs. 25-14½ to-day before closing at Rs. 26.

Barring a few select scrips in which Bombay Dyeings were prominent, textile shares failed to regain last week's losses. The sharp rise in cotton prices was the chief restraining factor. Bombay Dyeings were well favoured, reflecting the market's satisfaction over the Company's inherently strong financial position, despite a drop of nearly 50 per cent. in its net profit for the year 1952, which was in itself considered to be relatively better performance in view of the morbid state of the cloth market last year. The shares were, therefore, marked up from Rs. 397-8 to Rs. 413-2 yesterday, but closed to-day at Rs. 406-4 on profit-taking. Kohinoors struck a quiet note with a drop from Rs. 312 to Rs. 307-8. Central Indias retreated from Rs. 166 to Rs. 162. Century drifted lower from Rs. 286-8 to Rs. 283. The Company has declared a final dividend of Rs. 12 per share of Rs. 100, which with the interim one of Rs. 8, makes a total of Rs. 20 per share for the year 1952, the same as that for the previous year. Simplex were weak at Rs. 176-8, a loss of Rs. 9 over the week. Svadeshis were quiet at Rs. 255, as against Rs. 256-8. Tata Mills were down by Rs. 2-12 at Rs. 46-12. New Greats were placed at Rs. 154-8 *ex-div.*, as against Rs. 167 *cum-div.* last week. Finlays were done Rs. 2 better at Rs. 318. The Directors of the Company have maintained the dividend for 1952 at 20 per cent. paid for 1951. Indian Unitеds Ordinaries were in demand to go up by As. 4½ to Rs. 9-11½ and Deferreds by a fraction to Re. 1-10½. Standards looked up by Re. 1-4 to Rs. 295. The Company's dividend for the year at 20 per cent. is the same as that paid for 1951. Swans which staged a spurt last week on expectation of higher dividend continued to elicit support and moved up further this week by Rs. 15 to Rs. 455. The Directors have stepped up the dividend for 1952 to 30 per cent. from 25 per cent. paid for 1951.

Bank shares were quiet with small losses over the week. Barodas fell by Rs. 2 to Rs. 113, Centrals (Old) by Rs. 2 to Rs. 67-8 and Centrals (New) by Re. 1 to Rs. 71. Indias dropped Rs. 3 to Rs. 159. Imperial Fully Paids were a shade lower at Rs. 1,856-4, but Contributories showed no change at Rs. 461-4. United Commercials were steady at Rs. 38.

Public utility shares were a steady feature with small gains in select scrips. Ahmedabad Electrics were better by As. 5 at Rs. 115-5. Tata Hydros hardened by Rs. 2-8 to Rs. 152 and Tata Powers by Rs. 5 to Rs. 1,540. Tata Powers Preference were bid up to Rs. 1,295, a rise of Rs. 45 over the week. Andhra Valleys were steady at Rs. 1,427-8, while Bombay Suburbans were quiet at Rs. 123-12.

Miscellaneous shares were dull and in restricted activity, the list generally showed minor losses. A.C.C. were down by a rupee to Rs. 173 and Belapurs by Rs. 2-8 to Rs. 237. Bombay Burmahs were, however an active counter and the Old shares advanced by Rs. 6-14 to Rs. 396-14 and New by Rs. 5-14 to Rs. 147-8.

In the transport group, Scindias were quiet with a loss of As. 3½ at Rs. 14-10½. Bombay Steams were a fraction lower at Rs. 75-8. India Steamships were steady at Rs. 6-11 and Bharat Lines at Rs. 94. Air-Indias were lower by Re. 1 to Rs. 80 and Air-India Internationals by as much to Rs. 160. Hindustan Motors looked up to Rs. 4-3 and Premier Automobiles were done at Rs. 44-8.

In the mining and engineering group E.D. Petrols were quiet at Re. 1-2½. Indian Coppers were a fraction up at Rs. 3-3½. Alcocks disclosed a loss of As. 10 at Rs. 308-12 and Shivrajpurs As. 3 at Rs. 63. Premier Constructions were put up by Rs. 4 to Rs. 90. Tata Locomotives were on offer at Rs. 87.

* * * *

Calcutta Stock Exchange

CALCUTTA, 18*th March*

Considerable speculative enthusiasm enlivened market activity during the week under review. Quotations naturally moved fast, and Indian Irons at Rs. 27-2 saw the highest level so far touched during the year. Firmer Bombay advices and reports about the conversion rate for Tata Deferreds assisted the upward trend. During the last two days, however, profit-taking intervened, but the loss was insignificant. M. Malenkov's declaration aiming at international peace was a factor which accounted for a decrease in the volume of transactions during the last two days, but shrewed operators have not failed to take note of the implications of the war-like activities of the Russians in Germany and in Korea.

Better sentiment was noticeable in other sections also, and gains in selected counters were impressive. However, trading in jute shares was dull, consequent on lack of even moderate business in sacking goods with foreign buyers. Doubts were, therefore, entertained regarding any impressive working report of mills for the current accounting period ending this month. To give mills a marginal profit, it is essential that prices for sacking should improve; this could only be possible, if mills got a portion of the benefit of the recent cut in the export duty.

Textile shares were in the forefront, and operators noted with satisfaction that the Government edict which restricts production of *dhotis* in mills and which was designed as a protection to the handloom industry, is in fact turning out to be a "protective" measure for the mills themselves. This restriction has pushed up prices of the products of mills, as the handloom industry is yet to satisfy the consumers with materials which they have been accustomed to wear. It was no surprise, therefore, to see textile shares add fractional gains. Elgin Mills were taken up to Rs. 17-12 from Rs. 17-6, and Kesorams at Rs. 21-4 put on Re. 1-7. Bengal-Nagpurs were better at Rs. 14-8.

Coals were sympathetic to the general trend, and although the variation in prices was not as impressive as in other sections, yet more business than last week was put through. Burrakurs improved to Rs. 11-3 from Rs. 10-15, while East Indians responded demand by an increase of one point to Rs. 23-7. Bengals were bought at Rs. 539, and New Beerbhoums had buyers at Rs. 22-4 as against Rs. 21-3 earlier. Equitables were bought at Rs. 47 and Raneegunges were slightly lower at Rs. 9-6.

Trading in the jute section was cautious, but all the same gains were recorded. Thus Barnagores improved by five points to Rs. 175-8, and Orients to Rs. 188 from Rs. 183. Howrahs were maintained around Rs. 24-14, while Champdanies were steady at Rs. 165. Interest was shown in Belvederes at the higher rate of Rs. 209. Naddeas, after moving to Rs. 47-12, lost to Rs. 46. Kinnisons changed hands at Rs. 205, Presidencies at Rs. 5-8, and Kelvins at Rs. 221.

In the engineering section, speculative Indian Irons were the centre of attraction, and impressed with a rise to Rs. 27-2 from Rs. 25-13; however, profit-taking reduced the gain to Rs. 26-12. Braithwaites were steady at Rs. 11, and Jessops changed hands at Rs. 23-14.

Featuring in the miscellaneous section were Rallis which spurted to Rs. 76-8 from Rs. 73-4 on good support. Airways India were transacted at Rs. 11-9 and as the proposal for the nationalisation of the airways companies is to be executed soon, shares of airlines change hands often. Bharat Airways had buyers at Rs. 2-5, and Indian Nationals at Rs. 4-3. Shree Gopal Papers were pushed up to Rs. 19 from Rs. 18-8 and India Steamships were strong at Rs. 6-13. Angelo Bros. advanced to Rs. 18-14 from Rs. 18-8, Bararee Cokes to Rs. 18-12 from Rs. 18-4, and Sone Valley Cements to Rs. 7-9 from Rs. 7-5. Other counters that were shown keen interest included Godfrey Phillips, Champaran Sugars, Dunlop Rubbers, Titaghur Papers, Cherra Chhatak Ropeways and Orissa Minerals.

Madras Stock Exchange

MADRAS, 17*th March*

There were distinctly two different trends on the Madras Stock Exchange this week. Textiles and miscellaneous scrips ruled steady to firm, while plantings and banks were hesitant. The persistent upward trend in textiles, despite power famine, was attributed to efforts of textile mills to switch-over from electric power to diesel power-driven plants installed at their own mills, and expected increase in demand for yarns from handloom weavers in the near future. Miscellaneous scrips responded sympathetically to the upward trend in textiles. The dull conditions in plantings were due to a number of causes. In rubbers, the continuance of reports of heavy stocks with chief consumers of rubber was the main reason for the hesitancy. Coffees were slightly easy on rumours that the Government would take drastic steps to reduce prices. The quiet conditions in teas were due to a reactionary setback after a steady rise for some weeks past. Banks remained inactive for want of support. The cumulative effect of these varied trends was that, while prices of textiles and miscellaneous scrips forged ahead and recorded sizable gains, plantings and banks disclosed generally narrow variations, most of them recording minor losses.

Textile scrips continued to provide the highlight of the market. Radhakrishnas gained Rs. 4-12 to Rs. 148-12 and Lakshmis Rs. 4 to Rs. 76. Coimbatore Pioneers rallied Rs. 2 to Rs. 101 and Metturs Re. 1 to Rs. 186. Buckinghams were higher by Rs. 2-8 at Rs. 125 *cum-div.* Bangalore woollens were done at Rs. 236 as against Rs. 243 *cum-div.* Vasantas were up by Rs. 4 at Rs. 166 *cum-div.* Maduras and Janardhanas were better at Rs. 36-8 *cum-div.* and Rs. 57-8, respectively.

Rubbers came in for a little enquiry. It was held that as soon as the stocks with the chief consumers were exhausted, which would not take a long time, there would be improvement in the prices of rubber scrips. Malankaras rose by Re. 1-4 to Rs. 100-8 and Anandams by As. 4 to Rs. 9-4. Pullangodes were slightly better at Rs. 2-8½. Thirumbadis, however, lost As. 4 to Rs. 2-15 and Cochin Malabars an anna to Rs. 6-4½. Vaikundams were done at Rs. 15-10 *cum-div.*, as against Rs. 15-4. The Directors of the Company have recommended payment of a dividend of 20 per cent. (the same as in the previous year) on the ordinary shares for the year ended 31st December, 1952.

Coffee shares were eventless. Coffee Lands and Consolidated Coffees were lower by As. 1 and As. 1½ to Rs. 9-6 and Rs. 17-0½, respectively. Puthuthottams and Mysore Coffees were unchanged at Rs. 4-13 and Re. 0-9½, respectively. But Anaparais put on As. 2 to Rs. 2-14.

Among tea scrips, Highland Produces were up by As. 2 to Rs. 9-10. Periakaramalais (Tea and Coffee) disclosed a gain of Rs. 4 to Rs. 24-8. But, Parksides eased by As. 2 to Rs. 11-10. Stanes Amalgamated (Tea and Coffees) were done lower by As. 4 to Rs. 8-8. Kalasas slipped by a similar amount to Rs. 10-4.

Miscellaneous scrips were considerably in favour. Rallis shot up by Rs. 3-8 to Rs. 75. Mysore Papers were higher by As. 6½ at Rs. 12-5 and Aluminium Industries by As. 4 to Rs. 11-4. Indian Steel Rolling Mills hardened by As. 7 to Rs. 11-4. India Sugars and United Breweries put on Re. 1-4 and Re. 1 to Rs. 19-8 and Rs. 148, respectively. Andhra Cements(A), however, lost Re. 1 to Rs. 89, and F.A.C.Ts. As. 2½ to Rs. 3-5. Jeypore Sugars receded by Re. 1 to Rs. 12-4.

NEWS IN BRIEF

THE Government of Bhopal has proposed to levy tax on agricultural incomes. A Bill seeking the imposition of this levy is to be introduced during the current session of the State's Legislative Assembly.

The aggregate amount spent on the Lakkavalli irrigation project in Mysore up to December, 1952, was Rs. 1.08 crores. The project is estimated to cost Rs. 17.75 crores and will irrigate 200,000 acres after completion.

The aggregate expenditure on the development programmes of the Bombay State during the five-year period of the Plan is Rs. 146 crores, according to a revised estimate. Of this, the amount to be spent on social services like education, medical aid, public health, housing, labour welfare, etc., is Rs. 67.17 crores.

The offices of the Rationing Officer (Iron and Steel) and the Joint Rationing Officer (Cement) have been amalgamated. This is done in accordance with the recommendations of the Estimates Committee and also in view of the decontrol of pipes, tubes, fittings and other categories of iron and steel. The officer in charge of the amalgamated office is designated as Controller of Iron and Steel and Cement.

The first shipment of equipment for the D.D.T. plant, supplied by the U.N.I.C.E.F., arrived in Bombay last week. The plant is to be set up at Delhi. The proposed factory, which is expected to be completed next year, will produce 700 tons of 100 per cent. D.D.T. every year. The financial assistance rendered by the U.N.I.C.E.F. is to the extent of £250,000, which is supplemented by the Government of India's contribution of $470,000. The W.H.O. is providing assistance for training, the expenditure to be actually incurred during the two-year period amounting to $100,000.

The Spices Inquiry Committee, set up by the Government of India towards the end of 1951 to go into the problems of production and marketing of cash crops, such as pepper, ginger, cardamom, turmeric, cashewnut and lemongrass oil on the west coast of India, has concluded its investigations. The Committee is now busy scrutinising the mass of evidence it has gathered, as also the memoranda submitted to it by the various growers, traders and other interests concerned during its tours, and will submit its recommendations to the Government of India shortly.

In accordance with the Tariff Commission's recommendations, the Government of India has decided not to reduce the import duty on meta-aminophenol. It has also decided not to restrict imports of para-aminosalicylic acid. The indigenous producers of para-aminosalicylic acid will, however, be given all possible assistance to secure basic chemicals like nitro-benzene and fuming sulphuric acid. Para-aminosalicylic acid is an anti-tuberculosis drug. The current rate of import duty on meta-aminophenol and para-aminosalicylic acid is 37.8 per cent. *ad valorem* (standard) and 27.3 per cent. *ad valorem* (preferential), respectively.

As the Government of India has removed control over the distribution of steel bars, rods and light structurals obtainable from all registered stock-holders, other than the controlled stock-holders and registered producers, permits are no longer necessary for the acquisition by any consumer from such registered stock-holders or for disposal by such stock-holders to any consumer of any quantity of bars, rods or structurals. Those who require these categories can now obtain them from any registered stock-holder and need not apply to the Controller of Iron and Steel and Cement (formerly Rationing Officer, Iron and Steel). The price control, however, continues to be in force. Control over distribution and prices of all varieties of iron and steel pipes and tubes and fittings, whether indigenous or imported manufacture, has been completely removed. There still remains control over distribution and prices of plain and corrugated and black or galvanised sheets, M.S. plates and wire, and a permit will be necessary from the controlling authority for acquisition by any consumer from such registered stock-holders or for disposal by such stock-holders to any consumer of any quantity of sheets, plates or wire.

* * * *

From Abroad

The aggregate tonnage of the Pakistan merchant fleet at the end of 1952 was 200,528 (dead weight tons).

The Indonesian Government has reduced the export duty on rubber from 0.085 rupiah per half kilogram for the first quarter of this year to 0.077 rupiah for the second quarter.

During 1952, the population of the United States increased by about 2.7 million, the largest increase ever to occur in any year of the U.S. history. The population as on 1st January 1953 was about 158,448,000.

The known reserves of liquid petroleum in the U.S. during 1952 were higher by 764 million barrels, as compared with the previous year, which was a record. Natural gas reserves also were higher by 5.9 million cubic feet.

Under a barter agreement signed between the Governments of Pakistan and China recently, Pakistan has agreed to supply 10,000 tons of cotton in exchange for 200,000 tons of coal. Cotton will be exported through trade channels, while coal will be imported on Pakistan Government account.

Construction of the nation's first plant to make newsprint and pulp from bagasse, the waste of sugarcane, has been planned by the Valentine Pulp and Paper Company of New Orleans, Louisiana (U.S.). The plant, to be completed by the end of this year, will have a capacity of 17,250 tons.

The U.S. Government has removed price controls on coffee and coffee concentrates, soyabeans and animal feed, heating oil (No. 2), all chemicals and fertilisers, except the sulphur group, nearly all industrial materials, machinery and manufactured goods, and beer and other malt beverages. Controls on sulphur and sulphur chemicals, steel mill products, machine tools and several other metals, however, still continue.

The British Government has decided to end steel control with effect from 1st April, 1953. The system of steel allocation will, accordingly, be terminated, with the exception of heavy plate required for shipbuilding. The existing system under which steel prices are fixed by the Ministry of Supply, however, will not be affected by this decision. It will continue to operate and, with the application of the Iron and Steel Bill, the newly created Iron and Steel Board will exercise the powers which are at present exercised by the Ministry.

The Asian Trade Promotion Conference concluded its session at Manila on the 4th inst. The Conference adopted reports of its committees on market research as an aid to trade, selected import needs and export availabilities and methods of increasing Asia's trade. It also adopted draft report reviewing statements by member delegations on their present trade and market outlook and action taken to carry out the recommendations of the Trade Promotion Conference held at Singapore in October, 1951. The recommendations made at the Conference covered three important subjects, namely, stabilisation of prices of Asia's raw materials, long-term credit facilities and barter agreements. The Conference called for the continued exchange of information on major import requirements and the available exports among the members of the E.C.A.F.E. region. Also outlined were specific measures for expanding the region's trade with the West through diversification of exports, reduction and simplification of import restrictions, improved standardisation of Asia's products, and expansion of tourist trade in Asia as a means of obtaining the much-needed dollars. The Conference demonstrated, once again, the growing confidence of Asian nations in both "trade and aid" from free industrial nations.

PERSONAL

MR. P. A. Menon, India's Ambassador in Belgium, who had come to India on leave, left for Belgium this week.

Mr. Arun Chandra Guha, Member of Parliament from West Bengal, has been appointed Deputy Minister for Finance, *vice* Mr. Mahavir Tyagi who has been appointed Minister for Defence.

Mr. S. C. Joshi, until recently Director of Personnel, Tata Iron and Steel Co., Ltd., Jamshedpur, has taken up his new post of Chief Labour Commissioner to the Government of India.

Mr. R. Maulik of Messrs. Jardine Henderson Ltd. and Mr. J. W. N. Haldock of Messrs. Macneill and Barry Ltd., have been elected Chairman and Vice-Chairman, respectively, of the Indian Mining Association for the year 1953-54.

Mr. Walter A. Weldon, an American ceramics specialist, will be arriving in India shortly to advise the Government of India on the setting up of a new plant for the manufacture of high-tension insulators. The services of Mr. Weldon have been made available by the U.N. under its technical assistance programme.

Dr. M. Visvesvaraya has been re-elected President of the All-India Manufacturers' Organisation for the thirteenth year in succession. The other elected office-bearers of the Organisation are: Vice-Presidents: Lt.-Col. J. D. Kothawala, Mr. H. P. Merchant, Mr. A. G. Bande Gowda, Mr. Hansraj Gupta and Mr. Babulal Rajgharia; Jt. Hony. Secretaries: Messrs. B. D. Somani, Prabu V. Mehta and N. H. Pockkhanawala; Hony. Treasurer: Mr. S. M. Dahanukar.

Mr. E. L. C. Gwilt, Managing Director, Glaxo Laboratories (India) Ltd., has been elected President of the Bombay Chamber of Commerce for the year 1953-54. Messrs. K. C. Bakhle (Tata Sons Limited), A. Kirkwood Brown (Mackinnon Mackenzie & Co., Ltd.), A. H. Hume (Turner Morrison & Co., Ltd.), A. A. Jasdenwala (Adamji Lookmanji & Co.), W. Jenkins (W. H. Brady & Co., Ltd.), E. Parker (Imperial Chemical Industries (India) Ltd.), N. M. Wagle (Greaves Cotton & Co., Ltd.) and A. D. Wenzel (Firestone Tyre & Rubber Co. of India, Ltd.) have been elected members of the Committee of the Chamber.

TAXATION POLICY

MR. C. D. Deshmukh, Union Finance Minister, defended the Budget in Parliament, very ably indeed, against the Opposition's criticism that, while the rich are taxed lightly, the poor bear a relatively heavier burden of taxation. He gave a few figures to show how a small proportion of the people bear a disproportionately heavy burden of direct taxation. The number of income-tax assessees in the country is 6,37,000. The revenue from income-tax is Rs. 67.66 crores and that from super-tax Rs. 36.34 crores, giving a total of Rs. 104 crores. Of the total number of assessees, 95.2 per cent. fall within the first grade—that is, upto Rs. 25,000 where the super-tax level comes in—and they account for 26 per cent. of the demand. The next class—that is, the people who pay on Rs. 25,000 to Rs. 70,000—is 4 per cent. of the assessees and they account for 26.4 per cent. The inference—though Mr. Deshmukh did not draw it—is that 47.6 per cent. of the tax revenue is paid by 0.8 per cent. of the total number of assessees. And, the further inference that could be drawn is that they form a microscopic minority of the total population in the country.

It is not as if the richer section contributes to the exchequer only through income-tax. They bear a large part of indirect taxation too, such as the higher customs duty on semi-luxury items and excise duties on higher-priced cigarettes and tobacco which do not affect the poorer sections of the community. The level of direct taxation in the country, Mr. Deshmukh pointed out, is higher than in most countries of the world with the possible exception of the U.K. and the U.S. The rate on the higher slab in this country is 82 per cent., which is exceeded only by the U.K. where the rate is 97.5 per cent. and the U.S. where the rate is 91 per cent. And it must be remembered that these countries have a larger proportion of the higher-income groups than are to be found in this country. More light on this question will, of course, be available when the Taxation Enquiry Commission submits its report. Mr. Deshmukh hoped that, although it had been given a two-year period within which to submit its report, it might conceivably be ready with its main recommendations within 18 months from April, 1953.

PROBLEM OF UNEMPLOYMENT

The basic difference between unemployment in the West and that in India is not so well appreciated. In the West, the word 'unemployment' is used to denote a condition which results from the fall in the level of employment—from the higher to a lower level. In India, the problem of unemployment is almost entirely one of finding work for the chronically unemployed or under-employed sections of people. The problem is, therefore, much vaster, necessarily more complicated than in the West. It is not surprising that Mr. C. D. Deshmukh, India's Finance Minister, should have reminded Parliament, when he replied to the Budget debate last week, that chronic under-employment reflects the "underdeveloped nature of our economy." The problem of removing under-employment or creating fresh opportunities for new employment, as Mr. Deshmukh suggested, is synonymous with the problem of economic development itself. There are, of course, temporary setbacks in employment levels, caused by the change in the economic conditions of isolated sectors, such as the tea industry or coir industry or handloom industry. In these cases, the Government tries, according to Mr. Deshmukh, to stimulate employment through reduction in duties, or in imports, or other suitable measures.

But the larger problem of unemployment remains. And here, there is no escape from the harder—and longer-term solution of economic improvement. It is only when the rate of investment and capital formation, as Mr. Deshmukh said, is stepped up that a sizable improvement can be effected in the employment situation. Further, as he rightly urged, if middle class unemployment is to be solved, there must be a certain reorientation in the educational system. This system, it cannot be too often emphasised, suffers from a lack of practical bias. But middle class unemployment also results from a restriction in the scope for employment in sectors where employers are forced to pay artificially higher wages through labour awards. Under a given set of economic conditions—that is, where there is no scope for fresh employment—the sphere of employment becomes naturally restricted when the wages are maintained at an artificially high level. It is then a question of "higher wages *versus* wider employment."

DRY BATTERY INDUSTRY

The question of continuance of protection to the dry battery industry is now before the Tariff Commission. Of the three units of the industry, the National Carbon Co., which accounts for 80 per cent. of the batteries produced in India, has clearly stated that it needs no more protection. The other two units, Solar Batteries and Estrellas, have, however, claimed that protection should be continued and, if necessary, the rate of protective duty increased. From a brief review of the existing position and the problems facing the dry battery industry, which was given by Dr. B. V. Narayanaswamy Naidu, Member, Tariff Commission, while opening the enquiry into the question of continuance of protection on the 16th inst., one can justifiably conclude that the claim of Estrellas and Solar Batteries for protection is justifiable. The National Carbon Company is in an exceptionally favourable position, because of the long experience and resources of its world-wide organisation. But Estrellas and Solars could hope to stand on their own feet, only if they are protected from foreign competition for some time more.

It is gratifying to note that, at present, there are no imports of ordinary types of batteries; only hearing aid batteries and certain other types are allowed to be imported. Much more encouraging is the fact that the industry has even developed an exportable surplus of dry batteries, although exports have been very limited in view of strong competition in the export markets. In 1952, as many as 1.1 million cells were exported, as against 1.4 million cells in 1951. The quality of the batteries produced in India is comparable with the batteries produced in advanced foreign countries.

The demand for dry batteries is expected to increase in the next few years. Several estimates of demand have been made which vary from 123 million to 320 million. The Planning Commission has estimated the demand to increase to 320 million cells by 1955-56. Production in 1952 is estimated at 130.11 million cells, as against 148.3 million cells in 1951. The rated capacity of the industry is placed at 214.5 million cells per annum. There is stated to be some discrepancy in the figures relating to rated capacity and production. The Planning Commission's estimates regarding the increase in demand during the next few years indicates that there is scope for further development of the industry.

In view of these factors, we feel that the question to be decided by the Tariff Commission is not whether protection should be continued, but what should be the quantum of protection. The role of import restrictions as an element in the overall protection enjoyed by the industry has to be examined. These restrictions have provided the industry a virtually sheltered market and it is time to consider whether too much shelter is always or necessarily good for the industry. At the same time, the Commission must see that the growing industry is not exposed to heavy or cut-throat competition. A certain quantity of imports would, however, be necessary to ensure that the protected industry gives proper care towards improvement of quality and reduction of costs.

INDIAN COFFEE BOARD

The speech delivered by Mr. Ivor Bull, Chairman of the Indian Coffee Board, at the Board's meeting on the 10th inst. could be regarded as a forthright appeal to the Government to understand the facts concerning the coffee industry. In that speech, Mr. Bull, while dealing with the marketing problems of the coffee industry, made a fervent appeal to Government to have trust in the good faith of the Board and in the knowledge and experience of the industry which is represented on the Board, and to confine itself to broader outlines of policies, leaving the method of carrying out these policies to the Board's committees.

Explaining the Government's apparent lack of faith in the Board, Mr. Bull mentioned the Coffee Market Expansion Amendment Bill and observed that, if the Board had enjoyed the full confidence of Government, he could not believe that the Bill designed to amend the Coffee Market Expansion Act so radically would have been published without Government consulting a single member of the Board. "Undoubtedly," he said, "there is still a feeling in Delhi that the Board exists primarily for promoting the interests of the planting community at the expense of the consumer, although planters are in a minority in the Board."

Holding that there was no justification for such a feeling to be entertained by the authorities, Mr. Bull stressed that the Board's actions had been consistently designed to protect the interest of the consumer, whereas, for a period of years, the policy of the Central Government had been to maximise exports of coffee at the expense of the internal market. The Board had consistently opposed this policy but the pressure exerted by Government on the Board to export coffee had tended to vitiate its relations with the public and the Press. With the short supply of coffee in India resulting from this policy, there had naturally been a scramble by merchants to obtain it, and hence the recurring coffee price crises. Mr. Bull, continuing, said that now the accent had at last been taken off exports and placed on the interests of the Indian consumer. This was welcome, but not the interference in marketing methods which had accompanied it.

OILSEEDS

The proceedings of the sixth annual general meeting of the Indian Central Oilseeds Committee held at New Delhi last week covered a number of aspects relating to the production and marketing of oilseeds in India. The Committee decided that a demonstration centre of improved *ghanis* should be started in each of the existing community project areas and allotted a sum of Rs. 2.75 lakhs for the purpose. Secondly, the Committee urged the reduction, if not abolition, of export duties on linseed and mustard oils. It recommended higher priority for the movement of oilseeds by rail, so that it was put on par with cotton. Among others, it sanctioned a number of schemes for the multiplication and distribution of improved varieties of seeds and investigations on the reclamation of rancid food fats, etc. It reiterated a number of its previous recommendations, the most important of them being the levy of an additional cess at the rate of one anna per maund on mill oils for the first five years and two annas per maund thereafter, for financing the development of village oilseed crushing industry. The draft Five-year Plan of the Committee for the production of oilseeds, development of the village oil crushing industry and marketing of oilseeds and oils was considered and a small committee appointed to examine it in detail and finalise it.

None will deny the need to improve the village oil crushing industry. But few would endorse the recommendation of the Committee that it should be developed at the cost of the mill industry. The same arguments against the subsidisation of the handloom industry at the cost of textile mills holds good even in this case. Besides, in the case of village *ghanis*, a lot of oil will be left uncrushed. It is argued that the cake from *ghanis* by virtue of its larger oil content is more vitaminous as food to cattle. But this is not so. It has been proved that the extra oil content of the cake would go as waste and does not contribute in any way to the building up of the physique of the cattle.

The Committee's recommendation relating to reduction in, if not abolition of, export duties on linseed and mustard oils is again open to question. In fact, the decision is ill-timed. There has been a hectic rise in the prices of almost all oilseeds, consequent on shortage of groundnut crop which accounts for 75 per cent. of the oilseeds production in India. As a result, there has been a clamour for a ban on exports of groundnut oil or for imposition of export duty on it. In these circumstances, any reduction in, let alone abolition of, export duties on other oils is unthinkable, as it will aggravate the upward trend in prices. Further, the demand for placing copra and coconut oil imports on the Open General Licence and continuation of maintenance of palm oil on the O.G.L. beyond 31st March, 1953 and the reduction of *ad valorem* duty of 43 per cent. on palm oil has gained currency with a view to augmenting supplies of oil. It would be no wonder, therefore, if this recommendation of the Oilseeds Committee were to meet with the disfavour of ordinary consumers and the *vanaspati* interests in India.

The new schemes sanctioned relate, *inter alia*, to those for the multiplication and distribution of improved varieties of groundnut in Mysore, of mustard in Assam and of linseed in East Punjab. It sanctioned four schemes for fundamental research, including the one for investigations on auto-tetrapolids of some oilseed crops at the Indian Agricultural Research Institute, New Delhi, and on cytology of groundnuts in Madras, among others. It is gratifying to note that the Committee reconsidered its previous proposal to set up two central research institutes for oilseed crops in view of the advice of experts that fundamental research should not be divorced from its applied aspects and decided to promote research work in the various regions on a co-ordinated basis. A small committee has been appointed to examine the question of research work on oilseed crops and decide in which areas research needs to be initiated and strengthened.

NATIONALISATION OF AIRLINES

Two important statements relating to nationalisation of air transport were made by the Union Minister for Communications, Mr. Jagjivan Ram, in the course of a Press interview at Calcutta on Monday last. First, nationalisation of air transport would be accomplished as from 1st June, 1953. Secondly, there would be no retrenchment of labour, as a result of nationalisation that would follow nationalisation. The Report of the Communications Ministry published last week briefly reviews, among others, the causes which have been responsible for the decision of the Government of India to nationalise airlines. It is not clear, however, as yet whether there would be two corporations—one covering domestic air routes and the other for international routes—as reported in the Press. Also, the question of compensation to the existing airlines is yet to be decided.

But it is clear that nationalisation of airlines will shortly be a *fait accompli*. The Report of the Communications Ministry says that nationalisation of airlines is in the interest of the public, on the ground that it will result in the reduction of costs in the operation of airways, as it will then be run by a single body. Rationalisation, which will follow nationalisation, will help minimise costs. But, the statement of the Union Minister that the Government would see that "nobody was thrown out on the streets" sounds strange, for it is not clear how the Government hopes to effect economies without reducing the surplus staff.

The Report says that, in spite of substantial Government aid being given to the air companies, the position of the companies has not shown any appreciable improvement and that there is no chance of their becoming self-sufficient in the near future. The Report alleges lack of efficient management and of co-ordination, between the existing companies for bringing down the costs of operation. Moreover, the air transport industry, according to the Report, is not in a position to buy new capital equipment without substantial Governmental aid. The Government is of the view that, if it were to provide a large sum for the purpose, it would be in the interest of the public to assume ownership and management of the industry and finance it directly.

There is some truth in these arguments, but they do not constitute the whole truth. If the air transport companies have not been in a position to maintain themselves without substantial aid from the Government, it is because of the vagaries of Government policies. In the first place, far too many companies were licensed for operating scheduled services. Secondly, the tax on aviation petrol is heavy. And, thirdly, costs of operation have been continuously rising in recent years. Surely, had a reasonable number of companies been allowed to operate and the threat of nationalisation was not left hanging for long and measures had been taken to enable the industry to bring down operating costs, the air transport industry would now have been placed on a more solid basis. It remains to be seen whether the State can operate the service better than private enterprise. But the record of work by the Damodar Valley Corporation and other State-owned enterprises is too poor to justify the hope that the Air Transport Corporation will do better than private industry.

It would certainly have been better if the Government had brought about integration rather than nationalisation of air companies. The Government might then have advanced loans to the integrated unit or units and exercised the necessary supervision over their working. The advance of loans to an integrated unit or units will virtually have the same effect as direct financing of the State-owned Corporation, but with certain differences. The Government could exercise substantial control.

OFF THE RECORD

(By "ROVER")

THERE is something, which might prove to be either baneful and sinister or beneficial and wholesome, brewing in the political sphere, behind the mild turmoil, unrest and display of taut nerves, frequently witnessed at present in Parliament and outside it. Judging by signs and portents, the shape of things to come appears very vague, fluid and indeterminate, as these things are all in a formative stage. Confusion and bewilderment are the lot of any student of affairs, if he can keep himself free from wishful thinking along the lines of his favourite predilections in the socio-economic structure and strictly on the objective track. It might be of some interest to try and extricate the tangle of these trends, set them in separate skeins and see if they point or lead to any destination or at least a definite direction. I personally regard the present time as the most critical and crucial turning point in the history of the country since 1947 and what will emerge from the present *melee* of whirling and milling ideas, events and activities, overtures, antagonisms and enmities, in the cauldron on the boil will go to give both direction and meaning to the socio-politico-economic set-up during the next twenty years.

Had my mind not been preoccupied with the Central and some of the State Budgets and the annual session of the Federation of Indian Chambers of Commerce and Industry during the last three or four weeks, I would have drawn your attention to the menace of Mr. C. Rajagopalachari's then projected and since accomplished visit to New Delhi. What I had intended saying then was that that week was marked by two events of far-reaching importance—the demise of M. Stalin and Mr. Rajagopalachari's sojourn in the country's Capital. The latter has such a restless and fertile mind that he is bound to initiate certain new lines of thought and policy in the minds of his victims, sometimes even without their being aware of the source from which they receive inspiration. And, of late, Mr. Rajagopalachari has become so crabbed and twisted in his mental processes, that one has to sit up and take note, when his field of activities is changed or enlarged even for a short duration. I want you to take note of what he has been saying after his return from New Delhi about the need for the establishment for an all-party national Government. I am not quite sure whether it is the astute Mr. Rajagopalachari who has returned from New Delhi infected with this virus or whether he had gone to infect New Delhi with it.

Amongst the other signs and portents I have referred to at the outset, you are, of course, aware of the new *rapprochement*, which was more than mere idle flirtation between the President of the Congress and the virtual head of the Praja-Socialist Party. Mr. Nehru is much too serious, wary and advanced in age to be easily susceptible to or taken in by wanton coquetry. His intentions appeared to be honourable and he was obviously not seeking for a temporary and diverting political liaison. Besides, from all the protests that we heard and the indifference openly displayed, it must be concluded that the opposite party also was too moral to entertain any compromising proposals, even from so eminent and desirable a suitor as Mr. Jawaharlal Nehru. Though the proposed marriage, which has been temporarily forsaken, was one of convenience, both the parties were at pains to emphasise that there was a good deal of deep affection and community of outlook and interests to lift the union from a purely sordid plane. And whether you looked upon this bond, which appeared so imminent till yesterday, as a boon or a calamity, according to the political colours affected by you, you might rest assured that you have not heard the last of it yet. Cupid is an uncommonly persistent god and those who are genuinely enamoured of each other are apt to seek to come together, in defiance of the mercenary elders who forbid the banns.

I do not know whether Mr. Rajagopalachari, when he pleaded for the establishment of an all-party national Government, was showering his blessings on the then proposed union of the Congress and the Praja-Socialist parties at governmental levels or was opposing it in his own inimitable, clever manner by throwing out the suggestion at the right time of widening the scope from a bilateral to a multilateral set-up at New Delhi and in all the State capitals. I am positive that the Madras Chief Minister could not have entertained, even for a moment, the idea of inviting the Communists and their fellow travellers either in his own State or at the Centre to co-operate in the work of administration. What he presumably had in mind, while making his suggestion, was the formation of Governments in the country, more broad-based than a coalition of the Congress and the Praja-Socialists. This could only mean the association of some of the sober elements on the right of the Congress in the Government to balance the entry of the Socialists from the left. In the present state of the country, with its future staked on the success of the Five-year Plan, and with the present currents, cross-currents and under-currents at play in international politics, any suggestion which would lead to a Government speaking with the might and accord of the whole country must be welcomed.

Looking at the other side of the picture, I find that, while at least some of the Congress leaders are drawn towards the Praja-Socialists to the extent of seeking more than mere support in the legislatures and in the country for some of their policies and in the implementation of the Plan, there is also a general desire on the part of these same leaders and also of others who do not approve of a Congress-Socialist coalition, to win at least the confidence and the co-operation of the business community in general and industry in particular. I am also inclined to hold that it is this desire not to estrange the leaders of this community and not to give them more cause for discontent, which, to a certain extent, has been instrumental in bringing about the rejection of the more radical demands of Mr. Jaya Prakash Narayan and his political associates and the abrupt breakdown of the negotiations between Mr. Nehru and Mr. Narayan. They know that Congress had already moved about as much as it possibly could with safety along progressive lines to the left. If the Praja-Socialists had been content for the time being with this and if they had not tried to push Mr. Nehru further away from his other important party colleagues, a working understanding appeared to be possible.

It is only very recently that both Mr. Nehru and Mr. C. D. Deshmukh realised that a good measure of co-operation and goodwill of business men were really necessary, at least at the present stage to prevent the Plan, truncated as it is, from turning out a dismal failure at the end of the next three years. They also realised belatedly that discontent of the business community arose not so much from the progressive measures adopted by the Government but from the suspicion it was looked upon with and the contempt it was treated with. Some of the half-baked Ministers, new to their job, forgot themselves so far as to express this contempt openly in official and semi-official gatherings or at times even when they were themselves the guests of some business organisations. Mr. Deshmukh, always an irreproachably courteous man, showed his displeasure by his growing aloofness. Mr. Nehru expressed his dislike by his superior pose.

There may be diehards and last-ditch men in the business community as in any other group. But a majority of them were not so blinded by prejudices as not to realise that they would have to surrender their privileges and advantages, which accumulated wealth and control of means of production had conferred on them. They were reconciled to their fate and the wise ones amongst them did not kick against it. Many were progressive and patriotic enough to drop some of these advantages even before they were forced to do so by superior authority or by the force of public opinion. A few were even prepared to atone for the sins of their more misguided brethren. But when they came to be treated as if they were sub-human by some of the morally arrogant leaders, who were themselves incapable of controlling whole hosts of their own corrupt party men and close associates, some of the more sensitive ones amongst the business community began to hint at, and later to voice, their resentment. Fortunately for the country, the people who matter in the political set-up noticed this change betimes and they set about putting things right not merely verbally, but by appropriate action. I suspect that but for this realisation, namely, that they had driven business men at bay, when instead of meekly accepting and pocketing undisguised contumely and turning tail, they might bare their fangs, the composition of the Taxation Inquiry Committee would, perhaps, have been vastly different from what it is. I regard this as a gesture of returning goodwill and restoration of normal, if not amicable, relations, between the political and the economic wings of the country.

This is how things stand at the turn of the official and financial year. World affairs are getting more complicated in spite of the loudly expressed desire for peace on all sides. The new Administration in the U.S.A. has not found its feet yet; it has not yet finished making all those mistakes which a new party, coming into power after such a long time as almost to have forgotten the art of governance, is expected to make. The world does not know what forces M. Stalin's disappearance from the international political stage will let loose. Pakistan is a little less bellicose in the west, but there is serious trouble brewing in the east on the Burma-China border. Japan is likely to undergo a political upheaval.

If party majority in Parliament is the sole measure of a Government, the Government of India, even as it is, is in a strong position. But if you accept quality and sagacity, wisdom and moderation as going to make up the yardstick, it is not very strong. Its weakest point is its administrative inaptitude and inefficiency. If we are to achieve and maintain economic progress within the country and to continue to command respect and consideration abroad, it is necessary that the Government seeks strength and support from all elements in the country and all interests give these ungrudgingly to the Government. A coalition or all-party Government is not the only method of acquiring strength. It might lessen friction, but it might kill initiative and drive. A coalition of the Congress both with elements from the right and the left, though ideal, is unthinkable and beyond the range of party politics, unless a world crisis were to arise at some future date. A coalition only with the left will injure our economic stability which is none too stable. One with the right will release forces of unrest and agitation and jeopardise production thereby. Perhaps, things, as they are, are the best in the circumstances. If we act rightly in the present, the future will take care of itself.—*All Rights Reserved.*

INDO-PAKISTAN TRADE PROSPECTS

CENTRAL BOARD FOR SPICES TO BE SET UP

(From A Special Correspondent)

NEW DELHI, 17*th March*

THE Indo-Pakistan trade talks which have been going on during the last two days in the capital, it is now predicted, will soon result in some agreement on a broad and mutually advantageous basis between the two countries.

DELHI LETTER

Immediately after a preliminary discussion, the conference split into four sub-committees which would, among other things, discuss the movement of Indian coal by rail, supply of timber, iron and steel to Pakistan and border trade between the two countries. It is possible that Pakistan will abolish the discriminating levy on raw jute exported to India and might ask for some concession in the prices of coal charged to her. In regard to iron and steel, the supply in India is extremely limited and the controlled prices are markedly lower than those prevailing for similar products in the international markets. In case, India agrees to sell a small quantity of iron and steel to Pakistan, the Indian delegation will be insisting that Pakistan should show some concession in regard to the supply of some important raw materials to India. For the present, some long-term agreement will result in the exchange of Indian coal for Pakistan jute, but at the same time, the scope in regard to trade in other commodities will be left wide open so that the volume of trade could grow by mutual adjustment among business men.

Pakistan's Exports to India

During the last few months, there has been a considerable decline in the exports from Pakistan to India. For the first nine months of 1952-53, the value of Pakistan's exports amounted to Rs. 13.75 crores (excluding the value of 207,721 bales of raw jute imported during December, 1952, awaiting adjustment) as against Rs. 64.78 crores worth of goods for the same period in the previous fiscal year. The sharp decline in the value of Pakistan's exports is attributable not only to the reduced quantum of raw jute despatched to India but also to a heavy decline in its prices. During this period, the quantum of jute sent to India declined from 19.24 lakh bales to 10.15 lakh bales, their respective values being Rs. 56.31 crores and Rs. 9.89 crores. Total exports from India during the nine months of 1952-53 did not show any marked variation, the figure being Rs. 16.23 crores as compared with Rs. 17.08 crores in the preceding year. Now that prices of raw jute have come down appreciably, the value of Pakistan's exports to India is not likely to show any sharp rise even if the latter were to import hereafter about 15 lakh bales per annum. One pronounced feature in the Indo-Pakistan trade during the post-Partition period has been the marked adverse balance that India has had to experience since the trade relationship between the two countries was somewhat unilateral. During this period, Pakistan generally failed to keep up its import schedule as per agreement. The future agreement must, therefore, take notice of this aspect of the problem and India should not only insist that Pakistan should purchase the agreed quantum of goods from India but also make arrangements for a periodical review of the progress of trade as per agreement. India should also impress on Pakistan that no discriminating treatment should be accorded to Indian manufactured goods in that country.

At the latest meeting of the Council of Scientific and Industrial Research, presided over by the Prime Minister this week, it was decided to go ahead with the establishment of a National Development Corporation on the lines of the existing institutions in the U.K., the U.S., Canada, etc., in order that the processes discovered by Indian scientists be fully developed and exploited in large-scale production. This Corporation will be a semi-autonomous organisation. It will have as its chief function the establishment of pilot plants and semi-large-scale production units and thus form the link between research and industry. There are now well over 80 research schemes covering a wide range of scientific subjects such as radio, atmosphere, metals, chemicals, drugs and pharmaceuticals, fuels, essential oils, leather, etc. All these schemes are being continued.

The Spices Inquiry Committee, set up by the Government of India about 18 months ago under the chairmanship of Mr. Kashinath R. Damle, Additional Secretary, Ministry of Agriculture and Food, to go into the problems of production and marketing of cash crops like pepper, ginger, cardamom, turmeric, cashewnut and lemongrass oil in the west coast of India, has concluded its investigations. In a few months, the Committee will be making comprehensive recommendations for the improvement of these important cash crops both from the agricultural and commercial point of view. The importance of these commodities in India's export trade has become considerable during the last few years. Pepper and cashewnuts have a major share in our export trade.

Pepper Production

Despite the phenomenal prices obtaining for pepper in the export markets during the last five years, the present production in India at about 20,000 tons is believed to be the same as in pre-war years, while the setback to production in Indonesia has left India the largest producer. A notable feature of these years has been the large exports from India, which, in some pre-war years, had been a net importer; and it is even more remarkable that this change-over was achieved without any increase in production. In 1950, for instance, exports of pepper represented one-half of the total estimated crop and became the sixth most important export commodity; in that year 10 per cent. of the requirements of the U.S.A. were supplied by India as against 2 per cent. before the war. For the first nine months of 1952-53, exports of pepper amounted to 157,636 cwts., valued at Rs. 10.70 crores, as against 192,257 cwts. worth Rs. 15.93 crores for the same period in the preceding year.

Total exports of spices for the first nine months of 1952-53 came to Rs. 14.07 crores, as against Rs. 18.97 crores a year ago. Among these commodities, cardamoms accounted for Rs. 1.36 crores, chillies (mainly to Ceylon) for Rs. 1.27 crores, ginger for Rs. 39.24 lakhs, turmeric for Rs. 35.21 lakhs, the balance being the share of pepper. Besides these, cashew kernel exports accounted for Rs. 10.39 crores, the quantity being 32,645 tons for the nine-month period of 1952-53. The value of exports of lemongrass oil was Rs. 28.12 lakhs, as against Rs. 1.29 crores in the same period of the previous year. Total exports of all these commodities now amount to about Rs. 40 crores on an annual basis.

In view of the importance of spices in our export trade, the Government of India will shortly be setting up a Central Spices Board on the model of the Indian Coffee Board. The Board will form individual committees under its overall control and supervision in respect of various commodities. The Board has both short and long-term problems to solve. From the short-term point of view, it will have to safeguard the export markets for these commodities. It must introduce co-operative marketing methods to protect the small-scale producers and also set up standards for various products, especially for establishing a fair name in export markets. From the long-term point of view, research and pest control schemes should be intensified. In respect of lemongrass oil and cashew kernel oils, the Government should provide technological help. Since standardisation of the products for the export markets is necessary, the Government should implement, without any delay, some of the short-term remedies in order to safeguard the export trade of the west coast of India.

(Concluded from next column)

would, however, be to remove the anomalous excess profits tax which penalises companies making large profits to-day who were not making them in the basic year to which the tax is related. This tax was introduced in fulfilment of an electoral pledge but it has no merits, and relief given here would enable the successful company to plough back more of its profits into investment. The only other form of industrial relief is, of course, the reduction in the standard rate of income-tax. The Chancellor could meet criticisms on reducing the incidence on industrial taxation if he were to introduce a differential rate of tax between profits distributed as dividends and those kept back in reserve. No Chancellor has yet had the courage to do more than contemplate distantly such a proposition.—*All Rights Reserved.*

THOUGHTS ON BRITISH BUDGET

CLAIMANTS FOR RELIEF

(From Our Own Correspondent)

LONDON, 14*th March*

THREE months ago, there was considerable anxiety that national expenditure was appearing to outrun revenue to an extent that might have landed the Chancellor of the Exchequer with a deficit at the end of the financial year instead of the neat balance he had expected to achieve. This was anticipated after allowing for what is known as "below the line" expenditure, i.e., capital payments as well as ordinary expenditure items. The reason for the alarm was the fact that the overall exchequer deficit at the end of December was some £950 million, while a year before it had not exceeded £600 million. Since planned budget expenditure for 1952-53 on ordinary account had been set at £4,180 million (against £4,020 million for the previous year), there seemed no means of accounting for the increase in the seasonal deficit other than excess expenditure over the estimates.

LONDON LETTER

It was noted, however, that the Chancellor himself gave no hint of anxiety and since the beginning of the calendar year revenue has been coming in to date at an ever-increasing rate and brought the deficit at the beginning of March down to £300 million—compared with £100 million a year ago. The gap has therefore been substantially narrowed in recent weeks and a large part of the remaining difference can be accounted for by loan repayment operations. The revenue continues to be very buoyant, and, if one takes ordinary revenue and expenditure alone, to date the Chancellor can already show a surplus of £220 million. The overall deficit arises from the capital transactions of the Government including such important items as loans to Local Authorities for house-building. In his previous budget, the Chancellor had planned for an ordinary surplus of rather more than twice the level so far reached, and, though increased expenditure on supplementary estimates will drastically reduce this, the gap will be neither indecent nor intolerable.

Savings on Food Subsidies

With a month to go to Budget Day and most of the Departmental estimates published, it is possible to give some thought to the shape of the national accounts for the coming year. These accounts have increased in complexity to an extent that makes them often difficult to interpret in straightforward accounting terms. Moreover, without the revenue estimates which are not produced until the budget, it is impossible to strike any sort of accurate balance. But, broadly speaking, one can say that in spite of all the election promises of economy, the expenditure of the State will continue to increase. The only direction in which substantial savings are to appear will be on the food subsidies, where the coming year will have the advantage of a great part of the subsidy reductions announced a year ago together with the new savings to be effected from now on. However, the food subsidy savings are in themselves so substantial that it is quite possible that the Chancellor will have a revenue surplus of the order of some £100-£200 million to devote to the reduction of taxation.

There are three principal claimants. First, of course, is income-tax where the standard rate of 9*s.* 6*d.* in the £ might be reduced to 9*s.*, but this would carry with it the necessity of making concessions, possibly by way of increased family allowances, in order to afford the lower income groups the same advantages as were being given to the income-tax payers at the top of the scale. The next big claimant is the purchase tax; but the trouble here is that it has become such a large subscriber to the revenue (it produced no less than £337 million in the last full year, which is nearly as much as the whole of the beer and spirit tax) that the Chancellor could do little more than make some reduction in the rates or remove some of its pettier incidences. These concessions, however, he may well try to make.

Finally, there is the need for some relief to industry, to which the Chancellor has virtually pledged himself. One form of relief would be to increase the initial allowance on capital expenditure but this relief is, of course, only temporary since over the life of the particular piece of equipment nothing more than 100 per cent. allowance can be given. A useful relief

AMERICAN LETTER

SIGNIFICANCE OF STALIN'S DEMISE

TREND OF COMMODITY PRICES DOWNWARD

(From Our Own Correspondent)

NEW YORK, 12*th March*

PREMIER Stalin's death, General James A. Van Fleet's statement that the Korean war could be won without bringing on total war and the new Administration's decontrol actions covering prices in many fields and commodities were the dominant factors influencing business and finance in the last two weeks.

Succession of Malenkov to the No. 1 post in the Soviet Union has created a good deal of uneasiness here, even though his speech at Stalin's funeral was regarded as moderate. Hardly a Western diplomat has ever met or spoken to the new dictator. Moreover, the new 51-year old boss is described as cold, humourless and more anti-Western than Stalin. Uncertainty about his possible future actions, therefore, cause uneasiness.

The inside information here is that, while it is the desire of Moscow to avoid all outward appearance of political instability as a result of Stalin's death, the struggle for power has hardly begun and that, in the very near future, personnel changes in the Soviet Government can be expected.

These will obviously depend, it is felt here, on who will emerge as the most powerful character. According to this view, the triumvirate of Malenkov, Beria and Molotov is a period of planned transition. In addition, Bulganin and Kaganovich will have to bear watching. Presently, there is a try at orderly succession in Moscow and at an appearance of stability which may not last.

In a way, the death of the former Soviet Prime Minister is regarded here as foreshadowing an era—of whatever duration—in which no radical changes should be expected in the relations of the U.S.S.R. with the outside world.

The reasoning is that it took Stalin between two and three years to consolidate his personal position and, perhaps, the same thing is to be expected now for his successor, whoever, he may be. While Stalin could command great respect and loyalty from the Army and the Russian people as a war hero and as a subject of admiration for more than a quarter of a century, the same is not true of his successor.

Weakness for Soviet Union

Since the adventure of an all-out war would probably involve widespread suffering, it is argued, the present rulers in the Kremlin are unlikely to engage in it except in desperation. Thus, Stalin's death, in effect, is interpreted as ushering in an era of relative weakness for the Soviet Union, and, conversely, of greater relative strength for the United States. Regardless of whether or not this reasoning will prove right or wrong, this opinion is held here at the present time.

Those who do not analyse the situation as closely, merely enquire as to whether the chances for all-out war are greater now than previously. General Van Fleet did not think so when he testified before Congress. But that was before Stalin's death and it led to a mild peace scare stock-market-wise. In the cross-current of opinions, the possibility of a conclusion of hostilities in Korea is still taken quite seriously, although it is difficult to imagine that the defence programme could possibly be relaxed on that account.

There are also uncertainties about the ultimate consequences of decontrol actions. The moves themselves were, of course, approved heartily by the business and financial community. Controls made no longer any sense since prices in a good many categories were below ceilings anyway.

Wholesale prices of such items as cigarettes and oil were raised as a consequence of decontrol. This was widely regarded as unfortunate lest the inflationary spiral should be stimulated again. While there may have been some excuse in the tobacco field because of higher taxes, no such grounds are apparent for petroleum products which are over- rather than under-produced on a national basis. Regional shortages were alleged to be the reasons for the price increases which, however, have been relaxed since.

Commodities prices continue their downward trend. Premium quotas for metals are disappearing fast. Zinc and lead have been cut repeatedly. Owing to a multitude of quotations, complete confusion now reigns in the copper market and everyone concerned hopes that some progress will be made in arriving at a semblance of international agreements to stabilise the major commodities in the world markets.

The commodity price recession, which is a more or less natural sequence of the steep rise which occurred after the outbreak of the Korean war, has led, however, to renewed apprehension that it may be the forerunner of a decline in other fields as well.

Fears in this respect stem principally from possible over-production in some lines, when defence spending should taper off later this year. There is nothing new in this theory which has been expounded by the mathematicians for some time.

Offsetting factors are advance industrial planning plus the vast needs for new airports, schools, new roads from coast to coast and a steadily rising population. All of these elements hardly spell contraction. However, the well-balanced view seems to emerge that, in a period of relative stability and balance of the economy, it is inevitable that up and down adjustments occur in various fields. Thus, slackening of orders in the machine tool industry may be offset by prosperity in, say, food and tobacco. There may be lower demands for textiles, as occurred 18 months ago, but the chemical and synthetic industries may be booming. These, in effect, are healthy signs in a fluid economic life which is bare of stagnation.

Talks with U.K. Delegation

On the Government level, the new Administration is still groping to formulate new policies. For example, the British delegation, headed by Mr. Anthony Eden and by Mr. R. A. Butler, were received here very warmly and intensive discussions were held for three days. However, responsible Cabinet officers at Washington were extremely careful not to make half-promises or to indicate any comitments of any sort.

As is well known, the conversations revolved around the possible convertibility of sterling. The obvious problem is to provide a large enough cushion of some sort so that the integrity of the currency is not questioned so that a flight of capital is forestalled. Such a cushion could be provided in many ways, for example, through U.S. Treasury funds, by the International Monetary Fund or by means of a new stabilisation organisation. All these questions are being studied at the present time. —*All Rights Reserved.*

U.S. TRADE POLICY

The Public Advisory Board for Mutual Security has recommended that the U.S. should undertake to remove "inconsistencies" between its avowed foreign trade policies and foreign trade practices. In its opinion, the choice that the U.S. should make is one which continues its present export programme by increasing imports. The Board warns: "If this country does not soon take measures to facilitate an increase in imports, U.S. exports will decline and American industry and agriculture will be seriously affected."

The Board has recommended several steps to encourage and increase imports to help pay for exports. These include: The decisions on trade policy should be based on national interest, rather than on interest of particular industries or groups; a new simplified tariff act must be adopted, providing for the general reduction of duties and eliminating present uncertainties in the classification of goods; the President should be authorised to enter into reciprocal trade agreements without limit of the time and with power to reduce tariffs, within specified limits, as an interim measure, customs procedures should immediately be simplified, tariffs must be reduced and quotas on agriculture products be liberalised, tariffs are to be reduced and, in some cases, ultimately eliminated on metals and minerals of which imports are a major part of U.S. supplies, import excise taxes now applying to petroleum products should be dropped, the Congress should take necessary steps to enable the U.S. to join in establishing an international organisation to promote the objectives of the General Agreement on Tariffs and Trade.

The Board does not believe that completely free trade is feasible in the immediate future. Its proposal for consolidating, simplifying and reducing tariffs is suggested as a practical means of achieving trade policy objectives.

PAKISTAN NOTES

BUDGET FOR 1953-54

MORE INCENTIVES TO INDUSTRY

THE Government of Pakistan's budget for 1953-54, presented by its Finance Minister, Mr. Mohammed Ali, to the Pakistan Parliament on Saturday last, unlike its predecessor, may not claim to be a very popular one. For the budget, not only discloses a heavy deficit of as much as Rs. 5.74 crores—the deficit would have been still more marked, but for the sizable contribution of Rs. 6.92 crores from the Railways and the Posts and Telegraphs—but also contemplates fresh burdens of taxation. Even here, the task of the Pakistan Finance Minister has by no means been easy. This is due to marked shrinkage in revenue receipts—the customs revenue alone is expected to fall by 100 per cent., from Rs. 61.85 crores in 1952-53 (revised) to Rs. 30.10 crores in 1953-54 (budget) —and none too happy position in regard to foreign exchange resources, thanks to the extremely adverse circumstances created by the world-wide slump in commodity markets during the major part of last year, not to speak of the serious shortage of food. Indeed, the budget bears testimony to the fact that Pakistan has been passing through a difficult period.

While presenting the budget for 1952-53, last year, the Finance Minister had stated that, "during the next year, we expect to maintain our balance of payments position on a sound basis." This expectation has not materialised. The balance of payments position has actually worsened. Pakistan's foreign assets as on 20th February, 1953, were as low as Rs. 80.37 crores, as compared with Rs. 150.52 crores on 4th January, 1952. Despite all this, it is rather strange that the Finance Minister should have announced that his Government would not make any downward adjustment in the exchange rate of the rupee as a remedy for the economic troubles. The Pakistani rupee has always been quoted at a discount *vis-a-vis* the Indian rupee, and the Government has been losing heavily on account of false invoicing and black market operations. The export prices of several commodities, especially jute and cotton, Pakistan's staple earners of foreign exchange, have been at a very low level. The question of devaluation of the rupee, therefore, has received growing support at the hands of a considerable section of business and trade in Pakistan.

Tax Proposals

Be that as it may, with a view to converting the deficit of Rs. 5.88 crores into a nominal surplus of Rs. 14 lakhs, the Finance Minister has proposed several additional measures of taxation. By far the most important of these are the increases in the export duty and excise duty on sugar, by Rs. 12 and Rs. 4 per cwt., respectively; these charges are together expected to yield Rs. 2.3 crores. The rate of excise duty on mill-made cloth is to be raised from 5 per cent. to 12 per cent; this is expected to yield Rs. 1.65 crores. Import and excise duties on motor spirit will be enhanced by As. 12 per Imperial gallon, yielding Rs. 26 lakhs, and import duty on whisky, gin and brandy by 50 per cent., yielding Rs. 15 lakhs. Further, the existing rates of excise duty on cigarettes is to be increased by 25 per cent. This will give Rs. 45 lakhs which will be shared with the units. The Centre's share will amount to Rs. 23 lakhs. In case of imported cigarettes, the rate of excise will be higher by six pies per 10 cigarettes. Another important taxation measure relates to the restoration of the import duty of 30 per cent. on jute manufactures which had been removed in 1950 and the imposition of 45 per cent. import duty on second-hand or used gunny bags or cloth made of jute.

In spite of the stringent financial condition of the Pakistan Government, the Finance Minister has managed—and this is noteworthy—to provide more incentives to investment in industry. The following are the concessions announced by the Minister:

Exemption in respect of investments in approved industrial undertakings, which is at present limited to 10 per cent. of the total income, will henceforth be available in respect of investments upto 20 per cent. of the slab of total income up to Rs. 1 lakh and 10 per cent. of the balance, if any, above Rs. 1 lakh. In case of persons with income not exceeding Rs. 25,000, the exemption in the above will cover investments in Government Securities and Post Office Savings Certificates, subject to the limit of 20 per cent. of the total income. The profits of new industrial under-

TREND OF WORLD SILVER IN 1952

RISE IN OUTPUT NEGLIGIBLE

A FRACTIONAL fall in prices, a negligible rise in production, accompanied by a fall of 33 per cent. in the imports into the U.S. despite a large influx of Japanese silver, and a fall in the U.S. industrial demand for the white metal were the main features of the world silver market in 1952. These features have been brought out clearly by the world-renowned dealers in precious metals, Messrs. Handy and Harman, New York, in their *Annual Review of the Silver Market, 1952*. Commenting on the prospects for 1953, Messrs. Handy and Harman observe:

"The nearby outlook is dependent on the decisions made in Mexico and in Washington. A continuation of the policies followed in 1952 can be expected to provide the same stability which has characterised the year just ended. We believe that the Bank of Mexico will continue to be a buyer of Mexican production at or near current levels. On the other hand, the availability of United States' production and Treasury free silver at prices not far above the 90-cent level provides an assurance of supplies for American industry adequate to meet any foreseeable requirements during the coming year."

The world production of silver in 1952 is estimated at 172 million ounces, as compared with 166.9 million ounces in 1951 and 167.3 million ounces in 1950. Of the total, the output in the Western Hemisphere accounted for 141.9 million ounces, the balance of 31 million ounces coming from outside the Western Hemisphere. The two largest producing countries—the United States and Mexico—showed improvement over the previous year. In the U.S., the production at 40.5 million ounces represented a nominal increase of about 500,000 ounces. For Mexico, the increase was more substantial, in that the output at 45 million ounces was about 1.2 million ounces more than that in 1951. Canadian output of the white metal, estimated at 25 million ounces, was better by 800,000 ounces over the previous year's figure. In Peru, too, the increase was up by 2 million at 17 million ounces. In Bolivia, the output was 6 million ounces, as against 7.2 million ounces in 1951. All other South and Central American countries together produced about 7.5 million ounces.

Among other producers of silver, Australia continued to be the most important country, with an estimated output of 11 million ounces in 1952. Japan's production continued to improve since the war and reached about 7 million ounces in 1951. The production of silver in 1952 is estimated at about 7.5 million ounces.

The table below gives the estimated silver production in the different countries of the world in the three years ended 1952:

(In million ounces)

	1952	1951	1950
United States	40.5	40.0	42.1
Mexico	45.0	43.8	49.1
Canada	25.0	24.2	23.2
Peru	17.0	14.9	13.4
Bolivia	6.0	7.2	6.6
South and Central American countries	7.5	6.8	6.9
Total Western Hemisphere	141.0	136.9	141.3
Outside Western Hemisphere (partial)	31.0	30.0	26.0
World Production (partial)	172.0	166.9	167.3

Consumption

The world consumption of silver in 1952 amounted to 232.1 million ounces, about 800,000 ounces lower than that in the previous year. Of this total, the consumption of arts and industries accounted for 127.2 million ounces, as against 148.1 million ounces in 1951. The balance of 104.1 million ounces was used for coinage purposes.

Arts and industries in the U.S. consumed 13.6 per cent. less silver than they did in 1951, the actual consumption being estimated at 95 million ounces. Silverware, both sterling and plated, accounted for less than one half of the total, whereas five years ago the proportion was about two-thirds. The decline in the ratio was due to increased use of silver in defence and civilian industries. In the U.K., the use of silver for approved purposes declined sharply in 1952 to 11 million ounces. Canadian consumption dropped by 8.7 per cent. to 4.2 million ounces. But Mexican consumption improved by 10 per cent. to 2.2 million ounces. Japan used 3.5 million ounces in photographic industries.

During 1952, large quantities of silver continued to be used in coinage not only in the U.S. but in other countries as well. Reported use by foreign Governments for this purpose is said to be of the order of 46.8 million ounces. Of this, Saudi Arabia accounted for the largest portion, having contracted with Mexico for some 23 million ounces. Next in importance was Germany which used 8.8 million ounces in the minting of 5-mark pieces, coinage of which was started in 1951. Mexico used 8.3 million ounces for its own coinage requirements, Canada about 400,000 ounces. The U.S. had coinage orders from Cuba for minting 2.1 million ounces obtained from Cuban silver stocks in the U.S. The U.S. Mint consumed 57.3 million ounces of silver, an increase of 13 million ounces over the amount used in 1951 and the largest amount consumed by the U.S. Government for coinage since 1945.

The U.S. Treasury stocks of silver in bullion and coin declined by 20 million ounces to 1,942.2 million ounces during the first 11 months of 1952. Free silver receded from 124.5 million ounces to 85.5 million ounces. This drop was more than offset by an increase of 26 million ounces in silver bullion securing silver certificates. Coins in circulation showed a substantial increase, with the result that total silver outside the Treasury rose from 931.5 million ounces to 988.4 million ounces. The total stocks of silver in the U.S. aggregated 2,930.6 million ounces as at the end of November, 1952, as against 2,893.7 million ounces at the end of December, 1951.

As regards lend-lease silver, the total amount outstanding remained at 410,553,011 fine ounces, a figure at which it has remained unchanged since 1947. The ratification of the Japanese Peace Treaty in April, 1952, established the start of the five-year period, by the end of which such silver presumably is to be returned to the U.S. Treasury. The table below shows, in detail, the amounts due to the U.S. by different countries, as on 31st December, 1952, under the Lend-Lease agreement:

(Million ounces)

India and Pakistan	226.0
U.K.	88.1
The Netherlands	56.7
Saudi Arabia	22.3
Australia	11.8
Ethiopia	5.4
Fiji Islands	0.2
Total ...	410.5

The general trend of trading in silver last year is summed up by Messrs. Handy and Harman as follows: "The year 1952 was uneventful for silver. The pattern of recent years continued unchanged, with the New York market as the dominant world influence. Trading in London and Bombay is still subject to Government controls and there appears to be no prospect of relaxation." In New York, the trend of silver was downward, but there were in all only six changes in the published price. The opening quotation of 88 cents per troy ounce was the highest point seen in 1952, while the low of 82⅜ cents was touched on 28th May. The range of price movements was the narrowest in any year since 1949. The Bank of Mexico followed a policy of absorbing virtually all the silver output of Mexico and placing buying orders in the New York market. This policy prevented any further drop below the low of 82⅜ cents. The low level was seen as a result of the arrival into the market of about three million ounces in March as well as the unsold portion of the demonetised Cuban one-peso coins which had arrived in the market in 1951. Again, in October, another lot of three million ounces from Japan came into the market. Owing to increased trade requirements, there was, however, no difficulty in absorbing these arrivals. Demand, however, tapered off towards the end of November, and Mexican producers sold their stocks to the Bank of Mexico. The year ended with the factors of demand and supply in close balance.

In Canada, the price of silver moved down from 89¼ cents to 79⅞ cents. The Canadian base price of silver fluctuated to some extent independently of New York, as the price movements were influenced by the oscillations in the foreign exchange rates for the dollar. The official London price was based on approximate conversion of the New York quotation plus an adjustment for theoretical shipping charges from New York. Accordingly the opening rate of 77*d.* was also the high for the year and the low of 77½*d.* was reached on 29th May, just one day after the New York price reached its low of 82⅜ cents. The year closed better at 73¾*d.* on purchases for essential uses.

The official ban in India on silver imports and exports continued in effect throughout 1952. Licensed imports amounted to a negligible quantity of less than a lakh of ounces. Total estimated consumption was 5 million ounces. Prices ranged from a high of Rs. 193-11 per 100 tolas on 28th January, 1952, to a low of Rs. 140-12 on 6th December. These rates are equivalent in dollars to 1.08½ cents and 78⅞ cents per ounce, respectively. The closing rate in Bombay was about Rs. 152-2, equivalent of about 85⅛ cents (in U.S. currency) per ounce.

SMALL SAVINGS WEEK

The association of women with the small savings drive of the Government of India is significant, in that it is the housewife whose decisions on domestic expenditure have a close bearing on family savings. Each pie saved by every housewife and credited to her savings account will ultimately add up to a sizable amount. Viewed from this angle, the organisation of women's savings this week, that is from the 15th to the 21st inst., as a special feature of this year's savings drive, is welcome. The week is being observed in 15 of the most important cities of the country. Meetings are being conducted for enlisting the co-operation of women in the small savings drive.

The role of small savings in the formation of capital in India has assumed special importance owing to a change in the political and economic conditions in the country since independence. Prior to the country's freedom, princes, *zamindars* and capitalists constituted the main sources of funds for the capital market. The changed social order and the shift in incomes from urban to rural areas have dried up the flow of capital from these sources. Consequently, the Government has come to place increasing reliance on small savings than on large loans from the capital market. In his Budget speech, the Finance Minister said: "We shall have to turn increasingly to the small saver for providing the finance required for development." The Planning Commission has also emphasised, in its report, the role of small savings, because the extent of such savings determines the extent to which funds will be raised from other sources or the extent of deficit financing that has to be resorted to.

At present, three types of investment schemes exist in the sphere of small savings. These are: (*a*) The National Savings Certificates, (2) 10-year Treasury Savings Deposit Certificates and (3) Post Office Savings Bank Deposits. Since 1950-51, the collections on small savings have shown an upward trend as compared with the post-war period when a declining tendency was noticed. The net collections in 1950-51 were Rs. 33.3 crores; in 1951-52 they were Rs. 38.5 crores. The figure for the first nine months of 1952 (April-December, the latest month for which relevant figures are available) show that the net collections were of the order of Rs. 28 crores. For the full year, the total collections, based on monthly averages for these nine months, may be estimated at about Rs. 38 crores—an amount more or less the same as that for 1951-52. In other words, other things remaining the same, the upward curve of national savings seems to have flattened out.

The halting trend is perhaps an indication that the small savings schemes, as they are designed at present, have ceased to be attractive. In order to give new life to the savings movement, the Government is having under consideration a series of measures. Thus, it is proposed to extend the system of authorised agents who are functioning only in three States, to the entire country. The Government seems to be considering the appointment of extra departmental branch postmasters as authorised agents for sale of National Savings Certificates. Further, the proposal to introduce the cheque system for operating postal savings deposits would appear to be under consideration. Besides, it has been decided to return to State Governments all savings collections beyond Rs. 45 crores in the form of loans with a view to inducing them to take a livelier interest in the small savings drive.

All these amount to no more than an intensification of the drive. But by themselves these measures are unlikely to yield any substantial results, unless a little more incentive, in the form of higher rates of interest, is offered to investors. The yields on the existing savings certificates are not attractive enough to small savers. They must be sufficiently high to induce people to save and avoid the temptation of frittering away their income on non-essentials. Moreover, the rates of interest now being offered were fixed years ago when the general level of interest rates was low on account of the cheap money policy adopted by the Government. Since then, the rates have gone up and, therefore, there is need to revise them so as to make investments in the certificates worthwhile.

Part of the success of savings drives in the past was due to commission offered to agents

LB/G/34—1953

CENTRAL BANK MAINTAINS HIGH LEVEL OF LIQUIDITY

PROFIT LOWER DUE TO RISE IN EXPENSES

THE financial results of banks in India for the year 1952, reviewed in these columns so far, have shown that the responsibility thrown upon them by the official monetary policy in bringing about disinflationary conditions in the country has been borne well. They also indicate that the banks have not had any relief from the heavy cost of operations in spite of the decline in their turnover. Moreover, the rise in interest rates and its effect on the value of Gilt-edged securities have proved to be a heavy burden on them. The beneficial effects of higher interest rates on loans and advances have been more than offset by (*a*) the rise in rates of interest on deposits and borrowings, (*b*) the high cost of operations, and (*c*) the depreciation in the value of investments. This has particularly been so in the case of banks with a network of branches and big turnover. A typical example of this trend is provided by the financial results of the Central Bank of India Ltd. (Managing Director: Mr. H. C. Captain, Bombay), for the year ended 31st December, 1952. The profit of the Bank shows a shrinkage of Rs. 24.75 lakhs, in distinct contrast to the improvement of Rs. 22.73 lakhs noted in 1951. The gross income of the Bank during the year under review was well maintained; in fact, it shows a modest increase of Rs. 6.24 lakhs over that in 1951. If despite this improvement the profit shows a fall as above, it is because the interest paid and expenses have together gone up by as much as Rs. 30.51 lakhs. Both these items of expenditure have been progressively rising, with no signs of relief.

A more clear picture of the foregoing features can be had from the following comparative table:

(In lakhs of rupees)

† Includes post-war refund of E.P.T.

The increase of Rs. 17.54 lakhs in interest and discount earned during the past year has been followed by a fall of Rs. 11.87 lakhs in commission, exchange, etc., earned. This accounts for the relatively small increase of Rs. 6.24 lakhs only in gross income. The figure of Rs. 91.66 lakhs representing the income from commission, exchange, etc., includes the post-war refund of excess profit tax, the exact amount of which is not shown separately. But for this additional receipt which does not pertain to the year under review, the Bank's income and, with that, its profit from operations during the year would have recorded a much sharper fall than has been the case. The decline in commission, exchange, etc., earned is probably due to a fall in the Bank's bill business. The increase of Rs. 17.70 lakhs in interest paid and of Rs. 12.81 lakhs in administrative and other expenses has eaten into the profit-margin of the Bank. It will be noted from the foregoing table that, during the last three years, the increase in the Bank's gross income by Rs. 82.49 lakhs has been counteracted to the extent of Rs. 60.25 lakhs by the rise in expenses.

It will be noted from the allocation of the profit that, as in the previous year, no sum has been added either to the reserve fund or to the contingency fund this year also. The provision for investment account has also been reduced by Rs. 15 lakhs. Nonetheless, the sum set aside for this purpose, namely, Rs. 35 lakhs, is by no means small. This transfer is intended to meet, in part, the depreciation in the value of investments. It does not, of course, represent a real loss, for, if the securities are held until maturity, as is likely to be done, the Bank will receive repayment at par. When this happens, the amounts that are being set apart for this purpose year after year from profits will add to the Bank's inherent strength.

The Bank's balance-sheet as at the close of the year, a synopsis of which is given in the foregoing table, fully reflects the effects of the monetary discipline enforced by the authorities. The decline of Rs. 226.72 lakhs in deposits during the year is in keeping with the fall in the total money supply during the year. An analysis of the main heads of deposits reveals that current and savings deposits account for a decline of Rs. 309.48 lakhs, while fixed deposits and cash certificates show a rise of Rs. 82.75 lakhs. The Bank's borrowings from other banks at the end of the year show a large fall of Rs. 525.33 lakhs to stand at no more than Rs. 39.61 lakhs. Of these borrowings, as much as Rs. 30 lakhs are unsecured ones and the rest are secured by investments. This does not mean that the Bank had no necessity to borrow during the year as much as they had in the previous year, nor does it mean that the Bank did not avail itself of the bill market facility provided by the Reserve Bank. For the rising trend in advances noted in the previous years asserted itself so strongly during the earlier months of the year 1952 that the level of advances touched a peak. In the result banks had to borrow enormous sums from the Reserve Bank in the first quarter of last year. It was only the rapid decline during the remaining months that brought the level at the end of the year well below that at the close of 1951. Evidently, this has enabled the Central Bank to repay almost the entire borrowings from other banks. The fall of Rs. 5.81 crores in advances is attributable partly to the slump in commodity prices and partly to the official monetary policy. This decline is shared by loans, cash credits and overdrafts which have dropped by Rs. 3.52 crores and by bills discounted and purchased which account for a decline of Rs. 2.28 crores. It is, however, interesting to note that the ratio of advances to deposits is well above that in any of the years before 1951. The Bank's acceptances and endorsements, which represent the foreign trade bills business, have declined from Rs. 4.76 crores to Rs. 2.11 crores and bills receivable from Rs. 5.73 crores to Rs. 4.68 crores. Investments at Rs. 62.26 crores are shown at book value. Of these, Government securities stand at Rs. 55.10 crores, the market value of which is Rs. 51.55 crores, the depreciation on them being Rs. 3.55 crores. Cash balances too show a decline of Rs. 1.01 crores, but the total liquidity ratio stands at a slightly higher level, namely, 63.6 per cent. as against 60.5 per cent. a year before.

(Concluded from previous page)

appointed by the Government. There is need now to revert to this practice in areas where it is not in use and to make it applicable to both Treasury Savings Deposit Certificates and National Savings Certificates, instead of discriminating between the two as at present in certain areas. The better results that would follow these measures will be beneficial in several ways. For, increased savings invested in these schemes bring money to Government for financing its development schemes, checks inflation and provides protection against future want for the investor.

In Bombay State, the women's savings week was inaugurated by Dr. Jivraj Mehta, Finance Minister. Appealing for the co-operation of the public in the small savings movement, he revealed that, if the net collections of the State exceeded Rs. 13.75 crores, the State Government would get the excess over this amount as loan assistance from the Centre. During 1951-52, the net collections amounted to Rs. 13.5 crores. The movement in the State was, he said, conducted through the assistance of various agents working on a commission of 1¼ per cent. He hoped that, with the co-operation of the people, especially in the rural areas, the campaign would be a success.

RESULTS OF UNION BANK

MODEST DECLINE IN PROFIT

A DECLINE of Rs. 1.74 lakhs, from Rs. 3.92 lakhs to Rs. 7.18 lakhs, in profit is disclosed by the audited accounts of the Union Bank of India Ltd. (General Manager: Mr. F. K. F. Nariman, Bombay), for the year ended 31st December, 1952, as compared with that for the previous year. Though this decline is in contrast to the small improvement recorded in the preceding two years, it need not be viewed with concern, as it is in consonance with the general trend of bank profits for the past year. Following the decline in profit, the Directors have had to reduce the allocation to reserves. They, however, propose to maintain the dividend at As. 5½ per share of Rs. 5, to which level it was raised last year from As. 5 per share.

The following comparative table shows at a glance the Bank's progress in the last three years:

(In lakhs of rupees)

	For the year ended 31st December

As at 31st December

	1952	1951	1950	1949
Capital	40.00	40.00	40.00	40.00
Reserves	30.00	28.25	26.50	25.00
Deposits	5,66.82	6,06.84	5,36.04	4,63.47
Borrowings from banks...	...	...	...	68.00
Advances and bills ...	2,54.45	2,96.23	2,12.46	2,02.62
Investments	2,80.03	2,29.53	3,16.21	2,99.84
Cash	1,00.60	93.24	76.20	94.78
Balance-sheet total ...	6,60.01	7,13.99	6,43.75	6,10.82
Ratio to deposits of—	%	%	%	%
Advances	44.9	48.8	39.6	43.7
Investments	49.4	37.8	59.0	53.5*
Cash	17.7	15.4	14.2	20.4

* After taking into account the securities pledged against borrowings from banks.

It will be noted that the receipts from the principal sources of income have been nearly maintained at the previous year's level. The increase in the gross income to the extent of Rs. 1.08 lakhs is mainly due to the large receipts from other sources, including post-war refund of excess profits tax. This additional income has been more than absorbed by increases in the expenditure side. Both interest paid by the Bank on its deposits and borowings and expenses have moved up, the former by Rs. 2.58 lakhs and the latter by Rs. 0.41 lakh. In the result, the profit has, as already noted, suffered a decline of Rs. 1.74 lakhs. Inevitably, therefore, the provision for taxation is less by Rs. 50,000. While the transfer to the reserve fund has been maintained at Rs. 1.75 lakhs, the addition to the contingency reserve has been raised from Rs. 75,000 to Rs. 1 lakh. The investment account, which had received Rs. 1.50 lakhs last year, has not been provided with anything now.

Deposits of the Bank show a contraction of Rs. 40.02 lakhs to Rs. 566.82 lakhs. This fall is not shared by all classes of deposits. Thus, while fixed deposits and cash certificates account for a decline of Rs. 37.44 lakhs and savings bank deposits for Rs. 5.18 lakhs, current deposits have risen by Rs. 2.60 lakhs. With the decline in the Bank's resources, its advances have dropped by Rs. 41.78 lakhs. It may be noted here that while loans, cash credits and overdrafts have gone down by Rs. 61.02 lakhs, bills discounted and purchased have risen by Rs. 19.24 lakhs. The decline in advances during the major part of the year under review and the unusual prolongation of the slack season provided an opportunity to the Bank to take advantage of the more favourable rate of interest to be had on new investments in Government securities. Accordingly, the Bank's investments in Government securities (at market value) show an increase from Rs. 192.89 lakhs to Rs. 255.71 lakhs, while other investments are lower by Rs. 12.32 lakhs at Rs. 24.31 lakhs. At the same time, the cash position has also been strengthened by Rs. 7.36 lakhs, so that the total liquidity ratio stands at the impressive level of 67.1 per cent.

