Export Quota.—A fair amount of business has been done in 1953-54 export quota at 10 and 10½ pies. To-day's quotation remains at 10-10½ pies. Special licence is nominally quoted at 1½ pies with sellers over.

Forthcoming Auctions.—Dust sale "J" will be held on Tuesday, 19th May.

As we go to press, Messrs. Forbes, Ewart and Figgis Ltd., wire as follows:

"Sale 10.—13,25,000 lbs. Fair general demand at rates irregularly As. 2 easier, except for commonest kinds fully firm and occasionally dearer. Good fannings neglected. Leaf steady."

FOOD POSITION SATISFACTORY

(From Our Own Correspondent)

HAPUR, *12th May*

The food position in Uttar Pradesh has become tinued to be much the same as in the previous week. There are some scarcity pockets here and there, but the position generally is very satisfactory.

The food position in Utter Pradesh has become still more easy. Stoppage of purchases of rice by Government, following the Centre's declaration that it does not need any more supplies, has knocked out of the traders' hands the handle with which they had begun to boost prices of rice. The bumper wheat crop yield has begun to reach all *mandies* in the State and there has been a marked improvement in market supply position. The decision confining the running of the Government foodgrains shops to towns having a population of a lakh and above has not created any uneasy situation in those towns from which the shops have been withdrawn. The following are the wholesale prices of wheat in the important markets in the U.P.—Smali Rs. 16-8, Hapur Rs. 16, Chandausi Rs. 15, Kasganj Rs. 16, Gomda Rs. 15-12, and Sitapur Rs. 15-8. Eighty thousand acres of land in 29 districts of U.P. have so far been selected for field demonstrations in paddy cultivation, according to *Kora* method. The training process started at various centres in connection with the projected campaign is almost over and the supply of seeds and fertilisers would be completed by the middle of this month.

Prices of foodgrains are rising in Bihar, according to authoritative reports. The price of coarse rice has moved up from Rs. 20 to Rs. 25 and that of gram from Rs. 11 to Rs. 16-8, or even higher during the last fortnight. The State Government, it is learned, has asked the Union Ministry to authorise it to impose a ban on export of gram from the State. The rise in rice prices is due to cornering of Nepal rice, which normally used to come to Bihar, by agents of big dealers for exports outside the State, and there has been a draining of most of the gram produced in the State, following imposition of ban on exports of gram outside the surplus States.

SWIFT RISE IN SUGAR PRICES

(From Our Own Correspondent)

HAPUR, *12th May*

The recent rise in the prices of sugar and *gur* in several parts of the country has come as a surprise to officials dealing with the subject, who are now obliged to issue a stern warning to the sugar industry that, if the price of sugar continues to be high, it will be constrained to take such steps as it might deem necessary to maintain them at a reasonable level. Speculators have generally been active hoarders of sugar recently. They have circulated the story that India is proposing to export a large quantity of sugar and *gur* to Burma in exchange for rice. Enquiries show that there is absolutely no basis for this report.

Advices from Calcutta and Bombay report of huge speculative activity in sugar futures. Calcutta market ruled strong, due to speculative buying, prices advancing by about As. 12 per maund. Madras prices advanced, owing to higher prices quoted from Calcutta *c.i.f.* South Indian ports. The market had a rising tendency both in ready and forward transactions at Bombay, due to speculative demand from local and up-country centres.

The following are the latest quotations: Ambala Rs. 32-10, Amritsar Rs. 32-12, Delhi Rs. 34, Jullundur Rs. 31-8, Agra Rs. 32-8, Hapur Rs. 32-4, Kanpur Rs. 31-12, Mathura Rs. 32-8, Meerut Rs. 33, Muzaffarnagar Rs. 31, Patna Rs. 31-4-6, Calcutta Rs. 31-10, Gauhati Rs. 33-8, Cocanada Rs. 31-12-6, Bombay Rs. 32-8 and Madras Rs. 32-4.

Gur markets remained very steady. There was poor activity in the markets, as arrivals were extremely small and so were stock movements from North Indian markets. Stockists were not eager sellers. Prices improved at Amritsar and Jullundur, on poor supply position. Prices also improved at Calcutta, Bombay and Madras, due to stringent free market supply position and good demand. Latest quotations are: Ambala Rs. 16 to Rs. 15, Amritsar Rs. 18 to Rs. 16, Delhi Rs. 20 to Rs. 16, Jullundur Rs. 19-8 to Rs. 18, Agra Rs. 20 to Rs. 16, Hapur Rs. 18 to Rs. 17-12, Kanpur Rs. 21 to Rs. 18, Mathura Rs. 18 to Rs. 16, Meerut Rs. 18-10 to Rs. 17, Muzaffarnagar Rs. 19-8 to Rs. 17, Calcutta Rs. 20 to Rs. 16-8, Madras Rs. 18-8 to Rs. 22-8 and Bombay Rs. 20-8 to Rs. 27.

JUTE PRICES ADVANCE

(From Our Own Correspondent)

CALCUTTA, *12th May*

An impressive rise in prices, and the consolidation of gains were two outstanding features of both the raw jute and the jute goods markets during the week. It goes to the credit of sacking goods that, in contrast to the trend of recent weeks, they led hessian in the gains of this week.

STOCK & SHARE QUOTATIONS

Abbreviations:—D=Deferred shares. G=Guaranteed shares. P=Preference shares. P.O.=Preferred Ordinary shares. R=Rebate shares. Y=Accounts published yearly. H=Accounts published Haf-yearly. Q=Accounts bublishe once 15 months. T=Company has Debentures. R.L.=Reserve Liability on shares. N=Nominal Quotation. i=Interim Dividend. f=Dividend for first half-year, y=Dividend for the year. x=Ex. Dividend c.d.=Cum. Dividend.

Shares:—If a company has different classes of shares—as, for example A shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under "Paid-up Per Share."

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12 indicate the months of June and December, respectively "Reserves" ncludes general and other reserves and all other funds which a company may have as also depreciation on block items, when this is charged to separate account 'Block" represents actual cost of land, buildings, machinery, and all such other items on which depreciation is allowed, less sales, if any, and stands for the gross figure except where otherwise indicated.

Dividends:—Dividends for completed years are calculated at per cent per annum, but, where quoted for portion of a year, they represent percentages of the dividend on the paid-up share value. For companies closing the boc d half-yearly in the first three months of the year, and for companies closing their books yearly during the first half of the year dividends are shown as for the previous year.

• The following explanatory notes relate to the abbreviations and marks shown on page 928 in the debentures section:—

‡‡ Option to repay on six months' notice, on any interest date after 31st December, 1951, at 102 per cent. Also redeemable out of a cumulative sinking fund of 1½ per cent. per annum (commencing in 1938) by drawings at 102 per cent. or by purchase at or 102 per cent.

