BOMBAY DYEING RESULTS SATISFACTORY

DIVIDEND REPEATED—FINANCES SOUND

LAST week, the shares of the Bombay Dyeing and Manufacturing Co., Ltd. (Agents: Messrs. Nowrosjee Wadia and Sons, Ltd., Bombay) received some special attention at the hands of the investors on the Stock Exchange, when most of the other counters in the textile section were featureless. This was attributed to the investors' satisfaction with the Company's financial results for the year ended 31st December, 1952, in spite of the disclosure of a sizable fall in earnings by them. An analysis of the Directors' report and statement of accounts of the Company for 1952, in conjunction with those for 1951, discloses that there are sufficient grounds for such expression of satisfaction. First, the extent of decline is not so marked as was expected, or as in the case of many other mills in Bombay. Secondly, the final dividend, and for that matter the total dividend for the year, has been fairly well maintained at the same rate as that for the previous year; thirdly, a sizable sum has been added to the reserve fund, although the entire amount is not from out of the year's earnings.

The gross profit of the Company has gone down from the bumper figure of Rs. 96.63 lakhs for 1951 to Rs. 70.45 lakhs. This decline of Rs. 26.18 lakhs or 27 per cent. in profit is relatively much smaller than that suffered by many other mills. That the Company has been able to show a handsome gross profit of Rs. 70.45 lakhs despite the "various handicaps under which the industry had to work during the year, viz., the slackening in the demand for cloth, an appreciable decline in exports, and the fall in cotton prices," is something for which the management of the Company deserves to be complimented. The net profit shows a decline from Rs. 51.98 lakhs to Rs. 26.23 lakhs, that is by nearly as much as that in gross profit. In view of this fall, the reduction in the provisions for agents' commission (from Rs. 9.95 lakhs to Rs. 7.23 lakhs) and taxation (from Rs. 28 lakhs to Rs. 23 lakhs) is understandable. The provision for depreciation, however, has been enhanced from Rs. 5.37 lakhs to Rs. 12.74 lakhs. The increase in the allocation to the depreciation fund has evidently been occasioned by the additions to the gross block made during the year under review. The Directors have transferred to the reserve fund a sum of Rs. 6.84 lakhs from out of the net profit, as against Rs. 30 lakhs in the previous year. But that is not all that has been added to the reserves this year, for they have been strengthened further by the addition of Rs. 31.33 lakhs received from the Government of India by way of E.P.T. deposits (Rs. 71,853) and E.P.T. refund (Rs. 30,61,126). Appropriately enough, the entire sum has been placed to the rehabilitation and development reserve. The Directors, incidentally, report that no more refunds remain to be received from the Government. The Directors, in accordance with their cautious policy, did not unduly raise the distribution to shareholders last year, even though the results for 1951 warranted a substantial increase in it. They chose to conserve the profits when the going was good, as witness the addition of Rs. 30 lakhs or above 58 per cent. of the net profit, to the reserves last year, and to fix the dividend at a level which they felt could be maintained even in a lean year such as 1952. That they have been true to this policy is reflected in their decision to maintain the dividend at Rs. 20 per share of Rs. 250, or 8 per cent. per annum, free of income-tax, though it has meant the drawing of a small sum from the surplus brought in from the previous year.

The following table, giving the earnings and the disbursement thereof of the Company during the last four years, shows how its fortunes have been fluctuating in recent years:

(In lakhs of rupees)

	For the year ended 31st December			
	1952	1951	1950	1949
Sale proceeds	670.99	693.17	456.57	624.29

* Only approximate.

† On the increased capital of Rs. 250.98 lakhs, doubled in December 1950.

The conditions under which textile mills, in general, and the Company, in particular, had to work are described better in the words of the Directors thus:

"During the year, wide variations occurred in the prices of Indian and foreign cottons. Prices of Indian cotton, which were near the ceilings during the early part of the year, dropped sharply in April and it was not possible for the mills to protect themselves against this unexpected decline due to the absence of a hedge market, which was reopened only on 13th December, 1952, after a lapse of three years. 1952 was a year of record production in the cotton textile industry—the estimated figures being 4,607 million yards of cloth, and 1,450 million lbs. of yarn. The increase in production and the fall in exports contributed to a free flow of cloth in the domestic market, and the position gradually changed, resulting in the accumulation of large stocks with mills and merchants. Faced with this situation, the Government of India, towards the latter part of the year, withdrew a number of varieties of cloth from the operation of price and distribution control. The bulk of the production of your mills for the internal market, however, still remains under control. Due to poor shipments, the Government of India decided to license freely fine and superfine cloth for export from April. As this did not have the desired effect, the Government extended their policy in the following month and allowed free licensing of exports of all varieties of cloth to permissible destinations. Although these two measures had temporarily a salutary effect, the shipments progressively declined from September, and amounted to only 38.1 million yards for the month of December, due to the continuance of the export duty of 25 per cent. on Indian coarse and medium cloth. Whilst no relief was given to the industry during the year under report, the duty on coarse and medium cloth was reduced from 25 per cent. to 10 per cent. in the beginning of 1953. Due to good rainfall in the catchment area, the cut in the supply of electric energy which had been imposed by the Government of Bombay on 1st November, 1951, was restored with effect from 11th August, 1952, enabling the mills to resume full working. The system of staggering of holidays, however, still continues."

The financial position of the Company is quite satisfactory. The balance-sheet, as at the end of 1952, shows that, notwithstanding the large amounts capitalised in the past, the reserves and surplus, at Rs. 217.95 lakhs, still constitute about 87 per cent. of the paid-up capital. Of the total reserves, Rs. 50 lakhs represent general reserve, Rs. 97.96 lakhs rehabilitation and development reserve, Rs. 40 lakhs dividend equalisation fund. The gross block of the value of Rs. 377.03 lakhs has been provided with a depreciation of Rs. 319.69 lakhs. The gross additions to the block during the year amounted to Rs. 34.97 lakhs, mainly on account of the erection of new machinery valued at Rs. 31.09 lakhs. As against current liabilities, including taxation, aggregating Rs. 120.36 lakhs, there are current assets of the value of Rs. 531.94 lakhs. The cash balances (at Rs. 236.82 lakhs) alone are nearly double the current liabilities. Besides such a large cash balance, the current assets are made up of stock-in-trade amounting to Rs. 129.79 lakhs, stores, spares, etc., Rs. 29.16 lakhs, debts and advances Rs. 78.34 lakhs and investment Rs. 57.82 lakhs.

In addition to the uncertain trade position with which textile mills in India have been faced in recent years, they have to bear additional imposts also which will ultimately reduce their profit margin. In this connection, the Directors observe:

"The introduction of the new Employees' Provident Funds Act, 1952 and the Employees' State Insurance Act will throw further burdens on the industry, and will cost the Company annually about Rs. 6,00,000 and Rs. 90,000 respectively. The increase in excise duty on mill-made cloth sold for internal consumption to encourage and support the handloom industry, which has only recently been declared, will be an additional impost which will hamper the profit-earning capacity of the mills."

The Rs. 250 paid-up ordinary shares of the Company are being currently quoted at Rs. 402-8, at which rate they give a yield of 5 per cent. per annum, free of income-tax.

(Concluded from next column)

tors has been reduced by Rs. 5.90 lakhs, so that the total current liabilities show a rise of Rs. 14.38 lakhs only. There has been an addition of Rs. 50.02 lakhs to the fixed assets and, with the depreciation provision of Rs. 25.93 lakhs made during the year, the gross block has so far been written down by over 62 per cent. Stocks at the end of the year disclose a rise of Rs. 12.56 lakhs, but this has been more than offset by fall in sundry debtors to the extent of Rs. 14.24 lakhs, due to the reduction in turnover. The total current assets, at Rs. 574.88 lakhs, exceed the current liabilities by as wide a margin as Rs. 329.79 lakhs. It will be noted from this brief analysis of the Company's balance-sheet that its financial position is quite strong.

The Rs. 10 paid-up ordinary shares of the Company are now being quoted in the neighbourhood of Rs. 29, to yield a return of 5.2 per cent. per annum, free of tax, on the basis of the dividend for the past year.

PROFIT OF DUNLOP RUBBER FALLS

TRANSFER TO RESERVES RAISED

A CONTRACTION of Rs. 20.63 lakhs in the gross profit, from Rs. 146.54 lakhs to Rs. 125.91 lakhs, is disclosed by the audited accounts of the Dunlop Rubber Co. (India), Ltd. (Managing Director: Mr. Cecil Stack, Calcutta), for the year ended 31st December, 1952. This decline in profit need not be viewed with any concern because it was not due to any defect in the management of the Company, but was the result of a substantial fall in the volume of goods sold during the year, consequent on the general recession of trade. Further, there was also a decrease in the selling prices of the Company's products. The net profit, however, records a small increase of Rs. 6.79 lakhs to Rs. 66.63 lakhs, because of the lower provision made for depreciation and taxation. The ratio of net profit for the year under review to turnover has gone up, according to the Directors, from 4.2 per cent. to 4.8 per cent. This increase in net profit has been utilised, it is noteworthy, to raise the amount transferred to the reserve fund, thereby strengthening the financial resources of the Company further. After transferring a sum of Rs. 39 lakhs to the reserves, the dividend to ordinary shareholders has been maintained at 15 per cent. per annum.

The salient features of the Company's results for the year under review are compared with those for the preceding three years in the following table:

(In lakhs of rupees)

	For the year ended 31st December			
	1952	1951	1950	1949
Sale proceeds	12,97.48	14,18.78	8,28.27	9,83.30

6 % preference ..	3.57	3.57	3.60	3.60
Ordinary	24.00	24.00	20.00	20.00
	(15%)	(15%)†	(20%)	(20%)*
Carry forward	7.01	6.78	6.51	6.50

* On the increased capital of Rs. 1 crore raised by the capitalisation of Rs. 50 lakhs from the general reserve.

† On the capital increased to Rs. 1.60 crores by the capitalisation of Rs. 60 lakhs from the general reserve in April, 1951.

The decline in sale proceeds is due, as already noted, partly to the reduced selling prices and partly to a substantial fall in the volume of goods sold. While comparing the fall in sale proceeds during the year under review with the sharp rise noted a year before, one thing has to be borne in mind. That is, in 1951, the Company's turnover was substantially large, occasioned by the good demand, and the selling price of tyres was also raised; while, in 1952, besides the fall in turnover, the Company reduced the selling prices of cycle tyres and tubes early in April, 1952. A rather disquieting feature of the Company's working is its mounting trading and administrative expenses year after year; the increase in these during the past year was quite perceptible, despite the fall in turnover. But for this rise in expenses, the Company would have been able to maintain its profit. The sizable increase in expenses during 1952 was presumably due to the new lines of manufacture introduced during the year. The provision for depreciation has been reduced by Rs. 12.41 lakhs. The decrease in the provision for taxation is due partly to the lower profit and partly to the benefit of double taxation relief in respect of previous years to the extent of Rs. 3.50 lakhs.

The following synopsis of the Company's balance-sheets at the end of the last two years gives an idea of its progress in financial position:

	1952	1951
LIABILITIES	Rs.	Rs.
Capital	2,30,00,000	2,30,00,000
Reserves and surplus ..	1,32,01,468	92,77,697
Debenture stock	1,30,00,000	1,30,00,000
Provision for taxation ..	24,00,000	51,00,000
Liabilities	2,21,09,518	2,06,71,248
ASSETS		
Gross block	4,07,06,331	3,57,89,351
Less—Depreciation	2,52,71,321	2,27,52,458
Net block	1,54,35,010	1,30,36,893
Debenture redemption fund	7,88,105	3,90,000
Stocks	4,26,97,622	4,14,41,228
Debts, deposits and advances	1,37,08,075	1,51,92,083
Cash	10,82,174	9,88,741
	Rs. 7,37,10,986	7,10,48,945

The increase in reserves and surplus is accounted for by the addition of Rs. 39 lakhs from the profit for the year under review. The decline of Rs. 27 lakhs in the provision for taxation is, according to the Directors, due chiefly to the fact that the Company's assessments have been brought more up-to-date. During the year, the Company had to borrow additional funds from its bankers and the liability on this account at the end of the year shows an increase of Rs. 20.89 lakhs. The liability on account of sundry credi-

(Continued in previous column)

Points From The Chair

More Controls on Banking Deprecated

"WITH a view to ensuring that lack of short-term credit will not hamper the development programmes set out in the Plan, the Planning Commission desires that the Reserve Bank should exercise a direct control over its operations. What the nature of this control is to be is not, however, indicated. Taking into consideration the fact that Scheduled Banks in India have so far fully responded to the directions they have received from the Reserve Bank and have actively co-operated in carrying out its general policy regarding credit, there does not appear to be any need for the Reserve Bank to exercise any additional control for securing the flow of credit necessary for the execution of the Plan. Future developments in this connection will be watched with a great deal of interest, and not a little anxiety, in view of the unfortunate utterances of some of the Ministers of Government when the Plan was debated in Parliament. They appeared to suggest that substantial changes were necessary in the structure and organisation of banking and that they had a more positive policy in view than what the Planning Commission had recommended. Such statements raise doubts about the measure of acceptance by Government of the role of private enterprise in the execution of the Five-year Plan, and considering the way in which the banking system has been serving the country, talk of intensified control can only be characterised as unfortunate and uncalled-for."

HOMI MODY,
Central Bank of India Ltd.

Economic Health of South-East Asia

"The economic health of the free world must be maintained and this applies with particular force to the countries of South-East Asia. The disruption of war, the movement and expansion of populations, the changes in governmental personnel and structural pattern, the rise in world prices, shortages of foodstuffs and consequent inflationary trends, all these factors have affected the economic health of this vast area. Bearing all this in mind it may be considered remarkable that the standards of living, of integrity, of industrial output and of international trade and exchange have exhibited so little depreciation over the past seven years. This fact, however, calls for no complacency; for populations continue to rise, food shortages are a continuing and perhaps increasing anxiety, so that the economic stability of South-East Asia will continue to be of the first importance to the free world for years to come."

SIR KENNETH W. MEALING,
Mercantile Bank of India, Ltd.

World Supply and Consumption of Paper

"On the present basis of world consumption there is no longer a scarcity of newsprint, and, in fact, supply and demand are now almost in balance. Nevertheless, it is of interest to note that consumption in the United States showed a small increase during 1952 and topped the 6,000,000-ton mark, and for the month of January—the latest month for which figures are available—the consumption in that country showed an increase over the corresponding month of the previous year of 2 per cent. Were this rate of increase to be maintained, it might well have the effect of again taking consumption out of balance with supply, in which event a return to some scarcity of this commodity might again develop; indeed, at the present time publishers in the Southern United States are still unable to obtain all the newsprint they could use, but this situation will, we are hoping, be alleviated when our new Southern mills come into production early next year."

SIR ERIC VANSITTART BOWATER,
Bowater Paper Corporation, Ltd.

Financing Undertakings Abroad

"Competition from other countries is hardening in all parts of the world and is aggravated by the difficult problem of financing the extensions of large undertakings abroad which are prepared to place important contracts for capital equipment in this country, if we can arrange the necessary finance to bridge the period which must elapse before those developments can earn revenue. This overseas financing must not come from reduced essential investment in power supply at home, because by such action any improvement in the overseas position would be at the expense of improvement in the efficiency of productive industry at home. Such overseas financing can only come from savings in Government expenditure, involving, if necessary, some tightening of our belts' in financing in all but essential fields."

RESULTS OF INDIA AND MEGNA JUTE COMPANIES BETTER

IMPRESSIVE RISE IN PROFIT OF MARTIN BURN

India Jute Co., Ltd.

THE directors of the above Company (Managing Agents: Messrs. Mackinnon, Mackenzie and Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 30th September, 1952.

The accounts show a profit on trading Rs. 2,27,134 (loss of Rs. 17,55,455). Adding thereto the dividend for the half-year on investment in the Megna Mills Co., Ltd. Rs. 1,35,883 (Rs. 67,941), interest accrued or received Rs. 1,119 (Rs. 1,137) and sale proceeds of scrap materials, etc. Rs. 5,008 (*nil*), transfer from contingency suspense and other income *nil* (Rs. 20,07,130) the profit amounts to Rs. 3,69,144 (Rs. 3,20,753). Deducting therefrom interest on loans Rs. 39,404 (Rs. 1,12,863), retiral gratuities to workers Rs. 25,157 (Rs. 16,837), depreciation Rs. 1,51,635 (Rs. 1,34,961) and taxes *nil* (Rs. 13,641), there is a balance of Rs. 1,52,948 (Rs. 42,450). Adding thereto the sum brought forward from the previous year's account Rs. 1,43,281 (Rs. 99,660), there is available for distribution Rs. 2,96,229 (Rs. 1,42,110). The directors recommend that this be disposed of by payment of a dividend on 69,600 ordinary shares at 5 (2½) per cent. per annum, i.e., Rs. 3-2 (Re. 1-9) per share Rs. 2,17,500 (Rs. 1,08,750) and payment of a dividend on 30,000 deferred shares at 5 (2½) per cent. per annum Rs. 750 (Rs. 375) leaving a balance to be carried forward of Rs. 77,979 (Rs. 32,985).

Jute in stock has been valued at or under cost price and finished goods at contract and market rates.

In accordance with the Main and Supplementary Working Time Agreement of the Indian Jute Mills Association, the Mills worked 42½ hours per week with 12½ per cent. looms sealed throughout the half-year. Difficult trading conditions continued with prices tending downward and business being unprofitable, due mainly, to the lack of demand from Overseas. As advised in our last report, the Government of India reduced the export duties on hessian and sacking. This improved considerably the long-term prospects for the industry, but prices continued to fall due, to a large extent, to the prospects of large jute crops in both India and Pakistan. It was a matter of regret when it was announced that the Indo-Pakistan trade talks, as regards jute, had not been successful, the negotiations having broken down on the question of the special licensing fee imposed on raw jute exports to India which was considered to be discriminatory. The placing of a large order for hessians for the Argentine towards the close of the half-year improved the general tone of the market. This was also reflected in heavy goods. Although the demand for hessians has been sustained, since then there has been a lack of real demand for heavy goods and until this is forthcoming the immediate prospects are not good.

Megna Mills Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Mackinnon, Mackenzie and Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 30th September, 1952.

The accounts show a profit on trading of Rs. 6,67,485 (loss of Rs. 7,80,553). Adding thereto the interest accrued or received Rs. 1,054 (Rs. 1,052), sale of scrap materials, etc. Rs. 10,222 (*nil*), profit on sale of old machinery Rs. 25,473 (*nil*), and transfer from contingency and other income *nil* (Rs. 11,08,980) and after deducting interest on loans Rs. 67,596 (Rs. 1,24,296), retiral gratuities to workers Rs. 10,388 (Rs. 18,339), depreciation Rs. 2,93,897 (Rs. 1,42,580), provision for taxes Rs. 12,758 (Rs. 12,758) and transfer to contingency suspense Rs. 1,00,000 (*nil*), there remains a balance of Rs. 2,19,597 (Rs. 31,406). Adding the balance brought forward at credit of profit and loss account of Rs. 1,02,068 (Rs. 1,00,102), there is available for distribution a sum of Rs. 3,21,663 (Rs. 1,31,508). It is recommended that this be disposed of by payment of a dividend on 81,652 ordinary shares at 5 (2½) per cent. per annum, i.e., Rs. 2-8 (Re. 1-4) per share Rs. 2,04,130 (Rs. 1,02,065) and leaving a balance to be carried forward of Rs. 1,17,533 (Rs. 29,443).

Jute in stock has been valued at or under cost price and finished goods at contract and market rates.

Martin Burn Ltd.

The directors of the above Company (Chairman: T. Leslie Martin, Esq., Calcutta) submit the audited accounts of the Company for the year ended 30th September, 1952.

The profit and loss account shows a profit on the year's working of Rs. 50,15,561 (Rs. 39,75,221), to which is added the balance brought forward from the previous year of Rs. 2,35,696 (Rs. 2,26,800) making a total of Rs. 52,51,257 (Rs. 42,02,021). From this there has been provided for: taxation Rs. 22,75,000 (Rs. 17,50,000), and transfer to capital redemption reserve fund Rs. 2,00,000 (Rs. 2,00,000), investment reserve Rs. 6,00,000 (Rs. 4,00,000), leaving a balance available for disposal of Rs. 21,76,257 (Rs. 18,52,021). The directors paid as interim-dividends, the dividend payable on the preference shares for the half years ended 31st March, 1952, and 30th September, 1952, amounting to Rs. 1,50,000 (Rs. 1,50,000), and now recommend payment of a dividend on the ordinary share capital of the Company, at Re. 1-4 (Re. 1) per share absorbing Rs. 16,31,969 (Rs. 13,03,400), plus a special payment of As. 2 (As. 2) per share absorbing further Rs. 1,63,197 (Rs. 1,62,925), leaving a balance to be carried forward to the next account of Rs. 2,31,092 (Rs. 2,35,696).

During the year ended 30th September, 1951, holders of Rs. 43,500 convertible notes exercised their option to convert their holdings into ordinary shares resulting in an increase in the ordinary share capital of the Company by 2,175 shares, and a reduction of Rs. 43,500 in the convertible notes outstanding. Thus, the total ordinary shares subscribed at 1st October, 1951, was 13,05,575 and the amount of convertible notes outstanding at 1st October, 1951, was Rs. 38,88,500, the total reserve arising from surplus on conversion being Rs. 55,750.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	1,60,55,750	Block ...	8,21,163
Convertible notes ...	38,88,500	Goodwill ...	25,17,685

Rs.	4,56,02,160	Rs.	4,56,02,160

Arvind Mills Ltd.

The directors of the above Company (Agents: Messrs. Narottam Lalbhai & Co., Ahmedabad) submit the audited accounts of the Company for the year ended 31st December, 1952.

The profit for the year amounts to Rs. 8,25,782 (Rs. 54,98,401), to which has been added last year's balance of Rs. 1,37,004 (Rs. 52,656), making a total of Rs. 9,62,786 (Rs. 55,51,057). From this amount has been deducted the *ad-interim* dividend for the first-half of the year 1952, absorbing Rs. 1,57,500 (Rs. 1,57,500), and provision for taxation Rs. 3,30,000 (Rs. 24,50,000), leaving an available balance of Rs. 4,75,286 (Rs. 48,00,000). The directors have made the following payments:—

Dividend of Rs. 17-8 (Rs. 17-8) per share, income-tax free, on 21,000 ordinary shares for the second half of the year, absorbing Rs. 3,67,500 (Rs. 3,67,500), dividend on 5,250 5 (5) per cent. cumulative preference shares, less income-tax, Rs. 19,359 (Rs. 19,359), dividend on 10,500 4½ (4½) per cent. cumulative preference shares, less income-tax, Rs. 34,847 (Rs. 34,847), dividend on 10,500 4½ (4½) per cent. "A" class redeemable cumulative preference shares, less income-tax, Rs. 34,847 (Rs. 34,847) and a dividend on 5,250 4½ (*nil*) per cent. "B" class redeemable cumulative preference shares less income-tax, Rs. 17,423 (*nil*) leaving to be carried forward, to next year's account Rs. 1,309 (Rs. 1,37,004).

The year 1952 was unusually an exceptional year. The prices of Egyptian cotton soared to unlimited heights, because of a squeeze in Egypt, and India imported large quantities of American Cotton. To add to these troubles, there was a financial crisis in the country during the month of March and funds became scarce, with the result that prices of all commodities declined by about 10 to 40 per cent. This cost of production kept on rising owing to higher dearness allowance and rise in the price of stores and fuel. The result of working, therefore, has been unsatisfactory.

During the year under report, an amount of Rs. 9,62,155 was received as refund of part excess profit tax, under Section 10 (1) of the Indian Finance Act, 1942, in respect of years 1941 to 1946 and the directors have transferred the said amount to the reserve fund.

The Company's properties have been insured against fire, excepting a certain risk which is carried by the Company. The standing charges and profits have also been insured. The mills have 62,448 ring spindles, 3,348 doubling spindles and 1,216 looms and complete dyeing and bleaching plants.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	57,75,000	Block ...	1,18,76,140
Reserves ...	2,83,78,675	Stock-in-Trade ...	58,44,898
Provision for taxation ...	5,01,126	Other assets	2,50,000
Liabilities ...	20,95,808	Debts, deposits and advances ...	47,97,472
Profit and loss account ...	4,75,286	Investments	1,12,44,190
		Cash ...	32,13,195
Rs.	3,72,25,895	Rs.	3,72,25,895

Bararee Coke Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Jardine Henderson Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 30th September, 1952.

The profit and loss account shows a balance of profit of Rs. 1,53,953 (Rs. 2,34,067) to which has to be added the balance brought forward from the previous half-year, Rs. 57,055 (Rs. 30,005), overprovision for taxation in respect of previous years Rs. 32,653 (*nil*), making a total of Rs. 2,43,662 (Rs. 3,38,766). Out of this sum, there has been provided for taxation Rs. 53,381 (Rs. 85,000) and transferred to depreciation account Rs. 39,986 (Rs. 50,000) leaving a balance available for disposal of Rs. 1,50,294 (Rs. 2,03,766). This sum the directors recommend should be dealt with, in payment of a dividend on the share capital of 7½ (8¾) per cent. without any deduction for income-tax paid by the Company, absorbing Rs. 90,000 (Rs. 1,05,000) and in carrying forward Rs. 60,294 (Rs. 98,766).

Manufacture and despatches during the half-year were as follows:—

	Manufactured	*Despatched*
	Tons	Tons
Coke	28,365	28,332
Tar and Pitch	1,343	1,723
Sulphate of Ammonia	190	202
	Gallons	Gallons
Benzol	5,636	7,256

The directors consider the results for the half-year satisfactory under present-day conditions. Relations between management and labour at the works were good. Foodstuffs were still being issued to the workers at concession rates. The wagon supply position was not up to expectations. Working during the current half-year has been satisfactory, so far.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs
Capital ...	12,00,000	Block ...	3,31,240
Reserves ...	8,32,703	Stock ...	7,42,320
Provision for taxation ...	3,34,000	Stores ...	8,81,463
Liabilities ...	14,56,455	Debts, deposits and advances ...	18,28,545
Profit and loss account ...	60,294	Investments	800
		Cash ...	99,084
Rs.	38,83,452	Rs.	38,83,452

Central Kurkend Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Anderson, Wright & Co., Calcutta) submit the audited accounts of the Company for the half-year ended 30th June, 1952.

The profit, after deduction of all working charges and commissions, amounts to Rs. 24,000 (Rs. 320), to which is added the credit balance brought forward from the previous half-year of Rs. 6,672 (Rs. 35,000) making a total of Rs. 30,673 (Rs. 39,521). After providing for depreciation Rs. 28,400 (Rs. 32,000), there remains a balance of Rs. 2,273 (Rs. 7,521) which the directors recommend should be carried forward.

Raisings during the half-year were 77,097 tons, as compared with 68,566 tons, during the previous half-year and 87,349 tons, during the corresponding period of 1951. Despatches were 54,297 tons, as compared with 52,873 tons, and 68,503 tons, respectively.

In view of the unsatisfactory trading results for the half-year the directors do not consider it advisable to provide for full depreciation upon the enhanced value of the Company's assets. Provision for depreciation has, therefore, been made at full income-tax rates.

The Coal industry at present is in a position where the prices of coal are statutorily controlled at a level which bears no relation to present day costs, owing to accumulation of burdens which have constantly increased regardless of controlled prices. As a result, little or no margin exists between costs of production and selling prices. Furthermore, the acute shortage of wagons is another adverse factor which has not only seriously restricted output but is not conducive to increased sales.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	8,00,000	Block ...	16,92,909
Reserves ...	13,30,249	Stock ...	6,92,471
Provision for taxation ...	59,743	Stores ...	2,35,914
Liabilities ...	12,19,200	Other assets	22,936
Profit and loss account ...	2,273	Debts, deposits and advances ...	7,55,164
		Cash ...	12,071
Rs.	34,11,465	Rs.	34,11,465

STRINGENCY IN MONEY PERSISTS

(From Our Own Correspondent)

BOMBAY, 25*th March*

There was no fresh development in the short-term money market during the week under review. With more borrowers and few lenders, the market continued to experience stringent conditions. As the supply of funds was very meagre the demand for funds could not be met in full, with the result that the volume of business in inter-bank call money was at a low ebb. The inter-bank call rate among the Exchange banks and big Indian banks remained at 3 per cent. The rate among the small Indian banks also was stationary at 3 per cent. but, as funds were unavailable to them at this rate, the banks had to seek accommodation from the Reserve Bank and the Imperial Bank of India.

The stringent condition in the market is attributed to the heavy withdrawal of some of the funds of semi-Governmental concerns. Further, funds which were lent to inland centres for financing movement of cotton, oilseeds, etc., have not returned.

In the term money section, 3 months' deposits were offered at 2¾ per cent. with occasional business passing at 3 per cent. Six months' deposits were quoted at 2½ to 2¾ per cent. House money at call fetched 2½ per cent.

This week's tenders for Rs. 1 crore of three months' Government of India Treasury Bills brought offers of Rs. 101.50 lakhs, as against Rs. 108.75 lakhs last week. The average rate of accepted tenders, however, remained unchanged at Rs. 2-7-0 per cent. per annum.

A decline of Rs. 5 crores in notes in circulation and an expansion of Rs. 5.47 crores in notes held in the Banking Department are disclosed by the statement of affairs of the Reserve Bank of India for the week ended 20th March, 1952. The increase of Rs. 46.89 lakhs in total notes issued is covered by a corresponding rise in rupee coin. The most outstanding feature of the Banking Department is the sharp decline of Rs. 24.97 crores in Central Government deposits followed by an increase of Rs. 27.66 crores in those of the State Governments. Evidently, these variations reflect the transfer of resources by the Central Government to State Governments, presumably in accordance with the recommendations of the Finance Commission. Deposits of banks are lower by Rs. 36.34 lakhs. On the assets side of this department, balances held abroad reveal a small decline of Rs. 18.49 lakhs. Loans and advances to Governments are unchanged, but other loans and advances have risen by Rs. 4.52 crores. There has been a fresh advance of Rs. 2 crores by the Bank to Scheduled Banks against usance bills during the week, but the outstandings at the end of the week show no variations. Apparently, the banks must have repaid a like amount. Investments are lower by Rs. 4.08 crores and Government Treasury Bills purchased and discounted by Rs. 1.86 crores.

The Scheduled Banks' statement for the week ended 13th March, 1953, shows, as compared with that for the previous week, that the demand deposits of banks have risen further by Rs. 2.05 crores, while no significant variation is noted in their time deposits. Inter-bank borrowings repayable on demand are higher by only Rs. 46.35 lakhs, reflecting the poor turnover in inter-bank call money business. Inter-bank borrowings of a time nature show no change. Borrowings from the Reserve Bank have gone up by Rs. 61 lakhs and from the Imperial Bank by Rs. 60 lakhs. Advances are better by Rs. 2.91 crores, but bills purchased and discounted have declined by Rs. 96.35 lakhs. Investments have gone up by Rs. 92.54 lakhs. Cash-on-hand and balances with the Reserve Bank are together lower by Rs. 1.88 crores. Money at call have declined by Rs. 52.66 lakhs.

The recent spell of cheerful conditions in the Gilt-edged market was not very much in evidence during the week under review, as the demand fell off. The undertone, however, remained fairly steady. 3 per cent. 1953-55 was unchanged at Rs. 100-1, as also 3 per cent. 1957 at Rs. 98-12. 3 per cent. 1958 was placed an anna lower at Rs. 98-8. 3 per cent. 1959-61, 3 per cent. 1963-65 and 3 per cent. 1964 disclosed no change at Rs. 96-3, Rs. 92-10 and Rs. 92-10, respectively. 3 per cent. 1966-68 was dull at Rs. 90-9. 3 per cent. 1970-75 was featureless at Rs. 86-11. 3 per cent. 1986 Conversion Loan disclosed a loss of As. 2 at Rs. 82-14. Among the State loans, both 3 per cent. 1960 and 3 per cent. 1962 Bombay issues improved by As. 8 to Rs. 94-8 and Rs. 92-8, respectively. 4 per cent. 1964 Bombay rose by As. 2 to Rs. 101-4 and 4 per cent. 1964 Madras by As. 5 to Rs. 100-10.

There was no change in the rupee-U.S. dollar rate during the week, although the pound sterling experienced some minor fluctuation in terms of the U.S. dollar. In New York, the £ sterling which was placed at $2.81-9/16—2.81-11/16 for spot delivery on the 18th inst. shaded off to $2.81-7/16—2.81-9/16 on the next day. After improving to $2.81-9/16—2.81-11/16 on Monday this week, it closed at $2.81½—2.81⅝ yesterday.

KIPS CLEARANCE GOOD

(From Our Own Correspondent)

MADRAS, 23*rd March*

Arrivals of kips have been moderate and clearances good. Prices have ruled firm, due to exporters purchases to cover outstanding orders and are 1d. to 2d. above U.K. levels. Tanned cow calf and cow inferior fifths are in good demand, but arrivals have been small.

Shippers to Japan have been active buyers of tanned sheep skins and prices have increased by As. 4, as compared with last week. Prices of tanned goat skins also have slightly increased.

BULLION ERRATIC

(From Our Own Correspondent)

BOMBAY, 25*th March*

After last week's sharp drop in prices, the bullion market presented an irregular trend during the week under review. Early in the week, both the metals displayed a tendency to harden, but, on Saturday last, silver was again subjected to heavy selling pressure. There was, therefore, a sharp reaction on that day. This declining trend persisted till yesterday when both silver and gold touched low levels not seen for over two months. The low levels, however, brought a revival of demand and short-covering to-day and prices responded favourably with a smart rise. Nevertheless, over the week, silver lost Re. 1-1 per 100 tolas. Gold, however, was able to make good the earlier loss and register a gain of As. 14 per tola for forward.

The recovery in bullion prices during the earlier part of the week was assisted by unfavourable rumours about the proposed estate duty levy. Further, after the previous week's decline, short sellers were inclined to cover their sales. But, as the week progressed, the erstwhile bulls chose to lighten their commitments. This resulted in a downward trend once again. Besides, arrivals of gold were also larger with no corresponding improvement in offtake. To-day's recovery was more marked in gold, because of the report of a big haul of smuggled gold in the city.

Silver for forward delivery in April opened at Rs. 159-1 and advanced to Rs. 161-8 on Friday. From Saturday onwards, there was a small landslide in silver, with prices declining to Rs. 156-1 yesterday, a level not seen since 27th January last. As the rate went down below Rs. 157, that is, Rs. 5 lower than the last clearing rate of Rs. 162, special clearing in both the metals was enforced yesterday, the second in the last two weeks. To-day, there was a sizable recovery to Rs. 158-15 before closing at Rs. 158-7.

Ready silver (.996 Mint) improved from Rs. 159-1 to Rs. 161-8, and, after receding to Rs. 156-1, regained to close at Rs. 158-7. The floating stocks of silver are placed at 1,700 bars. The daily average offtake was no more than 10 bars.

Gold for forward delivery began at Rs. 84-6 and hardened to Rs. 85-11 on Friday. In the subsequent decline, the yellow metal dropped to Rs. 83-9 yesterday. To-day, however, there was a substantial improvement on bear covering and lower arrivals to Rs. 85-10, before profit-taking intervened. The closing rate was Rs. 85-2.

Ready gold, after improving from Rs. 84-6 to Rs. 85-10, dropped to Rs. 83-9, only to rebound to Rs. 85-3 at the close. The floating stocks of gold are reported to be 60,000 tolas. The daily average arrivals were 8,000 tolas, while the offtake was 5,000 tolas on an average.

There was no change in the price of silver in London and New York, where it stood at 74*d.* and 85¼ cents per fine ounce, respectively. In the international free market for gold, the yellow metal was quoted at $37.05 in Europe, as against $37.10 last week.

The following comparative table shows the trend of the market during the week under review:

	25-3-53	Highest	Lowest	18-3-53
	Rs. a.	Rs. a.	Rs. a.	Rs. a.

BRADFORD TOPS FIRM

(Messrs. J. Hardacre and Co.)

BOMBAY, 24*th March*

There has been a further advance in quotations from Bradford tops which is more marked in merino qualities than in any other section of the market. The proportion of wool suitable for these fine tops in primary markets just now is rather small and this has forced replacement costs on to a higher basis than is represented by Bradford quotations for tops. By comparison with Thursday last, merinos are about 6*d.* per lb. dearer. There has been substantial business in merino tops this week, with the delivery dates being pushed further ahead. In the crossbred section, the rise is 2*d.* per lb. Taken all round, there is still an upward tendency in this market, values being very firm at these higher prices.

Values at yesterday's London wool sales advanced by 5 to 10 per cent. as compared with the previous rates.

Wool values at Sydney this week are quoted as being at the season's highest point; prices are advancing daily at the rate of 2½ per cent. At Geelong, the wool market closed on the series strongest note, under keen and widespread competition. Values were fully firm. Values at East London and Capetown are 2½ per cent. higher.

The current quotations (in pence per lb. c.i.f. Bombay) for Bradford oilcombed tops are given below:

	May-June, 1953
48's Carded	87/88*d.*
58's Super	125*d.*
60's Super	147*d.*
64's Super	168*d.*
70's Super	186/7*d.*
	May, 1953
Fibro (3D. 4")	43½*d.*
46/48s scoured clothing wool	84*d.*

The tendency of the market is exceptionally strong.

COTTON STEADY

(From Our Own Correspondent)

BOMBAY, 25*th March*

Even though the forward market in cotton in Bombay touched the highest level so far achieved during the season, the week under review was, on the whole, uneventful. The market had already anticipated, earlier during the week, the slight advantage for Indian cotton derived from the ruling out of any possibility of Pakistan cotton coming to augment the supplies here during this year. It was disclosed during the trade negotiations at New Delhi between India and Pakistan that the latter had no cotton to offer to India. This would mean that even if the question of devaluation were to revive once again and even if Pakistan were led to accept devaluation by force of economic events, there would be little chance of Pakistani cotton being imported for consumption in Indian mills for the next six months or even a little longer.

In the final analysis, it is not whether Pakistani cotton is imported into India or not, which would govern the prices of Indian cotton, but this would depend more on the actual demand from the mills for such cotton. This demand would depend more on the condition of the internal and foreign markets for Indian cloth as well as the quality of the cloth that would be in demand. In the first place, the demand, after a little spurt, has slackened. Secondly, the mills feel, rightly or wrongly, that any possible demand will be more for fine, and especially, superfine cloth than for coarse and medium cloth. In spite of the spoon-feeding it is receiving, the handloom industry cannot be expected to consume larger quantities of lower counts yarn all of a sudden. The emphasis has, therefore, shifted from Indian cotton to imported styles in the spot market during recent weeks. If this trend persists for some time, as it is likely to do, and if Indian cloth is not likely to finds its way into Pakistan, it might be said that the present level of prices, both in the spot and in the forward markets, is about the highest that are likely to be touched this year; Rs. 720 to Rs. 725 appears at this stage, as the peak price unless there is cornering on a large-scale by a powerful syndicate. This does not mean that selected growths of Indian cotton will not command good premium now and then, when there is a special demand for them. But these higher prices in special cases will not go to affect the general trend in the forward market. The anticipated inflationary policy of the Government of India which might go to create a greater consumption of Indian cloth within the country because of the increased purchasing power is not likely to materialise till inflation gathers as certain degree of momentum and by the time it does so, the present cotton year will be over. Mills have already turned cautious in making their purchases. Cotton markets all over the world are also devoid of much enthusiasm and any effective drive by the U.S.A. to increase exports might tend to depress prices. All this, however, should not be interpreted as pointing to a slump round the corner. It only means that there is no boom ahead apart from temporary spurts on technical grounds now and then.

The position is slightly different with regard to exportable styles. In these, India does not have to compete with any other country except Pakistan. Stocks of short-staple exportable varieties are scattered far and wide in the country and no pressure is, therefore, likely to be exercised on prices by these, as difficulties of collecting them at one place for shipments will always be there. Pakistan prices are higher and even if they were to come down, there is a special class of consumers for this cotton, which will absorb available supplies. Though there is not much activity at present in the export market, the general feeling in the trade is that when it is realised that Bengal Deshi is not available, a demand for Oomras and Dholleras might arise. On the import front we have failed so far to obtain anything from East Africa. Certain Egyptian styles, however, have remained favourites with Indian mills and they are being imported regularly.

The following are the latest quotations from the spot market:

Bengal Deshi Rs. 575-620; Berar Jarilla Rs. 735-750; Vijay Rs. 860-870; Moglai Rs. 675-685; Khandesh Rs. 760-825; Oomra Deshi Rs. 700.

The following is the trend of prices in the forward market for the week ended 25th March, 1953:

	Opening	*High*	*Low*	*Closing*
	Rs. a.	Rs. a.	Rs. a.	Rs. a.
I.C.C. May	709 0	714 0	700 8	703 4
,, August	718 0	724 0	711 0	714 8

At Karachi, the optimism created by talks of big barter deals will be difficult to sustain for a long time unless some of these deals materialise soon. Japan is as evasive as ever and will be more so after the arrival of the American marketing specialists there to induce Japan to use more American cotton. In the meantime, Karachi is busy reselling some of the cotton purchased by France to other Continental countries at a slightly lower price. Some recession in prices at Karachi is bound to occur soon because enquiries have dried up after the recent rise. Political uncertainty within the country might also induce holders to dispose of their stocks by gradually reducing prices.

The following are the latest available quotations from the Karachi market: Bengal Deshi Rs. 67; 4F Punjab R.G. Rs. 56½ to Rs. 58; S.G. Rs. 60 to Rs. 61½; L.S.S. Punjab R.G. Rs. 60; S.G. Rs. 64½; N.T.R.G. Rs 65; 289 Punjab R.G. Rs. 65½ to Rs. 66; S.G. Rs. 71½ to Rs. 72.

At Alexandria, activity in the spot market continues unabated. The U.K. is gradually leaning once again on this market. France and Germany are also interested as production, next year, especially that of Karnatak, is bound to be considerably reduced under the Government decree. The all-round demand to secure these stocks while they last is bound to continue for some time. No development of significance is, however, expected in this market till a clearer picture of the Government's marketing policy for the coming year is available.

At New York, while internal consumption continues satisfactory, the export situation is causing real anxiety both to the authorities and the operators. The peace feelers in recent weeks from the East have gone further to increase these anxieties. The Department of Agriculture has, therefore, decided to send out one of its marketing specialists to Asia to find out ways of increasing exports of U.S. cotton to these countries. Curiously enough, one of the countries mentioned in the list for such efforts is Pakistan. It is difficult to see how the U.S. expects Pakistan to consume its cotton when Pakistan itself is an exporter of similar varieties. The price trend after the previous week's rise has been lower on the whole and it is not likely to improve in the near future even if there be no appreciable recession from the present level.

The following are the latest available quotations from New York as compared with those of a week and a fortnight before:

(In cents per lb.)

SCARCITY IN STAPLE FIBRE

(From Our Own Correspondent)

BOMBAY, 25*th March*

Last week's hectic buying in the art silk yarn market gave way to selling pressure during the major part of the week under review. This was influenced, in the main, by fairly good arrivals of yarn into the market, following unloading of imported shipments. Also, there was large-scale profit-taking at higher levels. Values of yarn, as a result, tended to decline. The downward trend persisted till to-day, when it was reversed, on reports of an increase of 3*d.* per lb. in Japanese yarn prices. These reports, coupled with expectation that the Government would not revise its import policy for art silk yarn, induced, once again, mild support at the low levels. But this was not strong enough to bring about a full recovery. Closing rates to-day were, therefore, lower than those at the end of last week.

In the forward section, 150D March contract, after losing 29 points to Rs. 824 yesterday, recovered to Rs. 846 to-day. At the close, however, it was a shade easy at Rs. 838. The net loss over the week was thus to the extent of Rs. 15. 150D April contract receded from Rs. 860 to Rs. 831 before finishing the week higher at Rs. 845, losing thereby Rs. 15. Values of yarn in the ready section moved in sympathy with those in the forward section. 150 Japan and 150 Italy declined by As. 3 and As. 2 to Rs. 4-5 and Rs. 2, respectively, yesterday; to-day, they were higher at Rs. 4-6 and Rs. 4-3. 120 Japan fluctuated between Rs. 5 and Rs. 4-11 before closing at Rs. 4-12. 120 Italy receded from Rs. 4-4 to Rs. 4-2 on the 21st inst., but improved to Rs. 4-3 to-day.

The table below gives the prices of art silk yarn quoted to-day, as compared with those on the 18th and 11th inst.

Art Silk Yarn—	25-3-53 Rs. a.	18-3-53 Rs. a.	11-3-53 Rs. a.
150D March (per case of 200 lbs.)	838 0	853 0	776 0
150D April ,, ..	845 0	860 0	799 0
120 Japan (per lb.) ,, ..	4 12	5 1	4 13
150 Japan ,, ..	4 6	4 8	4 5
120 Italy ,, ..	4 3	4 4	4 3
150 Italy ,, ..	4 3	5 4	3 15

As reported last week, the traders are very much disappointed over the meagre import quota allotted for art silk yarn. In view of the great need for meeting the demands of handlooms and powerlooms at reasonable prices, it is felt that the Government should have been more liberal in its policy. According to the trade, a larger quota will help stabilise art silk yarn values in the country which are very high *vis-a-vis* the world prices. The difference in the price now prevailing in the country and the current world prices is about Rs. 2 per lb. on an average.

The staple fibre section remained fully firm, supplies being scarce. Buying support was seen particularly in 2/40s yarn which resulted in an improvement of As. 4 per lb. Yarns of 20s and other counts were also reported slightly higher, the rise in the quotations ranging from six pies to an anna per lb. Traders are eagerly awaiting the Government's import policy. Fresh licences, it is expected, will be granted to consumers during the next two or three weeks.

GROUNDNUTS EASY

(From Our Own Correspondent)

BOMBAY, 25*th March*

The oilseeds market remained closed to-day and on the 23rd inst., on account of the death of a prominent merchant and *Ramanavami*, respectively. During the remaining sessions, the market ruled easy. A natural reaction which should follow a steady rise for a considerable time past was in full evidence this week. It was, in fact, responsible for the easiness. Persistence of generally discouraging overseas advices for almost all oils also contributed to the trend. The cumulative effect was that prices of oilseeds and oils declined under a wave of selling pressure and recorded sizable losses over the week.

The persistent rumours in the market of a possible ban on exports of oil from India lose their force in the context of world prices of vegetable oils, which are generally lower than those prevailing in India. As export of these oils is already subjected to quota controls, there is no need at all for further restriction by way of a ban on exports.

Although the decline in the prices of groundnuts is welcome, such is not at all appreciable, as the prices are still far above those which prevailed a few weeks ago. Bold ready, for instance, declined this week by Re. 1-4 to Rs. 41-12. But, as compared with those on the 24th February, they were higher by Rs. 3-8. Khandesh quality was reported done lower by Re. 1 at Rs. 42-4. The rate a month ago was Rs. 38-12. Groundnut oil ready lost As. 10 to Rs. 23-8 and railway receipts As. 6 to Rs. 22-10. Four weeks ago, the rates were Rs. 20-6 and Rs. 20-2, respectively. It was rumoured that Saurashtra might prohibit exports of groundnuts to other States.

The linseed section has been reflecting more or less the same trend as in groundnuts for a sufficiently long time now. This is attributed to the use of linseed oil as an adulterant with the comparatively high priced groundnut oil. Bold ready receded by Re. 1-2 to Rs. 29-6. Linseed oil was lower by As. 4 at Rs. 15-2.

Despite the fact that some business was reported with the U.S., in castor oil commercial quality between 18¾c. and 19c. early in the week, later advices regarding lower U.S. offers to buy at 18¼ cents to 18½ cents were discouraging. As a result, castor oil first pressure eased by As. 12 to Rs. 19-4 and commercial quality by As. 10 to Rs. 18-4. Castorseeds May which opened steady at Rs. 158-8, fluctuated between Rs. 160-8 and Rs. 152-8, before closing at Rs. 153-12. Madras quality was done at Rs. 32 as against Rs. 33.

The following table shows the prices of oilseeds and oil on the 24th inst., as compared with those on the 18th and 11th inst.

	24-3-53	18-3-53	11-3-53

PEPPER QUIET AT CLOSE

(Messrs. Parekh & Co.)

BOMBAY, 25*th March*

During the earlier part of the week black pepper ruled firm in sympathy with New York where speculators are said to be trying to boost up the prices by absorbing all offers from India ranging from $1.46 to $1.48 with a view to propping up the morale of the Indian market. One of the speculators at New York who was able to stage a successful bull squeeze in the year, 1951, by raising the spot price of pepper in New York to a record high price of $2.90 per lb., is now reported active in building long position both for ready and April-May-June shipments by buying in New York and in India all available contracts. But, a knowledgeable source in the trade opines that he may not be able to get as big a following as in 1951, because nobody, either among the grinders or among the dealers, in the U.S.A. is expecting that the recent moves by the new American Administration will lead to a world-war. In the later part, however, prices in all primary markets ruled quiet under pressure of offerings by planters who exhibited anxiety to sell off their holdings at round about the present price. Most of the prominent exporters in India are looking to the present rise in New York with misgiving. They are more prone to sell big quantity at round about $1.45 per lb., for April and May shipments. They think that as long as America is in the market, the growers are presenting firmer front, but the moment the country is off the market, they will be nervous sellers in view of the smaller export from India, and incoming competition from Sarawak and Lampong where crop prospects are reported better.

In the local market, in A.S.T.A. section, interbazar business, for April shipment, was doing on a fairly large scale at prices from $1.48 down to $1.44. Alleppey and Calicut are reported soft sellers at Rs. 3,350 to Rs. 3,500 respectively.

Following are to-day's nominal quotations: Ready delivery Rs. 2,750, March Rs. 2,690-2,720 and April Rs. 2,735-65 per candy of 5½ cwts.

FALL IN JUTE GOODS PRICES

(From Our Own Correspondent)

CALCUTTA, 24*th March*

The week under review was highlighted with last Friday's announcement of a three-year Indo-Pakistani Trade Agreement, according to which India will import from East Bengal 18 lakh bales of jute in each of the three jute years, beginning from July this year. India can increase this quantity up to 25 lakh bales a year, should there be need for a larger quantity of jute. The abolition of the discriminatory licensing fee of Rs. 2-8 a maund and the revision in the export duty on *kutcha* bales to Rs. 3 from Rs. 3-12 a maund remove the advantage which the Continental and other overseas importers of East Bengal jute have been enjoying for many months past.

However, foreign buyers will naturally hesitate to enter into commitments, if quotations are not on a par with those of the Continental manufacturers, and, as such, it was no surprise to witness the development of a bearish tendency after last Friday. There was some amount of speculative selling too, and sacking, which was already following a pronounced downward tendency, fared worse than hessian. B. twills opened at Rs. 90-8 last Wednesday, and the price was soon raised to Rs. 91-8, following some covering demand and the interest shown by speculative shippers. Business with foreign buyers was difficult, but mills continued to release stocks to satisfy shippers' instructions. However, this could not relieve stocks, since current production is going to mills' godowns. Over the week-end, the rate fell to Rs. 89-14 from Rs. 91-6, and touched a low of Rs. 89-2 yesterday.

The hessian market also ruled quiet, despite rumours about an order from Argentina and the talk about sealing of 5 per cent. of the hessian looms by mills. Mills were anxious to sell forward, but the turnover was limited. Hessian 40" 10 oz. opening at Rs. 40-2 improved to Rs. 40-6 on bear-covering, but over the week-end eased to Rs. 40. The rate was even lower at Rs. 39-14 yesterday. 40" 8 oz. was offered at Rs. 32-6 f.a.s., and at Rs. 39-2 f.o.b.

Although there was no change in jute prices as a first reaction to the Indo-Pakistan Trade Agreement paving the way for increased imports of jute from Pakistan, a decline in rates was a feature of yesterday's tendency in the market. Assam bottoms were hammered down to Rs. 18 from Rs. 19, with Dalcolas and Kissanganjs being offered at Rs. 19-8 and Rs. 18-8, respectively. Pakistan jats were held at Rs. 24. *Bimli* f.a.q. was not wanted even at a low rate of Rs. 14.

TEAS GENERALLY EASY

(From Our Own Correspondent)

CALCUTTA, 24*th March*

In contrast to the tendency during auctions of recent weeks, generally easy conditions prevailed during yesterday's export sale, where offerings amounted to 53,500 packages. Lack of adequate demand contributed to the change in sentiment. While prices for better Assams and low medium and common fannings were maintained at previous rates, better liquorinng fannings and whole leaf grades eased by half an anna. Bright liquoring varieties tended to show fractional rises. Common broken pekoes and low mediums had a firm market, while stylish B.P.S. teas were better by half an anna. Improved quality medium Assams were steady. The rates were: good Assam CTC BP Re. 1-14 to Rs. 2, medium Assam BP Re. 1-10 to Re. 1-10-6, clean black pekoe Re. 1-7, and clean common BP Re. 1-9.

Although demand was moderate, a fractional recession in prices was witnessed during last week's internal auction where offerings aggregated 19,866 and 1,071 packages of dust and other grades respectively. Such a decline was more marked in the dusts section than in the leaf market. The commonest varieties, commons and low mediums were quoted at lower rates. However, good mediums were about steady, while good CTC varieties were on occasions raised by As. 2 and the clean black leafy types, suitable for export, had a ready market. The rates were: Good red Assams Rs. 2-1, medium Dooars Re. 1-7, and medium grainy Assams Re. 1-9-6.

FOODGRAIN PRICES RECEDE

(From Our Own Correspondent)

HAPUR, 23*rd March*

The overall food position in Uttar Pradesh is quite easy and there has been a general fall in prices. There are huge stock accumulations of coarse grains in the 11 eastern districts of U.P. and the State Government is now disposing of the same. It has been decided to send a total of 8,500 tons of milo and 3,500 tons of *bajra* to Bombay. About 3,000 tons of rice are being sent to West Bengal and 1,000 tons to Bihar. The Regional Food Controllers all over the State are selling by auction to the trade several lakh maunds of gram and barley out of the Government's stocks lying in the different districts. Permits for the movement of auctioned stocks outside the State will also be granted.

Following were the wholesale and retail prices of foodgrains in important markets. Wholesale: Shamli Rs. 19-8, Hapur Rs. 19-8, Chandausi Rs. 21, Kasganj Rs. 22-12, Gonda Rs. 21-12, and Sitapur Rs. 20. The Government retail sale rate in all regulated towns of the State was Re. 1 per 2 *seers* and 2 *chattaks*. The other grain quotations in the Hapur market are: gram Rs. 15-4, *barley* Rs. 13, *bejhar* Rs. 12, rice: *basmati* Rs. 34, *hansraj* Rs. 30, *sela* Rs. 28-8 and coarse Rs. 23, maize Rs. 11-12, *bajra* Rs. 12, *jowar* Rs. 10 to Rs. 11-4, and peas Rs. 13-4 to Rs. 14.

The Punjab State is keeping its rice export programme to the needy areas as best as is possible. Nearly 8,270 tons of rice was exported to other States during the second fortnight of February. The Government has offered 29,993 tons of rice out of the previous crop and 29,834 tons have since been despatched to the deficit States.

MERCURY PRICES DECLINE

(From Our Own Correspondent)

CALCUTTA, 24*th March*

Although electrolytic copper ingots maintained last week's improvement, the early rise to Rs. 190 this week was only a temporary feature but the quotation closed at Rs. 188. The supply position is considered tight, and buyers were interested in offers of scrap. Buyers were reluctant, as they rightly felt that, if they did so, the upward trend in prices for ingots and the

MARKET REPORTS

(Concluded from page 575)

scrap-form material would move up. Tin was quoted at about Rs. 630, and consumers, with the knowledge that there was plenty of materials with dealers, were not interested to cover their requirements.

Mercury declined to Rs. 505 from Rs. 515 a flask, and the fall was attributed to the realisation that it was difficult for the trade to get the Government to accede to its demand to fix again a re-export quota. There was some turnover in antimony, and Government enquiry was for about 13 tons. The price of the imported material was pushed up to Rs. 190 from Rs. 175 a cwt. Virgin lead and electrolytic zinc were quoted at Rs. 66 and Rs. 59-8 respectively.

TEA DEARER

(Messrs. Forbes, Ewart and Figgis Ltd.)

COCHIN, 21st *March*

Sale No. 6.—The offerings in Sale No. 6, which was held on Tuesday, 17th March, amounted to approximately 9,19,000 lbs. Quality showed little change from the previous sale and there were some attractive Nilgiri teas on offer. The market opened to a good general demand, particularly for common, low medium and medium brokens and fannings which were fully As. 1 to As. 2 dearer. Good medium teas sold well at rates which were fully firm. There was a good demand for best liquoring teas, but these could only be sold at prices which were As. 4 to As. 6 below variations. Well made O.Ps. were strong, particularly for the best liquoring types which were As. 2 to As. 3 dearer. Other descriptions remained fully firm. Fannings met with a stronger demand and were generally dearer. The following were the quotations:—

	1953 Rs. a. p.
Low grown Travancore B.O.P. ...	1 12 0
Medium Travancore B.O.P.	2 2 0
Anaimallais B.O.P.	2 6 0
Best liquoring Nilgiri B.O.P.	3 15 0
Well made black leaf O.P.	2 3 0

Forthcoming Auctions.—Sale No. 7 will be held on Tuesday, 31st March.

As we go to press, Messrs. Forbes, Ewart and Figgis Ltd., were as follows:—

"*Dust Sale F.*—1,97,000 lbs. Good general demand. Prices irregularly As. 1 to As. 2 dearer."

SLACK DEMAND FOR SUGAR

(From Our Own Correspondent)

HAPUR, 23rd *March*

Indian sugar markets have remained quietly bearish and there has been slight fall in prices in all the centres. The sugar mills and trade stockists are anxious sellers at current prices, while buyers are inclined to restrict their operations to their immediate needs. The offtake has been extremely poor. During the last several weeks, sugar stock movements from North Indian mills to importing destinations have been fairly heavy and shortage is no longer reported from anywhere. Slack demand, satisfactory stock movements and fairly good sugar production prospects have imparted a definitely bearish undertone to the markets.

The following are the average sugar quotations in the different markets:

	Current prices Rs. a.	*Average prices for the month of February, 1953* Rs. a.
Ambala	29 14	30 1
Amritsar	31 0	30 8
Delhi	30 5	30 12
Jullundur	29 8	29 5
Agra	29 1	29 10
Hapur	29 0	29 0
Kanpur	27 14	28 7
Mathura	29 8	29 14
Meerut	29 6	29 6
Muzaffarnagar	29 13	30 0
Patna	30 12	30 9
Calcutta	28 11½	29 12
Gauhati	31 11	34 6
Cocanada	31 9	31 1
Madras	31 2	32 10
Bombay	32 12	32 14
Bhavnagar	31 7	32 9
Nagpur	31 9	31 15
Indore	28 14	29 11

There has been some stock accumulation in important *mandies*, particularly Hapur, Meerut and Muzaffarnagar. The latest quotations (per maund) are: Ambala Rs. 12-8, Amritsar Rs. 14, Delhi Rs. 14, Jullundur Rs. 12-9, Agra Rs. 14, Hapur Rs. 14-9, Kanpur Rs. 13-12, Mathura Rs. 13-2, Meerut Rs. 13-14, Muzaffarnagar Rs. 14-7, Patna Rs. 13, Calcutta Rs. 14-10, and Madras Rs. 19-2.

CONSIDERABLE HIDE ARRIVALS

(From Our Own Correspondent)

KANPUR, 22nd *March*

Fresh supplies of hides and skins from mofussil areas were considerable this week. There was, however, a slight fall in the volume of supplies of wet salted cow. Upper grade buff was in strong demand.

The latest quotations are: Wet salted cow, 1st grade: Rs. 280 and 2nd grade: Rs. 200 per score; wet salted buff, 1st grade: 1 lb. 12 ozs. and 2nd grade: 2 lbs. 4 ozs. per rupee; goat, 1st grade: Rs. 240 and 2nd grade: Rs. 200 per 100 pieces; and sheep skins: Rs. 220 per 100 pieces.

LINSEED DULL

(Messrs. A. Bradley & Co.)

CALCUTTA, 23rd *March*

The general tone of the linseed market is at present rather dull, and prices are ruling slightly easier, although conditions during the early part of the week were steady. Arrivals are rather poor, and ready goods are scarce. Crushers have shown a fairly keen interest in forward delivery, and there has been a small daily turnover. Enquiries have been received in the oil section from local buyers which caused some improvement in prices, but export enquiries continue to be at a standstill and prices are now showing a quieter trend.

Latest quotations are as follows: Ready Rs. 20, April Rs. 19-8 and May Rs. 19 per maund.

BANKS' LIQUIDATION PROCEEDINGS COMMITTEE

(Concluded from page 535)

the High Court, and that, if any High Court does not find it practicable to create a separate establishment of a Court Liquidator, on account of the number of liquidations being small, it should appoint one of its officers to be Court Liquidator in addition to his own duties.

Proceeding to schemes of arrangement for banks which have suspended payment, it is found that the management of such banks usually have no difficulty in persuading the depositors to agree to such schemes, which promise some definite payment to all, and often preferential payment to small depositors, because the belief prevails among them that, if a bank is taken into liquidation, the assets would be frittered away in cost expenses and the commission of the liquidator and the depositors would get little or nothing. But experience shows that schemes of arrangement are very seldom implemented in full and that the promises made to depositors, at the time the schemes are sanctioned, remained unfulfilled. The reasons are that, in most cases, the assets of banks remain frozen, that a large part of the debts due to them cannot be recovered without prolonged legal proceedings and that decretal amounts cannot be realised. Yet, under the existing law, once the Court has sanctioned a scheme, it can exercise no control over the working of the scheme, unless an application is made by a creditor for winding-up or unless the management makes an application for modifying the scheme.

This legal position is admittedly unsatisfactory. The Committee has, therefore, recommended that a provision should be inserted in the Banking Companies Act to the effect that a Court sanctioning a scheme of arrangement under section 153 of the Indian Companies Act in respect of a bank may either at the time of sanction or at any subsequent time make provision for enforcement of the scheme and general supervision over the conduct of the scheme to ensure that it is fully and effectively carried out; and that the Court should be empowered to order the winding-up of a bank at any time after sanctioning a scheme, if it is satisfied that the scheme cannot be implemented.

Again, the directors of a bank, which has suspended payment, may get a scheme of arrangement sanctioned, under which some of them remain in control and thereby shut out an investigation into their past conduct and escape liability for acts of misfeasance committed by them. The Committee has, therefore, recommended that provision should be made for investigating the affairs of a bank before a scheme is sanctioned by the Court and that the scheme should not be sanctioned, if the investigation discloses any grounds for enquiry into the conduct of the directors.

Reserve Bank's Function

Next, the Committee has suggested that the function of the Reserve Bank in relation to schemes of arrangement should be extended. This can be done by providing that, when the Reserve Bank issues a certificate under section 45 of the Banking Companies Act that a particular scheme of arrangement is not detrimental to the interests of the depositors, it should also certify that the scheme is practicable. If the Reserve Bank gives a certificate, it should be made to submit a report to the Court, giving the result of its investigations into the affairs of the bank, the conduct of the directors, etc., made by it before the grant of the certificate, and the Court should be empowered to exercise its discretion for sanctioning the scheme after considering the report of the Reserve Bank.

It has been mentioned before that none of the 30 banks, for which schemes of arrangement have been sanctioned by the Courts, has been able to implement its scheme fully, although some of them have tackled their difficulties with considerable courage. The difficulties are that they have lost a large portion of their assets in Pakistan; that debts due from a considerable number of their debtors, who have remained in Pakistan, are not realisable; that they have found it difficult to realise debts due from debtors in India, who, although capable of repaying the debts, have evaded their liability by seeking shelter, as displaced persons, under the Displaced Persons (Debts Adjustment) Act, 1951; and that they have been compelled to spend large sums in costs of litigation. For their benefit, the Committee has recommended that the Courts which have sanctioned schemes of arrangement for them should be empowered: (1) to excuse any delay in carrying out any provisions of the scheme on proper grounds being shown and on such terms as the Courts may think fit, (2) to extend to them the benefit of the summary procedure, recommended by the Committee and considered above, for the recovery of debts by filing a list of debtors, and (3) for the purpose of settlement of the list of debtors, to exclude any debtor from the protection of the Displaced Persons (Debt Adjustment) Act, 1951, provided (*a*) that no final adjudication of the debt has been effected under the Act and (*b*) that the Court is satisfied, after hearing the debtor, that it is just and convenient that he should be excluded.

Liaison with the Reserve Bank

The final problem dealt with by the Committee relates to liaison between the Reserve Bank and banking companies in liquidation. One view on it is that the Reserve Bank should have exclusive jurisdiction to liquidate all banks. The objections urged against this view are that the Reserve Bank would find it difficult to deal with many intricate questions of law and facts that would arise in the course of liquidations; that the onerous duty of investigating the conduct of directors and assessing their liability in misfeasance should not be imposed on the Reserve Bank; that examination of directors, who have not done their duty, in a Court would have much greater deterrent effect than their examination by the Reserve Bank; that the interest of the Reserve Bank may conflict with its duty in cases where the Reserve Bank itself is a creditor and claims priority by virtue of section 18 (2) of the Reserve Bank Act; and that the Reserve Bank would have to maintain a large and specialised staff for carrying out the liquidations.

These objections have appeared convincing to the Committee, which, therefore, has expressed the opinion that it is neither desirable nor feasible to confer exclusive jurisdiction on the Reserve Bank to liquidate banks.

Pending the decision of Government on the above recommendation, the Committee has suggested that the Reserve Bank should be empowered by statute, when directed so to do by the Government of India, to inspect any bank which is being liquidated by a private liquidator and to make a report to the Government; that, if the Government, after considering the report, is of opinion that there has been any substantial irregularity in the liquidation proceedings, it may send a copy of the report to the private liquidator; and that the liquidator must then submit the report to the Court, which must consider it and give its directions thereon.

As regards official liquidators, the Committee has suggested that the Reserve Bank should be empowered to obtain from them, within a reasonable time, any information relating to the liquidations, to enable it to keep itself in touch with liquidation proceedings of banking companies and to furnish to the Government any information which the latter may require in this behalf.

The recommendations made by the Bank's Liquidation Proceedings Committee are sound and there is no doubt that, if they are implemented, they will promote the interests of depositors greatly, by simplifying, expediting and cheapening liquidation proceedings and by raising their efficiency. It is to be hoped that they will be implemented soon.—*All Rights Reserved.*

BANKING

(Concluded from page 539)

undertaken by the engineers of India and Pakistan. The engineers of the Bank met at Karachi and New Delhi to exchange information from the studies. It was decided that the engineers should meet again on 1st September, 1953, in Washington to prepare a comprehensive plan for the development of the Indus Basin.

Australia

On 8th July, 1952, the Bank made a loan of $50 million to help Australia finance the import of capital goods and equipment needed for development in agriculture, coal-mining, iron and steel production, electrical power, railways, road transport, the production of non-ferrous metals and industrial minerals and manufacturing industries. The loan is for a term of 20 years and bears interest at 4¾ per cent. Amortisation is to begin on 1st June, 1957.

The European countries to which the Bank sanctioned loans during the period were Finland, Iceland and Yugoslavia. The Bank lent to Finland 18 million Swedish kroner ($3,479,464) for modernising and expanding the country's wood-products industry. The loan is for a period of 18 years and carries interest at 4¾ per cent. Amortisation will begin on 1st December, 1955. The loan granted to Iceland was equivalent to $854,000, for financing the construction of a nitrogen fertiliser plant. The plant is to produce about 18,000 tons of ammonium nitrate a year. The loan is for a term of 17 years and bears interest at 4¾ per cent. A loan in European currencies equivalent to $30 million was made to Yugoslavia to help finance the completion of 27 key projects in seven sectors of the economy. The interest charged is 4¾ per cent. and the loan is for a period of 25 years.

The Director for operations for Europe, Africa and Australia visited Austria, France, Germany, Italy, Switzerland and the U.K. for general discussions about the Bank's operations.

In the Western Hemisphere, Colombia and Peru were the only two countries which received loans from the Bank. The loan to Colombia was of the order of $25 millions for improving the Colombian National railroads. The term of the loan is 25 years and bears interest at 4¾ per cent. The loan for Peru was of the order of $1.3 million, meant for paying for the import of agricultural equipment to be used in improving agricultural production methods. It is a seven-year loan carrying interest at 4¼ per cent.

Earnings of the Bank

The net earnings of the Bank in the eight months ended 28th February, 1953, amounted to approximately $11,200,000. This sum has been credited to the supplemental reserves (against losses on loans and guarantees).

Since 1st July, 1952, Austria, Belgium, Denmark, France, Germany, Italy, the Netherlands, Norway, Sweden and the U.K. have agreed to the release of amounts equivalent to $31 million from their 18 per cent. funds for disbursement on loans.

Two new bonds were floated by the Bank during the period, one in Switzerland and the other in the United States. On 9th October, 1952, the Bank issued in the U.S.A. 3½ per cent. 19-year bonds for $60 million. The issue price was 98 per cent, so that the yield was as high as 3.65 per cent. Again, on 11th November, 1952, a syndicate of Swiss banks publicly offered bonds of the Bank. The issue consisted of 10-year 3½ per cent. bonds for 50 million Swiss francs. As the issue price was 98½ per cent., the yield was 3.68 per cent.

The Bank redeemed the 2 per cent. dollar bonds of 1950 for $10 million which matured on 15th February, 1953. The total international issues of the Bank now outstanding is equivalent to $557,537,469 of which $500 million is denominated in U.S. dollars and the remainder in sterling, Swiss francs or Canadian dollars.

During the period, the Bank sold to private investors the equivalent of $11,304,406 principal amount of borrowers' obligations. Of this amount, $5,592,585 were sold with, and $5,711,821 without, the Bank's guarantee. Total sales by the Bank of the obligations of its borrowers on 28th February, 1953, amounted to $67,681,094 of which $19,881,748 have been redeemed by the borrowers.

ENGINEERING

(Concluded from page 552)

and semi-hill sections which do not intervene between two plains sections, the policy of charging rates on the basis of inflated mileages should be given up and the rationalisation of rating structure on railways in the plains should be completed, as the regrouping of railways took place.

While introducing the new rates, it was found necessary to give effect to standard rates for grams, pulses, flour, oilseeds, etc., in two stages. In the first stage, lower wagon-load schedules for these commodities were introduced on Group II railways, comprising the Assam, E.I., E.P. and O.T. railways, and then on the rest of the Indian railways, forming Group I, the reason being that the rates prevailing at that time in the former group were exceptionally low and a sudden large increase would be undesirable. These anomalies among others, are gradually being removed through rationalisation of freight rates.

The passenger fares were standardised on a uniform mileage basis on railways in January, 1948. While this helped to equalise the low fares charged on a few railways with the fares charged on others, the basis of charge was left undisturbed. This equalisation hardly produced any perceptible effect on the revenues of the railways. Moreover, they lagged far behind the increase in operation costs. A small adjustment in passenger fares was, therefore, given effect to from 1st April, 1951.

The capital-at-charge on the Indian railways is estimated at Rs. 864 crores. The following figures show the rev

PROSPECTS FOR CONVERTIBILITY OF STERLING RECEDE

THE British Government took two important decisions last week which have a close bearing on the prospects for convertibility of pound sterling. One was the relaxation of restrictions on imports from Western Europe and the other was an undertaking, at a meeting of the Council of the Organisation for European Economic Co-operation (O.E.E.C.) held in Paris on 23rd March, 1953, to support the proposal for the renewal of the European Payments Union for a further 12 months after 30th June next, with an assurance that Britain would not try to leave the E.P.U. unilaterally. These decisions have removed the suspicion in the minds of West European countries that Britain was more keen on developing its trade with the sterling area than with them and on strengthening sterling at the expense of their trade, in order to make early convertibility feasible. This may be an important gain to Britain from the point of view of its political relationship with Western Europe. But, at the same time, it seems to reduce the chances of early convertibility of sterling, unless, of course, Britain has reached any secret understanding with the U.S. on this question during the recent discussions which Mr. Butler and Mr. Eden had with White House officials at Washington.

The relaxation of restriction on imports into Britain has been made in three ways. First, a considerable range of goods, mainly foodstuffs and manufactures, including unrationed cheese, textile yarns and piecegoods, gloves, footwear, carpets, plate and sheet glass, and cork and cork manufactures, has been restored to O.G.L. Secondly, the global quotas for the import of certain goods from Western Europe and some other countries, which must remain restricted, have been increased for the second half of the year. Thirdly, the travel allowances for tourists to Europe have been increased from £25 to £40 for adults and from £15 to £30 for children, besides raising the motor car allowance from £15 to £20. All these three measures together are expected to cost the foreign exchange resources of the U.K. to the tune of £40 million, of which £8 million represents the share of increased tourist allowances. The effect of the liberalisation of restrictions on trade will be to raise from 44 to 58 the percentage of the U.K. imports on private account from Western Europe which are free from quantitative restrictions.

Britain is not in desperate need of most of the goods which have now been allowed to be imported into the U.K. under the O.G.L. and increased global quotas. Yet, if it has allowed their import, it is, perhaps, because of the realisation that the continuance of stringent import restrictions was not conducive to the attainment of the goal of expanding world trade, one of the objectives agreed to at the last Commonwealth Economic Conference. It will be recalled, in this connection, that, in November, 1951 and March, 1952, Britain had to impose quantitative restrictions on a wide range of goods imported from Western Europe and certain other countries, in order to check the drain on its reserves. This object was very well served, as evidenced by the subsequent sharp improvement in the foreign exchange reserves of the U.K. But the restrictions have had an adverse effect on the economy of certain West European countries, especially France and Italy. In recent months, their position had deteriorated to such an extent that some of these countries had almost decided to make drastic reductions in their imports from the sterling area, particularly from Britain. Any such development would have aggravated the undesirable tendency towards restrictionism in the sphere of world trade, and that at a time when the need is to find new markets for absorbing the increase in industrial production the world over. Faced with such an uncomfortable prospect, the British Government would appear to have shifted the emphasis from convertibility of currency to relaxation of restrictions on imports. The one important lesson that emerges from this is that any attempt to bring about convertibility of currencies through import restrictions is bound to fail ultimately. In other words, the removal of restrictions on both trade and convertibility must go hand in hand.

It may be argued that, as the loss of foreign exchange, consequent on the relaxation of import restrictions, is no more than £40 million per annum, the conclusion that the chances of early convertibility of sterling have become slender tantamounts to undue pessimism. On the face of it, this contention sounds sensible. But a careful analysis of the position of sterling area reserves, as well as the trend of Britain's trade with the O.E.E.C. countries, suggests that there is something to be said in favour of the scepticism that has now come to prevail. In the first place, the recent surplus on balance of payments with Europe is only of a seasonal nature. It has been achieved "during the flush season for sterling area commodity exports and at a time of the year when British tourist spending is low." Secondly, the current payments surplus with Europe is so small that it would not be sufficient to counter a speculative movement in the opposite direction, if it were to arise. "Quite a small shift in prices, or in the volume of trade or in the mood of traders and foreign exchange dealers abroad about the future of sterling would," according to the *Financial Times*, London, "be sufficient to convert the present surplus, at least temporarily into a deficit." Thirdly, Britain has already a cumulative deficit of £300 million, including £100 million to be paid in gold, with the E.P.U. Although the British Treasury is confident of winning back the £100 million gold payment, the fact that at present there is a large deficit cannot be ignored. And, finally, the total foreign exchange reserves of Britain (and the sterling area as a whole) are not so large as to make one feel confident that Britain can safely embark upon relaxation of its import restrictions and still hope to make sterling freely convertible without any risk whatever.

Be that as it may, the gesture made by Britain to West Europe has averted the imminent danger of restrictionist policies receiving a fresh lease of life. Western Germany has freed from quotas a substantial part of its imports. France, which was about to slash its imports, has changed its mind and postponed the contemplated import restrictions. The French Minister for Economic Affairs has stated that he would have to review the position and revise the import programme for the six months beginning from April, in the light of the British Government's decision. Thus, it looks as though Britain has now a fair chance of making good a part of the foreign exchange loss, arising from relaxation of its import restrictions, through increased exports to Western Europe. Even if this were not to materialise, the possibility of a drop in Britain's exports to O.E.E.C. countries which was there before has been prevented.

The assurances given by Britain in regard to the E.P.U. are believed to be even more important than the relaxation of restrictions on imports for determining the prospects for sterling.

convertibility. So long as Britain is a member of the E.P.U., convertibility of sterling will not be practicable, unless fundamental changes are made in the rules of that clearing organisation, changes which will convert the Union into a wider system of multilateral payments. It is true that the Council of Ministers of the E.P.U., while agreeing to extend the life of the Union for one more year from June next, have stated that the rules of the Union will be subjected to a scrutiny by a team of experts in order to find out the lines on which they should be modified to meet the changed circumstances. It is, of course, not possible to anticipate the future changes, except to say that, if the object of convertibility of currencies is to be achieved at an early date, the term for squaring up unbalanced positions will have to be stiffer than they are at present. It is, however, doubtful whether two of the member-countries, namely, France and Italy, will be in a position to accept such terms. The economic position of France, in particular, is still extremely difficult. That country has yet to overcome inflation and its budget is heavily in deficit. In these circumstances, it is scarcely possible to envisage convertibility of the franc in the foreseeable future. And, without France, how can the E.P.U. be transformed into a multilateral system? If this hurdle is to be overcome, the U.S. must come forward to render substantial assistance. The attitude of the U.S. administration towards this question is yet to be known. An O.E.E.C. Mission, headed by Sir Hugh Ellis Rees, will shortly be visiting Washington to discuss this subject.

There is, of course, nothing that prevents Britain to decide on convertibility of sterling if it wants to do so. Only, the latest assurances given by it to the Council of the O.E.E.C. make the task a little more complicated than before. Hitherto, Britain was insisting on the right to withdraw from the E.P.U. by giving three months' notice, if the life of the Union were to be extended. In the Paris Conference, last week, Britain gave up this demand and agreed to a compromise that "any member may renegotiate the agreement within the twelve months' extension in the event of a move towards a wider system of multilateral payments." Although this clause provides scope for a member to withdraw from the Union, Britain has given an additional undertaking that it will not do so without giving "ample notice and opportunity for discussion to the others." Moreover, Britain has been maintaining that it is not in favour of a unilateral decision on the convertibility of sterling. If this were to mean, as we believe it does, that it would agree to convertibility of sterling only if the other major European currencies are ready for it, the conclusion is irresistible that the prospects for convertibility are distant. This view is further strengthened by reports that the chances of the U.S. coming forward with any assistance to ensure convertibility of the pound sterling alone are not bright. All advices from Europe and the U.S. suggest that a joint plan for multilateral convertibility of all West European currencies may evoke more ready response from the U.S. Administration than the Commonwealth Plan.

All this, however, does not mean that Britain has swerved from the Commonwealth ideal of securing multilateral trade and convertibility of currencies. On the contrary, Mr. Butler reiterated this ideal at the Paris meeting of the O.E.E.C. Council and expounded the following six-point programme to achieve it:

(1) There must be sound internal policies, especially by debtor countries.

(2) The gradual freeing of payments must be linked with the freeing of trade. Convertibility must not be secured at the expense of a strangulation of intra-European trade.

(3) Action must be taken not only by the debtor countries but also by the creditor countries of the world to provide a balanced pattern of trade between the dollar and the non-dollar areas.

(4) Special measures will be needed to deal with the problem of inadequate gold reserves.

(5) Overseas investment must be encouraged and led in the right directions. The sterling area countries, for their part, are determined that investment shall be for productive purposes and shall help the balance of payments.

(6) Effective use should be made of existing international institutions. In particular, special efforts should be devoted to the task of revitalising the International Monetary Fund.

The above programme contains nothing new; it is practically the same as that adopted by the Commonwealth Economic Conference. We are told that the O.E.E.C. Council has given its wholehearted support to it. This then means that there is now no difference of opinion between the Commonwealth and Western Europe on the broad lines in which the basic economic issues affecting international trade should be tackled. If this unity of purpose between Western Europe and the Commonwealth is to make any impression on the U.S., it must soon be followed by a concrete plan for translating the idea, with which all democratic countries are generally agreed, into a reality.

ANDHRA STATE

MR. Jawaharlal Nehru, Prime Minister of India, announced in Parliament, last December, that the Government had decided to establish an Andhra State, consisting of the Telugu-speaking areas of the present Madras State, but not including the city of Madras, and that the Government was appointing Mr. Justice K. N. Wanchoo, Chief Justice of the Rajasthan High Court, to report on the financial and other implications of this decision. Mr. Justice Wanchoo submitted his report on 7th February, 1953. The Prime Minister has also accepted, on behalf of the Government of India, the major recommendations made by Mr. Justice Wanchoo. Mr. Nehru stated, on 25th March, 1953, that the new Andhra State would consist of the Telugu-speaking districts of the Madras State, namely, (1) Srikakulam, (2) Vishakapatnam, (3) East Godavari, (4) West Godavari, (5) Krishna, (6) Guntur, (7) Nellore, (8) Kurnool, (9) Anantapur, (10) Cuddapah, (11) Chittoor, (12) a part of Bellary district. In Bellary district, only the three taluqs, namely, Adoni, Alur and Rayadurg, will become part of the Andhra State, while the rest of the district, consisting of six Kannada-speaking taluqs, will form part of the Mysore State. The Government's other decisions are: (1) A boundary commission will be appointed some time later to determine the exact boundaries of the new State; (2) the legislature of the new State, which will consist of the present Andhra members of the Madras State, will be allowed to determine the location of the capital; (3) since the Tungabhadra project consists of two parts, one in Hyderabad and the other in the Hospet taluq merged with the Mysore State, the latter part of the project will be jointly administered by the Mysore and Andhra State Governments, in view of the importance of the project to both the States; and (4) until such time as the new legislature decides upon the location of the new High Court, the present Madras High Court will function as the High Court for the Andhra State also.

Mr. Nehru did not commit himself to any statement on the financial implications of the formation of the Andhra State. He announced, however, that they were receiving the attention of the Government. He could not, naturally enough, be expected to make a statement on the financial implications of this domestic partition, particularly because they raise questions of principle, which are bound to be quoted as precedents in similar instances of linguistic division. Mr. Justice Wanchoo's report proves beyond any shadow of doubt that the Andhra State will be a deficit State. This fact alone should make those who will shortly be administering the new State more realistic than the administrators in other States. Mr. Justice Wanchoo has calculated the revenue of the new State at Rs. 17.70 crores and expenditure at Rs. 22.73 crores. This leaves a deficit of Rs. 5.03 crores. So far as the residuary State (that is, the rest of the Madras State) is concerned, it will have a small surplus, namely Rs. 2.13 lakhs; the revenue and expenditure of this State are placed at Rs. 41.73 crores and Rs. 41.71 crores, respectively.

Almost the first question, which the new State will be called upon to tackle, is that of bridging the yawning gap between revenue and expenditure. Mr. Justice Wanchoo agrees that there is scope for an increase of about Rs. 2 crores in revenue, through such sources as tobacco tax and sales tax, and for some reduction, estimated at Rs. 50 lakhs, in expenditure. All this will reduce the deficit but will not wipe it out. Mr. Justice Wanchoo is, therefore, emphatic that prohibition should go. His line of argument is convincing, as will be seen from the following extract from his report:

"The only other method which I can think of for reducing this deficit immediately is by scrapping prohibition in the new State. The last year in which there was no prohibition in any of the districts which would form the new State was 1945-46. The income from Excise in that year was Rs. 560 lakhs. The only way which I can see for balancing the budget immediately is by getting this Excise income. It is, of course, for the leaders of the new State to decide whether they will scrap prohibition in their area. But unless they do so, I am afraid, it will not be possible for them to balance their budget for a long time. On the other hand, if they scrap prohibition and get the Excise revenue, they will have some surplus each year which they can utilise for nation-building purposes and for financing the Five-year Plan. Without the Excise income, it would be absolutely impossible for the new State to find any money for its nation-building activities and for expenditure on the Five-year Plan, except by way of borrowing from the Central Government or in the open market. I would, therefore, recommend for the serious consideration of the leaders of the new State the necessity of giving up prohibition, if their State is to avoid bankruptcy from the very beginning."

For dividing the liabilities, namely the debts, Mr. Justice Wanchoo has recommended the adoption of a ratio of 36 : 64 based on the population of Andhra and the residuary State, respectively. The total debt of the undivided State, as on 31st March, 1952, is Rs. 43.42 crores. Of this, the share of local bodies constitutes Rs. 21.78 crores. Thus, the effective debt to be divided between the two States is of the order of Rs. 21.64 crores and, according to the basis recommended by Mr. Justice Wanchoo, the Andhra State will begin with a public debt of Rs. 7.36 crores. There is, however, no indication as to who will be responsible to the holders of the existing Madras Government State loans for payment of interest and the principal. Perhaps, the method followed at the time of the partition of the country, will be taken as a precedent, in which case the responsibility will be that of the residuary State.

For the division of assets, Mr. Justice Wanchoo has recommended the unexceptionable principle that all assets attached to land should pass to the State in which they are situated. But adjustments have necessarily to be made for capital expenditure incurred by the undivided State on projects, such as irrigation, navigation, electricity schemes and industrial schemes. This raises the difficult question of valuation of these assets, for the book value of these assets does not take into account the depreciation or rise in prices. Mr. Justice Wanchoo, has, however, recommended that the works executed before 31st March, 1940 should be taken at double their book value, and those carried out after that year at cost. Now, the total capital expenditure upto 31st March, 1952, was Rs. 86.82 crores, of which the amount spent in the Andhra districts aggregates Rs. 33.09 crores. The outlay on these items upto 31st March, 1940 was Rs. 24.31 crores, of which Rs. 8.76 crores were spent in Andhra area. By doubling the expenditure incurred before 31st March, 1940, and adding to this doubled figure the cost of the projects completed after that date, Mr. Justice Wanchoo values the assets in Andhra area at Rs. 41.86 crores and those in the residuary State at Rs. 69.28 crores. As the respective shares of the two States on this basis are in line with their population ratio, namely 36:64, Mr. Justice Wanchoo has suggested that there is no case for payment of any amount in cash or otherwise by the residuary State to the new State so far as the outlay on capital works is concerned. But he feels that the new State should get a credit of Rs. 2.30 crores for building its capital from the residuary State. Since the residuary State has no liquid resources from which to pay for this item, he has suggested that the new State's liability on account of public debt may be reduced by this amount, the residuary State taking over the extra debt burden.

The foregoing account is a broad outline of the recommendations made by Mr. Justice Wanchoo. Many minor objections could, of course, be raised. For instance, the validity of the formula for the assessment of the value of pre-war assets might be questioned. Perhaps, the Andhras might feel that insufficient account has been taken of their needs, particularly of their need for a new Capital. Mr. Justice Wanchoo has, however, recommended the grant of a loan of Rs. 5 crores by the Central Government to enable the new State to build its Capital estimated to cost Rs. 10 crores. In view of the extremely difficult financial conditions under which the Andhra State will have to work in the beginning, the leaders must show both realism and constructive vision, if they are to succeed in their experiment in Statecraft.

TREND OF MARKETS DOWNWARD AGAIN

INTEREST RATES ON DEPOSITS—SALES TAX JUDGMENT—ESTATES DUTY BILL

WEDNESDAY, 5 P.M.

THE slump in shares during the last three days has belied the earlier impression that the post-budget advance in equity values was based on an appreciation of the intrinsic merits of the Indian economic situation. It confirms the view, often expressed in this column, that the principal cause for the recent improvement in price was speculative buying and that it would be risky to follow it. This view is clearly borne out by a fall of as much as Rs. 62-8 in Tata Deferreds and of Re. 1-4 in Indian Irons. The decline in the value of textiles also has been fairly heavy, Kohinoors having lost Rs. 17 and Bombay Dyeings Rs. 23-12. Two developments have upset the apple-cart of the bulls. The unexpected, but welcome, move by China to end the fighting in Korea was one and the publication of the Select Committee's report on the Estates Duty Bill, confirming the worst fears of the operators, was another. The Chinese move would not have taken the operators unaware, as it has now done, had they taken note of the hints from Moscow during the past fortnight and of the hesitancy of commodity markets in the U.S. and the U.K. There is now a fear in market circles that, if the renewed efforts at settling the Korean issue were to succeed, it might result in a fresh wave of recession in many parts of the world from which India cannot hope to escape completely. Whether this will actually materialise or not, one cannot say, but there is no doubt that one must be cautious in one's activities in markets. It is better to avoid overtrading, because, generally speaking, the supply of goods all over the world has increased, while the purchasing power is falling.

MARKET GOSSIP

• • • •

A brief reference is made later on this page to the salient features of the Select Committee's report on the Estates Duty Bill. The proposal of the Committee to fix the exemption limit at Rs. 75,000 for individuals and at Rs. 50,000 to each interest in a joint-family is undoubtedly a serious blow to the investment market. It will be difficult to assess the exact effects of this Duty on investments, unless the rates of Duty are known. Broadly speaking, the introduction of Estates Duty will adversely affect the flow of savings into equities, but this factor must have been discounted already, for everybody knew that sooner or later this measure would be introduced. It is reported that one of the sequels to the introduction of Estate Duty will be the abolition of blank transfers. This seems quite likely, for, if this system is allowed to continue, it will make evasion of the Duty easy.

• • • •

The downward trend in values has not been the feature of share markets alone. It has been noticeable in other markets also, especially in commodities. Cotton, for instance, has dropped from Rs. 705 (for I.C.C. May) a week ago to Rs. 687-8. The depression in raw jute and jute manufactures has deepened, with rates declining to rock-bottom levels. Oilseeds are extremely quiet and so also bullion. Over the week, they do not show any perceptible fall in prices, but buyers, who were aggressive only a few days ago, are now on the defensive. Trading in piecegoods and yarn is very dull, as there is no offtake. Export demand is slack again, with no country evincing any interest in Indian textiles. Many operators are wondering whether the markets are on the threshold of a fresh wave of recession.

The Chairmen of both the Central Bank of India Ltd. and the United Commercial Bank Ltd. have made a reference in their annual speeches to the shareholders to the cost of procuring deposits in the changed conditions of the money market. And both of them have come to the conclusion that, but for the existence of Exchange banks in this country, the position would not be so bad as it is. On this point, the Chairman of the United Commercial, Mr. G. D. Birla, whose speech is published in full elsewhere in this issue, is more specific than Mr. H. P. Mody, Chairman of the Central Bank, and goes to the extent of inviting the Reserve Bank to control the situation. Their explanation, in our opinion, is neither a fair nor a full account of the causes for the present state of the short-term money market. Our study of the position, however, is as follows:

1. Nobody is more responsible than the monetary authorities of the country for the higher interest rates. It was the change in their policy that led to an all-round increase in interest rates. We are not concerned here with the question whether they were right or wrong in doing so.

2. Interest rates in many parts of the world, especially in those countries with which India has close economic relations, started rising and India could not have isolated itself from this influence. Higher interest rates in India is thus a part of world-wide development and nobody can and need be blamed for it.

3. Conditions in the money market in India were quite different before the change in the Bank of England rate which was followed by an increase in the Reserve Bank rate. It was last year's extreme local stringency which brought matters to a head. There was no *direct* connection between tighter money in London and tighter money in India. Therefore, the flow of funds could not have been affected by conditions in the respective markets to such an extent as has been made out. In fact, a perusal of the balance-sheets of the Exchange banks will show that they brought very large sums into India last year and we are told that they are still doing so this year, though to a lesser extent because there is not the same demand.

4. Merchant call deposits are not an innovation introduced by the Exchange banks. Owing to developments last year and the large depreciation in Government securities because of the raising of the Bank rate in India, coupled with the steep fall in commodity prices, merchants with large funds on their hands, as a result of liquidating stocks, wished to use these to the best effect. They could not be persuaded to place the money on time deposit, because they wished to keep their local funds readily available should market developments justify their using them. They would, therefore, only place money at call. With few exceptions, all banks met this development, not only the Exchange banks.

5. It is quite wrong to say that all the funds on call now would normally have been in current accounts, carrying next to no interest at all. Merchants would not leave large balances idle, pending a favourable opportunity of investing in goods and commodities; hence their taking to offering call deposits.

6. The smaller Indian banks quoted the present high rates long before the Exchange banks ever thought of doing so.

7. The following pointers must also be borne in mind to get a correct picture of the present conditions:

(*a*) The Government itself is borrowing on Treasury Bills at 2½ per cent.

(*b*) Government Bonds are generally quoted at a 3½ per cent. level.

(*c*) The Reserve Bank lends at only 3½ per cent. against Government Securities.

(*d*) The Bill Scheme available for approved overdrafts carries 3 per cent. plus half the cost of stamps.

Should not all these factors have some natural effect on the rates quoted to the public?

8. The inter-bank call rate has been pushed up by at least one large Indian bank. Other large Indian banks, when they had funds available, avidly lent at high rates, aided and abetted by the brokers whose interest it is to keep rates up. The brokers have, in fact, consistently talked the market into tight conditions for months.

9. Bombay has always been a free money market. Fixed rates have never existed. In Calcutta, on the other hand, where the Exchange banks quoted fixed rates by agreement on a low level, they found their funds going to the Indian banks. The Exchange banks, therefore, had to take steps to protect their deposits by increasing their own rates.

10. Before the Banking Tribunal, much was made of the fact that the Exchange banks brought money from outside and were, therefore, in a better position than other banks. Now they are using Indian funds for Indian business and paying good rates to Indian depositors. Yet this is also frowned upon.

11. Is the Indian depositor, who has had a raw deal in the past and who is now in a stronger position because of the increased use for money, to be left entirely out of account? In other words, are only borrowers from banks to be considered? Should these borrowers not pay somewhat higher rates which would, at the same time, accord with the curtailment of credit which was ordained some time ago by the Reserve Bank and has not yet been relaxed?

12. It looks as if Mr. Birla, instead of requiring the Reserve Bank to protect domestic monetary conditions as the custodian of national financial policy, would like the Reserve Bank to act as the protector of the Indian banks' business. The Exchange banks must be just as desirous of obtaining cheap money as the Indian banks.

13. Incidentally, there was a time when three of the large Indian banks ganged up against the inter-bank call market by refusing to lend at less than 2 per cent. when the market rate was around 1½ per cent. This was when these three banks were in a less strained position themselves. Now that they are also borrowers, they are offering just as much as all other banks.

14. There have been Indian banks lending time and call money in preference to investing in Government Securities because of the possibility of depreciation thereon. The call money has been at varying periods of notice and the money was not available at under 2½ per cent. to 2¾ per cent. according to the state of the market itself. It is, therefore, not all one-way traffic nor confined to the Exchange banks.

* * * *

To sum up, rates of interest on deposits reflect the simple fact that the supply of money, especially of savings, is short of demand. If the banks find that they are unable to absorb the additional cost, they should charge more on their advances. The cost of bank credit in this country is still much lower than what it should be, having regard to the enhanced Bank rate, the higher yields available on other investments and the cost of everything else. Further, the spread between interest rates on deposits and those on advances is much smaller than in many other parts of the world. Cheap bank credit encourages overtrading, which must be discouraged if general economic conditions in the country are to remain healthy. There have been signs of unhealthy competition among banks for obtaining deposits. A certain measure of competition is always desirable and any attempt to peg the rates of interest, when conditions are normal and no emergency exists, will not be in keeping with the spirit of private enterprise. Voluntary efforts on the part of banks to control rates of interest on deposits or advances by mutual agreement will provide no charges of monopoly against them and strengthen the hands of those who are advocating nationalisation of banking.

* * * *

The upward trend in pepper, which began towards the close of January last, persisted for some time this week also. Prices touched the peak levels of the year with Alleppey and Calicut quoting Rs. 3,500 and Rs. 3,700 respectively, as compared with Rs. 2,300 and Rs. 2,400 in the first week of January. The firmness was due to bullish advices from New York. It is learned that a West Coast dealer has been making large purchases for various positions, at prices ranging between $1.48 and $1.55 per lb. ex-dock. In the past two days, however, a reaction seems to have set in as dealers in both Alleppey and Calicut are showing willingness to sell, though sparingly, at lower levels, at Rs. 3,400 and Rs. 3,500 respectively. The soft tone is attributed to fears of an impending depression in commodities following the possible success of the present Korean peace move. Messrs. Parekh & Co., in their weekly report, observe: "Encouraged by the present high prices at New York, owing to cornering of pepper stock by speculative interests, if the Indian growers continued to sell sparingly without paying proper attention to the stock position and to the impending depression in other commodities subsequent to the Korean peace, they might miss the bus, as from July onwards India will have to face competition from Sarawak and Lampong." Enquiries by our correspondent show that the crop in Sarawak this year will be the same as last year.

The eagerly awaited decision of the Supreme Court on the Bombay Sales Tax Act was announced this week. The Supreme Court has held that the Act is not *ultra vires* the Constitution. The judgment was given on the case in which the Bombay Government appealed against the High Court's judgment that the Act was *ultra vires* the Constitution. The High Court's view, which was based on the consideration that the Act permitted taxation of prohibited categories of sales, has been rejected. The Chief Justice of the Supreme Court has, in his judgment, discussed at some length the implications of the Articles 286(1), 286(2), 301 and 304, which are of particular relevance to a State's powers of taxation. Article 301 affirms the principle of freedom of trade. Article 304 empowers a State to impose on goods imported into the State any tax to which similar goods manufactured or produced in that State are subject and also to impose reasonable restrictions on trade with or within that State. Article 286(1) prohibits the taxation of a sale when the sale takes place outside the State or where it takes place in the course of import into, or export out of, the Indian territory. For purposes of this Article, a sale or purchase is deemed to have taken place in the State in which the goods have been delivered for the purpose of consumption in that State. Article 286(2) prohibits the imposition of a tax on inter-State trade. These are the sections which have given rise to considerable litigation in the collection of sales tax. Explaining the scope of Article 286(1), the Chief Justice said that the Article provided a workable test for determining which State had the power to tax goods which passed from one State to another. The test was: Were the goods actually delivered in the taxing State for the purpose of consumption therein? Then, such sale or purchase would be deemed to have taken place in that State and outside all other States. The latter State, the Chief Justice said, was prohibited from taxing the sale or purchase; the former alone was left free to do so. Multiple taxation of the same transaction by different States was thus avoided. He added that the expression "for the purpose of consumption in the State" should be understood as having reference not merely to the individual importer or purchaser but as contemplating distribution eventually to consumers in general—within the State. Thus, all buyers within the State of delivery, except those buying for re-export, out of the State, would be within the scope of the explanation and liable to be taxed by the State on their inter-State transactions. This is no doubt a clear exposition of the position of all purchases of out-of-State goods under the sales tax legislation. But it does not make the administration of the Sales Tax Acts any the less difficult. This is because the exposition does not solve the problem of determining whether goods imported into a State are for purposes of genuine consumption in that State or for purposes of re-export.

• • • •

The Chief Justice rejected the Bombay Advocate General's contention that both the exporting States and the delivery States were entitled to tax inter-State sale or purchase on the ground that the acceptance of this contention would tantamount to the subjection of a transaction to double taxation. The person, who imported goods from another State, would then be subject to double tax, whereas the local dealer would pay only one tax. This would place inter-State trade at a disadvantage in competition with local trade. Article 286(2), the Chief Justice said, was intended to avoid precisely such discrimination. He also rejected, by implication, the view that neither State could tax the sale or purchase of goods which were exported from one State to another. He rejected this view on the ground that its acceptance would mean that consumers could get out-of-State goods more cheaply than local goods; it would place the local dealers at a competitive disadvantage as compared with outside dealers. And he added that it would be a

EQUITIES RULE WEAK

BULL LIQUIDATION BRINGS DOWN VALUES

(From Our Own Correspondents)

BOMBAY, 1st *April*

THE Stock Exchange experienced a shake-out this week, as sellers wielded the upper hand and depressed the market. After the recent sustained bull sway over the market following the presentation of the Central Budget proposals, bears seized the opportunity this week to hammer down equities, as factors turned in their favour. Thus, the Chinese Premier's offer to the United Nations of proposals to resume talks on the exchange of prisoners of war and the acceptance of the offer by the U.N. Supreme Commander brightened the prospects for the peace move. On top of this adverse news, presentation of the Select Committee's report on the Estate Duty Bill further affected the operators' sentiment. The recommendations of the Select Committee with regard to the fixation of the exemption limit at Rs. 50,000 in the case of a joint family and at Rs. 75,000 in other cases came up to the worst expectations of the market. This, however, did not bring about a rot, as the market still clung to the hope that the scales of duty would not be very high. Rumours that the Mediators' award on the conversion of Tata Deferred shares would be postponed, restrained speculative activity. The break in cotton prices and the depression on the art silk yarn market on reports of a slump in Japanese markets also had a sympathetic reaction. Further, there were rumours that the labour in the Tata Iron and Steel Works at Jamshedpur was asking for an increase in the profit-sharing bonus. It was feared that blank transfer of shares for delivery on the Exchange would be abolished. Under the impact of these adverse factors, the main body of shares came under heavy selling pressure, and prices registered sharp declines.

In the steel section, Tata Deferreds opened on Monday at Rs. 1,861-4 and fell to Rs. 1,820 yesterday. After a partial recovery to Rs. 1,830 they slumped again to Rs. 1,807-8 to-day and wound up at Rs. 1,810. As rumours regarding the postponement of the Mediator's award came in, selling pressure in Tata Ordinaries was subdued on Monday and bear covering lifted up the shares from Rs. 319-4 to Rs. 321-8, but the general weakness of the market dragged them down to Rs. 315-4 at the close. Indian Irons dropped under persistent offerings from Rs. 25-10 to Rs. 24-6, the lowest level since the second week of February.

Lack of buying power and bouts of bull liquidation hit the textile shares and almost the entire list of them suffered fair measure of losses. Bombay Dyeings started at Rs. 394-6 and after a mild upward reaction to Rs. 397-8, gave way to Rs. 385. Kohinoors were pressed down from Rs. 308 to Rs. 291, Centurys fell by Rs. 11 to Rs. 269-8, Central Indias by Rs. 7-8 to Rs. 154. Finlays by Rs. 5 to Rs. 310 and New Greats by Rs. 3 to Rs. 150-8. Simplex retreated from Rs. 182-8 to Rs. 177 despite the Directors' reported decision (subject to the sanction of the Controller of Capital Issues) to issue bonus shares at the rate of one share for every three shares held at present, by capitalising a sum of Rs. 10.5 lakhs from out of the reserves. Standards gave way from Rs. 295 to Rs. 282-8 and Svadeshis from Rs. 258 to Rs. 256.

Bank shares presented a mixed trend. Barodas were a fraction better at Rs. 112-8. Central Banks reacted from Rs. 67 *cum-div.* to Rs. 62-8 *ex-div.* and their New shares from Rs. 68-12 *cum-div.* to Rs. 64-8 *ex-div.* Imperials Fully Paid were lower by Rs. 15 at Rs. 1,840 and Contributories by Rs. 7-8 at Rs. 450. Bank of Indias were up by As. 8 at Rs. 154-4 *ex-div.* United Commercials dropped a fraction to Rs. 35-8.

Selective support was given to electricity shares. Andhra Valleys improved by Rs. 5 to Rs. 1,442-8, Tata Powers by Rs. 2-8 to Rs. 1,540 and Bombay Suburbans by As. 5 to Rs. 124-1. Tata Hydros were marked down by Rs. 2 at Rs. 151-8, Ahmedabad Electrics by As. 15 at Rs. 113-12 and Surat Electrics by As. 6 at Rs. 121-8.

Miscellaneous shares came under pressure and the more speculative issues sustained sizable losses. A.C.Cs. dropped Rs. 3 to Rs. 170 and Belapurs Rs. 3-8 to Rs. 235. After a somewhat brisk activity on buying support early in the week, Bombay Burmahs relapsed to lose Re. 8-12 at Rs. 385-10. B.I.Cs. lost As 8 to Rs. 8-3 *ex-div.* National Rayons sagged by Re. 1-12 to Rs. 73, Premier Constructions by Rs. 5-4 to Rs. 85-12, Tata Chemicals by As. 9 to Rs. 9-3 and Tata Oils by As. 12 to Rs. 34. Alcocks moved down by Rs. 3-12 to Rs. 302-8, Shivrajpurs by Rs. 2 to Rs. 61, and Indian Coppers by As. 1½ to Rs. 3-1½. Scindias were a weak spot with a loss of As. 9½ at Rs. 13-12½ and Bombay Steams with Re. 1-8 at Rs. 34. Wimcos provided a notable exception to the general trend with a rise of Rs. 2-8 to Rs. 233-12.

* * * *

Calcutta Stock Exchange

CALCUTTA, 31st *March*

Trading on the Calcutta Stock Exchange was dominated by active dealings in tea shares. Broadened enquiries at advancing rates for tea shares provided a striking contrast to the otherwise dull and featureless market. This performance of the shares may be regarded as something unusual. Having been held tightly, rarely have these shares been attracting attention of speculators. With the solitary exception of these shares the market was listless owing to the depressed state of the jute market. In the absence of any selling pressure during the major part of the week, prices were moving within a narrow range. On the closing day (that is to-day), however, industrial equities, led by steels, succumbed to selling pressure induced by reports of peace moves, apprehensions about the Estate Duty Bill, on which the Select Committee submitted its report, and the report that the Government would not favour the cut in the production of jute goods. The week finished with rates closing a shade lower than what they were last week in all sections, barring, of course, in tea shares.

In the engineering section, Indian Irons opened at Rs. 25-5 and moved between Rs. 25-11 and Rs. 25-1 till yesterday. Under to-day's selling pressure, the scrips fell to Rs. 24-13 at the close, and in the kerb dealings they drifted still lower to Rs. 24-8. Kumardhubi Engineerings reacted from last week's closing of Rs. 8-5 to Rs. 7-14. Marshalls recorded a decline from Rs. 6-12 to Rs. 6-1. Texmaco shares were As. 2 lower at Rs. 5-5. Jessops reacted from Rs. 25 to Rs. 24-3. Britannia Engineering were done at Rs. 20 and Burns at Rs. 271-8.

The jute section staged a recession on reports of a slump in the goods market, following the suggestions that the Government would not agree to the proposal of restricting output by sealing looms. Howrahs which were done at Rs. 24 at the close of last week were on offer to-day at Rs. 23-8. Champdanys fell from Rs. 161-8 to Rs. 159, Indias from Rs. 130 to Rs. 126 and Reliances had sellers at Rs. 13-7, as against Rs. 13-10. Ballys were Re. 1-8 lower at Rs. 152. Standards drifted lower from Rs. 141 to Rs. 138-8. Agarparas closed at Rs. 18-6 *ex-div.*, as against Rs. 19-14 *cum-div.* last week. Two of the jute companies under the management of Messrs. Jardine Henderson Ltd. announced this week their dividends for the half-year ended 31st December, 1952. Kankanarrah has declared a dividend of Rs. 4 per share (Rs. 100) which is Rs. 2 lower than that paid for the half-year ended 30th June, 1952, and Rs. 3-8 less than that paid for the corresponding six months of 1951. Kamarhatty's dividend of Rs. 6 per share compares unfavourably with Rs. 8-8 and Rs. 12-8 paid for the two preceding half-years, respectively.

Coal shares displayed a hardening tendency in limited turnover early in the week, but such failed to be consolidated in the face of the downward trend towards the close. Bengals which looked up from Rs. 540 to Rs. 543 reacted to Rs. 535. Burrakurs fell from Rs. 11-2 to Rs. 10-14. Centrals Indias after going up from Rs. 5-6 to Rs. 5-12 came back to Rs. 5-6. East Indias disclosed a net loss of As. 11 to Rs. 23-1. New Beerbhooms were taken up from Rs. 22-13 to Rs. 23-1 before being brought down to Rs. 22-10. Western Bengals were done up to Rs. 5-5, as against last week's closing of Rs. 4-11, but finished at Rs. 5.

As already noted, tea shares were in the limelight, though enquiry was mainly confined to select scrips of companies in Assam and Dooars, evidently on account of their lower production costs, as compared with those in other areas and the quality tea which they produce. The general sentiment was, however, one of buoyancy and prices hardened over a wide front. Thus, Birparas were picked up at Rs. 54-8, as against Rs. 50. Basmatias were done at Rs. 24-4. Dimakusis hardened from Rs. 28-8 to Rs. 30, Hantaparas from Rs. 138 to Rs. 142 and New Samanbaghs from Rs. 6-15 to Rs. 7-4. Singtoms advanced from Rs. 3-2 to Rs. 3-14, Sonai Rivers by as much as Re. 1 to Rs. 5-14, Teliaparas from Rs. 74 to Rs. 75, Tenganis from Rs. 18-8 to Rs. 20-4 and Tukvars from Rs. 5 to Rs. 5-4.

Miscellaneous scrips closely followed the market current and the entire list suffered losses over the week on predominance of sellers. B.I.Cs. drifted from Rs. 8-11 to Rs. 8-8. Indian Coppers were found neglected at Rs. 3-2, as the continued labour strike at the Company's works for the fourth week in succession gave rise to apprehensions about the profit for the current year. Martin Burns receded from Rs. 19-6 *ex-div.* to Rs. 18-9. Titaghur Papers moved down from Rs. 37 to Rs. 36-10 and Orient Papers from Rs. 35-8 to Rs. 34-8. India Steamships eased by As. 2 to Rs. 6-8. Rallis India were dull at Rs. 77, as also Alkali and Chemicals at Rs. 13-12. Assam Saws were quiet at Rs. 6-11, Indian National Airways at Rs. 4, Airways India at Rs. 11-8 and Bharat Airways at Re. 1-12. Calcutta Electrics were, however, in favour to harden by As. 3 to Rs. 6-4.

* * * *

Madras Stock Exchange

MADRAS, 31st *March*

The broad buying interest which was a general feature of the Madras Share Market for some time past subsided to a considerable extent during the week. Prospects of cessation of hostilities in Korea which induced a quiet trend in the Bombay and Calcutta markets was responsible for the subdued tone. The textile section ruled quiet in the absence of expected demand for yarn. In plantings, teas met with selective buying, while rubbers and coffees were almost colourless. Miscellaneous scrips came in for scattered enquiry. Consequently, the volume of business was comparatively less and price variations limited to a narrow range.

In the textile section, only a few shares came in for some attention. Thus, Bangalore Woollens rallied Rs. 5 to Rs. 243. Janardanas and Lakshmis were higher by Re. 1 each to Rs. 59 and Rs. 78, respectively. Mysore Spuns and Travancore Rayons were fractionally higher at Rs. 4-14 and Rs. 4-6, respectively. But for these, the market was cheerless. Rajalakshmis lost Rs. 4¼ to Rs. 72-8. Cambodias were down by As. 10 at Rs. 10-12. Vasantas eased by Rs. 2 to Rs. 164 *cum-div.*

Teas accounted for moderate turnover. Nonsuch Teas gained As. 8 to Rs. 24-4 *cum-div.* and Highland Produce As. 4 to Rs. 9-14. Nilgiri Teas and Chandramalais were fractionally higher at Rs. 10-11 and Rs. 2-4½, respectively. But, Peermades slipped by Rs. 2-4 to Rs. 35-8. Kalasas eased by As. 2 to Rs. 10 and Chembras As. 1¼ to Rs. 2-12.

Rubbers met with some enquiry. Thamarapallys and Peninsulars put on As. 2 each to Rs. 12-14 and Rs. 7-14, respectively. Malankaras, gained Re. 1 at Rs. 102. Be Bes, however, disclosed a fall of an anna at Re. 1-14. Cochin Malabars were lower by As. 1¼ at Rs. 6-4.

Coffee scrips were eventless. Coffee Lands and Cons. Coffees were lower by an anna each at Rs. 9-5 and Rs. 17-1, respectively. Shevroys, however, were higher by nine pies at Re. 1-3¾. Kadur Coffees were unchanged at Re. 1-8.

Among miscellaneous scrips, Prithvi insurance scrips hardened by As. 4 to Rs. 6-12. The Directors have announced proposal to mutualise the company. Indian Steel Rolling Mills were done at Rs. 11-12, as against Rs. 11-8. Mysore Papers and Tobaccos improved by As. 2 each to Rs. 13-9 and Rs. 10-4, respectively. Ranes (Rs. 50 paid-ups) lost As. 8 to Rs. 75 and Spencers As. 4 to Rs. 14-8. F.A.C.Ts. eased by As. 2½ to Rs. 3-2½ and Parrys an anna to Rs. 5-10.

In the banking section, Imperial Banks shot up by Rs. 40 to Rs. 1,865, while contributories lost Rs. 2½ to Rs. 450. Indian Banks (Rs. 100 paid-ups) gained Rs. 2 to Rs. 176 *cum-div.* Bank of Mysore and Andhra Bank were unchanged at Rs. 281 and Rs. 105, respectively.

Notices

THE TRAVANCORE RUBBER & TEA COMPANY, LIMITED

(Incorporated in Travancore)

NOTICE IS HEREBY GIVEN THAT THE Ninth Ordinary General Meeting of the Company will be held on Wednesday the 29th April, 1953, at the Registered Office of the Company in Alleppey at 2-30 p.m. to transact the following business:—

1. To receive and adopt the Directors' Report and the audited Accounts and Balance Sheet for the year ended 31st December, 1952.
2. To declare a Dividend.
3. To elect Directors.
4. To appoint Auditors.
5. To transact any other competent business which may be brought before the meeting.

The Transfer Books of the Company will be closed from 12th April, 1953, to 1st May, 1953, both days inclusive.

By Order of the Board,
THE TRAVANCORE RUBBER & TEA CO., LTD.,
Per Pro ASPINWALL & CO.
(TRAVANCORE) LTD.,
Managing Agents.

ALLEPPEY, 30*th March*, 1953.

NASKARPARA JUTE MILLS COMPANY LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE 39th Ordinary General Meeting of the Members of the Company will be held at the Registered Office of the Company, No. 8, Dalhousie Square East, Calcutta, on Monday the 20th April, 1953, at 5 p.m., for the purpose of receiving the Directors' Report, passing the Audited Accounts and declaring the Dividends recommended by the Directors for the half-year ended the 30th April, 1952, electing Director, appointing Auditors and for transacting any other business of the Company that may be brought forward.

The Share Transfer Register of the Company will be closed from the 13th April, 1953, to 20th April, 1953, both days inclusive.

By Order of the Board,
For and on behalf of
NASKARPARA JUTE MILLS CO., LTD.,
HOWRAH TRADING CO., LTD.,
Managing Agents,
(Sd.) K. D. JALAN,
Director.

CALCUTTA, 26*th March*, 1953.

NEWS IN BRIEF

THE night air mail services in India carried during 1952, approximately 27,000 passengers, 30 lakh lbs. of mails and 10 lakh lbs. of freight.

The Government of India has decided to continue free licensing of export of raw wool beyond 31st March, 1953, upto a ceiling of 9 million lbs.

Of about 550 million kwh. of electricity generated annually in India, the cities of Bombay and Calcutta consume approximately 40 per cent.

The Government of India has extended the free licensing of wool waste for shipment, which expired on 31st last month, upto 30th September, 1953.

The Government of India has extended the period of validity of open general Licence XXVI, which is applicable to Pakistan only, upto 30th June, 1953.

The Agricultural Income Tax Bill, 1953, seeking to levy tax on agricultural income exceeding Rs. 3,000 per annum, was introduced in the Bhopal State Assembly on 30th March.

The manufacturing cost of an air-conditioned railway coach on the broad-gauge is Rs. 2,71,000, of a second class coach Rs. 1,47,000 and of a third-class coach Rs. 1,17,000.

A Bill designed to abolish personal and miscellaneous *inams* was introduced in the Mysore Legislative Assembly on 28th March. Religious and charitable *inams* have, however, been excluded from its provisions.

The Government of India has released a further quantity of 100,000 tons of sugar out of the 1952-53 production of all the factories for sale in the free market. This brings the total quantity so far released to 366,000 tons.

The 1953-54 budget estimates for Patiala and East Punjab States Union disclose a deficit of Rs. 68.61 lakhs. Revenue receipts are estimated at Rs. 634.93 lakhs and expenditure at Rs. 703.54 lakhs. The budget proposes no new taxes.

The Mysore Legislative Assembly adopted the Mysore Motor Spirit (Taxation on Sales) (Amendment) Bill seeking to increase the sales tax on petrol from As. 4 to As. 6. This increase is expected to result in a revenue of Rs. 8 lakhs.

The *khadi* development budget, approved by the *Khadi* and Village Industries Board the other day, provides for an expenditure of Rs. 1 crore, recurring and non-recurring. It also provides for loans to finance development schemes to the extent of Rs. 1.75 crores.

The area under tobacco, according to the all-India first crop estimate in the 1952-53 season, is 735,000 acres, as against 727,000 acres of the adjusted first estimate of last year. This shows an increase of 8,000 acres or 1.1 per cent. The estimate, however, does not cover the entire area sown to tobacco. Past experience shows that the acreage at the supplementary (final) estimate stage is about 11 per cent. higher than at the first estimate stage.

The Government of India has decided to issue licences for the import of spare parts of prime movers required for complete power-driven agricultural machinery, power-driven pumps and generating sets, on the basis of five per cent. of half of 1st year's imports of the complete machinery in question. The licences issued will, however, not be valid to cover import of the prohibited types of spares and also such spares as have been separately shown under the Import Trade Control Schedule, such as piston rings and ball bearings.

A 100-acre site in Mahul village near Trombay Island, has been selected by the Atomic Energy Commission of the Government of India for locating its proposed uranium-thorium factory. The site is located near the proposed oil refineries and the land is at present being acquired by the Bombay Government on behalf of the Atomic Energy Commission. It is expected that all formalities in connection with the acquisition of the land will be over by the end of this month and work of construction of the factory will begin early in May. The factory is likely to go into operation within the next 15 months.

The Government of India has accepted the proposal of Messrs. Caltex (India) Ltd. for the establishment of a modern oil refinery at Visakhapatnam, with an initial capacity to refine 500,000 long tons of crude oil per annum. This agreement follows broadly the lines of the previous agreements concluded in 1951 with the Standard-Vacuum Oil Company of New York and the Burmah-Shell Group of Companies for the establishment of two oil refineries at Trombay Island near Bombay. Caltex (India) Ltd. will form an Indian Company, which will own and operate the refinery. Indian investors will be given an opportunity to subscribe up to 25 per cent. of the share capital in the form of cumulative preference shares. The construction of the refinery is expected to be undertaken towards the beginning of 1955.

The Pakistan Government has so far not agreed to the setting up of even a single joint committee, out of the five joint committees to be set up in India and Pakistan, under the Movable Property Agreement of June 1950, to assist the evacuee owners in obtaining compensation for property already acquired and sale proceeds of property already sold. The Movable Property Agreement lays down the following three basic principles: (1) In cases where movable property is still available, the evacuee owner has a right to its restoration; (2) where the property has been acquired, the owner is entitled to payment of compensation; and (3) where the property has already been sold off, the sale proceeds are payable to the owner. The only benefit which evacuees have derived from the Movable Property Agreement, so far, is a limited recovery of household and personal effects left with friends and relations in the other country.

An operational agreement was signed on 27th March in New Delhi between the Governments of India and the U.S. The agreement provides for a joint Indo-U.S. Project for locust control and plant protection. The U.S. will provide for the Project $221,000 and India Rs. 5 lakhs. Under the agreement, the facilities and services of the regional project established by the Technical Co-operation Administration under the last year's agreement will be made available to India during the months of July, August, September and October, 1953, to the extent of three planes, as may be required, with the necessary pilots and technical personnel. The project will also be extended to include prevention of damage to crops by other pests and diseases, such as, rice-bugs and wheat-rust, the intention being to provide general plant protection measures so as to minimise loss of agricultural production from pests and diseases.

The Government of India announced on 26th November, 1952, that packing charges for cement would be fixed every quarter on the basis of the average market price for packing material ruling on the first day of each month during the immediately preceding nine months plus Re. 1-4 per ton to cover incidental charges. On this basis, were fixed the existing packing charges of Rs. 14-11 per ton which will be in force upto the end of March, 1953. The industry could no doubt calculate on this basis the packing charges applicable to the quarter commencing from 1st April, 1953. In order, however, to make the position clear, the Government of India have informed all the State Governments that the packing charges for that quarter will be Rs. 12-4 per ton. These are the maximum charges applicable to cement packed in new bags only. Packing charges for cement packed in old bags will be a matter for settlement between the buyer and the seller subject to the maximum indicated above.

* * * *

From Abroad

Turkey has banned free entry of British goods in retaliation for the U.K. not purchasing its goods.

The Austrian National Bank has reduced the Bank rate from 5½ to 5 per cent., with effect from 26th March last.

The Japanese Government does not propose to effect any drastic cut in imports from the sterling area during the six months, April-September, 1953.

The U.K. Ministry of Materials has reduced the price of electrolytic copper from £285 to £280 per ton, delivered at consumers' works. The last time the price of copper was reduced was in August 1952, when it was cut from £287 to £285.

The population of Ceylon exceeds 8.1 million, an increase of over 1.4 million in seven years, according to the census taken on 20th March this year. The increase in population is said to have been assisted by a substantial drop in death rate.

It is learned that proposals for Ceylonisation of trade by legislation, which were placed before the Government recently, by the Minister of Trade and Commerce, Mr. R. G. Senanayake, have now been withdrawn.

The Chrysler Corporation of the U.S., manufacturers of Chrysler, Plymouth, Dodge and De Soto cars, has announced a reduction in prices averaging $100 on all its passenger models. A reduction of $40 in the price of Dodge lorries has also been announced.

Steel makers in Japan propose to establish a central organisation to study and make recommendations on counter-measures against the Schuman Plan. They fear that the Schuman Pool will threaten Japanese steel markets in West Europe, the Near East, South-East Asia, South America and Australia.

Pakistan and the U.S. Governments have signed an agreement, under which Pakistan will receive $12.25 million of economic assistance from the U.S., during the current year. The agreement envisages the setting up of a special fund to which the American contribution will be credited and the Pakistan Government will make available a sum in rupees equivalent in value to the dollars made available. The agreement provides for supply of capital goods as well as technical assistance for the execution of developmental projects on hand.

The Government of Burma has given three months' notice to the U.S. to terminate the Technical Co-operation Agreement Aid Programme to Burma. It will be recalled that Burma signed an agreement for aid and assistance in September, 1950. When the U.S. Government wanted to change this aid into Mutual Security Assistance in 1952, Burma objected. Aid to Burma was then brought under the Technical Co-operation Administration. Burma has so far received about $14 million worth of aid and will have received about $30 million by June this year for programmes already approved.

PERSONAL

DR. John Matthai has resigned his position as a Director of Tata Industries Ltd., following his acceptance of the Chairmanship of the Taxation Enquiry Commission.

Mr. R. G. Dube, a member of Parliament, has been appointed Parliamentary Secretary to the Ministry of Production, Government of India.

Mr. Balakrishna K. Mehta has been elected President of the Association of Merchants and Manufacturers of Textile Stores and Machinery (India), Bombay for 1953.

Mr. P. L. Saraogi has been re-elected President of the Bharat Chamber of Commerce for the year 1953. Mr. G. L. Mehta (not to be confused with India's Ambassador to the U.S.) and Mr. R. N. Bangur have been elected Senior Vice-President and Junior Vice-President, respectively.

Mr. C. Stribling Snodgrass, an international expert in the utilisation and transmission of natural gas, has arrived in Karachi. Mr. Snodgrass is to prepare a report for Pakistan Petroleum Ltd. on the question of the distribution of gas from Sui in Baluchistan to other parts of the country, with special reference to bringing it to Karachi *via* Sukkur, Rohri and Hyderabad.

Mr. R. W. Bullock, Chairman and Managing Director of Messrs. Forbes, Forbes Campbell and Co., Ltd., Bombay, retired on the 1st inst., after a distinguished service of 34 years with the firm. He has been succeeded by Mr. F. H. Kemple.

During his service, Mr. Bullock rendered yeoman service to trade and industry in the country. He was a Trustee of the Bombay Port Trust from 1939 to 1953, Vice-President of the Bombay Chamber of Commerce during 1941-42, besides being its Committee Member for ten years after 1937-38, and a member of the Committee of the Millowners' Association, Bombay, for three years.

Mr. Pranlal Devkaran Nanjee, Chairman of the Devkaran Nanjee Banking Co., Ltd., Mr. H. C. Captain, Managing Director, Central Bank of India, and Mr. P. S. Nayak, General Manager, Canara Bank Ltd., have been re-elected Chairman, Vice-Chairman and Honorary Secretary, respectively, of the Indian Banks' Association for the year 1953. The other elected members of the Committee are: Messrs. A. C. Clarke (Bank of India), Mathew S. D'Souza (Bank of Baroda), R. G. Saraiya (United Commercial Bank), M. S. Captain (Union Bank of India), Shriyans Prasad Jain (Punjab National Bank), S. Krishnaswamy Iyengar (Indian Bank), Sanjiban Banerjee (United Bank of India), S. L. Kothari (Bank of Jaipur), and C. V. Joag (Bank of Maharashtra).

Nawab Ali Yavar Jung, Ambassador of India in Argentina, is representing the Government of India at the 15th session of the Economic and Social Council, now being held at New York. Mr. A. S. Lal, Consul-General of India, New York, Mr. B. R. Shenoy, Alternate Executive Director for India on the I.M.F. and the World Bank, and Mrs. Shyam Kumari Khan of Allahabad are the alternate representatives. Mr Avtar Singh, First Secretary, Indian Delegation to the United Nations, is the Secretary-General and Adviser to the Indian Delegation. Mr. P. K. Banerji, First Secretary, Indian Delegation to the United Nations, is the Adviser.

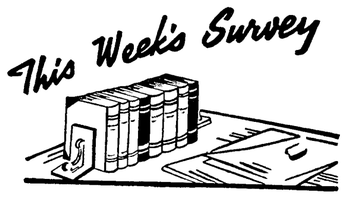
"COMMERCE" 1928

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, 7*th April*

The Wagon Industry

The Steel Protection Bill relating to the manufacture of railway wagons and underframes, component parts thereof, and wire and wire nails has been passed by the Legislative Assembly—not as it was presented in the House, but in a radically modified form. It was based on the report of the Indian Tariff Board, the recommendations of which were accepted with considerable modification. The Government of India agreed with the Board that the continuance of the bounty scheme was unnecessary and held that tenders should, in the first instance, be called for only in India and that the lowest tender should be accepted, provided it was reasonable. The Government of India, therefore, decided that the rate of duty on wagons and underframes and their component parts other than wheels, axles, vacuum brakes and certain other component parts which were not made in India should be raised to the rates applicable to fabricated steel generally, namely, 17 per cent. *ad valorem*, if of British manufacture, and 17 per cent. *ad valorem* plus Rs. 15 per ton, if not of British manufacture. As the manufacture of forgings is merely a process incidental to the construction of wagons, these are also to be subject to the increased duty. The Government of India could not accept the bounty scheme recommended by the Board in respect of steel castings, inasmuch as the conditions justifying protection for the manufacture of these were non-existent. The Tariff Board had no recommendation to make regarding spring steel, as it is not manufactured on a commercial scale; but the Government of India accepted the recommendations of the Board that, on all bolts and nuts falling under Article 61 of the Statutory Tariff Schedule, a specific duty of Rs. 2 per cwt. should be levied, in place of the existing *ad valorem* duty of 10 per cent., and that the protective duty on wire and wire nails should be discontinued.



VOLUNTARY NEGOTIATION

EMPLOYERS are increasingly becoming conscious of the value of the method of voluntary negotiations for settling labour disputes, as distinguished from the method of compulsory arbitration and adjudication. In a sense, this is not their new discovery, for, before the elaborate labour laws were placed on the statute book, they were wont to regard the method of negotiations as the only sure means for ensuring industrial peace. Only, they are now re-discovering the value of this old and tried instrument, thanks to the lead given by the Central Government. And yet, the battle for voluntary negotiations has not been won; the State Governments, a few labour leaders, and, one suspects, the "labour" machinery of the State Governments are not yet completely reconciled to the prospect of the abolition of compulsory adjudication. These doubters will do well to note what Mr. H. Gibson, who has known this country for over a quarter of a century now, had to say on the subject of labour legislation a few days ago.

Addressing the annual meeting of the Indian Engineering Association, held recently at Calcutta, Mr. Gibson said that the "system of compulsory arbitration has encouraged disputes, has magnified the differences between employers and workers and has given a prestige and standing to irresponsible agitators which they do not properly deserve and which is not in the best interests of either the workers themselves or of the industry as a whole." This is a strong but not baseless indictment of a legislation which was so obviously meant to usher in an era of industrial peace. That this legislation has succeeded in maintaining some sort of industrial peace, it is difficult to deny. But equally difficult it is to deny Mr. Gibson's contention that it is an "illusory kind" of industrial peace. It has been gained at a heavy cost, at the cost of industrial efficiency, and what is even more damaging, at the cost of the development of responsible labour leadership.

Why then does compulsory adjudication exercise so great a fascination for labour and some State Governments? Mr. Gibson was at some pains to answer this question. He said that the system appeals to labour because, "since tribunals seldom, if ever, give awards which detract from the existing privileges of labour, they have everything to gain and nothing to lose by forcing demands to the point of adjudication." It appeals to the Government because it "relieves them of the responsibility for taking unpleasant decisions." It is of a piece with the Government's general habit of referring inconvenient questions to committees, then waiting for their report. Action is always unpleasant. But there is something impersonal about a committee or a tribunal. Only, the Government does not realise the great harm that is done to the cause of industrial progress or to that of employer-employee relations by compelling the parties which must willy-nilly work together, to appear before an external authority in the unreal guise of plaintiffs and defendants.

It is, however, unlikely that the system of compulsory adjudication will be completely abandoned. Perhaps, this is not altogether a disadvantage, for there is something to be said for its gradual disappearance. The more important question, as Mr. Gibson said, is "at what stage and under what circumstances Government will invoke compulsion." And he suggested that, if the Government were to decide to retain the tribunal machinery, the Appellate Tribunal should also be retained. He also urged that the sections in the Industrial Disputes Act and the Appellate Tribunal Act, which prohibit changes in conditions of service during the pendency of tribunal proceedings, should be revised. These and certain other sections, which interfere with the employers' right of negotiation, of agreement with workers and of the organisation of the industry on an efficient basis, deserve to be amended without delay.

TRIPARTITE MACHINERY

Inaugurating the Rajasthan Tripartite Conference of Labour, Government and Industry, Mr. V. V. Giri, Union Minister for Labour, highlighted the importance of the role of tripartite machinery in the settlement of industrial disputes. He remarked that, if he were asked what machinery in the field of labour had been most productive of results in the avoidance and settlement of disputes and in the promotion of harmonious relations between labour and management, he would certainly have no hesitation in giving the pride of place to the machinery of tripartite conferences. He strengthened his statement by pointing out that even the International Labour Organisation was of the same opinion.

That the potentialities of the tripartite machinery in the settlement of growing industrial disputes are very great is a matter of common knowledge. It is true that labour laws, the world over, have created many agencies for conciliation, arbitration and adjudication, both voluntary and compulsory. Although they all play an important role in the maintenance of harmonious industrial relations, their functions are somewhat limited, in that they are designed to tackle and solve specific problems. But there is no such restriction implied in the tripartite conferences. They can comprehend the whole field of industrial problems from any or all angles.

A significant feature about the tripartite machinery is that it is born of the realisation that the problem of industrial relations is, in the wider aspect, one of keeping human relations straight and smooth, at any cost, and that mutual consultation among the parties alone is the best method of tackling industrial disputes. The primary role of tripartite conferences is, in the first instance, the creation of an atmosphere of goodwill, trust and confidence, an atmosphere in which suspicion is nipped in the bud and co-operation and compromise are sown in what might otherwise be a fertile field of conflict and opposition. Thereafter, it tries to tackle the disputes concerned.

The future of the maintenance of peaceful industrial relations lies in the success of tripartite machinery in solving labour disputes. If the tripartite system is to usher in an era of healthy industrial relations, it should become what one might call "the way of life," as Mr. Giri aptly put it. It must be ingrained in the attitude and the outlook of parties that the occasional need to resort to direct action, leading to deterioration of industrial relations, is a distasteful and cruel one. Surely, the settlement of disputes through tripartite machinery is the only sensible way in this world of complex labour problems.

COIR INDUSTRY

Whether there should be a separate board to look after the affairs of the coir industry or the Indian Central Coconut Committee itself should be assigned that duty has been hotly debated for some time now. The Coir Industry Bill, 1953, introduced in the House of the People on 26th March, has set at rest this controversy by proposing a statutory board with a view to controlling production of coir industry and improving the quality of coir products. The Union Government seeks to exercise control over this industry through the Board which would consist of a chairman, a secretary and members not exceeding 40, representing coir interests, the Governments of principal growing States, representatives of Parliament and other Central Government nominees. The Bill proposes to levy a customs duty not exceeding Re. 1 on coir fibre, coir yarn, and coir products exported from India to finance the Board's activities. The levy at the maximum rate is expected to yield approximately Rs. 12 lakhs a year. It is not possible at the present stage to indicate what expenditure will be incurred on the proposed Coir Board. It is, however, estimated that, initially, the expenditure would not exceed Rs. 6 lakhs a year, which would be met from the coir fund.

The coir industry in India does certainly need a central organisation to look after its affairs. India is one of the principal coir producers in the world. And the industry is of great importance to Travancore-Cochin State, where it is largely concentrated. The aggregated production of coir, manufactured and unmanufactured, is estimated at 1.3 lakh tons, Travancore-Cochin accounting for a lakh tons and Madras for almost the rest. In the former State, the industry provides employment to nearly 6 lakhs people. It is also an important foreign exchange earner. Thus, the total value of exports of coir, manufactured and unmanufactured, during 1951-52, fetched Rs. 10.26 crores, as against Rs. 10.85 crores during 1950-51.

The need for regulating the industry arises from the fact that it has developed in a haphazard manner without any considerable improvement in manufacturing technique. The cost of production is high and the quality of its goods lacks uniformity. Besides, the industry is experiencing severe competition from products of other hard fibres in overseas markets. The prices of coir and coir goods have declined in recent months. Although India exported during the nine months ended December, 1952, as much as 905,315 cwts. of coir goods, about 227 cwts. less than the exports during the corresponding period in the previous year, the value realised was only Rs. 5.15 crores, as against Rs. 7.98 crores. The exports of coir during April to December, 1952, were, however, higher at 633 tons, as compared with 451 tons during the corresponding period in the previous year. But the value realised during the period under reference was actually lower at Rs. 5.39 lakhs. If the industry is to maintain its position in overseas markets, there is clearly need for reducing its costs and improving its quality. The Coir Board should be able to assist in the development of the industry along correct lines. It must, however, be pointed out that the proposed levy should be fixed at a level that will not hamper the export trade.

PUBLIC CO-OPERATION TO DEVELOPMENT PLANS

The Planning Commission has suggested to State Governments that they should give the highest priority to the process of splitting up the National and State plans into programmes of local units such as district, town, and village, so that the people in these areas might be enabled to appreciate what the plan means to them. It has further suggested the integration of development schemes of State Governments and local bodies with programmes under the Five-year Plan. It is this wider conception of development which, according to the Commission, has to be placed before the people. This suggestion is designed to enlist the co-operation of the people in the implementation of the development programmes. The Commission has urged the need for setting up a rural extension service in each State, under a plan which would cover the entire area of the State in a period of ten years and a third of the area during the planning period, establishment of *panchayats* in villages or groups of villages and development of a system of regional co-ordination and supervision of district development programmes. It has highlighted the importance of closer association of members of State Legislatures and Parliament, irrespective of their party affiliations, in the framing and working out of local development programmes and utilisation of the services of social service organisations. These organisations, it has suggested, should be financially assisted in their work.

The insistence of top priority to the process of breaking up of the National and State plans into local units is most welcome. For it is only in terms of local programmes that local enthusiasm can be created and sustained. The plan can then become a medium and focus of constructive activity in every part of the country and can be further strengthened and developed by the effort of the people themselves. Thus, the people will become partners in the formulation of the plan, as well as in its execution. In a fascist country, a national plan might be imposed from above. But a truly democratic plan must, at all its varied stages, take the people into confidence; their co-operation should be enlisted so that they might feel that the plan is a part of their daily life and activity. Thus, public co-operation and public opinion constitute the principal force and sanction behind democratic planning.

The integration of development schemes which are part of the normal activities of the State and those of local self-governing bodies will help orderly progress of the developmental programmes. Public co-operation need, by no means, be limited to the schemes included in the Five-year Plan alone. The Plan should, as the Commission has rightly emphasised, be treated as part of the wider national effort which comprises all activities, made by the State Governments, local authorities, and voluntary organisations. The establishment of *panchayats* will certainly provide the necessary local leadership for the implementation of the Plan. These agencies are intended to be responsible for the framing of programmes of production for the villages and securing minimum standards of cultivation, reclamation of waste lands, organisation of community effort, co-operative management of farms and implementation of land reform measures. Besides, they would serve as channels through which Government assistance could be rendered. The closer association of members of State Legislatures and Parliament, irrespective of their political affiliations, and the utilisation of the services of social service organisations will prove valuable in developing non-official leadership, especially in the rural areas.

PROBLEM OF DEPRECIATION

A pressing problem confronting industries for a considerable time now, not only in India but abroad, has been that of finding finance for replacement programmes, thanks to the widening gap between original and replacement costs. The expenditure on replacement of plant and machinery and on modernisation in the various industries, which have a large backlog of arrears of depreciation to make up, is estimated by the Planning Commission at Rs. 150 crores for the five years ending March, 1956. Although this problem has been repeatedly stressed time and again, it is regrettable that it has not received adequate attention at the hands of the Government. Now that only three years remain for the implementation of the Five-year Plan, the need for providing rehabilitation finance assumes special importance. It was precisely to this need that Mr. Pannalal Saraogi, President of the Bharat Chamber of Commerce, drew pointed attention in the course of his address at the Chamber's fifty-third annual general meeting, held recently at Calcutta.

Inasmuch as the enquiry by the Taxation Commission will take a long time before it is completed, Mr. Saraogi urged the Government to adopt some interim measures with a view to enabling the industries to meet the various problems of replacement finance and to plough back a sizable portion of their profits. Without a larger flow of savings to industrial investment in the private sector, he said, it would be difficult for the latter to play the part assigned to it in the Plan.

Another intriguing problem facing the Indian industries, to which also Mr. Saraogi drew pointed attention, relates to high cost of production. In the context of the emergence of a buyers' market the world over, the importance of lowering the cost structure, improving quality and effecting rationalisation cannot be too strongly emphasised. When Mr. Saraogi emphasised the last aspect, he was, of course, fully aware of the immediate effect of rationalisation, namely, displacement of labour. Surplus labour, he maintained, could be absorbed by developing cottage and small-scale industries on the Japanese model. In this connection, he attached considerable importance to the need for encouraging industries producing artistic, semi-luxury or luxury goods, and also industries which depend on the supply of material or components from large-scale industries, as, for example, manufacture of tape, bobbin, laces, etc. At the same time, he warned that any "artificial" protection of small industries, by placing burden on larger industries and consumers, was a dangerous course.

Mr. Saraogi suggested that the Government should buy all its requirements from indigenous manufacturers *even at a sacrifice*. This is perhaps an overstatement of the case for *swadeshi*. If this suggestion were implemented, it would restrict the freedom of the Government to buy the quality product it wants. The quality of several products produced in India is somewhat below western standards. Moreover, the stores purchase policy, motivated by 100 per cent. spirit of *swadeshi*, has a tendency to take away from the factories the incentive to improve quality and reduce production costs. There is, therefore, the need to proceed cautiously in the matter. The industries should get the support a national Government ought to give it. But, at the same time, industries should see that the quality of their products is steadily improved.

LIFE INSURANCE AND THE COMMON MAN

NEED FOR DEVELOPING NEW METHODS FOR REACHING HIM

(Contributed)

LIFE insurance in India has a history of over 75 years. The Indian Life Offices Association is now celebrating its Silver Jubilee. Yet it is a significant feature of life insurance in India, unlike in the other countries of the world where life insurance has attained a leading position in the country's economy, that it remains far apart from the common man. It is the purpose of this article to explain how this position arises and to examine the future prospects.

Life insurance in India is divided by the Insurance Act into two parts. First is the life business of insurers, restricted to issuing life policies of Rs. 1,000 *or more* per life. This corresponds to what is internationally known as ordinary life insurance. Second is the business of provident societies, restricted to issuing of policies of Rs. 1,000 *or less* per life. This corresponds to industrial life insurance in other countries.

Thus, we have two broad and clearly separated categories of insurance companies, one for offering life insurance service to that section of the population which can afford to purchase policies of Rs. 1,000 or more per life, and the other for catering to those who can afford to purchase only policies of less than Rs. 1,000 per life. It is assumed, in this connection, that, although provident societies are permitted by law, in common with insurers, to issue policies of Rs. 1,000 exactly per life, the choice of the people for policies of Rs. 1,000 per life is more likely to be in favour of insurers rather than provident societies, since the former offer greater security and better service.

This dividing line in the population dependent on the capacity to afford to take out a policy for Rs. 1,000 per life corresponds to an income of, say, Rs. 2,000 to Rs. 2,500 per annum. Those with higher incomes can afford to take out policies of Rs. 1,000 and more per life, whilst those with lower incomes have to be content with policies of less than Rs. 1,000 per life. The average policy of life insurers in India costs, per Rs. 1,000 sum insured, Rs. 55 per annum and for holding such a policy, a person has to save at least Rs. 55 each year, in addition to maintaining an average family of 5 at the present scale of the cost of living. Life insurance premiums, however, cannot constitute the whole charge on his savings and they are probably less than half of such personal savings. So, taking the total saving per annum of such a person at Rs. 110, and assuming the total personal savings to be 5 per cent. or less of the income at the income level, which enables an average family man to take out a policy of Rs. 1,000 per life, the income level is estimated at Rs. 2,000 to Rs. 2,500 per annum per family of 5.

OFF THE RECORD

Owing to indisposition, "Rover" very much regrets that he has been unable to write his customary feature for the second week in succession. He, however, hopes to resume his work next week.

Considering this income level in comparison with the *per capita* income in India of Rs. 255 per annum or Rs. 1,275 per annum for a family of 5, and remembering the very uneven distribution of incomes in India (for example, the total number of income-tax payers is only 8,85,399 against a population of 36 crores), it is obvious that the vast majority of the people lie below the minimum income level which enables them to take out a policy of Rs. 1,000 per life in addition to making two ends meet with an average family of 5. If, therefore, the common man is to be found mostly below this income level, the extent to which life insurance has reached the common man is to be judged by the progress of life insurance business below the Rs. 1,000 per life level rather than above it.

The actual position, however, as reported by the latest *Insurance Year Book*, namely, that covering the year 1951, is as follows:—

Definition	Insurers: *Issue policies of Rs. 1,000 or more per life*	Provident societies: *Issue policies of Rs. 1,000 or less per life*
No. of companies (Indian and Foreign)	180	81
Total business—		
No. of policies	34 lakhs	63,097
	Rs.	Rs.
Sum insured	793 crores	3½ crores
Premium income	40 ,,	21 lakhs
Expenses	11.5 ,,	8.3 ,,
Payments to policyholders or their dependents by way of claims and surrenders	15.2 ,,	7.4 ,,
Increase in funds	15.2 ,,	6.1 ,,
Total investments	260 ,,	85 ,,

N.B.—The figures are taken from the *Year Book* as given there, subject to various omissions, but they do not affect the argument here.

The achievement so far of the life insurance business in India summarised above brings out quite clearly the fact that the progress below the line of Rs. 1,000 per life is very poor as compared with the achievement above that line. The number of policies below the line is hardly 64,000 and the premiums collected out of the savings of the people below the corresponding income level of Rs. 2,000 per annum per family are less than Rs. 25 lakhs, while above the line the total number of policies is 36 lakhs, with a premium income of Rs. 40 crores collected out of the savings above the same income level. So, the test referred to above to signify the extent to which the common man and life insurance are brought together only serves to show clearly how far they are apart.

No data is available to the writer about the number of people in this country whose individual incomes are below Rs. 2,000 per annum against the number of those above that level. However, the *per capita* income of Rs. 255 per annum for the whole population is low enough to indicate that the vast majority, perhaps three-quarters of the total population, are below that level; but, of them, less than 64,000 have received the benefit of life insurance through provident societies, while, out of one-fourth the population above that income level, a much larger number has benefitted by life insurance.

Clearer Proof

This is quite the reverse of the position in other countries of the world, where life insurance has achieved a leading position in their economy. Whether you take the U.K., U.S.A., Canada or Australia, or an Asian country like Japan, the number of policies of industrial assurance, which corresponds to the business of our provident societies, is overwhelmingly more than for ordinary life insurance, showing that the number of persons covered by life insurance in the lower income categories is much more than in the higher ones, although the total premium income derived from the lower income levels may not be equally large comparatively as the relative number of policies might indicate. Even so, the premium income derived through industrial insurance in those countries bears a respectable comparison with that of ordinary life insurance; as against this, the premium income of provident societies in India makes a miserable comparison even with reference to ordinary life business of this country. One cannot have a clearer proof of the wide gulf that separates life insurance from the common man in this country.

What is the reason for this position? It is a question of the extent to which small savings are being tapped for purposes of life insurance. The Government is collecting each year a net sum of something like Rs. 40 crores by way of small savings. How is it then that life insurance gets such a small share of these small savings—almost as much as what life insurers collect out of the higher income brackets?

Essence of Insurance

There can be no question that the need of life insurance is less for people with small savings than for those with big savings. In terms of need, the small saver should be getting more of life insurance, not less. In essence, life insurance consists of collecting the savings of the people at a time when they can afford to part with them and returning it to them when they need it most. When the need is likely to arise most is determined by the insured beforehand—mostly either death or survival to a certain age—and the amount payable is determined mathematically. Meanwhile, the collected funds are invested, less the expenses of management and payments to policyholders, for promoting national development, either through Government or otherwise, according to the requirements of the insurance law. So whether, we see it in terms of insurance protection to the individual savers or in terms of collecting savings for national development, the need of life insurance for the common man is no less than for the relatively well-to-do—probably it is more these days when the mobilisation of small savings is so much in the picture. And yet how comes it that the small saver is so badly ignored by life insurance?