EXPORT OF INDIAN COTTON TEXTILES

REDUCTION IN PRICE IMPERATIVE

A WELCOME change in the administration of control over export trade in cloth in Bombay has been the constitution of a separate panel for cotton textiles, with the Joint Chief Controller of Exports, Bombay, as the Chairman. The panel consists of persons representing the Millowners' Association, Bombay, Bombay Chamber of Commerce, Indian Merchants' Chamber, All-India Exporters' Association, and Africa and Overseas Merchants' Chamber. The panel will meet periodically with a view to discussing general problems of common interest to textile exporters.

The constitution of a separate panel for export of cotton textiles—and three others for cotton and cotton waste, oils and oilseeds, and miscellaneous items, respectively—is evidently an indication of the anxiety on the part of the export control authorities to keep in touch with the leading members of the trade so that the problems arising from time to time, may be solved with their assistance. Until recently, export control was being administered on the basis of the discussions and recommendations made by the Port Advisory Committee. As this Committee had to deal with so many commodities of exports, sufficient attention could not be devoted to cotton textiles, one of India's most important earners of foreign exchange. In fact, this was one of the lacunæ, which was interfering seriously with the speedy administration of export control, thereby causing considerable hardship to exporters. This brought to the fore the need for periodic meetings between the trade and the export control authorities. The constitution of the four separate panels, instead of the one Port Advisory Committee, marks the recognition of the need for a separate body to examine, from time to time, the problem of textile exports. The efforts of the Joint Chief Controller of Exports (Bombay), Mr. R. N. Phillips, who, it is stated, was primarily responsible for taking the initiative in this regard, are indeed commendable.

Decline in Exports

The mere constitution of a separate panel for cotton textiles, however, is not enough. What is more urgently required is that the recommendations of the panel should be given due consideration by the Government in framing its export policy and controls. How the vagaries of the Government's export policy have already done a lot of avoidable harm to the export trade in cotton piecegoods is common knowledge by now. It is undoubtedly one of the chief reasons for the shrinkage in exports in recent times. Thus, the total quantity of cloth exported during the calendar year 1952 was not more than 617 million yards, which compares with 776 million yards in 1951 and 1,120 million yards in 1950. The target for exports of Indian cloth for 1953, fixed at the Buxton Textile Conference, it may be noted, is 1,000 million yards and it is doubtful whether this target will be reached, as exports in recent months have not been very encouraging, despite the continuance of the Government's policy of freer licensing of exports and the reduction in the export duty on coarse and medium cloth. The latest official figures for cloth exports are not available. The latest month for which figures are available is January, 1953, and that too for Bombay only. According to these figures, the quantity of cloth exported amounted to 37.22 million yards, as against 58.81 million yards in September, 1952.

Competition

The position in the export trade in cloth as it stands at present is that export orders are not flowing in as smoothly and as easily as they did seven to eight months ago, owing to keen competition from other countries. Thus, Japan is offering stiff competition to India in the world markets for textiles, particularly in Indonesia. Again, British and Continental mills—in some countries, the exporters receive special assistance—are trying their best to push up exports of cloth to Africa, the Middle East and the Far East. It is unnecessary to go into these details again, as a detailed reference has been made on a previous occasion (*vide* page 1092 of *Commerce* dated 13th December, 1952). Further, imports of Indian cloth into some of the traditional markets, Pakistan, in particular, have been virtually stopped, thanks to the balance of payments difficulties. As readers are aware, it was only recently that the Government of Pakistan officially banned imports of textiles.

This brief account should be sufficient to emphasise the urgent need for raising the competitive position of indian cloth in world markets. Surely, the best way of achieving this objective is to lower export prices. Now that a buyers' market seems to have almost been established on a permanent basis, one wonders if the export trade can bear even the reduced export duty of 10 per cent. on coarse and medium cloth. In fact, a stage has been reached when the Government of India ought to remove the handicap on the mills' capacity to export fine and superfine cloth by giving a rebate of the import duty on cotton on the quantity of such goods exported by them.

Liberalisation of Exports

There is need, too, for a further liberalisation of restriction on exports. Export of mill-made *lungis*, for instance, is at present prohibited. The chief consideration which seems to have weighed with the Government in continuing to prohibit the export of this variety is to give encouragement to handlooms. But handloom-made *lungis*, it is common knowledge, are costly and cannot compete successfully with mill-made *lungis* from other countries. Moreover, there are certain countries which do not use *lungis*, e.g., Australia, New Zealand, etc., but which are interested in certain varieties of mill-made cloth which resembles *lungis*. Similarly, with regard to exports of pseudofine cloth, there seems to be no point in continuing the ban. Now that the supply position of this variety is very comfortable, there is no reason why the Government should not lift the ban on exports.

A reference may now be made to the policy of free licensing of cloth exports. It is not known whether the Government would extend the period of the policy beyond June, 1953, but, in view of the encouraging trend of output, the Government may readily agree to do so. In so far as exports of freely licensed cloth—these are licensed on shipping bills—are concerned, the exporters feel that the Government may consider the feasibility of transferring the licensing formalities to the customs, with a view to minimising delay. At present, a shipping bill, which is essentially a customs document, has to be presented to the export control authorities for endorsement before being presented to the customs authorities. This procedure can be simplified, by allowing the exporters to present the shipping bills (together with the Treasury challans) direct to the customs authorities.

WORLD TEXTILE TRADE

There was a distinct change in the country-wise pattern of world trade in cotton textiles during 1952, thanks to the recession in the early months of the year and to the import restrictions by major importing countries. Thus, Japan, which enjoyed the unique distinction of being the largest exporter of cotton textiles in the world in 1951, was pushed to second place during the year under review with the U.S. seizing the first place. The U.K. ranked as the third biggest exporter of cloth, followed by India, which retained its fourth position among textile exporters. It may be interesting to note that India had the distinction of being the largest exporter of cotton piecegoods in the world in 1950 by exporting as much as 1,120 million yards. The table below gives the quantity of cotton textiles actually exported by the world's four leading exporters in 1952, as compared with the previous year:

(In million sq. yards)

	1951	1952
Japan ...	1,082	753
U.K. ...	865	711
U.S. ...	809	761
India ...	776	617

It will be evident from the above table that exports of cloth from all countries suffered a sharp decline during the year under review. The decline is particularly in marked evidence in the case of exports from Japan, the chief factor responsible being the drastic cut in imports of Japanese textiles imposed by the British Colonies. Despite the decline in the volume of exports, the position of the U.S. in the world trade in textiles was comparatively well maintained. This is not surprising, considering the very high technical efficiency of the U.S. textile industry and the temporary dislocation of British and Japanese textile industries. In fact, the position would have been much better but for the continued dollar shortage confronting the countries, especially the underdeveloped and undeveloped ones.

Whether or not the aforesaid pattern of world trade in cotton textiles will persist during the current year also remains to be seen. There are several factors which cannot be sized up at present. There are, for instance, factors such as the trend of prices of cotton textiles, production performance, and import policy of the Governments of the importing countries. Strong efforts are, however, being made by the major cotton textile producing countries to step up their exports. Japan is expected to ship 1,110 million yards of cloth during 1953 and the U.K. 1,350 million yards. India also wants to have a larger share in the world trade, as is evident from the target it announced at the Buxton Conference, namely, 1,000 million yards.

WORLD WOOL SITUATION

The outlook for wool continues to be bright. An indication to this effect is provided by the generally firm conditions prevailing in the Bradford and also Continental wool markets. Imports of wool into all primary markets have been quite substantial and pressure for early delivery of stocks, it is said, remains strong throughout the wool textile trade. Another indication of the firmness in wool is provided by the marked acceleration in the rate of world wool consumption; consumption during the current quarter is estimated to be at an annual rate of 2,550 million lbs. (clean), that is the level which existed in the fourth quarter of 1952. If this rate of consumption were to persist during the next quarter also, the world consumption of wool during the current (1952-53) season ending June would amount to 2,500 million lbs.

The supply of wool available during the season is estimated at 2,590 million lbs. Of this, 2,325 million lbs. represent the season's clip, the remaining being the carry-overs in Argentine and Uruguay. Excluding the quantity of 50 million lbs. purchased by the U.K. for stockpile, the quantity left for commercial use is 2,540 million lbs. It is thus clear that, taking the season as a whole, supply and demand have almost been balanced. The South American countries may, therefore, be expected to liquidate before long not only their current season's clips but also the carry-overs from the previous season. South American wool consists mainly of crossbreds. There is little likelihood of a surplus of these, though there is not the same squeeze in this section as in merinos. "The world," to quote one report, "is using wool faster than it is being grown, a fact at present marked by the liquidation of South American stocks. Trade stocks were very low at the start of the season. Although next season's clip may be a little higher, there does exist a paper possibility that, within the next 18 months, demand for wool may exceed supply."

CLOTH DISTRIBUTION CONTROL RELAXED

The Government of India's policy of abolishing distribution control over cotton textiles has been carried a stage further. According to the latest announcement, the cotton textile mills are now permitted to sell their entire production of cloth to buyers of their own choice, except 15 per cent. of certain varieties of coarse and medium varieties. Hitherto, the percentage reserved was 20. The reduction has come into effect from the March packings due for distribution in April, 1953.

The Government of India had announced (on 28th November, 1952), that exports of silk waste of West Bengal, Bihar and Assam origin would be licensed freely for shipment upto 31st March, 1953. As a result of a further review, the Government has decided to extend the period of free licensing up to the end of this year. Shipments will be allowed only from the Port of Calcutta as hithertofore.

U.K. COTTON IMPORT POLICY

IS THERE SUFFICIENT CLOTH FOR HOME CONSUMPTION AND EXPORT?

(From A Special Correspondent)

MANCHESTER, 10*th March*

MANCHESTER LETTER

FURTHER developments have occurred in connection with raw cotton buying for British mills during the next cotton season. Private importation, which was resumed after a lapse of more than 10 years last September, has generally suited the requirements of users and as a result it has been forecast that about two-thirds of the industry is likely to obtain its supplies through individual Liverpool and Manchester merchanting firms during the year, compared with below 30 per cent. this season.

The President of the Board of Trade, Mr. Peter Thorneycroft, has now announced the setting-up of another committee to investigate the position, presided over by Sir Richard Hopkins, who was Chairman of the previous investigating body last year which recommended the revival of private importation. The new Committee is to consider the future of the State-sponsored Raw Cotton Commission, which was set up by the Socialist administration at the beginning of 1948.

The Government's intention to provide cover for spinners to protect them against fluctuations in the price of the raw material has also been announced. This system, on broadly similar lines to that provided by the Raw Cotton Commission this season, will be continued during next season, but it is hoped that the new committee will report at a sufficiently early date to give spinners time to appreciate their position before they have to choose which buying system to adopt for the new season.

Hopkins Committee

Raw cotton developments seem destined to be in the news for some considerable time ahead, although there may now be a lull for a few weeks while the new Hopkins Committee gets on with its job of carrying events a stage further in connection with private buying of the raw material. Those who anticipated any startling change of plan as a result of the recent talks between the Government and trade leaders were disappointed. The decision to review the situation and probe the way ahead had been widely predicted.

The new Committee has the advantage of being largely composed of the same members who assisted Sir Richard Hopkins in his deliberations last year and it can, therefore, continue where it left off in the light of subsequent experience. Spinners themselves have already indicated that, in general, they prefer to obtain their supplies privately, although until the cover question is finally settled definite decisions may be left outstanding.

Since private buying was resumed little difficulty has been experienced in obtaining sufficient dollars for American cotton imports, partly because more substitute growths are now being used. The future supply of Egyptian type cotton, however, creates more problems and users of such qualities are not entirely happy about the position, particularly in view of the ever-present threat of political disturbances in Egypt and the Sudan.

It now remains to be seen whether the revived Hopkins Committee can again successfully produce an agreed document. The attitude of the trade union leaders at these discussions can have an important bearing on the terms of the final report. It is known that they object strongly to any question of public subsidy of private buying and it is more than likely that a compromise will entail some payment by contracting-out spinners in return for the provision of cover by the Commission. This immediately raises the basic price of cotton for users but it is difficult to see any alternative under existing conditions which preclude the re-establishment of a futures market.

Cotton—Private Buying

The first of the big Lancashire cotton spinning combines using Egyptian cotton to announce its decision to buy all its raw material supplies privately in future is Combined Egyptian Mills Ltd., the Atherton group controlling 20 firms with more than 3,000,000 spindles.

It was announced in Manchester last week by Mr. Ernest Hirst, Managing Director of the group, that when the opportunity to contract-out from the Raw Cotton Commission is available in June, Combined Egyptian Mills intend to give notice to withdraw all their mills from the Commission—provided a satisfactory cover scheme is made available to the trade.

This follows a similar statement made in the previous week by Sir Frank Platt, Managing Director of the 50-mill Lancashire Cotton Corporation, the biggest group using American type cotton.

Sufficient Cloth?

At the annual meeting in Manchester last week of the Cotton Manufacturers' Association, representing owners of 1,000 weaving mills, Sir Cuthbert Clegg, the Chairman, said doubts had been expressed in some quarters as to the ability of the producing sections of the cotton industry to provide enough cloth to meet home demand and a higher export target.

The implication was that there must be a substantial use in Lancashire of foreign grey cloth for re-processing and export to fill the gap. Sir Cuthbert said:

"I do not share these doubts. I believe that there is sufficient productive capacity and an adequate and potential supply of labour—properly deployed and utilised—to meet all the demands likely to be made for yarn and cloth in the immediate future from our own mills."

It was in the general interests of the cotton industry as a whole, and of the nation, that exported cloth should be British spun, woven and finished as far as possible.

Discussing export trade, Sir Cuthbert said it was essential that the Government should pay close attention in trade negotiations to the valuable contribution cotton was making to the national recovery and ensure that the industry had a fair crack of the whip wherever commercial treaties were under discussion.

The Annual Report of the Master Cotton Spinners' Federation, also issued during the week, says it is now more than ever necessary to achieve maximum efficiency in production methods, so as to reduce costs and at the same time maintain satisfactory earnings for the operatives.

The report records a sharp reduction in the number of spinning industry accidents in 1952. A major factor in the decline from more than 28,000 accidents in 1951 to fewer than 21,000 last year was the trade recession, the report explains. Only 2,500 accidents necessitated absence from work.

Production Rising

Output by Lancashire spinning mills in the week ended 21st February has been bettered only once in the last 12 months, Cotton Board production figures have shown.

The operatives produced 17,690,000 lbs. of cotton, spun rayon and mixture yarn—200,000 lbs. more than in the previous week but 1,500,000 lbs. less than in the corresponding week of 1952.

Recruitment continues to outstrip manpower losses. The mills had a net gain of 91 full-time workers during the week, bringing the labour force increase since last August—the turn of the recession—to more than 6,000.

Cloth production figures, also issued to-day by the Cotton Board, show that the average weekly output from Lancashire weaving mills during January was the second highest since last March.

The mills averaged 46,640,000 yards weekly—nearly 3,000,000 yards a week more than in December. Output was over 8,000,000 yards a week below the level of February last year, however.

During the month the weaving mills recruited 1,070 full-time operatives.

Raw Cotton Imports

Raw cotton arrivals in British ports this week were almost equally split between those on Raw Cotton Commission and private account. Out of total imports of 19,963 bales, the Commission acquired 10,493 bales. Chief suppliers were East Africa with 5,019 bales, West Africa 4,674 bales and Pakistan 4,000 bales. Still afloat for Britain are 64,921 bales, mainly from Pakistan, East and West Africa and Egypt.—*All Rights Reserved.*

COTTON OUTPUT IN ASIAN COUNTRIES

CHINA MAKES HEADWAY

RAW cotton is one of those commodities which constitute an important source of foreign exchange earnings for the Asian region. In South-East Asia, raw materials account for 70 to 90 per cent. of total employment and for 60 to 75 per cent. of national income. Among these raw materials, cotton is one of the most important, for this region accounts for over 25 per cent. of the world production of this fibre. Some fresh light on the position of cotton in the economy of the Asian and Far East Asian region is shed by the Report of the Economic Commission for Asia and Far East (E.C.A.F.E.) which records that the region's cotton supply in 1950-51 greatly improved over 1949-50.

The following table gives the production of cotton in 1934-38, 1949-50, 1950-51 and 1951-52:

(In thousand tons)

	1934-38	1949-50	1950-51	1951-52*
India	1,150	518	593	607
Pakistan		221	265	287
China (mainland) ..	680	370	506	650
Korea	65	28	20	22
Other	..	17†	21†	25†
Total region ..	1,895	1,154	1,405	1,591
Total world ..	6,650	6,750	6,010	7,400

* Preliminary. † Japan, Burma and Thailand.

The Report states that production increased in response to strong demand and shortages in international markets, due mainly to the impact of the Korean War and rearmament programmes and to the introduction of export restrictions in the U.S. It observes further that production in both China and India increased at the expense of food crops in order to supply the requirements of textile industries.

Chinese Output

China does not, as is well known, publish any figures about its cotton output. Even the International Cotton Committee gives only rough estimates of its production. Presumably, the figures given in the E.C.A.F.E. Report are also estimates made by this body. In any case, it is interesting to note that China's cotton output has increased from 370,000 tons in 1949-50 to 650,000 tons in 1951-52. The E.C.A.F.E. Report says:

"Activity in textile mills on the mainland of China has been largely governed by the availability of cotton supply. The loss of imports from the United States was to some extent made good by increased imports from Pakistan, and the very considerable increase in the domestic crop in 1950-51 made possible increased activity early in 1951. In the middle of the year, however, operations had to be temporarily suspended in the textile industry, while arrangements were made to induce the flow of cotton from rural areas and to distribute the incoming supply from Pakistan."

It will be clear from the table that the region's cotton supply in 1950-51, which is still below pre-war, has improved over the 1949-50 output. The three chief producers of the area, namely, India, Pakistan and China have all contributed to the increase in cotton output. Referring to this improvement in cotton production, the Report says:

"Production increased in response to strong demand and shortage in international markets, owing mainly to the impact of the Korean War and rearmament programmes and to the introduction of export restrictions in the United States. Thus, production in both China (mainland) and India was increased, in many cases at the expense of food crops, in order to supply the requirements of textile industries, while in Pakistan there was an increase in retained consumption owing to the development of textile industries in the country in accordance with the Six-year Plan."

Major Producers

In 1951-52 there has been a continued increase in the estimated production of all the three major producers. The area under cotton was expanded by some 8 per cent. in Pakistan, 20 per cent. in India and apparently to an even greater extent on the mainland of China. In spite of the unfavourable growing conditions in several areas, it is estimated that the region's total cotton crop may be 10 or 15 per cent. larger than last season, leaving them still about 15 per cent. below the pre-war level.

Japan is the chief importer and India and Pakistan the chief exporters of this region, as the following table shows:

Export and Import

(In thousand tons)

	Exports			*Imports*		
	1934-38	1949-50	1950-51	1934-38	1949-50	1950-51
India	614	46	33	93	206	173
Pakistan ..		187	226		..	..
China (mainland) ..	53	..	11	77	87	59
Japan	..	..	..	779	208	425
Other	18*	4*	7*	24‡	49‡	47
Total region ..	685	237	277	973	550	695
Total world ..	3,070	2,700	2,560	3,060	2,620	2,660

* Burma only. † Korea only.
‡ Hong Kong, Indo-China, Indonesia, Korea and the Philippines.

The above table shows that Japan has more than doubled its cotton imports between 1949-50 and 1950-51. This is due to the increase in demand for Japanese textiles. Even so, it is noteworthy that Japan's cotton imports are much less than what they were in pre-war years.

WEIGHING COTTON

Customs authorities at the ports of Bombay, Calcutta, Madras and Cochin, it is stated, have been instructed by the Government of India to check the weight of bales of Indian raw cotton before shipment abroad. This measure, which is being implemented since this week, has been necessitated to prevent evasion of customs export duty on excess quantity of raw cotton in the bales.

BRAZILIAN COTTON

The Congress has sustained a veto by the Brazilian President of the clause in the Free Exchange Law which would have permitted sale of the Bank of Brazil's stocks of cotton and the sales of new crop cotton at the free exchange rate. It is understood that for the time being at least cotton exports will not be negotiable at the free exchange rate.

The Japanese Ministry of International Trade and Industry has decided to raise the ceiling on monthly cotton yarn output to 160,000 bales for the period March-May, 1953, as against the present ceiling of 150,000 bales. It has further been decided that 10 per cent. of the monthly ceiling of 160,000 bales can be carried over or used in advance between these months.

The 1952-53 production of Peruvian cotton is estimated at 449,000 bales of 500 lbs. gross, as compared with 425,000 bales in the previous year.

EXPORT POLICY FOR COTTON

NEED FOR FRESH QUOTA

IN cotton trade circles, the opinion is gaining ground that it is not only necessary that a fresh quota of exports of cotton should be given but an additional quota would not inflict any serious damage on the Indian cotton economy. On the contrary, it is felt that this country could earn some valuable foreign exchange in the context of the unsatisfied world demand for the varieties of cotton which India is in a position to export. But it is also felt that the Government would be well advised to reduce the export duty on certain exportable varieties to the level of the duty in Bengal *Deshi*.

The following are the varieties of cotton which have been allowed to be exported and the export duties which they bear:

Variety	*Export quota* Bales	Rs. per bale: *Previous export duty*	Rs. per bale: *Present export duty*
Bengal *Deshi*	1,50,000	200	125
Oomra *Deshi* old and new of staple not exceeding 11/16", C.P.I, C.P.II and C.I. *Deshi* ..	50,000	200	200
Dholleras and Mathias and Kalagins	50,000	200	200

The quota of 150,000 bales of Bengal *Deshi* allowed for export has, it is stated, been already exhausted. For other growths, the export quotas remain unutilised. This is attributed to the fact that the export duty on these varieties has not been reduced to the level of the duty on Bengal *Deshi*. The present level of export duty on these varieties, it is asserted, makes it practically impossible to sell them.

Bengal Deshi

From this point of view, the Government's decision to allow shipments of Bengal *Deshi* to the extent of one-half of the quota for export granted in respect of other varieties, has been widely welcomed by the cotton trade. The effect of this decision is that in addition to the original export quota of 150,000 bales of Bengal *Deshi* another 50,000 bales of Bengals can be exported this season, though the overall quota of exports stands unaltered at 250,000 bales. In 1951-52 the export quotas amounted to 352,000 bales of short-staple varieties. It is estimated that out of this quota about 155,000 bales were either not utilised or not shipped, and that this quantity has been carried forward into the 1952-53 season. It is further estimated that between September, 1952, and February, 1953, about 194,000 bales were shipped. An estimate places the quantity of cotton, already sold but not yet exported, at 100,000 bales. The failure to effect prompt shipments is attributed to transport bottlenecks which prevent the moving of cotton from upcountry to the ports. It is to be hoped the Government will give the necessary transport facilities to enable the shippers to fulfil their export commitments.

To turn now to the need for a fresh export quota. The position as estimated in trade circles is that there is in the country a surplus of exportable varieties, particularly, Bengal *Deshi*. The carry-over of Bengal *Deshi* as on 1st September, 1952, is estimated at 154,610 bales of 400 lbs. each. The commercial crop during the 1952-53 season has been variously estimated: one estimate places it at very much less than 300,000 bales, while another places it at well above 350,000 bales. If we take 330,000 bales as a safe estimate, the available supply of Bengals —that is, the total of commercial crop and carry-over cotton—might be placed at 484,610 bales. Of this quantity, mills might consume about 160,000 bales. The original quota for export is 150,000 bales. If the concession, which permits the conversion of one-half of the export quota of other varieties into Bengals, is availed of, it would mean an export of an additional quantity of 50,000 bales. This gives a total offtake of 360,000 bales or, say, 370,000 bales, inclusive of "sundry" consumption, as against the overall available supply of about 484,610 bales. The estimated surplus as on 1st September, 1953, is, therefore, of the order of 114,610 bales. It is on the basis of these estimates that men in cotton trade circles emphasise the need for an additional quota of exports for Bengal *Deshi*. It would appear that there is now a good demand for these varieties, and that any additional quota, which might be announced, would be readily absorbed by overseas buyers.

ROLE OF MANAGEMENT CONSULTANCY IN BUSINESS ORGANISATION—I

ITS BASIC PURPOSE ANALYSED

(By J. SANDFORD SMITH)

MANAGEMENT consultancy has grown out of the complexity of modern business organisation and the rate of technological improvement. But it is hard for any of us to appreciate fully the speed with which the recent change in our economic climate has taken place and the strain it has forced on man both physically and psychologically.

Anthropologists reckon that it has taken three-quarters of a million years for the present type of human being to develop from the primitive "Java" man. Development physically and mentally has been slow and gradual over this immense time span in history. Of these 750,000 years, it took the first 745,000 for man to develop to the stage of beginning to write. Of these last 5,000 years during which he could write some 4,800 went by before he got to the point where he began to use steam power to help to fill his needs and wants.

Even with this numerical scale, it is still not easy to grasp the full significance of the sudden change forced on man. The introduction of power led to the factory system and the gathering together of men, women, and children into factories and mills, and the growth of large industrial and commercial organisations. The old, relatively fixed social order was upset and a new set of relationships has been introduced much more complex than any which man has had to face hitherto.

New Problems

Power-driven machinery made everything go faster. For thousands of years, man could travel on land no faster than the speed of a running horse. With the coming of railways and steamships, and later motor cars and aircraft, conceptions of distance have been revolutionised. Again, the application of power to production has enormously increased the rate at which goods are made, and brought new problems of planning and control and an insistent sense of urgency in solving them.

All the intricacies which these developments have imparted into the field of management exist coincidentally with a vast and increasing technological specialisation. Each management technique becomes the subject of wider and deeper study, as research and development are applied to it. Whole new fields of knowledge are opened up, as, for example, electronics which again, in their turn, offer new areas for industrial exploration and research. Take another example, accountancy. Less than 100 years ago accountancy was looked on as a matter of writing up books in beautiful copperplate handwriting. To-day accountancy has become one of the most technical subjects in which one man does not seek to cover the whole range. There is the accountant specialist in auditing or it may be in tax, or again in organisation and methods, or municipal accounting or cost and works accounting. So we have constant development in methods and in processes running parallel with changes in management techniques, and all this happening in an industrial society to which the human being has had much too short a time to adapt himself.

Aware Of Own Deficiencies

It is natural that informed and sensible management should be only too well aware of its own deficiencies. The old skilled craftsman, the silversmith and carpenter, could get within a very close measure of what it was theoretically possible to produce with the tools at his disposal, both in his manner of working and in the quality of his product. To-day even the most efficiently conducted enterprise is a very long way from achieving the maximum efficiency of which it is theoretically capable. Technically one new method or process is rapidly followed by an improved one.

Administratively, no final principles have been identified for the proper relationship in the large commercial organisation between the direct executive line of authority and the functional technical line. No management has yet devised a method whereby every human being will give for all the working day his full and most effective effort. The nearest approach to this, perhaps, is in the mass-production factories which have only achieved their efficiency through making the machine the master and turning man into a near robot. This brings, in its train, the possibility of greater difficulties in labour relations. The industrial worker fights back in the only way available to him—the go-slow policy and the strike.

It was to help in solving the many problems which arose from the situation which has been briefly described that the management consultant came into being. But where, against this industrial background, does the management consultant find his place? He has two principal contributions to make. First, he is the technical specialist who studies one particular function of business, watches its operation over a wide range of businesses, and learns how to apply the most up-to-date methods in any business. Secondly, as an expert on organisation, he has to recommend an appropriate grouping of functions and responsibilities to enable the directing and controlling staff of a business to achieve the purposes of the business in the most effective way. He may be concerned with the balance between the functional and executive lines; he may have to consider the extent to which certain activities and their control should be decentralised. He provides an independent and impartial view of the organisation as a dynamic moving group.

The experienced management consultant can take a detached impartial and fully integrated view of the organisation as an organisation. He is the observer of human beings, working in a group as the doctor is the observer of the individual in terms of the human body. But, just as doctors treat separately the parts which make up the human body, so the management consultant may advise on a number of separate functions within the business organisation as a whole.

Field of Engineering

Management consultancy started in the purely engineering field. In the United States, even to-day the term management engineer is more commonly used than management consultant. Time study and motion study were the basic elements of his craft. Consultancy has spread now into the function of distribution, of financial and office management, personnel management and has learned to take the overall view in general management.

No one man will be adept over the whole range, and indeed anyone who claims to be is more properly termed charlatan than consultant. The large firm of consultants will have experts in each specialisation; the single practising consultant of repute confines himself to one or two specialisations in which he becomes an acknowledged expert.

The list prepared by the British Institute of Management of the functions on which consultants can advise is as follows:

General management (including organisation).

Financial and office management: clerical planning and methods; office layout; costing and cost control; communication and records.

Production: Layout; planning and control; stores and purchasing; methods and processes; material handling; inspection and quality control.

Personnel management: Selection; training; time study; motion study; remuneration and incentives; industrial relations; physical working conditions and employee services.

Distribution: Market research and planning; sales organisation and methods; publicity; packaging and despatch; transportation.

This is a comprehensive list covering most, if not all, of the functions with which any management is likely to have to deal.

Basic Purposes

In what circumstances is the management of any particular business likely to seek the services of a consultant in respect of these functions? To answer this question, it is desirable to analyse the basic purposes for which consultancy services are offered.

(1) *Assistance in expanding and developing markets.*—This may involve investigation of future demand for existing and projected goods or services. When this has been assessed, advice may be sought on sales organisation and distribution methods and on any changes in production processes or methods which may be needed to achieve the planned optimum economic output.

(2) *Assistance in reducing operating costs.*—The management may be dissatisfied with the quantity or quality of output in relation to cost. The consultant may then be asked to study the whole or part of the production functions and to seek economies by the introduction of better methods, of incentives to encourage greater effort, or of better employee selection methods and better training.

(3) *Assistance in reducing the cost of overheads.*—Increasing administrative and clerical costs are a characteristic of modern industry. Help may be sought from the consultant in checking this tendency by measuring the load of work on the administrative departments, drawing offices, and so on, in terms of man-hours, and by simplifying and improving clerical systems and routines.

(4) *Assistance in improving management control.*—The management may feel that the various functions within the organisation are not harmoniously bound together, so that the sum of the separate parts does not make an harmonious whole. The consultant may be called in to review the situation and to design an effective balanced management structure and to provide such tools of control as standard costing and production control.

Each of the four groups of services given above has been prefaced by the word "assistance." The management consultant is a professional adviser to his client; he is not an administrator, and the client should be careful to maintain this relationship.

Consultancy began in the realm of private enterprise but has now expanded into all fields of organised human endeavour. Government departments, municipalities, State boards all use consultancy services and are using them to an increasing degree. One of the encouraging factors in the growth of consultancy is that the practising consultant finds, first, that the most receptive firm is the one which has previously used consultancy services; secondly, that the user of consultancy services is generally one of the leading firms in its industry. This, of course, is not extraordinary. It is perhaps natural that the firm that is always reaching out for new ideas and new thought becomes one of the leaders in its industry.

An Important Factor

Size of firm is an important factor in consultancy, both for client and consultant. Hitherto most consultancy services have been applied to the medium, large, and very large business: and it is unfortunate but true that the small business, which may perhaps lack technique more than the larger ones, finds it difficult to afford consultancy services.

The problem is a simple financial one. To solve a certain technical problem, the consultant takes so long and this time, which in turn determines the size of his fee, can be afforded by the business with the big turnover and not by the one with the small.

As to size of consultant firm, management consultancy firms in Britain fall roughly into three categories. There are a few very large firms, some employing hundreds of operating consultants; there are more medium-sized firms with a dozen to 25 operating consultants, and then there is a number of smaller firms ranging down to one-man businesses. Each size group and each firm has its own particular contribution to make.

The large firm may have an equally large range of specialised experts, the smaller firm may give a more personal service but may be more limited in the range of subjects with which it deals. There are many one-man consultants who, from the point of view of range of service, are naturally limited to the specialisation possible to one man. Against this, by the very nature of his experience, a man may be the greatest expert on this particular specialisation in the whole country, if not, indeed, in the industrial world.

CONFECTIONERY INDUSTRY IN INDIA

STRESS LAID ON ACTIVE STATE AID

DESPITE the protection enjoyed for such a long period as eighteen years, the Indian sugar industry does not seem to have stabilised itself yet. The biggest problem of the industry has all along been the very high cost of sugar manufacture. This is the result partly of high sugarcane prices and partly of the lack of proper climate for, and attention to, the development of subsidiary industries. Consequently, the price of Indian sugar is very high *vis-a-vis* that produced elsewhere. It, therefore, the position of the sugar industry is to be stabilised, it is of the utmost importance that the price of sugar should be reduced to suit the pockets of the ordinary consumer. After all, it is only by such reduction that one can expect an improvement in the demand for sugar, which is very low as compared with the consumption in other countries. One of the most effective ways of bringing this about is to increase its industrial consumption. Inasmuch as confectionery forms a very convenient agent of enhancing sugar consumption in a form not only palatable but also acceptable to the body, the need for developing the industry cannot be stressed too strongly.

Confectionery is an advanced, developed and refined form of sweets prepared under hygienic and sanitary conditions. In quality, confectionery products are capable of keeping well for a long period. It is easier to handle, to distribute and to consume than most other sweets. It provides, as a matter of fact, a ready, manufacture on a large scale and, as already stated, a source of industrial use for sugar, bringing, along with it employment and, consequently, a high standard of living. It is, therefore, a matter of great importance that necessary conditions for development, stability and successful working of the confectionery industry should be created.

Although the confectionery industry plays an important part, both as a subsidiary to the sugar industry and as a producer of nutritive products, as noted above, the progress of the industry would appear not to have kept pace with the progress elsewhere. Thus, the production of machine-made confectionery is at present of the order of 10,000 to 12,000 tons per annum, as against 5,000 tons per week in the U.K. The total annual consumption of confectionery products in India, it may be noted in this connection, is estimated at over 30,000 tons.

Excise Duty on Sugar

In view of this low consumption, as also of the good export possibilities for Indian machine-made confectionery, it is rather surprising that the Five-year Plan does not contain any reference to the expansion of the Indian confectionery industry. Notwithstanding this, attempts are being made either to expand the units already in existence or to establish new plants for the same. While the total production capacity is going up, the difficulty, it is said, still continues of getting sugar—the most important raw material, accounting for more than 40 per cent. of the total cost of confectionery production—at reasonable prices, thanks to the imposition of the high excise duty on sugar. In fact, high price of sugar has mainly been responsible for the high cost of confectionery manufacture. Unless this cost is reduced, one cannot expect any improvement in the demand for confectionery. An effective way of bringing about reduction is the refund of Central excise duty on sugar used in the manufacture of confectionery. The industry has been repeatedly urging the refund of the duty for a considerable time now, and to which we have also drawn pointed attention on more than one occasion. In most countries where the confectionery industry is flourishing, it is exempted from payment of excise duty on sugar consumed by it. After all, by allowing the rebate, the Government will only be removing tax on raw material. Surely, this concession will enable the industry to reduce prices and stimulate the demand for confectionery, which, in turn, would result in higher production, greater utilisation of the industry's capacity, and more employment for labour than at present.

The confectionery industry is equipped with such modern machinery and technical resources that it is claimed to be in a position to manufacture quality confectionery in the country. This, coupled with the excellent prospects of export trade, especially in the neighbouring countries such as Pakistan, Burma and Ceylon, brings to the fore the problem of enabling the indigenous industry to place its products in the world market. The importance is all the greater in the present context of keen competition from other confectionery-producing countries. Hence the need for the Government of India supporting an export drive launched by the Indian confectionery industry. Among the measures that are required to be undertaken by the Government, mention may be made of the following:

(a) Whatever assistance rebates and subsidies may be given to the sugar industry to encourage sugar should be made applicable to the confectionery industry for the export of confectionery;

(b) rebate of import duty on essential raw materials should be given in respect of confectionery for export;

(c) the procedure whereby these provisions are implemented should be clear-cut and simple in order that the export of confectionery on a substantial scale should not be hindered by difficulties of procedure.

Foreign Competition

One of the disquieting problems confronting the confectionery industry relates to foreign competition. The industry looks with concern at the Government's policy of permitting imports of foreign confectionery at a time when the production capacity and the quality of the goods produced have been developed to a high level by the installation of costly and up-to-date equipment in the last few years and when the demand for confectionery has dwindled, owing to the restricted buying power of the consumer. In the opinion of the industry, import of foreign confectionery can only result in reducing still further the demand for Indian quality products. It accordingly urges the Government to reconsider its policy and prohibit imports without delay.

Another problem of the industry is one of tinplate supplies. The allocation of quotas by the Government is said to be not adequate to meet the industry's requirements. As an important and hygienic foodstuff, "it is essential that confectionery should be packed in air-tight containers so as to ensure that it reaches the consumer in fresh condition." The Government would do well to concede the demand for a more liberal allocation of tinplate quotas.

SUGAR PRODUCTION AND STOCKS

The total production and despatches of sugar for the current (1952-53) season up to 15th February, 1953, amounted to 695,480 and 390,443 tons, respectively as against 766,278 and 303,795 tons during the corresponding period of the previous season.

The opening stock, production, despatches and closing stocks of sugar during the fortnight ended 15th February, 1953, were 661,644, 143,148 66,999 and 737,793 tons, as against 473,492 140,453, 42,693 and 571,252 tons, respectively, in the corresponding fortnight of the previous season. Figures for the current fortnight relate to 127 factories representing 90.86 per cent. of the total cane-crushing capacity, while the figures of the previous year relate to 123 factories representing 85.99 per cent. of the total cane-crushing capacity.

EXPORTS OF INDIAN COAL

REMOVAL OF OBSTACLES URGED

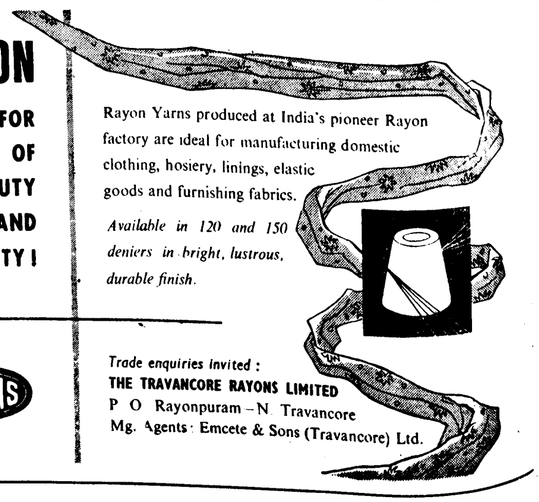
LATEST reports from Calcutta indicate that the Government of India has been planning increased exports of coal. This is a step in the right direction and is long overdue. For this will help consolidate India's position in the South and South-East Asian markets. India's future hold in these markets is dependent on the quantity and quality of coal it can supply at reasonable prices. Now that China is out of the picture and that India is the chief supplier of coal to South and South-East Asian countries, there is a danger that this country might succumb to the temptation of charging exhorbitant prices for coal and at the same time supplying low quality coal to these countries. The temptation must be avoided at all costs, as it is fraught with dire consequences to the industry in the long run. For when once the prejudice against Indian coal is established in the overseas markets, it will be difficult to remove it. And every opportunity will be availed of by consumers in these countries to do away with the imports of Indian coal.

The chief importers of Indian coal, excluding Pakistan, are Japan, Australia, Burma, Ceylon, Singapore and Hongkong. Of late, India has exported coal to Korea also. According to available statistics, India exported during the nine months ended November, 1952, nearly 2.3 million tons, as against 1.6 million tons and 0.8 million tons in the corresponding periods of 1951 and 1950, respectively. Since November, 1952, the quantity of exports is believed to be substantial. Enquiries for exports from India are reported to have been on the rising trend. As overseas enquiries are mostly for higher grades, India will have to take recourse, on an extensive scale, to washing and blending of coal which would facilitate considerably the promotion of coal exports from this country. Besides, certain other obstacles in the path of increased exports of coal such as, shortage of wagons and storage facilities at the ports need to be removed completely. These obstacles have also been responsible for coal famine experienced often in South India and many other parts, which are at a distance from the coal-producing areas.

There is good export demand for coking coal. But with reserves of coking coal limited, India cannot export this variety in large quantities. At present the production of coking coal is in excess of essential requirements of the iron and steel industry and for coking purposes. This excess can be exported to earn essential foreign exchange, as has been recommended by the Planning Commission. Meanwhile, it is learned that the Government of India has asked the collieries producing coking coal to watch their raisings month by month this year, so that their production targets are not exceeded. They are warned that under no circumstances will they be supplied with wagons in excess of their allotted quota. The warning emphasises the need for increased caution on the part of the collieries with regard to their raisings.

RAYON

YARNS FOR FABRICS OF BEAUTY AND UTILITY!



Rayon Yarns produced at India's pioneer Rayon factory are ideal for manufacturing domestic clothing, hosiery, linings, elastic goods and furnishing fabrics.

Available in 120 and 150 deniers in bright, lustrous, durable finish.

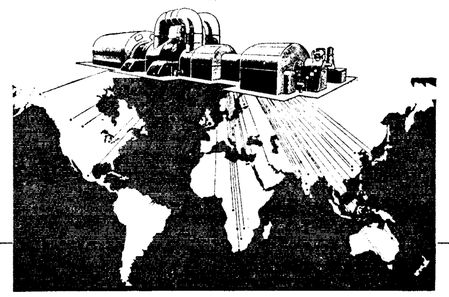
Power generation



The ENGLISH ELECTRIC Company has been designing and manufacturing steam turbo-generating plant of all types for Central Power Stations and industry for many years. This includes a wide range of machines with capacities up to 100,000 kW, hydrogen cooled, running at 3,000 r.p.m. and operating with steam conditions up to 1,500 p.s.i.g. and 1050° F.

In almost every country throughout the world 'ENGLISH ELECTRIC' steam generating plant and its associated transmission and distribution equipment is providing electric power for industry and the home. Continuous research on all types of power generation will ensure the continued lead of 'ENGLISH ELECTRIC' equipment.

LESSONS FROM TEA CRISIS IN INDIA

MR. HUTCHISON'S CONFIDENCE IN INDUSTRY'S FUTURE

THE severe crisis that overtook the Indian tea industry in 1952 set many people to wonder at one time whether the industry had any chance of survival at all. But there was still a section of the people which was not so pessimistic, but felt that the crisis was a passing phase and that, given the co-operation of the Government and the workers, the industry would be able to survive. To this latter rank of optimists belongs Mr. E. A. Hutchison, Chairman of the Indian Tea Association. This is evident from his address at the annual general meeting of the Association, held in Calcutta last week, when he expressed his confidence that the industry would survive, though it would take several years to make good the loss suffered in the past years. This confidence was born out of the past experience when a similar crisis had been overcome and of the voluntary measures that the industry has already taken to tackle overproduction.

Last year's crisis was the most serious one that the industry had ever experienced. Even in the crisis of 1932, the adverse gap between the cost of production and selling price was not go great as in 1952 and never had the tea companies suffered such staggering losses as they did in the past year. But Mr. Hutchison did not avail himself of the occasion to recall the melancholy events of the past year; nor did he attempt to apportion the blame for the crisis on any single partner in the industry, namely, the planters, labour or the Government. But he maintained, rightly in our view, that a united effort on the part of the planters and labour and timely help by the Government would have made the transition in world economic conditions less painful for all those intimately connected with the industry. The outstanding feature of Mr. Hutchison's address was that it was devoted to drawing lessons from the "misfortunes and mistakes" of the past so that the industry could "hasten the end of this crisis and try to avoid another in the future."

Overproduction

Mr. Hutchison candidly admitted that there was overproduction. But, according to him, it came about under extenuating circumstances and not as a result of deliberate attempt by the planters. He indicated that, even if the industry had desired to curtail production, it could not have been done. For the prices fetched by Indian tea were good and the Government wanted to earn foreign exchange. Labour also would not have willingly (and rightly too) agreed to such a policy in times of prosperity. But, when circumstances changed, he pointed out, the industry was only too willing to restrict output. Mr. Hutchison was confident that the machinery for the voluntary scheme of restricting output, which had already been agreed upon, would operate successfully. Though it was only a voluntary scheme, he hoped that it would not be scrapped when the present emergency was over, but allowed to remain in being, so that it could be applied whenever occasion demanded in future, for it was necessary never to allow production so greatly to exceed demand.

While Mr. Hutchison was willing to plead guilty of the charge of overproduction, he would not admit the accusation against the industry that it was producing poor quality tea. He sought to substantiate his stand by pointing out that the quality of tea made in 1952 was better than that of 1951. He, however, conceded that it would be extremely foolish to disregard the question of quality merely in the hope that the quantitative restriction on output would solve the problem. He was keenly aware that the Indian tea industry was living in a competitive world and that the shield of bulk purchase could no longer protect it. Proceeding, he observed: "Indonesia, Pakistan and the African territories have no export duties, the export duties of Ceylon vary with the selling price of tea, and, unless we can always offer teas of quality to our customers, we shall find ourselves at a grave disadvantage." But there are some odds against bringing about an improvement in quality. According to Mr. Hutchison, "renewal and modernisation of machinery is never easy when there are no profits; nor will labour readily agree to the less profitable and more tiring task of fine plucking." But still he assured the public that the planters were doing all in their power to meet the customers' requirements.

Mr. Hutchison felt that there was little justification in the charge of extravagence against the industry. "Whatever may have been the case in the 'good old days,' there is no opportunity given to us to be extravagant to-day," he said. This is because, he added, "the prices of our supplies are controlled, the routes by which those supplies reach the garden are dictated to us, and even the quantities of supplies are dependant upon Government releases."

Labour Problems

In its dealings with labour also, the industry has learnt its lessons from the crisis. Even in the year of stress, such as 1952, we are told, the industry's relationship with labour was on the whole excellent. Mr. Hutchison could not, however, at this point, help drawing attention to the unfortunate attitude of certain labour leaders who refused to admit that there was a crisis in 1952. It was because of this attitude, he felt, that the industry and labour could not put up a united front in the demand for relief from the Government in the middle of the year, when the time for such a demand was propitious. It was not until December, 1952 that a joint approach to the Central Government could be made. But, then, it was too late for success. In the absence of any relief from the Government, the full burden of the crisis had to be shared by the worker and the employer.

The industry's efforts to pay wages all in cash, instead of partly in cash and partly in kind, have not so far succeeded. Mr. Hutchison felt that labour itself would now welcome a certain cash wage in place of the variations and uncertainty of concessions. He referred to the strange spectacle of closed gardens, of unemployment, and of surplus labour which existed side by side with recruitment of additional labour from distant places which was a source of concern to the Government and the planters. A welcome development in this respect is the curtailment of recruiting activities by the Tea Districts' Labour Association which undertakes this task on behalf of the planters. Mr. Hutchison was also appreciative of labour's decision to accept reductions in earnings, thus avoiding unemployment.

Referring to the third and the "most prosperous" partner in the industry, namely, the Government, both at the Centre and in the States, Mr. Hutchison regretted that the co-operation that was expected of it was not forthcoming in the requisite measure. The industry's requests to the Government were broadly two: (1) reduction, if not abolition, of fiscal duties, and (2) assurance of supplies of foodgrains at controlled rates. As regards the first, Mr. Hutchison expressed the industry's great disappointment at the absence of any relief so far. Even if the industry's modified request, namely, that teas produced in Darjeeling and Cachar should be exempt from payment of excise duty, had been accepted by the Government, a great deal of the distress and sacrifice in these two districts could, he said, have been avoided. Mr. Hutchison was gratified to note that some progress had been made in regard to the second demand. The State Governments have agreed to make more satisfactory arrangements for rise in 1953.

Though the tea industry has, of late, been able to effect economies, it is still a long way from making good the gap between the costs and selling prices. Mr. Hutchison, therefore, warned all concerned, especially Governments and labour, to guard against the unwarranted assumption that, because the market had risen an anna or two, the crisis was over. Despite the recent increase in prices of tea, the sale proceeds on teas disposed of in North-East India during 1952-53 are, according to Mr. Hutchison, Rs. 8 crores less than those realised in 1951-52. It would be many seasons before this loss could be made good.

New Tea Bill

It may not be out of place to refer here to Mr. Hutchison's anxiety over the new Tea Bill, which is now before Parliament and which is intended to control the industry, whereas the Act now in force has for its objective the development of the industry. "The change is significant," he said, "and, if ever the Gov-

(*Continued on page 527*)

STOCK POSITION OF JUTE GOODS

UPWARD TREND PERSISTS

STOCKS of jute manufactures with mills as at the close of February, 1953, make very disquieting reading. As compared with those in the previous two months, they disclose a steady rise. Thus at the end of the month under review, the total stocks of jute manufactures amounted to 1,36,332 tons representing an increase of 6.1 per cent. over those at the end of January when they stood at 1,28,418 tons. These latter figures themselves were 11.7 per cent. higher than those at the end of December aggregating 1,14,938 tons.

The increase in the stocks of jute goods in the month under review is shared by both the principal categories of goods, namely, hessians and sackings. But whereas in the case of hessians the accumulation has been only slight, from 37,277 tons in January to 38,632 tons in February, in the case of sackings, the rise has been marked, the stocks of these having jumped up from 88,441 tons to 95,245 tons, or nearly three times the production in that month.

A summary of the detailed position of jute goods stocks with mills as at the end of February, 1953, as compared with the two preceding months and February, 1952, is given in the table below:

(In tons)

	As on			
	28-2-1953	31-1-1953	31-12-1952	29-2-1952
Civil				
Hessian	37,786	36,439	33,636	41,862
Sacking	92,473	95,389	73,969	63,677
Others	2,321	2,544	2,475	1,597
Total ..	1,32,580	1,24,372	1,11,080	97,136
Government				
Hessian	846	838	571	1,887
Sacking	2,772	3,052	4,218	7,357
Others	134	156	69	47
Total ..	3,752	4,046	4,858	9,291
Grand total ..	1,36,332	1,28,418	1,14,938	1,06,427

The heavy accumulation of stocks with the mills as stated above, reflects the gravity of the situation facing the industry. How difficult the position is will be evident from the fact that there has not been any marked improvement in the jute goods market since the reduction in the export duty on sacking was announced on Budget day from Rs. 175 per ton to Rs. 80 per ton. If the trend of prices in the jute market is any indication, the position shows a deterioration rather than an improvement. B. twills, for instance, which was quoted in Budget week at Rs. 96, stands at Rs. 93 now. The reasons for this depressed state are not far to seek. The offtake of sackings by overseas countries has been poor. Declining prices usually encourage buyers to wait for the bottom and this tendency would appear to be in evidence in the jute goods market to-day. The heavy accumulated stocks have induced some short-selling in the market. Bulk handling and use of substitute packing materials which became popular during the war, seem to have come to stay. Lastly, increased use of second-hand bags has also had the same effect. The present state of affairs has forced some to curtail their production; in fact, there seems to be a feeling that if stocks do not move out in the near future, the I.J.M.A. would have to revise the present working time agreement to cut hours of work per week—an expediency which is fraught with further grave consequences to the industry.

Production

The table below gives the output of jute goods during each of the three months ended February, 1953, as also during February, 1952:

(In tons)

	As on			
	28-2-1953	31-1-1953	31-12-1952	29-2-1952

WORLD OUTPUT OF SHIPS IN 1952

NEED FOR DEVELOPMENT OF SHIPBUILDING IN INDIA LIMELIGHTED

THE latest figures relating to merchant ships launched in the world's shipyards, according to Lloyds Register of Shipping, shows an increased output for 1952, as compared to the previous year. Thus a total of 1,074 vessels (of 100 g.r.t. and over) aggregating 4,395,578 g.r.t. were launched in the world's shipyards in 1952. This is an increase of 753,000 g.r.t. over the 1951 figure. About 46 per cent. of the 1952 output accounted for tankers, as against 42.4 in 1951. It is gratifying that a higher output of ships was achieved despite acute shortage of steel experienced in several shipbuilding countries.

The U.K. headed the list of builders with 1,303,000 tons of shipping launched at its yards during 1952. It was followed by Japan with 608,000 tons, Germany 520,000, the U.S. 468,000, Sweden 454,000, the Netherlands 296,000, France 213,000, Italy 132,000, Denmark 104,000, Norway 80,000 and Belgium 57,000 tons. Two ships aggregating 11,000 g.r.t. were launched at the Hindustan Shipyard Ltd. at Visakhapatnam (India) during 1952.

Nearly 36 per cent. of the total launchings were for registration abroad. Out of the total tonnage launched by the U.K., 32 per cent. was for registration abroad; similarly 34 per cent. of the launchings in Japan, 53 per cent. in Germany, 55 per cent. in the Netherlands, and 22 per cent. in Italy were for other countries. Belgium's entire output, excepting one motorship of 300 tons, was for registration abroad. On the other hand, all the ships launched in France and Norway during the year were for themselves.

The countries for which the largest amounts of tonnage were launched during 1952 are as given below:

United Kingdom	908,000
Norway	469,000
Japan	403,000
United States	373,000
France	279,000
Sweden	261,000
Germany	243,000
Panama	203,000

The tonnage owned by the various countries as on 1st July, 1952, according to Lloyds Register, was as follows:

United States	27,245,000
United Kingdom	18,624,000
Norway	5,906,000
Panama	3,740,000
France	3,638,000
Italy	3,289,000
Netherlands	3,264,000
Japan	2,787,000
Sweden	2,332,000
Germany	1,398,000
Denmark	1,391,000
Belgium	490,000
India	477,000

Indian Tonnage

This table discloses how unfavourably Indian tonnage compares even with that of a small country like Belgium. The total tonnage is about half per cent. of world tonnage estimated at about 90 million tons. The total volume of Indian trade is about 2½ per cent. of the total world trade. Indian ships hardly carry 6 per cent. of Indian overseas trade.

The low output of shipping tonnage during 1952 in India as compared with any other country referred to above, during the same period, points, among others, to the need for quickening the pace of development of the infant shipbuilding industry in India. The difficulty in acquiring additional tonnage from foreign countries further serves to emphasise the special importance to be given to the development of the Visakhapatnam shipyard. The Planning Commission has fixed a target of 600,000 tons to be achieved by 1955-56. There is a Five-year Plan ending in 1956-57 for the development of the shipyard at a cost of Rs. 15.82 crores. Out of this a sum of Rs. 11.77 crores is envisaged to be spent during the four years ending 1955-56. Taking into account the expenditure in 1951-52, the financial requirements for the period 1951-56 would be Rs. 14.08 crores. With the implementation of the Plan, the shipyard would be able to turn out cargo ships of 10,000 d.w.t. required for overseas trade, as against ships of 8,000 d.w.t. now being built.

The cost of a 8,000-ton ship built at Visakhapatnam, which works out to about Rs. 63 lakhs, is far in excess of the price quoted by British shipyards, which is about Rs. 48 lakhs. To make up the difference in the cost, the Government of India has been paying a differential cost subsidy on vessels built in the shipyard on its account. It is unlikely that the Hindustan Shipyard will be able to do without a subsidy for some years to come although the quantum of subsidy might be reduced considerably after the completion of the development project. It is expected that 19 to 20 ships would be built at the yard by March, 1956, corresponding to 150,000 d.w.t. (equivalent to 100,000 g.r.t.), out of which 60,000 g.r.t. might be utilised for replacement purposes. In view of the fact that the shipping companies do not have adequate reserves for outright purchase of ships, the disposal of ships built at the yard is proposed to be facilitated by a system of payment by instalments. Thus, one-third of the sale price is to be paid immediately and the balance by instalments extending over 5 to 10 years. It is, however, assumed that the Eastern Shipping Corporation and the Navy would pay the entire sale price at the time of the acquisition of the ships.

WORLD STEEL OUTPUT

The world production of steel during the current year is expected to be substantially higher than in 1952, according to the British Iron and Steel Federation. Thus, its estimates for 1953 are at between 235 million tons and 240 million tons, as against 208 million tons in the previous year. The production in 1952, it may be noted here, was lower by a million tons as compared with that in 1951, but was 36 per cent. above the 1948 level and as much as 72 per cent. above the 1937-38 average. The decline in production during 1952 reflects mainly the fall of 11 per cent. in output in the U.S. which offset the increase in the output in the rest of the world of the order of 10 per cent. To mention actual figures, the U.S. produced in 1952 as much as 83 million long tons of steel, while the rest of the world produced 125 million tons, as against 94 million long tons and 113 million tons, respectively. The U.K. staged a sharp recovery in 1952, as new capacity was brought into use and raw material supplies improved. The Schuman group recorded an increase of 4 million tons, that is, by about 10 per cent., of which the lion's share was contributed by Germany. Progress in the production of steel last year was slower in France, Belgium and Italy, owing to slackness of export business; Luxembourg actually registered a slight decline. There were general advances in output among the smaller producers of Western Europe, the aggregate increase being 350,000 tons to a total of 4.8 million tons. The British Commonwealth producers also continued to make headway, their combined output in 1952 amounting to 7.7 million tons, an increase of 9 per cent.

The British Iron and Steel Federation forecasts a marked advance in the consumption of steel. It assumes no lack of demand for the products of steel processing industries. This forecast may turn out to be correct, for there is still a large pent up demand for steel and steel products. The Federation's estimate of apparent consumption per head of the population in the principal countries discloses that a wide gulf separates the U.S. from the rest. The *per capita* consumption in the U.S. works out to twice as high as in the U.K., while consumption in France is only two-thirds and in Italy about a quarter of that in the U.K. Since pre-war, the Federation points out that consumption in the U.S. has more than doubled as a result of remarkable expansion of consuming industries and the general rise in the standard of living of the people. Even more rapid has been the rate of advance in Canada, which has risen from the seventh to the second place in consumption per head of the population among the important consuming countries. The U.K. has been holding the fifth place since the war.

(Concluded from next column)

weather control in the hands of novices could be dangerous, as it might lead to incorrect cloud seeding, as indicated earlier. In order to make weather control a benefit to mankind rather than a hazard, scientists are urging the passing of carefully framed legislation.

ELECTRICITY FROM ATOMIC PLANT

The production of useful amounts of electric power by nuclear energy has been achieved by successful operation of a new type of reactor—an experimental homogeneous reactor—at the Oak Ridge National Laboratory. On 24th February, scientists brought a pilot-model of the unique reactor system up to its full design power of 1,000 kilowatts of heat output. The reactor steam was then switched to a turbine and about 150 kilowatts of electricity was produced. This is enough electricity to provide service for 50 average five-room homes.

Homogeneous reactor is capable of producing both fissionable material and electric power, although it was not designed to produce electric power. Scientists emphasised that many problems have yet to be solved, but declared that this demonstration of the feasibility of homogeneous liquid-fuel reactor systems is an important step toward economical production of electricity by means of nuclear reactors. In the homogeneous reactor, a single homogeneous solution serves as fuel, moderator and coolant. The heat generated by the nuclear reaction of the uranium fuel in the solution is removed by pumping the hot radioactive liquid through a heat exchanger or boiler which produces steam drive of turbine generator.

RAIN THROUGH CLOUD SEEDING

PROGRESS SO FAR ENCOURAGING

THE advantage of inducing rain through cloud seeding is enormous, for it could help convert vast areas of dry lands into smiling pastures. Experiments conducted so far in various parts of the world, especially the U.S., have met with considerable success. But at the same time, they warn against the dangers of incorrect seeding techniques to the land beneath. For this reason rain-making has been confined to limited areas or carried out in the laboratory. Rain-making is of extreme utility to India which is subjected to vagaries of monsoons. Experiments are being conducted in Bombay and in certain other centres. These were reviewed at a symposium on rain-making held recently in New Delhi under the joint auspices of the Atomic Research Committee of the Council of Scientific and Industrial Research and the Indian Meteorological Department in which meteorologists and other scientists in India took part.

A study of the progress of rain-making experiments makes interesting reading. It will be recalled that it was in 1946 that Dr. Vincent Schaefer, a young scientist at the General Electric Company, New York, who first drew snow from an artificially "seeded" cloud. Since then, weather scientists have been trying to unlock more of nature's rain-making secrets. The experiments conducted by the three General Electric Company scientists, namely, Dr. Vincent Schaefer, Dr. Irving Langmuir and Dr. Bernard Vonnegut, have showed that rain, snow and even clouds can be produced by artificial seeding of the atmosphere with dry ice or silver iodide.

Snowflake Theory

Most of cloud seeding is done on the basis of snowflake theory. The theory proceeds on the basis that water droplets can exist in clouds at below freezing temperatures. Many clouds are composed of these super-cooled droplets, which are too light to fall. At a certain time, for reasons unknown, ice crystals form in the cloud. Nearby droplets collect on the crystals until they become heavy enough to fall to the earth as though they fall through warm air. Professional rain-makers believe that nature sometimes fails to supply enough ice crystals. So, to speed up rain-making process, they sprinkle the cloud with dry ice or silver iodide. It was Dr. Vonnegut who developed a silver iodide compound to serve as a nucleus for rain drops. This had led to the development of a silver iodide generator which, operated from the ground, sprays a silver-iodide mixture skyward.

When the silver iodide nuclei reach the super-cooled clouds, they act as raindrop cores, more efficient than ice—or dust which is another raindrop centre. In a mile-thick cloud, for example, natural rain would fall only from the top quarter-mile. The same cloud impregnated with silver iodide will produce far more rain. And unlike ice crystals, silver iodide will not evaporate or melt. Each particle stays aloft until it brings down a draindrop.

Both silver iodide and dry ice have been used to cause snow-falls. Schaefer says that during the first cloud seeding airplane flight in 1946, he saw "streamers of snow" falling from a cloud into which he had just scattered ice. Later, the General Electric men, working with Army Signal Corps and the Navy, observed the formation of thunderstorms in the State of Mexico following a dry-ice and silver-iodide field test.

These and other successful developments of weather modification techniques have created professional weather-control men. One of the most famous weather-control men is Dr. Irving P. Krick, Head of the Water Resources Development Corporation, a rain-making company. Dr. Krick believes that rain-making could raise the live-stock production of Western United States by 30 to 40 per cent. and crops by nearly 50 per cent.

Whether cloud seeding can prevent hailstorms is not certain. It is known, however, that hailstorm clouds are formed on certain mountain ranges where they might be accessible to modification by ground generators. A study of hurricanes made in the Honduras, Gautemala and Costa Rica in 1948 has given rise to the possibility of preventing violent storms by over-seeding the tops of high cumulus clouds.

While some weather scientists are optimistic about weather control, they sound a warning note. No way has been devised, it is stated, to break droughts, since long dry periods usually are the result of cloudless skies. Moreover,

GUIDING PRINCIPLES OF SOCIAL SECURITY—III

INVESTMENT AND ACTUARIAL PROBLEMS

IN this article, which is the final instalment of the series of articles on "Social Security," we shall examine the chief recommendations of the I.L.O. on workmen's compensation, and medical care, and conclude the study of the subject by a reference to certain investment and actuarial problems. If it is remembered that social security and related issues have grown to the status of a study by itself, it will be realised that what is attempted in this series is only to sketch the broad outline of the subject.

The Workmen's Compensation (Accidents) Convention, 1925, prescribes that the laws as to workmen's compensation should apply to workmen, employees, and apprentices employed by any enterprise, undertaking or establishment. Injured workmen are entitled, under the Convention, to medical aid and to such surgical and pharmaceutical aid as is recognised to be necessary in consequence of accident. If the injury results in death the dependents of the deceased person are entitled to compensation. The minimum scale of benefit envisaged by the I.L.O. for incapacity resulting from injury, is given below:

(*a*) In the case of permanent total incapacity, a periodical payment equivalent to two-thirds of the workmen's annual earnings; (*b*) in case of permanent partial incapacity, a proportion of the periodical payment due in the event of permanent total incapacity calculated in reference to the reduction of earning power caused by the injury; (*c*) in case of temporary total incapacity, a daily or weekly payment equivalent to two-thirds of the workman's basic earnings as calculated for purposes of compensation; (*d*) in case of temporary partial incapacity, a proportion of the daily or weekly payment payable in the case of temporary total incapacity calculated in reference to the reduction of earning power caused by the injury.

Where compensation is paid in a lump sum, the sum should not be less than the capitalised value of the periodical payment which would be payable under the foregoing paragraph.

The I.L.O. has also prescribed certain standards for medical care for workers which, in a modern community, is generally beyond the average means of individual workers. The chief recommendation on this subject, adopted in 1944, says that a medical care service should be designed to restore the individual's health, prevent further development of disease and alleviate suffering, when he is afflicted by ill health (curative care); and to protect and improve his health (preventive care). The cost of the service should be met collectively by regular periodical payments which may take the form of social insurance contributions or of taxes, or of both.

The problems which arise from the necessity to invest the large funds which accrue through collections made for purposes of administering social insurance, were considered in 1938 by the meeting of the Experts on Investment of Funds. This body decided upon the following (among other) measures:

The first concern of the body responsible for selecting investments should be to satisfy itself that their value is secure as regards the recovery or conservation of the nominal value of the capital invested and the regular receipt of interest.

It is essential that the insurance scheme should obtain for its investments the highest yield consonant with safety and with the degree of liquidity which is held to be indispensable. The average yield of the whole of one kind of investments made within a given period should not be less than the net rate of interest generally current on the market for investments of the same kind and made during the same period.

It is necessary to provide for the liquidity of the investments, in particular when, in the normal course of events and as a result of the nature of the benefits or of the financial structure of the scheme, a part of the actuarial reserves will have to be realised at a given date.

It is advisable that the body responsible for selecting investments should draw up a periodical plan setting out the broad lines which investment operations should follow during the period covered by the plan.

It is also advisable that this plan should include a table to be revised if circumstances require, determining, in particular, what proportions of the holding should be invested in fixed-yield and variable-yield investments respectively.

Such a plan would render possible the carrying out of a co-ordinated investment policy, since the extent to which the various requirements could and should be satisfied can be fixed in advance and all funds available for long-term investment can be immediately placed.

Issues made by public authorities with a gold clause or a currency option provide, if not an absolute guarantee against monetary devaluation, at any rate a substantial defence, and insurance institutions may be well advised to have recourse to such loans.

Ordinary shares or stock of commercial or industrial companies should only be entertained as possible investments for insurance funds if the interest or dividend and redemption of capital are sufficiently guaranteed. Only the shares or stock of companies enjoying long-dated concessions or monopolies would appear to fulfil these conditions. Main points to consider: What method should be followed in examining the prospects of payment of interest or dividend and of redemption of capital; whether there is likely to be an increase in the present potentialities of investment in commercial or industrial ordinary shares or stock.

In the sphere of social security, as in all spheres of insurance, the actuary plays a notable role. Indeed, he has a special role in the sphere of social security. This aspect of the actuary's work was emphasised by the Actuarial Sub-Committee of the Committee on Social Security which held its first meeting in Geneva in 1948. The report adopted by the Sub-Committee stated, *inter alia*:

"Wherever possible, hypotheses on long-term variations in biometric and demographic bases should be adopted, particularly as regards mortality rates, birth rates, etc. It is advisable to make various projections based on alternative hypotheses.

"It is desirable to collect and analyse demographic bases of calculation, not only by sex and age but also by marital status, in cases where marital status affects the amount of benefits paid.

"It is desirable to study more thoroughly the distribution of persons by amount of wages or income, and the wage or income variation as a function of age, sex and family composition.

"It is very difficult, if not indeed impossible, to adopt any one particular long-term hypothesis regarding possible economic variations in the bases of calculation. The actuarial experts, therefore, consider it advisable: (*a*) to make several estimates based on different hypotheses as to economic developments, in order to show how the scheme would operate under different economic conditions; (*b*) to analyse the mechanism of the scheme as a whole—and even of its various parts (i.e., method of calculating benefits, conditions attached to grant of benefits, sources of income, relation between individual contributions and benefits, etc.)—from the point of view of its stability in face of economic fluctuations and variations, as well as to show how it may be adapted when economic conditions undergo considerable alteration."

The Committee recognised that a sound economy is essential to the normal operation of a social security scheme, and stressed the necessity of strengthening the world economic situation.

Such, in broad outline, are the guiding principles of social security. These have not been adopted by the I.L.O. in any single session. They have been developed in the course of years, through careful consultation, discussion and debate. And they, therefore, represent the considered views of the enlightened section of the world.

INSURANCE CLAIMS BOARD

Under the Displaced Persons (Debts Adjustment) Act, 1951, the Government of India has constituted an Insurance Claims Board. Its members will be: Mr. K. Y. Bhandarkar, Government Solicitor, Ministry of Law (Chairman); Mr. K. P. Mathrani, Joint Secretary, Ministry of Rehabilitation (Secretary); Mr. A. Rajagopalan, Controller of Insurance, Ministry of Finance; Mr. T. K. Desai and Mr. William Gilmour Wylie, representing the General Insurance Council; and Mr. Tek Chand, M.P., representing displaced persons. The Act provides that in respect of claims of displaced persons against insurance companies, the tribunals will determine the amount of loss, the amount for which the property was insured on the date of such loss and the amount, if any, paid by the insurance company, and make a report to the Insurance Claims Board. The Board will, after taking into account certain principles which have been prescribed, propose to the tribunals concerned the amounts for which claims against insurance companies should be decreed.

THE BALOISE MARINE INSURANCE CO., LTD.

The Baloise Marine Insurance Company, Ltd., of Basle, Switzerland, has just established an office in India; the principal office of the Company is in Bombay. Founded in 1864, the Company is one of the leading Swiss insurance companies. The Company had at 31st December, 1951, £5,239,590 worth of assets and its total reserves and funds stood at £4,350,883. The departmental reserves at £1,933,237 and £956,521 in marine (including aviation and transit) and general (fire, accident and miscellaneous) departments amounted to about 140 per cent. and 117 per cent. respectively. In India, the Company will underwrite business in the fire and marine departments. Mr. E. S. Joel, who is well known in insurance circles, has been appointed the Company's Manager for India.

SUPREME COURT ON CARRY FORWARD OF LOSS

DECISION ENCROACHES ON TAX RELIEF TO BUSINESS

(By R. K. DALAL, B.Com., F.S.A.A., F.C.A.)

THE recent judgment of the Supreme Court on the case relating to *Anglo-French Textile Company Ltd.*, vs. *C.I.T., Madras*, reported in 1953 (XXIII) I.T.R. 82, has disclosed a grave deficiency in section 24 of the Income-tax Act, and unless immediate steps are taken by the Legislature to amend it, grave injustice is likely to result to the tax-paying public in general and insurance companies in particular.

Section 24 runs as follows:—

(1) "Where any assessee sustains a loss of profits or gains in any year under any of the heads mentioned in section 6, he shall be entitled to have the amount of the loss set off against his income, profits or gains under any other head in that year.

(2) "Where any assessee sustains a loss of profits or gains in any year, being a previous year not earlier than the previous year for the assessment for the year ending on the 31st day of March, 1940, under the head 'Profits and gains of business, profession or vocation', and the loss cannot be wholly set off under sub-section (1), the portion not so set off shall be carried forward to the following year and set off against the profits and gains, if any, of the assessee from the same business, profession or vocation for that year; and if it cannot be wholly so set off, the amount of loss not so set off shall be carried forward to the following year, and so on; but no loss shall be so carried forward for more than six years, and a loss arising in the previous years for the assessment for the years ending on the 31st day of March, 1940, the 31st day of March, 1941, the 31st day of March, 1942, the 31st day of March, 1943, and the 31st day of March, 1944, respectively, shall be carried forward only for one, two, three, four and five years, respectively."

A radical change was introduced in section 24 by the Amendment Act of 1939. Section 24 deals with the set off of loss under one head against profit under other heads of income as mentioned in section 6. Section 24(1), therefore, is attracted where there is a loss under one head and income under another. If that is so, it permits a set off against each other and the net balance becomes assessable to tax. There is no change made in this sub-section (1) by the Amendment Act, 1939, but the new sub-section (2) was added with a view to giving relief to the assessee of carrying forward to the same business the net loss of business determined under sub-section (1) for a period of six years, so that, so long as the assessee is not able to recoup his business loss, subsequent profits from business shall not be subjected to tax. The relief is not complete, because the loss carried forward can only be absorbed by profit next year in the same business and not in any other business. Equitably the loss should be allowed to be set off, not only against all business carried on by the assessee, but against all incomes available for tax. For the idea behind the legislation is to give tax relief on the principle that so long as the assessee has not been able to recoup his past losses, he cannot truly be regarded as having made profit by which his taxable capacity to contribute to the country's exchequer can be measured. This wholesome principle is whittled down by the narrow relief as set out above. Thus the relief was very narrow and restrictive. Narrow and restrictive as it was, it is made almost nugatory by the interpretation of section 24 by the Supreme Court in the case quoted above.

The Supreme Court has held that section 24(1) provides for a set off only in cases where assessee has income other than the loss under the head of business. In order, therefore, to entitle the assessee to carry forward a loss, the loss must be processed under section 24(1) and it cannot be so processed, if it has no other heads of income than the head under which the business has sustained a loss.

The Judges of the Supreme Court have said,

"There is no provision in the Act which entitles the assessee to have a loss recorded or computed, unless something is to be done with the loss. Thus, under section 24(1), a loss can be set off against an income, profit or gain, and under sub-section (2), the balance of a loss can be carried forward to a following year on the conditions set out there... But under sub-section (2) the loss can be carried forward when 'the loss cannot be *wholly* set off under sub-section (1)' and in that event only the '*portion* not so set off' can be carried forward. We are, therefore, thrown back on sub-section (1).

"Sub-section (1) provides that where an assessee sustains a loss of profits or gains in any year *under any of the heads mentioned in section* 6, he shall be entitled to have the amount of the loss 'set-off against his income, profits or gains *under any other head* in that year.' Therefore, before any question of set-off can arise, there must be (1) a loss under one or more of the heads mentioned in section 6, and (2) an income, profit or gain under some other head. It follows that when there is no income under any head at all, there is nothing against which the loss can be set off in that year, and unless that can be done, sub-section (2) does not come into play.

"Next, a set-off under section 24(1) can only be claimed when the loss arises under one head and the profit against which it is sought to be set off arises under a different head. When the two arise under the same head, of course, the loss can be deducted, but that is done under section 10 and not under section 24(1) . . . unless the loss can be set off under section 24(1), it cannot be carried forward under sub-section (2)."

The upshot of this judgment will render the practice of allowing an assessee to carry forward loss under section 24(2) impossible if he sustained a loss in business in one year and there was no other income in that year against which it could be first set off under section 24(1). It comes to this, that if an assessee has no other income under any of the sources mentioned in section 6, except loss in business under section 10, the loss that he may sustain, may not be carried forward and set off against the profit made by him in the *same* business. In other words, by this decision, a further restriction is placed on the section, viz., that the assessee must have income under some other source than business so as to make the loss eligible for carry forward under section 24(2). The judgment though at first sight seems revolutionary, yet on a considered study of the language of the sections, it will readily seem to be eminently logical and correct.

If an assessee has only one source of income, say under section 10, then the loss sustained by him does not attract section 24(1). It will attract only, if there is some other head of income against which to set it off. If section 24(1) is not attracted, section 24(2), by the very language of that sub-section, cannot operate at all. If section 24(2) cannot operate, an assessee does not get the right of a carry forward, notwithstanding the loss is sustained in the same business in which next year he makes a profit. The assessee must prove some other source of income in order to be eligible for section 24(1) to operate and for a subsequent invocation of section 24(2).

While the decision will be a serious encroachment on the relief hitherto given to business in general, it will have very serious repercussions on insurance companies in particular. The profit of insurance company under section 10(7) is computed under the schedule and is deemed to arise only under section 10. Sections 8, 9, 10 and 12 do not operate, therefore they cannot return any income under section 6 except one single head under section 10. This judgment will, therefore, prevent an insurance company, whether life or non-life, from claiming any right of carry forward under section 24(2). Since they are deemed to have no income other than under section 10, section 24(1) remains inoperative. The set off of profit and loss between life, fire, marine and accident can be effected under section 10 because only the net result is required to be returned. In this, section 24(1) does not come into the picture at all. If section 24(1) cannot be invoked, much less section 24(2). And, therefore, no insurance company can ever claim the benefit of section 24(2) of carrying forward of the loss sustained by it in one year against profit made under the same business in the next year. This is a situation most serious for new insurance companies which are still getting on their feet.

In case of other businesses, it is possible to claim income under other sources, say, interest on bank's current or deposit account. Since this is income from investment, it can legitimately claim assessment under section 12 and not under section 10 to satisfy the strict requirements of section 24(1), but in case of an insurance company, these sections 8, 9, and 12 do not operate at all. They are non-existent and, therefore, their absence will effectively scotch section 24(1) for ever. Was this result contemplated by the Legislature, when it effected an amendment of section 24 in 1939 and incorporated specific relief under section 24(2)?

The object as stated in the objects and reasons in the Income-tax Bill on this clause was as follows:—

"This clause allows losses in business, profession and vocation to be carried forward and set off against the profits of the *same* business, profession and vocation. The period of carry forward is to be six years, but to mitigate the effect on revenue of this concession losses of the first 'previous year' after the commencement of the Amendment Act are to be carried forward for one year, loss of the next year for two years, and so on until the full period of six years is reached."

The only restriction contemplated is that the loss can be carried forward next year to the credit of the same business which has made the profit.

Will Chambers of Commerce, the Federation of Indian Chambers of Commerce and Industry and other business communities move the Government for an early introduction of an amendment in the Act to mitigate the great hardship that otherwise will ensue?

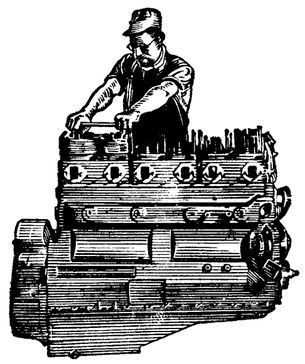
Cummins *Heavy Duty* Diesels



Built not once but Twice

The better—built engine for better *power profits*

Every light weight high speed Cummins Diesel is actually built twice. After initial assembly, each engine is run in on the test block. Then it is torn down and carefully re-inspected—after that it is reassembled and tested again to assure peak performance. And this is only one example of the *extra* care, the precision-workmanship that goes into *every* Cummins Diesel engine.

That's why a Cummins Diesel is a capital investment which will give a higher efficiency rating during *years* of trouble free use. The finest craftsmanship... exclusive Cummins fuel system and absolute reliability make a Cummins Diesel the best buy for today's power needs.

For the attention of

Far-sighted Industrialists

STORES CONTROL

You are well aware that there is a possibility of the continuance of the general downward trend of some raw material prices since the peaks of 1951, and that related manufactures should follow suit in the buyers' market. Your mind is therefore turning to the level of your stores inventories, and you are wondering how much money is now unproductively locked up there. You may be finding it difficult to obtain a clear picture of what really is the position in your stores, and whether the methods used there are capable of maintaining stocks between economic limits.

You realise that what you need is a system which will automatically provide, on a single piece of paper, the complete and up-to-date picture of each item of stores, regarding not only the current movements and stock, but also the past quarterly consumption, and the present supply position. Only then will your staff be able to hold stock balances at economic levels. In addition you naturally want a system which will enable material expenses against jobs to be made available for costing purposes within a day or two of the issue of those materials. All these needs can be met with no increase, and possibly even a reduction, in clerical expense, and with little capital outlay on equipment.

AUDITORS' REPORT TO THE SHAREHOLDERS.

We have audited the foregoing Balance Sheet of the Central Bank of India, Ltd., as at the 31st day of December 1952 and also the foregoing Profit and Loss Account of the Bank for the year ended upon that date, in which are incorporated the audited Returns of 65 Branches and the authenticated Returns of the Pay Offices and other Branches, and report that:—

(a) We have obtained all the information and explanations we have required and have found them to be satisfactory;
(b) The transactions of the Bank which have come to our notice have been within the powers of the Bank;
(c) The Returns received from Branch Offices of the Bank have been found adequate for the purpose of the audit;
(d) In our opinion, the foregoing Balance Sheet and Profit and Loss Account are drawn up in conformity with the law;
(e) Such Profit and Loss Account shows a true balance of profit for the year
(f) Such Balance Sheet exhibits a true and correct view of the state of the affairs of the Bank according to the best of our information and explanations given to us and as shown by the books of the Bank; and
(g) In our opinion, books of account have been kept by the Bank as required by Section 130 of the Indian Companies Act 1913.

RELAXATION OF FOOD CONTROLS

IS THERE CASE FOR FURTHER WIDENING?

RELAXATION of food controls is now accomplished in a number of States in India in varied degrees. How far is this relaxation justified and whether it needs further widening? These are the questions engaging the attention of the Central and State Governments as also the public in the country. A brief review of the relaxation of food controls so far made and its effect on food prices in the open market would be necessary fairly to assess the situation before proceeding with further relaxation. An interesting article entitled "Relaxation of Food Controls and After" published in the latest issue of the *Agricultural Situation in India*, closely examines the effect of food controls in India, and its findings should go a long way towards removing uninformed criticism of food controls in India.

It will be recalled that the causes which facilitated relaxation of controls in the latter half of 1952 in a number of States were three in number: (1) The food stock position of the States and the Centre was comfortable. Secondly, open market prices of foodgrains were appreciably lower than prices of rationed foodgrains. Finally, there was the expectation of favourable crops for 1952-53, following the well begun south-west monsoon. Consequently, an opportunity for lessening food controls was provided and was availed of by the State Governments one after another. It was, however, emphasised that the relaxation of the controls should be understood as adjustment within the framework of the policy of general food controls.