(a) Option of repayment at any time at 3 per cent. premium.

(b) Bearer bonds of Rs. 1,000 each repayable at par.

(c) Bearer bonds of Rs. 1,000 each repayable on 31st July, 1959

(d) Bearer bonds of Rs. 1,000 each with option of redemption in whole or in part at par on 30th June, 1952 or on any subsequent interest date at one month's notice.

(e) Returnable on or after 31st July, 1950, at Rs. 102-8 or at par after 31st July, 1955, on six months' notice in each case.

(f) Bearer bonds of Rs. 1,000 each with option of redeeming on 3 months' notice at ½ per cent. premium after 1st March, 1954, but before 1st March, 1957, and 1 per cent. premium on or after 1st March, 1957

(h) Option of redemption on or after 1st July, 1949, at par.

(f) Option of repayment at any time at par at any time on or after 30th June 1947 on six months' notice

EMPLOYERS' LIABILITY ASSURANCE CORPORATION LIMITED

(*Concluded from page 905*)

responsible for raw material matters, and as Chairman of the International Materials Conference. We were particularly gratified to learn of the honour of appointment as Knight Grand Cross of the Order of St. Michael and St. George conferred upon him by Her Majesty the Queen for his services to this country in that capacity.

"Mr. A. D. Besant resigned his directorship in June last, after serving the Corporation since 1921 when, as General Manager of the Clerical, Medical and General Life Assurance Society, he joined our Board at the time we purchased the shares of the Society. We miss him at our meetings and are grateful to him for his loyal assistance and his wise counsel over the past 32 years. His place as Director has been taken by Sir Andrew Rowell, Executive Director of the 'Clerical, Medical and General.' We have also appointed to the Board The Hon. David John Smith, Chairman of W. H. Smith & Son (Holdings) Ltd. The wide business experience of these two gentlemen cannot fail to be of great value to the Corporation.

"Lord Knollys made his usual journey to the United States and Canada last October. While at Boston he had useful talks with Mr. Larner and his principal officers, and he was able also to see our offices in Louisiana and Texas. In Canada, he dealt particularly with questions of organisation, to ensure that we are fully equipped to take all possible advantage of the future promising prospects in that rapidly developing country.

"The Deputy Chairman, Lord Waverley, called on our United States and Canada Branches and had discussions with our Managers there, in the course of a recent visit to North America on other business, while several of the Directors have taken a similar opportunity when their other interests have called them to countries overseas in which the Corporation is established. Visits to several overseas branches and agencies have also been paid by officials.

"Last July, Mr. Buggey was a welcome visitor from our United States Branch. I have already referred to his tragic death while apparently in the best of health. Earlier in the year, we had here Mr. Bush, now a Deputy Manager at Boston. Other visitors to this country have included Mr. S. C. Smith, our Manager for Australia; Mr. R. Martin, Manager at Toronto; Mr. Cleanthis Christophides, our Cyprus Chief Agent; the Hon. D. J. Judah and Mr. C. H. Randall, partners in Messrs. Judah and Randall, the Corporation's Chief Agents in Jamaica, and Mr. Mark Anisfeld, our Chief Agent in Israel. We hope to have the pleasure of seeing many of our friends from overseas during the Coronation period this year.

"I am sure that you would not wish me to close my review of the past year without paying my customary but, nevertheless, sincere tribute to those upon whom our fortunes must at all times depend—our Managers, Staff and Agents throughout the world. On your behalf I offer them our thanks for their continued loyal and efficient work in 1952.

"In making a few comments on the general economic position and prospects in the world today, the large stake which our Company has in North America makes it natural for me to refer particularly to that continent. Because of our long and close connection with the United States, we are able to appreciate as much as any the importance of our two countries understanding each other. In recent years, by more personal contacts, the people of each country have grown to know one another better, to know how each lives and what each thinks and why. British insurance itself has, I feel, contributed a great deal to this position by reason of its widespread points of contact. Its representatives have travelled frequently and far throughout the country. We ourselves bring over each year to this country some members of our United States staff. Some concern has been expressed in the correspondence columns of *The Times* recently that the British way of life and what we are doing for ourselves in our economic struggle is not yet widely enough known in the United States. Those of us who know that country and, particularly, areas remote from the Eastern seaboard, realise that, unfortunately, there is a good deal of truth in this. It is in the small towns and countryside of the United States that political opinions are so largely formed, and it is amongst the people who live there and have the least opportunity of seeing our country and talking to our people, rather than the many well-travelled Americans from whom so many people here gather their impressions, that the need for greater knowledge and understanding chiefly lies. A cross section of these does, indeed, now exist in this country in the considerable number of American soldiers and airmen who are at present stationed amongst us. It is to be hoped that they have every opportunity of seeing us in our work and in our homes, for it is difficult to imagine any better means of enabling representatives of countless families spread over the United States to judge us and our achievements—and even our shortcomings.

"From the other end of the world, Southern Africa, I have just had a first-hand report from our Managing Director, Lord Knollys, who has recently returned from a visit to the Union of South Africa and Southern Rhodesia. '*Ex Africa semper aliquid novi*' remains as true now as it ever was. Something new is indeed always being discovered out there usually at a time when it is most needed to support the country's economy. First, there have been the new goldfields in the Orange Free State, where a tour by air shows the extraordinary sight of great mining plants and rapidly growing townships standing out incongruously in the middle of vast farmlands. And now there has arisen the production of uranium in many gold mines of the Western Rand and the Free State. It is clear that South Africa has once again discovered a new great asset.

"In Southern Rhodesia, Lord Knollys found striking advances in the development of industry and building of all kinds since his previous visit a few years ago. Now that the referendum just held in that country has endorsed the policy of Federation with Northern Rhodesia and Nyasaland, the economic prospects of the areas should be much improved.

"At home, the Budget has been the outstanding factor influencing economic prospects. But we are still more heavily taxed than others—even than the U.S.A.—and it is still Government expenditure which needs the closest scrutiny and courageous pruning. I hope that this 'Incentive' Budget marks the opening of a new era for business enterprise in this country, and I can assure you that this Corporation stands ready to take full advantage of any resulting improvement in economic conditions."

TEXTILES

(*Continued from page 892*)

cularly fabrics, as is being done in western countries. There is some truth in this view. Even the Governments—Central and States—have realised it, as witness the active encouragement given for establishing industries for utilisation of such silk waste. The two units in Mysore referred to in an earlier paragraph are the notable examples. But the industry has not been able to consume the entire quantity of silk waste produced. The Government of India would, therefore, do well to revise its policy and allow a freer flow of exports, at least till such time as the indigenous industry is sufficiently expanded and is capable of utilising the entire quantity of silk waste. Such a policy, by enabling the silk goods manufacturing industry to cover a part of the cost of production, will go a long way towards bringing down the prices of silk fabrics which are very high at present.