The Answer

The answer lies in the fact that collection of small savings through the medium of life insurance is done everywhere in the world in two ways, both of which are conspicuous by their absence in this country. Either the savings are collected as premiums through the employer for the whole, or nearly whole, group of his employees under a Group Insurance Policy or they are collected at the home of the policyholder through Home Service Insurance.

The premiums paid by the employer may be a specific reduction from the wages of the employee supplemented by his own contribution, or may be additional to the known wages, but, in any case, in real terms, they are part of the total wages of the employee. The savings are collected through the employer before the employee receives his "take home-pay" for spending on his immediate necessities.

The other way is through policies of industrial insurance or home service insurance, which are voluntarily purchased by the workers but the servicing of these policies is done at the homes of the policyholders by the agents of insurance companies. All collections are made at the homes, all enquiries are answered and doubts settled at the homes and all payments are made at the homes. Without this home service insurance, these workers with low incomes would never have the benefit of life insurance, because the other demands on their scanty incomes are so pressing that they would always get priority unless somebody collects the savings required for maintenance of life insurance at the right time each week or month from the treasurer of the home—the wife!

INDIA'S CREDIT POLICY COMMENDED

DEVELOPMENT OF NEW INDUSTRIES

(From A Special Correspondent)

NEW DELHI, *30th March*

THE main objective of the Finance Ministry of the Government of India in inviting the International Monetary Fund Mission to pronounce its expert and independent opinion on the financial policies of the Government during the last one or two years, as also on its proposal for undertaking deficit finance to some extent for implementing the Five-year Plan, has been more than vindicated by the statement made by the leader of the Mission, Mr. E. M. Bernstein, to the Press before his departure from this country. It was a well deserved tribute to Mr. C. D. Deshmukh and his principal advisers when Mr. Bernstein declared: "India has had an exceptionally successful record in combating inflation in the past few years. This is no accident at a time when prices were rising throughout the world. It is a result of a determined and intelligent credit policy. The same determination and intelligence will be needed to shape credit policy in the next few years, when the Plan is being carried out. With such a policy, there is no great risk that deficit financing will get out of hand and result in inflation."

DELHI LETTER

Implementation of the Plan

There was no particular need for Mr. C. D. Deshmukh to invite this Mission. But, being a man of great modesty and humility, despite his high intellectual equipment and administrative skill, he would appear to have been anxious to fortify himself against ill-informed criticism from a section of the public which has made it a habit to decry the achievements of this country, however laudable and impressive they might be from an independent point of view. The leader of the I.M.F. Mission is reported to have submitted a preliminary report to the Government while the final report will take some more time before it is submitted to the Government. When the final report is received, the Government should take prompt steps to issue it to the public so that the latter may know that their Government has been following a right and judicious financial policy. The leader of the Mission has also confirmed the fact that deficit financing, if undertaken within limits for development purposes, will be beneficial to the economy of the country on the whole. Prospects for the implementation of the Five-year Plan have now become brighter.

On account of the rapid development of many engineering industries, several new items have begun to be produced for the first time in the country on a commercial basis. Among these, mention may be made of industrial boilers, autojiggers, interlock knitting machines, card and gill pins, fluorescent tubes, some radio components such as loudspeakers, plastic moulded cabinets, etc., pick-up heads for radio-gramophones, some machine tools such as wood planing machine, power press, all geared 40 tons capacity, small tools, water meters, pistons, bicycle spokes, industrial sewing machines, etc.

In the manufacture of many of the above new items, a number of concerns have been able to enlist successfully the co-operation of leading foreign firms, particularly those from the U.K. For instance, a textile machinery factory of Calcutta was able to undertake the manufacture of Lancashire type of industrial boilers since March, 1952, with the technical assistance of a noted U.K. firm. In the production of sparking plugs, the collaboration of both U.K. and German firms have been secured. In the production of fuel injection equipment for diesel engines, a German firm has been helping a Madras firm while in the manufacture of electric horns, a British company has been assisting another Madras concern. An Italian concern has proposed to help an Indian firm in Hirakud in the establishment of a ferro-manganese plant with an annual capacity of 10,000 tons. The assistance of a U.S. company for the production of borehole turbine pumps has been forthcoming in Calcutta. A Bombay company has commenced production of electrodes, since December last, in technical collaboration with a Swiss firm. It has an installed capacity of 50 million feet of mild steel electrodes, although in the initial stage the production will be restricted to 25 million feet. Besides the above, considerable progress has been made in the manufacture of centrifugal pumps, twist drills, reamers, cutters, etc., tungsten carbide tools, wood screws, hinges, A.C.S.R. conductors, switchgears, bicycle parts, umbrella ribs, etc. A Calcutta firm is stated to have received sanction for the manufacture of typewriters in the country of a well-known foreign make.

Progress of Chemical Industries

In the chemical industries section, considerable progress has been made during the last one year and more. For instance, calcium carbide used for making acetylene, was produced for the first time in India during 1952. Production of benzene hexachloride, an important insecticide, was also undertaken in 1952. The manufacture of rayon grade caustic soda by the mercury cell process was initiated during the year. The regular commercial production of ferric chloride in quantities sufficient to meet the entire domestic requirements also commenced during the year. Among the minor chemical items produced for the first time in the country during 1952, mention may be made of medicated soaps and Binaca tooth paste. In the drugs group, production of important antibacterial sulpha drugs was started in 1952. New plants are being set up for the production of calcium carbide, ammonium chloride, phosphoric acid, etc. Among other industries which have come to production stage, mention may be made of the installation of modern machinery for making window sheet glass upto 36 ozs., planned capacity being 27,000 tons and installed capacity, 18,000 tons. Another factory has installed—the only plant of its kind in the country—automatic machines for making bottles, pressed ware and lampware, capacity being 10,800 tons. The manufacture of thermos flasks, synthetic stones (in collaboration with a Swiss firm), gilded glass beads, artificial pearls, penicillin vials, etc., is being undertaken in the country. Schemes for the production of micanite and mica products are being taken up under the supervision of a German technician. Manufacture of zinc oxide, titanium dioxide, etc., is also being taken up on a fairly large scale in the country.

The fruits of integration of Travancore-Cochin States into the Indian Union about four years ago are now slowly discernible in the economic activity of that area. For the first time in the history of the country, concerted action is being taken by the Central Government to develop the industrial and agricultural potential of these States on a large scale. The Government of India has already made a thorough enquiry of the spices industry, as well as other hill products of these States, and it will be taking shortly a comprehensive action towards the expansion of the above from the agricultural, industrial and export points of view. The Rubber and Coconut Boards have already started functioning.

(Concluded from next column)

"Green Pool" will go. They have not yet, however, solved the problems of their own little Green Pool between Holland, Belgium and Luxemburg.

One cannot help feeling that the approach to international co-operation in the case of agricultural products would be more successful, if the problem were tackled commodity by commodity. Producers inevitably look to their own particular interests, as soon as the question of a common market is raised, and argument, which begins in general terms, can only find solution in particular terms.

Regard must be had to the desire of countries such as Great Britain to give special assistance to their own producers and this country has now got to face the problem, as the Government goes out of the direct importation of the principal feeding stuffs, of how to couple private trade and imports with the guarantees of markets and prices to the home producer. If the "Green Pool" Committee tackled specific problems such as this, presenting the European line to the United Kingdom, but with a proper understanding of this country's difficulties, there would be much greater likelihood of an outcome satisfactory to the agricultural exporters in Europe. At the moment, one is tempted to conclude that the promoters of the "Green Pool" are aiming much too high to achieve any results.—*All Rights Reserved.*

THE "GREEN POOL"

PROMOTERS' AIM TOO HIGH

(From Our Own Correspondent)

LONDON, *28th March*

AFTER steel and coal comes agriculture. The indefatigable unionists of West Europe have been attempting in Paris to set up a common market for European agricultural produce and all nations of the O.E.E.C., represented by their Ministers of Agriculture or their Deputies, have held their first conference on what they call the "Green Pool."

The products in which it was proposed to create a common market ranged from meat to cereals, covering eggs, fruit and vegetables on the way. Undoubtedly, the promoters of the plan—initiated some time ago by the then French Minister for Agriculture, Mr. Pfimlin —would be satisfied for a start with something less, but the general possibilities of doing anything had first to be explored. As one commentator remarked sagely, "prudence was the keynote of the conference," and after nearly a week of discussion, the work of further examination of the possibilities was relegated to official committees and the next plenary session of the conference was set for the autumn.

LONDON LETTER

The "Green Pool" plan is based on the premise that food production in Europe is not increasing anything like as much as it should; that in too many countries, it shelters stagnantly behind protective barriers and that low output, inefficient production and high prices restrict consumption and prevent development. All countries try to produce all products and the advantages of concentrating on the most suitable forms of production are lost. The alternative under a supra-national authority, it is argued, would be to sweep away the mass of tariffs and quotas which are stronger for agricultural products than for anything else and to turn West Europe into a common agricultural market. The next stage would be to increase the production inside this market until Europe was self-sufficient. The supra-national authority would have to study the flow of supplies as they began to develop under completely free conditions and would have to "organise production" (how, is not yet stated) to meet the new demands as they arose. In order to have order in this market, quotas of production would have to be established for particular products in each country. Furthermore, prices would be fixed, at least ceiling and floor prices, for exports between countries and, no doubt, levies would have to be raised, in order to even out costs of production between different countries.

"Ossification" of Agriculture

While the abolition of agricultural quotas and tariffs is in itself a desirable thing, the mind boggles a little at the thought of the machine to fix production quotas and prices for all Europe, and envisages an ossification of agriculture greater than exists to-day in the most highly protected country. The British delegate, indeed, had these fears in mind, for, in the first instance, Britain has declined to be directly associated with the plan, although attending the conference and prepared to discuss it. Both Britain and Denmark are opposed to the principle of the "Green Pool," though for different reasons.

Britain has accepted a special responsibility towards its growers which has involved a system of guaranteed prices, or at least guaranteed minimum prices, often much higher than those ruling abroad. Secondly, it gives preferential treatment to foodstuffs supplied from the other members of the Commonwealth. Thirdly, this country has become highly conscious of the need for a balanced agricultural production as part of the national defence system and it would not be prepared to concentrate on particular products to the exclusion of others.

Denmark, on the other hand, has built up agriculture out of a poor soil and has concentrated on dairy products, eggs and bacon, which she can export at competitive prices not only anywhere in Europe but anywhere in the world. She does not, therefore, desire any tutelage or interference in how she is to conduct her agricultural affairs.

The Dutch have also built up a highly efficient agriculture, but they are involved in Benelux and are committed to the principle of economic co-operation, so they are much more disposed to see how the discussions on the

(Continued in previous column)

AMERICAN LETTER

PROCESSION OF EUROPEAN DIPLOMATS TO UNITED STATES

FARM PRICES AND GILT-EDGED VALUES FALL

(From Our Own Correspondent)

NEW YORK, *26th March*

THE procession of European diplomats on official missions to the United States continues. Since my last despatch, Mr. Anthony Eden, British Foreign Secretary, and Mr. R. A. Butler, Chancellor of the Exchequer, have come and gone. After that, Lord Mayor of West Berlin Reuter was here and, presently, Premier of France Rene Mayer is visiting Washington.

What can be said for the benefit of readers in India is that the British delegation was considerably impressed. The top people in the new Eisenhower Cabinet took out three full days to talk to their counterparts in the Whitehall Government.

The London emissaries were given no promises and no half-promises. They explained the official United Kingdom desire for freer world trade. Now that as many internal regulations as possible have been removed in the British Isles themselves, the same idea is to be translated in the realm of foreign affairs. A corner-stone of this plan is convertibility of sterling.

The off-the-record attitude of the new Republican Administration in Washington is sympathetic to these aims. The immediate results of the talks has been that a series of further discussions are planned, because London feels a free Commonwealth trade policy is incapable of accomplishment unless it has the full support and backing of the United States.

Two Broad Avenues of Support

The British delegation has been pleading for two broad avenues of support. One concerns sterling, the other trade policy. London would like the creation of a foreign exchange and gold cushion to protect sterling in the event of convertibility beyond the reserves now available. The theory is, in brief, that, if a bank has sufficient reserves, a run on it is unlikely to occur, but, if its protection is too thin, such an emergency may happen. Thus, in order to prevent an outflow of capital on a large scale, Whitehall was to be able to cope with it.

The second and larger question of trade policy is, of course, a matter of legislation which neither the President of the United States nor the Secretary of the Treasury can decide. They can suggest a general reduction of tariffs, they could order a more efficient customs procedure, but they can do very little in actually eliminating the barriers which impede the flow of world trade.

Yet, the question of the monetary cushion and that of trade are inter-related. One might be self-defeating without the other. At this point, the voices for free trade are rising in the United States and it is just barely possible that a reasonable compromise might be achieved by which both aims may be facilitated.

The British delegation was smart enough not to propose any iron-clad outlines. London, they said, does not care particularly whether the required monetary cushion would be provided by the International Monetary Fund, by combined action of the United States and United Kingdom treasuries or by a stabilisation fund. Although this has not been published before, I can say with authority that the Britishers are pressing for prompt action, feeling that the entire international situation is in a state of rapid flux and delay can only be detrimental.

Of equal importance in the international scheme of things was the visit of Mayor Reuter of West Berlin, an ex-Communist, now a member of the Socialist Party in West Germany. In a number of Press interviews and public appearances, the Mayor shed considerable light on the Russian situation, as he saw it.

He declared that the Soviets were considerably weaker to-day than they were one or two years ago. While Stalin enjoyed the status of a Communist "saint," it would take several years before anyone else could assume such a position in the Kremlin again.

Pointing to the influx of thousands of refugees every day to the West, he went so far as to say that there were no Communists left, to speak of, in either East or West Germany since everyone was now acquainted with what is in store under the Soviet regime.

He suggested that the shooting down of Allied planes was merely a measure of the new masters of the Kremlin to impress the satellite countries with their "strength" and was, in effect, a manifestation of weakness. His viewpoint made sense to many Americans, although the Press and less informed people still cling to the proverbial fear of a sneak attack by Russia.

The visit of the Premier of France will probably boil down to discussions about the combined European defence community, Germany's participation in such a scheme and America's contribution in terms of dollars.

No Clear Cut Outline

All these are terribly important factors in shaping American policy. So far, no clear cut outline is visible on what the new Administration proposes to do, except that it has lifted nearly all domestic controls on production and prices which had been obsolete anyway, since most prices were below official ceilings.

In groping for a new policy, several weak spots have appeared. Prices for farm products have fallen to the dismay of those concerned with production and to the pleasure of consumers.

Government bond prices have also taken a dip. The longest term Treasury obligations bearing 2½ per cent. interest are now below 91 which is the lowest point since their issuance. This is in line with the higher yields in all money markets and the gradually higher rates which borrowers have to pay in all segments of the investment markets.

This, however, is still a period of what might be called an interregnum. No official plans have as yet been announced how the Administration proposes to go about in refinancing the vast maturities due this year.

The question of the future course of business is still on everyone's mind. There is a continued cleavage of opinion between the theoretical economists and the practical industrialists. The former suggests a recession is inevitable with receding defence expenditures. The latter are as optimistic as they were before.

In the meantime, the United States economy is proceeding at top speed, at full employment and at extraordinarily high levels of income in nearly all segments. The official position is that, for the next three months, no appreciable changes from that condition can be foreseen.—*All Rights Reserved.*

(Concluded from next column)

what practical use will it be? For the purposes of currency backing, a reserve of only Rs. 60 crores or so is needed and our reserves have always been adequate for the purpose."

An important announcement that the Finance Minister of Pakistan made on the floor of Parliament a few days ago relates to the Government's decision to constitute a tribunal, consisting of a High Court Judge and an Income-tax Expert, to scrutinise the particulars of hoarded wealth which may be submitted by the taxpayers. The decision is a sequel to the representations, received by the Government from time to time, that there is considerable hoarded wealth in the country which is not being brought out for fear of being taxed. The contention in all these representations is that what is hoarded is not concealed income which has escaped income-tax, but capital which is not liable to tax at all. It is, therefore, stated that if any attempt is made to tax hoarded wealth, it would result in the drying up of the very sources of investment. But the Government says that it cannot exempt income from tax which is legally due to it. In view of these conflicting opinions, the Government has decided to settle the question once for all and to allay any fear among the taxpayers that their hidden capital, when brought out and invested, would be subjected to income-tax.

PAKISTAN NOTES

CONTROL OVER PRICES OF COMMODITIES

MOVE TO TAX HOARDED WEALTH

THE Government of Pakistan has assumed legislative powers—an official Bill to this effect was passed in Parliament last week—to introduce, on an all-Pakistan basis, control over prices of commodities hitherto controlled by the Provinces and not subject to the Essential Supplies (Temporary Powers) Act, 1946. This is one more indication to suggest that Pakistan has been passing through difficult times. It was only recently that the Government imposed drastic restrictions on imports, thanks to the imperative need to bridge the widening gap in the balance of payments position. Thus, the open general licence has been cancelled. The number of items for which import licences are being given has been reduced from 303 to 215. Imports from the dollar area have been considerably curtailed. No import licences are issued for consumer goods of which 'sufficient' stocks exist in the country or are produced in the country. Import of luxury items, such as cosmetics, toilet goods, etc., has been banned.

Immediately following the announcement of the restricted import policy, prices of several essential articles—cloth, medicines, cigarettes, petrol and sugar products—shot up to very high levels. Forced by such a situation and with a view to preventing a further rise in prices, the Government of Pakistan assumed, as already stated, powers to control prices of commodities and also to declare any commodity as an "essential" commodity. Already, prices of many articles have been fixed in Karachi by the Chief Commissioner and drastic action is being taken against those who play foul with controls. To what extent the assumption of power to control prices by the Central Government and the fixation of prices for some of the items will prove a success, it is difficult to say. This much must, however, be admitted, namely, that a system of haphazard control would only worsen the situation by giving rise to anti-social activities on the part of the traders. If, therefore, price control is to yield fruitful results, it is imperative that the authorities should impose a blanket control on all commodities for some time and keep a vigilant watch over the supply position.

Commercial Policy Defended

The increase in the prices of consumer goods is not the only factor which is causing anxiety to the authorities. There is the persistence of the recession in prices of cotton and jute, Pakistan's two staple earners of foreign exchange. There has been continued slackness in the export demand for these commodities, which has adversely affected Pakistan's balance of payments position. The situation has been aggravated by the critical food shortage in the country, compelling the Government to import large quantities of food at the cost of much precious foreign exchange. It is not, therefore, surprising that the business and commercial community should have all along been very critical of the Government's policies. But the Government spokesmen point out that these criticisms are not justified in the least. They claim that the Government has been doing everything in its power to develop the economy of the country "which could bear the strain of this world-wide recession." This, in short, is the sum and substance of the observations of the Minister for Finance and the Minister for Commerce and Economic Affairs made in Parliament during the recent general discussion on the budget.

In the course of his speech, the Minister for Commerce and Economic Affairs claimed that his Government had considerably succeeded in implementing its commercial policy. The basic principles underlying the commercial policies from the very beginning, he said, had been to strengthen the internal finances of the country, to sustain the programme of economic development and defence, to provide employment for persons uprooted from their homes and to facilitate their rehabilitation, to enable industrialisation to be achieved at comparatively low cost, and to bring articles of daily consumption within the reach of the masses. Referring to the criticism on the marked fall in Pakistan's foreign exchange reserves, the Minister observed thus: "Too much has been made in recent months of the fall in reserves. The maintenance of high level of reserves is not an end in itself and has no intrinsic merit. If we build up our reserves, say, to five times the present figure of

(Continued in previous column)

DIFFICULTIES OF INDIAN BANKS

TALK OF SOCIALISATION DEPLORED

A COMPREHENSIVE review of India's banking problems was made by Mr. Pranlal Devkaran Nanjee, Chairman of the Indian Banks Association, when he addressed the Association's sixth annual general meeting, held at Bombay this week. Mr. Pranlal alluded to the general slackness in the banking business and described how the banks had been adversely affected, on the one hand, by the mounting establishment charges and, on the other, by the downward trend of profits. For instance, the total net profits of 18 member-banks of the Association for the year 1952, as compared with 1951, were lower by over Rs. 50 lakhs. According to him, the banks "have not been able to overcome completely the trade recession which overtook them in the early months of last year and the sellers' markets have now given place to buyers' markets generally." This, he said, had limited the capacity of the clients to pay increased charges.

In view of these considerations, Mr. Pranlal reiterated the hope he expressed last year that the award of the Industrial Tribunal (Bank Disputes), the proceedings of which had lasted longer than expected, might prove welcome not only to the employees and the banks but also to the clients of the banks. In this connection, he struck a note of caution to the effect that the banks could meet the demands of their employees only according to their capacity to pay and, if banks had to pay emoluments which were beyond their capacity, the result would be that the banks would be compelled to increase their charges to their clients and, if that did not prove to be a practical proposition, reduce or restrict their sphere of activity. There is considerable force in this contention and it is to be hoped that the Tribunal will not ignore these considerations.

Mr. Pranlal was critical of the attitude of quasi-Government institutions, such as Port Trusts, Municipalities, etc., towards Indian banks. He regretted that, even after several years of independence, their attitude towards Indian banks had not changed. Inasmuch as there were several Indian banks that can compare favourably with the large and sound banks in any part of the world, Mr. Pranlal thought—and not without justification—that it was the duty of the quasi-Government institutions "definitely" to place all their business with Indian banks.

The Indian Banks' Association Chairman referred to the problems of tapping the savings of the people. Replying to the charge that Indian banks had not helped to tap the savings by opening branches in the smaller towns and villages and in other ways, he mentioned two difficulties which had been interfering with the banks in the discharge of this responsibility. They were: (1) mounting establishment costs and (2) the "formidable" competition from the Government for savings deposits. He said that the latter was offering attractively higher rates of interest and that, too, free of tax, on National Savings Certificates and Treasury Savings Deposits. He substantiated his contention by pointing out that the savings deposits of banks had either gone down or not grown as they would otherwise have done. Nevertheless, he gave the assurance that the bankers would certainly not lag behind others in "playing their role dutifully and willingly for the success of the Plan."

Two other aspects to which Mr. Pranlal also alluded related to participation of Indian banks in foreign exchange business and development of bill market. While on the former, he observed as follows:

"To increase the usefulness of Indian banks to the nation, it appears necessary that they should increasingly participate in foreign exchange business. As the overseas trade of India is large and is expanding, it is but natural that India, like most other countries, should depend largely upon its own banks for providing the international banking services required by it. More than two decades ago, the Indian Central Banking Enquiry Committee stressed the importance of making efforts in this direction. That the financing of the foreign trade of the country should be largely in the hands of the Indian banks is the natural aspiration of the nation, in general, and the managements of Indian banks, in particular, and I am glad to find that some of our member-banks are actively exploring the scope for expanding their foreign exchange business. I wish them success in their efforts. The need for the public, the Government of India and the Reserve Bank of India to help their efforts in this direction is strengthened by general economic, strategic and balance of payments considerations."

Mr. Pranlal commended the efforts of the Reserve Bank of India for establishing a bill market. But as only those banks which have deposits of Rs. 10 crores and over are now allowed to take advantage of the Reserve Bank's scheme, he wanted it to be made applicable to all the Scheduled Banks. "There are," he said, "good reasons for believing that the scheme will prove helpful to the banking system and, through it, to India's commerce."

The Chairman referred to the talks of socialisation of banking emanating from certain quarters, sometimes, unfortunately, even from responsible quarters, and remarked that such was definitely discouraging for the expansion of banking in the country. He rightly averred that loose talk of socialisation or nationalisation of a key industry like banking, which had an immense bearing on trade, commerce, industry and agriculture, was "inopportune, unwarranted and injurious" to the country's progress. In this connection, Mr. Pranlal said:

"A bank in practice means public relations, and every office, branch or sub-office of a bank deals daily with a continuous stream of the public who are its clientele, finishing the business of each in a few minutes. Thus, millions of our people are daily served by our banks to their general satisfaction. I believe that Government has neither the personnel nor the resources to undertake this huge task and also that Government, by its very nature, is altogether ill-fitted for it."

In the considered opinion of Mr. Pranlal, it is in the best interests of the country that the manifold benefits and services which the public receives from joint-stock banking under free enterprise should not only continue unabated but also increase. It is, therefore, important that the uncertainty about the future of Indian banks, which "such utterances create in the minds of those concerned with banking, should not be allowed to develop."

A brief reference may now be made to the activities of the Indian Banks Association. The aggregate number of members of the Association is at present 36 Scheduled Banks; the working funds of these banks exceed 90 per cent. of the total working funds of all the 78 Scheduled Indian Banks. All the bigger, medium-sized and smaller banks are members of the Association. Twelve meetings of the Managing Committee were held during 1952. At these meetings, the Committee discussed several matters of much importance to the banks. Among the subjects that came under discussion were the Banking Companies Act, Bombay and Bihar Moneylenders Act, Reserve Bank's questionnaire on warehousing, and exemption from income-tax of the profits of banks carried to the reserve fund.

ENCOURAGING RESULTS OF TRAVANCORE BANK

PROFIT FOR 1952 BETTER

THE year 1952 has turned out to be another favourable one for the Travancore Bank Ltd. (Managing Director: Mr. R. F. Wishart). The audited accounts of the Bank for the year ended 31st December, 1952, show, as compared with the previous year, an improvement in profit to the extent of Rs. 1.12 lakhs, that is, from Rs. 5.76 lakhs to Rs. 6.88 lakhs which is the highest earned by the Bank so far since its inception in January, 1946. But the improvement has not been large enough to enable the Bank to enter the dividend list.

The rise in profits noted above would probably have been more marked but for the general slackness in business—following the recession in the commodity prices during the major part of the year—on the one hand, and the increase in expenses, on the other. Considering the general experience of the Indian banks as a whole, it is, indeed, noteworthy that the performance of the Travancore Bank has been quite encouraging. The results indicate that the resources of the Bank must have been judiciously utilised, with due regard for the safety of depositors' funds. The Bank's combined ratio of investments and cash balances as on 31st December, 1952, was higher at 86.0 per cent., as against 74.4 per cent. a year before, while the advances ratio has receded from 57.2 per cent. to 48.2 per cent. The high level of ratio of liquid assets has been possible because of the large capital of the Bank.

The financial results of the Bank for the year under review are highlighted against the background of those for the previous three years in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1952	1951	1950	1949
Interest and discount	18.41	15.81	12.87	12.33
Commission and exchange	3.55	3.47	1.85	2.70
Interest paid	6.79	6.20	4.22	4.75
Expenses	7.97	7.05	6.76	6.03
Depreciation	0.33	0.28	0.24	0.24
Profit	6.88	5.76	4.27	4.02
To taxation	1.00	0.80	0.25	1.00
To reserves	2.00	4.25	3.50	2.00
To depreciation reserve on investments	5.00	..	..	..
Carry forward	0.38	1.50	0.79	0.26

	As on 31st December			
	1952	1951	1950	1949
Capital	100.00	100.00	100.00	100.00
Reserves	17.50	15.50	13.65	11.23
Deposits	380.62	402.85	369.40	297.80
Borrowings from other banks	..	1.50	..	..
Advances	183.61	230.60	166.97	168.95
Investments	236.80	246.96	242.38	166.62
Cash and money at call	90.92	52.74	73.88	74.19
Balance-sheet total	577.62	615.04	553.63	470.19
Ratio to deposits of—	%	%	%	%
Advances	48.2	57.2	45.2	56.6
Investments	62.2	61.3	65.6	55.9
Cash	23.8	13.1	20.0	24.9

The above table reveals that the Bank's earnings by way of interest and discount have gone up by Rs. 2.60 lakhs to Rs. 18.41 lakhs. Receipts under commission and exchange are also higher at Rs. 3.55 lakhs. Although, in common with other banks, expenses and interest paid have gone up, the improvement in gross earnings has been large enough to result in a good increase in profit. Consequent on larger profit, the Bank has been able to write off a sizable portion (Rs. 5 lakhs) of the depreciation in the value of Gilt-edged securities brought about by the rise in the Bank rate in November, 1951. This provision does not mean a loss to the Bank. So long as the securities are not sold but kept till maturity, it actually constitutes a secret reserve. Taxation has absorbed a fractionally larger amount than in the previous year. The allocation to reserves, however, has been reduced by Rs. 50,000 to Rs. 2 lakhs. With this addition, the published reserves of the Bank, as at the end of December, 1952, stand higher at Rs. 17.5 lakhs.

There has been a slight fall in deposits, from Rs. 402.85 lakhs to Rs. 380.62 lakhs, but this has not resulted in any reduction in interest charges paid, which has actually moved up by Rs. 59,124. Evidently, the Bank, in common with other banks, must have had to pay higher rate of interest on deposits. There do not seem to have been any borrowings from other banks during the year; at any rate, as at the end of the year, there were no borrowings from other banks. A year before, it may be noted here, there was a small outstanding of Rs. 1.5 lakhs under this head. Investments are lower at Rs. 236.80 lakhs, as against Rs. 246.96 lakhs a year before. Nearly half of this decline represents the amount written down from the profits of the year and, of the balance of the fall, the liquidation of debentures accounts for Rs. 3.44 lakhs. All the investments are now in Gilt-edged securities. The market value of these investments (as at 31st December, 1952) is lower by Rs. 14.93 lakhs—even after writing off, as already stated, a sum of Rs. 5 lakhs out of the profits. Cash balances and money at call have staged substantial advance from Rs. 52.74 lakhs to Rs. 90.92 lakhs, thereby raising the ratio of liquid assets to deposits to an impressive level.

Ceylon had a net inflow of Rs. 9 million of private capital in 1952, according to the Bank of Ceylon. The total outflow from the Island was Rs. 51 million, as against an inflow of Rs. 60 million. The two-way movement was mainly with Britain.

PROGRESS OF UNITED COMMERCIAL BANK

LARGE VOLUME OF BUSINESS BUILT UP IN THE FIRST TEN YEARS

THE United Commercial Bank Ltd. (General Manager: Mr. B. T. Thakur, Calcutta) holds a unique position in the sphere of Indian joint-stock banking, unique because no other joint-stock bank in this country has a record of such phenomenal progress as this Bank has during the first 10 years of its existence. Now that the Bank has completed its first 10 years, a reference to its achievements as an introduction to its results of working during 1952, will be quite appropriate. Our task in this connection has been rendered easy by a brief description given by the Bank's Chairman, Mr. G. D. Birla, himself in the course of his thought-provoking address at the tenth annual general meeting of the Bank held at Calcutta last week, the full text of which is published elsewhere in this issue.

In order to have a clear idea of the Bank's progress during these years, it is necessary to refer, first, to the difficulties which banks in India had to overcome. The most important of these arose from the partition of the country in 1947. Then there was a heavy drop in prices of securities in 1951, followed by a sudden and sharp fall in prices of goods and commodities in 1952, paralysing trade and business in the country. These catastrophic happenings brought about the collapse of a number of small and medium-sized banks and crippled quite a few others. Established in January, 1943, the United Commercial Bank has come out unscathed from all these crises and now occupies a position of eminence, ranking, as it does, among the first five in India. Another distinction which this Bank holds is that it occupies the first place among Indian banks in the field of international banking.

The Bank's activities are being conducted through a network of 90 branches and extend over seven different countries. The number of accounts standing in the Bank's books is over 100,000, with a variety of clientele. An idea of the volume of business that the Bank has built up during its brief existence of a decade can be gained from the fact that its total working funds are as large as Rs. 45.20 crores (as at the close of 1952), of which deposits alone account for Rs. 30.88 crores. Its net earnings from its inception to the end of 1952 aggregate Rs. 782 lakhs. Out of this, it has distributed Rs. 342 lakhs to the staff, paid Rs. 78 lakhs to the Government by way of taxation and utilised Rs. 50 lakhs to meet the depreciation on investments. It has built up a reserve fund of Rs. 75 lakhs and distributed Rs. 43 lakhs to its shareholders.

Now to review the working of the Bank during the year ended 31st December, 1952. Readers are already aware that the past year was one of adverse business conditions, with no relief from high cost of operations, and that the earnings of banks in India for that year suffered a setback. In the case of the United Commercial Bank, the decline has been somewhat sharp, the profit having dropped from Rs. 35.03 lakhs for 1951 to Rs. 24.80 lakhs, the lowest to be recorded since 1945. The principal reasons for the fall in profit are (1) fall in commercial advances, (2) higher rate of interest on deposits with little or no corresponding increase in rates of interest earned on advances and investments, the latter having been bought during periods of low yield on Government securities, and (3) increase in establishment expenses. The shrinkage in profit, however, has not affected either the transfer to the reserve fund or the dividend to the shareholders which has been unchanged at 4 per cent. per annum.

The following comparative table shows the trend of the Bank's earnings and their disposal during the last four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1952	1951	1950	1949
Interest and discount earned	107.04	105.04	97.45	97.33
Commission and exchange	60.49	53.27	38.96	30.71
Interest paid	48.69	38.12	29.00	32.86
Expenses	90.00	81.83	64.98	60.18

The progress in the Bank's financial position since 1949 is fully reflected in the following comparative table:

(In lakhs of rupees)

	As on 31st December			
	1952	1951	1950	1949
Capital	2,00.00	2,00.00	2,00.00	2,00.00
Reserve fund	75.00	67.50	60.00	52.50
Deposits	30,87.73	29,58.10	33,28.48	30,74.60
Borrowings from other banks	65.25	2,21.40	3,11.70	3,38.87
Bills for collection	2,75.03	2,41.51	2,39.29	1,98.22
Acceptances	5,60.89	10,15.00	9,18.30	1,97.04
Advances and bills	14,17.62	17,91.56	16,76.35	14,41.37
Investments	14,81.49	12,13.02	16,72.81	16,27.30
Cash	6,62.67	5,03.71	5,64.89	5,58.60
Balance-sheet total	45,20.27	48,73.59	52,22.43	41,94.86
Ratio to deposits of—	%	%	%	%
Advances	45.9	60.6	50.4	46.9
Investments*	45.8	33.5	40.9	41.9
Cash	21.0	17.0	17.0	18.2

* After taking into account the investments earmarked against borrowings from other banks.

A striking feature of the balance-sheet is the sizable expansion of Rs. 1.30 crores in deposits, in refreshing contrast to the general trend of bank deposits. A marked fall of Rs. 1.56 crores is noted in borrowings from other banks and this is due to the contraction in the demand for funds occasioned by adverse business conditions. The Bank's bills business has been continuously expanding. Thus, bills for collection, payable in India as well as outside, show an increase of Rs. 33.52 lakhs. Bills purchased and discounted have risen from Rs. 421.25 lakhs to Rs. 506.52 lakhs. Acceptances on behalf of customers have declined from Rs. 10.15 crores to Rs. 5.61 crores, due to India's restrictive policy in the matter of imports, diminishing need for purchase of foreign cotton and lower values. The Bank's advances show a substantial fall from Rs. 13.70 crores at the end of 1951 to Rs. 9.11 crores at the close of 1952. This is the result of the fall in the values of commodities and exports and the consequent diminished demand for credit from trade and industry. A part of this decline has been offset by the increase in bills purchased and discounted noted above. The total of advances and bills bears a ratio of 45.9 per cent. With the expansion in resources and fall in commercial credits, the Bank has had to enlarge its investments and cash balances. Investments, at Rs. 14.81 crores, are shown at or below market value. We are assured that the Bank's policy of putting its funds in Government securities having early maturities is being continued. Cash balances have risen by Rs. 1.59 crores to Rs. 6.63 crores, which, with the investments, give a high liquidity ratio of 66.8 per cent. to deposits. Though such a high level of liquid assets means a low rate of earnings for the Bank, the Directors have deliberately chosen to follow a very cautious policy by giving primary importance to safety and liquidity of the Bank's money and assigning a secondary place to lending or higher income available therefrom, in view of the uncertain and difficult period of business through which the world is now passing.

As part of its programme of expansion, the Bank opened a branch in Hong Kong during 1952 and arrangements are being made to open a branch in London, the necessary permission having been obtained from the Reserve Bank of India.

(*Concluded from next column*)

bered portion of investments to deposits shows a rise, because of the substantially smaller borrowings from other banks in 1952 secured by the investments. Though the investments are lower, the gap between the book value and market value has widened from Rs. 43.34 lakhs at the end of 1951 to Rs. 57.07 lakhs. This depreciation is covered to the extent of Rs. 18 lakhs by the sum of Rs. 9 lakhs standing to the credit of sinking fund and Rs. 9 lakhs to non-statutory reserve fund. The redemption value is also lower than the book value, but this gap is well within the total of these two reserves. The cash balances (including balances with other banks and money at call) give a coverage of 14.4 per cent. to deposits. The combined total of unencumbered investments and cash balances gives a comfortable ratio of 55.8 per cent. to the deposits.

INDIAN BANK'S DEPOSITS AT RECORD LEVEL

PROFIT LOWER—DIVIDEND UNCHANGED

THE most arresting feature of the statement of accounts of the Indian Bank Ltd. (Secretary: Mr. N. Gopala Iyer, Madras) for the year ended 31st December, 1952, is that the sustained upward trend in the Bank's deposits noted since 1949 has not only been kept up but the pace of advance has been far more striking than in previous years. Consequently, the deposits of the Bank at the end of 1952 were the highest on record. Although this is not a feature peculiar to this Bank alone—a few others also have shown an increase in their deposits but the number of such banks, however, is very small—the expansion of Rs. 2.43 crores in the year-end figures is, indeed, something exceptional. This increase has been utilised to strengthen the liquidity of the Bank's resources.

The trend of the Bank's earnings during the past year was, however, similar to that of the majority of banks in this country. Thus, although the gross income expanded considerably, the net profit fell short of the previous year's level, thanks to a sharp rise in interest paid, and administrative charges and to a sizable loss on sale of investments.

The following comparative table shows, in an easily recognisable manner, the salient features of the Bank's financial results for the last four years and the progress in its balance-sheet position since 1949:

(In lakhs of rupees)

	For the year ended 31st December			
	1952	1951	1950	1949

* Net loss after adjusting Rs. 10 lakhs from sinking fund.
† Includes a bonus of 2 per cent. per annum.
‡ Include investments of staff security deposits.
§ Ratio arrived at after taking into account the securities earmarked for borrowings from other banks.

The Bank's total income in the year under review at Rs. 112.24 lakhs is not only Rs. 12.54 lakhs higher than that for 1951, but constitutes a record. A substantial part of the increase is accounted for by interest and discount earned. The increase in earnings has been more than counteracted by the rise of Rs. 8.30 lakhs in interest paid and of Rs. 5.71 lakhs in expenses. Although the loss on sale of investments charged to the profit and loss account is slightly higher than that met out of the 1951 profit, the total loss on this account in the preceding year was much heavier.

The capital of the Bank was raised from Rs. 53 lakhs to Rs. 55.40 lakhs (of which over Rs. 7,000 represent unpaid calls) by making a fresh call of Rs. 5 on the Rs. 75 and Rs. 50 paid-up shares. Despite the withdrawal of Rs. 10 lakhs from the sinking fund last year, the total reserves stand at the impressive level of Rs. 73.50 lakhs. A break-up of deposits shows that all the classes of deposits, except savings bank accounts, have shared in the rise, the fixed deposits going up from Rs. 4.34 crores to Rs. 5.80 crores, season and short-term deposits from Rs. 2.06 crores to Rs. 2.93 crores and current and other accounts from Rs. 7.62 crores to Rs. 7.76 crores. Savings bank deposits have recorded a small drop from Rs. 3.85 crores to Rs. 3.82 crores. Advances and bills purchased and discounted have not declined to any marked extent—the decline being of the order of Rs. 35.64 lakhs only—but the sharp rise in deposits has brought down the ratio of the former to the latter from 61.4 per cent. to 52.4 per cent. Investments (at cost) are lower by Rs. 78.09 lakhs, but the ratio of the unencum-

(*Continued in previous column*)

HONGKONG AND SHANGHAI BANKING CORPORATION

PROFIT RECORDS FURTHER RISE

THOUGH the world-wide recession in trade and anti-inflationary measures taken by the various Governments during 1952 led to a considerable shrinkage in the turnover of business of many banks, especially those whose operations extend over a number of countries where economic conditions are far from uniform, quite a few banks have had the envious distinction of showing an improvement in their profits for that year. To this class of banks belongs the Hongkong and Shanghai Banking Corporation (Chairman and Chief Manager: The Hon'ble Sir Arthur Morse, C.B.E.) The profit of this Bank for the year ended 31st December, 1952, shows a rise of H.K.$37,734 to H.K.$17,321,405. It is, indeed, heartening to note that this improvement compares well with that of H.K.$33,967 recorded in 1951 which was the most prosperous year in the history of the Bank till then. Judged from the point of view of the disclosed profit, 1952 has beaten 1951 by a good length and is the best year for the Bank since 1930.

Bank profits, as published, are not true guides to the exact trend of earnings, because of the statutory immunity they enjoy from publishing the figures of earnings before making provision for secret reserves. This position has been rendered even more complicated by the fluctuations in prices of securities in the past year. But they can be taken as a reliable indication of the trend of earnings, as the comparative figures of published profits are arrived at after providing for contingency reserves out of which reserves provision is made for any diminution in the value of current assets. Since the Hongkong and Shanghai Bank also follows this practice, the profits are strictly comparable and as such it can safely be assumed that 1952 was quite a profitable one, despite a contraction in the volume of business. The net profit of H.K.$17.32 million, along with the balance of H.K.$8.08 million brought in from the previous year, has been utilised as follows:

To write off Bank premises (H.K.$3 million) and to pay a dividend of £5 per share of H.K.$125—*the same rate as that paid for 1951*—leaving to be carried forward H.K.$9.49 million which is H.K.$1.41 million more than that brought in.

The following comparative table will give an idea of the Bank's progress in the past three years:

(In thousands of H.K. $)

	As at 31st December			
	1952	1951	1950	1949
Capital	20,000	20,000	20,000	20,000
Reserve fund	96,000	96,000	96,000	96,000

* Includes balance of remittances in transit.
† Include sums deposited as security for authorised note issue.

The sharp decline in the balance-sheet total reflects the effects of the world-wide recession in trade and the anti-inflationary measures taken by the Governments of several countries where the Bank is operating. The Bank enjoyed a continuous period of prosperity during the post-war years, with 1951 witnessing the peak. Thus, the Bank's balance-sheet total had an unbroken rise from H.K.$2,050.86 million at the close of 1946 to a record figure of H.K.$4,074.06 million at the end of 1951. But, as the Bank's Chairman said in his statement to the shareholders, the fall in the value of primary commodities and the general recession in the trade, which took place during the year in the areas in which the Bank is most interested, brought about some contraction in its figures. It is, however, interesting to note that the 1952 total is better than the 1950 total of H.K.$3,456.69 million. In other words, barring 1951, the past year's total constitutes a record in the history of the Bank.

The fall in the balance-sheet total reflects partly the fall of H.K.$494.82 million in current deposits and other accounts and partly the decline of H.K.$39.23 million in acceptances on behalf of customers. Current deposits and other accounts, as well as acceptances at the end of 1952, were still well above those at the end of 1950 or 1949. On the assets side, a notable decline has taken place in advances which is in consonance with the general trend. There has also been a fall in bills receivable, in investments in Gilt-edged and other securities and in money at call. The contraction in money at call has been partially offset by an increase in cash balances. Though there has been an aggregate decline of H.K.$158.86 million in cash and money at call, their total provides a coverage of 40.45 per cent., as against 38.66 per cent a year ago, to the Bank's liabilities to its customers. Investments are shown at below market values, full provision having been made in the profit for meeting the depreciation in their value.

INTEREST RATES OF LAND MORTGAGE BANKS

The rising trend in interest rates during the past one year is likely to handicap land mortgage banks both in Bombay and Madras in providing cheap long-term credit to agriculturists in the two States. A resolution passed at the twenty-third Conference of Co-operative Land Mortgage Banks at Madras, presided over by Mr. Bhogaraju Venkataratnam, referred to in a previous issue of *Commerce*, states that the rate of interest at 6¼ per cent. charged to the ultimate borrowers is too high and, therefore, appeals to the Government of India to make funds available to land mortgage banks at sufficiently low rates of interest to enable them to finance long-term agricultural operations at a reasonably low rate of interest. Another plea is also made to the Reserve Bank of India for assistance on similar lines. Mr. Venkataratnam, in his speech at the Conference, pointed out that the rate of interest was one per cent. more than the rate at which a private lender can legally recover from the agriculturist. "This is a rate which I feel," he remarked, "is too high and, therefore, heavy for an agriculturist of our State to bear and it is necessary in the interest of the country that the Government and the Reserve Bank should address themselves suitably to deal with the problem with a view to reducing interest rates."

In Bombay, the borrowing rate of the Provincial Land Mortgage Bank is now about 4.4 per cent. The Bank lends to the primary land mortgage banks at a margin of 1½ per cent. to cover its expenses. This means that the borrowing rate of the primary banks is about 6 per cent. As the working costs of these banks entail, on an average, 1½ per cent., they are finding it impossible to lend below the rate of 7½ per cent. In order to overcome this difficulty, the Government has sought to raise the maximum rate of interest chargeable by these banks. Accordingly, the Government proposes to amend the Bombay Agricultural Debtors' Relief Act, 1947—a Bill to this effect was passed in the State Legislative Assembly last week—so as to increase the maximum rate of interest to be charged by the banks from the current rate of 6 per cent. to Rs. 7-13. This increase is, of course, likely to affect adversely the work of land improvement by agriculturists in the State, but it is still very much below the effective rate of interest which agriculturists pay when they borrow from private moneylenders.

(*Concluded from next column*)

drop in cash and balances with other banks, which are lower at Rs. 2.84 crores, in advances which have moved down to Rs. 5.22 crores and in bills and in constituents' liabilities for acceptances which together are lower at Rs. 4.28 crores, as compared with Rs. 8.42 crores in 1951. The "overseas" character of the Bank is reflected not only in this item but also in its investment portfolio of Rs. 2.74 crores, which includes Rs. 47.40 lakhs of foreign Government's securities (Ceylon Government Securities and British National War Bonds). It is further reflected in the Bank's bills position in which the bills payable outside India at Rs. 183.92 lakhs preponderate over the bills payable in India at Rs. 14.67 lakhs. Deposits are, as already stated, higher at Rs. 9.93 crores, as compared with Rs. 9.70 crores at the end of 1951. Actually, the deposits would have been higher still but for the drop of about Rs. 50 lakhs to Rs. 5.01 crores in the Bank's current accounts. The increase in deposits, is, of course, modest, especially when the increase is compared with what took place over the year 1951. Nevertheless, it is in refreshing contrast to the general trend disclosed by the consolidated statement of Scheduled Banks for the year. A notable feature in the case of deposits is the substantial increase in fixed and time deposits, from Rs. 2.80 crores to Rs. 3.48 crores; two years before, these were only Rs. 1.92 crores.

A glance at the disposition of the Bank's assets indicated in the comparative table given above will show that the proportion of liquid assets to deposits has recorded a sizable improvement.

INDIAN OVERSEAS BANK

RESERVES STRENGTHENED

AS one bank balance-sheet after another comes out, a common feature which the financial results of banks discloses is the increase in earnings through interest and discount, in interest paid and the drop in advances. This reflects the continued effect of lower prices, the higher Bank rate and the Reserve Bank's directive to banks to restrict their lending to essential purposes. The latest report of the Indian Overseas Bank Ltd. (Chairman: Mr. M. Ct. M. Chidambaram Chettyar) for the year ended 31st December, 1952, also discloses this common feature. Thus, its income by way of interest and discount has recorded a steep increase of Rs. 12.07 lakhs to Rs. 36.83 lakhs, while the interest paid on deposits has moved up from Rs. 10.50 lakhs to Rs. 15.33 lakhs. At the same time, the advances have declined from Rs. 5.48 crores to Rs. 5.22 crores.

Apart from these trends, which the Bank shares with all other banking institutions in the country, there are a few notable features which mark this Bank out from its sister institutions. Thus, over the three-year period ended 1952, the Bank, which enjoys the distinction of being a pioneer in extending banking services to overseas countries, has shown commendable improvement in earnings. The latest report shows that the income through interest and discount has, as already stated, moved up from Rs. 24.76 lakhs to Rs. 36.83 lakhs, while the income through commission, exchange and brokerage has improved from Rs. 24.58 lakhs to Rs. 29.31 lakhs. Outgoings are listed under many headings, of which interest paid on deposits is the heaviest after salaries and other operating expenses. Interest paid on deposits and borrowings is higher by Rs. 4.83 lakhs at Rs. 15.33 lakhs, as also salaries and allowances by Rs. 7.25 lakhs at Rs. 25.66 lakhs. The increase in the former item has only to be compared with the increase of Rs. 23 lakhs in deposits to Rs. 9.93 crores and the actual decline of about Rs. 67.4 lakhs to Rs. 17.565 in borrowings to realise the effect of the end of the era of cheap money.

The following table reflects the changes in the balance-sheet and profit and loss account of the Bank over the three-year period ended 1952:

(In lakhs of rupees)

	For the year ended 31st December			
	1952	1951	1950	1949
Gross income	66.37	49.43	37.48	39.58

* After taking into account the investments earmarked against borrowings from other banks.
† After providing for depreciation on investments.

The working of the Bank during 1952 has resulted in a profit (before providing for taxation but after providing for depreciation on investments) of Rs. 12.87 lakhs as compared with Rs. 11.46 lakhs in 1951, an increase of Rs. 1.41 lakhs. The profit, together with Rs. 2.23 lakhs, the amount brought forward from the previous year, makes in all Rs. 15.09 lakhs which is available for disposal. This year, taxation absorbs Rs. 6.75 lakhs, as against Rs. 5.50 lakhs in the previous year, while the reserve fund, which received only Rs. 3 lakhs in 1951, has been augmented by Rs. 3.50 lakhs. The reserve fund now stands at Rs. 19 lakhs. The dividend has been maintained at 6 per cent. on the capital of Rs. 48.98 lakhs—the capital structure was raised in 1951 from the level of Rs. 37.16 lakhs—at a cost of Rs. 2.95 lakhs, leaving a sum of Rs. 1.90 lakhs to be carried forward to current year's accounts.

The balance-sheet total of the Bank is lower by Rs. 4.61 crores at Rs. 15.30 crores. This shows that the Bank had, on the whole, less resources at its disposition than in 1951, though this has fortunately not affected its earning position. The decline in the total reflects, on the assets side, a

AUDITORS' REPORT TO THE SHAREHOLDERS OF THE TRAVANCORE BANK, LTD.

We have audited the Balance Sheet of the Travancore Bank, Ltd., as at 31st December, 1952, and the Profit and Loss Account for the year ended that date as above set forth, with the Books of Account at the Head Office and the certified returns received from the Branches of the Bank and have obtained all the information and explanations we have required, which were found to be satisfactory.

In our opinion, such Balance Sheet and Profit and Loss Account are drawn up in conformity with the Law and the Balance Sheet exhibits a true and correct view of the state of affairs of the Bank as at 31st December, 1952, and the Profit and Loss Account shows a true balance of profit and loss for the period covered by such account according to the best of our information and the explanations given to us and as shown by the books at the Head Office and the certified returns from the Branches.

We are further of the opinion that the Bank has maintained the Books of Account as prescribed by Law, the transactions of the Bank which have come to our notice are, in our opinion, within the powers of the Bank and the certified returns received from the Branch Offices of the Bank have been found adequate for the purpose of this audit.

EXCISE ON FINE AND SUPERFINE CLOTH

REDUCTION IN THE FORMER IMPERATIVE

A VIGOROUS plea for the revision of the Government of India's policy in regard to the new rates of excise duty on fine and superfine cloth, fixed on the basis of yardage in the last budget, was put forward by Mr. Chandulal P. Parikh, President of the Ahmedabad Millowners' Association, in the course of his address at the annual general meeting of the Association held at Ahmedabad last week. Mr. Parikh is not alone in holding this view, for a considerable section of the industry and trade is also of the same opinion. Great concern over the high incidence of the excise duty on fine and superfine cloth produced in India was being expressed for quite a long time now. This concern has now become a source of great anxiety, following the sharp increase in the excise duty on fine counts, in particular, consequent on the change in procedure from *ad valorem* to specific rates of duty. In the context of the continued resistance from consumers, the levy of a high level of excise duty will, sooner or later, tend adversely to affect consumption. Several representations, pleading for a substantial reduction in, if not abolition of, the levy have been made to the Government of India. It is, indeed, unfortunate that the latter should have, instead of conceding the demand, actually enhanced the rate of levy, as we shall presently show.

Under the new procedure, the fine and superfine varieties of cloth bear "absolute" specific duties, the *ad valorem* assessments having been done away with, on 27th February, 1953. Accordingly, superfine cloth is being charged a duty of As. 3-3 per yard and fine cloth a duty of As. 1-3 per yard. The official explanation given in support of this change is as follows: When the Government of India decided—in May last year—to prescribe certain specific duties as maximum duties, the duty being levied at these rates or at the *ad valorem* rates, whichever was less, it was then expected that the rates of specific duty fixed would eliminate *ad valorem* assessments in most cases. The fall in cloth prices belied this expectation and led to the preponderance of *ad valorem* assessments, giving rise to administrative difficulties and continual friction between the mills and the assessing staff on the question of the adequacy of the declared prices. In order to overcome these difficulties, it was decided to do away with *ad valorem* assessments altogether and to prescribe absolute specific duties.

Higher Incidence of Duty

While announcing this change in the course of his Budget speech, the Finance Minister said that it would not mean any increase (or reduction) in revenue but would only make the task of assessment and collection easier. This statement is hardly convincing in the light of what he has done. Actually, the new procedure amounts to a significant increase in the incidence of the duty on fine counts. For instance, the excise duty on fine cloth (serial No. 75 quality), the *ex*-mill price of which was Re. 1 per yard when the control was in force, is now an anna and a quarter, as against seven pies before. In addition to this, there is also the special excise duty of three pies per yard, collected for the specific purpose of subsidising handloom and *khadi* industry. As readers are aware, this additional excise was not in force prior to 15th February, 1953. Since then, therefore, there has been an increase of 157 per cent. in the incidence of excise duty on fine cloth. This is undoubtedly too heavy an increase to be borne by the trade without a serious fall in their turnover.

In the case of superfine cloth, the revised rate of excise duty, including the special excise of three pies, is As. 3-6 per yard, irrespective of the price of cloth. Excise duties previously applicable were at a flat rate of 20 per cent. of the value of cloth per yard. The effect of the change in respect of these varieties of cloth is that, where the price exceeds Re. 1-1-6 per yard, the duty is lower than what it would be on the basis of 20 per cent. *ad valorem* and that, where the price is lower than Re. 1-1-6, the incidence will be practically the same or a little higher. But, as the prices of most of the varieties of superfine goods are invariably higher than Re. 1-1-6, the change in procedure does not make the position worse than it was before, except to the extent of the special excise of 3 pies per yard. But this does not necessarily mean that the present rate of duty on superfine varieties is bearable. It is undoubtedly much higher than what the traffic can bear at present. In short, the rates of excise duty on both fine and superfine require to be reduced, if the domestic offtake of cloth is to be encouraged and production maintained at a high level. If the Government is not prepared to concede this demand, it must at least agree to reduce the rate of duty on fine counts, especially as its intention was only to change the basis of the rate and not its incidence.

Complementary Relationship

To revert to Mr. Parikh's address. Referring to the restriction on production of *dhotis* and dyeing of *saris* by mills, Mr. Parikh felt that, as it would be difficult for the handlooms to produce immediately the necessary quantity of dyed *saris* and *dhotis*, a progressive reduction in production by mills should have been enforced. It is unnecessary to go into this question again, as a detailed reference to it has already been made on more than one occasion. Few would, however, fail to recognise the force of Mr. Parikh's statement that, in the present state of national economy, it is essential that all the three sectors of the cotton textile industry, namely, mills, handlooms and powerlooms should be made complementary to each other, not in a piecemeal manner, but by following well-thought-out long-term measures. For that is the most effective way of enabling the country to attain the twin objectives of securing adequate supply of cloth and providing employment to as large a number of people as possible. But this is easily said than done. It is to be hoped that Mr. Parikh and his colleagues in the industry will show the way, by indicating the lines on which the ideal solution mentioned by him could be translated into practice.

The Ahmedabad Millowners' Association President also chose for special comment the question of export trade in cotton manufactures. He was confident that the export target of 1,000 million yards could be reached, provided, of course, the Government of India took necessary steps to augment the export trade. He put forward two suggestions, in this connection, neither of which is new. He wanted (1) full rebate of the import duty on foreign cotton utilised in the manufacture of cloth for export, and (2) introduction of a system of voluntary checking of goods meant for export. These suggestions assume special importance now that competition for export markets in cloth has become very keen.

* * * *

Since writing the above, the Millowners' Association, Bombay, has addressed a communication to the Government of India urging the latter to revise the rates of excise duty on fine cloth. In support of this plea, the Association has clearly brought out the extent of increase in the incidence of the new rates of excise. According to it, the levy of the specific rate of duty of 15 pies per yard on fine cloth is higher than the highest rate of duty applicable under the previous system. Thus, in the lower categories of fine goods—these constitute the poor man's cloth—the increase in duty works out to more than 114 per cent. This will be considerably more in the case of low-priced goods, where *ad valorem* duty at 5 per cent. yields less than seven pies per yard, as will be seen from the table below:

Name of mill	*Present ceiling price* Rs. a. p.	*Present excise duty* Pies	*New excise duty* Rs. a. p.	*Percentage increase*

ACCOMMODATION AVAILABLE IN BANK OF MAHARASHTRA BUILDING

Opp. Poona Municipal Corporation
SPACIOUS ACCOMMODATION
Especially suited to big offices like—
Government and Semi-Government Offices, Insurance Companies, Commercial Establishments, etc.
Three floors with lift service. Carpet area of each floor 3,700 sq. ft. Rent Moderate.
Concession to those taking up an entire floor.
Building expected to be completed by 1st June, 1953.
For particulars see personally or write to :
The Manager, The Bank of Maharashtra Ltd.
Laxmi Road, Poona 2

The Association feels that such an increase in the excise duty will result in a swing from the use of imported cotton to Indian cotton which is already in short supply. The one reason for the downward trend in prices, it says, is consumers' resistance and, by increasing the incidence of tax, the Government is only making things difficult for the mills to sell particularly cloths with 36 warp and 40 weft made out of foreign cotton. The Association accordingly urges the Government to readjust the rates of excise duty. In its opinion, if the *ad valorem* duty at five per cent. on fine cloth yields a revenue which is less than 15 pies per yard, then, that duty should be applied.

OUTLOOK FOR WOOL

Despite the growing competition from synthetic fibres, wool seems still to hold its ground and there are indications to suggest that it would continue to do so in future. The trend of events in the world textile trade since the war will bear clear testimony to this fact. Thus, the world output of wool is now running at the rate of 2,500 million lbs., a level which is very much higher than that prevailing in the immediate pre-war years.

There are many factors which are responsible for wool's important position on the world textile map. The first and foremost is that wool is generally cheaper than the new fibres, such as nylon, "Orlon," "Dacron" and "Terylene," although it is not so cheap as rayon. For instance, a good 64s top was sold in mid-1952 at 170 cents per lb., which compared with 180 cents quoted for nylon and "Dacron" and 190 cents for "Orlon." Again, the resilience of wool—this enables garments to maintain their shape—is practically unmatched, although it is approached by nylon. Wool also recovers well from stretching, when wet, and its resistance to repeated flexing is as good as nylon and superior to that of other fibres. What is more, in the important characteristic of ability to absorb moisture, wool is unrivalled.

To add to these, there are certain fundamental disadvantages of some of the manufactured fibres which have enhanced the competitive capacity of wool. Thus, the supply of raw materials such as sulphuric acid, required for the production of synthetic fibres, is not unlimited, while some have alternative uses as food. The cost of materials, power, machinery and labour has risen sharply during the recent inflationary phase, while the natural processes of raising sheep have shown less effects from such rises in cost.

Against these disadvantages, there are a few advantages which have enabled the synthetic fibres to compare favourably with wool. The quality and quantity of the fibres can be controlled under factory conditions. There is no variation in quality from season to season, as with wool, and sale by description is facilitated, with its attendant economies of time and labour. Output can be stepped up or reduced more quickly than with a growing fleece. Economies of mass production are likely to grow, especially as heavy research and establishment costs are overtaken, the processes being more amenable to close control than in primary production. Some synthetic fibres are easier and cheaper to maintain than wool. Some are easier to wash and do not require pressing, which is particularly convenient for manufacturing clothes, uniforms and upholstery. Two other qualities are appearance and resistance to moths, chemicals and water.

A conclusion that emerges from this brief study of the competitive position of wool *vis-a-vis* the synthetic fibres is that each fibre will find its particular use, sometimes supplanting wool to some extent. The new fibres, therefore, should be regarded not merely as substitutes but as products with special attributes qualifying them to meet particular purposes. At worst, they will supplant wool in some uses, but, at best, they will stimulate larger consumption of wool by cheapening and improving the products resulting from the blends of wool and other synthetic fibres. Indeed, one may confidently expect that wool will continue to play a prominent role in the world textile trade.

WOOL INDUSTRY IN U.P.

The U.P. Government proposes to launch a five-year scheme, estimated to cost Rs. 30 lakhs, for the planned development of sheep and goats and production of quality wool in the hills. Investigation will also be conducted as to the possibility of developing the *pashmina* and *mohair* industry. Unlike most of the other States, Uttar Pradesh is potentially rich in sheep and wool and its importance in this respect is second only to Rajasthan. The State possesses greater facilities for improving both carpet wool in the plains as well as fine long and medium staple wool in the hills. The total sheep population of the State is about 2 million, which is estimated to produce 3.8 million pounds of coarse wool and 1.3 million pounds of fine wool, valued at Rs. 30 lakhs.

IMPORT OF TEXTILE MACHINERY

The Government of India has announced that no import licences will be granted for ring frames during the current half-year. Carding engines of 45 inches, however, are permitted to be imported freely by those who have been using them exclusively. The import of carding engines of other dimensions will not ordinarily be allowed to be imported. But applications from actual users, who experienced difficulty in using 40-inch standard cards manufactured in India, for the import of 37-inch or 38-inch or other dimension carding engines will be considered on merit, provided full justification for the proposed import is furnished.

TRENDS IN YARN PRODUCTION

CLOTH EXPORTS BELOW LAST YEAR'S AVERAGE LEVEL

(From A Special Correspondent)

MANCHESTER, 24*th March*

MANCHESTER LETTER

SINCE the beginning of the year the gap between British cotton and rayon yarn output and production totals 12 months ago has steadily narrowed until in the final week of February the mills exceeded the corresponding figure in 1952, which had then shrunk to below 17,000,000 lbs. Current output is only a shadow of its former self but in view of the severe wastage of manpower 12 months ago, this development was inevitable.

The following table indicates the trend of output and recruitment in the first two months of the year:

(Production in 000's lbs.)

Week ending—	*Yarn production* 1953	1952	*Recruitment* 1953	1952
Jan. 3	14,090	17,220	+ 77	— 129
,, 10	17,090	21,010	+369	— 9
,, 17	17,290	20,870	+172	— 202
,, 24	17,420	20,620	+ 97	— 339
,, 31	17,520	19,930	+102	— 670
Feb. 7	17,680	19,520	+138	— 528
,, 14	17,490	19,310	+113	— 549
,, 21	17,090	19,210	+ 91	— 1,009
,, 28	17,910	16,980	— 55	— 973
Mar. 7	18,010	17,360	+156	— 844

In the ten weeks so far recorded, 1953's total production of yarn is still nearly 20,000,000 lbs. below the quantity spun in the same period last year. Man-power, however, shows a very different picture despite the net loss shown in the final week of February. Whereas this year the labour force in spinning has gained more than 1,250 workers, the prevailing slump at the beginning of 1952 had drained nearly 5,250 operatives away from the industry.

Cloth Exports

Overseas trade in cotton goods from the United Kingdom last month was rather disappointing, as despite the fewer working days involved, the average of exports was smaller than in January. The value of shipments amounted to £9,997,295 compared with £15,326,469 in February, 1952. At that time the full impact of last year's depression had not yet been reflected in export figures.

Recent reports from shippers of piecegoods have been generally discouraging, although occasional advices from foreign outlets have given rise to hopes of slightly better trade which has yet to materialise. Shipments in February showed a fall of more than 12,000,000 square yards compared with the previous month and were below the average for the whole of 1952. The table below shows the recent experience of cloth exporters:

Monthly average in :	*Piecegoods* Sq. yds.	*Value* £	*Average price per sq. yd.* d.
1939	116,115,000	2,665,000	5.51
1949	75,298,000	8,809,000	28.07
1950	68,539,000	8,358,000	29.26
1951	72,096,000	11,016,000	36.67
1952	59,234,000	8,404,047	34.05
1953 (*a*)	58,412,000	7,415,953	30.47
January	64,796,000	8,223,374	30.46
February	52,027,000	6,611,090	30.49

(*a*) Two months' average.

The projected drive to increase trade with West Africa has not yet materialised and so far this year shipments to that area have declined compared with 1952. On the other hand, there has been a welcome revival in business for South Africa, although the turnover is still well below the 1951 level. The main disappointment has been the slump in trade with Pakistan, following the import restrictions. Cloth exports in the two months have been below 2,000,000 yards compared with more than 10,000,000 yards in the same period last year.

Leading consumers of Lancashire cotton piecegoods in the past two months are (in square yards, with 1952 comparisons): British West Africa 27,760,000 (36,038,000); South Africa 15,138,000 (8,751,000); Australia 8,235,000 (26,718,000) and Malaya 6,070,000 (4,506,000). Slight gains have been recorded in trade with several European outlets as well as Canada and the Irish Republic.

Yarn Sales Maintained

There has been a limited revival in yarn exports during the past few months and this welcome trend was maintained in February, when shipments were only slightly below those of December and January. The restrictions imposed on export yarn activities when there was a threatened shortage of supplies for home use will clearly harass the industry for some considerable time ahead.

Cotton yarn exports last month exceeded the average during the whole of 1952 and there was also an increase in the average price earned, as the following table shows:

Monthly average in :	*Yarn* Lbs.	*Value* £	*Average price per lb.* d.
1939	9,471,800	745,500	18.89
1949	6,838,400	1,002,500	68.88
1950	5,915,500	2,127,900	86.33
1951	5,547,900	2,648,500	116.46
1952	2,976,800	1,470,163	119.25
1953 (*a*)	3,378,200	1,431,492	101.70
January	3,467,700	1,427,349	98.79
February	3,288,900	1,434,904	104.77

(*a*) Two months' average.

As in the case of cloth exports the figures for Pakistan show a startling decline this year compared with last. Only 2,600 lbs. has been shipped against 1,034,500 lbs. in the first two months of 1952. Trade with Australia has also fallen away but conversely bigger shipments of yarn have been recorded for the Irish Republic, Canada and some European countries.

Chief importers of Lancashire cotton yarn so far this year have been (with 1952 comparisons): Irish Republic 1,044,500 lbs. (647,900 lbs); Australia 669,900 lbs. (1,072,100 lbs); Canada 664,500 lbs. (386,700 lbs); Denmark 493,900 lbs. (255,800 lbs.) and Norway 423,500 lbs. (438,100 lbs.).

More Jap Cloth

Mainly as a result of the arrival of larger quantities of Japanese cloth, imports of unbleached piecegoods last month were higher than in January. Arrivals from all quarters aggregated 6,367,000 square yards, of which 5,147,000 square yards came from Japan.

This brings the total for the two months to 10,954,000 yards, against 38,163,000 square yards in the same period last year. The cost of this material has been cheaper on average as imports to the end of February were valued at £999,499, against £4,473,853 a year ago.

Keeping Prices Steady

Control of world cotton supplies and prices as a move to reduce the risk of unemployment and financial crashes in the textile industry was urged last week by Mr. Charles Schofield, General Secretary of Britain's Operative Cotton Spinners' Amalgamation.

Mr. Schofield, in his Annual Report to 20,000 Amalgamation members, said the fact that the textile industry in this country and abroad was so vulnerable to trade winds, made it imperative that efforts to bring about more stable conditions should be explored to the full. Otherwise, cycles of good trade followed by periods of depression would continue, bringing the misery of unemployment and financial ruin.

"Much could be done in this direction by the establishment of control of world cotton supplies and prices," he said. In view of the expressed anxiety of growers and users of raw cotton, it did not appear that devising a scheme which would be fair and reasonable to all would be impracticable.

Raw Cotton Imports

American cotton comprised nearly half the imports of raw cotton reaching British ports this week. United States growers supplied 15,755 bales out of total arrivals of 33,326 bales. Of this quantity, 18,427 bales was on Raw Cotton Commission account. Imports of Egyptian cotton at 6,059 bales were the highest in a single week since January, 1952. Still at sea for Britain are 61,820 bales mainly from Pakistan, the United States and East Africa.—*All Rights Reserved.*

U.K. WOOL INDUSTRY

Reviewing the conditions in the U.K. wool industry, during the year ended October, 1952, Mr. F. J. Hill, Chairman of Messrs. G. R. Herron & Sons (Holdings), Ltd., wool merchants and top makers, observed at the recent annual meeting of the Company, in London, as follows:

"At the beginning of the financial year on 1st November, 1951, the wool trade generally continued very much in the doldrums and the outlook was extremely gloomy. There was a complete lack of interest by the public in purchasing all types of textile goods, with the result that wholesalers and retailers, in the hope that they would be able to buy at lower prices later on made no attempt to replace falling stocks.

"In the meantime, the price of wool, which had rallied sharply but unconvincingly in the autumn of 1951, started to sag again and continued to fall steadily until the end of March, 1952, by which time prices for Merinos were back to the level of the previous September and Crossbreds were considerably lower.

"In April, the first signs of some slight return of confidence became apparent and the price of wool began to harden again and, with the exception of one short-lived break in early September, continued to rise steadily until the end of the financial year. "Trade, however, remained lifeless and the depression was not really over until the unseasonable cold snap early in September caused the public to take an active interest in buying woollens. Towards the end of the financial year, business was exceptionally good and in the last two months of it we actually sold more tops than ever before in a similar period."

THE INDIAN BANK LIMITED, MADRAS

(ESTABLISHED 1907)

DIRECTORS' NINETY-FIRST REPORT

The Directors have the pleasure to submit a statement of Assets and Liabilities and of Profit and Loss Account of the Bank for the year ended 31st December, 1952. The Auditors' Report is also annexed.

2. The Net Profit of the Bank for the year amounts to Rs. 14,17,656-5-11 and together with the sum of Rs. 92,544-13-6 carried from the previous year's account, makes a total of Rs. 15,10,201-3-5.

3. Out of this sum, the Directors have made the following interim appropriations—

	Rs.	a.	p.
An ad-interim dividend at the rate of 5 per cent. and a bonus of 1 per cent. (both free of income-tax) was paid which absorbed	3,23,000	0	0
The Directors now recommend that the following further appropriations may be made—			
To pay a final dividend of 5 per cent. and a bonus of 1 per cent. (both free of income-tax) thereby making the dividend and bonus for the year amount to 12 per cent.	3,33,000	0	0
To provision for taxes	3,90,000	0	0
To transfer to the Reserve Fund under Section 17 of the Banking Companies Act, 1949, raising it to Rs. 55½ lakhs	2,50,000	0	0
To transfer to Sinking Fund raising it to Rs. 9 lakhs	1,00,000	0	0
To transfer to Bank's Buildings Account	10,000	0	0
To carry forward	1,04,201	3	5
Total .. Rs.	15,10,201	3	5

4. The Bank rate remained unchanged at 3½ per cent. during the year under report.

5. An Office of the Bank was opened during the year at Hyderabad (Deccan). A Pay Office for the use of the Members of Legislature was opened on 15th July, 1952 in the Government House Estate. This will function only during the sessions of the Legislature.

6. In accordance with Articles 95 and 96 of the Articles of Association of the Bank four Directors Messrs. O. M. SP. L. M. Meyyappa Chettiar, A. M. A. MR. Murugappa Chettiar, M. R. Guruswamy Mudaliar and C. Krishnamoorthy Mudaliar retire this year by rotation and they, being eligible, offer themselves for re-election.

PROSPECTS FOR WORLD COTTON CONSUMPTION

ENCOURAGING TREND PREDICTED

THE prospects for cotton consumption in any season are certainly of great interest to the traders in this commodity. But they have special reason to be interested in the outlook for it in the 1952-53 season, considering the textile situation in 1952 was marred by the low level of cloth offtake in many parts of the world and the consequent closure, or partial working, of several mills in many textile producing countries. There has, of course, been some welcome recovery in textile production since the earlier part of 1952, when there was a world-wide slump in textiles. The partial revival of replacement demand in some countries and better domestic demand in the main consuming countries are regarded by the International Cotton Advisory Committee, Washington, as among the factors which point to a "more encouraging" outlook for cotton consumption in the world during the current season.

The following table, extracted from the Committee's journal *Cotton* (March issue), gives the world cotton consumption during the three years ended 1951-52 and also the preliminary estimates for 1952-53:

Cotton Consumption

(In million bales of 478 lbs. each)

U.K.	2.1	2.4	1.8	
Others	1.3	1.3	1.5	1.6
	23.7	26.5	25.0	25.1

* Preliminary estimates.

The above table shows that the world cotton consumption in 1952-53 is likely to be somewhat higher than in 1951-52, though it will still be below the level touched in 1950-51. Commenting on the prospects for cotton consumption in the 1952-53 season, the Committee says:

"Assuming that there are no major setbacks during the remainder of the 1952-53 season, cotton consumption over this period is likely to be at a higher rate than a year ago. This assumption appears to be justified in the light of the finding at the recent Textile Conference. Participating countries appeared more optimistic about their respective domestic demand for cotton textiles, while textile exports were expected to increase slightly as compared with 1952."

The prospects for cotton consumption in individual countries, as a glance at the above table will show, differ widely. Estimates for cotton consumption in the U.S. point to some increase in the season over the level of 9.2 million bales consumed in 1951-52. The more satisfactory state of the textile industry in the U.S., the Committee says, is reflected in the continuous fall in textile stocks since July last year. Even more encouraging from the manufacturers' point of view is the "relative firmness displayed by textile values in the face of falling cotton prices."

An appraisal of consumption prospects for the 1952-53 season in Continental Western Europe, according to the Committee, is difficult, since there are divergent trends in textile production in Europe. However, consumption in most European countries during the early months of the current season showed a recovery from the low level prevailing at the end of the 1951-52 season, although it was well below the rate of consumption during the corresponding period of the previous year. Exceptions here, however, were the Federal Republic of Germany, the Netherlands, and Finland where consumption was running at roughly the 1951-52 level.

Although cotton consumption in the U.K. over the first five months in the present season was somewhat less than it was a year ago there has been a marked recovery from the low point reached in June and July last year. In November and December, cotton yarn production in the U.K. was fairly steady at about 13 million pounds per week. From the demand viewpoint, although exports of both cotton yarns and manufactures recovered in the last quarter of 1952, they were still appreciably under those in the same period a year ago. Rayon also shared in this revival in export demand.

The prospects for cotton consumption in India have been reviewed in the journal by Mr. P. D. Gadkari, Deputy Secretary, Indian Central Cotton Committee, who says that the reduction in export duty on cloth, permission for mixing Indian with foreign cotton, substantial relaxation in the control on cloth, and permission to export yarn of limited quantities to relieve pressure on mills are the factors which "may, to some extent, stimulate cotton consumption in India." As regards foreign cotton, Mr. Gadkari says that the American and East African cotton bought in 1951-52 at high prices are still with the mills which are reluctant to go in for new crop. He places the likely consumption of all cottons during the 1952-53 season at about 37 lakh bales (of 478 lbs. each), made up of 30 lakh bales of Indian cotton and about 7 lakh bales of foreign cotton. Commenting on the long-term outlook for cotton consumption, he says:

"Consumption of cotton in India reached the peak figure of 40 lakh bales in 1942-43, i.e., during World War II. There is no reason why this should not be reached during peace-time also, as there has since been an increase of about 12 per cent. in spindleage. Further, the Five-year Plan estimates the requirements of the Indian textile industry in 1955-56 at 4.1 million bales of cotton. This will provide for the production of 6,400 million yards of cloth (5,746 million yards for internal consumption at 15 yards *per capita* and 654 million yards for exports) and 125 million pounds of yarn for supply to other industries. Cotton consumption, of course, will depend largely on the relative price level of cotton, the extent of the internal and external demand for cloth, the size of the Indian cotton crop, the improvement or otherwise of the purchasing power of the people of India and the mill industry's capacity to compete in export markets for textiles where Japan is a potential competitor.

"Among the factors which may affect the long-term trend of cotton consumption, mention may be made of the recent increase in the imports of staple fibre and rayon yarn into India which was 40 million pounds in 1951-52, against 3 million pounds in 1949-50. This may be of interest so long as the prices of the imported cotton are high, but its competition with the present price level of cotton needs watching."

The overall conclusion reached by the study of the consumption pattern in many countries is that, on present indications and provided that there is no major change in the international outlook, the consumption of cotton in the free world will be roughly the same as in the 1951-52 season, namely, 25 million bales. Even if this figure is not very encouraging, it indicates that the position is at least much less disturbing than what it appeared to be in the earlier part of last year.

MADRAS, dated 11th March, 1953.

PRICE OF SUGARCANE

MADRAS DEMANDS AN INCREASE

WHILE the general demand all over the country is for a reduction in the price of sugar, the Madras Government has come forward with a suggestion for increasing the price of sugarcane. Replying to a question in the Madras Legislative Assembly a few days ago, Dr. R. Nagan Gowda, the State's Agriculture Minister, revealed that the question of securing a higher price for cane than the statutory minimum of Re. 1-5 per maund fixed for the current (1952-53) season was under correspondence with the Government of India. No effort, he added, would be spared to see that a solution was arrived at which would be fair both to the cane cultivator and the factories.

The Madras Government's suggestion for an upward revision in the price of sugarcane may have been prompted by its anxiety to better the lot of the agriculturist, an aim which generally commands good support in the country. But what one fails to understand is that these advocates ignore the fact that, as it is, the price of sugarcane is high and, if the Government of India concedes the demand for a rise, then, it would be defeating its own objective of reducing the price of sugar to a level which suits the pockets of the ordinary consumer.

It will be recalled that, when the Government announced a reduction in the price of cane from Re. 1-12 to Re. 1-5 per maund in September last, it clearly stated that that decision had been taken after reviewing the trend of sugar production during the last two or three years and the anticipated production in 1952-53, besides other factors, such as the price of *gur* and alternate crops. The decision, it was further said, was in conformity with the world trend of sugar prices which had been declining for the last one year or more. In fact, the reduction in sugarcane prices had been long overdue. It was as early as in March, 1950, that the former Indian Tariff Board suggested, in its report on the sugar industry, that the sugarcane price should be reduced to Re. 1-4 "in the next two or three years and, possibly, to Re. 1 per maund in a period of five years." This, it considered, was a fair price based on the estimated return from *gur*.

Present Price High

In view of the recent decline in the prices of consumer goods and, consequently, in the cost of living in rural areas, even the present minimum price for sugarcane is not justified. It is, as we pointed out on an earlier occasion, too high a price as compared with the prices of other agricultural crops. Perhaps the Government feels that, if the price of sugarcane were reduced further, it would result in a fall in the production of sugarcane and an increase in the output of other competing crops, thereby making it difficult for the sugar factories to secure adequate supplies of cane at the statutorily fixed prices.

There is not much substance in this line of argument. For, even if the area under sugarcane crop were to be cut—it may be noted that the second official estimate of sugarcane crop for the 1952-53 season places the area under sugarcane lower at 4,248,000 acres, as compared with the final estimate of 4,326,000 acres for 1951-52—it would not adversely affect sugarcane supplies to the factories. Even after making allowance for such a fall, there will still be sufficient quantity of cane for meeting the needs of factories. Again, despite reduced acreage, the actual yield of sugarcane may rise, what with all the emphasis that is now being laid on the intensive development of cane cultivation by the Planning Commission and the active steps that are reported to have been taken by the State Governments. Moreover, a lower price for sugar will mean a still lower price for *gur*. This is obvious. When the price of sugar goes down, its consumption will increase, as a large number of those who consume *gur* will prefer the clean, white sugar. This in turn will occasion a fall in the price of *gur*, thereby reducing the capacity of *gur* manufacturers to compete with the factory owners producing white sugar. After all, of the aggregate yield of sugarcane, only about 20 to 25 per cent. goes into the production of white sugar.

Fair Price

Inasmuch as the question of sugarcane prices has, once again, been raised, an attempt may be made here to assess the fair price for sugarcane. As no reliable data relating to the return on alternative crops, the price levels of consumer goods, foodgrains and the actual cost of production are available, the only practicable way to determine the fair price of cane is the one followed by the Tariff Board in 1950, namely, the estimated return from *gur*. There is also very good reason why this basis is preferable to others. A little over 50 per cent. of the sugarcane crop in the country is utilised in the production of *gur*. Naturally enough, the cane cultivator, in deciding whether or not he should supply his cane to the factories at any minimum price fixed by the Government, considers what return he is likely to obtain if he converts his cane into *gur*, instead of supplying it to the factory. The average price of *gur*, now prevailing in the country, is about Rs. 13. It is estimated that the cost of producing 1 maund of *gur* in Uttar Pradesh is Rs. 2-10. This means that the average gross return to the cultivator per maund of *gur* is Rs. 10-6. On the basis that 10 maunds of sugarcane are required to produce one maund of *gur*, the gross return per one maund of cane works out to Re. 1-0-7, which includes presumptive costs—as, for example, interest on capital value of the land—and profits. To this must be added the cost of transport at As. 3-9 per maund to arrive at the fair price for cane. On this basis, Re. 1-4-3 per maund happens to be the fair price. Accordingly, the present price of Re. 1-5 per maund is more than a reasonable price for the cane grower.

SUGAR PRODUCTION AND STOCKS

The total production and despatches of sugar during the current (1952-53) season amounted to 834,351 tons and 464,190 tons, respectively, as against 908,478 tons and 354,971 tons during the corresponding period of the previous season.

The opening stock, production, despatches and closing stocks of sugar during the fortnight ended 28th February, 1953, were 744,512 tons, 125,654 tons, 67,590 tons, and 802,576 tons, respectively. The figures for the corresponding fortnight of the previous season were 568,316 tons, 129,213 tons, 44,734 tons and 652,795 tons.

(*Concluded from next column*)

the remaining two collieries, namely, Bokharo and Kargali, has been engaging the attention of the Union Government for some time. These are two of the biggest collieries in India employing a large labour force and the problems attendant on the introduction of departmental working in these collieries have been many and complex. The change-over would necessitate additional capital expenditure. In view of the financial stringency, it has not so far been possible for the Government to replace contract system in these two collieries. The Government has, however, now recognised that the implementation of the decision should not be deferred any longer. It is accordingly setting in motion necessary action for the introduction of the departmental system of working and every endeavour will be made to complete this by 1st April, 1954.

OWNERSHIP OF RAILWAY COLLIERIES

MINISTRY OF PRODUCTION TO TAKE POSSESSION

THE decision of the Government of India to transfer the ownership of the railway collieries from the Railway Ministry to the Ministry of Production is a step in the right direction. This decision has been taken on the ground that the ownership of the collieries should not be dissociated from their management which is now the responsibility of the Ministry of Production. The Chief Engineer of the Mining Board is discharging this duty, under the direct control of the Coal Commissioner, an official of the Production Ministry.

It is stated that the implementation of this decision would help rationalise administration and economise costs. But mere vesting of ownership and management of railways collieries in a single Ministry will not be sufficient for the purpose. At best, it will only eliminate the botheration of the Chief Mining Engineer in going to various ministries for petty sanctions needed in the day-to-day management of the collieries and avoid delay in the execution of his work. What is really needed is a drastic change in the administrative set-up of the collieries.

The operating results of the railway collieries do not bear any comparison with the financial results of the private collieries. The working of the collieries during 1951-52, the latest year for which figures are available, disclose a net profit of Rs. 11.2 lakhs, as against a loss of Rs. 69.98 lakhs during the previous year. Although the profit is encouraging, it is negligible considering that the capital outlay is as high as Rs. 7.38 crores. It may be argued that a public enterprise is not operated for profit, but for public benefit. But that does not justify its management showing any less concern for costs than private enterprise does.

The question of running the railway collieries on economic lines has been engaging the attention of the public and the powers-that-be for a long time. The Railway Collieries Enquiry Committee was of the opinion that the establishment of an autonomous statutory body for the management of the collieries was not only desirable but imperative, so that the present policy of running these collieries through a Government department might be substituted by the system followed by well-managed industries. But the Working Party for Coal found itself unable to recommend the formation of an autonomous statutory body for a group of collieries alone. It felt that the efficiency hoped for by the Committee might be effected through the formation of a private limited company or a joint-stock corporation, the President of the Republic being the 100 per cent. shareholder.

The recommendation of the Working Party for coal, suggesting a private limited company or a joint-stock company, deserves serious consideration. It is, of course, assured here that such a company or corporation will be free from red-tapism, so characteristic of Government departments, and be allowed to work efficiently. This will be possible only if the corporation or company is not regarded as an appendage of the Ministry concerned and is given freedom of action to implement the policies of the Government in the best possible manner. The Working Party, it will be recalled, suggested that the management of the Company so formed be vested in a Chairman and a Board of Directors. Each of the Directors is to receive a share in the company from the President of the Republic, which is to be held only during the tenure of his office, and any profit accruing or dividend declared should be credited to the Government and not to the person concerned. This arrangement, while ensuring a certain measure of autonomy for the company, will give the Government of India full control over the running of the collieries.

CONTRACT SYSTEM IN RAILWAY COLLIERIES

The contract system of coal raising in the railway collieries, by which is meant a system under which coal is raised through contractors who recruit, control and pay their own labour and are paid by the Government on the basis of the total tonnage raised, had been the object of repeated criticism by various committees and commissions which had examined the question on the ground that it gave rise to several abuses. Labour had also been insistent in demanding the termination of this system. Recognising the force of the criticism, the Government of India decided some time back to abolish the contract system in the 11 railway collieries. In pursuance of this decision, the system has already been abolished in nine of the collieries and the introduction of the departmental system of working in its place in

DEPRESSION IN THE JUTE INDUSTRY

IS CURTAILMENT OF PRODUCTION DESIRABLE?

IT is a month now since the export duty on sacking was cut from Rs. 175 to Rs. 30 per ton. But, so far, there has been no improvement in the offtake of sacking and the prices of both jute goods and jute have actually gone down. One of the objects, in fact the main object, of the Government in reducing the export duty on sacking was to impart some strength to raw jute and prevent it from slipping down to a level at which it will become uneconomic for the grower to produce jute. This object has certainly not materialised. Thus, while the prices of jute manufactures have recovered a little from the lowest levels to which they had fallen a few days ago, the price of raw jute is still at the lowest level, as will be clear from the following table giving an idea of the trend of prices during March, 1953, as compared with those on the eve of the Union budget:

Date	*B. twills* Per 100 bales	*Hessians* 40" 10-oz.	*Raw jute Assam bottoms*
	Rs. a.	Rs. a.	Rs. a.
Pre-budget week	95 8	43 1	21 8
4th March	94 14	43 2	21 0
11th ,, ...	92 14	41 14	19 8
18th ,, ...	90 12	40 2	18 8
23rd ,, ...	88 12	39 12	18 8
25th ,, ...	93 8	40 12	18 8
26th ,, ...	92 12	40 8	18 8

The above table shows that the declining trend, which started early in March, persisted till the 23rd of that month when they saw the lowest levels of the period. The decline was hastened by the accumulation of heavy stocks with mills, lack of demand for sacking, competition from the Continental mills and buyers' resistance in the U.S. There may have been some speculative selling, but it could not have been much, owing to the suspension of the *fatka* market. Since then, however, raw jute prices have remained more or less unaltered, while B. twills and hessians have recovered a little. The relatively better tone in jute manufactures is attributed to rumours of an Argentine order for 20,000 tons of hessians, occasional buying of sacking by Australia and some Continental importers, and expectation of a further scaling of looms in order to meet the disquieting situation created by the absence of any appreciable demand for jute goods. If the improvement has not been sizable, it is attributed to some fundamental changes in the size and pattern of demand for jute goods. The latest theory is that the high prices of jute goods in recent years have resulted in a permanent loss of a part of the pre-war markets for these goods. In support of this view, it is pointed out that, first, exports of sacking to Far Eastern markets have shrunk considerably during the last 10 or 12 years. Thus, the offtake of bags has declined sharply from 116.5 million in 1938-39 to 35.9 million in 1951-52. This fall has been interpreted by some that India has substantially lost its chief market for sacking. Secondly, even offers made to the U.S., the U.K. and Australia at lower levels have not evoked any response from importers in these countries. Again, the U.S. purchases of burlap from India in January, 1953, amounted to only 55.5 million yards as compared with 75 million yards in December, 1952. This decline seems to have unnerved the market in jute goods.

Advices from Calcutta indicate that, after consultations with the Government of India, the jute industry has decided, for all practical purposes, to curtail production. As mentioned by us last week, this course is fraught with many dangers and will aggravate the injury already caused by the high level of prices in the past. The most important question that must be answered in this connection is whether such a step will serve the object in view. There are reasons to believe that it may not. What certainty is there that such a sacrifice by India will not be taken advantage of by jute mills in other parts of the world? It should not be forgotten that India no longer has the monopoly it had in jute manufactures a few years ago and that Pakistan is making feverish attempts to increase its capacity for manufacturing jute goods. Some idea of this can be had from the fact that India now accounts for only about 57 per cent. of the jute looms in the world, as against over 80 per cent. at one time before the war, and that this share is steadily going down. If Indian jute mills cut their production, their confreres in other countries may increase their output. A solution to the problem of accumulating stocks, therefore, must be found in ways other than restrictive practices, if India is not to yield further its position in the world trade in jute goods to other countries.

The jute goods market being stagnant, as already mentioned, there is little to inspire activity in the raw jute section where prices are more or less stationary, with Assam jute remaining in the neighbourhood of Rs. 18-8 per maund since the second half of March. The depressed condition of the raw jute market, despite the closing of futures trading and substantial reduction in export duty on sacking as noted at the outset, has created fears that the production target for raw jute set in the Five-year Plan will not be achieved. In fact, critics have gone so far as to blame the Government that, instead of helping the jute grower by taking prompt steps to ensure him an adequate price for his jute, the Central and State Governments are unconsciously lending support to the mills bent on depressing the price of raw jute. The Indo-Pakistan Agreement, signed last week, paving the way for the purchase of a minimum of 18 lakh bales jute a year, has been quoted as an instance of the Government of India's lack of appreciation of the plight of the jute grower. This accusation of the Government is only a travesty of the truth, for the agreement signed by the Government was guided not by the motive of depressing jute markets here but by other considerations of larger, and long-term, interests of the country. As the various implications of the agreement have been clearly brought out in the course of a leading article last week, there is no need to repeat them here. But it is necessary to refer to the problem facing the raw jute producers in the country to-day, as set out by Mr. Bhagirath Kanoria, President of the Raw Jute Interests Joint Committee.

At a Press Conference held at Calcutta on the 26th ultimo, Mr. Kanoria drew attention to the distress prevailing in the raw jute market. He stated that the total estimated consumption of jute in the country was 5.5 million bales. As against this, the supplies available were about 6.6 million bales, consisting of 5.3 million bales of Indian jute and 1.1 million bales of Pakistan jute imported so far and 0.3 million bales of outstanding contracts due to be fulfilled by Pakistan. Thus, at the end of the current season, that is, 30th June, 1953, the carry-over is expected to amount to 1.1 million bales. As the price of raw jute had already declined to Rs. 18 per maund, as against an economic price of Rs. 27 per maund, Mr. Kanoria suggested that the Government or the jute industry should buy the available supply of jute at a reasonable price or the Government should allow the export of such raw jute as was not required by the Indian mills.

A few observations may be made here on Mr. Kanoria's suggestions noted above. He advocates that the Government or the mills should purchase the jute at a reasonable price. In other words, he desires that the Government should adopt a price support scheme. In this connection, it is worthwhile recalling Pakistan's experience. The quality of jute in Pakistan, unlike that of Indian jute, is superior and is readily taken up by the industry in overseas countries including India. Despite this basic advantage, the price support scheme failed miserably in Pakistan. The reasons are varied and many. The jute crop last year was a bumper one on account of favourable weather conditions. To carry out the price support scheme successfully, the Pakistan Government did not have adequate finance to purchase all the jute offered to the Jute Board. Excess jute stocks were not able to go out of the country for the price of jute in terms of the appreciated Pak rupee limited the scope of free buying from overseas jute consumers. Above this, the Government imposed export duties which further acted as a check on exports. In addition, the Government's policy of discrimination against India, its principal customer, was hardly conducive to facilitate increased exports to this country. In the circumstances, the price support policy had to fail. The Indian Governments, of course, can avoid the mistakes which the Pakistan Government made, but, even then, a price support scheme for raw jute may prove costly. The last course will be to permit export of the surplus jute. But the question is one of finding markets for the type of jute available in the country for export. Granting that exports are allowed, care should be taken to see to it that the type of jute required by the mills is reserved for the use of the mills in the country. This again bristles with a number of problems, one of which is irksome controls.

As regards the question of mills themselves buying jute, it must be mentioned here that their financial resources having been locked up already in the accumulated stocks of jute goods, they do not have the wherewithal to buy and stock raw jute also. The mills can buy jute only when they are in a position to dispose of their goods. Besides, there is no means by which they can hedge themselves against a loss in such a huge transaction as the one advocated by Mr. Kanoria.

The solution to the present situation lies in restricting the production of raw jute to the areas where it can be grown economically and discourage the cultivation of low quality jute in areas unsuited to its cultivation. The so-called self-sufficiency drive in jute is superficial, for much of the jute produced is unfit to be put to good use. A committee has already been appointed by the Government to go into this question and it is to be hoped that, as a result of its deliberations, the self-sufficiency programme of raw jute would be revised and planned on a more rationalised basis than at present, bearing in mind the attitude of Pakistan towards exports of jute to India.

U.S. BURLAP CONSUMPTION AND STOCKS

The U.S. consumption of burlap during January, 1953, is estimated at 73 million yards including 1.2 million yards delivered to the armed forces, states the Indian Central Jute Committee. Although short of 2 million yards of the December, 1952, figure, this compares favourably with the 48 million yards consumed in the same month last year. U.S. stocks of burlap at the end of January, 1953, declined by 20 million yards from December, 1952. The estimated 193 million yards includes 129 million yards spot and 64 million yards afloat.

The U.S. purchases from India during January, 1953, totalled 55.5 million yards as compared with 45' million, 40.8 million and 75 million yards bought, respectively, during October, November and December, 1952, from the same source. U.S. purchases from the Continent during the last three months of 1952 were 7.6 million, 12.6 million and 4.5 million yards respectively. Complete official figures of burlap shipments to the U.S.A. for 1952 add up to 721 million yards, an increase of 227 million yards over 1951.

That burlap's immediate future is, says the Committee, brighter than it has been for many years is the sentiment prevalent among U.S. burlap circles. These circles believe that the bag dealers and manufacturers have before them a grand opportunity to regain most of the business so far lost to the burlap trade.

2. The Bank's business and profits continue to show gratifying progress.

During the course of the year we have closed the Pay Office at Srivilliputhur.

3. On the 23rd February 1953 Mr. Mulraj Kersondas tendered his resignation from the Board due to ill health. The Directors have accepted the resignation with regret and wish to place on record their appreciation of his services to the Bank.

4. In accordance with Article 94 of the Bank's Articles of Association Messrs. M. Ct. M. Chidambaram Chettyar and Ar. Rm. Ramanathan Chettiar retire by rotation and being eligible offer themselves for re-election. Under Article 86, Mr. A. Subbiah was co-opted as a Director on 1-4-1952 and being eligible offers himself for re-election.

5. The Shareholders are requested to appoint Auditors for the ensuing year and to fix their remuneration. Messrs. Suri & Co., the retiring Auditors, are eligible for re-appointment.

M. CT. M. CHIDAMBARAM CHETTYAR,
Chairman.

MADRAS, *2nd March*, 1953.

ABRIDGED BALANCE SHEET AS AT 31st DECEMBER, 1952.

INDIAN POSTS, TELEGRAPHS AND TELEPHONES

PROGRESS OF DEVELOPMENT PROGRAMMES REVIEWED

THE Report of the Indian Posts and Telegraphs Department for the year 1952-53, circulated to members of Parliament a few days ago, gives, among others, a brief review of the Department's working and the progress of development programmes on hand. This is the third year of the Five-year Plan for the posts, telegraphs and telephones, estimated to cost Rs. 50 crores. Already, as much as Rs. 12 crores have been expended. The development programmes envisage chiefly the provision of postal facilities in rural areas, the expansion of telephone facilities in larger cities and extension of telegraph channels.

A brief review of the Report discloses that there were 36,501 rural and 5,583 urban post offices on 31st March, 1952, as against 19,181 and 4,160 on the same date four years before. The programme for the provision of a post office for every village with a population of 2,000 and above, which began some years ago, has just been completed. The All-up Air Mail Scheme, introduced in 1949, has accelerated mail services, specially over long distances. Replying to the debate on the working of the Posts and Telegraphs Department last week, Mr. Jagjivan Ram, Minister for Communications, gave an assurance to the House of the People that, under the new scheme, the population basis for opening new post offices in frontier, hilly and tribal areas would be related to distance, so that no post office would be beyond the reach of two miles' walk. The development programmes on the postal side include, *inter alia*, mechanisation of postal services and installation of slot machines for vending post cards, envelopes, etc. and modernising the workshop for the manufacture of improved type of date stamps.

It is claimed that, in the context of distances over which the mail is carried and the present level of prices, the postage rates in India are very low. It has been found, says the Report under reference, by actual cost-accounting, that the postal side loses in all the branches of its business excepting in the case of the inland letter and the inland letter card. For instance, in the case of a postcard sold for 9 pies, the cost of printing and handling comes up to more than 13 pies.

The aggregate number of telephone exchanges in India at the end of 1952 was 604 and the number of telephones 199,934, as against 278 and 114,922, respectively, at the time of Partition. The total number of public call offices is now 1,839. Although about 85,000 new telephones have been installed since Partition, the unsatisfied demand for telephones is still very heavy. Every attempt is being made, we are told, to meet the demand by the installation of additional exchanges and new equipment. A number of trunk circuits has been provided to cater to increased trunk traffic. Schemes are also on hand for laying underground cables between all the important cities in the country, so that trunk service will be free from interruptions. When this scheme is implemented, the number of circuits available between the main centres will be ten times the present number. The services will then be trouble-free and the delays will be reduced to the absolute minimum.

The radio-telephone service with foreign countries has been extended to more and more foreign countries. There is at present direct radio-telephone service to the U.K., Egypt, Iran and Japan. The introduction of similar services to Nairobi and Burma is under consideration. Extension of the India-U.K. radio-telephone service to Brazil, Greece, Austria and Israel is also under contemplation.

The additional equipment installed for the telephone trunks provides for additional telegraph channels also. At present, there are 8,360 offices, as against 7,330 on 31st March, 1948. The policy of opening telegraph offices in every town with a population of over 5,000 and in every sub-divisional headquarter, irrespective of the size of population, is being implemented to the extent permitted by the funds at the disposal of the Department. Substantial improvement has been achieved in the working of teleprinters. The improvement is most marked on the main routes, on which traffic delays have decreased considerably. The proportion of express telegraph traffic has been steadily decreasing, indicating the growing confidence of the public in the ordinary telegrams.

The Indian languages telegraph service is being popularised. There are at present 122 places where telegrams written in *Devanagri* script are accepted. The number of these telegrams is increasing but very slowly. The English teleprinter has been modified for typing the *Devanagri* script. The *Hindi* teleprinter was first used at Nanal Nagar during the last Congress session and it proved a success. It is proposed to use these machines at the more important telegraph offices.

Incidentally, it may be noted that the Posts and Telegraphs Department looks after certain agency functions like Post Office Savings Bank, National Savings Certificates, Postal Life Insurance, collection of broadcast receiver licence fees and anti-piracy work relating thereto, on behalf of other Departments of the Government. A Director has been appointed at Bombay for implementing, in consultation with the Reserve Bank of India, the recommendations of the Committee which had been set up in 1950 to suggest improvements in the working and expansion of the Postal Savings Bank. Latest reports indicate that cheque facility will be introduced shortly in the Post Office Savings Banks.

EXPLORATION OF GROUNDWATER RESOURCES

An operational agreement, between India and the U.S. with a view to undertaking a nation-wide survey of the groundwater resources in India, was concluded last week. Under the agreement, the U.S. will provide $4.5 million and India Rs. 1.2 crores which together are estimated to help drilling approximately 350 exploratory wells in the various parts of India. Although the test borings, under the present agreement, will be conducted primarily for the exploration of the potentialities of water-bearing strata, the borings will be developed and equipped for use as irrigation wells or related purposes where economical productive aquifers are encountered. Such wells will be handed over to the State Governments concerned which will be responsible for their maintenance and operation. The value of the developed and equipped wells will be treated as loan to the States from the Centre.

The Central Ministry of Food and Agriculture will be responsible for the general supervision and administration of the project. Technical aspects of drilling, testing and sampling will be the functions of the Geological Survey of India. The exploratory drilling and equipment of wells will be conducted under contract which shall be negotiated and executed by the Government of India. The agreement provides that exploratory drilling should commence as soon as possible with a view to completing the project within a period of 36 months from the date of the contract. The Geological Survey of India will assign the necessary geologist to carry out geological and hydrological tests. The U.S. Technical Co-operation Administration is responsible, under the agreement, for the recruitment and assignment to India of such specialists as are needed from outside India.

EXECUTION OF HIRAKUD PROJECT

GOVERNMENT'S DECISION ON P.A.C. REPORT

THE 66-page document of the Public Accounts Committee presented to Parliament on the 26th ultimo contains a scathing indictment of inefficiency and public waste of money. It draws special attention to the continued execution of works without detailed sanctioned estimates for five years from the commencement of the Rs. 92-crore Hirakud Project and the failure to make adequate arrangements for proper storage of crores of rupees worth of plant and machinery and for the maintenance of their systematic accounting. It has expressed concern at the flouting of financial rules and accounts regulations by responsible officers. It has highlighted specific instances of non-observance of such rules in the case of purchase of 14,000 sleepers and import of bullocks and buffaloes all the way from Punjab for earth-moving work. The Report has quoted several instances of "nugatory and infructuous expenditure." A glaring example of maladministration is expenditure on an unfinished bridge over a non-existing canal.

The Committee's chief recommendation relates to the need for the appointment of a "high-level all-round administrator to be in entire charge of the project." The other recommendations include the separation of the functions of the Financial Adviser and the Chief Accounts Officer, adequate disciplinary action against officials responsible for gross irregularities, stock verification of all stores, including those not likely to be required during the next few years, and dismantling of the railway track linking the subsidiary dam with the main project. The Report has suggested that the Chairman and members of the Water and Power Commission should confine themselves to the work of consultants and advisers.

Mr. Gulzarilal Nanda, Minister for Irrigation and Power, announced on 27th March in Parliament that the Government of India has accepted many of the recommendations of the Public Accounts Committee on the affairs of the Hirakud Dam Project and that other recommendations were receiving the Government's careful consideration. He, however, made it clear that the acceptance of the Committee's recommendations did not imply that he had accepted or concurred with all the statements made in the Report. He expressed that full examination of the statements was necessary before he could form any definite opinion on the individual statements affecting the project or the officers concerned.

The Government of India is, according to the statement laid on the table of the House on 27th March, examining the question of devising proper administrative set-up for the river valley projects in general. It has partly accepted the recommendations regarding the bifurcation of the functions of the Financial Adviser and Chief Accounts Officer and is considering the details of financial advice and control. It has agreed to take disciplinary action against officials responsible for irregularities. The Government states that care will be taken to ensure that the system of stores accounting, in which necessary modifications would be made from time to time, would be enforced and that the stock verification of all stores, including those not likely to be required in the next few years, is being made. The question of dismantling the railway track, referred to, is being considered by the Government. The Government holds the view that it is necessary to consider carefully the proposal that the Central Water and Power Commission should be an advisory and consultative body with authority to undertake investigation of water-power resources, research, etc., and should not be permitted to undertake the execution of projects.

While on this subject, it may be noted that, on 24th March, Mr. C. D. Deshmukh, Finance Minister, indicated, during question hour in Parliament, that accounts of river valley projects which were at present run on the basis of centralised system would be decentralised in some of the works like the Hirakud. He revealed that there was no proposal at present for altering the provisions in the Public Works Codes or in any current orders of the Central Government, which require that previous concurrence of the Finance Ministry should be obtained, before financial commitments are entered into by the project officers.

For the attention of
Far-sighted Industrialists
RAW MATERIALS CONTROL

With every prospect of a buyers' market ahead, you are concerned to keep your manufacturing costs to a minimum. The raw materials cost of a product forms a high proportion of the total factory cost in paper and textiles, and a serious item of expense in engineering and chemicals. You may be wondering whether your staff are linking the provisioning of raw materials with sufficient closeness to your manufacturing programme. Then you want to be sure that you are actually receiving the materials you have paid for and, finally, that the minimum wastage and quality loss occur in the manufacturing processes. You are not prepared to accept only verbal assurances at your plants that nothing further remains to be done along these lines. You have heard that impartial analyses and subsequent statistical control figures, (that is, quality control,) have achieved further worthwhile economies in coal, timber, and steel, and in cotton and jute fibres.

PROVIDING INCOME FOR RETIREMENT

NEED FOR PENSION SCHEME IN INDIA

AN increasingly popular scheme with both employers and workers in the West is the scheme for providing a pension at retirement age for the benefit of employees. The popularity of the scheme with the employers is due to the fact that they have found in it the best means of keeping with them an able body of workers who find a pension scheme so attractive that they seldom like to risk losing this benefit by changing their employers. Apart from the fact that a pension scheme represents an important application of the Welfare State idea, there is no doubt that the scheme provides an excellent incentive for any body of workers to continue in the service of the particular firm or factory in which they are employed. Small wonder, then, that the demand for group and pension insurance continues apace.

So far as India is concerned, there is no well organised system of pension insurance in the country. The only agency which provides pensions for employees, as a matter of employment policy, is the Government itself. But here, the pension is administered as a part of the Government's expenditure pattern. No insurance calculations enter into the provision of pensions. Another scheme, which bears some resemblance to a pension scheme, is the Government's scheme of national savings certificates. Under the scheme, a certain sum of money is allowed to be invested every month in the certificates. After a period of 12 years, the sum invested increases by 50 per cent. This surplus may be drawn by the investor, leaving the original sum to be reinvested in the certificates. But the scheme, on the whole, entails the investment of a large sum of money, month after month, which is difficult for most employees.

Apart from the Government, there are a few well-established firms, generally foreign-owned firms, which give to employees of approved service a small pension at retirement age. But the provision of pension is not a part of the contract of employment. It could be given or refused at the employer's will. Hence, there is urgent need to evolve a pension scheme which will not depend on the employer's will, as such, but could be relied upon, under all circumstances, to give a steady income after a person completes his working life of active service. By and large, Indian insurers, as a class, have not yet been able to evolve a popular scheme for providing insurance at retirement, presumably because such a scheme would involve a high rate of premium which would not appeal to a wide class of persons. Even so, it should not be beyond the powers of the Government, the insurers, the employers and workers to evolve an acceptable pension scheme for the benefit of large classes of workers in all walks of life who are, willy-nilly, forced upon their own resources at the end of their working life.

It might be contended that a pension scheme, in which both employers and employees participate, is not an unmixed blessing, since it might prevent mobility of labour which is an important economic consideration. After all, labour turnover, within certain limits, is not an evil, for it permits the economic employment of human resources to maximum advantage. Nevertheless, there is much to be said for continuity of service and a life free from fears and anxieties about reaching old age without adequate provision, which a sound pension scheme alone can give.

In the U.K., the pension scheme is administered as part of the wider scheme of national insurance. The total expenditure under the National Insurance Fund is now running at an annual rate of about £517 million. It is noteworthy that a large part of this expenditure consists of expenditure arising from the payment of retirement pensions. Thus, out of the total expenditure of £517 million, the provision of retirement pension accounts for £335 million while the rest is spent on all other benefits such as sickness, maternity, widows and unemployment benefits together with guardians' allowances and death grants.

Besides the Government's scheme, there are, in the U.K., several other schemes, arranged by private employers and insurers for providing a steady income for employees on reaching retirement age. Where group life cover has been effected in addition, a capital sum is made available to the dependents in the event of the death of the employee before the retirement age is reached. The private individual or the self-employed man can make provision for himself and his dependents in ths same way. Suitable use of endowment policies and deferred annuities will enable a man to secure the advantages of group life and pensions scheme. Many endowment policies carry an annuity option clause, by which the person, who has taken out such policies, may elect to take an annuity instead of the capital sum. The annuity option is in lieu of the capital sum otherwise payable. When the maturity date is reached, if a better scheme is available at that time, the capital sum payable under the policy can be used to secure such return.

But retirement income is best provided by means of an annual payment of premium which results in a deferred annuity, commencing at the retirement age. This annuity has two forms, life annuity or annuity certain; the former is available for life and the latter for only a fixed term of years. Commenting on the use of these and other forms of insurance policies, the Insurance Correspondent of the *Financial Times*, London, writes:

"Many group pension schemes allow the pensioner to allocate part of his pension to his wife, so that, should he predecease her, her portion of the pension will continue to be payable. A similar provision can be made by the private individual.

"There are many forms of annuity available for two or more lives, where the income provided can be on a joint basis. For instance, a man may purchase, by annual premium payment, a deferred annuity which will be payable in full during the lifetime of his wife and himself, and at the reduced rate after the death of the first partner. These joint and survivorship annuities represent a suitable medium through which the married man may make provision for his later years.

"Where endowment policies are used to make provision for retirement, one question which has to be decided is whether with-profit or non-profit contracts should be effected. As a general rule there is no doubt that the with-profit contract offers a better return to the policyholder."

An aspect of the problem of pensions and of pension insurance schemes, which has, so far, not been satisfactorily solved, is the fact that no pension scheme provides any protection against the loss of purchasing power of the currency. A decline in purchasing power of the currency in which pension is paid means that the retirement income provides a standard of living far lower than was contemplated when the pension arrangement was made. A man may have denied himself a good deal of comfort, in order to save the money to provide a pension for his old age and find, at the end of his active life, that he has denied himself much in exchange for paltry comfort; he may find that the game (pension) was not worth the candle of his sacrifice. But this problem has already attracted the attention of actuaries in some countries, notably in the U.S., who have now come to think that, since inflation is a continuing evil, some tentative schemes should be devised to see that pension schemes, which, by their very nature, are long-term financial propositions, are not excessively vitiated by the decline in the purchasing power of the currency.

SOCIAL SECURITY IN NEW ZEALAND

Few countries spend a greater proportion of their expenditure on social security measures than New Zealand. It spends about £60 million a year, or approximately 28.4 per cent. of its total expenditure, on social security benefits. Besides, there are other social services, which are not provided specifically out of the Social Security Fund. These are education, health and other services. These services cost the country £40 million a year, or 17.9 per cent. of the total expenditure. Thus, social services, in all their forms, absorb some £97 million or 46.3 per cent. of the total expenditure.

Out of the £60 million, monetary benefits account for over £48 million and hospital, medical and certain emergency benefits absorb nearly £11 million. Administration costs account for about £1 million. The social security charge of 1s. 6d. on all income, earned and unearned, and including the income of companies, produces about £45 million. There is thus, a deficiency of about £15 million which is made up by transferring £14 million from the Consolidation Fund to the Social Security Fund—that is, from the pockets of the general taxpayers.

TENTH REPORT OF THE BOARD OF DIRECTORS

The Directors submit to the shareholders the audited Balance Sheet of the Bank as on, and the Profit and Loss Account for the year ended, 31st December, 1952.

	Rs.	a.	p.
The net profit for the year, including Rs. 1,70,952-7-9 brought forward from the previous account, after providing for all known and anticipated charges and expenses of opening branches, amounts to	30,24,733	7	4
The Directors have made the following appropriations out of the net profit :			
1. Transfer to Reserve Funds	7,50,000	0	0
2. Provision for Taxes	10,00,000	0	0
3. Disbursed as Ex-gratia Payment to Staff	3,73,614	5	4
4. Balance	9,01,119	2	0
	Rs. 30,24,733	7	4

Out of the balance of Rs. 9,01,119-2-0 the Directors recommend to the shareholders payment of Dividend at Rs. 2 per share, free of Income-tax, which will absorb Rs. 8,00,000 leaving Rs. 1,01,119-2-0 to be carried forward to the next year's account.

During the year under report, your Bank paid Rs. 7,276 as contributions for charitable, benevolent and public purposes.

During the year under report your bank acquired the following properties :
(1) Plot of land at Parliament Street, New Delhi, for constructing Bank's building.
(2) Two flats in Bombay.

Payments have been made for the same and the title deeds will be obtained in due course.

Looking to the difficult monetary and credit conditions in 1952, your Directors consider the business and profit for the last year as satisfactory. The Bank's investments appear in the Balance Sheet at below market value.

During the year, the Bank opened a branch at Hongkong and closed its office at Palwal in India. Arrangements are in hand to open a branch of the Bank in London.

The Directors are thankful to the shareholders and the clients of the Bank for their continued support. They also express their gratitude to the members of the Bank's Local Boards and Advisory Committees for their able help and guidance.

The Directors place on record their appreciation of the work done by your General Manager, Mr. B. T. Thakur, and the staff of the Bank and thank them for their ceaseless efforts in the interests of the Bank and for devotion to duty.

Under Article 95 of the Bank's Articles of Association, four of your Directors,
Shri G. D. Birla — Shri M. L. Dahanukar
Shri G. L. Bangur — Shri P. D. Himatsingka
retire by rotation, and, being eligible, offer themselves for re-election.

The shareholders are requested to appoint Auditors for the current year and to fix their remuneration.

By Order of the Board,
G. D. BIRLA,
Chairman.

CALCUTTA, 25th February, 1953.

BALANCE SHEET AS AT 31st DECEMBER, 1952.

THE UNITED COMMERCIAL BANK LIMITED

FIRST DECADE OF REMARKABLE PROGRESS COMPLETED

MR. G. D. BIRLA'S ADVICE TO BUSINESS MEN

"CHALLENGE TO OUR ABILITY AND INTENTIONS MUST BE ACCEPTED"

ADDRESSING the shareholders of the United Commercial Bank Ltd., Calcutta, at their Tenth Ordinary General Meeting, held at Calcutta on 26th March, 1953, Mr. G. D. Birla, Chairman of the Bank, appealed to business men to adjust themselves to the new social concepts and conditions and convince the people of this land by their deeds that they could deliver the goods. Mr. Birla was making this appeal in the context of the business community's role in the Plan for raising the standard of living of the people. Drawing the pointed attention of business men to the Prime Minister's call to them to function effectively and lead the country towards the Welfare State, Mr. Birla said: "In other countries, private enterprise has delivered the goods. In this country, too, if we have to justify our position, we must follow suit." Proceeding, he observed: "Our one and only aim should be to create prosperity in the country on the widest possible scale. I hope that the business community will rise equal to the occasion and successfully take up the challenge to its ability and intentions."

The following is the full text of Mr. Birla's speech at the meeting:

"GENTLEMEN,

"I have great pleasure in welcoming you to our Tenth Annual General Meeting. The balance-sheet and profit and loss account of the Bank have been in your hands for some time.

Bank's Business

"The deposits of the Bank at the close of 1952 stand at Rs. 30.88 crores, as compared to Rs. 29.58 crores at the end of 1951, showing a small increase of Rs. 1.30 crores. You will be glad to know that, although there is a small recession in deposits of Scheduled Banks, your Bank records some improvement.

"Cash in hand and balances with banks stand at Rs. 6.63 crores. This gives a ratio of over 21 per cent. to deposits, as against 17 per cent. at the close of 1951, showing considerable increase.

Investments

"Investments of the Bank stand at Rs. 14.81 crores, as compared to Rs. 12.13 crores at the end of the preceding year, showing an increase of Rs. 2.68 crores. The ratio of investments less amounts borrowed thereagainst to deposits is 45.8 per cent., as against 33.5 per cent. at the close of 1951. Cash, balances with banks and unencumbered investments in the aggregate amount to Rs. 20.79 crores, as against Rs. 14.96 crores at the end of the previous year. The ratio of these assets to deposits has improved from 50.6 per cent. to nearly 67 per cent. The Bank's investments appear in the balance-sheet at or below market value at the end of December, 1952. The policy of your Board in the matter of investments continues to be to put the Bank's funds in Government securities having early maturities.

Bills Purchased

"The amount of bills purchased and discounted has gone up from Rs. 4.21 crores at the end of 1951 to Rs. 5.07 crores as at the end of December last. These assets form 16.4 per cent. of the Bank's total deposits. You will notice that the Bank's business in bills has been continuously expanding.

Foreign Exchange Business

"Foreign exchange business continues to form a prominent part of your Bank's business. The amount of foreign bills receivable stands at Rs. 2.75 crores, as against Rs. 2.46 crores at the end of 1951. The amount of letters of credit opened and guarantees given on behalf of Bank's customers has, however, gone down from Rs. 10.15 crores at the end of 1951 to Rs. 5.61 crores at the end of 1952. India's restrictive policy in the matter of imports, diminishing need for purchase of foreign cotton and lower values are responsible for fall in this figure. Your Bank, however, continues to get a fair share of the available business.

Global Arrangements

"Your Bank has global arrangements to handle directly, speedily, efficiently and cheaply foreign exchange business with all parts of the world. I invite Government, merchants, industrialists, visitors and students increasingly to avail themselves of your Bank's service in the matter of remittances to foreign countries, opening of letters of credit and financing of imports and exports.

Advances

"Advances of the Bank show a substantial fall, from Rs. 13.70 crores at the end of 1951 to Rs. 9.11 crores at the end of 1952, the reduction being of the order of Rs. 3.59 crores. The ratio of advances to deposits has come down from 46.3 per cent. to less than 30 per cent. The combined total of advances and bills has fallen from Rs. 17.92 crores to Rs. 14.18 crores, a fall of Rs. 3.74 crores or nearly 21 per cent. The percentage of advances and bills to deposits has come down from 60.6 per cent. at the end of 1951 to 49 per cent. at the end of 1952. The principal reason for such heavy decline in your Bank's lendings is fall in the values of India's commodities and exports and diminished demand for credit from trade and industry. The diminution in your Bank's lendings, to such a large extent, however, exemplifies in a tangible manner the self-liquidating nature of your advances. But shrinkage in such assets of the Bank has adverse effect on earnings.

High Liquidity

"The liquidity of the Bank's business continues to be very high. The total of the liquid assets, viz., cash, bank balances, unencumbered investments and bills purchased and discounted comes to Rs. 25.85 crores, which is nearly 113 per cent. of the Bank's demand liabilities as represented by current and savings bank deposits and bills payable amounting in the aggregate to Rs. 22.88 crores. The ratio of these liquid assets to total deposits and bills payable, amounting to Rs. 32.62 crores, is 79.2 per cent. In both these respects, the Bank's liquidity is far greater than what it was last year and is actually much more than what is necessary. But during uncertain and difficult periods of business, your Directors think it prudent to follow an extremely cautious policy of giving primary importance to safety and liquidity of Bank's money and to assign secondary place to lendings or higher income available therefrom.

Profit

"The profit of the Bank for the year 1952 is Rs. 28.54 lakhs. This is lower than the previous year's profit. Principal reasons for fall in profits are: (1) shrinkage in the Bank's lendings, principally due to fall in prices to which I have already referred; (2) increase in the rates of interest on deposits with little or no corresponding increase in the rates of interest earned on Bank's advances and investments, the latter having been bought during periods of low yield on Government obligations; and (3) increase in establishment expenses, due to tribunal awards and absence of freedom to retrench staff or to close down unremunerative branches. We are trying to overcome the first factor by encouraging new acceptable business. Lowering the rates of interest on deposits, however, requires greater co-operation among banks. In this connection, I may mention that these rates are greatly disturbed by foreign banks offering higher rates than are warranted by return available on domestic bank loans and investments. By way of illustration, I may mention that, before the Bank of England raised its rate of interest, foreign banks in India for years continuously used to pay a maximum of ½ per cent. per annum on call loans, but, after increase in the British Bank rate, they offer 3 per cent. per annum for call loans and call deposits. This has not only led to substantial all-round increase in rates of interest on deposits in India, but even diverted large sums from interest-free or very cheap current deposits to costly call deposits. In the formulation of their policy on rates of interest on deposits, these foreign banks are perhaps influenced by the fact that bringing in funds from their parent offices for employment in this country costs them now more, because interest rates have gone up in their countries of origin. But, obviously, foreign banks cannot be allowed to disturb domestic monetary conditions. Some of the big exchange banks have also entered the field of savings bank deposits offering higher interest than the big Indian banks can give. This competition is keenly felt by small banks. The Reserve Bank, as a custodian of national financial policy, should look into this question and, if necessary, use its wide powers under law to enforce necessary correctives. With regard to the last factor, the establishment expenses, the matter is under investigation by the Industrial Tribunal for bank disputes. Banks are unable to bear the increasingly onerous burden of expenses imposed upon them by earlier awards. The general fall in bank profits must convince the Tribunal that the era of high profits, which induced excessively liberal awards, has come to an end and that banks cannot afford to continue them. Banks have a very important role to play in the expansion of the country's economy. This they are unable to do under the present conditions. They must have freedom to regulate their expenses according to their earnings.

"Diminished earnings of banks also call for co-operative action on the part of banks to study and jointly take decisions so as to improve the position of profits. Banking is the only industry in which the pre-war rates for services still continue to operate, in spite of substantial increases in interest rates on deposits and working costs. No branch of economy has to face greater brunt of monetary and economic crisis as banking. It is, therefore, imperative for banks to maintain their earnings in a very healthy condition, so as to absorb the effect of such crisis and of weaknesses in borrowers and investment markets resulting therefrom, without endangering their safety and services. This question of adequate earnings is of much greater importance in the case of small banks and small branches of big banks, which are vital to the introduction of banking in the countryside, a fresh and expanding field of new savings, so necessary for the development of our economy and the fulfilment of the Five-year Plan. The Reserve Bank, as the custodian of banking safety and banking growth, can also take initiative in this matter.

Appropriation of Profits

"Including the amount brought forward from 1951, the amount of profit available is Rs. 30,24,733-7-4. Out of this, the Directors have already disbursed Rs. 3,73,614-5-4 as *ex-gratia* payment to staff, appropriated Rs. 7½ lakhs to the Reserve Fund, which is of the same order as last year, and provided Rs. 10 lakhs for taxes. The balance available after these appropriations is Rs. 9,01,119-2-0. The Directors have already recommended to you in their report to sanction payment of dividend at Rs. 2 per share, same as last year, leaving Rs. 1,01,119-2 to be carried forward to the next year's account.

Branches

"During the year 1952, the Bank opened its branch at Hongkong. During the same period, we closed our office at Palwal, near Delhi. Sanction of the Reserve Bank of India, as required by law, has been received to open a branch of the Bank in London. Arrangements for opening the London branch have been taken up in hand. Premises have been leased in Fenchurch Street in the heart of the banking area of the City of London. It is hoped that this branch will start functioning within the coming few months.

Policy for Licensing New Branches of Banks

"In connection with opening of new branches by banks in India or abroad, I wish to suggest that there should, as far as possible, be avoidance of duplication of efforts. It happens at times that, when a bank has successfully established its branch in any place, another bank tries to rush to the same place and take advantage of the pioneering spadework of the earlier bank. The Reserve Bank should discourage such attempts by effectively using its powers and refusing permission in such cases. This should be particularly observed in the case of the Imperial Bank, which, on the basis of its privileged position, enjoys unduly great competitive power. It is true that, as a result of the recommendations of the Rural Banking Enquiry Committee, it is required to open many new branches, but these need be only at such places as lack reliable and sufficient banking facilities. Unless ordinary commercial banks can be sure of being safe from such unwarranted and privileged competition, they cannot afford to venture in small places which have just sufficient field for one bank and no more.

Bank Completes Ten Years

"During this first decade of its history, the Bank has built up large volume of banking business, total working, as disclosed in the last balance-sheet, being of the order of Rs. 45 crores. The Bank has a network of 90 branches spread in seven different countries. It has arrangements with over 55 leading foreign banks in all the continents of the world for attending to its foreign exchange business. We have over 1,00,000 accounts on our books. The Bank's customers consist of several Governments, including our own, many public bodies like Municipal Corporations, Improvement Trusts, Port Trusts, Government Corporations, Universities and a large number of industrialists, merchants, exporters and importers, and the general public. Such a varied list of clients from the biggest to the smallest, some of whom are highly discerning and selective in choosing their bankers, speaks volumes for the great confidence your Bank enjoys. I take this opportunity to convey to every one of the Bank's customers our sincerest gratitude for their trust and patronage.

Large Contributions to National Economies and Employment

"Your Bank's contributions to the national economies and employment of the countries in which we work are substantial. The Bank's total net earnings on interest, exchange, commission and miscellaneous receipts from inception to the end of the tenth year, December, 1952, amount to Rs. 782 lakhs. Out of this, the Bank has paid Rs. 342 lakhs to our employees by way of salary, allowances, contribution to provident fund, bonus and *ex-gratia* payments. This accounts for over 42 per cent. of total net earnings. The number of people in the Bank's employment exceeds 2,200. Other expenditure has accounted for Rs. 190 lakhs, total expenses for working the Bank during these ten years thus coming to Rs. 532 lakhs or 66 per cent. of the total earnings. Out of the balance of Rs. 249 lakhs, we have built up a reserve fund of Rs. 75 lakhs, paid Rs. 78 lakhs by way of taxes, provided Rs. 50 lakhs for depreciation on investments, written off bad and doubtful debts amounting to Rs. 2 lakhs and paid, as or provided for, dividends to shareholders Rs. 43 lakhs. The balance of Rs. 1 lakh is undistributed profit carried forward to the eleventh year's account.

Difficult Period Successfully Overcome

"These ten years have not been free from difficulties. There was partition of the country necessitating closing down of many branches of banks in Pakistan involving heavy losses. There has been heavy drop in the price of securities and investments. Last year, prices of goods and commodities suddenly came down, involving business men in appreciable losses. Your Bank has come out unscathed from all these big crises. Due to the foresight of your Board and management, adequate precautions were taken to protect the Bank from the adverse effects of such catastrophic happenings, which brought about collapse of many a small- and medium-sized bank, crippled several banks and involved even some older and bigger banks in huge losses, in some cases, equalling their reserve funds. Throughout this period, your Bank has been considerably expanding its activities both in India and abroad. To-day, it ranks amongst the first big five banks of the country out of a total of over 500 banks registered in India with Number One status among Indian Banks in the field of international banking.

New Features in Service

"We have introduced additional important features in the field of banking service. We are the only commercial bank in the country which has a regular and well-equipped economic and statistical section engaged in the work of studying economic and financial questions. The *Quarterly Review* published by this division of the Bank is in demand from banking, financial and public institutions all over the world. Special studies conducted by your Bank on commodities like jute, tea, mica, fill long-felt need for knowledge and systematised information of economists, business men and bankers. Again, your Bank is the only institution of its kind in the East which has a staff training centre of its own. These activities, as well as programme of expansion of branches, involve large expenditure, which is met from current revenue. But they are good long-term investments, results of which should increasingly accrue to us in the future.

Unique and Unsurpassed Record

"Looking to the size and range of our Bank's developments, we have every reason to be gratified and proud of our phenomenal progress in a short period of first ten years. This is a unique and unsurpassed record not only in the banking history of India but even in the banking history of many other countries.

Management

"For the splendid performance and progress of the Bank, I must specially congratulate your General Manager, Mr. B. T. Thakur, who has ceaselessly worked, without a single day's leave or holiday for the last ten years, to build up this Bank. His is an example of an extraordinarily high sense of duty and devotion to work and singleness of purpose. His one aim in life has been to build up a first-rate international bank for the country. In him we have one of the ablest bankers of the country enjoying great international reputation. In the task of building up your Bank, he is ably assisted by his colleagues, Mr. S. T. Sadasivan, Deputy General Manager, and Mr. R. B. Shah, Chief Accountant of the Bank. The Regional Manager for South-East Asia, Mr. J. P. Sen Gupta, has done splendid work for the Bank in the territory under his charge. From this year, another post of Regional Manager for Western India has been created and Mr. O. H. Gheewala, our Bombay Manager, has been promoted to this post. As your Bank grows in size and work, your General Manager suggests to your Board the creation of more regions for quicker disposal of work and adequate service to your Bank's clients. To our General Manager, his associates and all other employees of the Bank I convey our sincere thanks for their untiring efforts in building up the Bank.

General Conditions

"Although the year 1952 started with difficult monetary conditions which persisted for several months, during which even seasonal credit requirements could only be met by the Indian banking system by resorting to large-scale borrowing from the Reserve Bank, things greatly improved by the mid-year and this improvement was maintained right up to the year-end. The ratio of advances and bills to deposits, which stood at 64.1 per cent. at the end of 1951, went up as high as 71.5 per cent. in March, 1952. This ratio came down to 53.4 per cent. on 28th November and reached 56.4 per cent. at the end of 1952. Unlike 1951, there was no absorption of advance, but, on the contrary, there was much larger repayment, due to substantial realisation of debt made by banks in 1951. But, in spite of such great shrinkage in banks' lendings, the Scheduled Bank deposits show relatively very little fall. Such behaviour of deposits and advances probably indicates diminution in the absorptive power for hoarding money in the countryside.

Investment Trends

"The statements and graphs attached to this speech will show the changes that have occurred in the financial system. After many years of continuous fall in price, Government of India securities show a fractional improvement, the index number rising from 92.0 at the end of 1951 to 92.3 at the end of 1952. But index numbers of other investments, whether paying fixed or variable dividend, still continue to fall, the former coming down from 94.1 to 90.6 and the latter from 121.5 to 104.9. The slight betterment in the value of Government bonds is due to fall in loans of commercial banks and consequent increase in their investable funds, large investments of insurance companies, which, by law, are required to have 60 per cent. of their funds mostly in Government loans, and to demands of investment by many provident funds which industries are now required by law to introduce for the benefit of their employees. Excluding these special classes of investors tied to investment in Government bonds, there seems to be diminution in demand for investments. The index number of ordinary shares is now very much closer to the pre-war figure, in spite of very large increase in the replacement cost of industrial machinery, plant and building.

Urgency of Capital for Replacement

"At the last annual meeting, I also referred to this question of capital formation and discussed factors which militate against expansion of savings. There is no need to refer to them again, excepting to remind you that, with the annual wear and tear of industrial factories installed at low pre-war costs, the question of replacements at present high costs, and absence of savings with which to buy new equipment, the depreciation funds built up on the basis of original cost being grossly inadequate, we are fast approaching a situation where solution of this fundamental and basic problem can no longer be delayed without serious risk to our national economy. According to the Employers' Association, Calcutta, the total amount of money needed by the Indian industries over and above the regular depreciation allowance and the requirements of new plants installed in post-war years, for the purpose of renewal and replacement, will be at a minimum of Rs. 600 crores. This has to be found somehow, if our industrial production has to continue unchecked.

Other Economic Trends

"The year 1952 is notable for converting a sellers' market into a buyers' market. The break in prices first occurred in February, when the index number of wholesale prices, which stood at 433.1 in December, 1951, fell to 415.8 and further came down to 367.1 in the month of May. Since then it has fluctuated within a narrow range standing at 372.7 at the end of December last. The index number of raw materials is also about 25 per cent. lower. This phenomenon of falling prices is not peculiar to India alone but common to most of the eastern countries which mainly subsist on agricultural economy. It is a very serious matter for them, and creates many economic and political problems. The cost of living index number has, however, increased, having gone up during the first ten months of the year from 314 to 329. This is mainly due to food prices which enter to the extent of about 50 per cent. in the preparation of the index, which, on account of world shortages, have gone up and also partly due to time lag in lower adjustments of retail prices. It is hoped that this trend will be reversed this year.

"Burma, where your Bank has large flourishing business, is an exception to this general statement, because its economy mainly depends upon the production and export of rice; and on account of tremendous world shortage the price of rice, instead of coming down, actually went up to over £80 a ton, which brought that country badly needed more money for the strengthening of its defences and to rehabilitate its war-torn economy.

Increased Production

"The food situation in the country was much easier which induced the Government to allow relaxations in food controls. Productions of cotton and jute, essential raw materials for India's fabricating industry, which play such

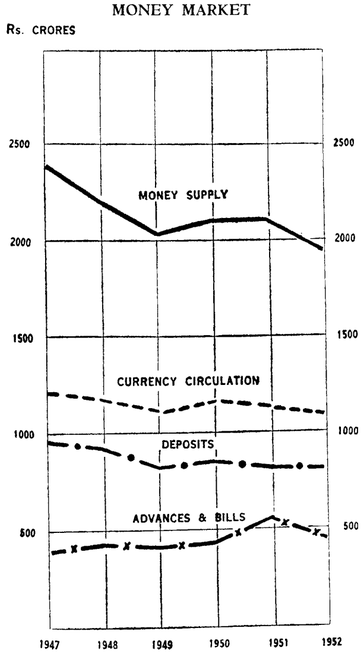
important role in the country's export trade, show substantial improvements, bringing India nearer to self-sufficiency. Production of manufactured goods, such as cotton textiles, jute goods, sugar, cement, coal, paper, iron and steel and chemical, shows appreciable increase. The index number of general industrial production improved from 117.2 at the end of 1951 to 128.7 at the end of October, 1952.

Future Outlook of Production

"There is some apprehension as to how far these improvements would be maintained, particularly in view of the lower purchasing power due to fall in prices, and the increased competition for exports in the overseas markets. If economic forces are not artificially interfered with by law, and wages, taxes and other elements which make up cost of production are allowed to adjust themselves to the price which buyers can pay, there is no reason why India's industries should not continue to expand. The only factor which can interfere with cost and volume of industrial production is inability to replace worn-out machinery, due to lack of funds. Increasing unemployment, increasing competition for our products in external markets, and increasing buyer resistance due to falling incomes in the home market are fast leading to a situation where, it is hoped, inescapable necessity will compel Government, industrialists and

MONEY MARKET



workers to solve all outstanding economic problems in a spirit of commonsense and realism, so that, through hard and efficient work, we may lower production costs to what the buyer can pay, without reducing wages.

India's Five-year Plan

"The most important economic event for this country which took final shape last year is India's Five-year Plan. I welcome the Plan, because it is a document which gives a concrete shape to the earnestness of the Government to grapple with the problems of Indian poverty. There could be no stability in a democracy, if its people do not have sufficient to eat and to clothe themselves and have houses to live in. It is a challenge to every one of us; and it invites each and every member of society to put his shoulders to the wheel of progress and to strive hard to translate the programmes of the Plan into actual achievements.

"Out of Rs. 2,069 crores, the estimated cost of the Plan, Rs. 630 crores have already been spent and only Rs. 1,438 crores are still to be spent in the remaining three years, i.e., up to March, 1956. I do not attach much importance to the ways and means by which this money is proposed to be raised. People may criticise the details and express doubts about the availability of finance from this or that source. But this is all meaningless. Whether the money is to be found from external assistance or from revenue or by raising loans or by deficit financing is immaterial. What is material is that the nation has decided to spend this much money through the public sector and, therefore, it must be found. Instead of wasting our time over the Plan's minor details, we should look to its fundamental importance and do everything possible to make it a success.

"I do not call this document a Plan, because Rs. 2,000 and odd crores to be spent on the Plan is nothing more than the capital budget of the Government up to 1956. A substantial portion of this expenditure is proposed to be devoted to agriculture and irrigation which will absorb just a little less than 50 per cent. of this total proposed budget. Another 25 per cent is allocated to transport and communications and the rest towards social services and industries. It is thus clear that this is not an all-embracing plan comprising all the total capital outlay of the country. It merely discusses the schemes which the Government will undertake on its own account during this period of five years and the size of its capital budget for the same period.

Government's Role

"I am glad the Government have confined their task to the undertaking of a few economic programmes of basic and public character. No democratic Government, however powerful, can do the entire work of economic growth, requiring the all-out effort of the whole nation. All that a Government can do is to draw its own budget and for the rest draw the attention of the people to the urgency of the problem and ask them fully to mobilise their energies and resources for the completion of other programmes not undertaken by the Government. Government should also create the necessary congenial climate and conditions, so that the total objective of economic growth may be achieved. In the final analysis, it is the people who can build up economic prosperity whether through a Government plan or private programmes.

When the Plan is fully implemented, it will create enough food in the country and make us free from hunger and famines. It will improve transport and communications. The Plan will, in short, lay the foundation on which the upper storey of our economic edifice can be built. But we must make no mistake and think that the Plan represents the finality of our economic efforts. Much greater effort and work will be needed as soon as the foundation is ready. The Plan must be a never-ending process. Although many have criticised the Plan as being too ambitious, I consider it as a modest beginning. This modesty does not weaken the Plan in any way; on the contrary, in it lies the Plan's greatest strength.

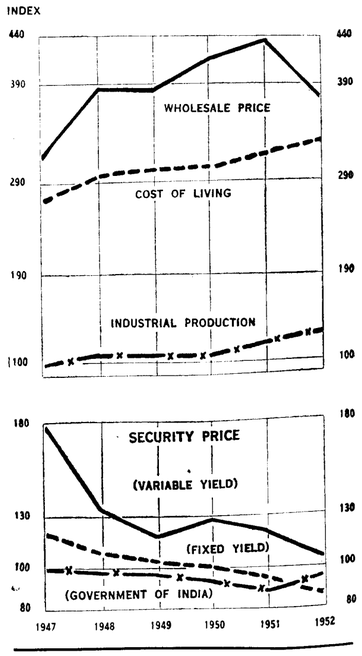
Private Enterprise

"Excepting the three branches of economic activity, agriculture, irrigation and transport, reserved by the Government for its own work, it has left the entire field of economic enterprise to private effort. And this is a right thing that that they have done. Government obviously cannot cover the whole field. It is the people who can undertake such a task. It is thus a challenge to the private sector—not just to the big industries alone but to the big, the small and the cottage industries—to plan for themselves in other branches, and show and prove, by actual achievement, their importance and usefulness. It will be a great misfortune, if we just continue to criticise Government and punch holes in their Plan and rest content with such criticising. Private enterprise owes a duty to itself, to the country and to the poverty-stricken masses, to make the fullest contribution to the development of the branches of India's economy not covered by the Plan.

"We often say that politicians have not enough experience of production and distribution. And since we claim to have greater knowledge in this respect, it is our duty to show the way. Government has made if amply clear—and the Prime Minister more so—that they seek the co-operation of the private sector. He has rightly asked us to function effectively and lead the country towards the Welfare State. In other countries, private enterprise has delivered the goods. In this country, too, if we have to justify our position, we must follow suit.

"When I talk of private sector, I have in mind all types of business and industrial undertakings from the smallest shopkeeper to the largest industrial producer. But, in the context of my suggestion of planning by private sector, I may remark that, at the present stage, the preliminary work of study, survey and planning should be undertaken by the leaders of large-scale industry. They should sit down, examine the import list, and determine what categories of goods imported by India could be produced within the country. They should then estimate the quantities needed in the next five years and then prepare plans for producing them in the country. Once they begin studying in this manner, they will find that there is considerable degree of interdependence in production; and unless all these interdependent functions in industrialisation are taken up collectively, it will not be possible singly to tackle production of many items. For instance, in heavy chemicals, if we want to produce just one thing alone, say *x*, we cannot do so economically. We must produce along with it, if it has to be produced economically, many other articles like y, z, w, etc., depending upon its by-products for their raw materials. And, perhaps, there is no demand for these additional goods like y, z, w, etc., and, therefore, the problem of utilisation of by-products remains unsolved, making it impossible to manufacture even x, for which there is good demand. We come back where we started. It is likely that lack of demand for the additional goods is due to absence of purchasing power. Human desire for their possession and use is there, but the means to buy are lacking. But once the tasks of production gather momentum, we shall find that new markets for new things will automatically spring up. The newly created purchasing power will supply the money

ECONOMIC TRENDS



with which to buy; and many things that are not needed to-day shall be needed to-morrow. It is up to us, therefore, to assist and guide the Government, tell them when and what should be done, how it should be done, what help we want from Government, and what sort of monetary and fiscal policies should be adopted to achieve the purpose of further and newer productions.

Economic Relationship

"In considering these questions of productions by private sector, I must emphatically refer to one significant development in the economic relationship. The days of *laissez faire* are gone for ever. There is no such thing now as undiluted capitalism in the world; nor is there such a thing as undiluted socialism, excepting perhaps in totalitarian countries. It is something compounded of these two systems which we may call, for the sake of convenience, 'mixed economy.' The Socialist leaders in England have realised that they must not go too far or too quickly on the road of nationalisation. Politicians in this country too have come to the same conclusion, through a process of trial and error. And if they have not realised it fully as yet, it is because the private sector, in spite of its making a great contribution to the economic growth through fresh investments of something like Rs. 500 crores during the last five years, has not quickly fallen in alignment with the development of this new concept in national economy. We must so shape our policy and plan our actions that the people are fully convinced of our ability to 'deliver the goods,' even under new social concepts and conditions.

"The days of criticism should now come to an end. Mutual recriminations should now be replaced by mutual understanding and mutual co-operation. Our one and only aim should be to create prosperity in the country on the widest possible scale. I hope that the business community will rise equal to the occasion and successfully take up the challenge to its ability and intentions.

Basic and Essential Truths

"In connection with the foregoing, I should like to place before the country, and specially before the Government, industry and labour, a few basic and essential truths for their consideration and acceptance. We must always keep these fundamental requirements before us and never lose sight of them, even for a moment, if we are to achieve real advancement in our prosperity and diminution in our poverty. They are:

"(1) Prosperity of the people is the vital necessity and fundamental condition for the stability of a democratic society. There can be no difference of opinion on this point.

"(2) Hard work, as put forth by Japan and Germany in the post-war period, is the only way to prosperity. Slogans and speeches do not lead us anywhere. Reward is the greatest incentive force which will move men to work efficiently and hard. Reward does not mean reward to a few men, it must be broad-based, everyone participating in it according to his capacity and contribution. These principles of hard work, incentive and reward must be accepted by the Government, capital and labour. Labour and capital must work in harmony and realise that, to a great extent, they have an identity of interest. Capital must know that, in accepting a Welfare State as the goal, they are not weakening, but, on the contrary, strengthening their own position. In a State where purchasing power is high, business prospers. Satisfied labour and contented society greatly enlarge scope and field for our work. It is enlightened self-interest to accept the change in social concept. Labour must also realise that, without increased production, their future is bleak.

Capital

"(3) Capital is only a synonym for resources and hard work. The harder one works to develop production, the greater is the capital formed. In this context, monetary system and discipline play very important parts. With all the resources and hard work, we may not achieve our economic purpose and production, because of a wrong monetary approach. The monetary policy, therefore, should be such as will promote 'capital,' viz., hard work and economic development. Those who talk of lack of capital in India seem to be insufficiently aware how modern financial technique, coupled with financial discipline, can work wonders. India, in my opinion, does not suffer from want of capital. It suffers, because there is absence of conditions which will impel men to work hard. We must create such conditions and social climate in which all, in their own self interest, will work hard. But financial set-up being an integral part of productive machinery, it is necessary to revise our ideas about finance, its structural organisation, and the mechanism and methods of its working. The business community can assist in the tasks of improving financial organisations, whereby deficiency of capital will not be insurmountable.

"(4) The economic growth in a democracy, or for the matter of that, even in a totalitarian regime, is not the responsibility of just a few men at the top in Government, but of every section of the society—the politician, the administrator, the labourer and the owner of capital. Without the fullest co-operation of all these people, extending over all fields of work, even the most cherished objectives become incapable of achievement. A crusade against poverty in which every one joins and every one does his bit, particularly those in charge of private enterprise, must be ruthlessly launched, if the objectives of prosperity and Welfare State are to be achieved.

Industrialisation

"(5) Economy largely based on agriculture, with population so large and continuously growing, and individual holdings of land so small, as we have, can never provide full employment or create prosperity in the true sense in any country. The only way we can accomplish this is to shift 30 to 40 per cent. of population from the farm to secondary and tertiary occupations. In other words, we can create full employment, only if we build industries of all sizes—cottage, small, medium and big—in large numbers, so as to create scope for new secondary and tertiary employment, which can absorb about 10 crores of our population, thereby making room for fuller employment of the remaining rural population at present insufficiently employed. Mr. Bevan, the Socialist leader, rightly remarked recently, 'If India succeeds in changing over her economy to closer approximation to a modern industrial community under the ægis of democratic institutions, she will achieve what no other nation in the world has achieved.'

"(6) If, for the sake of hypothesis, we estimate the existing industrial investment to be of the order of Rs. 2,000 crores with secondary and tertiary occupations already absorbing nearly 6 crores of the population, we must aim at investing another Rs. 8,000 crores in industry—may be in the coming 10 or 15 years—which, even with labour-saving devices, should give occupations to nearly half of the working population in secondary and tertiary jobs. We shall then get manufactured goods four times or more of the present quantum of production. To increase production to this level, Government too will have to increase its investments in the public sector.

Manufacture of Capital Goods

"(7) We can provide capital on such a large scale, and what is still more important, we can get deliveries of capital goods and tools to such a large extent, only if we produce these capital goods within the country. If we have to import capital goods of, say, Rs. 4,000 crores (half of the new Rs. 8,000 crores investment will probably be the value of capital goods needed for such expansion) from abroad, obviously, we have no means to pay for them. Payment will be needed in foreign currencies in which we are indeed poor. And so the ambition will remain unfulfilled. On the other hand, if we produce these goods ourselves within the country, we create simultaneously, along with the increase in wealth, new experience—and new employment even in the production stage.