The latest position with regard to food controls in India is that statutory rationing has either been completely given up as in Madras, Bihar, the U.P., Saurashtra and Madhya Bharat, or reduced to a smaller number of towns than before, as in Hyderabad and Mysore. In all these States, however, fair price shops, have been opened in place of statutory ration shops and card-holders have the option to draw from the fair price shops as they were entitled to before relaxation, and supplement this quantity, if necessary, with purchases in the open market. In certain other States, too, relaxations have been effected, in some of them only recently. It may be noted that even before June, 1952, when the series of relaxations started, Rajasthan had abolished statutory rationing.

The relaxation of food controls has been accompanied by intra-State movement of cereals. Free movement of cereals has been permitted throughout the States of U.P., Bihar, Madhya Bharat, Saurashtra, Hyderabad, Mysore and Travancore-Cochin. And procurement of foodgrains has generally remained suspended. It has been resumed in respect of rice in some States and is conducted on the basis of levy system.

Apart from these, a few recent relaxations of all-India character may be mentioned. The most important of these relate to relaxation in respect of millets and other coarse grains, announced in the House of the People on the 17th November, 1952. Under this policy, while the existing inter-State cordons on the movement of these grains continue, the State Governments are free to buy these grains in any other State approved by the Centre and move them into their own States either on State-to-State basis or by purchases through their own agencies; there will be no restrictions on movement within the State, except with the approval of the Central Government. Even in the case of inter-State cordons, movement of headloads is permitted for producers wishing to sell their produce in the neighbouring markets, though outside the border of the State; and the State Governments may procure for their own requirements necessary quantities of grains from within the State. Other relaxation measures of all-India character include liberalisation of austerity measures regarding number of guests permitted at entertainments, relaxation of restrictions on the manufacture and inter-State movement of 'fines'.

The whole scheme of relaxations is not, however, without safeguards. While effecting relaxations, care has been taken to see that the rationed population is not thrown suddenly to the vagaries of the open market. Ration shops have been converted into fair price shops for the purpose. The benefits of Government distribution of cereals, through fair price shops, have been extended to the population not covered orginally by statutory rationing in areas of scarcity, in order to arrest and reverse the rising trend in prices of open market. The Union Government promulgated, in July, 1952, a Foodgrains (Licensing and Procurement) Order, 1952, which has now been extended to all the States, except Jammu and Kashmir and the Andamans. The order is designed to meet any situation arising as a result of hoarding. The power to reimpose any restrictions has not been given up. In Madras, for instance, ban has been imposed on inter-district movement of millets, as a result of damage to millet crops.

What has been the experience of relaxation of food controls so far? When the relaxation was initiated, one of the hopes raised was that the step would release the forces which would eventually help in augmenting the production of cereals in the country. This hope was not based on the price incentive for the producer, but it was based on the fact that an assurance to the producer that he will no longer be subject to rigours or irksomeness of controls will enthuse him to put in greater effort. There are still signs that the hopes may bear fruit in spite of the failure of crops in certain parts of Madras, Bombay and elsewhere, owing to partial failure of monsoons. According to the first forecast reports, the all-India acreage sown to *kharif* cereals this year is 6.5 million acres more than in the corresponding year.

It is difficult to forecast whether the relaxation of controls can be widened further. Nor does the article referred to at the outset try to answer it. A big hue and cry is raised by orthodox economists that relaxation of controls is not compatible with planned progress of the country under the Five-year Plan. Others endorse the Government of India's policy of adjustments in controls to suit local or temporary conditions without prejudice to the basic policy of general control of foodgrains. It is, however, clear that the future of controls depends upon the degree of self-sufficiency that can be achieved by India in the matter of foodgrains. That again depends on favourable monsoons, successful execution of multi-purpose projects, minor irrigation schemes, new methods of cultivation and timely supplies of manures, seeds and implements in adequate quantities.

BEE-KEEPING

Inaugurating the Indian Council of Bee-keeping in New Delhi recently, Dr. Punjabrao S. Deshmukh, Union Minister for Agriculture, stressed the role of bee-keeping as a cottage industry. He highlighted the importance of honey as a nourishing and efficacious medicine. He pointed to the role bees play as pollinators of flowers. Finally, he considered that the industry had before it a bright future. In fact, his analysis of the current problem of the industry makes interesting reading.

Although the bee-keeping industry dates back to historic days, in India it is still in its infancy. This is due to absence of sufficient attention to the development of the industry. And this in turn is attributable to lack of appreciation of its importance as a subsidiary occupation for the rural population. A notable feature of the industry is that, unlike other cottage industries, it has not to compete with machines. Neither can it be mechanised. It gives employment during spare hours and gives relaxation to the workers after a hard day's toil elsewhere in the fields, etc.

Honey, the product of the bee-keeping industry, is only next to nectar. It is the choicest gift of nature to man. It contains A, B and C vitamins which retain their rare invigorating properties, as in other sugary products these vitamins are lost during the process of heating. Its utility as nourishing food, efficacious medicine and valuable disinfectant is established beyond doubt.

Production statistics disclose that the aggregate yield of honey in India works out to 10 to 12 million lbs. a year, of which, however, only one-third gets to commercial channels. As compared with India's output, the U.S. produces more than 200 million lbs. of honey. The *per capita* production in India is a fraction of an ounce as against 1¼ lbs. in the U.S. and 2½ to 3 lbs. in Canada. In the U.S., there are about 8 lakh persons who in one way or another derive benefit from bee-keep-

NEW ZEALAND

The Polynesian Maori of New Zealand came, like the later English settlers, from over the sea to this lovely land with its variety of scenery ranging from alpine to tropical. Brave, intelligent and industrious, the Maori is held in much esteem by his fellow New Zealanders. His country is not large, but its healthy, temperate climate and its growing agricultural and pastoral wealth enables its inhabitants to play an increasingly influential part in world affairs. New Zealand is a country of the future, and as such, owes a debt to the Caltex organisation. With its fund of technical advice on fuel and lubrication problems and its efficient system of distribution, the Caltex organisation ably serves the people of New Zealand.

INDIAN TARIFF (AMENDMENT) BILL

IMPERIAL PREFERENCE POLICY EXPLAINED

A BILL of considerable economic interest which the Council of States passed last week is the Indian Tariff (Amendment) Bill. The Bill seeks to place on a permanent footing the Government's powers to levy protective duties by notification, on the recommendations of the Tariff Commission. Besides, it seeks to give protection to the ball bearing industry.

The need for vesting the Government of India with powers to increase or levy import duties by notification arose from the urgency to forestall the activities of speculators and also to mop up the difference between the prices that ruled in India and those obtaining elsewhere. It may be recalled that, at present, the Government enjoys only emergency powers, granted to it in 1950, to levy protective duties by notifications. Accordingly, every notification issued by the Government has to be placed before Parliament, and if the House does not agree to it, the notification disappears. In other words, if the Government does not have powers on a permanent basis, it would tend to provide an excellent opportunity for the trading community to indulge in anti-social activities, whenever shortages in the commodities concerned occur and prices tend to rise. As any difference between prices in India and elsewhere gives room for speculative activity, it is but appropriate that Government should have powers, vested in it on a permanent basis, to mop up the difference between internal and external prices by altering import duties.

Few would dispute the principle of investing Government with powers to intervene for preventing possibilities of speculative activities. But there is the danger of all ill-timed move on the part of the Government to exercise its executive authority. Past experience shows that delays in taking action have harmed both the trade and the industry concerned. It is this danger that makes one to be rather disinclined to vest the Government with power to impose protective duties through notification. The objection raised in the Council of States by a certain member against the move has, therefore, some justification. While such protests serve to induce caution on the part of the Government, the remarks of some of the members favouring the proposal deserve mention. Dr. A. Ramaswamy Mudaliar, for instance, stated that such power is necessary in order to preserve secrecy and prevent speculation and stock-filing. "This practice," to quote him, "is hallowed by practice, proved by wisdom and sanctified by those who are for the promotion of indigenous industries." Indeed, there is nothing wrong in vesting the Government with powers to levy import duties by notification, if these powers are exercised only on the recommendation of the Tariff Commission and at the right moment.

No Extension of Imperial Preference

During the course of the debate on the Bill, several members criticised the continuance of the policy of Imperial Preference. Inasmuch as this issue has, once again, been raised, it is necessary to discuss it at some length. For one thing, it is difficult precisely to assess the effect of preferential duties on the economy of the country. For that depends on the elasticity of demand for a commodity (or group of commodities) in the country granting preferential concessions and on the selective elasticity of supply of preferred and non-preferred sources of imports. The difficulty is all the greater, in view of the absence of a detailed review of the working of Imperial Preferences in the past few years. However, from the preliminary survey which the Government of India has made and to which the Commerce and Industry Minister referred in Parliament, it is gathered that India strikes more or less "an even balance." Thus, while British goods enjoy preference in India, Indian goods enjoy preference in some other British territory. Indian textiles obtain preference in Malaya where there is severe Japanese competition. The same applies to other goods such as tea. The whole question is of purely economic significance and the continuance of preferential duties does not, as Mr. Krishnamachari emphasised, in any way affect Indian sovereignty. In this connection, the Minister assured that the Government was not going to extend the policy but might try to vary the preference. In such cases, it must be stressed that the preference should not be allowed to diminish the protection that an Indian industry requires.

Referring to the policy of granting protection to indigenous industries, a prominent member of Parliament sought to impress the fact that, whenever protection was given, the Government should take steps to see that the quality of goods was improved, that the consumer was able to obtain the product at a reasonable price, and that the workers in the protected industry got fair treatment. In fact, these are the very principles on which the Tariff Commission bases its recommendations for protection and, therefore, hardly would anyone dispute the observations of the member in question. But it is difficult to agree with him when he maintains that protection would not be of "real" use until the Government imposed a total ban or quantitative restrictions on the protected articles coming into the country. For one thing, as the Commerce and Industry Minister aptly stressed, granting of protection does not mean that the Government aims at self-sufficiency. Again, India, which is becoming an international trading country, cannot have one-way traffic alone. It is, therefore, essential to permit some imports which also keep an automatic check on the quality and price of indigenous articles. For another, the imposition of quantitative restrictions as a measure of protection is against the principles of the G.A.T.T.

Encouragement to Private Enterprise

Another prominent member wanted the Government to take shares in industries to which it grants tariff protection. Evidently, this suggestion stems from the desire for exercising effective control on protected industries. But the point is whether it can be implemented at all. Surely, no industry will tolerate Government's interference in this manner. Such interference is bound to have severe adverse effect on the industrial development and goes counter to the policy of giving encouragement to private enterprise. It is, indeed, gratifying that Mr. Krishnamachari should have acknowledged the force of this contention, as witness his remark: "Private industry has to be encouraged. In fact, during the last nine months or so, I have been trying to persuade people to start industries. This would industrialise the country and also provide employment to Indians to encourage industrialisation through every possible source. The Government is 'omniscient' and no industry can function without the Government having an opportunity to look into all aspects of the industry. There is hence no need to take shares in any particular industry for controlling it."

U.S. FOREIGN TRADE

Major fluctuations in U.S. foreign trade are unlikely this year, and both exports and imports will continue close to the near-record levels set in 1952, according to the annual review of the U.S. Commerce Department. This prediction is based on the expectation that domestic activity will be maintained at a high rate. Basic supply scarcities, which explain most of the wide gap between exports and imports, it is stated, have largely disappeared, as a result of increased production in the U.S. and the rest of the world and, in some cases, reduced consumption. Expansion in Government and private inventories of many commodities has also subsided. However, as a result of the continued high demands resulting from high production and income, prices of most basic items moving in world trade have become fairly stable. With a continuing high rate of domestic activity in prospect, it is felt that the demand for most imported goods will continue to be at least as high as it is currently. Hence foreign countries should be able to earn sufficient dollars to maintain their existing purchases from the U.S. at or near current rates.

The most recent foreign trade figures are for December. U.S. imports during that month aggregated $1,051 million, the highest monthly level of the year, while exports, at $1,388 million, were exceeded only in March. The December exports included $275.8 million of military shipments. Thus, there was a commercial trade surplus (dollar gap) of only $62.2 million—or an annual rate of about $734 million.

Foreign trade figures for the full year 1952 show that great progress was made during the year in reducing the dollar gap between U.S. commercial exports and imports. Total exports from the U.S. in 1952 amounted to $15,200 million, as compared with the record high of $15,340 million reached in 1947. Imports were of the value of $10,700 million, about $250 million lower than the 1951 peak. This resulted in an apparent gap of $4,500 million. It was more than that in 1951 or 1950, but less than in any other post-war year. However, when $1,980 million of military aid shipments are excluded from the exports, the commercial trade gap amounted to only $2,520 million, less than in any post-war year, except in 1950, when it was $1,400 million. This gap was built up in the first half of 1952 and sharply reduced in the second half. In the last six months, the gap was running at an annual rate of less than $2,000 million, again leaving out military aid shipments. Even this figure, however, is not a real measure of the commercial trade gap, since economic aid goods and civilian supply programme shipments cannot be separated out of the "commercial trade" shipments. A combination of foreign dollar acquisitions from U.S. tourist expenditure, private remittances and investments, U.S. Government economic aid and transfers, and earnings on various services have more than made up the commercial trade gap in the last few months, and foreign countries as a whole have been building up their holdings of gold and dollars. In the final quarter, the gain was approximately $225 million, which, computed on an annual basis, amounts to nearly $1,000 million per year.

PAKISTAN'S ECONOMY

BUSINESS MEN PESSIMISTIC OF THE FUTURE

PAKISTAN'S trade in the near future "must be on a very restricted scale; competition will increase, the downward tendency in prices will continue for a considerable time, and profits will be less. Most firms will be compelled to draw in their horns which may lead to the necessity of retrenchment." Thus, a note of pessimism was struck by Mr. B. R. Graham, President of the Associated Chambers of Commerce of Pakistan, in the course of his address at the annual session of the Chambers held at Karachi last week. For the first time since the last war, he declared, shortage of money and buying power is making itself felt, with the result that the sellers' market had disappeared.

There is no exaggeration whatever in these observations of Mr. Graham. As readers might be aware, Pakistan has been passing through one of the most critical periods of its history for some time past, more especially since the world-wide depression in the commodity markets in the beginning of last year. Shortage of food, precipitous fall in raw material prices, dwindling exports and a none too happy balance of payments position are the factors which have considerably afflicted the economy of Pakistan. The following extracts from Mr. Graham's speech will bear eloquent testimony to this.

(*a*) The trade (in cotton) is in for a bad time. There are surpluses of cotton all over the world and buyers are reluctant to buy more than their requirements. . . There still remains a balance of 1,100,000 to 1,200,000 bales to be disposed of before the end of August—a difficult task, indeed, in spite of comparatively low prices;

(*b*) heavy losses have been incurred by commission houses (in wool) through the disinclination or inability of sellers to meet their obligations;

(*c*) the effect of the present exchange rate of the Pakistan rupee on the tea trade has been such that producers were and are unable to compete with other countries in the world market;

(*d*) the country's import trade had also passed through a crisis and it is not out of the wood yet;

(*e*) there is little confidence in the piecegoods and other important markets; and

(*f*) the change from an extremely liberal import policy to one of extreme rigidity, the O.G.L. having been cancelled altogether, has had a most unsettling effect on the market.

Valuable Suggestions

In the context of the most pressing economic problems facing Pakistan, some of the valuable suggestions put forward by Mr. Graham assume special significance. These include, among others, (1) removal of control on export prices "as soon as it could be done without detriment to internal prices"; (2) permission for hedge trading in cotton; (3) continuance of exemption of tea from export duty after 31st March, 1953; (4) abolition of import duty and sales tax on tea chests; (5) introduction of a more stable import policy; (6) relaxation of the Government's order with regard to credit facilities, with a view to giving further latitude and discretion to the banks to grant clean overdrafts where they think safe and fit; (7) prompt payment for goods delivered to Government departments; and (8) grant of free import licences for raw material, accessories and machinery for raw industrial enterprises. Among these constructive suggestions of Mr. Graham, the absence of any reference to the devaluation of the Pakistani rupee is striking. Knowing, as he does, the strong views of the Government of Pakistan on devaluation, Mr. Graham might have felt the futility of making any suggestion for devaluing the rupee.

Notwithstanding the disquieting economic situation in Pakistan, Mr. Graham expressed the hope that the country would face the situation as boldly and as realistically as it did in the dark days of 1947-48 and would rise above its temporary troubles. How far and to what extent this hope will be realised, it is difficult to say, for such depends on so many factors which cannot be sized up at present, especially the Government's economic policies and the international political and economic situation.

PHARMACEUTICAL ENQUIRY COMMITTEE

The Union Health Minister, Rajkumari Amrit Kaur, in the course of her address at the inaugural meeting of the Pharmaceutical Enquiry Committee held at New Delhi last week, remarked that the medical requisites made available in the country should be of standard quality with prices remaining within the reach of the masses. These remarks are wholesome and pertinent, in that, in terms of resources for economic development, nothing can be considered of higher importance than providing standard medical preparations for the health of the people. Good health is a measure of the people's energy and capacity, as well as of potential of man-hours for productive work in relation to the total number of persons maintained by the nation. Indeed, for the efficiency of industry and agriculture, the health of the worker is an essential consideration. It is in this context that the need for creating a National Health Service assumes special significance. The appointment of the Pharmaceutical Enquiry Committee, with Major-General S. L. Bhatia, Director, Medical Services, and Secretary, Medical Department, Hyderabad Government, as Chairman, undoubtedly marks the first major step in that direction.

The Committee has been asked to enquire into the various aspects concerning the pharmaceutical industry, with a view to considering what steps should be taken to place the industry on a sound footing and to help its development on proper lines. The deliberations of the Committee, the recommendations that it will make, and the Government's decisions thereon are bound to be watched with interest by both industry and trade, not to speak of the common man who it is that has for long been anxiously expecting the supply of *quality* drugs and medicines at reasonable prices.

The first problem to which the Pharmaceutical Enquiry Committee will have to address itself relates to the widespread adulteration resorted to by a section of the trade and the consequent unethical products advertised and sold to the public. One can imagine the feelings of a person who, having purchased a bottle of medicine at exorbitant cost, finds that it is no more than a spurious product. Apart from being cheated, a sense of distrust and discontent spreads in the public mind which is harmful to the entire sector of the pharmaceutical industry. It is, therefore, high time that the evil of adulteration was stopped, not merely on health grounds but on economic and social grounds. The Union Health Minister did well to drive home this fact to the members of the Committee and urged them to suggest ways of eradicating the evil.

In the considered opinion of the Minister, there must be a three-pronged attack on adulteration, namely, (1) by making the punishment under the Drugs Act deterrent, (2) by going into the causes that lead to adulteration, as for example, shortage of a particular brand of medicine, and (3) by prevailing upon the medical profession to abstain from prescribing costly patent and proprietary medicines, unless they are absolutely essential. The Minister availed herself of the opportunity to exhort the pharmaceutical industry to devote itself largely to research, develop new methods of production, synthesise newer substances, and try to keep abreast of the times. The efforts, she said, must be devoted towards developing the industry on sound lines and, for that purpose, measures for having a stable basic chemical industry must be devised; raw materials will then *ipso facto* become available at competitive rates, she added.

in London... they know that

more motorists use

triple-action **Mobiloil**

than any other motor oil in the world!

The London taxi-driver, second in fame only to his fellow-citizen the policeman, plies his venerable vehicle around the clock, come wind come weather. He knows the way (some say the longest way) to any address you can name; and his powers of description are known only to the rash traveller who withholds a 'tip'.

Like wise drivers all over the world, he makes straight for the sign of the Flying Red Horse when he needs lubrication. His tip for smoother running, of course, is to use Triple-Action Mobiloil – the *Heavy-Duty* motor oil that ...

SAVES ON WEAR *by lubricating properly at all temperatures;*

SAVES ON REPAIRS *by preventing harmful carbon deposits in the engine;*

SAVES ON PETROL *by preventing acids eating away the metal parts, which causes loss of power.*

Stop at the sign of the Flying Red Horse

The Flying Red Horse is the sign of helpful service for your car. Go there for regular Mobilubrication – the *complete* motor service – and for Standard-Vacuum products backed by 87 years of leadership in the oil industry.

INDIAN TAX STRUCTURE

TASK BEFORE TAXATION COMMISSION

(By Prof. V. G. RAMAKRISHNA IYER)

THE announcement relating to the appointment of a Taxation Enquiry Committee under the chairmanship of Dr. John Matthai is a step in the right direction. The present tax structure shows the need for such an enquiry. The last time an enquiry was made into India's tax structure was in 1924. Since then, the pattern of political and economic life has so completely changed that it is almost unrecognisable. The tax revenue of the Centre, for instance, is five times that of pre-war. It is generally agreed that the present system of taxation is unsatisfactory. The incidence of a number of consumption taxes, it is maintained falls, very largely on the poorer classes. It is also considered that a large increase in income-tax rates coupled with heavy import duties and sales and excise taxes are "wiping out" the middle classes. Industrialists and some economists have expressed the view that because of the phenomenal rise in agricultural prices during and since the war there has been a shift of wealth from urban to rural classes; the latter, for political reasons, still remain very lightly taxed.

The Union Government has for some time past recognised the need for an enquiry into taxation but a committee was not appointed as it was felt that the data which the National Income Unit would have been able to furnish would be useful. As the reports of the National Income Unit and the Finance Commission are now available, the time has come for a taxation enquiry which will cover all spheres of taxation —Central, State and Local. The Committee will have to consider the effects of the present rates of income-tax on the ability and incentive to save, and suggest modifications, if necessary, to assist capital formation and investment in risk-bearing enterprises. It will have to consider how far the present system of taxation is suitable for implementing the development programme of the country and indicate whether and in what manner the system should be adapted to attain that end. It will examine the manner in which the burden of taxation is distributed between the different classes and suggest changes to ensure that the distribution is fair and equitable. It will examine the effects of taxation on the inflationary situation and will measure its usefulness as an instrument for dealing with inflation.

Pre-war Trends

A study of some of the important sources of tax revenue by the Taxation Committee (1924-25) revealed certain tendencies which indicate roughly the relative importance of the various taxes.

(Percentage of total tax revenue)

Tax head	1883-84	1893-94	1903-04	1913-14	1923-24
Land revenue	53.15	46.71	42.76	35.42	20.72
Customs	2.08	3.27	9.21	12.99	24.30
Excise	25.07	26.51	24.97	22.92	21.67
Income-tax	1.32	3.39	2.92	3.52	12.30
Transactions and fees ..	9.47	9.50	9.30	10.89	9.03
Local taxation	8.01	10.53	10.75	14.08	21.70

The figures in the above table show that a change almost amounting to a revolution had taken place in the proportion borne by the different taxes to the total tax revenue. Thus, land revenue which was the mainstay of the Government fell from 53.15 per cent. to 20.75 per cent. On the other hand, income-tax advanced from less than 1.32 per cent. to 12.30 per cent. The share borne by the excises fell from 25.07 per cent. to 21.67 per cent. The shares borne by stamp duties, including probate duties, and local taxation have been more consistent. These tendencies which have taken place in the past seem to be in the right direction and suggest further redistribution on somewhat similar lines.

Post-war Trends

The relative importance of the various taxes since the report of the Indian Taxation Committee in 1925 may be seen from some significant figures. The first noteworthy feature is the great increase in tax revenue, the aggregate revenue having increased from Rs. 73,14 lakhs to Rs. 235,61 lakhs, an increase of about 300 per cent. in the ten years from 1937-38. This is due largely to the situation created by the world war. The increase has been shared largely by three groups of taxes, namely, customs, central excises and income and corporation taxes. The proportion of salt revenue to the total tax revenue fell from about 11 per cent. in 1937-38 to about 4 per cent. in 1947-48 and the abolition of salt tax since then has meant only a loss of revenue without any appreciable decrease in price to the ordinary consumer. As regards customs, it was about 58 per cent. in 1937-38 and it fell in 1946-47 to about 27 per cent. of the total tax revenue. The revenue from Central excises increased from Rs. 7,66 lakhs in 1937-38 to Rs. 44,32 lakhs in 1947-48, the percentage proportion of Central excises to total tax revenue having increased from about 10 per cent. to about 18 per cent. The revenue from taxes on income and corporations increased from Rs. 14.58 lakhs in 1937-38 to Rs. 116,86 lakhs in 1946-47, its percentage proportion to total tax revenue having increased from about 20 per cent. to about 50 per cent. within a decade.

As regards provincial taxes, the total tax revenue for all the States (Provinces) in 1947-48 was about Rs. 170,88 lakhs and of this, the contribution of the Central Government from income-tax and customs was Rs. 40,47 lakhs or 12 per cent. of the total tax revenue. By the year 1947-48, land revenue formed only 12 per cent. of the provincial revenue; excise 24 per cent., stamps 10 per cent. and the balance of 29 per cent. may be accounted for by other taxes on consumption. It would appear, therefore, that so far as provincial tax revenue is concerned, about 60 per cent. of it is derived from consumption taxes.

Effects of Inflation

The changes which have taken place in recent years may be said to have altered the nature of the problem to some extent. The increase in public revenue is quantitative rather than qualitative, being the result of war-time inflation. The increase in public revenue does not signify a proportionate increase in the capacity of the Governmental authorities to incur expenditure on social and economic amelioration. In the case of the Provinces, most of them have developed new sources of revenue which had been assigned to them under the Government of India Act, 1935. But in neither the Centre nor in the States can the improvement be said to be in proportion to the increase in the responsibilities of public administration.

The new Constitution allocates to the States (Provinces) a wide range of potential taxes. The most important sources of State revenue at present are sales taxes, land revenue and stamp duties. Important new taxes only partially exploited are taxes on luxuries, betting and gambling, taxes on vehicles and agricultural income-tax. Other potential sources of tax revenue are taxes on advertisements and succession and estate duties. In fact, the States have been given very wide powers and their financial limits are set rather by the poverty of the people than by the Constitution.

Increased Tax Revenue

The scope for new taxes in India is very limited. The only new taxes are agricultural income-tax which has already been introduced in some of the States, and estate duty, now on the legislative anvil. But the yield from these two taxes will vary considerably from State to State. There is not much scope for regrading of the income-tax as there is already a steep graduation of the rates. But it is necessary to emphasise the need for proper collection of income-tax and of duties on Stock Exchange transactions as there is a good deal of evasion and consequent loss of revenue. As regards local taxation, the Indian Taxation Committee (1924) and the Local Finance Enquiry Committee (1950) have suggested various methods of augmenting the resources of local bodies but there is at present no popular demand for a higher standard of sanitation and other services rendered by local bodies except education. With the spread of education and reduction in the jurisdiction of local bodies, the local bodies might develop a popular demand and show a greater willingness to bear local taxation which might be spent to their benefit. An examination of post-war States budgets shows the significant fact that though some States have not yet tapped all the provincial sources of revenue, the tax revenues appear to have reached the limit of expansion. So far as the States are concerned, it appears that their financial position can be improved not so much by increased taxation as by a better scheme of reallocation of existing resources by the Finance Commission.

Recent Trends in Tax Policy

During recent years income and profits taxes are not so important as in war years. On the other hand, there has been a continued rise in revenue from outlay (indirect) taxes, a rise in Central Customs revenue due to a more liberal import policy and recent concessions granted in normal income and profit taxes, particularly in the 1949 and 1950 budgets, to the extent of about Rs. 15 crores. As compared with the relief in direct taxes, there have been fewer reductions in outlay (indirect) taxes. On the whole, there has been a tendency for direct taxes to be lightened more than indirect taxes and within the 'direct' tax structure the concessions have benefited the highest income groups, and income groups between Rs. 10,000 and Rs. 15,000 have not had any considerable concession in spite of the continued rise in cost of living and the absence of any personal or dependents' allowances and the fact that they cannot evade income-tax by the methods open to business men of higher incomes.

Taxable Capacity

The cardinal fact in Indian taxation is the low taxable capacity of the people. As early as in 1930, Sir Walter Layton, as Financial Adviser to the Simon Commission, pointed out that taxation in India formed only 8 per cent. of the national income whereas it was 20 per cent. in Britain and Japan. Whether India is lightly taxed or heavily taxed is still a matter of some controversy. The tax burden per head in 1939-40 was estimated at about Rs. 5-0-2 and the tax burden has increased on account of the increased taxation during World War II and the post-war years. The level of taxation cannot be considered without reference to the nature of public expenditure. In countries like Britain where a good part of public expenditure is in the form of social services, the taxes cannot be considered burdensome. In India, on the other hand, where a greater part of the revenue goes to meet military expenditure, debt services and civil administration and little is left for social services, even the present level of taxation is said to be burdensome.

Any enquiry into the tax system should not relate exclusively to the total amount of taxation but consider the distribution of the tax burden, in which respect the Indian tax system is open to criticism. Most of the taxes such as land revenue, customs, and excise duties on matches press more heavily on the poor. Only the income-tax, tax on motor spirit and taxes on luxuries in the import schedule fall on the rich. On the whole, the burden on the poor is much more than on the rich, according to expert investigations such as the Indian Taxation Enquiry Committee (1925) and the Indian Statutory Commission (1930). The broad conclusion that can be drawn is that the Indian people, by reason of their great poverty, form the least potential tax-paying community in the world.—*All Rights Reserved.*

SPECULATION LOSSES

In a communication addressed to the Ministry of Finance, the Committee of the Indian Merchants' Chamber urges the Government not to proceed with the proposal, included in the Finance Bill, to amend section 24 of the Income-tax Act in order to restrict the set-off of speculation losses, pending review of the entire Indian income-tax law which must follow the recommendations of the Taxation Enquiry Commission. At all events, the proposal, the Committee says, should be removed from the Finance Bill and the subject matter of the change separately considered after affording an opportunity to the interests concerned to place their views and suggestions before Government. Apprehensions are entertained by trade interests connected with forward markets regarding the scope and effect of the change. The Committee is, however, in agreement with the object of the amendment, namely, checking the abuse of buying speculation losses. But the amendment places avoidable hardships and difficulties on assessees, particularly those engaged in forward trading in the normal conduct of their business. Moreover, this change is opposed to the fundamental concept of taxation, namely, of taxing income on the net position, as tax liability would be determined by reference to a notional income and not to the actual balance of position of the assessee concerned. If speculation losses are not allowed to be set off against income, then profits from speculation also should not be aggregated for tax liability. The Committee says that business in respect of recognised exchanges should be treated on a composite basis and tax liability should be determined by reference to both brokerage or other income as also speculation loss or income, as the case may be. Speculative business in different markets or exchanges should be dealt with collectively and tax liability should be on the balance of the cumulative position. Speculation losses, according to the Committee, should be allowed to be carried forward without any time limit.

AUDITORS' REPORT TO THE SHAREHOLDERS.

We have audited the foregoing Balance Sheet of the Union Bank of India, Limited, as at 31st December, 1952, and also the foregoing Profit and Loss Account of the Bank for the year ended on that date, in which are incorporated the audited Returns of Kalbadevi, Rajkot, Mandvi (New), Surat Branches and the certified Returns from Jetpur, Jamnagar and Veraval Branches, and report that:—

(a) we have obtained all the information and explanations we have required and have found them to be satisfactory;

(b) the transactions of the Bank which have come to our notice have been within the powers of the Bank;

(c) in the absence of books of accounts of Mandvi (Old) Branch, we have accepted the recast Returns of the said Branch which are liable to adjustment. The other Returns received from Branch Offices of the Bank have been found adequate for the purpose of the audit;

(d) subject to the remarks in para (c), in our opinion the foregoing Balance Sheet and Profit and Loss Account are drawn up in conformity with the law

(e) such Profit and Loss Account shows a true balance of profit for the year;

(f) such Balance Sheet exhibits a true and correct view of the state of the Bank's affairs according to the best of our information and explanations given to us and as shown by the books of the Bank, and

(g) in our opinion the books of account have been kept by the Bank as required by Section 130 of the Indian Companies Act, 1913.

Instability in Export Markets of Underdeveloped Countries. Published by Department of Economic Affairs, United Nations, New York. Available at Oxford Book and Stationery Co., Scindia House, New Delhi. Price: $1.00.

THE above study, originally submitted to the U.N. Economic and Social Council at its thirteenth session in the fall of 1951, has now been published by the United Nations in book form. In requesting this study at its earlier eleventh session, the Council had in mind the strategic role played by exports in underdeveloped countries in determining national income, rates of savings and capital formation, monetary stability and progress of economic development programmes, since the price and volume of such exports tend to fluctuate more than those of imports. The study shows that this concern was, in fact, justified, since the degree of instability is of an amplitude where it is very difficult to reconcile with the need for steady investment for economic development. The study is mainly based on findings covering the period 1901-50 and relates to 18 important primary commodities which represent the major exports of selected underdeveloped countries—a total of 47 case studies.

According to the data presented, there have been marked fluctuations in proceeds from exports during the 50 years under review—whether measured on a cyclical basis or from year to year. While different commodities and countries have been variously affected, practically all showed a substantial degree of instability. Price fluctuations, however, were not the major factor in the instability of export proceeds; on the whole, the volume of exports fluctuated even more than the price.

The main findings of the study with respect to price fluctuations for the four kinds of fluctuation distinguished—year-to-year, cyclical, long-term and within-year—are shown in a special table. Year-to-year fluctuations in price of major primary commodities averaged about 14 per cent. Individual fluctuations ranged from 5 per cent. to 21 per cent. for different commodities; copra, cotton, hemp, linseed, rubber and shellac were the commodities with the widest fluctuations in prices from year to year. The intensity of year-to-year price fluctuations increased successively in the three peace-time periods analysed—1901 to 1913, 1920 to 1939, and 1946 to 1950. The instability of prices during the Second World War was less than during the First World War. Cyclical declines in prices averaged about 27 per cent.; on the average, the full cycle covered about 4½ years. Cyclical swings in the case of individual commodities ranged from 5 per cent. to 40 per cent.

Fluctuations in volume of exports are summarised in a separate table. Average year-to-year fluctuations were between 18 per cent. and 19 per cent., thus exceeding those in price by a considerable margin. The range in average fluctuations among different commodities was from 6 per cent. in the case of wool to 33 per cent. in the case of wheat. Fluctuations in the volume of exports in the period from 1920 to 1939 were smaller than those before 1914, but they increased sharply after 1945. Fluctuations were equally wide during both the world wars. Amplitude of cyclical fluctuations in volume ranged from under 10 per cent. to over 50 per cent. for different commodities. A third table shows fluctuations in export proceeds from 18 major primary commodities. These averaged 23 per cent. between 1901 and 1950. Cyclical fluctuations in proceeds amounted to about 37 per cent., and the average cycle covered a period of a little over four years.

The study points out that all types of fluctuations in proceeds—year-to-year as well as cyclical—and fluctuations measured for different periods were in each case higher than those in volume or in price alone. This indicates that changes in price and in quantity have a destabilising effect on each other.

Since the purpose of the study was to investigate the ability of underdeveloped countries to obtain foreign exchange, an analysis was made of the movement of capital and of invisible earnings, in addition to changes in proceeds from exports. This analysis showed that receipts from such capital movements and invisible earnings did not compensate for instability in exports proceeds. Long-term and short-term capital inflow, combined, was generally less than 10 per cent. of foreign exchange earnings from exports and showed a constantly declining trend.

Labour Legislation in India, 1937-1952. Published by International Labour Office, Indian Branch, New Delhi. Available at Oxford Book and Stationery Co., Scindia House, New Delhi. Price: Re. 1.

Great changes relating to improvement of the conditions of labour in India are in the offing. If Mr. V. V. Giri, the Union Labour Minister, were to carry conviction with employers, labour and the States, there will shortly be a labour relations Bill designed to do away with compulsory arbitration methods. There will also be a Bill to regulate healthy development of trade unions. But the importance of these two Bills can be known only if one has at least a rough background of the knowledge of the existing laws and how they have grown up to their present stature. *Labour Legislation in India*, 1937-52, under review, which is a revised edition of the article "A Decade of Labour Legislation in India, 1937-48," which appeared in the *International Labour Review*, Vol. LIX, Nos. 4 and 5, April and May, 1949, provides a brief resume of the growth and purport of labour laws during the past decade and a half.

The pamphlet under review gives the background to the labour legislation since 1937 by referring to the Factories Act, 1934. This is followed by brief references to the other legislative enactments, such as the Factories Act, 1948, mining labour laws, plantation labour laws, regulations relating to railway servants and trade disputes legislation. The concluding portions of the pamphlet are taken up by a review of the effects of independence and the constitutional provisions regarding labour.

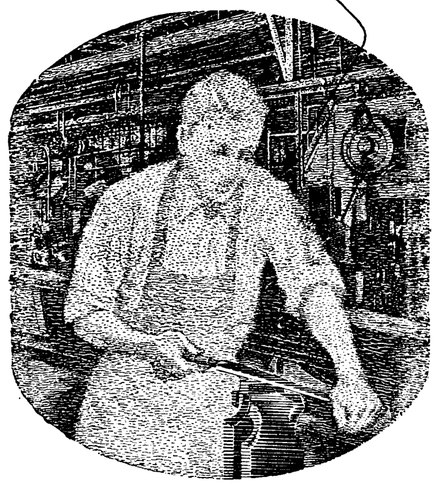
Law of Passport and Visa in India and Pakistan with Law of Foreigners. By M. A. Malik. Publishers: Federal Law Depot, Kashmere Gate, Delhi. Price: Rs. 6.

Primarily meant for the benefit of intending travellers between India and Pakistan, the book presents the law in this regard in operation in the two countries since mid-October last. The classified summaries of the passport and visa rules given in the book are calculated to make it readily intelligible to lay readers without specialised knowledge of legal terminology. The rules and procedure to be followed in respect of Indo-Pakistan travel, it may be noted, are different in the two countries from those applicable to other foreigners. The author gives the Indian legislative provisions applicable to non-Pakistani nationals, providing the necessary background information for comparative purposes. Details of formalities to be followed in regard to application for entry and for stay in the two countries or for leaving have been explained, giving the forms wherein requisite information is to be supplied. Lists of authorised routes for travel and reciprocal check-posts have also been supplied to help intending travellers in both directions. A brief comparison of the provisions in the two enactments enumerating the main differences between them has also been given, with some brief instructions of a practical nature. The book will be read with interest by business men and others who have to visit either of the two countries.

Investors' Chart. Published by Mukund Guruji, 272, Girgaum Road, Bombay, 4. Price: Rs. 5.

The Investors' Chart, which was first published in the year 1949 by Mr. Mukund Guruji of Bombay, has been brought up-to-date. The very useful chart originally contained only the weekly highest and lowest quotations and the closing levels of the leading shares in the steel, textile and miscellaneous groups of Bombay. But the latest edition of the chart has been revised and includes the weekly highest and lowest levels of Tata Steels, Indian Irons, Kohinoors and Bombay Dyeings among shares, and the weekly closing rates of 3 per cent. 1986 Conversion Loan, for the years 1948 to 1952. The chart also contains weekly highest and lowest prices of gold and silver in Bombay for the years 1948 to 1952.

Give the mechanic a cup of tea



he will work better...

... because tea drives tiredness away, soothes the nerves and builds up stamina. Your staff needs its refreshing sips, and you should write to the Central Tea Board on how this invigorating drink can be economically served in workers' canteens.

TITAGHUR PAPER MAINTAINS DIVIDEND

RESERVES CONSIDERABLY STRENGTHENED

SATISFACTORY results are disclosed by the audited accounts of the Titaghur Paper Mills Co., Ltd. (Managing Agents: Messrs. F. W. Heilgers & Co., Ltd., Calcutta) for the half-year ended 30th September, 1952. The trading profit for the past six months discloses a small decline of Rs. 5.94 lakhs, that is from Rs. 63.52 lakhs for the six months ended 31st March, 1952 to Rs. 57.58 lakhs. As compared with that (Rs. 58.34 lakhs) for the corresponding half-year of 1951, the profit for the six months under review shows no material decline. The small recession in profit noted above is not due to any set-back in production, but to higher expenses. The shareholders have, however, not been affected by the drop in profit; for the return to them is proposed to be maintained at 20 per cent. per annum, made up of a dividend of 15 per cent. and a bonus of 5 per cent. No doubt, there has been an additional income by way of refund of excess profit tax, but a large part of this income has been wisely utilised to fortify the reserves rather than to enhance the dividend to the shareholders.

The salient features of the Company's results during the half-year under review are presented against the background of those for the previous three half-years, in the following comparative table:

(In lakhs of rupees)

	For the half-year ended			
	30-9-1952	31-3-1952	30-9-1951	31-3-1951

D.—Dividend. B.—Bonus. *Includes tax contingency reserve.

The Directors report that the upward trend in production during the previous half-years was maintained during the half-year under review, reflecting, as it does, the benefits that are now accruing from successive improvements effected under the Company's renovation programme initiated a few years ago. If the sale proceeds of paper do not show any corresponding improvement, but records a drop, as is shown in the foregoing table, such is due to accumulation of stocks at the end of the half-year and the 'go-slow' movement amongst the finishers in the Company's No. 2 Mill which lasted for the best part of two months. Another factor which has affected the Company's profit is the increase in expenses, which is due partly to the higher production and partly to the increase in freight on coal from 1st April, 1952, higher costs of general and consumable stores, etc. Deliveries of raw materials, it is gratifying to note, were satisfactory throughout the half-year under review. The Company, be it noted, is entirely dependent upon indigenous raw materials for its requirements of pulp. Thus, deliveries are reported to have been greater in the half-year under review than in the corresponding half-year of 1951, despite the monsoon, when usually the flow of bamboo drops appreciably. As a result of this, the Company has had a gratifying stock position at the beginning of the current half-year. But the Company's anxiety about getting adequate supply of coal "continued unabated." It was not until August, 1952, that the wagon position improved and enabled the Company to accumulate stocks of coal. Till then the wagon supply position was woefully inadequate, resulting, on many occasions, in the fall of coal stocks to just what was required for a day's consumption.

The allocation of the profit for the half-year under review is clearly shown by the table above; but the addition to 'other funds' needs some elaboration. The transfer to taxation contingency reserve has been raised from Rs. 2.20 lakhs to Rs. 2.25 lakhs, the plant replacement and development reserve gets Rs. 17 lakhs which is Rs. 7 lakhs more than that provided in the previous half-year, the dividend equalisation reserve and labour quarters and labour welfare reserve get Rs. 1 lakh and Rs. 2.50 lakhs, respectively, the same as in the previous half-year. The increased allocation to the above reserve, as also to the general reserve, has been rendered possible by the recovery of a sum of Rs. 15.50 lakhs (net) on account of post-war refund of E.P.T.

The Company continues to enjoy an impressively sound financial position. The reserves and surplus, as on 30th September, 1952, stand at Rs. 257.63 lakhs, which is nearly 460 per cent. of the paid-up capital of Rs. 56.05 lakhs. Of these reserves, as much as Rs. 76.30 lakhs represent revaluation of fixed assets reserve, Rs. 84.99 lakhs reserve for plant replacement and development reserve and Rs. 32.99 lakhs general reserve. The gross block, of the value of Rs. 483.49 lakhs, has been substantially written down to Rs. 195.98 lakhs. The current assets, at Rs. 330.06 lakhs, cover the current liabilities amounting to Rs. 130.09 lakhs by a wide margin of Rs. 199.97 lakhs. The current assets are represented, in the main, by stocks of paper and raw materials amounting to Rs. 156.60 lakhs, debts and advances Rs. 95.38 lakhs, investments Rs. 62.31 lakhs and cash Rs. 15.53 lakhs.

The Rs. 10 fully paid-up ordinary shares of the Company are now quoted at Rs. 35-14 *ex-div.*, at which rate the latest dividend gives a yield of 5.6 per cent. per annum.

RAMNUGGER CANE AND SUGAR COMPANY
PAYS RECORD DIVIDEND

An impressive rise of Rs. 13.86 lakhs or about 197 per cent. in the trading profit, from Rs. 7.04 lakhs to Rs. 20.90 lakhs, an increase of Rs. 6 lakhs in the allocation to the reserves and the stepping up of the dividend on the ordinary shares from 7½ per cent. to 20 per cent. per annum are the highlights of the audited accounts of the Ramnugger Cane and Sugar Co., Ltd. (Managing Agents: Messrs. Anderson Wright, Ltd., Calcutta), for the year ended 31st August, 1952. The marked improvement in earnings, which has made the higher dividend distribution and larger allocation to reserves possible, is the result of substantially higher output of sugar, consequent on a prolonged working season and increased crushing of cane.

The Company's crushing operations commenced on 7th December, 1951, and continued till 1st April, 1952. The total quantity of cane crushed was 17,94,760 maunds, which was more than double that crushed in the 1950-51 season (8,72,097 maunds), although the average recovery of sugar was slightly less, at 10.87 per cent., as compared with 11.23 per cent. during the previous season. The improved supply of cane was the result of the success of the development scheme launched by the Company in the previous season with the help of the West Bengal Government, under which seeds of improved varieties of cane were sold to the cultivators at subsidised rates.

The Company's revenue from sale of sugar and molasses shows an increase from Rs. 30.71 lakhs in 1950-51 to Rs. 63.94 lakhs and the sale proceeds of sugarcane and other crops, less cultivation expenses, from Rs. 3.57 lakhs to Rs. 11.01 lakhs. Cultivation expenses have gone up only by a moderate extent from Rs. 13.51 lakhs to Rs. 15.34 lakhs, which is obviously due to the development scheme outlined above. Manufacturing expenses, at Rs. 39.69 lakhs, are Rs. 20.93 lakhs higher than those incurred in the previous year, and other trading expenses have risen from Rs. 8.68 lakhs to Rs. 14.51 lakhs. A sum of Rs. 2.16 lakhs has been provided for Managing Agents' commission, as against Rs. 68,125. Provision for depreciation is slightly lower at Rs. 1.75 lakhs (Rs. 1.90 lakhs), while that for taxation has been raised from Rs. 55,600 to Rs. 4.50 lakhs. The debenture redemption reserve, to which a sum of Rs. 1 lakh was added last year, receives a like amount this year. The reserve for replacements and extensions and general reserve which received nothing last year are proposed to be strengthened by the addition of Rs. 3 lakhs each. The dividend on ordinary shares, which was raised last year from 6 per cent. to 7½ per cent., is to be stepped up to a record level of 20 per cent. this year. That this is being done quite comfortably is evident from the larger surplus left to be carried over, namely, Rs. 1.62 lakhs, as compared with the sum brought in, that is Rs. 73,041.

The following summary of the Company's balance-sheet as on 31st August, 1952, gives an idea of its financial position:

Liabilities	Rs.	Assets	Rs.
Capital ..	20,59,820	Gross block	44,76,150
Reserves and surplus ..	25,12,592	*Less*—Depreciation ..	22,24,450
Debentures	6,00,000	Net block ..	22,51,700
Provision for taxation ..	8,03,739	Stock-in-trade	23,63,386
Liabilities ..	12,35,369	Crop-in-progress ..	10,81,842
		Stores, spares, etc. ..	8,07,271
		Debts, deposits and advances ..	4,21,418
		Cash ..	2,85,903
	Rs. 72,11,520		Rs. 72,11,520

In view of the increased quantity of cane now available to the factory for crushing, the Directors propose to extend the capacity of the existing plant and to replace a number of tractors and agricultural implements purchased many years back. Regarding the prospects for the 1952-53 season, the Directors, in their report to the shareholders, observe as follows:

"The factory started crushing on the 26th November, 1952. Supplies of cane from the Company's farms and outside cultivators have so far been better than last season's, and the total crush is expected to be of the order of 21 lakh maunds. The Government have decontrolled the price, distribution and movement of sugar, although releases from factories will be regulated by them. The minimum price of cane payable by sugar factories has been reduced from Re. 1-12 per maund, fixed for the last season, to Re. 1-5 per maund for gate deliveries. Sales are being made from our factory's current production at market prices. A quantity of 200 tons has also been exported to Japan."

EARNINGS OF BENGAL COAL FALL

FINANCIAL POSITION STRONG

FETTERED, as coal companies are, by controls over price and distribution, the financial results of these companies are being influenced more by seasonal changes in production and distribution than by forces of free supply and demand. This explains the decline in the gross profit of the Bengal Coal Co., Ltd. (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta), from Rs. 52.76 lakhs for the half-year ended April, 1952, to Rs. 42.54 lakhs for the half-year ended 31st October, 1952. This drop in profit follows the decline in the Company's raisings from 11,91,067 tons to 10,55,707 tons and in despatches from 12,59,190 tons to 12,20,936 tons. As compared with that for the corresponding half-year of 1951, however, the gross profit for the six months under review shows a gratifying increase of Rs. 6.02 lakhs from Rs. 36.52 lakhs. Raisings and despatches too are higher, the former disclosing a rise of 86,476 tons from 9,69,231 tons and the latter of 17,020 tons from 12,03,916 tons. So far as the return to the shareholders is concerned, the distribution has been well maintained at 20 per cent. per annum made up of a dividend of 10 per cent. and a bonus of 10 per cent., to which level it was raised from 17½ per cent. per annum (dividend 10 per cent. and bonus 7½ per cent.) only in the previous half-year.

The results of the Company for the past four half-years are presented in the following comparative table which gives an idea of its progress during this period:

(In lakhs of rupees)

	For the half-year ended			
	31-10-52	30-4-52	31-10-51	30-4-51
Sale proceeds	256.33	285.70	288.78	272.68
Other income	9.20	8.18	10.01	8.18
Stocks	14.88	19.24	8.44	10.96

Dividends—				
4½% preference ..	0.33	0.33	0.33	0.34
Ordinary	10.00 (D. 10%, +B. 10% p.a.)	10.00 (D. 10% +B. 10% p.a.)	8.75 (D. 10% +B. 7½% p.a.)	8.75 (D. 10% +B. 7½% p.a.)
Carry forward	8.03	7.25	6.13	5.53
	Tons	Tons	Tons	Tons
Raisings	10,55,707	11,91,067	9,69,231	9,75,832
Despatches (including coal purchased) ..	12,20,936	12,59,190	12,03,916	10,82,073

The decline in raisings during the half-year under review, as compared with those for the previous half-year, is only of a seasonal nature and does not indicate a general fall in the level of raisings. It must, however, be noted that the fall in raisings is steeper than that noted in the corresponding half-year of 1951. This factor, coupled with the decline in coal purchased, explains the fall in despatches during the six months ended 31st October, 1952, whereas a year before they were higher, as compared with the respective preceding half-years. Reflecting this is the drop in sale proceeds and the closing stocks. Despite the increase in rail freight on coal by 30 per cent. which took place in April, 1952, the expenses under freight, shipping and commission show a fall of Rs. 22.26 lakhs to Rs. 59.63 lakhs. The provision for depreciation has been raised by Rs. 3 lakhs, but the increase is due to the considerable additions made to the fixed capital expenditure during the past half-year. The reduction in provisions for taxation and cesses, as well as managing agency commission, is only in consonance with the fall in gross profit.

With the sizable sum of Rs. 7.25 lakhs brought in from the previous half-year, the Directors have been able to maintain the dividend comfortably, even though such has been done after reducing the allocation to the reserves by Rs. 2.50 lakhs. Even so, the amount transferred to the reserves, at Rs. 7.50 lakhs, represents 40 per cent. of the net profit.

Through judicious husbanding of resources during the past several years the Company has built up a strong financial position. The reserves and surplus at the end of the half-year under review, at Rs. 117.53 lakhs, represent 97.9 per cent. of the paid-up capital of Rs. 120 lakhs. Current liabilities, including provision for taxation and cesses, which amount to Rs. 231.49 lakhs, are covered by current assets amounting to Rs. 284.71 lakhs by a margin of Rs. 53.22 lakhs. The gross block, at Rs. 508.62 lakhs, has been

(*Continued in next page*)

Points From The Chair

Indian Jute Industry

"THE jute industry is painfully adjusting itself to lower pries both for its raw materials and its finished products. Conditions have improved since the depression early in 1952, on American demand for Indian hessians which, however, has not been sustained. Moreover, competition from European mills, which made great headway in modernising their machinery in recent years under the shelter of the Indian export duties on jute manufactures, and which obtain quality jute from Pakistan free from the discriminatory licence fee levied on exports to India, has been strong throughout the world's markets, and that section of the Indian industry which concentrates on heavy goods has experienced acute difficulty. Until India produces sufficient raw jute of high quality the scope for expanding the output of the better class of fabric must necessarily be limited, and until the mills can be fully modernised, it is unlikely that they will be able to recover their former dominating position as the world's greatest supplier of jute manufactures, and in view of the almost general tendency to protect national industries, and the widespread extension of jute manufacturing in many countries, it is quite certain that Indian mills will never again attain to the near monopoly they enjoyed in the early days of the present century."

VINCENT ALPE GRANTHAM,
Chartered Bank of India, Australia and China.

Outlook for Tea

"Since the close of the year there has been a welcome recovery in tea prices both in London and at the Calcutta and Colombo auctions. In London, common tea has risen to over 3*s.* a pound and corresponding increases have taken place in finer teas. The fact which has brought about this recovery is mainly the realisation that the surplus at the end of 1952 was no greater than the 1951 surplus. In addition, Northern Indian producers have recently agreed to restrict output during the present year by approximately 8 per cent. This reduction in crop will be achieved as the result of more selective plucking. . . . The outlook for tea appears much more promising than it did some few months ago, and if present prices can be held, many companies, particularly those producing the finer teas, should be able to make fair profits. In the meantime, however, the results for the year 1952 will, in many cases, disclose very considerable losses, and the absence of or reduction in dividends in respect of that year will be reflected in the Trust's accounts for the current year."

A. P. HAMILTON,
Orient Trust, Ltd.

Caution Against Futher Inflation

"We carry on to-day under the discipline of reduced imports coupled with continued exhortation to increase our exports, a state of affairs which must lead to further inflation unless effectively countered by determined effort on the part of all to save all they can. But increased saving, if it is to be achieved, has need of encouragement, and what better encouragement could be found than a reduction in taxation. And it is not only on the individual that the present crushing burden rests. It bears no less heavily on the industrial concern which cannot in these days retain out of taxed profits enough to maintain its plant in that state of efficiency which will enable it to compete in world markets. Whatever may be the difficulties in these times of reducing Government expenditure, the issue seems clear. Some relief on the earned income of the individual, and on the undistributed profits of industry, is essential if our foundations are to be secure and, however modest the relief, it would have a stimulating effect on the nation as a whole."

DUKE OF BUCCLEUCH AND QUEENSBERRY,
Royal Bank of Scotland.

(*Concluded from previous page*)

written down to a book value of Rs. 184.32 lakhs, the depreciation provided so far being nearly 64 per cent. of the gross block. During the half-year under review, the Directors have spent Rs. 19.01 lakhs on additions to machinery, buildings and other developments.

On the future of the Company's earnings, the Directors, in their report to the shareholders, observe as follows:

"During the period covered by the accounts certain of your Company's collieries were declared by the Coal Board to be collieries mining metallurgical coal, and pegged target figures have been announced which may limit their future raisings. The Coal Board has recently announced some relaxation in these provisions in the case of those collieries which have sand-stowing arrangements. The majority of the coal raised by the Company is non-metallurgical and the restrictions referred to are unlikely to have any serious effect on future results."

The Company's Rs. 200 fully paid-up ordinary shares are currently being quoted at Rs. 530 at which rate and on the basis of the annual dividend of Rs. 40 per share, the yield works out to 7.5 per cent. per annum, free of tax.

Notices

HUMAYAN PROPERTIES LIMITED

NOTICE IS HEREBY GIVEN THAT THE Directors at their Meeting held on 19th March, 1953, have declared a Dividend on the Preference Shares at the rate of 6 per cent. per annum, free of income-tax, for the year ended 31st March, 1953, payable on the 18th April, 1953, to those Shareholders whose names will appear on the Register of Members on 8th April, 1953.

By Order of the Board,
S. A. BASIL,
Director.

1 HUMAYAN PLACE,
CALCUTTA, 11*th March*, 1953.

MARTIN BURN LIMITED

CONVERTIBLE NOTES

NOTICE IS HEREBY GIVEN THAT INTEREST for the half-year ending 31st March, 1953, will be paid on or after that date to those holders of Convertible Notes whose names appear on the Company's Register on the 31st March, 1953, or in accordance with their instructions.

T. LESLIE MARTIN,
Managing Director.

12, MISSION ROW,
CALCUTTA, 12*th March*, 1953.

HINDUSTHAN MERCANTILE BANK LIMITED

NOTICE IS HEREBY GIVEN THAT THE Ninth Ordinary General Meeting of the Shareholders of Hindusthan Mercantile Bank Ltd., will be held at its Registered Office at No. 10, Clive Row, Calcutta, on Thursday the 16th April, 1953 at 4 p.m., to conduct the following business:

(*a*) To receive the report of the Directors and Audited Accounts for the year ending 31st December, 1952.

(*b*) To elect Directors.

(*c*) To appoint Auditors for the current year and to fix their remuneration.

(*d*) To transact any other business that may be brought forward with the permission of the Chairman.

By Order of the Board,
S. S. PURI,
Manager, Head Office.

CALCUTTA, 14*th March*, 1953.

N.B.—The Transfer Books of the Bank will be closed from Thursday the 2nd April, 1953, to Thursday the 16th April, 1953, both days inclusive.

THE ALKALI AND CHEMICAL CORPORATION OF INDIA, LIMITED

NOTICE

THE PREFERENCE SHARE REGISTERS OF the Company will be closed from the 1st April, 1953, to the 10th April, 1953, both days inclusive.

By Order of the Board,
IMPERIAL CHEMICAL INDUSTRIES (INDIA) LTD.,
Secretaries.

CALCUTTA, 11*th March*, 1953.

INDIAN ALUMINIUM COMPANY, LTD.

NOTICE IS HEREBY GIVEN THAT THE Fifteenth Ordinary General Meeting of Indian Aluminium Company, Limited, will be held at the Registered Office, 31, Chowringhee Road, Calcutta 16, on Thursday, 23rd April, 1953, at 11 a.m., for the following purposes:

1. To receive and adopt the balance-sheet at 31st December, 1952, and profit and loss account for the fifteen months ended 31st December, 1952, together with the reports of the Auditors and Directors.
2. To declare Dividends.
3. To elect Directors.
4. To appoint Auditors and to fix their remuneration.

The Share Transfer Books of the Company will be closed from 3rd April, 1953, to 23rd April, 1953, both days inclusive.

Payment of any dividend declared will be made only to those members whose names are registered in the books of the Company on 23rd April, 1953, or to their Mandatees. No application for warrants will be necessary. Claims on behalf of holders of shares held on blank transfer will not be entertained.

By Order of the Board,
(Sd.) JOHN W. E. JOHNSON,
Secretary.

6*th March*, 1953.

INDUSTRIAL INVESTMENT TRUST LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE TWENTIETH ANNUAL GENERAL MEETING of Industrial Investment Trust Limited, will be held at the Registered Office of the Company, 61, Apollo Street, Fort, Bombay, on Tuesday the 14th day of April, 1953, at 11 a.m. (S.T.), to transact the ordinary business of an Annual General Meeting of the Company.

THE SHARE TRANSFER REGISTERS OF THE COMPANY WILL BE CLOSED FROM SATURDAY THE 28TH MARCH, 1953, TO SATURDAY THE 18TH APRIL, 1953, BOTH DAYS INCLUSIVE.

By Order of the Board,
PREMCHAND ROYCHAND AND SONS,
Secretaries.

BOMBAY, 10*th March*, 1953.

To the Shareholders of Industrial Investment Trust Limited, and in particular to:—

Richard Austein Leigh, Esq., P. C. Francis Mascarenhas, Esq., Eastern Investments Ltd., Adolf Martin John Cordeiro, Esq., Noorul Hasan Qadri, Esq., Kishenchand Verma, Esq., Bhagwandas S. Mirchandani, Esq., Mrs. Edith Dawn Kingham, Jagan Nath Awal, Esq., Hamidul Huq Chowdhary, Esq., and Abdul Samad Khan, Esq.

MARTIN BURN LIMITED

NOTICE IS HEREBY GIVEN THAT THE Board of Directors of this Company has sanctioned payment of the Dividend on the Preference Share Capital of the Company at the rate of 5 per cent. per annum for the half-year ending 31st March, 1953. The Preference Share Register will be closed from 1st to 15th April, 1953, both days inclusive. Payment will be made on or after 15th April, 1953, to those Preference Shareholders whose names appear on the Company's Register on the 31st March, 1953, or in accordance with their instructions.

T. LESLIE MARTIN,
Managing Director.

CALCUTTA, 14*th March*, 1953.

RESULTS OF EQUITABLE COAL IMPRESSIVE

AHMEDABAD ELECTRIC MAINTAINS DIVIDEND ON HIGHER CAPITAL

Equitable Coal Co., Ltd.

THE directors of the above Company (Managing Agents: Messrs. Macneill & Barry Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 30th June, 1952.

The profit after providing for depreciation amounts to Rs. 22,28,710 (Rs. 16,02,479). Deducting from this provision for taxes and cesses Rs. 8,50,000 (Rs. 9,00,000); transfer to general development reserve Rs. 7,00,000 (general reserve Rs. 2,50,000); provision for workmen's compensation Rs. 2,00,000 (*nil*); and provision for bad and doubtful debts *nil* (Rs. 75,000), there remains a balance of Rs. 4,78,710 (Rs. 3,77,479). Adding thereto the balance brought forward from last account of Rs. 5,73,236 (Rs. 1,79,122), the total available sum is Rs. 10,51,946 (Rs. 5,56,601). Deducting from this the dividend for the half-year ended 31st December, 1951 (since paid) Rs. 3,82,470 there is available for distribution a sum of Rs. 6,69,476 (Rs. 5,56,601). The directors recommend, that this be disposed of by payment of a dividend on the preference capital at the rate of 6 (6) per cent. per annum absorbing Rs. 12,000 (Rs. 12,000), payment of a dividend on the ordinary capital at the rate of 30 (25) per cent. per annum Rs. 4,44,564 (Rs. 3,70,470) and leaving to be carried forward the balance of Rs. 2,12,912 (Rs. 1,74,131).

Net raisings during the half-year were 8,91,622 tons, as compared with 8,43,235 tons during the previous six months and 8,47,450 tons in the corresponding period of 1951. Despatches amounted to 8,50,992 tons, as against 8,90,153 tons and 8,01,269 tons during the preceding two half-years. Stocks aggregated 1,45,547 tons on 30th June, 1952.

The good condition of the Company's collieries has been fully maintained. Good relations between labour and management continued throughout the period and there were no stoppages on this account.

Raisings showed a further improvement and are the highest ever attained in a half-year, but a deterioration in the supply of wagons resulted in an increase in the coal stocks at the collieries. A marked improvement in this respect, however, was effected in the half-year to 31st December last. The improved results for the half-year have enabled the directors to recommend an increase in the rate of dividend to 30 per cent. per annum. It is necessary to sound a note of caution, however, as costs generally are rising and controlled selling prices have not yet been restored to the levels of 1949. Export markets are becoming increasingly restricted and these factors are already having an adverse effect upon the Company's results.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	33,63,760	Block ...	56,00,797
Reserves ...	62,12,380	Stock ...	22,60,669
Provision for taxation ...	21,87,405	Stores, etc.	84,68,458
Liabilities ...	2,39,90,348	Debts, deposits and advances ...	1,90,59,313
Profit and loss account ...	6,69,476	Investments	9,42,510
		Cash ...	91,622
	Rs. 3,64,23,369		Rs. 3,64,23,369

Ahmedabad Electricity Co., Ltd.

The directors of the above Company (Agents: Messrs. Killick Industries Ltd., Bombay) submit the audited accounts of the Company for the year ended 30th September, 1952.

The first series of 175,000 ordinary shares of Rs. 100 each, issued at par in September, 1950, have been fully called up, the third and final calls of Rs. 20 each having been made on 1st March and 2nd June, 1952, respectively. Since the close of the year the second series of 175,000 ordinary shares of Rs. 100 each, at par, have been issued and fully subscribed. 2,688 shares remain reserved for allotment at the date of this report, against fractional certificates and proof of title.

There was no change in the rates for supply of electricity during the year. As many as 2,512 new connections were made during the year, bringing the total at 30th September, 1952, to 33,152, of which 87 are large H.T. supplies. Sales during the year have made satisfactory progress as will be evidenced from the following table. The overall increase is 30.13 per cent. over the previous year and 62.57 per cent. over 1949-50.

Year ended 30th Sept.	Public and private lighting and fans	Power	North Gujerat grid	Total	Percentage of increase on previous year
Kilowatt hours sold—					
1950 ..	13,391,210	184,106,824	..	197,498,034	2.69
1951 ..	14,555,494	225,742,819	7,970,098	248,268,411	25.71
1952 ..	16,189,800	268,884,030	38,007,850	323,081,680	30.13

The full plant capacity of both "A" and "B" stations of the Sabarmati Power House, aggregating 97,500 kw. was in commercial operation during the whole year. In October, 1951, electrical rotor trouble developed on two 15 mw sets (Nos. 8 and 10), but the makers lost no avoidable time in effecting permanent repairs. Otherwise, the whole plant has given excellent service. An additional coal tippler, and steam inter-connection system between "A" & "B" stations were commissioned in February and May, 1952, respectively. Coal deliveries have been satisfactory throughout the year. Shipments of plant materials ordered from abroad for "C" station commenced to arrive during the year, and the erection of the boiler and coal handling plant is proceeding. Construction work on "C" power house building, office block, cooling towers, etc., is progressing according to schedule. Laying of 66 kv transmission lines and acquisition of land for new associated receiving stations are well in hand. The peak demand at the generating station reached 75,200 kw. by the end of the year, which was an increase of 20.90 per cent. over that of the previous year. As much as 13 miles of 11 kv cables and 15½ miles of low tension cables were laid during the year. 10 new sub-stations for general supply, 7 for rural electrification, 2 for industrial high tension supply and 1 for municipal pumping, were commissioned during the year. The transmission and distribution system operated efficiently. A number of cables were diverted from the Sabarmati River-bed on to the railway bridge crossing the river. The North Gujerat Grid, supply to which commenced on 15th February, 1951, with a demand of 1,600 kw. increased its demand to 10,500 kw., by the end of September, 1952. The dispute regarding bonus for the year 1948-49 was decided by the Labour Appellate Tribunal in the Company's favour.

A scheme for higher training abroad of selected members of the staff under the auspices of the British Electricity Authority, was introduced during the year. The T.W.I. (Training Within Industry) scheme has also made encouraging progress. A change in the method of municipal assessment resulted in the Company being called upon to pay increased taxation to the Municipal Corporation. The Company has appealed to Court.

The gross profit for the year amounts to Rs. 40,01,358 (Rs. 35,58,011). There is no present liability for taxation on the profits of the year owing to income-tax depreciation allowances. In compliance with the provisions of the Electricity (Supply) Act, 1948, regarding compulsory reserves, an appropriation of Rs. 1,56,463 (Rs. 2,92,828) has been made to contingencies reserve and Rs. 1,49,266 (Rs. 1,73,230) each to tariffs and dividends control reserve and consumers' benefit reserve.

After writing off Rs. 5,100 (Rs. 5,100) from promotion expenditure, Rs. 16,105 (Rs. 16,076) from stamp duty and brokerage in connection with debentures, and Rs. 1,887 (Rs. 1,506) from new share capital issue expenses, also in compliance with the Electricity (Supply) Act, it is proposed to take Rs. 1,75,000 (Rs. 1,55,000) to equalisation of dividends reserve and Rs. 1,00,000 (Rs. 1,42,915) to employees' retiring gratuities reserve. There then remains a balance of Rs. 32,48,271 (Rs. 25,14,292) and this together with Rs. 3,113 (Rs. 3,600) brought forward from the last year's accounts makes a total of Rs. 32,51,384 (Rs. 25,17,892). From this sum, an *ad-interim* dividend of Re. 1-8 (Re. 1-8) per share, proportionate to the amounts called up for the half-year ended 31st March, 1952, which absorbed Rs. 6,82,223 (Rs. 5,60,709), is to be deducted. The balance thus available amounts to Rs. 25,69,161 (Rs. 19,57,183) from which it is proposed to pay a dividend for the half-year ended 30th September, 1952, at the rate of Rs. 5 (Rs. 5) per share, proportionate to the amounts called up, (making 6¼ (6¼) per cent. for the year) absorbing Rs. 25,65,842 (Rs. 19,54,070), leaving to be carried forward Rs. 3,319 (Rs. 3,113).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	5,24,68,240	Block ...	6,30,35,724
Debentures	1,26,66,438	Stores, tools, etc. ...	55,79,211
Reserves ...	64,98,915	Debts, deposits and advances ...	38,03,051
Liabilities ...	77,79,829	Investments	6,13,551
Profit and loss account ...	3,319	Other assets	6,11,837
		Cash ...	57,73,367
	Rs. 7,94,16,741		Rs. 7,94,16,741

Hurriladih Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Macneill & Barry Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 30th June, 1952.

The profit after providing for depreciation amounts to Rs. 2,13,771 (Rs. 77,092). Deducting therefrom the provision for taxes and cesses Rs. 1,20,000 (Rs. 20,000), provision for bad and doubtful debts Rs. 10,000 (*nil*) and general reserve Rs. 25,000 (*nil*), there is a sum of Rs. 58,771 (Rs. 57,092). Adding thereto the balance brought forward from last account of Rs. 75,633 (Rs. 15,378), that is a total amount of Rs. 1,34,404 (Rs. 72,470). Deducting the dividend for the half-year ended 31st December, 1951, (since paid) of Rs. 60,000 there is available for distribution, a sum of Rs. 74,404 (Rs. 72,740). The directors recommend that this be disposed of by payment of a dividend at the rate of 15 (15) per cent. per annum Rs. 60,000 (Rs. 60,000), leaving to be carried forward the balance of Rs. 14,404 (Rs. 12,470).

Net raisings during the half-year were 1,40,024 tons, as compared with 1,42,505 tons during the previous six months and 1,29,947 tons in the corresponding period of 1951. Despatches amounted to 1,30,646 tons, as against 1,51,840 tons and 1,03,363 tons during the preceding two half-years. Stocks amounted to 31,932 tons on 30th June, 1952.

The good condition of the Company's colliery has been fully maintained. Good relations between labour and management continued throughout the period.

Raisings were maintained at the level of the previous half-year, but a deterioration in the supply of wagons resulted in an increase in the coal stocks at the colliery. Since the close of the period under review, however, wagon supplies improved and stocks have been reduced.

In pursuance of Government's policy for the conservation of metallurgical coal, the Coal Board fixed a production ceiling of 2,70,000 tons for the Company's colliery for 1952. This caused no hardship to the Company, but the ceiling for 1953 has been reduced to 2,50,000 tons and, unless the Company's application for an increase in this figure is successful, less satisfactory results may be expected during 1953.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	8,00,000	Block ...	4,62,765
Reserves ...	4,70,000	Stock ...	3,86,341
Provision for taxation ...	5,29,320	Stores, etc.	1,89,829
Liabilities	7,36,199	Debts, deposits and advances ...	15,76,190
Profit and loss account ...	1,34,404	Investments	49,566
		Cash ...	5,232
	Rs. 26,69,923		Rs. 26,69,923

Dhemo Main Collieries, Ltd.

The directors of the above Company (Managing Agents: Messrs. Macneill & Barry Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 30th June, 1952.

The profit after providing for depreciation amounts to Rs. 50,340 (Rs. 3,50,403). Deducting from this the provision for taxes and cesses Rs. 10,000 (Rs. 1,65,000), and addition to general reserve *nil* (Rs. 50,000) and adding the balance brought forward from last account of Rs. 91,699 (Rs. 8,497), there is an amount of Rs. 1,32,039 (Rs. 1,43,900). Deducting the dividend for the half-year ended 31st December, 1951 (since paid), of Rs. 80,000, there is available for distribution a sum of Rs. 52,039 (Rs. 1,43,900). The directors recommend, that this be disposed of by payment of a dividend at the rate of 5 (15) per cent. per annum Rs. 40,000 (Rs. 1,20,000), leaving to be carried forward the balance of Rs. 12,039 (Rs. 23,900).

Net raisings during the half-year were 98,807 tons, as compared with 1,02,530 tons during the previous six months and 1,24,110 tons in the corresponding period of 1951. Despatches amounted to 1,00,815 tons, as against 1,04,317 tons and 1,24,595 tons during the preceding two half-years. Stocks totalled 2,376 tons on 30th June, 1952.

Good relations between labour and management continued throughout the period. The serious mining difficulties, had an adverse effect upon the results, for the half-year and the directors are obliged to recommend a reduction in the rate of dividend to 5 (15) per cent. per annum.

Everything possible has been done to stabilise underground conditions at the colliery, but this work has necessarily restricted output and results for the half-year to 31st December, 1952, have been seriously affected. The position is now improving and it is hoped that raisings will be restored to normal by the end of the current half-year.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	16,00,000	Block ...	19,34,641
Reserves ...	6,20,000	Stock ...	34,208
Provision for taxation ...	5,04,044	Stores, tools, etc. ...	1,60,079
Liabilities	12,06,564	Debts, deposits and advances ...	17,23,388
Profit and loss account ...	1,32,039	Investments	1,95,500
		Cash ...	14,831
	Rs. 40,62,647		Rs. 40,62,647

West Jamuria Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Macneill & Barry Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 30th June, 1952.

The profit after providing for depreciation amounts to Rs. 1,538 (Rs. 1,23,616). Adding thereto the balance brought forward from last account of Rs. 85,234 (Rs. 12,154), there is a sum of Rs. 86,772 (Rs. 1,35,770). Deducting from this provision for bad and doubtful debts Rs. 5,000 (*nil*) and dividend for the half-year ended 31st December, 1951, (since paid) of Rs. 52,500, there is available for distribution Rs. 29,272 (Rs. 18,270). The directors recommend, that this amount should be carried forward.

No dividend is recommended for the half-year under report. A dividend at the rate of 15 per cent. per annum, absorbing Rs. 52,500 was paid for the corresponding period in 1951, after making a provision of Rs. 40,000 for taxation and cesses and transferring Rs. 25,000 to the general reserve.

Net raisings during the half-year were 71,946 tons, as compared with 1,05,711 tons during the previous six months and 1,15,705 tons in the corresponding period of 1951. Despatches amounted to 69,289 tons, as against 1,07,496 tons and 1,17,987 tons during the preceding two half-years. Stocks aggregated 9,167 tons on 30th June, 1952.

Good relations between labour and management continued throughout the period. With the approaching exhaustion of the Poniati Seam at West Jamuria Colliery, raisings were lower than for the previous period. Initial mining difficulties at the Company's new pits in Ackhalpur Colliery have meant that the reduced output from West Jamuria Colliery has not been replaced to the extent originally estimated. Working results were thereby adversely affected and the directors are unable to recommend the payment of any dividend. The mining difficulties referred to above have since been largely overcome, but it will take a little time to restore the Company's raisings to their normal level. Sinking to the Taltore Seam and the development of the Jamuria Seam at West Jamuria Colliery have been undertaken and reasonable progress is being made.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	7,00,000	Block ...	16,66,656
Reserves ...	7,25,000	Stock ...	1,30,798
Provision for taxation ...	1,42,249	Stores, etc.	2,97,063
Liabilities	13,88,174	Debts, deposits and advances ...	8,74,272
Profit and loss account ...	29,272	Cash ...	15,906
	Rs. 29,84,695		Rs. 29,84,695

Gokak Mills, Ltd.

The directors of the above Company (Agents: Messrs. Forbes Forbes Campbell & Co., Ltd., Bombay) submit the audited accounts of the Company for the year ended 31st December, 1952.

The accounts show a profit of Rs. 7,05,673 (Rs. 17,99,366) to which is to be added the net carry forward from 1951 of Rs. 93,393 (Rs. 54,004) post-war refund of E.P.T. of Rs. 6,19,169 (*nil*), which produces a total of Rs. 14,18,235 (Rs. 18,53,370). The directors have allocated this sum as under:—

Reserve account Rs. 48,336 (Rs. 70,859), depreciation Rs. 2,50,000 (Rs. 2,25,000), taxation reserve Rs. 1,75,000 (Rs. 7,50,000), staff gratuity fund Rs. 27,525 (Rs. 67,460), equalisation of dividend account Rs. 1,50,000 (*nil*), leaving available the sum of Rs. 7,67,374 (Rs. 6,40,051). From this balance the directors recommend the declaration of a dividend of Rs. 12 (Rs. 14) and a bonus of Rs. 5 (*nil*) per share, free of income-tax which will absorb Rs. 6,63,799 (Rs. 5,46,658) leaving a balance to be carried forward of Rs. 1,03,575 (Rs. 93,393).

During the year additions to machinery included, eleven electric motors complete, turbine machinery (one butterfly valve and three voltage regulators and transformers), and additional electrical equipment for new control room.

The mill building, machinery, stocks and stock-in-trade are insured for Rs. 3,48,65,200 (Rs. 3,77,87,200) and the profits and fixed charges have been insured for Rs. 44,22,140 (Rs. 43,29,260) covering a period of 18 months. The mill property at 31st December, 1952 was insured against riot and civil commotion risk to the extent of Rs. 2,44,26,475 (Rs. 2,43,08,575) and stocks were insured at that date for further Rs. 1,04,11,725 (Rs. 1,33,08,625).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	39,04,700	Block ...	82,22,587
Reserves	1,01,50,000	Stock ...	44,09,536
Provision for taxation ...	2,90,796	Stores, etc.	6,90,904
Liabilities ...	16,98,452	Debts, deposits and advances ...	4,35,585
Profit and loss account ...	7,67,374	Investments	1,75,000
		Cash ...	28,77,710
	Rs. 1,68,11,322		Rs. 1,68,11,322

Bengal Assam Steamship Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st October, 1952.

On 1st July, 1952, the Company formally appointed The Pakbay Company Ltd., Narayanganj, as its Agents in Pakistan, in accordance with the scheme explained in the chairman's letter of shareholders dated 12th May, 1952.

The quantity of cargo available for carriage was considerably lower than during the previous year and freight earnings are down in spite of freight rates being increased in November, 1951. The heavy repair programme, referred to in the last report, is still being undertaken. During the year it was decided that the Flat "Dublin", built in 1896, was beyond repair and the Flat has therefore been broken up and sold for scrap.

After providing Rs. 2,00,871 (Rs. 2,00,000) for depreciation and Rs. 9,60,000 (Rs. 15,20,000) for taxation and after transferring Rs. 2,00,000 (*nil*) to fleet replacement fund, Rs. 9,756 (Rs. 54,578) to capital reserve and Rs. 2,00,000 (Rs. 2,00,000) to reserve for repairs, there is a balance of Rs. 4,75,690 (Rs. 4,03,711) at the credit of the profit and loss account, from which the directors recommend a dividend on the preference shares at the rate of 7 (7) per cent. per annum, absorbing Rs. 21,000 (Rs. 21,000), a dividend on the ordinary shares at Rs. 12-8 (Rs. 12-8) per share absorbing Rs. 2,50,000 (Rs. 2,50,000), leaving to be carried forward the balance of Rs. 2,04,690 (Rs. 1,32,711).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	23,00,000	Block ...	1,16,39,102
Reserves ...	1,11,04,305	Stores ...	1,55,834
Provision for taxation ...	10,56,798	Debts, deposits and advances ...	7,10,274
Liabilities ...	10,82,443	Investments	11,34,928
Profit and loss account ...	2,04,690	Cash ...	21,08,098
	Rs. 1,57,48,236		Rs. 1,57,48,236

N.B.—Figures within brackets relate to the corresponding period of the previous year.

COMPANY MEETINGS AND DIVIDENDS

DHEMO MAIN COLLIERIES LTD. Half-yearly General Meeting, Calcutta, 26th March, 1953. Dividend: As. 4 per share. Transfer books closed from 18th to 26th March, 1953, both days inclusive.

HURRILADIH COAL CO., LTD. Half-yearly General Meeting, Calcutta, 26th March, 1953. Dividend: As. 12 per share. Transfer books closed from 18th to 26th March, 1953, both days inclusive.

WEST JAMURIA COAL CO., LTD. Half-yearly General Meeting, Calcutta, 26th March, 1953. Dividend: *Nil*. Transfer books closed from 18th to 26th March, 1953, both days inclusive.

EQUITABLE COAL CO., LTD. Half-yearly General Meeting, Calcutta, 26th March, 1953. Dividend: Re. 1-8 per share. Transfer books closed from 18th to 26th March, 1953, both days inclusive.

CENTRAL KURKEND COAL CO., LTD. Half-yearly General Meeting, Calcutta, 27th March, 1953. Dividend: *Nil*. Transfer books closed from 14th to 27th March, 1953, both days inclusive.

TITAGHUR PAPER MILLS CO., LTD. Half-yearly General Meeting, Calcutta, 30th March, 1953. Dividend: As. 4 per preferred ordinary share and Re. 1 on "A" and "B" ordinary shares (including bonus of As. 4 per share). Transfer books closed from 17th to 30th March, 1953, both days inclusive.

DHANALAKSHMI MILLS LTD. Annual General Meeting, Tirupur (Coimbatore Dist.), 30th March, 1953. Dividend: Rs. 10 per share. Transfer books closed from 17th to 30th March, 1953, both days inclusive.

INDIA JUTE CO., LTD. Half-yearly General Meeting, Calcutta, 31st March, 1953. Dividend: Rs. 3-2 per ordinary share and As. 4/5 per deferred share. Transfer books closed from 17th to 31st March, 1953, both days inclusive.

MEGNA MILLS CO., LTD. Half-yearly General Meeting, Calcutta, 31st March, 1953. Dividend: Rs. 2-8 per ordinary share. Transfer books closed from 17th to 31st March, 1953, both days inclusive.

DUNLOP RUBBER CO. (INDIA), LTD. Annual General Meeting, Calcutta, 2nd April, 1953. Dividend: Re. 1-8 per share, free of tax.