MARKET REPORTS

(*Concluded from page 917*)

This was principally due to the publication of the April-end stock position of mills, according to which sacking held, at 89,600 tons, registered a smart decline of 5,100 tons, while, on the other hand, hessian increased from 41,900 to 45,800 tons. Although the decline in sacking stocks is not attributed to business done in April, but should be due to clearance of certain backlog orders and to the transfer of sacking looms to the production of hessian by mills wherever possible, the psychological feeling that stocks were down encouraged speculators to give more attention to offers of sacking than those of hessian.

Last Wednesday, B Twills improved from Rs. 92 to Rs. 93 following covering business. Mills took advantage to sell at the higher rate, and on Thursday this factor slowed down the pace of advance; but even then at Rs. 93-8 a rise of As. 8 was recorded. To the pleasant surprise of holders, the rate gained to Rs. 96-4 on Friday, when an analysis of the stock position of mills was released by the I.J.M.A. Mills were cautious and did not want to repeat the earlier rush to book orders; even then the rise to Rs. 96 appeared too abrupt and the closure for the week-end at Rs. 95 did not surprise the market. Business from overseas did not justify the gain, but it was realised in the market that steady rates with a tendency to move up were an essential condition to attract buyers, both internal and external. Lack of business yesterday erased the gain further to Rs. 94-4, the July-September position easing to Rs. 95.

The hessian market was also steady, but the rise in prices was not as substantial as that in the rates for sacking. This was due to lack of moderate business with American buyers, and equally due to the awareness of buyers of plentiful stocks, as evident from the increase in stocks with mills. Ready hessian 40" 10 oz. opened at Rs. 42-2 last Wednesday, recording an overnight gain of As. 5. On Friday, a high of Rs. 43 was touched with forward positions even quoting higher. This improvement was unnoticed in New York spot rates, and this factor together with lack of business made the local quotation recede to Rs. 42-6 on Saturday. A further recession to Rs. 42 was recorded yesterday.

Assam bottoms were bought by mills from Rs. 22 up to Rs. 24 a maund for May-June delivery. Holders were not anxious to sell in anticipation of a further rise in prices, and this factor, coupled with the moderate support from mills, hardened quotations.

BASE METALS FIRM

(From Our Own Correspondent)

CALCUTTA, 12*th May*

Firmer advices from foreign markets, the confusion in Korea towards a truce agreement, and manufacturers' need for raw material were duly reflected in the trend of metal prices this week. Modest gains were recorded in the principal base metals. Stockists were cheered to note that consumers made a beginning in replenishing their requirements. Manufacturers commenced quoting for Government tenders, and naturally to cover the raw material necess

FIVE-YEAR PLAN AT WORK

THE Progress Report on the Five-year Plan for 1951-52 and 1952-53, presented by Mr. Gulzarilal Nanda, Minister for Planning, Irrigation and Power, to Parliament last week, is a record of mixed performance. On the one side, it claims credit for progress made in certain fields, while, on the other, one sees an apologetic vein running throughout the Report, born of consciousness of the limitations and handicaps which have tended to arrest the Plan's smooth progress. This is understandable, because, in judging the credit as well as the debit side of the work of implementing the Five-year Plan, one should bear in mind certain factors which have had a bearing on the execution of the Plan. The Plan itself was published in its draft form in July, 1951. The final Plan, with certain modifications, appeared 18 months after, in December, 1952. And the present Progress Report, coming as it does five months later, can hardly be expected to narrate any spectacular achievements. Nevertheless, the Report is to be welcomed, in that it enables the country to know which exactly are the hurdles to overcome before the Plan can be successfully implemented. Moreover, detailed information relating to several sectors of economic activity, such as the progress of industrial programmes in the private sector, the problem of unemployment, the assessment of Grow-more-food programmes, etc., is not available. As further studies in these subjects are yet to be initiated, one has to wait, till the emergence of a clearer picture, for pronouncing a balanced opinion on the progress of the work under the Plan.

To consider now what the Planning Commission has to say on the achievements during the period under review. In the field of domestic output, increase in the production of raw materials such as cotton and jute is stated to have widened the scope of the concerned industries for further utilisation of their installed capacity. Industrial output, as a result, has gone up by 20 per cent. Appreciable improvement is noticed in the production of important industries such as cotton textiles, cement, iron and steel, paper board, ammonium sulphate, etc., although, in certain engineering and other industries, the output has declined. In the field of agriculture, some possible increase in production of foodgrains is expected, as there is evidence of expansion in acreage under foodcrops. These increases, together with the improvement in railway transport, are expected to create conditions in which it would be possible to sustain a higher rate of investment. Progress in irrigation and power projects seems to be satisfactory. The additional area irrigated by these major projects is 1.42 million acres. In the sphere of power generation, the target has been actually exceeded. Programmes have also been initiated for the organisation of the National Extension Service and Community Projects in order to enlarge the sphere of public co-operation in the implementation of the Plan. Measures have been devised for keeping inflation under check. These are the chief achievements which the planners have attributed to measures envisaged in the Plan. The record is noteworthy. But it must be remembered that part of the success is attributable to programmes initiated even before the preparation of the Draft Plan.

The chief merit of the Progress Report on the Plan at work lies not so much in its enumeration of the achievements, such as those noted above, as in its focussing public attention on certain disquieting features of the Plan in action. Thus, the Report spotlights the unsatisfactory manner in which the land reform policy, as envisaged in the Plan, is being administered by the States. The Report further implies that the unbounded enthusiasm displayed by the various State Governments during the immediate post-independence years for carrying out land reform measures in feverish haste has since died down completely. It may be recalled that their endeavours were then aimed in two directions, namely, abolition of *zamindaris* and grant of enhanced rights to tenants. Legislation which has been ushered in in many States for accomplishing the aims has not been followed up by other measures of reform to complete the process, namely, consolidation of small holdings, co-operative farming, adequate provision for rural credit, etc. Minor irrigation schemes too have received less attention than they deserve. It is clear, therefore, that the States should drastically revise their methods of approach to land reform policy, in order to enable agriculture to play its role in the development of the economy on lines laid down in the Plan.

The Planning Commission's Progress Report, as a whole, may be taken as a mild reminder to the States Governments that they should make better and more concerted effort towards implementing their respective programmes under the Plan. It ought to have been possible for the States to show a better record of performance, in view of the fact that their tax revenues have shown a marked increase in the last few years. Thus, from about Rs. 222 crores in 1950-51, these revenues have gradually risen to Rs. 243 crores (budgeted) in 1953-54. Unfortunately, this increase in tax revenues has been more than absorbed by increased expenditure of a non-developmental nature on revenue account itself. Again, the States have been also spending larger sums on development schemes outside the State Plans. Taking the revenue and capital accounts together, they have spent, we are told, about Rs. 15 crores in the two years on such schemes. This unfortunate tendency should be checked in the interests of the effective implementation of the Plan.