"(8) It is true that, for the accomplishment of such a large industrial task, both in the consumer and capital goods sections, we require know-how. We are bound to have difficulties in producing them without necessary technical knowledge and skill. But we should not exaggerate these difficulties. We can start by buying foreign experience and know-how in the early stages. India has already started producing complicated machinery by using foreign models and designs. At least 75 per cent. of the required capital goods can be produced in this country, provided we have enough steel.

"(9) Steel being basic to all machine tools, we must install new plants to produce 2 million tons more of steel. This is the most urgent necessity. We must increase production in steel to this extent before 1957. Thereafter, all steel plants, major portions thereof at any rate, should be manufactured within the country. To do this, we also need to install capital goods producing factories. This is equally urgent.

Nation Should Decide to Work

"I have tried to scan the horizon of our industrial needs and production so as to locate the goal that we have to reach, and reach within the shortest possible period. It is not correct to say that 'time is gliding fast away.' Time stands. It is we who glide fast away. Events do not wait for us. Therefore, we must start individually to work hard, and so march onward, quickly and steadily, to reach our goal. But in looking round and scanning the vast economic horizon, I do not do so as a visionary or a doctrinaire. No hard-headed business man, even in his sixties, can suddenly become a dreamer even if he wanted to be one. When I say something big can be done, I say so on the basis of experience derived from production of different varieties of goods, and this too against obstacles and hindrances in the pre-independence days, extending over four decades. If only the nation decides to work, it shall move.

"And after all, what individuals like me can accomplish has its limits; much more can be accomplished by the whole people who are bigger and more powerful than individuals. This should, indeed, be easier, now that we are in charge of our own destiny. But the first essential is that we must work with one voice and with united determination. We must once for all make up our mind to achieve really big things. It is only when a nation as a whole decides to march forward unflinchingly that it makes progress. If India is determined wholeheartedly to move forward, she *shall* move forward and nothing can stop her progress. But it is self-confidence, determination, single-mindedness of purpose and real hard work which alone can ensure this."

QUESTION HOUR IN PARLIAMENT

Salt Production

A NUMBER of model factories and test laboratories are proposed to be opened in salt-producing areas such as Orissa, Madras and Travancore-Cochin in order to improve the quality of salt produced in India. The Salt Department is already giving technical advice to private manufacturers and running a model factory at Wadala in Bombay, to demonstrate the value of modern methods of manufacture and scientific lay-out of factories. Another model factory is to be established shortly at Tuticorin. A central salt research station is also being set up at Bhavnagar, in Saurashtra, under the auspices of the Council of Scientific and Industrial Research, to investigate problems connected with salt.

—Minister for Production

Sillimanite Reserves

According to the Director, Geological Survey of India, the world's largest concentration of sillimanite is in Khasi Hills, Assam, which contains reserves of the order of 251,000 tons. Sillimanite is used in the manufacture of furnace lining in the iron and steel industry, in the glass and ceramic industry, and in the manufacture of laboratory equipment and high temperature cement. There is a demand for this mineral in the world market.

—Deputy Minister for Natural Resources

Import of Pakistani Jute

Though under the Indo-Pakistan agreement, India is to purchase only 18 lakh bales of Pakistani jute, this country may need about 25 lakh bales. The Government, however, is bound to issue licences for 18 lakh bales only. In view of Indian prices being low and the Pakistani jute to be imported being of a better quality, the Government does not feel that there will be further depression in Indian prices. In any case, the jute mills will be purchasing the entire quantity produced in India.

—Minister for Commerce and Industry

Electricity Cut

The recent electricity cut in Madras State has affected the cement and textile industries. The 50 per cent. cut has been increased to 66⅔ per cent. from 1st March, 1953. As a result of the cut, it is estimated that there will be a loss of about 3.7 million lbs. of yarn, two million yards of cloth and 3,000 tons of cement, per month.

—Commerce Minister

I.M.F. Mission

The object of the International Monetary Fund Mission, now on a visit to India, is to collect and study statistical and other data pertaining to the fiscal, monetary and other economic policies of the Government of India and make a broad assessment of such policies in relation to the Five-year Plan. The mission proposes to hold discussions with the Government of India at the conclusion of its tour.

—Deputy Minister for Finance

Swiss Coaches

About 50 light-weight coaches have been received from Messrs. Schlieron of Switzerland under the agreement entered into with that firm for the supply of coaches. The total amount of advances, paid at the time the orders for a total of 100 coaches were placed in Switzerland, on the basis of 50 per cent. of the estimated cost of coaches, was Rs. 61.87 lakhs. The Government has stopped payment to the firm. No yearly payment has been made and no further orders placed because there was some delay in completing the implementation of the agreement. The Government has sent a high-ranking official to negotiate revision of the agreement. The agreement pertaining to the training of Indians for the manufacture of similar coaches in India is being fulfilled. The work on the construction of a factory at Perambur near Madras for building such coaches was started early in 1952, but it will be at least another two years before that factory goes into production.

—Deputy Minister for Railways and Transport

Procurement of Coarse Grains

The Government of India is considering the question as to whether special agents should be appointed to procure on behalf of the Centre coarse grains in the States. Following the decision to remove restrictions on internal movement of coarse grains within each State, it was decided that the purchase of such coarse grains from surplus States should be co-ordinated by the Centre. In the beginning, the Governments of the surplus States promised to make such procurement but, except in one State, no headway has been made. While small quantities are thus secured by the Governments, the trade points out that large stocks are accumulating.

—Minister for Food and Agriculture

Land Tenure Systems

A study of the economic results accruing from different forms of land tenure has been undertaken by the Indian Council of Agricultural Research under the scheme of village rehabilitation at Amroli, Baroda District, Bombay. The main objective of the scheme is to rehabilitate the Ranipara Bhils on the lands from which they have been ousted by money-lenders. Originally, peasant proprietary, lease tenancy, collective, and co-operative systems of farming were tried. On the recommendations of an expert officer, tenancy *in perpetuo* and collective farming system which were found successful are now being tried. The scheme is still continuing. From the point of view of profit, the peasant proprietary system is found to yield the largest amount and lease tenancy, collective farming and co-operative farming come next in order.

—Minister for Agriculture

EXPANSION OF PAPER INDUSTRY

RESPONSIBILITY OF STATE GOVERNMENTS

JUDGED from the various recommendations of the Planning Commission for the development of the paper industry in India, there is little evidence to show that the various State Governments are bestowing the attention that is due to it. Each State Government, particularly the major ones, must have some idea of the problems facing this industry, as each one of these has within its borders at least one unit, if not more, engaged in the manufacture of paper and paper board. One rarely comes across the budgets presented by these Governments to their respective Legislatures any specific recommendations calculated to encourage the development of the paper industry. If this attitude of indifference to the requirements of the industry were to persist, there is little hope for the industry to achieve even the modest targets set it by the Planning Commission under the Five-year Plan. For the implementation of the majority of the recommendations of the Commission depends on the action to be taken by the State Governments.

For long, the main problem of the paper industry has been the shortage of the principal raw materials, namely, bamboo and *sabai* grass, despite the fact that these are abundant in the forests of the country. The position is worse in the case of the paper factories in West Bengal, as they have been deprived of their supplies of bamboo which was being obtained from East Bengal in the pre-Partition period. Along with Bengal, Bihar too will have to look elsewhere for the supply of bamboo to its paper mills. The solution suggested by the Planning Commission is that some of the units in these two States should try to get their needs of bamboo from the forests in Orissa. It is not that Orissa has no paper mill at all. It has a big paper mill, but the supply of raw material in that State is large enough to meet a part of the needs of the mills in the neighbouring two States too. This does not mean that the other two State Governments can go to sleep. If the industry in these three States is to remain prosperous, all the three State Governments must strive to increase the supply of raw materials. Their aim should be to ensure adequate supplies of raw material first to the existing factories and later on to new units. The shortage of raw material is being experienced in other States also.

Bamboo and Grass

Shortage of raw material is not the only problem that needs to be considered by State Governments. The terms under which they allow the mills to have the available supply of raw material are also unsatisfactory. For the terms of supply of both bamboo and *sabai* from State forests to the factories by the State Governments have been generally framed on considerations which rarely coincide with the interests of the paper industry. In the result, supplies of these materials have been irregular, inadequate and untimely; the prices charged in different States for these materials have varied and have often been known to bear no relation at all to the market price of the finished product.

In order to overcome these handicaps, the Planning Commission has made the following suggestions, all of which seem to be quite reasonable and as such should be acceptable to the Governments of States:

(1) Reservation of specific forest areas for the paper industry and grant of long-term leases for working such areas;

(2) a rational method of price fixation on an all-India basis to enable the industry to obtain regular supplies of bamboo and *sabai* grass at reasonable prices. To safeguard the interests of the State Governments, arrangements might be made for the supply of such raw materials to the industry on the basis of a basic price, and a premium closely related to the selling price of the manufactured product or the profit margin; and

(3) development of roads in forest areas for facilitating transport.

It will be superfluous to emphasise the importance of the paper industry. Suffice it to say that the ambitious programmes of State Governments to spread education among the people will remain unfulfilled, unless there is a progressive rise in the production of paper in this country. The State Governments must, therefore, give up their indifference towards this vital industry and take an active interest in the promotion of its progress on the lines indicated by the Planning Commission.

The responsibilities of the State Governments will by no means end with the implementations of these measures alone. For, although bamboo and grass are the chief raw materials, there are others too which can be exploited to the best advantage of the industry. These include rags, hemp, hemp ropes and waste paper. One of the existing paper mills is, in fact, entirely dependent upon supplies of waste paper and rags. In view of the scarcity of raw materials which continues to affect most of the units, it is imperative that adequate facilities should be provided by the Government for the mills to secure their requirements. The industry, for instance, has been clamouring that all waste paper from Government offices, both Central and States, which is now being sold to contractors who sell it in the bazar for packing and other purposes, should be sold to the paper mills at reasonable prices. The Planning Commission seems to have made no reference to this specific claim. It has, however, recommended that the Governments should consider the question of careful regulation, or even total banning, of the export of cloth cuttings, hosiery cuttings, hessian and jute cuttings and waste paper. The Commission's emphasis on the importance of these resources to the industry will be appreciated from its observations quoted below:

"The development of the paper industry during the period of the Plan would involve an increasing utilisation of the bamboo resources in all areas, except in the north, where the expansion project of the Shree Gopal Paper Mills would have to depend for its success on the availability of *sabai* grass, rags and waste paper and probably bagasse as well. Measures should, therefore, be concerted for plantation of bamboo, to make good the depletion of this material and for development of *sabai* grass in Uttar Pradesh and the Punjab. At the same time, the collection of waste paper, rags, etc., should be more efficiently organised so that these subsidiary raw materials would also become available to an increasing extent.

"The State Governments, under the guidance of the Central Board of Forestry, should evolve a uniform policy for the leasing of bamboo and other timber forests and grasslands with the object of aiding the development of the paper industry."

Supply of Electricity

Although there has been marked improvement in the transport situation, the mills located in certain parts of the country are known to be experiencing considerable difficulty in obtaining supplies of coal. This is specially the case with the mills in the south. With a view to minimising the hardship, suggestions have been made in the past for the supply of electric power to the mills wherever it is possible. Commenting on this problem, the Planning Commission says that electric power is being utilised at present by the paper mills in the States of Mysore, Travancore-Cochin and Bombay only, and, therefore the possibility of extending the use of electric power in other areas should be explored. In the mills using hydel power, coal consumption is comparatively lower, and costs, therefore, too would be lower.

The paper industry also needs, besides bamboo and *sabai* grass, etc., other raw materials such as chemicals. These include lime, caustic soda, soda ash, chlorine, sulphur, sodium sulphate, resin and clay. While most of the factories obtain their requirements from manufacturers, there are some who produce their own requirements of chemicals. Besides, substantial quantities of soda ash and caustic soda are sometimes obtained from abroad. The main obstacle in the way of procuring some of these is the high cost of the materials and sometimes transport difficulties. These problems too need the attention of the Government and industries concerned, if only to lower the cost of production of paper.

Cost of Production

The cost of production of paper can be reduced by the industry if it adjusts its production programme in such a way as to meet the requirements of some of the principal industrial consumers. For instance, industries engaged in the manufacture of matches, cigarettes, packing materials, abrasives, etc. need large quantities of special kinds of paper. The requirements of these industries can be met by specialisation and introduction of modern techniques of production. Apart from this, the cost of production can be reduced, according to the Commission, in two ways, namely, (*a*) by economy in the consumption of fuel and different raw materials; and (*b*) improvement in the quality of the different varieties of paper, particularly wrapping paper and kraft paper. It is to be hoped that the industry will pay heed to this advice of the Commission.

Given the co-operation of the State Governments, the paper industry in India can be expected to discharge the important role allotted to it in the economic and social programmes envisaged in the Plan. The production of paper and paper board is to be stepped up, according to the planners, from 114,000 tons in 1950-51 to 200,000 tons in 1955-56, and that of strawboard and other fibre boards from 20,000 tons to 52,600 tons in the same period. In the case of the former, the target is considered to be adequate to meet the anticipated domestic requirements. The Commission, therefore, feels that there may not be any need to establish any further new units in the period of the Plan. There is, however, likely to be a gap of about 17,400 tons between production (77,000 tons) and estimated requirements (77,600 tons) of strawboard and other fibre boards, even after the implementation of the expansion programme. The Planning Commission suggests that it should be possible to bridge this gap if some of the sugar factories, instead of consuming bagasse as fuel, utilise other fuels such as wood or charcoal, and release bagasse for the manufacture of boards. The practicability of this suggestion is in great doubt for a number of reasons, the most important of them being the cost of alternative fuels and their ready availability.

VALUE OF STANDARDISATION TO TRADE

Certain implications of the Indian Standards Institute (Certification Marks) Act, 1952, were explained by the Commerce and Industry Minister, Mr. T. T. Krishnamachari, in the course of his address at the annual meeting of the General Council of the Indian Standard Institution held at New Delhi on the 27th ultimo. He said that this Act, passed in February last year, was a definite measure in the direction of implementing Indian standards. He pointed out that the Act did not envisage a compulsory enforcement of the I.S.I. Standards. It would be much better, he said, if the standards, as a rule, were to be adopted voluntarily, and on account of their own intrinsic merits than on account of any legal compulsion. The standards to be enforced by law should only be those where the sub-standard product was, in some way, dangerous.

Commenting on the choice of items in which standardisation was to be attempted, Mr. Krishnamachari felt that the choice should always be governed by practical consideration. The item must be one where the existing standard would give to the consumer a ready yardstick to apply in measuring the worth of a particular product. In this context, the Minister said that, during a recent review of the plywood and plywood tea chest industry, a number of Indian and foreign experts had expressed the view that Indian specifications for plywood and plywood tea chests were of a very high standard and might be considered the best in the world. He then referred to lac and mica and stated that the need for an international standard for these two commodities had been felt for a long time. But he doubted whether the immediate application of standard certification marks to these products would help the position of lac and mica in the world markets as the question had to be considered in all its various aspects.

The Commerce Minister dwelt on the important role which standardisation played in the external and internal trade of the country. "Progress of trade rests," he said, "on the quality and cheapness of the goods a country produces and sells in competition with the world outside, and it is gratifying to note that there has been growing realisation amongst our trade and industry of the need to strive for greater efficiency in our industrial and agricultural production. The I.S.I. has been able to make, to some extent, valuable contribution in this respect."

The Minister gave figures to indicate the progress of the I.S.I. In 1952, the number of subscribers

THE AIRWAYS CORPORATION BILL

SOME OF THE PROVISIONS EXAMINED

(By "RUDDERBAR")

THE long-awaited Airways Corporation Bill has at last been introduced in the House of the People and speculation as to its contents is laid to rest. The Bill, in fact, tells us little that was not already known. Compensation to private enterprise takes the form of acquisition of their physical assets only, and that on terms which cannot, by any stretch of the imagination, be considered generous. No compensation whatsoever is to be made for "goodwill" other than a very small sum of Rs. 10,000 payable to each company for "intangible assets"; the giving of it, however, is so hedged about with stipulations, provisos and conditions that it is very doubtful whether any company will, in fact, receive such payment.

It is difficult to understand why there has, so far, been so little attempt on the part of the air companies to obtain better terms. Their physical assets, for example, would have fetched, in the world market, at least four times as much as Government propose to pay, and in certain cases as, for example, "Skymaster" aircraft, the difference would be considerably greater. It is true that, owing to the ban on export of aircraft, the air companies are not able to avail themselves of world market prices, but surely such world values should have been taken into account?

So far as compensation for intangibles is concerned, there is an even stronger case. It cannot be denied that, in any industry, capital development losses are normal in the early stages. The air transport industry has incurred just such "development losses" in building up, over the past six years, a comprehensive network of air transport services. Starting almost from nothing, the domestic scheduled air services to-day carry over 5 lakh passengers and half lakh tons of freight per year. Given time and reasonably good fortune, the majority of operators would have made a success of their undertakings, particularly if the Government had taken a less Shylockian view of their customs dues on aviation spirit.

The rock on which the air transport industry has been wrecked is their inability to put in the reserve sufficient funds to renew their fleets. Such renewal was probably unnecessary for some six to eight years, at least so far as our domestic routes are concerned, but the day of reckoning was bound to come. It was this joint in their armour that enabled Government to press home their nationalisation scheme. There is, nevertheless, a very reasonable case for compensation in respect of development losses, as the Government Corporations will inherit, not only the traffic built up over a period of six years, but skilled personnel in every category, the majority of whom have been trained at the expense of the existing companies.

An Unusual Feature

Leaving the question of compensation, which in any event is now probably a dead issue, the point of most interest in the Bill is the manner in which the new Corporations will be constituted. It is laid down that the Boards of each Corporation will consist of a Chairman and five to nine members, all appointed by the Central Government. Furthermore, the General Manager of each Corporation is also to be "approved" by the Central Government, although appointed by the Board. This is an unusual feature and might lead to some disharmony.

It is, of course, natural that the Central Government should take powers to give directions to the Corporations. The relevant clause in the Bill reads as follows:

"The Central Government may give to either of the Corporations directions as to the exercise and performance by the Corporation of its functions, and the Corporation shall be bound to give effect to any such directions."

It is essential, however, that these powers are used sparingly and are not delegated to comparatively minor officials, as otherwise the Directorate of Civil Aviation may obtain quite undue authority over the affairs of the Corporations.

The Bill also sets up an air council, consisting of a Chairman and not more than eleven members, all appointed by the Central Government. Thus, the Air Council will advise the Government on matters relating to the fares charged, the facilities provided and the efficiency or adequacy of services run by the Corporations. It will be appreciated that the air transport industry in our country is, comparatively speaking, very small. To impose this edifice on top of the two Corporations, and when there is already a Directorate of Civil Aviation far too large and costly to be justified by the scope of air transport operations and civil aviation generally, is surely to balance the pyramid on its apex. Quite apart from the fact that the whole structure will be top-heavy, a quite unnecessary degree of interference in the affairs of the Corporations is invited which may seriously affect smooth working and which, in any event, robs them of any genuine autonomy.

Employment Policy

It is relevant, in this connection, to note that, even before the Corporations are actually brought into being, they have been saddled with a directive of the Central Government to employ all those presently employed in the existing companies, and on the same terms and conditions of service as heretofore. The clause of the Bill which relates to this particular directive does, it is true, leave a loophole, in that the Corporations "shall continue to employ him (the employees of existing companies), unless and until his employment in the Corporation is terminated or until his remuneration, terms or conditions are duly altered by the Corporation."

It is difficult to understand what really is intended by the Government in respect of former employees. Is the Government sincere in directing the Corporations to absorb all the former employees or is this merely a political side-step to stifle criticism of the Bill on grounds of unemployment to which it might lead? It is obvious that, were the former employees merely to be absorbed for a brief period into the Corporations after the vesting date and subsequently retrenched, as surplus to requirements, the Government will certainly be guilty of leading these men "up the garden path." If, however, the Government is sincere in introducing this particular directive, then, as previously stated, the Corporations' autonomy, in respect of labour policy at least, will have been seriously infringed.

One thing is certain. The Corporations will have, one way or another, considerable labour difficulties to contend with at their very inception. If not retrenchment, then clearly a fairly substantial reduction of salaries to keep the wage and salary bills within economic limits.

Provident Funds

Whilst on the subject of personnel, the clause in the Bill which requires that "provident funds" of former companies shall be transferred to the Corporations is going to lead to considerable discontent. Provident fund rules usually preclude an employee, discharged for an offence, from receiving the company's contribution to his fund. Let us suppose that two pilots, A and B, are transferred to the Corporation from different companies. Pilot A has served with a company which has a provident fund and Pilot B with a company which did not run such a fund. Both pilots commit an offence and are discharged from the Corporation. The Corporation decides to withhold the Corporation's contribution to their funds. Pilot A, who accumulated some Rs. 20,000 in his fund before transfer, may thus lose Rs. 10,000 on discharge. Pilot B loses a few hundreds only, that is to say, the Corporation's contribution to his provident fund. This is clearly unfair, and there should certainly be an undertaking by the Corporation to pay in full to an employee discharged for any reason whatsoever, the full provident fund transferred from the employee's previous company.

One final word on personnel matters. The Bill lays down that any officer or other employee, who does not wish to join the new Corporations, must give one month's notice in writing prior to the vesting date. This is to ignore facts. How is any officer or employee to know, prior to joining the Corporation, what appointment he will receive, in what location and on what terms and conditions? It would be more fair to permit any officer or employee, whose terms and conditions of service are altered by the Corporations, to leave the Corporation without loss of any privileges, should the new terms and conditions be unacceptable.

Non-Scheduled Operators

It is curious that, in an otherwise carefully drafted Bill, there is no specific mention made regarding the existing non-scheduled operators. Clause 18 of the Bill, which by its heading, purports to lay down the reservation of "scheduled air transport" to the Corporations, deals, in fact, mainly with various kinds of "aerial work" which may be permitted, notwithstanding the Corporations' monopoly of "scheduled air transport." Instances of permissible aerial work are flying instruction, ambulance flying, relief flying during a national calamity, crop dusting, locust extermination and joy-riding, with the proviso, in the latter instance, that take off and landing must be on the same aerodrome.

No mention whatever is made of any exemption in the case of non-scheduled operators presently engaged in the business. These companies own and operate 10 to 15 aircraft to-day and are mainly engaged in the carriage of freight from Calcutta to points in West Bengal and Assam.

The point to be determined is whether this is a deliberate lacuna in the Bill or merely bad drafting. If the former, then it would appear that the existing non-scheduled operators are to be permitted to continue on sufferance, until such time as the Corporations challenge their activities or the Central Government decides that their future existence is not necessary.

It would do no good to the non-scheduled operators to continue with such a "sword of Damocles" suspended over their heads. Sub-clause 2 of clause 18 states as follows:—"Any person who

PRECIPITOUS FALL IN EARNINGS OF KOHINOOR MILLS

FINANCIAL POSITION SATISFACTORY

THE Indian cotton textiles industry, like its confrere in other countries, has seen many vicissitudes in its long history and, during the post-war years in particular, its fortunes have fluctuated rather widely. The year 1952 was one of the years in which its fortunes stood at a low ebb. The profit of the mills for that year turned out to be one of the lowest for some years, even though production was at its peak. The experience of the Kohinoor Mills Co., Ltd, (Agents: Messrs. Killick Industries Ltd., Bombay), during the year ended 31st December, 1952, was no exception to this trend. Its gross profit for that year has fallen from Rs. 93.02 lakhs for 1951 to Rs. 23.22 lakhs, that is, by 75 per cent. Not since the year 1940 has the Company seen such a low profit. In 1940, it may be recalled, the Company earned a gross profit of Rs. 12.30 lakhs. But even the gross profit of Rs. 23.22 lakhs should be regarded as satisfactory, considering the heavy fall in the price of cotton and the unremunerative prices of cloth.

The marked fall in profit has not seriously affected the return to the shareholders. Last year, the Company's Directors had split up, with commendable foresight, the large distribution of 25 per cent. (as against 18 per cent. paid for 1950) into a dividend of 18 per cent. and a cash bonus of 7 per cent. This action clearly meant that the shareholders should not expect a return of 25 per cent. in the following year also. The Directors must have known, even while deciding the return for 1951, that the trading conditions during 1952 would not be so favourable as they were in 1951. Their decision to maintain the dividend to shareholders at no more than 18 per cent. cannot, therefore, be a matter for disappointment. On the contrary, it is a matter for pleasant surprise, for, on the basis of the trend of textile trade in 1952, many were wondering whether the Company would be able to pay even 18 per cent. That their doubts were not unjustified will be clear from the fact that the Directors have had to draw heavily on the E.P.T. post-war refunds amounting to Rs. 18.33 lakhs (net) for paying this dividend. In other words, the dividend of 18 per cent. for 1952 has not come out of the profit for that year, but from that part of the previous years' earnings conserved for future use.

The following comparative table shows, at a glance, the progress made by the Company since 1949:

(In lakhs of rupees)

	For the year ended 31st December			
	1952	1951	1950	1949
Sale proceeds (net) ..	725.27	814.38	524.63	558.44
Miscellaneous receipts ..	1.59	1.46	3.14	0.80
Expenses	703.64	722.82	468.16	496.55
Gross profit	23.22	93.02	59.89	71.33
Agents' remuneration ..	5.42	9.39	6.05	6.91
Depreciation	14.38	18.22	20.14	16.70
Taxation	3.00	28.00	15.00	18.00
Net profit	0.42	37.41	18.70	29.71
E.P.T. post-war refund (less tax)	18.33	..	..	..
Reserves	1.00	12.00	4.50	14.00
Dividend	18.00	25.00	18.00	15.62
	(18%)	(25%)†	(18%)	(15½%)*
Carry forward	2.23	2.48	0.53	0.28

* Excluding 11½ per cent. deferred dividend paid out of the profit for 1948.
† Includes bonus of 7 per cent.

The sale proceeds for the year under review have declined by Rs. 89.11 lakhs from those for the previous year. As against this, expenses have gone down by only Rs. 19.18 lakhs. This will show to what extent the cost remained at a high level. It will also show that the gradual relaxation of controls begun in April, 1952, did not go a long way towards improving the profitability of cloth manufacture. The gross profit has almost been wiped out by the provisions made for Agents' remuneration, depreciation and taxation. Fortunately, the Company received during the year a sum of Rs. 30.47 lakhs, being the balance of E.P.T. post-war refund. Out of this amount, a sum of Rs. 12.15 lakhs had to be repaid to the Government by way of tax on the refund. This left a balance of Rs. 18.33 lakhs which has been added to the profit available for distribution. It will thus be noted that the dividend for the year was not earned during the year.

The Directors' observations in their report to the shareholders on the trading conditions during 1952 bear reproduction here to enable our readers to gauge the results of the Company in their correct perspective:

"Price control on Indian cotton was maintained throughout the year, but was relaxed on certain varieties of cloth, yarn and sewing thread. Distribution control was also relaxed to the extent that mills were permitted to sell to dealers of their own choice, or to export 80 per cent. of cloth and 50 per cent. of yarn manufactured from Indian cotton and 100 per cent. of cloth and yarn manufactured from foreign cotton. All foreign cotton markets experienced a serious slump, and Egyptian and Sudan cottons were marked down to half the value they commanded at the beginning of the year. As a result, prices of textiles also declined sharply."

The setback in the results for 1952 has not seriously affected the Company's financial position, as indicated by the balance-sheet as at the end of the year, which continues to be sound. The reserves and surplus stand at Rs. 151.23 lakhs, as compared with the paid-up capital of Rs. 100 lakhs. The gross block of Rs. 290.52 lakhs has been written down to Rs. 82.71 lakhs, the depreciation provided so far amounting to Rs. 207.81 lakhs. Current assets amounting to Rs. 298.29 lakhs exceed the current liabilities (Rs. 129.78 lakhs) by as wide a margin of Rs. 168.51 lakhs. Among the current liabilities, loans from banks secured by stocks and stores show a sharp rise from Rs. 16.61 lakhs to Rs. 64.43 lakhs. Of the current assets, stock-in-trade shows an increase from Rs. 184.36 lakhs to Rs. 201.08 lakhs.

The Company has been spending large amounts on the expansion and modernisation of its mills. During the year, it has spent no less than Rs. 9.57 lakhs on buildings, plant and machinery, the exact amount spent on buildings alone being only Rs. 74,651. The total amount spent on fixed assets during the past seven years is as large as Rs. 141.06 lakhs. As a result of this heavy capital expenditure, the Company's mills are now one of the most up-to-date ones in India, capable of meeting the challenge of a buyers' market in yarn and piecegoods with confidence and success.

The Rs. 100 paid-up ordinary shares of the Company are currently being quoted at Rs. 308, the yield on which, on the basis of the dividend for 1952, works out to 5.8 per cent. per annum, free of income-tax.

(Concluded from next column)

reserve and maintain the dividend at 15 per cent. paid for 1950. But there were no such additional incomes in the year under review to supplement the net profit, which was inadequate to pay even the reduced dividend of 12½ per cent. The Directors have thought it appropriate to utilise a part of the reserve, created in 1950, against a fall in values of stocks and stores, for making good the loss occasioned by the fall in cotton prices in 1952. Accordingly, a sum of Rs. 10 lakhs was drawn from the stock and stores reserve and a dividend of 12½ per cent. was declared.

According to the Corporation's latest balance-sheet the paid-up capital remains unchanged at Rs. 406 lakhs. The reserves and surplus amount to Rs. 96.99 lakhs, as compared with Rs. 109.14 lakhs at the end of 1951, the decline being accounted for by the sum of Rs. 10 lakhs drawn from the stock and stores reserve and the sizable fall in the undistributed surplus. Current liabilities, including provision for taxation, amount to Rs. 301.14 lakhs, which are Rs. 149.83 lakhs less than those at the end of the previous year. The reduction in the liabilities has been brought about mainly by the repayment of the loan taken from the Corporation's bankers to the extent of Rs. 94.06 lakhs and the unsecured loans, amounting to Rs. 27.05 lakhs, taken from a subsidiary company. Last year, the Corporation had to borrow large sums of money to finance the replacement of stocks at inflated prices. "The demand for finance for this purpose," the Directors' report for 1952 says, "was less at the end of 1952 than at the beginning of that year, inasmuch as, owing to the uncertainty prevailing, raw materials were not replaced during the year to the full extent utilised." The provision for taxation is also less by Rs. 19.27 lakhs at Rs. 43.97 lakhs, which sum the Directors consider adequate for meeting the Corporation's possible liability to taxation. The gross block of the value of Rs. 238.42 lakhs has been written down to Rs. 47.78 lakhs. A sum of Rs. 14.85 lakhs has been spent on additional buildings and machinery during the year. Current assets amount to Rs. 756.35 lakhs (as against Rs. 926.65 lakhs last year) which are more than 2.5 times the current liabilities. The current assets include stock-in-trade at Rs. 299.48 lakhs, stores and spares at Rs. 101.11 lakhs, investments at Rs. 226.22 lakhs, debts and advances at Rs. 105.34 lakhs and cash balances at Rs. 24.20 lakhs.

The Rs. 5 paid-up ordinary shares are now being quoted at Rs. 9-5, at which rate the dividend for 1952 gives a yield of 6.7 per cent. per annum, free of income-tax.

B.I.C. HAS ANOTHER UNFAVOURABLE YEAR

DIVIDEND LOWERED

FOR the second year in succession, the British India Corporation Ltd. (Chairman and Managing Director: Sir Robert Menzies, Kanpur) has had to experience unfavourable trading conditions, the year referred to here being 1952. The Company's earnings for 1952 have suffered a set-back, mainly due to the sharp fall in prices of cotton which had to be bought at very high prices under Government control, and the decline in the output of leather and footwear. The gross profit, which had fallen last year from Rs. 185.76 lakhs for 1950 to Rs. 123.45 lakhs, has declined further to Rs. 71.46 lakhs, the lowest since 1940. As a result of this decline in profit, the dividend to shareholders has been reduced from As. 12 per share of Rs. 5 to As. 10. Even to pay this dividend, the Directors have found it necessary to withdraw Rs. 10 lakhs from the reserves.

Describing the trading conditions under which the Corporation had to work during the year under review, the Directors, in their report to the shareholders, observe as follows:

"In the last Directors' report, the hope was expressed that the price of wool had then become more stabilised, and that easier manufacturing and trading conditions in the year 1952 would result. The Directors are pleased to report that their hopes in this regard were eventually realised; the price of wool remaining much more stabilised after the first few months of 1952 than had been the case in 1951, and, accordingly, manufacturing and trading conditions were, on the whole, easier. Raw material prices, however, still remain very much above their pre-war level, with the result that the public is unable to purchase, to the same extent as formerly, certain popular items of woollen and worsted manufacture. The Corporation's cotton branch experienced a most unfortunate year, as the result of the operation of continued control by Government. Early in 1952, the cotton branch, in common with other cotton manufacturing units in Uttar Pradesh, was given a clear indication by the Government of India that, if allocations of raw materials already made to it on a zonal basis were not taken up forthwith at the prices then ruling, it might not be possible for Government to make further allocations at a later date. The mills, accordingly, had little or no option but to buy their entire requirements of raw materials for 1952 without delay. Almost immediately after these purchases had been completed, the market price of raw cotton slumped materially, as a result of which the Government of India reduced, on an all-India basis, the controlled selling price of cotton cloth and yarn. Protests made on behalf of mills situated in Uttar Pradesh and elsewhere in Northern India, that such operation of Government control would involve them in considerable loss, produced no satisfactory answer and, as a result, material losses, completely divorced from real manufacturing or trading conditions, could hardly be avoided in this branch. The leather and footwear branches again experienced a shortage of suitable quality hides, and this affected their output, particularly for export purposes. Products of the leather branches, however, continued to be in good demand."

The following comparative table gives one an idea as to how far the foregoing experience of the Corporation has affected its financial results:

(In lakhs of rupees)

	For the year ended 31st December			
	1952	1951	1950	1949
Sale proceeds	784.45	845.84	809.37	713.41
Stocks	299.48	424.36	171.75	216.91
Raw materials and manufacturing charges	352.63	750.06	505.68	561.21
Gross profit	71.46	123.45	185.76	101.60
Provision for—				
Depreciation	6.50	6.50	6.50	6.50
Taxation	30.00	55.00	80.00	51.25
Net profit	34.96	29.50*	99.26	43.85
Adjustment on account of revised valuation of stocks and stores ..	..	41.39	..	..
E.P.T. refund	..	22.50	..	..
Transfer for stock and stores reserve ..	10.00	..	..	30.00
To reserves	..	30.00	45.00	..
Dividend—				
8 per cent. preference.	6.48	6.48	6.48	6.48
Ordinary	40.62 (12½%)	48.75 (15%)	48.75 (15%)	36.56 (11¼%)
Carry forward	1.99	4.14	4.91	5.88

* After debiting a sum of Rs. 41.39 lakhs on account of adjustment arising from revised method of valuation of stocks and stores. This sum was, however, written back to the credit of the profit and loss appropriation account.

The decline in sale proceeds, closing stocks and manufacturing charges, reflects the fall in the Corporation's turnover. The increase of Rs. 14.40 lakhs in the net profit, indicated in the foregoing table, is due to the fact that the figure for 1951 has been arrived at after making the adjustment arising from a revision in the method of valuation of stocks effected in that year. The sum so debited was, however, written back to the credit of the profit and loss appropriation account. Besides this amount thus taken credit, the Corporation received last year a sum of Rs. 22.50 lakhs by way of E.P.T. refund, less tax, which enabled the Directors to set aside a sum of Rs. 30 lakhs to the rehabilitation

(Continued in previous column)

Points From The Chair

Capital—A Synonym for Resources and Hard Work

"CAPITAL is only a synonym for resources and hard work. The harder one works to develop production, the greater is the capital formed. In this context, monetary system and discipline play very important parts. With all the resources and hard work, we may not achieve our economic purpose and production, because of a wrong monetary approach. The monetary policy, therefore, should be such as will promote 'capital,' viz., hard work and economic development. Those who talk of lack of capital in India seem to be insufficiently aware how modern financial technique, coupled with financial discipline, can work wonders. India, in my opinion, does not suffer from want of capital. It suffers because there is absence of conditions which will impel men to work hard. We must create such conditions and social climate in which all in their own self-interest will work hard. But financial set-up being an integral part of productive machinery it is necessary to revise our ideas about finance, its structural organisation, and the mechanism and methods of its working. The business community can assist in the tasks of improving financial organisations, whereby deficiency of capital will not be insurmountable."

G. D. BIRLA,
United Commercial Bank Ltd.

An Anomaly in Return on Capital

"To provide for the much needed expansion of electricity supply in this country, very considerable capital outlay will be involved, for which the investing public has every right to demand a satisfactory assurance that it will get a reasonable return on its money. Unfortunately, what the investing public understands by a reasonable return under the present circumstances, is by no means the same as the reasonable return as defined in the Electricity (Supply) Act, 1948. The Federation has been urging that a return of 5 per cent. on the capital invested is, under the present-day conditions, no longer reasonable, and has been pressing for a revision to at least 6 per cent. So long as the return is pegged at its present, I maintain, unreasonable level, there are many other fields for investment that are more profitable and at the same time provide reasonable security. It is surely anomalous that our industry should be pegged to an overall return of 5 per cent. when, for instance, even fully secured loans from the Central Government's own Industrial Finance Corporation call for gross interest at 6 per cent."

K. G. MILNE,
Ahmedabad Electricity Co., Ltd.

Natural Rubber Growers' Anxiety

"The transfer of the synthetic plants to private ownership should assist the natural rubber producers in fair competition in the open market, freed from what is now virtually an industry subsidised by Government. Synthetic rubber would then have to be produced and sold on a commercial basis. It is understood that talks at a high level are now proceeding with the United States on the rubber question and it is to be hoped, if rumour is correct, that the present unsatisfactory state of affairs for growers may improve and the price of rubber be placed on an economic oasis. Naturally, the co-operation of the United States is essential."

SIR LIONEL SMITH-GORDON,
Broome Rubber Plantations, Ltd.

Cost of Production of Tea Must be Adjusted

"The tea industry was the subject of much public discussion, and it seems that the difficulties of the producers now have more chance of general recognition. The losses incurred in 1951 and 1952 caused some of the less prosperous gardens to close and, though prospects now seem rather better, it seems clear that the industry must be permitted to adjust its costs of production to changes in prices and demand even though the adjustment may involve a decrease in the labour force and some diminution in wages and amenities."

SIR EVAN M. JENKINS,
Eastern Bank Ltd.

Bane of Economic Existence

"The bane of our economic existence to-day is 'autarchy,' a policy bred by fear out of nationalism. When, for instance, rice can be grown at less than half the cost of buying it in world markets it is surely plain commonsense to put capital into agriculture rather than into industries, the products of which have to be subsidised. That may be an over-simplification, it is, nevertheless, basically true."

J. K. MICHIE,
National Bank of India, Ltd.

Notices

KANKNARRAH COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT THE One Hundred and Fortieth Ordinary General Meeting of Shareholders will be held at the Registered Office of the Company, No. 4, Clive Row, Calcutta, at 12 noon on Friday, 24th April, 1953, for the following purposes:—

(1) To receive and adopt the Directors' Report and Audited Accounts for the half-year ended 31st December, 1952, and the Balance Sheet as at that date.

(2) To declare Dividends.

(3) To elect a Director.

The Share Transfer Books of the Company will be closed from 10th April to 24th April, 1953, both days inclusive.

By Order of the Board,
JARDINE HENDERSON, LTD.,
D. FORDWOOD,
Secretary,
Managing Agents.

4, CLIVE ROW,
CALCUTTA-1, *27th March*, 1953.

Note.—Payment of any dividend declared will be made only to those members whose names are registered in the Books of the Company on the 24th day of April, 1953, or to their Mandatees. No applications for Warrants will be necessary. Claims on behalf of holders of shares on blank transfer will not be entertained.

KAMARHATTY COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT THE One Hundred and Fiftieth Ordinary General Meeting of Shareholders will be held at the Registered Office of the Company, No. 4, Clive Row, Calcutta, at 12-5 p.m. on Friday, 24th April, 1953, for the following purposes:—

(1) To receive and adopt the Directors' Report and Audited Accounts for the half-year ended 31st December, 1952, and the Balance Sheet as at that date.

(2) To declare Dividends.

The Dividend, when sanctioned, will be payable on and after the 4th May, 1953, to those Shareholders whose names stand on the Register on the 26th April, 1953.

Dividend Warrants will be posted to Shareholders in India at their registered address or in accordance with their mandates. Payment of Dividend to Shareholders domiciled or permanently resident in Pakistan will be arranged in Pakistan Currency at the official exchange rate on receipt of necessary application.

Early intimation should be given to the Bank of any change of address.

COMMERCE AND INDUSTRIES

(Concluded from page 612)

rose from 715 to 819. Revenue from subscriptions in 1952 at Rs. 2.19 lakhs was twice as much as that in 1951. The number of active committees and councils stood at 370, with a membership of 3,750 experts from various industries. The number of standards prepared aggregated 468. Of this, as many as 351 had already been published, 35 were in the press and 82 just finalised. The implementation of Indian Standards was, he said, a fairly formidable task. However, he felt that the achievements so far made were fairly satisfactory, although there remained a great deal more to be done. The purchasing departments of the Government of India had adopted in all 198 standards. State Governments too were pursuing the implementation of Indian standards. The progress made by them, according to the Minister, was not unsatisfactory, though not up to the expectations of the Central Government.

SOME CHANGES IN TRADE CONTROLS

The Government of India has announced certain changes in controls on exports and imports from and to India. One of these relates to the exports of *vanaspati* (vegetable oil products). Hitherto this item was under O.G.L., but now it has been removed from O.G.L. This action is a sequel to the hardship caused to the consumer of oils and oilseeds in the country, owing to a hectic rise in the prices of these commodities. Exports henceforward will be licensed freely on presentation of shipping bills up to an overall quota of 3,000 tons for 1953. The trade is advised to present shipping bills only when consignments are ready for shipment. Shipping bills will be endorsed valid only for a period of 15 days.

The Government has also decided to extend the free licensing of export of wool waste for shipment upto 30th September, 1953. On 8th November last, the Government had announced its decision to license freely for shipment upto 31st March, 1953, exports of this raw material. This concession which expired last Tuesday has, as a result of the above decision, been extended by a further six months.

Similarly, the Government has allowed exports of all varieties of cloth valid for shipment till the end of September this year. Such permission, according to a previous decision taken early in January, was valid only upto June, 1953.

With regard to imports, the Government has decided to issue licences for the import of spare parts of prime movers, required for complete power-driven agricultural machinery, power-driven pumps, and generating sets on the basis of five per cent. of half of last year's imports of the complete machinery in question. The licences issued will, however, not be valid to cover import of the prohibited types of spares and also such spares as have been separately shown under the import trade control schedule such as piston-rings and ball-bearings.

SHIVRAJPUR SYNDICATE REPORTS BUMPER RESULTS

CUT IN DIVIDENDS OF SOME ANDREW YULE JUTE COMPANIES

Shivrajpur Syndicate, Ltd.

THE directors of the above Company (Managing Agents: Messrs. Killick Industries Ltd., Bombay) submit the audited accounts of the Company for the year ended 30th November, 1952.

Steady progress in mining and development work was maintained during the year and as a result, the output from Shivrajpur and Bamankua group of mines amounted to 81,232 tons as against 82,830 tons in 1950-51. The small drop in output is due to the considerable development and exploratory work that was undertaken, which should lead to increased outputs in future years. Consequent on continued improvement in the supply of wagons, shipments showed a substantial increase, being 1,22,310 tons as compared with 59,118 tons in the previous year. Forward contracts were entered into with regular buyers for delivery extending into the financial year 1953-54. Moreover, there had been a steady demand for the Company's ores, and the opportunity was taken to conclude further sales at favourable rates for forward delivery to 1953-54; thus bringing the total outstanding commitments to 1,92,000 tons at the close of the year.

The difficulties which had arisen during development operations in No. 2 shaft, have been overcome and tram drives as well as the drives on the ore body at the 200 ft. level towards the east and west proceeded satisfactorily; the total progress on the ore body upto the end of year being 835 ft. and 971 ft. respectively. The tonnage yielded from these operations was 4,968 tons as against 780 tons during 1950-51. The progressive increase in development in this sector is calculated to help meet future commitments, but with a view to stepping up production further, other areas adjacent to the existing leases are being explored including 960 acres over which a prospecting licence has recently been granted by Government. It has also been felt for sometime that the present generating plant at the Shivrajpur Mines is of insufficient capacity to cope with the demands which have arisen on account of increased mining operations, etc. The directors have, therefore, sanctioned a scheme for the conversion from direct to alternating current and the existing 230 Volts D/C plant will be replaced by 440 Volts A/C 3-phase, alternators. This plan involves a capital expenditure of nearly Rs. 1½ lakhs and every endeavour is being made to see that the scheme is completed within the shortest possible time.

During the year further conciliation proceedings took place with the Union and another settlement was reached on 24th April, 1952, when it was agreed to pay to all the employees an annual bonus equivalent to 1/5th of their basic wages for the year 1950-51.

Effective measures taken to intensify expansion and modernisation at the Mines, are expected to result in higher production and increased amenities to the workers. The prospects, therefore, for the ensuing year should prove satisfactory, but further demands by the Union can only result in increased costs which sooner or later will affect the competitive capacity of the Company in the international market.

As expected, the Company received during the year under review, a sum of Rs. 4-7-6 per share being the final instalment on the Syndicate's holding of 1,218 Shares. This brings the amount distributed to Rs. 12-7-6 per share, or a total of Rs. 15,187 on the Company's holdings.

A credit for the net amount of the E.P.T. post-war refund of Rs. 13,463 was given by the excess profits tax authorities during the year, after deducting tax amounting to Rs. 9,212 from the gross amount of Rs. 22,675. Income-tax assessments on the profits for the years ended 30th November, 1950 and 1951 are pending with the authorities, but it is hoped that they will be finalised in the very near future.

The increase granted in wages and dearness allowance to labour has resulted in the cost of production moving up, and it has again been necessary to value the ore stocks on hand at the close of the year at higher rates.

The trading profit for the year amounted to Rs. 34,24,742 (Rs. 10,25,156) after deducting depreciation of Rs. 1,50,855 (Rs. 88,249). To this has been added Rs. 22,675 (*nil*) being the gross amount of the post-war E.P.T. refund, Rs. 1,754 (Rs. 9,908) being profit on sale of assets and Rs. 3,444 (Rs. 800) being the balance brought forward from last year's accounts, which includes an adjustment of Rs. 17 in respect of over provision of dividend last year. After providing Rs. 12,66,500 (Rs. 3,75,796) for income-tax and super-tax writing off loss on realisation of investments amounting to Rs. 313 (*nil*), writing off the expenses incurred on the issue of new shares amounting to Rs. 124 (Rs. 8,779), setting aside Rs. 4,272 (Rs. 4,875) to workmen's compensation reserve, Rs. 5,42,809 (Rs. 3,53,110) to staff Welfare Reserve, Rs. 6,00,000 (*nil*) to mine development and prospecting reserve, Rs. 4,00,000 (Rs. 70,000) to General Reserve and Rs. 1,35,000 (Rs. 15,000) to equalisation of dividends reserve, the balance available for distribution is Rs. 5,03,597 (Rs. 2,17,407), which it is proposed to appropriate as follows:—

To payment of a dividend for the year ended 30th November, 1952, at the rate of Rs. 5 (Rs. 3-8) per share, free of income-tax (proportionately on new shares) Rs. 3,49,780 (Rs. 2,13,980), to payment of a bonus for the year ended 30th November, 1952 at the rate of Rs. 2 (*nil*) per share, free of income-tax (proportionately on new shares) Rs. 1,39,920 (*nil*), and balance to be carried forward Rs. 13,897 (Rs. 3,427).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	6,99,570	Block ...	11,67,521
Reserves ...	19,58,000	Work-in-Progress ...	1,97,987

Vaikundam (Travancore) Rubber Co., Ltd.

The directors of the above Company (Agents and Secretaries: Messrs. Harrisons & Crosfield Ltd., Quilon) submit the audited accounts of the Company for the year ended 31st December, 1952.

	1952	1951
Crop (lbs.)	414,000	411,100
	Cts.	Cts.
Cost of production	50.55	48.10
Average price	122.53	119.28

During the year under review Rs. 5,665 (Rs. 6,940) was expended on the 25 acres immature rubber and Rs. 2,682 on the 5.20 acres new clearing. The estimates for 1953 provide for a crop of 4,00,000 lbs. (3,80,000 lbs.) to cost 53.56 cents (50.66 cents) per lb. Rs. 8,037 (Rs. 5,490) has been provided on capital account for the upkeep of the 30.20 (25) acres of immature rubber and Rs. 26,851 (Rs. 2,195) for the 1953 new clearing of 30 (2.25) acres.

After allowing for Travancore-Cochin agricultural income-tax, sales tax and depreciation, the net profit as shown in the accounts is Rs. 1,90,742 (Rs. 1,88,483) to which is added the balance brought forward from 1951, of Rs. 28,140 (Rs. 15,374) making a total of Rs. 2,18,882 (Rs. 2,03,856). Out of which the directors propose to pay a dividend of 20 (20) per cent. free of agricultural income-tax absorbing Rs. 1,25,716 (Rs. 1,25,716) and to transfer to general reserve Rs. 60,000 (Rs. 50,000) leaving to be carried forward the balance of Rs. 33,166 (Rs. 28,140).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	6,28,580	Block ...	6,96,538
Reserves ...	2,69,050	Stock ...	1,32,258
Liabilities ...	2,41,391	Stores ...	9,435
Profit and loss account ...	33,166	Debts, deposits and advances ...	9,392
		Cash ...	3,24,564
Rs.	11,72,187	Rs.	11,72,187

South Karanpura Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Bird & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st August, 1952.

As much as 99,222 tons of coal were raised and 1,02,845 tons were despatched as compared with 1,00,069 tons raised and 97,451 tons despatched in the previous half-year. The directors report a further increase in the raisings figure in the new quarry.

Despatches from the colliery have exceeded raisings, but this cannot be regarded as satisfactory, if it is realised that through lack of transport facilities the colliery is working to some 60 per cent. of its potential.

Representations have been made to Government at the highest level, calling attention to the fact that here in part is a readymade solution to relieve the transport difficulties affecting other coalfields.

Shortages in money and materials are retarding the necessary development of the Karanpura area but that at long last, some improvement is anticipated. In spite of a small decrease in raising costs the directors would draw Government's attention to the unfair burden of subsidising food for colliery labour. Not only does the coal industry undertake the duty of acting as the Government's distribution agency—an onerous task—but in doing so, has been left with meeting the difference between purchasing prices and prices at which foodstuffs are issued to labour. It is estimated that this item alone has added more than Re. 1-2 per ton to raising costs since 1947.

A recent tendency is for Government to authorise the sale of State Collieries' coal to Government and Government-sponsored projects. While the Company in common with the industry cannot object to this procedure in principle, the directors cannot reconcile this action with the present state of coal overproduction in the country and the view often expressed of maintaining State collieries as strategic reserves against emergencies. Procurement of stores items from abroad continued to be difficult.

The profit and loss account after providing Rs. 27,701 (Rs. 25,140) for depreciation, Rs. 20,000 (*nil*) for current taxation, Rs. 14,000 (*nil*) for tax contingency reserve and including Rs. 28,050 (Rs. 47,846) brought forward from last half-year, shows an available balance of Rs. 81,493 (Rs. 88,440) which the directors propose to dispose of as follows:—

In paying a dividend at the rate of 7½ (7½) per cent. per annum without any deduction for income-tax paid by the Company Rs. 65,625 (Rs. 65,625), and in carrying forward Rs. 15,868 (Rs. 22,815).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	17,50,000	Block ...	20,89,139
Reserves ...	10,70,000	Capital expenditure in progress ...	79,591

To the Shareholders of the Company and in particular to—

Mr. Zal Shiavax Daver of Karachi.

MONEY RATES REMAIN FIRM

(From Our Own Correspondent)

BOMBAY, 31*st March*

The short-term money market experienced another spell of stringency during the week under review. With a further broadening of demand for meeting financial year-end requirements and financing of trade and movement of crops, accompanied by a drying up of floating funds, banks were scarcely able to meet the demand without resorting to borrowing from the Reserve Bank of India and the Imperial Bank of India. Lenders in the inter-bank call money were scarce, resulting in a further dwindling of activity in this section. Interest rate for inter-bank call money remained firm at 3 per cent. both among the Exchange and big Indian banks, as well as among the smaller Indian banks. Term money rates were unchanged at 2¾ to 3 per cent. for 3 months' deposits and at 2½ to 2¾ per cent. for six months.

Leading finance brokers report that their day-to-day business this week was the lowest for several years. An idea of the shrinkage in inter-bank borrowings is provided by the latest weekly returns of Scheduled Banks. The interbank borrowings (other than those from the Reserve Bank and Imperial Bank) is no more than about Rs. 14 crores, as against Rs. 28 crores in the corresponding week of last year. The stringency in the money market does not, however, mean that the business of banks has expanded to any appreciable extent. Their turnover is still very much below what it was, say, this time last year. The extent to which business has fallen even during the peak period of the traditional busy season is revealed by clearing house statistics. The clearing house returns for the week ended 27th March, 1953, from the three main centres, Bombay, Calcutta and Madras, disclose that the total number of cheques cleared was only 3,76,215 for an aggregate amount of Rs. 98.88 crores, as compared with 4,16,895 cheques cleared in the corresponding week of 1952 for a total sum of Rs. 126.83 crores.

Tenders for Rs. 1 crore of three months' Government of India Treasury Bills continued to elicit poor response, this week's offerings amounting to no more than Rs. 101 lakhs (as against Rs. 101.50 lakhs last week). The average rate of accepted tenders remained unchanged at Rs. 2-7-0 per cent. per annum.

The statement of affairs of the Reserve Bank of India for the week ended 27th March, 1953 discloses no material changes in the currency department. The small increases of Rs. 10.75 lakhs in notes in circulation and of Rs. 30.11 lakhs in notes held in the Banking Department are covered by the increase in rupee coin. The large depletion of Rs. 24.97 crores in Central Government deposits noted in the Banking Department last week has been partly made good by a rise of Rs. 13.24 crores in the week under review. Deposits of other Governments, which had gone up by Rs. 27.66 crores a week before, have dropped by Rs. 9.25 crores. Deposits of banks have improved by Rs. 3.45 crores, while those of others have gone down by Rs. 81.24 lakhs. Cash balances are higher by Rs. 35.97 lakhs, while balances held abroad are lower by Rs. 1.10 crores. Loans and advances to Governments show a small decline of Rs. 16 lakhs, but other loans and advances, including loans to Scheduled Banks against usance bills, disclose a rise of Rs. 4.05 crores of which outstanding advances against usance bills account for Rs. 1 crore. The total amount of such advances availed of by Scheduled Banks since 1st January, 1953 is Rs. 14.24 crores, the increase over the week being Rs. 4.50 crores. Government Treasury Bills purchased and discounted are higher by Rs. 1.13 crores.

The consolidated statement of position of Scheduled Banks for the week ended 20th March, 1953, as compared with that for the previous week, shows a rise of Rs. 2.75 crores in the banks' demand deposits and a decline of Rs. 2.23 crores in time deposits. Inter-bank borrowings show a decline of Rs. 48.20 lakhs. Borrowings from the Reserve Bank account for a rise of Rs. 4.70 crores and those from the Imperial Bank for Rs. 1.29 crores. Advances have gone up by Rs. 5.06 crores and bills purchased and discounted by Rs. 2.45 crores. An increase of Rs. 1.30 crores is noted in investments. Cash-in-hand and balances with the Reserve Bank have risen by 60.07 lakhs, while balances with other banks and money at call and short notice have together declined by Rs. 2.46 crores.

The Gilt-edged market was devoid of any new developments, except for some enquiry for a few State loans. For sheer want of support, the 3 per cent. 1986 Conversion Loan fell by As. 6 to Rs. 82-10. In the absence of fresh incentives, the other securities disclosed little or no change in prices. But the undertone was steady.

The foreign exchange section of the money market was dull with no change in the rupee-U.S. dollar rates. But minor variations in the rates for sterling were seen in New York. The spot rate for £ sterling rose from $2.81¼-2.81⅝ to $2.81-9/16-2.81-11/16 on 25th March, but reacted to $2.81-7/16-2.81-9/16 on the 27th only to close unchanged at $2.81¼-2.81⅝ yesterday.

HIDES STEADY

(From Our Own Correspondent)

KANPUR, 29*th March*

During the week under review, the hides and skins market remained steady. There was good demand for upper grade goats and buff. Fresh arrivals were considerable and offtake was prompt. The main purchasers were the local tanners.

The latest quotations are: Wet salted cow 1st grade Rs. 380, 2nd grade Rs. 280 and 3rd grade Rs. 200 per score; wet salted buff 1st grade 1 lb. 12 ozs. and 2nd grade 2 lbs. 4 ozs. per rupee; goat skins 1st grade Rs. 240 and 2nd grade Rs. 200 per 100 pieces; and sheep skins Rs. 220 per 100 pieces.

GOLD REACTS AFTER SHARP RISE

(From Our Own Correspondent)

BOMBAY, 31*st March*

Trading on the Bullion Exchange during the week under review was dominated by activity in gold which experienced some wide fluctuations. Expectations of a shortage in floating stocks due to confiscation of large quantities of smuggled gold in the city inspired some speculative activity in the earlier part of the week. As a result, there was a sharp rise in the price of gold. Towards the close, however, there was a reaction on rumours of larger arrivals and reports of peace moves, which almost wiped out the earlier gains.

Silver, on the other hand, suffered an early setback due to switching over operations in which gold was bought against sale of silver. Latterly, the white metal regained ground to some extent on fresh bull support, but finished the week a shade lower.

Silver for forward delivery in end of March settlement opened at Rs. 157-3, as against last week's closing of Rs. 158-7, and relapsed further to Rs. 156-2 on the opening day itself. After rallying to Rs. 159-13 yesterday, it once again drifted lower to Rs. 157-7 before finishing at Rs. 158-3. Business for end of April settlement began at Rs. 157-5, but the rate soon touched a low of Rs. 156-4. It, however, came upto Rs. 160-1 yesterday, the carry forward charges against purchasers widening from As. 2 to As. 4. In the reaction which ensued to-day, the rate came down to Rs. 157-13 but wound up a shade higher at Rs. 158-9, the carry forward charges standing at As. 6.

Ready silver (.996 Mint) moved between Rs. 156-2 and Rs. 159-13 and closed at Rs. 158-3. The floating stocks of silver are estimated at 1,800 bars. The daily average offtake was 10 to 15 bars.

Gold for forward delivery in end of March settlement advanced from Rs. 84-12½ to Rs. 86-11, but reacted to close at Rs. 85-5. The business for the end of April settlement opened on Friday at Rs. 85-4 and moved up to Rs. 86-8 before closing at Rs. 85-4.

Ready gold rose from Rs. 85 to Rs. 86-13, but closed at Rs. 85-3. The floating stocks of gold are placed at 60,000 tolas. The daily average arrivals were 5,000 tolas. The offtake was also of the same order on an average.

The following comparative table shows the trend of the market during the week under review:

	31-3-53	Highest	Lowest	25-3-53
GOLD	Rs. a.	Rs. a.	Rs. a.	Rs. a.

ART SILK YARN CLOSES LOWER

(From Our Own Correspondent)

BOMBAY, 31*st March*

After remaining steady practically throughout the week, the forward section of the art silk yarn market reacted towards the close. The steadiness during the early part was the result of uncertainty regarding grant of import quota to actual consumers. Buyers were extremely hesitant to enter into commitments, while sellers were somewhat reserved. Activity in the market was, therefore, considerably restricted, with values moving within narrow limits. To-day, however, the market came under selling pressure, induced by Communist China's new Korean peace proposal and extremely bearish advices from Japanese markets. Also, here were reports of heavy arrivals of imported yarn. Consequently, values of art silk yarn touched the lowest for the past sixteen days, although, towards the close, there was some recovery on account of mild support at low levels. The closing quotations were lower than those at the end of last week. Thus, 150D March contract opened at Rs. 833 and, after improving to Rs. 835 yesterday, reacted to Rs. 808 to-day. At the close, however, it stood a shade higher at Rs. 873. April contract touched Rs. 843, before declining to Rs. 876 to-day. It finished the day's trading slightly higher at Rs. 821.

Values of yarn in the ready section were fully steady throughout the week. Thus, the quotations for 120 Japan, 150 Japan and 120 Italy were unaltered at Rs. 4-12, Rs. 4-6, and Rs. 4-3, respectively. 150 Italy, however, lost an anna to Rs. 4-2 today for want of support.

The table below gives the prices of art silk yarn quoted to-day, as compared with those on the 25th and 18th inst.

	31-3-53	25-3-53	18-3-53
	Rs. a.	Rs. a.	Rs. a.
Art Silk Yarn—			
150D March (per case of 200 lbs.)	813 0	838 0	853 0
150D April ,, ..	821 0	845 0	860 0
120 Japan (per lb.)	4 12	4 12	5 1
150 Japan ,, ...	4 6	4 6	4 8
120 Italy ,, ...	4 3	4 3	4 4
150 Italy ,, ...	4 2	4 3	5 4

In the staple fibre section, prices have remained more or less unchanged. Although stocks continue to be scarce, prices have not staged an advance. This is due to slackness in demand. For, owing to high level of prices for yarn and low prices offered for cloth, the genuine consumers, particularly silk mills and handlooms it is stated, have been compelled to purchase their requirements only in very small lots.

SETBACK IN COTTON

(From Our Own Correspondent)

BOMBAY, 31*st March*

The hesitancy of the mills to burden themselves more with stocks of Indian cotton, which was indicated last week in this review, was further emphasised during the current week. Though not exactly slack, the demand was certainly more selective and even in these favourite styles the volume of demand was lower to the extent of reducing prices all round. The mills are still fairly keen buyers of imported cottons at reasonable rates. But their interest in Indian styles at the end of March was not as great as at the beginning of that month. The reason for this is to be sought in the changing pattern of cloth consumption. There are, however, no indications of a big slump in cotton, just as there are no signs of a boom, apart from an occasional boomlet in certain styles.

It is not only the standard varieties of cotton generally in demand by the mills that have suffered from this declining tendency. The recession in prices is more marked in the case of exportable varieties. The supply position with regard to Bengals in the port towns is definitely expected to be easier in the coming weeks and shippers are therefore in no hurry to secure stocks for fulfilling their contracts at unreasonably high prices. In the case of Bengals, high prices in recent weeks were not a result of the overall supply position but of the strictly localised paucity of stocks in Bombay. As in sugar, the stocks were not at the right place and the railways were responsible for this artificial scarcity. Now that strong representations have been made to the railway authorities to correct this position, the prices are returning to the normal level.

Of late, this occurrence of maldistribution resulting in scarcity pockets and high prices in various commodities, arising from the vagaries and lack of intelligent anticipations and adjustments by the railway authorities with regad to the transport of important commodities, is of a frequent nature and needs some investigation as to whether it is not a product of certain machinations and manipulations by interested groups of traders and certain sections of the railway traffic staff. This is a matter for important chambers of commerce to take up with the railway authorities, because in the already highly speculative markets in India provision of transport or the lack of it at the crucial time goes to make the markets more speculative and to provide further grounds for rigging the markets by powerful dealers.

On the futures market also the tendency has been more or less the same as in the spot market. As remarked in the preceding issue, the prices seem to have touched their peak during the previous week and are now trying to seek a steadier level. At the same time, it must be noted that there is always support forthcoming at lower levels and this is a very healthy sign for the market. The tendency at present appears to point to a stalemate round about Rs. 700 for the May delivery. There will be less of hedging in evidence in future weeks, as fresh arrivals will not be on a large scale now that the season is coming to an end. The following are the latest available quotations from the Sewri market: Bengal Deshi Rs. 560-70; Berar Jarilla Rs. 725; Vijay Rs. 155-60 on May; Moglai Rs. 680; Khandesh Rs. 800; Oomra Deshi Rs. 10 off May.

The following is the trend of prices in the forward market over the six days ended 31st March:

	Opening	*High*	*Low*	*Closing*
I.C.C. May (Rs.) ...	700	708	690	690
I.C.C. Aug. (Rs.) ...	709	718½	701½	701½

A piquant situation has arisen over the imported East African cotton, for the importers are intrigued by the attitude of certain mills which have refused to take delivery of such cotton. This cotton was imported last year, in accordance with the Government's scheme for the bulk purchase of cotton from the Lint Marketing Board. The importers' contention is that, since they had purchased the cotton under instructions from the Government, they were acting only as the nominees of the Government. The importers argue that, as the purchase and selling prices and the terms of purchase, and the mills to which the cotton should be sold were all decided by the Government, the latter has a moral responsibility to see that the stocks are marketed in an orderly manner. It would appear that the Textile Commissioner contemplated, at one time, taking action against the mills which refused to take delivery of the cotton allotted to them by withholding extra allocation of this season's new crop Indian cotton but later found that such action would be illegal. The importers now feel that it is the Government's duty to take over stocks of cotton imported under its instructions, and to pay them the full value of the cotton, together with the carrying and other charges.

At Karachi, the week has been exceptionally quiet with hardly any transactions of note with any foreign country during this period, apart from some re-sales, at reduced rates, of cotton previously purchased by France to some buyers in the U.K. and Germany. The market was already feeling depressed with no favourable results forthcoming from the protracted negotiations with Japan for a huge barter deal. It is now feeling more depressed because it is openly admitted that there has been a hitch in the negotiation, though hopes of a final satisfactory issue are not abandoned. The difficulty appears to be centred round the question of the quantity of cloth that Pakistan is willing to accept against its supply of cotton to Japan. Naturally enough, the authorities, at Karachi, are more keen on obtaining capital goods in exchange than cloth, while as a textile exporting country Japan is laying more stress on the supply of cloth than machinery. Perhaps the negotiators will meet half-way and Karachi will agree to accept one-half of the price of cotton supplied by it in machinery and one-half in textiles. This stalemate and lack of buying by other countries on the Continent has increased stocks in Karachi with every fresh arrival from up-country and little, if any, offtake. It is believed that the stocks are about two lakh bales higher at present than those registered at the same time in 1952.

The following are the latest available quotations from the Karachi market: Punjab Deshi Rs. 68; 4F Punjab R.G. Rs. 60; S.G. Rs. 65; L.S.S. Punjab R.G. Rs. 62; S.G. Rs. 67½; N.T. R.G. Rs. 62; S.G. Rs. 67½; 286F. Punjab R.G. Rs. 68; S.G. Rs. 74.

Conditions at Alexandria during the week have been the reverse of those at Karachi. There, the spot market has been active with buyers keen to collect as much Karnak as possible in view of the anticipated lower production next year. But apart from this, enquiry by the U.K., the U.S.A. and one or two West European countries for the lower staple varieties of Giza 30 and Ashmouni have also been plentiful and the price level is likely to go a little higher as shippers make purchases against the barter deals entered into with several of the East European countries. It is now very clear that the pattern of cotton trading outside India and to a certain extent New York is changing rapidly in other producing countries. More and more emphasis is being laid on barter deals than on cash sales. Most of the European countries, whether in the West or in the East, are now engaged in such deals and a recent example of these is the disposal of a fairly large quantity of cotton by Turkey to several countries on this basis. But even with the increased interest in Egyptian cotton during recent weeks stocks at Alexandria of the current season's production are higher by about 60,000 bales than at this time last year which will act as a check to the rise in prices. India's interest in Egyptian cottons continues to be as active still as in the past, though some of it is being diverted to the auctions being held at Uganda.

At New York, the price trend has been moderately bearish during the week under review. Earlier in the week, there was a slight rise owing to purely technical adjustment, but the declining tendency reasserted itself almost immediately and it has been in evidence throughout the rest of the week because of lack of support from buyers for internal consumption and the weakness of some of the other commodity markets. This is attributed to the fast improving international political conditions and the end of the fight in sight in Korea. With more favourable developments from this quarter, American markets are likely to give way during the coming weeks and this is bound to have a profound effect on all the other world markets sooner or later and in the case of cotton, sooner rather than later.

The following are the latest available quotations from New York as compared with those of a week and a fortnight before:

	(In cents per lb.)		
	30-3-53	25-3-53	17-3-53
Spot	33.80	33.80	34.30
May	33.17	33.19	33.74
July	33.27	33.39	33.74
October	33.39	33.51	33.71
December	33.48	33.59	33.74

GROUNDNUTS EASY

(From Our Own Correspondent)

BOMBAY, 31*st March*

The removal of *vanaspati* from the O.G.L. for export, with effect from 27th March, was interpreted as the first step on the part of the Government towards arresting, if not reversing, the rising trend of oil and oilseeds prices. This factor, together with the defence of the Centre's policy regarding import of copra and coconut oil on 28th March, by Mr. T. T. Krishnamachari, Minister for Commerce and Industries, and the concern he expressed at the spurt in the prices of groundnut seeds and oils dampened the enthusiasm of the operators. As a result, the oil and oilseeds market turned easy, the prices declining to lower levels.

Although the decline during the week was considerable, prices were still substantially higher than those four weeks ago. There are several reasons for the high prices of oils and oilseeds. First, the announcement of export quota of 3,000 tons of *vanaspati*, simultaneously with its removal from the O.G.L. for export, robbed much of the bearish effects of the latter. Secondly, the overall vegetable oil deficit in the country for the year 1953 works out to about 3 million tons, groundnut oil accounting for a little above 2½ million tons and coconut oil 40,000 tons. The deficit cannot be wiped out unless there are large imports of coconut and palm oil. Indications are that import of coconut oil and copra in terms of oil would not be more than 40,000 tons to 50,000 tons during 1953.

The price trend during the week in the groundnut section was, however, somewhat easier, as stated already. Groundnuts, bold ready and Khandesh quality declined by Re. 1 each to Rs. 40-12 and Rs. 41-4, respectively. Overseas advices for groundnut oil during the week were discouraging. Groundnut oil, which was quoted at £155 per ton in bulk on the Continent, was almost out of parity with the local quotations. Since *vanaspati* interests switched over their purchases from groundnut oil to kardi and niger seeds, groundnut oil ready fell from Rs. 22-14 to Rs. 22-2. Railway receipts lost As. 10 to Rs. 22.

The castorseeds section too was out of favour. Castor oil, I pressure was enquired at £160 per ton and commercial quality at £150 per ton on the Continent. At these rates, only millers were in a position to sell. But they too could not make any encouraging profits. Therefore, Castor oil, I pressure eased from Rs. 19-4 to Rs. 18-12 and Commercials from Rs. 18-4 to Rs. 17-14. Among seeds, May delivery, which opened steady at Rs. 153-12 fluctuated between Rs. 154-8 and Rs. 146, before closing at Rs. 147. Madras quality was done at Rs. 31 as against Rs. 32.

The linseed section proved no exception to the general trend. *Vanaspati* interests, who had earlier shown some interest in linseed and linseed oil, partially withdrew their support. Linseed, Bold ready eased from Rs. 29-6 to Rs. 28-12. Linseed oil was lower by As. 14 at Rs. 14-4.

Kardi and niger seeds were slightly easy. Niger, Madras quality lost As. 4 to Rs. 33 and kardi, Bold ready As. 10 to Rs. 23-2.

The following table shows the prices of oilseeds and oil on the 31st inst., as compared with those on the 24th and 18th inst.

	31-3-53	24-3-53	18-3-53
	Rs. a.	Rs. a.	Rs. a.

TEA DUSTS WELL SUPPORTED

(Messrs. Forbes, Ewart and Figgis Ltd.)

COCHIN, 28*th March*

The offerings in dust sale "F" which was held on Tuesday, 24th March, amounted to approximately 1,97,000 lbs. There was a good general demand and prices were irregularly As. 1 to As. 2 dearer. Clean, black, well made dusts were particularly well supported.

London Market.—Market generally 1d. dearer. Strongest feature mediums.

Colombo Market.—3,750,000 lbs. Lowgrowas declined, following rise in duty. Better sorts less demand; considerably lower rates.

Calcutta Market—Export.—54,000 packages. Assam and clean common brokens firm to dearer. Others generally steady, but sometimes irregular.

Dust.—Best sorts fully firm, others occasionally half to one anna lower.

Export Quota.—1952-53 quota again remained steady at 1¼ pies. A certain amount of business has been done in 1953-54 export quota at 12 pies.

Forthcoming Auctions.—Due to Easter holidays, dust sale "G" will be held on Thursday, 9th April.

As we go to press, Messrs. Forbes, Ewart and Figgis, Ltd., wire as follows:—

"*Sale* 7.—9,62,000 lbs. Good general demand, particularly for all fannings grades. Market fully firm for low and medium descriptions. But good medium and best brokens easier. Whole leaf strong."

TEAS DEARER IN EXPORT

(From Our Own Correspondent)

CALCUTTA, 31*st March*

Moderate demand pushed up prices during yesterday's export sale when offerings aggregated 51,300 packages. Keen competition was offered from buyers on behalf of Britain. Good liquoring types had a steady market, while medium brokens, common and low medium brokens, low medium fannings, and whole-leaf grades recorded gains of As. 2 each. The rates were: Best C.T.C. Assam B.P. Rs. 2, clean black pekoe Re. 1-8-6 to Re. 1-9, clean common B.P. Re. 1-11, and medium Assam B.P. Re. 1-12.

Offerings during last week's internal auction amounted to 20,100 and 1,450 packages of dust and other grades respectively. Conditions were generally quiet as demand was limited. The feature in the dust market was the firmness in the quotations for coloury and bright liquoring Dooars and autumnal teas. Best C.T.C. Assams were irregular, prices often tending to move down. Powdery and residue varieties lost about an anna. The rates were: Best Assam C.T.C. Rs. 2, medium Dooars Re. 1-7, and medium grainy Assams Re. 1-8-6 to Re. 1-9.

HESSIANS STEADY

(From Our Own Correspondent)

CALCUTTA, 31*st March*

By and large, it is realised that the rate of production in sackings has, during recent months, far outstripped demand, and this factor has been responsible for the recent landslide in prices making production in mills uneconomic. This realisation and the inevitable step, viz., curtailment of production, which mills have soon to take, brought some improvement in quotations for manufactured goods during the week under review. A reduction in sacking production is easy to suggest, but would have to be carefully planned. For such a step should not affect hessian, which is regaining markets lost to it during the past one year in view of high prices. So, there is the need to maintain output of hessian at current levels, and the cuttings left over can only be consumed in producing sacking goods. Any reduction in sacking output would, therefore, increase production costs for hessian. All these problems are now before the mills, and the market is full of rumours that mills would soon announce their decision in regard to a decrease in the output of sacking goods.

B. twills opened at Rs. 92 last Wednesday, and the disinclination of sellers to part with their holdings at this rate raised the price to Rs. 93-4. At this stage, some quantity passed to bazar stocks, and buyers paid the higher price in view of the expected improvement in quotations following a possible curtailment in production. Over the week-end, however, Rs. 92-12 was realised, and yesterday the quotation was Rs. 91. Yesterday's easiness was due to an appreciation of the difficulties mills will have to face in implementing any decision to curtail sacking output.

In the hessian market, a note of steadiness was in evidence, and prices gained fractionally. Moderate support was forthcoming from bears, but buyers were over. The fear that any curtailment in sacking output would also mean a reduction in the hessian looms also encouraged bears to cover their sales. Hessian 40" 10 oz. advanced steadily from Rs. 40-4 to Rs. 40-12, with the April-June offer improving from Rs. 40-6 to Rs. 40-14.

Quotations for raw jute remained unchanged. Demand was, however, poor. Assam bottoms were offered at Rs. 18-8 per maund, with the new crop being nominally quoted at Rs. 19-8. Now that regular jute supplies from East Bengal are assured, and as the domestic production of the inferior varieties of jute is more than what can be consumed by mills, the market is confident that the Government would permit the export of *mesta*, *bimli* and *daisee* types of jute. Some such step is necessary to relieve stockists of their holdings and encourage cultivators to continue producing these varieties in moderate quantities. No doubt, a good check at ports has to be maintained to ensure that the superior varieties are not made to masquerade as *bimlis* and *mestas* and exported.

GOOD DEMAND FOR KIPS

(From Our Own Correspondent)

MADRAS, 30*th March*

The kip market has ruled steady and prices are above U.K. levels by a penny or two, due to shippers purchases. Arrivals have been as usual. There is good demand for inferior fifties cow for inland trade, as well for shipment to the U.K. but prices have continued to be firm making it unprofitable to shippers to operate. Enquiries are small for buff hides and patchy for cow calf and buff calf.

In the March London public sales, prices of goat skins advanced by 1*s.* to 1*s.* 6*d.* over January levels and those of sheep by 2*s.* to 2*s.* 6*d.* for primes, 1*s.* 3*d.* to 1*s.* 9*d.* for middle class and 3*d.* to 9*d.* for commons.

Raw skins prices have ruled firm in sympathy with the general trend.

FURTHER DECLINE IN FOODGRAIN PRICES

(From Our Own Correspondent)

HAPUR, 30*th March*

The overall food position in the country continued to be very satisfactory. The Union Food Minister has declared that, nowhere in the country to-day, there is a shortage of foodgrains. "If there is anything, it is lack of purchasing power in certain areas hit by famine," he says. The Government of India has offered to supply any quantity of foodgrains demanded by State Governments. The working of decontrol, the Minister claims, has been working "wonderfully well." But he feels that complete decontrol of foodgrains all over the country is not possible at present in view of the policy of controlled economy pursued by the Government. Imports this year will not exceed 2,400,000 tons.

India is expected to be completely independent of rice by the end of 1953 and as such will not need any imports during the year. The Government of India expects to procure within the country over one million tons of rice this year, instead of about 200,000 tons procured hitherto. What little rice India will import during the current year would be utilised for building reserve stocks within the country.

The Government of India is considering the question as to whether special agencies should be appointed to procure coarse grains in the States. Following the decision to remove restrictions on internal movement of coarse grains within each State, it is decided that the purchase of such grains from surplus States should be co-ordinated by the Centre. The Governments of the surplus States have made no headway in the matter of purchases.

Foodgrains markets in Uttar Pradesh remained quiet to unsteady. Harvesting of *rabi* grains is in full swing and arrivals have begun in all principal *mandies*. Market supplies have been increasing and prices have been declining slowly and steadily. Crop yield prospects are generally believed to be fairly good. It is reliably learned that sale of grams and barley from Government relief quota shops in the statutory rationed areas will be discontinued after the present stocks are exhausted. The sale was undertaken by the Government towards the last week of January this year all over the State. The offtake of the items from the ration shops, however, was miserably poor and not even 5 per cent. of the amount offered was lifted. Reserve stocks of barley and gram with the different food regions in the State have been offered for sale by auction and these run into several lakh maunds.

The following are the latest quotations: Wheat (wholesale): Shamli Rs. 20-8, Hapur Rs. 20, Chandosi Rs. 20-4, Kasganj Rs. 21-12 and Gonda Rs. 20-8. Gram Rs. 13-12, barley Rs. 10-10, *bejhar* Rs. 10-6, maize Rs. 11, *bajra* Rs. 11. Rice: *basmati* Rs. 34, *hansraj* Rs. 30, *sela* Rs. 28-8, coarse Rs. 23, *jowar* Rs. 9-8 to Rs. 11-8, peas Rs. 12-4 to Rs. 14.

The Punjab Minister of Civil Supplies has declared that the policy of control on foodgrains would be continued without any change for at least one year. The Government, however, may relax the rigour of controls to remove hardships which the people are experiencing. Procurement of foodgrains would continue, but the Government may not be able to procure according to the target quota because of the slight failure of rains at the time of the sowing of the crops.

MARKET REPORTS

(Concluded from page 621)

Procurement of rice in the Orissa State this year have exceeded all previous records, since foodgrains came under control of the Government within five months of the beginning of this *kharif* year, over 170,000 tons of foodgrains (in terms of rice) have been procured, against the target of 200,000 tons for the year.

SUGAR SUPPLIES IMPROVE

(From Our Own Correspondent)

HAPUR, *30th March.*

Sugar markets remained quiet to bearish during the week under review. With the further release of sugar quota for free sale by the Government, and the earlier releases, supplies of sugar in all the leading markets in the country have considerably improved. There have been good despatches in recent weeks from North Indian sugar mills. Calcutta and Bombay report of heavy stock accumulations, while the stringent stock position at Madras has eased considerably. Stockists are everywhere inclined to sell at current prices, whereas buyers are restricting their purchases to immediate needs only.

Efforts are being made to step up production during the next three years by transferring some of the factories at present lying idle to places where they would be assured of constant supply of sugarcane. The Hanura Factory in the P.E.P.S.U. is migrating to the U.P., two other U.P. factories are changing their location within the State. The main problem facing the industry, it appears, is not production, which experience has shown can be increased, but extension of the market to absorb the total production.

The Indian Food Minister has warned the industry that, if the sugar industry is to survive, it must be able to produce sugar at a price at which it would be possible to compete in the world market. The industry has been given protection for a fairly long time to enable it to stand on its own legs and it should try to justify that protection.

Gur markets have remained fairly steady. The season is drawing to a close and arrivals have been very small. There is moderately good demand from many importing areas, but stock movements have been small, due to non-availability of railway wagons for transport. West U.P. *mandies* hold good stock accumulations.

Khandsari markets remained very quiet with very little demand from the importing areas. There is little offtake. The bearish outlook in the crystal sugar section has affected the sentiment.

The following are the latest quotations in the sugar, *gur* and *khandsari* markets:

BRADFORD TOPS FIRM

(Messrs. J. Hardacre & Co.)

BOMBAY, *30th March*

There has been a further general advance in quotations for Bradford tops. A fairly large amount of business has been done this week on the basis of prices quoted on Monday. Now, higher prices are being asked for practically all qualities. To a large extent, the driving force is coming from the raw material market, but there has also been a notable response in the volume of new business done in tops and yarns. It is not uncommon for business to be booked for delivery up to the end of the year and even up to next year.

In the merino section of the top market, there are notable variations in the prices asked by topmakers. They range as high as 172*d.* for a 64s warp, although 171*d.* is probably nearer the average at which business can be done.

In the fine crossbred section, quotations range up to 120*d.* for 58s super, while medium-carded sorts are quoted around 86*d.* for 50s. There are firms which are firmly quoting as high as 87*d.* for the latter quality.

A feature is the reluctance of most spinners to take on further business in fine-count weaving yarns. They have already sold output in many cases right up to the end of the year and are not willing to anticipate the future beyond that.

Prices of tops and yarns have advanced recently at a pace which is causing some uneasiness, but the facts have to be faced. There continues to be marked reluctance to support a further upward movement, and most top-makers and spinners would be content to push ahead with production and delivery rather than enter into speculative commitments.

The current quotations (in pence per lb. c.i.f. Bombay) for Bradford oilcombed tops (May-June, 1953 delivery) are given below:

48s carded 89*d.*, 58s super 127*d.*, 60s super 152*d.*, 64s super 172*d.*, and 70s super 191*d.*

Fibro (3D.4") 43½*d.*

46-48s scoured clothing wool—84*d.*

MISCELLANEOUS STATISTICAL INFORMATION—*Continued.*

Q=Accounts bublished e 15 months. T=Company has Debentures R.L.=Reserve Liability on shares. N=Nominal Quotation. i=Interim Dividend. f=Dividend for first half-year, y=Dividend for the year. x=Ex. Dividend c.d.=Cum. Dividend.

Shares:—If a company has different classes of shares—as, for example, 'A shares and 'B shares—these are indicated by the same letters 'A' and 'B under "Paid-up Per Share."

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12 indicate the months of June and December, respectively 'Reserves" ludes general and other reserves and all other funds which a company may have as also depreciation on block items, when this is charged to separate account "Block" represents actual cost of land, buildings, machinery, and all such er items on which depreciation is allowed, less sales, if any, and stands for the gross figure except where otherwise indicated.

Dividends:—Dividends for completed years are calculated at per cent. per annum, but where quoted for portion of a year, they represent percentages of the dividend on the paid-up share value. For companies closing the books f-yearly in the first three months of the year, and for companies closing their books yearly during the first half of the year dividends are shown as for the previous year.

* The following explanatory notes relate to the abbreviations and marks shown on page 632 in the bentures section:—

■ Option to repay on six months' notice, on any nterest date after 31st December, 1951, at 102 per cent. Also redeemable out of a cumulative sinking fund of 1½ per cent. per annum (commencing in 1938) by drawings at 102 per cent. or by purchase at or 102 per cent

(a) Option of repayment at any time at 3 per cent. premium.

(b) Bearer bonds of Rs. 1,000 each repayable at par

Bearer bonds of Rs 1,000 each repayable on 31st July, 1959

(d) Bearer bonds of Rs 1,000 ach with option of redemption in whole or in part at par on 30th June, 1952, or on any subsequent interest date at one month's notice.

(e) Returnable on or after 31st July, 1950, at Rs. 102-8 or at par after 31st July, 1955, on six months notice in each case.

Bearer bonds of Rs. 1,000 each with option of redeeming on 3 months' notice at ½ per cent. premium, after 1st March, 1954, but before 1st March, 1957, and 1 per cent. premium on or after 1st March, 1957

(h) Option of redemption on or after 1st July, 1949, at par.

(f) Option of repayment at any time at par at any time on or after 30th June 1947 on six months notice.

LIFE INSURANCE AND THE COMMON MAN

(*Concluded from page 587*)

This home service insurance has been developed to a high degree by private enterprise in the U.K. and the U.S.A. It is not just an accident that the biggest life insurer in the U.K., the Prudential, is known in that country more for its home service insurance than for its ordinary life insurance. The total number of industrial insurance policies at the end of 1951 was 100 million against a population of 50 million and the total premium income was something like 60 per cent. of the total ordinary life premiums. Again, the leading life insurers of the U.S.A., the Metropolitan and Prudential of New York, have more industrial insurance policies and group insured lives on their books than ordinary insured lives. The total number of industrial insurance policies and group life insurance certificates in the U.S.A. at the end of 1951 was 145 million, against a population of 150 million, while the ordinary policies were only 72 million. In amount, the former two covered about 60 per cent. of the total sum insured under the ordinary policies. This gives a measure of the extent to which life insurance has permeated the life of the common man in those countries.

Example of Japan

But where the common man's life insurance is not so developed by private enterprise in advanced countries, it has become a State Service. Japan provides a clear example of this. While ordinary insurance has been developed by private companies in this country, industrial insurance is run there by the State through the Post Office. The number of industrial insurance policies in force through the Post Office is much larger than the number of those issued by private insurers in respect of ordinary life insurance. The amount of life insurance business based on small incomes is less, but it was as much as 67 per cent. of private companies' life business in March, 1950, it was as much as 92 per cent. in 1949-50, in the case of new business. This is certainly impressive life insurance service to the common man.

We thus see how, because of the lack of development of group insurance and industrial, *alias* home service insurance for the lower income population, the common man remains so far apart from life insurance in this country. How this position would be rectified in the future is a matter for conjecture. One thing that is probably indisputable is that, in these days of democracy and planning, every phase of the economic activity of the country is to be judged by the extent to which it is useful to the whole population instead of only to the cream of relatively high incomes at the top. No doubt, the investments of life insurers benefit the whole population, but it is no answer to the denial of life insurance service to the common man and the canalising of his savings for national development through life insurance. On this view, it is to be regretted that life insurance, even in this year of grace, remains so far from the people of India.

Possible Future Development

Government have now established a Corporation for rendering health insurance service to industrial workers and there is also the Provident Funds Scheme recently established. It may not be long before it is discovered that, in order to complete the protection offered to the worker and his family, Government would also have to provide life insurance protection for the prematurely dying worker. Perhaps, the organisation of group life insurance for industrial workers is, therefore, the next step to be undertaken by the State before long, as an adjunct to either the Provident Fund Scheme or the Health Insurance Scheme, with either of which it can easily be integrated. The State no doubt has the advantage that it can get the necessary contributions for the life insurance benefit compulsorily from the employers without necessarily increasing the heavy burden they are already bearing. A part of the provident fund contribution can be utilised to pay the premium for group life insurance, the need for which cannot be too strongly emphasised. Private insurers will be at a disadvantage to persuade employers to voluntarily undertake an additional burden for taking out group life insurance policies, though there is a field left open to them also in respect of the provident funds which are exempt from the Provident Funds Act and which continue to be managed by the employers.

Industrial workers, however, are a small section of the total small income population of the country. The real question remains of how to extend the benefit of life insurance to the millions of small savers who are contributing as much as (or at least the bulk of) Rs. 40 crores each year to the small savings scheme of Government. Government may not be immediately interested in whether or not these small income earners receive life insurance protection, so long as the requisite sum of small savings is being collected for the Five-year Plan. Steps are being taken through the State Governments to increase the savings so collected, with an assurance that any excess over the centrally budgetted amount will be available to the collecting State for its own development schemes.

One does not know the full potentiality of small savings in this country and the extent to which the total volume of small savings collected can be increased by offering the benefit of life insurance through a Home Service system. It is, however, a test of the faith which life insurers and provident societies in this country have in the need of taking life insurance to the very homes of the common men of this country. Two or three big life insurers have established provident societies as their subsidiaries for rendering life insurance service to the small man, but the number of policies issued by them in the small man's field is insignificant, owing to the absence of home service. It only emphasises the fact that trying to sell life insurance to the common man in the same way as to the relatively well-to-do man will not work. Even in the ordinary life insurance business, the heavy lapses noticed among the smallest policies may only be an indication of ordinary life insurance, at or near the minimum Rs. 1,000 per life level, having touched the boundary of the common man's area, and thus being unable to maintain itself without the home service which the holders of the smallest policies—being common men themselves—need.

Stupendous Task

The task is, indeed, a stupendous one, because of various problems such as untrained personnel, inadequate transport and banking facilities in the rural areas, and the cost of building up the home service system over vast areas which has probably been nowhere attempted in the rest of the world under conditions similar to those in India. We do not have here populations living in highly concentrated urban communities, with a high standard of literacy easily approachable by communications open all the year round. Maybe America, too, has vast distances as in India, but the people have higher incomes, more education and more insurance-mindedness, better developed transport and banking—all leading to much better conditions for the organisation of home service insurance. But all this only shows the difficulties to be surmounted. It is not enough to justify the complete absence of this vital service which makes life insurance in this, a proverbially poor man's country quite unavailable to him in the only way it is available to his opposite numbers in other lands. How can insurers take shelter under the alleged lack of insurance-mindedness of their common folk, when so much can be said, with evidence, of their own lack of service-mindedness? Not till they provide the essential home service as in other countries can they complain against the so-called apathy of the common man, if they still find it to exist there after rendering such service. If the general election established the reputation of the common man for a common sense that lags behind none anywhere in the world, perhaps the establishment of home service would show, in its turn, that his savings-mindedness and insurance-mindedness also lag behind none. This is a question which life insurers celebrating the Silver Jubilee of their Association might ponder over, with some profit to their souls.

The Five-year Plan expects the *per capita* income to double in about 25-30 years, that is, an increase from Rs. 21 per month to Rs. 42 per month by about 1977. If we assume that the consequent increase in personal incomes will be better distributed between the lower and higher income levels than at present, we should probably expect the number and quantum of incomes to grow below the Rs. 2,000 per annum per family level, without necessarily taking them above the line. If so, the prospects are that the future development of life insurance in this country, to the heights it has attained in the more advanced countries of the world, is linked with the extent to which it reaches the common man who will continue to have no more purchasing power for ordinary life insurance above the Rs. 1,000 per life level than he has to-day. This does not and need not mean that the scope for the growth of life insurance above the common man's level is unduly limited, but it could be said to be limited in contrast with the potentialities in the common man's field. Time will show when this will receive practical recognition at the hands of our life insurers—if they are not overtaken by some other agency in the race for building up Home Service Insurance.—*All Rights Reserved.*

THE AIRWAYS CORPORATION BILL

(*Concluded from page 614*)

operates an air transport service in contravention of the provisions of this section shall be liable in respect of each offence to a fine which may extend to one thousand rupees or to imprisonment, which may extend to three months or to both." It will be noted that the operative words are "air transport service" and not "scheduled air transport service." It is quite clear then that non-scheduled operation of the type which is carried out to-day would be an offence covered by this clause.

It is needless to say that the best interests of the country would be served by retaining the non-scheduled operators who, apart from the fact that they create their own business, definitely add to the country's air power potential. Nor would the competition, if any, which they might offer to the Corporations be of a very serious nature. In the interests of all concerned, then, the point under consideration requires clarification and a fresh clause should be introduced to make legal, in given circumstances, the activities of non-scheduled operators.

In this topsy-turvy world, readers will perhaps forgive a reference to the "statement of objects and reasons" of the Bill at the end and not at the beginning of this article. It is stated in clauses one to three of the "objects and reasons" that the Planning Commission examined the question of the air transport industry and decided that "under present conditions of traffic load and intensity of operation, development of the air transport industry on an economic basis could be achieved only if there was a single agency in charge of all scheduled air transport operations."

This is a very large assumption. The only evidence available to the Commission was probably the Rajadhyaksha Committee's report. Whilst open to correction, it is the belief of this writer that the evidence of the report did not add up to such a finding. There is, on the contrary, quite a lot of evidence that, given reasonable encouragement by the Government, in the form of a remission of the petrol tax and, possibly, at some later date, a loan for the renewal of fleet, private enterprise would, in the not far distant future, have made a financial success of its undertaking.

This writer at least, then, after reading the Bill and after visualising the manifold difficulties of bringing the actual integration of the companies into effect, is left with a final speculation as to "whether the Bill is really necessary."—*All Rights Reserved.*

MARKET GOSSIP

(*Concluded from page 583*)

"curious perversion" of the principle of freedom of inter-State commerce to drive local customs across the border to outside dealers and that such a position could not have been contemplated by the authors of the Constitution.

• • • •

His Lordship held that sales or purchases effected in Bombay in respect of goods in Bombay but delivered for consumption outside the State were not taxable in Bombay. Referring to the contention that this category of sales was not expressly excluded from the Bombay Sales Tax Act, the Chief Justice said that, although it was true that no such exclusion was specifically mentioned in the Act, it was also true that the Act did not make any provision for taxing such sales or purchases. On the other hand, the rules, made under the Act, specifically excluded such sales for purposes of sales tax. The Bombay State cannot, therefore, be considered to have made a law imposing or authorising the imposition of a tax on excluded sales or purchases. He, however, held that the rule under the Act, which prescribes that, in order to claim deduction in respect of inter-State transactions, the goods should be consigned only through a railway, shipping or aircraft company or country boat registered for carrying cargo, was *ultra vires* the rule-making authority, since there was no reason why sales of goods despatched by other modes of transport should not also be deducted from the taxable turnover. Thus, from the legal and constitutional points of view, the Bombay Sales Tax Act has been effectively vindicated, except in one respect. The economic, as also the administrative, aspects of the Act will, however, continue to create problems for the State's trade and industry.

• • • •

It is extremely unlikely that the Select Committee Report on the Estates Duty Bill will meet with wide approval. It is proposed to create fresh controversy on the Bill, considering that it has fixed the minimum exemption limit at as low as Rs. 50,000 in the case of an interest in property belonging to a joint Hindu family and Rs. 75,000 in other cases. General power has been vested in the Central Government to grant reliefs in suitable cases. The Committee has specifically mentioned the cases which deserve exemption. Apart from books (not intended for sale), wearing apparel (excluding those which have any precious or semi-precious stones), paintings and similar artistic goods, the list of exemptions consists of:

1. Property taken under a gift made by the deceased for a public charitable purpose within a period of six months from his death to the extent of Rs. 2,500 in value; (2) property taken under a gift made by the deceased for any other purpose within a period of two years before his death to the extent of Rs. 1,500 in value; (3) household goods, including tools of artisans, agricultural implements or any other tools or implements as were necessary to the deceased to enable him to earn his livelihood to the extent of Rs. 25,000 in value; (4) moneys payable under one or more policies of insurance effected by the deceased on his life for the purpose of paying estate duty or assigned to the Government for the said purpose to the extent of the amount of duty payable; and (5) moneys payable under one or more policies of insurance effected by the deceased on his life to the extent of Rs. 5,000 and (6) gifts made by a deceased parent or natural guardian in consideration of the marriage of any of his female relatives dependent on him for the necessaries of life, or moneys earmarked for such purpose under policies of insurance or declarations or trust or settlements effected or made by the deceased, to the extent of Rs. 5,000 in respect of the marriage of each of such relatives.

• • • •

The list does not certainly err on the side of generosity. By fixing the duty-free limit for purposes of public charity at Rs. 2,500, the Committee has not shown sufficient appreciation of the large projets in India which owe their existence to the munificence of the donors. Again, it is not clear why the tax-free limit, in respect of insurance policies, has been fixed at as low as Rs. 5,000. In an inflationary era, such as the one in which we live, the limit of Rs. 5,000 is too low. Further, the insurance habit has still to spread in this country to wider sections of the public. Surely, it would be a great blow to the spread of the insurance habit, if the tax-free policy amounts were fixed at a low level. The Committee could, on the other hand, have given a great impetus to insurance by providing a higher limit since such would prove an additional argument for convincing a prospect of the benefits of insurance. After all, insurance is an anti-inflationary force, and makes available funds from which Government loans could be supported. In view of these considerations, one would have expected the Committee to fix a higher limit for duty-free insurance policies.

• • • •

The Committee has suggested that the administration of the Act might, for the first few years, be left in the hands of a board and that the question of setting up an appellate tribunal might be considered later. There need be no serious opposition to this

U.N. REPORT ON WORLD TRADE

THE end of the last war saw certain powerful political and economic forces at work, dividing the world into several groups, namely, the communist and the non-communist, and the developed and underdeveloped countries. Since then, these forces seem to have gained further momentum, thereby widening the gulf between these groups. The *World Economic Report* for 1951-52, published by the United Nations, brings into bold relief as to how these influences dominate the developments in the field of world production and trade.

World industrial production to-day is 75 per cent. higher than what it was in 1937. The production of food, however, has risen, on an average, by only 10 per cent., while the increase in population has gone up by as much as 15 per cent. Another notable feature of the trend in production is that, although industries in the world are mostly concentrated in Europe and North America, the rate of expansion in industrial production has been most rapid in the communist world. While in the former group, the rate of increase between 1951 and 1952 was only 3 per cent., it was 11 per cent. in the Soviet Union, 24 per cent. in Hungary and 47 per cent. in China.

A similar upward trend is noticeable in the sphere of international trade also. The volume of world trade is now 33 per cent. larger than that in 1937. And this has taken place in spite of war and post-war restrictions, quotas and exchange controls. As these restrictions, though modified in certain cases in several countries, continue to prevail in some form or other, the achievement of international economic balance has yet to be fulfilled. But one striking feature is that both the worlds—the communist and the non-communist—are expanding trade more and more within their own spheres, thereby causing a shrinkage in East-West trade. The relevant figures given by the U.N. Report are revealing. In pre-war days, East European countries transacted 90 per cent. of their trade with the rest of the world and only 10 per cent. with each other. The extent of transformation which has since taken place will be evident from the fact that the trade carried on amongst themselves now accounts for as much as 66 per cent. The case of China is singularly striking. Only one per cent. of China's foreign trade in 1937 was with the countries now under communist rule. Since then, the proportion has risen to as much as 61 per cent. of the total foreign trade which by itself during the period has risen by 60 per cent. This tendency of confining economic activity to the two divided camps of the world is disquieting. Besides being a cause of suspicion and distrust, it checks the flow of trade between the two parts of the world and thus arrests expansion of international trade which is necessary for stabilising standards of living in the different countries of the world.

The U.N. Report has devoted a special chapter to the undeveloped countries. The picture presented by it, though not discouraging, is far from happy. In these countries, there is a growing consciousness of their backwardness which has, in its turn, created an urge for economic progress. This urge has come to stay. But certain formidable factors are blocking their progress. Growing population, deficit of foodgrains, inflationary tendencies, and lack of capital and technical skill are some of the handicaps facing them. To overcome these, the undeveloped and the underdeveloped countries look to the West. Unfortunately, assistance from that end has been very little, as compared with the magnitude of the requirements. It is true, as the U.N. Report says, that the main burden of the solution to these problems rests with the countries themselves. For instance, food production, which is essential to their economic development, depends on social organisation and land tenure problems. But there are vast areas in these countries where land tenure problems are no bar to progress and, if some capital is forthcoming, they can be developed without waiting for land reforms. This point does not seem to receive the attention it deserves, whenever U.N. bodies lay emphasis on the need for the backward countries to follow the policy of self-help. The U.N. Report, however, says that, given an easing of rearmament pressures in the industrialised countries, there should be no difficulty in supplying the underdeveloped countries with a greatly expanded volume of capital equipment. This again begs the question: Will there be a slowing down in the rearmament programme in the near future? Of course, the possibilities of a slow down are indicated by the present peace moves, but past experience shows that one can hardly hazard a prediction. Nevertheless, instead of waiting for the elusive peace to come, industrially advanced nations will do well to recognise the importance of developing the backward economies as soon as possible. For such a development will bring about increase in the purchasing power of these countries and thereby raise the demand for goods. That is the surest way of ensuring the prosperity of the world.

For another good reason also the economic development of the underdeveloped countries should be pushed ahead. For in it lies an effective solution to the "three major economic problems which still dominate the world scene and qualify, to some extent, the physical progress in economic development achieved since the end of the war." The three problems are posed by the U.N. Report thus: Can a slump be avoided? Can the dollar gap be closed? And can the poor countries ever catch up with the rich ones? The answers provided by the Report to these questions have a special significance to backward countries. Taking the first question, the Report opines that it is doubtful whether the world can avoid a slump. For fluctuations in the volume of stockpile buying are, according to it, sure to rock the boat of international trade. The disturbance caused by such shaking can be met only, if the countries concerned possess large supplies of gold and foreign exchange. As the existing supplies of these with most countries are insufficient, they cannot stand the strain without taking recourse to import restrictions or deflation. But, as industrially advanced countries cannot expand their trade in the absence of imports, they are likely to face recession. This danger can, however, be avoided, if facilities are provided for underdeveloped countries to expand their economies, for these countries will then be in a position to absorb the surplus production. This point has been adequately emphasised by the Report.

The Report is equally pessimistic on the second question, namely, can the dollar gap be closed? Of late, the gap has tended to narrow, but the Report characterises the improvement as "precarious." For, as has been pointed out elsewhere in this issue, to a considerable extent, it has been the result of special factors, "such as the imposition of tighter import restrictions by many countries in the non-dollar world, and a fall in the rate of stock-building there due to the slackening of industrial activity. At the same time, production continued to expand in the U.S. and unemployment there was reduced to unusually small dimensions." Even granting that the U.S. will adopt several methods to increase the dollar supplies to non-dollar countries, the dollar problem, in the opinion of the authors of the Report, will not be completely solved, because the latter countries will still have to make adjustment in their economies for importing less from, and exporting more to, the dollar countries. Such adjustments are likely to entail, in certain cases, changes in their structure of trade and, if need be, in their exchange rates, followed by disinflationary measures for arresting the spiral of wages and prices. As such measures will be politically unpleasant, they may not be resorted to the extent necessary, with the result that the "dollar gap" is likely to persist for a much longer time than many are inclined to believe at present. The position, however, will not be so bad, if real peace comes to prevail in the world and East-West trade is restored to its pre-war pattern. Hence the urgency of ending the present disquieting trend which is accelerating the division of the world into two independent economic blocs.

The third question, which relates to the economic development of the backward countries, is, as the Report itself admits, a crucial one. The solution of this problem has also in it the real answer to the first two questions dealt with above. There is a wide gulf between a country such as the U.S., with its vastly developed economic resources, and the backward countries such as India, Burma, and Indonesia in which resources await development. The gap can be bridged provided the latter are supplied with the means to build their economies. As stated already, an economically highly developed Asia, with a growing standard of living, will provide additional new markets for capital and consumer goods of the industrially advanced countries. It will thus not only help stem the tide of depression but add considerably to the strength of the non-dollar world to expand its trade with the dollar countries and thus reduce the dollar gap.

There is nothing new in the suggestions discussed in the foregoing paragraphs. They have been mentioned ever so often without

evoking any tangible results that a repetition of them may give rise to the impression that one is wasting one's time and may make the readers cynical. Even the authors of the Report under review seem to have been overcome by a feeling of frustration, as witness their description of the world as it is to-day: what to think of a "world frantically intent on industrialising; a world in danger of producing too many bicycles and too little bread; a world divided year by year by two ever-widening gaps—a political one between communist States and the rest, and an economic one between the rich and the poor: a world managing to avoid the catastrophe of economic depression; and a world pitifully unable to fit together the wealth of the U.S.A., with the investment opportunities in the under-developed continents?"

This is doubtless a gloomy picture of the world, but there is no exaggeration in it. It is to be hoped, however, that those in charge of the destinies of the world to-day will realise that it lies in their power to change this picture and thereby earn for themselves the gratitude of the masses all over the world. This is a chance for them to attain an honourable place in the history of the world. And they should not miss it.

LABOUR WELFARE

THE decision of the first All-India Conference of Labour Welfare Officers, which concluded its four-day session in Bombay early this week, to form an *ad hoc* All-India Council of Labour and Welfare Officers, is welcome. For the Council, representing as it will, the various labour training institutes and industries, should help usher in a new era of labour relations and welfare in India. The Council proposes to co-ordinate the activities of all associations of personnel and welfare officers and prepare the way for future conferences. The Council intends to deal with the implementation of the various recommendations relating to labour welfare adopted at the Conference.

The main resolution passed at the Conference suggested that professional institutions should include, in their training programmes, (1) pre-employment course of studies for all new entrants to the profession, (2) in-service training for those untrained officers already in employment and refresher or extension courses for practising welfare officers. This recommendation is of great importance, because the responsibilities of labour and welfare officers have, of late, grown in complexity and number. Several factors have been responsible for this. First, labour and welfare officers have to deal with human beings. Secondly, they have to function in consonance with business objectives. Thirdly, mechanical inventions are progressing day by day, introducing changes in environments of work and working methods. Fourthly, developments in social sciences have brought forth new theories regarding man and his treatment and suggested new techniques for the solution of human relations. Fifthly, labour has organised itself into unions. Sixthly, labour legislation and industrial jurisprudence have grown in bulk and complexity. It will thus be seen that, if one wishes to be a successful labour welfare officer, one must get himself properly trained and equipped with knowledge on the various subjects mentioned above.

The Conference recommended that the Union Government should sponsor an institute of industrial health and hygiene for (a) advising industrial establishments on matters pertaining to the health of industrial workers and (b) undertaking research in working conditions, such as heat, humidity, ventilation, etc., in co-operation with other existing bodies. Few can deny the truth of the well-known saying that only something is lost when wealth is lost, but everything is lost when health is lost. After all, the end and aim of society are the well-being of the humanity it is composed of. And the objective of industries is not merely the production of utilities but, even more, the development of healthy and well-adjusted human beings. It needs no reiteration that an industry which does not afford its workers protection against disease which might be contracted during the course of their work and the prevention of accidents, does not deserve to exist. Every effort should be made to co-ordinate the activities carried on by the personnel officer, medical officer, safety engineer and welfare officer with a view to enhancing the utility and effectiveness of welfare measures.

The delegates to the Conference advocated that, for the proper administration of labour policy, it was essential to have the functions regarding personnel management, labour welfare and industrial relations delegated to one officer, who might, however, be assisted by one or more officers, depending on the size of the undertaking concerned. The value of this suggestion is dubious, for the three functions are entirely distinct. It is an admitted fact that welfare activities should be free from the tensions in the field of personnel management or industrial relations. Besides, labour welfare activity should be carried out for its own sake. The principle that the provision of welfare measures does not carry the stigma of paternalism and philanthropy, should be clearly accepted. We feel, therefore, that it is absolutely necessary to bifurcate the authorities for welfare, personnel management and labour relations. This, however, does not mean that the activities of these three authorities should not be co-ordinated at the higher level.

The Conference felt that it would be desirable for trade unions in India to undertake welfare programmes as in the industrial West. This, however, presupposes the existence of healthy trade unionism, free from inter-union rivalries, in the country, a state of affairs which unfortunately is absent, except in a handful of individual industrial companies. There are too many trade unions not only in individual industries but even in individual companies, having affiliations with some political party or other. As a result, most of them are suffering from insufficiency of members, lack of funds and absence of quality in leadership. It is true that some of the delegates who spoke on this resolution were conscious of the defects in trade unionism which would make their proposal impractical. Nevertheless, they emphasised that a beginning must be made in this direction. There can, of course, be no difference of opinion on the objective they have in view nor on their plea that a start must be made. Those trade unions which command a large majority and are united can certainly take the initiative. The Ahmedabad Labour Association readily comes to our mind as one which can give a lead to the rest of the country. Ultimately, such efforts may prove to be a good solution to the problem of a multitude of trade unions and lack of unity among the workers. If the workers were to find, from the lead given by some of the well-organised unions, that, by remaining united, they could help themselves to a much greater extent than by remaining divided, they would themselves strive, sooner or later, to end the lack of unity.

The subject that attracted the greatest attention of the Conference was the philosophy underlying labour welfare. A number of eminent persons, including Mr. J. R. D. Tata, Mr. S. T. Edward, Mr. T. L. A. Acharya, Dr. K. S. Basu, Mr. G. K. Ved and Mr. G. S. Ahluwala presented papers on the subject. The gist of the papers is that industry is not merely a mass of machines' and technical processes, but a complex of humanity. Industry fulfils its functions not by virtue of some impersonal force but by human energy and, as such, the aim of industry should be the creation of a society, where work will become the instrument of well-being. As was pertinently pointed out by one of these persons, the reserve of loyalty of labour to work cannot be bought but earned by providing satisfaction of such human needs as every one has a right to expect. There is, therefore, no gainsaying the fact that the neglect of the legitimate rights of labour is fraught with dire consequences not only to industry, in particular, but to the State, in general. This warning must be noted especially by countries that wish to have democracy as its creed, for failure to heed it will hasten the end of this most ideal system in the world.

MR. WALCHAND HIRACHAND

WITH the passing away of Mr. Walchand Hirachand on Wednesday this week, India has lost an outstanding personality—a real *entrepreneur* who strove hard to place India on the industrial map of the world. But for his indefatigable efforts against heavy odds, it is extremely doubtful whether India to-day will be building ships, aircraft and automobiles. It is true, that, in automobiles there is a number of manufacturers, but the credit for doing pioneering work and fighting the vested interests that were opposed to India making a beginning in this field goes to him. In the sphere of shipping and shipbuilding also, he met with powerful opposition, but he succeeded in overcoming it by his tenacity of purpose and courage of conviction. Mr. Walchand's interests were not confined to transport alone; they covered a wide range, embracing, as they did, practically all fields of economic life, including banking and insurance, mining, and industry. He was associated with more than a score of industrial establishments, some of which are in Burma and Ceylon as well.

Mr. Walchand was born at Sholapur on 23rd November, 1882 and had his early education at Aurangabad, Sholapur, Poona and, finally, Bombay. His success in life is a thrilling story. From the humble beginnings of a middle class boy, he worked his way up in quick stages and retired as a millionaire. We are told that he started his business career at the early age of 20 as an assistant to a commission agent at Talikota. After gaining sufficient knowledge of business, he entered the construction engineering line as a contractor. By dint of hard work, keen foresight, courage and determination, he carried out successfully several construction works, including railway lines, river bridges, large military works and big public buildings. The most outstanding piece of his construction work is the Bhore Ghat Tunnel. It was in 1920 that he joined the Tata Construction Company as its Managing Director on the invitation of the House of Tatas and, in this capacity, he carried out various engineering projects. In course of time, he became the master of the whole show, the Company losing its identity with the Tatas. Mr. Walchand did some pioneering work in the field of modern agriculture also—he always regarded agriculture as India's largest and most important industry—and achieved remarkable success. The township of Walchandnagar bears eloquent testimony to this fact. He was one of the leading lights of the Indian sugar industry and contributed much to its development. To him goes, to a large extent, the credit for securing protection to the sugar industry, for he took the initiative and put up a courageous fight.

It was, perhaps, more in the sphere of transport than in any other that Mr. Walchand played a pioneering role, with the spirit of a buccaneer. He laid the foundations of the Scindia Steam Navigation Company firmly—a purely indigenous enterprise—nursed it through the difficult days of depression, and built it up as the largest shipping company in this country. Not content with plying ships, Mr. Walchand planned and constructed the first and the only shipbuilding yard in India. His ambition was to see India completely self-sufficient in shipping. Although he did not realise this in full during his lifetime, he has not only shown the way but placed the country well on to it. It is for his successors in the Scindia Company and the Government of India, which has taken over the shipbuilding yard, to complete the tasks undertaken by him. Mr. Walchand was also responsible for promoting the first aircraft construction factory, the second best aviation company and an automobile factory. In every one of the undertakings established by him, he took special pride in employing Indians even for jobs requiring considerable technical skill. He proved to the world, at a time when India was not a politically free country, that, given a fair chance, Indian engineers and technicians were capable of carrying out any job thoroughly and efficiently.

Mr. Walchand was connected with a number of institutions of all India importance and spared sufficient time to serve the cause of commerce and industry. He was President of the Indian Merchants' Chamber, Bombay (1927), Maharashtra Chamber of Commerce (1927-38), Indian National Committee of the International Chamber of Commerce (1931-33), Federation of Indian Chambers of Commerce and Industry (1932-33), All-India Organisation of Industrial Employers (1933-34), and Indian National Shipowners' Association (1934-35 and 1936-37). He was a member of the Governing Body of the Indian (then Imperial) Council of Agricultural Research for five years. He also played an active role in the affairs of some of the world organisations. He was, for instance, the Vice-President of the International Chamber of Commerce (1934-35 and 1936-37) and the Employers' delegate to the I.L.O. Conference at Geneva in 1932. He led the Indian delegation to the International Chamber of Commerce at Berlin (1937) and Copenhagen (1939).

The achievements of Mr. Walchand may be briefly summed up thus: He laboured hard at constructional engineering, regarded the development of transport industry—shipping, aircraft and automobile—as his special mission in life and played at agriculture in his spare time. Indeed, he was one of the builders of modern industrial India. His loss is not a loss merely to his family and friends, nor just to Walchandnagar Industries, nor, for that matter, Bombay alone, but to the whole country.

WILL PEACE LEAD TO DEPRESSION?

NON-FERROUS METALS—STERLING AREA GOLD AND DOLLAR RESERVES—NATIONALISATION

THURSDAY, 5 P.M.

THE markets seem to have got over the shock administered by the peace moves in Korea and the publication of the Select Committee's report on the Estate Duty Bill. In equities, a good part of the loss sustained in the previous week has been recovered. Tata Deferreds, for instance, have gained Rs. 22-8 over the week. Similarly, Bombay Dyeings have improved by Rs. 13-12. Some of the leading miscellaneous counters such as Belapurs, Bombay Burmahs and Wimcos have also registered modest gains. In bullion, gold is quite steady. Silver, after going down to a low of Rs. 151-11, has spurted to about Rs. 155; in fact, at one time it was as high as Rs. 155-8. Among commodities, cotton has once again looked up. The weakness that was noticed last week proceeded further and, on Tuesday, prices touched the lowest levels for the week. I.C.C. May, which stood at Rs. 706 on 30th March, slipped down by stages to reach a low of Rs. 675-8 on the 7th inst. Thereafter, it spurted to Rs. 691-8 and is being currently quoted at Rs. 689. The hesitant tone that was displayed by oilseeds a week ago has once again given way to a firm trend, with all seeds and oils staging a fairly sizable advance. Groundnuts (ready) have gone up from Rs. 40-12 to Rs. 42 and castorseeds (May) from Rs. 147 to Rs. 154-12. The only notable exceptions to this trend are the non-ferrous metals to which we shall refer presently.

MARKET GOSSIP

* * * *

Although, over the week, values show an improvement, the closing rates in many cases, especially in commodities and bullion, are slightly below the best levels witnessed a day earlier. From this, it would appear that operators are still uncertain about the short-range outlook and that the earlier improvement was chiefly the result of covering by bears. In any case, there are no signs of any sustained bullish fervour. There is, of course, quite a lot of buying activity in Tata Deferreds at the time of writing. But that is due purely to speculation on conversion ratio, on which the Mediator's award is long overdue. The latest rumour is that the ratio will be at 31 Ordinaries per 5 Deferreds, in which case the Deferreds should be well over Rs. 1,900, assuming that the Ordinaries will remain unchanged at about Rs. 315. The present activity will, therefore, die down once this source of provocation disappears.

* * * *

It is yet too early to judge the future trend of markets in the light of the welcome change visible in the foreign policy of the Communist powers, for one does not know to what extent this change is genuine and will lead to real peace in the world. Korea is not the only controversial issue with the Communists. There is a series of issues such as Indo-China, Formosa, Austria and Germany. If the Korean affair is settled, the cold war may become a little less comfortable than at present, but, if it is to end at all, and if both democratic and communist countries are to sit together to solve the economic problems of humanity, then all these issues must be satisfactorily solved. Are we very near such a miracle? One's guess of the answer to this poser is as good as another's.

* * * *

There is, however, some justification for the feeling of hesitancy among business men all over the world. The lessening of tension in the international situation is ultimately bound to result in a downward adjustment of defence expenditure. The plant and machinery now engaged in the production of armaments will switch over a part of their productive capacity to articles for civilian use. The supply of goods will thus increase, perhaps at a rate faster than the ability of the civilian markets to absorb them. Prices then will tend to decline and manufacturers will not be keen on paying the same price for raw materials as they are doing to-day. It is common knowledge that the cost aspect does not generally weigh heavily with industrialists when they are engaged in producing armaments. Further, a cutback in the output of armaments may not be completely offset by a corresponding increase in the production of civilian goods. If this assumption turns out to be correct, it will result in an automatic fall in the demand for raw materials. Thus, the prospects are that raw material producers will be faced with a fall not only in demand but also in prices. In fine, it looks as though a transition from cold war to peace will not be absolutely painless and it is better to be prepared for a recession in many parts of the world.

* * * *

It will, however, be a hazardous task to attempt at measuring the magnitude of such a recession. Nevertheless, a careful consideration of the pros and cons suggests that it will not be of a disastrous type. Two important reasons may be cited in support of this view. The inflation and the boom that followed in the wake of the Korean war have already been reversed to a very great extent. Ever since the slump a year ago, operators have been careful not to indulge in excessive overtrading and industries throughout the world are working with limited stocks. The Governments all over the world are more experienced than at any time before in the art of controlling a depression. The very fact that the slump in the first and early second quarters of 1952 was not allowed to deteriorate into a full-fledged depression is proof of this, if any proof were needed. Much will, of course, depend upon the state of economic conditions in the U.S., in whose bandwagon most of the democratic countries are now travelling. But all competent observers are confident about the resilience of the U.S. economy.

* * * *

In so far as India is concerned, it is by no means less easy to interpret the latest developments in the international situation, nor to anticipate the effects of the end of the cold war. If the prices of key raw materials such as tin and rubber were to decline, it would adversely affect the economies of South-East Asian countries. In such an event, India's exports to these countries may suffer to some extent. In addition to this, competition from Japan in these markets may become more intensive than at present, as the end of the Korean war will mean the loss of an important source of outlet to its productive capacity. As against this, there is the prospect of the Chinese market becoming accessible to the non-communist countries, including India. If peace comes to prevail in Indo-China, Malaya, Burma and other parts of the world, the trade with these countries will tend to look up, though, perhaps, at a lower level of prices. But then there is also another side to this picture. China itself will emerge as a competitor of India in some of these markets, for there has been a sharp improvement in Chinese industrial production. Besides this, China's vast coal and iron ore will become available to non-communist countries and this is bound to tell on India's exports of these materials to Japan, Australia and other Far Eastern markets.

* * * *

These adverse influences on Indian economy will, however, be offset, to some extent, by the large development expenditure planned by the Government of India. A fall in world price levels, following a rise in industrial production of civilian goods, will improve the chances of the Plan becoming a success. It will reduce the volume of deficit financing, inasmuch as the cost of the projects will come down. The possibility of India getting aid from the U.S. and other Western countries will also improve, for two reasons. In the first place, these countries will have more goods to dispose of and as such will be anxious to spare some for India on favourable terms. Secondly, India's foreign policy will not be a deterrent to getting substantial assistance from the U.S. as it is said to be at present. Thus, if the Plan were to be successfully implemented, it would provide a good market for almost all the domestic industries and keep them well employed. Nevertheless, one must be prepared for a lower margin of profits. The inflationary impact of the implementation of the Plan on the economy of the country may not be as heavy as it is feared it will be at present. To sum up, an economic depression of a serious nature in India seems extremely unlikely. But, at the same time, the days of large profits and bumper dividends are not likely to recur.

* * * *

As already mentioned, the non-ferrous metals have suffered a substantial fall in prices both in foreign countries and India. The main reason given is the Korean peace move, but there are also other causes. The worst sufferers have been tin and copper. In fact, the rot began in the former and spread to others. After remaining remarkably steady, the price of tin on the London Metal Exchange suddenly gave way last week and lost about £100 per ton in less than seven days. According to London advices, the downward trend was touched off by the indication that the Reconstruction Finance Corporation in the U.S. was likely to terminate its activities in tin gradually. The downward trend was accelerated by the enhanced prospects of peace in Korea, as well as by reports that Bolivia, one of the main producers of tin in the world, was continuing its secret talks with the U.S. for a long-term contract and that these talks had reached an advanced stage. The unexpectedly large drop in the price of tin on the London Metal Exchange induced heavy selling pressure in the Bombay metal market also, bringing down the price from Rs. 155 to Rs. 136 per cwt. Activity in this market has been suspended for the time being to facilitate settlement. In sympathy with tin and with other commodity markets, zinc and lead also declined, even though, unlike tin, these metals had experienced a fall some time ago. In London, zinc lost £2 to £3 per ton during the week and lead about £5 per ton. In Bombay, electrolytic zinc for forward was marked down from Rs. 54-8 to Rs. 52-8 per cwt. The fall in lead (forward delivery) was a little more steeper, from Rs. 64-8 to Rs. 57 per cwt. Well-informed observers of the market feel that the worst is not yet over for all the non-ferrous metals.

* * * *

There was a recession of over Rs. 10 in copper during the week, the latest rate for it in Bombay being Rs. 172 to Rs. 173 per cwt. for forward delivery. In the overseas markets, buyers are keeping aloof, while some of the Continental countries, especially Belgium, are anxious to sell to the U.S. at lower prices. Chile, the principal exporter of copper, is still trying to stick to its rate of 35.50 cents per lb. f.o.b., as against 32.00 cents c.i.f. New York quoted by Belgium, but it is felt that Chile's quotation will have to come down sooner or later. In this context, the following assessment of the copper situation by the *Financial Times* a few days ago will be read with interest:

"The present outlook for copper is confused. On the surface, it appears 'bearish.' If the market is freed in a few months' time, as is hoped, fabricators of copper will naturally try to 'price' their 'pipe-line' of copper and copper products, in order to be able to return to the pre-war practice of quoting firm prices for their goods. They will do this by making 'paper' sales on the market. In these circumstances, there may, for a time, appear to be very heavy quantities pressing down the price. This may well fall initially. Even some of those taking an optimistic view of the medium and longer term prospect concede that a fall of, say, £50 per ton is quite likely. There are large quantities of copper in Government hands. On the other hand, it would be rash to suggest that total copper stocks in the U.K. are as high as they were pre-war. Consumers have been running down their inventories and so have the consumers of fabricated copper. It takes about three months for copper to move from the mine to the consumer. If, moreover, as seems to be the case, the total stock is somewhat unbalanced, a further delay of up to a month may be involved in turning excess blister or fire-refined copper into electrolytic metal. The question of balance between different shapes also arises. Usually, a general copper shortage begins with particular shortages. Without implying that shortage will again emerge this year, it is worth pointing out that there is a number of rash assumptions being made now which could easily lead to the sort of miscalculation about 'pipe-line' stocks, which, for instance, occurred with Indian tea last year. In addition, it must be conceded that Chile holds a fairly strong position as the world's largest exporter of copper.

"The present position in which mercantile and consuming interests lay much stress on the weak points of the copper market is not accidental. It arises from the stringency of financial resources and the weakened ability to take calculated risks. Over the immediate future, with prices very high, with peace moves in Korea and with the transition to normal marketing, the course of copper prices must be uncertain. Once the transition is over, however, the market may reveal underlying strength, especially since lower prices would undoubtedly check the use of substitutes."

* * * *

In our issue dated 21st March, 1953, we observed in these columns as follows:

"Our enquiries in high Government circles reveal that the Ministers are quite aware that the Government machinery is not efficient enough to undertake additional responsibility in the sphere of trade and industry. There is absolutely no move to nationalise or socialise either banking or insurance and no change is being contemplated in the existing regulations in regard to these companies. If any changes were at all to be made in them, they would be such as to make the credit institutions more useful for promoting industrial development in the country under the auspices of private enterprise, as indicated in the Plan."

* * * *

The foregoing categorical statement did not evoke much notice, presumably because of Mr. Nehru's parleys with Mr. Jaya Prakash Narain for a sort of coalition with the Praja-Socialist Party and also because of Mr. Narain's revelation at a Press Conference that Mr. Deshmukh had expressed the view to Mr. Asoka Mehta that banking and insurance must be nationalised. The determination with which the Government **was pursuing its plan to nationalise civil aviation** was also one of the factors that raised doubts in the minds of business men about the intentions of the Government. But all these doubts will, we hope, be laid to rest, thanks to the categorical observations made by Mr. C. D. Deshmukh in Parliament on Tuesday this week, observations **which confirm what we stated three weeks ago.** In view of the importance of this pronouncement, it needs to be extracted here, *in extenso*, for purposes of record. This is what he said:

"I have studied now the operation of various economic systems in various countries of the world and I am prepared to say that, given certain conditions, it is more than one system that can be made to work and can be made to yield results. But, what one has to find out is whether, in the conditions of this country, in cold blood, one could choose a particular form, rather an unorthodox form of economic governance. After mature consideration, I have come to the conclusion that, in the conditions prevailing in this country, neither Communism nor Socialism nor any other variant of those systems will work... In regard to the Praja Socialists, although they profess to operate within the four corners of the Constitution and the democratic system, and although the difference in the final objectives is not too great, yet there the difference is really in regard to practicability and that matter also has been referred to time and again. What is required is not only leadership but very great resources in men and administrative machinery, and it is not possible to think in terms of widespread nationalisation in view of our current difficulties in these two respects. . .

"I now come to a different category of subjects, nationalisation of banking and insurance. I would request honourable members to read very carefully the paragraphs concerning this in the Five-year Plan. First, paras 28, 29 and 30 on page 37 of the full volume; they relate to the credit system. The other, in regard to insurance companies, is para 54 on page 68. It would be inadvisable on my part to try to paraphrase what has been set out after careful consideration in the paragraphs that I have mentioned. All that I would like to say here is that these paragraphs are being studied very carefully, and that the objective is not so much to nationalise for the sake of nationalisation, but to secure the results that it is alleged nationa-

EQUITIES RECOVER AFTER HEAVY DROP

SPECULATIVE BUYING REVIVES

(From Our Own Correspondents)

BOMBAY, 9*th April*

LAST week's slump in equities deepened further and persisted during the major part of this week. This was because negotiations for the exchange of prisoners of war took place at a quicker pace than was expected. Under the pressure of renewed nervous liquidation, equities dived down. The dive was more pronounced in steel shares than in other counters, with the result that steel shares receded to the pre-budget position at one time during the week. The low levels, however, brought a fresh bout of buying in the last two sessions. It was followed by covering by bears who had hammered down the markets last week. The revived support was inspired by the view that the earlier selling pressure had been overdone and that the present talks on exchange of prisoners of war would not mean an immediate cessation of hostilities. Operators appeared to be conscious of the fact that there were still many issues to be settled between the conflicting nations and that unless a general agreement was signed there were no chances of a reduction in expenditure on rearmament. The buying spree was assisted by the improved trend noted in bullion, commodity and cotton prices. The operators derived strength also from renewed rumours about the conversion ratio for Tata Deferreds, the Mediator's award on which is expected to be announced in the next few days. Market rumours place the conversion terms in the ratio of 31 ordinary shares to 5 deferred shares.

In the steel section, the well liquidated position in Tata Deferreds provided the basis for a handsome recovery on the opening day, and on renewed speculative and buying, the scrips rallied from last week's closing of Rs. 1,810 to Rs. 1,831-4. This speculative activity was, however, soon curbed by favourable prospects for peace in Korea and weakness of silver. In the spell of selling activity which followed as a result, Tata Deferreds slumped to Rs. 1,791-4 on Tuesday this week, the lowest level since 27th February last. A sizable recovery, however, ensued at this level and the shares moved up to close at Rs. 1,832-8 to-day. Tata Ordinaries reacted from Rs. 315-4 to Rs. 311-4, before regaining to Rs. 315-8. Indian Irons moved between Rs. 24-9 and Rs. 24-0 and closed at Rs. 24-8.

Textile shares moved in sympathy with steels, but the fluctuations were confined to a narrow range. Bombay Dyeings worked up from Rs. 381-4 to Rs. 395 on Monday, but the weakness of steel on Tuesday brought them down to Rs. 382-8 on that day. Subsequently, they staged a rally to Rs. 396-14 to-day before closing at Rs. 395. Kohinoors came up from Rs. 291 to Rs. 297-8 on Monday. After receding to Rs. 289-12, they advanced to Rs. 294-8 at the close to-day. Central Indias and Centurys gained a rupee each to close at Rs. 155 and Rs. 270-8, respectively. Gokaks moved up by Rs. 5 to Rs. 229, Lakshmis by Rs. 3-8 to Rs. 294-8 and Standards by Rs. 12-12 to Rs. 296-4. India United Ordinaries were better by As. 1½ at Rs. 9-7. Simplex showed no change over the week at Rs. 177. Notable exceptions to this steady trend were Finlays which went down by Rs. 3 to Rs. 307. New Greats which were lower by a rupee at Rs. 149-8, Svadeshis which were quiet at Rs. 255-8, Swans which lost Rs. 12-8 to Rs. 437-8, and Tatas which shed Rs. 4 to Rs. 40-8.

Bank shares presented a steady tone, but activity was restricted. Central Banks were up by a rupee at Rs. 63-8 and their new shares by As. 8 at Rs. 65, Imperial Fully Paids improved by Rs. 2-8 to Rs. 1,862-8, but the Contributories fell by as much to Rs. 447-8. Barodas were a fraction lower at Rs. 112 and Bank of Indias at Rs. 154. United Commercials put on a fraction to Rs. 35-12.

A rise of Rs. 425 to Rs. 7,135 in Orientals was the outstanding feature in the insurance section, where turnover was limited. Empires gained Rs. 7-8 to Rs. 552-8. New Indias remained steady at Rs. 42-4. Jupiters were unchanged at Rs. 7, as also Indian Mercantiles at Rs. 38-4.

Electric shares continued to be a steady feature, though no worthwhile rise in prices was noted. Ahmedabad Electrics were quoted at Rs. 108-12 *ex-div.* as against Rs. 113-12 *cum-div.* last week. Andhra Valleys were unchanged at Rs. 1,442-8 *cum-div.* Bombay Suburbans gained As. 5 to Rs. 124-6. Surat Electrics were maintained Rs. 121-8 and Tata Powers at Rs. 1,540 cum-div. but Tata Hydros put on As. 12 to Rs. 152 *cum-div.*

In the miscellaneous section, Associated Cements after moving down from Rs. 170 to Rs. 166-12 recovered to Rs. 168-12. Belapurs moved up by Rs. 3 to Rs. 238. Bombay Burmahs were in favour to score a gain of Rs. 10 at Rs. 395-10. B.I.Cs added As. 2½ and closed at Rs. 8-5½. A sharp rise of Rs. 8 was recorded by National Rayons. Tata Chemicals rose by As. 1½ to Rs. 9-4½, but Tata Oils were quiet at Rs. 33-12. Walchandnagars gained Re. 1-4 to Rs. 160, but Wimcos were maintained at Rs. 233-12.

In the transport group, Scindias witnessed lack of buying power and drifted from Rs. 13-12½ to Rs. 13-5 before closing at Rs. 13-8. Bombay Steams were unchanged at Rs. 34. Air-Indias were done at Rs. 81 and Air-India Internationals at Rs. 101. Bharat Lines stood at Rs. 94. Hindustan Motors were quiet at Rs. 4-1.

In the engineering and mining group, Alcocks made an impressive rise of Rs. 6-8 to Rs. 308-12. Indian Coppers were colourless at Rs. 3-1 and Shivrajpurs were steady at Rs. 61-4. Premier Constructions forged ahead from Rs. 85-12 to Rs. 88-12. Josts Engineerings were held at Rs. 82. Tata Locomotives were done at Rs. 87-8.

* * * *

Calcutta Stock Exchange

CALCUTTA, 7*th April*

Generally easy conditions prevailed on the Calcutta Stock Exchange during the week. This was due to satisfactory progress of talks relating to exchange of prisoners which is being taken as an indication of a possible cessation of hostilities there. The easiness was pronounced in the jute section because of the rejection by the Government of the industry's demand for permission to cut working hours in mills as also of the weakness of the sackings section. Despite the recent Indo-Pakistan trade agreement providing for regular export of coal to Pakistan, coal shares failed to put on a cheerful sentiment, on account of fears of a possible loss of overseas markets in coal to China, if peace talks in Korea were to succeed. Teas, however, ruled steady in anticipation of demand from the U.K. and the U.S. Miscellaneous scrips came in for selective buying, on speculative demand.

Jute shares staged a further recession, Baranagores lost Rs. 3 to Rs. 154 and Ganges Rs. 2 to Rs. 71. Champadanys were done lower by Re. 1 to Rs. 157. Howrahs eased by As. 6 to Rs. 23-1 and Agarparas As. 3 to Rs. 18-3. Empires, however, gained As. 4 to Rs. 21, on some special support. Indias were unchanged at Rs. 125.

Excepting a few scrips, others in the coal section displayed a slightly easy trend. Bengals gained Rs. 8 to Rs. 538. East Indias were fractionally higher by As. 2 at Rs. 23. But Central Indias lost As. 4 to Rs. 5-1. Burrakurs were done As. 2 lower at Rs. 10-10. Beerbhooms and West Bengals were lower by an anna each to Rs. 21-5 and Rs. 4-11, respectively.

In the tea section, Central Cachars improved by As. 8 to Rs. 60-8 and Oodlalaris by As. 6 to Rs. 2-8. Hansqua gained As. 4 to Rs. 15-12 and Sonai River As. 2 to Rs. 5-14. Tukvar, however, lost an anna to Rs. 5-3.

The engineering section was not in favour. Burn & Co., Ltd., declined from Rs. 268 to Rs. 265. Indian Irons had a fall of As. 8 to Rs. 24-2. Kumardhubis and Marshals were lower by As. 3 each to Rs. 8 and Rs. 5-6, respectively. Jessops, however, gained As. 3 to Rs. 24-5.

The miscellaneous scrips came in for some enquiry. Dunlop Rubbers advanced by As. 8 to Rs. 28-8 and Indian Wood Products As. 4 to Rs. 38-4. National Cables hardened by As. 2 to Rs. 12-1 and Indian National Air (P.O.) an anna to Rs. 6-15. Angelo Bros., however, lost anna to Rs. 17-12 and B.I. Corporation As. 3 to As. 4 to Rs. 17-12 and B.I. Corporation As. 3 to Rs. 8-5. Indian Cables declined by As. 2 to Rs. 17-11 and F. and C. Osler an anna to Rs. 6-2.

* * * *

Madras Stock Exchange

MADRAS, 7*th April*

Cheerless conditions prevailed in the Madras Stock Exchange during this week. They were in evidence particularly in the textile section, which put on a slightly easier trend on fears that the success of the peace moves in Korea, the prospect for which has been brightening, would mean low overseas demand for commodities generally. In plantings, teas came in for some selling, while coffees and rubbers were out of favour. The miscellaneous section disclosed more sellers than buyers. As a result, the volume of business done was comparatively low and prices, on balance, declined and disclosed widespread losses over the week.

Reports regarding lack of demand for cloth and yarn from consuming centres depressed sentiment in the textile section. Consequently, Vasantas eased by Rs. 2-8 to Rs. 161-8. Buckingams were done at Rs. 119, as against Rs. 121. Coimbatore Spinnings were lower by As. 8 at Rs. 41-8 and Maduras by As. 6 at Rs. 34-14. Rangavilas suffered As. 4 to Rs. 41-12 and Travancore Rayons an anna to Rs. 4-5. Bangalore Woollens were unchanged at Rs. 243 and Coimbatore Pioneers at Rs. 101.

In plantings, rubbers were quiet. Mr. T. T. Krishnamachari's statement that the Government would allow export of raw rubber if the manufacturers were not able to increase their offtake did not have any appreciable effect on the rubber shares, in view of the reported mounting stocks and discouraging conditions in overseas markets. Cochin Malabars and Thamrapallys declined by an anna each to Rs. 6-3 and Rs. 12-13, respectively. Vaikundams too suffered a similar amount to Rs. 15-8 *cum-div.* Udayagiris (rubber and tea) eased by As. 2 to Rs. 6.

Overseas enquiries for tea were not encouraging during this week. As a result tea shares remained generally dull. Ouchterlonys lost As. 4 to Rs. 3-11 and Neelamalais an anna to Rs. 3-10. Peermades declined by Re. 1-8 to Rs. 34 *cum-div.* following the declaration a dividend of 25 per cent. for the year 1952, as against 52½ per cent. for the previous year. The Company has proposed to capitalise a sum of Rs. 4.25 lakhs out of the capital reserves and distribute the same as capital bonus by the free issue of one fully paid share of Rs. 10 for every three shares held. Parksides, however, put on As. 2 to Rs. 11-12 and Chembras an anna to Rs. 2-13.

Coffees were dull. Shevaroys were fractionally lower at Rs. 1-3. Consolidated Coffees were unchanged at Rs. 17-1 and Mysore Coffees at As. 10. Coffee Lands, however, were higher by an anna at Rs. 9-6. Operators awaited with anxiety the Government's move to reduce prices of coffee.

In the miscellaneous section, Spencers lost As. 6 to Rs. 14-2. Deccan Sugars (Rs. 10 paid-ups) declined by As. 7 to Rs. 8-10 and Rs. 25 (paid-ups) As. 4 to Rs. 20. E.I.D.'B's. eased of As. 10 to Rs. 20-8 *cum-div.* Travancore Sugars were fractionally lower at Rs. 4-10. Rallis, however, put on As. 12 to Rs. 78-4. Gudivada Electrics hardened by Rs. 1-12 to Rs. 63-12. Mysore Papers and Indian Steel Rolling Mills were higher by As. 2 each at Rs. 13-11 and Rs. 11-14, respectively.

Notices

THE VISHNU COTTON MILL LIMITED

NOTICE IS HEREBY GIVEN THAT THE Forty-sixth Ordinary General Meeting of the Shareholders of the above Company will be held at the Registered Office of the Company, No. 9, Wallace Street, Fort, on Wednesday the 29th April, 1953, at 4-30 p.m. (Standard Time), for the purpose of transacting the following business:—

(1) To adopt the Directors' Report and the Audited Accounts for the year ended 31st December, 1952.

(2) To sanction the declaration of a dividend.

(3) To confirm the appointment of Mr. J. F. Parry as Director.

(4) To elect Directors in place of Mr. Pratapsinh Mathuradas and Mr. C. M. Khatau, who retire by rotation but being eligible offer themselves for re-election. Mr. Pratapsinh Mathuradas is interested as a partner in the firm of cotton buyers to the Company.

(5) To appoint Auditors for the current year and to fix their remuneration.

By Order of the Board of Directors,
OF THE VISHNU COTTON MILL LIMITED,
FOR THE BOMBAY COMPANY, LIMITED,
L. F. H. GOODWIN,
Managing Director,
Secretaries, Treasurers and Agents.

BOMBAY, 31*st March*, 1953.

THE LAKHSHMI COTTON MANUFACTURING COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT THE Fifty-eighth Ordinary General Meeting of the Shareholders of the above Company will be held at the Registered Office of the Company, No. 9, Wallace Street, Fort, on Thursday the 30th April, 1953, at 4-30 p.m. (Standard Time), for the purpose of transacting the following business:—

(1) To adopt the Directors' Report and the Audited Accounts for the year ended 31st December, 1952.

(2) To sanction the declaration of a dividend.

(3) To confirm the appointment of Mr. R. E. Forrester as Director.

(4) To elect Directors in place of Mr. Pratapsinh Mathuradas and Mr. D. M. Khatau, who retire by rotation but being eligible offer themselves for re-election. Mr. Pratapsinh Mathuradas is interested as a partner in the firm of cotton buyers to the Company.

(5) To appoint Auditors for the current year and to fix their remuneration.

By Order of the Board of Directors,
OF THE LAKHSHMI COTTON MFG. CO., LTD.,
FOR THE BOMBAY COMPANY, LIMITED,
L. F. H. GOODWIN,
Managing Director,
Secretaries, Treasurers and Agents.

BOMBAY, 31*st March*, 1953.

NEWS IN BRIEF

PRODUCTION of lead in India rose from 859 tons in 1951 to 1,132 tons in 1952.

The Government of Kashmir is not in favour of introducing prohibition in the State.

The central conciliation machinery decided 2,081 cases in 1952, as compared with 1,756 in 1951.

The receipts from Indian Railways form about 34 per cent. of the total income of the Central and State Governments.

An expenditure of Rs. 88 lakhs has so far been incurred in connection with regrouping of railways. No railway employee has been retrenched as a result of regrouping.

The Malabar Tenancy (Amendment) Bill, 1953, has been referred to a joint-select committee, consisting of 24 members—16 from the Madras Legislative Assembly and six from the Legislative Council.

The retail prices of cement in Delhi State has been reduced from Rs. 5-2-3 to Rs. 5 per bag of one cwt. The reduction has been made possible by a proportionate fall in the price of gunny bag packings.

India's food imports during the current year is expected to be reduced to 25 lakh tons, as against the original estimate of 29 lakh tons, following improved food situation. The imports in 1952 were 39 lakh tons and in 1951, 47 lakh tons.

The Government of India has decided to extend for a further period, upto 30th September, 1953, the existing arrangements for payment to displaced pensioners of advances of pensions, pending the transfer of their pensions from Pakistan.

General Motors India Ltd. has been granted a limited import quota for truck components, believed to be for 2,800 trucks. The quota will enable the Company to land trucks in completely knocked down condition and then to assemble them for sale.

The all-India first estimate of *rabi* pulses, other than gram and *tur* for 1952-53, puts the current year's area at 6,525,000 acres against 6,513,000 acres of the corresponding adjusted estimates of last year. This shows an increase of 12,000 acres or 0.2 per cent.

The Rajasthan Government has decided to appoint a five-man committee under the chairmanship of the Commissioner, Civil Supplies, to examine and review the working of the existing control measures in the State, with a view to improving the working and administration of controls in the State.

A Bill for acquiring the *zamindaris* in West Bengal will be introduced in the State Assembly shortly. It is estimated that the Government will have to pay a total compensation of about Rs. 18 crores when the 150-year old landlordism in the State established by Lord Cornwalis under the system of permanent settlement is abolished.

Lungis of 6 feet by 3½ feet manufactured in Sholapur will be exported to South Africa. The Government of India's marketing office at Bombay is understood to have placed an order for 6,000 pairs of these lungis for export to South Africa. The Sholapur Industrial Association, with whom the orders are said to have been placed, has so far supplied 2,300 pairs. Formerly, Japan was supplying these lungis to South Africa.

The Bhopal State Assembly passed, on the 2nd inst., the Agricultural Income-tax Bill. The Bill provides for the imposition of tax on agricultural incomes. This levy is expected to yield a revenue of Rs. 3,44,546 per annum. The proceeds of the levy will be used for giving impetus to production schemes and other development works. Provision has been made in the Bill to exempt income invested for charitable purposes and for developing waste land.

Air-India International Ltd. has placed an order for two De Havilland Comet Mark III jet airliners for use on their inter-continental routes. The cost of the airliners, together with the necessary spare parts and engines, which will be delivered early in 1957, is Rs. 2½ crores. These super-Comets are said to represent an advance over the Mark I flying to-day over many air routes and the Mark II which will be placed in service next year on some airlines. Weighing 150,000 lbs., these giant jet transports will carry 60 passengers at 500 miles per hour at an altitude of 40,000 feet.

The State Insurance Department of Rajasthan has so far, during its 9 years of work, issued 8,165 policies with a total risk of Rs. 53,84,563, of which 397 policies with a total risk of Rs. 1,33,038 have been paid. This cover is provided only to Government employees. A sum of Rs. 94,608 has been paid on 210 policies on death and Rs. 38,429 on maturity of 187 policies. The Government is contemplating extending this compulsory insurance scheme, which was started on 1st August, 1943 in the former Jaipur State, to the entire State of Rajasthan. All permanent employees of the State who are below 50 years of age and who are drawing more than Rs. 20 are covered by the scheme.

A Bill to provide for the levy of a higher tax on the sales of intoxicants in the State of Bombay has been published in the *Bombay Government Gazette* of the 6th inst. Clause 3 of the Bill provides for levy of tax, in addition to the general tax payable under the Bombay Sales Tax Act, 1953, at not more than one stage of the sale of intoxicants, (*a*) on potable foreign and country liquor at annas six in the rupee; (*b*) on spirituous medicinal preparations at annas four in the rupee, and (*c*) on other intoxicants, that is, non-potable liquor, opium and hemp drugs, at one anna in the rupee.

The U.P. Government has included in its Five-year Plan, a scheme for the construction of 340 tube-wells in the districts of Mainpuri, Etah, and Farukhabad. These tube-wells will form part of the 995 tube-wells to be sunk in the State under the Indo-U.S. Technical Co-operation Administration programme to develop irrigation facilities. The U.P. Government has also decided to install a 10,000-kilowatt power station at Mainpuri to supply energy to operate these tube-wells. The station will supply power for domestic and industrial purposes also. The Mainpuri power station, it is estimated, will cost Rs. 2.4 crores, but, since it will give energy for industrial and domestic purposes, it is expected to work at a profit.

* * * *

From Abroad

A record monthly output of 10 million tons of steel was reached by American steel mills in the month of March this year.