OSMANSHAHI MILLS, LTD. Annual General Meeting, Hyderabad (Deccan), 2nd April, 1953. Transfer books closed from 20th March to 2nd April, 1953, both days inclusive.

AZAM JAHI MILLS LTD. Annual General Meeting, Hyderabad (Deccan), 2nd April, 1953. Transfer books closed from 20th March to 2nd April, 1953, both days inclusive.

EAST INDIA DISTILLERIES AND SUGAR FACTORIES LTD. Annual General Meeting, Madras, 7th April, 1953. Dividend: 10 per cent. on "A" and 15 per cent. on "B" ordinary shares. Transfer books close from 7th to 20th April, 1953, both days inclusive.

INDUSTRIAL INVESTMENT LTD. Annual General Meeting, Bombay, 14th April, 1953. Dividend: Rs. 4-8 per share. Transfer books close from 28th March to 18th April, 1953, both days inclusive.

INDIAN ALUMINIUM CO., LTD. Annual General Meeting, Calcutta, 23rd April, 1953. Dividend: Rs. 5 per share. Transfer books close from 3rd to 23rd April, 1953, both days inclusive.

VAIKUNDAM (TRAVANCORE) RUBBER CO., LTD. Dividend of Rs. 2 per ordinary share, for the year ended 31st December, 1952.

VASANTA MILLS LTD. Dividend of Rs. 12 per share, for the year ended 31st December, 1952. Transfer books close from 1st to 15th April, 1953, both days inclusive.

BENGAL ASSAM STEAMSHIP CO., LTD. Dividend of Rs. 12-8 per ordinary share for the year ended 31st October, 1953.

WESTERN INDIA TANNERIES LTD. Interim dividend of 6¼ per cent. per annum, free of income-tax for the year 1952, payable on and after 15th April, 1953. Transfer books close from 31st March to 14th April, 1953, both days inclusive.

COMPANY REGISTRATIONS

S. B. JOSHI & CO., LTD. (First Director: Mr. R. N. Joshi.) Business: Constructing, Erecting, Fabricating, Manufacturing, Quarrying, Mining, Supplying, Transporting, Importing, Exporting, Purchasing and Selling, etc., in connection with Engineering or Trade and Industry allied to Engineering. Authorised capital: Rs. 11,00,000. Private company. Address: Examiner Press Building, Dalal Street, Fort, Bombay 1.

HEERA TRADERS LTD. (First Director: Mr. C. S. Vaswani.) Business: Capitalists, Financiers, Exporters, Importers, Manufacturers, Mill Owners, Merchants, etc. Authorised capital: Rs. 10,00,000. Private company. Address: 26-28, Hamal Wadi, Dhobitalao, Bombay.

GOKUL FILMS LTD. (First Director: Mr. M. S. Ramanujam.) Business: Manufacturers, Producers, Exhibitors and Distributors of Cinematographic Films. Authorised capital: Rs. 5,00,000. Private company. Address: B.M.S. Works, Bombay 22.

Address: 6, Harischandra Sadan, Daulat Nagar, Borivli.

QUESTION HOUR IN PARLIAMENT

Loans and Grants for Minor Irrigation Works

THE State Governments have so far been sanctioned loans aggregating Rs. 910.38 lakhs and grants of Rs. 203.13 lakhs for minor irrigation works.

* * * *

Production of Jute

The total production of jute in India in 1952-53 was 4,695,000 bales of 400 lbs. each and the acreage under jute was 1,834,000. The State Governments hope to increase the acreage in 1953 by 94,000. This figure cannot be taken as a target in the proper sense of the word, as much would depend on weather conditions and prices. The plan is to reach an acreage of 2 million by 1955-56.

—*Minister for Food and Agriculture*

Sulphate of Ammonia

The Government of India has reduced the price of sulphate of ammonia from Rs. 335 to Rs. 290 per ton. Last year the price was Rs. 365 per ton. The Government has agreed to sell 50,000 tons of sulphate of ammonia to the West Bengal Government for which it is proposed to give that State a short-term loan.

* * * *

Tobacco Production

India is the second biggest tobacco consuming country in the world, accounting for 7.06 per cent. of the total world consumption. The U.S.A. tops the list, consuming 19.53 per cent. of the total world consumption. In 1951-52, India produced 504 million lbs. of tobacco and consumed 508 million lbs. In 1947-48, as much as 542 million lbs. were produced and 437 million lbs. consumed.

—*Minister for Agriculture*

Bhakra Project

The Bhakra Nangal Project is expected to be completed in 1958-59 according to the present programme of construction. The original estimate of total expenditure is Rs. 132 crores and according to the latest revised estimate, the overall expenditure will be Rs. 156 crores.

* * * *

Research on Arid Areas

A proposal for the establishment of a research centre to study problems of arid areas is under consideration of the Government of India. It is proposed to set up the centre at Jodhpur and the work contemplated included hydeological, geological, geophysical and agricultural surveys and investigations primarily relating to the exploitation of water resources of the arid areas of Rajasthan. Setting up of necessary meteorological observation stations is also part of the proposal. The total initial expenditure is estimated at Rs. 26,70,000. The Government has made a request to the U.N. for technical assistance to the extent of Rs. 3.6 lakhs to cover expenditure on the salary of a foreign geophysical expert and on necessary equipment.

—*Deputy Minister of Irrigation and Power*

Excise Duty

Tobacco used in *hookah* and chillum and for chewing was assessable at As. 6 per lb. under item 9 1(6) of the First Schedule to the Central Excises and Salt Act, 1944, provided such tobacco is not capable of being used in the manufacture of *biris*. The manner in which local villages consume a variety of tobacco cannot affect the rate at which it is assessed to excise duty. Several representations were received in the latter half of 1951 from the Northern Thana District Tobacco Dealers' Federation, Palghar, Thana, protesting against the charging of heavy duty on tobacco used by villagers. No relief from the duty chargeable under the statute can be given and an exception cannot be made without serious repercussions on the administration of the excise duty on the same varieties of tobacco in question elsewhere in the Bombay State. There were about 150 small manufacturers of *biris* in the area in question at the time the representation was received.

—*Minister for Revenue and Expenditure*

Chittaranjan Factory

Except for some patented items and a few fittings which are uneconomical to make in small numbers, all parts of a locomotive can and will be manufactured at Chittaranjan. There are at present 12 foreign experts (11 British and one German) attached to the Chittaranjan Locomotive Works on contract basis for specific periods.

—*Deputy Minister for Railways*

Telephone Factory

Experimental production of dials has started in the telephone factory at Bangalore, while shops for the manufacture of condensers are being laid. Dials and condensers are not at present manufactured in the factory.

—*Deputy Communications Minister*

Wheat Purchases

India has already purchased 12,00,000 tons of wheat under the International Wheat Agreement this year. According to the current agreement, India is entitled to get 15,00,000 tons as a guaranteed quota. This year India has to purchase the entire quantity, of which 12,00,000 tons have already been purchased. Negotiations about the price of wheat under the proposed renewal of the agreement are still going on. The exporting countries have proposed higher prices, but the Government of India has not agreed.

—*Deputy Minister for Food*

MONEY STEADY

(From Our Own Correspondent)

BOMBAY, 18*th March*

The slightly stringent conditions in the short-term money market witnessed last week did not show any sign of slackening this week, as demand for money continued unabated due to financial year-end requirements. Though some of the big banks were able to keep an even position in regard to their requirements, a shortage of funds was felt by most of the banks during the clearing hours. The turnover in inter-bank call money, however, tended to shrink, as most of the borrowers were unwilling to pay 3 per cent. demanded by lenders. They preferred to go to the Reserve Bank for accommodation. The inter-bank call money continued to be quoted at 2¾—3 per cent. among the Exchange banks and big Indian banks. The rate among the smaller Indian banks was unchanged at 3 per cent. As regards term money, 3 per cent. was offered for renewals of three months' deposits, but only 2¾ per cent. for fresh money. Six months' deposits were quoted at 2¾ per cent. and 12 months' at 2 to 2¼ per cent.

A sum of Rs. 108.75 lakhs was offered this week against the usual tenders for Rs. 100 lakhs of three months' Government of India Treasury Bills, which compared with Rs. 116.50 lakhs offered last week. The average rate of accepted tenders hardened again a little from Rs. 2-6-11 per cent. per annum to Rs. 2-7-0 per cent.

An expansion of Rs. 1.89 crores in notes in circulation is disclosed by the statement of affairs of the Reserve Bank of India for the week ended 13th March, 1953. Notes held in the Banking Department are, however, lower by Rs. 2.08 crores, the resulting net decline of Rs. 18.86 lakhs in total notes issued being covered by a corresponding contraction in rupee coin. For the first time since the beginning of the year, deposits of the Central Government have shown a marked rise of the order of Rs. 7.79 crores. Deposits of other Governments have, on the other hand, declined by Rs. 9.04 crores, those of banks by Rs. 5.90 lakhs and others by Rs. 1.30 crores. Cash balances show a fall of Rs. 2.07 crores, but balances held abroad are higher by Rs. 57.99 lakhs. Loans and advances to Governments have improved by Rs. 25 lakhs and other loans and advances by Rs. 83.41 lakhs. The total amount of advances availed of by the Scheduled Banks against usance bills during the current year so far stands at Rs. 7.74 crores, the increase during the week being Rs. 2.50 crores. But the outstanding advances at the end of the week, at Rs. 4.24 crores, disclose a rise of Rs. 1 crore. Government Treasury Bills purchased and discounted have fallen by Rs. 1.24 crores.

The consolidated statement of position of the Scheduled Banks for the week ended 6th March, 1953, reveals an increase of Rs. 1.26 crores in demand deposits and a fall of Rs. 59.36 lakhs in time deposits. Inter-bank borrowings have fallen by Rs. 61.29 lakhs. Borrowings from the Reserve Bank (including those against usance bills) have risen by Rs. 5.23 crores, of which borrowings against usance bills account for an increase of Rs. 1.50 crores. Borrowings from the Imperial Bank of India too have gone up by Rs. 1.12 crores. Advances are higher by Rs. 1.47 crores and bills purchased and discounted by Rs. 4.55 crores. Investments have declined by Rs. 31.48 lakhs. Cash-on-hand and balances with the Reserve Bank are together higher by Rs. 1.26 crores, as also balances with other banks by Rs. 42.36 lakhs. Money at call and short notice are lower by Rs. 57.30 lakhs.

The Gilt-edged market presented a steady front, with select issues tending to harden in value. The Finance Minister's reassuring statement on the economic and financial outlook, coupled with the shortage of floating stocks, has brought about a slightly bullish fervour. 3 per cent. 1953-55 remained unchanged at Rs. 100-1. 3 per cent. 1957 and 3 per cent. 1958 were steady at Rs. 98-12 and Rs. 98-9, respectively. 3 per cent. 1959-61 was an anna better at Rs. 96-3. 3 per cent. 1963-65 was quoted at the self-same rate of Rs. 92-10, but 3 per cent. 1964 was offered an anna more up to Rs. 92-10. 3 per cent. 1966-68 was stagnant at Rs. 90-9, while 3 per cent. 1970-75 registered a gain of As. 2 to Rs. 86-11. 3 per cent. 1986 Conversion loan, which was in favour last week, due to proximity of interest payment, was taken up to Rs. 83-2, was placed at Rs. 83 *ex-voucher* from the 16th inst. onwards.

The foreign exchange section of the money market witnessed a mild flutter in the rupee-U.S. dollar rate during the week under review, but over the week there was no net variation. Even the change during the week was only confined to the Banks' selling rate, as the table below will show. In New York, the £ sterling displayed some easiness *vis-a-vis* the dollar early in the week, but towards the close recovered again. Thus, the spot rate for the £, which was quoted at $2.81¼—2.21⅜ on the 10th inst., relapsed to $2.81-5/16—2.81-7/16 on the 13th, but improved to $2.81-11/16—2.81-13/16 yesterday.

BULLION WEAK

(From Our Own Correspondent)

BOMBAY, 18*th March*

The week under review was notable for a sharp break in prices of both silver and gold. Silver, which had been responsible for almost a crisis two weeks back, experienced a marked setback on speculative selling induced by the proposed amendments to the by-laws of the Bullion Association, poor offtake and lower advices from Calcutta. Some of the bull operators, who had extended good support to the market before, but had recently switched over to share and cotton markets, were not inclined to renew their support. In the result, there was a landslide in prices which necessitated the enforcement of special clearing on Monday this week. But this did not arrest the downward trend and, as the rate for forward silver fell to-day by more than Rs. 7 below the opening rate for the current settlement, the bears were called upon to pay margin under the existing by-laws.

Gold, which had for some time past remained in the background, was also subjected to heavy selling pressure induced by larger arrivals and the weakness of silver. The mild attempts at recovery early in the week, that is, on Friday and Saturday last, proved futile. The selling pressure on gold pushed down the rate for the metal by more than Rs. 5 below the opening rate, as a consequence of which automatic margin was enforced to-day on bears in yellow metal too.

The Government of Bombay has not so far approved of the proposed amendments to the by-laws. It is reported to have asked the Board of the Bullion Association to place the amended by-laws before the general body of the Association so as to know the consensus of opinion of the members before giving its approval. An extraordinary general body meeting of the members was accordingly convened to be held to-day. But the meeting has had to be postponed for next week for want of a quorum. Even if the amendments are approved by the general body next week, it may not come into effect in time for covering transactions in the next settlement, that is, May settlement.

Silver for forward delivery in April settlement opened at Rs. 167-4 and dropped to Rs. 163-6 on Friday. There was a recovery to Rs. 166-2 on Saturday morning on scattered support induced by better advices from other markets, but only to relapse again to Rs. 162 at the close on Monday. As this rate was Rs. 5 below the last clearing rate, a special clearing was introduced in silver and gold. Even after this, the recession continued in the last two days, the closing rate for to-day being Rs. 159-8. As this rate was more than Rs. 7 below the opening rate of Rs. 168, automatic margin was enforced.

Ready silver (.996 mint) fell from the opening rate of Rs. 167-4 to Rs. 159-8. The floating stocks of silver are placed at 1,700 bars. The daily average offtake was no more than 10 bars.

Gold for forward delivery began at Rs. 87-14 and moved down to Rs. 86-12 on the next day on reports of large arrivals. After an improvement to Rs. 88 on Saturday, the downward movement asserted itself, bringing down the rate to Rs. 84-8 at the close to-day. As this rate was more than Rs. 5 below the opening rate of Rs. 90, automatic margin became payable by bears.

Ready gold declined from Rs. 88-3 to Rs. 84-9 the premium which the ready rate commanded over the forward narrowing down from As. 5 to an anna. The floating stocks of gold are estimated at 50,000 tolas. The daily average arrivals were 8,000 tolas, while the offtake was no more than 5,000 tolas on an average.

The following comparative table shows the trend of the market during the week under review:

	18-3-53	Highest	Lowest	11-3-53
GOLD	Rs. a.	Rs. a.	Rs. a.	Rs. a.
Ready (.99 fine Mint)	84 9	88 4	84 8	88 3

New York Ready ..	85½c	—	—	85½c.

BRADFORD TOPS FIRM

(Messrs. J. Hardacre and Co.)

BOMBAY, 16*th March*

Business in the Bradford top market has spurted on the basis of the prices recently quoted and this has caused topmakers to increase quotations by 1*d.* or 2*d.* by comparison with last week. Having sold to the limit of their purchases, topmakers are now forced to take into account the cost of wool at recent sales in the primary markets and thus bring their quotations into line with replacement costs. Thus, the market as a whole is not one in which sellers are inclined to make concessions.

Report from the primary markets indicate a further rising tendency. Values were fully firm at Brisbane. Values at Adelaide are 7½ to 10 per cent. up on last sale at this centre. Durban values were 5 per cent. up and, at Capetown, the market continued in sellers' favour, values being 2½ per cent. higher as compared with those in the previous sale. According to latest reports from the selling centre at Auckland, prices have advanced 5 per cent. over the previous sales.

Noil prices remain firm, under the combined influence of high values for short wools in the primary markets, stiffening of quotations in the top section, and short supply position; any variation in price is in sellers' favour.

COTTON FIRM

(From Our Own Correspondent)

BOMBAY, 18*th March*

The attention of the Bombay cotton market was centred mainly on the issue of the Pakistan currency. During the earlier part of the week under review, rumours were thick in the market that the Pakistan rupee will be devalued in view of the adverse balance of payments and the difficulty Pakistan experienced during the last and the current year of selling its two important raw materials, cotton and jute. Taking long-term views, the market believed that with the Pakistani rupee at par with the Indian currency, the prospects of imports of Pakistan cotton at competitive rates would improve. High prices of Indian varieties, which depended on the short supply position, would naturally have to give way in this case. The categorical refusal of the Pakistan Finance Minister to devalue its rupee sent prices soaring in the forward market in Bombay. The May delivery crossed the Rs. 700 limit and stayed there at closing time. There was a reaction of a technical nature since then, but taking a long-term view, the prices are likely to rule high both in the ready and the forward markets, as available stocks of useful or tenderable varieties get depleted.

Considering the reduced demand from the mills, prices in the spot market have been very steady, except in the case of Vijay, which is a little inexplicable. Though the present commitments on the part of the shippers with regard to Bengal *Deshi* have mostly been met, prices of this variety are still ruling high because of the hope that when the Government finds that Dholleras and Oomras cannot be exported, it might relent and allow the balance of the export quota of 50 per cent. in these other *deshi* varieties to be converted into Bengals, thus creating a fresh demand for this variety. On the other hand, there are also those in the market who believe that rather than do this the Government might reduce the export duty on Oomras, Dholleras, etc., in which case prices of Bengals might have to seek lower levels. The following are the latest quotations for the Sewri market: Bengal *Deshi* Rs. 630-40; Berar jarilla Rs. 30-50 on I.C.C. May; Vijay Rs. 160 on; Moglai Rs. 25 off; Khandesh Rs. 100 on; Oomra Deshi Rs. 10 off.

The following is the trend of prices in the forward market over the week ended 18th March, 1953.

	Opening	*High*	*Low*	*Closing*
I.C.C. May (Rs.) ...	694	714	690½	712½
I.C.C. August (Rs.) ...	706	725½	704	724

At Karachi, things are looking up so far as disposal of cotton stocks is concerned. It is reported that Government's efforts to use cotton for barter purposes are meeting with better response from some of the countries. China is believed to have agreed to an exchange of coal for cotton, in the same way as it has arrived at an arrangement with the Ceylon Government for an exchange of rice with rubber. In this respect Pakistan is likely to find some difficulty in effecting this exchange owing to shipping difficulties, though this may not be as severe as in the case of Ceylon because, unlike rubber, cotton may not be treated as a strategic material. While there is no official confirmation with regard to this exchange, the earlier barter with Spain has been confirmed by the Government.

There is mention here and there also of the big deal that is in the offing with Japan. But this appears to be used more as a hint to other countries who want to buy Pakistan cotton or to exchange it with some of the commodities which Pakistan needs to hurry up and secure it before Japan takes up the lot. For six months and longer Japan and Pakistan have been higgling in true Oriental fashion with regard to this deal. Another curious fact about the barter deals which are so much in fashion at Karachi is the hush-hush policy with regard to the price basis of these exchanges. It means that this basis cannot be very attractive for Pakistan and that it is either giving away more of its cotton to secure what it wants without paying for it in hard cash or that it is getting less of what it wants compared to the quantity of cotton delivered by it. In any case, the pressure of stocks is easing and to that extent it is a healthy sign. But this over-concentration on barter deals has discouraged Continental buyers of Pakistan cotton and enquiries from these sources, which had begun to come in, have again dried up. The following are the latest quotations from the Karachi market: Punjab *Deshi* Rs. 75; 4F Punjab R.G. Rs. 61-62; S.G. Rs. 65-66; L.S.S. Punjab R.G. Rs. 65-65½; S.G. Rs. 70 to 70½; N.T. R.G. Rs. 65 to 65½; S.G. Rs. 71-71½; 289F. Punjab R.G. Rs. 71; S.G. Rs. 78.

Both Sudan and East Africa are not much in the picture. In Sudan not only is the crop estimated to be lower than expected, but there are apprehensions that the quality will also be not up to the mark. The top grades are, therefore, not being offered freely by the Gezira Board as it has already sold fairly good quantities of these varieties. In East Africa crop prospects are reported to be better but activity is on a small scale.

At Alexandria, there has been a change in the policy with regard to exchange control regulations in respect of repatriation of proceeds from sales of cotton abroad. The revised regulations require the shippers first to register the whole of their foreign exchange earnings with the authorities. Only after they have done this, they are to be allowed to use three-fourths of these for payments against goods which they might decide to import. There are also certain other restrictions with regard to the period and the manner in which this right has to be exercised. India has been showing greater interest of late in Egyptian cotton and more shipments of this cotton might be expected to leave Alexandria during the next three months. Exports from Egypt during the current season till a fortnight ago amounted to a little over 4 lakh bales. Nothing seems to have been settled yet with regard to the reopening of the forward market, while activity in spot market has been fairly steady during the week under review.

At New York, prices were steady to firm during the week under review. The export position, however, still continues to be not very satisfactory and shipments so far are below 50 per cent. of those registered for the same period last year. The export target of 4 million bales for the current season is not likely to be reached in view of the fact that by the beginning of this month, only two million bales have been sold abroad. The only hope of the shippers now rests in the increased allotment of credit to various European countries and Japan for purchase of U.S. cotton. Against this there is a lessening of the international political tension after M. Malenkov's speech at the session of the Supreme Soviet in Moscow last Sunday. For the American as well as the other world cotton markets such indications are generally interpreted as a probable bearish factor.

The following are the latest available quotations from New York as compared with those of a week and a fortnight before:

(In cents per lb.)

	17-3-53	10-3-53	3-3-53
Spot	34.30	34.40	34.25

ART SILK YARN SHOOTS UP

(From Our Own Correspondent)

BOMBAY, 18*th March*

The import policy for art silk yarn for the current half-year was announced this week. The policy sprang a surprise on the market. Contrary to expectations of liberal imports, the Government has granted a bare 10 per cent. quota to established importers on the basis of half of best year's imports during the period 1945-46 to 1950-51. The aggregate quantity involved is estimated at not more than 2 million lbs., as against 35 million lbs. imported during 1950-51. Moreover, licences for yarn will not be valid for imports of both third and fourth quality yarn of 120 or 150 deniers and double rayon yarn. This extremely restricted import policy let loose a spell of speculative activity which overlooked reports of heavy arrivals of imported yarn and reduction in prices by German producers. Hectic purchases by bulls and large covering by shorts which followed sent up values of art silk yarn to touch the highest levels not seen in the past seven months. The net rise over the week was 81 points and 77 points, respectively, for March and April delivery contracts.

The bullish fervour was in marked evidence in the forward section. 150D March contract rallied 104 points to Rs. 880 to-day. On profit-taking, however, it closed a shade easy at Rs. 853. April contract advanced from Rs. 779 to Rs. 886, but finished lower at Rs. 860. In sympathy with the forward section, ready remained fully firm throughout the week. 150 Italy picked up As. 5 to Rs. 4-4. 120 Japan rose by As. 4 to Rs. 5-1. 150 Japan improved from Rs. 4-5 to Rs. 4-8. 120 Italy was better by an anna at Rs. 4-4.

The table below gives the prices of art silk yarn quoted to-day, as compared with those on the 11th and 4th inst.

Art Silk Yarn—	18-3-53 Rs. a.	11-3-53 Rs. a.	4-3-53 Rs. a.
150D March (per case of 200 lbs.)	853 0	776 0	789 0
150D April ,,	860 0	790 0	790 0
120 Japan (per lb.)	5 1	4 13	5 0
150 Japan ,, ...	4 8	4 5	4 5
120 Italy ,, ...	4 4	4 3	4 10
150 Italy ,, ...	4 4	3 15	4 0

The staple fibre section remained dull, owing to shortage of supplies. Traders are very much intrigued at the continued delay in the granting of import licences for staple fibre. Any further delay, it is feared, will result in considerable hardship to mills producing staple fibre yarn. Already, these mills are reported to be spinning inferior quality yarn and that at enhanced cost, thanks to higher prices for fibre.

GROUNDNUTS FIRM

(From Our Own Correspondent)

BOMBAY, 18*th March*

The oilseeds and oils market continued to march ahead aggressively till to-day. Caught in the firm grip of bull operators, groundnuts were in the lead. On buying from *vanaspati* interests values forged ahead to new high levels, the trend was assisted by some reported enquiries from Hongkong and the Continent at £157 to £158 per ton and £154 to £155 per ton, respectively. Linseed ruled bright on the recommendation of the Indian Oilseeds Committee to reduce export duty on linseed oil. The castorseeds section proved no exception to the generally upward trend. Some business was reported done with the U.S. in commercial oil at 18¾ cents. However, at the higher levels to-day, some profit-taking set in, and prices all round were a shade lower. But, on balance, they disclosed substantial gains over the week.

The high prices in groundnuts have caused concern to crushers and *vanaspati* interests alike who have put up the prices of their products. The increase in the price of *vanaspati* is attributed to the higher prices, particularly of groundnuts. These were reports of a switching over of demand to *kardi, niger,* sesamum and linseed, the prices of which were comparatively lower. Groundnuts, Bold ready shot up from Rs. 41-4 to Rs. 43-8, before closing at Rs. 43. Khandesh quality disclosed a gain of Rs. 2 to Rs. 43-4. Groundnut oil, ready delivery, gathered Rs. 1-2 to Rs. 23-8 and railway receipts As. 12 to Rs. 23. The all-India final estimate of groundnut crop at 28 lakh tons for 1952-53, against the partially revised estimates of 30 tons during the previous year, is discounted trade circles.

There was fair demand for linseed oil. The oil was reported being used for adulterating the high-priced groundnut oil. Linseed oil was quoted higher by As. 8 at Rs. 15-6. The difference between linseed oil ready and groundnut oil *ex*-mill delivery is as much as Rs. 8-2. Linseed Bold ready rallied As. 8 to Rs. 30-8.

The castorseeds section witnessed considerable speculative activity. Prices fluctuated violently as a result of a tussle between bulls and bears inspired by conflicting rumours regarding removal of export duty on oil. May delivery which opened at Rs. 150-12, as against Rs. 150, oscillated between Rs. 161-4 and Rs. 149-8, before closing at Rs. 158-8. Madras quality was done at Rs. 33 as against Rs. 31-12. Castor oil, commercial quality improved by As. 6 to Rs. 18-14 and B.S.S. Re. 1-6 to Rs. 20-8. In the U.S. castor oil Commercial was being quoted later in the week at 19c and B.S.S. at 20c.

Niger, kardi and sesamum also moved up in sympathy with other sections. *Niger* ready F.A.Q. was higher by As. 8 at Rs. 32 and *kardi* Bold by As. 14 at Rs. 24-6. *Niger* was quoted at £59 on the Continent, but Indian offers were higher at £62. *Kardi* had buyers, on the Continent, at £45, as against sellers at £47-10. Sesamum (yellow) rose Rs. 15 higher to Rs. 235 per candy of 500 cwt. and 35-15 quality improved by Rs. 10 to Rs. 210 per candy of 500 cwt. The seed is quoted on the Continent at £74 per ton (buyer), as against offers of £90 per ton.

The following table shows the prices of oilseeds and oil on the 18th inst., as compared with those at the close of preceding two weeks.

	18-3-53 Rs. a.	11-3-53 Rs. a.	4-3-53 Rs. a.
Groundnuts—			
Bold Ready New (per cwt.) ..	43 0	41 4	39 8

Commercial (per quarter) ..	18 14	18 8	18 0

PEPPER STILL STRONG

(Messrs. Parekh & Co.)

BOMBAY, 18*th March*

Prices of black pepper showed further strength during the week, Alleppey growers having sold some quantity at a new high level of Rs. 3,400 to Indian exporters. Encouraged by the recent purchases of New York at prices ranging from $1.45 to $1.47, for March and April-May-June shipments, Indian planters have turned stiff sellers. At every small sale, they put their prices up in order to excite the buyers for offering them still higher purchase prices. A knowledgeable source says that the present high prices of pepper in India are merely reflections of New York and that the advance is more or less engineered by bull forces in the U.S.A. who are exploiting more fully the present war psychosis heightened by the recent shooting down of American and British planes in East Germany. By making small purchases at continuous higher limits in India and also by buying all available *ex*-dock contracts in New York, they seem to have so cleverly handled the situation that it has also stimulated the otherwise dormant New York grinders. They have also continued to circulate among Indian growers the reports giving rosy picture of the New York market in order to keep back Indian planters from making big sales. The pepper market, from the technical point of view both at New York and in India, has become from day to day more vulnerable, and there appears, at the moment, a set-back in the present foreign demand, the trade in India expects a good sized reaction, provided there is no further deterioration in the political situation. Stocks in all the primary markets of India are accumulating and, if there is a lull in demand for a week or two from exporting countries, statisticians among the trade expect a sizable fall in the prices.

In the A.S.T.A. section, there are buyers for March shipment at $1.45 and for April-May-June at $1.47 with small pressure to sell. The present bullish sentiment in pepper has begun to reflect in other Malabar commodities like ginger, coconut oil and turmeric. Business in garbles, in Cochin, is very much restricted and small sales are reported done at prices ranging from Rs. 575 to Rs. 590.

Following are to-day's nominal quotations: Ready delivery Rs. 2,800, March Rs. 2,720-50, and April Rs. 2,765-95 per candy of 5¼ cwts.

FAIR DEMAND FOR TEA DUSTS

(Messrs. Forbes, Ewart and Figgis, Ltd.)

COCHIN, 14*th March*

Dust Sale "E".—Dust Sale "E" which was held on Tuesday, 10th March, contained approximately 3,62,000 lbs. There was only a fair demand and prices were generally As. 2 easier. There were a number of withdrawals, but the majority of these have been taken up since the sale.

London Market.—Strong general demand all kinds. Commons low mediums and mediums 1*d.* to 2*d.* dearer. Others unchanged.

Colombo Market.—3,750,000 lbs. Good and medium firm to dearer, particularly leaf grades. Low-growns generally dearer, fannings and dusts excited bidding on Egyptian account. Advances of 30 to 80 cents per pound.

Calcutta Market—Export.—53,700 packets. Good demand, but not so general as last week. Whole leaf grades steady. Teas up to Re. 1-10 As. 1 to As. 1-6 dearer. Others irregular and sometimes easier.

Dust.—20,500 packets. Good general demand with fairly steady prices up to Re. 1-10. Above that price a little irregular, except for best C.T.C.

Export Quota.—The market opened at 2 pies sellers, but later weakened to 1½ pies, at which price some business has been done.

Forthcoming Auctions.—Dust Sale "F" will be held on Tuesday, 24th March.

As we go to press, Messrs. Forbes, Ewart and Figgis Ltd., wire as follows:

"*Sale* 6.—8,10,000 lbs. Good general demand. Common, low medium and medium strong at As. 1 to As. 2 dearer. Good medium firm. Best liquoring lower by As. 4 to As. 6 below valuation. Best orange pekoe considerably dearer."

JUTE GOODS QUIET

(From Our Own Correspondent)

CALCUTTA, 17*th March*

Quiet conditions were witnessed in the jute goods market during the week under review. Foreign buyers were interested for only small quantities, and this contributed to a fall in prices both for hessians and for heavy goods. Sentiment in the hessian market was further affected by New York reports stating that consumption in the United States fell to 58 million yards in February from 73 million yards in January. The decline of 15 million yards could not be attributed in full to the shorter month, but has given the impression that stocks in America should be moderate. This assumption is assisted by the small measure of support given to the market by foreign buyers. There were even suggestions that, although the market for hessians has considerably improved since the export duty on them was cut 10 months ago, mills would feel the need to curtail production sooner or later. Rumours in this regard gave a push to quotations for a time, but the fact that foreign buyers were not inclined to enter into commitments on this score, erased the small gains.

Hessian 40" 10 oz. was offered at Rs. 41-12 last Wednesday, but reports that in New York spot prices fell to levels below Calcutta rates encouraged shippers to discount the local quotation, which fell to Rs. 41-4 on Thursday. A small recovery to Rs. 41-6 followed talks about the possibility of mills curtailing production, but over the week-end the realisation was only Rs. 41-2 with yesterday's rate being even lower at Rs. 40-14. B. twills fell to Rs. 92-4 from Rs. 93-4. The rates during the week were lower than those which prevailed the week prior to the cut in duty, and this shows that despite the full benefit of the duty cut being passed over to consumers, business has become difficult to materialise.

The Pakistani budget proposal to impose an import duty of 30 per cent. on jute goods and 45 per cent. on second-hand or used gunny bags or cloth made of jute is almost passing off unnoticed in jute trade circles here, which feel that if Pakistan, which is in need of only a very small quantity of jute goods a year, does not at all import any jute goods from India, it will have no effect in production of mills, in prices, or in market sentiment in this country. This proposal is, therefore, just advertisement, telling the world that Pakistan has begun producing its own jute goods and that it is no longer dependent on imports from India. It will not bring much revenue to the Government; it will not at the same time be an incentive for Pakistani mills to increase production. For, the country's requirements being small, the only incentive for increasing and improving quality would be the lifting of production by overseas buyers. But in world markets, Pakistan would have to meet competition not only from India but from the Continental producers also. It will be remembered that some months ago it was announced in Pakistan that that country would stop imports of jute goods from India and would get all her requirements direct from Dundee. This report was treated in the same way as the Pakistani Budget proposal is treated now.

During the week, mills were in the market for some quantity of raw jute. This did not, however, enliven sentiment as there were many offers. Further, in view of the distinct possibility of Pakistan removing the discriminatory export duty on jute exports to India, quotations were a shade lower.

PEAS ARRIVALS LARGE

(From Our Own Correspondent)

HAPUR, 16*th March*

Although the overall food position in the country is steadily improving, there are scarcity patches in many States which continue to cause headaches to their Governments. The Indian Food Minister told the House of the People this week that over 27.7 million people had been affected due to scarcity of foodgrains in different States. Bihar, West Bengal, and Uttar Pradesh which had been affected severally by famine conditions last year are free now. In Madras, Bombay and Mysore, famine conditions has accentuated this year. Other affected areas are Rajasthan, Vindhya Pradesh, Hyderabad, Madhya Bharat and Saurashtra. The Government of India has sanctioned big loans to the respective State Governments to enable them to meet the situation.

The U.P. Food and Civil Supplies Minister declared this week that the basic policy of the State Government was one of control and that this food policy would continue during 1953-54. According to him, it may in all probability be unnecessary to retain the system of relief shops, except in towns with a population of 100,000 and over and in the deficit towns of the eastern districts, and the bill towns after the *rabi* crops are in the market. If this happens, all forms of rationing will be with-

STOCK & SHARE QUOTATIONS

Abbreviations:—D=Deferred shares. G=Guaranteed shares. P=Preference shares. P.O.=Preferred Ordinary shares. R=Rebate shares. Y=Accounts published yearly. H=Accounts published Haf-yearly. Q=Accounts published once 15 months. T=Company has Debentures. R.L.=Reserve Liability on shares. N=Nominal Quotation. i=Interim Dividend. f=Dividend for first half-year, y=Dividend for the year. x=Ex. Dividend c.d.=Cum. Dividend.

Shares:—If a company has different classes of shares—as, for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under "Paid-up Per Share."

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12 indicate the months of June and December, respectively. "Reserves" includes general and other reserves and all other funds which a company may have as also depreciation on block items, when this is charged to separate account. "Block" represents actual cost of land, buildings, machinery, and all such other items on which depreciation is allowed, less sales, if any, and stands for the gross figure except where otherwise indicated.

Dividends:—Dividends for completed years are calculated at per cent. per annum, but, where quoted for portion of a year, they represent percentages of the dividend on the paid-up share value. For companies closing the books half-yearly in the first three months of the year, and for companies closing their books yearly during the first half of the year dividends are shown as for the previous year.

• The following explanatory notes relate to the abbreviations and marks shown on page 528 in the textures section:—

Option to repay on six months' notice, on any nterest date after 31st December, 1951, at 102 per cent. Also redeemable out of a cumulative sinking fund of 1½ per cent. per annum (commencing in 1938) by drawings at 102 per cent. or by purchase at or 102 per cent.

(a) Option of repayment at any time at 3 per cent. premium.

(b) Bearer bonds of Rs. 1,000 each repayable at par.

Bearer bonds of Rs. 1,000 each repayable on 31st July, 1959.

(d) Bearer bonds of Rs. 1,000 each with option of redemption in whole or in part at par on 30th June, 1952, or on any subsequent interest date at one month's notice

(e) Returnable on or after 31st July, 1950, at Rs. 102-8 or at par after 31st July, 1955, on six months notice in each case.

Bearer bonds of Rs. 1,000 each with option of redeeming on 3 months' notice at ½ per cent. premium, after 1st March, 1954, but before 1st March, 1957, and 1 per cent. premium on or after 1st March, 1957

(h) Option of redemption on or after 1st July, 1949, at par.

(f) Option ofrepayment at any time at par at any time on or after 30th June 1947 on six months notice

MARKET REPORTS

(Concluded from page 517)

drawn from 28 towns of the State which have a population of less than 100,000. The Government has decided to retain a sizable administrative machinery to reimpose all necessary controls on the movement and distribution of food controls at any moment, should the need arise. The power of requisitioning foodgrains is also being retained. The Government will be maintaining sufficient stocks of coarse foodgrains to meet any emergent requirements that may arise. Accordingly, it will purchase some grain and barley for building up of the reserve. Purchases will be through the trade and each licensee may be asked to give a certain percentage of his purchases to the Government. The purchase price of gram would be Rs. 11 and for barley Rs. 10 per maund. Similar action may be taken in respect of wheat, if circumstances so require, and the purchase rate of wheat will be Rs. 15 per maund.

The latest quotations in the local market are: Wheat Rs. 19 to Rs. 20; gram Rs. 15-8; barley Rs. 12; *bejhar* Rs. 12; maize Rs. 12; *bajra* Rs. 11-8; *jowar* Rs. 10-8 to Rs. 11; peas 12-14 to Rs. 13-2; *arhar* Rs. 14; *Urd* Rs. 20-8; *moong* Rs. 21 and *masoor* Rs. 15 to Rs. 17-8.

FURTHER DECLINE IN SUGAR

(From Our Own Correspondent)

HAPUR, 16*th March*

Sugar markets remain unsteady during the week under review and there has been a general decline in prices. Sugar production has been going on briskly and the trade is not so pessimist about the overall production during the current season as the Government. The Indian Food Minister expects that this year's production will amount to 1.2 to 1.25 million tons, while the trade believes that the figure may go upto 1.35 million tons. With a huge carry-over from the previous season, total supplies would be definitely larger as compared to last year. As there is a ban on exports of sugar and Indian sugar prices do not generally stand in competition with other sugar-exporting countries of the world, markets in India would continue to be bearish.

The liberal releases of sugar quotas for free sale by the Government of India in recent weeks have increased market supplies to a considerable extent. It has also discouraged the buyers. Now that the marriage season has come to a close, the sugar offtake is likely to go down still further. Stockists are quite anxious to get rid of their stocks. Owing to heavy arrivals and less demand from Southern India, the prices of sugar in the free market at Calcutta declined to some extent. There has been fairly large accumulations of stocks in Bombay.

The following are the average sugar quotations in different markets: Ambala Rs. 29-13, Amritsar Rs. 30-10, Delhi Rs. 30-5, Jullundur Rs. 29-4, Agra Rs. 29-4, Hapur Rs. 28-8 to Rs. 30, Kanpur Rs. 27-14, Mathura Rs. 29-10, Meerut Rs. 29-4, Muzaffarnagar Rs. 30, Patna Rs. 30-12, Calcutta Rs. 29-4, Gauhati Rs. 32-5, Cocanada Rs. 31-8, Madras Rs. 31-8, and Bombay Rs. 32-10.

HIDES AND SKINS ADVANCE

(From Our Own Correspondent)

MADRAS, 17*th March*

E.I. tanned hides and skins markets ruled firm during the week under review. Prices of kips in the local bazaar advanced by an anna per lb. U.K. buyers were interested in buying kips at last week's levels but shippers increased their prices by one to two pence and business was difficult to conclude. Prices of tanned buff heavies advanced by six pies per pound, but those of cow calf and buff calf remained unchanged.

HIDES FIRM

(From Our Own Correspondent)

KANPUR, 16*th March*

Although business put through was small and there were no perceptible variations in prices, firm conditions were in evidence in the Kanpur hides and skins market during the week under review. Enquiries from Madras dealers remained the market to some extent, but buyers remained cautious and there was no rush purchases. The following are the latest quotations:

Wet salted cow, 1st grade Rs. 400, 2nd grade Rs. 300 and 3rd grade Rs. 150 per score; wet salted buff, 1st grade 1 lb. 10 ozs. and 2nd grade 2 lbs. 4 ozs. to 2 lbs. 6 ozs. per rupee; goat skin, 1st grade Rs. 240 and 2nd grade Rs. 225 per 100 pieces; sheep skins Rs. 250 per 100 pieces.

FRACTIONAL GAINS IN METALS

(From Our Own Correspondent)

CALCUTTA, 17*th March*

There was a distinct change in sentiment in the metal market during the week under review, and prices registered fractional gains. Enquiries from consumers were satisfactory. The realisation that there is a shortage of ready electrolytic copper ingots coupled with better advices from the United States contributed to a three-rupee increase in the price of electrolytic copper to Rs. 187. No doubt, consumers' interest was more in offers of scrap, which also was becoming difficult to be located.

No interest was shown in antimony. Mercury was quiet at Rs. 515. However, the trade has begun to demand that the re-export quota recently fixed should be increased, as even after the exports stocks would be heavy and would meet the country's requirements for a number of years. Virgin lead took note of better advices from London and was firm at Rs. 66. Electrolytic zinc, after falling to Rs. 59-8, returned to the opening level of Rs. 60-8.

TEA PRICES FIRM

(From Our Own Correspondent)

CALCUTTA, 17*th March*

Export offerings yesterday amounted to 54,000 chests, most of which were firm. Good demand was shown to commonest, low medium brokens and fannings, prices for which were raised by an anna. A steady market greeted whole leaf grades. Demand being lower, prices for medium Assam B.O.P's and best Assams in the better liquoring section were just maintained. The quotations were: best C.T.C. Assam B.P. Re. 1-14, medium Assam B.P. Re. 1-9-6 to Re. 1-10, clean common pekoe Re. 1-7-6, and clean common B.P. Re. 1-8 to Re. 1-9.

Last week's internal sale brought an offering of 20,000 and 1,844 packages of dusts and other grades respectively, which were strongly supported. In the dust market, bright liquoring mediums sold well, and clean black leafy varieties, suitable for export, found a ready market. The best feature of the sale was good C.T.C. sorts and the better Assams, both of which were raised above brokers' valuations. Prices for commons and low mediums were maintained. Flavoury Darjeelings were again favoured, and the poor quality Darjeelings failed to attract buyers' attention. The rates were: good red Assams Rs. 2 to Rs. 2-1, medium grainy Assams Re. 1-9 to Re. 1-9-6, and medium Dooars Re. 1-7 to Re. 1-7-6.

LINSEED STEADY

(Messrs. A. Bradley & Co.)

CALCUTTA, 16*th March*

The general tone of the market has been rather steady throughout the week with prices remaining virtually unchanged; there has been a fair daily turnover, mainly for forward delivery as crushers have shown an increased interest in forward positions. Ready goods are rather scarce and are quoted at a premium, as arrivals from up-country have been poor. There have been enquiries for oil from local buyers mainly for forward deliveries and some business has resulted; there have been no fresh enquiries for export. Pending the release of a fresh Government policy in regard to export duties, the market has been displaying some hesitancy at present. The latest quotations are as follows:—Ready Rs. 20-8, April Rs. 19-4 and May Rs. 18-12 per maund.

PLANTING

(Concluded from page 494)

ernment desires to exercise greater control over the industry, the power will be to hand. It is difficult to see exactly how responsibility will be divided or who will take the blame for failure and who the credit for success. Indeed, Government's intentions may not be clearly known until the time comes for the drafting of the rules." Thus, there is a great deal of apprehensions in the minds of planters over the Government's intentions which were not made clear when the Bill was introduced. These fears may or may not be baseless. But the Government will do well to take the planters into its confidence and remove their apprehensions by making its intentions clear to them. After all, the planters also have been contributing a lot to the economy of the country.

AGRICULTURE

(Concluded from page 504)

ing. In the U.K. bee-keeping has made rapid progress during the last few years. Countries like Russia, Australia and New Zealand have made sizable progress in producing honey.

The value of the bee-keeping industry does not end with the production of honey. The value of insects as pollinators of flowers is enormous. But for the service rendered by bees, we would not be able to enjoy any one of the deciduous fruits such as apples, plums, peaches and cherries or vegetables such as melons, cucumbers, cauliflower and turnips and would have no oil either to eat or to rub our bodies. Cross-pollinated seeds, fruits or vegetables are better, bigger, and perfectly formed. Besides, longer yields can be obtained provided a sufficient number of colonies of bees in the field and the orchard is placed. It has been estimated that four colonies of honey bees are sufficient for about an acre of oilseeds, legumes, fruits or vegetables.

Experience shows that bee-keeping is a profitable business for a small holder who is in need of subsidiary occupation and wants his leisure time to be utilised for some good purpose. As a commercial enterprise, however, bee-keeping can be practised only in localities where honey plants are abundant. The bee-keeping industry should, therefore, be given the attention that is due to it for development on proper lines.

ANIMAL HUSBANDRY

An aspect of Indian economy which has received somewhat less recognition than is due to it is animal husbandry. It is no wonder then that, in spite of India having the largest cattle population in the world, the average consumption of dairy produce in the country is so low. In view of this and also of the fact that livestock plays a significant part in the country's economy—its annual contribution to the gross national income is estimated at Rs. 1,000 crores, which excludes the value of animal power for agriculture and transport— the importance of animal husbandry cannot be too strongly stressed. Dr. Punjabrao Deshmukh, Union Minister for Agriculture, stated, in the course of his address at the tenth annual session of the Animal Husbandry Conference, held at Poona on Monday last, that the farmer's animals were the focal point in the intensified and integrated nation-building and mass-welfare programme evolved under the Five-year Plan in the key village, community project and development schemes.

The mere inclusion in the programme of improvement in livestock in the Five-year Plan is not, of course, en

TRIUMPH FOR BUYERS' MARKET

THE successful conclusion of the trade negotiations between India and Pakistan held at New Delhi last week is the result of the return of a buyers' market in jute and jute goods. It will be unwise to put it at any higher than that. Pakistan was willing to come to an agreement with India, because that was the only solution open to it for a problem arising from its own actions. Some are inclined to consider the satisfactory outcome of last week's talks as denoting a change of heart on the part of Pakistan towards India. Past experience and even the recent pronouncements by some of the high dignitaries in Pakistan do not fully warrant this inference, though we would like to hope that it is correct. India has always cherished the desire to live in peace and friendship with Pakistan, and our Prime Minister has never been tired of saying, quite rightly, of course, that this sub-continent has no hope of survival, unless both the countries live as good neighbours. It is in keeping with this policy that the Government of India readily agreed to Pakistan's desire to re-open talks for exploring the possibilities of a long-term trade agreement. Economically, however, India to-day is not in *urgent* need of an understanding of the type that has now been reached with Pakistan. The supply position of raw jute in India is by no means so uncomfortable as to require this understanding. Nor are the prospects for exports of coal so bleak as to necessitate the extension of a special advantage to Pakistan. In saying this, we do not mean to suggest that the agreement concluded last week is either undesirable or wholly unwarranted. But what we wish to point out is that, unlike Pakistan in the past, India did not make any attempt at driving a hard bargain by taking advantage of Pakistan's present economic plight; instead, it has, generously and in a commendable spirit of forget and forgive, extended its helping hand to Pakistan when the latter asked for it. It is to be hoped that Pakistan will reciprocate this gesture by India in settling the remaining differences between the two countries.

The trade agreement under reference is of a limited nature, in that it covers only three items, namely, jute, coal and films. Because the first two commodities figure prominently in the deal, there seems to be an impression in the minds of some that it is a barter agreement. This is not so, for the simple reason that the import of Pakistani jute is not linked to the export of Indian coal. One is completely independent of the other. Under the terms of the agreement: (1) Pakistan has agreed to lift, with effect from the 25th inst., the licence fee of Rs. 2-8 per maund on exports of raw jute to India and reduce the export duty on loose jute, or *kucha* bales, to the same level as the export duty on *pucca* bales. (2) As from the same date, the Government of India has agreed that the prices of coal supplies to Pakistan—which have hitherto been higher than the prices charged to Indian consumers—shall be reduced so as to bring the two on a par. (3) The Government of Pakistan has also agreed, with effect from the same date, to levy the same effective rate of import duty per foot of exposed cinematograph film imported into Pakistan from India as may be leviable on imports from other countries. (4) In order to enable Pakistan to plan its production of raw jute, India has indicated that it will need at least 18 lakh bales per year from Pakistan. Accordingly, the Government of India has agreed to give import licences for this amount in each of the three jute years commencing 1st July, 1953. Should, however, larger quantities be required by India, Pakistan will facilitate the export of raw jute upto 25 lakh bales in a year. The trade will be through normal trade channels. (5) India has agreed to provide improved facilities for the export of coal to Pakistan and the movement of coal by rail to West Pakistan will be increased. (6) It is agreed that, at a later date, there should be further discussions between the two Governments, with a view to widening the scope and expanding the volume of trade between the two countries.

If the terms of the above agreement are viewed against the background of the history of the dispute between the two countries in regard to coal and jute, it will be found that the Government of India has treated Pakistan in a generous manner. In agreeing to remove the licence fee on raw jute exports to India and to collect only the same rate of duty on exports of loose jute as on *pucca* bales, Pakistan has conferred no special favour on India. It has merely removed an unfair discrimination which it chose to practise against India in July last to the advantage of jute manufacturers outside India. This discrimination was contrary to the provisions of the G.A.T.T., to which Pakistan is a party. That India had a strong case against Pakistan in this respect was beyond doubt. But the contention of Pakistan that the levy of a surcharge by India on exports of coal to it constituted discrimination had no basis whatever. That the Government of Pakistan was fully aware of this is evident from the fact that it did not lodge a complaint against India with the G.A.T.T. The principle underlying the surcharge on exports of coal is analogous to that of the double-price system which many countries in the world are practising to-day, that is, a lower price for domestic consumers and a higher price for export markets. Even Britain is following this practice in regard to exports of its coal. The surcharges levied by India vary from time to time and from markets to markets, depending upon the trend of world trade. The surcharge on exports of coal to Australia, for instance, is lower than that on exports to Burma and Malaya. Here, there is no intention of discriminating against Burma and Malaya in favour of Australia. A higher surcharge on exports to Burma and Malaya is charged because the traffic can bear it. It will thus be seen that the surcharge on coal is not similar to the additional duty and licence fee levied by Pakistan on exports of raw jute. These latter levies were specifically meant for placing the Indian jute mills at a disadvantage *vis-a-vis* the mills in other parts of the world, whereas India had no such ulterior motives in levying a surcharge on exports of coal to Pakistan. There can thus be no comparison between the two. Yet the Government of India has, apparently in its desire to promote better relations between the two countries, agreed to overlook the difference between the two and remove the surcharge on exports of coal to Pakistan as a quid pro quo to the Government of Pakistan abolishing the discriminatory duties on exports of jute to India.

What was it that made Pakistan remove the special duties on exports of jute to India after retaining them for nearly nine months? In the first place. Pakistan may have realised that the G.A.T.T., to which India had complained, may give an adverse verdict. Secondly, Pakistan must have realised that, in spite of all its efforts to develop markets for its raw jute outside India, it is still dependent on India for selling quite a substantial quantity of raw jute. The total supply of raw jute in Pakistan during the current season is of the order of 80 to 85 lakh bales. Out of this, countries other than India may take only 35 lakh bales—even in the peak year of 1950-51, these countries absorbed only 42 lakh bales. This leaves a balance of 45 to 50 lakh bales, of which India may absorb about 15 lakh bales, with the result that, at the end of the current season, Pakistan will still have a large carry-over of 30 to 35 lakh bales. Even if the output in the next season is restricted to 42 lakh bales only, as directed by the Pakistan Government, the total supply in the 1953-54 season will be as large as 70 to 75 lakh bales, that is, some 40 lakh bales more than the quantity that can be consumed by countries other than India. It is true that Pakistan is making feverish attempts to increase its capacity to consume raw jute by establishing mills. But the quantity which it can consume will be relatively small for some years to come. Thus, despite its heroic attempts to be independent of Indian mills, Pakistan finds that its dependency on India for disposing of its jute is still substantial. Thirdly, the Pakistan Government is passing through difficult times, both politically and economically.

In the aforesaid circumstances, the Government of India could have taken a somewhat firm stand against Pakistan's demand for the abolition of the surcharge on exports of coal. But its action could be justified from the long-term point of view. Pakistan is the natural market for Indian coal. It is, therefore, in the interest of this country to keep that market well supplied with its coal at competitive prices. It is true that, at present, the buyers' market has not yet fully asserted itself in the sphere of coal exports and that, even with the surcharge on, Pakistan imported from India as much as 1,145,000 tons of Indian coal in 1952, as against 900,000 tons in 1951. But the day may not be far off when keen competition for markets for coal will reassert itself. Incidentally, it would have been better, if the Government of India had obtained an assurance from the Government of Pakistan about the minimum quantity of coal that it would take from India in the same manner as it has given an undertaking in regard to imports of Pakistani jute.

There is a fear in certain circles that the 18 lakh bales of raw jute which India has agreed to take from Pakistan will adversely affect the domestic production of jute. This fear is not totally unwarranted, considering that the gap between the present output of Indian jute and the demand from mills is only about 10 lakh bales and that the quality of Pakistani jute is superior to Indian varieties. A reduc-

tion in India's production of jute is, perhaps, inevitable and not so undesirable either. In the present context of a strong buyers' market for jute goods, the Indian mills require more of high quality jute at reasonable prices than is grown in India. Self-sufficiency in jute is rather a costly policy, which should be modified if conditions for doing so are either favourable or if circumstances warrant it. Now that Pakistan is willing to supply India with more jute on the same basis as it does to other countries, India can afford to slow down its drive for higher and higher production of jute and concentrate its attention on growing good quality jute. This in itself will release certain areas, which are now growing only poor quality jute, for being utilised to produce foodgrains. Thus, the foreign exchange that will be lost on increased imports of jute from Pakistan can be offset by a saving in it brought about by a reduction in imports of foodgrains facilitated by increased domestic production.

NATIONALISATION OF AIR TRANSPORT

THE Government of India has now published the Air Corporations Bill, which seeks to create two corporations, one for the operation of long-distance international services and the other for domestic air services and for services to neighbouring countries such as Pakistan, Ceylon, Iran, Afghanistan and Burma, and these will be designated "Air-India International" and "Indian Air Line," respectively. These two corporations will take over the business of the existing private operators engaged in providing internal and external air services. Accordingly, private operators in the air transport industry will disappear when the Bill is placed on the statute book. For some time now, the air has been thick with rumours of nationalisation so that the disappearance of private operators has never been in doubt. The introduction of the Bill has, therefore, caused neither surprise nor excitement.

To those, however, who expected that the Government would at least publish a White Paper setting forth the reasons which prompted them to order the disappearance of private operators into thin air, the unseemly haste with which nationalisation is being implemented will come as a painful disappointment. With little ado, no more ado than would attend the requisitioning of a private building for official purposes, the Government is now taking over an entire industry, built up by private enterprise against heavy odds, one of which was the unsympathetic attitude of the Government itself. The public got little opportunity to discuss the issues involved. Reports of hurried consultations at top level, followed by vague reports about the Government's intentions to nationalise the industry, were the only stuff on which the public was fed, before it was served with the Bill to nationalise the industry. If the Government has thus failed to adopt the democratic procedure of giving the public and the Press a preview of its policy, the private operators have, strangely enough, been even less outspoken in their comments on the Government's policy. They have capitulated at the first sign of the Government's onslaught on this private sector without so much as a skirmish. They have, in fact, succeeded in giving the impression that they were only too willing to pass the baby (industry) to the Government. This is all the more regrettable, because they had a good case to fight for; a good case not only against nationalisation in principle, but also for better compensation, if nationalisation must at all take place.

Before we take a look at the main provisions of the Bill for nationalising air transport, it is necessary to consider whether nationalisation of the industry was inevitable. It is true that the industry has been passing through a difficult period for some time now. But the question is whether the Government has not behaved as though the industry's adversity was its opportunity. How else could the Government's move to take over the industry be described, considering that the Air Transport Inquiry Committee was against the policy of nationalisation of the industry? After an elaborate examination of the case for nationalisation, the Committee—there was not a single air transport operator on it—concluded that there was "not sufficient justification to break away from the present set-up," and backed this conclusion by an array of well-reasoned arguments which would even to-day stand the test of impartial scrutiny. The Committee also referred to the Government's previous decisions and policy statements on the subject which indicated that the Government's "constant view" was that "air transport should be left to private enterprise." A sudden reversal of this policy, it said, "may undermine the confidence of the industry in the assurances of the Government and may have unfortunate repercussions on the development and expansion of other industries also." Despite this warning, uttered after due deliberation and care and with forethought, the Government has rushed in with a big stick to beat private enterprise and drive it out of the field. There has never been any precedent for such a step, that is, for the Government going back on its Committee's recommendations, without there being any provocation for such a departure.

Instead of implementing these measures in their entirety and in the spirit in which they were put forward, the Government consistently accused the operators of extravagance, if not inefficiency, and charged them with incapacity to set their houses in order by mutual co-operation among themselves. It controlled the fares and freights in such a manner as to give no scope for either earning a reasonable profit or for free competition which would have eliminated the inefficient and marginal units. It accused them of high cost of operation but, at the same time, levied a duty of As. 15-9 on aviation spirit (subsequently reduced to As. 6 in 1952) which meant higher costs of operation at a time when traffic was beginning to fall off. There was little room left for implementing economy measures, considering that nearly 50 per cent. of the costs is represented by cost of fuel, spare parts and stores and another 40 per cent. by wages and salaries; the cost of the former item does not vary much from year to year, while that of the latter has been fixed for most companies by labour tribunals. Apart from these difficulties, the Government licensed far too many companies in the post-war period so that the available traffic was uneconomically distributed among the operators. It is strange that the Government, which determines the freights and fares, the frequency of flights and other details of air transport, should have been so indifferent to the need for economic operation of the aviation companies. The Government does not seem to have realised that it is a serious reflection on its ability and foresight if it allows an industry, over the working of which it exercises complete control, to fail or to work consistently at a loss. It is this failure of the Government to regulate the industry on proper lines that provides a first class ground for the charge by private operator that it was the Government that brought the companies to their present plight. The unrealistic and irksome controls exercised by the Government have discouraged the operators to such an extent that they are apparently quite willing to transfer the burden on to the shoulders of the Government and be content with a reasonable compensation for the assets which they have built up.

The amount payable by way of compensation to the companies is now placed at Rs. 4.8 crores, of which 10 per cent. will be paid in cash and the balance in 3½ per cent. bonds, redeemable at par at the end of five years. Both the interest and the redemption of the bonds are to be guaranteed by the Central Government. The assets will be valued with reference to the cost which each company incurred in acquiring them. Provision for depreciation will be made on the lines of the Indian Income-tax Act. Stores and spare parts will be taken over at cost less 10 or 20 per cent., depending on whether the stores are meant for Dakota or Constellation and Skymaster aircraft. The aggregate actual cost to the existing air companies of all lands, other than leaseholds, will be paid for. An amount not exceeding Rs. 10,000 might be paid as compensation for intangible assets or loss of profits. In the absence of an agreement, the assessment of compensation will be made by a tribunal consisting of three members appointed by the Central Government, one of whom will be a High Court judge. All personnel employed by the companies before 30th June, 1952, will be transferred to the Corporations. Each Corporation will have a board of directors consisting of five to nine members, with the Central Government's nominee as the Chairman. The Central Government has powers to control the activities of the Corporations. The Bill contemplates the setting up of an Air Transport Council, at a cost of Rs. 1 lakh per annum, to which matters of common interest to the two Corporations will be referred. A Labour Relations Committee is another body which is contemplated by the Bill.

Such, in brief, are the main features of the Bill. The question of compensation, it will be clear from a perusal of the Bill's provisions, has been decided without any reference to the market value of aircraft. It is computed, for instance, that a Dakota aircraft will be acquired for some Rs. 50,000, as against their market value of Rs. 3 lakhs, and that a Skymaster aircraft will be acquired for Rs. 4 to Rs. 6 lakhs, as against the market price of Rs. 30 lakhs. Little account is taken of the servicing charges which have been incurred by the companies for maintaining the airworthiness of their aircraft. Nor has any account been taken of the goodwill of the companies, unless the paltry sum of Rs. 10,000 for intangible assets could be regarded as compensation for goodwill. The companies have spent sizable sums, estimated at Rs. 1 to Rs. 1½ lakhs per year, on training of pilots alone. Thus, the Government seeks to get the benefit of trained personnel, such as pilots, radio officers and others, free of cost. It may be noted here that, when Air-India Ltd. took over the air services built up by Tata Sons Ltd., it paid no less than Rs. 20 lakhs by way of goodwill. It is true that a tribunal is contemplated for determining the question of compensation in the event of a dispute between the Government and the industry. But the Tribunal's freedom is strictly limited by reason of the elaborate principles of compensation laid down in the Bill. In short, the amount of compensation now proposed is so inadequate that it is nothing short of partial expropriation of assets, an action which is against the spirit of our Constitution.

No light is thrown by the Bill on the practical issues of integration of the existing air companies; nor is any light thrown on the vital question of the place of non-scheduled operators. A solemn assurance that no retrenchment of staff is contemplated has already been given by the Ministers concerned, though merger ought to mean at least some retrenchment of surplus staff. Perhaps, the question would be settled by compelling the employees to accept lower wages—this could hardly be a popular move—or by raising freights and fares, or by giving the Corporations relief in taxation or in other imposts, such as the duty on petrol. In any case, it looks as though one can safely conclude that, if the Corporations work economically, it will be either at the expense of the employees or of the taxpayer or of the passengers; most probably, it will be at the expense of all these groups.

Finally, there is the question of the autonomy of the Corporations. The public has, for long, demanded, and the Government accepted, the principle that commercial enterprises, run by the Government, should be fully autonomous and worked on accepted commercial principles. It is a strange variety of autonomy, indeed, which, in the case of the Corporations, is circumscribed by the powers of the Cabinet, the Directorate of Civil Aviation and the Air Transport Council. The Central Government, it is stated, "may give to either of the Corporations directions as to the exercise of its functions and the Corporation shall be bound to give effect to any such directions." In practice, this power will, naturally enough, be exercised with the concurrence of, or in co-operation with, the Directorate of Civil Aviation. All the members of the Board will be nominated by the Central Government. Each Corporation will be under the guidance of a General Manager, who will be appointed not by the Board but by the Government. The Corporations will thus be merely an extension of the Government, part of the Governmental machinery. And it is reasonable to fear that the policy of the Corporations will change with the political complexion of the Government.

Superimposed on this system of control is the Air Transport Council which will exercise its powers in its advisory capacity. The Directorate of Civil Aviation has, according to all accounts, grown into a large-sized organisation, a size which is out of proportion to its modest functions. It is not clear, therefore, why another body, the Council, is sought to be created. It is not as if the Council will be an autonomous body. It has a purely "advisory" capacity. And, what is even more pertinent, it can render advice only on questions referred to it by the Government. By thus reducing the autonomy of the Corporations to a farce, the Bill aims at nothing less than the incorporation of the air transport industry as part of the Government machinery. The import of this development to the efficient working of the Corporations is of a serious nature, indeed.

AWARD ON TATA DEFERREDS IMMINENT

ESTATE DUTY—CONTROLS ON BANKS—DEFICIT FINANCING—OUTLOOK FOR COMMODITIES

THURSDAY, 5 P.M.

MARKET GOSSIP

A STEADY trend is prevailing in the Share Market at the time of writing. Early in the week, there was a sharp setback in the value of speculative counters brought about by unfavourable and unfounded rumours about the impending Estate Duty. But the setback was short-lived and much of the loss has since been made good, the closing rates for the week being practically the same as those a week ago. This recovery shows that the intrinsic strength of the market has improved. At one time, it was believed that, as equity values moved up, old investors would come out to cash their holdings. This expectation has not so far materialised, for there are now fewer offerings on the market than, say, three or six months ago. Apparently, these investors have changed their minds, in the hope of seeing still higher prices. Whether or not their hope will materialise is a question to which one cannot give a dogmatic answer. This much, however, can be said. The outlook for most of the Indian industries is now better than it was six months ago or this time last year. At the same time, it must be stated that the existing yields on almost every one of the first class shares quoted on the Bombay Stock Exchange have come down to a level at which it looks as though this improved outlook for industries has been discounted to a very large extent. Exceptions there may be; also much will depend on what one considers is a reasonable yield. Having regard to uncertain conditions in the world, most people will agree that 5 per cent. to 6 per cent., free of tax, is a reasonable return for first class scrips, depending upon whether a particular scrip is speculative or not.

* * * *

Two factors are now exercising the minds of operators in shares. One is the Estate Duty and the other the award of the Mediator on the issue of Tata Deferred conversion. Various rumours about the former were set afloat early this week. But, as there was nothing new about them, the frightened look of some of the operators was really surprising. New Delhi advices indicate that many of them are baseless, for the authorities have not yet decided as to what should be the rates of Estate Duty, the exemption limit, etc. It is just possible that the Select Committee will submit its report before the end of this month. But as the measure is a highly complicated one, it may require further expert examination. Although Mr. C. D. Deshmukh stated in the Council of State, early this month, that it was the Government's intention to ensure that the Estates Duty Bill was passed during the current session, he may not find it possible to do so. All available indications go to show that it may take at least another four or five months before we are in a position to get an idea of the incidence of this duty, the main point about which all "money bags" in the country are now worried.

* * * *

It will not be long before the Mediator's award on the Tata Deferred Conversion issue is made public. Well-informed circles believe that the award may be published before the end of this month. According to one reliable source, a ratio of 6 Ordinary shares per Deferred share as the recommendation of one of the experts—an auditor practising in Delhi—advising the Mediator. The expectation in market circles varies between 6 and 6½ Ordinary shares per Deferred. Enquiries made in both the camps reveal that it will be quite surprising if the award is meekly accepted by them. Both the classes of shareholders are still feeling that they should fight out the issue in the Court and prolong it as far as possible. Unless, therefore, the award is enforced by the Government, the chances are that Deferred shares may have a much longer life as a trading counter in the market than most people believe.

* * * *

Every time the shares of the Indian Iron and Steel Co., Ltd. cross the limit of Rs. 26, the fear of the management of the Company, who is controlling the large holding of 11 lakh shares taken over from the "SCOB," unloading a part of these large holdings asserts itself and the quotation soon slips back. This is what happened during the past few days, when Indian Irons swiftly retreated from Rs. 27 to Rs. 25-10. In fact, there is an impression that a part of this big holding must have been quietly sold by the management. How far is this impression correct? Here is the answer to this poser, as given by the Calcutta Financial Correspondent of the *Statesman*, a paper close to the management of the Company:

"To discredit this bear rumour once and for all, one should point out that it is unthinkable that Irons would be dumped on the market from that quarter, if only because the proceeds from the sales are to be devoted to the expansion of the Company's works and it is the holder's concern to obtain for them the best price possible. It is quite improbable that shares would be sold in quantities sufficient to depress the price, and, for that matter, it is unlikely that any would be sold for some considerable time. As present expansion plans draw nearer completion, Irons will be worth more, and it is a reasonable conclusion that a large holder, who is in no urgent need of funds, would be content to wait a few years until Irons stand at a price many points higher than anything they are liable to reach this year."

* * * *

The explanation sounds convincing, though it is difficult to say whether there will be a further capital appreciation in the value of these shares and, if so, when and to what extent. Much, of course, will depend on the dividend policy that will be followed by the Directors in the coming few years and the attitude of the Government towards this issue. It may be mentioned here that the Government will soon be appointing, if it has not already done so, one or two of its nominees on the Board of Directors of the Company.

* * * *

The members of the Bullion Association, Bombay, deserve to be congratulated on the spontaneous display of their disapproval of the proposals that emanated from the majority of the Board of Directors for amending the terms of the futures contract in such a way as to give special weights against the bulls. The members first expressed their disapproval by not participating in requisite numbers in the general body meeting, held last week. Consequently, the meeting had to be adjourned for want of a quorum. The adjourned meeting was held on Wednesday this week, at which all the resolutions proposing major changes in regard to the scale of margin, conditions of delivery, auction of delivery and declaration of emergency were defeated by large majorities. If these resolutions had been accepted, it would have meant that the members of the Association were in favour of turning their market into a gamblers' den, reducing the contract to a wagering one. It is gratifying to find that the majority of them did not allow such a stigma to fall to their lot.

* * * *

When does deficit financing cease to be a useful instrument of economic policy and become inflation, pure and simple? This is a difficult question. One might as well ask when courage ceases to be courage and becomes foolhardiness, or when caution ceases to be caution and becomes an excuse for cowardice. Deficit financing is certainly allied to inflation and yet it could, under certain circumstances, be made to stand out in contrast with inflation. But the line of distinction between the two is very thin. Mr. E. M. Burnstein, Leader of the I.M.F. Mission, admitted as much when he said at the Press Conference held in New Delhi on the eve of his departure from India, that there is no way to set down a formula for what is the right amount of such financing and what would be excessive. The only definition he could offer was that the "right amount of deficit financing is the amount that meets the country's need for additional money without making prices rise." He was not, of course, unaware of the fact that this description, simple as it seems, gives no real clue to the easy and successful adoption of deficit financing, for, he said: "This can only be determined by letting the money supply expand slowly, by watching its effect, and by taking steps to prevent excessive credit that would force up prices."

* * * *

Mr. Bernstein recognised that a sound development programme would require more investment than could be easily financed by savings, for, if it required no more, it would not be a development programme but a mere inventory of investment projects that would be undertaken in the ordinary course of events. It is not, therefore, surprising that the Plan calls for a much higher level of investment—any plan, worthy of the name, ought to do that. But there was danger, warned Mr. Bernstein, in the view that finance ought not to stand in the way of development. The trouble was that inflation "is a socially and economically costly method of securing development," for inflation transfers income from one section, the economically weaker section, to another, raises the consumption of one class at the expense of another, distorts the economy, and wastes resources by drawing them into socially less productive channels.

* * * *

There is no need, however, to see the ghost of inflation in every dose of credit expansion. After all, in an expanding economy, as Mr. Bernstein said, it is essential that money supply should expand to enable the public to finance the higher level of production and consumption. This expansion could only take place, he added, through the acquisition of foreign exchange resources, the creation of Reserve Bank credit, or the creation of credit by the Scheduled Banks. He said: "That is why some borrowing by the Government of India from the Reserve Bank—what you call deficit financing—is not only justified but is even necessary." Lest this should be mistaken for a concealed plea for inflation, he reiterated his stand by saying: "I favour zero inflation, but I hold this is consistent with some deficit financing. I believe that some borrowing by the Government of India from the Reserve Bank is necessary and desirable at this time to keep the economy progressing on stable price basis." He felt that India had an "exceptionally successful" record in combating inflation in the past few years, for it followed a "determined and intelligent credit policy." He added: "The same determination and intelligence will be needed to shape credit policy in the next few years, when the Plan is being carried out. With such a policy, there is no great risk that deficit financing will get out of hand and result in inflation."

Here is the rub. The chief difficulty is that, although the Government has no doubt been successful in combating inflation arising from afar through the imposition of export duties, restriction on imports, and the grant of food subsidies, its ability to combat inflation which arises from within has still to be tested. During the post-Korean boom, the Government did successfully tackle inflation. But inflation was then an external enemy. It remains to be seen whether it could fight, equally successfully, an inflation generated from within by the adoption of deficit financing.

* * * *

The role of the banks in the unfolding of our economic potentialities, contemplated by the Five-year Plan, has not received sufficient recognition in this country. Analysing what he called the "vital bearing" of the Plan on the operation of the banks, Mr. H. P. Mody, who was addressing the annual meeting of the Central Bank as its Chairman, said that the large-scale expenditure (Rs. 2,089 crores) envisaged by the Plan, "would create opportunities for a large volume of business by the banks." The Planning Commission had not made any estimate of the total increase in short-term credit which the rising *tempo* of economic activity would need, but the requirements of the private sector of industry had been placed at Rs. 150 crores. Mr. Mody said: "This is the additional working capital which industry would need by the end of the Plan, and it would be mainly the responsibility of Scheduled Banks to provide it." The Planning Commission, on its part, has however admitted that the "process of economic development, once started, will make new demands on the banking system." There is no doubt that increasing demands will be made on the banking system. And, it is to be hoped that the banks will be found equal to the task. Mr. Mody referred, in this connection, to the Commission's view that the Reserve Bank should exercise a direct control over banks' operations with a view to ensuring that lack of short-term credit will not hamper the development programme contemplated by the Plan. He argued that, since the banks had always responded to the Reserve Bank's directions in the past, there "does not appear to be any need for the Reserve Bank to exercise any additional control for securing the flow of credit necessary for the execution of the Plan." In view of the banks' record of responsive co-operation with the Government, Mr. Mody rightly suggested that any "talk of intensified control can only be characterised as unfortunate and uncalled for."

* * * *

Of late, there has been a tendency for Indian banks to extend their banking activities to overseas countries, especially in the East and South-east Asian countries. Mr. Mody's reference in his speech to the Bank's proposed branch in London, therefore, roused the shareholders' curiosity to know something about the prospects for their Bank's branches in overseas countries. In reply to a shareholder's query whether the Directors were considering opening of any more branches outside India, Mr. Mody said that they were not anxious to do so.

* * * *

World producers of raw materials need fear no want of markets. This is the broad conclusion which emerges from the study of the Royal Institute of International Affairs Information Paper on world production of raw materials. The conclusion must certainly be heartening to raw material producers who comprise so large a proportion of the globe. And they are in need of some encouragement, considering that every rise in raw material prices has in the past been followed by a violent reaction. The recent experience of how the Korean boom has petered out is only another instance to show the essentially unsteady character of the markets for raw materials.

* * * *

The Institute's study of the subject refers to the "slump psychology" among the producers. But it points to the fact—an encouraging sign for the raw material producers—that, although world production of raw materials in 1950 was only some 10 per cent. higher than in the five years immediately preceding the outbreak of war, manufacturing capacity increased by as much as 40 per cent. The Paper says: "Manufacturing capacity throughout the world is outstripping the supply of raw materials."

* * * *

It refers, in this connection, to the American economy which, even under peaceful conditions, can be expected to expand at the compound rate of 3 per cent. per annum, so that, by 1975, the U.S. would be using 60 per cent. more raw materials than in 1950. Efforts are, no doubt, being made by the U.S. to increase domestic supplies of raw materials. But the limiting factors are the high cost of exploiting these resources and the fact that the high-grade materials have already been exploited. Thus, supplies of high-grade iron ore in the U.S. are expected to decline after 1956; the U.S. will also have to depend increasingly on imported bauxite for its aluminium production. The Paper, in fact, sees in this trend the hope of a long-term solution of the world's dollar problem. Increasing dependence of the U.S. on the outside world for raw material supplies ought to ease the world's desperate need for dollars. But this is only a long-term prospect, for, in respect of the short-term trend, it says: "In the immediate future, the fact that the U.S.A. is expanding its domestic output of primary products to meet the needs of its defence programme might well intensify the dollar shortage for other countries when rearmament ends, unless the high cost development projects are closed down."

* * * *

The Paper deplores that few international commodity schemes have come into effect in the

EQUITIES LISTLESS

TATA ORDINARIES DEPRESSED

(From Our Own Correspondents)

BOMBAY, 26*th March*

THE Stock Exchange proved its vulnerability to rumours in the absence of any other factors. After an initial hardening tendency based on hopes of better trade relationships with Pakistan, the sentiment of operators turned bearish. Rumours about Parliament proceeding with the Estate Duty Bill and speculation regarding the exemption limit and rates of duty in the Bill created a hesitant feeling. But soon interest of operators in shares was revived with the announcement of the Mediator's award on the Tata Steel conversion scheme being imminent. Conjectures about the ratio of conversion became rife, although the gap between the two sets of ratios had considerably narrowed. The common expectation was that each deferred share would be equivalent to six ordinary shares. But speculative interests were inclined to place it a little more favourable to the Deferred holders. As a result, the Deferred shares hardened towards the close, while the Ordinary shares were subjected to a mild hammering. The revival in Tata Deferreds towards the close also imparted a mild steadiness to the other sections. On balance, however, values were a shade lower than those at the close of last week. The much anticipated Indo-Pakistan Trade Agreement did not make any impression either here or in the Calcutta Share Market where jute shares continued to be featureless. To-day, the Stock Exchange remained officially closed for only an hour as a mark of respect to the late Mr. J. J. Kapadia, one of the prominent share and stock brokers of the city. But members refrained from doing business for the rest of the trading period.

In the steel section, Tata Deferreds opened promisingly and touched Rs. 1,888-12, as against last week's closing of Rs. 1,876-4, before rumours about the Estate Duty Bill brought them down to Rs. 1,850 on Tuesday this week. But later on reports about the ratio of conversion and firm advices from the bullion market lifted up the shares to Rs. 1,872-8 at the close yesterday. Tata Ordinaries declined from Rs. 326-4 to Rs. 318-8, before closing at Rs. 319-4. Selling pressure from Calcutta pushed down Indian Irons from Rs. 26 to Rs. 25-5, but at the close the scrips regained to Rs. 25-10.

Textile shares were unimpressive on adverse reports regarding declining offtake of cloth both for exports and internal sales. Bombay Dyeings disclosed no appreciable fall, though early in the week a mild pressure was noted when the scrips fell from Rs. 410 to Rs. 402-8. Latterly, there was an improvement to Rs. 407-8 before finishing at Rs. 405. Kohinoors moved between Rs. 310-4 and Rs. 305 and closed at Rs. 308. Centurys receded by Re. 1-8 to Rs. 280-8 and Central Indias were quiet at Rs. 161-8. Finlays were down by Rs. 3 at Rs. 315 and Gokaks by Rs. 3-8 at Rs. 223-8. New Greats were lower by a rupee at Rs. 133-8. Khataus were steady at Rs. 192-8. India United Ordinaries lost As. 2½ to Rs. 9-9. The notable exceptions to the general trend were Simplex shares, which rebounded by Rs. 6 to Rs. 182-8 on expectations of a bonus issue, and Svadeshis, which advanced by Rs. 8-8 to Rs. 263-8 on anticipations of higher dividends.

Bank shares were a little easy on selling seen in a few counters. Barodas were down by Re. 1 at Rs. 112. Indias were placed at Rs. 153-12 *ex-div.*, as against Rs. 159 *cum-div.* Centrals were at Rs. 67 *cum-div.* and their 'A' ordinary shares declined by Rs. 2-4 to Rs. 68-12 *cum-div.* Imperial Fully Paids were dull at Rs. 1,855, as also the Contributories at Rs. 457-8. United Commercials disclosed a loss of As. 4 at Rs. 37-12.

Interest in public utility shares was patchy and prices in select scrips showed small rises. The undertone was steady. Ahmedabad Electrics Old were placed at Rs. 114-11 *cum-div.*, as against Rs. 115-5, while the New shares were unchanged at Rs. 114-1. Bombay Suburbans were maintained at Rs. 123-12 and Surat Electrics at Rs. 121-14. Tata Hydros were up by Re. 1-8 at Rs. 153-8. Andhra Valleys hardened by Rs. 10 to Rs. 1,437-8. Tata Powers were, however, lower by Rs. 2-8 at Rs. 1,537-8.

The miscellaneous section was extremely dull. Associated Cements moved narrowly and closed at the previous week's level of Rs. 173. Belapurs hardened by Re. 1-8 to Rs. 238-8 due to scarcity of stocks. Bombay Burmahs reacted from Rs. 396-14 to Rs. 394-6, the shares at one time touching a low of Rs. 390. Industrial Investments were better by Re. 1-8 at Rs. 73-8. Killick Industries hardened by Re. 1-12 to Rs. 146-4. National Rayons were steady at Rs. 74-12. Tata Chemicals were unchanged at Rs. 9-12 and Tata Oils gained a fraction to Rs. 34-12. Wimcos were done Re. 1-4 higher at Rs. 231-4.

In the mining and engineering group, B.B. Petrols were steady at Re. 1-2½. Indian Coppers were quiet at Rs. 3-3. Alcocks drifted lower by Rs. 2-8 to Rs. 306-4. Premier Constructions looked up by a rupee to Rs. 91. Shivrajpurs were maintained at Rs. 63 *cum-div.* Tata Locomotives had sellers at Rs. 86.

In the transport group, Scindias receded by As. 4½ to Rs. 14-6, but Bombay Steams were up by As. 8 at Rs. 25-8. Bharat Lines had buyers at Rs. 94. Hindustan Motors were listless at Rs. 4-6. Air-Indias were done at Rs. 83 and Air-India Internationals were wanted at Rs. 102.

* * * *

Calcutta Stock Exchange

CALCUTTA, 25*th March*

A setback in sentiment and a reduction in turnover were features of trading on the Calcutta Stock Exchange during the week under review. Monday was observed as a holiday on account of *Sriramanavami*. Depression in the speculative Indian Irons was as sudden as was the spurt mentioned in these columns last week. The loss in the quotation was by two points to Rs. 25-3. The general tendency for quotations to move down was mainly due to the wait-and-watch attitude of operators after a week of hectic activity. London reports hinting at the possibility of high-level peace talks between Russia and the Western democracies and the revival of hopes of settlement in Korea under the U.N. auspices encouraged investors to pause and await the emergence of a clearer picture. Reports that the Estate Duty Bill would come up for consideration in the present session of Parliament were another factor which checked the enthusiasm of operators.