While criticising the States, one must, however, remember that the States' revenues and expenditure are dependent on their stages of economic development. The different levels of economic development of each State will, in turn, determine the progress of the work under the Plan. This partly explains the uneven development in the States. Again, the attention of some States has been diverted from the Plan on account of certain exigencies. Thus, these States have been compelled to spend outside the Plan on items such as famine relief, food subsidies, increased appropriation for debt services, etc. While there is every need to see to it that this sector of expenditure is brought down to its minimum in each State, one cannot but condemn the reckless misuse of public funds by Ministers of State Governments, as revealed by the periodical audit reports of the Controller and Auditor-General of India. In the circumstances, it is not at all surprising that most of the States have now hardly any reserves left to draw upon for implementing the Plan, and this, in spite of the fact that the Centre has to transfer to them Rs. 20 crores per annum under the Finance Commission's award. The Centre should show both courage and leadership and make the recalcitrant States change their attitude towards the Plan. One of the possible ways by which it can tighten its control over the States' expenditure is to extend its assistance to States towards expenditure on development schemes envisaged in the Plan on a *pro rata* basis. This practice of extending Central assistance is already in vogue in respect of many schemes, but what is desired now is that it should be revised and tightened further in order to make State expenditure on schemes under the Plan conform to correct standards.

The planners' attempts at securing the full participation of the public in the work on development schemes of the Plan have still to take definite shape. Community Projects, Extension Services, and *Bharat Sevak Samaj* are only in their initial stages of development. Village-level workers, trained so far under the Extension Service schemes, have yet to prove whether their training has enabled them to harness popular enthusiasm to the implementation of the Plan. Besides, there is still the need for fixing yearly targets of production in industry, agriculture, minor irrigation, etc., for each village. This need remains unfulfilled, because the State Governments have not given top priority for breaking up the State plans into district and village plans. They are also experiencing lack of suitable agencies for approaching individual villages separately. Sustained progress has, therefore, not been possible for mobilising popular will in the cause of the Plan. In this sphere too, the States should move with greater speed and energy than at present.

The Planning Commission appears to be rather apologetic in explaining the reasons for spending no more than Rs. 585 crores in the first two years of the Plan, representing only 30 per cent. of the total outlay of Rs. 2,069 crores. For it is well known that the first two years have been a period in which planning and execution of the investment programme have been taking concrete shape slowly and, therefore, the expenditure has to remain correspondingly at a low level. In fact, the *tempo* of expenditure is bound to reach its peak in the coming years, as work on the various sectors broadens over a wide front. But the difficulty is whether the States will be in a position to raise the additional resources needed by the Plan. There is, besides, the question of the Centre being in a position to procure, in full measure, external assistance envisaged in the Plan. The Commission itself seems to feel that it is difficult to make a precise assessment, at the present stage, of the

extent to which its estimates will be realised. It looks forward to additional finance through further taxation, borrowing and external assistance and, finally, deficit financing. The extent to which reliance might be placed on each of these sources is, however, not quite clear. It is here that the prospect of resorting to deficit financing looms large, as the scope for further taxation and borrowing remains strictly limited.

GOLD AND TRADE

A FRESH appraisal of the problem of the balance of payments, with which most countries of the world are to-day confronted, is available in the report by Mr. Roy Harrod, formerly Adviser to the Research Department of the International Monetary Fund. The report was written when Mr. Harrod was acting as Adviser to the I.M.F. Although it would be too much to hope that the report bears the authority of the I.M.F. as such, it is nevertheless significant that the views expressed in the report are somewhat different from those with which the I.M.F. has associated itself in the past. There is a veiled reference in the report to the gold price issue, which indicates an implied assumption that an increase in the official gold price ($35 per ounce) will go a long way towards mitigating the evil of chronic deficit in the external payments position, which has arrested the economic progress of most countries. Although the demand for a higher gold price—that is, a higher gold price payable by the U.S.—is by no means new, the chief merit of Mr. Harrod's report, which underlines this demand, is that it is presented with a wealth of statistical data relating to world trade, and from a somewhat unusual angle.

The problem of balance of payments arises principally in relation to the trade of the rest of the world with the U.S. It is essentially a problem of dollar shortage. Mr. Harrod emphasises that the dollar shortage is not due to any fundamental change in the pattern of world trade. He supports this view by a reference to U.S. export trade figures. The U.S. trade surplus amounted to $819 million during 1924-29, $338 million in 1933-38, $480 million in 1936-38 and $1,840 million in 1950 to mid-1952. These figures, no doubt, show some wide variations. But if the U.S. trade surplus is expressed as a percentage of the total U.S. exports, it is found that there are no significant variations. Thus, the percentage was 16.2 for 1924-29, 13.0 for 1933-38, 16.7 for 1936-38 and 14.7 for 1950-mid 1952. Anticipating the argument that a different picture might emerge, if invisible items of export by the U.S. were taken into account, Mr. Harrod cites figures to prove that, even if the whole balance on goods and services were taken into consideration, the position since the war would not show any significant change. For the same periods, already considered, the U.S. surpluses on goods and services were $769 million, $267 million, $378 million and $2,462 million, respectively. Again, if these amounts are expressed as percentage of U.S. exports, the relevant figures will be 15.2, 10.2, 13.5 and 19.6.

The question then is: If there is no fundamental change in the world pattern of trade, or, more precisely, in the U.S. trade with the rest of the world, then why is dollar shortage so important a problem now? Again, why did it not appear as a serious problem before the war? Mr. Harrod insists that, before the war, the dollar surplus in the U.S. trade did not constitute a serious problem, because it was covered by the investment of American capital abroad, as in the twenties, and by the inflow of gold into the U.S., as in the thirties. Indeed, the inflow of gold into the U.S. paid for the dollar surplus four times over. Thus, the average annual surplus from 1933 to 1938 was $267 million, while the average annual inflow of gold into the U.S. during this period amounted to $1,140 million. All this has changed since the war, for, owing to the low dollar price of gold, the earnings of the gold producers, who are mainly located in the non-dollar world, have been totally inadequate to cover the dollar deficit on goods and services. Gold has failed to perform its pre-war function of bridging the world's dollar deficit on current account. Three reasons are advanced to explain this failure: (1) The dollar price of gold has remained fixed, while the average price of all other items entering into world trade has risen 2¼ times; (2) the volume of gold output has fallen; and (3) about half the value of the reduced output has disappeared into private hoards. Incidentally, it may be stated that, before the war, Western Europe could export its goods to its natural market in the gold producing countries, and, therefore, was in a position to pay for the deficit in its trade with the U.S. But in order to achieve the same result to-day, the West European countries have to export more goods, because gold price has remained at a low level. Mr. Harrod argues that, if the value of the newly mined gold had borne the same relation to the value of the world trade, as it did in the thirties, the rest of the world "could have paid for the whole of the surplus of the U.S. on goods and services account in 1950 to mid-1952, without loss of reserves and without aid (other than military items)." He also insists that the inadequacy of existing reserves, at the current price of gold, is an even more fundamental problem, since it has led to widespread import restrictions.