World crude petroleum production during September, 1952, averaged a record 12,549,000 barrels daily, including a daily average U.S. production of 6,518,000 barrels.

A barter agreement for the exchange of goods worth $2 million has been concluded between France and Argentina. Under the agreement, France will provide iron and steel products in exchange for Argentine wool, hides, timber, fats and grains.

A new variety of rice, which gives a better stand and has greater resistance to disease, has been developed by the Rice Experiment Station of the U.S. Department of Agriculture. The new variety, named "Sunbonnet," yields larger crops in percentage of whole kernels.

A cheap process has been found in the U.S. to convert inedible tallow, grease and vegetable oils into ingredients for making plastic products. In the process, acid portions of animal fats are treated, resulting in a specially oxidised oil that makes plastics soft and pliable.

The U.S. Senate has passed a Bill putting off, until 15th May, 1953, the deadline for presidential recommendations to the Congress on selling the Government's synthetic rubber plants to private industry. The Bill has now gone to the House of Representatives, to be taken up by the Armed Services Committee.

The relaxations in Australian import controls, announced by the Prime Minister on 16th February, 1953, came into effect on the 1st inst. As a result of the relaxations, about £A.50 million worth of additional goods will be imported into Australia in the financial year 1953-54. The relaxations are so designed as to benefit the entire range of Australia's import trade from the sterling area.

The Soviet Government has ordered a cut in retail prices. The prices of bread, flour, macaroni, beans and peas have, accordingly, been reduced by 10 per cent. and those of meat and meat products by 15 per cent. Prices of socks and stockings also have been reduced by 20 per cent., of cotton, natural silk and felt hats by 15 per cent., of straw hats by 10 per cent., of linen by 8 per cent., and of wool and wool mixtures by 5 per cent.

The weekly average production of steel in the U.K. during February amounted to 352,400 tons, which compares with 346,300 tons in January, 1953, and 313,100 tons in February, 1952. Pig iron production was at a weekly average rate of 213,500 tons in February this year, as compared with the average of 213,900 tons a week in the previous month and 197,400 tons in the corresponding month of 1952.

A small independent committee to review the whole problem of the present and future cost of maintaining a proper and adequate National Health Service is to be set up by the British Government. The proposed committee is also to suggest means—whether by modifications in organisations or otherwise—of ensuring the most effective control and efficient use of such Exchequer funds as may be made available. It is to advise, too, as to how, in view of the burdens on the Exchequer, a rising charge upon it can be avoided, while providing for the maintenance of an adequate service. Mr. C. W. Guillebaud, a Cambridge economist, will be the Chairman of the Committee.

The U.S. Government has reduced the export quota for copper sulphate to 15 million lbs. for the current quarter, as against 25 million lbs. for the preceding quarter and 18 million lbs. for the corresponding quarter of 1952. The reduction is a sequel to the anticipated heavy seasonal domestic demand for agricultural purposes, and also to the lower output during the second-half of last year. The production of copper sulphate during the first six months of this year is said to be not sufficient to meet more than the domestic demand and the 15 million lbs. now allowed for export. It is, however, stated that, if the situation were to improve, a supplementary export quota might be granted.

PERSONAL

MR. Dag Hammarskjoeld of Sweden has been unanimously elected Secretary-General of the United Nations *vice* Mr. Trygve Lie who resigned.

Mr. P. M. Chinai and Mr. T. Murli have been elected President and Vice-President, respectively, of the Silk Merchants' Association, Bombay.

Mr. S. Kannan, Development Engineer, National-EKCO Radio and Engineering Company, Bombay, left for the U.K. for undergoing technical training.

Mr. M. K. Vellodi, until recently State Counsellor, Hyderabad, has assumed charge as Secretary, Ministry of Works, Housing and Supply, Government of India.

Sardar Datar Singh, Additional Secretary, Central Ministry of Food and Agriculture, returned from Rome, after attending the meeting of the U.N. Food and Agricultural Organisation held there recently.

Mr. Jehangir Ghandy has joined the Board of Directors of the Tata Iron and Steel Co., Ltd., in place of Dr. John Matthai who resigned following his acceptance of the chairmanship of the Taxation Enquiry Commission.

Mr. T. T. K. Allan, General Manager, National Bank of India Limited, has been appointed a Director, in place of Mr. J. R. H. Pinckney who has retired. Mr. N. W. Chisholm, Deputy General Manager, has succeeded Mr. Allan as the General Manager and Mr. W. Kerr, London Manager, has become Deputy General Manager.

OBITUARY

Mr. ASAF ALI

It is with deep regret that we record the demise of Mr. Asaf Ali, Indian Minister to Switzerland. Mr. Asaf Ali was the Minister for Transport and Railways in the interim Cabinet from September, 1946 to January, 1947. He was later appointed the first Indian Ambassador to the U.S., which post he held till April, 1948. On his return to India, he was posted as Governor of Orissa. His last assignment under the Government of India was as India's Ambassador to Switzerland and the Vatican.

Mr. G. W. CLARIDGE

We regret to announce the death of Mr. George William Claridge at Southport (England) on 25th March, 1953. Mr. Claridge, who was 89 at the time of his death, was associated with Messrs. G. Claridge & Co., Bombay, for a long period of 35 years, until his retirement in 1921, and was one of the pioneers in the printing industry in India.

"COMMERCE" 1928

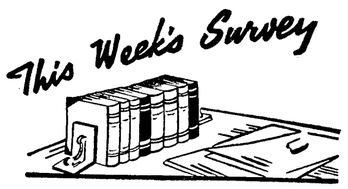
FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, 14*th April*

Marvellous Uncertainty

The three successive, distressful setbacks that the rubber industry has experienced during the last few weeks have been directly caused by the marvellous uncertainty of His Majesty's Government—by its lack of decision—followed suddenly and unexpectedly by a petulant withdrawal of the restriction scheme. In our issue of last week, we published informative correspondence in favour of a retention of the scheme in a proposed modified form. The arguments of our correspondents were, we think, quite sound. The restriction scheme is a good scheme; it has well served its purposes; it should not have been withdrawn. But if its withdrawal was imperative, it should have been taken away gradually by a periodic lessening of its operative power. The existing status of chaos would thus have been avoided. The muddling manner in which the matter has been treated by the departmental officers concerned is on all fours with the mess that has been made of the Indian coal trade by the Government of India.

Mr. Baldwin has undoubtedly been influenced by what the Chairman said at the recent annual general meeting of the Ceylon Chamber of Commerce, just as the Government of India was influenced in its dealings with the coal trade of the country by extraneous interests. The rubber industry, collectively, of the Federated Malay States, has been sacrificed to the much smaller rubber interests of Ceylon. At the annual general meeting of the Ceylon Chamber of Commerce, the Chairman said: "There is no doubt that our restriction scheme has been an important controlling factor in the situation in the past few years, but, with the established use of reclaimed rubber and the ever-increasing output of the Dutch East Indies, I find it difficult at this stage to put forward any reasonable argument for its continuation. It seems to me that, unless Dutch interests are prepared to come in with us, we are bound to weaken our own position eventually by continuing our efforts to control the position by restricting our exports." It is upon the basis of these somewhat random utterances that Mr. Baldwin fashioned his altered tactics when, unexpectedly and disastrously, he withdrew the restriction scheme.



EMPLOYEES' PROVIDENT FUNDS

THE decision of the Government of India to levy an inspection charge of ¾ per cent. of the aggregate employers' and employees' contributions on factories exempted from the provisions of the Employees' Provident Funds Act, 1952, is unwarranted. For quite apart from the cost aspect, there is no need for such inspection, as we shall presently show. On the basis of ¾ per cent. of the total employers' and employees' contributions, the factories will have to pay As. 1-6 towards inspection charges for every worker getting Rs. 100 as emoluments and contributing 6¼ per cent. of his emoluments towards his contribution to provident fund. It may be argued that this sum is very small and the employers could bear it easily. But it is not so, at a time when the sellers' market has vanished for most of the industries, especially textiles and cigarettes. If there were a sellers' market, the employer would naturally transfer the burden on the consumer. But now, when competitive forces are prevailing, he will have to meet this additional cost from his meagre profit.

The proposal involves a fundamental principle also. Where is the necessity for the proposed inspection when the income and expenditure of the fund have to be on lines approved by the Government and audited every year, by qualified auditors? Further, every beneficiary will be given a statement showing the position of his fund at the end of each year. This gives him an opportunity to exercise his own check on the affairs of the fund. The moneys of the fund can be invested only in securities approved by the Government. Moreover, every subscriber before joining the fund is given a copy of the rules, and he joins the fund with the full knowledge of his rights and liabilities. If the Government, however, believes that, in spite of all this, outside inspection should be done in the public interest, the cost of such inspection should legitimately be a charge on the general revenues of the country and not on the income of the employers of the exempted factories.

IMPORTS FROM JAPAN INTO COLONIES

The British Government has decided to recommend to the Colonial Governments certain limited relaxations of restrictions on imports from Japan—both for their own needs and for *entrepot* trade. The decision is a sequel to the agreement arrived at after negotiations between the Governments of the two countries held at Tokyo recently. It will be recalled that, some time ago, the Japanese Government sent a request to the British Government to the effect that, in view of the heavy deficit on its current payments accounts with the sterling area since July, 1952, the existing restrictions on sterling area imports from Japan should be relaxed, as, otherwise it would have to reduce its purchases from the sterling area. An indication of this difficult position is provided by the fact that, at the end of February last, Japan's sterling reserves had gone down as low as £55 million, as against over £100 million in mid-1952. Following this and with a view to maintaining the present level of Japanese purchases from the sterling area, the British Government has, as already stated, decided to ask the Colonial Governments to relax restriction on Japanese imports.

To what extent the restrictions should be relaxed is a matter for the Colonial Governments to decide. The British Government, however, hopes that the relaxation would be sufficient to stop the present drain on Japan's sterling reserves, so that Japan can continue to bring as much as it is now doing from the sterling area countries.

Whether or not the British Government also would relax restrictions on imports of Japanese goods, especially grey unfinished cotton cloth, it is not known. At any rate, the announcement does not make any reference to this. Probably, the U.K. Government may feel that such relaxation will not materially help Japanese exports.

Be that as it may, freer imports of Japanese goods into the Colonies and the Japanese Government's decision to allow, once again, exporters to retain 10 per cent. of their sterling and open account revenue are bound to affect India's exports to the British Colonies. The effect will particularly be severe in the case of cotton textiles. Already, Japan is offering stiff competition to India in the African Colonies. Freer imports of Japanese goods into Colonies will only mean that the benefits of the preferential treatment accorded by the Colonies to Indian cloth *vis-a-vis* Japanese cloth under the system of Imperial Preference will be neutralised to a great extent. Indian exporters, however, must redouble their efforts and meet the competition from Japan by improving the quality and packing of their goods and by giving all possible facilities to importers in the Colonies. The Government of India, too, must play its part by not placing any handicap on the competitive capacity of Indian industries.

COMMUNITY PROJECTS

Inasmuch as 80 per cent. of India's population lives in villages, the ultimate success of the Five-year Plan will naturally be judged by the extent to which the village life will have been rehabilitated by the end of the Plan period. For achieving success, fervent hopes are now rested on the Community Development Programme and the National Extension Organisation. These are the two planks on which the scheme for transforming the rural economy and generating "a new life, a new hope and a new aspiration" is being implemented. In this uphill task, special responsibility devolves on those in charge of implementing the scheme. It was, therefore, in the fitness of things that Mr. V. T. Krishnamachari, Deputy Chairman of the Planning Commission, should have emphasised this point, while inaugurating the Social Education Organisers' Training Centre at Nilokheri the other day, that the principal aim of the community project workers should be to attempt to give a new orientation to the rural life of India, whereby the people themselves would strive for their betterment through their own effort. "The workers," he rightly said, "should approach the villagers in a spirit of humility, trying to learn rather than to teach." This is indeed sound advice which can be turned to practical advantage by all social reformers. The advice deserves to be noted especially by the more enthusiastic sections of the public which want to bring about a radical transformation of rural life overnight, overlooking the realities of the situation.

The programme of community development, according to Mr. Krishnamachari, is three-fold. First, it aims at providing additional scope for work in the rural areas, thereby reducing the volume of underemployment. Secondly, it emphasises that the improvement of the condition of villages is the responsibility of the community as a whole and, therefore, the whole community must work together and, only through such collective effort, progress is possible. And, finally, it seeks to utilise the vast potentialities existing to-day in the countryside for the benefit of the nation, thereby benefiting the individual also in the process.

The Deputy Chairman of the Planning Commission referred to the "tremendous lot of unutilised manpower in the country and said that, because of lack of irrigation facilities which permitted only one crop, 40 million agricultural families had regular work only for a period of three to four months. Even in irrigated areas, about 15 to 20 million families had work for eight months only. This clearly indicates the imperative need for not only increasing further the irrigational facilities but also finding additional sources of employment for absorbing the idle manpower. This forms, in fact, the crux of rehabilitating rural life in the country. In this context, Mr. Krishnamachari's remarks are quite pertinent. He observed that, unless the unutilised manpower was usefully employed for the community's benefit on most parts of India, the country could not be economically strong.

Another aspect of the rural development programme which Mr. Krishnamachari did well to stress relates to the carrying of such improvements and technology to the villager which are tested and found acceptable and which are backed with necessary supplies of material and equipment. For the Indian agriculturist, as he stated, is not a conservative person as is believed; he is willing to adopt agricultural practices and techniques, but, being a man with small resources, he is not in a position to take any risk. Mr. Krishnamachari also sought to impress the fact that village improvement could be sustained and continuous, only if the necessary organisation was created in the village level. In his considered opinion, *panchayats* are a useful medium, and effort should be made to work village programmes through well constituted *panchayats* and multi-purpose co-operative societies.

COMMONWEALTH DEVELOPMENT FINANCE

A recent event of considerable importance to the Commonwealth countries is the incorporation in London of a company entitled the Commonwealth Development Finance Company, Ltd. The object of this Company, as its name itself suggests, is to finance the development of the economic resources of countries in the Commonwealth. The formation of this Company is a sequel to one of the specific recommendations of the Commonwealth Prime Ministers, at their London Conference in December last, to the effect that, within the limits of the Commonwealth savings, development should be more purposely directed towards expanding its resources and strengthening the sterling area's balance of payments position. The details of the Company are very much as had been expected earlier, as will be evident from the following description:

The Company has an authorised capital of £15 million, divided into 9.25 million "A" ordinary shares of £1 each and 6.75 million "B" ordinary shares of £1 each. The "A" shares are to be subscribed by the leading industrial, commercial, mining, shipping and financial interests, and the "B" shares by the Bank of England. Although the whole of the authorised capital is to be issued, initially it is intended to call up only 10 per cent. of the capital. The Company cannot, however, trade purely with its own capital; it will have to finance its projects by borrowings elsewhere, particularly in the world capital markets, including the World Bank. The Company has been vested with powers to borrow up to an amount equal to twice its issued capital, that is up to £30 million. The Company's operations at present, it is stated, would be financed mainly through the exercise of this power.

A significant feature of the Company is that it is in charge of competent persons with considerable industrial and financial skill. Thus, the Company has as its Chairman Sir Frederick Godber, Chairman, Shell Petroleum, "Shell" Transport and Trading, Anglo-Saxon Petroleum and United British Oilfields of Trinidad. Among the other Directors on the Board are Mr. R. E. Fleming, Sir Geoffrey Heyworth, Mr. H. C. B. Mynors, Sir Ernest Oppenheimer, Sir Edward Peacock, Sir Robert Sinclair, and Mr. I. A. R. Stedeford. With such persons on the Board, there is no doubt that the Company will command the confidence of investors all over the world.

It is not so much the details of the Company's constitution, given above, but as to how exactly the Company will operate that really matters and is important. From the information so far made available, it is gathered that the Company will—this is only as it should be—supplement, and not supplant, the other organisations engaged in the development of Commonwealth resources. While financing the projects, the Company will have to satisfy itself fully that these projects are perfectly sound. Emphasising this aspect, the *Financial Times*, London, observes: "The projects which will be considered will have to satisfy three conditions. They will have to be shown to be directly relevant to the sterling area's dollar balance of payments. Secondly, they will have to be shown to be firmly earthed in ordinary commercial prudence. Finally, they will have to be shown not to have been brought to the new company as a means of by-passing the ordinary and existing channels of international finance."

Considering the Herculean efforts now being made by the Commonwealth countries to bring about a rapid economic development, the efforts of the British industrialists and financiers at establishing the Company for financing the exploitation of the resources and strengthening the balance of payments are, indeed, commendable. But it must be emphasised, in this connection, that, in addition to direct finance, the Company will do well to render all other assistance possible. A usual defect in schemes of this sort is that they merely envisage assistance to projects which are so sound that they can raise their finances anyway. If, therefore, the Commonwealth Development Finance Company is fully to achieve the objective for which it has been set up, it should at least ensure that no worthwhile project is frustrated for lack of capital. It must at the same time be stated that, if the Company is to fulfil this task, the Governments concerned should follow not only healthy economic policies but also pay special attention to the question of encouraging savings. The latter aspect of this condition is very important, for, unless savings are allowed to be made and accumulated, the Company will not be able to repatriate the capital it provides to Commonwealth countries for developing their resources. Hence, the aptness of the remark by a contemporary of ours that, if the Commonwealth Governments do not actively promote savings, the whole project will be akin to "fine new ship built on a slipway from which the sea has long since receded."

WITHDRAWAL OF 'HALI' CURRENCY

Thanks to the proper precautionary measures taken by the Chief Minister of Hyderabad and the Finance Minister, demonetisation of *hali* currency in Hyderabad has proceeded apace smoothly in the past seven or eight days. Nothing untoward has happened since the inauguration of the demonetisation on the 1st inst., as was once feared on account of the public demonstration staged before the State Assembly towards the end of last month.

Although the Osmania currency (*halli sicca*) will continue to be legal tender in the Hyderabad State for two more years, all banks and the Government have begun making their payments in Indian currency since the 1st inst. as the first step towards complete demonetisation of the 80-year-old *hali* currency. Banks have commenced their transactions, with all their Osmania currency accounts converted into Indian currency accounts.

In order to ensure that a fair and equitable amount of *hali* currency small coins is made available to a large number of people, the State Government has made arrangements at offices of the Hyderabad State Bank and Government treasuries to issue *hali sicca* coins up to five rupees per day to individuals and up to 10 rupees a day to establishments and shops. The people are allowed to change reasonable amounts in Indian currency into *hali* coins but *hali* coins of eight annas and less only will be made available to them. Banks are thus giving *hali* change for about ten or fifteen rupees for each *bona fide* purpose. The standard exchange rate is Rs. 100 Indian currency is equal to Rs. 116-10-8 *hali*.

The State Government had withdrawn Rs. 17 crores worth of *hali* currency in the past three years. Still as on the 1st inst. as much as Rs. 40 crores of *hali* currency was in circulation. Since then, a sum of Rs. 25 crores has been withdrawn by automatic conversion of all Government papers and bank investment into Indian currency. The remaining *hali* money of Rs. 15 crores is expected to be withdrawn in the course of the next six months. The *hali* money, as stated above, has, however, been allowed to remain in circulation in the private sector for a period of two years. This is in order to make the change-over as smooth as possible.

All payments by Governments are now made in Indian currency at the rate of exchange stated above. Dues payable to Government are acceptable in both currencies for the period of two years allowed under the demonetisation scheme. The railway and post offices have been advised to accept either currency during this period. They have also been directed by the Union Government to retain imprest money to provide adequate conversion facilities. Arrangements have also been made for adequate publicity regarding the changes in the currency system and the measures adopted by the Government to minimise hardships.

The Government has appointed a Demonetisation Advisory Committee for tendering advice on problems connected with the changeover of *hali* currency. The Committee consists of 40 members, representing the various interests in the State and of the Ministries of Commerce and Industries, Labour, Information, and Supply and Revenue of the State Government. This Committee will have a small executive committee which would meet from time to time and advise the Government on day-to-day problems arising from the change-over.

The fear that abolition of *hali* currency would result in higher prices of commodities was, for some time, responsible for a demand by the working classes that their wages should be paid in an equal amount of Indian currency after demonetisation. The Government has, however, pointed out that the implementation of such a demand was impossible, as the Government will have to find the wherewithal to the extent of Rs. 1 crore, if it decided to pay the salaries of its employees drawing Rs. 100 and below in Indian rupees equivalent to *hali* currency. It has, however, proposed to issue an order, under the Essential Goods Control Act of the Government of India, for preventing any rise in prices consequent on demonetisation. Addressing the first meeting of the Advisory Committee mentioned above, the Chief Minister of Hyderabad said, on the 6th inst., that the Government would shortly announce its decision for checking inflation in prices, fixing a certain date as the standard for ascertaining fair prices and leaving a small margin for fluctuation in prices. This decision is a sequel to the rising tendency in the prices of vegetable, food and provision markets. It is reported that some merchants have raised the prices by about 20 per cent. in the hope of getting prices that prevailed before the 1st inst. in Indian currency at a later date.

There are also reports that black-marketing activities are going on in converting *hali* currency into Indian currency. Rates Rs. 112 (*hali*) are being charged for every Rs. 100 (Indian currency). The Chief Minister observed that as currency was a Central subject, action to put an end to the black-marketing in the rates of exchange should be taken by the Centre through the powers vested in it by the Indian Coinage Act and the Indian Paper Currency Ordinance. The matter is under the consideration of the Centre and action is expected to be taken shortly. The Chief Minister complained that the State Government laboured under a handicap, as it did not know the final shape of the Bill for demonetisation of *hali* currency introduced in the House of the People last month. Although the Bill had been passed, he said, no notification had been issued yet under it.

The Hyderabad Government has with it the Osmania Stabilisation Reserve, estimated at about Rs. 4 crores. This Reserve is invested in Government of India securities and is held by the State Government on account of the Central Government. Besides this, there is the *hali* reserve of Rs. 36 crores. It is stated that negotiations are in progress for the handing over of this reserve by the State Government to the Centre.

OFF THE RECORD

(By "ROVER")

THE Government of Bombay has been celebrating a Prohibition Week all over the State. In view of the increasing volume and venom of the criticism of this controversial policy of the Government, both within and without the legislature, it was but natural that the Government should consider it necessary to stage some demonstrations in support of it at this stage. There is a world of difference, however, between voluntary and spontaneous demonstrations by a section or the whole of the population for some popular cause and organised, official summoning of its supporters to wave flags and shout slogans. From the very nature of the thing itself, it was bound to lack life and strength, virility and enthusiasm witnessed on occasions of roused public feeling for or against some right or wrong cause.

If the celebrations staged to prop up prohibition proved to be limp, languid and lifeless like a wet rag, it was not the Government's fault. They could not have been otherwise. Being bureaucratically inspired and officially organised, smothered in red-tape and solemnity and lacking in imagination and exercise of the dramatic art, smelling of the musty odour of the Secretariat and the Old Custom House, not to say anything of the old files of the *Government Gazette*, they were destined from the moment of conception to prove as effete, dead and heavy, unavailing, uninviting and unentertaining as the daily run of Government publicity and propaganda poured from the Directorate of Publicity.

Demonstrations which fail to demonstrate and celebrations which are devoid of full-throated and lusty cheer or a sense of gaiety and temporary abandon are, in a sense, worse than useless; they do damage even to a good and worthy cause, by merely emphasising the distance between the sponsors of the cause and the general public for whose especial benefit the cause is being vigorously espoused. I must, however, concede that the absence of dust and din and vociferous stampede does not go to prove that prohibition as a policy is wrong any more than their success would have proved it right. All that it proves is that the policy, beneficial or otherwise, wise or ill-conceived, has failed to secure that emotional response from the public, which would transform it from being an official policy into a popular cause.

Incidentally, this proved two other things of which the Government and students of public affairs must take note: public opinion in the State of Bombay is not regimented; it cannot be commandeered by those in authority to support their whims and that, even within less than a year of its coming into power, the Government has lost intimate touch with the public, if it ever had it. The former is something for us to rejoice over, the latter we must all deplore, all the more so, when the Five-year Plan and the Community Projects need popular support and participation.

I should like to make it clear here, at the outset, that I am not endeavouring to examine the rights or wrongs of the prohibition policy of the Government of Bombay in any of its aspects—moral, political, legal or economic. Outside the pages of the Rubayat, I have not come across any sane person who would want to stand up in defence of drunkenness, if it is drunkenness that the Government is out to banish. I doubt if even old Omar advocated drunkenness as such. My intention is merely to comment on some phases of the recent celebrations organised by the Government as an item of the news parade.

I know that I am not qualified to undertake any serious probe into this policy; there are enough able philosophers, politicians, social reformers, lawyers and economists amongst us to undertake this difficult task. I hate to wade beyond my depth and, if I indulged in some such quixotic adventure obviously beyond my strength, I should be guilty of the same crime of which I accuse the Government of Bombay in engaging itself in staging this show. As a confirmed epicure, I am more interested in the frills and flounces than in the gross limbs they try to cover with a studied and intentional lack of success.

One of the curious things I noticed early in connection with the production of the play called Prohibition Week was that, like all producers, the Government of Bombay were also bent more on obtaining good press notices from the dramatic critics than on winning the approval of the audience. The other day, Mr. Jaya Prakash Narayan accused Mr. Nehru and the Government of India of valuing chits of recommendations for its plans and achievements from foreign visitors more than the evaluation placed on them by the people of the country. I thought this was a weakness confined to New Delhi because of its artificially created atmosphere of cosmopolitanism and internationalism. But I find that the disease in a modified form is more widespread.

The present Government of Bombay, which makes no secret of the fact that it stands or falls by its policy of prohibition, seems to seek with equal earnestness approval of its key policy from New Delhi than from the bulk of the citizens of the State. Having defied the Union Government several times in the past on this very point, the Chief Minister of Bombay seems now to have gone out of his way to gather testimonials and recommendations from this very source. And like the courteous and obliging visitors from abroad, the gods at New Delhi have proved equally accommodating. They have issued certificates of merit as they do at public exhibitions to those exhibitors who fail to win prizes.

I am certain that the Government of Bombay feels elated at receiving this "chit" from the Prime Minister. I have, however, subjected this rather equivocal and half-hearted certificate of merit to a critical examination and I am struck not so much by the general support it purports to give this policy as by all the "ifs" and "buts" and "howevers", which go to hedge in the limp and frequently faltering prop that it is meant to give Mr. Morarji Desai's pet policy. If I were applying for an important appointment on which I had set my heart, I would certainly hesitate to produce such a document to back up my application. In any case, I would not flourish it in the face of the members of the recruiting board or one of the many public service commissions, as something that clinches the matter in my favour for good.

The drafting of this message, which must have necessitated a strenuous effort and a good deal of direct or indirect pressure on the part of the State Government to obtain from so forthright a man as Mr. Jawaharlal Nehru, must have put a great strain on the ingenuity and capacity for equivocation of whoever undertook this difficult task. It also goes to show that diplomacy and penmanship are not dead in the Prime Minister's personal secretariat. It also does great credit to the resilience and political amiability of our gifted Prime Minister, because he could, with such great nicety and balance, combine personal integrity and political loyalty to a valuable party colleague. And to crown his great achievement, Mr. Morarji Desai also succeeded in dragging our astute Governor to support publicly this policy. But, as under our Constitution, the Governor or a Rajpramukh of a State cannot normally be held responsible for any of his public and political utterances, I, like the good constitutionalist that I profess to be, should naturally like to leave Mr. G. S. Bajpai out of this discussion. I wonder, however, if his lukewarm support lends any additional strength to the cause to what is already inherent in it.

The most outstanding thing, however, which I came across in this official campaign is something, which not only touches an important section of the business community very intimately, but also our whole future course of history as a democratic nation. Carried away by his newly found enthusiasm for this cause, Dr. Jivraj Mehta, the Prohibition Minister, who had gone to Ahmedabad to sponsor and inaugurate these celebrations, not merely deplored the misuse that various alcoholic tinctures were being put to by a misguided populace, but actually incited the people there openly and unashamedly to resort to *satyagraha*, to prevent the sale of tinctures in the larger interest of society. As if this was not enough, he went further and assured his audience that "there is no breach of law in such action."

Dr. Mehta and his Government have done all that is legally possible under the country's Constitution, to prevent the sale of certain pharmaceuticals where they are likely to be misused as intoxicants. Whatever sales which are now taking place in shops of tinctures are not only perfectly legal but backed by Government licences. The vendors are officially entitled to make these sales under the conditions of their licences. To ask and incite a body of men to obstruct the exercise of a legal right amounts almost to giving encouragement to officially organised and inspired lawlessness.

As it is, the country is being threatened, at innumerable places, with disintegration, by a misuse of this undemocratic and unconstitional weapon in support of causes good, bad or indifferent. I wonder if a man, who was not a responsible and senior Minister of one of the most advanced and progressive States, would not come within the clutches of the preventive detention legislation for such barefaced illegal incitement. This subject is of such tragic importance for our country at the present moment that I propose to examine it, if nothing more untoward requiring my attention happens in the meantime, by reverting to it in a future issue.—*All Rights Reserved.*

INDUSTRIAL POLICY OF GOVERNMENT

NEW MEASURES TO STIMULATE PRODUCTION AND EXPANSION IN THE OFFING

(From A Special Correspondent)

NEW DELHI, 7th April

DELHI LETTER

WITHIN this week-end, the voting on the grants for the various Ministries of the Government of India will be complete. It is not yet settled as to how long Parliament will be in session and what further business it should take up before it rises for the summer vacation. Now that the Prime Minister has returned to the capital from his Assam-border tour, a decision will be reached on this question in a day or two. The Finance Ministry is anxious to proceed with the Estate Duty Bill, as also with the Income-tax Amending Bill. Since the former is a revenue-yielding measure and will augment the resources of Government, so necessary for the implementation of the Five-year Plan, the Finance Minister does not like to have an indefinite postponement of the Estate Duty Bill. Although there is some force in the argument of those who want the consideration of this Bill shifted to a later date pending the final recommendations of the new Taxation Enquiry Committee, the Government is not likely to accept this argument inasmuch as such a course will delay the enforcement of the Bill by a few years. It will take at least two years for the Taxation Committee to submit its report and another year or so for Government to arrive at a decision on the recommendations of the Committee. By this time, Government will have completed the Five-year Plan period and, since the sponsors of the Plan have already taken into consideration, in their assessment of additional revenue, the yield from this source, the Finance Ministry is very keen to expedite this Bill and place it firmly on the Statute Book as early as practicable. It is, however, stated that a section of the Congress Party wants to adopt delaying tactics and it is possible that it will succeed in postponing this highly controversial measure, perhaps to the autumn session.

Encomiums to Ministry

The proceedings in Parliament on the voting of the grant of the Commerce and Industry Ministry this week were livelier and more interesting than the debates on the work of other ministries in the previous weeks. One reason for this is the fact that this Ministry has considerable direct dealings with the public both in the trade and the industrial spheres. A year or two ago, this Ministry was subject to trenchant criticism in regard to import and export control policies. With the emergence of a buyers' markets in a number of imported articles, coupled with stringent credit conditions, it has become no longer remunerative to hoard goods and hence members of Parliament were less critical in regard to export and import control administration. The relationship between these departments and the trade has become more cordial, instances of friction becoming negligible. In view of the improvement that has taken place in the administrative sphere during the last one year, many members paid well deserved encomiums to the efficient administration of this Ministry.

More Capital Goods

The reply of the Minister, Mr. T. T. Krishnamachari, to the debate was interesting from more points of view than one. The Minister utilised the occasion to make important pronouncements on the policy that his Ministry would be following in the course of this year with a view to augmenting industrial production as well as expansion. He was particularly conscious that Government should provide more stimulus for the manufacture of capital goods and other ancillary parts required in respect of several industries. For this purpose, he proposed to set up a high level body of experts to make a detailed survey of the available capacity and to indicate the uses to which it could be economically put. He was confident that, as a result of this survey, India should be able to produce a considerable quantity of machinery for the manufacture of cement, paper, jute goods, textiles, sugar, etc., which was being imported at high costs. It may be mentioned here that India has ere now been importing, on an average, about Rs. 95 crores worth of capital goods from abroad per year.

The Minister also advocated the importance of rationalisation in industry. He pointed out that greater production could be achieved by better utilisation of existing plant and machinery. The industrial production of the country, he said, had been planned on the assumption that each unit should manufacture the article in its entirety. There was no attempt to develop subsidiary industries manufacturing components on a large scale. Even when a manufacturer depended on the import of a particular component, he rarely made an attempt to explore and see whether the component could not be supplied by any other industry in the country. The Minister further observed: "We have, therefore, the paradox of a considerable fabricating capacity lying idle in the country, while we are still importing goods which could be produced by them, as well as extra plant and machinery for the making of such goods. If this form of national waste is to be avoided, we must, as a first step, make a survey of the existing capacity to discover what possible uses it could be put to." This method of approach to increase industrial production in the country is highly commendable and, if properly accomplished, will yield rich dividends in course of time.

Canalising Public Investment

Another announcement, which is also highly constructive in nature, made by the Minister for Commerce and Industry, related to the inducements proposed to be offered in order to increase the inflow of capital into industry. He stated that the Government proposed, during the year, to explore the possibilities of making investments in certain approved fields "more attractive." As a result of this, he asserted that "Indian capital will be seeking investment next year in desirable fields of production in a much greater measure than in the recent past." During the post-war period, a number of countries adopted special measures with a view to promoting a more rapid growth of some important industries. Among them mention may be made of increased amortisation for a specified time, guaranteeing of minimum interest for some years since it takes a few years for the establishment of key industries, exemption of income-tax for the money invested in specific industries, option to sell the shares to Government after a few years at a particular price, special encouragement for established industries to canalise a part of earnings into expansion activities by the exemption of income-tax for the money ploughed back into reserves, special railway concessions for the carriage of raw materials and also reduction of import duties, etc., exemption of tax on earnings from the sale of goods earmarked for export markets, etc.

Tea Propaganda in the U.K.

It is definite that Mr. H. V. R. Iengar, Secretary, Commerce and Industry Ministry, will be going to London some time in May in order to study the possibilities of increasing the consumption of tea in the U.K. and Continental countries. It is a well-known fact that Englishmen have not only been the most enterprising planters but also the greatest tea drinkers in the world. Wherever they have gone and colonised, they have taken this tea habit with them. Thus, to-day, besides the U.K., Canada and Australia consume more tea than any other country in the world on *per capita* consumption basis. Consumption of Indian tea in the U.K. has been averaging about 280 million lbs. per annum, valued at about Rs. 55 crores. Despite derationing of tea in August last, the intake of indian tea in that country has not improved to any marked extent. When the prices of tea in India declined in May last, the Government of India undertook certain measures in order to stimulate the import of tea by Continental countries. For instance, it relaxed the restrictions placed on the re-exports of tea from the U.K. to the Continental countries. Despite these measures, there was not any appreciable rise in the exports of tea, the total 'off-take of all the European countries put together not exceeding 10 million lbs. Generally, European countries have been accustomed to drink coffee or cocoa. If tea has not made any headway in these countries, it is due, to some extent, to the absence of large-scale propaganda. It is possible that judicious propaganda may, in due course, spread the consumption of tea. Since India and Ceylon are the two big tea exporting

(Continued in next column)

ECONOMIC OUTLOOK FOR THE U.K.

OFFICIAL SURVEY OPTIMISTIC

(From Our Own Correspondent)

LONDON, 2nd April

LONDON LETTER

THE Government's Economic Survey for this year—the non-planners of Conservatism have considered it desirable to keep the same watch on economic trends as their Socialist predecessors—is a good deal more optimistic than the same document of a year ago.

The past year has been one of disinflation and the Government consider they have got the economy on to a fairly even keel which can be maintained by a sufficiently strong but practicable stress on exports. The basic reason for the quietly confident but not too complacent survey of the coming year is the tremendous improvement which 1952 showed in this country's overseas balance of payments over 1951, an improvement which, though it may not be bettered, might be maintained in 1953.

In 1951, the U.K. had a deficit of some £400 million with the rest of the world. In 1952, this has been changed to a surplus of £291 million—an improvement of £689 million. This improvement has been made up as to £569 million by import cuts (of which the only encouraging feature is the substantial fall in commodity prices accounting for over half); higher export earnings £88 million, offset unfortunately by a fall in invisible earnings of £85 million; and finally defence aid receipts of £117 million. The following table compares the payment picture for 1951 and 1952:—

(In millions of £'s.)

	1951	1952
Total imports f.o.b.	3,496	2,927
Exports and Re-exports ...	2,748	2,836
Government expenditure ...	−187	−208
Other invisibles (net)	533	469
Balance	−402	+170
Defence aid	+4	+121
Final balance	−398	+291

It is unsatisfactory that invisible income should have fallen somewhat from the level of 1951 (the result of a drop in freights) and also that Government expenditure overseas should snatch back so much of the hard-earned income. Nevertheless, the standard of living has not suffered in the past year, thanks largely to the way in which commodity stocks have been able to buffer the drop in imports. For the coming year, particularly if the more confident outlook in international relations is maintained, commodity prices may continue to move advantageously to this country and compensate the otherwise undoubted need for some higher expenditure on imports.

So far as the sterling area as a whole is concerned, it is significant that the U.K.'s current balance is made up of a surplus with the rest of the sterling area of some £350 million and a *deficit* with the rest of the world of £60 million. The other sterling area countries, on the other hand, earned a net income with the non-sterling world of £135 million, so that the sterling area as a whole earned a net £75 million. If there had not been the repayment and interest on the U.S. and Canadian loans, this surplus would have been £150 million and the gold and dollar reserves would have risen over the past 12 months by no less than £200 million.

The future outlook for exports is uncertain: over 1952 prices rose by 5 per cent. not quite countering the drop of 6 per cent. in *volume*—mainly in cars, textiles, clothing and other consumer goods. Export prices are now dropping and competition is becoming fiercer. The Government can exhort but do little else: nevertheless they expect that industry will be able to maintain its position in overseas markets. The likelihood of this will be examined in one of my next despatches.—*All Rights Reserved.*

(Concluded from previous column)

countries in the world, it would appear that, in regard to tea propaganda, both these countries now appreciate the need for taking concerted measures in close co-operation. It will be remembered that, only recently, the Government of India came to an understanding with an important publicity firm in the U.S.A. for the promotion of Indian tea consumption in that country.—*All Rights Reserved.*

PAKISTAN NOTES

FOOD SUBSIDIES WITHDRAWN

CONSUMER TO PAY HIGHER PRICE FOR WHEAT

THE Government of Pakistan has withdrawn the scheme of subsidising foodgrains transactions, thanks to financial stringency. The chief consideration which has weighed with the Government in withdrawing the scheme is that not only did it not make any profit out of the food transactions but actually spent Rs. 2.5 crores during 1952-53 in order to make up the difference between procurement price and issue price. This difference had arisen from two main factors. First, the quantity of foodgrains procured inside the country during 1952-53 was a small proportion of the country's total requirements; the Government procured only 160,000 tons inside the country, but imported as much as 800,000 tons from abroad. Secondly, the price of imported foodgrains was substantially higher than that of grains procured internally and it was the average of these prices that was charged to the consumers.

As a result of the withdrawal of food subsidies, the price charged to the consumer is now exactly what it actually costs the Government to procure foodgrains, indigenous and imported. In addition to the cost of procurement, there are incidental charges of transport, handling, etc., which add to the cost to be recovered from the consumer. The procurement price of wheat has accordingly been raised by Rs. 2-8 to Rs. 12 per maund. This has been done to effect better procurement inside and also to provide inducement to cultivators to grow more wheat.

Pakistan is still faced with a difficult food situation, following failure of rains. The deficit in wheat is of the order of 1.25 million tons. The situation was very critical last year. Production of wheat during 1952-53 had gone down to 2,988,000 tons, as compared with 3,933,000 tons in the previous year, representing a fall of 945,000 tons. This had led to a sharp rise in prices everywhere. With a view to meeting food shortage and to bring down prices, the Government of Pakistan made vigorous efforts to import foodgrains from abroad. Arrangements for importing 800,000 tons of wheat were made. Of this quantity, 650,000 tons have already arrived and been distributed to the deficit areas. Efforts are being made by the Government to import a further substantial quantity of wheat against loans or aid. An approach has already been made to the U.S. and Australia.

"Grow-more-food" Campaign

The measures adopted by the Government to meet the food shortage have not been confined merely to arrangements for importing foodgrains from abroad. A vigorous "grow-more-food" campaign has been launched. The Provincial and State Governments have been taking active steps to bring about a re-diversion of area under commercial crops to food crops. Thus, to encourage the cultivation of wheat, the Sind Government has revised the assessment on oilseeds as against wheat. The Punjab Government and other administrations have granted remissions in assessment on additional areas and for areas diverted from non-food to food crops. Good quality goods are being supplied to cultivators in large quantities and at subsidised rates, and 12,000 tons of fertilisers have already been distributed in West Pakistan for use on *rabi* crops.

In addition to the above measures, several long-term measures are being adopted. These cover supply of water on a regular basis, cut in the area under jute cultivation, restriction on cultivation of other cash crops, import of 115,000 tons of ammonium sulphate, and sinking of a large number of tube-wells.

Textile Imports

The decision of the Pakistan Government to ban imports of cotton textiles during the current shipping period was bitterly criticised by the Textile Merchants' Association at the annual function of the Association held at Karachi the other day. The decision, it was said, had been responsible for the sudden rise in prices. Replying to this criticism, Pakistan's Minister for Commerce, Mr. Fazlur Rahman, maintained that there were enough stocks available in the country and as such there was no justification for the sudden rise in prices. In this connection, the Minister cited statistics to prove that there had been very heavy imports of cotton piecegoods in the past. Here are the figures:

(In crores of rupees)

Year	*Value*
1948-49	35.29
1949-50	21.41
1950-51	33.90
1951-52	37.12
Six months ended December, 1952	7.44

The Minister, once again, appealed to the trade not to speculate and corner the stocks. He also gave an assurance that if the stocks of cotton piecegoods, or for that matter any other essential consumer goods, declined, the Government would import them.

Balance of Payments

Pakistan had an adverse balance of payments to the tune of Rs. 77.69 crores during 1952, as against a huge surplus of Rs. 52 crores in the previous year. This was due, in the main, to heavy imports of foodgrains and defence equipment on Government account. The sharp fall in the demand for, and consequently the prices of, Pakistan's exports, following the world-wide recession in commodity markets, also was responsible for the reduction in the foreign exchange earnings. The adverse balance of payments during 1952 is fully reflected in the marked decline in Pakistan's foreign assets, from as high as Rs. 150.52 crores in the beginning of 1952 to Rs. 82.15 crores on 2nd January, 1953. The position seems to have worsened still of late, as will be evident from the fact that the assets stood lower at Rs. 80.51 crores as on 20th March, 1953.

Faced with such a situation and with a view to bridging the widening gap in the balance of payments, the Government of Pakistan has drastically curtailed imports. As a reference to this has already been made in the previous week's notes, it is unnecessary to refer to it again. But suffice it to say that, considering the persistence of heavy imports of foodgrains, on the one hand, and decline in exports, on the other, it would not be surprising if the current calendar year were to end with a wider adverse balance of payments than at present.

Radio Communications

An expansion scheme for the radio communications system is reported to have been finally approved by the Government of Pakistan. The proposed scheme envisages installation of five new transformers and 14 receiving sets in the country's four major centres of communication. The creation of additional circuits for the maritime mobile service in the seaports of Karachi and Chittagong is also included in the scheme. The whole scheme has been prepared by Mr. S. Q. Cabalerio, a Colombian tele-communications expert, working in Pakistan under the U.N. Technical Assistance Programme.

FIGHTING CANCER

In search of new and more powerful armaments to detect and combat diseases, General Electric has developed the latest equipment for fighting the dreaded disease of Cancer. The Chittaranjan Cancer Hospital at Calcutta has recently installed a G-E million volt X-ray apparatus; the biggest installation of its kind in Asia, this apparatus offers immense possibilities in the research and treatment of Cancer.

In peace or in war, General Electric has served the health services of India by supplying, servicing and maintaining X-ray and electro-medical equipment for more than quarter of a century. Nearly 3,000 G-E Diagnostic and Therapeutic X-Ray equipment are functioning throughout the country today, offering relief to the sick and infirm.

FOREIGN HOLDINGS OF GOLD AND DOLLAR ASSETS IN U.S.

RISE EXPECTED TO CONTINUE IN 1953

IN the past three months, the U.S. gold stocks have staged a decline of $675 million. This swing dates back to the spring of 1952. According to the U.S. Department of Commerce, foreign countries acquired $404 million from the U.S. in the second quarter of 1952. In the next quarter, their earnings climbed to $735 million, but dropped to $395 million in the last quarter. Thus, in the last nine months of 1952, foreign countries are estimated to have added slightly over $1.5 billion to their gold and dollar reserves. The accumulation was concentrated in dollars up to December, 1952, when conversions into gold began at the rate of $50 million a week on an average. The impulse to this movement was given by rumours of an increase in the U.S. price of gold which were rampant at the time. Besides, it was also considered safe by the acquiring countries that some part of the gains in foreign dollar resources should be converted into gold.

Foreign holdings of gold and dollars in the U.S. were at their lowest point just before the devaluation in 1949. Devaluation of most foreign currencies in September, that year, led to a recovery in the holdings which were further enlarged by American purchases abroad after the outbreak of the war in Korea in June, 1950. By June, 1951, foreign gold and dollar reserves were up by $4.75 billion. During the following nine months, however, the trend turned downward. While some countries such as Japan and Germany continued to gain in this period, the U.K. was, according to the *Monthly Letter* of the National City Bank of New York, a heavy loser on account of the collapse of the world prices of wool, tin and rubber. Consequently, the U.K. and sterling area countries had to tighten their import restrictions and change their monetary policy. These moves to correct their balance of payments, coupled with intensified efforts to increase their exports to dollar areas, brought about a change in the British position during the spring and summer of 1952. The U.K. added $184 million to its international reserves between 31st March and 31st December, 1952, after paying $181 million on its American and Canadian post-war loans. This trend continued in the first quarter of the current year also, the net accretion to the U.K.'s gold and dollar reserves being $320 million. These reserves now stand at $2,166 million, after dipping to a low of $1,685 million at the end of June, 1952.

The swing in the flow of gold and dollars from the U.S. to the rest of the world does not mean that there is no longer a "dollar gap." Nor should it be taken to indicate that the era of dollar shortage is over. All that it means is that the dollar scarcity which was acute in the first half of 1952 had eased considerable in the second half of that year. In fact, during the major part of the last two quarters of 1952, the U.S. lost gold or increased its dollar liabilities, despite the continuance of the "dollar gap." The dollar gap, which ordinarily means the deficit of the rest of the world with the U.S., is, says the *International Financial Statistics* of the I.M.F., difficult to define, and any precise indication of its magnitude is necessarily somewhat arbitrary. Nevertheless, broadly stated, the dollar gap can be stated to represent the net flow of goods and services from the U.S. minus the net receipts of dollars of the rest of the world on account of (1) private donations, (2) private capital movements, and (3) certain non-compensatory official financing transactions. Compensatory official financing comprises grants and loans induced by balance of payments pressure abroad, together with the movements in U.S. gold holdings and foreign dollar balances in the U.S. The arbitrary element in this definition of the dollar gap lies in the difficulty of separating compensatory and non-compensatory grants and loans. Again, it should be borne in mind that changes in the U.S. gold holdings are not the obverse of changes in the rest of the world's gold holdings, owing to the availability—to either the U.S. or the rest of the world—of current gold production and owing to outflows from the gold holdings of both the U.S. and the rest of the world into industrial consumption or private hoards.

The following table culled from the *Monthly Letter* of the National City Bank of New York, referred to above, indicates the changes in the U.S. balance of international payments since the year 1949:

U.S. International Payments.
(In billions of dollars)

	1949	1950	1951	1952*
Transactions Supplying Dollars:	$	$	$	$

Net	+0.6	+2.7	+1.3	+1.2

Based on the Department of Commerce data: 1952* partly estimated by the National City Bank of New York.

It will be seen from the table above that, among transactions supplying dollars to foreign countries, merchandise imports top the list. This reflects in a large measure the impact of the Korean war on Government expenditure. The value of imports which stood at $7.1 billion in 1949, gradually rose to $9.3 billion in the following year and to the peak of $11.7 billion in 1951. Although the estimates for 1952 place the value of imports slightly lower at $11.4 billion, it is necessary to bear in mind the decline in prices of imported raw materials in the year, while judging the magnitude of imports. Another notable item is the increase of $0.4 billion in the estimated U.S. Government expenditure to $1.6 billion in 1952. Under the heading "other dollars supplied" the U.S. investments abroad amount to annually $1.3 billion in all the years except 1951, when they were slightly lower at $1.1 billion. But the total dollars supplied under the U.S. Government economic aid shrunk gradually from $5.2 billion in 1949 to $2 billion in 1952. Nevertheless, the total dollar supplies improved from $16.6 billion in 1949 to $19.3 billion in 1952.

Among transactions requiring dollars, notable increases are reported in commercial exports which amounted to $14.4 billion in 1951 as against $10.4 billion in 1950. The estimates for 1952 place them lower at $13.3 billion, the fall being due mainly to the tightening of import restrictions in some countries and partly increase in production of agricultural crops in countries outside the U.S.

The gradual decline in the net U.S. surplus of receipts over payments from $2.7 billion in 1950 to $1.2 billion in 1952 is attributed to (a) the use of fiscal and credit policies to suppress inflation in the rest of the world; (b) the maintenance of tight foreign exchange and trade restrictions; (c) the continuance of the abnormal U.S. outlays abroad under the Mutual Security Act and other assistance programmes, and (d) U.S. capital investments. These have swollen the flow of dollars abroad to a point where they exceed the amounts the rest of the world require to pay for goods and services purchases in the U.S.

It will be noted from the aforesaid account that the setback in the net balance of payments position of the U.S. is not due to an excess of imports over exports but to the continued payments made by that country to the rest of the world on non-trade account. Accordingly, the "dollar gap" is still in existence, but the size of the gap has considerably narrowed down.

The U.S. Department of Commerce is of the view that, with favourable climatic conditions abroad and continued favourable business conditions in the U.S., foreign countries should be able to raise their gold and dollar assets again in 1953; though probably, at a slower rate. This view is based on the following points:

(1) Private investment may not decline below the rate of the last six months of 1952, since, except for Canada, the net outflow of funds for direct investment had already shrunk to an annual rate of less than $100 million.

(2) Military spending is the major source from which foreign countries can expect higher dollar receipts, since these are likely to rise as deliveries are made on contracts already placed.

(3) Government aid, other than military, is expected to continue to move downward, although a temporary upturn in grants is likely over the relatively low fourth quarter rate.

(4) The volume of merchandise imports required for current use in 1953 is likely to remain as high as in 1952. With steady U.S. demand and perhaps rising demand abroad, prices may stabilise, but at the level of the last quarter of 1952, they still would be 3 to 4 per cent. lower than the 1952 full year average.

(5) Textile production abroad has been rising, which may indicate a rise in U.S. raw materials exports. But excess capacity in U.K. metals products industries may result in increased competition for U.S. manufacturers.

(6) Large stocks of coal abroad will postpone the need for imports from the U.S., even if the demand for coal should increase. Foreign wheat inventories would postpone an upturn in purchases here even if the foreign supply situation becomes less favourable.

(7) The movement of funds abroad, reflected in the unrecorded transactions probably was a temporary factor. The amount available for transfer is limited and the recent rise in U.S. short-term interest rates probably has reduced the incentive for such transfers.

RESERVE BANK APPOINTED BANKER TO HYDERABAD STATE

The Government of Hyderabad has, as indicated previously in these columns, fallen in line with other State Governments, namely, Travancore-Cochin, Madhya Bharat and Mysore, which have appointed the Reserve Bank of India as their sole banker. According to an agreement signed at Hyderabad on the 31st ultimo between the Hyderabad Government and the Reserve Bank of India, the latter has been functioning as the banker to the State Government from the 1st inst. The Bank will, accordingly, conduct the banking, remittance and exchange business of the State Government, receive and keep in deposit its cash balances and also manage the public debt of the State, including issues of new loans. The agreement provides also for certain transitional arrangements designed to minimise dislocations.

Under a separate agreement, the Hyderabad State Bank, which has taken over the entire business of the Mercantile Bank of Hyderabad, becomes the agent of the Reserve Bank of India in the State of Hyderabad, the first to be so appointed in a Part B State. The Hyderabad State Bank will, on behalf of the Reserve Bank, transact the banking business of the State Government and also of the Central Government (including transactions pertaining to railways) within the territorial limits of the Hyderabad State. The terms of agency follows broadly, though not wholly, the pattern of the existing arrangements between the Reserve Bank of India and the Imperial Bank of India which enable the latter to function as the Reserve Bank's agent in Part A and Part C States. The Reserve Bank of India has established currency chests and small coin deposits at the offices and branches of the Hyderabad State Bank where Government cash business is transacted.

The Government of Hyderabad has agreed to appoint, in exercise of its powers under the Hyderabad Bank Act, a representative each of the Central Government and the Reserve Bank of India as Directors on the Board of the Hyderabad State Bank.

PROGRESS OF NATIONAL BANK OF INDIA SATISFACTORY

DEPOSITS AT RECORD LEVEL

THE steady expansion in the business of the National Bank of India Ltd. (General Manager: Mr. N. W. Chisholm, London), noted in the past several years, received a check in the year ended 31st December, 1952. From the statistics available with us we find that the Bank's balance-sheet total had steadily grown from £61.87 million at the end of 1943 to a record level of £125.30 million at the close of 1951. The marked growth in the Bank's activities reflected in these figures suffered a minor setback in the past year, as witnessed the slight decline of £1.84 million in the year-end balance-sheet total to £123.46 million. This fall was inevitable in the light of business conditions that prevailed during the year. It has not been as serious as in the case of many other banks. Further, it will be interesting to note that the 1952 total of £123.46 million is still well above the 1950 total of £109.97 million. A distinctly heartening feature disclosed by the accounts for 1952 is that there has been an expansion in the Bank's deposits by about £1 million to stand at £110.93 million. In fact, the Bank has had an unbroken record of continued expansion in deposits since 1938 when they stood at £27.86 million. As advances, however, have been lower and costs have remained unchanged, there has been a shrinkage in profit.

The following synopsis of the Bank's balance-sheet, as at the end of the year under review, as compared with those at the close of the previous three years, gives an idea of the Bank's progress in recent years:

(In thousands of £'s sterling)

	As on 31st December			
LIABILITIES (MAIN)	1952	1951	1950	1949
Capital	2,281	2,281	2,281	2,281
Reserve fund	3,675	3,675	3,600	3,500
Current assets and deposits ..	110,932	109,960	101,576	84,265
Bills payable	1,584	1,780	1,507	1,286
Loans payable	741	4,000	..	..
Acceptances for customers ..	1,010	1,963	452	..
ASSETS (MAIN)				
Cash balances	20,345	17,370	21,887	18,111
Investments—				
British Government and other securities	11,484	11,780	14,772	14,167
Indian, Pakistan, Ceylon and East African Governments and other securities	10,868	9,944	11,799	9,963
Bills of exchange (including Treasury Bills)	23,722	16,363	15,452	8,864
Advances and loans	53,318	65,476	43,351	39,746
Fixed assets (net)	1,202	952	724	614
Balance-sheet total	123,458	125,298	109,971	92,972
Number of shareholders	3,039	3,057	3,033	3,047

The deposits of the Bank as at the end of 1952 show an increase of £97,000 which is, however, very much less than that of £8.38 million noted at the end of 1951 and £17.32 million at the close of 1950. In other words, the pace of expansion considerably slackened during the year under review. This is only as it should be, in view of the disinflationary forces that were released during the year.

The slight improvement in resources was not accompanied by any increase in the Bank's commercial credits. The lower demand for credit from private borrowers coupled with the Bank's alertness to tune its lending policy in conformity with the official policy, has resulted in a contraction of its advances and loans by £12.16 million, in contrast to the spectacular rise of £22.13 million recorded in 1951. The decline in advances and loans in 1952 would have been less marked had it not been for the exceptionally large demand for accommodation at the end of 1951 and early in 1952. Acceptances for customers have also declined by about £95,000. The decline in these two items has been partially offset by the increase of £7.36 million in bills of exchange, including Treasury Bills. There has also been an increase in investments and cash balances. As will be noted from the foregoing table, the rise in investments has been only in Indian and other Government securities. As in the previous years, investments are shown at below market value. The combined total of investments and cash balances gives a liquidity ratio of 38.5 per cent. as against 35.5 per cent. a year ago.

The drop in the main source of income, namely, advances, has not very seriously affected the Bank's profit. The consolidated profit of the Bank (that is, including the profit of the subsidiaries) after providing for taxation and transfers to staff pension funds and to contingency reserves, out of which provision has been made for diminution in value of assets, amounts to £411,676. This shows a decline of £29,781 only, as compared with the profit for the previous year. The allocation to the premises account has been reduced by half to £75,000. Reserve fund, which had received £75,000 last year, has not been credited with anything. The Directors have, however, chosen to strengthen the inner reserves by increasing the allocation to them from £20,000 to £140,000. The dividend, at 16 per cent. per annum (same as that paid for 1951), absorbs £191,625, leaving an unappropriated surplus of £323,703, as compared with £318,652 brought in.

CANARA INDUSTRIAL AND BANKING SYNDICATE LTD.

The audited statement of accounts of the Canara Industrial and Banking Syndicate Ltd. (General Manager: Mr. T. A. Pai, Udipi, S. India), for the year ended 31st December, 1952, fully reflects the great caution exercised by the Bank's Directors in employing the resources of the Bank judiciously during the past year which proved to be one of the most strenuous ones for banks. At the same time, the accounts bear testimony to the successful efforts of the management in strengthening the resources of the Bank. Thus, the Bank's deposits at the end of 1952 show a striking improvement of Rs. 39.36 lakhs, an achievement which very few small banks can boast of. Advances were lower by only Rs. 9.82 lakhs, but, in terms of the level of deposits, they disclose a sharper fall, as is evident from the decline in the advances, ratio from 70 per cent. to 60.5 per cent. As in the case of every other bank, the effect of the decline in advances was more than offset by the larger income earned on it on account of the higher rates of interest on such advances. But the increase in establishment charges and higher interest paid on deposits counteracted the increase in the income, with the result that the Bank's profit for the year under review suffered a small decline from Rs. 4.01 lakhs for 1951 to Rs. 3.52 lakhs.

Interest and discount earned went up from Rs. 19.28 lakhs to Rs. 21.04 lakhs, but commission and exchange received declined from Rs. 3.19 lakhs to Rs. 2.87 lakhs. Interest paid on deposits and borrowings were up by Rs. 1.03 lakhs to Rs. 8.19 lakhs and establishment expenses from Rs. 12.14 lakhs to Rs. 12.89 lakhs. Out of the profit of Rs. 3.52 lakhs, provision for taxation absorbed Rs. 65,000 (as against Rs. 1.15 lakhs), transfer to the reserve fund Rs. 1 lakh (same as in the previous year) and bonus to staff Rs. 37,000 (Rs. 37,000). The dividends on the ordinary shares at 9 per cent. and on the 6 per cent. and 5 per cent. cumulative preference shares—all tax free—together took up Rs. 1.50 lakhs, as compared with Rs. 1.46 lakhs.

During the year, the Bank raised its paid-up capital from Rs. 24.38 lakhs to Rs. 25.11 lakhs. Its reserve fund as at the end of the year amounted to a respectable figure of Rs. 11 lakhs. Deposits stood at Rs. 401.07 lakhs, the increase over the year being Rs. 39.36 lakhs. A notable feature of the Bank's deposits is that fixed deposits form the bulk of them. These deposits amounted to Rs. 233.67 lakhs at the end of 1952, having risen by Rs. 22.64 lakhs. Current deposits too were up from Rs. 74.39 lakhs to Rs. 84.48 lakhs and so also savings bank deposits from Rs. 76.29 lakhs to Rs. 84.93 lakhs. Borrowings from other banks, which had been on a fairly high level last year at Rs. 46.85 lakhs on account of the heavy demand for funds, were reduced to a negligible sum of Rs. 15,084. As already noted, advances declined by Rs. 9.82 lakhs, that is, from Rs. 252.53 lakhs to Rs. 242.71 lakhs. Investments at cost amounted to Rs. 130.69 lakhs (an increase of Rs. 2 lakhs over the year), of which Gilt-edged securities account for Rs. 129.63 lakhs. The average market value of the latter was lower at Rs. 122.66 lakhs. Cash balances show a negligible drop from Rs. 77.18 lakhs to Rs. 76.97 lakhs. The investments and cash balances give a combined coverage of 51.8 per cent. to total deposits.

(*Concluded from next column*)

lakhs in saving deposits. Advances have declined by Rs. 61.18 lakhs and, as the fall in deposits has been greater than that in advances, the ratio of advances to deposits has gone down by only a small extent. Investments and cash balances do not show any worthwhile variation but, with the decline in deposits, the liquidity ratio has improved from 50.7 per cent. to 58.7 per cent. As in the previous year, investments are shown at book value. The market value of the same as at the close of 1952 was Rs. 181.75 lakhs, the depreciation being of the order of Rs. 5.91 lakhs.

The year 1953 may well prove to be a turning point in the history of the Bank, if the proposed amalgamation of the three banks in Rajasthan, namely, the Bank of Jaipur, the Bank of Bikaner and the Bank of Rajasthan, which has been approved by the Reserve Bank of India in principle, is carried through in the next few months.

BANK OF JAIPUR COMPLETES A DECADE

DIVIDEND MAINTAINED

THE war-time prosperity in India was fully availed of by a few enterprising industrialists to spread modern banking in places, particularly the Princely States, which had till then been served mostly by indigenous bankers. Quite a number of Scheduled Banks thus sprang up during those years. To the rank and file of banks thus established and which have completed a decade of useful service in 1952 belongs the Bank of Jaipur Ltd. (General Manager: Mr. S. L. Kothari, Jaipur). Established in February, 1943 (the Bank's business actually commenced in May of that year), the Bank, which has earned the distinction of being the first modern bank in any of the former Rajputana States, has not, however, had a smooth sailing during these ten years. The decade saw many political and economic changes which left their impress on the Bank. The political integration of the Rajputana States, in particular, has adversely affected the Bank, inasmuch as it deprived the Bank, to a large extent, of the patronage and support that was being extended to it by the former Jaipur State Government. Moreover, it has had to face keen competition from the banks of the other integrated units of the present Rajasthan State, as well as from other banks operating in that area. Though the effect of these factors on the working results of the Bank in recent years has been perceptible, the Bank has stood the test of time and been working fairly satisfactorily in recent years.

During the ten years of its working, the Bank has built up a reserve fund of Rs. 15 lakhs against a paid-up capital of Rs. 50 lakhs. Its deposits as at the end of 1952 stand at Rs. 516.28 lakhs (though they have fallen from the peak of Rs. 826.32 lakhs touched at the end of 1948, a trend common to most of the Scheduled Banks) and its total working funds at Rs. 655.20 lakhs. The Bank paid a maiden dividend of 4 per cent., less British Indian tax, in the fourth year of its working, i.e., in 1946. In the following year, the dividend was reduced to 3 per cent., free of income-tax, which rate has since been maintained. It has a network of 38 branches, as many as 20 of them being in Rajasthan.

The working of the Bank during the year 1952 has resulted in a small decline in its profit, that is from Rs. 4.59 lakhs for 1951 to Rs. 3.99 lakhs. After providing a sum of Rs. 1 lakh for taxation, the net amount available for appropriation is only Rs. 2.99 lakhs. But, with the addition of Rs. 1.21 lakhs brought in from the previous year, the Directors have been able to strengthen the reserves by a sizable sum of Rs. 2.35 lakhs, and also maintain the dividend at 3 per cent. (absorbing Rs. 1.50 lakhs), leaving to be carried forward a sum of Rs. 35,324.

The following comparative table gives an idea of the Bank's progress since 1949:

(In lakhs of rupees)

	For the year ended 31st December			
	1952	1951	1950	1949
Interest and discount earned ..	23.37	21.64	24.37	25.18

EXPORTS OF INDIAN CLOTH IN 1952

MARKED DECLINE IN QUANTITY

REVIEWING the highly encouraging trend of India's exports of cloth in 1950 two years ago—*vide* page 580 of *Commerce* dated 31st March, 1950—we observed that there could be little jubilation over it, for India would not be able to repeat that performance and retain its first rank among exporters of cloth. That this conclusion was not at all exaggerated is clearly borne out by the appreciable shrinkage in the quantity of cloth exported during the last two years, when India was pushed to the fourth place, preceded by the U.S., the U.K. and Japan. The shrinkage in exports was particularly marked in 1952. Thus, exports of cloth by India during the year under review—it was only a few days ago that the full statistical details of exports by sea and air became available—amounted to 591.51 million yards, as compared with more than 750 million yards exported by Japan, 711 million yards by the U.K., and 761 million yards by the U.S. It must, however, be mentioned here that the figures for India do not include exports through land. It is estimated that large quantities of cloth have crossed into Pakistan, part of it officially and part unofficially. Even if allowance is made for this, it is doubtful whether India's total exports would exceed those of any of these three countries.

For the current year (1953), the target for exports from India is fixed at 1,000 million yards. It is, however, doubtful whether this target will be reached, what with the growing competition in the world markets for textiles, especially by the Japanese, British and Continental mills, and the severe restrictions imposed in several countries, such as Pakistan, necessitated by balance of payments difficulties. Moreover, the vagaries of the Government of India's export policy and high export prices of cloth, thanks to export duty on coarse and medium counts and import duty on cotton, are doing a lot of avoidable harm to India's export trade in cloth. All this is an old story which has been referred to in these columns on a number of occasions in the past and as such it is unnecessary to repeat it in detail again. It is, therefore, proposed to confine the present review only to a statistical analysis of India's exports of cotton manufactures through sea and air during 1952, against the background of those in the previous two years.

As already mentioned, India exported 591.51 million yards of cloth during the year under review, which compares unfavourably with 775.97 million yards in 1951 and 1,119.62 million yards in 1950, representing a decline of 23.9 per cent. and 47.2 per cent., respectively. The value of exports aggregated Rs. 63.48 crores, as against Rs. 82.74 crores and Rs. 96.90 crores, respectively, the percentage of decline being 23.3 and 34.5. As will be seen from these figures, the extent of fall in value is not as large as in the case of quantity.

The decline in exports of cloth during 1952 was accounted for solely by mill-made piece-goods, the quantity actually shipped being 537.66 million yards, as against 732.34 million yards in 1951 and 1,078.47 million yards in 1950. Exports of handloom cloth, however, were substantially higher at 53.85 million yards, as compared with 43.63 million yards and 41.15 million yards, respectively, in the preceding two years. The fall in exports of mill cloth in 1952 was more marked in grey (unbleached) varieties than in other varieties, as will be seen from the figures given below:

(In million yards)

	1950	1951	1952
Grey (unbleached) ...	475.92	386.11	207.90
White (bleached) ...	219.13	132.25	104.29
Coloured (printed or dyed)	383.41	213.98	225.47

The following table gives a country-wise analysis of India's export trade in mill cloth in 1952, as compared with the two preceding years:

(In million yards)

	1950	1951	1952
Singapore	200.21	171.07	84.12
Burma	130.47	24.60	69.84
Aden	86.88	48.55	58.79
Pakistan	53.51	11.90	53.17
Sudan	53.91	27.99	53.06
Kenya, Zanzibar and Pemba	35.47	16.46	28.56
Tanganyika	18.81	5.52	22.41
Ceylon	48.91	25.11	16.59
Hongkong	27.36	20.48	8.64
Malaya	33.58	13.06	6.62
Australia	45.54	38.90	7.07
United Kingdom	71.87	89.12	5.48
Canada	4.80	15.14	1.52
U.S.A.	5.55	68.33	0.15
Other countries	261.60	156.11	121.64
Grand total ..	1,078.47	732.34	537.66

The above table reveals that the major part of the fall in exports of mill cloth in 1952 was accounted for by Singapore, the offtake of which during the year under review declined by more than 50 per cent. and 57 per cent., as compared with 1951 and 1952, respectively. The fact that, besides this, the Federated States of Malaya also bought a smaller quantity of cloth from India suggests that not only the internal consumption must have been downwards but also the re-export of cloth from Singapore to the surrounding countries, especially Indonesia, must have been adversely affected by the stiff competition offered by Japan. Another important *entrepot* centre to which cloth exports fell is Hongkong; the quantity of cloth exported to this place during 1952 was 8.64 million yards, as against 20.48 million yards in 1951 and 27.36 million yards in 1950. A conclusion that can be drawn from these figures is that the *entrepot* centres can no longer be depended upon for purposes of exports when the buyers' market comes to stay and when competition among exporting countries is the order of the day. Efforts must, therefore, be made by exporters in this country to contact the consuming countries direct and thereby improve the chances of establishing permanent markets in those countries.

Lower Offtake by U.K.

There has been a sharp decline in the quantity of cloth shipped to the U.K., from 71.87 million yards in 1950 and 89.12 million yards in 1951 to a bare 5.48 million yards in 1952. This was due to the world-wide recession in cloth trade and also to the efforts on the part of the Lancashire mills to step up exports of cloth manufactured by themselves. Most of India's exports of cloth in the previous years, it may be remembered, represented grey cloth which was subsequently finished in Britain and then re-exported. There has also been a sharp fall in exports to the U.S., which is the result of the slowing down of the stock-piling programme in that country. Exports to Australia, too, were very low, due to the import restrictions necessitated by balance of payments difficulties.

In contrast to the general trend, Burma, Aden, Pakistan, Sudan, Kenya and Tanganyika purchased larger quantities of cloth from India during the year under review.

India's export trade in twist and yarn also received a severe setback during 1952. The quantity actually shipped was not more than 20 million lbs. valued at Rs. 5.02 crores, as against 26.20 million lbs. valued at Rs. 6.93 crores in 1951 and 184.72 million lbs. valued at Rs. 17.46 crores in 1950. The most important buyer of Indian cotton twist and yarn was Hongkong, its offtake amounting to 6.12 million yards. Other important buyers were Burma accounting for 3.27 million lbs., Singapore for 3.25 million lbs., Aden for 2.37 million lbs., and Pakistan for 1.93 million lbs. The quantity exported by India would have been higher, but for the restrictions on exports by the Government of India in order to conserve supply for handlooms.

"WORRALL'S DIARY"

That the book, *Indian Textile and Engineering Diary*, published by the well-known firm of Messrs. John Worrall Ltd., Oldham, England, specialists in the field of textile publicity (Agents in India: Messrs. W. H. Brady & Co., Ltd., Royal Insurance Buildings, Veer Nariman Road, Fort, Bombay), has completed sixty-four years of existence is itself a clear proof of its growing popularity. The present edition, just like its predecessors, is replete with valuable data relating to the purchase and sale of textile machinery, accessories and other suppliers. The *Diary* contains a comprehensive buyers' guide furnishing information on three important aspects, namely, (1) machinery, accessories, power transmission equipment, mill supplies and services, (2) chemicals, auxiliaries, mineral products, oils, etc., and (3) raw materials, yarn spinning, processing manufacturing, finishing, merchanting and the like. It also gives pictorial trade marks and designs, besides an alphabetical list of trade names.

The utility of the publication is enhanced by the inclusion of notes and formulæ relating to spinning machinery and cotton preparing and series of tables indicating the easy way of numbering yarns by counts, finding out warp and weft weights, determining piece-weight of small patterns, carding cloth, etc. Also given at the end of the publication is a list of cotton, silk and rayon and jute mills and of miscellaneous textile firms. The other notable features of the *Diary* are classified list and glossary of textile fabrics (Indian Section), statistical survey of cotton spindles and looms in India, and list of textile associations and other organisations interested in the textile fabrics in India and Pakistan.

IMPORT OF BOBBINS INTO INDIA

PLEA FOR REVISION OF POLICY

THE Government of India's policy in regard to imports of bobbins requires a thorough revision, if the textile industries are to maintain their competitive capacity in the world and if the quality of Indian-made bobbins themselves is to improve. The present policy of the Government is to restrict the imports to the barest minimum, thereby providing for all practical purposes a closed market for the domestic manufacturers of bobbins. Although the latter have been enjoying this protection for the past four years, there has been no improvement in the quality of their products, according to the Millowners' Association, Bombay.

The Association has submitted to the Government a well-argued and convincing case for the relaxation of restrictions on quantum of bobbin imports into this country. The main ground on which the Association has based its demand is that the quality of the bobbins produced in a large number of factories is still "extremely unsatisfactory," in spite of the Government's protection by way of regulated imports. The total production of bobbins in India in 1951 was 334,929 gross, against the average consumption of 389,291 gross per annum, which means that the lag between domestic requirements and supply from indigenous sources was roughly 15 per cent. Evidently, the Government has been endeavouring to regulate imports of this item in such a manner as not to permit them exceed this 15 per cent., though, as a matter of fact, in more than one quota period, licences reported to have been given did not even exceed 50 per cent. of the difference between the estimated domestic demand and production. Having been assured of the market thus, the indigenous bobbin industry has shown no enthusiasm to improve its equipment and production. The cotton mills have, therefore, been driven to the necessity of taking to use even sub-standard bobbins, regardless of every other consideration.

Modernisation of Equipment

Certainly, this is not what the Tariff Board expected when it recommended to the Government, more than four years ago, regulation of bobbin imports with a view to maintaining and expanding indigenous production. For in its report, the Board has clearly stated that the manufacturers of bobbins should take early steps to equip their units with modern machinery and tools. The Government accepted this suggestion and promised all reasonable facilities in this regard when approached by the industry. The Tariff Board had also recommended that (*a*) "Government should arrange to have adequate tests carried out regarding the suitability of different kinds of timber for the manufacture of bobbins and secure the co-operation of textile mills for this purpose," and (*b*) "pending adoption of standard specifications, Government should appoint two timber experts to carry out a rapid survey of the industry and draw up a list of factories which are suitably equipped to produce quality bobbins." These factories were to be known as approved factories. Neither bobbin producers nor the Government have carried out these key recommendations with the result that, even four years after the Board's report, there has been no improvement in the quality of bobbins. There are no approved factories even to-day from which the mills can confidently buy their requirements. Consequent on this and also on imports being drastically curtailed, the cotton mill industry, as already stated, has been compelled to use sub-standard bobbins. There is, therefore, no exaggeration whatever in the statement of the Millowners' Association that the protection, which the import regulations seek to confer on the indigenous bobbin industry, regardless of its standard of equipment and production, ignores one of the main objectives of the Tariff Board, namely, improvement of quality.

From the foregoing one should not, however, rush to the conclusion that the Association is objecting to the Government's giving "reasonable measure of protection" to the indigenous bobbin industry. Far from it; the Association fully recognises the need for such protection. Only it emphasises, and rightly so, the fact that the claim for protection should be based on the needs of reasonably efficient units manufacturing bobbins, and, as the Tariff Board has ruled out a protective duty, imports of bobbins should be related to the difference between the *estimated indigenous production of reasonably efficient quality bobbins* and the estimated requirements of the Indian textile industry. "If this procedure had been followed," to quote the Association, "it would have given an inducement to indigenous bobbin manufacturing units whose equipment and qualities are not, according to the Tariff Board, upto the standard to improve their equipment and production."

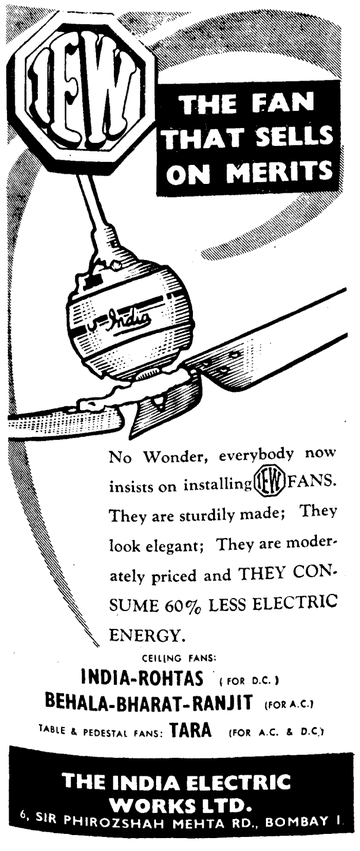
In view of this, the Association urges the Government to undertake an immediate review of the whole case. Otherwise, it warns, the use of faulty bobbins will lead to spinning of bad yarn, which, in turn, will lower the standard of cloth production. This warning is, indeed, quite timely, considering the fact that, with the return of a buyers' market, utmost attention needs to be paid to maintain a high quality of cloth production.

COMMONWEALTH WOOL

The U.K. is expected to be the largest buyer of Commonwealth wool during the current season. The bulk of the U.K.'s requirements is met from Australian wool. It is interesting to note that the U.K. has regained from the U.S. the distinction of being the largest buyer of Australian wool. The U.K. has also taken more than half the total shipments from New Zealand and about a third from South Africa. The rise in the offtake of wool by the U.K., in a way, indicates that the recovery in wool textile trade must have been more rapid than that in any other country, although the U.K. itself is supplying large quantities of wool in processed form to other countries which have found themselves inadequately stocked, at a time when improved demand again manifested itself.

The Commonwealth wool marketing season has entered its final stages. Only 8 more sales—those exclude "crutching" sales—are to take place in New Zealand. In South Africa, most of the full-length wools have been disposed of, the wool now remaining to be sold being short varieties. By far the largest proportion of the Australian clip has now passed under the hammer.

The statistical position of wool is commercially regarded as strong. The Commonwealth wool markets closed for the Easter recess at the highest point ever touched during the current season. The current prices, however, are less than half of those ruling at the post-war peak reached at Easter two years before. A healthy state of activity in most of the chief wool consuming countries is an encouraging augury for demand during the remaining part of the wool marketing season. Reviewing the trend of world wool markets, the International Wool Secretariat observes: "It is a matter of satisfaction throughout the industry that the substantial recovery in world wool textile activity this season has been accomplished without any repetition of the wool price stampede which occurred early in 1951 and had harmful repercussions from which consuming countries are only lately recovering."



QUALITY CONTROL ON TEXTILE EXPORTS

Replying to a question in the House of the People last week, Mr. T. T. Krishnamachari, Union Commerce and Industry Minister, revealed that the Government of India had been urging the cotton textile industry to institute some kind of quality control in regard to exports. The question now was, he said, whether it should be voluntarily adopted or compulsorily done and the matter was still under negotiation.

In the present context of growing competition in the world textile markets, the need for maintaining a high standard of quality, careful packing and attractive finishing cannot be too strongly stressed. Exports of poor quality textiles, thanks to the absence of proper check, have already done, and are doing, a lot of avoidable harm to India's export trade in cotton textiles. In many places, Indian cloth has earned a bad name for no other reason than poor quality, defective packing and lack of proper finish. Care taken in these respects will go a long way towards removing from the consumer's mind the impression that Indian goods are inferior in quality. There seem to be some mills which do not appear to realise this and it is doubtful whether they will ever do so unless they are compelled. Consequently, an organisation for promoting and supervising Indian textiles exports is badly required.

As to whether quality control is to be voluntarily adopted by the industry or be enforced by the Government has, however, been a matter of divided opinion for a considerable time now. The Minister for Commerce and Industry has categorically stated that, if quality control is not adopted by the industry, the Government would institute a compulsory scheme. It would be better, of course, if instead of allowing the Government to do it, the industry itself were to launch a scheme for enforcing quality control over exports of cotton textiles. This question has been before the industry for a long time now. Unless it does something about it, the Government will be justified in taking the initiative and establishing an organisation of its own to regulate the quality of Indian cotton goods exported from this country.

"TERYLENE" TO BE MANUFACTURED IN CANADA

A plant for the manufacture of "Terylene," the new synthetic polyster fibre, is to be set up at Millhaven, near Kingston, Ontario (Canada), by Imperial Chemical Industries (I.C.I.). The erection of the plant is estimated to cost more than $20 million which will be raised in Canada itself in accordance with the proposals approved by the Bank of England. Options on suitable land have already been secured, and building and engineering teams are expected to begin field work at an early date. The construction of the plant is to be initiated by a new wholly-owned Canadian subsidiary of the I.C.I. After the proposed segregation of the I.C.I. and du Pont interest in the Canadian Industries Ltd. (C.I.L.), it is intended to offer the project to that successor company of the C.I.L. in which the I.C.I. will be the principal shareholder and in which Canadians will participate as shareholders.

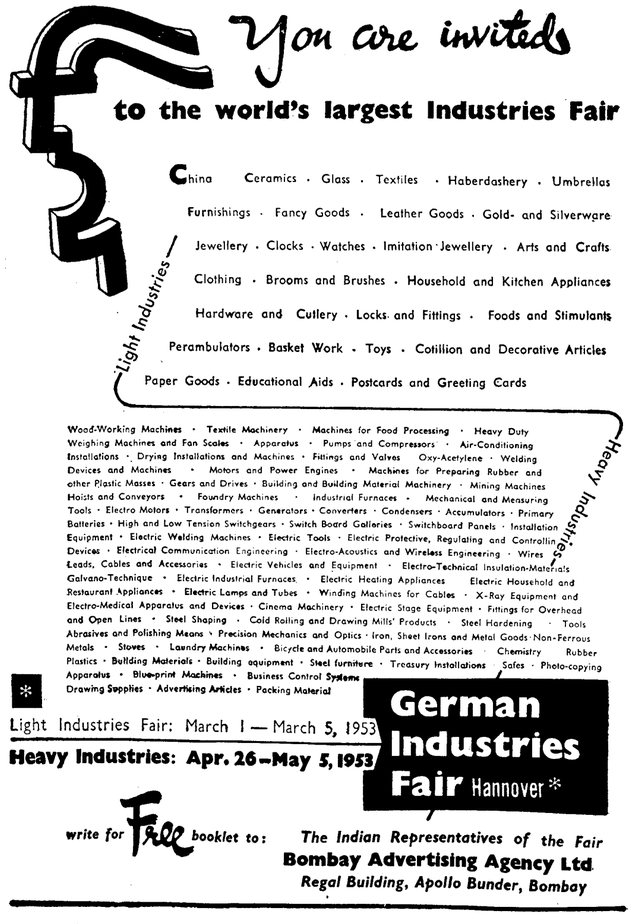
"Terylene"—a product of British research—was discovered in the laboratories of the Calico Printers' Association. The I.C.I. acquired the world rights, apart from the U.S. where the fibre is being manufactured and sold under the name of "Dacron." The basic Canadian patent was granted in February last.

The I.C.I. has invested substantial sums in research and development on the fibre and production in the U.K. on a pilot-plant scale started some years ago. The construction of a full-scale plant—the Wilton Plant—involving a large capital expenditure, is well advanced. The plant, the planned capacity of which is as much as 11 million lbs. per annum, is expected to go into production towards the end of 1954 or early in 1955.

WOOLLEN YARN OUTPUT IN JAPAN

The target of woollen yarn production in Japan for the current year 1953-54 has been fixed at 144.6 million lbs. by the Association of Wool Spinners and Weavers. This represents a fall of 6.57 million lbs., as compared with the estimated production for the previous year. Of the production of 144.6 million lbs. targeted for the current year, combed woollen yarn accounts for 72.6 million yards and carded woollen yarn for 72 million lbs. The figures for 1952-53 were 68.28 million lbs. and 82.89 million lbs., respectively. The bulk of the total output of combed woollen yarn is for domestic consumption, the quantity expected to be actually consumed being 65.53 million lbs. As much as 4.07 million lbs. are for export, 1.5 million lbs. to meet U.S. Army orders and 1.5 million lbs. for other purposes. As regards carded woollen yarn, 59.9 million lbs. are for domestic consumption, 6.8 million lbs. for the U.S. Army, 2.0 million lbs. for export and 3.3 million lbs. unallocated.

If the target of woollen yarn production is to be attained, it will be necessary for Japan to import 739,000 bales of raw wool. The Association has appealed to the authorities to allocate $206.92 million to the indigenous woollen industry for importing raw wool.



LANCASHIRE AT CROSS-ROADS AGAIN

READJUSTMENT IN WAGES DEMANDED

(From A Special Correspondent)

MANCHESTER, 31*st March*

MANCHESTER LETTER

INTERNATIONAL competition in textiles took pride of place among the subjects discussed by Mr. George Hasty, in his presidential address at the annual meeting of the Master Cotton Spinners' Federation, this week. The Lancashire mills, he said, did not panic in 1952 and did not intend to give away their yarn at unremunerative prices. Mills in other countries should also recognise this important principle of standing firm. Nothing, he contended, could be more suicidal than an international price war, based, not on relative efficiency, but on a competition as to who was prepared to sacrifice the biggest proportion of those sums which should properly be devoted to maintaining and renewing capital equipment.

Mr. Hasty laid stress on the vital necessity of ensuring that Lancashire mills must provide the most attractive conditions, in order to rebuild their labour force from the low point reached at the height of last year's slump. "If we do not modernise to the best of our ability and at the same time reduce costs, our industry will decline," he warned, and added: "The average age of our employees, which is already too high, will increase still further and we shall not attract the young people of Lancashire."

Readjustment in Wage Lists

More money has been spent on new machinery in Lancashire in proportion to the size of the industry than in any other European country since the war. But readjustments are necessary in the existing wage lists, Mr. Hasty continued, proposing that the trade unions and employers should confer on how a fair day's work for each occupation with the particular equipment available should be calculated.

Like many others, Mr. Hasty also believes that Lancashire is once more at the cross-roads. The industry, he said, could gradually contract, relying almost entirely on the old methods. It would still continue to contribute for a long time towards the national economy but, as equipment became older and the average age of the labour force increased, it would be less and less able to compete in a modern world. The alternative was to go forward with the aim of making the trade the most up-to-date and competitive in the world. Then Lancashire would be able to take advantage of the increasing demand for textiles which must inevitably result from the efforts being made to raise the standard of living in the undeveloped countries.

Freer Cotton Buying

A switch-back to private importation of raw cotton by "a much larger number of spinners," after years of buying their raw material through the Raw Cotton Commission, Liverpool, was also forecast by Mr. Hasty. To quote him: "We have all got much to learn or to re-learn as the raw cotton market opens up. But an industry which relies to a great extent on specialities and quality must welcome the chance to make its own exact choice once more, provided that we can count on a reasonable cover scheme."

The experience of contracting-out spinners during the experimental period had been generally satisfactory. "The experiment has also depended on the Raw Cotton Commission acting in a broadminded and unbiased manner. Under Sir Ralph Lacey's guidance, this has been achieved," Mr. Hasty told the meeting.

It was certain that firms which were now arranging their own imports of raw material had appreciated the chance of matching their requirements for particular types of cotton much more exactly than they ever could under a centralised buying scheme.

Continental Textiles

Importation of yarn and cloth into Britain has been a sore point on which Lancashire tempers have been frayed on more than one occasion in recent years. The whole subject has risen to the fore again with the relaxation of import restrictions on West European trade, announced by the President of the Board of Trade.

Most of the arguments which have arisen over foreign cloth purchases since the war have centred round the arrival of large quantities of grey cloth from Japan and India. The conflict between manufacturers and finishers on this point has not been resolved and pressure is even now being exerted in some quarters for assurances that no more Japanese fabric is to be procured. The volume of cloth received from European sources has been very much smaller, being mostly speciality cloths in the finished state.

What Lancashire traders chiefly fear is the possibility of the dumping here of unwanted supplies from Continental mills, despite import duties which still exist. There are several angles to this controversial problem, for which there is no all-embracing answer. If, on the one hand, Lancashire traders persist in their campaign for the lowering of American and other tariff barriers, they can hardly expect to retain restrictions on goods entering their own country. On the other hand, the depressing circumstances of the past 12 months should be borne in mind when considering whether Lancashire mills should be protected against foreign competitors.

Government Aid

There is an important, and vocal, school of thought in Lancashire which believes that the Government is none too helpful when negotiating trade treaties with other countries, involving textile supplies. The President of the Board of Trade, in answer to a question about the industry in the House of Commons, recently said: "I have the interests of Lancashire close to my heart." It is easy to see why some critics regard such remarks cynically when the industry is shortly afterwards left wide open to the inroads of European competitors.

At the same time, the prospects for Lancashire, as an important manufacturer of textiles, would be grim, indeed, if it was felt that rival countries in Europe could easily obtain trade on her very doorstep. There must certainly be something wrong with an industry with such a great history which is so vulnerable that it cannot compete successfully for its home market.

Wages and Hours

By the end of October last, when the Ministry of Labour took its latest census of average earnings in British industry, the cotton trade was showing signs of revival after its wretched experience over the first half of 1952. The upward movement in wage rates in industry generally at that time showed no sign of slackening and the earnings of the 6,500,000 employees covered by the survey showed a further advance, as compared with the average in April, 1952.

The continual increase in average wages paid since the war is shown in the comparative table below:—

	Men (over 21)	*Youths (under 21)*	*Women (over 18)*	*Girls (under 18)*	*All Workers*
	s. d.	*s. d.*	*s. d.*	*s. d.*	*s. d.*
October, 1938 ..	69 0	26 1	32 6	18 6	53 3
July, 1945 ..	121 4	45 6	63 2	35 1	96 1
April, 1950 ..	145 9	61 5	80 6	51 10	124 1
April, 1951 ..	160 2	66 11	87 4	65 11	136 2
October, 1951 ..	166 0	69 1	90 1	57 11	141 1
April, 1952 ..	173 7	71 9	92 2	57 9	147 3
October, 1952 ..	178 6	74 11	96 4	60 9	151 11
Percentage rise over October, 1938 ..	159	187	196	228	185

Less short-time was in operation in cotton mills in October as compared with that six months before and average earnings in spinning and weaving rebounded sharply. The level of wages has, in fact, only been exceeded once before—in October, 1951—at the height of the post-war boom, as the following table shows:—

	Men (over 21)	*Youths (under 21)*	*Women (over 18)*	*Girls (under 18)*	*All workers*
	s. d.	*s. d.*	*s. d.*	*s. d.*	*s. d.*
July, 1945 ..	107 1	55 0	64 1	43 2	74 7
April, 1947 ..	114 0	56 3	71 0	48 3	83 2
April, 1948 ..	129 2	71 10	81 11	62 1	96 6
April, 1949 ..	133 7	71 2	84 0	63 6	99 8
April, 1950 ..	140 10	74 11	88 6	66 7	105 2
April, 1951 ..	158 1	84 7	99 5	75 6	117 11
October, 1951 ..	166 10	90 6	105 1	79 11	124 5
April, 1952 ..	149 0	80 4	93 9	70 4	111 6
October, 1952 ..	160 6	88 6	102 5	77 8	121 0
October, 1951—					
Spinning ..	168 8	93 10	102 3	81 0	123 11
Weaving ..	163 10	83 11	109 6	78 3	125 3
April, 1952—					
Spinning ..	145 6	81 11	87 0	67 10	106 9
Weaving ..	154 5	77 8	103 0	74 1	118 4
October, 1952—					
Spinning ..	159 8	92 1	99 7	78 6	119 3
Weaving ..	161 10	82 1	107 0	76 3	123 11

Despite the effects of the slump, cotton mills still offer remunerative wages to women workers, and juveniles, in particular, can earn more than in many other industries. In the case of girls under 18, the average pay for spinning is higher than in any of the other 90 occupations listed.

The average number of hours worked in the cotton industry in April, 1952, had shrunk from around 44½ to 39½ per week. Increasing machine activity last autumn raised the average hours worked to 43.1 weekly by the end of October, but spinning mills were still operating more irregularly than weaving sheds. In spinning, the average was 42.7 hours and, in weaving, 43.6 hours per week. In industry generally, the improved trend resulted in average weekly hours worked, increasing from 45.6 in April to 46.1 in October, the same level as 12 months before.

Trade Chances

There are big opportunities for British producers of capital equipment—particularly electrical and engineering goods—in India, Pakistan and Ceylon, but speedy delivery is a key factor in meeting competition from American, Japanese and Continental suppliers. Sir Percival Griffiths, adviser to the India, Pakistan and Burma Association, said this in Manchester last week at the end of a conference with exporters to these markets at the Manchester Chamber of Commerce.

Development was going ahead in India and Pakistan on sound and well-balanced Five-year Plans. These projects would demand a lot of co-operation from the outside world, particularly from Britain, but the raising of living standards in the Far East was a vital need in combating the spread of Communisim. The political situation in India, Pakistan and Ceylon, said Sir Percival, was not unsatisfactory. Their problems, like those of the West, were economic.

FRENCH COTTON INDUSTRY

The French cotton industry is preparing a reorganisation scheme providing, among other things, for the closing down of out-of-date mills. It is proposed to compensate the owners of the enterprises which would disappear and to safeguard the interests of their workers who would be transferred to other industries after training in special centres. The scheme will be submitted at an early date to the authorities and the promoters expect that the measure will result in the general improvement in the industry.

The U.S. Department of Agriculture has formally announced that it will support the price of domestic wool for the 1953-54 marketing year at 90 per cent. of parity or at a national average price of 53.1 cents per lb. (Grease basis). The support price for 1952-53 was 54.2 cents per lb.

NATIONAL SAVINGS BANK LIMITED

(Established in 1941)

A SCHEDULED BANK TRANSACTING ALL KINDS OF BANKING BUSINESS

Head Office: **43/45, Apollo Street, Fort, BOMBAY**

Other Local Offices:

Kalbadevi, Mandvi, Zaveri Bazar, Ghatkopar and Bandra

Mofussil Branches:

Ahmedabad (Maskati Market and Manek Chowk), Baroda, Patan, Dabhoi and Poona

SAVINGS BANK DEPOSITS

Rate of interest on Savings Bank Deposits increased to 2½% P. A. on monthly minimum balances with effect from 1-8-1952. Withdrawals by cheques upto Rs. 500/- each ALLOWED TWICE A WEEK

SAFE DEPOSIT LOCKERS AVAILABLE AT MODERATE RATES AT

Head Office, Kalbadevi, Mandvi, Ghatkopar, Bandra, Manek Chowk (Ahmedabad) and Baroda Branches

Remittance and collection facilities arranged on all important centres all over the country

THE DUNLOP RUBBER CO. (INDIA), LTD.

MR. CECIL STACK'S REVIEW OF PROGRESS

THE Twenty-seventh Annual General Meeting of the Dunlop Rubber Co. (India) Ltd. was held in Calcutta on 2nd April, 1953. Addressing the shareholders, Mr. Cecil Stack, Managing Director of the Company, observed as follows:

"The Directors' report and accounts for the year 1952 have been in your hands for some time and with your permission I will take them as read.

The Year's Trading

"I am afraid I am not in the happy position of a year ago of being able to report to you an expansion of business and higher profits. Turnover was, in fact Rs. 121½ lakhs, or 8½ per cent. lower than in 1951. This was partly due to reductions in selling prices, but even more to an all-round drop in the volume of business. Compared with the 1951 level a sharp decline took place early in 1952 and persisted throughout the rest of the year. Although there has been some slight recovery since, I am afraid, this feature of our 1952 trading, brought about by tighter credit conditions and general recession of trade, must be regarded as a contraction of demand which may not be fully restored for some time to come.

"Although tyre stocks were adequate throughout the year under review, the distribution of our products was again hampered to some extent by transport difficulties and delays. Rail transport to the districts more remote from our factory was frequently not available and the irregularities of coastal and river services caused temporary shortages in various parts of the country, particularly Assam and South India.

"I was able to advise you at our last annual general meeting that cycle tyre selling prices had been reduced in April, 1952. Falling raw material prices enabled us to reduce our prices of motor and giant tyres in September. This trend has continued and I am glad to say that further substantial reductions were found possible last month, applicable on this occasion to motor, motor cycle, truck and bus, tractor and cycle tyres, also Dunlopillo Latex Foam cushioning. These developments bear out the remarks I made last year regarding your Board's policy of passing on to the consumer without delay the benefits of lower manufacturing costs.

"Although the net profit declined by Rs. 8 lakhs compared with 1951, the ratio of profit to turnover remained at almost the same level—7.7 per cent. compared with 7.6 per cent., both figures being gross before deduction of tax. To those who consider industrial profits are excessive I suggest, as I did on this occasion last year, that the ratio to sales rather than the amount of profit is the real measure. The results achieved by your Company in recent years, representing as they do the wholesale distributor's profit as well as the manufacturer's profit, are in the opinion of your Board no more than adequate. To cut margins any finer would be an unhealthy and even dangerous policy.

New Products

"The range of tyres being manufactured by the Company is constantly under review and a number of new sizes and types were added during the year to meet the requirements of users in this country. Several modifications in line with the latest developments in tyre construction were introduced with entirely satisfactory results. The quality of our products has never been higher than it is to-day and the widespread acceptance of this fact by the public is a source of great encouragement to your Board and to all employees of the Company.

"I informed you a year ago that Dunlopillo Latex Foam cushioning had been added to our range of products manufactured at Sahaganj. I am glad to say that output is expanding satisfactorily and this product is rapidly gaining in popularity. In addition to domestic articles such as mattresses, pillows, cushions and furniture upholstery, this material is widely employed for seating in cinemas, omnibuses, cars and aircraft.

"During the year, we commenced production of industrial transmission belting at Sahaganj. Our plant is the first installation in India for the manufacture of this type of rubber ply belting to British Standard Specifications, large quantities of which have been imported in the past. By supplying their needs of high quality belting more quickly and economically, this installation will, I feel sure, prove to be a valuable source of supply to the industries of this country.

"Two further products recently added to our range are fan belts and industrial Vee belts. Here again, the plant which the Company has installed is the first of its kind in India and the quality of the belts which we are now producing has hitherto had to be imported. Our range of sizes is as yet restricted, but early results are most encouraging and I have no doubt that this development will in course of time result in adequate supplies of highest quality belts being available in India at reasonable prices.

"The enterprise behind these extensions to the Company's manufacturing activities is an indication of your Board's determination to utilise the resources of the Company in a manner which it is hoped will be beneficial not only to the shareholders but also to the country. These developments provide a notable contribution to the national productive effort by affording increased opportunities for direct employment as well as encouraging the growth of the indigenous rubber planting industry.

Raw Materials

"The raw material supply position was on the whole much better in 1952 than in any previous post-war year. In the early months we had difficulty in obtaining sulphur, but the restrictions in the United States were relaxed and the supply position eased as the year progressed. Indigenous rubber was difficult to procure for a time until, on 28th October, 1952, the Government controlled price was increased by Rs. 10 per 100 lbs. Apart from indigenous rubber, the general price trend was downwards in the latter half of the year, although the Company's inventory position prevented the financial year 1952 getting the full benefit of this decline in prices. I have already referred to the reductions made in the Company's selling prices and it will be noted that no upwards adjustment was felt necessary when the price of rubber was increased in October last.

"I would now like to comment very briefly on the accounts.

Profit and Loss Account

"I have already referred to the decline in sales which resulted in a reduction of Rs. 8 lakhs in the net profit compared with the previous year. After deducting the lower debit for taxation, the balance available for disposal is, however, higher at Rs. 73,58,469. The Directors are recommending the same rate of ordinary dividend as for 1951, i.e., 15 per cent., which will absorb Rs. 24 lakhs. The Directors also recommend the transfer of Rs. 39 lakhs to general reserve, as against Rs. 32 lakhs last year. This will increase the total general reserve at the end of 1952 to Rs. 1 crore 14 lakhs, as shown in the balance-sheet.

Balance-sheet

"The Company expended Rs. 50 lakhs on additions to fixed assets, against Rs. 45½ lakhs in 1951. These additions, in the main, consisted of buildings and plant required for the recent expansion in our range of products. The depreciation written off in 1951 included a special provision for plant obsolescence and the normal depreciation in 1952, amounting to Rs. 26 lakhs, is considered adequate.

"Inventories were Rs. 12½ lakhs higher in value than at the end of 1951, but at that time the quantities held of certain raw materials were abnormally low. There is, however, a reduction of over Rs. 14 lakhs in sundry debtors in line with the lower turnover, so that in total current assets show little variation compared with the previous year. The net working capital of the business increased by Rs. 32,00,000 during the year, which is partially reflected in the closing bank overdraft of Rs. 146 lakhs, compared with Rs. 125 lakhs at the end of 1951.

Employee Relations

"It is usual at this meeting each year to ask you if I might send, on your behalf, a message of thanks to Dunlop employees for their work during the year. The recession in our business to which I have already referred necessitated the working hours at Sahaganj being reduced below normal at various times during the year and this naturally involved some financial loss to the operatives. Nevertheless, the situation was accepted loyally and there was no deterioration in the hourly rate of production. By the same token, the task of the sales staff to maintain and in many districts improve our position in the market was harder. All employees have continued to exert their best endeavours throughout the year and I would like to send them your renewed thanks for their faithful service and devotion to duty.

Five-year Plan

"It is fitting at this time that I should make a brief reference to the impact of the Five-year Plan on the rubber manufacturing industry in general, and your Company in particular. The allowance under the Plan for road development would appear to be disproportionately low, but, nevertheless, it must be obvious to all of you that implementation of the Plan will increase the demand for such consumer goods as tyres of all kinds, industrial belting and hoses, etc. I can only assure you that your Company will be prepared to play its part, as always in the past, in meeting any additional demands placed upon it and in contributing towards the well-being of the community and the national economy in every possible way."

The report and accounts were adopted.

CAUSES FOR HIGH PRICE OF SUGAR

TAXATION ON THE COMMODITY TOO HEAVY

THE warning that unless the Indian sugar industry produced sugar at a price at which it would be possible to compete in the world market it would not survive at all, was once again administered by Mr. Rafi Ahmed Kidwai, Union Minister for Food and Agriculture, while addressing the gathering on the occasion of the annual cane growing competition, organised by the Bihar Co-operative Federation, at Patna recently. It was due to the high price of Indian sugar, he said, that Pakistan and Ceylon were getting their supplies from foreign markets, and added: "The industry has been given protection for a fairly long time to enable it to stand on its own feet and it should try to justify that protection."

This warning is unnecessary so far as the factories are concerned. They are fully aware of the danger to which Mr. Kidwai drew attention in his speech. It is the administrators and those who speak on behalf of the cane-growers that should take note of this warning. Anyone who carefully studies the causes for the high prices of Indian sugar will find that there is precious little the factories can do to bring down the price and that much can be done by the Governments and cane-growers to achieve this object. It will also be found that the present high level of prices is due, in a large measure, to the Central Government's defective control policy. Although the Government does not exercise, at present, any control over prices and distribution, it continues to regulate the flow of sugar from factories. This is being done in a manner that still sustains an atmosphere of scarcity in the country and gives scope for manipulation of the market by dealers and factories in their favour. The quickest way to bring down the price of sugar now is to remove all controls on the freedom of factories to market their production.

Long-term Solution

The foregoing is only a short-term remedy. The long-term solution lies in bringing down the price of sugarcane. It is common knowledge that the high cost of sugar is due primarily to the high level of sugarcane prices, thanks to the anxiety on the part of the State Governments to secure for the cane-growers as large a proportion of profit as possible and to net in, for its own sake, a sizable amount of revenue by way of cane cess. Thus, the fixation of a high minimum price for cane, imposition of a large cess on cane, commission charged by co-operative societies, and transport charges together account for more than 67 per cent. of the total cost of sugar production. On top of these, there is the Central excise on sugar. The table below gives the different elements entering the cost of producing one maund of sugar (all-India average) at present, as compared with the position existing during the period 1932-33 to 1937-38:

	1932-33 to 1937-38		1952-53	
	Cost Rs. a. p.	Percentage to total	Cost Rs. a. p	Percentage to total
Price of cane ..	3 4 0		13 2 0	
Transport of cane ..	0 2 0	44.4	0 5 3	52.5
Co-operative societies commission	0 1 0		0 6 9	
Cane cess			1 14 0	
Central excise	0 14 6	14.2	3 12 1	21.3
Salaries and wages ..	0 10 0	8.1	3 12 10	14.4
Manufacturing expenses (less molasses realised).	1 8 0	20.9	1 13 6	7.0
Packing bags	0 2 0	..	0 5 0	1.2
Net profit (estimated by Government) ..	0 15 0	12.4	0 14 9	3.6
Total ..	7 6 6	100	26 5 6	100

A look at the items above will clearly show that there is vast scope for reduction in the cost of sugar to consumers by lowering Government taxes. The Central excise duty and the cane cess imposed by State Governments together come to Rs. 5-10-1, representing no less than 21 per cent. of the total price of sugar. This is, indeed, a high rate of commodity tax, particularly for such an article of food as sugar. There can thus be no possibility of sugar being made cheap for consumers, to any substantial extent, unless the Governments are prepared to reduce their taxes on it. In their anxiety to collect as much revenue as possible for implementing the Five-year Plan and for meeting their high level of expenditure, the Governments, however, are reluctant to give up any source of their income or to take less than they are taking at present. On the contrary, there is a tendency on their part to increase their share of burden on consumers of sugar. Not long ago, the Centre raised the excise duty on sugar. Now Bihar has decided to raise the cane cess by a quarter anna, from As. 3 to As. 3-3 per maund, which works out to as much as 15 per cent. of the cost of cane. Nowhere in the world is such a heavy cess being collected for the development of cane. The major part of this revenue, it will be remembered, flows into the general revenues of the State Government. We, therefore, reiterate that, consistently with the probable requirements of cane development, the cess can be reduced to, say, As. 1-6, as the former Tariff Board has recommended, and it is to be hoped that the State Governments will make this reduction as early as possible. There is also the need for reducing the sugarcane price to Re. 1-4 per maund. on the basis of cost of *gur* production.

Cane Development

Reduction in the price of cane and in the cess will lower the cost of sugar production by as much as Re. 1-9 to Rs. 24-12-6 per maund of sugar. If the price of cane could be further reduced to Re. 1 per maund, by increasing the yield and improving the quality of cane, the cost of sugar manufacture could be reduced by a further sum of Rs. 2-8 per maund, bringing it down to Rs. 22-4-6. Intensive research in the development of cane, with a view to improving the sucrose content of cane and reducing the quantity of cane required per maund of sugar, is thus of paramount importance in any drive for reducing the price of sugar.

There is also scope for reducing manufacturing expenses under certain items. It is stated, for instance, that an appreciable economy in fuel is possible in most of the mills through an improvement in furnace construction. Some economy can be effected, too, in repairs and consumable stores by replacing the inefficient and worn-out plants with more up-to-date ones. Furthermore, there are said to be a large number of surplus workers who cannot be discharged, owing to certain rules and regulations laid down by the State Governments concerned. No reliable data as to how far the mills are actually burdened with such surplus labour is available, but it must be admitted that there is some surplus labour in several sugar mills. Ways and means should, therefore, be explored to dispose of this surplus labour.

Considering all these factors, it can reasonably be expected—on the assumption, of course, that there will not be any marked rise in the general price level in the country—that the price of sugar can be brought down to Rs. 20 or Rs. 21 per maund. Surely, reduction in prices is the only effective way of placing the sugar industry on a firm foundation.

SUGARCANE CESS RAISED IN BIHAR

The Government of Bihar proposes to raise the cess on sugarcane crushed in the sugar factories from As. 3 to As. 3-3 per maund, with effect from the beginning of the current crushing season. An official Bill seeking the imposition of the enhanced cess—the Bihar Sugar Factories Control (Amendment) Bill—was accordingly introduced in the State Legislative Assembly last week. The statement of objects and reasons underlying the Bill says: "With a view to encouraging the co-operative movement among cane-growers, the State Government has exempted the co-operative societies from the operation of the Bihar Finance Act, 1950. This has reduced the income for the Government and, to make up the deficiency, it is necessary to increase the rate of cess."

The aforesaid decision of the Bihar Government is a deplorable one. The co-operative societies in Bihar are already said to be in possession of substantial funds—it may be noted that the societies charge a commission of As. 6-9 for every maund of cane delivered to the factory—which can be utilised for expanding their activities. These societies, therefore, are not in need of the assistance they are now getting by way of exemption from the cess. The co-operative movement is now fairly well established and has reached a stage when they could be asked to pay at least a smaller rate of cess, say, an anna per maund. Even the existing rate of As. 3 per maund is unconscionably high. Many impartial persons have testified to that effect. What is needed, therefore, is a reduction in cane cess and not an increase. As a result of the increase in the cess, it may be noted here, the additional burden on the sugar factories in Bihar will be of the order of Rs. 11 lakhs, assuming that the factories crush 70 million maunds of sugarcane during the current season.

COAL CONSUMPTION BY RAILWAYS

RECOMMENDATIONS OF FUEL ENQUIRY COMMITTEE

AFTER 16 long months of investigation, the Railway Fuel Enquiry Committee has just published its Report to the Government of India on the various aspects of railway fuel problem. It will be recalled that, in October, 1951, the Committee was appointed under the chairmanship of Mr. Darab Cursetji Driver, "to examine the supply, consumption and reserve stocks of coal on railways and make recommendations for economy in expenditure on coal used as fuel." The enquiry was initiated because of the fact that the fuel bill and, consequently, the cost of operation of the railways had been, and still is, increasing year by year.

The full text of the Report is not yet available. But the Press summary of the Report reveals that in regard to coal required for use in locomotives—loco coal, as it is called—the Committee recommends that efforts should be made to exclude from the future loco-coal programmes, as far as transport permits, coals of calorific value of less than 12,500 B.t.u./lb. and that the use of low grade coal (calorific value below 11,500 B.t.u./lb.) on shunting locomotives should be gradually discontinued. In other words, the Committee feels that the present policy of the railways tending to use more and more of low grade coals should not be carried too far. The chief idea behind these recommendations is that a change-over from coal of higher calorific value to that of lower calorific value involves an increase in the consumption of the quantity of coal which, in turn, results in the wastage of transport facilities. It is said that for every 100 miles of transport, if Grade II coal (11,100 B.t.u./lb.) is used, as against selected coal (12,500 B.t.u./lb.) railways will have to incur an increase in the cost of coal to the extent of about 20 per cent. Besides, it is stated that if coals of lower calorific value were to be used, the life of even the "W.P." locomotives, which have been designed to burn low-grade non-coking coal, would be shorter than their scheduled period. Further, their efficiency will begin to deteriorate much sooner than expected.

Coal Grading

The Committee recommends that an official committee, under the Coal Board, should be appointed immediately to evolve new grades of coal and fix a price which has proper relationship to the "as fired" calorific value. This recommendation is welcome, because, at present, a considerable quantity of coals graded lower has calorific value actually better than those of coals included in the higher grades and that coal prices have been fixed more or less arbitrarily, on the basis of grades determined several years ago.

The Committee says that the railways should in future select their own coals by inviting offers from collieries and by arranging for supplies on contract basis. It feels that a standing loco-coal committee should be set up to undertake all work connected with the framing of loco-coal programmes, inviting offers from collieries for scrutiny and acceptance and the allocation of their approved offers, according to the supplies of transport available. In order to simplify and rationalise transport and to ensure regular and reliable supplies of coal to railways, steps should be taken, according to the Committee, to introduce the system of grouping collieries, with distributing centres to serve as primary receiving points in respect of supplies to railway zones. The liberty allowed to the railways to select their own coals by inviting offers will not be acceptable to owners of small collieries, as it would deprive most of them of loco-coal orders. Nevertheless, the system proposed needs to be supported, because it would enable the railways to get better coal. Besides, it would encourage small collieries to amalgamate and form themselves into big organisations.

The Committee says that collieries and consuming areas should be in zones, rationally linked up to afford movement of block loads along specified directions, and that coal orders should be allocated colliery-wise and pilot-wise to form block loads. In other words, a zonal system, under which points of consumption would be assigned to specified collieries, should be ushered in. This system will not only regularise coal transport, but also reduce wastage in the use of transport facilities, thereby leading to economy in transport costs. Naturally, this proposal will be welcomed as a move in the right direction.

The Committee recommends electrification of a number of sections of railways and steps to introduce diesel traction on the Saurashtra Section of the Western Railway, diesel light rail-car services on suitable sections and diesel power for shunting services throughout India. The recommendation for electrification includes 11 sections of railway lines, with a total length of 2,187 miles. These sections include the suburban services in Howrah and Sealdah Divisions, and, on the main lines, Burdwan-Gaya, Gaya-Moghalsarai, Igatpuri-Bhusaval, Quilon-Ernakulam, Madras-Trichinopoly, Madras-Bangalore, Madras-Bezwada, Virar-Ahmedabad and Delhi-Ambala. The Committee suggests enlargement of power and fuel research and early action to set up a "standing railway power and electrification planning committee" to ensure co-ordination among the authorities responsible for industrial, power, transport, fuel and other national developments, among others. Electrification of railways will undoubtedly help conservation of coals, especially of higher grades. Middlings from washeries and low-grade coals can be used to produce electricity which can be transported over areas at reasonable costs. Introduction of diesel traction and diesel light cars, etc., will also reduce the dependence of railways, especially in areas far away from coalfields.

All these measures clearly spotlight the need for the constitution of regional departments to ensure control over consumption and progress in fuel and power research. The Committee feels that each railway zone should have a fuel control department and a training school. Besides, it urges a central fuel directorate and a central training school. The control measures should be the function of the fuel control organisation and power and fuel research should be the concern of the Railway Testing and Research Centre working in collaboration with Fuel Research Institute.

Further, the Committee has made a number of recommendations, specific and general, with which there can be little defference of opinion. Those of a specific nature relate to the need for the installation of a pilot washing plant at the Fuel Research Institute and the exploration of the possibilities of coal washing, as also setting up washing plants at selected sites. The recommendations of the Committee, which are of a general nature, are that high priority should be given to mining and exploitation of South Arcot lignite, immediate steps to develop outlying coalfields, particularly in Vindhya Pradesh, Madhya Pradesh and Hyderabad, modification of the existing practice of allocation of coal orders and wagons to give effect to regional distribution of coal, and increase in the production of high-grade non-caking coal in Raniganj and Karanpura.

The implementation of the recommendations of the Committee is estimated to result in a saving of about Rs. 6 crores annually for the next five years in the fuel bill of the railways. It is estimated that there would be savings in the consumption of coal by railways to the extent of 20 per cent. of the present consumption. Of the total railway coal supplies of about 20 million tons at present, as much as 83.5 per cent. is consumed by locomotives, 9.5 per cent. is used for non-loco purposes and the balance of 7 per cent. is lost in pilferage.

The Committee has deprecated the tendency to examine rail transport schemes on the conventional basis of immediate financial return detached from the overall picture of national requirements and ultimate economic and working advantages. It states, for instance, that, even though schemes for suburban electrification may initially indicate a low yield, the rapid development of suburban traffic, which invariably follows electric traction, will be accompanied by increased financial returns.

COAL STATISTICS FOR FEBRUARY 1953

According to the Chief Inspector of Mines in India, 826 collieries and 8 coke plants were reported to have worked during the month of February, 1953. On an average, 356,530 persons were employed daily and 8,218,958 man-shifts worked. The overall percentage of absenteeism was 13.01. The output per man-shift for miners and loaders was 1.03 tons, for all persons employed in underground and open-workings 0.57, and for all persons employed 0.37.

During the month, 3,061,067 tons of coal were produced. As much as 105,919 tons of soft coke, 165,379 tons of hard coke and 12,370 tons of other kinds of coke were also manufactured. 2,355,032 tons of coal, 87,698 tons of soft coke, 34,135 tons of hard coke and 4,095 tons of other kinds of coke were despatched during the month. The coal stocks at the collieries on the last day of the month were 3,368,523 tons.

GOVERNMENT'S RAW JUTE POLICY

OPEN MARKET SUPPORT RULED OUT

THE Commerce Minister's statement on the Government's raw jute policy in the House of the People on the 1st inst., though welcome, does not represent a full-fledged discussion of the problem of raw jute. He, of course, gave good reasons as to why the Government was not willing to extend support to raw jute by making purchases in the open market, but did not explain as to what he proposed to do to relieve the distress among jute growers. Nor did he project his thoughts a little further and say how he would meet the adverse effects of the present policy on the production of jute within the country in future. He did not also refer at all to the question of permitting exports of raw jute, especially *bimli* and *mesta*, the inferior quality jute substitutes not so much in demand from Indian mills as they used to be at one time. The fact that these questions were left unanswered by the Government suggests that it has no clear cut conception of the trend of developments in the future that it has no plan and that it would allow things to take their own course.

Explaining why the Government could not support the raw jute market, Mr. Krishnamachari recalled the unhappy experience of Pakistan in this respect. He was, of course, aware that the position in India was slightly different from that in Pakistan. But, fundamentally, the position was the same, in that the price of raw jute depended on the price of finished goods. In the circumstances, assuming that the Government was prepared to accept the risks of supporting the raw jute market, the losses would run into several crores of rupees. Even though the price at which support could be extended to raw jute would only be at a very low level. "If we fix a price for bottoms at Rs. 17-8 a maund delivered at a railway station so as to work at about Rs. 20 in Calcutta, it might not be," he said, "very satisfactory to the people concerned." The Government could not give more than this price, because the price had to depend on the prices obtained for manufactured goods, he added. In view of these difficulties, few would quarrel with the Government for not extending open market support to raw jute. But one can hardly afford to overlook the effects of this policy on raw jute production in India in the coming years.

With regard to imports of raw jute from Pakistan under the latest agreement, the Minister gave some figures to justify the stand taken by the Government. He stated that the Government would give licences for importing 1.8 million bales from Pakistan only after carefully considering all the consequences and after satisfying itself that the price of jute produced in India would not suffer thereby. This assurance should be taken note of carefully, as this means that, in the event of any serious fall in the price of raw jute in India, the Government will not be bound by the agreement to import 1.8 million bales.

The Minister's arguments justifying the fixation of the quantity of raw jute imports at a minimum of 1.8 million bales from the 1953-54 season onwards deserves to be noted here. This was the quantity, according to him, which was actually imported from Pakistan in the 1951-52 season and yet it had no adverse effect on growers of jute in India. In 1952-53 also imports of Pakistani jute of this size are expected to cause no hardships to growers. For the stocks with the mills on 28th February, 1953, were only 1.2 million bales. Further arrivals from the Indian markets are expected to be one million bales. The total at the end of the season will be 2.3 million bales. As against this, the consumption upto September when the new crop is to arrive is expected to be 3.36 million bales, leaving a deficit of one million bales. As there is need to provide for a carry-over of two months' stocks, that is, 0.96 million bales, the deficit will be nearly 2 million bales. As the country has received so far only 1.1 million bales from Pakistan, there will still be some deficit left uncovered even granting the balance of 7 lakh bales is received from Pakistan. Consequently, the Minister felt that the estimated minimum imports of 1.8 million bales from Pakistan was not on the high side.

Even from the long-term point of view, the Minister considered that the minimum of 1.8 million bales to be imported from Pakistan was not on the high side. For the annual requirements of mills were, he said, of the order of 6 million bales. As against this, the current Indian crop was estimated at 4.1 million bales. If this level of production were maintained, it would leave a gap of 1.9 million bales, a figure higher than the stipulated quantity of imports from Pakistan. The Minister next referred to the targets fixed under the Five-year Plan. By 1955-56 the requirements of raw jute were expected to go up to 7.2 million bales, while the target for Indian production to be reached by then was 5.4 million bales. This left a balance of 1.8 million bales to be filled by imports. The Minister, therefore, maintained that the agreement with Pakistan could not, in reality, be a discouraging factor to indigenous production.

The only flaw in the above estimates is in regard to the estimate of production in the current season. The Minister has placed this at 4.1 million bales, which is the estimate of the I.J.M.A., whereas the official estimate is 4.7 million bales. This, however, does not affect his conclusion, because, if allowance were made for stocks to be held by the mills and the trade, it would be found that the gap would be much more than 1.9 million bales. Moreover, the output of jute in the next, as well as the future, seasons may not be as large as in the current season, in view of the current low level of prices for the commodity. A lower estimate of available supplies of Indian raw jute will not, therefore, lead to wrong conclusions while considering the requirements of Pakistan jute.

While Mr. Krishnamachari convincingly proved that imports of raw jute from Pakistan as provided in the agreement recently concluded with that country were not incompatible with India's desire to expand its production of raw jute, he conveniently refrained from answering the question whether, on the basis of the present level of prices for jute, India would be able to maintain the production of jute at the current level, let alone increase it. Really speaking, this is the crux of the problem of raw material for the jute industry. Sooner or later, the Government will have to face it and find a solution if the Five-year Plan for jute is not to turn out to be a mere paper plan.

5,000 "KENAF" BAGS SOLD IN THE PHILIPPINES

The first commercial sale of 5,000 bags made of *kenaf* grown in the Philippines is reported from Manila. The new sacks are manufactured from 70 per cent. *kenaf* and 30 per cent. jute. The President of the company making this sale stated that, with the successful utilisation of home-grown *kenaf* in the manufacture of much-needed bags for rice, sugar, copra and for other uses, larger areas for its cultivation and establishment of centres for the decortication of the fibre might be expected. With greater supply of the fibre in the future, and through improved manufacturing methods, he expressed the hope of eventually being able to utilise *kenaf* for the manufacture of all the bags required.

A new $1 million jute bag plant to be built at Davoa, Southern Philippines, is expected to be in operation within a year.

GIANT CEMENT BAG

A new type of giant cement bag made of jute has been developed by a firm of jute manufacturers in Europe, according to the Indian Central Jute Committee. Designed to be carried by lorries, and its size depending on the size of the automobiles, the new container can hold any quantity of cement, and with reasonable care, is capable of making at least 20 journeys. It also lends itself easily to waterproofing by the application of a synthetic finish. The jute industries all over the world have now practically surrendered the cement carrying trade to paper, but the commercial use of the giant jute bag is likely to cause a break in paper's monopoly.

(Concluded from next column)

and Italy. Pakistan had set up, he continued, new plants: the Philippines had also gone in for a plant; and there was talk that plants were coming up in the Middle East too. Many of these plants concentrated, according to him, on the production of sacking. "It is difficult to say," he said, "whether we should look to a situation when the demand for sacking would slow down or would at least remain stationary." These observations are rather disquieting, and one cannot help feeling that, if the industry has come to this pass, it is not a little due to the past mistake of the Government, not in imposing heavy export duties but in retaining them longer than was necessary.

WEAKNESS IN SACKING CAUSES CONCERN

DELEGATION TO VISIT AUSTRALIA

THE Indian Jute Mills' Association, Calcutta, has done well in deciding to send a delegation to Australia to study the conditions of the market for sackings there and to explore the possibilities of expanding the sales in that market. The delegation will consist of Mr. J. G. Walton, Deputy Chairman, and Mr. D. P. Goenka, Vice-Chairman of the Association, and an official of the Government of India. The delegation is expected to leave India some time next week. Its itinerary is likely to include Malaya, Indonesia and a few of the Middle East countries growing rice. This is the second delegation during the last 12 months that the I.J.M.A. is sending abroad to study the market for the sale of jute goods manufactured by its members. The first one was sent last year under the leadership of W. G. Moncur to the U.S.A. and the U.K.

Australia has been an important market for Indian jute goods, especially sacking. It lifted from India 62.5 million gunny bags valued at Rs. 19.33 crores in the nine months ended December, 1951. In the same period last year, however, its offtake of Indian gunny bags dropped by about 50 per cent. to 30 million bags valued at Rs. 8.45 crores. A sharper fall was noticed in its purchases of gunny cloth, which, in April-December, 1952, amounted to only 9 million yards worth Rs. 83 lakhs, as against 29.7 million yards valued at Rs. 4.57 crores in the same period in 1951. Such a shrinkage in the size of a fertile post-war market is indeed a serious development and fully justifies the decision of the I.J.M.A. to conduct an on-the-spot study. From the various reports it is gathered that the recent high prices of jute goods were responsible for encouraging the Australian market to adopt bulk handling methods for transporting and storing grain. It is feared that consumers of jute goods have now become so used to these methods that India is unlikely to regain the position it has lost there. One should, however, wait for a true account of the Australian market till the return of the proposed delegation from its tour.

The worsening position of sacking in India is evident from the remarks of Mr. T. T. Krishnamachari, Minister for Commerce and Industry, in the House of the People during question hour on the 1st inst. The production of sacking during the second half of 1951 was, according to him, 276,800 tons. During the similar period in 1952, it was the same, being about 277,300 tons. During the first 12 weeks of 1952, production of sacking was 144,000 tons, whereas, in the corresponding period this year, it had dropped, he said, to 96,000 tons, though there had been a very slight increase during this period in the production of hessian. Similarly, the stocks of sacking during January and February, 1952, averaged about 53,600 tons, while the stocks in the corresponding period in 1953 averaged higher at about 86,400 tons. It was this weakness in the position of sacking that made the Government, he stated, to reduce the export duty on sacking from Rs. 175 to Rs. 80 per ton. He thought it was a little too premature to judge the results of this reduction. He added, however, that the despatches during January and February, 1952, of sackings, both export and internal, were 108,000 tons, whereas, in the corresponding months in 1953, they had dropped to 59,000 tons, the weakness essentially being in export of sackings.

The decision to send the delegation to Australia would appear to be a sequel to the Government of India's rejection of the I.J.M.A.'s proposal to allow its member mills to curtail production. Although the Government has its own reasons for brushing aside the mills' move, it must be admitted that such would have hardly provided a cure for the accumulation of stocks with the mills. It would have only provided, as we have already pointed out, further encouragement to the industry outside India to expand its production and reduce its cost to the permanent disadvantage of the Indian jute industry. The developments in overseas countries were clearly brought out by Mr. Krishnamachari in his statement referred to above. He said that there had been a change-over all over the world to bulk handling. Besides, the phenomenal price that was ruling for jute goods in 1951 diverted the demand into substitutes and encouraged the setting up and expansion of jute mills in other parts of the world. That happened in Germany

1952-4A

HOUSING IN INDIA

NATIONAL BUILDING ORGANISATION IN THE OFFING

SARDAR Swaran Singh, Minister for Works, Housing and Supply, indicated in Parliament last week that the Government of India had decided to establish shortly a national building organisation. The main object of this proposal, according to the Annual Report of the Ministry for 1952-53, is to initiate research into the problems of cheap housing. The functions of the Organisation include, among others, (a) standardisation of building components and building practices, (b) documentation of the latest results of research in construction technique and wide publicity to these ideas, and (c) the economic utilisation of available building materials in relation to national requirements, etc.

The Organisation is also expected to arrange exhibitions and demonstration projects. Mr. Swaran Singh announced that the Government would organise, in less than a year's time, an international exhibition and seminar on cheap housing. While organising this exhibition, proper care would be taken, he said, to see that the various units put up to represent ideas on cheap housing by the Central or State Governments or by foreign countries, were so situated as to enable their utilisation later on without demolishing them.

Lack of Materials at Cheap Cost

It is now common knowledge that the problem of clearing the tremendous backlog in the construction of houses, especially in industrial cities cannot be solved unless an effective programme for building houses at moderate cost is drawn up and implemented effectively. The planners of such a programme will do well to understand the exact meaning of the phrase "cheap housing." Cheap housing does not mean constructing poor houses. It means, as the Annual Report of the Ministry pertinently observes, that there should be reduction in the cost of building without a diminution in the volume or standard of accommodation provided in a unit.

It was pointed out at the E.C.A.F.E. Conference on cheap housing, held in Delhi towards the close of last year, that what was in the way of development of housing was the lack of steel and other essential materials at a cheap cost. It recommended two pilot projects—one for investigating into the treatment of bamboo and secondary wood species as substitutes for steel and timber in building houses, and the other for the survey and study of clay suitable for making bricks, tiles, etc. Among the methods for reducing cost, the Working Party recommended self-help, simplification of design, time zoning and the like, even if they were to mean a shorter span of life of the houses so built. It is claimed by certain authorities that since approximately half the building costs is spent on labour, the utilisation of the spare time of workers and of the available members of their family would have practically the effect of doubling the volume of housing for a given supply of funds.

In the course of the debate on the Works, Housing and Supply Ministry's demands for grants on 1st April, a number of suggestions were made by members of Parliament for speedily implementing housing programmes, especially urban. The suggestions included imposition of some kind of control on profiteering in sales of building sites, provision of cheap building materials at low rates of interest, suburban development around cities and the like. Mr. Mohanlal Saxena, M.P. from U.P., highlighted the part played by housing corporations and insurance companies in building houses in the industrialised West.

So far, the Government of India has concerned itself mostly with the question of industrial housing, and that for very good reasons. It is admitted on all hands that, among the badly housed, the industrial workers in the larger cities are the worst affected. Attempts have been made, ever since 1946-47, to deal with the problem of solving industrial housing shortage with no substantial results. The main reason for the lack of success in these attempts is that the cost of building, even after assistance by Government, turned out to be high, while the rents that could be realised from the workers had to be low so as to be within their capacity to pay. With a few notable exceptions, voluntary efforts in the field of industrial housing have not produced any satisfactory result.

The success of the present industrial housing policy, announced late in 1952, depends on a number of factors such as the enthusiasm of State Governments, employers and workers' co-operative societies, the quantum of aid at the appropriate time and the supply of cheap building materials. It is gratifying to note that some considerable research has already been done on the subject of bringing down the cost of construction and securing the fullest utilisation of indigenous building materials and other allied subjects at Roorkee and Dehra Dun and at other State Centres. The scheme envisages liberal financial assistance in the shape of both subsidies and loans at reasonable rates of interest towards industrial housing projects undertaken by State Governments, employers or industrial workers' co-operatives. Minimum specifications have been prescribed for single-storeyed and multi-storeyed one-roomed tenements and standard figures have been worked out and these constitute the basis of assistance. According to the scheme, a subsidy of 50 per cent. of the admitted cost of production and a loan towards the rest of the cost of industrial projects undertaken by State Governments or their Housing Boards are being given. In the case of employers or industrial workers' co-operative societies, the subsidy is 25 per cent. and the loan 37½ per cent.

Funds Sanctioned

The response to this scheme has been satisfactory so far. Funds have been sanctioned for the industrial housing schemes of Saurashtra, Madhya Bharat, Hyderabad, Punjab, U.P., Madhya Pradesh and Bombay Governments aggregating Rs. 4,91,02,792, to be disbursed equally as subsidy and loan. These schemes provide for 15,920 tenements by the end of June, 1953. Schemes submitted by private employers have also been sanctioned, their value aggregating Rs. 22,58,635, 25 per cent. of which will be given as free grant and 37½ per cent. as loan by the Central Government. These schemes provide for 1,405 tenements for workers.

Any plan for industrial housing should necessarily include slum clearance. The limiting factor for slum clearance is one of finance. The industrial tenements which are being constructed now can, however, act as buffer pool accommodation, at some places, to take in the slum population so that the slums can be cleared and rebuilt. But it is clear that a bolder policy will have to be initiated to overcome the evil of the slums. As a first step in this direction, the State Governments have been asked to send specific plans for slum clearance in order to help the formulation of a realistic policy on the subject by the Centre on an all-India basis. It is to be hoped that the States will promptly comply with this request from the Centre.

ALUMINIUM MANUFACTURE

It is learned that the expansion programmes of the two aluminium manufacturing units, namely, the Indian Aluminium Company, Ltd., Calcutta, and the Aluminium Corporation of India, Ltd., Calcutta would be complete by the end of the current year. This would result in increasing the aggregate capacity of the aluminium industry in India from the present 4,000 tons of ingots and 3,500 tons of sheets to 7,000 tons and 8,000 tons, respectively. The latest reports indicate that plans are well ahead for the establishment of a smelter with an annual capacity of 10,000 tons by 1956 in the Hirakud area and for the expansion of mining of bauxite at Lohardaga.

MARINE OIL TERMINAL AT BOMBAY

The proposal to construct a marine oil terminal at Bombay harbour for the Rs. 40-crore oil refinery project has been approved by the Bombay Port Trust and work on the project is expected to begin in October next. The terminal will be situated at Butcher Island, three and a half miles east of Bombay harbour. When completed, the project will be the first of its kind in the East. The scheme, which is expected to be completed by April, 1955, envisages building of berths and deepening channels to accommodate oil tankers. A two-mile long pipe-line in the bed of the sea will also be laid on the lines of those in the Middle East oil installations.

STATE TRANSPORT IN BOMBAY

PRESENT POSITION AND PROSPECTS

ADDRESSING a meeting of the Rotary Club, Bombay, last week, Mr. C. S. Patel hailed the experiment in the nationalisation of road transport under way in Bombay as the biggest which any State Government had so far undertaken. Envisaging a bright future, he assured the Rotarians that nationalisation of goods transport, which is to start shortly, would be carried out in such a manner that the existing private transport operators were not subjected to any avoidable hardship.

Mr. Patel prefaced his address by a review of the existing position of the nationalised industry. His account discloses how the State transport industry has developed from scratch into a mighty organisation. Thus, the State Transport has developed from a modest beginning with 36 buses into a fleet of 1,927 vehicles. The service covers two-thirds of the State of Bombay and has a route mileage of about 32,000 and a total service mileage of approximately 1,38,200 a day. The financial aspects of the State Transport Corporation, according to Mr. Patel, are satisfactory. The annual income in 1951-52 was Rs. 505.41 lakhs, as against Rs. 408.41 lakhs in 1950-51, Rs. 211.37 lakhs in 1949-50 and Rs. 55.11 lakhs in 1948-49. The annual income in 1952-53 is expected at Rs. 575 lakhs. It is estimated that it would be Rs. 819 lakhs in 1953-54. The capital employed in 1952-53 was Rs. 877.20 lakhs, as compared with Rs. 505.83 lakhs in 1950-51 and Rs. 160.05 lakhs in 1948-49. The percentage of income to capital generally works out to 65 during 1952-53, 80 in 1950-51 and 40 in 1948-49. It may be noted that the entire capital of the Corporation is contributed by the Union and State Governments, the Union Government accounting for Rs. 584.80 lakhs and the State Government for Rs. 292.40 lakhs.

Mr. Patel, however, gave no indication of the profitability or otherwise of the S.T.C. He did not say, for instance, as to what was the gross return on capital employed and what would be the net return if allowance were made for payment of taxes to the Centre at the same rates as is being done by joint-stock companies owned by private enterprise. In the absence of this vital information, it is difficult to say at what cost the Government has been able to provide transport facilities to the public.

Baseless Charge

Answering the criticism that State transport is costlier than private transport, Mr. Patel contended that it was a baseless charge. He pointed out that, in spite of the increase in the cost of operation, the Corporation had struck to its original fare of 9 pies per mile. Some idea of the increase in cost of operation will be evident from the fact that it was 173.5 pies per bus mile in 1948-49, 240.4 pies in 1951-52 to 247 pies now. In other words, the cost has gone up roughly by 30 per cent., but no increase has been made in fares.

How, then, has this rise in cost been met? Mr. Patel explained that it had been covered by expanding divisions and thereby reducing overhead costs, conversion of engines from petrol to diesel which are substantially cheaper in operation, increase in the average seating capacity of the bus from 28 to 42 and improved techniques of maintenance of vehicles, among others. It is calculated that saving of a pie in the cost of operation per *bus* mile would result in an income of Rs. 2.5 lakhs annually. When the entire State routes are covered by the Corporation, it would result in an income of Rs. 3.5 lakhs to Rs. 4 lakhs per annum. An increase of only one pie per *seat* mile in the rate structure would raise the annual revenue of the Corporation by about Rs. 62.5 lakhs with the present operations and Rs. 90 to Rs. 95 lakhs with the ultimate operations.

CERAMIC INSULATORS

The Government of India will shortly set up a plant for the manufacture of ceramic insulators of all types in India. The productive capacity of the proposed plant is expected to be 2,000 tons a year initially and 4,000 tons ultimately. India at present manufactures Rs. 3.5 crores worth of ceramic goods annually and imports Rs. 2.7 crores worth to cover the deficit between demand and supply. It is now importing all its requirements of high tension insulators for its fast expanding power industry.

An American expert on ceramics, Mr. Walter A. Weldon, whose services have been obtained under the United Nations Technical Assistance Service to India, is already in this country to advise the Government in setting up the plant and on general manufacturing techniques including testing methods and the erection of tunnels and kilns.

THE BANK OF JAIPUR, LIMITED

(INCORPORATED IN JAIPUR, LIABILITY OF MEMBERS BEING LIMITED.)

DIRECTORS' REPORT TO SHAREHOLDERS

The Directors beg to submit the audited Balance Sheet and Profit and Loss Account of the Bank of Jaipur Ltd., for the year ended 31st December 1952.

After providing for all expenses and making necessary provisions, the nett Profit of the Bank for the year amounted to Rs. 3,98,954-9-11 to which is to be added Rs. 1,21,369-13-11 brought forward from last year making a total profit of Rs. 5,20,324-7-10 available for distribution. The Directors recommend its appropriation as under :—

	Rs.	a.	p.
Reserve under Section 17 of the Banking Companies Act	95,000	0	0
Reserve other than under Section 17 of the Banking Companies Act	1,40,000	0	0
Dividend at 3 per cent. tax-free	1,50,000	0	0
Provision for Taxes	1,00,000	0	0

and the balance of Rs. 35,324-7-10 be carried forward to next year's account.

After making appropriations as above total Reserves and other Funds of the Bank will now amount to Rs. 15 lakhs.

During the year branches of the Bank were opened at Bikaner, Kotah and Sawai Madhopur.

The following Directors of the Bank retire under Article 114 of the Articles of Association and being eligible offer themselves for re-election :—

(1) Rawal Sahib Madan Singhji.
(2) Shri Kanai Lall Jatia.

The Directors wish to convey their thanks to the members of the various Local Boards for their guidance and valuable support and the members of the Staff of the Bank for their services.

Shareholders are requested to appoint Auditors for the ensuing year and fix their remuneration.

For and on behalf of the Board,
RAMNATH A. PODAR,
Chairman.

BOMBAY, 23rd March 1953.

BALANCE SHEET AS AT 31st DECEMBER, 1952.

REPORT OF THE AUDITORS TO THE SHAREHOLDERS.

We have audited the above Balance Sheet of the Bank of Jaipur Ltd., as at 31st December, 1952 and also the above Profit and Loss Account of the Bank for the year ended upon that date, in which are incorporated the authenticated returns from branches, and report that :—

(a) We have obtained all the information and explanations we have required and have found them to be satisfactory ;
(b) the transactions of the Bank which have come to our notice have been within the powers of the Bank;
(c) the returns received from Branch offices of the Bank have been found adequate for the purposes of the audit;
(d) in our opinion, the above Balance Sheet and Profit and Loss Account are drawn up in conformity with the law ;
(e) such Profit and Loss Account shows a true balance of Profit for the year ;
(f) such Balance Sheet exhibits a true and correct view of the state of affairs of the Bank according to the best of our information and the explanations given to us and as shown by the books of the Bank, and
(g) in our opinion, books of account have been kept by the Bank as required by section 130 of the Companies Act.

SOME CURRENT INSURANCE PROBLEMS

EXEMPTION OF POLICIES FROM ESTATE DUTY URGED

THE proceedings of the Annual Conference of the Patna Insurance Club, held at Patna on the 28th ultimo, bear interesting and arresting evidence to show that causes calculated to advance the progress of insurance in India still remain distressingly neglected. Particularly the addresses delivered by Mr. Mrityunjay Prasad as President of the Conference and by Mr. S. D. Srinivasan, Manager of the National Insurance Co., Ltd., Calcutta, as chief guest, highlight how the insurance industry in India has yet to tackle successfully its problems such as training of insurance agents, insurance publicity, competition among the branches of different companies, policy lapses, etc. The emphasis laid on these insurance topics by the two speakers, as also Mr. Prasad's interpretation of the implications of the Estates Duty Bill from an insurer's angle, deserves to be noted carefully.

To take first the insurer's views on the Estate Duty Bill. As readers may be aware from our reference to the Estate Duty Bill in the Market Gossip columns last week, the Bill, as presented by the Select Committee with its report to Parliament, envisages the fixation of the exemption limit at Rs. 50,000 to each interest in a joint-stock family and Rs. 75,000 in the case of individual property owners. It contemplates, among others, the fixation of the rates yearly through the Finance Act. Referring to these provisions particularly and to others generally, Mr. Prasad made certain notable suggestions which the legislators who are to consider the Select Committee's report may well take note of. In fact, there is force in his contention that fluctuating direct taxes, involving uncertainty, breed ill-will towards the Government. He, therefore, wants that the Act itself should prescribe a minimum exemption limit, with the Government vested with powers only to raise and not to lower the limit. With regard to the rate of tax, however, he desires that the Act should specify the maximum rate once for all. This suggestion will, if adopted, make the tax system rigid and hence it is likely to prove unsuitable. Perhaps, the suggestion that the rates of duty should not be frequently changed to suit the budgetary needs of the State and that, once fixed, the rates should remain unaltered for a long time, say, five or ten years, will have a better appeal to both the Government and public alike.

Life Policy—a Contingent Obligation

Mr. Prasad has, however, some commendable suggestions to make in respect of estate duty as applied to life insurance policies. He observes that a life insurance policy is that type of property which can be defined as the right to compel payment on the maturity of the policy and till then it is only a contingent obligation. Death duty on such property should be considered, he says, from this angle. As the Bill stands drafted, conditional assignments and nominations do not entitle the policy moneys to be exempt from this tax. Mr. Prasad, therefore, urges that insurance policies meant as provision for the family should be exempted from the operations of this tax upto Rs. 1 lakh. This limit is reasonable, and if accepted, it should go a long way towards giving a fillip to the insurance industry and the savings thus effected should help augment the process of capital formation in India.

Again, in order to avoid the break up of a business, the unwanted and forced sale of a valuable house or property, people will be found to go in for life insurance with the specific purpose of providing ready cash to their heirs to pay the estate duty. Mr. Prasad pleads that insurance mainly meant for this purpose should be free from the tax subject to a maximum of Rs. 1 lakh. This suggestion has, in principle, been accepted by the Select Committee and a recommendation that moneys payable under one or more policies of insurance effected by the deceased on his life for the purpose of paying estate duty or assigned to the Government for that purpose to the extent of the duty payable has been made by it.

Training of Insurance Agents

Emphasising the importance of providing facilities for imparting training to insurance agents, Mr. Prasad regrets that very little has been achieved in this direction. Expressing appreciation of the good work that is being done by the Indian Life Offices' Association in training and examining candidates in the theory and practice of insurance, he tells us that some of the insurance executives have not been evincing keen interest in extending their co-operation to fulfilling, in this respect, the objects of the Association. For, he quotes instances of companies victimising their staff for trying to improve their qualifications by studying for insurance examinations. We are told that one office assistant had to give up the examination for want of a week's leave to prepare for it. Another local branch manager had to resign his job, as his employers refused to give him, even without pay, study-leave to go to the U.K. to qualify for the F.C.I.I. degree. These examples hardly bring credit to the managements of the insurance companies concerned; for this attitude of theirs is not at all conducive to the building up of well qualified and competent executives. The Insurance Association mentioned above should take up the question of training insurance staff with their member-companies in order to see to it that the companies give all reasonable facilities to their staff for equipping themselves with the necessary technical knowledge.

Insurance Publicity

It is well known that non-Indian insurers generally pay close attention to the conduct of insurance publicity through finely printed, attractively designed and alluringly drafted pamphlets. These pamphlets shine by contrast with some of the poor specimens of insurance literature released by some of the Indian companies. This indifference of Indian insurers is regrettable indeed. In this connection, Mr. Prasad's observations are worth recalling here. He says: "Really, to capture the imagination of our masses and bring home our appeal to them, we have got to devise our posters, advertisements, sales-talks in the light of our peculiar problems, our social structure, the changed socio-economic picture and the Indian psychology. In short, we must launch a specialised propaganda. But this is too big a problem to be individually and adequately tackled by individual companies. Over and above individual advertisements, it is high time our insurance offices launched a joint and collective campaign to make our people insurance-minded."

Mr. Prasad is convinced that the success of the Five-year Plan is bound to open new avenues of insurance business, both life and non-life. He regrets, however, that, at the moment, the position is not satisfactory. He says: "Our new business is going down rather than increasing; we are paying more in loans to policyholders, more policies are lapsing due to financial difficulties than in the past. This can be explained by the fact that the average Indian policyholder is hard hit by rising costs of living, rising taxes and depreciation in his capital as well as lowered earning capacity." These considerations should provoke one to think calmly over the possible effect on insurance business of deficit financing which is being resorted to to implement the Five-year Plan.

Lapse of Policies

In view of the unsatisfactory position of new business in India, Mr. Srinivasan's references to increased number of policy lapses acquire special significance. He says: "The shutters must be put on the lapses which, of course, occur genuinely at times due to fluctuations in the economic conditions of the country. But a good portion of the lapses is due to defective selling. Sometimes lapses are also due to overselling by really good agents. But both these can be considerably checked, if there is a better liaison between the agents and the branch. Lapses could also be effectively minimised, if the premium notices and reminders were sent in time and regularly followed up by a more actively induced interest in the agents and the organisers to meet the policyholders more frequently."

The fact that the gathering consisted of insurance men of branches of different insurance companies seems to have prompted Mr. Srinivasan to point out that branches should compete but create no bad blood. "You can certainly fight," he says, "your legitimate battles to a finish without getting bitterness in the bargain. There should be no lack of feeling of charity and there should be no hesitation in admitting that the better man has won. Competition is bad only if it is sordid. The world could do with more of honest competition." To him branch offices of insurance companies are like branches, which are visible signs of life, to a tree, and he asks: "What is your branch, if it is not the life-giving cells of your company?" The supreme tasks which lie before branches, according to Mr. Srinivasan, are prevention of policy lapses, provision of complete and comprehensive service to policyholders and organisation of publicity for popularising insurance among the people.

ENFORCEMENT OF CODE OF CONDUCT

The Executive Committee of the General Insurance Council of the Insurance Association of India, at its meeting held at New Delhi on 30th and 31st March last, discussed the question of implementing the Code of Conduct drawn up by the Council early last year. With a view to exchanging views on improving and strengthening the Code, the Committee decided to meet the representatives of the Advisory Committee of Directors of the Indian Insurance Companies' Association, Bombay, towards the close of this month when it is expected to meet here.