Nevertheless, apart from the shake-up in the speculative counters and a decline in the volume of business, quotations in the different sections were steady. The successful conclusion of the Indo-Pakistani Trade Negotiations should have invited a buying spree in jutes, but this could not take place in view of the above considerations and the perceptible fall in the prices of jute goods. The prospect for increased coal exports to Pakistan has been cheerfully noted, and coal shares are bound to come to the forefront sooner or later. Tea shares were generally steady, and despite the quiet conditions and a fractional fall in prices, during Monday's export sales and yesterday's internal auctions moderate support was given yesterday also. Selected counters in the miscellaneous group proved features, while shares of paper and sugar mills received the moderate attention of operators.

In the textile section, Bengal Nagpurs featured with a rise to Rs. 15-4 from Rs. 14-12, but latter profit-taking reduced the gain to Rs. 15-1. Kesorams were fractionally lower at Rs. 21, while Elgin Mills, after being traded at Rs. 17-12, gave way to Rs. 17-8. Cawnpores were wanted at Rs. 8-3.

Coals had a steady market. Bengals, after spurting to Rs. 545, closed at Rs. 540, and Burrakurs were at one time raised to Rs. 11-4. Moderate support continued for East Indians which advanced to Rs. 24-1 from Rs. 23-6. Dhemo Mains were searched at Rs. 11-6, New Beerbhooms improving further to Rs. 22-13. Churulias were taken at Rs. 3-2, Western Bengals at Rs. 4-11 and Unions at Rs. 25-14. Raneegunges were supported at Rs. 9-2.

The weak reports from the finished goods markets were duly reflected in the trend of trading in jutes, where an improvement in sentiment is considered possible only after the current accounting period of mills comes to an end this month. This would, of course, depend on a revival of moderate demand for sacking. Speculative Howrahs opened steady at Rs. 24-11, and were shaded to Rs. 23-13. However, the close over the week-end was at Rs. 24-3 and yesterday the rate was even lower at Rs. 24. Anglo-Indias receded to Rs. 227 from Rs. 229 although the realisation was, at one time, Rs. 232. Empires were marked down at Rs. 21-6.

Baseless rumours that Dalhousie Holdings would shortly release to the market a good portion of Indian Irons in their possession invited a wave of selling pressure in Indian Irons. Fears of steel decontrol in the United States also contributed to accelerate the pace of selling. In fact, they eclipsed the hopes of an increase in the retention prices of steel as well as the prospects of another big loan to the Indian Iron and Steel Company. The counters opened at Rs. 26-13 last Wednesday, and, for reasons stated above, were mercilessly hammered down to Rs. 25-3. However, as the rumours about Dalhousie Holdings died out, an improvement to Rs. 25-9 was an impressive feature of yesterday's trading and was a sign of returning confidence. Interest in Jessops continued, and a high of Rs. 25 was recorded this week. Kumardhubis changed hands at Rs. 8-5, Marshalls at Rs. 6-12 and Braithwaites at Rs. 11-4.

Miscellaneous shares not only maintained the improvement of last week, but certain selected counters added further gains. Godfrey Phillips were better at Rs. 27-12, and F. and C. Oslers spurted to Rs. 6 from Rs. 5-2. Titaghur Papers were steady at Rs. 36-12, while after improving further to Rs. 77 Rallis were marked down to Rs. 76 for a time. Sone Valley Cements found buyers at Rs. 7-7, and India Steamships at Rs. 6-10. Shares of airlines were transacted at previous levels, while among teas, Jultibaris, Patrakolas, Baghmaris, Basmatias, Hoograjulis, East Indias, Borpukhuris, Dhelkhats and Central Cachars were counters of special interest and were put through at advancing rates.

* * * *

Madras Stock Exchange

MADRAS, 24*th March*

The Madras Stock Exchange ruled generally active this week. Textiles continued to attract attention on speculative support. The hesitant mood witnessed last week in the planting scrips gave way to brighter sentiment. Teas rose on reports of persistent demand for leaves from overseas countries. Rubbers were almost firm on good prospects for the plantations during the current year. Coffees depicted an improved trend in sympathy with teas and rubbers. Miscellaneous scrips proved no exception to the generally upward trend. As a result, there was an all-round advance in prices.

Textiles were again in the limelight this week also. Rajalakshmis shot up from Rs. 73 to Rs. 77 and Pankajas from Rs. 61-8 to Rs. 65. Bangalore Woollens gained Rs. 2 to Rs. 238. Coimbatore Spinnings rallied Re. 1-8 to Rs. 45-8. Balasubrahmanias Rs. 40 and Rs. 70 paid-ups improved by Re. 1 each to Rs. 29 and Rs. 50, respectively. Travancore Rayons and Trichinopolys were better at Rs. 4-5 and Rs. 10, respectively. Sitarams, however, lost Rs. 3-8 to Rs. 35-8, and Dhanalakshmis Re. 1 to Rs. 187 *cum-div.*

Teas were fairly active. Devoshalas improved from Rs. 14-8 to Rs. 15 and Peermades from Rs. 37-8 to Rs. 37-12. Midlands (tea and rubber) gathered As. 3 to Rs. 9-8. Kalasas lost As. 2 to Rs. 16-2.

Rubbers were in favour. Nenmenys shot up by As. 8 to Rs. 10. Malankaras put on a similar amount at Rs. 101. Thamarpally was higher by As. 6 at Rs. 12-12. But Vaikundams lost As. 2 to Rs. 15-8 *cum-div.* Kalpettas (rubber and tea) were down by As. 4 at Rs. 17-12.

Coffees came in for some enquiry with Consolidated Coffees closing As. 1½ higher at Rs. 17-2. Puthuthottams gained an anna at Rs. 4-14. Neelamalais (coffee and tea) and Ouchterlonys (coffee and tea) were better at Rs. 3-11 and Rs. 4-2½, respectively.

Among miscellaneous scrips, Ranes Rs. 50 paid-ups hardened by As. 8 to Rs. 75-8 and Mysore Stonewares As. 4 to Rs. 9-12. Indian Steel Rolling Mills were done at Rs. 11-8, as against Rs. 11-4. United Breweries disclosed a gain of Rs. 2 to Rs. 150. Indian Cements were, however, lower by As. 10 at Rs. 16-6.

Notice

PALAI CENTRAL BANK LIMITED

(Incorporated in Travancore-Cochin with limited liability)

NOTICE IS HEREBY GIVEN THAT THE Twenty-fifth Annual General Meeting of the Shareholders will be held at the Registered Office of the Bank on Thursday the 9th April, 1953, at 3.30 p.m., to receive the Profit and Loss Account and Balance Sheet, with the Report of the Directors for the year ending 31st December, 1952, to declare a dividend, to elect two Directors, and to appoint an Auditor or Auditors.

The Transfer Books of the Bank will be closed from the 21st March to 10th April, 1953, both days inclusive.

By Order of the Board,
K. JOSEPH AUGUSTI,
Managing Director.

PALAI, 18*th March*, 1953.

MARKET GOSSIP

(Concluded from previous page)

post-war world—apart from the notable exception of the International Wheat Agreement—although many experiments have been made in this sphere. The Paper points out that no measures have been taken to implement the recommendations of the Rubber, Tin and Wool Study Groups, set up by the United Nations, and that the "buffer stock" scheme of the F.A.O. was abortive. The International Materials Conference (I.M.C.) set up in Washington, in January, 1951, was, however, a successful attempt, although the allocation scheme, put through by the I.M.C., was not backed by any formal authority. While these attempts are merely in the nature of allocating scarce supplies of raw materials among the chief consumers, the real attempt at solving the problem must naturally be in the direction of increased production. From this point of view, the Paper notes that significant lead has come from the U.S. New deposits of copper, lead, zinc and tungsten are being worked in Alaska; of manganese in Arkansas; of tungsten and chromite ore in Oregon; of sulphur in Louisiana; of uranium in Colorado. But, apart from Canada, few countries have received any substantial investment from the U.S., though large American investments have been made in the world oil industry.

NEWS IN BRIEF

DURING 1952, Indian shipping companies carried 96 per cent. of the cargoes moving on the Indian coast and the remaining 4 per cent. was carried by foreign companies.

In response to an invitation by the Kutch Government, the Working Committee of the All-India Manufacturers' Organisation has sent an A.-I.M.O. delegation, headed by Mr. Morarji J. Vaidya, to tour Kutch and advise the Kutch Government on the industrial development of the State.

The Government of India has sanctioned a loan of Rs. 24 lakhs to the Hyderabad Government for financing the digging of new wells and repairing old ones. The loan will be repayable in five annual instalments with effect from 1954-55 and will carry interest at 3¾ per cent.

A process for converting low-grade phosphatic nodules obtained from the Trichinopoly area into a useful fertiliser without the use of sulphuric acid has been worked out in the Indian Institute of Science, Bangalore. The cost of production is roughly estimated at Rs. 150 per ton.

The Orissa Government proposes to establish seven new industries including paper, aluminium, ferro-manganese, and spinning and weaving mills, in the State within the next two years. Besides, the Government has obtained sanction from the Centre for the setting up of one jute and two sugar mills.

A suggestion for creating a central organisation for taking over operation in regard to mica is under the examination of the Government of India. The Government has been advised that the quality of mica for export should be improved by adopting a universal standard for grading. Action is being taken in this direction.

Under the Standard-Vacuum's Training Programme designed to offer suitable members of the Indian staff advanced training, three more Indian executives of the Standard-Vacuum Company have been sent to the U.S. for training for a period of three months. The present group will receive training in different phases of petroleum marketing, including engineering, retail merchandising, sales organising, etc.

India had an adverse balance of trade to the extent of Rs. 77.56 crores during the nine months ended December, 1952. The value of imports during the period amounted to Rs. 523.08 crores and exports to Rs. 445.52 crores. India's balance of payments on current account for the same period was plus Rs. 87 crores. The total invisible receipts during April-September, 1952, were Rs. 97 crores.

It has been decided to set up a Central Manures Committee of five experts, representing the Central Agricultural Ministry, the State Governments and the growers. The functions of the proposed Committee will be to take stock of results of manurial research and to make suggestions for the development of better manure use. The annual expenditure is estimated at Rs. 2,000.

The second conference of Development Commissioners of State Governments for Community Projects will be held in New Delhi from 16th to 18th April, 1953. The Conference will review the progress of the Programme launched in October last year, discuss problems that have since arisen, and draft a programme for the next year. The first Development Commissioners' Conference was held in May last year, when the idea of launching Community Projects all over the country was approved and the line of action to be taken decided.

The Government of India has decided to treat 50 per cent. of the dearness allowance, at present granted to Central Government servants in various pay groups up to a salary of Rs. 750 per month, as pay for purpose of retirement benefit, travelling allowance, compensatory and house rent allowance, and recovery of rent from those in occupation of Government quarters. This decision is in accordance with the recommendation of the Dearness Allowance Committee. The implementation of the recommendations will benefit 1,525,000 persons and cost the Government an additional sum of Rs. 5 crores per annum.

The amounts of loan sanctioned by the Government of India to the State Governments for the construction of tube-wells during 1952 were Rs. 67.5 lakhs for Uttar Pradesh, Rs. 45.74 lakhs for Bihar, Rs. 18.74 lakhs for the Punjab and Rs. 40 lakhs for Bombay. A sum of $1.3 million has already been paid out of the Indo-U.S. Technical Co-operation Agreement fund for the 2,000 tube-wells programme in the U.P., the Punjab, the P.E.P.S.U. and Bihar. From the Minor Irrigation Scheme Fund of Rs. 10 crores, a sum of Rs. 41.53 lakhs has so far been advanced as loan to the U.P. Government. The number of tube-wells sunk during 1952 was 190 in the U.P., 118 in the Punjab, 105 in Bihar and 18 in Bombay.

The total outlay involved in the setting up of the proposed electronics and tele-communications factory at Bangalore is estimated at Rs. 7 crores. A contract has been entered into between the Government of India and the French firm, *Campagnie Generale de Telegraphic San Fil*. Under the contract, a sum of Rs. 7 lakhs is to be paid to the French firm for the services rendered in connection with the drawing up of the plan and details for the building and construction of the factory, of Rs. 40 lakhs for the construction and services directly connected with the purchase and installation of plant and machinery, and of Rs. 40 lakhs as payment for technical advice and assistance. The payment in the nature of royalty on actual production will be on a percentage basis, such being 3 per cent. on the first crore worth of goods, 2 per cent. on Rs. 2 crores, and 1 per cent. on Rs. 2 crores and above.

The Government of India has decided to consider on an *ad hoc* basis the grant, in genuine cases, of some relief in customs duty on re-importation of machinery exported out of India for repairs, provided that no drawback of duty is admissible at the time of export. To qualify for exemption, it is necessary for a certificate to be obtained, before export, of the machinery from the Development Wing of the Ministry of Commerce and Industry, after inspection by officers of that Department, if necessary, to the effect that the repairs to be done to the machinery are such as cannot be carried out within the country. It will thereafter be open to the Government at its discretion to grant on re-importation exemption from so much of the customs duty as is in excess of that leviable on the cost of repairs, freight and insurance charges both ways. The Customs Collector should, however, be satisfied as to the identity of the goods. The ownership of it must remain unchanged and re-importation should be made within one year of the export.

* * * *

From Abroad

A Japanese official mission is visiting London shortly to discuss with the U.K. Government currency questions relating to the future relationship of the sterling and the yen.

The Canadian Government has removed the export and import controls on a wide range of strategic metals to and from the U.S., including all non-ferrous metals, except nickel and nickel-bearing material.

The U.S Government has lifted allocation controls over copper scrap, copper-base alloy scrap and ingot, blister copper, copper and copper-base alloy slot and wapple, and copper precipitates. Refined copper, however, still remains under allocation controls.

Sweden had a favourable balance of payments to the extent of Kr. 132 million (£9.1 million) during 1952, as compared with Kr. 1,046 million in 1951. Of this, favourable balance on foreign trade account, including invisible payments, accounted for Kr. 100 million.

The French Government is reported to have planned drastic cuts in imports from the sterling area countries during the next six months with a view to "rectifying" the unfavourable balance of payments position. The main items of imports to be reduced include medical equipment and manufactured goods and, to a lesser degree, wool cotton, jute, tin, rubber and oil.

France has constructed 50 hydraulic plants since the war as part of the programme of post-war economic recovery. France is at present consuming about 35 billion kw. hours of energy per annum, as against only 18 billion kw. hours before the war. More than half of the energy is produced by hydraulic power.

The Malayan Government has decided to conduct an enquiry into the natural rubber industry. This decision is a sequel to the representation made by workers. The total number of workers employed in the industry is 320,000, the majority of whom are Indians. Malaya produced 575,000 tons of rubber in 1952. The production during the current year is estimated at 560,000 tons.

Consumption of new rubber in the U.S. during January, 1953 agregating 120,742 tons, as compared with 107,319 tons in January, 1952. The January consumption represented an increase of 4.45 per cent. over the 115,600 tons consumed in December, 1952. Consumption of natural rubber in January, 1953, came to 47,567 long tons, as against 36,989 tons in January, 1952, and 44,502 tons in December, 1952, and of synthetic rubber to 73,175 tons, as against 70,330 tons and 71,098 tons.

During 1952, the insurance companies operating in Canada sold life insurance aggregating $2,287 million, which represents an increase of 14.9 per cent., as compared with that during the previous year. The total life insurance in force as on 31st December, 1952, was $19,091 million, an increase of 10.8 per cent. over 1951. Ordinary life insurance amounted to $13,617 million, industrial insurance to $1,625 million and group insurance to $3,849 million. Of the total business, Canadian companies carried $13,085 million, and British and U.S. companies $6,005 million.

West Germany is said to be making a determined effort to secure more orders for its engineering industry by devoting greater attention to the development of backward areas. The Federal Ministry for the Marshall Plan has worked out a technical assistance plan on the lines of the U.S. Point Four Programme. Already, about DM. 500,000 (£42,500) from the European Recovery Programme funds have been set aside for the purpose, which will be extended subsequently. Particular interest is to be paid to the Arab countries. Participation in the development of raw material resources in the Commonwealth is also under consideration. The Government is considering the financing of credits with a view to enabling the German industry to grant longer terms of payment to foreign buyers of industrial equipment.

PERSONAL

MR. Krishnaraj M. D. Thackersey has joined the Board of Directors of the Belapur Co., Ltd.

Mr. P. F. D. Tennant, Deputy Overseas Director of the Federation of British Industries, arrived in Bombay on Sunday last on a short visit.

Mr. Sankar Saran, a retired Judge of the Allahabad High Court, has taken over charge as Custodian-General of Evacuee Property, Government of India.

Sirdar P. S. Sodhbans, Editor, *The Indian Accountant*, New Delhi, has been elected to the Executive Committee of the International Chamber of Commerce for the year 1953-54.

Mr. Lambertus Nicodemus Palar, Permanent Indonesian Representative to the U.N., has been appointed Indonesian Ambassador to India. Mr. Palar is expected to take over his new assignment in May next.

Mr. George V. Allen was sworn-in as the U.S. Ambassador to India at Washington on Tuesday last. Mr. Allen will hold consultations with the U.S. State Department for three or four weeks after which he will be arriving in New Delhi.

Mr. Andre Coyne, a well-known French authority on dams and President of the World Committee on Large Dams, who has been invited by the Bombay Municipal Corporation to advise on strengthening the Tansa Dam, arrived in Bombay last week.

Mr. E. S. Krishnamurthy, Member of the Central Board of Revenue, and Mr. S. C. Mathur, Narcotic Commissioner, will represent the Government of India at a meeting of the Narcotic Commission and the International Opium Conference commencing at New York on the 30th inst.

Mr. A. Kirkwood-Brown of Mackinnon Mackenzie and Co., Ltd. and Mr. Paspatti of Rallis India Ltd. have been elected to serve as the representatives of the Bombay Chamber of Commerce on the Board of Trustees of the Port of Bombay for a period of two years from 1st April, 1953.

Messrs. M. A. Master, Ramdas Kilachand, P. M. Chinai, Morarji J. Vaidya, Vallabhdas V. Mariwala, and Tulsidas M. Vishram have been elected representatives of the Indian Merchants' Chamber, Bombay, on the Board of the Bombay Port Trust for a term of two years beginning from 1st April, 1953.

OBITUARY

We regret to record the sudden demise of Mr. Jagmohandas J. Kapadia on Wednesday this week. A well-known stock and share broker, Mr. Kapadia was an Honorary Secretary of the Bombay Shareholders' Association and, in that capacity, contributed much to the safeguarding of the interests of shareholders. He was also an acknowledged authority on company law, and the valuable work he did as a member of the Company Law Reform Committee bears ample testimony to his thorough grasp of the intricate problems connected with the financial structure of joint-stock companies. In the death of Mr. Kapadia Bombay has lost a doughty champion of the cause of improvement of company administration.

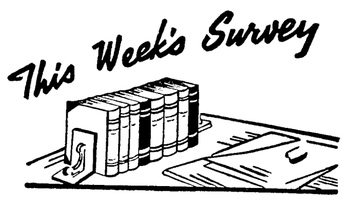
"COMMERCE" 1928

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, 31*st March*

Industrial Unrest in India

The recent visits of British Labour and Trade Union representatives to India have had the effect of stimulating—if not actually encouraging—industrial turmoil in India. We certainly do not object to better organisation of labour in this country, but what we most certainly do object to is the exploitation—a favourite word that in certain circles—of labour for any but the legitimate purpose. We heartily welcome better housing, better education and better surroundings for those who "toil and moil from morn till night"; we sincerely wish them all the amenities of life and we always applaud the efforts of temperance people to wean them away from vice and drink, but we do not like that their awakening—another favourite word again—should be one-sided. Simultaneously with the efforts to ameliorate their conditions of life, there should be awakened in them a sense of their responsibility—what their duties and obligations are towards their employers. Capital and labour are interdependent; one cannot thrive without the other. So there are mutual obligations and reciprocal duties, and the sooner they are made conscious of the same the better for all concerned. Disputes can be settled easily and amicably, if there be no extraneous agency to excite passion and create trouble where there should be none. And, above all, the after-effects of a strike or lockout—the misery it entails—the sorrow it brings in its trail—should be brought home to every person who earns his bread by the sweat of his brow before he downs his tool.



MR. CHESTER BOWLES

AS the U.S. Ambassador to India, Mr. Chester Bowles achieved a distinction that has seldom been surpassed. During the brief span of 18 months' stay in India, he became a popular figure in Indian circles and acquired the reputation of being not only an able interpreter of the U.S. to India but a sympathetic interpreter of India to the U.S. The secret of his success in this direction lies in the fact that, during his period of stay, he took special care to contact the people of India by constantly touring the country, going to its numerous villages, towns and cities, talking to thousands of people representing different strata of society, and observing India at work. In this way, he gained an intimate knowledge of the varied and diverse conditions—political, economic and social—prevailing in the country. It is not surprising, therefore, that his observations on topical questions and the sentiments he expressed, while replying to questions by journalists on the eve of his departure from New Delhi, last week, are realistic and reflect a clear appreciation of India's desires and aspirations.

Asked as to what outstanding impression of India he would carry home, Mr. Chester Bowles replied: "There are two things which have impressed me most about India and which I shall take back with me as my most vivid recollections. The first is India's determination to master, by democratic means, the vast problems which she faces in building a better future for her people. Second is the boldness, skill, energy and imaginative planning with which the Indian people and their leaders are tackling this great job." Surely, these words show how clearly he has grasped the underlying philosophy of the Five-year Plan.

Mr. Bowles, as is well known, was helpful in securing for India quite a sizable portion of the aid which India has already received from the U.S. In a little over a year, the U.S. has made available to this country as much as $95 million (roughly Rs. 48 crores) in economic aid, in addition to the $190 million (Rs. 96 crores) wheat loan granted two years ago. It is gratifying to find that he believes that India is using these funds "boldly, imaginatively and with very real effectiveness." He confirms that they are being put to work by the Indian Government in far-reaching programme, under the Five-year Plan, to raise the living standards and opportunities of the Indian people, in river valley development, irrigation and land reclamation, malaria control, public health and sanitation schemes, improvement of agricultural methods and production to erase India's criticial flood deficit, development of fisheries and fertiliser manufacture, and expansion of education and adult literacy. The community projects are bringing the benefits of these new programmes directly to 24,000 villages, or some 19 million of the Indian people. The total programme is the most comprehensive ever undertaken by any underdeveloped country receiving American technical and economic assistance.

Equally gratifying is Mr. Bowles' observation that he is not satisfied with the measure of financial and technical assistance given by the U.S. to India, for such is not large enough to meet the needs of the situation. He says: "I deeply believe that America should support India's brave efforts by advancing funds which are essential to the success of the Five-year Plan. I believe that America should advance this money—the financial gap in the Plan it may be noted, is to the extent of more than Rs. 300 crores—over a three-year period *without strings of any kind* (italics ours) as a contribution from the American people to the people of India who are struggling to create a great new democracy here in Asia." Whether or not these words carry conviction with the new U.S. Administration—it is to be hoped they will—there is no doubt that this represents a highly commendable selfless approach to India's problem.

PRODUCTIVITY DRIVE IN U.K.

The newly formed British Productivity Council has begun its productivity drive campaign in right earnest. Only a fortnight ago it organised a conference which was attended by a thousand delegates representing industry and labour, with a view to stimulating production by a country-wide drive. The programme covers coal mining, agriculture, transport, electricity supply and generation and the wholesale and retail distributive trades which employ about 14 million persons concerned in the productivity drive. The country has been divided into different circuits. Each individual firm in a circuit is required to send its team once a month to visit one of the other teams in the same circuit. One hundred and five towns have been invited to form productivity teams. Each team consists of six persons, two from the management, two from the staff and two from the workshops. Arrangements have been made to send competent lecturers to the centres to deal with whatever activity they are interested in. A series of films, entitled "There is a Better Way," have been made as part of the productivity drive, to be shown at the centres. First copies of the films have been supplied to the British Broadcasting Corporation for regular television showing.

The productivity drive undertaken by the Council is one of the important steps towards reaching the goal of convertibility of the pound sterling. In essence, it means harder and more work at all levels by those engaged in industry. Its features are vigorous approach, intensification of research, application of technical experience and resources, improvement in quality and the cultivation of the right attitude of the mind to new problems confronting industry. In other words, productivity means achievement of co-ordination of management effort to lower the cost of production—a factor which alone can effectively meet foreign competition, and increase exports in order to strengthen the pound sterling. The foreign exchange reserves of Britain now stand at over two billion dollars, as was pointed out by the Chancellor of the Exchequer at the Conference convened by the Council referred to above. He remarked that there had been a substantial improvement in Britain's reserves and that sterling financed over half the world's trade. "That means," he said, "that our life-blood is no longer draining away, and I think, when the figures continue to come out, that you will continue for some time ahead to have some satisfaction. However, the proportion of reserves to the transactions of the sterling area and of sterling is small indeed." He declared that the country is determined not to slip back into recession and crisis by further contraction and restriction. He, therefore, pointed out that finance should be made available for productive purposes and not for "milk-bar developments." He assured that allocations under the Mutual Security Act would be spent largely on the promotion of industrial productivity in Britain.

WORLD GRAIN PRODUCTION

World production of foodgrains in the 1951-52 season (excluding the Soviet Union and China), accordance to the report of the Commonwealth Economic Committee, was three per cent. more than the pre-war (1937-39) average. The increase in grain output is, however, not commensurate with the increase in population which moved up, during the years since the pre-war period, by as much as 10 per cent. The Committee says that production in the Commonwealth of each of the grains covered by the survey was higher in the 1951-52 season than before the war. The following table gives the changes in world production in recent years for each kind of grain, as compared with the pre-war average, the figures in brackets indicating the Commonwealth's share of world production:

	1951	1950	1949	*Average 1937-39*
Wheat	117.1	117.5	112.6	115.7
	33.2)	(31.5)	(28.8)	(27.5)
Maize	116.4	114.7	118.9	110.6
	(5.5)	(6.2)	(6.1)	(5.5)
Oats	48.3	47.6	44.3	47.2
	(11.4)	(10.2)	(9.0)	(8.2)
Barley	39.5	36.9	33.0	35.3
	(10.5)	(8.5)	(7.9)	(5.8)
Rye	19.9	19.4	19.2	23.8
	(0.5)	(0.4)	(0.3)	(0.3)
Rice	63.5	63.5	64.9	63.4
	(29.4)	(29.4)	(32.2)	(28.2)

It will be seen from the above table that the output of both wheat and maize, each of which accounts for over one-quarter of total grain production, were higher than the pre-war average. Exports of wheat and flour in 1951 (excluding shipment from Russia), it is stated, were two-thirds greater in volume than before the war. The proportion of maize exported, however, fell from 7 per cent. to 3 per cent., most of it coming from the U.S.

The supply position in regard to rice alone has been uncomfortable. Rice production, as a glance at the table will show, has increased little above the pre-war level. Among the Asian countries only Thailand, it is stated, has shown a consistent increase in production, adverse conditions checking expansion in India and internal disturbances hampering recovery in Indo-China and Burma. But the quantity of rice entering world trade is limited by reason of the reduced exportable surpluses of Asian countries.

THE D.V.C. BUDGET

The budget estimate of expenditure on account of the Damodar Valley Project (D.V.C.) for 1953-54 is Rs. 16.83 crores, of which a sum of Rs. 4.30 crores will be met by the Centre, Rs. 10.02 crores by West Bengal and Rs. 2.51 crores by Bihar. These figures compare with the revised estimated expenditure of Rs. 17.62 crores for 1952-53, the Centre's share accounting for Rs. 4.75 crores, West Bengal Rs. 9.64 crores and Bihar Rs. 3.23 crores. The dollar expenditure met out of the loan from the World Bank in 1952-53 is estimated at Rs. 164.23 lakhs. The decrease in 1953-54 budget estimates is due to the fact that the expenditure has had to be restricted in order that it might be in conformity with the allotment approved by the Planning Commission for D.V.C. expenditure in 1953-54, in its Five-year Plan. In addition to the usual construction, the budget for the next year provides for operation and maintenance of the thermal and hydro-electric power stations at Bokaro.

The operational phase of the Damodar Valley Project has already begun. The D.V.C. is distributing through its own grid the surplus power of the Sindri Fertiliser Factory, thereby giving immediate relief to the coalfields and other industries which had been suffering from acute shortage of power. Gross receipts amounting to Rs. 42.72 lakhs are anticipated during the year 1952-53 from the sale of power of the Sindri Fertiliser Factory, as well as of whatever surplus power would be available from Tilaiya and Konar power plants, after meeting the construction power requirements of the D.V.C. A sum of Rs. 61.59 lakhs is estimated during 1953-54 from the sale of power by the D.V.C. grid. Gross receipts amounting to Rs. 1,66,000 from the supply of water for irrigation purposes are also anticipated during 1953-54.

DEFICIT BUDGETTING

Mr. M. A. Chidambaram, a leading business man of Madras, criticised deficit budgetting in the course of his presidential address to the second quarterly meeting of the Southern India Chamber of Commerce, held recently in Madras. Although deficit budgetting could be resorted to as a temporary measure to meet certain exigencies, its adoption as "a policy and primarily with a view to work developmental plans," he feared, would lead to "suffering born of inflation." This is a wholesome warning, though it might be unpalatable to certain sections of opinion in the country. He substantiated his arguments by quoting the observations made by Mr. Bernstein, Director of Monetary Research, International Monetary Fund (now in India), who said recently that "inflation is the worst method of raising resources for the development of a country's economy" and that, as it is a method by which savings is forced out of the people, it is socially not desirable."

Mr. Chidambaram rightly preferred taxation to any other unorthodox form of financing development plans. The incidence or the burden that the additional taxation would entail is a known factor and the evils arising out of inflation could be avoided. Mr. Chidambaram, however, felt that taxation had reached its limit in India. But Mr. Bernstein, it may be noted, feels that there is still room for additional taxation. We concur with him to some extent in that, apart from the rationalisation of the existing pattern of taxation, the scrapping of the policy of prohibition and the imposition of the duty on salt would still give the country considerable revenue. The former measure would help State Governments to tide over their deficits and reduce their dependence on Central finances.

BANKS' LIQUIDATION PROCEEDINGS COMMITTEE

ITS RECOMMENDATIONS ANALYSED

(By Dr. S. G. PANANDIKAR)

DURING 1926-51, 351 banks in India suspended payment. The amount of their outside liabilities came to nearly Rs. 97 crores. The major part of these failures, numbering 180 and involving outside liabilities of Rs. 92 crores, occurred from 1947 onwards. Out of the 351, 321 banks were taken into liquidation and schemes of arrangement were sanctioned for the remaining 30 by the Courts. The liquidation proceedings in all cases dragged on for an undue length of time, because the liquidator of each bank had to file many suits against its debtors in several courts all over the country and could obtain decrees only after a very long time. When a bank is taken into liquidation, most of its debtors resort to delaying tactics and do not settle their debts without being dragged into court. The delay is very unfortunate because a banking company, unlike other joint-stock companies, is financed mainly by money received from depositors who, unlike shareholders, have no voice in the management of the bank. Further, the business of a bank is to lend money and such loans are given by it to a large number of persons.

To avoid this delay, the Banking Companies (Amendment) Act, XX of 1950, conferred exclusive jurisdiction in winding-up proceedings of a banking company on a High Court by adding sections 45A and 45B to the Banking Companies Act. This has enabled the liquidator of a bank to proceed against all its debtors in one court. But the interpretation of the above sections is not free from doubt and the matter has not yet come before the Supreme Court. Moreover, the liquidator of a bank cannot avoid the expense and delay involved in adopting the normal procedure of filing a suit or taking other proceedings against each debtor separately, although he can do so in the same court. Further, none of the 30 banks, for which schemes of arrangement have been sanctioned by the Courts, has kept pace with the provisions for periodic payments contained in the schemes and some of the banks have applied for the revision of the schemes, so as to reduce the amounts payable. Hence, in July, 1952, the Government of India appointed the Banks' Liquidation Proceedings Committee, under the chairmanship of Mr. D. N. Mitra, to recommend changes in the law and procedure that may be considered necessary for expediting liquidation of banking companies, for the more effective and expeditious enforcement of liabilities of directors and other officers of the companies and for the satisfactory working of schemes of arrangement for banking companies.

Depositors' Interest

The report made by the Committee to the Government of India has now been published and its recommendations, if given effect to, will safeguard the interests of the depositors much better. First of all, the Committee has recommended that section 43 of the Banking Companies Act should be amended so as to make it clear that depositors of a bank, which is being wound-up, are not obliged to file formal claims with regard to the amounts standing to their credit in the books of the bank and not disputed by the liquidator and that every depositor of such a bank, or in any event every depositor in its saving bank account, whose balance in the books of the bank at the time of the winding-up order does not exceed Rs. 100, should have priority for the full amount of his claim.

Next, to remove all doubts regarding the interpretation of sections 45A and 45B of the Banking Companies Act, referred to above, the Committee has recommended that these sections should be amended so as to make it clear that the jurisdiction of the winding-up Court extends to all claims of a bank against its debtors, whether arising before or after the winding-up order, and that proceedings pending at the date of the winding-up order must be automatically stayed until the winding-up Court exercises its discretion to transfer them to itself or not.

In order to remove the major evil, namely, multiplicity of proceedings, which is one of the chief causes for delay and expense in liquidation procedure, the Committee has recommended that a new section should be added to the Banking Companies Act, providing the following:

(1) The liquidator of a bank shall make out and file in the court lists of the debtors of the bank, containing all relevant particulars, not later than six months from the date of the winding-up order, except with the leave of the Court, each list to be verified by an affidavit.

(2) Any such list may be varied by the Court at any time.

(3) On submission of any such list to the Court, the Court shall appoint a date to settle the list and shall direct the liquidator to give notice of such date to all the persons, whose names are set out in the list, requiring them to appear on the said date and to show cause, if any, by an affidavit, why their names should not be settled on such list for the amounts shown therein against their respective names.

(4) On the date fixed for settling any such list or on any adjourned date, the Court shall declare any such list as settled in so far as it concerns the persons, who have not appeared or who have appeared and not shown cause, provided that the Court may not settle any such person on the said list if the Court is of opinion that the debt shown against such person is not enforceable in law. Where any person shows cause, the Court shall hear the objection and may disallow the same or allow it either wholly or in part and direct that the list be varied accordingly.

(5) At the time of settlement of any such list, the Court shall pass an order for the payment of the amount due by each debtor and for any relief that may be claimed.

(6) At the time of settling any such list or at any other time prior or subsequent thereto, the Court shall have power to pass any orders in respect of any debtor on the application of the liquidator for the realisation, management, protection, preservation or sale of any property given as security to the bank and shall give such further powers to the liquidator to carry out the aforesaid directions, as the Court thinks fit.

(7) The Court shall have power to sanction a compromise in respect of any debt and to order the payment of any debt by instalments.

Independent Evidence

To deal with the difficulty, which a liquidator experiences in establishing a claim against a debtor, namely, leading some independent evidence, in addition to entries in books of accounts, to prove the transactions on which a claim is based, as required by section 34 of the Evidence Act, the Committee has recommended that the following provision should be added to the Banking Companies Act:

"Unless the Court has reason to doubt any particular entry or unless it is proved that any particular entry is incorrect, all entries in the books of account of a banking company in liquidation shall be accepted by the Court as proof of the matters, transactions and accounts therein recorded without requiring further proof."

As the expenses of recovering the dues of a bank are undoubtedly the biggest part of expenditure in liquidation proceedings, the adoption of the above recommendations will certainly save the bank a large amount in law costs alone. Moreover, it will enable a liquidator to obtain a decree against the majority of the debtors within a short time, as most of the claims of a bank are undisputed. The above special procedure, recommended by the Committee for the realisation by banking companies alone of their debts, is justified, because a banking company, whose business is lending money, has far more debtors to deal with than a trading company with comparable resources.

Delay to be Minimised

When an order or a decree of a Court has to be sent to some other Court for execution, the Civil Procedure Code has laid down a complicated procedure. This, however, is really unnecessary, when the execution is at the instance of a liquidator of a banking company, who is an officer of the High Court. In such cases, the Committee has recommended a simple procedure, under which a liquidator will be enabled: (*a*) immediately after a payment order or a money decree has been made by the winding-up Court, to obtain a certificate signed by the Registrar, (*b*) to take and file the certificate in the Court in which the order or decree is to be executed and apply for execution in the usual way, and (*c*) to grant a certificate of non-satisfaction or partial satisfaction, which shall be accepted by the executing Court as correct. Further, the Committee has recommended that Government should consider whether and to what extent facility should be given to the liquidator to execute decrees under the summary procedure prescribed for recovery of arrears of land revenue.

As regards limitation, the Committee has recommended that legislation should be enacted to secure that limitation will stop running against a banking company from the date of the winding-up order.

Liability of Directors, Auditors and Officers

Proceeding to the problem of the enforcement of liability of directors and officers of a bank which has failed, the Committee has expressed the opinion that, when a banking company fails on account of mismanagement by its directors, the liability of the directors should be extended and should be enforced rigorously and expeditiously. This opinion is sound, because it is found that the failure of most banks is due to mismanagement by, or incompetence of, their directors. One or two directors have dominated the Boards of such banks and their complaisant "guinea pig" colleagues have unthinkingly agreed to their proposals. The Committee has, therefore, recommended that all persons who have, at the date of the winding-up order or at any time three years prior thereto, been directors of a banking company, should be liable to examination by the Court; and that, before such examination, the liquidator should investigate the conduct of all such directors regarding their management of the bank and submit a report to the Court. Such investigation would enable the liquidator to ascertain the liability, if any, of each director to the bank and would clear the ground for the issue of a misfeasance summons. Further, the Committee has recommended that, if the Court, after examination, is of the opinion that a director is incompetent to perform the duties of such a responsible office, it should have the power to order that he be prohibited, without its leave, from being a director of a company or from taking part, directly or indirectly, in the management of a company for a period not exceeding five years, even if he is innocent of any act of misfeasance. This recommendation is salutary, because an incompetent director is as much a public danger as a fraudulent one.

Fraudulent or complaisant auditors are as much a public danger as similar directors. The Committee has, therefore, recommended that the auditors of a banking company in liquidation should also be compulsorily examined unless such examination is dispensed with by the Court. As regards officers of a banking company, the Committee is of opinion that the existing law relating to their public and private examination need not be tightened, because they are not generally the principal delinquents in cases of fraud and misfeasance, but act under the orders of the directors.

The opinion next expressed by the Committee that the burden on a liquidator in bringing home acts of misfeasance to directors or officers should be lightened is sound, because his difficulties in doing so are great, on account of the previous manœuvring of directors and officers, lack of assistance from ex-employees of the bank, and missing, misleading or incomplete records of the bank. The Committee has recommended that, when an application, under section 235 of the Companies Act, is made against any director or officer, the burden, in the first instance, should be on the applicant to establish a *prima facie* case; that such director or officer should then be presumed to be liable to make good the loss alleged by the applicant; and that the onus of rebutting this presumption and of proving his innocence should be on the director or officer.

Next, the Committee has recommended that there should be no limitation in the case of claims of a banking company against directors arising out of their contractual obligations and that, in all other claims, the period of limitation should be 12 years.

Finally, the Committee has recommended that a director or an officer of a banking company should be bound to give such assistance as the liquidator requires in the realisation of assets and, if he fails to do so, he should be made guilty of contempt of court.

Appointment of Liquidators

Now to proceed to the question of appointment of liquidators. The main objection to the appointment of private liquidators is that, in most cases, their commission and expenses are heavy and their work is done in a dilatory and inefficient manner. The Committee has expressed agreement with this view and has recommended that, wherever possible, a Court Liquidator should be appointed on the model of the Court Receiver and Liquidator at Bombay, who is under the superintendence of

(Continued on page 579)

LISTLESS DEBATES IN PARLIAMENT

MORE INDUSTRIES AROUND SINDRI

(From A Special Correspondent)

NEW DELHI, 24*th March*

THE weariness of an enervating summer in the Capital is being well reflected in the proceedings of Parliament. There is neither heat nor light in the debates on grants to the various Ministries of the Central Government. Even the demands of the Food and Agriculture Ministry have not evoked any sharp criticism, as was the case during the last few years.

DELHI LETTER

Mr. Rafi Ahmed Kidwai, Food Minister, has had an easy time. In fact, he has been able to get encomiums on the way he has been handling this difficult portfolio which proved to be the grave of the political reputation of many a minister in the past. Generally speaking, there has been an air of uncertainty in Parliamentary and Ministerial circles regarding the outcome of the negotiations between the Congress and the Praja-Socialist parties regarding the latter's participation in Government for the purpose of building up the economic strength of the nation. In case the Praja-Socialist Party does not insist on a programme of work as a condition for its joining the Government, and also does not demand prior consent of the Prime Minister on the lines of work that should be followed, an agreement may still be possible.

Early in the week, the Prime Minister dominated the discussions in Parliament. In the course of his reply to the debate on the grants to the External Ministry, he made a forceful speech on the *raison d'etre* of India's foreign policy. He declared, in unequivocal terms, that the Government would consider it an "unfriendly act," if any part of the foreign pockets in India was treated as a base for operations elsewhere, as this was against India's policy. He ably defended India's association with the Commonwealth which had conferred positive advantages on this country, without imposing any corresponding obligations or limitations on the country's freedom or independence. According to him, the Commonwealth, in fact, showed the way to free and friendly non-militaristic association between nations and set a pattern that Asian countries might emulate. The debate on the demands on grants in respect of Food and Agriculture, as also of Education, was uneventful. The Minister for Labour, Mr. Giri, was persuasive in his reply to the debate on grants for his Ministry. He pleaded for the growth of strong and healthy trade unions. He was emphatic that strikes and lockouts should be the last resort in the armoury for settlement of trade disputes. He did not also like adjudication, but declared that "in the matter of industrial disputes, settlement between the parties across the table will be more permanent and far more abiding than imposition of a decision by a third party." The Rehabilitation Ministry was, as usual, subject to severe criticism. The Rehabilitation Minister, Mr. Jain, stated that the scheme for compensation to refugees from West Pakistan had been prepared in all its details and submitted to the Cabinet.

Significance of Trade Agreement

The latest Indo-Pakistan Trade Agreement differs from the previous ones in one material respect, and that is the spirit behind it. For the first time since the Partition in August, 1947, the cordiality of the spokesmen of the Pakistan Government was more genuine. There was a real appreciation among them that in economic matters there should be a closer link between the two countries. What Pakistan will lose by way of the abolition of the discriminatory fee of Rs. 2-8 per md. and the reduction in the export duty on loose jute and *kutcha* bales by As. 12 to Rs. 3 per md. will be more than compensated by an assured market in India for its raw jute and by the lower price of coal which it will be getting from India. For India, the three-year agreement has its own gains. The Indian jute mills need not worry about the supply of sufficient quantity of good quality jute from Pakistan at competitive rates. Again, their competitive capacity *vis-a-vis* Continental mills will improve following the abolition of the discriminatory fee. In other words, both Pakistan and India stand to gain by this agreement ultimately.

Even in regard to the present agreement, India will be importing from Pakistan goods valued more than the 18 lakh bales of raw jute costing about Rs. 20 crores per annum, according to current prices. On the other hand, Pakistan's imports of coal from India are not likely to exceed Rs. 3 to Rs. 4 crores. For instance, during the first nine months of 1952-53, the total quantity of coal imported from India amounted to 561,920 tons valued at Rs. 2.42 crores. In case Pakistan imports more than one million tons, the value will be less than Rs. 4 crores, now that India has done away with the surcharge on coal.

Centre for Heavy Chemical Industries

The Government of India's Production Ministry's Report for 1952-53 is of particular interest, especially as it gives succinctly the plans for the extension of the Sindri Fertiliser Factory. In Sindri, says the Report, "not only has the foundation been laid of an industry vital to the nation's food problem, but what is of equal importance, the nucleus has been formed of heavy chemical and allied industries. A vista of research in chemicals and chemical engineering has been opened, and to-day, but for four foreign production experts on short-term employment, the entire organisation is manned by our nationals." The following extensions to the factory has now been undertaken: (1) the establishment of a coke oven plant for the manufacture of 600 tons of coke per day. A contract for this plant, costing Rs. 2.5 crores, has been placed and preliminary work is already in hand; (2) the erection of a cement manufacturing plant by the A.C.C. with an installed capacity of 600 tons of cement per day, for the utilisation of the by-product, chalk sludge; and (3) it is proposed to utilise the coke oven gases for the manufacture of urea, a stable fertiliser with high nitrogen content, ideal for rice cultivation. A technical mission has been constituted, in association with the T.C.A., to study this question. After an inspection of urea plants overseas and a study of the process employed, this mission will submit a comprehensive report, on the basis of which a joint decision by the T.C.A. and the Government will be taken. An agreement on principle has been reached for the installation of a urea plant costing Rs. 9.5 crores. When all these become accomplished facts, it is stated that the factory could further reduce the price of ammonium sulphate which has already been brought down from Rs. 350 to Rs. 285 per ton.

Iron and Steel Plant

Now that there are some reports to the effect that the Government is not likely to go ahead with the establishment of one more steel plant in the country, it will be of interest as to what the report of the Technical Mission says in this connection. An assessment of India's requirements of iron and steel, says the report, indicated that immediate steps should be taken for the establishment of a major steel unit to supplement the production of the existing steel companies. A Technical Mission, in which the World Bank is represented, has been assembled to submit an up-to-date project report for the establishment of proposed steel plant. It is intended that as soon as the project report is received, complementary action will be initiated to secure financial participation of the Bank in the project. Technical assistance and financial participation from foreign steel makers will also be accepted subject to the condition that the overall control and management of this basic industry should be in the hands of the Government.

It is likely that in the course of his reply to the debate, the Minister for Production, Mr. Reddy, will give in a nutshell the recommendations of the Technical Mission and Government's proposed action thereon. Meanwhile, the two State Governments, Madhya Pradesh and Orissa, are anxious to have the proposed steel plant to be located within their respective territories. It is stated that the Technical Mission has not favoured the establishment of the steel plant due to reasons of heavy capital outlay and high costs of production, but appears to have recommended a further sum of Rs. 40 crores to be given as loan to the Indian Iron and Steel Co., for purposes of expansion. This concern has already secured two loans from the Government of India and the World Bank, aggregating Rs. 30 crores, and with an additional loan, the total will go up to the high figure of Rs. 70 crores, which is nearly ten times greater than its paid-up capital. The case against this proposal is that when the Government determines to advance a huge sum like the above, it can as well nationalise the industry or participate in the management. The Minister will also give some information regarding the recommendations of the French firm on the development of the Vizag shipbuilding yard. It is stated that their report, which is now under the consideration of the Board of Directors, when implemented, will equip this yard to build ships of all descriptions—passengers and cargo vessels, tankers and naval units up to a tonnage of 15,000.

PAKISTAN NOTES

ECONOMIC CONDITIONS IN PAKISTAN

FINANCE MINISTER'S CALL FOR MORE PRODUCTION

AN analytical review of Pakistan's economic and financial position was given by the Finance Minister, Mr. Mohammed Ali, while presenting the 1953-54 budget, to which a reference was made in our issue last week. The Minister prefaced his speech with a call for more production. But the most notable part of his speech was his reference to world economic forces, wherein he recognised the influence of these forces on Pakistan's economy. He said: "While no country is wholly immune from the operation of world forces, the countries producing raw materials are the first and worst sufferers from fluctuations in prices. In Pakistan, the effect of the recession has been particularly severe, because 90 per cent. of Pakistan's exports consists of jute and cotton and their prices have come down to less than half within the year. This has considerably affected the Central Government's revenues for the next year and the situation has been met by economies in expenditure and by additional measures of taxation. With these changes, the revenue budget for the next year would be balanced."

Dealing with the country's food situation, the Finance Minister drew attention to the various adverse conditions which had affected food production in the country during the last year. These conditions, he said, would continue in a severe form in the next year. The deficit in wheat would be of the order of 1.25 million tons. This, coupled with the 250,000 tons required for keeping in reserve, would raise the quantity to be imported next year to 1.5 million tons. Inasmuch as such heavy food imports put an intolerable strain on foreign exchange resources, efforts were being made by the Government to import a substantial portion of wheat imports against loans or aid. An approach had already been made to the Government of the United States and Australia, which, he hoped, would meet with a generous response.

Mr. Mohammed Ali's analysis of the country's foreign trade position reveals that the full impact of the fall in prices will be felt during 1953, when exports are expected to register a marked decline to Rs. 135 crores, as against Rs. 176 crores in 1952. Despite the fall in exports, there is expected to be a balance in the payments position, consequent on drastic curtailment of imports. In this connection, he said that the recurrent rumours of the devaluation of the Pakistan rupee are purely speculative in character and without any foundation, displaying a lack of understanding of Pakistan's economic position. By enhancing the internal prices of essential imports, such as capital goods and food, he said, devaluation would retard development, increase food prices and accentuate the inflationary tendencies. The country's economic position does not, therefore, warrant any change in the exchange rate, the Finance Minister concluded.

Budgetary Position

The following table shows the position of revenue and expenditure for 1952-53 (budget and revised) and 1953-54 (budget) after taking into account the effect of new tax proposals:

(In crores of rupees)

	1952-53 *Budget*	1952-53 *Revised*	1953-54 *Budget*
Gross revenue—			
Principal heads of revenue ..	107.45	102.58	67.32
Railways and P. & T.	49.20	52.90	53.17
Other heads	16.40	16.39	18.48
Effects of new proposals	..	..	5.88
Total ..	173.05	171.87	144.85
Gross expenditure—			
Civil expenditure	56.82	57.15	38.86
Railways and P. & T.	48.18	47.27	46.25
Defence services	67.69	67.24	60.10
Total ..	172.69	171.66	144.71
Surplus	0.36	0.21	0.14

The above table reveals that the gross revenue during the next year (1953-54) will be lower by as much as Rs. 27.02 crores, despite an additional yield of Rs. 5.88 crores, through the implementation of the new tax proposals, and an improvement of Rs. 2.09 crores under "other heads" and of Rs. 27 lakhs under Railways and P. & T. Customs receipts next year are expected to go down by Rs. 30.10 crores to Rs. 31.75 crores over the revised estimates for 1952-53. Similarly, as a result of reduced imports, collection under sales tax are estimated lower at Rs. 11.50 crores, as against Rs. 20.23 crores. Central excise revenue, on the other hand, is expected to show an improvement of Rs. 99 lakhs to Rs. 10 crores; after paying the share of the Provinces, the net rise in the Centre's share would be to the extent of Rs. 73 lakhs.

The total railway receipts for the year 1953-54 are estimated at Rs. 45.58 crores and working expenses at Rs. 40.26 crores, including a special provision of Rs. 40 lakhs for providing amenities to lower class passengers and for the welfare of staff. The surplus for the next year would thus be Rs. 5.32 crores. The current year's budget estimate for works chargeable to capital depreciation fund provided for an expenditure of Rs. 16.93 crores, including Rs. 2.49 crores for the development of the Chittagong Port. The revised estimate for the year places this expenditure at Rs. 14.44 crores. During the next year, Rs. 15.22 crores have been provided, including an estimated expenditure of Rs. 1.61 crores on the Chittagong Port.

The current year is expected to register a surplus of Rs. 89 lakhs in the Posts and Telegraphs Department, gross receipts amounting to Rs. 7.09 crores, as against Rs. 6.59 crores provided in the budget estimates, and expenditure amounting to Rs. 6.20 crores, as against Rs. 6.31 crores. For the year 1953-54, receipts are estimated at Rs. 7.59 crores and, after effecting necessary economies in expenditure, are placed at Rs. 5.99 crores, leaving a surplus of Rs. 1.60 crores. As regards capital outlay, the expenditure during the year 1952-53 is now estimated at Rs. 2.49 crores, as against Rs. 2.33 crores provided in the budget estimates. Capital expenditure, including that met from the renewals reserve fund during 1953-54, is estimated at Rs. 2.7 crores. In addition to 600 post offices opened during 1952-53, a further provision has been made for 500 new post offices in 1953-54.

Capital Expenditure

The capital budget for 1953-54 provides for an outlay of Rs. 58.16 crores, as against Rs. 67.00 crores in 1952-53, which has now been revised to Rs. 60.94 crores. In framing the capital estimates, the needs of development have been kept in the forefront. Thus, excluding the capital outlay on defence, the provision for other purposes—these comprise mainly development activities—amount to Rs. 38.26 crores, which is higher by Rs. 6.59 crores, as compared with the revised estimate for the current year. The provision for industrial development is placed higher at Rs. 12.41 crores, as against Rs. 5.56 crores. A sum of Rs. 8 crores has been provided for development loan to the Provinces and States, in addition to a special provision of Rs. 7 crores for irrigation and hydro-electric projects. A sum of Rs. 8.5 crores is included for expenditure out of funds for social uplift, refugee rehabilitation, roads of national importance and agricultural development.

(Concluded from next column)

posits has brought down their ratio to deposits from 35.54 per cent. as at the close of 1951 to 31.89 per cent. The fall of £4.27 million in bills receivable is attributable to the low level of business activity during the latter half of the year. Investments, excluding the British Government securities deposited against note issue, have gone up by £6.42 million, the major part of which (£6.37 million) is accounted for by securities quoted in Great Britain and the rest by securities quoted elsewhere than in Great Britain and unquoted securities. The increase in investments quoted in Britain reflects the effect of the monetary and budgetary policies followed by the British Government which, while restricting the credit to the private sectors, enhanced Governmental spending. In other words, banks had to lend more to the Government and less to the private sector. The quoted investments (£20.52 million) are taken at or under market value and the unquoted investments (£127,027) at or under cost. Cash balances show a contraction of only £413,000 to £15.21 million. The investments and cash balances together give a coverage of 52.3 per cent. to the deposits, as against 44.3 per cent. at the end of 1951.

MERCANTILE BANK TO PAY HIGHER DIVIDEND

DEPOSITS IMPROVE

READ together, the statement of the Chairman to shareholders and the audited accounts of the Mercantile Bank of India Ltd. (Chief Manager: Mr. R. N. Drake, London), for the year ended 31st December, 1952, reveal that the working of the Bank during that year was scarcely affected by the universal slump in commodity prices, in distinct contrast to the experience of the majority of Indian Scheduled Banks. There was no falling off in the volume of business handled by the Bank, the balance-sheet total, at £74 million (though this does not provide an exact idea of the business done during the year, it nevertheless offers a fair indication), disclosing little change over the year. The Bank's deposits experienced a further improvement which enabled it to keep the level of advances at a fairly high level consistent with the official policy of credit restriction and to invest the surplus funds in remunerative Gilt-edged assets. The profit also has been very nearly maintained What is more, the dividend has been stepped up from 12 per cent. to 14 per cent.

The net profit (after providing for taxation, contingency accounts, out of which full provision has been made for bad and doubtful debts and any other diminution in the value of assets), amounting to £195,188, shows only a negligible fall, as compared with £195,361 for 1951. Even this recession is due to increased provision for taxation consequent on the excess profits levy. All the customary allocations to the funds of the Bank have been maintained. At the same time, the dividend has been raised, as already mentioned, from 12 per cent., less tax, a rate which the Bank had been paying for the previous four years, to 14 per cent. per annum. The interim dividend of 6 per cent. paid in September last was the same as that for 1951. It is the final dividend that is now proposed to be raised from 6 per cent. to 8 per cent. The Directors' decision to recommend a higher dividend is perfectly justified by the trend of the Bank's profit in recent years. It may be interesting to note here that the proposed dividend is still 2 per cent. lower than the dividend for 1930, though it is 2 per cent. higher than that paid during 1931 to 1940.

That the progress of the Bank has, indeed, been highly satisfactory will be evident from the following comparative table:

(In thousands of £'s sterling)

	As on 31st December			
	1952	1951	1950	1949
LIABILITIES (Main)				
Capital	1,050	1,050	1,050	1,050
Reserves and surplus ..	1,700	1,700	1,539	1,383
Notes in circulation ..	278	229	282	262
Deposits and other accounts	68,510	67,396	62,018	49,932
Loans payable	..	405	..	..
Bills payable	1,729	2,890	1,828	1,251
Acceptances	299	408	246	..
ASSETS (Main)				
Cash	15,208	15,621	13,024	12,374
Investments	20,651	14,228	14,533	13,701
Securities against note issue	371	371	371	371
Bills receivable	14,830	18,850	15,804	8,997
Loans and advances ..	21,846	23,927	22,468	17,953
Fixed assets	644	695	550	415
Balance-sheet total ..	73,655	74,154	67,042	54,093

	For the year ended 31st December			
	1952	1951	1950	1949
Net profit	195	195	193	192
Appropriations—				
Pension fund ..	13	13	13	13
Premises account ..	50	50	50	50
Contingencies (additional)	55	55	55	55
Dividend	77	66	69	69
	(14%)	(12%)	(12%)	(12%)
Carry forward	200	200	189	183

A notable feature disclosed by the accounts for 1952 is that the deposits and other accounts have staged an advance of £1.11 million, in distinct contrast to the experience of many other banks. Thus, the unbroken trend of expansion in the Bank's deposits seen during the last several years has been kept up, though the pace of increase was relatively smaller. The increase in deposits has been offset by the decline of £1.2 million in bills payable. There are no outstanding balances on account of loans payable. Reflecting the fall in foreign trade, acceptances on account of customers have declined by £109,000.

As against these changes on the liabilities side, the assets side discloses a decline of £2.08 million in loans and advances. The management has always been discreet in regard to advances, as will be seen from the comparatively smaller pace of increase in advances *vis-a-vis* the expansion in deposits. The decline in advances in the face of an increase in de-

(Continued in previous column)

CHARTERED BANK REPORTS STEADY PROGRESS

DIVIDEND RAISED—BONUS SHARES TO BE ISSUED

THE fortunes of a banking company, the operations of which are confined only to one country, are influenced by the vicissitudes of the economic and monetary conditions in that particular country. But in the case of a banking company, the activities of which extend to a number of countries with varying economic and political conditions, its task of maintaining a sound balance between the conflicting demands of liquidity and earning capacity is, indeed, onerous. To the latter category of banks belongs the Chartered Bank of India, Australia and China (Chief General Manager: Mr. W. R. Cockburn, London) which operates in 18 separate areas and its experience of the conditions in these areas during the year ended 31st December, 1952, as will be noted from the masterly review by its Chairman, Mr. Vincent Alpe Grantham, in his statement to the shareholders—the full text of which appears elsewhere in this issue—has not been uniform. But one common feature of the economic conditions in these areas has been that there has been deterioration in their economy, accompanied by rising costs, including taxation, which take a heavy toll of the Bank's earnings. Judged against this background, the performance of the Bank during the past year must be regarded as quite commendable. The Bank has been more than successful in maintaining its profit for the past year at the record level for 1951 and declaring a slightly higher dividend without encroaching upon the allocations to reserves.

The Bank's profit (after providing for taxation and after making allocations to contingency accounts, out of which accounts full provision has been made for diminution in value of assets) for the year under review amounts to £698,782 and exceeds that for the previous year by £1,685. This increase, tiny though it is, is heartening, considering the difficult economic conditions that were witnessed during the past year and the note of caution struck by the Bank's Chairman last year, asking the shareholders to be prepared for some reduction in future profits. The aforesaid profit, along with the sum of £397,433 brought in from the previous year, has been utilised (*a*) to write off Bank premises (£200,000), and (*b*) to allocate to officers' pension fund (£125,000), widows' and orphans' fund (£20,000) and contingency account (£100,000). These allocations are the same as those made last year. Besides paying the usual dividend at the self-same rate of 14 per cent. less income-tax, the Directors propose to pay a bonus of 2 per cent. (less tax) to mark the Centenary of the Bank. These distributions absorb £252,000 (as against £220,500), leaving to be carried forward £399,215 which, incidentally, is a little more than the amount brought in, a pointer to the fact that all the appropriations and the enhanced return to shareholders have been fully earned.

The following summary of the Bank's balance-sheet as on 31st December, 1952, as compared with that at the end of the previous three years, gives an idea of the Bank's progress in recent years:

(In thousands of £'s sterling)

	As on 31st December			
	1952	1951	1950	1949

Undistributed surplus	399	397	366	409
ASSETS (MAIN)				
Cash	31,788	33,804	31,481	25,994
Investments—				
Government and other securities	66,300	62,102	55,867	50,461
Securities against note issue	2,670	2,929	2,947	3,099
Advances	99,248	86,779	67,158	52,853
Bills of exchange	15,110	12,887	14,244	4,016
Bank premises, etc.	1,845	1,913	1,843	1,823
Remittances in transit	4,833	548	5,569	1,832
Balance-sheet total	208,515	213,633	193,603	151,520

The balance-sheet at the end of 1952 reflects, in large measure, the effects of the almost universal fall in commodity prices which took place during the year and also of the decrease in the volume of foreign trade of the United Kingdom and other Dominions and territories where the Bank operates, caused by "restrictive measures upon imports designed to improve the Commonwealth's balance of payments, especially with hard currency countries." The striking increase of £1 million in the reserve fund is due to the transfer of a like sum from the secret reserve, namely, contingency account. While the current and other accounts have declined, the fixed deposits have gone up a trend similar to that experienced by the majority of Indian banks. There has been a contraction in bills payable, but acceptances have gone up. The increase in acceptance is noteworthy and is accounted for by "calls to finance heavier than usual shipments of food and raw materials around the end of the year against the trend already noted." The notable variations on the assets side are the substantial reductions in advances and cash balances and the increases in investments in Government and other securities and bills of exchange.

An outstanding development in the history of this 100-year old institution is the latest decision of the Directors, taken only a few days ago, to issue bonus stocks. Explaining the reasons for this decision, the Chairman observes, in his annual statement to shareholders, as follows:

"Two years ago, we augmented the reserve fund by transferring to it £1,000,000 from contingencies account, restoring the reserve fund to £4,000,000, the figure at which it stood before 1931. I pointed to you at the time that our balance-sheet total had increased out of all proportion to the issued capital stock and reserve fund. This matter has continued to give us concern, and it was felt that the opportunity should be taken this year of strengthening both the issued capital and the reserve fund. Accordingly, before closing the books on this occasion we transferred a further £1,000,000 from contingencies to the reserve fund, raising it to £5,000,000 with a view, subsequently, to capitalising £500,000 of this sum. I would draw your attention to the resolution which will be placed before the stockholders at an extraordinary general meeting to be held after the ordinary general meeting on 1st April, at which your consent will be sought to this capitalisation of £500,000 from the reserve, which will have the effect of making the capital of the Bank £3,500,000 and the reserve fund £4,500,000. The consent of the Capital Issues Committee has been sought and obtained to this new issue, and I would say that, in recommending this proposal to you, we hope that it will be possible to maintain the 14 per cent. rate of dividend."

In deciding to issue bonus shares thus, the Directors of the Bank have broken new ground in the traditions of British banking. But it is a good treat to the shareholders and they will remember it with pleasure, for it is a very, very rare treat.

LLOYDS BANK

HO/S/52-1956

BANK OF INDORE'S RESULTS

PROFIT WELL MAINTAINED

THE satisfactory progress that the Bank of Indore Ltd. (Manager: Mr. N. D. Joshi, Indore City) had been making in recent years was well maintained during the year ended 31st December, 1952. The Bank's profit for the past year, amounting to Rs. 4.87 lakhs, is fractionally better than that of Rs. 4.75 lakhs for 1951. The improvement may be small, but it is nonetheless in refreshing contrast to the general experience of Scheduled Banks as a whole and is all the more noteworthy because it has been achieved despite difficult trading conditions. A careful study of the accounts reveals that this good performance of the Bank is the result of judicious employment of its resources without affecting in the least the liquidity ratio. Thus, whereas the Bank's advances ratio at the end of the year has remained at the self-same level of 61 per cent., the combined ratio of investments and cash balances has slightly gone up from 46.25 per cent. to 48.53 per cent.

The following comparative table gives the disposition of the Bank's earnings and the progress in its financial position in recent years:

(In lakhs of rupees)

	For the year ended 31st December		
	1952	1951	1950
Interest and discount	20.73	19.08	16.79
Commission and exchange	1.97	2.02	1.44
Interest paid	8.58	7.84	5.77
Expenses	9.33	8.42	6.49
Depreciation	0.26	0.32	0.27
Taxation	..	..	1.28
Profit	4.87	4.75	4.62
To reserves	2.15	2.29	2.25
,, bonus to staff	0.86	0.78	0.64
Dividend	1.84 (D. 12%)	1.84 (D. 10% +B. 2%)	1.84 (D. 10% +B. 2%)
Carry forward	0.63	0.63	0.70

	As on 31st December		
	1952	1951	1950
Capital	15.30	15.30	15.30
Reserves	24.00	23.00	22.00
Deposits	494.55	544.13	528.62
Advances and bills	301.69	329.09	270.89
Investments	181.70	168.87	217.12
Cash	58.31	82.83	85.00
Balance-sheet total	561.79	616.88	604.55
Ratio to deposits of—	%	%	%
Advances	61.00	60.48	51.24
Investments	36.74	31.03	41.07
Cash	11.79	15.22	16.08

The gross income has risen from Rs. 21.34 lakhs to Rs. 23.04 lakhs, of which increase, interest and discount earned account for Rs. 1.65 lakhs. Commission and exchange show a small drop, evidently because of the decline in the Bank's bill business. The fall in deposits has not brought about any reduction in the Bank's outgo by way of interest paid, which has actually gone up by about Rs. 74,000. Apart from the higher rate of interest which the Bank, in common with other banks, must have had to pay on its deposits, its borrowings during the last busy season (if it had borrowed anything at all—there are no borrowings outstanding as at the end of the year) must have been costlier, because of the unprecedented demand for bank credit. A disquieting feature of the working of banks, in general, in recent years is the abnormal rise in their administrative costs. From the foregoing table, it will be noted that the Bank of Indore has proved to be no exception to this general experience. It may be noted here that, during the last two years, while the gross income of the Bank has risen by only Rs. 2.30 lakhs, the expenses have gone up by as much as Rs. 2.84 lakhs, due to factors not within the control of the management. This is a trend which, as readers are aware, is not conducive to the spread of the banking habit in the interior parts of the State concerned.

To revert to the accounts. The profit of the Bank for the year under review has enabled the Directors to maintain the allocations to the reserve fund and the contingency reserve at Rs. 1 lakh each. They have, however, reduced the transfer to the gratuity fund from Rs. 20,000 to Rs. 15,000. The distribution to the shareholders is maintained at 12 per cent. per annum, but there is a departure this year from the usual practice. Instead of splitting it into dividend (10 per cent.) and bonus (2 per cent.), the Directors propose to pay the entire distribution of 12 per cent. in the form of dividend only. This change is a significant one, in that it is made only when the Directors are confident that they can maintain the dividend at that level in future. The Bank has been making such steady progress all these years that we feel that the optimism implied in the aforesaid decision of the Directors is justified.

The Bank is endowed with quite a strong reserve position, the reserve fund, at Rs. 24 lakhs, being equal to about 157 per cent. of the paid-up capital. Besides this, the Bank has added sizable sums to the inner reserves. As against a decline of Rs. 49.58 lakhs in deposits, the fall in advances is only Rs. 37.40 lakhs, so that the advances ratio is maintained at the same level as at the end of the previous year. The increase of Rs. 12.83 lakhs in investments is mainly the result of additions to the Bank's holdings of Government securities and Treasury Bills. The book value of the investments, it is gratifying to note, stands at below market value. There has been a contraction of Rs. 24.52 lakhs in cash balances, but that has not, as indicated at the outset, affected the total liquidity ratio.

ECONOMIC CONDITIONS IN ASIA AND FAR EAST

VIEWS OF TWO BRITISH EXCHANGE BANKERS

ELSEWHERE in this issue appear the statements of Chairmen of two well-known Exchange Banks, namely, the Chartered Bank of India, Australia and China and the Mercantile Bank of India, Ltd. Both these banks have a network of branches in the various countries of the Far East and the statements of their Chairmen provide a comprehensive review of the economic conditions prevailing in these countries. The statements reveal that there is much that is common between them. Mr. V. A. Grantham, Chairman of the Chartered Bank, is of the opinion that "conditions, economically and financially, have deteriorated considerably almost everywhere in the East over the past year. The same conclusion has been drawn by the Chairman of the Mercantile Bank, Sir Kenneth W. Mealing, too. He says: "The disruption of war, the movement and expansion of populations, the changes in Governmental personnel and structural pattern, the rise in world prices, shortages of foodstuffs and the consequent inflationary trends, all these factors have affected the economic health of this vast area."

Both Sir Kenneth and Mr. Grantham have commented upon the economic conditions in India, Pakistan, Ceylon, Burma, Thailand, Malaya, etc., and one is struck by the similarity between the views of the two Chairmen, differences between them, if any, being in respect only of details. In their references to India both deal with the Five-year Plan and display keen interest in the progress of the Plan. Says Sir Kenneth: "Whether it is possible for this ambitious Five-year Programme to come to full fruition, I cannot judge, but one can only admire those who have high ideals and who fix high targets and have courage to do their best to attain them." Mr. Grantham, however, is inclined to feel that the vital feature of the Plan is the question of wherewithal to finance it and remarks that, "without adequate capital, even the most enlightened and efficient administration will be powerless to assure the eventual success of this great scheme."

The tea and jute industries have received prominent attention at the hands of both the Chairmen. Referring to tea, Sir Kenneth draws attention to the deterioration in the financial position of tea companies. "Many companies, whose working capital was adequate when tea could be made and sold profitably at 1s. per pound before the war, are severely under-capitalised to deal with present costs, and the excessive taxation, now current, gives little hope for the creation of reserves from profits wherewith to replenish their working capital." Although this is a serious problem to many industries in many countries, it is particularly striking, he says, in the case of the Indian tea industry. Reviewing the position of the jute industry, Mr. Grantham feels that in view of the almost general tendency to protect national industries and the widespread extension of jute manufacturing in many countries, it is quite certain that Indian mills will never again attain to the near monopoly they enjoyed in the early days of the present century." His emphasis on the need for growing sufficient raw jute of high quality for the manufacture of a better class of fabric deserves to be noted by all those who have at heart the welfare of the Indian jute industry.

Pakistan

For Pakistan, the year 1952 was a difficult one, according to the two Chairmen. The economy of the country underwent considerable change for the worst, as a result of the fall in prices of its export commodities such as cotton, jute, tea, etc. There was a large deficit in foreign trade, leading to imposition of import restrictions. The need to import foodgrains too affected its balance of trade adversely, and subjected the country's attenuated reserves of foreign exchange to a further and unexpected drain. In this connection, readers' attention needs to be specially drawn to Mr. Grantham's explanation of the causes leading to food shortage in Pakistan. In recent days, the Government of Pakistan has sought to blame India for this difficulty. It will be seen from Mr. Grantham's statement that he does not subscribe to this view. His explanation is important, because it is the view of an impartial observer. To those who are anxious to know whether the Pakistan Government will devalue its rupee, Mr. Grantham provides an interesting answer. He says:

"Inevitably during the past year there have been critics who have attributed Pakistan's difficulties to what they consider to be the over-valued rupee. With a comprehensive scheme of economic development in progress, entailing a considerable volume of imports on Government account for some years to come, it is unlikely that the authorities will be willing to depreciate the external value of the rupee unless the prospects of the country's major exports, jute and cotton, take a further turn for the worse."

In his reference to Pakistan, Sir Kenneth is rather critical of the policy of economic rationalism that is being pursued by that country. This policy, to quote him, is making its influence felt in restrictions by various means upon foreign enterprise which even those most anxious to co-operate find difficult to justify.

Position in Burma

The round-up of economic conditions in Burma by Mr. Grantham is informative. Burma has now a full-fledged central bank in the Union Bank of Burma. Its currency system has been reformed on the basis of the decimal system. Its eight-year development plan envisages expansion of paddy cultivation and the establishment of certain secondary industries. Welcoming the Plan, Mr. Grantham feels that Burma should try to diversify its exports, instead of relying only on rice. He emphasises that the country can derive the most immediate profit by the exploitation of its considerable mineral wealth, namely, petroleum, lead and silver mines, etc. In the political sphere, it is encouraging to hear from Sir Kenneth, foreigners now can proceed in greater safety a far greater distance from Rangoon than was the case two years ago. This reflects improvement in the internal political conditions in Burma, a country in which India has not a little interest.

In Ceylon, the greater part of the cultivated area is devoted to the production of tea, rubber and coconuts which account for nine-tenths of the Island's income from exports and provide employment, directly and indirectly, for two-thirds of its population. In 1952, Ceylon's external assets went down sharply, but Mr. Grantham seems to feel that the fall will be arrested in the current year. Sir Kenneth, in his references to Ceylon, points out that increase in population has necessitated the importation of large quantities of rice, flour and sugar at high prices. Ceylon has since restricted its imports considerably.

In Malaya, the rubber industry, one of the twin props of the country's economy, passed through an extremely difficult year, owing to a sharp fall in prices. Tin, however, escaped comparatively lightly.

In Indonesia, inflation is stated to be rife and markets are still suffering from lack of up-country offtake. It is potentially one of the richest areas in the world, and is capable of development. Drastic measures have, however, been introduced to arrest inflation. The former Javasche Bank has been converted into the Bank Indonesia which will act as the central bank of the Republic. The management of the Bank is said to be in capable hands. Mr. Grantham is confident that the existing administration in Indonesia will restore economic normalcy at an early date. He does not share the view of some of the ultra-pessimists that Indonesia will soon fall a prey to Communism or civil war.

In other areas of the Far East such as Thailand, Viet Nam, trade deficits and inflation appear to be a common feature. Even Japan is not free from these disquieting trends. Says Mr. Grantham: "The overall balance of payments, although favourable during 1952, showed a very ominous trend against Japan. On the one hand, strong inflationary pressure at home, accompanied by labour troubles, tended to price some exports out of world markets, whilst the import restrictions resulting from the Commonwealth Finance Ministers' Conference upset trade with the sterling area to an extent that Japan's sterling balances decreased with great rapidity from September onwards."

ACTIVITIES OF WORLD BANK

TOTAL DISBURSEMENTS EXCEED 1,000-MILLION DOLLAR MARK

EACH year that passes brings additional evidence to show of the good work that is being done by the International Bank for Reconstruction and Development (I.B.R.D.) in providing assistance, financial as well as technical, to the countries the economics of which have not been fully developed. The periodical reports of the Bank published from time to time bear testimony to this. The latest one to give us an idea of the activities of the Bank is the statement prepared by it for the use of the Economic and Social Council of the United Nations (U.N.E.S.C.O.) which is meeting in New York on the 31st inst. This statement, which is a supplement to the seventh Annual Report of the Bank to be considered by the U.N.E.S.C.O., provides a summary of the work done by the Bank from 1st July to 28th February, 1953. As one reads the statement one is struck by the care and thought bestowed by the Bank on the development projects submitted to it for aid. It is this study which not only ensures the implementation of the project on relatively more economic lines but makes the loan to the receiving countries less burdensome. Herein lies one of the chief contributions of the Bank to the development of the undeveloped and underdeveloped areas in their attempts at raising the standard of living of their people.

In the period under review three more countries, namely, Japan, Germany and Jordan, became members of the Bank. With the admission of these countries, the total strength of the Bank's membership rose to 54, with an aggregate subscribed capital of $9,036.5 million. Japan subscribed to 2,500 shares of capital stock valued at $250 million, Germany to 3,300 shares valued at $330 million and Jordan to 30 shares worth $3 million.

During the six months under review, the I.B.R.D. made eight loans—to Australia, Colombia, Finland, Iceland, India, Peru and Yugoslavia—amounting to $161,633,464. This brought the total loans sanctioned to $1,573,766,464, covering 76 loans to 28 countries. Actual disbursements during the half-year were equivalent to $148,733,489, bringing the total disbursements to $1,025,237,622.

The Bank's activities covered practically all the continents. During the period, the Bank sanctioned no loans to any country in Africa. But the Bank's staff visited British territories in East and West Africa to appraise the development plans of these territories. A Bank Mission visited Northern and Southern Rhodesia and Nyasaland in connection with a three-year development programme. Since the close of the eight-month period under review, the Bank has sanctioned a loan of $14 million to Northern Rhodesia for the development of railways. The loan is for a term of 19 years, bearing interest at the rate of 4½ per cent. including the 1 per cent. commission for the Bank's special reserve. Northern Rhodesia is not a member of the Bank. Nevertheless, it is eligible to borrow from the Bank as an overseas dependency of a member country, namely, the U.K. The loan is, of course, guaranteed by the U.K. Another African country the economy and development plans of which were examined by the Bank's Mission was South Africa.

Asia

In Asia, the Bank's activities were concerned with studies relating to development schemes in Burma, Ceylon, India, Japan, the Philippines, and Thailand. Excepting India, other countries did not receive any loans during the period. In the case of Burma, a Bank Mission was scheduled to arrive this month with a view to examining the plant for development. After examining the conditions in Ceylon, the Bank's general survey mission has recommended a six-year programme of development to begin in October, 1953, calling for a total expenditure equivalent to $337.5 million. The programme gives priority to the increase in agricultural production and to investments in transport power and industry. Two members of the Bank visited Japan and made a general appraisal of the Japanese economy and collected information bearing on Japan's economic prospects and its capacity to service foreign debt. It examined the investment requirements in various fields and gauged the extent to which Japan might be able to meet them out of its own sources. The Bank's Director of Marketing visited the Philippines to advise the Government on the development of a market for Government bonds. A Bank Mission is at present in Thailand for examining prospects for further development of that country.

During the period under review, India received two loans from the Bank. One was the loan of $31.5 million to the Indian Iron and Steel Co., Ltd., for a period of 15 years bearing interest at 4½ per cent. And the other was a 25-year loan for $19.5 million carrying interest at 4½ per cent. for financing key projects in a general plan of development of the Damodar Valley. As a full account of these loans appeared in *Commerce* dated 14th February, 1953, there is no need to detail them once again here.

Another useful work which the Bank is doing for the whole of the Indian sub-continent is the finding of a suitable solution for the Indo-Pakistan water dispute.

The Bank arranged for holding an Indus Basin Conference for studying the Indus system of rivers

(*Continued on page* 579)

WORLD COTTON SPINDLEAGE

SLUMP RETARDS PACE OF PROGRESS DURING FIRST HALF OF 1952

THE world-wide slump in cotton textile industry and trade in the early months of 1952 seems to have retarded the pace of expansion in the world cotton spinning capacity during the half-year ended July, 1952, the net increase in the number of spindles over the six months under review being only 1.39 million, as against 1.87 million in the corresponding period of the previous year. The aggregate number of spindles in the world as at the end of July, 1952, according to *International Cotton Statistics*, published by the International Cotton Federation, Manchester, was 129.25 million, as against 127.86 million on 31st January, 1952, and 125.99 million on 31st July, 1951.

The expansion in world spindleage is accounted for entirely by ring spindles, the number of which has gone up by 1.42 million to 107.60 million. The number of mule spindles, however, continued to register a fall, the exact recession being 34,000 to 21.65 million spindles. Much of this fall has been under spindles spinning Egyptian cotton, which, at the end of July, 1952, aggregated 20.35 million, as against 21.56 million six months before. The number of spindles spinning rayon staple fibre also has receded from 6.72 million to 6.10 million.

The trend of expansion in cotton spindles during the period February to July, 1952, as compared with the two previous corresponding periods, is indicated below:

(In millions)

	Feb., 1951— *July*, 1951	*Aug.*, 1951— *Jan.*, 1952	*Feb.*, 1952— *July*, 1952
U.K.	28.15	27.93	27.98
U.S.A.	23.18	23.12	23.23
India	10.85	11.24	11.24
U.S.S.R.	9.85	9.90	9.90
France	8.04	8.11	8.06
Germany	7.08	7.13	7.13
Japan	5.24	6.49	6.95
Italy	5.69	5.74	5.72
China	4.10	4.10	4.10
Brazil	3.28	3.23	3.25
Czechoslovakia	2.36	2.38	2.38
Spain	2.21	2.21	2.23
Belgium	1.84	1.86	1.85
Pakistan	0.32	0.34	0.53
Other countries	13.80	14.08	14.70
Total	125.99	127.86	129.25

It will be seen from the above table that the slow pace of expansion in the capacity of cotton spinning was in marked evidence in the case of Japan. Thus, the addition to the spindleage of that country during the half-year under review was to the extent of only 459,000, which does not compare favourably with as much as 1,250,000 in the previous half-year. The number of spindles at the end of July, 1952, was 6.95 million, which is equal to about 56.6 per cent. of Japan's pre-war capacity of 12.28 million spindles. The fall in the rate of expansion was the result of a series of restrictions on production imposed by the Japanese Government, following slackness in the export demand for cloth and appreciable decline in prices.

A fall in the rate of expansion was also witnessed by the U.K., the number of spindles added declining from 22,000 to 5,000. India did not witness any expansion at all in the first half of 1952; in the previous half-year, it may be noted, 392,000 spindles had been added. The bulk of the 11.24 million spindles in existence on 31st July, 1952, is accounted for by ring spindles, amounting to 10.98 million. The spindles in course of erection in India, during the six months under review, however, were higher at 542,000, as against 146,000 in the previous six-month period.

