Reviewing the economic conditions in India, in the course of his budget speech on 27th February last, the Union Finance Minister, Mr. C. D. Deshmukh, stated that prices had on the whole remained steady at lower levels. This statement of the Minister was evidently based on the variations in prices during the closing months of 1952, when the trend happened to be slightly downward, a common occurrence at year-ends, on account of expected arrival of agricultural commodities. Since the beginning of this year, however, prices have again registered an upward trend, with the general index of wholesale prices (base: August, 1939=100) standing higher at 385.2 in March, 1953, as against 372.7 in December, 1952 and 377.5 a year before, although it is lower as compared with 430.3 in January, 1952, or the pre-Korean war level of 397.1. The increase in wholesale prices during the first quarter of this year has been shared practically by all the commodities, as will be seen from the figures below:

(Base: August, 1939=100)

	Pre-Korean war	*March* 1952	*Dec.* 1952	*March* 1953
	24-6-50			
General Index ...	397.1	377.5	372.7	385.2
Food articles ...	407.1	342.7	344.5	365.0
Industrial raw materials ...	494.2	424.2	421.7	453.1
Semi-manufactures ...	335.5	343.2	342.6	349.8
Manufactures ...	346.9	383.8	367.6	369.0
Miscellaneous ...	692.4	625.6	625.3	585.5

It will be noted from the above figures that the wholesale price index would have shown a steeper rise than that indicated but for the recession in the index for the miscellaneous group. In other words, this means that the consumer has been paying very much higher prices for almost all his essential requirements. Thus, the index for food articles—the most important item—has registered an appreciable rise, owing to higher price of *jowar* at Amravati, of rice at Patna and Vijayawada, and of *bajra* at Hyderabad.

The prices of industrial raw materials have been steadily advancing, the index moving up from 421.7 in December, 1952, to 427.6 in January, 440.1 in February, and 453.1 in March this year. The increase has been entirely due to rise in the prices of fibres and oilseeds. This rise has been particularly marked in the case of raw cotton.

The prices of oilseeds also have gone up considerably, thanks to the general shortage of supplies.

The index for the manufactured group, as already stated, which had receded from 400.9 in January, 1952, to 367.6 at the end of the year, has since risen to touch 369 in March last. The rise has been mainly under wool, rayon and silk products. Cotton and jute manufactures, however, have proved an exception. The index of cotton manufactures, for instance, has all along remained at 406 since November, 1952—a level which is below that (410) prevailing in the slump period early last year. This is an indication of the emergence of a buyers' market for cotton textiles. This will be clear still further, if it is remembered that the increase in the price of cotton has failed to reflect itself on the price of manufactured cotton piecegoods.

OFF THE RECORD

(By "ROVER")

I DO not know if the short respite offered to the moneyed classes and the business community, by the Business Advisory Committee of the House of the People deciding to put off the consideration and the passage of the dread Estate Duty Bill to the next session of Parliament, is to be welcomed even by those who are most directly affected by it. Sometimes the prolonged suspense of a standing menace is more unnerving and more painful than the sharp edge of the guillotine descending in one clean, swift stroke and putting an end to the agony. Only a week ago, these condemned people had been startled by the news that the Congress Parliamentary Party had made up its mind to give top priority to this Bill and to put it on the Statute Book before the end of the current session. This *volte face* about the timing of such an important measure is certainly very intriguing and I wonder if it can be taken as an indication of the Government and the majority party being in two minds with regard to at least some of its more drastic provisions, if not the Bill itself.

I must, however, concede that, in sharp and pleasant contrast with the practice of our Governments to rush headlong with hastily conceived and carelessly drafted legislation on subjects of the gravest import to the social, political or economic structure of the country, the Government of India deserves to be congratulated on the time and thought they have given to this subject, the hesitancy and circumspection with which they have approached it and their readiness to give consideration and accommodation to the various interests which will be affected by it. The Government's position in this respect has been singularly difficult. In the first place, its own immediate need for raising more money is there. That this need is both real and urgent can be easily discerned from its decision to launch a fresh wave of inflation with all its ugly implications to the country's economy, where the standard of life of a vast bulk of its population is not merely woefully low but subhuman. For full five years, this very Government had been concentrating its efforts and resources in fighting this very inflation.

In the second place, the party in power in the country was pledged to bring in some such measure without undue loss of time. There is an important section within the ranks of its own supporters and a still more desperate one outside these ranks clamouring for it. There was, therefore, nothing to be surprised at in the Government and the Finance Minister making up their mind suddenly to introduce this Bill. Constituted as it is and with the heavy pressure which was being brought to bear upon it from several directions, the surprising part of it was that it could resist this pressure so long and so successfully. The credit for this must go, in full and overflowing measure, to Mr. Chintaman D. Deshmukh, the Finance Minister.

Unlike the clamouring crowds swayed by a desire not so much to help the country or its economy, as by some half-defined ideological urge and hunger to despoil those who have managed to save and lay by in the past, whether righteously and at a sacrifice or unsocially and as a result of some unjustifiable privileges they enjoyed in the past, our Finance Minister knew the heavy responsibility which would rest on him and his Government, for disturbing the social and economic structure of the country, which had a great many thick layers going down and having its roots in hoary antiquity. He stayed his hand as long as he could. He took time to think out and study the implications of this form of capital levy to a poor and at the same time sentiment and tradition-ridden country. I should not be at all surprised if he is still a little hesitant, if not actually doubtful, about the wisdom of some of the more drastic and narrow provisions of the Bill as it has emerged from the hands of the Select Committee. And, finally, it is not to his discredit that, though he had made no mention of it in his budget speech, he was stampeded, half reluctantly perhaps, to move in this matter during this very session, without giving a due warning to the populace. There are times when a wise minister, not unlike a gifted and charming woman, does well in stooping to conquer.

I see his hand once again in reversing the earlier decision to rush through this Bill in the present session. It must have been his wise and restraining influence which brought about this change, irrespective of the agency and legislative machinery which actually worded and registered it. Considering the number of minutes of dissent and the multiplicity of amendments which were bound to be moved, the House, already fatigued and harassed by New Delhi's gruelling temperature in the month of May, could never have spared enough time during this session, to assure mature and cool deliberation of the many points of view on the various administrative provisions of the Bill.

The central idea of the Bill is no longer in question; even the richest classes have reconciled themselves to this progressive idea making for greater social justice. But it is the mechanism devised for implementing a principle that matters more than the soundness of the principle itself, when it comes to reaping the harvest. Many a good idea, such as temperance or abstinence, has been ruined and turned into an engine of torture and totalitarianism by being framed into a hasty, and unbaked law. It could cause and create more fresh mischief, corruption and demoralisation, if unwisely and injudiciously administered, as the results in those States which have rushed into a policy of total prohibition go to demonstrate.

In spite of the time taken over it, nobody would claim that the Bill, as it now stands, would make its implementation and administration smooth and its effects on the structure of our complicated economy so graduated as not to mar the basic pillars of the structure itself. Evolution from a semi-feudal, semi-capitalist and caste-ridden society into a full-fledged democratic and socialist economy is a painful process of progress, which must be hedged in by and tempered with balances and adjustments. The pace may be increased if you remove the brakes and balances or do away with the nice adjustments, but pace alone cannot be the governing factor in bringing about fundamental social changes. It has to be conditioned by the gradient and the road surface of the route we travel on. A pace which would upturn the vehicle itself and injure it can never take us quicker to the goal. Instead, it might retard the very progress which we all desire and aim at. Before we launch this new vehicle of Estate Duty on its journey, it is imperative that we check it at every point and in every part. Army men would tell us that, in some terrain, a caterpillar is a more suitable and more speedy means of locomotion than a high-powered and well-appointed car.

So long as we have private property and private savings, so long as our mixed economy has to rest partly on these props, an Estate Duty Bill, which, in the gushing enthusiasm of its authors and their unregulated longing to secure full social justice at a stroke, would ruin and put out of action all the little incentives to savings and formation of capital, would certainly not be a vehicle taking us further in our uphill task. It might just land itself in a ditch on the roadside, pinning us down with its dead weight and crippling us for our onward march.

And it should not be forgotten that social justice, if it is to be called justice, must also take note of and provide for the group of those unfortunates in our society, who, for no faults of their own, have been left fully dependent on the past savings of their forbears for maintaining life itself on a very modest scale, without any strength, training, skill and experience of earning their living at an age, where making a fresh beginning is both a physical and psychological impossibility for them. There is little either of abstract or social justice in condemning them cruelly as economic parasites and leaving them to their fate in a dazzled, bewildered and helpless state. It is one thing to take steps to prevent creation of fresh recruits for this class; it is quite another to exterminate and liquidate those whom our past has saddled us with. I would appeal to our legislators to spare a thought for these forlorn creatures, these orphans of the storm, when they sit down again to finalise the various clauses of this Bill, after the preliminary general debate.

It is on these grounds that I welcome the further suggestion thrown out by Mr. Deshmukh, to arrange for an informal, inter-sessional conference of members to consider all such amendments to the Bill as are likely to be tabled and to deliberate on differences in a more cool and less surcharged atmosphere, so as to secure as large an area and degree of agreement as possible, before the Bill is finally and formally taken up for second reading in the House in its autumn session. This is a very valuable suggestion, which deserves to find a permanent place in our machinery and procedure for legislating on important subjects. With the growing volume of lengthy legislation on various subjects, which by their very nature are full of complications and which our dynamic urge towards peaceful social revolution is bound to bring up in large numbers in Parliament during the next few years, we must devise some such machinery to secure greater and deeper deliberation, as also to give better scope and chance to the minorities to influence policy and laws.

Our so-called parliamentary democracy, which has, in recent times, shown a tendency to go with a heavy steam or diesel-engine roller over the minorities, will drop democracy along the way and march towards totalitarianism, unless we safeguard it with some such device, as suggested by Mr. Deshmukh in the case of the Estate Duty Bill, as a permanent part of our democratic structure. In the meantime, as an inveterate cynic put it to me the other day, those of the rich who are determined that the Government should not be allowed to help itself to a big slice of the estate which they propose to leave behind, should utilise the interval offered to them by a kind Parliament, and arrange to die betimes before this Bill becomes law and comes into force, so as to cheat Mr. Deshmukh of his unearned gains.—*All Rights Reserved.*

PARLIAMENT ADOPTS 1953-54 BUDGET

IMPROVEMENT IN FOOD POSITION

(From A Special Correspondent)

NEW DELHI, 21st *April*

DELHI LETTER

HAVING given its consent to the Budget, Parliament has taken on hand important legislative matters. Before it rises for the summer vacation some time mid-May, it is expected to pass a number of Bills. The first among them is the Air Corporations Bill, which has been referred to a select committee to-day. While introducing the Bill, the Government spokesman, Mr. Jagjivan Ram, sought to justify the nationalisation of air transport by giving these reasons: the deterioration of the financial position of the operating companies, their inability to undertake development plans without large-scale financial help from Government, the importance of internal air transport both for maintaining law and order and defence and the need for rationalisation of air transport. The Minister for Communications further stated that the Government's idea was that the proposed two corporations should function as public utilities on business principles. According to him, they could have the advantages of unified operations such as the utilisation of workshop capacity, technical personnel, equipment, etc.

After the Air Corporations Bill, Parliament will take up the Income-tax (Amendment) Bill, the Industries (Development and Regulation) Amendment Bill, the Tea Bill, etc. In regard to the controversial Estate Duty Bill, five days have provisionally been allotted for general discussions during the current session. It is likely that members would be asked to give notices of amendments which might be considered during the inter-session period. The Finance Minister is expected to call an informal conference of members and thrash out the amendments before the Bill is taken up for clause-by-clause consideration during the next session. This procedure will save the time of the House and give an opportunity to members to place their points of view before Government. These apart, Parliament will dispose of another 10 minor Bills during the next three weeks.

The debate in Parliament on the Appropriation and Finance Bills has left one abiding impression on the onlooker. It is the fact that Mr. C. D. Deshmukh has been able not only to establish himself as a skilful Parliamentarian but also to dominate himself in the discussions on economic subjects. In other words, just as the Prime Minister, Mr. Jawaharlal Nehru, has been able to establish himself head and shoulders above his colleagues in the political sphere, Mr. Deshmukh has been gradually attaining for himself a similar place in the economic sphere. The combination of these two distinguished men, who are being motivated mainly by the laudable determination to endeavour steadfastly to strengthen the economy of the country in different fields, will do immense good to the country. People will be able to appreciate the good work they are doing in course of time.

Mr. Deshmukh's Reply

Mr. Deshmukh's reply to the debates in Parliament is characterised by some notable features. It is logical as well as analytical; cogent as well as convincing; informative as well as pertinent. For instance, in respect of super-tax payable on dividends from wholly subsidiary Indian companies he observed that the present pattern of taxation had become disincentive to the formation by foreign companies of Indian subsidiaries which could become more beneficial to the economy of the country. He stated that he would be increasing the rebate admissible on dividends received by a foreign company from its Indian subsidiary from one anna to one and a half anna. By doing so, the existing disparity would be halved. He realised that this was not sufficient. So he promised to remove it completely at another stage. The Finance Minister was equally logical in regard to the readjustment of the excise duty on tea, his main motive in this connection being to confer some benefit on the grower, without sacrificing Government revenue. By reducing the excise duty payable by the tea gardens to one anna when they sent out tea in bulk to the markets, Mr. Deshmukh claimed that the initial financial commitment of the tea gardens would be substantially reduced. He made some wise remarks on defence expenditure both in India and Pakistan and said that "instead of wasting our resources in trying to purchase the latest equipment in almost every sector of armament from foreign countries, it would be better to confine our purchases to what is absolutely essential and then to divert resources in the form of capital for starting industries which will enable us to produce these other things." Now that many notable administrative changes have taken place in the Pakistan Ministry, it is to be hoped that Pakistan will hereafter be able to take a realistic attitude and come to an understanding with India on all controversial issues which will be of immense benefit to both the countries.

Wheat Decontrolled in Punjab

The announcement regarding the decontrol of wheat in the Punjab, which will become effective from 15th May next, is yet another landmark in the food administration of the country, indicating the improvement that has taken place in its food supply position during the last few months. The favourable *rabi* harvest throughout North India this year, the anticipation that many of the small irrigation schemes undertaken during the last few years will become productive hereafter, and above all the hope that water will be let down from the Bhakra for a limited area from the forthcoming *kharif* crop resulting in greater outturn of food and commercial crops, had inspired the Punjab Government to take this bold decision. There has already been evidence of a sharp decline in the prices of pulses, the index number of which now stands at 427 (4th April), as against 617 at the end of February last. In East Punjab, after mid-May, there will be no price control of wheat and no rationing. The export of wheat will, however, continue to be prohibited, but movement within the State will be free. Control on rice will be continued as the commodity is required for export. The decision on decontrol of wheat is reported to be the result of an assurance given by Mr. Kidwai, Food Minister to the Government of India, that the Punjab need not contribute 60,000 tons of wheat to the Central Pool, in order to facilitate the smooth working of the decontrol policy. In this connection, the Chief Minister of that State recently observed: "In order to stabilise prices and to ensure some stocks in Government hands in case of any shortage developing in any part of the State during the year, Government will purchase a portion of the arrivals in markets at the market price."

It is likely that the decontrol of wheat will be introduced in the P.E.P.S.U. and the Delhi State also, barring perhaps Delhi proper. Even in the Capital, some relaxations are likely to be introduced in the distribution system, with the result that the Government will be gradually restricting the rationed area so as to lift the entire food control at the opportune time. It is perhaps these developments on the food front that spurred the Government of India's Food Minister to announce at Calcutta early this week that India had no food problem at the present time. If he were able to conclude a successful barter deal in rice with Burma for securing about 3.5 lakh tons of rice extra, he would be able to enrich the stock position of rice for any eventuality. It may be mentioned here that the procurement of rice in West Bengal, Orissa, Madhya Pradesh, etc. has so far yielded very encouraging results.

(Concluded from next column)

exports. Britain's external economy is well founded at the moment but the deration of sugar which is promised will cost some $80 million and more wheat will have to be imported now that a lower extraction rate is allowed to the flour milling industry yielding a whiter loaf. The way that the Wheat Agreement has gone suggests that Britain may have to pay more for her wheat next year than this. With this higher dollar expenditure, it is obviously important that American commodity purchases from the sterling area should remain high. A renewed outflow of gold would certainly lead to demands for more deflation at home and price reductions and a bleaker budget in a year's time. This would clearly not suit the Government's political book and they must, therefore, be confident of continuing to dwell in an expanding economy.—*All Rights Reserved.*

MR. BUTLER'S LARGESSE

OPPOSITION'S INGENIOUS INTERPRETATION

(From Our Own Correspondent)

LONDON, 18*th April*

LONDON LETTER

MR. Butler found that he finished the last financial year with a surplus of £88 million. In the financial year just beginning he estimates that revenue, on the old basis of taxation, would have brought him in £98 million more, as a result of the recovery in trade, while expenditure would be cut by about £92 million. He found himself, therefore, with £278 million in hand. With his deflationary policy at least as successful as he had wished, he decided that the "below the line" expenditure, consisting principally of loans to local authorities and other capital items, could be left to look after itself and need not swallow up the surplus on current account. Accordingly, he decided to aim at carrying forward £109 million of his estimated surplus and to distribute in largesse to the various kinds of taxpayer £169 million.

The income-tax payers are the principal beneficiaries, with a reduction of 6*d.* in the £ at each of the stages of taxation. This reduction varies from 6 per cent. to 16 per cent. and, as far as commercial companies are concerned, will leave them with £45 million more of undistributed profits to plough back into their businesses.

The purchase tax is generally reduced by 25 per cent. and it is thought that this will give a fillip to sales of motor cars and a number of luxury and semi-luxury items which, with reduced spending power, were failing to find a market. Among the personal concessions is an interesting one which allows authors to spread their royalties over two years, instead of being taxed to the full extent in the year in which the income is received.

Mr. Butler regarded his budget as giving a great fillip to production and investment. Apart from the cut in income-tax, the much disliked excess profits levy, penalising progressive companies which increased their profit over those made in a basic year, is to go and increased initial allowances will be made again for tax purposes on plant and machinery, industrial buildings, and mining equipment and buildings.

Opposition Attacks

From the point of view of industry, this does not look at all a bad incentive budget but there are some doubts whether too much incentive is not given to the production of luxury goods. The Opposition could not find much to criticise in the way the largesse was distributed except to point out that the concentration of relief on income-tax gave the most well-to-do more. For instance, the bachelor with £20,000 a year unearned income will get an extra £10 a week, but the married man with two children and an earned income of £10 a week will only get an additional 1*d.* Clearly there is not much incentive to additional production in these cases. But the greatest capital that Mr. Gaitskell could make out of his opponent in office was to say that the fillips which Mr. Butler was giving were necessary to put right the damage done by his deflationary policy. The Chancellor, he argued, was trying to represent that, as a result of a more prosperous economy, there was a budget surplus to be given away, while in truth he "realised that what the budget had to deal with was not a booming economy, flourishing in a splended way, but a stagnating economy, with production flagging, which had to be given a shot in the arm." Mr. Gaitskell obtained loud and prolonged Opposition cheers by his summary that, like last year's budget, "it would fail to produce that rise in production which was long overdue; and like last year's budget it would long be remembered as only one more example of the Tory efforts to put back the clock and strengthen the wealth, power and privilege of the well-to-do." This is excellent polemics and there is no doubt that most of the lower paid workers who do not have to pay income-tax will find little good in what Mr. Butler has done. Nevertheless, by and large, the nation must feel the better for these reliefs.

If we accept, then, Mr. Butler's budget as a "popular" one, it is clear that he is gambling on increased investment as a result of the tax concessions rather than increased spending on consumer goods, and also that there is unlikely to be a significant world recession in trade, starting in America, which would hit British

(Continued in previous column)

PAKISTAN NOTES

NEW MINISTRY STARTS WELL

PAKISTAN-JAPANESE TRADE PACT

THE most dramatic development in the political history of Pakistan so far has been the removal of the Khwaja Nazimuddin Cabinet on the 17th inst. and the appointment of a new cabinet, with Mr. Mohammed Ali, until recently Pakistan's Ambassador to the U.S., as the Prime Minister. The development was sudden, although it was not altogether unexpected; only, it came very much earlier than was orginally thought. Indeed, this is the culmination of a political crisis which had been brewing for a considerable time past, thanks to growing uneasiness at the "extremely difficult conditions" with which Pakistan had been faced. The Pakistan Governor-General's statement, announcing the removal of the Nazimuddin Cabinet, bears eloquent testimony to this. In this statement, the Governor-General observes thus: "There is the very grave food situation. The general economic outlook presents several features which must be dealt with vigorously. The law and order situation needs firm handling. There has been most serious criticism of Government measures and even more of the lack of measures to meet the situation. I have been driven to the conclusion that the Cabinet of Khwaja Nazimuddin has proved entirely inadequate to grapple with the difficulties facing the country."

Pakistan's present problems are indeed formidable. To what extent the new Cabinet—this consists of a few Ministers in the previous Cabinet, such as Mr. Zafrullah Khan and Mr. Mohammed Ali—will be able to set right the economic conditions in the country will be watched with utmost interest throughout the world, and by India, in particular. Immediately after assuming office, Mr. Mohammed Ali, the new Prime Minister, made a unity call to the people of Pakistan. He assured his countrymen that he would endeavour most to ensure "a clean and efficient administration free from corruption and nepotism." With the new regime, one may expect a better understanding and more harmonious relations between India and Pakistan. Indications are provided by the reassuring message of Mr. Mohammed Ali to the Prime Minister of India that it would be his Government's earnest endeavour to promote friendly relations between the two countries.

Food Problem

Mr. Mohammed Ali may be said to have started off quite well. Fortuitously enough, the circumstances also have turned out to be favourable. The biggest problem confronting Pakistan is the persistence of food shortage; the deficit in foodgrains is to the extent of nearly 1.5 million tons. The U.S. Government is expected to give substantial food aid to Pakistan. The State Department is drafting legislation for Congressional approval which would permit shipment of 300,000 tons to 500,000 tons of wheat to this country. The Governments of Australia, New Zealand and Canada have also come forward with food aid to Pakistan under the Colombo Plan. The Australian Government has already announced a gift of £A2 million (Rs. 1.5 crores) for the purchase of 45,000 tons of wheat. The New Zealand Government has announced a grant of £250,000 during 1953-54. The precise amount of Canadian assistance for the current year is now being discussed by Mr. Nik Cavell, Director of the International Economic and Technical Co-operation Division of the Canadian Department of Trade and Commerce, with Pakistan Government officials. These promises are encouraging and should go a long way towards reviving the confidence of the public in the new Government.

The new Government will, of course, find helpful the decisions taken at a two-day Food Conference of the Central and Provincial Governments held in Karachi earlier. The Conference considered the wheat requirements of various Provinces and States for the coming *rabi* year and discussed arrangements for procuring wheat from this year's crop. An important decision taken at the Conference was, besides embarking on long-term plan, to increase the output of the forthcoming summer crop. This is precisely the recommendation made by Lord Boyd-Orr. It was decided that 57,000 tons of fertilisers should be made available to the Punjab(P), 35,000 tons to Sind and 8,000 tons to other areas in West Pakistan. These fertilisers will be made available under the T.C.A. programme by the U.S.A. Additional land would be brought under cultivation by using lift pumps and by digging channels at suitable places.

Trade Pact with Japan

A trade agreement between Pakistan and Japan was signed at Tokyo on the 10th inst. Under the agreement, Japan has agreed to buy from Pakistan commodities worth about £32 million during the current financial year. These include 650,000 bales of raw cotton and 250,000 bales of jute, besides cottonseeds, hides and skins, cotton linters, rock salt, ophedrine, etc. This is in addition to about 200,000 bales raw cotton contracted for during January to March, 1953. Japan has also agreed to supply capital goods and machinery worth at least £6 million on a long-term credit basis, facilitating payment in instalments without any interest. In return, Pakistan has agreed to import £5.5 million worth of cotton fabrics, £1 million worth of cotton yarns, £1.5 million worth rayon and other textiles, and £1.5 million worth metals exclusively from Japan and has, in addition, agreed to throw open general currency area import licences for the first time to Japan.

The quantity of cotton manufactures that Pakistan will import from Japan during 1953-54 under the agreement is estimated at 80 million square yards, as against 191 million square yards in 1952 and 250 million square yards in 1951. The value of cotton to be purchased by Japan is expected to be of the order of £26 million.

Japanese Aid for Agriculture

The signing of the trade agreement by Pakistan and Japan is an indication of the better economic relations between the two countries. Another indication is provided in the attempts now being made to have a long-term agricultural co-operation agreement. A ten-man Japanese agricultural mission, headed by Dr. Y. Togari, a world authority on rice cultivation, is now in Pakistan at the invitation of the Government. During its stay in the country, the mission will tour the different areas, with a view to investigating the possibilities of adopting Japanese methods of rice cultivation. The recommendations of this mission are expected to result in a long-term agreement, under which Japan will send agricultural experts and machinery to Pakistan in return for Pakistani products.

Scientific Research

A call to the people to revive the brightest traditions of a spirit of enquiry and zeal to utilise the resources of nature and knowledge for the service of humanity was made by the Governor-General of Pakistan, Mr. Ghulam Mohammed, while inaugurating the Council of Scientific and Industrial Research at Karachi the other day. "Our needs," the Governor-General said, "are many and our present resources are limited, but, with will and determination, I have no doubt, we shall overcome these handicaps.

The Governing Body of the Council has already taken several important decisions to ensure rapid development of scientific and industrial research organisation in the country. Two important committees have been set up by the Governing Body. The first of these is the Planning Committee, under the chairmanship of Dr. Nazir Ahmad, Chairman, Tariff Commission. It is entrusted with the planning of the central laboratories of the Council in Karachi and with examining the question of setting up of regional laboratories in East and West Pakistan. This Committee is further charged with the selection of site for the central laboratories and drawing up its planning and programme of work. The second committee, of which the Industries Secretary is the chairman, will frame the by-laws.

The Governing Body has also set up a Selection Board for the appointment of the gazetted staff of the Council with powers to co-opt specialists in the branches of science relating to particular appointments of the scientific staff. Sanction for the immediately needed additional staff for the nucleus laboratories has also been accorded. For examining the various research schemes, already received from research scientists of the country, working in the universities or other research institutions, six Research Committees have been set up.

(Concluded from next column)

defence is to be strong and adequate and social services are to be maintained at desirable levels. After allowing for £140 million, estimated as likely to be received as the sterling counterpart of U.S. aid, direct defence expenditure is put at £1,497 million, to which must be added a further £139 million on other defence measures, coming under headings, such as air-raid precautions, stockpiling, etc. The total thus averages more than £30 per head of the population —man, woman and child.

The estimated cost of health and educational services, pensions, housing subsidies and other social services will be higher by £80 million at £1,264 million. Food subsidies, which have been reduced from a level of some £410 million in 1951-52, will cost about £220 million in 1953-54. This brings the total of social payments of all kinds to £1,484 million, which is £152 million less than the total to be spent under defence headings.

Judged by the reception given to the various proposals, the Budget should achieve its objectives. It will reduce the field of certain Government activities and leave more to be done by the private citizen. This will be particularly noticeable in the field of investment, where more activity will be financed out of savings. Other measures will help to reduce the cost of production and make British exports more competitive, thereby aiding the continuing task of improving the overseas balance of payments position, strengthening the sterling area gold reserves, and bringing nearer the day when it will be possible to restore full convertibility to sterling.

THE BRITISH BUDGET

TAX REDUCTIONS PROVIDE INCENTIVES TO INDUSTRY

(By JOHN KINGSLEY)

THREE notable points stand out in the British Budget for the fiscal year to 31st March, 1954, as presented on 14th April last. First, for the first time since the war, no new taxes are imposed. Secondly, a variety of tax reductions provide incentives to workers and industry to increase their earnings and turnover and, in the process, improve Britain's competitive position; these aslo encourage private saving. Thirdly, no attempt is made to provide, out of taxation, for all, or a substantial part of, the capital expenditure on housing, local government building, war damage and other developments which averaged some £575 million over the previous six years.

Such changes are possible, because, although further efforts are necessary, the anti-inflationary monetary policy pursued by the Government has been successful and a balance has been reached on overseas payments earlier than expected. With a prospective surplus of £278 million at old rates of taxation, the Chancellor of the Exchequer, Mr. R. A. Butler, has chosen to pass on a large proportion to a wide range of taxpayers. Income-tax is reduced, cuts are made in purchase taxes, and industry is encouraged to expand by the reintroduction of special tax allowances in the first year on new capital expenditure and the abolition of the excess profits levy imposed a year ago.

In the result, the total ordinary revenue is estimated at £4,368 million, ordinary expenditure at £4,259 million and the prospective surplus at £109 million. As other expenditure of a capital and similar nature is estimated at £549 million, some £440 million of this total will be financed by borrowing to meet outgoings, which, incidentally, will mostly be self-liquidating over future years by repayment from the local government and other bodies to which they are advanced.

Income-tax Reductions

The various tax cuts are estimated to be worth £169 million in the current financial year and £288 million in a full one. As much as three-quarters applies to income-tax, the four rates of which are to be reduced by 6*d.* to 2*s.* 6*d.*, 5*s.*, 7*s.*, and 9*s.* in the pound. (The income-tax rates are 2*s.* 6*d.* in the pound on the first £100 of taxable income, i.e., income after allowances for self, wife, children, etc., have been taken into account; 5*s.* on the next £150; 7*s.* on the next £150; 9*s.* thereafter until £2,000 income a year, when surtax rates begin.) This will directly benefit all income-tax payers, private and corporate. The allowances for dependent relatives and housekeepers also are increased by £10 to £60 and people of 65 with incomes of under £600 a year get some additional relief on their income from investments and property.

The effect of the 6*d.* reduction means that the income-tax payable by a single person earning £500 a year will be reduced from £63 6*s.* 8*d.* to £56 12*s.* 2*d.*, and from £604 7*s.* 9*d.* to £568 10*s.*, if the earned income is £2,000. A married man without children earning £500 a year will have his tax reduced from £36 13*s.* 10*d.* to £32 4*s.* 5*d.*, and one with one child from £14 1*s.* 8*d.* to £11 14*s.* 8*d.* Savings for the higher income groups will be proportionately greater.

Purchase tax reductions—most of them equal to 25 per cent.—will reduce the prices of a wide range of goods, including motor cars, radio and television sets, domestic refrigerators, washing machines, electric and gas fires, sewing machines, cameras, jewellery, perfumes and cosmetics.

Restoration of the initial first-year depreciation allowances at rates of 10 per cent. for industrial buildings, 20 per cent. for plant and machinery, and 40 per cent. for mining works—all allowable against income and profits taxes—will certainly encourage businesses to increase their expenditure on modernisation and in the process to increase their efficiency and competitive powers. It should also help to stimulate the production of British gold and base-metal mining companies operating overseas.

The excess profits levy is to be abolished as from 1st January, 1954. The effect on tax revenue will, therefore, not begin to be operative until about the 1954-55 fiscal year, but in a full year, it should mean a loss of revenue of £125 million at current levels of company profits—the tax is levied only on limited companies.

The reductions in taxation are probably the most that could have been expected, in view of the high rate of spending which is necessary, if

(Continued in previous column)

MODERATE FALL IN PROFIT OF BANK OF BARODA

LIQUIDITY RATIO AT COMFORTABLE LEVEL

THE decline of Rs. 2.97 lakhs or 10.5 per cent. in the profit of the Bank of Baroda Ltd. (General Manager: Mr. Mathew S. D'Souza, Baroda) disclosed by the audited statement of accounts of the Bank for the year ended 31st December, 1952, as compared with those for the previous year, is neither surprising nor serious. It represents, in fact, a relatively smaller recession than that suffered by some of the other Scheduled Banks. An analysis of the accounts indicates that the Bank's turnover was somewhat restricted, as in the case of others. But that does not seem to be the main cause for the decline in profit. For the gross earnings actually show a handsome rise over the year to stand at a record level. A substantial rise in interest paid on deposits and borrowings and a further rise in expenses have cumulatively more than offset the rise in gross earnings. The setback in profit has not necessitated any cut in the return to shareholders who will receive the self-same rate of 12 per cent., made up, as usual, of a dividend of 10 per cent. and a bonus of 2 per cent., which they had received consistently since 1946.

The salient features of the profit and loss account for the year under review and the balance-sheet at the end of the year are presented against the background of those relating to the previous three years in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1952	1951	1950	1949
Interest and discount ..	108.43	97.82	87.41	84.12

Cash	19.8	11.5	14.7	14.8

* After taking into account the investments earmarked for borrowing from other banks.

The gross income of the Bank has been steadily on the increase year after year, though the pace of increase in 1952 was not of the same order as that in 1951. Whatever increase there has been in gross income has been almost entirely due to the rise in interest and discount earned. While the higher rates of interest that prevailed during the year has thus been helpful to the Bank to earn more, they have also been responsible for the increase in interest paid on deposits and borrowings. This item of expenses has gone up by Rs. 14.44 lakhs, a rise which is much sharper than in any of the previous years. The increase of Rs. 2.02 lakhs in administrative and other expenses, however, is much less than that noted in 1951 or 1950. The decline in profit would have been greater, had there been any loss on sale of securities as in the previous year. Nonetheless, since the depreciation in the Bank's holdings of Government securities has been greater than in the previous year, the Directors have thought it fit to raise the allocation to the investment account from Rs. 3 lakhs to Rs. 4.50 lakhs. No addition to the reserve fund has been possible. The transfer of a sizable sum of Rs. 7 lakhs to this account in the past year was possible because of the increase in the profit for that year and the handsome amount brought in from 1950. The Bank already enjoys a strong reserve position. Consequently, the non-addition of any sum to the reserve fund this year is immaterial. The distribution to the shareholders has been comfortably maintained at 12 per cent. per annum.

The Bank's deposits, as at the close of the year, show a decline of Rs. 2.15 crores, of which current and contingency accounts account for Rs. 1.46 crores, fixed deposits for Rs. 22.98 lakhs and savings deposits for Rs. 46.46 lakhs. A fall in the Bank's activity during the year is indicated by the decline in the bills for collection from Rs. 76.44 lakhs to Rs. 60.29 lakhs and in acceptances on behalf of customers from Rs. 4.07 crores to Rs. 99.10 lakhs. Advances too have declined by Rs. 4.63 crores. As this fall is sharper than that in deposits, the ratio of advances to deposits is perceptibly lower at 49.9 per cent. The decline in investments is negligible, while cash balances are impressively higher, with the result that the combined ratio of cash and investments to deposits is at a very comfortable level of 57.4 per cent. Of the investments, Government securities maturing in 1962 or earlier are shown at book value, while those maturing in 1963 or later, other securities and investments are shown at or below market value. The book value of the securities maturing in 1962 or earlier is Rs. 8.35 crores, their market value as on 31st December, 1952, being Rs. 7.95 crores. In other words, the depreciation on investments, amounting to Rs. 39.38 lakhs, is in short-dated securities only. Accordingly, the Directors have decided not to make any transfer from reserve or other funds to cover this deficit.

HINDUSTAN COMMERCIAL BANK LTD.

The statement of accounts of the Hindustan Commercial Bank Ltd. (Managing Director: Mr. Kishen Chand Puri, Kanpur), for the year ended 31st December, 1952, reveals that the hope expressed by the Directors last year that the Bank's progress would continue in years to come has been realised to some extent. If there has not been any appreciable change for the better in the Bank's results for the year under review, such is to be attributed to the difficult monetary and credit conditions which prevailed during the year. Nevertheless, it is gratifying to find that the profit for the year, after meeting all expenses and depreciation on property, is higher at Rs. 4.80 lakhs, as compared with Rs. 3.90 lakhs for 1951. With the sum of Rs. 65,220 brought in from the previous year, the amount available for appropriation is Rs. 5.46 lakhs, out of which a sum of Rs. 4 lakhs has been utilised to write off bad debts. Last year, the Directors had utilised Rs. 3.80 lakhs for a similar purpose, which had left only a paltry sum of Rs. 65,220 to be carried forward. This year, the sum of Rs. 1.80 lakhs available has been appropriated thus: Rs. 1 lakh to the investment reserve fund; Rs. 35,000 to bonus to staff and Rs. 10,608 to be carried forward.

The following table gives the comparative position of the salient features of the Bank's balance-sheet:

(In lakhs of rupees)

	As at 31st December			
	1952	1951	1950	1949
Capital	125.00	125.00	125.00	125.00
Reserves	15.20	15.20	15.20	15.20
Deposits	450.83	497.88	520.10	575.13
Borrowings from banks.	102.00	84.75	37.00	55.48
Advances	308.47	310.86	305.25	355.79
Investments	289.43	289.66	271.64	271.53
Cash	71.02	86.02	85.43	106.87
Balance-sheet total ..	783.73	810.29	786.39	862.73
Ratio to deposits of—	%	%	%	%
Advances	68.4	62.4	58.7	61.8
Investments*	41.6	41.1	45.1	37.5
Cash	15.7	17.3	16.4	18.6

* Ratio is arrived at after taking into account the securities earmarked for borrowings from banks.

The market value of the Bank's investments, according to the particulars given in its balance-sheet, which was published in full in our last issue, is less than the book value by Rs. 32.15 lakhs, of which depreciation on non-Government securities alone is Rs. 14.72 lakhs. The auditors' report suggests that adequate provision for bad and doubtful debts has not been made. Referring to this, the Directors observe as follows:

"We have examined the list of accounts drawing our special attention, as received from the auditors, and are of opinion that the accounts mentioned therein are either not bad or doubtful or have either been written off or that the Bank holds adequate provision for them."

We are told that the Bank continues its policy of caution and consolidation and of effecting economy in expenses wherever possible.

MADHYA PRADESH'S NEW AGREEMENT WITH RESERVE BANK

A new agreement has been entered into between the Madhya Pradesh Government and the Reserve Bank of India with effect from 1st April, 1953, which provides that the State's minimum balance with the Bank should, with effect from that date, be Rs. 20 lakhs, instead of Rs. 10 lakhs, as provided under the previous agreement of 1937.

The new agreement also provides that the State Government would now be entitled to ways and means advances to the extent of Rs. 40 lakhs, that is twice the minimum balance. The rate of interest on these advances will oe one per cent. less than the Bank rate. The Reserve Bank has agreed to grant short-term loans to the extent of Rs. 2 crores, against cover of Government of India securities owned by the State Government, over and above the limit of ways and means advances, the rate of interest on these varying according to the quantum of accommodation. Thus, interest will be charged at ¾ per cent. below the Bank rate, if the amount does not exceed Rs. 50 lakhs; at ½ per cent. below the Bank rate, if the advances amount to between Rs. 50 lakhs and Rs. 125 lakhs; and at Bank rate, if the amount exceeds Rs. 125 lakhs. It will thus be seen that the larger the advances the higher will be the rate of interest, the underlying idea evidently being to discourage the State from borrowing too much.

SILVER REFINERY

Replying to a question in the House of the People, last week, the Deputy Finance Minister, Mr. A. C. Guha, said that two firms would join in setting up a silver refinery project. The firms were Messrs. Demag Electro Metallurgie, Karlsruhe (Germany), and Messrs. Sepulchre Brothers (India), Bombay. Messrs. Demag, with whom a contract had already been executed, would supply the plant and machinery for the project on payment in instalments of the sum of Rs. 3,65,975 (subject to price variation). The firm would also supervise the work of erection of the plant by Messrs. Sepulchre Brothers. Messrs. Demag had guaranteed proper performance of the plant to the Government of India's satisfaction. A separate contract was being executed with Messrs. Sepulchre Brothers, who would be responsible only for the erection, testing and putting into service of the plant, including its transport to the site of the project.

The total quantity of the quarternary alloy in the shape of coins for refining was about 500 million ounces, from which about 250 million ounces of pure silver were estimated to be extracted. On the basis of the estimated annual output of 23 million ounces of fine silver, the refinery would take about 11 years to finish the work of extracting silver from these quarternary coins.

NATIONAL SAVINGS BANK SUSPENDS PAYMENT

The National Savings Bank Ltd., one of the Scheduled Banks with its head office in Bombay, suspended payment temporarily on Tuesday this week. This step was taken by the Bank following the decision of the Reserve Bank of India to exclude the name of the Bank from the Second Schedule of the Reserve Bank of India Act, 1934, in exercise of the powers conferred upon it under sub-section 6 of the section 42 of the Act. As a result of the Reserve Bank's action, the National Savings Bank would no longer enjoy the Clearing House facilities. The Bank proposes to make an application to the High Court for granting it a memoratorium. The Bank was incorporated in Bombay in 1941, under the Indian Companies Act.

1953 BIF

BRITISH INDUSTRIES FAIR

Banking Facilities

Lloyds Bank is providing comprehensive facilities at each section of the British Industries Fair, which is being held in London and Birmingham from 27th April to 8th May 1953. Customers of the Bank who wish to bring their products to the notice of overseas buyers will find a number of invaluable services at their disposal:—

Introduction to foreign importers and agents
Local reports on overseas market conditions
Confidential reports on the credit standing of overseas buyers
Interviews arranged with trade consultants from certain overseas countries
Advice on all problems connected with the export trade

These temporary offices and the numerous other Branches in London and Birmingham and throughout England and Wales will be pleased to do all they can to help visitors who call on them.

DEMANDS OF BOMBAY COTTON MILL WORKERS

INDUSTRIAL COURT'S AWARD ANALYSED

AS was briefly reported last week, the Bombay Industrial Court announced its award on the claims of workers in the City's cotton textile mills on the 10th inst. The award, it may be recalled, followed the application filed by the *Rashtriya Mill Mazdoor Sangh*, for modification of the Court's two previous awards announced in May, 1947, and April, 1948, respectively. These awards, *inter alia*, standardised the wages, after fixing the minimum wage at Rs. 30 per month, and fixed the dearness allowance payable to workers at 1.9 pies per day per point rise in the cost of living index number over the pre-war figure (106). In its award in 1948, the Court had said that, if the cost of living index number reached 325, either party—the workers or the mills—would be at liberty to ask for a revision by applying to the Court. The application for revision of the previous awards, it is stated, was necessitated largely by the fact that the cost of living index number had exceeded 325 and showed signs of increasing still further. The main demands that the *Sangh* put forward in its application may be summarised as follows :

(1) The rate of dearness allowance should be revised so as to neutralise completely the rise in the cost of living of an average worker ;

(2) Such revised dearness allowance should be amalgamated with the basic wages at the level of cost of living index number 315 ;

(3) The minimum wage of Rs. 30 per month should be raised ; some standardisation of wages still remains to be done in the case of certain categories ; and

(4) Differentials will have to be revised, if the minimum wage is raised and the existing anomalies removed.

The aforesaid demands of the textile labour were stoutly opposed by the Millowners Association, Bombay, on the score that the financial position of the industry had not improved, as compared with 1946-47, and a large number of workers were not at present having an adequate work-load, so that the efficiency of the workers had deteriorated since the date of the previous award. According to the Association, there was no justification for revising the minimum wage, the differentials or the dearness allowance. The demand for consolidation of basic wage and dearness allowance at a certain level was also opposed, particularly on the ground that, if such a consolidation were to be made, it should be on an all-India basis. It finally contended that, if the existing differentials were to be revised, such a revision should be made only after proper scientific enquiry and a readjustment of the normal work-load for each worker on the basis of such enquiry.

Principle of Compromise

The award of the Industrial Court, as usual, is based on the principle of compromise and, in doing so, it has not departed from its previous practice of making the compromise in favour of workers. Thus, the Court has accepted, albeit partially, the demand of the labourers for an increase in the dearness allowance, though it has rejected all the other demands, as will be shown presently. The award, as is only to be expected, has pleased neither the workers nor the millowners, because it has fallen below the expectations of both. It is not surprising, therefore, that both the parties are reported to have decided to go to the Appellate Tribunal. In the meantime, the consumer, who is a non-participant in the dispute, is left wondering whether he will have to pay higher prices for cloth.

As already stated, the Industrial Court has conceded, albeit partially, the demand for an increase in the dearness allowance of textile workers. Thus, under the award, the amount of dearness allowance, which falls due for payment in the month of June, 1953, and the subsequent months, shall be calculated and paid as under :

10 per cent. of the dearness allowance on the present basis (1.9 pies per day for rise of a point in the cost of living index number) should be added thereto to make up the required amount, provided that the cost of living index number for the month in respect of which the dearness allowance is calculated and paid is more than 325.

In support of its decision to increase the dearness allowance as above, the Court observes as follows :

"There is no doubt that, if practicable, an increase in the dearness allowance is now called for, particularly in view of the fact that, under the Government Provident Fund Scheme, even the lowest paid worker has, for the time being, to part with 6¼ per cent. of his total emoluments, a circumstance which must make it impossible even for the most thrifty worker drawing the lowest pay to make both ends meet. We think that the ends of justice require that the amount of dearness allowance, whenever the cost of living index number exceeds 325, should be increased by 10 per cent., provided that the payment of such additional allowance is not beyond the capacity of the industry. In our opinion, the industry is capable of bearing the burden of this addition. The increase thus given would roughly offset the temporary deprivation of a part of the emoluments of the lowest paid worker on account of the Provident Fund Scheme."

Incidence of Higher Dearness Allowance

As a result of the upward revision of the dearness allowance, the textile worker in Bombay will be getting, on an average, about Rs. 6 more per month or Rs. 72 per annum. Inasmuch as the contribution to provident fund is to be based on the total of basic wage and dearness allowance, he will also get a larger share of the employer's contribution to the provident fund, the actual amount being about Rs. 4-8 per annum. These two are estimated to cost the cotton textile industry an additional sum of over Rs. 1.6 crores. The industry has already been sufficiently burdened with the enormous rise in the cost of machinery, stores and fuel and the compulsory contributions under the Employees' Provident Fund Act, not to speak of the additional excise on cloth and other taxes. There is also the prospect of further additional burdens being placed on the industry on account of the State Insurance Scheme, compulsory welfare funds, labour housing, etc. Considering these and also the imperative need for rehabilitating the worn-out machinery and plant—the aggregate cost of rehabilitation is estimated at about Rs. 120 crores—the upward revision in the dearness allowance now effected is indeed inopportune. It is difficult to appreciate the force of the Industrial Court's observation that "the industry is capable of bearing the burden of this addition." It has not given any reason to substantiate this statement. Further, its line of reasoning suggests that the industry should pay a penalty in the form of higher dearness allowance just because of the introduction of the provident fund scheme which was not their seeking. The Court's argument implies that, if the provident fund had not been introduced, the workers would not have had a case for higher dearness allowance. This interpretation may sound strange, but that is what the Court's argument amounts to.

The Industrial Court has, however, rejected the textile workers' demand for the amalgamation of dearness allowance with basic wages, for, in its opinion, it will not result in any material advantage, in view of the fact that the contributions to the provident fund which both the employers and the employees have to make are on the basis of both basic pay and dearness allowance. Moreover, there is no gratuity or pension scheme applicable to workers nor any other benefit connected with the basic wage alone, so that the benefit will be increased by such amalgamation.

While this decision of the Court is correct, its argument in support of it is defective in principle. Dearness allowance is meant to cover only the increase in cost of living and the quantum of such allowance will fall when the cost of living declines. The question of contribution to provident fund or gratuity does not at all arise in deciding the quantum of this allowance. We are afraid that the Court's argument may later on be quoted by the workers in their favour when the cost of living falls and the rate of dearness allowance has to be reduced. They may then contend that such a reduction should not be made, as it will adversely affect the contribution to provident fund.

The Industrial Court has also declined to grant an increase in the minimum wages from Rs. 30, fixed by the previous award, to Rs. 47 per month. "No sufficient case," says the Court, "has been made out to justify a revision of the minimum wage fixed in the standardisation award of 1947." According to it, it can hardly be said that the conception of minimum wage has so advanced since the date of the standardisation award that the figure for it, which was arrived at by the Court after careful consideration of the relevant facts and arguments, must now be disturbed. In support of this conclusion, the Court has mentioned the following considerations :

(a) "*The Rashtriya Mill Mazdoor Sangh* had accepted, with satisfaction, the minimum wage of Rs. 30 as fixed by the assessors, one of the assessors being no less a labour leader as Mr. Khandubhai K. Desai ;

(b) "It is to be remembered that a very large number of awards have been made since 1947 on the basis of the minimum wage fixed for the cotton textile industry in Bombay, regarding which awards it may be said with truth that they have resulted in the establishment of industrial peace in the case of a large number of industries to a great extent. If the minimum wage in the case of cotton textile industry at Bombay is now increased, it would, in our opinion, be likely to let loose a flood of agitation in other industrial concerns and 'would lead to numerous industrial disputes';

(c) "Another consideration is to be found in the Planning Commission's Report. Says the Commission: 'An increase in wages at this juncture may injure the country's economic stability by raising the cost of production. The volume of employment may also be affected adversely. Wage increase should, therefore, be avoided except to remove anomalies or when the existing rates are abnormally low or if increased productivity can be obtained from renewal or modernisation of plant or to restore the pre-war real wage' ;

(d) "The proper body for the consideration of the general question of price wage structure would be a Commission, appointed by Government, perhaps on an all-India scale, rather than the Industrial Court called upon to consider the limited question of the modification of a single award made by it a few years ago."

A Sensible Stand

These arguments show that, at least in this case, the Court has taken an eminently sensible stand, bearing in mind the general economic conditions in the country. It is, however, surprising that it did not attach the same importance to the Planning Commission's recommendation as it has done here, while sanctioning an increase in the dearness allowance to workers.

The Industrial Court has rejected, too, the workers' plea for a revision of differentials in the emoluments of workers. For the Court does not consider that the ratio of 1 to 4, in the case of emoluments of the lowest paid worker, as compared with the highest paid, is unduly low. It no doubt admits that, since 1947, the profits of some of the textile mills have been fairly large, but points out that the workers have got their shares of such profits by way of increased bonuses. The Court refers, in this connection, to the enormous rise in the cost of replacement and rehabilitation of machinery.

EXPORTS OF COTTON YARN

Replying to a question in the House of the People, Mr. T. T. Krishnamachari, Union Minister for Commerce and Industry, said that the export of cotton yarn to be allowed in the current year would not affect the supply of yarn to the handloom industry. According to the Minister, the total free yarn available to the handloom industry is 72,000 bales every month. The allotment for export is 22,000 bales but the actual export figures are not available. There is no destinational quotas. Export permits are given in order to relieve the stock position in mills because of lack of offtake of yarn by the handloom industry for seven or eight months and accumulation of stocks. Allotments for export would be made to mills according to their total output which relate to their deliveries of cotton yarn for internal consumption during 1952. The total quantity of cotton yarn likely to be licensed under this scheme for the half-year January-June, 1953, is estimated at about 26,000 bales. Under this scheme about 200 mills would be eligible to receive allotments for export but so far allotment letters have been issued in respect of 105 mills.

WORLD TRADE IN WOOL TOPS

A striking feature of the world trade in wool tops during 1952 was the marked expansion in the volume of trade, despite the decline in output. According to the latest survey of the Commonwealth Economic Committee, the world trade in tops in 1952 was almost back to the record 1950 level ; the volume of trade in the last quarter was probably larger than that in any other three-month period since the war. The output of wool tops in the nine major producing countries—these account for at least three-quarters of the world total—amounted to only 730 million lbs., as against 770 million lbs. in 1951 and 970 million lbs. in 1950. The bulk of the increase in the quantity of wool tops exported during the year under review was accounted for by shipments from France and Uruguay, thanks to the special measures introduced in these countries for promoting export sales.

OUTPUT OF LANCASHIRE MILLS RISING

REALISTIC ATTITUDE OF WORKERS TOWARDS LOWERING PRODUCTION COST

(From A Special Correspondent)

MANCHESTER, 14*th April*

SOME measure of the leeway still to be made up by the Lancashire cotton spinning industry before the recession in trade is completely surmounted is given by Cotton Board figures of yarn production in the first quarter of this year. Output of cotton, spun rayon and mixture yarn from the mills in January, February and March aggregated 227,930,000 lbs., the returns show. This represents a decrease of 8,350,000 lbs. on the first quarter of last year when the first effects of shortening order books was beginning to be reflected in weekly figures of yarn production.

MANCHESTER LETTER

A clearer picture of the margin between current production and that before the recession hit Lancashire can be obtained by a comparison with production figures for the first quarter of 1951. In the first three months of that year, the spinning mills turned out 263,970,000 lbs. of single yarn—just over 36,000,000 lbs. more than in the comparative period this year. Output figures are now showing a steady upward trend, however. Production has shown an increase in each of the last seven weeks for which returns are available and the level of output is approaching that of 13 months ago. How near the mills can return to the output figures of two years ago, before the recession set in, largely depends on whether the cotton labour force can be built up again to its former proportions.

Training for Beginners

Many important ventures have, in the past, arisen from small beginnings. A new scheme of introducing workers to cotton, planned by a number of mills grouped in the Salford and District Textile Training Guild, may well create a precedent for other areas to follow. School-leavers, who have joined the mills, are beginning this week a short course to prepare them for their daily job, by giving them a wider view of the industry as a whole. On three afternoons for each of the next three weeks, they will hear talks by experts on such subjects as safety, health, wages, quality and the opportunities and responsibilities of operatives in cotton mills.

Many a worker, not only in the cotton trade, has been pitchforked into a job at the outset of his career without realising the implications of the particular task he performs. In an industry as diversified as cotton, it is only right that each operative should have some idea of the varying processes which come before and after his own. If this experiment is successful, the educational authorities at the Cotton Board will doubtless recommend it to other districts and it seems an admirable way of impressing on the juvenile mind the interdependence of the various branches of the industry. A greater realisation of this fact would eventually lead to a reduction of the inter-sectional competition which has for so long been an impediment to progress.

Agreement Still Lacking?

While the younger generation newly entering the sphere of cotton is being taught how each section is interdependent, their elders are still arguing over the lack of co-operation between individual branches of the industry. The trade unions have returned to the attack in the Annual Report of the United Textile Factory Workers' Association, which will be presented to the operatives' conference at the end of the month. This document calls for substantial changes in the pattern of the organisation of the industry, especially in the light of last year's events.

"While the sellers' market continued merrily and profits for all sections remained high, co-operation between the sections functioned reasonably well," the report declares. "But, as soon as the slump came, it was apparent that voluntary agreement on steps necessary to meet the changed conditions would be impossible. Sectional interests, however courteously clothed, were paramount."

The union leaders, as they hinted at the recent conference on double shifts, are highly suspicious of the Yarn Spinners' Agreement, feeling that any sacrifices their members make in reducing productive costs by redeployment, re-equipment, work study techniques and shift working will not be passed on to the consumer, because of the minimum prices for yarn. At the same time, the workers are fully aware of the disastrous internal price-cutting which was rampant in the trade 20 years ago, and they have no desire to see a return to the unrestricted cut-throat competition of that time.

The view expressed by the workers' representatives is that they have a right to be satisfied that their co-operation in reducing costs of production is directed primarily to increasing the competitive ability of the industry and widening the range of demand for its products by reducing prices. They contend that, if the competitive challenge of the time is to be successfully met, it will mean reductions of margins all long the line and not merely concentrated on those sections least able to build up defensive barriers.

Far Eastern Rivalry

Japanese competition can deal the biggest blow to the preservation of Lancashire's export potential, Mr. William T. Winterbottom, the new President of the Master Cotton Spinners' Federation, warned last week. Lancashire is restless about Japanese competition, he said. Whatever the outcome of the discussions on the entry of Japan into the G.A.T.T. (General Agreement on Tariffs and Trade), the British Government must go on doing its utmost to limit Japanese competition inside the Commonwealth.

The biggest immediate danger to Britain's exports came from Japan, declared Mr. Winterbottom, writing in the *Federation of British Industries Review*. Lancashire exporters have welcomed the news that the ban on imports of Japanese textiles into East Africa is to be extended until the end of 1953.

Mr. Arthur Robens, an executive member of the Africa Section of the Manchester Chamber of Commerce and an authority on East African trade, said the decision would create greater confidence to continue the drive on East African markets, in operation since last July. "But," he warned, "Lancashire must take care to keep its prices down, now that we have this golden opportunity in East Africa, so that we can hold the market for ever and not just for the next nine months while the Japanese are kept out."

Empire Cotton Crops

The 1951-52 cotton crop in Empire countries and the Anglo-Egyptian Sudan amounted to 974,500 bales, according to the Annual Report of the British Cotton Growing Association. Although 76,350 bales below the record crop of the 1950-51 season, the production was still 91,500 bales above anything achieved prior to the previous year's record-breaking season. A major factor was a decreased production in the Sudan of over 214,000 bales, although this was partly offset by increases of 74,000 bales in East Africa (Uganda 34,000, Tanganyika 30,000, Kenya 2,000 and Nyasaland 8,000), 37,000 bales in Nigeria and 26,000 bales in South Africa and Southern Rhodesia.

The large decrease in the case of the Sudan was accounted for by extremes of seasons, an exceptionally favourable climatic season in the Sakel cotton areas in 1950-51 being followed by an unfavourable one.

Production by countries last season (with corresponding totals for the previous year in brackets) was: Anglo-Egyptian Sudan 312,000 bales estimated (526,600) ; East and Central Africa 486,300 (411,950) ; Nigeria 113,500 (76,600) ; West Indies 5,800 (6,100) ; Southern Rhodesia 9,500 (4,100) ; Union of South Africa 35,000 (13,800) ; Australia 1,900 (1,400) ; and sundries 10,500 (10,300).

The increases in East African and Nigerian production are described as "particularly encouraging," the main factor being the work and efforts of the various local authorities in co-operating in encouraging the farmer towards bigger production by providing him with better seed, better marketing facilities, and guaranteeing prices over a period. In South Africa and Southern Rhodesia, the report states, the high world price was no doubt the main factor contributing to the increased production. The bulk of the crop was consumed locally.

First shiploads of Brazilian cotton under the £4,000,000 jets-for-cotton barter deal are now on the way across the Atlantic for eventual use in Lancashire mills. Bought by the Raw Cotton Commission in exchange for Meteor jet aircraft supplied to Brazil by the Gloster Aircraft Company, the cotton consists of about 85,000 bales. In its weekly supply figures, the Commission announced that 23,403 bales of Brazilian cotton was at sea scheduled for Britain. Arrivals of 27,503 bales of cotton this week included 17,075 bales on Raw Cotton Commission account. Chief suppliers were American growers who provided 17,179 bales.—*All Rights Reserved.*

(Continued on next page)

MANUFACTURE OF RAYON FROM BAGASSE

PHILIPPINES GIVE THE LEAD

OF considerable interest and importance to the Indian rayon industry, as also to the sugar industry, is the report from Manila that rayon fabrics will be produced from bagasse, the sugarcane waste, at a factory being built near Bacolod, Central Philippines. The rayon filament industry in India, as it has developed at present, is dependent, to a large extent, on foreign countries for its raw materials, especially dissolving pulp, although plentiful supplies of materials required to produce the pulp are available in the country itself. If, therefore, the rayon industry is to be strengthened, it is of the utmost importance that great attention should be devoted to the manufacture of pulp in India. The need for this has become all the greater, now that the rayon industry has been accorded a very high place—fourth place, to be precise—in the Five-year Programme of industrial development allocated to the private sector. And in this venture, the experience of the Philippines sugar industry in establishing a plant for the production of purified rayon pulp from bagasse will doubtless be of immense value.

The utilisation of bagasse for the manufacture of rayon pulp is also important for the sugar industry, in that it will go a long way towards reducing the cost of sugar production which is at present high in all conscience. Supplies of bagasse in the country are plentiful. Even on a conservative estimate, the quantity of bagasse available is of the order of over 11 million tons per annum, excluding the quantity left after *gur* and *khandsari* manufacture. As a result of the absence of sufficient commercial use, the major portion of bagasse is now being utilised as fuel.

To revert to the proposed factory for the manufacture of rayon fabrics from bagasse in the Philippines. This venture is said to be the first of its kind in the world. A corporation, with a capital of 60 million pesos ($30 million), has been formed by the proprietors of four big sugar factories on the island of Negros to establish the industry. Of this capital, 95 per cent. is to be contributed by the owners of sugar factory group, independent sugarcane planters associated with the factories and local banks. The remaining 5 per cent. will be retained by the American technical associates and advisers, Messrs. Oscar Kohorn and Co., Ltd. (New York).

The most outstanding feature of the new enterprise is that the entire process of converting the bagasse to purified rayon pulp, to filament rayon yarn and staple, to spun rayon yarn, to crepe and novelty yarns, to woven grey goods, and, ultimately, to dyed, printed and finished rayon fabrics will take place under one roof. A new town site on the banks of the Bago River has been selected to accommodate the plant and house the 2,500 workers and their families, as well as all the necessary services and subsidiary trades that such a population would require and attract. Adequate water and rail transport facilities already exist at the site.

The proposed factory, which is expected to go into full production by 1955, will have 850 looms with an aggregate productive capacity of 33 million square yards of dyed and finished rayon textiles per annum. The total quantity of bagasse (with 60 per cent. moisture content) that will be utilised is estimated at 20,000 tons per annum; the rate of production of pulp will be 10 tons per day. It is interesting to note, in this connection, that supplies of bagasse to the rayon plant will be made available by the sugar factories free of charge till such time as the total investment is recovered, after which a royalty of 6 per cent. of the net profit will be paid. With a view to making the industry self-sufficient, the sponsors of the scheme have also proposed to set up plants for producing sulphuric acid, carbon bisulfide, caustic soda and chlorine—some of the most important raw materials—besides a water purification plant, a complete workshop, and chemical and textile laboratories.

The technical management of the plant will be under the well-known American technical associates and advisers, Messrs. Oscar Kohorn and Co., Ltd. (New York). They have a staff of 80 expert chemists, engineers and other specialists, with rich experience in the establishment of new rayon plants all over the world. Philippine engineers and chemists will also be sent for training to different plants operated by Kohorn in other countries, so as to be able to take over, at the earliest possible date, the operation of the plant from the Kohorn experts.

The proposed rayon plant is bound to play a vital role in the economy of the Philippines. Besides giving employment to a large number of persons and contributing to Government revenues, it will result in the saving of much precious foreign exchange which is now being spent on imports. The Philippines has been spending, on an average, about 100 million pesos ($50 million) on imports of rayon fabrics. The quantity actually imported during the last three years amounted to 21 million yards, 27 million yards and 50 million yards, respectively. It will thus be noted that the factory, when completed and worked to full capacity, will be able to meet the major portion of the Island's needs of rayon fabrics.

PAKISTAN COTTON FOR JAPAN

Raw cotton figures prominently in the trade agreement between Pakistan and Japan signed at Tokyo on the 10th inst. Under the agreement, Japan will purchase 650,000 bales of raw cotton from Pakistan during the current (1953-54) financial year. This is in addition to the 200,000 bales contracted for during the period January to March, 1953. The agreement, coupled with the reports that China is enquiring for Pakistan cotton and that fairly large quantity of new crop cotton has been sold through normal commercial trade channels recently, has been received well by cotton traders in Pakistan. Some are even so optimistic as to declare that the critical position of Pakistan's silver fibre has almost disappeared. The optimism is based on the fact that a fairly large quantity of new crop cotton has already been sold through normal commercial channels and that foreign buyers are now showing increased interest in Pakistan cotton, which, it is said, is still cheaper than the comparable U.S. types. Old crop stocks had been cleared earlier in the year through special barter deals. The carry-over stocks at the end of the current cotton season is estimated at not more than 200,000 bales.

The U.K. Raw Cotton Commission, it is reported, has not been buying Pakistan cotton lately. This is evidently due to changes in the U.K.'s buying arrangements. The total quantity of cotton (current season's crop) so far purchased by the Commission is estimated at not more than 40,000 to 50,000 bales, in the previous season, it had bought 80,000 bales.

The total quantity of raw cotton exported from Karachi so far during the current season (upto 2nd April, 1953) amounts to 998,300 bales, as compared with 778,500 bales in the corresponding period of the previous season. Despite the increase in exports during the current season, stocks at Karachi are still high, being a little over 700,000 bales.

QUALITIES OF U.S. COTTON

Cotton produced in the United States to-day is strikingly superior in two important qualities—fibre length and fibre strength—to that grown only a decade ago, according to plant scientists of the U.S. Department of Agriculture. The improved fibres make stronger and more easily processed yarns and fabrics. This is the result of a survey by Mr. J. E. Hite, cotton agronomist for the Bureau of Plant Industry, Soils and Agricultural Engineering. Mr. Hite compared the two fibre properties of the commercial cottons most widely grown in 1939-41 with those of 1949-51. He chose 1939-41 as the earliest three-year period in which newly devised instruments were used to make rapid determinations of fibre qualities in small amounts of cotton from the breeding plots.

In previous research, the scientists had established the importance of fibre length and fibre strength in the spinning performance of a cotton and had shown that these were inherited. Cotton breeders use fibre length and strength as a guide in making selections and crosses in varietal improvement.

The survey shows that new varieties with increased fibre length and fibre strength are being grown across the cotton belt. The average length of fibres (as measured on a Fibrograph) of nearly 12 million bales produced in the first period was .98". The average index of fibre strength, as indicated on a Pressley strength tester, was 6.78. Ten years later, the average fibre length of nearly 14 million bales was 1.04" and the index of average fibre strength was 7.23. The plant scientists see the 10-year gains as only the beginning of cotton fibre improvement that can be accomplished through research.

A draft specification for mercerised cotton fabric for gliders has just been circulated to textile interests in the country by the Indian Standards Institution. This draft specification prescribes constructional details and other particulars of mercerised cotton fabric used for covering gliders with wing loading up to 8 lbs. per sq. ft. and "placard never-exceed-speed" up to 135 miles per hour. The specification has been formulated by the I.S.I.'s 20-man Sectional Committee for Cotton Yarn and Cloth at the request of the Directorate General of Civil Aviation.

SALES TAX ON SUGAR IN U.P. RAISED

KANPUR MERCHANTS' PROTEST

IT was only two weeks ago that we referred, in these columns, to the causes for the high price of sugar in India and stated that there could be no possibility of sugar being made cheaper for consumers, to any substantial extent, unless the Governments were prepared to reduce their taxes on it. It is unfortunate that the Governments should, instead of realising this and reducing the incidence of the various taxes on the industry, go on increasing them. Thus, the Government of India had enhanced the excise duty on sugar some time ago. Some time later, the Bihar Government raised the sugarcane cess. A few days ago, the Hyderabad Government decided to levy a cess on sugarcane crushed in the factories for production of sugar. Now the Government of Uttar Pradesh has increased the sales tax on sugar from two pies to six pies in the rupee. As a result of this increase, the price of sugar in the U.P. has gone up by more than As. 9 per maund. Consequently, the additional revenue to the Government will be of the order of Rs. 1.37 crores.

The U.P. Government's move to enhance sales tax on sugar is, indeed, regrettable and goes counter to the declared objective of reducing the price of sugar. A look at the history of the Indian sugar industry ever since its inception, more especially since the end of the Second World War, will clearly reveal that sugar prices have all along remained very high *vis-a-vis* other sugar producing countries. The average price of sugar now ruling in India is, despite the reduction in sugarcane prices, as high as Rs. 30 per maund, against Rs. 14 in the world market. It is this high price of sugar which is responsible mostly for retarding the consumption of sugar in the country.

The U.P. Government's decision to raise the sales tax on sugar has met with strong protest from traders. The Kanpur Sugar Merchants' Association, for instance, has submitted a memorandum to the State Government (as also to the Government of India) drawing its attention to the adverse effect of the higher sales tax on the distribution system of sugar merchants and urging refund of tax on sugar exported to areas outside the State. The very distinctive qualities of all the important distribution centres in the State, the Association declares, will be completely annihilated if the refund of tax is not allowed to the sugar trade on exports to areas outside the State. In support of this contention, it observes as follows:

"Under the sales tax constitution, the mills are free to despatch sugar outside the State without the charge of sales tax either from their mill godowns or from some other distributing centres from where booking facilities are available to them. The result will be that, in order to swallow the sugar trade of various important centres in the State, the manufacturers will open their own sale depots and will despatch sugar outside the State, thus reaping the full advantage of the sales tax. The sugar merchants, on the other hand, will not be able to compete with these manufacturers at the distributing centres, as they will have to pay sales tax on their stock-holdings at the rate of six pies per rupee, which comes to As. 13-6 per maund. Naturally the customers of the various districts in the adjoining States will not purchase their requirements from the sugar merchants whose sugar will be dearer to them by As. 13-6 per maund than the sugar of the mills' depots at such centres."

Proceeding, the Association points out that Kanpur is the main distributing centre for sugar in the whole of Northern India. According to it, there is record to show that, during the previous year, about two lakh bags of sugar were despatched from Kanpur to various districts of the adjoining States. If, therefore, refund of sales tax is not allowed to sugar merchants at various centres on their stock-holdings—the business of these merchants mainly depends on the dealings with customers scattered at various places outside the side—they will be completely ruined. The Association also points to the increasing competition in distribution of sugar between the mills and the merchants. Thus, it is stated that, till now, when the sales tax on sugar was only two pies per rupee, there was no wide difference in price and the business of merchants at various centres with the State was not disturbed much. Now, the sugar mills have taken full advantage of the increase in sales tax "by capturing the business of sugar merchants at the various important centres of the State by way of offering sugar to the customers of the adjoining States at lower prices." For this purpose, they will keep the goods on their account. The sugar merchants, on the other hand, will be totally deprived of their heriditary business, as they will not be able to compete with the sugar mills, who, under the Constitution, are exempted from the charge of sales tax.

In view of all these, the Association has urged upon the U.P. Government to grant refund of sales tax on stocks of merchants meant for export to places outside the State. In this connection, it suggests that such refund may be allowed on presentation of railway certificates to prove that sugar has been really despatched for consumption outside the State. This is indeed a pertinent suggestion. In fact, according to Article 286 of the Constitution, imposition of sales tax on goods sold for consumption outside a State is prohibited.

SUGAR SUPPLIES IN U.K.

Thanks to the comfortable sugar supply position, the days of sugar rationing in the United Kingdom may be said to be almost over. Mr. Ian D. Lyle, a Director of Messrs. Tate and Lyle Ltd., well-known sugar refiners in the U.K., for instance, declared at Eastbowne recently that the sugar crop estimates, particularly in South Africa and Australia, were so favourable that sugar rationing could not go on far into 1954 "at the very worst." To deration sugar, Mr. Lyle said, an extra 500,000 tons per annum were needed to satisfy the country's unrestricted requirements of 2.5 million tons. According to him, the supplies of sugar available will be more than this quantity, the actual estimate being 2.6 million tons. This includes 1.8 million tons imported from the Commonwealth sugar-producing countries, 600,000 tons of home-grown beet sugar and about 200,000 tons to be imported from the soft currency areas.

The quantity of 2.6 million tons, Mr. Lyle said, was adequate to deration sugar in the U.K. Nevertheless, he pointed out that 600,000 tons of Empire and soft currency sugar were being diverted from the U.K. to the sterling area countries. Despite this diversion, however, the supplies of sugar in the U.K. will be plentiful. For, as the Chancellor of the Exchequer disclosed in his budget speech last week, the British Government had arranged to buy, at an advantageous price, one million tons of "surplus" sugar from Cuba. There does not, therefore, seem to be any justification for the continuance of sugar rationing in the U.K. According to Mr. Lyle, "there is little doubt that the present Government is eager to decontrol sugar when it sees the way clear."

That the British Government is anxious to lift sugar rationing will be evident from the statement of the Chancellor of the Exchequer which reads thus: "Our purpose is to end sugar rationing and the allocation of sugar to food manufacturers, and we shall now be able to do so soon. The details are still being worked out, and I cannot announce the precise date on which rationing will end. It will take some time to get enough sugar refined and distributed. But, as a preliminary step, the ration will be increased by 2 ozs. on 17th May. The cost to the balance of payments of the extra sugar will be partly offset by a substantial fall in our imports of expensive substitutes. After rationing has ended, the present small subsidy on sugar for domestic use will end too, but it is by no means certain that this will lead to a rise in price. The ending of this particularly irksome piece of rationing will, I know, be tremendous encouragement to every housewife."

The total production and despatches of sugar for the current (1952-53) sugar season amounted to 980,930 tons and 540,130 tons, respectively, as against 1,035,825 tons and 418,934 tons during the corresponding period of the previous season.

The opening stock, production, despatches and closing stock of sugar during the fortnight ended 15th March, 1953, were 800,389 tons, 126,275 tons, 63,507 tons and 863,157 tons, respectively. The figures for the corresponding fortnight of the previous season were 678,781 tons, 114,031 tons, 58,366 tons and 734,446 tons.

LABOUR IN COAL MINES

REVISION OF 1947 CONCILIATION AWARD DEMANDED

A DEMAND for revising or replacing the 1947 Conciliation Board Award relating to the coal industry has been made by a section of workers. It will be recalled that, after World War II, there was great unrest among the colliery workers due to high price of the necessities of life and that a Conciliation Board was set up to examine this problem. The award of the Board, which defines terms and conditions of service, was submitted in 1947 and came into force from May the same year. The Award was then hailed as an important milestone in the coal miners' progress.

But, now after six years of working, it has come in for a good deal of criticism from among the ranks of labour. Mr. M. John and Mr. Hariharnath Shastri, President and General Secretary of the Indian National Trade Union Congress, respectively, have threatened to launch a strike, if the Conciliation Award was not revised in the near future. While addressing the Miners' Day meeting held recently at Jharia, they contended that, as compared with the level of wages prevalent in other important industries, the standard prescribed by the 1947 Coal Board Award was very low now. It is the considered opinion of the I.N.T.U.C., as well as of other trade unions, as pointed out in the Minute of Dissent of their representatives to the Working Party Report 1951, that the Award does not provide for anything like minimum living wage for the workers. Not only are the rates of wages low, says the I.N.T.U.C., but there is no grading system for different categories of workers in the coal industry. It admits that, of late, some big groups of employers have introduced the grading system, but points out that the small employers have done nothing in this respect. It also alleges that the question of standardisation of wages was neglected by the Conciliation Board.

The employers' organisations are against revising or reopening the Conciliation Award. The Indian Mining Association says, in a memorandum on the economic conditions of the coal industry, submitted to the Government of India, that "not only does the industry extend substantial benefits to its labour force under the terms of the Conciliation Board Award but those concessions have been considerably increased by liberal interpretations, particularly what is known as the Joshi Agreement, which have subsequently been placed upon the Award." Any revision of the wage structure especially now, when the cost of production is increasing at an abnormal rate, would, the colliery owners emphasise, only aggravate the ills the industry is suffering at present, by increasing the costs of the industry further.

A brief analysis of the present position of the industry discloses that the demand of labour for the revision of the Conciliation Award is not timely. The industry is in need of substantial relief from the many burdens placed on it, in recent years. The biggest item of cost relates to the supply of foodgrains at concession prices to colliery labour. The loss, as a result, to the industry at the rate of about Rs. 18 per maund is estimated at Rs. 6 lakhs to Rs. 7 lakhs per week. The price of colliery stores has gone up very substantially; it has been calculated that the expenditure on stores, expressed as cost per ton of coal raised, has increased by As. 3 to As. 9 per ton since 1947. The operation of the Mines Act, 1952, is said to have involved the industry in increased expenditure on labour.

In these circumstances, the question of revising the structure of workers' wages should be deferred till the return of better days. In fact, the Government should grant the industry some substantial measure of financial relief, even of interim character, to tide over the present stringent financial circumstances. We feel that, if the Award is re-opened, it is labour that will suffer most. For, whatever may be the arguments, based on humanitarian grounds, for increasing the present structure of wages, ultimately it is the paying capacity that is to decide the overall remuneration of the workers. Judged by the existing circumstances, labour is definitely getting more than what the industry can afford to pay. Further, if the wages of workers in this industry were to be increased, then a rise in the prices of coal over and above the restoration of the partial price-cut demanded, would be inevitable. This would lead to the revival of inflationary spiral of rising wages and prices all round in other industries, and this would be detrimental to the economic development of the country under the Five-year Plan.

BGY-454
In recent years the cinema has become one of the most vivid mediums of instruction available to educationalists.
The Shell organization early realised that the story of oil, its development and its supreme importance in our modern world, were of special interest to universities, schools, business and training colleges, scientific societies, etc. So they sponsored a series of films which tell the story of oil—the story of a great modern industry.
Burmah-Shell maintain, at Bombay, Calcutta Madras and Delhi, a library of 16 mm. and 35 mm. films together with 16 mm. portable sound projection equipment. We shall be only too pleased to arrange showings of these films to interested groups or to lend our films. Please write to your nearest Burmah-Shell Office for full particulars and a catalogue of the films available.

BURMAH-SHELL... IN INDIA'S LIFE AND PART OF IT

JUTE MISSION LEAVES FOR AUSTRALIA

CUT IN PRODUCTION UNDESIRABLE

THE Indian Jute Mills Association's trade delegation left Calcutta on the 15th inst. on its four weeks' tour of Australia and New Zealand. The delegation consists of Mr. J. G. Walton, Deputy Chairman, I.J.M.A., Mr. D. P. Goenka, Vice-Chairman, I.J.M.A., and Mr. L. K. Jha, Joint Secretary, Ministry of Commerce and Industry. The delegation may also visit Burma, Indonesia and other countries on its way back. As already stated in these columns, the object of the delegation is to make a first-hand examination of the factors affecting the demand for gunnies in Australia and New Zealand.

The purpose of the trade delegation was clearly explained at a Press Conference held at Calcutta before the departure of the delegation, by Mr. G. J. Gardner, Chairman of the I.J.M.A. The delegation had been sponsored, he said, by the I.J.M.A. in furtherance of its policy of exploring means for "actively and aggressively" developing markets abroad for Indian jute goods. The Association's goodwill mission to the U.S.A. last October and the publicity campaign under way in that country were part of the same policy, he said, and added that a delegation similar to the one now visiting Australia would be sent by the I.J.M.A. to Burma, Indonesia and other countries to collect information about the conditions of jute goods markets there.

Mr. Walton who also addressed the Press Conference explained that this mission was different from the one that went to the U.S. last year. In addition to promoting goodwill, the delegation visiting Australia and New Zealand would function as a fact-finding body with the object of helping in the development of the markets for Indian jute goods in these countries. "It would make," he added, "a first-hand examination of the present state of the Australian and New Zealand markets and of factors affecting the demand for, and the consumption of, gunnies and try to estimate future trends on a long and a short-term basis." Continuing, Mr. Walton said that the delegation would hold talks with trade circles in the countries visited and would, therefore, also serve to establish useful personal contacts between the manufacturing industry and its customers. He further stated that, as one of the world's main producers of primary agricultural commodities, and in particular of wheat and wool, Australia naturally made large use of jute goods for packaging and distribution purpose and, with an annual offtake of gunnies amounting, in normal years, to between 80,000 and 90,000 tons, the country constituted one of the Indian jute industry's most important individual markets, particularly for sacking. New Zealand being also a substantial primary producer, especially of wool, consumed jute goods on a considerable scale. He reiterated the view that the Australian and New Zealand mission represented a further extension of the Association's post-war policy of maintaining a close touch with overseas markets, studying the needs and problems of individual consumers and providing a service to users of packaging materials which would enable jute goods to maintain and extend their long-established lead in this field.

Answering a question, Mr. Walton stated that the main factors affecting the demand from Australia and New Zealand for Indian jute goods were bulk handling and the use of substitute packaging material. In recent years, there had been, he observed, some variation in the offtakes by these two countries of jute goods which depended largely on the condition of crops there. There was no reason to believe that the markets there could not be expanded.

Incidentally, Mr. Walton welcomed the Government's decision to send Mr. L. K. Jha along with the delegation. The inclusion of Mr. Jha in the delegation, he said, was an encouraging indication of the Government's interest in the retention and expansion of the jute industry's foreign markets.

The delegation, as was pointed out in these columns a fortnight ago, has been the outcome of the Government's reported decision not to permit the jute mills to effect a further cut of 7½ per cent. in the total looms now in operation. However, despite this decision, rumours have been afloat that the Centre would revise its decision and agree to a cut in the output of jute goods by sealing more looms. It is, therefore, quite appropriate that a spokesman of the Commerce and Industry Ministry should have scotched the rumours by discounting them totally. He, however, stated that the Government had not taken any final decision on the industry's demand for sealing 7½ per cent. of testing looms. But he pointed out that sealing of looms had a speculative aspect. The Government had already sealed 12½ per cent. of the looms and any further cut could not be permitted without full investigations. In the opinion of the Government of India, the position of the jute industry was not as bad as had been made out in certain quarters. Exports in January and February were not, perhaps, good, but the figures for March was quite encouraging. The Government felt that the time which had elapsed since the reduction of the export duty on sacking had not been sufficient to enable the effects to be seen. In fact, it was pointed out that it took several months before the hessian markets began to react to the reduction in the duty on hessian and, therefore, it was felt that the effect of the cut in the duty on sacking could only be noticed after another month or two. The American buyers normally entered the market, he said, in June or July and the Government of India thought it was inopportune to cut down output now and push up prices, not to mention unemployment which the proposed measure would cause.

The Government's unwillingness to permit the sealing of looms and cut production would appear to be quite justified. In the first place, when once a cut in production is effected, it is difficult to restore it. For instance, the jute mills which sealed off 12½ per cent. of their looms in 1949 have not been able to retrieve the lost ground since then. In the result, it encouraged the foreign mills, especially the Continental units, to step in the breach created by the cut in production then. If the mills were to follow once again a similar step, it would be suicidal. For one thing, it will amount to yielding ground to its competitors abroad voluntarily and, for another, it will handicap the work of the trade delegation in Australia and New Zealand, in that it can hardly tempt buyers there to support a rising market in jute goods. The industry should rather cut its prices temporarily to its customer and incur losses that could be recovered later, than cut its production and suffer damage which might turn out to be beyond repair. It is to be hoped that the need for a cut in working hours will not at all arise, as a result of the efforts of the present delegation's visit to Australia.

NEW CENTRAL EXCISE DUTIES ON TEA

The Central Excises and Salt (Amendment) Bill, 1953, which was introduced in Parliament on 14th April, 1953, proposes differential rates of Central excise duty on bulk tea and package tea, and the discrimination so made has been strongly criticised in some quarters. The present rate of excise duty is 3 annas a lb. which is collected on *all* teas at the time they leave the factories. The proposed new duties are at the rate of one anna per lb. if packed in unit containers containing more than 60 lbs. net, and at the rate of four annas a lb. if packed in unit containers containing not more than 60 lbs. net. The duty would be levied and collected at the time the tea is issued from the factories.

It is further provided that tea which has been issued from the producing factories in containers containing more than 60 lbs. net on payment of duty at 1 anna a pound and which is later repacked at the premises of blenders and packers will be assessed to a further duty of 3 annas per lb. if repacked into unit containers containing not more than 60 lbs. net, but would be entitled to be issued without payment of further duty if repacked into unit containers of more than 60 lbs. net.

The decision of the Government to grant relief of duty to the extent of two annas on bulk tea will, no doubt, be widely welcomed by the producing industry. Nevertheless, the Government's action in trying to make good the revenue loss by increasing the duty on package tea is strongly resented by the trade as well as by some sections of the producers. It is pointed out that the consumers of package tea will have to pay more than those who buy tea in bulk, and in this way the middle class consumer will suffer. It is understood that strong representations are to be made by the tea trade in getting this discrimination removed without affecting the relief now proposed for bulk tea.

The tea gardens have been confronted with a new problem by reason of this decision. Many of them carry huge stocks of small size tea chests for which they will apparently have no use hereafter.

TREND OF TEA PRICES

OUTLOOK BETTER

WITH the passage this week of the amendment to the Finance Bill, seeking certain changes in the levy of excise duty on tea, attention has, once again, been focussed on the outlook for the tea industry. The trend of tea prices during the last three or four months has certainly been encouraging, but it is too much to think that the recent crisis in the tea industry was not as serious as was made out to be. The accounts of tea companies for 1952, when published, would bear testimony to the effect of the crisis on the finances of the companies. An analysis of the trend of tea prices at auctions held in Calcutta during the season ended 31st March, 1953, shows that the revival in the last few months has, however, been helpful to the industry to tide over what once appeared to be a critical situation and, if the present trend in demand for tea is maintained in the coming months also, the industry will be able to show a better performance in 1953.

During the season 1952-53, 41 sales were held for both export and internal consumption, as against 40 in 1951-52. The quantity of tea sold for export during the past season amounted to 1,768,576 packages which, as compared with that disposed of in 1951-52, shows a decline of 94,301 packages. The average price realised was lower at Re. 1-6-5 per lb., as compared with Re. 1-13-3 a year ago. For internal sales, 36,478 packages of leaf at an average price of Re. 1-1-6 and 614,054 packages of dusts fetching an average price of Re. 1-5-8 were auctioned, as against 92,448 packages of leaf at Re. 1-3-9 and 575,832 packages of dust at Re. 1-11-1 in the preceding season.

The following table gives the trend of prices of different varieties of tea sold both for export and internal consumption:

	Closing Sale for 1952-53. Per lb. Rs. a. p.	*Lowest touched in Nov. '52.* Per lb. Rs. a. p.	*Closing Sale for 1951-52.* Per lb. Rs. a. p.
EXPORT SALE.			
Clean B.P.	1 8 6 to 1 9 0	1 4 6 to 1 5 0	1 3 0
Clean Common B.P. ..	1 11 0	0 11 0	Not quotable
Medium Assam B.P. ..	1 12 0	0 12 0	1 5 0 to 1 6 0
Good Assam B.P.	2 0 0	1 10 0 (Nom.)	2 1 0 to 2 3 0
INTERNAL SALE.			
Medium Dooars dust ..	1 7 0	1 0 0 to 1 1 0	1 6 0 to 1 6 6 (Nom.)
Medium Assam grainy dust .	1 9 0 to 1 9 6	1 5 6	....
Best Assam C.T.C. dust ..	2 1 0	1 13 6	2 9 0 to 2 10 0

It will be noted from the foregoing table that, in most cases, the recovery in prices, since November, 1952, has been so marked that the closing prices are well above those for 1951-52. The best feature of the sales has been clean common black pekoe which has advanced by a rupee from the bottom touched in November, closely followed by medium Assam B.P. Good Assam B.P. at one time touched a high of Rs. 2-2 per lb. and the recession towards the close is attributed to a falling away in appearance and cup quality. The general recovery mentioned above in prices is due to strong demand from overseas, competition from the U.K. buyers having been particularly keen. It would appear that buyers from the U.K. and local blenders had overestimated their stock position earlier and had effected fairly large purchases in recent weeks in order to make up the shortfall in stocks.

The increase in the rate of exports has been at such a pace that the accumulated stocks have been cleared quickly. The following comparative table shows the trend of exports of Indian tea from Calcutta to some of the main consuming countries during the last three seasons:

(In million lbs.)

	1952-53	1951-52	1950-51
Britain	235.44	231.76	248.35
U.S.	21.33	17.83	28.65
Canada	15.58	11.86	15.20
Egypt	12.56	2.90	3.19
Australia	8.72	4.66	10.44
Red Sea Ports ...	8.96	3.94	3.78
Persian Gulf ...	8.74	8.38	10.79

It will be observed that the offtake by Britain during 1952-53 has outstripped that in 1951-52 and is clearly the result of the abolition of tea ration in the U.K. Reports from London suggest that tea consumption in the U.K. has improved recently. The present level of consumption is said to be of the order of 500 million lbs. per annum. A shortage of stocks is expected in the London market until August or September next when the new crop Indian tea will be coming in. It is expected, therefore, that blenders of tea will have to pay higher prices at the London auctions to meet any demand from retailers. It is also considered that there may not be a recession again after the new crop comes in, as the supplies in the 1953-54 season are expected to be relatively smaller than in the season just ended.

MINERAL RESOURCES OF ASIA AND FAR EAST

FIRST E.C.A.F.E. CONFERENCE IN SESSION

A MINERAL Resources Conference, under the auspices of the United Nations Economic Commission for Asia and the Far East, is now in session at Tokyo. The Conference is the first of its kind to be held in Asia. The main object of the Conference is to review the current mineral resources in the E.C.A.F.E. region and consider proposals for speedier development of the mineral wealth of this region. Particular attention is being paid to the need for a geological survey of the mineral resources in the region and for increasing the output of lignite.

Reports from Tokyo reveal that about 100 experts from Burma, China, France, India, Indonesia, the Netherlands, the Philippines, Thailand, the Soviet Union, the U.K., the U.S., Borneo, Federation of Malaya, Hong Kong and Laos are attending the Conference. Besides, the U.N. Technical Assistance Administration has also sent four experts to participate in its proceedings. Japan is represented by a delegation of 20. About 50 papers on questions relating to development of mineral resources have been prepared for the Conference by the various Governmental and non-Governmental experts, the E.C.A.F.E. Secretariat and the U.N. Technical Assistance Administration.

The importance of this Conference needs no emphasis. For minerals constitute the key raw materials for industrialisation and they are, therefore, of basic importance for the economic development of the less industrialised areas. It must also be considered that, as industrialisation advances, more and more minerals are required to keep existing factories going and to enable the setting up of new factories. In order to be able to supply increasing quantities of minerals from domestic sources, it is, in the first place, necessary to have adequate geological surveys. This explains why the Conference has been giving particular attention to the geological survey of mineral resources in the region. It is common knowledge that the geological investigation and mineral exploitation so far undertaken has been scattered and neither intensive nor extensive, with the result that the knowledge of mineral resources of the region is inadequate.

Special Report

A special report prepared for the Tokyo Conference reviews the mineral raw material situation based on existing information. The full text of the Report has not yet been made available to the public. An E.C.A.F.E. handout, just published, however, discloses that the Report emphasises that the region's output of minerals is very small, as compared with that of the rest of the world. It observes that the main characteristics of the coal resources of the region are the predominance of lignite deposits in many countries, while higher-grade coal deposits are limited to a few countries; coking coal is short in the entire region, except China and India. India possesses two-thirds of the region's known iron ore resources, with China running second. As for ferro-alloys, the region is well off in tungsten, manganese and titanium ore, moderately well off in molybdenum, chromium and vanadium and poor in others including nickel and cobalt. The region appears to be deficient in non-ferrous metals.

Latest reports indicate that almost all the countries of the E.C.A.F.E. region have plans to complete aerial surveys of the region as soon as possible. In fact, several countries, including British Borneo, China, Ceylon, India, Japan and the Philippines are already engaged in making such surveys. The Governments of India and Pakistan have granted the Standard-Vacuum Oil Company permission to make a geophysical survey of the Bengal basin by airborne magnetometer. The aerial reconnaisance covers an area of over 73,000 sq. miles in the great alluvial plain at the head of the Bay of Bengal. An aerial photographic survey of the mineral resources of Pakistan is already under way with Canadian assistance under the Colombo Plan. Some 3,500 sq. miles of Sarawak have been surveyed and photo-geological map produced. It would have taken a geologist five years to obtain the same amount of information without aerial help. An actual survey of Thailand was carried out by the British R.A.F. at the end of World War II, but only a small portion (confined to the southern part of the peninsula) of this survey is available. During the early part of 1951, a total area of 19,425 sq. kilometres was surveyed from the air. While stressing the need for aerial surveys and other exploratory measures, the E.C.A.F.E. experts, however, aver that it is unlikely that any "new sensational discoveries will be made."

Lignite

The Conference is paying special attention to raising the output of lignite. This is because, except for India and China, almost all the other countries of the region are suffering from shortage of fuel which is the first requisite for ensuring the economic development of any country. The urgency for exploratory work in the sphere of lignite resources has increased enormously, as a result of changed political conditions in the region after the last war. Politically, Burma, Pakistan and India were, for instance, before they achieved independence, all in the same family. It was not economical for Burma to develop lignite deposits in the Upper Chindwin area, when Bengal coal was available in the Rangoon market. But the picture is now different. Efforts are being made even in India, which is comparatively richly endowed with high-grade coal, to develop the huge lignite deposits of Madras. And this is being done not only because the bituminous coal reserves of India are limited, but also because South India can ill afford to pay large sums in terms of transport costs for Bengal and Orissa coals.

Output of Minerals

If we are to take the output of minerals, as the index of a nation's progress towards industrialisation, the E.C.A.F.E. region provides a pathetic picture. Taking the world as a whole, the output of the region's basic resources of coal, petroleum and iron ore is very small. The total output of coal in 1951, amounting to 119,575,000 tons, is about the same as the estimated production of West Germany alone and is only one half the production of the U.K. and 22 per cent. of the U.S. in the same year. The total iron ore production, excluding China, of 5.7 million tons is about 5 per cent. of that of the U.S. and the total production of petroleum is less than 3 per cent. of world output (excluding the Soviet Socialist Republics). Another feature of the region, however, is that Malaya, Thailand and Indonesia contribute about 60 per cent. of the total tin production of the world, that is, 172,000 tons. The region holds a dominant position in the world market in such export minerals as ilmenite (from India), tungsten ore (from China), graphite (from Ceylon), mica (from India), and manganese ore (from India).

The region depends mostly on the U.S. and Europe for the disposal of its minerals. This is, however, having a deleterious effect on its economy, especially in the case of such countries as Malaya, Thailand and Indonesia, which depend entirely on the U.S. and West European markets for its raw minerals. Such dependence makes their economies susceptible to even slight changes in international economic conditions. Since their economies are underdeveloped, the impact of inflationary and deflationary situations elsewhere in the world subject them to great hardship. The present depression in the tin and rubber markets is a standing example. If any plan for increasing the mineral and other raw materials output in this area is to succeed, it must, therefore, be accompanied by a scheme guaranteeing an economic price to producers.

RIVER VALLEY PROJECTS

The priority for construction of river valley projects in famine areas in Maharashtra has not been revised. The principal considerations governing the inclusion of irrigation schemes in the Five-year Plan are whether a scheme is under execution at the time of formulating the Plan and whether it is calculated to provide an early increase in food production. In the case of Bombay, the Plan contemplates that irrigation schemes already begun should be completed as early as possible. A number of recommendations have been made by the Ramamurti Committee, but they are mostly of long-term character and are not of current and immediate interest. These are under examination. Loans have been given for minor irrigation works to the extent of Rs. 23 lakhs as a measure of immediate relief.

WORLD STEEL STATISTICS

SLIGHT INCREASE IN OUTPUT

THE steady growth in 1952 of world steel production was arrested by the eight weeks' strike in the U.S., which cost that country some 16 million tons of steel. At an estimated total of 208 million tons in 1952, world production was only about a million tons above the 1951 level and some demands, consequently, went unsatisfied. But, whereas the American output fell by 11 per cent. from 94 to 83 million long tons, production in the rest of the world rose by 10 per cent. from 113 to 125 million. World production is now about 36 per cent. above the 1948 level and as much as 72 per cent. above the 1937-38 average. The following table gives countrywise production of steel in 1952, as compared with that in 1951 and 1948 and the average for 1937-38:

(In million long tons)

Country	Average 1937-38	1948	1951	1952

* Includes Eastern and Western Germany.
† Estimated.
‡ Included in Italy.
§ Included in Western Germany.

In contrast to last year's setback in the U.S., considerable advances were made by the principal steelmakers elsewhere. In Britain, there was a sharp recovery from the difficulties of 1951, as new capacity was brought into use and raw material supplies improved. The Schuman group recorded an increase of 4 million tons (about 10 per cent.)—of which the lion's share was contributed by Germany. With the removal of former restrictions, indeed, German production is climbing rapidly to the British level. Progress was slower last year in France, Belgium and Italy, while Luxembourg registered a slight decline, owing to the slackening of export business. Among the smaller producers of Western Europe, advances were general, these countries showing an aggregate increase of 350,000 tons, to an estimated total of 4.8 million tons.

The British Commonwealth producers—Canada, Australia, India and South Africa—also continued to make headway, their combined output in 1952 being estimated at about 7.7 million tons, or 9 per cent. more than in the previous year.

Substantial progress seems also to have been achieved in the Soviet Union and its satellites in response to the great efforts now being made to expand steel production. An E.C.E. estimate credits Russia with an output of 34,450,000 tons last year, as against 30,800,000 tons in 1951. With output also rising in Czechoslovakia, Poland, Hungary and Rumania, total steel production in the Russian sphere probably now exceeds 45 million tons a year.

It is not without interest to note that, compared with pre-war, output has more than doubled in what is now the Russian sphere, as well as in the U.S. and (at a much lower

(*Continued on page 779*)

INVESTMENTS OF INSURANCE FUNDS

COMMERCE MINISTER'S SUGGESTIONS

IN an article to the *Indian Insurance Supplement* of the *Hindu*, Madras, Mr. T. T. Krishnamachari, Minister for Commerce and Industry, has made available to the public his views on insurance. Besides containing a brief historical review of insurance legislation in India and the progress of the industry, the article is replete with a number of valuable suggestions, some of which, if implemented, will accelerate the growth of insurance in this country. Before making a reference to these suggestions, it is necessary to draw the attention of readers to the Minister's introductory remarks to the article under reference. These remarks emanate from his anxiety that nothing that he has stated therein should be taken as the views of the Government of India. He says: "I think the invitation has emanated beause the Editor felt that I had taken some interest in insurance legislation in the past. It is also true that I hold views on insurance which may not be popular with the concerned interests. Therein comes the embarrassment, for the reason that, being a member of the Government of India, it is likely that my views might be construed as being the views of the Government. Luckily, I do not handle the insurance portfolio. But I do hope that nothing that I say in the following paragraphs would be considered to be the views the Government as a whole hold on this matter."

This qualification is, no doubt, important and accepted as it is. Yet one cannot completely brush aside the feeling that, although the Minister no longer holds the insurance portfolio, the views he holds may have a bearing on the views of the Cabinet, if not completely, at least to a certain extent. It is this feeling that makes one pay more than ordinary attention to the views of the Minister.

Mr. Krishnamachari's review of insurance legislation, though refreshing, need not be recalled here, because those who are interested in the progress and development of insurance in India are quite familiar with the ground covered by him. But what is rather more pertinent to the matter in hand is Mr. Krishnamachari's conclusions about insurance. These may be summarised thus: (*a*) The law has not gone far enough to help the insurance industry; (*b*) with the life fund investments being placed more or less in a straight-jacket by reason of the provisions of clauses 27 and 27A of the Insurance Act, its attractiveness to policyholders as a method of investment is practically non-existent, and (*c*) the costs of management of life business are still very much on the high side.

Suggestions for Improvement

The suggestions designed to improve the climate for the development of insurance industry may be summarised thus:

(1) It is time for the State to cease looking at insurance from a purely negative and regulative point of view;

(2) the State should look upon the industry as a positive source of investment not only in Government securities but also in the field of equity investments;

(3) nationalisation does not solve all the problems of the industry. In the absence of nationalisation, attention should be diverted to two foremost things, namely, (*a*) amalgamation of the weaker units reducing their number to something like 50 companies, and (*b*) canalisation of a large portion of the life fund into equity investments;

(4) relaxation of sections 27 and 27A of the Act enabling more funds to flow towards investment in equities;

(5) the appointment of a statutory body to be in charge of diverting the funds into equity investments;

(6) limiting the handling of insurance business to firms which pursue only insurance business and nothing else; and

(7) the establishment of a reinsurance corporation to handle reinsurance business.

The suggestions in (3) (b), (4) and (5) above have attracted attention of operators in the share market and are one of the reasons for the present cheerful sentiment of the market. If these are to be implemented, there is need for a complete reformation in the thoughts on insurance of the present Government. In view of the importance of these suggestions, the relevant extracts from Mr. Krishnamachari's article are reproduced here:

"The question has, therefore, to be considered whether it is time for the State to cease looking at insurance from a purely negative and regulatory point of view and to look upon it as a positive source of investment not merely in Government and municipal securities but also in the field of equity investment thus playing a vital role in national development. This aspect of the problem has to be carefully studied for more reasons than one. The war-period has done a lot of damage to the middle classes who had in the past developed a habit of thrift and were slowly getting accustomed to investing their savings in equity investments. The surplus income of these classes available for investment has become non-existent and, in fact, their standards of living are rapidly deteriorating. It would be wrong to say that there is no other class coming into existence to replace the outgoing middle classes, because the industrial working classes are certainly making more money than they were formerly, and would naturally take the place of the outgoing classes in due course. Be that as it may, it seems the normal channels from which saving and investment flow no longer obtain and, with the present level of taxation and possibilities of increased direct taxation in the future, Government have to look for economic development to other sources of saving and investment. That life insurance could be a valuable contributory agent for economic development cannot be altogether ignored, and if this is realised, Government have not merely to make life insurance cheaper, they have to make the return more attractive, the organisation more efficient and also eliminate the wasteful competition among insurers that now exists to some extent.

More Attractive Terms to Policyholders

"There have been talks of nationalisation and these have been going on almost from 1937. That is a matter of high policy. While nationalisation might cut the Gordian knot and simplify problems, it does not solve all the problems connected with tapping people's savings for purposes of investment. Even if that has to be done, it must follow a pattern of administration which cannot be very far from what obtains, while insurance is being administered by private enterprise. Two things stand out foremost in this connection. One is reduction in the cost of insurance which indicates a certain amount of strengthening of the weaker links among the insurance firms and reducing their total number to something reasonable, like 50 companies. The second fact is that the only way in which we could offer more attractive terms to the policyholder is by canalising a large portion of the life fund into equity investments. It seems to me that it is an inescapable proposition for Government, if they wish to stimulate private investment for industrial development, that they should provide guarantee both in regard to the safety of such investment and also in regard to a reasonable return, at least in certain important industries. If this obligation is taken up by Government, it seems that some portion of the life funds can be diverted into industry, if the rigid provisions of sections 27 and 27A of the Insurance Act are suitably amended. But this will also result in Government having to create a body which would be in charge of diverting investment of the life fund into equity investment. To the extent that a statutory body takes up the responsibility for investing the life fund, to that extent the interest of the people who control insurance companies by holding blocks of shares, would diminish. It seems to me that the people concerned will have to think on these lines before long so as to make life insurance more attractive to the policyholder and also to make life insurance a means of stimulating national saving which could be canalised for economic development."

EXPORT CREDITS INSURANCE

Canadian exporters were paid $996,809 in 1952 by the Export Credits Insurance Corporation, covering losses due mainly to exchange transfer difficulties in foreign countries, according to the Corporation's annual report, which was tabled on 23rd March last in the House of Commons.

During the seven years since it commenced operations in 1945, the Corporation has paid claims totalling $1,702,704. Of this amount, $592,403 has been recovered. The total claim payments outstanding on the books of the Corporation at 31st December, 1952, were $1,092,114, of which it is expected a substantial part will be recovered.

Export sales insured by the Crown-operated Corporation in 1952 were valued at $35,836,484. Premiums paid in respect of these sales amounted to $354,348. Total sales insured by the Corporation since it commenced operations amount to $211 million.

INSURANCE CORPORATION FOR PAKISTAN

Subscriptions are being received, it is reported, towards the capital of the Pakistan Insurance Corporation to be established under the Pakistan Insurance Corporation Act, 1952. One of the main functions of the Corporation is to work for the development of insurance business in Pakistan. It is, besides, authorised to do all kinds of insurance, counter-insurance, reinsurance, further reinsurance work, the business of taking over the management of recalcitrant insurance companies, to promote new insurance companies, to assist insurance companies in organising training schemes for their staff and to underwrite the issue of the stock, shares, bonds or debentures of an insurance company. The Corporation will get compulsory reinsurance up to 10 per cent. of the business of all insurers operating in Pakistan.

The authorised capital of the Insurance Corporation is Rs. 1 crore, divided into shares of Rs. 500 each. The Central Government of Pakistan will hold 51 per cent. of the capital. At present Rs. 100 per share is payable with the application. The balance will be called up later on.

AIR CASUALTY RISKS IN 1952

According to statistics collected by the International Air Transport Association and the International and Civil Aviation Organisation, the number of passengers carried by aircraft increased from 39 million in 1950-51 to 45 million in 1951-52, or an increase of 13 per cent. The total number of passengers and crew killed was 757. This means that, making allowance for crew members killed, only one out of 70,000 passengers carried was killed. If the scheduled airlines be considered alone, the low figure may only be 1 out of 100,000. Thus, the risk of death through aircraft accident for passengers carried by the recognised airlines may safely be said to be extremely small.

The statistics reveal that, as the second half of 1952 was favourable, the figures for the whole of 1952 disclose a very remarkable improvement. The improvement is attributed to the continuous efforts of the various airlines to make air transportation safe and to minimise the risk as much as possible.

G. A. STEWART, *Acting Manager.*

EMPLOYER-EMPLOYEE RELATIONS

JUDICIAL PRONOUNCEMENTS ON DISMISSAL, RETRENCHMENT AND LOCK-OUTS

(By "LIBRA")

A WORKMAN refuses to obey the orders of his foreman; another workman is searched at the factory gate by the watchman and is found to have stolen some articles from the factory. The matter is reported to the manager. "Dismiss them," says the manager. Someone nearby reminds him that an adjudication of a dispute between the company and the workmen is pending before an industrial tribunal and, under section 33 of the Industrial Disputes Act, the permission of the tribunal will have to be obtained for dismissing these offending workers. It is an annoying recollection.

The perturbation of the management at the prospect of approaching an industrial tribunal for obtaining its permission to discharge the workers is not wholly groundless. Such a permission can be granted only after hearing both the parties. Some delay is, therefore, inevitable. The employers feel that discipline suffers if the management cannot take prompt steps to check insubordination. There are, of course, two sides to the medal. Only a few enlightened employers have realised that labour is an important partner in that most exciting and fruitful enterprise called production. Most of them still believe in the common law right of the employer to "hire and fire" his employees. It is, therefore, the duty of the State to protect the worker from the whims and fancies of his employer, preserving unfettered, at the same time, his right to take *bona fide* action against the worker. The work of harmonising capital and labour by holding the balance even between these two factors of national production is of the very essence in a Welfare State. How far the industrial law of the land has succeeded in striking this golden mean, is the subject of study in this article.

A survey of the law, regarding discharge, dismissal and retrenchment of workers, as laid down by the judicial pronouncements of the highest industrial tribunal in the land, namely, the Labour Appellate Tribunal, will be eminently apposite, in this connection. The decisions are quoted verbatim, as far as possible.

Discharge and Dismissal

"Normally an employer has the power to discharge or dismiss his workmen or to change the conditions of their service. In exercising that power, he takes the risk of an industrial dispute being raised and, if it is raised and the dispute is referred for adjudication by the appropriate Government, he will have to justify his act before an industrial tribunal in an investigation conducted by it on the lines laid down by the Labour Appellate Tribunal in the *Buckingham and Carnatic Mills* case." (1951—II L.L.J. p. 314).[1]

Section 33 of the Industrial Disputes Act comes into play when there is any change in the conditions of service of workmen concerned in a dispute, when proceedings regarding that dispute are pending before a conciliation officer or a tribunal. Section 33 was amended and section 33A was introduced in 1950 by Act XLVIII of 1950. The sections run as follows:

Section 33: "Duruing the pendency of any conciliation proceedings or proceedings before a tribunal in respect of any industrial dispute, no employer shall—

(*a*) alter to the prejudice of the workmen concerned in such dispute, the conditions of service applicable to them immediately before the commencement of such proceedings; or

(*b*) discharge or punish, whether by dismissal or otherwise any workman concerned in such dispute, save with the express permission in writing of the conciliation officer, Board or Tribunal as the case may be."

Section 33A: "Where an employer contravenes the provisions of section 33 during the pendency of proceedings before a tribunal, any employee aggrieved by such contravention, may make a complaint in writing, in the prescribed manner to such tribunal and on receipt of such complaint that tribunal shall adjudicate upon the complaint as if it were a dispute referred to or pending before it, in accordance with the provisions of this Act and shall submit its award to the appropriate Government and the provisions of this Act shall apply accordingly."

"Section 33A cannot be dissociated from section 33. The object of enacting section 33 was to ensure fair and satisfactory inquiry in the pending adjudication by forging a safeguard against victimisation of the employees concerned in the pending adjudication or against unfair labour practice on the part of the employer at that stage, by requiring him to obtain permission from the tribunal in respect of acts specified in that section."

"The position before the amendment of 1950 seems to have been that, if section 33 was contravened, two remedies were available to the workmen, namely, (1) prosecution under section 31, and (2) a reference under section 10 of the Act. Both these remedies were dependent upon sanction by Government. Section 33A has conferred a right on the aggrieved workmen to have at their instance the dispute regarding the change of conditions of service or their discharge or punishment by dismissal or otherwise, during the pendency of adjudication proceedings, adjudicated upon directly by the tribunal. Two objects have thus been attained, (1) avoidance of multiplicity of proceedings, and (2) speedy determination of dispute."[2]

"The functions of a Tribunal under section 33 of the Industrial Disputes Act are judicial functions; and a proper inquiry or investigation must be made to test the truth and sufficiency of the statement made in the application by the management."[3]

"The fundamental principle is that an industrial worker must be placed in such a position that the security of his service may not depend upon the caprice or arbitrary will of the employer. The power of the management to direct its internal administration, which includes the enforcement of discipline of the personnel, cannot be denied, but, with the emergence of modern concepts of social justice that an employee should be protected from the vindictive action on the part of the management, this power has to be subjected to certain restrictions.

"In such cases the tribunal does not act like a court of appeal but rather as a supervising body, exercising powers of reversion for correction of basic errors which go to the root of the matter. The decision of the management in relation to the charges against an employee will not prevail, if (*a*) there is want of *bona fides*, or (*b*) it is a case of victimisation or unfair labour practice or violation of the principles of natural justice, or (*c*) there is a basic error on facts, or (*d*) there has been a perverse finding on the materials."[4]

"It has been held in various cases by the Labour Appellate Tribunal that it is primarily the function of the management to decide as to what punishment should be awarded when a charge is proved after inquiry. However, it has been made clear that the Evidence Act, with all its rigour, does not apply to proceedings before the domestic tribunal. The evidence adduced before the domestic tribunal has to be taken into account and considered for disposing of an application under section 33 of the Act. No court can interfere with the decision of the domestic tribunal, except in cases of want of *bona fides*, unfair labour practice, victimisation, perversity or violation of the principles of natural justice. A tribunal cannot exercise a jurisdiction with which it is not vested, as, for example, to substitute the punishment of suspension for dismissal.[5] The tribunal may or may not grant permission to an employer as prayed but it is not competent for the tribunal to decide what the appropriate punishment should be."[6]

Temporary Workmen

The legal position regarding the discharge of workmen discussed above, pertains mainly to permanent workmen. "The termination of the services of a workman who is engaged on a temporary basis for a specific period, does not amount to a contravention of section 33, as his services are terminated by operation of law, without any action on the part of the employer and, if the employer notifies the termination of his services, he only invites the attention of the workman concerned to the terms of the agreement, explicit or implied."[7] "A temporary operative does not become permanent, even though his appointment is extended temporarily beyond the period of contract. But it is wrong to discharge a temporary worker retaining the services of a temporary worker junior to him."[8] "The employer has also the right to discharge a probationer, after the termination of his probationary period, if in his opinion, his services were not considered satisfactory."[9]

If a workman commits theft or assault or an act of insubordination or any act which may fall under the category of misconduct, the management has the right to suspend such a workman, pending inquiry and until permission of the tribunal under section 33 is granted. The Labour Appellate Tribunal has held that no permission of the tribunal is necessary for suspending a workman under section 22 of the Industrial Disputes (Appellate Tribunal) Act, 1950, which corresponds to section 33 of the Industrial Disputes Act, 1947.[10] Mr. K. C. Sen, Industrial Tribunal, Bombay, has held that "an order of suspension is ordinarily made in accordance with the ordinary conditions of service of employees and no conditions of service can be said to be altered to the prejudice of the workman concerned when he is suspended pending inquiry.[11] On the question of payment of wages to an employee during the period of suspension, the Industrial Tribunal of West Bengal, consisting of Mr. S. N. Modak, Mr. P. R. Mukherjee and Mr. M. C. Bannerjee, in its order in the case of *Champdany Jute Mills* and *Certain Workmen* (1952—I L.L.J., p. 554) has held that "an employer is not obliged to pay wages or any subsistence allowance during a period of suspension by way of security measure." Section 7 of the Payment of Wages Act, 1936, however, lays down that "the wages of an employed person shall be paid to him without deductions of any kind, except those authorised by or under this Act." It is, therefore, quite clear that a workman will have to be paid his wages for the period of his suspension.

"In the case of a misconduct, on the part of a workman, for which a criminal case is launched against him, the management is under no duty to await the result of a prosecution in order to discharge the workman for conduct subversive of discipline or to reinstate him on being discharged or acquitted in any such prosecution.[12] An acquittal in a criminal case is not considered a determining factor and a tribunal can consider the evidence against the workmen afresh and arrive at its own conclusions."[13]

The Bombay Bench of the Labour Appellate Tribunal has held that "permission to dismiss an employee can be given from a date prior to the order giving such permission, as, for example, from the date on which a workman was suspended pending the permission of the Tribunal."[14] This decision has been followed by a number of tribunals in Bombay and other States. But, in a recent decision, the Calcutta Bench of the Appellate Tribunal has held that "all that a tribunal is required to do is to accord the permission or to withhold it. If it accords the permission, it has no right to direct the company to discharge the workman from a date fixed by it. The permission only removes the bar and it is for the Company to decide as from when the discharge is to be effected and, in making the discharge, the company has to follow the rules and procedure laid down by its Standing Orders."[15] The position in this regard needs to be clarified.

"Section 33 is not contravened by the management by the declaration of a lockout. A lockout has not the effect of a discharge, as it does not automatically terminate the services of workmen. It does not also amount to punishment, for punishment presupposes an offence or misconduct.[16] But a change of work-load, during the pendency of a reference to a tribunal, changing the conditions of service to the detriment of workmen is a breach of section 33."[17]

Retrenchment

The question of large-scale retrenchment for trade reasons or for the introduction of rationalisation is also of vital importance to industry and labour. The guiding principles, on which permission for such retrenchment is to be granted by the tribunals, are now well settled by various decisions of the Labour Appellate Tribunal. "The onus of making out a case for retrenchment is on the management. If the management is able to establish a case for retrenchment, either on the ground of rationalisation, economy or other sufficient causes, the next question to consider would be the extent of retrenchment, which has to be considered under two sub-heads: (1) whether the action of the management in retrenching workmen is *bona fide*, and (2) whether, in determining the extent of retrenchment, it acts partially on extraneous considerations or improper motives. The increase of work-load on the workmen retained would be an instance of extraneous consideration. Similarly, victimisation or unfair labour practice in effecting retrenchment would be instances of improper motive."[18]

In the case of *Fertilisers and Chemicals, Travancore Ltd., Alwaye* and *Their Workmen* (1951—II L.L.J., p. 211), the Labour Appellate Tribunal held that the management should observe two important principles in effecting retrenchment, namely, (1) the principle of last come first go should be followed, (2) if there is a fresh recruitment and suitable retrenched employees are available, they should be given priority, the older hands being first taken into service. The Tribunal did not favour the idea that, upon re-employment, the services of the retrenched personnel before retrenchment and after re-employment should be treated as continuous for the purpose of seniority as this would have a prejudicial effect upon permanent staff.

However, in the case of *British Institute of Engineering Technology (India) Ltd., Bombay*, vs. *K. S. Rao and 20 others* (Application Miscellaneous (Bom.) No. 90 of 1952 decided on 6th May, 1952), in granting permission to retrench 19 employees, the Lower Appellate Tribunal laid down the following condition:

"Should the Institute decide to increase its staff in the future the retrenched persons will have prior claim to appointment according to seniority and if appointed will continue in service as if there had been no break."

Although there is apparent divergence in these two views, each case is decided on its own merits and the particular aspects of the case regarding the British Institute of Engineering Technology, cited above, must have required the imposition of such a condition. But the normal principle seems to be that laid down in the case of Fertilisers and Chemicals Travancore Ltd.

"On retrenchment, it is just and proper that the persons who are thrown out of employment for no fault of their own should be given some compensation in order to maintain themselves for a certain period during which they can secure other jobs. In many cases before the Labour Appellate Tribunal, compensation besides pay for the period of notice has been allowed."[19] "The measure of compensation on retrenchment would have to be determined by a tribunal, keeping in view the length of service, the nature of service and the reasonable period of time, within which the discharged workmen are likely to get other employment, having regard to the nature of the occupation."[20]

It has also been held that the mere fact that there has been a decrease in profits would not entitle a company to retrench its workmen. In the case of shortage of orders or for any trade reason of a temporary nature, which includes shortage of raw materials, it would not be permissible to retrench the workmen and deprive them totally of their maintenance. The workers can be played-off for some days in a month, if there is such a provision in the Standing Orders.[21] There will be no violation of section 33, when, acting in accordance with the Standing Orders, a company plays off its workers.[22]

Lock-out

Nothing can prevent the management from closing down an undertaking if it runs at a loss. The Madras High Court has held that, "if under the Constitution, a citizen has the right to carry on any business, he must be at liberty not to carry it on, if he so chooses. A person can no more be compelled to carry on a business than can a person be compelled to acquire or hold property. It is not open to canvass the grounds which prompted the owner to discontinue his business. The grounds may be actual loss or apprehended loss or disinclination to run the risk of running the business."[23] The Labour Appellate Tribunal has, however, laid down that, even in the case of closure, a mill is bound to apply for permission of the tribunal, if this occurs during the pendency of proceedings before it.[24]

Thus, the main principles regarding discharge, dismissal, retrenchment and closure have now been well settled by the judicial pronouncements of the Labour Appellate Tribunal, which has brought much needed uniformity in the decisions of the Industrial Tribunals in this country. It will be evident from the above survey of these decisions that the disability imposed upon employers by section 33 of the Industrial Disputes Act, while protecting the workers from the unfair labour practice of a few capricious and vindictive employers, does not adversely affect the interests of the general run of employers of normal integrity. Of course, the delay in the disposal of applications under section 33 inconveniences the managements to a certain extent. Even though the tribunals dispose of such applications expeditiously, some reasonable delay is bound to occur when the matters are to be decided judicially. But the opportunity such applications offer for redressing individual and collective grievances, thus reducing tension in the labour-management relations, amply compensates for the inconvenience caused.

Section 33 can safeguard the interests of the workers only during the pendency of adjudication proceedings before a tribunal. A collective dispute might lead to an adjudication. The discharge or dismissal of a prominent union leader might equally well set the adjudication machinery in motion. No such safety valve is open to an ordinary worker who rightly or wrongly believes that he has been the victim of a wrongful dismissal.

It would not be out of place here to make a suggestion for being considered for what it is worth. At present, the workers can have recourse to section 33A during the period of pendency of proceedings before a tribunal. When no such proceedings are pending, the individual worker or workers who are aggrieved by the discharge or dismissal orders of their employers should be able to approach the tribunals direct, if the Government Labour Officer, after preliminary investigation, certifies that the complaints are not frivolous and that there are *prima facie* grounds for such complaints. This would, of course, increase the work of the tribunals enormously, but will also pay rich dividends by prompt redress of grievances, thus paving the way for better employer-employee relations. The smouldering embers of individual grievances, though they may appear trifling to short-sighted vision, may, in the long run, explode into collective violence and strikes. I, therefore, cannot conclude this article on a better note than that struck by Mr. W. L. McKenzie King, the late Prime Minister of Canada, in his illuminating book entitled *Industry and Humanity*. He said:

"The germ of discontent is like any other germ; it grows and reproduces and multiplies and there is no germ so virulent as that of unredressed wrong, whether the wrong be real or imaginary. To neglect investigation or to delay adjustment merely aggravates the case. A continual adjustment of little things is better than a grand adjustment of many things accumulated over a series of years. The latter usually comes too late. Something in the nature of continuous administrative machinery for the orderly disposition of controversies is as necessary for the establishment of law and order in industry as in the State. There is the same need for definition of rights and obligations, the formulation and interpretation of rules, and authoritative decisions in matters of controversy."

TRENDS OF FACTORY WORKERS' EARNINGS

A series of index numbers showing the trends of earnings of factory workers in India during the years 1944 to 1949, compiled by the Labour Bureau, with 1939 as base, has been published, in an article in the February 1953 issue of the *Indian Labour Gazette*. The index numbers have been compiled on the basis of data relating to the annual earnings of workers collected under the Payment of Wages Act. The industries covered account for nearly five-sixths of the total factory employment in the country.

The index which stood at 211 in 1946 (1939=100), showed an increase of 46 points in 1947, 52 points in 1948 and another 37 points in 1949 and reached the peak figure of 346 in 1949. On a comparison of the index of eanings with the interim all-India Working Class Cost of Living Index, now being published by the Labour Bureau, it is estimated that the real earnings of factory workers increased by 22 per cent. between 1944 and 1949. In the absence of an all-India cost of living index with a pre-war base, it has not been possible to compile an index of real earnings on 1939 as base. Considering, however, the phenomenal increases in the cost of living index numbers during the period 1939 to 1944 at some of the major centres such as Bombay, Ahmedabad, Madras, Nagpur and Kanpur, and the comparatively low rise in workers' earnings during that period, it is inferred that real earnings of factory workers might have had a considerable fall during that period. Though there was a sharp and continuous rise in the real earnings of workers between the years 1946 and 1949, the indications are that, compared to 1939, the level of real earnings in 1949 was a little lower.

AMERICAN INTERNATIONAL TRADE POLICY

EXTENSION OF RECIPROCAL TRADE ACT URGED

CERTAIN developments of significance to the trade of the United States with the rest of the world are in the offing. The most important of them relates to the demand of President Eisenhower to continue the present U.S. Reciprocal Trade Agreements Act for one more year, pending a thorough and comprehensive re-examination of the economic foreign policy of the United States. The Ways and Means Committee of the U.S. House of Representatives has begun public hearings on a Bill to make agreements for reducing tariffs under the Reciprocal Trade Agreements Programme, which has remained the corner-stone of U.S. trade policy for nearly two decades now.

The Reciprocal Trade Agreements Act, 1934, empowers the President to reduce duties on imports from all foreign countries which do not discriminate against the commerce of the U.S. It has since been renewed from time to time until June, 1951, when it was further renewed upto 11th June, 1953. In 1948, an amendment was made for the determination by the Tariff Commission of "peril points" below which the Executive should not reduce the import duty. Though this amendment was repealed in 1949, it was reintroduced on 16th June, 1951.

The Bill under consideration of the Ways and Means Commission now restricts, however, the freedom of the President to reach international trade agreements. In the past, possible damage to a domestic industry or national security constituted sufficient cause to withdraw certain tariff concessions to foreign products. In the proposed Bill, the question of employment in the domestic field would also be taken into consideration in extending or modifying tariff concessions. If, for instance, it were found that by showing tariff concessions to imports of certain products, the employment in the corresponding domestic industry would be adversely affected, the concessions might not be given; if they had already been given, they might even be withdrawn. Further, the President's power to veto recommendations of the Tariff Commission, in regard to concessions granted to competing import products, is also sought to be removed. It may be noted that, through the international trade programme, the U.S. has entered into reciprocal agreements with more than 40 countries to cut tariffs and other barriers to trade. The trade of these nations accounts for 80 per cent. of the world's total trade. The effect of the Programme is reflected in the fact that U.S. trade with countries with which reciprocal agreements have been reached has increased twice as fast as that with other nations.

Although concessions have been granted on thousands of imported commodities, only less than 50 official investigations have been held or referred to the Tariff Commission so far. Out of these, the Commission found that that it could justify only five claims as having caused injury to U.S. producers. Of these five, two were not accepted by the President. In other words, the tariff concessions were modified only in regard to three cases. All this clearly shows that tariff concessions once given are not easily whittled down in U.S. administration to please the domestic manufacturers and that, generally speaking, the Reciprocal Trade Agreements have worked well to the satisfaction of the countries concerned.

Another important development in the sphere of U.S. trade with foreign countries relates to the extension of Mutual Security Administration. The Sub-Committee on Foreign Economic Policy, under the chairmanship of New York Republican Mr. Jacob K. Javits, is holding hearings to consider extension of the M.S.A. Mr. Kenneth H. Campbell, representing 3,000 chambers of commerce and trade organisations throughout the U.S., made these points before the Committee:

(1) U.S. aid should serve to increase production in other nations;

(2) economic aid should not be suspended until trade completely replaces aid and

(3) the U.S. Chamber of Commerce favours simplification of customs regulations, treaties and agreements to protect U.S. investments abroad, and private U.S. investments as the basis for aid to less developed areas.

Mr. W. S. Swingle, President of the National Foreign Trade Council, told the Sub-Committee that his organisation would support a three-year extension of the Reciprocal Trade Agreements Act without amendments. He opposed "any new tariff duties, import taxes or other devices designed to increase the present impediments to the flow of imports" into the U.S. Thus the general consensus of opinion among trade circles appears to be in favour of not adding further to the existing tariff barriers.

We are told that the U.S. Mutual Security Agency has already drafted plans to extend its private investment guarantee programme to some more countries. At present, it is guaranteeing investments in 15 countries. Under the Programme, the U.S. offers to new private investment abroad insurance protection against the risk of loss through confiscation or expropriation. Although there are impediments to the flow of private investments to other parts of the world, officials in the U.S. are encouraged to find that the countries in need of such investments are now in a better position to appreciate the importance of creating favourable climate for attracting foreign private capital.

According to U.S. officials, it is a part of U.S. foreign economic policy to encourage investment not only by American private investors but also by private enterprise of other countries in the West. Its investment programme is twofold: First, to improve the climate for private enterprise in other free countries and, second, to encourage overseas investment by American companies and individuals. In order to accomplish the first objective, the U.S. is seeking to expand its negotiations of commercial treaties. Also wider use of private enterprise will be made in foreign aid and technical assistance programmes. Specific information on overseas investment opportunities and general information about investment conditions are being made available to U.S. business men by the Commerce Department. As a complementary operation, a U.S. Government liaison service is being operated in many countries to aid foreign business men in getting in touch with American business men who have capital to invest or who are interested in licensing the manufacture of their products abroad.

From these moves, it is clear that the fear that President Eisenhower's administration might mark the beginning of an era of comparative isolationism of the U.S. is unwarranted. It is true that, during election time, some of the Republicans promised relief to the U.S. taxpayer through reduction of foreign aid and greater protection to industries. But when they were voted to power, they could not but eschew their former utterings, for, in this democratic world, a palatial building amidst thatchments cannot hope to exist long in isolation with all its splendour. It is being increasingly recognised in the U.S. that the more fortunate among the nations of the world, by aiding the less fortunate, are not only helping the latter to raise their standards of living but also maintaining, if not improving, their own standards.

LAC INDUSTRY IN INDIA

The Report of the Indian Lac Cess Committee for the year 1951-52, just published, follows the pattern of its previous year's report. It gives a bright record of the performance of the Indian lac industry during the year 1951-52, as compared with that in the previous few years. Thus, the production of lac during the year under review was as much as 1,219,400 maunds, as against 1,002,900 maunds in 1950-51, 1,166,250 maunds in 1949-50 and 827,200 maunds in 1948-49. The normal yield based on the average production during the period of ten years before the war is 1,151,000 maunds. Of the aggregate production of 1,219,400 maunds, Bihar accounted for 666,000 maunds, that is, more than 50 per cent. The runners-up were Madhya Pradesh, with a total production of 357,000 maunds and West Bengal with 59,000 maunds. The total production of Vindhya Pradesh was 47,650 maunds, Assam 30,000 maunds, Bombay 16,000 maunds, Orissa 15,750 maunds, Uttar Pradesh 9,400 maunds and other Indian States 18,600 maunds.

An analysis of export figures discloses that, during 1951-52, they were the highest in value so far recorded. The total exports of all kinds of lac during the year were 712,736 cwts. valued at Rs. 14.83 crores. This compares with 660,758 cwts. valued at Rs. 11.87 crores exported in 1950-51 and 455,304 cwts. valued at Rs. 8.08 crores in 1949-50. The U.S. imported the highest amount of lac, that is, 235,526 cwts. valued at Rs. 4.85 crores. It purchased the largest quantity of seed lac, the exact quantity being 93,075 cwts. The U.K. which came next, among importers, accounted for 162,738 cwts. of lac, valued at Rs. 3.57 crores. It was the most important purchaser of shellac, the quantity taken up by it in 1951-52 being 1,43,702 cwts. The following table gives exports during 1951-52 to various countries from the port of Calcutta and their respective values:

Country	Quantity Cwts.	Value Rs.
U.S.A.	2,35,526	4,85,88,389
U.K.	1,62,738	3,57,30,629
U.S.S.R.	84,667	1,95,91,279
Germany	71,956	80,32,653
Brazil	37,048	93,06,014
France	17,689	36,02,301
Sweden	15,975	26,95,144
Australia	15,827	37,23,206
Italy	13,495	32,32,739
Argentina	8,956	22,93,517
Hong Kong	7,576	19,88,292
Belgium	5,478	12,04,773
Canada	4,907	9,61,772
Other countries	31,171	74,38,983
Total for 1951-52 ...	7,12,649	14,83,89,741
Total for 1950-51 ...	6,60,758	11,87,52,168
Total for 1949-50 ...	4,55,304	8,08,45,020
Total for 1948-49 ...	4,90,623	8,67,81,417

Exports from Bombay to other countries amounted to 87 cwts. valued at Rs. 25,163, according to figures supplied by the Bombay Chamber of Commerce.

The aggregate imports of stick and seed, shell and button as well as other kinds of lac accounted for 39,053 cwts. valued at Rs. 34.67 lakhs during 1951-52, as compared with 69,511 cwts. valued at Rs. 65.16 lakhs during 1949-50 and 1,20,973 cwts. valued at Rs. 1.06 crore during 1948-49. The main source of these imports was Thailand which accounted for 73 per cent. of the total imports.

The Report also gives monthly average prices of some of the important varieties of lac during the year. A brief review discloses that pure button lac, which stood at Rs. 157-8 per maund in April, 1931, shot up to Rs. 174-3 in September, 1951, but declined gradually to Rs. 109 in March, 1952. Shellac fluctuated between Rs. 137 and Rs. 170-3, before closing at Rs. 194 in March, 1952. It may, however, be noted that the fall in price continued in the remaining months of 1952. Shellac was quoted at Rs. 68 per maund in December, 1952, in the Calcutta market, as against Rs. 140 in January, 1952. The price in the London market was £8 in December, 1952, as against £19 a year before. These developments in 1952 affected the cultivators and retarded the Lac Cess Committee's plan for expansion of its cultivation.

During the year under review, a good deal of emphasis was laid on attempts to increase the output of lac in India by increasing production in areas where cultivation was already taking place on a large scale and stimulating production in areas where cultivation of lac was low or practically non-existent. The Madhya Bharat Government started taking interest in lac cultivation and the Forest Department initiated some work during the year. The most vigorous attempt at bringing idle hosts under cultivation is being done by the Forest Department in Madhya Pradesh. The cultivation in Bihar is showing some increase. In West Bengal the vast *palas* areas in the northern portions of the Bankura District remain to be brought under cultivation. In Assam, steps are being taken to have the cultivation extended to the plain areas. The States of Uttar Pradesh, Bombay, Punjab (I), Mysore and Madras are also taking interest in extending the cultivation in their respective areas. The Forest Department in Uttar Pradesh has initiated experimental cultivation in some of the Divisions with the object of extending it later on. In Bombay, the Forest Department is also trying lac cultivation on an experimental scale and has also a scheme for training the personnel at Namkum. The Punjab Government has also initiated the cultivation in some of the Divisions like Ambala, Amritsar, Hoshiarpur and Karnal.

The role of the lac industry in the country's economy is quite valuable. It provides employment to no less than three million workers, not to speak of the thousands of workers engaged in subsequent stages of processing this commodity. Shellac is an essential ingredient in industrial processes such as gramophones, varnish, furniture trade, etc. The industry has two important rivals. One is Thailand, which is producing a sizable quantity of lac, and the other is a synthetic product which has proved itself to be an effective substitute for shellac. If properly organised and prices are competitive, the Indian lac industry should be able to hold its prominent position in world trade.

SALES TAX ON TOBACCO

A Bill to levy sales tax on certain kinds of manufactured tobacco was adopted by the Madras Legislative Assembly a few days ago. It will be recalled that, last month, the Bombay Government also enacted a Bill, amending the law relating to sales tax in the State, which withdrew the exemption from general tax on sales of tobacco. The Mysore Legislative Assembly too adopted a Bill the other day amending the Mysore Sales Tax Act, 1948, providing for a levy of a higher rate of sales tax on certain kinds of manufactured tobacco.

The levy of sales tax on tobacco in Madras and Bombay was necessitated, consequent on the termination of arrangements between them and the Government of India, under which they were receiving compensation for not levying any tax on tobacco; Bombay was receiving Rs. 54 lakhs and Madras Rs. 56 lakhs as compensation. The Finance Commission, which went into the question of allocation of revenues between the Centre and the Units, recommended that a part of the excise duty on this commodity should be distributed to the States. It urged freedom to the States to levy tax on it as they thought fit. In the light of this recommendation, it felt that it would be anomalous to continue compensation to these States in lieu of tax on tobacco. It, therefore, recommended the termination of the payment of compensation by the Centre.

RAILWAY FINANCE AND BUDGETING

IMPLICATIONS OF 1949 CONVENTION

(Mr. N. C. DEB, Director, Finance, Railway Board)

THE vital importance of the railways to our national economy needs hardly any emphasis. They constitute the nation's largest public utility industrial undertaking with a capital investment of over Rs. 860 crores, earning about Rs. 275 crores and spending about Rs. 230 crores in a year. The extent to which railway finance plays a part in the national economy can be gauged from the fact that the railway receipts and expenditure form about 34 per cent. and 27 per cent., respectively, of the Central and States Governments' total income and expenditure.

The story of railway finance, besides chronicling the difficulties which the railways in India had to face in the initial stages of construction, is woven round three main strands, viz., (*a*) progressive extension of State ownership and State management, (*b*) measures to ensure the financial stability of the undertaking, and (*c*) the changing concept of the role it has to play in the economy and welfare of the country.

The political background of the country has left a deep impress on its railways. The need for a rapid means of locomotion was felt by the Government of India, under the East India Company, for maintaining their power and authority in the country, as well as for exporting raw materials to England and for transporting imported manufactured goods from the ports to the hinterland. The State could not, however, bring itself to engage in commercial activity which was, in the contemporary political and economic philosophy of *laissez faire*, considered to be the legitimate sphere of private enterprise. Indigenous capital was shy, and British capital would run the risk of investment in India only on its own terms. After the initial hesitation in evolving a policy in regard to construction of railways in India, it was Lord Dalhousie's famous despatch of 1853 which for the first time stimulated construction of trunk lines in the country by Guaranteed Companies incorporated in England through free grant of land and a guaranteed rate of interest ranging from 4½ per cent. to 5 per cent. payable at a preferential rate of exchange. This method of financing construction prevailed till 1869, by which time it was found that this system was far too onerous from the point of view of the Indian taxpayer. The evils inherent in the guarantee of minimum interest, breeding extravagance on the part of the companies, became too apparent and the Government, thereafter, embarked on a new policy of State enterprise in the field of railway construction. The railways, however, continued to be unremunerative and the country-wide famines of 1874-79 taxed the Government's resources to such an extent that it had to abondon this constructive activity. In the eighties of the last century, the Government again reverted to the guarantee system, but at less onerous terms with lower rate of interest and with provision for a fair share in the profits earned. When the contracts with the old guaranteed companies expired, they were either renewed on the new basis or the lines were purchased and taken over for State management.

Process of Nationalisation

The beginning of this century marked a turn in the fortunes of Indian railways. In the first decade, the railways for the first time started showing profits. In the second, however, under the severe strain of the First World War, they came very near to breaking point, giving rise to serious problems in the administrative and financial spheres. The Acworth Committee, which was appointed in 1920 to investigate into these problems, gave a clear verdict in favour of State ownership and State management, thus laying the foundation of India's largest nationalised undertaking. This recommendation was accepted by Government and implemented with vigor and promptitude. The E.I. and the G.I.P., two of the largest guaranteed railways in India, were taken over by the Government for direct management in 1925. The process of nationalisation, although halted during the economic depression of the thirties, was completed by 1944 by termination of the contracts with the remaining guaranteed companies. Railways in Princely India, of some 7,000 miles, still remained outside the control of the Government of India. With the integration with the Union of the federal functions of these States with effect from 1st April, 1950, the ownership and management of all these railway lines also came to be transferred to the control of the Union. Today, barring about 800 miles of odd narrow-gauge lines, the entire railway system in India is a unified undertaking owned and managed entirely by the Union Government.

Separation Convention of 1924

The evolution of the policy of State ownership and State management had also focussed attention on the scope and constitution of the Central Authority as well as on financial relationship between Railways and the General Finances of the Central Government. In regard to the first, in view of the growing responsibilities of the State in railway management and control, the Railway Board, which was constituted for the first time in 1905, was expanded in 1925, with a Chief Commissioner at its head and as the sole technical adviser to the Government, assisted by three functional members. The other important change was the creation of the post of Financial Commissioner exercising full financial authority of the Government of India and full control over railway finances from within as an ex-officio member of the Railway Board. As regards the second, the Acworth Committee, after a very careful study of the conditions prevailing in India and parallel organisations in other countries, recommended the separation of Railway Finance from General Finance. This was a recommendation of far-reaching significance intended to free the railways, which were a commercial undertaking, from the trammels of a system of budgetary control designed to meet the needs of the spending departments of Governments. This recommendation found concrete shape three years later in the Separation Convention of 1924 which stipulated that, besides the interest liability on the capital at charge, the Railways would contribute to the General Revenues an additional 1 per cent. on the capital of commercial lines plus one-fifth of the surplus profits earned. The balance of the surplus profits was to be credited to the Railway Reserve Fund, provided that if in any year, the amount available for transfer to the Railway Reserve Fund should exceed Rs. 3 crores, one-third of the excess would be paid to the General Revenues. Under this arrangement, the loss on strategic lines was to be borne by the General Finances. The Railway Reserve was to be used to secure the payment of the annual contribution, to provide if necessary for arrears of depreciation and for writing down capital and generally to strengthen the financial position of the railways. A Depreciation Reserve Fund was also instituted, with effect from 1st April, 1924, to provide for expenditure on renewal and replacement of assets when due.

Reserves Depleted

After the separation, the financial results of the Indian State-owned railways were satisfactory for the first five years. During this period, the railways were able to earn enough to meet the interest on their capital outlay and make suitable provisions for their Depreciation and Revenue Reserve Funds and also contribute substantially for the relief of the general taxpayer. But during the next five years coinciding with the world-wide economic depression, the picture changed completely and earnings were insufficient to discharge the liabilities of the Railways to the General Revenues. In 1929-30, the net surplus after meeting the interest charges was not sufficient to meet the contribution, and from 1930-31 to 1935-36, the net receipts were insufficient even to meet the interest charges. As a result, the Railway Reserve Fund was depleted and interest payments were made by taking loans from the Depreciation Reserve Fund. At the end of 1936-37, loans from the Depreciation Reserve Fund to meet deficits stood at Rs. 30.29 crores, and arrears of contribution to General Revenues stood at Rs. 30.74 crores. A moratorium had to be declared in 1937, and again extended in 1939, suspending repayments to the Depreciation Reserve Fund and all payments of contributions to General Revenues. The Second World War, however, brought prosperity to the railways, and by 1942-43, the entire loan taken from the Depreciation Fund as well as the arrear contributions to General Revenues were fully paid up.

The Convention for separation of railway finance from general finance had two-fold objects, viz., (*a*) relieving the general budget from violent fluctuations and (*b*) enabling the railways to carry a continuous railway policy suited to its own end. The first object underlying the Convention was to some extent fulfilled in that the General Revenues were assured of a more or less steady return, and fluctuations in the general budget, so far as they related to contributions from railways, were reduced to the minimum possible, though not altogether eliminated. Even during the years of depression, when the railways did not earn enough to meet the full obligation under the 1924 Convention, the interest charges were paid in full to General Finance, either from the Revenue Reserve Fund or by taking loans from the Depreciation Fund. It can perhaps be assumed that, had there been no separation, the deficits of these years would have been borne by the Central Government and withdrawals from the Depreciation Fund would have been used for legitimate purposes of renewals and replacements only. The second object of enabling the railways to follow a continuous railway policy, irrespective of the vicissitudes of the Central budget, does not appear to have been achieved. In spite of large appropriations to the Depreciation Reserve Fund, the railways had to line up with the policy laid down by General Finance of restricting expenditure to the absolute minimum requirements in the period of depression and to curtail considerably their programme of renewals and replacements.

The Separation Convention of 1924 provided for a review after three years. A committee was accordingly appointed in 1928, but it did not pursue the enquiries in view of the constitutional changes then impending. Another committee appointed in 1943 too found it impossible to foresee the conditions which might prevail after the war and, in recommending the postponement of the permanent revision of the Convention suggested that, until a new Convention was adopted, the allocation of the surplus should be determined every year on consideration of the respective needs of the Railways and the General Revenues. This *ad hoc* distribution of surpluses between the Railways and the General Revenues continued until 1949-50 and, during this period, General Revenues received an aggregate contribution of Rs. 142 crores out of the total surplus of Rs. 212 crores in railway working, against Rs. 109 crores due under the previous formula which had been suspended. The permanent revision of the Convention was taken in hand, as soon as the conditions prevailing immediately after the war and Partition had become comparatively more stable, through a committee of the Legislature and a new Convention was adopted in December, 1949, to be effective for five years from 1st April, 1950.

Revised Financial Convention

The new Convention stipulates that the separation of Railway Finance from General Finance will continue, but the subsisting relationship between them should be so altered as to give the general taxpayer the status of the sole shareholder in the railway undertaking entitled to a guaranteed dividend of 4 per cent. on the loan capital invested in the undertaking. The revised Convention is a great step forward in the development of railway financial policy. The old formula involving an indeterminate contribution to General Revenues is now replaced by a simpler and more easily workable arrangement, in the shape of a fixed dividend on the capital investment, which assures to the General Revenues, over the period agreed upon, a fixed annual return. This would facilitate not merely forward economic planning in the civil field, but assist at the same time the railway undertaking in building up its reserves and planning and implementing a comprehensive programme of rehabilitation for overtaking the heavy arrears of renewals, replacements and neglected maintenance as well as of improvement and expansion of railway service. The fulfilment of this objective is seen from the fact that, since the time the Convention has been in operation, it has been possible to earmark large sums of money for implementing the rehabilitation programme of the railways. Thus a sum of Rs. 32 crores was earmarked in 1950-51, Rs. 43 crores in 1951-52 and Rs. 57 crores in 1952-53. In spite of these large amounts having been diverted towards renewals and replacements of railway assets, the Reserve Funds have been strengthened; they increased from Rs. 130 crores at the end of 1949-50 to Rs. 178 crores at the end of 1951-52.

Another important provision contained in this Convention is the constitution of a Railway Development Fund to finance expenditure on the construction of new lines which are necessary but unremunerative, as well as for meeting expenditure on passenger amenities and labour welfare works as also expenditure on unremunerative projects for improving opera-

tional efficiency in excess over Rs. 3 lakhs. This change may rightly be considered as an important landmark in the history of railway construction in India. Hitherto, railway development had been influenced mainly by commercial considerations. In the case of branch and feeder lines, if the construction of such a line was not remunerative but was taken in hand at the instance of a State Government or local body in purely local interests, the construction was undertaken by Central Government either on a guarantee from them to make good the loss sustained from year to year or such proportion of the capital expenditure being borne by them as to make the net revenue return economical on the share of capital invested by the Central Government. With the implementation of the new Convention, this policy has undergone a radical change. In the present altered conditions, a system of nationalised railways must fulfil a positive and complementary role in the general economic development of the country, and the Central Government being responsible for rail transport has to undertake the obligations to extend rail facilities in undeveloped areas, unhampered too much by considerations of the adequacy of the return on the capital invested. The commercial principle of ploughing back surplus revenues of prosperous years for expansion has thus come to be an integral part of the new financial policy of the railways.

Contribution to Depreciation

The new Convention also lays down that the contribution to the Depreciation Reserve Fund should be a minimum of Rs. 15 crores per annum and that the full cost of replacement, including the improvement and inflationary elements in it should be charged to the Depreciation Fund. The creation of a proper Depreciation Reserve Fund was one of the financial reforms included in the scheme of separation of Railway from General Finances of the country in 1924. Renewal Reserve Funds had existed before 1875 on several of the old guaranteed railway companies but were abolished, being either inconsistent with the terms of their contracts or because the Government found it difficult to meet the guaranteed rate of interest after meeting the depreciation charges. The serious and unavoidable postponement of renewals of permanent-way and rolling stock during the First World War brought the question of reserve fund again into prominence and, on the recommendation of the Acworth Committee, which criticised Government's failure to establish such a reserve, a depreciation fund was instituted on 1st April, 1924 in railways owned and worked by the State. The Fund was formed by setting aside from current revenues every year a sum which would equal the original cost of each unit of wasting assets at the end of its normal life. This procedure involved, in actual practice, the maintenance of elaborate accounts and, with a view to simplification, the contribution has been made yearly at a flat rate of one-sixtieth of the capital at charge with effect from 1935-36, and at this rate the contribution credited to Depreciation Reserve Fund in the year 1949-50 amounted to about Rs. 11 crores. During the three years the new Convention has been in operation, an annual contributioin of Rs. 30 crores has been made to the Depreciation Reserve Fund. The raising of the rate is based on the consideration that present-day replacement costs bear no relation either to the original costs of acquisition or the estimated lives of the assets—the two factors which have hitherto determined the rate of contribution. The present disparity between the original and replacement costs is considerable, and for certain assets like locomotives, railways are withdrawing eight rupees for every rupee put into the fund in respect of these assets upto the date of replacement. If the practice followed hitherto of making the contributions to the Depreciation Reserve Fund on the historical cost of the assets had been continued, the Fund would have been depleted in no time in financing the arrears of replacement at the present-day price levels. The provision made in the new Convention that the full cost of replacement, including the improvement element, should be charged to the Depreciation Reserve Fund may be open to criticism, as the improvement element indicates increased earning capacity and might, according to the orthodox rules of accountancy, be a capital charge. In these days of rapid scientific progress, however, any new equipment is seldom an exact replica of the old one which it replaces, and it is not unjustified if improvements, which are nowadays concomitant to all replacements, are also financed from the Depreciation Fund which in fact is only a renewal and replacement fund. Incidentally, this also prevents over-capitalisation of the undertaking.

By agreeing upon a fixed dividend payable to General Revenues, the new Convention has bestowed greater freedom on the railways in the regulation of their day-to-day financial transactions, e.g., framing the rules of allocation of expenditure, etc., which under the old Convention were controlled by General Finance, so far as they affected the calculation of the surplus in which the latter was interested. It is, however, to be observed that even the new Convention does not seek to bring about a real separation of Railway from General Finances. Although two distinct accounts are maintained, it does not effect a separation of the ways and means parts of the two wings of the Government. General Finance acts as the banker for railways and the reserve funds of the railways are deposited with their banker who is free to utilise them for his ways and means financing. General Finance, however, pays to the railways interest on the balances accumulated in these reserve funds. This involves a certain amount of limitation on the freedom of the railways to draw upon their balances, according to their requirements.

Further, all loan capital required by railways for expenditure of a capital nature is raised only by General Finances as an integral part of their resources. The over-capitalisation of Indian railways, arising mainly out of the history of their ownership, has been commented on adversely by various expert committees from time to time. The Indian Railway Enquiry Committee (1947) pointed out that out of the total capital-at-charge of railways, about Rs. 68 crores represented intangible assets, which should be gradually written off through a Debt Redemption Fund to be built up by contributions from revenue at the rate of 1 per cent. of the gross receipts. The capital invested on railways being a part of the Public Debt of India, no large-scale writing down of railways' capital-at-charge has, however, been possible so far.

Annual Railway Budget

The railways are a monopolistic undertaking with vast financial resources and economic power and, therefore, their public accountability is a matter of great importance in a democracy. This is particularly so when, within limits, the Railway Administrations can manipulate fares and freight rates to augment revenues. Parliamentary control can be most effective through control of expenditure and this has been provided through budget and by an examination of the Appropriation Accounts by the Public Accounts Committee. The annual budget also provides an effective means in the hands of the Railway Administrations and the central authority in regulating the working of the railways and improving their operating efficiency. The primary purpose of an annual budget for the railways is to develop a forecast of traffic volume and financial results and to establish systematic controls to achieve such results. The annual budget, in effect, consists of three parts, viz., a revenue budget, a rehabilitation and capital improvement budget and a financial budget showing the relationship between anticipated revenue receipts and operational expenses, and other long-range financial requirements which might project into the future year. The preparation of an operating and financial budget on a sound basis requires skill and research. While it is true that the central authority or the head of each Railway Administration has to take overall decisions, every employee from departmental heads down to supervisors in the lower brackets, has control over expenses in his own area of responsibilities and, to a proportionate degree, is in a position to contribute to the economical working of his railway. In order to achieve maximum results in this field, there must be co-operation and enthusiasm in a large measure on the part of each employee and this spirit can be fostered and maintained through the operating budget if it is prepared and administered efficiently.

Under the Separation Convention, a railway budget was presented to the Legislature for the first time in 1925-26 separately from the general budget. The total expenditure, amounting to Rs. 87 crores, excluding the expenditure on the central authority, was covered by only five demands for grants, two for working expenses, one for appropriation to Depreciation Fund and two for works expenditure. Control of operational expenses of this magnitude through these two demands only was not found very effective. From 1934-35, working expenses were rearranged into eight separate demands corresponding to each department of railway working. This rearrangement of the demands, however, placed severe restrictions on the General Managers powers of reappropriation which hampered efficient railway operation. To remedy the difficulties arising from the rigidity of these restrictions, a convention was established that the Railway Administrations could set off excess expenditure under any of the demands against savings anticipated in other demands of working expenses. The Public Accounts Committee, which investigated into the arrangements of budget demands, however, thought that the effect of this convention was tantamount to re-appropriations being allowed between the eight different demands which was contrary to all canons of budgetary and financial control. With a view to rectifying these defects, the demands were rearranged and seven demands are now operated upon for working expenses, one each for administration, repairs and maintenance, operating expenses—staff, operating expenses—fuel, operating expenses—other than staff and fuel, miscellaneous expenses and labour welfare. This rearrangement is more rational than the previous one and secures reasonable balance between the needs of administrative flexibility and efficient financial control. As the largest employer of labour, the railways are spending enormous sums of money on labour welfare services, and a separate demand under "working expenses" for labour welfare expenditure was introduced from 1950-51 to exhibit in one place the provisions made for such expenditure which was previously scattered over the various revenue demands. Similarly, to enable Parliament to watch the interests of labour, a separate demand head has also been opened for labour welfare works, such as quarters, hospitals and other amenities for staff, e.g., institutes, etc. In recent years, great emphasis has also been laid on the measures taken to ameliorate the conditions of railway passengers, particularly the third class passengers, which had been neglected in the old company days. For this purpose, a Betterment Fund was created in 1946, but under the new Convention, this fund has been merged in the Development Fund with a definite stipulation that, for five years from 1950-51, a sum of Rs. 3 crores should be made available every year from the new fund for expenditure on passenger amenities. This is provided for under a separate demand, but along with all other expenditure financed from the Development Fund.

The Railway estimates are presented to both the House of the People and the Council of States and there is general discussion in both the Houses on these estimates. The Lower House only has, however, the right to vote supplies. After all the demands have been voted, an Appropriation Bill is presented to authorise the Government to withdraw necessary moneys from the Consolidated Fund of India. In the course of discussion of the Appropriation Bill, the House can again raise any question of general policy or public importance, but, by convention, such discussions at this stage are confined within narrow limits. The Appropriation Bill, after it is passed by the Lower House, then goes to the Upper House which cannot reject the Bill, but can return it to the Lower House with such recommendations as it may like to make. After the Appropriation Bill has been passed by both the Houses, the budget estimates stand approved by Parliament to be operated upon by the railways, and the central authority then communicates the budget sanctions to each railway through "budget orders." The annual operating budget, as sanctioned by Parliament and as may be revised by the same authority from time to time during the financial year depending on sharp business changes or basic changes in wage rates, material prices, etc., becomes the guide post to the railways in working out appropriations on a month-to-month basis. The anticipated revenues and expenses are compared with the actual figures each month. At the end of the year, a comprehensive review is made of the total expenditure incurred during the year against the grants voted by Parliament, through appropriation accounts and submitted to the Comptroller and Auditor-General of India for his scrutiny. The Railway Appropriation Accounts as well as the Auditor-General's report on financial irregularities relating to the railways are subjected to a searching examination by the Public Accounts Committee as in the case of any other ministry.