It may be remembered (*vide Commerce* dated 13th December, 1952) that, at its meeting held on 26th and 27th November last, the Executive Committee reviewed the arrangements made for the enforcement of the Code of Conduct for rooting out the evil practice of rebating which continues to prevail in the sphere of general insurance business in India. As a result of the review a decision was taken to do the administrative work in connection with the enforcement of the Code of Conduct in close co-operation with the four Regional Councils at Bombay, Calcutta, Delhi and Madras. In order to ensure close co-operation, it was decided to appoint a sub-committee at each regional centre, with one representative each of the Executive Committee and the Regional Council and two other leading insurance men from the area and to attach to the sub-committee an investigating officer appointed by the Executive Committee. It is now understood that arrangements for the completion of this administrative machinery to enforce the Code of Conduct evolved for general insurance companies are being expedited. The Executive Committee is expected to appoint shortly the four investigation officers referred to above.

It will be noted that already a Code of Conduct has been in operation, pending the establishment of the administrative machinery. This Code is being observed by all insurers carrying on general insurance business in India. The Code forms Appendix 'A' attached to the circular letter No. 2 addressed by the Executive Committee to all the members in March 1952. Appendix 'B' of the same letter will take effect soon after the coming into existence of the administrative machinery mentioned above. This Code requires all licensed insurance agents to register their names with the administrative machinery. It has provisions controlling the activities not only of the agents under certain conditions but also of inspectors, organisers, and branch offices, with the object of seeing to it that no underhand dealings are practised by deflecting general insurance business from one insurer to another. While certain well established insurers have come forward to support wholeheartedly the implementation of the Code of Conduct, there appears to be another section, composed mostly of smaller units, which does not seem to view the move with a friendly eye. Since there are several ways in which the rules could easily be circumvented, the administrative machinery will find it very difficult to implement the code successfully. Success will largely depend on the co-operation of the members of the Association. If at least a large majority of them offer their wholehearted support, there is some chance of the evil of rebating being brought under control. But we wonder whether it will ever be possible to kill the evil itself by these means, so long as general insurance is allowed to remain a competitive business.

PRITHVI INSURANCE TO BE MUTUALISED

The Directors of the Prithvi Insurance Company (Head Office: Madras, Managing Director: Mr. S. Parthasarathy) have decided to mutualise their company. The salient features of the proposed mutualisation scheme are as follows:

The Company has an authorised capital of Rs. 50 lakhs divided into 5 lakh shares of Rs. 10 each. Of this the issued, subscribed and paid-up capital amounts to Rs. 15 lakhs, consisting of 1.5 lakh shares of Rs. 10 each. In order to redeem the paid-up liability on account of the shareholders, the Directors propose refund of Rs. 5 per share in cash out of the amount paid up. Again, for every five shares held, it is proposed to issue two shares of Rs. 5 each fully paid up in the Prithvi's subsidiary, the Asiatic Government Security and General Life Assurance Company. The shareholders will continue to have claim on the amount distributable from out of the accumulated reserves in the general department of the "Prithvi." However, to those who do not elect to take the "Asiatic" shares in satisfaction of Rs. 2 per share, a sum of Re. 1-8 is refundable in cash within 18 months. The mutual company will handle only life insurance, and its subsidiary company will take over the general insurance business of the "Prithvi." The acceptance of the scheme is subject to the approval of the Central Government and the consent of the general body of the shareholders of the Company. If the scheme is finally approved; every existing shareholder gets Rs. 6-8 per share in cash if he refuses to have the shares of the subsidiary company. If he accepts the shares of the latter, he gets Rs. 5 per share in cash and if he holds five of these shares, two shares of Rs. 5 paid-ups of the subsidiary in lieu of Rs. 7-8 in cash.

THE CANARA INDUSTRIAL AND BANKING SYNDICATE LIMITED

DR. T. M. A. PAI WANTS EFFECTIVE CONTROL ON FINANCING OF PLAN

ADDRESSING the shareholders of the Canara Industrial and Banking Syndicate Ltd. at their Twenty-seventh Annual General Meeting, held in Udipi, South Kanara, on 15th March, 1953, Dr. T. M. A. Pai, the Bank's Chairman, referred, in the course of his speech, to the financing of the Five-year Plan and pointed out that the ultimate limit of deficit financing and the consequences thereof would be entirely within the hands of the monetary authority and the discipline of the citizens collectively in the days to come. He desired that people must realise that the money to meet the cost of various projects must ultimately come from their own pockets. Adverting to deficit financing, he uttered a note of warning that utmost control would be necessary to see such financing did not become the "handmaid of political pressure." He also called upon banks "to have a voluntary restraint in the qualitative control of their advances."

The following is the full text of Dr. Pai's address:

"GENTLEMEN,

"We have met after the Central and several of the State budgets have been presented to Parliament and the legislatures. It has now been made clear in the picture that has emerged out of these budgets that in the third year of the Five-year Plan, resources calculated to come out of the revenue surpluses of the Governments, both at the Centre and the States, amounting to about Rs. 568 crores, have shown a bleak prospect of realisation. In the absence of savings and Government loans and in the absence of the States' abilities to resort to further taxation, the alternative that has been left to the Government is deficit financing. The Planning Commission has indicated an estimate of Rs. 290 crores as being the probable limit of this means of raising additional revenues, but once we have accepted the principle as not only necessary but theoretically sound, the ultimate limit and consequences of deficit financing will be entirely in the hands of the monetary authority and the discipline of the citizens collectively in the days to come.

"Sine Qua Non" of Economic Policy

"While the taxable capacity of the people is almost reached and borrowing has its own limitations, the cost of various projects which we have undertaken has to be met either by external aid or by alternative internal resources. The scope of external aid is getting restricted. Reserves built up by the States have almost disappeared, while the spate of spending continues unabated. It seems to me that the time has now come for a pause for reflection on what has happened in the past few years of our independence—how we have spent our resources—and make a qualitative and quantitative assessment of our progress relative to the cost we had to bear for it in the name of a welfare State. What we have planned for the future should have necessarily a bearing on what has happened in the past. Have we not attempted to do too many things within too short a time, however desirable those objectives were? Have our priorities been right? An individual may desire to have so many things for himself, but may not afford them. Ultimately he will find that he can have only what he can afford. Collectively, of course, we are prone to feel that the Government ought to fulfil all our desires without limit, without realising that this money has to come from somewhere and that ultimately this cost has to come from the pockets of the people themselves. In a new democracy, the increasing recognition of this principle by our people and politicians is a *sine qua non* of a stable economic and financial policy. Our resources being extremely limited, we have to use them to the maximum advantage. Before the Planning Commission came into the picture, we were under the illusion that we were a prosperous country and embarked on several schemes which could have been very well given up or postponed, with the result that when really useful schemes are to be taken up, we find ourselves short of resources. This fact alone should have been a corrective for our spending, but if a psychology is now sought to be created that money could be found by resorting to deficit financing, utmost control would be necessary to see such financing does not become the handmaid of political pressure, as otherwise people would never realise that capital formation should come out of savings which could only be the product of hard work and prudent spending. In making the monetary policy effective, the banks themselves would do well to have a voluntary restraint in the qualitative control of their advances. In fact, the Plan itself envisages that 'special effort will have to be made to ensure that credit facilities become available in those lines of production which have been given high priority in the Plan.'

Bank's Working

"It is in this background, I wish to review our working for 1952. The most significant aspect of the Bank's business during the year is a rise of about Rs. 40 lakhs in deposits, showing the deposits at Rs. 4,01,07,199 at the year-end. This has enabled the Bank to keep its advances steady with its own resources, thus reducing the Bank borrowings to Rs. 15,083 from Rs. 46,85,019 on 31st December, 1951. With the voluntary calls that are coming in, the paid-up capital stood at Rs. 25,01,526 as on 31st December, 1952, while the reserves inclusive of the current year's transfer were at Rs. 11 lakhs. Considering the rise in the deposits, the capital would leave some scope for increase, but our subscribed capital is Rs. 32,10,987 and I consider, as experience has shown, whatever in theory one may have to say in its favour, over-capitalisation in banking business brings its own train of difficulties. It would be advantageous instead, to rapidly allow the reserves to grow. The increase in deposits amounting to nearly 11 per cent. over last year has been achieved by an increasing number of deposit accounts which have come to about 1,20,000 so far as your Bank is concerned. While most of the banks have shown a reverse trend in this matter, it is gratifying to note that our experience has been different. This brings us to reflect over a problem that has been confronting banks in South India generally. Even in the case of the biggest of us in South India during the peak periods of their deposits, the total deposits did not exceed Rs. 25 crores. Thereafter the deposits have shown a steady decline. It means, therefore, unless banks try to cover either a bigger area of operation or try to reach more and more remote strata of society neither in their savings nor in their operation banks should be considered to have reached their optimum size. The reason is, South India does not provide for large-scale industries which are in a position to maintain large balances in current account with banks. Even such of those industries that we have, have had to largely depend on bank borrowings with the result not only were the demand liabilities of South Indian banks lower in proportion to the time liabilities even during the war days, thereafter now the shift has been prominently into time liabilities with the result that the average rate of borrowing of the banks has been generally high. Our bank has been no exception to this. With the increase in the cost of operation, the lending rates also have been high. But unless the margin of profits in trade and industries is considerable, which is by no means so, this means, borrowers will not be able to pay a high borrowing rate and yet thrive in their business. The need to reduce the cost of operation by banks is, therefore, imperative.

Increase in Costs

"The ratio of our advances to the deposits stood at 60 per cent., while that of cash-in-hand with bankers and money at call was 19 per cent. and that of investments in G.P. notes to the deposits was 32.5 per cent. With the price falls in commodities, the same physical quantity of the produce could be financed with a much less quantum of money. This is reflected, therefore, both in the fall in bills for collection, as well as the total commission earned. Though the gross earnings remained more or less the same, the net profits were less by nearly 22 per cent. mainly on account of an increase under establishment and interest paid on deposits. The operational costs of the Bank will be the ultimate result of the efficiency of the staff and, therefore, the recruitment policy of the Bank, promotions and training has been mainly directed towards this goal. The staff of the Syndicate has done exceedingly well in loyally discharging their responsibilities and the management will do everything possible to increase their staff amenities. I should like to pay a word of tribute to Mr. T. A. Pai, the General Manager, and the rest of the officers at the head office and branches. They have, each of them, devoted themselves to the task of making the Bank more serviceable, stronger and the great instrument of good that it continues to be. To you, gentlemen, we are grateful for the interest you have been evincing and, I am sure, you will always recommend this Bank and its services to your friends, as a satisfied shareholder or a customer is the best advertisement any bank would desire."

THE NATIONAL BANK OF INDIA, LIMITED

PROSPECTS FOR CURRENT YEAR QUITE FAVOURABLE

MR. J. K. MICHIE'S IMPRESSIONS OF THE EAST

THE Annual General Meeting of the shareholders of the National Bank of India, Limited will be held in London on 14th April, 1953. In the course of his statement circulated to the shareholders along with the Directors' report and accounts of the Bank for the year ended 31st December, 1952, Mr. J. K. Michie, Chairman, not only makes a customary review of the economic conditions in the countries in which the Bank operates but also gives his impressions of the recent tour of the countries in the East undertaken by him. His expectations that the year 1952 would be "a year of adjustment" had proved to be true. In some countries and in certain sections of commerce and industry, it involved considerable pain and tribulation. It was a poor year for the importer, he says, but the position is now being rectified and, "if smaller in volume, trade should now be sounder in character than it was." Summing up his impressions of the East, he observes that all these countries require and want foreign aid in the form of capital, and hopes that "a mutually happy *modus vivendi* for British capital and its necessary British personnel will be found." But he adds that goodwill and tolerance will be necessary on both sides.

The following is the full text of Mr. Michie's statement:

"Before dealing with the accounts, I wish to refer to changes in our Board of Directors and our General Management.

"Recently, Mr. J. R. H. Pinckney has been reducing his business responsibilities and expressed a wish to retire from our Board. He will cease to be a member after this meeting and we part with him with great regret. Mr. Pinckney is the doyen of the Board, having joined it in June, 1934, and we shall greatly miss his wise counsel emanating from long experience and a well-stored mind and, in particular, his wide knowledge of the tea industry. We shall also miss him as a friend.

"To fill this vacancy we have appointed to the Board Mr. T. T. K. Allan who retires from the position of General Manager on 31st March. It is our wish that the accumulated experience which Mr. Allan has gained in fifty years of service should not be lost to us and you will be asked to confirm this appointment. But Mr. Allan's qualifications do not rest on service alone. As your General Manager since 1st February, 1946, he has shown a breadth of vision in his approach to the problems of the Bank and a calm appreciation of all aspects of a situation which has been of immense value to myself, to the Board, to his colleagues and, therefore, to the Bank.

"We could not have wished for a better chief executive and the staff could not have a head more sympathetic to their difficulties and their legitimate aspirations.

"Mr. Chisholm, who takes his place, needs no introduction to the shareholders or to our constituents and he carries our full confidence, as does Mr. Kerr, who has become Deputy General Manager.

Accounts for 1952

"Turning to the accounts for 1952, the total of the consolidated balance-sheet shows a reduction of £3,816,532 to £143,467,142 which, in the conditions met during the year, is a relatively small decline. The figure relating to the National Bank of India Ltd, alone has fallen by £1,839,229, although the total of deposits has, in fact, risen slightly—loans payable, on the other hand, have fallen from £4,000,000 to £740,663.

"On the other side of the book, advances have fallen by over £12 millions and, in consequence, cash and investments, including bills of exchange, etc., show an overall increase of £10,962,165. As I explained last year, there were special reasons for advances being temporarily high at 31st December, 1951.

"After making full provision for taxation and other necessary reservations, net profits are £381,444, a reduction of £29,229, as compared with 1951 results, which were exceptional. We are, therefore, satisfied with the results and with the progress the Bank is making.

"We continue to have to spend money on premises and housing, but because of the long-term nature of these assets we have decided it is more logical to spread writings-down over a more extended period and this year we are allotting £75,000 for this purpose. As you can appreciate, your properties are worth very much more than the figure at which they stand in the books. We have allocated £115,000 to contingencies reserve account, thereby strengthening our inner reserves, leaving the carry forward practically unaltered.

"Grindlays Bank Ltd. again had a satisfactory year and we continue to be satisfied with their progress. There is no special feature requiring comment in regard to the operations of our Finance and Development Corporation.

"Branches of the Bank have been opened at the following places since my last report:

Hargeisa, Somaliland Protectorate,
Eldoret, Kenya,
Moshi, Tanganyika Territory.

"The offices at Soroti and Tororo, opened originally as sub-branches to Mbale, Uganda, have now become full-time independent branches. Other developments are in train.

"Through no fault of our own we have again been disappointed in our hopes of opening a West End branch in St. James's Square, but since the beginning of the year progress made by contractors—who are not under our control—has been much better and we can safely promise to be functioning in the autumn. It is regrettable that we shall not be open for the Coronation.

1952—A Year of Adjustment

"The expectation, I expressed last year, that 1952 would be 'a year of adjustment' was certainly proved true and, in some countries and in certain sections of commerce and industry, it involved considerable pain and tribulation.

"Hardly a commodity in the finance of which we are concerned escaped a severe fall in value—jute, cotton and tea in India and Pakistan, rubber, copra and coconut oil in Ceylon (her tea industry suffered but in a minor degree), cotton in Uganda and sisal in Tanganyika. Prices of coffee in East Africa and rice in Burma were exceptions, but the rise in the price of Burma rice embarrassed still further her neighbouring consumers, India and Ceylon.

"Consumer buying power inevitably fell and this was aggravated in some countries by the previous excessive imports resulting in a very poor year for the importer. This position both through Governmental restrictions made necessary by lack of foreign exchange and by the common sense of importers is now being rectified and, if smaller in volume, trade should now be sounder in character than it was.

India

"India is our largest and oldest field. Since the General Election, which returned Congress to power last spring, the Government has shown a firmer purpose in economic and labour matters than was obvious in pre-election days and this must be welcomed.

"The financial policy being followed by the Finance Minister, Sir Chintaman Deshmukh, while recognising the need for lightening the tax burden on individuals, is anti-inflationary and interest rates are now being allowed to play their part in a country in whose money markets that commodity is in short supply.

"The Government has also wisely reduced the export duty on certain jute products and so helped the Calcutta mills to compete with an industry in Europe and elsewhere which need never have been developed to its present extent.

"The tea industry was, in 1952, a headache to itself, to its bankers and to the Government and at the end of the year prospects for quite a large section of the industry were far from bright. Fortunately, due to a combination of causes and circumstances the picture has since improved radically and there is now reasonable grounds for optimism though not for complacency.

"A year ago, there was no cloud in the sky, merely the prospect and hope that in the United Kingdom tea would be derationed and decontrolled. Unfortunately, a long period of bulk contracts in which quality was not sufficiently discriminated for or against in price, encouraged human frailty to assert itself and in all too many cases coarse plucking was indulged in. When decontrol and free auctions arrived, simultaneously came the inevitable consequences, good teas went up in price, poor teas fell catastrophically.

"I am glad to say that the industry took immediate steps to rectify its policy, while the Government of India has given valuable assistance in lightening the burden previously imposed on the industry in the form of subsidies on food, although they have as yet done nothing by way of reducing the imposts of excise and export duties. Fortunately, also the stock position in this country is not so heavy as was feared and the cumulative result has been a steady recovery in prices which we hope will be maintained. My excuse for writing at length on the subject of tea is that because the lesson has been short and sharp, I hope it will not be quickly forgotten. We cannot dissociate ourselves from the problems and policy of one of our largest interests.

"Food production in India remains its biggest and most intransigent economic difficulty and, although by better agricultural methods, by irrigation schemes and by encouraging the use of artificial fertilisers, real, if unspectacular, progress is being made, a continually growing population largely, if not entirely, negatives the gains. The Government's Five-year Plan aims particularly at meeting this crying need.

Pakistan

"1952 was almost as disastrous a year for Pakistan's economy as the previous year was favourable.

"Her foodgrain crops were poor, while prices of cotton in West Pakistan and jute in East Pakistan fell steadily and steeply. She had also in the flush of previous prosperity allowed imports on far too generous a scale.

"To help the situation the Government—I think mistakenly—indulged in price support schemes which in the event left it with stocks on which it has lost considerably. Earlier realisation would have saved their budget from losses and would have benefited the country's external trade balance.

"The Government of Pakistan is now taking energetic steps to rectify the situation which fundamentally is quite sound by limiting non-essential imports and by stimulating exports, though I regret to see a modern State reverting to barter as a method of trading. This, I fear, is another consequence of non-convertibility of currencies.

"Trade between India and Pakistan is not dead, but it is far from being as alive as it should be, and, even though a mere and obvious truism, one must point to the enormous mutual advantages that would derive from a free flow of commerce within the sub-Continent.

Ceylon

"Ceylon is another country that has had to adjust its ideas of importing and Governmental spending to a reduced income. Her major problem is the cost of the necessary imports of foodstuffs, mainly rice and, as her yearly needs are not less than 450,000 tons, this, if imported entirely as rice at present world prices, would cost over £30,000,000. Further, Ceylon was subsidising rice to such an extent that it was cheaper to the consumer than wheat products, which, in fact, cost less than half. Obviously the Government cannot afford such a policy and I am confident it will amend it in its coming budget.

"The feature of Ceylon's economic year has been the barter deal with China of 50,000 tons sheet rubber for 270,000 tons of rice both at prices which seem favourable to Ceylon. Each side will try to assure that shipments balance as nearly as possible and this may well interfere with the smooth working of the agreement. Already the rubber market in Colombo is suffering from the lack of Chinese tonnage.

"Another, and possibly serious obstacle, is the decision of the United States of America and of Great Britain not to allow the use of its tonnage and to forbid the bunkering at its stations of any tonnage used for the transport to China of strategic materials—under which rubber falls.

"If a little slowly, the reconstruction of Colombo harbour is proceeding steadily.

Burma

"During 1952, the control of the Burma currency previously vested in a Currency Board sitting in London was removed to Rangoon under the Union Bank of Burma and the name of the rupee changed to the *kyat*, a name by which it was always known in the Burmese language, and it is now a decimal currency. Under the Union Bank of Burma Act the value of the International Reserve maintained by the Bank shall be not less than 25 per cent. of the Bank's liability on account of deposits and currency in circulation. The present ratio is 90.26 per cent.

"While there are definite and sore irritations, such as the activities of Chinese Nationalist troops in the Shan States and of Red and White Communist guerillas whose sporadic raids are most unsettling, not to forget the continued lack of a firm settlement of the Karen question, the past year has, on the whole, been one of progress, politically and economically.

"The very high prices obtained for her rice surplus have assured Burma of an extremely favourable trade balance—which shows every sign of being increased in 1953—and as Government insists that 300 post-war *kyats*—less 'expenses'—is at least as good a price to the cultivator as was 125 to 150 pre-war rupees, this means that the Government's policy is anti-inflationary—that it is piling up balances which so far it has hardly begun to spend, while the purchasing power of the cultivator remains low. True progress through the increase of law and order will only be reflected in a higher production and it is confidently expected that 1953 will see a larger surplus of rice for export.

"Now that the constitutional position has been cleared by a reference to the Supreme Court, it is expected that negotiations for the projected joint venture in the oil industry will be resumed, and others may follow.

Aden

"Aden has inevitably suffered in trade from the general recession, as a port that is partly *entrepôt* must suffer, and merchants have had to face considerable losses on their stocks of imports, but, on the whole, trade is remarkably active and is, undoubtedly, being aided by the erection of the A.I.O.C. Ltd. refinery in Little Aden.

Somaliland Protectorate

"Our branch at Hargeisa only functioned for nine months in 1952, but the volume of business done is encouraging.

East Africa

Kenya.—"The economy of the Colony has been gravely disturbed by the tragic emergence of the 'Mau Mau' organisation created by a small, but fanatical, section of the Kikuyu tribe.

"There are, in fact, two tragedies; one, that the crisis was not forestalled, and the other, the aftermath of fear and bitterness it will leave behind, however soon the present emergency may be resolved. This will want all the statesmanship and goodwill at the command of the Governor and his advisers to whom our sympathy goes out.

"So far the effects of the 'Mau Mau' activities on agriculture and industry have been less than was to be expected, but they may well increase and last for a long time for Government are being forced to postpone certain schemes of development they had in train.

Uganda.—"Although cotton prices fell, production was good and coffee did well.

"The Owen Falls Electricity Scheme can already sell its potential production and the formation of the Uganda Development Corporation to take over suchlike projects, as the Tororo Cement Works, is a sound move. Considerable mineral development in the Kilembe district is in prospect and a rail link with that area is under construction.

Tanganyika.—"Although sisal and cotton prices have fallen, they are still adequate and, on the whole, the territory had a satisfactory year. As with Uganda, the lack of adequate road and rail communication remains the main obstacle to development, particularly, of mineral potentialities.

Zanzibar.—"Cloves, the principal source of income made satisfactory prices.

"I have just returned from a tour of the East, during which I visited all except four of our branches east of Suez.

"What I saw of our business and our staff was encouraging. Our relations with the various Governments and with the Central Banks, which, in our sphere of activities, represent them, are excellent and the spirit of service which is a well kept tradition throughout the staff is appreciated by our customers.

"The changes caused by the achievement of political independence in India, Pakistan, Burma and Ceylon have demanded a reorientation by British business operating in these countries and, I think, the necessary adjustments, mental and otherwise, have been made very successfully.

"One cannot but be struck by the initiative being displayed by the new Governments made up in some cases of names previously quite unknown to the political scene.

"That their dynamic urges spurred in varying degree by nationalism have led to actions and policies which have not been particularly successful, they themselves would probably admit, but the past two years have at least brought firsthand experience which I hope will be heeded in future.

"Extreme nationalism, I fear often, regards its aims as justifying themselves irrespective of their economic results; on the other hand, all these countries require and want foreign aid in the form of capital and I hope that a mutually happy *modus vivendi* for British capital and its necessary British personnel will be found. Goodwill and tolerance will be necessary on both sides.

"I was struck by the calibre, *esprit de corps* and enthusiasm of our staff of all ranks, wherever I went, and once again we owe them genuine praise and sincere thanks for their work during the past year.

Convertibility of Sterling

"I will end by reference to an issue, about which I am often asked and with which all countries in the sterling area and we, as an Exchange Bank, are deeply concerned—free convertibility of sterling. It has been my view

REPORT OF THE AUDITORS TO THE MEMBERS.

We have obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purposes of our audit. In our opinion proper books of account have been kept by the Bank so far as appears from our examination of those books and proper Returns adequate for the purposes of our audit have been received from Branches not visited by us. We have examined the above Balance Sheet which is in agreement with the books of account and Returns. In our opinion and to the best of our information and according to the explanations given to us the said Balance Sheet gives the information required by the Companies Act, 1948, in the manner thereby authorised for Banking Companies and on such basis the Balance Sheet gives a true and fair view of the state of the Bank's affairs as at 31st December, 1952.

We have also examined the annexed Consolidated Balance Sheet and Consolidated Profit and Loss Account of the Bank and its Subsidiaries dealt with thereby with the audited accounts of those Companies. In our opinion such Consolidated Balance Sheet and Consolidated Profit and Loss Account have been properly prepared from such accounts in accordance with the provisions of the Companies Act, 1948, in the manner thereby authorised for Banking Companies and, on this basis, give a true and fair view of the state of affairs and of the profit ascertained in the manner therein indicated of the Bank and its Subsidiaries so far as concerns members of The National Bank of India, Limited.

ROLE OF MANAGEMENT CONSULTANCY—II

THE COUNTER TO ADMINISTRATIVE INERTIA

(By J. SANDFORD SMITH)

[Readers will recall that the first instalment in the series of articles on Management Consultancy appeared in Commerce dated 21st March last. The second and final of the series appears below.—Ed.]

HOW should a Board of Directors or Management, thinking about using consultancy services, get in touch with a reputable and expert firm on whose professional standard of conduct they can rely? Next, having found this paragon, how can they ensure making the fullest and the best use of consultancy advice?

In 1948 Sir Charles Renold, the President of the British Institute of Management, speaking of the purposes of the Institute said "... it is necessary that industry shall have confidence in the standing of the firms and individuals who offer their service as management consultants. Unfortunately, the profession is one which could easily become the happy hunting ground of quacks, and for this reason, an industrial concern may well hesitate to seek this kind of help. To meet this situation the Institute is in consultation with leading management consultants with a view to establishing a Register of Consultants of accepted standing." Since then the Institute has devoted a great deal of time to preparing a Register of Consultants of accepted standing.

Its first and principal task has been to satisfy itself by independent reference that any firm on the Register has proved over the years its ability to render a valuable service to its clients. The Institute has examined qualifications of all practising consultants and continues to check up each year to ensure that a proper standard of competence is maintained.

Professional Code

It has devised a code of professional conduct in the following terms: "It shall be regarded as unprofessional conduct: (1) to advertise consultancy services in the public Press except in the case of classified advertising for staff; (2) to accept, or permit any of their staff to accept, any trade commission, discount, or consideration of any sort, in connection with the supply of goods or services to clients: (3) to have any financial interest in goods or in services (other than their own) recommended or supplied to clients by them, or to be controlled directly or indirectly by a supplier of such goods; (4) to calculate their remuneration on any basis other than a fixed fee agreed in advance (which may be on a time basis); (5) to disclose or permit to be disclosed, confidential information regarding their clients' business: (6) to pay commission or any other form of remuneration to persons not on their staff for the introduction of clients; or (7) to do anything likely to lower the status of Management and Industrial Consultancy as a profession."

Above all, the Registration Committee represents a focal point of which any complaints about consultancy services can be directed in the full confidence that they will be investigated thoroughly and impartially. Any board of directors, municipality or government, can obtain from the British Institute of Management the names of approved consultants of high professional standing and technical competence.

It is natural, perhaps, that United Kingdom consultancy services are being sought for by management all over the world. Britain led the industrial revolution; she has already passed through the stage of totalitarian management when perhaps the main incentive to work was the risk of dismissal and starvation. She is beginning to work out a true industrial democracy in which the native resource and inventiveness of her people, and respect for quality —whether in man or machines, may build a new industrial revolution on the foundations of the old.

Measuring Potential Benefit

The client contemplating the use of consultancy services has to envisage a sizable expenditure in fees before any tangible advantage accrues. How can he be certain that the cost of the fees will represent, in the long run, a profitable investment?

In certain directions, the anticipated benefit to be obtained from consultancy services can be measured with a fair degree of accuracy. As an example, there is the introduction of improved work methods and incentive schemes whereby in normal circumstances a consultant can forecast with reasonable certainty that production will increase by a certain figure, say, 25 per cent. Again, in the general run of consultant service designed to seek economies in administrative and overhead costs, the consultant's usual objective is to achieve a reduction in the annual operating costs at least equal to the whole of his fees; thus that investment in consultant service in this instance should render 100 per cent. return on the money invested.

It is the purpose of the preliminary survey report made by the consultant to set out what service in his view should be rendered and what advantages are likely to accrue from it. Though in many cases he cannot measure these precisely, no reputable firm of consultants will set out gains which from their own experience and knowledge are unlikely to accrue.

The management consultant is the counter to administrative inertia. His is the task of carrying out research, designing plans and helping to implement. It is not suggested that the administrator—the business manager—is habitually the slave of inertia or is incapable himself of trying to bring about change and improvements. But the burdens which he has to carry to-day, and the complexity of the environment in which he works, greatly increase the natural difficulties of promoting changes from within. The consultant can concentrate his attention single-mindedly on the problem.

NATIONAL BANK OF INDIA, LIMITED

(Concluded from previous page)

that this most desirable consummation can only come by being worked for and that to experiment with such a measure before ensuring adequate safeguards in the form of gold and dollar balances would be catastrophic.

"At the time of writing, the means to a solution of this question are under discussion in Washington and it is to be hoped that the result will be a positive contribution. Until then barter arrangements with their restrictive effects are likely to continue.

"The bane of our economic existence today is 'autarchy' a policy bred by fear out of nationalism. When, for instance, rice can be grown at less than half the cost of buying it in world markets, it is surely plain common sense to put capital into agriculture rather than into industries the products of which have to be subsidised. That may be an oversimplification; it is, nevertheless, basically true.

"Despite the difficulties of the times through which we are passing, I have complete faith that your business will grow and expand and, I believe, our prospects for 1953 are quite favourable."

NEW PUBLICATIONS

Governmental Policies Concerning Unemployment, Inflation and Balance of Payments—1951-52. Published by the Department of Economic Affairs, United Nations, New York. Available from: Oxford Book and Stationery Co., Scindia House, New Delhi. Price: $ 1.00

THE above publication is an analysis of the replies sent by the Governments of the member-countries of the United Nations to questions relating to the trends and policies bearing on the maintenance or achievement of full employment and on related balances of payments.

An annual enquiry concerning these subjects, conducted in accordance with a request by the Economic and Social Council, was initiated in 1949. It was greatly elaborated in 1950 and further modified in 1951 by the Council and, in 1952, by the General Assembly. The major objective underlying the Council's request is to provide the means for a periodic review of the extent to which the Governments have responded to the recommendations of the U.N. with respect to national and international full employment policies. The questions, which were submitted to the Governments by the Secretary-General in February, 1952, were divided into two parts; Part A concerned domestic policies, and Part B covered policies relating to the balance of payments. By August, 1952, replies had been received from 25 Governments; 17 of these replied to both parts of the questionnaire; an additional seven Governments replied only to Part A and one only to Part B.

The replies to the questions dealing with domestic conditions indicate that the more developed private enterprise economies expected a moderate increase, ranging up to five per cent., in total national output in 1952. While Government expenditures were expected to continue to rise in 1952, as a result of increased military outlay, private investment was, in many instances, expected to decline, largely because the rate of inventory accumulation in 1952 was likely to be slower than that in 1951.

With some exceptions, as in the U.K., personal consumption was expected to rise, despite rising levels of armament. No increased pressure of demand upon available supplies and no drop in real wage rates was generally anticipated.

The average level of unemployment in 1951 was less than four per cent., except in Belgium, Denmark and Italy. The pockets of unemployment that had begun to develop in several countries during the second half of 1951 were generally made the object of remedial action. The principal measures took the form of relaxations of tax and commodity control measures so as to increase effective demand and employment opportunities, in view of the fact that armament expenditures and production were proceeding at a slower pace than had been anticipated.

Of the Governments with centrally planned economies of eastern Europe, only Czechoslovakia, the U.S.S.R. and Yugoslavia replied to the questionnaire. The reply of the U.S.S.R. did not include a statement of objectives for 1952; however, from the draft directives for the Five-year Plan for 1951 to 1955 which have been published in the meantime, it appears that an average increase of about 10 per cent. per annum in real national income was proposed for the period in question. The planned increase in consumption appears to be only a little less. In Czechoslovakia, according to the analysis, it was proposed to increase the real national income in 1952 by a little less than 20 per cent. and consumption by about 10 per cent. over the 1951 level. In Yugoslavia, both real national income and consumption were expected to be maintained in 1952 at roughly the same level as in 1951. In Czechoslovakia and the U.S.S.R., there was to be a considerable expansion of investment, while, in Yugoslavia, investment was expected to decline in 1952. In all the three countries, a further increase in military expenditure was planned for 1952.

The underdeveloped countries did not report their development objectives for 1952. These countries, which are primarily exporters of raw materials, experienced a sharp rise in the volume and prices of their exports during 1950 and the early part of 1951. This was followed by a decline in the demand for raw materials and in the prices of such products. Several of the countries reported that they had introduced measures during 1950 with the aim of siphoning off export profits, but had found it necessary to rescind such measures. In India, where the influence of raw material exports is of limited significance for the economy as a whole, the overriding factor in the economic situation in both 1951 and 1952 was the problem of grain shortage, which was reflected in the continuous rise in grain prices.

In its resolution concerning full employment, the Economic and Social Council tried to encourage Governments to prepare in advance the measures which they would be ready to institute in order to meet any threatening growth of unemployment beyond a previously announced limit. The analysis notes that, while several of the economically more developed countries with private enterprise economies adopted policies and measures designed to maintain high levels of employment in relation to their available labour supply, the U.K. remained the only country that adopted a specific full employment standard. This standard was defined as three per cent. of the employees at the seasonal peak. The position of the U.S. continued to be that outlined in the Employment Act of 1946, namely, employment goals are announced from year to year as part of the economic report which the President submits to the Congress. The centrally planned economies reported, in effect, that the development of their economies is planned to utilise their entire labour force and that their effective consumer demand, investment programmes, and related economic policies are arranged to eliminate the possibility of the problem of unemployment.

With respect to the economically less developed private enterprise economies, the Council has recognised that their major employment problem is that of underemployment of labour and of under-utilisation of natural resources. The achievement of conditions of full employment by these countries is, therefore, recognised as involving the promotion of interrelated economic development policies.

An appendix to the analysis contains a table listing the various anti-inflationary measures introduced late in 1950 and in 1951 by a number of Governments which replied to the questionnaire.

The national policies which have been applied in recent years to govern external transactions were largely of two very different kinds. One type comprises predominantly monetary or fiscal measures which affect external transactions only indirectly, chiefly through their influence upon effective demand in general. In their action on the balance of payments, such policies are likely to be on the whole non-selective as to the kind of goods or services exchanged with other countries and non-discriminatory as to the geographical orientation of trade. Such policies, therefore, bear on the global balance of transactions, but may have little more than a proportionate effect on the balance of transactions with particular countries or regions. Various replies received to the questionnaire point to a tendency towards relaxing import restrictions and using curbs on domestic demand, in order to achieve a more stable balance, not only internally but also in external transactions. The other type of policy includes measures bearing directly upon foreign transactions. Such measures are almost invariably selective, in the sense that they favour the exchange of certain goods at the expense of others (exchange control, for instance, is likely to accord priority to the import of essential goods), or that they discriminate among different areas. This type of policy naturally lends itself to influencing the balance of payments with particular countries or groups of countries.

The information, explicit or implicit, in the statements received from the Governments makes it clear that, under prevailing conditions, both types of policy are considered indispensable to countries in the conduct of their foreign business transactions.

As the pressure on the payments situation of many countries increased with the fall in international market prices of numerous staple products, beginning in the second quarter of 1951, many Governments tightened their trade restrictions of the selective and discriminatory type, in order to protect their payments position. The explanations supplied clearly indicated the reasons for this. The difficulties which these countries experienced were not related exclusively to the balancing of their global accounts, but, to a large extent, to the triangular settlement of accounts. In this situation, their chief concern was to reduce these difficulties through a reorientation of trade involving a balancing of accounts with individual countries or groups of countries. Accordingly, outside the very limited group of countries that experience no difficulty in triangular settlements, the pattern of policies applied may be described as one by which the Governments seek to régulate the general or global balance in external transactions chiefly through monetary or fiscal policies bearing on domestic demand, while difficulties of triangular settlement, while not eliminated, may be mitigated by quantitative restrictions, exchange control and similar discriminatory measures.

Surveying the use of restrictions by member-countries in May, 1952, the International Monetary Fund reported that only seven of its 51 members—Canada, El Salvador, Guatemala, Honduras, Mexico, Panama and the United States—had refrained from availing themselves of the "transitional arrangements" of the Fund. Practically all countries employing restrictions on international transactions have discriminated in the application of such restrictions between hard and soft currencies. The analysis finds that the persistence of discriminatory trade controls and widespread non-convertibility of currencies suggests that a satisfactory solution of the problem of balance of payments equilibrium is a matter of international concern.

An appendix to the analysis gives detailed balance of payments forecasts for 1952 and estimates for 1951 by a number of Governments which replied to the questionnaire.

The Demographic Yearbook 1952. Published by the Statistical Office of the United Nations, New York. Available from: Oxford Book and Stationery Co., Scindia House, New Delhi. Price: $ 6.00

The continued increase in city dwellers as opposed to farm residents may necessitate the development of a more elaborate and centralised system for distributing goods and services, according to the 1952 edition of the United Nations *Demographic Yearbook*.

In a study of the increase in urbanisation, the new *Yearbook* points out that the twentieth century move to the cities has brought about a concentration in large cities. In almost every country listed in a table showing the percentage of urban population, most of the population lives in cities of 50,000 or more. The *Yearbook* sees this as the natural follow-up of the surge of industrial development since 1900. It indicates, however, that this concentration may call for important revisions in the distribution set-up.

The 1952 *Yearbook* is the fourth in this demographic series. In nearly 400 pages of statistical tables, two introductory chapters in French and English, indexes, maps and a bibliography, it compiles current and retrospective population and migration data for every country which has available figures. Almost all data are official statistics supplied by national Governments, and supplemented through research in national official publications. A foreword points out that the Statistical Office has made every effort to improve the *Yearbook*, as it has every year. The number of countries included is increased, the code evaluating the quality of statistics has been extended, and comparative figures with earlier years are given in a number of the key tables.

In an interpretive chapter on "Urban Trends and Characteristics," the *Yearbook* emphasises several results of the current move to the cities. It points out that, in general, cities have a greater proportion of women than men, and that the larger the city, the more women there are as compared to men. The study notes, however, that the proportion of city men seems to be greater in countries with a "non-western" or partly "non-western" cultural pattern, though the data on which this conclusion is made may be inconclusive.

Despite the greater proportion of women in cities, the birth rate is lower in cities than in farm areas, the *Yearbook* says. Moreover, fertility as a whole is lower in urban industrial countries than in agricultural countries, and lower in urban areas than in rural parts of the same country, whether the country concerned is industrially advanced or not.

The study also points out that infants in rural areas have a greater life expectancy than those in cities, and that urban mortality far exceeds the rural death rate.

A special map of the world, showing the location of all cities with 100,000 or more inhabitants, reveals where industrial urban development has reached its highest peaks. It clearly points to the concentration of big cities in Western Europe, the eastern United States and Japan. The list of cities shown in this map, with their population and the date on which the figures are based, is given in a statistical table.

INDUSTRIAL UNDERTAKINGS OF GOVERNMENT

FAIR PROGRESS IN 1952-53 REPORTED

JUDGED by the developments recorded in the first Annual Report of the Ministry of Production, just published, the Ministry may be said to have achieved a fair measure of progress in the organisation and development of industries in the public sector. To the extent of this progress, the Ministry may well claim the credit of fulfilling the objectives for which it was constituted last year. It will be recalled that the Ministry of Production was created on 13th May, 1952, by the bifurcation of the former Ministry of Works, Housing and Supply into two ministries, namely, Ministry of Works, Housing and Supply and Ministry of Production. The object of creating the Ministry of Production is to ensure the fulfilment of the objectives of the Industrial Policy Resolution, 1948. The Resolution seeks to secure rapid industrialisation of the country by planning and by active and progressive participation of the State in the creation of new industrial undertakings in certain basic industries of national importance.

The main items of work of the Ministry of Production relate to (1) the management of all Government industrial undertakings, excluding those specifically allotted to any other Ministry, (2) production and distribution of salt and coal, and (3) oil refineries. Among the important industrial undertakings are: (1) Sindri Fertilisers and Chemicals Ltd., Sindri; (2) Machine Tool Factory, Jalahalli, Mysore State; (3) National Instruments Factory, Calcutta; (4) Hindustan Cables Ltd., Rupnarainpur (West Bengal); (5) Penicillin Factory, Pimpri (Bombay State); (6) Government Housing Factory, New Delhi; (7) D.D.T. Factory, Delhi; (8) Government (Railway) Collieries; (9) Hindustan Shipyard Ltd., Vishakapatnam, and (10) Rajasthan Salt Sources, Sambhar Lake. The Ministry is responsible for planning and co-ordinating policy, and for controlling and managing industries in the public sector. The company form of management has generally been adopted in the State enterprises under its control, with a view to providing flexibility in administration, by adoption of commercial principles and practices.

Sindri

The Report hails the setting up of the Rs. 23-crore Sindri Fertiliser Factory as a great national achievement aimed at making India self-sufficient in foodgrains. The first quantity of crystalline ammonium sulphate was turned out on 31st October, 1952. The bagging plant was commissioned on 4th February. At the end of 1952, the daily average production stood at 803 tons. During the first few days of 1953, the production was as high as 965 tons a day. There were occasions when the plan was run at about 1,100 tons a day for periods ranging from four to nine days at a stretch. The peak production reached on any single day so far has been 1,317 tons, which is 317 tons more than the average rate of output per day. The total production upto 28th February, 1953, was 2,31,590 tons.

The initial price of Rs. 350 a ton, which was effective till 31st December, has been reduced by Rs. 65 to Rs. 285 a ton and a further reduction is contemplated after the establishment of a coke oven plant for the manufacture of 600 tons of coke per day and the erection of a cement manufacturing plant by the A.C.C., with an installed capacity of 600 tons of cement a day, for the utilisation of the by-product—namely, chalk sludge. It is also proposed to utilise the coke oven gases for the manufacture of urea, a stable fertiliser with high nitrogen contents, ideal for rice cultivation. The plant is estimated to cost Rs. 9½ crores. The entire production of Sindri is contributed to the Fertiliser Pool administered by the Food and Agriculture Ministry. It is intended, however, that Sindri will constitute its own marketing organisation and take over distribution responsibilities from 1st January, 1954. It may be added here that the distribution aspect of the Sindri product has remained neglected since its inception, and the decision to have its own marketing organisation is to be welcomed. It is to be hoped that the move will not be delayed any longer.

Machine Tool

So far as the Machine Tool Factory is concerned, plant and machinery valued at Rs. 110 lakhs ordered overseas have been arriving in a steady flow and are being installed at the factory site at Jalahalli, Bangalore. The hangars for the machine shops are nearing completion. It is expected that initial production will commence by the end of 1953 and reach full production in 1955. In the first stage, production in the factory will be confined to the manufacture of 4,000 lathes of 8½" size a year. The authorised capital of the Company is Rs. 12 crores, but the estimated cost of the project is Rs. 8.73 crores. The Government holds 85 per cent. of the shares and Oerlikons, a Swiss firm of machine tool manufacturers of international fame, the remaining 15 per cent.

Instruments

The reorganisation of the National Instruments Factory at a cost of Rs. 1.82 crores is planned by the Ministry of Production. This factory, one of the oldest in the country, came into existence in 1830, as a small repair and service depot for survey instruments. Under the impetus of the war, it developed into a full-fledged instruments factory, producing no less than 250 broad types of survey, drawing, mathematical, optical and other instruments. Of the amount of Rs. 1.82 crores for reorganisation, Rs. 80 lakhs will be spent within the Five-year Plan period. The scheme covers construction of new buildings, purchase of balancing equipment and of new machinery to replace old and obsolete ones and, what is more important, the manufacture of optical glass. Another important new activity will be the manufacture of linen measuring tapes. The foundation-stone for the construction of new buildings was laid on 22nd February, 1953. Production at the factory has been rising steadily and in the first nine months of 1952-53, it had produced articles worth Rs. 14 lakhs, which is more than the annual production in any of the three preceding years. It is anticipated that production in the full year will be of the value of Rs. 20 lakhs.

Cables

Construction of the Hindustan Cables Ltd. is in progress. The factory is expected to go into production by June, 1953, and reach full production in about six months thereafter. The factory has been planned to produce about 470 miles length of cables of different specifications a year. The sale value of the annual output at present price levels will be about Rs. 87 lakhs. The cost of the factory is estimated Rs. 110 lakhs. India's requirements of dry-core paper insulated telephone cables, at present met entirely from imports, are of the order of Rs. 1 crore a year. The annual consumption by the Posts and Telegraphs is about Rs. 80 lakhs. The Company has concluded a technical assistance agreement with Messrs. Standard Telephone and Cables, Ltd. of the U.K.

Penicillin and D.D.T.

A penicillin factory is being established with the assistance of W.H.O. and U.N.I.C.E.F. The Government of India will contribute Rs. 130 lakhs towards its capital and the other two organisations $12 lakhs. The ownership, as well as administration of the factory, will vest with the Government of India. The factory is planned to produce 3,600 billion units of penicillin a year to start with, rising to 9,000 billion units a year. The factory is expected to go into initial production by December, 1953, and reach full production a year later.

A D.D.T. factory is being established also with the assistance of the W.H.O. and U.N.I.C.E.F. The contribution of the Government of India is Rs. 22.45 lakhs and the W.H.O. and U.N.I.C.E.F. $3.5 lakhs. The factory, with a capacity of 700 tons of D.D.T. per year, is expected to go into production before the end of 1953.

Shipbuilding

The participation of the Government of India in shipbuilding by acquiring a two-third interest of the Hindustan Shipyard, at about Rs. 180 lakhs, is expected to be a prelude to the development of the Shipyard to meet India's growing needs for shipping. A French naval firm of international reputation, with which an agreement for technical aid co-operation is concluded, has submitted a report which is under the consideration of the Board of Directors. The Shipyard is planned to be equipped to build ships of all descriptions, passengers and cargo vessels, tankers and naval units up to a tonnage of 15,000. Provision has also been made for the manufacture of modern engines and boilers and for the expansion of berths for increasing its shipbuilding capacity. The Planning Commission has made a provision of Rs. 14 crores in the Five-year Plan on account of the Hindustan Shipyard.

The Government of India accepted, last year, the proposals of the Standard-Vacuum Oil Company of New York and the Burmah-Shell Group of Companies, London, for the establishment of oil refineries, one each at Trombay. Only a few days ago, it accepted the proposal of the Caltex Company of New York to set up another refinery at Vishakapatnam. The total capacity of the refineries is estimated at 3.8 million tons of crude oil per annum. The refineries, besides providing a major part of India's oil requirements, are expected to furnish the basis for a modern petro-chemical industry, utilising numerous by-products from the refineries.

Among other units with which the Ministry is connected, mention may be made of the following: (1) The Hindustan Housing Factory Ltd. has been incorporated as a private limited company, with the Government of India and Messrs. Basakha Singh-Wallenbang Ltd. as equal partners. The paid-up share capital is Rs. 1 lakh. The Company will manufacture foam concrete roofing panels, pre-stressed concrete components, woodwork for buildings, etc.; (2) the Mandi Salt Mines, the only known rock salt deposits of India, is proposed to be developed and a provision of Rs. 1 crore on this account has been made in the Five-year Plan. Core drilling of the mines is being carried out to ascertain the extent of salt deposits, before the development is taken on hand; (3) a heavy electrical power plant for the establishment of which the Planning Commission has signified its intention to provide Rs. 7 crores; and (4) the Nahan Foundry in the former Sirumur State, was purchased by the Union Government from the ex-ruler of Sirampur State, following the integration of the State with Himachal Pradesh. The foundry manufactures sugarcane crushers, sugar boiling pans and other miscellaneous articles required for our manufacture.

The Government of India has set up a Coal Board under the Coal Mines (Conservation and Safety) Act, 1952, to deal effectively with problems relating to safety in mines and conservation of coal. The railway collieries continued to be managed by the Ministry of Production during 1952. The working of collieries during 1951-52 resulted in a profit of Rs. 11 lakhs. The ownership of the railway collieries is shortly to be transferred to the Ministry of Production. The Government has under consideration the question of setting up a State-owned iron and steel project.

IMPORT OF COPRA AND COCONUT OIL

GOVERNMENT'S POLICY DEFENDED

IN the course of a discussion on import of copra and coconut oil the other day in Parliament, Mr. T. T. Krishnamachari, Minister for Commerce and Industry, Government of India, vigorously defended the Government's import policy. Mr. V. P. Nayar, a Communist M. P. from Madras, at whose instance the discussion was raised, condemned the import policy as callous and stepmotherly and calculated to encourage industries at the expense of millions of coconut growers in India, especially in Travancore-Cochin and the district of Malabar in Madras State. He alleged that the pursuance of this policy would result in "killing the goose that laid the golden egg." He based his arguments on the ground that the prices of copra and coconut oil were on the downward trend, as a result of the Government's import policy. He contended that the bulk of coconut oil and copra was being consumed for industrial purposes and that only a small percentage represented domestic consumption.

Anyone who studies the facts about this industry will find that, true to the policy of his party, the Communist member spoke nothing but untruth. It is gratifying to find that the Minister concerned, Mr. Krishnamachari, tore Mr. Nayar's version to pieces by quoting facts and figures which are unassailable.

Mr. Krishnamachari declared, without any fear of contradiction, that there was no basis whatsoever in the complaints made and that "much ado about nothing" was made. He pointed out that the prices of copra and coconut oil had not been dropping but had been following an upward trend in recent months. Thus, copra was quoted in March, 1953, at Rs. 1,253 a ton, as against Rs. 1,132 a ton in November, 1952, and Rs. 871 a ton in March, 1952. The price of coconut oil last month was Rs. 1,887 a ton, as compared with Rs. 1,648 a ton in November, 1952, and Rs. 1,300 a ton in March, 1952. It will be seen from these figures that the prices of copra and coconut oil are even to-day much higher than what consumers can afford to pay. Incidentally, the ruling prices for coconut oil are higher than the price of Rs. 1,620 a ton considered to be quite remunerative by the Indian Central Coconut Committee in June last year. But even this price, as Mr. Krishnamachari said, is on the high side and out of parity with the prices of other commodities. It is significant that, while there has been a progressive decline in the price of industrial commodities like cotton textiles since May last, the prices of agricultural commodities like copra and coconut oil have been upward. Surely, as Mr. Krishnamachari pertinently observed, "we cannot, in the circumstances, allow the price of agricultural commodities to rise to offset any reduction in the cost of living achieved by the drop in prices of manufactured goods."

No Sound Reason

The grievance of coconut producers arises from the fact that to-day's prices are below the peak levels seen towards the end of 1950 when the Korean War boom was on. At that time, the price of coconut stood at Rs. 1,644 a ton and the price of oil at Rs. 2,464 a ton. But these rates were inordinately high, being as much as eight times the pre-war level. Surely, no one can expect to enjoy such boom times for all time. Consequently, the non-availability of boom prices can scarcely be regarded by the producer of any commodity as a good ground for grievance against the Government.

A brief review of production, consumption and imports of copra and coconut oil discloses that the charge of domestic producers having been let down by excessive imports is baseless. The average production of coconut oil during the last three years has been about 107,700 tons per annum, as against the estimated requirements approximately of 150,000 tons. There is thus definitely a shortfall of 40,000 tons of coconut oil which has to be met by imports from abroad. As against these, imports in 1952 amounted to 28,288 tons of oil and 18,350 tons of copra. In other words, imports were just sufficient to meet the shortfall in supplies. Accordingly, it would be incorrect to presume that excessive imports have had an adverse effect on prices.

The contention that the prices of coconut and coconut oil do not matter very much to consumers is pure nonsense. For 55 to 60 per cent. of the total supply of these in India is used for edible purposes. Of the balance, only 12.5 per cent. is taken up by the soap industry, the rest

representing consumption for toilet, domestic and illumination purposes. The higher the price of this edible oil, the higher will be the cost of living in those parts of the country where it is widely used.

The present prices of copra and coconut oil at Rs. 1,253 and Rs. 1,648 per ton are very high. It is feared that they might shoot up further. For the groundnut crop this year is poor and the deficit in the supply of groundnut oil is expected e no less than 2½ million tons. If we are to the normal deficit of 40,000 tons of coconut the overall deficit of vegetable oils will be ut 3 million tons. It is because of this possiy that prices of all oilseeds and oils have n showing an upward trend.

Expressing concern at this development, Krishnamachari said:

"The cost of living index has been steadily g from December, 1952. The whole scheme of our planning for the future depends upon our holding the price line firm and I do not mind admitting to the House that we view this rise in the cost of living with considerable alarm, and the Government would take every possible step to bring down the prices of articles of internal consumption to reasonable levels."

Now that the Minister himself admits that something must be done to bring down prices, it is to be hoped that he will favourably consider the suggestion that imports of copra and coconut oil must be placed under the O.G.L. and that the Government should offer some positive encouragement to soap manufacturers to utilise non-edible oils in preference to edible oils. The implementation of these two suggestions will result in an increase in the supply of vegetable oils in the country and thereby induce a fall in prices, especially of edible oils.

SUPERIOR AIR DRYING VARNISHES

Formulations for the production of superior air drying varnishes have been worked out at the National Chemical Laboratory, Poona.

In India, oil varnishes are usually prepared from ester gum and zinc resinate, the films of which are not sufficiently resistant to water, acids and organic solvents and are comparatively less flexible compared to films from other resins.

In the new formulations by the N.C.L. metallic salts of polymerised fatty acids are employed in place of the resins. The films obtained through their use have a high gloss and are flexible and tenacious. They also possess good resistance to common organic solvents, water and acid solutions. Oil varnishes prepared from these metallic salts have been tested for their weathering properties over a period of six months and have been found superior to corresponding ester gum varnishes. Besides ordinary uses, these varnishes can be used for waterproofing of textiles.

The various raw materials required for the manufacture of these metallic salts are readily available from indigenous sources. The process is simple and requires little extra equipment.

in Madras... they know that

more motorists use triple-action Mobiloil

than any other motor oil in the world!

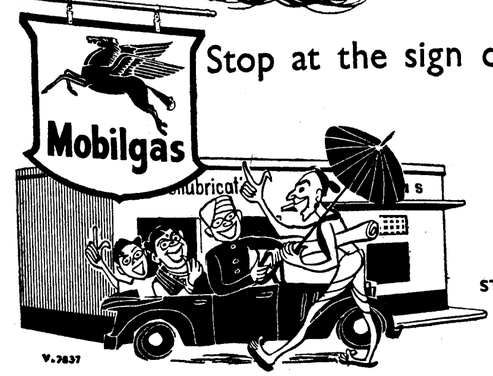
The people of Madras, endowed with an enviable gift for pronouncing long names, are also noted for their proficiency in mathematics. The Madras motorist, for instance, has no hesitation in saying 'Mobiloil' as he pulls in at the sign of the Flying Red Horse; and on adding up his accounts, he readily proves that Mobiloil reduces his running costs.

Like his fellow motorists all over the world, he knows that Mobiloil is a *Heavy-Duty* oil, giving greater protection than regular or premium-type oils – and can see for himself that it ...

SAVES ON WEAR *by lubricating properly at all temperatures;*

SAVES ON REPAIRS *by preventing harmful carbon deposits in the engine;*

SAVES ON PETROL *by preventing acids eating away the metal parts, which causes loss of power.*



Stop at the sign of the Flying Red Horse

The Flying Red Horse is the sign of helpful service for your car. Go there for regular Mobilubrication – the *complete* motor service – and for Standard-Vacuum products backed by 87 years of leadership in the oil industry.

STANDARD-VACUUM OIL COMPANY

V.7837

IMPORTANCE OF FOOD PRESERVATION INDUSTRY

NEW PLANT INAUGURATED AT CHITALENAGAR

THE seasonal character of food and fruit gives rise to the need for preserving them, with their nutritive value intact. This need is met by the development of food preservation industry. Preserved foods can be used not only in the off-season but also in urban centres and distant areas which are poorly endowed with nature's bounties. In a country such as India which is a land of distances and where failure of monsoon is frequent, occurrence of famine common, and growth of population persistent, manufacture of nutritious foods preserved in cans and bottles lessens the rigours of the food problem.

The canned food industry has, however, its own problems. Canned foods are still a luxury in this country. People too are generally not in the habit of consuming canned food. There is also a certain amount of prejudice which needs to be eliminated before people can be expected to accustom themselves to the use of canned food on a large scale. In several directions a move has to be made by the industry to make preserved food popular. Not only does the quality of the food now manufactured require to be improved but a high standard should be maintained. The prices of such food also require to be reduced considerably in order to enable the common man to use it. High cost of sugar and cans and freight rates form a substantial proportion of the cost of production. The future of the food preservation industry, therefore, largely depends on the extent to which these problems are solved. The industry needs to be built up on progressive lines, with the help of research. The establishment of the Central Food Technological Research Institute at Mysore is intended to serve this end. Given proper encouragement, the industry can undoubtedly look forward to a great future.

The lines on which leaders of this industry are applying their minds to develop it are provided by some thought-provoking observations made by Mr. N. Y. Kashalkar in his presidential address at the Tenth Annual Conference of the All-India Food Preservers' Association in New Delhi recently. He said that production of fruit and vegetables must be increased by a very high percentage in order to raise the nutrition standards of the people of India. He was absolutely certain that the increase has to be very much larger than the five per cent. visualised in the Five-year Plan. He drew attention to the F.A.O. recommendations that India should grow 350 per cent. more fruit and vegetables. According to this U.N. body, South-East Asian diets contain too little proteins and vitamins. Any such increase in fruit and vegetable production would only result, Mr. Kashalkar stated, in more food being wasted, if it is not accompanied by a corresponding increase in the country's preservation capacity. "Food preservation was," he declared, "the twin-sister of good production. The Government must also realise that food did not mean merely cereals." He said he had a plan to open 600 canneries in a period of five years with a total capacity of 3,000 tons a day. These canneries should be run primarily in the interest of the consumer. Preservation of larger quantities of food could, he opined, be helpful in keeping the prices of food low. This would also mean making factories more hygienic.

While on this subject, it will be interesting to record here the exploits of the Chitale Agricultural Products Ltd., Chitalenagar, in Malshiras Taluk, Sholapur District. Under the management of two enterprising brothers, Messrs. S. D. Chitale and W. D. Chitale, this company has started a subsidiary, known as the Chitale Syrups and Allied Products Ltd., for the manufacture of preserved foods. The subsidiary has put up a fully equipped plant which was declared open last week by Dr. A. V. Baliga, President, Association of Surgeons of India. The factory is designed to manufacture preserved foods such as jams, jellies, pickles, syrups, etc., on hygienic lines.

The new venture seems to have been preceded by considerable planning, preparation and research calculated to make it a success. The raw materials required by the industry, namely, sugarcane, papayas, lemons, oranges, grapes, bananas are all cultivated in the lands owned by the parent company. Modern methods of agriculture, involving large-scale farming, scientific system of irrigation, preparation of composts, use of agricultural tractors, hybridised seeds, mixed-farming, and extensive and intensive cultivation, have all gone into the production of these crops. Care bestowed on designing special types of bunding operations for the entire area suitable to the particular physical features of the tract with a view to using the irrigated water to the best advantage is a special feature of the methods of cultivation practised by the management. Substantial increase in yields—record ones in some cases—has enabled the Company to supply the raw materials not only on a scale that permits large-scale manufacture but at a price which should help reduce considerably the cost of the finished product. As sugarcane juice, instead of sugar, is used directly as a raw material, this factory scores an advantage over its confreres using sugar, in that it saves the additional cost involved in converting the juice into sugar.

Another notable feature which is likely to make the new venture a success is the attention devoted to the welfare of the workers of the factory, numbering nearly 4,000. The Company has built *pucca* residential quarters which are being provided free of rent. Tap water and electricity are also provided free of charge. Free medical aid, education, provision for recreational facilities, establishment of an art centre and library are the other amenities which go to secure the willing co-operation of the workers in giving their best to increase productivity in the factory. Viewed as a whole, the Chitalenagar Colony may be taken as an example of what a community project, now sponsored by the Government, should be like.

(Concluded from next column)

either on the basis of area to be covered or on the output of work. Rates are fixed in this manner for preparatory operations such as embanking and also for harvesting and thrashing. At the time of enquiry, in certain villages selected in Assam, the piece rate for transplanting, for instance, was Rs. 12 per acre. The daily wages of casual workers in many of the States were sometimes supplemented by customary perquisites, such as household sites, light refreshment or daily meals, etc.

Rates of minimum wages for agricultural wages have been fixed in a number of States including the Punjab, Delhi, Kutch, Bilaspur, Himachal Pradesh, Uttar Pradesh, and Coorg. The main object of fixing minimum wages is to see that the worker is assured of a subsistance living or that he is paid a wage which bears a fair proportion to the market value of the products. The Report gives a brief review of the minimum wages fixed in the various States at the time of enquiry.

The Report also deals with the question of *begar* or involuntary labour. Article 23 of the Constitution of India prohibits traffic in human beings, *begar* and other forms of forced labour. The States may, however, impose compulsory service for public purposes. Section 374 of the Indian Penal Code, 1860, renders liable to imprisonment or fine anyone illegally employing forced labour. A mild form of forced labour was permissible under the Criminal Tribes Act, 1924, which was repealed by the Criminal Law (Repeal) Act, 1952. The Act also repealed every other law corresponding thereto in any State or part thereof with effect from 31st August, 1952. The State Governments have been requested to give the widest publicity in the rural areas to the constitutional and legal provisions so that the evil of forced labour existing either in disguised or any other form might be totally eradicated.

A brief review of the Report thus discloses that only a beginning towards regulation of wages of agricultural workers has been initiated. Minimum wages are to be fixed yet in certain States. There is, therefore, quite a lot to be achieved yet. But there is the danger that any arbitrary or ideal levels fixed might have adverse effect on the agricultural economy. The position in most of the States is that, owing to low productivity of farms and in the absence of scientific methods of cultivation, wages cannot be maintained at levels that can afford a reasonable standard of living to workers. The problem of fixing a fair minimum wage, therefore, is not an easy one. It remains to be seen how the authorities will tackle it satisfactorily, without violently upsetting the present set-up in rural areas.

AGRICULTURAL WAGES IN INDIA

FINDINGS OF MINISTRY OF LABOUR

THE Report of the Union Labour Ministry on agricultural wages in India, published recently, contains the results of an enquiry into the working conditions of agricultural labour, conducted on a nation-wide scale for the first time. The Report is expected to help the authorities to evolve protective and ameliorative measures for workers engaged in agriculture, including the fixation of minimum wages under the Minimum Wages Act, 1948, in States where they have not been fixed so far. The importance of this Report lies in the fact that agriculture occupies the major place in the economy of the country and is the chief source of income for the majority of the population. The level of agricultural wages, therefore, is a crucial index of the standard of living of the nation.

The rate of agricultural wages in India is mostly determined by custom and tradition. And it is the general experience that, in backward areas, the economically stronger party is usually able to exercise some degree of pressure to mould custom and convention to its own advantage. Subject to these, the law of supply and demand for labour operates. And as the pressure of population on land is great, the levels of wages tend to stabilise at, if not decline below, the existing levels and the chances of any improvement are, therefore, remote.

There are two distinct kinds of labour, namely, permanent labour and casual labour. The employment of casual labour arises from the exigencies of work to be done on the farm. The Report, based on a sample survey of villages in the various States, discloses that, except in P.E.P.S.U., where the attached or permanent workers are of the order of 74 per cent., the bulk of agricultural workers fall in the category of casual labour. In Assam, Madras, West Bengal, Mysore, Rajasthan, Saurashtra, Travancore-Cochin, Coorg, and Tripura, the percentage of attached workers is less than 10; in Bombay, Madhya Pradesh, Orissa, Hyderabad, Madhya Bharat and Ajmer, it is above 10 but less than 15; in Jammu, Uttar Pradesh and Bhopal, it is above 20 but less than 25; in Delhi, Himachal Pradesh and Vindhya Pradesh, it is above 25 but less than 35 and in Bilaspur it is 40.

The terms of employment of attached or permanent workers and the methods of remunerating them vary from State to State. The terms governing the period of contract, conditions of employment and modes and amount of wages are generally settled between workers and the employers by mutual agreement, which is usually oral, though sometimes reduced to writing. Attached workers are engaged either for a year or at least for a month, but frequent cases of lifelong and even hereditary employment were noticed during the enquiry. Driven into debt by their poverty, the agricultural workers have to render lifelong service to their creditors, when they cannot pay. In West Bengal, for example, loans are advanced to workers on condition that they or any other member of the family remain attached to the creditor for agricultural work or household duties. In Bihar and Orissa, an attached worker is usually allowed a loan of Rs. 50 to Rs. 100, at the beginning of the year, and unless and until he repays the sum, he is not permitted to leave his employer. In some States, it is customary for the employer to bear all expenses on account of marriages in the workrs' family, on the understanding that the workers would be attached to the creditor for agricultural work.

The average rates of wages for adult men in 1949-50 ranged between Re. 1-15-3 and Rs. 2-2-7 a day, in Assam; a little above Re. 1 in Bombay, Bihar, Punjab, Uttar Pradesh and West Bengal, except for weeding in Bombay, where the adult worker was paid Re. 0-14-3, on an average. Relatively lower rates of wages prevailed in the villages selected in Madhya Pradesh, Orissa and Madras, where the average wages were mostly below Re. 1 a day. In computing these figures, the Report has included the cash value of perquisites received by workers to wages paid in cash. The price factor has thus entered in the computation of the average wage. Piece-wages have, however, not been taken into account, since piece earnings depend on the varying capacity of individual workers.

As already mentioned, casual workers form the bulk of the agricultural labour force. Wages are paid to them, according to time or piece rates. Piece-work is generally remunerated

By Order of the Board,
SHAW WALLACE & CO., LTD.,
Managing Agents.

CALCUTTA, 28*th March*, 1953.

CENTURY MILLS' PROFIT LOWER

DIVIDEND UNCHANGED—FINANCES STRONG

THE financial results of the Century Spinning and Manufacturing Co., Ltd. (Managing Agents: Messrs. Birla Brothers Ltd., Bombay), for the year ended 31st December, 1952, do not show any deviation from the general trend of cotton mill profits, except that the extent of fall in profit is not as marked as it has been in some cases. Thus, the gross profit has suffered a recession from Rs. 92.55 lakhs for 1951 to Rs. 51.17 lakhs, representing a drop of 44.8 per cent. Evidently, the Company was able to avert a more drastic recession in profit because of the substantial relaxation of control over prices and distribution of a number of varieties of cloth during the latter half of the year. Apart from the improvement in trading conditions in the second half of 1952, the judicious valuation of the stocks at the close of 1951 and 1952 has also been responsible for the relatively satisfactory results for the past year. The fall in profit has affected the allocation to the reserves from the earnings for the year, but this has been nearly made good by the transfer to the reserves of the post-war E.P.T. refund received from the Government. The dividend to shareholders has been kept unchanged at 20 per cent. per annum, to which level it was raised last year from 18 per cent. paid for 1950.

The following comparative table shows at a glance the Company's progress since 1949:

(In lakhs of rupees)

	For the year ended 31st December			
	1952	1951	1950	1949
Sale proceeds	724.56	732.65	471.17	458.84
Stocks	188.42	281.74	243.05	230.39
Expenses*	676.81	640.21	403.53	412.31
Gross profit	51.17	92.55	69.30	48.57
Provision for—				
Agents' remuneration		0.18	7.06	4.98
Depreciation	11.00	11.00	12.10	8.60
Taxation	15.00	33.00	23.06	15.23
Net profit	25.17	48.37	27.08	19.76
Post-war refund of E.P.T. (net) ..	18.24			
To reserves	18.24	22.00	8.94	3.05

Dividend	21.89 (20%)	21.89 (20%)	19.70 (18%)	16.42 (15%)
Carry forward	5.31	2.02	0.54	2.10

* Only approximate.

The sale proceeds of cloth, yarn, waste, etc., are more or less the same as those for 1951. This is evidently due to better sales at higher prices during the latter months of the year. The Company's stocks of unsold cloth at the end of 1951 had been valued by the Directors in a conservative and farsighted manner. By the time the accounts for 1951 were ready, a fall in prices of cloth and cotton had taken place and the Directors knew that, if they did not provide for this depreciation in the value of stocks, at least in part, from out of the profit for 1951 which was a bumper one, the profit for 1952 would show a precipitous decline. They accordingly adjusted a part of this depreciation against the profit for 1951. As regards the valuation of stocks as at the close of 1952, as the Directors do not anticipate any fall in cloth prices, they have valued them at market rates prevailing at the end of 1952.

The aforesaid change in the method of valuing closing stocks has, to some extent, helped the Company to prevent a phenomenal fall in the profit for 1952. The gross profit at Rs. 51.17 lakhs is lower than that for 1951 by only Rs. 41.38 lakhs, a fall relatively small as compared with the performance of mills of equal size and equipment. The net profit, after providing for depreciation and taxation, is Rs. 23.20 lakhs or 48 per cent. less than that for 1951. This net profit is supplemented by the receipt of Rs. 30.27 lakhs, representing post-war refunds of E.P.T. Out of this sum of Rs. 30.27 lakhs, taxation absorbs Rs. 12.03 lakhs, so that the net refund received is Rs. 18.24 lakhs. The whole of this amount has been utilised to strengthen the dividend equalisation fund, which, it may be noted here, had received a handsome sum of Rs. 17 lakhs last year from out of the profit for 1951. After distributing a sum of Rs. 21.89 lakhs by way of dividend, the unappropriated surplus left to be carried over, at Rs. 5.31 lakhs, is sizably larger than the sum of Rs. 2.02 lakhs brought in.

The Company enjoys a strong financial position. The paid-up capital of Rs. 109.43 lakhs is supplemented by reserves and surplus to the tune of Rs. 143.19 lakhs, represented by general reserve amounting to Rs. 60.05 lakhs, premium on shares Rs. 4.43 lakhs, extension fund Rs. 1.55 lakhs, dividend equalisation fund Rs. 55.24 lakhs, insurance fund Rs. 22.61 lakhs and undistributed surplus Rs. 5.31 lakhs. As against a gross block of the value of Rs. 243.74 lakhs, including Rs. 19.12 lakhs expended on it in 1952, a deterioration and repairs fund of Rs. 125.23 lakhs has been built up. The current assets, aggregating Rs. 356.16 lakhs, consists of stock-in-trade Rs. 176.42 lakhs, stores and spares Rs. 14.06 lakhs, debts, deposits and advances Rs. 58.25 lakhs, investments Rs. 3.72 lakhs and cash balances Rs. 103.70 lakhs. As against these, the current liabilities (including provision for taxation) are no more than Rs. 116.04 lakhs.

The Managing Agency of the Company was in the hands of Messrs. Chunilal V. Mehta and Sons Ltd. until 23rd April, 1951, when it was terminated as from that date by the shareholders and handed over to Messrs. Birla Brothers Ltd. A fresh managing agency agreement between the Company and the latter firm was negotiated and approved by the general body of the shareholders, on 7th February, 1953. The appointment of the new Managing Agents took effect from 2nd March, 1953. The agreement is for a period of 10 years and provides for a commission of 10 per cent. on the net profits of the Company, with a minimum commission, in case of absence, or inadequacy, of profits in each year of Rs. 50,000. The present Managing Agents are not entitled to any remuneration for the period from 2nd March, 1953 to 30th June, 1954. Their remuneration will commence as from 1st July, 1954.

The Company's Rs. 100 fully paid-up shares are being currently quoted at Rs. 272, at which rate and on the basis of the dividend for 1952, the yield works out to 7.35 per cent. per annum, free of income-tax.

SIMPLEX MILLS TO ISSUE BONUS SHARES

The Directors of the Simplex Mills Co., Ltd. (Agents: Messrs. Forbes, Forbes Campbell & Co., Ltd., Bombay), have decided to capitalise a sum of Rs. 10.50 lakhs from out of the accumulated reserves and issue bonus shares to the existing shareholders. The issue is subject to the sanction of the Controller of Capital Issues (C.C.I.), to whom application has just been made, and the approval of the general body of the shareholders. If the proposal meets with the sanction of the C.C.I. and is approved by the shareholders, it will be the third bonus issue in the history of the Company, all since 1947.

According to the Directors' decision, a sum of Rs. 4 lakhs, being part of the post-war refund of E.P.T., and Rs. 6.50 lakhs, being part of the machinery renewal reserve account, making in all Rs. 10.50 lakhs, will be capitalised and issued as capital bonus to the existing shareholders at the rate of one share for every three shares held by them. The present paid-up capital of the Company is Rs. 31.50 lakhs, made up of 63,000 shares of Rs. 50 each. This is sought to be raised to Rs. 42 lakhs by the proposed bonus issue. The machinery renewal reserve account stands (as disclosed by the balance-sheet as on 31st March, 1952), at Rs. 37 lakhs, after the transfer of Rs. 5.49 lakhs to capital last year. In April, 1952, the Company received a net sum of Rs. 7.85 lakhs (gross Rs. 12.95 lakhs, less income-tax and super-tax Rs. 5.10 lakhs), being the post-war refund of E.P.T. Out of this refund a sum of Rs. 50,000 was utilised for the purchase of 500 shares of Rs. 100 each of the National Machinery Manufacturers Ltd. After the capitalisation of a sum of Rs. 4 lakhs out of the balance, under the proposal on hand, there will be left Rs. 3.35 lakhs, the disposal of which will be found in the accounts for the year ended 31st March, 1953.

The first occasion when the Directors capitalised a part of the reserves was in September, 1947, when a sum of Rs. 7 lakhs from out of the general reserve was capitalised and issued as bonus shares in proportion of one ordinary share of Rs. 50 each for every two ordinary shares held. This raised the paid-up capital from Rs. 14 lakhs to Rs. 21 lakhs, necessitating the raising of the authorised capital from Rs. 14 lakhs to Rs. 25 lakhs. In accordance with the resolutions passed by the shareholders in January, 1952, the authorised capital of the Company was increased from Rs. 25 lakhs to Rs. 50 lakhs to enable the capitalisation of a sum of Rs. 10.50 lakhs (Rs. 5.01 lakhs from the reserve fund and Rs. 5.49 lakhs from the machinery renewal reserve account) and issue of bonus shares in the proportion of one share for every two held. The paid-up capital was thus raised to Rs. 31.50 lakhs. No explanation is available as to why the Directors propose to make another bonus issue in less than 15 months since the last issue.

GOKAK MILLS LTD.

The enhancement of the distribution to the shareholders of the Gokak Mills Ltd. (Agents: Messrs. Forbes, Forbes Campbell & Co., Ltd., Bombay), for the year ended 31st December, 1952, from 14 per cent. to 17 per cent. per annum was one of the rare exceptions to the general trend of dividends of cotton textile mills for the past year. What was even more noteworthy about it was the fact that the Directors raised the dividend despite the marked shrinkage in the Company's earnings. The Company's gross profit for the year under review amounted to no more than Rs. 8.19 lakhs and represented a contraction of nearly 60 per cent. from Rs. 20.23 lakhs earned in 1951. The net profit, after providing for Managing Agents' remuneration, depreciation and taxation, showed a decline from Rs. 8.24 lakhs to Rs. 2.81 lakhs.

The decline in earnings was due to the adverse business conditions in respect of yarn which prevailed during the year. Referring to this, the Company's Chairman, Mr. R. W. Bullock (now retired), observed, in his address to the shareholders at their annual general meeting held early last week, thus:

"The fall in prices of all commodities early in the year was reflected in the yarn market and State nominees were slow to take up their allotments and stocks of yarn accumulated. A reduction in the controlled price was put into operation in May, 1952, which further aggravated the position. Distribution control was relaxed to some extent in March, which assisted in the liquidation of stocks, and from June, mills were permitted to sell one-third of their packed production to buyers of their own choice, and this was extended to 50 per cent. of packed production from October last, a concession which should have been granted to spinning mills many months earlier. Let us hope that a complete withdrawal of distribution control is imminent, thereby leaving the mill to manage its own affairs, at any rate, to the extent of the choice of buyers. The control of exports of yarn reduced our export business to a negligible figure."

The net profit of Rs. 2.81 lakhs would have meant a drastic reduction in the dividend to the shareholders but for the sum of Rs. 6.19 lakhs, being the net amount received from the Government towards the post-war refund of E.P.T., credited to the profit and loss account. The Directors felt that such a transfer was justified, in view of the Company's already strong reserves position. This addition enabled them not only to recommend a dividend of Rs. 12 per share of Rs. 100 each and a bonus of Rs. 5 per share but also to transfer a sum of Rs. 1.50 lakhs to the dividend equalisation account and Rs. 48,336 to the reserve fund. It must be mentioned here that the dividend part of distribution to the shareholders was actually reduced from Rs. 14 to Rs. 12 per share and that the increase in the total distribution was the result of paying an additional cash bonus of Rs. 5 per share.

The Company has a programme of rehabilitation and the latest balance-sheet shows a satisfactory financial position. The following is a synopsis of the balance-sheet:

Liabilities	Rs.	Assets	Rs.
Capital ...	39,04,700	Gross block ...	82,22,587
Reserves and surplus ...	44,13,575	Less—Depreciation ...	60,50,000
Provision for taxation ...	2,90,796	Net block ...	21,72,587
Liabilities ..	21,52,251	Stock-in-trade	44,09,536
		Stores and shares ...	6,90,904
		Debts, deposits and advances ...	4,35,585
		Investments	1,75,000
		Cash	28,77,710
Rs.	1,07,61,322	Rs.	1,07,61,322

It will be observed that current liabilities are covered by cash balances alone by a comfortable margin.

INDUSTRIAL INVESTMENT TRUST LTD.

The decision of the Directors of the Industrial Investment Trust Ltd. (Secretaries: Messrs. Premchand Roychand and Sons, Bombay) to maintain the return to shareholders for the year ended 31st December, 1952, at 4½ per cent. paid for 1951 (after having raised it successively from 3¾ per cent. for 1949 and 4 per cent. for 1950), may well be taken as a reflection of the measure of prosperity enjoyed by the Company in 1952 and a pointer to the Directors' view of the outlook for the current year. The Company's fortunes being dependent upon the experience of the industries, in which its funds are invested, during the preceding year, its results for 1952 have turned out to be satisfactory as a result of the increase in dividends earned during the year.

The Company's gross income for the year shows a small improvement from Rs. 6.28 lakhs to Rs. 6.69 lakhs. Almost the whole of this income represents dividend and interest earned, which, in 1951, amounted to Rs. 6.12 lakhs. There has been no profit on sale of investments, as was the case last year. On the other hand, the sale of investments had resulted in a small loss of Rs. 1,708. With no increase in expenses—except for the negligible loss on sale of investments—to counteract the improvement in gross income, the profit, at Rs. 5.65 lakhs, reveals a small increase over that of Rs. 5.26 lakhs for 1951. As a result, the Directors have been able to transfer a sum of Rs. 1 lakh to the investment reserve. Despite the small rise in profit the Directors have not carried further the process of raising the dividend, even though they did so last year notwithstanding a slight recession in profit. This indicates that the Directors of the Trust are taking a cautious view of the outlook for 1953. This caution is justified, considering that the results of industrial concerns for 1952 published so far during the current year reveal an all-round fall in dividends. After paying the dividend at 4½ per cent., the sum left to be carried over at Rs. 1.85 lakhs (subject to taxation for the years 1949, 1950, 1951 and 1952) is a shade higher than that of Rs. 1.66 lakhs brought in.

The Company's aggregate investments, at cost, amount to Rs. 126.82 lakhs, an increase of Rs. 1.27 lakhs over the year. The market value of the investments is lower than the book value by 9.75 per cent., the gap having widened from 0.26 per cent. at the end of 1951, because of the fall in values during 1952. A break-up of the investments shows that holdings of Gilt-edged securities, preference shares and debentures are unchanged at Rs. 3.33 lakhs, Rs. 19.05 lakhs and Rs. 7.72 lakhs, respectively, while an increase of Rs. 1.27 lakhs is noted in equities, at Rs. 96.72 lakhs. The distribution of the investments among different classes of undertakings shows minor variations. The largest share of holdings is in cotton textiles (16.42 per cent.). Banks come next with 11.01 per cent. Jutes, public utilities, sugar come next in order, with 8.99 per cent., 8.82 per cent. and 7.97 per cent. respectively. Investments in miscellaneous undertakings amount to 17.55 per cent. The other main classes of undertakings in which the Trust's funds are invested and the percentage of each are: shipping 4.74 per cent. iron and steel 4.29 per cent., tea 3.99 per cent., paper 3.32 per cent. and cement 3.22 per cent.

Points From The Chair

Need for Credit Control

"BEFORE the Planning Commission came into the picture, we were under the illusion that we were a prosperous country and embarked on several schemes which could have been very well given up or postponed, with the result that when really useful schemes are to be taken up, we find ourselves short of resources. This fact alone should have been a corrective for our spending, but if a psychology is now sought to be created that money could be found by resorting to deficit financing, utmost control would be necessary to see such financing does not become the handmaid of political pressure, as, otherwise, people would never realise that capital formation should come out of savings which could only be the product of hard work and prudent spending. In making the monetary policy effective, banks themselves would do well to have a voluntary restraint in the qualitative control of their advances. In fact, the Plan itself envisages that special effort will have to be made to ensure that credit facilities become available in those lines of production which have been given high priority in the Plan."

DR. T. M. A. PAI,
Canara Industrial and Banking Syndicate, Ltd.

U.K.'s Cloth Export and Japanese Competition

"At the International Cotton Conference held at Buxton last year, the United Kingdom representatives put forward an export target of 1,350 million square yards of cotton cloth, which compares with actual export figures of 865 million square yards in 1951 and 710 million square yards in 1952. This figure was regarded by many, even in Lancashire, as unrealistic; but, in our view, it is not being immoderate to fix a target which is only equivalent to the yardage exported in the slump year of 1938. Three-quarters of Lancashire's exports find their way to Commonwealth and Colonial Empire markets and there should be every prospect of retaining this volume, while adding to it exports of quality cloths to neutral markets. This prospect, of course, could be irreparably damaged, if the United Kingdom and Commonwealth Governments consented to the admittance of Japan on terms of equality to the General Agreement on Tariffs and Trade. The U.K. and American joint cotton mission to Japan a few years ago warned Japan's industrial leaders against the expansion of her capacity owing to the limited size of the world market, but their advice was ignored. It would be foolish in the extreme to remove this barrier against floods of Japanese textiles which would disrupt not only United Kingdom but world trade."

JAMES EWING,
Bradford Dyers' Association Ltd.

Importance of Life Assurance

"Nowadays men are marrying and acquiring family responsibilities at earlier ages than in pre-war years. For them, a life assurance policy with family income benefits is an absolute essential. Furthermore, in present circumstances, most young men in business, or in profession, require to buy a house, but do not have enough capital. To borrow on the security of the house alone, without life assurance cover, might mean the sale of the house in the event of the borrower's premature death; but a loan covered by an endowment assurance policy has a twofold advantage. First, the sum assured is payable on the death of the borrower should that occur before the policy matures, so that the loan is repaid and the house can be retained by the widow or sold at will instead of immediately. Secondly, should the borrower survive to the maturity date, the loan is at once repaid out of the maturity value of the policy."

CHARLES R. MUNRO,
Scottish Life Assurance Co., Ltd.

Prospects for U.K. Electrical Industries

"There is no doubt that the demand for electricity must continue to expand; as I mentioned last year, the consumption of electricity per head of population in this country is still only about half the corresponding figure in the United States. There is every indication, however, that we are entering a period when conditions will once again be highly competitive. During the years of inflation, success has depended very largely on maintaining production in the face of shortage of all kinds. Often more expensive materials and methods of manufacture have had to be adopted to overcome them. As the material supply position improves, costs are again of prime importance, and our future prosperity will depend on our being able to manufacture at least as cheaply as our competitors both at home and abroad."

SIR GEORGE E. BAILEY,
Associated Electrical Industries, Ltd.

INCOME-TAX REVENUE STATISTICS FOR 1951-52

MARKED INCREASE IN NUMBER OF ASSESSEES

ALTHOUGH India has a total population of about 360 million, the number of assessees on the register of the Income-tax Department of the Government of India on 31st March, 1952, was only 885,399, including 134,305 in part "B" States and merged territories, as compared with 540,002 immediately after the Partition. This information is disclosed in the income-tax revenue statistics for the financial year 1951-52 compiled by the Central Board of Revenue of the Union Ministry of Finance, not only on an all-India basis but also for the assessments made in particular States during the period, a study of which reveals some interesting features.

The total number of assessments, including those brought forward from the preceding years, completed in 1951-52 was 1,159,616, as against 856,209 in the previous year. The assessments resulting in demand during the year numbered 647,376, as compared with 472,419 in 1950-51, but the difference between these two sets of figures does not necessarily indicate the number of infructuous cases.

A bulk of the difference is covered by cases (i) where an adequate amount of tax had been deducted at source, or (ii) where the assessment was on a registered firm and the tax assessed was payable by the partners, or (iii) where the assessment resulted in a refund. Even excluding these three types of cases, there is a considerable number of cases where the total income assessed is below the minimum taxable limit or where there is a loss.

In 1951-52, there were only 4,737 assessees with income over Rs. 1,00,000 which worked out to .0013 per cent. of the total population, but they accounted for nearly 63.5 per cent. of the total gross demand of Rs. 195.8 crores levied during the year. Assessees with income between Rs. 25,000 and Rs. 1,00,000 made up 21.5 per cent. of the total demand and those with income between Rs. 10,000 and Rs. 25,000 about 9.5 per cent. of the demand. By far the larger number of persons assessed (510,412) fell in the category with income below Rs. 10,000 and accounted for only 5.5 per cent. of the demand.

Of the 647,376 persons assessed during the year to a positive demand, 547,539 were individuals, 65,750 Hindu undivided families, 23,326 unregistered firms and other associations of persons and 10,761 companies and other concerns assessable at the company rate. In 1950-51, the number of persons assessed was 472,419 of whom 395,017 were individuals, 52,401 Hindu undivided families, 16,482 unregistered firms and 8,519 companies.

The total income assessed in 1951-52 was Rs. 782.9 crores, as against Rs. 574.6 crores in the preceding year, the share of the different categories of assessees being as under:

(In crores of rupees)

	1951-52	1950-51
Individuals	475.5	342.3
Hindu undivided families ...	80.3	64.4
Unregistered firms	27.2	22.0
Companies and other concerns	199.9	145.9
Total ...	782.9	574.6

Classes of Income Assessed

The number of persons with income from salaries assessed went up from 211,508 in 1950-51 to 280,288 during the year under review. Government and non-Government employees numbered 98,018 and 182,270, respectively, as against 84,059 and 1,27,449 in 1950-51. The total salary income brought under assessment in 1951-52 was Rs. 178.4 crores, as compared with Rs. 125.9 crores in the previous year.

In 1951-52, there were 187,443 persons, with income from property amounting to Rs. 30.2 crores, on which Rs. 6.1 crores were demanded as tax. The corresponding figures for the preceding year were 141,221 persons, with an income of Rs. 22.8 crores, on which the demand was Rs. 4.9 crores. Of the persons assessed during the year, 368,868 had income from business and professions, as against 252,779 in 1950-51. The income assessed was Rs. 455.9 crores and Rs. 337.7 crores and the tax demand Rs. 132.6 crores and Rs. 104.9 crores, respectively. Among them, only 23,348 persons were engaged in the various professions, while the rest were in business. The number of persons with income from dividends rose from 95,951 in 1950-51 to 118,507 during the year under review. Income from dividends included in the assessments for 1951-52 amounted to Rs. 52.3 crores, as against Rs. 38.2 crores in the preceding year. Income-tax taken to have been paid on behalf of the shareholders was Rs. 13.4 crores in 1951-52, as against Rs. 10.1 crores in 1950-51. Income accruing or arising abroad brought under assessment in 1951-52 aggregated Rs. 29.3 crores, of which a sum of Rs. 6 crores was assessed on a remittance basis. The income-tax demand on this class of income was Rs. 3.7 crores and super-tax demand Rs. 3.4 crores.

The total demand levied in assessment, including tax on capital gains, penalties and demand on account of minor rectifications of assessments amounted to:

(In crores of rupees)

	Income-tax	*Super-tax*
1951-52	130.2	85.3
1950-51	102.9	63.2

from which the following reductions were allowed:

(In crores of rupees)

	1951-52		1950-51	
	I.T.	*S.T.*	*I.T.*	*S.T.*
Refunds or rebates	17.8	16.2	17.2	12.8
Tax deducted or paid at source ...	30.0	3.5	23.2	2.8
Exempted income	0.6	—	0.8	—
Total ...	48.4	19.7	41.2	15.6

resulting in a net demand of

	Income-tax	*Super-tax*
1951-52	81.8	65.6
1950-51	61.7	47.6

Refunds and Rebates

The principal items on which refunds and rebates were allowed pertain to double taxation relief, losses, reduction in demand, income accruing or arising in Pakistan, undistributed profits, provident fund, insurance premia and donations to charities.

Relief in tax granted in respect of income which had also suffered taxation in the United Kingdom, Burma, Ceylon, Aden and other Dominions amounted to

(In lakhs of rupees)

	Income-tax	*Super-tax*
1951-52	331	7
1950-51	496	5

Of this, relief in respect of income suffering taxation in the U.K. alone amounted to Rs. 246 lakhs and Rs. 414 lakhs, respectively.

The amount of loss carried forward from the preceding years and set-off in the assessment for 1951-52 was Rs. 755 lakhs. A similar set-off allowed in the assessment for 1950-51 amounted to Rs. 581 lakhs. As a result, the taxation liability was reduced by

(In lakhs of rupees)

	Income-tax	*Super-tax*
1951-52	121	78
1950-51	116	67

Reduction in demand on account of revisions as a result of appellate decisions, rectification of assessments and other refunds amounted to Rs. 177 lakhs income-tax and Rs. 242 lakhs super-tax. Similar figures for 1950-51 were Rs. 439 lakhs and Rs. 233 lakhs, respectively.

As regards income accruing or arising in Pakistan, in view of the agreement for the avoidance of double taxation, abatement of tax had been allowed in 1951-52 in 2,395 cases on income amounting to Rs. 200 lakhs. In 1950-51, similar abatement had been given in 1,463 cases on incomes aggregating Rs. 130 lakhs. The effect of this rebate in terms of tax was Rs. 102 lakhs in 1951-52 and Rs. 50 lakhs in 1950-51.

In respect of undistributed profits, 4,664 Indian companies were granted an income-tax rebate of Rs. 135 lakhs during the year. In 1950-51, a similar rebate granted to 3,075 companies amounted to Rs. 139 lakhs.

In the assessments for 1951-52, rebate on contributions to provident funds to which the Provident Fund Act of 1925 applied as also to provident funds recognised under the Income-tax Act was granted to 20,074 persons. The amount of their contribution was Rs. 174 lakhs and of income-tax forgone Rs. 16 lakhs. In 1950-51, 14,075 persons had been given rebate on income aggregating Rs. 103 lakhs, the amount of income-tax forgone being Rs. 10 lakhs.

In addition, 26,420 persons got rebates amounting to Rs. 519 lakhs in the assessments for 1951-52 on account of contributions to provident and superannuation funds of business organisations recognised under the provisions of the Income-tax Act. The reduction in income-tax payable by them amounted to Rs. 47 lakhs. In the 1950-51 assessments, similar concession had been granted to 22,587 persons on an income of Rs. 402 lakhs, the income-tax on which amounted to Rs. 44 lakhs.

In the 1951-52 assessments, 130,672 persons claimed rebate on total insurance premia of Rs. 1,585 lakhs, the income-tax on which amounted to Rs. 165 lakhs. In 1950-51, this rebate had been given to 1,03,224 persons on premia of Rs. 1,222 lakhs, the income-tax on which came to Rs. 137 lakhs.

In 1951-52, having donated Rs. 94 lakhs to approved charitable institutions or funds, 2,123 persons got rebates of Rs. 23 lakhs in income-tax and Rs. 4 lakhs in super-tax in their assessments. In 1950-51, this concession had been granted to 2,223 persons who had donated Rs. 123 lakhs and got rebates of Rs. 32 lakhs and Rs. 6 lakhs, respectively.

Tax Deducted or Paid at Source

The amount deducted or paid at source considered in the assessments for 1951-52 came to Rs. 2,999 lakhs as income-tax and Rs. 353 lakhs as super-tax, as against Rs. 2,319 lakhs and Rs. 275 lakhs, respectively, in the previous year. Private salaries assessed in 1951-52 amounted to nearly twice as much as all the Government salaries taken into account in the assessments during the year.

Tax on exempted income may sound strange, but what really happens is that some of these incomes are included in the total income for determining the rates of tax and a rebate thereon is given at the average rate. The total of such income included in the assessments made in 1951-52 was Rs. 237 lakhs, of which dividends accounted for Rs. 128 lakhs and interest on securities Rs. 104 lakhs. In all, a total rebate of Rs. 58 lakhs was given in 1951-52, as compared with Rs. 85 lakhs in the previous year.

RESULTS OF RAYALASEEMA MILLS ENCOURAGING

RAVALGAON SUGAR MAINTAINS DIVIDEND

Rayalaseema Mills, Ltd.

THE directors of the above Company (Managing Agents: The Rayalaseema Development Co., Adoni) submit the audited accounts of the Company for the year ended 31st December, 1952.

The net profit for the year, after providing Rs. 3,12,094 (Rs. 3,10,271) as depreciation on plant and machinery, buildings, etc. together with the last year's carry over of the profit of Rs. 31,324 (Rs. 6,589) amounts to Rs. 10,14,238 (Rs. 3,75,352). Out of this amount, the directions have made the following appropriations.

Provision for taxes Rs. 30,000 (*nil*), general reserve Rs. 6,00,000 (Rs. 1,50,000), plant replacement reserve Rs. 1,00,000 (*nil*), dividend equalisation reserve Rs. 50,000 (Rs. 50,000), and bonus to employees (at one-sixth of the basic earnings in 1952) Rs. 35,825 (Rs. 32,900), leaving a balance of profit of Rs. 1,78,413 (Rs. 1,65,352) for disposal. The directors recommend that a dividend of 6 (6) per cent. free of income-tax be distributed for the year ended 31st December, 1952, amounting to Rs. 1,34,028 (Rs. 1,32,443) and the balance of Rs. 44,385 (Rs. 32,909) be carried forward to the next year.

The working of the Mills has been very satisfactory. This satisfactory result is due mainly to the judicious purchases of cotton by the managing agents. The concession of selling the Mills' yarn through the Mills' retail depots is being continued and this has contributed to the profits to a large extent. The retail margin of 6¼ per cent. allowed by the Government was reduced to 4-11/16 per cent. during January and February, 1952, but was again increased to 6¼ per cent. from the 1st March, 1952. The market conditions were very disturbing during the last quarter of the year and it was found impossible to market the Mills' yarn with the full retail margin.

The Government of India has decided to allow exports of cotton yarn on a quota basis under which scheme the Mills would also be entitled to a quota. The allotment is expected for the licensing period January to June, 1953.

As for the expansion of production, the machinery for the first 3,000 spindles with necessary drawing, carding and simplex frames is expected very shortly.

In order to provide pucca houses to the labour force, about 19 acres of suitable land has been bought. Application has been made to the Government of India through the Commissioner of Labour, Madras for the sanction of subsidy and loan under the Industrial Housing Scheme, 1952-53. As soon as sanction is obtained, the labour colony work will be taken up.

Though the market conditions of cotton show higher prices and the selling prices of yarn have been fixed lower by the Government, yet as a result of the steps that the Government is taking in regard to export of yarn and cloth, the directors expect satisfactory results during the present year also.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.

Rs.	43,77,923	Rs.	43,77,923

Ravalgaon Sugar Farm Ltd.

The directors of the above Company (Managing Agents: Messrs. Walchand & Co., Ltd., Bombay) submit the audited accounts of the Company for the year ended 30th September, 1952.

During the year, the Company has made a profit of Rs. 7,06,601 (Rs. 11,90,662) after providing Rs. 3,40,000 (Rs. 4,75,000) for depreciation. The balance available for disposal is Rs. 8,87,513 (Rs. 13,31,904) including the sum of Rs. 1,80,913 (Rs. 1,41,242) brought forward from the last balance sheet. The directors recommend that the following appropriations be made:—

Dividend on preference shares at 5½ (5½) per cent. (less income-tax) Rs. 1,10,000 (Rs. 1,10,000) on ordinary shares at 18 (18) per cent. (free of income-tax) Rs. 3,60,000 (Rs. 3,60,000), on deferred shares at 7 (7) per cent. (less income-tax) Rs. 28,000 (Rs. 28,000), for reserve fund Rs. 2,00,000 (Rs. 4,54,880) and to carry forward Rs. 1,89,513 (Rs. 1,80,913).

The factory commenced crushing on 12th November, 1951, and stopped on 25th May, 1952. Sugarcane crushed during the season was 1,25,471 (79,783) tons while sugar manufactured was 1,25,180 (92,500) bags with a recovery of 9.97 (11.7) per cent.

During the year, the confectionery plant at Ravalgaon produced about 563 tons of confectionery and about 10,000 maunds of sugarcandy. The confectionery and the sugarcandy produced found on the whole, a ready market. Owing however, to the general slump since the beginning of last year, the demand for confectionery has been fluctuating and consequently the confectionery plant could not be worked to its capacity.

The factory was carrying on experiments for producing wax from cane mud. As the experiments proved successful, the production of wax on a commercial scale was commenced during the year. About 14,400 lbs. of wax was produced and the same found a ready market.

The area of land taken on lease by the Company is 3,085 acres and 22 gunthas, while the area of land owned by the Company is 6,534 acres and 30 gunthas.

Delta Jute Mills Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 30th November, 1952.

After providing Rs. 2,00,000 (Rs. 6,12,000) for taxation there is a balance of Rs. 3,43,326 (Rs. 8,33,128) at the credit of profit and loss account from which the directors recommend payment as follows:—

Dividends on preference shares at Rs. 2-8 (Rs. 2-8) per share Rs. 12,500 (Rs. 12,500) and on ordinary shares at Rs. 10 (Rs. 17-8) per share Rs. 2,80,000 (Rs. 4,90,000), leaving Rs. 50,826 (Rs. 3,30,628) to be carried forward.

In accordance with the working time agreement of the Indian Jute Mills Association, the mills worked 42½ hours per week with 12½ per cent. of the total looms sealed.

Accounts in brief are as under:—

Cheviot Mills Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 30th November, 1952.

After transferring Rs. 75,000 (*nil*) to dividend equalisation reserve there is a balance of Rs. 1,76,539 (Rs. 4,20,927) at the credit of profit and loss account from which the directors recommend payment as follows:—

Dividends on preference shares at Rs. 3-8 (Rs. 3-8) per share Rs. 35,000 (Rs. 35,000) and on ordinary shares at Rs. 6 (Rs. 12) per share Rs. 95,700 (Rs. 1,91,400), leaving Rs. 45,839 (Rs. 3,30,628) to be carried forward.

In accordance with the working time agreement of the Indian Jute Mills Association, the mills worked 42½ hours per week with 12½ per cent. of the total looms sealed.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	25,95,000	Block ...	25,59,403

Port Shipping Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st December, 1952.

After providing Rs. 12,391 (Rs. 14,008) for depreciation and Rs. 7,500 (Rs. 20,000) for taxation, and after transferring Rs. 44,500 (Rs. 5,500) to reserve for bad and doubtful debts and Rs. 1,00,000 (Rs. 2,00,000) to reserve for repairs, there is a balance of Rs. 1,30,199 (Rs. 1,39,810) at the credit of the profit and loss account. The directors recommend payment of a dividend of As. 8 (As. 8) per share, absorbing Rs. 70,411 (Rs. 70,411) and leaving a balance of Rs. 59,788 (Rs. 71,561) to be carried forward.

Freight earned during the period shows a satisfactory increase over the previous half-year, partly as a result of an increase in freight rates during the half-year. There was also increased expenditure on repairs and stores.

Accounts in brief are as under:—

Shree Sitaram Sugar Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Karamchand Thapar & Bros., Ltd., Calcutta) submitted the audited accounts of the above Company for the year ended 31st December, 1952.

The total crush during the season pertaining to the year was 22,78,642 mds. of cane as against 17,23,706 mds. of the previous season, and as against an average crush of 17,05,440 mds. for the last ten years, while a bumper cane crop and comparatively lower *gur* prices are responsible to some extent for diverting more cane to the manufacture of sugar, the efforts of the management in different directions to augment cane supplies are also largely responsible for the increased crush. During the year the Company were able to utilise a sizable fleet of their own tractors, trailers and trucks and so while on one hand the cost of transport was reduced, on the other hand better facilities were made available to distant cane growers resulting in larger intake of cane from the distant areas. The cane acreage in the reserved area of the factory was also increased by sustained work on cane development.

From the very beginning of the season, however, it could be foreseen that the increased sugar production in the country react strongly on the market. The Government controlled prices and rationing scheme managed to work for a part of the year under great stress and strain, but very soon it was found that the Government dealers refused to lift their respective quotas. Sugar mills were thrown on their own resources to sell their product in a glutted market, but on account of the sound grasp of the situation and an efficient sales organisation, the management steered the course of the Mill admirably during the difficult times. As a result of protracted negotiations and conferences between the Government and the Industry the sugar policy of the Government has since been revised. The controlled price was reduced with effect from the 1st of December, 1952, in respect of 1951-52 stocks, and the control on price as also rationing were abolished for 1952-53 sugar. A policy of subsidising exports has also since been announced by the Government.

Cane development work done during the year, for the benefit of future years included sinking of tubewells in collaboration with the Co-operative Societies, to whom recoverable loans were advanced by the Company. Generous loans were also given to farmers in the shape of seeds and manures. It is confidently hoped that these steps and other development work contemplated will enable the Mill to gradually increase the annual crush to 30 lakh maunds within a couple of years or so.

Simultaneously with the cane development work, an elaborate scheme has been taken in hand for additions and alterations to increase the crushing capacity to 1,000 tons and to improve the efficiency of the Mill. An additional boiler, a 150-kva Turbo generating set and a vacuum pan are already under installation and will be put into commission during the later half of 1952-53 season.

During the year, the Company made a gross profit of Rs. 7,46,440 (Rs. 8,08,230). After providing for debentures and other interest, depreciation and managing agents' remuneration by way of profit, commission, etc., there was a net profit of Rs. 5,18,636 (Rs. 6,54,302) out of which Rs. 2,40,000 (Rs. 3,00,000) was set aside for provision for income-tax, leaving a balance of Rs. 3,42,768 (Rs. 3,88,306) in profit and loss account including Rs. 64,141 (Rs. 34,004) brought forward from the previous year, which the directors distributed to payment of a dividend on ordinary shares for the year ended 31st August, 1952, at Re. 1 (Re. 1-8 inclusive of bonus As. 8) per share Rs. 79,450 (Rs. 1,19,175) to reserve for contingencies Rs. 1,00,000 (Rs. 1,50,000), to dividend equalisation fund Rs. 75,000 (Rs. 55,000) and to carry forward Rs. 88,318 (Rs. 64,131).

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	7,95,462	Block ...	13,46,877
Debentures ...	5,12,178	Stock ...	31,95,867
Reserves ..	12,74,066	Stores, etc. ...	4,88,568
Provision for taxation ...	9,06,648	Work-in-progress ...	32,048
Liabilities ...	35,63,683	Debts, deposits and advances ...	9,51,450
Profit and loss account ...	3,42,768	Investments	7,63,100
		Cash ...	6,16,895
Rs.	73,94,805	Rs.	73,94,805

N.B.—Figures within brackets relate to the corresponding period of the previous year.

COMPANY REGISTRATIONS

M. B. BROTHERS LTD. (First Director: Mr. Issak Haji Shakoor.) Business: Exporters, Importers and Merchants. Authorised capital: Rs. 50,00,000. Private company. Address: Noor Palace, 101, Mohamedali Road, Bombay 3.

HIMALAYA TILES AND MARBLE LTD. (First Director: Shri Har Lal Sher Singh Gupta.) Business: Manufacturers and Dealers in Marble, Marble Articles, Wall Tiles, etc. Authorised capital: Rs. 10,00,000. Private company. Address: 17-19, Dalal Street, Fort, Bombay.

TEXTILE PROCESSORS LTD. (First Director: Shri Bhagwatiprasad Khetan.) Business: Cotton Spinners and Doublers, Flax, Hemp and Jute Spinners, etc. Authorised capital: Rs. 10,00,000. Private company. Address: Khetan Bhavan, 198, Jamshedji Tata Road, Churchgate Reclamation, Bombay 1.

MINERVA TRADERS LTD. (First Director: Saraswati Devi.) Business: Dealers and Manufacturers of Hardware Goods, Iron Founders and Mechanical Engineers, etc. Authorised capital: Rs. 5,00,000. Private company. Address: 332, Kalbadevi Road, Bombay.

QUESTION HOUR IN PARLIAMENT

Deposits in Foreign Banks

THE deposits in foreign Scheduled Banks in India as on 26th December, 1952, amounted to Rs. 173.96 crores, investments being Rs. 45.92 crores and advances including bills discounted being Rs. 126.52 crores.

—Finance Minister

Adulteration of Ghee

The *vanaspati* factories have been directed to maintain, with effect from 1st April, 1953, a record of Baudouin test of each batch of *vanaspati* produced in the factory. Each batch has to be certified by the factory chemist to the effect that the same conforms to the required Baudouin test. The State Governments have been asked to instruct the local bodies to make an extensive use of this test for detecting adulteration of ghee with *vanaspati*. It has been decided to add 300 international units of synthetic vitamin 'A' per ounce of *vanaspati* and arrangements for import of the same are being finalised. The Ministry of Natural Resources and Scientific Research has been requested to consider the possibility of setting up a plant in India for production of synthetic vitamin 'A'. The research for a suitable colour for colouring *vanaspati* is being continued.

—Minister for Agriculture

Employees' State Insurance

The Government hopes to implement the Employees' State Insurance Scheme in May, 1953, in the towns of Amritsar, Ludhiana, Jullundur, Ambala and Bhiwani, and, if arrangement for medical care can be completed by the State Government, also in Batala and Adullahpur.

—Deputy Minister for Labour

Persian Gulf-Japan Shipping Conference

Beyond Press reports regarding the formation of a Persian Gulf-Japan Shipping Conference, the Government has no information in the matter. Ships under this Conference will not participate in the Indian coastal shipping. The Indian coastal trade has been reserved for Indian shipping and there is no question of any foreign shipping company being allowed to participate in that trade.

—Parliamentary Secretary to the Minister for Transport

Nationalisation of Collieries

There is no proposal to nationalise the collieries owned and worked by foreign companies. The policy contained in the Prime Minister's 1948 statement on foreign capital continues to govern the Government's policy in regard to nationalisation. The total capital investment in coal mines is approximately Rs. 29 crores. On the basis of the census of India's foreign liabilities and assets conducted by the Reserve Bank, the share of the British capital in this is Rs. 14 crores.

• • • •

Salt Production

India is expected to produce about 800 lakh maunds of salt in 1953 as compared to 768 lakh maunds in 1952. Attention is being paid continuously to the improvement of quality of salt production. Salt content fixed for edible salt is being raised gradually from year to year.

• • • •

Shipbuilding in India

About 60 per cent. of the parts of a ship, including the hull, superstructure, deck and cabins are constructed at Vishakapatnam, while the remaining 40 per cent., including electric fitting, copper pipes and steam fittings together with all the prime and auxiliary machinery are imported mostly from the U.K. The question of manufacturing these items in the country is also receiving Government's attention. The report of the French experts in this connection has just been received and the whole matter will be gone into.

—Minister for Production

Enquiry Into Working of Hirakud

The Comptroller and Auditor-General of India will be visiting Hirakud shortly for an on-the-spot study of the working of the accounting system at Hirakud. His advice after such study will be accepted and given effect to by Government. The progress at Hirakud achieved at the end of the last working season is being maintained. In order to ensure that the work has been progressing satisfactorily, it has been arranged to report how far targets for the working season have been achieved. This will be demonstrated by charts.

—Deputy Minister for Irrigation and Power

Rubber for Export

The Government will allow export of raw rubber in case the manufacturers have not been able to increase their offtake in the country. The manufacturers have been purchasing their normal quota of indigenous rubber. There have, however, been some accumulation of stocks with producers. At the end of last month, the stocks with dealers and estate owners were in the region of 5,100 tons. Government have lifted the control on the movement of rubber, so that the manufacturers can purchase whatever quantity they desire. Four hundred tons of "group 4" rubber which include pale latex crepe, is being allowed to be exported, and so also 200 tons of sole crepe. The Government has also under consideration measures like advancing of loans so that the surplus stocks with producers can be taken off the market. The world prices of rubber are moving down further.

—Minister for Commerce and Industry

Notices

THE WESTERN INDIA MATCH COMPANY, LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Thirtieth Ordinary General Meeting of the Shareholders of the abovenamed Company will be held at the Registered Office of the Company at Indian Mercantile Chambers, Nicol Road, Ballard Estate, Bombay, at 3 p.m. (S.T.), on Wednesday the 29th day of April, 1953, to transact the following business:—

STRINGENCY IN MONEY CONTINUES

(From Our Own Correspondent)

BOMBAY, *8th April*

The short-term money market experienced, during the week under review, no easing of the stringent conditions which had been noted in the preceding few weeks. In fact, the stringency was more keenly felt this week. There was, no doubt, a small influx of funds into the banks, but such was too negligible to make any impression on the market. The inter-bank call money rate remained unchanged at 3 per cent. among the Exchange banks, as well as big and small Indian banks.

Merchants are said to have locked up their funds in commodities or used them to pay income-tax. The surplus funds of semi-Government bodies too have gone to the Government's bankers. Another important factor which has contributed to the stringency in the money market during the week under review was the appointment of the Reserve Bank of India as bankers to the Hyderabad State with effect from the 1st inst. in place of the Hyderabad State Bank. Formerly, the State Bank, which collected the revenues of the State and retained them with it, used to be a lender of funds to the Bombay market, but, with the change in its position from the 1st inst. to one of an agent of the Reserve Bank to collect the revenues of the State, it has to remit the funds to the Reserve Bank. As a result, the supply of funds to the market from this source has ceased.

Finance brokers feel that the present stringency may not continue for long, as the current crop season is nearly over. Further, with the revival of the downward trend in world commodity markets the export demand for Indian goods may remain slack for a considerable time to come. This view has given rise to the feeling that merchants will have no other recourse but to sell their stocks even at a loss. If, however, they decide to hold on, a sizable amount of funds will remain locked in stocks. But, if exports materialise, as has been the case, to some extent, with cloth, then the present tightness in money will yield place to relatively easy conditions at any early date. In their opinion, the trend of exports must, therefore, be carefully watched to judge the short-term outlook for the short-term money market.

Term deposit rates are unchanged at 2½ to 3 per cent. for three months' deposits and at 2½ to 2¾ per cent. for six months. The Treasury Bill rate too is unchanged at Rs. 2-7 per cent. per annum, though the response to this week's tenders for Rs. 1 crore of bills was slightly better at Rs. 135 lakhs, as against Rs. 101 lakhs offered last week.

An expansion of Rs. 16.54 crores in notes in circulation is the outstanding feature of the statement of affairs of the Reserve Bank of India for the week ended 3rd April, 1953. Notes held in the Banking Department are, on the other hand, lower by Rs. 7.12 crores, so that the total notes issued disclose an increase of Rs. 9.43 crores. This is covered by a rise of Rs. 5 crores in foreign securities and of Rs. 4.43 crores in rupee coin. On the liabilities side of the Banking Department, a spectacular fall of Rs. 48.49 crores is noted in deposits of the Central Government, while those of other Governments and banks have gone up by Rs. 19.57 crores and Rs. 5.72 crores, respectively. On the assets side, cash balances have contracted by Rs. 7.24 crores and balances held abroad by Rs. 2.05 crores. Loans and advances to Governments are higher by Rs. 30 lakhs, whereas other loans and advances show a decline of Rs. 1.50 crores. There has been a fresh advance of Rs. 1.50 crores to Scheduled Banks against usance bills, but the outstanding advances against the usance bills have fallen by Rs. 4.50 crores. Investments have gone down by Rs. 9.80 crores.

The Scheduled Banks' statement for the week ended 27th March, 1953, discloses a rise of Rs. 2.76 crores in the Banks' demand deposits and a fall of Rs. 42.04 lakhs in time deposits. Inter-bank borrowings are lower by Rs. 13.15 lakhs. Borrowings from the Reserve Bank and Imperial Bank have risen by Rs. 4.18 crores and Rs. 81 lakhs, respectively. The rising trend in advances and bills purchased of banks is maintained, with a further increase of Rs. 6.32 crores and Rs. 1.91 crores respectively. The increase in Scheduled Banks' total advances during the current season so far, that is, from the beginning of December last, is Rs. 76.98 crores, as compared with Rs. 76.35 crores during the same period last year, and the level of total advances as on 27th March, 1953, at Rs. 528.53 crores, is short of that at Rs. 580.48 crores a year ago by only Rs. 51.95 crores. Investments disclose a small rise of Rs. 18.19 lakhs. Cash-on-hand and balances with the Reserve Bank have together risen by Rs. 1.49 crores and balances with other banks by Rs. 36.64 lakhs, while money at call and short notice has shrunk by Rs. 90.64 lakhs.

The Gilt-edged market was in a subdued mood, with no support from any quarter. Consequently, a slightly easy trend was in evidence. The volume of business also was small. 3 per cent. 1953-55 and 3 per cent. 1957 were the notable exceptions to the general trend, in that they held their ground at Rs. 100-1 and Rs. 98-12, respectively. 3 per cent. 1958 fell by an anna to Rs. 98-7 and 3 per cent. 1959-61 by as much to Rs. 96-3. 3 per cent. 1963-65 and 3 per cent. 1964 each eased by As. 2 to Rs. 92-8. 3 per cent. 1966-68 was placed at Rs. 90-6 *ex-voucher*, as against Rs. 90-9 *cum-voucher*. 3 per cent. 1970-75 was quiet at Rs. 86-10, as against Rs. 86-11. 3 per cent. 1976 Conversion Loan declined sharply by As. 5 to Rs. 82-5.

After a lapse of two weeks, the foreign exchange section of the money market experienced, during the week under review, a minor fluctuation in the rupee-U.S. dollar rate. The variation was only in the selling rates of banks, but, over the week, there was no change even in these rates, as the table appended below will show. In the New York market, some small fluctuations were noted in the sterling-dollar rate. The spot rate for £ sterling, which stood at $2.81⅛—2.81⅜ on the 30th ultimo, declined to $2.8-13/16—2.81-5/16 on the 1st inst., but improved to close at $2.81⅝—2.81⅜ yesterday.

SILVER WEAK, GOLD STEADY

(From Our Own Correspondent)

BOMBAY, *8th April*

The week under review witnessed heavy fluctuations in silver prices on the Bullion Exchange, while gold ruled relatively steady. During the major part of the week, silver experienced a sharp break in values, due to the weakness of the Calcutta market following the developments in the international situation and on hopes of an early cessation of hostilities in Korea. Under the impact of heavy unloading by prominent bull operators, silver slumped to a low of Rs. 151-11 on Monday this week, a level not seen since 7th January this year. Thereafter, a quick rally ensued, on reports of good offtake in the ready section at the rate of 100 bars, but the closing prices still disclosed sizable losses over the week.

Gold presented, a steady trend, with very minor fluctuations in prices, due to good demand for it.

Silver for forward delivery (1st May settlement) opened at Rs. 158-7 and reacted to a low of Rs. 151-11 on Monday. As the closing rate on that day, namely, Rs. 152-15, was over Rs. 5 below the previous clearing rate, a special clearing was enforced in silver and gold, the clearing rate for silver being fixed at Rs. 152-12 and for gold at Rs. 84-12. With the recrudescence of buying activity induced by favourable offtake, silver recovered to Rs. 155-7 to-day and closed at Rs. 155-1.

Ready silver (.996 Mint) opened at Rs. 158-2, that is, at a discount of As. 5 below the forward rate for May settlement and declined to Rs. 151-11 on Monday to be on par with the forward rate, reflecting a higher offtake in ready. It rallied to close at Rs. 155-5, at which level it commanded a premium of As. 4 over the forward. The floating stocks of silver are 1,700 bars. The daily average offtake was 50 bars.

Gold for forward delivery (30th April settlement) improved from Rs. 85-4 to Rs. 86-5 early in the week, but, after declining to Rs. 84-3 on Monday in sympathy with silver, recovered to Rs. 85-3 at the close.

Ready gold disclosed a gain of As. 12 over the week to Rs. 85-15, the discount of an anna below the forward rate at the beginning of the week yielding place to a premium of As. 12, due to the excellent offtake during the week and, more particularly, in the last three days. The floating stocks of gold are reported to be 50,000 tolas. The daily average arrivals were 6,000 tolas, while the offtake was of the order of 10,000 to 12,000 tolas on an average.

The following comparative table shows the trend of the market during the week under review:

	8-4-53	Highest	Lowest	31-3-53
GOLD	Rs. a.	Rs. a.	Rs. a.	Rs. a.
Ready (.99 fine Mint)	85 15	86 8	84 13	85 3

HIDES AND SKINS QUIET

(From Our Own Correspondent)

MADRAS, *6th April*

Quieter conditions prevailed in the E.I. tanned hides and skins market, due to Easter holidays and lack of overseas interest. Prices ruled steady, except in the case of inferior grades cow hides for which there was good inland demand.

The market for tanned goat and sheep skins ruled easier at origin and prices were As. 3 lower than those last week.

Shipments (in bales) during the month of March, 1953 were: To the U.K.: 4,500 cow hides, 322 cow calf, 332 buff hides, 416 buff calf, 961 goat and 754 sheep; to the Continent: 3 buff calf, 293 goat and 38 sheep; to the U.S.: 91 cow hides, 4 cow calf, 67 buff hides, 109 buff calf, 145 goat; to Japan: 20 goat, 599 sheep.

COTTON WEAK

(From Our Own Correspondent)

BOMBAY, *8th April*

For all practical purposes, mills appear to have withdrawn themselves from the spot market at Sewri, at least for the time being. Many of them have done so for the simple reason that they have covered the greater part of their requirements for months ahead. Some might still be waiting for a further break in prices, while some others are more interested in imported cotton than in Indian styles, as in their judgment, there will be a greater margin for them in cloth made from foreign cotton. Thus, though the reasons for paucity of buyers in the market may be varied, the effect on the price structure is uniform and prices are giving way gradually, if not precipitately in the absence of offtake. Another reason for this may also be that the output during this season is likely to prove higher than anticipated earlier, by about a couple of lakhs of bales. Dholleras were the only bright spots in a weak market at Sewri. This may be due to some enquiries for exports for this so far neglected variety.

The forward market at Kalbadevi also showed signs of great weakness day after day during the major part of the week, with prices touching lower and lower levels. Thus, at one time during the current week, the quotation for May delivery dipped by about Rs. 37 below the highest level touched only a short while ago. The bulls seemed to have lost not only their enthusiasm but even their hopes, and they were inclined to liquidate gradually their holdings in a market, which was not in a position to absorb all the offerings. Earlier in the week under review, bears themselves came to the rescue of the bulls by large-scale short coverings. But as the week progressed, they realised the weakness of their opponents and showed a tendency to sit tight. Towards the close of the week, however, there was a slight improvement in the tone of the market and prices staged smart recovery on call-fixing by mills, scattered buying by the trade and covering by a prominent bear. The result was that closing rates were substantially above the lowest levels and only a shade lower than the closing rates of the previous week.

On the export and import fronts, there have been no developments of note during the week, except for a revival of interest in Dholleras mentioned earlier. There are no enquiries for Bengals, now that the supply position is easier. Conditions with regard to imports also have remained unchanged. India's interest in Egyptian cotton continues as before.

The following are the latest available quotations from the Sewri market: Bengal *Deshi* Rs. 550; Berar Jarillas Rs. 640; Vijay Rs. 850; Moglai Rs. 680; Kandesh Rs. 790; and Oomra *Deshi* Rs. 695.

The following table shows the trend of prices in the forward market during the week under review:

	31-3-53	*High*	*Low*	8-4-53
	Rs. a.	Rs. a.	Rs. a.	Rs. a.
I.C.C. May ...	690 0	684 8	681 0	688 4
I.C.C. Aug. ...	701 12	700 0	692 0	698 12

Karachi has been equally void of any interesting developments. Even the Japanese, who are credited with indefinite patience in negotiations, are wondering at the delay on the part of Pakistan negotiators in coming to some conclusion, with regard to the barter deal under discussion for a long time. They are reported to have made fresh proposals to accommodate Karachi's requirements to a greater degree, and it is believed that the authorities in Pakistan will now try to close the bargain. If the deal gets through, Pakistan is likely to be relieved of a good deal of its anxiety regarding the disposal of its cotton crop, because the quantity of cotton involved in the deal is believed to be about six lakh bales. Apart from this, there is little enquiry for Pakistan cotton from the Continent though the U.K. is a buyer of certain varieties at lower prices. Cotton exports at Karachi, however, taking the year as a whole, are better than last year.

The following are the latest available quotations from Karachi market: Punjab *Deshi* Rs. 66-8; 4F Punjab R.G. Rs. 55; S.G. Rs. 59; 4S.S. Punjab R.G. Rs. 58; S.G. Rs. 62-8; N.T. R.G. Rs. 58-8; S.G. Rs. 63; 289F Punjab R.G. Rs. 63-8 and S.G. Rs. 69.

At Alexandria, the Government has expressed its decision to continue the present scheme of marketing during the next season. This means that no forward trading will be allowed in this market and that all cotton will be bought by the authorities from the growers and sold to intending exporters as also to internal consumers. The prices will remain as at present closely related to those at New York from day to day. In the spot market several West European countries as well as India continue to be buyers and nearly a third of the season's production is believed to have been already exported. The period of shipment for the outstanding contracts for export is likely to be extended in individual cases by four months beyond 31st August, provided all "On" call business is fixed by the end of August.

At New York, the same bearish trend as in the previous weeks continues. It is now admitted that the carry-over at the end of the current season will be about a million and a half bales more than at the end of July, 1952, provided the export objective of four million bales is reached. The exports during the first half-year, however, amounted only to 1.8 million bales. The spot demand is also falling and it is believed that the carry-over ultimately might prove to be heavier than expected. In this case, the distant positions are also likely to suffer a setback, especially in view of very favourable weather conditions for fresh plantings reported from all cotton-producing areas.

The following are the latest available quotations from New York as compared with those of a week and a fortnight before:

(In cents per lb.)

	7-4-53	30-3-53	25-3-53

October	33.38	33.39	33.51
December	33.48	33.48	33.59

SELLING PRESSURE IN ART SILK YARN

(From Our Own Correspondent)

BOMBAY, *8th April*

A heavy landslide in values of yarn, both forward and ready sections, was witnessed in the art silk yarn market this week. It was brought about by renewed prospects of Korean peace, heavy imports and slackness in art silk fabrics trade. The downward trend persisted till to-day, when, on expectations of a further increase in prices by Continental producers, firm advices from the bullion market and revival of demand in the ready section, art silk yarn staged a sizable recovery. But the recovery was not so marked as to erase completely the previous losses. The closing rates to-day were, therefore, very much lower than those at the end of last week.

In the forward section 150D April contract was marked down at Rs. 778 yesterday, representing a fall of Rs. 35, as compared with the quotation on the 31st ultimo. On good buying support, it recovered to close at Rs. 794 to-day. The net loss in this contract over the week was Rs. 20. May contract commenced business at Rs. 815 on Wednesday last and, after receding to Rs. 783, recovered slightly to finish the week at Rs. 799, the net loss being Rs. 16.

In the ready section, 120 Japan declined from Rs. 4-10 to Rs. 4-6 yesterday but improved to Rs. 4-7 to-day. 150 Japan, 120 Italy and 150 Italy dropped As. 2 each to Rs. 4-3, Rs. 4 and Rs. 3-15, respectively. To-day, however, they were higher at Rs. 4-4, Rs. 4-0½ and Rs. 4.

The table below gives the prices of art silk yarn quoted to-day, as compared with those on the 31st and 25th inst.

Art Silk Yarn—	8-4-53 Rs. a.	31-3-53 Rs. a.	25-3-53 Rs. a.
150D March (per case of 200 lbs.)	794 0	813 0	838 0
150D April ,, ...	—	821 0	845 0
150D May ,, ...	799 0	—	—
150 Japan (per lb.)	4 7	4 12	4 12
150 Japan ,, ...	4 4	4 6	4 6
150 Italy ,, ...	4 0½	4 3	4 3
150 Italy ,, ...	4 0	4 2	4 3

The Korean peace developments have led the traders to envisage the possibilities of slowing down of stockpiling programme, which means increased arrivals of yarn from Japan and Continental countries, leading to a fall in yarn quotations. Consequently, the traders are extremely cautious to hold large stocks, while buyers are restricting their purchases to small lots just sufficient to meet the immediate requirements. In this context, even rumours of a further rise in the prices of art silk yarn by Continental shippers are discounted by a section of the trade; for, in its opinion, Continental producers cannot at all enhance prices further, what with Japan offering stiff competition in the world art silk yarn market.

Turnover of business in the staple fibre yarn section has been greatly limited, thanks to acute scarcity of stocks. The yarn producing units are reported to have been very much handicapped for want of adequate supplies of fibre at reasonable prices. The price of ready staple fibre now ruling in the market is as high as Rs. 2-8 per lb., as against Re. 1-12 (c.i.f. Bombay) quoted by exporters in overseas countries. Utter disappointment is, therefore, expressed at the postponement of import policy for staple fibre by the Government. Several communications, it is said, have been addressed to the Government, urging the latter to announce the policy immediately. An announcement is expected next Wednesday and, according to one source, import licences may be granted only to actual users.

GROUNDNUTS RECOVER

(From Our Own Correspondent)

BOMBAY, *8th April*

A notable development of considerable significance to the oilseeds and oils market this week was the Government's announcement on 1st April of certain concessions to trade regarding shipment of oils. The Government has decided to allow the balance of January-June, 1953, quotas of groundnut oil and H.P.S. groundnuts to be shipped upto the end of August, 1953. It may be noted that against established shippers' quotas of groundnut oil for January-June, 1953, announced on 13th December last, not more than half the quantity, in the case of quotas exceeding 75 tons, had been allowed to be exported upto the end of March, 1953. This period has, as a result of the above decision, been extended till the end of August for the balance of the quota. Similarly, the Government has extended to newcomers also the period of shipment of quotas of groundnut oil which were valid till March, 1953, granted in November last, till the end of August, 1953. The Government has further decided to continue the free licensing of linseed oil on shipping bills (subject to a maximum quantity of 500 tons at a time by a shipper) upto the end of June, 1953. These developments came as a surprise to operators who all along feared a ban on exports of oils in view of the short groundnut crop during the current year. As a result, the easy trend witnessed last week in all the sections yielded place to a hardening tendency with prices looking up all round.

In addition to the above, considerable demand for groundnuts and groundnut oil from *vanaspati* interests contributed to the improvement in the groundnut section. Bold ready advanced from Rs. 40-12 to Rs. 42-6. Khandesh quality rallied Rs. 1-2 to Rs. 42-6. Groundnut oil, ex-mill ready delivery, hardened by As. 6 to Rs. 22-8 and railway receipts As. 10 to Rs. 22-10. May and June deliveries were done at Rs. 22-12 and Rs. 22-15, as against Rs. 22-3 and Rs. 22-6, respectively.

The castorseeds section also improved, on rumours of reduction in export duty on castor oil. India occupies a very important place among the producers of castor oil and its export does not in any way affect the edible oil position in India; for it is used mainly for medicinal and industrial purposes. Hence, stimulus to exports by a reduction in export duties is not ruled out. This, in fact, explains the credence in the rumours. May delivery which opened steady at Rs. 147 shot up to as high as Rs. 157-8, before closing at Rs. 151-12. Madras quality gained As. 6 to Rs. 31-6. Castor oil, First Pressure, lost As. 6 to Rs. 18-6 and Commercials As. 4 to Rs. 17-10, on lack of overseas demand.

Linseed ruled steady. Bold ready, after moving up from Rs. 28-12 to Rs. 29-4, declined to close at Rs. 28-12. Linseed oil was higher by As. 4 at Rs. 14-8.

Kardi and *niger* seeds also registered an uptrend, on encouraging demand by *vanaspati* interests and other oil merchants. There were also enquiries from the Continent. Consequently, *niger*, Madras quality advanced by As. 8 to Rs. 33-8, and *kardi* seeds, ready bold by As. 6 to Rs. 23-8.

The following table shows the prices of oilseeds and oil on the 8th inst., as compared with those on the 31st and 24th inst.

	8-4-53 Rs. a.	31-3-53 Rs. a.	24-3-53 Rs. a.

PEPPER QUIET

(Messrs. Parekh & Co.)

BOMBAY, *8th April*

The week under report was shortened by the intervening holidays. In the earlier part, black peppar at Alleppey and Calicut attempted to withstand the bearish sentiments prevailing in other Indian markets, as New York showed resistance and recorded a fall very much smaller than that in other commodities like rye, wheat, maize, barley, soya-beans, castorseeds, castor oil, copra, coconut oil, both on the U.S. and the Continental markets. Arrivals at Alleppey were negligible owing to Easter holidays and this also served as a prop to the market. A small quantity was reported sold at Alleppey at Rs. 3,400. In the A.S.T.A. section, at Bombay, some of the bulls who believed in the ability of New York speculators for a successful manœuvring of a corner tried to support the market and bought April and May-June at price from $1.47 down to $1.46. In the later part, however, as the growers and dealers in India were not very confident about the future of pepper, because they believed that the immediate bearish reaction to Korean peace parleys in Indian and in other foreign markets will make itself felt sooner or later, pepper at Alleppey dropped from Rs. 3,350 to Rs. 3,100 with few buyers. The fall in almost all the primary centres was accentuated by the drop in the A.S.T.A. market at Bombay where the party who has got an office at New York and who is believed to be in the confidence of New York speculators was an aggressive seller. The merchant sold more than 50 tons for April shipment at price from $1.46 down to $1.41 per lb. c. & f. New York. The U.S.A. report was discouraging where buyers were quoting a nominal price between $1.41 and $1.42 without any firm bid to buy. A knowledgeable source in the market cites that the speculators in New York may not be able to stage a successful bull-squeeze as the demand from the grinders is likely to fall owing to the present peace psychology and the recent heavy fall in Wall Street and in other speculative markets, is likely to act as a damper against further pyramiding of contracts.

At the time of writing, Alleppey is reported to have improved after touching the new low level of Rs. 3,100 to Rs. 3,250 under pressure of short covering. May shipment to New York in Bombay is reported done at $1.44. Accumulation of stock at Alleppey and Calicut is reported, but the growers, because of their bullish inclinations, are reported storing their stock against loan account even after paying heavy rate of interest to the local shroffs.

Following are to-day's nominal quotations:— Ready delivery Rs. 2,850, April Rs. 2,720-50, and May Rs. 2,750-80 per candy of 5½ cwts.

GOOD GENERAL DEMAND FOR TEA

(Messrs. Forbes, Ewart and Figgis Ltd.)

COCHIN, *4th April*

The offerings in sale No. 7, which was held on Tuesday, 31st March, amounted to approximately 9,62,000 lbs. Quality had shown a slight falling away, but there were still many useful teas on offer. The sale opened to a good general demand, particularly for common, low medium and medium descriptions, and these remained fully firm at last rates. Although good medium and best liquoring grades sold well, prices inclined easier. The strongest feature of the sale were fannings grades which were occasionally dearer. Whole leaf grades met with keen competition and must be quoted dearer. The following were the quotations:—

	1953 Rs. p.
Low grown Travancore B.O.P. ...	1 13 0
Medium Travancore B.O.P. ...	2 2 0
	to 2 3 0
Anaimallais B.O.P.	2 5 6
Best liquoring Nilgiri B.O.P. ...	3 13 0
Well made black leaf O.P.	2 4 6

London Market.—Market generally ½*d.* to 1*d.* dearer on the week, but Wednesday no stronger than Monday.

Colombo Market.—4,500,000 lbs. Market again lower except price tea and good liquoring fannings.

Calcutta Market—Export.—51,000 packages. Strong general demand. Prices irregularly As. 1 to As. 2 dearer for all brokens, sometimes As. 1 to As. 3 dearer for fannings. Assam B.O.Ps. and better whole leaf grades weakest feature, but little deterioration in prices.

Dust.—Strong general demand. Prices generally firm to dearer.

Export Quota.—Special licence is still quoted at 1¼ pies, although business has been small. 1953-54 quota stands at 12 pies sellers.

Forthcoming Auctions.—Sale No. 8 will now be held on Wednesday, 15th April.

WEAKNESS PERSISTS IN JUTE

(From Our Own Correspondent)

CALCUTTA, *7th April*

Prices of jute goods recorded sizable losses during this week, as it became evident that New Delhi was also sharing the desirability of the West Bengal Government to postpone any decision of mills to restrict the output of sacking. There is indeed some force in the view put forward by the Government that sufficient time has not elapsed since the duty cut and that, because of this, its effect on marketing cannot be assessed now. The experience of hessian—it was ten months after the reduction in the duty foreign demand began to assume a reasonable proportion to output—is cited to support Government's contention. However, it is difficult to draw any comparison between sacking and hessian, since export figures for the former during recent years go to show that there has been a progressive decline in demand; especially the decline is pronounced in the demand from Far Eastern countries. Unless, therefore, there is a change basically, the experience gained by hessian may not be expected to repeat in the case of sacking. Demand for sacking has fallen, it is thought, in view of countries like Australia introducing bulk handling to reduce packing costs. Due to the ravages of war and of rebellion, Burma's rice exports are much less than the pre-war rate. Under this context, the announcement that an Indian Jute Mills Association delegation will go to Australia this month, study on the spot the causes for decline in demand for sacking from that country, and create goodwill between Indian mills and consumers there is welcomed in the market. Australia is reported to be having a bumper agricultural crop this year, and the visit of the delegation is well-timed. It may not be possible for the industry to send similar missions to every country, but the Government of India can assist the mills by advising its Consular offices in other countries to explore the possibilities for jute goods and find out in what particular way mills could assist consumers.

B. twills opened last Wednesday at Rs. 37-2, and business was difficult to materialise. Foreign buyers were not prepared to enter into commitments, and speculative holders were not interested to increase their stocks. On Thursday, however, some business was reported at Rs. 87. Friday and Saturday the market remained closed on account of Easter. Some change in sentiment was in evidence when the market re-opened yesterday, and as a result the rate advanced fractionally to Rs. 87-10.

Suggestions that more sacking looms would be transferred to the production of hessian affected sentiment in the hessian market, and the quotation for 40" 10 oz. was quiet at Rs. 38-14 last Thursday. However, yesterday, the price was better at Rs. 39-4. Hessian 40" 8 oz. was offered at Rs. 32-8 f.a.s. and at Rs. 39-4 f.o.b.

Depression in the goods was duly reflected in the quotations for raw jute. Mills did not desire to enter into buying commitments, and as sellers were also anxious for business, rates were depressed. Stockists have yet to dispose of jute mostly fit for the production of sacking, and as such only an improvement in the prices of sacking would prevent heavy losses for holders of indigenous jute. Assam bottoms eased to Rs. 17 from Rs. 18, and *bimli* f.a.q. had no buyers even at Rs. 13-8. There is the need for the Government to consider sympathetically the trade demand for permission to export the excess of the inferior qualities of Indian jute, unwanted by the mills. Pakistani jat bottoms were priced at Rs. 21. Other quotations were: Dalcola Rs. 19, Kissanganj Rs. 18, Dinhatta Rs. 17, and Pucca bale firsts ready Rs. 100 per bale.

SHARP BREAK IN FOODGRAINS PRICES

(From Our Own Correspondent)

HAPUR, *6th April*

With the first arrivals from the *rabi* harvest flowing into the markets, food prices have come tumbling down in Uttar Pradesh. Wheat, which was quoted at Rs. 21 per maund 10 days ago, is reported to be selling at Rs. 15 in one or two wholesale markets and at Rs. 16-8 generally. When the full impact of the harvest is felt, the price is likely to drop further by about Rs. 2 per maund. Harvesting is now over all over the State and threshing operations are in full swing. A normal yield

STOCK & SHARE QUOTATIONS

Abbreviations:—D=Deferred shares. G=Guaranteed shares. P=Preference shares. P.O.=Preferred Ordinary shares. R=Rebate shares. Y=Accounts published yearly. H=Accounts published Half-yearly. Q=Accounts published once 15 months. T=Company has Debentures. R.L.=Reserve Liability on shares. N=Nominal Quotation. i=Interim Dividend. f=Dividend for first half-year, y=Dividend for the year. x=Ex. Dividend c.d.=Cum. Dividend.

Shares:—If a company has different classes of shares—as, for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under "Paid-up Per Share."

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12 indicate the months of June and December, respectively. "Reserves" includes general and other reserves and all other funds which a company may have as also depreciation on block items, when this is charged to separate account "Block" represents actual cost of land, buildings, machinery, and all such other items on which depreciation is allowed, less sales, if any, and stands for the gross figure except where otherwise indicated.

Dividends:—Dividends for completed years are calculated at per cent. per annum, but, where quoted for portion of a year, they represent percentages of the dividend on the paid-up share value. For companies closing the books half-yearly in the first three months of the year, and for companies closing their books yearly during the first half of the year dividends are shown as for the previous year.

* The following explanatory notes relate to the abbreviations and marks shown on page 684 in the bentures section:—

■ Option to repay on six months' notice, on any nterest date after 31st December, 1951, at 102 per cent. Also redeemable out of a cumulative sinking fund of 1½ per cent. per annum (commencing in 1938) by drawings at 102 per cent. or by purchase at or 102 per cent.

(a) Option of repayment at any time at 3 per cent. premium.

(b) Bearer bonds of Rs. 1,000 each repayable at par.
Bearer bonds of Rs. 1,000 each repayable on 31st July, 1959.

(d) Bearer bonds of Rs. 1,000 ach with option of 'edemption in[whole or in part at par on 30th June, 1952, or on any subsequent interest date at one month's notice.

(e) Returnable on or after 31st July, 1950, at Rs. 102-8 or at par after 31st July, 1955, on six months notice in each case.
Bearer bonds of Rs. 1,000 each with option of redeeming on 3 months' notice at ½ per cent. premium, afte 1st March, 1954, but before 1st March, 1957, and 1 per cent. premium on or after 1 stMarch, 1957

(h) Option of redemption on or after 1st July, 1949, at par.

(f) Option ofrepayment at any time at par at any time on or after 30th June 1947 on six months' notice

MARKET GOSSIP

(Concluded from page 635)

lisation will bring. In regard to banking, it should be clear to any dispassionate observer that, while we are running a mixed economy and have a very important private sector, nothing is to be gained by the nationalisation of banks. Such a process takes place automatically as the public sector increases and assumes greater importance. So long as the private sector exists, I think it will be admitted that it is best to leave these matters to be managed by private agencies, so long as due control is exercised. That is important. From my own experience and from the measures that I myself initiated, I can say with confidence that the control and regulation of banking in this country is as thorough-going as one would hope to find in any country run on a generally democratic system.

"As regards insurance, there seems to be some fallacy in the argument that one has only to nationalise insurance in order to be able to get hold of funds for the completion of the Plan. For that purpose, one must make a distinction between the private sector and the public sector, and our Plan, though it is in terms of the public sector, does take into account the private sector. Something, perhaps, could be done by a greater supervision of the objects to which the investible funds of insurance companies are devoted after they have invested in what are called approved securities. And there are certain, at the moment inchoate, proposals that are under examination, with a view to finding out whether something could be done to direct investment a little further positively. We have not, I confess, gone very far in this direction. Of course, there is a very small core of nationalised insurance already in existence in this country in the shape of the Postal insurance, and it may be that, in the course of development, that sector will be allowed to expand its business, if, for instance, it shows good results in the sector in which it is allowed to operate, viz., that of Government servants. So, the point I make is that the closer examination of this problem that has been recommended by the Planning Commission is being made at present, and a study of the trends in the world and the experience of the countries which have nationalised insurance has been undertaken. And that is as far as I would wish to go into this matter at the present moment."

* * * *

The foregoing observations are as clear as they can be about the Government's intentions. They mean, as we read it, that (*a*) there will be no nationalisation of banking and insurance, (*b*) some changes may be made in the Insurance Act to enable the insurance companies to take greater interest in the financing of industrial development, and (*c*) no increase in the percentage investments in Government and approved securities is likely. There is, however, one criticism against Mr. Deshmukh. And that is that the Government is opposed to nationalisation not on principle but on grounds of expediency. While it is gratifying to find that the present Government is more practical in its approach towards this question than the socialists. It is, nevertheless, regrettable that it is not willing to concede the superior merits of private enterprise over the State ownership. Perhaps, in course of time, it will be realistic enough to admit this also in a generous manner. But that, we recognise, will depend to a large extent on the behaviour of private enterprise itself in the next few years. It is to be hoped, therefore, that business men in this country will realise that they are on trial now.

* * * *

The latest returns, namely, those for March, on the sterling area's holdings of gold and dollar reserves show a further improvement though the rate of expansion has been lower. Thus, the end of March figures disclose a surplus of $63 million, which compares with that of $125 million and $132 million recorded in the two preceding months, namely, February and January, respectively. The marked decline in the quantum of surplus in March is due to a substantial dollar payment by the U.K. to the U.S. for tobacco already bought. Lest this decline should lead to any misgivings, the authorities have taken care to add a warning that "too much must not be read into the changes of a single month which are not indicative of general trends. Any individual month may be affected by a particularly heavy dollar outlay or receipt." During the month the value of tobacco to be paid for and shipped was in the region of 50 million dollars. It is, however, not known whether all or what part of this liability was disbursed in March, but the point to be noted is that it is an outlay on account of six months' supply of tobacco held in America by the U.K. traders 'on option' till the dollars were made available to the trade for buying it.

* * * *

With the month's surplus of $63 million, the total holdings of gold and dollar reserves of the sterling area improved to $2,166 million, the highest level since December, 1951. The surplus earned in March included $29 million received from the U.S. on account of defence aid. Of the balance of the $32 million, as much as $19 million represented part of the U.K.'s surplus with the European Payments Union in February which was received in gold. The U.K. had also a surplus with the E.P.U. in March to the extent of $7.5 million. According to the agreement with the Union, the E.P.U. has to settle this in April by payment of £4 million in gold, the balance being used for reducing the book debt of the U.K. which now stands at $200 million, besides another £100 million repayable in gold. The U.K. has succeeded in running a surplus with the E.P.U. since September, 1952. Prior to that, there had been deficits for 18 months.

* * * *

In the past two quarters, the sterling area's reserves have been *slowly creeping up. This is* an encouraging trend. In fact, the reserves in the first quarter of this year improved by as much as $320 million which compares favourably with an increase of $161 million recorded in the preceding quarter and a loss of $635 million in the first quarter of 1952. Thus the sterling area's determination to retrieve its lost ground by conserving what it had and by building up additional reserves has been achieved to a certain extent. As a result, the sterling area's reserve position to-day is far beyond the danger zone. But the leeway yet to cover for freeing the pound sterling is still large and the path before it is a hardy and rugged one. For much of the present improvement is due to "aid and not trade" and not to "trade and not aid." There is therefore, still no room for complacency. What is more, it is difficult to forecast the trend of gold holdings in the current quarter. For one thing, Britain has relaxed its import restrictions on trade with Western Europe and the effects of this on the trade remain to be seen. For another, last month's surplus with the E.P.U. was due to French deficit with the U.K. With recent cuts in French imports, it is likely that the U.K.'s trade with France may stage a setback. These considerations lead to the conclusion that the stage is not yet set for the convertibility of the pound sterling.

MARKET REPORTS

(Concluded from page 673)

is expected. The peak touched by wheat during the pre-harvest scare some weeks ago was Rs. 27 per maund, necessitating the establishment of fair price shops, through which imported wheat was sold to the public at 1 *seer*, 14 *chataks* per rupee. All other *rabi* cereals—gram, barley, *bejhar* and peas—have also shown a downward tendency, a substantial fall having already been recorded.

The U.P. Government has now finalised its food policy for the current *rabi* season. Rice, barley and gram will be bought from licenced dealers at declared prices on the basis of the dealers giving to the Government a percentage of their stocks so purchased. *Juwar* and *bajra* will be bought from the free market. No decision has yet been taken in respect of wheat purchases. Rice is being purchased for supply to the Centre, as the State already produced more rice than is consumed within. Coarse grains are being bought to build up a reserve stock in the State for purposes of austerity and hill-provisioning areas. The State Government will only import foreign wheat at Rs. 17-8 per maund. It will purchase foodgrains stocks at the following rates: Rice: first Rs. 29, second Rs. 21-4, third Rs. 18-8, fourth Rs. 14-8 and fifth Rs. 12; *bajra* and gram Rs. 11, barley and *jowar* Rs. 10.

The latest free market quotations in the Hapur *mandi* are: Wheat Rs. 16-12, gram Rs. 13-10, barley Rs. 9-12, *bejhar* Rs. 9-10, peas Rs. 11-4, maize Rs. 10, *bajra* Rs. 11-8 and *jowar* Rs. 9-8 to Rs. 11-8; rice: *basmati* Rs. 34, *hansraj* Rs. 30, *sela* Rs. 28-8 and coarse Rs. 23.