Mr. Harrod does not, of course, maintain that the problem of dollar shortage is simple enough to be solved by a mere redistribution of the world stocks of gold. This solution is impracticable. Besides, as Mr. Harrod points out, all the gold in the world will not be sufficient to provide nations with adequate reserves. Nor does he think that internal inflation in the European countries is the real villain of the piece, for he says:

> "Even if Europe had not suffered from any internal inflations, she would still have been under the necessity of finding a new method of paying for some 35 per cent. of her normal imports from the United States, or, alternatively, of dispensing with all or part of them. It is clear that such a change-over cannot be effected without great strain and dislocation. The need for making it has no connection with internal inflations, and will continue to exist when they have been completely removed. It may be regarded as the hard core of the dollar problem."

Mr. Harrod's report deserves, indeed, a high place among the contributions which have been made towards the analysis of the intricate—and well-nigh intractable—problem of the balance of payments. But even those who would readily accept his analysis might regard the implied suggestion for increase in gold price with honest misgivings. Is the problem really so intractable that it cannot be remedied by the joint endeavour of all nations to set their economic houses in order? Again, will the simple device of an increase in gold price (the implied suggestion in Mr. Harrod's report)—apart from the difficulty of persuading the U.S. to adopt such a course—solve the problem in its entirety? These questions do not seem to have received the attention they deserve. It is rightly argued by those who do not see the need for a change in gold price that an increase in gold price will benefit only a few gold producers and a few other countries which export goods to these producers, and not all the countries of the world. Again, the advocates of a higher gold price should remember that 40 per cent. of the gold outside the U.S. is concentrated in Canada, dollar area countries of Latin America and hard currency countries, and that an increase in the price would primarily benefit these nations. It is true that a higher gold price will stimulate gold production. But then, it is not the whole truth. Even now, gold-producing countries are only exploiting the second-rate mines, reserving the better mines for another day. Also, the recent devaluation of the pound has already enabled the gold producers to reap a rich harvest in terms of local currency, which should be sufficient incentive to them for increasing gold output. Even if a higher price for gold were to increase gold production to the 1940 peak levels, it is computed that it would mean an annual increment of only $880 million, as compared with the annual aid, to the tune of $4,800 million, actually provided by the U.S. so far. In certain free markets, gold is no doubt quoted at a high price. But it can hardly be taken as a correct price, for it only reflects transportation costs, lack of confidence in local currencies and temporary supply and demand relationships. Finally, the argument for an increase in gold price comes now at a wrong time, since gold prices are everywhere adjusting themselves to lower levels. It is not clear why they should be artificially pushed up to higher levels, especially when such a course might conceivably mean a fillip to inflation, not only in the U.S. but in the rest of the world.

ESTATE DUTY BILL

THE debate on the Estate Duty Bill, as reported by the Select Committee, held in the House of the People last week, turned out to be a tame affair. This was only to be expected, considering the fact that the members of the House knew that consideration of the Bill would be postponed. Further consideration will be taken up at the next session.

The Finance Minister, Mr. C. D. Deshmukh, was content to explain the Bill; he made little attempt at justifying its different provisions. Three issues arising from the Bill, which are of particular importance to trade and industry and, therefore, call for special notice, are those which relate to exemption limit for the purpose of levying estate duty, levy on an insurance policy, and administration of the Act providing for the levy and collection of estate duty. The Finance Minister was rather vague on the question of the minimum exemption limit. He would have done well to indicate the factors which weighed with the Select Committee in fixing the limit at Rs. 50,000 for Hindu joint family property and Rs. 75,000 for any other property. Inasmuch as estate duty is payable on the principal value of the property, to be calculated on the price it would fetch in the open market at the time of decease, one would naturally expect a fairly high exemption limit. By fixing the limit at low levels, the Government is not serving the cause of savings and capital formation, and is thereby retarding the pace of progress of the development programmes in the country. Indeed, the measure, as Mr. G. D. Somani, M.P., aptly remarked, "will do more harm than good to the general economy of the country." Surely, it is time that the question relating to savings and capital formation was much more minutely examined than has been done now.

Equally vague and unconvincing were the Finance Minister's observation on the levy of estate duty on insurance policy. The exemptions specified in clause 32 of the Bill—the tax-free limit in respect of insurance policies is fixed at Rs. 5,000—moneys received under a life insurance policy are included in the property deemed to pass on death. In support of this provision, the Minister said: "The object is to prevent a person from escaping estate duty by reducing his estate during his lifetime by payment of premiums, etc., which reappear as beneficial interest accruing or arising on his death. Liability to duty is further extended to any interest or annuity which, though not directly provided by the deceased, is in substance attributable partly or wholly to any property derived from him."

These observations are hardly convincing. What is important is not the question of the evasion of tax as that of the adverse effect which the low tax-free limit in respect of insurance policies will have on the business of insurance in a country like India where the insurance habit has not spread over wide sections of the population. By fixing the tax-free limit at a low level, as is now contemplated, the Government will be interfering with the development of insurance habit in the country. We would like to emphasise the point that the Estate Duty Act should provide for a higher limit for duty-free insurance policies. Such would be beneficial not only to the progress of insurance but also to the Government itself. For insurance makes available funds from which Government loans could be supported.

With regard to the administration of the Act, the Finance Minister was not inclined to accept the suggestion that the appeal against the Controller's valuation of an estate should be made to an independent tribunal and not to the Central Board of Revenue, as is now proposed. He said: "If the appeal lies to a body entirely outside the administrative department, there has to be some sort of rigidity and absolute conformity with the letter of the law. On the other hand, in the case of an appeal to the department, there can be more flexibility which is essential in the case of absolutely new legislation. ... In 95 per cent. of the cases, the appeal would relate to the question of valuation of property which the accountable person can require the Board to refer to two independent valuers. In a tribunal we cannot have a number of expert valuers for all types of property, and even if an appeal were to lie to an independent tribunal, they would have to refer the question of valuation to expert valuers and to rely on their decision. In view of this, the appeal to the Board would be preferable, as the administrative authority is likely to be less rigid than a purely appellate authority."