A Suggestion

Unlike most other spending departments of Government, railway expenditure is largely influenced by the need to carry traffic offering, and the non-availability of grants based on forecasts made in advance cannot prevent a railway administration from carrying out the service expected of it. Whether the Appropriation Accounts of the railways, the receipts and expenditure of which are extremely sensitive to vagaries of climate and gusts of wind that affect the economic barometer of the country, should be subjected to a system of scrutiny, against Parliamentary grants, comparable to those for a purely spending ministry is a question on which opinions may differ. This matter, however, is linked with the more fundamental question as to whether the railways should be managed and administered as a part of a ministry of the Government or by an autonomous body subject only to general control of Government and Parliament. The provisions regarding setting up of a Federal Railway Authority of the kind envisaged in the Government of India Act, 1935, were rightly excluded from free India's Constitution, but the experience of other democratic countries in the management of their nationalised undertakings, including the railways, as well as our own experience in the running of State enterprises, will perhaps lead some day to a reopening of the important and intricate question of the form that the central controlling authority for railways should take.

Notices

THE SASSOON SPINNING & WEAVING COMPANY, LIMITED

NOTICE

THE EIGHTIETH ORDINARY GENERAL Meeting of the Shareholders of the Company will be held at the Registered Office, Maneckji Wadia Building, 127, Mahatma Gandhi Road, Fort, Bombay, on Tuesday the 28th April, 1953, at 4-0 p.m. (S.T.), to transact the following business:—

1. To receive and adopt the Directors' Report, Audited Balance Sheet and Profit and Loss Account for the year ended 31st December, 1952.
2. To declare a Dividend.
3. To elect a Director in place of Mr. M. N. Pochkhanawalla who retires by rotation and is eligible for re-election.
4. To elect a Director in place of Mr. Kaushikprasad Chandulal who retires by rotation and is eligible for re-election.
5. To elect a Director in place of Mr. Arvind N. Mafatlal who retains office till the General Meeting under Company's Articles of Association but is eligible for re-election.
6. To elect a Director in place of Mr. Yogindra N. Mafatlal who retains office till the General Meeting under Company's Articles of Association but is eligible for re-election.
7. To appoint Auditors for the current year and fix their remuneration.

The Transfer Books of the Company will be closed from Friday the 10th April, to Friday the 1st May, 1953 (both days inclusive).

By Order of the Board of Directors,
M. G. INVESTMENT CORPORATION LTD.,
N. MAFATLAL,
Director,
Managing Agents.

MANECKJI WADIA BUILDING,
127, MAHATMA GANDHI ROAD, FORT,
BOMBAY, *17th March*, 1953.

N.B.—If Dividend, as recommended by the Directors, is passed at the Meeting, the payment will be made at the Registered Office of the Company on and after Monday, the 18th May, 1953, during office hours, excepting Saturdays, to those shareholders whose names are on the Company's Register on 1st May, 1953.

Shareholders are requested to intimate the Company immediately any change in their registered address.

NOTICE is hereby given to the Shareholders of the Sassoon Spinning and Weaving Co., Ltd., and in particular to:

Col. Bhupal Shum Shere Jung Bahadur Rana, Mr. Elerahim Suleman Asmal, Lt.-Col. Richard Lawrence Ferard, Mr. Franklin Piedade, Mr. Haji Davji Mohamed Sidat, Mr. Ismail Mohmed Vavda, Mr. Joaquim Cardide Pereira, H.H. Maharani Krishna Kumari, Mr. Nissim Cohen Sassoon and Mr. Timothy Mariano Fernandes.

THE NEW UNION MILLS, LIMITED

NOTICE

THE SIXTEENTH ORDINARY GENERAL Meeting of the Shareholders of the Company will be held at the Registered Office, Maneckji Wadia Building, 127, Mahatma Gandhi Road, Fort, Bombay, on Tuesday the 28th April, 1953, at 4-30 p.m. (S.T.), to transact the following business:—

1. To receive and adopt the Directors' Report, Audited Balance Sheet and Profit and Loss Account for the year ended 31st December, 1952.
2. To declare a Dividend.
3. To elect a Director in place of Mr. M. N. Pochkhanawalla who retires by rotation and is eligible for re-election.
4. To elect a Director in place of Mr. Kaushikprasad Chandulal who retires by rotation and is eligible for re-election.
5. To elect a Director in place of Mr. Arvind N. Mafatlal who retains office till the General Meeting under Company's Articles of Association but is eligible for re-election.
6. To elect a Director in place of Mr. Yogindra N. Mafatlal who retains office till the General Meeting under Company's Articles of Association but is eligible for re-election.
7. To elect a Director in place of Mr. Jayantilal D. Vasa who retains office till the General Meeting under Company's Articles of Association but is eligible for re-election.
8. To appoint Auditors for the current year and fix their remuneration.

The Transfer Books of the Company will be closed from Friday the 10th April to Friday, the 1st May, 1953 (both days inclusive).

By Order of the Board of Directors,
MAFATLAL CHANDULAL & Co. (BOMBAY) LTD.,
N. MAFATLAL.
Director,
Managing Agents.

MANECKJI WADIA BUILDING,
127, MAHATMA GANDHI ROAD, FORT,
BOMBAY, *17th March*, 1953.

N.B.—If Dividend, as recommended by the Directors, is passed at the Meeting, the payment will be made at the Registered Office of the Company on and after Monday, the 11th May, 1953, during office hours, excepting Saturdays, to those shareholders whose names are on the Company's Register on 1st May, 1953.

Shareholders are requested to intimate the Company immediately any change in their registered address.

NOTICE is hereby given to the Shareholders of the New Union Mills Limited, and in particular to:

Mrs. Elvira De Sa e Santos & Nicolan Pinto Sa, Mr. Franklin Piedade Xavier de Souza & Mrs. Flory de Souza, Mrs. Lena Ribeiro & Nicolan Pinto Sa and Mrs. Mehra Phiroz Cooper.

THE KUARDI COAL COMPANY LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Sixty-ninth Ordinary General Meeting of the Shareholders of the above Company will be held at the Registered Office, No. 3, Synagogue Street, Calcutta, on Tuesday the 5th May, 1953, at 3 p.m., for the purpose of receiving the Report of the Directors, passing the Audited Accounts for the year ended 30th June, 1952, declaring Dividend, electing Directors and Auditors in place of those retiring and transacting any other ordinary business that may be brought forward.

The Share Registers of the Company will remain closed from the 27th April to 5th May, 1953, both days inclusive.

By Order of the Board,
H. V. LOW & CO., LTD.,
Managing Agents.

3, SYNAGOGUE STREET,
CALCUTTA, *17th April*, 1953.

IMPORTANT:—Dividend is Payable on Application.

ANDERSON WRIGHT, LIMITED

NOTICE IS HEREBY GIVEN THAT AN Interim and Final Dividend at 4½ per cent. per annum for the year ended 31st December, 1952, has been declared on the Preference Shares of the Company at a Meeting of the Board of Directors held to-day. Warrants will be posted to the registered shareholders or to their Mandatees very shortly.

By Order of the Board of Directors,
G. J. K. HOOK,
Director.

7, WELLESLEY PLACE,
CALCUTTA, *15th April*, 1953.

RESULTS OF WIMCO ENCOURAGING

DIVIDEND UNCHANGED—FINANCES SOUND

THE decision of the Directors of the Western India Match Co., Ltd. (Managing Director: Mr. T. H. Rydin, Bombay), to maintain the distribution to the Company's shareholders for the year ended 31st December, 1952, at 11 per cent. (made up of a dividend of 10 per cent. and a bonus of 1 per cent.) does not reflect in full measure the favourable results achieved by the Company during the year, as compared with those for the previous year. The Company's gross profit for 1952 has recorded an expansion of Rs. 12 lakhs, that is from Rs. 94.63 lakhs for 1951 to Rs. 106.62 lakhs. If, despite this improvement, the Directors have not chosen to enhance the return to the shareholders, it is, perhaps, because of their policy of maintaining a steady dividend and ploughing back sizable sums year after year. This policy has stood the Company in good stead and has endowed it with a sound financial position, as we shall presently show.

This is the fourth year in succession that the distribution has been maintained at 11 per cent. Barring the year 1948, the rate of distribution has shown very little fluctuation during the last twelve years. The return to the shareholders remained unchanged at 12 per cent. from 1941 to 1947 (both inclusive). This was reduced to 6½ per cent. in 1948 due to the Dividend Limitation Ordinance, but, in the subsequent year, this was raised to 11 per cent. and has been kept up at that level since then. While recalling this dividend record of the Company, mention should, however, be made of the fact that, during the last twelve years, the Company's paid-up capital was raised three times by the capitalisation of reserves. Thus, in 1943, the Directors increased the paid-up capital from Rs. 70 lakhs to Rs. 77 lakhs by the capitalisation of a sum of Rs. 7 lakhs out of the sum standing to the credit of the general reserve, and distributed one share for every 10 shares. In February, 1947, a large sum of Rs. 77 lakhs out of the general reserve fund was capitalised, raising the capital to Rs. 1.54 crores, and distributed as capital bonus in the proportion of one share for every existing share held, the new shares ranking *pari passu* with the old shares for dividend out of the profit for 1946. This was followed by a further bonus issue in December, 1948, when the capital was raised to the present level of Rs. 2.20 crores by capitalising Rs. 66 lakhs from the reserves and issuing bonus shares in the proportion of three new shares for every seven old shares held. As on the previous occasion, the new shares qualified for the dividend paid out of the profit for 1948.

It will be noted from the foregoing that, though the present rate of distribution is only one per cent. less than that paid in 1941, the sum required for such lower distribution is nearly three times (Rs. 24.20 lakhs) that taken up twelve years ago (Rs. 8.40 lakhs). Thus, the Directors have been following a steady dividend policy with good justification. It may further be noted that they did not reduce the dividend in 1950 when the profit fell from Rs. 122.92 lakhs to Rs. 94.59 lakhs, a recession more perceptible than the increase registered in 1952.

To revert to the analysis of the results for 1952. Readers' attention is drawn to the following table giving the salient features of the financial results for 1952, as compared with those for the preceding three years:

(In lakhs of rupees)

	For the year ended 31st December			
	1952	1951	1950	1949
Gross sale proceeds ..	11,85.11	11,04.30	11,23.46	11,22.39

Carry forward	4.21	3.86	4.16	9.30

The Company's factories in India are reported to have worked to their full capacity and sales have been good. The Company's factory at Shahdara, in Pakistan, which was closed in August, 1951, however, continued to remain closed during 1952. The relatively small decline in sale proceeds and excise duty paid shows that the factories in India must have almost made good the absence of production in Pakistan. The increase in the depreciation provision by over Rs. 2 lakhs is due to the fresh addition made to the fixed capital expenditure during the year. The net profit shows a rise of nearly Rs. 8 lakhs which sum has been utilised to enhance the addition to the reserves. Whereas the whole of the Rs. 12 lakhs added to the reserves last year represented the sum transferred to the general reserve, this year's allocation is made up of a sum of Rs. 17.50 lakhs to the general reserve and Rs. 2.50 lakhs to the dividend equalisation fund.

The Company's financial position is quite impressive, as the following synopsis of its balance-sheet as on 31st December, 1952, would reveal:

LIABILITIES	Rs.	ASSETS	Rs.
		Gross block ...	2,16,78,740
Capital ...	2,20,00,000	*Less*—Depreciation ...	1,40,91,183
Reserves and surplus ...	1,17,39,692	Net block ..	75,87,557
		Stock-in-trade	27,10,585
Reserve for taxation ...	1,02,54,674	Stores, raw materials, etc. ...	1,72,60,532
Liabilities ...	1,26,90,721	Debts, deposits and advances ...	1,40,33,305
		Investments	31,016
		Cash balances ...	1,50,62,062
Rs.	5,66,85,057	Rs.	5,66,85,057

The reserves stand strengthened not only by the addition of a sum of Rs. 20 lakhs from out of the profit for the year but also by the transfer of Rs. 15.94 lakhs, being the sum received during the year from the Government by way of post-war refund of E.P.T., after deducting Rs. 10.46 lakhs for taxes, in respect of the optional and compulsory deposits made for the years 1941 to 1946. The gross additions to the block during the year amount to Rs. 17.60 lakhs. During the last several years, the Company has been spending sizable sums every year on fresh additions to the block, the amount thus spent since 1945 aggregating Rs. 71.05 lakhs. The other features of its financial position are: (1) the fixed assets have been well written down; (2) the current assets exceed the current liabilities by a huge margin of Rs. 261.53 lakhs and (3) the current assets include a large amount of cash balances.

The Company's Rs. 100 fully paid-up shares are being currently quoted at Rs. 236-14, at which rate the latest dividend gives a yield of 4.64 per cent. free of income-tax.

(Concluded from next column)

tary dividends for the years 1942, 1945 and 1946. This amount was met out of the general reserve.

The financial position of the Company is sound. The paid-up capital of Rs. 68 lakhs is supplemented by reserves and surplus aggregating Rs. 115.56 lakhs, made up of, in the main, premium on shares Rs. 16.87 lakhs, general reserve Rs. 54.20 lakhs, dividend equalisation fund Rs. 10 lakhs and rehabilitation and development reserve Rs. 30.74 lakhs (including Rs. 10.74 lakhs added during the year from the post-war refund of part of E.P.T. for the years 1941 to 1945). As against a gross block of Rs. 113.81 lakhs a depreciation reserve of Rs. 78.39 lakhs and a special depreciation reserve of Rs. 15.16 lakhs have been built up. The current assets aggregate Rs. 219.97 lakhs, made up of stock-in-trade Rs. 70.89 lakhs, stores, spares, etc., Rs. 12.81 lakhs, book debts, advances and deposits Rs. 49.81 lakhs, investments Rs. 5.04 lakhs and cash balances Rs. 81.44 lakhs. The current liabilities amount to no more than Rs. 61.67 lakhs, which are more than adequately covered by cash balances alone.

The Company's Rs. 100 fully paid-up ordinary shares are being currently quoted at Rs. 295 *cum-div.* On an *ex-div.* basis, the latest dividend gives a yield of 7.3 per cent. per annum, free of tax.

STANDARD MILL CO. LTD. REPEATS DIVIDEND

RESERVES AT AN IMPRESSIVE LEVEL

THE dividend of Rs. 20 per share of Rs. 100 paid by the Standard Mills Co., Ltd. (Managing Agents: Messrs. Mafatlal Gagalbhai and Sons, Bombay), on its ordinary shares for the year 1951—it had been raised from Rs. 15 paid for 1949 and 1950—is proposed to be repeated for the year ended 31st December, 1952, also, although the earnings for the year have not been at the same high level as in the previous year. The gross profit for 1952 shows a drop of Rs. 27.43 lakhs, that is, from Rs. 61.41 lakhs to Rs. 33.98 lakhs. This decline, though marked, is in keeping with the general trend of cotton mill profits for the past year. If the Directors have chosen to maintain the dividend at the previous year's level, it is probably due to the relatively smaller recession in net profit, from Rs. 23.82 lakhs to Rs. 15.54 lakhs, which in turn is the result of substantially lower provision for taxation. The financial position of the Company is so satisfactory that it permits a cut in the allocation to the reserves and the maintenance of the dividend level. The Directors could have maintained the dividend even without reducing the transfer to the reserves, if they had only chosen to follow the mode adopted by many other mills, namely, by bringing into the profit and loss account the E.P.T. refunds. But they have taken the E.P.T. refund (about Rs. 10.74 lakhs) due to the Company straight to the rehabilitation and development reserve, in strict conformity with the purpose for which the E.P.T. refund was originally intended.

The following comparative table gives the salient features of the Company's results for the last four years.

(In lakhs of rupees)

	For the year ended 31st December			
	1952	1951	1950	1949
Sale proceeds	305.72	298.53	197.14	214.03

* Approximate.

The increases in sale proceeds, closing stocks and expenses indicate that the output by the Mills must have been on a higher level during the year. The Directors report that the mills worked day and night shifts, as well as a third shift partially during the year. The small increase in sale proceeds shows that the relaxation of price control on many varieties of cloth from 1st October, 1952, must have enabled the Company to get more remunerative prices than in the earlier months of the year. But this advantage, if any, has been counteracted by the decline in "other income," mainly on account of the fall in processing charges from Rs. 23.13 lakhs to Rs. 4.54 lakhs, and by the rise of Rs. 31.34 lakhs in expenses. Of the sum of Rs. 8 lakhs provided for depreciation, Rs. 4.70 lakhs represent the transfer to the usual depreciation reserve and Rs. 3.30 lakhs to the special depreciation reserve. The cut in the provision for taxation is in tune with the decline in earnings. The dividend equalisation fund receives Rs. 3 lakhs (as against Rs. 2.11 lakhs added last year) and the reserve fund Rs. 1 lakh (as against *nil*). Last year, in addition to the sum of Rs. 2.11 lakhs, the Directors had added Rs. 10 lakhs from the profit for 1951 to the rehabilitation and development reserve, but now the profit for 1952 does not permit of such an addition. However, as already indicated, the Directors have strengthened this reserve by transferring the E.P.T. refund of Rs. 10.74 lakhs. It may be added here that, apart from the proposed dividend of Rs. 20 per share, the shareholders had received, during 1952, a sum of Rs. 3.36 lakhs, being supplemen-

(Continued in previous column)

PROFIT OF AZAM JAHI AND OSMANSHAHI MILLS WELL MAINTAINED

OUTLOOK FOR CURRENT YEAR PROMISING

A REFRESHING feature of the audited accounts of the Azam Jahi Mills Ltd. and the Osmanshahi Mills Ltd. (Secretaries, Treasurers and Agents: The Industrial Trust Fund, Government of Hyderabad), for the year ended 30th September, 1952, is that the profits of both the mills have been nearly maintained at the previous year's levels. Thus, Azam Jahi's profit for the year under review amounts to Rs. 6.93 lakhs, as compared with Rs. 6.98 lakhs for the previous 12 months, and that of Osmanshahi Rs. 9.42 lakhs, as against Rs. 9.52 lakhs for 1950-51. These results are all the more heartening considering that throughout the Companies' accounting year, there was no relaxation of control on prices of many varieties of cloth. It was only in October, 1952, that controls on the prices of a number of varieties of cloth were relaxed. In fact, during the year under review, the controlled prices of cloth were actually lowered.

The appropriation of the profits of the two Companies slightly differs from each other. Azam Jahi has raised its allocations to depreciation and general reserve a little, but has maintained the dividend at 6 per cent. to which level it was raised last year from 5.5 per cent. paid for 1950. Osmanshahi has maintained the transfer to the general reserve (which includes provision for taxation) after placing a slightly higher sum to depreciation, but has stepped up the dividend from 6.5 per cent. to 7 per cent. It may be noted here that this is the second year in succession to witness an increase in the dividend after the same was drastically cut in 1949-50 to 5.5 per cent. from 14 per cent. (made up of a dividend of 10 per cent. and a bonus of 4 per cent.) paid for the year 1948-49.

The following comparative tables, giving the salient features of the results of the two mills for the last four years, provide an idea of their progress in these years:

* Including provision for taxation. D—Dividend. B—Bonus.

The difficult trading conditions which the two mills had to experience is aptly described by the Chairman of the Companies, Mr. Vinayakarao Koratkar (Minister for Commerce and Industry and Labour, Government of Hyderabad), in his address to the shareholders thus:

"Trading conditions during the greater part of the year have been very difficult. Controlled prices of cloth and yarn remained unchanged for the first six months, but an all-India financial crisis developed during the first three months of 1952, finally coming to a head in March with prices declining sharply in all markets. As a result, cloth became, for a time, very difficult to sell and many mills were compelled to sell at below controlled rates. I am very pleased to be able to say that due to the good reputation our cloth enjoys in the market, we were able to obtain controlled prices though for some time deliveries were below normal. During the year under review, the controlled prices of cloth underwent a gradual decline. The first cut came in May, 1952, when prices were lowered as much as 16 per cent. on coarse sorts and 7 per cent. on medium. A very small rise of about 1 per cent. on coarse sorts was given in June, the medium sorts being lowered a further 1 per cent. From July to September a rise of 5 to 6 per cent. was given in coarse sorts, medium being lowered a further 1½ per cent. The prices of yarn were also reduced during the year. I have gone into these details, so that when judging the results of the year's working you may give due consideration to the effect this fall in prices has had on our profits and, although this was to some extent offset by a continued decline in the price of cotton, it was not possible to take the fullest advantage of lower prices as the main cotton season is during the months of December, January and February, when the bulk of good cotton arrives in the market, and many mills throughout the country had already covered the greater portion of their requirements before the steep fall in prices which started from March, 1952. As regards exports, we managed to obtain almost exactly the same amount of business as in the previous year, but the price realised was considerably lower."

The latest balance-sheet of the Azam Jahi Mills shows that the Company's reserves and surplus amount of O.S. Rs. 51.87 lakhs, as against a paid-up capital of O.S. Rs. 71.94 lakhs. During the year, there was an addition of O.S. Rs. 21.13 lakhs to the fixed capital expenditure, bringing the total gross value of the block to O.S. Rs. 190.40 lakhs. This has been written down to a book value of O.S. Rs. 145.12 lakhs. Current assets aggregate O.S. Rs. 105.43 lakhs whereas current liabilities amount to O.S. Rs. 126.75 lakhs, of which loans from bank secured by the hypothecation of movable assets and guaranteed by the Industrial Trust Fund alone account for O.S. Rs. 108.76 lakhs.

As regards the extensions to the Company's plant and machinery, the Chairman observes as follows:

"With regard to the extensions we were not able to get the new turbine tested until August, as due to the failure of the monsoon we had insufficient water in the cooling tanks to keep the old turbine running and test the new one at the same time. In addition, the first tests were not satisfactory, and it was not until November that the new turbine was able to take the load. We are now running 550 looms with the necessary spinning machinery and it is anticipated that the whole mill will be running by June."

The financial position of the Osmanshahi Mills, as disclosed by its latest balance-sheet, is quite satisfactory. The paid-up capital of I.G. Rs. 87.04 lakhs is supplemented by reserves and surplus aggregating I.G. Rs. 61.71 lakhs. Current liabilities of the value of I.G. Rs. 62.73 lakhs are covered by current assets amounting to I.G. Rs. 112.61 lakhs by a wide margin of I.G. Rs. 49.88 lakhs. The gross block of the value of I.G. Rs. 158.62 lakhs (including I.G. Rs. 12.39 lakhs added during the year) has been written down to I.G. Rs. 98.86 lakhs.

The conversion machinery for erection in the mills was received partly in August, 1952, and partly in December. It was not, therefore, possible to augment the mills output of yarn. Hence the mills were working during the last six months of the year on 750 looms. This number has since been raised to 850. It is expected that the increased working will lower the cost of production.

As regards the outlook for the two mills, the Chairman's observations may be quoted *in extenso*:

"I must, however, state that for reasons which I shall mention later the benefits that will accrue as a result of the increase in production will not be as much as was anticipated previously owing to several new factors having since arisen. In my speech last year, I referred to the fresh burdens in the shape of the Provident Fund Act and the Employees' State Insurance Act, that have been placed on the industry by various legislations. These have since been added to by several other forms of taxation both direct and indirect. Sales tax on cotton and the increase in income-tax rates which have been brought in level with the rest of India will considerably affect the profits of the Company. Excise duty on cloth has been doubled and sales tax on cloth and yarn has been imposed at multiple points and, although these imposts are ultimately borne by the buyer, they are, doubtless, a hindrance to the smooth flow of trade. Added to these, demands of labour are still on the increase, although the profits of the industry are curtailed. In spite of all these adverse factors, however, your Directors hope, without being too optimistic, that the prospects for the current year should be better than the year under review."

PODAR MILLS' PROFIT HIGHER

FINANCES QUITE SATISFACTORY

AN increase of about Rs. 1 lakh in the gross profit, from Rs. 20.92 lakhs for 1951 to Rs. 21.90 lakhs, is the notable feature of the audited accounts of the Podar Mills Ltd. (Managing Agents: Messrs. Podar Sons, Ltd., Bombay), for the year ended 31st December, 1952. The improvement may be small, being of the order of 4.7 per cent., but what is significant about the rise is that it is in refreshing contrast to the heavy recession suffered by many of the Company's confreres and the loss sustained by a few others. The net profit, however, shows a decline of Rs. 1.12 lakhs to Rs. 9.81 lakhs, but that is due to larger provisions made for depreciation and taxation. The dividend has been kept unchanged at the liberal rate of 10 per cent. per annum, free of tax, to which level it was raised last year from 9 per cent. paid for 1950 and 1949.

The gross sale proceeds of cloth disclose a fall from Rs. 141.32 lakhs for 1951 to Rs. 115.59 lakhs, while closing stocks of cloth show a rise from Rs. 10.13 lakhs to Rs. 25.10 lakhs. The decline in sale proceeds of cloth has been made good to some extent by the increase in gross sale proceeds of yarn from Rs. 11.78 lakhs to Rs. 16.70 lakhs. Sales of waste are also lower at Rs. 1.58 lakhs, as against Rs. 3.72 lakhs. Cost of cotton purchases amounts to Rs. 76.80 lakhs, as compared with Rs. 94.24 lakhs, while other expenses have gone up from Rs. 44.74 lakhs to Rs. 47.91 lakhs. The fall in the value of purchases of cotton and sales suggests that the Company must have been cautious in making purchases of cotton and restricting output in view of the difficult marketing conditions during the year.

The salient features of the Company's accounts for the last four years are compared in the following table:

(In lakhs of rupees)

	For the year ended 31st December			
	1952	1951	1950	1949
Sale proceeds (net) ..	146.65	159.74	123.84	130.62
Expenses (including cost of purchases of cotton)	126.17	139.42	109.11	113.89
Loss on shares	1.06	0.42	..	1.74

4% preference ..	0.40	0.40	0.40	0.40
Ordinary	4.00 (10%)	4.00 (10%)	3.60 (9%)	3.60 (9%)
Carry forward	1.25	1.36	0.83	0.84

The table shows that the Company's profit level has been on the progressive side since 1949. The profit for 1952, it may be noted here, is the highest since the year ended 30th September, 1946, (the Company changed its accounting year-end in 1947 from 30th September to 31st December), but falls very much short of the record profit of Rs. 75.47 lakhs touched in the year 1943-44. The Directors had provided only a sum of Rs. 50,000 for depreciation for each of the years 1948 to 1951, but they have now doubled this provision to Rs. 1 lakh for 1952. Provision for taxation has also been raised from Rs. 7.50 lakhs to Rs. 9 lakhs. The increase of Rs. 2 lakhs in these provisions has resulted in a drop of Rs. 1.12 lakhs in net profit. Nonetheless, the net profit, together with the unappropriated surplus of Rs. 1.36 lakhs brought in from last year, is sufficient to add more than 50 per cent. of the net profit to the reserves and maintain the dividend. Reserve fund gets Rs. 4 lakhs as against Rs. 2 lakhs, while the allocation to the dividend equalisation fund has been reduced by half, from Rs. 2 lakhs to Rs. 1 lakh, and that to the rehabilitation fund from Rs. 2 lakhs to Rs. 51,467.

The capital structure of the Company is unchanged at Rs. 50 lakhs, made up of 40,000 ordinary shares of Rs. 100 each and 10,000 4 per cent. cumulative preference shares of Rs. 100 each. The reserves and surplus aggregate Rs. 41.92 lakhs, representing nearly 84 per cent. of the paid-up capital. These reserves have been built up after capitalising as much as Rs. 30 lakhs during the years 1943 to 1947. The provision for taxation amounts to Rs. 14.55 lakhs. The gross block of Rs. 24.15 lakhs has been written down almost entirely, the depreciation provided so far being Rs. 21.50 lakhs. The current assets, amounting to Rs. 120.49 lakhs, cover the current liabilities, including provision for taxation, at Rs. 31.22 lakhs, by a huge margin. Of these current assets, cash balances alone, amounting to Rs. 32.01 lakhs, provide ample coverage to the current liabilities.

The Rs. 100 fully paid-up ordinary shares of the Company are being currently quoted at Rs. 135, at which rate the dividend for 1952 gives a yield of 7.4 per cent. per annum, free of tax.

SASSOON SPINNING AND NEW UNION ENHANCE DIVIDEND LEVELS

PROFITS OF KANKNARRAH AND KAMARHATTY JUTES RECEDE

Sassoon Spinning and Weaving Co., Ltd.

THE directors of the above Company (Managing Agents: M.G. Investment Corporation Ltd., Bombay) submit the audited accounts of the Company for the year ended 31st December, 1952.

The result of the working for the year under review shows a profit of Rs. 25,18,427 (Rs. 14,51,128), to which is added the balance profit brought forward from 1951 Rs. 1,316 (Rs. 17,813) making available a sum of Rs. 25,19,743 (Rs. 14,68,941). This sum the directors have appropriated as under:—

Reserve fund Rs. 1,00,000 (Rs. 4,00,000), provision for taxation Rs. 10,00,000 (Rs. 6,00,000), special depreciation fund Rs. 5,85,293 (Rs. 2,17,625) and dividend equalisation fund Rs. 5,00,000 (*nil*). From the balance of Rs. 3,34,450 (Rs. 2,51,316), the directors recommend, the payment of a dividend of Re. 1-4 (Re. 1) per share, free of income-tax, absorbing Rs. 3,12,500 (Rs. 2,50,000) leaving a credit balance to carry forward to 1953 account Rs. 21,950 (Rs. 1,316).

The values of the mill buildings and plant and machinery have been increased by Rs. 23,342 (Rs. 70,318) and Rs. 27,46,923 (Rs. 5,40,945) respectively due to extensions and purchase of new machinery. Some of the machines have been installed and are working satisfactorily.

The directors report that the Company has received from the Government a net amount of Rs. 3,20,219 during the year under review on account of refundable excess profits tax which sum has been credited to the replacement of machinery fund.

Accounts in brief are as under:—

		Cash ...	23,11,897
	Rs. 1,28,29,968		Rs. 1,28,29,968

New Union Mills, Ltd.

The directors of the above Company [Managing Agents: Messrs. Mafatlal Chandulal & Co. (Bombay) Ltd., Bombay] submit the audited accounts of the Company for the year ended 31st December, 1952.

The result of the working for the year under review shows a profit of Rs. 13,53,499 (Rs. 9,13,903) to which is added the balance brought forward from 1951 of Rs. 941 (Rs. 3,884), making available a sum of Rs. 13,54,440 (Rs. 9,17,787). This sum the directors have appropriated as under:—

Provision for taxation Rs. 5,00,000 (Rs. 1,00,000), special depreciation fund Rs. 4,45,254 (Rs. 99,836) and dividend equalisation fund Rs. 2,50,000 (*nil*). From the balance of Rs. 1,59,186 (Rs. 1,27,951) directors recommend the payment of a dividend of Re. 1-4 (Re. 1) per share (free of income-tax) absorbing Rs. 1,58,762 (Rs. 1,27,011) leaving a credit balance to carry forward to 1953 account Rs. 423 (Rs. 941).

The values of the mill buildings, plant and machinery have been increased by Rs. 50,326 (Rs. 12,876) and Rs. 17,51,809 (Rs. 4,45,890) respectively due to extensions and purchase of new machinery. Some of the machines have been installed and are working satisfactorily.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	12,70,100	Block ...	28,92,872
Reserves ...	28,78,922	Stock ...	26,36,655

Profit and loss account ...	13,54,440	Investments	50,000
		Cash ...	2,24,329
	Rs. 80,51,537		Rs. 80,51,537

Lakhshmi Cotton Manufacturing Co., Ltd.

The directors of the above Company (Secretaries, Treasurers and Agents: The Bombay Co., Ltd., Bombay) submit the audited accounts of the Company for the year ended 31st December, 1952.

The accounts show a profit for the year of Rs. 18,47,514 (Rs. 36,39,320), to which must be added balance brought forward from last year of Rs. 2,77,976 (Rs. 13,966) giving a total of Rs. 21,25,489 (Rs. 36,53,286). Out of this sum the interim dividend paid in November, 1952 of Rs. 10 (Rs. 12-8) per ordinary share absorbed Rs. 1,28,000 (Rs. 1,60,000). They have transferred to depreciation Rs. 9,53,966 (Rs. 10,69,310), reserve for taxation Rs. 3,60,000 (Rs. 11,00,000), engine and machinery fund Rs. 48,000 (Rs. 4,83,000) and gratuity fund Rs. 25,000 (Rs. 24,000), leaving a sum available of Rs. 6,10,524 (Rs. 8,16,976).

Out of this balance the directors recommend the payment of a dividend of Rs. 12-8 (Rs. 12-8) per share less income-tax on 6,400 preference shares, and a final dividend of Rs. 27-8 (Rs. 25 plus a bonus of Rs. 12-8) per share on 12,800 ordinary shares (making Rs. 37-8 (Rs. 50) per share for the year) free of income-tax, absorbing Rs. 4,11,000 (Rs. 5,39,000) and to carry forward the balance of Rs. 1,99,524 (Rs. 2,77,976).

The amount transferred to engine and machinery fund from the profits of 1952 covers the estimated amount of initial depreciation for the year. This depreciation does not affect the block and is not shown in the schedule of fixed capital expenditure. A sum of Rs. 15,250 representing surplus on sale of old machinery has been credited directly to engine and machinery fund, and Rs. 3,295 being dividends forfeited during the year has been added to reserve fund.

There was a serious crisis in internal cloth markets during the early part of the year and mills were also handicapped by the low prices fixed for goods manufactured from dearly bought cotton. The mill continued to do a fair export business. The present outlook appears to promise more stable conditions generally.

Additions to machinery during the year cost Rs. 2,15,191 (Rs. 9,61,111). The main items were two carding engines, two grinding machines, two fire service pumps, and the renovation of nine doubling frames.

During the year the Industrial Court awarded a bonus of 6¼ per cent. of basic earnings in respect of 1950. In respect of 1951 workers received a bonus of 25 per cent. of basic earnings.

The profits and fixed charges of the Company have been insured for the sum of Rs. 60 lakhs for a period of two years. Buildings and machinery were insured against fire and riot and civil commotion for Rs. 3,35,32,850 (Rs. 2,77,32,000) on the basis of reinstatement value. Stocks of cotton, cloth, yarn and stores at Sholapur and elsewhere are fully insured under declaration policies.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs
Capital ...	48,00,000	Block ...	45,00,322
Reserves ...	68,94,345	Stock ...	55,92,614

Liabilities ...	35,58,296	Debts, deposits and advances ...	28,25,258
Profit and loss account ...	6,10,524	Investments	7,80,182
		Cash ...	21,44,423
	Rs. 1,73,11,880		Rs. 1,73,11,880

Vishnu Cotton Mill Ltd.

The directors of the above Company (Secretaries, Treasurers and Agents: The Bombay Co., Ltd., Bombay) submit the audited accounts of the Company for the year ended 31st December, 1952.

The accounts show a profit for the year of Rs. 13,39,541 (Rs. 27,76,449), to which must be added balance brought forward from last year Rs. 2,69,813 (Rs. 31,142), giving a total of Rs. 16,09,354 (Rs. 28,07,590). From this the interim dividend paid in November, 1952 of Rs. 3 (Rs. 4) per ordinary share absorbed Rs. 96,000 (Rs. 1,28,000) leaving an available sum of Rs. 15,13,354 (Rs. 26,79,590). From this amount the directors have transferred to depreciation Rs. 6,68,602 (Rs. 7,21,907), reserve for taxation Rs. 2,50,000 (Rs. 9,00,000), depreciation, renewal and extension fund Rs. 44,000 (Rs. 3,50,000), and gratuity fund Rs. 24,000 (Rs. 37,000). Out of the balance of Rs. 5,26,752 (Rs. 6,70,683), the directors recommend the payment of a dividend of Rs. 35 (Rs. 35) per share less income-tax on 3,133 preference shares, and a final dividend of Rs. 7 (Rs. 6 plus a bonus of Rs. 4) per share, on 32,000 ordinary shares (making Rs. 10 (Rs. 14) per share for the year), free of income-tax Rs. 3,04,870 (Rs. 4,00,871) and to carry forward the balance of Rs. 2,21,881 (Rs. 2,69,813).

The amount transferred to depreciation, renewal and extension fund from the profits of 1952 covers the estimated amount of initial depreciation for the year. This depreciation does not affect the block and is not shown in the schedule of fixed capital expenditure.

A sum of Rs. 2,723 being surplus on sale of old machinery has been credited directly to depreciation, renewal and extension fund. Forfeited dividends amounting to Rs. 2,984 have been added to reserve fund.

There was a serious crisis in internal cloth markets during the early part of the year and mills were also handicapped by the low prices fixed for the goods manufactured from dearly bought cotton. The Company's mill continued to do a fair export business. The present outlook appears to promise more stable conditions generally.

Additions to buildings during the year cost Rs. 11,697 (Rs. 5,574), and to machinery Rs. 1,58,313 (Rs. 8,35,745).

During the year the Industrial Court awarded a bonus of 6¼ per cent. of basic earnings in respect of 1950. In respect of 1951 workers received a bonus of 25 per cent. of basic earnings.

The profits and fixed charges of the Company have been insured for the sum of Rs. 60 lakhs for a period of two years. Buildings and machinery were insured against fire and riot and civil commotion for Rs. 3,15,86,950 (Rs. 2,61,98,450) on the basis of reinstatement value. Stocks of cotton, cloth, yarn and stores at Sholapur and elsewhere are fully insured under declaration policies.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	47,66,500	Block ...	35,38,905
Reserves ...	48,90,559	Stock ...	64,84,340

	Rs. 1,54,19,807		Rs. 1,54,19,807

Svadeshi Mills Co., Ltd.

The directors of the above Company (Managing Agents: Tata Industries, Ltd., Bombay) submit the audited accounts of the Company for the year ended 31st December, 1952.

The profit for the year, after making a provision of Rs. 6,00,000 for depreciation, amounts to Rs. 10,41,300 (Rs. 25,29,138). Adding thereto the balance brought forward from the accounts of the previous year Rs. 70,099 (Rs. 80,961) there is a total amount of Rs. 11,11,399 (Rs. 26,10,099). From this sum the directors have appropriated to equalisation of dividend fund Rs. 10,00,000 (Rs. 14,25,000) and to provision for gratuities account Rs. 20,000 (Rs. 15,000) leaving a balance of Rs. 91,399 (Rs. 70,099) to be carried forward. The directors recommend payment of the following dividends, free of income-tax, for the year ended 31st December, 1951 (to be paid out of the equalisation of dividend fund):—

On preference shares at Rs. 5 (Rs. 5) per share Rs. 75,000 (Rs. 75,000) and on ordinary shares at Rs. 16 (Rs. 18) per share Rs. 12,00,000 (Rs. 13,50,000).

The directors hope that looking to the conditions experienced by the industry during the year, the results will be considered fairly satisfactory.

The Employees' Provident Funds Act, 1952 was brought into force from 1st November, 1952. Under the Act all employees at the mills whose basic wages do not exceed Rs. 300 per month are required to be members of the fund. Further the contribution, which is fixed at 9¼ per cent., is to be calculated on the dearness allowance as well as on the basic wages. The extra cost that the Company had to bear on account of the increased membership of the fund and the calculation of the contribution on the dearness allowance amounted to about Rs. 50,000 during the last two months of 1952. The increase in cost will be about Rs. 3,00,000 per year.

The Company had also to incur an expenditure of about Rs. 44,062 under the Employees' State Insurance Act. Although initially the provisions of the Act apply only to the State of Delhi and the Kanpur area of the State of Uttar Pradesh, employers in other parts of the country have had to make a contribution to the cost of the scheme at the rate of ¼ per cent. of their total wage bill from the 24th February, 1952. Over a whole year the cost would be about Rs. 51,000 and at 1½ per cent., the rate in force in Delhi and Kanpur, it would amount to about Rs. 86,000.

Owing to a substantial rise in the price of liquid fuel the Company had to bear an extra cost of over Rs. 3,00,000 during the year under report. Machinery of the value of about Rs. 30,96,000 against the long term plan of reorganisation and renovation of the mills was received and installed during the year. Further machinery worth about Rs. 24,90,000 was also received but remained to be installed.

The last date for the presentation of fractional certificates against the issue of 15,000 ordinary shares made in 1949, has been further extended by the directors by one year upto the 30th September, 1953. During the year under report 24 fractional certificates were presented for conversion into six whole shares, leaving a balance of 38 shares on the 31st December, 1952 still to be allotted. The directors decided during the year to take up further 1,350 shares of Rs. 100 each of the National Machinery Manufacturers Ltd., the bulk of whose capital is held by the textile industry. The total holdings of the Company now amount to 4,500 shares.

During the year the Company received from Government a net sum of Rs. 11,36,304 as refund of one-tenth of the excess profits tax, after deduction of income-tax and super-tax. The directors have decided to credit this amount to the equalisation of dividend fund. A further sum of Rs. 9,197 being repayment of the sum deposited with the Government against post-war refund of excess profits tax, was also received in 1952.

The Company's buildings, machinery and stocks were insured as at 31st December, 1952 for Rs. 3,27,86,000 (Rs. 3,24,31,000). Profits and standing charges were insured for Rs. 50,00,000 (Rs. 35,00,000) per annum, indemnity being payable for 24 months.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	90,00,000	Block ...	1,57,2[illegible]

[illegible]knarrah Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Jardine Henderson, Ltd., Calcutta) submitted the audited accounts of the Company for the half-year ended 31st December, 1952.

After taking credit for Rs. 50,000 (Rs. 2,00,000) being commission waived by the managing agents, the profits of the half-year amounted to Rs. 5,45,057 (Rs. 8,42,525). To this was added the balance brought forward from the previous half-year of Rs. 1,14,824 (balance of Rs. 1,67,260 and E.P.T. refund of Rs. 2,49,131) making a total of Rs. 6,59,881 (Rs. 12,58,917). From this sum was deducted provision for taxation Rs. 2,30,000 (Rs. 1,25,000) and depreciation Rs. 1,00,000 (Rs. 2,00,000), leaving an available balance of Rs. 3,29,881 (Rs. 9,38,917). The directors have disposed of this as under:—

Payment of the half-year's dividend on the preference shares at Rs. 3 (Rs. 3) per share without any deduction for income-tax paid by the Company Rs. 30,000 (Rs. 30,000), payment of a dividend on the ordinary shares at Rs. 4 (Rs. 7-8) per share without any deduction for income-tax paid by the Company Rs. 1,20,000 (Rs. 2,25,000), payment of a dividend on the "B" ordinary shares at Rs. 4 (Rs. 7-8) per share without any deduction for income-tax paid by the Company Rs. 96,000 (Rs. 1,80,000) and carry forward Rs. 83,881 (Rs. 1,98,917).

Accounts in brief were as under:—

	Rs. 1,31,60,319		Rs. 1,31,60,319

Kamarhatty Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Jardine Henderson, Ltd., Calcutta) submitted the audited accounts of the Company, for the half-year ended 31st December, 1952.

After taking credit for Rs. 50,000 (Rs. 2,00,000) being commission waived by the managing agents, the profit of the half-year amounted to Rs. 8,37,987 (Rs. 11,15,311). To this was added the balance brought forward from the previous half-year of Rs. 67,132 (balance of Rs. 2,23,696 and E.P.T. refund of Rs. 3,88,973) making a total of Rs. 9,05,099 (Rs. 17,27,980). From this was deducted provision for taxation Rs. 3,55,000 (Rs. 4,50,000) and depreciation Rs. 1,50,000 (Rs. 1,00,000), leaving an available balance of Rs. 4,00,099 (Rs. 11,77,980). The directors disposed of this sum as under:—

Payment of the half-year's dividend on the preference shares at Rs. 3 (Rs. 3) per share without any deduction for income-tax paid by the Company Rs. 48,000 (Rs. 48,000), payment of a dividend on the ordinary shares at Rs. 6 (Rs. 12-8), per share without any deduction for income-tax paid by the Company Rs. 1,44,000 (Rs. 3,00,000), payment of a dividend on the "B" ordinary shares at Rs. 6 (Rs. 12-8) per share without any deduction for income-tax paid by the Company Rs. 1,15,200 (Rs. 2,40,000) and carry forward Rs. 92,899 (Rs. 1,89,980).

Jute stocks have been valued at average cost and stocks of sold goods at contract rates. Goods unsold on 31st December, 1952, have been valued at market rates.

In compliance with the main and supplementary working time agreements of the Indian Jute Mills Association, the Mills worked 42½ hours per week throughout the half-year with 12½ per cent. of the total looms, sealed.

The remedial measures of reduced export duties adopted by Government as a means to stimulate trade, with a further reduction of Rs. 95 per ton in the export duty on sacking goods as from 28th February, 1953, have, unfortunately, failed to produce the results which might reasonably have been expected. The demand from consuming markets has been much below expectations especially for sacking goods which have become more and more difficult to dispose of.

The labour situation remained quiet during the period under review and there was some improvement in efficiency in most departments.

As a result of discussions between the Governments of India and Pakistan, lately concluded, the latter has agreed to abolish the discriminatory licence fee of Rs. 2-8 per maund on the export of all jute to India and to decrease by As. 12 per maund the export duty on all exports of jute to India packed in *kutcha* bales. These measures should result in an easier flow at cheaper rates of such qualities of jute as are necessary to maintain a good standard of production.

The Managing Agents have waived the sum of Rs. 50,000 out of their commission for the half-year.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.

COMPANY MEETINGS AND DIVIDENDS

NEW UNION MILLS LTD. Annual General Meeting, Bombay, 28th April, 1953. Dividend: Re. 1-4 per share, free of income-tax. Transfer books closed from 10th April to 1st May, 1953, both days inclusive.

SASSOON SPINNING AND WEAVING CO., LTD. Annual General Meeting, Bombay, 28th April, 1953. Dividend: Re. 1-4 per share, free of income-tax. Transfer books closed from 10th April to 1st May, 1953, both days inclusive.

VISHNU COTTON MILLS LTD. Annual General Meeting, Bombay, 29th April, 1953. Dividend: Rs. 10 per share, free of income-tax. Transfer books closed from 10th to 30th April, 1953, both days inclusive.

SEEBPORE COAL CO., LTD. Half-yearly General Meeting, Calcutta, 30th April, 1953. Dividend: Re. 1 per ordinary share. Transfer books closed from 18th to 30th April, 1953, both days inclusive.

SVADESHI MILLS CO., LTD. Annual General Meeting, Bombay, 30th April, 1953. Dividend: Rs. 16 per share. Transfer books closed from 24th March to 22nd April, 1953, both days inclusive.

LAKSHMI COTTON MANUFACTURING CO., LTD. Annual General Meeting, Bombay, 30th April, 1953. Dividend: Rs. 37-8 per share, free of income-tax. Transfer books closed from 10th to 30th April, 1953, both days inclusive.

SHREE KRISHNA GYANODAY SUGAR LTD. Annual General Meeting, Dalmianagar (Bihar), 30th April, 1953. Dividend Re. 1-8 per share free of income-tax. Transfer books closed from 24th to 30th April, 1953, both days inclusive.

BELSUND SUGAR CO., LTD. Annual General Meeting, Calcutta, 30th April, 1953. Dividend: As. 12 per share. Transfer books closed from 23rd to 30th April, 1953, both days inclusive.

NEW BEERBHOOM COAL CO., LTD. Half-yearly General Meeting, Calcutta, 30th April, 1953. Dividend: As. 8 per share. Transfer books closed from 20th to 30th April, 1953, both days inclusive.

TATA MILLS LTD. Annual General Meeting, Bombay, 1st May, 1953. Dividend: Re. 1 per share. Transfer books closed from 24th March to 22nd April, 1953, both days inclusive.

BELVEDERE JUTE MILLS CO., LTD. Half-yearly General Meeting, Calcutta, 1st May, 1953. Dividend: Rs. 7-8 per share. Transfer books closed from 18th April to 1st May, 1953, both days inclusive.

PODAR MILLS CO., LTD. Annual General Meeting, Bombay, 4th May, 1953. Dividend: Rs. 10 per share. Transfer books close from 1st to 15th May, 1953, both days inclusive.

NASIK-DEOLALI ELECTRIC SUPPLY CO., LTD. Annual General Meeting, Bombay, 5th May, 1953. Transfer books closed from 16th April to 5th May, 1953, both days inclusive.

STAR TEXTILES LTD. Annual General Meeting, Calcutta, 5th May, 1953. Transfer books close from 27th April, to 5th May, 1953, both days inclusive.

MODERN MILLS LTD. Annual General Meeting, Bombay, 8th May, 1953. Dividend: Rs. 5 per share. Transfer books closed from 18th April to 8th May, 1953, both days inclusive.

CAMBODIA MILLS LTD. Annual General Meeting, Coimbatore, 9th May, 1953. Dividend: Re. 1 per share. Transfer books closed from 25th April to 9th May, 1953, both days inclusive.

ASSAM MATCH CO., LTD. Annual General Meeting, Bombay, 11th May, 1953. Dividend: **Re. 1-4 per share** (including bonus of As. 3 per share.) Transfer books close from 4th to 16th May, 1953, both days inclusive.

NATIONAL RAYON CORPORATION LTD. Annual General Meeting, Bombay, 21st May, 1953. Transfer books close from 1st to 21st May, 1953, both days inclusive.

BHARAT LINE LTD. Annual General Meeting, Bhavnagar, 26th May, 1953. Transfer books close from 27th April to 26th May, 1953, both days inclusive.

RADHAKRISHNA MILLS LTD. Dividend of Rs. 6 per share. Transfer books closed from 20th April, to 9th May, 1953, both days inclusive.

PHOENIX MILLS LTD. Dividend of Rs. 8 per share for the year ended 31st December, 1952.

COMPANY REGISTRATIONS

CARONA SAHU CO., LTD. (First Director: Mr. Gianchand Jain.) Business: Manufacturers. Repairers and Dealers in Rubber, Sponge Rubber, Leather, Textiles, Jute, Balata, Rubber Seats, Cushions, Pillows, Mattresses, Tyres, etc. Authorised capital: Rs. 50,00,000. Private company. Address: 143, Mahatma Gandhi Road, Fort, Bombay.

TARUN COMMERCIAL MILLS LTD. First Director: Sjt. Ratilal Nathalal.) Business: Cotton Spinners and Doublers, Wool, Silk, Flax, Jute, and Hemp Spinners and Doublers and Manufacturers of Linen, etc. Authorised capital Rs. 50,00,000. Private company. Registered office: Ahmedabad.

BUDHABHOY EXPORT IMPORT LTD. (First Director: Mr. Fidahusein Budhabhoy.) Business: Importers, Exporters and Dealers in all kinds of Iron Scrap, Iron Ores Manganese Ores, Iron and Steel Goods, Hardware Goods, etc. Authorised capital: Rs. 50,00,000. Private company. Address: 199, Abdul Rehman Street, Bombay 3.

QUESTION HOUR IN PARLIAMENT

Overprinted Burma Notes

ARRANGEMENTS have been made by the Government for the exchange of overprinted Burma currency notes which have been so altered that the alteration cannot be readily detected. There have been a number of cases of overprinted Pakistan and Burma currency notes having been imported into India and passed off as India notes after cleverly removing the overprinting by some chemical or other processes. Customs authorities are taking every possible step to prevent smuggling. The public have also been warned against such notes and their serial numbers also have been published. The notes in circulation have decreased considerably of late, as a result of these steps.

—Finance Minister

Sales Tax on Tobacco

Representations have been received from the Tobacco Merchants' Associations of Sompeta and Srikakulam in Madras State complaining that tobacco products like cheroots and cigars are, with effect from 1st April, to pay sales tax to the State Government as well as excise duty to the Centre. The Central Government has considered the matter. The levy of sales tax by the State Government is within its rights under item 54 of the Seventh Schedule to the Constitution and the Government of India cannot intervene in the matter.

* * * *

No Double Taxation in Part 'B' States

Inter-State transit duties are being levied in certain Part 'B' States, while the Indian Income-tax Act now applies to all those States, except Jammu and Kashmir. The agreement entered into with all these States under Article 306 of the Constitution, provide for the abolition of inter-State transit duties within a maximum period of five years from the commencement of the Constitution in Saurashtra, Rajasthan and Madhya Bharat and four years from the same date in the case of Hyderabad. As regards income-tax, the old State laws ceased to have effect from 1st April, 1950, and are applicable only to arrear assessments of the pre-integration period. There is thus no double taxation.

—Deputy Finance Minister

Coal Export Charges

The question of abolition of the commercial charges on coal export as a general issue is under examination. The commercial charges on coal export to Pakistan have been abolished from 25th March, 1953, and the amount of loss will be about Rs. 1 crore. Commercial charges varied from country to country.

* * * *

Water Transport Board

A proposal is under consideration at present for the setting up of an inland water transport board for Travancore-Cochin State. The Study Group of Inland water Transport has not submitted its report to the Government of India. The Economic Commission for Asia and the Far East expects to finalise the report by December, 1953. The recommendations, in the final report, are not expected to differ materially from those in the interim report. Progress has been made further in formulating the pilot project with shallow draft tugs in consultation with an inland water transport expert provided by the U.N.

* * * *

Tata Locomotive

The recommendation of the Public Accounts Committee that the Government should take over from TELCO the manufacture of boilers and locomotives and run it as a State-owned industry is still under examination.

* * * *

Highways Scheme

The Mysore State Government has not so far elected to participate in the national highway scheme on the same basis as the other States.

—Deputy Minister for Transport

Hirakud Project

The Government of Orissa has given its approval to the revised estimate for the first stage of the Hirakud Project. This estimate is now under scrutiny by the Hirakud Control Board. As soon as the recommendations of the Board are received, necessary revised sanction of the Government of India will be issued. This, however, is not affecting the programme of construction which is being pursued with vigour.

—Minister for Planning, Irrigation and Power

Bhakra Canal Scheme

The construction of the Bhakra canal is proceeding according to schedule and the supply of water from the canal system will become available for irrigation purposes by May, 1954. The length of the main canal will be 108 miles and the branches will be about 442 miles, irrigating in all 5[illegible] acres of land.

* * * *

Power Station at Konar

A proposal to construct an underground hydro-electric station at Konar dam in the D.V.C. is under consideration of the Government. The estimated expenditure on it is Rs. 3.85 crores.

—Deputy Minister for Irrigation

MONEY RATES FALL

(From Our Own Correspondent)

BOMBAY, *22nd April*

The week under review witnessed perceptible signs of a slackening of demand for funds in the short-term money market. In the inter-bank call money sector, conditions were more favourable to borrowers. The inter-bank rate, for day-to-day call money among the Exchange banks and big Indian banks, which was placed at 2¾ per cent. last week, with stray transactions having been done at 2½ per cent. early in that week, was uniformly quoted at 2½ per cent. throughout this week. Some banks, however, offered 2¾ per cent. for renewal of good money. The rate among the smaller banks was unchanged at 3 per cent. and they were able to get their requirements in full.

There was no keen bidding for short-term deposits. Almost all banks quoted 2¾ per cent. for 1 to 3 months and 2 to 2½ per cent. for six months. The Treasury Bill rate was again unchanged at Rs. 2-7 per cent. per annum. The amount offered against this week's tenders for *Rs. 1 crore* was *Rs. 129.50 lakhs*, as against Rs. 120.50 lakhs last week.

After two weeks of sharp rise in notes in circulation to the tune of over Rs. 33 crores, there has been a small drop of Rs. 75.39 lakhs in the week ended 17th April, 1953, as shown by the Reserve Bank's statement for that week. Notes held in the Banking Department are up by Rs. 1.12 crores. The rise of Rs. 36.98 lakhs in total notes issued is covered by a corresponding increase in rupee coin. The deposits of the Central Government, which had gone up by Rs. 11.06 crores in the previous week, have risen further, but by a small sum of Rs. 35.83 lakhs, in the week under review. A further drop of Rs. 4.75 crores, following the decline of Rs. 17.71 crores in the previous week, is noted in deposits of other Governments. Deposits of banks have gone up by Rs. 2.39 crores, while those of others are lower by Rs. 1.12 crores. Cash balances are better by Rs. 1.15 crores, but balances held abroad are lower by Rs. 3.73 crores. Loans and advances to Governments show a small rise of Rs. 37 lakhs, whereas other loans and advances disclose a fall of Rs. 2.67 crores. Advances to Scheduled Banks against usance bills have gone up by Rs. 1.24 crores. Government Treasury Bills purchased and discounted show a rise of Rs. 1.74 crores.

A sharp rise in deposits of the Scheduled Banks is disclosed by their consolidated statement of position for the week ended 10th April, 1953, as compared with that for the previous week. The demand deposits are higher by Rs. 3.16 crores and time deposits by Rs. 5.73 crores. Inter-bank borrowings have declined by Rs. 1.63 crores. Borrowings from the Reserve Bank have also gone down by Rs. 1.96 crores and those from the Imperial Bank by as much as Rs. 3.56 crores. Advances and bills purchased and discounted too have declined by Rs. 32.83 lakhs and Rs. 46.13 lakhs, respectively. Investments are better by Rs. 42.65 lakhs. Cash-on-hand and balances with the Reserve Bank have together dwindled by about Rs. 9 crores, but balances with other banks in current account have improved by Rs. 2.91 crores. Money at call and short notice are lower by Rs. 59.70 lakhs.

After several weeks of dull conditions, the Gilt-edged market presented a cheerful appearance, with all-round appreciation in values, the rise in undated securities being much sharper. The improvement is attributed to the stoppage of selling of securities by the Reserve Bank, the emergence of investment demand and shortage of floating stocks. 3 per cent. 1953-55 was well maintained at Rs. 100-1. 3 per cent. 1957 and 3 per cent. 1958 hardened by an anna each to Rs. 98-12 and Rs. 98-7, respectively. 3 per cent. 1959-61 was placed As. 2 higher at Rs. 96-6. 3 per cent. 1963-65 firmed up by As. 2 to Rs. 92-10. Likewise, 3 per cent. 1964 advanced by As. 2 to Rs. 92-10 and 3 per cent. 1966-68 were in demand to rise by As. 2 to Rs. 90-7. 3 per cent. 1970-75, which had declined to Rs. 86-8 *ex-voucher* early in the week, regained to Rs. 86-9 at the close. 3 per cent. 1986 Conversion Loan, after touching a low of Rs. 81-8, rose spiritedly to Rs. 82-2 at the close.

The foreign exchange section was dull with no change in the rupee-U.S. dollar rate. The dollar is quoted at Rs. 475¼ per $100 (banks selling for ready delivery) and Rs. 476¼ (banks buying for ready). In New York too, the sterling was featureless, excepting for minor fluctuations in the forward rates. The spot rate for £, which had stood at $2.81½-2.81⅝ on the 14th inst. was placed at $2.81.11/16-2.81.13/16 throughout this week. The forward rate for three months closed at $2.81-2.81¼, after touching $2.81¼-2.81½ and that for six months at $2.80¼-2.80⅝ after being placed at $2.80⅝-2.80⅞.

KEEN DEMAND FOR LINSEED

(Messrs. A. Bradley & Co.)

CALCUTTA, *22nd April*

Distinctly steady conditions have prevailed in the linseed market throughout the past week and, while the undertone remains firm, trading has been reported on an increased scale. Up-country markets are reported to be very firm and arrivals to this centre, though somewhat improved, are mainly against earlier commitments. Demand at producing centres is reported to be good. Local crushers have shown a keen interest for both early and forward deliveries and, although the daily turnover has been fairly large, there have been buyers over. General conditions in the oil section have improved and the demand from local buyers has increased in sympathy with the price advance in mustard oil. Shippers also have been active and fair business has been reported.

Latest quotations are: April-May Rs. 18-4 and June-July Rs. 18-10 per maund.

SPURT IN SILVER

(From Our Own Correspondent)

BOMBAY, *22nd April*

The trading on the Bullion Exchange during the week under review was characterised by a fresh spurt in the price of silver which touched a new high level after more than a month. Although towards the close, the white metal had to shed a part of its gains, the undertone was still bullish. the rise over the week being Rs. 2-8 per 100 tolas. *Gold, on the other hand,* was featureless, but the undertone was steady.

The rise in silver was due to the active support from bull operators who tightened their grip over the market. Aided by strong up-country advices, inspiring reports from other commodity markets and encouraging offtake from up-country centres silver forged ahead in enlarged dealings The upward trend persisted till yesterday morning, but thereafter a reaction set in. To-day attempts by some of the bull operators to push up the market was not fully successful, as profit-taking set in at every rise.

Silver for forward delivery (1st May settlement) began at Rs. 158-2 and advanced to Rs. 163-6 yesterday morning, but reacted to close at Rs. 161-3.

Ready silver (.996 fine) opened at Rs. 158-6 and appreciated to Rs. 163-10 before winding up at Rs. 161-7. The floating stocks of silver are placed at 1,200 bars. The daily average offtake was estimated at 35 bars.

As already indicated, activity in gold was less pronounced due to lack of aggressive buying. The offtake was on a smaller scale than in the previous week, but the significant factor which contributed to *the steadiness of gold* was the dwindling in arrivals. Gold for forward delivery (30th April) started at Rs. 86-15 and soon touched Rs. 88-3. After receding to Rs. 87-5 on Saturday it once again improved to Rs. 88-2 yesterday before finishing lower at Rs. 87-6 to-day.

Ready gold opened at Rs. 87-3 and, after moving between Rs. 88-11 and Rs. 87-11 closed at Rs. 87-12. The floating stocks of gold are placed at 40,000 tolas. The daily average arrivals were 6,000 tolas, while the offtake was no more than 4,000 tolas on an average.

The trend of the international free market in gold was a little quiet, with the rate remaining at $36.95-$37.05.

The following comparative table shows the trend of the market during the week under review:

	22-4-53	Highest	Lowest	15-4-53
	Rs. a.	Rs. a.	Rs. a.	Rs. a.

PEPPER WEAK

(Messrs. Parekh & Co.)

BOMBAY, *22nd April*

There has been a further deterioration in the tone of the pepper market, since our last report and values have broken down through the level of Rs. 3,000 at Alleppey which has been generally considered to be a point of resistance, if not necessarily a market "floor." Calicut reached a low figure of Rs. 3,000 with anxious sellers, while April delivery at Bombay stood as low as Rs. 2,450-80. At one time at Alleppey, there were sellers at Rs. 2,950, but few buyers, and the bankers who advanced loan against pepper at round about Rs. 2,900 actually demanded margin. Next day, however, on report of slight improvement at New York, growers pushed up their prices at Alleppey to Rs. 3,100 which brought about a lot of short coverings in A.S.T.A. section at Bombay. About 50 tons for May shipment to New York changed hands at $1.35 to $1.37 per lb. c. & f. New York. April shipment was done at prices from $1.35 down to $1.33.

The undertone of the market appears to be weak, but at every new low level, there is found to be a strong resistance from the growers who think that their weakness, instead of attracting business, is likely to keep back new buyings from foreign countries. The present sustaining factor in the otherwise gloomy outlook for the commodity is the improvement in the commodity markets in India, in spite of better prospects of Korean peace.

Following are to-day's nominal quotations:—Ready delivery Rs. 370 per Bengali maund; April Rs. 2,495-2,525, May Rs. 2,520-50 and June Rs. 2,520-50 per candy of 5¼ cwts.

HIDES RECEDE

(From Our Own Correspondent)

MADRAS, *20th April*

Arrivals of E.I. tanned hides and calf were as usual. Owing to lack of response from U.K. importers, there was some nervousness in the local market and prices ruled weaker. A few shippers are reported to have accepted lower prices, though several large tanners have declined to follow London levels. If importers keep out of the market for a week or two and shippers make offers freely, lower prices will be inevitable.

The tanned skins section also continued weak and prices declined by As. 4 to As. 6 per lb. There was good clearance of stocks in the local bazaar.

COTTON PRICES ADVANCE

(From Our Own Correspondent)

BOMBAY, *22nd April*

In common with all commodities, the week under review has seen a steady improvement in demand and in prices in the spot cotton markets. Even Bengal has shown unusual steadiness in view of the fact that shippers do not appear to be interested, for the time being, in this variety. The mills' interest in suitable varieties is easily understandable, because, as stocks of desirable styles get thinner as the season advances, the mills are forced to cover their estimated requirements of these styles. For mills it is not merely a question of buying any cotton, but cottons of specified grade and staple. Such demand is usual at this time of the year and it is bound to continue for a little while longer, unless there is a sudden development in the form of depreciation of the Pakistani currency as a result of the political changes effected at Karachi.

Cotton merchants in Bombay, and even in certain other up-country centres, have once again started worrying their heads about possibilities of import of staple varieties from Pakistan if devaluation comes. While this contingency cannot be ruled out altogether, because the new Ministry promises a realistic approach to problems, there is no possibility of large-scale dumping of Pakistani cotton in India, even if the currency is devalued at an early date. In any case, this menace will serve as a standing damper preventing a large-scale rise in prices. This is also likely to be aided by the fact that the mills in the South will be required to restrict their production for want of enough power, thus reducing their demand for raw material to a certain extent. On the whole, the factors making for a bullish and bearish trend in the market are well balanced.

In the forward market, prices have forged ahead considerably. Though an effort is bound to be made by some speculators to use the possibility of currency devaluation at Karachi to stage a reaction, much will depend on the strength and readiness of those who hold the contracts for May delivery to take delivery of likely tenders. If they show weakness, the bears will certainly take advantage of it. On the other hand, the steadiness in the spot market will go to prevent large-scale deliveries and the shorts might be forced to cover their sales. The position is, therefore, intriguing and developments could be awaited by operators with keen interest during the coming months.

The following are the latest available quotations from the Sewri market: Bengal *Deshi* Rs. 575; Berar Jarillas Rs. 745; Ujjay Rs. 890; Moglai Rs. 715; Khandesh Rs. 815; and Oomra *Deshi* Rs. 720.

The following table shows the trend of prices in the forward market during the week under review:

	15-4-53	*High*	*Low*	22-4-53
	Rs. a.	Rs. a.	Rs. a.	Rs. a.
I.C.C. May	698 4	717 0	707 0	714 0
I.C.C. Aug.	709 4	726 4	715 8	723 4

The auctions at Kampala are now over and this source is now closed to the trade and industry for the time being. Interest is, therefore, being switched over to the Sudan, while it continues in the case of Egyptian cotton. Though there is a modest revival for imported styles in Bombay, the market interest this year centres more round Indian cotton and the position is not likely to change during the coming months, unless the trade pattern for textiles undergoes a sudden change and a new demand for fine and superfine cloth crops up.

Even more important than the sudden change in the Government for the cotton market and the cotton grower in Pakistan is the news of a trade pact with Japan, negotiated by the delegation headed by Mr. I. H. Usmani who is the Controller of Imports and Exports. Amongst other things, this pact ensures an export of 650,000 bales of raw cotton from Karachi to Japan in return for cotton fabrics and yarn, some machinery, metals and consumer goods. This is bound to have a good effect on the morale of the market at Karachi and on the volume of export of cotton from the U.S.A. to Japan. The change in Government has also once again brought to the front the issue of devaluation. But it would be useless to speculate on this issue before it is finally settled. The immediate effect, even if devaluation comes, on outside demand will not be appreciable because the first reaction to such a move will be a proportionate rise in the price of cotton at Karachi.

The following are the latest available quotations from Karachi market: Punjab *Deshi* Rs. 66; 4F Punjab R.G. Rs. 57 to Rs. 58; S.G. Rs. 61 to Rs. 62; L.S.S. Punjab R.G. Rs. 60-8; S.G. Rs. 65; N.T. R.G. Rs. 60-8; S.G. 65; 289F Punjab R.G. Rs. 65-8 to Rs. 66; and S.G. Rs. 71 to Rs. 71-8.

At Alexandria, export clearances are better this year than those at the same time in 1952. The market has discovered that it have oversold Giza 30 and this quality is likely to command good premia for this season. The spot market is fairly active. Even apart from the demand for Giza 30, some business with Germany, France and Japan is reported.

The situation in the New York market is a little bewildering. In spite of many factors favouring a bearish trend, the market this week has been unusually steady, though the volume of business has gone down. The large-scale credit allocations to various European countries and Japan have slightly improved the position with regard to export enquiry. But this is not on such a scale as to account for this steadiness. Possibly the market is bidding time to seek the resulting position with regard to the May delivery, and only after this is known, a definite trend either way will be discernible. It is also felt that the gloom generated by the peace movement has been overplayed, and it is being gradually realised that the consumption of commodities will not come to an end or be reduced drastically merely because political tension is reduced. In any case, India has at present little interest in U.S.A. cotton and price movements at New York or New Orleans serve more as a guide than for any practical purpose of imports from the U.S.A.

The following are the latest available quotations from New York as compared with those of a week and a fortnight before:

(In cents per lb.)

	21-3-53	14-3-53	7-4-53
Spot	33.55	33.75	33.80
May	32.96	33.20	33.27
July	33.17	33.38	33.34
October	33.37	33.50	33.38
December	33.43	33.59	33.48

ART SILK YARN RALLIES AT CLOSE

(From Our Own Correspondent)

BOMBAY, *22nd April*

Renewed reports of a possible upward revision in prices of art silk yarn by Continental producers and highly encouraging advices from rayon cloth market imparted steadiness to the art silk yarn market on the opening day of the week under review. The marked recovery in values witnessed at the close of last week was thus fully sustained. But the steadiness gave way to a wave of selling pressure during the subsequent sessions, under the bearish influence of a grant of Rs. 1.25 crores worth of import licences to the Silk and Art Silk Mills Association, Bombay, for the January-June, 1953 period. Arrivals of considerable quantities of imported yarn also contributed to the selling pressure. This, coupled with the unwillingness on the part of traders to take delivery of goods—this is a common occurrence at month-ends—brought about a fall in values of yarn which persisted till late to-day. At the close, however, lower levels attracted some support, which, along with firm advices from other markets, pushed up values. But the recovery noticed thus was not so marked as to erase completely the previous losses, and the closing rates were, therefore, lower than those at the end of last week.

In the forward section, 150 April delivery contract opened the week higher by Rs. 4 at Rs. 832 and, after receding to Rs. 798 early to-day, finished higher at Rs. 816, the net loss over the week being Rs. 16. May contract was fully steady at Rs. 837 on the opening day, as against Rs. 835. It gradually declined to Rs. 806 to-day, but recovered to close at Rs. 824. The net loss was thus limited to Rs. 9. In the ready section, 120 Japan and 150 Japan lost an anna each to Rs. 4-8 and Rs. 4-4, respectively, yesterday. To-day, however, they were better each by half an anna. 120 Italy, after losing As. 2 to Rs. 4-2, finished higher at Rs. 4-2½. 150 Italy suffered a loss of As. 2½ to Rs. 4-0½ before closing at Rs. 4-1½.

The table below gives the prices of art silk yarn quoted to-day, as compared with those on the 15th April and 8th inst.

	22-4-53 Rs. a.	15-4-53 Rs. a.	8-4-53 Rs. a.
Art Silk Yarn—			
150D April (per case of 200 lbs.)	816 0	823 0	794 0
150D May ,, ..	824 0	835 0	799 0
120 Japan (per lb.)	4 8	4 0	4 7
150 Japan ,, ...	4 4½	4 5	4 4
120 Italy ,, ...	4 2½	4 2	4 0½
150 Italy ,, ...	4 1½	4 3	4 0

As already stated, the Government of India has granted to the Silk and Art Silk Mills Association, Bombay Rs. 1.25 crores worth of licences for importing art silk yarn during the current half-year. The quantum of licences, it is considered, is very negligible. According to the trade, each loom—there are said to be as many as 22,000 looms in Bombay—will not get more than Rs. 600 worth of artificial silk yarn, which, on the basis of present level of prices, comes to about a couple of hundred lbs. This, it is pointed out, is "extremely insufficient" and the industry will have to undergo considerable inconvenience and loss, "particularly because it will not be possible for the mills to work their looms even for a few days and even for one shift, not to talk of the double shift which some of the mills have been running at present." That apart, it is not known whether the licences now granted will be distributed among the mills, thereby enabling imports on an individual basis, or be utilised to make bulk purchase as was done on the previous occasion.

The staple fibre yarn section remained steady with a moderate improvement in demand. The marked rise in the prices of 2/40s staple fibre yarn, despite very limited offtake in the market, is due to speculative purchases by dealers in the Punjab market. The other counts of yarn, such as 20s, 30s and 40s, were all fully steady. The staple fibre section was somewhat easy, following reports that the Joint Chief Controller of Imports had started granting licences to consuming mills. A few mills are already reported to have opened letters of credit in favour of their supplies. Arrivals are expected in the next four to five weeks.

GROUNDNUTS FIRM

(From Our Own Correspondent)

BOMBAY, *22nd April*

A notable feature of this week in the oilseeds market was the resumption of trading in non-transferable specific delivery contracts in groundnuts and linseed. Business is confined during the present season to June-July and August-September contracts in the current crop upto the end of September. It will be recalled that trading in such contracts was suspended in May last by the State Government, following the slump in seeds and oils. The resumption of trading in these contracts was facilitated by the changes effected this week in the by-laws of the Exchange.

Market circles have been jubilant over this development. But consumers have given it a cold reception. The latter seem to feel that it would push up further the already high prices, as especially the groundnut crop, constituting 75 per cent. of the oilseeds crops in India, is admittedly short by about 25 per cent. Besides, oil being an essential commodity of life, they fear that further increases in oil prices will substantially contribute to raise the cost of living index. Although trading is confined to non-specific delivery contracts, it is felt that it would tend to degenerate into full-scale futures trading, as had been the case prior to suspension of these contracts. Whatever the ultimate consequences of the resumption of trading, it had this week a bullish effect on the market. As a result, prices in the groundnuts and linseed sections soared high to new levels of the year and recorded substantial gains.

The bullish trend in the groundnuts section was also influenced by scarce offerings and buying by crushers. Consequently, Bold ready shot up from Rs. 43 to Rs. 45 and Khandesh quality from Rs. 42-12 to Rs. 45-4. Bold June-July, which opened at Rs. 45 yesterday, was done to-day at Rs. 45-4. August-September was done to-day at Rs. 46-4, as against Rs. 45-10 yesterday. Groundnut oil ex-mill ready gained Rs. 1-6 to Rs. 24 and railway receipts Rs. 1-2 to Rs. 22-10.

In the linseed section, Bold ready rallied Rs. 2-8 to Rs. 31. June-July deliveries changed hands between Rs. 31 and Rs. 31-14 and August-September deliveries between Rs. 31-10 and Rs. 32-8. Linseed oil was done at Rs. 15, as against Rs. 14-6.

The free licensing period of castor oil exports expires on 30th April. Traders, therefore, awaited the new export policy. They, however, expected the continuation of free licensing. The U.S. decided to export freely medicinal castor oil by placing it on the O.G.L. This was interpreted by traders to give rise to greater imports of oil from India. As a result of these factors as well as the general upward trend of other markets, the castor-seeds section also looked up. May delivery which opened at Rs. 152-8 as against Rs. 153, shot up to a high of Rs. 162, before closing at Rs. 160-8. September delivery fluctuated between Rs. 153-12 and Rs. 164, before finishing to close at Rs. 162-12 F.A.Q. gained Re. 1 to Rs. 32-8 and Madras quality Rs. 1-8 to Rs. 33-4. Oil I Pressure was done at Rs. 19-8, as against Rs. 19 and Commercials at Rs. 18-2, as compared with Rs. 17-10. Business was reported done with the U.S. in small quantities in Commercial quality at 18.35 cents per lb. Brazil was reported to have sold First Pressure at 19 cents per lb.

The following table shows the prices of oilseeds and oil on the 22nd inst., as compared with those at the end of the previous two weeks.

	22-4-53	15-4-53	8-4-53

DEMAND FOR HESSIANS IMPROVES

(From Our Own Correspondent)

CALCUTTA, *21st April*

Steady conditions were again witnessed in all sections of the jute market during the week. Jute goods added fractional gains, the stabilisation of which was a healthy feature. However, much headway has yet to be made for prices to reach such levels as are economic to mills. A good start has been made in the last two weeks. Although rumours regarding the sealing of 7½ per cent. of existing looms have been discounted in New Delhi, it was strongly suggested in the market that the production of sacking would have to be restricted sooner or later. This was again one of the factors for the fractional gains which heavy goods recorded this week. Certain quarters have suggested that mills should not be permitted to avail their annual holidays now since any such thing might retard the present expansion of market activity in hessian. As stated in these columns last week, much emphasis need not be given to this fear, as stocks of hessian are plentiful and they can check any unfair rise in prices.

The hessian market was in cheerful spirits; this was not due to any sizable improvement in prices which, as stated above, was only *just fractional* and insignificant, but due to the prospect of good business with foreign buyers. Even this week, a moderate quantity changed hands for export to the United States. Although it was only a "routine" affair, sentiment was assisted by the American army placing an order for 10,000,000 sandbags in India. In addition, incentive was also drawn from details of bids which the U.S. Corps of Engineers would open on 22nd April. The Corps is in need of 40,330,000 sandbags, of which 22,630,000 would be for delivery in the eight weeks ending 15th November 1953, and the remainder for delivery between 16th November and 31st January next. For manufacturing bags for the latter quantity, burlap, *osnaburg or kenaf* cloth may be used, whereas for the former only burlap. It is thought that American burlap manufacturers would cover their requirements for a good portion of burlap required from India, since Indian quotations are now competitive compared to those of the Continental manufacturers. That osnaburg or *kenaf* cloth can be used for the latter quantity has been carefully noted.

Ready 40" 10 oz. hessian opened at Rs. 39-4 last Wednesday, which took with it an improvement of As. 8 from Monday. This improvement was maintained almost throughout the week, but the closure over the week-end as well as yesterday was Rs. 39-2, as, although mills were reserved business passing was restricted. That enquiries from, and business with, American buyers havs tended to increase has been taken as a definite sign that burlap, because of its new cheapness, is ousting its substitutes, such as paper and cloth bags, in the United States. The market reacted favourably to the report that burlap consumption in America during March amounted to 69 million yards, representing a substantial increase of 17 million yards over February. Another cheerful report picked up in the market is Argentina's need for a substantial quantity of hessian. Hessian 40" 8 oz. was offered at Rs. 31-4 f.a.s. and at Rs. 38 f.o.b.

The steadiness in sacking goods during the week was more in sympathy with a firm hessian market than with actual business. In addition, there were fresh rumours that the Government of India might permit mills to seal a further percentage of looms. Healthy stabilisation of the gains recorded would call for much more substantial business. B. twills were pushed up to Rs. 87-4 from Rs. 86-10 last Wednesday, but declined to Rs. 87 on profit-taking by local holders. Mills adopted a reserved tendency in anticipation of a further rise in prices, and although business was small, the closure during the week-end was firm at Rs. 87-4, which was maintained yesterday. Heavy cees plain was offered at Rs. 88-4 and green stripped heavy cees at Rs. 100-8. The market is jubilant over the present visit of the I.J.M.A. mission to Australia and New Zealand, which, on its way back, is likely to pay short visits to Burma and Indonesia. The hope that as a result of the mission's efforts exports of sacking goods would increase is held.

The raw jute market was also in better form, as mills gave moderate support and bought a fair quantity. Expectations of a shorter crop during the season are assisted by the continuance of the hot and dry weather, which is affecting sowings. Even if it rains, in all likelihood, the acreage would represent a decline in view of the level of prices which are below the economic rates. These factors have naturally encouraged holders to adopt a hesitant tendency in finalising business, and Assam bottoms gained Rs. 20 from Rs. 17-8. A ten-rupee rise to Rs. 110 a bale was recorded in *pucca* bales first marks. Pakistani bottoms were priced at Rs. 23 showing an improvement of Rs. 2. Latest quotations of other varieties of jute, all of which show gains of Re. 1-8 to Rs. 2. are: Dalcola Rs. 21-8, Murshidabad dist. tossa bottoms Rs. 18-8, Kissanganj Rs. 20-8, *mesta* bottoms Rs. 15, *Bimli* f.a.q. Rs. 15-8, Murshiganj Rs. 15, Salmari-Sonaili tossa Rs. 20, and Dirhatta Rs. 19-8.

FURTHER DROP IN METAL PRICES

(From Our Own Correspondent)

CALCUTTA, *21st April*

The recession in the prices of metals continued during the week with even greater force than during the period covered by our last report. Weak advices from overseas markets, dread of consumers to enter into commitments in the present unsettled conditions, and continued closure of the Bombay market for an indefinite period, were all factors which slashed prices further. Traders in manufactured products are only interested in ready material and in unavoidable cases for stores for the near delivery positions. Electrolytic copper was one of the worst affected sections this week, and, despite a tight supply position, the price was taken down to Rs. 171 from Rs. 180. For a time, however, it appeared as though the downward movement would stop at Rs. 177, but this was not to be. The fall in prices in America, following the American Smelting and Refining Company reducing the May shipment rate from 33 cents to 32 cents a lb. and the possibility of Chile revising its price, chilled the sentiment of local holders. At the lowest level, some transactions took place.

The further drop in prices in the London and the Far Eastern markets was reflected in tin, which moved down from Rs. 520 to Rs. 485, but closed higher at Rs. 505. Not much movement back is necessary to see the price at the pre-Korean war level. Now that a truce in Korea is a matter of only a few weeks, it is thought that the price would get stabilised at the level of mid-1950. In contrast to the general weakness, mercury was slightly better at Rs. 500 a flask, and some ready material changed hands. Electrolytic zinc eased from Rs. 53-8 to Rs. 52 and lead from Rs. 66 to Rs. 64-8.

FOOD SITUATION BRIGHT

(From Our Own Correspondent)

HAPUR, *18th April*

The food situation in India for the current year is regarded as very bright in Government circles. Total imports for the current year will be only 2.5 million tons, as against 3.7 million tons last year. There was an opening stock of wheat of 10 lakh tons, thanks to the American wheat loan. The internal procurement target is half a million tons and the wheat crop in Northern India is so good that the actual procurement may easily exceed the target. Arrangements have already been concluded for the import of 1.8 million tons of wheat.

In the case of rice, the current year opened with a stock on hand of 130,000 tons. India expects to receive during the current year 22,000 tons of rice from Pakistan, in return for wheat supplied last year, and another 15,000 tons of rice loaned to Ceylon last year. Internal procurement, thanks to good

STOCK & SHARE QUOTATIONS

Abbreviations:—D=Deferred shares. G=Guaranteed shares. P=Preference shares. P.O.=Preferred Ordinary shares. R=Rebate shares. Y=Accounts published yearly. H=Accounts published Hal-yearly. Q=Accounts publishe once 15 months. T=Company has Debentures. R.L.=Reserve Liability on shares. N=Nominal Quotation. i=Interim Dividend. f=Dividend for first half-year, y=Dividend for the year. x=Ex. Dividend c.d.=Cum. Dividend.

Shares:—If a company has different classes of shares—as, for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under "Paid-up Per Share."

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12 indicate the months of June and December, respectively. 'Reserves" ncludes general and other reserves and all other funds which a company may have as also depreciation on block items, when this is charged to separate account "Block" represents actual cost of land, buildings, machinery, and all such other items on which depreciation is allowed, less sales, if any, and stands for the gross figure except where otherwise indicated.

Dividends:—Dividends for completed years are calculated at per cent. per annum, but, where quoted for portion of a year, they represent percentages of the dividend on the paid-up share value. For companies closing the boo half-yearly in the first three months of the year, and for companies closing their books yearly during the first half of the year dividends are shown as for the previous year.

* The following explanatory notes relate to the abbreviations and marks shown on page 780 in the bentures section:—

Option to repay on six months' notice, on any nterest date after 31st December, 1951, at 102 per cent. Also redeemable out of a cumulative sinking fund of 1½ per cent. per annum (commencing in 1938) by drawings at 102 per cent. or by purchase at or 102 per cent.

(a) Option of repayment at any time at 3 per cent. premium.

(b) Bearer bonds of Rs. 1,000 each repayable at par.

(c) Bearer bonds of Rs. 1,000 each repayable on 31st July, 1959.

(d) Bearer bonds of Rs. 1,000 each with option of redemption in whole or in part at par on 30th June, 1952, or on any subsequent interest date at one month's notice.

(e) Returnable on or after 31st July, 1950, at Rs. 102-8 or at par after 31st July, 1955, on six months notice in each case.

(f) Bearer bonds of Rs. 1,000 each with option of redeeming on 3 months' notice at ½ per cent. premium, after 1st March, 1954, but before 1st March, 1957, and 1 per cent. premium on or after 1st March, 1957

(h) Option of redemption on or after 1st July, 1949, at par.

(i) Option of repayment at any time at par at any time on or after 30th June 1947 on six months' notice.

MARKET GOSSIP

(Concluded from page 739)

cargo and passengers. Since the close of the Second World War, and especially since the Partition of India, the whole character of the coastal trade of India, and particularly of the West Coast, has changed to the detriment of the Bombay Steam Navigation Co., Ltd., and the advent of a number of relatively small shipping companies into this trade has taken away a good slice from the cargo trade both to the north and to the south of Bombay. The trade with Pakistan (which was formerly coastal trade) has practically disappeared." The capital structure of the Bombay Steam is unbalanced with a debenture loan of Rs. 2 crores and a share capital of Rs. 75 lakhs. Looking to the tonnage which the Company presently possesses and the natural limitations to any further expansion of its activities, it is stated, the possibility of utilising the cash resources of the Company for purchasing new tonnage that could be profitably employed within its normal zone of operations is not much.

* * * *

The present capital structure of the Scindia Steam is made up of an authorised capital of Rs. 6.75 crores, divided into 45 lakh shares of Rs. 15 each and a paid-up capital of Rs. 6.60 crores divided into 44.01 lakh shares of Rs. 15 each. The paid-up capital of the Bombay Steam is Rs. 74.90 lakhs, made up of 2.40 lakh ordinary shares of Rs. 25 each and 6,000 preference shares of Rs. 250 each. As the authorised capital of the Scindia Steam is very nearly fully issued and paid-up, the amalgamation of the Bombay Steam and the allotment of the Scindia Steam shares to the Bombay Steam shareholders require the raising of the Scindias' authorised capital. The Directors of Scindia, therefore, propose to enhance this by Rs. 45 lakhs by the creation of 3 lakh new shares of Rs. 15 each ranking *pari passu* with the existing shares. They have applied to the Controller of Capital Issues for necessary sanction in this connection.

ENGINEERING

(Concluded from page 756)

absolute level) in the British Commonwealth. In the U.K., it has risen by 40 per cent., in the Schuman countries by 17 per cent. and in Western Europe as a whole by 27 per cent.

Consumption Per Head

In the light of these production figures, it is of interest to attempt an estimate of apparent consumption per head in the principal industrialised countries. The estimates are made by adding the ingot equivalent of imports to home production, deducting the ingot equivalent of exports and dividing the resulting total by the population. The fact that no allowance can usually be made for increases or decreases in stocks means that year-to-year changes in the estimates must be treated with reserve. Nevertheless, the figures afford a useful guide to comparative levels of consumption —though "consumption" in this sense naturally includes the steel which eventually leaves the country in the shape of metal goods exports.

Since complete trade figures are not yet generally available for 1952, the latest period for which the consumption estimates can be made is 1951. The following table gives apparent consumption of steel per head in some important countries:

(In ingot lbs.)

	Average 1937-38	1948	1950	1951
U.S.	641	1,131	1,237	1,343
Canada	346	623	614	703
Sweden	482	625	645	715
Australia*	428	415	538	643
U.K.†	495	614	630	642
Germany‡	598	278	469	497
Belgium-Luxembourg	353	757	501	488
Netherlands	333	326	370	428
France§	289	408	332	497
Italy	123	110	141	166

* Year ended 30th June.
† Adjusted for stock changes.
‡ Includes the Saar in 1937 and 1938; W. Germany only 1948-51.
§ Includes the Saar 1948-51.

Though only the larger consumers are shown, the first impression is of the wide gulf that separates the U.S. from the rest of the world; there are also considerable differences between the levels of consumption in the several West European countries. On a *per capita* basis, consumption in the U.S. is twice as high as in the U.K. This is a reflection of that country's enormous oil industry, its huge annual output of motor cars and its high level of industrialisation generally. On the same basis, consumption in France is only two-thirds, and in Italy about one-quarter that of the United Kingdom.

Since pre-war years, consumption in the U.S. has more than doubled, as a result of the remarkable expansion of the consuming industries and the general rise in the standard of living. Even more rapid has been the rate of advance in Canada, that country having risen from seventh to second place in terms of *per capita* consumption. The U.K. has occupied fifth place since the war, consumption per head showing a steady advance. The actual figure for 1951 was influenced by raw material shortages, which temporarily depressed steel production and from which a sharp recovery has since been made.

In Western Europe, German consumption has naturally made a marked recovery in recent years, though in 1951 it was still below the pre-war level. A decline in home production and an increase in exports are the reasons for the post-war fall in apparent consumption in Belgium-Luxembourg. A stable level of consumption seems to have been maintained in France between 1948 and 1951, while in Holland and Italy considerable increases were recorded.

Since no labour difficulties are expected in the United States this year, world steel production may well rise to between 235 and 240 million tons. Steel should, therefore, become more plentiful throughout the Western world. In the absence of unforeseen difficulties, consumption will be able to show a further marked advance, assuming no lack of demand for the products of the steel-processing industries.—*Monthly Statistical Bulletin. Published by British Iron and Steel Federation, London.*

COMMERCE AND INDUSTRIES

(Concluded from page 760)

A brief analysis of the measures discloses that, in Bombay, tobacco in any form, whether manuiactured or not, is subject to general tax at 3 pies in a rupee. The new law, in addition, subjects cigars, cheroots and pipe tobacco (other than *hooka* tobacco) to special tax at nine pies in the rupee. The Madras Bill taxes only certain kinds of manufactured tobacco. Cigarettes which cost three pies or less each at the retailer's point will not be liable to taxation. Only cigars costing more than As. 2 each at the retailer's point are taxable. The tax would be levied at the rate of 10 per cent. on cigarettes costing six pies or less, and 20 per cent. on cigarettes costing more than six pies but not more than nine pies each at the retailer's point. For varieties costing more than nine pies each, the tax will be 30 per cent. There will be no tax on *bidis*, chewing tobacco, snuff or any preparation of tobacco which is not a cigar, cigarette, cheroot or pipe tobacco. The amendment to the Mysore Sales Tax Act was necessitated to avoid smuggling of tobacco to Madras from Mysore, on account of higher prices fetched there.

The Bombay Act has not evoked much criticism. The Madras measure has, however, come in for some comment. It has been criticised on the ground that the differential rates of taxation would divert a substantial class of smokers from the costlier to the cheaper varieties of cigars which are injurious to health. The raising of the top slab to 30 per cent. has been condemned outright. The Madras Government, however, feels that the rates are adjusted according to the capacity of the people to pay. There are some who feel that tobacco is the not taxed sufficiently heavily and that the measures are not stiff enough to discourage the tobacco habit. This criticism is easily met. The object of sales tax on tobacco is not enforcement of a moral or health reform but to raise revenue for the State. Secondly, smoking has become almost second nature and should not be compared to drinking.

MARKET REPORTS

(Concluded from page 769)

rice crop, has been extremely satisfactory. In the first quarter of this year, 900,000 tons have been procured. The total commitments of the Government of India during the year is of the order of 1 million tons. Rice supplies already assured would, therefore, be sufficient to meet current year's requirements and at the same time carry forward a surplus.

The Indian Food Minister has, nevertheless, proceeded to Burma to conclude a barter agreement for the purchase of another 350,000 tons of rice, so as to be able to create confidence amongst the people of India that, even if there were adverse production next year, there could be no rice shortage.

It has been made clear that the additional 350,000 tons of rice will be purchased from Burma only if prices are reasonable. The position is that either there would be a barter deal on the basis of a reasonable price or India would be content with the rice it has already purchased.

The foodgrains markets in Uttar Pradesh remained quiet to steady. Arrivals are still poor and there is good consumers' offtake, since, with the free market prices falling below rationed grain levels, offtake from ration shops has been stopped. The estimated rice production in the U.P. this year (1,845,000 tons) shows an increase of more than 20 per cent. over last year's production. The Indian Food Minister, it is understood, has intimated to the State Government that the Centre may no longer purchase rice from the State and that rice procurement in the State may consequently be stopped.

The State Government is not at present lifting its quota of imported wheat from the Central pool, in view of the fact that imported wheat is no longer in demand, as it is priced higher than the indigenous wheat, the arrivals of which are in full swing these days. Ration-shop keepers are facing a loss, as the Government has refused to take back the unsold stock and also to bear any loss on underselling the same. It has been proposed to purchase 25,000 tons of gram and barley this year to replenish the stocks in the eastern districts.

The latest quotations in the local market are: Wheat Rs. 16 to Rs. 17; arrivals averaged 500 maunds daily; gram Rs. 14-8; there are no arrivals; barley Rs. 11-6; *bejhar* Rs. 11-6; rice: *basmati* Rs. 34, *hansraj* Rs. 30, *sela* Rs. 28-8 and coarse Rs. 23; maize Rs. 12; *bajra* Rs. 11-8; *juar* Rs. 11 to Rs. 13-8; *guwar* Rs. 13-4; peas: ready dara Rs. 13-4, superior white Rs. 20 to Rs. 25 and forward *jeth* Rs. 13-6; arrivals averaged 3,500 to 5,000 maunds daily. Thrashing results are reported to be generally disappointing and the pressure of arrivals may not last long. *Arhar* ready Rs. 13-8; arrivals averaged 300 to 400 maunds daily and forward

REAL CHARTER FOR BANK EMPLOYEES

THE award of the three-man Tribunal, under the chairmanship of Mr. S. Panchapagesa Sastry, on the "industrial disputes" between certain banking companies and their workmen is an eminently reasonable one. It has sought to meet the grievances of workers in a liberal manner, bearing in mind the general economic conditions prevailing in the country. In certain respects this award, of course, offers to workers a little less than the Sen Award, which, however, was declared null and void by the Supreme Court, but, in certain other respects, it is definitely better. Further, it should not be forgotten that the Sen Award was too liberal to have stood the test of time, even if it had not become invalid. It sought to confer on workers in banks monetary benefits and other facilities which the banks could not afford and which were completely out of tune with general standards of wages and living in the country. It ignored the interests of the community as a whole and placed a burden which, had it been allowed to continue, would have brought about the closure of many banks and accentuated the unemployment situation in the country. It will not, therefore, be wise on the part of employees of banks to compare the Sastry Award with the unrealistic Sen Award and nurse a grievance that they have had a raw deal under the former. On the contrary, they have now an award to which their employers are more or less reconciled, even though the latter have good reasons to feel disappointed with it, and which assures them of a standard of living higher than what they can get in comparable callings in the private sector or in Government service. Those who doubt the accuracy of this statement need only study the minute of dissent added by Mr. M. L. Tannan, a member of the Tribunal, who is well known for his knowledge of banking in this country and elsewhere in the world. In fact, it is Mr. Tannan's contention that the award errs in favour of employees. One may not agree with this and many other remarks of his on the details of the award on grounds of practicability, but there is no doubt that there is considerable force in most of his arguments.

A refreshing feature of the Sastry Award is that every one of its decisions is supported by arguments. The case presented by both the parties to the dispute has received careful examination and the pros and cons of the various suggestions made have been considered. The Tribunal has taken extraordinary care to state its conclusions forcefully and precisely. Among the several issues referred to the Tribunal, the most important related to basic pay, dearness allowance, bonus, provident fund and hours of work. On the question of basic pay, the ideal principle of "equal pay for equal work," laid down in our Constitution, has been found impracticable by the Sastry Tribunal also. Even some of the unions of workers seem to have recognised this, as is evident from the schemes submitted by them to the Tribunal for the classification of banks according to their ability to pay. Uniformity even in regard to basic wages, however desirable in principle, will not be possible, so long as there are banks of varying strength, resources and capacity to pay and all such banks are considered as essential. This was recognised in all the awards which preceded the present one. The Sastry Tribunal, however, has found it necessary to have four classifications, instead of three as under the Sen Award. This has been done with a view to giving some relief to smaller banks. Under the Sen Award, all banks, the working funds of which were below Rs. 7.5 crores, were classed together under one group. This proved to be a great handicap to several banks with limited resources. Consequently, the Tribunal has introduced a new group, consisting of banks the working funds of which are below Rs. 1 crore. Mr. Tannan, in his minute of dissent, does not favour this classification on the ground that it is an unsound policy to encourage small banks. In a brief discussion, he has sought to show that the country stands to benefit by depending more upon the big banks to spread the banking habit than upon small banks. But this is a question of major policy on which a decision can be taken only by the Government and which is clearly outside the purview of the Tribunal. The two other members of the Tribunal, therefore, did well in disregarding this question while fixing the level of pay and other allowances for the employees of small banks.

Another classification followed by banks for determining the basic pay and allowances is the regionwise division of branches on the basis of population. This has become necessary in view of the considerable difference in the cost of living in the various parts of the country. It would obviously be unfair to have the same scale of emoluments for the employees in all these places. The Tribunal decided to meet this difficulty by having slightly varying scales of pay, supplemented by local allowances for different localities on a graded scale according to the cost of living. The classification of the areas has been done on the basis of population. As Mr. Tannan points out, this is by no means a flawless basis, but, in the absence any other workable alternative, the Tribunal had no choice in the matter.

The Sastry Tribunal has made a fundamental departure from the Sen Award in deciding to fix the dearness allowance at a flat rate on a percentage basis linked to the basic pay, subject to a minimum and maximum, for the clerical staff, and at a flat rate for the subordinate staff, instead of at a fluctuating rate linked directly to the movements in the cost of living index for the different centres, as prescribed in the Sen Award. This is, indeed, a welcome departure, as the formula laid down by the Sen Award proved to be very complicated and difficult to operate. It led to many anomalies too, as cost of living indices were available only for 46 centres, as against 894 places where the banks concerned have their branches. The Sastry Tribunal has followed a fairly scientific basis in arriving at the quantum of dearness allowance. Further, it also provides for automatic revision of the dearness allowance half-yearly on the basis of the variation in the interim series of all-India average working class cost of living index number, which the Government of India has been compiling and publishing in the *Indian Labour Gazette* since the beginning of this year. The revised dearness allowance compares favourably with what was being paid under the Sen Award and nearly offsets the slight reduction in the basic pay. Thus, the total emoluments under the Sastry Award for one who starts as a clerk in one of the A Class banks in Bombay or Calcutta is Rs. 128 per month, as against Rs. 129-8 under the Sen Award. Employees who have already put in several years' service also do not stand to lose anything, inasmuch as they are not asked to take a cut if they are already getting more than what they are entitled to under the time-scale fixed by the new Award.

On the issue of bonus to workers, the Sastry Tribunal has displayed a commendable degree of common sense and a clear appreciation of the practical difficulties involved in linking the bonus to dividend, as had been done in the Sen Award. The scheme which it has put forward for determining the quantum of bonus to workers eschews the many defects noticed in the one adopted by the Labour Appellate Tribunal in regard to textile workers of Bombay and Ahmedabad and makes suitable allowances to meet the prior claims of banks on their profit to safeguard their position as credit institutions. Though it remains to be seen whether the scheme will work without any hitch in actual practice—the Exchange Banks, for instance, might find some difficulty in operating it—the workers' right to a definite share in the surplus profit of banks is firmly secured in the award. Similarly, their right to promotion is also ensured; it will not henceforth be dependent upon the sweet will of their superiors. They will automatically get it, provided they work conscientiously and without any blemish. The real merit of the Sastry Award is that it safeguards the self-respect and dignity of the workers in banks, provides for a decent wage as well as for retirement benefits, and assures them fair and decent working conditions. It is a real charter of rights for them, a generous charter, indeed, considering the low level of economic standards in the country. Although it provides no worthwhile relief to most of the banks in the present high cost of administration, they should accept it wholeheartedly in the hope that it will, in course of time, lead to better relations with their workers.

LOCAL FINANCE

WITH the Local bodies gradually becoming alive to their responsibilities, there is everywhere a profound discontentment with the economic backwardness of these ancient institutions. Small wonder, then, that there was, at the All-India Local Bodies Conference, held at Madras this week, a chorus of protest against the dismally low levels of their revenue position. Dr. C. P. Ramaswamy Iyer, who opened the Conference, described the Local bodies as "a beneficiary and beggar," perpetually in want and asking for grants from the State Governments. Mr. R. K. Sidhwa, who presided over

the Conference, deplored that no serious effort had been made to "formulate a plan for bettering the economic conditions of local bodies."

The scope for the extension and improvement of the work of Local bodies is certainly immense in this country which has an abysmally low level of civic amenities. Five out of six villages, it has been stated, are without primary schools. Less than 10 per cent. of India's population is served by protected water supply. Medical relief is non-existent over large parts of the country. Modern sanitation is confined only to a few large towns and cities; and even here, it is far from perfect. Village roads are an apology for communications. And yet the Local bodies are charged with the responsibility for providing education, sanitation, medical relief and roads to the people whom they serve. The best intentions of the authors of local self-government have foundered on the rock of finance. Lack of finance has not only engendered a feeling of despair, but the consequent lack of avenues for useful service, has provided scope for these institutions to become cesspools of personal intrigue, and rural faction. In sheer despair, State Governments resort to supercession of these institutions, without realising that such is hardly any remedy for the disease.

The chief cause of the malady is inadequate financial resources. It calls for speedy relief. In any country, the allocation of resources between the State and Local bodies presents a difficult enough problem. The problem becomes well-nigh intractable in a Federal State where there are three claimants—the Centre, the States and the Local bodies—for the available sources of revenue. Local bodies in India, a Federal State, are, therefore, in an unenviable plight. And their position has been rendered worse by reason of the fact that a few sources of revenue, such as electricity tax, entertainment tax, amusement tax and advertisement tax, which are regarded in many countries as the exclusive monopoly of Local bodies, have been appropriated by the State Governments. It is true that it would be no solution to their problem if the list of permissible sources of revenue were merely augmented by addition of new sources, so long as the Local bodies are unwilling, for fear of popular disapproval, to utilise fully their existing sources of revenue. But then, Local bodies alone are not to be blamed for the short-sightedness. Are not State Governments themselves unwilling to impose a surcharge on land revenue? The problem deserves to be tackled not through apportionment of blame but through resolute action at some level.

The one way of doing it is to give Local bodies some elastic sources of revenue. Property tax, to which they are entitled, is an inelastic source, and in villages, where house rent is purely nominal, little revenue could be gathered. This applies to several other sources of revenues, such as profession tax, which are assigned to local institutions. Now that the whole structure of taxation, Central, State and local, is shortly to be reviewed by the Taxation Enquiry Commission, under the chairmanship of Dr. John Matthai, it is only reasonable to hope that the Commission will be able to make up for the past neglect of this essential field, namely, the sphere of local taxation. The Commission will no doubt be greatly assisted by the valuable ground that has been covered already by the Local Finance Enquiry Committee.

A look at the resolutions, passed at the Madras Conference, will reveal many practical suggestions, capable of immediate implementation. The main resolution accorded its full support to the various recommendations made in the report of the Local Finance Enquiry Committee. It urged the State Governments to take immediate steps for the implementation of the recommendations of this Committee. The Conference resolved that the State Government should meet the full expenditure incurred by local authorities towards the attainment of free and compulsory education to all children of school-going age within a period of 10 years. It requested the various State Governments to amend the City and District Municipality Acts and Local Bodies Acts framed, either prior to or after the advent of independence, so as to give absolute autonomous powers to Local bodies in consonance with the present democratic set-up. It urged the Centre to issue necessary directions to all the State Governments to organise village *panchayats* on a real democratic basis, with all the powers, functions and privileges within their area necessary for the effective discharge of their legitimate functions and duties. It further resolved that wastelands belonging to Government in civil and cantonment areas inside the limits of Local bodies, which remain uncultivated or unused for a period of ten years, and above, should be automatically transferred to the respective Local bodies free of cost, as the Local bodies find that these lands remain in insanitary conditions without supervision of anybody and endanger the health of the people. Finally, it authorised the President, Mr. R. K. Sidhwa, to lead a deputation to the Prime Minister to urge him to implement the recommendations of the Local Finance Enquiry Committee.

Among the many reforms, which are indicated in India's fiscal field, the change in the administration of octroi must take an important place. Since octroi remains the only important source of revenue for the Local bodies, they levy this impost often with scant regard for the interests of trade and industry. The schedule of rates varies from one State to another, and even within the same State, there does not seem to be any great uniformity in rates. A terminal tax, according to the Local Finance Enquiry Committee, would be less objectionable than octroi which is admittedly an irksome obstacle to the free movement of goods. The Committee, accordingly, recommended the transfer of the entry relating to terminal taxes from the Union list to the State list.

Tracing the history of terminal tax, Mr. Sidhwa pointed out how all Local bodies were empowered, prior to the Government of India Act 1935, to levy terminal tax subject to the approval of the items and the rates by the State Governments concerned. Under the Government of India Act, 1935, the Local bodies were deprived of this right. This position has been maintained under the new Constitution also. Mr. Sidhwa pleaded for the amendment of the Constitution, with a view to enabling the Local bodies, now deprived of an important source of revenue, to levy terminal taxes. The subject is not, however, free from controversy, for, as Mr. R. D. Kapila, member, Local Finance Enquiry Committee, pointed out, in his minute of dissent, it would be wrong to alter the present position, whereby the terminal taxes leviable in respect of goods and passengers carried by railway, sea or air are placed in the Union list and terminal taxes on goods and passengers are placed in the State list. The whole issue must be thoroughly examined before Mr. Sidhwa's suggestion is accepted by the Government.

There are, of course, many non-controversial suggestions for improving the state of their finances which have been made from time to time by the Local bodies. Many of them have been considered and recommended for adoption by the Enquiry Committee referred to above and were emphasised by more than one speaker at the conference. These include the withdrawal of the concession of freedom from local taxation, granted to State property, if that property is used for purposes of State trading, measures to prevent the evasion of octroi duty, revision of the schedule of professional tax and provision of adequate grants-in-aid to Local bodies. These suggestions could be implemented without delay. At least, they ought to be so implemented, if the Local bodies are to be raised to a state of solvency and if they are to discharge effectively their function as nurseries of democracy.

ANOTHER MINIMUM WAGE AWARD

THE Bombay Industrial Court has announced its award fixing the minimum wages for unskilled workers engaged in sugarcane farms of certain sugar factories in the Deccan. The award is the outcome of a reference to the Court in 1950, by the Government of Bombay and the employees, of a dispute between seven sugar companies and their workers. The employees put forward their claims for a minimum wage of Rs. 30 for a month of 26 working days when the cost of living index number was at 105. Contending this demand as excessive, the sugar companies argued that, as the present wages of workers were 4½ times higher than what they were in pre-war years, there was no need to fix any minimum wage at all; but if the Court thought it was absolutely necessary to fix such a wage, they stated, a sum of Rs. 11 for a month of 26 days might be taken to be more than a sufficient minimum wage for unskilled workers. In order to assist in its work, the Court, however, appointed a committee of assessors. After visiting the factories and their farms and collecting necessary information and evidence, the assessors unanimously recommended a minimum wage of Rs. 22-12 for a month of 26 days. The Court, after examining the data in the light of similar awards in the cotton textile industry and bearing in mind, at the same time, the complete rural character of the region in which the factories are situated, has prescribed a minimum wage of Rs. 23-2-6 for a month of 26 working days or Re. 0-14-3 per day on the pre-war level of prices.

The various considerations, mentioned by the Court to justify the minimum wage level prescribed by it as above, provide adequate indication that it has made the best of a bad job. A point to be noted, in this connection, is the fact that the Court was greatly handicapped by lack of accurate statistics to assess the real position of workers in the area covered by the dispute. The award may be taken to be in keeping with the gradual change that has taken place in the concept of minimum wage. Says Mr. S. H. Nayak, member of the Court: "It is no longer based upon the subsistence theory which held that the minimum wage equalled the amount of commodities necessary to feed and clothe a worker and his family. It is now made to include not only bare physical necessities but also a modicum of comfort, otherwise known as conventional necessities." On the question of the ability of employer to pay, the Court has taken the view that "an industry which is incapable of paying the minimum wage has no right to exist," a view clearly endorsed by the Labour Appellate Tribunal in the Buckingham and Carnatic Mills' case.

Although the fixation of the minimum wage reflects the spirit of the times through which the country is passing, its repercussions on the fortunes of the seven sugar factories concerned can hardly be ignored. These factories have to pay, with retrospective effect as from 1st October, 1952, a basic minimum wage of Rs. 23-2-6 for a month of 26 days, whereas hitherto they were paying about Rs. 11 only. The increase of Rs. 12-2-6, consequent on the award, is a primary and recurring burden which the factories have to shoulder now. Further, as the dearness allowance of these workers is linked to the basic wage, the higher basic wage will mean a corresponding increase in the dearness allowance also. Besides, some of the skilled workers employed in the factories have a static dearness allowance not related to the basic wage, and they may now find that their dearness allowance is less than that of the unskilled labourer. This, in turn, will lead to considerable dissatisfaction among them and possibly unrest also. The factories may ultimately have to step up the dearness allowance of these workers too, incurring thereby further additions to their costs of manufacture, if they are not to have any trouble with their workers. This is unfortunate, because the sugar industry has now entered a stage when the need for keeping down the cost of production is paramount.

A notable feature of the award is that it makes no discrimination between a male and a female worker, while prescribing the minimum wage for the workers. This is in line with the accepted principle of equal pay for equal work. On economic and social considerations the acceptance of this principle is justifiable. In the present instance, however, it looks as though this principle may work against the interests of women workers in the region. For, at present, they are being paid a lower wage on a six-hour basis. Now that the implementation of the award entails additional expense by way of increased wages and dearness allowance, there will be a tendency to avoid employment of women when male workers are readily available for the same wage. The elimination of female workers will almost halve the earnings of most of the workers' families, of which both husband and wife usually work on the farms. This, in its turn, would affect adversely the standard of living of these families, defeating thereby the very purpose of the award, namely, to improve the living standards of the working classes.

The award has placed the seven factories which are parties to the dispute at a great disadvantage. It singles them out for incurring excessive additional burdens which their confreres neither in the Deccan Canal area nor in U.P. and Bihar are required to bear. To the extent of this burden, the competitive capacity of these factories stands impaired. As the award benefits only an infinitesimal fraction of workers employed in land cultivation, it will not make the slightest impression on the standard of living of agricultural workers as a whole. The award is yet another instance to show that those who resort to scientific methods for improving their production must be prepared to pay some penalty of trying to be more efficient than their rivals in the field. The Deccan factories in question, however, can have the satisfaction of having proved that large-scale farming, with the help of modern implements, brings far greater benefits to landless labourers than farming in small plots under peasant proprietorship.

BULLISH FERVOUR IN SHARES

KOHINOORS TO EXPAND—NEW LOAN NEXT MONTH

THURSDAY, 5 P.M.

THE bullish fervour in the share market, which has been the dominant feature of trading on the Stock Exchange in the last three weeks, has not yet waned. On the contrary, it seems to be a little stronger than a week ago. The trend of prices has generally been upward, with both steels and textiles recording handsome gains. Tata Deferreds touched to-day a high of Rs. 1,922-8, the highest level to be seen for over a year now. The strength of the market during the week is due, to a very large extent, to the revival of the Calcutta market where both jute shares, which had remained depressed all along, have been meeting with some selective buying. Reports about profit margins of mills are also encouraging. An impression is gaining in the minds of operators that 1953 will turn out to be an infinitely better year for cotton mills than 1952. Some even go so far as to say that it will prove to be one of the best post-war years. Millowners, however, do not share this robust optimism, though it is true that they do not take a pessimistic view either. They feel that the market is not making adequate allowance for the new burdens that have been heaped on the industry. A point to be borne in mind, while anticipating the profits of mills, is that the days when broad generalisation could be made are over and that, with no price control on over 70 per cent. of the industry's production and considerable freedom for the mills to buy their requirements of raw material, the profits of individual mills will vary to a considerable extent. Those mills, which had the foresight to buy early this year the major portion of cotton needed by them for the whole year, for instance, will be able to show a much better profit than those which had bought only a limited quantity, for, in recent weeks, the cost of cotton has been consistently going up, with little chances of any appreciable fall in them in the next few months.

MARKET GOSSIP

* * * *

Among the cotton mill shares, Kohinoors have recorded a good rise, the exact gain over the past two weeks being as much as Rs. 18 per share or 6 per cent. In the initial days of the fortnight, this counter evoked some investment buying stimulated by the note of optimism struck by the Company's Chairman in his speech at its last annual meeting. But, in recent days, the rise has been rapid and this is attributed to reports that the Company is planning to expand its productive capacity by acquiring one of the mills in Bombay, which is for sale. Our enquiry reveals that the mill in question is the Raghuvanshi Mills, which has 33,160 ring spindles and 197 looms. The machinery of this mill is modern, having been installed only some eight or nine years ago, after the old machinery was destroyed in a fire. This machinery was bought during the war years, with the help of the War Department, under a special priority, and that before the British textile machinery makers put up their prices. It is considered to be good for another 25 years. Market operators believe that the cost of acquiring this mill will be relatively cheaper as compared with the cost of buying new machinery. It is, however, too early to say as to what will be the outcome of the proposed deal. According to one source, the Kohinoor Mill Company is experiencing some competition from another party who is also said to be bidding for the mill.

* * * *

Why is it that even a leading company such as Kohinoors prefers to buy a second-hand mill, instead of going in for brand new plant? Is the cost factor so attractive as to induce it to do so? Some feel there must be other considerations besides the cost factor. One of them may be the Government's stringent restrictions on imports of foreign textile machinery, with a view to giving protection to domestic textile machinery makers. If this is true, then it looks as though these restrictions have enhanced the value of foreign spinning and weaving plants already in this country, even though they may have been in use for some time.

* * * *

As already stated, there has been a perceptible improvement in the value of some selected jute shares. Anglo-India, for instance, has gone up from Rs. 224 a fortnight ago to Rs. 236, Champdany from Rs. 155 to Rs. 163, Cheviot from Rs. 199 to Rs. 212. Among the more speculative counters, Howrah has gained over a rupee to Rs. 24-11. The interest that is now being evinced in these shares is the result of the firmness of the jute manufactures and jute markets. On reports of fair-sized orders for jute goods from Argentina and the U.S. Army Department, the price of 40"x10 cz. hessians has gone up to Rs. 42-6, which compares very favourably with Rs. 39-2 a week ago and Rs. 38-4 on 10th April, 1953. The price of sackings has also advanced from about Rs. 86 towards the close of last week to Rs. 93-8. On 10th April, it was as low as Rs. 85-14. In the raw jute market, mills have been buying again. Their re-entry into the market is attributable partly to the revival of export enquiry for their manufactures and partly to apprehensions that, in the next season, the output of raw jute both in India and Pakistan may suffer a perceptible fall, owing to adverse weather conditions and a fall in the area devoted to jute. It is stated that for want of rains, the tender jute plants in certain parts of East and West Bengal are withering. These reports have pushed up the prices of raw jute. Assam Bottoms, which had come down to Rs. 18-8 after advancing to Rs. 20 last week, have again gone up to stand at Rs. 22. Twenty days ago, these were being offered at as low a level as Rs. 16-8 per maund.

* * * *

The Gilt-edged market too has been ruling firm, with a gain of As. 4 to As. 6 in the value of all long-dated loans, as will be seen in the following table:

	30-4-1953	23-4-1953	16-4-1953	9-4-1953
	Rs. a.	Rs. a.	Rs. a.	Rs. a.
3% 1953-55	100 1	100 1	100 1	100 1
3% 1957	98 12	98 12	98 11	98 12
3% 1958	98 10	98 10	98 7	98 7
3% 1959-61	96 9	96 6	96 4	96 3
3% 1963-65	92 14	92 10	92 8	92 8
3% 1964	92 14	92 10	92 8	92 8
3% 1966-68	90 9	90 7	90 5	90 5
3% 1970-75	86 12	86 9	86 8	86 10
3% 1986 Conversion Loan	82 12	82 4	81 8	82 3

* * * *

The improvement noted above is mainly the result of the Reserve Bank's open market operations designed to prepare the market for a new loan. The Bank is said to have put up its selling rates for these long-dated loans by a couple of annas. This has induced the other sellers to hold back their sales, in the expectation of a further rise. Consequently, the market is bare of floating stock. The Reserve Bank itself is not a keen seller, we are told. Does the grooming of the market on these lines warrant the belief that the Bank will be able to push up the market to such an extent that the Government of India will be able to issue a new loan on terms less favourable to lenders than the current yields? We have our own doubts. We do not think that the Reserve Bank will be so unwise as to resort to artificial methods of boosting up the values to such an extent as to bring about a significant fall in the current yields on Government securities. Its objective in preparing the market even now for a loan that may be offered early next month is, in all probability, no more than to whet its appetite. It is not unlikely to take the risk of keeping the yield on the new loan at a level which does not offer any attraction over the current loans. If the new loan is to find ready buyers, it will have to be issued on terms that will give a yield of 3.80 per cent. for 10 or 11 years. Since 1964 is the most convenient year from the point of view of repayment—the outstanding of the existing loan maturing in that year is no more than Rs. 30 crores—the new loan is almost bound to be repayable in that year. As the existing 2½ per cent. 1964 loan is offering a yield of about 3.80 per cent., the rate of interest on the new loan will have to be 3¼ per cent., with the issue price being at a discount of Re. 1-8 or Rs. 2 per cent.

* * * *

Many are wondering as to why no announcement has yet been made about the proposed debenture issue of the Standard-Vacuum Oil Refineries about which much has already appeared in the financial columns of the daily Press. In fact, one or two readers have written to us, asking as to when this issue will be offered to investors. Our enquiries show that it will be some time next month. It would appear that the Government of India wishes to complete its borrowing programme first and then allow others to enter the long-term capital market to raise their requirements. As readers are aware, the debentures of "Socony" Refineries will carry interest at the rate of 3½ per cent. (taxable) for a period of 10 to 15 years. Out of a total issue of Rs. 4 crores, the amount that is proposed to be offered to investors in this country will be about Rs. 2.5 crores. It is understood that the Tata Hydro-electric Companies will also be approaching the capital market shortly for a sum of Rs. 3 crores by way of debentures. The rate of interest on these will be, it is believed, at 5 per cent., subject to tax. In that case, the issue price may be at a slight discount.

* * * *

The recent merger of the Mercantile Bank of Hyderabad Ltd. with the Hyderabad State Bank, about which a brief reference was made in an earlier issue of this journal, has been negotiated, it is stated, on most satisfactory terms. Although complete details of the merger, which took effect from 1st April, 1950, are not available, it is learnt that the merger was based more or less on the same lines as those followed by the Punjab National Bank Ltd. when it took over the assets and liabilities of the Bharat Bank Ltd. It would appear that the authorities of the Hyderabad State Bank showed considerable spirit of accommodation in assessing the dead stock, stationery and other non-banking assets of the Mercantile Bank of Hyderabad, as also in taking over the entire staff of the latter Bank. The staff were assured their salaries, emoluments and allowances, and also their continuity of service. The customers of the Mercantile Bank of Hyderabad are also assured of continuity of service, because all the Bank's branches (except the Latur branch) will now function as the State Bank's branches. That the terms of the merger must have been satisfactory to the merging bank is evident from the fact that the Directors are confident of being able to pay back a "very high percentage of the share capital to the shareholders of the Bank."

* * * *

An irksome and wholly unnecessary restriction has been sought to be placed on the banks which wish to receive current account deposits from local bodies or quasi-Government institutions. These institutions are allowed to keep their moneys normally with the Reserve Bank of India or the Imperial Bank of India. But, should they choose to keep their surplus funds with any other Scheduled Bank, the official regulations require that the concerned bank should lodge with the investing institution sufficient Government securities as a cover against the amount deposited. The intention is that, if the bank defaults payment of deposit, the securities might be sold in order to recover the deposit amount. Adequate arrangements, it is stated, will be made for the safe custody of the securities and also for the payment of interest on them. The scheme is obviously motivated by the 'safety-first' principle. But no good bank will reconcile itself to the prospect of having to lodge Government securities with local bodies just for receiving current deposits. It actually amounts to banks taking a loan from local bodies, a loan repayable on demand. Further, such a procedure would seriously reduce their ability to borrow from the Reserve Bank or other bankers, as Government securities are generally used as a cover for their borrowing operations. Since good banks would not care to abide by these restrictions, it is only reasonable to expect that it is only the second-rate banks, anxious to attract deposits at any cost, which might agree to keep securities with the local bodies. If the Government of India, which is said to have directed the local bodies to insist on such a condition, sincerely want the Scheduled Banks to have the benefit of being bankers to local bodies, then it must withdraw this directive. If, however, it has no confidence in such bodies, it can direct them to be guided in their choice of their bankers by the Reserve Bank which might be asked to advise them. With the greater control and powers of supervision which the Reserve Bank has acquired under the Bank Act, it should be possible for the Bank to guide the local bodies properly in selecting their bankers.

* * * *

Mr. Ramdas Kilachand urged, in the course of his presidential address at the twenty-sixth annual general meeting of the Bombay Oilseeds Exchange, held last week, the need for the opening of hedge contracts in linseed and groundnuts on the lines of those in castorseeds. This plea deserves to be examined somewhat critically, in view of the fact that the statistical position of the vegetable oilseeds in India discloses a tight supply situation, particularly in edible oils. Consequently, there is a danger of speculative elements pushing up the prices of groundnuts and linseed and their oils, which are already high, to still higher levels, if hedge trading facilities are provided.

* * * *

It would be wrong to take a measure which might conceivably tend to push up the prices of an essential article of the daily food of millions of people. In fact, even the resumption of forward trading in non-transferable specific delivery contracts last week in linseed and groundnuts is being regarded with misgivings in certain quarters. But it must be conceded, at the same time, that the world oil supply position is tending to ease, with better crop prospects during the current season in the important producing countries. Also, if Korean peace is established, it might lead to a lowering of prices of oilseeds. If China joins the list of other competitors to India in the world's oilseed markets, as Mr. Kilachand himself pointed out in another context, there may well be a fall in the prices of oilseeds. The Government has, however, in the machinery of the Forward Controls (Regulation) Act, a fairly sound instrument for controlling excessive speculation. It would also be wrong to withhold indefinitely the facilities for hedging in the case of so important a commodity as oilseeds. There is thus a case for allowing hedge trading in this commodity, but the point to be considered is whether the time for doing so has arrived or whether it is still far off.

* * * *

The need for maintaining an adequate level of exports of vegetable seeds and oils was forcefully urged by Mr. Kilachand. Before the last world war, India was by far the largest exporter of groundnuts, but since then, Nigeria and French West Africa have taken the lead. Linseed exports have also declined sharply in recent years, and the commodity has been priced out of world markets. Again, castor oil exports from India are facing keen competition from Brazil. If India's exports, as Mr. Kilachand pointed out, were quantitatively the same as in pre-war years, the foreign exchange earnings would be four to five times higher than those in the pre-war period. The decline in exports is mainly due to increasing domestic demand. If, therefore, exports are to be maintained at reasonable levels, without sacrificing domestic consumption, it is clear that the production of oilseeds should be stimulated. And there is good scope for doing so. It may be noted here that the yield per acre in India of groundnuts is only about 800 lbs., as against 1,500 lbs. in China, of linseed 325 lbs., as against 550 lbs. in Argentina, and of castorseeds a maximum of about 700 lbs., as against 2,000 lbs. in Brazil. It is gratifying to note that the Indian Oilseeds Committee is taking up research schemes in this connection and trying to provide improved strains of oilseeds at reasonable prices. Better methods of cultivation, as Mr. Kilachand suggested, ought to lead to "larger production of oilseeds even on the same acreage."

* * * *

A development in the sphere of European steel industry and market for steel which calls for some special notice is the reported agreement between producers to keep prices at a particular level. Belgian steel producers, for instance, are reported to have reached an agreement with the German steel producers that Belgian steel will not be sold in Germany below German prices. In return, the German producers have assured the Belgians that they will keep out of the best of the Belgian export markets. Such agreements are clearly contrary to the spirit of the European coal and steel community. And it is perhaps unfortunate that they have come on the eve of the opening of the Pool's common market which takes effect from 1st May. M. Jean Monnet, President of the High Authority of the European Coal and Steel Pool, warned against a European price racket in steel and said that he would use all means open to him to defeat the racket.

FIRM TREND IN SHARES PERSISTS

TATA DEFERREDS RISE HIGH

(From Our Own Correspondents)

BOMBAY, 30th April

THE hardened sentiment in equities which had been in evidence on the Stock Exchange since the shake-out caused four weeks ago by the peace move by China, was fully preserved during the week under review. Under the combined influence of professional support and public buying, equities were able to rear their heads a good extent this week. Over a wide front most of the speculative equities regained their losses suffered in the shake-out. The performance of Tata Deferreds, in particular, was exhilarating, recording as they did to-day, a new high level after more than a year. A feature of the upward trend during the last four weeks was a cautious rise in values in the absence of any sharp reaction at bulges, and this helped equities to consolidate their gains well.

Operators on the Stock Exchange appeared to have been guided this week less by considerations regarding the Tata Deferreds conversion ratio issue than by other favourable influences. Thus the current difficulties encountered in the Korean armistice talks, hopes of better trade relationship between India and Pakistan engendered by the more friendly tone of the Pakistan Premier's utterances and his desire for a peaceful settlement of all outstanding issues between the two countries, prospects of better earnings by textile mills as a result of the decontrol on prices of two more varieties of cloth from 1st May, and the strength of the bullion and commodity markets were all helpful factors for the improved sentiment of the operators.

In the steel section, Tata Deferreds hardened from Rs. 1,876-4 to Rs. 1,895 on Monday. After a mild corrective reaction to Rs. 1,886-4 on Tuesday, the shares regained stability and moved up cautiously to Rs. 1,922-8 to-day, the highest level since 27th February, 1952, but closed at Rs. 1,917-8. Tata Ordinaries worked up from Rs. 321-8 to Rs. 329-12 and closed at Rs. 329-4. Indian Irons advanced from Rs. 25-4 to Rs. 25-9 on Monday. After receding to Rs. 25-6 on Tuesday, they once again appreciated to Rs. 25-14 before finishing fractionally lower at Rs. 25-12-6.

Optimism regarding the outlook for textile mills gave rise to bouts of buying in textile shares. Kohinoors were particularly strong, due to good investment demand and reports that the Company was negotiating to purchase another textile unit under its plan of expansion. As a result, the scrips reaped a handsome gain from Rs. 307 to Rs. 319-12 before winding up at Rs. 318. Bombay Dyeings were in demand to advance from Rs. 389-6 to Rs. 398-2 yesterday. To-day, some profit-taking intervened to cut part of the earlier gain and the shares closed at Rs. 396-14. Central Indias were in good form, recording a rise of Rs. 12 to Rs. 171. New Greats attracted attention and closed with a gain of Rs. 3 at Rs. 155. Simplex, which were in disfavour in the previous two weeks, rose by Rs. 9 to Rs. 177 this week. Standards gathered Rs. 8-12 to Rs. 304-6, Svadeshis Rs. 8-8 to Rs. 270, Tata Mills Re. 1-8 to Rs. 42-12, Gokaks Rs. 4 to Rs. 216 and Indu Ordinaries As. 5½ to Rs. 10-6. Finlays were quoted to-day Rs. 303 *ex-div.* (dividend being Rs. 20) as against Rs. 309 *cum-div.* a week ago.

Barring Imperials and Barodas, other bank shares were listless. Good activity was noted in Imperials, the Fully Paids advancing by Rs. 32-8 to Rs. 1,885 and Contributories by Rs. 10 to Rs. 463-12. Barodas recorded a gain of Re. 1-8 at Rs. 114. Centrals were quiet, with both Old and New shares losing As. 4 each to Rs. 64-4 and Rs. 65-12, respectively. Indias were lower by As. 4 at Rs. 154. United Commercials were fractionally higher at Rs. 35-12.

Persistent investment enquiry for select issues was a feature of trading in the public utility section. Although activity was not brisk, prices displayed a rising tendency. Ahmedabad Electrics rose by As. 15 to Rs. 109-11, Bombay Suburbans by As. 5 to Rs. 123-7 and Surats by Rs. 3-2 to Rs. 130-10. Tata Hydros were only better by a fraction at Rs. 152. Tata Powers and Andhra Valleys were, however, unchanged at Rs. 152 and Rs. 1,425, respectively.

The miscellaneous section displayed a diverse trend. A.C.Cs. were in request and, as a result, went up by Rs. 7-8 to Rs. 173-8. Belapurs lost Rs. 2 to Rs. 241. Bombay Burmahs moved between Rs. 387-8 and Rs. 398-2 and closed at Rs. 389-6. B.I.Cs. changed hands As. 4 higher at Rs. 8-9½. Killick Industries were picked up Re. 1-8 better at Rs. 152. National Rayons continued to be in favour, and gained further ground from Rs. 84 to Rs. 86. Tata Chemicals were quiet at Rs. 9-5, but Tata Oils were unchanged at Rs. 34-12. Wimcos were a steady feature at Rs. 236-14.

In the transport section, Scindias had a fairly steady spell and closed at Rs. 13-12. After last week's spurt, Bombay Steams reacted to Rs. 35-8, losing on balance Re. 1-8. Air-Indias were done at Rs. 84 and Air-India Internationals at Rs. 105. Hindustan Motors were marked up by a fraction to Rs. 4-3.

In the mining and engineering group, Alcocks were picked up Rs. 2-8 better at Rs. 323-12. Indian Coppers were quiet at Rs. 3. Premier Constructions were dull at Rs. 90-8. Tata Locomotives had business at Rs. 84.

Calcutta Stock Exchange

CALCUTTA, 28th April

Reports that peace talks in Korea were not proceeding as smoothly as expected earlier, imparted a ray of steadiness during the last two days on the Calcutta Stock Exchange, and speculative counters made a bid to make good the earlier losses. Much headway could not, however, be made due to lack of outside buying support. In fact, part of the funds normally available to the share market was diverted for speculative activity in the bullion and the commodities markets. Earlier during the week, the market was almost lifeless, and even despite the maintenance of the gains in the prices of jute goods, jute shares also lacked enthusiasm. Operators were anxious not to extend commitments, as they believed that without a reduction in the rate of sacking goods production, they could not expect much change in mills' working reports for the current accounting period.

There were reports that Indian coal exports were declining, and these affected coal shares. Hope is, however, expressed that in view of the expected change in the political relationship between India and Pakistan, Pakistan would find it profitable to import coal from India only. The increasing level of business in tea shares received a check this week, when it was learnt that the Indian tea exports would be cut down by 15 per cent. However, sentiment was better during the two closing sessions of the week, following the resumption of tea auctions yesterday.

In the textile section, Elgin Mills were unchanged at Rs. 17 and Kesorams were easier at Rs. 19-14. Cawnpores realised Rs. 8-7. Among banks, Hindustan Commercials changed hands at Rs. 11-12, while United Commercials eased by one point to Rs. 34-12.

Coals were easy, and transactions were limited. Burrakurs gradually receded from Rs. 11 to Rs. 10-11, but gained to-day to Rs. 11 in transactions of small lots. Interest in Bengals could not raise the quotation to more than Rs. 431. Central Indias declined from Rs. 5-2 to Rs. 5-1. South Karanpuras from Rs. 14-4 to Rs. 13-14, Western Bengals from Rs. 5-1 to Rs. 4-13. Earlier, however, Khatras Jherriahs improved from Rs. 41 to Rs. 41-9. After gaining As. 2 on Monday, East Indias returned to-day to Rs. 23-2. Raneegunges were better to-day at Rs. 9, adding As. 8 from the previous rate.

The feature in the jute section was the slightly improved trend during the last two sessions following Monday's gains in the prices of jute goods. However, transactions were limited. Last Wednesday, speculative Howrahs opened at Rs. 24 and had declined to Rs. 23-15 on Saturday; however, the quotation recovered to-day to Rs. 24-6. One of the features in the section was the continued interest shown in Khardahs which were pushed up from Rs. 168 to Rs. 185. Deltas were also steady and at Rs. 233 showed a five-point improvement. Nationals met with buying at Rs. 24-14 and Presidencies at Rs. 5-6, while Lansdownes were easy at Rs. 127. Anglo-Indias were earlier quiet at Rs. 228, but were steady to-day at Rs. 232. Nuddeas gave way from Rs. 45 to Rs. 42. Champadanies recovered from Rs. 160 to Rs. 161-8.

The movement in Indian Irons was on both ways but within a narrow range, to-day's closure at Rs. 25-7 comparing with an opening rate of Rs. 25-6 last Wednesday. National Irons came to business at Rs. 5-10, Braithwaites sticking around Rs. 11-3. Kumardhubis changed hands at Rs. 8-2, Marshalls at Rs. 5-8, and Britannia Engineerings at Rs. 19.

In an otherwise quiet miscellaneous section, selected scrips were better. Indian General Navigations gained from Rs. 81 to Rs. 84-8, while India Steamships, after losing from Rs. 6-7 to Rs. 6-4, were better to-day at Rs. 6-8. Rallis after moving from Rs. 75-8 to Rs. 76-8, were lower at Rs. 75-4. Indian Cables declined to Rs. 18-1, while Dunlop Rubbers were fractionally better at Rs. 28-10.

Madras Stock Exchange

MADRAS, 28th April

There was some revival of interest this week on the Madras Stock Exchange. This was attributed to prospects of restoration of a sizable portion of the cut in power supplies effected some time ago. It is stated that generation of more power is now possible, consequent on a rise in the water level of the Pykara, Mettur and other dams. Textile scrips came in for considerable attention on speculative support as well as on reports of some demand for piecegoods and yarns from consuming centres. Plantings were comparatively better than last week. Rubbers and teas attracted selective buying, while coffees were dull. Miscellaneous scrips met with sporadic enquiries. The trading on balance revealed that the scrips disclosing gains were more than those showing losses. The undertone was steady.

The threat of a labour strike in Coimbatore, following the reported unwillingness of employers to concede the labour demand of compensation for involuntary unemployment caused by power shortage, had no effect on the market. In fact, the operators discounted the possibility of the success of such a strike move. On the other hand, revival of demand for cloth in consuming centres flared up the values of certain scrips. Thus, Bangalore Woollens rose from Rs. 245 to Rs. 247-8, thereby recording a gain of Rs. 2-8. Janardanas too put on a similar amount to Rs. 62. Rajalakshmis gained Re. 1-2 to Rs. 74-8.

On steady advices from the U.K., tea scrips staged a smart rally. Mlamallays firmed up by Re. 1-8 to Rs. 37. Devasholas hardened by As. 8 to Rs. 15-8. Periakarmalais (Tea and Coffee) were up by As. 4 at Rs. 25-4. Parksides improved by As. 2 to Rs. 11-12. But Twyfords lost As. 4 to Rs. 12. Talyars eased by As. 3 to Rs. 86. Peermades were done at Rs. 24 *ex-div. ex-right*, as against Rs. 34-8 *cum-div. cum-right*. Stanes Amalgamateds (Coffee and Tea) were lower by As. 2, at Rs. 8-6. Coonoor Teas were unchanged at Rs. 21-12 *cum-div.* The Directors have declared a final dividend of 12½ per cent., thus making a total of 17½ per cent. for the year ended 30th September, as against 30 per cent. for the previous year.

Rubbers displayed a similar trend. Nellithnams gathered As. 4 to Rs. 7-10 *cum-div.* and Cochin Malabars As. 2 to Rs. 6-4. Tirumbadis and Velimalais were better at Rs. 2-9½ and Rs. 2-14½, respectively. But Malankaras lost As. 8 to Rs. 101-8 and Rajagiris As. 4 to Rs. 10. Be Bes were slightly lower at Rs. 1-12.

Among the miscellaneous scrips, Andhras gained Re. 1 to Rs. 94. Rallis As. 8 to Rs. 77-8 and Mysore Papers As. 2 to Rs. 13-12. Spencers improved by an anna to Rs. 14-4. But India Cements lost As. 4 to Rs. 16 and Mysore Chemicals and Fertilisers an anna to Rs. 8-1. India Aluminiums were done at Rs. 122, as against Rs. 127 *cum-div.* Aluminium Industries were unchanged at Rs. 11-8 and F.A.C.Ts. at Rs. 3-3.

HIND BANK LTD.

A decline of Rs. 2.68 lakhs to Rs. 7.10 lakhs in gross profit is disclosed by the audited accounts of the Hind Bank Ltd. (General Manager: Mr. C. D. Pardiwala, Calcutta) for the year ended 31st December, 1952. This fall in earnings has not, however, affected the allocation to reserves or the distribution to the shareholders. The modest maiden dividend of 2 per cent. which the shareholders received last year, has been repeated. That the results have been satisfactory considering the difficult business conditions that prevailed during the past year is further indicated by the fact that the year's profit is substantially above those for 1950.

The following comparative table of the Bank's results for the past three years and the synopses of the balance-sheets at the end of these years reflects the Bank's progress since 1950:

(In lakhs of rupees)

	For the year ended 31st December		
	1952	1951	1950
Interest and discount earned ..	10.67	10.99	8.93
Commission and exchange ..	9.11	10.45	7.05
Total income	19.84	21.48	16.02
Interest paid	4.87	3.40	3.55
Expenses	7.86	8.30	8.63
Loss on sale of investments ..	..	..	0.73
Gross profit	7.10	9.78	3.84
Depreciation and repairs ..	0.36	0.30	0.21
Taxation	2.90	2.70	1.85
Net profit	3.84	6.78	1.78
To reserve fund	2.50	2.25	1.25
,, investment account ..	..	3.35	0.50
Dividend	1.00 (2%)	1.00 (2%)	..
Carry forward	0.86	0.86	0.68

	As on 31st December		
	1952	1951	1950
Capital	50.00	50.00	50.00
Reserves	20.00	17.50	15.25
Deposits	317.59	348.30	276.78
Borrowings from other banks ..	0.78	..	15.00
Bills for collection and acceptances..	153.87	146.91	105.97
Advances	175.06	174.99	123.21
Investments	114.63	115.52	106.41
Cash (including money at call) ..	100.31	119.60	105.92
Balance-sheet total	552.19	568.93	470.43
Ratio to deposits of—	%	%	%
Advances	55.1	50.2	44.5
Investments	35.8*	33.2	33.0*
Cash	31.6	34.3	38.2

* After taking into consideration the securities earmarked against borrowings from other banks.

It will be noted that the total income of the Bank for 1952, has dropped by Rs. 1.64 lakhs, the fall being shared by the main sources of earnings. This decline in income has been accompanied by a rise of Rs. 1.47 lakhs in interest paid. The combined effect of these two changes has been partially offset by the drop of about Rs. 44,000 in administrative and other expenses. It is noteworthy that the Bank's expenses have been showing a downward trend since 1950. Although the decline has not been perceptible, it is in refreshing contrast to the general trend of bank expenses. Another feature disclosed by the table is that nearly 70 per cent. of the net profit for 1952 has been added to the reserve fund. This shows how the management is keen on strengthening the Bank's reserves. Yet another notable feature is that no sum has been provided this year for depreciation on investments, evidently because the book value of the Bank's investments at the close of 1952 has been below market value.

The decline in the Bank's deposits is only in consonance with the general trend of bank deposits. But contrary to the downward trend of bank advances, the advances of the Hind Bank are almost unchanged, so that the ratio of advances to deposits is at a slightly higher level. The decline of Rs. 19.29 lakhs in cash balances and the slight fall in investment portfolio has not seriously affected the liquidity ratio, which has been maintained at as high a level as 67.4 per cent. Of the investments, about 97 per cent. are held in Government securities, of which about 48 per cent. mature within the next 5-6 years and the rest within the next 10 years.

NEWS IN BRIEF

INDIAN shipping tonnage at the end of 1952 was 4,52,274 G.R.T.

During 1952-53, Indian customs revenue collections amounted to about Rs. 167 crores.

The route mileage operated by the Indian airline companies as on 1st January, 1953, was 14,050 internal services and 13,713 international services.

Two fish cold storage plants, of 20 tons capacity each, will be arriving in India shortly. These are being made available under the U.S. technical aid programme. Of the two plants, one will be established at Visakhapatnam and the other at Tuticorin.

The next meetings of the Import and Export Advisory Councils will be held in New Delhi on the 22nd and 23rd inst., respectively. The Minister for Commerce and Industry, Government of India, will preside over these meetings.

Out of the total price of Rs. 64 crores for sugarcane supplied to the sugar mills during 1951-52, Rs. 70 lakhs still remain to be paid to cultivators. The Government of India has asked the State Governments to use their good offices in getting the arrears cleared as early as possible.

The Government of India has sanctioned a loan of Rs. 1.51 crores to the Bombay State for minor irrigation works in the scarcity areas. It has also agreed to charge a specially reduced price of Rs. 14 per maund, up to a limit of 200,000 tons, for imported wheat issued to persons employed in relief works in the famine or scarcity affected areas.

The scheme for the setting up of the National Building Organisation is reported to have been finalised by the Government of India. The main objective of the proposed organisation is to provide technical information and assistance to Central and State Governments, public organisations and individuals engaged in house-building activities.

The Madras Government has reduced, with effect from the 1st inst., the power cut from 75 per cent. to 60 per cent. in the hydro-electric areas and from 33⅓ per cent. to 20 per cent. in Madras City. The restoration in power cut is a sequel to the improvement in the storage position in the reservoirs, particularly in the Mettur reservoir.

The Government of India has sanctioned a loan of Rs. 1 crore to Hyderabad for the purchase and distribution of fertilisers to cultivators, with a view to augmenting food production. The loan will be partly in cash and partly in the shape of ammonium sulphate supplies. Fertilisers will be distributed to cultivators as *taccavi*, to be recovered in instalments at the time of harvest, preferably in kind.

Control over prices of sucis and shirtings has been abolished with effect from the 1st inst. On 1st October last, the Government of India lifted price control over certain categories of cloth, such as *dhotis* and *saris*, mulls and voiles, poplins and crepes, drills, *mazri* cloth, *dosuti*, bed-ticking cloth, and a few other less important items. A few more items were included in the list on 1st January, 1953—superfine cloth falling within group XIII, twills and coatings.

The next class for training in inland fisheries at the Central Inland Fisheries Research Station at Barrackpore will commence on 1st June, 1953. Admission is generally open to graduates in zoology. The course, which is primarily designed to train personnel for the fisheries departments of the State Governments, lasts for about 10 months and covers training in the general principles and practice of inland fisheries work.

A marked improvement in industrial disputes in India was registered during the month of February, 1953. The number of disputes resulting in work stoppages was 42, the number of workers involved was 23,284 and the number of man-days lost was 116,398 which were the lowest recorded in recent months. Eight of the disputes resulted in lockouts, affecting 3,246 workers and accounted for 34,211 man-days lost. Six of these were in West Bengal and one each in Bombay and the Punjab.

The Government of India has decided to remove shortly all restrictions on trade in wheat products, such as *rava*, *sujee* and *maida*. The flour mills will accordingly be permitted to manufacture these "fines" from imported wheat and sell them in the free market. No flour mills will, however, be allowed to utilise home-grown wheat for the purpose. Imported wheat will be issued to the mills by the Centre direct, and not by any State Government, at Rs. 21-2 per maund at the port of discharge or at a Central Government godown.

The death rate in India in 1950 was 16 per 1,000 population. The corresponding figures for 1947, 1948 and 1949 were 19.7, 17.0 and 15.8, respectively. The actual infantile mortality (deaths under one year) was 9,32,620 for 1947, 8,06,260 for 1948, 8,30,270 for 1949, and 8,55,261 for 1950. These work out to an infantile mortality rate of 145.6 per 1,000 of live births, 130.1, 122.8, and 127.1, respectively. In 1950, 18.3 per cent. of the deaths was among the age group 1-5, while 5.7 per cent. was in the age group 5-10 years. The figures for the three previous years were: 16.9 per cent. for the age group 1-5 years and 5.7 per cent. for age group 5-10 in 1947; 17.2 per cent. and 6.2 per cent. in 1948; and 17.0 per cent. and 5.6 per cent. in 1949. While accurate figures are not available in many States, it is estimated that about 200,000 women die annually in India from causes arising from child-birth.

Under a supplementary operational agreement signed in New Delhi on Saturday last between the Governments of the United States and India, additional technical assistance, equipment and supplies for the Hirakud, Ghataprabha and Gangapur projects will be available for expediting the construction work. The joint cost of the project is $1,880,300 and Rs. 1,25,00,000, representing, respectively, the contributions of the two Governments. The equipments, etc., now proposed to be made available to those three development projects, are in addition to those already provided in a previous operational agreement signed last year. The present sum has been allotted out of $38.5 million provided by the U.S. Government under the supplementary Indo-U.S. Technical Co-operation Agreement signed in November, 1952.

* * * *

From Abroad

The Government of Ceylon has relaxed exchange control restrictions on the repatriation of foreign capital invested in Ceylon.

The Government of Chile is planning to nationalise all public services, including electricity and telephone companies.

Egypt's total trade deficit during 1952 was of the order of £73.7 million, including £2.3 million spent for importing gold to cover the Egyptian currency.

The total world merchant ship losses arising from all causes during the third quarter of 1952 amounted to 198,268 tons, the number of ships involved being 131. Losses as a result of casualties were 50,730 tons (40 vessels).

The Argentine Foreign Trade Promotion Institute has abandoned the system of fixed prices for hides exports. The export sales are now made by inviting bids. The Institute will offer the product of each packer individually, selling it to the highest bidder, but reserving the right to refuse sole under its current price ideas.

The total capital expenditure in Canada during the current calendar year is expected to be higher by 6 per cent., as compared with 1952. The outlay on new construction plant and machinery is estimated at $7,464 million, as against $7,110 million in 1952 and $6,472 million in 1951. New construction is expected to entail an expenditure of $3,433 million, repair and maintenance of existing plant and equipment $2,043 million, and new machinery $1,988 million.

The licensing and other restrictions on imports of all but super-luxuries, machines and oil products from the E.P.U. and most other countries into Greece have been removed. An import licence is, however, needed for imports from the U.S. and Canada, if payment is in free dollar. A Bank of Greece licence is also needed for imports from dollar countries of wheat, flour, rice, coffee, sugar and coal. Exports of machines, and spare parts and oil products will continue to be subject to foreign trade administration licensing procedure.

An official Bill seeking to provide for the "immediate" abolition of the luxury tax of 30 per cent. in Holland has been introduced in the Dutch Parliament. The goods falling under this tax—these include luxury furniture, textiles, radio valves, several electrical apparatus, gas and electrical ovens, gramophone records, pianos, watches and clocks, gold and silver ware, cosmetics, etc.—will henceforth be subject only to a turnover tax of 15 per cent. This decision of the Dutch Government is expected to cost the Treasury about Fl. 10 million.

The American Council of the International Chamber of Commerce has urged the U.S. Government to effect a progressive reduction in all tariffs beginning with a cut of no less than 20 per cent. in January. It has also urged the repeal of preferential legislation, including the "Buy American" Act, which restricts the purchase of foreign goods. The other suggestions of the Council include simplification of customs measures, gradual abolition of import quota restrictions and appointment of a special advisory group of business men to study ways of expanding the foreign trade of the U.S.

The British Government has permitted, with effect from 27th April, 1953, exports of certain categories of copper, iron and steel goods to any destination other than China, Hong Kong, Macao or Tibet under open general licence, if the value of goods exceeds the value of the copper, copper alloy, iron or steel content, calculated at the rate of £380 per ton for copper, £250 per ton for alloys (mainly of copper) and £30 per ton for iron and steel. Under similar previous licences, which are now revoked, the values were £430, £350 and £40 per ton, respectively. The reduction in the minimum values has been made in order to facilitate exports of these goods.

PERSONAL

MR. George V. Allen, U.S. Ambassador-designate to India, arrived in New Delhi on 24th April, 1953.

Mr. Luang Bhadravadi has been appointed Thai Ambassador to India, in succession to Mr. Luang Vichit Vadakan.

Mr. Yesdezard Dinshaw Gundevia, till recently Minister in the Indian Embassy at Moscow, has been appointed Minister of India to Switzerland.

Mr. N. M. Ayyar, formerly Chairman of the Calcutta Port Trust, has taken over charge as Secretary, Ministry of Transport, Government of India.

Mr. H. L. Jerath, Senior Deputy Director-General, Posts and Telegraphs, will represent India at the Universal Postal Union to be held at Berne shortly.

Dr. Ladislav Durdil, Chief of Section, Ministry of Foreign Affairs, Government of Czechoslovakia, has been appointed Czechoslovakian Ambassador to India.

Mr. Ivan Alexandrovich Benedictor, Deputy Minister of Agriculture and Procurement, Government of Soviet Russia, has been appointed Soviet Ambassador to India.

Mr. U. M. Rao, until recently Manager of the Supply Department of General Motors India Ltd., has been elected to the Board of Directors of the Company, by its management in recognition of his long and distinguished service.

Gen. K. M. Cariappa, who recently retired as the Commander-in-Chief of the Indian Army, has been appointed High Commissioner for India in Australia, in succession to Mr. M. S. Duleepsinhji. Gen. Cariappa is expected to take up his assignment in Canberra some time in July next.

Mr. R. G. Saraiya, Vice-Chairman, Messrs. Narandas Rajaram and Co., Ltd., and Mr. E. R. Mama have been elected President and Chairman, respectively, of the Commerce Graduates' Association, Bombay, for 1953-54.

Mr. N. V. Gadgil, former Minister in the Union Cabinet, has been appointed Chairman of the Committee constituted by the Government of India to review the arrangements arising from the financial integration of the four Part B States—Rajasthan, Madhya Bharat, Saurashtra and the P.E.P.S.U., with a view to rendering financial and technical assistance to these States. The other members of the Committee are Mr. S. V. Ramamurthy, Programme Administration Adviser, Planning Commission, and Mr. Bimal Comar Ghose. Member, Council of States. Mr. C. Ganesan, Deputy Secretary, Central Ministry of States, is the Secretary to the Committee.

OBITUARY

We regret to record the demise of Mr. W. W. Laws, head of Messrs. W. W. Laws and Co., in Bombay last week. Mr. Laws was a highly respected British resident of Bombay.

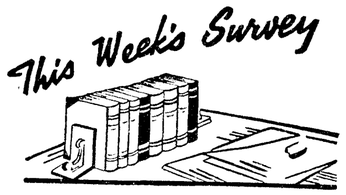
"COMMERCE" 1928

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, 12th *May*

Better Trade

There are unmistakable signs in the West that trade is on the mend. The improvement thus indicated will be reflected upon the East in due course. The return, issued last week by the Bank of England coinciding with the third anniversary of Britain's reversion to the gold standard, discloses the strongest technical position recorded in any return since the outbreak of the war. The ratio borne by the reserve of notes and coin in the banking department to liabilities, which is the best index of the Bank of England's position, stood at 22.1 per cent., when the reversion to gold became effective. To-day it stands at 40.3 per cent., which exceeds fractionally the last bank return before the outbreak of war. The actual amount of the reserve, which is over £45,000,000, is the highest since the return to gold. The figures encourage optimism. Successful banking is based on successful trading, and the first considerations of the banker must be the state of affairs in the wide world of industry, in which he is called upon to exercise functions at once beneficent and lucrative. Academic theses on theoretical questions, while of profound interest to the professional economist, are not of much practical importance and seldom carry far. In the enhanced financial strength now recorded by the Bank of England, we have concrete evidences of a revival in England from the setback sustained in 1926. The curve of industrial activity is undoubtedly tending upward. The official trade forecast of the Federation of British Industries for the first three months of the current year is somewhat more optimistic in tone than it has been for several preceding quarters. The forecast states: "While the heavy losses of the coal stoppage have still to be met, and the coming year is likely to see important changes in the sphere of industrial reorganisation, it seems possible to hold out the expectation that a settlement of these difficulties should see the end of our major post-war problems, and at long last, permit the foundations to be laid for a sustained expansion of British trade."



STATE GOVERNMENTS AND LABOUR DISPUTES

THE State Governments in India, especially those which have under their jurisdiction highly advanced industries, will do well to ponder over the carefully considered views of Mr. Vithal N. Chandavarkar, Deputy Chairman, the Millowners' Association, Bombay, on the attitude of State Governments towards industrial disputes. Speaking at the annual meeting of the Association last week, he referred to a number of instances in which the State Governments, by introducing an element of partiality in their decisions on these disputes, had acted in a manner calculated to destroy employers' faith in Government. The attitude of the Government of Travancore-Cochin is particularly striking. Thus, when the Fertilisers and Chemicals (Travancore) Ltd. retrenched no less than 600 employees two years ago and the workers' appeal was turned down by the Appellate Tribunal, the State Government did not deem it necessary to invoke its special powers. Again, the Public Works Department Workshops at Trivandrum were permitted by the States Industrial Tribunal to retrench 64 workers in 1951. The retrenchment went through and it did not occur to the State Government that any public grounds were involved. Then again, when the Tribunal gave permission for retrenching a number of paddy procurement officers of Government in March, 1953, the Government did not deem it necessary to interfere. But, when the Labour Appellate Tribunal permitted the Tata Oil Mills Co., Ltd., at Tatapuram to retrench 60 of its surplus workers, the Government rejected the permission, as was pointed out in detail in a previous issue of this journal.