OFFTAKE OF SUGAR DECLINES

(From Our Own Correspondent)

HAPUR, 6*th April*

Sugar markets throughout India remained quiet to bearish. Following heavy despatches from mills, resulting in accumulations of huge stocks with trade, free market crystal experienced strong selling pressure. On the other hand, the offtake has declined, as buyers are operating very indifferently and confining their purchases to immediate needs only. The demand from consuming areas is now mostly confined to bold grain of sugar which has ruled comparatively steady. The market for ready sugar at Calcutta remained slightly steadier under brisk demand from South India by sea. The Bombay market ruled quiet, in sympathy with the forward market and also on account of poor demand from Malabar which is now reported to be buying sugar from Calcutta.

The current free sale sugar quotations are: Ambala Rs. 29-14, Amritsar Rs. 31, Delhi Rs. 30-3, Jullundur Rs. 29-5, Agra Rs. 28-14, Hapur Rs. 29-8, Kanpur Rs. 27-12, Mathura Rs. 29-4, Meerut Rs. 29-4, Muzaffarnagar Rs. 30, Patna Rs. 30-14, Calcutta Rs. 28-8, Gauhati Rs. 31, Cocanada Rs. 31-4, Madras Rs. 31-8, Bhavanagar Rs. 30-10, and Indore Rs. 31-2.

Out of the 67 sugar factories in Uttar Pradesh, 30 have closed down for want of adequate supplies of sugarcane. This is likely to shorten the current crushing season in that State. The closure of sugar factories in western and central U.P., it is feared, may curtail the aggregate output to about 12 lakh tons during the current season, as against 13.5 lakh tons anticipated by the trade. As many as 10.5 lakh tons are reported to have already been produced.

The Uttar Pradesh Governor has now declared that the turnover in respect of sugar shall not, with effect from the 1st inst., be liable to tax, except (1) in the case of sugar manufactured in the U.P. at the point of sale by the manufacturer and (2) in the case of sugar imported from outside U.P. at the point of sale by the importer. The Governor has further declared that such turnover will be taxed at the rate of 6 pies per rupee. Formerly the sale tax was 2 pies.

SLUMP IN TIN PRICE

(From Our Own Correspondent)

CALCUTTA, 7*th April*

The changed attitude of the Russian rulers to international problems and the distinct possibility of peace in Korea following the willingness of the Chinese to exchange prisoners of war affected metal prices, which moved in the downward direction. Tin was especially the hardest hit during the week. Consumers, who had been covering only for the day-to-day requirements for many months past, were thus encouraged to inquire only for still smaller quantities. Further, reports from London and New York were far from encouraging. Tin showed a loss of Rs. 43 at Rs. 583.

CENTENARY OF INDIAN RAILWAYS

SIXTEENTH April, 1953, marked the completion of the first Centenary of the Indian railways. Exactly 100 years before that date, on 16th April, 1853, the first train in India steamed out from Bombay City to Thana, a distance of 21¾ miles. Thus, it was Bombay City that had the proud privilege of witnessing the first railway train in action in India, nay, in the whole of Asia. It is, therefore, in the fitness of things that the City should celebrate this great event in a suitable manner. Strangely enough, the Bombay Municipal Corporation, which represents the City, has done scarcely anything to commemorate this occasion. But the managements of the railways have done their part very well in reminding the public of the memorable day in the history of this City.

From a modest beginning a century ago, the Indian railways constitute to-day the largest single nationalised enterprise in the country. The capital invested in them exceeds Rs. 860 crores. They have a route mileage of 34,120 spread all over the country. Their gross earnings amount to Rs. 275 crores a year, while their expenditure runs to Rs. 230 crores. They play a vital part in the economy of the country, their aggregate revenue and expenditure forming about 34 per cent. and 27 per cent., respectively, of the Central and State Governments' total income and expenditure. They offer direct employment to 925,000 persons. It is, however, estimated that they support families covering more than three million persons. Some idea of the magnitude of the work done by them can be had from the fact that, in 1951-52, the railways carried some 1,200 million passengers, as also 96 million tons of goods, in a total of 188 million train-miles. Such is the size and economic importance of Indian railways to-day.

The railways in India are one of the constructive contributions made by the British to this country. Whatever might have been the motives behind the development of railways in India, the fact remains that it was British capital and British technical skill that gave the start for linking the various parts of the country with modern means of communication. A price, of course, had to be paid for these services. But that was in keeping with the spirit of the times and the political status of the country. Those were the days when the economic philosophy that held the field was plain *laissez faire*. The State could not bring itself to engage in commercial activity which was considered to be the sphere of private enterprise. As indigenous capital was shy, recourse had to be had to foreign private capital. In the then political conditions, Britain was the only source of foreign capital to India. And British capital would run the risk of investment in India only on its own terms. Free grant of land and a guaranteed rate of interest, ranging from 4½ per cent. to 5 per cent., payable at a preferential rate of exchange, were the main incentives offered to British capital. These terms proved very onerous and disproportionately high as compared with the results achieved. By the end of 1900, the Government had lost a net sum of as much as £51½ million by way of guaranteed interest to the railway companies.

Experience even in the initial stages of railway development revealed that, whatever might have been the achievements in other parts of the world, private enterprise was unsuited to this task in India and that the best means of ensuring quick development of railways was State ownership and State initiative. Thus, as early as in 1869, Lord Lawrence, the then Governor-General, recorded a very decided opinion to the effect that the direct agency of Government would be more economical than that of the railway companies (owned and operated by private enterprise) and that there would almost certainly be advantages to the State financially and, therefore, to the community of India at large, if the Government were to construct railways hereafter through its own engineers with money directly borrowed from the market for the purpose. As years passed, private enterprise contributed a progressively declining share to the development of railway communications, even though it did not completely disappear from the picture till so recently as 1944. It is true that, in 1881, the policy of State construction had to be changed and the help of private enterprise invited once again. But the conditions under which assistance was taken were such that the State had an active control over its activities. The point that we wish to make here is that, almost from the very beginning, the influence of the State over the development of railways was very strong, even though a large part of the capital was provided by private enterprise. The latter was not given unrestricted scope in the field of railways as elsewhere in the world. Its role in the growth of railways in India was accordingly of a limited nature.

Another feature that emerges from the study of the history of Indian railways is that, in the last quarter of their first century, there was hardly any expansion. On the contrary, this period actually witnessed a contraction in the area served by the railways, the route mileage to-day being smaller than that a decade ago by about 2,000 miles. This state of affairs was due to two reasons. One was the economic depression of the 'thirties which put an end to the rapid expansion programme that followed the adoption of the first Railway Convention as recommended by the Acworth Committee. It may be interesting to note here that, between 1920 and 1930, the route mileage had gone up from about 36,700 to about 42,000. The second reason was World War II. Unlike in the case of some of the industries, both the First and the Second World Wars meant a serious drain on the physical resources of the railways, which greatly undermined their operational efficiency. In World War II, the attrition of assets, due to intensive use and postponement of renewals, was far heavier than in World War I. Over 8 per cent. of metre-gauge locomotives and 15 per cent. of metre-gauge wagons, 4,000 miles of track and 4 million sleepers were transferred from the Indian railways to the Middle East. The political disturbances and the Partition of the country that followed soon after World War II accentuated the strain imposed on the railways by the war. The railways, therefore, could not make good the damage suffered during the war years. As the problem of rehabilitating and improving the existing equipment became urgent and had to be given priority, the question of opening new lines had to be relegated to the background. This position continues even to-day,

as will be seen from an analysis of the development programme of the railways under the Five-year Plan published elsewhere in this issue.

Even though the size of railways was smaller in the post-war than in the pre-war years, the volume of traffic handled by them, it must be said to the credit of the railway authorities, recorded a phenomenal increase, as will be seen from the following set of figures:

	(In millions)	
	1938-39	1949-50
Passengers carried	372	1,061
Freight tons carried ...	86	105
Passenger miles	12,589	32,344
Freight ton miles	17,047	23,144

It will be noted that the volume of passenger traffic had increased more than 2½ times. Goods traffic had also gone up. Some idea of the efforts that must have been put forward by the managements of railways to move all this traffic can be had only if one had a clear picture of the formidable state of affairs that prevailed, say, at the beginning of 1949-50. The position then was that a large number of locomotives, coaching vehicles and wagons were overage and obsolete. The track had deteriorated to dangerous levels which demanded severe speed restrictions and slowing down of movement of trains. The partition of the country had affected the pattern of traffic and the loss of the Port of Karachi added to the burden on the Bombay-Delhi route, necessitating augmentation of line capacity, increase of yard capacity, and facilities and readjustment of many other essential operational arrangements. The power position also had deteriorated and called for urgent attention at the hands of the authorities.

In the course of the past three years, most of these difficulties were overcome with courage and determination. One redeeming feature of the Second World War was that it helped the railways to strengthen their financial position and build up a fairly sizable reserve for post-war reconstruction. The position in this respect improved further by the high level of traffic which continued in the post-war years. A new system of fares and freights was brought into effect in 1948 and the rates themselves were revised in an upward direction later. All this enhanced the revenue of the railways. The comfortable financial position thus achieved facilitated the implementation of their rehabilitation programme.

During the past five years, much has been done to improve the efficiency of the railways. Many reforms of a far-reaching nature have been introduced in their administration and finances. New constructions have doubtless been few in comparison in recent years, the Assam rail link and the Deesa-Kandla connection, each about 180 miles in length, being the only lines that could be undertaken. But rehabilitation of major assets and improvements necessary to obtain optimum performance from existing equipment have been given the highest priority in capital programmes and these have yielded satisfactory results. On the whole, the railways can legitimately claim a progressive and commendable record in the post-war years. Thanks to the new Financial Convention introduced in 1949, the association of railways with the State has not impaired the observance of commercial principles so necessary to maintain efficiency, while, at the same time, the public utility aspect of their functions has been steadily kept to the fore. Greater recognition is being given to the comfort of third class passengers and the staff is being treated better. Yet much remains to be done. If the railways are to meet in full the demand for transport that will arise as a result of a growing population and the plans that are being implemented to increase the economic wealth of the country, they must be expanded considerably and modernised. A comparison of the railways in this country with those in the U.S. and Europe will be sufficient to show how they are backward in their method of operations and outmoded in their equipment, and to indicate the great scope that exists for technical improvements in several directions. A great responsibility rests with those who are in charge of the railways, for no plan for the economic development of the country will succeed, unless the transport lifeline is expanded and kept in readiness to meet the additional traffic that will flow from such development. They must realise that the problem is not merely one of providing adequate transport facilities, but that it is also one of offering such facilities at a cost which will be well within the capacity of users.

THE CHALLENGE OF SYNTHETIC FIBRES

THE textile industry in India and the world stand to gain much by the wealth of information on the world fibre position, provided by the Commonwealth Economic Committee in its latest review of industrial fibres, published last week. An analysis of their relative roles as raw materials indicates how the changes in their economic position have considerably influenced the textile industry to adjust itself to these changes. Thus, prior to this century, cotton, wool and silk fibres dominated as the raw materials of the textile industry. However, with the advent of the synthetic fibres of the rayon group at the beginning of this century and their rapid expansion during the inter-war period and since the Second World War, the relative proportions of the various fibres consumed by the textile industry have also changed.

The expansion of synthetic fibre output is reflected in the increasing proportion of rayon in the total production of apparel fibres, as will be seen from the table below:

(In thousands of metric tons)

Fibre	1934-38	1948-49	1949-50	1950-51	1951-52
Cotton ..	6,433	6,320	6,845	6,001	7,200
	(80)	(75)	(75)	(70)	(72)
Wool ..	934	976	997	1,036	1,061
	(12)	(12)	(11)	(12)	(10)
Rayon ..	632	1,113	1,225	1,585	1,795
	(8)	(13)	(14)	(18)	(18)
Total ..	7,998	8,408	9,069	8,622	10,061
	(100)	(100)	(100)	(100)	(100)

N.B.—Figures in brackets indicate percentage to total production.

The table above shows some interesting trends in the production of the fibres. As compared with the average output for 1934-38, the proportion of cotton to the total has declined from 80 per cent. to 72 per cent. in 1951-52. The proportion of wool production, however, shows relatively little change. The rapid growth of synthetic fibre is evident from the increase in proportion to the total from 8 per cent. in 1934-38 to 18 per cent. in 1951-52. This increase suggests the significant extent to which synthetics have supplanted cotton by their increased use for mixture with both wool and cotton.

The trend of production of apparel fibres as above, disclosed by earlier studies, is confirmed by the latest review of the world fibre position prepared by the Commonwealth Committee. According to the Committee, the world output of all industrial fibres rose sharply in 1951-52 to reach the new record level of 31,700 million lbs., as compared with 26,400 million lbs. in 1950-51. The output of apparel fibres alone rose by 19 per cent., while that of all other types increased by 23 per cent. The predominant increase occurred in cotton. The wool clip also continued to expand along with rayon, but the expansion in both cases was relatively smaller, as compared with that in cotton. The Commonwealth Committee indicates that the output in 1952-53 may equal that of 1951-52, while the consumption is likely to register some improvement. This upward trend in the world fibre position may be taken as an indication that world scarcity of these fibres, experienced in recent years, is now past history.

The Commonwealth Committee review deals at considerable length with the most notable development in the world fibre situation in recent years, namely, the entry into commercial production of the artificial fibres to which a brief mention has been made at the outset. Its findings make enlightened reading. The artificial fibres are divided into two broad categories, namely, semi-synthetic and wholly synthetic. The former class of fibres belongs to what is commonly known as the rayon group and the latter the nylon group. The rayon fibres are produced from cellulose, as well as protein. Under the category of these protein fibres come newer synthetics known as *ardil*, *vicara*, and *lanital* used in the manufacture of clothing. The nylon group of synthetics, chiefly derived from the by-products of coal and oil, includes nylon, *perlon*, *terylene*, *orlon* and *saran*. In regard to these two groups of synthetic fibres, a point of utmost interest to the textile industry and trade is the fact that, while rayon is firmly established in certain fields, the other fibres are still in an early stage of commercial development. Accordingly, trade in synthetic fibres other than rayon is confined almost to nylon. But the other synthetic fibres, which are of recent origin, though produced on a relatively small scale, are meeting with steadily rising demand for use in mixture fabrics and certain types of underwear mostly used by women in America and Europe. By reason of their strength and durability, they are in demand for some industrial uses also, such, for instance, as for producing beltings, awnings and tarpaulins. Resistance to acids and mildew and non-inflammability are the main characteristic features of these fibres which have found for them use in the manufacture of car upholstery, curtains, acid-resisting cloths, etc.

Besides their intrinsic qualities, synthetic fibres confer certain other economic advantages to their consumers. The most important of them is that long-distance shipment of some of these fibres does not add prohibitively to their cost. In recent years, this characteristic feature has encouraged many industrial countries, which wanted to achieve self-sufficiency in textiles, or to conserve their foreign exchange resources, to take to the manufacture of synthetic textiles. Typical instances of such countries are Germany, Italy and Japan, all three of which stimulated the production of rayon staple before the war by subsidies and by making provisions for its compulsory admixture with cotton and wool. Among the limitations of the wholly synthetic fibres is the difficulty of dyeing them. Rayon production requires so large an investment in plant that it is difficult for backward countries with limited capital resources to establish these units in large numbers. This limitation explains the concentration of these units in Europe and the U.S.A., and that too mostly in the hands of a few large firms. In the U.S., in 1950, there were 17 rayon producers, of whom two or three dominated the scene. Similarly, in the U.K., the bulk of the country's output is accounted for by two of its eleven producers.

The world output of synthetic fibres in 1951 is estimated by the Commonwealth Committee at 247 million lbs., as compared with 169 million lbs. in 1950, or barely one per cent. of the total. The total capacity of production of these fibres is expected to be raised to 564 million lbs. by 1955 in seven countries alone, namely, the U.K., Canada, the U.S., Germany, France, Japan and Italy. Among these countries, the U.S. is still by far the biggest producer of synthetic fibres, its share in 1950 and 1951 being 145 million lbs. and 200 million lbs., respectively, out of the total production mentioned above. According to the Commonwealth Committee, the U.S. share is expected to drop below 70 per cent. of the world total by 1955, while the output of the U.K. is likely to rise from 11 million lbs. in 1951 to 61 million lbs. in 1952-53. In the course of this year or so, the output of Germany is to reach 20 million lbs., as against 9 million lbs. in 1951. The production of synthetic fibres in France is expected to increase from 7 million lbs. in 1951 to 23 million lbs. in 1953 and that of Italy from 4 million lbs. to 8 million lbs.

This marked expansion in the output of synthetic fibres raises the question as to how far these fibres will challenge the position held by the natural fibres, namely, cotton, wool and silk. Although the production of rayon and nylon has increased remarkably during the past decade and a half, so far as one can see to-day, they are unlikely to oust the natural fibres to any marked extent. The total output of synthetics, even when it reaches the target of 564 million lbs. by 1955, will constitute only a small fraction of the fibres needed by the world's textile industry. With its various limitations on rapid expansion in the different parts of the world, synthetic fibres may take yet another decade to reach a level which will be equal to half the total production of all fibres to-day. And any appreciable headway made by it to catch up with the demand for uses in apparel industry is likely to be offset by the increased demand for clothing from the underdeveloped countries when their economies are improved. It is true that nylon has driven silk out from the stocking markets of Europe and the U.S.; yet silk and cotton and wool have their own exclusive spheres where they are bound to remain unchallenged. As rayon, however, enjoys a much more favourable price relationship to the natural fibres, it will have a strong influence on the choice of the fibre used by the textile mills. It may find increasing favour with them as a mixture with cotton and other natural fibres. But even this influence can be neutralised, to a certain extent, by possible new uses of the fibre in fields other than textiles. Besides, any rapid progress which can be expected from synthetic fibres is at present limited to rayon and nylon. And even here, the development of nylon is likely to be slow, as compared with that of rayon, as the latter costs much less than nylon. Considering these factors, one can safely conclude that the trade in the old natural fibres need not view with any anxiety the expansion of synthetic fibres as a source of danger.

FIRM TREND IN MARKETS PERSISTS

OUTLOOK FOR U.S. BUSINESS—BANK RATES—NEW WHEAT AGREEMENT

THURSDAY, 5 P.M.

MARKET GOSSIP

EQUITIES have hardened further. The upward trend noted last week has been fairly well maintained, though it has not been perceptibly aggressive. Operators in the local market have noted with satisfaction that London and New York Stock Exchanges have thrown off their hesitant feeling and that values in both of them have once again started looking up. This has been interpreted to mean that no adverse effects on the economies of these countries are expected as a result of the latest moves to secure peace in Korea. If, however, operators have not chosen to become aggressively bullish, it is because they are awaiting the mediator's award on the issue of conversion of Tata Deferreds into Ordinaries. There is a strong belief at the time of writing that the award will be made public this week-end. The majority, however, prefer not to speculate on this issue, as expectations in the past had led to nothing but disappointment.

* * * *

The latest advices from Washington indicate that the U.S. official experts are of the view that peace in Korea will have no bearish effect on the U.S. economy. The staff of the Congressional Joint-Economic Committee has issued, in consultation with the Administration experts, a statement disagreeing with the stock market's bearish interpretation of the Korean peace move. The statement says that "the present outlook for private business activity and continued high levels of production and employment remains good." While admitting that there is a danger of a psychological reaction reversing the immediate post-Korean buying sprees, it avers that a truce in Korea would not remove the basic threat of Communist aggression. It further contends that military and economic adjustments resulting from a truce would be comparatively minor and adds: "the present business investment plans made in expectation of a cut in defence spending from the present year's peak appear to be based on long-term considerations and hence are reasonably secure from fluctuations due to a Korean truce. Consumer expenditures seem likely to be stable or rising through the next 15 months." Although no official comment is available on the future trend of defence expenditure in the U.S., unofficial advices suggest that no cut in such spending is likely this year. On these indications, as well as on the possibility of an increase in the price of steel in the U.S., Wall Street has been looking up during the last two days. The shares of heavy industries, and steel companies in particular, have registered sizable gains.

* * * *

The London Stock Exchange, too, has been displaying a firm undertone, but for an entirely different reason. The British Chancellor of the Exchequer has sprung a pleasant surprise on investors by giving liberal tax concessions. He has reduced the standard rate of income-tax by 6*d.*, promised to abolish the Excess Profits Levy from 1st January, 1954, restored the initial depreciation allowances and reduced the purchase tax rates by 2½ per cent. In short, his latest budget is a real incentive budget, designed to lighten the burden on industries and the people and to liberate their energies for securing increased production. It is this budget that has enthused the London Stock Exchange.

* * * *

Before Mr. Butler presented his budget, there were expectations that the Bank of England rate might be reduced. These were based on two grounds, (1) the belief that the danger of inflation was over, and (2) the tendency in other parts of the world to reduce the Bank rate. Only a few days ago, the Netherlands Bank rate was lowered to 2½ per cent. This was the third cut, of ½ per cent. on each occasion, since January, 1952. A few days prior to this, the Australian Central Bank had reduced its discount rate to 5 per cent. This was the second downward revision since the beginning of this year. Yet another country to reduce the Bank rate this year was West Germany which fixed it down at 4 per cent. This was the fourth alteration in less than a year, the aggregate cut effected during this period being 2 per cent. In December last, Belgium had lowered its official discount rate. Mr. Butler, however, did not announce any reduction in the Bank rate. He, of course, said nothing specific about the monetary policy, but his observations on general economic conditions indicate a broad continuation of the monetary measures now in operation. A few well-informed observers also feel that there is still need for retaining the dearer money correctives. A factor that has to be taken into account, in this connection, is the pronounced tendency on the part of the present administration in the U.S. to keep the interest rates high. So long as this trend persists, the U.K. is unlikely to reverse its current monetary policy.

* * * *

So far as this country is concerned, there is hardly any justification for altering the Bank rate at present. Markets have more or less settled down, adjusting themselves to the existing Bank rate. Any change, even if it be in an upward direction, will bring about fresh disturbances in the state of the markets and lead to a violent rise in prices. The price levels have already tended to move up and a rise in the Bank rate will be a signal for a fresh bullish momentum which will be most undesirable.

* * * *

Curiously enough, while London was speculating on the possibility of a fall in Bank rate, the Gilt-edged market in Bombay turned quiet, with the Conversion Loan, in particular, losing some ground. The reasons for this are different. A few weeks ago, some operators expected that the monetary authorities would soon initiate measures for bringing down the yields on Government securities. They, therefore, took a "long" position in the Conversion Loan and pushed it up to a little over Rs. 83. They held on for several days but nothing happened. In the meanwhile, conditions in the money market became a little more stringent, with keen competition among banks for inter-bank money. These operators, therefore, decided to liquidate their purchases. As usual in such circumstances, buyers completely withdrew and the price of the Conversion Loan quickly slided down from Rs. 83 to Rs. 81-8. It is now believed that, as most of the speculative purchases have been squared up, steadier conditions will come to prevail in the security.

* * * *

The upward trend in bullion and commodity markets noted in the past week has also been well maintained. Over the week, the price of silver has gone up by Rs. 5 and gold by Rs. 2, owing to good offtake and a substantial fall in floating stocks. Cotton and oilseeds too have been ruling firm, with a further fractional advance in prices. Even jute and jute goods have improved a little. The non-ferrous metals, however, have continued to fall, as will be seen from the following set of quotations for spot delivery in the Bombay market. Forward trading still remains suspended:

	7th April	15th April
	Rs. a.	Rs. a.
Copper (per cwt.)	183 0	177 0
Lead (per cwt.)	64 0	62 8
Zinc (per cwt.)	56 0	53 0
Tin (per cwt.)	147 0	130 0

The above fall in prices is in keeping with the trend of the London Metal Exchange where tin for forward delivery had crashed to as low as £680 on Tuesday, as against £830 per ton a week before.

* * * *

Strong criticism of the retention of production control on the Indian cotton textile industry was voiced by Mr. E. D. Sheppard, Chairman of the Kohinoor Mills Co., Ltd., in his address to the shareholders at their annual general meeting held on Tuesday this week. With the return of the buyers' market, mills have necessarily to cater to the needs of the public by manufacturing only those varieties which are in demand. The retention of production control was, therefore, considered by Mr. Sheppard not only as unnecessary but as "a very real hindrance to the industry." He wanted the Government to review this aspect of its control policy without further delay.

* * * *

In any discussion of the outlook for textile mills, one has to take into account the cost of the various burdens that have been imposed by the Central and State Governments in recent months. Mr. Sheppard, therefore, did well in enumerating the effects of these measures on costs of the Kohinoor Mills. The chief among these are the compulsory Provident Fund Scheme, the Employees' State Insurance Scheme, the special cess on mill-made cloth (subsequently converted into additional excise duty) and the multi-point sales tax. The Kohinoor Chairman was not opposed to the Provident Fund Scheme, as the Company had already one for many years, but the compulsory contribution of 6¼ per cent. on the basic pay plus dearness allowance, instead of the present rate of 8⅓ per cent. on basic pay only, would cost the Company about Rs. 5.40 lakhs per annum more. The Employees' State Insurance Scheme, which has not yet come into force in Bombay, would cost Rs. 1.02 lakhs per annum worked on the basis of ⅜ per cent. of the monthly wage bill. The special cess, now converted into an additional excise duty, would have, in its original form of a levy of 3 pies per yard, involved an outgo of Rs. 5 lakhs per annum. But a part of this, so far as the controlled varieties of cloth are concerned, can now be passed on to the consumer, under the modified special excise duty. But it is doubtful whether this relief will last to any appreciable length of time. For, with a buyers' market steadily gathering momentum, a stage may soon come when the whole of this levy will have to be met by the mills themselves. The multi-point sales tax was described by Mr. Sheppard as "the most undesirable of all measures taken by the Government." He felt that "it might very easily lead to a further recession in trade, as the already reduced purchasing power of the average man in the street would be further curtailed." The increase of 10 per cent. in dearness allowance recently awarded by the Industrial Court payable to workers, is an additional burden on the industry, and we are told that in the case of the Kohinoor Mills, it would raise the wage bill by Rs. 7.25 lakhs per annum.

* * * *

From the foregoing, it can readily be seen that the Kohinoor Mills will have to earn at least Rs. 18.67 lakhs more, if it is to maintain its normal margin of profit. This is not all. For the Chairman, who is also connected with a number of electrical undertakings, disclosed that there is likely to be a power cut again in 1956 with the consequent loss of production and wages to workers, in view of the delay by the Government of Bombay in extending the period of licences to hydro-electric companies. The cost of power was also bound to be higher, he said, on account of the higher cost of plant and machinery which would be used in the erection of a new steam power station at Trombay. There was, therefore, sure to be an overall upward revision of the tariffs for power and an interim increase had already been notified.

* * * *

With the shackles of production control and the heavy burdens imposed by the Government, Mr. Sheppard found it difficult to assess the future of the industry, but he drew the shareholders' attention to the encouraging sign in the return of relative stability to the various cotton markets of the world. It appeared to him unlikely that the wild fluctuations of the past two years would be witnessed in the foreseeable future. "This, in turn, should restore confidence among our merchants and buyers who lost heavily in last year's slump," he said. Referring to the outlook for the Kohinoor Mills in particular, he said: "I can say, however, that, subject to this handicap (production control), your mills are in excellent fettle and well prepared to weather any storms, or to take full advantage of any opportunities, which the future may hold in store." This is, of course, a general statement, but the market has interpreted it optimistically. Many of the operators seem to feel that, given no upsets, the Company will be able to earn sufficient profit in the coming years to maintain its dividend at Rs. 13 per share, the 1952 level. It is perhaps this impression that is responsible for the smart rise in the value of the Company's shares from Rs. 295-8 to Rs. 301 after its Chairman's statement.

* * * *

Of considerable significance to this country is the signing of the World Wheat Pact by India on the 9th inst. The pact will extend the present agreement, due to expire on 31st July next, for a further period of three years, that is, till 31st July, 1956. It commits India to the purchase, during each of the three years, of a million and a half tons at rates higher than the prices under the current wheat agreement. The price levels under the new agreement range between a maximum and minimum of $2.05 and $1.55 a bushel, respectively, as against the existing range of $1.80 and $1.20 a bushel. The prices are for Manitoba northern wheat, delivered at Fort William, Port Arthur on Lake Ontario. The carrying charges will be extra. Under the agreement, the exporting countries are to deliver only when the importer offers the maximum price and the importer guarantees to buy from the exporting countries only when wheat is offered at the minimum price. This stipulation is intended to leave some leeway for free trading; but experience in the past four years shows that the maximum price has always been effective. The present market rate in U.S. is $2.50 a bushel.

* * * *

The signing of the new wheat agreement will mean a substantially higher price for wheat imported into India. For, if any exporting country were to offer wheat at the minimum price which is 35 cents per bushel more than the current minimum, India will have to pay an additional sum of more than Rs. 9 crores on its purchases of 1.5 million tons under the agreement. However, if circumstances at home force India to go in for the wheat, the chances are that it will have to buy at rates varying between the minimum and maximum. The target of food imports for the current year has been fixed at 2.9 million tons, as compared with 3.9 million tons in 1952 and 4.7 million tons in 1951. The reduction in the target is evidently due to the steady improvement in internal production and procurement. Besides, there is also the prospect of getting larger quantities of rice from Burma on barter basis. The domestic supply position of rice is also satisfactory as it opened the year with a stock on hand of 1.3 lakh tons. During the current year, India expects to receive 22,000 tons of rice from Pakistan in return for wheat supplied last year. Besides, Ceylon has to repay 15,000 tons of rice loaned to it in 1952. If, in addition, the present mission to Burma for negotiating a barter agreement for another 3.5 lakh tons were to succeed, the necessity for India to import the high-priced wheat will be considerably lessened.

* * * *

Along with India, 17 other countries have signed the Pact. These countries include the U.S. and Canada, the two principal producing countries, besides Belgium, Ceylon, Denmark, the Dominican Republic, Egypt, France, the Federal Republic of Germany, Guatemala, Haiti, Italy, Japan, Liberia, Holland, the Philippines and Switzerland. The Pact will be open for signature until 27th April. It will have to be ratified before 15th July by the Governments intending to participate and will go into operation on 1st August next. It is, however, significant that Britain, the leading importing country, has not signed it so far. And if this country finally refuses to participate in the agreement, the whole arrangement may fail. It may be mentioned here that the quota allotted to Britain is as high as 177 million bushels out of the total of 580 million bushels. After opposing any increase in the maximum price from $1.8 per bushel, it yielded to some extent by agreeing to pay a maximum of $2 a bushel, but it has firmly refused to pay anything more than that. An increase in the rate to $2 per bushel will mean a rise of $30 million a year in its food bill. If it accepted the rate of $2.05, the expenditure would go up by a further $10 a year. Besides, Britain feels that, as wheat stocks in the four leading export countries are about double the level they were a year ago, the demand for higher prices is somewhat artificial. But for the U.S. Government's support price of $2.20 per bushel, the market price of wheat will come down appreciably in due course.

* * * *

The increase in the minimum and maximum prices under the agreement is mainly the result of the insistence by the U.S., which has an export

EQUITIES RULE STEADY

SPURT IN ALCOCK ASHDOWNS

(From Our Own Correspondents)

BOMBAY, *16th April*

THE Stock Exchange presented a steady tone during the week under review. After remaining subdued on the opening day, due to absence of fresh buying and scattered liquidation on end-of-account considerations, equities showed signs of steadiness in the new account. The efforts of certain professional operators to lift up values in later sessions were successful only to some extent. For progress was halting due to absence of appreciable buying support. It is reported that, as almost all the big bulls had diverted their attention to the bullion and commodity markets, support to the market was confined to small operators. These were encouraged by favourable advices from Calcutta and the local bullion market. As a result, equities, on balance, finished with moderate gains over a wide front.

Though there is no fresh force to stimulate any large-scale speculative activity, the steady conditions reflect the market's appreciation of the Finance Minister's gesture to provide more incentives to private enterprise, as indicated by the latest amendments to the Finance Bill. Particularly, the exemption of genuine jobbing and arbitrage transactions by brokers of recognised Stock Exchanges from the provision contained in the Finance Bill to the effect that all speculative losses and gains should be treated independently of other incomes—a concession announced by the Finance Minister—has been quite welcome to the market. The suggestion that the Finance Minister is likely to hold consultations with party leaders on the Estate Duty Bill, with a view to accommodating any suitable suggestions, is taken to imply that further relaxation in the provisions of the Bill is possible. These factors seem to have a steadying effect on the sentiment of the market at present.

In the steel section, Tata Deferreds started at Rs. 1,837-8 and drifted to Rs. 1,815 early on Monday. But in response to fresh buying support, they touched a high of Rs. 1,852-8 yesterday before closing to-day at Rs. 1,850. Tata Ordinaries advanced from Rs. 315-8 to Rs. 321-12, but closed at Rs. 320-12. Indian Irons were in favour on encouraging advices from Calcutta where the shares sought encouragement from the improvement in the jute market. The scrips, therefore, hardened by As. 9 over the week and closed at Rs. 25-1.

Barring a few weak spots, the textile section, as a whole, was steady with small gains. Bombay Dyeings, after dropping from Rs. 395 to Rs. 386-14, regained to close at Rs. 387-8 *ex-div.* Kohinoors received good attention on optimistic outlook for the Company and gathered Rs. 6-8 to Rs. 301. Central Indias put on Re. 1 to Rs. 156. Century was listed *ex-div.* to-day and closed at Rs. 259-8 *ex-div.*, as against Rs. 270-8 *cum-div.* last week. Finlays improved by Rs. 2 to Rs. 309, New Greats by Re. 1 to Rs. 150-8 and Svadeshis by Rs. 2-8 to Rs. 258. Podar Mills were in good form with a rise of Rs. 8-12 to Rs. 135 on favourable results disclosed by the accounts for 1952. Khataus were lower by Rs. 7-8 at Rs. 185. New Citys, which were dormant at Rs. 166-14 *ex-div.* till yesterday, suddenly drifted lower to Rs. 152-8 *ex-div.* Simplex reacted from Rs. 177 to Rs. 173-8. Standards by Re. 1-4 to Rs. 295 and Swan by Rs. 2-8 to Rs. 435.

Small activity was witnessed in bank shares with minor gains in select scrips. Imperial Fully Paids were marked up by Rs. 15 to Rs. 1,857-8 and the Contributories by Rs. 6-4 to Rs. 451-4. Centrals (Old) hardened by Re. 1-12 to Rs. 65-4 and the New shares by Re. 1-8 to Rs. 66-8. Barodas were up by As. 8 at Rs. 112-8. Indias were steady at Rs. 154. United Commercials were a fraction down at Rs. 35-8.

A further rise of Rs. 150 to Rs. 7,285 in Orientals was the outstanding feature of business in insurance shares. New Indias were in request and put on Re. 1-4 to Rs. 43-8. Jupiters were a shade quiet at Rs. 6-14. Indian Mercantiles were taken up As. 4 better at Rs. 38-8. Other scrips disclosed little change and business was next to nothing.

Activity was on a limited scale in the public utility section and support was selective, but the undertone was steady. Ahmedabad Electrics were lower by As. 5 at Rs. 108-7. Andhra Valleys lost Rs. 2-8 to Rs. 1,440. Tata Hydros were up by a rupee at Rs. 153 and Tata Powers by Rs. 3-12 at Rs. 1,543-12. Poona Electrics gained As. 10 to Rs. 122-8 and Surat Electrics advanced by Rs. 3-8 to Rs. 125. Bombay Suburbans were unchanged at Rs. 124-6.

Selective buying interest was witnessed in the miscellaneous section. Belapurs were in favour, to go up by Rs. 4-8 to Rs. 242-8. A.C.Cs were steady at Rs. 169. Bombay Burmahs receded from Rs. 395-10 to Rs. 390 early in the week, but were keenly sought after on rumours that the Company had been invited by the Burma Government to explore the possibilities of reviving the timber trade. The shares, therefore, closed at Rs. 400. B.I.Cs. were unchanged at Rs. 8-5-6 *ex-div.* National Rayon Ordinaries were steady at Rs. 81, while their Preferences were keenly bid at Rs. 83-8, as against Rs. 80. The Company proposes to clear off the arrears of dividend on the preference shares for 1950 and 1951 and pay the dividend on them for 1952 also. Tata Chemicals were taken up As. 2½ better at Rs. 9-7 and Tata Oils As. 12 higher at Rs. 34-8. Wimcos rose by Re. 1-4 to Rs. 235.

In the transport section, there was a revival of support to Scindias which moved up by As. 3½ to Rs. 15-14½. Bombay Steams, on the other hand, reacted from Rs. 34 to Rs. 32. Bharat Lines were done at Rs. 95. Air-Indias were in request to go up by Rs. 3 to Rs. 84 and Air-India Internationals by as much to Rs. 104.

In the mining and engineering section, Alcocks staged a spurt of Rs. 23-12 to Rs. 332-8 on expectations of better results. Shivrajpurs added Re. 1-4 to Rs. 62-8, while Indian Coppers were quiet at Rs. 3-14. Premier Constructions attracted attention and put on Rs. 2-8 to Rs. 91-4.

* * * *

Calcutta Stock Exchange

CALCUTTA, *14th April*

The Calcutta Stock Exchange was in a mood of lethargy during the week, which was again short of two working days on account of holidays on Monday and Tuesday. During the four days, transactions remained restricted and prices easy. The change in the international situation and the bright prospects of an early settlement in Korea all means at present that operators should move cautiously and that they have to look for incentives, for extending commitments, from within the country and not from without.

Conditions in the jute industry being what they are, jute shares could not give their customary leadership to the market. Stocks of finished goods are accumulating, and although during the week prices of jute goods have turned better on the decline, there is a wide gap between current and economic levels. Unless, therefore, this gap is bridged and mills are relieved of stocks, interest in shares will continue to be just nominal. The general weakness also affected tea shares.

Market circles have encouragingly noted the Finance Minister's outright rejection of the "nationalisation" proposals put forward in Parliament and his able defence of the country's banking and insurance systems. The reported possibility of Government directing insurance companies to invest funds in industrial shares has been viewed favourably.

Sectionwise, textiles were quiet. Cawnpores were traded at Rs. 8, while Basantis at Rs. 3-11 lost As. 3. Among banks, United Commercials were lower at Rs. 35-6 and Hinds changed hands at Rs. 21.

Only small interest was shown to coals, Burrakurs meeting with business at Rs. 10-12. Bengals were unchanged at Rs. 524, while Equitables, in sympathy with the general trend, searched a lower level and at Rs. 42-12 were easier by As. 4. Western Bengals changed hands at Rs. 4-9, and Talchers realised Rs. 3. Standards were, however, better at Rs. 18-4 as against Rs. 17-14 earlier, and at Rs. 5-3 Central Indias tended to be steady. Karanpura Collieries were favoured at Rs. 94-8, Raneegunges at Rs. 8-6 and Churulias at Rs. 3.

The jute section wore a deserted appearance. Speculative Howrahs opened at Rs. 22-15 and after moving to Rs. 23-4 were shaded to Rs. 22-14. The closure over the week-end was, however, at Rs. 23-2. Agarparas declined to Rs. 4-12 from Rs. 5, and Reliances to Rs. 12-8 from Rs. 12-14.

In the engineering section, Indian Irons closed quiet for the week at Rs. 24-5. During March, production of the Company was 60,640 tons pig iron, 39,350 tons steel ingots, and 22,090 tons semis and finished steel. From Rs. 24-8, Jessops improved to Rs. 24-11. Braithwaites were favoured at Rs. 11. Sarans realised Rs. 10-1 and Kumardhubis Rs. 7-14.

Among tea shares, New Samanbaghs were taken at Rs. 7, while Hantaparas declined to Rs. 135 from a previous rate of Rs. 142. Banarhats were unchanged at Rs. 300. Dhunseris at Rs. 9-14 were lower by As. 8, and Bisnauths were shaded to Rs. 26-8 from Rs. 26-12. Other shares that fractionally eased included Hattikhiras, Sonai Rivers, Nagri Farms and Bokahats.

In sympathy with the general trend, miscellaneous industrials also remained quiet. Rallis were, however, better and steady at Rs. 77, while Indian Cables were offered at Rs. 17-6 as against Rs. 17-11 earlier. Godfrey Phillips were searched at Rs. 28-4, Dunlop Rubbers being fractionally lower at Rs. 28-4. Some Valley Cements changed hands at Rs. 7-4 and Indian Coppers were quiet at Rs. 3-1. Titaghur Papers were fractionally lower at Rs. 36.

* * * *

Madras Stock Exchange

MADRAS, *14th April*

The Madras Stock Exchange witnessed yet another week of cheerless conditions. The imposition of further power-cut and the lessening international tension were responsible for the dull trend. Textiles were out of favour with enquiries confined to certain stray scrips. Rubbers and coffees were easy, while teas met with some buying in a few selected scrips. Miscellaneous scrips came in only for a few odd transactions. Consequently, prices were generally downward and disclosed, on balance, perceptible losses. Volume of transactions remained restricted to a narrow range.

In spite of the fact that many of the mills have been installing their own electric power generating units, trading in shares was not happy, because of lower dividends declared by some mills. Vasantas declined from Rs. 161-8 to Rs. 160. Coimbatore Spinnings were down by As. 8 at Rs. 41. Travancore Rayons lost As. 2 to Rs. 4-3. Cambodias were done at Rs. 11 *cum-div.*, as against Rs. 10-14. The Directors have declared a dividend of 10 per cent. (free of income-tax) for the year ended 31st December, as against 12½ per cent., (free of income-tax) during the previous year. Radhakrishnas Rs. 100 paid-ups were sticky at Rs. 149 *cum-div.* and Rs. 50 paid-ups at Rs. 72 *cum-div.* The Company has declared a dividend of 6 per cent. for the year ended 31st December, 1952, as against 16 per cent. for the previous year. S.R.C. Ambikais were done at Rs. 142-8, as against Rs. 148-8 *cum-div.* Metturs, however, put on Rs. 2 to Rs. 188. Janardanas were higher by As. 8 to Rs. 59-8.

There was very little offtake of rubber by tyre manufacturers this week also. With stocks remaining high, rubber shares were generally unwanted, even at lower rates. Cochin Malabars eased by As. 2 to Rs. 6-1. Kailas declined by an anna to Rs. 3-3. Pullangodes, Thirumbadis, Velimalais were also lower at Rs. 2-7½, Rs. 2-9 and Rs. 2-1½, respectively. Tharmarpallys, however, put on an anna to Rs. 12-14.

Operators seemed to await the action to be taken by the Government of India to bring down prices of coffee, which have been at a high level. They were averse to commit themselves. Coffee Lands suffered As. 3 to Rs. 9-3 and Consolidated Coffees an anna to Rs. 17. Puthuthottams were fractionally lower at Rs. 4-12. Mysore Coffees were unchanged at As. 10.

Business in tea shares was subdued. Haileyburias declined by As. 4 to Rs. 13-10. Chembras were lower by an anna at Rs. 2-12. Udayagiris (rubber and tea) were done at Rs. 5-12, as against Rs. 6. Peermades, however, put on As. 4 to Rs. 34-4 *cum-div. cum-right* and Periakaramalais As. 3 to Rs. 24-12.

In the miscellaneous section, Rallis lost Rs. 2-4 to Rs. 76. Mettur Chemicals were slightly lower at Rs. 4-2. Andhra Cements 'B' were, however, higher by As. 3 at Rs. 9-4 and F.A.C.Ts. by As. 2 at Rs. 3-4. Spencers gathered an anna to Re. 14-3. Deccan Sugars came in for enquiry As. 2 higher at Rs. 8-12.

STANVAC REFINERY PROJECT

The work on the Standard-Vacuum refinery under construction at Trombay is progressing according to schedule and India's first modern oil refinery will go into production, as planned, in 1954. Clearing and grading of the site was started in December 1952. An area of 280 acres, formerly covered with dense undergrowth and large trees, has been cleared and the area graded where the refinery process units are to be located. A number of the major foundations for the refinery units, which will have a crude capacity of 25,000 barrels per day, have been poured. This work has been accomplished in record time by employing modern earth-moving machinery and over 1,000 labourers. It is expected that the surface drainage ditches, roads and all underground work will be completed prior to the monsoon, thus permitting erection of vessels, towers, buildings, etc., to proceed during the rains.

A great deal of equipment consisting of pipe, reinforcing steel, erection machinery, etc., has already been delivered to the site. A warehouse is nearing completion for the storage of materials. A concrete bath plant dominates the skyline. It is equipped with conveyors, hoists and power-driven mixers capable of delivering 720 cu. yds. of concrete every 24 hours. This equipment will ensure uniform quality of the concrete required for the massive foundations.

Work is already under way in the harbour for determining rock formations on the harbour bottom for the installation of the salt water pumphouse and 30" intake lines to the refinery area. This refinery, consisting of the most modern processing equipment known to the industry, will require over 24 million gallons of sea water for cooling each day. This volume is roughly equivalent to the fresh water requirements of a city of over half a million people.

It will be recalled that Standard-Vacuum was the first oil company to conclude an agreement with the Government of India for the erection of a modern refinery in India.

Notice

THE BELSUND SUGAR COMPANY LIMITED

THE ANNUAL ORDINARY GENERAL MEETing of Shareholders will be held at the Registered Office of the Company,. 14, Netaji Subhas Road, Calcutta, 1, on Thursday the 30th April, 1953, at 11-30 a.m., for the purpose of receiving the Directors' and Auditors' Report for the year ended 30th September, 1952, passing the Accounts, declaring Dividends, confirming declaration of dividends for the year ended 20th September, 1951, electing Directors and Auditors in place of those retiring, and transacting any other business that may be brought forward.

NOTICE is hereby given that the Share Transfer Books of the Company will be closed from 23rd April to 30th April, 1953, both days inclusive.

The Dividend Warrants will be sent to Registered Shareholders.

By Order of the Board,
BANGUR BROTHERS LTD.,
(Sd.) N. D. BANGUR.
Managing Agents.

14, NETAJI SUBHAS ROAD,
CALCUTTA, *7th April*, 1953.

NEWS IN BRIEF

ORDERS for the supply of 200,000 tons of ammonium sulphate, to be despatched to various destinations according to the Government of India's phased programme, have been placed with the Sindri Fertiliser Factory.

The Union Finance Ministry is proposing to introduce a Bill in the House of the People for the levy of terminal taxes on goods or passengers carried by road, sea or air. These taxes will be collected by the Centre but assigned to the States.

The Hyderabad Sugarcane Cess Bill, which provides for the levy of Rs. 6 per ton on sugarcane brought to the factories for producing sugar, has been passed by the State Legislative Assembly. The proceeds of the levy—to be paid by the factories—will be spent on improving agriculture.

About 400 tons of steel sheets imported from Japan were unloaded in Bombay last week. This is part of the 50,000 tons of steel allotted to India under the U.S. Technical Co-operation Administration's aid programme. India has so far imported 2,500 tons of steel under the programme.

The Government of India has decided to consider on merit the applications for import licences for special types of biscuit and bread-making machinery intended to be used for more balanced production and improving the quality of the indigenous production. Imports of these were hitherto banned.

The Government of India has decided to reallocate the unshipped balance of the quota of 10,000 flasks of mercury, announced in October, 1952, for export only to shippers who have utilised their licences. Such shippers will be granted further export allocations equivalent to the quantities actually shipped by them. The licences will be valid for shipment upto 31st August, 1953.

A Rs. 3.25-crore contract for the construction of the main harbour works at Kandla Port has been signed between the Government of India and three engineering firms—two Indian and one German. Four German engineers are already at work on the new harbour and a few more technicians are expected shortly. The first consignment of engineering accessories of the German firm has already arrived.

Negotiations for an Indo-Egyptian trade and payments agreement will be held in Cairo shortly between the representatives of the Governments of the two countries. The Government of India will be represented by Mr. H. V. R. Iyengar, Secretary, Ministry of Commerce and Industry, and assisted by two officials, one from the Central Finance Ministry and another from the Reserve Bank of India, respectively.

The Bombay Industrial Court announced its award on the claims of workers in the City's cotton textile mills on the 10th inst. Under the award, whenever the cost of living index number exceeds 325, the amount of dearness allowance should be increased by 10 per cent. The Court, however, has declined to grant any rise in the minimum wages based on an earlier decision. It has also rejected the demand for amalgamating the dearness allowance with basic wages.

The Madhya Pradesh Government proposes to replace by a new land revenue code about 90 enactments regulating the existing tenancy system, and an official Bill to this effect has been introduced in the State Legislative Assembly. Under the proposed measure, there will be only three types of cultivators. The village community properties are to be vested in a *gram panchayat* which will also collect land revenue. A portion of this revenue will go towards a village development fund. The changes do not cover land holdings and other agricultural reforms, for which separate legislation is expected to be enacted.

The cost of the newsprint project in Madhya Pradesh—the N.E.P.A. mills—has gone up to Rs. 6 crores, against the original estimate of Rs. 3 crores. This was disclosed by the Madhya Pradesh Industries Minister in the State Legislative Assembly recently. According to the Minister, the cost had been underestimated by the former managing agents and was subsequently revised by the Shroff Committee to Rs. 4.72 crores. Owing to increase in the dollar expenditure on imported machinery, labour charges and engagement of foreign technical personnel, the cost now works out to Rs. 6 crores. The Government of India has agreed to give Rs. 34 lakhs as loan to the Madhya Pradesh Government to finance the project. The Centre has so far given as loans Rs. 98 lakhs.

* * * *

From Abroad

The East African High Commission has announced that no import licences for Japanese textiles will be issued this year. For goods other than textiles, however, there will be some relaxations in existing restrictions.

The Mutual Security Agency has allocated $3.3 million to Turkey for the purchase of tractors and their spare parts and other agricultural machinery. This brings the total allocation so far made to that country during 1953 to $50 million.

Pakistan will receive $287,500 from the U.S. during 1953 under an agreement signed with the U.S. Technical Co-operation Administration last week. This contribution, which is a part of $12.25 million sanctioned by the T.C.A., will be spent on health projects.

Following the enhanced duties on aviation spirit, the aviation company in Pakistan has raised, by 10 per cent., the fares on all internal routes with effect from the 4th inst. The fares on inter-dominion routes, however, are not affected for the time being.

President Eisenhower has asked the U.S. Congress to extend, by one more year, the period of the Reciprocal Trade Agreements Act, under which the U.S., in common with other countries, agrees to reduce tariffs. The Act is due to expire on 12th June next.

The British Government has abolished, with effect from the 9th inst., price control over secondary copper and copper scrap. These metals, it is said, are now in good supply and are selling below the controlled maximum prices. This step brings to an end the last of the statutory price control over secondary non-ferrous metals.

The Government of Pakistan has granted protection to the indigenous sodium silicate industry. This is a sequel to the recommendations of the Tariff Commission. Accordingly, the revenue duty of 30 per cent. *ad valorem* has been enhanced to 60 per cent. *ad valorem*, such being converted into a protective duty.

The U.S. Government has announced that it will not make any further purchases of copper for the national stockpile for the present. The existing contract for stockpile purchases, however, are not affected by this decision. The decision has been taken with a view to preventing "added strain" on the market where copper "is not in too plentiful supply."

Britain's sterling payments agreement with Poland has been extended by three months with effect from 10th March, 1953. The agreement signed in March, 1948, covers trade and financial payments between the residents of Poland and those of the sterling area. It allows Poland to have a transferable "National Bank of Poland No. 1 Account" at the Bank of England.

The Australian Government has granted Pakistan £A2 million (about Rs. 1.5 crores) for the purchase of 45,000 tons of Australian wheat under the Colombo Aid Plan. The money realised from the sale of the wheat will be utilised for the economic development of Pakistan. This is in addition to the contribution of £A3.7 million already made by the Government of Australia.

The world maize production in 1952-53 is estimated at 5,600 million bushels, which is higher by 30 million bushels, as compared with the previous estimate made in February last. North America accounts for 3,517 million bushels, Asia for 700 million bushels, and Africa for 270 million bushels. The corresponding figures for the year 1951 were 3,108 million bushels, 670 million bushels and 260 million bushels, respectively.

The Hong Kong Government has removed restrictions on certain items of imports from Japan. Accordingly, rayon yarn and piecegoods, household utensils, enamelware, toys, cigarettes, lighters, cigarette cases, fountain pens, pencils, bicycles and bicycle parts, and chinaware are now permitted to be imported freely from Japan. Restrictions on imports of Japanese yarn and piecegoods will, however, continue to remain in force.

One Hundred Years of Banking in the East

The Chartered Bank of India, Australia & China, which celebrates this year the Centenary of its incorporation by Royal Charter, is exhibiting at the British Industries Fair, Earls Court, London, from 27th April to 8th May.

Visitors from the East are cordially invited to call at the Bank's stand, No. V8, where encashment facilities and information services will be available.

PERSONAL

SIR Joseph Kay, K.B.E., Managing Director of Messrs. W. H. Brady and Co., Ltd., left for the U.K. on the 16th inst.

Mr. W. R. Natu, India's Executive Director, International Monetary Fund, left for Washington on Tuesday last.

Mr. R. A. P. Misra, Managing Director of Indian Wild-Barfield Co., Ltd., left on a business tour of the U.K. and the Continent.

Haji Mohd. Haza and Mr. R. F. Barbey have been elected Chairman and Vice-Chairman, respectively, of the Tanners Federation of India for 1953.

Mr. G. N. Desai, until recently Mayor of Bombay, has been elected Chairman of the B.E.S.T. Undertaking, vice Mr. Gordhandas G. Morarji.

Mr. J. G. Pradhan, Section Sales Manager of Caltex (India) Ltd., has been sent to the U.S.A. for advanced training under Caltex (India) Limited's "Technical Training Programme."

Mr. T. Benson Gyles, a chemical and metallurgical engineer of considerable experience in Europe and Australia, has joined the Sindri Fertiliser Factory as its General Superintendent. Mr. Gyles' services have been made available to the Government of India by arrangement with the U.N. Technical Assistance Administration.

Mr. D. R. F. Brower, Regional Information Officer, British Information Services, Bombay, will relinquish his post early next month and proceed to Pakistan as Regional Information Officer, Karachi. Mr. Brower will be succeeded by Mr. R. P. Ross-Williamson, until recently Press Attache to the U.K. Ambassador at Dublin.

Mr. P. H. Sykes of Messrs. Bengal Paper Mills Co., Ltd., and Mr. C. J. E. Keene of Messrs. Titaghur Paper Mills Co., have been elected Chairman and Vice-Chairman, respectively, of the Indian Paper Makers Association for the year 1953-54. Messrs. V. Mehta, C. G. Hutchison and J. C. Longfield are the other elected members of the Committee.

Mr. S. N. Haji, Joint General Manager, Scindia Steam Navigation Co., Ltd., left for Liverpool to attend the annual meeting of the Association of Navigation Schools in the U.K. on behalf of the training ship *Dufferin*. Mr. Haji will also attend the annual meeting of the International Shipping Federation scheduled to be held in Brussels on 7th and 8th May next and the biennial conference of the International Chamber of Commerce commencing on 18th May.

Mr. B. L. Agarwalla has been re-elected President of the Indian Colliery Owners Association for the current year. Mr. Rashiklal Worah and Mr. D. K. Samanta have been elected Vice-President and Honorary Secretary, respectively. The other elected members of the Committee are: Messrs. Ratilal M. Dave, Umedrai Worah, Jiwandas Arya, D. R. Rathor, K. S. Sahai, M. G. Chaora, Madanlal Basawatia, Madanlal Agarwalla, B. L. Gutgutia, Hukum Chand Bhutani, B. D. Sharma and Shyamlal Sunda.

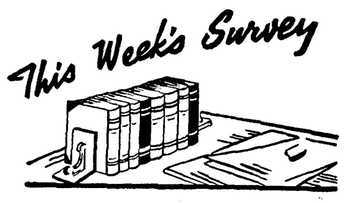
"COMMERCE" 1928

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, *21st April*

Financial Combines and Scientific Research

A huge combine of financiers is the latest thing in company promotion. The venture—the stupendous nature of which almost takes one's breath away—will be known as the Finance Company of Great Britain and America. It is difficult at the moment to visualise the place to which the corporation aspires in the industrial life of the world; but it should find ample scope for its activities, being supported, as it is, by advisers who possess expert knowledge and vast experience in financial, industrial and commercial matters. In seeking a justification for the favourable reception that has been accorded to the enterprise by the London and Provincial Press, it is, perhaps, essential to notice the vastly important effect which the development of large-scale business has had, and is having, upon scientific discovery and invention. If we contrast the lot of the inventor one hundred years ago with that of to-day, we observe at once how great the progress has been in the interval. The inventor was scoffed at in the old days, whereas, now, he is sure of ample financial recompense for his pains. Speaking recently at Manchester, at the annual dinner of the Society of Dyers and Colourists, Sir Josiah Stamp said that, while it might be true that a great combine, with its research establishments, would keep to itself for a time the secret processes and discoveries made by its scientists, and in this sense, there might be a retardation in the speed with which new discovery became common property, there was such enormous gain at the outset that the community were, on the whole, the gainers. In the first place, the research was carefully recorded, whether a failure or not, and each year and each worker had its predecessors to build upon. When results were achieved, they received immediate valid scientific sanction and the whole force of interest was to get them into full working order as quickly as possible. There was ample finance at the outset and ample staying power during the early periods.



INDUSTRIES ACT TO BE AMENDED

AN official Bill seeking to amend the Industries (Development and Regulation) Act was introduced in the House of the People on the 10th inst. by Mr. T. T. Krishnamachari, Commerce and Industry Minister. Although the primary object of the Bill is said to be the removal of some of the difficulties experienced in the working of the Act, it envisages an increase in the Government's power to control industries. Thus, by an amendment, six more industries—silk, artificial silk, dyestuff, soap, plywood and ferro-manganese—are sought to be added to the 37 industries enlisted in the First Schedule of the Act. Again, by deleting section 4 of the Act, all undertakings, even with a capital below Rs. 1 lakh in industries mentioned in the Schedule, are sought to be brought under the purview of the Act. Further, the Government of India proposes to increase its power to take over the management and control of industrial units. Power is also proposed to be taken to control the distribution and prices not only of goods produced by the scheduled industries but also of similar goods of imported origin. The Government has sought to assume power to revoke the registration of any industrial undertaking.

It is thus evident that, by tightening the provisions of the Act and assuming additional powers, the Government of India seeks to exercise greater control over the industries Originally, it may be recalled, the provisions, such as taking over control, etc., had been limited to industries which were of national interest, as, for example, iron and steel and aircraft. The list was subsequently enlarged so as to include 37 industries, including small hand tools. This has since been proposed, as already stated, to be enlarged further still to cover six more industries. In so doing, the Government may be said to have apparently not given proper consideration to the question of availability of trained technical personnel required to administer the controls for which power is being sought by it.

Be that as it may, the new clause in the Bill vesting in the Central Government power to assume management and control of recalcitrant industrial undertakings is intended to remove a lacuna in the present law. In the absence of legal provisions, the Government is facing two difficulties. These are: (1) inability of the Government to take over managements, even in a situation calling for emergent action, without first issuing directions to it and waiting to see whether or not they are obeyed, and (2) want of details in the existing law with regard to the consequences of the Government taking over the management. The difficulties are understandable and the Government may, no doubt, be justified in taking over the management of any concern in certain emergencies under the proposed new clause. But the point is whether the Government would guarantee any losses as a result of its mismanagement. It is not difficult to foresee such cases. No provision has been made in the Bill to meet such a contingency. Besides, there is also a need to prescribe a time limit for the continuation of control by Government, say, three or four years, at the end of which the management should be returned to the original owners or their rightful successors, provided there is no blemish against them. If, however, the Government feels that the management should continue to remain in its hands, for some valid reason, provision may be made in the law for extending the period for another term.

Another feature in the Bill is the extension of the period of six months allowed under the Act for the registration of undertakings. As the Act now stands, only those units which came within its scope on the day it came into force—8th May, 1952—are required to register. This excludes industrial units which have since been established. This is a lacuna which has come to light in the course of the administration of the Act. And it is with a view to removing this lacuna that the Government of India has now sought power to fix the period of registration by notification in the *Gazette* with respect to industrial undertakings generally or to any class of them. Also, the provisions relating to licensing are to be extended to make them applicable to (1) industrial undertakings which, though required to be registered, are not registered within the time limited for the purpose, (2) industrial undertakings, which though not registrable at the commencement of the Act, becoming registrable subsequently by reason of the definition in the Act becoming applicable, (3) industrial undertakings proposing to change their location, and (4) industrial undertakings proposing to take up the manufacture of goods of new brands (and types) within the same scheduled industry or of goods pertaining to any other scheduled industry, without any additional plant and machinery or factory buildings.

PAPER INDUSTRY

Mr. C. I. Turcan, Chairman of the Indian Paper Makers Association, put forward, in the course of his address at the annual meeting of the Association held at Calcutta recently, a vigorous plea for the adoption of a co-ordinated forest policy embodying long-term leases of bamboo forests for paper mills at reasonable royalty. There are good reasons in support of this plea. A serious handicap retarding the development of the Indian paper industry is the lack of adequate supplies of bamboo and grass—staple raw materials—at reasonable prices for reasons mentioned in a previous issue of *Commerce* (*vide* page 612 dated 4th April, 1953). An additional difficulty not mentioned there is the demand for an increase in royalties by the State Governments, in their anxiety to net in the maximum revenue possible from bamboo forests. Despite repeated representations, it is unfortunate that the Government of India has not yet taken any step to solve this difficulty of the industry. It will be recalled that, as early as in 1950, it had given an assurance to the industry that it would consider the question of evolving a co-ordinated forest policy, but this assurance is yet to be implemented.

The need for a co-ordinated forest policy has been recognised even by the Planning Commission. Thus, in its final report, the Commission states: "The State Governments, under the guidance of the Central Board of Forestry, should evolve a uniform policy for the leasing of bamboo and other timber forests and grasslands with the object of aiding the development of the paper industry." In view of the new paper projects now being implemented and the expansion of the existing ones, as envisaged in the Five-year Plan, the demand for bamboo supplies (and grass) is bound to increase considerably. In fact, as Mr. Turcan rightly observed, ample supplies of bamboo (and grass) at reasonable prices constitute the life-flood of the Indian paper industry. It is to be hoped that the Development Council for the Paper Industry will give due consideration to this problem, as also to the question of lowering the railway freight for bamboos from the forests to the mills which is at present said to be very high.

Another problem confronting the Indian paper industry arises from increased competition from imported paper and newsprint. Alluding to this subject, Mr. Turcan wanted the industry to be protected from "unfair competition." This, he said, could be done only if the Government were to adopt a selective import policy, under which only those qualities of paper that were not manufactured in India and that were still in short supply would be imported. He justified this demand by claiming that the indigenous industry was in a position to meet the country's requirements of standard printing and writing papers and that the complaints of consumers related almost entirely to special qualities of paper not manufactured in India.

Referring to the price which the Government was paying for the paper purchased by it, Mr. Turcan maintained that such was not sufficient to provide for adequate depreciation and return of capital. In support of this contention of his, he referred to the heavy backlog of maintenance and renovation of plants, on the one hand, and the enormous rise in the prices of plant and machinery on the other. Few would dispute this point. The paper industry, just as so many other industries, is hard-pressed for finance for implementing their replacement programmes, what with increasing labour costs, high level of freight on coal and bamboo, and huge coal consumption, owing to the low grades which the industry has to accept, not to speak of taxes levied by State Governments. Now that only three more years remain for the completion of the development programme for the paper industry, the need for providing the industry with adequate rehabilitation finance assumes special importance. There is, therefore, no exaggeration in the statement of Mr. Turcan that, unless adequate provision for depreciation and renovation is included in the price of the finished product, it will be impossible for the industry to maintain itself in an efficient condition.

FAVOURITISM IN TEXTILES

The Government of India would appear to have relaxed restrictions on production of *dhotis* in certain mills. In fact, it is reported that one mill in Orissa has been given almost complete freedom to manufacture any quantity of *dhotis*. No reasons are stated to have been offered for this strange move. If, however, the Government feels that the relaxation has been necessitated by the fact that the mill or the mills on which restrictions have been relaxed, or completely abolished, have been faced with peculiar handicaps, it must be said that there are several mills in other parts of the country which are also confronted with the same handicaps. Why not then, one would ask, allow these latter mills too to enjoy the benefit of relaxation now extended to Orissa mills? In the absence of any explanation, the Government's move is tantamount to discrimination, which, in certain sections of the mill industry, has been taken to mean favouritism. In fact, the vigorous protest against this discriminatory policy of the Government, lodged by the Millowners' Association, Bombay, in a communication addressed to the Government, is only quite appropriate. According to the Association, the manner in which the relaxation has been given to certain mills is not the proper procedure to adopt. The relaxation, it points out, is calculated to lead to frustration and undermine the efforts of the industry to maintain production regardless of a number of handicaps. It argues that, "if the need for keeping the handloom industry by ordering mills to restrict their output of *dhotis* had been proved beyond all doubt, then the order should have been enforced on all mills alike."

The protest of the Millowners' Association is justified. In the absence of details regarding the Government of India's announcement, one would want to know from the Government the circumstances under which it has relaxed restriction on production of *dhotis* in certain mills and the names of the mills concerned. The Association is, therefore, quite right in urging the Government to disclose this information.

Availing itself of this opportunity, the Association has reiterated its demand for abolition of restrictions on *dhoti* production. The demand is based on the ground that the Government's announcement limiting *dhoti* output in mills was immediately followed by (1) reports from various centres drawing attention to inadequate supplies of *dhotis* and the increase which the lag between supply and demand had brought about in the prices of the smaller supplies of *dhotis* available, and (2) a substantial increase in the production of long-cloth, which could not readily be absorbed and which naturally resulted in prices being unduly depressed in this sector, leading to accumulation of stocks with the mills. "This," to quote the Association, "is extremely unfortunate; while, on the one hand, the industry as a whole has been endeavouring to maintain production at the optimum to keep prices at reasonable levels and to meet the reasonable requirements of the people, here is a case where an artificial shortage brought about by executive instructions of Government, is likely to produce the contrary effect." Few will dispute the reason underlying these observations. It is, therefore, to be hoped that the Government will reconsider the question and abolish restrictions, at least till such time as the Cotton Textile Enquiry Committee has submitted its recommendations. As the Association has aptly remarked, no such restriction should be imposed, unless the Government is in possession of complete statistical data regarding the total needs of the country in the shape of *dhotis* and the output of *dhotis* by handlooms and mills.

BANKERS SUPPORT FIVE-YEAR PLAN

It is said that bankers are generally hard-boiled and level-headed business men, who do not allow sentiment to get the better of them while judging economic issues. Accordingly, the views of bankers on the Five-year Plan have a special merit. If they all say that the Plan is a good one and quite practical, then the Plan must be regarded so. Almost every one of the bankers who referred to the Plan in their annual speeches paid encomiums to it. They included both Indian and British bankers. Two more bankers have also said the same thing this week, as will be seen from their statements published elsewhere in this issue. They are Lala Yodhraj of the Punjab National Bank Ltd. and Mr. Ramnath A. Podar of the Bank of Jaipur Ltd. Posing the query, "will it work," the latter answers it by observing that the proposed outlay of Rs. 2,069 crores on the Plan means only an investment of about 5 per cent. of the national income which cannot be considered to be unduly heavy. The money outlay is, after all, according to him, a bare rupee per head per month for five years. And this suggests that the ambitions of the Planning Commission are surely modest enough. He concedes that deficit financing could be injurious if abused, but feels the target of Rs. 290 crores is a modest one and that, therefore, there is no cause for alarm. He is confident that the Finance Minister can be trusted to keep the situation well under control.

Lala Yodhraj, however, goes deeper still into the Plan but comes more or less to the same conclusion as that of Mr. Podar. In his statement to the shareholders, he perceives many good things in the Plan. Thus, he says: "With the progress of the Five-year Plan, we will be saving a large amount of foreign exchange now utilised for the import of foodgrains. As the industries of the country develop on the basis of the increased agricultural production including jute, cotton, oilseeds, etc., banking is bound to expand and the habit of saving will grow. We should, therefore, look forward to larger profits resulting from increased prosperity of the country."

If Mr. Yodhraj sees scope for larger bank profits in the Plan, it is because his examination of the various aspects of the Plan reveals that the Plan is workable. To him, as it is to many others of his way of thinking, the Plan is democratic in character, proletarian in aim, bold in conception, and sound in the order of priority drawn by laying the first accent on agriculture. He is, however, not unaware of the limitations to work it. The limitations underline the greater dependence on the Government for implementing it, the need for a strong, competent incorruptible administration and the harnessing of public enthusiasm to work it vigorously.

Coming to the financial aspect of the Plan, Lala Yodhraj makes certain suggestions some of which are open to controversy and, therefore, deserve to be carefully examined. One such relates to the raising of sufficient funds for India's Plan through the banking system and credit mechanism of the country by means of Government guaranteed deposits. This suggestion is the result of his studies of practices followed in countries such as Germany and Russia —countries which differ politically, socially and economically from India, and, therefore, what held good there may not be suitable for this country. His emphasis on the need for taking off from land 25 per cent. of superfluous labour and transferring it to the sites of multi-purposes projects and to towns should not, however, be lost sight of by the planners. He thinks that such a transfer can march in company with an actual increase in the output of agriculture on large tracts of lands brought about by consolidation of holdings and changes in tenure laws now being effected by many State Governments.

COCONUT PRODUCTION

Inaugurating the seventeenth meeting of the Indian Central Coconut Committee last week, Dr. Punjabrao Deshmukh, Union Minister for Agriculture, stressed the need for increased production of coconuts in India. He also revealed that there were proposals to set up as early as possible seedling growing farms in coconut-growing areas, provided they did not already exist there, to celebrate Coconut Days on the lines of *Vana Mahotsava* and to open research stations in different parts of the country and to publish the results of important researches in the requisite regional languages.

The need for increasing production of coconuts is well known. According to Dr. Deshmukh, the production of these in India amounts to 113,000 tons, whereas the demand is 1,98,000 tons. Thus, there is a deficit of as much as 85,000 tons. The Planning Commission has estimated the deficit in copra, to be covered during the period of the Planning period, at about 1,00,000 tons in terms of copra. At the rate of 6,773 coconuts per ton of copra, India will require an additional

OFF THE RECORD

(By "ROVER")

MR. Walchand Hirachand is dead. He died on the 8th of this month, away from his home, at a small wayside town—Sidhpur in North Gujerat, while on a tour of pilgrimage. The end, though tragic, was more formal than real. For Indian industry, for the many business organisations which he had helped in building up during the course of a memorable generation, memorable for its courage, enterprise and achievements, and for his own many concerns, Mr. Walchand had been virtually dead for a little over three years now.

With his broad back to the wall, he fought against that relentless spectre death, holding it at bay for three years and longer, till it gained inch by inch on his rapidly weakening physique, with the same grim determination, utter disregard of consequences, unbendng tenacity of purpose and unawareness of defeat, which he had displayed in his long and often lone struggle with astute British bureaucrats in India and still more astute and deadly foes abroad, who were out to strangle the infant Indian shipping enterprise established by him, as they had done time and again during a cruel century of extermination. The manner of his death was typical of the man, his life, his personality and his character.

The greatness or the strength of his adversaries did not unnerve him: on the contrary, it put him on his mettle and went to stiffen his resolve. In fact, he chose and sought out his adversaries from amongst the reputedly mighty. His search always was for foemen worthy of his steel. He found them in plenty and he must often have experienced that supreme exhilaration, which brave men find on the battlefield and which, to a certain extent, has been responsible for keeping war as an ever live issue through the long ages.

Mr. Walchand died, as every one of us must, but even in dying he turned his death-bed into a field of battle. When he found that he could not engage in a fight with any fellow mortal, he threw his gauntlet to death itself and challenged it, chivalrously leaving the choice of weapons and the field of operation to his enemy. He was bound to succumb in this unequal struggle and he did, but without any consciousness of defeat or surrender. I had the honour of seeing him surrounded by mountains of fresh flowers in his eternal sleep. It was the same defiant Walchand in death as I had seen him often striding with long steps in active life.

Many have written about Mr. Walchand's great achievements in many a field. The Editor has honoured him with an editorial recording his great services. Others will speak and write now and later in greater details, about his life and work in an epoch of Indian history replete with great men and noble deeds. There would be no point in my engaging in this task and repeating what others have related and could relate in a better manner and with greater authority than I could command. But for a singular aspect of the life of the Indian business community, which has been troubling me for some time and which is well illustrated by Mr. Walchand's end, I should not have chosen it as a subject for my piece this week for this column.

Why is the country and the business community here so often deprived of the services of the leaders by death or disablement, just at that stage of their development and experience, when they are capable of giving of their best? Why do we lose so many outstanding men of business and industry when they are in the prime of their life? There must be something radically wrong with the manner of leading their lives, if captains of industry and prominent leaders in the world of finance and commerce, appear in India to crease and crumble up like a sheet of paper dipped in water at about sixty-five or even earlier.

Under other climes and in other countries, men are just ripe and mature, at this age and good for at least ten to fifteen years for putting in their best efforts. With the passions of youth assuaged, with the fever in their blood worked out, with the cynicism which creeps in with middle age duly corrected and balanced by the birth of a new sense of detachment, their minds, when they arrive at this age, are purged of much of the dross that weighs down human nature. Their perception is more comprehensive and their judgment more mature and dependable. In any business or industry abroad, the presence of one or two such leaders at the helm, who, leaving active work to others, serve with their minds, form more valuable assets than all the items enumerated on the right-hand side of their balance-sheets.

Mr. Walchand had just turned seventy when his end came. But long before this, he had been compelled by a stroke of illness to retire completely from all business activities. His launching the s.s. *Jalaphankhi* at the Vizag Shipyard of the Scindias and his memorable speech on this occasion, on the 6th of December, 1949, constituted this great man's swan song. I still remember the crisp and cold but sunny morning on the east coast of the country, when this ceremony was performed with great rejoicings. But there was an undercurrent of uneasiness and a barely perceptible shadow of the loss the country and this industry were to suffer at no distant date in the midst of all this cheer. Even Mr. Walchand appeared to have a premonition, not of course of the inevitable end, which was still far ahead, but of his infirmity. Apart from the whole tenor of his speech, which was coloured by this impending doom, there were distinct references to it two or three times in the course of that moving address, which brought tears to some eyes.

I ask again why it should be so with our leading personalities in the economic field. Imagine the great usefulness of a man of Mr. Walchand's ability, imagination, experience and drive to our infant Republic, when its whole future is staked on the success of its many plans for economic regeneration and rehabilitation and you will realise the importance of the issue I am raising. If a dynamic personality like that of Walchand Hirachand, with his unparalleled wealth of experience apart from his own innate strength of mind, were behind some of our key industries during the whole of the decade from 1950 to 1960, if his counsel were available during this crucial period both to the political leaders of our country at New Delhi and to the various organisations in the private sector of industry, not only would the progress be greater but many of the pitfalls could be avoided. The country could ill afford this grievous loss.

Leaving aside those imbued with a belief in blind fate, common sense would accept that the loss was not unavoidable. Because Mr. Walchand had attained an all-India and international eminence, his case draws our attention, but every year there are many instances of losses suffered by premature retirement or death to many business concerns and institutions of men less well known but of equally great usefulness to them in a narrower field. And the immediate cause in a majority of such cases is either nervous breakdown, paralysis, high blood pressure or heart disease. There is no denying the fact that the toll taken by these fell diseases during the last ten to fifteen years has been much higher than at any time in the past except during periods of raging epidemics. There must be some reason for busy business man meeting this sad fate in greater numbers than any other section of society.

To my mind this heavy drain in the economic field is due entirely to two reasons. Soon after the war, our business men began not only to live at high pressure, carrying a greater load of worry and risks on their head but worked longer hours. They saw the chance of a lifetime to make more money and to expand their undertakings. One after another, the controls made their appearance and added to the pressure under which they lived. Those with a more elastic conscience and a more enterprising mind increased their burden of business or financial worries by adding to it apprehensions of legal consequences following from evasions of controls and suppression of private gains. These anxieties gnawed at their vitals and deprived them of rest and recreation. There is nothing more wearing than an uneasy conscience and a heavy load of financial worries. When this goes on month after month, year after year, for a long stretch of time, it is not surprising that those so handicapped should fall victim to any or all of the diseases I have mentioned above. There are few cases of high blood pressure or heart disease amongst those who lead a healthy, normal life, with periods of rest and recreation for recuperation.

Even when business is normal or slack, the Indian business man is a stranger to sport, relaxation or the real art of living. An American or European director or top executive, carrying as much responsibility or more than his Indian counterpart leads a better and more ordered life. He lays aside his work every day however pressing the problems facing him, at the appointed hour and goes for his golf or tennis or swimming. He relaxes at his club, when a wealthy Indian merchant labours late in his office without a thought of his mental or physical health or consideration for his staff. It is the same with regard to weekly day of rest or his annual holidays. The result of all this is that our industrialist pays for his lack of regard for these simple rules of life by years of prostration and disease or premature death. Keeping healthy and maintaining one's ability to work at the highest possible level is a duty, which a citizen owes not only to himself, his family and his business, but to his country and there is neither patriotism nor self-interest in working in a manner, which would impair the machine and shorten its life.

There is another reason also for more frequent cases of breakdown or early end amongst business men in India. They have never learnt the art of decentralisation and parting with powers and responsibility, so that they filter down to the lowest level of their employees. They like to hold all the strings in their hands and they are pulling them all the time. This adds to their fatigue without doing any real good to the business itself. Only a few realise that creating a sense of responsibility and capacity for taking initiative in their lieutenants is a better way of doing business than trying to control the minutest details themselves.

I have seen scores of important but ill-informed and untrained business magnates wasting their time and energy in wrestling with paltry details and small bills, which, in a properly organised business, would be even below the notice of the fourth in command. Apart from the harm it does to the business itself, it ages the man and renders him unfit for useful work at fifty. And what is worse, this propensity for distrust of his subordinates and lust for petty powers on the part of our business men prevent business houses from consolidating and expanding with the passing of each generation as in the West. Here, with a very few exceptions, a business or industry begins to deteriorate and crumble as soon as the man who founded it is gone. Mr. Walchand's prolonged illness and his untimely death, causing such a loss to the community and the country, can be suitably mourned only if those left behind mend their mode of life.—*All Rights Reserved.*

SPOONFEEDING OF THE KHADI AND HANDLOOM INDUSTRIES

TRIBUTES TO INDIA'S ADMINISTRATIVE SET-UP

(From A Special Correspondent)

NEW DELHI, 14th April

DELHI LETTER

THE Khadi and other Handloom Industries Development (Additional Excise Duty on Cloth) Bill, 1953, passed by Parliament this week, represents a new departure by Government in the sphere of taxation. Until now, the practice of the Government of India has been confined to the levy of cesses on a few agricultural commodities, the proceeds of which used to be specially earmarked for the purpose of research and intensification of production and marketing of the specified commodities so taxed. This is the first time when Government has begun to tax a particular industry for the purpose of assisting the development and expansion of other competing industries.

The Bill aims at the encouragement of the adoption of improved methods of manufacturing khadi and other handloom cloth by promoting research in the technique of production and designs, assistance to the maintenance of institutes which have similar objects, improvement of the marketing of these products through co-operative effort and introduction of standardisation and quality control measures in the production of these goods. In its statement of objects and reasons, the Central Government points out that both the khadi and the handloom industry have a definite place in the country's economy. While khadi makes its contribution towards the relief of rural unemployment and provides a supplementary source of livelihood to our agricultural population, the handloom industry has a substantial part to play in supplying the demand for cloth in the country. "Both these industries, however, have been suffering from many handicaps of late, mainly in finding an adequate market for their products. They have to cater to certain special markets and to individual and local tastes. For this purpose, they need assistance in order to obtain adequate supplies of cotton and yarn at reasonable rates." In order to finance these industries for the above-mentioned objectives, the Bill has proposed to levy a cess of three pies per yard in the form of an excise duty on mill-made cloth other than cloth exported out of India.

Humanitarian Point of View

The debate on the Bill revealed considerable misgivings on the eventual stabilisation of these industries on an economic basis. Although from the humanitarian point of view and also from the consideration of the number of people employed in them, these industries deserve to be helped, it is a moot point whether they will ever be able to stand on their feet without any spoon-feeding from the Government. The Minister for Commerce and Industry evaded this aspect of the problem in his reply to the debate, but recognised the inadequacy of help granted to handlooms through this tax. The mere fact that the result achieved would be only fractional as compared with the size of the problem was not an argument against taking a step towards the result which they wanted to achieve, naively stated the Minister. Mr. Krishnamachari further told the House that in order to prevent abuses in the distribution of the proceeds, the help to these industries would be channelised through co-operative societies. This is no satisfactory reply either, because the co-operative movement itself is not free from such defects as favouritism and nepotism.

The Government of India's approach to help the khadi and handloom industries directly from the proceeds of the levy on mill cloth is defective in another respect. The economic position of the Indian mill industry is not satisfactory at the present time and, therefore, the imposition of an additional burden on this industry is indefensible. Its competitive capacity has been largely vitiated by the fact that a large section of the industry has been working not only with old but completely outmoded machinery. The renewal of the machinery is an urgent problem with the industry at the present time. According to the Working Party for the Cotton Textile Industry, 90 per cent. of the present machinery in Bombay is more than 25 years old. Machinery prior to 1910 which exists in mills is obsolete in design and completely worn out and should be replaced by modern equipment at the earliest time. According to the Millowners' Association, the cost of plant and machinery has trebled since the war and the depreciation set apart is not adequate for the purpose of renovation. The industry has, therefore, asked Government to come to its rescue. The requirements of the mills in Bombay City and Island alone for renovation purposes are estimated at Rs. 80 crores, while the reserves and other funds available are approximately Rs. 30 crores, thus leaving a balance of Rs. 50 crores. The Millowners' Associations have suggested a levy of 6 to 10 pies per yard on a graduated scale for creating a fund, out of which Government could grant loans for purposes of rehabilitation. When such is the urgency for raising the funds needed for implementing the renovation programme of the mill industry, it is not opportune on the part of the Government to levy an excise duty on mill-made cloth and utilise the proceeds to help the khadi and handloom industries. Apparently, in this case, the age-old adage that "charity begins at home" does not suit the convenience of the Government of India.

Efficiency of Administration

At the annual general meeting of the Congress Parliamentary Party this week, the Prime Minister is reported to have referred to the report of an American expert who had ranked the Indian administration among the 12 best in the world. During the past one or two years, it may be mentioned that a number of American experts who had specialised in administration have had the opportunity to make a close study of the administrative set-up in this country. All of them have paid uniformly well merited tributes to the way the Indian administration is being carried on. They are of the opinion that the number of political and administrative leaders are somewhat limited as compared with the needs of the country, but most of those that are available are of outstanding quality and devotion. Their presence and the presence of more junior personnel in various functional fields and levels of responsibility, it is suggested, provide nucleus resources of an impressive sort and reflect high potentialities in the society. These experts are of the view that more honesty and disinterested devotion are found in the administrative square inch in the Government than in any large private organisation. This is in bold contrast to the allegations of some members of Parliament this week on the conduct of Government servants when they demanded the appointment of a commission to enquire into the investments of all responsible officers and to report to Parliament from time to time. While every effort should be made by Government to check the abuses and administrative lapses of Government servants, it behoves political leaders and administrators to take special care to maintain the morale of the right type of Government servants, which is very essential for the smooth functioning of democracy.

New Steel Plant

The latest indications are that the Government of India is likely to decide in favour of the establishment of a new steel plant rather than financing the extension of the existing steel plants. Despite the fact that the latter may cost relatively less than the new plant, the Government is of the view that further extension of the old factories will become cumbersome from the administrative point of view at a later date. The capacity of the new plant will be 500,000 tons in the first instance, but it would be so laid out as to permit expansion to one million tons in the second phase of development. Although the present estimated cost is likely to be about Rs. 60 crores, the cost of actual construction may be lower, if peace comes to prevail in the world. Whether the proposed plant is to be located in Orissa or Madhya Pradesh will depend on the trend of negotiations with the Japanese industrialists who have been evincing a keen desire to secure from this country iron ore on a long-term basis. In case some understanding is reached with Japan, it is possible that construction costs will come down still further, for, in this case, Japan is expected to bear the capital cost of the railway line.

INDUSTRIAL PRODUCTION

UPWARD TREND LIKELY

(From Our Own Correspondent)

LONDON, 9th April

LONDON LETTER

THE *Economic Survey* for 1953—last week's letter dealt with the balance of payments aspects—is mostly concerned with a review of 1952 plus a tailpiece of prospects for the current year.

1952 was a year of recession, and industrial production fell by nearly 3 per cent. In the third quarter the index (1948=100) had sunk as low as 105, against 112 in the same period the previous year and an average of 114 in 1950. Prices, however, continued their rise of previous years, though more moderately, and with a 7 per cent. increase pushed up the value of the national income by £700 million to a new "high" of £17,000 million (compared with under £14,000 million in 1950). By the end of the year, personal consumption was again rising and the domestic economy seemed to have got on to a stable footing.

It is natural that this Government should eschew anything that looked like a "plan" for the future, but the *Survey* does indicate what is possible in the economy. We are told that supplies of basic materials, including coal and steel, will permit a higher level of production, while manpower and machine capacity is adequately available. Already the level of industrial production is back to that before the recession of last year (agricultural production has never ceased its steady rise) and with the disinflationary brake no longer applied hard, the prospects for a further advance are at least reasonable.

But what of demand? Defence, which takes one-eighth of national production, will increase its pull on resources to the extent of £125 million. But part of this is expenditure on personnel—there are 2 million persons in the forces and directly engaged on defence work or 9 per cent. of the working population—and the Government will try to prevent any increased strain on the metal-using and engineering industries.

The civil expenditure of the Government will not increase and spending by local authorities will be only slightly up, so that the total defence plus other Government pulls on resources will be up by, say, £150 million, which is a very small percentage of the national income.

Housing Programme

The housing programme will be pushed towards its target of 300,000 per annum, which, now that industrial building demand has been slackened by deflation, looks achievable. In 1952, as many as 240,000 houses were completed.

Total fixed investment in plant and machinery is likely to increase and indeed, the Government is alive to the "vital importance" of "the re-equipment of industry and the maintenance of full efficiency." Whether this appreciation will be reflected in practical fiscal measures in the Budget remains to be seen, although it is said that "the policies of the Government will continue to be directed to achieving these ends."

Trading stocks were run down during 1952, and if production goes on trending upwards some increase may be looked for here. Finally, personal consumption which slumped heavily last year is unlikely at the worst to be any lower.

The *Survey* concludes cautiously: "Both home and export demand for consumer goods may, even after some recovery, be lower than in some previous years; while both home and export demand for the products of most of the capital goods industries is likely to remain high."

An interesting point to which the *Survey* gives little clue is the Government's attitude—to be revealed in the Budget—to the inflationary effect of public investment on the economy. Total revenue, including non-recurring items, may in the new fiscal year exceed ordinary expenditure by £400 million, while public investment (loans to local authorities for housing, etc.) will more than absorb this. If the Chancellor decides that capital expenditure must be covered by revenue, there could be no tax remissions; but if he decides that since the economy stood in 1952-53 an overall deficit (i.e., after allowing for capital expenditure) of £400 million, that it can do with a repeat dose, there will be ample room for tax easements to give some incentives to increased production.—*All Rights Reserved.*

AMERICAN LETTER

FEAR OF OVERPRODUCTION IN THE U.S.

INDIA'S FIVE-YEAR PLAN PRAISED BY FEDERAL RESERVE BANK

(From Our Own Correspondent)

NEW YORK, 8th April

THE Russian peace offensive has dominated the business and financial scene here for the last two weeks. Stocks on the New York Stock Exchange took their worst tumble in two years. Corporate bonds followed suit and U.S. Treasury securities were unsettled for several weeks before an official announcement was made of a new 3¼ per cent. 30-year bond to be issued later. The break in stocks was the worst since the Korean War started and the so-called war-babies, among the equities, took the brunt of the selling. In effect, the break in prices dramatised the fear of a relatively small but vocal group of analysts and academicians. They have insisted, for some time, that even under conditions of hot war in Korea, the country would soon be faced with overproduction in several fields.

Such a condition would be aggravated, they maintain, by an actual truce between the East and the West on the Asiatic mainland since the pressure of public opinion, in those circumstances, would demand further curtailment of Government expenditures beyond those planned now. The same theorists were not unhappy last year over the prolonged steel strike which postponed overproduction in that basic commodity and they would be willing to give silent approval to an automobile workers' strike which is a possibility about 1st May. This would postpone a possible overproduction of cars of which about 4 million will have been made by 30th June, without a strike—presumably more than the market can absorb.

Point No. 2 is concern over the commodity price situation. Prices for farm products have been dropping steadily for about six months, even though in recent weeks they have shown some steadying tendencies. Beef prices, the Department of Agriculture says, have now more or less stabilised because of a steadily increasing demand at lower prices.

But there is still no jubilation because farm surpluses are piling up. The mild winter has spurred output of dairy products to the point where imports had to be restricted more sharply. The ban spread from dried milk to butter and peanuts and importers fear that all farm imports may be shut off completely which may have a damaging effect on the balance of payments of exporting nations.

There is talk of a possible potato glut in addition to the large known carry-overs of grain and cotton from the last harvest. The cotton situation in particular will bear watching, since farmers are refusing to listen to the Government's plea for planting smaller areas this year. Planting intentions so far are estimated at 27 million acres, but the Government's target is not more than 21 to 22, possibly 23 million acres.

The Brighter Side

On the brighter side, business and industrial activity proceeds at top levels in all categories. Automobile assemblies in the beginning of April were 44 per cent. ahead of a year ago and actual car production so far this year has been 50 per cent. over 1952. This is attributable chiefly to relaxation of controls and greater availability of materials.

Easter trade was good in all sections of the country and large gains were registered particularly in the Far West, the South and the South-west of the United States. Other parts of the country did not quite do so well because of incessant rains. However, nationally, Easter retail business was about 5 per cent. ahead of 1952, both in terms of dollars and of physical volume.

Reasons to complain are few, *indeed*, at least at the moment and continuation of present high levels of employment and business activity seems assured for at least several months to come.

India's Five-year Plan

The Federal Reserve Bank of New York has published in its April *Monthly Review*, a comprehensive study, entitled "India: Retrospect and Prospect." The Bank reviews the history of the past five years since independence—the pressure of a great population on limited resources, the serious inflationary pressures inherited from the last war and the unfortunate succession of severe droughts.

"That India has managed as well as it has, is a tribute to the wisdom and skill of its leaders; that it has not done more is a measure of the difficulties that have confronted the new nation," it is pointed out in the introduction.

The Five-year Plan, adopted by the Indian Parliament in December, has been praised. "Its approach is one not of rapid forced development, but rather of comparatively few strategic controls, co-operation with private enterprise and economic development sufficiently gradual not to require excessive sacrifices from the people."

Industrial Base in India

The Bank speaks of the broadening of the industrial base in India over and beyond the significant replacement of worn-out equipment. "The addition of two new plants will be of great importance for future economic expansion. One of these, the Sindri fertiliser plant, which was opened early in 1952, will shortly be able to produce sufficient sulphate of ammonia to increase food output by a million tons a year, representing an annual foreign exchange saving of more than $80 million."

The second project referred to is the Bokaro steam power plant, reputedly the largest in Asia. Discussing the Damodar Valley development as a whole, the area, the Bank points out, "contains about 85 per cent. of the world's known reserves of high-grade mica, most of India's coal and iron deposits, large quantities of manganese, aluminium and other important minerals. The exploitation of some of these could eventually result in sizable exports to the dollar area."

The *Monthly Review* concludes that "the Five-year Plan reflects the fact that India is a federal union of many States. A large part of the Plan is based upon projects started by the State Governments in previous years and expenditures by the State Governments will account for 40 per cent. of the outlay. There appears little likelihood of overly centralised direction, and changes as may be necessary in the interest of national development will no doubt be made as experience is gained and ideas are tested in practice."—*All Rights Reserved.*

(Concluded from next column)

where further exploration and prospecting can be carried out. The Department of Geological Survey is also being asked to study the report to see if it can be of any use to the Government.

The Industries Minister referred next to the measures taken by the Government for the development of mineral resources. In view of the shortage of technical personnel, the Government has introduced a scheme for training of six mining surveyors each year. Two batches have already been trained and the surveyors employed by mine-owners and Government Departments dealing with mining of coal. A chair of Geology has been set up at the Punjab University. A scheme for the training of mining engineers in the Punjab College of Engineering and Technology, which was drawn up some time ago, has now been approved by the Government. Several students have already been sent abroad for training in geology and oil technology. Means of communication in the mining areas of Sharigh have been improved by construction of a metalled road.

As a result of the steps taken by Government, there have been activities in the mining areas *leading to the discovery* of a number of new minerals and increased production of various minerals being mined at present. The number of mining concessions has also increased. The pace of progress can be judged from the fact that production of almost all minerals has steadily increasing from year to year. For instance, the production of coal had increased from 3¼ lakh tons in 1949 to over 600,000 tons in 1952.

PAKISTAN NOTES

INDO-PAK ECONOMIC CONFERENCE

CANAL WATERS ISSUE TO BE DISCUSSED

A MEETING of the senior officials of the Governments of India and Pakistan is to be held in New Delhi shortly. The subjects that will be discussed at this meeting are not known. From the information so far made available, it is, however, gathered that the meeting is being convened to chalk out an agenda for an official conference—presumably the conference of the Prime Ministers of the two countries—to consider the several outstanding Indo-Pakistan economic problems. One of these problems, it may be expected, will be the one relating to the canal waters dispute.

It was nearly a year ago that the World Bank took the initiative in bringing about an amicable settlement of the canal waters dispute between the two countries. Although, since then, the engineers of the two countries have been engaged in drawing up a comprehensive plan for the development of the water resources in the Indus basin, no appreciable progress has been made and the dispute still remains unsettled. In fact, it may be said to have worsened, with the Pakistan Government openly denouncing India's attitude towards the question. With the talks heard recently of a fresh approach for a better understanding between the two countries, it was expected that a settlement of the dispute was at a near end. It now looks unlikely that these expectations will materialise, in view of the unfounded allegations of the Prime Minister of Pakistan. In the course of a Press Conference in Karachi the other day, he stated that the food crisis of Pakistan was attributable, albeit partly, to the supply of water in the canals being "liable to interference by India."

That the above charge is clearly exaggerated will be evident from the fact that, of the 16 canal systems in undivided Punjab, 12 fell entirely within Pakistan, and India has no control over them. Three lie wholly in India and it is only one that is common to both the countries. Further, of the total flow of the six rivers of the Indus system, Pakistan utilises 40 per cent. of the waters and India 5 per cent., while as much as 55 per cent. runs as waste to the sea. There are only two canals in Pakistan which get supplies from headworks in India. Water to these canals is being given in accordance with a programme communicated to Pakistan before the commencement of each sowing season. Pakistan has not objected either to the programme or to the supplies actually received. In view of this, it is stated that Pakistan's allegations are absolutely baseless; the Government of Pakistan has not lodged any protest whatsoever to the Indian Government to the effect that water has been stopped.

Mineral Resources

An interesting account of the steps taken by the Government of Pakistan for developing the mineral resources in that country was given by Pakistan's Industries Minister, Sirdar Abdur Rab Nishtar, in Parliament the other day. According to the Minister, the reports of Messrs. Lurgi of Frankfurt (Germany) and Powell Duffryn Technical Services Ltd., London, on the working of the lignite deposits in East Pakistan have been received by the Government. Both the firms have stated that, although peat exists over a wide area in East Pakistan, the deposits seen by their investigators are not sufficiently big to justify large-scale development for generating electric power or for producing briquettes to provide a convenient solid fuel. It is suggested that comprehensive exploration by drilling should be undertaken to prove accurately the extent of occurrence of the reserves. Such an exploration, it is said, may well prove one or two deposits of economic importance. The Government of Pakistan is considering the steps to be taken for carrying out the investigation recommended by the two firms.

With regard to the oil-bearing areas, the Standard-Vacuum Oil Co., Ltd., recently submitted its report. The report contains maps, photographs and other data collected during the aeromagnetic survey of East Pakistan, with a view to selecting the promising oil-bearing areas. The technical experts of the Company are studying the data in order to select areas

(Continued in previous column)

PROGRESS OF PUNJAB NATIONAL BANK IMPRESSIVE

MARKED EXPANSION IN DEPOSITS

THE results of the Punjab National Bank, Ltd. (Chairman and General Manager: Lala Yodhraj, Delhi), for the year ended 31st December, 1952, make encouraging reading. In fact, they are so good as to suggest that the Bank must have fared better than any of the big Indian joint-stock banks during the year under review. Its deposits at the end of the year show a striking increase, in refreshing contrast to the general banking trend as shown by the consolidated statement of Scheduled Banks' position. The two principal revenue-yielding assets of the Bank also disclose impressive increases. This has enabled the Bank to withstand the effect of higher administrative expenses and higher interest rates on deposits. Consequently, the profit of the Bank has been well maintained at the previous year's level. The dividend has been raised from 4 per cent. to 6 per cent., thereby restoring the cut made two years before.

A study of the Bank's accounts for the past six years reveals that it has almost recovered from the effects of the Partition in 1947 and built up its business steadfastly. Its resources have gone up to such an extent that it has regained its former rank, namely, the second largest Indian joint-stock bank. The Bank's total working capital, as at the end of 1952, amounts to Rs. 73.99 crores which compares fairly well with the record of Rs. 77.81 crores touched in the immediate pre-Partition year of 1946. The secret of such success lies in its having been able to build up its deposits. Of the total working funds at the end of 1952, deposits alone account for Rs. 58.94 crores, a level which falls short of the record of Rs. 62.02 crores, touched in 1946, by only Rs. 3.08 crores. In other words, the deposits which fell from Rs. 62.02 crores in 1946 to Rs. 42.95 crores in 1949 have been very nearly regained.

The Bank, which had paid a dividend of 12 per cent. for 1946, could not pay anything for 1947 as a result of the adverse effects of the Partition, but resumed payment in the next year with a distribution of 6 per cent. This rate was maintained for 1949, but was reduced to 4 per cent in the subsequent year. After repeating this rate for 1951, it has now raised it to 6 per cent. Though the dividend has thus been restored to the 1949 level, it is still well below the 1946 level.

The following comparative table gives the trend of the Bank's earnings and appropriations thereof since 1949:

(In lakhs of rupees)

	For the year ended 31st December			
	1952	1951	1950	1949
Interest and discount earned ..	214.36	177.51	171.59	168.73
Commission and exchange ..	47.80	43.74	29.38	29.19
Other income	32.70	35.84	20.57	12.89
Interest paid	83.53	67.39	41.92	42.41
Establishment and other expenses ..	171.15	150.14	118.75	114.39
Depreciation and repairs ..	6.05	5.39	4.24	4.88
Profit	34.12	34.17	36.63	30.13
To taxation	15.00	1.00	0.08	4.40
,, reserves ..	3.46	..	1.52	..
,, depreciation on investments ..	..	10.68	16.28	..
,, bonus to staff ..	5.48	3.77	8.42	8.40
,, Other appropriations*	8.31	10.44	6.37	12.06
Dividend	5.25	3.50	3.50	5.25
	(6%)	(4%)	(4%)	(6%)
Carry forward	1.95	5.34	0.56	0.31

* Include sums utilised for scaling down Pakistan assets in view of Displaced Persons (Debts and Adjustments) Act, 1951, for writing down other assets, bad debts written off, assets lost in Pakistan and charity.

The income from interest and discount has gone up sharply by Rs. 36.85 lakhs, as compared with the relatively smaller increases noted in the previous two years. This indicates that the Bank's funds must have been well employed. The rise of Rs. 4.06 lakhs in commission and exchange is not as marked as in the previous year, thereby reflecting the decline in bills business. There has, however, been a fall of Rs. 3.14 lakhs in other income, thereby reducing the net increase in the gross income of the Bank to Rs. 36.77 lakhs. As against this increase, expenses have gone up, by Rs. 16.14 lakhs under interest paid and by Rs. 21.01 lakhs under establishment and other expenses. The rise in interest paid is due partly to larger borrowings and partly to higher rate of interest on deposits. Of the increase of Rs. 21.01 lakhs in expenses, staff alone accounts for Rs. 10 lakhs. The mounting expenses—in the case of the Punjab National the increase during the last three years has been as much as Rs. 56.76 lakhs or nearly 50 per cent.—have been a source of deep concern to banks. Commenting on this trend, Lala Yodhraj states, in his statement to the shareholders circulated along with the accounts: "The total cost of establishment is bound to keep on rising by the amount of annual promotions due. The profits of the Bank must be increased to cover fully these, including the increased costs of annual promotions. I am an optimist on this point. . . . As the industries of the country develop on the basis of increased agricultural production . . . banking is bound to expand and the habit of saving to grow. We should, therefore, look forward to larger profits resulting from an increased prosperity of the country." There has been no drain on the Bank's profit this year by way of provision for depreciation on investments, for which an aggregate sum of Rs. 26.96 lakhs had been set aside in the previous two years. But provision for taxation which had been of an insignificant size in the previous two years, has absorbed a sum of Rs. 15 lakhs this year. A sum of Rs. 7.92 lakhs has been utilised to write down the Bank's assets in Pakistan under the Displaced Persons (Debts Adjustments) Act, 1951. After allocating Rs 1.71 lakhs more for bonus to staff and with the sizable sum of Rs. 5.34 lakhs brought in from the previous year, the Directors have been able to step up the dividend, as already stated.

The following table brings out the variations in the Bank's main balance-sheet items as at the close of the last four years:

(In lakhs of rupees)

	As on 31st December			
	1952	1951	1950	1949
Capital	87.50	87.50	87.50	87.50
Reserves	80.00	87.50	1,13.84	1,09.55
Deposits	58,94.02	51,94.37	44,19.92	42,94.58
Borrowings from other banks ..	2,50.63	1,99.71	9.35	1,01.90
Bills for collection ..	5,05.19	6,12.36	3,29.50	2,58.90
Acceptances	1,92.36	1,31.86	1,15.59	47.66
Advances and bills ..	29,29.40	24,22.65	19,78.07	18,77.73
Investments	28,79.90	26,55.04	19,08.79	22,92.73
Cash and money at call ..	6,63.78	6,91.52	5,63.79	5,25.35
Balance-sheet total ..	73,58.68	67,51.82	54,71.92	52,06.51
Ratio to deposits of—	%	%	%	%
Advances	49.7	46.6	44.7	44.2
Investments*	44.6	47.3	45.0	51.5
Cash	11.3	13.3	18.2	12.4

* Ratio arrived at after taking into consideration the securities earmarked against loans from other banks.

A striking feature disclosed by the foregoing table is the expansion in deposits in distinct contrast to the general trend which has been downward. Studied together, the balance-sheet at the end of 1952 and the Chairman's statement give an idea of the manner in which these resources have been utilised. Another notable feature is the expansion in the Bank's foreign trade bills business as indicated by the figure of acceptances on behalf of customers which has risen from Rs. 1.32 crores to Rs. 1.92 crores. The rise in advances by Rs. 5.07 crores is also a deviation from the general trend, the advances of all Scheduled Banks showing a contraction of Rs. 74.2 crores at the end of 1952.

Investments show an increase of Rs. 2.25 crores to Rs. 28.80 crores (at or below cost), the market value of which is Rs. 26.35 crores. Of these investments, Government securities account for Rs. 27.30 crores, the market value of the same as on 31st December, 1952, being Rs. 26.97 crores. Cash balances, including money at call and short notice, are fractionally lower, and because of the sharp rise in deposits, the cash coverage is lower at 11.3 per cent., as against 13.3 per cent. a year before. The combined ratio of cash and investment in Government securities (unencumbered) is as high as 55.9 per cent.

1953
BIF
BRITISH INDUSTRIES FAIR
Banking Facilities
Lloyds Bank is providing comprehensive facilities at each section of the British Industries Fair, which is being held in London and Birmingham from 27th April to 8th May 1953. Customers of the Bank who wish to bring their products to the notice of overseas buyers will find a number of invaluable services at their disposal :—
Introduction to foreign importers and agents
Local reports on overseas market conditions
Confidential reports on the credit standing of overseas buyers
Interviews arranged with trade consultants from certain overseas countries
Advice on all problems connected with the export trade
These temporary offices and the numerous other Branches in London and Birmingham and throughout England and Wales will be pleased to do all they can to help visitors who call on them.
LLOYDS BANK LIMITED
INCORPORATED 1677 IN ENGLAND
LB/GI/39—1953

ALLAHABAD BANK'S RESULTS GOOD

DIVIDEND RECORD WELL MAINTAINED

THE audited accounts of the Allahabad Bank Ltd. (General Manager: Mr. J. F. Wood, Calcutta) for the year ended 31st December, 1952, reveal that the steady progress which the Bank had been making in recent years was fully maintained during the year under review also. Thus, the profit for the year 1952, at Rs. 18.39 lakhs, is lower by only about Rs. 50,000 from that for 1951 and about Rs. 12,000 less than that for 1950. The distribution to shareholders is kept unchanged at the sumptuous rate of 18 per cent. (made up of a dividend of 12 per cent. and a bonus of 6 per cent.), a rate which the Bank has been consistently paying from the year ended 31st March, 1925, the earliest year for which statistics are available with us. It may incidentally be noted that the Bank changed its accounting year-end from 31st March to 31st December in 1949, in order to conform to the provisions of the Banking Companies Act. The other features of the accounts for 1952 are: (1) the reserves are nearly 2.5 times the paid-up capital; (2) the deposits have not suffered any marked decline, the drop being only about 4 per cent., and (3) the liquidity ratio is at the impressive level of 54 per cent.

The following comparative table gives the salient features of the profit and loss account of the Bank for the last three years, as well as of its balance-sheet at the end of each of these years:

(In lakhs of rupees)

	For the year ended 31st December		
	1952	1951	1950

Cash	12.4	15.4	12.4

* Subject to payment of bonus to staff.

It will be noted that the income from interest, discount, commission and exchange has declined by Rs. 3.47 lakhs. This fall is small indeed, but the deviation from the general trend is significant. Interest paid is also lower by Rs. 3.12 lakhs, which is also contrary to the general trend, but this decline has nearly offset the reduction in interest, discount, etc., earned. Establishment expenses have not gone up to any appreciable extent. The reduction in the amount provided for investments from Rs. 10 lakhs to Rs. 5 lakhs is explained by the fact that the depreciation in Gilt-edged over the year was relatively smaller than that in 1951. The prospects of further depreciation are also remote. Moreover, the book value of the Bank's investments continues to be below the market value; there is, therefore, no need for any provision for depreciation at all. If, however, the management of the Bank has thought fit to make some provisions, it has done so as a precautionary measure.

As already noted, the Bank's reserves stand at the impressive level of Rs. 108.34 lakhs, as against a paid-up capital of Rs. 45.50 lakhs. Despite the decline of Rs. 1.19 crores over the year, the deposits continue to be at a high level. A break-up of the deposits discloses that fixed deposits have gone down by Rs. 1.54 crores to Rs. 12.50 crores, and current and contingency accounts by Rs. 50 lakhs to Rs. 10.36 crores, while savings deposits are higher by Rs. 34 lakhs at Rs. 4 crores. Of the decline of Rs. 2.36 crores in total advances, loans, cash credits and overdrafts account for Rs. 1.81 crores and bills purchased and discounted Rs. 55.54 lakhs. Investments are higher by Rs. 2.21 crores, the bulk of which, namely, Rs. 2.19 crores, is in Government of India and Indian State Government securities. Almost the entire investments are in Gilt-edged securities—Rs. 10.57 crores in Indian securities and Rs. 59.57 lakhs in Pakistan securities. Cash balances are lower by Rs. 1 crore, but that has not in the least affected the liquidity ratio. With the decline in deposits and the rise in investments, the liquidity ratio has actually gone up from 47.3 per cent. to 54 per cent.

UNITED STATES ON EDGE OF RECESSION?

ITS EFFECT ON STERLING AREA

NOW that peace in Korea seems to be in sight once more, it is but natural that the thoughts of the world should turn again to the danger of a recession arising in the U.S. and then spreading to other parts of the world. Bound up with this vital problem is the question of the policy of the new Republican Administration in the U.S. towards international economic problems. The policy will become clearer by next June or July; but so far, the reaction of the Administration to these problems has been what was expected by most people. In his State of the Union Message to Congress, President Eisenhower emphasised the great importance of an approach on the lines of "trade, not aid" and supported an extension of the Reciprocal Trade Agreement Act, simplification of American customs regulations, continuance of offshore purchases, increased American investment abroad and larger American purchases of foreign raw materials. He, however, qualified this support by demanding that no encouragement should be given to those foreign industries which were competing seriously with the normal peacetime industries of the U.S. The writer of an article in the latest (March 1953) issue of the *Banker* states that the belief of most people is that even in the field of "trade, not aid," the Republican Administration would turn back more quickly to the American traditional protectionism than its predecessor would have done on the first signs of a recession in the U.S.

Liquidity Cushion

Such signs will frighten Europe and the sterling area into abandoning its attempts to develop freer world trade, unless the Republican Administration provides a "liquidity cushion," in the form of raising the price of gold substantially and using the enormous cash profit that the American Treasury would obtain from the revaluation of its stock of gold, as a stabilisation fund made available to European countries to enable them to do away with currency restrictions. Well-informed American journals, however, have expressed the opinion that the idea of providing such a cushion is not likely to find favour with the Republican Administration and that the most that may be expected of it is its support to some marginal modifications in the rules and functions of the International Monetary Fund, if a recession overtakes the world.

At present, the Republican Administration is laying great stress on unity among European countries and freer exchange of goods and services among themselves on the ground that, in Europe, there are areas of labour surplus as well as of shortage and agricultural areas needing machines and industrial areas needing food. Its spokesmen have made it clear that the extent of American aid to Europe in the immediate future will depend upon the extent to which Europe makes serious endeavours to realise this objective.

French Government's View

The French Government is in agreement with this view of the American Administration. The former has made it clear to the British Government that it is opposed to any system of currency convertibility, which involves the continuance or extension of the existing import restrictions and that the British and Commonwealth Governments should relax their restrictions on imports from the countries of Continental Europe, before they proceed with their plan for convertibility of sterling. There is undoubtedly some substance in this plea, because the Commonwealth will hardly promote freer trade, even by allowing foreigners to spend sterling as they choose, if at the same time it increases import restrictions which prevent them from earning sterling. In response to the plea, the British Government has now relaxed restrictions on imports from Western Europe. But the danger is that the group of deficit European countries may work up such feverish activity in their internal markets and their mutual trade as to derange their balance of payments with the outside world and may then be compelled to impose rigid restrictions against imports from the outside world. To avoid this danger, the present breathing space provided by brisk economic activity should be used to adjust the economies of the sterling area and Western Europe in such a manner as would enable them to earn together a surplus large enough to permit an appreciable relaxation of restrictions against imports from North America. This would prevent their suffering too large a deficit with North America, if a trade recession overtakes the world. Unless they work out such a policy now, the appearance of even a moderate recession will spell disaster to all.

Three Aspects

This analysis raises the fundamental question: is a recession in the U.S. likely in the immediate or near future? This question has three aspects. First, is an inventory recession likely? The analysis below indicates an answer in the affirmative. Secondly, is such a recession likely to develop into a real slump before the end of the current year? The answer to this question appears to be in the negative. Finally, is a real slump likely to occur within the next three or four years? This question is the most important and it is not possible to give a reassuring answer to it.

The following table brings out the close connection between the rate of building of business inventories in the U.S. and the economic fortunes of the sterling area:

	Increase (+) or decrease (−) in U.S. inventories $ million at annual rate	*Changes in rate of inventory accumulation from previous half-year* (1952) prices	*Increase (+) or decrease (−) in sterling area gold and dollar reserve* $ million
1949—			
January-June ..	— 900	— 3,900	— 205
July-December ..	— 1,800	— 900	+ 38
1950—			
January-June ..	+ 1,800	+ 3,600	+ 735
July-December ..	+ 4,200	+ 2,400	+ 877
1951—			
January-June ..	+ 6,900	+ 2,700	+ 568
July-December ..	+ 3,800	− 3,100	− 1,533
1952—			
January-June ..	Nil	− 3,800	— 650
July-December ..	+ 2,000	+ 2,000	+ 161

The above table shows that in four of the last eight half-years, the rate of inventory accumulations in the U.S. increased and that, in each of these, the sterling area's gold and dollar reserve also increased. In the other four half-years, the rate declined, and in three of them, the sterling area's reserve also declined, the exception being the latter half of 1949, which witnessed extensive bear-covering after devaluation. This shows that, broadly speaking, the rate at which U.S. inventories increase or decrease depends on the rate of industrial purchases of raw materials from the sterling area.

Inventory Accumulations High

The recent rate of inventory accumulations in the U.S. has been too high. The reason for this high rate has been that the physical controls, which were imposed at the commencement of the Korean War, induced an unthinking scramble for raw materials and semi-finished goods by people who did not really need them but who were afraid that they would not get licences if and when they needed the materials later. The price and wage controls also helped the scramble. Consequently, while, according to experts, the normal rate of inventory accumulation would be between $2 and $2½ billion for every $10 billion increase in the gross national product of the U.S., since the Korean War business inventories alone in the U.S., ignoring defence inventories, have run up by $17 billion in terms of 1952 prices, although the annual rate of gross national product, on the same basis, has run up by only $42 billion.

Gross National Product

The President's Council of Economic Advisers, on the assumption of an increase of 700,000 workers (1 per cent.) annually and an increase of 2½ per cent. in individual productivity per annum, has calculated that the gross national product of the U.S. can rise by $10 or $12 billion a year between 1953 and 1955, provided there is adequate demand. The rate of accumulation of inventories that will go with this estimate is substantially below the present level. The present breathing space of the sterling area may not, therefore, continue, even if there is no regular slump in the U.S. There is real danger that the position of the sterling area in this respect may start deteriorating even before the end of the current year.

What are the possibilities of a slump in the U.S.? On the whole, it appears that demand will be sufficiently buoyant in the current year. The prospect for defence expenditure seems to be that it will steadily rise to a plateau in the last quarter of the current year of about $4 billion above the present annual rate. The intention seems to be to maintain this plateau until the middle of next year, after which defence expenditure may begin to fall. As regards civil expenditure of Government, in spite of the Republican desire to cut it, it is likely to be $5 or $10 billion higher in the current year than in the last year, especially on account of the estimated increase in the State and local government expenditure by about $3 billion in the current year. Much the same appears to be true of investment expenditure in the current year, on account of the removal of physical controls and credit restrictions. Personal consumption in the current year will depend on whether new purchases on the instalment system increase or fall off, while people are paying their heavy instalments on the purchases of previous years. It should be noted that owing to the purchases of the past seven years, 96 per cent. of all American homes wired for electricity now have radio sets, 89 per cent. have refrigerators, 76 per cent. have washing machines and 47 per cent. have television sets. Most of these appliances are probably now reaching the end of the possible range of sales to new owners and will have to depend on replacement demand. Hence, the middle years of the present decade will probably be a lean period for the sale of durable consumer appliances.

Consumer Expenditure

Further, a high proportion of the consumer expenditure in the U.S. is now capable of postponement. If American consumers begin to feel that prices are likely to fall, they can postpone 40 per cent. of their expenditure without any substantial fall in their standard of living. Such postponement can start an American slump, which can soon spread to other countries. The effect may be so devastating as to necessitate a quick counter-cyclical action on the part of the American Government, if Government action is to be in time.

American consumers will expect a fall in prices only when demand looks like falling below the level of potential supply. The above analysis indicates that they have no reason to expect this during the current year. But 1954 and 1955 may tell another story. By that time, defence expenditure may begin to fall, the Republican efforts at reducing the civil expenditure of Government may begin to succeed, the backlog of demand for commercial and recreational construction may be largely met, the country may begin to realise that accumulated stocks are at a high level even for full employment production and that starting the construction of 1,100,000 houses annually is not required for new family formations numbering about 600,000 annually, replacement demand for automobiles may move towards a cyclical low point and the demand for luxury appliances, including television sets, may be more or less fully satisfied.

This gloomy forecast may be falsified, if the cold war becomes hot, or if a new boom in civil investment based, for instance, on industrial use of atomic energy, comes into existence or if new objects of consumer demand come into favour. But, at present, there are no indications of such developments.

Adjustment in Economics Needed

The conclusion from this analysis is clear. The free world was saved from destruction during the war years and has been saved from collapse during the post-war years by the dynamism of the free enterprise system of the U.S. But one of the penalties of this dynamism is that the system is rushing onward at great speed on the edge between boom and slump, and it may topple temporarily from boom into slump in the next two or three years. If the countries of Europe and the sterling area are to live with the U.S. and not on it, they must adjust their economies so as to build up reserves of gold and dollars during the years of boom and equilibrium. This would enable them to draw on the reserves during a temporary recession and thereby avoid the imposition of severe import cuts, which might necessitate the closure of many factories through shortage of raw materials and a further fall in the general standard of living. The British Government must give the other countries of the sterling area a lead in reorienting their economies for this purpose. Otherwise, as pointed out by the writer of the article in the *Banker*, mentioned above, the present recovery of the sterling area may prove to be not a breathing space but the last gasp of a group of Welfare States.

ADDITIONAL EXCISE ON MILL CLOTH

PARLIAMENT GIVES ITS CONSENT

AFTER a six-hour debate, spread over three days, the House of the People passed the *Khadi* and Other Handloom Industries Development (Additional Excise Duty on Cloth) Bill on the 9th inst. The Government's move to impose a cess of three pies per yard on mill-made cloth sold internally had both supporters and opponents. Several members felt that the aid envisaged in the Bill for the handloom weaver was very inadequate. Some even went to the extent of urging exclusive reservation of certain types of cloth for production by handlooms. Others opposed, in principle, the penalisation of the mills by discriminatory treatment extended to handlooms. This section included that extremist element which said that *khadi* was nearly a dead thing and that there was no point in trying to bring it to life again. On the whole, however, the Government's move, as was only to be expected by reason of the Government's majority in the House, received support and the Bill, as stated at the outset, was passed by the House.

Moving the motion for the consideration of the Bill, Mr. T. T. Krishnamachari, the Union Minister for Commerce and Industry, sought to justify the cess on mill-cloth on the score that his Government was determined to render "all possible help" to weavers, so that they might be made an integral part of society and of the country's economy. "We shall," to quote Mr. Krishnamachari, "foot the bill whether by means of a cess or by other means which the Government had at their disposal, provided the whole scheme works for the betterment of the handloom weavers." Again, while replying to the debate, he said: "This measure is a solution of a purely practical problem. It is a problem of unemployment, underemployment and disguised underemployment. *Charka* would give them some cheer. The very sympathy that was extended to the worker was enough to put some cheer into the life of those millions. To a large extent, therefore, it is a matter of social work."

Cess Not Justified

These observations of Mr. Krishnamachari clearly reflect the keen anxiety on the part of the Government of India to better the lot of the handloom industry. Any one will fully appreciate this anxiety and few will dispute the need for giving assistance to the industry. But in this anxiety, the Government has unfortunately relegated to the background the strict canons of taxation. It is wrong in principle to tax one sector of the industry just for the sake of developing another sector. Moreover, the Government has also overlooked the fact that the imposition of a cess on mill-made cloth is bound to have disquieting effect on the mills, especially in the present context of the buyers' market for textiles when the incidence will have to be borne by the mills themselves. Thus, it is said to be difficult to sell fine and superfine varieties of cloth, as, in a number of cases, the whole excise duty, or the major portion of it, comes from the pockets of the manufacturer and not from those of the consumer. In the case of coarse and medium goods, the total excise duty is an imposition on a large section of the community which depends on this type of cloth. It is indeed regrettable that these considerations should have simply been brushed aside by the powers that be. The Government seems to have been prompted more by sentiments rather than purely economic considerations, as is evident from the following statement of Mr. Krishnamachari himself:

"Even though the U.K. is a highly mechanised country, this industry flourished and has its own market even in the U.S.A., another highly industrialised country. *Khadi* can be maintained and can be sustained likewise, along with the sentiments attached to it. The sentiment is that the country is free to-day and ought to be free all the time. I am afraid that, if the adherents to *khadi*, however imperfect they might be, lose faith then, they may lose the concept of freedom altogether. Let us keep the sentiment alive. It is easily possible to maintain the sentiment of the people in a subject like this. If I get possibly within a measurable time 100 million yards of *khadi* absorbed in the country, I shall be grateful. There is enough strength in the sentiment perhaps to build up a trade of 100 million yards of *khadi* within the next three or four years."

Mr. Krishnamachari's basis for the imposition of cess on these sentimental grounds is not quite justifiable. Apart from the question as to who bears the burden of the duty, the urgent need, as the Millowners' Association, Bombay, rightly stated, in a communication addressed to the Government some time ago, is more productive "to secure a fair and competitive level of prices" in the country. A high excise duty and the attempts at reserving certain categories of cloth for the production exclusively by handlooms will cut across this main objective by not only making cloth costlier for the consumer but also adversely affecting output. There is, therefore, no exaggeration whatever in the statement of Mr. G. D. Somani that the Bill seeks to enforce a permanent burden of Rs. 6 crores on the mills, irrespective of the fact whether, at any time in the future, it would be in a position to bear the additional burden or not and that it is doubtful whether the industry even to-day is in a position to bear this burden.

Further Restrictions on Mills

When the mill industry is thus subjected to considerable hardship by the present measure, it is certainly amazing that some members of Parliament should have gone so far as to suggest the imposition of further restrictions on production of cloth by mills. Mr. M. Ananthasayanam Iyengar, for instance, wanted the production of *dhotis* and *saris* to be exclusively reserved for the handloom industry. This suggestion is to be wholly deplored. For, besides adversely affecting the mills, the implementation of the suggestion will not at all provide an enduring solution to the ills of the handloom industry. The issue that needs to be faced by all those who champion the cause of the handlooms, it must be pointed out—even at the risk of repetition—is that the major sector of handloom industry is an uneconomic unit, in that the cost of their manufactures is beyond the capacity of the average consumer to pay. It is gratifying that Mr. Krishnamachari should have acknowledged the force of this contention, as witness his remark: "I am aware of the trouble from which the handlooms industry is suffering. I do feel that, by mere reservation of some items for them, we cannot achieve the desired result. Something more and something concrete has to be done to help the handloom weavers."

In this context, the two suggestions which Dr. Shyama Prasad Mookerjee put forward deserve particular mention. First, yarn has to be provided at reasonable rates to the weavers which cannot be done without subsidising it. Secondly, production by handlooms should be standardised and a marketing organisation set up; the latter should purchase the output and sell it to consumers at reasonable prices. It may be said that the Ministry of Commerce is alive to the need for implementing these suggestions of Dr. Mookerjee. In fact, the policy which the Minister said that he would propose to the State Governments would be more or less on these lines. The salient features of the proposed policy are as follows:

The State Governments should work for the formation of co-operative societies. Every weaver must be brought into these societies. The societies may also undertake supply of yarn to weavers and help in the dyeing, finishing and marketing. They may have the goods transported to markets and, if need be, open marketing centres to sell the goods, the object being the elimination of middlemen. Losses are inevitable and the Government does not want the weavers to suffer losses nor does it want sweated labour. Its idea is to draw away these individual weavers from the clutches of the middlemen who have been exploiting them. They should be paid decent wages. The Government has to make up the losses which they may suffer. The tastes of markets have to be studied. All this work will have to be undertaken by the Handloom Boards which should be set up by the State Governments. The finances required by the Boards for conducting the operation will be met from the proceeds of the cess on mill-made cloth. The Government would also ask the Reserve Bank of India to help the co-operative banks to finance the societies.

Referring to the expenditure on the handloom industry, the Commerce and Industry Minister stated that the money would be paid to the State Governments and it would be the duty of the latter to see that the money was spent properly. Broadly, the Centre might lay down certain principles on which the money was to be spent. So far as *khadi* was concerned, the Minister disclosed that his Government proposed to use roughly Rs. 1 crore this year. The necessary budget was being prepared. It would be a subsidy for the workers primarily. Proceeding, he said: "The idea of the Government is that it should operate like a social insurance scheme and it should be a means of avoiding unemployment. . . the Government do not propose to insist upon the method of spending. The House may be well assured that it would be spent properly."

A prominent member of Parliament suggested that there should be no further increase in the loomage in the textile mills in the country. Alluding to this suggestion, Mr. Krishnamachari referred to the policy of the Government to grant permission for the expansion of looms and said that the question had been his "primary headache." The textile industry everywhere, he stated, wanted expansion of looms and even the Madras Government, which looked after the interests of handloom weavers jealously, had recommended addition of a few looms here and there. The Government of India had been refusing permission for installation of looms for some time past, the idea being that it should have before it the full picture which would emerge from the Textile Enquiry Committee's report.

COTTON MILLS IN SAURASHTRA

How the cotton textile mills in Saurashtra have been passing through very difficult times, especially since the merger of the State, was described by Mr. Shantilal Mangaldas, President of the Saurashtra Millowners' Association, in the course of his address at the eleventh annual general meeting of the Association held at Rajkot last week. An idea of the critical position of the mills can be had from the references made by Mr. Shantilal to the innumerable handicaps faced by them to-day. These handicaps included the location of mills in isolated places, high freight on transport of cotton, cloth, coal and stores, inefficient labour, increased working capital, on account of maintenance of large stocks of cotton and storage of materials, and lower realisation of cloth prices, as a result of absence of rich markets, such as the mills in Ahmedabad and Bombay, have in these cities. These disadvantages, he said, had placed the mills in Saurashtra in a none too happy position *vis-a-vis* the mills in Ahmedabad and Bombay. In support of this contention, he cited certain figures which are given below:

The complement of labour up to spindle point in Saurashtra mills is about 18 per 1,000 spindles per shift, as against 12 in Ahmedabad and Bombay mills. For a composite spinning and weaving mill, the number of workers per loom per shift is 2, as against 1.6 or even less. The mills in Saurashtra are paying coal freight at the rate of Rs. 22 to Rs. 24 per ton, as against Rs. 18 paid by Ahmedabad mills. This does not take account of the greater loss percentage in transit, owing to additional transhipment at Sabarmati or Viramgam. It has been worked out that, for every 100 tons of coal loaded at the collieries only 85 tons are received at the mills. One of the mills running on public power is paying 25 pies per unit of electric energy, as against 6 pies in Bombay.

The wage bill of the textile industry of Saurashtra was fast mounting up. The average daily basic wage of a worker, excluding dearness allowance, rose from As. 15 in 1948 to Re. 1-6-6 in 1952, an increase of 50 per cent. Owing to the unnatural linking up of the dearness allowance with that payable by Ahmedabad mills, the dearness allowance shot up by Rs. 8 per month per worker, a rise of about 15 per cent., when the food subsidy was withdrawn by the Government of Bombay last year and the cost of living index went up in Ahmedabad on that account. The introduction of the State Insurance Scheme increased the wage bill, inclusive of dearness allowance, by ¾ per cent. Then came the Provident Fund Scheme for workers which means an increase of 6¼ per cent. in the basic wage and dearness allowance, ignoring the contribution to be made towards the administrative expenses. It has been worked out that the total wage of a worker, which, on an average, stood at about Rs. 60 per month in 1948, rose to about Rs. 105 per month in 1952, an increase of 75 per cent. These figures include dearness allowance, provident fund, leave with pay, etc. By way of comparison, it may be mentioned that the average monthly earnings of a worker in 1939 were about Rs. 25. There has thus been a rise of over 300 per cent. in the total earnings of a worker since 1939.

In view of all these, Mr. Shantilal said that the cost of production in Saurashtra is higher than that in Bombay and Ahmedabad, so much so that the textile mills in the State were gradually losing their competitive capacity. He, therefore, warned that the textile industry in Saurashtra could not at all work satisfactorily, unless it was drastically reorganised and its efficiency raised. He felt that it was possible to place the textile industry of Saurashtra on a stable footing, if only the mill-owners, the workers and the Government made concerted move in the direction. Inasmuch as the problem of the textile industry hinges on cost of production, Mr. Shantilal stressed the need for reducing it. Such, in his opinion, could be effected by an economy drive and systematic rationalisation of labour on the part of the management, by better efforts of the workers to raise output, and by the Government's assistance by way of re solving disputes amicably.

WORLD TEXTILE TRADE IN 1952

YARN OUTPUT IN LANCASHIRE MILLS CLIMBING UP

(From A Special Correspondent)

MANCHESTER, *7th April*

MANCHESTER LETTER

BRITAIN'S Cotton Board has now issued official figures showing that world trade in cotton piecegoods last year shrunk by almost 1,000 million yards, equivalent to nearly one-sixth of the total volume of exports in 1951. Britain was not alone in having to report a depressing period and all the chief exporting nations experienced a fall in the quantity of their shipments of cotton cloth, with the exception of Holland and Germany.

International trade in rayon and mixture fabrics also declined by about 13 per cent. last year, as compared with 1951, but its volume was about one and a half times its size, as compared with the immediate pre-war period. Shipments of cotton goods were barely 75 per cent. of the pre-war level. Some idea of the impact of the textile slump in 1952 can be obtained from the following tables showing comparative export achievements in recent years:

Cotton and Rayon Piecegoods Exports

(In million sq. yds.)

Country	1938	1949	1950	1951	1952
U. K.	1,445	1,075	1,017	1,083	912
U. S.	352	1,140	245	1,015	969
Japan	2,578	777	1,286	1,412	1,113
India	186	466	1,108	776	617
Hong Kong	52	119	181	194	170*
Germany	223	199	150	299	334*
Belgium	146	158	247	271	178*
France	483	591	634	684	423†
Italy	567	339	509	596	286
Spain		86	148	123	50
Holland	210	160	186	196	227
Portugal	25	57	110	110	87

Cotton Yarn Exports

(In million lbs.)

U. S.	10	25	18	30	18‡
Belgium	26	48	38	55	44*
Italy	43	79	62	73	47
Japan	42	21	24	26	28
India	41	33	83	26	19§

* Eleven months. † Eight months.
‡ Six months. § Nine months.

According to the latest reports circulated to the industry by the Cotton Board, Lancashire's slow recovery is being mirrored in other parts of the world, including the United States and various leading cotton-textile manufacturing countries. Output is showing a gradual improvement, but exports remain below the levels of the last few years. Pride of place among shippers of cotton goods in 1952 went to the United States, but Japan raised her exports of rayon piecegoods by 30,000,000 yards, as compared with 1951, and retained her position as leading world supplier of cotton and rayon cloth. At the end of last year, Japan possessed 7,500,000 operable cotton spinning spindles and 1,500,000 spindles for rayon yarn output, the total spindleage being as high as at any time before the war.

Wages for "More-loom" Weavers

New developments in connection with wages in the British cotton industry, other than straightforward applications for advances, have been rare since the spinning section re-organised its pay systems by means of the Evershed and Aronson lists. In the weaving branch, the fresh methods of calculating earnings allied to redeployment, advocated by the Cotton Manufacturing Commission, have only been adopted on a limited scale. Now, from the weaving unions comes a new scheme affecting a fundamental principle of wage rates. Later this week, the employers will be approached to establish a higher level of wages for weavers operating more than the traditional four looms.

Contention over this problem dates as far back as 1932, when a joint agreement set out the wage scale for the "more-looms-to-a-weaver" system. Because these operatives were provided with unskilled labour to perform such jobs as sweeping, cleaning and oiling the machines, it was then agreed that their wages should not be calculated on the same ratio as those weaving on four looms. Actual earnings were, of course, greater, but not proportionately so.

During the post-war boom, the quest for labour and ever-increasing output led employers to raise the standard of earnings of "more-loom" weavers in ratio to those operating four looms on the uniform list. As trade has slackened, the tendency has been for wages to slip back to the same basis which existed before the war. The unions now want to establish the higher ratio of pay for weavers operating six looms and more to cover all weaving firms.

Rising Output

Production of yarn by the Lancashire spinning industry is steadily climbing back towards the level of pre-recession days. A formidable gap remains to be bridged before weekly output can be favourably compared with the latter months of 1951, when the industry repeatedly set up new records for the post-war years, but a survey of production over the past eight months shows that steady progress has been made towards recovery.

Latest returns issued by the Cotton Board reveal that cotton, spun rayon and mixture yarn output in the third week of March was the highest for 13 months. The mills' production of 18,270,000 lbs. of yarn compared with 18,210,000 lbs. in the previous week and 15,710,000 lbs. in the corresponding week of 1952. It was the sixth week in succession in which output has improved.

The latest yield of 18,270,000 lbs. contrasts with a weekly average of about 22,000,000 lbs. when the spinning industry was experiencing its best period of post-war activity in the final quarter of 1951. Then, of course, the mills had a labour force over 17,000 stronger than the present-day total on spinners' books of 107,500. The margin between the two figures must obviously be a limiting factor on how near the industry can approach the output returns of 15 or 18 months ago.

At the worst period of the recession, output was running at an average of about 12,000,000 lbs. a week. By the beginning of this year, production had exceeded the 17,000,000-lb. mark and, in the three months covered by the latest returns, another 1,000,000 lbs. have been added to the weekly output. Man-power in the spinning mills is also steadily mounting. In little less than eight months, following the end of the drift of workers to other jobs, the industry has built up its labour force by 6,200 full-time operatives.

Holiday Pay

A guaranteed holiday payment for Lancashire's 275,000 cotton industry workers, payable at the start of the Wakes Fortnight holiday in each town, is to be urged on employers, according to Mr. Charles Schofield, one of Lancashire's "Big Three" cotton unions. "It is only fair and reasonable that the payment should not fall below a certain level and efforts to bring about a more adequate payment to meet this contingency will be exerted," declares Mr. Schofield in his annual report to members. At the present time, employers put aside each week a certain percentage of each workers' earnings to cover the annual paid holiday. "The pleasure of having two successive weeks' holiday, he says, "was to many workers somewhat clouded by the fact that, owing to the prevalence of short-time working, the holiday payment was reduced by a substantial amount below the normal wage earnable. The agreement governing the holiday payment—whilst providing fair allowance when full-time has been worked—fails to make adequate provision when short-time working has been prevalent."

Profits—1953 Version

Because of the arbitrary division of the calendar, the results published by Lancashire cotton mill companies during 1952 gave a distorted picture of the conditions which prevailed in the industry during that year. Those firms which issued reports 12 months ago were, of course, basing their figures on the trading circumstances of 1951 and it was only in the latter half of the year that the profits and losses reflected the true state of affairs.

The aggregate profit earned by 30 firms which have so far announced results this year was £1,099,616, as compared with £3,251,003 announced in 1952. There has been a drastic reduction in the average profit per company, which has shrunk from £108,367 to £36,654. The average dividend distributed this year has been 15.81 per cent., whereas a year before it was 17.37 per cent.

Although individual companies have differed in their attitude towards the decreased profit rate, the trend has been largely similar. Many firms have maintained their dividend to shareholders, but have dispensed with allocations to reserves, while the sums carried forward have, in the majority of instances, been in excess of those of 12 months before.

Raw Cotton Imports

Imports into the United Kingdom last week aggregated 38,853 bales, comprising 18,742 bales Pakistan, 11,259 bales East African, 3,709 bales West African, 1,225 bales American, 920 bales Egyptian, 372 bales Argentine, 250 bales Indian, 69 bales Mexican and 2,307 bales sundries—*All Rights Reserved.*

THE HINDUSTAN COMMERCIAL BANK, LIMITED

DIRECTORS' REPORT TO SHAREHOLDERS

GENTLEMEN,

The Directors beg to submit the Audited Balance Sheet as at and the Profit and Loss Account for the year ended 31st December, 1952.

The profits for the year including the balance of Rs. 65,220-4-3 brought forward from the last year and after providing for all working expenses and depreciations amounted to Rs. 5,45,608-13-0. Your Directors have decided to make the following adjustments and appropriations therefrom :—

		Rs.	a.	p.
1.	Amount utilised for writing off of Bad Debts	4,00,000	0	0
2.	Transfer to Investment Reserve Fund	1,00,000	0	0
3.	Provision for Bonus to Staff	35,000	0	0
4.	Balance to be carried forward to the next year's account	10,608	13	0
	Total	5,45,608	13	0

In spite of the difficult monetary and credit conditions during the year 1952, the Bank's business continued to function satisfactorily. Our continued policy of caution, consolidation and effecting economy in expenses wherever possible has enabled the Bank to show better results this year, which progress, we hope, shall continue in years to come. The Bank's sub-branch at Ratanpole (Ahmedabad) had to be closed down during the year as it was found to be uneremunerative.

The Directors deeply regret the death on 9th November, 1952, of their esteemed colleague Lala Motilal Agarwala, who took a keen interest in the affairs of the Bank. They place on record their appreciation of his very valuable services.

The Directors are thankful to the constituents and shareholders for their continued confidence and support. They also express their grateful appreciation to the members of the Local Advisory Boards for their able help and guidance.

We have examined the list of accounts drawing our special attention, as received from the Auditors, and are of opinion that the accounts mentioned therein are either not bad or doubtful or have either been written off or that the Bank holds adequate provision for them.

According to the Articles of Association of the Bank two Directors, viz.,

1. R. R. Kedar Nath Khetan, and
2. S. B. Sardar Gurbaksh Singh

retire from the Board. They are both eligible for re-election.

You are requested to appoint Auditors for the current year and to fix their remuneration.

For and on behalf of Directors,
PADAMPAT,
Chairman.

16th March, 1953.

BALANCE SHEET AS AT 31st DECEMBER, 1952

CAPITAL AND LIABILITIES	Rs.	a.	p.	Rs.	a.	p.
1. Capital—						
AUTHORISED CAPITAL— 5,00,000 Ordinary Shares of Rs. 100 each				5,00,00,000	0	0
ISSUED AND SUBSCRIBED CAPITAL— 2,50,000 Ordinary Shares of Rs. 100 each				2,50,00,000	0	0
AMOUNT CALLED AND PAID-UP— Rs. 50 per share on 2,50,000 Ordinary Shares of Rs. 100 each				1,25,00,000	0	0
2. Reserve Fund and Other Reserves						
(i) Reserve Fund as per last Balance Sheet	14,00,000	0	0			
(ii) Sinking Fund in respect of Buildings as per last Balance Sheet	1,20,000	0	0			
				15,20,000	0	0
3. Deposits and Other Accounts—						
(i) Fixed Deposits, Short-term Deposits, Three Years' Cash Certificates and Security Deposits	2,05,65,210	9	0			
(ii) Savings Bank Deposits	62,47,695	7	8

Schedule of Particulars required by the Banking Companies Act, 1949 (Act X of 1949) attached to and forming part of the Balance Sheet as at 31st December, 1952

PARTICULARS OF ADVANCES	Rs.	a.	p.
(i) Debts considered good in respect of which the Banking Company is fully secured	2,45,86,012	9	8
(ii) Debts considered good representing claims reported to have been lodged but not yet admitted with (a) West Punjab Government for commodities alleged to have been taken by them or sale proceeds deposited into Treasuries of Pakistan; (b) Government clearing agents under grain procurement arrangements; (c) debts against mortgage of immovable property in West Punjab; (d) Stocks stated to have been held in the factories and godowns of the debtors; (e) with Postal authorities in Pakistan, etc., as per information disclosed on the respective files in the Bank (NOTE.—Due to abnormal conditions, the Auditors are unable to express any opinion on this)	15,45,875	3	5
(iii) Debts considered good for which the Banking Company holds no other security than the debtors' personal security (NOTE.—It includes a sum of Rs. 11,38,062-10-11 (representing Rs. 7,90,321-4-11 in West Pakistan currency), regarding advances in West Punjab Branches in respect of which the Auditors are unable to express any opinion)	40,81,096	15	0
(iv) Debts considered good secured by the personal liabilities of one or more parties in addition to the personal security of the debtors	6,83,842	14	4
(v) Debts considered doubtful or bad not provided for	Nil		
	3,08,46,827	10	5

PARTICULARS OF ADVANCES	Rs.	a.	p.
(vi) Debts due by Directors or Officers of the Banking Company or any of them severally or jointly with any other persons	97,500	14	6
(vii) Debts due by companies or firms in which the Directors of the Banking Company are interested as Directors, Partners or Managing Agents or, in the case of private companies, as Members	21,61,709	13	
(viii) Maximum total amount of advances including temporary advances made at any time during the year to Directors or Managers or Officers of the Banking Company or any of them either severally or jointly with any other persons	1,01,836	0	0
(ix) Maximum total amount of advances, including temporary advances granted during the year to the companies or firms in which the Directors of the Banking Company are interested as Directors, Partners or Managing Agents or, in the case of private companies, as Members	35,14,284	0	0
(x) Due from Banking Companies	Nil		

(Continued on next page)

REPORT ON COTTON TEXTILE INDUSTRY

SALIENT FEATURES OF WORKING PARTY'S SUGGESTIONS

THE Working Party for the Cotton Textile Industry, appointed by the Government of India under the chairmanship of Mr. A. Ramaswami Mudaliar about three years ago, has approached the problems confronting the industry from a constructive point of view. The Party, it will be recalled, was asked to examine and make recommendations on measures necessary to achieve a higher production, to reduce cost of production and to improve the quality of production. Besides, the Party was to suggest measures necessary for effecting a speedy rationalisation of the industry and also for improving the efficiency of the labour management and the organisation of the industry as a whole. Now that the industry had been able, during the last few years, to foster a sizable export market, the Party was asked to bear this aspect of the problem in its mind when recommending measures for the better marketing of its products, internal as well as external.

The Party was asked to report on the above problems within six months, but it took nearly two years to finish its labours. The Government of India had taken yet another year to publish the report. The result is that some of the recommendations of the Party have become out of date, especially those concerning the bulk purchase of cotton, etc. It might have been better, had the Government issued a neat and exhaustive summary of the Report to the public soon after its receipt and taken necessary steps, towards the implementation of the measures for the rationalisation of industry, with a view to reducing production costs and augmenting quality output. Now that the Commerce and Industry Minister, Mr. T. T. Krishnamachari, has recently unfolded his desire to maximise production by utilising the full installed capacity of the industry and also by removing all the bottlenecks towards that objective, it is expected that he will implement many of the constructive suggestions of the Working Party, which are practicable at the present time. The textile industry, being the biggest in the country, offers greater scope for the Minister than any in this direction and his attention to the solution of its problems will yield him commendable results at the shortest possible time.

The Working Party constituted three sub-committees, (i) for machinery and equipment, (ii) for rationalisation, and (iii) for cotton. It was also able to carry out a factual survey to find out the man-hour and machine-hour production in major production departments of representative mills. This survey was undertaken by a few technical experts and their findings have been appended at the end of the report. The report is as interesting as it is revealing about the present conditions of the mills, the imperative need for rationalisation and rehabilitation of the industry having been forcefully brought to the attention of the Government of India.

Changes in Production Pattern

During the last two decades, notable changes have taken place in the pattern of production. For instance, many concerns, which were principally engaged in spinning counts below 30, have had readjustments made in their machinery and also additions which have enabled them to spin finer counts of yarn and manufacture finer varieties of cloth. The progress of the industry in this direction is reflected in the quantities of imported cotton from year to year, notably Egyptian, East African and American. The report emphasises the fact that, while protection to the Indian textile industry was largely based on the ground that raw material was available in abundance within the country and the industry was helping the agriculturists to find a market for such raw material, the situation is tending to take a reverse turn and requires careful watching. It also observes that, "in many of the industrial units, proper attention was not paid to the repairing and reconditioning of machinery during the war period. There are, of course, other units where, owing to such prompt attention being paid to the maintenance of the machinery in good order, there has been no material deterioration in the effective work of the machinery, in spite of the strain that was put on it during the war years."

The Working Party has made a pertinent reference in regard to the changes in the management of mills during recent years, which have, in many instances, proved detrimental to the proper development of the industry. Till the beginning of the last war, most of the units were under the management of those who had grown in experience in the working of the textile industry and who had acquired fairly intimate knowledge of the complexities of technical management. The Working Party regretfully observes that the management of several mills are now in the hands of those who have had no experience of any industry, least of all experience of the textile industry. They were mere financiers hitherto and, having an ambition to become industrialists, they bought up some of these concerns and came into the category of industrialists without experience of running any industrial concern.

Production Control and Efficiency

In regard to Government's control measures, the Party is of the opinion that, "unless the industry as a whole is in a position to put its house in order and adopt measures which will expose erring members and mete suitable punishment to such, if necessary, by claiming powers from the Government for such reform measures being adopted by them, it will be difficult to get out of the era of controls which many of them desire." In order to maintain some production standard, the Party states that Government should revive the suggestions put forward by the Textile Production (Control) Committee of 1948 and appoint a team of technical experts who, along with the Textile Commissioner and the Advisory Committee, would be required to assist by their specialised knowledge of spinning, weaving and finishing branches of the industry and whose main functions would be to suggest ways and means of improving the technical efficiency of the mills. In this connection, the Party is of the view that the industry itself, through its various millowners' organisations, should regulate the production control and check the tendency to produce unwanted cloth or cloth of inferior quality by some of the mills. The Party desires that there should be some flexibility in regard to the third shift and the whole question could be left to the discretion of the management and labour. It has turned down the suggestion that mills should be given stimulus to produce more by giving greater freedom to export a part of the extra production. This recommendation was made at a time when there was shortage of cloth in the country. Now that cloth production has increased appreciably and there are already signs of a glut in the cloth markets, this recommendation has become out of date.

Inspection Necessary

Alluding to the bulk purchase of foreign mill stores, the Mudaliar Committee gives preference to the maintenance of the present system to some extent, but "feels that, if the mills can take the responsibility for the bulk purchase of mill stores through an organisation of their own associations, facility should be given to them to do so; the present state of controls

AUDITORS' REPORT TO THE SHAREHOLDERS.

We have audited the Balance Sheet of the Hindustan Commercial Bank Ltd., as at 31st December, 1952, as above set forth and the annexed Profit and Loss Account for the year ended the same date with the books and accounts kept at the Head Office in Kanpur in which are incorporated (a) the returns of the Bank's Branches in India and Pakistan (Lahore) certified by the respective Branch Managers and amended at the Head Office on the basis of the information with the Head Office, and (b) Statements of Accounts prepared at the Head Office based on the records of the various other branches in Pakistan which were evacuated in the year 1947. Subject to the complete disclosure and adequate provision for Bad and Doubtful Debts and the notes appearing on the face of the Balance Sheet, we report that :—

(a) We have obtained all the information and explanations we have required and have found them to be satisfactory.

(b) The transactions of the Bank which have come to our notice, have been within the powers of the Bank.

(c) The returns received from the Branch Offices of the Bank have been found adequate for the purpose of audit.