Pakistan, on the other hand, witnessed a remarkable expansion in its spindleage. Thus, the number of spindles in that country increased from 337,000 to 527,000, a rise of 190,000 spindles, as against only 22,000 spindles added in the previous half-year. Spindles in course of erection were also substantially higher at 605,000, which compares with 60,000 six months before and 9,000 a year before. The total spindleage at the end of 1953 is expected to be as high as 1,079,000, as against 178,000 at the time of the Partition.

The rapid rate of expansion in the size of the Pakistan cotton textile industry is primarily due to the active encouragement and assistance given by the authorities—Central and Provincial. Referring to this industry, Pakistan's Finance Minister stated, while presenting the budget estimates for 1953-54 a few days ago, that, out of the 11 Government-sponsored textile mills, installation of eight was already in progress and orders for the remaining three mills would be placed during 1953-54. The total estimated cost of these 11 mills is placed at about Rs. 8.53 crores, of which the Government of Pakistan will provide approximately half, the balance being provided by the Provincial Governments. The chief reason why Pakistan is attaching such great importance to the development of the cotton textile industry is the need to save foreign exchange. The value of imports of cotton textiles into Pakistan hitherto was of the order of Rs. 30 crores per annum and that too after exercising a strict control over the volume of cloth imports.

The pattern of spindleage in the more important cotton textile producing countries as at the end of July, 1952, is indicated below:

(In thousands)

	Ring spindles	*Mule spindles*	*Spindles spinning Egyptian cotton*	*Spindles spinning rayon staple fibre*
U.K.	10,505	17,472	11,851	1,319
U.S.A.	23,226	..	1,500	1,377
India	10,980	261	1,149	231
U.S.S.R.	8,700	1,200	45	..
France	6,920	1,142	1,491	247
Germany	6,932	202	222	1,540
Japan	6,942	6	327	92
Italy	5,672	52	1,200	450
China	4,100	..	250	..
Pakistan	522	5	..	..

It is thus seen that the bulk of the spindles in the U.K. consists of mule spindles. In the U.S., there are no mule spindles at all. In India and also in Japan, the proportion of mule spindles to the total is very negligible.

Just as in the previous half-years, so also in the period under review the expansion in the world cotton spindles was not accompanied by a rise in world consumption of cotton. In fact, the quantity of cotton actually consumed during February-July, 1952, was lower, as compared with the previous half-year, by 180,000 bales at 16.24 million bales (of 500 lbs. each). The decline was in evidence in the American and Egyptian varieties only, whereas the Indian and sundry varieties showed a slight increase. An analysis of these totals according to the principal growths of cotton is given in the following table:

(In million bails of 500 lbs. each)

	Six months ended		
	July, 1951	*Jan.*, 1952	*July*, 1952
American	7.49	7.11	6.86
East Indian and Pakistan	2.13	2.12	2.16
Egyptian	0.74	0.55	0.45
Sundries	6.65	6.63	6.77
Total	17.01	16.41	16.23

Of the total of 16.24 million bales of cotton consumed during the six months ended July, 1952, the U.S. alone accounted for 4.43 million bales; this was 278,000 bales lower than that in the previous six months. The U.K. accounted for 674,000 bales, which represents a fall of 337,000 bales. Japan accounted for 868,000 bales, as against 928,000 bales. Cotton consumption in Canada and Argentina too was lower at 148,000 bales and 261,000 bales, as against 182,000 bales and 335,000 bales, respectively. In contrast with this general trend, cotton consumption in India during the period under review was substantially higher at 1.96 million bales, as compared with 1.91 million bales. Consequently, the production of yarn during the six months under review was larger at 701 million lbs., as against 664 million lbs. in the previous six months. Similarly, the cotton mills in China and Brazil consumed more cotton, the exact quantities being 1,643,000 bales and 481,000 bales, as against 1,126,000 bales and 447,000 bales, respectively.

During the half-year under review, the total "spindle-hours worked" was the largest in Egypt, each spindle on an average working 3,380 hours, followed by Turkey with 3,285. The spindles in Chile accounted for 2,788 hours, in the U.S. for 2,543, in Denmark for 2,491 and in Japan for 1,872. The "spindle-hours worked" in the U.K. were only 873 hours. It may be noted here that the "total spindle-hours worked" by the industry in any one country divided by the actual spindles in place gives the average hours worked.

EXPORTS OF RAW WOOL

TRADERS URGE FREE LICENSING

IT will be recalled that the Government of India announced, on 12th June, 1952, that exports of raw wool would be licensed freely for shipment up to 31st August, 1952. After a further review of the position, it decided to continue the policy till the end of the year. Whether or not the policy of free licensing of wool exports will be continued during the current year is not known. And the Government's decision in this regard is being eagerly awaited. In the meantime, the All-India Wool Trade Federation has submitted a representation to the Government of India urging it to free exports of raw wool during the next 12 months. Such a policy, it points out, will enable the exporters to maintain the usual rate of exports and thus strengthen the hold of Indian wools in world markets.

The Federation's plea for free licensing of raw wool exports is based chiefly on the ground that there is a surfeit of supplies in the country. The aggregate output of raw wool is placed at 58 million lbs., which is very much more than what the indigenous woollen industry actually consumes. For instance, the quantity of wool consumed by the carpet industry is said to be not more than 5 to 6 million lbs. (including South Indian wools) per annum. Even here, it is stated that the carpet industry has been patronising medium and coarse varieties of wool rather than superior wools, such as Bikaner, Joria and Vicaner.

Another important ground on which the Federation's plea is based is presumably that, despite the free exports allowed during the latter half of 1952, prices of raw wool in the country have not only not increased but have actually declined. The overall price of superior Bikaner white wool during 1952 was Rs. 2-14 per lb., as against Rs. 3-12-8 in 1951 and Rs. 3-9-2 in 1950. Likewise, the price of superior Beawar fazilka white wool was lower at Rs. 2-9-6 per lb., which compares with Rs. 3-5-2 and Rs. 3-4-4 in the two preceding years, respectively.

The Federation, therefore, points out that the carpet industry's complaint against high prices of wool is not justified. According to it, Indian wool is consumed in world markets and, as such, the prices paid for it are in conformity with those of other wools suitable for carpet making. Similarly, Indian carpets are marketed in foreign lands at prices in comparison with those of carpets produced elsewhere. In other words, Indian carpets too are sold at higher prices, if the world prices for wool are higher.

Proceeding, the Federation observes that the season for white wools has already begun and stocks are accumulating at all wool centres. Naturally enough, it fails to understand the argument of the carpet industry that the high cost of Indian wool precludes the foreign buyers of carpets from placing new orders, because the Indian manufacturers actually enjoy a benefit of 10 to 15 per cent. in wool prices, which their competitors in foreign lands have to bear by way of freight, insurance, commission, etc., and also because labour in India is cheaper *vis-a-vis* labour in other countries. To expect, in spite of these two main advantages, raw wool supplies to be made available at below the current level of world prices is, the Federation feels, not at all justified. The Federation is also opposed to the suggestion for the introduction of quantitative restriction on wool exports, put forward by the carpet industry, and urges the Government, on the contrary, to free exports of raw wool. Otherwise, the Government would only be killing the sheep industry in India, the Federation warns, "by forcing the shippers to send more sheep to the slaughterhouses which would offer them better returns."

FREE LICENSING OF CLOTH EXPORTS

It was only last week that we observed in these columns that, in view of the encouraging trend of cloth output, the Government of India might extend the period of the policy of free licensing of exports beyond June, 1953. We are glad to find now that the Government has since announced its decision to continue the policy for three months more, that is, up to the end of September next.

Another welcome decision announced by the Government relates to the suspension—as an experimental measure—of the operation of clauses 25 and 26 of the Cotton Textile (Control) Order, 1948, till 30th June, 1953. As a result of this decision, the mills and dealers are now free to buy or sell or to have in their possession time-barred cloth and yarn in packed or open condition. Dealers can dispose of such cloth and yarn without getting them T.C.B. stamped by the State textile authorities. They can also dispose of the T.C.B. stamped cloth and yarn, even though the time limit for disposing of the same may have expired.

FUTURE OF RAW COTTON COMMISSION

RIVALRY IN CLOTH EXPORT TRADE

(From A Special Correspondent)

MANCHESTER, *17th March*

FACED with the task of providing a report for the British Government on the future of raw cotton buying, a committee of textile experts headed by Sir Richard Hopkins began its deliberations in Manchester to-day (Tuesday). Set up by Mr. Peter Thorneycroft, President of the Board of Trade, the Committee is to review the position of the State-sponsored Raw Cotton Commission and make recommendations as to its future. In view of the fact that many Lancashire millowners wish to revert to private buying of their raw material providing adequate cover arrangements are available to protect them against price fluctuations, it is believed that this is the next step in the direction of the reopening of the Liverpool cotton market.

MANCHESTER LETTER

Spinners will again have the option in June of deciding whether to obtain supplies privately or through the Raw Cotton Commission for next season. The Committee has, therefore, less than three months in which to make its report.

Sir Richard Hopkins, who was Chairman of the 1952 Cotton Import Committee which recommended the revival of private buying for the first time for more than 10 years, will preside over representatives of the Liverpool and Manchester Cotton Associations, the Master Spinners' Federation, the Cotton Board, the Raw Cotton Commission and the United Textile Factory Workers' Association.

While spinners must now settle down to wait, more or less impatiently, for the new Hopkins Review Committee's report, there is much to interest them in the present raw cotton situation and the future supply outlook. The Committee begins its deliberations this week in the knowledge that its final recommendations must play a very considerable part in influencing the decision of the trade whether or not to contract-out from the Commission during the summer.

Meanwhile, the gap between supply and demand for the raw material has shown no sign of decreasing, and if anything the reverse trend has been indicated. Reports already predict that the efforts being made to hold down the acreage planted for cotton in the United States are not being entirely successful. In several States there is the possibility of large areas being under cultivation and preliminary forecasts are that the acreage will be larger than a year ago. The inevitable result of another season producing a crop at around the current level would be the automatic control of acreage in 1954.

New Cover Scheme

Repercussions of the first Hopkins Committee report are still being felt as the second Committee gets down to work. The Raw Cotton Commission has had to revise its cover arrangements with contracting-in spinners as a result of changes in the situation in which it now competes with private traders using the Commission's published prices as cover for their operations.

There is clearly need for far more flexibility in the Commission's methods if it is still to render an adequate service to those mills which remain within its organisation. But the Commission itself is hampered by its inability to estimate what proportion of the trade it will have to cater for at the start of the new season. It must mantain a sufficiently large and varied stock of cotton to offer its customers and consequently must be prepared to vary its purchasing arrangements from year to year. The new cover agreement provides the Commission with necessary freedom to alter the scope of its cover facilities as circumstances require.

It is nearly two months since the Government offered facilities to raw cotton merchants to import up to 30,000 tons of non-sterling cotton as the basis for a spot market to provide stocks for the choice of contracting-out spinners. So far this season, imports of raw cotton have aggregated 718,050 bales, of which 223,399 bales have been on private account. Nearly 130,000 bales of the cotton privately bought has been American staple.

Export Rivalry

Preliminary figures of cotton cloth exports from the United States in 1952 now enable an assessment to be made of the position of the chief rivals for export trade. By shipping 760,500,000 square yards of cotton cloth abroad the American mills attained their fifth best export total, but it is not yet clear whether they just exceeded the Japanese figure. Earlier reports from Tokyo indicated shipments of just under 761,000,000 square yards, but confirmation of this total is awaited. Whatever the final figures, the two countries were obviously running neck and neck for export business last year, leaving Britain some 50,000,000 yards behind with a total of nearly 711,000,000 square yards.

Apparently the loss of trade has affected the Japanese industry to a greater extent than its competitors, as the comparable 1951 figures were: Britain 865,000,000 yards, Japan 1,082,000,000 yards, and the United States 809,000,000 square yards. Combined export trade losses of these three countries alone were about 500,000,000 yards of cotton cloth compared with 1951.

The estimates put forward at last year's Buxton Conference of possible shipments in 1953 do not look very realistic in the present state of world markets. There is time for changes to take place but it is unlikely that buying by consumers on the scale experienced in the years immediately after the war will recur. The shelves of the world have been filled and are now slowly emptying. Replenishments can only be expected at a more reasonable rate, based mainly on seasonal requirements.

Research Plans

The drive to hasten the application of new devices and processes developed by British cotton industry scientists to practical use at factory level is gaining momentum. At this week's annual meeting of a development company set up by the British Cotton Industry Research Association to deal with the commercial aspects of new devices, the Chairman, Sir Raymond Streat, said that there were about 40 items which the Company would be dealing with in the next year or so. Some of them, although designed for the cotton industry, would be capable of proving valuable to other industries. Sir Raymond added:

"What we are concerned about is that the inventions of the Institute—past, present and future—should, as they take practical shape in the laboratories and workshops at the research centre, be got into the premises of potential users as quickly as is consistent with first-class performance and lasting satisfaction and benefit to the industry."

Double-shift Work

The need for retaining the best machinery for the operation of double day-shift working in the cotton industry was stressed by Mr. Charles Schofield, Secretary of the Operative Spinners' Amalgamation, in his latest quarterly report.

The widespread adoption of the system, he said, would mean the closing of approximately 40 per cent. of existing units, assuming that the labour force remained at its present level. Discussing the prospects of how this process of sealing or scrapping was to be carried out, he said:

"It is very difficult to conceive a situation in which owners of 40 per cent. of the trade's equipment will be so altruistic as to agree to scrap their plant without adequate compensation in order that others may remain in business, perhaps at a more remunerative level."

Provision for some reimbursement for dismantlement of plant and loss of business would presumably be charged against firms remaining in the industry, thus adding to already heavy capital charges.

Yarn Output Rise

Lancashire mills spun more yarn in the last week of February than in any week in the past 12 months. Output figures given by the Cotton Board show that spinning operatives produced 17,910,000 lbs. of cotton, spun rayon and mixture yarn—an increase of 220,000 lbs. on the previous week.

The last time this total was exceeded was in the week ended 23rd February last year, when the mills turned out 18,990,000 lbs. of yarn. Because of the slump, production has never since exceeded 18,000,000 lbs.

For the first time for two months the mills lost more workers than they recruited. There was a net wastage of 55 full-time operatives and an additional loss of 10 part-timers.

Despite this reverse, however, the spinning industry has taken back since August more than 6,000 workers who forsook the mills for safer jobs when the slump was at its worst.—*All Rights Reserved.*

SIXTIETH ANNUAL REPORT OF THE BOARD OF DIRECTORS TO THE SHAREHOLDERS

The Directors submit to the Shareholders of the Bank the General Balance Sheet and Statement of Profit and Loss Account for the year ended 31st December, 1952.

The Balance of Profit and Loss Account for the year after providing for Taxation and after Allocations to Contingency Accounts out of which full provision has been made for Bad and Doubtful Debts and any other diminution in the value of Assets, amounts to £195,188
to which has to be added the balance brought forward from last account .. 200,130
making the amount available .. £395,318
out of which the following appropriations have been made:—

To Interim Dividend of 6 per cent. on the "A", "B" and "C" shares less Income Tax at 9s. 6d. in the £, paid on 23rd September, 1952	£33,075	
To Officers' Pension Fund	13,000	
To Amount written off Freehold Banking Premises and Property	50,000	
To Additional Allocation to Contingencies Account ..	55,000	
		151,075
leaving a sum of ..		£244,243

from which the Directors recommend:—

A Final Dividend of 8 per cent. on the "A", "B" and "C" shares, less Income Tax at 9s. 6d. in the £ (making 14 per cent. for the year) payable 31st March, 1953	44,100
Balance to be carried forward to next Account	£200,143

A Branch of the Bank has been opened at Khulna, East Pakistan.

Mr. Cecil Doughas Miller, has been appointed to a seat on the Board and under Article 97 of the Articles of Association offers himself for re-election.

The following Directors retire by rotation under Articles 116 and 117 of the Articles of Association but, being eligible, offer themselves for re-election:

Sir Kenneth W. Mealing.
Sir John G. Hay.

Messrs. Cooper Brothers & Co. and Messrs. W. A. Browne & Co., the present Auditors, will continue in office pursuant to Section 159 (2) of the Companies Act, 1948.

By Order of the Board,
R. N. DRAKE,
Chief Manager.

NOTES.

1. Currency Assets and Liabilities have been converted into Sterling at the following rates:—1s. 6d. per Indian and Ceylon Rupee and Burma Kyat, 2s. 3d. per Pakistan Rupee, 2s. 4d. per Straits Dollar, 1s. 3d. per Hong Kong Dollar, 7s. per United States Dollar, 5d. per Tical, Yen 1,000=£1 and Shanghai Yuan 80,000=£1.

2. Group Accounts are not prepared as the Directors consider they would be of no real value to members in view of the insignificant amounts involved in the accounts of the Subsidiary Companies.

3. Contracts for outstanding capital expenditure Nil (1951, £9,241).

4. There are Contingent Liabilities in respect of the following:—
Bills Receivable re-discounted £803,541 (1951, £2,639,340) all of which have since run off.
Outstanding Forward Exchange Contracts.
Confirmed Credits and Guarantees entered into in the ordinary course of business, including Guarantees to Government Departments in India amounting to £29,912 (1951, £56,673) for which security has been deposited with the Reserve Bank of India.
Uncalled Capital amounting to £54,963 (1951, £54,963) in respect of partly paid shares in Subsidiary Companies.

REPORT OF THE AUDITORS TO THE MEMBERS.

We have obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purposes of our audit. In our opinion proper books of account have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purposes of our audit have been received from Branches not visited by us. We have examined the above Balance Sheet and Profit and Loss Account which are in agreement with the books of account and returns. In our opinion and to the best of our information and according to the explanations given to us the said accounts give the information required by the Companies Act, 1948, in the manner thereby authorised for Banking Companies and on such basis the Balance Sheet gives a true and fair view of the state of the Bank's affairs as at 31st December, 1952, and the Profit and Loss Account gives a true and fair view of the profit ascertained in the manner therein indicated for the year ended on that date.

LONDON, *3rd March*, 1953.

THE MERCANTILE BANK OF INDIA, LIMITED

ONE MORE YEAR OF SATISFACTORY RESULTS COMPLETED

SIR KENNETH MEALING ON IMPORTANCE OF ECONOMIC STABILITY IN S.-E. ASIA

THE satisfactory progress made by the Mercantile Bank of India, Ltd., during the year 1952 in the face of a severe recession in world prices of most commodities has been clearly brought out by Sir Kenneth W. Mealing, Chairman of the Bank, in his statement to the shareholders to be presented at their Sixtieth Annual General Meeting to be held in London on 31st March, 1953. Sir Kenneth has availed himself of the opportunity to strike a note of warning that "the economic stability of South-East Asia will continue to be of the first importance to the free world for years to come." Referring to the recession in prices during the past year, he says that, although in the case of some commodities, prices have fallen too fast and too far, in general the disinflationary trend should prove healthy.

The following is the full text of Sir Kenneth's Statement:

"During the year, Mr. C. D. Miller has been elected to the Board to fill the vacancy created by the retirement of Sir Charles Innes. Mr. Miller has wide business experience in and current knowledge of Thailand, Malaya, India and Pakistan, which will be of great value to the Bank, and you will be asked to confirm his election. Sir John Hay has given his valuable services as Deputy Chairman throughout the year, since I became your Chairman on the retirement of Sir Charles Innes after our last annual meeting.

Bank's Results

"The accounts indicate that there has been no falling off in the volume of business handled by the Bank and, despite the recession in world prices of most commodities, the balance-sheet total, at £74 million, shows little change. On the assets side, there is an increase of £6½ million in our holding of Government securities, but this has been counterbalanced by a fall of £4¼ million in bills receivable and a decrease of £2 million in loans and advances. On the other side, the increase in deposits of £1 million has been offset by a decrease of £1 million in bills payable.

"At £195,188, our net profit is very slightly lower than in the previous year, provision having had to be made for increased taxation in the form of E.P.L. Considering the difficulties we had to anticipate during a period of trade recession and anti-inflation, I trust you will agree that the results of the year's working are satisfactory.

"The Directors have felt justified in recommending a final dividend of 8 per cent. and, if this recommendation is approved, the dividend for the year will be 14 per cent., a figure which the Directors consider is justified by the progress of the Bank.

"You will see from the notice convening the meeting that in proposing the adoption of new Articles of Association, rendered desirable as a result of the Companies Act, 1948, we are proposing to increase the maximum number of Directors from eight to ten. With the expansion of the Bank's business the burden on the Board has also increased, rendering this enlargement very desirable. In 1948, you passed a resolution fixing the Board's remuneration at £9,000, subject to tax, in replacement of the previous remuneration of £4,500, tax-free, which had subsisted since 1918. This was done to conform with the Companies Act, 1948, and, in fact, represented no increase in the remuneration to the Board. Having in mind the proposed increase in the Board, you will now be asked to pass a resolution increasing the total remuneration to the Board to a sum not exceeding £13,000.

International Affairs

"To my deep regret I am unable to report any appreciable improvement in international affairs during the past year. The hope of an armistice in Korea appears to have faded almost completely and there is no sign of any relaxation in the cold war maintained by the Russian-dominated bloc against the Western Powers. Against this, however, may be set the fact that in Europe, the Western Powers, through N.A.T.O. and the E.D.C. organisation are to-day better equipped to withstand an aggressive onslaught than they were a year ago. It may be that from this knowledge will flow an increasing determination in Western Europe to resist by all means in its power should aggression take place. Equally, this knowledge may itself have the effect of discouraging potential aggressors from any adventure which might result in a new war.

"Whether this interpretation has validity or not, however, the attainment of armed security can only be effected at great cost in treasure and manpower at a time when they can ill be spared. The economic health of the free world must be maintained and this applies with particular force to the countries of South-East Asia. The disruption of war, the movement and expansion of populations, the changes in governmental personnel and structural pattern, the rise in world prices, shortages of foodstuffs and consequent inflationary trends, all these factors have affected the economic health of this vast area. Bearing all this in mind, it may be considered remarkable that the standards of living, of integrity, of industrial output and of international trade and exchange have exhibited so little depreciation over the past seven years. This fact, however, calls for no complacency, for populations continue to rise, food shortages are a continuing and, perhaps, increasing anxiety, so that the economic stability of South-East Asia will continue to be of the first importance to the free world for years to come.

"Two important Commonwealth Conferences took place during 1952. The first to agree on mutual steps to check the drain on reserves which presented a dangerous threat to the entire sterling area. The second, to review the results achieved and agree on future plans to promote industry, commerce and trade for the benefit of all. There is no doubt that the fiscal policy of the U.K. during the year, together with the steps taken by mutual agreement throughout the Commonwealth, checked the drain on reserves and strengthened the position of sterling; no small achievement, bearing in mind the burden of rearmament.

"The fall in prices of many commodities which commenced in 1951 continued in 1952, wool, seeds, cotton, jute, rubber, tea all fell further in price, and whilst price recession is an undoubted check to inflation, it has its own dangers, if it takes place too fast or goes too far. Apart from foodstuffs it would seem that the inflationary trend has been checked, if not reversed, and although in the case of some commodities prices have fallen too fast and too far, in general, the disinflationary trend should prove healthy.

India and Pakistan

"In India, the most important event of the year was the peaceful general election on the basis of universal adult suffrage and the return of a stable Congress Government with Pandit Nehru as Prime Minister.

"Towards the end of the year the new Government presented its ambitious Five-year Plan, aiming at an 11 per cent. increase in national income by expenditure of over 2,000 crores of rupees (£1,500 million). Towards this, a sum of Rs. 156 crores (£117 million) is anticipated from foreign aid. Indeed, during the year, aid in the form of grants from the United States with fertilisers, steel and technical advice and from the World Bank for steel manufacture were received by India. Whether it is possible for this ambitious Five-year programme to come to full fruition I cannot judge, but one can only admire those who have high ideals and who fix high targets and have the courage to do their best to attain them.

"On the whole, trade and industry in India had a somewhat disturbing year. The world-wide decline in commodity values brought about almost panic market conditions accompanied by the temporary closure of some commodity, stock, and bullion markets. As this subsided some measure of recovery took place and production surpluses in sugar, tea, textiles and some classes of engineering products induced a cautious outlook, while the Government began to remove controls over a wide front, particularly as regards cotton and textiles.

"The Calcutta jute industry benefited from two successive reductions in the high rate of export duty which had partly priced this important commodity out of world markets, and these reductions, together with a successful goodwill mission from the industry to the U.S.A. and U.K., have restored much of the competitive capacity and popularity in overseas markets to India's most important export.

"The tea industry has had one of the most anxious years in its long history. The cessation of bulk buying in 1951, the reopening of public auctions and, many months later, the de-rationing of tea in the U.K. was not expected to result in a disastrous fall in tea values, such as, in fact, took place towards the end of 1952. By December, prices for many gardens' teas had fallen far below cost of production and tea companies were facing severe losses on the year's working. Many companies, whose working capital was adequate when tea could be made and sold profitably at 1s. per lb. before the war, are severely under-capitalised to deal with present costs, and the excessive taxation now current gives little hope for the creation of reserves from profits wherewith to replenish their working capital. This is a serious problem to many industries in many countries—including the United Kingdom—but is particularly striking in the case of the Indian tea industry.

"Early in the year, the cotton economy of India was in a precarious condition, but from March, when the Government reduced the export duty from Rs. 400 to Rs. 200 per bale, there was staged a steady and, under the circumstances, remarkable recovery in the raw cotton markets and the textile industry. Later in the year, the Government gave further assistance by relaxing some of the controls on cotton and made a further reduction to Rs. 125 per bale in the export duty on certain varieties of cotton. The liberalisation of Government's export policy for textiles enabled India to make a determined effort to restore her position in the world's textile markets, which had been so undermined in 1951 by restrictions on exports, and in this she was partially successful, despite keen competition from Japan and the change from sellers' to buyers' markets throughout the world.

Bill Market

"An important development in banking and finance in India was the establishment by the Reserve Bank in January, 1952, of a bill market, whereby Scheduled Banks are able to obtain advances from the Reserve Bank at favourable interest rates against the security of usance bills drawn by traders payable in India and supported by the Scheduled Bank's demand promissory note to cover such advances. The scheme was of great assistance during very difficult periods and is the first step towards a fully developed bill market in India. The system was responsible for providing over 81 crores of credit to commerce and industry during the year, and would have been higher but for the lower level of business activity towards the end of the year. Scheduled Banks' advances in early December, 1952, were only Rs. 429 crores, against Rs. 492 crores at the same time in 1951.

"According to the latest estimates, India will import 2½ million tons of foodgrains in 1953, against 3.9 million tons in 1952 and 4.7 million tons in 1951. According to the Indian Food Minister, India is steadily progressing towards self-sufficiency in food and there is no doubt that, should this come about, it will effect the greatest contribution to stability and prosperity in India and throughout South-East Asia.

"Indo-Pakistan trade, in general, remains limited in extent. The agreement which expired during the year was replaced in August by a limited pact which unfortunately excluded some major items of trade. India's overall trade balance was heavily deficit during the first half of the year, but in the second half the gap was narrowed, more by reduction of imports than by increase in exports.

"On the decision of Pakistan, passports were instituted for travellers between India and Pakistan, and India found it necessary to follow suit. There must have been cogent reasons for this innovation, but it cannot be expected that this formality will encourage commerce and trade so desirable between these two countries with their enormously long common frontiers.

"Pakistan has been through a difficult year from almost every point of view. In the past a

producer of surplus food, Pakistan imported wheat from Turkey, through American aid, and from Russia through a barter deal made with that country. Pakistan's main export commodities, cotton and jute, fell in price by 50 per cent. and in both commodities there resulted a large carry-over.

"With her major export crops bringing in far less foreign exchange, it followed that Pakistan's balance of trade would become adverse, unless drastic import restrictions were imposed. Partial restrictions were imposed in May, but it was not until 1st July that drastic action was taken. In order to curtail the inevitable inflation resulting from restriction of imports, the Government introduced measures to curtail credit, but the full effect of these restrictions on imports and credit has not yet been felt and its impact upon the future of the State and its people is, therefore, still to be seen.

"Pakistan is still without a written Constitution and its Assembly consists of the original members existing at the time of Partition in 1947. Until the new Constitution is finalised and elections for the new Parliament held, the state of uncertainty as to the future must be expected to continue. Economic difficulties, inflation, and internal political stresses and strains bear particularly hardly upon a young country still in the throes of Constitution making.

"Much has been done to rehabilitate the railway system, and work on the Lower Sind Barrage is progressing well. Several textile mills are now operating and other industrial projects are under way. Economic nationalism, however, is making its influence felt in restrictions by various means upon foreign enterprise which even those most anxious to co-operate find difficult to justify. This phase may, however, be a passing one which with greater political maturity may be found to defeat rather than attain the desired end: the increasing prosperity of Pakistan.

"During the year, we made arrangements to open an office in Khulna, the nearest town to the new port of Chalna in East Bengal. Permission for us to do so was readily granted by the Government of Pakistan and we commenced business on 5th February, 1953. It is anticipated that in time a fairly large tonnage of jute will pass through this port which gives East Pakistan an alternative outlet from Chittagong.

Ceylon

"A General Election was held in Ceylon in May, 1952, and resulted in the return of the United National Party with a good working majority over all other parties. Ceylon should, therefore, be assured of peaceful and stable political conditions during the next four years.

"In the last 80 years, the population of Ceylon has risen from 3½ million in 1871 to 7½ million in 1951 and with an estimated increase of about 200,000 a year the population in 1962 will be some ten millions. This increasing population has necessitated the importation of large quantities of rice, flour and sugar at high prices, whilst, in 1952, a decline occurred in the prices of many of Ceylon's exports. It is likely, therefore, that a trade deficit of Rs. 110 million in 1952 will replace the trade surplus of Rs. 349 million in 1951. Ceylon's balance of trade has, therefore, suffered during 1952 to the extent of approximately Rs. 459 million compared with 1951.

"In order to check the inflationary trend in the cost of living, something like one-third of the Island's national revenue, it is estimated, is expended on food subsidies, and the result is that the Budget deficit for the year ended 30th September last is believed to be in the region of Rs. 293 million—the highest in the fiscal history of Ceylon.

"The Government of Ceylon are certainly alive to the urgent necessity of increasing food production, and the Galoya and other large schemes to this end are progressing; but naturally these projects take time to reach maturity. At the close of the year the Ceylon and Chinese Governments ratified an agreement whereby the whole of Ceylon's production of sheet rubber for 1953, estimated at about 50,000 tons, will be sold to China at a price of about Rs. 1.74 per lb. f.o.b. Colombo. It is reported that only Ceylonese shippers will be allowed to purchase, grade, pack and ship this rubber on behalf of the Rubber Commissioner. Under the Trade Pact Ceylon will import from China 270,000 tons of rice at prices which are believed to compare favourably with those charged by other rice producing countries at the present time.

"Good progress continues to be made with the Rs. 80 million scheme for the improvement of Colombo Harbour. The turn round of ships has been so accelerated that the freight surcharge imposed by Shipping Lines in April, 1951, on cargoes from Europe has been abolished.

Burma

"Conditions in Burma, which continue difficult to assess, appear to have improved somewhat during the past year. Whilst much of the country is still controlled by insurgents or ravaged with raids by dacoits, the efforts by the Government in Rangoon towards the pacification of the country seem to be achieving some success, and foreigners can proceed in greater safety for greater distances from Rangoon than was the case two years ago.

"The principal advisers to the Government are an American firm of engineers whose goal, I understand, is a comprehensive and balanced programme of rehabilitation and new development involving expenditure of some K.7,500 crores (£5,625 million) over the next eight years. The programme includes large planned projects in mining, agriculture, power, irrigation, transport and communications as well as cottage industries.

"In the Budget presented last August a revenue surplus of K.4.45 crores was estimated, and a capital deficit of K.29.63 crores. 57 per cent. of revenue receipts is to be spent on defence. No provision was made for the repayment of loans to India (Rs. 72,00,00,000) and the U.K. (£17,800,000). Burma is a recipient of economic aid from Britain and the U.S.A. and is also a participant in the Colombo Plan. Economic nationalism is also retarding co-operation from foreign concerns in Burma. It can be of little avail to expect foreign business to risk capital in any country which restricts or denies it the right to employ officers of its own choice.

Mauritius

"The sugar crop in Mauritius, at 467,000 metric tons, in 1952 was rather lower than the record crop of 484,000 tons in 1951 and the whole crop was purchased by the United Kingdom under the Commonwealth Sugar Agreement. The year has been a prosperous one for Mauritius and given normal weather conditions prosperity should continue in the coming year. The diversity of communities and increasing population, however, present problems for the future and new elections in 1953 will bring political issues to the fore. The prosperity of the Colony is, of course, vulnerable to a fall in world sugar prices.

Malaya

"There has been a heartening improvement in the grave emergency threatening Malaya. Not only has there been a sharp drop in incidents and casualties, but the morale of security forces and civilians has improved as a result of the energetic steps taken by the High Commissioner, General Templer. It would seem that the initiative is passing or has passed, to the security forces, although this does not mean that the Communist cannot still attack persons and property. Least of all does it justify complacency, for there is no doubt that the slightest sign of relaxation would be taken by those behind the Communist organisation as the signal for a recrudescence of activity. It is thus vitally important that our determination to win this campaign should be made apparent to the entire population of Malaya so that the maximum co-operation and goodwill of the people be secured and retained.

"Coupled with this determination the economic prosperity and stability of the country is no less important in bringing the emergency to a successful conclusion and this is dependent upon the prosperity of the major industry, rubber.

"The year saw wide fluctuations and a general decline in the price of rubber—from $1.42½ per lb. in January to as low as 73½ cents in September and a recovery to 91 cents at the close of the year. Output was some 21,000 tons lower than in the previous year, a decline of about 3 per cent. It cannot be too clearly emphasised that just as the economic stability of Malaya is principally dependent upon rubber, so the prosperity of this great industry is principally dependent upon the policy of its largest consumer, the United States of America. Consumption, stockpiling, and the policy towards synthetic rubber in the U.S.A. affects Malaya directly and immediately, and is thus a vital factor in the prosperity of this bastion of the free world in South-East Asia.

"Ocean shipments in 1952 were 910,408 tons, against 1,155,275 tons in 1951. The entrepot trade also declined heavily as imports from Indonesia were only 289,079 tons, against 470,609 in 1951. The biggest buyers were U.K. 273,855 tons and U.S.A. 234,248. Direct shipments from Malaya to the U.S.S.R. were negligible and there were none at all to China.

"Tin prices remained at rather higher levels in 1952 than in the second half of 1951, but, even so, it is understood that a number of marginal producers have dropped out and the total output for 1952 will be slightly lower than in the previous year. There may be some slight further reduction in the coming year, but there is no reason to anticipate any important break in price.

"Foodstuffs, particularly rice, are a cause for anxiety. There has been a serious reduction in Malaya's own paddy crop and imports are also down on last year. These come principally from Burma and Siam, with a little from Indo-China. It is clearly of great importance that Malaya's crop should be increased, for, although the ration has been maintained, the price for unrationed rice has ruled very high, whilst prices for other foodstuffs also continue to rise.

"Whilst it may be said that the general inflationary pressure of 1951 has receded and cost of living indices show some slight fall in the closing months of the year, food prices in general continue upwards and, until these become stabilised or decline, no positive anti-inflationary trend is likely to occur. The finances of both the Federation and Singapore appear to be in better shape than might, in all the circumstances, be expected. The Federation is expected to show a deficit of only $26 million after providing a special reserve of $85 million for capital expenditure in 1953, and Singapore, a surplus on 1952 of $37 million which will leave the general revenue surplus, at $202 million, to be carried forward.

Thailand

"As the largest supplier of rice to South-East Asia, Thailand continued prosperous throughout 1952 and, although no trade figures are at present available, it seems likely that there was again a surplus of exports over imports, although this surplus is almost certainly considerably less than in 1951. 1,428,400 metric tons of rice were shipped in 1952, against 1,555,500 in 1951.

"The Government, which is predominantly of a military character, has taken powers to strengthen its hands against subversive or Communist activities and a Bill has been passed providing for severe penalties for such activities. The standard of living is high compared with neighbouring territories and a Bill is now before the Assembly to limit the amount of land an individual may hold, presumably with the object of creating a large number of small-holding farmers. This may indeed be a wise policy in a country in which the population is increasing rapidly.

"I regret there is no improvement to report in connection with Shanghai. All the principal lines of import and export are handled by Government agencies, practically all foreign trade being conducted by barter. We, in common with others, applied to the local authorities at the beginning of June last for permission to close our Branch in Shanghai, but to date we have received no reply nor any indication as to whether or when a reply will be given.

Hong Kong

"Hong Kong experienced a considerable trade recession during 1952. Compared with 1951, imports decreased during the eleven months to end November by over $1,000 million and exports by no less than $1,548 million, declines of 22½ per cent. and 37 per cent., respectively. With the exception of Japan and Thailand, imports from all other countries declined, those principally affected being Malaya, U.S.A. and U.K., whilst the major decline in exports was to China, although exports to Macao, Malaya, U.K. and Pakistan also declined substantially. Substantial losses were incurred by merchants on accumulated stocks, although in the latter half of the year a good proportion of these inventories was cleared.

"The decline in imports was almost entirely due to two factors: embargoes and export restrictions imposed by other countries and the practical cessation, in the earlier part of the year, of trade with China. These factors similarly affected re-export to China which accounts for two-thirds of the decline in the export figures.

"Local industries are developing rapidly in Hong Kong. Cotton spinning, bleaching and dyeing, knitting, enamelware, cement and other industries are expanding and Hong Kong continues to extend its markets for local manufactures in the South Sea areas. The effects of the trade recession would have been more serious but for this increasing expansion in local industrial production. Hong Kong has its problems of over-crowding, of housing shortage and the like, but they are being tackled with energy and foresight. The financial situation of the Colony appears to be sound. Taxation is extremely low and many new projects of public works, such as roads, waterworks and recreational facilities are under way.

Japan

"Japan regained its full sovereignty at the end of April, 1952, after nearly seven years of occupation. Largely owing to American assistance these years of occupation have assisted in the rehabilitation of the economy of Japan, and, as a result of the Peace Treaty and the U.S.-Japan Security Treaty, Japan is on the side of the Western Nations.

"A General Election took place on 1st October and in the result, the Liberal Party under Mr. Yoshida, which has given political stability to Japan during the past 3½ years, was returned to power, but with a weakened absolute majority. The Communists failed to secure a seat in the Diet. It must not, however, be inferred from this that communism is non-existent, for the serious communist-inspired riots which took place at the inauguration of independence disprove this. Indeed, the advent of Japan's independence has brought some measure of political instability coupled with a more sombre economic outlook.

"Throughout the year, a dull trend in exports was a major factor. The international trade recession, the slowing down of the American rearmament programme, and the policy of restriction of imports by the Sterling Area and some other countries severely curtailed Japan's overseas trade and her exports, which exceeded $120 million a month at the beginning of the year, have not reached $100 million in any month since July.

"Japan's major problems are too large a population, too high a birth rate, too little land and too few natural resources. Like the U.K., Japan must export or die. Her population which in 1937 was 70 millions had increased in 1951 to nearly 85 millions and is continuing to increase by nearly a million a year. Her dependence on food imports is thus growing yearly.

"Japan's economic stability is undoubtedly dependent upon American assistance and the ability to sell her exports in exchange for the importation of food and raw materials and upon this depends her ability to maintain and improve her present low standard of life. Any widespread unemployment or a lowering of the standards of living would imperil the young and by no means strong democracy which has been implanted by the Americans in Japan, and thus have repercussions throughout South-East Asia and the whole of the free world. Our two offices in Japan continue to establish a tradition of service to Japanese commerce and trade, which our connections and branches in other countries throughout South-East Asia qualify us to do.

"Our thanks are due to Mr. Drake, our Chief Manager, to Mr. Hawkins, his Deputy, who paid a short, but strenuous, visit during the year to our branches in India, Pakistan and Ceylon, to the Managers in London and to all our officers and staff throughout the world. Apart from our steady progress, the increasing complications of legislation and controls in most countries where we operate impose an increasing pressure of responsibility and vigilance upon them and our gratitude is due for the hard work and loyalty which they have given."

ANGLO-CANADIAN FINANCING COMPANY

With Treasury approval, a United Kingdom group is providing part of the capital of a new financial company, United North Atlantic Securities, which has just been set up in Canada. The new company will have a paid-up share capital of $2,500,000.

The objects of the company are to take part in the medium and long-term development of Canada in the form of financial participations in established companies engaged in or associated with the development of Canada's natural resources and in branches or subsidiaries of established British industry which are opening up in Canada, or, being already established there, require further capital.

The company will, in addition, engage in short-term market operations through its wholly-owned subsidiary, United North Atlantic Corporation, whose manager will be Mr. Ronald Smith.

JAPANESE BANK IN CALCUTTA

The Bank of Tokyo has opened a branch at Calcutta. At a function held, in this connection, on the 11th inst., an official of the Bank stated that branches would be established soon in Bombay and Karachi also.

The only Japanese bank which functioned previously in India was the Yokohoma Specie Bank. This Bank was closed during the Second World War on being declared as an enemy bank. It is reported that the assets of this Bank will be returned to the Bank of Tokyo with which the former has since been merged.

THE ALKALI AND CHEMICAL CORPORATION OF INDIA, LTD.

MR. N. D. HARRIS' SPEECH AT ANNUAL MEETING

PRESIDING over the Sixteenth Annual General Meeting of the Alkali and Chemical Corporation of India, Ltd., held in Calcutta on 12th March, 1953, Mr. N. D. Harris, the Chairman, said:

"You have received copies of the report and accounts for the year ended 30th September, 1952, which have been sent to all members, and, with your permission, I propose to take them as read.

"The Calcutta (Rishra) chlorine/caustic soda and hydrochloric acid plants had another good year, but there has been some reduction in the demand for hydrochloric acid since the end of the year, as a result of supplies of sulphur being again freely available for sulphuric acid manufacture. We encountered severe competition in our "Gammexane" benzene hexachloride (B.H.C.) dust and water dispersible powder formulations and, owing to accumulation of stocks, production was curtailed for part of the year. The technical benzene hexachloride plant started commercial production towards the end of the year and produced a satisfactory product. The plant could not be run at full output, owing to the demand for Rishra chlorine from your Company's regular customers. Experimental work continues on the plant and ample supplies of chlorine should become available later in the year.

Plant Extension

"Work on the caustic soda/chlorine extensions has proceeded steadily and the final stage of plant installation has now been reached. It is hoped that the additional plant will begin production before the end of the current year.

"As forecast by me last year, the paints manufacturing unit at Rishra, producing "Duco," "Dulux" and "Necol" paints, reached its full rated output by the end of 1952. The Works management are to be congratulated on this achievement.

Khewra Works

"The Khewra Works had a satisfactory year and maintained a high rate of production. Although, with your approval, we entered into a contract for the sale of Khewra last year, the latter does not become effective until the formal written consent of the Pakistan Government has been obtained. It has been given in principle. Everything possible is being done to enable the sale to be completed without further delay. Meanwhile, all profits made in Pakistan continue to accrue to us and those earned up to 30th September, 1951, have been remitted to India with the exception of a small balance.

Profits

"You will observe that the Company made a net profit for the year of Rs. 26,64,063, which, including the balance brought forward from the previous year and provision for taxes no longer required, gives a total of Rs. 32,18,795 available profits. Of this, the Directors have allocated Rs. 3,07,000 to reserve for deferred income-tax liabilities due to initial allowances, Rs. 3,00,000 to general reserve, raising it to Rs. 23,00,000, and Rs. 7,50,000 to dividend equalisation reserve. Our reason for making the latter transfer is as follows. At present, Khewra contributes a considerable proportion of our profits. When its sale is completed, we shall be left with the Rishra plants only. The paints and B.H.C. plants are still in the early stages of production and their products have to be sold in very competitive markets. The chlorine/caustic soda extensions have not yet been completed. For the next year or two, after the sale of Khewra goes through, your Company's earnings are likely to be reduced. Your Directors, therefore, considered it prudent to put aside the sum of Rs. 7,50,000, in order to strengthen our resources with the object of maintaining the present rate of dividend.

"The preference dividends for the year have been paid and the Directors recommend payment of a dividend of 6 per cent. free of income-tax on the ordinary shares, absorbing Rs. 3,72,000 and leaving a carry forward to next year of Rs. 2,51,870."

The report and accounts were adopted. Mr. N. D. Harris and Sir Birendra Nath Mookerjee were reappointed Directors. The Auditors, Messrs. Lovelock and Lewes, were reappointed.

THE BANK OF INDORE, LIMITED

(INCORPORATED IN INDORE, 1929)

LADIES AND GENTLEMEN,

Your Directors have the pleasure to lay before you the Balance Sheet and Profit and Loss Account of the Bank for the year ended the 31st December, 1952, duly audited by Messrs. A. F. Ferguson & Co., Chartered Accountants.

	Rs.	a.	p.
The Net Profit for the year, including the sum of Rs. 61,454-14-8 brought forward, amounts to	5,48,251	1	1
An *ad-interim* Dividend was paid for the half-year ended 30th June, 1952, at the rate of 12 per cent. per annum on 61,215 shares absorbing	91,822	8	0
Amount transferred to Reserve Fund (bringing that Fund upto Rs. 24,00,000)	1,00,000	0	0
Amount transferred to Contingency Fund	1,00,000	0	0
Bonus paid to the Bank's Staff	85,906	4	0
Rs.	3,77,728	12	0
Your Directors now recommend :—			
To pay a Final Dividend at the rate of 12 per cent. per annum on 61,215 Shares for the half-year ended 31st December, 1952, amounting to	91,822	8	0
To transfer to Gratuity Fund	15,000	0	0
To donate to the Holkar State Red Cross Fund	500	0	0
To carry forward to the next account	63,199	13	1
Rs.	5,48,251	1	1

Shri P. Mohan Rau and Seth Bhanwarlal Sethi, being out of station have not signed the Balance Sheet.

The Directors hope that you will find the progress of the Bank satisfactory. In the current year Pay Offices of the Bank were opened at Sendhwa and Jaora (Madhya Bharat).

By Order of the Board of Directors,

N. D. JOSHI,
Manager.

THE BANK OF INDORE, LIMITED,
INDORE CITY, the 6th March, 1953.

BALANCE SHEET AS AT 31st DECEMBER, 1952.

CAPITAL AND LIABILITIES	Rs.	a.	p.	Rs.	a.	p.
1. Capital—						
AUTHORISED— 1,00,000 Shares of Rs. 50 each	50,00,000	0	0

SUSTAINED RESEARCH IN IMPROVING QUALITY OF COTTON

WORK OF CENTRAL COTTON COMMITTEE

FROM the latest available report of the Indian Central Cotton Committee which relates to the year ended 31st August, 1951, it would appear that the Committee has added yet another year of successful work to its thirty-year-old record of service to the country's economy. Its work continued to embrace such varied and important spheres of activity as collection of cotton statistics, promotion of cotton research, both fundamental and applied research, cotton extension work in States, introduction of improved varieties of cotton and scrutiny of the Governmental policy in relation to cotton with a view to suggesting improvements and changes in the policy. The Report, which gives a succinct account of the Committee's work in all these spheres, shows that the Committee has been able to extend and improve its services to the cotton grower in the country.

The Indian Central Cotton Committee, it might be mentioned here, was established by the Government of India in 1921, in pursuance of the recommendation of the Indian Cotton Committee of 1917-18. During the 30 years of its existence, the Indian Central Cotton Committee has provided a common meeting ground for all sections of the cotton industry and the Agricultural Departments of the cotton-growing states. In the discharge of its functions the Committee has always adhered to its original principle, namely, the cotton-growers' interests must be paramount in all matters considered by it. During the first two years of its existence, the Committee was a purely advisory body to the Government on matters connected with cotton. In 1923, however, it was incorporated under the Indian Cotton Cess Act and provided with separate funds to enable it to undertake work for the improvement of the growing, marketing and manufacture of cotton. These funds were derived from the levy of a cess on all cotton consumed in mills in India or exported from Indian ports. For the first three years after the passing of the Act the cess was collected at the rate of As. 4 on every bale of Indian cotton consumed in Indian mills or exported, and, thereafter, at the rate of As. 2. But the heavy decline in exports, which occurred during the war and after the Partition of the country, had its effect on the receipts of cotton cess, which were reduced considerably. The loss of income was, however, made good, to some extent, by grants given by the Government of India from the Cotton Fund which had been built from the proceeds of the levy of an additional duty of one anna per lb. on all imports of raw cotton.

In order to provide a more assured and adequate income to the Committee to enable it to carry out its work effectively, two successive amendments of the Indian Cotton Cess Act were made in 1947 and 1948. By these amendments, the cess was made leviable on all cotton consumed in Indian mills or exported from India, with effect from 15th August, 1947, and the rate of cess was raised from two annas per bale to four annas per bale from 10th September, 1948. Further, the amended Act, which was applicable only to Part A and Part C States, was made applicable to Part B States as well with effect from 1st April, 1951. The total receipts of the Committee from its inception in 1923 to 31st March, 1951, amounted to Rs. 310.60 lakhs, of which Rs. 231.89 lakhs represented collections from the cotton cess and miscellaneous receipts, the balance being special grants from the Government of India. The receipts during the year under report amounted to Rs. 30.16 lakhs and the total expenditure to Rs. 14.54 lakhs.

The research work of the Committee is being conducted under two divisions—technological research and applied research. The Committee's Technological Laboratory in Bombay renders valuable service to cotton breeders through its work connected with the evolution of new varieties and the estimation of the spinning properties of these varieties. This aspect of the Committee's work was reviewed briefly in these columns (*vide Commerce* dated 31st January, 1953). Applied research is necessarily conducted in the respective cotton-growing tracts. Thus, in the Bombay State, six schemes were under investigation during the year under review: a scheme for cotton breeding in Khandesh; a scheme for breeding wilt-resistant cottons in Surat area; Broach cotton breeding scheme; a scheme for improvement of Wagad cotton in Viramgam; a scheme for improvement of Mathio cotton at Amreli and a scheme for improvement of Dharwar-American cotton. There were three research schemes in operation in the Punjab, connected mainly with the improvement of the quality of cotton. Eight schemes are under investigation in Madras; they include a scheme for improvement of Cocanadas cotton, a scheme for breeding Cambodia cotton in the Ceded Districts and a scheme for improvement of Tinnevelli and Karunganni cottons. There were four schemes under investigation in Madhya Pradesh, one in Assam, one in Hyderabad, one in Mysore, one in Rajasthan and three in Madhya Bharat.

An interesting aspect of the Committee's research work is the work on "perennial cotton." These varieties of cotton occur as voluntary growth in field hedges, gardens and other localities, or as plants intentionally grown in compounds of temples and residential houses in both villages and towns. In order to assess the role which the perennial cotton might play in increasing cotton production, without encroaching on the area under food crop, the Committee sanctioned a special grant in 1950. The Committee carried out investigation into the growth of Kidney cotton and of a certain variety, known as Barbadense variety. From the experience of the first two seasons, Kidney cotton, it was found, could not establish itself on waste land in a high rainfall area, if it did not receive adequate cultivation and care in the initial stages and if it was not resistant to "black arm." But this variety, as well as other perennial types, thrived well in sheltered situations such as house compounds, where proper attention was given to the plants during the period of initial growth.

In the ultimate analysis, the importance of the Committee's work will be judged only by the actual improvement which is effected in the cultivation of cotton. In other words, the work of the Committee has to be translated from the research stations and laboratories to the field. Realising the value of extension work, the Committee has initiated various schemes for the multiplication and distribution of improved seeds of cotton. During the year under review, there were 17 seed distribution schemes in operation, as compared with 15 schemes in the previous year. The Committee, it is stated, has spent Rs. 33.8 lakhs on subsidising such extension schemes.

The area under improved varieties of cotton in India in 1950-51 was 6.99 million acres, as against 6.04 million acres in the previous year. In both the years, the improved varieties covered about 50 per cent. of the total cotton area in the country. The improved varieties, in cultivation were mainly medium and long-staple types. The production of long, medium and short-staple cottons in the Indian Union during the years 1950-51 and 1949-50, together with the corresponding averages for the quinquennium 1939-44 and 1944-49, is shown below:

(In 000 bales of 392 lbs. net)

Year (1st Sept. to 31st Aug.)	Production (Based on official forecasts)			
	Long staple (1⅛" and above)	Medium staple (below 1⅛" and above 11/16")	Short staple (11/16" and below)	Total
Average 1939-44 ..	755 (19)	1,386 (36)	1,771 (45)	3,912
Average 1944-49 ..	381 (18)	1,044 (50)	676 (32)	2,101
1949-50 ..	492 (19)	1,345 (51)	791 (30)	2,628
1950-51 ..	627 (22)	1,415 (48)	884 (30)	2,926

Figures within brackets indicate percentages of total production.

It will be seen from the above table that the proportion of long-staple cotton to the total production of cotton during the year under review was 22 per cent. as against 19 per cent. in the previous season.

There has, however, been no significant improvement in the yield of cotton. The figures of yield per acre are based on two sets of data, namely, the official estimates of production and the estimates of actual crop calculated from cotton pressed, cotton consumed in mills, extra factory consumption, etc. Based on the former set of data, the yield of lint per acre worked out to 83 lbs. in 1950-51, as compared with 85 lbs. in 1949-50, an average of 73 lbs. in the period 1944-49 and 83 lbs. during 1939-44. Based on the latter set of data, that is, on the basis of actual crop, the yield worked out to 94 lbs. in 1950-51, 94 lbs. in 1949-50, 92 lbs. in 1944-49 and 94 lbs. in 1939-44. There is, therefore, considerable scope for improvement in cotton yields in this country—which compare unfavourably with those in other cotton-growing countries. It is, however, gratifying to note that the additional income which was earned by the growers of improved varieties was, according to the Report, about Rs. 5.25 crores in 1950-51. This is indeed a notable achievement.

At the cotton auction held in Kampala on 11th March, about 15,000 bales were sold.

REPORT OF THE AUDITORS TO THE SHAREHOLDERS.

We have audited the foregoing Balance Sheet of the Bank of Indore, Ltd., as at 31st December, 1952 and also the foregoing Profit and Loss Account for the year ended upon that date, in which are incorporated the audited returns of the Branches, and report that :—

(a) we have obtained all the information and explanations we have required and have found them to be satisfactory ;

(b) the transactions of the Bank which have come to our notice have been within the powers of the Bank ;

(c) the returns received from the Branch Offices of the Bank have been found adequate for the purpose of the audit ;

(d) in our opinion, the foregoing Balance Sheet and Profit and Loss Account are drawn up in conformity with the law ;

(e) such Profit and Loss Account shows a true balance of profit for the year ;

(f) such Balance Sheet exhibits a true and correct view of the state of affairs of the Bank according to the best of our information and the explanations given to us and as shown by the books of the Bank, and

(g) in our opinion, books of account have been kept by the Bank as required by Section 130 of the Indian Companies Act, 1913.

SUGAR SUPPLY POSITION

STOCKS PLENTIFUL—PRICES DECLINE

THE difficulty experienced by certain areas in the country in getting adequate supply of sugar would appear to have eased of late. Not only has the scarcity of supplies acutely felt in some of the States disappeared but the prices of sugar also have generally tended to decline, a welcome development indeed. The average price of sugar in the Bombay market is now in the neighbourhood of Rs. 86 per bag, as against Rs. 96-8 on 1st January, 1953. This price is, however, still high, as compared with a low of Rs. 80 per bag witnessed in the first week of December and the previous control price of Rs. 82-6 (including railway freight, town duty, and standing and carting charges aggregating Rs. 4-4). The downward trend in prices has been experienced in some of the other important sugar markets too, as will be seen from the figures given below:

(Rs. per bag)

	6-1-53	16-3-53	*Net decline*
	Rs. a.	Rs. a.	Rs. a.
Madras	96 4	86 10	9 10
Gauhati	97 10	88 14½	8 12½
Kanpur	79 1	76 5½	2 11½
Calcutta	81 13	80 7	1 4

The fall in sugar prices noted above has been brought about by a number of factors. The most important is the release by the Government of India of a fairly large quantity of 266,000 tons of sugar from out of the current (1952-53) season's output since the beginning of February. Secondly, the movement of sugar from one part of the country to another has been accelerated, following better wagon supply, thanks to the special efforts of the Standing Committee of the Central Board of Transport. Thirdly, the imposition of a ban on exports by the Government has discouraged hoarding by merchants. And fourthly, the earlier apprehensions of a marked fall in sugar output this season have receded. As against 1,200,000 tons anticipated earlier, production is now expected to amount to more than 1,350,000 tons. Indeed, one estimate places it at as much as 1,400,000 tons.

The chief ground on which the aforesaid calculation is based is that, although the sugar season started late, on account of accumulation of heavy stocks from the previous season, it will be extended by a few more weeks than in the previous season. Quite a good number of factories which usually close their crushing operations by the end of February, it is said, will continue crushing till the end of next month. In this connection, it is pointed out that supplies of sugarcane to the factories have been quite satisfactory. Producers of *gur*, the principal competitors with the mills for cane supplies, are not keen buyers of cane, owing to large stocks of *gur* lying unsold in the several *mandis* and the downward trend in prices.

Encouraging Trend

The expectation of a larger output of sugar than what was anticipated seems to be quite justified, in that it is based on the latest fortnightly statement of production and stocks issued by the Director of the Indian Institute of Sugar Technology, Kanpur. The production of sugar during the fortnight ended 15th February, 1953, was higher at 143,148 tons, as compared with 140,453 tons in the corresponding fortnight of the previous season. The aggregate output during the season upto 15th February was 695,480 tons, as against 766,278 tons in the same period last year. Consequent on the encouraging trend of sugar output and freer movement of stocks, the traders are rather reluctant to hoard large stocks and the trend of prices, as already stated, is downward.

Despite quicker despatches of sugar in recent weeks, there is still said to be accumulation of heavy stocks with mills, causing considerable anxiety. The closing stocks with the factories as on 15th February, 1953, amounted to as much as 737,793 tons, as against 571,252 tons a year before. The industry is finding it extremely difficult to hold these stocks, due to lack of adequate financial and storage facilities. Although the industry has made several representations to the Government, the latter has yet to complete the special financial arrangements which it had undertaken to do as early as in September, 1952.

In the meantime, a section of the sugar industry and trade feels that the removal of the ban on sugar exports would help the factories to liquidate their stocks to a large extent. This view is clearly exaggerated. For the question of sugar exports from India is only of academic importance, inasmuch as prices of Indian sugar do not at all compare favourably with the rates quoted by other sugar exporting countries. That apart, the Government is not prepared to allow exports of sugar. A primary consideration which has weighed with the authorities in deciding not to permit exports is, as Dr. Punjabrao Deshmukh, Union Minister for Agriculture, said in Parliament recently, "the desirability of conserving supplies for home requirements at reasonable price."

Supplies Comfortable

The question naturally arises as to what should be done. Some feel that the Government should lift control on despatches of sugar from the factories. The period of comfortable supply position and downward trend in prices, they say, is the most propitious time for such action. That the supply position in respect of sugar is quite comfortable cannot be denied. Even assuming that sugar production during the current season will amount to no more than 1,310,000 tons—according to official estimates—and taking into account the carry-over of 461,000 tons from the previous season, the total available supply of sugar during the 1952-53 season will be of the order of 1,771,000 tons. Excluding the 25,000 tons exported already and the 300,000 tons which the Government wants to keep as a reserve, the quantity actually available for consumption in the country will amount to more than 1,400,000 tons, a quantity well above the present estimated consumption of 1,300,000 tons. In view of this comfortable position, one feels that the Government can confidently lift all the remaining controls on sugar. After all, it is only when adequate scope is given for the free interplay of the forces of supply and demand that the industry can hope to adjust itself to meet the needs of the country and ensure stability of price and continuity of supplies.

POWER ALCOHOL IN AUSTRALIA

Examining the expansion plan for the power alcohol industry under the Five-year Plan in these columns two weeks ago, we stressed the imperative need for developing this industry as an effective way of economically disposing of the huge surplus molasses produced by the sugar factories. That this emphasis is not at all exaggerated will be evident from the significant development in the sphere of power alcohol manufacture in other sugar-producing countries. The development has been particularly marked in Australia, where the extensive and highly efficient sugar industry has rendered possible production of ethanol (power and industrial alcohol and methylated spirit) from molasses. The total output of alcohol in Australia is at the rate of 6 million gallons per annum, besides 1 million gallons of benzol.

The swift development of the power alcohol industry was made possible by the active encouragement given by the Government of some States. For instance, the Government of Queensland guarantees a market for the molasses produced by the sugar factories in the State. This is being done by compelling the oil companies to purchase specified quantities of industrial alcohol and blend it with imported motor spirit.

(Concluded from next column)

Mr. Innes' references to congestion at the Calcutta port make sad reading. There are difficulties of draft, shortage of pilots and harbour masters, taxation problems and so on. Again, there is the question of allocation of wagons in time to the docks. Delays in supplying wagons have resulted in frequent delays in the turnround of ships. We are told that, in May last, as a result of reduction of daily allocation of wagons to 260 from the previous average of 450, there was much congestion of ships, and steamers had, therefore, to wait for as many as 30 days, and on occasions even more, before they could get a loading berth. At one time, steamers waiting for coal berths were 32, and since demurrage is as heavy as Rs. 2,500 a day, a long waiting period must have been a serious deterrent both to owners and charters of steamers. It took six weeks before the authorities concerned realised the seriousness of the situation, and it was not until the end of the year that normality in the docks returned. Meanwhile, colliers were debarred from booking further orders and buyers drifted away from India. The damage done, as a result, to India's coal trade would appear to have been great. It is high time that the Calcutta port was made fit for a larger turnround of ships by providing all the facilities needed.

SOME COAL PROBLEMS

NEED FOR REVISING DISTRIBUTION CONTROL

ADDRESSING, for the last time, the shareholders of the Bengal Coal Co., Ltd., at their half-yearly general meeting, held at Calcutta on 17th March, Mr. C. A. Innes, the Chairman, who will shortly be retiring, dealt with, among others, three important problems facing the Indian coal industry. First, he made out a case for replacing the present distribution control by the system of priorities in the allotment of wagons that existed prior to the last war in times of wagon shortage. Secondly, he criticised the surcharge on exports of coal, as being retrograde to the development of the Indian coal industry. Thirdly, he was highly critical of the requirement that a certain proportion of inferior coal should be exported along with superior coal.

Mr. Innes' demand for a revision of the distribution control is well reasoned. Prior to the last war, controls were clamped on distribution, only when supplies of wagons were short. The practice usually followed was to allot available wagons, first to essential consumers, and then distribute the rest of the wagons as public supply to all collieries *pro rata* on the basis of wagons supplied to them previously. This basis was revised quarterly on the average raisings and stocks of collieries. The consumer was free to choose any coal from any colliery he liked and there was complete freedom for the collieries too to sell coal to any customer. It is true that, even now, shortage of wagons exists and the position is not expected to ease in the very near future, despite the vigorous efforts of the railway authorities at augmenting the supplies. But to force the consumers to waste the available wagon capacity by compelling the carriage, along with good coal, of inferior coal containing a large proportion of useless matter, when there is plenty of good quality coal, as was forcefully pointed out by Mr. Innes, is, indeed, neither just nor fair either to the consumer or to the producer. And, therefore, the case presented by Mr. Innes for a return to the simple system of priorities that existed previous to the last war has every justification in it.

Now that a buyers' market in coal is emerging, there is hardly any case, according to Mr. Innes, for surcharge on exports. Its removal becomes all the more urgent considering that Australian coal is, as has been pointed out by him, being exported to Hong Kong and even into Chittagong. He fears that subsidised rail freights and ambitious development projects of the mines in South Africa are likely to result in increased competition of South African coal with Indian coal. He is, therefore, anxious that coal exports should not suffer, on account of the surcharge, in the same way as jute goods did owing to heavy export duties. He says: "The great jute industry was recently brought to the verge of ruin by too heavy export duties and, while the coal industry is not as dependent on exports as is the jute industry, nonetheless it would be a pity for India's export trade in coal also to be prejudiced by the refusal of Government to remove these duties in time."

Mr. Innes says that control over coal distribution and the condition that a proportion of inferior grade coal must be exported along with superior coal have been maintained by some as a means of protecting small collieries mining inferior coal, which otherwise would not be able to compete with their bigger rivals. He hopes that this is not the case, but lest he should give vent to any loose thinking on the subject, he takes care to point out that the Bengal Coal Co., Ltd., needs encouragement from the Government, in view of its role in the Indian economy. It is composed of a large number of small individuals whose annual return on the average investment is not great, but who are playing an important part in the country's economy by their contribution to the revenues and even more by their contribution to the country's requirements of coal for the present as well as the future. The ordinary shares are held, according to him, by 1,572 shareholders, of whom 1,414 are resident and 158 (about 10 per cent.) non-resident. The return on an average holding of 32 shares at the present rate of dividend is Rs. 1,280 a year. In the past six years, the Company has provided Rs. 1.77 crores for the Government through taxation and cesses, as against Rs. 1.01 crores paid out by way of dividend. It has spent Rs. 2.15 crores in development of mines for the future and ploughed back Rs. 1.74 crores into the Company.

THE CENTRAL BANK OF INDIA, LIMITED

MR. HOMI MODY'S SPEECH AT ANNUAL GENERAL MEETING

FURTHER CONTROLS ON BANKS UNWARRANTED

THE observations of the Planning Commission on the role the banking system is expected to play were critically examined by Mr. Homi Mody, Chairman, the Central Bank of India Limited, in the course of his address at the Forty-second Annual General Meeting of the Bank, held in Bombay on Thursday, 26th March, 1953. Mr. Mody was of the view that the additional controls on banks, implied in the Planning Commission's report, for securing the flow of credit necessary for the execution of the Plan were unnecessary as the Reserve Bank already had enough powers to control the activities of Scheduled Banks. Mr. Mody also deprecated the unfortunate utterances of some of the Ministers of the Government, when the Plan was debated in Parliament, utterances which went even beyond the recommendations of the Planning Commission and envisaged further intensified control of the banking system. All such talk, in his opinion, was uncalled for.

The following is the full text of Mr. Mody's speech:

"GENTLEMEN,

"The year under review closed on a somewhat hopeful note. The danger of the cold war developing into a clash of arms seemed to have receded and the financial outlook in most countries became a little more reassuring. Owing to the Presidential election, there was no major change in American economic policy which largely governs business and industrial trends in the world of to-day. The countries of Western Europe and the British Commonwealth were able, on the whole, to reduce the gap between their receipts and payments on international account, but this, it must be said, was achieved largely by restricting imports and not by any far-reaching changes of a permanent character.

"Economic conditions in India during the year showed, on the whole, a greater improvement than at any time in the post-war period, notwithstanding the persistence of a rather weak undertone in commodity prices. There was a sizable increase in the stocks of foodgrains available with the Government, the rising trend of industrial production was well maintained and the inflationary forces which bedevilled the economy for a long period were at last brought under control. On the food front, the apprehensions created by measures of decontrol were found to be exaggerated and some progress was made towards the restoration of normal conditions.

"Production in all the major industries, including textiles—which were adversely affected for some time because of shortages of raw cotton and jute—recorded a notable increase during the year. The engineering and tea industries, alone among major producers, showed a fall in their output. Some of the industries were faced with a new problem in the shape of reduced offtake and accumulation of stocks towards the end of the year, but it was not very serious.

Operations of Scheduled Banks

"The operations of the Scheduled Banks, because of the new monetary policy adopted by the Reserve Bank in November, 1951, when the Bank rate was raised and open market operations stopped, were on a restricted scale. The position may be summarised by comparing the main data at the end of 1952 with those of the corresponding period of the preceding year:

(In crores of rupees)

	28th Dec., 1951	26th Dec., 1952
Deposits	869	848
Advances, loans, etc.	554	486
(Percentage of deposits)	63·8	57·2
Investments	307	323
(Percentage of deposits)	35·4	38·1

"The most significant change was the reduction of Rs. 69 crores in the volume of loans and advances. By comparison, a fall of Rs. 21 crores in deposits may be regarded as not very significant. It may be noted that this reduction took place wholly in demand liabilities, time liabilities actually showing an increase. From the relative position of bank loans to deposits, it appears that it was not so much the position of liquid resources, as the prospects of utilising them profitably in loans to trade and industry, which was the main problem of banks during the year. The improvement in investments was almost wholly due to Treasury Bills which were not on offer in 1951.

"In the busy season following the introduction of the new monetary policy in November, 1951, the chief problem of the banks was the procurement of resources for meeting the demands of credit-worthy borrowers. Thanks to the efforts made by the Reserve Bank for developing a bill market, Schedule Banks were, however, able to meet this demand comfortably. In the present busy season, the demand for credit seems to have considerably weakened. Compared with an increase of about Rs. 100 crores in bank credit in 1951-52, the increase over the slack period which has taken place during the current season, which is not yet over, is only of the order of Rs. 46 crores.

"The Five-year Plan which was published towards the end of the year should have a vital bearing on the operations of Scheduled Banks and their policies in the years immediately ahead. If the programme of development involving an overall expenditure of Rs. 2,069 crores in the public sector is executed, according to schedule, there should be a substantial increase in general economic activity such as would create opportunities for a large volume of business by the banks. The Planning Commission does not make any estimate of the total increase in short-term credit which the rising *tempo* of economic activity would need, but the requirements of the private sector of industry have been placed at Rs. 150 crores. This is the additional working capital which industry would need by the end of the Plan, and it would be mainly the responsibility of Scheduled Banks to provide it.

"The Planning Commission recognises the important role which the banking system of the country will have to play in the provision of short-term credit. It is, however, apprehensive that banks, if they are guided by the profit motive, may not be able to extend credit facilities for those schemes to which the highest priority has been accorded in the Five-year Plan, and the Commission goes on to say that:

"'The process of economic development, once started, will make new demands on the banking system, and this may necessitate changes in organisation and structure. . . . The proper discharge of its functions by the banking system will necessitate its operations more and more in the light of the priorities for development indicated in the Plan and less and less in terms of returns on capital. The banking system—and, in fact, the whole mechanism of finance including insurance, the Stock Exchanges and other institutions concerned with investment will thus have to be fitted increasingly into the scheme of development visualised for the economy as a whole.'

Control for Securing Flow of Credit

"With a view to ensuring that lack of short-term credit will not hamper the development programmes set out in the Plan, the Planning Commission desires that the Reserve Bank should exercise a direct control over its operations. What the nature of this control is to be is not, however, indicated. Taking into consideration the fact that Scheduled Banks in India have so far fully responded to the directions they have received from the Reserve Bank and have actively co-operated in carrying out its general policy regarding credit, there does not appear to be any need for the Reserve Bank to exercise any additional control for securing the flow of credit necessary for the execution of the Plan.

"Future developments in this connection will be watched with a great deal of interest, and not a little anxiety, in view of the unfortunate utterances of some of the Ministers of Government when the Plan was debated in Parliament. They appeared to suggest that substantial changes were necessary in the structure and organisation of banking and that they had a more positive policy in view than what the Planning Commission had recommended. Such statements raise doubts about the measure of acceptance by Government of the role of private enterprise in the execution of the Five-year Plan, and considering the way in which the banking system has been serving the country, talk of intensified control can only be characterised as unfortunate and uncalled for.

"Before I close this review, I would like to say a few words about the Budget presented to Parliament a few days ago. The proposals this year seem to be generally in consonance with the emphasis placed on the formation of capital in the Five-year Plan, and there has not been any material change in the range or level of different taxes. If the country is to be in a position to develop to anything like the full extent of its resources, it is obvious that conditions have to be provided for savings in every sector of its economy. To create a position in which the nation is reduced to living on past savings, would be to stunt its growth and incapacitate it from achieving a higher standard of life, which can come about only through greater productivity and the ability to save and invest. A feature of our economy which has not received the attention it deserves is the pace at which Governmental spending is mounting. It is a factor which may not be peculiar to India; the essential difference lies, however, in the stage of industrial development reached by this country, compared with the conditions obtaining amongst the nations of the West.

"One of the important proposals made by the Finance Minister in his speech relates to the appointment of the Taxation Enquiry Commission, under the presidentship of Dr. John Matthai, to make a thorough investigation of the present system of taxation at all levels and to make recommendations for the future. It may be hoped the Commission will be able to evolve proposals calculated to increase the volume of savings and capital formation and to sustain the basic incentives for increased production.

Bank's Accounts for 1952

"Turning to the Directors' report and statement of accounts, I shall first deal with the special factors which prevailed in 1952 and which generally affected the business and profits of banking institutions.

"The dearer money conditions resulting from the raising of the Bank rate in November, 1951, and the disparity between Indian and British interest rates, coupled with the policy pursued by foreign banks of financing their business with local funds to a greater extent than before, led to mounting pressure on available funds. This resulted in a general rise in deposit rates and consequent increase in the cost of working capital. For call and short-term deposits, the rate went up to as much as 3 per cent. resulting in a material change in the pattern of deposits as compared with previous years. Call deposits, so to speak, became the order of the day. The rising deposit rates, in the case of some of the larger banks, was reflected in an appreciable increase in the interest paid on deposits, although the aggregate total of the deposits stood at a lower figure, as compared with the previous year. To make the position worse, the sharp and precipitous fall in the prices of commodities in March, 1952, caused such hesitation and nervousness on the part of business men as to prevent them from launching out into fresh commitments. In consequence, there was an appreciable drop in the advances and bills business of banks. The lower level of activities, at times, meant the nursing of capital borrowed at higher cost.

"On the investment side, the setback was of a more serious nature. On the working funds locked up in Government securities the Bank had to pay at times a higher rate of interest than what the securities earned. In case of banks with large investment portfolios—which it was not possible to reduce on account of the prevailing unfavourable rates—a narrowing of margin even to a small extent was enough to make a substantial difference in the final results. Establishment charges maintained an upward trend in all the banks and materially affected the figures of net profits.

Net Profit

"From the statement of accounts presented to you, you will see that the result of the Bank's working during the year yielded a net profit of a little over Rs. 1 crore which, when compared with the figure of the previous year, shows a drop of about Rs. 25 lakhs, though the gross earnings during the year showed an increase of Rs. 6¼ lakhs.

"By reason of the deposit rates being higher during the year, the amount paid by way of interest on our deposits and borrowings was higher by Rs. 17 lakhs, though the total deposits and borrowings dropped by over Rs. 7½ crores.

"The advances and bill business of the Bank showed a decrease of Rs. 5,81,00,000, as compared with 1951.

"Establishment charges went up by a further Rs. 13,62,000 during the year under review. An idea of the enormous increase under this head can be had from the fact that during the last three years there has been a rise of as much as Rs. 56 lakhs due to the implementation of the Sen Award, and even after it was set aside, on account of our having to continue the salaries and allowances as required by the provisions of the Industrial Disputes Act of 1951.

"As you may be aware, another Tribunal was appointed last year, to which scales of pay and allowances and other such matters were referred by Government. The Tribunal had prolonged sittings and their Award is now awaited.

Bonus to Staff

"This is an appropriate place in which to refer to the question of bonus paid to the staff. The payment of bonus depends on the available surplus left over out of the net profits of the year, after making provision for taxation, dividends to shareholders, depreciation on securities and other contingencies. After making these provisions, the surplus in the hands of the Directors was not sufficient to enable them to sanction a higher amount than one month's salary, which together with what was paid in July, amounted to two months' salary as bonus. The management sent to the group agents all relevant statements bearing on the subject from the published accounts of the last ten years. This helped to allay the misapprehensions which had been aroused and there was a greater disposition on the part of the staff to accept the inevitable.

"In determining the quantum of bonus to be paid out of the available surplus, an important factor is to be taken into consideration, and that is the total of salaries. Owing to the abnormal rise in establishment charges, there has been a substantial increase in the amount required for paying bonus. In previous years, not only were the profits higher but the salary bill stood at a lower figure. The position in the year under review was that a larger amount was paid by way of bonus than was required in 1946 when the equivalent of 4½ months' salary was paid to the staff.

"In the Chairman's speech last year, reference was made to the fall of Rs. 3,15,00,000 in the market value of our holdings. At the end of 1952, the difference between the book and the market value widened still further, and after providing Rs. 35 lakhs out of the profits, the difference to-day stands at the figure of Rs. 3,54,00,000. As pointed out, however, to you last year, on the maturity of the securities in our portfolio, the difference would not only be wiped off, but according to our reckoning, there would be a total surplus on our investments of over a crore of rupees. In the meantime, we are keeping a close watch on the position and shall do everything we can to reduce our commitments whenever an opportunity offers itself.

"Shareholders will be interested to know that we decided to open a branch of the Bank in London. We have been successful in securing permises at Fenchurch Street, which is one of the most prominent localities from the banker's point of view. Vacant possession is expected to be given in the month of June, when the branch will begin to function. We have appointed Sir Cecil Trevor, retired Deputy Governor of the Reserve Bank, as our representative in London, and we have every hope he will be able to develop whatever possibilities there are of business in the London market.

Difficult Times

"The times are difficult and a heavy and ever-increasing burden is thrown upon those in charge of the affairs of the Bank. To Mr. Captain who, apart from his normal responsibilities, is bearing the burden of the representation of the Bank's case before the Tribunals appointed from time to time, to Mr. Karanjia, our Manager of Branches, to Mr. Cooper, our Secretary, and to our Local Committees at the various centres, I would like to convey on your behalf our sincere thanks for the sterling work they have been doing. I would also like to extend to all members of our staff at the head office and at the branches our appreciation of their services. I have every hope that, in time to come, there will be a more active realisation of the close identity of interests between all who are working to advance the interests of this institution.

"I shall conclude on a personal note. It is due to the generous gesture of Mr. Dinshaw Romer that I find myself back in my place. He had been serving as your Chairman for over three years with wholehearted devotion and there was no reason for any change in the direction at the top, but he insisted on my getting back into the position I occupied before I left to assume other responsibilities, and all I can say is, I hope I may be able to justify the confidence placed in me by him and other members of the Board. I am sure, I am voicing your feelings in conveying to Mr. Romer our warm appreciation of his services to the Bank.

"I have now pleasure in moving the adoption of the report and audited statement of accounts."

fixed levels. The reason for the latter is that cereal prices in the United Kingdom have been below world prices, and it is felt that the farmer should now get something nearer the world price.

The farmers, following common form, have expressed themselves dissatisfied with both the total income which they are estimated to earn for the coming year, given in terms of the guaranteed prices, and also with the levels at which the minimum prices for eggs and cereals have been put, but, since they have agreed with the Government on the probability of target production being reached over the next few years, it seems likely that the farmers' grumbles will nevertheless result in more output and, no doubt, in more income as hitherto.—*All Rights Reserved.*

IMPORTS OF DUTY-FREE MACHINERY INTO U.K.

The British Government has set up an independent committee, with Sir Henry Wilson Smith as Chairman, to review the long-term problems of the duty-free entry of machinery into the U.K. The terms of reference of the Committee are to consider and report whether it is in the national interest to provide for the duty-free admission into the U.K. of machinery, either by classes or in individual consignments, to review the provisions of Section 10 of the Finance Act, 1932 and their administration, and to recommend what, if any, changes should be made.

The cost of Britain's National Insurance during 1953-54 is estimated at £183 million, which represents an increase of £16.4 million as compared with the current financial year. The requirements of the National Assistance Board during the same year are expected to be higher by £3.1 million at £127.8 million.

THE PROSPECTS FOR AGRICULTURE

STRESS LAID ON INCENTIVE PAYMENTS

(From Our Own Correspondent)

LONDON, 21st March

LONDON LETTER

THE annual price negotiations between the Government and the farmers have resulted in a number of increases in the price of basic farm products designed to cover the greater part of the estimated increases in production costs and to give some incentive for increased output. It is estimated that, in the farm year ending 1st June, 1953, agricultural production in the United Kingdom will be 50 per cent. over the pre-war figure. This is a rise of only 2 or 3 per cent. over the previous year, but that, in turn, represented an increase of 6 per cent. over the year before—and these fluctuations between one year and another are the inevitable results of weather conditions. The Government and the farmers are confident that the target of a 60 per cent. increase in production over pre-war by 1956 can be achieved.

The prices of agricultural products have not ceased to rise since the war and, with a steadily mounting increase in farm efficiency and output, it is not surprising that the actual net farm income regularly turns out to be above the estimates; the value of this net income for the current year is put at about £320 million. These Price Reviews, at which an immense amount of hard bargaining goes on between the Government and the producers, are yielding increasingly detailed data on the value of agricultural production, and the White Paper, published at the conclusion of the present Review, shows that the agricultural industry is contributing to the national income in the current year a gross output of £1,200 million. Of this, a quarter is milk, rather more than a quarter is fat stock, the balance being made up of the value of farm crops, eggs and poultry, and horticultural products, in that order. The expenses of producing this output aggregates some £880 million, of which one-third is the cost of labour, followed by the expenses of purchased feeding stuffs and the maintenance of machinery—the latter amounting to not less than £150 million at present. It is an interesting corollary of this last figure that the producers themselves are worried that the country is not taking advantage of all the machinery which is available. There has been too large a tendency on the part of farmers to count their mechanisations, for example, in terms of tractors, instead of in terms of tractor-hours, and there is plenty of scope for a greater intensity in the use of the existing amount of equipment.