Another State Government whose attitude towards labour problems has not been impartial is that of Madhya Pradesh. This State Government constituted a Tripartite Committee to arrive at an agreed solution of the problem of bonus in the cotton textile industry, as there arose a dispute between workers and mills in the State over the bonus for the year 1949-50. This Committee appointed a sub-committee. The Sub-Committee evolved a formula and submitted it to the Tripartite Committee. The latter accepted the formula and asked the millowners to work out the figures for themselves and to announce the grant of bonus on that basis. The millowners applied that formula and found that they had made no profits and that, therefore, there was no bonus to pay. The workers were dissatisfied with this outcome and, in order to please them, the Government referred the matter to adjudication by the Industrial Court. Commenting on this episode, Mr. Chandavarkar said: "Having themselves constituted a sub-committee to go into this matter, and having also been a party to an agreement, which apparently contained a formula for the determination of bonus, I expected the State Government to call upon labour to honour the agreement or, if they wanted to satisfy themselves, to ask the Court to make sure that the formula has been properly interpreted and worked. This they apparently did not do and so far as I can see, the Court was asked to assess what bonus, if any, was payable to textile workers for the year in question."

If instances of this type were allowed to happen, they would undermine one's faith in settling industrial disputes by means of direct negotiations. For, if the Governments of States take sides with the party which has not had all its way in these negotiations, who will take seriously to the settlement of disputes through direct negotiations? No wonder, therefore, that Mr. Chandavarkar found it necessary to observe that "if agreements or settlements reached by direct negotiations are to be allowed to be treated in this manner, Mr. Giri's approach may not lead us anywhere." In observing thus he was not, however, unconscious of a number of cases in which direct negotiations had resulted in success. But he attributed such success mainly to the personalities conducting the negotiations. In other words, if the "Giri approach" is to succeed, two things are essential, (1) a high state of organisation on both sides, and (2) the association of responsible and enlightened leaders with the conciliation proceedings. His considered view is that these prerequisites are not to be found in the present state of affairs in the country. With leaders of the trade unions and spokesmen of State Governments being what they are, there is nothing to suggest that any settlement arrived at, after days of negotiation, will be faithfully accepted and acted upon. He, therefore, desired that the new Labour Relations Bill, which was being moulded at present, should contain suitable and adequate safeguards for ensuing the success of the "Giri approach."

PROSPECTS FOR ALUMINIUM

What exactly are the prospects for aluminium in the country? This light white metal, which seems to be invading new fields almost every year, and the consumption of which is everywhere on the increase, was developed only recently in India, despite the fact that this country has been well endowed by nature in regard to the supply of the basic raw material for aluminium. The output of this metal is less than 4,000 tons per year. But there is scope for its extended use and, therefore, for an increase in its production. Some of these aspects of India's aluminium problem were discussed, ably indeed, by Mr. K. C. Mahindra, Chairman of the Indian Aluminium Co., Ltd., at the recent annual meeting of the Company.

Mr. Mahindra deplored that there should be a certain section of opinion in the country which believes that India cannot consume 20,000 tons of aluminium ingots by the year 1956. Discussing the prospects for the increase in the consumption of this metal, he pointed out that India was already following the practice of other countries by increasing the use of aluminium in its transport system. The cabs and platforms of locomotives now being built at Chittaranjan and "Telco" use aluminium alloys. Other articles or industries in which its use could be increased are: "all steel" coaches of the Perambur coaching factory, in which aluminium is used in doors, windows, frames and other fittings, aircraft industry, bodies of trucks and chassis, electrical industry, particularly in the wiring system, kitchenware, grain storage equipment and prefabricated housing structures.

There is no doubt that India cannot afford to lag behind other countries in the development of its aluminium industry, particularly when nature has been so generous in the provision of its chief raw material, namely, bauxite. But further use of aluminium will, on the one hand, depend on the progress of the transport, electrical and other industries which are now only relatively small consumers of aluminium and, on the other, on the price at which it is made available to its users. The latter consideration is likely to prove increasingly important in the next few years. And here, it is the duty of the Government, as it is the responsibility of the industry, to work for the removal of the two chief obstacles—how one wishes that Mr. Mahindra had thrown some light on these issues—which stand in the way of the lowering of the cost structure, namely, the relatively uneconomic size of the industry and the high cost of electric power consumed by it.

But these problems are part of the larger economic problem—the problem of finding the finance needed for the modernisation, re-equipment and expansion of industries. On some of these larger problems, Mr. Mahindra expressed himself with commendable clarity and forthrightness. He asked, in effect, why this country, which is so woefully short in capital, should be apprehensive of foreign investments, especially when it has a democratic right to determine the safeguards for the protection of its national interest. He pleaded particularly for the expansion of capital-goods producing industries. He urged the Government to facilitate, through tax relief and other means, the ploughing back of profits in industry for purposes of re-equipment of capital goods. But he did not overlook the vital consideration that capital in the ultimate analysis—he quoted, approvingly, Mr. G. D. Birla on the subject—is a synonym for "resources and hard work." The latter factor can never be too strongly emphasised in this country.

TECHNICAL AID UNDER COLOMBO PLAN

The report of the Colombo Plan Council for Technical Co-operation for 1952 makes encouraging reading. The report indicates an appreciable expansion in the flow of assistance to the countries of South-East Asia. The total number of technical experts whose services were made available to different countries during the year under review was double that provided in the previous year, the actual figure being 90, as against 45, bringing the total since the inception of the scheme in June, 1950, to 135. Of these, 67 were sent from the U.K., 40 from Australia, 17 from New Zealand, six from Canada and five from India. Most of the experts were engaged for specific projects where their duties included training of local personnel for implementing the schemes on which they were engaged. Similarly, the number of training places provided in 1952 rose by as much as 229 to 538, as compared with 1951; since June, 1950, a total of 847 places has been provided—286 by Australia, 279 by the U.K., 109 by New Zealand, 106 by Canada, 66 by India and one by Pakistan. The total cost of the whole scheme till the end of 1952 was £1.7 million. Up to the end of 1952, India received 33 experts and sent out 301 trainees, while, during the same period, it furnished five experts and provided places for 56 trainees.

The technical assistance that has so far been given by the Council relates to three aspects of development—the drawing up of plans, the execution of specific projects, and the training in their own countries of the numerous technicians of all kinds needed. The third aspect is claiming—this is only as it should be—increasing attention of late. As the report rightly points out, from a longer-term point of view, it is vitally important that the countries of the region should develop facilities for producing their own technicians of all grades, from the agricultural extension worker and the mechanic to the university professor and the soil scientist.

The year 1952 also witnessed notable progress in schemes relating to combined capital and technical assistance. Mention, for instance, may be made of: (1) the experimental livestock farm in the Thal area of Pakistan under assistance rendered jointly by the Governments of Australia, Canada and New Zealand; (2) a pilot project in mechanised fishing in Ceylon assisted by Canada; (3) Canadian assistance in the aerial and geological survey of Pakistan; and (4) help rendered by the U.K. and Australia to the Ceylon Government in the latter's campaign against tuberculosis.

The year under review witnessed, too, a steady increase in the demand for the provision of equipment for use by experts and for training and research institutions. For example, Pakistan has asked for equipment for technical high schools and Ceylon has applied for equipment for 100 workshops to be attached to the senior secondary schools. These requests are being met, albeit partly, by the Governments of the U.K. and Australia.

From the foregoing brief account, it will no doubt be evident that the Technical Co-operation Scheme of the Colombo Plan has been making satisfactory progress of which the Colombo Plan Council may justifiably feel proud. But considering the huge demand for technical assistance in the countries of South-East Asia, it must be said that what the Council has provided is only a very small part of the total need. Nevertheless, a brave start has been made in tackling this problem. And, as has been aptly remarked, if the tree of technical knowledge is well planted in Asia to-day, it will produce thousands of healthy seeds to-morrow. Surely, the Council has planted such a tree and the growth of it in future will, naturally enough, be watched with considerable interest.

WORLD BANK AND I. M. F.

The wide disparity in the distribution of the World Bank's loans between the West and the East is quite significant to escape notice. Of the total sum of $1,524 million distributed by the Bank in 1952, only $180 million or about a ninth of the total went to Asian and Middle-East countries having 50 per cent. of the world's population. This point was highlighted by India's representative on the U.N. Economic and Social Council at its latest session held on the 15th April. His emphasis that a balanced distribution of assistance to development schemes in both industrial and agricultural spheres should be ensured is quite appropriate and it is to be hoped that those in charge of dealing with loan applications to the Bank will bear in mind the need for eliminating the disparity in future.

There are, of course, good reasons for the relatively small loans sanctioned by the World Bank to backward countries. The Bank authorities are more familiar with the economic and social conditions in the Western countries than they are with those in the East. Highly organised industries, abundance of skilled labour, advanced stage of technological progress, availability of statistics and their ability to draw up large schemes of economic development place the Western countries in a decidedly advantageous position as compared with their confreres in the East. The paucity of appropriate projects of development in many Asiatic countries and their dependence for drawing up these schemes on the experts from the West cause delay in preparing and presenting schemes for assistance from the Bank. Nevertheless, some of the advanced countries amongst them, such as India, Pakistan, Burma and Ceylon have already such projects and plans which are awaiting the assistance the World Bank can easily render. This is, of course, not to belittle the good work that the Bank has done so far by providing technical and financial aid to these countries. With the studies of social and economic conditions instituted by the various U.N. organisations in the Asian countries, the Bank authorities are gaining familiarity with the problems of development in these countries and this should enable them to increase the pace of aid to these countries in future.

If much assistance from the two world institutions is not available, such is also due to the limitations imposed by the Articles of Agreement. These limitations are a severe handicap to the International Monetary Fund in particular. This is evident from the frantic efforts that are being made by the I.M.F. to widen the scope of its assistance to member-countries within the four corners of the Articles of Agreement. Thus, the I.M.F. is seeking to provide extensive use of its resources as a means of secondary reserves for its member-countries. The Fund has also revised its scale of charges so as to make the use of its resources for a short term less expensive. Standby arrangements have been made for assisting member-countries which run into temporary balance of payments difficulties. All these measures have been found quite inadequate. That the Fund's authorities are, however, anxious to enlarge the scope of assistance is evident from the invitation extended by Mr. Ivor Rooth, Chairman and Managing Director of the Fund, to all the members of the Fund to join in the task of improving its techniques. The opportunity provided by this invitation should not be missed by the member-countries.

(Concluded from third column)

be conceded that an industry can set apart only a limited and specified proportion of its earnings or assets for this purpose. If you take away this portion meant for research from the industry on the plea of doing it yourself, you cannot turn round and pillory it for neglecting it. If you misappropriate these amounts for purposes other than industrial or agricultural research as the case may be, you not only sacrifice your right to upbraid industry for neglect of research but make yourself liable for answering this very charge, apart from incurring the opprobrium involved in what undoubtedly amounts to a moral turpitude. But this is exactly what some of our State Governments are perpetrating without any qualm of conscience.

I have in mind the case of sugarcane cess collected exclusively from the sugar factories by several State Governments. A probe into how the huge income from this cess levied for financing research in sugar technology, sugarcane cultivation and agriculture in general, is being squandered or misappropriated, will undermine whatever enthusiasm an industrialist might have retained for undertaking research. Income from this source in 1952-53 amounted to a little over six crores of rupees. So far about fifty crores of rupees have been collected from the industry during the fifteen years since it was first imposed in U.P. and later adopted by other States. If even a fraction of this money had been spent wisely and conscientiously on research, the country would have been flooded with sugar at a price within the means even of the poorest. When Ministers of these very Governments turn round and take the sugar industry to task for neglecting research, I feel towards them as I do towards a man I know, who helps himself to his baby's milk and then, when the baby cries because of hunger, he takes his wife to task for not keeping the brat quiet.

OFF THE RECORD

(By "ROVER")

IT is not as if I am unaware of the many defects of industry and industrialists in this country. If anything, I am myself inclined to be a little too engrossed with and too sensitive to these. They are there and, even if you were afflicted with a somewhat defective vision, you could not help noticing them. I grant that they are a little too much in a hurry to get rich quick to have the patience to lay a sound foundation and to build up their concerns on the lines of quality and consumer service. I concede that self-interest rules high with them in the final reckoning and further that even this self-interest is not of the enlightened variety but in a majority of cases of the vulgar bazaar type. I am even prepared to yield that, barring a few honourable exceptions, the fierce glare of high profits is likely to dazzle most of them to the extent of rendering them blind not only to the dim and flickering light of business ethics but even to their own safety.

But doing all this, I refuse to join in the general chorus of condemnation or to adopt the newest fashion of investing them with every imaginable form of wickedness and stupidity. This has now come almost to a stage when one would be justified in exclaiming, "Give a dog a bad name and you might as well hang him." Sometimes hanging a fellow-being is a cleaner and more humane process of dealing out popular justice than throwing stones at him at random. Apart from the centuries-old wise adage warning residents in glass houses against throwing stones at their neighbours' windows, one must not lose one's sense of proportion or fairplay in upbraiding others for their shortcomings. Mobs or even the common run of long-suffering citizens can claim unwritten privilege for ignoring such niceties and dictates of justice, but the Press which claims to be better informed and should, therefore, possess greater enlightenment, as well as the responsible and non-demogogic section of the politicians, would be wrong in using any stick that happens to be handy, to chastise this class, merely because it has earned a bad name.

I noticed this particularly during the last week-end, when even newspapers and journals of standing, with a reputation for balance and judgment, tried to decry industry, in general, and the textile industry, in particular, for not being research-minded. Our politicians have, of course, been saying this for years, more to win popular applause than to correct any shortcomings on the part of the business community. In fact, one is almost left with the impression that politicians rejoice at heart that the business community is full of so many imperfections. If it were not, then spotless white *khadar* dress and self-righteousness would not look so immaculate. Even our Prime Minister, who, though impulsive and outspoken, is, as a rule, fair-minded to all sections of the community, has at times in his enthusiasm for this pet subject of his, rated business men for neglecting scientific research in the past.

It is far from my mind to underrate the importance of research for the development of our industries. Equally, it is not at all my intention to uphold Big Business for its apathy towards research. Nor do I want to exonerate the cotton millowners in the country or in Western India, where the textile industry is concentrated from the charge of not having done anything substantial to endow and organise research in the problems of their industry, though I would like to give them due credit for their recent awakening after a somnolence lasting for a century. All I want to say is that there is another aspect of this problem, too, which we, in our newly awakened but still vague interest in industrial research, are apt to ignore, while sitting in judgment over business men on this question.

I maintain that we cannot carry on industrial research either in vacuum or in darkness. This research has to be related to certain definite problems which any given industry has to face at the moment. Industrial research, to be of any service, has to be objective and co-related to conditions of production. These conditions have also to be such as would create a certain degree of confidence as to their continuance for some length of time. If official policies with regard to industry in general, or with regard to any specific industry, are fluid, vague and liable to change from time to time—either in relation to the disposal of products or the nature of the products themselves, the target for production and other relevant factors, which go to determine the running of an industry—there will be little point and less profit in spending large sums of money on research or on finding out solutions of problems, which might change overnight or might cease to be problems as a result of some executive action.

Even in the limited field of cotton textiles, an ignorant and often unthinking bureaucracy has changed its policy with regard to exports of piecegoods during the last six years to such an extent that it would take a volume to write the history of our cloth export policy and to record all the changes that have taken place. What would be the value of research to an industry which has not known what to produce, how much to produce, whether to produce for internal consumption or for export, and if for export to what destination? During this long period, the textile industry has been one of the biggest victims of official and political vagaries and bureaucratic interference. After all, research can aid only planned production and any planning in cloth or yarn production was rendered impossible during this period of rapid changes and successive blunders. The position is in no way better to-day. An industry, which can be asked one fine morning not to produce *saris*, with certain types of borders or which can be coerced into abandoning 40 per cent. of its production of *dhotis* during one week-end, without any prior consultation or notice, when it had been asked only a short while ago to concentrate on this particular line and to reserve a specified percentage of its loomage for this purpose, cannot be blamed for not undertaking scientific research.

Handloom itself was a fruit of earlier and unorganised research. It was an improvement, as a result of such research, on earlier and cruder methods of cloth production. Further research in this direction has brought us to the present stage of cloth production by mills. There cannot be any artificial limits imposed on the growth of human knowledge and it is not difficult to imagine that fresh research might even render the most up-to-date weaving and spinning mills of to-day and the present processes obsolete. Unless we are prepared to follow where advance in knowledge takes us and make necessary adjustments and the requisite sacrifice involved and inherent in such advance, it would be irrational to insist upon any industry undertaking research merely for the satisfaction of knowing that things could be made cheaper or at less cost. For a country and a Government which has not yet made up its mind whether it wants to be atrophied at the stage of handloom or at that of mill production or which has not yet succeeded in establishing a close co-relation and demarcation of boundaries between these two wings, a good deal of research undertaken by the mill industry would only mean a waste of money.

Successful research always tends to eliminate waste or duplication in materials, machinery, man-power and time. Invention of improved machinery or creation of better processes is bound to result, at least temporarily, in reducing the number of workers required for a given amount of production. Machinery means replacement of and saving in human labour and improved machinery means a greater degree of this replacement. From the attitude that organised textile labour has taken up with regard to rationalisation or replacement of the present machinery with more up-to-date and labour-saving machinery and from the open or half-concealed or indifferently concealed support of the authorities for this attitude for purely political reasons, would anyone in his senses want to risk large sums of money on research leading to more rational methods or processes?

I shall not probe deeper into this aspect of the textile industry, which, in the absence of an accepted policy, renders all talk of research into just so much moonshine, because this industry itself is a sore point with not only many of our slogan-loving public men but because of its past behaviour even to large sections of the public itself. I shall try to apply my mind instead to another consideration, which must govern any industry's willingness and capacity to spend a part of its profits in undertaking or encouraging scientific research in its own problems. It must

BRISK LEGISLATIVE BUSINESS IN PARLIAMENT

CONSTRUCTIVE APPROACH TO PROBLEMS

(From A Special Correspondent)

NEW DELHI, *28th April*

DELHI LETTER

DESPITE scorching summer and intermittent heat waves, not to speak of occasional dust-storms, the turnover in Parliament was unusually brisk this week. The level of debates was particularly high. The speeches of most Parliament members were noted alike for their clarity and substance. Even Communist members were constructive in their criticisms. Three important Bills, keenly debated, were the Air Corporations Bill, the Industries (Development and Regulation) Amendment Bills and the Income-tax Amending Bill. The first two Bills were again referred to the Select Committee, while the third was passed rather speedily to the surprise of the Treasury Benches. There was genuine dissatisfaction regarding the proposed compensation to many air companies, in which many shareholders had lost heavily. Among the Government spokesmen, both Messrs. Krishnamachari and C. D. Deshmukh made admirable speeches, both at the time of introducing their respective Bills and while replying to the debates at the end. Among opposition members, Dr. Shyma Prasad Mookerjee, Mr. Tulsidas Kilachand and Mr. Hiren Mukerjee, Communist leader, offered vigorous and constructive criticisms on many controversial points which were very much appreciated. It was Dr. Shyma Prasad who suggested that the Government should set up an organisation which would be capable of managing any industrial unit taken over by it. The Communist leader Mr. Mukherjee, advocated the extension of State trading and larger participation of the State in industrial policy, especially when the behaviour of the private sector of industry had not been commendable. Mr. Tulsidas, the Bombay industrialist, refuted some of the statements of the Communist leader and pointed out that for the success of industrial undertakings, both finance and co-operation from labour were indispensable and that instances of mismanagement of industries were few and far between. In regard to the Income-tax Amending Bill, the criticisms of the Opposition spokesmen centred round a few problems such as the prevention of tax evasion, the association of Apellate Assistant Commissioners with judicial functions, easy payment facilities, etc.

Tantalum for Private Enterprise

The clarification, once more, of the Government of India's industrial policy in Parliament was the keynote of Mr. Krishnamachari's speech during the debate on the Industries (Development and Regulation) Bill. The Minister characterised the Bill in his own inimitable way when he described it as a "tantalum for private enterprise." The main motive of the Bill was to rectify some of the defects in industrial management which had become pronounced during the last decade when the control of some companies had gone into undesirable hands. As matters stood, the Government could not take over the management of any industrial undertaking, even in a situation calling for emergent action, without first issuing directions to it and waiting to see whether or not they were obeyed. According to the Minister, the Government's role under the new dispensation was to be that of a trustee when it took direct management or control of industrial undertakings. In other words, it is "analogous to what is called a court of wards in the States, when they have to deal with landed estates either during the time of the minority or imbecility of the owner." In such instances, Government, it may be noted, took them over and managed the estates and ultimately handed them over to the rightful owners. Mr. Krishnamachari further remarked that the Government's aim was "to keep the wheels of industry moving" and to put an end to the misbehaviour of some unscrupulous financiers masquerading in the garb of industrialists. Government's intention was to work this measure not from a punitive aspect but largely from the development angle. The Minister fully concurred with the view, expressed by Dr. Mookherjee, that a sort of Government corporation was necessary for managing industrial concerns dealt with under the provisions of the Bill. Perhaps, it may take some time for the Minister to develop this idea in concrete terms. Incidentally, he indicated the policy of the Government in regard to Development Councils. He stated that the Government would be going through this matter very carefully and watching for some time the results of working of the two Councils, namely, diesel engines and fertilisers, before it proceeded further in regard to the constitution of other Development Councils.

Wheat Agreement

There was a certain amount of unreality in the debate concerning India's participation in the International Wheat Council which was recently renewed for another three years. Mr. Kidwai, Food Minister, appeared to be somewhat defensive on the whole to the criticism of the opposition members when they drew the attention of the Government to the fact that the latter need not have displayed such haste in signing the Agreement since both the stock position and the outturn of crop were satisfactory in the country at present. The observations made by the Opposition were theoretical, to say the least. Although India has committed itself to buy 1.5 million metric tons of wheat as per the Agreement during the next three years, it has the option to refrain itself from doing so at the maximum rate of 205 cents per bushel. Only when the price declines to the minimum level of 155 cents per bushel, it has to honour the Agreement. During the last few years, it will be remembered, India has been getting about three lakh tons or slightly more from Argentina under a barter deal in exchange for hessians. In case India's food position maintains the improvement, she could reduce the quantum from the international pool substantially if prices were to stand near about the maximum level. India's participation as a signatory must be viewed from a protective angle; it is a sort of insurance against crop failures and recurrence of famine conditions, when India will be able to secure an assured quantity at a certain price. Mr. Kidwai briefly pointed out that, under the present international set-up, the U.S.A. had a considerable pull in influencing the price levels of important agricultural commodities through its domestic price support programme. Since this policy was to continue for yet another two years, there was no likelihood, according to him, for any drastic reduction in the prices of foodgrains. It may be noted that, while many sensitive world commodities such as non-ferrous metals, rubber, some industrial fibres, etc., have recorded an impressive decline since the beginning of April, resulting in a moderate recession of index number in the U.K., their counterpart in the U.S. has been able successfully to display considerable resistance. For instance, while the *Financial Times* index (July, 1952-100) has now receded below 88 as compared with 93 in mid-February, the Dow Jones spot index in the U.S.A. has been very steady around 169. The steadiness of the latter is attributable to the price support programme in the U.S. which is also a contributory cause to the aggravation of the dollar scarcity problem of the world.

Mr. H. V. R. Iyengar, Secretary, Ministry of Commerce and Industry, Government of India, is leading a trade delegation to Egypt early in May, it was officially disclosed here. The new treaty that is proposed to be negotiated with Egypt will be the fourth with that country since India attained independence. The delegation is likely to seek increased imports of Egyptian raw cotton and exports of Indian jute, tea, tobacco and spices. The previous trade agreement with Egypt, it may be noted, expired on 31st March, 1953.

INDUSTRIAL FINANCE CORPORATION OF INDIA

KEELING ROAD, NEW DELHI

NOTIFICATION

IT IS HEREBY NOTIFIED THAT THE SHARE Register of the Corporation will be closed and the registration of transfers suspended from 16th June, 1953, to 30th June, 1953 (both days inclusive).

V. R. SONALKER,
Managing Director.

BRITISH TENDER REJECTED BY U.S.

FIXING DOLLAR PRICE FOR WHEAT

(From Our Own Correspondent)

LONDON, *25th April*

AT no time in recent years has the American Administration been under greater criticism in the City than at present as a result of quite an accumulation of circumstances. It is now old history since the British Chancellor, Mr. Butler, coined the slogan "Trade not Aid," and there is a silly story from Washington that Senator Taft when asked whether he agreed with it said that he agreed with the second half. Apparently the isolationist wing of the Republican Party is convinced that, now that Britain's gold and dollar balances are steadily creeping up and that there is £100 million a year in dollars coming in as America's defence contribution to swell the Chancellor's coffers, there is really no need for the United States to make any further contribution towards increasing the dollar income of the Western world.

LONDON LETTER

The principal cause of the present irritation here is, of course, the famous case of the English Electric Company's tender for the Chief Joseph Dam Project in Washington which, being well within the Administration's power to accept, as it was substantially below the lowest American tender, has been reopened on what amounts to a legal quibble. The English Electric Company will bid again but in the circumstances it will be much more difficult for it either to put in the lowest bid or to be sufficiently below the U.S. bill to oblige the American Administration to accept it. It is extraordinary that after all that has been said, on the other side of the Atlantic as much as here, on the need to develop trade between the dollar and non-dollar areas, protectionism of this order should still make it impossible for British exports to the States to increase.

Insistence on Maximum Price

The other recent incident has, of course, been the American Administration's insistence on a maximum dollar price of wheat of $2.05 per bushel. Although 100 per cent. of the exporting countries agreed that this should be the ceiling, it was only because the United States as the dominant supplier would not budge. Admittedly, the United States was thinking of avoiding heavy subsidy payments to its own domestic producers, but the result is seen as an attempt to hold the non-dollar world to ransom on dollar wheat. Less than 70 per cent. of the importing countries are likely to ratify the Agreement, but under the new procedure a 50 per cent. ratification will be enough and this is assured. This country's non-appearance will, of course, greatly weaken the effectiveness of the $2.05 ceiling. But coming at a time when the British Government is turning the import trade over to private shippers it will need a great deal of restraint in this country to avoid making purchases in Canada at the top figure.

When British Ministers were in Washington recently, they were as good as told that Britain's dollar problems were ended, but Mr. Butler pointed out that this was the very narrowest of thinking since dollar imports into the United Kingdom are severely restricted. British exports to North America have shown a rise over the past months but imports appear to be outrunning them, and although specific dollar expenditure such as the Cuban sugar purchase is possible as a spot transaction under temporarily favourable conditions, the British balance of payments with the dollar area needs to be far more active before it can be said that trade between the two countries is reverting to "normal" in terms of pre-war freedom. Although the atmosphere here at present is one of cynicism about the Administration's intentions, it may be that the pretty plain speaking that is going on between both business and Government circles in London and Washington will have some effect in turning American policy back to more liberal ways.—*All Rights Reserved.*

Statistics prepared by the Board of Trade show that production of paper of all types in the U.K. during 1952 was at a weekly average rate of 32,539 tons, as compared with 38,005 tons in the previous year. For the year as a whole, production was down by 15 per cent. Production of newsprint rose by 2 per cent., while that of board by 13 per cent.

AMERICAN LETTER

UNCERTAIN FEELING ABOUT ECONOMIC CONDITIONS IN U.S.

GOVERNMENT'S POLICY BEING MISUNDERSTOOD

(From Our Own Correspondent)

NEW YORK, *23rd April*

A NUMBER of question marks are arising on the American scene. The biggest one concerns the future of business in the light of the Soviet peace offensive and the psychological reaction to it. Another is the relative unfamiliarity of the Eisenhower Administration with the burning questions of the day. The two are rather involved stories. On point number one, the impact is strictly psychological. While succeeding Democratic Administrations at Washington were openly regarded as inflationist, the new Republican regime is popularly considered deflationist. This, of course, is completely wrong since I have yet to talk to any Cabinet officer who even in private talks would say he favours a little recession. Nobody does. Yet, the impression remains, and it is pretty difficult to eradicate, particularly for those who remember that the last Republican Administration was defeated in a maze of unemployment and closed banks. It must be clearly admitted that such a mass psychology has within itself the germs of grave dangers. Uncertainty alone can make people hoard their money, instead of spending it, which is injurious to the American mass production economy.

Superimposed on all this is the peace offensive and the apparent olive branches offered by the new dictators at the Kremlin. The American economy has been sustained by emergency Government spending since 1933 and, thus, the idea has taken hold that, without this support, activity will decline fractionally or more. There is no concrete evidence to support such views, but they prevail just the same.

As I have said in previous despatches, the prophets of gloom are found mostly among the academicians and the slide-rule theorists who can prove by statistics that, unless there is a General Motors strike lasting several months, there will be an overproduction of automobiles, unless people abandon their caution and begin to spend more rather than save. But this assumption alone contains three equations, not one. Moreover, theorists do not determine mass attitudes.

So far as the peace moves are concerned, it is being hammered into American consciousness by editors, reporters and radio commentators that proof has yet to be forthcoming that the overtures made so far are genuine. As a very practical matter, too, the Government spending for defence is scheduled for so long in advance that no abrupt halt or slow-down could be expected, even if real peace were around the corner.

Meaning of Higher Interest Rates

There is acute awareness of all these problems in present Administration quarters and I know this from personal knowledge. How far this is going to be translated into a campaign of public education remains to be seen. The Eisenhower Administration is already under attack for having issued a 3¼ per cent. 30-year bond and for having abandoned the easy money policy.

The reasoning behind this decision simply is to get more of the public debt out of the inflationary area of bank-held short-term securities into the hands of real long-term investors. While it has a slightly deflationary effect, temporarily, the intention is an honest and good one. But this could be misread by the public who is not used to such manœuvres and has to be educated to the philosophy that the integrity of the dollar will be preserved.

In a broader perspective, highly placed spokesmen of the new Republican Administration have assured me that they are trying to avoid mistakes, that they will avoid making major decisions before being perfectly certain of their facts. The same has been told to visiting European diplomats. As a practical matter, it means that nothing will be done before the first of next year. It will take that long to complete "exhaustive staff studies."

General Eisenhower, as a former Army Commander, is thoroughly geared to working through a staff, in this instance the Cabinet and their advisors. Apparently, he will not be rushed into any decision without previous study, unless immediate steps have to be taken for emergency purposes.

Another characteristic of the current thinking in the executive branch of the Government is extreme sensitivity to the possible charge that an ex-military man is likely to have the desire to dominate both the legislative and judiciary branches of the U.S. Government. Consequently, General Eisenhower leans over backward to avoid any such impression. However, the net result of all this is that he wants to work *with* Congress and not against it. If there is a cleavage of opinion on a course to be pursued, he is inclined to persuade the legislators rather than to pound the desk or stamp his feet. It is an ideal target, but it would seem extremely difficult of accomplishment.

Major Decisions Postponed

Meanwhile, all major decisions are being postponed, such as the controversial reciprocal trade legislation, an overhaul of the Federal tax structure and the foreign aid programmes. Any impartial observer must admit that all this adds up to a psychological let-down.

People expected action, but they did not get it. They expected an outline of leadership which would, at least, point to a solution of pending problems, but they do not understand the very understandable caution of the new Administration to make their position known. This creates uncertainty which is not salutary to business. As pointed out above, it might easily lead to mass psychological complications which are undesirable. This is not to say that it will happen, but it might.

If any recession should occur, it is difficult to see how such a movement could be sustained. Savings and capital continue to accumulate at an unprecedented rate and the statutory accumulation of some $2,500 million in pension and retirement funds, plus insurance premia, almost guarantee that nothing serious can happen to share prices. However, rising money rates and the decision of the U.S. Treasury to issue a 3¼ per cent. 30-year bond have played havoc in the bond markets were outstanding obligations have adjusted themselves by downward price movements to the new scale.

This has also led to an increase in call money rates and prime lending quotes are expected to go up shortly out of sympathy. All this is somewhat deflationary, of course, but it is meant as a brake on inflation rather than as a retarding influence. Fiscal managers here are fully cognisant that it is more difficult to stop a recession than inflation and, with full co-operation of the Treasury, they aim at stability. The present state of the American economy is called as being in "a precarious balance" and the target is to preserve this balance without any too violent ups and downs even in the event of peace. Whether this can be achieved remains to be seen.—*All Rights Reserved.*

PAKISTAN NOTES

COTTON YARN CONTROL

AGRICULTURE IN THAL AREA MAKES HEADWAY

THE Government of Pakistan has promulgated the Cotton Textiles (Yarn Control) Order, 1953. Under the Order, which came into effect on 21st April, 1953, the production, import, distribution movement, and prices of all cotton yarn, excluding hand-spun yarn, have all been brought under control. The chief consideration that has weighed with the Government in deciding to control cotton yarn is the need to ensure "equitable" supplies of cotton yarn to handloom and powerloom weavers, hosiery factories, and other consumers at "reasonable" prices.

As a preliminary to fixing of prices and regulating distribution, the Textile Commissioner has frozen all stocks of yarn and also asked importers, manufacturers, dealers and all other persons (including banks) who hold one bale or more of yarn to declare their stocks in the prescribed form. Contravention of these rules is punishable under the Essential Supplies (Temporary Powers) Act, 1946.

With a view to augmenting agricultural production in the country, the Pakistan Agricultural Development Finance Corporation has decided to encourage *zamindars*, by providing financial assistance, to set up tractor farms on a co-operative basis. Two conditions, however, have been laid down for granting such assistance. First, the *zamindars* sponsoring the farms should produce adequate security for the Corporation's investments and running expenses. Secondly, the farms should be corporate bodies, possessing their own tractors, spare parts, workshops and engineers, which must hire out the tractors for cultivation of private lands of *zamindars* and tenants.

Wheat Purchase in Punjab

A monopoly procurement scheme for the purchase of wheat during the current crop year has been enforced by the Punjab Government with effect from 15th April, 1953. Under the scheme, the Government has assumed monopoly powers over purchase of all wheat coming to the *mandis* for sale through authorised *pucca arthis* who will be paid a commission of an anna per maund, besides incidental charges according to prescribed scale. The producers will be paid the price on the spot by the *pucca arthis*. The price of fair average quality wheat is fixed at Rs. 12 per maund.

The Government has also prohibited movement of wheat or wheat products by mechanised transport, such as rail, trucks, motor cars, aircraft and river-craft. There is, however, no restriction on transport of wheat (or wheat products) from one place to another within the Province by head-loads, carts or pack-animals. Export of all foodgrains, including pulses from the Province, has also been banned. Again, no one is allowed to deal in foodgrains without a licence.

Agriculture in the Thal Development Area has made appreciable headway in recent months. An indication of this is provided in the marked increase of 90,000 acres in the area brought under food production during the current *rabi* crop year. The yield of wheat in the area is about 12 to 15 maunds per acre, which is said to compare very favourably with the yield in the adjoining areas.

The Thal Development Authority has decided to raise further the total areas under cultivation by 150,000 acres to 450,000 acres. It is actively considering arrangements for the storage of flood water from the river Indus. The proposed arrangements are designed not only to help irrigate the areas throughout the year but also to prevent damage to food crops during flood periods. An agreement has already been reached between the Sind Government and the Authority, under which the latter has agreed to utilise only 6,000 cusecs of water from the Indus per annum. As the water supply from the river Indus is thus not sufficient, the Authority is considering proposals to irrigate 3.5 million acres of land through tube-well scheme and 1.5 million acres through canal scheme.

The representatives of the Governments of India and Pakistan and also of East Bengal, West Bengal and Assam are expected to meet shortly to work out an agreement on border trade among these States. The proposed conference is a sequel to the Indo-Pakistan Trade Conference held in New Delhi in March last, which agreed on certain principles for regulating border

(Continued in previous column)

(Concluded from next column)

trade. The Conference will decide whether the agreement on border trade should be a long-term or a short-term one. The border trade between East Bengal and West Bengal, Assam, and Tripura States normally covers a wide variety of food items and articles of daily use.

Several recommendations relating to the development of sugar industry in East Bengal were made by the East Pakistan Sugar Advisory Board at its meeting held at Dacca recently. The recommendations cover improvement of sugarcane cultivation, better transport facilities, training of Pakistani personnel in engineering and manufacturing sections of sugar mills, and development of industries based on sugar and its by-products. In view of the special importance of sugarcane cultivation, the Board has suggested the constitution, on the model of the Central Jute Committee, of an autonomous body charged with the responsibility for research and development work on sugarcane.

There are at present four sugar factories in East Bengal, with an aggregate daily cane-crushing capacity of 2,800 tons.

ACHIEVING OBJECTIVES OF BRETTON WOODS SYSTEM

SOME CHANGES TO AVOID FAILURE SUGGESTED

THE Bretton Woods system, as it was conceived seven years ago, had and is still having, as its main objective the achievement of multilateral non-discriminatory trade and convertibility of currencies. This objective is clearly embodied, along with others, in the Articles of Agreement of the International Monetary Fund. Many an economist, who has judged how far this objective has been achieved by the Bretton Woods system, in the light of analysis of past experience, is known to have come to the conclusion, generally, that up to now the Bretton Woods programme has been a dismal failure. The reasons for this conclusion are not far to seek. Thus, the quantitative trade restrictions, which were in existence when the system was instituted, have not been reduced much. Convertibility of currencies has not been restored. Exchange controls are still being continued and, what is more, in every other year, there has been a new balance of payments crisis, and, where there have been moderate successes, in freeing trade and making currencies partially convertible or transferable, such have been on a regional, that is, on a discriminatory basis, as within the European Payments Union and the sterling bloc. These failures are generally attributed to the persistence of the dollar shortage which has come to be regarded as an incurable disease.

While thus there has been a strong body of opinion, both in the U.S. and in Europe, which still holds that the Bretton Woods programme has so far been a dismal failure, as stated at the outset, it is refreshing to hear that Prof. G. Haberler, of the world-renowned Harvard University, thinks that all this pessimism and defeatism are "entirely unwarranted, superficial and devoid of historical sense and perspective." The Professor considers that the situation is not as bleak as it is made out to be and that the possibility of moving towards convertibility exists, if it is really wanted.

It will be interesting to note the grounds on which Prof. Haberler bases his conclusions. He has stated his views in the course of an article to *Wirtschaftsdienst*, a monthly review published from Hamburg. At the outset, he focusses attention on certain post-war developments which prove that, despite the recurrent dollar crisis and the persistent U.S. surplus, the situation has greatly improved and that the objective conditions—at least as distinguished from political and psychological prerequisites—for a restoration of convertibility are now more favourable than they ever have been since the end of the last war. First, the overall production and the volume and value of trade have everywhere grown fast and almost uninterruptedly. Secondly, the value and volume of exports of many key countries—U.K., Germany, and Netherlands, for example—have risen very promisingly. Thirdly, U.S. imports have grown fairly continuously not only in value but also in volume, and recurrent spurts in the U.S. export surplus are mainly due to jumps in exports rather than to drops in imports. This is considered by Prof. Haberler as a significant fact, in that it strongly suggests that the periodic recrudescence of the dollar scarcity is due to periodic changes in foreign demand rather than to fluctuations in the U.S. demand. The changes in foreign demand are again caused by spending sprees, delayed adaptation to unfavourable changes, relaxation in credit and import controls and the like. Fourthly, there is the rediscovery of money and of monetary policy adopted by many countries. Lastly, in most cases, where there was a deterioration in the balance of payments situation, it can be traced to inflationary excess. "The upshot of all this is," says Prof. Haberler, "that conditions have become much more favourable for making progress in the direction of convertibility and multilateral trade than they were for a long time."

Plea for Free Exchange Rates

The Professor then proceeds to answer the poser: how should we go about to achieve the goal of convertibility? In answering this question, he says: "I have nothing new to offer, and I am convinced that there are no magic formulæ, no clever gadgets, which would carry us easily and painlessly to convertibility." His basic prescription to achieve the goal, however, is this: "Let exchange rates find their equilibrium level, avoid inflation, and apply disinflationary policies. I am convinced that, if exchange rates were set free and countries pursued, what Meade calls 'policies of internal balance' that is, keep internal money-wage level approximately stable, the balances of payments would quickly equilibrate themselves without sharp shifts in the terms of trade." On the face of it, the remedy suggested by Prof. Haberler is an extremely radical solution. However, he is conscious of its revolutionary nature as he himself calls it "a dash towards convertibility" and is aware that it has no chance of adoption. He, therefore, tries to find a more gradual approach to achieve the aim. He favours beginning with decreasing real expenditure, by which he means less domestic consumption, caused by a rise in exports and/or fall in imports, by a country which seeks to improve its balance of payments position. His observations, in this connection, are worth quoting here, if only to make his argument clear. He says: "In the absence of widespread unemployment, any improvement in the balance of payments, however brought about, implies a decrease in real expenditure, consumption and investment, because, if exports rise and/or imports fall, less is available for domestic use. This unavoidable decrease in real expenditure, I call the primary burden of equilibrating the balance of payments. This primary burden can be either magnified by a secondary burden or reduced by a secondary benefit. We have a secondary burden if, as a consequence of the method used for the elimination of the deficit, e.g., as a result of devaluation, the terms of trade deteriorate. If the terms of trade improve we have a 'secondary benefit.'"

He opines that the primary burden is tolerable for all countries and that there is no danger that it would be so greatly magnified as to make it intolerably large, if non-discriminatory methods are used to fill the dollar gap.

Changes in I.M.F. Articles Needed

Stating the general position thus, Prof. Haberler then proceeds to discuss a few specific points and some changes in policies and procedures which he thinks are essential for the attainment of the basic objectives of the I.M.F. He points out that some of these changes could be effected within the framework of the Articles of Agreement, others may require renegotiation of the Fund Agreements. In the light of the experience gained since the inception of the Fund as an operating agency, he says that the experts who assembled at Bretton Woods paid much too little attention to the problem of inflation, as they were pre-occupied with fighting the last crisis, with deflation rather than inflation, with competitive depreciation rather than with overvaluation and reluctance to adjust the exchange rates. He, therefore, advocates that the Fund will have to concern itself more intensely with the internal economic and financial policies of various countries than was contemplated by the authors of the Articles of Agreement.

The Professor then proceeds to refer to another equally serious defect in the present system. That is the rigid attitude to exchange rates. Unfortunately this is, he observes, a defect which it seems to be very difficult to remedy without a revision of the Agreement. The law ought to make it permissible, he asserts, for a country to adopt a system of freely fluctuating exchanges without being cut off from support from the Fund, and the Fund ought to be able to make not only a once-for-all adjustment in the exchange rate, but also the introduction of freely fluctuating rates, at least for a while, a condition of financial assistance. He adds that the policy of accepting unrealistic par values should be changed.

If once the changing exchange rates are permitted, Prof. Haberler observes that—as a means of initiating adjustment of exchange rates—foreign exchange retention schemes, broken cross rates and similar devices have a certain value. True these practices are a nuisance, but, if they are gradually generalised and thus become a wedge driven into the tight rate structure, loosening it up and preparing the way for a general adjustment of currency values as well as serving as a barometer for the true value of a currency, they have, he says, a very useful function to perform.

In both respects, namely, in exerting influence on members to control inflation, as well as in suggesting necessary changes in currency values, the Fund would be, according to the Professor, in a stronger position, if it were to use its resources more freely as an inducement. Moreover, the help of the Bank should be enlisted, loans by the Bank should be made conditional upon certain minimum requirements with respect to controlling inflation and establishing realistic exchange rates.

Triangular Trade

In order to illustrate what might be achieved by concentrating efforts at a strategic point, Prof. Haberler calls attention to the fact that inflationary pressure, coupled with rigid exchange rates not only ruins the balance of payments of the country concerned but also prevents triangular trade settlement and thus causes difficulties for other countries. In this connection, he thinks that the dollar shortage can be overcome at least partially if not completely by means of triangular trade among the U.S., Europe and the Latin American countries. "It would seem to be natural," he says, "for Europe to eliminate her present deficit with the U.S., at least partially, in a triangular fashion, namely, by developing a surplus with Latin America and other raw material exporting countries which, in turn, would have a surplus with the U.S. There can be no question of elastic demand, and all the real and alleged difficulties of penetrating the U.S. market do not exist in that case. Europe must be able to replace many U.S. exports to Latin America—it is only a question of price. He thinks that there is no danger of the U.S. insisting on bilateral balancing of its trade. But what prevents this triangular adjustment is either too high European prices or too slow delivery of goods, or inflation and overvalued currencies in the Latin American and other raw material exporting countries. If these countries suffer from overall deficit in the balance of payments position on account of rigid exchange rates and inflation, they cannot be expected to play the game of triangular trade.

A triangular adjustment would be in the interest of all concerned. It would be easier and cheaper for Europe to get into dollar balance; Latin America would get her imports at more favourable terms and the U.S. could cut down on European aid and enable the American taxpayer (by means of tax reductions) to buy for as many dollars more as exports to Latin America have fallen. The U.S. imports from Latin America, etc., as well as untied dollar loans to those countries, would greatly facilitate the adjustment and increase the scope for triangular trade. Prof. Haberler feels that, if one or two Latin American countries are persuaded to permit triangular trade, others might be encouraged to follow the example.

Regionalism in International Payments

Prof. Haberler next considers the problem of regionalism in the field of international payments, as represented by the E.P.U. and the sterling area. He raises several objections against regional payments unions. These are:

(1) the regional payments unions do not solve the problem of multilateral trade; taken separately, the sterling area is better than the E.P.U.;

(2) if some members of such unions lack discipline others are also adversely affected;

(3) the functioning of any such unions is always threatened by the emergence of large debtor and creditor positions; thus, if the whole group is in balance with the rest of the world, there will always be some members who have deficits with the outside world offset by surpluses with the rest of the Union, and others who have surpluses with the world offset by deficits with the Union. Disequilibrium is likely to arise on account of any indiscipline among them or differences in the degree of controls, etc.;

(4) even if the unions succeed in overcoming these difficulties by keeping sufficient discipline and operate with tolerable technical efficiency, there remain all the objections to discriminatory treatment of outsiders. And discrimination constitutes an infringement upon the optimum conditions of international division of labour and, therefore, curtails elimination of world income, as compared with a non-discriminatory free trade position. Prof. Haberler confidently asserts that the dollar gap can be eliminated without the use of discriminatory methods.

Strong Currency Approach

After examining the operation of the E.P.U. in detail, Prof. Haberler says that the E.P.U. highlights what he stated at the outset. Elaborating the point, he says: "If the Fund is to fulfil its function, it must adopt a tougher attitude with respect to internal and fiscal policies of its members. Since it is not in a position to do that on a global scale, since it has no stick and no sufficiently attractive carrot to coerce or induce recalcitrant members to adopt reasonable policies of internal and external equilibrium, it should not waste its resources on hopeless cases, but should concentrate its efforts and energies on those countries which are near convertibility and which have shown that they are willing and able to keep their finances in order and avoid inflation. This policy may be called the strong currency approach, because efforts are concentrated on relatively strong (hard) currencies which are near convertibility." He feels that the approach will be promising if a sizable group of countries participates. He suggests that the sterling area, Germany, Holland, Belgium, Denmark, Japan, together with countries already possessing convertible currencies—the U.S., Canada, Mexico, etc.—should form a strong currency bloc in the first instance, to be joined by France and others later on.

When you go to London

Lloyds Bank has over 1,700 Branches in England and Wales.

LLOYDS BANK LIMITED

INCORPORATED IN ENGLAND.

LB-6-M-1953

The approach of Prof. Haberler to the problem of convertibility as summed up in the foregoing paragraphs, seems to be a realistic one, and there is no reason why it should not be seriously examined by the forthcoming Commonwealth Economic Conference and by the authorities of the I.M.F. and the World Bank. An important point which, however, needs to be carefully considered in this connection is to what extent the policy advocated by the Professor will suit the convenience of underdeveloped countries like India which are eager to raise their economic wealth within a very short period of a few years.

ANDHRA BANK LTD.

Slackness in the demand for bank finance, following the recession in commodity markets, adversely affected the working of the Andhra Bank Ltd. (General Manager: Mr. E. Ramachendramurti) during the year ended 31st December, 1952. This is fully reflected in the marked contraction in advances and bills from Rs. 321.32 lakhs at the close of 1951 to Rs. 240.69 lakhs as at the end of 1952. Despite such contraction, the gross income of the Bank was more or less maintained at the same level as in the previous year, thanks to an increase in interest earned. But this advantage was more than offset by a rise in administrative expenses, with the result that the net profit shows a fall of Rs. 78,042 to Rs. 3.68 lakhs. There is nothing unusual about this fall; as readers are aware, many a bank in this country has reported lower profit for 1952. In fact, judged against the background of adverse business conditions which neutralised the benefits of dearer money to a considerable extent, the working of the Bank during 1952 may be regarded as quite satisfactory.

In consonance with the fall in net profit as noted above, the allocation for taxation has been reduced by Rs. 50,000 to Rs. 1.40 lakhs. The transfer to the statutory reserve fund also is lower by Rs. 11,000 at Rs. 75,000. The dividend to the shareholders, however, has been maintained at 6 per cent., free of income-tax, which absorbs Rs. 1.50 lakhs. After making all these provisions, there is a balance of Rs. 7,231 which has been carried forward to the current year. This compares with Rs. 3,977 brought in from the previous year.

The balance-sheet of the Bank as at the close of the year under review discloses, as compared with that for the previous year, a modest rise of Rs. 22.41 lakhs to Rs. 4.67 crores in deposits, which is in refreshing contrast to the general recession in the deposits of Scheduled Banks. This improvement has been shared both by current and fixed deposits, the actual increase being from Rs. 1.00 crores and Rs. 2.15 crores to Rs. 1.14 crores and Rs. 2.18 crores, respectively. Savings deposits, however, are slightly lower at Rs. 1.35 crores, as against Rs. 1.36 crores. There are no borrowings from other banks, which a year ago stood at Rs. 68 lakhs. On the assets side, investments are a shade higher at Rs. 154.93 lakhs, as against Rs. 154.65 lakhs a year before. Nevertheless, the ratio of investments to deposits has shot up from 19.3 per cent. to as high as 33.1 per cent. This has been so because of the absence of any borrowings from other banks. Of the total investments, as much as Rs. 154.16 lakhs are in Gilt-edged securities—all in dated loans. Of these, 84 per cent. are in loans maturing within 10 years and 16 per cent. in 10 to 15 year-loans. The market value of these investments are lower than the book value by Rs. 9.11 lakhs, but the redemption value is higher by Rs. 6,700.

The Bank's advances and bills discounted, as already stated, show a marked decline of Rs. 80.63 lakhs to Rs. 240.69 lakhs. Consequent on this decline and also on the rise in deposits, the ratio of advances and bills to deposits stands very much lower at 51.5 per cent., as against 72.1 per cent. The rise in deposits in the face of a decline in advances, coupled with the absence of any perceptible rise in investments, has resulted in an improvement in cash position, the amount of cash in hand, balances with other banks and money at call held by the Bank as at 31st December, 1952 being Rs. 120.89 lakhs, as compared with Rs. 91.70 lakhs a year before. The ratio of cash to deposits is thus higher at 25.8 per cent., as against 20.7 per cent. The combined ratio of both cash and investments to deposits is as high as 58.9 per cent.

The progress of the Bank during 1952, as compared with that in the previous three years, is clearly indicated in the following table:

(In lakhs of rupees)

	For the year ended 31st December			
	1952	1951	1950	1949

* After taking into consideration the investments pledged against borrowings from banks.

Discussing the outlook for the current year, the Chairman, S. R. Y. Sivarama Prasad Bahadur, in his statement to shareholders at their recent annual meeting, observed as follows:

"With the expansion in trade conditions, I expect the current year's results would improve. Your directors are, however, taking effective steps to improve the earnings of the Bank and observe economy in expenses."

BANK OF BIKANER MAINTAINS PROGRESS

A satisfactory expansion in the business of the Bank of Bikaner Ltd., (General Manager: Mr. Satya Dev, Bikaner) is disclosed by its audited accounts for the year ended 31st December, 1952. Reflecting this are the rise of Rs. 1.04 crores in deposits, of Rs. 65 lakhs in advances, and of about Rs. 8,000 in the profit. The expansion in deposits has been utilised to strengthen the investment portfolio by Rs. 1.03 crores. There has been no provision for depreciation in this asset as there was last year. But the Bank has strengthened its reserves by a sizable amount, as compared with only a small sum which it had added to this account last year. The dividend has been maintained at the modest level of 3 per cent. which the shareholders had received in the previous two years.

The following comparative table gives an idea of the Bank's progress in recent years:

(In lakhs of rupees)

	For the year ended 31st December			
	1952	1951	1950	1949

Cash	16.6	24.3	20.8	21.5

* After taking into account the securities earmarked against borrowings from other banks.

The large sum of Rs. 5.50 lakhs which the Bank had provided last year for investment account had been necessitated by the heavy fall in Gilt-edged securities. Though the Bank's holdings of securities at the end of 1952 show a much larger depreciation than at the end of 1951, the Directors have presumably not thought it necessary to make any provision this year.

As already pointed out, deposits have gone up by Rs. 1.04 crores to Rs. 11.10 crores, which is a record in the history of the Bank. The rise of 10 per cent. in the Bank's deposits is in distinct contrast to the fall of 2 per cent. in the case of all Scheduled Banks. Alongside the growth of deposits, the Bank's advances also have gone up by Rs. 65 lakhs, raising the ratio of advances to deposits to 44.7 per cent. But even this ratio is considerably less than that (55 per cent.) in the case of Scheduled Banks as a whole at the end of 1952. Referring to the Bank's advances, the Chairman of the Bank, Mr. Khushalchand B. Daga, said, in his address to the shareholders, that the Directors were keen on adhering to the "safety first" policy in the matter of selection of security towards advances granted from time to time. It was their established policy, he added, to lend against readily marketable and first class securities only. In keeping with the increase in its resources, the Bank's investment portfolio has been raised by Rs. 1.03 crores, so as "to afford a safe, liquid and remunerative cover to such of the Bank's day-to-day funds as may be remaining surplus." We are told that the Bank's investment in Gilt-edged securities consist only of short and medium-dated securities, the risk of depreciation on which is minimum. The book value of the Government securities stands at Rs. 4.77 crores, as on 31st December, 1952, and the average market value as prescribed by the Reserve Bank of India is Rs. 4.64 crores. The depreciation of Rs. 13 lakhs is larger than that of Rs. 7 lakhs noted at the end of 1951. The book value of investments other than in Government securities is Rs. 15.92 lakhs, their market value being Rs. 15.06 lakhs. Cash balances are lower by Rs. 60.19 lakhs, but the combined ratio of investments and cash to deposits stands at the impressive level of 60.7 per cent.

BANK OF BARODA LTD.

In the profit and loss account of the Bank of Baroda Ltd., published on page 751 of our issue dated 25th April, 1953, the item No. 2(i) under expenditure should read as "To General Managers" and not "To General Manager" as was erroneously stated therein.

RESULTS OF EASTERN BANK ENCOURAGING

DIVIDEND LEVEL RAISED

AN expansion of a little over £2 million in deposits and other accounts to a record level of £28 million, a rise of about £2,000 in net profit and an enhancement of the dividend from 6 per cent. to 7 per cent. are the highlights of the accounts of the Eastern Bank Ltd. (Joint General Managers: Mr. F. B. Sadler and Mr. H. Millew, London) for the year ended 31st December, 1952. The improvement in the Bank's resources during a period of difficult trading conditions, as the past year proved to be, is not a feature of the working of this Bank alone; for, as readers are aware, some of the British banks operating in India and a few Indian Scheduled Banks have also been able to report this achievement. But what is noteworthy about the rise in the resources of the Eastern Bank is that the upward trend has continued unbroken since 1949 and that the expansion in 1952 has been greater than that in 1951.

The net profit of the Bank for the year under review (after providing for taxation and making provisions, and after an appropriation to the credit of reserve for contingencies, out of which reserve provision has been made for any diminution in value of current assets) amounts to £126,722, representing an increase of £1,959 over the year. With the unappropriated surplus of £92,625 brought in from 1951, which itself is higher than the corresponding sum of the preceding year, namely, £89,362, the available sum for appropriation amounts to £219,347, as against £214,125. Out of this, a sum of £50,000 has been added to the reserve fund. No transfer to the reserve fund was made in the previous year, but, instead, a sum of £60,000 was taken to the reserve for contingencies. The Bank premises account has been credited with £30,000, as in the previous year. After making these essential allocations, the available surplus is £15,222 more than the corresponding sum of 1951. This has been utilised to enhance the distribution to the shareholders from £31,500 (at 6 per cent. less tax) to £36,750 (at 7 per cent. less tax) and carry over to the next year a larger sum of £102,597, as compared with £92,625 brought in.

The increase in the dividend level is in consonance with a similar step taken by a few other British banks operating in India. The dividend for the year has been raised by increasing the final distribution from 3½ per cent. less tax, to 4½ per cent. less tax, the interim dividend having been maintained at 2½ per cent. less tax. Explaining the step taken by the Directors in enhancing the dividend level, the Chairman, Sir Evan M. Jenkins, says, in his statement accompanying the accounts: "I must explain that the increase in dividend relates to the year as a whole, and is, in the opinion of your Directors, justified by the results achieved over a period of years, and by the fact that, when dividend restraint was officially requested, a very conservative policy was already being followed." Thus, the Bank's dividend policy is influenced not only by the results of the year to which the dividend relates but also by the results over a few years. The conservative policy followed by the Bank in the matter of dividend will be evident from the following dividend record in the past decade and over: 1941: 4½ per cent.; 1942: 5 per cent.; 1943-45: 5½ per cent.; 1946-51: 6 per cent.; and 1952: 7 per cent.

The following comparative table gives an idea of the progress in the Bank's financial position since 1949.

(In thousands of £'s sterling)

	As on 31st December			
	1952	1951	1950	1949
Capital	1,000	1,000	1,000	1,000
Reserve fund	1,250	1,200	1,200	1,000
Unappropriated Surplus	103	93	89	88
Current, deposit and other accounts	28,038	25,969	24,352	20,972
Bills payable	664	684	715	571
Acceptances	213	324	236	419
Advances	8,459	9,214	6,687	5,700
Investments	11,113	8,712	11,010	10,862
Cash balances	6,286	5,809	4,768	3,871
Bills receivable	4,020	4,014	3,956	2,422
Bank premises	363	251	204	156
Ratio to deposits of—	%	%	%	%
Advances	30.2	35.4	27.5	27.2
Investments	39.6	33.5	45.2	51.8
Cash	22.4	22.4	19.6	18.5

The reserves and surplus stand at a more impressive level, at the close of 1952, than three years ago. The deposits and other accounts (including reserve for contingencies) have gone up by over £7 million in the course of the last three years. The level of advances also has gone up, the exact increase being of the order of about £2.8 million. Excepting for the rise in 1951 by a modest extent, the ratio of advances to deposits has undergone very little change. A noteworthy feature of the Bank's financial position is the high level of liquid assets.

The following observations of the Bank's Chairman on the prospects for the Bank will be read with interest:

"As far as can now be foreseen, our prospects for the next few years at least are quite good. There are, of course, risks of a political nature in the East, as in most other parts of the world; they are, perhaps, no graver in the countries which we serve than they are elsewhere."

TEXTILE INDUSTRY IN WESTERN EUROPE

POST-WAR TREND REVIEWED

THE textile producing countries in Western Europe play a notable part in the world trade in textiles. Some idea of this can be had from the fact that, out of 5,346 million square yards which entered the world in 1950, W. Europe accounted for 2,507 million sq. yards. In 1951, the share of these countries expanded to 2,732 million sq. yards, out of a total of 5,521 million sq. yards. Complete figures for 1952 are not available, but the estimates made at the Buxton Conference place W. European countries' exports at 2,470 million sq. yards, out of a total of 4,820 million sq. yards. The target for 1953, as announced by these countries at the Buxton Conference, is 3,050 million sq. yards. It will be clear from these figures that the developments in the sphere of textile industry in these countries will greatly influence the pattern of world trade. Inasmuch as India is endeavouring its utmost to maintain a high level of exports, the developments assume considerable significance to this country and, as such, deserve to be prominently noticed. There is, therefore, no doubt that the review of the post-war trends in the textile industry in the W. European countries, contained in the *Economic Survey of Europe Since the War*, just published by the U.N. Economic Commission for Europe, will be read with great interest.

According to the *Survey*, the textile industry in W. Europe, having shared in the general growth of production and exports after the war, was the first and the most acutely affected by the recession in consumer goods in 1951-52. The recession meant a decisive turning point for the textile industry. Thus, on the one hand, the pre-war tendency for exports to contract has now reasserted itself and, on the other, the trend of output has been distinctly downwards, thanks to shrinkage in demand—home and foreign. In short, textiles in W. European countries are regarded as a "declining industry."

Post-war Recovery

The review of the textile industry in W. European countries is made under three heads—post-war recovery, recession of 1951-52 and prospects for the future. To take post-war recovery first. At the end of the war, Europe as a whole had little or no problem of textile capacity in a quantitative sense, although much of the capacity was old and obsolete. Before the war, there was considerable surplus of capacity in the textile exporting countries and war-time losses were comparatively light in most of them. In a number of textile importing countries, capacity was expanded during the war years. Practically all countries witnessed a notable expansion in the rayon sector. In fact, at the end of 1947, the number of spindles and looms in some of the smaller countries, such as Denmark and Norway, was higher than that prior to the war and it was only one-tenth lower in Austria and France.

As there was a high level of demand for textiles, which was guaranteed, for a number of years, by the universal desire to make good the depletions of war-time, the rate of recovery in textile production in W. Europe depended primarily on the speed with which the industry could rebuild its labour force. There had been a sharp contraction in spinning and weaving operations in most belligerent or occupied countries, with a consequent reduction in the labour force. In the immediate post-war period, several countries had, therefore, been faced with a textile man-power problem, as is indicated by the following table showing the wage and salary earners employed in the textile industries:

(In thousands of persons)

Country	1937-39	*End*-1946	1950-51
Great Britain ...	1,160	844	1,015
Italy ...	602	635	635
France ...	602	550	605
W. Germany ...	522	270	620
Belgium ...	162	170	192
Netherlands ...	78	75	109
Austria ...	56	46	87
Switzerland ...	61	65	71
Sweden ...	53	55	62

It will be seen from the above table that, in most of the countries, the man-power problem was of comparatively short duration; in Italy, Belgium, Switzerland and Sweden, employment by the end of 1946 was above the pre-war level and, in the Netherlands, it was only just below pre-war. The two countries where man-power difficulties persisted for the longest period were France and the U.K.

Rayon Industry

A good deal of the rise in the textile activity in Europe since 1937 has been in producing substitutes for (primarily dollar) imported raw materials rather than in final production. The development of rayon industry, which was stimulated in Continental Europe during the war by shortage of natural fibres, has been encouraged further in the post-war period by the need to reduce dollar expenditure on cotton, continuing improvements in the technical properties of rayon, and—most important—the cheapening of rayon prices in relation to those of cotton and wool. This movement of relative prices in favour of rayon had been very striking even before the great boom in natural fibre prices which followed the outbreak of the Korean war. Between 1937 and the middle of 1950, the price of raw wool rose by 75 per cent. and that of raw cotton nearly trebled, whereas the price of viscose staple fibre rose by only 30 per cent. and that of acetate staple actually fell. The same movement is seen in yarns, an increase of less than one-quarter in rayon yarns contrasting with a doubling of the price of cotton and wool yarns. By the middle of 1950, rayon yarn, either spun or filament, was cheaper absolutely than cotton yarn, although, in 1937, it had been over one-third dearer. The comparison is based on U.S. prices. In view of the devaluation against the dollar, the shift in favour of rayon is even more striking for European countries.

Extent of Substitution

The extent of this substitution of artificial for natural fibres is illustrated by the following table:

Composition of Yarn Production in Five European Countries:*

	Percentage to total production	
	1938	1951
Cotton	62	48
Wool	26	24
Rayon	12	28
	100	100

* U.K., Italy, France, Austria and Belgium.

It will be seen that rayon has more than doubled its importance amongst the three major apparel fibres, primarily at the expense of cotton. Had Italy moved in the same way as other European countries, the substitution would appear even more striking. In fact, however, rayon has been a smaller proportion of total fibre consumption in Italy than before the war and, even in 1951, rayon production was little higher than in 1938 and far below the peak level of war-time production. While it is no doubt true that, in the pre-war period, the substitution of rayon was pushed well beyond the point which was then justifiable, in the post-war period, the possibility of financing imports of American cotton through dollar-aid has led Italy to increase its dependence on the dollar area and to forgo the increased employment which the full use of rayon capacity would have created. Even in 1951, roughly one-third of Italian capacity for producing rayon seems to have been unused. In Western Germany, on the other hand, rayon capacity seems to have been fully employed by 1951.

Exports

The following table compares the importance of textiles in the export trade of six W. European countries in 1939 and 1951:

	Percentage to total exports	
	1938	1951
Italy	23	33
U.K.	17	15
France	13	13
Belgium	7	11
W. Germany	4*	1
Netherlands	†	—

* Figures relate to whole of Germany.

† In 1938, textile exports were 20 per cent. less than textile imports.

It is thus evident that the dependence of the U.K. and Germany on earnings from textile exports has been reduced, while that of Belgium and Italy raised. The fall in the ratio for the U.K. (and to a lesser extent Germany) is in part the result of an increase in imports of textile manufactures, of which Italy and Belgium have been important suppliers. So far as exports to overseas are concerned, earnings from textiles accounted in 1951 for rather less than one-fifth of the total visible exports of the six countries combined. But the position varies considerably from country to country. France and the U.K. (and to a lesser extent Italy) account for most of the textile trade with the world outside W. Europe. The remaining countries are heavily specialised on inter-European trade, so much so that their total exports to Europe greatly exceed those of France and the U.K. combined, in spite of the much greater absolute importance of the two latter as exporters. This general pattern is repeated in each of the major apparel fibres, although in varying degree. For the six countries taken together, the whole increase in the volume of trade—about 12 per cent. in all—has been in exports to other countries in the same region, namely, W. Europe. This reflects, in general, the relative absence of imports restrictions in W. Europe, following liberalisation of trade among the O.E.E.C. countries and, in particular, the formation of the Benelux Union.

All the countries shared in the expansion of intra-European trade. This was particularly in marked evidence in the case of countries the exports of which are normally focussed on the areas. In the Latin American market, on the other hand, the W. European textile exporting countries lost their hold to a substantial extent, as the war and its aftermath had established not only new trade connections for the U.S. textile industry but also for the taste for American fashions, in the imitation of which the European producers seem to lack enthusiasm. The notable expansion in French textile exports has been concentrated on the dependent or associated territories of Africa and Asia and is, to a large extent, the result of the heavy increase in French military expenditure and capital investment in these areas. Similarly, it is in the dependent or affiliated areas of Africa and Oceania that the U.K. has made its chief advances.

The five years of almost uninterrupted expansion in textile production in W. Europe noted thus were followed by the sharp textile recession of 1951-52. Production of textiles fluctuated more violently than net exports. Thus, while exports of cotton and rayon tissues in the first half of 1952 were still above the level of the second half of 1950, production had fallen by nearly one-tenth. The contraction in production has been most severe in the U.K., particularly in cotton and rayon goods, and least serious in France, with Italy occupying an intermediate position.

Prospects for Future

Europe's biggest market for textiles is in Africa and the Middle East. Out of the total quantity of cotton and rayon goods imported into this area, nearly 70 per cent. is accounted for by the six European countries referred to above. Similarly, the share of European countries in the aggregate imports into Oceania (Australia and the neighbouring islands) is to the extent of more than 75 per cent. The countries of Asia, however, account for poor offtake of cloth from European countries, as the bulk of the requirements are met by Japan and India. The Latin American countries also account for a small portion of Europe's trade in textiles; almost the whole of these countries' imports from the outside world is supplied by the U.S.

The prospects of larger exports of European textile goods in the coming years will depend, to a considerable extent, on competition from other exporting countries, especially Japan, the U.S. and India. It will also depend on the trend of consumption in the importing countries, not to speak of the expansion in the size of the textile industries. The U.N. *Survey* considers the prospects of a rise in the demand for textiles in Asia, Africa and the Middle East as less favouable than before.

The textile producing countries of W. Europe are thus confronted, on the one hand, with a substantial fall in their export earnings and, on the other, with the internal problems created by a declining industry. The impact of these developments is likely to be felt primarily by the major producing countries. Most of the smaller countries of W. Europe are still deficit in textiles. In the absence of protection, their own industries might bear part of the burden of a contraction in domestic demand. In the case of countries like Greece and Turkey, where labour is plentiful but capital scarce, some protection against competition seems not only inevitable but also desirable. Among the major producing countries, Belgium and Italy seem likely to suffer a considerable fall in their exports. Although the immediate effects of contraction in overseas exports will be felt by France and the U.K., these countries have also been substantial importers of textiles from the rest of Europe and are, therefore, in a position to offset a significant part of their losses overseas by lower purchases in Europe.

It has been suggested that some 700 million square yards of overseas exports may be at risk in the foreseeable future. At present prices, this represents a loss of export earnings of some $350 to $400 million. Perhaps, one-third of this loss would be offset by the consequential saving in raw material imports, and further savings will result if production for home use fails to return to 1951 levels and from the further substitution of artificial for natural fibres. All in all, the net deterioration in W. Europe's balance of payments may not exceed some $200 to $250 million. Moreover, to the extent that the loss of European exports is the result of increased production within the franc or sterling areas, the payments difficulties created will be in the least difficult sector of Europe's external financial relations. The effects of falling exports may be particularly serious for Italy; both on its external position—because textile exports account for roughly one-third of its total export earnings—and on its internal position—because of the heavy unemployment already existing and of the shortage of capital for creating new industrial capacity. The unfavourable prospects for textiles emphasise the importance of practicable action to minimise textile protectionism by more-developed European countries.

Improvement in Efficiency

The prospect of a contraction in the size of the W. European textile industry has implications for investment policy generally. It was suggested earlier that the heavy investment in textiles over the last five years was itself a mistake. *A fortiori*, further investments should be confined to any necessary expansion of import-saving rayon capacity or to exploiting the possibilities of the newer synthetic fibres. On the other hand, there will be a pressing need in some countries for Government action to concentrate production and man-power on the most efficient plants and ensure intensive utilisation of such capacity. All the experience of the 1930's suggests that the operation of market forces does not bring about rationalisation in industries where firms are small and numerous.

Finally, labour problems arise when an industry contracts, even in countries where demand, employment and activity are generally kept at a high level. Special problems will arise from the geographical concentration of the textile industry. Moreover, there may be resistance to schemes for nationalising and enhancing the efficiency of production, if the immediate effect is to reduce still further the demand for labour. Further, there will be the problem, which full employment will itself create generally, of maintaining the flow of juvenile labour to the industry necessary to keep a balanced labour force in the long run. Alluding to all these, the *Survey* concludes that it is doubtful whether satisfactory solutions for some of the problems will develop from the operation of market forces alone.

CAMPAIGN FOR RELIEF FROM PURCHASE TAX LAUNCHED

OUTLOOK FOR COTTON CONSUMPTION

(From A Special Correspondent)

MANCHESTER, 21*st April*

HAD it not been for a misunderstanding over the purchase tax concessions which led traders at first to believe that textiles were included in the cuts, Mr. Butler's Budget would have received the full approbation of industrialists in this area. It has been hailed as an "incentive Budget" because of the additional incentives it should provide by reintroducing initial allowances, ending the excess profits levy, and reducing income-tax. The necessity of stimulating activity in industry has been stressed on so many occasions in recent years that a real attempt to provide the impetus by cutting taxation instead of increasing it is held to be a step in the right direction.

MANCHESTER LETTER

But for textile men at any rate, the purchase tax problem took on an aspect perhaps out of proportion to the rest of the proposals. For nearly a year tax on textile goods has been lower than on other merchandise but now the rates will be the same. In this instance there was no delay in acquainting the Government with the unmistakable opinion of not only cotton, but the rayon, silk and linen industries, on the unjustifiable omission of those goods from the tax concessions. The fact that the general rates of purchase tax on textiles was reduced last year is not regarded as an adequate reason for failing to adjust them on this occasion.

"Drop-the-tax" Plea

Serious concern at the omission of textiles from the Budget purchase tax concessions was expressed at a special meeting this week by leaders of the cotton, rayon, silk and linen industries. The tax hindered the export drive, retarded modernisation and limited the range of goods in the home market, it was stated when representatives of 17 organisations in the non-wool section of the textile industry met in Manchester to launch a new campaign for purchase tax relief.

Sir Raymond Streat, Chairman of the Cotton Board, described the tax as "hanging like an old man of the sea round the neck of the industry." The industry was disappointed and dismayed at the Chancellor's response to what had been conceived as a "strong and unanswerable" case for P.T. relief put to Mr. Butler in a personal interview. This was a time, Sir Raymond said, when the textile industry should be freed from shackles to allow it to compete more effectively with its rivals overseas.

The Conference agreed that Lancashire was having to produce more lower quality goods to keep below the "D" line. This was hitting at the export trade, for without a wide range of designs for the home market the industry could not give export markets either the choice or the delivery which rival suppliers could offer. Answering the charge that textiles were given tax relief last year, Sir Raymond said that concessions then were merely in the light of the "D" scheme and not in relation to purchase tax as a whole.

Mr. W. T. Winterbottom, President of the Master Cotton Spinners' Federation, said that Lancashire's export trade would be ruined unless the Chancellor saw the textile industry's point of view on the P.T. issue. The whole pattern of the industry would be changed if something was not done quickly and more mills would be producing lower quality goods. The first step in the new campaign to secure the complete abolition of purchase tax has been to furnish every M.P. with a detailed memorandum outlining the textile industry's case for purchase tax revision.

Level of Employment

Strong criticism of Mr. Butler's decision was also voiced by leaders of Lancashire's 275,000 cotton operatives. Following a meeting in Manchester of the Legislative Council of the United Textile Factory Workers' Association, the President, Mr. A. C. C. Robertson, said there were fears about the effect of purchase tax on the level of employment in the cotton industry once Coronation orders had been cleared.

The unions felt a very strong case had been made out for the total abolition of the tax on textiles. Concessions made in last year's budget had resulted in very little extra business coming to the mills.

What the trade wants is nothing less than the complete removal of purchase tax, an impost which has been as much abused as any burden ever imposed on industry. Only just before the Chancellor's statement it was announced that direct representations had been made to Mr. Butler by Sir Raymond Streat on behalf of all non-wool textile industries for the removal of the tax. This special appeal was made some months ago and had been kept secret for the obvious reason that when such representations are made buyers are liable to withhold purchases if they think there is a possibility of some relief.

Because little has been said about it for some time a feeling may have developed in circles outside the cotton trade that the "D" scheme which was introduced last year is proceeding satisfactorily. Nothing could be further from the truth. The arbitrary division of taxable and non-taxed goods has caused exactly the result its critics foretold—production of goods below the "D"-line at whatever cost in quality and style.

Mr. R. Robson, Director of Economics and Statistics at the Cotton Board, has surveyed cotton consumption prospects in Britain for the International Advisory Committee. His prediction is that Lancashire mills this season will use probably about 1,600,000 bales, the lowest since the worst years of war-time concentration. Mill margins, he says, are little more than half and production only about three-quarters of the peak levels reached in November, 1951.

Cotton Consumption

The immediate outlook for the home market is favourable, Mr. Robson adds, and stocks at all stages of distribution have been reduced to very low levels, mainly because of the weakness in cotton prices earlier in the year. Discussing long-term prospects, he says it should be remembered that at no time since the end of the war has consumption per head of cotton and rayon textiles attained the pre-war level, despite the increased use of textiles for industrial purposes. The most probable reason for this is the high price of cotton in recent years.

On exports, Mr. Robson is inclined to be optimistic, pointing out that shipments to such countries as Australia can be expected to regain their normal level when import restrictions are eased. In addition, if the present ban on the import of foreign grey cloth for processing and re-export is continued, a much greater proportion of total shipments of cotton goods from Britain will be of local manufacture than has been the case in recent years.

At the same time, it is clear that cotton will have to meet stiffer competition from synthetic fibres, and in particular from rayon staple. Price stability is one reason for the growing interest in rayon and the use of synthetics for new fabric constructions is an important factor. It is interesting to note that in the final quarter of last year deliveries of rayon and mixture apparel cloths to the home trade were very little less in volume than those of cotton goods.

Cotton and Wool

An organisation such as Bradford Dyers' Association, which handles the products of textile mills in both Lancashire and Yorkshire, can take an unprejudiced view of the conditions in the manufacturing sections of both counties. Mr. James Ewing, the Chairman, has drawn a comparison in his Annual Report between the pattern of distribution of cotton and woollen goods during the past generation. Lancashire trade, he says, has undergone changes to a far greater extent than the West Riding of Yorkshire trade, which has been more stable, largely because of the retention of its old goodwill and its production of worsted goods from the lightest dress fabrics to men's outer wear.

Although Lancashire has been much more vulnerable to the erosion of her trade by tariffs, development of domestic industries in former markets, including the industrialisation of Asia, and the aftermath of two world wars, Mr. Ewing feels that definite steps have been taken to meet the challenge of changing world conditions, aided by scientific and technological advances. "By the installation of modern plant, redeployment of labour and exploratory steps in double-shift working, Lancashire is showing her determination to leave the past behind," he observes.

A further pointer to the ground gained by the Lancashire cotton spinning industry since the difficult times of a year ago is provided by Cotton Board production figures for the week ended 4th April. Production of cotton, spun rayon and mixture yarn during the week, which was curtailed through the Good Friday holiday, aggregated 14,940,000 lbs.—*All Rights Reserved.*

PLACE OF COTTON IN MIDDLE EAST'S ECONOMY

INCREASE IN PRODUCTION AND EXPORTS

EGYPT overshadows every other country in the cotton economy of the Middle East region so that the improvement that is taking place in cotton cultivation in other parts of this region seldom attracts sufficient notice. It is, for instance, not common knowledge that cotton has surpassed Iraq's wool exports and that it now ranks as the third major export item. Again, cotton has become a major export item of Turkey, supplanting dried fruits and tobacco. These facts are revealed in the U.N. Report, *Review of Economic Conditions in Middle East* 1951-52, which includes an interesting section on cotton production and trade in this region.

Although the information furnished by the Report refers by no means to the very recent period, it is important for the comprehensive data it gives about the cotton economy of the Middle Eastern region. The Report says that during the past fifteen years, the area planted to cotton and the total production of cotton in the Middle East have varied considerably from year to year. During the Second World War and the immediate post-war period, the shortage of imports encouraged the development of food crops at the expense of cotton in several countries. The area under cotton in Egypt declined from 746,000 hectares in 1934-38 to 297,000 in 1942; in Syria from 32,000 hectares in 1934-38 to 15,000 hectares in 1942; and in Iran from 158,000 hectares in 1934-38 to 118,000 in 1944. The movement was reversed after the war as more food supplies became available in most areas and by 1948, cotton output in the Middle East as a whole had regained the pre-war level.

There has, in recent years, been a slackening of output in Egypt, the largest producer in the region, in contrast to the marked rise in production in the Anglo-Egyptian Sudan, Syria, Turkey and Iraq. The increased in the latter countries more than offset the decline in Egypt, with the result that the production of the region in 1949, 1950 and 1951 showed a distinct improvement over the pre-war level. As the new producers did not have any sizable capacity to consume the cotton they grew, they had to export their production. Accordingly, to the traditional cotton exporters of the region, Egypt and the Anglo-Egyptian Sudan, were added Iran, Iraq, Syria and Turkey.

The expansion in output was a result of the rise in cotton prices, following a sharp increase in demand, and the flexibility of cotton production. The shortage of dollars and the devaluation of sterling in 1949 placed the producing countries in the Middle East in a particularly favourable situation with respect to cotton exports. The international demand, which was already high, again increased sharply after the events in Korea in 1950-51. The quantity exported increased from about 460,000 tons in 1949 to 570,000 tons in 1950. At the same time, local demand for cotton was stimulated by growing domestic use, chiefly for expanding textile industries in the Middle East cotton-producing countries. During the second half of 1951, however, prices began to decline, chiefly because of the abundant cotton harvest in the U.S., the existence of large cotton stocks and some slackening in demand as a result of the previous high level of prices. From 1950 to 1951 the volume of cotton exports from the Middle East declined by approximately 120,000 tons. This decline was more than accounted for by the drop of 170,000 tons in exports of Egypt alone.

The Report also discusses the country-wise position in the region's cotton economy. In Egypt, the cotton harvest of 1950 and 1951 were rather poor; the 1951 harvest, in particular, was 9 per cent. below the average for 1934-38 despite expansion in acreage. In 1951, as in 1950, the authorities determined the minimum area to be planted to cereals, thus indirectly limiting the total area planted to cotton, but the effectiveness of these measures was somewhat reduced by the appeal of high cotton price. The poor yield seems to have been due chiefly to the boll weevil, to sun-scorching and, in Lower Egypt, to shortage of water.

In order to support cotton prices, the Government of Egypt fixed minimum prices from the beginning of 1951 and later announced that it would buy any amount of cotton tendered at such prices. This policy was abandoned in 1952, in view of the cessation of exports and the accumulation of large stocks. The Government has since then adopted, as is well known, several measures designed to maintain cotton prices at what it regards as reasonable levels.

Syria, where cotton-growing is not new, vastly increased its output during the past three or four years. The quantity rose from 5,700 tons in 1939 to 50,000 tons in 1951, while the area under cotton increased from 32,000 hectares in 1934-38 to 217,000 in 1951. Expansion in cotton production was encouraged by the authorities who saw not only an opportunity for expanding the area under cultivation but also a means of providing more employment. Acreage was added chiefly in El Jezira and the Euphrates region. Use of tractors and agricultural machinery made it possible to expand the area under cultivation rapidly; there was a substantial investment of capital.

The yield of cotton also increased in Syria. In 1952, the yield was 460 kilogrammes per hectare—as high as that of Egypt. There was, however, considerable decline in yield in 1951. Among the reasons for the decline in yield were plant parasites, lack of experience, poor selection of seed, shortage of water and, on some areas, late rainfall, which delayed preparation of soil. Other obstacles to be overcome included technical problems in picking, storing, ginning and pressing cotton fibres, financing the harvest, providing sufficient man-power for cotton picking and regulation of property rights. The area under cultivation was reduced from 217,000 hectares in 1950-51 to about 150,000 hectares in the 1951-52 season, chiefly because of the downward trend of prices. A cotton office was set up by a decree in 1952, to regulate cotton production by controlling cultivation, ginning, sorting and export. Steps were also taken to limit the area planted to cotton, to improve the quality of the seed and to supply producers with equipment for insect control.

Both exports and domestic consumption of cotton increased in Syria. Thus, total exports for 1951-52 were estimated at about 40,000 tons, as compared with about 24,000 tons in the 1950-51 period. Cotton was the most important item of export in 1951. In 1950-51, 7,000 tons were used by the mills in Syria, an increase of about 40 per cent. in comparison with 1949-50; in 1951-52, the quantity increased to 8,000 tons. The chief purchasers of Syrian cotton in 1950-51 were France, Lebanon, Italy and the U.K.

The area planted to cotton in Iran and Iraq too increased substantially. In Iran, it rose from 100,000 hectares in 1949 to 130,000 in 1950 and 150,000 in 1951. Selection of seeds and standardisation of quality, according to the Report, appeared inadequate. Cotton was the main export of Iran in 1950-51, next only to petroleum.

In Iraq, the area under cotton increased from 11,000 hectares in 1949 to 32,000 in 1950 and 44,000 in 1951, when it was almost three times the average for 1934-38. Production in 1951, despite the expansion of the area under cultivation, remained below the output of the preceding year. The total output in 1951 was under 7,000 tons, with a yield of about 140 kilogrammes to the hectare. Drought and heavy damage by the spiny bollworm were chiefly responsible for the low yield. Most of the harvest was exported but the local textile industry was beginning to absorb a part of it. For the first time, in 1951, cotton surpassed, as already stated, wool exports and ranked as the third major export item.

Stimulated by high prices prevailing in foreign markets, cotton production, the Report says, made important advances in Turkey in 1950 and 1951. Average export prices increased by 67 per cent. between 1950 and 1951, reaching about nine times the average price of 1934-38. The area under cultivation rose from 249,000 hectares in 1934-38 to 305,000 hectares in 1949, 448,000 hectares in 1950 and 642,000 in 1951. As compared with the pre-war period, the 1951 cutput increased three times and the average yield was also higher. The value of cotton exports reached £T216 million in 1951. Cotton thus became the major Turkish export, surpassing the exports of dried fruits and tobacco, the exports of which had encountered difficulties for several years owing to limited world demand in relation to production and stocks. At the end of 1951 and the beginning of 1952, prices showed a downward trend and price support measures were taken, in particular through the action of cotton co-operative unions.

WORLD COTTON PRODUCTION

The current (1952-53) cotton season is expected to register a slight fall in the production of cotton, the quantity actually produced during the year being 28.3 million bales (excluding the Communist countries), as against 28.6 million bales, according to the estimates of the International Cotton Advisory Committee. The bulk of the production of cotton in 1952-53 is accounted for by the Northern Hemisphere, where the production at 25 million bales is the same as that in the previous year.

In the U.S. cotton production averaged higher in grade but lower in staple. White and extra white, strict low middling and higher grades represented 76 per cent. of the ginnings which more than compensated for the higher lower carry-over of stocks of these grades.

The supply of cottons of one inch and shorter for the year under review is estimated to be higher by 1.2 million bales, as compared with the previous year, owing to larger carry-over and reduced average length of the crop. The supply of cotton over one inch, on the other hand, is estimated lower by 800,000 bales. Recent reports indicate shortage of higher grades in countries other than the U.S. This, together with the fact that much of the annual production of American cotton in these countries average around one inch in staple length, lends support to the general conclusion that, in medium-staple group, surplus may be more pronounced than in short-staple lower grade cotton.

The current season's stocks of extra long staple cotton (1⅛" and over) indicate an increase of 350,000 bales in the world production of these staples and a relative decline in demand account for the present surplus in these countries. The production of long-staple cotton (1⅛" to 1⅛") is expected to rise by 200,000 bales, while that of cotton below 1⅛" is expected to be lower by over 750,000 bales, as compared with 1951-52.

EGYPTIAN COTTON

The Egyptian Government has decreed that the acreage to be sown under cotton during 1953 should be reduced from 1,895,000 acres to 1,590,000 acres. The main decline will be in Karnak, the acreage under which is sought to be reduced from 572,000 acres to 337,000 acres. It is believed that this measure will enable the top-heavy Karnak supply position to correct itself during the next season.

It has been officially announced that there is no prospect of the Alexandria cotton market reopening at an early date. The present arrangements for buying and selling cotton will be continued until the end of the season. The Government will not pay the growers the same prices as it is paying for cotton of the 1952-53 crop. Selling prices will, according to a Government spokesman, continue to be based on New York cotton futures.

The Government has accepted, it is stated, about 1,800 bales of U.S. cotton which were tendered by Scheduled Banks in Bombay to realise the loan moneys, advanced by them to the mills concerned for financing the mills' purchase of American cotton. The price paid by Government is reported to be about Rs. 1,644 per candy. A survey panel consisting of three members from the trade has been appointed to report on the quality of the cotton tendered. It will be recalled that, in March, 1952, the Government had assured the Scheduled Banks that the American and East African cotton pledged with them against loans granted to the mills would be bought by the Government at stated prices if the banks found it necessary to sell the cotton in order to realise the loan.

In official circles, the supply of cotton in India for the 1952-53 season is said to be estimated at 6.5 million bales, made up of 5.3 million bales of Indian cotton and 1.2 million bales of foreign cotton. Consumption of cotton is placed at 4.5 million bales (3.6 million bales of Indian cotton and 855,000 bales of foreign cotton), while total exports are placed at 300,000 bales. Thus, the carry-over of cotton, as on 31st August, 1953, is expected to be about 1.7 million bales.

Japan will buy from Pakistan, according to a trade agreement between the two countries, 150,000 bales of cotton in the second quarter of 1953, 100,000 bales in the third quarter, 275,000 bales in the fourth quarter and 125,000 bales in the first quarter of 1954. Thus Japan will buy 650,000 bales of Pakistan cotton by the end of March, 1954. It is, however, believed that purchases might be delayed because of scarcity of sterling in Japan.

The fourth and final Pakistan cotton crop forecast places the 1952-53 cotton acreage at 3,430,000 acres and production at 1,468,000 bales, as compared with 3,244,000 acres and 1,376,000 bales respectively in 1951-52.

The Sudan cotton crop is placed at 280,000 bales, comprising 140,000 bales each of 'S' and 'L' varieties. Total sales, so far, by the Sudan Gezira Board are placed at about 240,000 bales, leaving a balance of about 35,000-40,000 bales of unsold cotton. It is, however, stated that higher grades have been entirely disposed off.

The U.S. Secretary of State for Agriculture, Mr. Benson, stated recently that the Government is not contemplating cotton export subsidies either now or in the foreseeable future. This should set at rest the rumours about grant of subsidies.

INCOME-TAX AMENDMENT BILL PASSED

MAIN PROVISIONS SURVEYED

THE Income-tax Amendment Bill, which was approved this week by Parliament, marks a definite stage in the evolution of the law on the subject, in that it embodies, partially at least, the considered views of so expert a body as the Income-tax Investigation Commission (Chairman: Mr. S. Varadachariar) which submitted its report in 1948. The Bill has also been the subject of considerable discussion both in the Press and by the public since it was referred to the Select Committee in July last. This 31-clause Bill has also had the benefit of a very careful examination of a 26-member Select Committee, the report of which was published in November, 1952. Out of the operative clauses of the Bill, 14 are beneficial, 11 procedural and the rest designed to check evasion of taxes.

Among the important changes made by the Select Committee, mention must be made of the change in clause 1, whereby the extent and commencement of this measure has been modified to make it clear that the substantive provisions of the Bill (except when specific retrospective effect has been provided) come into force from the assessment year 1952-53 and that the procedural provisions apply to pending cases also. Some slight change has been made by the Committee to make it clear that the "previous year" of a firm is the "previous year" of a partner of the firm also in respect of his share therein only where the firm itself has been assessed as a unit. Where the firm is not separately assessed, the partner can include the firm's share in the "previous year" adopted by him. Some apprehensions were expressed in the Select Committee whether, under the amended definition, it would be open to a new business to adopt, in the first year, a "previous year" exceeding 12 months, as at present. The Finance Minister, Mr. C. D. Deshmukh, made it clear that such a period could be adopted, "provided it was not designed to evade any income-tax by including losses or excluding profits of a latter period."

Payments for Charity

The Select Committee has also recast the proposed clause (1) to section 4 (3) in such a manner as to enlarge the scope of payment for charitable purposes. The following changes deserve notice:

(a) The income is exempt from tax even if it is not applied to religious or charitable purposes in one year but is accumulated for application to such purposes subsequently;

(b) The charitable purposes should normally relate to something done within the taxable territories and that in cases where such purposes are without the taxable territories, the income will not be exempt unless the Central Board of Revenue grants the necessary exemption, and

(c) the exempted income is liable to tax when it is diverted to any other purpose or ceases to be set apart for religious or charitable purposes.

As regards the question whether scholarship granted to Indian nationals for studies abroad would not lose the exemption on the ground that this did not relate to anything done in India, Mr. Deshmukh assured the House that, so long as it was done for the "benefit of the country," exemption would be available in respect of the amounts spent on such scholarships.

Small Appeals

In the original Bill, it was provided that, where an inspecting Assistant Commissioner made an assessment functioning as Income-tax Officer, the appeal should be heard direct by the Income-tax Appellate Tribunal. The Select Committee has reversed this provision and allowed the existing practice of a first appeal to the Commissioner to continue. In this connection, Mr. Deshmukh pointed out that about 90 per cent. of the small appeals are settled by the Department to the satisfaction of the appellants, and that the concerned officers are given "absolute discretion and independence in the matter of deciding appeals in a judicious manner." The Committee has, however, given the assessees the option to demand a re-hearing of the whole or a part of the proceeding whenever any proceedings under the Income-tax Act are taken up by a succeeding authority. The Committee has further provided that the time limit for re-hearing will be excluded for purposes of computing the time limit for completing an assessment.

A notable feature of the Bill is the liberalisation of the provisions relating to the exemption from tax of newly established industrial undertakings. Section 15 of the existing Act provides, it may be mentioned here, for the exemption from tax of any industrial undertaking which is established after April 1948 and which employs more than 50 persons, the exemption period lasting till 31st March, 1954. The section applies only when the profits of the undertaking do not exceed six per cent. on the capital employed in the undertaking. Now the amendment provides that the tax exemption applies also to any new manufacturing concern run with the aid of power and employing ten or more workers or any such concern without the aid of power but employing 20 or more workers. This provision will certainly enable many small new industries to earn some relief in taxation.

Two Lacunæ

Two important lacunæ in the existing Act have been removed. In the first place, an assessee who incurred a loss could not file a return voluntarily nor was the Income-tax Officer bound to serve him with a notice calling for a return of income. The Act has now been amended, with a view to giving him the right to claim the determination of loss and to file a loss return voluntarily before the expiry of time given in the general notice issued every year before 1st May. The loss-return can also be filed later if permitted by the Income-tax Officer. As regards the right to claim determination of losses for and upto the assessment year 1952-53, Mr. Deshmukh announced that instructions would be issued to the effect that returns received for some time after the passing of the Bill should be regarded as having been made in time.

Secondly, the Finance Minister moved an amendment, not originally incorporated in the Bill, designed to facilitate the carry-forward of losses. In the case of *Anglo-French Textile Co., Ltd.* vs. *C.I.T.* Madras, which was noticed and commented upon in this journal at the time the Supreme Court decided the case (*vide Commerce* dated 21st March, 1953), the Supreme Court held, in effect, that no loss could be carried forward, unless the assessee had more than one head of income. We then urged that the situation created by the judgment called for expert examination and speedy remedy in order to rectify what appeared after all to be a legal flaw. This view has now been accepted by the Finance Minister who confessed that it was never the intention of the authors of the Act that the loss could be carried forward only when the assessee had more than one head of income. Accordingly, the Minister moved an amendment to section 24 (2), which seeks to clarify the position, so that, even if an assessee has no other head of income, the loss incurred under the head "business" could be carried forward.

Other notable provisions in the Bill include the exemption of daily allowance of Members of Parliament, the requirement that the President of the Appellate Tribunal should ordinarily be a judicial member and the provision that the Government should continue to pay (this requirement had been withdrawn under the original Bill) interest on the instalments of tax paid under section 18-A.

Legal Decisions

Little has been done in the Bill to alter the present position under which the Appellate Assistant Commissioners of Income-tax are under the control of the Central Board of Revenue. The chief argument against the arrangement rests on the ground that the consideration that the advancement in services of the Appellate Assistant Commissioners is dependent on the good opinion of the Board of Revenue might influence their decisions in cases of appeal. Referring to this argument, the Income-tax Investigation Commission wrote:

"We have no reason to think that Appellate Assistant Commissioners have not been impartial in the discharge of their duties or that the independence of their judgment is vitiated by any considerations irrelevant to the decision of the appeal. But, on the principle that not only should justice be done but that it should appear to be done and should inspire confidence in the persons concerned, we think that the present system requires alteration."

In a forceful minute of dissent, Mr. A. K. Basu, member of the Select Committee, stated:

"The Appellate Assistant Commissioner who is the judge is considered adequate to represent the department—an unusual responsibility for a judge to undertake. The party really becomes a judge in his own case. This is a perversion of judicial procedure and is against all cardinal principles of administration of justice. . . . There should be a permanent separate Income-tax judicial cadre."

During the debate on the Bill, many members raised this issue. In his reply to the debate, Mr. Deshmukh argued that it was not fair to say that the principle of separation of the executive from the judiciary had not been adopted, since the questions, involving legal issues, did go up to the Appellate Tribunal. Answering the question why a fully judicial machinery should not be provided at a lower stage, he said that appeals to Appellate Income-tax Commissioners were, in effect, only administrative reviews. He pointed out that there was scarcely any country in which the first appeal lay with judicial officers as such. Again, he quoted figures to show that only a small percentage of assessees went in appeal against the Appellate Commissioners' decisions. Thus, in 1951-52, appeals were preferred over the Appellate Commissioners' decision in respect of only 13 per cent. of the cases; one-fifth of such appeals was fully successful, two-fifths partially successful and two-fifths were unsuccessful. These figures do certainly show that the Appellate Commissioners discharge their functions with a considerable degree of impartiality and fair-mindedness. Even so, it seems unfair to disregard a vital principle on the basis of statistical data relating to successful and unsuccessful cases.

U.S. SYNTHETIC RUBBER PLANTS

The President of the United States recommended to the Senate, last week, the enactment of legislation for the sale of the Government-owned synthetic rubber plants to private industry. This recommendation was based on the report of the U.S. Reconstruction Finance Corporation (R.F.C.)—the agency which is responsible for the Government's synthetic rubber operations—submitted on 1st March, 1953, regarding the disposal of the plants, in accordance with the Rubber Act of 1948.

In a special message, asking the Congress to enact the necessary legislation, Mr. Eisenhower expressed his "hearty accord" with the policy of the Congress that the security interests of the nation would be best served by the development within the U.S. of a free competitive synthetic rubber industry, and he considered the present moment as opportune for disposing of the plant.

The recommendations of the R.F.C., in his opinion, provided the basic outline of a satisfactory method of achieving this objective. The disposal of these plants, he said, must be consistent with three objectives: (1) the Government should realise its fair value; (2) disposal should be effected in such a way as to ensure the benefits of fair competition; and (3) the facilities (plants) must always be available for the production of synthetic rubber in times of emergency.

The Government's huge synthetic rubber industry was set up, at a cost of $770 million, at the beginning of World War II, when the U.S. was denied access to its normal supplies of natural rubber. There now remain plants worth $550 million in Government ownership and these plants supply nearly all the requirements of synthetic rubber in the U.S. In 1952, the requirements amounted to 806,500 long tons out of a total U.S. consumption of 1,260,000 long tons of raw rubber. The consumption of natural rubber thus amounted to just over 450,000 tons.

With the building up of its synthetic rubber plants, the U.S. had a strong influence over world rubber prices, as the largest consumer of raw rubber and the biggest producer of synthetic rubber. In recent years, the influence has been felt more strongly, at the cost of the natural rubber growers in Malaya. Thus, the consumption of natural rubber by the U.S. dropped from 720,262 tons in 1950 to 454,276 tons in 1951 and 453,000 tons in 1952. The price of natural rubber now stands at about 20d. per lb. on the London Rubber Exchange, as against 32½d. a year ago and 67d. early in 1951. The current price of natural rubber is competitive with the price of synthetic rubber. So long as the natural rubber remains competitive, the future for natural rubber should cause no concern.

SUGARCANE CESS IN BIHAR TO BE RAISED

GOVERNMENT'S MOVE UNJUSTIFIED

THE Bihar Government's move to enhance the cess on sugarcane, from As. 3 to As. 3-3 per maund was bitterly criticised by several members of the State Legislative Assembly in the course of the debate on the official Bill seeking to amend the Bihar Sugar Factories Control Act recently. Some members characterised the proposed increase in cess as highly unjust and felt that such would ultimately jeopardise the sugar industry in the State. A few went even to the extent of dubbing the measure as one of immoral taxation.

These criticisms are by no means unjustified, for the increase of three pies in the rate of cess on sugarcane will raise the cost of sugar manufacture by As. 2-6 per maund. As it is, the cess works out to as much as 15 per cent. of the cane cost. That despite the plea for reduction in cess on sugarcane, repeatedly put forward in the Press and on the platform, for a considerable time past, the Government of Bihar should have not only not reduced it but actually proposed to enhance it further amounts to contempt for public opinion. As pointed out in these columns recently, this move runs counter to the recommendation of the Tariff Board (1950), namely, that the cess on sugarcane should be reduced from As. 3 to As. 1-6 per maund.

Judging from the figures of total collection of cess and expenditure on cane development in Bihar, it must be said that there is no justification at all for raising large revenues by way of cane cess which is meant only for the specific purpose of financing research in production of cane. Thus, while the total amount now being collected by the Government of Bihar by way of cess is of the order of more than Rs. 1.14 crores per annum, the expenditure that is actually being incurred for cane development is said to be not much. That this conclusion is not unfounded will be evident from the statement of Bihar's Industries Minister, Mr. Mahesh Prasad Sinha, himself. He said: "The entire cess cannot be, for obvious reasons, used for betterment of the industry alone," for many more tube wells are being sunk and better manure provided for betterment of cane. No one has suggested that the cane cess fund should be utilised solely for the benefit of the sugar industry. But what is objected to is the expending of the proceeds of this tax in a manner which does not serve the interests of either the grower of sugarcane or the crusher of cane exclusively.

Cess Should be Reasonable

Viewed thus, the explanation hardly sounds convincing. There is no doubt that a large part of the cess on sugarcane is being used largely for purposes for which funds should be found from general revenues. It is wrong in principle to tax sugarcane, the basic raw material required by the sugar industry, for such purpose. Further, sugar is an essential article of consumption and, since the Governments are already collecting excise duty, sales tax, etc., on sugar, it is not proper to collect cess on sugarcane also. As the Tariff Board has pertinently remarked, the levy of a tax on raw material is, as a rule, wrong in principle generally, and much more so when it is imposed on the raw material of an industry "which has been nursed by the consumers all over the country for a period of 18 years and for which they have made a heavy sacrifice during all these years." Since, however, the cess on sugarcane has become a part of the system of State taxation and is required for improving the yield, quality and marketing of sugarcane, one may allow the imposition of the levy. But it must be pointed out that the rate of cess should be at a reasonable level, say, As. 1-6 per maund, that is, at a rate consistent with the requirements of the cane development programme.

Replying to the criticisms made by the memmers, the Industries Minister sought to justify the imposition of a higher cess on sugarcane on two grounds. First, the increase in cess would make good the loss—estimated at Rs. 12 lakhs per annum—which has resulted from the exemption of sales tax granted by the Government to cane growers' co-operatives. Secondly, the present market price of sugar is not causing much hardship either to cane growers or to consumers who will not be affected, as the increase in cess will be borne by the sugar mills themselves.

Neither of these arguments cuts any ice. The co-operative societies in Bihar (as also in Uttar Pradesh) are charging as high a commission as As. 1-9 per maund of cane supplied to the factories which is more than sufficient to expand their activities. There was, therefore, no need to exempt them from sales tax. In fact, there is no justification even for the commission which these societies are allowed to charge. For the main function of these societies is development and marketing of sugarcane, which is largely the function of the Government's Cane Development Department. In other words, this means that the funds required by the societies for cane development at least should be provided out of the money raised from the cane cess. "It would thus follow," to quote the Tariff Board, "that no separate commission should be charged from the mills."

The argument that higher cess on sugarcane will not cause hardship to consumers, in view of the recent decline in sugar prices, is simply ridiculous. It means that the Minister concerned is opposed to the generally accepted policy of bringing down prices and that he cares little for the consumer. That apart, despite lower sugarcane prices and higher production, the price of sugar is still high in all conscience. Indeed, it is the high cost of sugar that is keeping down the level of consumption in the country. Even at the risk of repetition, it must be said that, if the level of sugar consumption in India is to be raised, it is imperative that the price of sugar must be reduced substantially. This will be possible only when the Governments—Central and State—reduce their taxes. It is to be hoped that the Government of Bihar will reconsider its decision and, instead of enhancing the cess on sugarcane, will reduce it. The Government need not be afraid of a fall in its revenue, for a reduction in the incidence of taxation will stimulate the turnover and bring in more revenue to the State.

SUGAR PRODUCTION IN 1952-53

The production of sugar during the current (1952-53) sugar season is expected to aggregate 1,300,000 tons, according to the latest official estimate, the number of factories working being 134, as against 139. This represents a fall of more than 13 per cent., as compared with the previous season's output of 1,497,000 tons. The fall in sugar output follows the marked decline in the quantity of cane crushed, from 15.5 million tons in 1951-52 to 13.0 million tons during the current season. The fall would have been steeper, but for the improvement in percentage recovery of sugar from cane, a welcome sign, indeed. Thus, the all-India recovery for the season under review is estimated at 10.01 per cent., which compares favourably with 9.57 per cent. in 1951-52. The chief factor responsible for such an improvement has been the late start of the crushing season, which enabled the factories to get fully matured cane containing larger sugar content. It will be recalled that the early commencement of crushing in the previous season led to cutting of immature cane, the sugar content of which is generally poor.

Several factors have been responsible for the downward trend in sugar output during the current season, as compared with the previous one. The Union Minister for Agriculture, Dr. Punjabrao Deshmukh, for instance, referred, while replying to a question in the House of the People the other day, to four factors. These are (1) decline in area under sugarcane crop, (2) diversion of cane supplies in the factory zones to *gur* manufacture, thanks to relatively high prices for *gur*, (3) closure of seven sugar factories in Uttar Pradesh, and (4) late starting of crushing by factories. According to the Minister, the 1951-52 sugar season was an abnormal one, when, due to a bumper sugarcane crop and low prices of *gur*, there was considerable diversion of cane supplies from *gur* to sugar production. If that season were to be excluded, then the production during the current season would be more than that in any of the eight preceding seasons.

Despite the decline in sugar output, the supply position is quite comfortable, thanks to the large opening stocks. The production of 1,300,000 tons of sugar expected for the current season, together with 436,000 tons (excluding the quantity of 25,000 tons exported) brought in from the previous season, gives a total supply of 1,736,000 tons for the current season, which compares favourably with 1,660,000 tons available during 1951-52. In spite of such comfortable supply position, and of a reduction in sugar prices from Re. 1-12 to Re. 1-5 per maund, price of sugar continues to stay at a high level. The average price quoted in the Bombay sugar market, for instance, is as high as Rs. 92 per bag, as compared with a low of Rs. 80 per bag witnessed in the first week of December, 1952, and the previous control price of Rs. 82-6.

"INDIAN SUGAR"—ANNUAL NUMBER

The Indian Sugar Mills' Association, Calcutta, has just brought out the annual number of its monthly journal *Indian Sugar*, the first to be published since the Association took over its publication in June, 1951. The number—Edited by Mr. J. S. Mehta—reviews the proceedings of the recent annual general meeting of the Association and contains several valuable articles on the different aspects of the Indian sugar industry. The subjects cover sugarcane and its problems, sugar technology, confectionery manufacture, power alcohol production, and labour problems. The utility of the publication is enhanced by an analysis of the programmes of development of sugar and power alcohol sectors, as outlined in the Five-year Plan. The publication also contains statistical tables relating to sugarcane cultivation and sugar production in India, distribution of sugar mills in India and Pakistan, and world sugar crops. The Annual will be useful not merely to those connected with the sugar industry but also to those who wish to know something about the problems of this important Indian industry.

EXPORTS OF INDIAN COAL

SHARP DECLINE IN MARCH

PROSPECTS of cessation of hostilities in Korea and rumours that the Government of India would soon abolish all existing surcharges on exports of coal are reported to have adversely affected exports of Indian coal in recent weeks. It will be recalled that the Government of India withdrew surcharge on exports of coal to Pakistan, with effect from 25th March last, under the Indo-Pakistan Agreement concluded some time earlier. This development has led to the belief that the Government may, sooner or later, abolish the surcharge on exports of coal to other destinations. In fact, in the week in which the Indo-Pakistan trade agreement was concluded, some of the newspapers actually reported that this would happen. The rumours, referred to above, are perhaps the outcome of these reports.

Latest reports from the port of Calcutta indicate that certain prominent buyers have practically given up buying Indian coal. Japan which imported 750,090 tons in 1952 is following a cautious policy. It is stated that Japanese importers are reluctant to enter into fresh commitments for fear that the end of hostilities in Korea may lead to a fall in industrial activity in their country. Hong Kong, another important buyer of Indian coal, is already confidently looking forward to revive coal trade with the Chinese mainland.

Paucity of shipping space has also been adversely affecting exports of coal in recent months. Last month, only 27 steamers were available for shipment of coal, as against 42 in February and 32 in January. Consequently, the tonnage shipped in March is said to be only 143,689, as against 264,434 in February, and 199,374 in January. The corresponding figures in 1952 were 231,790, 306,973 and 218,173 tons, respectively.

If a truce were to be concluded in Korea at an early date and, as a result, China were to enter the Far and South-East Asian markets, exports of Indian coal may suffer a sharp decline, with its consequent effects on foreign exchange earnings. Already, hopes of an increase in exports to Pakistan have been receding, with indications that Pakistan is trying to import not more than 70,000 tons per month by rail, a quantity which does not show any improvement over the actual exports in the previous months. Efforts, however, are being made to step up exports to Pakistan by another 10,000 tons per month.

As a result of all these developments, the decision taken by the Government of India last month to relax control on exports of coal has been of little value so far. The concession given to shippers to offer coal to foreign countries, except Pakistan, without prior permission of the Coal Commissioner has failed to bear any fruit.

Peace in Korea will mean the entry of China into the Far and South-East Asian markets, where India has been practically holding a monopolistic position in recent years. India can hope to withstand Chinese competition only if it can supply coal of high quality at competitive prices. This will not be possible without rationalisation of the Indian coal industry and setting up of washeries to wash and blend coals. It also requires priority of attention towards transport requirements from the coalfields to the port of Calcutta and storage facilities at the requisite centres. It is high time India took energetic measures to establish its position in the Far and South-East Asian markets more firmly than ever before.

COAL STATISTICS FOR 1952

During the year 1952, as many as 862 collieries were reported to have worked. On an average, 348,663 persons were employed daily, of which 182,762 males were employed underground and 114,433 males and 51,468 females were employed above ground. The overall percentage of absenteeism was 13. The output in tons per man-year employed for miners and loaders was 309, for all persons employed underground and in open workings 167, and for all persons employed 104. The output in tons per man-shift worked for miners and loaders, was 1.05, for all persons employed underground and in open workings 0.57, and for all persons employed 0.35.

As much as 36,301,865 tons of coal were produced during the year. The quantities of coal produced in some of the important coalfields were as follows: Jharia 13,303,184 tons, Raniganj 12,074,285 tons, Bokaro 2,485,947 tons, Karanpura 1,014,740 tons, Madhya Pradesh 3,449,077 tons, and Hyderabad 1,434,194 tons. Further, 111,396 tons of hard coke and 1,302,016 tons of soft coke were also manufactured. Of these, 31,183,666 tons of coal, 120,806 tons of hard coke and 1,319,874 tons of soft coke were despatched during the year. The coal stocks at the collieries on the last day of the year were reported to be 3,019,795 tons.

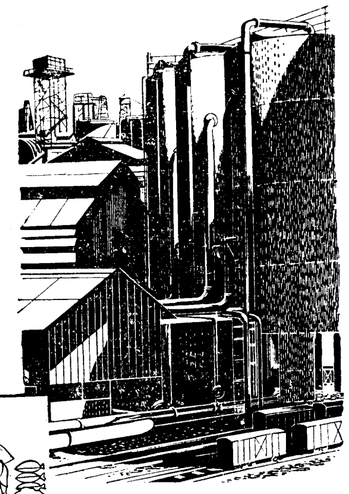
Sindri Fertilizer Factory

Built to last with ACC cement



ACC Cement has been largely used in the construction of this fine new factory – the largest Fertilizer Factory in Asia. It is sending out hundreds of tons of desperately needed synthetic fertilizer to put new life into the soil of India, to give new hope to agriculture – more food to the people.

Cement means better living for everyone – and the A.C.C. continues to make more and more *quality* Cement.

READJUSTMENT OF EXCISE DUTY ON TEA

GOOD QUALITY TEAS PENALISED

THE Central Excise and Salt (Amendment) Bill, which was passed by the House of the People last week, has, we are told, two objects, namely, to (1) render some assistance to the tea gardens, and (2) bring direct benefit to a large section of the consumers, particularly of the poorer classes. So far as the first object is concerned, it has been welcomed by the growers not because it confers on them any substantial direct benefit, but because it affords them some relief in the initial outlay which they have to make by payment of duties to the Government. As regards the second object, it is sought to be achieved not by any direct method for bringing down the retail prices, but by a readjustment of the excise duty which existed till recently. (The readjusted duty came into effect from the 15th ultimo.) The method by which the Government has chosen to readjust the levy has been widely resented by manufacturers of packed tea, inasmuch as it discriminates them against dealers in loose tea. It is also feared that this step might lead to practices which certainly could not be the intention of the Government to promote.

The Government has, as readers are aware, adjusted the erstwhile excise duty at the flat rate of As. 3 per lb. levied at the time of issue of the tea from the producing gardens thus:

(1) Tea packed in containers having more than 60 lbs. of tea and issued from the producing gardens—One anna per lb.

(2) Package tea, i.e., tea packed in any kind of container having not more than 60 lbs. net—

(*a*) If issued from the producing gardens—As. 4 per lb.

(*b*) If issued from the premises of blenders and packers—As. 3 per lb.

The export duty of As. 4 per lb. remains unchanged. At the time of export, the difference, if any, between the new excise duty and the export duty will continue to be collected as hitherto.

Thus, it will be noted that two different and discriminating rates of duty are now being levied. The excise on bulk tea in packages of more than 60 lbs., in other words, loose tea, which was As. 3 per lb. before, has been reduced to one anna, while that on tea packed in quantities of 60 lbs. and less, which was also As. 3 per lb., has been increased by one anna to As. 4 per lb.

Explaining the provisions of the Bill, Mr. Deshmukh, the Union Finance Minister, claimed that, after careful consideration of the question of reducing the excise duty, which was one of the measures suggested to help the industry, the Government was convinced that any flat reduction in the excise duty would confer little or no benefit on the producer of tea, as such concession was more likely to be absorbed by the middleman. In other words, Mr. Deshmukh feared that the middleman, that is, the blender and packer, would not reduce his selling price to the extent of the reduction in excise duty. The Finance Minister's fear was based on the fact that, when there was a slump in auction prices last year, the retail prices of tea did not decline to any perceptible extent. The flat reduction of excise duty would thus only lead to a considerable sacrifice of revenue to the Government which it could ill afford. The Government, therefore, thought that, without any sacrifice of revenue, the excise duty should be so readjusted as to prove of practical benefit to the grower.

This conclusion of the Finance Minister is a naive one. The reduction of excise duty from As. 3 to an anna per lb. at the time the tea leaves the garden in bulk may not confer any material benefit on the grower, for the middlemen, namely, the blenders and packers, may try to pass on the incidence of the duty to producers by bidding at lower prices in the auctions. In a sellers' market, the incidence of such duty is generally passed on to the consumer, but, in a buyers' market, such as the one prevailing at present, this will not be possible and the burden of the duty is invariably borne by the producers. Mr. Deshmukh placed the estimated internal consumption at 210 million lbs. of which only about one-third was sold in retail in the form of loose tea and two-thirds was marketed by blenders and packers in small packets of suitable sizes. It will thus be seen that the major portion of tea sold for domestic consumption will bear a higher rate of excise duty. Accordingly, the readjustment of the excise duty will act as a damper on consumption of tea within the country.

Mr. Deshmukh contended that the kind of readjustment of duty which had been proposed in the Bill should be of direct benefit to a not inconsiderable section of consumers, particularly of the poorer classes who bought loose tea. He admitted that the consumer who preferred to buy tea in packets might have to pay an anna more per lb. He, however, expected that a good portion, if not the whole, of the extra one anna per lb. might be borne by the packers and other middlemen. Is this assumption correct? We have our own doubts. If the packers and blenders did not reduce their prices to consumers during the period when there was a slump, it is too much to expect them to bear the additional burden now. As already mentioned, they may either pass this on to consumers by increasing the price of their packets or to the producers by offering them lower prices. If they increase the price to the consumers, they may suffer a fall in their business, as consumers will turn to loose tea, which will actually be cheaper by As. 2 per lb. The chances, therefore, are that the blenders may offer lower prices to producers or sell more than they are doing at present in the form of loose tea.

The Government's proposal will thus certainly lead to an increase in the sale of tea in loose form. There will be no incentive to traders to take the trouble of choosing quality tea and packing them to preserve quality. The sale of tea in loose form provides scope for adulteration and underweighment. In other words, the Government's object to make available to a large section of consumers tea at cheaper rate in this manner will be achieved only at the cost of quality. In fine, the Government's action amounts to nothing more than placing a premium on the sale of inferior teas and levying a penalty on good quality teas. A somewhat similar step was taken in December last when the Government abolished the export duty on inferior teas (tea wastes) with the object of affording relief to the industry. But soon the Government realised that it was encouraging the production of inferior teas, and therefore, it had to withdraw that concession.

The present action shows that the Government has not learnt anything from its past mistake. In his reply to the debate on the Bill, Mr. Deshmukh complacently stated that the Government had sufficient powers to keep a watch on undesirable developments of the kind, referred to above. This means that the Government will be capable of preventing adulteration. But knowing the efficiency of the Governments as we do and the extent of adulteration that is daily taking place in food articles, in spite of all laws, we have not the least doubt that the task is beyond them. That apart, why deliberately give room for a disease to set in and then think of a remedy for it, and that too, a remedy which the authorities are incapable of administering?

COST OF PRODUCTION OF COFFEE

Mr. S. Boothalingam, Joint Secretary to the Ministry of Commerce and Industry, Government of India, accompanied by the Chairman and Vice-Chairman of the Indian Coffee Board, made a tour of some of the coffee estates in the Baba budin range of Mysore on 20th April, 1953. It is stated that the visit was in connection with ascertaining the cost of production of coffee, and particularly in connection with the fixation of a new basic price of coffee. Growers of coffee have been considering the question for some time and it is stated that strong representations would be made to Government pointing out that the present basic prices are by no means on the high side and that the dealers and middlemen are making more profits than the growers. The benefit of price for the consumer should come only by a reduction of the large profits that are being made by the middlemen and not by cutting the basic price for the grower, and it is this point that the growers propose to urge on the Government.

(*Concluded from next column*)

such as rice, wheat, gram, barley, *jowar*, *bajra*, etc., has recorded a production increase of over 12 per cent. since 1939. Production of sugar, both raw and crystal, which is an important consumer of jute bags, has gone up by over 67.8 per cent. from 35,43,000 tons in 1939 to 59,49,000 tons in 1949, and the latest reports indicate further rise in sugar output. Some of the industrial raw materials have also recorded a rise in total production. Oilseeds, for instance, have increased from 48,11,000 tons in 1939 to 50,95,000 in 1949."

The trend of production is bound to be upward still with the progress of the Plan which has set targets to be achieved for each of the commodities noted above. It is for the industry to study further to see how it can develop the home market for its products.

HOME MARKET FOR JUTE GOODS

NEED FOR NURSING IT IMPERATIVE

THE crisis that has now overtaken the Indian jute industry underlines the importance of developing the home market for its goods. The origin of the present crisis is seen in the Partition of India. In pre-Partition days, India was the producer of both raw jute and jute goods. After the Partition, the jute mills were cut off from their source of the raw material, namely, East Pakistan. While India sought to rely increasingly on home-grown jute, East Pakistan not only began to supply raw jute to India's competitors in Dundee and on the Continent of Europe but also began installing its own mills for the production of jute goods. Thus, Indian mills began to face growing competition from the mills in the Continent and elsewhere. In addition to this, the unhelpful export duties, which increased the prices of jute goods to consumers, encouraged the development of substitute packing materials made of cotton and paper. The result is that to-day, the monopoly which India enjoyed once is no longer there and the importance of jute goods as the largest single earner of foreign exchange for the country has declined considerably. In view of this, the need for expanding the home market for Indian jute goods assumes great significance. Geographically India is one of the biggest countries; its industrial and agricultural potentialities are immense. The Five-year Plan envisages huge expansion in both. The internal packaging need will slowly increase as the Plan progresses. The home market and its possibilities for larger usage of jute goods, doubtless, offer, therefore, scope for interesting study. The Indian Central Jute Committee has done well in drawing the attention of those interested in the subject by publishing a pamphlet entitled *Structure of the Home Market for Jute Goods* written by Mr. A. K. Mukherjee, Publicity Officer of the Committee.

A review of the pamphlet discloses that, during the ten-year period, 1930-39, local and upcountry despatches of jute manufactures from the reporting mills of the I.J.M.A. steadily rose along with a similar trend in the export trade for jute manufactures. This was, indeed, a period of expanding markets for the goods. The despatches of jute bags for internal consumption increased from 62.29 million yards in 1930 to 104.5 million yards in 1939. Jute bags exported from India also rose from 546.29 million yards to 939.9 million yards in 1939. Gunny cloth exports increased during this period from 1,395.5 million yards to 1,552.2 million yards. Gunny cloth despatches for local and upcountry purposes advanced from 24.3 million yards to 72.4 million yards. The expansion was, however, not continuous, the consumption being affected by the economic depression of the thirties. Expressed in percentage, the increase in local and upcountry despatches of gunny bags between 1930 and 1939 was 67.7, as against an expansion in foreign despatches by 35.1 only. Similarly, despatches of gunny cloth for internal purposes went up by about 200 per cent. while foreign despatches of the same commodity rose by only 11.2 per cent. Comparatively speaking, therefore, the expansion of the internal market for both the varieties of gunny products was at a much higher rate than that of the foreign market.

The upward trend of despatches of both cloth and bags noted above continued upto 1942, assisted by the Second World War. By that year, the war had become a global one. Shipping transport was seriously affected by it. Since then, the internal consumption of hessian and sacking has continued to decline. Thus, hessian consumption dropped from 46,900 tons in 1944-45 to 11,800 tons in 1949-50 and sacking consumption from 138,700 tons to 89,000 tons in the same period. To what extent these declines reflect the index of economic activity in the country with which the fate of packaging materials generally is tied and to what extent they present the scarcity conditions for jute goods in recent years is stated to be a guess. But it cannot be denied that internal consumption has accounted for a steadily declining share of the total jute goods production. It did decline from 23.1 per cent. in 1944-45 to 11.8 per cent. in 1949-50. The Indo-Pakistan currency deadlock, stockpiling programme after the Korean War, high prices of jute goods, and the Government of India's directive to chambers of commerce and trade associations to effect a cut of 25 per cent. in the consumption of jute manufactures were the causes of the decline.

For the reasons already mentioned the need of the hour is to nurse the internal market and develop it. That there is scope for the same will be evident from the remarks made by Mr. Mukherjee in the pamphlet referred to above. He says:

"The demand for jute goods is virtually a derived demand, varying largely with the growth of population, progress of industrialisation, growth of export trade, expansion of agriculture, etc. India's population has increased by 29.4 per cent. during the last 20 years. Industrialisation in general, as may be assumed from the trend of industrial activity, has advanced by over 46 per cent. during the same period. In the sphere of agricultural production, the food group comprising cereals

AUDITORS' REPORT TO SHAREHOLDERS.

We have audited the above Balance Sheet of the Bank of Bikaner Ltd., as at 31st December, 1952, and also the Profit and Loss Account for the year ended that date in which are incorporated the audited returns from Bombay (Fort), Bombay (Zaveri Bazar), Calcutta, Delhi, and Bikaner Branches and the authenticated returns from other branches. We report that :—

(a) We have obtained all the information and explanations we have required ;

(b) In our opinion the above Balance Sheet and Profit and Loss Account are drawn up in conformity with the Law ;

(c) Such Balance Sheet exhibits a true and correct view of the state of the Bank's affairs according to the best of our information and explanations given to us and as shown by the books of the Bank ;

(d) In our opinion, books of account have been kept by the Bank as required by Section 130 of the Indian Companies Act, 1913 ;

(e) The information and explanations required have been found to be satisfactory ;

(f) The transactions of the Company which have come to our notice have been within the powers of the Company ;

(g) The returns received from the branch offices of the Company have been found adequate for the purposes of the audit ; and

(h) The Profit and Loss Account shows a true balance of Profit and Loss for the period covered by such account subject to Taxation and the appropriations made.

FINANCING CONSTRUCTION OF ROADS

FLOTATION OF LOANS SUGGESTED

ADDRESSING the annual general meeting of the Indian Roads and Transport Development Association (Madras Branch), Mr. T. S. Santhanam, Chairman, suggested for consideration of the Government of India the flotation of road loans and the issue of road bonds for financing construction of new roads. This, he expressed, was necessary in view of the allocation of a meagre sum of Rs. 104.5 crores under the Five-year Plan, as against a minimum requirement of Rs. 400 crores for a national network of roads, according to Nagpur Plan of 1943, at the then estimated cost. This is not the first time that a suggestion of this kind has been made. It will be recalled, from our references in these columns, that Mr. E. A. Nadirshah, speaking at the Institution of Engineers (India), M.P. Centre, nearly two years ago, advocated tagging these loans with the formulation of a special scheme of prize bonds.

A scheme for the flotation of road loans, together with a special scheme of prize bonds, is worth consideration, although it is true that it is difficult to estimate the success of road loans. Despite the fact that an investment in prize bonds assures the investor a steady rate of return and a prize if he is lucky, the scheme may not be such a great success in the present climate of the capital market as some seem to believe. But no harm will come in giving a trial to these schemes, on an experimental basis in certain selected areas, and extending them subsequently, to other places, if found successful.

Another point referred to by Mr. Santhanam related to a separate Road Transport budget on the lines of the Railway budget. The revenue from motor vehicles, he claimed was as much as Rs. 50 crores in 1952. Further, he stated that railways recover from passenger travel Rs. 95.5 crores, annually, while the total receipts from buses, taxis and private cars aggregated Rs. 105 crores. The sizable increase in receipts from roads, as compared with those from passenger traffic through rail, makes out a case, the Chairman added, for fostering a live road programme, as in the case of railways. This explains the need, according to Mr. Santhanam, for a separate road budget.

Although Mr. Santhanam's demand for a separate road budget appears to be reasonable on the face of it, it will not find sympathetic response from the States in the present circumstances, for roads other than national highways are a State subject under the Constitution and much preliminary work has to be done in winning over the State Governments to the view of having a common road budget, on the lines of the railway budget. As these Governments are in the habit of using the proceeds of tax collected from transport for purposes other than road construction, their response to the new idea is likely to be little. Besides, the problem involves complications, arising out of roads being under the jurisdiction of municipalities, district boards and States, in regard to such matters as the collection of taxes, their allocation among the various units and the division of responsibility for construction and maintenance of roads. In other words, it means centralisation of authority which might be unsuitable to the development, especially of rural roads. All that is possible is the constitution of a Central Road Fund and State Road Funds, into which all the money made available for expenditure on roads could be credited, on a non-lapsable basis. This arrangement will enable the authorities responsible for roads to plan ahead without fear of lapse of funds, because they will be tolerably sure of their road budgets for a sizable number of years to come. The authorities in the U.S. know the road budget two years in advance, before work on a project commences, and it is noteworthy that grants are not allowed to lapse there, till the particular project is completed. Such grants, once announced, can be taken on a "matching basis", the State authorities undertaking to raise equivalent funds from their own resources within three years after construction actually commences.

Mr. Santhanam dealt also with another aspect, namely, the heavy incidence of taxes on roads. In fact, the heavy Central and State taxes have made motor vehicle taxation in India perhaps the highest in the world. There are, in addition to Central and State taxes, local levies also. The average goods lorry pays in Central and State taxes alone twice the average earnings per ton of goods carried by rail. So far as Madras is concerned, a bus now pays, on an average, nearly 45 per cent. of its gross takings to the State and the Centre. Surely, no other industry or trade pays such a large contribution to the general exchequer.

The heavy incidence of taxation is a point which has been complained of by almost every person concerned with motor vehicles. It has retarded the growth of road transport industry. Especially in India, a land of vast distances not traversed by railways sufficiently, the development of road transport requires high priority of attention. Even the Motor Vehicle Taxation Enquiry Committee has complained that heavy and unco-ordinated taxation is detrimental to cheap, rapid and efficient development of road transport. It is high time that some relief was given to owners and users of motor vehicles. It is to be hoped that the Matthai Taxation Enquiry Committee will go into the question thoroughly and make suitable recommendations.

ROAD SWEEPING MAGNET

Conservation of tyres is a matter of utmost importance for motor transport operators, as tyre consumption is one of the major items of their running costs, and works out to about 10 per cent. of the total cost of operation. The Road Sweeping Magnet offers the most effective form of conservation of tyres. Messrs. Southern Roadways, Ltd., Madurai, have imported one such unit from the U.S. at a cost of Rs. 17,000. The Magnet, installed in a Chevrolet truck, automatically, efficiently and swiftly attracts and picks up bullock-shoes, nails, spikes and wires from the roads and thus saves motor vehicle tyres from premature destruction. The cost of operation of this magnet is Re. 1-6 per mile (inclusive of fuel, lubrication, maintenance, driver's wages and depreciation). Having regard to the thousands of tyres saved from destruction by bullock-shoes and iron pieces scattered on roads, the operational cost is very negligible.

The Road Sweeping Magnet is just a heavy truck, run on charcoal gas, with a heavy electro-magnet (6 ft. long, 18 inches wide) slung at the rear of the vehicle and weighing about 3,000 lbs. The road clearance is 4½ inches. An electric generator 2½ kw. and 120 volts is used to magnetise the electro-magnet. To sweep a road of average width, the sweeper will have to run one side each way. On idle haulage, the petrol-run generator need not work. During the operation, the running speed is five miles an hour. If the sweeper is not worked, the vehicle can run at an average speed of 20 miles.

SOUND AND HEAT ENERGIES

Intensive studies on the thermal effects of ultrasonics by Dr. S. Parthasarathy, Head of the Acoustics Division of the National Physical Laboratory, New Delhi, have culminated in the discovery of the relationship between sonic and thermal energies. It has been established that sound is always converted into heat in a definite ratio and this ratio is 4.19×10^7 ergs/cal., which is in remarkable agreement with similar constants of proportionality determined by the conversion of mechanical and electrical energies into heat.

The unit of mechanical energy is the erg, which is the measure of work done by a dyne, that is, by a force which, acting for one second upon a mass of 1 gramme produces a velocity of one centimetre per second. A joule is 10 million—usually written 10^7 ergs. The calorie is a thermal unit and measures the amount of heat needed to raise a gram of water one degree Centigrade in temperature. The studies confirm that, whatever the form of energy, mechanical, electrical or sonic, the heat produced by that energy is the same as long as its value remains the same.

TRAVANCORE-COCHIN BACKWATERS

INLAND WATER TRANSPORT BOARD TO BE SET UP

THE Government of India is considering a proposal for the setting up of an Inland Water Transport Board for Travancore-Cochin. The main object of the Board is the development of backwaters of Kerala for navigation purposes, which is expected to increase the prosperity of the State. Latest reports indicate that progress is being made in the formulation of a pilot project with shallow draft tugs in consultation with an inland water transport expert provided by the U.N. Again, there have been consultations between the Madras and Travancore-Cochin Governments on certain questions that are common to them both in the development of the backwaters of Travancore-Cochin State and Malabar.

One of the reasons that is retarding the development of Travancore-Cochin State is the lack of proper communications. The major means of transport is through these backwaters. Statistics regarding the volume of traffic carried on these backwaters are not available. But the value must be large considering that goods transport carriers by land are few and they too are unorganised. Unfortunately, the backwaters and the canal system are in a very poor condition, thanks to the lack of administrative care and facilities for the upkeep of these waters. There is frequent congestion, at the locks and gates, of boats and barges. Again, there is the steady silting of canals.

Water transport is the cheapest of all inland systems of transport. It is a pity that this system of transport should be neglected, especially when it could effectively supplement roads and railways. Mr. Otto Popper, E.C.A.F.E. Expert on inland navigation, who was in India some time ago and who submitted his interim report on inland navigation, investigated into the question of improving navigation in these backwaters. The E.C.A.F.E. Commission for Asia and the Far East will finalise his report and forward it to the Government of India, in course of time. The report is stated to limelight the potentialities of developing the Travancore-Cochin backwaters for transport purposes. In this connection, it is noteworthy that Mr. U. Shanker Rao, an Indian authority on the subject, has stressed the need for the development of backwaters, deepening and widening of channels, effective measures for speeding up of passage through the locks, and goods—landing and load facilities at the main traffic approaches. He has further made out a case for a dependable and power-operated craft for goods traffic.

Mr. U. Shanker Rao has also urged, in the course of an article in the *Hindu*, the constitution of a Joint Transport Board for Travancore-Cochin comprising the railway, the backwater operators and the road services. The purposes of the Board, according to him, should be the co-ordination and the stimulation of the three main systems of transport so that "they can, while developing each in its own way, avoid mutually exclusive policies and in time build up a well-knit State-wide transport system on the most modern lines." This would help avoidance of waste of transport facilities besides ensuring full and satisfactory service to the public. "The Board can," according to him, "build up a fund and provide initiative and knowledge required for turning the backwaters from the slow, inefficient and uncomfortable means of transport that they are now into one of equal importance and utility to the existing and future road and rail systems in the State."

INDIAN SHIPPING

During question hour in the Council of States, Mr. O. V. Alagesan, Deputy Minister for Transport, stated that the Government had already taken adequate measures to prevent the development of monopolistic trends in Indian shipping. It could be legitimately claimed that there are no such trends in India at present. A Consultative Committee of Shipowners had been set up and it had so far held two meetings. Among the subjects discussed at the meetings, were the grant of certain income-tax concessions to the Indian shipping industry, collection of shipping statistics, the setting up of a salvage organisation in India and the improvement of the existing facilities at certain ports. These suggestions were under Government's consideration.

Asked whether there were differences of opinion between the smaller shipowners and the major shipping interests in the Committee, the Deputy Minister said that he had no knowledge. The Committee had six members nominated by the Indian National Steamship Owners' Association, one representative of the Eastern Shipping Corporation and two persons nominated by Government from among the shipping companies which were not members of the I.N.S.O.A.

FIRE INSURERS' PROBLEMS

IMPRESSIONS OF A BRITISH INSURER

FEW nations can boast of so widespread an insurance institution as the U.K. Through the centuries, British insurance institutions have stood the test of time and have emerged successfully from the many perils and hazards which they have had to face in their long history. Of these institutions, British fire insurance has certainly a creditable record of good service in diverse lands under very trying conditions. Most of the problems which the British fire insurers have faced and are still facing are by no means purely British in character, for they are essentially international. So intricate are the problems involved in the work of these insurers that a study of the activities of the Fire Offices Committee (Foreign) of the British fire insurers will evoke considerable interest. From this point of view, it is instructive to turn to the masterly address which Mr. A. S. Hinshelwood, Chairman of the Fire Offices Committee, delivered at a recent meeting of the Insurance Institute of London, in which he surveyed briefly but comprehensively the Committee's functions in the field of international fire insurance.

The importance of the Fire Offices Committee (Foreign) will be evident from the fact that, with a membership of over 230 companies, members and associations, the Committee functions in no less than 43 countries, each with its own separate distinct characteristics, laws and traditions. It is a tribute to the flexibility and the adaptability of the British insurance system that it has been able to adjust itself, since its establishment as far back as in 1869, in a remarkably successful manner to ever-changing conditions in the many countries in which it operates. Mr. Hinshelwood divided the functions of the Fire Offices Committee (Foreign) into three categories: the establishment and maintenance of the business of fire insurance on the soundest possible lines, the continuous development of knowledge of fire hazards and of the means to counteract them and the making of that knowledge generally available to the concerned interests, and the common defence of common interests. Mr. Hinshelwood said that the Committee had sought to discharge the first of these functions, from the earliest days, by establishing local associations, most of which were now autonomous bodies. Despite this development, it is interesting to note that such associations continue to look to the Committee for assistance as the need arises and work in co-operation with the Fire Offices Committee (Foreign). The Committee exercises an integrating influence through the regular prescribed consultations with the U.S. Fire Companies Conference, the French Overseas Section and the Council in Amsterdam, all of which are concerned with problems of fire insurance.

The second function of the Fire Offices Committee is the development and dissemination of the knowledge of fire hazards and the means to counteract them. Referring to this, Mr. Hinshelwood remarked: "I doubt whether there is any other body in any industry which has so wide a field of experience, both geographically and in relation to those engaged in the industry, upon which to draw." The Committee is fortunate in the fact that not only has it its own technical staff and the staffs of the companies at its call, but it can also avail itself of the knowledge and experience of the other important technical organisations in the U.S. and elsewhere, with which it maintains very friendly relations. Again, there are two important institutions devoted to the investigation of fire hazards, namely, the Joint Fire Research Organisation and the Fire Offices Committee Fire Protection Association, which, together with the Fire Offices Committee organisation, according to Mr. Hinshelwood, constitute a "very fine technical workshop for the analysis and defeat of fire hazards."

The third function of the Committee is what Mr. Hinshelwood described as the "common defence of common interests." To this class belongs "war risk," for it is through the joint endeavour of the fire insurers that the principle that insurers should refrain from covering war risk to property on land was accepted in 1936. Again, a common problem is the coverage of explosion risks. In this connection, the Chairman referred to the explosion of the ammunition ship in Bombay in 1944 where the damage done was placed at £20 million. The hazard, as Mr. Hinshelwood observed, grows as each new explosive is produced. It, therefore, constitutes a matter of common concern to all fire insurers.

Referring to the accidents which might be caused by the release of atomic energy in times of war, he said that they are covered by the war risk regulations in force in the U.K. Insurers are, therefore, concerned only with the accidental release of atomic energy. And here, he was not satisfied that the time had come for the inclusion in fire policies of a general protective clause. Finally, fire insurers are called upon to face the losses inflicted on property during a period of civil commotion and disorder. It is true that many fire policies do cover these accidents. But then, civil commotion has begun to assume grave proportions in many countries and to cause greater damage than in the past, thanks to the modern powerful explosives to which the unruly elements in the population have freer access than before. In these circumstances, civil commotion passes the limit of what is ordinarily understood by "civil commotion" and becomes what should be regarded as an "insurrection." These developments pose difficult problems for fire insurers.

A far graver source of irritation to fire insurance companies, as indeed it is to all types of insurers, is the growing volume of legislation relating to insurance. Analysing the general features of the legislative action of the Governments in the field of insurance, Mr. Hinshelwood said:

"First come those requirements which purport to improve the security of the policyholder. In general they take the form of the compulsory deposit of guarantees and technical reserves and the investment of those funds in a prescribed range of securities. Unhappily, this is more or less common form where control legislation exists. Under the second head come those measures designed to protect the national companies. Broadly speaking, they cover differential taxation in favour of national companies; compulsory co-insurance with national companies; compulsory reinsurance with national companies; the compulsory placing of certain classes of business with national companies; finally, limitation of acceptances. The third category of legal provisions are those which pave the way for direct participation by the State in the insurance industry. That participation may be in respect of direct writing or of reinsurance. As to the former, most of the principal companies in France have been acquired by the State; State-owned companies exist in Iran, Iraq, Pakistan, Turkey and Uruguay, while in Burma, the two Burmese life companies have been nationalised. In the field of reinsurance we have the Instituto Mixto Argentino de Reaseguros in the Argentine, the Instituto de Resseguros de Brasil in Brazil, the Caja Resseguradora de Chile in Chile and the Caisse Centrale de Reassurance in France. With the exception of the State-owned companies in Turkey and Uruguay and of the State reinsurance concern in Chile, all these State insurance or reinsurance institutions have come into existence since the outbreak of the last war. That is broadly the position to-day. But it would seem that there is still more in store for, at this moment, legislation affecting insurance, whether original or amending is threatened or pending in 16 countries."

Mr. Hinshelwood was not, of course, opposed to the principle of protecting the citizens against "unsound and unscrupulous" insurance concerns. Only, he was not convinced that the measures which insist on "compliance with a prescribed standard of solvency and nothing more" were wrong. Perhaps, Mr. Hinshelwood might have done well to explain his point of view more elaborately, for the lamentable fact remains that it is in those countries where insurance has not made much headway that most stringent regulations are found necessary to protect the citizens against their being exploited by unscrupulous insurers.

Mr. Hinshelwood deplored, in so many words, the extravagance of extreme nationalism which shows itself in the field of insurance legislation. The "indisputable effect" of legislation, in this field, in many countries is, as he said, to encourage "insurance self-sufficiency." He quoted approvingly from the report of the organisation of the European Economic Co-operation which observed in 1950, "that in view of the international character of the insurance business," it should be granted the "greatest possible measure of freedom." He said:

"The more that the world becomes articulated into separate political units, the more assertive that national consciousness becomes, the more that national differences are stressed—indeed exalted—and similarities ignored, the more and more necessary is the active play of every countervailing force. Such a force is to be found in insurance and the more imbued those engaged in it are with a consciousness of their own unity in that purpose, the greater will be its effect. Insurance possesses a basic international quality which is capable of transcending national differences and barriers and might, in the fullness of time, contribute something to their removal."

There is, of course, no denying the validity of the principle that insurance gains by its being internationalised. From this point of view, excessive restrictions placed on insurance to meet national aspirations are certainly to be deplored. But this represents only one side of the picture. After all, if national insurance institutions are not encouraged, it leads to an unhealthy dependence on foreign insurers on the part of an underdeveloped country, and ultimately to difficulties in balance of payments. It is, therefore, necessary that the Governments of the countries should not altogether be prevented from adopting policies which are designed to assist domestic insurers.

NATIONAL INSURANCE IN CZECHOSLOVAKIA

The system of national insurance has received a great impetus in Czechoslovakia in post-war years, as is evident from the fact that the sum spent on providing free medical care alone, as part of health insurance scheme, has increased from 779 million crowns in 1937 to over 10,000 million crowns in 1952. A large variety of allowances is paid to those who are disabled from work because of sickness. Such persons are paid allowances amounting from 15 to 159 crowns per day for a period of one year. After the 92nd day of illness, these allowances are increased by 10 per cent. and after the 182nd day of illness by 15 per cent. Other allowances paid from the national health insurance funds include: an allowance of 2,500 crowns paid to every woman after giving birth to a child; maternity allowances, ranging from 1,890 up to 20,034 crowns, paid to mothers during the 18-weeks maternity leave; financial support for household work if a woman with a child cannot do the household work; allowance to the family if a patient who remains in a health institute; allowances for patients undergoing special treatment at home; an "outfit allowance" for newly-married couples amounting to 5,000 crowns; funeral allowance of 5,000 crowns and allowances paid in the case of death of a family member of an insured person. Workers also receive "children's allowance" ranging from 190 to 540 crowns per month per child, depending upon the number of children in a family.

Pension insurance forms another substantial part of the Czechoslovak national insurance system. The pension insurance scheme is applicable not only to workers in organised industries but also to independent workers, such as farmers and craftsmen. Generally speaking, old-age pensions become payable to the insured persons on their reaching 60 years of age. Miners get the pension earlier than other classes of workers—on their reaching 55 years of age. A feature of the pension scheme is that it is paid to the insured's wife or companion who is not employed and has no pension of her own. Other pensions include a pension paid to orphans up to the age of 16 (to students up to the age of 25) and amounting to one-half of the income earned by the late supporter; an injury pension; a social pension amounting to 8,400 crowns a year which is paid to all old and disabled citizens; educational allowances paid for each child the pensioner looks after. All pensions can be increased up to a maximum of 50 per cent. of the normal pension, if the pensioner is so helpless that another person must take care of him. The monthly old-age pensions amounted to an average of 2,080 crowns in 1949 and to 2,449 crowns in 1952.

MUTUAL INSURERS

Replying to the debate on the Income-tax Amendment Bill last week, Mr. C. D. Deshmukh, Finance Minister, made a reference to the demand that mutual insurers should be treated like co-operative societies for tax purposes. He said that there was no difference between proprietory insurance companies and mutual insurers; the former reserved 90 per cent. of the surplus for bonus to policyholders and the latter the entire surplus. Nevertheless, mutual insurers had already been given a concession and they were now paying a lower tax than proprietory concerns. There was, therefore, "no room for further concession" to them, said the Finance Minister.

UNITED NATIONS

Important New Publications

Statistical Yearbook 1952 554 pages 177 tables. Clothbound **Rs. 37–8;** Paperbound **Rs. 30**

The latest available statistical information on world economic and social conditions is presented in the United Nations *Statistical Yearbook* 1952. The *Yearbook* contains official data from nearly 250 countries and territories on such subjects as: Population, Manpower, Agriculture, Forestry, Fishing, Production, Mining, Manufacturing, Construction, Electricity and Gas, Consumption, Transport, Communications, Internal and External Trade, Balance of Payments, Wages and Prices, National Income, Finance, Social Statistics, Education and Culture.

Economic Survey of Asia and the Far East 1952 104 pages **Rs. 5**

This is the sixth in an annual series of economic reports prepared by the Secretariat of the U.N. Economic Commission for Asia and the Far East. It presents an official review of the economy of the area during a crucial period in the life of the region. During the months under review there was a collapse in the raw material boom of 1950-51 and a world recession in textiles. These events immediately influenced the markets for the principal export commodities of the region and led to a worsening in the terms of trade and a decline in foreign exchange reserves.

Economic Survey of Asia and the Far East 1951 430 pages **Rs. 12-8**

Published in November 1952, this report by the Secretariat of the U.N. Economic Commission for Asia and the Far East assesses Asian and Far Eastern economic developments during 1951. Part I of the study covers trends in production, foodstuffs, raw materials, fuel and power and manufactures. Part II discusses international trade and payments. Money and credit, public finance and inflation and deflation are reviewed in Part III.

Economic Survey of Europe Since the War 400 pages **Rs. 17-8**

Already widely discussed in the press, this new book reviews the major developments in the European economy since the end of World War II. Among the important subjects covered are: the present stagnation of the European economy, problems of economic integration, trade with dollar areas, balance of payments difficulties, European manpower resources, etc. Two chapters are devoted to the economic policies, achievements and problems of the Eastern European countries and the U.S.S.R.

Demographic Yearbook 1952 518 pages Clothbound **Rs. 37-8;** Paperbound **Rs. 30**

Official statistics from the major countries and areas of the world on population, births, deaths, marriages, divorces and international migration are provided in the *Demographic Yearbook* 1952. This is a volume which will be of special value to business executives, professors, students, population experts, etc.

Preliminary Report on the World Social Situation 180 pages **Rs. 8-12**

This study is the first major attempt by the United Nations Secretariat to review world social conditions and problems. In separate chapters, the *Report* surveys the international situation with regard to population, health, food and nutrition, housing, education, conditions of work and employment, special circumstances of need and general levels of income and welfare. The three concluding chapters are devoted to a survey of social conditions in three less-developed areas—Latin America, the Middle East and South and South-East Asia.

INDIAN ALUMINIUM COMPANY, LIMITED

FIFTEENTH ANNUAL GENERAL MEETING

MR. K. C. MAHINDRA OUTLINES MEASURES FOR CAPITAL FORMATION

THE task ahead of the Indian Aluminium Company, Ltd., in the implementation of the development programme of the Planning Commission in respect of the aluminium industry, formed the main thesis of the address of Mr. K. C. Mahindra, Chairman of the Company, at the Fifteenth Annual General Meeting of the Company held in Calcutta on 23rd April, 1953. The cost of the expansion programme prepared by the Commission is Rs. 9 crores and the bulk of this finance will have to be found by the Indian Aluminium Co., Ltd., holding as it does the pride of place in the industry. In the speech under reference, Mr. Mahindra made a searching analysis of the climate for capital formation in this country and suggested several measures for the promotion of savings. These included: (1) Government should reduce its expenditure, thus indicating the way to thrift and encouraging savings among the citizens; (2) people must be induced to work hard and develop the habit of saving; (3) the present disincentives to investment must be removed; (4) a self-revolving co-operative method of financing replacing of worn-out plant and machinery should be set up by the major industries; (5) Government should grant relief in income-tax on undistributed profits of companies and on such individual savings which are invested in approved industrial enterprises; and (6) foreign investment should be encouraged.

The following are extracts from Mr. Mahindra's speech:

"The audited accounts of the Company for the 15-month period ended 31st December, 1952, together with the report from the Directors have been circulated to the shareholders.

"The period of 15 months covered by the report involved a severe shake-up in the trading world. I will not use the word 'regression,' because industrial pointers do not indicate that there has been a setback of the type associated with this word. It is, nevertheless, apparent from our experience that the purchasing power in this country has shrunk and the average consumer either has not the funds or has decided to conserve his resources in contrast to the habits and inclinations displayed by him in previous years.

"The problem of replacement of old and worn-out plant and machinery is looming large on the industrial horizon in India. Your Directors have been continuously studying this problem. The total cost of the fixed assets of the Company in 1950 amounted to about Rs. 258 lakhs. Against this, we had made a provision of Rs. 85 lakhs by way of depreciation and a replacement reserve of Rs. 20 lakhs. That is, in other words, by the end of 1950 we had provided for 41 per cent. of the original cost as a measure of assurance for the future. But I should like you to bear in mind that costs have increased fourfold since 1939. Keeping this factor prominently before us, my personal view is that provision should be made by this Company to bring up the depreciation and the replacement reserves to a figure of at least 100 per cent. of the total fixed asset costs in 1950 at as early a date as possible. I hope and trust that the future operations of this Company will enable your Directors to make such recommendations over the course of the next few years, so that we will have tackled this problem of replacement finance in a scientific and assured manner.

Expansion Programme

"In my address to you last year, I gave you a brief description of the immediate expansions which your Company has undertaken. The progress at Belur and at Alupuram has been according to schedule. It is expected that, while the modernisation and expansion of Belur Mills will be virtually finished by the end of 1953, the Alupuram expansion will be completed in time to make use of the additional power which is promised for the summer of 1954.

"A brief reference has been made in the Directors' report to the new developments at Hirakud. While our negotiations with both the Central and the State Governments are taking their usual course, there has been a certain amount of criticism over the forecast and anticipations of the Planning Commission and of the objectives clearly delineated in its Report in respect of the aluminium industry. It has been stated in certain responsible quarters that India will not be able to consume as much as 20,000 tons of primary ingots by the year 1956. Such pessimism, possibly prompted by shortsighted self-interest and certainly by very inadequate market appreciation, does a great harm to the development of an infant industry. India has not been a great consumer of aluminium products for the one principal reason that aluminium was not available in large quantities in the various forms and alloys at reasonable prices."

The Company's Task

Mr. Mahindra then visualised the shape of things to come and traced the probable expansion in the uses of aluminium in transport, electrical development, grain storage and housing. Referring to the Company's task in the coming years, he said:

"The most important task ahead of your Company in the coming years will be the implementation of the Hirakud scheme. I have briefly referred above to the potential consumption-uses for aluminium products in the country within the next few years. It is, therefore, appropriate that with the specific approval of the Planning Commission, your Company should proceed to formulate proposals for installation of additional production facilities within the country. The Planning Commission has stated that the expansion programme in respect of the aluminium industry over the next few years will cost in the region of Rs. 9 crores. Bulk of this finance will require to be furnished under the ægis of the Indian Aluminium Company. How is this to be procured?

Deficit Financing

"There has been considerable talk in the last few months about 'deficit financing.' This is an unfortunate phrase. If there is a gap between State revenues and State expenditure, the gap is usually called a surplus or a deficit. The deficit again, under orthodox canons of public finance, is usually sought to be covered either by additional taxation or by public borrowings or in the last resort by printing of currency notes.

"In the words of a British banker, 'there is no such thing as a State purse, but only a State sieve. Into this sieve is poured a large number of your earnings and mine, to be poured out again in many directions, some essential, some desirable and some waste.' It should be added that into this sieve one should hesitate to pour in currency notes of Government's own volition, because the pouring out can lead to no other result than a rapidly mounting inflation. Discarding, therefore, the use of the printing press, the gap between revenue and expenditure (both current and development) should under normal circumstances be bridged by additional taxation and public loans. For satisfaction of these two purposes, there is an immediate and intensive need for inducing the formation of capital in the country. Such increments of capital could be syphoned into the development programme of the Government through public loans or used for stimulating the growth of private enterprise.

"India, admittedly, is a poor country, and, therefore, the total volume of her savings is negligible, as compared to the resources required for implementing our development programme. When the saving habits of individuals are extremely uneven, example is usually better than precept. It behoves the Minister of Finance, therefore, to deliberate whether the mounting Government expenditure on civil services and ancillary activities could not be drastically curtailed. There are to-day nearly 150 Ministers in various States functioning throughout the country, in contrast to perhaps 30 Executive Councillors in the old regime in undivided India. I suggest that the Government should indicate the way to thrift by direct example and thus encourage savings by the average citizen.

"Mr. G. D. Birla has recently stated that 'capital is only a synonym for resources and hard work; India does not suffer from want of capital; it suffers because there is absence of conditions which will impel men to work hard.' But the only realistic compulsion for work known to man proceeds either from the stick or from the carrot. In our country, however, the use of either of these is limited—democratic concept forbids slave driving; welfare economy restricts individual incentives. What will be more correct to say is that, while a pitiless tropical sun engenders lassitude in action, our inherited philosophical approach to life begets resignation and individual un-ambition. It is difficult to control the tribulations of tropics, but it should not be difficult to instil and develop pride of individual performance and so to encourage ambition. It should not be a discredit to accumulate money, just as it is no reflection to accumulate political wisdom. Savings will be the result of hard work alone and it should be the continuing consideration of our Government to-day to induce hard work and thus develop the habit of savings by each and every means under any circumstances.