(d) In our opinion the said Balance Sheet and Profit and Loss Account are drawn up in conformity with the law.

(e) The Balance Sheet exhibits a true and correct view of the state of the Bank's affairs and the Profit and Loss Account shows a true balance of Profit for the year according to the best of our information and explanations given to us and as shown by the books and records of the Bank kept at its Head Office, and

(f) In our opinion Books of Account have been kept by the Bank as required by Section 130 of the Indian Companies Act, 1913.

SUGARCANE CULTIVATION IN U.P.

HOLDINGS TO BE CONSOLIDATED

NOW that the *Consolidation of Holdings Bill* has been passed by the U.P. State Legislative Assembly, the Uttar Pradesh Government's move to consolidate agricultural holdings is of special significance to sugarcane development. At present, sugarcane cultivation in Uttar Pradesh is carried on in small plots of land. Out of the total cropped area of 47.5 million acres in U.P. in 1951-52, more than 2.96 million acres were under sugarcane. Although the sugarcane grower is said to be cultivating, on an average, less than five acres, the actual size of the area devoted to cane is exceedingly small, as a part of this area is utilised for growing other crops also. The worst feature of these holdings is that they are not, it is stated, to be found in compact blocks; they are fragmented into a number of plots scattered all over the State. This process of subdivision and fragmentation, in some cases, is carried to such extremes that the size of the holdings is not more than a fraction of an acre! The result has been that the development of cane cultivation in the State has suffered immensely.

Consequent on the sugarcane growing areas being scattered—and the size being too small—the introduction of scientific methods of cultivation has been greatly handicapped. It is no wonder, therefore, if both yield of cane per acre and recovery percentage in Uttar Pradesh today is very much lower, as compared with the Deccan and South India where sugarcane is cultivated in comparatively larger and more compact blocks of land. In the latter areas, readers may be aware, most of the sugar factories themselves own large sugarcane estates. Thus, the yield of cane per acre in U.P. is as low as 320 maunds, as against 790 maunds in Bombay, 740 maunds in Madras and 490 maunds in Hyderabad. The recovery percentage of cane also is very low, such being 9.57, as against 12 in the Deccan. What is worse, not only has the yield of sugarcane in U.P. been decreasing but the State's share in the country's aggregate cane area and production has been falling, in distinct contrast to the trend in the Deccan and the South, as will be seen from the table below:

	Percentage of total cane acre in India		Percentage total cane production in India	
	1936-37	1951-52	1936-37	1951-52
U.P.	65.5	62.7	62.5	53.7
Bombay	2.3	4.5	4.2	10 2
Madras	3.2	5.5	6.7	11.6
Hyderabad	1.2	2 1	1.9	3.2

It will be seen from the above figures that the share of Uttar Pradesh in the aggregate production of sugarcane has declined more than in proportion to the fall in its percentage share in cane area, while the reverse is the case with regard to the other States. This indicates that the trend of yield per acre has been distinctly downward. In fact, the low yield of sugarcane per acre in U.P. is largely responsible for the high cost of sugarcane cultivation and, consequently, the high cost of sugar production. Now that the holdings are to be consolidated, the scope for cane development work has been considerably widened. It will facilitate the provision of irrigation and drainage. Steps to check damage to crops by insects and diseases can be easily undertaken. Scientific methods of cultivation, designed to augment yield of high quality cane can be adopted. This will go a long way towards reducing the cost of sugarcane cultivation, and thereby lower sugar prices which are at present high in all conscience.

The U.P. Government's move to consolidate agricultural holdings is indeed long overdue. It must, however, be pointed out that whatever benefits accrue from such consolidation are bound to be neutralised, if the Government does not revise its taxation policy. The Government has, for instance, a proposal to enhance irrigation rates by 50 per cent., although it is stated that this will not be enforced in the coming *kharif* season. When implemented, this levy will be injurious to the interests of the industry. The Government proposes to lower the exemption limit for holdings for purposes of levying the agricultural income-tax; the official Bill seeking the amendment has already been passed by the Legislative Assembly. Accordingly, the taxable limit for holdings is to be reduced from 50 acres to 30 acres, but the holder of 30 acres will not be taxed if his agricultural income is less than Rs. 3,000 per annum. This measure too would handicap the progress of the sugar industry in U.P.

CANE DEVELOPMENT

Reviewing the development of cane cultivation *in India in these columns* six weeks ago (*vide* page 388 of *Commerce* dated 7th March, 1953), we observed that, despite the efforts of the Indian Central Sugarcane Committee (I.C.S.C.), cane cultivation had not only not registered any improvement but actually deteriorated. In support of this contention, we referred to the marked decline in both yield of cane per acre and recovery percentage of cane during 1951-52, as compared with 1943-44, that is the year before the I.C.S.C. was established. Apropos this reference, we have received a note from an official spokesman, wherein it is claimed that cane cultivation has definitely improved. The following is an extract from the note:

"It is well known that only 20 to 25 per cent. of the total production of cane is utilised by the sugar factories for the manufacture of crystal sugar and that development work at present is confined mainly to the factory zones which constitute only a small fraction of the total area under cane. As the factories draw most of their supplies from these zones only, development work naturally has had to be confined mostly to these areas. As a result of the activities of the development schemes during the last three or four years, definite progress has been made both in yield and quality of the cane cultivated in these areas. These increases are very near the targets laid down."

Substantiating his statement, the spokesman has given the following figures:

Average yield (in tons) of cane per acre

States	Before commencement of the schemes 1947-48	Achieved by 1951-52	Targeted for after five years
Uttar Pradesh ..	12.9	18.4	25.7
Bihar	12.0	16.1	20.0
Bombay	31.0	40.5*	34.1
		23.8†	
Madras	25.0	33.5	30.0
Punjab (I)	12.9	17.8	18.4
West Bengal	16.1	16.8	20.1

* For Deccan Canal. † For Karnatak tract.

It will be evident from the above account that the official spokesman has taken into consideration only the cane development work in the factory zones, while we have taken the entire area and yield of sugarcane. Moreover, the comparison made by the official spokesman is between 1947-48 and 1951-52, whereas our comparison was between 1943-44 and 1951-52. It is no doubt true that the factories draw most of their sugarcane supplies from these zones. But, inasmuch as the factory zones constitute, as the official spokesman himself admits, only a small fraction of the total area under cane, it would be necessary to take the whole area into account, if the progress of the cane development work were to be accurately assessed. That apart, the official spokesman has cited figures to show that the yield of sugarcane has risen since the development schemes were launched. He would have done well, if he had also cited figures to indicate the progress in raising the quality of the cane. Our own feeling is that, barring the instance of a few individual estates which have been endeavouring to cultivate better quality cane, the quality of cane has generally been rather poor.

(*Concluded from next column*)

Tribunal if the management did not follow proper principles in effecting retrenchment.

It is learned that India's coal export again fell considerably in March, 1953, due to paucity of shipping. While in February, 42 steamers both foreign and coastal with a total cargo of 2,64,434 tons left the Calcutta port, in March only 1,43,609 tons of coal were shipped in 27 steamers. Twelve foreign ships, exactly half the number of ships that called in February, visited the port in March, while the number of coastal ships came down by three to fifteen.

CONSERVATION OF COAL

HAS OFFICIAL POLICY FAILED?

SPEAKING at the twentieth annual general meeting of the Indian Colliery Owners Association, held recently at Dhanbad, the President, Mr. B. L. Agarwalla, declared that the Union Government's policy of coal conservation had proved a bitter failure. Characterising the policy as "indecisive, hesitant and arbitrary," he contended that the 7.9 million tons fixed as target of production for selected A and B grades of coal for 1952, was found "in excess of the capacity of the industry by at least 2 million tons." Further, he alleged that restrictions on retrenchment of labour and absence of compensation for collieries subject to hardship, as a result of pegging of their output, taken together with concessions allowed to certain individual collieries to exceed their targets, undermined the whole policy of conservation. As a result, he maintained, conservation still remained in the dreamland of wishful planners. Thus, Mr. Agarwalla presented a dismal picture regarding conservation of metallurgical coal.

A careful review of the position regarding conservation since the Government passed the Coal Mines (Conservation and Safety) Ordinance 15 months ago discloses that the production targets of 7.9 million tons for 1952 and of 7.4 million tons for 1953 have been fixed on the basis of the mining capacity of the collieries concerned. In fact, the targets have been arrived at on the basis of 108 and 100 per cent. of the performance of collieries in 1950. The Government's conservation policy does not at all err on the side of over-fixing the targets. There is nothing wrong in giving concession to a colliery, the operation of which would become uneconomic, consequent on pegging its output by allowing it to exceed its target.

Mr. Agarwalla's contention that restrictions on retrenchment defeat the purpose of conservation, however, is beyond doubt. For it is to an axiomatic truth that conservation cannot be carried out successfully without retrenchment of surplus labour. Although the plea that economically affected collieries should be compensated by the Government sounds reasonable, the State, faced as it is with financial stringency, cannot afford to bear the burden of compensation, however willing it may be to do so.

Mr. Agarwalla has also made a scathing attack on the Government's policy of financial assistance to collieries carrying out voluntary stowing. He further seems to disapprove of the policy of relaxation of restrictions on the output of coking coal in the case of those mines which have undertaken stowing measures. These attacks emerge from an incorrect appreciation of the definition of conservation. It is an admitted fact that conservation of wasting assets such as coal lies not so much in restriction of output as in inefficient extraction and utilisation. Experts aver that stowing offers one of the best means of conservation of coal in general and metallurgical coal in particular. But stowing is a costly process. As such, any assistance or concession to collieries undertaking stowing measures is surely justifiable. We do not feel, as did Mr. Agarwalla, that such assistance to voluntary stowing as is being given now should be re-examined immediately. One cannot judge the success or failure of an experiment immediately. The experiment of assistance to voluntary stowing needs to be watched for a sufficiently long time before any opinion is expressed on it. We, therefore, certainly do not agree with the view of Mr. Agarwalla that assistance to voluntary stowing tantamounts to premium on collieries which had worked inefficiently for long and were compelled to take up to stowing as an inevitable measure. Assistance should be given not only for stowing but also for washing coals and blending them.

RETRENCHMENT IN RAILWAY COLLIERIES

The Industrial Tribunal, Dhanbad, has granted permission to retrench surplus labour, numbering about 4,145 persons, in railway collieries. This is the outcome of an application for permission to retrench surplus labour employed in different collieries by the authorities concerned. The Tribunal held that it was the right of the management to decide the number they should engage and retrench the rest so long as the decision was not actuated by any ulterior motive, and there was a *prima facie* case for the same. The Tribunal observed that the workmen were, however, free to move the Government to make a reference to the

(*Continued in previous column*)

INDIAN RAILWAYS AND FIVE-YEAR PLAN

WAGON USERS' UTOPIA IS OUT OF QUESTION

(By F. C. BADHWAR, Chairman, Railway Board)

THE general objectives of the Five-year Plan are well known but the exact role which Indian railways should play in progressing them is perhaps not so clear to the public. Railway programmes, as far as the Plan is concerned, must necessarily be consequential to the targets and important projects to which high priority is given but have, at the same time, to be based on the realities of resources available.

Before deciding the actual steps that should be taken to provide the additional carrying capacity which the Plan requires, it will be as well to review the main functions that important users expect the railways to perform during the next three years. Few agree on the emphasis that should be given to the various aspects of railway performance and competing interests are naturally pressing for those railway facilities that affect them most. Let us, therefore, examine the views that have been expressed by the leading organisations of railway users during the past few months.

At its last annual meeting, the Associated Chambers of Commerce, while paying a tribute to the "admirable way in which railways had faced up to the colossal tasks with which they had been confronted in recent years and managed, despite many vexatious difficulties, to cope with the demands of industry to a large measure," expressed the view that the supply of transport facilities must be equated to the growing demands from industry and that 'railway expansions must precede and keep ahead of the increases in production." In other words, railways should plan to provide slightly more carrying capacity, some months earlier than it is actually required, to enable industry to expand and make forward arrangements with confidence.

The point of view of agriculture is that railways should make all the arrangements that are necessary for carrying its produce during, or shortly after, harvest periods, even if this involves special considerations like supplying many more wagons at certain seasons than during the remainder of the year.

Trade and commerce, which are particularly interested in exports and imports, both regional and foreign, require wagons at comparatively short notice in the numbers, and of the types, and at the times and stations that are most suitable for each transaction. For example, firm arrangements for moving a consignment may be finalised while a ship is unloading at a particular port and the interest concerned often want train-loads to be rushed down from their factories or mines to the port within a few days, even if this involves empty haulage in one direction.

That such demands, as well as the seasonal requirements of agriculture, can be met only if appreciable reserves of wagons and power are regularly maintained by railways, is not always taken into account.

Most States, and other regional interests, want new railway lines to open areas, neglected in the past in respect of transport facilities, where economic development is, in consequence, being hampered, sometimes to the detriment of the country as a whole. Passenger associations focus their demands on more and better travelling facilities and modern amenities at stations. There are many other demands also, usually from vocational or sectional interests, and, in a responsive democracy, it is neither desirable nor possible to ignore them.

The Five-year Plan has given an opportunity to all users of railways to press for the fulfilment of their particular requirements during the Plan period and few are prepared to let this chance go by default.

The railways themselves also have a number of urgent new requirements connected with the removal of operational and engineering difficulties and with the need for achieving self-sufficiency in respect of the specialised components which they use. The coontry's demands on railways since Partition and Independence are, in many cases, different from those under the previous regime and it is not always possible to adapt existing systems and installations to meet the new conditions. There are certain purely railway requirements, therefore, which have to be met, if the organisation is to work more efficiently, and these have to be added to the many demands from industry, agriculture, trade, States and other interests.

All A Question of Priorities

The majority of these numerous demands cannot be termed as either unjustified or unreasonable, but their fulfilment is obviously not possible within five or even 10 years. Railways have to make the best possible use, from an all-India angle, of such resources as are likely to be made available to them and their programmes for execution really boil down to questions of priorities to meet the most pressing needs of the Five-year Plan, to such an extent as is possible, by the end of 1955-56. Two years of the Plan period have passed and the remaining three are all too inadequate, both in respect of time and funds, to bridge the full gap between what is wanted and what can be provided.

Let us see what resources are actually earmarked for railways during these remaining three years of the Plan period. An allotment of Rs. 400 crores for the five years is shown in the Plan, this figure being based on the assumptions that the railways will themselves contribute Rs. 320 crores, representing the estimated difference between their gross earnings and their total working expenses during this period, and that the remaining Rs. 80 crores will be found from Central revenues.

During the first two years of the Plan period, expenditure of a capital nature on railways has amounted to about Rs. 150 crores, thus leaving approximately Rs. 250 crores for the remaining three years. Railway programmes, therefore, have to be contained within an average overall annual expenditure of about Rs. 83 crores during 1953-54 and each of the two succeeding years. Any downward fluctuations in net earnings, or tightness of funds in the Central balances, will tend to slow down, or curtail, such programmes, while increased railway revenues will enable quicker progress to be made, or additional items to be included.

Rehabilitation—First Need

As explained in the Five-year Plan itself, the railway programmes must necessarily concentrate on rehabilitation first and some operating, technical and productivity improvements next, with a few of the more urgent expansions being added, if funds permit. There can be no dispute about rehabilitation getting first preference, as efficient and intensive performance from existing assets can be ensured only if each is brought up to, and maintained in, good serviceable condition. Operating and technical improvements and modernisation of equipment for signalling, workshops, engine sheds, etc., are also necessary to obtain the best results from the present installations.

Some indication of the benefit that has already been obtained from such measures is provided by the average monthly net ton-miles carried in 1952-53 as compared with 1948-49. The increase has been over 40 per cent., though the number of locomotives and wagons in the total holdings of railways was practically the same throughout this period. The increase in performance by railways, during the same period, of which the train-miles run is an index, was also substantial. The monthly average passenger train-miles went up by about 16 per cent., while goods train-miles rose by about 25 per cent. These figures show the significant efforts made by railways, since the Partition, to get the best out of the equipment they have had to work with.

Training of Staff

Rehabilitation and improvements should not be confined to track, rolling stock, signalling, workshops and marshalling yards, but must be extended to the training of staff and some amelioration in their working and living conditions. There has been much loose talk about the low productivity of Indian workmen without a fair and objective analysis of the conditions under which they have to live and do their work and the physical and nutritive factors that must affect them. For improving output on Indian railways modern equipment is not the whole answer, even if it could be afforded on an extensive scale, and well trained, well rested and well nourished workers are as important as well designed equipment, perhaps even more so in our trying climatic conditions. The line of approach on railways is, therefore, to balance these important factors and try to obtain increased output and higher efficiency from the existing staff by better training and improved working and living conditions as well as modern equipment.

Operating Improvements

The more urgent operating improvements being undertaken include the provision of about 40 per cent. increased line capacity between Bezwada and Madras, various items essential for the additional rail movements required for the expansion of our two steel works, including the doubling of the Rourkela-Manoharpur and Adra-Asansol sections, some works for increasing the distribution of coal, like increased capacity on the Annupur-Katni and Barkakhana-Sone East Bank sections, a broad-gauge bridge over the River Ganga near Mokameh and doubling of a part of the Ahmedabad-Mehsana line. Track and signalling standards are also being improved on intensively worked main lines, and mechanical and electrical equipment, and techniques in workshops, are being gradually modernised. Training facilities for staff of all levels, including the Central Staff College at Baroda and the zonal transportation and signalling schools on each railway, are being improved and expanded.

Additions and Expansions

It is only after these first priorities have been covered that it will be possible to divert such funds, and other resources, as remain to the provision of some urgent additions and expansions, which can be listed, broadly, under two main heads, namely, new rolling stock and new lines.

With regard to new rolling stock, programmes within the allotment for railways in the Plan cannot include many additions as there are heavy accumulations of arrears of replacements to overtake. There were 8,209 locomotives, 19,193 passenger carriages and 1,99,049 wagons in service on Indian railways on 31st March, 1951, and of these 3,956 locomotives, 9,916 carriages and 73,371 wagons will be over-age at the end of the Plan period, namely, on 31st March, 1956, many of them being of obsolete types. It is, of course, not possible to obtain regular normal performance from more than a proportion of such average stock and the replacement of most of it is, therefore, both important and economical. It is not, however, always necessary to provide 100 new engines for each 100 old ones removed from service. The present standard types, designed by the Railway Board for Indian conditions and thoroughly tested in service, are, in some cases, more powerful and can, therefore, haul longer and heavier trains. It is also obvious that for the same level of performance a lesser number of locomotives and wagons, which are both under-age and in good condition, is required than is the case when the stock is over-aged. If, therefore, the problem was one of replacement only, and there was no necessity to cater for rising levels of traffic, the formidable figures indicated above might be reduced to some extent. But railways have to plan for an expanding economy

and every precaution must be taken to provide safeguards against pronounced shortages of rolling stock in future. The actual funds available, however, must decide the final postponement programmes and so far it has not been possible to plan for more than 1,444 new locomotives, 6,166 new passenger coaches, and 5,662 new wagons during these five years. The doubts expressed by the Associated Chambers of Commerce regarding the adequacy of the provision for progressive increases in the movements of goods and mineral traffic are, therefore, not without some foundation.

New Lines

Coming to the provision for new lines, so many are wanted and, comparatively, so few can be provided, that the problem is where to start and what to include. After the new works required in connection with the oil refineries that are being set up, a new line connecting the large metre-gauge systems of north and south India with each other, through the Khandwa-Hingoli link, is now the most urgent; but there are also many other projects which are important to both railways and other interests. The need for new lines to open up undeveloped areas in many parts of the country is apparent and will have to be accepted as soon as some resources can be spared for this purpose. It would be more methodical to deal with this problem by setting aside a specific sum each year to be spent on such new lines during the next decade. At present-day price levels, the inclusive cost of a new line through average terrain may be assumed at Rs. 4 lakhs per mile—it is less for metre-gauge but somewhat more for broad-gauge—and on this basis each 100 miles of new line would cost about four crores. Construction to austerity standards, designed for light traffic only, may reduce first costs by 10 to 15 per cent. but there is still the question of working expenses, i.e., recurring costs, to consider as new lines can seldom even pay their way for the first six to a dozen years. Where mountainous country, or heavy bridging, have to be faced, the cost may well rise to range from Rs. 9 to Rs. 12 lakhs per mile. These figures do not include the cost of the additional rolling stock that would be required to work these sections and before new lines are constructed on an appreciable scale, therefore, the necessary funds and reasonable returns have to be assured.

Electric Traction

Electric traction offers advantages on some sections of Indian railways and there are two in particular where its introduction should not be delayed much longer. The Calcutta suburban sections which have reached saturation point with steam traction should be electrified as early as possible, this electrification being extended to the Bengal-Bihar coalfields as funds permit. The extension of electric traction from Igatpuri to Bhusaval, on the main Central Railway line serving Bombay, will also have to be undertaken before very long, as the capacity of this double line section has practically no margin left for more steam trains and, unless electrification, or a third railway line over 200-mile length, is provided, the quantum of goods moved to and from Bombay cannot be increased.

Distribution of Funds

After a very careful study of all aspects of these many problems, the Railway Board have decided to distribute the Rs. 250 crores that they expect to get for expenditure of a capital nature during the next three years, as shown below:

(In crores of rupees)

(*a*)	Rehabilitation, including steps to attain self-sufficiency	193
(*b*)	Operating and technical improvements and amenities for passengers and staff	33
(*c*)	Additions and expansions under rolling stock and new lines (including works in progress)	30
(*d*)	Miscellaneous, including investments in road services, etc.	4

These are round figures and, in some cases, there is no sharp dividing line between rehabilitation and improvements, but, in the context of the Plan's requirements from railways, with particular reference to the projects which have been given high priority, the Board are convinced that it would be difficult to arrange a better distribution of these funds. It is obvious that railways cannot, during the Plan period, wholly satisfy the demands of the many interests wanting increased carrying capacity and industry, agriculture, trade, development of backward areas and passengers will all have to continue to accept some degree of rationing as far as rail transport is concerned. Present trends, however, indicate that such rationing will be less severe than hitherto and, unless heavy movements of foodgrains or some similar emergency upset calculations, at least 90 per cent. of traffic offering will be freely moved. There should also be no undue apprehensions about serving the remaining 10 per cent. provided the railways are permitted to deal with it in their own time. It will not, however, be possible to afford that reserve margin of extra carrying capacity which would enable industry, or agriculture, to obtain, promptly on demand the full numbers and exact type of wagons required at any station for any destination—in other words, a wagon users' utopia is out of the question.

The Five-year Plan is neither static nor rigid and is only a beginning. It has been accepted by the Planning Commission that each new major project which is examined should include the full transport component necessary for its success. In all such schemes that are sanctioned for execution in future, therefore, the railway element will automatically be provided. This includes new steel plants, schemes for the export of minerals, new industries and multi-purpose river valley projects, etc., that may be undertaken hereafter.

Wanted A Blood Transfusion

An eminent foreign economist, who is also a widely experienced planner, asked me about two months ago to name, if possible, the single most urgent and vital requirement of Indian railways that could, if met, produce the greatest benefit to the country immediately, even if it took some time to make good other shortages. My answer was that a "blood transfusion" of about 500 new locomotives and 20,000 new wagons, which our existing line capacity could easily and usefully absorb, would enable Indian railways to move freely practically all the goods traffic offering to-day. This stock would, however, have to be imported as the entire installed capacity for manufacturing engines and wagons in the country has already been fully booked for the next three years. Without this replenishment, however, it may take some time, beyond the Plan period, to equate the carrying capacity of Indian railways to the increased production aimed at in the Five-year Plan.—*All Rights Reserved.*

(Concluded from next column)

Thus, the output of hessian has moved up from 29,011 tons in February to 31,635 tons in March. Similarly the production of sackings has risen from 37,171 tons to 40,049 tons. The output of other varieties has gone up from 2,433 tons to 2,746 tons.

Latest reports from Dundee, however, disclose that jute manufactures producing centres outside India are much better placed than the Indian jute mills. Continental manufacturers are extremely busy. Many of the mills in Dundee, for instance, are working overtime, but are still unable to cope with the internal demand. It is stated that the Continental manufacturers have obtained orders by shading their terms below those of Calcutta. It is, however, admitted by the Continental manufacturers that the prices contracted for have left little or no profit. The only recompense has been the receipt, from the sale of their goods, of foreign currency, particularly from the dollar markets. But this state of affairs cannot continue long. Herein lies the silver lining in the cloud for the jute mills in India.

STOCK POSITION OF JUTE GOODS IN MARCH

UPWARD TREND STILL PERSISTS

STOCKS of jute manufactures with the Indian jute mills as at the close of March, 1953, disclose a further rise over those in the previous month. Thus, they were 139,385 tons at the end of the month under review, as against 136,106 tons, at the end of February, 1953, thereby representing a fractional rise of 1.6 per cent. This increase in percentage compares with a rise of 6 per cent. in the stocks at the end of February, 1953, when stocks stood at 128,413 tons. The stocks at the end of the month under review shows an increase of 24 per cent. over those at the end of March, 1952, when they amounted to 111,574 tons.

An analysis of the stock position of different categories of goods discloses that whereas the rise in hessian stocks has been markedly upward, the stocks of sackings and others have registered a slight decline. Thus, stocks of hessian increased from 38,632 tons at the end of February to 41,732 tons, at the end of the month under review. But, sackings and others declined during the same period from 95,000 tons and 2,474 tons to 94,494 tons and 2,159 tons, respectively. The increased stocks of sackings continue to indicate that the reduction of import duties has failed to stimulate demand for sackings. It is, in fact, this position that forced the mills to request the Government to permit them to seal 20 per cent. of their looms, instead of the existing 12½ per cent. The request has, as stated previously, been turned down.

A summary of the detailed position of jute goods stocks with mills as at the end of March, 1953, as compared with those at the end of the two preceding months and 31st March, 1952, is given in the table below:

(In tons)

	As on			
Civil	31-3-1953	28-2-1953	31-3-1953	31-3-1952
Hessian	40,611	37,760	36,439	42,123
Sacking	92,158	92,228	85,389	57,793
Others	2,122	2,340	2,544	1,697
Total	1,34,893	1,32,354	1,24,372	1,01,613
Government				
Hessian	1,119	846	832	1,828
Sacking	2,336	2,772	3,052	8,086
Others	37	134	156	42
Total	3,492	3,752	4,046	9,956
Grand total	1,38,385	1,36,106	1,28,418	1,11,574

The heavy accumulation of stocks reflects the gravity of the situation. How difficult the position of mills is will be evident from the weak trend in the jute goods market; if the trend of prices is an indication, B Twills, for instance, which was quoted in the Budget week at Rs. 96 is now placed at as low as Rs. 86-8.

The table below gives the output of jute goods during each of the three months ended March, 1953, as also on 31st March, 1952:

(In tons)

	As on			
Civil	31-3-1953	28-2-1953	31-1-1953	31-3-1952
Hessian	29,553	26,846	28,251	25,364
Sacking	39,560	36,979	39,338	49,734
Others	2,746	2,419	2,834	2,564
Total	71,859	66,244	70,423	77,662
Government				
Hessian	2,082	2,165	2,083	116
Sacking	489	192	422	5,106
Others	..	14	67	15
Total	2,571	2,371	2,572	5,237
Grand total ..	74,430	68,615	72,995	82,899

It is seen in the table that the output of jute goods at 74,430 tons in March, 1953, has registered a rise of 8.4 per cent. over that of the previous month. The consumption of raw jute calculated on the basis of production can be placed at 431,694 bales, as against 395,151 bales in February, 1953. With the output of jute goods in the month under review, the total production during the nine months of the 1952-53 season aggregated 671,957 tons, as compared with 707,205 tons in the corresponding period of the preceding season. The consumption of raw jute, so far during the season may be put at 3,777,350 bales as compared with 4,101,739 bales.

An analysis of production of jute goods, category-wise, shows that there has been an increase in all the three varieties of goods.

AUDITORS' REPORT TO THE SHAREHOLDERS.

We have audited the foregoing Balance Sheet of the Allahabad Bank, Ltd., as at 31st December, 1952, and also the foregoing Profit and Loss Account of the Bank, in which are incorporated the audited Returns of Calcutta and Bombay Branches and the authenticated Returns of the remaining Branches for the year ended on that date, and report that:

(a) we have verified the cash and securities at Head Office and have obtained all the information and explanations which we have required and have found them to be satisfactory;
(b) the transactions of the Bank which have come to our notice have been within the powers of the Bank;
(c) the Returns received from Branch Offices of the Bank have been found adequate for the purpose of the audit;
(d) in our opinion, the foregoing Balance Sheet and Profit and Loss Account are drawn up in conformity with the law;
(e) such Profit and Loss Account shows a true balance of profit for the twelve months;
(f) such Balance Sheet exhibits a true and correct view of the state of the affairs of the Bank according to the best of our information and the explanations given to us and as shown by the books of the Bank; and
(g) in our opinion, books of account have been kept by the Bank as required by Section 130 of the Indian Companies Act, 1913.

WORLD STEEL DEVELOPMENTS

JAPAN'S PLAN TO COUNTER SCHUMAN THREAT

IN recent weeks, certain interesting developments have taken place in the world of steel. The European producers have taken the view that the fall in export prices, which had been proceeding almost uninterruptedly for several months, has been overdone. They, therefore, have made a sudden and concerted move to raise their export prices. The move is to raise the rate to $85 per ton f.o.b. Antwerp, from below $80 prevailing now. It may, however, be noted that last summer when the U.S. steel strike was on, the rate was as high as $100 per ton.

The proposal is reported to have been referred to the European Iron and Steel Cartel, which was reconstituted in the third week of March last, with Belgian, Luxemburg, German and French producers as its members. The Cartel is of special importance to Belgium and Luxemburg producers, who rely predominantly on export trade and are among the world market's biggest suppliers of steel. The Cartel, as re-formed, does not, it is stated, infringe the regulations of the European Coal and Steel Community, the authorities of which are said to have been informed of the Cartel's constitution and decisions. It is stated that the Cartel will not affect free competition within the six-member nation countries of the Schuman Plan. The Cartel is now reported to confine itself to the fixing of export price only and it is believed that the price will be so adjusted as to be, as far as possible, not lower than the internal price that would be charged in the common market, the opening of which is scheduled for 1st May.

The British export prices for steel and steel products are now well above the Continental quotations, and in some products the gap has been widening, since the beginning of this year. It is true that the U.K. export prices were cut in the beginning of the year, but the reductions were on a comparatively small scale and did not cover the heavy products. Even the proposed increase in European steel price still will not be sufficient to close the gap between the rates of the U.K. and the Continent.

There is a feeling in the Continent that the U.K. export prices are high. But British exporters point out that their price policy has always been based on considerations different from that of the Belgian industry, which largely determines the export prices of Continental producers. The Belgians charge much higher export premia than the U.K. at the height of the boom. Traditionally, their prices fluctuate much more frequently in response to slight changes in market sentiment. The British exporters further aver that their steel is superior to Continental steel. This argument, however, does not hold good in all cases. The gap between the U.K. and the Continental prices for structural steel is very great and it cannot be accounted for by difference in quality alone.

The U.K. steel industry is, however, watching the situation carefully. So far, it has not found any compelling reason to reduce its export prices. The prime object of the U.K. Government's policy in regard to export prices for steel seems to be to guarantee a large quantity of cheaper steel to the British steel industries—cheaper than is available to any of its competitors—and to rely chiefly on indirect exports in the form of finished metal goods. At present, the U.K. is exporting only about 15 per cent. of its total production of 16 million long tons. There are many Government restrictions on tonnages and destinations of steel exports.

Japanese steel makers are much perturbed by the prospects of competition from the European Steel and Coal Pool. They fear that the Pool will threaten their steel markets in West Europe, the Near East, South-East Asia, South America and Australia. They propose to counter this threat by establishing a central organisation. A preliminary conference of the Japanese Iron and Steel Manufacturers' Association, held towards the end of March last at Osaka, was of the view that an export of 1.2 million tons of steel annually would absolutely be necessary, if Japan were to obtain sufficient credit to pay for vital imports of iron ore. The Osaka Conference also decided to urge the Government to appoint a foreign official thoroughly acquainted with the steel industry on the Japanese Legation in Luxemburg and further to organise a joint Government and private body to make policy recommendations. Already, it may be noted, the Japanese steel makers have stationed a representative at Luxemburg and the Yawata Iron and Steel Company, one of Japan's biggest steel concerns, has also sent a special expert to Bonn to report on the activities of the Schuman Plan. The delegates to the Conference agreed to co-operate in the purchase and dispositions of scrap iron. At present, the anti-monopoly law, among others, prevents the Japanese steel industry from setting up a joint-purchasing organisation to buy scrap at lower prices on behalf of the entire industry. There are doubts even as to the legality of the current agreement to co-operate voluntarily in the purchase and disposal of scrap. It is, therefore, hinted that pressure will be brought to bear upon the Government to amend the anti-monopoly law.

It is, however, difficult to forecast the prospects for prices on the basis of present pattern of prices. For, almost in every country, plans are ahead towards expanding steel production. When the present plans come to fruition, it will raise the present production of steel by over 60 million long tons in the five years that lie ahead. The production in 1952 was 208 million long tons, as against 134 million tons in 1947 and, if there had not been the steel strike in the U.S., the world production would have approached 225 million tons. The shortage of steel, which the world is still experiencing, is mainly due to the absorption of the metal, to a large extent, by the war industries. And if peace were to return shortly to this tormented world, then a sizable supply of metal would be released from war to peaceful pursuits. As against this prospect, there is the fact that the capacity for consuming steel has also been expanding simultaneously throughout the world, so that the prospects of any burdensome surplus of steel are not bright, provided the price of metal promptly adjusts itself to suit the changed conditions. Some, however, argue that the volume of world trade in steel as such may tend to decline. They contend that installation or extension of steel-making facilities in importing countries clearly portends a reduction in the tonnage of steel entering international trade, unless consumption in these countries exceeds indigenous production at a rapid rate. And in their opinion, indications are that this influence is not, however, likely to be very strong over the next few years. At the same time, they concede that there is little likelihood of the world trade in high quality steel products declining in the near future. For the consuming countries intending to establish or already establishing steel-making plants, it is natural to begin with simple products, such as heavy section, rail, etc. and import such items as sheet, tinplate, tubes, wire and alloy steel. It is so even in cases of extensions to existing plants in countries which have not well-developed steel units.

One general conclusion that can be safely deduced is that the future expansion in the consumption of steel in the world will depend on the ability of the industry to supply steel at a price within the purchasing power of the consumers. This will be the main factor that will determine the volume of world trade in steel. The sellers' market is already fading and it will not be long before the buyers' market is established strongly in many parts of the world.

BUILDING RESEARCH IN INDIA

CENTRAL INSTITUTE OPENED

THE Central Building Research Institute which was formally opened on Sunday last at Roorkee, is the last in the network of eleven research institutes included in the first plan of the Council of Scientific and Industrial Research (C.S.I.R.) and the first major national building research institute set up in the tropics. It will be recalled that the establishment of this institute was recommended as early as in 1944 by the Building Research Committee set up by the C.S.I.R. in 1943. As in the case of other national research institutions, research work in building construction did not wait for the erection of the institute buildings, but was started in 1947 in temporary quarters at Roorkee. The foundation-stone of the new building, now opened, was laid in 1951.

The importance of research in building problems needs no emphasis, especially in modern times. It is an admitted fact that shifts in population due to changing pattern of economy and political conditions, limited availability of land, shortage of conventional building materials and other similar factors have all emphasised the need for research in building techniques and materials, with a view to reducing costs and improving the quality of work. Among prominent aspects, which require investigation, mention may be made of problems of design, functional requirements of buildings, basic studies of structures, standardisation of building components and evolution of new materials or substitutes. Attention has also to be devoted to the nature and properties as well as treatment of clays, minerals and soils. Materials and practices evolved in foreign countries require to be studied to facilitate their adoption to suit Indian conditions and climates.

The first building research station was established in the U.K., in the early twenties, with a view to combating increasing cost of building construction, which followed the First World War, 1914-18: Many more countries in Europe and elsewhere followed suit in the next decade, and as a result, there exist now building research institutes in all major countries of the world. The Building Research Institute in India is the latest addition to their numbers.

Although the problems for investigation in building research institutes are generally common, the solutions to them, however, vary from country to country, according to climate, soil, availability of indigenous materials and other factors. So far as India is concerned, the solution found in Europe and the U.S. in reducing costs and improving quality of buildings is not of much value, in view of the basically different character of Indian and Western houses, or more exactly, because of the basically different standards of performance required in temperate and tropical zones. The Institute will, therefore, pay special attention to factors governing comfort and efficiency under tropical conditions and the use of indigenous materials such as, stone, clay and bamboo, among others. The work of the Institute will be carried out under four main heads, viz., problems relating to (*a*) building materials, (*b*) methods of construction, (*c*) performance of buildings, and (*d*) survey and information. Work done so far in the Institute regarding soil stabilisation, improvement of dwelling construction and waterproofing have already yielded some results. Research work in these will be carried further.

If at all research is to be successful, it must be carried out, as pertinently pointed out by Dr. Kurt Billig, Director of the Central Building Research Institute, on the occasion of its formal opening, in close contact with the building industry interests, namely, manufacturers of building materials and contractors on one side, and designers, architects and consultants, on the other. It is gratifying to note that the Institute is to be a clearing house for the results of building research carried out in this country in the various institutes including itself as well as in foreign countries. For that purpose, we are told, there will be attached to this Institution (*a*) pilot plants for the introduction of promising manufacturing processes and valuable techniques from abroad, as well as for the development of novel methods initiated in India. (*b*) a building centre with a permanent exhibition of building materials, fittings, plant and construction processes, and (*c*) an information centre for the collection of foreign building practices and of the research results from the institutes and universities in this country.

ARABIA

Behind the Arab of today there lies about three thousand years of history. Many centuries before it became the birthplace of Mohamed, Arabia was the home of a great civilisation. With the spread of Islam Arabia contributed greatly to the learning of the Western world, particularly in the realm of mathematics, while Arabic culture has also strongly influenced the East. Though his country consists mostly of desert, it adequately supports the hardy Bedouin who breeds the famous horses and camels. It also has one vast source of wealth . . . petroleum. The Caltex organisation, with its expert knowledge of the latest developments in petroleum research and its efficient system of distribution, is very much at the service of the Arab people.

LIFE POLICIES AND ESTATE DUTY BILL

MR. VAIDYANATHAN CONSIDERS MODIFICATION OF CERTAIN CLAUSES NECESSARY

A RECENT development which has considerably perturbed the Indian insurance industry is the Select Committee's Report on the Estate Duty Bill, 1952. This measure has been on the Legislative anvil for nearly seven years now. A similar Bill was introduced in the old Legislative Assembly in 1946. It was later reintroduced in the Provisional Parliament in 1948. Subsequently it was referred to a Select Committee, but before its report was considered the Provisional Parliament was dissolved and the Bill, therefore, lapsed. After the new Parliament assembled, it was introduced again and, for the second time, referred to a new Select Committee. It is the report of this Committee that is now before Parliament. Ever since the report of this Committee was published, it has attracted the attention of leading life insurers in this country on account of certain disquieting provisions contained in the Bill. Last week, we referred to the views on the Bill of Mr. Mrutyunjaya Prasad, expressed at the Patna Insurance Club. Since then, other insurers too have expressed their reactions, and among these, certain well considered suggestions made by the veteran insurer, Mr. L. S. Vaidyanathan, Manager of the "Oriental," India's leading life office, merits full consideration.

Writing last week in the *Insurance Supplement* of the *Hindustan Times*, Mr. Vaidyanathan has made a convincing case for modifying substantially certain sections of the Bill, as it stands, for furthering the development of life insurance in India. These are sections 9, 10 and 14 of the Bill. Before referring to these sections, it is necessary to point out that the Bill seeks to levy a duty on estate passing on the death of an individual to his heirs. As the Bill stands framed, if the estate of deceased persons includes moneys received under a life policy owned by the deceased person, it would also attract the estate duty payable by the heir. At the outset, Mr. Vaidyanathan says that "it is imperative that a specific exemption from estate duty in respect of life insurance policies, at any rate upto a limit of Rs. 1 lakh, should be granted where policy moneys are payable to named beneficiaries, that is, nominee or assignee who has already been determined by the policyholder and in whose favour he has before his death executed a nomination or assignment, either absolute or conditional." He considers that a specific provision should be incorporated in the Bill itself for granting such exemption. The *raison d'etre* for this exemption is as follows:

(1) There is need for carefully fostering insurance consciousness among the public;

(2) the development of life insurance is of greater importance to the country, as it is the chief source of savings necessary for the formation of the country's capital;

(3) the importance is all the more great because, social security, in the form of provision for one's old age and for the family in the event of death of the bread-winner, has, in India, to be provided by the individual himself, in the absence of a State-sponsored comprehensive scheme;

(4) the provisions of the Insurance Act, 1938, with respect to nomination and conditional assignment, are extremely useful to policyholders and claimants. Nominations and conditional assignments now account for 90 per cent. of the total transfers of life insurance policies. Nothing, therefore, should be done to deprive policyholders of this advantage conferred by the Insurance Act. But the benefits of the Act are neutralised by certain sections of the Estate Duty Bill; and

(5) in the overwhelming majority of cases, policyholders make gifts of their policies either at the very time of taking out policies or very soon thereafter by way of nomination or assignment. The intention is that policy moneys are meant for the benefit of the nominees or assignees. Policies should be treated as gifts and, therefore, should be exempted from estate duty.

Now to come to the clauses referred to above. Clause 9 in the Bill provides that *bona fide* gifts of property by a deceased person at least two years prior to death are exempt from estate duty. Some have doubted whether this exemption applies to gifts of moneys payable under life insurance policies. Mr. Vaidyanathan is, however, sure on that point. He opines that gifts under life policies are not quite different from gifts of any other types of property. He, therefore, suggests that clause 9 of the Bill should be suitably amended so as to make it clear that the exemption provided therein applies also to gifts (by way of assignments or nomination or taking out the policy under the Married Women's Property Act) of life insurance policies made *bona fide* and not less than two years before the death of the deceased. In the U.K., there is, he says, a similar exemption in respect of *bona fide* gifts made three years before the death of a person and such exemption applies to gifts of life insurance policies also.

Fixation of Minimum Period

There is one more consideration to be borne in mind in regard to the fixation of a minimum period which should elapse between the date of the gift and the date of death, if the gift is to be exempted from the duty. In the majority of cases, policyholders make a gift of their policies at the time of effecting insurance to nominees or assignees. If, after some time, the nominee or assignee dies, the policyholder usually effects a new nomination. If a minimum period is laid down, it may well happen that in a number of cases the policyholder may die before the expiry of the minimum period of two years from the date of the second nomination. It will not be fair to deny the second nominee the benefit of exemption from the duty, as policyholder himself had established his intention to divest himself of the interest in the policy on the very day of his first nomination.

Clause 10 of the Bill provides that the gift to be entitled to exemption must be such that the donee immediately assumes possession and enjoyment of the property and thenceforward retains it to the entire exclusion of the donor. Commenting on this section, Mr. Vaidyanathan says that it is not right to lay down this onerous condition which insists on the donor to divest himself of all interest in the policy. This restriction will undo the entire benefit conferred on policyholders and claimants by the Insurance Act, 1938, as stated already. To force the donor to effect absolute assignment as a condition of exemption of the policies from the duty, is a disservice to policyholders and claimants. Because, the difficulties and hardships to claimants which flow from the restriction would outweigh the advantages that would accrue from exemption from the estate duty.

Clause 14 lays down that money received under a policy of insurance effected by a person where the policy is kept up by him for the benefit of the donee, whether nominee or assignee, or a part of such money in proportion to the premiums paid by him where the policy is partially kept up by him for such benefit shall be subject to estate duty. This clause is bodily lifted from the English Act, but Mr. Vaidyanathan feels that the framers of the Bill have overlooked the vast difference between the conditions obtaining in the two countries. In this country, the large majority of gifts of life policies are made for the benefit of the wife of the policyholder, whereas in the U.K. it is fairly common for the wife to have a separate income wherewith she would be in a position to pay the premiums on a policy gifted to her by her husband. In India, in a minority of cases, wives will have an income of their own to pay premiums on policies gifted to them by their husbands. Again, even in cases where nomination and assignments are made, the premiums are actively paid mostly by the policyholders themselves, with the result the benefit of clause 9 exempting the policy from estate duty will not be available. Consequently, clauses 9, 10 and 14 together will render illusory the relief in respect of life insurance policies envisaged in these sections. The suggestions for amendment of the Bill of Mr. Vaidyanathan are as follows:

(i) A specific provision should be incorporated in the Bill itself for granting exemption from estate duty in respect of life insurance policies, at any rate up to a limit of Rs. 1 lakh where the policy moneys are payable to named beneficiaries, i.e., where the policy is effected under the Married Women's Property Act or where the policyholder has executed a nomination or assignment either absolute or conditional.

(ii) Proceeds of life insurance policies payable to the estate of the deceased person himself where the policy was taken out for the specific purposes of paying estate duty should be exempt from estate duty up to the extent of the estate duty itself, subject to a maximum limit of Rs. 1 lakh.

(iii) It should be made clear that clause 9 of the Bill applies also to gifts of life insurance policies. So far as gifts of life insurance policies are concerned, the conditions in clauses 9 and 10 that the gift should have been made at least two years before the date of death and that the donee should assume possession and enjoyment of the property to the entire exclusion of the donor should not operate. Clause 14 should be deleted.

The Manager of the "Oriental" finally observes that Estate Duty Acts operating on proper lines have been found to give a fillip to the progress of life insurance in other countries. The Bill now before the House of the People in India, unless modified on the lines noted above, will, he says, retard the progress of life insurance. To that extent, it will have a deleterious effect on the development of thrift habits, so very essential for social well-being and building up of national wealth. These views are worth bearing in mind by Members of Parliament, while considering the Estate Duty Bill. The modifications suggested by Mr. Vaidyanathan are necessary, if the Bill were to be of any material benefit to the country.

BOMBAY FIRE AND GENERAL INSURANCE

SMALL RISE IN PROFITS FOR 1952

A MODEST increase of Rs. 62,870 in the total earnings is disclosed by the results of working of the Bombay Fire and General Insurance Co., Ltd. (Manager: Mr. B. H. Reporter, Bombay), for the year ended 31st December, 1952, as compared with those for the previous year. Thus, the aggregate profit earned by the three departments of the Company, namely, fire, marine and accident, inclusive of interest and transfer fees, amounted to Rs. 3,84,966, as against Rs. 3,22,096 in the preceding year. The credit for this increase goes, in the main, to the marine department, the profit of which has gone up from Rs. 16,789 for 1951 to Rs. 67,057. This marked improvement is in refreshing contrast to the setback suffered by this department last year. The fire department, too, has shown an improvement in profit, albeit slightly, from Rs. 2.56 lakhs to Rs. 2.64 lakhs. The profit of the accident department, however, is slightly lower at Rs. 15,427, as against Rs. 16,257 for 1951. The return to shareholders has been maintained, as in previous years, at 5% per cent. per annum.

A detailed analysis of the performance of individual departments reveals that, in the fire department, the net premiums received staged a setback from Rs. 10.22 lakhs in 1951 to Rs. 8.89 lakhs in the year under review. The fall is due to a decline in the receipts from business effected both in India and abroad. Thus, premiums earned in India witnessed a sharp drop from Rs. 6.71 lakhs in 1951 to Rs. 5.87 lakhs and those derived from outside India from Rs. 3.51 lakhs to Rs. 3.02 lakhs. Expenses of management, including commission, were slightly higher at Rs. 4.84 lakhs, as against Rs. 4.64 lakhs. The claims experience was also slightly unfavourable, in that the total claims amounted to Rs. 1.93 lakhs, as compared with Rs. 1.75 lakhs. Although the fire fund stood lower at Rs. 4.60 lakhs, as against Rs. 5.26 lakhs, it represents over 50 per cent. of the net premiums.

The net premiums received in the marine department too show a small recession of about Rs. 23,000 to Rs. 2.60 lakhs. The recession is solely due to a setback in the business done in India. For the premiums received on this account have declined from Rs. 1.72 lakhs to Rs. 1.37 lakhs in the year under review. It is, however, gratifying to note there has been a steady improvement in marine premiums derived from business effected outside India. Thus, these premiums, which amounted to Rs. 1.03 lakhs in 1950 rose gradually to Rs. 1.11 lakhs in the following year and to Rs. 1.24 lakhs in 1952. Expenses of management, including commission, have registered a marked decline from Rs. 1.17 lakhs to Rs. 84,837. Claims incurred aggregated Rs. 1.30 lakhs, as against Rs. 1.73 lakhs in the previous year. The marine fund, which is slightly lower at Rs. 2.60 lakhs, remains at 100 per cent. of the premium income. The net effect of lower expenses and claims, as against a fall in premium receipts, has been an improvement in the profit from Rs. 16,789 to Rs. 67,057.

The performance of the accident department during the year under review was slightly unfavourable, as compared with that in the previous year. Premium receipts from business in India declined from Rs. 1.38 lakhs to Rs. 1.19 lakhs, although those derived from abroad improved from Rs. 14,161 to Rs. 20,533. In the result, the total premiums earned by the department were lower at Rs. 1.40 lakhs, as against Rs. 1.52 lakhs during the preceding year. The loss ratio was lower at 41 per cent., as against 43.1 per cent. a year before. The expense ratio, however, rose from 36.5 per cent. of the premium income to 51.2 per cent. The accident fund has had to be reduced from Rs. 77,445 to Rs. 71,330, but it is still over 50 per cent. of the premium income.

The profit and loss account shows that, during the year, no provision has been made for either loss on realisation in investments as in the previous years. The sum available for disposal amounts to Rs. 5,91,974, as against Rs. 4,30,608, which includes Rs. 2,07,008 brought in from the previous year. Out of this sum, the Directors have provided a larger sum of Rs. 2,00,000 for taxation (as against Rs. 1,50,000 in 1951). The transfer reserve for contingencies at Rs. 1,00,000 is twice as high as the sum set apart in the preceding year. The Directors have maintained the dividend to shareholders at 5% per cent. per annum. This means that the dividend on shares of Rs. 10 paid-up is As. 9 per share and on Rs. 40 paid-ups is Rs. 2-4 per share. As this distribution to shareholders absorbs Rs. 23,600, the amount carried forward to the current year is substantially higher at Rs. 2.68 lakhs, as against Rs. 2.07 lakhs brought in.

PANDYAN INSURANCE CO., LTD.

The year ended 31st December, 1952, has turned out to be another favourable one for the Pandyan Insurance Co., Ltd. (Manager: Mr. S. C. Rawlinson, Madurai, S. India), so far as new business underwritten is concerned. For there has been an all-round increase in the premium income, less reinsurances, derived from all the three departments, namely, fire, marine and miscellaneous. In the marine [illegible] claims, however, the Company's experience has not been equally encouraging, inasmuch as claims paid and outstanding have gone up both absolutely and in relation to the premium income. The heavier claims experience has inevitably affected the balance available for appropriation, after maintaining the reserves for unexpired risks at 50 per cent. of the premium income of each of the fire and miscellaneous departments and at 100 per cent. of that of the marine department. The addition to the general reserve has been reduced from Rs. 3 lakhs to Rs. 2.5 lakhs, but the dividend is maintained at 15 per cent. per annum, free of income-tax.

The fire revenue account shows that premiums, less reinsurance, have gone up from Rs. 8.12 lakhs to Rs. 8.15 lakhs, but the improvement has not been of the same order as that noted in the previous year. Of these premiums, those derived from business effected in India has declined from Rs. 3.57 lakhs to Rs. 3.16 lakhs, while those from outside India has improved from Rs. 4.55 lakhs to Rs. 4.98 lakhs. Claims paid and outstanding disclose a sharp rise from Rs. 1.87 lakhs to Rs. 3.03 lakhs, representing a rise from 23 per cent. to 37.1 per cent. of the premium incomes for 1951 and 1952, respectively. After meeting all expenses and commission on reinsurances and after providing a reserve for unexpired risks of 50 per cent. of the premium income, the balance transferred to the profit and loss account is Rs. 2.30 lakhs, as against Rs. 2.40 lakhs a year ago.

Marine premium income has risen from Rs. 5.67 lakhs to Rs. 6.25 lakhs, the incomes from business effected in both India and outside participating in the increase. The claims, at Rs. 95,795 (as against Rs. 39,023) represent 15.3 per cent. of the premium, as compared with 6.9 per cent. in the preceding year. The marine fund stands at Rs. 6.25 lakhs or 100 per cent. of the premium, but the balance transferred to the profit and loss account is lower at Rs. 2.28 lakhs as against Rs. 3.08 lakhs a year before.

The premium income from miscellaneous insurance has gone up from Rs. 2.27 lakhs to Rs. 3.13 lakhs and alongside of it the claims also. The claims ratio has gone up from 22.7 per cent. (Rs. 51,517) to 48.1 per cent. (Rs. 1.51 lakhs). After providing 50 per cent. of the premium income for miscellaneous insurance fund, the profit and loss account has been credited with Rs. 10,959 (as against Rs. 78,025).

The following table gives an idea of the Company's financial position as at the end of 1952:

	Rs.	Rs.
Capital (paid up)		20,00,000
General reserve		47,50,000
Profit and loss account (after providing for a dividend of 15 per cent.) ...		4,354
Insurance funds:		
Fire	4,07,408	
Marine	6,25,037	
Miscellaneous	1,56,651	
		11,89,096
		Rs. 79,43,450

The Company's investments in Gilt-edged securities, shares and debentures in India at book value amount to Rs. 48.96 lakhs, the market value of the same being Rs. 49.99 lakhs. Its investments in Pakistan Government securities of the face value of Rs. 3.50 lakhs are valued at Indian Rs. 5.03 lakhs.

THE BANK OF JAIPUR LIMITED

TENTH ANNUAL GENERAL MEETING

MR. RAMNATH A. PODAR ACCORDS SUPPORT TO FIVE-YEAR PLAN

ADDRESSING the shareholders of the Bank of Jaipur Ltd., at their Tenth Annual General Meeting held in Jaipur on the 13th inst., Mr. Ramnath A. Podar, Chairman of the Bank, made a brief reference to the Five-year Plan. He was of the opinion that the ambitions of the Planning Commission were modest and that the country had nothing to be alarmed about the outlay on the Plan. He held out the assurance that banks in the country would never hesitate to throw their full weight with the Government in its task of implementing the Plan successfully. He felt confident that deficit financing would have plain sailing, so long as the quantum of such financing remained strictly limited to the ability of the Government to impose effective controls over credit and money. "Orthodox principles of sound finance have sometimes to be sacrificed to suit the circumstances prevailing at a given time to attain a certain end," he added. Even though there was bound to be some inflation, as a result of deficit financing, he thought that the risk was worth taking. Referring to the proposed merger of banks in Rajasthan, Mr. Podar assured the shareholders that the Directors would safeguard the interests of the latter to the best of their ability.

The following is the full text of Mr. Podar's speech:

"GENTLEMEN,

"I have much pleasure in welcoming you to this, the Tenth Annual General Meeting. The balance-sheet and the statement of accounts have now been in your hands for some time and I trust you have perused them with interest and pleasure.

"A decade is nothing in the æon of time, neither is it much in the history of banks, even in this country, but it is certainly a landmark in the progress of your Bank and, I think, it is a matter for satisfaction that we have been able to keep our head above water, so to speak, amidst so many vicissitudes and hardships, not uncommon in the first formative years of institutions such as yours. I may, however, point out that we have been able to pay continuous dividends for seven out of ten years and you will agree, that it is not at all a mean achievement.

Bank's Accounts

"The first thing that must have struck you while perusing the balance-sheet is the fall in profits. Even though it is nothing extraordinary in the banking industry this year, it requires some explanation. You will remember that in recent years, our advances were over-extended and naturally profits were higher. Deposits were also much higher and far less expensive. But times change and the year under review saw a change. It has been the most difficult year in the history of the Bank. First, due to a rise in the Bank of England rate, the local Exchange banks found it more profitable to obtain funds locally, and money rates commenced an upward swing. Secondly, due to contraction of money supply during the year, floating money in the country touched bottom and there was a regular scramble for available deposits at continously rising rates. Call money touched an unprecedented rate, at least during the last quarter century, of 3 per cent. and banks competed for fixed maturities at even higher rates. Those who stuck to orthodox principles were the losers in this keen struggle. Our deposits declined during the year, chiefly due to the reason that, as a matter of policy, we declined to accept funds at what we considered uneconomic rates, the extent of fall being of the order of about Rs. 75 lakhs. It is small consolation that several others, far older and considerably larger banks than ours, suffered the same fate in more or less degree. Even the deposits of the Imperial Bank this year have been the lowest in the past ten years.

"Deposits having declined and become more expensive, as will be seen from the amount of interest paid, there has also been a rise in charges due to higher salaries paid to clerical and subordinate staff in accordance with the Award, which, unlike during former years, is being made applicable to Part B States also. Thus, we have been forced to burn the candle at both ends. The All-India (Banks) Tribunal, before whom protracted proceedings took place for about a year, is believed to have submitted its report to Government, but one does not know when Government will make it public. It is, however, likely to be far more comprehensive and to embrace practically all cadres in the banks' service. Thus, banking is being threatened with fetters and shackles on all sides and prospects of peaceful progressive development seem to be fraught with considerable anxiety and apprehension.

"Banking, unlike other concerns, commercial or industrial, is conservative, stolid and reserved. To keep our position perfectly safe, it was necessary to cut down ruthlessly our advances, not only in conformity with the decline in deposits, but even further, though, at the end of the year, the overall decrease is only about Rs. 60 lakhs. Nevertheless, the judicious employment of funds during the year has, on the whole, been satisfactory, culminating in higher gross earnings, and has resulted in a net profit of Rs. 3,98,954-9-11, as compared with the corresponding figure of Rs. 4,59,120-13 last year. The dividend has been maintained, the necessary provision for reserves and taxation has been made and there is a carry forward of Rs. 35,324-7-10 for the next year.

"It may also be mentioned that, in the balance-sheet, all reserves are lumped together, while actually reserves under section 17 of the Banking Companies Act now amount to Rs. 6 lakhs. Reserves under other than section 17 which can be freely handled are Rs. 8 lakhs. Dividend equalisation fund amounts to Rs. 1 lakh. In all, the total of our reserve funds is Rs. 15 lakhs, which, I am sure, you will consider not at all unsatisfactory.

"There is one more item which needs explanation and that is the figure of Rs. 11,94,000 shown as claims against the Bank not acknowledged as debts. Of this amount, a sum of Rs. 11½ lakhs has been claimed by the Bank in the exercise of its right of set-off against moneys due to the Bank. The remaining amount of Rs. 40,000 is in respect of a payment claimed under a forged token.

Progress in Rajasthan

"Having fully and frankly explained what I deemed points of domestic interest to you, I should like briefly to touch upon matters of interest in the Rajasthan State. Formerly, for several years in succession, your Bank had played a very prominent part in the financial field, as affecting the Jaipur State, and latterly the State of Rajasthan. But now the development projects, such as the Chambal Valley Project, public health and rural sanitation, are some of the items provided for in Rajasthan's budget for 1953-54. The Five-year Plan has allotted Rs. 16.81 crores to Rajasthan and about Rs. 4 crores will be spent during the coming financial year, including, of course, the allocation from the State sector. The Community Projects Scheme has roused the enthusiasm of the people and their co-operation in the implementation of the scheme has been very much in evidence. Even though the food situation is not entirely free from anxiety, rationing has been abolished and the State is making every effort to be self-dependent and, if the contretemps obtaining in the political field just now is patched up, there is every hope of the Government of Rajasthan making a good job of it. In fact, the Chief Minister's recent speech ends with the hope that, given guidance and assistance by the Centre, there will be 'none ill-housed, ill-clad and ill-nourished and every one would be placed in a position to live better, have better educational, medical and other facilities and lead a life of prosperity and progress.'

The Five-year Plan

"As regards the Plan itself, the Union Government has only acted in a logical and rational manner. It is but a poor sailor who ventures on a voyage without a chart or compass; a coachman with only a carriage, but no horse. The Plan has its protagonists as well as its antagonists. This is as it should be, for it is impossible to please everybody. The pessimist is afraid that the Plan will fail, the optimist is determined to make it succeed. One is full of complaints that agriculture has not received its adequate share; that industry has been neglected; that the private sector has been ignored; that the targets set are too ambitious; that Government resources have sunk to the bottom. The other gently points out that the main thing is to get going and learn by experience; that we talk too much and do too little. There may possibly be something in each of these. But, by and large, the Plan has received considerable praise for its thoroughness not only in this country but throughout the world. Business men, on the whole, have pledged their co-operation to the Plan, while banks in the country will never hesitate to throw their full weight towards its successful implementation.

"The question 'will it work?' has been on the lips of every thinking person both in and out of the country. It is one thing to chalk out grandiose plans and quite another to make them work. Some say we have pushbyke income and Rolls Royce taste. But it must not be forgotten that the one who aims at the sky will shoot higher than the other who aims at the tree-top. The total outlay of Rs. 2,069 crores really means an investment of about 5 per cent. of the national income, which cannot be considered to be unduly heavy. The present Government debt of about Rs. 2,500 crores works out to about Rs. 70 per head. Similar commitments in other progressive countries are considerably larger and I feel this country has nothing to be alarmed about. And, after all, what does it mean in money outlay—a hare rupee per head per month for five years! Surely, the ambitions of the Planning Commission are modest enough.

Deficit Financing

"As regards deficit financing, it is the principle that is objected to in most quarters. Deficit financing or created money can certainly be bad, lead to inflation, unhealthy rise in prices and other evils. Some even say that it is the most inequitous form of taxation which makes the rich richer and the poor poorer. Deficit financing is like a stimulant. If used well, it can do good; if abused, it can do harm. Moreover, economic climate for deficit financing appears to be, at present, favourable and, so long as the quantum of deficit finance is strictly limited to the ability of the Government to impose effective controls over credit and money supply, I am confident that it will be plain sailing. Orthodox principles of sound finance have sometimes to be sacrificed to suit the circumstances prevailing at a given time to attain a certain end.

"It must be remembered that for a country like ours, with its vast potential resources, deficit financing to the extent of Rs. 290 crores is of a modest nature indeed. What most people fear, however, is not the size of the deficit financing, nor even the ability of the Union Government to wield this instrument with skill, but the effectiveness of its control over the State Governments or their unwillingness to co-ordinate their policies in tune with the Centre. Co-operation of the people of the country is necessary to make a success of a Plan of this nature. The Finance Minister is fully aware of the risks of the policy of deficit finance. He has assured the country that he will watch the impact of deficit financing on the national economy at every stage, that he would apply the brakes where and when necessary and has asked the country to place confidence in him. If the past is any guide, it would appear that the credit of the country is in very good hands and it is the duty of every citizen to go all out to lend his valuable and enthusiastic support. Even though I do not want to give an impression of elation at the prospect of inflation, for some inflation there is bound to be, I think the risk is worth taking.

"Time was when fantastic pronouncements on major matters of policy emanated from various quarters, but that responsible Ministers should talk of nationalisation of banking and insurance at this time appears to me to be most inopportune. When all encouragement, direct and indirect, is avidly looked for, unpalatable forebodings are likely to discourage those labouring in these fields.

"In a country like ours, where direct taxation is already higher than anywhere in the world, except perhaps in the United States and the United Kingdom and that too on topmost slabs only, the recent budget of the Union had to be so designed as to keep alive, even to a limited degree, the incentive to produce and save. It is also welcome news that the Taxation Enquiry Commission headed by the veteran Dr. John Matthai will enquire into our taxation problems and the Finance Minister will have the benefit of its report before he formulates his next budget.

"The country has now definitely turned the proverbial corner, thanks to the adoption, two years ago, of the policy outlined in the Plan. We have spent already some Rs. 600 crores and there has been an all-round rise in the output of various commodities, including food. In the field of foreign trade, the Government has revised its policy to stimulate exports which are so very important for the success of the Plan. Our adverse balance of Rs. 170.39 crores in the first six months was reduced in the second half-year to Rs. 3.72 crores. Various projects, such as the Damodar Valley, designed for 2,00,000 kw. capacity, towards which a total aid of 38 million dollars has been given by the World Bank, have made headway and it is but a matter of time when India will have firmly conquered the cruel vagaries of nature in the shape of droughts and floods, rendering destitute and hungry millions of people all over the land. It is this fight that the country is at present engaged in and it is here that all our resources are to be mobilised. The main problem to be solved, as Sir George Schuster recently said, is to place the great bulk of the natural increase in population in industry or tertiary employment, to expand our manufacturing industry and increase our agricultural production. India's development, he said, depended on four elements—men, material, machines and money. Far more stress is laid on money than it really deserves. What is far more important is the man-power judiciously employed. Peaceful and placid nation that we are, it is, nevertheless, necessary to lend our individual might to control the forces of destruction from all sources, internal or external, natural or artificial, to make this country a place worthy to live in and noble to die for.

The Merger of Banks in Rajasthan

"I will now come to the subject which must be uppermost in your minds and naturally you will expect me to throw some light on it. As early as 1946, I had mentioned that amalgamation rather than nationalisation would be the most appropriate for the integration of small units in the banking industry. Three years later, you will remember that the Government of Jaipur, through its Chief Minister, had expressed its wish to see the three banks, originating in Rajasthan and, at present, entrusted with the State Treasury business, consolidated into one strong unit, following the pattern of integration of the Rajasthan States. Soon after, in my speech at the seventh annual general meeting, I stated that your Directors welcomed this suggestion of amalgamation, in principle, and that they were ready to make every sacrifice. But, due to several difficulties as a result of Partition, etc., it was not possible for all the three banks to come to a decision. The Reserve Bank having now shown their willingness to entrust their agency throughout Rajasthan and give their currency chest and Treasury work to the new institution, in case the three banks, the Bank of Rajasthan, the Bank of Bikaner and ourselves merge themselves into one unit, I am happy to inform you that all the three banks have agreed to get together and work out details. Things being more or less in a fluid state you will not expect me to go into details of advantages likely to accrue to the institution, as a whole, but suffice to say that the benefits will be considerable, the status much enhanced, competition for business eliminated and wasteful expenditure avoided.

"I can assure you that your Directors will safeguard your interests to the best of their ability and if the scheme materialises, as everyone is optimistically inclined to believe it will, we may have to call a special general meeting of shareholders to consider the scheme in all its details.

Head Office Premises

"You will remember that this beautiful building specially designed and constructed for the Bank was opened last year by His Highness the Rajpramukh of Rajasthan in the presence of a very large gathering and now affords ample space for the staff, comfortable banking hall for our constituents and a luxurious safe deposit vault for the public at large.

"In conclusion, I trust that the Government of Rajasthan, the shareholders, our customers and well-wishers will continue their patronage, guidance and goodwill in ever-increasing measure, till we come out as we earnestly hope, in new feathers in the shape of consolidated and considerably stronger, larger and closely-knit unit in the very near future.

"On your behalf and mine, I would like to express our cordial thanks to the General Manager, officers and the staff of the Bank for their faithful services throughout the year."

DEPOSITS OF PUNJAB NATIONAL BANK HIGHER

LALA YODHRAJ'S PLEA FOR GOVERNMENT GUARANTEE OF BANK DEPOSITS

IMPORTANCE OF LARGER INVESTMENTS IN GILT-EDGED STRESSED

WITH an array of facts and figures, supported by examples of other industrially advanced countries such as Germany, Soviet Russia, the U.S. and the U.K., Lala Yodhraj, Chairman and General Manager of the Punjab National Bank Ltd., puts forward the thesis that, if the State is to avoid resort to deficit financing, it is imperative that the banks should hold more Government securities, which is possible only when there is an increase in their total deposits. This thesis forms the main theme of his statement circulated to the shareholders, along with the accounts of the Bank for the year 1952, to be considered at the 106th Ordinary General Meeting in Delhi on 9th May, 1953. The increase in deposits, Lala Yodhraj feels, can be brought about if the Government guarantees the deposits. For the implementation of this proposal, he suggests the setting up of a "suitable machinery to examine periodically the statements of assets, including loans and advances, of each bank and to give necessary directions to the management." Reviewing the recent economic trends, he opines that the Government of India is in a favourable position to frame sound monetary policies for providing adequate finance for the successful implementation of the Five-year Plan. Nevertheless, he apprehends a possible slump, following the slowing down of stock-piling in the U.S., and emphasises the need for adopting a judicious expansion of credit policy.

The following is the full text of Lala Yodhraj's statement:

"GENTLEMEN,

"It is a great pleasure to me to meet the shareholders again at the annual meeting and to submit for approval the audited balance-sheet and profit and loss account for the year ended 31st December, 1952. The year's working has resulted in a profit of Rs. 39,46,306-7 (including Rs. 5,33,828-14-11 brought forward from the previous year's account). After paying dividend at 6 per cent. per annum to the shareholders, it is proposed to make the following allocations:—

		Rs.	a.	p.
1.	Bonus to the staff	5,48,462	3	3
2.	Provision for income-tax ...	15,00,000	0	0
3.	Scaling down of Pakistan assets in view of Displaced Persons' (Debts Adjustments) Act, 1951	7,92,275	6	6
4.	Transferred to reserve fund	1,45,707	10	11
5.	Transferred to contingency reserve	2,00,000	0	0

Prospects of Banking Development

"A sum of Rs. 1,92,604-14 is being carried forward to the next year's account. Our paid-up capital continues at the old figure of Rs. 87,50,000, but our reserve fund has gone up by Rs. 1,50,000, during 1952; both aggregate Rs. 1,76,50,000. Of the profits, bonus paid to the staff during the year is 13.8 per cent., while the dividend paid to the shareholders is 13.3 per cent. The establishment expenses have gone up by about rupees one million. The largest slice in this increase is represented by annual increments to the workmen including a sum of Rs. 1,72,000, on account of increase in the bonus paid. The staff as a whole has received Rs. 1,32,00,000 during the year. The total cost of establishment is bound to keep on rising by the amount of annual promotions due. The profits of the Bank must be increased fully to cover these, including the increased costs of annual promotions. I am an optimist on this point. Our country is enjoying the benefits of a sound and stable Government. Private enterprise is expanding, industrial and agricultural production going up and total employment in factories increasing. With the progress of the Five-year Plan, we will be saving a large amount of foreign exchange now utilised for the import of foodgrains. As the industries of the country develop on the basis of increased agricultural production, including jute, cotton, oilseeds, etc., banking is bound to expand and the habit of saving to grow. We should, therefore, look forward to larger profits resulting from an increased prosperity of the country.

"Deposits and other accounts stand at Rs. 58,94,02,036,10-7 and represent an increase of Rs. 70 million over last year's figure, as against a decrease of Rs. 240 million in the case of Scheduled Banks (from 28th December, 1951 to 2nd January, 1953). This rise in our deposits is entirely due to the confidence the public places in our institution and in the ability of the management to conduct its affairs efficiently. The sound loaning policy of the Bank has helped in creating the necessary background for this confidence. Our total working capital is Rs. 73,98,67,929-7-7, as against Rs. 67,51,82,527-15-8 last year. The total working capital of the 'Big three' banks, which have published their balance-sheets, shows a decline of Rs. 265 million. As against this, the working capital of your bank has gone up by Rs. 6,46,85,401-7-11 and it now ranks *second* among the 'Big Five.'

Assets

"On the assets side, the figures indicate a strong liquid position. Cash, bank balance, money at call and short notice and investment in Government securities aggregate Rs. 33,94,04,829-7-2, forming 57.5 per cent. of deposits. The demand drafts in hand amount to Rs. 2,49,85,388-5. If these are added to the other liquid assets, the total comes to Rs. 36,43,90,217-12-2, raising the ratio of our liquid assets to deposits to 61.8. This must be considered as very satisfactory.

"The total of our loans and advances amounts to Rs. 29,29,39,977-5-9, as against Rs. 24,22,04,981-5-11 in 1951, which is equivalent to 39.5 per cent. of our total assets and 49.7 per cent. of our deposits. The general trend, as revealed by the published figures of the Scheduled Banks, shows a decline of Rs. 742 million under this head. The 'Big Three' record a decline of Rs. 197.6 million. Our policy in the making of loans and advances has been to maintain a balance between the needs of the small and the large borrower and proper utilisation of loanable funds in different areas. The total number of loan accounts at one time during the last year was approximately 14,500 and the average amount of advance about Rs. 20,300. On 26th December, 1952, nearly 62 per cent. of our loans and advances were against agricultural produce, manufactured and sundry goods in effective possession of the Bank and 5.3 per cent. against G.P. notes and shares. Loans against bank deposits and surrender value of life policies and D.Ds. purchased, which may be considered as self-liquidating assets, accounted for 16 per cent. Advances against gold and silver were 4.2 per cent., while mortgage loans amounted to another 4.2 per cent. Our total lendings are well spread over a wide range of securities and over all parts of the country.

Business Conditions in India During 1952

"The year 1951 was marked by increased rearmament activity, heavy stock-piling, cornering of goods by speculators and rising prices in almost all countries. But the close of the year saw the situation take a turn for the better. There was a marked fall in the demand for essential raw materials and staple commodities, which, coupled with increased production, led to a slump in prices. India was particularly hard hit. Her principal articles of export, like jute and jute manufactures, oils and oilseeds, mica, tea, cotton, hides and skins, etc., suffered severely. The Indian wholesale price index, which stood at 432 at the end of December, 1951, (base: August 1939=100), came down to 364.9 by the first week of March, 1952. There began a slow recovery thereafter. Since June, 1952, with a short break in September, the price index showed an upward trend and stood at 374.5 at the close of the year. During the year, the recession in industrial raw material sector was the greatest, i.e., 25 per cent., as compared to 10.5 per cent. in food articles, 6.7 per cent. in manufactured goods and 6 per cent. in semi-manufactured goods. The later part of the year witnessed the lifting of controls from various strategic raw materials and staple articles in important producing countries of the world. There were also signs of overproduction in the world steel industry.

"The equity market in India suffered a setback during the year. The index of variable dividend industrial securities dropped by 14 per cent. from 121.7 to 107.7. The rates of ordinary shares practically receded to their 1939 levels, though the fixed dividend yielding securities showed only fractional losses.

"The bullion market was also not left untouched by recession and, twice during the year, it touched the lowest level, never before seen in the post-war period. The difference between the highest and the lowest levels touched, in the ready section, was Rs. 55-3 per hundred tolas of silver and Rs. 29-8 per tola in gold. In distinct contrast to the commodity, share and bullion markets during the year, Gilt-edged presented a relatively steady trend. The index number of Government and semi-Government securities stood at 91.8 on 29th December, 1951. It steadied upto 92.2 in the second week of June, 1952. The year, however, closed at the starting point of 91.8.

Effect of Monetary Discipline

"The effect of monetary discipline and disinflationary measures enforced by the monetary authorities in several countries was reflected not only in their prices but also in their monetary and banking sectors. The volume of currency shrank, net deposits of the Scheduled Banks declined, volume of credit fell, and advances and bills discounted and purchased dropped from the previous level in India. These, in turn, led to a fall in the profits of the banks which are estimated to be on the lower side from 5 to 10 per cent., as compared with last year. The main reason affecting the profits of banks has been the substantial rise in expenses without any compensating factor. The banks, moreover, had to concede higher rates on deposits, which were not compensated for adequately by an increase in loan rates, as their total advances during the year dropped by as much as Rs. 666 million.

Five-year Plan

"Before I close, I would like to refer to India's Five-year Plan and the role which the banks can play in its successful implementation. We could profit from a study of the methods adopted by other countries and make necessary modifications in these to suit our peculiar needs and conditions.

"All development plans are strictly conditioned by the existing potential capacity of heavy industry, the willingness of the foreign countries to allow export of machinery and materials and the amount of foreign exchange available for such imports. Resources for development can be further supplemented by a curtailment of consumption, diversion of a part of existing output capacity of consumers' goods industries to the making of capital goods, and postponement of repairs and replacements.

"On the financial plane, in the last resort, the economic development is essentially limited by the 'savings fund' of the community, that is, the difference between the existing income and consumption. There is, however, growing inclination among the economists to regard such a pre-existing 'savings fund' as a myth. The margin between income and consumption can be enlarged by augmenting the former as by lowering the latter. Plans of capital construction augment the income of the people from the moment of their inception and not when they are completed. Release of purchasing power, whether it comes from printing of new notes, borrowings or surplus balances from the annual budget, automatically and simultaneously increases the income of the community. An assumption underlying this argument is that the economic system does contain elements of reserve productive capacity in the shape of unutilised or under-utilised labour and resources and that the purchasing power released by Governmental spending on the Plan is wholly, or a considerable part of it, siphoned back into savings. From this point of view, India is in a favourable position. We have a vast reserve of unemployed or under-employed labour in the country and the gap between potential capacity and actual production is not inconsiderable. A greater part of the target of production laid down in the Plan can be covered by existing productive capacity of industry.

"If, during the period of the Plan, cottage industries of India could be harnessed for the production of more and more consumers' goods, this would enable the resources of the machine industry to be diverted to the production of goods more urgently required for the completion of the Plan. Of a total farm population of about 249 million in India engaged in agriculture, about 85 million may be considered as active farm workers. Twenty-five to 30 per cent. of them may be considered as superfluous, who could be taken off the land without loss to agriculture. With the reorganisation in the social and property relations of the village and consolidation of scattered holdings, etc., the transfer of labour from village to the sites of multi-purpose projects and to towns can march in company with an actual increase in the output of agriculture.

Possible Snag

"Plans, however detailed they may be, can deal only with the main contours of economy. The filling out of these with details, the application of general directives to particular situations, must be decentralised. The Plan has to reach out, in its last details, the people who have actually to work it. The character of the personnel near the periphery is as important as the quality of central leadership. The general shape of the Plan may be good, as it undoubtedly is in the case of India, but the snag may come from the lack of capable lieutenants and sergeants on whom the general has to depend. In some countries, the plans have met with passive resistance, if not economic sabotage, from the *entrepreneurs* holding the rights of economic sovereignty. Fortunately for India, private business has come forward with their bold offer of wholehearted co-operation in the implementation of the Plan.

"'Plan fulfilment' is as important as the preparation of a plan. If the Plan is not followed up by supervision over its fulfilment, it becomes a scrap of paper. Supervision does not mean simply a *post facto* audit or inspection to allot praise or blame for achieving or failure, but the process of fitting a plan to actual data and of testing out its correspondence with reality. A democratic Government must conduct its economic planning in a manner which preserves the maximum possible freedom of choice to the individual and leaves undisturbed the essential flexibility of the economic life of the community. The Indian Plan is essentially a democratic plan. It does aim, like 'proletarian plans,' at the improvement of the position of the propertyless classes of society by a redistribution of income derived from property. But it nowhere implies collective ownership of the material means of production or collectivist direction or control of their use. It is possible to have much planning with little socialism or little planning with much socialism. The Indian Plan steers clear of both. In fact, it is not a plan in the formal sense of the word in which it is used in the Communist countries. The corner-stone of India's Plan is its combination of bold plans of multi-purpose projects with yet a bolder transformation of the property relations in the rural economy, which still bears marks of feudalism.

Arrangement of Priorities

"The best way to proceed is so to arrange priorities as will reduce the dependence on foreign food. All such investments as increase the output of food, e.g., irrigation, land reclamation, production of manures and improvement of livestock, are of the greatest urgency. The Indian Plan, from this point of view, is conceived on right lines. But we have to remember that planning in backward countries imposes a much bigger task on Government than it does in advanced countries, as the Government has to do many things which, in the latter countries, can be left to *entrepreneurs*.

"Planning also requires a strong, competent and incorrupt administration which must be able to enforce its measures, such as enforcement of controls and rationing without black markets. It must be able to understand the large issues that are at stake and to act reasonably and rapidly. The masses, even if they are inarticulate, will sooner or later resist violently such measures as are corruptly administered, however acceptable otherwise these may be.

The Crux of the Problem

"The crux of the problem in India is its backward system of agriculture, lack of scientific knowledge, poor equipment, inefficient marketing, insecure tenure, uneconomic small-scale of operations and rural over-population. For all these, there are recognised remedies, and fortunately for India, the public works, the roads and railways, irrigation, electric and water systems, etc., are all fairly well established. Health, education, courts, and police are also functioning well. It should, however, be remembered that very little headway will be made with planning, unless the interest and the enthusiasm of the people are awakened and held. Popular enthusiasm is both the lubricating oil of planning and petrol of economic development—a dynamic force that almost makes all things possible. The democratic countries felt this enthusiasm during the war period. India could also progress rapidly, if its Government could tap this dynamic force. The Government of India have politically and economically broken the landowners, and by diverse social and labour legislation, finally sealed the economic and political fate of big finance. But these are only negative achievements. For positive results and to fill up the vacuum, they must give something about which the public enthusiasm can be roused.

Russian Example

"Russia affords a unique example of the transformation of a formerly backward country to a country of extensive industrialisation and modern technique, brought about unaided by any considerable import of foreign capital.

"Prior to 1917, she was not unlike India which to-day stands upon the threshold of ambitious schemes of development. Like India, she had a small *per capita* national income, a low standard of life, relatively little developed industries and majority of the rural population engaged in types of agriculture, which had a very low yield in relation both to man-power and acreage. She was again, like India, overwhelmingly dependent on imports for the supply of an extensive range of both capital and consumers' goods. Russia may be considered as the pioneer of plans. Her success in this has indicated the feasibility of central planning without the device either of a market for capital goods or of an interest charge on capital as an accounting category. Her industrial development, during the period of the plans beginning in 1928, has generally taken the form of constructing large specialised plants and concentrating on the production of a few standard types of machines and goods. The Soviet planning has mainly been occupied with the development of new sources of power and of raw materials, completion of engineering workshops for the production of machinery, physically transplanting whole industries in newer regions, in fact, in transforming the very constants of her economic geography. Russia's success has proved that (1) the period of time in which a programme of capital investment can become an aid to the output of consumption goods, instead of a competitor with it, is relatively a short one, (2) that the launching of a plan does not necessarily entail any prior or concurrent fall of consumption, (3) that the previous backwardness of industrial development in a region may really be due to a deficiency of economic organisation which can be made up with a little effort. Russia has paid particular attention to the steering of the plan in operation. She has paid attention to the minutest details. There are planning boards, consisting of 15 to 30 persons, in all the autonomous republics of Russia at each of the levels of the territory, the region and the canton. These boards are further divided into a number of sub-sections concerned with local industries, industrial co-operatives, agriculture, trade and road transport.

Private Enterprise

"Planning in a democratic country like India has necessarily to exclude certain courses of action and certain sectors of economy from its purview. It has to set limits within which the private sector would be allowed to function. For this purpose, it must possess extensive controlling powers and duplicate the normal apparatus of economic administration. In the public sector, sectional interests and departmentalism may arise creating centrifugal tendencies which conflict with co-ordination. There may not be a close-knit identity of aims and interests between the framers of the plan and the individuals and groups which operate the plan. There is no internal pressure to reform, and as the case of Sindri shows, production may not be adjusted to the changing conditions of demand. In the private sector, on the other hand, the profit motive, though it may not succeed in earning profits, will normally prevent a loss from being incurred. The contrast between the two will naturally work to the disadvantage of the public sector. In these circumstances, State planning must be pursued with a degree of caution or a method evolved in which the business acumen and the managerial skill of private enterprise can be fully harnessed for the service of State projects.

"Germany is an example where finance for planning (pre-war) was provided under an ingenious system. Public works were carried out by private *entrepreneurs* under contracts given by public authorities. The contractors would draw 'work creation bills' which would be accepted by the drawees and accepted by the bank designated for the area. These bills were usually of three months' maturity, but, as a rule, could be automatically renewed 20 times. Redemption at maturity was guaranteed by the State, the guarantee being the equivalent of a collateral security behind an ordinary commercial bill.

"After 1935, the German authorities developed special types of short-term paper adapted to the particular conditions of the German money market. 'Special bills' replaced the 'works creation bills.' The bills thus were direct obligations of the Reich and represented a temporary expedient of pre-financing. A new instrument, known as the 'delivery certificate,' was devised for intermediary financing and could be used as collateral against advances from the Reich Bank upto 75 per cent. of face value. By April, 1939, the 'delivery certificates' were scrapped for what came to be known as 'new finance plan,' under which 40 per cent. of the amount due to business enterprises for their deliveries under public contracts was to be paid in 'tax-credit certificates,' which were accepted in payment of Reich taxes at par plus accrued interest, after their date of issue according to the length of maturity.

The German Method

"Stripped of its roundabout features, the 'work creation bills' procedure amounted to the financing of the public spending by central bank credit, with the Reich Bank acting as the credit generating agent for the Reich. This was also true of the 'special bills' and, to a large extent, of the other type of credit instruments of the later period. Through these bills, the business needs for operating funds were covered outside of the financing apparatus of commercial banking. The control of the process of credit expansion was determined outside the banking system. To do so, a reform of the Reich Bank was carried out in October, 1933, under which its credit generating powers were considerably expanded by (1) removing the restrictions upon its powers to engage in open market operations, (2) making inoperative 40 per cent. minimum requirements of gold or gold exchange reserve, (3) giving the legal status of 'reserve' to Reich Bank holdings of fixed interest securities acquired in the open market, and (4) making the Reich Bank a Reich agency under the jurisdiction of the Department of Economics. The parallel between the Reich Bank, after these reforms were carried out, and the Reserve Bank of India is marked. The Reserve Bank has also unlimited powers to engage in open market operations and, since nationalisation, it is a Government agent under the Ministry of Finance. By making a few changes in its statutory powers, the Government could enable it to play an active part in mobilising credit on the German model for the service of the Five-year Plan. The German system made it possible to finance new investments without the pre-existence of savings. It was essentially a transitional and temporary phase, as the credit created through these instruments was but in anticipation of future saving which was bound to emerge from increased economic activity and liquidate the loans.

Institutional Savings

"The German Government evolved new methods of diverting institutional savings into Government loans which can be adopted with profit in India. This was achieved by (i) packing of their assets with Reich long-term paper; (ii) virtually eliminating alternative investment channels; (iii) imposing restrictions upon the issue of securities of the mortgage type; (iv) special long-term loans were floated and placed entirely with particular institutions, e.g., trusts, banks and insurance companies, etc., (v) a complete embargo was put on mortgage credit; (vi) all banks, co-operative credit societies, public and private insurance companies were prohibited from granting mortgage loans of any kind on real estate or building, exemptions being granted only in specified cases; and (vii) admission of new securities to official trading on stock exchanges was made subject to the approval of the Government and the same obligation was extended to non-enlisted securities traded in the free market.

"By adopting similar measures, it is possible, in my opinion, to raise sufficient funds for India's Five-year Plan through the banking system and credit mechanism of the country.

THE PUNJAB NATIONAL BANK, LIMITED, DELHI

(Established in 1895)

DIRECTORS' 106th REPORT TO THE SHAREHOLDERS FOR THE YEAR ENDED 31st DECEMBER, 1952

The General Board of Directors begs to submit to the Shareholders the audited Balance Sheet and Profit and Loss Account for the year ended 31st December, 1952.

The transactions for the year under report have resulted in a profit of Rs. 39,16,306-7-0 (including *Rs. 5,33,828-14-11 brought forward from the previous year's account*). The following amounts have been appropriated for the under-mentioned purposes:—

		Rs.	a.	p.
1.	Bonus paid to Staff during the year	5,48,462	3	3
2.	Transferred to Income-tax Provision	15,00,000	0	0
3.	Transferred to Contingency Reserve	2,00,000	0	0
4.	Transferred to Reserve Fund	1,45,707	10	11
5.	Scaling down of Pakistan Assets in view of Displaced Persons (Debts Adjustments) Act, 1951	7,92,275	6	6
6.	Charity	42,256	4	4
7.	Ad-interim Dividend at 6 per cent. per annum free of Income-tax for the half-year from 1st January, 1952 to 30th June, 1952 paid	2,62,500	0	0
	Total .. Rs.	34,91,201	9	0

The Directors recommend that the balance of Rs. 4,55,104-14-0 be disposed of as follows:—

		Rs.	a.	p.
(a)	Dividend at 6 per cent. per annum free of Income-tax, for the half-year from 1st July, 1952 to 31st December, 1952	2,62,500	0	0
(b)	Carry forward to the next year's account	1,92,604	14	0

The Bank rate remained unchanged at 3½ per cent. per annum.

The Directors consider that the working of the Bank has been satisfactory.

By Order of the General Board of Directors,
YODHRAJ,
Chairman.

DELHI, 7th March, 1953.

BALANCE SHEET AS AT 31st DECEMBER, 1952

CAPITAL AND LIABILITIES	Amount			Total

The main emphasis should be on increasing the total deposits of the banks and increasing the banks' holdings of Government securities. If the banks could hold more Government securities, they could help the State in avoiding resort to deficit finance. The Scheduled Banks' investments in Government securities formed 35.8 per cent. of their total deposits on 27th March, 1953. This percentage could be suitably raised. There are two aspects of the problem, positive and negative. The deposits of Scheduled Banks could be increased, if these are guaranteed by the Government of India and the law so modified as fully to protect the liquidity of bank assets and to ensure the ultimate realisation of deposit liabilities. Government securities should form a larger percentage of deposits, and loans and advances and cash be limited to a certain percentage. These ratios may not be fixed legally, but should be considered as 'norms' from which no deviation be allowed by the Reserve Bank. Negatively, where money is required for consumption or for keeping assets with a view to book appreciation in value, the banks should not be allowed to lend. Loans against bullion, gold and silver ornaments, shares of joint-stock companies, etc., and real estate hardly form 16 per cent. of the total loans. Limiting of loans and advances to a certain percentage of deposits, or placing of restrictions on purely consumer and speculative loans, will not adversely affect the private sector. The Government's guarantee of deposits is bound to increase their volume. It may be noted, in this context, that, while the deposits in the U.K. and the U.S.A. are a little more than 4 and 3½ times, respectively, of their total note *circulation*, in India, this proportion is only 73.4, as against 130 in 1938-39.

"For the implementation of my proposal, a suitable machinery will have to be set up to examine periodically the statements of assets, including loans and advances, of each bank, and to give necessary directions to the management. The Government will not be running any appreciable risk in guaranteeing deposits. Loss, if any, could be paid out of a special account which can subsequently be reimbursed by charging a small commission from the banks in proportion to the magnitude of the guarantee involved in each case. This accounting may be done once in three years. Of course, the Government should also take other measures for the protection of credit institutions, e.g., enactment of a law to protect them from malicious attacks, baseless rumours, etc.

Government-sponsored Schemes

"The financing and carrying out of some Government-sponsored schemes through private enterprise was allowed in Germany. The same could be allowed in India for the distribution and sale of electricity generated from multi-purpose schemes and water from Government tube-wells with a guarantee of minimum profits. The execution of Government projects, or parts of projects, could also be entrusted to private enterprise. Instead of the State undertaking the entire work from A to Z, these projects should be divided into sections and sub-sections and responsibility for executing these passed on to private and public companies with a State guarantee of minimum profit.

"The U.S.A. affords an example *par excellence* of a country which has made unparalleled progress through private enterprise and where the allocation of resources is made by countless decisions of men and women in response to price and income movements. The motive force of economic activity is the sovereignty of the consumer. Only during periods of depression and war, the Government assumes an increased responsibility for the use to be made of labour, capital and management. The United States does not believe in any central planning. The Council of Economic Advisers, while laying down economic objectives, made it clear that these were not to be confused with economic blue-prints or plans used in regulated economies.

"In the U.K., the Government relies primarily on private enterprise, though the Labour Government, in its *Economic Survey* for 1947, did commit itself further in the direction of a planned economy. They, however, disavowed a desire for a detailed system of controls which would interfere with fundamental liberties.

Rise in Productivity

"A recent review shows that political uncertainties, economic crises of 1947 and the Korean war have disturbed the even tenor of the plans of various countries. The advances on the economic front have been restrained and planners have been disappointed. A rise in productivity is the corner-stone of every plan, but annoying bottlenecks have interfered in unexpected places. The planners are generally over-ambitious in their investment programmes. Some plans call for allocations of as much as 30 per cent. of the national income. Almost all plans, excepting those of the Soviet pattern, are based on the assumption that foreign aid in plenty will be freely forthcoming. With almost every country in the world seeking aid from abroad, primarily from the United States, the 'mendicants,' as Prof. Harrod calls them, are bound to be disappointed. Western Germany, Japan, Greece and France have already become the economic wards of the U.S.A. If to these are added other 'mendicants' from Asia, the problem for Uncle Sam, however, willing and generous he may be, becomes difficult and the strain on his charity or loan portfolio terrific.

"Plans can be easily upset by untoward economic and political developments in a country or in the international sphere. In agricultural countries like Poland or India, these may be upset merely by bad weather or failure of monsoons. Their success depends upon the administrative setup and availability in the country of trained personnel for their execution. Due attention must be paid to lessening the strain of huge investment expenditure on the price structure and the balance of payments. The national plans must also be integrated with those of other countries.

"India has been efficiently solving her problems of law and order, and the country is enjoying the benefits of political stability. These conditions are not a rule in Middle and South-East Asia. India presents a welcome exception. An Indian by nature is a peace-loving, cool and calculative individual. By long traditions, he is inclined to save by restricting his consumption. Thus, both the political stability and the national character of the people favour the development of the country.

Signs Favourable

"The signs are favourable. The rise in industrial production during the two years of the Plan has been very satisfactory. This has resulted in checking the rise in prices and stabilising them at a lower level, as is shown by the following figures:

Index Numbers of Wholesale Prices and Industrial Production in India

	Wholesale prices (Base: August, 1939=100)	*Industrial production* (Base: 1946=100)
1947	—	97.2
1950	400.7	105.0
1952	386.9	128.5

"The increased production has taken place mainly in the private sector of industry which has been able to achieve the aforesaid results by additional investment of Rs. 4,900 million during the period 1947 to 1952. The rise in production has contributed to the economic stability, which, in turn, has promoted political stability. Therefore, the Government of India is in a favourable position to frame sound monetary policies for providing adequate finance for the successful completion of the Plan. The armament programme of the U.S.A. has reached such a proportion that any further stock-piling may not continue at the present rate. The markets may, therefore, experience a slump. In these circumstances, a judicious expansion of credit will not only provide finance for the Plan but may prove highly beneficial for maintaining the economic stability of the country by acting as an antidote against the apprehended slump."

THE PUNJAB NATIONAL BANK, LIMITED, DELHI—*Contd.*

REPORT OF THE AUDITORS TO THE SHAREHOLDERS OF THE PUNJAB NATIONAL BANK, LIMITED, DELHI.

We have audited the annexed Balance Sheet of the Punjab National Bank, Ltd., Delhi, as at 31st December, 1952, and the annexed Profit and Loss Account for the year ended on that date, with the books and accounts kept at the Head Office in Delhi, in which are incorporated the Returns of the Bank's Branches in Indian Union, Pakistan and Burma certified by the respective Branch Managers. We report that:

(a) We have obtained all the information and explanations we have required and have found them to be satisfactory;

(b) the transactions of the Bank, which have come to our notice, have been within the powers of the Bank;

(c) the Returns received from the Branch Offices of the Bank have been found adequate for the purposes of the audit;

(d) in our opinion the said Balance Sheet and Profit and Loss Account are drawn up in conformity with law;

(e) the Balance Sheet exhibits a true and correct view of the state of the Bank's affairs and the profit and Loss Account shows a true Balance of Profit for the year, according to the best of our information and explanations given to us and as shown by the books and records of the Bank kept at its Head Office; and

(f) in our opinion, books of account have been kept by the Bank as required by Section 130 of the Indian Companies Act, 1913.

FOREIGN EXCHANGE BUDGET IN THE PLAN

INCOMPLETE ESTIMATES HANDICAP CORRECT ASSESSMENT OF POLICY

(Contributed)

THE success or failure of a plan for economic development of an underdeveloped country such as India depends largely upon ready availability of foreign exchange for the purpose; because the scope for any sizable reduction in the domestic consumption levels to finance development is limited. While the implementation of the various schemes in the plan may increase import requirements, the nature of development itself and its effects on the incomes of the people may lead to sizable reduction in many directions of exports: and thus create acute foreign exchange difficulties during the initial period of the plan. In order to assess the needs and availability of foreign exchange resources and to devise an appropriate policy to balance the foreign exchange budget, it is necessary to estimate accurately import requirements of the plan and their cost, and possible changes in the volume and composition of exports as its result. For this purpose, a careful study of the trends in the balance of payments of a country is vital.

Balance of Payments Trends

India's post-war balance of payments have been heavily adverse. The trends show large and recurring deficits in the total balance of payments, and a serious and growing imbalance with the dollar area. The main causes for this severe weakness in the country's balance of payments position are the effects on its economy of (1) the war, (2) the Partition and (3) the successive droughts and floods since 1944-45.

During the war, increased industrial production was given priority over replacement and renovation of plant, regardless of the heavy wear and tear of machinery it involved. The acute scarcities of durable consumer and intermediary goods due to cessation of imports and transport difficulties led to the establishment of several industries. To catch up with the backlog of replacement and renovation, on the one hand, and to ensure even development of the newly established industries, on the other, there was heavy import of machinery and capital equipment in the post-war period.

Secondly, the partition of the country reduced India's resources in food and in agricultural raw materials, such as jute and cotton. This together with the successive droughts and floods since 1944-45, necessitated heavy imports of foodgrains to feed the population, and agricultural raw materials to maintain the required level of exports of their manufactures.

Owing to the extensive war-time devastation of the productive potential, the traditional supply sources of India's capital goods could not meet India's demand for these goods. Similarly, the post-war exchange difficulties and transport shortage made the restoration of the pre-war pattern of trade impossible, and reliance on the dollar area for the bulk of food imports and a substantial portion of capital goods supply, unavoidable. Moreover, the labour welfare policies of the Government of India substantially increased the structure of industrial costs and reduced the competitive capacity of Indian products in foreign markets, causing heavy deficits in its total balance of payments, and a severe imbalance with the dollar area.

The foreign exchange budget in the Five-year Plan presents two separate estimates based on a development outlay of Rs. 1,700 crores and Rs. 2,069 crores. The estimates of requirements, earnings and availability of foreign exchange, deficits in the balance of payments and the extent of foreign aid required are calculated on the 1950-51 import-export, prices and on the assumption of strict import and export controls during the planning period.

As the emphasis of the proposed development is on agriculture and labour-intensive schemes, the Plan estimates direct demand for foreign exchange, on account of development in the public sector, to amount to Rs. 400 crores, assuming a development outlay of Rs. 1,700 crores. The development proposed to be achieved in the spheres of agriculture, irrigation and industries by 1955-56 are expected to reduce import requirements, particularly in raw jute (—10.7 lakh bales), raw cotton (—0.3 lakh bales), and fertilisers (—2.2 lakh tons); and increase exports, particularly of jute manufactures (+3.5 lakh tons), coal (+2 million tons), cement (+2.7 lakh tons) and oils (+.5 lakh tons (*vide* Table I below), so as to increase export earnings by Rs. 133 crores. This will, however, be offset by increased imports of capital goods and machinery to the extent of Rs. 108 crores. In other words, the Plan estimates a net improvement of Rs. 25 crores in the balance of payments for 1955-56 over the 1950-51 level. This estimate excludes, however, foreign exchange earnings due to installation of oil refineries and increased exports to South-East Asian countries and also foreign exchange requirements for additional imports of capital goods.

In order to ensure a balanced development of the economy and to allow the schemes initiated during the second half of the planning period to mature, the Plan considers a development outlay of Rs. 2,069 crores essential. This level of expenditure will reduce the level of exports in some directions and increase import requirements due to a rise in domestic incomes. The estimated effects of this outlay on exports are set out in Table II. Besides these, exports from newly developed lines of production such as sewing machines, textile machinery, electric fans, etc., particularly to South-East Asian countries, are expected to increase. The changes in imports cannot be accurately estimated, but imports of processed raw materials, capital equipment, heavy durables, and metals to help attain the prescribed targets of production of the industries concerned will increase substantially. The net result of these changes will be a deterioration in the country's balance of payments, which is expected to show an annual deficit of Rs. 180-200 crores. In other words, an increase of Rs. 369 crores in the development outlay will wipe out the estimated improvement of Rs. 25 crores and will lead to a net annual indebtedness of Rs. 180-200 crores.

Foreign Assistance Needed

While the deficits in the balance of payments over the rest of the planning period (3¼ years) will thus amount to Rs. 600-650 crores, India's capacity to cover them out of the annual sterling releases is limited to Rs. 50 crores a year or Rs. 160 crores over the period, leaving a net deficit of Rs. 450 to Rs. 500 crores. To cover this deficit, and also to help import capital and consumer goods in accordance with the desired targets of domestic consumption and investment, foreign assistance in a form flexible enough to be used in accordance with the needs of the Plan is needed. As foreign assistance amounting to Rs. 156 crores has already been received, foreign aid needed may, therefore, be placed at Rs. 300-360 crores.

The importance of external assistance to the implementation of the Plan lies mainly in avoiding undue pressure on domestic consumption and investment level and also in checking inflationary pressure arising from increased Government outlay and temporary scarcities of goods. If foreign assistance is not available or is available in a form not flexible enough to be used in accordance with the needs of the Plan, "by appropriate adjustments in exports and imports, it will be the function of commercial policy to ensure the most effective utilisation of such resources (foreign exchange resources) *without affecting either the domestic industries or the export prospects in the future.*"

The role of commercial policy in the Plan is, thus, a functional one. With a view to conserving as well as to maximising returns from the limited foreign exchange resources, the Plan lays down five criteria for policy: (1) close interrelation between imports and the production and consumption targets of the Plan; (2) maintenance of high level of exports; (3) management of the balance of payments within the available exchange resources; (4) control of exports in accordance with the fiscal and price policies laid down in the Plan; and (5) continuity in policy and trade relations to the extent practicable.

Validity of the Estimates

Although the Planning Commission considers "that, on long view, any improvement in the terms of trade over the 1948-49 level is likely at best to be of a temporary character and that, in fact, the terms of trade might become more unfavourable to India to the extent of 10 per cent." the estimates in tables I and II below make no allowances for this estimated deterioration in the terms of trade. The calculation of the earnings and requirements of foreign exchange during the period of the Plan, on the 1950-51 export-import prices, is particularly inappropriate, inasmuch as the prices that year were abnormal owing to the Korean War and the consequent stockpiling programme in the West.

Secondly, the Plan does not present anywhere the estimates of foreign-exchange requirements for development in the private sector, nor does it indicate the methods of financing it: From the analysis presented in the Plan, it is not clear whether the estimated surplus of Rs. 25 crores in the first estimate, is considered adequate to finance the imports of capital goods required for the development in the private sector or whether the private sector is to finance those imports in any other manner or whether it has left the financing of the private sector's needs to the second half of the Plan. The second estimate also fails to specify how much of the estimated annual deficit of Rs. 180-200 crores is due to the imports of capital machinery for the private sector and how much for the public sector. It is, therefore, clear that the estimates are incomplete, not only because they leave out of account the estimated additional foreign exchange earnings due to the installation of oil refineries and expansion of exports to South-East Asia, and additional requirements due to increased capital imports during the second half of the Plan, but also because they fail to assess separately the foreign exchange needs of the public and private sectors, and indicate the methods of financing them.

Thirdly, although the Plan admits that the estimated improvement in the balance of payments on the basis of a development outlay of Rs. 1,700 crores may not materialise, it does not provide any clue or understanding the reasons for the estimated annual deficits of Rs. 180-200 crores in the second estimate. The additional expenditure in the second estimate is mainly on social services which are likely more to reduce the level of exports in some directions and to increase imports of consumer goods than to increase import of capital goods. It is precisely on this account that the calculations appear to be of doubtful validity.

Fourthly, the estimated decreases in imports and increases in exports depend on the attainment of the prescribed targets of agricultural production by 1955-56, the certainty of which, despite the Commission's allowances "for seasonal variations," is doubtful. The only economies in imports likely to materialise are in food imports due to improved domestic availability, which according to the National Sampling Survey amounted to 61.6 million tons in 1949-50, and in fertilisers; the other projected reductions may not be possible, if the development outlay is Rs. 2,069 crores.

The estimated increase in exports, particularly of textiles, jute manufactures, and black pepper, depends upon: (1) continuance of external demand as in 1950-51, which is unlikely; (2) ready availability abroad of machinery and materials for development, which depends upon the availability of foreign exchange resources; and (3) the development of domestic industries concerned in accordance with the time-schedule, which is dependent on the condition above. The attainment of the export targets in the Plan depends upon the effectiveness of commercial policy.

Adequacy of Policy

None of the criteria for commercial policy laid down in the Plan accords with the urgent need for active export promotion inasmuch as the first four of them are mere truisms. Although the need to draw up a commercial policy with a long-term perspective has long been felt, nothing in the Plan shows any attempt to draw up a policy on those lines, nor rationalise trade relations in accordance with the needs of development of the country's economy. There is, for instance, no attempt to review the policy of levying export duties for revenue purposes or assess its effects of the export trade of India under the changed international conditions or the effects of any change in that policy on the estimated budget surpluses. The Plan does not, therefore, consider the relative efficacy of any long-term positive measures to expand exports. The assumption of increases in exports of this magnitude, in the face of increasing international competition in a buyers' market, particularly in the absence of positive export-promotion measures, is not realistic. Thus the criteria for commercial policy prove to be little more than platitudes.

If commercial policy is to play its all-important role in the Plan, it must be based upon the structure and needs of the several sectors of the economy to attain the prescribed targets of development and production. The primary need of the economy during the next three years will be to maximise foreign exchange earnings by increasing exports to finance essential imports and to avoid altogether non-essential imports. The realisation of this twofold objective depends upon the ability of the industries in the private sector to develop in the desired manner, because the bulk of the planned increase in exports and the major portion of the 7 per cent. increase in domestic consumption levels are to be supplied by them. Adequacy of policy must, therefore, be judged not by general principles laid down for it, but by the operative conditions it establishes for the even development of the private sector towards the prescribed goals.

The main operative hurdle of industrial development is the absence of continuity and perspective in fiscal, industrial and commercial policies. The Plan recommends continuity in policy and trade relations, without emphasising that such a policy cannot be devised or followed without long-term concepts of the respective roles of the public and private sectors.

The more appropriate measures to help attain the objectives of the Plan may be considered to be (1) revision of the policy of export duties to accord with changed international market conditions; (2) positive export-promotion measures such as periodic expert surveys of foreign markets, and provision of facilities for popularisation of products abroad; (3) reduction or abolition of import duties on raw materials, capital goods, etc., and also a more rational domestic labour policy to keep costs of production low; and (4) appropriate amendment of the existing local, State and Union taxes to provide adequate financial incentives to industries to develop faster and attain the set objectives quicker. Without a rationalisation of all policies directly or indirectly affecting industrial development, it is neither possible nor profitable to lay down any criteria for commercial policy. The success of the Plan, as a whole, depends upon the development of industries in the private sector in accordance with the time schedule.

TABLE I

Estimates of Production, Imports and Exports of Major Commodities in 1955-56

(On the assumption of an Investment programme of Rs. 1,700 crores)

Commodity	Unit	Production		Imports		Exports	
		1950-51	1955-56	1950-51	1955-56	1950-51	1955-56
Raw cotton	Lakh bales	20.7	42.2	12.3	12.0	0.8	1.3
Raw jute*	Lakh bales	33.0	53.9	18.8	8.1	..	..
Oil seeds	Lakh tons	51.0	55.0	0.4	..	2.0	0.5¶
Sugar	Lakh tons	11.6	15.0	0.6	..	0.3	0.1
Foodgrains†	Million tons	54.0	61.6	2.1	3.0	..	..
Cotton manufactures—							
(i) Yarn	Million lbs.	1,179.0	1,640.0	0.5	..	74.5	10.0
(ii) Cloth	Million yds.	3,718.0	4,700.0	5.7	1.0	1,288.0	1,000.0
(iii) Handloom	Million yds.	810.0	1,700.0				
Jute manufacture	Lakh tons	8.9	12.0	..	..	6.5	10.0
Coal	Million tons	32.0	36.0	..	..	1.0	3.0
Pig iron‡	Lakh tons	3.5	7.0	..	..	..	..
Steel	Lakh tons	10.0	13.7	2.8	5.0	..	..
Ammonium sulphate	Lakh tons	0.5	4.5	3.7	1.5	..	..
Others	Lakh tons	0.6	1.8	0.7	0.2	..	..
Oils	Lakh tons	11.25	13.0	0.2	0.4	1.2	1.7
Cement	Lakh tons	26.9	48.0	0.06	..	0.3	3.0

N.B.—(i) Value of imports and exports in 1955-56 is estimated at 1950-51 prices. (ii) Value of exports includes export duty.

* Exclusive of the production of meesta.

† Production in 1950-51 was 52.7 million tons; the targeted increase in the period of the Plan is over the 1949-50 level when the production was 54.0 million tons. Provisionally it has been assumed that about 3 million tons of foodgrains will have to be imported every year in the period of the Plan.

‡ Available for the foundries, i.e., over and above what is consumed in the manufacture of steel.

§ Production in 1950-51 has been assumed to be the same as in 1949-50.

¶ The fall in the exports of oilseeds will be to a large extent compensated by the increase in the exports of oil.

TABLE II

Estimated Increase in Exports by 1955-56

(On the assumption of an Investment programme of Rs. 2,069 crores)

Commodity	Unit	1948-49	1955-56	Percentage of increase
Cotton piecegoods	Million yds.	341	1,000	193.3
Jute yarn and manufactures	'000 tons	929	1,000	7.6
Manganese ore	'000 tons	309	1,000	223.6
Oil	Million gals.	15.5	41.4	167.1
Coal and coke	'000 tons	1,137	3,000	163.9
Black pepper	'000 cwts.	141	300	112.8
Tobacco	Million lbs.	55	96	71.4
Coir manufacture	'000 cwts.	869	1,700	95.6
Woollen manufactures	Million lbs.	8.3	16.0	92.8

INDIAN PAPER MAKERS ASSOCIATION

MR. C. I. TURCAN URGES RAW MATERIAL SUPPLY AT REASONABLE PRICES

THE view that the importance of a co-ordinated forest policy and the effect of the establishment of new paper mills on the supplies of raw materials to existing mills should receive the close attention of the Development Council for Paper was forcefully put forward by Mr. C. I. Turcan, Chairman of the Indian Paper Makers Association, in the course of his address at the Annual General Meeting of the Association held at Calcutta on 8th April, 1953. Mr. Turcan drew particular attention to the enormous rise in prices of bamboo and grass, as a result of exorbitant railway freight and increase in royalties demanded by State Governments, only to emphasise the fact that manufacturing costs had not fallen, despite higher production. In his considered opinion, ample supplies of bamboo and grass at reasonable prices constitute the life-blood of the Indian paper industry. Mr. Turcan also urged the Government to adopt a selective import policy under which only those qualities of paper which were not manufactured in India, or were still in short supply, would be imported.

The following is the full text of the speech delivered by Mr. Turcan:

"GENTLEMEN,

"The annual report for 1952 has now been in your hands for some days.

"On this occasion last year, my predecessor described the previous year as an uneventful one, in that there had been no major or minor changes in the sentiment of the market which had remained uniformly firm throughout the year. Broadly speaking, the same can be said of 1952, although, lately, there has been a trend towards a better equilibrium of supply and demand, both as regards raw materials and the finished product. Supplies of raw materials, coal and chemicals were more freely available than during the previous year; transport was easier; and production increased slightly, while paper prices remained unchanged.

"Although the present state of the paper industry can be considered as reasonably healthy, nevertheless there are indications of difficulties which lie ahead.

Basic Price of Paper

"Last year, my predecessor drew attention to the fact that the basic price of paper for Indian-made paper had remained static at Rs. 1,370 per ton, against a landed cost of Rs. 3,306 for the similar quality of imported paper. During the past year, the price of imported paper has fallen considerably, while the price of Indian-made paper is unchanged. The margin between the prices of imported and Indian-made paper is still substantial, but it is a matter of some concern that Indian mills' manufacturing costs have not fallen despite increased production. There are several reasons for this. Increasing labour costs, increased freight on coal, and high coal consumption owing to the low grades which the industry has to accept, are but some of them. The main reason is, however, the cost of the industry's staple raw materials, bamboo and grass.

"Bamboo prices are now nearly five times what they were in 1939. One of the reasons for this is the exorbitant freight which has to be paid on the transport of bamboos from the forests to the mills. This has been the subject of many representations to the railways but without any success. Railway freights are, however, but one of the causes of the increase in bamboo and grass prices. The root of the trouble lies in the rates which mills have to pay for leases. Not only is the industry perturbed by the steady increase in royalties demanded by State Governments, but the position regarding the availability of future supplies is also disturbing. Repeated representations have been made to the Central Government, and in 1950 the industry was assured that the Government of India considered it essential that there should be a co-ordinated forest policy embodying long-term leases for paper mills at reasonable royalty rates and the development of roads and communications, etc.

"Unfortunately, very different policies are being followed by certain States, which appear to be interested only in extracting the highest possible revenue from their bamboo forests, heedless of what the effect may be on the paper industry or on the forests. That the industry's fears regarding future supplies are not groundless is shown by the fact that at least one State will not consider applications for leases from existing mills on the grounds that there is a possibility that a new mill will be constructed in the State. Thirty years ago, the production of paper was about 33,000 tons, in the manufacture of which less than 25,000 tons of bamboo were consumed. Since then, production has risen to over 130,000 tons and consumption of bamboos is now probably well over 300,000 tons. The Five-year Plan envisages a production of 200,000 tons of paper and pulp boards by 1956, so a further considerable increase in the paper industry's consumption of bamboos is inevitable. During the past year, the Industries (Development and Regulation) Act, 1951, came into force, and I trust that both the importance of a co-ordinated forest policy and the effect of the establishment of new paper mills on the supplies of raw materials to existing mills will receive the close attention of the Development Council for paper. We must never lose sight of the fact that ample supplies of bamboo and grass at reasonable prices constitute the life-blood of the Indian paper manufacturing industry.

"A further point of concern to the industry is Government's policy regarding the import of paper and newsprint. You will have observed in your Committee's report a reference to correspondence with the Government of India regarding competition from imported paper and newsprint. Undoubtedly, from time to time, there are complaints from consumers that they cannot obtain their full requirements of paper. These complaints, however, relate almost entirely to special qualities which are not manufactured in India. The indigenous industry can meet the country's requirements of standard printing and writing papers; and what is required is a selective import policy under which only those qualities of paper which are not manufactured in this country, or are still in short supply, would be imported. It is only thus that the industry will be protected from unfair competition and, at the same time, the consumer will obtain his requirements in full.

"You will also have observed in the report reference to the industry's dissatisfaction with the manner in which negotiations regarding the supply of paper to Government had taken place. The dissatisfaction arose principally from the different views held by Government and the industry as to the amount to be included in the price for depreciation and return on capital. During the war, not only did plant and machinery suffer an abnormal strain, owing to the increased production which the industry was called upon to make, but it was not possible for normal maintenance and renovation of plant and machinery to be carried out in full, with the result that the end of the war found the industry with considerable arrears of maintenance and plant renovation. At the same time, plant and machinery prices have nearly trebled; and unless adequate provision for depreciation and renovation is included in the price of the finished product, it will be impossible for members of the industry to maintain their mills in an efficient condition. Unfortunately, this view has so far not been accepted by the Government of India in fixing the price for supplies of paper.

Joint Action

"If the Indian paper industry is to continue to flourish, these difficulties, and many others of a similar nature, must be overcome. I say of a similar nature, because a common factor in all these problems is that they arise from causes over which the industry has no control. Consequently, these problems can only be resolved by joint action by Government and the industry, and for this, close liaison with frank exchange of views and discussion of problems is essential. The inclusion of the paper industry in the schedule to the Industries (Development and Regulation) Act, 1951, is, therefore, an event of major importance to the industry and I trust that it will not be long before the Advisory Council for Paper, for which this Association has been asked to nominate two members, is functioning.

"In conclusion, gentlemen, I must place on record my appreciation of, and gratitude for, the co-operation and assistance which I have received from my follow members of the Committee and from our Secretary."

INDIA'S FOREIGN TRADE IN 1952

SUBSTANTIAL DEFICIT RECORDED

INDIA'S foreign trade in 1952 recorded a sizable deficit, the actual figure being Rs. 170.95 crores, as compared with Rs. 59.06 crores in the preceding year. It is possible that the deficit in 1952 is likely to be somewhat higher in case some adjustments in the land frontier account are made in the coming weeks. One noteworthy feature of the sea- and air-borne trade on export account was the considerable shrinkage in value, exports declining from Rs. 763.09 crores (1951) to Rs. 592.51 crores—a drop of 22.4 per cent. Imports on sea- and air-borne account receded slightly from Rs. 769.06 crores (1951) to Rs. 761.07 crores. On the land frontier trade account imports into India showed a substantial decline from Rs. 73.97 crores (1951) to Rs. 30.10 crores, mainly due to the fall in the quantum as well as in the value of raw jute imported from Pakistan. Thus, total imports into India in 1952 amounted to Rs. 791.17 crores, as against exports valued at Rs. 620.24 crores, while in the previous year, the respective values came to Rs. 843.03 crores and Rs. 783.97 crores.

In view of the fact that the terms of trade were moving considerably adverse against India during the last one year, the trade gap widened to a marked extent in 1952. In 1950, India was able to achieve a moderate surplus of Rs. 37.96 crores on sea- and air-borne trade account when its exports amounted to Rs. 543.16 crores, as against imports valued at Rs. 505.20 crores. The index number of average unit of declared values for imports stood at 127 in January, 1952, improving to the high level of 135 in April. Thereafter, the import index declined to 121.4 by August—the lowest for the year. During the subsequent months, the figure moved both ways, the latest figure for November last being 127.2. On the other hand, there was a substantial decline in the export index. Starting from 164.4 in January, 1952, it declined to the low level of 116.7 by September. Thereafter, the fluctuations became somewhat narrow, the November figure being 117.1. It may be mentioned that practically the entire adverse trade balance during 1952 was incurred during the first half of the year when, on the sea- and air-borne trade account alone, it amounted to Rs. 170.02 crores. During this period, India was importing substantial quantities of foodgrains and raw cotton which had been contracted at high prices early in the year.

Rise in Foodgrains

On the import side (sea- and air-borne account) the value rose from Rs. 215.42 crores (1951) to Rs. 233.87 crores in 1952 in the food group. In the raw material group, imports remained steady at Rs. 233.68 crores, the previous year's figure being Rs. 224.68 crores. In the manufactures group, they were marked down from Rs. 325.61 crores to Rs. 297.20 crores. Foodgrains alone accounted for a major share in the food group, the total for the year being Rs. 207.93 crores, as compared with Rs. 183.61 crores in 1951 and Rs. 104.61 crores in 1950. Imports of wheat and rice were marked up from Rs. 108.43 crores and Rs. 39.54 crores to Rs. 121.28 crores and Rs. 48.75 crores, respectively, while those of *jowar* and *bajra* declined appreciably from Rs. 25.79 crores to Rs. 6.34 crores. Next to food is raw cotton which accounted for Rs. 114.98 crores, as compared with Rs. 113.31 crores and Rs. 87.20 crores in 1951 and 1950, respectively. Despite the fact that there was very little change in the value of raw cotton imports, the quantum of imports during 1952 was higher at 203,000 tons, as against 165,000 tons in the previous year. Machinery imports at Rs. 94.51 crores were lower than in 1951 when they amounted to Rs. 96.31 crores. The intake of mineral oils has been showing a steady increase in recent years. From Rs. 71.51 crores in 1951, it improved to Rs. 84.23 crores, while in 1950 it amounted to Rs. 58.87 crores only. A part of the increase, especially in lubricating oils, was the result of the increased industrial activity in the country. Imports of iron and steel were higher at Rs. 25.52 crores, as against Rs. 20.05 crores, while those of non-ferrous metals remained more or less steady at Rs. 19.42 crores, the previous year's figure being Rs. 19.80 crores. Chemicals and drugs continued to remain high, the value in 1952 being Rs. 30.28 crores, as against Rs. 31.33 crores in 1951 and Rs. 15.64 crores in 1950. Imports of dyes and colours recorded a substantial decline from Rs. 21.74 crores to Rs. 12.43 crores, as also those of cutlery and hardware from Rs. 19.41 crores to Rs. 15.88 crores. Imports of paper and paste-board at Rs. 12.53 crores were lower than in 1951, when they amounted to Rs. 15.84 crores. The intake of vehicles increased from Rs. 29.39 crores to Rs. 31.40 crores and that of electrical goods from Rs. 9.16 crores to Rs. 12.92 crores. Among other imports, spices were marked down from Rs. 8.37 crores to Rs. 4.26 crores, fruits and vegetables from Rs. 9.38 crores to Rs. 9.20 crores, provisions and oilman's stores from Rs. 9.04 crores to Rs. 7.69 crores and miscellaneous articles from Rs. 4.99 crores to Rs. 3.59 crores. In the land-frontier trade, imports of raw jute in 1952 were valued at Rs. 26.83 crores.

Decline in Exports

On the export side, there was a marked decline in the value of a number of goods sent from India, mainly due to a sharp fall in the prices of many export articles. In the food group, the value of exports dropped from *Rs. 162.50 crores to Rs. 146.46 crores*—a fall of about 10 per cent. In the raw material group, exports were marked down from Rs. 160.93 crores to Rs. 147.78 crores. The manufactures group was the worst sufferer, the value receding from Rs. 416.86 crores to Rs. 294.07 crores—a decline of more than 25 per cent. Exports of fruits and vegetables increased from Rs. 13.51 crores to Rs. 16.49 crores mainly due to higher quantum of despatches of cashew kernels, the value of which rose from Rs. 9.76 crores to Rs. 12.08 crores. Sendings of spices receded from Rs. 29.87 crores to Rs. 22.79 crores. In this section, pepper accounted for Rs. 17.99 crores, as against Rs. 25.14 crores in 1951. The quantum of pepper exports declined from 16,700 tons (1951) to 13,200 tons. Exports of tea came down from Rs. 96.85 crores to Rs. 80.90 crores, the quantity receding from 450.24 million lbs. to 409.13 million lbs. Sugar exports were markedly higher at Rs. 3.99 crores, as against Rs. 43 lakhs in the previous year, while those of tobacco declined from Rs. 16.44 crores to Rs. 14.62 crores.

In the new material group, coal showed a substantial rise from Rs. 5.87 crores to Rs. 8.94 crores, the quantity moving up from 18.79 akh tons to 26.02 lakh tons. Despatches of mica and quarry products declined from Rs. 14.62 crores to Rs. 10.49 crores and those of lac by nearly 50 per cent. from Rs. 18.30 crores to Rs. 9.17 crores. Raw hides and skins were also lower at Rs. 5.87 crores, as against Rs. 9.94 crores in the previous year. Impressive increase was seen in the exports of manganese which moved up from Rs. 16.19 crores to Rs. 38.57 crores. The quantity of manganese exports increased from 904,300 tons to 1,401,500 tons in 1952. Vegetable oil exports were maintained at a high level, namely, Rs. 25.30 crores, as compared with Rs. 23.23 crores in 1951 and Rs. 13.06 crores in 1950. The value of oilseeds exports was negligible at Rs. 5.24 crores, the respective figures for 1951 and 1950 being Rs. 12.60 crores and Rs. 18.05 crores. Raw cotton exports declined from Rs. 25.73 crores to Rs. 24.57 crores, but the quantity despatched increased from 27,600 tons to 46,000 tons. Exports of raw wool were marked up from Rs. 6.87 crores to Rs. 8.72 crores in 1952, but the quantum of exports registered more than 100 per cent. rise from 8,400 tons to 17,900 tons.

In the manufactures section, the sharp decline in the prices of jute goods, as well as the substantial reduction in the export duty on them, brought down the value of exports of this commodity from Rs. 240.09 crores (1951) to Rs. 162.54 crores. In 1950, the value stood at Rs. 119.33 crores. The quantum of exports was marked down from 771,800 tons to 735,500 tons. Despatches of cotton piecegoods and yarn receded from Rs. 94.07 crores to Rs. 73.15 crores, the quantum coming down from 785.9 million yards to 592.3 million yards in 1952. Exports of tanned hides and skins declined from Rs. 33.42 crores to Rs. 17.56 crores.

Importance of U.S.A. in Import Trade

In the distribution of import trade, the U.S.A. has been able to maintain the first rank because it has now become the principal supplier of foodgrains and raw cotton to India during the last one or two years. Total imports from the U.S.A. amounted to Rs. 272.34 crores, as compared with Rs. 201.69 crores in the preceding year. In 1950, the U.S.A. accounted for Rs. 107.17 crores worth of imports. The total value of goods imported from all the Commonwealth countries put together cannot come to the level of that of the U.S.A. In 1952, imports from these amounted to Rs. 265.37 crores as against Rs. 279.38 crores in the previous year. Imports from the U.K. increased from Rs. 144.11 crores to Rs. 149.74 crores. After the cessation of mineral oil imports from Iran, those from Bahrein Islands, and Saudi Arabia recorded a marked rise, the figures for 1952 being Rs. 17.22 crores and Rs. 15.76 crores, as against Rs. 9.34 crores and Rs. 6.50 crores, respectively, in the previous year. Imports from West Pakistan shrank from Rs. 10.43 crores to Rs. 23 lakhs. The intake from Singapore declined from Rs. 19.53 crores to Rs. 13.78 crores while those from Kenya remained very steady at Rs. 19.69 crores. Perhaps, the sharp decline in the offtake of Sudan cotton was responsible for the reduced imports from that country which were marked down from Rs. 14.54 crores to Rs. 3.52 crores. Imports from Canada rose from Rs. 12.22 crores to Rs. 29.66 crores, while those from Australia declined slightly from Rs. 17.88 crores to Rs. 15.09 crores. In 1950, imports from that country stood at the high level of Rs. 57.33 crores, largely due to despatches of wheat. Shipments to India from West Germany were slightly lower at Rs. 24.22 crores, as compared with Rs. 26.01 crores in the previous year, while those from the Netherlands moved up from Rs. 9.22 crores to Rs. 12.33 crores. Cargoes from France were steady at Rs. 12.23 crores, while those from Switzerland came down from Rs. 10.18 crores to Rs. 7.85 crores. Iran's exports to India sharply declined from Rs. 32.82 crores to Rs. 3.93 crores. But the value of imports from Burma rose from Rs. 23.45 crores to Rs. 31.06 crores, while that from Japan declined from Rs. 22.17 crores to Rs. 19.39 crores. Goods received from *Egypt and Thailand receded* from Rs. 44.08 crores and Rs. 13.47 crores to Rs. 20.11 crores and Rs. 9.16 crores, respectively. Imports from China were somewhat higher at Rs. 15.44 crores as against Rs. 13.65 crores in 1951.

U.K. as Best Customer

In the sphere of export trade, the U.K. continues to hold the place of pride, its offtake of Indian merchandise in 1952 being valued at Rs. 126.48 crores, as compared with Rs. 196.14 crores in the previous year. Exports to all the Commonwealth countries amounted to Rs. 284.57 crores, the previous year's figure being substantially higher at Rs. 382.12 crores. Next to the U.K. comes the U.S.A. which imported Rs. 119.76 crores of goods, as compared with Rs. 137.05 crores in 1951. Japan has become the third best customer, importing from this country Rs. 26.48 crores worth of goods as compared with Rs. 15.55 crores in the previous year. Exports to Burma improved from Rs. 18.80 crores to Rs. 23.51 crores and those to West Pakistan from Rs. 10.53 crores to Rs. 17.60 crores. The offtake by Ceylon was slightly higher at Rs. 19.75 crores, as compared with Rs. 18.15 crores in the previous year. Despatches both to Singapore and Hongkong—free ports—declined from Rs. 23.68 crores and Rs. 12.80 crores to Rs. 15.08 crores and Rs. 6.44 crores, respectively. Sendings from Australia dropped from Rs. 45.12 crores to Rs. 23.46 crores, *mainly due to severe* import restrictions imposed by that country in March last year. Canada's imports were lower at Rs. 12.73 crores, as compared with Rs. 16.19 crores in the previous year. Exports to West Germany and the Netherlands were marked up moderately from Rs. 9.25 crores and Rs. 9.47 crores to Rs. 12.77 crores and Rs. 10.36 crores, respectively.

Apropos our references in *Commerce*, dated 21st March, 1953, to the Indian Tariff (Amendment) Bill explaining Imperial Preference, a reader, in a letter addressed to us, writes that the preference should not be allowed to diminish the protection that an Indian industry requires. He says:

"These preferences, however, go deeper than they would appear to do. For example, electrical goods have a difference of 12 per cent. on import duty between U.K. and non-U.K. manufactures. Electrical goods from U.K. are levied a duty of 24 per cent. preferential, while from others 36 per cent. is levied. This, combined with consideration of tenders being compared and decided on basis of f.o.r. values, would almost monopolise the British electrical goods for acceptance in India, with the result that the U.K. can sell to India electrical goods at a rate still higher than their own rates offered to other countries. They can raise their price even upto a certain percentage and still have a preference in Indian markets. This would, more or less, mean monopoly so far as Indian markets are concerned.

"However, this point is more outstanding in cases where electrical component parts are being imported into India, first, for assembling, and in the future for manufacturing the same, as in the case of house-service meters. Here is a glaring case where preferences are allowed to diminish the protection that this new and important industry so adequately requires."

For the attention of
Far-sighted Industrialists
HAVING LABOUR TROUBLE?
When you find you are having continuous labour trouble in one of your plants, you are not likely to put all of it down to subversive influences, within or without. You realise that these influences make their presence most felt where there is already an undercurrent of dissatisfaction based on genuine grievances. If you are satisfied with the personal qualities of your management, you next ask yourself if your Labour Department is organised to act effectively in dealing with complaints from the Labour Union, and whether its service records are adequate to prevent nepotism and anomalies arising out of increments and promotions. Then you study your wage structure to see if each job is being paid at its true relative worth, and that sufficient channels of promotion are open to the ambitious. If any incentive schemes are in use, you review their working, as you realise that haphazard schemes can cause very serious trouble. Only when you have seen to the removal of weaknesses in the administration of your plant, can you honestly blame any remaining unrest on others.

OUTPUT AND EXPENSES OF AGRICULTURE

FIRST U.N. REPORT ON SOME EUROPEAN COUNTRIES

THE U.N. Report* on the output and expenses of agriculture in some European countries, just published, makes interesting reading. It gives a broad outline of the agricultural structure of 14 countries, namely, Belgium, France, Ireland, Luxemburg, the Netherlands, Switzerland, the U.K., Denmark, Finland, Norway, Sweden, West Germany, Greece and Italy and summarises the main developments in recent years. Being the first of its kind, the Report, however, is of an exploratory character, mainly confining itself to the assembling of basic data. It is more descriptive than analytical.

The purpose of this report will be served better still, if further intensive and critical studies are initiated. Such studies would go a long way towards solving the problem of increasing production of food of the right kinds at as low a cost as possible, while at the same time enabling the agriculturists to have a reasonable standard of living. It is true that some important steps have been taken in the past, but these are insufficient. New efforts are doubtless needed for making agriculture a highly remunerative venture without increasing the burden of the consumers of farm produce.

The Report discloses that in 1950, the 14 countries mentioned above, produced about $19 billion worth of agricultural products, as against $10½ billion before the Second World War. The increase of $8½ billion was mainly due to the general rise in prices or, in other words, to the decline in the purchasing power of the dollar in terms of agricultural products. There was also, however, a rise of about 10 per cent. in the volume of output. As much as 15 per cent. of the value of output, as against 17 per cent. pre-war, represented the cost to farmers of purchases of feed and other raw materials, namely, seeds, livestock, fertilisers, pesticides, fuel and electricity. The difference is mainly attributable to the greater degree of self-sufficiency in feeding stuffs, which many European farmers have achieved during post-war years.

The net receipts from agriculture—that is, the sum which remains if current expenses (except repairs, maintenance and labour costs) are deducted from gross realised output—have increased in all countries, if current money values are compared with corresponding figures for pre-war years. These money values, however, have been inflated by general price increases. In comparison with changes in cost of living, the balance per head of the agricultural population appears to indicate an improvement in the purchasing power of agricultural income in the U.K., the Netherlands, Western Germany, Sweden and Ireland. The authors of the Report say that it has not been possible to examine the position in all countries, because of lack of even approximate data on changes in the agricultural population. Similarly, available information does not permit calculation to be made of, either of the distribution of net agricultural income between the different recipients, namely, farmers, hired workers and proprietors, or of the trend in net income per head of agricultural population compared with income per head in other groups of the population. As such, it has been found difficult to arrive at precise conclusions. There is, therefore, the need for accurate measurement and analysis of these trends which call for more adequate statistical material for the purpose of intensive studies.

The value of net output per head of active agricultural population, according to the Report, in the United Kingdom was $1,550, Belgium $1,300, Denmark $1,200, and Switzerland $1,150. Finland and Italy account for the lowest with $350 each per head of active agricultural population. The value of net output per hectare was the highest in Switzerland, the Netherland and Belgium. Thus, it was $408 in Switzerland, $377 in the Netherlands, and $371 in Belgium. The lowest in the ladder was Ireland, accounting for $65.

In a number of countries, according to the study, the wage bill of hired labour absorbed from 10 to 20 per cent. of total receipts. It is interesting to note that since 1948, there has been a tendency for hired labour to take a diminishing part of gross receipts, particularly in the Netherlands, the U.K., Denmark and Western Germany. If it is correct to suppose that agricultural wage rates have generally been well maintained in relation to other agricultural prices, this reduction in the wage-bill per unit of output (in money value) appears to reflect an increase in the productivity of labour. Generally speaking, the number of hired workers is declining and in some cases the decline is offset by a substantial rise in wage rates.

Although it is difficult to arrive at precise conclusions, it is clear that there is a great need for increasing the volume of production, keeping costs at sufficiently low levels, as indicated earlier. It is gratifying to note that Governments, individually and collectively, are endeavouring to create the conditions which they consider are most appropriate to the situation. Emphasis is laid on the benefits to be expected from improvements in equipment and the application of technical knowledge. In recent years, the effects which might follow an increase in competition brought about by a reduction in existing tariffs and by the organisation of common markets have also been pointed out.

The shortcomings of the present Report are expected to be made up by further studies on the subject. The studies are expected to deal with recent trends in net agricultural income, and comparison of productivity to-day, especially of labour, with that of pre-war years. Other problems which merit examination, among others, include the distribution of social income of agriculture, the influence of price policies in raising productivity, concealed unemployment in agriculture and the profitability of farms, according to size.

USE OUR EXPERIENCE...

It has long been appreciated by industrialists that the cost of paint per gallon is by no means the best guide to the economics of painting. Production and maintenance costs merit careful study by all who aim to improve quality and efficiency.

I. C. I. have always advocated a realistic approach to this problem and in furthering this aim have recently produced two booklets entitled "*Improving Paintshop Productivity*" and "*Better Housekeeping in the Paintshop*"

Interested executives may obtain copies of these publications from the sole selling agents.

INDIAN ALUMINIUM'S PROGRESS SATISFACTORY

EXPANSION PROGRAMME GOES AHEAD

READERS' attention is invited to the change-over in the accounting year of the Indian Aluminium Co., Ltd. (General Manager: Mr. J. W. Cameron, Calcutta), from the end of September to the end of December, so as to bring the same in line with the calendar year. The latest accounts of the Company, therefore, cover a period of 15 months, that is, from 1st October, 1951 to 31st December, 1952. This change is to be borne in mind before the results for the period under review are studied in conjunction with those for the previous periods, as the results of the two are not strictly comparable.

The Directors' report and accounts for the 15 months under review make, on the whole, satisfactory reading in the light of the adverse trading conditions during 1952 consequent on the slump in the aluminium market. The average rate of monthly sales of the Company's products during the period was higher than in any of the previous years. This was because of the new lines of manufacture undertaken during 1952 which offset the lower demand for its other products. The Company's output of ingot sheets and circles was lower due to causes beyond the control of the management and this resulted in an increase in the cost of production with the consequent decline in the margin of profit.

The trading profit for the 15 months under review, amounting to Rs. 32.58 lakhs, does not compare well with that of Rs. 31.36 lakhs for the previous 12 months. The net profit, at Rs. 10.70 lakhs, discloses a sharper fall, as compared with Rs. 13.64 lakhs for the year ended 30th September, 1951. In spite of the decline in profit, the Directors have added a useful sum of Rs. 3.95 lakhs to the general reserve. Unfortunately, they have had to make a provision of Rs. 2.50 lakhs for bad and doubtful debts on account of the failure of two of the Company's large customers. After paying the preference dividend, the Directors have had reluctantly to prune the dividend from 5 per cent. per annum paid for the previous year to 4 per cent. (Rs. 5 per share of Rs. 100 for 15 months). But the distribution of even this lower dividend has necessitated the drawing of a sum of Rs. 5.60 lakhs from the undistributed surplus brought in from the previous year.

The following summary of the accounts for the period under review, as compared with those for the previous years, portrays the Company's progress since 1949:

(In lakhs of rupees)

	For 15 months ended 31st Dec., 1952	For the year ended 30th September 1951	1950	1949
Sale proceeds	161.46	120.62	102.43	78.44
Manufacturing expenses (including raw materials consumed)	109.06	73.01	65.39	53.25
Depreciation and depletion	19.82	16.25	17.32	17.90
Trading profit	32.58	31.36	19.73	7.29
Other income	..	..	..	0.72
Other expenses	19.56	10.48	9.22	7.29
Further depreciation	0.35	0.08	0.07	..
Taxation	3.50	8.00	..	..
Net profit	10.70	13.04	10.82	0.72
Refund of taxes and provisions written back	..	11.14	21.85	..
To reserves	3.95	11.05	20.00	..
To bad and doubtful debts	2.50	..	..	..
Dividend—				
Preference 5% less tax	1.85*	1.47	1.47	1.50
Ordinary	8.00* (5%)	8.00 (5%)	5.60 (3½%)	..
Carry forward	22.28	27.88	23.62	18.02

* For fifteen months ended 31st December, 1952.

The Company's operations at Lohardaga Mines and the Muri Alumina works continued to be below capacity as demand from the smelter was on the low side. Demand on account of outside sales too was lower. There was, besides, a loss of production of about 150 tons of ingot at Alupuram smelter on account of the power cut imposed during the year. Production of sheets and circles at the Company's Belur rolling mills was restricted to meet sales requirements, which in the latter part of the period was much below capacity. Owing to the shortage of electric power in Bombay and the poor demand from the paint trade, production of aluminium paste was undertaken on an intermittent basis. The absence of adequate demand for ingots on the one hand and the starting of the new aluminium power and paste plant, on the other, resulted in an accumulation of stocks of raw materials and finished products, the value of closing stocks being as high as Rs. 153.61 lakhs, as against Rs. 113.73 lakhs at the end of the previous year.

The Company's total reserves and surplus stand at Rs. 60.93 lakhs, (as against a paid-up capital of Rs. 200 lakhs) of which the general reserve represents only Rs. 15 lakhs which indicates the leeway to be made up in the matter of building up a strong reserve. Fixed assets replacement reserve accounts for Rs. 20 lakhs. Current liabilities (including provision for taxation) show a sharp rise of Rs. 61.19 lakhs, that is from Rs. 58.22 lakhs to Rs. 119.41 lakhs, mainly on account of the unsecured loan of Rs. 50 lakhs taken from Aluminium Ltd. (repayable between 1955 and 1962) to finance the Company's expansion programme. During the period under review, the Company made additions to its Alupuram smelter and Belur rolling mill at a cost of Rs. 17.64 lakhs, as part of its programme of expansion which is estimated to cost Rs. 1 crore. The current assets, at Rs. 193.47 lakhs, amply cover the current liabilities at Rs. 119.42 lakhs, by a wide margin of Rs. 74.05 lakhs.

A more detailed picture of the Company's financial position, as on 31st December, 1952, is depicted in the following synopsis of its balance-sheet:

Liabilities	Rs.	Assets	Rs.
Capital ...	2,00,00,000	Gross block	3,07,88,193
Reserves and surplus ...	60,92,867	*Less*—Depreciation ...	1,21,00,053
Provision for taxation ...	11,50,000	Net block ...	1,86,88,140
Liabilities ...	1,07,91,838	Stocks ...	1,53,61,465
		Debts and advances ...	17,86,010
		Investments	10,093
		Cash ...	21,88,997
Rs.	3,80,34,705	Rs.	3,80,34,705

The Directors are keenly alive to the responsibilities thrown on private industry by the Planning Commission towards the achievement of the production targets set by it. It is with a view to achieving that target, that the Directors have launched a scheme of expansion which, according to them, is as follows:

"As announced by the Chairman at the fourteenth ordinary general meeting of the Company, expansion of the Company's smelter facilities at Travancore from a capacity of 2,500 to 5,000 tons per annum, as envisaged in the original plan of that works, has been approved by the Government of India, and work in this connection is proceeding satisfactorily. It is expected that completion of this expansion will coincide with the availability of additional power from new facilities being constructed by the suppliers, which are expected to be finished during the first half of 1954. Expansion of the rolling mill at Belur, which was announced at the same time, is also proceeding satisfactorily and, provided no undue delays occur in the delivery of equipment, is expected to be completed by the end of 1953. Application has been made under the Industries (Development and Regulation) Act for a licence to install extrusion facilities. This will enable your Company to offer a wide range of semi-fabricated products which, at the present time, are not manufactured in India. Preliminary steps have been taken to assess the possibility of constructing a new smelter with an initial capacity of 10,000 tons a year in the vicinity of the Hirakud Project. An application has been made for a licence under the Industries (Development and Regulation) Act. Negotiations are in progress with the appropriate authorities regarding suitable and satisfactory contracts for the land, water and power required for the smelter."

It may be noted here that the Planning Commission has envisaged the following expansion of primary ingot:

	1950-51	1955-56 (In tons)
Rated capacity	4,000	20,000
Production	3,677	12,000

The Commission has also recognised the importance of aluminium paste and powder to the economy of the country. It has fixed a target of 750 tons for expansion in both rated capacity and production of these commodities, to be reached by 1955-56. Expansion of the aluminium industry is expected by the Commission to cost a capital investment of Rs. 9 crores.

REFORM OF COMPANY LAW

Considerable progress is reported to have been made with the drafting of the new Companies Bill, but the Bill is not likely to be introduced in the current session of Parliament. The proposed Bill will not only be an amending measure but also a consolidating one, and the Government is apparently anxious to take all possible steps to ensure that the Bill is drafted as carefully as possible.

Mr. D. L. Mazumdar, I.C.S., Special Officer, Ministry of Finance (Department of Economic Affairs), and Mr. E. H. Marker, former Under-secretary of the Board of Trade, U.K., who paid a four-day visit to Bombay recently in this connection, met the representatives of the Chambers of Commerce and other associations and discussed with them some of the basic principles underlying the English Companies Act, 1948, on which the recommendations of the Company Law Committee have been largely based. Mr. Marker also reviewed the working of the new English Companies Act and the manner in which the Board of Trade administered it. He emphasised the importance of a quasi-independent organisation for this purpose with sufficiently comprehensive powers covering the entire field of the formation and management of joint stock companies and related matters like the regulation of stock exchanges.

PROFIT OF VASANTA MILLS SHRINKS

DIVIDEND, HOWEVER, RAISED

FOR the fourth year in succession, the dividend on the ordinary shares of the Vasanta Mills Ltd. (Managing Agents and Secretaries: Messrs. R. K. Shanmugham Chetty and Bros., Coimbatore) has been raised, the latest enhancement being in respect of the year ended 31st December, 1952. The first occasion on which the dividend was raised (after the Company's ordinary capital was increased in 1947 from Rs. 7 lakhs to the present level of Rs. 21 lakhs) was in 1949 when the Directors paid a dividend of 7 per cent. as against 5 per cent. for 1948. This was stepped up consecutively to 9 per cent. in 1950, 10 per cent. in 1951 and 12 per cent. in 1952. The latest dividend, it may be noted, represents a return of 36 per cent. on the previous paid-up capital and compares very favourably with the highest rate of 30 per cent. paid in 1943 on that capital. What is rather more striking is that the latest dividend has been enhanced despite the shrinkage in earnings for the year under review, which has proved to be one of the leanest in the post-war history of the Company. Thus, the gross profit for the year under review shrunk by as much as over 54 per cent., that is from Rs. 18.67 lakhs in 1951 to Rs. 8.52 lakhs. If the Directors have paid a higher return to the shareholders despite this marked contraction in earnings, it may be conceded they have done so, paying due consideration to the modest dividend policy they had followed in the preceding years and the strength of the Company's financial position.

Textile mills all over the country had an unhappy experience during the past year so far as trading conditions were concerned. In the case of mills in the South, there was an additional disquieting factor in the cut in electric power supply which contributed to a fall in production, a trend which is in striking contrast to the record production of their confreres in other parts of India. "Owing to the unusually low water level conditions at the Government hydro-electric supply source," the Directors observe in their report to the shareholders, "large restrictions were imposed on the consumption of energy by the mills for over nine months of the year under report. The consequent fall in production is estimated at 25 per cent." In order to avert a large-scale fall in production, the Directors took steps to augment the supply of current from the Government system by installing a generator. The generator is expected to meet nearly 20 per cent. of the current requirements of the mills. As it was installed only at the end of the year under review, the full benefit of the additional supply of power could not be derived during the year.

The Company's earnings and the disposition thereof for the last four years are compared in the following table:

(In lakhs of rupees)

	For the year ended 31st December, 1952	1951	1950	1949
Sale proceeds	140.88	172.36	111.84	125.72
Gross income	141.16	172.77	112.16	126.03
Raw materials and manufacturing expenses	128.21	150.03	94.79	104.78
Other expenses	4.43	4.06	4.70	6.49
Gross profit	8.52	18.67	12.67	14.75
Agents' commission	0.55	1.20	0.93	1.26
Depreciation	2.52	4.26	2.96	2.16
Taxation	1.50	6.00	2.00	4.00
Net profit	3.95	7.21	6.78	7.33
To reserve fund	0.50	2.00	0.50	4.00
To other reserves	0.50	2.78	4.15	1.50
Dividends—				
Preference (6½% and 6%)	0.28	0.28	0.28	0.28
Ordinary	2.52 (12%)	2.10 (10%)	1.89 (9%)	1.47 (7%)
Carry forward	0.50	0.39	0.40	0.49

The profit for the year under review at Rs. 8.52 lakhs has been arrived at after revaluing the stock of American cotton at the end of the year at par with the market rate that ruled on 31st December, 1952. This has been done in view of the steep fall in the price of American cotton during the year. The appropriation of the profit is clear from the figures in the table. It will be noted that the net profit has been utilised for paying the higher dividend only after adding a useful sum of Rs. 50,000 to the general reserve and Rs. 50,217 to the reserve for contingencies.