The foregoing remarks may not meet with any serious opposition, although there is much to be said for the setting up of an appellate authority from the very beginning of the operation of the Act. Similarly, the method suggested for determining questions relating to valuation of assets would appear to afford reasonable protection to the assessee, though, as we recently pointed out, it is a little cumbersome. Reassuring, in this connection, is the statement of the Finance Minister that the valuers would be independent qualified men of different professions, who would not be governed by any departmental instructions issued by the Central Board of Revenue.

REVIVAL OF CONFIDENCE IN MARKETS

TUSSLE IN SILVER—OUTLOOK FOR NATIONAL RAYON—MONEY RATES IN U.S.

THURSDAY, 5 P.M.

MARKET GOSSIP

BUSINESS activity seems to have broadened over a wide front during the past month or two. Practically in every sector of trade and industry, conditions have changed for the better. It looks as though the confidence which remained shaken this time last year on account of the economic blizzard which hit markets in India and abroad in March, 1952, has been staging a gradual revival in recent weeks. This revival of confidence is indicated by the upward trend of prices which has been persisting throughout, barring occasional setbacks caused by the prevailing technical position in the markets concerned. Thus, cotton has made a strident advance since the end of March when renewed talks for peace in Korea were initiated. I.C.C. August is at present quoted at Rs. 728-4 as compared with Rs. 725 on 31st March. Similarly during this period, ready gold has moved from Rs. 85-3 to Rs. 87-7 to-day and silver from Rs. 158-3 to Rs. 164-6. Persistent firm tone in the oilseeds market has been responsible for the fact that groundnuts have pierced the Rs. 50-mark this week and touched Rs. 50-4, not seen since two years, as compared with Rs. 40-12 on the last day of March this year.

* * * *

The remarkable improvement in prices has not been confined only to the principal speculative commodity markets referred to above. The phenomenon has manifested itself in other markets too. The cloth market has been very active with continued demand from internal and overseas markets. Prices, especially of the fine and superfine varieties, have registered sizable gains. Sugar is currently ruling at about Rs. 32-8 per maund as against Rs. 31 at the end of March. *Gur* prices have shot up from Rs. 15 to Rs. 20-8. Business in pepper is reported at Rs. 3,300 (per candy of 5¼ cwts.) as against Rs. 2,900 in March. Wool tops too show the same encouraging trend with marine tops (64s) standing at 179*d.* as against 171*d.* Tea, raw jute and jute manufactures which were in a slough of despondency some time ago have recovered and the present trend appears quite encouraging. Tea prices are generally stable at levels prevailing seven weeks ago, with C.T.C. Assams ruling at about Re. 1-14 per lb. Business in Assam jute is being done at Rs. 25 per maund, whereas at the end of March it stood at as low as Rs. 18-8. B. twills and hessians 40" 10 ozs. have rallied during the period from Rs. 90 and Rs. 39-14 to Rs. 96-10 and Rs. 42-2, respectively. These quotations, which could be supplemented too, should be convincing enough to indicate the broadened activity in the sphere of trade and industry.

* * * *

In judging these trends one should also bear in mind certain general features common to most markets. In the first place, floating stocks in many markets are on an attenuated scale. While demand for commodities generally has improved, the prospects of lower crops or reduced arrivals in the near future seem to have generated a considerable amount of speculative activity, especially in the principal commodity markets. Trade circles attribute the improvement in demand to the growing trendency of replenishing stocks which had been thrown upon the markets by merchants during the March slump last year in order to cut down losses. Revival of confidence in the health of the country's economy has induced merchants—who carried on trading operations on day-to-day basis till almost Budget day this year—to buy goods for purposes of building stocks required to carry on their normal operations. The zonal tickets issued by the railways has enabled the up-country merchants to purchase stocks from convenient urban centres.

* * * *

In the most important sector of the economy, namely, food, the situation in the country has turned out to be quite satisfactory on account of larger crops, improved procurement and better arrivals of supplies from overseas countries. Many major, and several small-scale, industries have been able to record increases in production. Industrial production has, in fact, gone up by 20 per cent, as compared with 1950, which is indeed an admirable record. This increase has enabled the Government to effect a great measure of relaxation of control over cloth, sugar, steel, foodgrains, etc. Industrial relations to-day are better than they were formerly. With a view to enabling trade and industry to enlarge their respective spheres of activity, the Government has not only relaxed and revised the controls on foreign trade, but extended minor concessions by way of reducing duties on exports of manufactured articles and imports of essential raw materials.

* * * *

Indications are also not wanting to show that the Government and industry are both anxious to co-operate with each other in the cause of economic progress in general and of the implementation of the Five-year Plan, in particular. For a time doubts had been entertained by the public regarding the successful working of the Plan; but these have since disappeared with the unstinted support extended to the Plan by the business community. The fact that India will get more U.S. aid during 1953-54 than in 1952-53, thanks to the larger allocations recommended by the U.S. Mutual Security Administrator, and the visit to India of the U.S. Secretary of State, have only served to instil new faith in the possibility of obtaining enlarged external assistance in order to implement the Plan. Deficit financing which the country is expected to adopt to the extent provided for in the Plan, will mean, according to market opinion, an era of slightly higher prices. Moreover, hopes of a possible reduction in the incidence of taxation as a result of the investigations of the Taxation Enquiry Committee appointed by the Government, are entertained in industrial circles. Above all, the recent move on the part of Pakistan to establish closer economic relations with India will result, it is stated, in mutual benefit to both the countries.

* * * *

In these circumstances it is no wonder that the markets have all along looked up during these seven or eight weeks. Of course, this is not to say that all is well with the Indian economy. For, factors such as unemployment, high production costs, rise in living costs, the Government's new measures to control industries, the imminence of the levy of estate duty, the continued morbid condition of the capital market, lack of finance for rehabilitating plant and machinery, threats of nationalisation of industry as indicated by the taking over of the air transport industry from the private sector, have prevented private enterprise from initiating bold development schemes in the country. These factors, however, are of long-term interest to the markets and are, therefore, viewed with less concern.

* * * *

The bullion market has once again been the scene of a tussle in its silver section between leading bulls and bears, resulting in an erratic movement in prices. After a sharp reaction from last Thursday's closing level of Rs. 165-11 to a low of Rs. 160-6 on Tuesday, the forward rate for current settlement firmed up to Rs. 163-2 at the close to-day. The interesting part of the tussle this week is that the bulls are trying to exact from the bears as heavy *budla* charges as they can for the next settlement, but at the same time to avoid payment of margin on heavy *budla* charges, through keeping the daily rate below the basic rate for the current settlement. The bears, on their part, have been trying to implicate the bulls in the difficulty of paying heavy margin by sitting tight on their forward sales and, at the same time, pushing the rate above the basic rate through purchases in the ready position. Thus, in an effort to outwit each other, the two opposing camps have been reversing their natural roles.