"It will not be denied that in the last few years there has been a plethora of disincentives against investment in industrial concerns. It is not enough that these disincentives should be removed. With the acceptance of the Five-year Plan, it devolves upon the Government, not only to remove the disincentives but to provide positive measures for encouragement to save, for channelling such savings into investments, both public and private, for directing corporate earnings into expansions and for providing recognition and dignity to risk capital.

Problem of Replacing Plants

"Submissions have been made to the Government that the problem of replacement of worn-out plant and machinery in itself is a colossal problem of finance and, for this purpose alone, several desirable steps could be formulated. I give prominence to one such self-revolving co-operative method. At present the majority of our industries depend upon overseas suppliers for the bulk of their machinery requirements. It is not outside the practical experience of each respective industry to raise enough funds by a voluntary cess, for the purpose of setting up co-operatively a machine building industry to serve its respective plant requirements and of supplying credit finance for individual units to purchase locally manufactured machinery. If a few of the major industries, e.g., cotton textiles, jute and sugar were to follow this suggestion (already introduced to a small extent by the cement combine), there will be taken a great forward step in strengthening our production facilities and lessening our current dependence upon imports. We should not always look upon the Government to furnish this climate or that for our salvation, but by concrete examples provide ourselves with the sinews to build up our deteriorating production economy and thereby earn the trust and confidence of our legislators for further beneficiation.

"Amongst other measures, one may ask the Government to consider the granting of relief in income-tax on undistributed profits of companies and on such individual savings which are invested in approved industrial enterprises. The Government should also consider the removal of double taxation in cases where certain companies hold shares or stocks in other companies and are, therefore, subject to double corporation taxes. Liberal depreciation allowance and permission to write off fixed assets of certain mature age will be of some assistance. In fact, there should be a real tax holiday on productive capital investment.

Foreign Investments

"In the context of capital formation, the use of foreign investments has not been ruled out. The views of a foreign industrialist, sympathetic to India, were prominently displayed a little while ago. It was stated that between the Government and the public, the Press and the Parliamentary opposition, a potential foreign investor is faced with a long series of nightmares. Many of these, however, have been exaggerated. It is, nevertheless, true that doubts are there and these should be removed, while the Government has resolved on an integrated plan of production in all spheres, encouragement should be afforded wherever possible and in whatever form it is practicable to increase the physical product-yielding facilities within the country, irrespective of the source of their financing.

"In this context, India should take a long and searching look at what has happened in

POST-WAR PROGRESS OF W. EUROPE

ECONOMY LAPSES INTO STAGNATION

THE years following the end of the Second World War witnessed so many outstanding developments in the economies of countries of Western Europe that an authentic account of them will evoke great interest among business men and economists. *The Economic Survey of Europe Since the War**, just published by the United Nations Economic Commission for Europe, offers such a review. The *Survey* reviews the economic developments in W. Europe, in the post-war years, examines the present problems and assesses the prospects. The salient feature of the *Survey* are as follows :

The economy of Western Europe has for about one and a half years lapsed into stagnation. Demand has shrunk and profit margins have become lower. Increases in production and trade have been checked, in spite of the continued boom in the U.S. and flow of American aid and rising levels of defence expenditure in Western Europe. W. European countries are still faced with the task of making great adjustments in their dollar accounts to be able to cover even their minimum import requirements. And they must make still greater readjustments, if they are to take their place in a more liberal system of international trade and payments.

Behind the continuing weakness in the trade and payments position of W. European countries and their vulnerability to future disturbances lies the failure to evaluate realistically the potentialities and the limitations of different lines of action in relation to the nature and magnitude of the strains at work. The avoidance of a setback in intra-European trade, and thereby in production, depends on co-ordinated policies to maintain steady economic progress throughout Europe.

While W. European countries have been able recently to add to their dollar and gold reserves, this has been accomplished more by cuts in imports than in increase of exports. One of the "hard facts" of the present situation arises from the low level of gold and dollar reserves of most of these countries. With few exceptions, they are not in a position to cover more than two or three months, at most, of current imports out of their present reserves, even if the whole of these reserves were available for this purpose (without regard to minimum working balances) and none were drained away by flight of capital.

After the war, as a result of "deep-rooted" changes in the world economy, the dependence of W. European countries on the dollar area as a source of supply increased and it became far more difficult than before for these countries to earn from other countries the means to cover the deficit. In these circumstances, there could be no resumption of a free flow of international trade and payments, and hence no question of restoring currency convertibility, until W. Europe could greatly reduce its need for dollars by reviving and developing alternative sources of supply, or greatly increasing its dollar earnings from the U.S. or restoring its ability to earn dollars from third countries.

Fundamental Changes Needed

It appears that, taking into account various factors including the loss of economic aid, a total annual adjustment of at least $2,000 million to $2,500 million will have to be made in other items of dollar expenditure or dollar receipts whether direct or indirect. If the broader objective of removing discriminatory controls against dollar goods and of strengthening currency reserves is to be achieved, the total readjustment required becomes considerably greater and would probably be more of the order of $4,000 million annually.

What is needed at this juncture as a prelude to more specific action and continued co-operation is a general agreement at the responsible political levels on the fundamental characteristics of the present imbalance and on the nature and magnitude of the adjustments to be sought. Within the practical limitations of the situation, the following are suggested as the main courses open :

(1) An increase in W. Europe's dollar earnings from sales of goods and services to the U.S. and other dollar countries ;

(2) an increase in production of food and raw materials both in W. Europe and in other non-dollar areas with the double aim of meeting the needs of expanding population and industry in the world, generally, and of reducing the present one-sided dependence on dollar sources of supply ;

(3) a displacement of U.S. exports of manufactured goods in W. Europe, as well as in the affiliated overseas areas, whether as the result of stronger competition by European producers or, alternatively, of increased discriminatory restrictions against dollar goods ; and

(4) finally (as a line of action cutting across all the other three), a more effective use of the great amounts of goods and capital supplied by W. Europe to the affiliated overseas countries so as to receive larger returns in the form of essential imports or of dollars and to decrease the direct dollar outlays of these countries.

To obtain these and other objectives should have been, and must be, the main preoccupation of the countries concerned. Conditions now necessitate as much as ever the creation of a new pattern of economic relationships harmonising the needs and interests of W. Europe with those of other areas. The realisation that fundamental changes are needed and that they involve both time and capital should, however, not detract from the urgency of the need to work out an integrated and consistent programme adequate to the problem, since further postponement will mean that international trade and payments become increasingly dependent on the discriminatory controls erected to force a balance between dollar expenditures and dollar earnings.

Trade With Other Areas

Sources of W. Europe's fundamental difficulties in trade and payments are indicated by changes in the direction and composition of W. Europe's imports from other areas and exports to other areas. The table from the *Survey* reproduced below shows that the major shifts in W. Europe's imports have been just the opposite of those needed to produce equilibrium in its dollar accounts, and have been very different also from those foreseen in the European recovery programme drawn up by the members of the O.E.E.C. in 1948.

(Millions of dollars at 1948 prices, *c.i.f.*)

Source	1938	1948	1950	1951
Dollar area	5,200	6,250	4,900	6,700
Overseas sterling area*	4,400	3,050	4,300	4,400
Non-British dependent territories.	2,150	2,050	2,350	2,300
Non-dollar Latin America ..	2,100	2,000	1,700	1,400
Other overseas countries ..	2,400	1,250	1,800	1,800
Eastern Europe	3,150	1,150	1,000	850
Total ..	19,400	16,000	16,050	17,350

* Including British dependent territories.

Imports

It will be seen from the above table that the fall has been greatest in W. Europe's imports from Eastern Europe but also very severe in those imports from the non-dollar countries of Latin America—mainly Argentina—and from other overseas countries outside the sterling area and dependent territories. Together, these regions supplied 40 per cent. of W. Europe's imports from the outside world in 1938, but in 1951, the volume obtained from them had fallen by nearly one-half or by some $3,500 million at 1948 prices. Imports from both the overseas sterling area and the non-British dependencies made up for none of this deficiency, at least in global terms, whereas imports from the dollar area were, even in 1950, only fractionally less in volume than those in 1938 and, in 1951, almost 30 per cent. larger.

Imports of engines, machinery, synthetic fibres and manufactures, and medicinal and pharmaceutical preparations, which had been negligible before the war, accounted in real terms, for more than 40 per cent. of the total increase in W. Europe's imports of manufactures from the U.S. These increases, tended to be concentrated especially in France, Italy, Belgium and Switzerland. Petroleum has become the largest single element in W. Europe's total dollar disbursements.

Despite the rise in imports of manufactured goods and petroleum and the exceptional imports of coal, W. Europe has been able to keep the total volume of its imports from other areas lower than before the war and still meet the consumption requirements of a larger population and the raw material needs of a greatly expanded industrial output. Probably, the most important factor in this development is that the increase in industrial production has been largely in lines, such as engineering, where the raw material import content is extremely low. A second factor is that significant economies or substitutions have been made in industrial raw materials.

Exports

The following table reveals that export achievements, though substantial, have been inadequate for the needs of W. Europe :

(Millions of dollars at 1948 prices)

Area of destination	1938	1949	1950	1951
Dollar area	2,800	1,700	2,750	3,300
Overseas sterling area*	2,650	3,350	4,450	4,650
Non-British dependent territories.	950	1,300	2,000	2,300
Non-dollar Latin America ..	1,200	1,000	1,350	1,650
Other overseas countries ..	1,600	950	1,350	1,550
Eastern Europe	1,600	800	750	700
Total ..	10,900	9,100	12,650	14,150

* Including British dependent territories.

The 40 per cent. increase in the total volume of exports to the outside area from 1938 to 1951, while substantial, was itself not sufficient to cover the deterioration in the terms of trade, the loss of property income and the diminished scope for invisible earnings, even if the whole proceeds of the additional exports had been available for settling current liabilities. In fact, this was by no means the case. The share of total exports going to the dollar area has risen only moderately, even though exports in 1951 were swollen by abnormal purchases and 1938 was itself a bad year for exports to the dollar area.

The major change in the geographical distribution of exports has been the huge increase in exports to the affiliated overseas countries, partly at the expense of a fall in exports to other non-dollar countries. Such a pattern of exports could provide equilibrium in Europe's dollar accounts, only if the affiliated overseas countries themselves earned a substantial dollar surplus. They have signally failed to do so.

Primary Production

It is urgently necessary to lay a firmer foundation than has been done hitherto for the expansion of primary production in the world. This is required to provide for the further growth of world population and industrial production, as well as to meet its food requirements more adequately than at present. From the standpoint of W. Europe, the need for such an increase in non-dollar sources will be all the more acute, should it prove impossible to open the way for very great increase in exports to the U.S.

Possibilities exist for a considerable expansion of agricultural production in W. Europe itself through more efficient methods of land use and exploitation. One of the conditions for such an expansion is the investment of large amounts of capital in agriculture, part of which aiding the development of the impoverished areas of Southern Europe. Another condition, if the potentialities of agricultural production are to be realised, would be the conclusion of agreements among W. European countries to provide for the expansion of their trade with one another in agricultural products and to give assurances of market stability.

Similarly, an increase in production and supply of food and raw materials in other areas, such as E. Europe, Australia and Argentina, is likely to come only as part of comprehensive agreements relating to such questions as the goods which W. European countries are to furnish in return, determination of prices, and continuity of market outlets. Here also, the expansion of primary production on the scale needed will require heavy investments and the conscious diversion of capital funds from other purposes. In the circumstances, it is natural that much of this investment should be supplied by the interested importing countries.

A great deal and perhaps most of this expansion will have to be secured through direct arrangements between W. European countries and their trading partners in other areas. The initiative lies, to a great extent, in the hands of W. European countries themselves, because of their ability to enter into long-term purchase contracts and to supply part of the investment funds required.

Development Programme

A major step forward in working out an integrated pattern of trade would be taken, if the European countries, the overseas countries affiliated with them, and the U.S. could fix the general outline and overall magnitude of a long-term development programme, followed by the elaboration of specific projects. Such a development programme should meet the following criteria :

(a) it should be reasonably firm as to the total investment contemplated and its scheduling over the period ;

(b) it should give European countries an even chance to provide the capital equipment and other goods financed with dollar loans, so that they, in turn, can better cover their imports from the dollar loans ;

(c) it should be co-ordinated with other development programmes, such as the Colombo Plan and the investments undertaken by France and Belgium in their dependent territories ; and

(d) it should seek to effect an equitable balance between the development of dollar-earning and dollar-saving exports of foodstuffs and raw materials from the overseas countries and the industrial development aims of these countries.

Given the special importance to W. Europe of increasing primary production in other areas, the possibility could be considered for uniting private capital from W. Europe with the greater resources available from the U.S. in joint ventures under which the former would bear the top risks or underwrite the loan funds obtained.

Agriculture

The physical possibilities of higher agricultural output in most European countries, particularly in the poor ones, are very great. Southern Europe has a greater density of agricultural population and a lower output, not only per man but also per hectare of arable land, than in other European areas. In this large area, nearly one-half the European agricultural population, tilling 40 per cent. of its arable land, produces only 25 per cent. of Europe's total agricultural output.

The large differences between countries in agricultural production and consumption levels and prospects all point to two major conclusions. First, the full utilisation of existing possibilities depends, to an important extent, on development of intra-European trade in food. The large differences in the density of agricultural population in European countries is evidence of the need for a higher degree of international specialisation on more or less labour-intensive products, such as expensive vegetables, fruit, wine and tobacco. By contrast, nearly all W. European countries have grain deficits which are often very considerable. Secondly, the long-term solution of the problems of European agriculture is to be found outside agriculture in an expansion of industry. Only a large-scale transfer of both wage-earners and millions of small holders to industry, can pave the way to the radical transformation and rationalisation of European agriculture, which is necessary to raise the living standards of the European population. Such a transformation is badly needed not only in southern Europe but on the whole European Continent.

While the goal in the highly industrialised countries should be further mechanisation, both in agriculture and in industry, the goal of over-populated countries in S. and E. Europe should be an expansion of employment in industry hand-in-hand with an increase in total food production.

The population trends over the next decade point to further widening of the gap in economic development between S. and N. Europe. In S. Europe, the rate of increase of population of working ages will diminish only slightly and the industrial expansion required to eliminate open and concealed unemployment in S. Europe, or even to prevent it from growing further, is far beyond what these countries would be able to finance unaided without using methods as severe as those employed in E. Europe.

Heavy Industries

As compared with the development of coal, steel and electricity production in the U.S. and the Soviet Union in the last four decades, the performance of Europe is far from impressive. Targets have been set for a further expansion of steel and energy production in W. Europe, but these targets are "much less ambitious" than those in E. Europe. Both past investment and future plans reflect strong tendencies to autarky in the basic industries of W. Europe, and it remains to be seen as to how far the European Coal and Steel Community, which now embraces all major steel producers, will be able to reverse this trend.

Any plans for expansion of the W. European economy need to take into account that engineering and steel production will have to expand at a faster rate than the home demand for these products, which, in turn, must rise at a faster rate than that envisaged for the national income. Indeed, in view of the relatively high dependence of W. European economy on foreign trade, too low a target set for steel and energy production means planning for a depression or at least a stagnation of European production, unless Europe is once more to be made dependent on dollar imports of commodities which could relatively easily be produced at home. The further expansion of steel, coal and electricity production in W. Europe is limited not by physical scarcities but by the amount of investment which can be undertaken, although, even in the wealthier countries, great investment costs set a limit to the rate at which these production increases can be expanded without disturbing monetary stability.

It is possible that concern for monetary stability is often exaggerated or that it is used as a pretext by monopolistic groups more interested in the high profits, engendered by scarcity than in expanding production. It may also be that inflationary pressures created by expansion in the basic industries can be combated by direct controls, such as is done more or less successfully both in N. and E. European countries. Nevertheless, it remains true that capital is so scarce in all European countries that a careful choice has to be made among different investment objects. Capital-intensive modernisation should take place primarily in branches most exposed to American competition and not in more or less sheltered branches where the effect will be only to lower prices to European consumers—a purpose which might equally well be achieved by less costly investments in other sectors of the economy such as agriculture. This consideration is no argument against heavy investments to lower the costs of European steel, the main raw material of the engineering industry which is Europe's biggest and most promising export industry—an industry which itself must be expanded and modernised to allow it to make full use of the increased quantities and improved quality of steel. The disadvantages of some over-investment in basic industries are much smaller than those of the same amount of under-investment.

Climate for Investment

Private investors, including those in heavy industries and engineering, decide, to a great extent, not only their own fate but that of the whole economy. If they distrust the future and reduce investment, they destroy the market for their own goods. At worst, a depression may ensue, and at best, the future growth of the economy is hampered, because a delay in investments in the heavy industries takes a long time to make good.

The present climate for investment is not very favourable, because the Governments are holding down demand, on account of balance of payments difficulties and fears of inflation. Without greater investment and changes in production, Europe cannot balance its payments. And this might even worsen the present unsatisfactory level of European consumption, trade and production.

Economic stagnation would be fatal for even the most humble efforts to break the historical trends towards national economic autarky in W. Europe. A general climate of *expanding economy* is required to avoid a setback in intra-European trade and thereby in production. Private business must be given firm confidence that Governments take responsibility for maintaining total demand at a high level. The Governments need to lay the foundation for a *new equilibrium* in international trade and payments and for a more regular and normal functioning of the world market before removal of controls on trade and payments and the achievement of currency convertibility are possible without serious threats to European production and trade. Action must be taken on several fronts, if Europe's dollar shortage is not to be solved by Europe going without the goods it needs. The recovery and expansion of food and raw material production in the non-dollar areas is essential; this requires capital from Europe and elsewhere. Also, European goods will have to displace American goods somewhere, whether in Europe itself, in the U.S., where the removal of impediments to increased imports could open the way to increased dollar earnings, or in the rest of the world. A major expansion of U.S. foreign investment under conditions permitting free competition by European exports for the dollars made available in this way would contribute to an overall expansion of world trade in which all areas might benefit. The situation requires *adequate action* by the European countries themselves, with co-operative efforts on a wider scale to promote steady economic progress.

NEW USE FOR POWER ALCOHOL

EXTRACTION OF OILS FROM CAKES

(By Y. K. RAGHUNATHA RAO, Senior Scientific Officer, Central Food Technological Research Institute, Mysore)

THE E.C.A.F.E. Seminar on power alcohol, held at Lucknow during last November, drew attention to the present Indian output of six million gallons of power alcohol, which is hardly a third of the installed capacity, although the Five-year Plan has set the target at 21.1 million gallons, to be attained by 1955. One of the major reasons for the lack of enthusiasm for increasing production of power alcohol, is stated to be the absence of a keen demand for the commodity by the motorists. The use of power alcohol is said to require minor adjustments and alterations to the fuel system to eliminate troubles and to give better mileage, e.g., the petrol tank has to be cleaned, spark plugs readjusted, ignition advanced and alternative fuel-pump, diaphragm and carburettor-float have to be substituted. The average car owner who is not a mechanic cannot be blamed, if he prefers straight petrol for his high-priced luxury car. Petrol consumption is over 200 million gallons in India, and since the output of power alcohol is only six million gallons and localised near sugar factories, the scheme envisaged by the Indian Power Alcohol Act, 1948, is enforced only in some regions. A uniform excise policy and less irksome restrictions may allow easy transport of power alcohol to consuming centres. However, unless there is a greater demand for the product, there is little practical prospect of reaching the production target. In fact, the Indian output of 15 million maunds of molasses permits a maximum production of 31.5 million gallons of alcohol. There are other commonly used raw materials like *mhowa* flowers for producing additional alcohol, if need be. Other industrial uses of alcohol have only been minor ones, taking off an inconsequential fraction of the total Indian output. There appeared, therefore, little real prospect of expansion hitherto in power alcohol output.

Recent Discovery

However, a recent discovery that power alcohol is an ideal material for solvent extraction of oils, both edible and industrial, from oilseeds and oilcakes, has created a new, optimistic situation. The oil mills, when they take to this modern development using alcohol for recovering large quantities of oil now being wasted in oilcakes, would not only need six million gallons of power alcohol now being produced but the demand would reach even 15 million gallons annually. It is at once realisable that this demand would create the much needed fillip to power alcohol.

It is well known that power alcohol has only two-thirds the calorific value of petrol and, therefore, is an inferior fuel. It is mainly the policy of self-sufficiency in liquid fuels that encourages power alcohol being used as a fuel. But in view of its greater suitability as an industrial oil-solvent, in which function it is superior on account of its special properties to petrol, it is better to be employed more and more as an irreplaceable valuable solvent than to turn it away as an inferior fuel.

Recent Discovery

A new development makes use of the physical and chemical solvent properties of alcohol, which ordinarily has little affinity with common oils at atmospheric temperatures. But on heating, the alcohol to near its boiling point, it is readily miscible with most oils. Thus when a commercial oilcake such as that of groundnut is powdered and mixed with boiling alcohol, the latter dissolves the residual oil in the oilcake and when the solution is allowed to cool to the ordinary temperature, the oil separates itself out as a bottom layer and the alcohol can be reused for a subsequent extraction.

Power alcohol has been employed in a pilot plant at the Central Food Technological Research Institute, Mysore, in this manner to extract many common oils such as groundnut, cottonseed, mustard, castor, etc. Large quantities of oils, now being wasted, can be extracted by alcohol not only from commercial oilcakes but also from various oilseeds, e.g., cottonseed, *mhowa*, *neem*, tobacco, *honge*, etc., which have hitherto been allowed largely to go to waste. The total quantity of oils thus recoverable would amount to over 200,000 tons valued at Rs. 15 to Rs. 20 crores. The oil recovered by alcohol extraction is a high grade, semi-refined quality oil unlike oil recovered by the use of other usual solvents such as petrol hydrocarbons or chlorinated hydrocarbons which yield dark coloured oils requiring further refining. Use of alcohol scores over other solvents in the fact that alcohol is non-toxic. With other solvents, care has to be exercised that they contain no toxic or noxious components and that they are completely eliminated from the recovered oil and from the extracted solid meal in order that the latter may be edible either by animals or by men. Evidently alcohol is a more suitable non-toxic solvent. It is economic to use power alcohol as a solvent, since it costs only about two rupees per gallon including excise duty, compared with more than twice this price for any imported solvent.

Edible Oil Flours

Solvent extracted oilseed meals have long been in use as livestock feed in the U.S.A. Instances are soyabean, linseed, and peanut meals. Small portions of the extracted soyabean and peanut meals are used as flour for human foodstuffs. The solvent used there, has been a selected grade of petrol hydrocarbons which are available at low cost, in plenty. In India the dearth of hydrocarbons and the plenitude of cheap ethyl alcohol is favourable to the use of the latter as a solvent to manufacture edible groundnut flour and other oilseed flours. Groundnut flour, e.g., obtained in pilot plant trials, has proved a satisfactory edible material; it is a soft, white to cream coloured substance, which can be used as a cheap nutritious supplement to wheat, rice or other cereal flours in various food preparations. Tasty biscuits have also been made out of it.

The quantity of such edible oilseed flours which could be manufactured would amount to almost a million tons, valued at several crores of rupees. The prospect of obtaining so much additional food from present waste materials is well worth urgent, and serious consideration by the public and the Government. Alcohol extracted cottonseed meal is a very nutritious feed for livestock, while much valuable oil is also recovered.

From the foregoing it is evident that power alcohol has to be looked upon from a new viewpoint. It is a valuable industrial solvent especially for the oil industry and having more valuable and unique properties than those of petrol and, therefore, the first call, on the production of alcohol in this country should be as an industrial chemical rather than as a fuel. This approach, made commercially possible by this modern Indian development (patented by C.S.I.R.) not only confers immediately new benefits on the Indian oil industry, and creates a *new food industry* but also envisages a fresh and increasing demand for absolute (power) alcohol which will reach and pass the production target set by the Planning Commission.

The new discovery is of great significance to the country's economy.

AUDITORS' REPORT.

We have audited the Balance Sheet of the Andhra Bank Ltd., as on 31st December, 1952, and the Profit and Loss Account for the year ended on that date, as set forth above, with the books of the Head Office and the certified returns from Branches and Sub-Offices and we beg to report that :—

(a) We have obtained all the information and explanations we have required and such information and explanations have been found to be satisfactory ;
(b) the transactions of the Company which have come to our notice have been within the powers of the Company ;
(c) the returns received from the Branch Offices of the Company have been found to be adequate for the purpose of our audit ;
(d) the Profit and Loss Account shows a true balance of profit for the year ended 31st December, 1952 ;
(e) the Balance Sheet and Profit and Loss Account are, in our opinion, drawn up in conformity with the Law ;
(f) the Balance Sheet exhibits a true and correct view of the state of the Bank's affairs as on that date according to the best of our information and explanations given to us and as shown by the books of the Bank ; and
(g) that, in our opinion, the books of account have been kept by the Bank as required by Section 130 of the Indian Companies Act.

NEW PUBLICATIONS

Banking in the British Commonwealth. Edited by R. S. Sayers. Published by Oxford University Press, Amen House, London E.C. 4. Price: 35s. net.

THIS book has been edited by R. S. Sayers, Professor of Economics, University of London, and may be regarded as a companion volume to his well-known book, *Modern Banking*. It gives an account of the development, present organisation and problems of banking in Australia, Canada, India, Pakistan, Ireland, New Zealand, South Africa, Ceylon and the British Colonies, which are, or have until recently been, included in the British Commonwealth. The Editor has realised that some people in the new Dominions and in Ireland may not like the inclusion of the word "British." Nevertheless, he has thought it necessary to say "British Commonwealth" to avoid confusion, as there are other "Commonwealths." He has, however, made it clear that no political implication is intended and that the space given to each country has likewise no political implication and has depended mainly on the complexity of the picture to be drawn. There is also a chapter on the sterling area. Most of the chapters of the book were completed by the middle of 1951 and events that occurred afterwards have, therefore, not been covered.

Out of the eight writers of the chapters, four, namely, J. S. G. Wilson, A. C. L. Day, Paul Bareau and G. S. Dorrance have been associated with the Editor in the teaching of monetary economics at the London School of Economics and two others, namely, W. T. Newlyn and H. A. de S. Gunasekera were his pupils at the School. Only for the chapters on Ireland and New Zealand has he found it necessary to rely upon two outsiders, namely, G. A. Duncan and C. G. F. Simkin. The reviewer had an opportunity to discuss some of the banking problems of India with Mr. Wilson, on the eve of his departure from India, where he had come to study these problems and he was struck by the grasp which the latter had obtained of the problems. This opinion of his is fully borne out by Mr. Wilson's chapters on India, Pakistan and Australia.

Although the book is published chiefly for the benefit of University students, it will be found interesting and useful by bankers and others interested in the comparative study of financial institutions, as it is not written in highly technical language. Most of the contributors belong to, or at least have some first-hand knowledge of, the countries of which they have written. They have considered commercial banks, as well as central banks, both in relation to each other and in relation to the broad problems of economic development of the countries concerned.

The common feature of the banking systems described in this book has been that they have, or have had in a formative stage, close links with London, in addition to the fact, mentioned above, that their countries are, or have until recently been, parts of the British Commonwealth. This has provided some justification for a tendency to look upon all the systems as merely variations of a single pattern. Hence, most of the plans for reforming them have hitherto been more or less of the same kind. The authors of this book, however, have made it clear that, along with the universality of some political and financial ties with London, there is great diversity of historical background and even of the course of development of the various banking systems which they have discussed. This means that measures for the improvement of each banking system must be evolved with proper regard to the conditions in which it has been functioning. The authors have considered the structure of each banking system not merely in terms of the number of banks and branches, but also in terms of the business which they have been doing, the local peculiarities of trading and property which the business reflects, the relationship of banks to other financial institutions and the relationship of the local banker to his head office and to the local community in which he works.

The book shows that, in some of the countries considered in it, particularly in Canada and Australia, there is a well-established commercial banking system, run by commercial bankers, who, in efficiency and soundness, can bear comparison with their fellows in any other part of the world. In other countries, commercial banking is in a much earlier stage of development, without a stable structure or settled methods of doing business. For the latter, a strong and intensive system of bank supervision is very desirable. This service can be rendered by the central bank. If wisely rendered, it can accelerate the development of a strong and sound commercial banking system and also give the central bank a better understanding of, and influence with, commercial banks.

There is a central bank in each of the countries covered by this book, except the colonial territories, and a separate chapter is given to each central bank. All of them are youngsters in comparison with the great central banks of Europe, having been established only during the 'twenties or the 'thirties of the present century. The authors have pointed out that the constitutions of these banks have been changing according to changes in public opinion. In the reconstruction period after the First World War, the demand was that they should be independent, shareholders' banks, because the Bank of England and the Federal Reserve System were independent of the executive Government and because the subordination of central banks to the financial needs of Governments in Continental countries had led to enormous inflation there. But, after the outbreak of monetary nationalism in the early 'thirties, public opinion changed in favour of Government control over central banks and led to changes in the constitutions of some of the central banks in the Commonwealth. The exigencies of finance for the Second World War maintained and strengthened the hold of Governments on them. But recently, there are signs, particularly in Australia, that the pendulum is turning back again in favour of greater freedom for central banks from Government control.

Another thing which the authors have brought out is that the power of a central bank to command an automatic response to its use of the discount rate and open market operations depends not only upon full dependence of the money market upon the central bank as lender of last resort, but also upon the existence of a market offering to the individual banker indefinitely elastic supplies of a very attractive earning asset. In some of the Dominions, hopes were expressed and some attempts were made for the development of a bill market. But nothing effective could be done and, in India, fusion of the diverse money elements has continued to elude the efforts of the Reserve Bank of India and other banking reformers. A close banker-customer relationship continues to determine the volume of earning assets in all parts of the Commonwealth. As long as this situation remains, the control of the central bank over commercial banks has to depend upon direct contacts rather than upon an impersonal wielding of conventional weapons.

A third feature brought out by the authors is that there is no short and easy road to success in central banking and that a somewhat ineffective "settling-in period" is inevitable for central banks. The general view is that a central bank needs something like 20 years to establish its influence. Developments since the Second World War, however, seem to have speeded up the process.—*Dr. S.G.P.*

The Wealth of India, Vol. III. Published by the Council of Scientific and Industrial Research, Old Mill Road, New Delhi. Price: Rs. 18.

This is the third volume of the publication *Wealth of India*—the first and second volumes were published in 1948 and 1950, respectively. The volume under reference contains articles which deal with about 600 species of economic plants, three minerals and four animal products. The volume thus introduces to the reader the pageantry of Indian flora. The subjects on which information regarding production, processing, utilisation and trade has been assembled and presented include timber and forest products, medical plants, cereals and pulses, fruits and vegetables, oilseeds, spices, animal products, and minerals.

In the case of botanical subjects, the scientific name of the genius forms the title of each article and is followed by a brief account of the genus. The important economic species are described in the alphabetical order of their scientific names. No attempt is made to give a botanical description of either the genus or the species. The parts of economic importance, however, are described adequately. Where the species are of minor importance, a short generic note is considered sufficient, although purely ornamental or horticultural plants have not been included. For animals and animal products, their common names have been found more convenient. Articles on minerals, it is stated, have been scrutinised by the Geological Survey of India.

Canada 1952. Published by the Dominion Bureau of Statistics, Department of Trade and Commerce, Ottawa.

This is a very interesting handbook, depicting a balanced picture of the general economic and social structure of Canada. The handbook is replete with colourful photographic diagrams and statistical tables, reviewing the progress which Canada has made in recent years. It begins with a brief and excellent review of the economic conditions in the country at the close of 1951 and then proceeds to describe the system of government, health and welfare activities, education and scientific research, and social and cultural relationships. Aspects relating to national income and trend of production form the subject-matter of a separate chapter. An analysis of the developments in the spheres of primary production—classified according to agriculture, forestry, mines and minerals, water powers, fisheries and furs—and secondary production—manufactures and construction—is also given in the volume. Among the other aspects dealt with are those relating to labour, transport and communications, domestic and foreign trade, and finance.

Even a cursory glance at the handbook under review will clearly bear out the utility of the publication. Indeed, it is an attractive record of current economic conditions in Canada and will undoubtedly be of great use, not merely to students of world economic history and business men interested in trade with Canada, but also to anyone who cares to know something about Canada—its people and their problems.

The International Labour Code, 1951 (Vols. I and II). Published by International Labour Office, Geneva. Price: £3.

Encouraged by the response to the International Labour Code, 1939, published in 1941, the International Labour Organisation has brought out a revised and enlarged edition of the Code in two volumes. The first volume contains a systematic collection of Conventions and Recommendations adopted by the I.L.O. since 1919, while the second volume includes appendices embodying other standards of social policy framed or approved by the various conferences and committees, held, from time to time, under the auspices of the I.L.O. The two volumes have been prepared by Mr. C. Wilfred Jenks, Assistant Director-General of, and Legal Adviser to the I.L.O., who has participated in the drafting of all the Conventions and Recommendations adopted by the I.L.O. during the last 20 years and who has served in the drafting committees of many of the conferences and committees, the conclusions of which appear in the appendices.

The Code must not, however, be regarded as the final word of the I.L.O. on any of the subjects dealt with, but essentially as the "working manual of a living organisation." The present volume, however, provides the necessary grounding for officials preparing proposals for new legislation or treaties. It will also serve as a reference volume to students of social legislation. This edition will certainly be widely welcomed, thus rewarding the enormous labour involved in its preparation, for it sets forth the principles of labour legislation which have been discussed and accepted by the representatives of nearly all the democratic countries of the world.

THE HIND BANK, LIMITED

DIRECTORS' REPORT TO THE SHAREHOLDERS

The Directors have pleasure in presenting herewith the Audited Accounts of the Bank for the year ended 31st December, 1952.

		Rs.	a.	p.
The Profit and Loss Account after deduction of all working expenses shows a profit of	.. ..	6,74,922	13	9
to which must be added the amount brought forward from previous account	.. ..	86,262	1	7
	Total ..	Rs. 7,61,184	15	4
which the Directors have disposed of as follows:—				
Amount transferred to Reserve Fund	.. ..	2,50,000	0	0
Provision made for taxation	.. ..	2,90,000	0	0
Bonus to Staff	.. ..	35,000	0	0
Balance	.. ..	1,86,184	15	4
	Total ..	Rs. 7,61,184	15	4

Out of the balance of Rs. 1,86,184-15-4 the Directors recommend to the shareholders payment of dividend Re. 1 per share free of Income-tax, which absorb Rs. 1,00,000-0-0 leaving Rs. 86,184-15-4 to be carried forward to the next year's account.

The business of the Bank during the year under review and the results achieved are satisfactory. The investment policy of the Bank during the year 1952 continued to be the same. About 65 per cent. of Time and Demand Liabilities are held in Cash and Investments. Of the Investments, about 97 per cent. are held in Government of India and State Government bonds, of which about 48 per cent. mature within the next 5/6 years and all of which mature within the next 10 years. The Bank's Investments in the Balance Sheet stand at below market value as at the end of December, 1952.

During the year under review Mr. J. R. Jacob, a well-known businessman of Calcutta, at the request of your Board, joined the Board of Directors. You are requested to confirm his appointment on the Board as a Director.

Under the provisions of the Articles of Association of the Company, Mr. K. P. Goenka, Mr. B. Kumar Birla and Mr. Chimanlal B. Parikh retire from the Board of Directors and being eligible offer themselves for re-election.

The Auditors appointed by the Shareholders at the last General Meeting, Messrs. K. N. Gutgutia & Co. and Messrs. Dalal and Shah retire, but offer themselves for re-appointment.

The Directors express their gratitude to the shareholders and the numerous constituents for their support in the growth of the institution and also to the members of the Local Advisory Boards at Ahmedabad and Bombay for their valuable advice. They also record their appreciation of the loyal and efficient services rendered by the staff at Head Office and Branches.

For and on behalf of the Board of Directors,
K. P. GOENKA,
Chairman.

CALCUTTA, 12th March, 1953.

BALANCE SHEET AS AT 31st DECEMBER, 1952

CAPITAL AND LIABILITIES	Rs.	a.	p.	Rs.	a.	p.

AUDITORS' REPORT TO THE SHAREHOLDERS.

We have audited the foregoing Balance Sheet of the Hind Bank, Ltd., as at 31st December, 1952, and also the foregoing Profit and Loss Account of the Bank for the year ended upon that date, in which are incorporated Branch returns audited by the Statutory or Local Auditors, and report that:—

(a) We have obtained all the information and explanations we have required and have found them to be satisfactory;
(b) the transactions of the Bank which have come to our notice have been within the powers of the Bank;
(c) the returns received from Branch Offices of the Bank have been found adequate for the purpose of audit;
(d) in our opinion, the foregoing Balance Sheet and Profit and Loss Account are drawn up in conformity with the law;
(e) such Profit and Loss Account shows a true balance of profit for the year;
(f) such Balance Sheet exhibits a true and correct view of the state of the affairs of the Bank according to the best of our information and the explanations given to us and as shown by the books of the Bank; and
(g) in our opinion, books of accounts have been kept by the Bank as required by Section 130 of the Indian Companies Act, 1913.

INDUSTRIES (REGULATION AND CONTROL) AMENDMENT BILL

APPOINTMENT OF INDUSTRIAL CORPORATION CONTEMPLATED

THE trend of discussions in the House of the People on the Industries (Development and Regulation) Amendment Bill on the 22nd April indicates that the Minister for Commerce and Industry, Mr. T. T. Krishnamachari, will have hardly any difficulty in piloting the Bill successfully through the House in the current session. The convincing explanation given by him for introducing the several amendments seems to have gone a long way towards not only silencing the opposition but also winning the tallest among them. The support extended to the measure by Mr. Hiren Mukerjee, acting leader of the Communist group, and Dr. Shyama Prasad Mookerjee, leader of the National Democratic group, may be taken as a tribute to the Minister for sponsoring the Bill. The House committed the Bill to a Select Committee for report on the 29th. It may be noted here that this Bill, which was introduced on 10th April, replaces the one presented to the House on 20th December last.

Under the existing provisions of the Act, the Government can assume management of an industrial unit only after waiting for some time to see whether the directives issued by it were carried out or not. It cannot exercise immediate control in emergent cases. This lacuna is now sought to be removed by adding a new chapter in which provision is made for empowering the Government to assume charge of an undertaking the position of which calls for immediate action. It also contains suitable provisions for meeting the consequences of the Government taking over the control of an undertaking.

Among the amendments is one relating to Government's power to cause investigation to be made of scheduled industries "in certain circumstances." The term "public interest" used in the amendment was admitted by the Minister for Commerce and Industry in his speech, as one which was very wide but what was contemplated was, according to him, only investigation and nothing more. In any case, there was nothing peculiar about it, as legislations similar to the one under reference, such, for instance, as the Company Law, gave power, he said, to shareholders in certain matters such as these. He thought that it was possible that the Companies Act might be amended so that the Government authority which controls the operation of the Companies Act could work in a manner similar to what the present Bill proposed to do.

Direct Management

The new chapter in the Bill on direct management and control of industrial undertaking by the Central Government, in some cases, is almost a verbatim copy of the analogous provisions in the Industrial Finance Corporation Act. Explaining this clause, Mr. Krishnamachari points out that, in the case of the latter Act, the idea was as to how the Corporation should work an industrial unit which owed money to it and which it had to take over. In the present Bill, the Government's position was very nearly the same, the difference being, in one case, the unit would be taken over because the taking authority was a creditor, while, in the other, the Government stepped in as a trustee. He gave the assurance that the powers were not for nationalising an industry but for keeping the wheels of industry moving. Normally the procedure was to go to a court which appointed a receiver and that meant a time lag. "Here the Government must be," he said, "the sole judge about whether a particular industrial unit is a very necessary one in the economy of the country. The very fact that this chapter is in the Statute Book will be a guarantee against misbehaviour" by those managing industrial concerns.

Price and Distribution Control

Another chapter in the Bill deals with the Government's power to control supply, distribution and price of some articles. In the absence of the Essential Supplies (Temporary Powers) Act and the Supply and Prices of Goods Act, which are to remain only for a temporary period, the Minister said the responsibilities of the Government to a scheduled industry were so comprehensive that, without some kind of power to control prices, such responsibilities could not be discharged properly. But one of the Minister's reasons for powers to control prices makes strange reading. He said: "It may be that the Government would have actively to enter into the field of expanding industries and promoting the floating of new concerns. If it does so purely on its own as a nationalised unit, even then it has to make it a profitable one, or at any rate, see that it does not lose. So the prices have to be controlled." It must be admitted that there is a danger here in that the Government may exercise its power to control prices in order to protect it from losses arising out of its own mismanagement of a unit taken over by it under the Act. This danger should be avoided at all costs, as price controls for such a purpose will not be in the interests of consumers. It is the business of the House to safeguard the interests of consumers by laying down the specific circumstances in which the Government can introduce price controls under the provisions of this Act.

Development Councils

The establishment of Development Councils is another aspect of the Bill to which the Minister made certain references. It was originally intended to start with six councils. But so far only two have been started, one for diesel engines and another for chemicals and fertilisers. The delay in the establishment of the remaining Councils is due to the desire of the Government to proceed cautiously, as the Development Councils, which were first started in the U.K., had a chequered career. Mr. Krishnamachari revealed, in this context, that the Government was able to get an expert who was familiar with the working of such Councils in the U.K. and had given the Government of India the lines on which that country had proceeded with the starting of these Councils.

Among the other amendments in the Bill is the one which seeks to widen the Government's power to control the expansion of existing industrial undertakings falling within the scope of the schedule. Commenting on this amendment, Mr. Krishnamachari said that there was, at present, nothing to prevent a number of units now existing in this country, both Indian and foreign, from manufacturing a new article, a new brand of article, say a tooth paste, with a new name for which a licence is taken out. If any foreign exchange was involved in this manufacture, the units had to obtain the Government's permission and thus the Government could come to know of it. But, often-times, even this might not be brought to the notice of the Government, because the Government might say that it was not going to permit any money straightaway, and a mere agreement of a foreign company in regard to payment of royalty did not make it necessary for them to come to Government. The Government felt that even such cases should come before the Licensing Committee, so that it would have an opportunity to tell them, he said, whether the units should manufacture the articles or not, in which case the Committee would examine the amount of royalty which had to be paid and the remittances which would have to be made for that purpose.

Not a Punitive Measure

Concluding his remarks, the Minister assured the House that "it is the Government's intention to work this measure not from a punitive aspect but largely from the development aspect. . ." He said that the Government would not needlessly interfere with the management of industrial undertakings. Private enterprise need have no fear of such intervention so long as the industries under its control were worked efficiently and honestly and in a spirit of service to the public.

Dr. Shyama Prasad Mookerjee, supporting the Bill, stated that it was a complete guarantee to all industrialists who want to play the game that the Government had no desire to interfere with them. He suggested the establishment of an industrial management corporation under the ægis of the Government with adequate finance at its disposal for being able to take over a recalcitrant industry and managing it efficiently. The Minister for Commerce and Industry, in the course of his reply to the debate, referred to this suggestion and stated that his thoughts too, had been running in the same direction for some time now and that he had been discussing the question with the various interests concerned.

CHIEF CONTROLLER ON CERTAIN ASPECTS OF IMPORT POLICY

Certain problems of import controls were discussed by the representatives of the Southern India Chamber of Commerce with Mr. K. B. Lall, Chief Controller of Imports and Exports during the latter's visit to Madras last week. The Chamber complained of the change in the manner of constituting Import and Export Advisory Councils, thereby depriving the chances of representative commercial organisations to send their nominees to serve on these councils. It further pointed out that, under the present constitution, representatives of commercial organisations formed a microscopic minority. The Chamber pressed for the need for at least setting up Import Advisory Committees at ports. Mr. Lall replying to this point said that there was no objection to consult chambers of commerce informally on problems affecting imports. But he felt that the regular constitution of such committees entailed certain additional expenditure and establishment which he considered was not necessary. If, in specific instances, such committees were required, the request would be considered, he added.

The Chamber then represented that there was a tendency on the part of the Government to subdivide serial numbers to suit its licensing policy. This had necessitated reclassification of quotas. The insistence on minimum imports for each subdivision has resulted in many established importers losing licences, as their basic import for that particular serial number got split up and the imports in this class of articles covered by each sub-division fell short of the quota. The Chamber suggested that, in such cases, the quota might be calculated on the total imports of goods under the serial number taken as a whole. The Chief Controller promised to give due consideration to the suggestion.

The Chamber complained that the quota for import of packing and wrapping paper was very low. The Chief Controller observed that the question of increasing the quota of this variety of paper would be considered in due course. On the question of delay in the issue of licences for importing writing paper, the Government was awaiting clarification of certain issues and promised that the issue would be expedited. He further stated that the question of increasing the import quota of betelnuts by 50 per cent. and of allowing imports of cocoa in limited quantities would also be considered by the Government.

At present import of fountain pens is possible only if the value of each pen was Rs. 25 or more. The Chamber wanted this value to be reduced to Rs. 10, as the purchasing capacity of the people in the country was low. The Chief Controller said that fountain pen factories would be started in the country soon and that they would be able to supply pens at a cheap price. Till such factories were established the Government would, he said, consider the question of allowing imports of cheaper pens.

IMPORT POLICY ON FEW MORE ITEMS ANNOUNCED

The Government of India has announced its import policy regarding a few more items which had been kept in abeyance at the time of the previous announcements. Thus, according to a notification published in the *Gazette of India Extraordinary* dated 18th April, 1953, no import licences will be issued for tea chests for the current half-year. The restriction applies to tea chests, parts and fittings thereof, including tea chests containing aluminium but excluding aluminium tea chests linings. Nor will any licences be issued for raw wool (other than merino and cross-breeds) which was recently removed from the scope of the O.G.L. So also is the policy for zinc chloride for which it has been decided not to issue licences for the current half-year.

However, a 25 per cent. quota has been given for tinmen's rivets and a 100 per cent. quota for D.D.T., excluding preparations thereof. For printed advertising material, not supplied free of charge, applications will be considered *ad hoc*, licences up to the value of Rs. 1,250 in a six-monthly period being granted freely. Additional licences will be given for coloured and copying pencils and for fountain pen ink on which the import duty has been increased under the Finance Bill from 39⅜ per cent. to 66⅜ per cent. *ad valorem*. Not more than 1/20th of the face value of this additional licence can be utilised for the import of fountain pen ink. Copying and coloured pencils whose c.i.f. value is not less than Rs. 20 per gross only can be imported against the additional licence.

The import policy for penicillin has been reviewed, and it has been decided to license separately the import of three types of bottled penicillin for which it had been earlier announced that import licences would not be valid. The three types are (1) crystalline penicillin, sodium or crystalline penicillin potassium, (2) crystalline penicillin procaine, and (3) procaine penicillin G.W.M. fortified with crystalline penicillin (sodium or potassium) (aqueous). The import licences for the three varieties will be issued for both general and soft currency areas on the basis of 50 per cent of half of best year's imports.

AGRICULTURAL CREDIT IN INDIA

NO NEED FOR NEW CENTRAL AGENCY

THE discussion on problems of agricultural credit in the Council of States on 24th April last, has served well to focuss the country's attention, once again, on this most vexed question of providing short-term finance for the ryot to carry on his agricultural operations remuneratively. The occasion for the discussion was provided by a resolution moved by Mr. N. G. Ranga who demanded the establishment of an All-India Agricultural Finance Corporation for facilitating expansion of rural credit. The debate on the resolution was inconclusive and will be resumed during the next session of the Council, if fresh notice is given and the motion secures a place in the ballot.

Although there was nothing new in Mr. Ranga's observations on the inadequate measures taken by the Government for supplying cheap rural credit to ryots, they deserve reiteration. The problem of agricultural indebtedness and rural credit is a very longstanding one. A number of committees has enquired into it, but very little has been done by the Government. In the circumstances, it is only natural that Mr. Ranga should have expressed his regret at this unsatisfactory progress even after independence. He said: "Though it was thought, at one time, that the war boom had reduced agricultural indebtedness, surveys have shown that only six per cent. of the agriculturists who owned more than 20 acres were benefited from the boom. The rest had actually suffered." While the total indebtedness might have been reduced, the reduction was, he observed, due mainly to the agriculturist selling away his land. Proceeding, he drew attention to the estimates by the Reserve Bank of India, of the agricultural credit requirements of India which were anything between Rs. 500 crores and Rs. 800 crores. Stating that the ryot was getting credit at about 24 per cent. interest, he asked: Can any other industry show progress if it is forced to get loans at such a rate of interest?

The mover of the resolution mentioned above then referred to the work done by the Reserve Bank of India in the sphere of agricultural credit. He said that the Reserve Bank of India was not performing its duty and responsibility of providing the credit. He gave figures regarding the amount of credit sanctioned by it through co-operative banks since 1946-47 to 1950-51. But these figures do not give a true picture of the assistance given by the Bank, as they do not include the figures for 1951-52 and 1952-53. The table below gives a better idea of the amount of credit advanced by the Reserve Bank of India to farmers through co-operative banks:

(In crores of rupees)

1946-47	0.15
1947-48	0.16
1948-49	1.02
1949-50	2.07
1950-51	5.37
1951-52	12.51
1952-53 (estimated)	15.00

It will be seen that there has been remarkable progress since, 1950-51 and, with the work now in hand, the Bank's advances are bound to increase. If the assistance rendered so far represents only a fraction of the total requirements, such is not due to any reluctance on the part of the Bank to extend credit facilities, but to certain legal limitations imposed on the Bank. It is a central bank which cannot directly participate in advancing loans at the farm level. In between the farmer and the Bank, there are agencies, namely, co-operative banks, which it can make use of as intermediaries to dispense the credit. So, in the first place, these agencies should be in sufficient number, which is not the case at present. The use of even those agencies that exist will be possible only, and if some of the legal restrictions on the Bank are relaxed. Steps are being taken in this direction and a move is afoot to amend the Reserve Bank of India Act in the light of experience gained so far by it. Legislation has been so framed as to place State co-operative banks on the same footing as scheduled commercial banks in respect of sale or rediscount of bills of exchange and promissory notes arising out of *bona fide* commercial trade transactions. Further, the period for which accommodation can be made available has been extended from nine months to 15 months. Again, recommendations have been made to the Government for making further changes in the law. The object of these recommendations is to include certain new categories of assistance such as short-term finance for mixed farming activities and processing of crops by agricultural producers, short-term finance for cottage industries through industrial co-operatives and, to a limited extent, medium-term finance for agricultural purpose. Besides, the area of operations of the Bank has been extended to include B States under the purview of the Act. Much headway would certainly have been possible, if some of the State Governments had come forward to encourage the development of the Co-operative Movement in their areas. It is a well-known fact that, so far, the growth of the Co-operative Movement has been confined only to a handful of States. All this is not to say that one is satisfied with the progress made by the Bank, as one has to admit that the process has been slow.

The setting up of an Agricultural Finance Corporation on the lines of the Industrial Finance Corporation, as pleaded by Mr. Ranga, has certain inherent difficulties. This Corporation, too, like the Reserve Bank of India, cannot be of much help if it does not establish direct dealings with the farming classes in the country. Such direct dealings for providing credit with millions of farmers are an impossibility, and, therefore, like the Reserve Bank of India, the Corporation too will find it necessary to seek the assistance of intermediaries such as the co-operative institutions. If that is so, it is difficult to see how the proposed Corporation can be in a better position than the Reserve Bank of India in dispensing credit. Instead of expending time, energies, and money on a new organisation such as the one suggested by Mr. Ranga, it is worthwhile concentrating increased attention on assisting the Reserve Bank to extend further not only the scope or area of operations of the Bank but also the provision of larger and freer flow of agricultural credit. In this context, the remarks of Mr. A. C. Guha, who intervened in the debate, are worth recording. He said: "The Government has every sympathy with the objectives of the resolution. But whether a central agency should be established or whether agricultural credit should be given through other means has to be explored. None of the committees which enquired into agricultural credit has recommended a central agency. In such a large country, it would not be possible for such a central agency to function effectively, specially for the purpose of short-term credit." Mr. Guha, continuing, stated that the Government had not a closed mind on the subject. He remarked that the Reserve Bank was at present conducting a further enquiry into the matter.

QUESTION HOUR IN PARLIAMENT

Foreign Ships Leaving Calcutta

THE Government is aware that while foreign ships leaving Calcutta port go almost fully loaded, Indian ships leaving Calcutta for the U.K. and Europe go with insufficient cargo. Shipping is in the private sector and export trade also is largely in private hands. It is for Indian shipping companies themselves to take the initiative for securing adequate cargo for their ships plying in the overseas trade. The Government can render only limited assistance in this direction. The Government is always anxious to take such practical steps as would help Indian shipping companies, and it is keeping the subject under constant review.

* * * *

Coastal Trade

Coastal trade has already been reserved for Indian shipping. Instructions have also been issued that Government cargo should be carried on Indian ships where they are available. It is true that countries like the U.S.A. and Japan have stipulated that a portion of cargo leaving their shores must be carried in their national ships. India is unable to imitate them in view of its small tonnage. But in recent trade agreements a shipping clause has been introduced whereby the goods will be carried in Indian ships.

—Deputy Minister for Transport

Porcelain Factory

The Government-owned Mysore Porcelain Factory at Bangalore has a proposal to expand the factory to manufacture high-tension insulators. The estimated cost of the expansion scheme is Rs. 75 lakhs. The installed capacity is 650 tons and it is proposed to expand it to 2,200 tons.

—Minister for Commerce and Industry

Oil Refineries

The total annual production of refined oil from all the three refineries, when in full operation, will be about 3.4 million tons. The total annual consumption of crude oil by the refineries will be about 3.8 million tons. The companies have made arrangements for ensuring the supply of crude oil. The annual consumption of refined oil is in the neighbourhood of 4 million tons at present.

—Minister for Production

Loans to States

Loans given by the Central Government to the State Governments during 1951-52 amounted to Rs. 76 crores, against the Budget estimate of Rs. 63 crores, but the original budget estimate of Rs. 63 crores was raised to Rs. 79 crores by supplementary appropriations of Rs. 16 crores sanctioned during the year. Rates of interest varied with the period of each loan and market conditions prevailing at the time it was sanctioned.

—Finance Minister

Servicing World Bank Loans

The World Bank has not put any "ceiling" on the amount of "hard money" that India can service and authorise on it. The Bank, however, makes its own assessment of India's capacity to service the loan whenever a loan is sought from it.

—Deputy Finance Minister

World Bank Loans

Negotiations have recently been initiated for a loan of $14.7 million from the International Bank for the Trombay Electricity Project of Tatas. Negotiations are also nearing completion for a loan of $8 million to the Industrial Financial Corporation to enable it to make advances to various industrial companies to meet their foreign exchange obligations.

—Parliamentary Secretary to Finance Minister

Exemptions From Industrial Provident Fund Scheme

600 applications have been received seeking exemption from the Industrial Provident Fund scheme. These are under the consideration of the Government. At present, the Act covers 33,650 factories employing 18,65,000 workers. Under the scheme, Rs. 1 crore is being collected every month.

—Deputy Minister for Labour

Consumption of Coal by Railways

Indian railways consumed approximately 3.9 million tons of metallurgical coal and six million tons of non-metallurgical coal in 1952. There are no specific restrictions on the use of metallurgical coal. About 12 million tons of metallurgical coal are consumed in the country. The production of certain selected grades of metallurgical coal has been limited to 7.4 million tons in 1953 and of grades I and II to the level of production in 1952. The opening of new mines for producing metallurgical coal is also not being allowed.

—Deputy Minister for Works, Housing and Supply

Grow More Food Drive

Out of a total provision of Rs. 125 crores for all the States for increasing food production under the plans, a sum of Rs. 86 crores will be contributed by the Central Government for 'G.M.F.' purposes during the Five-year Plan. The provision for agricultural development in the States includes expenditure on "G.M.F." programmes also. Apart from the Rs. 86-crore expenditure by the Centre, a special additional provision of Rs. 10 crores for minor irrigation schemes in 1952-53 has been made. Similar provisions will also be made for the remaining three years of the Plan. Short-term loans for the supply of fertilisers, seeds, etc., were also made from year to year. India has received from the Ford Foundation a sum of Rs. 60,86,260 for all the Ford Foundation projects administered by the Food and Agriculture Ministry.

—Deputy Minister for Irrigation and Power

Notices

THE MAFATLAL FINE SPINNING AND MANUFACTURING COMPANY, LTD.

NOTICE

THE TWENTY-SECOND ORDINARY GENERAL Meeting of the Shareholders of the Company will be held at the Registered Office, Maneckji Wadia Building, 127, Mahatma Gandhi Road, Fort, Bombay on TUESDAY the 2nd June, 1953, at 3-0 p.m. (S.T.), to transact the following business:—

1. To adopt the Directors' Report and Audited Balance Sheet and Profit and Loss Account as approved by the Directors for the year ended 31st December, 1952.
2. To declare Dividends on Preference Shares and Ordinary Shares.
3. To elect a Director in place of Mr. Natverlal Bhikhabhai who retires by rotation and is eligible for re-election.
4. To elect a Director in place of Mr. Bhupendra Bhikhabhai who retires by rotation and is eligible for re-election.
5. To elect a Director in place of Mr. Arvind N. Mafatlal who holds office till the General Meeting and is eligible for re-election.
6. To elect a Director in place of Mr. Yogindra N. Mafatlal who holds office till the General Meeting and is eligible for re-election.
7. To elect a Director in place of Mr. Laxmanprasad D. Vasa who holds office till the General Meeting and is eligible for re-election.
8. To elect a Director in place of Mr. Kumudchandra K. Mahadevia who holds office till the General Meeting and is eligible for re-election.
9. To appoint Auditors for the current year and fix their remuneration.
10. To transact any other business of the Company that may be placed before the Meeting by the Chairman.

The Share Transfer Books of the Company will be closed from Friday the 15th May to Friday the 5th June, 1953 (both days inclusive).

By Order of the Board,
SHAW WALLACE & CO., LTD.,
Managing Agents.

CALCUTTA, 18*th April*, 1953

SHARP FALL IN PROFIT OF MODERN MILLS

FINANCIAL POSITION COMFORTABLE

THE Modern Mills Ltd. (Managing Agents: Messrs. N. Sirur & Co. Ltd., Bombay) is one of the many mills in Bombay which were severely hit by the heavy fall in prices of cotton and the slashing of prices of cloth and yarn during the year 1952. The Company's gross profit for the year ended 31st October, 1952, at Rs. 3.91 lakhs, shows a fall of as much as Rs. 12.90 lakhs from that for the previous year. Expressed differently, the decline in profit is as much as 76.7 per cent. The year's profit is nearly the same as that for 1950 and is only half of that earned in 1947, one of the leanest post-war years for the cotton mill industry. Whatever little profit the Company has been able to make during the year under review was only from sales of cloth abroad. In the face of such heavy recession in earnings the Directors have found it necessary to cut the distribution to the shareholders from 14 per cent. to 10 per cent., which is, however, 2 per cent. more than that paid for 1950. It may also be noted that last year's distribution was made up of a dividend of 10 per cent. and a bonus of 4 per cent. Thus, the dividend part of the distribution has been maintained. Further, the cut in distribution is not as drastic as the fall in profit warrants.

Explaining the reason for the sharp fall in the earnings of the Company, the Directors observe in their report to the shareholders thus:

"The textile industry was faced with a severe crisis brought about by the sudden slump which set in about March, 1952. After the bulk of the cotton quotas was purchased at ceiling rates, the prices of the raw material declined precipitously, and the Government at once slashed down the prices of yarn and cloth, with the result that, for quite a long time, goods manufactured from high-priced cotton had to be sold at considerable losses. It was only when the Government, realising the gravity of the situation, relaxed the export controls that mills could sell some of their manufacture at better margins in the overseas markets. Your mills, however, being a composite unit with a large production of yarn to sell, was not much benefited, as yarn was practically not allowed to be exported and had to be sold at inland controlled prices. What little profits the Mills made was derived from the export sales of cloth during the year under report. The working of the Mills was also adversely affected by the cut imposed by Government in the electric power supply during the first eight months of the year under report. Although the Mills supplemented their power supply by installing their own generators, the production suffered to some extent."

The following salient features of the Company's accounts for the year under review, presented against the background of those for the previous three years, show how far the Company's fortunes have been affected by the above factors:

(In lakhs of rupees)

	For the year ended 31st October			
	1952	1951	1950	1949
Sale proceeds	163.92	159.94	114.13	122.06
Stocks of manufactured goods	40.44	39.44	19.61	25.96
Cost of raw materials purchased	109.87	114.67	70.08	70.59
Expenses	50.39	46.68	35.79	41.35
Gross profit	3.91	16.81	3.10	10.58
Managing agents' commission	0.43	1.72	0.37	1.09
Provision for—				
Depreciation	0.89	9.77	0.97	2.33
Taxation	0.28	0.35	..	3.10
Net profit	2.32	4.97	1.76	4.06
Other income	0.49	..	..	..
To reserves	0.47	1.55	0.04	0.70
,, gratuity	0.20	0.17	0.15	..
Dividend	2.21 (10%)	3.10 (14%)	1.77 (8%)	3.10 (14%)
Carry forward	0.24	0.81	0.16	0.86

The foregoing table clearly shows to what extent the cost of production remained high, despite the fall in production due to cut in electric supply. The provision for depreciation has been drastically reduced, but the Directors state that the cumulative depreciation provided so far is adequate. The extra income of about Rs. 49,000 (shown in the table) which supplements the net profit represents the profit on sale of machinery in previous years and surplus provision for bonus to staff at head office made in 1943 now written back. During the year, the Company received the final instalment of post-war refund of E.P.T. amounting to Rs. 1.98 lakhs. The Directors could have utilised a part of this sum to maintain the return to the shareholders. But they have chosen to follow the commendable policy of conserving the entire sum for the machinery rehabilitation reserve fund, which was created last year to enable the Company to meet the heavy expenditure that will have to be incurred in the near future in rehabilitating the existing old machinery. Not content with this addition, they have transferred to the same fund the sum of Rs. 47,228 from the year's profit also.

The Company's latest balance-sheet reflects a comfortable financial position. As against a paid-up capital of Rs. 22.13 lakhs, the reserves and surplus stand at Rs. 47.27 lakhs, that is well over twice the paid-up capital. Besides, the debenture loan of Rs. 12 lakhs there are secured loans amounting to Rs. 54.77 lakhs (which show a rise of Rs. 13.74 lakhs over the year) and unsecured loans of Rs. 8.34 lakhs (as against Rs. 8.08 lakhs). The increase in these liabilities is evidently due to the high price which the Company had to pay for cotton. The gross block of Rs. 101.01 lakhs, including the additions made during the year amounting to Rs. 9.18 lakhs, has been written down to Rs. 58.49 lakhs. The current assets aggregate Rs. 116.30 lakhs, made up of, in the main, stock-in-trade Rs. 96.44 lakhs, stores, spares, etc., Rs. 9.81 lakhs, debts, deposits and advances Rs. 5.66 lakhs and investments Rs. 4.26 lakhs. Despite the increase in loans taken, the current liabilities amount to only Rs. 93.38 lakhs and are more than adequately covered by current assets, the surplus of such assets over the current liabilities being Rs. 23.22 lakhs.

INDUSTRIAL PROFITS IN INDIA

The following comparative profits of the major industries of India for the years 1950, 1949 and 1948 were furnished by the Union Minister for Commerce and Industry last week in the House of the People, in reply to a question from a member:

(In crores of rupees)

INDIA UNITED MILLS LTD.

A full and complete investigation into the working of the India United Mills Ltd., Bombay, has been ordered by the Government of India. Mr. S. D. Chopra, a chartered accountant of Delhi, has been deputed by the Government for the purpose. This action is being taken under the provisions of the Industries (Development and Regulation) Act, because the Government is of the opinion that there is likely to be a rise in the price of coarse and medium cloth manufactured by the mill. The Government is also of the opinion that the industrial undertaking is being managed in a manner likely to cause serious injury or damage to the interests of the consumers of the mills' products or a substantial body thereof.

T.W.A.'S RECORD EARNINGS

The Trans World Airlines, Inc., earned a gross revenue of $160,702,790 during 1952, which is a record in the history of the Airlines and represents a rise of 13 per cent. over that for 1951. The net earning, after providing $6,034,000 for Federal income-tax, amounted to $7,660,588, as compared with $7,660,262 in the previous year. The year 1952 was the fourth successive one of profitable operation and the Directors have recommended a dividend of 10 per cent. to the stockholders.

The record revenue was accompanied by a reduction in unit operating costs during the past year, according to the Airlines' consolidated report. This record income would have resulted in a higher net income but for the "sharply reduced temporary U.S. mail rates established by the Civil Aeronautics Board for T.W.A.'s international operations."

(Concluded from next column)

made by your Directors, the Skenandoa Rayon Corporation have agreed to receive the amount due to them by way of commission in three equal instalments instead of in one lump sum. They have further agreed to receive the sum of Rs. 15,75,000 instead of Rs. 16,80,000 due to them. Out of these three instalments, the first has been paid during the report year and the remaining two instalments will be paid during the years 1953 and 1954. The rebate of Rs. 1,05,000 given by the Skenandoa Rayon Corporation has been suitably adjusted in the fixed capital expenditure in the balance-sheet."

The Company's latest balance-sheet underlines its need for conserving its resources, particularly in view of the programme for expanding its plant capacity. The present paid-up capital is Rs. 332.08 lakhs, as against which there are no reserves. The current liabilities amounting to Rs. 155.89 lakhs, include loans from the Industrial Financial Corporation of India of the order of Rs. 50.84 lakhs secured by mortgage of the fixed assets and from banks Rs. 47.09 lakhs secured by hypothecation of stock-in-trade, stores, raw materials, etc. There has been a net addition of Rs. 7.36 lakhs to the fixed capital expenditure during the year, bringing the gross value of the block to Rs. 427.10 lakhs. The total depreciation provided so far on this block amounts to Rs. 70 lakhs. The current assets aggregate Rs. 134.59 lakhs, including Rs. 3.50 lakhs, being the balance of underwriting expenses to be written off.

RESULTS OF NATIONAL RAYON IMPRESSIVE

ARREARS OF PREFERENCE DIVIDEND PAID OFF

IF the impressive performance of the ordinary shares of the National Rayon Corporation Ltd. (Managing Agents: Messrs. Chinai & Co., Ltd., Bombay) on the Stock Exchange in recent days—in the last three weeks alone, they have gone up by nearly Rs. 10 to Rs. 84—reflected the investors' satisfaction with the Company's results for the year ended 31st December, 1952, it was not because their fond hope of receiving the maiden dividend this year had been realised, but because the prospects of their receiving one at least next year have been rendered brighter by its achievements in the past year. 1952 represents the first full 12 months since the Company commenced production in March, 1951 and, during this period, its output exceeded the rated capacity of its plant. The gross profit for the year, amounting to Rs. 71.14 lakhs, shows a striking rise of Rs. 12.37 lakhs over that for the preceding year. This encouraging result has enabled the Company to pay off all the accumulated arrears of dividend on its preference shares for the three years 1949 to 1951, as also for the year 1952. The profit, however, does not permit the transfer of any sum to the reserves. Even the payment of the preference dividend to date has been rendered possible by the sizable surplus brought in from the previous year.

The following comparative table giving the salient features of the accounts for the last two years shows the Company's progress during the year under review:

	For the year ended 31st December	
	1952 Rs.	1951 Rs.
Sale proceeds	2,11,20,717	1,25,55,102
Stocks	59,66,603	43,50,671
Other income	1,13,821	87,288
Raw materials and stores consumed	1,16,51,848	79,67,241
Expenses	40,78,256	31,48,447
Gross profit	71,14,366	55,77,248
Managing agents' remuneration	3,99,237	2,76,117
Provision for depreciation	35,00,000	35,00,000
,, ,, taxation	54,833	..
Net profit	31,60,296	21,01,131
Underwriting expenses written off ..	3,50,000	94,364
Preliminary and other expenses written off.		3,27,882
Reserve for bad and doubtful debts ..	..	2,69,600
Dividend—		
Preference 5 per cent.	32,39,198†	8,55,198*
Ordinary	38,933	4,66,206
Carry forward		

* For the years 1947 and 1948. † For the years 1949 to 1952.

A point to be noted here is that the results for 1952 are not strictly comparable with those for 1951, in that the Company's factory worked throughout 1952, whereas in 1951 its production commenced only in July. In fact, during 1952, its production exceeded the rated capacity. Nevertheless, it is significant that the sale proceeds for 1952 are not proportionately higher. This is evidently due to the persistence during 1952 of the adverse trading conditions in the rayon yarn market which began in June, 1951. The uneconomic prices that prevailed in the market during the year considerably affected the profit-margin of the Company. This is indicated by the fact that the ratio of gross profit to sale proceeds is disproportionately lower in 1952 than in 1951. The appropriations of the gross profit are clearly indicated in the table and needs no explanation.

Reviewing the progress made and the trading conditions that prevailed during the year, the Directors observe, in their report to the shareholders, as follows:

"The shareholders may be gratified to know that the actual production during the report year exceeded the rated capacity of the plant. Your Directors have decided to expand the capacity of the plant by the addition of further spinning frames and other auxiliary equipment, orders for which are being placed. The very difficult supply position of the important raw materials which was experienced in 1951 eased off considerably in the year under report. The trading conditions during the year under report remained adverse and the prices of rayon yarn continued to rule low due mainly to overstocked position of the market consequent upon heavy imports, and at times severe competition from foreign makers. In spite of these unfavourable conditions the Company has been able to achieve the results as disclosed by the accounts mainly because of the higher efficiency at which the plant was operated, resulting in higher production. You will be also glad to know that the quality of the yarn produced at the plant has improved and is being considered on par with the best of the imported yarns."

The following observations of the Directors regarding the commission payable to the Company's associates, the Skenandoa Rayon Corporation of New York, will be read with interest:

"The shareholders may be aware that ordinary shares of the face value of Rs. 14,00,000 were reserved for allotment to the Skenandoa Rayon Corporation for the balance of commission payable to them. In view of the loan taken from the Industrial Finance Corporation of India, the Skenandoa Rayon Corporation had an option to receive the commission either in cash or in shares of the Company, which option they have exercised in favour of receiving cash. On a representation having been

Points From The Chair

Foreign Investment Should be Encouraged

"IN the context of capital formation, the use of foreign investments has not been ruled out. The views of a foreign industrialist, sympathetic to India, were prominently displayed a little while ago. It was stated that between the Government and the public, the Press and the Parliamentary opposition, a potential foreign investor is faced by a long series of nightmares. Many of these, however, have been exaggerated. It is, nevertheless, true that doubts are there and these should be removed, while the Government has resolved on an integrated plan of production in all spheres, encouragement should be afforded wherever possible and in whatever form it is practicable to increase the physical product-yielding facilities within the country, irrespective of the source of their financing. In this context, India should take a long and searching look at what has happened in Canada where the economy in the past 15 years has been transformed from one based largely on primary industries, such as agriculture, mining and forestry, to one which now includes a highly developed and wide range of manufacturing industries. Canadians will readily admit that the envious position in which their country now finds itself is not one entirely of their own making but has come about as a result of the favourable climate created by the wise and stable fiscal and monetary policies of the Government which, along with the natural resources of the country, has proved an attraction for outsiders possessed of the requisite capital and know-how."

K. C. MAHINDRA,
Indian Aluminium Co., Ltd.

Co-operation of Industrialists and Workers in Five-year Plan

"The authors of the Plan who include the Prime Minister and Finance Minister desire that this Plan should be carried out with the co-operation and enthusiastic support of the people of the country. They reject the idea that the methods which have been adopted in totalitarian forms of government may be copied for the quick realisation of the targets laid down in the Plan. They emphasise that the democratic constitution of the country and the democratic way of life to which India has subscribed, require co-operative effort and not compulsion. I trust that the significance of the emphasis on the democratic way of life and of the democratic constitution, which we have adopted, will not be lost either on the industrialists or even more on workers engaged in industries. Experience of other methods in other countries has shown that where short cuts are attempted in the carrying out of such economic plans, the result has been that the worker has lost his comparatively free and independent position and has become an unwilling unit in the mechanism of production, while the private sector has disappeared. It behoves, therefore, both industrialists and workers to justify the trust that has been reposed in them, both by the Planning Commission and the Government of India."

A. RAMASWAMI MUDALIAR,
T.I. Cycles of India Ltd.

Need for a Stable Price Level

"The break in prices of all commodities in the first quarter of 1952 tended to reduce the level of prices in the country and the index number of wholesale prices which stood at 432.2 points at the end of December, 1951, fell to 374.5 points by the end of December, 1952, a drop of nearly 13 per cent. The downward movement was the result of a combination of internal and international factors and marked the change-over from sellers' to buyers' markets. There was a gradual relaxation in controls over many commodities with the increase in the production of foodstuffs and industrial materials. A stable price level is necessary for increasing the pace of production and keeping full level of employment and the authorities must ever be watchful of these matters for effectively dealing with them."

YARLAGADDA SIVARAMA PRASAD BAHADUR,
Andhra Bank, Ltd.

Investors Should Make Sacrifice

"It would be a truism to say that high profits are no longer in keeping with the social philosophy governing our country. Similarly, improving the lot and life of those who work in industry, to the extent that the position of the industry would allow, is now an accepted policy of our country and an underlying principle of our Constitution. This undoubtedly involves a certain sacrifice on the part of the investors. But I am sure that, so long as this burden or the ever-increasing burden of taxation is within your means and within the scope of your earnings, you will not grudge it in the overall interests of our country, and our countrymen. The future for your Company may not be rosy; I may assure you, however, that, provided we all work with zeal and efficiency, it is not bleak."

GULABCHAND HIRACHAND,
Premier Construction Co., Ltd.

Bank Merger in Rajasthan

"A move for the amalgamation of the Rajasthan banks doing Government work is afoot under the aegis of the Reserve Bank of India. Your Bank is by far the largest amongst the banks concerned. A heavier responsibility, therefore, rests on the Board of your Bank than on the Boards of the other Rajasthan banks as regards the long-range assessment of practical benefits accruing from such a merger and its effect on the welfare of the shareholders, staff and customers of your Bank. The matter is under careful study at present and the entire scheme will be brought before you if your Directors are fully satisfied with the various pros and cons involved."

KHUSHALCHANDJI B. DAGA,
Bank of Bikaner Ltd.

COMPANY MEETING

T.I. CYCLES OF INDIA LIMITED, MADRAS

SIR A. RAMASWAMI MUDALIAR'S SPEECH AT THIRD ANNUAL MEETING

THE progress made in the manufacturing activity of T.I. Cycles of India, Ltd., Madras, was reviewed by Sir A. Ramaswami Mudaliar, Chairman of the Company, in the course of his address to the shareholders at their Third Annual General Meeting held in Madras on 13th April, 1953. He highlighted the arrangements made for giving training in the U.K. to skilled hands of the Company. Alluding to the Planning Commission's report, Mr. Ramaswami Mudaliar offered the Company's co-operation to the authorities for hitting the targets prescribed by the Commission:

The following is the full text of Sir Ramaswami Mudaliar's speech:

"It gives me great pleasure to be present at this third annual meeting of the shareholders of T.I. Cycles of India Limited, and to welcome you to this gathering.

"You will see from the Directors' report that the manufacturing activity in the factory has been kept continuous throughout the period under review.

"I stated at the last annual meeting that we have a regular programme of manufacturing various components which go into the formation of a cycle, and that we propose to manufacture as many parts in this country as possible and as quickly as possible. Notwithstanding these assurances and notwithstanding the fact that the very size of the factory, which was completed in 1951, must have indicated the nature of the work intended to be carried out in the factory and notwithstanding the fact that certain processes had already started by the end of 1951, there was a continuous stream of false propaganda by interested parties to misrepresent the position of this Company, the work it was doing and intended to do. However, the visit of officers of Government to your factory and of responsible Ministers has dispelled these mischievous and false rumours set afloat by certain individuals and, to-day I feel, I can state with some confidence that the Government of India is convinced that we are keeping to the assurances that we gave when the formation of this Company was first sanctioned by Government.

Second Factory Nearly Completed

"You will find from the Directors' report that the construction of a second factory for the manufacture of the components is stated to be making rapid progress and I am glad to announce to-day that this second factory is practically completed. The second factory, called Factory B, will house the capital goods necessary for the manufacture of the component parts, and capital goods worth about Rs. 30 lakhs have either been received or are in the course of despatch, the Government having been pleased to give the necessary licences therefor.

"I have referred to the need for training skilled hands and for the rapid progress we are making therein. We have necessarily to get trained Indians in supervisory capacity and, in accordance with the policy of the Company and with the ready co-operation of our British collaborators, we are deputing trainees from time to time to the U.K. for undergoing training in our associate factories in Birmingham, and elsewhere, in various branches of the manufacture of cycle parts.

"Towards the end of 1951, the Hon'ble Mr. Karmarkar, now Minister of Commerce, visited our factory and during the current year both the Hon'ble Mr. T. T. Krishnamachari, Minister of Industry and Supply, and the Hon'ble Mr. V. V. Giri, Minister of Labour, have paid very welcome visits to the factory.

"It is gratifying to note that the Company has made a substantial profit. The Directors, however, anticipating your approval from the fact that the policy enunciated at the last annual meeting met with your concurrence, have proposed that full depreciation under various heads should first be provided before the net profit is allocated for any other purpose. 20 per cent. initial depreciation on all new machinery and 10 per cent. on buildings and the further extra depreciation of 10 per cent. on machinery allowed by the Government have all been, therefore, provided for in addition to the normal depreciation. This cautious policy has several advantages which it is unnecessary to dilate upon.

"Our collaborators in Great Britain have assured us that all help will be given to the Indian manufacturing concern. They have agreed to send from time to time their own experts to supervise the manufacturing processes in your factories and to guide the local officers, if necessary, in maintaining the quality of these products.

"We had the pleasure of welcoming one of the British Directors, Mr. Arthur Chamberlain, who visited us in February this year. His impression of the factory and the progress that has been made by us is gratifying. We hope to have the pleasure of welcoming the other British Director, Mr. Stedeford (Chairman of Tube Investments), some time during the closing months of the year.

Co-operation With Government Assured

"I would like to refer to an event of some significance which occurred during the closing months of the year under review. The final report of the Planning Commission has been published and the Government of India has adopted its recommendations. It is hardly necessary for me to state that your Company will do its best to meet the targets prescribed and to co-operate wholeheartedly with the Government in ensuring the successful completion of the Five-year Plan.

"Apart from the fact that the Plan visualises development, through the private sector, of several industries, I would like to draw your attention to a most significant statement in the Plan. The authors of the Plan, who include the Prime Minister and the Finance Minister, desire that this Plan would be carried out with the co-operation and enthusiastic support of the people of the country. They reject the idea that the methods which have been adopted in totalitarian forms of government may be copied for the quick realisation of the targets laid down in the Plan. They emphasise that the democratic constitution of the country and the democratic way of life to which India has subscribed, require co-operative effort and not compulsion. I trust that the significance of the emphasis on the democratic way of life and of the democratic constitution which we have adopted will not be lost either on the industrialists, or even more on workers engaged in industries. Experience of other methods in other countries has shown that where short cuts are attempted in the carrying out of such economic plans, the result has been that the worker has lost his comparatively free and independent position and has become an unwilling unit in the mechanism of production, while the private sector has disappeared. It behoves, therefore, both industrialists and workers to justify the trust that has been reposed in them, both by the Planning Commission and the Government of India.

"In conclusion, I should like to express on behalf of the Directors and on your behalf our appreciation of the devoted services of all the members of the staff both at the head office, in the branches and in the factory and, in particular, the workers for their enthusiastic co-operation in seeing that the concern is a success."

SHREE KRISHNA GYANODAY SUGAR REPORTS HIGHER PROFIT

CAMBODIA MILL PRUNES DIVIDEND

Shree Krishna Gyanoday Sugar Ltd.

THE directors of the above Company (Managing Agents: Messrs. Sahu Jain Ltd., Dalmianagar) submitted the audited accounts of the Company for the year ended 31st July, 1952.

After writing off depreciation amounting to Rs. 6,65,058 (Rs. 6,70,119), the year's working resulted in a net profit of Rs. 16,72,299 (Rs. 14,16,347). To this was added Rs. 27,889 (Rs. 2,042), brought forward from last year making a total of Rs. 17,00,188 (Rs. 14,18,389).

The directors distributed this amount in paying dividends for the year ended 31st July, 1952, to the shareholders as on 30th April, 1953, on 6,000 "A" class preference shares at Rs. 6 (Rs. 6) per share, free of income-tax Rs. 36,000 (Rs. 36,000), on 12,000 "B" class preference shares at Rs. 5 (Rs. 5) per share, free of income-tax Rs. 60,000 (Rs. 60,000), on 2,00,000 ordinary shares at Re. 1-8 (Re. 1) per share, i.e., 15 (10) per cent. free of income-tax Rs. 3,00,000 (Rs. 2,00,000), set apart for providing for taxation Rs. 7,00,000 (Rs. 6,70,000), and transferring to general reserve [making same at Rs. 17,00,000 (Rs. 11,00,000)] Rs. 6,00,000 (Rs. 4,25,000) leaving to be carried forward the balance of Rs. 4,188 (Rs. 27,889).

During the cane crushing season 1951-52, the position was as under:—

	Cane crushed Mds.	*Sugar produced* Mds. Srs.	*Recovery* Per cent.
Hathwa ...	26,24,804	2,74,292 10	10.45
Lauriya ...	29,68,623	3,04,651 16	10.26

Production of alcohol and spirit during the year under review was 7,52,572 bulk gallons, as compared to 5,64,558 bulk gallons in 1950-51. The same will be even higher in the current year. During the current year, cane crushed at Lauriya is highest ever achieved. Crushing in the current year is expected to exceed by about 6 to 7 lakh maunds cane over that of 1951-52 and the factory is still working. Hathwa sugar factory has also crushed higher quantity of cane during the current year. The project of laying tramway line at Hathwa for the purpose of increasing cane supply has not yet been completed. In this connection necessary formalities are being gone into and it is expected that the tram-line would be completed before the start of crushing season 1953-54. With a view to improving quality of sugar and reducing manufacturing losses, the sugar factory at Hathwa is being converetd into a double carbonation plant and the same is expected to work with changed process in the next crushing season. The prospects of profits of the current year are also expected to be satisfactory.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	38,00,000	Block ...	54,30,149
Debentures ...	15,00,000	Stock ...	64,60,907

	Rs. 1,56,09,452		Rs. 1,56,09,452

Cambodia Mills, Ltd.

The directors of the above Company (Managing Agents and Secretaries: Messrs. Peirce, Leslie & Co., Ltd., Coimbatore) submit the audited accounts of the Company for the year ended 31st December, 1952.

The result of the Company's working for the year after allowing Rs. 1,59,553 (Rs. 1,60,054) for depreciation is a profit of Rs. 4,16,041 (Rs. 7,99,516), to which is added the unappropriated profit brought forward of Rs. 55,358 (loss of Rs. 1,39,158), making a total of Rs. 4,71,399 (Rs. 6,60,358). From this is deducted dividend paid on cumulative preference shares at 7 per cent., free of income-tax, for the year ended 31st December, 1952, Rs. 7,000 (Rs. 7,000), and provision for taxation Rs. 1,71,000 (Rs. 1,68,000), leaving a balance of Rs. 2,93,399 (Rs. 4,85,358). This amount the directors propose to deal with as follows:

To pay a dividend of 10 (12½) per cent., free of income-tax, on the ordinary shares of the Company Rs. 2,00,000 (Rs. 2,50,000) and to carry forward Rs. 93,399 (Rs. 55,358).

The accounts show a considerable decrease on the profit earned for the year ended 31st December, 1951, and this can mainly be ascribed to the very difficult trading conditions experienced during the past year.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	21,00,000	Block ...	14,20,771
Reserves ...	16,31,836	Stock ...	17,66,735
Provision for taxation ...	10,716	Stores, tools, etc. ...	2,93,235
Liabilities ...	9,62,715	Debts, deposits and advances ...	6,35,830
Profit and loss account ...	93,399	Investments	1,39,427
		Cash ...	5,42,668
	Rs. 47,98,666		Rs. 47,98,666

Coonoor Tea Co., Ltd.

The directors of the above Company (Secretaries: Messrs. Matheson, Bosanquet & Co., Ltd., Belmont, Coonoor) submit the audited accounts of the Company for the year ended 30th September, 1952.

A crop of 195,637 lbs. made tea was secured against an estimate of 210,000 lbs., which compares with a crop of 218,766 lbs. obtained during last season. The crop was short of the estimate by 14,363 lbs., chiefly due to adverse weather conditions during the latter half of the season and on account of some blister blight infection. The crop was sold at a net average of 158.21 cts. compared with 186.98 cts. per lb., the fall in average price being due to the slump that prevailed from February, 1952 onwards. The total capital expenditure during the year amounted to Rs. 24,940 (Rs. 10,971).

After providing for depreciation, taxation, etc., the profit for the year amounted to Rs. 53,467 (Rs. 1,30,566), to which is to be added the balance brought forward from the previous season of Rs. 53,134 (Rs. 6,526), making a total of Rs. 1,06,601 (Rs. 1,37,092). The balance after appropriating Rs. 9,000 (Rs. 9,000) being 6 per cent. preference dividend and Rs. 12,493 (Rs. 18,740) being 5 (7½) per cent. interim-dividend free of tax is Rs. 85,108 (Rs. 1,09,352), from which the directors recommend a payment of 12½ (22½) per cent. final dividend free of tax, absorbing Rs. 31,233 (Rs. 56,219) and to carry forward the balance of Rs. 53,875 (Rs. 53,134) to the current season.

A crop of 2,10,000 (2,10,000) lbs. is estimated for the season 1952-53. Cost of production is estimated at 124.29 (112.67) cts. per lb. (including 16.73 (16.26) cts. for manuring. The estimate for capital expenditure of Rs. 9,760 covers the following:—

Dismantling and reconstructing old lines at Kodamalai with 4 labour quarters Rs. 7,600, building 4 chimneys on 4 cottage type sets Rs. 240, and four bathing rooms for Peargarden lines at Guernsey Rs. 1,920.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	3,99,860	Block ...	4,12,114
Reserves ...	1,66,204	Stock ...	54,040
		Stores ...	8,500

Liabilities ...	13,208	Investments ...	1,27,333
Profit and loss account ...	85,108	Cash ...	55,444
	Rs. 6,64,579		Rs. 6,64,579

Assam Match Co., Ltd.

The directors of the above Company (Managing Director: T. H. Rydin, Esq., Bombay) submit the audited accounts of the Company for the year ended 31st December, 1952.

The trading result of the year has been satisfactory. The factory worked to its full capacity and sales continued good. The factory and other property of the Company, have been adequately maintained. Rs. 2,13,313 (Rs. 1,55,762) has been provided for depreciation on buildings and machinery. A sum of Rs. 1,84,104 (*nil*) has been received from Government on account of post-war refund of E.P.T., after deducting Rs. 1,22,723, for taxes, in respect of the optional and compulsory deposits made for the years 1942 to 1946. The aforesaid amount of Rs. 1,84,104 has been transferred to the general reserve fund. For 1952, a provision of Rs. 4,20,000 (Rs. 3,80,000) has been made for taxation.

The net profit for the year, after providing for depreciation and taxes for 1952, as aforesaid, is Rs. 5,85,308, (Rs. 4,81,686) to which should be added the sum of Rs. 1,00,602 (Rs. 1,18,916), being the balance carried over from last year, making a total of Rs. 6,85,909 (Rs. 6,00,602), which the directors recommend may be dealt with as follows:—

To pay a dividend for the year ended 31st December, 1952 at the rate of 7½ (7½) per cent. per annum (i.e., As. 12 per share) free of income-tax absorbing Rs. 1,50,000 (Rs. 1,50,000), to pay a bonus for the year ended 31st December, 1952 at the rate of 5 (5) per cent. per annum (i.e., As. 8 per share) free of income-tax, absorbing Rs. 1,00,000 (Rs. 1,00,000), to set aside for dividend equalisation fund Rs. 50,000 (*nil*), to set aside for general reserve Rs. 2,50,000 (Rs. 2,50,000) and to carry forward to next year's account Rs. 1,35,909 (Rs. 1,00,602).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.

Belsund Sugar Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Bangur Brothers, Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 30th September, 1952.

The results for the year, after providing for depreciation showed a profit of Rs. 7,32,732 (Rs. 7,96,837), from which has been deducted for taxation reserve Rs. 3,25,000 (Rs. 3,10,000) leaving a balance of Rs. 4,07,732 (Rs. 4,86,837). To this sum had been added the carry forward from the previous year of Rs. 2,24,419 (*nil*) leaving at credit of profit and loss account Rs. 6,32,151 (Rs. 4,86,837). This balance the directors disposed off as follows:

Transferred to reserve Rs. 2,00,000 (Rs. 1,00,000), made payment of dividend at As. 12 (As. 10) per share free of income-tax for the year ended 30th September, 1952, Rs. 1,94,903 (Rs. 1,62,419) and carried forward the balance of Rs. 2,37,248 (Rs. 2,24,418).

The factory commenced crushing on the 20th December, 1951 and finished on the 1st of May, 1952 with a total crush of 23,13,192.50 (20,00,741.50) maunds of sugarcane. The quality of the cane available was normal and the recovery was 10.86 per cent.—the highest yield in the last six years. The quality of sugar was maintained.

The cane price was Re. 1-12 (Re. 1-12) per maund and cane cess was levied at As. 3 (As. 3) per maund. Cane co-operative society commission was during the year, increased to pies 9 per maund of cane against As. 7½ per maund in the previous year.

During the year, the Government of India introduced a new policy of partial decontrol of sugar. There was also record production in sugar industry as a whole during this year and these two factors contributed a depressing effect on sugar prices.

Building was maintained in good order. There were some minor additions in staff bungalows during the season. The major additions to plant and machinery were a w.i.f. boiler and fifth mill plant.

During the season 1952-53 the cane supply is expected to be more than that of the last year. This year the Government has not controlled the sugar price though minimum cane prices have been fixed. By an announcement the Government of India has reduced the sugar price of 1951-52 stock to Rs. 27 per maund from 1st of December, 1952 and the difference shall be paid by the Government itself. An additional excise duty of Re. 1 per maund has been levied on sugar to be produced during the season 1952-53.

Full provisions for bonus upto season 1951-52 had been made in the account excepting bonus on free sugar awarded by the Tribunal for the year ending 30th September, 1951. The appeal of the award is pending in the Court of the Labour Appellate Tribunal, Calcutta.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	19,49,050	Block ...	6,94,063

Orient Paper Mills Ltd.

The directors of the above Company (Managing Agents: Messrs. Birla Brothers, Ltd., Calcutta) submitted the audited accounts of the Company for the half-year ended 30th September, 1952.

After payment of the managing agents' remuneration, directors' remuneration and transfer of Rs. 5,00,000 (Rs. 8,00,000) to general reserve and Rs. 15,00,000 (Rs. 6,00,000) to reserve for repairs and renewals and providing for depreciation and taxation and taking into account the balance of the previous half-year, there remained a surplus of Rs. 7,87,508 (Rs. 7,48,505), which the directors disposed of as under:

Dividend on 20,000 preference shares at 5½ (5½) per cent. per annum, free of income-tax, Rs. 55,000 (Rs. 55,000), dividend on 60,000 preference shares at 5½ (5½) per cent. per annum, subject to income-tax Rs. 1,21,687 (Rs. 1,21,687), and dividend on 4,19,500 ordinary shares of Rs. 10 each fully paid up at Re. 1 (Re. 1) per share, free of income-tax Rs. 4,19,500 (Rs. 4,19,500), leaving a balance to be carried forward of Rs. 1,91,321 (Rs. 1,52,318).

The mills worked satisfactorily during the half-year.

Accounts in brief were as under:—

PREMIER CONSTRUCTION COMPANY LIMITED

MR. GULABCHAND SAYS OUTLOOK NOT BLEAK

AT the Thirty-third Ordinary General Meeting of the Premier Construction Company, Ltd., held at Bombay on 28th April, 1953, the shareholders were informed by their Chairman, Mr. Gulabchand Hirachand, that there was no reason for them to be apprehensive of the results of the Company for the current year, as the industrial expansion resulting from the implementation of the Five-year Plan was bound to bring a rising trend of business. This reassuring statement was made by Mr. Gulabchand in order to disabuse the impression in the minds of the Company's shareholders that the decline in the business of the various companies, the shares of which were held by this Company, might adversely affect its results. He remarked confidently: "The future of your Company may not be rosy, I may assure you, however, that, provided we all work with zeal and efficiency, it is not bleak."

The following is the full text of the speech delivered by Mr. Gulabchand at the meeting:

"Before I begin to deal with the items on the agenda, I feel I must make a reference to the sad demise of Seth Walchand Hirachand, the founder of your Company and Chairman of its Board of Directors for many years. Though Seth Walchand had retired from active participation in the affairs of your Company for the last two or three years, you are well aware of his deep interest in the welfare of this concern, which he had so fondly originated and reared to its present proud position in the economic structure of our country. Taking into consideration your feelings on this occasion, I would suggest that, if you so desire, you might express your feelings, in a suitable manner, for this great loss, which we have all suffered, after the conclusion of my speech and before we begin the formal business of the day.

Composition and Structure of the Company

"I take it that you are aware of the nature, composition and structure of your Company. I think it would make for smooth despatch of business and avoid any misunderstanding, if I explain to you the implications of our position. Your Company holds shares in a number of other companies. These other companies, in which your Company has holdings, are separate industrial entities under the law, with their own constitution, management and Board of Directors. The final authority on the management of these companies as well as the authority sanctioning the policies and the balance-sheets and statements of accounts are the general meetings of the shareholders of each of these companies.

"Any questions, or discussion with regard to the affairs or the management of these companies, therefore, would be out of place on this occasion. The balance-sheets and statements of accounts for their respective years are, as required in law, included in your Directors' report and statement of accounts of your Company merely for your information. It may not be possible for me and your Board of Directors to supply any further information on the affairs of these companies at this meeting, beyond what is included in the statement of accounts and balance-sheets printed as a part of this report.

"With your permission, I shall take this report and the statement of accounts of your Company for the year ended 31st December, 1952, which has been in your hands for some time, as read. As I had already indicated in my speech last year, the various companies, in which your Company is interested and draws its income from by way of dividends, are engaged in so many industries of varying nature that it would be very difficult to attempt a review of their workings. The industries covered by these companies, in which your Company holds shares, are construction engineering, manufacturing of engineering materials and machines, such as Hume pipes, rials and machineries, such as Hume pipes, railway fittings, fans, castings and oil engines and cultivation of sugarcane and other crops, as well as manufacture of sugar, *vanaspati*, industrial alcohol, etc.

General View Encouraging

"Except in a rising tide of inflation and a sellers' market, one cannot expect all the companies to have uniform success. While it is possible that, the atmosphere in a particular year, being favourable, some of them might be very successful; in the case of others, for various reasons, this success may be more modest, while still in the case of some, for reasons easily understandable, there may be little or no profits in any particular year. But the spreading out of the resources of your Company in various fields ensures better average return than if any concern like yours were to put all its eggs in one basket. If one company does not pay well, the other is bound to succeed better and so the average outturn is more satisfactory than would be the case, if their activities were all in one direction only. I have, therefore, to request you to take a general view of the total results obtained in the year under report, as detailed in the profit and loss accounts of your Company. I am certain that you will find these results very encouraging, considering that the year was one of a heavy slump.

"For the same reasons as I have outlined above, it is also difficult for me to assess in any manner the probable outcome of the returns at the end of the current year. The diversity of the activities of the various companies in which your Company is interested makes such a general bird's-eye view impossible. In addition to this, there is always the uncertainty which attends on changing Government policy with regard to industry in general or to specific industries. This policy is often conditioned not so much by purely economic considerations as by political factors and election prospects. This makes it all the more difficult to make definite prognostications with regard to even immediate future. Therefore, even if I were to attempt it, it would not serve as a reliable and useful guide for basing your anticipations. All I can say is that, as a result of the industrial expansion, which is bound to follow in various fields as a result of the Five-year Plan of our Government, there is no reason for you to be apprehensive about the results for the current year, except to the extent that these results would be conditioned by heavy taxation and increasing cost of production, due to labour legislation in advance of what the conditions of various industries would justify. This is a common factor reducing the future margins of profit for all industries, and to that extent it is bound to operate in the case of industries in which your Company is a participant.

A Truism

"It would be a truism to say that high profits are no longer in keeping with the social philosophy governing our country. Similarly, improving the lot and life of those who work in industry, to the extent that the position of the industry would allow, is now an accepted policy of our country and an underlying principle of our Constitution. This, undoubtedly, involves a certain sacrifice on the part of the investors. But I am sure that, so long as this burden or the ever-increasing burden of taxation is within your means and within the scope of your earnings, you will not grudge it in the overall interests of our country, and our countrymen. The future for your Company may not be rosy; I may assure you, however that, provided we all work with zeal and efficiency, it is not bleak.

"Gentlemen, you must have already taken a note of the improved business and profits of your Company during the year, as shown in the balance-sheet, and I am certain that in view of this, it will be your desire to put on record our sense of appreciation of the manner in which the staff of your Company have discharged their responsibility and coped cheerfully with the growing volume and complexity of the work of your Company."

COMFORTABLE CONDITIONS IN MONEY

(From Our Own Correspondent)

BOMBAY, 29th April

Conditions in the short-term money market remained comfortable during the week under review. There was no glut of funds, but supplies were on a larger scale than in recent weeks. At the same time, the demand for money was also good, with the result that there was a larger turnover. The inter-bank call rate was maintained almost throughout the week at 2½ per cent. among the Exchange banks and big Indian banks. However, on Saturday last after clearing hours, some surplus funds were offered at 2 per cent. Some old call money was still being renewed at 2¾ per cent. The rate among the smaller Indian banks remained unchanged at 3 per cent.

Some of the banks, which had till now been earning 3 per cent. on their surplus funds in the inter-bank call, are now stated to be turning to Government securities, thereby earning 1 per cent. more on their funds, being the difference between the present call money rate and yield on Government securities.

Banks were unwilling to pay competitive rates for term deposits. Although they were freely offering 2¾ per cent. for 1 to 3 months last week, this week some of them were reluctant to pay that much. Six months' deposits were offered 2 to 2½ per cent.

Despite the comfortable conditions in the market, response to the weekly tenders for Rs. 1 crore of three months' Government of India Treasury Bills was not encouraging, the amount offered this week being Rs. 100.50 lakhs, as against Rs. 129.50 lakhs offered last week. The average rate of accepted tenders again remained unchanged at Rs. 2-7 per cent. per annum.

There has been a contraction of Rs. 5.72 crores in notes in circulation during the week ended 24th April, 1952, in continuation of the fall of Rs. 75.59 lakhs in the previous week. The Reserve Bank's statement for that week, which discloses this, also shows a rise of Rs. 6.53 crores in notes held in the Banking Department. The increase of Rs. 30.72 lakhs in total notes issued is covered by a corresponding rise in rupee coin. A rise of Rs. 5.79 crores in deposits of the Central Government and a decline of Rs. 1.36 crores in those of other Governments are noted on the liabilities side of the Banking Department. Deposits of banks and others have also fallen by Rs. 1.97 crores and Rs. 1.47 crores, respectively. On the assets side, cash has risen by Rs. 6.53 crores, while balances held abroad have declined by Rs. 5.67 crores. No noteworthy variations are seen in loans and advances to Governments and other loans and advances, but there has been a sizable increase in advances against usance bills. The total amount of such advances availed of by the banks shows an increase of Rs. 4.70 crores over the week, but the outstanding advances are higher by only Rs. 2.45 crores. This indicates a repayment of Rs. 2.25 crores during the week. Treasury Bills purchased and discounted have gone up by Rs. 1.44 crores.

The consolidated statement of Scheduled Banks for the week ended 17th April, 1953, records a decline of Rs. 2.77 crores in banks' demand deposits and a rise of Rs. 1.88 crores in time deposits. Inter-bank borrowings are higher by Rs. 59.33 lakhs. Borrowings from the Reserve Bank and the Imperial Bank have gone down by Rs. 2.35 crores and Rs. 92 lakhs, respectively. Advances have declined by Rs. 6.66 crores, but bills discounted and purchased have risen by Rs. 2.07 crores. Investments reveal no change, as also cash-on-hand and balances with the Reserve Bank. Balances with other banks are lower by Rs. 75.54 lakhs, but money at call and short notice are higher by Rs. 55.94 lakhs.

The Gilt-edged market continued to be firm this week also, with a further all-round appreciation in prices. There was some investment demand from institutions, but, in the absence of sufficient floating stocks, the volume of business transacted was limited. Though the Reserve Bank resumed sale of some securities, namely, 3 per cent. 1963-65, 3 per cent. 1964 and 3 per cent. 1970-75, during the week, this had little effect on the prices, as the Bank had raised its selling rate. 3 per cent. 1953-55 was stagnant at Rs. 100-1. 3 per cent. 1957 moved up by an anna to Rs. 98-13, but closed lower at Rs. 98-12. 3 per cent. 1958 improved by As. 2 to Rs. 98-10 and 3 per cent. 1959-61 by as much as As. 3 to Rs. 96-9. 3 per cent. 1963-65 and 3 per cent. 1964, each advanced by As. 4 to Rs. 92-14. 3 per cent. 1966-68 was marked up by As. 2 to Rs. 90-9 and 3 per cent. 1970-75 was in good demand and went up by As. 3 to Rs. 86-12. 3 per cent. 1986 Conversion Loan spurted from Rs. 82-2 to Rs. 82-12.

There was no variation in the rupee-U.S. dollar rate during the week, but minor fluctuations were noted in New York in the sterling-dollar rate. The spot rate for sterling, after hardening from $2.81-11/16—2.81-13/16 to $2.81⅞—2.81¹⁵⁄₁₆ came back to $2.81-11/16—2.81-13/16 yesterday. The forward rate for three months closed at $2.81-1/16—2.81-3/16, as against $2.81—2.81⅛, but that for six months stood unchanged at $2.80⅞—2.80⅝.

KIPS WEAK

(From Our Own Correspondent)

MADRAS, 27th April

The kip market has ruled weaker and U. K. buyers have been offering lower prices. But sellers think that prices have now touched the bottom and cannot decline further. Demand has been mostly for lower grades in kips and for buff calf. There are patchy enquiries for cow calf and buff hides and the market is dull.

The tanned skins market has ruled firm. There has been good clearance of stocks of tanned sheep skins in the market with prices remaining higher by As. 4 to As. 6, as compared with the previous week. Prices of goat skins are also higher by As. 2 to As. 3.

BULLION IRREGULAR

(From Our Own Correspondent)

BOMBAY, 29th April

After displaying a soft tendency at the close of last week, the silver section of the bullion market was somewhat erratic during the week under review, but the undertone was bullish, with prices recording a further gain of As. 14 per 100 tolas over the week. Gold, too, was a little irregular, but finished with a loss As. 11 per tola on balance.

Although the atmosphere was favourable for a further spurt in prices, what with a satisfactory offtake from up-country centres, encouraging advices from Calcutta and persistent support from a section of the bull operators, silver failed to make a steady advance, as one of the prominent bull operators continued to sell. Trading on the whole, however, was thin and day-to-day movements were within a narrow range.

Opening the week at Rs. 160-13 silver for forward delivery (1st May settlement) advanced to Rs. 162-15 on Friday last on good buying support, induced by reports of good offtake from Kanpur and Delhi markets. It, however, reacted to Rs. 161-6 on the same day on selling by a prominent bull, but there was a spurt to Rs. 163-4 on Saturday. Lack of follow-up support and a slackening in offtake brought the price down again to Rs. 161-0 yesterday. The belief that, when the current settlement falls due, there would not be any delivery of silver encouraged buying towards the close, which pushed up the rate to Rs. 163 today. The closing rate was, however, a shade lower at Rs. 162-1.

Silver for forward delivery in the second settlement (end of May) began at Rs. 161-1 and touched a high of Rs. 163-7 on Saturday. Yesterday, it touched a low of Rs. 161-4 and closed today at Rs. 162-3.

Ready silver (.996 Mint) advanced from Rs. 161-1 to Rs. 163-8, but closed at Rs. 162-5. The floating stocks of silver are placed at 1,100 bars. The daily average offtake was 30 bars.

Gold for forward delivery (30th April settlement) began at Rs. 87-5 and hardened to Rs. 87-12 on Saturday due to steady offtake. As this level, there was some liquidation by the bulls and it drifted to Rs. 86-1 yesterday. Thereafter, aided by bear covering and fresh buying in ready as well as forward positions, the yellow metal improved to Rs. 87-2 to-day. With fresh arrivals and a fall in offtake to-day, there was a reaction to Rs. 86-11 at the close.

Gold for forward delivery in the second settlement opened at Rs. 87-5 and went up to Rs. 87-10 and closed at Rs. 86-10.

Ready gold improved from Rs. 87-10 to Rs. 88 before winding up at Rs. 86-15. The floating stocks of gold are estimated at 30,000 tolas. The daily average arrivals were 6,000 tolas, while the offtake was 5,000 tolas on an average.

In the international free market, gold was quiet at $36.90 per fine ounce.

The following comparative table shows the trend of the market during the week under review:

	29-4-53	Highest	Lowest	22-4-53
GOLD	Rs. a.	Rs. a.	Rs. a.	Rs. a.
Ready (.99 fine Mint)	86 15	88 0	86 5	87 12

PEPPER IMPROVES

(Messrs. Parekh & Co.)

BOMBAY, 29th April

During the earlier part of the week, pepper market ruled quiet in sympathy with the easier advices from New York where there were re-sellers at $1.29 to $1.30 per lb. c. & f. much below the replacing parity. There was no business at Alleppey, as growers were reserved sellers even at Rs. 3,000, buyers asking Rs. 2,900. In the delivery section, Bombay ruled weak under pressure of selling by bears, who thought that the present dearth in the export demand would make the growers nervous and they would soon be forced to sell at lower limits to meet buyers. But, contrary to the expectation, the growers remained tight sellers and were reluctant to bring down pepper from the interior for marketing in the terminal centres of the coasts, in spite of the approaching monsoon. In the later part, however, the market improved, as the dealers had to buy against their sales for April shipment. Bombay also showed improvement in May and June deliveries, though there appeared off and on some short sellings by Singapore merchants who are said to be bearish on account of the present weakness in rubber and tin. The position of pepper in India appears to be intriguing, particularly in face of poor demand, smaller export, approaching monsoon, the impending competition from Lampong and Sarawak and the prospects of Korean Peace. Such strong resistance of sellers at this time of the season, according to a knowledgeable source, is attributed to a smaller final production than earlier estimated.

The following are to-day's nominal quotations: Ready delivery Rs. 380 per Bengal maund; May delivery Rs. 2,550-80 and June delivery Rs. 2,560-90 per candy of 5¼ cwts.

FORWARD COTTON FIRM

(From Our Own Correspondent)

BOMBAY, 29th April

The question of forward trading in the 1953-54 season's crop has already begun to exercise the mind of the cotton trade. This question has assumed a greater significance just at present, because operators find it very difficult to have dealings in the August Delivery Contract, for want of another contract ahead of this delivery to slide into when the actual time for delivery comes. But for such a contract, as the supply position stands at present, few will be inclined to offer any cotton for sale for August delivery and if there are no sellers the market cannot function. It is feared that by August, there will be little cotton left by way of floating stocks to tender against maturing contracts. The longs by merely sitting tight could then push prices up to the ceilings and squeeze the shorts to this limit. No shorts would, of course, be shortsighted enough not to notice this trap. Further, continuity and liquidity of forward contracts cannot be regarded as a goal in itself of cotton trading. And so the efforts of the more obstreperous section of the forward trade in cotton who are trying to hustle the Government of India into allowing forward trading in the new crop are likely to meet with failure.

The forward market is allowed to function because it aids the spot market and enables mills, merchants, ginners and producers to dispose of, to secure and to store the year's crop. The present position for the remaining few months of the year is such as to obviate the necessity for any aid from the forward market by way of elimination of risk for those holding cotton. This cotton, whether held by merchants or mills, because of the statistical position, is not likely to undergo any price reduction. To that extent forward trading becomes redundant and purely speculative. The authorities are likely to take their own time in fixing their marketing policy for the coming cotton year. It may, therefore, be taken for granted that the forward market will cease to have much interest for the cotton trade in general, after the expiry of the May Delivery Contract.

Forward cotton ruled firm during the week under review, thanks to hectic covering and continued bull support. Considerable encouragement was derived from the strong statistical position in cotton and good enquiry in the spot markets. I.C.C. May opened the week at Rs. 713 and moved up to Rs. 724 on 27th April. There was some profit-taking at this level which pushed prices down to a low of Rs. 718 on 28th April. But the May Contract again ruled firm on the last day of the week, touching a high of Rs. 726½ before closing the week at Rs. 725¼. A similar trend was witnessed in the August contract which opened at Rs. 723½ and moved up steadily to Rs. 735 on the last day of the week before finshing the week at Rs. 734. The following is the trend of prices during the week ended 29th April:

	Opening	*High*	*Low*	*Closing*
I.C.C. May (Rs.) ...	713	726½	710½	725¼
I.C.C. Aug. (Rs.) ...	723½	735	721½	734

The spot markets are all very active, with premia for staple and popular varieties increasing from week to week, as demands from mills becomes more evident. In spite of the lessening of the gap between the price of Indian cotton and imported cottons, the consumption of home-grown cotton has increased considerably during this year and it is expected to exceed this year's production by about two lakh bales, thus reducing the carry-over at the end of the season. If the rains are auspicious in the earlier part of the season, hopes of a better crop may go to relieve the pressure on the spot position to a certain extent. But even with a really successful season, we cannot hope for production to exceed consumption next year. Spot rates are, therefore, bound to rule fairly firm throughout the rest of the season. The following are the latest available quotations from the spot market:

Bengal *Deshi* Rs. 550; Berar Jarillas Rs. 750; Vijay Rs. 900; Moglai Rs. 710; Khandesh Rs. 840; Oomra *Deshi* Rs. 715.

Exports for the year might now be taken as completed, with the Government's refusal to convert unused quotas in Dholleras, Mathias, Oomras, etc., into Bengals or to give an additional quota for exports of Bengals, though efforts will continue by certain interests to persuade the Government to show some relaxation in this respect. With regard to imports also, apart from cotton that has already been purchased but remains unshipped, there is not much likelihood of large-scale fresh purchases from any source except perhaps Sudan. At a later stage there will be a revival of interest in Egyptian cotton, if the cloth market continues to be active for superfine varieties. Spot lots of imported cotton, however, are finding good buyers, and trading in imported cotton will continue uninterrupted. Some of the importers of East African cotton under Government auspices last year are very much worried about the stocks lying still on their hands, but the step taken by the Government to ease the burden of a part of the U.S.A. cotton has created a ray of hope amongst these dealers.

Things are at a stand still at Karachi and the rates quoted in the market are only nominal without any transactions taking place. An effort is being made by the authorities to overhaul the whole economy of the country and a feeling of suspense hangs over the trade. No details have been announced as to how the 6½ lakh bales promised to Japan are to be dealt with. The following are the latest available quotations from the Karachi cotton market:

Punjab *Deshi* Rs. 66; 4F Punjab R.G. Rs. 55-8; S.G. Rs. 59-8; L.S.S. Punjab R.G. Rs. 59; S.G. Rs. 64; N.T R.G. Rs. 60-8; S.G. Rs. 65; 289F. Punjab R.G. Rs. 65; S.G. Rs. 70-8.

At Alexandria also the week on the whole has been without any interesting development. The spot market continues to be fairly active. Interest from the Continent is sustained, while a new encouraging factor has been added to this by the entry of Japan and Formosa into this field. Looking to the statistical position, however, it is evident that the Egyptian Government must be carrying fairly large stocks, inasmuch as the quantity of cotton ginned during the season up to the end of March was 1,327,612 bales while exports upto the middle of April added up to 554,064 bales. Though the latter figure is higher by about 150,000 bales than the previous year's, it still shows a big gap between production and exports. The authorities, however, do not seem to be worried about the disposal of these stocks, as foreign enquiries are steadily coming in.

The position at New York has taken a turn and changed from weakness to firmness, possibly because the first tenders in May delivery have been well taken and partly because of fresh credit on a fairly large scale being given to West Germany for buying the U.S. cotton. How long this firmness in the market will last is a question in view of the fact that reports from various centres point to a large crop next season. The distant positions even to-day are not showing any strength and this is a good indicator for future developments.

The following are the latest available quotations from New York as compared with those of a week and a fortnight before:

(In cents per lb.)

	28-3-53	21-3-53	14-3-53
Spot	34.30	33.55	33.75
May	33.95	32.96	33.20

October	33.45	33.37	33.50
December ...	33.46	33.43	33.59

ART SILK YARN LISTLESS

(From Our Own Correspondent)

BOMBAY, 29th April

Listless conditions prevailed in the art silk yarn market during the week under review. In the absence of any encouraging development, traders were not enthusiastic about fresh purchases. They were more busy with the squaring up of transactions by switching over their delivery contracts from April to May. The volume of business was, as a result, extremely small, with prices moving irregularly within narrow limits. On balance, over the week, values of yarn recorded losses.

The market opened the week with a hesitant note. But on Saturday, a cheerful note was visible, on firm advices from Calcutta and reports of good demand in the ready section. Large turnover of business and higher prices in the art silk fabrics trade, especially in the markets in Delhi, Uttar Pradesh and the Punjab, also assisted the favourable sentiment of operators. Buying support that ensued, as a result, lifted up the art silk yarn quotations. The upward trend was, however, checked on Monday, when, on account of profit-taking, values again drifted downwards. But during the last two days, the market presented somewhat steady conditions.

In the forward section, 150D April delivery contract opened the week lower by Rs. 9 at Rs. 807. After improving to Rs. 827 on the 25th inst., it reacted to Rs. 816 on Monday. To-day, it was a shade higher at Rs. 812. The net loss over the week was to the extent of Rs. 6. May contract improved from Rs. 816 on the opening day to Rs. 834 on Saturday and, after receding to Rs. 816 on Monday, steadied upto Rs. 818 to-day, although at one time it had even touched Rs. 822. In the ready section, the net loss suffered by Italian and Japanese yarns was, on an average, about six to nine pies per lb. 120 Italy, however, elicited some special support and gained half-an-anna to Rs. 4-3.

The table below gives the prices of art silk yarn quoted to-day, as compared with those on the 22nd and 15th inst.

	29-4-53	22-4-53	15-4-53
Art Silk Yarn—	Rs. a.	Rs. a.	Rs. a.
150D April (per case of 200 lbs.)	810 0	816 0	828 0
150D May	818 0	824 0	835 0
120 Japan (per lb.) ,, ..	4 8	4 8½	4 9
150 Japan ,, ...	4 4	4 4½	4 5
120 Italy ,, ...	4 3	4 3½	4 2
150 Italy ,, ...	4 0½	4 1¼	4 3

Looking at the trend of art silk values in the past few weeks, the highest and the lowest points for the forward contracts may be put at Rs. 840 and Rs. 800, respectively. In other words, the values are likely to be maintained at about these levels for some time to come, at least till such time as the rayon cloth markets in India witness some special development or the Continental markets undergo a change. So far as the supply position in respect of art silk yarn is concerned, it is reported to be not very comfortable, despite arrivals of large quantities of imported yarn. The quantity of yarn actually imported into India during the first quarter of this year was as large as 4.67 million lbs., as against 3.45 million lbs. in the corresponding quarter of 1952. The rate of imports in the past few weeks is said to be still higher. The bulk of these arrivals is said to be accounted for by dull quality (on cones) yarn, for which there is not much demand. But in the case of 150 deniers (on hanks), supplies are reported to be scarce.

In the staple fibre yarn section, prices remained more or less unchanged during the major part of the week. Latterly, however, a slightly easier undertone came to prevail, on possibility of increased yarn arrivals from South Indian centres, following the partial restoration of cut in the power supplies to Madras City and other hydro-electric areas, and on good demand from up-country centres.

GROUNDNUTS FIRM

(From Our Own Correspondent)

BOMBAY, 29th April

Trading in the oilseeds market during the week was characterised by a mixed trend. Thus, while the castorseeds section ruled easy, the groundnuts section was firm, with prices advancing further to new high levels not seen since July, 1951. This was due to paucity of supply which exaggerated the effect of even small buying orders on the price structure. Linseeds, *kardi* and *niger* seeds ruled in sympathy with the groundnuts. As a result of the wide disparity between the prices of the groundnuts and others, there was a switch over of buying activity from groundnut seeds and oils to linseed, *kardi* and *niger* seeds, the oils of which are now widely used as an adulterant to the high-priced groundnut oil.

In marked contrast to the firm trend in groundnuts, castorseeds registered a downward trend and this despite the continuance of free licensing of castoroil for export upto 31st July. The easiness was attributed to the reported withdrawal of the U.S. from the market as purchaser of castorseeds and oil for stockpiling purposes, as also to competition of South Africa in the U.S. and the Continental markets. Consequently, the castorseeds section sustained sizable losses over the week.

The stock position in the groundnut section is becoming tighter, while the demand from *vanaspati* manufacturers and crushers continues almost unabated. This state of affairs has virtually eclipsed discouraging overseas demand. Groundnuts Bold ready advanced from Rs. 45 to Rs. 46. Business in June-July and August-September deliveries were done at Rs. 46 and Rs. 46-8, as against Rs. 45-4 and Rs. 46-4, respectively. Khandesh quality registered a gain of Re. 1-6 to Rs. 46-10. Groundnut oil ready was steady at Rs. 24 and railway receipts at Rs. 23-12. May and June deliveries were done by As. 3 higher each at Rs. 23-13 and Rs. 23-15.

Linseed which was dormant during the past few months staged a sizable rally this week on support from oil merchants. Bold ready gained Re. 1 to Rs. 32. June-July and August-September deliveries improved from Rs. 31-14 and Rs. 32-8 to Rs. 32-8 and Rs. 33-4, respectively. Linseed oil shot up by Re. 1-6 to Rs. 16-6.

There were rumours that Japan had sold castoroil I Pressure to U.S. at 19c. in drums from its imported stocks. Again, offers of Indian castoroil, commercial quality at 18¾c. were reported to have been rejected by the U.S. These prices, as a result, affected the sentiment adversely and declined. May delivery which opened at Rs. 160-12, as against Rs. 160-8, fluctuated between Rs. 164 and Rs. 154-8, before closing at Rs. 156-4. September delivery lost Rs. 4-8 to Rs. 158-4, the highest and the lowest touched during the week being Rs. 166-4 and Rs. 156-12. Madras quality eased by Rs. 1-10 to Rs. 31-10. Castoroil I Pressure was done at Rs. 18-12, as against Rs. 19-8 and Commercials Rs. 17-8, as against Rs. 18-2 B.S.S. lost As. 10 to Rs. 19-2.

Niger, F.A.Q., ready gained As. 12 to Rs. 35-4 and *kardi* Bold ready As. 4 to Rs. 24-12.

The following table shows the prices of oilseeds and oil on the 29th inst., as compared with those at the end of the previous two weeks.

	29-4-53	22-4-53	15-4-53
Groundnuts—	Rs. a.	Rs. a.	Rs. a.

MODEST GAINS IN JUTE GOODS

(From Our Own Correspondent)

CALCUTTA, 28th April

Prices of jute goods registered modest gains during yesterday's trading. Although business in hessian with foreign buyers was moderate, earlier in the week price movements either way in that period were practically *nil*. As expected, Argentina has covered about half of its annual requirements of hessian by placing orders in India for 20,000 tons. Ready hessian 40" 10 oz. was steady at Rs. 39-2 during the week-end. Actually on Wednesday last the price had fallen to Rs. 38-10 from Rs. 39, but on Thursday a recovery to Rs. 39-2 was staged, following reports of the Argentine order. Had it not been for these reports, the price would have gone downwards. The trend yesterday took a different pattern, and very steady conditions visited the market. Hessian 40" 10 oz. gained to as high as Rs. 40-4 with the July-September position being dealt with at Rs. 40-10. Speculative support was moderate for forward delivery, and bear covering for near delivery enabled mills to adopt a reserved tendency.

The sacking goods market continued to suffer from a level business that would favourably compare with output and justify the current level of production. Prices did not stage a major fall this week; this was due to a steady hessian market. Trading during recent weeks has amply justified the proposal of the Indian Jute Mills Association to seal a percentage of the sacking looms. Last Wednesday, B. twills eased to Rs. 86-8 from Rs. 87-4, but on Friday registered a recovery to Rs. 86-12 in sympathy with the trend in the hessian section. Yesterday, the price was pushed up to Rs. 89, showing a gain of Rs. 2-8 on balance. The July-September goods were favoured at Rs. 89-12, and the near goods at Rs. 89-4. The quotation for heavy cees plain gained to Rs. 90-8 from Rs. 88-12. Similarly D.W. fourbags were better at Rs. 111-8, and A. twills at Rs. 111.

Support from mills was available to the raw jute market during the week, and prices kept steady. Assam bottoms changed hands at Rs. 20 a maund, and the gains in other constructions mentioned in these columns last week were well maintained. The season's first rain fell last night in certain jute districts of West Bengal and Assam, and this is expected to help farmers in sowing. According to weather forecasts, more rains are expected and the end of the dry weather would make further rise in prices slower. The change in the weather is not expected to show an increase in the jute acreage which, it is believed, would record a shrinkage this season in view of prices being much below what cultivators consider the economic rates. To this extent, mills would have necessarily to stock as much raw material as possible from the old season's crop, and stockists would naturally feel disinclined to part with much. However, the decline in prices of the Pakistani fibre is a helpful factor for mills, and is a check on the upward movement on local quotations. The *pucca* bales section was also steady, and first marks made a further recovery to Rs. 125 a bale from Rs. 110 earlier in the week. Lightning marks were quoted at Rs. 115, and Dundee Daisee at Rs. 120.

METALS DEPRESSED FURTHER

(From Our Own Correspondent)

CALCUTTA, 28th April

The depression in the metal market noted in the previous two weeks persisted in the week under review also. Quotations were, therefore, taken further down, and consumers' enquiries were limited to minimum requirements. Stockists of manufactured products desire only to cover for actual orders placed on them. The rate contracts of Government for 1953-54 would take some more time to be placed on manufacturers in view of the Budget formalities; as a result, manufacturers' acitvity shrank to the completion of outstanding quantities of the 1952-53 orders, as well as to meeting the small commercial demand.

There was no improvement in the supply situation of electrolytic copper ingots, and even a shortage existed for scraps. Had it not been for these factors, the maintenance of the quotation at Rs. 171 per cwt. could have been difficult, especially in view of the reports of continued weakness in the foreign markets. For a time, the rate moved even down to Rs. 170. The fire-refined material was available at Rs. 165. Prices of electrolytic zinc were affected by the landslide in quotations on the London Metal Exchange. Opening at Rs. 51-8, electrolytic zinc reacted to Rs. 46 on Saturday last. Yesterday, there was a slight recovery to Rs. 47-8. Another factor which pulled down the price was the expected addition to the already heavy stocks. The quantity that changed hands was almost insignificant.

The mid-week's steadiness in Singapore having proved to be short-lived, the local quotation for tin at the closing level of Rs. 480 yesterday showed a loss of Rs. 2 on balance. The lowest level of Rs. 478 was touched last Thursday. Some enquiries resulted in small business. The quotation for quicksilver was maintained at Rs. 500 a flask, and exporters, who have yet to utilise half of the export quota of 10,000 flasks, are less enthusiastic now, since the export duty of Rs. 300 a flask is stated to stand in the way of materialisation of business from overseas following the recent change in the international situation. The Government has already been told that the duty might have to be revised, if the export quota is to be realised in full. In sympathy with the general trend, lead also moved further down to Rs. 62 from Rs. 64-8.

SUGAR PRICES ADVANCE

(From Our Own Correspondent)

HAPUR, 28th April

During the week under review, the undertone in the free sugar markets remained steady with an advance in price. The upward trend in *gur* markets and non-release of free sale sugar quota by the Government of India for a long time were the two bullish factors. The difficulties in the transport of sugar from North India mills and the "sitting-tight-policy" of the traders who still hold the stocks of the previous free sale quota were additional factors forcing a price advance.

The release of the free sale quota is long awaited. The Bombay Sugar Merchants' Association has urged the Central Government to release an immediate sugar quota and to take steps for the quick movement of sugar from factories to the consuming centres to prevent the sharp rise in sugar prices. The Association says that sugar rates are rising daily in Bombay, as well as all over India, due to shortage of ready stocks. It is also complained that, although Bombay merchants had already made heavy purchases from factories, sufficient wagons were not available for their movement to consuming centres. Bombay sugar stocks have gone down and the Association has asked for a special quota of 25,000 tons of sugar for Bombay. The Government of India has since released a further quantity of 150,000 tons of sugar for sale in the free market.

Throughout the week the free sugar market at Calcutta ruled strong, due to heavy purchases by the South Indian buyers. At Madras too, the free market remained firm, due to limited stocks and good demand.

The latest quotations in the free markets are: Ambala Rs. 31, Amritsar Rs. 31-12 Delhi Rs. 32, Jullundur Rs. 30-2, Agra Rs. 30, Hapur Rs. 31-8,

STOCK & SHARE QUOTATIONS

Abbreviations:—D=Deferred shares. G=Guaranteed shares. P=Preference shares. P.O.=Preferred Ordinary shares. R=Rebate shares. Y=Accounts published yearly. H=Accounts published Haf-yearly. Q=Accounts publishe once 15 months. T=Company has Debentures. R.L.=Reserve Liability on shares. N=Nominal Quotation. i=Interim Dividend. f=Dividend for first half-year, y=Dividend for the year. x=Ex. Dividend c.d.=Cum. Dividend.

Shares:—If a company has different classes of shares—as, for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under "Paid-up Per Share."

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12 indicate the months of June and December, respectively. 'Reserves" ncludes general and other reserves and all other funds which a company may have as also depreciation on block items, when this is charged to separate account "Block" represents actual cost of land, buildings, machinery, and all such other items on which depreciation is allowed, less sales, if any, and stands for the gross figure except where otherwise indicated.

Dividends:—Dividends for completed years are calculated at per cent, per annum, but, where quoted for portion of a year, they represent percentages of the dividend on the paid-up share value. For companies closing the boo half-yearly in the first three months of the year, and for companies closing their books yearly during the first half of the year dividends are shown as for the previous year.

• The following explanatory notes relate to the abbreviations and marks shown on page 732 in the textures section:—

‡‡ Option to repay on six months' notice, on any interest date after 31st December, 1951, at 102 per cent. Also redeemable out of a cumulative sinking fund of 1½ per cent. per annum (commencing in 1938) by drawings at 102 per cent. or by purchase at or 102 per cent.

(a) Option of repayment at any time at 3 per cent. premium

(b) Bearer bonds of Rs. 1,000 each repayable at par

(c) Bearer bonds of Rs. 1,000 each repayable on 31st July, 1959.

(d) Bearer bonds of Rs. 1,000 each with option of redemption in whole or in part at par on 30th June, 1952, or on any subsequent interest date at one month's notice.

(e) Returnable on or after 31st July, 1950, at Rs. 102-8 or at par after 31st July, 1955, on six months notice in each case.

(f) Bearer bonds of Rs. 1,000 each with option of redeeming on 3 months' notice at ½ per cent. premium, after 1st March, 1954, but before 1st March, 1957, and 1 per cent. premium on or after 1st March, 1957

(h) Option of redemption on or after 1st July, 1949, at par,

(l) Option of repayment at any time at par at any time on or after 30th June 1947 on six months notice

INDIAN ALUMINIUM COMPANY, LIMITED

(*Concluded from page 804*)

Canada where the economy in the past 15 years has been transformed from one based largely on primary industries, such as agriculture, mining and forestry, to one which now includes a highly developed and wide range of manufacturing industries. Canadians will readily admit that the envious position in which their country now finds itself is not one entirely of their own making, but has come about as a result of the favourable climate created by the wise and stable fiscal and monetary policies of the Government which, along with the natural resources of the country, has proved an attraction for outsiders possessed of the requisite capital and know-how. It does not seem to worry Canadians that 45 per cent. of their manufacturing industry is American-owned. Why then should we in India, as citizens of a sovereign democratic republic with an acknowledged need for foreign capital and 'know-how' and with every right to safeguard absolutely at every stage our national interests, create these 'nightmares' and make it virtually certain that the assistance we need will not be forthcoming in time and in the measure required?

"It should be remembered that under our planned economy, interest rates and the supply of credit together with the provisions of the Essential Goods Supplies Act and Industries (Development and Regulation) Act constitute, perhaps, the most powerful weapon of economic control and, therefore, there can always be kept a tight rein on something or other which may run away from the ambit of budgetary vista.

Co-operative Effort Between Government and Industrialists

"It is the general thesis of the Five-year Plan that agricultural development of the country is but a prelude to industrial development. In the development of industries in the country, the private business man has still a great role to play. To the extent that he meets the challenge, he will justify the continuation of trust in the system which he represents. Now that the Government has indicated very clearly that India is determined at all cost to implement the Five-year Plan, it is only realistic to hope that suitable climate for capital formation, for the growth of risk capital, for increased productivity and better use of men and material, would be furnished in ample measure, through a genuine co-operative effort between the Government and the industrialists.

"Your Company has undertaken a gigantic task of expansion and construction. I am sure that shareholders who have shown such admirable faith in the future of aluminium and, particularly, in the prospects of the Indian Aluminium Company, will continue to bestow their confidence on the management and the Board of Directors who have steered the Company throughout these years with determination and with success. This is only a prelude to greater efforts and, I hope, to a more bountiful crop.

"The employees of your Company deserve a special word of praise for their loyal and ungrudging services during the difficult period and I commend them for your thanks and appreciation."

MARKET REPORTS

(*Concluded from page 821*)

Kanpur Rs. 29-8, Mathura Rs. 31, Meerut Rs. 30-14, Muzaffarnagar Rs. 30, Patna Rs. 31-4, Calcutta Rs. 31-8, Gauhati Rs. 31, Cocanada Rs. 32, Madras Rs. 31-15, Bombay Rs. 35, Bhavnagar Rs. 33-8 and Nagpur Rs. 32-8.

The *gur* markets remained very steady throughout India. Arrivals in most of the markets were either stopped altogether or were only nominal. There was some enquiry from many importing areas but stock movements were poor, owing to railway booking difficulties. Stocks in the surplus mandies were small and this confirms the apprehensions that the overall production of *gur* has been lower this year, as compared with last year. Hapur quotations ranged between Rs. 18 and Rs. 18-8. *Gur* prices in the South Indian markets ranged between Rs. 20 and Rs. 22-8.

GRAIN ARRIVALS IN FULL SWING

(From Our Own Correspondent)

HAPUR, 28*th April*

The overall food position in India continued to be generally satisfactory. There are parts of Madras and Rajasthan where food scarcity is complained. Foodgrain supplies are being rushed to these affected areas. The Union Food Minister had earlier advised the Governments of the wheat growing States to stop procurement, in view of the abundance of stocks in Government hands. No direction has, however, been issued to any State for the decontrol, of wheat, but all States, except Delhi, had been given the option to remove or relax internal restrictions on movement of wheat, if their crop position justified this.

Foodgrains prices in Uttar Pradesh have showed no sign of easing down, although *rabi* grain arrivals have been in full swing all over the State. Some time ago, the State Government had offered to sell, by auction, several lakh maunds of gram and barley for exports outside the State or free sale within the State, but the auctions were not finalised, as the prices offered did not come to the mark, as expected. The latest quotations are: Wheat Rs. 16-8 to Rs. 18, gram Rs. 15-9 barley Rs. 11-12, *bejhar* Rs. 12, maize Rs. 13, *bajra* Rs. 12-8, *jowar* Rs. 11 to Rs. 14, *guwar* Rs. 14, peas: daragreen Rs. 14, white superior Rs. 16 to Rs. 20, *jeth* Rs. 13-14, *arhar* Rs. 14-8; urd Rs. 22-8, *moong* Rs. 20 to Rs. 22-8, and masoor Rs. 15-8 to Rs. 18.

DEMAND FOR TEA MODERATE

(From Our Own Correspondent)

CALCUTTA, 28*th April*

After a break of two weeks, tea auctions were resumed yesterday. Yesterday's export sale was the last time of this season. Offerings aggregated 24,343 packages, of which 343 packages were of the new season. However, suitable teas being inadequate in quantity, no quotations were provided. This was not surprising since the sale was more or less in the nature of a clearance auction, and the old season's offerings had a good proportion of unattractive types of teas. Demand was, nevertheless, moderate, and the feature was the firmness in the prices of well-made whole leaf grades. Other varieties showed a two-anna decline in prices. Offerings of the new season's teas met with sparse interest, and prices were well below brokers' valuations. With the completion of this season's sales, brokers would enjoy a recess during the next four weeks, as the first sale of the new season would take place on Monday, 1st June.

Auctions for domestic consumption, which had been postponed during the last two weeks, are to be resumed to-day, and are expected to be continued throughout May also. Since this year's turnover at gardens being larger than usual, four more auctions are considered necessary to clear stocks. A two-week suspension of the sales was necessary following the confusion caused by the readjustment of the excise duty on tea, made effective from 15th April. Doubts were held whether "double" duty would be exacted on tea which had left the gardens before 15th April but was in transit to the godowns of buyers as on that date. The excise authorities said that exemption of the adjusted duty on teas which had left estates prior to 15th April but had not reached buyers as on that date, would be granted only on documentary proof that the duty had been paid, as per the old arrangement, at the place of origin. In all cases, it was not possible to accommodate this condition of the authorities, although it was appreciated that no tea could have left the estates without payment of the excise duty. A satisfactory arrangement was arrived at last week between the tea trade and the authorities, and a new procedure has been adopted whereby the fear of "double" levy of the duty on teas in transit on 15th April has been removed.

FAIR DEMAND FOR TEA DUSTS

(Messrs. Forbes, Ewart and Figgis Ltd.)

COCHIN, 25*th April*

Dust sale 'H' which was held on Thursday, 23rd April, contained approximately 1,16,000 lbs. There was still a certain amount of apprehension on the part of buyers, due to the implementation of the new excise tariff. However, there was a fair general demand at prices which were irregularly As. 2 easier. There was some competition for clean, black, well made dusts.

Export Quota.—There has been an interim release of 70 per cent. of the basic crop. It is reported that the total release will amount to 115 per cent. of the standard exports. This would mean a reduction of 20 per cent. in the figure for last year. As a result of this announcement the quotation for 1953-54 quota hardened to 11¼ pies at which rate business has been done. Special licence is quoted at 1½ pies.

As we go to press, Messrs. Forbes, Ewart and Figgis, Ltd., wire as follows:

"*Sale* 9.—13,70,000 lbs. Much weaker demand. Commonest firm. Low medium and mediums As. 2 easier. Best liquoring neglected irregularly As. 8 easier. Whole leaf As. 1 to As. 2 easier."

BRADFORD TOPS FIRM

(Messrs. J. Hardacre and Co.)

BOMBAY, 27*th April*

The Bradford top market is firm to-day, in response to the similar behaviour of wool in the Dominion markets, and there is a better tone of trading conditions. Wool in Australia is selling extremely well at prices, which, though perhaps not dearer, make it progressively more difficult to buy on unchanged limits.

The Bradford market seems to have discarded the slight nervousness apparent about a fortnight ago, when mental speculation was rife as to whether the improved Korean outlook and the simultaneous curtailment of United Kingdom stockpiling of wool, would react on the world price of wool. Such fears are now discounted and the preponderant trade view is that the wool supply position is likely to be the dominating influence on prices for the remaining part of the season.

Values of merino fleece wools and skirtings appreciated 2½ per cent. at yesterday's sale. Other merino descriptions sold freely at improved rates. Values at Melbourne closed yesterday on the highest level of the series. At Cape Town, as also at East London, advances of 2½ to 5 per cent. were registered. Both the markets are fully firm.

The current quotations (in pence per lb. c.i.f. Bombay) for Bradford oilcombed tops are given below:

	July shipment
48s carded	86*d.*
58s super	124*d.*
60s super	150*d.*
64s super	173*d.*
70s super	184*d.*
	June-July shipment
Fibro (3D 4")	43¼*d.*
46/48s scoured clothing wool	76*d.*

The tendency of the market is very firm against buyers.

BRISK TRADING IN LINSEED

(Messrs. A. Bradley & Co.)

CALCUTTA, 27*th April*

The linseed market remained firm during the past week and trading has been fairly brisk at somewhat advanced prices. Up-country markets are reported to be firm and local sellers are reserved, with forward positions quoted at a premium. Arrivals, although mainly against previous commitments, have shown an improvement. Buyers have been keen for both ready, as well as forward deliveries, and the daily turnover has been good. Fair business is reported in the oil section, with shippers showing some interest. Besides, there has been increased demand from local buyers at higher prices. Latest quotations are: April-May Rs. 19-8 and June-July Rs. 19-12 per maund.

Notice

1952

CAREW & COMPANY, LIMITED

REPORT AND ACCOUNTS FOR THE YEAR ENDED 30th JUNE, 1952

NOTICE IS HEREBY GIVEN THAT THE Ordinary General Meeting of the Shareholders of this Company will be held at the Registered Office, No. 4, Fairlie Place, Calcutta, on 11th May, 1953, at 12 noon, for the purpose of:—

1. Receiving the Directors' Report and passing the Accounts to 30th June, 1952.
2. Declaring a Dividend on the Preference Shares.
3. Electing Auditors for the current year and fixing their remuneration.
4. Transacting such other business as may be brought before the Meeting.

The Transfer Books of the Company will be closed from 2nd May, 1953, to 11th May, 1953, both days inclusive.

Preference Shareholders and holders of Preference Shares under Blank Transfer should note that upon the declaration of the Dividend the Dividend Warrants will be posted to Registered Preference Shareholders or their Mandatees. No application for payment will be necessary.

GLADSTONE LYALL & CO., LTD.,
Managing Agents.

4, FAIRLIE PLACE,
CALCUTTA, 23*rd April*, 1953.

To the Shareholders of Messrs. Carew & Co., Ltd., and in particular to:

INDUSTRIES REGULATION BILL

THE House of the People passed this week the Industries (Development and Regulation) Amendment Bill, 1953, as reported by the Select Committee of the House. The trend of the debate on the Bill discloses that the changes made in it by the Select Committee are by no means final. For Mr. T. T. Krishnamachari, Minister for Commerce and Industry, pointed out, in the course of the debate, that the provisions in the Act relating to price control were confined only to stocks and not to goods to be manufactured by the scheduled industries, while the intention of the Government was to apply the price control to both. He, therefore, proposed to bring forward an amendment accordingly. This change, when made, will be only one of the innumerable changes which this measure has undergone ever since the Government embarked upon its idea of development and regulation of industry in 1949. Incidentally, it may be noted that, apart from the present Select Committee, two other similar Committees of the previous Parliament have also scrutinised and suggested changes in the measure. These frequent modifications, as also the snail's pace at which the question of establishment of Development Councils is being handled, serve to underline the criticism that the Government still lacks clear ideas about the control of industries.

Although the present Select Committee has not made any radical changes in the Bill, some of its recommendations are of immense significance to India's industrial development. The Committee has suggested more stringent punishment for contravention of the provisions of the Act. Punishment in the original Bill was imprisonment extending to three months or fine extending to Rs. 2,000 or both. The Select Committee has extended the period of imprisonment to six months and enhanced the fine to Rs. 5,000. It has recommended that the Government may continue to manage an undertaking taken over by it even beyond the period of five years mentioned in the Bill, but has stipulated that the notification extending the term of control should be placed on the table of the House. The Committee has also exempted the Government undertakings from the provisions requiring licences for producing new articles. Provision has also been made for enabling the Government directives to override the memorandum and articles of association of undertakings taken over by the Government. Another change made by the Committee seeks to ensure that reasonable prices are fixed for articles covered by the Bill. The Committee has added to the schedule of industries not only textiles made of staple fibre, but also industries manufacturing toilet requisites.

The foregoing amendments to the Bill are, however, not the unanimous recommendations of the Select Committee. Five members have appended notes of dissent to the report, although all the members of the Committee are agreed on the principle of the Bill. But the measure of control envisaged in the Bill has been the most controversial part of it. While one section feels that the control provisions do not go far enough, another section, composed of practical business men, firmly believes that they are unnecessarily drastic. There is considerable force in the contention of the latter section, as represented by Mr. G. D. Somani, a member of the Committee, which feels that the provision for taking over a recalcitrant undertaking after investigation, without issuing directions or giving the management opportunities to explain the charges, is most disturbing. It has led to considerable genuine fears among the members of the industrial community in the country. The Federation of Indian Chambers of Commerce and Industry, in the course of a memorandum on the Bill, states, for instance, that certain provisions of the Bill have created grave doubts and misgivings in the minds of the 1,500 establishments covered by the Act.

The Federation, in its memorandum, suggested to the Government that the provision for taking over the management of a concern after investigation should be revised completely so as to see that it did not infringe the normal rights of the shareholders. Now that the Bill has been passed without this change, it is evident that the Federation's sound advice is not acceptable to the House. This is rather unfortunate in that the industrial unit concerned gets no opportunity to explain the charges before being taken over by the Government. The denial of a safeguarding provision in the Bill is to be deplored, as even a drowning person is supposed to have as many as three chances of life before reaching his watery grave. It is, however, to be hoped that the provisions of the Bill will be administered by the agencies appointed by the Government in the spirit in which these provisions have been conceived by the Commerce Minister. He said: "In this particular measure, we seek to control all means of production, we do not seek to nationalise. If in the public interest it is necessary to take over any unit which we think is mismanaged, we wish to do so. . . . It would not be a pleasure to take up the responsibility of managing an institution which would otherwise be properly run and where production would be maintained, labour would be kept employed and public interest would be served."

The insertion in the Bill of a new section requiring licence for producing new articles in so far as it applies to existing concerns is not calculated to help achieve the main objective of the Bill, *namely, development of industries* on right lines. From the statement of the Minister for Commerce and Industry, it looks as though the section is directed more towards conserving foreign exchange than towards creating facilities for expanding production. The Minister pointed out that the section would help the Government to know the amount of foreign exchange involved in producing a new article. While this knowledge might be useful, it should not be forgotten how the provision involves an unnecessary restriction on industry. After all, if all that the Government needs through this section is information about foreign exchange requirements, it is not clear why the formality of a special licence is deemed necessary.

Even now, an industrial undertaking has to approach the Government far too often. As was pointed out by the Federation in its memorandum, an industrial unit has to approach the Government for seeking registration. It has to secure a licence, if it is a new undertaking. It has also to secure a licence for substantial expansion and another for changing its location. Besides, it has to seek permission from the Examiner of Capital Issues before it augments its capital. In view of these considerations, how can it be said that conditions are favourable for smooth progress of industries in India? Enthusiasm chills as one thinks of the way in which Indian industry is asked to function under the guidance of the various bodies contemplated in the Industries (Development and Regulation) Act, 1951, in its amended form. For the progress of industry cannot but be checked by frequent delays and interference with its work by the Government, the Central Advisory Council, the Development Council and the Licensing Committees, to be followed, possibly, by yet another body, namely, the contemplated Industrial Management Corporation.

A word of caution is, therefore, needed. The Industries (Development and Regulation) Act, a legislative provision which was once, on compromise, considered as adequate enough to regulate the development of industries on right lines, has, by means of a series of amendments, now turned out to be the most drastic measure which must prove detrimental to private initiative and enterprise. It has strengthened the powers of the State to interfere with industrial management. The State has thereby assumed the responsibility of taking over the management of mismanaged concerns, mostly on the brink of collapse. In the task of bringing such units back to life, the position of the State is similar to that of a doctor called upon to attend a patient in his last stages of life. In order to infuse life into the industry, the State may have to be prepared to effect economies and to retrench surplus staff—a measure which it cannot be expected to carry out fully, as this measure would come into conflict with its obligations as a Welfare State to provide work for labour. It is to be hoped that the authorities will bear in mind limitations, such as this, before assuming control over recalcitrant units.

ECONOMIC INTEGRATION OF EUROPE

FEW topics have, in recent years, aroused such widespread interest as the movement towards economic integration of Europe. The reason is plain enough. The two world wars have taught the lesson that peace in Europe is the first essential step towards world peace. Disharmony, economic competition, and trade rivalry in this part of the world are the most potent causes of world unrest. In the early post-war period, there were hopes of achieving considerable progress in the sphere of economic integration of Europe as well as of the world. These hopes have willy-nilly withered away under the impact of the cold winds of economic realities. The policy of aiming at modest economic targets has, accordingly, gained more adherents who realise that it is better to achieve small gains than to hanker after unrealisable ideals. Of these modest targets, the economic unity of Western Europe has a power-

ful appeal to many sections of political opinion; for, Eastern Europe has been, for all practical purposes, so powerfully insulated from the Democratic world that it is only the fortunes of W. Europe that lend themselves to public discussion. This point of view was effectively stated by Mr. Lionel Robbins, the leading British economist, who, in an article in a recent issue of *Lloyds Bank Review*, said: "For our generation, at least, the world is irrevocably divided. There is no reasonable hope of achieving peaceful co-operation with the Soviet bloc; the one hope of avoiding actual war is that the countries of the West should be sufficiently strong and sufficiently united to make it obvious to the other side that there is no chance of success that way. But this means, not merely the co-ordination of defence, but also the elimination of causes of disunity; and some of these causes may be economic."

The entire issue of economic integration of Europe, particularly W. Europe, has accordingly exercised a great fascination for the economic statesmen of that Continent. But the progress achieved, so far, has been limited to the creation of the European Coal and Steel Community and Benelux Union. There has no doubt been considerable progress in the field of economic consultation. And if the amity and goodwill, which mark their relations in the political field, are any indication of the shape of economic things to come, the W. European countries, it is reasonable to hope, are bound to be drawn closer together in future years. But it would be palpably wrong to overestimate the possibility of that integration or to underrate the admittedly intricate nature of the problems involved in that integration. From this point of view, the well-documented U.N. Report, *Economic Survey of Europe Since the War*, acquires a special significance by reason of the fact that it spotlights, in a particularly readable chapter entitled, "Problems of Economic Integration," not only W. Europe's achievements in the economic field but also the obstacles which beset its progress towards closer union.

Before reviewing the economic problems of W. Europe, it is perhaps well to take a look at what goes on behind the Iron Curtain. The view is by no means clear; for little information is available. But the U.N. *Survey* draws attention to a few salient features of the economy of E. Europe. The chief among these is the expansion of the trade relations of these countries with Soviet Russia. Russia never figured prominently in the foreign trade of these countries before the war. Its share then was only about 1 per cent. of the foreign trade of Poland, Czechoslovakia, Rumania, or Bulgaria; but, in 1951, Russia's share aggregated 25 per cent., 28 per cent., 51 per cent., and 58 per cent. of the foreign trade of these countries, respectively. There has also been a corresponding diminution in the trade of the E. European countries with the rest of the world. Between 1937 and 1951, the share of the rest of the world in Russia's foreign trade declined from 89 per cent. to 17 per cent. For E. Germany, the corresponding percentages were 83 per cent. and 21 per cent; for Poland, 93 per cent. and 42 per cent; for Czechoslovakia, 89 per cent. and 40 per cent; for Hungary, 87 per cent., and 33 per cent; for Rumania, 82 per cent. and 21 per cent; and for Bulgaria 90 per cent. and 8 per cent. An important development in E. Europe is thus the increasing dependence of these countries on Russia. Long-term bilateral agreements with Russia cover trade and receipt of technical and other forms of aid and improvement of the communications with Russia. The co-ordination of trade and planning of production is undertaken under the guidance of the Soviet-inspired Council of Mutual Economic Assistance.

For Europe, as a whole, the main problem is that presented by the fact that intra-European trade has not expanded in line with the expansion in commodity output over the four decades from 1913 to 1951. Thus, commodity output in Europe has increased by 70 per cent., whereas intra-European trade has increased only by 2 per cent. One cause of the failure of the European countries to increase their trade with one another was the increasing emphasis that came to be placed, after the First World War, on national self-sufficiency. Some ineffectual attempts were made to increase intra-European trade during the inter-war period, but the great depression of the thirties put an end to these attempts and generated a "new wave of protectionism and autarky." After World War II, trading was directed largely by bilateral agreements. But no great expansion could take place, thanks to the war-caused devastation of industries, inflation at home, and rigorous import restrictions in nearly all the countries in this area. More important than these factors is the political division of Europe, caused by the East-West split, which is too painfully obvious to be brushed aside, while considering the problem of economic integration. The *Survey* rightly proceeds on the assumption that the split is a "political datum" and that integration must be sought on the basis of two separate political entities.

The principal reasons for the failure to achieve a closer economic union in W. Europe are the prevailing restrictions on labour and capital movements. There is opposition even today against free movement of labour. This is a hangover of the inter-war period when unemployment became the "overriding and unanswerable" argument against such movements. Although free movement of labour is desirable in itself, the *Survey* emphasises that the possibilities for creating "common labour markets" are restricted to countries with stable employment conditions. A far more difficult problem is that presented by the absence of capital movement. An international capital market has practically ceased to exist since 1931. In post-war years, some significant capital movements have taken place, largely because of loans and grants made by the U.S. and a few other countries. But these sources of capital inflow into W. Europe are fast drying up. The *Survey* sums up the position by saying that "there would seem to be a strong case for a transfer of capital from the richer countries of north and north-western Europe to the poorer countries." But it recognises that such a flow of capital is "unlikely to come about in the form of private investment," and that Governments' sponsorship, in some form or other, would be imperative.

Some planning is, therefore, held necessary, in order that capital may flow to the several industrial sectors of these countries, which require it urgently. The need for international planning of investments, it is pointed out, arises most sharply in industries, such as coal, electricity and steel, which are "basic to the economy, where investments are costly and take a long time to mature and where the costs of a misdirection of investments are correspondingly high." But the *Survey* admits that the chances of reaching internationally agreed decision in investment planning "appear to be faint." The *Survey*, however, notes with satisfaction the fact that the investment problems of different industries which come up for discussion in international organisations may be of importance for investment decisions in the various countries. It is only necessary to add here that international discussion can hardly be expected to stimulate investment and that capital transfers are only possible in a climate of economic freedom.

Although the actual achievements in the field of economic integration are slight and the conditions for the possibility of that integration by no means very propitious, it is no doubt true that the limited agreement which has been achieved in the sphere of trade relations is heartening to a degree. The decision of the Netherlands, Belgium and Luxembourg to integrate their economies, though only in the limited sphere of customs, is a notable step towards integration. But there has been no complete freeing of trade between the countries, which is attributed to the different conditions of agriculture in Belgium and the Netherlands and to differences in monetary and financial policies. But the working of the Benelux Union has revealed a few defects, which owe their origin to the fact that the countries have for long developed as independent national units. It is the knowledge of these defects that led the economic statesmen of Europe to attempt a different approach to economic integration, namely, the approach of "integration of sector." The one important sector, where this approach is being tested, is the European coal and steel industry. The High Authority, created for this purpose, is a supra-national authority with wide powers. It has authority to prevent the formation of private cartels and to take decisions in the face of a crisis or shortage of essential commodities. The whole arrangement, with its delicately balanced adjustments, represents an "interesting experiment in international planning under conditions of free enterprise."

The other fields in which co-ordination might still be attempted with advantage are transport and agriculture. Transport lends particularly to planning, for lines of communications can be used more economically, if national frontiers can be ignored. Also, there are obvious advantages to be derived through international planning of transport which can bring about rationalisation and unification of tariff structures. Moreover, there is the important consideration that such planning will avert the danger of over-investment which is a common evil in many countries which have unregulated systems of transport. Agriculture, unlike transport, does not lend itself so readily to integration. In the first place, agriculture represents a sector in which the workers and owners are a powerful political group. No nation would like to allow so important a sector of its economic activity as agriculture to be controlled by an external authority. Also, since food prices are of vital significance to industrial labour costs, Governments would not like to yield the power of control over such an important element of industrial costs as food. This is why the various "Green Pool" plans for gradual unification of agricultural markets in Western Europe have failed to make much headway.

Such, in broad outline, are the problems of economic integration of Europe and the achievements in this sphere. The chief advantages of integration are obvious. In the industrial field, it would mean a higher level of productivity and absence of fierce competition. It would also mean a rational division of labour. In the agricultural field, it would mean a more efficient exploitation of soil and manpower for achieving larger production and better marketing of produce. But any plan for reaching this goal ought to take into account the basic realities of the European economic situation. Apart from the difficulties caused by the fact that national isolation and competitive habits have been the marked features of European economic life, there is the consideration that the area consists of countries at very different levels of development. The poorer countries need special attention, if they are to be brought up to the level of the advanced countries. Any attempt at implementing a uniform policy for the whole of W. Europe, which ignores these essential differences, must inevitably end in failure. There is, therefore, a need, as the *Survey* rightly emphasises, for an "empirical approach to the practical problems of economic integration." At any rate, there can be no simple solution. And to oversimplify the admittedly complex nature of the problems is to meet failures at every turn. Caution and patience are the qualities which the European statesmen need. There is fortunately some evidence, in the shape of Benelux and the European Steel and Coal Community, to show that they possess these qualities.