The Company's financial position continues to be sound. Even after the capitalisation of a sum of Rs. 14 lakhs in 1947, the reserves and surplus now stand at Rs. 28.50 lakhs, against a paid-up capital of Rs. 25.50 lakhs. The gross block of Rs. 47.61 lakhs (including Rs. 3.15 lakhs added during the year) has been written down to a book value of Rs. 18.85 lakhs, the depreciation provided so far being Rs. 28.76 lakhs or 60.4 per cent. of the value at cost. The current assets, at Rs. 59.11 lakhs, exceed the current liabilities, at Rs. 23.96 lakhs, by as wide a margin as Rs. 35.15 lakhs.

The Company's Rs. 100 fully paid-up ordinary shares are currently quoted on the Madras Stock Exchange at Rs. 160 *cum-div.* On the basis of the *ex-div.* rate, the latest dividend gives a yield of 8.1 per cent., free of income-tax.

Points From The Chair

Risk of Deficit Financing Worth Taking

"IT must be remembered that for a country like ours, with its vast potential resources, deficit financing to the extent of Rs. 290 crores is of a modest nature indeed. What most people fear, however, is not the size of the deficit financing, nor even the ability of the Union Government to yield this instrument with skill, but the effectiveness of its control over the State Governments or their unwillingness to co-ordinate their policies in line with the Centre. Co-operation of the people of the country is necessary to make a success of a plan of this nature. The Finance Minister is fully aware of the risks of the policy of deficit finance. He has assured the country that he will watch the impact of deficit financing on the national economy at every stage, that he would apply the brakes where and when necessary and has asked the country to place confidence in him. If the past is any guide, it would appear that the credit of the country is in very good hands and it is the duty of every citizen to go all out to lend his valuable and enthusiastic support. Even though I do not want to give an impression of elation at the prospect of inflation, for some inflation there is bound to be, I think the risk is worth taking."

RAMNATH A. PODAR,
Bank of Jaipur Ltd.

Economic Development Limited by Savings

"On the financial plane, in the last resort, the economic development is essentially limited by the 'savings fund' of the community, that is, the difference between the existing income and consumption. There is, however, growing inclination among the economists to regard such a pre-existing 'savings fund' as a myth. The margin between the income and consumption can be enlarged by augmenting the former as by lowering the latter. Plans of capital construction augment the income of the people from the moment of their inception and not when they are completed. Release of purchasing power, whether it comes from printing of new notes, borrowings or surplus balances from the annual budget, automatically and simultaneously increases the income of the community. An assumption underlying this argument is that the economic system does contain elements of reserve productive capacity in the shape of unutilised or under-utilised labour and resources and that the purchasing power released by governmental spending on the Plan is wholly or a considerable part of it siphoned back into savings. From this point of view, India is in a favourable position."

LALA YODHRAJ,
Punjab National Bank Ltd.

Estate Duty Bill

"That there is no new taxation in the Budget seemed to give relief to some people, but the proposal to modify the interpretation of the word 'income' by separating speculative losses and gains from other income is very disturbing. If carried, the proposal threatens to wreck certain functions of finance which are the *sine qua non* of all forward markets. . . . The Finance Minister in his Budget speech referred to the question of living costs. Unfortunately, as the largest spender in the country, the Government has not set an example in wise living. If prices have come down, as is claimed to be the case, Government expenditure ought to have been reduced to some extent. But we find that it is not so. Actually, the Government would do well to set a good precedent by attempting to live within their means. . . . I am sorry to say that our Government is determined to implement its socialistic ideas. The unseemly vehemence with which they are proceeding, for instance, with the Estate Duty Bill is to be deplored. It is scarcely realised that in a country like India where industries are only in the developing stage, such a drastic measure can only have the effect of restricting the flow of capital into industry."

MANEKLAL PREMCHAND,
Industrial Investment Trust Ltd.

Securities on the London Stock Exchange

"Fifty years ago the Stock Exchange Market was dominated by railway securities (both home and overseas) and by foreign bonds, and the British Government section was comparatively small. Insurance companies held a very small proportion of their assets in British Government securities—for example, the institution's proportion was less than 1 per cent.—while foreign Government bonds and foreign railway bonds were well represented in our portfolios. Who were the good foreign borrowers of those days? Mexico, Russia and Germany were among the best, while Chile and other South American countries stood fairly high. What changes have taken place since then. I know something about Mexico, having long had business interests there, and having served as chairman of the Mexican Railway Company Ltd. for many years until its eventual sale to the Mexican Government seven years ago. I take some pride in the fact that the debenture holders of that railway ultimately fared a good deal better than those of most other Central American railways, all of which had been very popular fields for investment for British money in the early years of this century."

VINCENT W. YORKE,
National Provident Institution.

REPORT ON COTTON TEXTILE INDUSTRY

(*Concluded from page 699*)

over imports necessarily means that licences for import of these mill stores should be granted to the organisation which mills may establish for the purchase and we recommend to the Government and to the industry that these steps may be adopted." The Party stands for the encouragement of the mill stores manufactured within the country, but suggests that, "while protection should be afforded to these industries by compelling the mills to purchase indigenous goods, there is need for constant inspection of the goods so produced." For this purpose, it wants the Government or the mill industry itself to set up an organisation for the constant inspection of the goods so manufactured in the country.

The Party has paid particular attention to the problem of utilising the home-made textile machinery, the rationalisation of production and the rehabilitation of the industry. It was only a few weeks ago that the Commerce and Industry Minister convened a conference of textile machinery manufacturers to find ways and means for the greater absorption of the locally produced machinery and decided that standardisation methods should be introduced in the production of various components, such as ring frames, looms, carding machines, etc. The Government of India has earmarked a sum of Rs. 25 lakhs in this year's Budget as loan to the Machinery Manufacturers Corporation which is manufacturing good quality carding machines. In order to encourage quality production, the Working Party has recommended that, "in consultation with the textile industry and the textile machinery manufacturing industry, a competent and adequate system of inspectorate should be organised by the Government and that such inspectorate should be authorised to certify to the quality of the products of the industry." This suggestion was accepted at the last meeting of the Government of India, machinery makers and the mill industry. The latest proposal of the Commerce and Industry Minister to maximise production of capital goods is expected to provide some stimulus to this industry.

Top Priority for Scientific Work-load

The Mudaliar Committee is of the view that some sort of scientific work-load should be ascertained and that highest priority should be given to the question of the scientific assessment of work-load for the industry as a whole and its application, with proper modifications according to the circumstances existing in each individual mill. If such work-loads were accepted by both managements and labour unions, it would promote healthier relations between workers and management. The Working Party further suggests that a panel of names of experts, approved both by management and labour unions, should be set up for the purpose of assessing the work-load in the industry regionwise. In regard to rationalisation of production, the Committee is emphatic that it should be viewed not merely from a national but from an international point of view. It points out that, unless the industry is rationalised, unless its productive capacity is increased and costs of production decreased, unless modern methods are adopted and plant and machinery renovated so as to suit such modern methods, the position of the industry, especially in its export markets, will be in serious jeopardy. The maintenance of export markets for Indian cloth, which has been developed during recent years, can only be made possible by paying particular attention to rationalisation. Since rationalisation should not adversely effect labour, it should be undertaken along with an expansion of the unit, in which case the displaced personnel can be employed in the expanded portions of the industry. The gains of rationalisation should be distributed to the management, the worker, the shareholder and the consumer. Thus, the problem of rationalisation covers different aspects, namely, (i) plant and machinery, including replacement, rehabilitation and renovation, and introduction of machinery capable of better and speedier production in the first phase, (ii) redesigning of buildings, where necessary, so as to make operation by workers under more healthy conditions, and (iii) rationalisation of the management of the mills.

The Working Party has devoted particular attention to the subject of supervision and efficiency of technical labour. In view of the large-scale growth of the industry, it feels that closer relations can now be possible in some cases, only if the supervisory staff virtually takes the place of the management in relation to the workers. In this connection, it suggests that, in those textile colleges where technicians are trained, the subject of a proper human relationship to the worker, the social *aide* of the activities of the technicians, may also be studied and a course of studies prescribed so composed as to give the opportunity to the student to acquire at least a previous and preliminary knowledge of these matters and of how these relations can be properly adjusted. In order to improve the efficiency of the worker, the Working Party is emphatic that a preliminary training should be given to the worker, and for this purpose, it suggests that Government should set up the necessary machinery by way of a pilot plant in the chief centres of textile production and have the staff to train the workers for a suitable period before they are taken back by the mill employing them.

In order to ensure a stable export market for Indian cloth, the Mudaliar Committee suggests that an organisation should be set up for inspecting cloth intended for export. It may be mentioned that the Government has already begun to take steps in this direction. Since the textile industry is the largest single industry employing nearly 750,000 workers on multi-shift basis and producing cloth and yarn valued at between Rs. 350 and Rs. 400 crores per annum, the Working Party concludes that Government, industrialists, technicians and labour leaders should combine together and make joint and sustained efforts to improve the efficiency of the industry from all angles, so that it can play a creditable part in the economy of the country in the coming years.

Notices

NASKARPARA JUTE MILLS COMPANY LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE 39th Ordinary General Meeting of the Members of the Company will be held at the Registered Office of the Company, No. 8, Dalhousie Square East, Calcutta, on Monday the 20th April, 1953, at 5 p.m., for the purpose of receiving the Directors' Report, passing the Audited Accounts and declaring the Dividends recommended by the Directors for the half-year ended the 30th April, 1952, electing Director, appointing Auditors and for transacting any other business of the Company that may be brought forward.

The Share Transfer Register of the Company will be closed from the 13th April, 1953, to 20th April, 1953, both days inclusive.

By Order of the Board,
For and on behalf of
NASKARPARA JUTE MILLS CO., LTD.,
HOWRAH TRADING CO., LTD.,
Managing Agents,
(Sd.) K. D. JALAN,
Director.

8, DALHOUSIE SQUARE EAST,

PREMIER CONSTRUCTION RAISES DIVIDEND

SHARP FALL IN PROFIT OF CALICO MILLS

Premier Construction Co., Ltd.

THE directors of the above Company (Managing Agents: Messrs. Walchand & Co., Ltd., Bombay) submit the audited accounts of the Company for the year ended 31st December, 1952.

During the year, the Company has made a profit of Rs. 8,71,432 (Rs. 8,00,048). To this has to be added the sum of Rs. 42,987 (Rs. 46,209) being the balance brought forward from the last year's accounts, making a total of Rs. 9,14,419 (Rs. 8,46,257), which the directors propose to appropriate as follows:—

For dividends on 6¼ (6¼) per cent. cumulative preference shares at Rs. 6-4 (Rs. 6-4) per share (less income-tax) Rs. 62,500 (Rs. 62,500), on 6¼ (6¼) per cent. cumulative second preference shares at Rs. 6-4 (Rs. 6-4) per share (less income-tax) Rs. 93,750 (Rs. 93,750), on 4½ (4½) per cent. cumulative third preference shares at As. 7 pies 2.4 (As. 7 pies 2.4) per share (less income-tax) Rs. 2,53,125 (Rs. 2,53,125), on ordinary shares at Rs. 4-8 (Rs. 4-8) per share (free of income-tax) Rs. 3,37,500 (Rs. 3,00,000), on promoters shares at As. 11 pies 10.43 (As. 6 pies 4.20) per share Rs. 25,963 (Rs. 13,890), for reserve fund Rs. 88,143 (Rs. 80,005), and for carrying forward the balance of Rs. 53,438 (Rs. 42,987).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	1,05,06,250	Block ...	62,657
Reserves ...	1,15,34,059	Debts, deposits and advances ...	37,85,621
Provision for taxation ...	14,25,000	Investments	2,31,74,262
Liabilities ...	28,02,927	Cash ...	1,60,115
Profit and loss account ...	9,14,419		
Rs.	2,71,82,655	Rs.	2,71,82,655

Ahmedabad Manufacturing and Calico Printing Co., Ltd.

The directors of the above Company (Agents: Messrs. Karamchand Premchand Ltd., Ahmedabad) submit the audited accounts of the Company for the year ended 31st December, 1952.

During 1952, there was a general and precipitate decline in prices. However, the directors consider the working results to be satisfactory.

Under Article 3 of the agreement with the managing agents, the board of directors have fixed for 1952 the amount of commission payable to the managing agents at Rs. 16,50,000 instead of Rs. 21,68,396. It has been the policy of this Company to value stocks below cost. For the purpose of income-tax assessment, however valuation is made on the basis of cost. Accordingly, the Company does not expect any liability for taxes on income for 1952. Hence, no provision for taxes has been made in the accounts.

A sum of Rs. 45,67,966 (Rs. 1,00,64,013) of 1952 is available for appropriation which together with Rs. 2,89,575 (Rs. 2,45,178) brought forward from the previous year's account amounts to Rs. 48,57,541 (Rs. 1,03,09,191). The directors have transferred Rs. 26,00,000 (Rs. 28,00,000) to depreciation fund and Rs. 38,536 (Rs. 1,87,616) paid as donations are debited in profit and loss appropriation account. The directors recommend:—

Payment of dividend on 'A' cumulative first preference shares for the year 1952 at 4½ (4½) per cent. on 1,600 shares of Rs. 125 each bearing interest at 4½ (4½) per cent. per annum free of income-tax absorbing Rs. 9,000 (Rs. 9,000), payment of dividend on diamond jubilee cumulative second preference shares for the year 1952 at 4½ (4½) per cent. on 16,000 shares of Rs. 50 each bearing interest at 4½ (4½) per cent. per annum subject to income-tax absorbing Rs. 36,000 (Rs. 36,000), payment of dividend on cumulative third preference shares for the year 1952 at 4½ (4½) per cent. on 38,666⅔ shares of Rs. 50 each bearing interest at 4½ (4½) per cent. per annum subject to income-tax absorbing Rs. 87,000 (Rs. 87,000), payment of final dividend for the year 1952 of Rs. 10 (Rs. 10) per share free of income-tax on 1,00,000 ordinary shares together with the interim-dividend at Rs. 8 (Rs. 8) per share for the year 1952 absorbing Rs. 18,00,000 (Rs. 18,00,000), and carry forward to the following year's account the balance of Rs. 2,87,005 (Rs. 2,89,575).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	1,54,10,274	Block ...	3,71,68,168
Reserves ...	3,38,63,311	Stock ...	84,22,837
Provision for taxation ...	24,03,316	Stores, etc. ...	17,11,464
Liabilities ...	71,55,113	Debts, deposits and advances ...	1,01,12,643
Profit and loss account ...	14,19,005	Investments	3,55,609
		Cash ...	24,80,307
Rs.	6,02,51,019	Rs.	6,02,51,019

Belvedere Jute Mills Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st December, 1952.

After transferring Rs. 1,00,000 (*nil*) to general reserve there is a balance of Rs. 2,60,847 (Rs. 8,09,714) at the credit of profit and loss account from which the directors recommend payment as follows:—

Dividends on preference shares at Rs. 3-8 (Rs. 3-8) per share Rs. 24,500 (Rs. 24,500) and on ordinary shares at Rs. 7-8 (Rs. 15) per share Rs. 2,10,000 (Rs. 4,20,000) and leaving Rs. 26,347 (Rs. 3,65,214) to be carried forward.

In accordance with the working time agreement of the Indian Jute Mills Association, the mills worked 42½ hours per week with 12½ per cent. of the total looms scaled.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	35,00,000	Block ...	40,32,986
Reserves ...	32,59,373	Stock ...	30,04,687
Provision for taxation ...	1,38,668	Stores ...	12,98,694
Liabilities ...	18,67,792	Debts, deposits and advances ...	3,67,286
Profit and loss account ...	26,347	*Investments*	*55,360*
		Cash ...	33,167
Rs.	87,92,180	Rs.	87,92,180

Trichinopoly Mills Ltd.

The directors of the above Company (Managing Agents: Messrs. Mooljee Ramjee & Sons, Ramjeenagar) submitted the audited accounts of the Company for the year ending 31st December, 1952.

The profit for the year is very meagre compared with those of the previous years. Due to the continued slump in the yarn trade, yarn prices ruled even below the already unremunerative prices fixed by the Government, while the mills had to consume high priced American, Egyptian, as well as Indian cotton stocked by it. Prospects for the year 1953 seem to be equally gloomy. The cut in energy supply which was prevalent in varying degrees for almost 9 months in the year added to the cost of production.

The appeal filed by the directors against the award of the Industrial Tribunal regarding bonus to workers for the year 1950, is still pending. The dispute over the quantum of bonus to workers for the year 1951, was adjudicated upon by the Industrial Tribunal, Madurai and the award is expected very shortly.

The net profit for the year after providing for all expenses and writing off Rs. 56,748 (Rs. 45,358) as depreciation on fixed assets, is Rs. 71,470 (Rs. 6,65,963). With Rs. 61,026 (Rs. 5,362) the balance carried forward from last year, there is a sum of Rs. 1,32,497 (Rs. 6,71,325) at the credit of the profit and loss account. The directors recommend to dispose of this sum as follows:—

To provision for taxation Rs. 37,000 (Rs. 2,75,000), to pay a tax-free dividend of 7 (10) per cent. on the old shares and 7 per cent. on the new shares from the date of their allotment to shareholders Rs. 85,654 (Rs. 93,299) and to carry forward the balance of Rs. 9,843 (Rs. 61,026) to next year.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	13,98,630	Block ...	3,46,014
Reserves ...	7,25,505	Stock ...	14,68,544
Provision for taxation ...	3,05,598	Stores, etc. ...	1,65,703
Liabilities ...	1,76,650	Debts, deposits and advances ...	7,06,685
Profit and loss account ...	1,32,497	Cash ...	51,934
Rs.	27,38,880	Rs.	27,38,880

Peermade Tea Co., Ltd.

The directors of the above Company (Secretaries: Messrs. Aspinwall & Co., (Travancore) Ltd., Alleppey) submit the audited accounts of the Company for the year ended 31st December, 1952.

The net profit for the year, amounts to Rs. 3,12,093, which compares with a profit of Rs. 9,84,920 in 1951, and Rs. 9,47,784 in 1950. As usual the necessary provisions for depreciation on buildings and machinery have been made; also full provision has been made for taxation at current rates. The teas unsold have been conservatively valued.

The crop harvested in 1952 was 18,24,487 (19,34,298) lbs. Although this figure is less than the estimate of 18,50,000 lbs., also 1,09,811 lbs. behind the 1951 record figure, yet compares favourably with the average crop *1948-1951* of 17,11,590 lbs. The harvesting of a finer quality leaf, and a less favourable rainfall distribution during the year, are the main causes for the short-fall in crop.

Except for a small dust contract, all the remaining dusts and export grades were offered at the Cochin auctions. Some export grades which received unsatisfactory bids in Cochin auctions were withdrawn and shipped for sale in London. Unfortunately, during the year tea prices fell sharply, but this fall was not unexpected with tea changing from a sellers' to a buyers' market. In 1952, the average sale price was 155.98 cents or 44.17 cents below the 1951 figure. The average prices of 1950 and 1951 would appear unlikely to be repeated, although export grades have met with better prices since the first auction of 1953.

Effective from 30th June, 1952, the Travancore Government notified minimum wages for plantation labour at high rates above those ruling in neighbouring States. The increase in estate expenditure above estimate, in 1952 is mainly caused by such legislation.

The table below gives the results of the last four years:—

Year	Crop	Estate expenditure	All-in cost	Average sale price	Net profit
	Lbs.	Cts. per lb.	Cts. per lb.	Cts. per lb.	Cts. per lb.
1949 ...	16,60,853	119.48	141.98	171.82	32.50
1950 ...	17,47,388	97.43	138.72	191.19	54.24
1951 ...	19,34,298	108.13	150.76	200.15	50.92
1952 ...	18,24,487	124.21	139.73	155.98	17.19

For 1953, a crop of 18,50,000 (18,50,000) lbs. is estimated to be collected at an estate expenditure of 122 (109.42) cents per lb. Compared with this time last year, the present crop figure is slightly ahead.

Although less than the record crop year of 1951, yet the crop of 18,24,487 lbs. is the second highest in the history of the Company and represents an all-over yield of 1,172 lbs. per acre, which must be considered extremely satisfactory.

Commenting on the recent yields the visiting agent states that it is quite remarkable that on a property of this size there was only one field during the last pruning cycle which did not reach the 1,000 lbs. per acre mark and this demonstrates clearly the quality of the tea as a whole.

The directors' policy of improvement of housing for labour and labour conditions generally on the estate has continued with the building of new lines and the renovation of old lines. Three creches were also built during the year and pipe water supply to lines and buildings is being extended where possible. Buildings and factories are well maintained and the tea machinery is running satisfactorily and is well cared for. The visiting agent, reports that the property is in good order.

The profit and loss account shows that, inclusive of the profit for the year, the amount available for appropriation is Rs. 5,75,950 (Rs. 9,49,732) and the directors recommend that this balance be disposed of as follows:—

By payment of a total dividend on the paid up ordinary capital at the rate of 25 (52½) per cent. Rs. 3,18,750 (Rs. 6,69,375) and by transfer to non-executive staff retirement fund Rs. 12,500 (Rs. 35,000), leaving to be carried forward the balance of Rs. 2,44,670 (Rs. 3,72,857).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.

Dawn Mills Co., Ltd.

The directors of the above Company (Agents: Messrs. Ramnarain Sons, Ltd., Bombay) submitted the audited accounts of the Company for the year ended 31st December, 1952.

The result of the year's working showed a profit of Rs. 2,14,939 (Rs. 10,59,071) after providing for depreciation and staff gratuity fund. To this was added the sum of Rs. 2,30,356 (debit of Rs. 86,715), brought forward from last year's account, making a total of Rs. 4,45,295 (Rs. 9,72,356) which, the directors disposed of in payment of a dividend at the rate of Rs. 6 (Rs. 6) per share, free of income-tax for the year Rs. 1,92,000 (Rs. 1,92,000), transferred to reserve fund Rs. 1,76,427 (Rs. 3,00,000) leaving to be carried forward the balance of Rs. 76,868 (Rs. 2,30,356)

The mill buildings with machinery and stocks of cotton, yarn, hosiery, etc., are insured against fire and riot risks to the extent of Rs. 1,34,47,172 (Rs. 1,76,04,066). The profits and fixed charges, including the risk of riot and civil commotion, have been insured for Rs. 20,00,000 (Rs. 20,00,000) covering indemnity for 24 months.

Rs.	1,06,42,304	Rs.	1,06,42,304

Broach Electric Supply and Development Corporation Ltd.

The directors of the above Company (Managing Agents: The Rajputana Textiles (Agencies) Ltd., Bombay) submitted the audited accounts of the Company for the year ended 31st December, 1952.

The performance of the power plant during the year was satisfactory and a steady, continuous supply of energy was maintained. The additional plant capacity resulting from the commissioning of the 155 k.w. mirrlees-brush set in the preceding year was fully absorbed. Furthermore, there is the matter of replacing the old sulzer set—No. 3—which has been fully depreciated in terms of the Electricity (Supply) Act 1948. The Company's agents are therefore actively considering the placing of an order for a suitable generating set and the requisite enquiries have already been set afoot.

The directors have had under consideration, the question of raising the additional finance necessary for expansion of the plant capacity as also for the extension and strengthening of the distribution system, and after examining all aspects of the matter, have come to the conclusion that the most suitable method under prevailing circumstances would be to issue first mortgage debentures. These debentures will in the first instance be offered to shareholders of the Corporation.

The distribution system was well maintained and attention is being concentrated on efficient supply to consumers. As a result of the large number of additional connections given during the year, it was found that the feeders were getting somewhat over-loaded. Accordingly the work of constructing a 3.3 k.v. high tension line in one section of the area of supply was taken on hand during the year. The progress of the Corporation during the past five years is reflected in the following tabulation:—

Year	Number of consumers	Connected load	Units of energy sold	Revenue from energy sold
		kw.		Rs.
1952	3,574	1,813	1,318,456	4,24,373
1951	2,905	1,630	1,222,540	3,39,269
1950	2,657	1,467	1,004,204	3,08,155
1949	2,550	1,412	937,448	2,62,232
1948	2,656	1,420	1,118,152	2,88,456

The sales, revenues and number of consumers served reflect satisfactory increases. The report of the rating committee appointed by the Government of Bombay pursuant to the provisions of the Electricity (Supply) Act 1948, was finalised during the year, and on receipt of the requisite Government orders the rates authorised therein were brought into effect from the August, 1952, billings. It may be mentioned that Government orders have created a certain amount of dissatisfaction amongst the motive power consumers, as the rating committee has directed that a flat rate should be applied to all consumers irrespective of the size of the installation of any particular consumer. Capital expenditure during the year amounted to Rs. 58,982 (Rs. 1,16,771). The profit and loss account shows that the result of the year's operations, compared with the previous year, was as follows:—

	1952 Rs.	1951 Rs.
Revenue from sales of energy	4,24,373	3,39,269
Revenue from other sources	20,682	16,933
Total gross revenue ...	4,45,055	3,56,202
All charges including depreciation and taxes ...	3,74,524	3,16,651
Net profit	70,531	39,551

While total gross revenue showed a satisfactory increase, the charges including depreciation and taxes also rose substantially with the result that only a portion of the increased revenues were carried through to the net profit. It will be noted that there is a large liability on account of arrears of depreciation as ascertained in accordance with the provisions of the Electricity (Supply) Act 1948, and the major portion of the profit has therefore been applied towards reduction of this statutory liability.

As a result of the above factors the net balance available for disposal after making the several appropriations and adding the amount brought forward and the excess tax provision and refund of taxes paid in the previous year as also the amount due to adjustment of the 1950 profits, amounted to Rs. 34,043 (Rs. 29,624) and the directors utilised this balance in paying a dividend on shares at As. 5-9 (As. 4-9) per share (3.59 (2.96) per cent.) free of income-tax Rs. 25,409 (Rs. 20,990), leaving to be carried forward a sum of Rs. 8,634 (Rs. 8,634).

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	7,07,020	Block ...	11,99,885
Reserves ...	6,35,667	Stores, tools, etc. ...	92,674
Provision for taxation ...	33,265	Other assets	53,978
Liabilities ...	1,07,326	Debts, deposits and advances ...	86,096
Profit and loss account	8,634	Investments	5,975
		Cash ...	53,304
Rs.	14,91,912	Rs.	14,91,912

Chaparmukh-Silghat Railway Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Martin Burn Ltd., Calcutta) submitted the audited accounts of the Company for the half-year ended 31st March, 1952.

The route mileage of line open for traffic at the end of the half-year was 30.81 miles, gauge 3' 3¾", and date of first opening for traffic 30th March, 1920. The total capital expenditure to the close of the half-year was Rs. 35,18,317 (Rs. 34,91,077). The gross earning during the half-year were Rs. 2,76,245. During the corresponding period in 1951 they were Rs. 2,36,396. The increase was Rs. 39,849 (Rs. 14,354) or 16.85 (6.07) per cent. The working expenses are as usual, 50 per cent. of the gross earnings, plus management expenses Rs. 4,394 (Rs. 9,624). The net earnings were therefore Rs. 1,33,728, against Rs. 1,08,574 in 1951 exclusive of interest on loans. The balance available for distribution, including net profit of Rs. 65,318 (Rs. 57,207) and balance brought forward of Rs. 32,574 (Rs. 69,050), was Rs. 97,892 (Rs. 1,26,257). The directors disposed of this amount in payment of a dividend for the half-year of Re. 1-4-7.8 (Re. 1-7-3.6) per share, without deduction of tax Rs. 40,009 (Rs. 45,143) and carried forward Rs. 57,883 (Rs. 51,257). The amount thus distribute at 3¾ per cent. per annum amounted to Rs. 40,009 for the half-year ended 31st March, 1952, the same as for the previous half-year. This amount, however, includes Rs. 28,482 paid towards income-tax and surcharge.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	31,00,000	Block ...	27,82,596
Reserves ...	75,000	Other assets	7,35,721
Provision for taxation ...	74,821	Debts, deposits and advances ...	1,00,824
Liabilities ...	3,74,233	Cash ...	1,02,805
Net revenue account ...	97,892		
Rs.	37,21,946	Rs.	37,21,946

N.B.—Figures within brackets relate to the corresponding period of the previous year.

COMPANY MEETINGS AND DIVIDENDS

KANKNARRAH CO., LTD. *Half-yearly General* Meeting, Calcutta, 24th April, 1953. Dividend: Rs. 4 per share. Transfer books closed from 10th to 24th April, 1953, both days inclusive.

KAMARHATTY CO., LTD. Half-yearly General Meeting, Calcutta, 24th April, 1953. Dividend: Rs. 6 per share. Transfer books closed from 10th to 24th April, 1953, both days inclusive.

UPPER JUMNA VALLEY ELECTRIC SUPPLY CO., LTD. Half-yearly General Meeting, Calcutta, 24th April, 1953. Dividend: As. 10 per share (including an additional payment of As. 2 per share), free of income-tax. Transfer books closed from 18th to 24th April, 1953, both days inclusive.

NEW MANBHOOM COAL CO., LTD. Half-yearly General Meeting, Calcutta, 24th April, 1953. Dividend: *Nil.* Transfer books closed from 17th to 24th April, 1953, both days inclusive.

SHAHJAHANPUR ELECTRIC SUPPLY CO., LTD. Annual General Meeting, Calcutta, 24th April, 1953. Dividend: As. 8 per share. Transfer books closed from 17th to 24th April, 1953, both days inclusive.

TRICHINOPOLY MILLS LTD. Annual General Meeting, Tennore, Tiruchirapalli, 25th April, 1953. Dividend: As. 12 per share. Transfer books closed from 8th to 25th April, 1953, both days inclusive.

NEW UNION MILLS LTD. Annual General Meeting, Bombay, 28th April, 1953. Dividend: Re. 1-4 per share, free of income-tax. Transfer books closed from 10th April to 1st May, 1953, both days inclusive.

SASSOON SPINNING AND WEAVING CO., LTD. Annual General Meeting, Bombay, 28th April, 1953. Dividend: Re. 1-4 per share, free of income-tax. Transfer books closed from 10th April to 1st May, 1953, both days inclusive.

VISHNU COTTON MILLS LTD. Annual General Meeting, Bombay, 29th April, 1953. Dividend: Rs. 10 per share, free of income-tax. Transfer books closed from 10th to 30th April, 1953, both days inclusive.

WESTERN INDIA MATCH CO., LTD. Annual General Meeting, Bombay, 29th April, 1953. Dividend: Rs. 11 per share (including bonus of Re. 1 per share). Transfer books closed from 18th April to 7th May, 1953, both days inclusive.

STANDARD MILLS CO., LTD. Annual General Meeting, Bombay, 29th April, 1953. Dividend: Rs. 20 per share, free of income-tax. Transfer books closed from 7th to 24th April, 1953, both days inclusive.

TRAVANCORE RUBBER AND TEA CO., LTD. Annual General Meeting, Alleppey, 29th April, 1953. Dividend: 6 per cent. Transfer books closed from 12th April to 1st May, 1953, both days inclusive.

BELSUND SUGAR CO., LTD. Annual General Meeting, Calcutta, 30th April, 1953. Transfer books close from 23rd to 30th April, 1953, both days inclusive.

SEEBPORE COAL CO., LTD. Half-yearly General Meeting, Calcutta, 30th April, 1953. Dividend: Re. 1 per ordinary share. Transfer books closed from 18th to 30th April, 1953, both days inclusive.

SVADESHI MILLS CO., LTD. Annual General Meeting, Bombay, 30th April, 1953. Dividend: Rs. 16 per share. Transfer books closed from 24th March to 22nd April, 1953, both days inclusive.

LAKSHMI COTTON MANUFACTURING CO., LTD. Annual General Meeting, Bombay, 30th April, 1953. Dividend: Rs. 37-8 per share, free of income-tax. Transfer books closed from 10th to 30th April, 1953, both days inclusive.

TATA MILLS LTD. Annual General Meeting, Bombay, 1st May, 1953. Dividend: Re. 1 per share. Transfer books closed from 24th March to 22nd April, 1953, both days inclusive.

BELVEDERE JUTE MILLS CO., LTD. Half-yearly General Meeting, Calcutta, 1st May, 1953. Dividend: Rs. 7-8 per share. Transfer books closed from 18th April to 1st May, 1953, both days inclusive.

PODAR MILLS CO., LTD. Annual General Meeting, Bombay, 4th May, 1953. Dividend: Rs. 10 per share. Transfer books close from 1st to 15th May, 1953, both days inclusive.

MODERN MILLS LTD. Annual General Meeting, Bombay, 8th May, 1953. Dividend: Rs. 5 per share. Transfer books close from 18th April to 8th May, 1953, both days inclusive.

DURBHANGA SUGAR CO., LTD. Annual General Meeting, Durbhanga, 11th May, 1953. Transfer books close from 1st to 11th May, 1953, both days inclusive.

WEST COAST ELECTRIC SUPPLY CORPORATION LTD. Interim-dividend of As. 6 per share free of income-tax for the half-year ended 30th September, 1952. Transfer books close from 19th to 26th April, 1953, both days inclusive.

ROHIT MILLS LTD. Dividend of Rs. 9 per share (including bonus of Re. 1 per share), for the year ended 31st December, 1952.

MAFATLAL FINE SPINNING AND MANUFACTURING CO., LTD. Dividend of Rs. 17-8 per share for the year ended 31st December, 1952.

NEW COMMERCIAL MILLS LTD. Dividend of Rs. 70 per share, for the year ended 31st December, 1952.

QUESTION HOUR IN PARLIAMENT

Balance of Payments

INDIA'S balance of payments position on current account with the U.K. from April to December, 1952 showed, according to tentative estimates, a deficit of Rs. 59.2 crores.

* * * *

National Sample Survey

It has been decided to develop the National Sample Survey into a Central focal agency, under which all schemes of national sample survey may be conducted. In pursuance of this decision, the co-ordinated schemes for crop survey and the preliminary inquiry in connection with the agricultural census have been transferred to the National Sample Survey.

—*Finance Minister*

Spinning Mills in India

There are 113 cotton spinning mills and 276 composite mills in the country. Their installed production capacity, according to the Planning Commission, is 1,510 million pounds of yarn and 4,744 million yards of cloth. Their estimated production in 1952-53 yas 1,450 million lbs. of yarn and 4,700 million yards of cloth.

* * * *

"Khadi" Production

As much as 92,31,204 sq. yards of *khadi* were produced in India in 1951-52. The comparative figures for 1950-51 and 1949-50 were, 72,88,501 sq. yards and 71,54,407 sq. yards, respectively. The Government purchased in 1951-52 Rs. 67,287 worth of *khadi*, Rs. 96,277 worth in 1950-51 and Rs. 2,587 worth in 1949-50.

—*Minister for Commerce*

Rice-Wheat Deal

There was an agreement between India and Pakistan, under which India exchanged 38,378 tons of wheat with Pakistan rice. The value of the wheat, at the prevailing market prices abroad, is Rs. 229 lakhs. Recently, Pakistan was reported to have entered into a deal with Japan for such exchange. I think that no further deal will be entered by Pakistan with India.

—*Minister for Food and Agriculture*

Hirakud Dam Committee

The recommendations of the Advisory Committee on the Hirakud Dam Project are considered and mostly accepted in regard to stage one which is in hand, excepting some items. They include irrigation in the Mahanadi delta, transmission lines, etc., which are still under investigation. Final decision in the matter will be taken after the detailed investigations are completed.

—*Deputy Minister for Irrigation*

Trade Unions

While the Government would welcome any more towards elimination of unhealthy rivalry among trade unions, this is a matter in which they would not intervene. It is for the workers themselves to discourage the formation of trade unions by refusing to join more than one union in the same industry. Parallel and rival trade unions, sometimes two or more, are functioning in some of the major industries and in some industrial centres. The ideal arrangement would be to have one union in one industry and, naturally, the existence of parallel trade unions in the same industrial concern tends to weaken the trade unions and, consequently, make them less effective. Sometimes, however, a parallel trade union in the same industrial concern exist only in name and does not very much affect the effectiveness of a strong trade union functioning on proper trade union lines.

—*Minister for Labour*

Caltex Oil Refinery

Caltex (India) Ltd., which is to establish an oil refinery at Visakhapatnam with a capacity to refine 50,000 long tons of crude oil per annum, has been assured by the Government against nationalisation for a period of 25 years. The Company has also been exempted from sections 15 to 18 of the Industries (Development and Regulation) Act, 1951, and would be allowed freedom to make its own arrangements for the import of crude oil and for the distribution of the refined products in India, as also to export such products as may not be required for the Indian market. On its part, the firm has assured the Government that it would (1) spend Rs. 15 lakhs to provide housing for their labour, (2) make available, at reasonable prices, the surplus by-products to subsidiary Indian chemical industries, (3) not use tankers of countries discriminating against India, and it would use Indian Government tankers, if required, (4) take adequate steps to train Indian personnel subject to the right of the management to select personnel, and (5) use Indian crude oil, if available in sufficient quantity and suitable for processing. The refinery would be owned and operated by a public company, to be promoted by Caltex under the Indian Companies Act, with an issued capital of Rs. 7½ crores, 25 per cent. of which would be offered to Indian investors. Caltex would be permitted to fix the prices from time to time at any level not higher than that at which they can make available for equivalent imported products, provided that, subject to this principle, it would consult the Government before altering the prices.

—*Minister for Production*

CALL MONEY RATE LOWER

(From Our Own Correspondent)

BOMBAY, 15*th April*

The most outstanding event of the week under review in the money market is the slight fall in the inter-bank call money rate among the Exchange banks and the big Indian banks. After having been firmly held at 3 per cent. for several weeks, this rate declined to as low as 2½ per cent. early in the week and then remained steady at 2¾ per cent. Some stray business was, however, reported even at 3 per cent. towards the close, but the general rate was no more than 2¾ per cent. There has been a slight fall in the demand for funds, with some of the big banks not showing the same amount of anxiety to borrow on call as in the preceding two weeks. The rate among the smaller Indian banks continued unchanged at 3 per cent.

Term money rates also were a shade lower, at 2¾ per cent. for one to three months—3 per cent. was offered occasionally for renewals—and 2½ per cent. for six months. The Treasury Bill rate, however, showed no change and stood at the self-same rate of Rs. 2-7 per cent. per annum. The response to the weekly tenders continued to be lukewarm, this week's tenders for Rs. 1 crore of bills having brought an offer of only Rs. 120.5 lakhs.

For the second week in succession, the notes in circulation have gone up by over Rs. 16 crores. The statement of affairs of the Reserve Bank of India for the week ended 10th April, 1953, which discloses the latest rise of Rs. 16.57 crores, however, shows a fall of Rs. 1.67 crores in notes held in the Banking Department. The total notes issued, as a result, have risen by Rs. 14.89 crores. This rise has been covered by the transfer of Rs. 15 crores in the foreign assets from the Banking Department to the Issue Department. A small decline of Rs. 10.43 lakhs in rupee coin is also noted. On the liabilities side of the Banking Department, deposits of the Central Government which had declined by Rs. 48.49 crores in the previous week have risen by Rs. 11.06 crores in the week under review. Deposits of other Governments, however, show a decline of Rs. 17.71 crores, in contrast to the rise of Rs. 19.57 crores in the previous week. Deposits of *banks too have declined by Rs. 9.56 crores and those* of others by Rs. 2.11 crores. On the assets side, balances held abroad have shrunk by Rs. 15.80 crores. A decline of Rs. 2.17 crores is disclosed by loans and advances other than to Governments. A fresh advance of only Rs. 25 lakhs has been made to Scheduled Banks against usuance bills during the week.

A notable rise of Rs. 5.41 crores in demand deposits is disclosed by the consolidated statement of position of Scheduled Banks for the week ended 3rd April, 1953, while time deposits are lower by Rs. 37.09 lakhs. Inter-bank borrowings repayable on demand have risen sharply by Rs. 2.58 crores and those of a time nature by Rs. 35 lakhs. Borrowings from the Reserve Bank against usance bills have declined by Rs. 4.50 crores, but total borrowings show a fall of only Rs. 1.94 crores. Borrowings from the Imperial Bank, on the other hand, show a rise of Rs. 2.30 crores. Advances reveal no variation, but inland bills purchased and discounted have moved up by Rs. 3.16 crores. Investments are lower by Rs. 2.06 crores. Cash on hand and balances with the Reserve Bank are together higher by Rs. 9.55 crores, balances with other banks by Rs. 23.51 lakhs and money at call and short notice by Rs. 3.74 crores.

The Gilt-edged market experienced listless conditions during the week under review. In the absence of any support prices were down in some cases—the 3 per cent. Conversion Loan showing the largest decline—and the volume of business dwindled. 3 per cent. 1959-55 was unchanged at Rs. 100-1, but 3 per cent. 1957 was an anna down at Rs. 98-11. 3 per cent. 1958 stood at Rs. 98-7, whereas 3 per cent. 1959-61 gained an anna to Rs. 96-4. 3 per cent. 1963-65 and 3 per cent. 1964 were unchanged at Rs. 92-8. 3 per cent. 1966-68 was placed an anna lower at Rs. 90-5. 3 per cent. 1970-75 was maintained at Rs. 86-10, despite the payment of interest to-day. 3 per cent. 1986 Conversion Loan declined by as much as As. 10 to Rs. 81-11.

There was no change in the rupee-U.S. dollar rate. Nor was there any significant variation in the sterling dollar rate during the week. The dollar continued to be quoted at Rs. 4753 per $100 (banks selling for ready delivery) and Rs. 4764 (banks buying for ready). In New York, £ sterling stood at $2.81¾—2.81¾ per £ for spot and the rate for three months forward which had remained unchanged at $2.81—2.81¼ till Monday shaded off to $2.81-1/16—2.81-3/16.

EXPORT DEMAND FOR TEA SHRINKS

(From Our Own Correspondent)

CALCUTTA, 14*th April*

In contrast with the trend of auctions during recent weeks, export sale yesterday suffered from a shrinkage in demand, and as a result certain lines of teas offered recorded a decline in prices. The downward movement was pronounced in the case of residue and stalky teas. Offerings amounted to 47,000 packages. Despite the general weakness, prices for whole leaf grades possessing useful leaf appearance improved by one anna, while best liquoring B.O.Ps. and fannings tended dearer. The quotations were: best C.T.C. Assam B.P. Rs. 2, medium Assam B.P. Re. 1-12, clean common B.P. Re. 1-11, and clean black pekoe Re. 1-9.

An irregular trend was also the feature of last week's sale for domestic consumption. Dusts offered aggregated 19,960 packages, and leaf grades 1,290 packages. A small decline in demand was in evidence. In the dust market, prices for the best liquoring C.T.C. sorts eased. Teas suitable for export were in demand. Low mediums and commons were steady. A one-anna rise was recorded in the prices for mediums. The rates were: best Assam C.T.C. Rs. 2 to Rs. 2-1, medium Dooars Re. 1-7-6, and medium Assam grainy Re. 1-9-6. The leaf market was steady, and prices were higher.

BULLION FIRM

(From Our Own Correspondent)

BOMBAY, 15*th April*

The trend of the bullion market was rather erratic during the week, but prices generally managed to move forward and remain at higher levels, as the undertone was distinctly bullish in both the metals.

The upward trend in silver witnessed towards the close of last week failed to assert itself during the first few days of the week. During these days, prices actually declined due to selling by an erstwhile bull operator. But from Monday onwards a distinctly bullish trend came to prevail on strong speculative buying induced by good offtake from both local and up-country centres. To-day, however, the advance was halted a little and price closed below the best levels of the week. Nonetheless, silver scored a handsome gain of Rs. 3-10 over the week.

Gold was firmly steady throughout the week due to a shrinkage of floating stock and fairly good offtake. At the close, reports of a decline in offtake checked the rise, but on balance, the yellow metal stood Re. 1-10 per tola higher for ready delivery and Re. 1-13 for forward.

Silver for forward delivery (1st May settlement) began at Rs. 155-5 and after touching Rs. 156-1 on Friday the 10th inst. reacted to a low of Rs. 154 early on Monday this week. But, on revival of speculative buying, the rate advanced to Rs. 159-12 yesterday. As yesterday's closing rate, namely, Rs. 157-12, was Rs. 5 more than the last clearing rate, automatic interim clearing came into force in both the metals, the clearing rate being fixed at Rs. 159-8 for silver and Rs. 87 for gold. To-day, however, the white metal lost a part of the previous day's gain and closed at Rs. 158-11.

Ready silver (.996 Mint) opened at Rs. 155-9 and moved down to Rs. 154-4, but recovered to close higher at Rs. 158-15, the premium over the forward rate being kept up at As. 4 throughout. The floating stocks of silver are placed at 1,300 bars. The daily average offtake was 50 bars.

Gold for forward delivery (30th April settlement) steadily advanced from Rs. 85-1 to Rs. 87-10 yesterday, but finished to-day at *Rs.* 87.

Ready gold moved up from Rs. 85-15 to Rs. 88-4 before closing at Rs. 87-9. The premium of As. 13 which the ready metal commanded over the forward early in the week narrowed down to As. 9 at the close. The floating stocks of gold are estimated at 35,000 tolas. The daily average arrivals were 7,000 tolas, while the offtake was 5,000 tolas on an average.

The following comparative table shows the trend of the market during the week under review:

	15-4-53	Highest	Lowest	8-4-53

ALL-ROUND DECLINE IN METALS

(From Our Own Correspondent)

CALCUTTA, 14*th April*

The steep fall in the prices of tin in the London, Singapore and local markets affected all sections of the metal market during the week, and this coupled with a three-day suspension of activity in the Bombay market to meet the emergency, made consumers put off even purchasing their day-to-day requirements. The result has been depression all-round and he would be a bold man who invests money at the present stage. The element of risk has been thus brought to a climax. Tin provided a feature at Rs. 592, with a sharp decline to Rs. 540 on Wednesday last. At this stage, a ray of steadiness was reported in the London and Far Eastern markets, and the recovery that ensued in the local market saw the quotation improve to Rs. 558. However, the lack of business could not sustain the recovery, and the week's closure was extremely quiet at Rs. 540. It appears that the worst phase of the decline is now over, but at what level the price would get stabilised remains to be seen. Till then business would continue to remain almost at a standstill. The cause for this heavy decline is undoubtedly the settlement over the prisoners-of-war issue in Korea, and the clear possibility of an early peace there.

Electrolytic copper eased from Rs. 185 to Rs. 182. The decline would have been even more pronounced had it not been for the continuance of the difficult labour situation in Ghastila and the shortage of the ingots material. It is expected that in view of the changed international outlook, prices in foreign markets would fall further and for this reason consumers refrain from entering into commitments of a long-term nature. The emphasis continues to be on the procurement of scrap.

Lead was unchanged at Rs. 66, and stockists were not prepared to discount the rate in view of the expectation that consumer demand would soon revive. In sympathy with the general trend, electrolytic zinc declined from Rs. 57 to Rs. 55-8. Stocks are heavy, but consumer demand is not expected to change the general nature of the stock position. After declining to Rs. 465, mercury staged a recovery to Rs. 485 but Government's decision to reallocate the unshipped balance of the quota of 10,000 flasks for export only to shippers who have utilised their earlier licences is not expected to bring any noticeable change in the price inasmuch as the re-export quota has not been increased.

COTTON PRICES ADVANCE

(From Our Own Correspondent)

BOMBAY, 15*th April*

Ordinarily April is not a dull month for cotton markets in India. But, due to a combination of circumstances, conditions verging almost on dullness are likely to prevail in these markets during the next few weeks. For the present, however, the forward market is still bullish and prices have gone up further. Much of this increase is due to covering by bears. Now that the market has moved up to high levels, fluctuations are likely to be within a narrower range than in the last few weeks, when the market experienced fairly wide fluctuations.

Instead of setting the tone for the marketing of cotton in general, the forward market is now coming to depend more and more on the conditions in the spot markets. The only factor of uncertainty at present in the forward market is that of the entry of certain outside interests possibly from the northern and eastern parts of the country. The behaviour of the markets is likely to be shaped more by the activities of these new entrants. Apart from this the bear and the bull forces are more or less evenly balanced.

The spot market as indicated above is drawing greater attention from operators though the turnover is not very remarkable. A significant feature, however, to be noted is the gradual trekking back of the mill interests to the market for purchases at lower rates. All of a sudden the mills have lost interest in imported cotton and are reverting once again to Indian styles. One of the reasons responsible for this wholesome change is the changing pattern of purchases in the cloth market. Demand for lower priced cloth appears to have increased possibly due to pre-monsoon buying in mofussil centres. This has induced the mills to replenish their stocks of Indian cotton. It is also expected that the issue of fresh allocations to mills, especially those having less than two months' supply, will give a certain impetus to demand.

The controversy with regard to the crop estimate continues and market opinion is, on the whole, for lower levels which will also go to lend a certain strength to prices. The carry-over at the end of the year, both with regard to foreign and Indian styles, is also expected to be very much lower than in the previous year. This in itself is a bullish factor, because even though efforts to increase production next year in certain parts of the country are afoot, this would need some planning and the increase could only be gradual and spread over two or three years. One of the States keen on effecting such an increase is U.P., where the authorities are endeavouring to raise the acreage by about 50,000 during the next sowing season.

Bengals are still in the doldrums and there is not much enquiry even at lower levels. Holders of stock both here and in up-country centres are, however, living in hopes that some enquiry is bound to be forthcoming from local shippers with commitments for April shipments. With regard to imports, the interest as before is still confined mostly to Egyptian cotton.

The following are the latest available quotations from the Sewri market: Bengal *Deshi* Rs. 560; Berar Jarillas Rs. 750; Vijay Rs. 850; Moglai Rs. 700; Kandesh Rs. 780; and Oomra *Deshi* Rs. 690.

The following table shows the trend of prices in the forward market during the week under review:

	8-4-53	*High*	*Low*	15-4-53
	Rs. a.	Rs. a.	Rs. a.	Rs. a.
I.C.C. May	688 4	704 0	693 4	698 4
I.C.C. Aug.	698 12	715 8	709 4	709 4

At Karachi, nothing has happened during the week to change the pattern. Dealers are marking time for the conclusion of the negotiations regarding the big barter deal with Japan. It is not known whether Karachi has sent any definite counter-proposals to the revised proposals submitted by the Japanese for purchase of six lakh bales of Pakistan cotton. Western Europe is too much shaken by the recent peace moves to indulge in any fresh buying of cotton and the little interest which some of these countries had in Pakistan cotton is in abeyance at least for the time being.

The following are the latest available quotations from Karachi market: Punjab *Deshi* Rs. 64 to Rs. 66; 4F Punjab R.G. Rs. 57-8; S.G. Rs. 61-8; L.S.S. Punjab R.G. Rs. 59-8; S.G. Rs. 64-8; N.T. R.G. Rs. 60; S.G. Rs. 65-1; 289F Punjab R.G. Rs. 65; and S.G. Rs. 70-5.

At Alexandria also, the market is adjusting itself gradually to the prospects of the continuance of the present scheme of marketing for the next year. The operators are actually engaged in a series of threefold operations: Buying from producers, delivering this at a little premium to the Government at fixed prices and purchasing back those varieties more in demand abroad from the Government for export at a light discount and trying to make a living out of these varied transactions. On the whole, from the attitude of the Government it is apparent that the producers will not get the same guaranteed prices for their cotton next year, because the Government cannot afford to go on incurring losses to subsidise the farmers.

More or less the same position obtains at New York. There too the authorities are feeling a little tired of the price support scheme. The combined effect of all these trends is likely to be a general lowering of the price structure in the new year, provided the international situation does not take a sudden turn for the worse for any reason. This is likely to put off foreign buyers from making commitments ahead and the U.S. markets, which are so sensitive to exports, are likely to react unfavourably as the export demand shows a further recession. But for the liberal dollar allocations to various countries for purchase of U.S. cotton, even the present demand would not have been there and there are reports that some of these allocations are going unused because of comparatively cheaper cotton of corresponding staple avail-

e from the sterling areas. If one takes into sideration all these clouds gathering from ious directions, it looks as if a heavy storm is wing for the cotton world which might burst the 1953-54 cotton year.

The following are the latest available quotas from New York as compared with those of week and a fortnight before:

(In cents per lb.)

ART SILK YARN RECOVERS

(From Our Own Correspondent)

BOMBAY, 15*th April*

The recovery in values of yarn witnessed in e art silk yarn market towards the close of last eek, was carried a stage further on the opening y of the week under review, on firm advices om the local bullion market. But on the follow- g session, the market staged a setback which assisted till the 13th inst. The setback was ought about by renewed reports of heavy arrivals imported yarn and expectation of still larger pplies in the coming weeks. There were, besides, eports of progress in Korean peace talks. These actors induced operators to liquidate their stocks, nd buyers being reserved, values of yarn, particularly in the specific delivery contract, drifted ownwards. Yesterday, however, the sentiment of perators changed for the better and, on rumours hat consumers of art silk yarn would receive per oom very limited yarn import licences during the urrent half-year, values staged a marked recovery which continued to-day also. Not only were the previous losses completely erased but the closing rates stood very much higher than those at the end of last week.

In the forward section, 150D April delivery contract opened the week higher at Rs. 811, as against Rs. 794. After receding to Rs. 797 on the 13th inst., it recovered to finish at Rs. 828 to-day, the net gain over the week being Rs. 34. May contract improved from Rs. 799 to Rs. 816 on the opening day, but declined gradually to Rs. 804 on Monday. Yesterday, however, it strengthened to Rs. 826 and a further nine points were added to-day. The contract gained Rs. 36 over the week.

Values of yarn in the ready section moved in sympathy with those in the forward section. Thus, 150 Italy opened the week an anna higher at Rs. 4-1 and, after declining to Rs. 4 on Monday, moved up to Rs. 4-3 to-day. 120 Italy fluctuated between Rs. 4-0½ and Rs. 4-2 before closing at Rs. 4-2. 120 Japan and 150 Japan were on the whole better by As. 2 and an anna at Rs. 4-9 and Rs. 4-5, respectively.

The table below gives the prices of art silk yarn quoted to-day, as compared with those on the 8th April and 31st March, 1953.

Art Silk Yarn—	15-4-53 Rs. a.	8-4-53 Rs. a.	31-3-53 Rs. a.
150D April (per case of 200 lbs.)	828 0	794 0	821 0
150D May ,, ...	835 0	799 0	— —
120 Japan (per lb.) ,, ...	4 9	4 7	4 12
150 Japan ,, ...	4 5	4 4	4 6
150 Italy ,, ...	4 2	4 0½	4 3
150 Italy ,, ...	4 3	4 0	4 2

Despite imports of large quantities of art silk yarn in the last few weeks, prices are still ruling high. In fact, it is reported that several looms using yarn are lying idle, as a result of high prices for yarn *vis-a-vis* prices of rayon cloth. Disappointment is, therefore, expressed at the restricted import policy of the Government. To quote one report: "It is unfortunate that, at a time when Continental suppliers are offering their yarns at cheap and attractive prices for prompt shipments, the Government of India do not take advantage by granting more liberal licences both to the consumers and to the established Importers and unnecessary scarcity is felt, as a result of which almost 50 per cent. of the looms remain idle and unemployment has been the order of the day."

The staple fibre and staple fibre yarn section was quiet this week. Turnover of business continued to be small, owing to shortage of floating stocks in the market.

CASTORSEEDS IMPROVE

(From Our Own Correspondent)

BOMBAY, 15*th April*

The oil and oilseeds market came in for considerable enquiry this week. On business reported done with the U.S. in castoroil First Pressure at 19 cents per quarter and Commercials at 18¾ cents per quarter, the castorseeds sections ruled bright. The groundnuts section advanced further on demand by *vanaspati* interests. As a result, prices in the two sections improved and disclosed sizable gains. The linseed and kardi seed sections, however, ruled slightly easy and disclosed minor losses in values. But nigerseeds remained almost unchanged.

At one time in the castorseeds section, there was some liquidation in May delivery by a prominent shipper. This in its wake brought forth selling pressure from the smaller fry also. Consequently, prices were slightly easy. But the easiness was short-lived, as prices recovered subsequently. The earlier liquidation, however, wiped out to a considerable extent the difference between May and September quotations. September delivery, therefore, to-day disclosed at a premium of only As. 12 at Rs. 153-12. May delivery which opened at Rs. 152, as against Rs. 151-12, fluctuated between Rs. 151-12 and Rs. 157-12, before closing at Rs. 153. September delivery improved from Rs. 155 to Rs. 157-8 and finally eased to close at Rs. 153-12; the lowest touched during the week was Rs. 151. F.A.Q. hardened by Re. 1 to Rs. 31-8 and Madras As. 6 to Rs. 31-12. Castoroil First Pressure advanced by As. 10 to Rs. 19, while Commercials were steady at Rs. 17-10.

The improvement witnessed in the groundnuts section last week gathered some momentum especially at the end of the week on heavy demand by *vanaspati* interests. Bold ready gained As. 10 to Rs. 43. Coromandals ready was higher by As. 6 to Rs. 42-12. Khandesh quality too put on a similar amount to Rs. 42-12. Groundnut oil ready gained As. 2 to Rs. 22-10. Railway receipts were steady at Rs. 22-10. May delivery was unchanged at Rs. 22-11.

The linseed section was easy on lack of local enquiries. Bold ready lost As. 4 to Rs. 28-8. Linseed oil ready was down by As. 2 at Rs. 14-6.

Nigerseeds Madras quality gathered As. 8 to Rs. 34, while Fair Average Quality was unchanged at Rs. 33-8. Kardis Bold ready lost As. 8 to Rs. 23.

The following table shows the prices of oilseeds and oil on the 15th inst., as compared with those on the 8th April and 31st March, 1953.

	15-4-53 Rs. a.	8-4-53 Rs. a.	31-3-53 Rs. a.

EASY TREND IN PEPPER

(Messrs. Parekh & Co.)

BOMBAY, 15*th April*

Black pepper during the week continued to present an easy trend, with prices in Bombay touching the lowest figure of Rs. 2,595 for April delivery. Primary markets on the Malabar coast remained closed for a couple of days owing to local holidays, but the curb trading showed a softer tendency. Sellers there were willing to meet buyers, but New York having withdrawn, no notable business was reported except some covering against past sales by exporters. In the delivery section, there being a disparity between Bombay and Coast markets, the volume of business remained small. Instead there was a notable pick up in A.S.T.A. business and on an average 10 to 20 tons were changing hands almost daily, April-May and May-June were done at $1.38 per lb. c. & f. New York. There was slight improvement to-day, and sellers were quoting for April and May at $1.40, while buyers were asking for $1.39. Sarawak and Lampong which were stiff sellers till recently are now reported offering at price ranging from $1.38 to $1.32 for various positions for July onwards. Sentiment of the sellers there seems to have been affected by the weakness in rubber and tin. Peace psychology has been responsible for the recent somewhat bearish feeling. Expectations of the end of Korean War following the signing of agreement on exchange of sick and wounded prisoners have led to general belief that, with the change in the situation, the remnants of inflation which are still in evidence here and there will die a natural death, and that deflation would set in with cut in Defence expenditure everywhere. With the stockpiling programme no longer required and with the added production capacity, depression will first set in the U.S.A. affecting other sectors of the world though slowly but surely.

Following are to-day's nominal quotations: Ready delivery Rs. 2,800, April delivery Rs. 2,640-70 and May delivery Rs. 2,660-90 per candy of 5¼ cwts.

IMPROVED TONE IN JUTE

(From Our Own Correspondent)

CALCUTTA, 14*th April*

There was a small but welcome improvement in the tone of the jute goods market during the week. Gains, although fractional, were well sustained, and this trend was in evidence very perceptibly yesterday. However, it is difficult to say whether the upward movement would raise prices to levels economic to mills during the coming weeks, as buyers realise that mills' godowns are overstocked with finished goods and that manufacturers desire to seize every opportunity to sell. Now that mills have to put up with Government's decision against curtailment in sacking production, for the present at any rate, mills are reported to be eager to avail the yearly holidays of ten days, before long in order that the temporary stoppage of working would enliven market activity, raise prices, and relieve godown space. Rumours in this regard served this week as useful factors for bulls to push up prices. They also, with advantage, circulated unconfirmed reports that some mills were transferring a percentage of sacking looms to the production of hessian.

A report, quite welcome to the market, indicates that foreign manufacturers are no longer able to under-quote Calcutta goods, and that foreign buyers are holding off entering into commitments. It is expected that if only a steady trend is maintained in local prices, more orders for export would be received. In this context, the decision of the Government postponing consideration of the mills' demand for a reduction in the rate of sacking goods production is unwelcome to Dundee and other Continental manufacturers. The fulfilment of contracts, which they had entered into during recent months and which diverted business from this country, has in certain cases resulted in losses to them, it is reported. Although this is the position, Indian mills are constrained to the view that, in view of the shrinkage in world demand, there is the need at the present time to curtail output of sacking, so that the accumulated stocks can be marketed and funds released. If, therefore, Government feels that it cannot concede the demand for a reduction in output, mills should be permitted to avail their yearly holidays now. No doubt, the stoppage of production might affect hessian prices, but hessian stocks, which amount to, as stated above, 41,700 tons, will be a check on any attempt of bulls at taking up the prices to unnatural levels.

Although hessian prices followed an irregular pattern, the closing yesterday was higher on balance. Opening at Rs. 37-10 on Wednesday last, moderate covering demand raised the rate to Rs. 38-2. At this, mills adopted a reserved tendency in an attempt to raise the price, and a further rise to Rs. 38-10 on Friday was aided by American enquiries for moderate quantities and by suggestions that burlap manufacturers in the United States would need more burlap to meet a huge order for sandbags expected to be placed on them by the Army. Selling pressure made its presence felt, however, and the closing over the week-end was somewhat quiet at Rs. 38-4. But later rumours which anticipated moderate business with foreign buyers imparted a steady trend yesterday, and covering demand from bazar dealers helped the quotation to move up to Rs. 38-12, which was higher by Re. 1-2 compared to the opening on last Wednesday.

In company with hessian, heavy goods were also better on the decline. Some business was put through in sacking in general, and a moderate quantity changed hands in cornsacks and green heavy cees in particular. Heavy cees plain were better at Rs. 88-8, as against Rs. 87-8 earlier, and greenstriped heavy cees were offered at Rs. 100-8. Opening at Rs. 85-4 last Wednesday, B. twills were taken up to Rs. 86-12, but gave way to Rs. 85-14 over the week-end. A feature of yesterday's trend was the reserved tendency on the part of mills, which helped the rate to close better at Rs. 86-10.

Since mills' interest in offers of raw jute was only nominal, prices ruled easy for most part of the week. However, yesterday, a portion of the decline was made good as sellers were reserved. The decline in prices during recent months are encouraging cultivators to grow less jute this season. Stockists, who are bearing the brunt of the decline in prices are, therefore, encouraged to adopt a reserved tendency, with the hope that the 1953-54 output would be much smaller than that for 1952-53 and jute prices as a consequence might return to natural levels. Assam bottoms at Rs. 17-8 were better by As. 8, while *pucca* bales first marks remained unchanged at Rs. 100 a bale. Sellers were prepared to part with Murshidabad district tossa bottoms at Rs. 16-8, and Murshiganj jute at Rs. 13. Dalcolas were quoted at Rs. 20 as against Rs. 19 a week ago, Dinhattas at Rs. 18 as against Rs. 17, Kisanganjs at Rs. 19 as against Rs. 18, and *bimli* f.a.q. at Rs. 14 as against Rs. 13-8. Pakistan jat bottoms were priced at Rs. 21.

TEA DUSTS IRREGULARLY DEARER

(Messrs. Forbes, Ewart and Figgis Ltd.)

COCHIN, 11*th April*

Dust sale "G" which was held on Thursday, 9th April, contained approximately 1,84,000 lbs. There was a strong general demand for all types and prices were irregularly one anna dearer. Well-made black dusts were often sold at a premium.

London Market.—No sale this week.

Colombo Market.—No sale this week.

Calcutta Market—Dust.—19,800 packages. Good general demand market. Opened easier, but strengthened as the sale progressed.

Export Quota.—Small transactions have taken place in special license at 1½ pies. 1953-54 export quota stands at 9 pies sellers.

Forthcoming Auctions.—Dust Sale "H" is due to be held on Tuesday, 21st April.

As we go to press, Messrs. Forbes, Ewart and Figgis, Ltd., wire as follows:—

"*Sale No.* 8.—10,89,000 lbs. Less demand. Common fully firm; low medium half to one anna easier; medium As. 2 to As. 4 lower; and best liquoring As. 8 to As. 12 down, following decline in quality."

SHARP FALL IN WHEAT PRICES

(From Our Own Correspondent)

HAPUR, 13*th April*

Mr. Rafi Ahmed Kidwai, the Union Food and Agriculture Minister is leading a food delegation to Rangoon to negotiate a Rs. 40-crore deal for the supply of half a million tons of rice to India. India may benefit from the downward trend in rice prices in Burma.

The overall food position in the country has remained unchanged. *Rabi* grain arrivals have begun in N. India and the crop yield outlook is good. Orissa has harvested a bumper rice crop.

In the U.P., wheat and other *rabi* grain arrivals have begun all over the State, and the quantity received is increasing daily. There has been a precipitous fall in wheat prices. In some districts, wheat has been sold at Rs. 13, in others at Rs. 15, and, in still others, at Rs. 16 to Rs. 17. In most of the rationed towns, free market prices have fallen below Government sale rates and the offtake from ration shops stopped. The State Government has decided not to sell imported foreign wheat on rationed shops at any subsidised price and the retail selling rate will continue to be 2 *seers* and 2 *chattaks* per rupee. Rationing is to be terminated all over the State with effect from 1st May, 1953, except in 34 towns, that is, towns in the Eastern region of the State prone to scarcity

STOCK & SHARE QUOTATIONS

Abbreviations:—D=Deferred shares. G=Guaranteed shares. P=Preference shares. P.O.=Preferred Ordinary shares. R=Rebate shares. Y=Accounts published yearly. H=Accounts published Hat-yearly. Q=Accounts publishe once 15 months. T=Company has Debentures. R.L.=Reserve Liability on shares. N=Nominal Quotation. i=Interim Dividend. f=Dividend for first half-year. y=Dividend for the year. x=Ex. Dividend c.d.=Cum. Dividend.

Shares:—If a company has different classes of shares—as, for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under "Paid-up Per Share."

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12 indicate the months of June and December, respectively "Reserves" ncludes general and other reserves and all other funds which a company may have as also depreciation on block items, when this is charged to separate account "Block" represents actual cost of land, buildings, machinery, and all such other items on which depreciation is allowed, less sales, if any, and stands for the gross figure except where otherwise indicated.

Dividends:—Dividends for completed years are calculated at per cent. per annum, but, where quoted for portion of a year, they represent percentages of the dividend on the paid-up share value. For companies closing the books half-yearly in the first three months of the year, and for companies closing their books yearly during the first half of the year dividends are shown as for the previous year.

• The following explanatory notes relate to the abbreviations and marks shown on page 684 in the bentures section:—

Option to repay on six months' notice, on any nterest date after 31st December, 1951, at 102 per cent Also redeemable out of a cumulative sinking fund of 1½ per cent. per annum (commencing in 1938) by drawings at 102 per cent. or by purchase at or 102 per cent

(a) Option of repayment at any time at 3 per cent. premium.

(b) Bearer bonds of Rs. 1,000 each repayable at par.

(c) Bearer bonds of Rs 1,000 each repayable on 31st July, 1959.

(d) Bearer bonds of Rs. 1,000 ach with option of redemption in whole or in part at par on 30th June, 1952, o on any subsequent interest date at one month's notice.

(e) Returnable on or after 31st July, 1950, at Rs. 102-8 or at par after 31st July, 1955, on six months notice in each case.

(f) Bearer bonds of Rs. 1,000 each with option of redeeming on 3 months' notice at ½ per cent. premium, afte 1st March, 1954, but before 1st March, 1957, and 1 per cent. premium on or after 1 st March, 1957

(h) Option of redemption on or after 1st July, 1949, at par,

(i) Option ofrepayment at any time at par at any time on or after 30th June 1947 on six months' notice.

SURVEY

(Concluded from page 691)

production of 677.3 million coconuts, which is about 20 per cent. of the existing production of 3,399 million coconuts.

The gap between demand and supply can be overcome in two ways; one by encouraging imports and the other by stepping up domestic production. Imports mean a drain on the country's resources. They should, therefore, be avoided, if possible, by increasing the domestic production. The question that needs to be answered, in this connection, is whether India can achieve self-sufficiency in coconut production in an economic manner? If it can, measures must be taken to achieve that goal as early as possible.

Self-sufficiency can be achieved through better methods of cultivation, which includes utilisation of quality seedlings for sowing purposes, among others. It is gratifying to note that the nursery schemes started by the Indian Central Coconut Committee have already been capable of supplying about five lakh quality seedlings of coconuts per day. As this, however, is considered inadequate, it is urged that the number of seedling farms should be increased.

The need for opening regional research stations and publishing the results in regional languages is a long-felt one. Research will help explore, *inter alia*, better remedies for controlling pests and diseases, thereby improving the quality and increasing the quantity of coconuts. The publication of the results of such research in regional languages or, in other words, in the language spoken and read by the farmer, will help carry the results of research to those for whom they are intended.

The celebration of Coconut Day on the lines of *Vana Mahotsava* will provide the psychological drive necessary to stimulate the farmer to plant more coconuts. If, however, this drive is to yield the results expected of it, the farmer must be made to realise that there is money in coconut plantation. The profit incentive is the surest means of ensuring increased production.

WORLD TIN PROBLEMS

The International Tin Study Group has come to the conclusion that it is necessary to regulate the supply of tin in accordance with the demand. As a first step in this direction, it has appointed a Working Party to examine the question in all its aspects. The move seems to have been prompted by the demand for tin not keeping pace with production. The price of the metal has been fluctuating so violently as to cause no little concern. At present, the rate for spot tin in London is about £800 per ton, as against £942 towards the close of March, 1953, and £967 a year ago. In January, 1951, when the Korean boom was at its height, it stood as high as £1,620 per ton. The statistical position of world tin discloses rising production and declining demand. Production of tin improved from 165,500 tons in 1951 to 172,000 tons in 1952, despite political uncertainties in Malaya and Bolivia, while the consumption actually declined from about 147,500 tons in 1950 to 127,500 tons last year. According to these figures, the present rate of production exceeds the demand by as much as 44,500 tons.

Of the world's total tin production, over 40 per cent., according to *World Production of Raw Materials*,* is consumed by the tinplate industry. In recent years, tinplate is being used for an increasing number of purposes, but the consumption of tin has not kept pace with this development, for with the new electrolytic process much thinner coatings of tin have become possible. Tinning is a similar process to tinplating and is used for copper wire, pails, and cooking utensils. A large amount of tin is required for tin alloys, of which solder, babitt, bronze and gun-metal are the most important. Secondary tin, which is recovered in the United States in quantities not far short of the output of virgin metal, can also be used for tin alloys. In its pure form, tin can be used for collapsible tubes, foil for wrapping, pipes and tubes, but all these uses are declining, partly because of war-time and immediate post-war restrictions and partly because of the development of alternative materials.

The U.S. Reconstruction Corporation, which has been absorbing world surplus tin for stockpile purposes at ruling prices is expected to withdraw from the market gradually, as it will cease to exist from June, 1954, according to a recent U.S. Government announcement. This development is likely to aggravate the downward trend in demand, unless the U.S. makes alternative arrangements to continue its purchases. Pricewise, this possibility has already been discounted, but it remains to be seen whether there will be a further fall in prices, when the R.F.C. completely withdraws from the market.

The Tin Study Group is believed to have enquired into these developments. But its findings are not available. The Working Party, which will meet in June, will study afresh all the aspects of the problem and decide whether the time is ripe for international regulation of supplies of tin. Its decision will be duly conveyed to the Chairman of the Steering Committee of the United Nations Geneva Tin Conference, held in Autumn of 1950, and which was adjourned *sine die*, following abortive attempts to regulate tin supplies and set up buffer stocks.

The decision of the Tin Study Group to constitute a Working Party to enquire into the question of international regulation of supplies does not indicate, however, any immediate progress towards the production of any specific scheme to regulate supplies of tin. It is, however, a clear indication that the U.S., which has all along taken objection to international regulation of supplies, and which was also responsible for the breakdown of the 1950 Conference, is at least prepared to consider the possibility of an international agreement. The U.S. objections are attributed to its fears that the producers of tin are seeking to revive the pre-war cartel arrangements.

It is common knowledge that violent fluctuations in prices do no good either to producers or consumers and that a reasonably stable level of prices, be it for tin or any other commodity, is a desirable objective. The intention behind the move to regulate supplies of tin the world over is precisely to achieve this object. But this cannot be done without the co-operation of the U.S., which is the main consumer of tin in the world.

MARKET GOSSIP

(Concluded from page 687)

quota of 253 million bushels annually. The pressure for a higher price is dictated by the U.S. domestic agricultural policy. Even at the new maximum of $2.05 a bushel of wheat sold abroad under the agreement, the U.S. Government will have to pay a subsidy of 15 cents a bushel to the American wheat grower, since the domestic support price, is $2.20 a bushel. The U.S. is anxious to reduce, as far as possible, this element of subsidy in its expenditure. With this end in view, at one time, in the course of negotiations, the U.S. pitched its price at as high as $2.50. As the agreement means for that country an outlet for despatching a million bushels per annum, any failure of its renewal would give rise to the problem of facing the disposal of all this wheat. Consequently, it agreed to bring down its price to $2.05 a bushel, to which several countries, as already indicated, have agreed. The question now before the International Wheat Council is as to what would be the position of the agreement, if Britain, the world's biggest importer of wheat, were to remain outside the Pact. Meanwhile, an official statement from the U.K. clarifying its policy is imminent at any moment.

MARKET REPORTS

(Concluded from page 725)

and famine and those that have a population of over one lakh. This will reduce the Government's food commitments by more than 8,000 tons per month.

The Union Food Minister has sent a communication relieving the Punjab Government of the responsibility of supplying foodgrains to the Centre. He has intimated that Delhi's requirements will be met by 8,000 tons of wheat from the P.E.P.S.U. and imported wheat. The State has also been allowed the freedom of inter-State control. The Punjab Government, it is understood, is considering a proposal to lift control on all coarse grains, including gram. The position in regard to wheat and rice will not be materially changed.

The Government of India has decided to maintain the present issue price of wheat and *atta* in Delhi. Efforts are being made to move as much wheat as possible from the Punjab and the P.E.P.S.U. to Delhi. Stocks of imported wheat held by the Centre in Delhi will be released, when necessary, to supplement the availabilities of stocks to indigenous wheat.

The Madhya Bharat Government has fixed the procurement price of wheat at Rs. 14 and Rs. 14-8 per maund, according to quality. The selling price of wheat may also be reduced. Procurement will be made in the free market from licensed traders.

BRADFORD WOOL QUIET

(Messrs. J. Hardacre and Co.)

BOMBAY, 14*th April*

Following the news of a possible settlement in Korea and the general fall in the prices of all commodities, there has been a widespread feeling of uncertainty in the trade, and, for the most part, buyers in all countries have been adopting a wait and see attitude. Possibly, on the resumption of sales in Australia and New Zealand next week, this situation may be resolved, but for the past week, the Bradford market, though very quiet, has remained firm in all sections.

It is pointed out that the demand for wool in the past few months has owed little to defence requirements, unlike metals and other commodities which have declined in the past week. Furthermore, there is little unsold stock being carried by the trade, and to meet the demand which is expected to continue in the next few months, there are not more than 50,000 bales of medium crossbred top making fleece remaining unsold in New Zealand, and merino stocks in Australia or South Africa are correspondingly small. In view of this, the trade in general is of the opinion that the market will re-establish itself in the near future and there is no reason to anticipate any serious decline in prices. In fact, during the last two days, there has been a marked increase in demand, particularly from the Continent.

The current quotations (per lb. c.i.f. Bombay) for Bradford oilcombed tops are given below:

48s carded (July, 1953) 88d., 58s super (June-July, 1953) 124d., 60s super (June-July, 1953) 148d., 66s super (June-July, 1953) 170d., Fibro (2D. 4") (June-July, 1953) 43½d., Type 114 (June-July, 1953) 80d., and 70s super (July 1953) 190d.

LINSEED FIRM

(Messrs. A. Bradley & Co.)

CALCUTTA, 13*th April*

Linseed prices have shown little change during the past week and fair business has been reported, with the undertone of the market being firm. There has been a fairly keen interest shown by sellers for new crop forward delivery, and fairly large quantities have been changing hands daily. Ready goods are rather scarce, but there are no enquiries for this position. There are no enquiries at present in

COTTON TEXTILE INDUSTRY

THE review of cotton textile industry, made by Mr. G. D. Somani, M.P., the retiring Chairman of the Millowners' Association, Bombay, in the course of his speech at the annual general meeting of the Association held this week, was an exhaustive and a fair one. Mr. Somani was critical, albeit mildly, not only of the Government but also of the industry itself, in that he frankly acknowledged its shortcomings. At the same time, he was zealous in answering unwarranted or ill-informed criticisms against the industry. Further, he did not hesitate to give credit to the Government where credit was due.

The first question that Mr. Somani posed and answered was whether it was necessary to continue the control on the industry. He was, of course, aware that the Government had already relaxed the control to a very substantial extent and that, at present, only a small proportion of the industry's production was subject to control. Nevertheless, he felt that there was no justification for the continuance of even this limited control and offered very good reasons in support of his contention. It is common knowledge that control was introduced at a time when there was a large shortage in the supply of cloth and yarn. The purpose of this control was to ensure an equitable distribution of available supplies of cloth and yarn at fairly reasonable prices. To-day, the supply position has improved beyond expectations, thanks to production running at record levels, and the *per capita* availability of cloth is as high as it used to be in pre-war years.

In 1952, the mill industry produced 1,449 million lbs. of yarn, out of which it wove 4,599 million yards of cloth, leaving a substantial quantity of yarn for use by the handlooms. This was a record high for the Indian Union and compared very favourably with 1,304 million lbs. of yarn and 4,076 million yards of cloth produced in 1951. If the trend of output in the first quarter of this year is any indication, it looks as though the industry's performance in this respect during the current year will be brighter than in the preceding year. Thus, in the first three months of 1953, the mills produced 1,201 million yards, as compared with 1,029 million yards in the corresponding quarter of the previous year, the monthly average being 400 million yards, as against 384 million yards. Similarly, the output of yarn in the quarter just ended was higher at 364 million lbs. as against 336 million lbs. in the same quarter of last year, the monthly average being 121 million lbs., as against 112 million lbs. In other words, cloth and yarn production was at the rate of 4,800 million yards and 1,452 million lbs., respectively. Assuming that handloom production will be of the order of 1,200 million yards and that exports will be 1,000 million yards—the offtake by foreign countries so far this year suggests that exports will be much less than this figure—the quantity of cloth available for domestic consumption will easily be 5,000 million yards, giving a *per capita* availability of 14 yards. The *per capita* quantum will actually be more if exports fail to reach the target and if the output of handloom cloth increases, as, indeed, it must, in view of the substantial assistance that is being rendered to it by the authorities. According to Mr. Somani, the quantity of cloth that was available for domestic consumption in 1952 was greater than the aforesaid estimates, being of the order of 5,600 yards, a quantity sufficient to distribute at the rate of about 16 yards per head of population. When so much cloth is available for the population of this country, what justification is there for the Government to continue the control on prices and production?

The Government has yet to offer a convincing reply to the aforesaid question. It may conceivably argue that it has to retain control on the limited quantity of the industry's production, because (*a*) the price of Indian cotton is subject to control and (*b*) the common man, who consumes mostly coarse and medium varieties of cloth, must be assured of supplies at reasonable prices. Neither of these arguments cuts any ice. The price of cotton is even to-day well below the ceiling and the mere removal of price and production controls on these varieties is unlikely to push the prices up to the ceiling. The assumption that the common man is able to get these varieties of cloth at control prices is unfounded, for, as there is no control on distribution, the merchants are charging the maximum that the traffic can bear. The only sufferers are the mills which manufacture these varieties and which have free yarn to sell in the market. Further, the prices of the controlled varieties of cloth, as well as those of all free yarn, have not been raised at all, as they should have been under the Tariff Board formula, even though the price of cotton has gone up substantially since the last revision was made. If the sacrifice of these mills at least served the object the Government has in mind, it would be something worthwhile. But as it is not so, there is no purpose in putting them to these hardships. On the contrary, if the Government abolishes the remaining controls on prices and production, primarily meant for the benefit of consumers, there will be some advantage to the Government itself, for it will get, in the form of taxes, a good part of the additional profit which the industry will earn following the removal of controls.

As a result of the partition of this Sub-Continent, the well-being of the Indian cotton mill industry is dependent not merely on the domestic market but also on overseas markets. The importance of developing export markets for Indian cloth will become even more obvious if it is remembered that the country's capacity to consume cloth at the pre-war rate of 16 yards *per capita* has been adversely affected by the sharp rise in the cost of production, unaccompanied by a corresponding rise in the purchasing power of the people. As Mr. Somani pertinently pointed out, the price of cloth to-day is four to five times the pre-war price, while incomes have not gone up to any such extent. That being so, it is inconceivable how the country can absorb cloth at pre-war consumption levels. Accordingly, if production is to be maintained at the current high level, the cost of production must be brought down and exports must be encouraged. This is a problem that can be solved only by the combined efforts of the Government, management and labour.

To take labour first, it must agree to a scientifically evolved programme for achieving higher productivity through modernisation of plant and machinery and rationalisation of the methods of production. Any such programme is bound to result in some displacement of labour in the initial stages. The trade unions must be prepared to face this rather unpleasant fact. The Government has to realise that a buyers' market for cloth and yarn has come to stay and that it cannot, therefore, continue to subject the exports of cotton goods to such handicaps as export duty on cloth and yarn and import duty on raw material. The Government will have also to reduce, in due course, the heavy burden of taxes on cotton manufactures and cry a halt immediately to the addition of labour welfare measures. The Government, of course, needs revenue for financing the various development programmes it has undertaken. Its policy of taxing consumption within the country has, therefore, to be accepted, especially because of the absence of suitable alternatives. But such taxation should be within reason and should not be carried to such an extent as to have an adverse effect on production and employment through a sharp fall in consumption. With production running at a high level to-day, the Government may feel that the existing rates of taxes on cloth and yarn are not so high as is being made out by the millowners. That is, perhaps, the reason why the Government has not yet yielded to the industry's demand for reducing at least the excise duty on fine counts which has been stepped up unduly by 114 to 230 per cent. in the latest Budget, while converting the basis of the duty from *ad valorem* to specific rate. But a wise Government will not wait for concrete proofs of the adverse effects of its fiscal policy on industry, such as accumulation of stocks, actual fall in production and rising unemployment. It will act by seeing the signs on the wall and by carefully studying the prospects for the industry. Though, in the past, the Government of India was not so wise as all that, it is to be hoped that, in future at least, it will act in time, taking a sympathetic view of the industry's needs.

There is also one more thing that the Government has to do to keep down the cost of cotton manufactures. And that is the abandonment of the policy of taxing the efficient units of the industry in order to assist the cottage industry. All that Mr. Somani said on this subject in the course of his speech under reference was relevant and economically justified. The policy is wrong in principle and will give impetus to the unhealthy tendency of protecting uneconomic units at the expense of economic units in utter disregard of the interests of consumers. Again, the Government has resorted to the extraordinary practice of subsidising the handloom and *khadi* industry at the cost of the mill industry even before the Committee appointed to report on this question commenced its work. The proper thing to do would have been to await the findings of this Committee before adopting any remedial measures. In departing from this healthy principle by imposing the burden of a special excise of quarter anna per yard of cloth and by restricting the production of *dhotis* and *saris* by mills, the Government has, to quote Mr. Somani's words, "prejudged the issue and gravely prejudiced the industry's case before the Committee of Enquiry." The adverse effects of this action on the consumer are already visible. The fall in mill production of

dhotis and *saris* has not been matched by an increase in the handloom output of these goods at reasonable prices. Consequently, a shortage in the supply of these varieties is fast developing, accompanied by a rise in their prices. Actually, this development may turn out to be a blessing in disguise later, if the Committee of Enquiry takes note of it from the consumers' point of view. In saying all this, we do not mean to suggest that the handloom industry does not deserve to be helped. We are fully alive to the importance of this cottage industry as a source of employment to millions in the rural areas. But the way in which the Government is trying to help this industry will not yield satisfactory and sustained results. On the contrary, it will perpetuate the uneconomic character of the industry, as the subsidy and doles that are being given to the weavers will provide no incentive to them to improve the efficiency of their production. If this industry is to survive and stand on its own feet, it must be organised on scientific lines.

A brief indication of what is expected of labour and the Government to enable the cotton mill industry to face a firmly established buyers' market has been given in the foregoing paragraphs. We must now refer to what the industry itself has to do in this respect. A careful study of Mr. Somani's speech will show that there are several things which it has to do. In the first place, the industry must "conform to the highest standard of managerial efficiency and integrity" and "must make a determined drive to eradicate the evils and malpractices which seem to have crept into its ranks." This is a reiteration of what Mr. Somani said last year; nevertheless, it is worth repetition, because there is no future for the industry, unless the standard of management of those units which had deteriorated in recent years is raised to a high level of efficiency and integrity. The Working Party for the Textile Industry has also emphasised this point. Mere repetition of this weakness of the industry, however, will not do much good. What is more important is the remedy for this weakness. Has the industry, as a whole, found any remedy for it? We wish Mr. Somani had thrown some light on this point. There is, of course, one way of dealing with the erring members of the industry under the Industries (Development and Regulation) Act which is now being amended. But considering the Government's lack of experience and personnel to run industrial establishments, one wonders whether it will be an effective remedy and whether it will not turn out to be a case of the remedy being worse than the disease. In this connection, it will be recalled that the Working Party is of the opinion that the industry itself, through the various millowners' associations, should put its house in order by adopting such measures as will expose the erring members and mete out suitable punishments to them. This is a better solution than the one contained in the Industries (Development and Regulation) Act. The leaders of the industry will, therefore, do well to consider it carefully and make it workable. That is the only way to keep the irksome controls of the Government down to the minimum.

Allied to the general problem of toning up the managerial efficiency and integrity of the industry is the urgent necessity to regulate the quality of cloth exported by this country. If the industry is to retain and expand the sizable share which it has already won in the world trade in textiles, if it is to hit the target of 1,000 million yards which it zealously defended at the Buxton Conference, it must work hard for it. This requires, as Mr. Somani fully recognised, (*a*) "initiation of measures which will go to assure the overseas buyers that India will sell what they want and their grievances, if any, will be properly attended to; and (*b*) a systematic survey of every sizable overseas market." It is in this context that Mr. Somani outlined the salient features of the "export contract" for cotton piecegoods drawn up by the Committee of his Association. This "contract" offers a reasonable measure of check on the quality of cloth exported and a remedy to importers to proceed against shippers who default. It provides, *inter alia*, for the following:

(i) mills preparing a counter sample against the requirements of the overseas buyers and securing the approval of the buyer before bulk supply;

(ii) opportunity for the overseas buyer or his representative in Bombay to inspect the cloth which has been manufactured against the buyers' orders, before the goods are actually baled;

(iii) an arbitration procedure in Bombay in the event of any dispute arising between the buyer and the seller;

(iv) an undertaking from the seller to become a party to an arbitration proceedings which may be held overseas in certain circumstances; and

(v) a standard packing practice to ensure freedom from damage when the goods are in transit.

It may be argued that a mere contract on the above lines will not achieve the desired object. The Millowners' Association is conscious of this and has, therefore, evolved something more than a contract, as will be evident from the following observations of Mr. Somani:

"We have worked out a scheme which seeks to raise the standard of export qualities to reasonable levels, called the 'Indian Standards.' We propose to introduce the use of certain quality numbers and ask all those who desire to use these quality numbers to ensure that the goods are in accordance with the specifications laid down, and to get them inspected and passed before they are stamped with the relevant quality numbers. So much for grey goods. In regard to non-greys, we propose to lay down that the buyer shall have the option of asking for bulk inspection of the goods tendered under a contract, to ensure that the goods are strictly according to the dimensions ordered and free from weaving flaws. Minimum standards of weaving flaws will be laid down in consultation with all concerned, and mills will be bound to supply the cloth in conformity with these standards. The Committee's proposals are at present before the Cotton Textiles Fund Committee, as an alternative to their own proposals for a general pre-export inspection of all cotton textiles exported out of the country, to which the Committee of the Association have taken very strong objection."

Voluntary control by the industry to ensure the quality of exports as proposed by the Association is, of course, preferable to a rigid scheme of inspection prior to shipment as contemplated by the Government. But, if voluntary control is to be acceptable to the Government, the industry and shippers must soon agree to some such arrangement as the one suggested by the Millowners' Association, Bombay; for any delay on the part of the trade and industry will provide an excuse for the authorities to enforce their scheme. Moreover, this question has been hanging fire for several years now and failure by the industry to settle it promptly, without any further delay, will cast a serious reflection on its ability to put its house in order without official interference.

The attention which the industry has devoted to research is not worth mentioning. This is one of the subjects about which the industry has talked much but done precious little. Mr. Somani's speech shows that he is aware of the importance of research, for he said that research would be "the prop and stay of the industry," but it is doubtful whether all the millowners realise this. It is true that efforts are being made to establish some research institutions, but, considering that a beginning in this direction was made as early as in 1944, the absence of any concrete achievement, barring the collection of a few crores of rupees for this purpose through the Government, is a striking testimony to the fact that the industry as a whole is not at all research-minded and that it prefers to rest content with making profits. This is a deplorable state of affairs. The industry must realise that a stage has now been reached when it cannot expect to secure a reduction in the cost of social amenities to workers and that the only course open to it to discharge its responsibility to the workers, shareholders and the country, in general, is through the most efficient use of scientific research in the widest possible field and through modernisation of its equipment.

FOOD FRONT

FRESH signs of a distinct improvement in the food situation in the country are now visible. The Punjab Government has decided to decontrol wheat as from the 25th inst. In future, there will be no monopoly procurement of wheat nor restrictions on price and movement of the grain in the State. News also comes from Mysore that the State Government has decided to terminate the ten-year old rationing system—now confined to the three cities of Bangalore, Kolar Gold Fields and Davanagere—with effect from 1st May next. The Government's ration shops will, however, continue as fair price shops. The Food Minister of Ajmer has stated that a definite announcement regarding decontrol in the State will be made within the next ten days. The Central Food Minister is reported to have informed the U.P. Government that the Centre was no more desirous of purchasing rice from U.P. and that the State should restrict its purchases to wheat, barley and grain, allowing the grain trade to purchase the grains in large quantities as another step forward towards complete decontrol. A report from Lucknow says that thanks to a bumper wheat crop, there has been a sharp fall in the price of dust-free and clean wheat sold in the free markets and that the dust-laden foreign wheat sold in ration shops is going abegging. The U.P. Government has decided to abolish rationing in 28 towns, each with a population of less than a lakh, from 1st May, 1953. Rationing will, however, continue in towns with a population of more than one lakh, as well as in towns in the eastern and hill districts irrespective of their population.

The developments mentioned above are an indication that the country has definitely turned the corner in food. The position in regard to rice also points to the same conclusion. The estimated requirements of Governments to meet their commitments of rice this year are about 900,000 tons. Internal procurement at the middle of April had exceeded the potential demand. Up to 15th of this month, procurement of all foodgrains aggregated 1,042,400 tons, of which rice accounted for 911,600 tons, wheat 28,750 tons and the balance other grains. The total procurement of rice, according to official estimates, is expected to reach 1,200,000 tons which will be 300,000 tons in excess of requirements. In addition, India has a carry-over of 167,000 tons, including 22,000 tons obtained from Pakistan and 15,000 tons repaid by Ceylon. India is also buying 150,000 tons of rice from Burma under the existing agreement, thus taking the potential surplus to over 600,000 tons. Apart from this, rice production is expected to increase next year on account of larger acreage sowings and the more generous use of fertilisers.

While thus the rice position in India is quite promising, the world position too seems to be happy. According to the U.S. Department of Agriculture, world rice production in 1952-53 (August-July) is expected to reach a record of 357,000 million pounds of rough rice. This, it is stated, is four per cent. larger than the previous post-war high, six per cent. larger than a year earlier and seven per cent. bigger than the pre-war average. The large crop is attributed to record plantings and favourable weather in most countries. The largest gains have occurred in Asia, the output of the Continent, excluding China, being 224,000 million lbs. The Department states that India has planted one of the largest acreages in rice and that production has increased in Japan, Pakistan and Korea as well. The 1952-53 production of rice-exporting countries is estimated to have increased between 1,000 and 2,000 million pounds of rough rice. Major gains are seen in Burma, Brazil, U.S. and Italy. About 86 per cent. of Burma's increased exports are expected to be absorbed by India and Ceylon and India is a principal buyer of Thailand's rice.

This improvement in rice position explains many offers of rice to India. Thailand, for instance, has consented to sell 150,000 tons to India, but the offer has been kept in abeyance pending the outcome of negotiations between India and Burma now in progress in Rangoon for a barter agreement for the exchange of Burmese rice for Indian manufactures. The official team, led by Mr. Rafi Ahmed Kidwai, India's Food Minister, which left New Delhi on the 18th inst. for this purpose, consists of Mr. D. P. Karmarkar, Commerce Minister, Mr. R. S. Krishnaswamy, Director-General of Food, and Mr. P. C. Bhattacharya, Financial Commissioner of Railways. The latest reports from Rangoon regarding the progress of the barter deal indicate that Burma is demanding a high price of Rs. 30 per maund, whereas India is prepared to pay Rs. 20 or Rs. 22 per maund, which itself is substantially higher than the price of Rs. 15 per maund prevailing in the internal markets of Burma. It is true that India has already purchased 150,000 tons of rice at Rs. 30 per maund under the existing agreement, but, in view of the improvement that has taken place since then in the supply of rice both in India and elsewhere, the Indian mission is justified in asking Burma to quote a lower price. Moreover, the quantity which India is prepared to buy is large enough to deserve special consideration at the hands of Burma.

COTTON STATISTICAL POSITION STRONG

MARKETS FIRM ALL ROUND—PAKISTAN'S ECONOMIC POSITION EXTREMELY WEAK

THURSDAY, 5 P.M.

MARKET GOSSIP

A STEADY to firm trend continues to prevail in all the markets, with no signs of a setback. In shares, there has been selective buying in the leading counters and business has broadened a little. Over the week, some sprinkling of gains is noticeable on a long list. A sizable advance has taken place in Tata Deferreds in particular, consequent on bear covering and some fresh speculative buying. But investment support to equities, in general, is still of a restricted nature. The Calcutta market has been inclined to follow Bombay for a while, but activity there is somewhat slackening at the time of writing. The Gilt-edged market, which was a shade quiet last week, has looked up again, in the expectation that the Reserve Bank may begin grooming the market soon for a new loan. In the bullion market, silver has gone up by about Rs. 2 since last week, while gold is steady at about the same level. Among commodities, cotton is ruling very firm, in view of its strong statistical position and the continued high level of production by the mills. Good cotton is getting scarce once again. Raw jute, too, has looked up. Early in the week, Assam bottoms had spurted to Rs. 20 per maund from Rs. 17 a few days ago, but they are a little lower at Rs. 18-8 at the time of writing. A feeling is steadily gaining ground that the jute crop in the coming season will be much smaller both in Pakistan and India and that the era of burdensome surpluses will come to an end with that season. There has been a fractional improvement in the quotations for jute manufactures also. Oilseeds have gained further in value during the week under review, following the revival of trading in specific forward delivery contracts. The following table will show the extent to which share, bullion and commodity prices have improved, after the initial shock of the Communist powers' move for peace in Korea, and how the latest quotations compare with those early in the year, as well as a year ago:

	Latest 23-4-1953	*Soon after peace moves* 31-3-1953	*Early in January* 13-1-1953	*A year ago* 23-4-1952

* Latest available quotation.

* * * *

Two more items were added to the long list of speculative counters in Bombay markets this week, with the resumption of trading in non-transferable specific delivery contracts in groundnuts and linseed, under the auspices of the Bombay Oilseeds Exchange. Business is now permitted in June-July and August-September contracts in the current crop upto the end of September. It will be recalled that trading in non-specific delivery contracts in groundnuts and linseed was suspended in May, 1952, by the Government of Bombay for 14 days and subsequently prohibited by the Bombay Oilseeds Exchange, following the demoralisation of the market consequent on the March slump in seeds and other equities.

* * * *

Operators in oilseeds have welcomed the resumption of trading in these contracts, but consumers have given it a cold reception. Prices of edible oils are already high and these, they fear, may be boosted up further by the entry of speculative elements. Their fears are not unwarranted for a number of reasons. The most important of these is the fact that the groundnut crop, which accounts for 75 per cent. of the edible oilseed crops, is short by about 25 per cent. this season. Another reason is that, though trading is confined to non-transferable specific delivery contracts, it is not unlikely that it will soon degenerate into full-fledged futures trading, as had been the case in the past. It would have been better, therefore, if the authorities of the market had refrained from giving permission to resume trading in these forward contracts.

* * * *

The current season cotton crop in India has now reached a stage which permits an estimate of the supply and demand position to be made with a fair degree of accuracy. A leading cotton firm, with branches and agents all over the country, places the crop for the 1952-53 season at 3,553,000 bales of 400 lbs. each, including village consumption. This, together with stocks of foreign and Indian cotton at the beginning of this season, amounting to 2,458,000 bales, gives a supply of 6,011,000 bales. As imports during the current season are expected to be not less than 600,000 bales, the total supplies during the season will amount to 6,611,000 bales. As against this, consumption by mills is likely to be of the order of 4,400,000 bales, while exports may absorb 300,000 bales. If allowance were made for the customary village consumption at 270,000 bales, the total disappearance of cotton during the current season would be nearly 5,000,000 bales, leaving a balance of a little over 1,600,000 bales at the end of the season. A break-down of these stocks by the firm referred to above shows that Indian cotton with the mills and the trade will be in the neighbourhood of 1,386,000 bales and of foreign cotton at about 329,000 bales. As compared with the stocks at the commencement of the season, these figures show a drop of 567,000 bales in Indian cotton and 180,000 bales in foreign cotton. In other words, the stocks will be a good deal smaller than those a year ago. The conclusion of the firm, therefore, is that, "although there will unquestionably be enough cotton to tide the industry over until the new crop cotton comes into the market, there can be little doubt that the stock position will be a great deal less comfortable than a year ago. The next crop will have to be bigger than the current one and imports will have to be larger, if the present rate of production of cloth and yarn is to be maintained."

* * * *

Those in this country who had been closely watching the developments in Pakistan in recent months knew full well that all was not well with our neighbour and that the country was heading for a revolution. The dramatic developments that took place towards the close of last week did not, therefore, come as a surprise to them. What was, however, surprising was that the change in administration was brought about in such a peaceful manner. Though this change was made within the four corners of the old Government of India Act and as such perfectly constitutional, it amounts to a *coup d'etat* for all practical purposes. It, however, has the merit of not having resulted in any bloodshed. The rapidity with which the old Nazimuddin Cabinet was dismissed and a new one was installed indicates that the Governor-General of Pakistan has a good grip over the administration of the country and must have prepared the ground for the shift well in advance. Again, the absence of any violent repercussions to the dismissal of Mr. Nazimuddin and some of his colleagues is proof enough to show that the general population of Pakistan is still law-abiding and peaceful. Both these features of the situation in Pakistan are encouraging and justify the hope that nothing untoward will happen which will disturb the peace in that country.

* * * *

The main cause for the fall of Mr. Nazimuddin's Cabinet is the deterioration in the economic situation to a dangerous level, brought about by maladministration. This is a striking instance to show that no political stability can be achieved, if a country is allowed to drift to economic bankruptcy. It is to be hoped that administrators in this country, who are continuously disregarding the importance of economic stability and are indulging in policies leading to heavy loss of revenue and wasteful expenditure, will profit by the experience of Pakistan.

* * * *

To give an idea of the extent to which economic conditions in Pakistan have deteriorated, it is enough to mention the fall in the Government's cash balances and external reserves and the high level of defence expenditure. In 1952-53, Pakistan spent no less than Rs. 67.24 crores on defence, out of a general revenue of Rs. 118.97 crores, excluding the receipts from railways. For 1953-54, a sum of Rs. 60.10 crores has been earmarked for defence. This sum is no doubt Rs. 7 crores less than that for the year just closed. But it constitutes as much as 65 per cent. of the general revenue which is placed at no more than Rs. 91.60 crores. An infant State like Pakistan, with an enormous backlog of nation-building expenditure, cannot afford to spend such large sums on an unproductive item like defence. Most of it is unnecessary, because the country of which it is said to be afraid and which is regarded as its enemy is no enemy at all, but its sincerest friend. If only the rulers of Pakistan have faith and trust in India and work for the restoration of the trade that existed between the two parts of this Sub-Continent, most of their economic difficulties will be over.

* * * *

In the course of the past one year, gold and sterling reserves of Pakistan have declined from Rs. 140 crores to about Rs. 60 crores, a loss of Rs. 80 crores. During the same period, the cash balances of the Government have shrunk from Rs. 62.17 crores to Rs. 32.64 crores, a depletion of Rs. 30 crores. By the end of the current year, they are expected to be at no more than Rs. 19.67 crores and that too after taking credit for foreign loans and aid and for borrowing in the open market to the extent of Rs. 20 crores. "Thus, the balances bequeathed to Pakistan at Partition have," to quote from a despatch to the *Financial Times*, London, "evaporated, to all intents and purposes, and the country's finances have reached a parlous condition."

In spite of the heroic efforts made by Mr. Nazimuddin's Cabinet to dispose of its large crops of cotton and jute, Pakistan still has heavy surpluses of these silver and golden textile fibres. The official price support schemes for cotton and jute are estimated to have resulted in a loss of Rs. 14 crores to the Government. It is not unlikely that a further loss remains to be incurred on this account, for the Government still holds a fair-sized stock of jute, if not cotton. While Pakistan has a surplus of these commodities, it is running a serious shortage of foodgrains which it has to import at a high price and sell to the public at subsidised rates. In its anxiety to conserve its fast depleting foreign exchange resources, the Pakistan Government has imposed severe import restrictions even on essential goods. This has led to a serious shortage of several goods and a flourishing black market. If onions, which are selling at As. 4 a seer in Bombay were not available in Karachi a few days ago even at Rs. 2 per seer, one could easily imagine the state of hardship which the people of Pakistan are undergoing now. The overvalued rupee, which was expected to make imports cheaper, has proved to be the curse of the common man. Of course, for a time the rulers of Pakistan were successful in getting the best of both the worlds, thanks to the boom following the Korean War. But, when the tide turned against them and commodity prices took a downward trend, they failed to realise that they must change their policy. They thought they could get away with a highly overvalued rupee. If only they had devalued their rupee early in 1952, their position to-day would not have been as bad as it is. Even now, they have no way out except devaluation. The earlier they do it, the better for them, for that is the only way to correct the serious disequilibrium in their economy.

* * * *

It is not easy to predict the attitude of the new Pakistan Government towards India. The new Cabinet consists of some of the old guards like Sir Zafrullah Khan, Mr. M. A. Gurmani, and Mr. C. Mohammad Ali (the Finance Minister) who formed part of the old Cabinet which was by no means friendly or tolerant towards India. It is true that Mr. Fazlur Rahman, who held the Commerce portfolio and pursued a wholly unrealistic policy in the face of dwindling demand for cotton and jute, is out of the Cabinet now. But his exit has been neutralised by the inclusion of the demagogic Abdul Quaiyum Khan, a bitter opponent of India and the Congress Party. The only new Minister who understands India better than anyone else is Mr. Mohammed Shuab Qureshi, who was Pakistan's Ambassador to India until recently, but he holds a minor portfolio, namely, Information, Broadcasting and Kashmir Affairs. The new Prime Minister, Mr. Mohammed Ali, who was Ambassador in Washington, is a dark horse, insofar as India is concerned. In any political assessment, he must be regarded, to quote a correspondent, "as almost an entirely unknown and untried figure."

* * * *

A feature of the trading in shipping shares on the Bombay Stock Exchange this week was the spurt of Rs. 5 to Rs. 37 in the value of Bombay Steams. In fact, this scrip had been presenting a steady front for some months past on reports that the Directors of the Scindia Steam Navigation Co., Ltd. (who are the Managing Agents of the Bombay Steam) had been considering the question of taking over this concern. The fresh spurt in these shares this week was due to the fact that the reports had proved correct. A circular to this effect was circulated on Wednesday by the Scindia Steam Navigation Co. to the shareholders and debenture-holders of both the companies. A meeting of the ordinary shareholders of the Bombay Steam Navigation Co. has been convened for 9th June, 1953, to consider the scheme of amalgamation.

* * * *

The salient features of the scheme are: (1) the amalgamation will have retrospective effect from 30th June, 1952, by the transfer of the assets and liabilities of the Bombay Steam to the Scindia Steam. (2) The 20,000 bearer debentures of Rs. 1,000 each of the Bombay Steam (total value Rs. 2 crores) will be redeemed at par with *pro rata* interest thereon upto 30th June, 1953, within 30 days after the merger scheme is sanctioned by the High Court. (3) The 6,000 6 per cent. cumulative preference shares of Rs. 250 each of the Company will be paid off at the rate of Rs. 325 per share by way of compensation within 30 days after the scheme is sanctioned by the High Court. Of these 6,000 shares, 2,274 shares are held by the Scindia Steam Navigation Co. and these will, therefore, automatically stand redeemed and cancelled. (4) The holders of ordinary shares of the Company will be offered 2½ ordinary shares of the Scindia Steam Navigation Co. for every share of the former held on 20th June, 1953. This offer exceeds the fair value, namely, 2⅜ shares, assessed by the auditors of both the companies. Of the 2,39,582 ordinary shares of the Bombay Steam, 1,40,092 shares are held by the Scindia Steam and there will be no allotment to the Scindia Steam Navigation Co. in respect of its holdings in the Bombay Steam; only the balance of 99,490 shares held by the public will be allotted the shares of the Scindia, and (5) simultaneously with the merger of the Bombay Steam with the Scindias, the latter Company will set up two separate new and wholly-owned subsidiary companies for the purpose of transferring to each of them, respectively, the business carried on by the Bombay Steam, namely, (*a*) ship-repairing and general engineering carried on in its workshop, and (*b*) running the passenger and ferry services in the Bombay Harbour and on the Konkan Coast.

* * * *

The Directors have decided to merge the two companies with a view to securing more economical and efficient working of both the companies. "Till very recently, the Bombay Steam Navigation Co., Ltd.," the Directors state, "had a monopoly of the trade on the West Coast of India both in

EQUITIES ADVANCE HESITANTLY

TATA DEFERREDS SCORE FAIR GAIN

(From Our Own Correspondents)

BOMBAY, *23rd April*

UNDER sustained buil support, equities on the Stock Exchange moved further ahead during the week under review. Although day-to-day movements indicated a feeling of hesitancy, due to an urge for booking profits at every bulge, the undertone was steady with shares revealing modest gains, over the week, on a wide front.

The news of the Government of India's proposal to lend Rs. 10 crores to the Tata Iron and Steel Co., Ltd., for the expansion of its steel works at Jamshedpur, the fond hope of a higher retention price for steel as a result of the Tariff Commission's enquiry which was concluded a few days ago, the spurt in commodity and bullion prices, the postponement of the final consideration of the Estate Duty Bill to the autumn session of Parliament, and rumours regarding a further sharp rise in notes in circulation (though this later on proved incorrect) were the factors which induced speculative buying and short covering. But, as in the previous week, the buying was not aggressive, and the upward trend was faltering, as operators preferred to book profits at every rise. The main cause of the hesitancy was the delay in the announcement of the Mediator's award on the Tata Deferred conversion ratio. Activity was, therefore, somewhat restricted.

Sectionwise, Tata Deferreds led the steel section and the scrips made handsome advances to reach fresh high levels not seen since nearly a month. Opening at Rs. 1,851-4, Tata Deferreds hardened to Rs. 1,862-8 on the same day, but retreated to Rs. 1,846-4 on the following day. However again gathering fresh strength on Monday spurred by the rise in other commodities, the scrips moved up to Rs. 1,875 before scattered selling pressure brought them down yesterday morning to Rs. 1,860. There was renewed buying yesterday which lifted the shares to Rs. 1,885, but they finished to-day on a quiet note at Rs. 1,876-4. Tata Ordinaries was colourless, but the undertone was steady. After moving between Rs. 319 and Rs. 323, the scrips finished with a fractional gain of As. 12 at Rs. 321-8. Indian Irons attracted enquiries in the earlier sessions of the week and advanced from Rs. 25-1 to Rs. 25-9½ on Monday, but rumours of strike at the Company's works induced some selling, with the result that the shares receded to Rs. 25-2½ before closing better at Rs. 25-4. The Company's production of pig iron during the month of March amounted to 60,640 tons, as against 54,600 tons in February and 56,370 tons in January. Output of finished steel amounted to 22,090 tons in March, as against 20,090 tons and 28,650 tons, respectively, in the preceding two months.

Textile shares too maintained their upward trend, but the pace of advance was less marked than in the previous week. Bombay Dyeings, after an early advance from Rs. 387-8 to Rs. 391-4, gave way to Rs. 385 on Saturday. Subsequently, they rallied to Rs. 390-10 before winding up the week at Rs. 389-6. Kohinoors were strong and the shortage of scrips lifted them up from Rs. 301 to Rs. 308-4, but finished at Rs. 307. Centurys gathered as much as Rs. 8 to Rs. 267-8. Central Indias put on Rs. 3 to Rs. 159 and Svadeshis Rs. 3-8 to Rs. 261-8. Finlays showed no change at Rs. 309, Gokaks added Re. 1 to Rs. 212, New Greats Re. 1-8 to Rs. 152, Standards As. 10 to Rs. 295-10, Vishnus As. 10 to Rs. 171-4, Tata Mills As. 4 to Rs. 41-4 and India United Ordinaries As. 2½ to Rs. 10-0½. Simplex provided a notable exception, being marked down from Rs. 173-8 to Rs. 168. New City, which declined from Rs. 166-14 to Rs. 152-8 last week, gave way further to Rs. 141-4. A good parcel of these shares is reported to have changed hands this week.

Bank shares were quiet with the leading counters recording fractional losses. Imperial Fully Paids were lower by Rs. 5 at Rs. 1,852-8, but the Contributories were better by Rs. 2-8 at Rs. 453-12. Centrals (Old) lost As. 12 to Rs. 64-8 and the New shares As. 8 to Rs. 66. Barodas were maintained at Rs. 112-8, while Indias were a fraction better at Rs. 154-4. United Commercials were unchanged at Rs. 35-8.

Insurance shares were steady, though business passing was small. Orientals, after their last week's advance to Rs. 7,285, reacted to Rs. 7,135. New Indias closed at the last week's rate of Rs. 43-8, after being done at one time at Rs. 43-12. Some business passed in Jupiters at Rs. 7, a rise of As. 2. Vulcans were done at Rs. 11-3.

Public utilities presented a bright feature with handsome gains in leading scrips. Ahmedabad Electrics added As. 5 and closed at Rs. 108-12. Surat Electrics showed a smart rise of Rs. 2-8 to Rs. 127-8. Andhra Valleys which closed at Rs. 1,440 *cum-div.* last week was listed *ex*-dividend yesterday at Rs. 1,422-8 and rose to Rs. 1,425 today. Tata Hydros were done at Rs. 151-8 *ex-div.* to-day, as against Rs. 153 *cum-div.* and Tata Powers finished at Rs. 1,537-8 *ex-div.*, as compared with Rs. 1,543-12 *cum-div.* Bombay Suburbans, however, closed Re. 1-4 lower at Rs. 123-2.

In the miscellaneous section, Associated Cements picked up some strength towards the close and finished Re. 1 higher at Rs. 170, on expectations of a better price for cement, induced by the reference to the Tariff Commission of the industry's demand for a rise in the price of that commodity. Belapurs were steady round about Rs. 243. Bombay Burmahs were adversely affected by reports that the current year's earnings of the Company would be lower and the scrips fell by Rs. 3-2 to Rs. 391-14. B.I.C.s were unchanged at Rs. 3-5½. National Rayons were in demand and the shares gained Rs. 5 to Rs. 84.

In the mining and engineering section, there was a reaction in Aircok Ashdowns after their recent spurt, and the shares lost Rs. 11-4 to Rs. 221-4. Indian Coppers were quiet at Rs. 3-0½. Shivrajpurs closed at Rs. 57-8 *ex-div.* as against Rs. 62-8 *cum-div.* Premier Constructions were subdued at Rs. 91.

In the transport section, Bombay Steams were in the limelight with a rise of Rs. 5 to Rs. 37, following the Directors' decision to amalgamate the Company with the Scindia Steam Navigation Co., Ltd. Scindias rose from Rs. 13-11½ to Rs. 13-13, but closed at Rs. 13-11. Bharat Lines were done at Rs. 92, as against Rs. 93. Air-Indias improved by a rupee to Rs. 85 and Air-India Internationals by Rs. 1-4 to Rs. 105-4. Tata Locomotives had sellers at Rs. 84.

* * * *

Calcutta Stock Exchange

CALCUTTA, *21st April*

Although turnover was limited, the week under review on the Calcutta Stock Exchange was noted for a revival of interest in the jute section which is the barometer of the market. Speculative buying in jute shares was indulged in by operators following the fractional improvement in prices of jute goods, moderate business in hessian with American buyers, and the prospect of good business with the United States in the coming few weeks. Particularly yesterday and to-day, jutes added substantial gains. Incentive was also provided from the rumour that, although the Government of India was against any immediate restriction of sacking goods production or the sealing of further looms, some sort of arrangement might be permitted by the Government in order that the production of sacking would be affected.

With the prospect of Korean peace having been made brighter with the proposal to resume truce talks by the week-end, operators were pausing for the emergence of a clearer picture before entering into commitments of a long-term nature. Yet, speculative counters in other sections were also supported, as it was suggested that any recession in the prices of commodities following a Korean peace would be substantially neutralised by the increasing *tempo* of industrial progress under the Five-year Plan within the country. This view gained strength by this week's improvement in the commodities markets in general. Mr. Chintaman Deshmukh's hopeful references about the country's future economy provided further ground for optimism. Encouragement was derived from the likelihood that the Estate Duty Bill would not become law in the present session of Parliament.

Speculative trading in the engineering section was assisted by expectations of new retention prices this month as the Tariff Commission had completed the enquiry. The possibility of the Government granting a loan to Tata Steels for expansion was also utilised by bulls. Indian Irons were sent up to as high as Rs. 25-11 from Rs. 24-12. In contrast to the conditions in the past few weeks, transactions in teas thinned this week. Operators used the opportunity for profit-taking, but not much could be put through as buyers desired to wait and watch what actual effects the new method of levying the excise duty on tea would have on marketing.

In an otherwise dull textile section, Dunbars impressed the market with a rise from Rs. 123 to Rs. 124-8, while Muir Mills maintained the previous rate of Rs. 215. Kesorams adopted an air of lethargy at Rs. 20, Basantis remaining unchanged at Rs. 3-11 and Elgin Mills realised Rs. 17-1.

In the bank section, United Commercials were fractionally better at Rs. 35-12, but Imperial Fully Paids eased to Rs. 1,837-8 from Rs. 1,840.

Jutes found buyers at increasing rates. Howraths improved from Rs. 23-4 to Rs. 24-4, and Anglo-Indias impressively rose by seven points to Rs. 230. Barnagores disclosed a gain of Rs. 9 at Rs. 163. Kinnisons came to business at Rs. 193, Presidencies displaying moderate strength at Rs. 5-6 as against Rs. 4-14 last Thursday. Interest was shown in Reliances at Rs. 13-5, Nuddeas at Rs. 45, and Orients at Rs. 185. Lansdownes picked up strength at Rs. 132, Indias spurted from Rs. 123 to Rs. 127, and Ganges from Rs. 72-8 to Rs. 73-8. Nationals were better at Rs. 24-13 as against Rs. 24-4 earlier.

Coals came in for little attention. Even so fractional gains were recorded in selected counters. Bengals were better at Rs. 530, but Burrakurs were unchanged at Rs. 10-15. East Indias added As. 5 to close at Rs. 23-2. Central Indias were transacted at Rs. 5-2, while Equitables at Rs. 44 showed an impressive rise of Re. 1-4. Khatras Jherriahs were fractionally raised to Rs. 41, and Raneegunges had buyers at Rs. 8-8. Standards moved up from Rs. 18-4 to Rs. 18-8 and Eharats from Rs. 5-15 to Rs. 6.

A great amount of speculative enthusiasm was evinced in Indian Irons which opened at Rs. 24-12 last Wednesday and closed at Rs. 25-5 on Saturday. During Monday a high of Rs. 25-11 was touched, but the closure to-day was slightly lower at Rs. 25-7.

Although not much attention was shown to miscellaneous shares earlier in the week, selected counters recorded gains in the last two sessions of the week. Dunlop Rubbers were better at Rs. 28-8, and Assam Saws recovered from Rs. 6-3 to Rs. 6-8. Martin Burns hardened from Rs. 18-8 to Rs. 18-12, but the gain was lost to-day. F. & C. Oslers met with business at Rs. 5-3. B.I. Corporations changed hands at Rs. 8-5 and, Angelo Bros. at Rs. 17-13, while Rohtas Industries rose from Rs. 8-13 to Rs. 9. India Steamships were wanted at Rs. 6-7, Orient Papers at Rs. 32-12, and Indian Cables at Rs. 18-4.

In contrast to the earlier trend, teas were quiet. This was attributed to the confusion resulting from the readjustment of the excise duty on tea. Consequently, profit-taking followed. Bormahajans receded from Rs. 11-9 to Rs. 11 and Hantaparas from Rs. 135 to Rs. 131. However, Eastern Cachars were better at Rs. 3-9 and Dufflaghurs at Rs. 35-12. Sonai Rivers, after realising Rs. 5-14, eased to Rs. 5-12.

* * * *

Madras Stock Exchange

MADRAS, *21st April*

No perceptible change was visible in the conditions noticed last week on the Madras Stock Exchange. Dull trading persisted this week also with business confining to a limited number of shares. Excepting for a few stray deals, the textile section remained mostly eventless. In plantings, teas came in for some support, following the reduction of excise duty payable by tea gardens on their bulk sales of loose tea. The Government of India has decided to cut India's exports of tea by about 15 per cent. during 1953-54, to arrest, if not reverse, the down-trend in prices of teas in overseas markets. It is, however, too early to forecast the effects of this decision on tea shares. Rubbers and coffees were virtually stagnant. Miscellaneous scrips were quietly steady. As a result, price movements were confined comparatively to a narrow range and the undertone was hesitant.

In the textile section, Bangalore Woollens improved from Rs. 243 to Rs. 245 and Sri Krishnarajendras from Rs. 36-8 to Rs. 38. Balasubrahmanias and Ashers were higher by Re. 1 each to Rs. 74 and Rs. 30, respectively. Anglo-French, however, lost Rs. 5 to Rs. 84. Dhanalakshmis were down by Rs. 4 to Rs. 174. Coimbatore Spinnings eased by Re. 1-8 to Rs. 39-8. Lakshmis 'A' were lower by As. 8 at Rs. 38. Vasantas were done at Rs. 148, as against Rs. 160 *cum-div.*

The decision of the Government of India to cut exports of tea is expected to lead to a fall in the price of tea for domestic consumption. Operators were, therefore, hesitant to commit themselves. But some selective support took the prices of Highland Produces up by As. 4 to Rs. 10-2. Periakaramalais too put on a similar amount to Rs. 25. Kil Kotgiris were higher by an anna at Rs. 5. Chembras and Parksides, however, lost As. 2 each to Rs. 2-10 and Rs. 11-10, respectively. Business in Kalasas was done at Rs. 9-14, as against Rs. 10.

Among rubbers, Anandams improved by As. 2 to Rs. 9-8. Cochin Malabars were higher by an anna at Rs. 6-2. Kailas scrips were fractionally better at Rs. 3-3¼. But, Mercaras were down by As. 2 at Rs. 3-6 and Pullangodes by As. 1½ at Rs. 2-6. Be Bes were slightly lower at Rs. 1-12½. Tharmarpaly and Thirumbadis were unchanged at Rs. 12-14 and Rs. 2-9, respectively.

Rumours that the price of coffee to consumers will be cut induced a quiet tone in coffee scrips. Kadur Coffees and Mysore Coffees were dull at Re. 1-8 and As. 10, respectively. Consolidated Coffees were unchanged at Rs. 17. But Coffee Lands improved by an anna to Rs. 9-4.

In the miscellaneous section, Rallis hardened by Re. 1 to Rs. 77. Indian Steel Rolling Mills gained As. 10 to Rs. 12-8. Deccan Sugars Rs. 10 paid ups put on As. 4 to Rs. 9 and Rs. 25 paid ups As. 8 to Rs. 20-8. Transactions were reported done in Mysore Stonewares at Rs. 10, as against Rs. 9-12. But Mettur Chemicals lost As. 2 to Rs. 4 and Indian Cements As. 2 to Rs. 16-4.

Notice

THE CALCUTTA TRAMWAYS COMPANY, LIMITED

(Incorporated in England)

THE DIRECTORS OF THE CALCUTTA Tramways Company, Limited, announce that an Interim Dividend of 2½ per cent. free of Income-tax will be paid on the Ordinary Shares to the Shareholders registered in the Books on the 1st May, 1953, in respect of the profits for the year ended 31st December, 1952. Transfer Books will be closed from the 2nd May to the 15th May, 1953, inclusive, and Dividend Warrants will be posted on the 15th May, 1953.

By Order of the Board,
A. C. T. BLEASE,
Agent.

P-4, MISSION ROW EXTENSION,
CALCUTTA, *22nd April*, 1953.

NEWS IN BRIEF

APPROXIMATELY 1,565,000 workers employed in about 33,600 factories are not covered by the Employees' Provident Fund Act, 1952, at present.

A 33⅓ per cent. power-cut in Madras City and an additional cut of 8⅓ per cent. in the southern districts of the State affecting about 200,000 domestic and industrial consumers came into effect on the 16th inst.

The Pharmaceutical Enquiry Committee will hold its second meeting at Bombay on 7th May, 1953. During its one-week stay in the City, the Committee proposes to visit some of the pharmaceutical establishments and hold discussions with the representative associations of industry and trade, as well as individuals.

The term of the I.L.O. Productive Mission, which has been in India since 5th December, 1952, expires on 31st May, 1953. The question of extending the term is under the consideration of the Government of India. An expenditure of Rs. 21,835 has been incurred by the Government during the financial year 1952-53. The work studies and method studies of the Mission are still in progress.

A sample survey to collect agricultural statistics will be carried out by the U.P. Government during the next four months. The survey is a sequel to the Government's decision to participate in the world census of agriculture, organised by the U.N. Food and Agriculture Organisation. The data will be collected on the various items as proposed by the F.A.O.

The Government of India has released a quota of 200,000 lbs. of Madras and Mysore silk waste for export by the trade from ports in Madras State during 1953. Licences against this quota will be granted both to established shippers who were in the trade in the basic period from 1948-49 and also to newcomers who participated in the export of Madras and Mysore silk waste in 1952-53. Established shippers will be granted export licences on the basis of exports in the best year out of the basic period 1948-52, while newcomers will be given export licences on the basis of actual exports in 1952-53.

Representations have been received by the Central Finance Ministry, to the effect that, under the recent changes in the assessment of package tea, tea cleared from the gardens on payment of an excise duty of 3 annas per lb. will have to bear a further duty of As. 3, if it is taken into a packers' or blenders' premises after 15th April, 1953, for such blending or packing. The Government of India has, therefore, authorised the Collectors of Central Excise to collect only an additional one anna per lb. on such tea at the time of clearance after packaging from the blenders' or packers' premises where it is established from documentary evidence to the Collector's satisfaction that such tea brought into the blenders' or packers' premises after the 15th inst. had paid excise duty at the rate of As. 3 at the garden.

India signed the new International Wheat Agreement on the 17th inst., leaving only Britain among the major wheat importing nations still out of the pact. Sweden and Equador also signed the Agreement the same day, bringing the number of nations who have joined to 24, as compared with 46 in the expiring Agreement, Britain, the world's largest wheat importer has refused to accept the new maximum wheat price of $2.50 and is only prepared to pay $2. The new Agreement will be open for further signatures until the 27th inst., and must be ratified by the respective Governments by 15th July, 1953. Three of the four exporting nations, the United States, Canada and France, have already signed. Australia, the other exporter, is expected to join next week.

Two operational agreements were signed between the Governments of India and the U.S. last week, one dealing with a project for development of building materials under the auspices of the Central Building Research Institute at Roorkee and the other for the demonstration of improved methods of low-cost house construction, at a joint cost of $75,000 and Rs. 1,50,000. Under the agreement covering the development of building materials, additional equipment to augment the present facilities of the Central Building Research Institute at Roorkee will be provided for developing and demonstrating the production of indigenous building materials. The joint cost of this project is $100,000 and Rs. 1 lakh. The project for the construction of low-cost houses seeks to develop and demonstrate more economical methods of housing designs and construction through the introduction of modern building methods and equipments.

Under a supplementary operational agreement signed between the Governments of India and the U.S. in New Delhi on the 20th inst., 650 additional tube-wells would be constructed in the Punjab, Uttar Pradesh and Bihar within the next three years. The total joint cost of this project will be $5.26 million and Rs. 2.20 crores, the dollar expenditure representing the U.S. contribution, while the rupee expenditure will be by the Government of India. Since the signing of last year's agreement for 2,000 tube-wells, the cost of their construction, as well as that for providing electric power for these tube-wells, has increased by $2.54 million and Rs. 2.5 crores. To cover up this gap, the present agreement provides a sum of $930,927. The rest of the required amount, namely, $1,609,073 has been found by a reallocation from Operational Agreement No. 1, an amendment to which was also signed this week. The additional rupee expenditure of Rs. 2.5 crores will be contributed by the Government of India.

The Government of Madras has instituted proceedings against the Madras Electric Tramways Co., Ltd., alleging that it has declared an "illegal lock out" and made "illegal alterations in the service conditions of its 1,700 employees." It has also decided to refer to the Industrial Tribunal for adjudication the employer-employee dispute arising out of the suspension of tramway operations. It will be recalled that the Company suspended its 60 years of service to the public of Madras on 11th April, 1953, on the ground that it had been sustaining a loss to the extent of Rs. 40,000 to Rs. 50,000 per month in recent months. The Company has a fleet of 103 single-deck cars plying over a track of 16¼ miles. About 1,600 persons depend on it for livelihood and 125,000 for transport facilities.

* * * *

From Abroad

The U.N. Korean Reconstruction Agency will ship more than 150,000 metric tons of fertilisers to Korea in time for the spring planting. The quantity is sufficient to fertilise about one-fourth of the Republic's farmland.

In 1952, a representative group of companies in Australia earned, on an average, 8.3 per cent. on funds employed by them, as against 9.3 per cent. in the previous year. The dividend percentage, therefore, fell to 5.7, as against 6.1.

Steel production in the U.S. reached a new record of 10,153,000 tons of ingots and steel in March, 1953. This brought production for the first three months of the year to a new quarterly record of 28,981,137 tons.

The U.S. Government filed on the 21st inst., a civil suit against the major U.S. and other oil companies which are alleged to have taken part in an international oil cartel. The criminal grand jury enquiry has been abandoned for security reasons.

During the week ended 10th April, Britain purchased 1 million metric tons of wheat from Canada under the International Wheat Agreement. This is stated to be an unprecedented quantity for a single week and is equal to almost two months' export quota of Canada.

The Australian Government has lifted control over lead and zinc, but subject to one condition, that the domestic price should not exceed the export price. Copper, however, will continue to be under control, with the domestic price reduced from £A350 to £A330 per ton.

Australian wool cheque for the nine months ended March, 1953 was £A307.0 million, as compared with £A247.9 million in the corresponding period of the previous year. The average price of greasy wool was £A103-19s. per bale (or 82.17*d.* per lb.), as against £A92 2s. 2*d.* per bale (or 74.61*d.* per lb.) in the previous year.

The purchase of 1 million tons of Cuban sugar, announced by the Chancellor of the Exchequer in his budget speech, is estimated to cost about £22 million to £23 million over a period of two years. Of the total quantity of 1 million tons of Cuban sugar to be purchased by the U.K., 600,000 tons will arrive this year and the balance next year.

The amount now being spent on oil and gas development in West Canada is of the order of about $1 million per day. Canada as a whole is expected to be self-sufficient in oil within five years. Over 150 million acres are being actively explored for petroleum and natural gases, which compares with hardly 20 million acres in 1946.

The Sulphur Committee of the International Materials Conference is to be dissolved on the 30th inst. This is a sequel to the Committee's recent decision to discontinue international allocation of crude sulphur from 1st March, 1953 and reflects the continuing improvement in the supply and demand position of sulphur in the free world.

Japan is reported to have launched a drive to secure iron ore from South-East Asia, particularly from the Philippines, India, Thailand and Malaya. The big five steel manufacturers of Japan are trying, with Government backing, to build up stable supplies of iron ore by expanding imports or extending arrangements for investment of capital and technical aid.

The Ceylon Government has allocated a sum of Rs. 1.15 crores out of the profits it realised from the sale of sheet rubber to China for the rehabilitation of the rubber industry. The fund will be administered by a Rubber Rehabilitation Board, consisting of six nominated members. The scheme, which envisages replanting of 10,000 rubber trees every year, is now being worked out by the Food and Agriculture Ministry.

The U.K. Board of Trade has completed arrangements for licensing private imports of cereals and animal feeding stuffs with effect from 1st May next. Importers will be granted open general licences for import of wheat and flour, feed grains and certain miscellaneous animal feeding stuffs and fertilisers from any country. They will, however, be obliged to render weekly returns to the Ministry of Food in respect of imports other than fertilisers and monthly returns to the Ministry of Materials in respect of fertiliser imports.

PERSONAL

MR. E. L. C. Gwilt, Managing Director, Glaxo Laboratories (India) Ltd., Bombay, left for the U.K. on a short trip.

Mr. D. N. Khandke has been elected President of the Western India Automobile Association for the year 1953-54.

Mr. H. Wrigley has assumed charge as Australian Trade Commissioner in Bombay, succeeding Mr. S. D. Schubart.

Mr. Shanti Prasad Jain of Messrs. Sahu Jain Ltd., Dalmianagar, has been elected President of the Bihar Chamber of Commerce.

Mr. R. W. Bullock, till lately Chairman and Managing Director of Messrs. Forbes Forbes Campbell & Co., Ltd., Bombay, sailed for the U.K. this week on retirement.

Mr. W. B. Moncur, former Chairman of the Indian Jute Mills Association and Director, Andrew Yule & Co., Ltd., Calcutta, left India last week on retirement.

Mr. S. D. Srinivasan, Manager, National Insurance Co., Ltd., Calcutta, has been elected President of the Indian Insurance Companies' Association for the current year.

Mr. R. P. Ross-Williamson, who has been appointed Regional Information Officer of the British Information Services in Bombay, arrived from London on Tuesday this week. He will assume charge of his office on 14th May.

Mr. E. H. S. Marker, former Under-Secretary, British Board of Trade, who was on a six-week visit to India to advise the Government of India on Company Law reform, sailed for the U.K. this week.

Mr. Bernard E. Loshbough, Deputy Director of the U.S. Technical Co-operation (Point Four) Administration for India and Adviser on Community Development, has resigned his post, following his appointment as Deputy Representative in India for the Ford Foundation Philanthropic Trust.

Mr. I. I. Chundrigar, Commerce Minister in the Interim Cabinet of undivided India and now Governor of Punjab (P), has been appointed High Commissioner for Pakistan in India, *vice* Mr. Shuaib Qureshi who has joined the new Cabinet in Pakistan.

Mr. B. C. Mukherji, Managing Director of the Sindri Fertiliser Factory, and leader of the Indian fertiliser mission to Japan, Canada, the U.S., the U.K., Germany, France, Italy and other European countries, returned to Calcutta on Tuesday last. The other members of the mission who also returned are: Dr. A. Nagaraja Rao, Industrial Adviser to the Union Ministry of Commerce and Industry, Dr. Van Evera of the T.C.A., and Mr. K. C. Sharma, Manager, Sulphate Plant, Sindri. The mission visited modern fertiliser factories in various countries to study fertiliser manufacture processes, with a view to determining what other nitrogenous fertilisers can be produced with advantage in India.

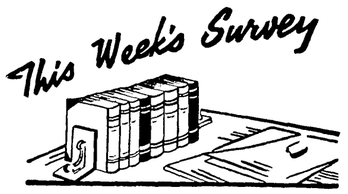
"COMMERCE" 1928

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, *28th April*

Jute Problem in Bengal

Under the above caption, Mr. N. R. Sarker, member, Bengal Legislative Council, delivered, last week, an address to the members of the Bengal National Chamber of Commerce, Calcutta, which must somewhat be irritating to certain Calcutta jute interests. Mr. Sarker made a laudable effort to suppress the politician in him and express himself as a student of economics. In the abundance of his sympathy for the cultivator, Mr. Sarker was, perhaps, a bit too severe upon middlemen, who are useful members of society, and are, considering all circumstances, a necessary evil in the upkeep of the trade and industry of the country. With his elucidation of the problem of intensive cultivation as applied to jute production, we have no quarrel, but the solution Mr. Sarker is anxious to apply to it seems to us to be utopian. There are at all events ample areas available in India for carrying on simultaneously a more extensive cultivation of both jute and food crops. Mr. Sarker has bestowed considerable care and thought on the subject he handled and his marshalling of facts and figures is deserving of the best attention of all concerned. At the outset, Mr. Sarker doubted—and not without reason—if the importance of the jute trade in the economic life of Bengal and its wide and varied implications are appreciated to any adequate degree in the Province. It is, of course, common knowledge that, as it is widely cultivated in Bengal, it is one of the staple products of our agriculture and is second in importance only to rice, our staple grain and food. Mr. Sarker tried to give full idea of its importance from the facts and figures bearing on jute. Jute, he said, puts more than Rs. 30 crores a year into the hands of the cultivator and jute exports from Calcutta amount to over Rs. 75 crores and from Chittagong Rs. 1 crore annually, while the coastal and rail-borne trade in jute is valued at Rs. 5 crores each. This enormous export trade gives rise to other services and utilities in the shape of transport, insurance and banking, which, at 10 per cent. of the value of the coastal and sea-borne trade, would represent a value of Rs. 8 crores.



FIRST DEVELOPMENT COUNCIL

TWO years after the Industries (Development and Regulation) Act was passed in 1951, this country has just been able to have its first Development Council constituted and started under the provisions of the Act. The time lapse is by no means a short one and, therefore, the first Development Council, namely, that for Internal Combustion engines and power-driven pumps, has come not a day too soon. The delay in taking this first concrete step under the provisions of the Act serves to underline the stupendous preliminary work the Government has to do before constituting a council. Certain modifications to the Act, which the Government had to effect later, the time needed for implementing the preliminary provisions of the Act, the lack of experience in giving effect to some of the provisions of the Act such as those relating to development councils, licencing bodies, etc., and the dearth of trained personnel to serve on these bodies, all these explain the delay. Nevertheless, the inaugural meeting of this first Council held in New Delhi on Monday last, under the chairmanship of Mr. G. R. Damodaran, M.P., may be considered as heralding a new era in the industrial development of this country. Incidentally, it may be mentioned that the Government has constituted a Development Council for the heavy chemicals industry also but it has yet to start work.

Inaugurating the meeting, Mr. T. T. Krishnamachari, Union Minister for Commerce and Industry, exhorted the Council to show "concrete results" and said that, if the experiment turned out to be successful, the Government would be able to appoint more Development Councils for ensuring development of industries along right lines. The Minister assured—a most welcome assurance, indeed—that the Government would treat the recommendations of the Council with the utmost consideration and would, as far as possible, be guided by the Council in the policy to be adopted in respect of the industry the development of which had been entrusted to its care.

The Development Council for internal combustion engines and power-driven pumps has before it a very great responsibility for two reasons. First, there are so many pressing problems confronting the industry that the Council will have to address itself in right earnest for solving them. The Council, for instance, has to recommend targets of production, suggest coordinating production programmes and review the progress of the industry from time to time. It has to suggest norms of efficiency, with a view to eliminating waste, obtaining maximum production, improving quality and reducing cost. It has also to make arrangements for better marketing and standardisation of products and propose measures for increasing the productivity of labour. These are the general problems of the industry. Besides these, there are certain special problems which the Council has to face immediately. One such is the fall in demand, which has resulted in accumulation of stocks with the factories. Consequently, several units have already closed. The industry, therefore, put forward a plea for stopping imports, which has been conceded by the Government. But stoppage of imports completely for any length of time is not desirable, inasmuch as it takes away all incentive from the indigenous industry to raise efficiency of production with a view to improving quality and reducing cost. Moreover, as the Commerce and Industry Minister aptly remarked, it is necessary to allow trickle imports in order to keep in touch with developments abroad. The main problem of the industry, hitherto was, however, shortage of raw materials, particularly pig iron. The position seems to have somewhat eased of late, as is borne out by the encouraging trend of production in the recent past.

The Development Council has to do a lot for the power-driven pumps industry also. This industry assumes special significance in the present context of the implementation of the large industrial and agricultural programmes. Power-driven pumps are required extensively for several industrial and agricultural purposes, namely, for feeding boilers, pumping sewage, etc., and for watering fields in the rural areas. There are at present, in India, 20 organised factories—all in the private sector—manufacturing power-driven centrifugal pumps, the number of persons employed being 4,500. The aggregate rated capacity, assessed on an eight-hour single-shift basis, is estimated at 42,800 pumps per annum. The actual production during 1951, however, was higher at 47,989 pumps, against the estimated demand for 60,000 pumps at present and 100,000 pumps (including tube-well pumps) by 1955-56. During 1952-53, the production of pumps is estimated at 50,000 and that envisaged for 1955-56 at 80,000 to 85,000. It is on the success or otherwise of the working of this Council that the setting up of Development Councils for other industries will depend, to a large extent, as it is the first of its kind to be tried in this country.

COMMUNITY PROJECTS

The Conference of Development Commissioners, held at New Delhi this week, under the chairmanship of Mr. V. T. Krishnamachari, Deputy Chairman, Planning Commission, must have provided a good opportunity for the Commissioners from 26 States to compare the progress of work done in the Community Projects, the difficulties encountered and the solutions evolved to overcome them in each area. The survey of the work done by these Commissioners reveals that the progress in all cases has not been uniform on account of certain difficulties peculiar to particular areas. But, as admitted by the Chairman, Mr. Krishnamachari, the progress was in no way disappointing. Personally, the Chairman seems to feel optimistic about the success of the programme. His emphasis on the importance of the Co-operative Movement, drawing the particular attention of the Development Commissioners to it, is perhaps an indication that the Commissioners have not yet paid the Movement the attention it deserves. In view of the importance attached to the Co-operative Movement in the Plan, it is necessary for the Commissioners to join hands with the officers of the Co-operative Department and thereby give a fillip to introduce the Co-operative system in the various spheres of rural life.

The crux of the problem of the Community Projects centres round increasing the avenues of employment in rural areas. Both Mr. Krishnamachari and the Prime Minister who addressed the Conference laid stress on this problem. The Prime Minister's forceful expression of his views on this problem merits the attention of the Development Commissioners. He said: "The most important consideration must be what we can do for providing fuller employment, because mass production of commodities cannot raise the standard of living, unless there is mass consumption which means that the mass, as a whole, must have greater purchasing power. The simplest way whereby the people in general will have greater purchasing power is to create work which again will keep the industrial machinery functioning." Proceeding, he said that, as technological revolution had changed the face of the world, there was need to utilise this technology for the benefit of small-scale industries which could survive and flourish only then. Provision of small-scale industries has been one of the planks of the Community Projects, and so far there is no indication to show as to what progress has been made in the Projects which have been in operation for more than a year and a half now. One would like to hear on this point from the Community Projects Administrator.

LABOUR WELFARE FUND

The Bombay Labour Welfare Fund Bill adopted by the State Legislative Assembly, last week, is a highly objectionable and an unwarranted one. It is wholly contradictory to the new approach advocated by the Central Government towards labour problems, inasmuch as it seeks to constitute statutorily a Labour Welfare Fund under the direct control of the Government of Bombay, thereby stifling the voluntary efforts of employers towards provision of labour welfare amenities. It gives the misleading impression that the Government alone is the benefactor of labour and not the employer. The directive issued by the Centre in November, last year, requested the State Governments to issue instructions to employers' organisations and/or industrial undertakings to constitute labour welfare funds on a voluntary basis. This was done, we believe, on the clear recognition of the healthy principle that statutory measures, however desirable, are not capable of yielding satisfactory results, since they are devoid of the personal touch, a primary requisite for the successful implementation of labour welfare measures.

That apart, the measure seeks to impose additional burdens on industry, though not immediately. It is true that the Bill, as passed by the Assembly, proposes to constitute the Fund from "fines realised from employees, unpaid accumulations and voluntary donations." It is also true that the measure empowers the Labour Welfare Board, the body to administer the Fund, to borrow any sum required for the purpose of carrying on welfare activities after obtaining the previous sanction of the Government. It may so happen that the Government will have to resort to borrowing earlier than expected, and, if the expedient fails, it will call upon the employers to finance the Fund. This is clear from the remark of Mr. Shantilal Shah, Labour Minister, some time in February, that, if it became necessary to raise additional funds, employers might have to contribute a "nominal fee." The definition of "nominal fee" will doubtless depend upon the circumstances and the needs of the Labour Welfare Fund activities.

The proposal to constitute a common pool of fines and accumulated balances with the various factories, with a view to utilising the same for labour in general, is a reprehensible one. It is contrary to the present practice of utilising such funds on the workers' of the units in which they are accumulated. It is true that section 22 of the Act provides for exemption of any class of establishment from all or any of the provisions of the measure, subject to such conditions, as may be necessary. This, however, does not mean that exemptions will be the general rule. If that were to be so, there would have been no necessity for this legislation. The correct thing to do will be to have welfare funds unit-wise. There is no need for the State to interfere in the administration of such funds. It has neither the resources nor the personnel to administer them.

The Labour Welfare Board, envisaged in the Act, will be an appendage of the Government. It does not enjoy any freedom in the discharge of its functions. Under section 7, for instance, the Board will have to carry out such measures "as may be specified by the State Government from time to time." Again, section 10 says that "the State Government may give the Board such directions as in its opinion are necessary or expedient in connection with expenditure from the Fund or for carrying out the purposes of the Act," and adds that "it shall be the duty of the Board to comply with such directions." The Board will, of course, consist of representatives of employers and employees of equal numbers as well as of independent members. But all of them will be nominated by the Government. All this shows that the Government wants to have one more machinery through which it can exercise control over labour and influence it. In short, this legislation has been motivated by political considerations and not by a sincere desire to improve the lot of workers. If the latter were the only objective, it could have been achieved by informal directives to employers and through persuasion.

Lest we should be misunderstood, we hasten to add that we are not against the provision of welfare measures for labour. We recognise that the provision of welfare activities designed to improve the standards of labour by providing community and social education centres, games and sports, excursions and facilities for learning useful hobbies should be encouraged. In fact, such facilities are already being provided by well established units of industry. Where they are not being provided, the authorities could have persuaded employers to do the needful. But what we are against is the manner in which the Bombay Government has decided to introduce welfare measures.

MERGER OF RAILWAY UNIONS

A welcome development of the week in the sphere of labour is the decision of the two premier railway labour organisations, the All-India Railwaymen's Federation and the Indian National Railway Workers' Federation, to merge into a single unit. As all students of trade unionism will admit, each industry should have one union only as far as possible. For the success of collective bargaining, it is essential that there should be one single bargaining agent over as large an area of industry as possible. Separate unions for different units in the same industry are inimical to the growth of healthy trade unionism and their existence may be justified only in very exceptional circumstances. A single consolidated union will facilitate representation of grievances of workers forcefully and effectively. Such a step will accelerate progress towards the introduction of uniformity in wages and conditions of service throughout the industry.

Mr. J. P. Narayan and Mr. Hariharnath Shastri, President of the A.I.R.F. and I.N.R.W.F. respectively, have decided to keep the union affairs free from the influence of any political parties or factions. This decision is a tribute to the wisdom of both the presidents. For it is an admitted principle that trade unions should be economic entities devoted to improve the living standards of its members. Contrary to trade union developments elsewhere in the industrial West, especially in the U.K., trade unions in India are in perpetual conflict with one another by virtue of their affiliations with the various political organisations.

There is a fear that a single union, commanding the allegiance of lakhs of workers, especially in public utility undertakings, is a potential danger not only to the undertaking, in particular, but also to the country, in general. The effect of labour unrest and the consequent stoppage of railways is only to be imagined, they say. This fear is not unwarranted. Unless the union is led by leaders whose sense of responsibility to the society as a whole is high and who believe in negotiation and conciliation of disputes and not in a demonstration of the union's might by holding the authorities and the general public at its mercy, the merger will have been in vain. In view of the existence of a permanent machinery, with a tribunal at the apex to decide unresolved disputes, it is to be hoped that such a contingency will not arise in the railways.

The benefits of having a single union with a large membership are enormous, apart from its role in the settlement of labour disputes. In view of its considerable resources by way of membership fee, etc., it can initiate labour welfare activities on the lines undertaken by the unions in the industrial West. It can, for instance, run co-operative societies, undertake cultural activities and the like, thereby making the life of its members happier. Trade unionism, the offspring of industrialism, is the only force, with dynamic energy, for ensuring the fundamental welfare of labour in a society where the standards of workers are appalling.

TREND OF COMMODITY PRICES