* * * *

The foregoing tactics can be understood better, if one recollects the amended by-laws of the Bombay Bullion Association introduced in August, 1952. The by-law relating to payment of margin on *budla* by bulls reads thus:

"(i) Whenever the daily official closing rate of the current forward contract is higher than its official starting rate and the daily official closing rate of the current forward contract is quoted higher than the daily official closing rate of the next succeeding forward contract by Rs. 3 or more per 100 tolas of silver or by Re. 1-8 per tola of gold, every member who has outstanding purchases shall pay to the Association a margin amount at the rate of Rs. 1,000 per silver bar and Rs. 14 per tola of gold; and (ii) whenever the daily official closing rate of the current forward contract is lower than its official starting rate and the daily official closing rate of the current forward contract is quoted higher than the daily official closing rate of the next succeeding forward contract by Rs. 5 or more per 100 tolas of silver or by Rs. 2-8 per tola of gold, every member who has outstanding purchases shall pay to the Association a margin amount at the rate of Rs. 500 per silver bar and Rs. 7 per tola of gold."

* * * *

It will be seen from the foregoing by-law that the bulls can exact *budla* from bears up to Rs. 5 per 100 tolas, without having to pay margin, provided they manage to keep the daily closing rate of the current forward contract below the official basic rate, and at the same time, keep the daily official closing rate for the next settlement below the corresponding rate for the current settlement. Accordingly, they depressed the market during the earlier part of the week by selling in the next settlement. Thus they caused the *budla* rate to widen from Re. 1-8 on Thursday last to Rs. 2-12 on Monday, when that day's closing rate for the current settlement fell to Rs. 161-13, that is, below the basic rate of Rs. 162-10 for that settlement. On Tuesday, however, the *budla* narrowed down to Rs. 2, even though the closing rate on that day was Rs. 160-15. The decline in the rate for current settlement, substantially below the basic rate, cautioned the bears. Finding that the bulls can extract *budla* from them up to Rs. 5 so long as this situation continued, the bears adopted the reverse tactics of pushing up the rate above the basic rate by purchasing in the ready position; they were, at the same time, allowing the *budla* rate to go above Rs. 3. This would compel the bulls to pay a margin of Rs. 1,000 per bar under clause (i) of the above by-law. To some extent they have succeeded and the *budla* rate stands to-day at Rs. 2-7. It is, however, stated that this tussle in silver cannot go on longer than the end of this month when the current settlement matures and the seasonal demand for silver from up-country centres, which is now the main prop for the market, comes down.

* * * *

Gold is quietly steady in the free overseas markets. Although there seems to be good support for the yellow metal at lower prices, there is no gainsaying the fact the price-trend itself has been downward during the last few months. Gold is now being offered in the European free market at $36⅝ per fine ounce as against $38¼ touched earlier in the year. The present price is at or near the post-war low levels. The rise which gold witnessed in the early part of the year, was attributed to hopes of an increase in official price. But these hopes have now died down, notwithstanding the publication of Mr. Roy Harrod's report (reviewed editorially in this issue) by the I.M.F.; the report makes out a case for an increase in gold price. Since similar, though less authentic, arguments for an increase in gold price have not met with any official response in the U.S., it is now believed that the publication of the report, by itself, is no guarantee that the implied suggestion for an increase in gold price will be accepted by the U.S. The chief cause for the lower trend of gold prices is that the offtake in the Far East and the Middle East has already shown signs of decline. This factor, coupled with the Korean peace prospects, acts as a damper on any bullish fervour.

* * * *

In these days it is seldom that one comes across chairmen's speeches which pay a handsome compliment to the Government. All too frequently they are a little too critical of the Government's errors of commission and omission. The Chairman's speech at the annual meeting of the National Rayon Corporation Ltd., which was held this week, might, therefore, be perused for the sake of the refreshing contrast it provides. Mr. Kasturbhai Lalbhai, who presided over the meeting in the absence of the Company's Chairman, Mr. Purshotamdas Thakurdas, paid a well-deserved compliment to the Government's import policy in respect of art silk yarn, which had enabled the Company to clear the large stocks of yarn which had accumulated with it. He added that he was confident that the Government's import policy would be so framed as to permit the import of only so much yarn as cannot be produced within the country. He also commended the Government's action in permitting imports of the raw materials required by the industry. The Government's solicitude for the industry, he said, was responsible for the happy relations between the producers and the consumers. He also paid a tribute to the Government's policy in respect of income-tax which had enabled the Company, a new unit, to get liberal depreciation allowance.

* * * *

The shareholders of the Company have every reason to be happy over the Company's immediate past as well as its future. The way in which the Company has been able to clear its stocks, and the great future which lies before it, are factors which have made the Company's shares so attractive to investors. No wonder, the shares which were quoted at only Rs. 55-8 at this time last year, are now being sought at Rs. 103-4, although at one time they had gone up to as high as Rs. 105. The ordinary shareholders have waited in patience for long. And it looks as though they need not have to wait much longer, for the arrears of preference dividends have been wiped out. Indeed, Mr. Kasturbhai gave the assurance that he believed they could—"barring unforeseen circumstances"—now expect a steady return on their capital. He struck a cheerful note, which must have gladdened many a shareholder's heart, when he recognised the patience with which they had waited, and assured them that the "investors who made possible the starting of this large-scale venture will, in course of time, be amply rewarded for their confidence in this industry and its management." Equally welcome to the shareholders was his announcement that the production capacity of the Company would soon be augmented by about 25 per cent. of its present capacity, and that the additional finance for the expansion would be found from the resources of the Company itself. Incidentally, it is extremely gratifying to note that the National Rayon's plant, together with the rayon plant at Travancore and the projected rayon plant at Hyderabad, will be able to meet as much as 35 to 40 per cent. of the art silk yarn requirements of the country. This is no mean achievement for an industry, such as the art silk yarn industry, which had practically to start from scratch.

* * * *

About 30 banks, which are likely to be followed by a few more, it would appear, have decided to appeal against the recent Sastry award on bank disputes. Bank employees have also appealed against the award. The employees, it is stated, have requested the Government to see that the appeal is heard in Calcutta instead of in Bombay. It is not clear what reasons have prompted them to prefer Calcutta to Bombay where the Sastry tribunal enquired into the dispute. After all, the records of the dispute heard by the Sastry Tribunal are here; the head offices of many of the banks are also located in Bombay, and the counsel and solicitors, who appeared on behalf of the parties to the dispute, are also in the city. It would be a serious inconvenience and also very expensive to both the parties, and to the counsel who, because of their familiarity with the subject, would, in any case, have to be present at the time of the appeal, if the appeal were heard in Calcutta rather than in Bombay.