DR. R. K. SHANMUKHAM CHETTY

IN the death of Dr. R. K. Shanmukham Chetty, which occurred at Coimbatore on Tuesday last, the country has lost an accomplished debater, able economist, efficient administrator and far-sighted statesman. Indeed, as has been most aptly remarked, his disciplined life and ever-increasing multitude of activities, his scholarship, his unique way of tackling intricate problems, his simple manner of exposition, and his courage of conviction won for him both respect and admiration. The active part he played in the deliberations of the I.L.O. Conference at Geneva in April, 1932, the Imperial Economic Conference at Ottawa in July-August, 1932, the Assembly of the League of Nations at Geneva in September, 1938, and the World Monetary Conference at Bretton Woods in 1944 is only part of a career, at once exciting, useful and varied. As the elected President of the Central Legislative Assembly in 1933, he maintained not only the high standard of excellence set up by many of his predecessors but also a firm and genial control over the proceedings of the Assembly and won laurels at the hands of such great parliamentarians as Mr. Bhulabhai Desai, Mr. S. Satyamurthy and Mr. M. A. Jinnah.

The other aspects of his versatility were noticeable when he was Dewan of Cochin from 1935 to 1941, head of the Government of India's Purchasing Mission in America from 1941 to 1942, Chairman of the Industrial and Scientific Research Committee in 1944, Constitutional Adviser to the Chancellor of the Chamber of Princes in 1945, and Chairman of the Tariff Board from 1945 to 1947. To Dr. Shanmukham goes, to a considerable extent, the credit for the formulation of a tariff policy for the preservation and development of war-time industries. As the Finance Minister of the Government of India in 1947-48—the first Indian Finance Minister of Independent India—he brought to bear upon the solution of the many pressing problems of the day his active and independent powers of judgment. His death leaves a void in the economic and political life of the country which is difficult to fill.

SUBDUED TONE IN SHARES

MONEY STRINGENT—COMMODITY MARKETS LOOK UP—STERLING AREA'S GOLD RESERVES

THURSDAY, 5 P.M.

THE Stock Exchange has depicted a slightly subdued trend this week. The bullish fervour which had been in evidence in the past four weeks seems to have waned considerably. Under the leadership of steel shares the trend of prices has been generally downward all round. Tata Deferreds, for instance, have receded to Rs. 1,887-8 this week from Rs. 1,917-8 at the close of last week.

MARKET GOSSIP

The sentiment of operators in shares seems to have been adversely affected by several uncertain factors. Conflicting rumours regarding the conversion ratio, continued delay in the announcement of the Mediator's award as also of the Government's decision on retention prices of steel, disquieting conditions on the Burma border and in Thailand all seem to have induced some leading operators to switch over their interests from shares to other principal commodities. In fact, the relatively attenuated floating stocks of silver, cotton and groundnuts in the respective markets have acted as a strong stimulus to divert the attention of tired bulls from shares to these commodities. A leading bull is stated to have unloaded a large parcel of Deferreds in order to cover his commitments in silver. Share values, which declined to lower levels as a result, have since improved and the undertone of the market remains steady.

* * * *

Stringent conditions have again come to prevail in the short-term money market. Revival of activity in the principal commodity markets and the need for funds for moving cloth, cotton and sugar to consuming centres by merchants seem to have led to some good demand on banks' funds this week. Having gone short of loanable funds to meet the demand, some banks, it is stated, are reluctant to go in for call money and pay a rate higher than 2¾ per cent. They consider it more prudent and remunerative to obtain advances from the Reserve Bank at 3½ per cent. against their securities rather than pay 3 per cent. on call money in the open market. For, the loss of interest on the statutory margin to be kept with the Reserve Bank on call loan and the brokerage along with interest on the loan will exceed 3½ per cent. payable on borrowings from the Reserve Bank. This explains why the inter-bank call rate which hardened from 2½ per cent. to 2¾ per cent. has not exceeded the latter rate, despite heavy pressure for funds on banks. The renewed demand for funds has belied the expectations of the market some time ago that the slack season would commence this year earlier than expected.

* * * *

Quiet conditions prevail in the Gilt-edged market. The Conversion loan which stood at as high as Rs. 82-12 last week has dropped sharply to Rs. 82-4. The high level to which the Conversion loan had touched last week is now reported to be due to covering by a Calcutta operator who had heavily sold short previously. Now that the technical position has thus been corrected, the market can be expected to put on a steady appearance. The activity in other long and medium-dated loans is at present subdued in sympathy with the Conversion loan. 3 per cent. 1970-75 loan has shed As. 2 over the week to stand at Rs. 86-10. The Reserve Bank is offering this loan slightly higher at Rs. 86-12. 3 per cent. 1963-65 loan and 3 per cent. 1964 loan are unchanged at the Reserve Bank's selling rate of Rs. 92-14 for these loans. 3 per cent. 1966-68 loan is ruling annas below the Bank's selling quotation at Rs. 99-10. Transactions reported done, however, appear to be few and far between.

* * * *

Price movements in the cotton market disclose a brighter tendency throughout. Both in the ready and forward sections the price-trend is unmistakably upward. Over the week ended to-day, I.C.C. May has gained nearly Rs. 10 to Rs. 733, and I.C.C. August about Rs. 7 to Rs. 738½. The highest levels in both May and August contracts were witnessed to-day; they were Rs. 738 and Rs. 744 respectively. This firmness stems largely from statistical considerations which point to a tight supply position in cotton. There have, of course, been considerable switching operations from May contract to August contract. Apart from the fact that the cotton market tends to reflect the firmness in other commodity markets the main inspiration for the firmness in the market is the scarcity of good quality cotton. It is true that not all local mills have been active buyers. They have not received their quotas. But the holders of quality cotton feel that the mills must come into the market, sooner or later, and that their stocks would command a good market. Indian varieties, such as Vijay, Laxmi, and Jayadhar, continue to attract buyers. Among foreign varieties, Sudans and Egyptians are in request. Only a few hundred bales have been tendered against May contract so far—a fact which, in its turn, reflects the firmness in the ready section. An intriguing question is: what will be the trend in the cotton market once the May contract expires? There will then be only one contract left, namely, the August contract, which will become extremely vulnerable in the absence of any other contract with a convenient expiry month. Much interest attaches, therefore, to the question of new crop trading. No decision, it is learned, has yet been taken by the Government on this question. An early decision would naturally be welcome to the cotton traders. It is not clear whether the Government would like to wait till the new crop position gets a little clearer. In that case, it would have to wait till October-November. The Government's attitude is likely to be known, it is stated, before the end of this month.

* * * *

Silver has caused much flutter in the bullion market during the week. This is not the first time that silver has been the object of attraction of speculators. For several weeks now, silver has been in the limelight. This week's performance, therefore, offers no surprise. In some weeks, price fluctuations have been narrow and in others the movements have been wide. This week, it is the latter trend which has been in full evidence. Thus, the white metal dropped from Rs. 161-11 on Thursday last to as low as Rs. 156-2 on Saturday, on aggressive selling by shorts, in which a prominent bull operator also joined. This trend proved to be short-lived; for, since Monday tables have been turned against the short sellers, and the leading bull operator has gained control over the situation. Encouraged by reports of good offtake, he has managed to rig up the price. During the course of one day's trading alone, that is on Monday, he nearly made good the loss he suffered in the previous two days and with full control over the statistical position, he took the price further in his favour to as high as Rs. 165-3 yesterday, thus bringing about a rise of Rs. 9 in the course of three days. Currently, the ready rate stands at Rs. 164-9.

* * * *

The silver section of the bullion market has witnessed a trial of strength during the last four days, in which the leading bull operator has gained the upper hand. The operator derived his inspiration from the white metal's statistical position. It is stated that out of the total floating stocks of 3,500 bars all over India, about 2,000 bars are believed to be in the hands of the leading bull operator and the balance is scattered in the various centres. In addition, this bull operator has purchased in the forward position as many as 3,000 bars, while the leading bear operator has gone short to the extent of 4,500 bars. Thus, as against the floating stocks of only 1,500 bars, there has been a speculative business to the extent of 7,500 bars. If the present good offtake is maintained and the floating stocks dwindle further, then the bull operator can dictate his own terms at the time of settlement. Even if the offtake, on the other hand, were to decline, then also the bull operator would be able to retain his control over the market.

* * * *

It is understood that a number of important amendments will be proposed to the Tea Bill, as reported by the Select Committee, which is now before Parliament. One of the amendments, of which notice has been given, proposes to fix the number of seats to be allotted to various interests on the Board. This proposal allows for a Chairman to be appointed by the Government, and five members from Assam, three from West Bengal, and two each from Madras and Travancore-Cochin, respectively, to be nominated by "such bodies and in such manner as may be prescribed," two persons from the House of the People, one from the Council of States, one each from eight States to be nominated by the respective State Governments, four officials to be nominated by the Central Government, and such other persons to be nominated by the Central Government which, in its opinion, will represent labourers, manufacturers of tea, dealers, etc. Another amendment proposed specifically asks for representation on the Board for the following four principal all-India organisations of the working class, viz., the All-India Trade Union Congress, the Indian National Trade Union Congress, the *Hind Mazdoor Sabha* and the United Trades Union Congress. Other amendments have been proposed to ensure that in various important matters the Government does not make any decision affecting the tea industry without previous consultation with the Board.

* * * *

News is to hand that the International Tea Committee has fixed the tea export allotment from the producing countries for 1953-54 at 135 per cent. of the standard export quota. This decision has come against India's own decision to fix exports for the year at 115 per cent. of the standard quota. It will be remembered that Ceylon has already decided to fix its export figure at 135 per cent. In consequence of the International Tea Committee's decision it is considered probable that India's export figure also will be raised to 135 per cent.

* * * *

The Government of India has accepted the recommendations of the Tariff Commission in respect of the conversion charges payable to the registered re-rollers and the fair retention price of untested electric furnace billets produced by the registered re-rollers. Accordingly, the re-rollers have been granted Rs. 130 per ton as conversion charges for untested bars and rods 5/8" and above; and inland units have been allowed additional charges, on account of place extras, at 8.35 per cent. of the place extras. The fair retention price of untested electric furnace billets has been fixed at Rs. 310 per ton. The increased conversion charges and fair retention price have retrospective effect from 1st January, 1953, and will remain in force up to 31st December, 1955. The other recommendations of the Commission in this connection are under consideration of the Government. These are: (1) the desirability of making larger supplies of billets available to the re-rolling industry should be kept in view, since the production of steel in India is increasing and plans are in hand for major expansions in the near future, and the main producers should, therefore, be asked to make due provision for the requirements of this industry in their expansion projects; (2) exports of scrap should be strictly controlled with a view to ensuring that no melting scrap, which can be used by the electric furnace, is allowed to be exported; (3) the present system of place extras on scrap deserves re-examination by the Government; and (4) a committee should be appointed to examine the position and prospects of the re-rolling industry and to suggest suitable measures for its reorganisation.

* * * *

To the list of the non-ferrous metals which were returned by the U.K. Government to free trading, namely, tin, zinc and lead, has now been added another, namely, copper. The U.K. Government has given the necessary three months' notice to Commonwealth producers to end bulk buying. The London Metal Exchange will resume, it is stated, free dealings in copper on 5th August. Thus, the Exchange, which in pre-war years was a leading marketing institution for non-ferrous metals, is coming into its own. The Government's decision has been obviously prompted by the relatively sound position of the market for copper and other non-ferrous metals. A notable feature of world commodity markets in recent weeks has been the fall in prices of non-ferrous metals. These metals form part of an important group of defence materials, so that their prices are influenced by defence demands. So far as copper is concerned, larger quantities are expected to flow into world markets from Africa and Europe. Discussing the long-term trends in copper, the *London Financial Times* says:

"The key to the long-term trend of copper—as of other commodities—will lie in the U.S. and in the turn of political events. Mine production of copper has been increased to cover normal peacetime demand, rearmament programmes and U.S. stockpiling. If either of the last two is scaled down, then there will undoubtedly be a degree of over-production which the operation of a free market will automatically correct."

* * * *

The overseas markets are slowly shaking off the initial shock of the news regarding the cut in U.S. Governmental expenditure. But it would be rash to suggest that spectacular gains are imminent. In the U.K., there is less belief now than formerly in the possibility of a cut in the Bank rate. Writers on economics believe that the U.K. Government will watch the effect of the concessions it gave recently as part of its budget proposals before it tinkers again with the Bank rate. A notable development—and a development which is hardly calculated to further the hopes of a cut in the Bank rate—is that relating to bank advances. It was in November 1951, that the Government introduced its new monetary policy. During the twelve months from November, 1951, the credit totals of the London clearing house declined by £182 million to £1,743 million. At that point, there was a sharp reversal of trend. The total of loans granted by banks now stands at £1,814 million. During the past five months the banks have been granting an additional credit of £14 million per month. For the next few months, there is possibility of a further increase in advances, thanks to the proposed denationalisation of transport, and the return of grain import trade to private enterprise. There is, therefore, less need to stimulate banks' advances through the stimulus of a reduction in the Bank rate. At any rate, the Government, it is felt, will not take any decision on monetary policy, before it has studied the trends in bank advances and the effect of the recent reliefs in taxation which it has announced.

* * * *

The sterling area's gold and dollar reserves recorded yet another gain at the end of April, when they aggregated $2,273 million, as compared with $2,166 million at the end of March. Thus, during April, the area had a gold and dollar surplus of $107 million, which compares with surpluses of $63 million in March and $125 million in February. The April surplus includes $20 million received from the U.S. through military aid and $11 million through the E.P.U. settlement. It is now more than a year since the area's reserves touched so high a level. At the end of 1951, the area had gold and dollar reserves to the tune of $2,335 million. So the present level falls only slightly short of the high level at the end of 1951.

* * * *

It is, of course, difficult to assess the prospect of this area's dollar surplus in the coming months. For one thing, the U.S. Government has already slashed the appropriations for foreign aid. The effect of this reduction would begin to be felt from the next American fiscal year commencing from 1st July. Perhaps, any cut in this aid will be made good, at least partially, by fresh American demand for sterling area commodities, of which the U.S., it is stated, does not hold plentiful stocks. But the fact that these commodities do not command such good prices as they received in world markets in the post-Korean boom suggests that the possible dollar earnings through American purchase of these commodities cannot be very considerable. A commodity, which is particularly affected in this manner, is rubber. The position in regard to rubber was neatly summed up by Sir Sydney Palmer, Chairman of the Rubber Growers' Association, at the recent annual meeting of the Association. During the seven years since the end of the Second World War, natural rubber exports to the U.S. have earned the sterling area $1,350 million. If account is taken of the rubber exports to other dollar areas, this commodity has earned the sterling area over $1,600 million. In 1951, rubber exports to dollar area were valued at $400 million. In 1952 rubber's earnings dropped by half, and in the current year, it "looks as if they may be less than $100 million." The progressive decline in earnings reflects, in part, the fall in rubber prices.

EQUITIES REACT ON LIQUIDATION

TEXTILES, HOWEVER, STEADY

(From Our Own Correspondents)

BOMBAY, *7th May*

AFTER remaining firm for several weeks, equities on the Stock Exchange displayed a sagging tendency during the week under review. In the absence of any bullish incentive and selling pressure by shorts, there was a marking down of prices over a wide front. A notable exception to the general trend was, however, provided by select speculative scrips in the textile section which ruled firmly steady, thus indicating that the market was still inclined to be bullish, despite the recession in steels and other leading miscellaneous counters.

Though the firmness of the bullion and cotton markets and rumours of an early announcement of the steel retention price induced rallying attempts at times, equities could not hold their ground in the face of persistent selling by shorts who chose to depress the market. Reports of lower production by the Tata Iron and Steel Company at Jamshedpur during the month of April, fears of a fall in prices of steel in foreign countries due to a large increase in production, continued labour strike in the Indian Iron and Steel Company disturbed the sentiment of bulls.

In the steel section, Tata Deferreds opened on a quiet note at Rs. 1,906-4, and after going up to Rs. 1,916-4 on Saturday, reacted sharply to Rs. 1,886-4 on Monday. At this level, scattered bull support and bear covering came forward and lifted the scrips to Rs. 1,901-4, but they slipped back to Rs. 1,871-4 before closing at Rs. 1,887-8. Tata Ordinaries moved between Rs. 329 and Rs. 324 and finished at Rs. 328-8. Indian Irons were on offer and moved down from Rs. 25-12½ to Rs. 25-2½, but at the close gathered strength to Rs. 25-8 on hopes of an early settlement of the labour strike.

The textile section was generally steady and select scrips scored useful gains, on reports of a better demand for cotton piecegoods from external as well as internal markets. Kohinoors, which came down to Rs. 314-12 yesterday from Rs. 318, jumped up to Rs. 320 to-day before closing at Rs. 319-12. Bombay Dyeings were a shade lower at Rs. 395. Central Indias gained Rs. 5 to close at Rs. 176, Centurys, a rupee to finish at Rs. 276, Finlays Rs. 2 at Rs. 305, Indu Ordinaries As. 3½ at Rs. 10-9½. Gokaks showed no change at Rs. 216, but New Greats were marked up by Re. 1 at Rs. 156 and New City by Rs. 8-12 at Rs. 150. Standards were a shade quiet at Rs. 282-8 *ex-div.*, as against Rs. 304-6 *cum-div.* Svadeshis were steady at Rs. 254 *ex-div.* Simplex, however, disclosed a loss of Rs. 3-8 at Rs. 173-8.

Banks were featureless and select scrips disclosed minor losses. Imperial Fully Paid-ups, which came into the limelight last week with a gain of Rs. 32-8 to Rs. 1,885, were marked down by Rs. 27-8 to Rs. 1,857-8 and the Contributories by Rs. 8-12 to Rs. 455. Centrals (Old) were a fraction lower at Rs. 64, while the New shares were unchanged at Rs. 65-12. Indias were steady at Rs. 154, and Barodas at Rs. 114. United Commercials shed As. 8 to Rs. 35-4.

A feature of the trading in insurance shares was a drop of Re. 1 to Rs. 42-4 in New Indias. Orientals were, however, taken up by Rs. 125 to Rs. 7,150. Other scrips remained unchanged.

In the public utility section, the Tata Hydro group came in for selling, on reports that the Companies' new issue of shares for financing their Trombay Scheme would be offered to the existing shareholders at par. Tata Powers declined by Rs. 22-8 to Rs. 1,515. Tata Hydros were a fraction down at Rs. 151-4. Andhra Valleys, however, were, better off by Rs. 7-8 at Rs. 1,432-8. Ahmedabad Electrics shed As. 10 to Rs. 109-1, but Bombay Suburbans put on As. 15 to Rs. 124-6. Surat Electrics held their own at Rs. 130-10.

Miscellaneous industrials presented a quiet trend. A.C.Cs. drifted lower from Rs. 173-8 to Rs. 170, before winding up at Rs. 171. Belapurs relapsed from Rs. 241 to Rs. 234-8, but edged forward towards the close to Rs. 236. Bombay Burmahs receded by Rs. 5-10 to Rs. 383-12. B.I.Cs. were steady at Rs. 8-10½. National Rayons were in demand to go up by Rs. 3-8 to Rs. 89-8. Tata Chemicals were dull at Rs. 9-4 and Tata Oils disclosed a loss of As. 12 at Rs. 34. Wimcos backed away from Rs. 236-14 to Rs. 234-6.

In the mining and engineering section, Alcocks drifted down from Rs. 389-6 to Rs. 383-12, Shivrajpurs from Rs. 56-12 to Rs. 53 and Indian Coppers by As. 2 to Rs. 2-14. B.B. Petrols were quiet at Re. 1-2½. Premier Constructions were placed Re. 1-8 lower at Rs. 89.

In the transport section, Scindia Steams were weak with a decline of As. 4½ to Rs. 13-7½. Bombay Steams were steady at Rs. 35-8. Air-Indias were done at Rs. 84 and Air-India Internationals at Rs. 104.

Calcutta Stock Exchange

CALCUTTA, 5*th May*

During the first two sessions of the week under review, that is, on Wednesday and Thursday last, the support given to jutes and steels imparted general steadiness to equities on the Calcutta Stock Exchange, but the following sessions of the week were dull and uninteresting. Judging from this week's trend, it would appear that operators are waiting for the emergence of clearer prospects before increasing commitments. Although the market could have derived a measure of strength consequent on the disappearance of the near-possibility of Korean peace, in view of the delay tactics adopted by the Russians, operators rightly placed more reliance on internal factors. The changed attitude of the Pakistani Government towards India has been noted, but operators wait for further developments which might improve the pattern of Indo-Pakistani trade.

This week's gains in prices of jute goods being substantial, an abnormal rate of business in jute shares would not have been any surprise at all. However, this was not to be, as after earlier steadiness in selected counters, prices drifted and to-day's closing rates are either lower on balance or carry insignificant gains. The reason behind this performance would appear to be operators' preference to wait for a time and see if the price gains of jute goods are well maintained. If they are not, jute mills cannot show better working results during the current accounting period. Coals were also far from steady, as anxiety was felt by the fall in the rate of exports.

Although there was a slight increase in the number of transactions in the textile section, prices did not move up. On the other hand, a recession was in evidence in certain counters. Thus, Kesorams were unchanged at Rs. 19-14, while Bengal-Nagpurs shaded from Rs. 15-4 to Rs. 14-14. Muir Mills were traded at Rs. 215, and Elgin Mills declined from Rs. 16-15 to Rs. 16-12.

Jutes could not maintain the earlier gains in most cases, and operators were cautious, as the increase in the price of jute goods had been accompanied by an advance in the price of the raw material. Speculative Howrahs opened at Rs. 24-9 and gained to Rs. 24-11. The closure on Saturday took the quotation down to Rs. 24-5, and during the last two days the rate fluctuated between Rs. 24-4 and Rs. 24-12 before closing to-day at the higher level. Nuddeas, after improving from Rs. 42 to Rs. 45, partially lost the gain at Rs. 44-12, while Reliances steadily advanced from Rs. 13-8 to Rs. 15. Gourepores were noted for a gain of Rs. 21 to Rs. 286. Barnagores were better by two points at Rs. 165. Unions changed hands at Rs. 163, Anglo-Indias at Rs. 231, and Indias at Rs. 131. Kinnisons realised Rs. 194.

Only nominal interest was shown in coal shares, and rates varied little. Burrakurs were wanted at Rs. 10-10. Raneegunges rose further from Rs. 9 to Rs. 9-4, but on Monday the gain was completely lost. East Indians were unchanged at Rs. 23-2, while Bengals were bought at Rs. 532. Khatras Jherriahs moved further from Rs. 41-9 to Rs. 43. Bengal-Nagpurs changed hands at Rs. 14-4 and Central Indias at Rs. 5.

Speculative support to the engineering section raised Indian Irons earlier from Rs. 25-7 to Rs. 25-13, but subsequently gave way to Rs. 25-3. The rate was around Rs. 25-8 during the last two sessions. Jessops were taken at Rs. 24-11, and Texmacos were bought at Rs. 5-6. Burn & Cos. realised Rs. 221.

In the miscellaneous section, features were limited. Carews were wanted up to Rs. 7, showing an overall gain of Re. 1-5, while Dharbanga Sugars receded from Rs. 9-2 to Rs. 8-15. After remaining at Rs. 12, Airways Indias slipped to Rs. 11-12, while Rohtas Industries were steady at Rs. 9-6. B.I. Corporations were traded at Rs. 8-9, Indian Cables showed a fractional improvement to-day at Rs. 18-6 and India Steamships changed hands at Rs. 6-5. Titaghur Papers were taken at Rs. 35-2, Sone Valley Cements at Rs. 7-4 and Alkali Chemicals at Rs. 13-6.

* * * *

Madras Stock Exchange

MADRAS, 5*th May*

There was considerable enquiry in the Madras Stock Exchange this week. The lull in the Korean peace talks stimulated the upward trend that was in evidence last week. Textiles advanced further on revival of demand for cloth and yarn from consuming centres and certain overseas enquiries. Plantings were steadier. Teas improved on encouraging Continental advices. Rubbers were better on speculative demand. Coffees too were lively in sympathy with the other two planting scrips. Miscellaneous scrips proved no exception to the general trend. As a result, the volume of business done was slightly better and prices recorded moderate gains over the week.

Some popular scrips in the textile section came in for fair support. Dhanalakshmis and Janardhanas were higher by Re. 1 each, at Rs. 175 and Rs. 63, respectively. Sri Krishnarajendras were done at Rs. 40, as against Rs. 39 at the end of last week. Lakshmis Rs. 50 paid-ups gained Re. 1-8 to Rs. 80 and Rs. 25 paid-ups Re. 1 to Rs. 39. Metturs were better at Rs. 190. Malabar Spinnings exchanged hands at Rs. 142, as against Rs. 150 *cum-div.*, and Rajalakshmis at Rs. 76-4 *cum-div.*, as against Rs. 74-8. The Directors of Rajalakshmi Mills have recommended a dividend of 9 per cent. on ordinary shares for the year ended 31st December, 1952, as against 10 per cent. for the previous year.

The crisis in tea is taken to have been virtually tided over. London advices were encouraging. Parksides hardened by As. 6 to Rs. 12-2. Highland Produces and Kalasas were quoted higher by As. 2 each at Rs. 10-4 and Rs. 10, respectively. Outcherlonys (tea and coffee) gained As. 4 to Rs. 3-15. Periakarmalais were done at Rs. 26-12 *cum-div.*, as against Rs. 25-4. The Directors have declared an interim dividend of 15 per cent. on ordinary shares for the year ended 31st March, 1953. Kil Kotagiris (tea and coffee) were up by As. 2 at Rs. 5-3 *cum-div.* The Directors have maintained the dividend of 30 per cent. on ordinary shares for the year ended 31st October, 1952.

There were reports of considerable reduction of rubber stocks with the leading rubber consuming factories. Consequently, Thamarapally improved by As. 4 to Rs. 13-2 and Rajagiris by As. 2 to Rs. 10-2. Anandams gained an anna and a half to Rs. 9-9½. Kailas and Pullangodes were steady at Rs. 3-4 and Rs. 2-7, respectively. Midlands (tea and rubber) were up by As. 2 at Rs. 9-10. Kalepettas (tea and rubber) were, however, lower by As. 2 at Rs. 17-8.

Among coffees, Coffee Lands improved by As. 3 to Rs. 9-9. Consolidated Coffees also advanced by a similar amount to Rs. 17-3. The coffee crop realised by this estate till the end of March is reported to have been considerably above expectations. Puthuthottams were slightly better at Rs. 4-1. But Shevaroys were fractionally lower at Re. 1-2½.

Among miscellaneous scrips, Andhra Cements Rs. 100 paid-ups were enquired at Rs. 95, as against Rs. 94 and Rs. 10 paid-ups at Rs. 9-10, as against Rs. 9-5. Mettur Chemicals and Mysore Chemicals and Fertilisers were fractionally higher at Rs. 4-1 and Rs. 8-2, respectively. Deccan Sugars Rs. 25 paid-ups were up by Re. 1 to Rs. 21-8. India Sugars were done at Rs. 22 *cum-div.*, as against Rs. 20-4. The Company has maintained the dividend of 25 per cent. for the year ended 30th September, 1952. Mysore Tobaccos were better at Rs. 10-5. Rallis, however, lost As. 8 to Rs. 77 and Mysore Papers As. 2 to Rs. 13-10.

ROLE OF STOCK EXCHANGES

Addressing the recent annual meeting of the Madras Stock Exchange, Mr. J. V. Somayajulu, Chairman, made a few notable observations on the role of stock exchanges, in general, and on the trading conditions of the Madras Stock Exchange, in particular. He said that a stock exchange was a delicate and sensitive mechanism which could be described as an economic barometer. Its services lie in the direction of providing continued liquidity to the securities quoted on it and of diverting capital into the most fruitful and essential channels of investment. The Madras Stock Exchange has, like other stock exchanges in the country, already witnessed a sharp fall in the volume of business. He attributed this development to the general change in the economic climate of the country, and, secondly, to the paucity of funds flowing into the market, thanks to the virtual absence of surplus savings in the community. But it must be said to the credit of the Madras Stock Exchange that it did not suffer from such violent downward movements as have characterised the working of the other chief stock exchanges in the country. Mr. Somayajulu attributed this fortunate development to the fact that the Madras Share Market was "primarily an investment market." However, what the stock exchange has gained in stability of prices has apparently been lost in turnover and liquidity, for Mr. Somayajulu said that the "volume of business has diminished to negligible dimensions at the present moment."

Reviewing the prospects for stock exchanges, he pointed out that the hopeful factors were the change in the international situation, the Republican Victory in the U.S., and the internal factors, such as the implementation of the Five-year Plan and the appointment of the Taxation Enquiry Commission. But he deplored the low exemption limits in the Estate Duty Bill—Rs. 75,000 for individuals and Rs. 50,000 for each member of a joint Hindu family.

Of the three major stock exchanges in the country, the Madras Stock Exchange takes a somewhat less important place than either the Bombay or the Calcutta Exchange. Mr. Somayajulu was, naturally enough, sorely exercised over this backwardness of the Exchange. He deplored that the Exchange was having a "rather stunted growth." He urged the need for the 7 founder-members and the 7 non-founder members to give up voluntarily their privileges and thereby ensure the growth and development of the Association. It is to be hoped that the concerned members will rise to the occasion and make the necessary sacrifice in the larger interests of the organisation which they have helped to establish and in whose progress they ought to be really and vitally interested.

NEWS IN BRIEF

THE Government of Madhya Bharat has appointed a committee to revise the Land Revenue and Tenancy Act, *Samvat* 2007.

The next meeting of the Import Advisory Council will be held on Friday, 22nd May, 1953, in New Delhi under the chairmanship of the Minister for Commerce and Industry. The Export Advisory Council will meet on the following day.

Sixty-nine foreign business institutions in India were sold to residents and 12 were liquidated during the period July, 1947 to December, 1952. The remittances received during the above period for investment in India amounted to Rs. 8.3 crores.

With a view to minimising any dislocation that may be caused, particularly to the lower income groups, by the withdrawal of the *hali sicca* currency, the Government of India has agreed to issue reasonable and adequate quantities of small coins of the denomination of annas eight and below in the local currency for a period of one year from 1st April, 1953 and *hali sicca* one-rupee notes for a temporary period. The legal tender character of the State currency has also been extended for two years.

The all-India fourth estimate of cotton for 1952-53, puts the area and the production at 15,030,000 acres and 2,906,000 bales, as against 15,126,000 acres and 3,042,000 bales of the corresponding adjusted estimate for 1951-52. This shows a decline of 96,000 acres and 1,34,000 bales in production. The decline is due to insufficient rains and adverse weather conditions in central and southern parts of India. The decline is mostly in the varieties of Oomras, Hyderabad Gaorani, Southerns, and in Hyderabad, Madhya Pradesh, Madras and Mysore.

Loans amounting to Rs. 73.91 crores were advanced to Parts "A" and "B" States in 1951-52, for schemes in the Five-year Plan. In 1952-53, loans advanced to these States aggregated Rs. 68.82 crores. The grants sanctioned in their favour for Grow More Food scheme and as special developmental grants to certain Part "B" States amounted to Rs. 12.35 crores for the two years, 1951-52 and 1952-53. The loans were for meeting expenses in connection with the centrally financed river valley projects, rehabilitation, G.M.F. scheme (including minor irrigation), natural calamities, industrial housing, Community Development Projects and miscellaneous schemes.

The States of Bombay, Punjab and Hyderabad have already enacted legislation for the levying of betterment fee in areas brought under irrigation by the new river valley projects. The States of Madras, Uttar Pradesh, West Bengal, Rajasthan and the P.E.P.S.U. have drafted Bills for this purpose which are under consideration. The States of Bihar, Orissa, Madhya Bharat and Travancore-Cochin have accepted, in principle, the levy of betterment fee in connection with new irrigation projects. The income from the levy of betterment fee would be credited wholly to the revenues of the States concerned. It would, of course, appear in the administration accounts of the projects concerned.

The question of development of river communications, particularly on the Ganga and its feeders, is under consideration of the Bihar Government. A board, known as the Ganga-Brahmaputra Water Transport Board, has been set up at the Centre in the Ministry of Transport on which Bihar is represented. This Board is actively considering questions which have direct bearing on the navigability of the river Ganga and Gogra. The State Government has also constituted an Inland Water Transport Advisory Committee consisting of the representatives of the steamer companies, the railways and the Governments concerned. The function of the Committee is to advise Governments mainly to ensure efficient transport of goods and passengers on the Ganga and the feeder services.

The Government of Bombay has decontrolled barley throughout the State of Bombay, with effect from the 2nd inst. It has consequently now become a derationed article. Among the restrictions removed are those which laid down the maximum percentage of extraction of bran from barley ground in roller-flour mills and prohibited manufacture of barley flour other than wholemeal barley flour in the Bombay Ration Area. The restrictions which will continue to exist in respect of barley are: (1) prohibition against the movement of the grain into or out of the limits of the State of Bombay, (2) those imposed by the Flour Mills (Chakki) Licensing Order, 1950 and (3) those arising under the Entertainment Restriction Order which regulate the number of persons that can be entertained at parties or functions with articles in which cereals are used.

The total concealed income unearthed in the year 1952-53 by the Income-tax Investigation Commission and through the disclosure scheme amounted to Rs. 20.54 crores. This information was given by the Deputy Finance Minister in the House of the People this week. Besides this, some amount was detected by officers of the Income-tax Department in the course of normal assessment proceedings, but information therefor is not readily available and cannot be collected without much time and labour. Generally speaking, the concealed income represents black-market money, speculation profits or profits suppressed through inflation of expenses, deflation of sales, undervaluation of stocks, purchase of speculation losses, bifurcation of transactions and such other devices. Moderate to heavy penalty is levied on offenders according to the facts and circumstances of each case.

The rates of postage applicable to packets and parcels have been revised with effect from 1st May, 1953. In the inland service, the postage on book, pattern and sample packets has been revised from nine pies to one anna for the first five tolas and from three pies to six pies for each subsequent two and a half tolas or part of that weight. For parcels, the postage has been revised from six annas to eight annas for every 40 tolas or part of that weight. The postage on registered newspapers remains unchanged. In the foreign post, for all destinations other than Aden, Ceylon, Nepal, Pakistan and Portuguese India, the postage on printed papers, business papers and sample packets has been revised from nine pies to one anna per two ozs., subject to a *minimum* charge of four annas in the case of business papers and two annas for sample packets. For packets of printed papers, etc., addressed to Aden, Ceylon, Nepal, Pakistan and Portuguese India, inland rates of postage are applicable.

Problems relating to the promotion of the horticulture industry in India will be considered at a special meeting of the Horticulture Committee of the Indian Council of Agricultural Research to be held at New Delhi on the 11th inst. The Committee will examine certain suggestions made by the Horticultural Society of India and make recommendations which might help horticultural improvement in the country on a rational basis. It will also discuss a proposal for establishing a horticultural division at the Indian Agricuitural Research Institute, Pusa. As work on horticulture will now be eligible for Grow More Food subsidy, the Committee will suggest the lines on which the States can, with advantage, intensify their horticultural work. It will review the status of horticulture in each State and recommend a phased programme of horticultural development on a regional basis during the next five years, taking into account the research work now being done. The Committee will go into the question of the State Governments setting up commercial gardens and orchards on scientific lines, to be worked more or less on a self-supporting basis.

* * * *

From Abroad

Sweden's engineering industry, excluding shipyards, has reported a 29 per cent. decrease in the number of shipping orders on hand during January and February this year. On an average, the orders on hand provide employment for 11 months.

The British Government has lifted control over the distribution of all iron and steel products, except tinplate. Steel supplies in the U.K. are said to be sufficient to meet domestic demand, as well as to provide somewhat larger quantities for export.

The Government of Malaya has decided to settle Indian labourers in Malaya on land. Two pilot schemes have been prepared by the Government for immediate execution. One of them will make State lands and the other estate lands available to Indian labourers in Malaya. In three out of the nine States in Malaya, some progress has already been made.

Commonwealth Prime Ministers will begin a series of meetings at No. 10, Downing Street, two days after the Coronation. The meetings are expected to last for about a week. The British Prime Minister, Sir Winston Churchill, will preside. It is understood that a provisional agenda has been drawn up for them, touching foreign affairs, defence and finance.

The first Wool Futures Market ever to be held in Britain opened in London on the 29th inst. The floor was crowded with many Commonwealth, United States, and European representatives, and associate members of the London Wool Terminal Market. Some nine lots, about 45,000 lbs. were traded, and prices varied between 158*d.* (Rs. 8.12) for September delivery, and 147d. (Rs. 8.4) for July, 1954, delivery.

The Norwegian State Housing Bank has financed the building of 60,000 homes since the war, as well as business premises and farm buildings, says the Bank's Annual Report. Last year, loans were approved for the construction of 20,000 new homes, about 30 per cent. more than in 1951. The Housing Bank now has loans outstanding amounting to £50,000,000 and has loan commitments amounting to another £15,000,000. The Bank says that from 1950 to the autumn of 1952, building costs rose by 20 to 30 per cent.

The British Government has removed all wartime price controls except on food, with effect from the 1st inst. The last remaining Board of Trade price control, on nylon stockings, has also lapsed. Price controls on subsidised food and feeding stuffs however, remain in force. Control on importing, distributing, and price of rice will end on 31st July. Private traders will be able to start importing rice from 1st July. British rice consumption, about 3½ lbs. per head a year, represents only a small fraction of world supplies and is not expected to rise with the lifting of controls.

A revolutionary type of pump, of extremely simple design, which is being shown for the first time at the Birmingham section of the British Industries Fair, has attracted much attention. Known as the Cycle-Plunge pump, its revolutionary features is that it is completely non-priming and has only three moving parts. The pump has passed stringent tests with the British Sugar Corporation and is considered suitable for pumping molasses. This is a considerable achievement as, up to the present, the pumping of molasses has had to be done by a heavy machine weighing over one ton. The new pump weighs 23 lbs. It gives 300 lbs. pressure and a 27-ft. suction lift.

PERSONAL

MR. George V. Allen, U.S. Ambassador to India, presented his credentials to the Union President on the 4th inst.

Mr. P. V. R. Rao has assumed charge as Accountant-General, Bombay, *vice* Mr. V. N. Adavi who has proceeded on leave.

Mr. Dhirajlal Maganlal has been elected Honorary Secretary of the Bombay Shareholders' Association, in place of the late Mr. Jagmohandas J. Kapadia.

Mr. K. L. Dalal, who was second Secretary to the Indian High Commission at Colombo, has been appointed Secretary to the Embassy of India in Prague, Czechoslovakia.

General K. M. Cariappa, High Commissioner-designate for India in Australia, has been concurrently accredited as High Commissioner for India in New Zealand.

Mr. Faiyazuddin Ahmed Faizi, Special Social Service Officer, Karimnagar, has been appointed Assistant Member of the Conditions of Work Division of the I.L.O. with headquarters at Geneva.

Lt.-Col. J. D. Kothawala, of Messrs. Polson Ltd., has been appointed a member of the Divisional Railway Users' Consultative Committee (of the Central Railways) in Bombay to represent the Indian Merchants' Chamber.

Mr. G. J. Gardner, Chairman of the Indian Jute Mills' Association, left for Singapore last week-end on a brief visit, with a view to collecting such information as is available at this focal point of Far Eastern countries and the extent to which changes in jute goods trade may be anticipated.

Rajkumari Amrit Kaur, Minister for Health, Government of India, and leader of the Indian delegation to the sixth session of the World Health Assembly which commenced at Geneva on the 5th inst., left for Geneva. Mr. C. G. Pandit, Secretary of the Indian Council of Medical Research, and Mr. R. Visvanathan, Deputy Director of Medical Services, accompanied the Health Minister.

Mr. S. M. B. Easwaran of Messrs. Dalal & Co. and Mr. V. Rangachari of Messrs. Maconochie & Co. have been elected President and Vice-President, respectively, of the Madras Stock Exchange Association Ltd. for the year 1953-54. Mr. S. Ramaswami Naidu of Messrs. Ramlal & Co. has been elected Honorary Treasurer, and Mr. K. Venkataraman of Messrs. Venkataraman & Co. and Mr. H. Subramaniam of Messrs. Chitra & Co., Joint Honorary Secretaries.

"COMMERCE" 1928

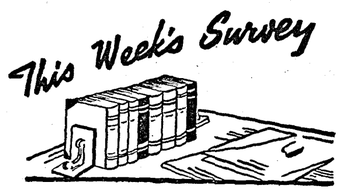
FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, 19*th May*

Trade Barriers

Asked in the House of Commons last week whether any negotiations were under consideration for the removal of restrictions on imports to India, Sir Austen Chamberlain (Foreign Secretary) said that he thought conversations on the matter had been proceeding and no doubt, these would be continued. It may be recalled here that, at the recent annual meeting of the Association of British Chambers of Commerce in London, a resolution was adopted in favour of the removal of trade barriers within the Empire and recommending that the matter should be considered at a conference of representatives of Empire industry which was proposed to be called before the next Imperial Conference. And we have it on the authority of a cable from Geneva that the Government of India has signed a Convention and Statutes founding an International Relief Union and a Convention for the abolition of import and export prohibitions and restrictions. Both Conventions were concluded at Geneva in 1927. The time has come to put an end to the increase in tariffs and to move in the opposite direction was the most significant single conclusion of the World Economic Conference held at Geneva last year. It was at this Conference that the Government of India delegates, Sir N. Wadia, Sir Campbell Rhodes, and Dr. Hyder, recommended the permanent appointment of an Indian representative at Geneva to watch its interests. There were 194 members of the Conference, attended by 157 experts drawn from 50 countries in all quarters of the globe.

The Geneva Economic Conference has been followed by constructive work. About 20 countries had signed the Convention on export and import prohibitions prepared by the Diplomatic Conference in November last year. The Convention on the enforcement of foreign arbitration awards was signed by the British Government in the first week of December last. While the economic organisation of the League is entering on new tasks, it is of the utmost importance that all its members should carry out the agreements already made. The ratification of the past economic Conventions is by no means universal. If the league is to make satisfactory progress over new ground, they must consolidate the ground already covered. And it was well that M. Theunis, formerly Belgian Premier, emphasised at the Conference the futility shown in some countries by expending vast sums on ports and railways to reduce the costs and time of transport and neutralising this work by excessive and annoying tariffs, and many other speakers emphasised that the interests of European countries lay in facilitating, not impeding, the flow of international trade.



SLASH IN U.S. BUDGET EXPENDITURE

THE Republican fervour for enforcing economy in Governmental expenditure in the U.S. is showing itself in many ways. Already several departments of the U.S. Government, it is stated, are asking for a lower appropriation than those provided by the Democratic ex-President Truman when he presented, in January last, the Budget for the fiscal year ending June, 1954. But savings in Government expenditure, important as they are, could hardly be substantial, so long as defence and foreign aid constitute so important a part of the Federal Budget. With singular courage, the U.S. Administration is now tackling the problem of economy. President Eisenhower announced a cut of $8,500 million in his budgetary expenditure for 1953-54. The great bulk of the savings, it is stated, would be made by reductions in defence and foreign aid programmes.

Mr. Truman, in his budget message to Congress, last January, it may be recalled, had asked for $7,600 million for foreign aid and $46,000 million for defence expenditure. Since then, many Americans have been pressing the case for economy. Senator Taft, for instance, has been hoping for an economy of at least $4 billion on the expenditure proposed for defence. Mr. Eisenhower has now met the widespread American demand for economy by his agreeing to slash the budgetary expenditure by $8,500 million. But then, it is not clear how the cut would be split between defence expenditure and foreign aid.

However, Mr. Eisenhower proposed to the Congress this week a $5,800 million foreign aid programme, as against the $7,600 million programme suggested by his predecessor. This means a cut of $1,800 million in the original programme. If the President's intention is to effect a cut of $8,600 million in budgetary expenditure, the present cut in foreign aid programme succeeds only partially in achieving that objective. Presumably, further economies are being considered. However, the present reduced rate of $5,800 million foreign aid programme includes, it is stated, $5,250 million for military aid, while the balance, namely, $550 million would be spent for technical and economic development purposes. Again, out of the amount set apart for military aid, a sum of $2,534 million will be devoted towards assistance for the members of the N.A.T.O., $469 million for Middle Eastern countries, and $20 million for Latin America. This is for actual guns, tanks and planes shipped abroad. Also, about $995 million will be spent on "mutual defence payment," inclusive of the amounts set apart for purchases of materials and services for French and Indo-China forces fighting in Indo-China. A sum of $250 million is set apart for a "mutual special weapons planning" in order to provide special weapons to friendly nations. Finally, the Point Four Programme receives 140,234,000 dollars.

During 1952-53, a sum of $4,410 million was allocated to N.A.T.O. countries out of a total of about $5,780 million provided for foreign aid. Of the $4,410 million, about $3,128 million was allocated for military aid and $1,282 million for defence support expenditure. The chief recipients of the aid were the U.K. and France; the former received about $400 million and the latter about $300 million. Also, during 1952-53, $621 million out of the $3,128 million for military aid was set apart for offshore purchases. These items of American expenditure abroad were a fruitful source of dollar income to the European countries. Their reduction would certainly mean a smaller dollar income for these countries. But Mr. Eisenhower has been thinking in terms of "maximum military strength within economic capacities" of the American nation. He said last week: "Security based upon heavy armaments is a way of life that has been forced upon us and upon our Allies. We do not like it; in fact, we hate it. But so long as such an unmistakable, self-confirmed threat to our freedom exists, we will carry these burdens with dedication and determination." It would therefore appear that Mr. Eisenhower will seek economies in defence expenditure without in any way whittling down the military strength or preparedness of his nation. Military strength, Mr. Eisenhower pointed out in his special message to Congress, this week, must be based on "solid economic foundation." But the new climate of peace, which now prevails in the world, seems to have encouraged Mr. Eisenhower to pursue economies to which, in a different context, he might not have so readily consented. Even so, it would be widely deplored if the new American anxiety for economy were to lead to serious cuts in foreign aid, especially the aid for economic improvement of underdeveloped areas. From this point of view it is noteworthy that the President has provided, as already stated, about $140 million for the Point Four Programme of mutual development and technical progress. A notable feature of Mr. Eisenhower's special message to Congress is that he has again emphasised the need for the U.S. to help other free nations to help "themselves in eradicating conditions which corrode and destroy freedom and democracy from within."

ADMINISTRATIVE IRRESPONSIBILITIES

It is indeed a very sad commentary on the West Bengal Government that it should have laid itself open to grave charges of administrative irresponsibilities and even positive bungling at the hands of the Comptroller and Auditor-General of India. The Comptroller, in his Appropriation Accounts (1950-51) and Audit Report for 1952, refers to the series of acts of omission and commission on the part of the West Bengal Government, involving huge sums of money—public money, be it noted. Some irregularities are bound to creep in in one or two departments of the Government. This, however, could certainly be minimised by exercising strict vigilance over expenditure by the Ministries concerned. But, if the Ministries themselves were to prove recalcitrant, as it has been in the case of West Bengal, the entire administration machinery is prone to get corrupted.

A serious charge that has been levelled against the West Bengal Government relates to the purchase of a house in Calcutta for Rs. 7.15 lakhs for accommodating displaced persons by direct negotiation with the owner, thereby disregarding the Land Acquisition Act. The whole purchase is characterised as unremunerative and unnecessary, with no attempt being made to calculate whether the ultimate use to which the property might conceivably be put was a sound financial proposition. Thus, from the details furnished, it appears that, during the period of two and a half years the house was rented out, the rent realised was only Rs. 2,186, against Rs. 7,830 paid as municipal taxes and Rs. 10,000 provided for meeting the cost of repairs. Again, in respect of certain other premises requisitioned and lent out by the Government, no rent has been realised at all; the outstanding rent as at the end of September, 1950, was Rs. 4.36 lakhs and the defaulters included Government servants as well.

Another instance of similar bungling is the purchase of a *zamindari* estate. The price of the estate was fixed at thirty times its estimated net income. This rate is said to be substantially higher than that laid down in the executive instructions by the Government itself under the Land Acquisition Act for the capitalisation of the net annual profits of landholders. Besides, there are also instances of "wasteful expenditure on aeroplanes." No effective steps, we are told, were taken to introduce adequate control over consumption of aviation petrol and oil. No log books were maintained and whatever claims were preferred on this account by the firm concerned were readily admitted without checking the number and distance of flights made. Petrol was shown to have been supplied on certain dates on which the planes had performed no flights at all! Even more amazing is the fact that three planes were sold for a total amount of Rs. 6,206; the plane "Dominic," the book value of which was Rs. 25,000, was sold for Rs. 1,005 and another for Rs. 200. Irregularities are also witnessed in expenditure on road transport and on survey of an underground railway in Calcutta City—the survey is estimated to have cost Rs. 6 lakhs—in the issue of furniture to Ministers and certain officers in excess of the prescribed scale, and in the irregular issue of diets in some hospitals and non-acceptance of lower tenders by some others.

All these charges on the West Bengal Government will perhaps pale into insignificance, if one were to consider the flagrant abuse of administrative power which has occurred in the printing of certain handbills—in Bengali and Hindi—considered essential by the Government to counter the anti-social activities of a certain political party. What is even surprising is that the printing was entrusted to another political organisation which brought them out in its own name. The amount involved may no doubt be small, being only Rs. 3,140. But the method adopted, to quote the Comptroller, "was novel and unusual and it is felt that it would be wrong in principle to meet, out of public revenue, the cost of propaganda done by a political party in its own name." Surely, there can be no worse instance of political impropriety than this.

The foregoing account clearly brings out the lamentable lack of care in the use of public funds by the West Bengal Government. This is indeed highly discreditable and reflects on the integrity of persons who hold the reins of administrative machinery. As we had occasion to observe some time ago, nothing is more fatal to Government's prestige, nothing is more destructive of the confidence of the people in the integrity of Government departments than the impression that public money has been misused, and that deliberately. The Government, like Cæsar's wife, must be above suspicion, and it is deplorable that the West Bengal Government is not. It is to be hoped that the Ministers in charge of the various departments will exercise utmost restraint on themselves in the use of public money.

NATIONAL EXTENSION SERVICE

The three-day symposium on National Extension Service, convened recently by the Indian Council of Agricultural Research, to exchange and evaluate experiences of the past year in training multi-purpose village level workers at Bhopal, has evoked considerable interest. Few aspects of the Five-year Plan have better claim to appeal to public imagination than the establishment of a National Extension Service over a period of ten years. The Service seeks to harness mass enthusiasm for national effort. This aspect cannot be stressed too strongly, for no plan can have any chances of success unless the millions of small farmers in the country understand its meaning, regard it as their own, and are prepared to make the sacrifices necessary for implementing it.

The success of the scheme for the establishment of the National Extension Service, covering the five hundred thousand and odd villages in India, rests largely on trained personnel. Already, it may be noted that 34 extension training centres have been opened by the Government of India in the different parts of the country with financial aid from the Ford Foundation and the U.S. Technical Co-operation Administration. Incidentally, it may be noted that the scheme for the establishment of the National Extension Service, with which the Community Development Programme is to be integrated, will cover during the Plan period about 120,000 villages, or about one-fourth of the country, with a population of eight crores. The programme will be carried out jointly by the Central and State Governments and is expected to begin on 2nd October next. About 1,575 persons are at present undergoing training at these centres, while over 670 have completed their training.

The Indian farmer obviously needs the assistance of a multi-purpose worker at the village level, that is, a person who has a comprehensive understanding of the rural people and their problems and who would be prepared to identify himself completely with them. Such workers must be technically qualified, mentally alert and spiritually alive to the needs of the rural population and be prepared to show to their fellow-villagers, by personal example, the value of human effort.

This, indeed, was the keynote of the addresses delivered by the various speakers at the symposium held in Bhopal last week. Presiding over the symposium, Mr. S. C. Roy, Agricultural Extension Commissioner, for instance, rightly emphasised that the success of the Community Development Projects depended entirely on the type of personnel, especially the village-level worker, who was the link between the Government and the people. "The philosophy of the Community Project," to quote him, "is multi-purpose co-operative societies with the help of multi-purpose village level workers who are the intimate workers of a country-wide National Extension Service." If, therefore, the village worker is to be successful in broadening the horizon of the village people, he must be trained to approach them as a friend, to gain their confidence, to see their problems in the way as they do, and to know the things they value and for which they must work and sacrifice. Viewed thus, the observations of Mr. Douglas Ensminger, Ford Foundation representative in India, assume special significance. The training of the multi-purpose village workers should have a twofold focus in each of the major fields. First, he should know how to identify and, therefore, be familiar with the basic village problems in agriculture, health, education, housing, etc. Secondly, the village worker should be trained in a minimum of basic skills, so that he can assist the villagers in evolving self-help improvement programmes to solve their problems. Indeed, the preparation of the rural population for self-help ought to remain the constant aim of the project workers.

LABOUR PROBLEMS

In the course of his address to the sixteenth annual general meeting of the Employers' Association of Northern India, Kanpur, Seth Mungturam Jaipuria made some thought-provoking suggestions of significance both to employers and labour. The suggestions included, among others, the application of the principle of *res judicata* to labour cases, fixation of time limit for reference of disputes to conciliation and the introduction of standardisation of holidays for industrial establishments. He pleaded also for the retention of Labour Appellate Tribunal, as against the demand, in certain quarters, for the abolition of the same in the new Labour Relations Bill, in the offing.

Mr. Mungturam's demand for the application of *res judicata* to labour cases appears to be justifiable. For this would reduce litigation by closing up issues once decided from continuing to be a renewed source of agitation over and over again. It is true that labour cases should be dealt with in a manner quite different from the common law cases, as they involve issues relating to human relations. But that should not be used as a cloak to stimulate litigation by unscrupulous labour leaders who are more interested in their self-aggrandisement than in the interests of labour.

The time limit plea for reference of disputes to conciliation put forward by the Chairman of the Employers' Association mentioned above also sounds logical. Because, in the absence of such a limit, there is the tendency for cases, which have remote prospect of survival before the tribunals, to be kept alive by withholding their reference for a long time to the authorities concerned. Even here, it appears better to implement the common law rule of limitation of time for reference of disputes to court.

The need for standardisation of holidays, which figured prominently in Mr. Mungturam's speech, is admitted on all counts. In fact, the whole question of standardisation of holidays was included in the agenda of the International Labour Conference held at Nainital last year, but, unfortunately, it could not be discussed there for want of time. As it is, working days in Bombay, Ahmedabad and Baroda are 309, in Calcutta 308, in C.P. and Berar 311, and in Kanpur 296. The disparity in working days is responsible to a considerable extent for the difference in the cost of production in the various units of the same industry. The disparity needs in all conscience to be eliminated.

So far as the demand for the retention of Labour Appellate Tribunal is concerned, it may be pointed out that the demand becomes pointless if India adopts a policy of conciliation and voluntary arbitration for settling disputes, when the need for the Appellate Tribunal will be much less than at present. Moreover, industrial relations would receive a rude shock, if an agency were set up and maintained in the teeth of determined opposition from one of the parties concerned, namely, the workers. If the employers believe that the principle of collective bargaining and voluntary arbitration is not only desirable but also practicable in the present state of affairs, they should rely less on the Labour Appellate Tribunal for guidance and support.

(Concluded from third column)

ever ugly and degrading it might appear to our new concept of equality, all I can say is that a caste system based on false sentiment is as poisonous and demoralising as one with birth as its basis. It is time clear-headed men like Mr. Rajagopalachari discarded some of these clogging sentiments, such as, the sacredness of hand-spinning and hand-weaving and measuring the moral worth and patriotism of a man or woman by the colour, quality and texture of the cloth which covers him or her.—*All Rights Reserved.*

OFF THE RECORD

(By "ROVER")

I THINK the weather at New Delhi in these dog days of May unjustifiably comes in for a lot of abuse and vituperation at the hands of visitors and legislators. I base this observation of mine on the very light-hearted manner in which responsible Ministers, and otherwise sombre and sedate members of Parliament, debauched from the dull discussion on the Industries (Development and Regulation) Amendment Bill, 1953, as reported on by the Select Committee of the House, into developing a highly entertaining and instructive thesis on the best method of handling a nagging wife. If the weather at the Capital were really as malignant and depressing as it is made out to be, nobody, not even Ministers and M.Ps. whom Nature in her partiality is supposed to provide a second protective layer of hide, could have felt inclined to bandy words or joked about such an old and awe-inspiring institution as a nagging wife.

Though my respect for the Chair in the House of the People would prevent me from calling the Deputy Speaker a kill-joy, I doubt if I could bring myself to feel exactly grateful to him for intervening and cutting short this entertaining and speculative dissertation on family life, as he called it, just when the Commerce and Industry Minister was giving the benefit of his researches in the solution of this most difficult of domestic problems. I hold that the public, as a whole, is far more interested in the discovery of the most effective method of silencing a spouse, who is apt to be troublesome with her tongue, than in the elimination of an erring industrial unit which "is being managed in a manner highly detrimental to the scheduled industry concerned or to public interest." For once a Minister of the Union Government was about to render some service to the public, which it might have found useful and of practical application, instead of appealing to it to make more and more sacrifices. But the Deputy Speaker pulled him up and condemned us once again, for an indefinite period, to this age-old tribulation from which the poor male has suffered in silence.

But in spite of the disappointment most of us must have undergone, at this abrupt termination of ministerial revelations about essays in unravelling chronic domestic complexities, I am inclined to believe, on second thoughts, that the Deputy Speaker was right and was really doing us a good turn, when he saved us from the due consequences of testing remedies recommended by a mere quack. If by any chance, you come to apply a wrong method of curing a nagging wife of her distressing proclivity to nag a patient husband, you might possibly end by lending a sharper edge to her tongue by your own undoing. And as it really turned out, what Mr. T. T. Krishnamachari was dishing up about managing wives, nagging or otherwise, had no stamp of personal experience and hence it was bound to be devoid of any authenticity. He confessed to the Chair that he had no wife.

This, however, gives me a good clue for testing the effectiveness of the method Mr. Krishnamachari has thought up about dealing with industrial concerns which habitually persist in misbehaving. In this respect too, the Minister is likely to prove himself a quack. I am confirmed in this belief by what I have been able to gather about the many industrial concerns, such as ordnance and aircraft factories and projects for manufacturing pre-fabricated houses, not to say anything of the glut and bottle-necks plaguing the Sindri Fertiliser Factory. I have not kept count of all the reported scandals about Government's stores purchase activities nor of the gross waste and irregularities galore at the three important river valley projects. In all these, the Government began at scratch with no initial handicaps. In the case of recalcitrant and mismanaged units of industries, which it will now have power to take over, these will already be in a bad way and burdened with many sins of long duration of disreputable managing agents.

I fail to understand how a Government which has made a sorry mess of everything it has touched, which was clean and nice and promising to start with, can be relied upon to take over the management of diseased and mangled bodies despoiled of all its blood and energy for setting them up on their legs so as to function properly. I could have had more confidence in official management of decrepit or diseased factories, if the Government had to its credit a single instance of running one industrial or commercial concern efficiently and economically. Of course, it is another matter if the Government claims that it has the sole monopoly of mismanaging things economic and the private sector of industry should not be allowed to trespass on this preserve.

In this case the Government would be within its rights in claiming all the rotten units of all the industries as its perquisites of office and the private sector would be well rid of such nuisances. While saying this, I am not unmindful of the case of the Sholapoor Mills. Apart from the fact that Government would never be able, in all cases, to find as good a team as that to which the management of this textile unit was transferred, Sholapoor would go to prove the wisdom of transferring all the mismanaged industrial concerns owned by the Government to bodies composed of selected men from the private sector, as Mr. V. N. Chandavarkar and his colleagues on the Board of Directors in charge of the Sholapoor Mills.

Rajaji Turns into a Realist

In spite of my occasional grouse against that gifted leader, Mr. Chakravarti Rajagopalachari, I have always entertained a great respect for his keen-as-a-razor's-edge intellect. He is perhaps the shrewdest senior statesman in the country to-day. When he wants to, he can see the rights and wrongs of an issue almost in a flash and, when it suits his purpose, he has the courage to confess his finding openly, without any thought of the offence he might give to interested parties. This is a quality rare amongst politicians, and as things are shaping to-day, it is likely to be rarer in the near future. I have still to come across a politician, who really counts in the scheme of things, outspoken enough to tell off important sections of the community controlling large blocks of votes like the agriculturists or industrial workers, when they are in the wrong. Mr. Rajagopalachari is, perhaps, the only person who would not be afraid of swimming against the current.

The other day he gave a demonstration of this valuable quality of his, when commenting on the proposal of the State Government undertaking to run the tramway service in Madras to save hundreds of people from being thrown out of employment. While having real sympathy for the widespread distress this closure might cause to the employees of the concern, he is reported to have observed that his Government would not be justified in running this outmoded, inefficient and uneconomic mode of transport at a loss, merely because of the distress its abandonment might cause to a comparatively large number of people. With this outspokenness, he cut across a lot of tangled but misplaced sentiment posing to-day in the country as humanitarianism.

I, however, wonder why so astute and logical a man like Mr. Rajagopalachari should fail to transfer the logic of his courageous stand in this case to the issue regarding cloth production by handlooms. Even under an ideal system of democracy, nobody would claim that the truth or untruth of a proposition could be decided by counting heads. What is right where only fifteen hundred men are affected should be no less right merely because in another instance the number of victims involved in an economic change is a million and a half. And still it is this same Mr. Rajagopalachari, so devastatingly logical, objective and unsentimental in his outlook where transport workers are concerned, who has been at the bottom of a host of wrong policies adopted by the Central Government with regard to the mechanised section of the textile industry.

I wonder if our Congress Governments, which are at such pains to exterminate caste and all that it implies in the social sphere, are engaged, perhaps unconsciously, in building up a new caste hierarchy amongst the citizens. By the look of things, those engaged in hand-spinning and working handlooms comprise the new race of *brahmins*; those who drive a bullock round and round a *ghanee* to crush oilseeds are possibly the *kshatriyas*; those employed in mechanised industries or transport cannot claim a higher status or consideration from the authorities except that of *vaishyas*. Possibly employees in breweries, dance-halls or the soulless film industry must be classed as *shudras*. And finally, to complete the picture, the small band of people engaged in trade or industry for personal profit must rest content by being regarded as *pariahs* or outcastes.

If this is true, and I have no reason to believe that I am very far from the actual truth, how-

(Continued in first column)

TRADE POLICY AND GOVERNMENT

MORE ECONOMIC HELP FROM AMERICA EXPECTED

(From A Special Correspondent)

NEW DELHI, *5th May*

THERE was some change in the legislative programme of Government. Early in the week, the Commerce and Industry Minister initiated the debate on the Tea Bill in the House of the People. The Government's main object in regard to the above was to achieve simplicity and administrative convenience by enacting a single consolidated Bill, in the place of the present two existing Acts, namely, the Indian Tea Control Act, 1938 and the Central Tea Board Act, 1949. The Bill, it may be noted, provides for the constitution of a statutory Board, called the Tea Board, which will practically be able to control the whole industry. The Tea Board is empowered to regulate and control tea sold by auction or otherwise and has powers in regard to the registration, licensing of brokers and blenders, quality control, etc. The proposed Bill gives considerable powers to Government in the matter of appointment of members to the Board, as also to control the wholesale and retail prices of tea. Generally speaking, leaders of the plantation industries have not been able to see eye to eye with Government in regard to its assumption of sweeping powers to control the industry.

DELHI LETTER

The forthcoming Import and Export Advisory Councils meetings, scheduled to take place in New Delhi on the 22nd and 23rd inst., respectively, will, as usual, be presided over by Mr. T. T. Krishnamachari, Minister for Commerce and Industry. Since their previous sessions some six months ago, a number of developments have taken place in the country's trade position. On account of a marked improvement in the food supply, the balance of payments position has become slightly in favour of India, due to reduced food imports during the last few months. The country is not anxious to import food at any cost from any area; on the other hand, the Food Ministry is anxious to stagger imports as far as practicable, in view of difficulties of storage. It is this reason that has recently prompted Government to suspend procurement of rice and wheat in some areas. In view of the moderate decline in the prices of foreign cotton in recent months, imports on this account will show a gradual reduction. There are already indications that the consumption of indigenous cotton by mills during the current season has been showing an increase of about 23 per cent., while that of foreign cotton has come down by about 21 per cent. With the gradual increase in the area under irrigation through the coming into operation of many small and medium-sized schemes from now on, it is possible that production of quality cotton will be showing a corresponding increase, with the result that the Government can effect some cut on the cotton budget.

This time last year, India was importing goods valued at between Rs. 70 and Rs. 80 crores per month. At present imports have declined to the Rs. 40-crore mark and they are likely to come down further. In view of the steady improvement in industrial production which now works out to about 7 per cent. more than that last year, the Government will have to scan the import list, in order to effect reduction in such of the goods as are being manufactured in the country. There is a case for substantial reduction in imports of goods, which are being produced in the country and which have, in recent months, been meeting with consumer resistance. However, the Government can adjust its import policy in such a way as to allow more luxury goods which yield impressive customs revenue and to utilise their proceeds to the financing of the Plan. Since it has already begun to follow this line of policy to some extent in recent months, it is possible that the Government will intensify it in the coming months.

In regard to exports, the time is now opportune for consolidation and the Export Advisory Council has important problems to tackle. With the emergence of a buyers' market, a certain amount of standardisation has become necessary. Steps must, therefore, have to be taken to set up an organisation for purposes of scrutinising the cloth earmarked for exports and also to improve its quality. The jute mission, which is now on tour in Australia, will be submitting a preliminary report on the conditions of sacking market in this area in a few weeks' time and the Government has to take suitable measures to implement this report. The Burmese trade delegation will be arriving shortly in order to conclude a barter agreement with India. In view of the possibilities of improvement in Indo-Pakistan relations, it is likely that an increased volume of trade might take place between these countries. Latest reports from overseas suggest that Indian prices in regard to oilseeds, oils, hides and skins have become out of tune with those prevailing in competing countries. Further, special efforts are being taken by a few countries to step up exports by resorting to extension of credit facilities, etc. The Export Council will have, therefore, to take note of these developments and adopt a realistic policy conducive to the growth of the export trade of this country.

Those who have had some misgivings about the continuity of American economic help for the financing of the Five-year Plan, after the departure from the Capital a few weeks ago of the previous American Ambassador, the vivacious and genial Mr. Chester Bowles, have proved themselves to be in the wrong, after hearing, at a Press Conference, the new Ambassador, Mr. George V. Allen, the Republican nominee, who presented his credentials to the President this week. Although the presentation of credentials by foreign Ambassadors has become a normal feature in the Capital nowadays, considerable significance is attached to the speech and the Press Conference of Mr. Allen, in view of the unique position that the U.S. has been occupying both in the economic and political spheres in the world. During the last two years and more, a closer economic link has been noticeable between India and the U.S. As a result of large-scale food and raw cotton imports from the latter, the U.S. has taken the first place in India's import trade, while, in regard to exports, it is next only to the U.K. At the same time, its timely wheat loan and the sizable financial allocation which it has been making in regard to Community Projects and kindred development schemes, not to speak of Point Four aid, the Ford Foundation schemes, etc., have gone a long way towards not only easing India's dollar position but also providing the much needed fillip in accelerating the pace of its economic development.

It will be remembered that, during 1952, the total economic assistance received from the U.S., in two instalments, amounted to $86.35 million (Rs. 41.7 crores). In 1951, India received a loan of $190 million (Rs. 90.25 crores) for the purchase of two million tons of foodgrains from the U.S. Purchases under this loan agreement were completed by the end of June, 1952. Although conceived primarily in relation to India's emergency food needs, this loan has, in fact, contributed to the implementation of the country's development programme. The counterpart funds realised by the Government of India from the sale of foodgrains purchased out of this loan are credited to a Special Development Fund to be utilised for financing development schemes and for assisting State Governments by short- and medium-term loans for their development schemes. These apart, India was able to secure, until now, a total sum of $109.8 million (Rs. 52.06 crores) from the International Bank for Reconstruction and Development, in which the U.S. has a lion's share of interest, having contributed a major portion of its working capital.

(Concluded from next column)

is the newest substitute material. But boats made of plastic are also on show, while aluminium, of course, is now almost a traditional material. Aluminium alloy, combined with a two-way tension construction, has produced what the makers call a "challenge to 4,000 years of shipbuilding tradition" and nearly 600 of these craft have already been sold overseas.

The customary exhibits in London include pottery, but the export trade rarely shows much of worth, with its concentration on the gaudy and the over-ornate. The jewellery and clock industries have interesting displays, but the former is obsessed with Coronation emblems and, this year, there appears to be a brisk trade in tiaras. The scientific instrument makers have also, as usual a great deal to show, the most interesting developments being concerned with radar and television. One of the largest groups contributing to this country's export earnings is the chemical industry, and it is fascinating to see concerns such as Shell devoting their salesmanship not to oil but to the wide range of petroleum products, from fertilisers to pesticides, which are of immense value to agriculture; this is an industry which has grown up from nothing since the war. Similarly the Distillers Company, which one would naturally associate with whisky and gin, (exports of the former have reached a new high level in 1952-53) shows what it can produce out of mineral matter—new alloys and plastics.

The biggest single exhibit in London is that of textiles. Coronation robes are shown for those who are privileged to wear them; male mannequin parades strike a new note—it seems Edwardian styles are coming back, for those who are sensitive to such matters; the cheaper plastic materials are dying a natural death, but high quality plastics, less liable to tear, appear to have a future. One of the best displays is that of Nylon Spinners who have largely equipped this year's British Everest expedition in quilted clothing, tents and ropes, all of nylon. This material, either alone or combined with cotton, wool or silk, is now used for every possible type of clothing. But the newest material on show is Terylene, made by I.C.I., which appears with the qualities either of silk or rayon, or as a woollen type. Unlike nylon, terylene is warm to the touch, and, like it, it is crease-resistant and keeps shape wet or dry. It needs no ironing, and is easily washed and dries quickly. It is immune to insect attack and is highly resistant to weather action and sunlight. It can now be used for every type of garment and its industrial uses include filter cloths, which are far more durable than those made of "natural" materials. The textile industry appears to be turning away for good to chemical sources for its materials, but the capacity for manufacturing these new materials is necessarily limited. The sheep and the cotton field have a long life in front of them yet, for the first factory in this country which will be able to make terylene on a commercial scale will cost £10 million to build.—*All Rights Reserved.*

BRITISH INDUSTRIES FAIR

SOME NOVEL FEATURES ON SHOW

(From Our Own Correspondent)

LONDON, *9th May*

THE world's largest show of a nation's manufactured goods opened this week in London and Birmingham. This thirty-second British Industries Fair has adopted the Coronation as its motif and the emblem E.R.I.I. (*pace* the Scots to whom the Queen is E.R.I.) is brought into every conceivable type of decor. For several years now, the designers of the setting of the Fair have been given a free hand and if this year's displays are a little more subdued than those of the past two years, they have lost nothing in gracefulness and simplicity, so that the Fair is a pleasure to stroll around (although one would not advise attempting the whole 35 miles of stand frontage in one day in spite of the air links between the two groupings alleged to make this possible!) as well as a serious occasion for the 20,000 odd overseas buyers who make it their annual pilgrimage.

LONDON LETTER

The only non-British exhibits at the Fair are the displays on the Commonwealth stands. It is interesting to observe how countries such as Canada and New Zealand, which formerly featured their staple products such as foodstuffs, have—either because they see no point in showing goods which are a buying monopoly of the British Government or because of the growing strength of autarky—now concentrated themselves on showing their manufactured products which, presumably, they hope to export either elsewhere in the Commonwealth or to the U.K. All the principal Commonwealth countries have taken stands with the notable exceptions of India and Ceylon. Pakistan shows products ranging from modern industrial goods and sports goods to the exquisite examples of her cottage industries. Pakistan is the largest maker of sports goods in the East and second only to Britain in the world. Among other exhibits are machine tools, surgical instruments, handloom textiles (Dacca muslin is well featured) and silver filigree work.

This year's Fair has a number of novel features, but the pride of place goes to *The Times* newspaper with its miniature but complete rotary newspaper printing plant on wheels. Two vehicles, each comprising a Leyland "Beaver" tractor and a semi-trailer, together contain the complete printing plant. When placed parallel, the sides are opened down to form a floor between them and a portable roof and extending side panels are affixed to form the complete office. On one side of this office are two linotype machines for composing text, one of them equipped for radio typesetting. On the other side are the casting boxes for producing the semi-circular stereoplates from which the paper is printed and the large rotary press. Two other vehicles are required for operating the unit—a lorry for stores and a trailer containing an electricity generating plant. Finally, a jeep receives radio-telephone communications and another which can be operated some miles from the main unit provides radio typesetting. The oldest surviving newspaper in the English language is thus the proud pioneer of the latest development in mobile newspaper production.

After watching the production of a newspaper on this unit the rest of the large and important display of printing machinery seems less exciting than usual. In fact, all the exciting items at the Fair have, an element of mobility about them. If newspaper production can be mobile, so can the houses in which people live. The production of prefabricated houses has become increasingly ingenious since the war first started the demand, but the 1953 prefab claims to be transportable, erectable in the minimum of time (one of them can be put together by two men) and, in an extreme case, is built on skids so that to move the house one has simply to unfasten the divisions and mount the lot on lorries without troubling to pack or move out the furniture! The makers of these ingenious designs —in timber, aluminium, plastic and stressed steel— are now catering mainly for overseas markets. There is a 'Baltic' House which is warm and dry in the severest climatic conditions and the 'Tropical' House which keeps cool and insect-free. What is amazing about these new prefabs is the spaciousness and comfort (and insulation) and the completeness of the plumbing and domestic facilities, combined with lightness, ease of erection and cheapness. Moreover, size appears to be no problem, where precast concrete is used, and buildings such as hospitals and power stations can be built in Britain and shipped anywhere in the world. This line of exports only began in 1949, but last year the value of the shipments was no less than £7 million.

The remaining "mobile" exhibit which has created a sensation at this year's Fair has been the display of sailing craft. A start was made a year ago in a modest way, but this year the builders from every estuary from Dorset round to Suffolk appear to have competed to show what their ancient craft can do and a wide range of dinghies, of yachts under full sail, their canvas towering up into the roof of the exhibition hall, and of motor cruisers are tribute to an industry in which this country holds the premier place. Not all these vessels are built of timber: fibreglass, making a lightweight, one-piece seamless hull, the colour moulded in at manufacture, rot and corrosion-proof,

PAKISTAN NOTES

NEW COMMERCIAL POLICY

GOVERNMENT'S ANNOUNCEMENT EXPECTED SOON

EVER since Mr. Mohammed Ali, Prime Minister of Pakistan, disclosed—on 27th April, 1953, to be precise—that the Government would soon take a new major commercial policy decision, all sections of trade and industry have been eagerly awaiting the official announcement. The eagerness is only to be expected, in view of the fact that some of the ill-conceived commercial policies that the previous Government—the Nazimuddin Cabinet—had followed have already done a lot of avoidable harm to Pakistan's economy. Thus, on the one hand, there is the persistence of the growing food shortage, which has led to very high level of food prices and, on the other, the gap in the balance of payments continues to be fairly big. That Pakistan's balance of payments position is none too happy will be evident from the marked decline in that country's foreign assets from Rs. 150.52 crores in the beginning of 1952 to as low as Rs. 79.68 crores on 17th April, 1953.

A change in the policy that the Government might effect will have a close bearing on the Indo-Pakistan trade. As it is, the trade between the two countries has been very much restricted, notwithstanding the recent trade agreement. Now that the new Prime Minister of Pakistan has, on more than one occasion, indicated his keen anxiety to meet the Indian Prime Minister with a view to ironing out the several disputes remaining unsolved, one may expect that the commercial policy to be announced shortly will be so designed as to facilitate a freer movement of goods and commodities between the two countries. It is certainly gratifying to be told, in this connection, that three of the four Indo-Pakistan boundary disputes relating to the Lahore-Amritsar border were amicably settled at a meeting of the Financial Commissioners of the two Punjabs held at Lahore the other day. One of the disputes so settled relates to the cutting of *shisham* trees and some territory near the railway track between Wagah and Attari.

Economy Steps

From the reports that have been emanating from Karachi in the past few days, it looks as though the Government of Pakistan is determined to cut down all unnecessary expenditure as much as possible. In fact, a series of measures to effect substantial retrenchment is already reported to have been decided upon by the Government. Although the measures cover a fairly wide field, they are primarily applicable to certain sectors of the administrative machinery. While effecting economy in expenditure, the Government will pay due regard to the maintenance of efficiency and integrity. The economy measures, which have been necessitated by financial stringency, range from removal of telephones installed at the residence of Government officers to restrictions on the number of Pakistan delegations to be sent abroad in future.

It has been decided that all officers below the rank of a Joint Secretary should be asked immediately to surrender Government telephones at their residence. However, if a Ministry feels that it is essential for any other officer to have a telephone at his house, the matter is to be immediately referred to the Administrative Inquiry Committee set up by the Government for obtaining its concurrence. Similarly, to eliminate waste of electricity caused, for instance, by occasional negligence to turn off fans and lights after office hours, the Secretaries and Joint Secretaries in the various Ministries have been asked to ascertain the monthly requirements of the departments under them and to cut the expenditure on electricity to the tune of 20 per cent. All Government departments have also been instructed to reduce expenditure on contingents by 25 per cent. An identical cut in expenditure has been imposed in stationery used in Government departments. No new furniture is to be purchased in the current financial year, except in the case of new offices. The number of staff cars is also to be drastically reduced. No Ministry other than the Foreign Ministry will be allowed to retain more than one staff car. Four or five cars are to be kept in a central pool, others are to be sold forthwith. It has also been laid down that prior concurrence of the Ministry of Finance should be obtained for arranging official entertainments. As further measures of economy in expenditure, transfers other than those required under tenure rules are to be restricted and touring by air, except in the case of East Pakistan and foreign countries, is to be discouraged. No promotions for periods of less than four months are to be made and vacancies existing for even longer periods are not normally to be filled.

Economy in expenditure is proposed, too, to be effected by limiting Pakistan's participation in international conferences. Unless the vital interests of Pakistan are likely to be affected, either no delegation will be sent, or, if it is felt necessary to send a delegation, its personnel will be reduced to the minimum. As an alternative arrangement, it is suggested that the nearest Pakistan mission should be asked to send an officer as observer. Further, previous concurrence of the Ministry of Finance will have to be obtained in future for sending officers on tour to foreign countries. The same restriction has been imposed on heads of Pakistan missions abroad and members of their staff wishing to visit Pakistan for consultation.

Corruption in Railways

With a view to eradicating corruption in the railway administration, the Government of Pakistan has appointed a screening committee to review the conduct of those officials whose integrity is in doubt. Suitable action will be taken when the work of screening is completed. This is the first major step in the direction of "cleaning" the railway administration of corruption.

The Government of Pakistan has granted protection to the boot and shoe industry for a period of three years ending 31st March, 1956. The rate of protective duty is 40 per cent. *ad valorem* Protection—for the same duration—has also been granted to macaroni, spaghetti, and vermicelli and products thereof, the rate of duty being 45 per cent. *ad valorem*. In the case of biscuits, cakes, and farinaceous and patent foods (canned or bottled) not otherwise specified, however, the import duty of 45 per cent. *ad valorem* now imposed will be in the nature of revenue duty.

Punjab's Cotton Crop

A rise in the area under cotton cultivation is revealed in the fourth forecast of the cotton crop of the Punjab for *kharif* 1952. Thus, the estimate of the area is placed at 1,927,800 acres, which represents an increase of 10.4 per cent. and 3.4 per cent. of the corresponding (fourth) and the final forecast of the previous year, respectively. The rise in acreage under cotton is attributed to high prices of cotton prevailing up to sowing time and the generally satisfactory water-supply position. Of the total area under cotton, 1,727,100 acres are under American varieties and the rest under *desi* varieties. The rise in acreage, however, has not been followed by a proportionate improvement in the yield of cotton, which, during the season under review, is estimated at 725,000 bales (663,500 bales American and 61,500 bales *desi*), a rise of 7.3 per cent. and 2.3 per cent., respectively, as compared with the previous year's corresponding (fourth) and final forecasts.

The East Bengal Jute Regulation (Amendment) Act, 1953, was passed in the Provincial Legislative Assembly recently. The Act prohibits the cultivation of *mesta*, an interior variety of jute which is generally used as an adulterant in high quality jute. It also empowers the Government to prohibit the growing of jute or any particular variety of it in the whole or part of East Bengal.

(Concluded from next column)

To assert the same principle of loyalty and unity, the Congress General Council has listed a number of organisations which are proscribed as bodies to which local trades councils may become attached. These organisations include "breakaway" unions, communist and Fascist Parties, and subsidiary organisations of those parties which aim at one-party dictatorship. A few councils have from time to time transgressed their own rules by associating with a proscribed body. Each case is examined by the Joint Consultative Committee, whose influence is exerted to bring the local council into line. Only in a case of extreme recalcitrance on the part of a local council is Trades Union Congress recognition withdrawn from it.

TRADES COUNCILS IN THE U.K.

ROLE IN TRADE UNION MOVEMENT

(By HERBERT TRACEY)

LOCAL trades councils have played a significant part in the history of Britain's trade union movement. It is due to their initiative that the Trades Union Congress has been enabled to exercise a unifying influence. The Congress itself owes its origin to an action taken by one important trades council in calling the first assembly entirely on its own authority nearly three generations ago. Before that assembly met —in Manchester, in 1868—the trade union movement lacked any central organisation to give it direction and aim. The trades councils themselves exercised locally a certain measure of authority mainly in getting the affiliated branches of unions in each locality to concern themselves with the general interests of the movement. And they still have that responsibility under the guidance of the Trades Union Congress.

Between 400 and 500 trades councils are recognised by the Trades Union Congress as *bona fide* organisations, and they are linked together to the regional federations covering all the United Kingdom. Representation is accorded to them through their federations on the Joint Consultative Council, a central body composed of six members of the General Council of the Trades Union Congress and six elected by the Trades Councils' Annual Conference, held under the Congress auspices.

Building Up Membership

The objects which the trades councils are commissioned to serve include provision of services to the branches of unions in each locality, on a wide range of industrial, civic and educational matters. It is their task to build up trade union membership by carrying on recruitment campaigns, which are sometimes directed to a particular industry or factory where organised membership is low, and also take the form of propaganda campaigns and public demonstrations.

An important function of the trades councils is to secure representation of the trade union movement on the increasing number of committees, tribunals, and advisory bodies of every kind, such as hospital management committees, local employment committees, food control committees, boards of school governors, and the like. Most of this work is carried on voluntarily by active members of the trades councils, but provision is made for the payment of expenses and loss of earnings to those who serve on the various joint bodies.

Most of the trades councils provide the Trades Union Congress headquarters with monthly reports on their activities. These reports show consistent and steady service to the sick, the aged and the blind, and to adult education, mainly through week-end schools and summer schools for trade unionists. Thirty-three week-end schools were held last year to provide an opportunity for a study of the trade union movement's structure, the history of unions, and economic and industrial problems.

Arrangements are made each year for secretaries of trades councils to attend special training courses, both at week-end schools and summer schools. These educational activities are connected with the Trades Union Congress training centres, which are provided for full-time and voluntary officers of unions and trades councils and workshop representatives. At these training centres, there is systematic study in four-week courses of training in the main fields of trade union work, especially industrial relations, collective bargaining, and industrial and social legislation.

Loyalty to T.U.C.

Activities of this nature could not be carried on without the full co-operation of the trades councils. The vast majority of the trades councils are staunchly loyal to the Trades Union Congress, but occasionally, one gets out of line and the authority of the Congress has to be asserted.

It is a fundamental principle of trade unionism that the movement advances through unity on the basis of majority votes. The report of the Trades Councils' Joint Consultative Committee to this year's Conference notes with regret that this principle is disregarded by a number of councils in the London area. It has, therefore, been necessary for the General Council of the Trades Union Congress to withdraw its recognition from the London Trades Council and to establish a new federal organisation for the 49 councils in the metropolitan area.

(Continued in previous column)

CURE FOR CHRONIC DOLLAR SHORTAGE

MOBILISING BULLION HOARDS FOR DEVELOPMENT SCHEMES

THE world has been experiencing dollar shortage for nearly two decades now. Since the end of last war, the shortage has become almost acute. This is due to several factors. The world outside the dollar area has increased its purchases of plant, machinery and other goods for purposes of reconstruction and development. In the post-war period, many non-dollar countries depended on the U.S. for consumer goods too. On the other hand, American need for imports has lessened, thanks to the achievement of self-sufficiency in several directions and the introduction of synthetic products. American tariff regulation and certain other forms of discriminatory regulations have had also a restraining effect on imports into that country. Consequently, the main aim of almost all countries outside the hard currency areas has, naturally enough, been to overcome the dollar shortage by the adoption of various measures. The inadequacy of these measures to meet the situation has only served to spotlight the need for a more permanent and lasting cure for the problem of dollar shortage. Economists and leading business men both in India and abroad have suggested a series of remedies. Last week, it will be recalled, we gave a brief account of Prof. Haberler's views on the subject of convertibility of sterling which is closely linked to the problem of shortage of dollars. In this context, some of the measures suggested by Mr. Shantilal Sonawala, Partner of Messrs. Motilal Vijbhukhandas, a leading firm of bullion dealers in the city, make interesting reading.

In a pamphlet entitled *The Gold and Silver Problems*, published this week, Mr. Sonawala, examines the various remedies intended to overcome the dollar shortage and sets out to explain as to how the problem can also be tackled by bringing out dishoarded gold for purposes of utilising it for implementing the Five-year Plan. Surveying briefly the remedies adopted by several countries to meet the dollar shortage, Mr. Sonawala states that the devaluation of a number of currencies in 1949 was successful to a certain extent, but considers—and rightly too—that a further devaluation, as suggested in some quarters, may not yield effective results, as long as the fundamental disequilibrium in the internal conditions of the countries concerned remains uncorrected. Even deflation as a weapon to correct the adverse external payments position would, according to him, not be of practical help, because of the rigidities of internal economic conditions. He also rejects fluctuations in exchange rates as a step for overcoming dollar shortage—a suggestion which, for instance, has been put forward by Prof. Harberler. This suggestion has been brushed aside by Mr. Sonawala on the ground that fluctuating rates may aggravate movements on one side and thus create further difficulties when the balance of payments position continues to be adverse. It may even result, he says, in unstable trade conditions by bringing about a shift from production for export to production for domestic consumption. He does not also place much reliance on another measure, namely, foreign aid to meet the payments deficit; for he considers that it will be doubtful whether such aids would continue on a large scale on account of wider political issues.

Discarding thus, the use of devaluation, deflation, fluctuating exchange rates and foreign aid as measures for overcoming the chronic dollar shortage, the author of the pamphlet under review proceeds to consider the claims for increasing the price of gold. It has been argued that a rise in the dollar price of gold would help build up larger world monetary stocks of gold by (1) increasing the value of monetary reserves, (2) increasing the value of annual gold production, and (3) stimulating the production of gold. Some writers have, in this context, gone so far as to advocate the creation of a stabilisation fund by the U.S.A. out of the profit earned by raising the price of gold from $35 to $52 per ounce. Such profit will amount, it is stated, to $10,000 million out of which the U.S. can set aside a portion for issuing loans to the sterling area countries against their deficit on dollars. Mr. Sonawala thinks that this suggestion is a controversial one, as the effects of such loans will be inflationary in character and will be resented by the U.S.

Mr. Sonawala next proceeds to consider the effect of higher price of gold on hoarding, as it has been argued that such increase will encourage dishoarding of a large part of private stocks held in Western Europe, Middle East and India. He admits that bullion held on private account has some special economic and social significance. During the inflationary period, the absorption of bullion from the masses results in diverting the purchasing power of the people from commodities to bullion. In times of depression purchases of bullion by the Government tends to divert purchasing power in the hands of the public from bullion to commodities. Secondly, it leads to automatic expansion of currency during depression and contraction of currency during inflation, and thus brings about equilibrium of currency in terms of commodity during prosperity and depression. But, in spite of these functions, the investment in bullion is, in another sense, uneconomic, since it does not create wealth nor facilitate production, and what is more, its imports will be a drain on foreign exchange resources especially of a country like India which has limited resources of foreign exchange. All these considerations hold good, if there is dishoarding of gold from private holdings, following an increase in the price of gold. Mr. Sonawala thinks that it is doubtful whether an increase in gold price will be accompanied by dishoarding of gold; for the extent of dishoarding depends on the economic conditions of the country concerned and not merely on the increase in gold prices. Thus, an increase in gold prices also may not prove an effective remedy for the balance of payments difficulties.

The author of the pamphlet next proceeds to consider certain other measures adopted for the purpose of avoiding balance of payment difficulties, such as export and import restrictions, raising and lowering of customs duties, and short-term lending and borrowing between creditor and debtor countries. These measures have been successful though they are only short-term remedies. They lack the main objectives, namely, a relatively permanent solution, since they do not bring about the adjustments between the internal value of currency and commodities.

With a view to bringing about internal currency adjustments based on external payments position of currency, the author suggests a scheme for mobilising bullion hoards by means of issuing bullion certificates by the Government. The scheme, the main features of which were published in *Commerce* dated 11th October, 1952, is as follows:

Under this scheme, a person will deposit gold or silver with the Government of India, who, in turn, will issue a gold or silver certificate to him. The period for which such gold or silver deposits to be kept by the Government may be fixed at, say, 10 years. The bearer of the gold or silver certificates should be entitled to receive, at the end of this period, the same quantity of gold or silver which he deposited with the Government. The transaction does not concern the price of the bullion at all. Thus, a person depositing 100 tolas of gold in exchange for a gold certificate for 100 tolas, will get back his 100 tolas at the end of 10 years. To facilitate transactions, the certificates may be in denominations of 1, 5, 10 and 100 tolas for gold and a minimum of 50 tolas for silver. It should be a freely convertible bearer certificate and the title of the bearer should never be asked for either at the time of depositing the bullion or at the time of its withdrawal. It should be accepted as security against which loans and advances can be secured from the banks.

The advantage of this scheme of bearer certificate is, according to the writer, its flexibility. If the holder of these certificates so desires, he may liquidate them in the market at the current market rate for the metal concerned and get back the monetary value of the bullion. But, by this process of liquidation, the holder of the certificate loses his claim over bullion once for all.

For those who do not want to lose their bullion in this way, Mr. Sonawala says that a system may be evolved whereby the gold certificate may be exchanged for a Government bond, maturing at the end of a specific period of 10 years and carrying interest at the rate of 4 per cent. per annum. The value of the Government bonds should be fixed not at the current market value of the gold contents of the bond certificate but at the par value of the gold to be fixed by the Government. If the par value of the gold is Rs. 62½ per fine tola, based on the U.S. Government's price of $35 per fine ounce of gold, a person holding a gold certificate for 10 tolas would receive a Government bond worth Rs. 625, carrying 4 per cent. interest.

It should further be provided that, at any time within 10 years of maturity, the holder of the bond can demand the gold or silver against his bond. In that case, the Government may return the gold or silver, but if it is unable to do so, it may have the option to pay at the ruling market rate for gold or silver at the time of demand. Only in extreme cases, the option to pay in rupees should be resorted to. This is necessary in order to ensure confidence among the depositors of bullion in the ability of the Government to return their deposits. At the end of the maturity period, however, it should be obligatory on the part of the Government to return the bullion as specified.

Thus, the scheme provides for two elastic benefits. First, gold can be exchanged, says Mr. Sonawala, into gold certificates with the certainty of getting back gold (at the end of the specific period). Secondly, if the holder prefers to exchange the gold certificate for a Government bond, instead of keeping the certificate for himself, he gets an interest of 4 per cent. on the possession of Government bond with maturity of 10 years, at the end of which he will get back his gold certificate convertible into gold. Of course, as long as the market value of gold is higher than the par value of gold in rupees, very few people will prefer to exchange the gold certificate into the Government bond. But if gold certificates and Government bonds are made freely interconvertible, perhaps more persons may tend to evince interest in the Government bonds.

A part of the quantity of gold and silver thus collected, writes the author, may be pledged as security against which loans from foreign countries may be sought. These may be short-term loans from countries whose currencies we need to finance our purchases of capital goods. Care should be taken to see that the external resources that are obtained are used for productive purposes which would yield very quick results.

If this plan is to be applied to India, we are told that some further points must be borne in mind. (1) Since 1930, the external and internal value of the Indian rupee has been depreciating in terms of commodities. The rupee has also been depreciating in terms of gold. Further, the sterling value of gold in terms of commodities has also depreciated owing to many factors. Thus whether the rupee deserved this

DEFICIT FINANCING AND CAPITAL FORMATION IN INDIA

TAXATION POLICY NEEDS REVISION

(By P. C. JAIN, University of Allahabad)

THE theory of deficit financing can be stated in two different ways. According to the Keynesian analysis, "effective demand," that is, the point of equality between aggregate demand "price" and aggregate supply "price," is normally such as to bring about equilibrium at less than full employment. The main cause of this is that the marginal propensity to consume is less than unity. In other words, owing to psychological causes and to certain rigidities in the economic system, persons who receive income cannot possibly spend the whole of it. This prevents the consumers' demand from rising to a pitch at which gradually all the available resources would be fully utilised. This "gap" in effective demand can be filled in, if the State or some other agency makes new investment with the help of "created money." This would make the aggregate investments in any period greater than the aggregate savings. Greater investment leads to greater aggregate income. Out of the higher aggregate income, greater savings would be made. This process, under certain conditions, would go on till savings again become equal to investment at a higher level of aggregate income. In this way, "new" investment brings about an increase in the aggregate national income (which looked at from another point of view is the same thing as aggregate output), national savings and employment. If the State is to make this new investment at a sufficiently high rate to bring about an increase in the aggregate national income, and consequently the national savings, it must resort to deficit financing.

In the traditional way, the theoretical justification of deficit financing is quite different. The Government budget need not balance from year to year and no harm will be done, if the Government's budget shows a deficit for a number of years and a surplus for subsequent years so that, taking a long period of, let us say, five to ten years, the budget is balanced. This provides a justification for deficit financing.

Although the net result in both these cases is the same, namely, the development of national resources, the Government policies necessary to make the process a success are different in the two cases. In the traditional approach, the Government will have to raise taxes to obtain greater revenue in the future so as to cover the budget deficits in the past, with a view to balancing the budget over a long period. But if we consider the matter from the Keynesian point of view, any increase in taxation would prove extremely harmful, if it reduces the marginal propensity to consume. There might be cases in which higher taxation might not reduce the marginal propensity to consume, but in most cases it would do so. In other words, when people have to pay higher taxes, they will at least partly reduce their current expenditure. A reduction in the marginal propensity to consume would retard the process of increase in the aggregate national income as a result of "new" investment. The investment multiplier tells us by how much the aggregate national income would increase as a result of a certain investment. If the marginal propensity to consume is, let us say, 7/8 and the marginal propensity to save is 1/8 the multiplier is 8. The multiplier is $\frac{1}{1-c}$, where c is the marginal propensity to consume. If, as a result of additional taxation, the marginal propensity to consume is reduced to 3/4, the multiplier would be reduced to 4. Any further reduction in the marginal propensity to consume would reduce the multiplier to 2 and so on.

In India's Five-year Plan, it is expected that as a result of an investment of Rs. 2,069 crores in the period 1951 to 1956, the national income would rise from Rs. 9,000 crores in 1950-51 to Rs. 10,000 crores in 1955-56 and the national savings would increase from Rs. 450 crores (i.e., 5 per cent. of the national income) to Rs. 675 crores (i.e., 6¾ per cent. of the national income). It is further expected that, if in the subsequent period 10 per cent. of the additional income created is invested, the rate of national savings would rise to 11 per cent. by 1960-61 and to 20 per cent. by 1967-68. All these calculations are based on Keynes' theory of the multiplier.

If, as the Indian Finance Minister has said and has actually put his ideas into operation, the rate of taxation is increased to produce finance for the Five-year Plan, the very object of planning would be defeated. Additional taxation would reduce the multiplier and not an investment of Rs. 2,069 crores but of a much larger amount will have to be made to increase the aggregate national income to Rs. 10,000 by 1955-56. The policy of additional taxation to meet part of the finance has created a vicious circle. Additional taxation has been levied to find finance for the Plan, and this by itself makes it necessary to find more finance, if the objectives of the Plan are to be achieved. This would mean still higher taxation. The conclusion is irresistible that in order to achieve the objectives of the Plan, the Government's policy of additional taxation should be reversed. It is likely that the Finance Minister has confused the two theories of deficit financing. Additional taxation would be fully justified in the traditional theory but not in the Keynesian theory. In this the aggregate national savings would rise with every increase in the aggregate national income, as a result of investment till, in equilibrium, savings become equal to investment, thereby removing the "deficit." In order that India's national income by 1977-78 might reach a total of Rs. 25,000 crores with savings and investments at Rs. 5,000 crores each, it is necessary that the rate of taxation should not be increased and nothing else should be done to reduce the marginal propensity to consume.

The targets of national income in the Five-year Plan are based upon the assumption that it would be possible to invest 50 per cent. of the additional national income after 1955-56. For a poor country like India, this is much too high a rate. As a result of planning in the first period (1951-56), the income of all classes of people will rise, and since most of them are poor, with a low standard of living, it is not reasonable to expect that they would postpone the consumption of half their additional income when they have already suffered such great hardship for over a century. The Government has sought public co-operation in the fulfilment of the Plan, but it is too much to expect the people to make, over long periods, the sacrifice which the Plan asks them to make.

In the Keynesian scheme of things, inflation would not occur unless investment is pushed beyond the level of full employment. If there is inflation in the system beforehand, the increase in investment and, consequently, in the purchasing power in the hands of the consumers, might exhaust itself in pushing up the price level still higher. In order to check inflationary forces, it is necessary to increase production in the short period so that the higher purchasing power in the hands of the consumers might be counterbalanced by greater supply of goods in the market. But the main emphasis of India's Five-year Plan is on long period projects. The net result is that, while the purchasing power in the hands of consumers has increased, the supply of goods has not increased. This has intensified inflation. In order to increase the national income and the rate of capital formation, it is necessary to check inflation.

But the Government's anti-inflationary policy is such as to defeat its own object. Credit has been made tighter under its anti-inflationary policy, with the consequence that industry is not able to get the necessary finance for buying raw materials and keeping stocks of finished commodities. This has actually resulted in the closing down of some units and in the curtailment of output of some others, thereby reducing supply in the market and still further pushing up the price level. If the emphasis of the Plan is on long-period projects, great care has to be taken to increase industrial and agricultural production in India in the immediate future, in order to increase the supply of goods in the market. For this, the Government's monetary policy will have to be changed making available to producers more finances from banks and other sources.

Production in India cannot be expected to increase to the desired level and the prices to fall to the required extent if wage costs remain high owing to higher wages, low productivity and to increase in transport charges, taxes and duties, thereby adding to costs of production in industry.

The Five-year Plan relies upon Government controls to keep down the price level. Whether Government controls are or are not inevitable for the type of democratic planning we are having in India, there is no doubt that such controls cannot possibly keep the rising prices in check. Government controls can overcome temporary shortages of supply and can "ration" out the scarce commodities without leading to a rise in prices. But when there are volcanic forces in the shape of ever-rising costs of production, no amount of controls can keep the prices down. In order to achieve the levels of national income and savings envisaged in the Five-year Plan, the Government's industrial, labour and monetary policies will have to be changed, with a view to increase industrial and agricultural production in the immediate future.

WORLD BANK'S OPERATIONS DURING FIRST NINE MONTHS OF 1952-53

The net income of the World Bank for the nine months ended 31st March, 1953, amounted to $12,947,735, which compares favourably with $12,507,639 for the corresponding period of 1952. The increase in net income follows a rise in the gross income (exclusive of loan commission) of the Bank from $25,744,168 to $31,682,273. The net income earned by the Bank has been added to the supplemental reserve against losses on loans and guarantees, which now stands higher at $70,975,835. The receipts by way of commissions on loans derived by the Bank, during the period under review, aggregated $6,985,416, which have been credited—in accordance with the Articles of Agreement—to the special reserve, raising it to $34,670,070. The total reserve of the Bank as at 31st March, 1953, were thus substantially higher at $105,645,905, as against $85,712,754 a year before.

During the nine months under review, the Bank made three loans—$19.5 million to India, $30 million (various European currencies) to Yugoslavia, and $14 million to Northern Rhodesia. These loans bring the total loans signed since the commencement of operations and upto the end of March, 1953 to $1,587.77 million. The disbursements on loans were $56.66 million, bringing the total disbursements to $1,053.17 million.

The Bank received during the same period $999,289 by way of repayment of principal from borrowers. It also sold to private investors $1,105,186 of securities from its loan portfolio. These transactions bring the total portfolio sales to $66.77 million, of which $47.18 million are with the Bank's guarantee and $19.59 million without recourse.

A special feature of the World Bank loan to Yugoslavia was the permission which the various European members gave the Bank to use amounts aggregating the equivalent of $21.67 million from their domestic currency subscriptions to the Bank's capital. Also, the U.K. agreed to make £60 million ($168 million) from its sterling subscription available for lending by the Bank to Commonwealth countries in the sterling area; these funds are to be disbursed by the Bank over a period of at least six years on projects to be agreed upon between the Bank and the U.K.

WORLD BANK LOAN TO BRAZIL

The International Bank for Reconstruction and Development has granted a loan of $3,000,000 to Brazil to help finance a highway programme necessary for the continued development of the important agricultural and industrial State of Rio de Janeiro. The funds lent by the Bank will pay for imported equipment needed by the State Highway Department for the maintenance of its highway network and to help carry forward its programme of new highway construction and paving. The Bank's loan will be used primarily for the purchase of maintenance and paving equipment, with a small part for construction equipment. The new equipment will permit a shift from hand labour to mechanised methods which should result in better road maintenance at lower unit cost. The loan is for a term of five and carriers interest of 4¼ per cent., including the 1 per cent. commission. Amortisation payments will begin from 15th July, 1954.

EFFICIENT COLLECTION SERVICE

Lakhs of cheques and bills are received by us for collection each year. While our service is geared to any volume, it is also fitted to the handling of items that require special attention. Correspondent banks can rely on us for prompt and dependable service.

SERICULTURE INDUSTRY IN INDIA

CONTINUANCE OF PROTECTION UNDER TARIFF COMMISSION'S EXAMINATION

THE Indian sericulture industry, which produces what has aptly been termed "the queen of fibres," is one of the few industries which has enjoyed protection for such a long period as 18 years—it was on 1st April, 1934, that the industry was first granted protection—and which has been assiduously nursed by the State Governments concerned. Despite all this, the industry does not seem to have made any significant progress; in fact, it is said to be passing through very critical times. And the industry has, once again, urged for a further continuance of protection beyond 31st December next. This question is now under the examination of the Tariff Commission which held a public enquiry in Bombay last week.

Opening the enquiry, Mr. M. D. Bhat, Chairman of the Tariff Commission, remarked that it was difficult to feel satisfied with the progress of the sericulture industry. There is no exaggeration whatever in this remark, as will be evident from the fact that not only has production not increased but the quality of the indigenous silk has also not registered any appreciable improvement. The aggregate production of mulberry raw silk in 1952, for instance, was about 1.7 million lbs. only, as against 2 million lbs. in 1933 and the overall domestic demand of 3 million lbs. As regards quality, there was some improvement during the period 1948 to 1951, when the filature variety advanced to the international 'D' grade. Since then, however, the bulk of the indigenous filature silk does not seem to have improved beyond 'D' grade. Even the quality of Kashmir raw silk—this is generally of 'B' grade—is said to be, in some cases, only of 'E' and 'F' grades in neatness and evenness and, judged from penalty and clearance classification, it is much below the lowest of 'G' grade reeled in Japan.

Peculiar Problems

The none too happy position of the Indian sericulture industry, as noted above, has been the result of certain peculiar problems arising from its agro-industrial character. Sericulture industry is primarily, that is, at the bottom, an agriculturist's secondary occupation, whereas, at the top, that is, at the manufacturing stage, it has all the characteristics of a full-fledged industry. Often, the primary stage lags far behind the manufacturing stage, for raw silk production, both in quality and quantity, is woefully insufficient to meet the country's demand.

Several factors have been responsible for this state of affairs. Among others, three stand out prominently. First, the mulberry gardens are often adversely affected by failure of rainfall. Secondly, the presence of a natural defect in the multivoltine cocoons have largely contributed to the lowering of the grades of silk. Thirdly, the demand for raw silk has been gradually declining, thanks to the growing use of synthetic fibres, such as artificial silk and yarn which are sold at cheaper prices, and to the fall in the purchasing power of the consumer. If, therefore, the sericulture industry is to be stabilised on a solid and sound footing, it is imperative that these problems are tackled energetically. Such can be done only through the concerted endeavours of the industry, the Agricultural Departments of the State Governments, and the silk goods manufacturing industry. The problem of water-supply to mulberry gardens, for instance, can be solved by a well planned irrigation system. Similarly, greater attention should be paid to research designed to reduce "hairiness" and raise "neatness." Demand for raw silk can be stepped up by reducing the cost of production which is at present very high.

These are, indeed, formidable problems which somewhat justify the industry's claim for a continuance of protection beyond 31st December next. Even the representatives of interests other than raw silk producers, namely, importers, consumers, and Governments, have expressed themselves in favour of such continuance. The importers, however, have put forward a plea for a downward revision of the rate of duty. To what extent this plea is justified, it is difficult to say, in the absence of up-to-date statistics relating to prices. It may be recalled that, early last year, the Government of India reduced the level of protective duty on raw silk (excluding silk waste and noils) and silk cocoons from 30 per cent. *ad valorem* plus Rs. 6-8 per lb. plus 5 per cent. of the total duty to 30 per cent. *ad valorem* plus Rs. 3-14 per lb. If, therefore, the rate of duty is to be reduced still further, it will have to satisfy one condition, namely, that the gap between the fair selling price of raw silk produced in India and the landed cost of imported silk is narrower than that obtaining at the time of the previous reduction.

Other Suggestions

Be that as it may, besides tariff protection, various suggestions have been offered for the speedy development of the Indian sericulture industry on sound lines. These include quantitative regulation of imports, stabilisation of the prices of cocoons and raw silk, intensification of research, pooling of indigenous and imported raw silk. The first mentioned suggestion has already been implemented. For the quantum of imports is being so adjusted as to meet the gap between estimated demand and domestic production. There is nothing new in the suggestion relating to price stabilisation, inasmuch as it has been very clearly emphasised by the former Tariff Board. This question no doubt bristles with difficulties. Nevertheless, it deserves a thorough examination by Government. There is also the need for enlarging the scope of research. It is, however, difficult to accept the suggestion relating to the pooling of indigenous and imported raw silk, as it ignores the quality aspect. This is especially so when the quality of indigenous raw silk is not generally of a very high standard. Moreover, such a pooling arrangement will encourage complacency among producers of raw silk and remove what little urge there is among them now to improve the quality of the silk they produce.

(Concluded from next column)

trying time. If, therefore, the industry is to maintain a high level of production at an economic cost, it is of the utmost importance that the Government should reduce the level of taxation. There is also the need, on the part of the Government, to enable the industry to carry out their schemes of rehabilitating machinery and equipment. The pointed attention drawn to the problem of rehabilitation by both Mr. Shroff and Mr. Tata underlines its significance to the industry at the present moment. Mr. Shroff warned that, unless the Government liberalised depreciation allowances and thereby put the industry in a position to modernise on an extensive scale, the competitive capacity would be weakened. This warning is, indeed, quite timely and, it is to be hoped, will not go unheeded by the Government.

While these are matters which require Government's active attention, there is the imperative need for rationalising methods of production with a view to lowering cost. Indeed, a reduction in cost of production will bring down cloth prices, which alone is the most effective way of maintaining a high level of consumption—domestic and foreign. But, unfortunately, any attempt of the industry to effect rationalisation methods is being opposed by workers for fear of unemployment. Mr. Shroff also is fully aware of the fact that there will be unemployment but such would be confined only to a very limited number of workers. It should not be a bar against retrenchment, in view of the ability of the industry to reduce its cost and cheapen its product, as pointed out by Mr. Shroff, which must ultimately result in an overall increase of employment in the country.

PRODUCTION OF "DHOTIS" BY MILLS

It will be recalled that a reference to the Bombay Millowners' Association's protest against the reported relaxation on restrictions on production of *dhotis* by certain mills in Orissa State was made in our issue dated 18th April, 1953. The Government of India issued last week a Press note in which it has clarified the position. The Government admits that, in the case of 11 mills, it has permitted certain relaxations, but points out that such has been based on such considerations as the nature of their equipment or the need to make allowances for extra loomage installed since 1951-52. According to the Government, when the decision to restrict production of *dhotis* by mills to 60 per cent. of their production during the year 1951-52 was taken, it was recognised that some individual units would find it difficult to comply fully with the new order and that a certain degree of relaxation would be found necessary. The Government has refuted the allegation that one mill in Orissa has been given complete freedom to manufacture any quantity of *dhotis*.

OUTLOOK FOR COTTON TEXTILES

IMMEDIATE FUTURE NOT PROMISING

NOW that the buyers' market in cotton textiles has come to be established almost on a permanent basis, great concern is being expressed by both millowners and traders over the future of the Indian cotton textile industry and trade. The concern over the several disquieting problems confronting the industry was fully reflected in the addresses of Mr. N. H. Tata and Mr. A. D. Shroff, Chairmen of the Tata Mills and Svadeshi Mills, respectively, delivered at the annual meetings of their respective mills a few days ago. Mr. Tata presented a rather dismal picture of the state of affairs and said: "At present, the future of the cloth trade continues to be uncertain. Highly sensitive cloth markets, like ours, react very sharply, though temporarily, to imminent prospects of peace in Korea and talks of East-West political amity. With increased production in India and reduced offtake in both local and export markets, the immediate future does not look to be very promising." Expressing more or less similar views, Mr. Shroff observed: "... the inability of the industry to export anything like a thousand million yards a year may unfortunately drive the industry to curtail production and aggravate the problem of unemployment, which has already assumed rather large proportions."

The present disturbed situation of the Indian cotton textile industry and trade has been particularly aggravated by the ill-conceived policies of the Governments—Central and States—especially those relating to taxation. As readers are aware, the series of additional burdens imposed by the Governments in the form of fresh taxes has adversely affected the cotton textile industry and trade. It is not surprising that these policies should have been stoutly denounced by the two millowners referred to above. For instance, Mr. Tata said that, with a staggering array of tax burdens imposed by the Central Government, such as import duty on cotton, excise duty, contributions on account of Provident Fund, Employees' State Insurance, and additional excise, and an equally imposing list of taxes enacted by the Bombay Government, such as the multi-point sales tax, electricity duty and mounting municipal assessments on water and property, there was very little scope for economies that could be effected by the industry in the small sector of cost structure under its control. Proceeding, he said: "If, to-day, Government fixed in the textile industry a treasure chest which could be used freely to appease, at intervals, labour and handlooms at the expense of consumers and industry, the time will not be very far when an accusing finger may be pointed towards Government for crippling the growth of the premier industry of the country by levying imposts year after year."

The taxation proposals of Government were also the target of criticism at the hands of Mr. Shroff. His remarks are worth production in this connection. Said he:

"There appears to be a tendency on the part of Government to believe that the cotton textile industry can continue to absorb indefinitely additional burdens. On the top of the Employees' Provident Fund Act and the Employees' State Insurance Act, which will subject the industry to an additional recurring charge of Rs. 11 crores per year, now a new cess of 3 pies per yard is imposed to enable Government to help the handloom industry out of the proceeds. This is a curious way of helping the handloom industry, which everybody, including the cotton textile industry, wishes well. The two measures which have been recently taken to support the handloom industry, viz., restricted production of *dhotis* by the industry and the cess, are hardly calculated to attain the objective in view. The consumer has already started paying more for his *dhotis* and the mere distribution of the proceeds of the cotton cess will not ensure the prosperity of the handloom weaver. The cotton textile industry is naturally very anxious gradually to reduce the price of cloth, but, in the face of new burdens which are being continuously piled on the industry, it is inconceivable that the consumer can expect any relief in lower prices. As a matter of fact, the consumer has already started bearing the burden of higher prices, because of this new impost on the industry."

Any one who has followed the developments in the sphere of the cotton textile industry will fully appreciate the criticisms of the two millowners. As has been pointed out ere now in this journal, with taxes heavily loaded, expenditure mounting up, and prospects of growing trade remaining highly uncertain, the cotton textile industry in India is certainly having a

(Continued in previous column)

PRIVATE IMPORTS OF COTTON

COTTON GOODS EXPORTS BELOW LAST YEAR'S LEVELS

(From A Special Correspondent)

MANCHESTER, *28th April*

MANCHESTER LETTER

THE report of the Cotton Import Review Committee, set up by the Government to consider whether any changes are necessary in the duties of Britain's State-sponsored Raw Cotton Commission, will be issued in May. The recommendations of the Committee, which started its deliberations last month, will have an important bearing on the extension of free enterprise imports of raw cotton for Lancashire mills.

One in every three bales of raw cotton coming into Britain at the present time is by private arrangement. It is known, however, that this proportion will be sharply increased in favour of private importers, with a corresponding reduction in the volume of Raw Cotton Commission imports, when spinning mills have their next opportunity of "contracting-out" of the Commission this summer.

It is to prepare for this development and to recommend what should be done about the provision of cover—an insurance against losses at present operated by the Commission—that the Review Committee was set up.

Quarterly Exports

As if to underline the difficulties stressed by the trade in connection with exports due to the quality problems arising from purchase tax, the March returns for overseas shipments provided poor comfort for merchants and manufacturers alike. Although the value of cotton goods exported rose by more than £500,000 to £10,550,744, earnings from yarn and cloth for the quarter were substantially lower than a year ago, being £32,225,777 against £49,842,174.

The level of shipments of cotton piecegoods remains below the average recorded in 1952 and some startling development will be necessary if any serious attempt to reach the target figures is to be made. In the first quarter the amount of cloth shipped, at 173,406,000 square yards, compares with 211,765,000 square yards a year ago and the value has fallen from £33,209,435 to £21,984,335. Details of recent comparative shipments are shown below:—

	Piecegoods Sq. yds.	*Value* £	*Average price per sq. yd.* d.
Monthly average—			
1939	116,115,000	2,695,000	5.51
1949	75,398,000	8,809,000	28.07
1950	68,539,000	8,358,000	29.26
1951	72,006,000	11,016,000	36.67
1952	59,234,000	8,404,647	34.05
1953 (3 months' average) ..	57,802,000	7,328,112	30.42
January	64,706,000	8,223,374	30.46
February	52,027,000	6,011,090	30.49
March	56,283,000	7,136,820	30.43

To add to the difficulties of exporters, who are in many cases already beset by import restrictions and the wariness of foreign buyers, political distractions in some prospective consuming countries have arisen. Because of this the final arrangements for the provision of standard cloths for West Africa are held up and interference has been caused to the negotiations to send larger quantities of yarn to Pakistan. One of the few markets, now absorbing larger quantities of Lancashire cloth, is South Africa, whose imports this year are almost twice the quantity of the first quarter in 1952.

Leading buyers of Lancashire cotton cloth in the first quarter of this year have been (in square yards, with 1952 comparisons):—British West Africa 39,906,000 (53,021,000); South Africa 23,878,000 (12,699,000); Australia 12,963,000 (37,902,000) and Malaya 8,401,000 (6,820,000). Shipments to Pakistan have dipped sharply, being below 2,000,000 yards compared with more than 15,000,000 yards in the first quarter of 1952.

Rising Imports

Arrivals of foreign cloth into Britain in the first quarter this year are distinctly lower than in the corresponding period 12 months ago, but there was a tendency for imports to rise slightly last month. The value of all cotton goods imported so far this year is £3,486,164 against 13,110,909 in the first quarter of 1952.

Japanese grey cloth accounted for fully three-quarters of the unbleached material reaching Britain in March, the total being 8,199,000 square yards, the highest monthly figure since last September. For the three months shipments have been 19,144,000 square yards against 53,473,000 square yards a year ago, and Japan has supplied 12,175,000 yards of this total. Imports of finished cotton goods this year have been halved compared with 1952 at 5,617,000 square yards.

Further cuts in imports of cotton yarn have been effected, the quantity arriving in the first quarter being only 256,988 lbs. against 4,370,874 lbs. last year. The value of these yarns has been £68,654 against £1,238,356.

Limited Yarn Shipments

Very little variation took place last month in the quantity of yarn exported, which remains at a relatively low level compared with some recent years. Shippers are now sending barely 3,000,000 lbs. of yarn abroad each month, whereas in 1949 exports at one stage were three times that figure.

In the first three months of the current year, yarn exports totalled 9,879,300 lbs., at a value of £4,107,776. This compares with 12,198,600 lbs., valued at £6,443,254, shipped abroad in the corresponding period of 1952, and is barely one-third of the volume of exports immediately before the war. The following table shows the latest position:—

	Yarn Lbs.	*Value* £	*Average price per lb.* d.
Monthly average—			
1939	9,471,800	745,500	18.89
1949	6,838,400	1,962,500	68.88
1950	5,915,500	2,127,000	86.33
1951	5,547,900	2,648,500	116.46
1952	2,970,800	1,479,163	119.25
1953 (3 months' average) ..	3,293,100	1,369,259	99.79
January	3,467,700	1,427,349	98.79
February	3,268,900	1,484,904	104.77
March	3,114,500	1,241,552	95.67

Mention was made a month ago of the persistent decline in cotton yarn shipments to Pakistan, which so far this year have only been 20,600 lbs., as against 1,652,700 lbs. in the first quarter of 1952. A welcome feature, however, has been the revival in business for Canada, whose imports have increased from 596,700 lbs. to 1,088,300 lbs. Other leading consumers have been (with 1952 comparisons):—Irish Republic 1,430,500 (935,400) lbs.; Australia 1,024,500 (1,460,500) lbs., and Denmark 708,900 (394,300) lbs.

It is interesting to note that the decline in shipments of yarn from Lancashire this year has been mainly in the lower and very fine qualities. Whereas spinners producing yarns in the range of counts between 26s and 120s have actually raised their exports compared with a year ago, shipments of yarns up to 26s have fallen from 4,629,500 lbs. to 2,173,700 lbs., while those above 120s counts have declined from 120,600 lbs. to 67,700 lbs.

Empire Cotton

The importance of better transport and port facilities in Empire cotton-growing countries so that Lancashire's requirements of non-dollar cotton can be met, was emphasised at the annual meeting of the British Cotton Growing Association.

The President, Lord Derby, said the need for Britain to obtain its raw material from other than dollar countries was generally recognised. The position was not likely to undergo a rapid change and for a number of years Lancashire would have to look to sterling areas for more and more cotton. Africa—to a large extent that meant countries within the Empire—continued to produce the increased quantities of cotton required, but better railway and port facilities were necessary. Lord Derby said: "Unless these services are more efficient the efforts at increasing and expanding production can be greatly retarded."

The quantity of cotton produced in Empire countries and the Sudan last year amounted to 975,000 bales—the second highest total ever recorded. This was 75,000 bales less than in the previous year, which was a record. The decrease was caused by unfavourable climatic conditions in the areas of the Sudan which produce Sakel type cottons. Almost every other area was well above its post-war production, the main achievements being 50 per cent. increases in Nigeria and in the areas growing American-type cottons in the Sudan, while Tanganyika territory had returned to its best previous production.

Lord Derby said that a year ago it had been announced that the Governments of four African territories—Uganda, Tanganyika, Nyasaland and Nigeria—hoped for annual productions, amounting to over three-quarters of a million bales. A big stride towards that quantity was made last year, the four territories mentioned producing 584,000 bales—about 110,000 bales more than the previous year.

It was the Association's view that these countries could produce more than the quantity hoped for. There was every prospect, Lord Derby said, that this year's Empire crop would total about the same as in 1952. The Sakel cotton-producing areas of the Sudan had shown a substantial recovery from the setback of last year but due to climatic conditions there was likely to be rather smaller quantities from some other countries.—*All Rights Reserved.*

Endorsements, Guarantees and Other Obligations		119,008,251	The National Bank of Scotland Limited—		
			Consolidated Capital Stock £4,894,650 (nominal), £1,076,823 paid up, taken at amount paid up, plus proportion of Reserve Fund and undivided profits	3,662,107	
			Indian Premises Company Limited	....	
			Lloyds Bank Executor and Trustee Company (Channel Islands) Limited— 100,000 Shares of £1 each, fully paid, at cost	100,000	
			Nominee and Other Companies (written down to nil)	....	
				3,662,107	
			Lloyds and National Provincial Foreign Bank Limited— 12,000 Shares of £50 each, fully paid, at £50 per share	600,000	
			Other Trade Investments at cost or under	3,921,658	
			NOTE.—There is a contingent liability for uncalled Capital in respect of a portion of these Investments.		8,183,765
			Other Assets and Accounts (including Sundry Properties at cost, less amounts written off)		7,227,919
			Bank Premises, at cost, less amounts written off		7,955,982
			Liabilities of Customers for Acceptances, as per contra		2,761,533
			Liabilities of Customers for Endorsements, Guarantees and Other Obligations, as per contra		119,008,251
	£ 1,323,908,127				£ 1,323,908,127

NOTES.

I. Investments in British Government Securities amounting to £376,537,137 which are all redeemable at fixed dates, the majority maturing within 10 years, are taken at or under cost and below redemption price. Market value of these Investments at the 31st December, 1952, was greater than the balance sheet figure.

II. Other Investments : the market value of the quoted investments at the 31st December, 1952, was greater than the balance sheet figure.

III. Securities and Other Investments totalling £670,000 (1951 : £808,000) nominal are lodged for Public and Other Accounts and for the Note Issue in the Isle of Man.

IV. Foreign Currencies have been converted at the official rates of exchange ruling at the 31st December 1952 ; in the case of Eastern Branches as at the 31st October, 1952.

A. H. ENSOR, E. J. HILL, } Chief General Managers.

T. HARRIS, Chief Accountant.

BALFOUR OF BURLEIGH, Chairman.
A. J. RAISMAN, Vice-Chairman.

PROFIT AND LOSS ACCOUNT FOR THE YEAR ENDED 31st DECEMBER 1952.

Dr.		*Cr.*	
To Interim Dividends, less Income-tax	£ 471,613	By Balance brought forward	£ 596,803
,, General Reserve	1,200,000	,, Profit brought in, after providing for taxation on the profits of the year and after making transfers to the credit of contingency accounts out of which accounts full provision has been made for any diminution in value of assets	1,964,665
,, Reserve for Future Contingencies	....		
,, Final Dividends, less Income-tax (subject to confirmation by the Members)	471,613		
,, Balance to be carried forward	418,242		
NOTE.—Directors' Emoluments amounted to £64,973 (1951 : £68,364), of which sum £6,213 (1951 : £6,159) was paid to certain Directors by Subsidiary and other Companies.			
	£ 2,561,468		£ 2,561,468

REPORT OF THE AUDITORS TO THE MEMBERS OF LLOYDS BANK LIMITED

We have obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purposes of our audit. In our opinion proper books of account have been kept by the Bank as far as appears from our examination of those books, and proper returns adequate for the purposes of our audit have been received from Branches not visited by us.

We have satisfied ourselves as to the Cash, in hand, with Bank of England and Eastern Reserve Banks the Balances with, and Cheques in course of collection on, other Banks in the United Kingdom and Ireland, the Balances with Banks abroad, and the Bills. We have also verified the correctness of the Money at Call and Short Notice and the securities representing the Investments of the Bank. We have examined the above Balance Sheet and Profit and Loss Account which are in agreement with the books of account at Head Office and certified returns from the Branches. The Eastern Branches accounts being brought in as at the 31st October, 1952. In our opinion and to the best of our information and according to the explanations given to us, the said accounts give the information required of banking companies by the Companies Act, 1948, and, on the basis authorised therein, the Balance Sheet gives a true and fair view of the state of the Bank's affairs as at the 31st December, 1952, and the Profit and Loss Account gives a true and fair view of the profit, ascertained in the manner therein indicated, for the year ended on that date.

In our opinion the group accounts (comprising the Balance Sheet and Profit and Loss Account of the Bank and the annexed accounts of The National Bank of Scotland Limited), have been properly prepared in accordance with the provisions of the Companies Act, 1948, applicable to banking companies and, on this basis, give a true and fair view respectively of the state of affairs and of the profit of Lloyds Bank Limited and its subsidiary dealt with by such group accounts so far as concerns members of Lloyds Bank Limited.

3 Frederick's Place, E.C. 2, 13th January 1953.

PRICE WATERHOUSE & CO. Chartered Accountants.

W. T. C. PARKER, General Manager (Eastern Branches)

(Continued in next page)

PATTERN OF WORLD TRADE IN COTTON

ROLE OF BILATERAL AGREEMENTS

ALTHOUGH it is relatively more difficult to predict the nature of demand for cotton than to estimate the available supplies of the commodity, a tentative survey, made by *Cotton*, the monthly review of the world cotton situation, issued by the International Cotton Advisory Committee, points out that possible increases in consumption of cotton are likely to occur in the U.S., India and Japan. Such increases, it is held, might offset the anticipated decline in cotton consumption in Western Europe. The journal remarks that these changes "may have some significance from the viewpoint of world cotton demand."

Free world production of cotton in 1952-53 is now estimated at 28.3 million bales (of 478 lbs. each) as compared with 28.6 million bales last season. The major part of this production consists of staple length $\frac{3}{4}$" to $1\frac{1}{8}$" (23.5 million bales) as compared with 24.4 million bales in the previous season. Free world stocks of raw cotton aggregated 13.3 million bales or 2.7 million bales more than on 1st August, 1951. Free world cotton consumption during the 1952-53 season is now expected to be of the order of 25.0 million bales. Thus, in general terms, there exists a surplus of cotton over anticipated world consumption this season, owing to the increased world carryover on 1st August, 1952, and to a continuing high level of production.

In estimating the consumption of cotton, an important factor is the trend in consumption in the net exporting countries. Total cotton consumption in net exporting countries is expected to increase mainly because of the expected higher consumption in the United States and the further development of domestic textile industries in primary producing countries. Taking account of the disinclination of mills to buy in a falling market and some statistical evidence, the journal says that, it is safe to assume that carry-over cotton stocks of mills in these countries were no larger than a year ago and perhaps smaller. From this it follows that domestic demand in net exporting countries for the full season will remain at least as high as last season. It is difficult even at this juncture to predict, with any degree of accuracy, the probable level of international trade during the present season. There exist, however, according to the journal, quite formidable arguments for "expecting trade to remain at a relatively high level although under last season."

The journal lists the following considerations as among the factors which go to show that trade in cotton will remain at a moderately high level:

"First, the influence of the changes in cotton consumption mentioned above might seem to argue for some decline in the volume of world cotton trade. Consumption in Western Europe, which normally accounts for well over 60 per cent. of world cotton imports, is expected to be less this season than last. On the other hand, this might be partly offset by the expansion of yarn and textile production in India and Japan so that, on balance, consumption in net importing countries may be not much less than in 1951-52. In any case, any decline in aggregate cotton consumption in these countries would represent only a small fraction of world cotton trade.

"Second, stocks in many importing countries on 1st August were generally on the low side.

"Third, and perhaps the strongest argument of all, is the possible effect of reduced prices. Under normal circumstances, this should operate to stimulate demand and even encourage buyers to purchase cotton for stock over and above current seasonal requirements. This latter will depend primarily on the trend of prices over the remaining months of the season which in turn is related to the probable level of cotton production during 1953-54. At the moment, it appears likely that there could be some decline in world production next season but this is highly conjectural, depending largely on weather conditions and how much cotton will be grown in the United States. If an appreciable drop in world production was indicated, it might affect market values at the end of the present season and induce heavier purchases of old crop cotton.

"Fourth, exchange difficulties in cotton trade are being countered by continuing dollar loans and grants, by special payments agreements and commercial treaties covering this commodity, and by barter arrangements. In the short run, these should react to promote greater cotton exports."

There are, however, a few factors which tend to restrict the volume of world trade. Thus, the U.K. and India, both heavy importers of the staple in 1951-52, are likely to import less cotton this season. Both the countries started the season with larger stocks. Again, cotton imports into both these countries will be influenced by price trend and exchange availability. Other factors which tend to restrict the volume of world cotton trade are:

"There is also the uncertainty attached to the level of cotton consumption in the various importing countries over the longer period which may restrain any policy to purchase cotton for stock. This is modified somewhat by the fact that cotton is a durable commodity and may be more than offset, if the price trend over 1953-54 was viewed bullishly.

"The volume of free world cotton trade is determined to no small extent by the amount of cotton which is exported to the Communist countries. The U.S.S.R., China, and several Eastern European countries have made fairly substantial purchases of cotton in Egypt and Pakistan which, if continued during the next few months, would mean that exports from the free world to these countries would be maintained at least at last season's level—namely, 800,000 bales."

Over the first half of the 1952-53 season, the volume of international trade in cotton, according to the journal, was lower than last season and over most of this period consumption in several important consuming countries was actually running over imports with a consequent reduction in stocks. Although there may have been several reasons for this reduction in trade, the over-riding factor was in many cases the bearish sentiment in world markets, with the almost continuous fall in world cotton values.

With a much greater export availability this season, the journal says, competition in the various cotton markets has become more intense. This is reflected in the fact that the U.S. cotton exports are reported to be still running at half last season's volume but with a tendency to increase. The position would have been worse if no special efforts had been made to stimulate cotton exports through Mutual Security Administration grants to foreign countries or through Export-Import Bank's allocation of dollars. Again, in spite of the competition of non-dollar growths, consumer preference for the U.S. cotton, it is stated, remains high in a number of importing countries, partly on grounds of spinners' resistance to changes in the source of supply and partly due to the quality of this season's crop in the U.S.

A notable feature of the world cotton trade is that it is characterised by a pronounced trend towards greater bilateralism. In few other commodities there are a large number of barter agreements than in the case of cotton. There are also agreements which seek to stimulate trade in cotton through revisions of payments procedures. In this connection, the journal says:

"The cotton export trade is still characterised by a pronounced trend towards greater bilateralism. Many of the major exporting countries, and in particular Brazil, Egypt, Pakistan, and Turkey, have been actively negotiating barter or other trade agreements for cotton against manufactures or foodstuffs. However, although no aggregate figures of the total volume of cotton involved in such agreements are available, it is believed that they do not amount to more than a relatively small proportion of total trade in raw cotton and, for the most part, are essentially short term in scope.

"Another important aspect of non-dollar cotton trade in recent weeks has been the efforts to stimulate trade by revisions in payments procedures. To accommodate foreign spinners, the Egyptian Government now rules that if cotton exports are payable in dollars or sterling, 25 per cent. of the total payment may be made in these currencies and 75 per cent. in Egyptian pounds (export account), which may be used or resold for the purchase of authorised imports. Payments were previously acceptable only on the basis of 60 per cent. or more in dollars or sterling.

"Although a free exchange market is now operating in Brazil, on which quotations represent a major depreciation on the official rates, it is reported to be applicable only to commodities that individually represent a small percentage of Brazil's exports and not to cotton."

It would, however, be wrong to deny that these trade or payments agreements have an important role in facilitating the expansion of trade in cotton. These agreements, as the journal recognises, promote cotton imports in the face of exchange difficulties as well as make it possible to maintain or expand their own export economies. Raw cotton trade of the producing country is often linked to cotton textile trade of the importing country, so that these agreements promote a two-way traffic in the trade in cotton and textile goods.

CONSUMPTION OF COTTON

The consumption of Indian cotton during the five months ended January, 1953, amounted to 1,531,046 bales, and that of foreign cotton to 355,621 bales. This works out to a monthly average of 306,210 bales of Indian cotton and 71,120 bales of foreign cotton, as compared with 248,950 bales and 90,340 bales, respectively, in the 1951-52 season. It will thus be evident that the consumption of Indian cotton has improved by 23 per cent. while that of foreign cotton has declined by 21 per cent.

At the auction held at Kampala on 15th April, a further quantity of about 15,000 bales, consisting mainly of ARBP 52, were sold. Prices realised, it is stated, were: Rs. 1,420-1,425 for ARBP 52, Rs. 1,410-1,415 for West Nile, Rs. 1,405-1,410 for Masaka, Rs. 1,380-1,385 for Kenya, and Rs. 1,375-1,380 for Bunyoro.

LLOYDS BANK LIMITED—*(Continued)*

AUDITORS' REPORT ON THE INDIAN BRANCHES OF LLOYDS BANK LIMITED UNDER SECTION 30 OF THE BANKING COMPANIES ACT, 1949.

We report that we have audited the Balance Sheet of the Indian Branches of Lloyds Bank Limited dated 31st December, 1952, and above set forth and the annexed Profit and Loss Account for the year ended 31st October, 1952, with the books and accounts as kept at the General Manager's (Eastern Branches) Office, Calcutta, in which are incorporated certified returns from the Indian Branches and have obtained all the information and explanations we have required. In our opinion such Balance Sheet and Profit and Loss Account are drawn up in conformity with the law and the Balance Sheet exhibits a true and correct view of the state of the Bank's Indian Branches' affairs according to the best of our information and the explanations given to us and as shown by the books of the Bank's Indian Branches. In our opinion books of account have been kept as required by law.

CALCUTTA, 25th March, 1953.

SUGAR INDUSTRY IN INDIA

ITS SCIENTIFIC PROBLEMS AND THEIR SOLUTION

DESPITE the long period of 18 years of protection enjoyed by the Indian sugar industry, conditions in the industry have not stabilised yet. In fact, it is to-day faced with a score of disquieting problems which have been responsible for the high cost of sugar manufacture. Among these, three stand out prominently. First, the sugar factories are not getting adequate supplies of high quality sugarcane at an economic price, economic in the sense that sugar could be produced at a price that is either competitive with world prices or within the reach of the common man. Secondly, the technical efficiency of working of most of the factories is generally low. Thirdly, industrial utilisation of by-products of sugar has not been fully developed. If, therefore, the sugar industry is to be set on a stable and sound footing, it is of the utmost importance that these problems are solved by means of scientific research and development. Realising this doubtless, the Planning Commission has emphasised the need for improving the standards of efficiency "so as to enable the (sugar) industry to bring down its costs and to be in a position to meet foreign competition in due course." As to how this could be achieved has been discussed by Mr. Ram Behari Lal Mathur, in an interesting paper entitled "Scientific Problems of Sugar Industry" which he read at the recent meeting of the Academy of Sciences held at Trivandrum.

The main scientific problems of the Indian sugar industry has been studied under four heads, namely, (1) improvement of sugarcane cultivation, (2) adoption of more economical and less technical methods of production, (3) attainment of higher technical efficiency of working or minimising manufacturing losses, and (4) industrial utilisation of by-products.

Cane Cultivation

To take cane cultivation first. Scientific methods of cultivation should be introduced, special attention being devoted to the growing of disease-resisting varieties and also those types of cane which give better yield and contain more sucrose. The soil scientists and plant physiologists should labour to determine the amount of different fertilisers needed to produce maximum yield of cane. For organic manures, the State Governments should formulate and popularise schemes for utilising compost and farmyard manure and other organic village manurial sources. The efforts in this direction require wide publicity. There is also the need for effective control of pests and diseases. A few practical methods have been evolved for the protection of sugarcane against red rot, smut and mosaic diseases and for the control of borers and other insects. But these methods have not been amply demonstrated to cultivators. This defect must be removed without any delay. An intensive research in this direction of curative methods is urgently required.

Simultaneously with the efforts at improving cane cultivation, technological research on improved methods for the manufacture of cheaper and better quality sugar should be evolved. So far very little work has been done in this direction and a more intensive research is needed. Prof. J. M. Saha, Director of the Indian Institute of Sugar Technology, Kanpur, has evolved a process of manufacturing white sugar without sulphur. Another attempt has been made by Mr. D. N. Ghosh of the Science College, Patna, and this refers to the process of clarifying cane juice by an electrical process without the aid of chemicals and heat.

These processes are yet to be tried on a commercial scale. Unfortunately, the sugar factories seem to be very reluctant to undertake the risk of a trial with new research in their factories. In this respect, they seem to be as conservative as the Indian farmer to adopt improved methods of cultivation. It is, therefore, suggested that the experimental sugar factory, attached to the Sugar Institute, Kanpur, should be so enlarged in capacity and equipped sufficiently to enable practical technologists and research scholars to experiment there on an industrial scale.

The Indian sugar industry has no doubt achieved a fairly high standard of efficiency in working, as compared with the other leading sugar-producing countries of the world. The average overall efficiency of a sugar factory in India, for instance, has gone up from 83.5 per cent. in 1934 to about 86 per cent. at present, which is equal to that in Mauritius, Java and Cuba. It does not, however, compare favourably with the overall efficiency of 89 per cent. in Hawaii and 91 per cent. in Formosa. It is thus evident that the scope for enhancing the efficiency of sugar plant in India is still considerable.

The existing plant must be designed to avoid the basic causes of lack of high efficiency. The most skilled operator, regardless of his ability and devotion to work, cannot adjust and balance the operation as effectively as an automatic instrument. The utilisation of steam flow, pressure and vacuum recorders attached to various units will not only result in a more uniform operation but also save much fuel. It must be clearly understood that the secret of obtaining higher overall efficiency depends on the regularity in its operational conditions, regularity in the juice and steam flow, and maintenance of high vacuum without fluctuation. Unless these conditions are improved to the optimum, with the help of automatic instruments and devices, mere impovement in the constuction and design of the plant will not be of much avail.

Utilisation of By-products

Vast scope exists for the profitable utilisation of the several by-products of the industry, particularly bagasse and molasses. Bagasse has for long been recognised as a valuable material, possessing possibilities of commercial utilisation. The similarity between bagasse and a number of farm products, such as corn, stalk, rice, wheat and other straws, was recognised several years ago, and, although intensive scientific research has been undertaken in a few other sugar-producing countries, nothing worth the name has been done so far in this country.

It is common knowledge that India is short of cellulose materials and bagasse can as well be utilised as a source of cellulose in several essential industries such as paper and insulating materials. Cardboard manufacture from bagasse has been undertaken in certain factories, but paper pulp production entirely from bagasse is yet to be undertaken. As the availability of bamboos and sabai grass is limited, bagasse can be used in their place. It can also be utilised as a raw material in the manufacture of a wide range of insulating and hardboard products for the building industries. Besides being a source of useful fibre, bagasse is claimed to be an excellent source of chemicals, such as formaldehyde, forturaldehyde and various ketones. Inasmuch as bagasse contains a large proportion of pentosans, it is a very suitable raw material for the production of furfural, which has a wide range of uses—commencing from the manufacture of synthetic rubber and nylon to the separation of vegetable oils into food and paint oil constituents.

All this is true, but the fact remains that in India bagasse is being utilised as fuel by sugar factories and that there is not much wastage of this waste product. Unless it can be proved that the use of coal will be more economical than that of bagasse, that coal will be freely available to sugar factories, and that there will be a ready and assured demand for bagasse with adequate transport facilities for promptly moving this waste product from the factory areas, there will be no inducement to sugar mills to divert their supply of bagasse for the purposes mentioned above. Another point that has to be taken into consideration in this context is that there must be a marked improvement in transport facilities before anyone embarks upon schemes for the utilisation of bagasse.

The other important by-product of the sugar industry is molasses. Molasses is being utilised largely in the manufacture of power alcohol. This has, to some extent, solved the problem of molasses disposal. But the price of molasses fixed is unremunerative for the sugar mills. Molasses is being sold to the distilleries of Northern India at a price less than Rs. 6 per ton (*ex*-factory), while the actual sugar content of a ton of molasses —28 to 30 per cent. sucrose—has a value of as much as Rs. 175 to Rs. 200 at the present cost price of sugar. If, therefore, the price of sugar is to be reduced, it will not be sound economics to remain satisfied with this price of molasses, which may go down still lower if petrol becomes cheaper. It has not so far been possible to extract sugar from molasses profitably. But, intensive scientific research in other countries has shown that it should be possible to utilise the different constituents of molasses for producing other useful substances. Bio-chemical methods may come to the aid in producing lactic and citric acid. The improvement in the yield of acetone and butanol also requires close examination. Molasses contain an appreciable quantity of aconitic acid. If, in the near future, industries consuming aconitic acid and its derivatives are developed, molasses will find some outlet. Efforts should be made to develop a suitable method of recovering this particular acid. There are still many more possibilities to be explored and the field is still a fertile one in which notable developments may confidently be expected in the future.

CUBAN SUGAR CROP

The 1953 sugar crop in Cuba is restricted to 5,000,000 Spanish long tons. Approximately 18 mills had started functioning on 30th January, 1953 and on 2nd February about 66 mills of the 161 operating were reported grinding. The agreement reached between the mill owners and the cane growers for participation in the restricted crop gave additional protection to the small and medium-sized sugar mill owners and sugarcane growers at the expense of the larger mills, and to those mills producing administration cane and the cane growers who produced more than 500,000 arrobas (1 arroba=25 pounds) of sugarcane in 1952.

Cuba holds a special financed quota of 1,750,000 Spanish long tons of sugar, as a reserve to be distributed at the rate of 350,000 tons for the years 1953-57 to Cuba's quota for the United States. Except for this reserve, Cuba's surplus stocks at the end of 1952 equalled about 275,000 Spanish long tons.

The Cuban Sugar Stabilisation Institute announced some time ago that it had authorised the release to the United States market of 350,000 tons of special financed 1952 quota sugar. The Government also announced that, in order to facilitate the liquidating of accounts between mill owners and cane growers, it had fixed 3.40 cents per Spanish pound as the provisional general average price for the 1953 sugar crop. The 1952 provisional price was 4.18 cents per pound.

TRANSPORT OF COAL

INCREASE IN WAGON SUPPLIES

LATEST reports disclose that wagons loaded on broad and metre-gauges to transport coal from 1st April, 1952 to 31st January, 1953, was 1,034,709, as against 956,845 in the previous year. This discloses a gain of 8.14 per cent. The average coal loadings from Bengal and Bihar during 1952 amounted to no less than 3,163 wagons daily or 130 wagons a day better than in the previous year. This is a signal achievement and it is gratifying to note that the railways are planning for an even greater movement of coal during 1953-54. The improvement in wagon supply is attributed solely to regrouping of railways and the commendable progress of rationalisation measures.

It is, however, stated that the present available wagon capacity is hardly sufficient to carry 29 million tons a year, while the production is 34 million tons. It is estimated in trade circles that 3,700 wagons daily are required to move 28 million tons from Bengal and Bihar coalfields. If the transport of coal is to be raised to 34 million tons, that is, the annual output in India in 1952, an additional 650 wagons daily would be required. But with the expansion of agriculture and industry under the Five-year Plan, more and more coal would be required. This means that there should be a programme of progressive increase in the supply of wagons consistent with the increased requirements of coal of the country.

It is, however, alleged that regrouping has not in any way changed the conditions on the B.N.R. and E.I.R. collieries. It is reported that these collieries are still suffering, despite regrouping, from the continuance of restrictions that B.N.R. collieries could only despatch to B.N.R. destinations and E.I.R. collieries to E.I.R. destinations. This has led to the feeling that either regrouping has not been fully achieved or the facility for despatch in all directions which should have been possible has not been extended to collieries.

The low grade collieries have a bitter grouse against the Government. They have been complaining that the Government's promise to earmark 25 per cent. of total available wagons for lower grade coals, recommended by the Rationalisation Sub-Committee and endorsed by the Working Party on Coal, has not been fulfilled. They point out that the number of wagons allotted to lower collieries has been dwindling, year by year, resulting in forced shrinkage in the output of low-grade coal.

The problem of coal transport cannot be solved by the provision of more wagons. It should be supplemented by loading spaces on railway sidings, storage houses at ports and the like. There has been vehement opposition towards allotment on the basis of allocation of one wagon space for each 500 tons monthly cutput and an additional one wagon space for each 1,000 tons in stock. The railway sidings should be assisted by private sidings also. Complaints are frequent that even when a colliery applies for permission to construct a siding at its own cost, there is always inordinate delay in giving it.

Thus, it is clear from the foregoing that the problem of stimulating rationalisation of transport demands priority of attention. The laudable aim should be to enable every consumer to draw his coal from the nearest source of supply. Although this would result *prima facie* in considerable economy of transport, there is need for caution. If the outlying coalfields are extensively developed to supply adjacent consumers previously supplied by Bengal and Bihar, there will obviously be acute dislocation of work leading to unemployment in the latter collieries, if they are deprived arbitrarily of markets which they have been serving for nearly half a century. Again, there are many consumers who, for technical reasons, require special types of fuel which may not be available from the coalfields geographically close to them and, therefore, require to be exempted from the rationalisation edict, as Mr. W. H. S. Michelmore puts it. The question of rationalisation is thus a complicated one and requires to be closely examined in all its implications before any arbitrary directives are issued.

During the question hour in Parliament recently, Mr. S. N. Buragohain, Deputy Minister for Works and Housing, disclosed that Indian Railways consumed approximately 3.9 million tons of metallurgical coal and 6 million tons of non-metallurgical coal in 1952. There were no specific restrictions on the use of metallurgical coal. About 12 million tons of metallurgical coal were consumed in the country, he added. Further, he stated that the production of certain selected grades of this coal had been limited to 7.4 million tons in 1953 and of Grades I and II at the level of production in 1952.

PARLIAMENT DISCUSSES TEA BILL

COMMERCE MINISTER OUTLINES POLICY

THE House of the People took up for consideration on Saturday last (2nd inst.) the Tea Bill, as amended by the Select Committee, which presented its report to the House on 14th February, 1953. Mr. T. T. Krishnamachari, Minister for Commerce and Industry, who initiated the debate on the Bill, gave the House an idea of the Government's reading of the present position of the Indian tea industry and its policy towards the industry. Though one may not agree with all that the Minister had to say on the subject, his speech was notable for the frankness with which he gave expression to his (or the Government's) views.

Initiating the debate on the Bill, Mr. Krishnamachari referred at the outset to the criticism about the Government's attitude towards the industry during its last crisis. There is certainly some force in all this criticism, for the Government can take credit for nothing which helped the industry to tide over the slump—the industry has certainly not escaped unscathed from that crisis—except for its offer of limited guarantee of bank credit to gardens which many of them could not have availed of, and the belated reduction, with effect from 15th April, of excise duty on tea. Even as we read the Minister's review of the steps taken by the Government so far to help the industry, we do not find any single positive step taken by the Government of which it could be proud. The Minister said:

"As soon as this new Government was formed, it was more or less sensed that the industry was going to undergo a certain amount of difficulty and the Commerce and Industry Ministry applied its mind to the problem. With the help of the Finance Ministry, we were able to appoint a more or less one-man committee and the Rajaram Rao Committee's report has been before the House and the public for a long time. At the same time, we did feel that in order to put the tea industry on a proper footing there must be some kind of readjustment in the position of the foodgrain concession, which really meant that in estates, labour got foodgrains at about Rs. 5 a maund. When we considered this position the Government were fully alive to the necessity of protecting labour interests in this matter. I do remember mentioning to this House that the Rajaram Rao Committee would not recommend anything which would be in the nature of reducing the emoluments that labour was getting and a similar assurance was given by the Finance Minister when he was asked this question. We did so with a full sense of the responsibility that we had in this matter.

Converting Foodgrains Concessions into Cash

"At the time it was found that it would be proper to readjust this burden on the industry by converting the foodgrain concessions into cash at the then ruling prices, so that any addition by way of absenteeism or multiplication of the number of dependents in a labourer's house, which reacted adversely on the quantum of sacrifice that the estates had to make in respect of these foodgrain concessions, would be remedied. Unfortunately, labour leaders could not be persuaded by the Labour Ministry to accept a revision of those terms at that time. My regret that that was not done is not due to the fact that the Government's proposals were not accepted, but that the non-acceptance of the proposals at a time when conditions were opportune has reacted on a section of the industry, which is least able to bear any sacrifice. I am not happy that tea labour, particularly in Cachar and certain of the uneconomic gardens in Assam, have had to accept wages far below what they were getting in order to carry on.

"Thereafter there was a tripartite conference in Calcutta, at which my colleague the Labour Minister was present. One of the most curious things that have happened in a tripartite conference happened, which very nearly shook my belief in the efficacy of the tripartite conference as a useful instrument of resolving disputes. Two forces diametrically opposed, with a mentality like cat-and-dog, the employers and labour, came together and said, 'well the employer won't make any sacrifice and labour cannot make any sacrifice so let the Government forgo their revenue and everyone would be happy!' The labour leaders, unfortunately, more or less walked into the trap of the tea garden estate people in order to propose to the Government a proposition manifestly impossible of acceptance. After that the West Bengal Government acted and the Assam Government acted and a certain amount of diminution of wages did occur to the detriment, regrettably, of people who could least afford to bear that diminution."

It was the realistic step taken by labour in agreeing to accept lower wages, rather than face complete unemployment, coupled with the psychological effect of the producers' decision to restrict production in 1953 and the running down of stocks in the U.K. that were responsible for the improvement in the industry's position since the beginning of this year. But to say that the tea industry has now come up to a more or less stable equilibrium, because of the recovery in prices since January, is to exaggerate the value of this recovery. The financial position of many estates is still critical, as will probably be borne out by the accounts of the companies for 1952 which will be published in the course of the next few months.

This is not to deny that the Minister is unaware of the problem facing the industry, chief among which is one of finance. As the Secretary of the Commerce Ministry testified, after his visit to the tea gardens early in April, "the position is that in some gardens the atmosphere is one of pessimism, but in others there is determination to make a success of the whole venture even against odds. The industry, so far as the Indian-owned gardens are concerned (twenty per cent. of the entire industry), is in the doldrums." The reasons given for this state of affairs are, according to the Minister, that these were acquired at a relatively late stage when all the better lands had been occupied by the Europeans and Indian gardens have found a lot of difficulty in obtaining finances. The Minister expressed his concern over the steps to be taken in order to put these Indian gardens on a satisfactory footing. "I have been thinking about these problems," he added, "but my mind is not very clear as to what we could do. We do accept the position where we can save the marginal gardens and cannot save the submarginal ones, but even that is a very general proposition and wants further examination before it can be taken as a basis." He, however, hoped that he might be able to evolve some method by which the Government could either develop an institution or otherwise provide aid for these tea gardens where finance seems to be the main bottleneck, at the same time taking care that it was only an aid and not a dole.

Another important matter to which the Minister made a reference, in his speech is the question whether the industry would be able to pay reasonable minimum wages to labour and provide the necessary amenities. But to give an answer to this question an investigation of the cost structure of the industry should be made. Mr. Krishnamachari admitted the failure of the Government in making a beginning in this direction. He attributed this to the lack of suitable personnel. However, he hoped that the Government would be in a position to muster the personnel necessary for conducting the enquiry. "At the same time," he added, "the limitations of any enquiry into the cost structure have to be recognised."

Foreign Interests

Mr. Krishnamachari's references to the foreign interests which control 80 per cent. of tea estates will be widely deplored inasmuch as they are incompatible with the Government's policy of giving concessions to foreigners for investment in India. He said that two factors compelled the Government to become "a conscious and deliberate partner" in this industry rather than abdicate its rights in favour of the Indian or foreign interests that are to be found in the industry. One was the industry's unpreparedness to meet the crisis after an uninterrupted period of prosperity extending to 21 years. The other was that 80 per cent. of the industry was in the hands of people "who are not sons of the soil." But he conceded that "the elimination of the foreign element does not produce something better." He also added that he had no intention of discriminating against the foreigner provided the latter played the game. He particularly made a reference to the last Chairman and Deputy Chairman of the Indian Tea Association who, he said, were "positively obstructive." He, however, found the present Chairman more "reasonable." He told the House that with his co-operation, the Government would be able to better the lot of labour, improve the quality of tea and establish a name for Indian tea which India was losing "because of better propaganda and better sentimental support for Ceylon tea." He, however, recognised the place of foreign element and felt that "we have to work in the circumstances in which we are placed and see that the national industry is improved and at the same time our labour gets a square deal."

One of the steps proposed by the Government in this connection was the reorganisation of the Tea Board. "We do propose, consistent with our obligations to the industry and the economy of the country, to exercise control from time to time, when it is necessary," he said. When the Government had to undertake the responsibility, it must have power, he concluded. It is to be hoped that the power, when acquired, will be used with a full sense of the Government's responsibility for the progress of the industry.

The Government of India has decided to reduce India's exports of tea during the year 1953-54 by about 15 per cent. This step has been decided upon as a consequence of the fall in demand and its effect on prices. Under the International Tea Agreement, to which India, Pakistan, Ceylon and Indonesia are parties, standard export quotas for the four countries have been fixed. India's quota is 348.25 million lbs. a year, but the actual export quotas vary from year to year, according to a uniform percentage of the standard quota, fixed unanimously by the International Tea Committee. This percentage was 125 for 1949-50, 130 for 1950-51, 135 for 1951-52 and 1952-53. For 1953-54, India has decided to reduce it to 115 per cent., having taken into consideration that last year's export quota was very unrealistic. Thus, India's exports in the current year will be 399.68 million lbs., as against 470.13 million fixed for 1952-53.