Incentive Payments

The arguments at the recent Review centred around the recouping of cost increases to the farmers and the making of incentive payments. The producers showed that their costs on the basic commodities alone, i.e., the commodities on which there are guaranteed fixed or minimum prices, increased by some £22 million, and they have been awarded the greater part of this sum plus further payments to a total of £27 million, in order to encourage the production of particular commodities. The milk producers are having only part of their costs met, but fat cattle and sheep have been given a substantial bonus. Meat remains the principal foodstuff, in which supplies fall substantially below demand without much immediate prospect of the two being equated. The potato acreage of this country has been steadily declining; so some incentive has had to be given there. Sugar beet growers have also received a substantial increase in price to enable them to add to their contribution to supplies of sugar (it is still a rationed commodity) which could otherwise only be made up by dollar purchases.

Two interesting developments which have complicated the calculations of estimated farm income have been the Government decisions to fix minimum guaranteed prices only for eggs and cereals. It is anybody's guess what the farmers will actually earn in the coming year on these products. The guaranteed minimum price for eggs has been set some 12 per cent. down on the current fixed price and the minimum prices on cereals have been left at the current

(Continued in previous column)

HUNDRED YEARS OF INDIAN RAILWAYS

SOME MAJOR EVENTS AND POLICIES OUTLINED

THE history of the Indian railways, which are now celebrating their centenary, makes fascinating reading. From humble beginnings, with a route mileage of 20 in 1853, the railways have developed into a gigantic organisation, commanding a route mileage of 34,120. It is true that the railways have yet to make up a great leeway, considering the existence of vast regions which are by no means very adequately served by railways. There are, in fact, frequent reports of bottlenecks; there are also problems of rehabilitation and of self-sufficiency in the manufacture of locomotives and coaches. Even the Five-year Plan, it must be admitted, touches only the fringe of these problems. Despite these shortcomings, the growth of the railways over the last ten decades has, indeed, been quite remarkable.

Although the construction of about 200 miles of railway line linking the three port towns of Calcutta, Bombay and Madras with the immediate hinterland was sanctioned as early as in 1845, it was only in 1853 that a railway policy for the country seeking to link the principal cities in India was formulated and the credit for this goes to Lord Dalhousie who presented a well-reasoned case for such a policy. As the resources of the East India Company were inadequate to finance the approved plans, the Company encouraged the formation of sterling companies for undertaking rail construction in India, through a generous guarantee of return on capital invested, convertible at a preferential rate of exchange, together with free grant of land and certain other facilities. Since the return on capital was assured to the early promoters of the railways, there was no incentive to economise either in construction or in operation. The cost of construction turned out to be prohibitively high due to the ignorance of foreign engineers of local conditions and terrain. After much initial disappointment and setback, there was a period of inactivity, which was broken by the decision in 1869 to undertake further expansion under the ægis of Government, through its own agency. Due to inexperience of the Government agency, the new experiment was also not a pronounced success. There was then a reversion to the earlier policy of the system of guarantees in 1879, though in a modified and less onerous form. The right to acquire ownership of the companies was also progressively exercised as and when options matured. The management, however, continued to be vested in the original companies. Meanwhile, full advantage was taken of the easy position in the money markets of the world to modify substantially the original contracts to reduce the financial commitments of the Government.

Acworth Committee

With minor variations, this policy continued until after the First World War, when the Acworth Committee reviewed the position. It advocated gradual adoption of a policy of State enterprise in the field of future railway expansion. A step forward was taken in 1925, by terminating the managing agency arrangements in regard to the East Indian and the G.I.P. Railways. The last, but the most important, phase of nationalisation, however, took nearly 20 years to complete, when the last managing agency arrangement was extinguished in 1944. The process could not, however, be extended to cover the railways of the Indian States until April, 1950, when the dream of the century, of establishing a unified nationalised railway undertaking, became a complete reality.

The expansion and development of Indian railways, like all other industrial units, have naturally been determined and regulated by the financial resources available from time to time. Until 1924, the railway undertaking formed an integral part of the administrative machinery of the Government, without an independent financial status or existence. Its fortunes were indissolubly linked with the fortunes of the Central Government, thus retarding its growth and fulfilment as a public utility concern, managed and operated on commercial principles. The Convention of 1924 bestowed on the railways a separate financial status. It stipulated that, in addition to the interest liability on the capital-at-charge, the railways should contribute to the general revenues an additional one per cent. on the capital plus one-fifth of any surplus profits remaining after paying this fixed return. There was a further provision for the appropriation to the general revenues of a third of any surplus remaining after these adjustments, should the surplus exceed a sum of Rs. 3 crores.

The 1924 Convention could not work during the depression of the thirties, when the railway revenues were insufficient even to meet interest liabilities to general revenues. In 1935-36, a three-year moratorium was declared and the payments to general revenues suspended. The moratorium was later extended upto 1942 and then for another year. By 1943, the arrears of contribution to the Central Government, as well as loans from depreciation, were all cleared. The magnitude of the problem of rehabilitation, consequent on the railways having worked to over-capacity during war years and the Partition days, necessitated the revision of the Convention. The Constituent Assembly adopted in December, 1949, a new convention which altered the relationship between general finance and railway finance, so as to give the general taxpayer the status of the sole shareholder in the railway undertaking, entitled to a guaranteed return of 4 per cent. on the loan capital invested in the undertaking for a period of five years ending 1955, as computed annually. The new Convention also provides for the allocation to the depreciation fund of a sum not less than Rs. 15 crores, during the first quinquennium. The balance is to be divided between the general purposes reserve, for maintaining financial equilibrium, and the development

fund, for meeting the cost of passenger amenities, labour welfare and other necessary, but unremunerative, projects.

Return on Capital

The substitution, by a fixed dividend, of the indeterminate contribution according to the old Convention now assures to the general revenues, over the agreed period, a definite return on capital-at-charge, thus facilitating not merely forward economic planning in the civil field, but also assisting, at the same time, the railway undertaking in building up its reserves and carrying out a comprehensive programme of rehabilitation and expansion. The raising of the rate of annual contribution to the depreciation fund is now based on the consideration that present replacement costs bear no relation to the original cost of acquisition or the estimated lives of the assets—the two factors which have hitherto determined the rate of contribution. The enhancement of the burden of expenditure which revenue has to bear, under the new arrangement, is in accordance with commercial principles designed to prevent over-capitalisation of the railway undertaking.

The institution of a development fund is the result of the recognition that future railway development could no longer be conditioned by commercial considerations alone, and that a system of nationalised railways must perforce fulfil a positive and complementary role in the general economic development of the country. The obligation of the State to expand rail facilities in undeveloped or underdeveloped areas, unhampered too much by considerations of the adequacy of the return on the capital invested, was another consideration which influenced the institution of this fund. The commercial principle of ploughing back surplus revenues of prosperous years for expansion has thus come to be an integral part of the new financial philosophy of the Indian Railways. Capital construction is now financed both from loan funds provided by general revenues and from railway revenues accumulated in the railway development fund. The natural corollary to this position is the separation of the loan account from the block account of the undertaking. The budget plans since the introduction of the revised Convention reveal that projects have been undertaken which otherwise would have been impossible.

Zonal Scheme

The inauguration of the new Financial Convention with effect from 1st April, 1950, is a landmark in the history of the railways. It has facilitated immediate attention to large-scale administrative reorganisation. Federal financial integration, and virtual completion of nationalisation of rail transport under one overall control are expected to provide the opportunity for planning and carrying out a policy of uniformity in administrative pattern and financial control, rationalisation of workshop and other operational facilities and an improved standard of performance. A Committee of the Railway Board was appointed early in 1950 to consider the question in all its aspects. The Committee recommended that the railway system should be welded to form one co-ordinated railway undertaking, divided into six major zonal administrative units, the governing considerations being operational efficiency and economy, and, what is more important, the economic inter-dependence of contiguous regions. The zonal scheme, based on these principles, was completed last year.

The immediate future of Indian Railways depends, to a large extent, on the successful rehabilitation of the railways. The Five-year Plan has envisaged an expenditure of Rs. 400 crores, of which the contribution from the Central revenues will be Rs. 80 crores; the balance is to be raised by the railways from their own resources. The bulk of the proposed allotment of an average of Rs. 80 crores a year during the Five-year Plan, is for rehabilitation purposes. The rehabilitation of railways is expected to enable them to handle more efficiently passenger and goods traffic at around the present level. The provision in the Plan for new lines is about Rs. 20 crores. Further, in the case of certain expansion schemes, such as iron and steel and mineral development, the expenditure needed for providing the necessary railway facilities has been treated in the Plan as part of the expenditure on the project concerned. It is expected that, out of the lump sum provision of Rs. 50 crores in the Plan for further expansion of basic industries and transport, the railways will get the necessary allocation.

The question of achieving self-sufficiency in railway operations by the creation of facilities for the manufacture of locomotives and coaches has been agitating the minds of people for a considerable time past. The first step towards this objective was taken by the handing over, in 1945, of the Singhbum Workshops at Tatanagar to a new company—The Tata Locomotive and Engineering Co. The production potential of the company is estimated at 50 locomotives and 50 spare boilers. The Government has extended financial aid by participating in its capital expenditure to the extent of Rs. 2 crores. Meanwhile, construction activity is proceeding apace at the Government unit, Chittaranjan factory. The eventual production target of the factory is 120 locomotives and 50 spare boilers. During the period of the Plan, the Tata Locomotive and Engineering Co. is expected to manufacture 170 locomotives and the Chittaranjan Works 268 locomotives. The Government has taken on hand the establishment of a coach-building factory at Perambur, with an annual single-shift production capacity of 300 to 350 all-steel integral type coaches. Meanwhile, the spare capacity of the Hindustan Aircraft is mobilised for the production of all-metal third-class coaches. The manufacture of wagons is now well established in India and the wagons are comparable with the best manufactured abroad.

One more aspect that deserves to be recorded in this survey is that relating to the rationalisation of freight and fare structures. In view of the difference in rating followed by individual railways, there had grown up a rating system of extreme complexity. It was only in 1948 that this defect was remedied when a new system of telescopic rates on continuous mileage basis was introduced. Although the new rates overcame many of the shortcomings of the previous system, the major anomalies which still persisted in the rating structure of the Indian railways were mileage inflations on certain sections of railways in the plains and disparities in the rates of some important commodities, e.g., sugar, foodgrains, pulses, oilseeds, etc. With the integration of Indian railways, there was no justification for these anomalies. It was accordingly decided that, except on hill

NATIONALISATION OF INSURANCE COMPANIES

MR. PURSHOTAMDAS THAKURDAS' VIEWS

INSURANCE companies have always had a fascination for a certain type of politician who believes that a business such as insurance, in which large public funds are to be found, might conceivably be used for some public purpose which he holds dear. Unfamiliar as he is with the ways in which insurance companies function, he is apt to think that insurance presents a field in which he could exercise his ingenuity. It is necessary to warn this type of politician against the danger to public welfare which might result from the State's taking over the insurance business. This warning has, of course, been given by leading insurance men in the country from time to time.

Apparently, the warning has had no effect, considering that in the fourteen-point programme which Mr. Jayaprakash Narain, the Socialist leader, submitted to Mr. Jawaharlal Nehru for aligning himself and his party with the party in power, he listed the programme for nationalisation of banks and insurance. There is thus a body of opinion in this country which believes that some great public purpose could be served by nationalising insurance. To the men who hold this view the warning, uttered by Mr. Purshotamdas Thakurdas, Chairman of the Oriental Government Security Life Assurance Co., Ltd., only a few days ago, while declaring open the Company's new building at Ahmedabad, needs to be drawn. Mr. Purshotamdas said:

". . . in fact the *per capita* insurance of India is about the lowest in the world and politicians and economists have deplored this unequivocally. I am aware that there are members of Parliament and of the Congress who set a good deal of store by 'thinning the fat' as they call it, but I suggest that, if they can give a little thought, they will leave insurance alone for years to come; for, insurance is a provision for widows and children after the breadwinner's death and I suggest that a man who is fairly insured, according to his earning in life, enjoys comparative peace of mind on his death bed.

"It is surprising that, in spite of the grim warning furnished so unequivocally by nationalisation of the coal industry in the U.K. in the shape of diminished output per man and increased cost of raising, our ministers in power talk lightly of socialising or nationalising as applied to a business least fitted for nationalising and whose progress depends upon research in several fields of intellectual activity which can be fostered only under conditions created by healthy competition as a private enterprise. I, therefore, cannot allow this occasion to pass without putting out, most respectfully, a warning to these advocates of socialism: 'Hands off those for whom we insurance companies are trustees, particularly as they are normally widows and orphans.' I make an appeal to ministers in power in all humility but with the utmost sincerity to be consistent in their policy declarations, bearing in mind the great harm that will be done to the country's economy by inconsistent pronouncements of policy."

This is a clear and well-reasoned warning which deserves to be heeded by those who are in charge of the Government. They seldom realise the consternation caused by their unguarded utterances among the interests concerned, for, if they did realise it, they would be more circumspect in speaking on matters of policy, such as nationalisation of insurance, or any other industry or service for that matter. Fortunately, our enquiries, made at the highest quarters of the Governmental hierarchy, reveal that there is no intention on the part of the Government, now or at any time in the foreseeable future, of nationalising insurance. This information must naturally be reassuring to the concerned interests, and must serve as a corrective to exaggerated fears of nationalisation. Even so, it should be clear that, when ministers and responsible public leaders begin to talk of nationalisation of insurance and banking, or of abolition of stock exchanges and similar financial institutions, a great deal of apprehension is necessarily caused.

Politicians, as a class, do not seem to weigh their words carefully before they make public statements. One section among them feels that nationalisation is the magic key which opens the door to prosperity. And insurance is a business which holds great attraction for them. Discussing why insurance has a special fascination for politicians, a writer in *The Review* of London says:

"The charms of insurance are, perhaps, more seductively apparent than of other businesses. There is the great wealth of the world's insurance institutions, particularly in Europe and America; no trace, of course, remains of those which failed to survive the hazards of competitive existence. There are the evident hesitations and shifts, back and forth, of the mechanism of insurance, both in its domestic and in its international respects; and who, among our cleverer politicians, could recognise in this the subtle and complex interplay of natural balances, of the profit motive checked by the corrective of competition? His own firm hand could achieve the desired result in a fraction of the time! Finally, there is the splendid justification that, in a world of restricted currencies, the Government must come into the picture anyway, in a business so essentially international.

"Since these politicians have been looking so attentively at us, perhaps it would be appropriate, for a change, to take a look at them. As a class, they would appear to be assiduous and vocal rather than numerous, and, without looking too far from home, they appear to belong to the oratorical rather than to the business or industrial breed. Few of them have graduated with any known distinction from the hard school of competitive free enterprise, and many would appear to have served their apprenticeship on the soap-box or the rostrum, rather than at the office desk. . . .

"But let us return to insurance. Here, certainly, is wealth to 'redistribute'—wealth which, in the older democracies, has accumulated slowly over a century or two in the course of a public service which, judging from the support of the public—has not proved unworthy. But is it, in fact, purely redistribution of capital that the insurance politicians are after? If this were so, it would be the misfortune of the few rather than of the many.

"If, on the other hand, the intention is to take over also insurance goodwill—which certainly is the case—then it is very much the concern of all, for everyone is entitled to enquire how insurance will be conducted in the future. This is, in point of fact, the vital question."

Few people, however, stop to think whether outright nationalisation of insurance could really confer any superior advantage which is not possessed under the present order. Nor do they ask themselves the question: Since insurance is already so largely controlled by the State, what special advantage is to be derived through wholesale nationalisation? The Government now controls every aspect of insurance companies—the expense ratio, the disposition of their investments and the portion of the surplus that might be utilised for payment of dividend, etc. The problem of misuse of investment funds is not so serious a problem it was some years ago. In any case, the Government has powers to appoint its nominees as administrators for the insurance companies which, in its opinion, are being wrongly managed. In fact, on no other industry—not even on banking—does the Government exercise so meticulous a system of control as it does on insurance. For all practical purposes, insurance might be described as a nationalised service. Indeed, the Government exercises all the power without the responsibility for the business side of insurance. It is not, therefore, clear why certain sections of public opinion should still demand that the Government must give up this advantageous position and take over the entire responsibility of running the insurance industry, which is now being run fairly efficiently by private enterprise.

COST OF INVISIBLE IMPORTS

E.C.A.F.E. REPORT'S ESTIMATES

IT is well known that the countries of the Asian and Far Eastern region have been largely dependent on industrialised countries for shipping, banking and insurance and other services in connection with international trade and similar transactions. These countries have also had to make payments by way of interest and dividends on foreign investments in their industries. Payments for these services and for dividends and interest constitute an "invisible" form of import. The Report of the Economic Commission for Asia and the Far East for 1951 throws some light on the cost of the import of transportation and insurance services by this region.

The following table gives the cost of transportation and insurance services which were utilised and, therefore, paid for by some important countries of this region during 1950 and 1951:

(In millions of currency units)

Countries.				1950	1951
Burma	..	..	(Rs.)	—13	—14
Ceylon	..	..	(Rs.)	18	—55
India	..	..	(Rs.)	192	334
Pakistan	..	..	(Rs.)	—85	—137
Philippines			(Pess)	—59	—99
Indonesia			(Rupiahs)	—120	—52
Thailand	..	..	$	—0.4	—0.4

The increase in transportation and insurance charges, which occurred in 1951, is to be attributed to the larger volume of trade transactions, which implies larger payments for insurance, and higher freight rates which prevailed during that year. For instance, the volume of imports increased by 15 to 30 per cent. in Ceylon, Indo-China, India, Malaya and the Philippines. Payments in respect of insurance, the Report observes, increased in association with the larger volume of imports and exports. But the above table must be interpreted with caution for two reasons. In the first place, the figures include the cost of both transportation and insurance. Secondly, the figures do not show a complete picture, because in certain countries, namely, Ceylon, India, Indonesia and Thailand, most of the payments for freight and insurance charges were included in import figures recorded on a c.i.f. basis. In Pakistan, both imports and exports were recorded on a mixed basis, partly c.i.f. and partly f.o.b.

Even so, the table reveals how the use of foreign shipping and insurance services constitute an important source of foreign exchange earnings for the countries which supply them. While these countries still continue to earn a sizable part of their overseas income through performance of shipping and insurance services, it must also be remembered that they have lost a portion of the income, which they formerly received on their investments in the E.C.A.F.E. region. The loss of the latter form of income is due to the fact that, as a "result of war-time destruction, the liquidation of foreign investment, the decline of the colonial system, the rise of economic nationalisation, and, in some countries, civil disturbances, the investment of Western European countries has declined sharply."

INDIAN INCOME TAX ACT
1952 Edition
By
A. C. SAMPATH IYENGAR, B.A., B.L.
Senior Advocate, Supreme Court.
This Edition is the most up-to-date book on the subject. All Case Law up to April 1952 have been noticed. Comments include provisions relating to the Income-tax Amendment Bill, 1952, now pending before the Parliament. An exhaustive treatise in Two Volumes. **Price: Rs. 42-8-0**
It is proposed to keep the work up-to-date by annual Supplements from time to time. The first annual Supplement will be issued about May this year.

THE CHARTERED BANK OF INDIA, AUSTRALIA AND CHINA

STEADY PROGRESS MAINTAINED

MR. GRANTHAM ON ECONOMIC AND FINANCIAL CONDITIONS IN THE EAST

THE Ninety-ninth Ordinary General Meeting of the Chartered Bank of India, Australia and China will be held in London on 1st April, 1953. The Chairman's Statement circulated to the shareholders along with the Directors' report and accounts for the year ended 31st December, 1952, highlights, as usual, the economic conditions in the countries in which the Bank operates in the East. It is the considered opinion of the Bank's Chairman, Mr. Vincent Alpe Grantham, that, in almost all these countries, the past year was one of deterioration in the economic and financial spheres, but he warns that "it would be wrong to apply a rigidly Western yardstick to the measurement of the extent of the deterioration which has taken place or to the consequences which might be expected to flow therefrom." Referring to conditions in India, Mr. Grantham makes an interesting statement on the Five-year Plan of economic development and the position of India's export industries. In his study of the position of these industries *vis-a-vis* the Plan, he finds that a further recession in the conditions in the export industries "might well involve the Government in difficulties over the financing of the public sector of the vital Five-year Plan, from which so much is expected and hoped."

The following is the full text of Mr. Grantham's Statement:

"In my last Statement I referred to the approaching centenary of the incorporation of the Bank by Royal Charter. The Great Seal of the Realm was affixed to the Charter on 29th December, 1853, and although the 100th annual meeting of the stockholders will not take place until 1954, it has seemed fitting to regard 1953 as our centenary year, as indeed it is.

Classic Land of Joint Stock Banking

"Great Britain is the classic land of joint stock banking, and although many of the great British financial institutions, whose names are known and honoured throughout the commercial world, have already passed their centenaries, few have preserved, as the Chartered Bank has, their complete independence and their original constitutional forms. Of the numerous oversea banks granted Royal Charters during the nineteenth century only the Chartered Bank of India, Australia and China survives as originally incorporated, but the full name of the Bank has, I fear, become something of an anachronism. As is well known, the Bank has never opened branches in Australia and recently, to our deep regret, we have been compelled to order the closing of our remaining branches in China; but, as I shall show later in this Report, the Bank continues to prosper throughout those countries in Southern Asia which were a hundred years ago still under the jurisdiction of the East India Company, and in those lands which are quaintly described in our Charter as the Eastern Archipelago.

"This is not the place to review the progress made since the founders of the Bank met in Threadneedle Street over a century ago to petition the Crown for the grant of a Royal Charter of Incorporation. Sir Compton Mackenzie has accepted our invitation to write an official history of the Bank, and I hope that the book will be published shortly before the one hundredth meeting of the stockholders is held in the spring of 1954. The activities of the Bank, during the past hundred years, have touched world history on many occasions and in many places, and the story we have to tell will, I believe, prove to be of the greatest interest.

"In the course of our researches into the history of the Bank it has been borne in upon us that the most significant exports from Britain to the East have been not textiles or machinery, but liberal ideas. These wholly invisible exports have fructified in a way few could foresee, and they have made possible those extensive, but orderly, transfers of sovereignty, to which I referred in my last Statement. It is remarkable that the Chartered Bank, founded as it was when the British Empire, sustained by an unchallenged sea power, was approaching the the height of its power and its glory, should find in these changed days more opportunities than ever before of fulfilling the constructive and pacific aims of its founders.

"Carlyle observed that history is the essence of innumerable biographies. Down the years the Bank has been well served by its principal executives, the branch managers and a devoted rank and file. If few individuals made reputations outside the service, it was because the majority found their work in the Bank completely absorbing and wholly satisfying. The service of the Bank has become a tradition and the present generation continue to manifest the skill, enterprise, loyalty and fortitude which were characteristic of their pioneer predecessors.

"The present occasion, marking as it does the culmination of a century's successful endeavour, affords me once again an opportunity of acknowledging the exceptionally distinguished services rendered to the Bank by its present Chief General Manager, Mr. W. R. Cockburn.

The Court of Directors

"I have to record the retirement during the year of the Bank's senior Director, Lord Colgrain, and of Mr. Archibald Rose, C.I.E.

"Lord Colgrain joined the Court in 1923 and he brought to its councils an unrivalled comprehension of the problems of Indian trade and finance. Although he later presided over the British Bankers' Association and was, for many years, Chairman of the National Provincial Bank Ltd., he remained a Director of the Chartered Bank and continued to manifest the liveliest interest in its affairs. His wisdom helped, and his wit leavened the deliberations of the Court, and it was a privilege to share his knowledge and understanding of the London money market.

"Mr. Archibald Rose was elected a Director in 1926, shortly after his retirement from the Diplomatic Service. A distinguished authority upon Far Eastern political and economic affairs, his counsel was invaluable to the Court. During his long service as a Director, Mr. Rose made many journeys, often under hazardous conditions through the Eastern lands, and his understanding, from knowledge gained at first hand, of the problems which constantly confront so far-flung an overseas branch system as this Bank administers, was invariably helpful.

"In succession to Lord Colgrain the Directors have elected to the Court the Earl of Inchcape, whose father and grand-father held similar office. Lord Inchcape's appointment reinforces the personal link which has existed for so long between the Bank and the P. & O. group of steamship companies.

"Sir Harry Greenfield, C.S.I., C.I.E., who rendered distinguished service to the Imperial Indian Government, has taken Mr. Rose's place, and the stockholders will be invited at the annual general meeting to confirm his election and that of Lord Inchcape.

Management and Staffs

"The Bank continues to be well served in all fields by its British and Asian staffs. It is impossible to speak too highly of the interest and devotion to duty of our Managers and senior officers throughout the Bank's branches. Some of these, in point of size, are greater than the head office; but all present daily problems of management and control peculiar to banking institutions handling widely diversified systems of foreign trade and exchanges, as well as all the other varied business normally handled by banks in this and other countries. Realising, however, that continuously changing conditions and new developments in the political and economic systems of the countries in which the Bank operates is throwing an ever-increasing burden of understanding upon the senior officers of the Bank, to whom our clerical staffs everywhere must look for guidance in the day-to-day work of the Bank, and that, therefore, the flow of understanding between the general management and the branch managers and their Asian staffs must be widened and strengthened, the Bank has established a college to which, each year, groups of our Asian officers will be brought home and given an intensive course of instruction. This, it is hoped, will assist them to appreciate more fully the principles upon which the Bank operates and in applying those principles more effectively.

"The College, which is situated at Dorman's Park in Surrey, has as its principal, Sir Alexander Campbell, M.A., M.C., E.D., formerly Director of Public Instruction, Burma.

"Admittedly, the College is an experiment, for it is proposed to house within it at one and the same time many officers of diverse nationalities and attainments; but all will have one characteristic in common, for they will be drawn from among the Asian officers who have gained distinction in the service of the Bank, and I firmly believe the College course will assist in preserving and enlarging the traditions of service within the Bank, which has been the happiest feature of the co-operation between our British and Asian staffs throughout the service.

Bank's Balance-sheet

"As forecast in my Statement a year ago, when I suggested that we might look for lower figures, the total of the Bank's balance-sheet shows a fall of some £5,000,000 from the record figures of last year.

"It is, perhaps, wrong to attach too much importance to the total of the balance-sheet, for it merely represents the sum of the position as at the end of the year in all the eighteen separate areas in which the Bank operates, and our experience in these areas has been far from uniform. In general terms, however, it is safe to say that, while the reduction is due in large measure to the almost universal fall which has taken place in commodity prices over the past year or more, it also reflects some decrease in the volume of the foreign trade of the United Kingdom and other Dominions and territories of the Commonwealth within our sphere of operations, caused by restrictive measures upon imports designed to improve the Commonwealth's balance of payments, especially with 'hard' currency countries.

"On the left hand, or liabilities side of the balance-sheet, current and other accounts, bills payable and loans payable show decreases of £8,536,218, £1,158,363 and £1,400,833 respectively, offset by a moderate increase in fixed deposits of £873,917. On the other hand, acceptances are up by the relatively substantial figure of £4,051,448, this being accounted for by calls to finance heavier than usual shipments of food and raw materials around the end of the year against the trend already noted. Notes in circulation remain at practically the same figure as last year.

"On the right hand, or assets side, cash in hand, at call and at bankers, and advances to customers and other accounts, are down by £2,016,368 and £17,531,539 respectively. The substantial reduction in the total of our advances, while in conformity with the officially expressed desires of our own and other Governments that banks should, in the national interests, adopt a more restrictive lending policy, is largely due to the falls in commodity prices of which mention has been made above. Government and other securities (apart from those lodged against our note issue) and bills of exchange (including United Kingdom, Dominion, Colonial and Foreign Treasury Bills) are up by £4,198,187 and £2,223,056 respectively, these increases reflecting, in the main, the switch from advances to more liquid assets. Fixed assets, after allowing for amounts written off, show a slight decrease of £69,086.

"Considered as a whole, I submit that the balance-sheet reveals a position of enhanced strength and a sound balance between the conflicting demands of liquidity and earning capacity.

Profit and Loss Account

"The net profit for the year amounts to £698,782, an increase over that of last year of £1,685. When commenting upon the record results achieved last year, I stated that it would be foolhardy, in the face of the recession we were then experiencing (and which has continued ever since) not to be prepared for some reduction in future profits. In the face of continuously deteriorating conditions throughout practically all the territories in which the Bank operates, accompanied by constantly rising costs, including taxation, which in all countries takes heavy toll upon our earnings, our results can only be considered very satisfactory.

"Last year, I mentioned the heavy depreciation which had taken place in the market value of our investments in Government securities. There has been a modest recovery this year, but naturally this has not figured in our computations in assessing our profits. We have never departed from our custom of valuing our securities at or below market values and, as before, all our holdings are dated and in large proportion short dated.

"We paid a dividend in October last of 7 per cent., less income-tax, absorbing £110,250, and it is proposed that, out of the balance now available, a final dividend of 7 per cent., less income-tax, should be paid costing £110,250, and this being our centenary year, it is further proposed that a special centenary bonus dividend of 2 per cent., less income-tax, should be paid costing £31,500, making the total distribution for the year 16 per cent. At the same time, bearing in mind the great services rendered to us by our staffs everywhere, we have decided to pay a special Centenary bonus of 10 per cent. of their salaries to all members of the staff throughout this country and abroad who will still be serving us on the 1st April, 1953. These Centenary bonuses are special ones which will not be repeated.

"We propose to repeat the allocations made in each of the last two years to the pension fund and the widows' and orphans' fund of £125,000 and £20,000 respectively. The calls upon these funds continue to increase, and it is necessary that they should be maintained against the future. Last year, I informed you of the circumstances which rendered necessary the inauguration of a supplementary pension fund scheme, which, in respect of senior officials serving abroad, would not only increase their ultimate pensions, but would, in the case of untimely death before the age of retirement, provide adequate security for their dependants. While the annual cost to the Bank at present is considerable, as the pensions under the Supplementary Pension Fund Scheme are secured under insurance policies, it will diminish as years go on until all those eligible enter the scheme at the minimum age instead of as at present at ages in most cases well above the minimum. In the meanwhile, I already know that we have the approval of the stockholders of what is being done in this direction.

"In 1947, I mentioned that we were considering the payment of retiring allowances to members of the Court who retired after completing long terms of office with the Bank, and informed you in 1948 that we were legally advised that we had powers under our Charter to do so. Directors' duties in this Bank have been arduous, especially over the past troubled years of the war and the aftermath of the war, entailing generally not less than two or three meetings weekly, and I am sure that the stockholders will approve of retiring allowances now being paid to Directors who have retired after more than twenty years' service.

"At the same time, I would refer you to our annual general meeting in 1947 when the stockholders increased the gross remuneration payable to Directors to £20,000. This figure has unfortunately not been sufficient to give us the elbow room we require, and a special resolution is being put before you, in which you will be asked to agree to allocate up to £30,000 to cover all present outgoings on account of Directors and to provide for future necessities in this direction. In putting this before you I would add that we have no present intention of increasing individual Directors' fees.

Bank Premises

"As you will observe from the profit and loss account, £200,000 has again been applied to write down Bank premises and furniture account. The extent to which new building, rebuilding, and extension of offices and houses in the East has been necessary since the war to enable us to carry on adequately our very extensive business, and to house our staffs, may not be fully realised by the stockholders. We have opened a number of offices in new areas and have faced and are facing the necessity to build modern offices to house our developing business. In some areas we are faced with the necessity for opening second branches, and everywhere the conditions ruling after the war have made it necessary to build, and furnish a great many houses. A year or two ago, we had anticipated a gradual lessening of further extensions and building; but looking forward to-day we must anticipate a continuation of expenditure on premises account for some time to come. I must emphasise that the possession of office and house accommodation is a prerequisite to our doing business and that in most places we have had no option but to build. The annual allocations made out of profits ensure that the balance-sheet figure for premises is kept at a reasonable level, bearing in mind the location of our premises.

"I now turn to the Bank's reserve fund. Two years ago we augmented the reserve fund by transferring to it £1,000,000 from contingencies account, restoring the reserve fund to £4,000,000, the figure at which it stood before 1931. I pointed out to you at the time that our balance-sheet total had increased out of all proportion to the issued capital stock and reserve fund. This matter has continued to give us concern, and it was felt that the opportunity should be taken this year of strengthening both the issued capital and the reserve fund.

"Accordingly, before closing the books on this occasion we transferred a further £1,000,000 from contingencies to the reserve fund, raising it to £5,000,000 with a view subsequently to capitalising £500,000 of this sum. I would draw your attention to the resolution which will be placed before the stockholders at an extraordinary general meeting to be held after the ordinary general meeting on 1st April, at which your consent will be sought to this capitalisation of £500,000 from the reserve, which will have the effect of making the capital of the Bank £3,500,000, and the reserve fund £4,500,000. The consent of the Capital Issues Committee has been sought and obtained to this new issue, and I would say that, in recommending this proposal to you, we hope that it will be possible to maintain the 14 per cent. rate of dividend. From every point of view I venture to think that the proposal will be welcomed by the stockholders, and it is an added pleasure that we find ourselves in a position to take this step forward in our Centenary year.

"Lastly, it is proposed to transfer £100,000 to contingencies account and to carry forward to next year the slightly increased balance of £399,215.

"I trust the stockholders will approve of all our proposals.

Introductory

"In my last Statement, I described some of the consequences to the Bank of the political fragmentation of the Eastern world. During the year under review, there has been further evidence of the desire of the newly emancipated Asian nations to divest themselves of every form of political and financial tutelage. Victor Hugo wrote: 'There is one thing that is stronger than armies: an idea whose time is come.' Asian nationalism is such an idea, and those of us who are concerned with the direction and management of British commercial enterprises in the East, have come to realise the force of it. It has always been and remains the purpose of the 'Chartered Bank' to serve legitimate commerce and creative industry, and given a fair field without favour, it can, I believe, continue to play a constructive part in the economic development of all the countries to which its establishment extends. We are proud of the British financial tradition to which we subscribe; but we do not pretend that banking, in either the domestic or the international sphere, is a closed shop, and we must expect to encounter more and more competition throughout the East concomitantly with political progress and technical advance.

"It may be appropriate to remark here that, although the Bank enjoys the privilege of incorporation by Royal Charter, it receives no greater measure of official support abroad than is accorded to other privately-owned British enterprises. The founders of the Bank were free traders to a man and the petition for the Charter was, in effect, a protest against monopoly and privilege.

"A glance around the horizon I surveyed in my last report reveals that the position in practically every country in which the Bank operates in the East, has deteriorated economically and financially. This has been so even in those areas, e.g., Malaya, Sarawak, North Borneo, Hongkong, etc., where currency reserves are automatically created and preserved, for, like other countries in the Far East, they, with the exception of Hongkong, being large producers of raw commodities, experienced a steep recession as a result of the almost universal fall in the prices of their main products. Nor did they escape the consequences of overspending by Governments and peoples induced by the preceding period of high prices, which, as also in the other countries of the Far East not so fortunately placed in regard to the creation and preservation of currency reserves, over-encouraged imports. These, under the changed conditions, the bazaars and markets of the East have found it difficult to absorb.

"While it is true to say that conditions economically and financially have deteriorated considerably almost everywhere in the East over the past year, it would be wrong to attempt to apply a rigidly Western yardstick to the measurement of the extent of the deterioration which has taken place, or to the consequences which might be expected to flow therefrom. Naturally, the consequences cannot be entirely avoided; but the capacity of peoples governing themselves for the first time in history for self-discipline and recovery, may well prove to be greater than has been hitherto suspected, and it would be unwise to fail to take that capacity into account.

"With these few introductory remarks, I shall proceed, as usual, to devote some attention to the individual countries in which the Bank is represented.

India

"It is common knowledge that four in five of India's 356 million inhabitants till the land and maintain a precarious existence by the use of time-honoured agricultural methods largely inadequate to the urgent necessities of the modern era. With an annual population increase of some 4-5 millions, India's immediate economic problem is the vital necessity for a substantial expansion of food production. To this end the Five-year Development Plan was first drawn up in 1951, constituting in the financial sphere 70 per cent. of the Colombo Plan. But, whereas in the other countries participating in the Colombo Plan, the predominant aim is to broaden the base of their economies and to render them less dependent upon the vicissitudes of a relatively narrow range of commodities, in India the emphasis is very reasonably laid upon agricultural development by such means as irrigation and improved methods of cultivation. Indeed, agriculture, community development, irrigation and power projects, transport and communications, account for 68 per cent. of the aggregate investment proposed under the Indian Plan. During the period which has elapsed since the publication of the original draft, the Five-year Plan has been submitted to the scrutiny of the constituent States of the Republic and has been the subject of considerable public discussion, particularly during the elections in 1951-52. It was not until December, 1952, that the Plan in its final form received the formal endorsement of the Indian Government.

"The Plan is designed to expand India's national income by 10 per cent. over the period 1951-56, but it is estimated that almost half this increment will be automatically absorbed by the ever-increasing population. Thus, there is little scope for any spectacular improvement in the general standard of living, but it should be remembered that, with a population more than seven times greater than that of Great Britain, India has a national income less than two-thirds as large. Obviously the most vital feature of the Plan is the question of the wherewithal to finance it, for, without adequate capital, even the most enlightened and efficient administration will be powerless to assure the eventual success of this great scheme. The Planning Commission has assumed that the annual rate of capital formation within the country will increase during the period of the Plan from approximately 5 per cent. to 6¾ per cent. of the total national income. By European standards this may seem modest, but the relative poverty of the Indian masses is such that, of 356 million inhabitants, less than one million are even in a position to pay direct taxation, let alone accumulate savings.

Financing the Plan

"Assuming that the Commission's estimates of the country's annual investment potential prove correct, the total national resources available during the currency of the Plan will amount to between Rs. 2,700 and Rs. 2,800 crores. Aggregate Government outlay will be Rs. 2,069 crores, a figure which leaves what is considered under the circumstances as an adequate margin of savings available for capital development in the private sector of the economy. This margin apart, little more than 8 per cent. of Government expenditure under the Plan is to be devoted to industry, but Indian commerce and industry may reasonably expect additional capital from overseas through the medium of private investment by foreign enterprise. The Planning Commission expects to raise the greater part of the projected outlay through budgetary saving by the Central and State Governments; from surplus railway revenue; by loans and savings made by the public; and by sterling releases under the Indo-British Sterling Balances Agreement. Nevertheless, there still remains a sum of Rs. 365 crores to complete the financing of public expenditure proposed in the Plan and, as the possibilities of increased taxation and additional borrowing from the public have already been taken into account in drawing up the estimates, the Commission is hopeful that the gap will be bridged by a substantial measure of overseas support. It was, therefore, encouraging to hear in December that the International Bank for Reconstruction and Development had decided to make a

substantial dollar loan to the Indian Iron and Steel Company, Ltd., to finance a five-year expansion scheme. This is the fourth loan that the Bank has made in support of Indian development projects.

"The early part of the year was marked by an abrupt recession in world prices of a number of important commodities produced and exported by India. The country had derived considerable benefit from the rise in raw material values set in motion by the Korean war. But, by April, 1951, the world-wide scramble to stockpile basic commodities had slackened and the reaction set in. Nevertheless, the downward movement in prices was gradual until March, 1952, when a sharp fall took many substantial holders of Indian commodity stocks by surprise. Such was the situation that it became necessary to close temporarily Stock and Bullion Exchanges and commodity markets in the principal commercial centres throughout the country. The fact was that the skilful monetary policy of the Indian Government had rendered inevitable the eventual adjustment to their world level, of prices which in India had been kept artificially high by speculative contracts. The disinflationary measures instituted by the financial authorities took effect in forcing a contraction of trading stocks and in a few weeks a lower and more realistic price structure was established.

"The recession at once confronted the Government with urgent demands for the relaxation of the export duties imposed to insulate the Indian economy in some measure from the rise in world prices stimulated by the Korean war. Certainly at the end of 1951 it was evident that India's exports were contracting, and with the fall in the international price level early in 1952, a number of Indian staples were being priced out of oversea markets as a result of the export duties. But, owing to the loss of revenue entailed by the reduction of these duties, both in rate and yield, the Government was compelled to discontinue the food subsidies. This was an unpopular measure, but, at first, the fall which had already taken place in food prices mitigated to some extent the hardship caused. Although food prices have subsequently risen slowly, supplies are now more plentiful and, owing to increased grain production within the country, stocks have increased and it has been possible to curtail food purchases abroad. However, the crop failure in Madras is a sad reminder that India's food problem is still far from solved.

"Early in the year when the fall in the world values of the country's staple exports moved the terms of trade against India, there were fears of a considerable trade deficit, but a steady diminution of imports has since caused a marked improvement in the balance of trade. In particular, the expansion of raw jute and cotton production, by rendering India less dependent on Pakistan for these commodities, has contributed substantially to the contraction of the adverse trade gap. This improvement has been reflected in the balance of payments, and the rate of drawing on the sterling balances has been much reduced. The authorities have taken heart from this encouraging trend and have decided that they can safely pursue a more liberal policy towards imports during the first half of 1953, although, naturally, essential materials will still receive priority.

Export Industries of India

"The situation of the export industries is less favourable, but, despite a number of concessions, the Government has tended to resist reduction or removal of export duties. Conditions in the tea industry deteriorated to such an extent, however, that emergency measures, such as the exemption of tea waste from export duty, were introduced in November, but these were not sufficient to avert widespread closing of tea gardens at the end of the year. Apart from its losses on the current crop the industry has been faced with the problem of financing production in the new season. The Government has rendered assistance by offering a limited guarantee in respect of the 1953 crop to banks concerned with the financing of tea estates, but this measure has not been deemed adequate in all the circumstances, and the tea industry's difficulties remain largely unsolved. The Indian tea industry has voluntarily agreed to reduce production by some 8½ per cent. during the present year, and meanwhile world, and in particular British, demand has shown some improvement since the turn of the year.

"The cotton industry has suffered less, although demand both at home and abroad has slackened since the summer. Even so, the present position of Indian textiles is considerably stronger than appeared likely during the slump in March, 1952. There still remains an awkward legacy of that period—the problem of clearing stocks of relatively expensive fabrics manufactured from highly priced American cotton.

"The jute industry is painfully adjusting itself to lower prices both for its raw materials and its finished products. Conditions have improved since the depression early in 1952, on American demand for Indian hessians which, however, has not been sustained. Moreover, competition from European mills, which made great headway in modernising their machinery in recent years under the shelter of the Indian export duties on jute manufactures, and which obtain quality jute from Pakistan free from the discriminatory licence fee levied on exports to India, has been strong throughout the world's markets, and that section of the Indian industry which concentrates on heavy goods has experienced acute difficulty. Until India produces sufficient raw jute of high quality, the scope for expanding the output of the better class of fabric must necessarily be limited, and until the mills can be fully modernised, it is unlikely that they will be able to recover their former dominating position as the world's greatest supplier of jute manufactures, and in view of the almost general tendency to protect national industries, and the widespread extension of jute manufacturing in many countries, it is quite certain that Indian mills will never again attain to the near monopoly they enjoyed in the early days of the present century.

"India's economic achievements since the country gained its independence have been considerable, and it is to be hoped that conditions in the export industries will now become more stable as a further recession might well involve the Government in difficulties over the financing of the public sector of the vital Five-year Plan, from which so much is expected and hoped.

Pakistan

"Pakistan has had a difficult year, but after many anxious months it seems that the worst may now be over. Last year, I emphasised the vulnerability of Pakistan's economy owing to its extreme dependence on exports of raw cotton and jute, which accounted for more than four-fifths of the country's earnings of foreign exchange. The fall in world commodity prices which gained impetus during the early months of 1952 was, therefore, a serious ordeal, and it was not surprising that the Government came under heavy pressure to reduce or remove the export duties which were pricing the country's potentially remunerative staples out of world markets. The Government's dilemma was unenviable, for while it was anxious to do all in its power to get exports moving, it was reluctant to sacrifice such a useful source of revenue as the export duties. Customs duties, import and export, contribute more than two-thirds of Pakistan's revenues at a time when, apart from the burden of defence expenditure, the Government has considerable financial commitments under the Six-year Development Plan.

"The authorities first attempted to halt the fall in prices by instituting price support schemes for both cotton and jute, and undertaking to purchase these commodities when prices fell below the stipulated minima. But it proved impossible by these means to isolate Pakistan from the effects of the slackening of international demand, and by the end of June, Government stocks had become so large that it proved necessary to lower the minimum price of jute by 25 per cent. and reduce the export duty by more than half. At the same time the authorities indicated that they were prepared to sell cotton at 10 per cent. below its purchase price and, in August, the export duty on long staples was cut by half and the cess on *desi* cotton removed. At the end of the season the price support scheme for cotton was discontinued and forward trading restored, but, nevertheless, prices still tend to sag. The Government continued to support the jute market and there was a revival of foreign demand in September which carried prices up to the official minima; but the position of jute remains very uncertain, and the Pakistan Government decided later in the year that jute production in the 1953-54 season should be severely curtailed with a view to re-establishing a measure of equality between demand and supply. The export duties on wool were removed in April and those on tea in September.

"The serious trade deficit in the second quarter of the year compelled the Government to take steps to restrict imports. Import duties on cotton manufactures were raised in June and had the effect of stemming the flood of Japanese piecegoods entering the country. The banks were directed to enforce a number of credit regulations designed to restrict imports, but it was soon apparent that more direct methods of limitation were necessary. The open general licence regulations were reviewed in August and the free list severely pruned. Later in the year, even the curtailed open general licence list was cancelled, so that all classes of merchandise now require import licences.

"At such a trying juncture it was particularly unfortunate that Pakistan should have been afflicted by the unwelcome spectre of famine. It had previously been considered a source of economic strength that the country was apparently self-sufficient in food, certainly in wheat and generally in rice. It is possible that the high prices previously ruling for cotton and other commodities had tempted cultivators temporarily to abandon wheat for a more profitable crop. On the other hand, it has been surmised—whether accurately or not we cannot, of course, say—that the crux of the problem may lie in the fact that the populations of Pakistan and India are still in a state of flux. Farmers of the Punjab, who cultivated their lands for generations, have, in many cases, moved across to India, and those who came from India may have neither the experience nor the will to emulate their example on the land allotted to them on the Pakistan side of the border. The disquieting feature of this explanation, if it is in any sense accurate, is that it portends food shortages for years to come, and the urgency of measures to improve food production in such case could scarcely be exaggerated. As a corollary to what I have just said, it is now being surmised in Karachi that imports of food in 1953 will possibly have to be made in greater quantity than in the year just closed.

"The urgent necessity to import considerable quantities of foodstuffs last year, subjected the country's attenuated reserves of foreign exchange to a further and unexpected drain; but the United States Export-Import Bank stepped into the breach with a substantial dollar loan, while the British Government diverted to Karachi a large consignment of Australian wheat originally destined for the United Kingdom.

Pakistan's Development Plan

"Pakistan's Development Plan involves an expenditure of approximately one-seventh of the total expenditure contemplated under the Colombo Plan. Although agriculture is to receive the largest allocation of funds, its share is just under a third. This is in marked contrast to India and reflects the supposedly greater self-sufficiency of Pakistan in matters of food and its relative dearth of industry and poverty of communications. To assist the financing of the Plan the British Government has agreed to progressive releases of Pakistan's sterling balances over a period of six years, and Canada, Australia and the United States are all providing assistance. The International Bank is granting advances for various purposes, notably agriculture and railways. The Government, while welcoming foreign capital in both the public and private sector of the economy, has itself been taking an active part in sponsoring industrial enterprises, especially since the foundation in 1951 of the Industrial Development Corporation, which has already been instrumental in establishing a jute manufacturing industry. The country's difficulties in 1952 have not been allowed to retard the progress of the Development Plan, and, if anything, have underlined the importance of persevering with a scheme which will render the national economy less dependent upon a few staple exports. But this presupposes self-sufficiency in food production, and if such self-sufficiency is in fact lacking, it may well prove necessary for the Central Government to face facts, and take measures first to restore the all-important agricultural basic industries before embarking wholeheartedly upon some of the more advanced industrial schemes within their programme.

"Inevitably during the past year there have been critics who have attributed Pakistan's difficulties to what they consider to be the overvalued rupee. With a comprehensive scheme of economic development in progress, entailing a considerable volume of imports on Government account for some years to come, it is unlikely that the authorities will be willing to depreciate the external value of the rupee, unless the prospects of the country's major exports, jute and cotton, take a further turn for the worse.

"I have never changed my view, which I have so often expressed, that the economies of Pakistan and India remain largely complementary, and it is my conviction that the severity of the slump affecting Pakistan's main commodities has been emphasised by the inability of the two countries to agree upon an adequate exchange of goods when their new trade agreement was signed in August, 1952. Even so, it is probable that were the Pakistan Government willing to forgo the discriminatory premium levied on India's purchases of Pakistan raw jute, India would be able to absorb a substantial proportion of the heavy stocks which Pakistan was carrying at the end of last season, so that the benefit of such a course would be mutual.

Burma

"In the banking sphere the outstanding event of 1952 has been the introduction of the Union Bank of Burma Act, which took effect on 1st July. The Act owed much to the example of the statutes setting up the Reserve Bank of India and the Central Bank of Ceylon, and it confers upon the Union Bank of Burma, the status and powers of a central banking institution. Although there is at present no intention of changing the parity of the currency in relation to sterling, the necessity for 100 per cent. sterling backing, which was formerly inherent in the method of issue of Burmese currency, has been abolished. The Burma Currency Board in London has now transferred its powers to the Union Bank of Burma, in Rangoon, and, under the Act, the latter is required to maintain a minimum international reserve equivalent to 25 per cent. of the currency in circulation and demand deposit liabilities. Authority for determining the value of the Burmese rupee, now called the *kyat*, is shared jointly by Government and the Union Bank, with due recognition of Burma's responsibilities as a member of the International Monetary Fund. A decimal system of currency has now been introduced, the *kyat* being divided into a hundred units called *pyas*.

"The primary aim of Burma's Eight-year Development Plan is to restore the production and export of rice to pre-war volume, and an ambitious programme envisages a considerable expansion of the area of paddy cultivation. It is officially claimed that rice production has now climbed back to the 1947 level, but even so it is little more than two-thirds of its pre-war tonnage, and it seems unlikely that the quantity available for shipment abroad from the 1951-52 crop will exceed the previous season's exports. The Government's export policy remains unchanged, although the system of sales has undergone some modification. The greater part of the rice is sold on a Government-to-Government basis and the remainder is disposed of by private tender. Although prices have advanced rapidly throughout the last few years, no part of the increased returns from rice sales has been passed back to the cultivators. The substantial profits have gone to swell the country's already considerable reserves of foreign exchange, and, while by this means the Government has accumulated a useful reservoir of funds to finance its oversea expenditure in connection with the Development Plan, the cultivators have been deprived of a strong financial inducement to increase rice production, which is the basis of the Government's export policy and of their hopes for future development.

"Although at present there are ample markets to absorb at remunerative prices all the rice that Burma is able to export, in the long run it is obviously desirable for the country to develop alternative sources of export income, and so render its economy less vulnerable to the vicissitudes of a single commodity. The Government recognises this, and although priority under the Development Plan has been given to increasing rice production, a number of secondary industrial undertakings are also projected, including a steel rolling mill. But it is in the exploitation of its considerable mineral wealth that the country is likely to find the most immediate profit, and in this field the Government's joint ventures with the Burmah Oil Company and the newly-formed Burma Corporation are promising developments in the rehabilitation of the petroleum industry and the lead and silver mines respectively.

"Since gaining its independence Burma has received a substantial measure of technical and financial assistance from abroad, notably from Great Britain and the United States, and to assure the continued progress of the Development Plan the Government has been at pains to give an assurance that there is no question of immediate nationalisation of foreign-owned industries. It is the Government's policy to encourage their effective rehabilitation, a process requiring foreign capital and knowledge, and, meanwhile, to do no more than secure by the purchase of shares a measure of participation in their ownership.

"The considerable appropriation of budgetary funds to defence expenditure is a grim, but pertinent, reminder that Burma's future is dependent on the restoration of law and order within its own borders and the subjugation of the various rebel bands that now harass the country's communications and disrupt its economy. Owing to the Government's efforts during the past year transport and communications are now functioning with less hindrance, but the valuable pre-war timber industry is still at a standstill because of insurgent activity. Nevertheless, it is pleasing to record that Burma's economic prospects for 1953 appear more favourable than for some years past, especially now that the import market shows some recovery from the stagnation that afflicted it in the early part of last year.

Ceylon

"It is with deep regret that I record the death on 22nd March, 1952, of Mr. D. S. Senanayake, Prime Minister of Ceylon. The late Mr. Senanayake became Prime Minister when Ceylon attained independent status within the Commonwealth, and his four-and-a-half years of wise leadership and far-sighted administration did much to guide his people in the ways of peace and prosperity. The loss of a leader of such outstanding ability, with his heart in the interests of his people, was an extremely sad blow to the whole community.

"Ceylon escaped the worst effects of the fall in world tea prices during 1952 by virtue of the fact that there was a steady demand abroad, and particularly in London, for the Island's high quality teas. Nevertheless, the early months of the year were a difficult period for the tea trade, the mainstay of Ceylon's economy. With the end of tea rationing in the United Kingdom in October, there were high hopes of a greatly increased demand, but the Ministry of Food had been careful to ensure that stocks were plentiful, and, therefore, at first the market was unexpectedly sluggish. Towards the turn of the year, by which time British stocks had been somewhat reduced, prices improved, especially for the teas of higher quality which are Ceylon's speciality.

"In November, the industry suffered what it is hoped will be but a temporary setback when the Egyptian Government stipulated that future imports of tea from Ceylon would be paid for in Egyptian sterling only: it will be remembered that Egypt is not a member of the Sterling area. Ceylon's imports from Egypt are but modest and it was feared at first that a profitable market might be lost to India, which was prepared to take Egyptian cotton in exchange for tea. However, it is hoped that arrangements will be made to overcome the currency difficulty.

"Interest in the rubber industry has been concentrated on the five-year trade agreement negotiated by Ceylon and Communist China. Under its terms Ceylon will supply China each year with 50,000 tons of sheet rubber at a price that is above the prevailing international level, and in return China will ship 270,000 tons of rice to Ceylon at prices to be agreed each year. The agreement covers approximately half Ceylon's annual rubber production, and, in consequence, although the world price of rubber, Ceylon's main U.S. dollar earner, fell steadily during most of the year, the local price in Ceylon has been at a substantial premium above the international parity.

"After a disappointing period early in the year, during which the Government was under pressure to make a further reduction in the export duty, coconut products have shown a steady improvement in price. In the import trade, liquidation of the heavy stocks, particularly textiles, in the hands of the trade at the end of 1951 was slow, despite substantial price cuts. In general, prices of imports showed appreciable reductions during the course of the year, but rice, the import of which is in Government hands, rose no less than 43 per cent. in cost. However, in respect of the rice ration, the consumer is subsidised by Government, so that the increase in the price is met almost entirely out of public funds.

"On his return from the Conference of Commonwealth Finance Ministers held in London in January, 1952, the Minister of Finance stated that Ceylon expected a surplus in her general balance of payments during the year, and also anticipated a favourable balance with the dollar area. Although steps would be taken to encourage a continued improvement in this favourable trend, it was not considered necessary to tighten existing restrictions on dollar imports any further. As events turned out, Ceylon's U.S. dollar income showed a steady shrinkage during the second quarter of the year, and it came as no surprise when, in August, drastic restrictions were imposed on imports from the dollar area and many items of merchandise, hitherto available under open general licence, were made the subject of import permits, which are normally granted only where the materials in question are necessary for the economic development of the Island. With a trade deficit in nine months of the year, Ceylon's external assets fell by approximately a quarter during 1952. On 22nd October, it was announced that the British Government was transferring £9.4 million to Ceylon's No. 1 account to be held as a currency reserve against an undertaking not to draw on this sum without previous consultation with the Government of the United Kingdom.'

"The salient feature of Ceylon's economy is that the greater part of its cultivated area is devoted to the production of tea, rubber and coconuts, which account for nine-tenths of the Island's income from exports and provide employment directly and indirectly for two-thirds of its population. It is the Government's aim under the Colombo Plan to impart a greater stability to the economy by promoting an increased production of food and by fostering the development of other forms of industry. It is encouraging to record that, with assistance from the Commonwealth and the United States, satisfactory progress has been achieved towards these eminently desirable objectives, but it is to be hoped that the fall in Ceylon's external assets which are a vital component in the financing of the capital investment proposed under the Plan, will be arrested during the course of 1953.

Malaya

"It is very pleasing to record that, during the past few months, appreciable progress has been made in the campaign to extirpate the Communist terrorists in Malaya, and to restore law and order in a territory which, on account of its dollar earnings alone, must be rated as a vital economic bulwark of the Commonwealth and the sterling area. The increasing number of terrorists surrendering themselves to the authorities and the greater willingness of the population at large to provide the police and military authorities with information of terrorists movements have been welcome signs of the effect produced by General Templer's drive, decision and determination. He has played a notable part in lessening the dangers and easing the discomforts of Malaya's miners and planters, who, with their families, have endured such a formidable ordeal since the beginning of the Emergency.

"But it would be misleading to suppose that the quieter conditions now ruling herald the passing of the storm. It is clear that the Government's success in the military sphere has compelled the Communists to change their tactics and caused them, for the present, to turn from overt terrorism to more subtle means of undermining the political and economic stability of the Federation. It is now their policy to infiltrate into the membership of trade unions, the home guard and similar important organisations, so as to cause as much disruption as possible from within; furthermore, they will probably attempt to exploit for their own ends the prevailing social and economic situation.

"The improvement in morale and security engendered a favourable atmosphere for the introduction in September of the Federation's new Code of Citizenship. More than half the Chinese living within the boundaries of the Federation are now legally citizens of Malaya, and the new code, evolved after prolonged discussion between the Federal Government and the nine Malay States, is an encouraging manifestation of the British Government's expressed policy, of which I reminded you last year, of welding the peoples of Malaya into a united self-governing nation within the Commonwealth.

"During 1952, Malaya's aggregate oversea trade showed a substantial reduction in value from the record level it had reached the previous year, and whereas during 1951 there had been a considerable export surplus, the country ended 1952 with a deficit. This reflected the substantial fall in the price of rubber which took place during the year. The world-wide scramble to stockpile potentially scarce raw materials during the opening stages of the Korean war had spent itself early in 1951, and since then the prices of the majority of basic commodities have tended to fall. It is no coincidence that the last year in which Malaya, that is Singapore together with the Federation of

Malaya, showed an adverse balance of trade, was 1949, the year in which the Korean War began and sterling was devalued. There was a deficit in January, 1952, but the figures showed some improvement during the next two months. However, an appreciable fall took place in exports during May, although this was more than made up when imports dropped sharply in August, while shipments of rubber and tin expanded. In October, the balance turned against Malaya once again and continued adverse to the end of the year.

"The overall deficit in visible trade in 1952 amounts to Straits $53,500,000 (£6,241,666) and contrasts with the surplus of Straits $1,268,000,000 (£148,000,000) for 1951. The full figures for the two years were:—

	1951	1952
Exports	$5,991,000,000 (£699,000,000)	$4,794,500,000 (£442,691,667)
Imports	$4,723,000,000 (£551,000,000)	$3,848,000,000 (£448,933,333)
Total Trade	$10,714,000,000 (£1,250,000,000)	$7,642,500,000 (£891,625,000)
Surplus	$1,268,000,000 (£148,000,000)	Deficit: $53,500,000 (£6,241,666)

"Exports in 1952 to the United States totalled Straits $656,750,000 (Straits $1,193,500,000 in 1951) which produced U.S. $210,160,000 (U.S. $390,000,000 in 1951) for the sterling area reserves. This reduction in gross earnings of United States dollars is due to the contraction which took place in American imports of rubber from Malaya and to the fall in the price of natural rubber during the course of the year. Malaya's imports in 1952 from the United States were valued at Straits $182,750,000 (Straits $218,000,000 in 1951) or approximately U.S. $58,480,000, and thus the country's net earnings totalled about U.S. $151,680,000, a marked fall from the previous year's figure of U.S. $320,000,000.

"It is a serious matter for Malaya at a time when the Government of the Federation is allocating a substantial proportion of its budgetary expenditure to the campaign against the terrorists, that the rubber industry, one of the twin props of the country's economy, should have passed through an extremely difficult year. Tin, as the table of price changes during the year makes clear, has escaped comparatively lightly:

	Lowest	Highest	Closing
Rubber, spot	21¼d.-21⅝d. (14-10-52)	41⅝d.-41¾d. (10-1-52)	26¾d.-27¼d.
Tin, cash	£917 10s. 0d. (7-8-52)	£1,005 0s. 0d. (25-1-52)	£946/£947

"While the general trend of rubber prices during most of 1952 was downward the market rallied towards the end of the year only to fall away again in January, 1953. There was a sharp fall at the end of May when the Rubber Study Group, even after allowing for a fall in world rubber production, forecast a substantial surplus of production over consumption during the course of the year. In the event United States stockpiling appears to have absorbed this potential surplus and with the price of the particular grade of natural rubber used by American industry dropping below 23 United States cents a lb., the level at which the price of general purpose synthetic rubber has been controlled since March, 1952, American manufacturers decided, as from the beginning of October, to use a greater proportion of natural rubber and less synthetic. This stimulated an increase in American imports of natural rubber in the later months of the year.

"Nevertheless, during the course of 1952, American imports of rubber from Malaya dropped by 125,000 tons, and, under these circumstances, it is scarcely surprising that Malaya's aggregate exports fell from 1,155,264 tons in 1951 to 910,433 tons in 1952. But the Malayan figures include a substantial proportion of re-exported rubber emanating, in the main, from Indonesia. Early in the year, the Indonesian Government introduced special exchange regulations designed to encourage direct exports to the dollar area and this led to a considerable reduction in rubber shipments to Singapore. Malaya's imports of rubber from all sources fell by no less than 209,000 tons so that the bulk of the reduction in total exports is to be attributed to the decline in the entrepôt trade.

"As was to be expected with the fall in prices, Malaya's rubber production diminished during the year from 603,880 to 583,935 tons, the lowest figure recorded since 1946. But an increase of some 10,000 tons in plantation output to some extent masked the decline in production of over 30,000 tons from small holdings. Demand for the lower quality rubber produced by the small holders has fallen considerably, particularly in the United States, and, as in Indonesia, many small producers are finding it difficult to cover their costs. It is likely that during the current year there will be a further reduction in tapping by the small holders, a factor of no mean significance for the immediate future of the industry, which is making efforts to improve the quality of its output.

"The prospects for plantation rubber remain uncertain, but, apart from a probable fall in production, there are encouraging signs that world consumption of natural rubber may rise during 1953. The United States consumes approximately 30 per cent. of the world's output of natural rubber, so that any estimate of the future of the Malayan industry must depend to a large extent on the likely trend of the American market. It is probable that technical developments in the industrial sphere will widen rather than restrict the use of rubber in general, but, nevertheless, the natural product still has to compete against synthetic rubber.

"An inter-governmental committee of the International Rubber Study Group has recently spent some months examining proposals for stabilising world trade in natural rubber. The Committee has been concerned to prevent a scarcity as much as to avoid a surplus, and now that the boom occasioned by the Korean war has finally spent itself and trading conditions have returned to something like normal, it is appropriate to consider measures which it is hoped will achieve reasonable equilibrium between production and consumption of rubber. It is reported that a draft plan has been compiled and will shortly be submitted to a full meeting of the Study Group, but in any case many formalities will be necessary before it can be adopted. Although no details have yet been divulged, it is thought that the plan envisages the creation of a buffer stock pool to steady the market.

Malayan Tin

"Tin, in contrast to rubber, enjoyed comparative stability in price during 1952, and here again the United States is the decisive influence in the world market. American consumption of tin metal showed a reduction from the previous year's level owing to the steel strike in the middle of the year, but it still amounted to slightly more than a third of total world demand. Malayan output of tin-in-concentrates was a fraction of 1 per cent. lower at 56,838 tons, but tin-metal production fell from 65,914 tons in 1951, to 62,829 tons, a reduction of over 4½ per cent. Exports at 64,120 tons were slightly lower than in 1951, but the American share rose from 2,532 to 19,381 tons.

"The purchasing policy of the United States in respect of tin is largely determined by the Reconstruction Finance Corporation, whose incursion into the markets was primarily responsible for the substantial rise in price after the Korean war began. In an endeavour to force prices down again, it then withdrew from the Far Eastern market and for the greater part of 1951, as noted last year, purchased no tin from Malaya. The United States Government has since authorised the private purchase and importation of tin and has also removed restrictions on the industrial use of the metal, measures which, in the long run, should effectively widen the market.

"Nevertheless, although prices were well maintained during 1952, the long-term future of tin gives rise to some disquiet. In the United States, it has been reported that the Reconstruction Finance Corporation may be going out of business, which might tend to depress tin prices. Furthermore, in a number of processes, industry is using substitutes for tin, and even though world production of tinplate has increased substantially since 1939, the volume of tin used in its manufacture has been reduced. It is estimated that total world production of tin metal in 1952 was practically the same as during the previous year, 167,500 tons, but consumption is reckoned to have fallen from 137,000 tons in 1951 to 128,000 tons last year. Stocks of tin metal and concentrates in Malaya in November, 1952, were fully a third lower than a year before, but in September, the last month for which complete figures were available, world stocks at 107,600 tons had increased by rather more than 8,000 tons over their level at the end of 1951.

"Malaya's import trade inevitably suffered from the contraction in purchasing power caused by the fall in the oversea earnings of rubber. During the greater part of the year, the initiative in the piecegoods market lay with the public, and most traders found themselves burdened with heavy stocks, purchased at high prices many months before. In many cases it became necessary to accept substantial losses in liquidating surplus holdings of goods, but, fortunately, there were few failures owing to the high profits of the previous year. However, the Government's temporary ban on the import of Japanese textiles and the restrictions in force in India during the early part of the year, limiting the export of piecegoods both helped to steady the Malayan market. Merchants were able gradually to clear their surplus stocks and so reduce their losses. Towards the end of the year domestic demand began to revive and prospects are distinctly more promising for the current year.

"At one time it was feared that the declining yield of the export duty on rubber would cause a substantial contraction in the total budgetary revenues of the Federation of Malaya. In the event, the unprecedented increase in the yield of income-tax has been more than double the deficiency on the rubber duty, and the revised estimate for Federal Government revenue in 1952 is $712,306,715. With expenditure at $653,111,109, the budget shows a surplus, but this is converted into a deficit of $25,804,394 by an appropriation to reserve of $85,000,000 to meet liabilities which have been incurred in 1952 and will constitute a charge on the budget in future years. The draft estimates for the current year envisage a deficit of $97,246,922, and, allowing for last year's deficiency, the accumulated surplus funds at the end of 1953 will be reduced to some $211,000,000, although, this figure will be augmented by approximately $26,000,000, if the Federation's share in respect of Penang and Malacca of the assets of the former Straits Settlements is received during the year.

"The Government decided to issue a special loan to provide funds for military expenditure rendered necessary by the Emergency, as it was felt unreasonable that the entire cost should be charged against the Federation's current budgetary revenue. Accordingly, after a small trial issue in October, when the authorities had to meet money market conditions by offering $7,500,000 at 5 per cent. per annum, the Federation of Malaya 5 per cent. Security Loan of $50,000,000, redeemable between 1962-72, and the first tranche of borrowing to the extent of $200,000,000 authorised by the Legislative Council, was issued at par two months later. In December, the Government also initiated an issue of Treasury Deposit Receipts, indicating that Treasury Deposits to a total of $60,000,000 would be accepted. To finance power development and other projects the Singapore City Council in October issued a 5 per cent. loan of Straits $25,000,000, repayable between 1962-72.

"Notes in circulation on 1st January, 1953, amounted to $786,797,438, as compared with $764,109,209 at the beginning of 1952. After a substantial increase in the first few weeks of the year, the progressive rise in the note circulation, which had been a striking feature of 1951, levelled off. Throughout the remaining months of 1952, the volume of notes in circulation showed little change.

"As at this time last year, the future in both Malaya and Singapore is extremely uncertain and almost entirely depends upon the prospects of rubber and tin in the world's markets. It is to be hoped that the decline in Singapore's importance as an entrepôt is but temporary and that once again the neighbouring territories will use the port's unrivalled facilities and world-wide mercantile connections. Meanwhile, it is clear that Malaya has successfully adjusted its economy to the considerable fall which has taken place in rubber prices, and, with the struggle against the terrorists turning to the Government's advantage, the country can face its current economic problems with a greater degree of confidence.

North Borneo

"North Borneo's dependence on the world rubber market is strikingly emphasised by the Colony's preliminary trade statistics for 1952. Rubber exports fell from 21,698 tons in 1951 to 19,093 tons last year, but the value decreased by nearly 55 per cent. from Straits $86,000,000 (£10,033,000) to approximately Straits $39,000,000 (£4,550,000). Although aggregate imports remained steady at Straits $70,000,000 (£8,166,000), exports declined from Straits $113,000,000 (£13,183,000) in 1951 to approximately Straits $65,000,000 (£7,583,000) in 1952, thus turning a favourable balance of Straits $43,000,000 (£5,016,000) in 1951 into a deficit of Straits $5,600,000 (£653,000) last year.

"Copra prices fell substantially during the course of the year, and, although the volume of exports was higher than in 1951, the financial return was fully a third less. The output of timber constituted a record for the Colony, but there was a slump in exports which lasted until the middle of the year. This was mainly due to import restrictions imposed by Australia, but shipments improved towards the end of the year. Apart from Australia the leading purchasers of North Borneo's timber were Great Britain, Hongkong, Japan and South Africa.

"If the future of the rubber industry in North Borneo seems less promising, in view of the conclusion of the boom stimulated by the Korean War, and severe competition by producers in neighbouring territories, there appear to be distinct possibilities of development in the timber industry. Demand for timber for building and reconstruction in the East is likely to continue high and, if the forests can be scientifically exploited and adequate logging machinery imported to offset the labour shortage, it is possible that the establishment of subsidiary industries, such as plywood, would be encouraged. Already the forests yield remunerative by-products, among which is cutch, a valuable earner of United States dollars, and the Government is fully alive to the necessity for setting aside extensive areas of forestry reserves.

"But throughout the British possessions in Borneo an acute shortage of labour continues to render economic progress extremely slow, and it is a problem which admits of no simple solution. The inhabitants show little interest in wage earning, and although the oil industry in Brunei attracts workers, in North Borneo less than 6 per cent. of the population of 334,000 is engaged in paid labour. When yields from cash crops fall, the growers sometimes seek employment, but only to return to their land when times improve. Attempts to import labour from abroad have been unsuccessful; and it now appears that the Indian Government is only willing to allow emigration to Borneo for purposes of permanent settlement and not merely for temporary labour.

"Although North Borneo is a country of small cultivators, it is by no means self-supporting in food, and substantial imports of rice are necessary from Thailand, Burma and Indo-China. Because of extremely bad weather last season's local rice crop was poor and will probably not yield more than 21,000 tons, and hence 15,000 tons had to be imported for distribution on a rationed basis in needy areas. It is hoped that the current season, which has opened well, will yield a bigger crop. North Borneo followed Sarawak's example in introducing a *padi* purchase scheme, whereby the Government, to encourage increased production, guarantees to purchase any surplus output, and it is possible that the fall in the rubber prices may induce *padi* farmers, who deserted rice for rubber in 1950, to revert to food production.

"In view of the fall in export earnings, budgetary revenue at Straits $21,300,000 (£2,485,000), although below the record figure of Straits $25,000,000 (£2,916,000) reached in 1951, was satisfactorily maintained. After allowing for ordinary expenditure there was a surplus of Straits $7,000,000 (£816,000). No grant-in-aid was received from the British Government, but it was possible, by drawing on accumulated balances, to increase expenditure on reconstruction and development to Straits $15,800,000 (£1,843,000), almost Straits $4,000,000 (£466,000) above the previous year's appropriation. It is noteworthy that, since 1949, over Straits $29,000,000 (£3,383,000) has been contributed from taxation for this eminently laudable purpose.

"Despite the shortage of labour, improvements have been effected during the course of the year in the Colony's communications. New roads have been constructed and existing ones metalled and surfaced, while progress has also continued in the rehabilitation and development of the railway.

Sarawak

"The Colony's oversea trade surplus for 1952 s estimated to be Straits $53,000,000 (£6,183,000) r approximately a third of the previous year's avourable balance. Oil contributes some Straits 35,000,000 (£4,083,000) of this surplus and the ggregate turnover of imports and exports is kely to be approximately Straits $825,000,000 £96,250,000), of which oil accounts for no less an Straits $575,000,000 (£67,083,000). It is lear that Sarawak's external trade has shrunk value from the record total, Straits $892,000,000 £104,066,000) it reached in 1951, and this can be tributed to a fall in exports and, in particular, a reduction both in the volume and the value rubber shipments. However, the decline in e oversea earnings of rubber will be partially fset by the shipment of the first post-war pper crop and by an increase in exports of timber.

"Both as import and export oil remains by far the most valuable item of trade, and its turnover in 1952 shows an increase on the previous year's figure. Crude oil is pumped to the refinery in Sarawak from the adjoining territory in Brunei, where the oilfield at Seria is still the most prolific source of oil within the sterling area. Development continues apace in Brunei and every effort is being made to increase the production of crude oil within the borders of Sarawak itself. To this end exploratory boring is in progress in a number of areas and more projects of this nature are planned.

"The timber industry is developing satisfactorily and as the intensive building programme in progress on the oilfields demands large quantities of sawn timber, there should be a considerable local market for this product for some time. Rubber output declined sharply at the beginning of 1952 owing to the fall in the world price, and towards the end of the year unusually bad weather during the wet season interfered with production. Heavy floods have severely damaged many pepper gardens and it is feared that the crop will be substantially lower this year.

"Excluding oil, the estimated value of imports into Sarawak in 1952 shows little change from the previous year and this indicates that, as elsewhere, the terms of trade have turned against the Eastern producer. Although the decline in export earnings reduced purchasing power, except in the neighbourhood of the oilfields, local trade was brisk during the early part of the year. Later, it tended to stagnate and merchants found some difficulty in disposing of their stocks during the wet season.

"Nevertheless, with an expanding oil industry as the basis of its economy, Sarawak should enjoy continued prosperity during the present year, and it is pleasing to record that encouraging progress has been made during 1952 in carrying out the Colony's development programme under the Colombo Plan.

"Half Sarawak's projected expenditure on economic development is to be devoted to the improvement of communications, and a number of roads are under construction. Malayan Airways are now calling at Sibu during the course of their regular service linking Singapore, Kuching and North Borneo, and this is a recognition of Sibu's growing importance as a commercial centre.

Republic of Indonesia

"Much of an alarmist nature continues to be written about Indonesia, and, if full credit be given to the utterances of the ultra-pessimists, communism, or perhaps civil war, is inevitable. Others predict early economic collapse, and in view of our own considerable stake in the business of the country, it is important to obtain a balanced view of the situation as it exists at the moment, and of possible future trends.

"Probably the most disquieting feature is the continued lack of adequate control over labour, whose demands and actions are still extravagant and unrelated to present prices and conditions. Even in relations with labour, however, there are some encouraging signs that trades unionists are beginning to realise that to render the running of estates, etc., uneconomic, is to work against their own interests. Should elections take place in 1953 and a stronger Government emerge, it is possible that the then Minister of Labour would be in a better position to protect the Republic's export potential. The absence of a declared policy for the renewal of estate leases must also in time react to the further worsening of the terms of trade, which during the year turned sharply against Indonesia.

"This appearance of a trade deficit causes much concern regarding the Republic's foreign balances. These ran down considerably over the year, and are likely to continue to do so for some time to come. In fact, the responsible ministers recognise that 1953 is going to be a crucial year; but, with characteristic optimism, think the position should thereafter begin to right itself. Once again there is some encouragement in the fact that the authorities are convinced that they will get through 1953 without having to sell all the gold they acquired during the Korea boom period.

"Internally also the situation is not good. In 1952, there was a budgetary deficit of Rp. 4.3 billion and the Cabinet has accepted in next year's budget a further deficit of Rp. 1.8 billion. Inflation is rife and markets are still suffering from lack of up-country offtake.

"Nothwithstanding the undoubtedly gloomy short-term outlook, evidence is not lacking that in this, potentially one of the richest areas in the world, there is every justification for this bank continuing to participate as fully as possible in the general trade of the country compatible with ordinary business safeguards.

"We have sufficient confidence to believe that it is unlikely that there will be any rapid deterioration of the country's internal and external stability. Drastic steps have been taken to curtail imports, and a regulation necessitating a considerable advance payment to the Exchange Control before a licence is granted has helped to minimise drafts upon the foreign exchange and gold reserves, to check speculation, to reduce stocks of imported merchandise, and has, by tightening credit, assisted towards arresting the rise in the note issue.

"Cuts in Government expenditure are promised, and if effected would, with a continuance of reasonable world prices and demand for rubber, go a long way towards keeping the country solvent. It is hoped that the Governments's negative policy regarding the oil industry will be speedily changed and that agreements will be concluded which will allow the oil companies to assist by increasing production of this valuable export.

"The Javasche Bank has now, by law, become the Bank Indonesia, and will act as the Central Bank of the Republic, gradually discontinuing its functions as a commercial bank. Whilst welcoming the Bank Indonesia, it is only fitting that I should pay tribute to the Javasche Bank, with whom we have maintained cordial relations ever since the Chartered Bank opened its first office in Indonesia ninety years ago. No bank could have had more courteous or fair treatment than we have received from this illustrious institution, which has played such a notable part in the economic life of Indonesia for well over a century, and it is a happy augury for our continued good relations, that the first President of the new Central Bank is the highly respected Dr. Sjafruddin. It is interesting that the Monetary Council, which is vested with extensive powers over the management of the Bank Indonesia will, in addition to the Governor of that Bank, consist of the Minister of Finance and the Minister of Economic Affairs which, if judged by present appointees, constitutes a formidable and well-balanced team.

Thailand

"Since the war, my reports on Thailand have emphasised the dominating effect of the country's rice exports on its economic well-being. In 1952, although progressively higher external prices were obtained, the volume of rice exports fell, and this, coupled with a fall in world prices of the country's other important exports, rubber and, in less degree, tin, has, according to later statistics, resulted in an adverse trade balance, a new experience for Thailand.

"Rice exports could have been higher; but the Government preferred to use its monopoly of the trade to increase stocks inside the country in order to keep domestic prices low. This policy may have had a general effect of halting inflation; but, unfortunately, living costs in the towns, particularly in Bangkok, appear still to be rising. On the other hand, the policy probably operated to prevent the growers from receiving any enhanced reward for their efforts, and this doubtless tended to accentuate the disparity between living conditions in the country and in the towns, which has been an undesirable feature for some years past. Moreover, it will be clear that the policy probably failed to provide any added incentives to increase the production of rice.

"It was the appearance of an adverse trade balance which undoubtedly influenced the authorities to introduce during the year a form of import and exchange control; but, so far, the restrictions imposed on imports have not been drastic enough to correct the adverse tendency, and the time may not be far off when, from necessity, legislation will have to be enacted to curtail the luxurious living of a part of the population.

"Another result from the change in the terms of trade has been a check to the avowed official policy of further appreciating the external value of the tical. In February, an official adjustment from Tcs. 51 per £1 to Tcs. 45 per £1 was made, and it is doubtful if, with the conditions prevailing at the moment, any further official intervention would assist the country's trade. In any case, current exchange dealings suggest that the tical is, for the time being, correctly valued with other currencies, and it would be very difficult for the market to withstand the effects of another change without considerable disruption in trade and finance generally.

"Given sound administration and freedom from political trouble—1952 was a quiet year in this respect—Thailand appears to have every chance of retaining its satisfactory economic

position, but there is some doubt whether the country's standard of economic productivity will prove able to absorb the extensive developments being imposed upon it by American interests.

"Last year, I deprecated the manner in which unofficial dealers in exchange were openly competing for business without being made to pay the very heavy exchange tax on all transactions imposed upon ourselves and other authorised banks, and it is satisfactory to note that a revised Revenue Code, now under consideration, contains clauses to rectify the position by imposing, instead, a general tax on exchange profits.

Viet Nam

"After seven years the war in this unfortunate country still continues with undiminished violence and the French and Viet Nam forces have at times been hard pressed to hold their own. Viet Minh pressure towards the Red River delta having been especially strong. In view of Viet Nam's vital strategic importance to the Western cause, the French have taken the view that their allies should share the burden of defence and at the Paris meeting of the North Atlantic Treaty Organisation in December, 1952, it was formally agreed that the war in Indo-China is in fact the common concern of the whole Atlantic community. When M. Letourneau, the French High Commissioner, visited Washington in June, he received an assurance that increased American aid would be forthcoming, and this will, doubtless, be an important factor in equipping the Vietnamese national forces, which are now being rapidly expanded. Meanwhile, the military situation remains uncertain and the strain on French resources considerable.

"Until internal security is restored, the economic rehabilitation of Viet Nam is unlikely to make much progress. The country's whole economy is based on rice, the staple food of the population and traditionally the most remunerative export, but production has not yet reached its pre-war level and exports are but a fraction of their former annual average of 1¼ million metric tons. Before the war, China, Hongkong and the Philippines imported substantial quantities of rice from Viet Nam, but now the comparatively small amount that is available for export is divided between Indonesia, France and the French possessions in Africa, Malaya and Ceylon. It had been hoped that it would be possible in 1952 to increase rice exports beyond the figure of 360,000 metric tons, which they had reached the previous year, but in May, in order to stimulate the development of its own milling industry, Cambodia placed an embargo on the sale of rice to Viet Nam. Formerly, rice from Cambodia had been milled at Saigon, and the embargo caused a severe shortage in Viet Nam and prices soared. In an endeavour to discourage hoarding and to ensure adequate supplies within the country the Viet Nam Government likewise banned exports, which in consequence have fallen considerably below expectations at the beginning of the year. On the other hand, it is encouraging to record that both output and export of rubber showed a steady increase during the course of the year, despite lower world prices for this commodity.