UNITED BANK OF INDIA LTD.—*(Continued)*

PROFIT AND LOSS ACCOUNT FOR THE YEAR ENDED 31st DECEMBER, 1952

EXPENDITURE	Rs.	a.	p.
1. Interest paid on Deposits, Borrowings, etc.	26,01,501	11	10
2. Salaries and Allowances and Provident Fund (General Manager Rs. 27,412-8-0)	64,14,253	9	11

AUDITORS' REPORT.

We have audited the Balance Sheet as on 31st December, 1952, and Profit and Loss Account for the year ending 31st December, 1952, of United Bank of India Ltd., as above and in attached sheets set forth respectively with Books of Accounts as kept at the Head Office with which are incorporated the Branch Balance Sheets as on 31st December, 1952, and Profit and Loss Accounts for the year ending 31st December, 1952 (both in India and Pakistan) as audited, certified and reported to by the respective Auditors and report that—

(a) We have obtained all the information and explanations we have required and have found them to be satisfactory.

(b) The transactions of the Bank which have come to our notice have been within the powers of the Bank.

(c) The Balance Sheets and Profit and Loss Accounts and the relative returns received from branch offices of the Bank have been found adequate for the purpose of the audit.

(d) The Balance Sheet and the Profit and Loss Account are drawn up in conformity with the Law.

(e) Such Profit and Loss Account shows a true balance of Profit for the year.

(f) Such Balance Sheet exhibits a true and correct view of the state of the affairs of the Bank according to the best of our information and explanations given to us and as shown by the Books of the Bank.

(g) In our opinion the Books of Account have been kept by the Bank as required by Section 130 of the Indian Companies Act, 1913.

WORLD ZINC STATISTICS

PRODUCTION EXCEEDS CONSUMPTION

THE persistent easy trend in zinc prices which has been in evidence the world over now is partly due to a sympathetic reaction to decline in tin and other metals and partly to excess of supply over demand. Zinc (slab) production in 1953 is estimated at 2,355,000 short tons, as against consumption of 2,100,000 short tons, thus leaving a surplus of 255,000 short tons. The aggregate production in 1952 was 2,325,000 short tons, as against 1,990,000 short tons of consumption, resulting in a carry-over of 335,000 short tons. Productive capacity is adequate even to meet considerable unexpected demand and shortage can arise only through prolonged labour or transport difficulties. The present supply position is, virtually, disquieting. Indeed, the easiness at the end of 1952 was such that several domestic mines in the U.S. had to close down. It is, however, pointed out that the existing position may not persist, as a silver lining to the cloud is seen in the growing demand for zinc for special die-casting purposes. There is also prospect of a high level of output in industries using zinc as an essential raw material. Also zinc may still be absorbed for stockpile purposes.

Zinc is a non-corrosible metal that can be easily worked, but it is not strong. The most important use of zinc is in making brass. In its pure form, it is one of the principal constituents in electrical dry cells and batteries. Zinc sheeting is used extensively by the building industry for roofing, guttering and flashings. Rolled zinc plates are used in the printing trade. About half the zinc plates in peace-time is used for galvanising iron and steel products. Zinc is also coated on to metals as a productive layer as, for instance, ship hulls, window frames, steel pylons, and parts of aircraft bodies. Since the commencement of the last war, it is being increasingly used for alloy die-castings, particularly in the motor and general engineering industries. Since 1945, the consumption of high-purity and electrolytic zinc has increased very appreciably. In its non-metallic form, that is, zinc oxide, it is used as an ingredient for paints and glass.

The world production of raw materials published recently by the Royal Institute of International Affairs, London, gives a brief review of the importance of zinc among non-ferrous metals. It discloses that the U.S. is the largest producer of zinc ore. The other main producers are Canada, Australia, and Mexico. Smaller producers include Italy, Spain, Sweden, Yugoslavia, the Belgian Congo and Peru. Before the war, the U.S.S.R. accounted for about 4 per cent. of world output. The countries possessing the largest smelting capacity are the U.S. (where 5 per cent. of the output is derived from secondary material), Canada, Australia, the U.K., France and Belgium. The U.K. imports most of its zinc concentrates from Australia and a smaller amount from Canada; zinc metal is imported from Canada, the U.S., Australia and Belgium.

World production of zinc has increased to 20 per cent. above pre-war level. Of the major producers, Mexico has shown the most rapid expansion, compared with the pre-war years. In Canada and the U.S., the increase has been relatively small, and in Australia, the output is below the pre-war level.

In 1951 an international allocation scheme for zinc was introduced and it was discontinued in May, 1952. Free trading in the London Metal Market in zinc was resumed recently. It is already having an important influence on world prices. It is expected to provide the international price and hedging facilities, which are essential for satisfactory European trade in concentrates and the metal.

Mr. R. L. Stubbs, Director of the Zinc Development Association, U.K. dealing with the present trends in zinc production and consumption in Western Europe, in the course of his address at the American Zinc Institute, Missouri the other day, estimated European mine production, including Belgium and French overseas territories, to be higher by about 40,000 to 50,000 metric tons over the production of 526,000 metric tons in 1952. Consumption is estimated at 660,000 tons in the current year, as against 617,000 tons in 1952. Smelter production will also be higher, according to Mr. Stubbs, at some 651,000 metric tons, as a result of new capacity coming into operation.

It will be recalled that following the Second World War, the large Silesian mines with an annual production of about 209,000 tons of zinc in concentrates, passed on to Russian hands. Again, the important smelter capacity in Europe has been lost to Russia, which now controls the Polish, Czech and some of the German smelters, together producing about 180,000 tons of zinc in 1938. These losses, however, have been made good to some extent by recent developments in French overseas territories in Africa, which are expected to produce about 60,000 tons this year. In Belgian Congo, the annual production is estimated at about 90,000 tons. As a result of the growth of mine production in Africa, which for practical purposes can be included in European figures, and with the rise in the amount of scrap, which passes through smelters, it would seem that Europe's dependence on imports of concentrates from the American Continent and Australia would diminish.

Only Italy, Spain and Yugoslavia have enough ore and metal production to meet home consumption. France, however, is approaching self-sufficiency. A striking feature is that Belgium which is the largest metal producer outside the U.S. is entirely dependent on imports of concentrates. Britain, the largest consumer outside the U.S., is dependent, as already stated, on imports of both the concentrates and the metal. The European countries with a net export surplus of metal are Belgium, Norway, Yugoslavia, Italy and Holland.

In the opinion of the U.S. President's Materials Policy Commission which submitted its report in June, 1952, on the possible demand for, and the supply of, the important metals of the free world, the only metal in respect of which the outlook for production is bright is zinc. But it is clear that the future of the zinc industry depends on a sufficiently attractive price.

ASBESTOS AND BARYTES IN CUDDAPAH

About a quarter of a million tons of asbestos and barytes would be available from deposits in the Cuddapah District of Madras, according to the Geological Survey of India's report, "Asbestos and Barytes in Pulivendla Taluk, Cuddapah District," published recently.

The report observes that it will be possible to exploit the deposits on a small scale with simple mechanical aids and it is not necessary to employ costly machinery or highly paid technicians.

The deposits of asbestos and barytes in the Ceded Districts of Madras have been worked since before the First World War. At the request of the Government of Madras, they were studied by the Geological Survey and two Memoirs were published in 1934. The asbestos deposits of the Pulivendla taluk in the Cuddapah District, were worked for a few years in the early thirties by a private company but were given up soon after. The Government of Madras requested the Geological Survey to survey the asbestos deposits again to find out which of them was promising for commercial exploitation. The area between Brahmanapalle and Lingala was mapped in detail by Dr. M. S. Krishnan and Mr. M. S. Venkatram of the Geological Survey of India. Drilling was done in a few places under the supervision of these officers with drills supplied by the Government of Madras.

All the deposits of barytes occurring in the Pulivendla taluk were also investigated by Dr. Krishnan and Mr. Venkatram, who found that most of them were of small magnitude, and that the veins varied in thickness from less than an inch to as much as 6 feet in exceptional cases. The veins are irregular and it is not possible to make even approximate estimates of the quantities available. Nevertheless, the deposits are large enough to support mining at the present rate for several years to come. Much of the barytes mined at present is of second grade and off-colour, only a small percentage (5 to 10 per cent.) of the total quantity mined being first grade and of snow-white colour. The opinion is expressed that there is good scope for the discovery of new veins by detailed prospecting in the area.

INEXPENSIVE SOLAR COOKER

A solar cooker to be of practical utility should be as cheap as possible, and it should be simple, easy to operate and efficient. A preliminary study conducted at the National Physical Laboratory, New Delhi, of the various possible methods of cooking with solar heat has disclosed that a reflector concentrating solar heat directly on the cooking utensil, that is, a direct reflector-type solar cooker, will be most suitable for Indian conditions.

The main parts of a direct reflector-type solar cooker are a reflector to focus the incident solar radiation on the cooking utensil, a support with turning mechanism to keep the reflector facing the sun, and a cooking utensil. The size and cost of the reflector are determined mainly by the heating capacity desired. The cost of the support and turning mechanism depends largely on the design. A number of designs were tried at the National Physical Laboratory for efficiency, cost, and convenience of operation.

It is found that a reflector with an effective face area of about 10 sq. ft. is convenient for handling. Aluminium of high purity with polished and anodized surface is a suitable reflector material. Concave spheroidal reflectors with regulated automatic turning arrangement may be used for cookers, but paraboloidal reflectors are most suitable for manually controlled cookers.

The cooking utensils should have blackened bottoms. An insulated pressure cooker is most suitable for cooking with solar heat. Insulated utensils with close fitting, vapour-tight lids also give good performance. Special attention has to be given to the utensil support so that the utensil can be kept horizontal for all positions of the reflector.

SAND-LIME BRICKS FROM LIME SLUDGE

Investigations at the Central Glass and Ceramic Research Institute, Calcutta, have shown that good quality sand-lime bricks can be manufactured from lime sludge obtained from acetylene gas works. Large quantities of lime sludge are obtained as a waste product during the manufacture of acetylene from calcium carbide. An average sized factory produces about 150-200 tons of this product per month, and its disposal is a problem for acetylene gas works.

Sand-lime bricks have proved superior to clay or red bricks for constructional purposes. They are stronger and more regular in size and shape than clay bricks. They resemble white sandstone in appearance and are often employed as facing bricks for obtaining artistic effects in buildings. By incorporating suitable pigments such as ochre, rouge, lamp black, etc., they can be made in a variety of pleasing colours.

The process for the manufacture of sand-lime bricks is different from that employed for clay or red bricks. It consists in shaping the bricks from sand mixed with lime equal to 10 per cent. of its weight in a hydraulic press and autoclaving the shaped bricks at a pressure of 120 to 160 pounds per square inch for 8 to 10 hours. No firing is required. Ordinary building sand is quite satisfactory, but it should be, as far as possible, free from impurities. The proportion of lime in the mixture and the forming pressure influence the quality of the bricks. Autoclaving of bricks should be carried out immediately after forming. The strength of the bricks increases as the pressure and the duration of autoclaving increase.

E.C.A.F.E. MINERAL RESOURCES CONFERENCE

The E.C.A.F.E. Regional Conference on Mineral Resources Development in Asia and the Far East considered the activities of the U.N. Technical Assistance Administration (T.A.A.) at its seventh session held in Tokyo at the end of last month. A detailed report of technical assistance in the field of mineral resources was presented to the Conference, composed of some 120 mining experts and Government officials from 20 countries and five international organisations. The delegates learned that a total of 34 fellowships and scholarships in mineral resources had been awarded so far by T.A.A. since 1949. Of these 18 went to India and six to Pakistan. T.A.A. also organised together with E.C.A.F.E., a group visit of Asian iron and steel experts to Japan in 1952-53.

Mr. N. E. S. Raghavachari of India, Far Eastern Representative of T.A.A., pointed out that technical assistance had been limited by lack of financial resources. This also applied to fellowships and scholarship grants, he said. Dr. P. S. Lokanathan, Executive Secretary of E.C.A.F.E. stressed the fact that the small number of grants for geologists had, however, not always been caused by inadequacy of funds. It was also up to the Governments to make specific requests for such scholarships and fellowships, and to decide on priorities for activities in which they wish to have the grants, he said.

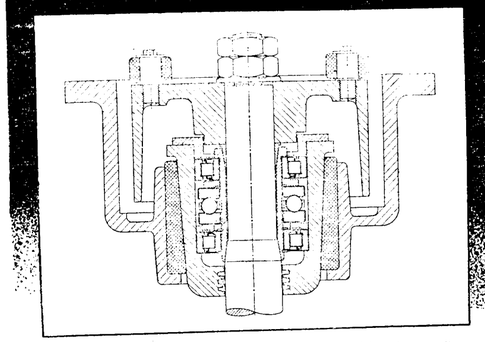
Good service to the sugar industry



SKF have considerable experience in the field of bearing applications for all types of cane-sugar machines. Excellent results have been obtained with SKF bearings, e.g. in knives, crushers, mills, and centrifugals.
The above illustration shows an SKF bearing unit for centrifugals. Its most important advantages are:

Great reliability: The sleeve undergoes no wear and therefore never needs renewing.

Long life: The thrust ball bearing - i. e. the most heavily loaded bearing - can be chosen much more robust than for previous types of similar bearing applications.

Good economy: The complete SKF bearing unit is cheaper than the rolling-bearing combinations hitherto supplied. Also a new separate bearing for the SKF bearing unit costs considerably less than the sleeve of old designs.

NATIONALISATION OF INSURANCE

NEITHER NECESSARY NOR BENEFICIAL TO COUNTRY

*[In recent years there has been a demand, from certain quarters, for the nationalisation of insurance. In the following article, Mr. K. A. Pandit discusses some aspects of the problem and reaches the conclusion that the State ownership of insurance is neither necessary nor beneficial to the country.—*ED.*]*

[By K. A. PANDIT, B.SC., F.I.A. *(Lond.)]*

SINCE the time the Five-year Plan was published, the question of nationalisation or socialisation of insurance and banking has been agitating the official and the non-official mind. Of course, the recent statement of the Finance Minister has clarified the position as regards banking. However, the question of insurance is still in the air and it is difficult to read the official mind from the public statements sometimes made. It would be opportune, however, to consider the question of nationalisation of insurance in all its aspects.

First of all, let us discuss it from the standpoint of the needs under the Five-year Plan. One thing is clear: for financing the plan, money should be made available and for this purpose, credit institutions like banking and insurance might be tapped. Insurance companies, particularly those, transacting life business, accumulate funds year after year and, therefore, the investment of such funds is the primary factor which affects our discussion.

Assets of Insurers

From the figures available in the *Indian Insurance Year Book*, 1952, the assets of Indian insurers amounted to Rs. 249.82 crores on 31st December, 1951, and, out of this amount, Rs 121.60 crores were invested in Indian Government securities. Also, the increase in the funds was Rs. 15.23 crores in the year 1951. Thus, about Rs. 121 crores of assets have already been invested by insurance companies in Government securities and every year, about Rs. 15 crores is available for new investment. Out of this amount, Rs. 7 crores on an average can be taken as available for investment in Government securities. Thus, the remaining Rs. 127 crores of the total assets and Rs. 7 crores from the increases every year are the amounts which have to be considered from the point of view of the Plan.

Investments of insurance companies are generally distributed among certain categories. In addition to Government securities, they have to keep some amounts invested in:—(1) Loans on policies, (2) agents' balances, outstanding premiums, interest, etc., (3) deposits, cash and stamps, and (4) miscellaneous investments. Investment in these categories is essential for the conduct of business and thus, certain percentages have to be kept invested therein. The total investment in these categories was about Rs. 49.63 crores on 31st December, 1951. This amount forms about 40 per cent. of Rs. 127 crores. Even of the new premium income, every year, about 40 per cent. would be required for investment in these categories. Thus, the amounts available for investment under the Plan would be Rs. 76 crores to begin with and about Rs. 4.5 crores, (60 per cent. of Rs. 8 crores) annually.

It may be pointed out that, even out of the Rs. 76 crores, certain amounts are invested in: (1) Securities of Part B States, (2) British Colonial and Foreign Government securities. (3) Municipal, Port Trust and Improvement Trust Securities and (4) land and house property. These investments cannot be disturbed for re-investment, as they constitute important sectors of the public finance. The amount already invested in these categories is about Rs. 32 crores. Thus, the net amount available for re-investment to meet the objectives of the national Plan is Rs. 44 crores initially and Rs. 4.5 crores annually. By nationalising insurance, therefore, it may become possible for the Government to obtain control over investment to the extent of these amounts only.

Share Capital

Against this, it should be remembered that repayment of the share capital would constitute a very important problem. The total of the net paid-up share capital of companies shown in the *Insurance Year Book*, 1952, is about Rs. 7 crores. It may be that some part of this capital is available to cover valuation deficits. However, a large proportion pertains to bonus-paying companies whose shares have higher market values. Thus, the liability of repayment can be taken to exceed Rs. 7 crores. If, therefore, nationalisation on one side might give the control on investments to the tune of Rs. 44 crores initially and of Rs. 4.5 crores annually, the Government would have to provide for a liability of payment to the shareholders to the extent of more than Rs. 7 crores.

It is not clear how nationalisation or socialisation, which would make available these amounts, will serve the purposes of the Five-year Plan. Further, it should be realised that, by nationalisation, there is likely to be a fall in future business and thus a shrinkage of the yearly income.

Insurance Must Be Sold

Life insurance in this country has to be sold. It goes to the credit of the vast agency force that insurance has progressed to a certain extent. However, it is still in its infant stage. Compared to the vast population of our country, insurance business has an uphill task to perform. It has to penetrate deep into the country, extending its beneficial cover to each and every home in the villages. Would this be achieved by a nationalised industry? If the agency force is eliminated or modified, it is certain that the business will receive a large setback. It would be, therefore, very essential to consider this aspect of the business if nationalisation is thought of.

Further, could it be said that a nationalised industry would be managed at costs lower than what are now prevailing among the top companies? I think, this is also untenable. So long as the agency force is to be maintained, it is unlikely that the costs of operation will go down. Some of the top companies, transacting the major portion of insurance business in this country, are managed at the lowest costs and it will not be possible to introduce more economy. Thus, from either of the two standpoints, namely, that (1) by nationalisation, it would be possible to obtain control over investments which might be materially helpful to the working of the Five-year Plan, or (2) by nationalisation, the insurance business would be more economically managed, it cannot be argued that nationalisation is either necessary or will be beneficial to the country. What is necessary is that the Government should regulate the industry, with a view to creating healthy conditions in the field of insurance business, and keeping the incentive to private enterprise alive so that greater and greater effort could be put in by the insurers, in order to expand the spheres of business and thus cater to the needs of the country.

Further, a public sector of insurance business can be created by setting up insurance funds for the Government and semi-Government employees on the lines of the Postal Insurance Fund. If such funds can be developed, perhaps larger amounts will be available to the Government for purposes of investment. Even the national health insurance scheme can be placed on a funding basis, like the one prevailing in the U.K. Larger funds would thereby be obtained by the Government for investment.

NEED FOR INCREASED SAVING

Insurance institutions perform a real national service in all countries by enabling the men of small means to save for purposes of meeting contingencies such as death and old age. To the individual, they thus offer protection, while to the nation they render a service by making available large funds for investment in channels which produce further wealth. This aspect of the service which the insurers render to the people was stressed by Mr. C. H. Shuttleworth, Chairman of the Royal London Mutual Insurance Society, at the recent annual meeting of the Society. He pointed out that capital was needed to re-equip British industry on modern lines at a faster pace than now, to develop new industries and to construct new factories, and added:

"Capital in these days is not the monopoly of the privileged few, but the accumulated savings of the many. The redistribution of income due to heavy taxation of the higher income groups makes it inevitable that savings, in future, must come from the mass of the people. It is in stimulating the expansion of these savings to satisfy the need for more and more capital that the industrial assurance offices have their part to play.

"The representatives of the industrial assurance offices call regularly at the homes of millions of their policyholders, collecting premiums and introducing new schemes of saving by means of life assurance policies."

PRITHVI INSURANCE CO., LTD.

We have in an earlier issue (*vide Commerce*, dated 11th April, 1953) referred to the scheme for mutualisation of the Prithvi Insurance Co., Ltd. It would appear from what is stated there that the shareholders would get only Rs. 6-8 or Rs. 5 plus Rs. 2 worth of "Asiatic" shares and that the balance of the capital would be lost to shareholders. There need be no such apprehensions, for the scheme, we are told, contemplates that all the properties, assets and moneys of the original company, representing the capital and general funds, will be held by the mutual company in trust. After payment of the initial distribution of Rs. 6-8 in cash or Rs. 5 plus Rs. 2 worth of "Asiatic" shares to its shareholders, the balance of the trust funds remaining in the hands of the mutual company will be kept undistributed until the accounts of the reinsurance agreement and all claims against the general funds of the original company are settled and, in any case, for a period of 18 months. After the expiry of the period aforesaid, the balance of the trust funds remaining in the hands of the mutual company will be distributed amongst the shareholders *pro rata* the number of shares held by each shareholder.

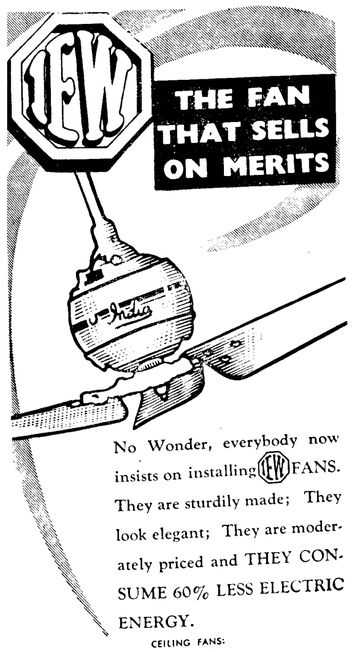
PAKISTAN INSURANCE ACT

The Pakistan Insurance Amendment Act, 1953, which may come into force on such a day as the Central Government may, by notification, in the official *Gazette* announce, inserts a new clause relating to "approved investment." Under the new clause, "approved investment" means investments specified by the Government as approved investments for the purposes of the Act, and in the case of securities or debentures of a corporation or a joint stock company, the concerned corporation or company should be so constituted that at least two-thirds of its capital is held by, and at least two-thirds of the members of the governing body consist of, Pakistan nationals.

CODE OF CONDUCT

A meeting of the Executive Committee of the General Insurance Council of the Insurance Association of India was held at New Delhi on the 27th April, 1953, under the chairmanship of Mr. K. G. Ambegaokar, Secretary, Ministry of Finance, Government of India. In order to exchange views with the trade on the Code of Conduct evolved for general insurers, the Advisory Committee of Directors of the Indian Insurance Companies Association, Bombay, had been invited to send representatives to meet the Committee. Seven such representatives also attended the meeting and put forward certain suggestions. The Committee appreciated the suggestions and gave them a preliminary consideration at the meeting itself; it was also decided to examine them in detail at the next meeting.

The Committee reaffirmed its faith in the Code of Conduct for General Insurers which will continue to be enforced. To make more effective the enforcement of the Code, it adopted a set of rules and regulations to guide the four sub-committees in the four regions already formed and the investigating officers, who, it decided, will be appointed with effect from the 1st June, 1953.



THE FAN THAT SELLS ON MERITS

No Wonder, everybody now insists on installing FANS. They are sturdily made; They look elegant; They are moderately priced and THEY CONSUME 60% LESS ELECTRIC ENERGY.

HINDUSTAN COMMERCIAL BANK LIMITED

NINTH ANNUAL GENERAL MEETING

SIR PADAMPAT SINGHANIA SUPPORTS DEFICIT FINANCING

THE view that infusion of money supply in the country was absolutely essential, considering the low purchasing power of the public at present to support the country's economy, was expressed by Sir Padampat Singhania, Kt., Chairman of the Hindustan Commercial Bank Ltd., in the course of his address to the shareholders of the Bank at their Ninth Annual General Meeting held in Kanpur on the 25th ultimo. Sir Padampat thus supported deficit financing in India, by which a sum of Rs. 290 crores is proposed to be raised to finance part of the Five-year Plan. He, however, made a distinction between the deficit financing resorted to during the war and that proposed now under the Plan in the present conditions. He also examined the possibilities of raising the amount required for financing that part of the Plan left to the private sector of industry to develop and made several suggestions in this connection.

The following are extracts from Sir Padampat's speech:

"It is once in a year that we, the shareholders of the Bank, meet to examine and review the working of the Bank, when I, as Chairman, place before you my views and offer clarifications not only on the trend of events and operations that have taken place during the year in our Bank, but also matters concerned with the economic survey and development of our country as a whole as the subject is interlinked with the financial operations and resources with which we are mainly concerned. Till such time we get into a position of full economic independence, political independence having already been achieved, we have got to continue to work hard and face all sorts of difficulties. Individuals or groups are not to look to the personal rewards of their hard work and endeavours, but to the betterment of the conditions of their countrymen. To my mind, the year 1952 closed on a somewhat hopeful note, though indications of improvement may not be to our full expectations. In the matter of our Bank, we have this year done better than before and I have now no doubt in my mind, as I said last year, that such consolidation of the Bank's position having been achieved as was warranted by the change of circumstances in the country, we can now safely go ahead with further development of our business as much as our resources and circumstances permit.

"The working of the year under review including the balance of Rs. 65,220-4-3 brought forward from the last year and after providing for all the working expenses, depreciation, etc., resulted in a net profit of Rs. 5,45,608-13 which indicates an improvement, though small, on the previous year's working. As you would have noticed in the Directors' report already submitted to you, your Directors decided to utilise Rs. 4 lakhs in writing off bad debts. Of the balance, a sum of Rs. 1 lakh has been transferred to investment reserve fund and Rs. 35,000 provided for bonus to the members of the staff. The balance of Rs. 10,608-13 has been carried forward to the next year's account.

"Cash and dues from banks amounted to Rs. 71 lakhs and represents about 16 per cent. of the total deposits and about 32 per cent. of the demand liabilities. The proportion of the cash in hand and with bankers, including the unencumbered securities, to the total deposits will amount to 41 per cent. which is double the statutory requirement. The figures will also indicate that the Bank's demand liabilities have almost been fully covered by the cash resources of the Bank, and this position has throughout been maintained since the inception of the Bank in order to maintain a sound liquid cash position.

Investments

"The Bank's investments in securities of the Central and State Governments and also Port Trust debentures, surely represent a position out of proportion to our deposits. This also explains our larger borrowings from the bankers against those securities. Market conditions did not and do not permit our disposing of a part of it, although we have had a careful watch on the market operations. Apparently, the difference between the book value of these investments and the market value is a big sum. You will, however, notice that the difference between the book value and the maturity value is below a lakh of rupees, and a reserve of Rs. 1 lakh to cover the same has been created from out of the profits made during the year under review. The figures given below will indicate that most of these securities are short and medium-dated, maturing for payment within nine years, when full value will be realised:

Securities maturing within five years, Rs. 2,12,900; securities maturing within seven years, Rs. 85,85,000; securities maturing within nine years Rs. 1,33,68,200; and securities maturing after nine years Rs. 17,17,800.

"In the matter of investments in the shares of the joint stock companies, which are mainly in cumulative preference shares, the position almost continues to be the same as indicated by me last year. I am confident that the position will improve with the improvement in the Stock Exchange markets of the country.

"The Bank's advances as at the close of the year, excluding those in Pakistan, represent 55 per cent. of the total deposits and including those in Pakistan, as against our total deposits, paid-up capital and reserves represent 46.5 per cent. in the matter of bills discounted and purchased, the figures represent purchases of demand bills only which is a short-term credit and is paid back within a few days.

"The period near about the close of the year represents an active season when money is more in demand, and your Directors have to some extent pursued a policy of intensive employment of funds in order to earn a satisfactory margin of profits. They, however, always follow a very conservative and cautious policy not only from the point of view of safety but also of liquidity of the funds.

"The Bank's investment in land and buildings, amounting to about Rs. 14 lakhs, indicates quite a happy position, as it is not only a safe and sound investment but the net return therefrom is over 10 per cent.

Deposits

"The figures in the balance-sheet will reveal that, as far as time deposits and savings deposits are concerned, and as compared to the previous year, the position is almost the same. It rather indicates a slight improvement, whereas in the matter of current deposits there is some fall and that is equally reflected in the deposit figures of the Scheduled Banks in the country. The total decline in deposits of the Scheduled Banks during the year under review is about Rs. 21 crores, being Rs. 869 crores on 28th December, 1951, against Rs. 848 crores on 26th December, 1952. The reasons are obvious, the scarcity in the money markets of the country continues.

"We have been operating in foreign exchange business mainly at our Calcutta and Bombay offices for the last many years. This business, however, has had our special attention during the year 1951 and in the year 1952, we created a special department at our Calcutta office to develop this business in order to be of greater service to our clientele and also to draw the necessary income from this business. I am glad to say that we are now doing well in that direction and further efforts continue to extend this facility at a larger scale to other commercial centres, particularly Bombay. You are requested to make use of our services in this direction and also to recommend to your friends to extend their patronage to us.

"A comparison of the profit and loss accounts for the years 1951 and 1952 will reveal an all-round improvement on the income-side. As for the expenses, they almost continue to be the same excepting an increase in the matter of interest paid. This was necessitated by a higher rate on deposits and borrowings from other banks. In the matter of establishment charges, the position is more or less the same, in spite of the retrenchment here and there of the surplus hands. The effect of the reduction under this head in the numerical strength either equalises or is even outweighed by the annual additions in the shape of increments even to the reduced number of the staff. The total earnings and analysis of the figures as a whole will surely indicate an improvement on the earning capacity of your institution. As I have said, your Directors are doing their best in the matter of improving the earning capacity and exercising every possible economy without impairing efficiency. I have no doubt that this progress will continue and in the years to come we will be in a position to show still better results.

Money and Banking

"The year 1952 made a beginning with a change in the monetary policy of our Government when the Bank rate was raised and open operations in the security market were withdrawn by the Reserve Bank of India. Some other complementary measures were also introduced and a stricter control was exercised on the credit operations of the Scheduled Banks. This was to check the inflationary trends and to bring down the price level. Experience and the reports received indicate that our Hon'ble Finance Minister, through the agency of the Reserve Bank of India, has been able to effect a beneficial control over the monetary system of the country. Though as a result of all this, the value of investments of banks has become more or less stable at a lower level and their market rates have indicated a further, though small, decline. There has been practically no change in the size of the banking system in India and the trend towards decline in the post-Partition period in the number of bank's offices has been checked. The big banks continued their cautious policy and actually reduced the number of their offices. On a review of the various factors connected with the banking system and structure in the country, I feel that the number of the bank's offices in the country is far below the requirements. Looking to the vastness of our country, its population and its unification after independence, the development of the banking habit amongst our countrymen is far from satisfactory. The habit of thrift and of savings is inborn amongst our people and to mobilise the same for the purposes of the nation-building programme, proper machinery is not available.

"The Central Government has introduced certain measures of tapping the savings of the urban people by introducing several schemes of attracting money on more remunerative terms, but the question of mopping up the savings of the rural population is still a problem. The Rural Banking Enquiry Committee recommended that the Imperial Bank of India, acting as the agents of the Reserve Bank of India, should open branches in the countryside for receiving deposits from the rural population. But no tangible results have been achieved so far, although the problem is pressing, specially during the period of planning. My suggestion is that an opportunity should be given to the Scheduled Banks of the country and the initial losses which may be incurred by them during the operations may be met by the Government. Encouragement can be given to them by lightening labour legislation as applicable to rural branches and also permitting the Local authorities and *panchayats* to make deposits of their surplus funds in these banks.

Bill Market

"On the occasion of the last general meeting I had referred to the Reserve Bank of India sponsoring a scheme for the discounting of the usance bills of the big banks (having deposits for Rs. 10 crores and over) under section 17 (4) (c) of the Act, particularly at that time, to remove the stringency caused in the money market when the Scheduled Banks' advances went up very high. I was unable to understand the reason for this discrimination. I am, however, glad to learn that the Reserve Bank of India has decided to make the scheme a permanent feature, and this will provide the foundation of a bill market in India, which need has been felt since long. Furthermore, they are seriously considering after a year's experience, of extending the scheme to other Scheduled Banks. I would welcome this move on the part of the central banking institution, as, by doing so, they will not only help to ensure short-term secured commercial advances but provide a big support to the commodity advances which is a very essential feature of Indian banking. I am confident that after another year of its working, as in the past, they will find an equal satisfaction of its operations with the medium-sized and smaller Scheduled Banks, as they have done in the case of the big ones.

"A need to create a bill market in the country was envisaged by the Central Banking Enquiry Committee, the recommendation of which gave rise to the establishment of the Reserve Bank of India. Unless its application is made as wide as to support all the Scheduled Banks throughout the country, the real objective of the creation of a healthy bill market for supply of short-term credit to the Indian markets will not be freely met. As it is, it simply tantamounts to an emergency measure to help the big banks to get out of financial stringency, whenever it arises. The procedure is, no doubt, cumbersome and its wider application may be a difficult task, but since this is a very important matter, Government have to devise ways and means.

Five-year Plan

"Considering the economic problems facing the country I have no doubt that the Planning Commission has produced a splendid plan in which top priority is given to agriculture. The success of the Plan obviously depends to a very large extent on the co-operation of our countrymen. Sums amounting to Rs. 722 crores have been earmarked for expenditure on agriculture, irrigation and power projects. It is hoped that the works envisaged in the Planning Commission's Report shall provide facilities for irrigation and cheap power in the countryside. But the farmer has yet to realise that not only his produce is for his own requirements and the requirements of his family but that on his production depends the life of all his countrymen. Thus, hard work on the part of everybody, including the farmer, is the *sine qua non* of the success of the Plan.

"The importance attached to the development of transport is only in the fitness of things. A sum of Rs. 497 crores is allocated to the development of transport and communication. While in the matter of railway route mileage India is not lagging far behind other countries with the exception of U.S.A., which has a route mileage of 2,25,800 miles as compared to India's 33,900, U.K.'s 20,600, Australia's 27,800 and Canada's 43,800. However, there is considerable room for improvement, if the population also is taken into account. Australia has 3.3 miles of route per 1,000 inhabitants, Canada 3.1, India 0.1, Japan 0.2, U.K. 0.4, and U.S.A. 1.5. We are at the bottom of the ladder in this list and considerable room for expansion to serve rural areas still exists. Our main difficulty, however, is that during the last war the replacement of engines and rolling stock and lines has fallen heavily into arrears. The excessive movement of traffic during the period of war coupled with a disregard for proper maintenance and repair, inflicted heavy damages on stock and track. The result is that the carrying capacity and speed of trains had to be curtailed. The foremost task of our Railway Minister is the work of rehabilitation. In fact, this has to take precedence even over expansion because on the speed of the trains depends the efficiency of the system.

"The total estimated expenditure in the Five-year Plan is estimated at Rs. 2,069 crores, out of which Rs. 290 crores is expected to be raised by deficit financing. Some critics have taken a very serious view of it, as, in their opinion, it would lead to further inflation. They quote the example of deficit financing during the last world war which resulted in shooting up of prices to such high levels, but the present conditions are widely different from those of war-time. During the war period, we had nothing more than I.O.U's of Great Britain (euphemistically called sterling balances), as against paper currency issued in this country and utilised for purchasing both industrial products and raw materials for purpose of the war, so that the supply of consumer goods fell short of the minimum requirements. At the same time, there was an increase in the purchasing power which naturally led to increase in prices. Deficit financing in the present conditions is entirely on different lines. No consumer goods are to be destroyed in war or exported against the paper currency to be issued. On the other hand, the money will be utilised in creating better means of production and works of lasting benefit to the country. These works will increase production and, consequently, there would be more goods available for consumers with no chances of prices rising up abnormally. In fact, considering the low purchasing power of the public at present, infusion of money supply in the country is absolutely essential to support the country's economy.

"While a sum of Rs. 2,069 crores is to be spent during the period of the Five-year Plan on different heads falling within the public sector, the private sector in industry is left to shift for itself for setting up new industries and improving the existing ones to step up production of consumer goods. I have not the slightest doubt that industrialists fully realise their responsibility in this matter. During the year 1952, in spite of adverse circumstances the production of industrial goods has gone up by 15 per cent. In the matter of finance, however, a serious problem has arisen. Replacement of worn-out parts is likely to cost about Rs. 120 crores. The need for replacement of worn-out and obsolete machinery is urgent. Depreciation reserves are insufficient considering that the cost of new machinery is between three and four times higher than the cost of machinery purchased before 1939. I drew the attention of all concerned to these points in my last year's speech, but no positive steps have been taken so far. In the present circumstances, the industry is being taxed not only on its profits but also on a portion of its capital which is represented by the difference in depreciation on the written-down value of the existing machinery and the cost of the new machinery which has to be installed at the present high price levels. This problem is getting more and more acute every year and I hope it will be examined by the Taxation Enquiry Committee during the course of its investigation. At least a sum of Rs. 230 crores will be required for expansion and starting of new industries. Where is this money to come from? Obviously in the present money market conditions, there is hardly any likelihood of substantial investments coming from the public. The industry will have to find this money from its own resources. This is possible, if most of the profits are ploughed back in the industry and the dividends are reduced as much as possible. In the new Finance Bill the Government has proposed an amendment so that companies investing their surplus funds in shares of companies floated after February, 1953, and engaged in the production of coal, iron, steel, motor and aviation fuel, heavy chemicals, heavy machinery, machinery and equipment for the generation, etc., of electric energy, non-ferrous metals, paper, internal combustion engines and power-driven pumps, shall not be liable to pay super-tax on the dividend income from such companies. This is a step in the right direction, but a new company formed for the above purposes is not likely to earn profits for distribution of dividends for several years and, consequently, this relief may not prove of much practical help. I think the situation demands that payment of double corporation tax should be altogether abolished on income from dividends paid by one company to another company. The income of a company from dividends should be altogether excluded from the total income for the levy of super-tax. Our present attempt should be to give every encouragement to the industry to let it plough back its profits in the expansion of the existing industries and starting of new ones. Consequently, anything which hampers the achievement of this objective should be removed. While a reasonable limit may be placed on the amount of dividend in the case of public companies, the provisions of section 23A of the Income-tax Act should be suspended at least for the period of the Plan and some time thereafter, so that the profits may be available for the expansion of the industry instead of being frittered away by compulsory distribution of dividends. Provisions of section 23A were suspended for two years during the war period, but the present emergency being one of greater consequence, there need be no hesitation in accepting the suggestion.

"Friends, we are passing through the period of planning. During this period, there must be maximum employment for our own countrymen. This would be possible, if we were to manufacture most of the equipment ourselves instead of looking to foreign countries for it. We should welcome the technical skill and the know-how, but we should, as far as possible, manufacture most of our requirements in this country, thus creating more work for our countrymen. This will incidentally solve, to some extent, the present problem of growing unemployment besides giving us experience in the manufacture of heavy machinery and capital goods. Our initial attempt may not be quite successful, but a beginning has to be made if we wish to achieve economic independence."

HASTY LABOUR LEGISLATION

NEED FOR CONSOLIDATION AND NOT EXPANSION

(By A Special Correspondent)

SINCE the coming of freedom to this country, there has been a phenomenal increase in the *tempo* of social legislation for the benefit of industrial labour. Far-reaching measures, such as health insurance and provident fund schemes, have already found their place on the Statute Book. Having accepted the principle of a Welfare State, it would, of course, be absurd to call in question measures designed to promote that end, but the point for consideration is whether, it would not be wise, in the present state of our industrial economy, to hasten slowly and to make a critical review of the laws that are already in force with a view to eliminating their defects.

This view is presented because Britain, which has provided inspiration for some of our major labour legislation, has itself not departed from the salutary doctrine of gradualness. It is, of course, true that social legislation in that country, particularly for the industrial community, is, to quote the Beveridge Report, "on a scale not surpassed and hardly rivalled in any other country of the world," but this commanding position in social progress was not achieved by it overnight. It is evident, from the history of the British labour laws, that the gains which they represent for the industrial worker came to him only after his country had achieved a great measure of industrial prosperity and not before. This is borne out by the fact that the scope of the Workmen's Compensation Act, the basis of all progressive labour legislation, was extended only as late as 1906. The point to be borne in mind is that in no country were far-reaching ameliorative measures for labour adopted in advance of their industrial prosperity and stability.

Employees' State Insurance Scheme

Viewed against this background, it is impossible to deny the fact that the Government of India has not been very circumspect in its desire to promote the well-being of industrial labour. Measures that call for a good deal of hard thinking have been rushed through and passed into law. A striking example of such hasty legislation is provided by the Employees' State Insurance Act. The scheme, envisaged under this Act, is certainly a splendid piece of social legislation which should go a long way towards eliminating some of the most serious disabilities of industrial workers. It provides for not only the health of the worker but also protection from hunger during the period of his enforced abstention from work owing to sickness. Even so, such a significant measure does not seem to have evoked the enthusiasm of its beneficiaries. The fact is that the scheme, as it has been conceived, is not on right lines since it ignores the serious shortage of medical facilities in the country.

For example, the Bhore Committee, whose Report was published in 1946, says: "Taking the population of British India as 300 millions, the proportion of doctors to population (considering graduates and licentiates together) is approximately 1 : 6,300. In England and the United States of America the corresponding proportions are 1 : 1,000 and 1 : 750 respectively." It is true, as Professor Adarkar pointedly says, that the scheme will only need some 2,000 to 3,000 whole-time medical men out of the total number of 42,000 medical practitioners in the country, but he does not seem to be on firm ground when he thinks that the withdrawal of some 3,000 doctors for the service of the industrial population alone will make no great difference to the medical needs of the community as a whole. Nor is there anything to support his view that the demand for more doctors will be automatically met once the health insurance scheme is set on its course. Experience of the "pilot project" at Delhi and Kanpur, inaugurated last year, does not seem to bear out this assumption.

More serious than the problem arising out of the shortage of doctors is that of the limited availability of hospital accommodation in the country. The Bhore Committee Report has drawn attention to this problem. It says that the number of beds available in British India, including those for the treatment of general and special diseases, is about 73,000, or about 1 bed to 4,000 of the population. The following figures compare British India with England and Wales and the United States of America in this respect:—

(Beds per 1,000 population)

U.S.A.	10.48
England and Wales	7.14
British India	0.24

The Committee estimates that on the basis of the existing morbidity and mortality rates, the number of beds required in this country should be over 40 times the present provision.

Medical Attention Inadequate

It will be conceded that the pivot of any health insurance scheme is the availability of a sufficient number of doctors and adequate hospital accommodation. Reports from both Delhi and Kanpur show that, apart from the fact that the insured workers at those centres are not receiving adequate and satisfactory medical attention, they are forced to put up with a great deal of inconvenience in obtaining their bottle of medicine. This situation did not exist in the dispensaries run by employers from whom they received medical service without paying for it. Their grievance seems to be all the more legitimate since they are under the statutory obligation to contribute to the scheme and are thus entitled to better medical facilities.

Here then is an excellent scheme whose value and usefulness are being whittled down solely because the practical difficulties in the way of its implementation were not sufficiently considered. This precisely is the reason why its extension to other industrial centres has been held in abeyance, in spite of the fact that January, 1953, was declared as the "deadline" for its inauguration in Bombay City. Indeed, the prospects of its introduction in Bombay City are dim and remote, unless, of course, the Government is prepared to modify the scheme so as to meet the actual situation obtaining in this most densely populated industrial centre. It is perhaps a measure of the ineptitude of the Corporation in charge of the scheme that it has been unable to resolve the deadlock over the remuneration of panel doctors. But even if this hurdle is overcome, it is inconceivable how the Corporation will arrange for hospital accommodation for the insured workers in the city. The number of beds available is extremely limited and insufficient for the growing population. If, in these circumstances, some of them are reserved for the workers, it will entail greater hardship to the general public who might well construe the scheme as being based on preferential treatment for the industrial worker.

Special Contribution

From the employers' point of view also, the scheme is not particularly attractive. The benefits that are available to an employee under it are sickness and maternity benefits and disablement and dependents' benefits. All these benefits, save that in regard to sickness, are already covered under the Workmen's Compensation Act and the Maternity Benefit Act. Despite this fact, factory employers outside Delhi and Kanpur, where the scheme is already in operation, are being compelled to contribute ¾ per cent. of the total wage bill towards a project that has still to be implemented. This means that, in addition to their statutory obligations, they have to bear financial liabilities without any *quid pro quo*. Industry is already burdened with heavy imposts in the shape of taxes and levies and this additional call upon its resources, amounting to some Rs. 67 lakhs in the case of the cotton mill industry alone, is calculated to undermine its competitive ability.

In this connection, it is pertinent to recall what a distinguished writer says on the subject of social services in Britain. In his booklet entitled *Social Security*, Sir Ronald Davidson writes: "It is, of course, through our modern services established since 1900, that we have done most to diminish poverty, disease, and ignorance, three of the giants in the path of social progress. *But we could not have achieved so much without the accompanying increase in the national income and in real wages during the years* 1900-39" (italics mine). Evidently, considerations like these have not weighed with the Indian authorities in formulating the social

service schemes for the benefit of the industrial worker.

An obvious remedy for this anomalous situation would, therefore, be either to withdraw the levy pending the introduction of the scheme at all the industrial centres outside Delhi and Kanpur or to inaugurate it at those centres without further delay. It is understood that the scheme was recently examined by a committee and that its recommendations are now with the Government. It is only fair that, where the medical facilities provided by employers are of a high standard, they should be taken over by the Corporation and financed by it. Alternatively, the employers might be allowed to continue these facilities, in which event the cost of maintaining them should be borne by the Corporation.

Provident Funds Scheme

One more glaring example of hasty legislation might be cited. It will be recalled that the Employees' Provident Funds Scheme was brought into operation last year by means of an Ordinance. It is not clear why this extra-constitutional method was considered necessary in formulating a measure, the basic principles of which had been accepted both by employers and workers. That apart, the scheme suffers from the grievous defect of over-centralisation. Neither the employer nor the worker has any effective say in administering the fund, although it is they who contribute to it. The system entails considerable hardship to the worker in the settlement of his claims and involves much avoidable delay in the day-to-day administration of the fund. Moreover, it fosters in the mind of the illiterate worker the feeling that the other quota of contribution to the fund is made by the Government and not the employer, and is calculated to rouse his resentment against the management for the delay and red-tapism in the disposal of his claims. Surely, the scheme, as it has been formulated, is not very helpful in promoting harmonious relations between employers and workers. Here again the Government seems to have recognised the weakness of the scheme and is, accordingly, persuading more and more employers to ask for exemptions. A more straightforward course would, however, be to amend the Act suitably so that the scheme might, as employers have all along suggested, be managed unit-wise.

Factories Act

A third instance of the Government's sentimental approach to labour problems is provided by its proposal to amend the Factories Act of 1948 with a view to reducing the days of workers' attendance to qualify themselves for leave with pay. Under the present legislation, a worker has to serve for 256 days in 308 working days in order to earn his leave with pay. The Government contemplates reducing this period to 200 days. Now, the object of holidays with pay is to enable the worker to have a period of rest during the year as well as to ensure his regular attendance. In the City of Bombay industrial labour is granted four paid holidays in addition to leave with wages. The paid festival holidays alone cost the textile industry in the City Rs. 32 lakhs every year. In these circumstances, if the period of attendance is further reduced, it will give a great impetus to absenteeism which is already rife in the Bombay cotton mill industry.

The wage system, as it exists to-day, puts a premium on inefficiency and irregularity in attendance. For example, the dearness allowance is linked, not to the worker's wages or his production, but to the cost of living—an arrangement that guarantees to him more than his basic wage even if he absents himself from work for a number of days in a month. At a time when the need is hard work and higher production, it is impossible to contemplate with equanimity any increase in the incidence of absenteeism.

Turning now to what has been described as the notorious section 33 of the Industrial Disputes Act, it is difficult even for a detached observer to discover any *raison d'etre* for this provision. According to this section, an employer is prohibited from taking any disciplinary action against his employees during the pendency of a dispute before a Conciliator or an Industrial Tribunal. Apart from the fact that this provision is calculated to encourage indiscipline and recalcitrance among the workers, it creates a kind of vested interest for them in litigation. The whole arrangement savours of what has been aptly described as "inverted slavery" inasmuch as the employer is placed at the mercy of his employees, whenever there is a dispute with them. This state of affairs is a clear negation of the "Giri approach," the essence of which is conciliation and collective bargaining.

Labour Welfare Fund

Lastly, the Bombay Government's scheme to create a centralised Labour Welfare Trust Fund is not in accord with the Union Labour Minister's policy of forging stronger bonds of goodwill and esteem between workers and employers. The scheme is likely to take away from employers all incentives to provide for the welfare of their employees. This will be a very great loss indeed to the latter, for the cotton mill industry in Bombay City alone spends more than Rs. 30 lakhs per annum on its workers' welfare. Most of the welfare measures undertaken by employers are the fruit of their own initiative and exemplify their solicitude for their men. The need for a centralised labour welfare trust fund has not been convincingly proved, especially when the Government of India, the originator of this idea, has abandoned it.

These are a few glaring examples of how the Government has allowed sentiment to outrun considerations of prudence and ignored the need for gradualness in legislating for the welfare of the industrial worker. A noteworthy feature of its policy in formulating this costly social legislation is to ignore completely the point of view of employers who, after all, are the persons that must bear the brunt of these measures. Apart from the great harm which this policy does to cordial industrial relations, it heavily mortgages the future of industry by imposing intolerable burdens on it, even before it has achieved a stable position, as its counterparts in countries like Britain, America and Japan have done. There is thus a clear need for calling a halt to new labour laws and for allowing a period of years to elapse for the consolidation of those already in force. This point of view is in full accord with the opinion of the Planning Commission.—*All Rights Reserved.*

NEW PUBLICATIONS

International Economic Co-operation. By V. S. Krishna. Published by the University of Madras. Price : Rs. 10.

IN this publication are reproduced six lectures on international economic co-operation, delivered by Prof. V. S. Krishna, Vice-Chancellor of the Andhra University, at the University of Madras early in 1951, under the Sir William Meyer Lectures. In the first lecture, Prof. Krishna studies the nineteenth century world economic order. He shows that, before the First World War, conditions for the continuance of the old economic order on the basis of private enterprise alone were not favourable, because private enterprise was not in a position to provide the necessary conditions for expansionary forces under which it could flourish. It is against this background that Prof. Krishna reviews, in a lucid and interesting manner, the inter-war development in the international economic field. The review is made under five heads—each forming the subject-matter of a chapter—namely, disintegration and beginning of mutual aid, extraordinary aids, chronic disequilibrium and world economic development, technical assistance and provision of long-term capital, and equitable exchange rates and non-discrimination. In these lectures, Prof. Krishna emphasises the need for providing an international forum for adjusting differences among the trading nations. Such a forum, Mr. Krishna remarks, would facilitate the transformation of the present chaotic world into a voluntary economic community, in which no country tries to grow rich at the expense of another and the prosperity of the whole becomes the concern of every member. It is, however, doubtful whether the significance of this conclusion will be appreciated by the leading countries of the world. But there is no gainsaying the fact that the emphasis on international economic co-operation deserves much wider support than it has obtained so far. This is not, of course, to decry the good work that is being done by some of the leading countries of the U.N.

WHAT DO WE MEAN BY 'PLANNED LUBRICATION'?
JUST THIS:
ANALYSIS of the lubrication requirements of your plant, engines and machines. RECOMMENDATIONS of proper lubricants together with specific instructions as to when and how they should be used. SCHEDULED CHECK-UPS for all critical and unusual machinery. THIS ADVICE is given without obligation on your part and we are pleased to give all the assistance we can on any lubrication problem you may be tackling.
SUGAR
Once upon a time some sugar-processers came to us with a tricky problem. They explained that during the processing season, machinery operates at very high speeds and a tremendous strain is placed on all the working parts. They asked us if we could devise a special lubricant to protect their machines.
So we sent some expert chaps with high foreheads to the factories to study the problem at first hand. They came back full of carbo-hydrates and ideas and got busy in their laboratories. After making many brews they finally produced a lubricant which dealt with the problem, and the sugar-processers have lived happily ever after. This true story is just one of the many chapters in Burmah Shell's history of 'planned lubrication'—the service which we bring to Indian industry.

INDUSTRIAL DEVELOPMENT IN BOMBAY STATE

LARGE SCOPE LEFT FOR PRIVATE SECTOR

IT is undoubtedly a matter for pride that Bombay State holds a leading position in the trade and industry of the Indian Union. It is also in the fitness of things that, out of the total expenditure of Rs. 829 crores to be incurred under the Five-year Plan by all the States of the country, as much as a sum of Rs. 146 crores has been allotted as the share of this State. According to the latest available statistics, a marked improvement was noted in the industrial production in 1951, when the index rose to 117.4 from 105.2 in 1950. The improvement was particularly noticed in industries such as cement, coal, sugar, steel, cotton textiles, engineering, heavy chemicals, rubber goods, etc. In that year, 7,632 factories were actually working in the State, as against 7,091 in 1950 and 6,835 in 1949. Although these figures make encouraging reading, the handicaps suffered by industries in the State are not a few in number. The progress of industries is checked by inadequate supply of power, lack of skilled labour, difficulty of securing raw materials in time on account of transport bottlenecks, and absence of timely financial assistance in an adequate measure for carrying on their normal operations. The State is also facing the problem of unemployment in common with other States in the country. Dwindling demand for some commodities and accumulation of stocks are reported in many industries.

The problems noted above call for energetic action on the part of the Government and the proceedings of the State Advisory Council of Industries, at its meeting held on two days last week, indicate that the Government is alive to the above developments in the industry. The Council, it may be noted, has a membership of 31 persons including the Ministers of Industries, Co-operation and Agriculture, key officials of several departments, industrialists and representatives of employers' associations, labour and cottage industries. Presiding over the meeting of the Council, Mr. Jivraj Mehta, Minister for Industries, stated that the responsibilities of the Council had increased correspondingly with the responsibilities of the State to implement the Five-year Plan. He referred to the handicap caused by the failure of monsoons and its effect on the supply of power and stated that when, after the completion of the various power projects, improved supply of power was available, a definite percentage should be allocated for small-scale industries and special types of industries not established hitherto in the State. He revealed that the Industrial Finance Corporation, with a capital of Rs. 2 crores, would soon come into existence. He sought the advice of the Council on the question whether any further relaxation was necessary in the provision which insisted that every new industry should provide accommodation for at least 60 per cent. of the labour employed by it. Assistance to be provided for small-scale industries was emphasised by him. He expressed satisfaction over the number of applications received by the Government for issue of licences for starting new factories under the Industries (Development and Regulation) Act.

The Council which then took up the various problems for consideration devoted considerable attention to the question of allocating the additional electric power which would be available when the present expansion schemes are implemented. The Government thermal plant at Chola, with its third boiler to be commissioned in 1954, would produce an additional quantity of 48 m.w. The Council felt that the additional power supply should be used for establishment of new, or expansion of existing, industries, as this would provide scope for employment of 50,000 additional workers, and not for removing staggering of holidays. In view of the opportunities that will be created by using the additional power for new expansion, the Council's decision should be accepted by the Government. The question of abolishing staggering should be taken up only when the power supply position exceeded the total requirements in the State.

But the Council's decision on housing for employees of new industrial establishments, although welcome, may not bring any improvement in the situation. As already stated, the Government has been insisting on all new industrial undertakings, which require licences, that it should make provision for housing 60 per cent. of the employees. In view of the hardship caused by this high percentage, the Council has done well in advising the Government to reduce the percentage to 40. Even this reduction will not be enough to stimulate the growth of new enterprises. For in view of the high cost of constructing houses, new undertakings find it hard to raise funds for investment on assets which bring in little or no return at a time when interest rates are high and the capital market is dry. The Government will do well to relax, for the time being, this provision by asking the undertakings to build a given number of houses every year during a specified period. Unless some such policy is followed, no tangible progress will be possible towards the establishment of new industries in the State.

About 40 applications for licences for starting new industries were received by Government, out of which only 27 were granted. The range of industries for which licences were granted included oil refineries, manufacture of power cables, electric equipment, motion picture equipment, internal combustion engines, thermos flasks, sewing machines, caustic soda and chlorine, paper and pulp, woollen textiles, etc. These industries, it is stated, will employ about 6,000 persons, whereas the Employment Exchanges in the Bombay region register, on an average, about 15,000 persons per month. This underlines how slow is the rate of industrialisation in the State, as compared with the need for employment. It is to be hoped that this point will be borne in mind by the Standing Committee appointed by the Council for examining the suggestions for industrial expansion and development referred to the Council by the Government.

The Council also noted the schemes of the Government for achieving the targets set under the Five-year Plan. The Government proposes to spend Rs. 103 lakhs for cottage industries, Rs. 100 lakhs for State Industrial Finance Corporation, Rs. 90 lakhs for trading estates, Rs. 11 lakhs for collecting census of manufacturing industries and industrial statistics and Rs. 9 lakhs for organisation of schemes. The only undertaking of the Government is the proposal to set up a D.D.T. plant at a cost of Rs. 40 lakhs. Thus the total expenditure of the State Government under the Five-year Plan would be of the order of Rs. 3.53 crores out of a total of Rs. 146 crores. The balance of Rs. 142.4 crores is to be spent by the private sector under the Plan. The scope left for private enterprise in the industrial field is very large indeed.

CONCESSION TO EXPORT INDUSTRIES

The Bill to amend the Indian Sea Customs Act, 1878, introduced in the House of the People on 14th April by the Minister for Finance is of much significance to industries, especially to those the manufactures of which are exported abroad. It proposes to allow concessions to industries in two respects. First, it makes provision for payment of drawback of import duty paid on the raw materials contained in the manufactured goods exported abroad. With a view to giving effect to this proposal, power is sought to be vested in the Government to frame rules for specifying the class of manufactured goods, the description of raw material used, the quantity of such raw material contained in the goods to be exported, the rate of drawback payable with reference to weight, quantity, the period of admissibility of drawback and other relevant provisions incidental to the payment of such drawback.

The second provision in the Bill seeks to allow "manufacture of goods in bond in order to facilitate industrial enterprise." The relevant provisions under this item propose to empower the Collector of Customs to permit any owner of goods, after warehousing the same, to carry on any manufacturing process, or blend the goods, or make any other alteration in bonded warehouses. The Central Government is empowered also to exempt any such goods when cleared for home consumption from the whole or any part of the duties leviable thereon.

The move to help export industries in India will be welcomed by business men in the country, inasmuch as it increases the scope for earning foreign exchange. It is, however, needless to add here that the object will be defeated if the customs authorities exercise the powers vested in them very rigorously and cause harassment to the parties concerned. This warning is considered necessary because past experience offers sufficient evidence of the unhelpful attitude of customs officials towards trade and industry in India.

PHOSPHATE FERTILISERS

Suitable conditions for the preparation of phosphate fertiliser (dicalcium phosphate) by the action of hydrochloric acid on phosphate rock from Egypt and phosphatic nodules from Trichinopoly have been worked out in the National Chemical Laboratory, Poona. A continuous pilot-plant process is being evolved in the laboratory for the production of dicalcium phosphate from Egyptian phosphate rock. The present shortage of sulphur has led to increased efforts at replacing sulphuric acid wherever possible. Nearly six million tons of 70 per cent. sulphuric acid are consumed by the fertiliser industry all over the world for the manufacture of single superphosphate. India's present production of about 60,000 tons of single superphosphate consumes about 8,000 tons of sulphur, all of which is imported. India's caustic chlorine electrolytic plants, producing less than a quarter of the country's present requirements of alkali, simultaneously generate large amounts of chlorine, of which about 9,000 tons would be available for the manufacture of hydrochloric acid. Many caustic chlorine plants in the country are not working to full capacity to-day because of the difficulty in the disposal of chlorine.

In this context, the National Planning Commission envisaged the stepping up of phosphate fertiliser production without additional consumption of sulphuric acid and suggested that the work of making dicalcium phosphate from phosphate rock and hydrochloric acid might be taken up in the National Chemical Laboratory. The use of this fertiliser is of particular value to a vast country like India, because it is a concentrated phosphatic fertiliser, and considerable economy can be effected in transport. It is neutral and remains a free-flowing powder for a long time, and this renders its packing, handling and transport easy. In another series of experiments at the National Chemical Laboratory, semi-acidulated phosphates have been prepared by using between one-half to three-fourths of the acid required for superphosphate manufacture. The product obtained is highly effective as a phosphatic fertiliser, thus showing the possibility of reducing the acid consumption in the manufacture of phosphatic fertilisers from rock phosphate.

WORLD TRADE FAIR AT SAN FRANCISCO

The Sixth Annual World Trade Fair will be held from 24th to 28th June, 1953, at San Francisco. It is sponsored by the San Francisco Chamber of Commerce and the World Trade Association of San Francisco in conjunction with the authorities of the city and county. All nations in the free world are invited to participate in the Fair. In the past years, 12 to 16 foreign Governments have officially participated in the Fair, which in 1952 displayed products and services of more than 200 exhibitors from 20 countries. The attendance at the Fair in 1952 was approximately 50,000 and during this year it is expected to be more. The Fair authorities are emphasising consumer goods exhibits during this year. One of the larger exhibition halls, having about 5,000 square feet of space, which is about one-third of the total exhibit space, has been set up at the Fair as a temporary sub-zone of the San Francisco Foreign Trade Zone No. 3 for the special purpose of exhibiting foreign merchandise.

SWEDISH-SOVIET TRADE AGREEMENT

A trade agreement concluded between Sweden and the Soviet Union recently in Moscow, foreshadows an exchange of goods to a value of approximately Kr. 75,000,000 (£5,172,000) for the current year. Imports to Sweden will comprise, among other things, asbestos, apatite, chromium, manganese ore, diesel oil, paraffin and paraffin oil, maize and oilcakes. Swedish exports to the Soviet Union are to include traditional products such as butter, rayon wool, certain kinds of iron and steel, accumulators, welding electrodes, razor blades, electric bulb filament, machines, etc.

SHELLAC TRADING

The Government is considering the question of bringing forward trading in shellac and seedlac within the purview of the Forward Contracts (Regulation) Act of 1952. The banning of the export of sticklac is also under consideration. The Bihar Government has drawn the Central Government's attention to the crisis in the lac industry. The recession in the demand for shellac and the general fall in prices, as a result of the armistice after the Korean war, speculation in the commodity, increasing exports of seed lac and sticklac and increasing competition from synthetics are some of the reasons for the crisis in the industry. It is "partially true" to say that the lac export trade is in the hands of foreigners. Inquiries made in 1950 showed that in order to bring prices down, exporters were not exporting the commodity or buying it.

GOVERNMENT'S COMMERCIAL POLICY

A clarification of some of the issues pertaining to the Government of India's export-import policy was made by Mr. K. B. Lall, Chief Controller of Imports and Exports, in the course of his reply to the memorandum submitted by the Madura-Ramnad Chamber of Commerce during his visit to Madurai recently. Mr. Lall referred to four important points raised in the memorandum, namely, (1) consultation of commercial bodies representing sectional interests prior to the framing of the export and import policy, (2) decentralisation of authority for purposes of granting licences, (3) extension of the validity of licences from six months to one year, and (4) liberal issue of import licences for articles which are produced in India.

Referring to the first point above, Mr. Lall maintained that the present arrangement for consultation had been found adequate in practice. As there were frequent consultations with trade associations by means of representations and interviews, he considered that anything more specific and formal than this was unnecessary. He even warned that such might lead to difficulties.

While on the plea for empowering the Deputy Chief Controller of Imports and Exports (Madras and Cochin) to grant licences for all items so far as South India was concerned, Mr. Lall said that such was not possible in many cases. In support of this contention, he cited the instance of textiles. According to him, there are a number of textile items for which licences are being issued on an *ad hoc* basis in consultation with the Textile Commissioner. If such items are decentralised, it will mean a lot of delay. Similarly, the items which call for policy decisions and special attention cannot be transferred. With regard to items for which import licences are being issued from Calcutta, however, the Government would consider as to how many items can be transferred to Madras.

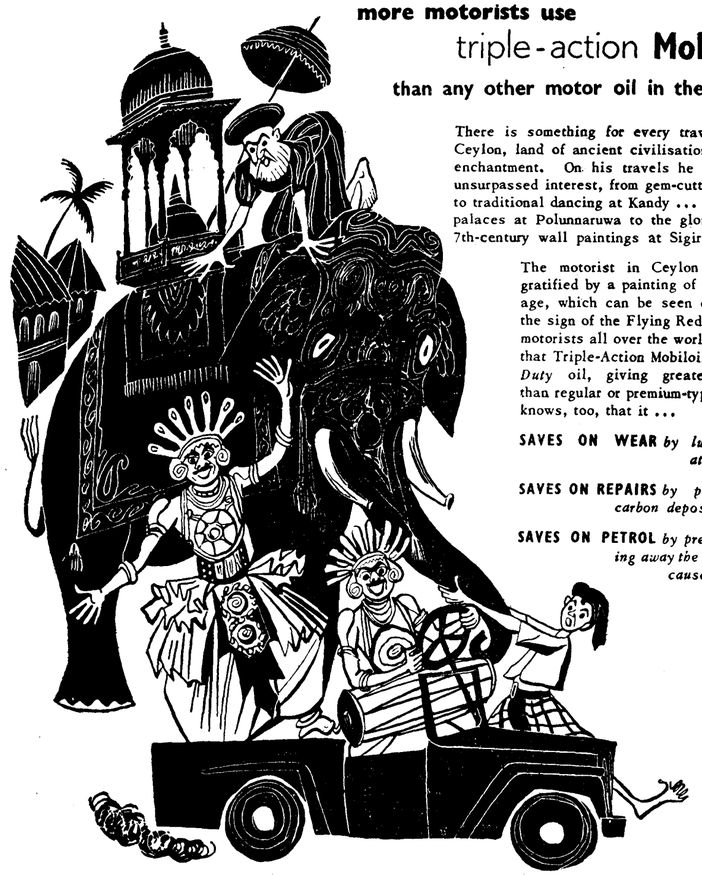
Mr. Lall alluded next to the extension of the validity of import and export licences. In his opinion, it is always difficult to foresee the position as a whole for a year in advance, especially when the exchange position fluctuates. The items which are not in ample production at the time of issue of licences and which will increase in production in about six months' time cannot be given licences for the 12-month period. But now that the foreign exchange position seems better and more stable, the Government is considering, we are told, a proposal to expand the number of items for which the period of validity of licences can be 12 months.

Finally, Mr. Lall clarified the position regarding the issue of import licences for articles produced in the country. Said he, "it is always the Government's policy to grant licences for import to the extent of the total demand minus the amount of production. In 95 per cent. of the cases, they are able to estimate correctly the demand. The import and export organisation has acquired sufficient experience during the last 10 years and has considerable data before it."

NEW PHOTOGRAPHIC FILM BASE FACTORY

Ilford Ltd., in conjunction with B.X. Plastics, Ltd., has constructed a new factory in the United Kingdom that manufactures photographic film base. The new £1.25 million project is already in full production. The additional production capacity will save almost $2 million annually in imports from the United States, the previous source of most of the film base used in the United Kingdom. Expansion of the United Kingdom's production of X-ray film is also expected, the demand for which has increased considerably since the extension of the British National Health Service.

in Ceylon... they know that
more motorists use
triple-action Mobiloil
than any other motor oil in the world !



There is something for every traveller in beautiful Ceylon, land of ancient civilisations and timeless enchantment. On his travels he sees things of unsurpassed interest, from gem-cutting at Ratnapura to traditional dancing at Kandy ... from the ruined palaces at Polunnaruwa to the glorious 7th-century wall paintings at Sigiriya.

The motorist in Ceylon is equally gratified by a painting of a more modern age, which can be seen everywhere – the sign of the Flying Red Horse. Like motorists all over the world, he knows that Triple-Action Mobiloil is a *Heavy-Duty* oil, giving greater protection than regular or premium-type oils. He knows, too, that it ...

SAVES ON WEAR *by lubricating properly at all temperatures;*

SAVES ON REPAIRS *by preventing harmful carbon deposits in the engine;*

SAVES ON PETROL *by preventing acids eating away the metal parts, which causes loss of power.*

Stop at the sign of the Flying Red Horse

The Flying Red Horse is the sign of helpful service for your car. Go there for regular Mobilubrication – the *complete* motor service – and for Standard-Vacuum products backed by 87 years of leadership in the oil industry.

WORKING CONDITIONS IN BOMBAY FACTORIES

REPORT OF INDUSTRIAL ENQUIRY COMMITTEE

THE Final Report of the Bombay Industrial Conditions Enquiry Committee which discusses the problems of industrial conditions in the cotton textile mills of Ahmedabad and other industrial centres in the State throws much light on labour conditions in these areas. But it must be remembered that the Committee which was appointed in November, 1946, and subsequently reconstituted in November, 1947, with Mr. Purushottam Kanji, as Chairman, submitted its Report in October, 1950, though it is made available to the public only now. Since the Committee commenced its enquiry, several changes have taken place in industrial conditions which might conceivably impair the Committee's observations and conclusions. Again, the members of the Committee appear to have been swayed by welfare conditions such as those which obtain in foreign countries rather than by the capacity of the industries in India to provide similar amenities.

The Report suffers from a too theoretical approach towards the problem of working conditions of labour. Further, it appears to have magnified isolated instances of remissness on the part of managements in a few industrial undertakings and generalised them for the industries, as a whole, in the State of Bombay. These explain their remark that the working conditions in the industries in general present a "drab and dreary picture of man's inhumanity to man." The Report alleges that the outlook and imagination of employers in general with regard to the provision of better working conditions have been clouded. Few employers, it says, seem to have been able to realise the long-term effect and value of the provision of better working conditions and that they, as a class, are concerned with immediate profits. Then, a number of employers, according to it, adopt methods to nullify the social objectives of legislation intended to help workers. In the first instance, the Report observes, efforts are often made towards studying statutory provisions and the lowest minimum requirements. This is followed by efforts to keep as far below the minimum standards, as is legally feasible. Seldom has any representative of management been able to point out instances where extra measures to supplement statutory provisions have been taken, it adds.

It is true that there are in the State a few employers who are diehards and treat labour with scant regard for their human rights. But it would be absurd to assert that the whole class of employers in the State belongs to this category. To give an impression that the working conditions in the State present a "drab and dreary picture of man's inhumanity to man" is neither fair nor just to the employers. Indeed, several instances could be quoted to show how employers in the State are far ahead of the employers in other States, in the matter of providing amenities for labour. Instances can also be quoted to show that the employers have voluntarily provided amenities above the standard expected of them by law. It is true that ideal conditions such as those which exist in the industrial West, do not obtain in this State. But this is due to the fact that not all industries in the country are so prosperous as in the West. It is grossly unfair to expect in these adolescent units working conditions which cannot be sustained by them.

All this is not to suggest that we are against the prescription of minimum standards of hygiene and sanitation, the provision of medical facilities to workers and recreational facilities. But the problem facing the country to-day is the improvement of the conditions of employment, wherever possible, without prescribing standards which industrial profits will not be able to support. Certainly, the absence of canteen facilities in several factories, as pointed out by the Committee, is a serious omission, though some factories might plead the excuse of want of adequate space for housing canteen management. But to expect these canteens to introduce menus on the basis of Dr. Aykroyad's nutritional standards is somewhat over-ambitious. Apart from the consideration that not all industrial establishments can maintain costly equipment in canteens, the fact remains that canteens become unpopular once they begin distributing what does not appeal to the workers' tastes, however nutritious the menu might be, or when they charge a little more than the normal rates for the menu they serve. However, the Committee's proposals with regard to the adoption of modern methods of humidification and ventilation inside the factories in which they do not exist in order to safeguard the health of the workers and to improve productive efficiency, the provision of cold drinking water during the hot weather and better sanitary arrangements are neither unreasonable nor extravagant.

The Committee has made a number of other recommendations which deserve urgent consideration. The most important of them is the constitution of a labour code for Bombay State. Among others, it has urged complete reorganisation of the Factory Inspectorate and Welfare Department, a unified Government organisation under the Chief Inspector of Factories to deal with various issues, and encouragement to all factories with 50 or more workers to develop health, hygiene and safety committees. It has finally urged the leading industrialists in the State "whose humanity and regard for the welfare of workers are exemplary" to help in the setting up of non-official organisations, such as institutes of industrial welfare. We would invite the attention of employers to this recommendation particularly, for, if they should avoid public criticism and irksome legislative enactments which such criticism would lead to, they should, in good time, start studying the problem of labour welfare and adopt measures which would ensure satisfactory conditions for the workers.

A notable feature of the Report is the pleasant surprise of the Committee at the high standards of welfare facilities and provision of amenities by the managements in certain establishments such as the Century and Zenith Mills, the India United Mills No. 1, the Britannia Biscuit Factory, the Finlay Mills, General Motors Factory, the Lakshmi, Vishnu, Calico and Silver Jubilee Mills, H.V.M. and the Firestone Factory.

RESULTS OF MACNEILL AND BARRY JUTE GROUP DISAPPOINTING

DIVIDENDS PASSED OVER

THE Chairman of the three jute companies under the management of Messrs. Macneill and Barry Ltd., Calcutta, namely, the Ganges Manufacturing Co., Ltd., the Gourepore Co., Ltd., and the Nuddea Mills Co., Ltd., has chosen to adopt the unusual practice (unusual only in this country, though it is a common practice in the U.K.) of circulating to the shareholders copies of his speech, to be delivered at the companies' forthcoming annual general meetings, along with their accounts for the half-year ended 30th September, 1952. This step has been taken because he felt that there are "certain matters" which the shareholders should be informed. His observations refer not only to the results of the Companies during the half-year under review but also to certain general conditions in the jute industry. The results of the Companies' working during the half-year under review have proved to be rather disappointing, as the comparative table appended below would show.

It will be noted from the table that all the three companies have suffered losses, during the half-year under review, whereas in the corresponding half-year of 1951 all of them had shown profits. The "Ganges," which had shown the largest profit among the three, has now recorded the heaviest loss. In the half-year ended 31st March, 1952, however, one of them, namely, "Nuddea," was able to show a small profit. Of the other two, "Gourepore's" loss was the heavier. Thus, as compared with the performance during the previous half-year, the loss of the "Ganges" has widened rather by a sizable extent—the increase in loss being of the order of 178 per cent. "Gourepore's" loss has shrunk by 25.3 per cent, and the small profit of Nuddea has been converted into a moderate loss.

Commenting on the loss suffered by the Companies, their Chairman, Mr. A. W. Taylor, observes, in his speech referred to above, thus:

"Two factors were primarily responsible, (a) our high labour costs, and (b) depressed market conditions. Our retrenchment programme had only started in the course of the half-year and, in consequence, costs benefited only for part of the six months by the savings effected in wages. Since the close of the half-year retrenchment has continued and the position now is that your Company's labour costs are on a par with the average of the industry. So far as market conditions are concerned, the half-year opened with the Company holding large stocks of hessian and sacking goods for which reasonable offers could not be obtained. At that time overseas buyers were holding back in anticipation of a further reduction in export duties, and although, when the reductions were announced on 6th May business was done at slightly enhanced rates, prices were not maintained and rates for both hessian and heavy goods gradually receded over the remainder of the half-year. Although prices of raw jute declined too, these reductions always followed the decline in manufactured goods prices. As a result, the Company was compelled to sell the accumulated production on a falling market at a very substantial loss, particularly in the case of heavy goods."

Referring to the working of the Gourepore Co., Ltd., in particular, the Directors add in their report to the shareholders: "The poorer quality of Indian jute was more difficult to spin with the same efficiency, and markets for special hessians could not be maintained when the raw material was both scarce and expensive, so that the Company's business, much of which has been built up on special fabrics, was particularly adversely affected."

As a result of the adverse results, all the three Companies have been obliged to draw from the reserves to cover up their losses, but in the case of the "Ganges," a deficit of Rs. 12.30 lakhs is left uncovered as there are not enough reserves to draw from. All of them have had to pass over the dividends. "Ganges" and "Gourepore" have had to hold over even the dividends on their preference shares. This is the second half-year in succession that "Ganges" skips over the ordinary dividend, while "Gourepore" which had slashed the dividend on ordinary shares in the previous half-year from 20 per cent. per annum to 2½ per cent., has not been able to distribute even this token dividend.

One of the important matters to which Mr. Taylor draws the attention of the shareholders, in his speech referred to above, relates to the *phatka* market transactions which were held in November last, but which were subsequently closed. These transactions are stated to have received a certain amount of publicity and have given rise to "ill-informed" comments. Mr. Taylor has, therefore, sought to remove the misconceptions arising out of these. Thus, he observes:

"Another matter on which I would wish to comment, although it does not actually fall within the period to which the accompanying accounts refer, is a transaction in P.D.Os. which took place at the end of November last. These transactions have received a certain amount of publicity and much of the comment is ill-informed. At the end of November, in an attempt to take advantage of the premium, then being paid for ready delivery, the delivery of certain goods was brought forward and sales were made of goods which were rebought for delivery within a few days. As the Company, after granting an inspection order, did not produce the full quantity of the goods covered by the P.D.Os. the buyer who held the P.D.Os. claimed compensation. The Managing Agents have settled the claim for compensation and this Company has not sustained any loss in connection with the transaction."

The Chairman has also made a reference in his speech to the Central Government's repudiation of a contract for B twills. In spite of the support extended to the Companies by the Bengal Chamber of Commerce and the I.J.M.A., the Companies' claims are stated to have not been settled and they have, therefore, instituted suits against the Government. It may be pointed out here that the Companies have taken credit for the amounts of claim in their respective accounts, as the table below would show.

The Managing Agents of the three Companies have been assisting the Companies "very materially" for some years past by waiving a portion of the commission due to them under the managing agency agreement. This commission is based on sales. This is now sought to be changed to one on profits, which is in line with the recommendations of the Company Law Reforms Committee. The Directors have applied for permission of the Central Government to amend the terms of remuneration.

The following synopsis of the Companies' balance-sheets as on 30th September, 1952, give an idea of their financial position:

LIABILITIES	Ganges Rs.	Gourepore Rs.	Nuddea Rs.
Capital	90,32,100	50,50,000	66,79,500
Reserves and surplus	5,72,023*	35,33,478	37,24,556
Liabilities	92,44,305	146,02,402	47,32,117
ASSETS			
Gross block	2,10,12,266	2,18,72,970	2,10,50,572
Less—Depreciation	1,34,77,245	1,60,21,337	1,35,98,606
Net block	75,35,021	58,51,653	74,51,966
Stocks	45,06,973	55,09,824	33,25,775
Stores	16,39,319	18,68,108	15,42,168
Debts, deposits and advances	34,08,515	54,42,468	23,97,487
Investments	4,83,215	42,44,348	3,08,362
Cash	43,712	2,09,509	1,10,415
Profit and loss account	12,29,673	..	..
	Rs. 1,88,48,428	2,31,85,910	1,51,36,178

* Represents only provision for possible loss on forward contracts and provision for doubtful debts. There are no other reserves, as the entire amount of Rs. 5.50 lakhs, which was standing to the credit of contingency and replacement of machinery reserves at the end of the previous half-year, has been utilised to write down the loss for the half-year under review.

PROGRESS OF CAREW & CO. SATISFACTORY

Satisfactory progress is disclosed by the results of working of Messrs. Carew and Co., Ltd. (Managing Agents: Messrs. Gladstone Lyall & Co., Ltd., Calcutta) during the year ended 30th June, 1952. The Company incurred a net loss of Rs. 7.28 lakhs in the year 1949-50 and could not pay even the dividend on its preference shares for that year. In the following year, it was able to earn a small net profit of Rs. 1.64 lakhs which was adequate only to reduce the previous year's deficit brought in from Rs. 6.80 lakhs to Rs. 5.16 lakhs. Consequently, the Company had to fail in arrears of the preference dividend for the second year in succession. The working of the Company during the year under review has been more encouraging, in that it has earned a net profit of Rs. 4.15 lakhs. But even this sum has not been sufficient to wipe off the deficit of Rs. 5.16 lakhs brought in from the previous year. However, a sum of Rs. 2.95 lakhs, representing the net E.P.T. post-war refund, received during the year, has come in handy not only to wipe off the said deficit but also to make a provision of Rs. 1 lakh for bad debts and pay the preference dividend for the year ended 30th June, 1950. The balance left after these appropriations is a tiny sum of Rs. 41,747.

The following comparative table shows the Company's progress since the year 1948-49:

(In lakhs of rupees)

	For the year ended 30th June			
	1951-52	1950-51	1949-50	1948-49
Sale proceeds	149.14	145.10	181.34	186.99
Other income	10.20	10.70	8.84	12.70

To reserves	1.00	..	..	0.50
Dividend—				..
Preference 6½%	0.52	..	..	0.52
Ordinary	..	..	..	1.60 (5%)
Carry forward	0.42	—5.16	—6.80	0.48

All the three distilleries of the Company worked at a profit during the year under review. The profit was, however, slightly lower than in the previous year owing to shortage of molasses for Asansol and shortage of wagons to move spirits. The sale of the Company's pharmaceutical products at Darsana is reported to have made very rapid progress. Though the working of the pharmaceutical works resulted in a small loss, which is only to be expected in the early stages of production, the Directors are hopeful of building up a lucrative source of revenue from this section in future. The working of the Company's sugar factory at Darsana shows a satisfactory progress, the quantity of cane crushed, as well as recovery of sugar, disclosing an appreciable improvement over the previous year. Thus, the quantity of cane crushed was 24.30 lakh maunds with a recovery of 9.24 per cent., as against 8.65 lakh maunds with a recovery of 9.17 per cent. in the previous year. The factory at Rosa had a greatly increased crush of over 23 lakh maunds of cane, as compared with 14.45 lakh maunds, but recovery of sugar declined owing to the poor quality of the cane crushed by the factory. This, combined with the fall in price of free market sugar, resulted in a heavy loss at this factory.

The Company's reserves and surplus amount to Rs. 23.60 lakhs, as against a paid-up capital of Rs. 40 lakhs. There is a debenture liability amounting to Rs. 24.33 lakhs. The other current liabilities, including provision for taxation, aggregate Rs. 161.47 lakhs, including loans from bank secured by hypothecation of stocks and book debts amounting to Rs. 85.62 lakhs. The gross block of the value of Rs. 129.42 lakhs has been written down to a book value of Rs. 47.74 lakhs. The current assets aggregating Rs. 201.66 lakhs (made up of, in the main, stocks and stores Rs. 153.88 lakhs, book debts Rs. 16.08 lakhs, advances and deposits Rs. 28.33 lakhs, and cash balances Rs. 2.10 lakhs) cover the current liabilities by a wide margin of Rs. 40.19 lakhs.

The Company's prospects for the current year appear to be better, as will be noted from the following extracts from the Directors' report:

"Owing to the very helpful attitude of the Government of West Bengal, prospects for the current year (regarding the distilleries) are better and we may hope shortly to recapture a good portion of the Calcutta industrial spirit market. Since our last report, we have opened up an export market to Burma for denatured spirit, which promises well. . . . We are glad to report, however, that the current season (at Rosa) should show better results as a result of improvements made to the factory and of good quality cane, which have resulted in Rosa attaining a higher recovery figure than for very many years. . . . The current season's returns at Darsana also show considerable promise and the crush will be in the vicinity of 28 lakh maunds, but the recovery will be slightly less than that obtained last year, due to the fact that, towards the end of the season, we took over certain areas which had been previously zoned to other factories. Since these additional zones will be allocated to Darsana permanently, future crushes will be higher than have been obtained in past years and this, in turn, should enable Darsana to show even better results than have hitherto been possible."

† Provision for sales tax in dispute.

Points From The Chair

Scheduled Banks and Rural Savings

"THE Central Government has introduced certain measures of tapping the savings of the urban people by introducing several schemes of attracting money on more remunerative terms, but the question of mopping up the savings of the rural population is still a problem. The Rural Banking Enquiry Committee recommended that the Imperial Bank of India, acting as the agents of the Reserve Bank of India, should open branches in the country-side for receiving deposits from the rural population. But no tangible results have been achieved so far, although the problem is pressing, specially during the period of planning. My suggestion is that an opportunity should be given to the Scheduled banks of the country and the initial losses which may be incurred by them during the operations may be met by Government. Encouragement can be given to them by lightening labour legislation as applicable to rural branches and also permitting the local authorities and *panchayats* to make deposits of their surplus funds in these banks."

PADAMPAT SINGHANIA,
Hindustan Commercial Bank, Ltd.

Outlook for Indian Economy

"Now that the budgets of the Central and several State Governments have been out, it appears that the various Governments have decided, as a matter of policy, not to levy any fresh taxation as far as possible. It is a matter of some satisfaction that the Governments have realised that taxation limits have been reached and any further taxation may show diminishing returns. The Central Government has also appointed a Taxation Enquiry Commission and it is to be hoped that, as a result of their labours, our taxation system will be rationalised, and taxes will be so levied as not to hamper initiative, but to encourage larger production and increase of trade. The recent improvement in our internal economy has enabled the public to view the future with some measure of confidence, and we look forward to a period of stabilised prices with increased production and fuller employment."

TULSIDAS KILACHAND,
Bank of Baroda Ltd.

Premium Income of Insurance Companies

"Owing to the world-wide distribution of our business, we are usually able to balance disaster in one area with good fortune in another, but we must always be prepared to deal with a major catastrophe which might be beyond the capacity of our normal spread to even out. In its financial aspect this means that our fire and accident income of £45½ million must be regarded not as new funds for investment, but as money constantly and necessarily on the move within the organisation. The premiums flow in according to the pattern of the risks underwritten and flow out in volume and direction according to the liabilities arising, leaving, in a favourable year, a balance of profit with the Company. Behind this, and to meet a major calamity, are our reserves, which must be readily available to support any unusual demand beyond the normal. The essential requisite of all our insurance contracts is that, in the event, payment is prompt and certain, and it is upon this basic fact that all our policyholders do business with us."

LT.-COL. JOHN LESLIE,
Commercial Union Assurance Co., Ltd.

Prospects for a Middleman-Industry

"On the last two occasions, I have not found it difficult to give a fairly accurate line on the forward prospects, but this time comment on our 1952-53 year is more hazardous. After a poor start, our merchanting business tended to improve, although not to the extent we should have liked. In volume, we may reach a turnover of £40 million but, while conditions have certainly become more stable, competition everywhere has become intense and the margins obtainable are small. Despite the fall in freight rates and in the price of sisal, both the Maritime and Ralli Estates should show satisfactory results, but not, of course, comparable with last year's record. Berg should do better and Dehns (Africa) Ltd. have found more demand from East Africa for their Kangas. While I, therefore, anticipate a reduction, perhaps appreciable, in the consolidated trading profit, provisions for taxation and doubtful outstandings which, for several reasons, were exceptionally onerous last year, should on present indication, call for a considerably smaller proportion of the profit."

JACK VLASTO,
Ralli Brothers Ltd.

Outlook for Shipping

"In the North Atlantic, prospects for passenger traffic during the coming Coronation season are good. World and trading conditions affect the cargo business of the group's services in varying ways. In the North Atlantic, outward cargoes are presently good, but there is a shortage homeward. The same conditions apply in the India, Pakistan and Ceylon trades, but in the Australian and New Zealand trades the reverse is the case. With such varying conditions in the different trades it is difficult to forecast results. However, experience has taught that fluctuations in commerce can be sudden, and growing crops and increased production could improve cargo conditions generally. We are an island people. It is, therefore, natural that we should look ever seaward and beyond for our living and trade. Without British merchant shipping we would continue to look in vain."

F. A. BATES,
General Steamship Company Ltd.

Notices

THE PULLANGODE RUBBER AND PRODUCE COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT THE Tenth Annual General Meeting of the Shareholders will be held at the Registered Office of the Company at 11 a.m. on Tuesday the 26th May, 1953, for the following purposes:

(1) To receive and consider the Report of the Directors, Accounts and Balance Sheet for the year ended 31st March, 1953.
(2) To declare a Dividend.
(3) To elect a Director.
(4) To appoint Auditors.
(5) To transact any other competent business which may be brought before the meeting.

The transfer books of the Company will be closed from the 16th May, 1953, to the 28th May, 1953, both days inclusive.

(The Board will recommend to the meeting that a first and final dividend of 20 per cent. be declared for immediate payment, on the ordinary share capital.)

By Order of the Board,
ASPINWALL & CO., LTD.,
Managing Agents.

FORT COCHIN, *2nd May*, 1953.

NEW SHORROCK MILL MAINTAINS DIVIDEND LEVEL

REWA COALFIELDS REPORT HIGHER PROFIT

New Shorrock Spg. and Mfg. Co., Ltd.

THE directors of the above Company (Managing Agents: Messrs. Mafatlal Chandulal & Co., Ltd., Bombay) submitted the audited accounts of the Company for the year ended 31st December, 1952.

The profits for the year amounted to Rs. 15,84,089 (Rs. 30,64,208). From this was deducted the amount carried to depreciation account of Rs. 9,75,000 (Rs. 9,00,000), thus leaving a balance of Rs. 6,09,089 (Rs. 21,64,208). To this sum was added the amount brought forward from previous year's account of Rs. 19,706 (Rs. 22,498), making a total of Rs. 6,28,795 (Rs. 21,86,706). To this balance was added the amounts brought from dividend equilisation fund Rs. 1,50,000 (*nil*) and reserve fund Rs. 3,15,000 (*nil*) leaving an available balance of Rs. 10,93,795 (Rs. 21,86,706). The directors made payment of dividend for the year ended 31st December, 1952 on 31,200 ordinary shares at Rs. 35 (Rs. 35) per share, free of income-tax Rs. 10,92,000 (Rs. 10,92,000) and carried forward to next year's account Rs. 1,795 (Rs. 19,706).

There was an under provision for bonus for the years 1950 and 1951 of Rs. 1,81,803. After adjusting the same against the over provision for bonus for 1949 of Rs. 12,376 the balance of Rs. 1,69,427 was made good by the transfer of a like amount from the reserve fund.

Part E.P.T. refund for the years 1941 to 1945 amounting to Rs. 5,78,589. after payment of income-tax for the respective years, has been received during the year and the same has been credited to the machinery renewal fund.

The Mills worked day and night shifts during the year. The Mills have 47,952 spindles and 864 looms.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	39,00,000	Block ...	96,79,263
Reserves ...	1,31,07,324	Stocks ...	30,49,273
Provision for taxation ...	9,22,214	Stores and spare parts	8,38,619
Liabilities ...	26,73,984	Debts, deposits and advances ...	40,22,833
Profit and loss account ...	16,03,795	Investments	35,63,616
		Cash ...	10,53,713
Rs.	2,22,07,317	Rs.	2,22,07,317

Shorrock Spg. and Mfg. Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Mafatlal Chandulal & Co. (Ahmedabad) Ltd., Bombay) submitted the audited accounts of the Company for the year ended 31st December, 1952.

The profits for the year amounted to Rs. 12,91,043 (Rs. 23,01,157). From this was deducted the amount carried to depreciation account of Rs. 6,05,000 (Rs. 4,50,000), leaving a balance of Rs. 6,86,043 (Rs. 18,51,157). After adding the amount brought forward from the previous year's account of Rs. 12,027 (Rs. 870), there remained a total of Rs. 6,98,070 (Rs. 18,52,027). After deduction of Rs. 3,00,000 (Rs. 9,50,000) for provision for taxation there remained an available sum of Rs. 3,98,070 (Rs. 9,02,027). The directors made payment of dividend for the year ended 31st December, 1952 on 19,500 ordinary shares at Rs. 20 (Rs. 20) per share, free of income-tax, absorbing Rs. 3,90,000 (Rs. 3,90,000) and carried forward the balance of Rs. 8,070 (Rs. 12,027).

Part E.P.T. refund for the years 1941 to 1945 amounting to Rs. 3,84,666, after payment of income-tax for the respective years, had been received and the same had been credited to the machinery renewal fund.

The Mills worked day and night shifts during the year. The Mills have 36,624 spindles and 720 looms.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	19,52,500	Block ...	61,33,831
Reserves ...	94,78,968	Stocks ...	23,52,733
Provision for taxation ...	2,77,866	Stores and spare parts	6,27,769
Liabilities ...	18,36,482	Debts, deposits and advances ...	16,28,097
Profit and loss account ...	13,03,070	Investments	1,75,000
		Cash ...	39,31,456
Rs.	1,48,48,886	Rs.	1,48,48,886

New China Mills, Ltd.

The directors of the above Company (Managing Director: Navinchandra Mafatlal, Esq., Bombay) submitted the audited accounts of the Company for the year ended 31st December, 1952.

The Company made a profit of Rs. 15,26,018 (Rs. 31,28,214) (after deducting Rs. 24,000 (Rs. 24,000) as managing director's remuneration). Adding the balance brought from the previous year of Rs. 3,254 (Rs. 3,040), there remained a total sum of Rs. 15,29,272 (Rs. 31,31,254). Out of this amount the directors made the following appropriations:—

To depreciation reserve Rs. 3,10,000 (Rs. 3,20,000), special depreciation reserve Rs. 2,22,000 (Rs. 2,44,000), provision for taxation Rs. 3,95,000 (Rs. 14,64,000), transferred to post-war rehabilitation and development fund Rs. 6,00,000 (*nil*), and carried forward to next year's account the balance of Rs. 2,272 (Rs. 3,254). During the year, the Mills worked day and night shifts. The Company's properties have been insured against fire, riot and civil commotion risks, standing charges and profits have also been insured. A net amount of Rs. 6,34,314 received during the year on account of refundable excess profits tax has been shown credited in the balance sheet to the post-war rehabilitation and development fund.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	31,80,000	Block ...	89,61,255
Reserves ...	1,36,86,514	Stocks ...	34,04,371
Provision for taxation ...	4,08,624	Stores and spare parts	5,80,359
Liabilities ...	10,51,930	Debts, deposits and advances ...	26,93,948
Profit and loss account ...	15,29,272	Investments	2,20,810
		Cash ...	39,95,597
Rs.	1,98,56,340	Rs.	1,98,56,340

Rewa Coalfields, Ltd.

The directors of the above Company (Managing Agents: Messrs. Shaw Wallace & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the half-year ended 31st December, 1952.

The Company's profit for the half-year after the inclusion of Rs. 35,349 (Rs. 17,372) brought forward amounted to Rs. 4,86,908 (Rs. 1,87,930). After making provision for taxation Rs. 1,87,519 (Rs. 81,438) and writing off investments Rs. 25,000 (*nil*), there remained a total sum of Rs. 2,74,389 (Rs. 1,06,492). Out of this sum the directors placed to development reserve Rs. 1,00,000 (*nil*), capital reserve Rs. 3,385 (*nil*) and paid a dividend at the rate of 20 (10) per cent. per annum, free of income-tax absorbing Rs. 1,35,000 (Rs. 67,500), leaving to be carried forward the balance of Rs. 36,004 (Rs. 18,992).

Output and despatches of steam and other grades of coal for the last three half-years were as follows:—

Half-year ended.	*Raisings.* Tons.	*Despatches.* Tons.
31st December, 1952 ...	1,67,990	1,65,004
30th June, 1952 ...	1,49,417	1,49,773
31st December, 1951 ...	1,35,679	1,51,193

There was a welcome improvement in wagon supplies during the half-year which is reflected in the production and despatch figures and the better working results for the period. There had been a falling off in the supply of wagons since the close of the half-year due to heavy movements of grain traffic but this is expected to be temporary.

A new station was opened at Amilaii and a fresh application was submitted to the Railway for provision of a siding at this station to serve the partly developed new colliery in the Company's Bergama leasehold, work on which was suspended three years ago for lack of transport facilities. To meet the cost of developing and equipping the new colliery, a development reserve fund has been created which has been credited with Rupees One lakh.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	13,50,000	Block ...	6,13,000
Reserves ...	6,88,385	Stores ...	7,06,255
Provision for taxation ...	3,60,000	Stock ...	60,597
Liabilities ...	13,87,440	Debts, deposits and advances ...	13,52,107
Profit and loss account ...	36,004	Investments	1,30,000
		Cash ...	9,59,870
Rs.	38,21,829	Rs.	38,21,829

Marshall, Sons and Co. (India) Ltd.

The directors of the above Company (Managing Agents: Marshalls (Direction) Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 30th June, 1952.

The trading account showed a profit of Rs. 1,79,443 (Rs. 9,57,343). After adding profit on sale of plant and machinery, furniture and motor vehicles Rs. 18,885 (Rs. 11,540) and forfeited dividends Rs. 43,342 (*nil*), there was a total of Rs. 2,41,670 (Rs. 7,68,883). From this was deducted general depreciation Rs. 1,73,372 (Rs. 1,48,107) and adjustment in respect of previous years Rs. 14,882 (Rs. 27,511). The year's trading showed a net profit of Rs. 53,416 (Rs. 3,13,265) to which was added the balance carried forward from the previous year of Rs. 1,85,717 (Rs. 2,54,951) making a total of Rs. 2,39,133 (Rs. 5,48,217). From this the directors paid a dividend of 5 (25) per cent. free of Indian income-tax, amounting to Rs. 52,500 (Rs. 3,62,500), and carried forward the balance of Rs. 1,86,633 (Rs. 1,85,717).

With the reduced profit it was not considered necessary to make any specific provision for taxation, but the excess profits tax deposit fund which was no longer needed, was re-transferred to the reserve for taxation.

In spite of strenuous efforts to maintain the Company's trading on the high level of recent years, the general market recession caused a rapid and considerable fall in the turnover and profit. In consequence, the directors felt that there was no justification for recommending payment of a higher dividend than 5 (25) per cent. free of tax, for the year.

The crisis in the tea industry has particularly affected the Company for, it was closely concerned with supplying power plant, machinery and maintenance parts to the plantations. In addition to a serious drop in the value and volume of orders received, the Company had numerous requests from tea companies for cancellation of orders previously placed.

With the rapid change from a sellers' to a buyers' market, and the return to what some may consider more normal trading levels, the Company has felt the burden of heavy establishment and other charges built up in past prosperous years. The directors have recognised the urgent necessity of reducing expenditure to keep it within the limits imposed by the lower turnover of the Company, and a good deal has been done in this respect. There has been an inevitable time lag however, and such economies as have been made are not reflected to any great extent in the accounts.

Import restrictions had seriously affected the Company and this was the largest contributory factor to the lower turnover, thus forcing the directors to make important reductions in overhead expenses. Further, it created a problem in supplying replacement parts for the comprehensive range of power plant and machinery sold over the past years. In this connection, the possibility of increasing the Company's facilities for indigenous production is receiving the directors careful attention.

The Company's properties had been maintained in good condition throughout the year. Stocks had been under constant review and values depreciated as considered necessary.

The Company's New Delhi office is housed in a new building embodying good office, workshop and stores facilities. Apart from the resultant improvement in arrangements for handling the large volume of our agricultural and general machinery business in the North, the Company's position in dealing with the various departments of the Central Government will be considerably strengthened.

The Company's contract with the Government of India for servicing the indigenously produced Tata-Marshall road rollers continues to run smoothly. Up-to-date almost 900 of these steam road rollers have been delivered, and are working satisfactorily on the roads throughout the length and breadth of India.

The Marshall group in the United Kingdom, which embraces John Fowler & Co. (Leeds) Ltd., have now developed and brought on to the market a series of heavy diesel crawler tractors, being the first British manufacturers to produce a complete range. It is confidently anticipated that the Company will benefit from this most welcome enterprise.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	10,50,000	Block ...	4,19,378
Reserves ...	20,40,000	Work-in-progress ...	1,21,844
Provision for taxation ...	15,88,216	Stocks ...	92,79,437
Liabilities ...	98,35,053	Stores and loose tools	40,630

		Cash ...	4,58,862
Rs.	1,47,52,402	Rs.	1,47,52,402

Bengal Flour Mills Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Balmer Lawrie & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the half-year ended 31st December, 1952.

The profit for the half-year, after providing for taxation and depreciation, was Rs. 68,992 (Rs. 63,060), to which was added items relating to previous years Rs. 24,577 (*nil*) and refund of E.P.T. Rs. 9,433 (*nil*), making a total of Rs. 1,03,001 (Rs. 63,060). From this sum was deducted the debit balance brought forward Rs. 16,619 (credit of balance of Rs. 61,025), leaving a total sum of Rs. 86,382 (Rs. 1,24,086), the directors disposed of this amount in payment of a dividend on 1,20,000 shares at 12½ (12½) per cent. per annum Rs. 75,000 (Rs. 75,000) and carried forward Rs. 11,382 (Rs. 49,086).

During the first part of the half-year the Mills continued to work for the West Bengal Government, and the prices and distribution of wheat and *atta* remained under Government Control throughout. From mid-October the manufacture and sale of Flour and associated products were partially decontrolled, and this enabled the Company to gain some return for the work and money put into improving the Mills in recent years, the return of the Mills' branded products to the market meeting with a keen demand.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	12,00,000	Block ...	3,87,208

QUESTION HOUR IN PARLIAMENT

Loans to Kashmir and Nepal

THE total amount of Central Government loans outstanding against Kashmir on 31st March, 1953, was approximately Rs. 14.66 crores. A loan of about Rs. 1 crore was outstanding against Afghanistan on that date. A loan to Nepal has been agreed to in principle and a provision of about Rs. 50 lakhs is made in the final estimates of 1952-53, but the details are still being worked out.

—Finance Minister

Savings on Salary Bill

The Government of India expects to effect an annual saving of Rs. 75 lakhs in the salary bill of its employees. The Government is contemplating reduction or abolition of the dearness allowance to all employees drawing more than Rs. 750 per month. If the allowance is withdrawn, the saving will be Rs. 75 lakhs annually.

* * * *

Security Smuggling

A few cases of suspected smuggling of Pakistani securities and shares have come to the notice of the Government and the Reserve Bank of India is investigating them. No estimate is available of the value of Pakistani securities and shares held by Indian citizens.

* * * *

Insured Properties

The Centre has advised the State Governments that when they insure their properties the insurance should be placed with the recently formed Indian Insurance Companies Association Pool. The States have been advised that this will give much needed encouragement and support to Indian insurers.

* * * *

Loans for Building State Capitals

No loan has been given to the Punjab Government by the Centre for the construction of the new capital at Chandigarh. The Punjab(I) Government was, however, given a loan of Rs. 3 crores to find employment for refugees at the site of the capital. The Orissa Government has been given a grant of Rs. 171.26 lakhs for the construction of the new capital at Bhubaneshwar.

* * * *

Technical Aid by India

Since 1950, offers of technical assistance valued at Rs. 13,14,508 have been made by India to foreign countries. Four Indian experts have been sent out. During the same period, 100 foreign students have been undergoing training in India under the Colombo Plan and another 172 under other schemes, of which 161 have been under the General Cultural Scheme, two under the French Scholarships Scheme and nine under the Indo-German Industrial Co-operation Scheme.

* * * *

Official Price of Gold

There is no world price of gold as such. The conception of a fixed world price of gold is, in fact, based on the obligation of the members under the Articles of Agreement of the International Monetary Fund, that the monetary authorities buy and sell gold at prices corresponding to the par values of their respective currencies. These par values are fixed in terms of gold and, consequently in each country, there is an official price of gold in terms of its currency. This price is relevant only in official transactions of the monetary authorities. The prices prevailing in the Indian market on private transactions in gold are not controlled and not based on this official price.

—Deputy Finance Minister

Project Investments

As against an anticipated investment of Rs. 11.87 crores in 1951-52, Rs. 8.99 crores were invested by the Centre on all Central industrial projects. During 1952-53, the revised estimate of investment was Rs. 8.01 crores, against a budget provision of Rs. 13.06 crores. Of the 15 industrial projects of the Centre, the Rare Earths Factory and the new mint at Alipore had gone into production in 1952-53.

* * * *

D.V.C. Revenue Receipts

The revenue receipts of the Damodar Valley Corporation up to the end of 1952 were Rs. 36,00,309 by sale of power and Rs. 10,19,508 by miscellaneous receipts. The estimated revenue receipts in 1953-54 are Rs. 61,59,000 by sale of power, Rs. 1,66,500 by irrigation and Rs. 4,22,000 by miscellaneous receipts. Up to the end of 1952, Rs. 46,19,817 were taken into account as revenue receipts.

—Minister for Planning, Irrigation and Power

Tilaiya Dam

All work in connection with the Tilaiya Dam and Bokaro power station will be completed by July, 1953. There is no truth in the report that the Bokaro power station has been closed after its inauguration by Mr. Nehru and that the foundation of Tilaiya Dam is sinking.

* * * *

Expenditure on Community Projects

The total expenditure incurred on Community Projects upto the end of last year, was Rs. 15 lakhs. There were some complaints of delay in sanction of fund in the initial stages, but this defect has been removed, and the progress has been satisfactory. Power has been delegated to Development Commissioners in most of the States with a view to giving speedy sanction to schemes. The other States, which have not delegated powers, have been asked to take early action in this regard. The Planning Commission has a plan of "evaluation" and the members concerned with it will go round and find out the progress made by the Centres.

—Deputy Minister for Irrigation and Power

Steel Imports

The Government of India has entered into an agreement with the U.S. Government for the import of 110,000 tons of steel for agricultural purposes under the Technical Co-operation Programme. The sale proceeds of this steel will be utilised for the prosecution of further projects for economic development of India mutually agreeable to the two Governments as provided for in the project agreement. It has been agreed that the bulk of this steel will be sold to farmers and village artisans for the manufacture of implements, cart tyres and the like. The rest will be available to manufacturers of farm machinery.

—Minister for Food and Agriculture

U.P. Rice Price

The Madras Government has represented to the Centre regarding the prohibitive price of U.P. rice. The price of the superfine variety only of U.P. rice is a little higher than the price of imported rice. The price is Rs. 32 per maund, while in Madras the price of similar rice ranges between Rs. 18 and Rs. 20. Consumers in U.P. themselves are paying a high price for this quality of rice. Procurement of paddy through State agency has been stopped in U.P. at the instance of the Central Government. The reasons include comparatively high price of its rice and the reluctance of recipient States to pay this high price. Further, the interest of rice deficit areas in the State is taken into account. Nevertheless, already 35,000 tons of rice have been exported from the State whose surplus is expected to be 40,000 tons.

—Deputy Minister for Food

Nepal-Indian Rupee Rate

There has been a steep rise in the Nepal-Indian rupee rate. The rate which was around Rs. 130-132 (Nepalese) to Rs. 100 (Indian) during 1952 rose to as much as Rs. 157(N) to Rs. 100(I) in 1953. Towards the beginning of March the Nepalese exchange rate stood at Rs. 148. The rise in the exchange rate is understood to be due to the increased demand for Indian rupees for payments for cloth and other goods purchased by Nepalese traders in India, as also for other payments such as fares and freights for air transport between India and Nepal. The currency problem of Nepal is being studied by an officer of the Reserve Bank who has been deputed to advise the Nepal Government. He has been sent at the request of the Nepal Government.

—Parliamentary Secretary to Finance Minister

Electric Equipment

The proposal for the establishment of a factory for the manufacture of electrical equipment in India is under consideration. Project reports were prepared by three firms, one British and two American, in 1949 and no decision was taken to implement any of the reports because of financial stringency. It is likely that a certain number of technical experts will have to be obtained from abroad in the initial stages.

—Minister for Production

Aerodromes in India

As many as 186 aerodromes in India belong to the Central Government, 105 to the State Governments, and 14 to private agencies or individuals. The sources of income at Central Government aerodromes are: (1) landing and housing charges from the air transport companies; (2) rents of lands and buildings leased out and rented to various parties; (3) electricity and water charges, and (4) revenues accruing from caterers, sale of grass-cutting rights, advertisement charges, etc. The income derived from those sources is credited to General Revenues. The expenditure on the maintenance etc. of aerodromes is met from the budget grant that is voted by Parliament from year to year. No foreign air-lines have been registered in India. The revenue realised during 1952-53 from the foreign companies in respect of their use of the Central Government aerodromes was Rs. 14,53,104 and that from the domestic companies Rs. 42,45,296.

—Deputy Minister for Communications

Medical Care in Plantations

The recommendations of Dr. Lloyd Jones regarding standards of medical care for tea plantations have been accepted *in toto* by the Industrial Committee on Plantations. Many of the progressive employers have already begun implementing the recommendations. The progress has, however, been slowed down following the crisis in the industry.

—Deputy Minister for Labour

Community Projects

Roughly speaking 25 per cent. of the Community Centres are doing extraordinarily well, that is to say, they have done beyond expectations. As much as 30 per cent. are doing well and 30 per cent. to 35 per cent. are doing fairly well and 10 per cent. badly. It does not mean that no work is being done in those centres, but it means that not much progress has been made.

—Prime Minister

MONEY RATES HARDEN

(From Our Own Correspondent)

BOMBAY, 6th *May*

After two weeks of comfortable conditions, the short-term money market once again turned somewhat stringent. There was a revival of trade demand for funds early in the week, which grew up as the week rolled on, and absorbed the lonable funds. Thus with more borrowers than lenders, *the market was found on occasions to be short of* supplies, and in order to meet the unsatiated demand, some of the banks had to go to the Reserve Bank for accommodation. In the circumstances, money rates could not but turn in favour of lenders. The inter-bank call money among the Exchange banks and big Indian banks, which stood at 2½ per cent. throughout last week, hardened to 2¾ per cent. this week. The rate among the smaller Indian banks was, however, unchanged at 3 per cent.

It is stated that the Exchange banks and big Indian banks are, as a result of some understanding among them, unwilling to pay more than 2¾ per cent. Further, any rate above 2¾ per cent. is unremunerative to banks and is as costly as borrowing from the Reserve Bank at 3½ per cent.

In the term money section also, the rates steadied up. Banks which were unwilling to pay 2¾ per cent. for one to three months' deposits offered 2¾ per cent. Six months' deposits which fetched anything from 2 to 2½ per cent. remained steady at 2½ per cent.

The response to the weekly tenders for Rs. 1 crore of three months' Government of India Treasury Bills was slightly better this week than in the previous week, the amount offered being Rs. 163.25 lakhs, as against Rs. 100.50 lakhs. The average rate of accepted tenders was unchanged at Rs. 2.7 per cent. per annum.

A rise of Rs. 4.81 crores in notes in circulation is disclosed by the weekly statement of the Reserve Bank for the week ended 1st May, 1953. Notes held in the Banking Department, on the other hand, have fallen by Rs. 4.91 crores and the consequent contraction of about Rs. 10 lakhs in total notes issued is covered, on the assets side, by a corresponding fall in rupee coin. In the Banking Department, a decline of Rs. 2.02 crores is noted in deposits of the Central Government and a rise of Rs. 4.15 crores in those of other Governments. Deposits of banks and others are lower by Rs. 80.49 lakhs and Rs. 51.58 lakhs, respectively. On the assets side, cash has shrunk by Rs. 4.99 crores, but there has been an expansion in balances held abroad to the extent of Rs. 3.37 crores. Loans and advances to Governments disclose minor decline, but other loans and advances have gone up by Rs. 6.11 crores, mainly due to the increase in advances to banks against usance bills. There has been a rise of Rs. 6.45 crores in the total amount advanced against usance bills up to the end of the week under review. The amount outstanding against such bills at the end of the week shows a rise of Rs. 5.45 crores, which indicates that there has been repayment of Rs. 1 crore by banks.

Minor variations in Scheduled Banks' deposits is noted in their consolidated statement for the week ended 24th April, 1953. Demand deposits are unchanged, but time deposits are better by only Rs. 33.68 lakhs. Inter-bank borrowings are lower by Rs. 1.75 crores and borrowings from the Reserve Bank by Rs. 85 lakhs. Borrowings from the Imperial Bank are, however, higher by Rs. 40 lakhs. Advances have declined by Rs. 2.16 crores, but inland bills purchased and discounted have gone up by Rs. 69.32 lakhs. Investments have declined by Rs. 65.86 lakhs, as also cash-on-hand and balances with the Reserve Bank by Rs. 2.37 crores. Balances with other banks in current account are lower by Rs. 53.83 lakhs, but money at call and short notice are higher by Rs. 83.93 lakhs.

The upward trend in the Gilt-edged market during the previous three weeks was not maintained this week. In fact, the trend was easy, the long and undated issues disclosing moderate losses over the week. 3 per cent. 1953-55 was unchanged at Rs. 100-1, as also 3 per cent. 1957 at Rs. 98-12. 3 per cent. 1958 was placed an anna lower at Rs. 98-9. 3 per cent. 1959-61, 3 per cent. 1963-65, 3 per cent. 1964 and 3 per cent. 1966-68 were all unchanged at Rs. 96-9, Rs. 92-14, Rs. 92-14 and Rs. 90-9, respectively. 3 per cent. 1970-75 fell by As. 2 to Rs. 86-10 and 3 per cent. 1986 Conversion Loan by As. 9 to Rs. 82-3.

After remaining unchanged for several weeks, the rupee-U.S. dollar exchange rates, experienced minor variations this week, as the table appended below would show. In New York, the sterling-dollar rate was a little erratic. Thus, the spot rate which was quoted at $2.81-11/16—2.81-13/16 on 28th April moved between that level and $2.81¾—2.81⅞ and closed yesterday at the higher rate. The forward rate for three months stood 1/16 cent lower at $2.81—2.81⅛, after having been done at $2.80-13/16—2.80-15/16. The rate for six months, after going down from $2.80½—2.80⅝ to $2.80-5/16—2.80-7/16, closed at $2.80-7/16—2.80-9/16.

SILVER ACTIVE

(From Our Own Correspondent)

BOMBAY, 6th *May*

Trading on the Bullion Exchange during the week under review was characterised by hectic activity in silver. After experiencing wide fluctuations, prices, on balance, showed marked gains. In the previous three weeks, though the undertone had been bullish, the movements were less erratic, but this week prices moved over a wide range, and showed a distinctly two-sided movement. In the earlier part of the week, it was easy on bull liquidation and bear selling. The sharp decline in price as a consequence necessitated the enforcement of interim clearing on Saturday. From Monday onwards, there was a reversal of the trend, and on strong bull support encouraged by reports of good offtake, prices began to soar. As Monday's closing price was more than Rs. 5 above the previous clearing rate on Saturday, another interim clearing was enforced. But the enforcement of the second clearing did not have any effect on the trend which continued to be bullish upto the time of writing.

Gold, on the other hand, was relatively steady with movements confined to a narrow range.

Silver for forward delivery (1st May settlement) opened the week at Rs. 161-14 and declined to Rs. 159-1 on Friday before the settlement ran out at Rs. 158-12 on that day. The business for the next settlement (30th May) was done at Rs. 161-15 at the opening of the week, but on active selling by both bulls and bears, the rate tumbled down to Rs. 156-3 on Saturday. As this rate was more than Rs. 5 below the delivery rate of Rs. 162 fixed for this settlement, interim clearing was ordered. But on Monday this week, there was a sudden spurt on bull support and bear covering to Rs. 161. As this rate was Rs. 5 above the previous clearing rate of Rs. 156, a second interim clearing was ordered on Monday and the clearing rate was fixed at Rs. 161 for silver and Rs. 86-4 for gold. Despite the enforcement of clearing, prices continued to move up to touch Rs. 165-3 to-day, before closing at Rs. 164-1.

Ready silver reacted from Rs. 162-3 to Rs. 156-2 before regaining to Rs. 164-5 at the close. The floating stocks of silver are placed at 1,000 bars. The daily average offtake was 70 bars.

Gold for forward delivery (30th April settlement) was done on the opening at Rs. 86-7 and the settlement ran out on that day at the same rate. The rate for the 29th May settlement receded from Rs. 86-8 to Rs. 85-8 early in the week due to lower offtake and the weakness of silver. But with an improvement in offtake later on in the week, the rate slowly edged forward to Rs. 87-5 to-day before closing at Rs. 86-10.

Ready gold, after moving down from Rs. 86-13 to Rs. 85-14, gained ground to Rs. 87-2 at the close. The floating stocks of gold are estimated at 35,000 tolas. The daily average arrivals were 7,000 tolas, while the offtake was 6,000 tolas on an average.

The following comparative table shows the trend of the market during the week under review:

	6-5-53	Highest	Lowest	29-4-53

BLACK PEPPER STRONG

(Messrs. Parekh & Co.)

BOMBAY, 6th *May*

During the earlier part of the week, pepper market remained fairly steady, as, in spite of the poor turnover, there was no selling pressure from the growers who were holding off in anticipation of higher prices. At Alleppey, the arrivals, as well as the sales, were on a very restricted scale. Growers in all the terminal markets appeared to be resisting anything below Rs. 3,000 per candy of 6 cwts. Calicut ruled firm and was quoting always higher in comparison with Alleppey. In the later part, however, in view of the development of buying interest by New York dealers, the the market at Alleppey and Calicut firmed up and exporters had to pay as high as Rs. 3,300 at Alleppey and Rs. 3,500 at Calicut. The deterioration in the Indo-China situation and the repeated adjournment in Korean talks also contributed not to a small degree to the present improvement in the sentiment of pepper here, as well as at New York where $1.42 to $1.43 were paid for May and June shipments, which positions were neglected a few days back and for which there were resellers at as low as $1.29. Saravak and Indonesia being nearer to the new theatre of war (Indo-China) became reserved sellers. Exporters there are reluctant to sell in New York July-September which are quoted at a very big discount from the spot. The present attitude of the Indian growers is in favour of reserved selling, as such policy adopted by them for the last couple of years had paid good dividend and forced America and Europe to buy at sellers' price. The growers think that they have no competitors for the coming 3 to 4 months, because neither Saravak nor Indonesia can sell freely before August.

Locally, in A.S.T.A. section, business in May and June shipments were done at price ranging from $1.35 to $1.44 per lb. c. & f. New York.

The following are to-day's nominal quotations:—Ready delivery Rs. 380 per Bengal maund. May delivery Rs. 2,715-45 and June Rs. 2,735-65 per candy of 5¼ cwts.

FORWARD COTTON FIRM

(From Our Own Correspondent)

BOMBAY, 6th *May*

The only thing preventing greater turnover in the spot markets is the lack of fresh quotas with mills for purchase of Indian cotton. The desire and the need for such purchases are there, and now that the authorities have a full grasp of the supply position in various regions, fresh quotas are likely to be issued without much delay. But, in spite of somewhat reduced buying activity by the mills during the week under review, spot prices and premia for selected varieties have not been adversely affected, because stocks are believed to be in good hands and future demand for this is assured. Merchants, being confident of realising good profits in the months to come, are in no hurry to dispose of their holdings.

For want of quotas for Indian cotton and because of continued demand for superior quality of cloth, mills have turned their attention to imported cottons. Amongst these, those in demand at present are East Africans and Sudans, with very poor demand for U.S.A. styles. Alexandria too has figured, once again, on a small scale in supplying mills' requirements, but the demand is concentrated mainly on Sudans. Things are naturally quiet on the export front and Bengal Deshi is going abegging for want of enquiry from abroad. Even here a few mills appeared to be interested in small lots for internal consumption. But this has not helped to lift prices.

Now that the current season is practically over, so far as fresh arrivals in upcountry markets are concerned, the trade interest has shifted from the current crop to the next crop. About this there is a general feeling that the acreage will be higher this year and production also is expected to register a good increase. Officials engaged on cotton research and cotton production in the Bombay State are optimistic about cotton production in this State during the next two years. They hope that, by 1955, production in Bombay will rise to about 1.1 million bales. Madhya Pradesh, Hyderabad and Mysore too are making efforts to increase production and all these efforts are bound to bear fruit provided the monsoons are favourable.

In the futures market, after a lull in sympathy with some of the commodity markets during the week-end, prices are again tending to rise. Tenders against May delivery are meagre, almost negligible, and this alone is bound to have a very bullish psychological effect on the market. Apart from this, the statistical position, as already pointed out in previous issues, is in favour of longs. A goodly amount of bear covering, however, has taken place recently and, when most of the sales are covered, the market will have little incentive. Operators believe that, while a steep fall may be ruled out in the present circumstances, the forward market is likely to meet with stiff resistance round about Rs. 740-750. With only August delivery to operate in, the daily turnover at Kalbadevi is bound to go down in the coming weeks.

Cotton futures commenced the week on a firm note. They developed a saggish tendency on Friday, due to profit-taking and long liquidation based on weak advices from upcountry centres. Values, as a result, drifted downwards, which persisted on the following day also. Yesterday, however, the market put on a cheerful note, the bullish fervour being fanned by factors like firm advices from the bullion market and good demand in the spot section. Not only were the previous losses completely erased, but the closing quotations today were higher than those at the end of last week. I.C.C. May contract opened the week at 724-8, as against Rs. 725-4, and, after receding to Rs. 721 on Saturday, gradually improved to Rs. 736-12, the net gain over the week being Rs. 11-8. I.C.C. August contract, after opening at Rs. 733, declined to Rs. 729 before closing higher at Rs. 743. The following is the trend of prices during the week:

	Opening	*High*	*Low*	*Closing*
	Rs. a.	Rs. a.	Rs. a.	Rs. a.
I.C.C. May ..	724 8	738 0	724 0	736 12
I.C.C. Aug. ...	733 0	744 0	733 0	743 0

The spot markets continued to be active during the week under review. Special buying support was lent by mills to foreign styles cotton, particularly Egyptian and African varieties. Indian cottons also elicited buying support and registered handsome improvement in prices. Thus, over the week, Berar Jarillas advanced by Rs. 25 to Rs. 775. Vijay and Khandesh spurted, each by Rs. 20, to Rs. 920 and Rs. 860, respectively. Moglai rose from Rs. 710 to Rs. 725. Oomra Deshi increased by Rs. 10 to Rs. 725. Bengal Deshi remained fully steady at Rs. 550.

At Karachi, conditions in the cotton market continue to be dull. The overall economic picture in Pakistan is still very vague and hazy and market men are bidding their time to watch developments. In the meantime, there has been a small recession in the prices of all varieties during the week under review, for want of fresh enquiries. The U.K. appears to be the only consistent buyer on a small scale in this market, though there are spasmodic enquiries from Germany and Italy which tend to keep up rates. Even barter activities are not being heard of much either in official or market circles. The latest available quotations from the Karachi cotton market are: Punjab Deshi Rs. 66; 4F Punjab R.G. Rs. 59-8; S.G. Rs. 63-8; L.S.S. Punjab R.G. Rs. 61; S.G. Rs. 66; N.T. R.G. Rs. 62-8 to Rs. 63-8; S.G. Rs. 67 to Rs. 68; 289F. Punjab R.G. Rs. 68 to Rs. 69; and S.G. Rs. 73 to Rs. 74.

Unlike Karachi, the Alexandria spot market is humming with activity. India has once again entered the market. Enquiries from the U.K. are being well maintained. As sales to sterling areas are favoured by the authorities, shippers are in a position to offer substantial discounts on Alexandria prices to buyers from these areas. Acreage for the next year is also expected to be lower by about a quarter of a million acres. Giza 30 is not only in short supply in the present season, but is likely to

be so even in the coming season, in view of the fact that the seed for this variety is not easily available. Apart from outright sales for shipments abroad, barter activity is also in evidence. All this goes to maintain the volume of activity in the Alexandria market.

Sudan is coming more prominently in the picture, so much so that the stocks there are believed to be well-nigh exhausted. The Gezira Board has ceased to offer any cotton now. It has also effected some change in the procedure for price fixation for "on call" purchases, though this will not affect the purchases already made. India and the U.K. are, of course, the main buyers in this market and this interest is likely to continue till all available cotton is sold.

At New York, the bullish tendency in the near deliveries indicated last week has strengthened considerably and prices for July delivery once again crossed the 34-cent limit last Monday. Though there was a reaction from this height, the undercurrent appears to be strong and this has also affected, at any rate for the time being, even the new crop deliveries which have scored a modest rise. The market is naturally affected by other commodity markets which are ruling firm because of the development in Indo-China. The lull in Korea has been neutralised by this fresh development and the price trend is likely to continue bullish, unless there is some sudden change in the situation in South-East Asia. The following are the latest available quotations from New York, as compared with those of a week and a fortnight before:

(In cents per lb.)

	5-5-53	28-4-53	21-4-53
Spot	34.45	34.30	33.55
May	34.07	33.95	32.96
July	33.96	33.71	33.17
October ...	33.62	33.45	33.37
December ...	33.52	33.46	33.43

ART SILK YARN LISTLESS AGAIN

(From Our Own Correspondent)

BOMBAY, 6th *May*

The art silk yarn market passed through another listless week. Slightly bearish undertone was in evidence during the first two sessions of the week, on reports of renewed arrivals of imported yarn, and prices were at a low ebb *vis-a-vis* those prevailing at the close of last week. Even the reports of good offtake of rayon cloth markets had no effect. But on Saturday, the sentiment of the market changed for the better, due to expectation of the continuance of the present restricted import policy, and values of art silk yarn recorded handsome improvement. The improvement persisted till to-day. At the close, however, profit-taking set in which took the prices again to a lower rung. Nevertheless, the closing quotation stood slightly higher than those on 29th April, 1953. The volume of business, however, remained restricted.

In the forward section, 150D May delivery contract receded from Rs. 818 to Rs. 800 on Friday and, after rising to Rs. 824 to-day, reacted to finish at Rs. 815. April contract remained depressed at Rs. 802 on the closing day, as against Rs. 810 last week. Business in this contract commenced at Rs. 802 on 2nd March, 1953, the highest and the lowest levels touched being Rs. 860 (on 18th March) and Rs. 778 (on 7th April), respectively. Trading in June contract commenced at Rs. 813 on Saturday. It improved to Rs. 830 to-day before closing at Rs. 821. The ready section remained quiet to steady throughout the week, with minor variations in prices.

The table below gives the prices of art silk yarn quoted to-day, as compared with those on the 29th and 22nd April, 1953:

	6-5-53	29-4-53	22-4-53
Art Silk Yarn—	Rs. a.	Rs. a.	Rs. a.
150D April (per case of 200 lbs.)	—	810 0	816 0
150D May ,,	815 0	818 0	824 0
150D June ,,	821 0	—	—
120 Japan (per lb.)	4 7½	4 8	4 7½
150 Japan ,,	4 4	4 4	4 4½
120 Italy ,,	4 3½	4 3	4 2½
150 Italy ,,	4 0½	4 0½	4 1½

Arrivals of imported yarn, as already stated, have been quite large. The total quantity actually imported during the month of April amounted to more than 35 lakh lbs., which compares with about 21 lakh lbs. in the corresponding month of 1952. Despite such large imports, traders do not appear to be satisfied with the quota allotted by the Government for the current half-year. For it is reported that scarcity is felt in certain types of deniers and quotations of art silk yarn, the prices of which are still very high. The Silk and Art Silk Mills' Association (Bombay), for instance, has urged the Government of India, in a representation made to the latter, to grant a licence for import of at least Rs. 3 crores worth of art silk yarn during the January-June, 1953 period, the present licence for Rs. 1.75 crores being treated as an interim one. In support of this plea, the Association refers to the recent improvement in the rayon cloth markets which has enabled some of the mills to restart working and some others to commence second shift.

The staple fibre yarn section remained quiet this week, with limited offtake even for 2/40s count. The tendency of this section remains uncertain. There is very little to report in the staple fibre section. Transactions have been few and far between, but prices have remained steady.

GROUNDNUTS MOVE UP

(From Our Own Correspondent)

BOMBAY, 6th *May*

The oilseeds market was virtually in the grip of speculators during the week under review. Prices oscillated within a narrow range on account of frequent tussles between bulls and bears, till the last two days when bulls appeared to have gained the upper hand. The groundnut section, which ruled quietly steady early in the week, firmed up subsequently and pierced last week's highs. The castorseeds section, after experiencing considerable fluctuations steadied up in the last two sessions of the week. The linseed section more or less put on a similar trend. On balance, the prices in all sections were sizably higher than those at the end of last week.

The tight situation in the groundnuts section is being felt more and more nowadays. At the present high level, it is difficult for *vanaspati* interests or crushers to make purchases, except for essential purposes. Groundnuts Bold which opened at Rs. 45-12, as against Rs. 46, improved gradually to close at Rs. 47-12. June-July delivery was done at Rs. 47-2 as against Rs. 46 and August-September delivery at Rs. 47-8 as against Rs. 46-8. Khandesh quality gained Re. 1-10 to Rs. 48-4. Groundnut oil ex-mill ready hardened by As. 8 to Rs. 24-8. Railway receipts exchanged hands at Rs. 24-4, as compared with Rs. 23-12 quoted at the end of last week. June delivery was higher by As. 8 at Rs. 24-7. July delivery, which opened at Rs. 24-3 on the 4th inst. was done to-day at Rs. 24-9.

At one time, in the castorseeds section, oils and seeds depicted contradictory trends. While the seeds were hardening, oils turned easy. This was because of scarcity of seeds, as against considerable supplies of oils. The tight supply situation in seeds, in fact, explains the lack of issuance of tenders against May delivery. May delivery which opened at Rs. 155-8, as against Rs. 156-4 fluctuated between Rs. 152-8 and Rs. 159-8 and closed the week at the latter level. September delivery improved from Rs. 158-4 to Rs. 159-12. Madras quality gathered As. 2 to Rs. 31-12. Oil B.S.S. lost As. 10 to Rs. 18-8, while Commercials were steady at Rs. 17-8. Overseas advices were discouraging. U.S. quoted commercials at 17.25 cents. But this was out of parity with Indian quotations which worked out to 18.40 cents. On the Continent, B.S.S. was done at £150, as against £163 a week ago, and Commercials £140, as against £153. If these discouraging advices were to persist, it is difficult to forecast whether the castorseeds section would be sustained at the current levels.

Despite demand from *vanaspati* interests, the trend in the linseed section was not bright almost upto the 4th inst. This was because of speculative selling. Subsequently, it staged a spurt in sympathy with the hectic rise in groundnuts. Bold ready improved As. 7 to Rs. 32-7. June-July gained As. 8 to Rs. 33. August-Septembers were unchanged at Rs. 33-4. Linseed oil eased by As. 6 to Rs. 16.

The following table shows the prices of oilseeds and oil on the 6th inst., as compared with those at the end of the previous two weeks.

	6-5-53	29-4-53	22-4-53
Groundnuts—	Rs. a.	Rs. a.	Rs. a.
Bold Ready New (per cwt.) ..	47 12	46 0	45 0

WOOL TOPS FORGE AHEAD

(Messrs. J. Hardacre & Co.)

BOMBAY, 5th *May*

The trend of wool prices in the Dominion markets this week moves steadily against the buyer and, if Bradford top prices were fully to reflect the increased prices which importing topmakers have to pay for wool in Australia and South Africa, merino top quotations would show much more than the 1d. advance on Monday's rates.

There is a good selection of Bradford style combing wool on offer in Adelaide and, at the closing sale yesterday, prices were about 2½ per cent. dearer than those prevailing on Monday. In South Africa, the increase over the week is about the same amount and it is quite impossible to buy wool in either market at prices which will fit the best obtainable for tops in Bradford. Topmakers are buying wool on increased limits, because they must avail themselves of supplies, whilst they are on offer.

The current series of wool sales at Adelaide closed very firm, the prices being in sellers' favour. Prices at Cape Town have shown a general advance of 2½ to 5 per cent. on previous sales. East London values showed an advance of 2½ per cent. on previous sales.

COMMONEST TEAS KEENLY BID

(Messrs. Forbes, Ewart & Figgis Ltd.)

COCHIN, 2nd *May*

The offerings in Sale No. 9, which was held on Tuesday, 28th April, amounted to approximately 13,70,000 lbs. Quality continued to show a seasonal decline and some of the offerings were far too fibrous and stalky. High grown teas generally lacked flavour.

The sale opened to a much weaker demand. Commonest kinds remained fully firm at last rates and there was some competition for these types. Low medium and medium brokens and fannings were generally As. 2 to As. 3 easier, although there was a fair demand for these teas. High grown Nilgiri brokens and fannings were neglected and prices declined irregularly by As. 8 to As. 12. Whole leaf was weaker and must be quoted As. 2 to As. 3 easier. There was a fair demand for fannings grades at the drop. There were a large number of withdrawals. The following are the quotations:—

	1953
	Rs. a. p.
Low grown Travancore B.O.P. ...	1 11 6
Medium Travancore B.O.P.	1 14 0
Anaimallais B.O.P.	2 1 0
Best liquoring Nilgiri B.O.P. ...	2 9 0
Clean black leaf O.P.	1 15 0

London Market.—Active demand. Last Monday's rates fully maintained.

Colombo Market.—Six million pounds. Strong demand. Gulf types advanced sharply; others irregularly dearer, except liquoring fannings ten cents lower.

Calcutta Market.—Export.—With the exception of whole leaf grades market As. 2 to As. 3 lower for all types.

Dust.—Market opened easier, but prices hardened. Medium teas firm to half anna dearer. Poorest sorts irregular.

Export Quota.—1953-54 quota opened at 12 pies, but has eased slightly now and business has been done at 11 pies. Special licence has changed hands at 1½ pies.

Forthcoming Auctions.—Sale No. 10 will be held on Tuesday, 12th May.

As we go to press, Messrs. Forbes, Ewart and Figgis Ltd., wire as follows:—

"*Dust Sale* 1.—1,50,000 lbs. Fair general demand at prices irregularly As. 2 easier. Good demand for clean black well-made dusts."

JUTE PRICES RALLY

(From Our Own Correspondent)

CALCUTTA, 5th *May*

Wide fluctuations in the prices of jute goods were the main feature of trading in the jute market this week. Prices at one time saw the highest level for the last few weeks. After business had satisfied the end-of-the-month considerations, rates sagged; nevertheless, the closing rates yesterday were higher on balance. There were reports that Continental manufacturers were again under-quoting Calcutta rates, but, despite this, the American support, forthcoming to the market in a moderate measure, was a factor which assisted the upward trend. Mills were reserved, on reports of anticipated shortage of the raw material.

Market circles are looking forward for more business, and buyers have noted that production of jute goods might be affected by the smaller crop in India and Pakistan this season. Business in sacking goods has not yet picked up the rate which the market considers satisfactory, and again this week, the rise in prices of heavy goods was more in sympathy with a steady hessian market.

Last Wednesday, ready hessian 40" 10 oz. shot up to Rs. 42-6 from Rs. 40-10 and similar gains were recorded in the forward positions. Speculators commenced buying, as they expected that Argentina, which had only covered half of its annual requirements of hessian recently, would again come to the market for another quantity shortly. On Thursday, the gain at Rs. 42-6 was well maintained, and mills were reserved. As the covering business for shippers was over, Friday saw the rate getting back to Rs. 41-10. These wide fluctuations restrained enquiries from the United States, and speculators' expectation regarding another Argentine order did not materialise. The tendency to erase the gains continued for the week-end, but nevertheless on Saturday the closure for the ready position at Rs. 41-2 was higher on balance. Yesterday the upward movement was again seen, and the rate was higher at Rs. 41-10. Hessian 40" 8 oz. was offered at Rs. 32-12 f.a.s. and at Rs. 39-8 f.o.b.

The sacking goods market was mostly influenced by the trend in hessian. B. twills opened the week at Rs. 93-2, as against an overnight quotation of Rs. 90-4. Covering demand and speculators' anxiety to increase their stocks were also factors for the steady rise. It was on Thursday that B. twills reached the highest level at Rs. 94-4. However, such a high level could not be maintained, due to lack of business, and the week-end saw the price recede to Rs. 91-12 which rate was maintained yesterday also.

Reflecting the changed sentiment in the goods market, prices for raw jute also recorded moderate gains. Thus Assam bottoms were traded at Rs. 23, representing an increase of three points. The prices of other constructions improved by one to two points, the latest quotations being: Dalcola Rs. 23, Dinhatta Rs. 20-8, Kissanganj Rs. 22, Murshidabad District tossa Rs. 20-8, Murliganj Rs. 16-8, Bimli f.a.q. Rs. 17, Mesta bottoms Rs. 17-8, and Salmari-Sonaili tossa Rs. 21. Mills were in the market for a fair quantity. Pakistani jat bottoms remained unchanged at Rs. 23. In the pucca bales section, another 10 points were gained by first marks ready at Rs. 135 a bale.

WHEAT PRICES RECEDE

(From Our Own Correspondent)

HAPUR, 5th *May*

There was interesting discussion on the International Wheat Agreement in the House of the People this week. Replying to the general criticism that the international food situation and stocks held by the exporting countries at present and prospects of food crops did not justify renewal of the agreement at a higher price, the Indian Food Minister declared that so long as the present international price continued and so long as the United States price support policy continued, he did not think India would be a gainer, if she had not entered into the agreement. Mr. Kidwai added that the country did not need much of the imported wheat. It was on account of shortage of rice that they were importing now. If the price of rice came down below the price of wheat, the Government would stop importing wheat. He hoped that, next year, there might be a drop in the price of wheat in India by a rupee per maund.

STOCK & SHARE QUOTATIONS

Abbreviations:—D=Deferred shares. G=Guaranteed shares. P=Preference shares. P.O.=Preferred Ordinary shares. R=Rebate shares. Y=Accounts published yearly. H=Accounts published Hat-yearly. Q=Accounts publishe once 15 months. T=Company has Debentures. R.L.=Reserve Liability on shares. N=Nominal Quotation. i=Interim Dividend. f=Dividend for first half-year, y=Dividend for the year. x=Ex. Dividend c.d.=Cum. Dividend.

Shares:—If a company has different classes of shares—as, for example 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under "Paid-up Per Share."

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12 indicate the months of June and December, respectively "Reserves" ncludes general and other reserves and all other funds which a company may have as also depreciation on block items, when this is charged to separate account "Block" represents actual cost of land, buildings, machinery, and all such other items on which depreciation is allowed, less sales, if any, and stands for the gross figure except where otherwise indicated.

Dividends:—Dividends for completed years are calculated at per cent. per annum, but, where quoted for portion of a year, they represent percentages of the dividend on the paid-up share value. For companies closing the bood half-yearly in the first three months of the year, and for companies closing their books yearly during the first half of the year dividends are shown as for the previous year.

• The following explanatory notes relate to the abbreviations and marks shown on page 880 in the bracketed section:—

‡‡ Option to repay on six months' notice, on any interest date after 31st December, 1951, at 102 per cent. Also redeemable out of a cumulative sinking fund of 1½ per cent. per annum (commencing in 1938) by drawings at 102 per cent. or by purchase at or 102 per cent.

(a) Option of repayment at any time at 3 per cent. premium.

(b) Bearer bonds of Rs. 1,000 each repayable at par.

(c) Bearer bonds of Rs 1,000 each repayable on 31st July, 1959.

(d) Bearer bonds of Rs 1,000 each with option of redemption in whole or in part at par on 30th June, 1952, or on any subsequent interest date at one month's notice.

(e) Returnable on or after 31st July, 1950, at Rs. 102-8 or at par after 31st July, 1955, on six months notice in each case.

(f) Bearer bonds of Rs. 1,000 each with option of redeeming on 3 months' notice at ½ per cent. premium, after 1st March, 1954, but before 1st March, 1957, and 1 per cent. premium on or after 1st March, 1957

(h) Option of redemption on or after 1st July, 1949, at par.

(j) Option of repayment at any time at par at any time on or after 30th June 1947 on six months notice

BANKING

(Concluded from page 842)

depreciation or not, it had to follow sterling because of the rupee-sterling link. During World War II, the balance of payments position of India was favourable; in spite of this, the advantage from this favourable balance of payment was offset by creating sterling balances which depreciated in value in terms of commodities during and after the war, thus creating inflationary tendency in terms of commodities. All these factors created, he observes, a sort of lack of confidence in the rupee in terms of commodities.

There are large hoards of bullion in India and the current annual absorption is placed at about Rs. 40 crores. These hoards are estimated at about 225 million tolas of gold and 3,800 million ounces of silver. Valued at the current market rate of Rs. 90 per tola for gold and Rs. 160 per 100 tolas of silver, the total value of the hoards would come to a little over Rs. 2,000 crores in the case of gold and about Rs. 1,700 crores in the case of silver. The Government of India has placed a ban on the import of bullion, but the current demand for bullion is met, to an appreciable extent, by way of smuggling of gold into Bharat from outside countries. The estimated smuggling of gold between 1950 and 1952 is placed at about 2 million ounces per year. Whether the authorities provide for the foreign exchange resources for the same or not, these smugglings have been ultimately paid for by dollar resources which have been perhaps secured not by rightful means. The smuggling has not only resulted in spending of foreign exchange but has encouraged indirect export trade for commodities on a reciprocal basis. This has resulted in the loss of import duties in respect of gold coming into the country and loss of export duty for goods sent out. The authorities cannot, he observes, ignore such a position.

Under these circumstances, Mr. Sonawala emphasises that the following problems must be borne in mind by economists (1) to bring under control the inflationary tendency in the country, (2) to create confidence in the currency in terms of commodities, (3) to find a solution to check smuggling but at the same time attempting to satisfy the current internal demand for bullion, and (4) to bring into use the vast investment in stocks of gold and silver for productive purposes. With these points in view, certain proposals are discussed by the writer as part of the plan.

The author's conclusions are, however, noteworthy. He is conscious of the limitations of the scheme and appears to be satisfied even with 10 per cent. success. He observes: "The success of this scheme is sometimes doubted. It goes without saying that success will depend upon the response of the people. On the basis of a conservative estimate, if the scheme induces even 3 to 5 per cent. of the hoards to come out, about Rs. 30 to Rs. 50 crores worth of bullion may be made available to be utilised for productive purposes in the aforesaid manner. A large part of current investment may also be diverted this way, and if we achieve a 10 per cent. success here, about Rs. 4 crores will be available annually. It is just possible that success may turn out to be rather limited during the initial stages. Even then, it cannot be denied that this is a beginning in the right direction and that as such it deserves a trial."

UNITED BANK OF INDIA LTD.

Judged by the results of its working for the year ended 31st December, 1952—it may be noted that this is the second year of working for the Bank, after it was brought into existence by the amalgamation of four Scheduled Banks of Bengal towards the close of 1950—the United Bank of India Ltd. (General Manager: Mr. B. K. Dutt, Calcutta) may be said to have been able not only to maintain its previous year's progress but also to consolidate its position as one of the major banking units in this country. The profit of the Bank for the year under review amounts to Rs. 20.21 lakhs, disclosing as it does, very little variation from that of Rs. 21.01 lakhs for 1951 and of Rs. 20.41 lakhs, the combined profit of the four amalgamated units, for 1950. The Bank's ability to maintain its profit well during the year, despite adverse business conditions, serves to emphasise the success of the amalgamation scheme. Unlike last year, there has been no large provision for depreciation and this has enabled the Bank nearly to maintain the addition to the reserve fund at the previous year's level and the dividend at the modest rate of 3 per cent. which had been paid in the previous two years.

The following comparative table giving the salient features of the profit and loss accounts and balance-sheets relating to the past three years provides an idea of the Bank's progress:

(In lakhs of rupees)

	For the year ended 31st December 1952	1951	1950
Interest and discount earned	98.38	1,02.16	1,15.60
Commission and exchange	25.51	25.03	17.20
Other income	10.73	10.92	10.72
Gross income	1,34.63	1,38.11	1,43.52
Interest paid	26.01	27.81	37.99
Expenses	84.44	85.47	82.61
Depreciation and repairs	3.97	3.82	2.51
Profit	20.21	21.01	20.41
Taxation	7.50	4.00	7.50
To reserve fund	4.05	4.21	4.71
To investment account	0.50	8.00	1.00
Dividend	7.96 (3%)	7.77 (3%)	7.94 (3%)
Carry forward	1.58	1.38	4.34

	As on 31st December 1952	1951	1950
Capital	2,09.28	2,08.77	2,64.62
Reserves	1,03.00	1,02.00	1,01.00
Deposits	26,66.24	29,36.47	26,89.62
Borrowings from other banks	..	..	2,86.00
Bills for collection and acceptances	2,46.50	3,83.35	2,42.34
Advances	13,24.55	14,31.21	13,93.66
Investments	13,12.13	14,21.86	14,83.08
Cash balances	3,90.73	4,75.89	4,54.58
Balance-sheet total	34,14.38	38,46.44	36,93.33
Ratio to deposits of—	%	%	%
Advances	49.7	48.5	51.6
Investments	49.2	48.2	55.0
Cash	14.6	16.2	16.7

It will be noted that there has been a further drop in the gross income, which has steadily declined from Rs. 143.52 lakhs in 1950 to Rs. 138.11 lakhs in 1951 and then to Rs. 134.63 lakhs. The decline during 1952 is evidently due to the shrinkage in turnover of business. Another striking feature revealed by the table above is that the decline in gross income has been, to a large extent, offset by the decrease in interest paid and the small, but welcome, fall in expenses. The table reveals also clearly the appropriation of the profit for the year under review. The slightly larger sum required for paying the dividend for 1952 is due to the small increase in the paid-up capital.

Though a sum of Rs. 8.26 lakhs has been added to the reserve fund and Rs. 8.50 lakhs to investment reserve in the last two years the total reserves (including investment reserve) have gone up by only Rs. 2 lakhs, that is from Rs. 101 lakhs in 1950 to Rs. 103 lakhs in 1952. The decline in the turnover of the Bank during the year under review is reflected in the fall of Rs. 2.70 crores in deposits, and of Rs. 36.85 lakhs in bills for collection and acceptances on behalf of customers. The fall in deposits is shared by all classes of deposits, the major part of the recession being borne by current accounts which show a fall of Rs. 1.71 crores. On the assets side, advances have gone down by Rs. 1.07 crores, which is less than the decline in deposits, so that the ratio of advances to deposits is slightly higher. There has been a fall of Rs. 1.10 crores in investments and a contraction of Rs. 85.16 lakhs in cash balances, but the total liquidity ratio is almost unchanged at as high a level as 64 per cent. The investments are shown at book value, while their market value is lower by Rs. 40.31 lakhs, of which Gilt-edged securities account for Rs. 30.29 lakhs.

MARKET REPORTS

(Concluded from page 869)

The Union Agriculture Minister informed the Council of States that, out of a total provision of Rs. 125 crores for all the States for increasing food production under the Five-year Plan, a sum of Rs. 86 crores would be contributed by the Central Government for the Grow-more-food schemes. The provision for agricultural development in the States included expenditure on G.M.F. programmes also. Apart from this expenditure, a special additional provision of Rs. 10 crores for minor irrigation schemes in 1952-53 had been made. Similar provisions would be made for the remaining three years. India had received from the Ford Foundation a sum of Rs. 60,86,260 for all the Ford Foundation Projects administered by the Government of India.

The latest quotations in the Hapur market are: wheat: *dara* Rs. 15-4 and fine superior Rs. 17-8; gram Rs. 15-8; barley Rs. 11-8; *bejhar* Rs. 11-12; maize Rs. 11-8; *bajra* Rs. 11-4; *jowar* Rs. 10-8 to Rs. 12; *guwar* Rs. 15; rice: *basmati* Rs. 35-8; hansraj Rs. 31; sela Rs. 29-8 and coarse Rs. 23-4; peas: green *dara* Rs. 14 and superior white Rs. 15 to Rs. 21; *arhar* Rs. 14; *urd* Rs. 20 to Rs. 22-8; *moong* Rs. 22-8, and *masoor* Rs. 15-8 to Rs. 18.

AIR CORPORATIONS BILL

THE debate on the Air Corporations Bill was a dull affair; with one or two notable exceptions, the speeches were repetitious, uninformed and biassed by the particular political twist of each speaker. Perhaps, the most predominant feature was ignorance of the subject. It was clear that very few of the spokesmen had taken the trouble to read the report of the Rajadhyaksha Committee. It will still remains the only source of reliable information regarding the facts of our air transport industry. The Rajadhyaksha Report had some very pertinent things to say about the potential evils and dangers of nationalisation—even nationalisation in terms of an autonomous corporation. Nothing could be more to the point than these passages from the Report:

"It is obviously essential that, if the air transport industry is to be efficient, there should be flexibility of management. Personal initiative and responsibility involving quick decisions in the administrative, operational and engineering organisations is called for to an extreme degree, as more operational and technical emergencies are encountered in air transport than in any other field of enterprise. A Governmental organisation would not provide such flexibility. Stereotyped departmental organisation, with set regulations, naturally moves slowly and, in consequence, affects efficiency. Rigidity in financial matters, necessarily unavoidable in a Governmental organisation, would hamper quick decisions. There would also be lack of close personal interest and supervision, without which the discipline of the staff would suffer. It would also be difficult in a State organisation to eliminate the inefficient and the semi-efficient without lengthy and elaborate procedure.

"Some of the limitations of State enterprise might conceivably be eliminated by setting up a State Corporation to undertake the nationalised air transport services, but the chances of success of such a Corporation would be determined by the availability of competent managerial personnel at the top and also by the degree of freedom from departmental and parliamentary control that would be enjoyed in practice by that Corporation. We, however, feel that, even in regard to public corporations, it would be found difficult to achieve the required degree of independence. For instance, in matters like scales of pay, staff, and their terms and conditions of service, comparisons would be made with the staff of other Government departments or organisations and pressure brought to bear on the Corporation to conform with those levels. Similarly, elaborate and detailed accounting procedures and financial control would be set up and these, in practice, would retard quick action by the officials of the Corporation."

It is idle, however, to charge our M.Ps. with ignorance, when the very authors of the Bill have so obviously ignored the warnings contained in the Rajadhyaksha Report. Instead of endeavouring to eliminate, so far as is possible in any nationalised undertaking, the dead hand of the bureaucrat, they have gone far out of their way to ensure that the Corporations are autonomous only in name. It is bad enough, in all conscience, that the Corporations themselves are composed entirely of Government nominees. But what are we to make of the proposed Air Council? This body, consisting of a maximum of eleven Government nominees, appears to be vested with the rights to advise the Government on all aspects of the Corporations' activities, and, in case there should still be matters on which the Corporations themselves require advice, there are to be Advisory Committees to help them. What also of the present Directorate of Civil Aviation? What will be the functions of this department of Government, in view of the constitution of the Air Council to advise the Government. Presumably, those powers which the Central Government has taken on itself to issue directions to the Corporations and to make rules for the Corporations will, in fact, be exercised by the Directorate of Civil Aviation, thus finally setting the seal on the mass of red-tape with which the Corporations are to be bound.

In view of the very obvious intentions of the Government, it is hardly surprising that the Bill was returned by the Select Committee with hardly any amendment of importance. The main point of disagreement in the Committee was whether there should be one or two corporations. A surprisingly large number of the Committee members dissented from the majority on this issue, presumably on grounds of economy. The setting up of two corporations, instead of one, will cost the Exchequer possibly some six lakhs of rupees annually. On the other hand, were the continuity of the management of Air-India International to be disrupted, or were any real or fancied deterioration in its standards to occur, the drop in its traffic would run to double or treble this figure. This should be obvious to anyone who understands the cut-throat rivalry in international air transport. On this subject also, our legislators would have done well to study the Rajadhyaksha Report. Here is what it says on this particular aspect of nationalisation:

"The private air companies have, in our opinion, not done so badly as to require a drastic change of system. Their operational efficiency has been uniformly good. An outstanding example of operational and business efficiency, under a system of private management, is afforded by Air-India International, which, in the second year of its operation, has, we understand, been able to break even and show a small profit. Air-India International has built up a high reputation in the international field, and we consider it

name of education throughout the world to-day. How, otherwise, can one account for the fact that such a large number of people, who would raise a howl of protest if they saw their own property expropriated without compensation or for inadequate compensation, are perfectly willing, in the name of their particular political ideologies, to do unto others what they would abhor to have perpetrated upon themselves? Rather typical of this outlook was the amendment recommended by the Select Committee giving the Central Government power to direct the Corporations to employ men discharged from any existing company after July, 1952, where such discharge was considered to be victimisation. Who is to be the arbiter of such claims?

The many points which might usefully have engaged the attention of the Committee from the employees' angle were ignored. For example, the Committee might have clarified the intentions of the Bill in respect of retrenchment. As matters stand, the Government is committed to retain in employment on the vesting date all *bona fide* personnel of existing companies. In other words, a policy of no retrenchment is implied. There is, however, a proviso that present personnel will serve in the Corporations on the same terms and conditions of employment as they enjoy to-day, unless and until their terms and conditions of service are altered by the Corporations or their services are terminated. This means that the Government intends either to throw the onus and odium of retrenchment on to the Corporations or to burden the Corporations with personnel far in excess of requirements and, incidentally, to rob the Corporations of any pretence of autonomy in such a vital matter as employment policy. To take another example, a clause in the Bill requires the Trustees of existing companies' provident funds to hand over those funds *in toto* to the Corporations on the vesting date. Employees somewhat naturally view this with misgivings. Their apprehensions are threefold. First, the rules of the Corporations' provident fund may be less liberal than those of their present companies; secondly, the rules themselves will be more rigidly applied; thirdly and, consequently, if retrenched by the Corporations, they may not receive their present companies' contributions in full, which ordinarily they would have received, if existing provident funds were now wound-up. A simple amendment laying down that, on transfer to the Corporations, the whole amount lying to the credit of each employee in his existing fund, that is to say, both the employee's and employer's contributions, will vest in the employee and will be regarded in future, solely as the employee's contribution, would have set all fears at rest. Had the Select Committee devoted some of its valuable time and attention to these matters, instead of introducing an amendment, the effect of which will be to reinstate in employment probable trouble-makers, the ends of honest and loyal employees would have been better served. It cannot be too strongly emphasised that in no form of employment is the trouble-maker a more potentially dangerous element than in air transport, where even momentary negligence may take a toll in the form of human lives.

The Bill is shortly to become law. But what steps have been taken towards the actual integration of the various companies? So far as present information goes, very few steps indeed have been taken. And yet, until this is done, the Bill is nothing but a paper mandate. It would have been wise to have selected the Chairmen and the key personnel of the Corporations some months ago, so that pre-planning would have been well advanced before the vesting date. This has not been done, and if report is to be credited, the difficulty of finding a suitable Chairman for the domestic Corporation has not yet been overcome.

Many have unexpressed fears about the working of the Corporations. They are prompted by the fact that the Corporations are to be at the beck and call of the Central Government and Parliament to an extent that will negative any attempts to run them on sound business lines. The shareholders will be in almost constant session and will be guided in their criticism far more by political ideologies than by the realities which govern the business of air transportation. The Corporations will, in fact, be run in the best bureaucratic tradition. Decisions will be difficult to obtain, files will shuttle backwards and forwards between the Corporations, the Air Council, the Ministry, the Directorate of Civil Aviation and the Advisory Councils, rules will be hidebound, salaries will be related to other Government departments, promotion will be on length of service, and last, but not least, parliamentary criticism will damp any ardour, which might remain in the hearts of genuine enthusiasts amongst the executives. In other words, all the worst fears expressed by the Rajadhyaksha Committee will be fulfilled.

This is not a very engaging picture to contemplate, but the fact remains that air transport does not lend itself to function smoothly and efficiently under the form of control implicit in the Bill. It would show wisdom on the part of the Government, even at this late stage, to delay implementation of those clauses which deal with the Air Council and to divorce entirely the Corporations from any control by the Directorate of Civil Aviation, save, of course, in matters relating to crew licensing, aircraft registration and certification, etc., which are normally dealt with by the Directorate.

The Government has ample safeguards in its choice of the Chairmen and members of the Corporations. Having selected these carefully, the running of the Corporations could and should be left to their direction, unhampered by undesirable and unnecessary outside interference. It is the essence of wise leadership to leave to subordinates the execution of the policy laid down. Let Parliament by all means scrutinise the annual accounts and castigate, like good shareholders, any deviation from the path of economy or good stewardship. For the rest, it would be wise to give the managements reasonable scope for efficient work and then, in spite of a somewhat inauspicious start, both Corporations might prove to be an asset and a source of pride to the nation.

SALES TAX LAW

A CLEARER picture of the sales tax law in India has emerged from a series of Supreme Court decisions on sales tax appeals preferred by both State Governments and trading concerns. Only in March last, we had the Supreme Court's verdict on the Bombay Sales Tax Act appeal in respect of Articles 286(1), 286(2), 301 and 304 of the Constitution of India. Once again, last week, a further interpretation of some of these Articles was given by the Court, in the course of its judgment on a number of appeals to it preferred by the Travancore-Cochin Government. This interpretation is beneficial in two ways. First, it serves to extricate the sales tax law from the labyrinth of legal conundrums. Secondly, the several points of law raised and the decisions given thereon are of immense significance to trade and industry, in that they have minimised considerably the vagaries of interpretation to which the sales tax law stood exposed in each State.

Before proceeding to the legal aspects involved in the Supreme Court judgment referred to above, it is necessary to refer briefly to the facts of the case. The respondents in the case were dealers in cashewnuts in Travancore-Cochin. Their business consisted of several types of transactions in the commodity: (*a*) purchases of cashewnuts from dealers inside the State; (*b*) purchases from dealers outside the State in the neighbouring districts of Madras; (*c*) purchases through importing cashewnuts from Africa through (i) Bombay party which acted as commission agents, and (ii) others who sold the goods as principals to the respondents by issuing separate delivery orders against payment; (*d*) purchases of raw cashewnuts and manufacturing of kernels out of them for export to the U.S.A., and (*e*) export of the oil pressed from the shells and from the cashewnuts. At several stages in these transactions they paid sales tax to the State Government under the Travancore-Cochin General Sales Tax Act. The position of the respondents changed with the coming into force of the Constitution of India on 26th January, 1950. Article 286(1)(B) of the Constitution exempted from sales tax goods in the course of export or import trade. This Article, it may be noted here, reads: "No tax should be levied on the sale or purchase of goods into or export of goods out of the territory of India." Consequently, the respondents applied to the State authorities for exemption in respect of the purchases made between 26th January and 29th May, 1950, the end of the account year. The sales tax authorities having rejected the claim, the party went in appeal to the State High Court. The claim was upheld by the Court which quashed the levy of the sales tax so far as it related to the particular period. The State, in its turn, preferred an appeal to the Supreme Court.

The question for consideration by the Supreme Court was as to how far the cashewnuts purchases made by the respondent firms were entitled to the protection of Article 286(1)(B) mentioned above. Of the five Judges of the Court, four have unanimously affirmed the decision of the State High Court, while the dissenting Judge has disagreed on the main interpretation given to Article 286. The majority decision interprets Section 286(1)(B) in the light of the Supreme Court's earlier decision in the Bombay Government sales tax appeal case. In that case, the two sections which had given rise to considerable litigation in the collection of tax, namely, 286(1) and 286(2), had come up for the Court's review. Article 286(1) prohibits the taxation of a sale when the sale takes place outside the State or where it takes place in the course of import into, or export out of, the Indian territory. For the purpose of this Article, the Court had stated that "a sale or purchase is deemed to have taken place in the State in which the goods have been delivered for the purpose of consumption in the State." Again, Article 286(2) prohibits the imposition of a tax on inter-State trade. Explaining the scope of this Article, the Court had pointed out that it provided a workable test for determining the State which had the power to tax goods passing from one State to another. The test was: Were the goods actually delivered in the taxing State for the purpose of consumption therein? All buyers within the State of delivery, except those buying for re-export out of the State, were liable to pay tax on the inter-State transactions, the Court added. Bearing these interpretations in mind, the Chief Justice of the Supreme Court has pronounced his decision on the applicability of sales tax law to transactions (*a*) to (*e*) enumerated in respect of cashewnut purchases made by the respondents, as mentioned in the second paragraph above.

The majority judgment splits up all purchasing transactions into three groups, (*a*) purchases made within the State, (*b*) purchases made in the neighbouring State, and (*c*) purchases from abroad. With regard to (*a*), that is, purchases within the State by the exporter for purposes of export, the Court has decided that such are not within exemption and are, therefore, liable to tax.

Commenting on (*b*), namely, purchases made outside the State, the Court holds that, if the purchases are made and taken delivery of by their own paid servants outside the State, and brought into the State across the border, after the transaction is complete, such goods are exempted from the tax. But, on the contrary, if the purchases are effected by commission houses outside the State on behalf of the respondents and are delivered through normal commercial channels, such transactions are considered to be not within the scope of exemption.

Imports from abroad are again split into two groups similar to those in inter-State trade above; one group of purchases made through intermediaries, known in this case as "Bombay party" doing business as commission agents at Bombay for the respondents, and the second of purchases by the "Bombay party" which sells goods as principals to the respondents at the port of destination by issuing separate delivery orders, as pointed out in (*c*) (ii) above. The first type of purchases, where the "Bombay party" acts as commission agents, is deemed to be within the scope of the exemption granted by the Constitution on the ground that these purchases occasioned the import of the article. In the second category of purchases, where the "Bombay party" itself purchases directly from Africa, the respondents are required to pay the sales tax. For one thing, no privity is established between the respondents and the African sellers; for another, the respondents' purchases are deemed as purchases of goods within the State from the "Bombay party." However, if the purchase by the respondents takes place while the goods are at sea, such purchases come under the exemption clause, though the "Bombay party" is the direct importer.

On certain other points, too, the Supreme Court has expressed its opinion. Thus, if the cashewnuts are purchased for the purpose of exporting them out of the country, such purchases are deemed to have fallen under the exemption clause. However, if such cashewnuts go through a process of manufacture and are then sent abroad, the purchases are outside the clause. Again, sales tax is required to be paid in the case of cashewnuts purchased locally for export. Again, the Court has done well in ruling that no sales tax should be levied on the value of the packing materials, as they cannot be treated as articles separate from the contents of the packages.

AWARD ON TISCO SHARES WELCOMED

TEA BILL PASSED—BURMA'S DECISION ON TARIFFS

THURSDAY, 5 P.M.

CHEERFUL conditions are again being witnessed on the Stock Exchange. The slightly subdued tone noticed last week has proved shortlived, as equity values have again forged ahead under the influence of speculative activity. The market has reacted very favourably to the Mediator's award on the conversion issue of Tata steel shares. After creating a mild flutter, the award has helped to impart a steady tone to the market.

MARKET GOSSIP

The flutter is attributed to some feverish covering in Tata Ordinaries and liquidation in Deferreds, by certain operators who, having pitched a higher ratio than 1:6, had gone short in Ordinary shares and long in Deferreds. The technical position having thus been corrected, relatively more stable conditions have come to prevail since yesterday. Among steels Tata Deferreds have rallied 32½ points to Rs. 1,920 and Ordinaries 2½ points to Rs. 331 over the week. Textiles too have moved up on speculative enquiry, induced by bright outlook for cloth exports and encouraging reports from the local cotton piecegoods market. The miscellaneous section has, in sympathy with other scrips, recorded modest gains on balance. The undertone remains, at the moment, very steady.

* * * *

The most notable event of the week for the Stock Exchange is the release of the award, by Mr. M. C. Setalvad, Mediator, on the conversion of Tata Deferred shares into Ordinaries. The Mediator has suggested that, in his opinion, the ratio of conversion would be six Ordinary shares to one Deferred share. The striking part of this award is that its author has not gone into details of the controversy; nor has he given, in an elaborate manner, the reasons behind his decision. He has forwarded a short note entitled, "Opinion" to the Tata Iron and Steel Co., Ltd., and the two committees representing the two classes of shareholders. The note is perhaps the briefest valuable document of its kind, dealing, as it does, with the most controversial issues connected with assets of a company valued at several crores of rupees—Rs. 41.76 crores to be precise. For, it contains no more than five carefully worded paragraphs which read thus:

"1. In substance, what is to be achieved in the present case is a fair valuation of the Deferred shares of a going concern in terms of the Ordinary shares of the same concern. In such a valuation no question would seem to arise of winding up or sale values. It appears to me that the essential factors to be considered in arriving at the intrinsic or real value of the shares are: (*a*) the earning capacity of the Company; and, (*b*) the safety of capital or assets backing. Of these two factors the paramount factor is the potential earning power of the Company.

"2. Though the market quotations for shares are not necessarily indicative of their true worth they certainly have to be taken as representing their market prices at a particular time because these prices are fixed in a free and open market by dealings between buyers and sellers. Thus though market value is not a conclusive test of real value, where there is a free market, it is cogent evidence of real value.

"3. The dividends paid over a number of years would also in some measure be indicative of the real or intrinsic value of the shares.

"4. The true approach, in my view, would, therefore, be first to arrive at the fair value of the two classes of shares on the basis of a computation of the average maintainable profits. The average maintainable profits would be equivalent to the maintainable yield and indicate the prospective earning capacity of the shares. The fair value so arrived at can be checked by a valuation based on market quotations over a period of about ten years and by a valuation based on the dividends paid over a similar number of years. The equity value of the two classes of shares and their relative rights in a winding-up will also have to be considered.

"5. Having given careful consideration to all the relevant factors including the equity value of the two classes of shares and having given due weight in valuating the ratio to the higher rights in a winding-up of the Deferred shareholders, I am of the opinion that the fair conversion ratio is six Ordinary shares to one Deferred share."

* * * *

It is evident that in arriving at the fair value of the two classes of shares, Mr. Setalvad has taken into consideration the earning capacity of the Company, the safety of capital, or assets backing, and the average maintainable profits which indicate the prospective earning capacity of the shares. The ratio of conversion on the basis of this method of computation is, as already stated, one Ordinary share to six Deferred shares. This ratio of 1:6 has been checked further by a valuation based on the dividend paid over a period of ten years as also by a valuation based on market quotations of the shares over a similar number of years. It may be noted that this ratio is the same as the one arrived at by the Tariff Board also on the basis of earning power. Again, this ratio is in line with the expert opinion of which an indication was given in these columns in *Commerce* dated 28th March last. We observed then: "According to one reliable source, a ratio of six Ordinary shares per Deferred share is the recommendation of one of the experts—an auditor practising in Delhi—advising the Mediator." As against this ratio, the expectations in market circles have, however, varied from time to time, all these days, between the ratios of 1:7 and 1:5½. Again, while the Ordinary Shareholders Committee pleaded for a ratio of 1:5 the Deferreds Committee pleaded for one of 1:11 in the course of their discussions with the Mediator during his investigations.

* * * *

Now that the award has been given, the question which arises uppermost in one's mind is: Will the two classes of shareholders agree to the ratio? A clue to the answer to this question is provided by the reactions to the award of Mr. R. E. M. Patel, Chairman of the Deferred's Shareholders Committee. Mr. Patel has characterised the award as a "golden mean." Although the actual ratio is not far below his expectations, Mr. Patel opines that it should be accepted by the general body of shareholders. Further, in his opinion, it will not be difficult for the Company to keep up the present level of dividends after the conversion, as the Company has a strong case for a higher retention price for its steel. These views have engendered hopes among certain sections of the market that the conversion scheme would be put through comfortably. This section feels that even if there is opposition from a small group of disgruntled shareholders, such elements will not get substantial backing from either class of shareholders. Besides, it is pointed out that such opposition cannot gather adequate strength, since it will be difficult to secure the support of all shareholders scattered widely all over the country. As against these views, there is another section which, by reason of its sad experience of the way in which the Conversion issue has been stoutly opposed by certain Deferred shareholders since it was mooted ten years ago in 1942, is somewhat unwilling to admit that the scheme will have a smooth passage.

* * * *

The reactions of the Ordinary shareholders are not, however, available on account of the absence from Bombay of the Chairman of their Committee. It is, however, understood that they have little cause for dissatisfaction with the award, as it is more or less up to their expectations. In 1942, the Tata Iron and Steel Company had offered a ratio of 1:5½. As a result of the award this ratio moves up by ½ ordinary share only, which they should not mind conceding, in view of the improvement and expansion that have taken place in the financial position of the Company since then.

* * * *

The Deferred Shareholders' Committee is scheduled to meet on the 25th inst., for considering the award. The date of the meeting of the Ordinary Shareholders' Committee is not yet fixed. But when these Committees meet, they should bear in mind certain important considerations, while taking their final decisions on the award. There is a very good demand for steel in the country. In order to meet this demand, the Company has formulated plans for expansion. When the plans are given effect to, the production of steel by the Company is expected to go up from the present level of 800,000 tons to 931,000 tons by 1957. The Company needs huge capital to carry through its expansion programme and has approached the Government of India for financial assistance. But the latter has indicated that it will be difficult to grant a loan, unless the highly speculative Deferred shares are converted into Ordinary shares. Even the old Tariff Board emphasised the need for such a change. The elimination of the Deferred shares is considered necessary because the shares are absorbing a good portion of the Company's profit; their presence has been a source of friction between workers and the management of the Company and is being stoutly opposed by labour. Moreover, the Company will not be in a position to reorganise its capital structure which is necessary to carry out its expansion programmes. Finally, as the most sensitive and speculative of scrips, these shares have been responsible for causing violent disturbances in the investment market. These considerations point to the need for accepting the Mediator's award. The author of the award is a disinterested third party known for his integrity and independent judgment. His assessment of the value of the shares can undoubtedly be taken as fair and reasonable and, therefore, satisfactory. It is to be hoped that in view of the Company's important role in the country's economy, the shareholders concerned will give the line clear to the Company for proceeding ahead with its plans by upholding the Mediator's award.

* * * *

The present capital of the TISCO consists of 350,000 Ordinary shares, each with a paid-up value of Rs. 75, and 48,750 Deferred shares of a paid-up value of Rs. 30 each. On conversion—if the scheme is finally accepted—at the ratio of 1:6, the total number of ordinary shares would go up to 642,500. What are then the dividend prospects for these shares? The answer to this question has been provided by Mr. Patel, the Chairman of the Deferred Shareholders' Committee, himself. Apart from his general observations, it will be seen that if the total amount to be distributed on these shares is the same as that for last year, that is, Rs. 129 lakhs, the rate of dividend after conversion will be a fraction better than Rs. 20 per share. In order to raise this by a rupee more to Rs. 21, the dividend paid last year, the additional amount required will be about Rs. 5.25 lakhs, a sum which is only a fraction of the total average annual profits earned by the Company.

If the conversion scheme is finally adopted, the Ordinary shares are likely to have a bright future. In fact, it has every chance of taking the place of the Deferred shares on the Exchange. For, the shares continue to acquire all the qualities of leadership at present enjoyed by the Deferred shares. The large volume of floating stocks of the Ordinary shares, their high dividend-earning ability with prospects of further improvement in future, the fact that the Company is under sound management in which the ordinary investor has reposed his complete confidence, and the bright future for steel in the country under the Five-year Plan—all these factors are bound to go a long way towards making the shares the most coveted ones from the point of view of both investors and speculators.

* * * *

Now that the House of the People has passed the Central Tea Bill, which, when finally enacted will be known as the Tea Act, 1953, it is worthwhile to consider the changes which it has undergone in the course of its passage in Parliament. So far as the industry is concerned, it will get some satisfaction by the knowledge that the Chairman of the Tea Board, contemplated by the Bill, will be elected instead of being nominated. The Commerce Minister, Mr. D. P. Karmarkar, accepted an amendment to this effect on behalf of the Government, though he declined the suggestion that the Government should consult the Board in fixing the price of tea. The Minister's argument for rejecting the suggestion was that the Government alone could act objectively in this matter. An amendment, moved by Mr. Karmarkar, clarified the Government's powers in dealing with tea prices. The Government has powers to direct any person, growing, manufacturing, or holding tea or tea waste, to sell the whole or part of the commodity. When this power is used, the price at which the sale is to take place shall be a price consistent with controlled price or a price calculated with reference to the controlled price or, in the absence of a controlled price, a price calculated at the market value prevailing in the locality as on the date of sale. Although the Government was unwilling to accept the industry's suggestion that the Board should not be nominated, but consist of representatives nominated by the concerned tea associations or other bodies, the Commerce and Industry Minister, Mr. T. T. Krishnamachari, gave the assurance that he would select the members from a panel of names submitted by the representative interests. He said he had no intention of being arbitrary in the matter and would provide in the rules that the representation of the appropriate associations should be taken into account in making nominations. This is a welcome assurance.

* * * *

Burma, according to reports from Rangoon, has decided to end with effect from 30th September, 1953, the system of preferential tariffs, now enjoyed by the U.K., India and Pakistan, and also the Indo-Burmese trade agreement. This action would naturally affect India's trade with Burma, which consists largely of textile exports from this country. Burmese observers feel that the exports of British and Indian textiles are likely to suffer as a result of the new move by Burma, and that Japan might gain at the expense of India and the U.K. Already, exports of certain varieties of mill *lungis*—*lungi* exports to Burma constitute an important part of India's export trade—are prohibited by the Government of India, as a measure of assistance to handloom weavers who are permitted to export freely all varieties of *lungis*. But it remains to be seen whether the handloom weavers will be able to benefit from this artificial help, considering that they have to compete with mill-made fabrics from Japan—and do so, without the original advantage of lower tariffs. In the meantime, if Burma revises its tariff rates so as to make them more protective in character—and it is now reported to be engaged in this task—it would be a severe blow to India's export trade to that country. Perhaps, this country would do well to negotiate a bilateral trade pact with Burma so that a market for its textiles and other commodities is assured there. Burma too will then be assured of an outlet for its surplus products, notably rice and timber. The next few months might, however, see a sizable expansion in Burma's trade with the Commonwealth countries and with India, in particular. For, many firms, in that country, it is stated, would be anxious to import goods at the current favourable rates of tariff, before the old schedule is finally replaced by a new one in October.

* * * *

The outlook for wheat exports acquires some new significance against the background of the recently concluded International Wheat Agreement (I.W.A.) which has been signed by all the 46 members of the Agreement with the sole exception of the U.K. There is little chance of prices piercing the I.W.A. maximum of $2.05 a bushel, considering that world stocks of wheat are reported to be exceptionally high, thanks to good harvests last year. The chief producing countries, namely, the U.S., Canada, Australia and France, it is stated, hold good stocks of wheat which were estimated at 39.4 million tons as on 1st January, 1953, as against 25.5 million tons on the same date last year. These countries, which belong to the I.W.A. group, account normally for 24 million tons out of the world total exports of some 26 million tons. The breakdown of their stock position, in millions of tons, at the beginning of the year is: U.S. 195; Canada 14.8; Australia 3.1 and France 2.0. And on the same date, the two chief non-I.W.A. wheat producing countries, namely, Argentina and Turkey, holds 3.6 million tons and 0.5 million tons respectively. These stocks are certainly on the high side. But then, it would be necessary, for purposes of global comparison, to take into account the wheat position of the Iron Curtain countries. Little information is, however, available about these countries, though it is known that their agriculture, disrupted during the war, has recovered, and that their wheat output has increased.

ALL-ROUND ADVANCE IN SHARE VALUES

TEXTILES RULE FIRM

(From Our Own Correspondents)

BOMBAY, 14*th May*

THE suspense that had been hanging over the Stock Exchange, over the Mediator's award on the conversion ratio for Tata Deferreds, for the last several weeks, was relieved with the announcement of the award on Sunday night recommending a ratio of 1:6, followed by the publication of his brief report. The award failed to take the market by surprise, as it was more in tune with general expectations. There were, therefore, no violent fluctuations in prices on that account, which showed that the market had reconciled itself to the inevitable position of accepting the award in the larger interests of the Company and of the shareholders themselves. To this extent the award had a fair reception and prices of steel counters hardened. If there were no substantial gains, it was due to two reasons: (1) this factor had already been discounted in prices; and (2) it would take some months before the scheme of conversion, if the award was finally accepted by both the classes of the shareholders, was implemented.

There was an all-round rise in prices in other sections of the market, the gains in textile counters being particularly impressive. Though the day-to-day news regarding armistice in Korea produced mild fluctuations in prices, the market circles have generally come to disregard this factor as a disturbing one, at least for some time to come, in view of the difficulties in the way of signing an armistice. The good prospects for cotton textiles and the firm trend in bullion and commodity markets lent good support to equities.

In the steel section, Tata Deferreds were dull but steady early in the week due to end-of-account considerations, moving up from Rs. 1,887-8 to Rs. 1,892-8. The immediate reaction to the announcement of the award was a smart gain to Rs. 1,930 on Monday, but the advance was halted by the intervention of profit-taking which made fairly deep inroads into the earlier gains. The scrips, as a result, soon reacted to Rs. 1,913-12. After moving between that level and Rs. 1,927-8, they finished the week at Rs. 1,920 with a gain of Rs. 32-8 over the week. Tata Ordinaries rebounded from Rs. 328-8 to Rs. 334-8, but latterly moved between Rs. 328 and Rs. 333 before closing at Rs. 331. Except for a mild reaction in sympathy with Tata scrips, Indian Irons failed to impress, finishing the week with a gain of only As. 2 at Rs. 25-10.

Textiles shares were active and the speculative, as well as the cash counters, scored fair gains encouraged by favourable reports from the cotton textile piecegoods markets. Bombay Dyeings advanced by Rs. 3-12 to Rs. 398-12, Centurys hardened by Re. 1-8 to Rs. 277-8, Finlays gained as much as Rs. 12 to Rs. 317, Gokaks put on Rs. 3-8 to Rs. 219-8 and India United Ordinaries were As. 5 better at Rs. 10-14½. Indore-Malwas moved up by Rs. 6-14 to Rs. 96-4, Kohinoors closed at Rs. 313-8 *ex-div.* which, on the basis of *cum-div.* showed a rise of Rs. 6-4. New Citys rose by Re. 1-4 to Rs. 151-4 and New Greats by Rs. 2 to Rs. 158. Simplex were pushed up by Rs. 8-8 to Rs. 182. The Company has declared a final dividend of Rs. 9 per share of Rs. 50 each, which with the interim one of Rs. 6, makes a total of Rs. 15 per share for the year ended 31st March, 1952, on a capital of Rs. 31.50 lakhs. Last year, the Company had paid a final dividend of Rs. 10 per share on the capital of Rs. 31.50 lakhs, while the interim one of Rs. 5 per share was on a capital of Rs. 21 lakhs. Standards were a bright spot with a spectacular rise of Rs. 18-12 to Rs. 301-4. Svadeshis and Swans each gained Rs. 5 to Rs. 259 and Rs. 440, respectively and Tata Mills were placed Rs. 2 higher at Rs. 44.

Banks shares presented a steady front with small gains. Barodas were in request to score an advance of Re. 1 to Rs. 115. Indias were up by As. 12 at Rs. 154-12. Imperial Fully Paids rose by Rs. 8-12 to Rs. 1,966-4 and Ordinaries by Rs. 3-12 to Rs. 458-12. Central Old and New shares were, however, a fraction lower at Rs. 63-12 and Rs. 65-8, respectively. United Commercials added As. 4 before closing at Rs. 35-8.

Selected shares in the public utility section were in request and scored modest gains. Ahmedabads (Old) were done As. 10 better at Rs. 109-11 and Bombay Suburbans Re. 1-4 higher at Rs. 123-10. Surats were picked up Re. 1-4 higher at Rs. 131-14 and Tata Powers moved ahead by Rs. 5 to Rs. 1,520. Tata Hydros were quiet at Rs. 151 and Andhra Valleys at Rs. 1,431-4.

Despite lack of interest, insurance shares remained steady. Orientals were better by Rs. 10 at Rs. 7,160, New Indias by As. 4 at Rs. 42-8, Jupiters by As. 3 at Rs. 7-3 and Vulcans by just an anna at Rs. 11-5.

In the miscellaneous section, Associated Cements stabilised themselves at Rs. 171. Belapurs, however, improved by Rs. 4-8 to Rs. 240-8. Bombay-Burmahs were a neglected counter and they lost Re. 1-4 to Rs. 382-8. B.I.Cs. were steady at Rs. 8-11. Killick Industries were in demand, moving up by Rs. 3 to Rs.155. National Rayons closed with a gain of Rs. 3-8 at Rs. 93. Tata Chemicals were better by As. 2 at Rs. 9-6, but Tata Oils showed no change at Rs. 34. Wimcos were placed at Rs. 225-10 *ex-div.*, as against Rs. 234-6 *cum-div.* at the close of last week.

Calcutta Stock Exchange

CALCUTTA, 12*th May*

The award of Mr. M. C. Setalvad, suggesting the ratio for the conversion of Tata Deferred shares, at six ordinary shares to one deferred share did not have any pronounced effect on trading on the Calcutta Stock Exchange during the last two days. In expectation of this announcement, however, Indian Irons had been sent up from Rs. 25-6 to Rs. 25-11 on Saturday. As the award was broadly in line with the market's expectations, the rate did not move further in the past two days. Strength was also derived earlier from expectations of an early announcement regarding higher retention prices. It was, however, the jute section which provided leadership to the market; this was quite natural in view of the impressive rise in prices of jute goods. Jutes provided many features and, judged from present indications, hold out moderate prospects. Stocks of sacking goods are declining, and although business with foreign buyers has not yet picked up a justifiable rate to enable holders of sacking goods to take a very optimistic view of the future, a fillip is possible as a result of the present efforts of the I.J.M.A. to increase the rate of exports to the Far Eastern countries. No doubt, hessian stocks are increasing, but the market expects that this increase would be more than offset by business with the United States and the Argentine. In view of these factors, jute shares attracted a considerable portion of the funds that came to the market this week.

Another factor for all-round cheerfulness was the difficulty in reaching a truce agreement in Korea. The upward trend in prices of silver, and the smart rally in the prices of copper and tin were considered as indications of the inconclusive pourparlers in Korea.

Moderate interest was shown in textile shares, and although the disposal of cloth production continue to be a major problem for mills, operators could not but notice the higher tendency in cloth prices. Elgin Mills were unchanged at Rs. 16-12, while Basantis gained to Rs. 4-4 from a previous rate of Rs. 3-13. Kesorams were quiet at Rs. 19-10, and Cawnpores came to business at Rs. 8-7.

Coals were generally quiet, but were not devoid of features. Rewas were raised to Rs. 20-4 from Rs. 19-8, and Pench Valley in transactions advanced to Rs. 20-5 from Rs. 19-11. Raneegunges picked up interest at the higher rate of Rs. 9-3, Burrakurs and Bengals remaining unchanged at Rs. 10-10 and Rs. 532, respectively. South Karanpuras changed hands at Rs. 13-12.

Jutes occupied the pride of place in the market, and the better outlook for jute goods resulted in a large number of transactions at advancing rates. Indias at Rs. 133 showed a six-point rise and Kinnisons gradually gained from Rs. 196-8 to Rs. 201. Ganges were strong at Rs. 74, Nuddeas at Rs. 48-12, and Reliances at Rs. 15-2. Unions spurted from Rs. 163 to Rs. 173 and Northbrooks were better at Rs. 21, as against Rs. 19-3 earlier. Other counters of interest were Standards at Rs. 136, Agarparas at Rs. 19-8, Deltas at Rs. 135, Gourepores at Rs. 306, and Budge Budges at Rs. 166. Speculative Howrahs opened at Rs. 24-7 and after rising to Rs. 24-15 shaded to Rs. 24-11.

Indian Irons in the engineering section fluctuated narrowly. Opening at Rs. 25-8 on Wednesday, the rate was pushed down to Rs. 25-4 following selling pressure, but Saturday saw an improvement to Rs. 25-11. The disappointment owing to the delay in the announcement of retention prices was duly reflected during trading on Monday and the rate moved down to Rs. 25-6. During April, the Company produced 52,210 tons pig iron, 30,980 tons steel ingots, and 19,090 tons semis and finished steel. Jessops changed hands at Rs. 24-12 and Braithwaites improved from Rs. 11-2 to Rs. 11-6. Burns realised Rs. 277. Britannias eased from Rs. 19-5 to Rs. 19-1.

Indian Cables provided a feature in the miscellaneous section with an advance from Rs. 18-5 to Rs. 18-10. Alkali Chemicals maintained the improvement, touching Rs. 13-14, while Airways India were further marked down to Rs. 11-7. Dunlop Rubbers were wanted at Rs. 28-14, B.I. Corporations were steady at Rs. 8-11. India Steamships were unchanged at Rs. 6-5, while F. & C. Oslers were traded at Rs. 5-14. Titaghur Papers were around Rs. 35-2, Assam Saws Rs. 6-5 and Sone Valley Cements at Rs. 7-4.

Only poor interest was evinced in tea shares, and sellers out-numbered buyers. In the result, some recession in values was reported. Thus, Basmatias receded from Rs. 24-4 to Rs. 24-2, Hattikhiras from Rs. 9-13 to Rs. 9-11, and Patrakolas from Rs. 104 to Rs. 101. Birparas were unchanged at Rs. 54. Seeyoks came down from Rs. 8 to Rs. 6-12. Teloijans were priced at Rs. 9-14, while Moheemas were fractionally better at Rs. 3-9.

* * * *

Madras Stock Exchange

MADRAS, 12*th May*

There was further broadening of activity on the Madras Stock Exchange during this week. Textiles came in for fair speculative support. Plantings were comparatively better. Rubber scrips were cheerful on continued reports of reduction in floating stocks of raw rubber. Teas fared well on steady offtake of tea leaves from consuming centres in India and demand for quality tea from the Continent. Coffees ruled in sympathy with the generally better trend in plantings. Miscellaneous scrips also met with some support. Banks were firm. Business done on the Exchange was, as a result, considerable, and prices generally recorded sizable gains.

Expectation of restoration of power cut at an earlier date was also responsible for the fair activity witnessed in textiles. Coimbatore Kamalas shot up from Rs. 85 to Rs. 91. Metturs gained Rs. 2 to Rs. 192 and Sitarams, Re. 1-4 to Rs. 36-12. Sri Krishnarajendras were done at Rs. 41, as against Rs. 40. Maduras were better at Rs. 35-8. Bangalore Woollens and Buckinghams were, however, unchanged at Rs. 247-8 and Rs. 115, respectively. Cambodias were done at Rs. 10-10, as against Rs. 11-11 *cum-div.*

Among rubbers, Thamarpallys improved by As. 10 to Rs. 13-12 and Cochin Malabars, by As. 5½ to Rs. 6-10. Vaikundams rallied As. 6 to Rs. 13-12. Kailas scrips gained As. 2½ to Rs. 3-6½ and Thirumbadis, an anna and a half to Rs. 2-11½. Midlands (tea and rubber) advanced by As. 9 to Rs. 10-3. Anandams and Velimalais were fractionally better at Rs. 9-10 and Rs. 2-2, respectively. Pullangodes were done at Rs. 2-12 *cum-div.*, as against Rs. 2-7. The Directors have recommended payment of first and final dividend of 20 per cent. on ordinary shares for the year ended 31st March, 1953. The dividend for the previous year was 7½ per cent.

In teas, United Nilgiris were higher by Re. 1 to Rs. 178. Kalasas gained As. 8 to Rs. 10-8. Periakaramalais were up by a similar amount to Rs. 27-4 *cum-div.* Peermades changed hands at Rs. 24-4, as against Rs. 24. Devoshalas improved by As. 4 to Rs. 15-12 *cum-div.* But Haileyburias lost As. 2 to Rs. 13-6 and Highland Produces, an anna to Rs. 10-3. Fringfords were also slightly lower at Rs. 2-7.

Coffee scrips were in good support. Coffee Lands and Consolidated Coffees were lifted up by As. 5 each to Rs. 9-14 and Rs. 17-8, respectively. Chandramalais, Chembras and Kil Kotagiris (teas and coffees) were all better at Rs. 2-8½, Rs. 2-12½, and Rs. 5-4 *cum-div.*, respectively.

Among miscellaneous scrips, Andhra Cements 'B' were in demand As. 8 higher at Rs. 10-2. Andhra Cements 'A' gathered Rs. 5 to Rs. 100. Central Scientifics were up by As. 2 to Rs. 5-5. Radio and Electricals improved by As. 4 to Rs. 4-8. Indian Steel Rolling Mills shot up by As. 8 to Rs. 13.

In the banking section, Indian Banks, Rs. 80 paids-ups, firmed up by Rs. 6 to Rs. 135, Rs. 55 paid-ups, by Rs. 4-8 to Rs. 96, and Rs. 100 paid-ups by Rs. 3 to Rs. 173. A call of Rs. 5 per share on the Rs. 80 paid-ups and Rs. 55 paid-ups has been made and the same is payable on or before 30th May, 1953.

Notice

THE NEW INDIA ASSURANCE COMPANY, LIMITED

BOMBAY

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Share Transfer Books of the Company will be closed from 30th May to 26th June, 1953, both days inclusive.

By Order of the Board.
B. K. SHAH,
General Manager.

BOMBAY, 14*th May*, 1953.

JENSON AND NICHOLSON (INDIA) LTD.

An event of considerable importance to the long-term capital market was the issue of 20,000 redeemable preference shares of Rs. 100 each, at par, carrying interest of 7½ per cent. per annum, less tax, by Messrs. Jenson and Nicholson (India) Ltd. last week. The success of the issue was already assured even before it was open for public subscription on the 8th inst. For, the Company had already received firm applications for 18,000 shares and the Directors had decided to accept them in full. The remaining 2,000 shares, we are told, have since been over subscribed. The issue was not underwritten.

The Company was incorporated and registered as a private company in December, 1922 and was converted into a public company as recently as on 22nd April, 1953. It is a subsidiary of Jenson and Nicholson Ltd. of England, a name associated throughout the world with the manufacture of high quality paints. The Indian company has an up-to-date factory at Naihati on the River Hooghly. It manufactures a wide variety of paints and natural and synthetic protective materials, including industrial finishes. It has a programme of development and modernisation. Part of the proceeds of the above capital issue, namely, Rs. 6 lakhs, is to be used for the above purpose and the balance is to be utilised as working capital.

The Company already has an issued share capital of Rs. 32.50 lakhs, made up of 3,25,000 ordinary shares of Rs. 10 each, on which it paid a dividend of 9 per cent. free of tax for the year ended 31st December, 1950. The dividend was doubled in the following year to 18 per cent., but was reduced to 11 per cent. for the year 1952.

NEWS IN BRIEF

THE net income-tax revenue collections during 1952-53 amounted to about Rs. 181 crores, which is Rs. 11 crores more than the revised budget estimate.

Upto the end of 1952-53, under the various technical co-operation schemes, India has provided five experts to foreign countries, and given training facilities to 70 foreign students. During the same period it has received 150 foreign experts and training facilities abroad for 350 Indian technicians.

The Taxation Enquiry Commission has shifted its Secretariat from Sudama House, Ballard Estate, Bombay, to "White House," 91, Walkeshwar Road, Bombay. All letters, telegrams etc. should now be directed to the Secretary, Taxation Enquiry Commission, at the new office.

No nickel coins are being minted at present in the new Mint at Alipore. It is producing bronze single pice only. The Mint is capable of processing other metals also. There is large capacity to process bronze, aluminium and cupro-nickel coins, in addition to nickel, and to manufacture medals, tokens and badges.

The all-India final estimate of black pepper (piper nigrum), 1952-53, puts the current year's area and production at 203,106 acres and 21,625 tons, as against the revised estimates of 201,945 acres and 22,965 tons for last year. This shows an increase of 1,161 acres or 0.6 per cent. in area and a decline of 1,340 tons or 5.8 per cent. in production.

The Government of India has decided to set up a small committee of officials and private engineers to undertake a survey of installed capacity of industries in this country. The data to be collected by the Committee will enable the Government to determine what type of foreign experts would be needed to undertake the overall enquiry envisaged by the Commerce Minister.

Two officials of the West Bengal Government have proceeded to Canada to arrange for the speedy transportation of a suitable hydro-electric plant for the proposed 4,000 kw. hydro-power station of Messanjore Dam under the Mayurakshi project. The Government of Canada has, it is stated, agreed to make a gift of the plant to India under the terms of the Colombo Plan which covers this project.

The Government of India has accepted the Tariff Commision's recommendations that (1) there is no case for the grant of protection to the flax goods industry; (2) an increase in the rates of import duties on flax goods is not warranted; (3) the existing import duty on flax both "line" and "tow" should be abolished and (4) there is no case for the refund of duty already paid on imports of flax fibre.

The total collection of customs and Central excise revenues during the nine months ended December, 1952 amounts to Rs. 196.3 crores, as compared with the revised estimate of Rs. 257 crores for the whole year 1952-53. Of the amount collected, import duties account for Rs. 90.56 crores, export duties for Rs. 42.77 crores, land customs and miscellaneous for Rs. 3.07 crores and Union excise duties for Rs. 59.90 crores.

The Tariff Commission proposes to hold an enquiry into the continuance of protection and assistance to the button industry beyond 31st December, 1953, and has prepared a special questionnaire for producers, who have been requested to furnish information regarding types of buttons manufactured by them, their annual rated capacity and actual production during the last three years, by 23rd May, 1953, at the latest.

The total amount of capital sanctioned under the Capital Issues Order for the five years from 1948 to 1952 (both inclusive) was Rs. 362.9 crores. This information was given by the Finance Minister, Mr. C. D. Deshmukh, in the House of the People on Tuesday last. The amounts sanctioned were Rs. 125.7 crores in 1948, Rs. 63 crores in 1949, Rs. 74.8 crores in 1950, Rs. 59.6 crores in 1951 and Rs. 39.8 crores in 1952. Of the total amount of Rs. 362.9 crores, the proportion of foreign capital was Rs. 41.69 crores.

The Government of India has granted short-term loans aggregating about Rs. 2.90 crores to 10 State Governments to finance the purchase by them of the allocations of fertiliser from the Sindri factory. The loans granted to individual States are: West Bengal Rs. 72.60 lakhs; U.P. Rs. 60.45 lakhs; M.P. Rs. 31.90 lakhs; Bihar Rs. 31.81 lakhs; Hyderabad Rs. 27.89 lakhs; Rajasthan Rs. 17.89 lakhs; Mysore Rs. 16.75 lakhs; the Punjab Rs. 11.05 lakhs; Assam Rs. 7.97 lakhs; P.E.P.S.U. Rs. 6.75 lakhs and Madhya Bharat Rs. 4.53 lakhs.

An agreement has been reached between the management of the Hindustan Shipyard Ltd. and the Hindustan Shipyard Labour Union, to refer to the decision of Mr. Justice Mehrchand Mahajan of the Supreme Court, the dispute between the management and the workers. The decision of Mr. Justice Mahajan will be final and binding and without the right of appeal to either party. A joint application is being filed before the Adjudication Tribunal appointed by the Madras Government, requesting permission for the withdrawal of the dispute from their file.

In reply to a question in the House of the People, Mr. A. C. Guha, Deputy Minister for Finance, said on Tuesday last that exact data regarding rural indebtedness in India were not available. The latest authoritative estimate in this regard was the one made in 1931 by the Indian Central Banking Enquiry Committee which put the total indebtedness at about Rs. 900 crores. While no data were available to show how much of this debt had been liquidated in recent years as a result of the rise in agricultural prices, the Rural Banking Enquiry Committee (1950) had expressed the view that the indebtedness had probably been reduced and especially the debts of large and medium land-holders had been reduced substantially. Agricultural indebtedness was a State subject and the measures that were necessary to liquidate it fell within the sphere of action of the State Governments. The States had been taking necessary steps as and when circumstances required.

* * * *

From Abroad

The Netherlands Bank has repaid $48 million to the International Monetary Fund, being the balance of a debt in foreign currency incurred in 1947-48.

A contract has been signed between the Italian company Nouve Reggiane and the Yemen Government for the exploitation, by the company, of coalfields in South Yemen.

As from 30th April, 1953, a total of 10,572,973 one-hundred pound bags of U.S. rice has been licensed for export, against the adjusted commercial allocation of 12,237,953 bags for the 1952-53 crop year.

Sweden has proposed to abolish the special investment duty from next year. This duty of 10 per cent. on all capital investments by industry is designed to limit the total investments in the country and to abolish inflationary pressure.

Austria's quartz lamp industry put a new model of the most interesting design on the market. The new model can easily be included in a travelling kit owing to its low weight. The lamp has a 5-a.t.m. burner of pure rock crystal and offers the possibility of switching in either simultaneously or separately ultra-violet or infra-red rays.

The U.S. Department of Commerce has estimated the U.S. consumption of natural rubber during March, 1953 at 50,470 long tons—44,123 tons of dry natural rubber and 6,347 tons of natural rubber latex. The consumption of new rubber—natural and synthetic—in March at 128,607 tons, is reported to be a new all-time monthly high record.

It is learned that Japan has asked for 2½ lakh tons of Burma rice for the current year. Burma sold, in February, to Japan 60,000 tons of rice on Government-to-Government basis and 30,000 tons through other channels. It has called for tenders for the sale of 1,46,000 tons of rice for shipments during May and June to Ceylon, Indonesia, Japan, Ryukyu Island, British territories and other countries in the hard currency area.

PERSONAL

MR. Paul Henri Spaak of Belgium has been re-elected Chairman of the European Coal Steel Pool Common Assembly.

Mr. G. D. Daftary, former Chief Engineer, P.W.D., Government of Bombay, and member of the Bombay Housing Board, has been appointed Chairman of the Board, *vice* Mr. Motichand G. Shah who resigned.

Mr. Akhtar Hussain, Foreign Secretary, and Mr. Aga Hilaly, Deputy Secretary, Ministry of External Affairs, Government of Pakistan, arrived in New Delhi on Monday last in connection with Indo-Pak negotiations.

Mr. R. N. Desai has been elected President of the All-India Plastics Manufacturers' Association for the year 1953. Mr. R. C. Shah and Dr. C. L. Gupta have been elected Vice-Presidents and Messrs. M. K. Ramchandani and B. P. Himmatsingka, Hon. Secretaries.

Mr. Arthur Staynes, who has been Director of the International Wool Secretariat's branch in New Delhi, will shortly return to the U.K. He will be succeeded by Mr. E. B. Whitley, the present Director of the Secretariat's Lahore branch. Mr. Whitley will also continue to administer the Pakistan branch.

Mr. H. V. R. Iengar, Secretary, Union Ministry of Commerce and Industry, accompanied by Mr. S. S. Shivalkar, Deputy Secretary, Economic Affairs, Union Ministry of Finance, Mr. P. J. Jeejeebhoy, Exchange Controller, Reserve Bank of India and Mr. N. Dandekar, Director of the Scindia Steam Navigation Co., Ltd., left for Cairo on Tuesday this week for trade talks with the Egyptian Government. After negotiating a trade agreement, Mr. Iengar will proceed to the U.K. and also visit Switzerland, Germany and one or two other Continental countries to find out what arrangements can be made for promoting the sale of Indian tea in the U.K. and other Continental countries.

OBITUARY

Dr. *Sven* Wingquist

We regret to record the death of Dr. Sven Wingquist, Chairman of the Board of Directors of the SKF Ball Bearing Co., Ltd., on 17th April last. Dr. Wingquist started A. B. Svenska Kullagerfabriken SKF in 1907 and designed the self-aligning ball bearing. After serving in the capacity of both Managing Director and member of the Board, he became Chairman of the Company in 1938, which position he held until his death. He olayed a very prominent part in the industrial development of Sweden during his illustrious career.

U. S. AID TO INDIA

CONSIDERING the need for large-scale foreign economic and financial assistance required for the successful implementation of the Five-year Plan, it is indeed comforting to hear that the Republican fervour for enforcing economy in Government expenditure in the U.S. during the ensuing (1953-54) fiscal year has not led to any cut in aid to India. In fact, India will get more U.S. aid during 1953-54 than that provided in the current (1952-53) year, according to the statement of Mr. Harold Stassen, U.S. Mutual Security Director, in the course of his analysis of foreign aid figures submitted to the Senate Foreign Relations Committee last week. The size of the U.S. aid to India during the coming year will be larger than the $45.4 million that India received during the current year. The Congress, we are told, is now being asked to grant $94.4 million for India and Pakistan.

The gesture of the U.S. Government in providing larger economic assistance to India is certainly to be appreciated, inasmuch as it indicates that country's keen anxiety to help India in the task of economic development. This aid will supplement India's efforts to meet its essential development needs by mobilising domestic resources. But the resources, by themselves, have not been found to be adequate to meet all demands, especially in regard to the demand for solving the problem of recurring famine, which, as Mr. Stassen has aptly remarked in his report, "is of crucial importance to the security and stability of the whole area." The U.S. Government's decision to ensure a larger flow of economic and financial assistance to India will, therefore, be widely welcomed in this country.

The scale of assistance which the U.S. Government has so far given and now proposes to give to India, has no doubt served to supplement India's efforts to implement the Five-year Plan. The financial gap in the Plan, to be filled during the next three years, is to the extent of over Rs. 300 crores. It is not clear whether the new U.S. Administration would be willing to assist India further. In this connection, we might recall the suggestion made by the ex-U.S. Ambassador to India, Mr. Chester Bowles, on the eve of his departure from this country in March last, namely, that the U.S. should fill the gap in the Plan by advancing money over a three-year period "as a contribution from the American people to the people of India who are struggling to create a great new democracy here in Asia." The suggestion will, it is to be hoped, receive the consideration it deserves.

HASTY LEGISLATION

Read together, the addresses of Mr. Ambalal Kilachand and Mr. Chimanlal B. Parikh in their capacity as President and Vice-President, respectively, of the Indian Merchants' Chamber, at the first quarterly general meeting of the Chamber, disclose the reactions of the merchant community to the Centre's various measures affecting commerce, industry and trade. The haste with which measures such as the amendment to the Industries (Development and Regulation) Act are being rushed through, naturally came in for severe criticism. And the powers to be vested in Government for taking over the management of industrial undertakings were regarded as "radical" in character. The characterisation of such powers by Mr. Parikh as "sweeping" is, therefore, justifiable. Mr. Kilachand rightly held that the exemption limit in the Estate Duties Bill, as fixed by the Select Committee at Rs. 50,000 in respect of a share in joint family property and Rs. 75,000 in other cases, as "low" and that these limits consequently required "liberalisation." The concern expressed by Mr. Kilachand at the absence of option for surrendering to Government of property equal to the value of the duty is a point to be noted. For, it is possible that it would lead to forced sale of property, to find cash resources to pay duty, at "distress" prices. Mr. Parikh felt that the position of losses, under the Finance Act, incurred by persons who are not members of a stock exchange, in respect of speculative transactions in the stock exchange, called for elucidation. He also emphasised the need for issuing instructions to the officers concerned in order to ensure that the new provision in respect of speculative business are applied in a manner that will not handicap normal speculative business.

The terms of enquiry of the Taxation Enquiry Commission attracted a good deal of the attention of Mr. Kilachand. There is logic in the President's condemnation of one of the terms, which demands of the Commission to examine the suitability of the present system of taxation with reference to the objective of reducing inequalities of income and wealth as "tendentious." For such a reference is likely to convey as Mr. Kilachand pointed out, an impression that the present economic ills are due to "concentration of wealth in a few hands and the inequalities resulting therefrom." In this connection, he quoted, a few interesting figures. More than 99 per cent. of the population, according to 1951-52 statistics, have an income below the taxable limit. The number of persons liable to income-tax in 1951-52 was 8,85,399 which worked out to .25 per cent. of the population. There were only 4,737 assessees with an income of over Rs. 1 lakh per annum. This number, which represented .0013 per cent. of the population, accounted for nearly 63.5 per cent. of the total income demand of Rs. 195.8 crores. Even if the entire income of, say, Rs. 150 to Rs. 200 crores attributable to higher income groups are to be distributed among the 36 crores of population, the *per capita* share would not be more than Rs. 5. He held accordingly that what was required was not so much levelling down of incomes as an all-round increase in incomes through increase in economic activity. Mr. Kilachand's suggestion that the Taxation Enquiry Commission should enquire into the question of utilisation of the revenue derived from the existing system of taxation before it considered sources of new income is certainly reasonable. For, there has been a fourfold increase in public expenditure since 1938-39, when it was only Rs. 6 *per capita*. Whether this increase which has necessitated a corresponding raise in the level of taxation is justifiable, deserves impartial examination.

PUBLIC CO-OPERATION FOR FIVE-YEAR PLAN

Inasmuch as the success of India's Five-year Plan rests largely on the extent of public co-operation it receives, the need for enlisting such co-operation assumes special significance. It was this very need that led to the formation of the National Advisory Committee for Public Co-operation last year, with the Prime Minister as Chairman and consisting of persons representing the important political parties, industrialists and social workers, besides the members of the Planning Commission. Since its inaugural meeting in August, 1952, the Committee has made appreciable progress, as will be evident from the deliberations of the meeting of the Committee held at New Delhi last week-end.

Various steps have been taken by, or under the auspices of, the Planning Commission for generating public enthusiasm for the Plan. These include the setting up of the *Bharat Sewak Samaj*, organisation of voluntary welfare and local works programmes, enlistment of women's co-operation in small savings campaign, breaking up of State plans into district and local units, and orientation of the development administration through the setting up of a National Extension Service and expansion of the Community Projects Programme.

The organisational aspect of the *Bharat Sewak Samaj* has almost been completed and conveners have been appointed in most of the States. As the activities of the *Samaj* involve expenditure, the State conveners decided, at their conference held in New Delhi last week, to launch a drive for collection of subscriptions and donations for the National Welfare Fund at the rate of Rs. 1 lakh per month. The Fund will be utilised partly for central activities and partly for the work taken up in the Pradesh areas. The special programme of work, as adopted at the conference referred to above, covers nine important functions and these are: (1) Education of the people regarding the Five-year Plan and local surveys, (2) training of local workers, (3) participation in Community Project Programmes, (4) anti-corruption drive, (5) anti-adulteration drive, (6) organisation of student and youth camps, (7) community organisation and community centres, (8) non-official participation in agricultural rural extension service, and (9) promotion of national savings.

It is noteworthy that the Planning Commission, as also the State Governments, should have received a number of offers of voluntary service. Several of these, it is said, have already been accepted and work is progressing. The participation of students in voluntary work, mainly in the Community Project areas, is at present being considered and it is expected that, during the ensuing summer vacation, a large number will be working in various parts of the country on constructive programmes. It is equally noteworthy that the public response to the special women's savings drive, launched in March last, has been very encouraging. Thus, according to preliminary reports, nearly Rs. 50 lakhs have been collected during the one-week's drive and promises of another Rs. 50 lakhs, we are told, have been made. With a view to securing lasting results in this direction, a scheme for continuing the work on a permanent basis is being considered.

Action, too, is being taken by the State Governments to break up their plans into district and local units, in accordance with the suggestions of the Planning Commission. Such decentralisation is quite desirable, for it is only in terms of local schemes that local enthusiasm and leadership can play their part. Incidentally, it may be noted that the Planning Commission has earmarked Rs. 15 crores for purposes of encouraging local works. The successful implementation of these works, however, depends on voluntary labour.

Another notable development during the period since the first meeting of the Public Co-operation Committee has been the finalisation of a scheme of National Extension Service which, during the rest of the Plan period, is expected to cover 120,000 villages all over India, or nearly one-fourth of the total rural population of the country. Under this scheme, the existing Community Development Programmes will receive a greater fillip and as many as 70,000 villages, comprising about 46.2 million people, will be intensively developed.

OPIUM CULTIVATION

Opium enjoys the unenviable distinction of being a debilitating intoxicant and a useful drug. It has claimed through the ages, in its capacity as an intoxicant, many victims who have ruined their health and fortunes by becoming staunch devotees of this obnoxious plant. But one might confess that it has inspired some great writers, notably De Quincy and Coleridge, to sublime literary efforts. Nevertheless, opium remains a scourge, a source of ruin to all its addicts. When China woke up from its age-long slumber, induced partly by its pernicious preference for opium, it made heroic attempts to rid its people of the opium-eating habit. India, which was the source of supply, responded, and opium has ceased, for the last 40 years, to be an item of export to China.

The Government's policy, as was recently reiterated by Mr. Mahavir Tyagi, Minister for Defence Organisation, in a radio talk this week, is to encourage the production of only so much opium as is needed for medical purposes. India devotes 75,000 acres, or five-thousandth part of its cultivated area, to the raising of opium, the annual production of which is of the order of 12,000 maunds. About 3,000 maunds, it is stated, are used for edible purposes. The Central Government controls cultivation of poppy through a licensing procedure—U.P., Madhya Bharat and Rajasthan are the chief cultivating States—sells it to State Governments after processing it and exports the balance to foreign countries. Opium is processed, before consumption or export, at the two Government factories at Gazipur and Neemuch. The Government-sponsored alkaloid factory at Gazipur meets the country's demand for medicines. A large part of it is exported to America, France and England where it is preferred both for its quality and for its cheapness. India earns over Rs. 1 crore through its opium exports. India's competitors in this field are Turkey, Iran and Yugoslavia.

The illegal possession and use of opium is rigorously controlled by the Government, the authority for implementing the Government's opium policy being the Narcotic Commissioner at Simla. Indeed, India, as a member of the Economic and Social Council of the United Nations, has subscribed to the policy of control over opium trade and consumption enunciated by the Council. A conference of State representatives, held in 1949 at New Delhi, decided that a 10 per cent. cut in consumption should be enforced so that there would be no opium-eater in 1959. Despite the utmost vigilance exercised by the Government, cases of illicit transport and possession of opium do come to light, thanks to the perplexing ingenuity of the smuggling tribe. Mr. Tyagi appealed to the public to lend their "helping hand in suppressing opium smuggling." It is to be hoped that this co-operation in what is after all a really humanitarian cause will be forthcoming from the public.

POST OFFICE SAVINGS BANK ACCOUNTS

The Government of India's move to extend certain new facilities to make deposits in, and to withdraw from, the post office savings bank accounts is to be welcomed. Although the move is chiefly intended to mobilise small savings by eliminating impediments to the free flow of savings from the lower income groups, it should be considered a source of great relief to those who have savings deposits with post offices in big industrial centres. For these depositors have for long been complaining to the effect that the present procedure entails unnecessary delay, thanks to the heavy pressure of work in the post offices. Nevertheless, it must be admitted that the present move breaks new ground, doing away with the outmoded antiquated conservative system of banking by post offices.

With a view to facilitating easy withdrawal of funds from savings accounts, the Government has now proposed to introduce, as in commercial banks, the cheque system. Crediting cheques, drafts, etc., to offices of savings bank accounts is also proposed. If the system is to succeed, there is need to open, as in banks more than one counter for receipt of cash and a separate counter for payment of cash.

Among other facilities contemplated by the Government is the provision for extending the number of withdrawals from an ordinary savings bank account to two per week, as against one at present, subject to a maximum of Rs. 1,000. If the depositor's signature does not tally with his specimen signature, attestation of the signature by a gazetted officer or another depositor on an application for withdrawal is necessary. In order to avoid waiting in queues at the post office counters, metal tokens will be issued to depositors at head offices in Bombay, Calcutta, Kanpur and Ahmedabad. Another facility relates to the interest of post office savings bank accounts standing in the names of joint depositors at 2 per cent. per annum, upto a balance of Rs. 20,000 and at 1½ per cent. per annum on the remainder of the balance not exceeding Rs. 30,000. Liberal savings bank facilities are also being provided in post offices in rural areas. The number of branch post offices doing savings bank work as at 31st March, 1953 was 5,076, as against 4,501 a year before. Although this number is too small for a country of the size of India with about five and a half lakhs of villages, the rising trend, in a way, is an indication of the growing popularity of post office savings banks accounts.

LAND REFORMS COMMITTEE

The appointment of a Central Committee for Land Reforms, announced by Mr. Jaisukhlal Hathi, Deputy Minister for Irrigation and Power, the other day, in Parliament, marks one more step in the direction of implementing the land policy contained in the Five-year Plan. The Committee is expected to evolve a broad common approach to land reform programmes of various States, which is an essential aspect for the proper and full implementation of land policy, namely, provision of land to landless tenants and the reduction of existing disparities in the distribution of land, among others.

It is true that problems of land vary from State to State, depending on the basis of land tenure, fertility and the like. It is natural, therefore, that there should be divergencies in the programmes of land reforms among the various States. But, if the divergencies were to usher in a multiple system of land pattern, not connected through a common string, such divergencies would certainly not be in the interests of States in particular and India in general. They call for general all-India pattern which cannot be evolved without the help of a Central Committee.

So far, the abolition of intermediary rights in the various States is almost a *fait accompli*. There is also some progress towards the establishment of peasant proprietorship, co-operative farms and the like. But the pace of progress is too slow because of the lack of requisite data on which to proceed, shortage of personnel, etc. The quickening of the pace of progress requires exhaustive investigation into the condition of land and its relationship to the farmer in each State. There is also the necessity for pooling knowledge and experience gained till now by the various States and chalking out on that basis measures for further progress of land reforms.

Inasmuch as the functions of the Central Land Reforms Committee include the maintenance of continuous study of problems relating to ownership, management, cultivation and distribution of land and assistance to States in determining and carrying out programmes of land reforms, there is ample scope for the Committee to act as a liaison between the Centre and the States on the one hand, and among the States themselves, on the other, in evolving a general pattern of land policy for India. The Committee can help evaluation of and reporting upon, the progress and effects of measures of land reforms. It is gratifying to note that it would also advise on schemes of co-operative re-settlement which is the sole alternative to collective farming in a democratic State.

OFF THE RECORD

(By "ROVER")

A WISE man, and especially a husband rendered wise by experience, even though he might not have been wise to start with when he entered the matrimonial estate, leaves the last word in all unimportant matters to women. Wiser ones do not even question a statement, however atrocious or wide of the real truth, when made by a woman. There is, perhaps, at least to my mind, no greater folly than that of contradicting a woman. And by common consent and long usage, all these privileges of the fair sex, unwritten in the Constitution, have gradually been appropriated by and conceded to the bureaucracy. Just as a constitutional monarch can do no wrong, a Government official believes that he is never in the wrong. He hates to be corrected and is enraged at being contradicted. Women only sulk or storm for a while, if you are so unchivalrous and uncharitable as to make them out to be wrong, but civil servants and brass hats alike will go to any length and waste any amount of public money to re-establish their omniscience.

I cannot understand what possessed a comparatively wise man like Pandit Jawaharlal Nehru, when he was last at Ahmednagar in the course of his tour in the famine areas of Maharashtra, to waste his time and lose his temper about an insignificant official error in honouring a particular room in the historic fort there as his one-time residence, when he was the guest of the then Government of India for more than three years. Some petty P.W.D. official, with more zeal than accuracy, had put up a tablet on a wrong room, describing it as the one in which our present Prime Minister had stayed as an internee during the "Quit India" movement. Pandit Nehru noticed the inaccuracy while going round his old haunts, and his soul, wedded to historical virtuosity and veracity, cried out in protest.

After all, Mr. Nehru is the best authority on this question, especially as he is not one of those absent-minded professors, who take no notice of their mundane surroundings and go about as if blind to everything except ideas. The matter should have rested there, and the inoffensive little plaque should have been removed and affixed to the right room. If I had not long ago given up being surprised at official idiosyncrasies, I should have been annoyed at all the tiresome fuss that is being made about a point to which no sane person, who has work to do, will give a second thought. What I want to register here is not my individual annoyance but the violence done to my sense of proportion and administrative economy.

Tradition has invested a false glamour to a large number of possibly very uncomfortable beds in country houses and inns scattered all over England, as those in which Queen Elizabeth I had slept at some time or other during the course of her long reign. Sentimental chatelaines or landladies take great pleasure in showing these treasures to visitors. History also confirms the fact that this celebrated virgin Queen was in the habit of, and perhaps took delight in, sleeping in many odd beds. We do not have to dig deep into history to learn that Pandit Nehru, in the not distant past, was in the habit of living in many jails during the long course of his public life.

Are we going to start a new cult here of regarding and preserving all these horrid jails as national and historical monuments and the cells in which our leaders of the long struggle for independence were made to dwell to the lasting infamy of the authorities of those days, as so many sacred shrines? Personally, I believe that the sooner we cease to sentimentalise and gloat over these memories and get on with the present task of building up an impoverished country, the better it would be for the health, welfare and sanity of our children and grandchildren.

But even if we are going to be officially ordered to be morbid and to live in the past, I see little point and much less sense in prolonging this controversy over such a trifle as the actual room in the Ahmednagar Fort, in which Pandit Nehru was lodged by the British authorities in the last phase of our national struggle. It is all the more senseless to organise widespread research and to seek corroboration for the Prime Minister's statement by dragging people, who were associated with him in some manner, from a great distance at public expense. This points to a lingering hope amongst the Ministers and bureaucrats of the Home and P.W.D. Ministries in the State of proving that Pandit Nehru is mistaken about such an intimate detail of personal life and that the Bombay officials were better informed on all such matters, when they in their wisdom condemned him to room No. 8 by putting up a memorial slab to this effect.

Apart from the lack of courtesy and respect due to such a personage by persisting in this attitude, I protest against the waste of public time and public money involved in State servants engaging themselves in this ludicrous game, when they have far more important things to attend to. I wonder if you noticed in the news columns of our daily Press an item informing us all that immediately on the Prime Minister completing this tour some busybodies in the P.W. Department unearthed an old official, Mr. Balak Ram, who was in charge of the prisoners' barracks at Ahmednagar, during the period of Pandit Nehru's detention there. Escorted by no less a personage than the District Magistrate of Bijapur, this Mr. Balak Ram was taken to Ahmednagar to revive his ten years old memories and to testify whether the Prime Minister lived in room No. 1, as he now claims, or really in the one numbered No. 8, as the Bombay bureaucracy, backed by its Chief Minister, avers. Mr. Balak Ram is reported to have tried to end this little comedy of errors, by revealing that the present room No. 8 bore No. 1 in those days and that the rooms had since been renumbered.

This, at any rate, should have put all doubts to rest, if doubts there were. But the civil service was not going to give up its stand so easily. It was reported after this discomfiture that the Government of Bombay intended to consult and question the Civil Surgeon and the District Judge at Ahmednagar in those days, both of whom were required to visit the Fort regularly when Congress leaders were detained there. The outcome of this line of inquiry is not yet known. But the official sleuths got fresh scent in the meanwhile and were after their quarry. Pandit Nehru himself had provided this clue by mentioning the name of a convict who was detailed by the jail authorities to fetch water daily for his morning and evening bath and telling the party which accompanied him how he used to shout for this Raghu. So the hounds were after Raghu Tukaram, who was dragged all the way to the Ahmednagar Fort, from his village of Pimpalwadi in the Karjat taluka of the Ahmednagar District to the scene of this heinous crime. He was confronted last Monday with the two rooms and was asked to identify the room occupied by Mr. Nehru. Raghu proved equally unobliging and pointed to the room now numbered as 1.

But, perhaps, the State Government would dismiss Raghu's evidence as unreliable and object to its admissibility on the ground of his previous conviction for theft. It is not known whether the Bombay Government proposes to appoint, by issuing an ordinance, a special tribunal to adjudicate on this disputed issue and to apply to it to subpoena all the members of the Congress Working Committee of 1942, who were Mr. Nehru's fellow detenues, for recording their evidence on oath. And if they fail to get satisfaction even from the judiciary, they would still have a potent weapon left in their hands. The Government of Bombay could order that the offending Ahmednagar Fort be pulled down, stone by stone, on grounds of public security, to put an end to so humiliating a situation for the all-knowing officials!

Ceremonies Sans Ministers

It was with a feeling almost bordering on glee that I read one fine morning early this week that there are still some sensible people left in the country. I respect them as sensible persons, because they do not consider it a religious duty enjoined on them by the *shashtras*, to invite and secure a Minister, a Deputy Minister or at least a Parliamentary Secretary to lay the foundation-stone or to perform the opening ceremony, of some useful structure that they might have been enabled to put up. I am referring to the trustees of the P.M. Shah Memorial Fund at Godhra in North Gujerat, who are building a waiting shed and rest rooms as an annexe to the Godhra Civil Hospital for outpatients and visitors. Disregarding the hollow claims of the politicians, they decided to honour a Bhil patient of the hospital by asking him to lay the foundation-stone of this building.

I wish other commercial, cultural, educational and social organisations in the country would take a tip from this commendable act of these pioneers at Godhra. Their running after Ministers from the Centre and the States for all such ceremonies has now reached a stage where it is positively nauseating. As it is, the performing politicians are vain enough and full of self-importance. To pander to this vanity and to inflate it is a social crime, which is bound soon to react on the people themselves. I can understand prominence given to them at political gatherings, but for the life of me, I cannot see any relevance in the organisers of a music or literary circle or a trade association asking a Chief or some other Minister, merely because he is a Minister, even though he be utterly innocent of any leaning towards art, letters or economics, to inaugurate any of their functions. What could be more degrading or ridiculous for us than being subjected, at the opening of an exhibition of paintings at an Art Gallery, to a long rigmarole about the place of fine arts in the life of a nation, drafted by a ghost writer, from a reputedly philistine and parvenu Minister, who did not know the difference between a water-colour and an oil-painting. I had the misfortune of being present at one such function. The pity of it is that most of us do not see or realise how degrading and ridiculous this sycophancy is.—*All Rights Reserved.*

PARLIAMENT ADOPTS TWO IMPORTANT BILLS

POSITION OF INDIAN COIR INDUSTRY

(From A Special Correspondent)

NEW DELHI, *12th May*

DELHI LETTER

THE weather in Delhi has been most unpleasant during the last few days. Constant heat waves and a heavy dust haze over the horizon have become the normal features of the summer in the Capital. Even nights have been extremely sultry and it is, therefore, not unnatural, if members of Parliament were to look longingly to their forthcoming return to their home towns next week, after an absence of more than three months.

Despite this irritating weather, Parliament was in a businesslike mood, being able to dispose of two important Bills of considerable economic interest, namely, the Air Corporations Bill and the Tea Bill. The Government's approach in regard to the former was objective, in view of the fact that it was the first major step in nationalisation. The Communications Minister, Mr. Jagjivan Ram, was, on the whole, able to acquit himself creditably during the course of the passage of this Bill in Parliament. He was persuasive and reasonable, taking pains to put forward Government's viewpoint as clearly as possible. He agreed with the members of the Select Committee that the Air Corporations would have to make every effort to develop the air transport industry progressively. He again stressed that the necessity for two Air Corporations arose from the fact that a high standard of efficiency should be maintained for international services and that the External Services Air Corporation must always be alert in order to maintain its competitive capacity. It has now been more or less a settled fact that Mr. J. R. D. Tata will be the Chairman of the first Board of Directors of this Company.

Regarding the compensation issue, the Communications Minister displayed considerable anxiety that the interests of ordinary shareholders should not be jeopardised. He, therefore, accepted the two amendments proposed by Mr. N. C. Chatterji, a leading opposition spokesman. According to one of the amendments, if an existing company were allowed to go into liquidation, the Government should have power to direct the proportion and the manner in which the net compensation was to be distributed to the various classes of shareholders. Under the other, a corollary of the first, the Government was to be empowered to authorise a company to go into liquidation after its undertakings were acquired, if the company, or the majority of ordinary shareholders holding at least 75 per cent. of the value of the shares, applied to the Government for liquidation.

Tea Industry

Although the Government has acquired wide powers to control the tea industry, it may be taken for granted that it has no intention of interfering with the industry, provided the latter "paid decent wages to labour, paid taxes to Government and, in short, played a fair game within the four corners of the law." The Minister for Commerce and Industry did not complain about the dominance of foreigners in this industry. He was particularly keen that there should not be any major disturbance in control of this industry. In this connection, his observations are worth notice: "I know, if they go away, their estates will fall into the hands of people who are less interested than they are. It will do no good to the industry, nor to labour." What the Government is anxious is to secure a change of heart and healthy co-operation from the industry. It may be mentioned that consumers' interest will be expected to receive greater attention hereafter, in view of the growing importance of the internal market. For instance, although Ceylon is an important producer of tea, it exports almost the entire quantity grown in the country, whereas, at the present time, India is able to consume nearly one-third of its tea production.

The trend of commodity prices in the country, which has been looking up for the past few months, is expected to rectify, to some extent, the character of trade which has been showing against India during the last few months. The index number of average unit of declared values in respect of imports, which stood at 132.4 in July last, has come down gradually, but erratically, to 120.0 by January, 1953 (1948-49=100). During this period, the export index also dropped by about 12 points to 110.2. Since January last, the trend of internal wholesale prices in the country has been distinctly upward, the latest figure in the last week of April being 389.2—the highest for the last many months.

Another noticeable feature in this connection is that, whereas prices in many countries have come down, those in India have been moving up. As compared with July, 1952, the sensitive world commodity prices in the U.K. have receded by about 13 per cent., while, in India, the wholesale prices index is nearly 4 per cent. higher than this time last year. Some of the export commodities, prices of which remained very much depressed during the second half of last year, are now looking up. Mention, for instance, may be made of tea, pepper, oilseeds and oils, hides and skins, raw cotton, raw wool, etc. The industrial raw material index, as well as the semi-manufactures index, has now been ruling at 457.4 and 355.8, as against 420.4 and 339.8, respectively, for the corresponding week a year before. The rise in export prices and a decline in the prices of imported goods will doubtless improve the balance of payments position of the country during the coming months.

Coir Industry

Although the position of the coir industry in Travancore-Cochin State is being raised in Parliament from time to time by members hailing from that area, there is some lack of appreciation of the entire problem, especially the difficulties facing this industry. Exports of coir goods are valued at about Rs. 10 crores per annum. Since the industry depends, to a considerable extent, on the export market, the vicissitudes of international trade, the price levels and the general economic conditions in important importing countries have their due repercussions on the fortunes of this industry. During the last few months, the value of coir exports have been showing a decline of about 35 per cent. over that of last year. This is the result of the emergence of a buyers' market in many foreign countries which are now interested in liquidating the heavy stocks bought at high prices. Further, the Indian coir goods have begun to face considerable competition, albeit indirectly, from other types of products, namely, goods manufactured out of sisal, hemp, wool, etc. Again, grass floor coverings manufactured in China and Japan have been proving to be a competitor to Indian carpet goods. Indian mats and mattings have also to face competition from modern floor coverings like linoleum and tastefully designed floor boards.

In order to maintain the competitive capacity, the Indian coir industry has to evolve new techniques in manufacture with new and attractive colours and designs. Efforts should have to be made to bring down the costs of production by undertaking research in regard to chemical and mechanical methods of retting on a commercial scale and in the spinning wheels and looms. Besides, standardisation schemes have to be introduced in order to preserve the quality of our export products. To all these, the proposed Coir Board will have to pay immediate attention and bring about improvement in the shortest possible time. Since the industry provides employment to nearly five to six lakhs people on a cottage industry basis, this industry has to be cared for against frequent depression and slackness in trade. At the same time, the internal market should be explored and developed through a stable marketing organisation.

(Concluded from next column)

nise that his deflationary policy at home has been accompanied by deflation in the sterling resources of the world and that just as he has eased up in his home budget this year, he must ease up a good deal further than the Government has already proposed in making it possible for other countries to acquire sterling? The gain of £200 million in the reserves over the past nine months has given him some leeway for experiment. The time seems ripe for this country to see what an injection of sterling into the outside world can do to U.K. trade—*All Rights Reserved.*

WHITHER THE GOLD RESERVES?

IMPROVEMENT AT EUROPE'S EXPENSE UNHEALTHY

(From Our Own Correspondent)

LONDON, *7th May*

LONDON LETTER

MONTH by month this year, the gold and dollar reserves of the sterling area have steadily risen. In January and February they rose by over £90 million; March was less spectacular with a rise of only £22 million; but April has shown another very substantial gain of £39 million. Thus the reserves have risen by nearly one quarter since the end of December to £812 million. This is still a long way from the level of £1,380 million two years ago, but equally it is a very substantial rise from the nadir of £600 million one year ago.

Nor is this improvement in the U.K.'s external position reflected only in the gold and dollar reserves. The same movement is seen in the U.K.'s balance with the European Payments Union. In August last year, the net deficit had risen to £350 million, though by the turn of the year, this had been reduced to £237 million. Since then, although the spectacular improvement of last autumn has been toned down, there has been a steady £10 million a month average coming to the U.K. in gold or credits with E.P.U., and at the end of April, this country was another £42 million better off with a net deficit reduced to £195 million.

It is not easy to account for the improvement in the gold and dollar reserves in terms of a straightforward improvement in the active balance of trade. The balance between imports and exports has not been moving in recent months strongly in this country's favour, and we are still benefiting from the drastic action taken last year to keep down imports. Moreover, staple commodity prices are continuing to weaken, and before long, this must be reflected in the value of the sterling area's exports to the dollar area. Meanwhile, it seems unfortunately true that the U.K. by restricting its imports from Europe has managed to put itself right with the E.P.U. and drag gold out of countries, such as France, to strengthen the sterling area's reserves. While, therefore, the restrictive action of last year has improved the U.K.'s and the sterling area's position, *vis-a-vis* the dollar area, it appears to have been at the expense of Europe's position with that area, that is, the U.K. has been exporting its deficit to the Continent.

Source of Strength

There is no long-term source of strength to the sterling area along this line of action. In due course, the European countries' countermeasures to preserve their own reserves will again restrict the U.K.'s exports, and the rise in the U.K.'s reserves will come to an end. Another source of strength to this country's reserves is also going to diminish this year, that is the aid received from the United States on defence account. In the year 1952-53 that aid has amounted in all to some $400 million, say £140 million; but the U.S. authorities are now going to be obliged to cut that aid to half, half on direct arms account and the other for payments of exports of American foodstuffs. Some of the dollars going to N.A.T.O. will, nevertheless, find their way to this country in settlement of arms contracts for Europe; but this will not be altogether a new source of income, although it may be on a larger scale than hitherto. It is thus probable that something like £50-60 million in dollars will be lost to this country in the year 1953-54.

The reduction in U.S. aid will have a parallel effect on the U.K. domestic budget, for this has been credited in the past year with the sterling counterpart of the U.S. assistance. With the latter reduced, the Chancellor of the Exchequer will have either to find more money to finance the domestic programme or the latter will have to be cut. Will the Government have the courage to recognise that the strengthening of the reserves over the past months is unlikely to go on without some positive action to increase U.K. exports, and that this positive action must take the form first of freeing more domestic resources for those branches of export trade in which this country's demand is the strongest, such as heavy engineering, and in a more liberal trade policy which will in turn supply our customers overseas with the sterling with which to buy U.K. goods? Will the Chancellor recog-

(Continued in previous column)

AMERICAN LETTER

NO SIGN OF DEFLATION IN THE U.S.

UNSETTLEMENT IN INVESTMENT MARKETS CONTINUES

(From Our Own Correspondent)

NEW YORK, *7th May*

THE great hopes for peace between the East and the West which have prevailed since the death of Premier Stalin, have been fading fast in the last two weeks. Early promises of more than just an uneven exchange of prisoners of war remain unfulfilled and an armistice in Korea seems just as far removed now as for the past six months, not to mention the intensified hostilities in Indo-China. Thus, the emotional pressure for a decrease in American rearmament expenditures—beyond the economies planned anyway by the new Republican Administration—is also declining.

President Eisenhower's requests for military appropriations by Congress, in fact, were $2,000 million below those of the preceding Truman Administration. The armed strength of the United States remains undisturbed, but a strechout is indicated in reaching the prescribed higher targets. As a practical matter, this means the continuance of high level business activity for months to come. Beyond that, much will depend on staff studies now being made at Washington. They involve recommendations for a complete revision of the Federal tax structure, possible changes in the Reciprocal Trade Act, customs procedures and other matters. It is well to bear in mind, however, that none of such major changes as may be proposed by the Eisenhower Administration are likely to emerge before the first of next year.

In the meantime, the likely shifts in Washington policy envisage greater foreign aid emphasis in Asia and, perhaps, to a lesser degree in Latin America and reductions in Europe where the N.A.T.O. countries have made little progress towards the planned European Army, but where the Schuman Plan of combined coal, iron and steel production is now finally emerging.

Change in Money Markets

Domestically, the greatest change in recent weeks has been in the money markets. Higher interest rates have been established in all segments of the market since the U.S. Treasury issued its new 3¼ per cent. 30-year bond. The $1,000 million issue was vastly oversubscribed, but the new high coupon which represented a 20-year high, disrupted the entire yield curve. Outstanding bonds bearing lower interest reached new lows in price in order approach the new higher yields. Commercial banks raised their prime lending rate from 3 to 3¼ per cent. and commercial paper rates stiffened likewise. This, in turn, disrupted the bond markets where even the new Treasury 3¼'s *declined on* some days below par. The development also proved somewhat conclusively that there is no longer any precise relationship between short and long-term rates here.

One of the contributory factors to the continuing unsettlement in the investment markets is the hands-off policy of the Federal Reserve System which has no intention of interfering in the Government bond market in the way of open market operations, unless it should become "disorderly." There may be some who consider present markets not particularly orderly, but the official interpretation of "disorderly" goes much beyond that. It covers, really, conditions of quasi-panic selling as might occur at the time of outbreak of war or other emergencies. Thus, a new Government bond market concept is emerging here.

It means, in effect, the inflationary cycle of the last two decades has been halted and a sounder dollar is arising, perhaps. Obviously, not everybody is happy about that. Fixed income groups will benefit most. The greatest losses in this process of adjustment have been incurred so far in the agricultural areas of the world. Some sensitive commodity prices are now off as much as 36 per cent. from the peak they reached in the period after the outbreak of war in Korea. Living costs have fallen about one half per cent. in this period, prices paid to farmers have declined 16 per cent. and the value of farmland has dropped 2 per cent. Farm exports have fallen 30 per cent. Old houses can be bought cheaper now and used automobile prices are down sharply in the face of a record new car output. Shortages are ending and surpluses are appearing. Thus, it is harder to sell and easier to buy. Competition is quite tough in some businesses.

The deliberate halting of inflation, however, means a semblance of stability rather than deflation. In fact, all signs are that the monetary authorities will keep a close watch over economic developments and will try to avoid deflation like the plague. Admittedly, this is more difficult than stopping inflation, but so far there are no signs that deflation has begun, rather disinflation. Most segments of the U.S. economy are humming at top speed. Earning reports for the 600 corporations covering operations in the first quarter are running 10 per cent. ahead of last year.

Industrial Production

Overall industrial production in April maintained the same high record as that of March and was about 10 per cent. higher than a year ago. However, unless final figures are revised, April will be the first month since September that industrial production has not increased. Steel executives, including Mr. Benjamin Fairless, Chairman of U.S. Steel Corporation, expect output to continue at top levels "well into the September quarter and possibly through the fourth quarter." The construction boom is still proceeding at previous levels. In the first quarter of the year, the volume of cheques drawn by individuals and business concerns was 7.9 per cent. ahead of last year.

Scheduled American airlines carried about 28.5 million passengers last year, a new record and a gain of 11 per cent. compared with 1951. Operations covered 15,500 million passenger miles, an increase of 18 per cent. over the preceding year. Business and commercial failures were lower in April, both in the United States and in Canada, compared with April, 1952. While Federal Government tax collections in the first quarter were about $2,000 million behind expectations, they are expected to rise again in line with higher corporate profits. The drop is due to the shrinkage of income last year, one half of which, if not more, resulted from the prolonged steel strike last summer.

Despite fears and apprehensions of all sorts, there is no sign of deflation in the United States, but rather the continuation of good business for some time to come, coupled with disinflation of some prices, according to supply and demand conditions as they may develop during the balance of the year.—*All Rights Reserved.*

PAKISTAN NOTES

THE FOOD PROBLEM

MAINTENANCE OF STRONG RESERVE EMPHASISED

EVERY effort should be made to build up a strong food reserve to meet any future deterioration in the food situation. This was the sound advice which Lord Boyd-Orr, Chairman of the Pakistan Grow-more-food Committee, gave, while addressing the members of the Punjab Grow-more-food Committee at Lahore the other day. Pakistan, as readers are aware, is in the grip of an acute food shortage. The gap between the total production in the country and the quantity actually required for consumption is as much as 1.5 million tons, including 250,000 tons required for holding stocks as a buffer against any temporary artificial scarcity and spurt in prices.

Forced by shortage of food and with a view to ensuring steady supplies at reasonable prices to consumers, the Government of Pakistan, in active co-operation with the Provincial Governments, has launched a four-pronged campaign for augmenting food production—distribution of ammonium sulphate for use in the coming *kharif* crop season, provision of more irrigation facilities, bringing new areas under cultivation, and control of pests and locusts. And in this task, active assistance and help are being taken from the various United Nations bodies, Governments of other countries and private agencies. Simultaneously with this campaign, the Government has also taken steps to check any rising tendency in prices. Thus, ceiling prices for foodgrains, especially wheat, have been fixed at the prevailing levels.

U.S. Wheat Assistance

The improvement in indigenous production is only a long-term solution to Pakistan's food problem. What is urgently required is import of foreign grains on a large scale. The Government of Pakistan is making vigorous efforts in this direction. It has requested the U.S. Government for assistance to the extent of one million tons. There are indications to suggest that the request may be conceded. A three-man U.S. Food Mission, headed by Dr. Harry Reed, Dean of Purdue University's College of Agriculture, is expected to visit Pakistan soon for a survey of the food crisis in the drought-stricken areas of the country.

In the meantime, Senator Hubert Humphrey has introduced a Bill in the U.S. Senate envisaging a loan to Pakistan for purchasing wheat in the U.S. The Bill also seeks to provide for an emergency loan of wheat or any other food commodity, from the Government's own food reserves under the direction of the Mutual Security Administration. The Bill is to be patterned after the $190-million loan made to India two years ago, although the actual amount of the loan will be less than that granted to India. The interest on funds, to be paid by Pakistan, would be placed in a special account, to be used for financing the exchange of students and technicians between the two countries and also of books, scientific materials and laboratory work.

Efforts are also being made to secure foodgrains from other countries. Canada has already offered, under the Colombo Plan aid, 55,000 tons of wheat, and Australia 45,000 tons.

Price Control

It is not the food shortage alone that is causing anxiety to the Pakistan Government; the prices of several essential articles also have been steadily moving up, thanks to the anti-social activity, indulged in by a section of the business community. The Essential Commodities (Control of Distribution) Order, 1953, recently promulgated by the Government, has, therefore, come not a day too soon. Under this Order, the Government has already imposed control over sale and prices of 16 articles. These include paper other than newsprint, cycles and spare parts, tyres and tubes for the same; drugs and medicines, medical and surgical instruments and appliances; caustic soda; soda ash; hydrosulphide of soda; ammonia; chlorine; acetylene; oxygen; imported chemical dyes; mechanically propelled vehicles, their spare parts, tyres and tubes for the same, glass and glassware, including scientific and laboratory equipment; electrical and radio goods and appliances, including wires and cables; and artificial silk yarn and thread.

The aggregate yield of cotton in Pakistan for the season 1952-53—according to the final forecast—is estimated at 1,468,000 bales of 392 lbs. each, which represents a rise of 6.7 per

(Continued in previous column)

(Concluded from next column)

cent., as compared with the previous season's output of 1,376,000 bales. The rise in the yield closely follows an expansion in acreage under cotton crop, which, during the year under review, was 3,430,000 acres, as against 3,244,000 acres in 1951-52, or an increase of 5.7 per cent. It is thus seen that the increase in yield is more than proportionate to that in area, which suggests that the average yield must have gone up. The improvement in yield has been shared both by American and *desi* varieties, the quantity produced being 1,299,000 bales and 169,000 bales, respectively, as against 1,220,000 bales and 156,000 bales in 1951-52. The area under these varieties accounted respectively for 2,967,000 and 463,000 acres, against 2,782,000 and 462,000 acres.

Plea for Larger Investment in Industry

A warning that "economic depression might come with greater severity in the near future" was given by Mr. Muhammad Ali Rangoonwala, President of the Chamber of Commerce, Pakistan, in the course of his address at the ninth annual general meeting of the Chamber held in Karachi a few days ago. Mr. Rangoonwala would appear to feel that such depression could be averted, if only business men and the Government remained vigilant. He called upon business men to invest more in industry, although he admitted that trade and commerce was an important function which should not be neglected. Industrial development, he declared, formed the basis of Pakistan's economic progress and the country's future would depend on the extent of development in this field.

EARNINGS AND EXPENSES OF BANKS IN INDIA

POSITION SINCE 1946 REVIEWED

A GREAT hue and cry has been raised by the employees of the banks over the award of the All-India Industrial Tribunal (Bank Disputes). The award, they say, has not conferred on workers in banks monetary benefits and other facilities which the banks can *easily* afford. This claim of the employees, however, is not borne out by facts. A look at the working of the banks in recent years will clearly reveal that the banks have been having a trying time. For, on the one hand, the expenses of banks have been steadily mounting up, thanks to expansion in branch banking—though in certain cases indiscriminate—increase in cost of living and application of new scales of emoluments through Bank Awards. On the other, their earnings, particularly from investments, have tended to decline, while the banks have been compelled to provide for heavy depreciation in the value of investments. These have adversely affected the profits of the banks and, consequently, their capacity to pay larger emoluments to their employees. An idea of the extent to which the financial position has been affected by the various factors may be had from an illuminating study of the trend of earning and expenses of Indian banks during recent years (1946-51), which has appeared in the form of an interesting article in the latest issue of the *Reserve Bank of India Bulletin*. In view of the importance of the subject, it is proposed to review the salient features of this study.

The analysis covers different periods for different groups of banks. Thus, the figures cover a period of six years (1946-51) for Scheduled Banks and A2 class Non-scheduled Banks, and of three years (1949-51) for Exchange Banks. The total number of banks reporting varies from year to year. The trend in earnings and expenses of these reporting banks is indicated in the table on this page. It will be seen from the table that the net profit of the Scheduled Banks declined from Rs. 9.36 crores in 1946 to Rs. 7.51 crores in 1951, due to the marked rise in expenditure, particularly establishment costs, increased provision for depreciation, and decline in recoveries. The net profit of A2 class Non-scheduled Banks also suffered a fall.

The total earnings of the Scheduled Banks amounted to Rs. 27 crores in 1946 and remained at about Rs. 30 crores during the period 1947 to 1950. In 1951, they were higher at Rs. 32.3 crores, following a record expansion in bank credit. The earnings of Exchange Banks, which had fallen from Rs. 11.3 crores in 1949 to Rs. 9.5 crores in 1950, rose to Rs. 13.1 crores in 1951.

Earnings

The bulk of the earnings of Scheduled Banks and Exchange Banks is accounted for by income from bills and loans. In 1951, their ratio to total earnings was 56.3 per cent. for Scheduled Banks and 67.7 per cent. for Exchange Banks. The comparatively high proportion for Exchange Banks reflects the predominant position of advances in their assets; the proportion of advances to deposits was 103 per cent., as against 59 per cent. for Scheduled Banks, as at the end of 1951. Earnings from foreign bills purchased and discounted were also higher. Exchange Banks' earnings from bills and loans were Rs. 7.0 crores, Rs. 6.3 crores and Rs. 8.8 crores in 1949, 1950 and 1951, respectively, the proportion to total earnings rising from 61.7 per cent. in 1949 to 67.7 per cent. in 1951. Income from investments in Government securities, the second main item, was substantial in the earlier years for the Scheduled Banks, but declined from nearly 38 per cent. of total earnings in 1946 to 28 per cent. in 1950 and 21 per cent. in 1951.

In amounts, while total earnings had gone up in these years, income from Government security holdings declined from Rs. 10.3 crores in 1946 to Rs. 8.1 crores in 1950 and Rs. 6.7 crores in 1951, mainly due to large-scale liquidation of securities. For Exchange Banks, the amount and proportion did not show much variation and stood at a bare Rs. 1 crore (9 per cent.) in 1951, Government security holdings being relatively unimportant in their assets structure. Earnings from "other" sources, i.e., commission on bills for collection, T.T's and D.D's sold, service charges, etc., of Indian Scheduled Banks registered a perceptible rise, from Rs. 3.0 crores in 1946 to Rs. 4.9 crores in 1950 and Rs. 6.3 crores in 1951, the proportion to total earnings also rising from 11 per cent. to 17 per cent. and 20 per cent. in the respective years. For Exchange Banks, earnings from "other" sources declined from Rs. 3.0 crores in 1949 to Rs. 1.8 crores in 1950, but rose again to Rs. 2.9 crores in 1951.

Expenditure

On the expenditure side, establishment costs of Scheduled Banks accounted for the largest share of earnings, owing to higher emoluments paid to staff. The entire increase in the earnings of the Banks since 1946 has been virtually absorbed in higher establishment charges. The proportion of these charges to the total earnings was as high as 37 per cent. in 1951, as against 26 per cent. five years before, while that in the case of Exchange Banks was 26 per cent. in 1951, which compares favourably with 33 per cent. in 1950. Interest paid on deposits, borrowings and other accounts is the next important item of expenses of Scheduled Banks, its share in the total earnings in 1951 being 23.6 per cent. It is interesting to note, in this connection, that, in 1946, this item had exceeded establishment expenses and constituted 28.5 per cent. of earnings. Since then, there has been a decline, owing to fall in deposits, the figure for the year under review being 23.5 per cent. For Exchange Banks, the ratio of interest to earnings shows a fall from 22.2 per cent. in 1949 to 17.4 per cent. in 1951. While interest on deposits is the main constituent of this item for Scheduled Banks, both the amount and the ratio of interest paid on borrowings and other accounts are higher for the Exchange Banks as compared with the Scheduled Banks.

Profit

As is revealed in the table, the net profit of the Scheduled Banks suffered a continuing decline throughout the period covering 1946 to 1950. In 1951, however, it was slightly higher, despite a net depreciation provision of Rs. 81 lakhs. The factor responsible for such improvement was better earnings. The net profit of the Exchange Banks declined in 1950, but increased in the following year, corresponding to the trend in total earnings. Net profit formed only 23 per cent. of the total earnings of Scheduled Banks, while it was 42 per cent. in the case of Exchange Banks.

The share of dividend, bonus, etc., to shareholders in the aggregate allocation of the Scheduled Banks went up from 21 per cent. in 1946 to 33 per cent. in 1950. During each of the years 1946 to 1949, tax provision had been the largest single appropriation but, in 1950, payment to shareholders was the main item. In 1951, allocation to other special purposes (Rs. 4 crores) was the main item. This was necessitated by the heavy decline in the value of Government securities, consequent on the increase in Bank rate in *November, 1951.*

Allocations under other heads, except for special purposes, were generally the same in 1951 as in 1950 in amounts, but their percentage shares were all noticeably less, due to the special allocation mentioned above. In effect, the increase in net profit over 1950 and withdrawal from reserves were taken up by the increase in appropriation for special purposes and the carry forward was a much smaller amount. Bonus paid to staff, at Rs. 1.1 crores in 1951, was larger than that in any earlier year under review. For Exchange Banks, provision for taxes formed the largest single item of appropriation each year, accounting for two-fifths of the resources in 1951. Transfers to head offices (which may be taken to correspond broadly to dividend, *etc., paid to shareholders* and carry forward, taken together in the case of Scheduled Banks) formed a larger share of total allocations than for Indian Scheduled Banks; in 1950, the respective percentages were 51 and 40.

Ratio of Operating Expenses

The ratio of current operating expenses—these exclude allowances for depreciation and loss incurred on sale of assets—to earnings—these exclude recoveries on assets previously written down—was higher for Scheduled Banks in each of the years 1949, 1950 and 1951 than for Exchange Banks, the percentage for the respective years being 73.6, 75.3 and 74.1, as against 59.0, 62.9 and 55.4. The smaller ratio for Exchange Banks may be attributed to their comparatively large earnings from loans and bills, smaller investment portfolio, and lower expenses on interest payments and overhead charges.

The earnings, expenses and net profit of the major Indian Scheduled Banks in 1951 (11 in number) formed a very substantial part in the total for all the reporting Indian Scheduled Banks (72 in number). Their earnings amounted to Rs. 25.3 crores in 1951, as compared with Rs. 21.1 crores in 1946 (14 in number) and accounted for three-fourths of the earnings of all Indian Scheduled Banks. With the expansion in bank credit, their earnings from bills and loans rose from Rs. 9.0 crores or 43 per cent. of total earnings in 1946 to Rs. 13.7 crores or 54 per cent. in 1951; their income from Government securities accounted for Rs. 8.5 crores or 40.4 per cent. of total earnings in 1946 and declined to Rs. 5.6 crores or 22.3 per cent. in 1951. Establishment expenses of these Banks rose continuously from Rs. 5.6 crores in 1946 to Rs. 8.7 crores in 1950 and Rs. 9.9 crores in 1951, i.e., from 26.4 per cent. of their earnings in 1946 to 39.7 per cent. in 1950 and 39.1 per cent. in 1951, which may be compared with the 1951 ratios of 33.7 per cent. for all banks, 37.1 per cent. for all Indian Scheduled Banks and 26.1 per cent. for Exchange Banks. Interest paid on deposits, borrowings and other accounts, at Rs. 5.5 crores in 1951, accounted for a little over one-fifth of total earnings. Their net profit declined over the period, both in amount and as a proportion to total earnings, from Rs. 7.8 crores (37 per cent.) in 1946 to Rs. 6.3 crores (25 per cent.) in 1951. Dividend and bonus paid by these Banks amounted to Rs. 2.1 crores in 1951 or 23 per cent. of the total resources made available for allocation. The amount allocated to other special purposes in 1951 was Rs. 3.9 crores.

Earnings of Other Scheduled Banks

The earnings of the other Indian Scheduled Banks, which had risen from Rs. 6.2 crores to Rs. 7.6 crores during the period 1946 to 1949, declined to Rs. 7.2 crores and Rs. 7 crores in the following two years, respectively. At Rs. 4.4 crores in 1951, earnings from bills and loans accounted for 63 per cent. of the total earnings, a proportion which is larger than that for the major banks. Their establishment expenses almost doubled to Rs. 2.5 crores between 1946 and 1950, but were lower at Rs. 2.1 crores in 1951, accounting in that year for 30 per cent. of their total earnings, a percentage lower than that for the major Scheduled Banks. Interest on deposits, borrowings and other accounts in 1951 was Rs. 2.1 crores or 30.4 per cent. of total earnings, which was higher than that for the major Scheduled Banks. The larger proportion of earnings from bills and loans, as also of interest, payments, as compared with major banks, is due to the higher interest rates charged and paid by this class of banks. Net profit of these banks amounted to Rs. 1.2 crores in 1951 or 17.2 per cent. of their total earnings, as compared with Rs. 1.5 crores or 24.9 per cent. in 1946.

The earnings of the large Non-scheduled Banks, that is, banks having paid-up capital and reserves of Rs. 5 lakhs and over, maintained an upward trend, rising from Rs. 1.8 crores in 1946 to Rs. 2.2 crores in 1949. In the following two years the earnings declined to Rs. 1.9 crores; the number of reporting banks was 43, 69, and 59 in 1946, 1949 and 1951, respectively. Their earnings from bills and loans rose from Rs. 99 lakhs in 1946 to Rs. 1.4 crores in 1951, the proportion to total earnings (73 per cent. in 1951) being higher than that for the smaller Indian Scheduled Banks. Their income from investments in Government securities declined from Rs. 39 lakhs in 1946 to Rs. 27 lakhs in 1951, or, as a proportion to total earnings, from 22.4 per cent. to 14.0 per cent. Interest payments were the largest item of expense for this class of banks in each of the years under review, the amount and the proportion being Rs. 80 lakhs and 41.4 per cent. in 1951. The relatively larger interest payments, as also the larger earnings from bills and loans, even as compared to the smaller Indian Scheduled Banks, are attributable to the higher rates of interest paid and charged by these banks, a large part of the deposits of these Non-scheduled Banks being held in the form of fixed deposits. At the end of 1951, the ratio of fixed deposits to total deposits was 47 per cent., as compared with 24 per cent. for Indian Scheduled Banks.

EARNINGS AND EXPENSES OF BANKS, 1946 TO 1951

(Amounts in crores of rupees)

	Earnings			Expenses			Net profits for the year
	Earnings from bills and loans	Earnings from investments	Total earnings	Establishment expenses	Interest paid on deposits, borrowings, etc.	Total expenses

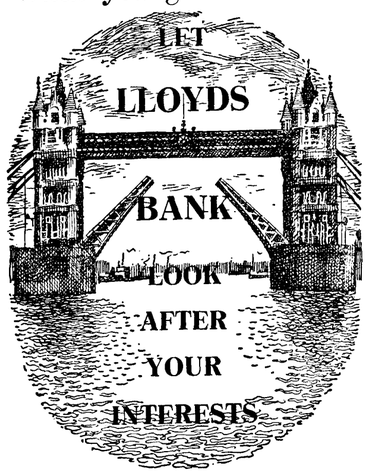
When you go to London



Lloyds Bank has over 1,700 Branches in England and Wales.

LLOYDS BANK LIMITED

INCORPORATED IN ENGLAND.

LB-4-31-1953

Following the above order, the British banks have advised the depositors as to how they should fill in forms and register their claims in China, in order to preserve any rights they may have. In this connection, they have made it clear that the Chinese revaluation involves only local currencies, and as such the question of transfer of funds to countries outside China does not arise, nor is there any assurance that creditors would be able to use their revalued deposits freely in China. They have also emphasised that they accept no obligation or responsibility in the matter.

SYRIAN MONETARY LAW

The transition from the present monetary system to the new system, evolved in February last, requires time and calls for the enforcement of new legislative provisions gradually and by stages, according to a statement recently made by the Finance Minister of Syria. The first step will be the establishment of the Money and Credit Board. This is expected in the near future, but the establishment of a Central Bank will take more time. Press reports that the Bank will not be established until 1964, the date of the expiration of the concession of the Bank of Syria and Lebanon, which now issues the local currency and enjoys central bank prerogatives, have been denied. Negotiations have already begun with the Bank of Syria and Lebanon for determining orderly methods of transfer to the new institution at the appropriate time of the assets and liabilities of the Issue Department and of Government deposits. In the meantime, the Bank of Syria and Lebanon will continue to enjoy the issue privilege and its other central bank prerogatives. The only part of the new monetary legislation which becomes enforceable immediately is that concerning the control of banks. This control is temporarily entrusted to the Exchange Office, established in April, 1952, pending the setting up of the Money and Credit Board.

GRINDLAYS BANK LTD.

The financial results of the Indian branches of Grindlays Bank Ltd. (*General Manager in India:* Mr. A. Simpson, Bombay) for the year ended 31st December, 1952, are in consonance with the general experience of Scheduled Banks in India. The profit of the Bank in India has shrunk from Rs. 13.14 lakhs for the year 1951 to Rs. 9.14 lakhs. A notable feature of the Bank's accounts is a sharp rise of over 35 per cent. in advances in distinct contrast to the decline noted in the case of Scheduled banks as a whole. With a small decline in deposits, the ratio of advances to deposits has recorded a rise from 50 per cent. to 69.5 per cent., while a fall in investments to the extent of over 33 per cent. has been mainly responsible for bringing down the total liquidity ratio from 62.8 per cent. to 46.6 per cent.

The Bank's income from interest and discount has gone up from Rs. 33.11 lakhs for 1951 to Rs. 35.34 lakhs for the year under review. The increase of Rs. 2.23 lakhs on this account has been more than offset by the fall of Rs. 1.97 lakhs to Rs. 28.13 lakhs in commission, exchange and brokerage, a rise of Rs. 2.02 lakhs to Rs. 6.76 lakhs in interest paid and of Rs. 2.25 lakhs to Rs. 47.54 lakhs in expenses. Consequently, the profit, at Rs. 9.14 lakhs, after providing Rs. 6,000 for depreciation on bank property, records, as compared with the profit of the previous year, a shrinkage of Rs. 4 lakhs. As much as 66.3 per cent. of the profit, that is Rs. 6.06 lakhs, has been set apart for taxation, for which a sum of Rs. 8.14 lakhs had been provided last year. The balance, along with the sum of Rs. 88,509 brought in from the previous year, has been remitted to head office, as against Rs. 10.81 lakhs remitted last year. The larger sum remitted last year was due, in part, to the sizable sum of Rs. 6.69 lakhs brought in from 1950.

The Bank's deposits in India as at the end of the year under review stand at Rs. 9.55 crores, which shows a decline of only Rs. 22 lakhs. Borrowings from other banks have gone up from Rs. 46 lakhs to Rs. 62 lakhs. The whole of these borrowings at the close of 1952 are unsecured, whereas those at the end of 1951 were partly secured (Rs. 15 lakhs) by investments and partly unsecured (Rs. 41 lakhs). The Bank's bills business would appear to have declined during the year, the outstandings on account of bills for collection and acceptances on behalf of customers showing a marked fall—the former from Rs. 2.14 crores to Rs. 1.22 crores and the latter from Rs. 2.48 crores to Rs. 1.32 crores—evidently due to the lull in trade and commerce during the major part of the year following the slump in March. Advances, as already indicated, have gone up from Rs. 4.90 crores to Rs. 6.64 crores. A break-up of the total advances shows that loans, cash credits and overdrafts have risen from Rs. 3.93 crores to Rs. 5.79 crores, while bills discounted and purchased have declined from Rs. 96.98 lakhs to Rs. 85.21 lakhs. Investments, the whole of which are in Government securities, are lower at Rs. 3.62 crores, as compared with Rs. 5.42 crores. These investments are shown at below market value. Cash balances, at Rs. 83.52 lakhs, do not disclose any marked fall from Rs. 87.12 lakhs at the close of 1951, and at which they provide a cash coverage of 8.7 per cent. (as against 8.9 per cent.) to deposits. Taken together, investments and cash stand at 46.6 per cent. of the deposits.

CURRENCY REFORM IN CHINA

The Chinese Government recently issued an order to the effect that the British banks, which formerly operated in China, should revalue and repay deposits in Chinese nationalist currency, which existed when the Communist Government took over in 1949. The banks involved are the Chartered Bank of India, Australia and China, the Hongkong and Shanghai Banking Corporation, and the Mercantile Bank of India. The revaluation scale commences with one Chinese nationalist dollar equalling 12,500 Chinese dollars in respect of accounts and deposits not used since the beginning of 1937. There is then the descending scale of revaluation rates, the lowest being 100 Chinese (Nationalist) dollars equalling one Chinese Communist dollar for accounts and deposits which were used after 19th August, 1948.

TECHNICAL EFFICIENCY IN INDIAN COTTON MILL INDUSTRY

SCOPE FOR IMPROVEMENT CONSIDERABLE

MOVING the Industries (Development and Regulation) Amendment Bill, 1953, in the House of the People recently, the Minister for Commerce and Industry, Mr. T. T. Krishnamachari, remarked that the Government's policy would be not only to keep the wheels of industry moving but also to take effective measures to improve its managerial and organisational aspects wherever necessary. The Indian cotton textile industry, as the biggest single industry, has a vast field for the Minister to display his drive and originality, especially if he carefully peruses the Report of the Technical Sub-Committee of the Working Party for the Cotton Textile Industry. This part of the Report has been the result of a factual survey of machinery, labour and production in the major productive departments of representative mills in the leading centres of production, conducted by men who are experts and well experienced in this line. The Report has made a number of observations on the real conditions of the textile industry and suggested the lines in which action is necessary to improve its efficiency and competitive power.

Many of the recommendations of the Technical Committee will not involve heavy costs and can be implemented in a short time, with the result that the total output may record an increase of about 10 per cent., besides bringing down production costs to some extent. The Planning Commission, it may be mentioned, has recognised that there are 150 inefficient and uneconomic units in this industry, the actual percentage being 33.6. When such is the position, the Minister for Commerce and Industry need not wait for the Kannungo Report which is expected to cover all the sectors of the cotton textile industry, namely, the mill, handloom and *khadi*, but could straightaway implement the Report regionwise. A high-power technical committee should be immediately constituted and empowered to inspect the mills in order to suggest ways and means to maximise production, both from the qualitative and quantitative point of view, and also to see that their recommendations are implemented by the concerned mills within a specified period.

Blow Room Machinery

The Technical Committee has made many useful observations on mixing and blow room machinery. It says: "No mill has auto-doffing equipment. This does away with the irregularity creeping in, as a result of starting and stopping and due to cutting and folding of the lap. Besides saving labour, the efficiency is improved by 10 to 20 per cent., depending on conditions." It favours fluorescent light, since, "with this system of lighting, night shifts will be more successful, particularly in weaving and more so in fancy weaving, as it improves efficiency substantially." Except in few places, we are told, humidification and ventilation is far from being satisfactory. Lighting and general working conditions are badly lacking in almost all the mills.

Regarding the carding section of the industry, the Report says: "Most mills have fillets in a very unsatisfactory condition. Everybody complains about the short supply of the material. The standard of supply is seven per cent. irrespective of the number of shifts worked. For one-shift working, this standard is acceptable. But for two shifts, this should be raised to 12½ and for three-shift working to 15 per cent." It goes on: "In quite a good number of installations, the carding rows were not facing each other. The middle and back alleys were too narrow and the space between the cards hazardous. About layout and spacings, this section is the most neglected in some mills." In regard to draw frames, the Report says that "only in one mill are the machines equipped with measuring motions and light signals." In the speed frames section, it says: "Two zone systems, with adequate condensers, have revolutionised the amount of drafts and the number of processes. One process for coarse and medium counts and two processes for fine and superfine counts are sufficient for reasonably good quality of yarn."

Improvement in Winding Section

With regard to ring frames, the Report observes: "It is over 25 years since high drafting, tape drive of spindles, rising and falling lappets and bigger size of packages were introduced in the industry. Yet the number of three-roller drafting and band-driven spindles found were inconsiderable. It is hard to believe that the spindles and the drafting rollers have not been changed during this period. The principal rival systems of high drafting are the four-roller and the double apron. For coarse and medium counts, the Casablanca system is established as the better of the two. For fine counts, the superiority is not yet finalised and the trend of opinion for superfine counts is in favour of the roller system." In the winding section, it is stated that, in most of the mills throughout India, except one or two of recent years, winding machines of the old nineteenth century, such as grey vertical winding and drum winding machines are still predominant. In this connection, the Report observes as follows:

"To improve the quality and quantity of work, it has now become necessary to scrap old machines and introduce latest high-speed automatic winders. Introduction of such machines will naturally reduce the wage bill and thereby cost of production. . . . In many mills, winders were seen working without mechanical knotters and producing knots so big as to cause fall in production in weaving sheds. The managements seemed to be ignorant about such an important factor. . . . In every centre, we found more number of winders producing much less than what workers of the same category produce in other countries, such as Japan, America and England. Reasons are old obsolete machines without proper maintenance, inferior quality of yarn, unsatisfactory working conditions, and misled labour."

Cone Dyeing

The Report recommends the adoption of cone dyeing and also the complete elimination of female workers from the cotton mills, in view of lower *per capita* output by them. In the pirn winding section, the Report says: "Old obsolete machines, such as Leesona No. 90 pirn winders, are being extensively used, instead of the latest high-speed automatic pirn winders, viz., Schweiter, Hacoba, Britoba and many other latest machines. The ratio differences in production per spindle and per winder will definitely be nothing less than 3 : 1, if latest machines are installed."

Like winding, warping machines of old obsolete slow speed types are predominant in most of the mills in all textile centres. Production on this machine is invariably three to four times less than that on modern high-speed machines with number of workers and machines naturally more in proportion. Machines are working with beams 20" to 22" diameter against modern tendency of beams upto 30" diameter thereby producing smaller packages of set lengths and resulting in more doffing not only on warping machines but in subsequent process as well. Sizing is noted to be the key to success of weaving and it is here that maximum negligence is noticeable in every centre, says the Report. Old machines can definitely be renovated and equipped with modern controls to produce better beams, but nothing has been done so far anywhere. According to the Report, output has been three times less than that on high speed machines with all modern electronic controls (Hibberts and Cockers), and, therefore, three times more number of machines and men are needed. To quote the Report: "Rarely did we come across a mill where sizing ingredients are analysed before acceptance from the market and before use in the size mixing. It is too dangerous a practice in a country like India where scruples have no place in trade and commerce. Technicians do not know what they use and, therefore, the most important chapter of size mixing remains as the most neglected case." Mills all over India are, we are told, still continuing the system of hand-drawing-in, with the exception of very few mills which have introduced successfully automatic warp tying and automatic reaching-in machines. Some mills are still experimenting on the use of wire and flat steel heralds, although it is not at all a matter for experiment.

Role of Automatic Looms

There is considerable scope for improvement in the weaving section, as will be evident from the following extract from the Report: "In order to introduce four, six or eight looms to a weaver, it will be necessary to supply good yarn, control speeds of looms, standardise sorts, provide good light and humidity and ventilation, wider alleys, perfect floorings, bigger packages of weavers' beams and weft pirns, and many other amenities necessary for workers, such as providing tea, drinking water and snacks in the department, urinals and smoking room attached to the shed. One mill in Delhi and two in Madras have installed all automatic looms and are working four, six, eight and even 16 looms to a weaver. One mill in Ahmedabad having automatic looms is working 18 looms to a weaver and another in Bombay six per weaver. Mills working automatic looms have proved beyond doubt the necessity and utility of introduction of automatic looms on a wider scale throughout India for plain sorts. Wherever automatic looms are working, they are faring very successfully. We have seen in many mills counts from 14s to 70s working in the same shed on any loom under the same atmospheric conditions giving higher efficiency in the case of one count and lower in the case of the other. Such methods of work can be seen in India only and not in any other country advanced in the theory of textile technology. We recommend restriction of counts in every mill to suit looms, humidity and working conditions. Everywhere we received complaints against very frequent changes in sorts made so often by the managements to obtain maximum margin of profit. We recommend that measures be taken to stop such practices immediately."

Managements of many mills seems to economise on wage bills by employing less number of workers in the folding department—definitely a wrong conception of economy. According to the technicians, the folding department is one of the most important sections where every care has to be taken to mend, clean, check and sort out cloths received from the weaving shed. "In many mills," observes the Report, "we saw as much as 70 per cent. of the production to be faulty pieces, and managements pass them as good cloth in the market—both home and export, without any hesitation. It is definitely a malpractice and must be checked through strict regulation."

Joint Responsibility

The Report finally concludes that an enlightened management must, as in all industrially progressive countries of the West, possess a progressive outlook and keep itself abreast of developments in other countries in the sphere of new devices and production technique, resulting in increased production and reduced costs. An enlightened labour force, conscious of its importance, cannot afford to non-co-operate in the introduction of new working methods and otherwise share with the management the joint responsibility for the continued progress and development of what is easily the premier national industry of this country. The benefits accruing from the adoption of improved production methods must be shared by capital with labour which must be made to feel that it has an important role to play in the country's economy as partners in this great enterprise. The Technical Committee is of the firm opinion that, from the short-term point of view, the Government should see that the mills will introduce methods of quality control to achieve uniformity in laps, better carding, improved rovings, better splinnings, etc., all aimed at securing maximum production of cloth from the looms. It is to be hoped that the Government would take immediate measures to implement the recommendations of the Report and not to pigeon-hole the Report, as has generally been the practice until now.

Have the pulse of the
COTTON WORLD
in your hand by subscribing to the American "Weekly"
THE COTTON TRADE JOURNAL
This international "weekly" serves the cotton trade proficiently and, as a mirror, reflects the cotton situation in the United States and other cotton-producing and consuming countries.
A year's sea-mail subscription (Rs. 28-12 only) or air-freight subscription (Rs. 100-7 only) includes an Annual Textile Number, reporting developments and progress in the textile industry, and an International Edition of over 200 beautifully illustrated pages, giving a resumé of conditions in each of 22 countries as they affect cotton and world trade in general. This International Edition, otherwise, by itself costs $3.00 or Rs. 14-6-0 plus postage.
Substantial reductions for 2-year and 3-year subscriptions.

EXPORT OF SILK WASTE

The plea for the relaxation of restrictions on silk waste exports has received growing support at the hands of a section of export trade in this commodity. Recently, it will be recalled, the Government of India announced removal of all quantitative and other restrictions on exports of silk waste of Bengal and Assam origin. The silk waste of Mysore origin has thus been left out. Incidentally, it may be noted that the Government of India has released a quota of 200,000 lbs. of Mysore and Madras silk waste for export of the trade from ports in Madras State during 1953.

The above plea is based on the ground of surfeit of supplies. The aggregate production of silk waste in the State of Mysore is estimated at as much as 1,400,000 lbs. per annum, against the 600,000 lbs. that the manufacturing concerns—mainly the Mysore Silk Filatures Ltd. and the Mysore Spun Silk Mills—are actually capable of consuming. This surplus of stocks thus available for export is stated to be of the order of nearly 800,000 lbs. As this quantity is fairly large, the Government should, the trade feels, allow freer export of silk waste. If, however, the Government feels that such free licensing of exports would result in increase in price, it is pointed out, it can levy a small export duty of, say, As 4 per lb., with a view to subsidising the manufacturing concerns.

The present system of distribution of quotas and licences by the Government to exporters is also criticised by the trade. Under the procedure now in force, licences against the quota allotted are granted to established shippers on the basis of exports in the best year during the period 1948 to 1952, while those to new-comers are granted only on the basis of actual exports in 1952-53. This has resulted in the export trade being concentrated in the hands of only a few—a dozen or two, according to one estimate. "Such a system," to quote one report, "is not very conducive to get good prices for silk waste in foreign markets." It is accordingly suggested that, if the Government were to liberalise exports and modify the licensing procedure, promotion of exports of silk waste would be facilitated and much valuable foreign exchange earned. Further, the Government should issue quotas only to shippers who produce evidence of sale. Such will check the tendency on the part of that section of traders which indulges in black marketing of export licences.

There is, however, another section of opinion which feels that no export of silk waste should be allowed at all. For, in its opinion, the material should be utilised in the country itself for the manufacture of a wide range of products, parti-

BRITISH LABOUR LEADER ON NEED FOR WORLD COTTON PACT

ANGLO-ARGENTINA TRADE IN TEXTILES

(From A Special Correspondent)

MANCHESTER, *5th May*

MANCHESTER LETTER

A CALL for international talks aimed at beating trade slumps by agreeing on the size of raw cotton crops was made by Mr. A. C. C. Robertson, President, at the Annual Conference of the United Textile Factory Workers' Association last week. Lack of confidence in raw materials was one of the causes of last year's "very grave trade slump" in the Lancashire textile industry, he said.

"It should be possible in a sane world for the cotton-growing and cotton-using countries to get together and plan as to how much material it is necessary to produce to adequately provide for the normal requirements of the world, and to arrange to grow and sell to that end," said Mr. Robertson. He added:

"No ordinary person wants to see the grower of cotton in any part of the world not receive a proper reward for his labour, nor do we want to work without a proper reward. If we keep pressing this matter it will surely dawn on the people affected that it is better to live in a voluntary ordered world than exist in a cut-throat business one."

Mr. Robertson criticised the employers for rejecting an all-round wage application by the unions. Employers could not expect workers to continue to agree to new methods of working if the result was their debarring from legitimate wage advances. The mills' trading results during the past year had shown very good profits.

Raw Cotton Cover

Private buyers of raw cotton have been officially notified by the Raw Cotton Commission that its cover facilities guarding them against price changes will be withdrawn at the end of August.

Notice to end the present scheme follows the establishment of the Cotton Review Committee which is at present investigating the future of raw cotton buying in Britain. New proposals are being drawn up for submission to the Government by an expert committee under the chairmanship of Sir Richard Hopkins.

Mr. E. J. Richmond, Secretary of the Commission, in a memorandum to contracted-in spinners, said: "Pending any decisions which may follow the recommendations of the Hopkins Review Committee, the Commission's cover price list will not be extended beyond August delivery. Spinners will be informed as early as possible of the Commission's arrangements for the supply of cotton and the provision of cover for the coming season."

About 30 per cent. of Britain's cotton requirements are being bought privately this season. Millowners will again be offered the choice of obtaining supplies privately or through the State-sponsored Commission in June.

A proposal that a delegation from the International Federation of Textile Workers should visit Japan towards the end of this year to make an on-the-spot study of conditions in the textile industry there, is being considered by the Federation.

Announcing this at the Annual Conference of British cotton textile workers, at Morecambe, Mr. John Greenhalgh, General Secretary of the Federation, said the proposed visit would enable a report to be made to affiliated associations on the position in Japan.

Mr. Greenhalgh said that promises given to him by the President of the Japanese Textile Workers' Union that there would be no resumption of dumping of low-priced textiles had been kept by the Japanese textile workers. There had been no recurrence of the unfair trading conditions experienced before the war. "But what the future holds no one can say," he said.

Jets-for-Cotton Deal

First supplies of Brazilian cotton under the £4,000,000 jets-for-cotton barter deal reached Britain this week and are now available for use in Lancashire spinning mills.

Arrivals so far total 15,242 bales out of eventual shipments of about 85,000 bales scheduled under the deal. These supplies have been bought by the Raw Cotton Commission in exchange for 70 Meteor jet aircraft which are being shipped to Brazil by the Gloster Aircraft Company.

The Brazilian cotton comprised most of the week's imports of 36,044 bales which also included 10,084 bales from West Africa. A further 18,618 bales of cotton from Brazil is at sea for Britain out of total supplies afloat of 63,919 bales, mostly Sudan, Pakistan and African qualities.

Rising Cloth Production

Output of cotton and rayon cloth from Lancashire weaving sheds in March topped the 50,000,000-yards-a-week mark for the first time for 12 months, the Cotton Board has announced. The weaving operatives produced a weekly average of 50,600,000 yards of cloth compared with an average of 49,100,000 yards in the previous month.

Contrasted with the March production last year, output showed a drop of 2,220,000 yards a week. Total amount of cotton and rayon cloth turned out during the month was 141,320,000 yards. The weaving labour force has now increased to over 136,250.

A Forlorn Hope

Lancashire traders are no longer inclined to optimism over the future possibilities of Anglo-Argentine trade in textiles. The scales seem so weighted against our local industry that most shippers with connections in South America have ceased to regard opportunities of freer trading with any enthusiasm.

So it was that the announcement that no cotton piecegoods were to be included in the £3,000,000 worth of less essential commodities to be granted import licences for shipment to Argentina under the new protocol to the trade agreement, came as no surprise. Yet the industry is wholeheartedly behind any attempts made to improve the situation, however forlorn they may appear. The Manchester Chamber of Commerce statement on the subject minced no words, and the comment: "Successive British Governments have jeopardised the cotton industry's interests in a vital long-term market" was considered entirely justified.

As the official statement pointed out, Argentina bought an average of 114,000,000 square yards of cotton cloth annually from Britain in the three years before the war. Subsequently, imports have been little more than a trickle. Again, to quote the Manchester Chamber: "The whole history of the annual negotiations under the 1949 five-year Anglo-Argentine trade agreement has been disastrous from Lancashire's viewpoint. During the whole of the negotiations the Chamber has felt that the British negotiators have been too lenient." The United States, Brazil and a number of European countries, especially Italy, have been engaged in trade with the Argentine in recent years, while Lancashire fabrics have been almost totally excluded. The danger that consumers in the Argentine may well lose their taste for high-grade Lancashire textiles is an important factor which will be stressed by any deputation which the President of the Board of Trade is prepared to meet.

The New and The Old

The American productivity report on the British cotton industry still provides a talking point for traders and gives company chairmen an opportunity to air their views on the rights and wrongs of current conditions in Lancashire. Mr. S. S. Hammersley, Chairman of the Oldham group, Cotton and Rayon Spinners Ltd., in his annual survey, says there is a vast gulf between mills re-equipped with modern machinery, staffed by managements alerted to take full advantage of modern improvements, and old-fashioned mills with complacent managements. It is a national misfortune, he declares, that the size of this gulf is concealed.

There is a growing conviction in many quarters that the blame for this state of affairs is not solely the fault of management and that both employers and workers should co-operate in drawing up wage systems more suited to modern industrial activity. "If the method of wage remuneration throughout the industry were scientifically linked to the operatives' workload, as it is in America, then the difference in cost of production between modern and old in Lancashire would leap to the eye," adds Mr. Hammersley.

Lancashire traders continue to talk with nearly as many tongues as there are individual firms in the industry. On the one hand we have the United Textile Factory Workers' Association declaring: "The need for standard cloths, standard qualities and long runs is more important than ever now if production costs are to be kept as low as possible." But Mr. Hammersley's view is that the production of common cloths in Lancashire in competition with nations of a lower standard of life is not a hopeful prospect. "Fortunately," he adds, "the diversifications of the textile trade are enormous, scores of thousands of new cloths coming into existence every season."—*All Rights Reserved.*

WORLD NEEDS MORE COTTON

AMERICAN JOURNAL'S REVIEW

TRUE to its rich traditions of leadership in the cotton world, the U.S. has been a pioneer in cotton cultivation and research in cotton. Apart from its distinction as the chief grower and exporter of cotton, the U.S. has also successfully established many a journal devoted exclusively to the dissemination of information about cotton and to the discussion of the manifold problems of this fibre. Among this class of journals, the *Cotton Trade Journal* is easily the most well-known periodical devoted to the cause of the white gold. The *Journal's* annual publication, entitled *International Edition Year Book*: *The Cotton Trade Journal*, is always looked forward to with interest by cotton men the world over, both for the authoritative information it provides and for the interesting manner in which this information is presented. The latest issue of this annual publication for the year 1952-53* maintains the traditions of its illustrious predecessors, and will be read—as, indeed, it deserves to be read—with particular interest by cotton men in this country.

The *Journal's* latest annual publication is called the "Challenge Number." Explaining the significance of this title, Mr. Francis G. Hickman, the publisher, says that the articles in the number "reflect the vital economic problems and political issues in many different countries." He explains further that what is at stake is the "preservation of the fundamentals of democracy." Cotton men, he argues in so many words, could promote world-wide commercial relations and through such association, promote international goodwill. The articles in this publication have all been written from this wider angle. Typical of the broad outlook of those who have contributed to this publication is Mr. Hickman's remark: "Some say there is too much cotton. Such reasoning is obviously absurd when we realise that over half of the world's population is not adequately clothed." Appropriately enough, this "Challenge Number" begins with a description, by Mr. Stanley Andrews, of the Point Four Programme, the instrument designed by the far-sighted economic statesmen of the U.S. for meeting the challenge of extremist political ideologies in the underdeveloped parts of the world. This is followed by articles on cotton and related economic problems in a number of countries such as Mexico, Canada, South America, Japan, India, Pakistan, Egypt, Middle East, England, France, Germany, Russia, Hungary and China. There is an interesting article on the challenge of synthetics to the natural fibre by Mr. Francis A. Adams, and another on the role of textile conferences, by Dr. W. T. Kroese. The publication is ably supplemented by tables of statistical data relating to world cotton.

Need for Irrigation

India gets an extended treatment by the the publishers of this volume. The Indian section is prefaced by an appreciative reference to that doyen among India's cotton men, Mr. Purshotamdas Thakurdas whose life and career are intimately bound up with India's economic progress in general, and with the evolution of India's cotton economy, in particular. Sardar Datar Singh, the well-known authority on India's agricultural problems, makes a fervent plea for more irrigational facilities in order to solve the problem of cotton production. Out of the total area of 15.1 million acres under cotton crop in 1951-52, only one million acres enjoyed irrigational facilities. The crop on all the remaining area depended for its water-supply on the monsoon rains. The yield per acre is hardly 100 lbs. per acre—though on irrigated land it varies from 180 lbs. to 250 lbs.—as compared with 267 lbs. in the U.S. and 390 lbs. in Egypt. Referring to the need for the extension of irrigation facilities, Sardar Datar Singh says:

"The area of irrigated cotton in 1951-52 was only about one million acres, as has been said. There are several major irrigation projects under construction in the cotton-growing States. It is estimated that, when these projects are completed, at least four to five million acres will be available for growing irrigated crops. Nearly 1.5 million acres out of this additional area will probably be placed in cotton in the normal course of rotation. With the existing standard of yields, the extra production from this additional area may be estimated at about 600,000 bales. However, since it may still take five to seven years to complete these projects, the estimated additional production from this source is not likely to materialise during the period fixed for the achievement of the Planning Commission's target. From the short-term aspect, therefore, increasing production with the help of minor irrigation schemes (which may perhaps be completed in a relatively short time) has to be thought of. One authority has estimated that if three million acres of rain-fed cotton are irrigated from minor irrigation projects, the additional production will be enough to achieve the Planning Commission's target during the next four or five years. The cost of these minor projects has been roughly estimated at 300 million rupees (about 60 million dollars)."

Dr. C. N. Vakil, the noted economist of this country, strikes a similar note in his article, entitled "A History Woven in Cotton." Emphasising the need for higher productivity, he says:

"In the ultimate analysis, the shortages could be removed only by increased productivity. Yields per acre of cotton in India are notoriously low. With the extension of irrigation and technological improvements, we should be in a position to realise at least half of the requisite increase from the present acreage without encroaching on other crops. Competitive pulls on available resources induced by shifting prices and vacillating Government policies might result in wastage and misallocations. India needs more foodgrains, more cotton and more jute."

Writing on the cotton supply problem, Mr. Manilal Patel pays a well-deserved tribute to the U.S., for it is the supply of large quantities of American cotton which came into this country during 1951-52 that contributed substantially to the supply position of cotton and "paved the way for some relaxation in the cotton control machinery."

Research

Dr. C. Nanjundayya, Director, Technological Laboratory of the Indian Central Cotton Committee, has contributed an article, in non-technical language, on the importance and results of cotton research. Explaining why the Committee should be engaged in developing a large number of different strains of cotton, he says:

"It may be asked why hundreds of new strains should be developed by cotton breeders. The answer is simple. India is a vast sub-continent and the diversity both in the geographical and the climatic conditions is so great that the chief factors which affect plant growth—the amount and distribution of rainfall, the composition and fertility of the soil, the availability of irrigation facilities, etc.—would have to be taken into consideration before evolving a suitable strain for a particular cotton tract."

Cotton research is, as students of cotton know only too well, not a mere academic adventure. It has an abiding economic significance. This has been effectively brought out by Dr. Nanjundayya in his article.

Now, as regards the monetary return to the grower, it is by no means possible to assess it accurately, but the following figures give a rough idea: additional income earned in 1947-48, Rs. 5.1 crores; in 1948-49, Rs. 5.6 crores; in 1949-50, Rs. 6.0 crores and in 1950-51 Rs. 7.0 crores.

It would also be interesting to note that, whereas in the year 1923-24 only two-fifths of the total cotton crop produced in India was consumed by Indian mills, to-day practically the entire quantity of cotton produced in the Indian Union is being consumed by the Indian mills.

The need for a sound and workable plan for Indian cotton has been emphasised in a very interesting article by Mr. D. S. Nadkarny, the Secretary of the Cotton Buyers' Association. He says:

"The main drawback in the cotton situation as it stands to-day is a serious lack of collective thinking and scientific planning. With the present dynamic world situation, India can ill afford to be complacent about the future which undoubtedly calls for a sustained and determined effort to move ahead and plan our cotton economy in such a manner as to keep the country above the present subsistence level."

There is no doubt whatever that the publication under review provides a sumptuous and varied fare for the reader who wants to keep himself abreast of cotton problems. The chief merit of the publication is that it presents these problems in a world perspective in which they should naturally be viewed. This publication, therefore, deserves to find a place on the bookshelves of all cotton men in the country.

SEN-RALEIGH INDUSTRIES OF INDIA LTD.

MR. S. K. SEN CRITICISES GOVERNMENT'S IMPORT POLICY

THE Third Annual General Meeting of Sen-Raleigh Industries of India Ltd. was held at Calcutta on 11th May, 1953. Addressing the meeting, Mr. S. K. Sen, Chairman of the Company, said:

"The accounts for the year 1952 have been with you for some time now. This covers a period of building and installation activities which brought your Company on the verge of manufacture. The operating results reflect this condition.

"The Company's income from the sale of Raleigh products showed an increase over the previous period and covered all operating costs for the year but the heavy initial depreciations. Your Directors decided to avail of the maximum benefit from the provisions of the Income-tax Act permitting special depreciation allowances for new undertakings in the initial year. This move was felt to be advantageous in building up large depreciation reserves necessary for the high capital costs of to-day.

"The outstanding event in the year was the opening of your most modern and up-to-date factory by Mr. D. P. Karmarkar, the then Deputy Minister, Commerce and Industry, on 21st June, 1952.

"We had the pleasure of welcoming Messrs. G. H. B. Wilson and L. C. Clarkson, Directors of Raleigh Industries Ltd. and also Directors of this Company, during June. Our thanks are due to them for having made it convenient to visit India at that time and to lend the Indian Company the full benefits of their experience and support for the opening.

"During the year under review, the plant and machinery for the first stage of manufacture was installed by the Indian technicians with the help of Raleigh personnel and test runs were completed. Training was imparted to a small band of workers who showed promise of manufacturing on the up-to-date plant and equipment products equal in every respect to the Nottingham counterparts.

Training for Technicians

"Agreements with Union and Wittkop were also concluded during the year. Under these arrangements your Company will shortly commence production of hubs, pedals, spokes, chains and saddles of a quality equal to that now produced by the associate companies in Germany. A further batch of technicians was selected for training at Nottingham and in Germany. The addition of the resources of Union and Wittkop in planning extensions, along with expansions assisted by Raleigh, considerably increased the pace of progress in laying out Scheme 'B' for further stages of manufacture.

"Planning for buildings for the second stage was completed in the year under review and orders were placed for all the material required for the extensions. Our thanks are due to Mr. K. N. Sinha, the Architect of the Company, for the personal interest taken by him in the growth and development of the factory and town at Kanyapur, which enabled Scheme 'B' buildings to be planned within months from receiving plant layouts. Unfortunately, the delivery position of steel to fabricators has not improved to any great extent in West Bengal and progress on actual buildings will be held up due to late deliveries of the steel work.

"It is with regret that I have to report that even with the election of a popular Ministry, the biggest hindrance to the rapid expansion of industries in the country, namely, procedural delays in grant of licences and permits, remained unchanged. Delays of three to four months on the grounds of policy not being settled in the matter of import licences for components and raw materials appeared to be quite normal in the year. What was worse, the same delays crept into the applications for consumable stores and raw materials. There is no more effective bar to production than an insecure supply line and with the best efforts of the Company, economic production will not be possible, if supplies are not sustained. Your Company has more than once put forward the plea that in the matter of import licences for industries there should be a continuity of policy to enable balanced shipments of components and raw materials. The total value of the imports may be adjusted as Government think fit, depending upon the production of the unit applying for licences and the exchange position of the country, but licences should be with the producers every succeeding half-year without a break. Although in principle this has been agreed to, it has still to be seen in practice and policy decisions have not materially been speeded up. We sincerely hope that procedures for grant of licences to industries will be thoroughly revised to prevent discontinuities in future.

"Before concluding, I would like to thank the various interests concerned with the planning of the factory and its operations, particularly Raleigh departments, whose advice contributed not a little to the successful operation of our first efforts at manufacture. I would also thank the Works Manager, the foreman and staff and workers at Asansol and at Calcutta for the ungrudging efforts put in by them to transform the project to a production unit in the shortest possible time."

USE OUR EXPERIENCE...

It has long been appreciated by industrialists that the cost of paint per gallon is by no means the best guide to the economies of painting. Production and maintenance costs merit careful study by all who aim to improve quality and efficiency.

I. C. I. have always advocated a realistic approach to this problem and in furthering this aim have recently produced two booklets entitled *"Improving Paintshop Productivity"* and *"Better Housekeeping in the Paintshop"*

Interested executives may obtain copies of these publications from the sole selling agents.

SUGAR INDUSTRY IN INDIA

NEED FOR STEPPING UP CONSUMPTION IMPERATIVE

IT will be recalled that the development programme of the sugar industry in India, as drawn up by the Planning Commission, does not envisage any expansion in the installed capacity of the industry. For, according to the Commission, the present capacity of the industry, namely, 1.55 million tons, is more than sufficient to meet the present consumption requirements of sugar in the country. It accordingly emphasises that, in the present state of development of the industry, the problem of facilitating full production in the existing units is of greater importance than that of establishing new units, involving heavy capital expenditure.

Basing themselves on this view and assuming that the *per capita* consumption of white sugar is 8.3 lbs., that is, the estimate made by the Planning Commission, some are inclined to feel that India has already produced more sugar than it can consume. They have, therefore, advocated a policy of restricting output. This proposal has, however, been seriously questioned by the more responsible section of the Indian sugar industry on the score that not only is the present rate of production not adequate but the consumption requirements of sugar are also an underestimate. In the opinion of this section, there is vast scope for further expansion of the industry. Such, at least, is the conclusion arrived at by Mr. M. N. Mitra, one of India's leading sugar millowners, in an interesting brochure entitled *Has India Really Produced More Sugar than She Needs?*

In the considered opinion of Mr. Mitra, the record output of 1.48 million tons of sugar during the sugar season 1951-52 should not be taken as an index for estimating the future trend of production. This record output was the result of certain special features which were peculiarly applicable to that season. Mention, for instance, may be made of factors like increased capacity of sugar mills *vis-a-vis gur* producers, thanks to decline in *gur* prices, incentive provided by Government's policy of partial decontrol of sugar, and bumper sugarcane crop. All these induced the sugar mills to indulge in over-crushing to the extent of about 30 per cent. of their rated capacities. While thus production rose, as a result of the artificial stimulus, the machinery and plant of most factories were subjected to heavy wear and tear, thereby adversely affecting the production capacity of the units. This is corroborated by the fact that the output for the current (1952-53) season is estimated at 1.31 million tons.

Duration of Season

Similarly, it would not be correct to anticipate for every year such long duration of crushing season—133 days—as was witnessed in 1951-52. The estimate of a reasonable and average rate of production has to be based on the working of a normal crushing season, an idea of which can be had from the figures given below:

	No. of average working days
1947-48	128
1948-49	101
1949-50	90
1950-51	101
1951-52	133
Total	553

On the basis of the working of the past five seasons, the average duration of a sugar season can be estimated at 106 days, or, say, about 110 days. As many as 139 sugar mills have worked in India in 1951-52. But if we take into consideration the average number of working sugar mills in India for each season after the Partition, this number then stands at 138 only. We have seen that, in 1951-52, the average crushing capacity of each sugar mill in India was 840 tons a day. But the average for that season was very high. Taking the average of the last five seasons, the average crushing capacity of a sugar mill in India comes to 778 tons a day, as will appear from the following figures:

	Daily crushing capacity of each mill
	Tons
1947-48	742
1948-49	740
1949-50	776
1950-51	790
1951-52	840

The all-India percentage recovery of sugar for 1951-52 was 9.57. Let us now take the figures of percentage of recovery for the last five seasons:

	Recovery percentage
1947-48	9.85
1948-49	9.97
1949-50	9.89
1950-51	10.03
1951-52	9.57

The average recovery percentage of sugar in India, therefore, stands at 9.86. But considering the future improvement in the quality of sugarcane in India due to intensive research work now being carried out under the Five-year Plan, the average recovery percentage may be put at 10.5 for the coming few years. A fair and reasonable estimate of the future production of sugar in India should, therefore, be based on the following considerations:

Average No. of working days	110
Average No. of working sugar mills ...	140
Average percentage recovery of sugar ...	10.50
Average daily crushing capacity of each mill	800

On these presumptions, the annual production of sugar in India is estimated at 12.90 lakh tons. About 13.00 lakh tons should be taken as the average annual production in India for the next three or four years.

Consumption

Another aspect of the question that has to be considered relates to consumption. The Planning Commission estimates the *per capita* consumption of white sugar at 8.3 lbs. On the basis of the present population in India and on the basis of the *per capita* consumption at 8.30 lbs., the total consumption of sugar in India comes to over 13.33 lakh tons. India's population is increasing, on an average, by 4 million people annually. Taking the *per capita* consumption of sugar even at 8 lbs., the total amount required to feed this increase of population is 15,000 tons per annum. If a 800-ton plant is considered as an economic unit, it means the establishment of two such new mills per annum to produce the said quantity of 15,000 tons of sugar.

When compared with other countries of the world, India's *per capita* consumption of sugar, even including *gur*, is abnormally low, as will be evident from the following table:

	Per capita consumption of sugar
	Lbs.
Australia	143.0
Cuba	140.1
New Zealand	138.0
Denmark	112.0
U.S.A.	106.0
Switzerland	95.0
U.K.	92.0
France	60.0
Egypt	30.0
India (including *gur*)	26.4

A *per capita* consumption of 26.4 lbs. of sugar (including *gur*) is certainly very low and extremely poor in nutritional value. As has been aptly stated, India should be able to increase this to at least double its present quantity, if the nutrition requirements of the population were to be adequately met. Such could be brought about by effecting reduction in sugar prices to a level that suits the pockets of the ordinary consumer. If the existing price of sugar is reduced, as the Tariff Board stated, to Rs. 18 or Rs. 19 per maund, consumption of sugar is bound to increase substantially, at least by

SUGAR PRICES SOAR

GOVERNMENT WARNS HOARDERS

THE Government of India has administered another warning to the sugar industry and trade that if the prices of sugar continue to be high, the Government would be constrained to take such steps as it might deem necessary to maintain prices "at a reasonable level." This warning is a sequel to the disquieting situation that has once again appeared on the sugar front. Scarcity of supplies (amidst plenty!) is being felt in several parts of the country and sugar prices have been spiralling up. The price of sugar in the Bombay market is quoted at Rs. 88-8 to Rs. 97 per bag (as on the 10th inst.), as against Rs. 83 to Rs. 86 on 15th March, 1953, and the previous control price of Rs. 82-6. The price of sugar per bag in the other markets also has tended to go up, as will be seen from the table below:

	16-3-53	5-5-53	*Net increase*
	Rs. a.	Rs. a.	Rs. a.
Hapur	78 6	88 11	10 5
Meerut	80 7	90 1	9 10
Calcutta	80 7	87 5	6 14
Kanpur	76 5	83 3	6 14
Delhi	83 5	87 5	4 0
Gauhati	88 13	92 2	3 5
Madras	86 10	88 6	1 12
Patna	84 9	85 15	1 6

The disquieting sugar situation noted above is indeed surprising, considering the quite comfortable supply position. The total supply available in the country during the current (1952-53) sugar season is estimated at about 1,800,000 tons—including the 461,000 tons bought in from the previous season—a quantity which is well above the actual offtake of 1,177,000 tons in the 1951-52 season and the estimated offtake of 1,500,000 tons for the current season as a whole. This comfortable supply position is fully reflected in the marked improvement in the quantity released for internal consumption, the actual figure for the past five months alone being 940,000 tons, as against 1,177,000 tons for the whole of 1951-52. This figure excludes the release of 100,000 tons of sugar on the 9th inst. by the Government for sale in the free market. This brings the aggregate quantity so far released to 1,040,000 tons. The movement of sugar from factories to consuming centres has also been satisfactory, thanks to better wagon supplies. During the period 1st December, 1952, to 30th April, 1953, nearly 700,000 tons were moved out, which compares favourably with about 500,000 tons in the corresponding period last year. The stock position at present is highly satisfactory. The closing stocks with the factories as at 15th April last amounted to 956,638 tons, as against 829,996 tons a year before. In fact, the present level of stocks is the highest in the history of the Indian sugar industry.

Hoarding Tendency

Despite comfortable supplies and quicker despatches, why, then, should sugar prices register an upward trend now? The answer to the question is not far to seek. As the Government of India itself has pointed out in its letter of warning addressed to the Sugar Mills Association, Calcutta, "as it is, the present rise in prices can be attributed mainly to speculative activity and an allround hoarding tendency." The millowners in the U.P. and Bihar, it is reported, are reluctant to sell large quantities of sugar in anticipation of better prices. Some have even enhanced prices arbitrarily.

This attitude is certainly to be deplored and the Government of India's warning, referred to at the outset, is quite timely. It will be recalled that, while removing price and distribution control over sugar last year, the Government had clearly stated that, if there was any "unreasonable" rise in sugar prices, the Government would fix a statutory price, corresponding to the minimum price of cane, and arrange for its sale, so that sugar might reach the consumer at a *reasonable* price. It is to be hoped that the sugar mills (as also the trade) in Northern India will take steps to bring down prices in the immediate future before the Government takes any action.

The Government of India's warning in itself will not, however, prove adequate. For the Government should ensure better transport facilities to the factories and thereby quicken the rate of despatches. This assumes special significance to the Bombay region where the stocks have been reduced, as a result of larger purchases of sugar by traders in the Konkan area, which are a normal feature on the eve of the monsoon. In view of the comfortable supply position, one wonders if the Government could not abolish the remaining controls on sugar.

LABOUR IN RAILWAY COLLIERIES

DISCHARGE ORDER HELD VOID

THE Labour Appellate Tribunal has set aside the recent order of the Central Industrial Tribunal, Dhanbad, granting the Chief Mining Engineer, Railway Board, permission to retrench 4,145 surplus workers employed in railway collieries. It has declared that an order giving general permission to retrench a specified number of workmen without naming them, or giving particulars, as would identify them, and leaving it to employers to select the workmen on the strength of such an order was not maintainable in law.

It will be recalled that a fact-finding committee appointed some time back, to enquire into the affairs of the railway collieries, held that there were 5,693 surplus workers employed in eight railway collieries. Following this finding, the Chief Mining Engineer, Railway Board, filed an application before the Central Industrial Tribunal at Dhanbad, under the Industrial Disputes Act, seeking permission to retrench the surplus labour. This application was, however, subsequently amended and the number of workers sought to be retrenched was reduced to 4,145. The Central Industrial Tribunal held, in March last, that the management concerned had the right to decide the number that it could engage and retrench the rest so long as the decision was not accentuated by any ulterior motive and there was a *prima facie* case for the retrenchment. The Tribunal further observed that the workmen were free to move the Government to make a reference to the Tribunal, if the management did not follow proper principles in effecting retrenchment. Against the order of the Central Industrial Tribunal, the trade unions concerned filed an appeal with the Labour Appellate Tribunal, which gave its verdict, as stated at the outset.

As the order of the Central Industrial Tribunal has been set aside purely on a question of law, it is open to the Dhanbad Tribunal to go into the merits of the controversy that may be raised, when a new application for permission to effect the retrenchment is made before it. The Labour Appellate Tribunal's order, however, reiterates the right of the management to effect retrenchment of surplus labour, except in cases where the action of the management is vitiated by bad faith, discrimination and/or victimisation. It may be noted that the general principle of retrenchment is "last come first go," but there may be exceptions, as, for example, inefficient and unreliable workmen. The retrenched personnel should, however, be given preference for re-employment; the older hands should be taken first. A Tribunal cannot sit in judgment over management's action concerning the extent of retrenchment so long as it is *bona fide*.

The retrenchment, when effected completely by the Chief Engineer, should bring immense relief to the management of railway collieries. For, on account of maintaining a huge idle surplus labour force, the collieries are reporting losses. It is true that in 1951-52, they disclosed a profit of Rs. 11.3 lakhs, a sum which pales into insignificance when it is remembered that the collieries have involved a capital outlay of Rs. 7.38 crores. The year should have ordinarily shown a loss but for the boom conditions witnessed then, following the Korean war. The working in 1950-51, in fact, revealed a loss of about Rs. 70 lakhs. It is held that the net profit in 1951-52 would have been higher had it not been for the surplus labour in the collieries which accounted for an expenditure of Rs. 50 lakhs.

COAL STATISTICS FOR MARCH 1953

According to the Chief Inspector of Mines in India, 828 collieries and eight coke plants worked during March, 1953. On an average, 340,294 persons were employed daily and 8,383,832 man-shifts, worked. The overall percentage of absenteeism was 14.40. The output per man-shift for miners and loaders was 1.06 tons, for all persons employed in underground and open-workings 0.57 and for all persons employed 0.36. As much as 3,075,992 tons of coal were produced during the month. Besides, 119,227 tons of soft coke, 182,992 tons of hard coke and 13,583 tons of other kinds of coke were manufactured. Despatches during the month accounted for 2,684,451 tons of coal, 127,465 tons of soft coke, 41,412 tons of hard coke and 3,375 tons of other kinds of coke. The coal stocks at the collieries on the last day of the month were 3,376,006 tons.

OUTLOOK FOR NATURAL RUBBER

PLEA FOR REVISION OF AMERICAN POLICY

THE International Rubber Study Group (I.R.S.G.) is currently in session at Copenhagen since Monday this week, reviewing the world rubber position and considering the report of the Working Party of the I.R.S.G. which it set up at Ottawa last year. The Working Party suggested that a buffer stock agreement between the producing countries might be entered into, but left the final decision on the necessity for such an agreement to the I.R.S.G. itself. In this connection, a study of the immediate background to the present world rubber situation and the long-term prospects for natural rubber is provided by the address of Sir Sydney Palmer, Chairman of the Rubber Growers' Association (Incorporated), at the annual general meeting of the Association, held early this month.

The world production of natural rubber in 1952 fell by about 100,000 tons to 1,780,000 tons and consumption by 45,000 tons to 1,455,000 tons, of which only 454,000 tons were absorbed by U.S. manufacturers. The surplus natural rubber production over consumption, namely, 325,000 tons, was taken into the U.S. strategic stockpile which, at the end of 1952, might have amounted to 1,100,000 tons, as compared with a little over 800,000 tons at the end of 1951. The U.S. stockpile target had, however, been achieved by the middle of 1952 and there had, therefore, been very little offtake of natural rubber on this account since then, except for rotational purposes. In the absence of any compensatory buying by U.S. manufacturers, the price of natural rubber has steadily fallen from about 3*s.* per lb. a year ago to as low as 1*s.* 7¾*d.* a few weeks back, though currently it stands at 1*s.* 8⅝*d.* The decline in the offtake of natural rubber by U.S. manufacturers is in a large measure due to the reopening of the high cost alcohol-based synthetic plants, the product of which is sold at far below cost. The consequential decline in price to such a low level, as noted above, is stated to be causing a serious situation in South-East Asia.

The immediate problems of the Malayan rubber industry are that it is denied competition on equal terms with the synthetic product and is weighed down by the burden of taxation which is now 70 per cent. of the profits. At the current price of 1*s.* 8⅝*d.* per lb. it is just competitive with synthetic rubber, but it is too unremunerative for small holders (whose cost of production is high) to subsist; the larger low-cost producers can, however, manage to subsist. Already, in recent weeks, the output of small holders in Malaya has declined by 30,000 tons. In Indonesia, the fall in production of the small holders is said to have been even more marked, though the output of estates in Malaya and Indonesia is better.

The rubber growers feel that "in the urge to ensure national security, the U.S. Government has unfortunately overlooked the inevitable repercussions elsewhere." The present situation in the Malayan rubber industry is said to be the result of American policy. Sir Sydney Palmer, therefore, thought it reasonable to expect that a slight revision of this policy might create a situation wherein artificial correctives were not required. In this connection, he suggested that, to begin with, the Governments of producing areas should endeavour to create conditions of free competition between natural and synthetic rubber on equal terms. For this purpose, it would be necessary, according to him, to ask the American Government, first of all, to dispense with all restrictive practices against natural rubber. The threat of the re-imposition of mandatory controls should be removed. In the second place, the price at which the American Government is selling its synthetic rubber should be put on a commercial footing.

The U.S. Government has already declared its intention to sell its synthetic plants to private companies and it is rumoured that the price of synthetic rubber may be raised, partly to assist the deal, from the present pegged price of 23 cents per lb. for GR-S general purpose synthetic rubber. But well-informed circles feel that it will be at least 18 months before the transfer to private enterprise is implemented. It is this period that will be most critical in the fortunes of the natural rubber producers. Sir Sydney, therefore, thought it imperative that the U.S. Government should make the necessary ameliorative changes in its rubber policy without delay.

In the meantime it is anticipated that surplus of world rubber production over consumption will continue, though at lower levels. At the moment, Sir Sydney said, natural rubber production was running at an annual rate of over 1.75 million tons, while consumption was at the rate of just over 1.5 million tons. This in itself is an encouraging sign, for the surplus of production over consumption, at 250,000 tons will be considerably less than that of 325,000 tons in 1952, thanks to the low price of the natural product.

Though the present situation in Malaya is one of immediate concern to the natural rubber producers, they are from a long-term point of view, quite hopeful of the future of latex. For, as Sir Sydney said, "when the U.S. Government ceases to spoon-feed industry with supplies of synthetic at call, a new situation will arise, and it will then be necessary for manufacturers and the trade to increase their working stocks of natural rubber which are at a very low level." One day, and perhaps, soon, some one would wake up, he added, to the fact that natural rubber could not for long be available at a price which, for comparable grades, was lower than the price of 23 cents at which GR-S rubber is pegged. The increasing consumption of rubber, as already pointed out, and the development of new uses, together with increased consumption in established uses, have prompted Sir Sydney to take an optimistic view of the future and, in his opinion, by the end of this decade, the total demand for rubber may be in excess of the existing productive capacity for both natural and synthetic rubber. If the natural rubber producers were unhindered by Governmental action, he had little doubt, they could make themselves more than competitive with synthetic rubber by developing higher-yielding material.

IMPORT OF TEA CHESTS

The decision of the Government of India to stop the importation of tea chests for the Indian tea industry with effect from this year will be received with mixed feelings by all sections of the industry. Although such a decision was expected to be made some time, it looks as if no warning was given by Government that it would come in respect of the year 1953. The indigenous production of tea chests has no doubt made very considerable progress in the last few years both in respect to quantity and quality and it is in keeping with national policy that the indigenous production should be made to cater to the full needs of the tea industry. Nevertheless, it is an admitted fact that the indigenous production has not yet reached that stage in which it can effectively compete with the foreign production in respect of quality only. This is reflected in the fact that overseas buyers of tea have often expressed a strong preference for foreign-made chests. Until Indian-made chests have reached that stage of perfection, perhaps, it would not be in the interests of the tea industry of India to cut out imports of chests altogether.

JUTE INDUSTRY IN U.K.

PRESENT POSITION AND PROSPECTS

IT is now common knowledge that jute manufactures producing countries outside India, especially in the U.K., are faring much better than Indian jute mills. Many of the mills in Dundee, for instance, are working overtime, but are still unable to cope with internal demand. It is true that the U.K. mills have obtained orders by shading their prices a little below those of Calcutta, which hardly ensure reasonable profit for the industry as a whole. But it is clear that the industry in Dundee has not met with the prospect of reducing hours of work or closing a part of the looms, etc., as in India.