"With a growing trade deficit, aggravated by the measures to conserve rice within the country just mentioned, it is scarcely surprising that for the first time some form of control is to be imposed on imports from France. This restriction and the greater participation of Vietnamese in the trade at the expense of the large French firms, may alter considerably next year's pattern of trade.

"Inflation continues unabated, and there is always much talk of the possible devaluation of the piastre in terms of the French Franc; but, whilst many leading Saigon business men expect a devaluation of the piastre in terms of Francs, just as many feel that there can be no devaluation, whilst France is maintaining large military forces in the country. The import restrictions referred to in the previous paragraph will, in any case, be a further drain on France's economy and an argument against inflation.

Republic of the Philippines

"For the greater part of the year under review the Philippines have been running a substantial trade deficit, due mainly to the lessened world demand for their copra, sugar and hemp, and to the fall in prices of these three commodities, which between them account for four-fifths of the Republic's foreign exchange earnings.

"In view of this it is a decided achievement that the foreign balances, including those in the hands of the commercial banks, have been maintained at a figure of over U.S. $300,000,000, which is roughly equivalent to the note issue and is the safety line apparently decided upon by the Finance Department and the Central Bank. There is no doubt that the strict control by the Central Bank over releases of foreign exchange and the impartial manner in which it carries out its functions, are bright spots in a control-dominated economy. The various controls are regarded as necessary evils in the fight to maintain adequate foreign balances; but this does not lessen the dislocation and uncertainty their application introduces into trade, and importers suffer, in particular, from being so dependent upon the actions of Government departments.

Bell Trade Act

"The economic scene has been dominated by the imminence of the application of the Bell Trade Act, which allows the United States to bring into force from 1st January, 1954, a graduated scale of duties on imports from the Philippines. The imposition of such duties would, undoubtedly, have an adverse effect on the country's exports, and intensive work is going on behind the scenes to effect a revision or a postponement of the Act. A committee appointed by President Quirino has suggested the alternative of free trade for a limited period applicable to a few selected commodities, and has recommended the cancellation of some of the privileges now enjoyed by Americans in the Philippines.

"Whatever the outcome of the negotiations on the Bell Trade Act, it would appear to be only a question of time before the lessening of trade bonds with the United States forces the Philippines to look for other markets, and I have an impression that Government circles are already much exercised with the thought of the opportunities they are losing by having no trade treaties or monetary arrangements with the sterling area for example.

"The peso is probably over-valued in terms of the U.S. dollar; but there appears to be little chance of any form of devaluation in the near future, particularly as the recent mutual security agency loans, aggregating U.S. $77 millions, were given conditional, on the setting up of a counter fund in pesos at the rate of Pesos 2 for each U.S. $1 allocated. There has been considerable criticism in the Philippines of the slow progress made in using the funds so provided.

"It is pleasing to record that inflation generally would appear to have halted in the Philippines, and that there was no appreciable rise in the cost of living during the year. This is one reason, together with the prospects of filling the United States sugar quota of 952,000 short tons this season, which allows a certain amount of quiet optimism about the future, particularly if the country can be spared the devastating typhoons that have damaged its crops during the last few years. Other encouraging features are the increased production of gold and base metals and, what is more important, the considerable increases in production of domestic food supplies, particularly rice.

"It says much for the geographical importance of Hongkong for its trade facilities and the resilience of its mercantile community, that the embargo on strategic materials imposed by the United States of America and the avowed intention of Communist China to by-pass the port, failed to kill its entrepôt trade or bring ruin to its industries.

"Trade figures were naturally much lower than those for the previous year. I quote them, as usual, for purposes of comparison:—

	1951	1952
Imports ..	$4,802,046,009 (£305,752,875)	$3,787,701,723 (£236,731,360)
Exports ..	$4,460,563,941 (£278,785,246)	$2,913,180,491 (£182,073,780)
Total Trade ..	$9,352,609,950 (£584,538,121)	$6,700,882,214 (£418,805,140)

"As illustrating the effects of the embargo, the following figures covering the trade with the China mainland are illuminating:—

	1951	1952
Imports	$862,099,820	$830,265,924
Exports	$1,603,795,356	$520,032,168
Total	$2,465,895,176	$1,350,298,092

"They show that shipments to the China mainland in 1952 have been curtailed to less than one-third of the value of shipments for the previous year, and in view of the general reduction in the Colony's trade, it is difficult to be optimistic about future prospects in the absence of peace in the Far East; but, nevertheless, there have so far been few failures and unemployment is not yet a serious problem. Local markets are overstocked in many lines, but imports, particularly from Japan, are tapering off, and provided there is no major setback, the stock situation should not cause undue alarm.

"Some apprehension must be expected to be felt in Hongkong regarding the recent announcement on Formosa by the President of the United States. The decision, giving freedom of action to Marshal Chiang Kai-shek to attack the mainland at will, is stated to mean exactly what it says, and as long as the withdrawal of the seventh fleet from Formosan waters is in no way a forerunner of other and more direct action against the China mainland, this unilateral action by the United States would not seem to gravely affect Hongkong except that it has added to the existing uncertainty.

"Industrially, the Colony continues to grow, mainly in recent years through the initiative of the Shanghai expatriates who have made cotton spinning and weaving a major industry, and have also opened other factories for making enamelware, etc. This development since the war has been so pronounced that, in 1952, over a quarter of the Colony's export income was derived from locally-produced goods.

"The Government must be perturbed at the large fall in revenue due to diminished trade, but the introduction of the Business Registration Ordinance, together with the larger and more efficient staff in the Inland Revenue Department, resulted in large additional collections from business and salary taxes. On the whole, Hongkong seems to have adapted its economy successfully to the difficult conditions which have ruled ever since the outbreak of the Korean war, and, although there has been understandable anxiety concerning the future, the mercantile community has shown its customary and traditional initiative in the face of adverse circumstances, and will lose no opportunity to pursue its legitimate business as an entrepôt for free enterprise in the Far East.

China

"Last year, I told how, during the last years of the Kuomintang Government after the victory over Japan, all our efforts to rehabilitate our business in China had been defeated by the vast depreciation of the Chinese National Currency Dollar. I also stated that, following the advent of the People's Government, although the internal value of the currency had been stabilised, commerce with the outside world had declined, or was handled on a Government-controlled basis, which largely negatived our usefulness as an exchange bank, and that we had, as a first step to closing our doors in China, sought the permission of the financial authorities of the People's Government to close our Tientsin Office. I regret to say that, so far, little progress has been made towards this end, and, although, in the interim, we have made similar application in respect of our Shanghai Office, it seems certain that some little time must still elapse before we shall be permitted to withdraw completely from China and discharge our staffs. Such reductions as we have been permitted to make have been made, and both our offices have been reduced, practically speaking, to a care and maintenance basis.

"There would appear to be some disposition on the part of the People's Government of China to encourage trade with Western countries, for, in addition to setting up an organisation in East Berlin to afford opportunities of a wide exchange of commodities and merchandise between China and European countries, China, as I have recorded in my remarks on Ceylon, has entered into a five years' agreement to supply rice to Ceylon in exchange for rubber.

"In former times China was more often than not an importer of rice. It seems now that the country must be more than self-supporting in this respect, a supposition—for no statistical evidence is available to support it—which, however, appears to find some confirmation in the fact that, within the country, the price of rice has remained on a stable basis over a considerable period.

Japan

"At the end of April, 1952 the Japanese peace treaty was ratified and, in consequence, S.C.A.P. (Supreme Commander Allied Power) withdrew from Japan. This organisation had, in fact, been relinquishing control over the Japanese economy for more than a year; but, although the final transfer of authority was little more than a formality, it introduced a completely new background for our operations in Japan.

"The functions of the Foreign Exchange Control Board were taken over by the Ministry of Finance, and Japanese banks were able to participate more directly in the overseas trade of the country. With this object some of the leading Japanese banks opened branches in overseas financial centres; but it may be a considerable time before these new offices engage in the full functions of an exchange bank, and, in the meantime, we feel that the services of the British banks will remain of great importance to the trade of the country. In any case, we believe that opinions in Japan are sharply divided on the opening of overseas branches, as many are of opinion that it would be cheaper and better for Japanese banks to work through agents abroad.

"The Japanese authorities were quick to realise that the country could not hope to receive financial assistance from abroad to promote economic recovery until arrangements were made to settle the pre-war external debt. After lengthy negotiations, agreement was reached in September, 1952, for servicing all the outstanding loan issues, and provision was made for the payment of arrears of interest.

"I have commented in the past on the fundamental weakness of the Japanese economy arising from the heavily overlent position of all Japanese banks, and it is encouraging to note that, during 1952, a slight improvement in this respect took place. There is no doubt, however, that the country is overbanked, and there is a danger that excessive competition is leading to the granting of facilities unwarranted by the credit-standing of the borrowers. It is clear, however, that political independence has not alleviated Japan's economic problems, and, in seeking to restore peace-time economy and to stimulate a gradual return to normal conditions in both banking and foreign trade, the authorities have had to reckon with many adverse factors.

Balance of Payments

"The overall balance of payments, although favourable during 1952, showed a very ominous trend against Japan. On the one hand, strong inflationary pressure at home, accompanied by labour troubles, tended to price some exports out of world markets, whilst the import restrictions resulting from the Commonwealth Finance Ministers' Conference upset trade with the sterling area to an extent that Japan's sterling balances decreased with great rapidity from September onwards.

"At present, new terms of trade are being negotiated with representatives of the British Government; but it is doubtful if the outcome will do much to right the country's major ills which are over-population and lack of capital. It is this shortage of capital which, after taking every conceivable measure to assist long-term financing, first by the creation of the Japan Industrial Bank and then by forming the Japan Long-term Credit Bank with similar objectives, has caused the Government to deviate from the austere financial path prescribed by the American occupation authorities. The so-called Dodge line postulated a rigidly balanced budget and avoidance of subsidies, and was anti-inflationary in concept; but I fear that easier budgeting, rather than an increase in the national income, has resulted in the figures for the note issue reaching in December an all-time record. This lack of capital and desire for new capital from abroad undoubtedly had its influence on Japan's agreement to service all outstanding loan issues and provide for the payment of arrears of interest to which I have already drawn your attention.

"From what I learn, the Japanese authorities and the Bank of Japan are well aware of, and are concerned with, the appalling load of short-term debt which is borne by the trading community, but without which the economy of Japan could not have made its quick recovery after the war.

"Steps are being taken for a gradual reduction in interest rates, and, although from necessity the whole economy turns on the ability of the Bank of Japan to give support to the banking and commercial needs of the country, there is every reason to believe that, whilst the moderate political and economic policy of Mr. Yoshida's Government prevails, this will be accomplished.

"In Japan's favour is the undoubted ability and willingness of its people to work hard; but its economy and the solution to its gross over-population depend almost entirely on the expansion of its overseas trade, and here the future of the South-East Asia markets is crucial to its future. So long as import restrictions in this sector of the world's markets penalise Japanese exports, there is likely to be a strong body of commercial opinion within the country that will favour an extension of trade between Japan and Communist China, and, if such a development seemed likely to promise some alleviation from Japanese competition with this country's products, which otherwise must be expected to increase in severity, it is possible the course mentioned might also find support from the more hardly-pressed interests in the United Kingdom.

New York

"A close reading of the preceding pages must reveal the many links which the territories which this Bank serves have with the all-powerful United States of America. In Malaya, to select one example, a large proportion of the total shipments of rubber and tin find their way to that all-embracing market. In Indonesia and Thailand, similar conditions prevail, and in both countries special regulations encourage shipments which will earn much desired dollars. The United States are also notable purchasers of Indian jute as well as Bornean cutch, and even this recital covers only isolated examples, since other countries, such as the Philippine Republic whose whole trade is based on the United States, and Japan whose economy since the war, and until quite recently, has been dependent upon the U.S. dollar, transact the major proportion of their external trade, both ways, with the United States.

"In these circumstances, the state of the United States' economy is a major interest to this bank as it is to most of the world at large in these modern days, and it is good to find that recent reports from New York can speak of the United States' economy as still operating at peak levels and forecast a continuance of active demand for some months ahead. On the other hand, other reports consider the outlook deflationary rather than inflationary, and, therefore, it would seem that our customary cautious approach to all business is still appropriate.

"One subject of much interest and importance to both the United States and Great Britain is convertibility of sterling; but, in spite of the access of strength which sterling has acquired over the past twelve months, the transition to convertibility cannot be accomplished overnight or merely by wishful thinking. I am aware that it is widely suggested that, by separating sterling accruing on current account from sterling representing previous accumulations, and applying convertibility only to so-called current sterling, the operation would be simplified. Our experience as Exchange Bankers, although, being so largely engaged upon exchange business directly concerned with the transfer of goods and commodities between countries, we have only a moderate interest in the arbitrage markets of the world, leads us to think that current transactions can only be separated from those of the past with the greatest difficulty, if at all, and, therefore, that the whole subject will require a most careful and prepared approach and safeguards, if the desired result is to be achieved.

"Our New York Office continues to provide an essential link between our branches in the territories of the Far East as well as in Europe, and also maintains close contact with all our many banking friends in the United States and Canada, to whom I would extend our greetings and thanks for their continued support.

Hamburg

"Our Hamburg Agency continues to perform a useful function in assisting the development of West Germany's trade with the Far East, although competition in the banking sphere has become noticeably stronger. Exports have been well maintained, but there were signs in the latter part of the year that trading prospects overseas were less encouraging, and it is possible that, to support the export programme and to ensure adequate supplies of raw materials for West German industry, the Government may find it necessary to resort to barter deals with a number of countries producing basic commodities.

Manchester and Liverpool

"Manchester and Liverpool play a notable part in assisting Lancashire's traditional commerce with the markets of the East and in developing the Bank's considerable and long-standing connections with trade and industry in the North of England.

"West End, London, continues to render useful service, and is admirably situated to provide a comprehensive range of banking facilities for the many thousands of visitors from the East who will be coming to London for the Coronation festivities this year.

"Having reviewed the entire field served by the Bank, I venture to close this Statement with a few words on topics of special interest in Great Britain. Three subjects have been common to many recent Chairmen's speeches in the United Kingdom, viz., 'Convertibility,' 'Government Spending' and 'Taxation.' All are important subjects; all are separate issues; but equally, all are closely related.

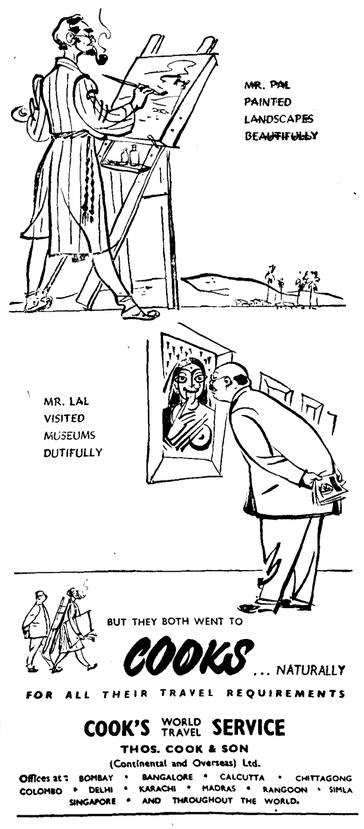
"I have already touched on the subject of 'convertibility' in my remarks under New York, and it will be apparent therefrom that I advocate caution. Yet I firmly believe that, if the British nation is to survive as banker to the sterling area, and leader of a great Commonwealth of Nations, it is essential that sterling should become 'convertible,' and, if this is to be accomplished within a reasonable space of time, productivity within the United Kingdom must be improved to an extent which will enable our exports to compete with those of the rest of the world. In short, we cannot get more out of the common fund than we put into it.

"If it is a fact that the raising of the Bank rate and the tightening up of bank credit had much to do with restoring the value of sterling and bringing about a material improvement in the overall balance of payments in the last year, and so far as I know the matter is not in dispute, then it must also be a fact that overspending by Government and by Government Agencies in the same period operated to offset and limit that restoration and improvement. It follows then that, if Government spending could be curtailed, the value of sterling might be expected to improve still further, thereby again increasing, through falling prices, the competitive quality of British exports.

"With lower Government spending, followed by some reduction in taxation, we could hope to have the necessary incentives to increase productivity and encourage savings, without both of which, further great progress upon the road to complete solvency would appear to be impracticable. Above all, it is clear, I think, that a prerequisite to convertibility must be a more liberal trade policy on the part of the United States.

"No final solution of the dollar gap problem can be arrived at, unless all these factors are taken into account.

"Convertibility of sterling we must have, but it is bound to put an immense strain on the sterling area reserves of gold and United States dollars, and it would be well, therefore, that the effect should be cushioned by the acquisition of further reserves of United States dollars before the issue is put finally to the test."



PURCHASE OF GOVERNMENT STORES

ENQUIRY COMMITTEE SET UP

THE Government of India is perhaps the single largest buyer of stores in India. Its various departments such as Railways, Public Works, Defence, Production, Food, Health, etc., ordinarily require crores of rupees worth of stores of all varieties for their daily use. With a view to making these purchases economically and in the best markets, the Government has a department of its own, known as the Central Stores Purchase Organisation. This purchasing body has grown in size tremendously during the war and, with the various development schemes now in hand under the Five-year Plan, its functions and responsibilities will grow several times more. As it is, the various departments of the Government seem to be not quite satisfied with the organisation for several reasons. First delays are known to have occurred in making purchases. Even where purchases have been made, the stores concerned in certain cases are found to be either below the specifications or are unsuited for the purpose for which they were intended. Sometimes, prices at which the stores are purchased are known to be not commensurate with the quality of the products, with the result that the sums spent on stores are anything but economic, causing severe losses to Government. Lack of careful planning, defective inspection of stores, and excessive payments to contractors for stores supplied are some of the defects in the present methods of purchases which should be eliminated, if the Stores Purchase Organisation were to become the most economic purchasing agency for the Government. It is with a view to scrutinising these defects and laying down new principles for the sound and efficient working of the Organisation that the Government has appointed a committee, known as the Stores Purchase Committee, under the chairmanship of Mr. S. N. Buragohian, Deputy Minister, Works, Housing and Supply.

The terms of reference to the Committee cover a wide field. They include:

(i) The scope and functions of the Organisation, the extent of delegation of powers for the indenting departments for direct purchases, and the advisability of utilising the Organisation for purchases by State-owned industrial enterprises and important river valley and other projects;

(ii) the organisation of the Central Purchasing Agency, including the extent of powers, provision of adequate and suitable personnel to man the Organisation, scales of pay, service conditions and technical qualifications of the staff, with a view to securing greater efficiency;

(iii) the manner of determination of Government demands and the authorities at appropriate levels competent to approve such demands, rationalised planning, provisioning and indenting of stores, screening and processing of such demands, and the procedure for the communication of sanctions and contract to audit;

(iv) the procedure and methods of purchase, progressing of deliveries and payments of bills with special reference to avoiding delays and achieving better results in respect of quality and economy;

(v) the procedure of inspection of stores with a view to suggesting general improvements and simplifying and rationalising it;

(vi) the working of the stores purchase system in relation to assistance to Indian manufactured goods and encouragement to small-scale and cottage industries;

(vii) whether any modifications are required in the general conditions of contract with particular reference to the arbitration clause;

(viii) the policy, procedure and method of disposal of surplus stores with reference to their utilisation against Government requirements;

(ix) any other matter considered relevant to the enquiry.

In addition, the Committee will consider how better co-ordination can be secured between different purchase organisations in India and abroad. In this connection, it will take into consideration the reports of the London and Washington Regional Stores Purchase Committees which are under the Government's consideration.

The first meeting of the Committee was held on the 19th inst. Inaugurating the meeting, the Finance Minister, Mr. C. D. Deshmukh, drew the pointed attention of the Committee to the need for laying down a new set of principles and a more rational and elastic system for the purchase of stores required by Government. He considered that these principles were necessary to meet the changing new circumstances brought about by the various development schemes under the Five-year Plan. Mr. Deshmukh stated that the placing of irresponsible indents by the officials of the various departments was one of the causes for the defects in the working of the Organisation. He wanted the Committee to examine this question thoroughly. He suggested that the Committee should study the question of purchases made by the various States and evolve a system of working which would convince the States that it would pay them to place their orders with the Organisation. He did not, however, forget to lay stress on one of the terms of reference to the Committee, namely, purchase of stores from indigenous manufacturers. Referring to the interest of the Finance Ministry in the Stores Purchase Organisation, the Finance Minister revealed that the Government's purchases in all departments, including Food and Railways, were now of the order of Rs. 350 crores, and that, even if a little economy could be achieved, it would help a great deal in enabling the country pull through the difficult period of development.

Sardar Swaran Singh, Minister, Works, Housing and Supply, who opened the proceedings, insisted on getting the maximum value for the taxpayers' money. He revealed that two small committees had reported on the working of the Purchase Organisations in London and Washington and that their reports were under consideration. Keeping these reports in view and the need for encouraging Indian industries consistent with efficiency and economy, the Committee should make such recommendations as would improve the working of the Organisation. Mr. Narahari Rao, Controller and Auditor-General, stated that the Organisation should see to it that the purchaser got what he required. For this purpose, it should make proper arrangements for inviting tenders, entering into contracts, and inspecting the stores. The Minister for Agriculture stressed the need for employing competent and technically qualified persons in the Organisation.

It is evident from the above account of the proceedings of the Committee's meeting that those in authority are alive to the defects of the Organisation and the need for removing them. It is to be hoped that the various points stressed by the members above will receive the utmost attention of the Committee in laying down the principles on which the activities of the purchasing organisation can be reorganised. In this task, the Committee's responsibilities are very great. The Organisation handles every year stores worth Rs. 350 crores. The sum is by no means small. If to this is added the money spent by the States Governments on stores the total will add up to an impressive figure. Every pie saved is a pie gained to implement the Five-year Plan. The stores on which the money is spent are not confined to any single variety. They include every conceivable commodity from a pin to a motor car. In handling these goods, success depends on the employment of men who are not merely competent and technically qualified but honest to the core. It is, in fact, the lack of the latter quality which would appear to be responsible for some of the scandals connected with the various purchases made and contracts entered into by the State in the past. The waste and extravagance associated with Sindri, jeeps, prefabs, Damodar Valley Project, purchases of iron from Belgium, etc., are too recent to need any elaborate mention here. What is, however, necessary is that the Committee should frame its recommendations in the light of the criticisms made by the public of these various deals. As regards encouraging indigenous industries, the policy of the Organisation should be to encourage production of quality goods which compare favourably with the imported ones in respect of both quality and price. Preference should be given to home industries.

CEMENT IN THE PLANNED ECONOMY

The implementation of the multipurpose projects, buildings and roads envisaged in the Five-year Plan has enhanced the importance of the role of cement industry in the Indian economy. The Planning Commission which examined the position of this industry, has finalised the Plan for its development in the planned period. The programme aims at a target of 4.8 million tons during 1955-56, the last year of the Plan, as against 2.7 million tons during 1950-51, the base year. The target set for the last year is expected to give enough scope for India to export 300,000 tons of cement to neighbouring countries. The table below indicates the targets set for the industry:

	1950-51	1955-56
Number of factories ...	21	27
	Tons	Tons
Annual rated capacity ...	3,280,000	5,306,000
Actual production ...	2,692,000	4,800,000
Exports	29,000	300,000

It will be seen from the table above that the number of factories will be stepped up from 21 to 27. The rated capacity will be increased from 3.28 million tons in 1950-51 to 5.31 million tons in 1955-56. It may be noted, in this connection, that in addition to the implementation of certain projects in the private sector, the capacity of the cement factory belonging to the Government of Mysore will reach 90,000 tons by 1955-56. Further, during the latter part of the Plan period, a cement factory of a capacity of 200,000 tons per annum which is being set up by the U.P. Government at Pipri will come into production. The additional capital investment required for increasing the capacity to 5 million tons by 1955-56 is roughly estimated at about Rs. 17 crores, a part of which is stated to have already been invested.

The cement industry is one of the well-established industries in the country. It grew up in the inter-war period and has attained its present status without fiscal protection. By March, 1952, there were 23 cement factories with an annual rated capacity of about 3.88 million tons on the basis of 330 working days per annum. The actual production of cement during 1950-51 was 3.29 million tons. A sum of Rs. 29 crores had been invested in the industry upto 1950-51. The total number of persons employed in the industry was estimated at about 33,000.

During the years 1929 to 1934, the annual consumption of cement was between 600,000 and 700,000 tons. The demand increased sharply during the war years, 1941-45, when the consumption was two million tons per annum. In 1951, the total cement supplied to different areas of the country amounted to 3.17 million tons. The future demand for cement, exclusive of the quantity required for multipurpose projects and roads, is estimated to rise to about 3.3 million tons by 1952-53 and 3.8 million tons by 1955-56. Including the annual average requirements of the multipurpose projects (600,000 tons) and roads (over 100,000 tons), the total demand for cement would be about 4 million tons by 1952-53 and 4.5 million tons by 1955-56.

With the increase in production since 1950, imports were restricted to quantities included in trade agreements and to fulfil commitments entered into prior to 1950. About 17,000 tons were imported in 1950-51, while in 1951-52 the quantity imported was negligible. Exports of cement took place during the war years, but, since the end of the war, in view of the large domestic demand, there have been no exports except in very limited quantities to Pakistan on the basis of trade agreements and to countries of the Middle East, Ceylon and East Africa.

The industry is at present facing a series of problems, the solution of which is necessary before it can play an effective role in building up the Indian economy. These problems include the existence of a number of uneconomic units, the high cost of production and distribution the high cost of transport, and dependence on foreign countries for supplies of cement plant and machinery.

INTERNATIONAL LEIPZIG FAIR, 1953

Leipzig Fair, 1953, will be held from 30th August to 9th September, for capital and consumer goods. The widespread demand for exhibition space from at home and abroad is taken as an indication of the significance of the Fair as an instrument of international trade. In the 15 modernly equipped fair buildings of the city centre with a total exhibition area of 20,000 sq. metres, 20 branches of the consumer goods industries will be represented with a varied and all-embracing assortment. In the 13 large halls on the Technical Fair grounds, 15 branches of the capital goods industries will dominate on a total area of 75,000 sq. metres.

THE
BANK OF MAHARASHTRA
LIMITED
(*Established* 1935)
Head Office: LAXMI ROAD, POONA, 2

CAPITAL

Authorised	Rs.	50,00,000
Issued and Subscribed	,,	32,00,000
Paid-up	,,	16,00,000
Reserve & Other Funds	,,	6,16,000
Total Working Funds	,,	3,40,00,000

Board of Directors

Mr. D. K. Sathe (*Chairman*)
,, S. G. Marathe (*Vice-Chairman*)
,, N. G. Pawar — Mr. M. R. Joshi
,, F. D. Pudumjee — ,, M. V. Shah
,, S. L. Kirloskar — ,, B. M. Gupte

The Bank has declared 5 per cent. dividend free of tax for the last year as before.

L. G. MARATHE, *Bombay Branch Agent.* — C. V. JOAG, *Manager.*

They
ROB YOU — TWICE OVER!

WHEN THE TRAIN IS FULL —
they get on without a ticket, pick your pocket, and steal your valuables.

WHEN THE TRAIN IS EMPTY —
they steal lamps, fans and fittings, put there for your comfort.

REPORT THEM
to any uniformed Railway employee. Railway staff are constantly working to prevent theft and damage, and they will appreciate your help.

WHAT THE RAILWAYS ARE DOING
In spite of continued efforts to stop it, theft of public property from Railway coaches has increased in the last ten years, and has now reached very serious proportions. In 1952, fittings worth three lakhs of rupees were stolen from suburban and through-line coaches. Determined once and for all to stamp this out, the Railways are:

- Increasing Watch-and-Ward staff;
- Installing uniformed and plain-clothes policemen on stations and running trains, with State Government help;
- Introducing thief-proof fittings wherever possible.

By reporting beggars and suspicious-looking characters, you are directly helping to stop theft. Remember — *you* own the Railways!

HELP YOUR RAILWAYS TO CATCH THE THIEF

ANNUAL MEETING OF BENGAL COAL COMPANY, LIMITED

FOLLY OF EXPORTING BAD COAL

MR. C. A. INNES' ADDRESS

PRESIDING over the Annual General Meeting of the one-hundred-and-ten-year-old coal company, the Bengal Coal Co., Ltd., held at Calcutta, on 17th March, 1953, Mr. C. A. Innes, the Chairman, pointed out that it was misleading to look at dividends in terms of capital, and that the dividend, which had been paid, was really a return on the money which had been put back into the Company in the past. He deplored that the coal industry should be asked to export only bad coal even though good quality coal was available, and said this policy was one of "economic suicide."

The following is the full text of Mr. Innes' speech:

"GENTLEMEN,

"The accounts are in the form which has been familiar to you for several years, and I do not think there is anything in them which needs special mention. You will see that raisings are down as compared to the previous half-year, and that the Company has made less profit, but we have less tax to provide, and your Directors have therefore been able to maintain the dividend at its previous level. I must, however, point out that this dividend is by no means a measure of the prosperity of the industry as a whole; rather, it is the result of the wisdom of your, and my, predecessors. Your Company is now one hundred and ten years old, and no company formed to exploit a wasting asset such as coal can maintain its existence throughout this length of time, unless those responsible for the conduct of its operations continually look to the future, and consistently, with the consent of the shareholders, plough back sufficient money into the Company to provide for the development of new collieries to take the place of those in which the coal seams have been worked out. I would refer you to the remarks of the Chairman of the Indian Mining Association at their annual general meeting last week, that it is misleading to look at dividends in terms of capital, the correct way being to view them in relation to the total working funds actually employed in the business; and the dividend which your Company has paid is really a return on the money which has throughout the years been put back into the Company. The future of the coal industry must at many times in your Company's history have looked as obscure to our predecessors as it does to us to-day, but they were not deterred from building for the future, and we have cause to be grateful to them for the strong position in which the Company now finds itself.

Sand-stowing

"This policy is still the policy of your Board. You will be interested to hear that in the last six years our additions to block total Rs. 2.15 crores, and that development on this large scale has only been made possible because in that time we have placed no less than Rs. 1.74 crores to depreciation and reserves. As a result, we now have two new collieries—Girimint and Chinakuri—each capable of raising, when in full production, over 50,000 tons of coal a month. Girimint, which mines the well-known Poniati seam, is at present raising about 16,000 tons a month, and as output is steadily increasing as development proceeds, it can without difficulty replace the falling production at Old Banksimula Colliery, which also works the Poniati seam. Girimint is highly mechanised underground, and has a most modern and efficient surface layout, and when I inspected it a fortnight ago, I was very greatly impressed with all I saw. Chinakuri has as yet only one shaft actually into the Dishergarh seam, but its two other shafts should strike the seam in a few months' time, one of which, at about 1,950 ft., will be the deepest colliery shaft in India; and meanwhile the colliery is raising, from one shaft and two inclines, about 16,000 tons a month. This colliery will also be mechanised, and in addition has a most ingenious scheme for sand-stowing at a low cost, for which the greatest credit must go to the Company's technical staff. I believe—and I have had this opinion recently confirmed by a visitor from another country—that the sand-stowing arrangements in collieries in Eastern India are far ahead of anything in the world, and it has been fascinating to me, watching the development of sand-stowing at our collieries almost since its inception, to see how the ingenuity and resource of our technical staff have resulted in a steady improvement in technique and design which is now culminating in the arrangements at Chinakuri.

"On my recent tour of your collieries, I saw abundant evidence on every hand of the skill and enthusiasm of the Company's staff, and I would like to pay a very warm tribute to our Chief Mining Engineer, Mr. Rosser, who is here with us to-day, and to all his staff for all that they have done and are doing for you.

Raisings

"Raisings during the half-year amounted to about 10½ lakh tons, and though this is appreciably less than the figure for the previous half-year, it constitutes a record so far as the October half-year is concerned. Raisings during the current half-year are also very good, but to continue on our present scale is not without its problems and it seems to me that we are very near, if indeed we have not already reached, the stage of overproduction of coal in India.

"As you are aware, the coal industry is today operating under a very rigid system of controls. Our price is controlled, our internal sales controlled, our export sales controlled, and we are bound to pay certain wages and to grant certain concessions to our labour.

"The price structure was fixed in 1947 in relation to costs as they then were, and selling prices were actually reduced in 1949 on assurances from Government that certain reliefs as regards costs would be given. These assurances have never been implemented, and yet the price cut remains. Meanwhile our costs, particularly as regards labour, have been steadily increasing. It must surely be clear to anyone who has any knowledge of the trend of costs in India during the past five years, that maximum selling prices based on 1947 costs and subsequently reduced, are obviously due for reconsideration; the point is so essential and so simple that I do not see what more need, or can, be said about it, and I feel that there can be little doubt that Government are now considering the matter.

Distribution Control

"Further, on the distribution side, there is no longer the need for complete control over every wagon of coal which is despatched. I spoke on this subject at some length at our meeting a year ago and do not wish to go over the same ground again, but I would like to tell you that control over distribution is in fact more onerous now than it was, as it is now apparently recognised that it is not the inadequacy of production of coal which necessitates control over distribution, but the inadequacy of the railways to carry it, and a system of rationalisation of coal transport has been introduced. We know that a great effort is being made under the Five-year Plan to expand the country's railway system, and this, of course, should in time be of great help to us; but from the short-term point of view I must say that if the railways cannot at present carry all the coal that the country wants, it seems absurd that they should be forced to waste capacity, as they are now doing, by carrying inferior coal containing a large proportion of useless matter when there is plenty of good coal available. The time has come when the consumer should be allowed to buy the quality of coal he desires. There was no control over distribution before the war, and when wagons were short, as always happened in the early months of the year, the situation was met by a simple system of priorities which worked adequately. A return to this procedure should not cause any difficulties, it would increase the efficiency of industry throughout the country, and it would save the taxpayer the expense of maintaining an elaborate, and no longer necessary, organisation.

"I mentioned last year the question of exports, and I make no apology for referring to it again since it is a most important part of your Company's business and, as I forecast last year, there has been considerable deterioration during the past few months. The export trade is still handicapped by export surcharges, by restrictions on the quality of coal we are allowed to ship, and by the unpopularity among shipowners of the port of Calcutta; and since we now have to compete in a buyers' market, we cannot carry these handicaps. Already Australian coal is being imported into Hong Kong, and indeed into Chittagong, and we have reason to believe that subsidised railway freights and ambitious development projects in the mines of South Africa will shortly mean increasing competition from that country. The great jute industry was recently brought to the verge of ruin by too heavy export duties, and while the coal industry is not as dependent on exports as is the jute industry, nonetheless it would be a pity for India's export trade in coal also to be prejudiced by the refusal of Government to remove these duties in time.

Economic Suicide

"Important though this is, it is not so serious as the extraordinary regulation by which we are forced to export bad coal when plenty of good coal is available. I cannot see any sense in this at all; on a buyers' market, and competing with other coals of a quality as good as the best Indian coal or better, it is economic suicide. I can only conclude that the matter has still not been properly examined by Government since it seems to me inconceivable that Government would after careful consideration be willing to continue a policy which obviously is so opposed to the country's overall policy of stimulating exports. Even if it is urged that we should not send our best coals abroad, where is the sense in shipping inferior coals to ports in India? Coal in Madras, for instance, is expensive because the railways cannot carry sufficient to the South, and as a result coal has to be brought in from Calcutta by steamer; and it seems nonsense that in these unfortunate circumstances the cost to Madras coal users should be made even greater by the supply of poor quality coal containing a large amount of waste matter.

"As regards the port of Calcutta, this has never been popular with shipowners owing to difficulties of draft, shortage of pilots and harbour masters, taxation problems, and so on, but we have last year seen a state of affairs in the port, the like of which I have never known in my twenty-two years' connection with the coal industry. In May, last year, the daily allocation of wagons to the docks was reduced to two hundred and sixty a day as against the previous average of four hundred and fifty. This restriction, of course, immediately affected the turn-round of steamers and set in motion a process which eventually culminated in such a congestion of shipping in the port that steamers had to wait for as much as thirty days, and on occasions more, before they could even get a loading berth. At one time, the number of steamers waiting for coal berths was thirty-two, and since demurrage is nowadays heavy, amounting to something like Rs. 2,500 a day, a long waiting period is a serious deterrent both to owners and charterers. It took six weeks and many urgent representations both from the Bengal Chamber and from the Indian Mining Association before the authorities realised the seriousness of the position, and it was not till the end of 1952 that normality in the docks was achieved. Meanwhile, we were for a period debarred from booking further orders, buyers drifted away from us, and our business has greatly suffered and is indeed still suffering. When I tell you that there are at present only two colliers loading in the Calcutta docks, and naturally no colliers waiting for a berth, you will be able to contrast the position to-day with the position nine months ago and judge for yourselves the damage which has been done to our export trade.

Company's Shareholders

"I have heard it said that the control over coal distribution, and the requirement by which a proportion of inferior coal has to be exported along with superior coal, are maintained as a means of protecting small collieries mining inferior coal which otherwise would not be able to compete with their bigger rivals. I do not believe that this can in fact be the case, but lest there should be any loose thinking on this subject, it may be as well to state exactly what your Company is. The ordinary shares are held by 1,572 shareholders, of whom 1,414 are resident and 158 (about ten per cent.) non-resident. The average shareholding of the ordinary shares is, therefore, under thirty-two, and the return on an average holding of thirty-two shares, at our present rate of dividend, is Rs. 1,280 a year. This body of shareholders which constitutes the Bengal Coal Co., Ltd., has in the past six years provided Rs. 1.77 crores for Government in taxation and cesses as against Rs. 1.01 crores paid out in dividends; it has, as I have already told you, spent Rs. 2.15 crores in development for the future, and in order to do that, has ploughed back Rs. 1.74 crores into the Company. You will see, therefore, that while your Company may raise more coal than any other company in India, and may thus be regarded as a very big unit, it is in fact composed of a large number of individuals, whose annual return on their average investment is not great, but who are playing an important part in the country's economy by their contribution to the country's revenues, and even more by their contribution to the country's requirements of coal both in the present and for the future. Surely such a company deserves the maximum support which Government can give it.

"There are many other matters of importance which are now under active consideration by the industry, such as the conservation of metallurgical coal, the washing of coal, and labour legislation; but these have been most adequately dealt with by the Chairman of the Indian Mining Association, Mr. Michelmore, in his speech a few days ago, and there is nothing which I can add to supplement his remarks.

"Before I close, however, I would like to tell you that we have recently had the privilege of visits to your collieries from the Hon'ble Mr. K. C. Reddy, Minister for Production, and the Hon'ble Mr. V. V. Giri, Minister for Labour. We also had the pleasure, last October, of taking our new Coal Commissioner and Chairman of the Coal Board, Mr. R. K. Ramadhyani, I.C.S., underground, and also showing him over our sand-stowing installations at Seetalpore and Sodepore collieries. We are very glad to welcome Mr. Ramadhyani to his responsible and important post.

"We are glad also to welcome Mr. K. C. Neogy back to the Board. You will remember that Mr. Neogy resigned from the Board in November, 1951, when he became Chairman of the Finance Commission, and now that that duty is finished, he has kindly consented to rejoin us, and we are delighted to have his advice and knowledge of the industry, which dates back many years, at our disposal.

"Finally, gentlemen, this is the last time that I shall address you, as I am shortly retiring. I have been connected with your Company almost since I first joined your Managing Agents, and from my intimate knowledge of it I can tell you that on the production side we can face the future with confidence. Our new collieries will, I believe, be the best in the East, and these two alone will, in full production, be capable of raising over a lakh of tons a month of Dishergarh/Poniati coal, which, as you know, are the best high volatile seams in India, for something like seventy years. We have also other big raising units with a long life ahead of them, and above all, we have on the coalfields a most able, efficient, and enthusiastic staff to whom our present strong position is largely due."

ASSISTANCE FOR VOLUNTARY STOWING

Sixty-seven collieries have been sanctioned assistance by the Coal Board for voluntary stowing for safety of the mines during 1953-54. A five-man Stowing Committee, set up to examine the applications for assistance, estimates that 62,00,883 tons of materials might be stowed during the period. As much as 34,54,726 tons of coal are expected to be extracted with stowing. The Coal Board has decided that no assistance will ordinarily be granted for work which was not approved by the Board before its commencement.

According to an official of the Board, a number of collieries have carried out stowing in areas not approved by the Board and submitted their applications for assistance for such stowing after completion of the work. Assistance for stowing for conservation will be sanctioned after the rules under the Coal Mines (Conservation and Safety) Act are published. The Board has decided that, pending publication of the rules, collieries may apply for assistance for stowing operations for conservation of coal, so that the applications might be examined in advance.

GERMAN COAL INDUSTRY

Western Germany's coal industry needs DM. 3,500 million (£300 million) for investments to increase its annual capacity by 15 million tons in order to reach the O.E.E.C. target of 150 million tons by 1956. Half of the required capital is expected to be provided by the industry itself out of its earnings, but the other half would have to be in the form of credits. As much as DM. 1,860 million (£158 million) has been invested in German coal mining from 1948 to 1952. This works out to one-fifth of the amount per ton invested in the French coal industry. It is proposed that five large modern pits with a daily capacity of 10,000 tons each should be constructed. In addition, the old pits, which are largely out of date, are awaiting modernisation. Only 28.6 per cent. of the coal is being produced in fully or partly mechanised pits.

THE GOLD MOHUR MILLS, LIMITED

NOTICE

THE TWENTY-SEVENTH ORDINARY GENERAL Meeting of the Shareholders of the above Company will be held at the Registered Office of the Company, Chartered Bank Buildings, Fort, Bombay, on Wednesday, the 22nd April, 1953, at 4-00 p.m. (S.T.), to transact the following business:—

(1) To receive and adopt the Directors' Report and Audited Statement of Accounts made up to 31st December, 1952.

(2) To sanction the declaration of a Dividend.

(3) To elect two Directors in place of those who retire by rotation under Article 114 of the Company's Articles of Association, but who are eligible for re-election under the same Article and offer themselves for re-election.

(4) To appoint Auditors for the current year and to fix their remuneration.

The Transfer Books of the Company will be closed from 6th April to 22nd April, 1953, both days inclusive.

By Order of the Board of Directors,
JAMES FINLAY & CO., LIMITED,
Agents.

BOMBAY, 12*th March*, 1953.

Note.—The Dividend, when sanctioned, will be made payable at National Bank of India, Limited, Bombay, on and after 30th April, 1953, to those Shareholders whose names stand on the Register on 6th April, 1953, to whom Dividend Warrants will be posted.

THE FINLAY MILLS, LIMITED

NOTICE

THE FORTY-EIGHTH ORDINARY GENERAL Meeting of the Shareholders of the above Company will be held at the Registered Office of the Company, Chartered Bank Buildings, Fort, Bombay, on Friday, the 24th April, 1953, at 4-30 p.m. (S.T.), to transact the following business:—

(1) To receive and adopt the Directors' Report and Audited Statement of Accounts made up to 31st December, 1952.

(2) To sanction the declaration of a Dividend.

(3) To elect two Directors in place of those who retire by rotation under Article 114 of the Company's Articles of Association, but who are eligible for re-election under the same Article and offer themselves for re-election.

(4) To appoint Auditors for the current year and to fix their remuneration.

The Transfer Books of the Company will be closed from 6th April to 24th April, 1953, both days inclusive.

By Order of the Board of Directors,
JAMES FINLAY & CO., LIMITED,
Agents.

BOMBAY, 12*th March*, 1953.

Note.—The Dividend, when sanctioned, will be made payable at National Bank of India, Limited, Bombay, on and after 30th April, 1953, to those Shareholders whose names stand on the Register on 6th April, 1953, to whom Dividend Warrants will be posted.

SWAN MILLS, LIMITED

NOTICE

THE FORTY-FIFTH ORDINARY GENERAL Meeting of the Shareholders of the above Company will be held at the Registered Office of the Company, Chartered Bank Buildings, Fort, Bombay, on Thursday, the 23rd April, 1953, at 5-00 p.m. (S.T.), to transact the following business:—

(1) To receive and adopt the Directors' Report and Audited Statement of Accounts made up to 31st December, 1952.

(2) To sanction the declaration of a Dividend.

(3) To elect two Directors in place of those who retire by rotation under Article 114 of the Company's Articles of Association, but who are eligible for re-election under the same Article and offer themselves for re-election.

(4) To appoint Auditors for the current year and to fix their remuneration.

The Transfer Books of the Company will be closed from 6th April to 23rd April, 1953, both days inclusive.

Agents.

BOMBAY, 12*th March*, 1953.

Note.—The Dividend, when sanctioned, will be made payable at National Bank of India, Limited, Bombay, on and after 30th April, 1953, to those Shareholders whose names stand on the Register on 6th April, 1953, to whom Dividend Warrants will be posted.

THE RAYALASEEMA MILLS, LIMITED ADONI

NOTICE

THE SEVENTH ORDINARY GENERAL Meeting of the Shareholders of the Company will be held at the Registered Office of the Company, Rayanagar, Adoni-Thungabhadra Road, Adoni P.O., on the 12th April, 1953, at 2-00 p.m. (S.T.), to transact the following business:—

1. To receive, consider and adopt the Directors' Report and the Audited Statements of Account for the year ended 31st December, 1952.
2. To sanction the payment of Dividend.
3. To elect two Directors in the place of Sri Molagavalli Lakshmikantha Reddy and Janab Bharpet Mohammed Haniff Saheb who retire by rotation but being eligible, offer themselves for re-election.
4. To elect one Director in the place of Sri C. B. Raghava Reddy who was co-opted as a Director on the 24th January, 1953, under Article 86 of the Articles of Association of the Company and who retires under the same Article but being eligible offers himself for re-election.
5. To appoint Auditors for the current year and fix their remuneration. Messrs. Brahmayya & Co., the retiring Auditors, offer themselves for re-appointment.

Notice is also given that the Transfer Books of the Company will be closed from 6th April, 1953 to 20th April, 1953, both days inclusive.

By Order of the Board of Directors,
For THE RAYALASEEMA DEVELOPMENT CO.,
M. SOMAPPA,
Senior Partner,
Managing Agents.

ADONI, 21*st February*, 1953.

Note.—The Dividends, if sanctioned at the General Meeting, will be paid by Warrants to all those Shareholders whose names stand on the Register of the Company on the 20th April, 1953.

THE HONGKONG AND SHANGHAI BANKING CORPORATION

OUTLOOK FOR BANKING IN SOUTH-EAST ASIAN REGION

HON'BLE SIR ARTHUR MORSE OPTIMISTIC

THAT there are vast potentialities for expansion of banking business in the South and East Asian region was the view expressed by the Hon'ble Sir Arthur Morse, C.B.E., Chairman of the Hongkong and Shanghai Banking Corporation, in the course of his address at the Ordinary Yearly General Meeting of the Corporation held in Hong Kong on 27th February, 1953. Asia, Sir Arthur said, was rapidly raising its standard of living and, in order to meet the demands of the people, vigorous efforts were being made to expand the production and exports of primary products so as to pay for imports of commodities which were in ever-increasing demand. "There is, therefore, adequate scope for the diversion of our energies and resources to these areas," he observed. Alluding, in this connection, to the slogan 'Trade not Aid,' he maintained that, if the basic principle underlying the slogan were accepted and adopted as the official policy by the U.S., not only would the dollar gap be less menacing but there would also be better prospects of an improvement in the standards of living in South-East Asia. Sir Arthur, however, laid greater stress on the policies of the Governments of the East. No attempt, he warned, should be made by these Governments to introduce industrialisation on a rapid or large scale. He observed that it would be far wiser to concentrate on food and agricultural production and on those ancillary industries which depended upon the raw materials available in the country concerned.

The following is the full text of Sir Arthur Morse's speech at the meeting:

"LADIES AND GENTLEMEN,

"The net profit for the year amounts to H.K.$17,321,405 after making transfers to reserves for contingencies, out of which reserves full provision has been made for all bad and doubtful debts and for the further writing down of our investments, which appear in our balance-sheet at below market values. The balance of profit brought forward from last year is $8,075,332 and the total available for distribution, accordingly, amounts to $25,396,737. As in previous years, it is recommended that a sum of $3 million be appropriated to write down the value of Bank premises and after allowing for this amount, the interim dividend of £2 per share and the final dividend of £3 per share which is now proposed, there remains a balance of $9,489,174 to be carried forward to next year.

"Turning to the balance-sheet it will be seen that the total at £221 million shows a decrease of some £33 million over last year. As you will be aware, there has been in the post-war years a very considerable increase in our figures. The total of our balance-sheet during the two previous years increased by over £85 million and last year's figures constituted an all-time record in the history of the Bank. It is not surprising, therefore, that the fall in the value of primary commodities and the general recession in trade which has taken place during the year in the areas in which we are most interested should have resulted in some contraction in our figures.

Balance-sheet

"On the liability side of the balance-sheet the contraction in this year's figures is reflected by a drop of £31 million in current, deposit and other accounts and a decrease of some £2½ million in acceptances on behalf of customers.

"On the assets side, the general recession in trade has resulted in a drop from some £51 million to £38 million in our holdings of bills receivable, which decrease would have appeared even greater had it not been offset by an increase of over £7 million in our holding of British Government Treasury Bills which are included in this figure. Decreases of £6½ million and £2½ million respectively are also shown in advances to customers and in the liability of customers for acceptances. Money at call which now amounts to nearly £41 million shows a decrease of some £13 million over last year, but this decrease is partly offset by an increase in cash balances of some £3 million. In this connection, it may be noted that, although there has been a decrease in the total of cash and money at call, the overall percentage of these two items to our total liabilities to customers has increased since last year from 38.66 per cent. to 40.45 per cent.

Trading Conditions

"Trading conditions in many parts of the world, and particularly in the territories in which the Bank operates, have been more than usually difficult throughout the year and your Directors consider that, with the existing unsettled political conditions, it is essential to continue to pursue a conservative financial policy.

"Each year at this time, when I come to consider what should be said about political developments in the East during the period under review, I feel inclined to pass the subject by and to confine myself to a few remarks on trade. But I realise that this would be to shirk an important duty to shareholders who undoubtedly have a right to know what their Board's views are on the political aspects of affairs. The business of an overseas bank like this is naturally liable to be affected by political considerations and we are bound to keep a continuous and close watch on the international tug-of-war and the effect of changes of Government on a country's internal affairs and on external relations with others. I think that I can fairly say that during the past year the Eastern political situation, as a whole, did not deteriorate even though stability was lacking. Hopes of an early settlement in Korea have, unfortunately, been shattered: this naturally gives rise to nervousness and makes the outlook perplexing.

"Undoubtedly, the Governments of India and Ceylon have strengthened their position as a result of the popular elections. India's outstanding leaders have succeeded, in spite of critical periods, in maintaining the country in a stable and orderly condition. Ceylon too, in spite of the loss of that great statesman, the late Prime Minister Mr. D. S. Senenayake, has established her political position in the world.

"Malaya has seen a definite turn in the tide and Burma has good grounds for hoping that the insurgents will no longer be so serious a menace as in the past. Thailand's prestige has suffered from rumours of disaffection and dissension, but the strong arm of the Government continues to prevail. The Philippines have many controversial issues to solve, but there does not seem to be a serious danger of untoward changes. The Indonesian Government is, unfortunately, faced with dangerous and threatening problems, but has successfully surmounted more than one crisis. The same applies to Indo-China, but in a far more critical way. Japan's political future seems secure for some years to come, but the country has serious economic difficulties and if they cannot be solved this may well affect the political aspect.

China

"This brings me to China which, at the present time, is closely following the Russian line, although there are some prophets who foretell that one day this role may be changed, if not reversed. Were it not for China's serious involvement in Korea the outlook for her economic development and for the new Five-year Plan would be far happier. It would be a mistake to deny that great feats have been accomplished in railway construction and agricultural production, but the fundamental truth about China cannot easily be ascertained, while strict regimentation persists and true freedom keeps silence.

"Now that our banking interest in China is confined to liquidating our position and withdrawing our foreign staff, it is natural that our attention should in the main be focused on other areas. Indeed, we see great potentialities for the expansion of foreign trade in the other countries of South and East Asia. In this area, excluding China, there is a population of possibly 500 million people which is growing at the rate of at least 50 million a year. Although the national income of these countries is low in comparison with that of Western countries it is clear that Asia is rapidly raising its standard of living and in order to meet the demands of the people vigorous efforts are being made to expand the production and export of primary products so as to pay for the import commodities which are in ever-increasing demand. There is, therefore, adequate scope for the diversion of our energies and resources to these areas.

Dollar Gap

"During the past year, we have seen that one of Her Majesty's Government's main preoccupations has been to try and bridge the 'dollar gap' and to arrest the threat to the sterling area's gold reserves which was growing increasingly serious in the early part of 1952.

"The Chancellor of the Exchequer decided to adopt a monetary policy as the main instrument to effect his purpose and the Bank rate was raised from 2½ per cent. to 4 per cent. on 11th March, 1952. This step seems to have been fully justified by the outcome of events. I do not propose to dwell on the technical aspects of the dollar problem, but I wish to remind you of the fact that the countries in which this Bank operates (with the exception of Japan) are agricultural countries largely dependent on their crops and on satisfactory prices being obtained for their export produce. Such prices vitally affect the livelihood of producers and the standard of living throughout the East which badly needs raising. If, then, prices are depressed, the result may well lead to unfortunate consequences to the economy of producing countries, to discontent and possibly to popular revolts against established Governments which are naturally held to blame for any deterioration in conditions. Here there is fertile ground for political agitation by unscrupulous agitators with dubious or false ideological axes to grind. In such a state of affairs, reactions are felt throughout the world and thus also the industrial countries are affected. This fact was pointed out by the influential Paley Commission, which was set up by President Truman to whom it made a lengthy report last June. The report contained the following important paragraph in its final summing up:—

"'If we fail to work for a rise in the standard of living in the rest of the free world, we, thereby, hamper and impede the further rise of our own and equally lessen the chances of democracy to prosper and peace to reign the world over.'

"Naturally we hope that a statement, such as this, by an important presidential commission will be given full weight, but, as our Malayan friends know so well, there is a wide gap between preaching and practice.

"Trade Not Aid"

"It is true that for some years the United States has been able to point with justifiable pride to the work of the Point IV programme of the Mutual Security Agency and of the Technical Co-operation Administration, for which the East is duly grateful. But such generous and helpful aid has hitherto only scratched the surface of what is needed. The Chancellor of the Exchequer invented the slogan 'Trade not Aid,' which has been adopted as Government policy. If the basic principle, as stated by the Chancellor, were to be accepted and adopted by authoritative circles in the United States (as it is, indeed, being accepted by many far-seeing Americans and apparently by the Paley Commission) not only would the dollar gap be less menacing but there would be also better prospects for improvement of the standards of living in South-East Asia. I deliberately use the words 'better prospects,' because more is needed than just external action to improve the trading and commodity outlook. The Governments of the East need to play their part and that is a vital one, but one thing I would urge most strongly—that no attempt should be made to introduce industrialisation on a rapid or large scale. It would be far wiser to concentrate all available capital and energies on food and agricultural production and on those ancillary industries which depend upon the raw materials available in the country concerned.

"Of the primary commodities produced in the East, rice is the most vital one, although other foodgrains, oils and fats, fibres, sugar, tea, tobacco and minerals are all of great importance. Rice is a pan-Asiatic problem which particularly affects the countries in which we are most interested. It is becoming a far more serious problem than is generally realised. I referred to this matter last year, but the present situation is one which gives rise to great disquiet. In the five main rice-consuming countries in Asia the total consumption of calories is from 10 per cent. to 24 per cent. below a proper nutritional standard and the production of rice is lagging behind demand, while rice supplies to the international market were under 5 million tons last year, as against over 8 million tons in pre-war years. Moreover, a standard grade of rice which before the war sold at between £5 and £7 a ton has recently been fetching between £80 and £100 a ton in the free markets. Ways of solving this problem are being widely discussed and considered. There is, for instance, the question of Government participation which under present circumstances seems difficult to avoid. Yet many authorities consider that larger Asiatic supplies would be available, if Governments ceased to interfere.

"As in past years, I will now deal one by one with the various countries with which we are mainly concerned.

"First of all, you will be interested to know that we have obtained the necessary authority to open our own office in Paris, where we first appointed agents in 1865. We have found very suitable premises at No. 22 Place Vendôme and we hope to commence business there about the middle of this year. In due course our Lyons Office will be closed. It was first established there 72 years ago in connection with the important silk business of those days, which has now, sad to say, come to an end.

Hong Kong

"Looking back at the past year in Hong Kong, I think, you will agree that, by and large, it has been a surprisingly unruffled period. At the beginning of the year there appeared to be many possibilities of political impediments to steady development, but law and order was maintained throughout. For this we have to thank the efficiency of our Commissioner of Police and his men as well as the salutary effect of the presence of British military forces who are so welcome and valuable to Hong Kong. As a consequence, there has been good progress in all the services provided by the Government. The public utility services have continued to develop, particularly the electricity companies whose output for the needs of the community has doubled since 1949. Domestic supply has increased in line with the large housing development, but the industrial supply has expanded even more noticeably. This shows that industrialisation in the Colony is still forging ahead: the existing local industries, with few exceptions, have steadily expanded and, on balance, 160 more factories were registered in 1952 than in 1951. Although most of these industries are on a very small scale their total output amounts to an appreciable figure: their exports alone are estimated to have been worth nearly $500 million in 1952 and textiles accounted for some 63 per cent. of this total.

"The Hong Kong Clearing House figures were about 20 per cent. lower than in 1951, as was to be expected, but they were almost exactly the same as in 1950. The bank note circulation figures again remained steady at just over $801 million, while the local retail price index ended the year slightly lower than a year earlier after only minor fluctuations.

"The finances of the Colony remain highly satisfactory. The latest returns show that revenue is likely to exceed the estimates by a considerable sum owing mainly to a surprising increase in the earnings and profits tax, due, no doubt, to the additional staff appointed to deal with this work during the year. The Financial Secretary is to be congratulated on the happy position in which he finds himself. There is an insignificant public debt: he is likely to have another good surplus to add to the general revenue balance, which on 31st March last year already amounted to $219 million, and he has the development fund, with a balance of over $57 million on the same date, to which the trading profits for the year are to be added. The Legislative Council was, therefore, fully justified in approving, on 31st December, the gift to Her Majesty's Government of a further sum of H.K.$8 million over and above the $16 million included in the estimates for the current year, as a contribution to the cost of reinforcing the garrison.

"The short visit paid to Hong Kong by Her Royal Highness the Duchess of Kent at the end of October was a very successful and welcome event which has contributed much to furthering good relations between all communities, not only in Hong Kong but also in Malaya and Borneo.

"As regards trade, there have been various references in articles in the United Kingdom to the 'collapse of the boom' in Hong Kong which is alleged to have prevailed here since the end of the war. In fact, the so-called boom in Hong Kong merely covered the period when, as a result of rearmament and the consequent rise in commodity prices following the outbreak of hostilities in Korea, world trade figures became inflated. Thus, Hong Kong's trade returns were exceptionally swollen from the summer of 1950 to June, 1951, when the United Nations' embargo was imposed on shipments of strategic goods to China. After that period Hong Kong's monthly trade figures (exc.uding only China) settled down rather above the line of early 1950 which had been a very satisfactory period for trading. Coming to 1952, you will find that the total import figures (even including China) were almost exactly the same as for 1950. Further, the average monthly exports from Hong Kong in 1952, to countries other than China, were higher than any similar monthly figures, except during the above-mentioned boom. Indeed, imports from China, at $830 million, have only shown a fall of about 3 per cent. in the last three years, but exports to China in 1952 were down to $520 million, as compared with $1,461 million in 1950, and $1,604 million in 1951. The advantage we gain by the excess of imports from China is obvious and, while the loss of so much export trade to China is, of course, a serious matter, the trade was in 1950 and 1951 an exceptional phase caused by China's stocking up on account of the Korean war. But I must mention here that quite a considerable trade to and from China, by-passing Hong Kong, has been proceeding from European continental ports direct to various ports in China and back again. I do not intend to refer to the rumours about a possible blockade of the China coast, but I want to emphasise that the present Hong Kong export trade to China, as is well known, is strictly licensed under arrangements made with the Home Government and it does not include any strategic commodities. Hong Kong, in fact, is strictly complying with the United Nations embargo on items useful in the production of arms, munitions and implements of war.

"In dealing with Hong Kong's trade I have so far dealt only with trade values. If the volume of trade is considered it will be found that the tonnage of commercial cargo recorded here in 1952 was 10 per cent. lower than in 1951 and 30 per cent. lower than in 1950. In this respect price changes and other factors complicate the picture.

"Although Hong Kong's entrepôt trade with countries other than China remained very active throughout 1952 there have recently been signs of hesitation and unfortunately hindrances to trade imposed by Governments are very much the fashion everywhere. For instance, the restrictions on Japanese trade put into force here recently by our Exchange Control at the instance of the Home Government are proving harmful to Hong Kong merchants and to the entrepôt trade from which we all benefit. Similarly, the recent import regulations imposed in Indonesia added to the above-mentioned restrictions are affecting our export trade to that country which in 1952 reached record figures. We can only hope that Governments will interfere as little as possible with the stream of trade which eventually almost always finds its way round the obstructions set in the way.

Malaya

"After Hong Kong our Singapore Branch comes next in importance. We are vitally interested in the political and economic trends in Malaya and there is so much that could be said about the developments there in the past year that it is difficult to know where to begin and where to end. I must necessarily be concise, but if you want fuller particulars about internal political and social affairs I recommend that you should read some of the important speeches made by the High Commissioner, General Sir Gerald Templer, in the course of the year.

"One of the really pressing topics of the day is the communal problem—that of relations between the Malays and Chinese—which arises constantly in connection with Malayan affairs. The need to cement the friendliest bonds of understanding and goodwill between these two communities is of the highest importance.

"But probably the most cheering feature of the present situation is that public confidence and morale has gained strength throughout the year, as a result of the success against the Communists and because of the satisfaction at having a vigorous leader in Malaya at the head of affairs, with a clear unhesitant line of policy. There is greater efficiency in the administration, even though there are departments where economy and pruning may still be needed, and there is a determination to ensure that the whole machine runs smoothly.

"In Singapore also, there is satisfaction that the new Governor, Sir John Nicoll, whose well deserved decoration announced in the New Year's Honours List gave great pleasure to his many friends in Hong Kong, is also wisely directing his policy towards efficiency and reasonable economy in the Colony. The business community will give him their full backing in such steps as he is able to take.

"The Federation Government and Singapore have accumulated satisfactory surpluses in their revenue accounts during the post-war years, but both Governments have deficits, of $97 million and $10 million respectively, in their budgets for the current year. The Federation hopes to cover its deficit by the Security Loan of $100 million at 5 per cent. interest which was authorised last November: half of this has been successfully issued at par and another $10 million is at present on tap. I must confess that when this loan was floated it was rather galling to recall that only two years ago we were urged to subscribe liberally, as we did, to the Federation 3½ per cent. Loan which now stands at about 85. It should not be forgotten that the Federation expenditures include $144 million on account of the 'Emergency,' but it is to be feared that it will hardly be possible to eliminate this heading from the accounts for some years to come although we hope that the amount will be lower in future. Hitherto, apart from the contributions made by the Home Government and $4 million donated by the Singapore Government, the financial burden of the 'Emergency' has throughout the whole period been borne by the Federation out of ordinary yearly revenue. Now it has been decided by the issue of the Security Loan, repayable in 10-20 years, to spread a small part of the loan over a longer period of time. In September last, the Singapore City Council floated successfully a small loan of $25 million at 5 per cent. repayable in 10 to 20 years, mainly to finance extensions to the Colony's electricity and water undertakings. So satisfied is Singapore with its financial position that the Government decided recently to make a gift of £1 million to Her Majesty's Government as a gesture of goodwill.

"As compared with 1951, the Malayan foreign trade figures for 1952 at first sight appear alarming since they show a drop from M.$10,710 million to M.$7,642 million or 29 per cent. in the year. However, it must be remembered that 1951 was an exceptional year with trade figures no less than 56 per cent. higher than in 1950. Moreover, in comparing 1952 with 1951 we find that while rubber exports were lower by no less than M.$2,000 million, other exports were actually higher in 1952 than 1951—a significant fact emphasising how very important the rubber industry is to Malaya. Indeed, the reversal of the favourable balance of visible trade which was M.$1,066 million in 1950 and M.$1,270 million in 1951 to an adverse balance of M.$52 million in 1952 was certainly due to the rubber situation.

"There is, however, still confidence in the long-term outlook for the natural rubber industry, especially as both the United States and the rest of the world's consumption for 1953 is estimated as likely to be higher than in 1952, while production may be lower. Unfortunately, there is a curtain of uncertainty hanging over the U.S. synthetic commodity which is impenetrable, but as I have already indicated, the Report of the Paley Commission may perhaps lead to a change in policy.

"The production of tin was not very much below the 1951 total of 57,100 tons, and under present conditions and prices not much improvement in output can be expected, but excepting the continuing difficulty of prospecting for new tin-bearing areas, the industry is in a satisfactory condition and the Malayan figures remained about 39 per cent. of the world's output—the same as in 1951.

"Having referred to these two very important primary industries upon which the economy of Malaya is almost too vitally dependent, I must mention that some advance is being made in the establishment of secondary industries for which, however, there is still much scope. There are also interesting possibilities in future mining expansion, for which external financial and technical assistance will be required.

Borneo

"Let us now cross the sea to British North Borneo and Brunei, a land of promise but needing enterprise and labour. Enterprise is handicapped by the chronic shortage of labour, but it is difficult to believe that satisfactory means cannot be devised to unravel this problem, while ensuring that proper safeguards are adopted. Enterprise is, however, certainly apparent in the activities of the British Malayan Petroleum Company whose development and

expansion continues without check. Brunei State is reported to be considering a new Five-year Plan; this has not yet been published, but the State's large surplus of revenue over expenditure should enable it, in due course, to make the territory a model to its neighbours. North Borneo's finances showed a surplus of ordinary revenue over expenditure of $7 million which was transferred to the account set up for re-construction and development of the country. The latter account has a shortfall of $6½ million for the current year, to meet part of which consideration is being given to the flotation of a loan of £500,000. The terms of such a loan will need very careful watching, if it is to be successfully put on the market. The export trade figures were seriously affected by the fall in prices of rubber and copra and dropped by $49 million. This resulted in a small adverse balance of trade of $5.6 million. Import figures were practically the same as in 1951. There has been no little dissatisfaction in North Borneo at the slow progress made in reconstruction which it was hoped to finish at the latest by the end of 1951. Now the deadline has been fixed for the end of 1954, which should give ample time for this long overdue work to be completed. Our new office at Jesselton should be ready for occupation some time this autumn.

India

"Our interests in India, being limited to Calcutta and Bombay, are not extensive, but they are important by reason of the link with Indian trade which is maintained with our offices in other Eastern countries. Early in 1952, following a considerable amount of overtrading, a collapse of prices took place affecting many commodities, and markets were seriously depressed for some months.

"India has recently been called a 'bastion of stability and peaceful endeavour.' This is an apt phrase, even if her political and economic stability has yet to be fully tested. But her 'peaceful endeavour' can be observed not only in the political world but particularly in her new and ambitious 'Five-year Plan' which has been widely applauded, in spite of criticisms that the target has been set too high and is not sufficiently precise. The emphasis on agriculture, transport and power development, both in this Plan, in the Colombo Plan and in the loans or grants received from the World Bank and from United States sources, shows that India believes that this is the most important way of raising the standard of living of the people, which is the central objective of the Plan. It is also interesting to note, that, in regard to her proposed industrial development, first priority is wisely given to the fuller utilisation of the existing industries producing goods from local raw materials. It is distressing to hear further reports of famine in large areas of Bombay State, but, fortunately, prior to this, the food situation had been better. An important Government Minister not long ago referred publicly to the subject of 'Indianisation' in non-Indian firms. He brought the matter forward in a moderate way and, no doubt, the principle will in the main be acceptable, so long as adequate time is allowed for training, and the final proposals are reasonable and not discriminatory.

Ceylon

"From India we naturally pass to Ceylon. The report of the World Bank Mission to Ceylon, which was led by Sir Sydney Caine, was published last autumn. It contained many important and valuable proposals and, as a reference book regarding Ceylon's general economic position, it will be of great value for a long time to come. Recommendations for a six-year development programme were sketched in considerable detail and the establishment of a Ceylon Development Corporation was proposed in which the Government, the Central Bank and the commercial banks are expected to participate jointly. Owing to the large deficit with which the Government is at present being threatened, it is to be feared that there will be delay in implementing these recommendations. The lower prices of tea and rubber have been largely responsible for turning a surplus of Rs. 342 million into an adverse trade balance of Rs. 205 million, comparing the year 1951 with 1952. Considerable dissatisfaction is felt in foreign business circles at the way in which various measures of Ceylonisation are being imposed, some of which seem to indicate unjustifiable discrimination on the part of certain Government departments.

Thailand

"Thailand has had a quiet year in the political sphere, in spite of rumblings of discontent. In commercial and banking circles, there has been some dissatisfaction and confusion in regard to the policy of the Government. For instance, the appreciation of the tical against sterling by lowering the import rate a year ago had a bad effect on the export market, and the increase in rice prices, while rubber prices have fallen, has seriously affected the livelihood of workers on the plantations in South Thailand.

"Fears of a considerable reduction in rice available for export in 1952 proved unfounded, as shipments were only about 120,000 tons less than in 1951, which was a record year, while 200,000 tons are estimated to be carried in stock. Hopes of greater rice production are attached to the important Chainad Dam barrage scheme which is proceeding steadily and will eventually irrigate a large area of land suitable for cultivation. This is one of the ambitious public works now proceeding—some have been newly started and some are in continuation of work commenced in the last few years, such as the Bangkok Port scheme, a hydro-electric plant project, the provision of new railway equipment and extensive highway construction. These developments are being financed partly under the United States Mutual Security Agency programme and partly by the World Bank.

Burma

"As regards Burma, although there is some disappointment at the slow rate of the restoration of internal security and of economic advancement, progress has nevertheless been made and, considering all the difficulties, it would be a mistake to expect more rapid improvement.

"One noteworthy feature has been the assumption of office of the first popularly-elected Government under Prime Minister U. Nu. A new President, Dr. Ba U, a distinguished former Chief Justice, has also taken office.

"A further important event was the passing of the Union Bank of Burma Act at the first session of the new Parliament. This Act took effect on 1st July, when the Union Bank became in effect a Central Bank. The Burma Currency Board has been absorbed and finally closed its doors on 31st December last. The Burma rupee is now termed a Kyat which is divided into smaller units under the decimal system. Although the Kyat no longer has a fixed statutory value in terms of sterling, the parities of the previously established exchange rates were adopted without change. A feature of the financial position is the increasingly large deposits in the Union Bank on Government account. Although the note circulation and commercial banks' deposits have changed little, Government deposits are now nearly 45 per cent. of the total supply of money. The useful employment of these idle deposits would considerably assist the economic recovery of the country.

"The Government has an eight-year programme for large-scale development of the country and American technical assistance has been obtained to make detailed investigations as to how best to proceed. The possible establishment of a hydro-electric plant, the development of the Kalewa Coal Mines and other mining projects are amongst the plans under consideration. Meantime, the work on the rehabilitation of the seaports, especially Rangoon, is proceeding rapidly with technical advice and financial support from United States sources.

Indo-China

"It is difficult to decide what line to take about the political and economic situation in Indo-China. There are many gloomy prophets and yet a considerable amount of quiet optimism prevails in knowledgeable circles. The pessimists see no end in sight to the civil war and have no confidence in the regime to which the French have given so much responsibility. On the other hand, the optimists claim that there is a strong and growing Vietnam army helped with American materials, which is gaining prestige and spirit, while the new Prime Minister has shown himself to be an able and energetic administrator. Furthermore, the economic situation is in some respects hopeful; some of the richest districts in the country, including the important plantation areas, are held and administered by the autonomous Governments of the Associated States; the new rice crop is promising and rubber production is satisfactory, while coal output is expected to increase. The strategic importance of Indo-China is widely regarded as of the first importance in East Asia to the democratic camp, and since this is so, we are unlikely to see any deterioration, but rather we have grounds for hoping that the optimists will be right.

Indonesia

"Indonesia is another country regarding which it is not easy to sum up the political and economic situation in a few words. There are many ups and downs, shades and colours, in the scene. The fall in the price of rubber and other agricultural products of the country, in conjunction with adverse internal factors, has made the financial situation of the Government an uneasy one. I foresee many difficulties for Indonesia before the country gets on to a steady basis. The problem is one of production and of taking full advantage of the wealthy resources of the country. A number of agricultural and other commodities are still being produced in quantities well below pre-war standards. Rice, sugar and coal particularly come to mind. However, the character and quality of some of the highest officials in the country is a good omen for the future, if they can overcome the many difficulties which surround them. I was, for instance, much impressed with speeches made at the 125th anniversary of the Javasche Bank. If the wisdom and foresight expressed on that occasion can be carried forward to the new Bank Indonesia which is about to replace the Javasche Bank, the outlook for the financial future of Indonesia will be more promising.

The Philippines

"It is satisfactory that, in the Philippines, there has been more success in the past year in dealing with the Hukbalahap insurgents. The movement appears to be waning, although it has not yet been eliminated and outbursts of violence may well arise from time to time. As a basic measure of dealing with this and other agricultural discontents, considerable attention has recently been directed to proposals for the reform of land tenure and allied matters. The Hardie report on this subject, sponsored by the Mutual Security Agency, gave rise to keen controversy. But the necessity for early action is widely agreed and the recent open support given by the Defence Secretary makes the prospect promising.

"During the past year, the copra and hemp markets were badly depressed and, although the sugar crop was an improvement on 1951, there was nevertheless a considerable decline in the total value of exports in the year. However, tightened controls reduced imports by over Pesos 100 million, so that the final figures are likely to show a not greatly increased trade deficit. Thanks to United States Government expenditure in the Philippines during the year, the visible adverse balance will probably be cancelled out.

Japan

"On 28th April, 1952, Japan regained her full sovereignty, after more than six and a half years of Occupation. Now Japan is directing her policies as she sees fit, subject only to the inhibitions and restrictions with which she is obliged to comply as a partner in the anti-communist world. Japanese officials are already established in all the important capitals of the world and her bankers and merchants are to be found everywhere searching for accommodation and for business.

"The outstanding Japanese pre-war loans have been settled on terms satisfactory to most bondholders, and Japan has been accepted as a member of the International Monetary Fund and the World Bank from which she is now seeking a large loan for the development of hydro-electric power plants.

"Yet there is no little nervousness about Japan's political, commercial and financial future. Her internal political problems are not, however, likely to have serious external reactions. Her commercial outlook is gloomy, because it has been so seriously affected by the restrictions imposed by countries upon whom she is dependent for a large proportion of her trade, particularly the sterling area countries. Financially she is in a precarious position, because of her dependence on American dollar expenditure in Japan in connection with the Korean war to balance her serious dollar trade deficit. Japan's sterling balances are now falling rapidly, owing to the restrictions already mentioned. But trade returns for the year show that imports exceeded exports by no less than 60 per cent. Her problem of increasing exports deserves sympathetic consideration, but it is widely felt that she could, without much difficulty, reduce her dollar imports and increase her sterling imports proportionately, which might lead to some relaxation of the sterling area restrictions.

"Japan's need for the China market is, of course, obvious and the reverse applies to China, but, under present political conditions, Japan is likely to continue to restrict shipments of many types of goods and the opening of other markets is of the utmost importance.

"I am glad to say that our new building at Osaka is proceeding rapidly and we hope to be in occupation before the autumn.

Retirement

"Many of you are aware that I am handing over the reins in a few days' time and that this is the last occasion on which I shall preside at one of our annual meetings. I joined our London Office exactly forty-one years ago to-day. After such a long period, including thirty-eight years out East, however much one may look forward to an easier time free from the hurly-burly of daily banking, inevitably one gets a sense of nostalgia and of real sadness at breaking away from many old associations and leaving many old friends.

"It is tempting, as one looks back, to start to make a catalogue of the changes which have taken place since the days when I first landed in Hong Kong in 1915, but I must resist the temptation, as this is not the right occasion for reminiscences, but I will just say that the most notable transformation that has taken place in the territories where we operate has been here in Hong Kong, as I feel sure that some of our distinguished Chinese friends who can look back as far as I can, or even farther, will agree. The credit for Hong Kong's progressiveness must go, in the main, to a succession of far-sighted Governors, including very notably our present Governor, Sir Alexander Grantham. But, perhaps, the Bank can claim a little credit for some of Hong Kong's commercial progress. I could say much about many of my predecessors, but my recollections are particularly vivid and poignant about Sir Vandeleur Grayburn, whose death in 1943 while he was in the hands of the Japanese, came as such a severe shock to all connected with the Bank and with Hong Kong.

"It was on 16th December, 1941, just before the fall of Hong Kong, that I was called upon to serve as Acting Chief Manager in London and it is with real gratitude that I think of the ready assistance I received in the war years from many departments of His Majesty's Government, especially from the Colonial Office and the Bank of England. I also gratefully recall the forbearance of the shareholders of the Bank in those dark days when it was impossible to see far ahead and hazardous to plan for the future. I trust that they have not been disappointed with the post-war results which have been effected in a period, when at first, the outlook was quite obscure, then surprisingly improved, and more recently again, perplexing, but not unpromising. All this time I have also been supported by the staff of the Bank to whom I must pay due tribute, from managers down to the most junior local employee. My long experience encourages me to assert that there are few banks or commercial concerns in the East or anywhere else which can have had such loyalty and support from their staff. Wayfoong has always prided itself on treating its staff well, and they have responded in a way which calls for the thanks of all shareholders.

"I have no hesitation whatsoever in commending to you my successor as Chief Manager, Mr. M. W. Turner, who is already well known here and who has been making his mark in Hong Kong in the last few years. I am confident that he will serve the Bank well."

Notice

THE BOMBAY FIRE AND GENERAL INSURANCE COMPANY, LIMITED

(Incorporated in India)

NOTICE IS HEREBY GIVEN THAT THE Eighteenth Ordinary General Meeting of the above Company will be held at the Registered Office of the Company, United India Life Building, Sir Phirozshah Mehta Road, Fort, Bombay, on Thursday, the 16th April, 1953, at 3 p.m. (S.T.), to transact the following business:—

1. To receive and adopt the Directors' Report and Audited Revenue Accounts, Profit and Loss Account and Balance Sheet for the year ended 31st December, 1952.
2. To sanction the declaration of a Dividend.
3. To elect a Director in place of Mr. Shapoorji Pallonji Mistry who retires under Article 95 of the Articles of Association of the Company and being eligible, offers himself for re-election.
4. To confirm the appointment as Directors of Mr. F. H. Kemple and Mr. Pallonji Shapoorji Mistry who retire under Article 85 of the Articles of Association of the Company.
5. To appoint Auditors for the current year and to fix their remuneration.

The Share Transfer Register of the Company will be closed from 2nd April to 16th April, 1953 (both days inclusive).

By Order of the Board,
B. H. REPORTER,
Manager.

BOMBAY, *24th March*, 1953.

THE HONGKONG AND SHANGHAI BANKING CORPORATION

(THE LIABILITY OF MEMBERS IS LIMITED TO THE EXTENT AND IN MANNER PRESCRIBED BY CHAPTER 70 OF THE LAWS OF HONG KONG)

BALANCE SHEET AT 31st DECEMBER, 1952.

1951 Hong Kong Dollars		Hong Kong Dollars	Sterling Equivalent
$ 20,000,000	SHARE CAPITAL— Authorised and Issued— 160,000 Shares of H.K. $125 each, fully paid	$ 20,000,000	£ 1,250,000
	RESERVE LIABILITY OF MEMBERS— H.K. $125 per Share on 160,000 Shares $ 20,000,000		
96,000,000	RESERVE FUND	96,000,000	6,000,000

Notes:—1. There are contingent liabilities on bills re-discounted amounting to H.K. $6,760,936 ($1,511,204) and commitments in respect of Confirmed Credits, Guarantees and Forward Exchange Contracts.

2. Foreign Currency Balances have been converted into Hong Kong Dollars at approximately the rates ruling at 31st December, 1952. The Sterling equivalents of the figures shown in the above Balance Sheet have been converted at the rate of H.K. $1=1/8d.

MORSE, *Chief Manager.* G. O. W. STEWART, *Chief Accountant.* J. D. ALEXANDER, H. D. BENHAM, E. R. HILL } *Directors.*

REPORT OF THE AUDITORS TO THE MEMBERS OF THE HONGKONG AND SHANGHAI BANKING CORPORATION.

We have examined the above Balance Sheet with the books of the Corporation kept in Hong Kong, with the audited accounts of the London Office and with the returns received from the other offices which have been signed by the Branch Managers. We have obtained all the information and explanations we have required and in our opinion such Balance Sheet is properly drawn up so as to exhibit a true and correct view of the state of the Corporation's affairs at 31st December, 1952, according to the best of our information and the explanations given to us and as shown by the books kept in Hong Kong and by the returns received from the other offices.

PEAT, MARWICK, MITCHELL & CO. / LOWE, BINGHAM & MATTHEWS } *Chartered Accountants, Auditors.*

HONG KONG, *10th February*, 1953.

PROFIT AND LOSS ACCOUNT FOR THE YEAR ENDED 31st DECEMBER, 1952.