The comparatively better health of the jute industry in the U.K., as noted above, is chiefly due to strenuous efforts on the part of the industry, since September, 1952—when export licensing was removed—to regain the direct export markets lost by it. The loss of markets since 1939, it may be remembered, was occasioned by the shortage of jute products which restricted the activity of the industry to the primary necessity of satisfying the demands of many basic industries in the U.K. and other manufacturing industries which themselves were exporting their finished products to a large extent. We are told that the U.K. has, during the past five months, made gratifying progress towards regaining the markets which it was serving in the pre-war period. Exports of specialised goods have been on the increase, but those of standard goods to certain markets have not made much headway.

Another contributory factor to the recovery of the jute industry in the U.K. is the continuance of control on the purchase of raw jute and imported goods. This has given stability to the industry in a manner that is commendable, by ensuring steady and orderly flow of supplies to consumers as far as it is humanly possible under conditions of acute shortage. The jute trade has, through the British Jute Trade Federal Council (B.J.T.F.C.), wholeheartedly supported the continuance of jute control.

It is difficult to forecast the future of the jute industry in the U.K. But it is clear that it depends on reasonable price for jute goods. Unless jute goods are advantageously priced in relation to other textiles or substitutes, the future of jute, in the words of Mr. C. J. D. Renny, ex-Chairman, B.J.T.F.C., would be one of "diminishing importance—a future which neither the U.K., India, Pakistan nor any other country engaged in trade could view with anything but disquiet." The price of jute goods produced in the U.K. depends upon the price of raw jute in the producing centres such as India and Pakistan, as also the prices at which India will be able to place its manufactures on the world markets. Last year the industry in the U.K. enjoyed a decided advantage over its compeer in India in that Indian jute manufactures were not able to make headway in international markets because of the discriminatory high duties imposed by Pakistan on exports of its raw jute to India, purely attributable to political motives unconnected with economic reasons. Now that the export duties have been removed, Dundee is expected to keep a close watch on the Indian industry which can early secure raw jute from Pakistan and thus be in a better position to compete in overseas markets. However, the manufacturing industry in both the U.K. and India, as also the raw jute producing Pakistan, cannot ignore the fact that the high cost of jute goods, consequent on high-priced raw jute and/or any other consideration, would stimulate the production of substitutes, thus jeopardising the jute industry.

Whatever the long-term prospects might be, short of anything quite unforeseen, it is stated that the level of activity in the U.K. jute industry is likely to remain good over the next six to nine months. Assuming that the general level of trade of the country will not alter substantially in the near future, the outlook may be considered propitious, especially in view of the new structure of wages agreed to under the wage structure (1952). The wage agreement reached early in November, 1952, between the Association of Jute Spinners and Manufacturers and the trade unions representing all sections of textile workers in the industry, when implemented, it is expected, would help increase the efficient working of the industry. Under the new structure which would become effective only when scientific study of the work-load has taken place and where re-deployment has been worked out—all occupations have been evaluated on merit basis, and from this, a scale of basic

SCHUMAN STEEL MARKET

EXISTENCE OF CARTEL AGREEMENTS FEARED

THE opening of a common European steel market on 1st May, 1953, has been received with mixed feelings in many of the European countries. Evidently, this is attributable to the fears of a rise in steel prices which would go to increase the danger of inflation. It is alleged that Belgian steel producers have agreed with the Germans not to sell their steel below German steel prices in Germany. In return, the Germans are said to have promised to keep out of the best of the Belgian export markets. It is rumoured that these may include the markets in Northern France, which comes under the European Pool. The agreement is said to have been arrived at as a side issue of the recent agreement in Paris to reconstitute the European Iron and Steel Cartel Agreement on the price of steel exported outside the territory of the European Pool. It is stated not to have infringed the anti-cartel provisions of the Schuman Plan Treaty. If the alleged agreement were to turn out to be true, German consumers would be forced to buy at the German price of $98 per ton, whereas Belgium is in a position to deliver at $86 f.o.b. Antwerp. German consumers could, under the rules of the Pool, buy steel from Belgium at the Belgian internal price of $84 ex-works, Liege. It is also reported that Italy has decided to raise its steel duties from 13 per cent. to 23 per cent., the maximum under the Geneva Agreement on Trade and Tariffs, and in accordance with the right held under the Schuman Pool Treaty, which will close its market to French producers.

The authorities are quite aware of these, as evidence the warning of M. Monnet to the associations of steel producers that cartel agreements will not be tolerated. He has pledged to ensure the interests of consumers by providing unrestricted competition. But there is the difficulty of knowing as to what agreements have been entered into between the producers which infringe the Schuman Agreement. It is to be hoped that M. Monnet's laudable intentions would bear fruit and that the steel producers would give the co-operation expected of them to make the Schuman Pool a success.

Investment

There is one more question with regard to the Schuman Pool and that concerns investment needs for rationalising and increasing the production of steel. Rationalisation, first of all, requires co-ordination of national programmes for securing adequate and proper expansion. The output of steel in 1952 by the Schuman Community countries was just 41 million tons and the Community influence is to be used to secure a target of 50 million tons normal capacity in about five years, at low costs. It is held that unless marginal and uneconomic units are sought to be scrapped and efficient units aided to increase production, it might not be possible to usher in Western Europe a similar type of economic growth that has been achieved in the U.S. which alone is said to be the model in the existing circumstances.

Finance is the main obstacle to increasing the production of the Schuman Pool. The High Authority is collecting some money for the purpose by a levy on coal and steel production. But this is not enough and the capital markets in Europe are tight. It is expected that capital for development projects would be found from the U.S. and Swiss sources. The High Authority will act as a lender or as an intermediary in raising funds for the Pool. The investment programmes are expected to be so adjusted as to "ensure the rational spreading of production at the highest possible level, while safeguarding the continuity of employment and avoiding the creation of basic and persistent troubles in the economies of the member-States." It requires careful analysis of the investment programmes, before they are finalised, and their proper co-ordination, with a view to securing unified development of the Schuman Pool as a whole.

A feature of importance to be noted is that the first flow of European steel in the Schuman area unrestricted by customs or quota barriers and without any discrimination in rail freights, across the frontiers, separating Luxembourg, Belgium, Netherlands, Italy, France and Germany has been effected at a time when world conditions have changed, as compared with those three years ago when the Plan was envisaged by M. Schuman. The steel markets were faced with the threat of surplus early in 1950. But following the Korean war, the world experienced acute shortage. And now again, there is the prospect of surplus world steel production in the not distant future, consequent on the expansion of steel capacity in the intervening period, the world over, generally. The sellers' market is already fading and it might not be long before the buyers' market is established strongly in many parts of the world, following the completion of big expansion schemes which are either on the way or under contemplation in many countries. The Schuman authorities have to take all these into consideration before they chalk out their long-term programme.

TAXATION OF MOTOR VEHICLES

The Policy Committee of the Central Transport Advisory Council, which concluded its two-day session on the 9th inst. at Bombay, was attended by Ministers in charge of Transport from 16 States, among others. The Committee discussed the questions relating to the evolution of a uniform policy for the taxation of motor vehicles and the elimination of impediments to road transport development.

The Committee recommended that octroi on goods consumed in towns might remain, but those charges which were in the nature of transit duties should be abolished. It urged the Government of India to appoint a committee comprising representatives of State Governments to examine how, in the levy of octroi, delay through transit of goods could be removed. The Committee also suggested that when a State had its own Road Fund, the Central contribution should be paid into it, and where there was no State Road Fund, the Central contribution should be made on the basis of the existing Central Road Rules. It further felt that so long as a State conformed to an agreed transport policy and spent a portion of its revenue on roads, the Centre should also conform to this policy.

The Committee pointed out that the high price of petrol in the interior of India was hampering the growth of motor transport. It disclosed that, apart from the question of taxes, petrol now costs from 6 to 8 annas a gallon more in some of the inland States than in the maritime States. It indicated that the cost of pooling freight charges on petrol would fall on the consumers of the maritime States and not on the State Governments, but anything that increased productivity in the interior of the country would be of general benefit to the country, as a whole. As discussions revealed differences of opinion on this subject, the Committee suggested that the Government of India might examine ways of solving the difficulties involved.

NEW STEEL PLANT

Mr. K. C. Reddy, Production Minister, informed the Council of States, last week, that negotiations were going on between India and some German firms about their technical and financial participation in the setting up of a new iron and steel plant in India. These negotiations were "in an advanced stage." The Government was not going to depute another team of experts to go into the findings of the Technical Mission, which had submitted its report to the Government early this month regarding location of the proposed iron and steel plant, he declared. Further, the Production Minister said that the main thing was to find out a suitable technical and financial collaborator. Such a person should be willing to participate in the financial structure to the extent of about one-third of the capital investment necessary for the plant and also give technical help. The Government was endeavouring to find such a collaborator. The proper time for making final efforts to decide the location of the plant could only be after a collaborator was found. The Government had an offer from the Japanese but that could not be accepted, he added.

OIL PROSPECTING FROM THE AIR

Oil prospecting from the air, a method developed by a Swedish-born engineer, Hane Lundberg, has proved more than three times as accurate as the conventional and more expensive surface methods, it was reported at the Association of Swedish Engineers in New York recently. During a period of three years approximately 100,000 sq. miles of the sub-soil on the North American Continent have been 'mapped' from the air, and oil has been found in 50 per cent. of the places indicated by Mr. Lundberg. The Lundberg system is based on the theory that the layers of soil covering oil deposits are less radio-active than otherwise, as oil prevents the diffusion of salts. The frequency of the gamma radiation is registered by means of a "scintillation counter" installed in the aeroplane. Mr. Lundberg claims that his method not only permits of determining the extent of the oil deposits but also gives indications of their depth.

APPARATUS FOR TESTING CONCRETE

An automatic temperature control unit for studying the temperature rise in mass concrete has been designed in the National Physical Laboratory, Delhi. The rise in temperature in concrete dams induces cracks which destroy continuity, reduce the life of the structure, and alter the conditions of stress and stability. The cracks are also focal points for erosion and disintegration. With the help of this apparatus, we are told, a study of heat rise in different design mixtures has already been taken up in the Bhakra-Nangal Concrete Laboratory. The data is expected to be useful in fixing the cement content to a minimum and thus help in the elimination of temperature cracks.

IRRIGATION AND POWER PROJECTS

SPECIAL COMMITTEE TO DETERMINE PRIORITIES

THE announcement by Mr. Jai Sukhlal Hathi, Deputy Minister for Irrigation and Power, in the House of the People last week, that the Government of India proposed to constitute shortly a special Committee to determine the relative priorities among the various new irrigation and power projects on an all-India basis, is welcome. For, at a time when the finances at the disposal of the Centre are limited, few would deny the need for spending them in such a manner as to derive the best possible economic advantage. This advantage is better secured by examining the various schemes to be financed and determining their order of priority. The proposed appointment of the Committee, therefore, should go a long way towards the proper disposal of the limited resources of the country. Besides, the Committee will help judge the complaint that, in the existing order of priorities among irrigation projects, the case of South India has gone by default.

The constitution of the special Committee now under the consideration of the Centre is in accordance with the suggestions made by the Planning Commission. The Commission has recommended that the Committee should consist of a Chairman to be appointed by the Government of India, Additional Secretary, Ministry of Irrigation and Power, a representative of the Ministry of Finance, President of the Central Board of Irrigation and Power and an engineer not in the service of Government of India. Besides, the Chief Engineer of the State concerned is to be co-opted, according to the Commission, as a member, when a project prepared by him is being examined.

Broad Principles

The Commission has also laid down certain broad principles to be taken into consideration, while determining the priority of irrigation and power projects. These include, among others, the following:

(1) A project for inclusion in a plan must have been investigated in sufficient detail, relating, *inter alia*, to broad features of design, approximate cost, availability of water, suitability of land for irrigation and the like, as needed;

(2) projects which will add to the food production in the country must receive priority over projects relating to other uses of river waters;

(3) projects which are more remunerative in respect of direct financial returns, in terms of cost of irrigation per acre or per unit of power generated and in total benefit to the community and those which would yield quick results should be given preference;

(4) in any power project based on the use of coal, the possibility of using low grade coal, if available, in the neighbourhood must invariably be examined. Similarly, use of middlings from coal washeries, etc., should be encouraged; and

(5) region-wise requirement of food and power must receive due consideration and also the need of backward areas.

As soon as a project has been fully investigated and project report prepared, the State Government concerned should send copies of the report and accompanying documents to the Committee. The Committee will have to get the report technically examined by the Central Water and Power Commission to see that all necessary investigations have been carried out, and that the estimates of expenditure are reasonably correct; it should further find out that the estimates of revenue are based on adequate data. Then the Committee will have to examine the report of the Commission and submit its own observations.

As indicated at the outset, there is a feeling that South India is being consistently neglected by the Centre. This is a factor to be examined carefully. It is true that the South Indian rivers are not perennial as those of the North. Because, in summer, they almost dry up, while North Indian rivers are snow-fed during that period. As a result, it might not be feasible to envisage mighty dams such as the Damodar Valley, in South India. For, in the absence of adequate supply of water, they turn out to be useless monuments of concrete. But that does not justify lack of attempt towards chalking out, and implementation, of small projects of the sizes required, including minor irrigation projects. These would contribute considerably to alleviate the distress of millions who are being subjected to untold hardship, consequent on drought which has been a recurring feature. And, as clearly stated by the Planning Commission, region-wise requirement of food and power must receive due consideration. It is to be hoped that this aspect would receive the attention it is due.

RAYON FOR
MODERN TEXTILES

The National Rayon Corporation, situated on the Ulhas River at Kalyan, near Bombay, is making a major contribution to India's Textile Industry by producing rayon, an indispensable element in the fabrication of modern textiles. Installed in the Corporation's factory are nearly 4,000 specially designed G-E pot motors, revolving at 6900 r.p.m. and spinning and collecting from chemically treated wood pulp over seven million pounds of rayon every year.

General Electric is the largest electrical manufacturing organisation in the world with a production range of 200,000 different items—from tiny switches to giant generators, from lamps to locomotives. Inaugurated 75 years ago in U.S.A., when its parent company was first established, General Electric's unlimited resources, skill and research have been used and are available to India for the development of her natural resources.

This is G-E's 50th Anniversary of Service in India.

ANALYSIS OF COSTS OF SOCIAL SECURITY

DIFFICULTIES OF DIRECT COMPARISON

THE International Labour Office undertook an enquiry into the cost of social security in 1949 as part of its preparatory technical work for the Convention concerning minimum standards of social security. The results of the enquiry form the subject of an interesting article in the March issue of the *International Labour Review*, in which the questions arising out of the problem of effecting social security in different countries and out of the comparative analysis of the cost of providing such security, have been considered in some detail. The article brings out the essential difficulty of comparing systems of social security in different countries, and rightly warns against any unjust comparison of the data compiled by the Office.

The financing of social security, the *Review* says, raises various problems, which may be divided into two categories. The first concerns financial relationship within a social security system and the second, the interdependence of social security and the national economy. The problems of the first category, which are mostly of an actuarial nature, arise from the obvious need to keep the administering body solvent at all times by balancing its receipts and expenses. The problems of the second category concern the economic repercussions of the operation of social security either on the national economy or on its various factors and sectors—prices, wages, the national budget, etc.

The enquiry undertaken by the International Labour Office into the cost of social security in 1949, according to the *Review*, is primarily intended to provide more accurate figures regarding the financial operation of social security in a number of countries. The question which the I.L.O. had to face in these studies, fall into three categories: (*a*) definition of social security, (*b*) collection of statistics at the national level, and (*c*) establishment of appropriate criteria for an international comparison. Since the concept and functions of social security differ from country to country, the I.L.O. had to evolve a set of requirements which a scheme had to fulfil before it could be regarded as part of social security. The following three requirements were held necessary for a scheme to be designated as social security: (*a*) the aim of the system must be either to give curative or preventive medical care, or to guarantee income in the case of the involuntary loss of all or a large part of income from work, or to grant additional income to persons with dependants; (*b*) the system must be instituted by legislation which attributes certain individual rights to, or imposes definite obligations upon, a public, partly public or autonomous organisation; (*c*) the system must be administered by a public, partly public or autonomous organisation.

These criteria have led to the inclusion in the enquiry of the following schemes: (*a*) compulsory social insurance; (*b*) certain systems of voluntary social insurance; (*c*) special schemes for public employees; (*d*) family allowances; (*e*) public assistance; (*f*) public health services; and (*g*) benefits to war victims.

The collection of data also presented many difficulties. This is because in each country there are a number of institutions or services which together make up the social security and the results of the financial operations of these institutions are not always available. The following table gives a part of the data, compiled by the I.L.O.'s study of the costs of social security systems.

Country	1	2	3	4
Australia	130.33	6.9	16.72	47
Austria	4,128.42	14.1	589.8	31
Belgium	82,181.1	12.8	3,376	75

Union of South Africa	30.63	3.7	2.56	10
United Kingdom	1,172.5	11.3	23.27	87
United States	10,482.1	4.8	71.13	71

Columns 1 and 2—Social security expenses.
(1) In millions of units of the national currency.
(2) In percentages of national income, 1949.
(3) Total expenses—per head of total population.
Column 4—Average annual expenses of social security per head in U.S. dollars.

Strict comparison between countries, on the basis of these or other data relating to social security, is impossible. This is so for various reasons. The significance of the receipts and expenses of social security as a whole depends not only on the absolute figures but also on the population and its distribution by age, occupation, etc., and on the general standard of living. In order to establish some basis of comparison, two groups of coefficients were worked out: (1) the social security figures expressed as a percentage of national income at factor cost; (2) the averages per head of total population and per head of the population of working age, i.e., between 15 and 64 years.

Nevertheless, the *Review* warns that "great caution must be shown in the use of these data and especially in the use of the newly introduced relative coefficients." For several countries social security data are as yet incomplete, and comparison is not always possible. Moreover, the method used to calculate the relative coefficients is not perfect, although "every effort has been made to use the most reliable terms of comparison." The I.L.O. has, however, rendered a great service to students and administrators of social security by compiling these statistics and by formulating techniques of comparison.

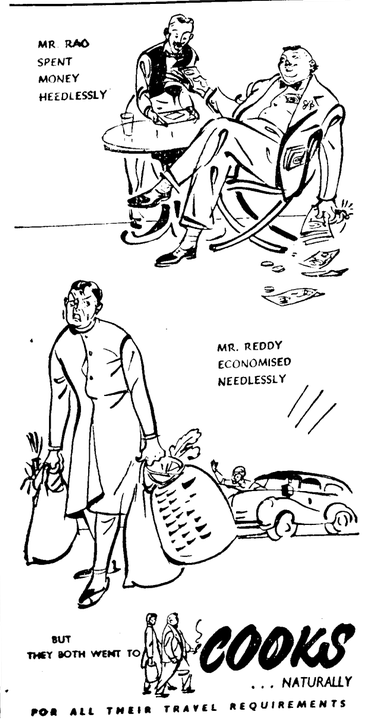
(*Concluded from next column*)

The Corporation has had a profitable year in workmen's compensation business, the premium income from which has advanced from £5.03 million to £5.42 million. As a result of the Corporation's policy of improving the standard of the risks, adopted for many years now, the number of risks has actually decreased. However, the increase in premium income is due to the extra premiums that have arisen from a further advance in industrial activity.

The loss of the Comet which crashed near Calcutta the other week, will involve the British insurance market in claims on the aircraft for £500,000, it is stated. This is the insured value of the hull. In addition, there will be personal claims. The liability of an aircraft company for injury to its passengers is based on the Warsaw Convention, which was ratified in Britain by the Air Navigation Act, 1932. The Convention says that the airline operator is liable, in the event of loss of life, to pay a sum in gold French francs, which is now the equivalent of about £3,000.

At the Annual Conference of the International Credit Association, held recently in London, the delegates to the Conference discussed a number of problems common to credit insurers. The Conference considered the role the Association should play in helping new credit insurance companies to establish themselves in countries where there is a demand for credit insurance and where no facilities exist to-day. The Association, it was felt, should assist new companies with technical advice.

The Oriental Government Security Life Assurance Co., Ltd., wrote, during the year 1952, 71,359 new policies assuring a sum of Rs. 21,22,44,577.



EMPLOYERS' LIABILITY ASSURANCE CORP.

RESULTS BETTER-DIVIDEND RAISED

THE striking features of the accounts of the Employers' Liability Assurance Corporation Ltd. (Managing Director: The Rt. Hon. Viscount Knollys, G.C.M.G., M.B.E., D.F.C.), London, for the year ended 31st December, 1952, are: (1) the maintenance of the progressive trend in premium income of the Corporation; (2) the earning of an underwriting profit of £353,566, as against a deficit of £754,035 for the previous year; and (3) the increase in the dividend from 4*s.* to 4*s.* 6*d.* per share (of 5*s.* each), less income-tax, by enhancing the final dividend from 2*s.* to 2*s.* 6*d.* per share. The improvement in business, indicated by the further rise in premium income, during a period of difficult trading conditions, and the earning of a profit in the face of a further rise in claims and expenses, bear testimony to the Corporation's successful efforts at making inevitable losses less severe. How severe the difficulties of business have been during the year is evident from the fact that the Corporation's profit for the year under review is considerably less than that of £537,772 for 1950.

The profit of £353,566, together with the Corporation's share of life profits from the Clerical, Medical and General Life Assurance Society (£56,465), interest, dividends and rents (£782,264), and the balance brought in from the previous year (£631,149), make in all a total of £1,823,444 available for appropriation. Out of this, U.K. taxation absorbs £583,783, staff pension fund and expenses take up £301,418 and the payment of dividend requires £187,576, leaving to be carried forward £750,667 to the current year's accounts. Commenting on the Directors' decision to enhance the dividend, the Chairman, in his statement to the shareholders, observes: "Although conscious, as always, of the need to maintain reserves at the highest possible level, the Directors feel that, without departing from their usual prudent policy, they may reasonably make the modest addition which they are recommending in the dividend."

The following comparative table gives an idea of the progress in the Corporation's business (including that of its subsidiaries) during the last three years:

	1952	1951	1950	1949
	£	£	£	£
Premiums—				
Fire	2,249,033	1,937,329	1,626,002	1,251,628
Motor	9,284,198	8,252,019	7,236,249	4,701,035
Accident and general	11,643,903	10,978,450	9,963,235	7,094,163
Marine	619,476	557,772	572,797	558,581
Life	1,926,313	1,738,315	1,527,447	1,404,476
	£25,728,823	23,463,885	20,930,730	15,099,883

The bulk of the Corporation's business being from the United States of America, its success in earning a profit in 1952 is due to the remarkable improvement in its results in the U.S. An analysis of the Corporation's own business in the two departments, fire, accident and general (including motor) shows that the premium income in the fire account has gone up from £1.81 million to £2.10 million. And its results in the U.K. and overseas, having continued to be favourable, the Corporation has been able to earn a profit, though it is slightly lower, at £120,395, than that of £165,184 in 1951. The lower profit is due to the smaller margin of profit on fire business in the U.K. than usual, which in turn, is the result of the large increase in the cost of fires during 1952. The claims paid and outstanding in this class have gone up from £700,390 to £861,254.

The premium income from accident and general (including motor) business has risen by £1.69 million to £20.87 million and claims paid and outstanding have gone up by only about £12,000 to £12.52 million. Since the results of the Corporation's business in the U.S. are said to have considerably improved, it has been able to earn a profit of £233,171, as compared with the heavy loss of £919,219 suffered in 1951.

The premium income in the field of motor insurance, which is the largest individual class of business transacted by the Corporation, has gone up from £8.25 million to £9.28 million. Although the overall results are stated to be better, the business continues to be still unprofitable. The Corporation's motor business in the U.S., we are told, has considerably improved, in contrast to the general experience in that country which shows that this class of business has been less unprofitable. The improved results are in a measure due to the higher rates of premium authorised in 1951 which had proved to be hardly beneficial in that year, but which have had a fuller effect on the Corporation's earnings in 1952. The effect of the higher rates of premium has been offset, however, by the high cost of claims, though the Corporation has been able to keep its loss on this class of business within bounds by maintaining the "most exacting standards of underwriting." The Corporation's motor business in the U.K., though better than in 1951, is reported to be still unsatisfactory. Though casualties during 1952 were lower in relation to the number of vehicles on the road than in 1951, the wastage of human life and limb continued to be heavy.

1. By Interest and Discount	35,33,757 5 4
2. ,, Commission, Exchange and Brokerage	28,13,495 12 3
3. ,, Rents	2,484 9 0
4. ,, Net Profit on Sale of Investments, Gold and Silver, Land, Premises and Other Assets (not credited to Reserves or any particular Fund or Account)	Nil
5. ,, Net Profit on Revaluation of Investments, Gold, and Silver, Land, Premises and Other Assets (not credited to Reserves or any particular Fund or Account)	Nil
6. ,, Income from Non-Banking Assets, and Profit from Sale of or Dealing with such Assets	Nil
7. ,, Other Receipts	863 2 0
Total .. Rs.	63,50,600 12 7

A. SIMPSON,
General Manager in India.

We have audited the foregoing Balance Sheet of the Indian Branches of Grindlays Bank Ltd., as at 31st December, 1952, and also the foregoing Profit and Loss Account for the year ended on that date, in which are incorporated the authenticated returns of the Calcutta, Madras, Delhi and Simla Branches and report that:—

(a) we have obtained all the information and explanations which we have required;

(b) in our opinion, the foregoing Balance Sheet and Profit and Loss Account are drawn up in conformity with the law;

(c) such Balance Sheet exhibits a true and correct view of the state of the Branches' affairs according to the best of our information and the explanations given to us and as shown by the books of the Branches; and

(d) in our opinion, books of account have been kept by the Branches as required by Section 130 of the Indian Companies Act, 1913.

BOMBAY, 26th March, 1953.

(Sd.) A. F. FERGUSON & CO.,
Chartered Accountants.

EMPLOYERS' LIABILITY ASSURANCE CORPORATION LIMITED

ALL-ROUND IMPROVEMENT IN BUSINESS RECORDED

LORD COURTAULD-THOMSON'S STATEMENT

A GLOBAL review of the business conditions during the year 1952 and the results achieved in each class of business by the Employers' Liability Assurance Corporation Ltd. has been made by the Rt. Hon. Lord Courtauld-Thomson, K.B.E., C.B., Chairman of the Corporation, in his statement circulated to the shareholders along with the Directors' report and accounts for the past year. The following is the full text of his statement:

"The combined premium income of our group of companies for 1952 was £25,728,823, an increase of £2,264,938 on that for 1951 :—

	£
Fire	2,249,933
Motor	9,284,198
Workmen's Compensation	5,418,446
Other Casualty	6,230,457
Marine	619,476
Life	1,926,313
	£25,728,823

"The Corporation's underwriting profit for the year amounted to £353,566. Our share of the life profits of the Clerical, Medical and General Life Assurance Society was £56,465, and the interest earned on our investments rose to £782,264. After making a contribution of £265,000 to the staff pension account and charging sundry other expenses of £36,418, there is a total trading profit of £890,877. From this amount we provide £583,783 for United Kingdom taxation, so that our net profit for the year is £307,094. With the balance of £631,149 brought forward from last year, we have available a total of £938,243. The Directors recommend the payment of a final dividend of 3s. 0d. per share, making a total dividend of 4s. 6d. per share, less income-tax, for the year. This would cost £187,576, leaving the carry forward at £750,667, an increase of £119,518 on the year.

"Although conscious, as always, of the need to maintain reserves at the highest possible level, the Directors feel that, without departing from their usual prudent policy, they may reasonably make the modest addition which they are recommending in the dividend. The sum of £500,000 has been transferred from inner reserves to the general reserve, which now stands at £3,500,000.

Fire

"The premium income in the fire account has again improved, from £1,812,320 to £2,104,525. Results, both in the United Kingdom and overseas, have continued to be favourable and, from this source, we have a profit of £120,395, or 5.7 per cent. The margin of profit on our fire business in the United Kingdom is smaller than usual—a result which is not altogether unexpected when we consider the large increase in the cost of fires in this country during 1952, as evidenced by the estimates made by *The Times*. These amounted to £24,230,000 for the year, an increase of more than £1,000,000 over 1951. Much of this huge national loss could, I am sure, have been avoided by the exercise of greater care and, in times like the present, when all available manpower is needed for production, it becomes the manifest duty of each one of us to take every possible precaution against such unnecessary waste.

"Our fire business in the United States continues to develop in a satisfactory manner.

Accident and General

"The premiums in this account have increased by £1,695,042 to £20,871,508, and I am glad to report that, by reason of the considerable improvement in our United States results, we are able to show a profit of £233,171 compared with the exceptional loss of a year ago. This illustrates once more how the outcome of insurance business is liable to vary from year to year, although profitable over a period.

"Motor business, as usual, was the largest individual class, with premiums of £9,284,198 and, although the overall results were better, they still do not provide a profit. In the United States, while the general experience was rather less unprofitable than it was in 1951, our own results were considerably improved. The increases in rates which were authorised in 1951, but hardly benefited that year, had a fuller effect in 1952. The cost of claims is, however, still high, and only by the most exacting standards of under-writing have we been able to keep within small proportions the loss on this large part of our business. Although the further rate increases which have been approved in many States should improve our experience, these increases are, in some instances, much smaller than past experience and present trend would justify. In Massachusetts, for example, it will again, in 1953, be difficult to make a profit on the compulsory cover, although rates for the non-compulsory business there are on a somewhat sounder footing. The outlook in some other States is also rather more encouraging than it was a year ago. In these circumstances, our policy is to make the best of conditions as they are now, while striving vigorously and continually for their improvement. We have, accordingly, not only subjected all our motor business to the most careful scrutiny but we have also taken the lead in every useful endeavour that has been made to secure adequate rates and to promote understanding among the public to this end.

"I have referred to rate increases which we have sought, or have been glad to obtain, in the conditions that have recently prevailed, but I need hardly say that we, and I am sure all other companies, would be delighted to see the cost of claims reduced so far that lower rates would be justified. What can be done to prevent unreasonable jury verdicts in cases of liability to third parties it is difficult to suggest, but it must be realised that repeated enhanced verdicts mean even higher rates of premium for users of cars. In one or two States, plans for improving safety on the highways and penalising drivers responsible for accidents are being brought forward. These are steps in the right direction, and whatever success they have will be most cordially welcomed.

"In the United Kingdom the results of our motor business, although better than in 1951, were still unsatisfactory. In relation to the number of vehicles on the road, casualties showed some reduction compared with 1951, but the wastage of human life and limb continued to be heavy. The challenge which was thrown out by H.R.H. The Duke of Edinburgh some months ago, when he urged the various organisations concerned with road safety to combine and tackle the problem of accident prevention, has been taken up with vigour. We, in company with other insurers, are co-operating in this new approach to what is a matter of national concern. We hope that, by these efforts, all road users will be brought to a greater realisation of the need for still more care on their part and that some reduction may be made in the number and severity of road casualties. A real measure of success will then have been achieved, which should be reflected in our own results. In most other parts of the world, the experience of motor business has again been generally unsatisfactory. It is clear that it is becoming ever more necessary, in all countries, to face the whole question of the provision of rates for motor insurance which are adequate to allow insurers to count on a modest profit over the years. The best solution of all would, of course, be a generally higher standard of driving.

"Our workmen's compensation premiums have increased from £5,032,765 to £5,418,446. Last year, I described in some detail the factors which were producing unfavourable conditions for workmen's compensation in the United States, and I am pleased to be able to tell you that, in spite of them, we have managed to have a profitable year's trading in this line in that country. For many years now, we have been improving the standard of the risks on our books. This year, as a result of this policy, the number of these risks has actually decreased, but our premium income is higher on account of the extra premiums that have arisen from a still further advance in industrial activity. I feel sure that our policy is now bearing fruit and that it accounts very largely for our good experience this year.

"At the same time, we must take a guarded view of our prospects for 1953 and 1954. Most of the State legislatures will be in session in 1953 and we may well find that, in many of them, benefits under their workmen's compensation laws will be increased. Experience shows that it is rare for rates to be increased enough to compensate for the extra cost to insurers of wider benefits.

"The results of employers' liability business at home show some improvement, but the heavy awards of damages to injured workpeople by the Courts continue, and leave us no alternative but to increase rates of premium. Whilst, therefore, we regret the necessity for further rate revisions, employers will realise that, in common with other insurers, we cannot continue to subsidise this class of business. In other territories, workmen's compensation business was, on the whole, profitable.

"The rest of the premiums in this account, derived mainly from public liability, personal accident, burglary, plate glass and fidelity insurances, amounted to £6,168,864, an increase of £277,182. These classes have again, in total, shown development on profitable lines. In aviation, we have now completed arrangements for entering a wider field through participation in one of the large American company groups specialising in this class.

Geographical Review

"I am pleased to be able to report that a remarkable improvement in our results in the United States has brought us an underwriting profit in another difficult year's trading there after the loss which we, with others, suffered in 1951, and I am sure that you would wish me to record our appreciation of the way in which Mr. Larner, our Manager there, has guided our affairs through so difficult a period. I have already dealt with the results and prospects of separate classes. Quarterly results published for all companies showed that whereas the bad experience of 1951 continued into the first quarter of 1952, a progressive improvement was apparent in the succeeding quarters. Though the average improvement is rather less marked than our own, the trend is definite and we may take the view, however unpredictable the future may be, that a cycle has been completed during 1952 in which the difficulties of our business have been exceptionally severe. It is in the nature of insurance that there is no means of evading completely the impact of such a cycle. All that can be done is to prepare for it and to mitigate it, and we have, I believe, in this case done all that has been feasible to make inevitable losses less severe. In this task we have had to call upon our agents for full co-operation, sometimes at some temporary disadvantage to themselves. I should like to record our gratitude for the loyalty with which they have responded, and for the real help which they have given us in weathering the storm. Indeed, the mutual confidence which exists between us and the fine agency force that represents us all over the United States is the great strength of our business in that country.

"In August last year, we received the sad news of the sudden and untimely death of Mr. Townsend M. Buggey, who, after many years of successful management of our branch office in Philadelphia, had earlier in the year been appointed a Deputy Manager of our United States branch. Mr. Frank Carey, whose visit to London, in 1951, I reported last year, has now been appointed First Deputy Manager of our United States Branch, and Mr. Howard S. Bush has been appointed a Deputy Manager. Mr. Carey, whose experience has been mainly on the financial side, has a breadth of outlook which will enable him to appreciate clearly the more general problems with which he will now help to deal.

"Our United Kingdom premiums increased by about 10 per cent., compared with 1951, and the total business for 1952 showed improved profit, both in percentage and in amount. In common with many other insurance companies, we have had to deal with a large number of claims in 1953 following the great destruction by tempest and flood on the East Coast in February last. We are glad to have had a part in the relief of the distress caused by this disaster.

"We are pleased to welcome the Marquess of Hamilton and Mr. J. H. T. Stevenson as Local Directors in Northern Ireland, and also to report the appointment of Sir John Ruggles-Brise, who has given such excellent service as our City Manager, as a Local Director in the City and in the Eastern Counties.

"We have to record another appreciable increase in our business from overseas territories other than the United States, although, with but one or two exceptions, the poor results of motor business have had a noticeable effect upon the results from each territory. In Canada, where there has again been a marked growth in premium income, especially in casualty business, our general claims experience deteriorated considerably and the total results were unprofitable. This is particularly disappointing, as Canada has been an invariable producer of profits in recent years. Motor claims increased both in number and severity, and, notwithstanding the rise in premium rates during the year, the ratio of claims to premiums worsened. Further rate increases are being introduced during 1953, but the full effect of these will not be felt during the current underwriting year.

"Our Australian business continues to progress, and I am able to report with pleasure an increased margin of profit from that branch. Unfortunately, I cannot yet say that the substantial motor account is satisfactory, but there are encouraging signs of improvement. I am glad to tell you that Mr. Daniel McVey, C.M.G., Managing Director of Metal Manufacturers Ltd., and Director of several other large companies, has agreed to become a Local Advisory Director of the Corporation at Sydney. South Africa is another important area where the adverse motor results have overshadowed those of the otherwise profitable casualty business. Our Indian business continues to be satisfactory, although the slower upward movement in our premium income has reflected the economic stresses felt by that great country during a difficult year. In Pakistan, where we have been anxious to take part in the growth of the country, our business shows promising development. In Malaya, our business is still expanding in a most encouraging manner, with a maintenance of the favourable results in the fire account. The area, as a whole, has yielded its quota of profit and, with the gradual improvement in the Malayan scene, we can hope for still further development. The Corporation's energetic agents in Israel have produced a really substantial increase in the volume of business written during 1952, but once again the motor results have had an adverse effect upon the whole of this important agency account.

Life

"The Clerical, Medical and General Life Assurance Society, our associated life office, again reports progress. Its net new business, at £6,718,120, is an improvement of £1,004,122 on the 1951 record of £5,713,998; the amount of claims by death, in spite of the increased sums at risk, fell by £140,367 to £455,369 and the character of the claims was such that the profit for the year from favourable mortality was a record. The life assurance fund of £21,110,777 is up by £1,135,443 and the combined life and capital redemption funds now total £23,591,533. In spite of the fall in security values during the year, the Society was still able to show a margin of market values over book values without any call on current income. In the latest published valuation of its liabilities, made as at 31st December, 1950, the Society set up reserves equivalent to those of a net premium valuation at less than 2 per cent. At that time, the gross rate being earned on the assets was £4 11s. 11d. per cent. and the net rate £3 12s. 1d. per cent. For 1952, the corresponding figures were £5 2s. 1d. and £3 19s. 3d. and the increased yield means that, although the margins in the value of the assets are reduced, the margins in the valuation of the liabilities have greatly increased, leaving the Society's strong position unimpaired.

Marine

"The business of the Merchants' Marine Insurance Company, Ltd., our marine subsidiary, continues to develop satisfactorily. The net marine premiums of £619,476 show an increase of £61,704, and the marine fund at the end of 1952 amounted to £814,597, equal to 131 per cent. of the premium income.

"The ever-increasing cost of repairs and the delay in presenting claims are still major problems in the hull account, but the surcharge of 10 per cent. recently approved by the Joint Hull Committee should help materially to balance these adverse conditions. Cargo business continues to be profitable, but intensified competition for this class, following the heavy increase in the size of the market during the past two or three years, makes future prospects uncertain. The growing fire and accident business of the 'Merchants' Marine' was again profitable.

Aviation

"Our main interest in the aviation market continued to be through our shareholding in the Aviation and General Insurance Co. The operations of this company have again been profitable, and I am pleased that the Corporation has, in this way, been able to take part in the striking developments, particularly in commercial aviation, that we have seen during the past few years.

Investments

"The total investments of the Corporation (including property and subsidiary and associated companies) amounted to £29,529,006 at the end of 1952, an increase of £1,773,481, and I am again able to report with pleasure that, as in previous years, their total market values at 31st December, 1952, showed an appreciation over their total book values. Although we have every confidence in the continued prosperity of the United States, we felt it desirable to hold an adequate proportion of short-term securities there, including commercial obligations, until the trend of interest rates for longer term investments became clearer. The extensive development of Canadian natural resources and industries has prompted us to invest part of our Canadian funds in first-class equities, and we have welcomed the advice of our recently formed Local Advisory Committee in this connection.

"I have some changes to report in our United States Executive Committee, whose prudent supervision of our investments in that country is of so great value to us. Mr. Lewis W. Douglas, who was already a member of the Committee, has been appointed its Chairman and Senator Edward C. Stone, Vice-Chairman, while Mr. Charles Francis Adams has accepted the position of Honorary Chairman. Mr. Thomas K. Finletter has rejoined the Committee on relinquishing the office of Secretary to the Air Force which he held in the last Administration. We look forward to seeing Mr. Douglas, a former United States Ambassador to the United Kingdom and a regular visitor to this country, at meetings of our Board, when he will be able to give us first hand accounts of the view of the Committee on current economic and business affairs.

Directorate

"The Corporation has suffered a grievous loss by the death of Sir Gordon Campbell and Mr. Richard J. Crowe. Sir Gordon Campbell became a member of the Board of Directors in 1917. We valued his advice in our counsels and, by his death, have lost a loyal friend and colleague whom we held in great affection and respect. Mr. Crowe had served the Corporation with distinction and success since 1911. Our Manager, and finally our General Manager, over a period of sixteen years until his retirement from executive duties in 1949, he was elected to the Board in 1947 and had been its Vice-Chairman since 1951. His wide knowledge and experience of insurance affairs were of the utmost value to the Corporation, to whose interests he devoted himself to the end. His fine and friendly personality and his outstanding record of service and achievement will ever be remembered.

"We were very glad, in May last, to welcome back our Managing Director, Lord Knollys, who had been on leave of absence, while acting as Minister at the British Embassy at Washington

DISTRIBUTION OF TAX BURDEN IN INDIA

ADJUSTMENT ON EQUITABLE BASIS NEEDED

(By Prof. V. G. RAMAKRISHNA IYER)

ONE of the terms of reference of the Taxation Enquiry Commission is to examine the incidence of general, State and local taxation on the various classes of people. Since the Matthai Committee has already begun its investigations into the Indian tax structure, the relation of taxes to taxable capacity is no longer one of theoretical interest but of great practical importance. It is necessary to have some idea of the distribution of taxation in India, before the question of revising the tax structure and imposing additional taxes can be decided. A canon that applies to the entire system of taxation is that it should be equitable. It is not enough to know that a given tax is suitable in itself. It is far more important to know whether it falls on a class lightly taxed or already burdened. Every system of taxation is always approaching but never reaches equality of taxation on account of changes in the yield of the tax as well as in the economic conditions of different classes of the community as a whole. The measurement of the burden of taxation in relation to taxable capacity is important, but it does not follow that it can be made easily. The problem of incidence is rendered more difficult in India by the lack of reliable statistics, and it has been observed that in India an estimate of aggregate and average income might be made within a possible range of error of 35 per cent. but certainly not less than 25 per cent.

Pre-war Incidence

Under these circumstances the Indian Taxation Committee (1925) attempted to enumerate the principal taxes that fall on certain selected classes of the population.

(1) *Urban labourers (including lower grades of urban artisans)*: The principal taxes that affect this class are the excise duty on goods of the coarser variety, customs duty on production goods such as machinery and raw materials, the duty on intoxicants and municipal taxes. Under a high general tariff position of this class will, in the initial stages, be rendered worse, since an adjustment of wages to an increase in the cost of living is a very slow process.

(2) *The landless agricultural labourer and the lower grades of village artisans*: This class differs from the urban labourers in that it receives lower wages but consumes less important or excisable goods. It is free from payment of municipal taxes;

(3) *The small holder, whether raiyat or tenant*: The small holder, if he is not a tenant, pays, in addition to land revenue and cesses, the same taxes as the daily labourers and has a standard of living not much higher. The small holders are bearing heavy burdens, but these burdens are not the result of taxation. The absence of alternative occupations, the fragmentation of holdings, the uncertainty of seasons and the failure to save in good years wasteful expenditure on marriages and the high rates of interest from a combination of causes which make it difficult for cultivators of these uneconomic holdings to keep their heads above water. The remedy for this state of affairs lies, however, not in a reduction of taxation but in changes in other parts of the social economy, some of which may necessitate heavy expenditure on the part of the State and an increase in the burden of taxation borne by the community as a whole.

(4) *The peasant proprietor* with a substantial holding is very different, inasmuch as the land revenue, being imposed at a flat rate, taxes a smaller portion of his surplus than that of the small holder. He lives almost self-supporting. The prices of his crops which provides a surplus have increased to a greater extent than the increase in the land revenue paid by him, though his expenses have increased, especially in wages.

(5) *The large landholder*: This class is lightly taxed. The income of a member of this class in so far as it consists of rent, is all surplus after his standard of living is allowed for. He pays a fair share of the customs duties besides court fees, but pays no income-tax on his income from land in some States (Provinces).

(6) *The village trader*: This class of persons, on the whole, gets lightly off since it pays only the general taxes. The village trader does not generally drink and there is scope for bringing him within the ambit of further taxation by a general extension and by a more efficient administration of taxes of the nature of the circumstances and property tax and the profession tax.

(7) *The small trader in towns*: Unlike the small trader in the village, he is liable to tax by municipalities and there is scope for a profession tax and an increase in the rate of property tax.

(8) *The large trader generally in towns* is liable to income-tax and contributes also to some extent to the revenue from stamps and court fees and in some cases liable to other taxation.

(9) *The big merchants*: This class includes the proprietors, partners and managers of large businesses who are found almost entirely in the towns and contribute considerably to income-tax revenue, the bulk of the probate duties, the bulk of the customs and taxation on business, and a large proportion of the fees and taxes on transactions.

(10) *The professional classes—lower and higher grades*: The professional class of the lower grade consists largely of the clerical class, including subordinate ranks of Government service and the lower ranges of professional men who are not subject to income-tax. This class has suffered recently more by reason of its comparatively high standard of living, and of the fact that its earnings have not responded as closely as those of the manual workers to the increase in prices. The contribution by this class to the general taxation of the country is small, including a share of municipal house and profession taxes and a portion of the customs duties on necessaries and some luxuries such as piecegoods, tobacco and bicycles, etc.

The case of the professional class of the higher grade is just like that of the big merchants, and individuals of this class are the chief contributors to income-tax. In fact, the burden of taxes borne by the foregoing typical classes of the population has been considered roughly in relation to their comparative wealth and their standard of living, and it is not based on accurate statistical data or an analysis of family budgets which are extremely difficult to draw up in India.

Better Distribution of Burden

The Indian Taxation Committee (1925) made certain proposals to secure a better distribution of the tax burden. The proposals related to the various groups mentioned above.

(1) *The urban labourer*: The burden on this class has increased mainly owing to the increase or new imposition of customs and excise duties on articles of universal consumption, especially sugar, cotton goods, matches, machinery and raw materials and a decrease in these duties is considered as a satisfactory course for this class.

(2) *The landless agricultural labourer*: The total burden on this class is comparatively low and the members of it would be indirectly benefited by a reduction in the duty on goods consumed by all classes.

(3) *The small holder*: The difficulties of the small holder are not primarily the result of taxation except in so far as he suffers with the rest of the community from the effects of high tariffs. Standardisation of land revenue is the only means of affording relief.

(4) *The peasant proprietor*: With an economic holding, he is a comparatively prosperous member of the community and extension of probate rates to all classes of the community is likely to affect this class, as also the raising of the cesses by local bodies.

(5) *The large landholder*: Except in individual cases, the burden on this class is light and the possible means of increasing the burden on this class would be the imposition of agricultural income-tax or something in the shape of a general probate or inheritance duty.

(6) *The village trader*: In the case of this class, a higher contribution to the general revenues is possible by a general extension and more efficient administration of taxes as, for example, circumstances and property taxes and a profession tax.

(7) *The large trader*: The large trader with an income below the super-tax limit becomes liable to income-tax, but still escapes with a comparatively light burden and he will be affected by a general extension of probate duties and a steepening of the graduation of income-tax coupled with an increase in local taxation.

(8) *The big merchants*: They contribute a large percentage of the total collection of income-tax, the bulk of probate duties, the bulk of customs duties on luxuries and a large proportion of the fees and taxes on transactions and their contribution will be increased by the estate duty and higher graduation of income-tax.

(9) *The professional classes of the lower grades*: The position of this class from the point of view of contribution to tax revenue is difficult of any improvement and it has been hit hard by the inflationary conditions during the war and post-war period.

The statistical determination of India's taxable capacity is a complicated problem. Nevertheless the personal or aggregate income method and the production method have been employed in the past enquiries into India's taxable capacity with varying results. To take one instance, Shirras worked out the taxable capacity of India for the year 1920-21 and 1921-22 and arrived at figures which vary widely. In 1921-22, the taxable capacity was about Rs. 393 crores but effective taxation, i.e., taxation *minus* interest on internal debts and debts repaid was Rs. 120 crores, leaving a balance of about Rs. 273 crores. In a normal year like 1920-21, the balance was much less. Effective taxation was estimated at about 4 per cent. of the gross income as compared with 24 per cent. in Britain. But such comparisons are valueless. It may be emphasised that the taxable capacity of a country is not an absolute amount. We can only roughly indicate the direction in which this limit lies. Two main features stand out in the case of such estimates, (1) the large variation between a good and a bad year with reference to income and taxable capacity, and (2) the taxable capacity of India is not so high as that of an advanced country like Great Britain.

Precise Assessment Necessary

There was a time when, by present standards, the "tax burden" was not really a burden at all. For instance, in the pre-war year 1938-39, the last year of free economy, with Central and Provincial taxes amounting to about Rs. 130 crores and with local taxation at about Rs. 13 crores, the whole *per capita* burden was about Rs. 5. But to-day, with Central taxes at more than Rs. 400 crores, with States taxes at about Rs. 390 crores and with local taxes amounting to Rs. 45 crores, the entire burden is as much as Rs. 24 per head. As if we have not reached the limits of the tax burden, further taxation is in the offing in the form of new taxes to be imposed by the Centre as also by the States, such as surcharge on land revenue, special levy on commercial crops, tax on increased land values which the States are now induced to take up but which have been stayed till now on account of elections to the legislatures of the country. Should these indirect taxes be imposed, they may well leave the mass of the people with no "real income" worth the name. Of course, it is obvious to everyone that for the implementation of the Five-year Plan, a considerable part of the resources has to be raised by taxation, if we are not to resort to inflationary methods of financing. It is, therefore, all the more necessary to reform the tax system in a scientific manner in which the taxable capacity is assessed as precisely as possible and the burden distributed as equitably as possible.

Recent Trends in Indian Tax Policy

Year	Union	State and Local	State percentages of total	Income and profit as percentage of total
	(Rs. in crores)			
1938-39	73.8	83.2	53	11
1943-44	193.2	140.8	42	54
1945-46	311.4	205.6	39	49
1948-49	392.2	211.6	35	30
1949-50	370.0	234.7	38	31

The above figures include a certain amount of non-tax or semi-tax revenue, such as Government-owned monopolies and profits of trading enterprises. Broadly speaking, the proportion of State revenue collections depends partly on the policy of the States which have wide independent tax system and partly on the Union Government policy. Before the war, the States (Provinces) were collecting more than half the total revenue and this proportion fell, as income and profit taxes expanded under war conditions. During recent years, income and profit taxes were not so important as in war years. On the other hand, while there has been a continued rise in revenue from indirect taxes, as compared with the relief given to direct taxes, there have been fewer reductions in indirect taxes. On the whole, there has been a tendency for direct taxes to be lightened more than indirect taxes and this has an important bearing on the taxable capacity of the mass of the population.

In fact, the relation of taxes to taxable capacity in India must take into account the following considerations: (1) In rupees, the tax revenue has greatly increased but the rupee has fallen in value and purchasing power; (2) the development of commerce and industry, the building of railways, the execution of great irrigation works and in general, the play of "economic forces" have created a new wealthy class and so have increased taxable capacity in a greater ratio than taxation; and (3) the bulk of the population, nevertheless, is still in much the same economic position living close to the margin of subsistence. In view of these considerations, the problem of Indian taxation lies in the adjustment of the burden of taxable capacity of different classes of taxpayers equitably in order to obtain the resources necessary for improving the economic and moral status of the bulk of the population.—*All Rights Reserved.*

NEW PUBLICATIONS

Industrial Housing in India. By S. C. Aggarwal, Ministry of Production, New Delhi. Price: Rs. 13-8.

MR. S. C. Aggarwal has done a very useful service in bringing out this book, the first of its kind on the problems of industrial housing in India. He has discussed threadbare the questions relating to the ways and means of finance, cheap housing, prefabrication and the like. Giving a historical review of the action taken by the Central and State Governments from time to time, he has disclosed how the problem of housing has assumed the present vast proportions. A significant feature of the book is the incorporation of the latest reports and/or plans of the Central and State Governments and the Planning Commission. The author has enhanced the value of the book by giving a brief review also of the action taken by certain international bodies and Governments in various parts of the world.

The conclusions of Mr. Aggarwal, arrived at after a thorough analysis of the whole problem, are arresting. Emphasising that improved housing is the first step towards the improvement of the standard of living, behaviour and moral of the industrial labour, he declares: "To those who assert that India cannot afford to spend more money for industrial housing, there can be only one reply, that she can no longer afford to delay such expenditure." Like a realist, he concedes that the problem is so vast that the employers cannot bear the entire burden of building houses for their workers at the present moment, faced with declining profits. He also avers that neither the Union nor the State Governments can solve, without the co-operation of employers, employees and the public, the problem of industrial housing. The author has welcomed the latest subsidised housing scheme of the Government of India. He has suggested consideration of investment of Postal Savings Bank deposits and surplus funds of co-operative institutions in housing enterprise. He has even suggested assistance by the International Bank for housing lower income groups.

The book, in short, gives briefly and clearly various aspects of the subject of housing the industrial worker for the benefit of those who are engaged in this branch of social service as well as those who are interested in the economic and industrial problems of the country. As Mr. Jagjivan Ram, Minister for Communications, has aptly remarked in his foreword to the book, Mr. Aggarwal has made "a notable contribution to the solution of an important problem" and fulfils "a very long-felt want." We are sure it will receive the fullest appreciation of all concerned, thus rewarding the labour involved in its preparation.

First Five-year Plan—People's Edition. Issued by the Publications Division, Ministry of Information and Broadcasting, Government of India, New Delhi. Price: Rs. 2-8.

Successful implementation of India's Five-year Plan depends, to a considerable extent, on public co-operation. If such co-operation is to be forthcoming, it is essential that the public, including the layman, should have a clear idea of the Plan. Inasmuch as the report on the Plan is a complicated and bulky one, running into over thousand pages, not many have been able to digest the report. Hence the need for an abridged and simplified version of the report at a low price. This need has certainly been amply fulfilled by the Publications Division of the Central Ministry of Information and Broadcasting, which has just brought out a People's Edition of the Plan.

The Edition condenses, in about 263 pages, the Plan, giving a full authorised summary, together with a number of illustrative charts, diagrams and pictures. The abridged version retains the substance of the Plan and, while simplifying, also preserves, as far as possible, its form and language, so that, for purpose of general use, it can help in the study of the document.

A salient feature of the People's Edition is the inclusion of a number of informative charts and diagrams illustrating the various aspects of the Plan and the targets of additional production. There are special charts showing Central and State Governments' plans, major irrigation and power projects, community projects and development blocks, etc. Targets of the Plan in the spheres of agriculture, irrigation and power, industry, transport, education and health are shown in the form of pictographs. A break-up of the main heads of expenditure forms the subject of a special chart. The location of the various river valley projects and which of them are multipurpose and which are exclusively for irrigation or power, are depicted in a map. The new projects, to be initiated during the latter period of the Plan, are also indicated. Indeed, the People's Edition gives the essential features of India's Five-year Plan.

The Indian Trade and Industry Review. Editors: Prof. C. M. Kulkarni and Mr. A. Y. Mirza. Published by The Eastern Publications Bureau, 20, Hamam Street, Bombay 1. Price: Rs. 5.

The chief value of this publication lies in bringing together, between two covers, many of the facts and figures relating to the progress in the spheres of trade and industry in India during the year 1952. There are as many as 65 articles covering the various aspects. Among the important industries, the progress of which has been reviewed, are iron and steel, textiles, engineering, glass, plywood, mica, etc. Mineral development and cottage industry form the subject matter of two separate articles. After summing up the progress in the economic sphere during 1952, the Editors hold out bright hopes for the future. "India's economic prosperity," they say, "will increase and the standard of living of the masses will improve gradually, year by year, as the schemes envisaged in the First Five-year Plan will be completed one after another."

Recent Trends in Agrarian Reforms. By Guru Charan Singh. Published by Atmaram and Sons, Kashmere Gate, Delhi. Price: Rs. 2-8.

As the title of the book suggests, it presents a short but comprehensive picture of the legislative activity undertaken by the States in India to contend with the various problems connected with land-holding and land tenure. On this subject, extreme views, as is well known, are held, which range from maintaining the *status quo* to the need for sweeping changes with demands for immediate transfer of land to the tiller without giving any compensation to the landlord. The book has dealt with the factual aspects of land legislation and has discussed, in the final chapter, the pros and cons of the aims, policies and implications of the reforms, and their adequacy in bringing about the desired change in the rural, social and economic life. The author has also given an analysis of the financial and economic implications of land legislation in different States. The three chapters, "Land for the Tiller," "Size of Holdings" and "The Props of the System" will be of special interest to the reader as these deal with matters on which, in the final analysis, the success of agrarian legislation depends. In another chapter, the author discusses how some of the other Asian countries are tackling their own land problems and the working of the legislative reforms in these countries.

The "Indian Journal of Economics." Conference Number. Issued by the Department of Economics and Commerce, University of Allahabad. Price: Rs. 7.

The Conference Number of the *Indian Journal of Economics* is, as usual, replete with articles on several current economic topics. These are the reproduction of papers read by those who participated in the Thirty-fifth Conference of the Indian Economic Association, held at Trivandrum in December last. Broadly, the papers cover three important subjects, welfare economics, productivity in industries, and taxation. Special mention must be made of the interesting paper on "Productivity Comparisons in Indian Industry" by Dr. R. Balakrishna. In this paper, the author has made a lucid analysis of the productivity in the important industries of India. The analysis clearly reveals that some centres are persisting in manufacturing certain products which are uneconomical in the larger interests of the country, while other potential centres for future development of certain industries are being neglected. In the considered opinion of Dr. Balakrishna, regional specialisation should be encouraged as a principle of State policy on the basis of the relative differences in productivity among the manufacturing centres.

For car or truck, tractor or earth-moving vehicle, there's a Firestone Tyre to suit your needs, and to give you the most for your money. Such Firestone extra values as new, tougher tread rubber compounds, better-than-ever Gum-Dipping, and longer wearing designs mean even more to you today, when tyre economy is so important. Over 50 years of Firestone leadership assures you of the finest in materials, design features, and workmanship to bring you tyres that give more for your money.

THE FIRESTONE TYRE & RUBBER CO. OF INDIA LTD.

PLASTICS INDUSTRY IN INDIA

CASE FOR REDUCTION IN IMPORT DUTIES

THE demand for reduction in tariffs on imports of raw materials for the manufacture of plastics was made by Mr. M. K. Ramchandani, Chairman of the Reception Committee, and Dr. K. A. Hamied, President of the All-India Plastics Manufacturers' Conference which met last week in Bombay. This demand is justifiable, because the heavy duty of 31¼ per cent. *ad valorem* on the main plastics raw materials has increased the cost of production, with the result that it has been found difficult to dispose of the manufactured plastics articles. The duty has virtually impaired the competitive capacity in the export market. Of course, the Government has now sponsored legislation providing for payment of drawback of import duty paid on raw materials contained in the manufactured goods exported abroad, by means of amendment to the Indian Sea Customs Act, 1878. This concession will, no doubt, be welcomed by the plastics industry, but it still remains to be said that this concession by itself will not provide much relief to the industry, for it depends, for selling the bulk of its manufactures, on the domestic market. Consequently, its demand for a drastic cut in duties on imports of its raw material still remains unfulfilled even after the Tariff Commission's recommendation to that effect. Its case merits the prompt attention of the Ministries of Finance and Commerce and Industry.

The plastics industry is yet in the adolescent stage. It is true that it is fairly developed in the manufacture of industrial and household plastics articles. But, unfortunately, there is hardly any development in the manufacture of moulds and machines as well as of synthetic resins. It may be argued that high tariffs would encourage private enterprise in these fields. But this argument is indefensible. High duties are justifiable only when it is possible to produce indigenously these raw materials, etc., needed for increasing the production of plastics goods. Few will deny the need to reduce the dependence of the Indian plastics industry on the West. It is true that it takes time to produce calcium carbide and methanol—the two important basic substances for the manufacture of various types of plastics—for increasing the production of phenol and the like.

Dealing with the production of raw materials for plastics, Dr. Hamied felt that India should try to utilise shellac, colophany, cashewnut shell oil and other products, as adjuncts to plastics, as they are found in abundance in India. He rightly urged the National Chemical Laboratory to undertake research on new synthetic plastic materials, and thus help produce plastic articles superior in quality to those of foreign countries with the use of these new raw materials.

A surprising feature of the Indian plastics industry is the consumption of polysterene among the thermoplastic materials because polysterene is the least suitable material for use in Indian conditions. First of all, it is very brittle, and secondly, it develops cracks on long exposure to sunlight. As such, all articles made of polysterene break easily. They, however, are in popular demand because of their bright colours and interesting designs. These considerations justify Dr. Hamied's critical comments on the use of polysterene. His advice to the Indian plastic industry to pay more attention to the use of thermoplastic resins such as polyethylene, P.V.C. and Acryl resins will, it is hoped, be considered by the industry. No doubt these are all costlier than polysterene and it is the cheapness of polysterene that has been responsible for its being consumed in large quantities. But a way should be found out to lessen their cost so that plastics goods may retain a strong grip on the domestic market. Here, the co-operation between industry and the National laboratories are most needed.

The field of manufacture of various industrial materials from the P.V.C. cellulose acetate and polyethylene is very great. To mention a few, there is increasing demand for it in the manufacture of artificial leather, rexine, sole leather for shoes, motor tyres, artificial wood for furniture like masonite, electrical goods, radio cases, batteries, acid-resisting equipment, ball bearings, refrigerator parts, packing materials for the cosmetics and pharmaceuticals industry and chemical products.

It is hard for the plastic industry to develop on sound lines in the absence of indigenous manufacture of moulds, injection and extruding machines. Dr. Hamied felt that some of the big engineering firms should take up the manufacture of these moulds and machineries. It is gratifying to learn that the Government of India has obtained the services of Mr. Robinson, an expert, who will visit the factories concerned and help in the manufacture of complicated moulds and other machines.

There are two important fields of activity in the sphere of production of plastic commodities. One is the manufacture of ordinary goods such as toys, household wares, etc., and the other is the production of industrial articles required by important industries, such as the manufacture of electrical goods, radio parts, telephones, packaging materials for pharmaceutical and other industries, aircraft tubings, etc. In the second field, there is a very great future for the plastics manufactures in India. Plastics materials are also increasingly replacing wood, metals, glass and ceramics. It is, therefore, up to the industry to develop this side of manufacture as much as possible and thus enlarge the valued activity of the industry.

INDO-IRAQI TRADE AGREEMENT

A trade agreement between India and Iraq was signed at Baghdad on the 6th inst., by His Excellency Dr. Dhia Ja'far, Minister of Economics, on behalf of the Royal Iraqi Government, and His Excellency Mr. Khub Chand, Envoy Extraordinary and Minister Plenipotentiary, on behalf of the Government of India. This is the first treaty authorised by King Faizal since his coronation. The agreement shall come into force shortly on a date to be fixed by the two Governments. It shall remain in force until 31st December, 1954, and for such successive periods as may be mutually agreed upon before its expiry. The schedule of exports from India includes the following items:

(i) Food and agriculture products like fruits, spices, tea, etc.; (ii) timber and related products, i.e., plywood and wood and timber; (iii) textiles, such as cotton piecegoods, jute manufactures, coir and coir manufactures, rayon piecegoods, woollen manufactures, etc., (iv) fibres and bristles, i.e., bristles and hair, and palmyra fibre; (v) rubber products like tyres and tubes; (vi) hides and skins and related products; (vii) ceramics, pottery, glassware, and allied products like tiles; (viii) art goods, handicrafts and jewellery; (ix) chemicals and related products like paints and varnishes, soap, toilet requisites, etc.; (x) coke; (xi) machinery and metal products, like agricultural machinery, diesel engines, electric fans, hurricane lanterns, sewing machines, etc.; (xii) iron and steel and other products; and (xiii) miscellaneous items like abrasives, belting, films, linoleum, etc.

The schedule of imports from Iraq provides for the following:

(i) Animals like horses and mules; (ii) cotton, long staple; (iii) dates; (iv) foodgrains like barley, millets, pulses, rice, wheat, etc.; (v) gallnuts; and (vi) hide and skins, light weight.

DUTIES ON PALM AND LINSEED OILS

The Government of India has reduced with effect from 12th inst. the import duty on palm oil to 10 per cent. *ad valorem* and abolished altogether the import duty on palm oil which is the produce or manufacture of a British colony. As a result, the standard rate of import duty on palm oil has been reduced from 43¾ per cent. *ad valorem* to 10 per cent., while the preferential rate on duty at 31¼ per cent. *ad valorem* on imports from a British colony has been altogether abolished. It has also brought the import of palm oil under licensing control. Palm oil has, therefore, been removed from the Open General Licence No. XXX with immediate effect. Pending the grant of separate licences for palm oil, all outstanding licences for the import of coconut oil will, at the option of the importer, be valid for the import of palm oil. Importers, who have already entered into firm commitments with overseas suppliers for import of palm oil are requested to furnish the Chief Controller of Imports and Exports, New Delhi, with details of their commitments and all documentary evidence in support thereof by 25th May, 1953, at the latest. They should also clearly indicate the extent to which their commitments can be met from their outstanding licences, if any, for coconut oil. The Government of India has also reduced with effect from 12th May export duty on linseed oil from Rs. 200 to Rs. 50 per ton and on linseed from Rs. 100 to Rs. 25 per ton.

CONIDTIONS IN THE COIR INDUSTRY

SIGNIFICANT DECLINE IN EXPORTS

THE discussion on the conditions prevailing in the coir industry in Travancore-Cochin State in the House of the People, last week, provided an opportunity for Mr. T. T. Krishnamachari, Minister for Commerce and Industry, briefly to review the problems facing the industry and the attitude of the Centre towards them. The discussion was raised at the instance of Mr. P. T. Punnoose, a Communist member from Travancore-Cochin, who claimed that several lakhs of people including the 70,000 people in the coir mat and matting industry had been affected by the slump in the industry. He substantiated his statement by referring to the substantially low earnings of the industry in 1952-53, as compared with those in the previous two years. Thus, the value of exports, according to Mr. Punnoose, in 1952-53 amounted to Rs. 597 lakhs, as against Rs. 883 lakhs in 1951-52 and Rs. 814 lakhs in 1950-51. He said that Mr. Krishnamachari's statement in the House some time back that, as a result of improvement in the export position, and consequent measures to ease the situation, the conditions of the people engaged in the coir industry were better than in 1952 had been belied by the crisis facing the industry. He was of the considered opinion that "the overall picture was dark and bloomy as it was before."

Mr. Krishnamachari was glad that Mr. Punnoose had raised the problem to focus the attention of the public on the coir industry and that he was going to take advantage of it and see what could be done. He said that the Prime Minister had commissioned him to look after economic matters relating to Travancore-Cochin. He added that New Delhi was indeed very earnest to do what it could to Travancore-Cochin where the number of the educated public was the highest in India and unemployment was rife.

Decline in Prices

Continuing, Mr. Krishnamachari averred that Mr. Punnoose's reading of statistics was defective. He said that if the figures of 1947-48 were to be taken into account, the picture would be different. The years 1949-50 and 1950-51 were peak periods because of the Korean war. It must be recognised that there was a big demand for coir manufactured products and coir yarn during the Korean war. Some of the factories came into existence because of the boom. Naturally when the boom disappeared, the opportunity for shipping the same quantum of goods abroad also disappeared. The disappearance of the boom conditions, as was inevitable was followed by decline in prices. The declared value of coir manufacture in January, 1953 was Rs. 52-12-9 per cwt., as against Rs. 70-11-5 in the same month in 1952 and Rs. 76-14-0, in 1951. The decline in demand and price was not confined to the coir industry alone but all industries. It was predominant in the jute industry. The existing situation was, according to the Minister, the one which was not under the control of the Government. But the Government did not adopt, he said, any passive attitude towards the coir industry. In this connection, it may be said that the Government is moving in the right direction.

It is gratifying to note that the Government has called for a survey of every country to which exports of coir industry products could be made. We are told that reports have already been received from a number of countries including Ceylon, New Zealand, Pakistan, Iraq, Afghanistan, the U.K., Sweden, Finland, Denmark, Aden, the Philippines, Thailand, France, Italy, Greece, the U.S., Egypt, Yugoslavia, Transjordan, Malaya, Belgium, Canada, Iran, Germany, the Netherlands, Indonesia and Japan. It is stated that in Finland where there is a good market for Indian coir products, the currency position is not good. These reports may contain valuable information but unless this information is made available to the industry and unless action is taken to move out the goods, the industry can hardly be expected to overcome the crisis facing it to-day.

General U.S. imports in March, 1953, aggregated $1,018 million. This represents a sharp advance of 19 per cent. over February imports of $856 million, and falls only a little short of the record monthly total reached in December, 1952. Exports also increased in March. Shipments of domestic and foreign merchandise accounted for $1,388 million, a gain of 16 per cent. over the February total. Part of the expansion in March exports was due to shipments of supplies and equipment financed under the Mutual Security Programme. These shipments were about $60 million higher than those of February.

Even a lathe tool can't scrape off this oil!

Between a lathe tool and the work being machined, a cutting fluid acts as a lubricant. Under the enormous pressure at the tip of the cutting tool, the fluid is reduced to a film a few molecules deep.

Yet this microscopically thin film of oil must never break. It must never 'scrape off'. If metal-to-metal contact occurs between work and cutting tool, they will weld together and the tool may fracture.

No soap-and-water here!

It's small wonder that traditional lubricants have given way to Gargoyle Cutting Fluids. These modern cutting fluids have extraordinary tenacity. They cling fiercely to metal, forming a lubricating film that even extreme pressure cannot break.

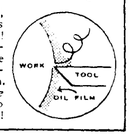
How is it done? Partly by scientific blending of oils with high natural tenacity; partly by incorporating chemical additives which increase tenacity, and great 'anti-weld' properties.

But mostly (as any engineer will agree) by *experience*. After all, we've been in the lubrication business for 87 years. It's only natural that we should know how to make oil!

Incredible, but true . . .

It's the oil that does the cutting!

With a good cutting fluid, the tool never touches the work being machined! The entire cutting pressure, concentrated at the tip of the tool, is transferred *through* the oil film. No wonder *experience* was needed to develop Gargoyle Cutting Fluids!



Let this experience work for you. Get the 4-way benefit of correct lubrication with Standard-Vacuum Industrial Lubricants:-

- Reduced power consumption;
- More continuous production;
- Decreased maintenance;
- Lower lubrication costs.

PRICE SUPPORT POLICY IN U.S.

CAN IT SUCCEED AS A LONG-RANGE MEASURE?

THE economics of price supports to agricultural commodities, as provided in the United States, has been analysed in an article entitled "Toward a Solution of the Farm Problem" in one of the latest issues of the quarterly survey published by the Guaranty Trust of New York. It discloses the attitude of the new Administration towards such supports especially as a long-range farm policy. It is clear from the article that the new Administration defends price controls as a means not of circumventing the law of supply and demand but rather of cushioning some of its harsh impacts. In other words, it believes in a moderate and flexible farm-price support policy, as a form of insurance against disaster, even while recognising, in the long run, the open market as the only dependable equaliser of supply and demand. Whether it will be possible to devise such a policy, it is difficult to forecast, even according to the article. Anyway, price supports appear, for the time being, politically unavoidable, whether permanently feasible or not, it adds. The whole question of price supports is, therefore, complicated and deserves critical examination before seeking a long-range solution to the farm problem. The paragraphs below giving the various aspects of the price support policy make interesting reading.

In agricultural affairs the new Administration in the United States has one of the most troublesome of its "inherited" problems. It took office at a time when farm prices had been declining steadily for five months and irregularly for two years. Some people were beginning to fear that the recession might continue long enough to bring about a serious shrinkage in farm income and purchasing power. As has been usual under such conditions in recent years, the demand arose in certain quarters that the Government "do something" about it. In the face of this situation, the President and the Secretary of Agriculture have indicated their determination to move away from the rigid price supports and output controls of the recent past toward a regime of free enterprise and free markets for agriculture. In adhering to this basic philosophy they have shown a political courage and an economic sagacity that have won commendation from thoughtful students of agricultural economics, including the more far-seeing of the farmers' organisations. At the same time, they have been strongly criticised by some, in and out of Congress, who insist that farm prices be held at arbitrary levels without regard for ultimate consequences. The abuse directed at Secretary Benson by some Congressional "farm bloc" politicians suggests the sort of opposition that the Administration is likely to encounter in its efforts to shape a long-range national farm policy based on economic realities.

The part of Mr. Benson's position that aroused the ire of farm spokesmen in Congress was the assertion that "price supports should provide insurance against disaster to the farm-producing plant and help to stabilise national food supplies. But price supports which tend to prevent production shifts toward a balanced supply in terms of demand and which encourage uneconomic production and result in continuing heavy surpluses and subsidies should be avoided." In reply to those who would rely upon acreage allotments and marketing quotas to control farm output, the Secretary said: "We seek a minimum of restrictions on farm production and marketing to permit the maximum of dependence on free market prices as the best guides to production and consumption. Farmers should not be placed in a position of working for a free market."

Under Mr. Benson's programme, the mandatory price supports at 90 per cent. of parity on the so-called basic commodities for 1953 and 1954, as well as statutory supports on other farm products, "will be carried out faithfully in every respect." Meanwhile, however, "there will be formulated long-term programmes which will more fully and effectively accomplish our over-all objectives." All this is in line with the new Secretary's underlying belief that "it is doubtful if any man can be politically free who depends upon the State for sustenance. A completely planned and subsidised economy weakens initiative, discourages industry, destroys character, and demoralises the people.... The future of agriculture and the preservation of a sound economic system depend upon the vigorous re-emphasis of the principles, benefits, and values of private competitive enterprise." The details of the new Administration's farm policy are yet to be spelled out, but the main objectives are clear. First, a determined effort will be made to supplant temporising and dilatory measures with a definite, workable, long-range farm policy. Second, the aim of this policy will be to place less reliance upon price and production controls, and more upon free enterprise and free markets.

The last 20 years have brought large gains in farm income, but they have not brought a rational and consistent farm policy. In theory, price supports are contingent upon the acceptance by farmers of production controls that are supposed to take the place of free-market fluctuations in adjusting supply to demand. In practice, no one seems to have much faith in such controls. Nor has actual experience with them been encouraging. At least twice the Government has been "bailed out" of threatening situations of surplus by international events that unexpectedly caused world demand to soar abnormally, absorbing or reducing the accumulated surpluses. If output controls should fail to work over the long term, it would seem that the Government must eventually face the alternative of allowing the price-support system to break down or resorting to the mass destruction of surplus farm commodities. Even if the controls could be made to work, the natural tendency would be for one farm product after another to come under the controls until in the end the farmers would become virtually agents of Government, operating as directed for a schedule of fees, while the consumers paid the bill twice—once in the form of taxes and once in the form of arbitrary prices for a reduced supply of food and other products. Can the Secretary of Agriculture be fairly criticised for trying to lead the traditionally independent American farmer away from such a threat?

Since World War II, almost all pretence of working toward a sensible farm policy has been abandoned. The last gesture in that direction was made in 1948, when Congress passed a law replacing the rigid war-time price supports with a sliding scale adjusted to demand-supply relationships, ranging from 60 to 90 per cent. of parity for basic crops and with no specified minimum for most other farm products. That law has never been allowed to take effect. The flexible support schedules, originally due to go into operation in 1949 and 1950, have been postponed from year to year until now the 90 per cent. supports of war-time are to continue through 1954, nine years after the war.

Among the critics of this state of affairs, some have maintained that, in the long run, the interests of the farmer, as well as the general public, would be best served by liquidating the whole price support and output control programme and allowing agriculture to resume its former independent and competitive status. Others, like Secretary Benson, have held that supports are defensible, not as a means of circumventing the law of supply and demand but rather of cushioning its sometimes harsh impacts. This latter view is usually based on the argument that farm products are subject to an exceptionally inelastic demand—a demand that responds only slowly and to a limited extent to changes in price. Most farm products are used in the form of food, clothing, and other necessities that people must have from day to day, whether cheap or dear. The same is largely true on the side of supply. It has been said that "farming is not only a business but a way of life." Most farmers are neither financially nor technically able to suspend or curtail operations and turn to other pursuits at times of low returns. They are small operators and have no substantial reserves to enable them to ride out a squall of bad economic weather. Within limits, they can shift from some products to others, but as long as they remain farmers they must produce farm products, and produce as much as possible. Moreover, their productivity is subject to climate, insect damage, plant and animal diseases, and other factors that have no relation to demand or price.

The result is that farm products can and sometimes do undergo wide price swings before their supply-demand position is much affected. Price fluctuations in farm products are almost invariably more pronounced than those in non-agricultural commodities. Thus farmers are subject to exceptional business risks, although they are among the producing groups least able to withstand financial adversity. These sharp "ups and downs" in agriculture are of grave concern to the economy as a whole, as well as to the farmers themselves. The farm population is one of the largest groups of consumers, and a severe decline in farm income necessarily limits the market for goods and services of all kinds and thus reduces the incomes of other groups. If such declines can be cushioned without destroying the market mechanisms by which adjustments must be made, general economic stability can be promoted and unnecessary hardship avoided. Such is the reasoning of those who believe in moderate and flexible farm-price supports as a form of "disaster insurance," even while recognising that in the long run the open market is the only dependable equaliser of demand and supply. Whether it will prove possible to devise such supports and at the same time leave enough market freedom to avoid regimentation on the one hand and economic breakdown on the other, the future must determine. For the time being, supports seem politically unavoidable, whether permanently feasible or not.

It will be unfortunate if the moderate dip in farm prices is allowed to distort the perspective in which the nation is preparing to survey the future of agriculture. A parity ratio of 95 per cent. (the actual ratio on 15th January) is no cause for alarm. It is the ratio that existed in early 1950, a few months before the outbreak of fighting in Korea. It is well above the 90 per cent. support level for basic products. Only in comparison with the abnormal figures of the war and post-war years does it appear low. Wider swings than this will have to be tolerated if American agriculture is to escape regimentation. The authorities now entrusted with the task of seeking a long-range solution to the farm problem need and deserve better treatment than to be sniped at by those who refuse to look beyond the horizon of to-day's market quotations.

WHAT IS AN ADEQUATE GOLD RESERVE?

SAFETY LEVEL NOT YET REACHED

(By PAUL BAREAU)

WHEN the problem of moving towards convertibility and freer trade is considered in Britain, voices are certain to be heard suggesting moderation and restraint in the speed of advance. The burden of their advice is "no irrevocable commitments or decisions until the gold reserve is considerably larger than it is at present."

What is an "adequate" gold reserve? At present, it stands at over $2,100 million. How does this compare with earlier totals? If we go back to 1914 and the immediately preceding era, we find that the Bank of England ran the gold standard with a reserve which seldom exceeded the equivalent of $200 million and was normally within the range of $100 million to $150 million. In those days, sterling was wholly free, being available to make payments for any purpose in any part of the world. No one called it convertible, because even the possibility of its inconvertibility never entered anyone's mind. The Bank of England in those days carried the responsibility of maintaining the pound anchored to its gold parity. It carried an even greater responsibility—that of maintaining the whole gold standard system in reasonable balance—for, without any question, it was sterling which in those days provided the real medium of international exchange and finance. The world in the early years of this century may have appeared to be on the gold standard; in fact, it was on the sterling standard.

If a reserve of no more than $200 million was sufficient to provide the apex of this enormous inverted pyramid of credit and international payments, why should a reserve 10 times that size be deemed insufficient to-day to underpin the convertibility of sterling? There are many answers to that question. The first, which does not advance the argument very far, is that world prices have risen considerably since 1914 and that, consequently, it needs larger reserves to underpin credit and currency. Another is that, in 1914, the gold in the Bank of England was only part of Britain's reserve. The other, and larger part was actually carried in the pockets of the people. A more important answer to this question is that, in 1914, the whole world was, on balance, indebted to London. Britain's reserves were, in large part, represented by the money owed to the United Kingdom banks by the rest of the world. A slight pull on the Bank rate lever was enough to send remittances and gold scampering back to London from every quarter of the globe. Those were the days when it used to be said that "a seven per cent. Bank rate will draw gold from the North Pole."

Even more important was the fact that, in those days, the world, thanks in part to the wise and restrained commercial policy of Britain, was in reasonable economic equilibrium. Year by year Britain earned a surplus on its current trading account; but those surpluses were wisely invested abroad. There was no talk of a sterling gap, despite the fact that Britain was the world's greatest creditor and exporting country.

Much has happened since then. Britain's creditor position is no longer there to cushion the impact of seasonal swings in the balance of payments. A lot of the valuable stuffing in that cushion—in the form of overseas investments—was sold to pay for victory in two world wars. The world, moreover, has got out of its former balance. There is no longer that natural equilibrium of trade and payments which made it possible to operate a system of international currencies and payments with a small gold reserve. The "swings" to-day are bigger, both on normal commercial account and also because they are accentuated by speculative movements.

The size of these "swings" is well illustrated by the recent fluctuations in Britain's gold reserves. By the end of the third quarter of 1949, soon after the devaluation of sterling in September that year, the reserve stood at $1,425 million. It rose continuously throughout 1950 and, under the impact of the Korean boom in Sterling Area commodities, it reached a peak of $3,865 million by mid-summer 1951. Then began a collapse which carried the reserve down to $1,685 million by mid-summer 1952. Since then it has recovered to over $2,100 million. In the light of these wide fluctuations, it is hardly surprising that a reserve of the present level should still be regarded as inadequate.

The adequacy of the reserve should also be judged in the turnover of payments it has to underpin. The existing reserve of just over $2,000 million has to lubricate an annual turnover of sterling trade of between $25,000 million and $30,000 million. This reserve may be in United Kingdom ownership, but it has to serve the needs of the whole Sterling Area.

Another point to be taken into consideration is that Britain's reserve must be strong enough to take the impact of substantial external debt payments. Once a year, Britain has to pay the United States and Canada about $130 million to cover the service on the moneys borrowed immediately after the end of the war. These funds, amounting to over $5,000 million, were used to pay for essential imports urgently needed, while Britain was slowly trying to regain the export trade that had been thrown to the winds during the war. There is little in the way of concrete reproductive assets to show for the outlay of these dollars—only a reconversion to peacetime economy a little smoother, less disturbed by political and social friction than might otherwise have occurred. These debts do not earn their keep; but they have to be repaid and they absorb every year as many dollars as are earned by about three months' exports from Britain to North America.

Taking all these factors into account, it is not surprising that the dimensions of the reserve should haunt those who are responsible for the conduct of Britain's monetary affairs. This reserve has recently been climbing up. But even at the recent satisfactory rate of progress, it would take a long time for it to reach a reasonable safety level of, say, $6,000 million.

No Wonder, everybody now insists on installing IFW FANS. They are sturdily made; They look elegant; They are moderately priced and THEY CONSUME 60% LESS ELECTRIC ENERGY.

PROFIT OF KIL KOTAGIRI TEA AND COFFEE SHRINKS

DIVIDEND, HOWEVER, MAINTAINED

A DECLINE of a little over 25 per cent. in tea crop harvested and a sharp rise of 40 per cent. in the cost of production are the two main factors which have been responsible for the recession in the earnings of the Kil Kotagiri Tea and Coffee Co., Ltd. (Managing Agents and Secretaries: Messrs. Peirce Leslie & Co., Ltd. Kozhikode, Malabar), for the year ended 31st October, 1952. The Company's gross profit shows a fall from the record one of Rs. 4.88 lakhs for the previous year to Rs. 3.93 lakhs. The decline would have been much sharper but for several favourable factors, namely, (1) the average price realised has not suffered a decline—in fact, it is a fraction better—in refreshing contrast to the general experience; (2) the coffee crop harvested in the Company's coffee estates is substantially higher; and (3) the price realised for coffee has gone up sharply. Despite the recession in earnings noted above, the Directors have been able to maintain the dividend at the attractive level of 30 per cent. paid for the previous year on its enhanced capital (the capital, it may be recalled, was doubled by the capitalisation of a part of the reserves), after transferring a sum of Rs. 1.66 lakhs to the general reserve. This has been possible because of the sizable sum of Rs. 1.67 lakhs brought in from the previous year.

The outturn of tea from the Company's estate is lower at 2.57 lakh lbs., as compared with 3.44 lakh lbs. for the previous year, and is much below the anticipated crop of 3.50 lakh lbs. The cost of production of tea also has belied expectations. As against an anticipated cost of 95.91 cents per lb. (as compared with 97.56 cents per lb. actually incurred in 1950-51) the cost has gone up to 137.07 cents per lb. in 1951-52. The one redeeming feature of the sale of the Company's tea is that the average price realised at 217.05 cents per lb. compares favourably with 216.46 cents realised in the previous year. The effect of the lower crop and higher cost of production has been offset to a large extent by the higher coffee crop which shows an increase from 174 cwts. to 654 cwts.—thus reversing the downward trend noted in the previous two years—and the higher price realised for coffee, which has advanced from Rs. 178.8 per cwt. to Rs. 213.2 per cwt.

The salient features of the Company's results of working for the year under review are set out in the following table against the background of those for the previous three years.

	For the year ended 31st October			
	1952	1951	1950	1949
	Rs.	Rs.	Rs.	Rs.
Sale proceeds of—				
Tea	5,63,173	6,29,223	6,25,962	4,76,377
Coffee	1,40,162	34,482	44,545	1,26,438
Stocks of tea (since sold)	1,03,226	2,10,806	63,410	1,23,518
Tea estate expenditure ..	3,52,555	3,36,013	3,08,236	2,98,581
Coffee estate expenditure ..	61,465	42,051	51,567	53,577
Gross profit ..	3,92,911	4,87,899	3,74,261	3,74,963
Managing agents' commission	21,512	28,088	21,849	18,402
Depreciation	39,893	39,214	38,436	35,334
Taxation	64,000	89,000	60,000	51,000
To reserve	1,66,292	..	4,25,000	1,00,000
Dividend—				
6% preference	15,000	15,000	15,000	13,750
Ordinary ..	1,50,000	1,50,000	25,000	25,000
	(30%)	(30%)	(10%)	(10%)
Carry forward	79,174	1,66,665	35,273	1,73,109
Tea crop (in lbs.) ..	2,57,200	3,44,400	2,86,000	3,06,600
Cost per lb. (in cents) ..	137.07	97.56	107.77	97.37
Average price realised per lb. (in cents) ..	217.05	216.46	206.92	171.72
Coffee crop (in cwts.) ..	654	174	262	840
Value per cwt. .. Rs.	213.2	178.8	169.1	145.3

The Company's dividend record makes pleasant reading. It paid a maiden dividend of 10 per cent. for the second year of its working, that is for 1948-49, and this was repeated for the next year. It was stepped up to 30 per cent. for 1950-51 on a capital which was doubled immediately after the close of the year and has been maintained for the year under review. Thus, the dividends for each of the two years 1950-51 and 1951-52 represent 60 per cent. on the original ordinary capital of the Company.

The Company's financial position is satisfactory. The paid-up capital of Rs. 7.50 lakhs is supplemented by reserves and surplus aggregating Rs. 5.04 lakhs. Early in the year under review, the Directors capitalised a sum of Rs. 2.50 lakhs from out of the capital reserve (Rs. 33,708) and the general reserve (Rs. 1,66,292). This capitalisation wiped out the entire capital reserve and brought down the general reserve from Rs. 4.25 lakhs to Rs. 2.59 lakhs. With the addition of a sum of Rs. 1.66 lakhs from out of the profit for the year under review, the general reserve has been restored to Rs. 4.25 lakhs. The gross block of the value of Rs. 12.62 lakhs has been written down to Rs. 10.94 lakhs. During the year, a sum of Rs. 39,193 has been incurred on staff and labour quarters, extensions to office building, additional machinery and development of immature tea. The current assets, amounting to Rs. 6.46 lakhs, adequately cover the current liabilities at Rs. 4.86 lakhs, including the provision for taxation of Rs. 2.78 lakhs.

The output of tea for the 1952-53 season is estimated at 3.50 lakh lbs. to be harvested at a cost of 88.32 cents per lb. f.o.b. The coffee crop is estimated at 200 cwts.

TRAVANCORE RAYONS REDUCE ARREARS OF PREFERENCE DIVIDEND

The unfavourable market conditions experienced during the past year have had an adverse effect on the working of Travancore Rayons Ltd. [Managing Agents: Messrs. Emcete and Sons (Travancore) Ltd., Rayonpuram, Travancore-Cochin State]. The Company's accounts for the year ended 31st December, 1952, disclose a fall of Rs. 24.76 lakhs, that is from Rs. 42.23 lakhs in 1951 to Rs. 17.47 lakhs, in its gross profit. After providing Rs. 66,485 as against Rs. 97,552 in the previous year for managing agency commission and making a substantially lower provision of Rs. 12.45 lakhs for depreciation, as compared with Rs. 33.26 lakhs, the net profit, at Rs. 4.35 lakhs, falls short of that (Rs. 9 lakhs) for 1951, by Rs. 3.65 lakhs. In providing a lower figure for depreciation, the Directors have taken into account the excess provision made in the previous year. The rate adopted for 1952 is, according to the Directors, 10 per cent. on plant and machinery and 5 per cent. on all buildings, both based on original cost, and these rates are considered sufficient by the Directors. The net profit, together with the undistributed surplus of Rs. 4.93 lakhs brought in from the previous year, has enabled the Directors to reduce the arrears of dividend (5 per cent.) on the preference shares which had fallen due from the inception of the Company, that is 1946. The Directors have decided to pay off the dividends on the preference shares for the three years 1946, 1947 and 1948, which take up Rs. 6.94 lakhs, leaving to be carried forward Rs. 2.35 lakhs. Thus, the Company is still in arrears of preference dividend for four years more.

The Company, it may be recalled, commenced production of transparent paper in December, 1949, and rayon yarn in August, 1950. During the first half of 1951 the Company's business was brisk and profit quite encouraging. But, unfortunately, the market for rayon yarn became difficult in the second half of 1951. With the fall in price of rayon yarn and transparent paper, following the easing of the raw materials position, and the liberal import policy adopted by the Government of India, the sale of the Company's products became unremunerative. These conditions witnessed no change for the better during 1952. And, if anything, they were worse, resulting in a shrinkage of profit as aforesaid. The following observations of Directors bring out clearly the market conditions in 1952:

"Mention was made in last year's report about the unfavourable market conditions. The same conditions prevailed in 1952 also and in a more severe form. The price of yarn and paper touched still lower levels and our stocks were fast accumulating with little or no demand in the market. Approaches to the Government of India were made and, as a result of continued representations, the Government of India were kind enough to realise the damage done to the trade by their free import policy and also putting a competitor—staple fibre—on the O.G.L. The import policy of the Government of India with regard to rayon yarn and transparent paper was revised in the second half of 1952 and with the help so timely accorded by the Government, prospects of revival seemed to be apparent, and by the third quarter of 1952 we were already beginning to feel the beneficial effects. The Directors are glad to inform the shareholders that the Government of India have decided to continue their policy of restricted imports during the first half of 1953 also. The rayon section was working throughout the year. The transparent paper section was shut-down on 6th February, 1952, and reopened on 3rd October, 1952. The shut-down was necessitated owing to very little response from the market and consequent heavy accumulation of stocks."

The following is a summary of the Company's latest balance-sheet:

Liabilities	Rs.	Assets	Rs.
Capital ..	1,49,91,720	Gross block ..	2,67,67,573
Reserves and surplus ..	5,59,553	*Less*—Depreciation ..	53,91,774
Liabilities ..	1,41,94,363	Net block ..	2,13,75,799
		Stock ..	68,97,465
		Stores, spares, etc. ..	9,41,685
		Debts, deposits and advances ..	4,44,017
		Cash ..	86,670
Rs.	2,97,45,636	Rs.	2,97,45,636

SHREE NIWAS COTTON MILLS LTD.

SETBACK IN RESULTS FOR 1952

THE recommendation of the Directors of the Shree Niwas Cotton Mills Ltd. [Managing Agents: The Marwar Textile (Agency) Ltd., Bombay] to reduce the dividend on the Company's ordinary shares for the year ended 31st December, 1952, from 17½ per cent. paid for 1951 to 12½ per cent., follows the drastic fall in the Company's earnings for the past year. Though the rate of dividend is thus brought on a par with that paid for 1949, the dividend for 1952 represents 15⅝ per cent. of the paid-up capital that existed in 1949. The Company's paid-up ordinary capital was enhanced from Rs. 48 lakhs to Rs. 60 lakhs in February, 1951, and the dividends for the year 1950 and the subsequent two years are on the increased capital of Rs. 60 lakhs. The Company's gross profit for the year under review amounts to Rs. 23.24 lakhs, representing a contraction of over 64.6 per cent. from Rs. 65.68 lakhs earned in the previous year. The net profit shows a fall from Rs. 31.98 lakhs to Rs. 7.94 lakhs, that is by 75.2 per cent. Consequent on this sharp decline in earnings, the Directors have not been able to place any sum to the reserves, to which as large a sum as Rs. 22 lakhs was added last year.

The results of the Company's working were adversely affected, as indicated in the foregoing paragraph, by the substantial fall in the prices of foreign cotton, especially that of East African. The Company had a big quota of East African cotton which was allotted at the bulk prices fixed by the Government, over which the Directors had no control. There was also an appreciable rise in the cost of manufacturing due to various other factors, which combined with the recession in cloth prices, brought down the profit margin substantially.

The followinig table clearly brings out how the results have been affected during the year under review, as compared with those for the preceding three years:

(In lakhs of rupees)

	For the year ended 31st December			
	1952	1951	1950	1949
Sale proceeds	362.81	401.92	232.63	297.52
Stocks	119.04	114.85	125.67	68.84
Expenses*	340.07	346.72	257.69	271.42
Gross profit ..	23.24	65.68	40.46	35.68
Managing Agents' remuneration	2.90	8.21	5.06	4.46
Provision for—				
Depreciation	9.97	7.49	4.41	2.66
Taxation	2.50	18.00	12.50	14.00
Net profit	7.87	31.98	18.49	14.56
To reserves	..	22.00	9.00	12.00
Dividends—				
4 per cent. preference ..	0.19	0.19	0.19	0.19
Ordinary	7.50 (12½%)	10.50 (17½%)	8.40 (14%)†	6.00 (12½%)
Carry forward	3.44	3.19	3.10	2.71

* Approximate only.
† On the capital of Rs. 60 lakhs raised in February, 1951, by the capitalisation of reserves.

The reduction in the amounts provided for Managing Agents' commission and taxation is only in consonance with the decline in the gross profit. The provision for depreciation has, however, been raised in view of the substantial addition made to the block account during the year. The amount set apart for this purpose has steadily gone up in the last three years, as a result of the modernisation programme undertaken by the Company a few years ago and in which considerable progress has been made.

The Company's financial position is quite satisfactory. The paid-up capital as at the end of the year under review amounts to Rs. 64.80 lakhs, made up of a preference (4 per cent.) capital of Rs. 4.80 lakhs and ordinary capital of Rs. 60 lakhs. Out of the latter, as much as Rs. 36 lakhs has been raised by the capitalisation of reserves, twice in the history of the Company, once in March, 1948 when a sum of Rs. 24 lakhs was thus capitalised and the other in February, 1951, when Rs. 12 lakhs was transferred to the capital account. Despite these capitalisations, the reserves and surplus as at the end of 1952 stand at Rs. 67.64 lakhs, of which general reserve alone accounts for Rs. 39.70 lakhs. Current liabilities, including provision for taxation, aggregate Rs. 62.40 lakhs. Of these, loans from banks, secured by the liquid assets of the Company, amount to Rs. 20.65 lakhs, these having gone up from Rs. 2.69 lakhs at the end of 1951, evidently due to the high price at which cotton had to be purchased. The gross block of the value of Rs. 81.84 lakhs, including the additions to the land, building and machinery during the year to the extent of Rs. 8.68 lakhs, has been written down to Rs. 42 lakhs, that is by nearly 50 per cent. Current assets amount to Rs. 152.93 lakhs, thus providing cover to the current liabilities by a wide margin of Rs. 90.45 lakhs.

Points From The Chair

Imports of Components and Raw Materials

"IT is with regret that I have to report that even with the election of a popular Ministry, the biggest hindrance to the rapid expansion of industries in the country, namely, procedural delays in grant of licences and permits, remained unchanged. Delays of three to four months, on the grounds of policy not being settled, in the matter of import licences for components and raw materials appeared to be quite normal in the year. What was worse, the same delays crept into the applications for consumable stores and raw materials. There is no more effective bar to production than an insecure supply line and with the best efforts of the Company, economic production will not be possible, if supplies are not sustained. Your Company has more than once put forward the plea that in the matter of import licences for industries there should be a continuity of policy to enable balanced shipments of components and raw materials. The total value of the imports may be adjusted as Government think fit, depending upon the production of the unit applying for licences and the exchange position of the country, but licences should be with the producers every succeeding half-year without a break. Although, in principle, this has been agreed to, it has still to be seen in practice and policy decisions, have not materially been speeded up. We sincerely hope that procedures for grant of licences to industries will be thoroughly revised to prevent discontinuities in future."

S. K. SEN,
Sen-Raleigh Industries of India, Ltd.

Problem of Tackling Road Accidents

"The challenge, which was thrown out by H. R. H. The Duke of Edinburgh some months ago, when he urged the various organisations concerned with road safety to combine and tackle the problem of accident prevention, has been taken up with vigour. We, in company with other insurers, are co-operating in this new approach to what is a matter of national concern. We hope that, by these efforts, all road users will be brought to a greater realisation of the need for still more care on their part and that some reduction may be made in the number and severity of road casualties. A real measure of success will then have been achieved, which should be reflected in our own results. In most other parts of the world, the experience of motor business has again been generally unsatisfactory. It is clear that it is becoming ever more necessary, in all countries, to face the whole question of the provision of rates for motor insurance which are adequate to allow insurers to count on a modest profit over the years. The best solution of all would, of course, be a generally higher standard of driving."

THE RT. HON. LORD COURTAULD-THOMSON,
Employers' Liability Assurance Corporation Ltd.

Prospects for Natural Rubber

"While the present and near future outlook for the industry is obscured by the policies adopted by the U.S. Government and the Governments of the producing territories, the more distant outlook is promising. The consumption of rubber has been increasing steadily, and the development of new uses, together with increased consumption in established uses, suggests that by the end of this decade the total demand for rubber may be in excess of the existing productive capacity for both natural and synthetic rubber. So far as the natural rubber producing industry is concerned, if we were unhindered by Governmental action, there is little doubt we could make ourselves more than competitive with synthetic rubber by making use of the results which are being achieved by our research efforts in developing higher-yielding material. The higher yields which will be obtainable on the plantations will not only permit us to meet free and unsubsidised competition from the synthetic rubber industry but will also enable us to continue to play our part, as we have done in the past, in providing our labour with the highest standard of living in South-East Asia."

SIR SYDNEY PALMER,
Rubber Growers' Association Inc.

Insurance Funds for Industrial Activity

"Turning to the third point (making available insurance funds for supporting industrial activity), the simple answer is that an insurance company is a trustee for its policyholders, who, if they are holders of life or annuity policies, very rightly regard their money as being in safe keeping, or, if they are policyholders of any other description, expect that the necessary money will be available to meet their claims for loss by fire, accident or any other insured contingency. They would surely not then wish their insurance company to speculate with the premiums, which, in absolute and complete confidence, they have paid. But I will not leave matters there. The fact is that insurance companies do provide, directly, such risk capital as the dictates of prudence and duty may allow and whilst they frequently feel obliged to leave it to others—better suited to do so—to provide the capital for experimental or speculative activities, they often assist indirectly to this end also by providing loan capital on a considerable scale."

RUNDOLPHE E. F. DE TRAFFORD,
Atlas Assurance Co., Ltd.

(*Concluded from page* 896)

150,000 tons per annum. From the nutritional point of view, increased consumption of sugar is of a vital necessity to India. The quantity of sugar required for direct consumption thus comes to 1.5 million tons. This, together with the quantity of 30,000 tons required by the confectionery industry and 15,000 tons by other industries, will bring the aggregate of annual consumption of sugar in India to 1.55 million tons. This figure, of course, excludes the quantity needed for export.

In view of the foregoing factors, Mr. Mitra warns against any attempt at restricting sugar output. In fact, he urges the Government of India to issue licences liberally for the expansion of the existing units, as well as for the erection of new units in States like West Bengal, Madras, Bombay and Mysore. He also emphasises, at the same time, that expansion of the existing factories or erection of new ones should not be permitted in Uttar Pradesh and Bihar, where the sugar industry has already been over-concentrated. This is in line with what is being urged by sugar experts in the country.

SUGAR STOCKS AT JUBBULPORE

A Press report from Jubbulpore states that as much as 16,000 bags of sugar worth Rs. 15 lakhs have been lying unsold in the Government godowns for the past one year. This stock of sugar, it is reported, was indented at the time when sugar had been controlled and when it was being sold to consumers through Government-controlled fair price shops. But, after sugar was decontrolled, the market was flooded with sugar imported by private business men. As a result of keen rivalry among these importers, prices of sugar came down and it became easily available to consumers in free market. The price of sugar in fair price shops is As. 14-6 per seer, as against As. 12 in the free market. This resulted in the stock-piling of sugar in the Government godown, as the fair-price shopkeepers ceased to indent. The quality of sugar in the Government godowns, according to the report, is fast deteriorating and the quantity is also being affected on account of rodent activities. The interest on the amount locked up in sugar is also mounting up daily and the godown rent and other incidental charges are also being added to the capital invested.

PALM "GUR" IN RAJASTHAN

Over 4,500 maunds of palm *gur* worth Rs. 91,000 was prepared from 40,000 palm trees in Rajasthan during the last four years, according to a recent report of the Rajasthan Palm *Gur* Organiser. It is estimated that 40,000 people can find gainful employment, if the 20 lakh palm trees in Jaipur, Kotah and Udaipur Divisions of the State are further exploited for preparing palm *gur*. The average income of a person engaged in the palm *gur* industry in Rajasthan is Rs. 2-8 per day. The industry also offers good scope for employment to the people of scarcity-stricken areas. Already, 400 of the trained personnel are earning their independent livelihood from the industry. The Government of Rajasthan has been running 26 palm *gur* centres since the last four years, of which one is experimental, 10 educational and 15 production centres where 500 people have already received necessary training.

SUGAR PRODUCTION AND STOCKS

The total production and despatches of sugar during the current (1952-53) season amounted to 1,215,900 and 689,712 tons, respectively, as against the corresponding figures of 1,269,213 and 524,729 tons in the previous season.

The opening stocks, production, despatches and closing stock of sugar during the fortnight ended 15th April, 1953, were 927,216, 89,410, 60,088 and 956,538 tons, respectively. The figures for the corresponding fortnight of the previous season were 795,081, 91,214, 46,929 and 829,996 tons. Figures for the current fortnight relate to 127 factories representing 94.36 per cent. of the total cane-crushing capacity, while those for the previous year relate to 122 factories representing 90.18 per cent. of the total cane-crushing capacity.

Notices

THE SIMPLEX MILLS COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT THE Transfer Books of the Company will be closed from the 15th June, 1953, to the 29th June, 1953, both days inclusive.

Shareholders are requested to notify immediately any change in address to the undersigned.

By Order of the Board,
FORBES, FORBES CAMPBELL & CO., LTD.,
Agents.

FORBES BUILDING,
HOME STREET, FORT,
BOMBAY, 9*th May*, 1953.

THE JAY SHREE TEA GARDENS LIMITED

NOTICE IS HEREBY GIVEN THAT THE Seventh Ordinary General Meeting of the shareholders of the Company will be held at the Registered Office of the Company at 8, Royal Exchange Place, Calcutta, on Tuesday the 23rd June, 1953, at 3.00 p.m.,

(*a*) to receive and pass the Directors' Report and audited accounts for the year ended 31st December, 1952;

BOMBAY, 8*th May*, 1953.

SHARP FALL IN PROFIT OF GONDALPARA JUTE MILL

POOR RESULTS OF TWO DUNCAN GROUP TEA COMPANIES

Societe Generale Industrielle De Chandernagor (Gondalpara Mill)

THE directors of the above Company (Managing Agents: Messrs. Gillanders Arbuthnot & Co. Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1952.

In accordance with the Indian Jute Mills Association's main and supplementary working time agreements the Mill worked 48 hours per week with 12½ per cent. of the looms sealed up to 31st March, 1952, and thereafter 42½ hours per week were worked with 12½ per cent. looms sealed.

Raw jute was in fairly plentiful supply during the year, at gradually declining rates. Prices for manufactured goods, however, were generally unremunerative, and this is reflected in the comparatively poor trading results for the year. The export duty on sacking goods was reduced by Rs. 95 per ton as from 28th February, 1953. but this has so far failed to stimulate demand.

Jute in stock and process has been taken into account at rates corresponding with forward sales of manufactured goods, and manufactured goods have been taken into account at contract rates.

In view of the difficult conditions prevailing during the year under review, the agents have waived the sum of Rs. 1,50,000 from the commission due to them by the Company. The result of the year's working is a profit of Rs. 63,630 (Rs. 10,97,729) to which is added post-war refund of excess profits tax Rs. 86,661 (*nil*) and excess reserve for loss in weight in jute made in previous years written back Rs. 1,57,540 (*nil*) making a total of Rs. 3,07,831 (Rs. 10,97,729). From this sum is deducted provision against contingent loss on forward jute purchases Rs. 83,794 (*nil*) leaving a balance of Rs. 2,24,037 (Rs. 10,97,729). Adding the credit balance brought forward from previous year Rs. 25,156 (Rs.19,139), there is an available sum of Rs. 2,49,193 (Rs. 6,24,156 after deducting a sum of Rs. 5,00,287 for reserve for income-tax). The directors recommend that this should be disposed of as follows:—

Pay a dividend at the rate of 10 (30) per cent. per annum (or say Rs. 30 (Rs. 90) per share) without any deduction in respect of income-tax payable by the Company Rs. 1,08,000 (Rs. 3,24,000), transfer to depreciation reserve Rs. 1,00,000 (Rs. 1,75,000), and carry forward to next year Rs. 41,193 (Rs. 25,156).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	10,80,000	Block ...	21,66,248
Debentures ...	1,800	Stocks ...	14,02,386
Reserves ...	28,83,794	Stores, etc. ...	6,00,928
Provision for taxation ...	2,57,066	Debts, deposits and advances ...	14,79,203
Liabilities ...	14,52,721	Investments ...	1,42,543
Profit and loss account ...	2,49,193	Cash ...	1,33,266
Rs.	59,24,574	Rs.	59,24,574

Poobong Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Duncan Brothers & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December, 1952.

The accounts disclose a loss of Rs. 55,548 (Rs. 13,268). On transfer of this sum to profit and loss account and after sundry adjustments, including a transfer of Rs. 27,000 from Reserve account, there is a balance at credit of that account amounting to Rs. 335 (Rs. 27,013).

Despite the improvement in the selling price, the results of the season's working are disappointing owing to the high cost of statutory concessions to labour combined with the lower crop consequent on finer plucking and damage by insect pests.

Crop weighed out at 2,237 maunds as compared with 2,684 maunds in 1951 and the average selling price was Re. 1-13-7 per lb. as against Re. 1-12-7 per lb. in the previous year.

Estimates for 1953 provide for a crop of 2,200 (2,500) maunds for an outlay of Rs. 3,08,340 (Rs. 4,34,367) including inland freight and sale charges.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	3,00,000	Block ...	2,85,000
Reserves ...	3,17,301	Stock ...	40,342
Provision for taxation ...	16,996	Tea sales receivable ...	1,13,863
Liabilities ...	28,223	Advances and deposits ...	30,429
Profit and loss account ...	335	Investments ...	93,370
		Cash ...	99,851
Rs.	6,62,855	Rs.	6,62,855

Runglee Rungliot Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Duncan Brothers & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December, 1952.

The accounts disclose a profit of Rs. 75,520 (Rs. 88,622). On transfer of this sum to profit and loss account and after sundry adjustments, there is a balance at credit of that account amounting to Rs. 75,096 (Rs. 91,520), out of which the directors have transferred Rs. 5,000 (Rs. 5,000) to hail reserve. Rs. 12,379 (Rs. 15,000) to buildings and machinery reserve and Rs. 15,000 (Rs. 15,000) to staff pension reserve. The directors have proposed to pay a dividend of 17½ (27½) per cent. and to carry forward Rs. 18,217 (Rs. 18,020).

The crop made was 2,434 maunds compared with 2,276 maunds in 1951. The average selling price was Rs. 2-5-4 per lb. against Rs. 2-8-2 per lb. in the previous year. Planted area remains at 34¼ acres.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	1,40,000	Block ...	1,40,000
Reserves ...	3,27,000	Stock ...	31,172
Provision for taxation ...	85,289	Tea sales receivable ...	1,16,630
Liabilities ...	1,10,696	Advances and deposits ...	30,868
Profit and loss account ...	18,217	Investments ...	1,77,936
		Cash ...	1,84,596
Rs.	6,81,202	Rs.	6,81,202

Aryodaya Ginning and Mfg. Co., Ltd.

The directors of the above Company (Secretaries, Treasurers and Agents: Messrs. Mangaldas and Brother Ltd., Ahmedabad) submitted the audited accounts of the Company for the year ended 31st December, 1952.

Profit for the year amounted to Rs. 8,13,492 (Rs. 21,00,868). With the last year's balance of Rs. 92,811 (Rs. 93,614), there was a total sum available of Rs. 9,06,303 (Rs. 21,94,481) which the directors disposed of as under:—

To depreciation fund of machinery and buildings Rs. 6,50,000 (Rs. 7,81,670), to payment of dividend at Re. 1 (Re. 1) per each of 1st issue to 7th issue preference shares for the year ended 31st December, 1952, Rs. 40,000 (Rs. 40,000), to reserve fund Rs. 1,00,000 (*nil*), to charity account Rs. 5,000 (Rs. 5,000) and carried forward to next year's account Rs. 1,11,303 (Rs. 92,811).

Prices of foreign cotton and manufacturing expenses in general were high during the year, whereas, due to slackness of demand prices of cloth declined during a part of the year with the result that cloth had to be sold much below the ex-mill ceiling prices. The directors considered the result of the working of the mills satisfactory.

During the year a refund of part excess profits tax under Section 10(1) of the Indian Finance Act, 1942, for the years 1943 to 1945 was received. It amounted to Rs. 3,15,169 (after paying tax) and this amount has been transferred to the reserve fund account.

The directors made payment of dividend at Rs. 15 (Rs. 35 including bonus of Rs. 5) per ordinary share of Rs. 200 each for the year, from the dividend reserve fund (from profits). The following new machines were installed during the year:

Mercerising machine, roving waste opener, thread extractor and padding machine. The mills are equipped with 35,884 spindles, 1,280 doubling spindles and 884 looms and complete dyeing and bleaching plants. Mill buildings, machinery, stores, etc., have been insured against the risks of fire and riots. A small risk is carried by the Company.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	30,00,000	Block ...	76,03,158
Reserves ...	86,35,169	Stocks ...	49,57,175
Provision for taxation ...	11,81,730	Stores, etc.	6,64,995
Liabilities ...	17,62,678	Debts, deposits and advances ...	14,65,729
Profit and loss account ...	9,06,304	Investments	75,004
		Cash ...	7,19,820
Rs.	1,54,85,881	Rs.	1,54,85,881

Rohit Mills Ltd.

The directors of the above Company (Secretaries, Treasures and Agents: Messrs. Lallubhai Gordhandas Ltd., Ahmedabad) submit the audited accounts of the Company for the year ended 31st December, 1952.

During the year, the Company made a profit of Rs. 8,53,666 (Rs. 16,31,472). After deducting Rs. 26,610 (Rs. 47,741) (being donations), there is a balance of Rs. 8,32,056 (Rs. 15,83,731) to which is added the balance brought forward of Rs. 3,873 (Rs. 6,205), making a total of Rs. 8,35,929 (Rs. 15,89,936). The directors recommend the following allocations:—

To 5½ (5½) per cent. dividend for the year 1952 on 10,000 cumulative preference shares (deducting income-tax) Rs. 40,562 (Rs. 40,562), 4 (4) per cent. dividend for the year 1952 on 2,000 redeemable cumulative 2nd preference shares Rs. 8,000 (Rs. 8,000), 4 (4) per cent. dividend for the year 1952 on 2,500 redeemable cumulative 5th preference shares Rs. 10,000 (Rs. 10,000), to dividend for the year 1952 on 32,500 ordinary shares at the rate of Rs. 8 plus Re. 1 (Rs. 8 plus Re. 1) per share, total Rs. 9 (Rs. 9) per share, Rs. 2,92,500 (Rs. 2,92,500), to depreciation fund Rs. 4,00,000 (Rs. 5,75,000), to taxation fund Rs. 65,000 (Rs. 6,50,000), to charity account Rs. 10,000 (Rs. 10,000) and to carry forward the balance of Rs. 9,866.

During the year, certain additions and alterations were made in machinery and buildings. The mill is equipped with 33,156 spindles and 648 cotton textile looms. The Company's properties have been insured. Standing charges and profits have also been insured. Insurance has also been taken for Workmen's compensation. Insurance is not taken for certain items in which the risk of loss by not insuring is nil or negligible also for buildings, plants and stocks in process of certain new departments which gradually come into operation until the time of completion.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	47,00,000	Block ...	81,93,993
Reserves ...	58,29,453	Stock ...	53,33,422

		Cash ...	6,53,137
Rs.	1,86,55,907	Rs.	1,86,55,907

Shri Ambica Mills Ltd.

The directors of the above Company (Managing Agents: Messrs. Harivallabhdas Kalidas & Co., Ahmedabad) submitted the audited accounts of the Company for the year ended 31st December, 1952.

After providing a sum of Rs. 9,25,000 (Rs. 8,25,000) for depreciation and a sum of Rs. 8,30,000 (Rs. 21,00,000) for estimated taxation, the working of the year showed a profit of Rs. 9,58,231 (Rs. 23,32,091), to which was added the sum of Rs. 93,168 (Rs. 48,897) being balance of profit brought forward from the previous year, making a total of Rs. 10,51,399 (Rs. 23,80,988). Out of this amount, the directors provided a further sum of Rs. 75,000 (*nil*) for depreciation on machinery. The balance of Rs. 9,76,399 (Rs. 9,64,136), the directors disposed of in payment of dividends on 5,600 first cumulative preference shares of Rs. 100 each at Rs. 5 (Rs. 5) per share free of income-tax for the year ended 31st December, 1952 Rs. 28,000 (Rs. 28,000), on 7,000 second cumulative preference shares of Rs. 100 each at Rs. 4 (Rs. 4) per share free of income-tax for the year ended 31st December, 1952, Rs. 28,000 (Rs. 28,000), on 49,803 ordinary shares of Rs. 50 each at Rs. 16 (Rs. 18) per share free of income-tax for the year ended 31st December, 1952 Rs. 7,96,848 (Rs. 8,14,968), and carried forward a sum of Rs. 1,23,551 (Rs. 93,168).

The directors have entered into a royalty agreement with Messrs. Cluett Peabody & Co., Inc., New York, the registered proprietors of the trade mark "sanforized" for the use of the said trade mark and their special process of pre-shrinkage of fabric material on the mills' products and in accordance with the said agreement, have ordered out a controlled compressive shrinking range, which has arrived and has been installed and is working at No. 1 Mills.

The directors have also purchased 426 "Texmaco" plain calico looms for replacement of old looms at No. 2 Mills and 44 new Japanese revolving flat cards for replacement of old cards also at No. 2 Mill. The work of replacement of the said machinery is in progress.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	37,50,150	Block ...	1,01,07,709
Reserves ...	1,91,30,172	Stocks ...	46,55,241

Rs.	2,98,08,355	Rs.	2,98,08,355

Naskarpara Jute Mills Co., Ltd.

The directors of the above Company (Managing Agents: Howrah Trading Co., Ltd., Calcutta) submitted the audited accounts of the Company for the half-year ended 30th April, 1952.

The accounts showed a gross profit of Rs. 5,93,155 (Rs. 26,42,341). After providing Rs. 49,266 (Rs. 55,813) for depreciation and Rs. 3,23,099 (Rs. 2,80,565) for interest, commission, allowance and other expenses there was an available balance at credit of profit and loss account of Rs. 2,20,791 (Rs. 23,06,666). To this amount was added the balance brought forward from the previous year of Rs. 16,393 (Rs. 25,780), making a total of Rs. 2,37,184 (Rs. 23,32,447). The directors set aside a sum of Rs. 1,00,000 (Rs. 11,00,000) to reserve for taxation (income, and super-tax) and disposed the balance of Rs. 1,37,184 (Rs. 12,32,447). In paying a dividend on ordinary shares exclusive of bonus shares at 15 (30) per cent. per annum free of income-tax (or at As. 12 (Re. 1-8) per share) Rs. 90,000 (Rs. 1,80,000), transferred to reserve account Rs. 30,000 (Rs. 10,00,000) and carried forward a sum of Rs. 17,184 (Rs. 52,447).

During the period, the mills worked in accordance with the supplement working time agreement of the Indian Jute Mills Association.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.

Rs.	1,36,46,505	Rs.	1,36,46,505

United Provinces Electric Supply Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Martin Burn Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 30th September, 1952.

The commissioning of the last of the three C.T.M. boilers in the early part of March this year, completed the plant extension scheme at Lucknow, bringing the effective station capacity up to 13,600 kilowatts. The station is at present carrying a load of approximately 10,000 kilowatts, however, load development is such that the surplus capacity is likely to be absorbed within the next three or four years.

In order to assist in providing funds to meet the cost of additional mains, converting plant, substations, etc., a sum of Rs. 60,000, out of the reasonable return which is at the Company's disposal, has been set aside for this purpose.

The following schedule indicates the progress made during the past three years.

Half-year ended	*Units sold*	*Revenue* Rs.
31st March, 1950	22,054,899	27,54,628
30th September, 1950 ...	23,221,659	28,92,286
31st March, 1951	23,129,769	27,79,281
30th September, 1951 ...	26,484,531	31,10,349
31st March, 1952	25,430,966	31,52,162
30th September, 1952 ...	28,185,332	34,33,172

After complying with the provisions of the Electricity (Supply) Act, 1948, and making adequate provision for liabilities and setting aside Rs. 60,000 to development and extensions account, there remains a balance of Rs. 3,56,045 (Rs. 3,40,899) including Rs. 72,471 (Rs. 74,361) brought forward from the previous half-year available for distribution and this the directors recommend be disposed of in paying a dividend at the rate of 10 (10) per cent. per annum free of income-tax Rs. 2,80,000 (Rs. 2,80,000) and in carrying forward to next half-year Rs. 76,045 (Rs. 60,899).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	56,01,185	Block ...	1,12,88,865
Debentures ...	30,00,000	Plant under construction	6,17,674
Reserves ...	29,12,939	Stores, tools, etc. ...	21,23,129
Liabilities ...	47,64,977	Other assets	1,10,517
Profit and loss account ...	3,56,044	Debts, deposits and advances ...	13,89,474
		Investments	4,76,140
		Cash ...	6,29,346
Rs.	1,66,35,145	Rs.	1,66,35,145

Shahjahanpur Electric Supply Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Octavius Steel & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 30th September, 1952.

The revenue account showed a profit on the year's working of Rs. 1,09,816 (Rs. 1,10,444) from which was deducted appropriations as under:

Rs. 4,543 (Rs. 41,871), bonus to employees
Rs. 4,701 (Rs. 4,808), arrears of depreciation
Rs. 5,416 (Rs. 5,418), provision for taxation
Rs. 22,500 (*nil*), reserve for deferred taxation
Rs. 17,300 (*nil*) and expenditure during construction written off Rs. 1,297 (Rs. 1,297). There was a credit balance of Rs. 54,059 (Rs. 57,049). After adding to this Rs. 16,895 (Rs. 30,339), the adjusted balance brought forward from the previous year, there was a balance of Rs. 70,954 (Rs. 87,389) at credit of profit and loss account, which the directors disposed of in payment of a dividend at 5 (5) per cent. for the year ended 30th September, 1952, without any deduction of income-tax paid by the Company Rs. 45,500 (Rs. 45,500), transferred to general reserve Rs. 20,000 (*nil*), and carried forward the balance of Rs. 5,454 (Rs. 15,889).

A satisfactory expansion of the Company's business was again recorded during the year, and there was an increase of approximately 16 per cent. in the number of units sold as compared with the previous year. The 15 per cent. surcharge on energy bills was cancelled as from April, 1952. The Company's future prospects are considered good.

The number of consumers connected to the Company's system at 30th September, 1952, was 1,825 representing a connected load of 2,350 k.w., as compared with 1,676 representing a connected load of 2,176 k.w. at the close of the previous financial year. These figures include bazar lighting consumers, who numbered 104 as against 115 at 30th September, 1951.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	9,10,000	Block ...	7,86,877
Reserves ...	2,16,255	Stores ...	2,69,703
Provision for taxation ...	22,500	Other assets	20,221
Liabilities ...	2,05,228	Debts, deposits and advances ...	1,58,535
Profit and loss account ...	70,954	Investments	12,793
		Cash ...	1,76,808
Rs.	14,24,937	Rs.	14,24,937

N.B.—Figures within brackets relate to the corresponding period of the previous year.

COMPANY MEETINGS AND DIVIDENDS

RUNGLEE RUNGLIOT TEA CO., LTD. Annual General Meeting, Calcutta, 20th May, 1953. Dividend: Rs. 17-8 per share. Transfer books closed from 15th to 20th May, 1953, both days inclusive.

POOBONG TEA CO., LTD. Annual General Meeting, Calcutta, 20th May, 1953. Dividend: *Nil.*

SHREE NIWAS COTTON MILLS LTD. Annual General Meeting, Bombay, 21st May, 1953. Dividend: Rs. 12-8 per share, payable on 25th May, 1953. Transfer books closed from 1st to 21st May, 1953, both days inclusive.

MUTTRA ELECTRIC SUPPLY CO., LTD. Annual General Meeting, Calcutta, 23rd May, 1953. Transfer books close from 16th to 23rd May, 1953, both days inclusive.

UNITED PROVINCES ELECTRIC SUPPLY CO., LTD. Half-yearly General Meeting, Calcutta, 25th May, 1953. Dividend: Rs. 5 per share. Transfer books close from 19th to 25th May, 1953, both days inclusive.

PULLANGODE RUBBER AND PRODUCE CO., LTD. Annual General Meeting, Fort Cochin, 26th May, 1953. Dividend: As. 6-2/5 per share. Transfer books closed from 16th to 28th May, 1953, both days inclusive.

CHAMONG TEA CO., LTD. Annual General Meeting, Calcutta, 27th May, 1953.

SURAT ELECTRICITY CO., LTD. Annual General Meeting, Bombay, 28th May, 1953. Dividend: Rs. 7 per share (including interim dividend of Rs. 2-8). Transfer books closed from 15th to 29th May, 1953, both days inclusive.

CALCUTTA LANDING AND SHIPPING CO., LTD. Half-yearly General Meeting, Calcutta, 29th May, 1953. Transfer books close from 19th to 25th May, 1953, both days inclusive.

SOCIETE GENERALE INDUSTRIELLE DE CHANDERNAGOR (Gondalpara Mill). Annual General Meeting, Calcutta, 29th May, 1953. Dividend:. Rs. 30 per share. Transfer books closed from 15th to 29th May, 1953, both days inclusive.

INDIAN WOOD PRODUCTS CO., LTD. Annual General Meeting, Calcutta, 29th May, 1953. Dividend: Rs. 3 per share (including interim dividend of Re. 1-8). Transfer books closed from 15th to 29th May, 1953, both days inclusive.

MYSORE CHEMICAL MANUFACTURERS LTD. Annual General Meeting, Chikbanavar, 30th May, 1953. Dividend: Re. 1 per share, free of tax, payable on and after 30th May, 1953. Transfer books close from 17th to 30th May, 1953, both days inclusive.

TRAVANCORE CEMENTS LTD. Annual General Meeting, Kottayam, 30th May, 1953. Transfer books closed from 16th to 30th May, 1953, both days inclusive.

INDIA SUGARS AND REFINERIES LTD. Annual General Meeting, Hospet, Madras, 1st June, 1953. Dividend: Rs. 2-8 per share, free of tax. Transfer books close from 18th May to 1st June, 1953, both days inclusive.

DEVASHOLA (NILGIRI) TEA ESTATES CO., LTD. Annual General Meeting, Coonoor, R.S. Nilgiris, 1st June, 1953. Transfer books close from 25th May to 1st June, 1953, both days inclusive.

MAFATLAL FINE SPINNING AND MANUFACTURING CO., LTD. Annual General Meeting, Bombay, 2nd June, 1953. Transfer books closed from 15th May to 5th June, 1953, both days inclusive.

INDIAN SMELTING AND REFINING CO., LTD. Annual General Meeting, Bombay, 5th June, 1953. Transfer books close from 18th May to 5th June, 1953, both days inclusive.

ROHIT MILLS LTD. Annual General Meeting, Ahmedabad, 20th June, 1953. Dividend; Rs. 9 per share. Transfer books close from 14th to 28th June, 1953, both days inclusive.

RAJALAKSHMI MILLS LTD. Dividend of Rs. 4-8 per share, for the year ended 31st December, 1952. Transfer books close from 1st to 14th June, 1953, both days inclusive.

PALANI ANDAVAR MILLS LTD. Dividend of Rs. 7-8 per "A" ordinary share and Rs. 11-4 per "B" ordinary share, for the year ended 31st December, 1952.

COMPANY REGISTRATIONS

HYDERABAD (SIND) ELECTRIC SUPPLY CO., LTD. (First Director: Mr. M. G. Mukhi.) Business: Electric Light and Power Supply. Authorised capital: Rs. 10,00,000. Private company. Address: Dady House, 1st Floor, Churchgate Street, Fort, Bombay.

ALEXANDRA ENGINEERING WORKS LTD. (First Director: Mr. M. Mithabhai Diler.) Business: Mechanical Engineers and Manufacturers of Implements and Machinery. Authorised capital: Rs. 5,00,000/ Private company. Address: 29, Quay Street, Darukhana, Bombay 10.

Y. A. MAMAJI AND SON LTD. (First Director: Mr. Haji Mulla Abdealli Yusufalli.) Business: Saddlers, Upholsterers, Coach and Carriage and Motor Body Builders, etc. Authorised capital: Rs. 5,00,000. Private company. Address: 136-38, Bhendi Bazar, Bombay.

JAI BHARAT YARN TRADING CO., LTD. (First Director: Mr. H. F. Kanthawalla.) Business: Exporters, Importers and Yarn Merchants. Authorised capital: Rs. 5,00,000. Private company. Address: 77, Tambakanta Sutar Bazar, Bombay 3

CHERIYAN TRAVEL SERVICE LTD. (First Director: Mr. Warkey Cheriyan.) Business: Travel Agents. Authorised capital: Rs. 5,00,000. Private company. Address: 39, Karwar Street, Ballard Estate, Fort, Bombay.

QUESTION HOUR IN PARLIAMENT

Match Manufacture

IN 1952, W.I.M.Co. manufactured 430,770 cases of matches each case containing 50 gross boxes of 60 sticks each. The rest of the industry produced 176,902 cases. This compared with 374,712 cases of W.I.M.Cos. and 148,697 cases of others in 1948. The Government has taken a number of measures to help other sections of the industry which mostly manufactured on a cottage industry basis. W.I.M.Cos. have a total capital of Rs. 240 lakhs of which Indians hold a share of Rs. 115.96 lakhs in the five factories owned by W.I.M.Cos. Out of nine directors six are understood to be Indians. The question of increasing the efficiency of production and help to the small industries is one thing. The question of liquidating the monopolistic character is entirely another question which must wait.

—Minister for Commerce

Water Transport Board

The Government proposes to set up an inland water transport board for South India. A provision of Rs. 2 lakhs towards the Central Government's contribution to that board has been made. The views of the Governments of Madras and Travancore-Cochin have been invited and awaited. The powers, function and personnel of the board are some of the questions now under consideration of the Government.

—Parliamentary Secretary to the Transport Minister

Colombo Plan Council

The next meeting of the Consultative Committee of the Colombo Plan Council is proposed to be held in New Delhi in September-October this year. The agenda is to review the work of the Committee and to consider other matters having a bearing on the co-operative development schemes of the area. The policy session of the Council for Technical Aid has found that about £1.3 million have been spent out of £8 million. India's contribution to the aid is in the form of technical training and its commitment is to the extent of £750,000. It has already spent a little over £450,000. The countries, to which it has given assistance, included Burma, Ceylon, Indonesia, Federation of Malay States, Nepal, Pakistan, Philippines and Thailand.

—Parliamentary Secretary to the Finance Minister

Wheat From Abroad

India this year has so far purchased 4,56,000 tons of wheat from the U.S.A. and 3,50,000 tons from Canada under the International Wheat Agreement. The wheat has been purchased at about $1.85 a bushel. In addition, some 62,000 tons of wheat has been purchased from Canada with the Colombo Plan funds at an average price of about $22.15½.

* * * *

Food Control

Relaxation of food control, if found profitable, will be extended to other areas. On the other hand, if it is found to be unprofitable, the Government will not hesitate to bring back control. The introduction of free market in various foodgrains in different States, along with Government distribution through fair price shops, has been made during the last several months. Even in the statutorily rationed areas, there is now a free market so far as coarse grains and wheat flour are concerned. Wherever the extension of the idea of free market along with Government distribution as a safeguard is desirable or feasible, the Centre will generally not oppose such a proposal from the State Governments.

—Deputy Food Minister

Paddy Cultivation

The special features of the improved method which has come to be known as the Japanese method are: (1) Raised seed-beds for growing seedlings per bunch, and (6) interculturing in the nursery; (3) heavy manuring of the crop in the nursery and later in the field; (4) transplanting in rows in the field; (5) transplanting four to five seedlings per bunch, and (6) interculturing in the fields and weeding. All State Governments have been requested to estimate their requirements of fertilisers in connection with the campaign on introducing this method and the Government of India has agreed to make available the required quantity. A sum of Rs. 29,648-7 has geen paid to date on propaganda and publicity.

* * * *

Gas From Cow-dung

A large-size plant is being set up at the Indian Agricultural Research Institute to produce combustible gas from cow-dung. It is expected that the assembling, welding and erection of this plant will be completed by the end of this month. The experimental work and analysis of the gas will then be started. Production of gas from cow-dung will not affect its utility.

* * * *

Marine Fisheries

The operational agreement for the expansion and modernisation of marine fisheries was signed between the Government of India and the U.S.A. on 31st May, 1952. It provided for the supply of marine diesel engines and other equipment for improving the existing craft and methods of capture. The equipment will be procured at an early date. The annual estimated quantities of marine fish landed showed a decline after 1950. From 14,010,000 mds. in 1950 it had fallen to 12,432,000 mds. in 1952. The fall is attributed to the failure of the sardine and mackerel fisheries on the Malabar coast.

—Minister for Agriculture

MONEY RATES UNCHANGED

(From Our Own Correspondent)

BOMBAY, *13th May*

The short-term money market experienced steady conditions during the week under review. Although money was not as stringent as in the previous week, the rates remained unchanged. For supply of funds was relatively better this week but the volume was not as large as to meet the entire needs of banks for trade demand. The inter-bank call money was done at the unchanged rate of 2¾ per cent. among the Exchange banks and big Indian banks and at 3 per cent. among the smaller Indian banks. Deposit rates remained unchanged at 2¾ per cent. for 1 to 3 months, and at 2½ per cent. for 6 months.

The week under review witnessed a fractional decline in Treasury Bill rate to Rs. 2-6-10 per cent. per annum from Rs. 2-7 per cent.—a rate which had remained unchanged in the previous eight weeks. The amount offered against the usual tenders of Rs. 1 crore, was, however, Rs. 163.25 lakhs, the same as in the previous week.

A sharp rise of Rs. 15.26 crores in notes in circulation is disclosed by the weekly statement of the Reserve Bank of India for the week ended 8th May, 1953. Notes held in the Banking Department, however, show a fall of Rs. 1.23 crores, so that the total notes issued have recorded an expansion of Rs. 14.03 crores. This is covered by a rise of Rs. 15 crores in foreign securities and a fall of Rs. 97.16 lakhs in rupee coin. A decline of Rs. 3.53 crores in deposits of the Central Government and a fall of Rs. 4.14 crores in those of other Governments is seen in the Banking Department. Deposits of banks too have fallen by Rs. 2.36 crores and those of others by Rs. 1.06 crores. Cash balances have receded by Rs. 1.17 crores. Balances held abroad have gone down by Rs. 16.00 crores mainly due to the transfer of foreign assets to the Issue Department to the extent of Rs. 19 crores as noted above. Loans and advances to Governments are higher by only Rs. 39 lakhs, but other loans and advances are higher by as much as Rs. 7.77 crores, which is mainly accounted for by the rise in loans and advances to Scheduled Banks against usance bills. There has been a fresh advance of Rs. 11.50 crores to banks against usance bills during the week, but there has been a repayment by the banks to the tune of Rs. 6.10 crores, so that the outstandings of such loans are higher by only Rs. 5.40 crores.

A fresh decline in deposits of Scheduled Banks and a substantial rise in borrowings from the Reserve Bank and Imperial Bank to meet a large demand for funds, as shown by a sharp rise in advances, are the outstanding features of the consolidated statement of position of Scheduled Banks for the week ended 1st May, 1953. Demand deposits have dropped by Rs. 3.03 crores. But while time deposits are higher by Rs. 1.07 crores, the total deposits are lower by Rs. 1.96 crores. Borrowings from the Reserve Bank show an increase of Rs. 6.27 crores (of which those against usance bills alone amount to Rs. 5.45 crores) and those from the Imperial Bank of Rs. 1.68 crores. As against these changes on the liabilities side, the assets side discloses an expansion of Rs. 11.29 crores in total advances, loans, cash credits and overdrafts accounting for Rs. 9.94 crores and bills purchased and discounted, for Rs. 1.35 crores. Cash-on-hand and balances with the Reserve Bank are together lower by Rs. 98.90 lakhs, balances with other banks in current account, by Rs. 26.03 lakhs and money at call and short notice, by Rs. 95.09 lakhs.

The Gilt-edged market was featureless, but the undertone was steady. The turnover was small. 3 per cent. 1953-55 was stagnant at Rs. 100-1, as also 3 per cent. 1957 and 3 per cent. 1958 loans at Rs. 98-12 and Rs. 98-9, respectively. 3 per cent. 1959-61, after remaining at Rs. 96-9 for most part of the week, as against last weeks closing of Rs. 96-8, improved to close at Rs. 96-10. 3 per cent. 1963-65 remained unchanged at Rs. 92-14, as also 3 per cent. 1964 at Rs. 92-14. 3 per cent. 1966-68 was done an anna better at Rs. 90-10. 3 per cent. 1970-75 stood at Rs. 86-10, but 3 per cent. 1986 Conversion Loan after going down to Rs. 82, regained to stand at Rs. 82-4.

The foreign exchange section of the money market witnessed a softening tendency in the rupee in terms of the U.S. dollar, following a slight weakening of £ sterling both in London and New York, though there was little commercial demand for sterling. Dollar, which was done at Rs. 475 per $100 (banks selling for ready delivery) on the 4th inst., gained strength to Rs. 476¼ on the 9th, but receded a little to Rs. 476 yesterday. The bank's buying rate for ready after improving from Rs. 471¾ per $100 to Rs. 472½, closed at Rs. 471¾. Similar variations were noted in the forward rates also, as the table below shows. In New York, spot sterling slided from $2.81 1/16-2.81 3/16 on the 5th inst. to $2.81 1/16-2.81 3/16 on the 8th, but closed at $2.81¼-2.81¾ yesterday. The forward rates showed a fall of ¼ cent per £ on balance to $2.80½-2.80⅝ for three months and to $2.79 15/16-2.80 1/16 for six months.

BULLION STEADY

(From Our Own Correspondent)

BOMBAY, *13th May*

The silver section of the Bullion market was a little erratic, during the week under review. The fluctuations in prices, which were fairly violent last week, were less pronounced this week due to the apathy of speculators to extend their commitments one way or the other. But on balance, the white metal emerged better in value, indicating that the position was still in favour of bulls. The hands of bulls were further strengthened by reports of better offtake from up-country centres. The undertone at the close was, therefore, steady.

A feature of the week's trading is the fresh strength in gold which scored a gain of Rs. 1-2 per tola for ready delivery and Re. 1-1 for forward, due to better demand for the yellow metal.

Silver for forward delivery (end of May settlement) opened on a confident note at Rs. 164-10, as against last week's closing at Rs. 164-1, but reacted to Rs. 162-8 on Friday on account of renewed pressure from the leading bear operator and on reports of slackened offtake. Fresh support, however, came in on news of better offtake from Kanpur and stronger advices from Calcutta. Prices were, as a result, lifted up steadily to Rs. 166-3 on Monday. Though the offtake in up-country centres was satisfactory, larger arrivals in Bombay with no corresponding increase in offtake locally, dislodged prices which fell to Rs. 163-11 yesterday. The sentiment remained weak for most part of to-day, but just before the close, reports of a large rise in notes in circulation pulled up the white metal to Rs. 164-15.

Ready silver (.996 fine) began at Rs. 164-14, and after receding to Rs. 162-12, advanced to Rs. 166-7 on Monday. Yesterday, it reacted to Rs. 163-15 only to recover to Rs. 165-3 at the close to-day. The floating stocks of silver are estimated at 1,000 bars. The daily average offtake was 15 bars.

Gold for forward delivery (end of May settlement) was dull early in the week, moving between Rs. 86-13 and Rs. 86-4, but soon responded to support from bulls by staging a steady advance to Rs. 87-12, but finished at Rs. 87-11.

Ready gold, after an initial softness, moving down from Rs. 87-2 to Rs. 86-12, gathered strength to Rs. 88-4 at the close to-day, at which the premium over the forward rate was As. 9, as against As. 7 at one time during the week. The floating stocks of gold are placed at 35,000 tolas. The daily average arrivals were 6,500 tolas, while the offtake was 8,500 tolas on an average.

The following comparative table shows the trend of the market during the week under review:

	13-5-53	Highest	Lowest	6-5-53
GOLD	Rs. a.	Rs. a.	Rs. a.	Rs. a.
Ready (.99 fine Mint)	88 4	88 5	86 12	87 2

BRADFORD WOOL TOPS STRONG

(Messrs. J. Hardacre & Co.)

BOMBAY, *12th May*

Wool in Australia has become progressively dearer in the past few days and Bradford tops are relatively one of the cheapest commodities in the wool world to-day, as prices, although against the buyer, lag considerably behind replacement costs in the raw material.

On a conservative estimate, merino combing wool in Australia has advanced by about 7*d.* per clean lb. in the past fortnight, while Bradford top quotations have hardened only by a penny or two. As they were previously out of line with wool costs, the margin by which wool is relatively the dearer commodity has widened still further, and it is increasingly difficult for importing topmakers to shape a wool buying programme for the remainder of the season on the prices they are now bidding for tops.

Short of unforeseen developments, the Dominion wool marketing season shows every reasonable sign of closing on a firm note. The element of nervousness, which was apparent a few weeks ago, has disappeared, in the general anxiety of all importing countries to add to their supplies. Some of the chief Bradford topmakers admit that they have wool requirements still to fill before they are covered to the opening of the next season.

Against such a wool position, the market is very strong and most firms have advanced their merino and fine crossbred quotations by at least 1*d.* and, in some cases, 2*d.* per lb.

The current quotations for Bradford oil-combed tops, are given below:

(In pence per lb., July 1953 delivery)

48's carded	86
58's super	126
60's ,, ...	150
64's ,, ...	175

FORWARD COTTON HESITANT

(From Our Own Correspondent)

BOMBAY, *13th May*

A slight increase in deliveries against maturing May contract has brought about a hesitant tone in the forward cotton market. The total delivery against this contract so far does not appear to have reached even 1,500 bales. But it goes to show how vulnerable the position of longs in the market is, when offerings of a few hundred bales go to damp the enthusiasm of the bulls. There are also rumours that certain sellers in the May contract, with goods to deliver in their hands, have been prevailed upon by some of the influential buyers not to issue tenders against delivery for a certain consideration to keep up the morale of the market.

There is a section in the market which believes that the cotton is there in the godowns to deliver, and if the buyers in August delivery are faced with the problem of finding the necessary finance to meet the tenders, they would certainly fail to do so and unload their holdings on the market. At any rate, this line of reasoning has come to affect the undercurrent and to cry a halt for the time being, to the aggressive buying of certain groups. This leads one to believe that the longs will now concentrate more on taking small profits at slight bulges and to indulge in replacement on a smaller scale when prices recede again. By all accounts, it is now a game more of endurance than of strength and the market will see a seesaw movement on both sides of the Rs. 740 level.

At the same time, frantic moves are being made by speculators to persuade the authorities to allow forward trading in the new crop and rumours, claiming to know the inner working of the mind of the Textile Commissioner in this respect, are being circulated to retain the large number of small operators who would otherwise abandon the market, as there is only one forward delivery to deal in now. Saner elements in the trade, however, do not give much credence to the fondly held belief that the Textile Commissioner would permit forward trading in new crop by or before the end of this month. Even if the Cotton Advisory Committee, which is meeting to-day, were to consider this subject seriously at this meeting, its recommendation, whatever it might be, will have to be considered by the Government carefully and such consideration is not possible without some data as to the likely volume of the next crop.

After several weeks of firm conditions, the cotton futures market has turned somewhat easy on technical considerations. Unloading by certain bulls and profit-realising by some have resulted in a recession in prices, to-day's closing quotations being lower than those on the opening day of the week. The following is the trend of prices during the week:

	Opening Rs. a.	*High* Rs. a.	*Low* Rs. a.	*Closing* Rs. a.
I.C.C. May ...	735 0	733 12	713 8	714 12
I.C.C. Aug. ...	742 0	744 0	728 8	731 12

In the spot section, activity is not so brisk now as it was a few days ago. Mills are keen buyers still, but this buying is of a selective nature and many of the mills have not got quotas for fresh purchases. The cloth market is placing more emphasis on superfine goods and those mills which are in a position to produce these goods are more interested in imported cotton than the home-grown varieties. After a long interval, importers have come into their own and they are reaping a rich harvest as a reward for their patience.

This week has witnessed a keen demand for Egyptian Karnak and Ashmouni, while East African and Sudan have been claiming equal attention from up-country mills. Altogether, in spite of moderate activity in Indian cotton in this section, the volume of trading has been fairly steady, because of good business in foreign styles. Fresh imports are also expected in the coming months from Egypt and East Africa. The only doubtful factor in the spot market is Bengal *Deshi*, which, even at somewhat lower rates, is not in demand. Perhaps the fag-end of the season will create the demand for this variety also and there will be no cause for disappointment for those who hold stocks of Bengals. With stocks of Indian cotton going down in Bombay, the trade has now turned its attention to small upcountry centres for odd lots lying scattered in many such centres and the railway authorities are also being pressed to provide adequate facilities to bring all this scattered cotton to Bombay or other important textiles centres.

At Karachi, the U.K.'s interest in some of the styles continues unabated. This has created a situation in which the varieties in demand, such as L.S.S. and 289F Punjab, have maintained their price levels, while the other varieties, such as 4F, show a slight decline in prices. However, the movements either way have been very small and the market is without any interest for the time being. Even a slight rise in prices tends to dry up enquiries from the Continent, while Japan, being assured of its supply under the present trade agreement, is no longer in the market. Dull conditions are likely to prevail at Karachi till supplies for Japan are under way. The general economic depression in the country is also having its effect on the cotton market. The latest available quotations from the Karachi cotton market are: Punjab *Deshi* Rs. 66; 4F Punjab R.G. Rs. 57; S.G. Rs. 61; L.S.S. Punjab R.G. Rs. 57; S.G. Rs. 61; N.T. R.G. Rs. 63-8; S.G. Rs. 68-8; 289F Punjab R.G. Rs. 68; and S.G. Rs. 73.

With improvement in demand and prices in most of the world markets, the smaller markets like Brazil, Turkey, Syria are coming more into the picture. On the other hand, Sudan is gradually fading from the picture, as stocks there are almost depleted with only a small quantity left for sale, which is likely to be disposed of by the end of this week.

At Alexandria, there has been a slight change in the position with regard to sales in the sterling area. The discount offered to buyers from this area is now on a smaller scale, but in spite of this, keen interest is being shown in all Egyptian varieties by buyers from both India and the Continent. The total volume of exports till the end of April came to almost six lakh bales.

At New York, the steadiness and strength witnessed in the previous week were absent. Perhaps, the easing of the situation in Indo-China, together with improved prospects in the negotiations in Korea, has had its effect on the sentiment. The trend has been irregular and it is likely to continue so for some time, till the appearance of some decisive factor which might give prices a good jolt either way.

The following are the latest available quotations from New York, as compared with those of a week and a fortnight before:

(In cents per lb.)

	12-5-53	5-5-53	28-4-53
Spot	34.05	34.45	34.30
May	33.62	34.07	33.95
July	33.74	33.96	33.71
October	33.60	33.62	33.45
December	33.58	33.52	33.46

ART SILK YARN LISTLESS

(From Our Own Correspondent)

BOMBAY, *13th May*

Yet another week of listless conditions in the art silk yarn market has been passed. Operators lack enthusiasm to enter into fresh commitments, thanks to uncertainty regarding future trend of supplies and prices. Consequently, volume of trading has been greatly restricted, with fluctuations in values confined to a narrow range. Over the five-day period ended yesterday, prices of yarn were more or less maintained at last week's level, on encouraging advices from share, bullion and commodity markets, although the closing rates were slightly lower. To-day, the market remained closed.

In the forward section, 150D May delivery contract opened the week lower at Rs. 813, as against Rs. 815 last week-end. After improving to Rs. 818 on Saturday, due to buying support extended by a professional operator, it reacted to finish lower at Rs. 812 on profit-taking. June contract rose by 6 points to Rs. 825 on the 9th inst., but slided down to Rs. 820 yesterday. In the ready section, 120 Japan, 150 Japan and 120 Italy advanced, each by six pies, to Rs. 4-8, Rs. 3-9 and Rs. 4-4, respectively, on Saturday. Yesterday, however, they were all a shade lower. 150 Italy gained an anna to Rs. 4-1-6 before finishing lower at Rs. 4-3.

The table below gives the prices of art silk yarn quoted to-day, as compared with those on the 6th inst. and 22nd April, 1953:

	12-5-53 Rs. a.	6-5-53 Rs. a.	29-4-53 Rs. a.
Art Silk Yarn—			
150D May (per case of 200 lbs.)	812 0	815 0	818 0
150D June ,, ,, ,,	820 0	821 0	—
120 Japan (per lb.)	4 7½	4 7¼	4 8
150 Japan ,, ...	4 3	4 3½	4 4¼
120 Italy ,, ...	4 3	4 3½	4 3
150 Italy ,, ...	4 0¼	4 0¼	4 0

Imported licences for art silk yarn are being granted to established importers by the Joint Chief Controller of Imports. The quantum of licences is very poor, being about 5 per cent. of the previous imports. Scarcity in supplies of some of the superfine deniers, such as 60s, 75s, and 100s, is still being felt. With regard to coarse deniers, such as 150 and 120 bright and others, however, stocks are reported to have accumulated with several traders, the chief factor responsible for such accumulation being heavy arrivals of imported yarn in the past few weeks.

Slightly easy conditions have prevailed in the staple fibre yarn section, although prices have remained unchanged. Some of the cotton mills have already been able to secure licences for imports of raw fibre and have started producing yarns for forward deliveries, especially in 2/40s. Some well-known mills are reported to have made sales to the extent of about 1,000 bales at about As. 6 per lb. lower than the spot prices. It is also reported that, due to recent heavy and favourable rains in Coimbatore District, the electricity cut may be further relaxed in the next few days. It is, therefore, feared that the Coimbatore mills will be keen sellers of not only staple fibre yarn but also cotton yarn in the next few days. This has naturally created some easiness in the market at the close of the week and the tendency has remained rather uncertain.

LINSEED STEADY

(From Our Own Correspondent)

BOMBAY, *13th May*

The most important development during this week was the reduction of export duty on linseed oil from Rs. 200 to Rs. 50 per ton, and on linseed from Rs. 125 to Rs. 25 per ton, with effect from 12th May. Despite this announcement the linseed section did not improve, because of discouraging overseas advices. The groundnut section ruled hesitant, on account of changes relating to the import of palm oil. Although the bearish effect of the abolition of import duty on palm oil which is the produce or manufacture of a British colony and the reduction of import duty by 10 per cent. *ad valorem* (standard rate of duty) on oil from other sources was neutralised by the withdrawal of the oil from O.G.L., and placing it under licensing control, still fears were entertained regarding the possibilities of increased imports of the oil under the licensing system. To-day, however, on account of buying from local crushers and *vanaspati* interests there was some speculative support, as a result of which prices tended to look up. Castorseeds ruled a little easy, following

Indian quotation being relatively higher than those of other countries. Indian offers for castor oil, Commercials were placed between 18c. and 18.25c. per lb., as against U.S. buyers' quotation at 17c. to 17.25c. per lb. Consequently, business done in the local market remained limited, and price movements were confined to narrow levels.

In the groundnut section, groundnuts Bold ready, which receded from Rs. 47-12 to Rs. 47, recovered to-day to Rs. 47-8, on speculative buying. June-July delivery, which eased from Rs. 47-2 to Rs. 46-12, improved to-day to Rs. 47-8. Similarly August-September delivery, which declined by As. 8 to Rs. 47 yesterday, advanced by As. 12 to-day. Khandesh quality was hesitant at Rs. 48-4. Groundnut oil ready gained As. 6 to Rs. 24-14 and railway receipts As. 4 to Rs. 24-8.

There were rumours that the Government might also reduce export duty of Rs. 300 per ton on castor oil, in view of the fact that Indian oil is priced out of world markets. In the Continent, there are buyers at about £147 for B.S.S. oil. But Indian costs work out to £153 per ton. Consequently, B.S.S. declined from Rs. 18-10 to Rs. 18-6 and Commercials from Rs. 17-8 to Rs. 17-5. Castorseeds May, which opened at Rs. 159, as against Rs. 159-8, fluctuated between Rs. 160-12 and Rs. 154-8, before closing at Rs. 157-12. September delivery sustained a loss of Rs. 2-8 to Rs. 157-4, the highest and the lowest touched during the week by Rs. 160-12 and Rs. 153-12 respectively. F.A.Q. fell by As. 4 to Rs. 31 and Madras quality As. 8 to Rs. 31-4.

The announcement of reduction of import duty on linseed and linseed oil has been too late. The reduction, although amounting to 75 per cent., is considered insignificant, as Indian prices are still higher than Continental quotations. London quotations are £101 per ton of linseed oil, as against Indian offer at £123 per ton. Despite this, linseed oil ready was higher by As. 8 to Rs. 16-8, which is attributable purely to speculative factors. Linseed Bold ready was colourless at Rs. 32-8. June-July delivery was steady at Rs. 33. August-September delivery gained As. 6 to Rs. 33-4.

The following table shows the prices of oil-seeds and oil on the 13th inst., as compared with those at the end of the previous two weeks.

	6-5-53 Rs. a.	29-4-53 Rs. a.	22-4-53 Rs. a.
Groundnuts—			
Bold Ready New (per cwt.) ..	47 8	47 12	46 0

BLACK PEPPER FIRM

(Messrs. Parekh & Co.)

BOMBAY, *13th May*

During the earlier part of the week, all primary markets for black pepper ruled firm under pressure of buying by the exporters who were able to sell May and June shipments in New York at over $1.44 and $1.43, respectively. As a consequence, Alleppey was able to sell at Rs. 3,300, while Calicut did some business at Rs. 3,550. June delivery in Bombay was also lifted in sympathy to Rs. 2,750. Some repurchases on account of Indian exporters were also reported done in New York for May shipment at $1.44, at it was more profitable to repurchase in New York than to buy and ship from India as growers here were reserved sellers. In the latter part, however, when New York after making sizable purchases withdrew and reduced their bid, growers once again lowered their price to attract buyers, but there being disparity between the two markets nothing except some speculative sales were reported done. In spite of the proximity of monsoon, there appeared no anxiety on the part of growers to sell their holdings. They, on the contrary, did not fail to raise their price immediately they knew that there were more than one buyer. Steadier tone in other commodities due to inflationary tendency resulting from spending programme of the Indian Government for their Five-year Plan, unsettled conditions in Indo-China, trouble in Suez and uncertainty regarding Korean Peace were some of the sustaining factors which kept back growers to press sales on an unwilling market. The following are to-day's nominal quotations:

Ready delivery Rs. 360 per Bengali Maund; May delivery Rs. 2,630-60 and June Rs. 2,630-60 per candy of 5½ cwts.

DUSTS IRREGULARLY EASY

(Messrs. Forbes, Ewart & Figgis Ltd.)

COCHIN, *9th May*

The offerings in dust sale "I" which was held on Tuesday, 5th May, 1953, amounted to approximately 1,50,000 lbs. There was only a fair general demand and prices were irregularly As. 2 easier. The demand for clean, black, well made dusts was maintained.

London Market.—Good demand. Commons fully firm. Others firm to half penny dearer.

Colombo Market.—Six million pounds. Good demand. Steady rates, except fannings and good brokens. Price tea dearer.

Calcutta Market.—Dust.—Poor liquoring Assams and commons half anna easier. Good liquoring and Darjeeling weakest feature.