* * * *

If the U.K. is now beginning to feel the need for cheaper money, the U.S. has commenced its pursuit of dearer money in right earnest. The U.S. Secretary for the Treasury recently averred that interest rates had been artificially manipulated for the last 20 years and that there was need for "courageous, determined corrective action." Since then, the U.S. authorities have been applying an upward pressure to interest rates. Gilt-edged prices are falling. U.S. banks have been compelled to raise their lending rates, from 2½ per cent. to 3 per cent. The Treasury Bill rate

RESTRICTED TRADING IN SHARES

UNDERTONE REMAINS BULLISH

(From Our Own Correspondents)

BOMBAY, 21*st May*

EQUITY values on the Stock Exchange made further headway this week. Trading, however, appeared to be somewhat restricted. Though the underlying sentiment was bullish, the upward movement was cautious and profit-taking at every bulge intervened, making inroads into earlier gains. This tendency was more marked to-day due to end-of-account considerations, resulting in sizable recession in values from the highest levels for the week. On balance, however, quotations revealed minor gains over a broad front.

The lack of aggressive movement in equities was mainly due to absence of big operators to influence the trend one way or the other. They seemed to have withheld their support owing to the uncertainty created by the continued delay in the announcement of the Government decision on the Tariff Commission's recommendations. However, the bullish sentiment was sustained by the belief that the higher retention price for steel would soon be announced. Though the announcement of Burma's decision to end the preferential duties on imports with effect from October next caused some apprehensions regarding the slackening of demand for Indian cotton textiles from that country, the hope that exports to Burma during the intervening months would go up and the generally good prospects for the mills in the current year imparted steadiness to textile shares. Banks, public utilities, and miscellaneous all kept a steady front.

In the steel section, Tata Deferreds opened quiet at Rs. 1,912-8 and soon dropped to Rs. 1,903-12 due to weakness of textiles owing to apprehensions about Burma's decision to end preferential tariff policy. But on revival of bull support attributed to the strength of Ordinaries, the scrips advanced to touch Rs. 1,930 on Monday, Rs. 1,936-4 on Tuesday and Rs. 1,945 on Wednesday, though closing rates on these days were a shade lower than these levels. To-day, however, the shares met with some profit-taking and closed at Rs. 1,935. After an initial marking down from Rs. 331 to Rs. 328-8, Tata Ordinaries moved ahead to Rs. 338 yesterday, but closed to-day at Rs. 336. Persistent rumours about the strike in the Indian Iron and Steel Works brought down the shares from Rs. 25-10 to Rs. 25-2 on Tuesday, but the denial of the reported strike by a spokesman of the Company yesterday revived confidence and the shares looked up to Rs. 25-5 at the close.

After the good performance in recent weeks, textile shares tended to be quiet early in the week, but fresh professional support imparted mild buoyancy. At the close, however, there was a sharp reaction which in some cases caused minor losses over the week. Thus Bombay Dyeings, after being marked down from Rs. 398-12 to Rs. 390, gathered strength on renewed buying and short-covering to touch a high of Rs. 403-12 to-day, before closing at Rs. 400-10. Kohinoors reacted early in the week from Rs. 313-8 to Rs. 310, but steadily hardened to Rs. 316-8 yesterday. To-day, there was heavy unloading which wiped out the earlier gain and the scrips closed at Rs. 311-12. Central Indias were steady at Rs. 174. Centurys advanced by Rs. 4-8 to Rs. 282, Finlays by Rs. 7 to Rs. 324, Gokaks by Rs. 3-8 to Rs. 223 and Standards by as much as Rs. 12-8 to Rs. 313-12. New Greats were only a fraction better at Rs. 158-8, as also Tatas at Rs. 44-12. Simplex were lower by Re. 1-12 at Rs. 180-4 and Svadeshis by As. 8 at Rs. 258-8.

There was moderate enquiry for bank shares and prices showed small rises in most counters. Barodas were steady at Rs. 111-8 *ex-div.* as against Rs. 115 *cum-div.* last week. Centrals (Old) were picked a rupee higher at Rs. 64-12, but the New shares were unchanged at Rs. 65-8. Imperials Fully Paids and Contributories, each advanced by Re. 1-4 to Rs. 1,867-8 and Rs. 460, respectively. Bank of Indias were done As. 4 higher at Rs. 156 and United Commercials As. 8 better at Rs. 36.

Moderate gains in select issues were noted in the public utility section. Ahmedabad Electrics were stagnant at Rs. 109-11. Bombay Suburbans were done at Rs. 127-8, as against Rs. 125-10. Surat Electrics rose by Re. 1-4 to Rs. 133-2 and Broach Electrics by As. 6 to Rs. 7-6. Poona Electrics were placed at Rs. 121-4 *ex-div.*, as compared with Rs. 125. Tata Hydro Ordinaries stood at Rs. 151, but their preferences were better by Rs. 2-8 at Rs. 125. Tata Power Ordinaries were unchanged at Rs. 1,520, while their Preferences gained Rs. 12-8 to Rs. 1,302-8.

In the miscellaneous section, A.C.Cs. were dull during the major part of the week, but towards the close picked up strength due to good enquiries, to close at Rs. 172-12 with a gain of Re. 1-12. Belapurs, after reacting from Rs. 240-8 to Rs. 238-8, closed at Rs. 239. Bombay Burmahs attracted attention to go up from Rs. 382-8 to Rs. 390, only to react to Rs. 385 at the close. B.I.Cs. were in demand at Rs. 8-12. Killick Industries moved up by Rs. 2-8 to Rs. 157-8. Tata Oils were fractionally up at Rs. 34-8, as also Tata Chemicals at Rs. 9-9 and Wimcos at Rs. 226-4. A feature of the trading in this section is the spurt in National Rayons due to persistent support on encouraging prospects for the industry as a whole and the Company in particular during the current year. They rallied, as a result, from Rs. 93 to Rs. 105, before finishing at Rs. 103-4, thereby registering a handsome gain of Rs. 10 over the week.

In the transport group, Scindias were quietly steady at Rs. 15-10. Bombay Steams were done at Rs. 35-12 and India Steamships at Rs. 6-5⅝. Air Indias were maintained at Rs. 84 and Air-India Internationals at Rs. 104-8.

In the mining and engineering group, there was good support to Alcock Ashdowns which gained Rs. 5-10 to Rs. 315-10. Shivrajpurs were unchanged at Rs. 56. Indian Coppers were steady at Rs. 2-14½. B.B. Petrols were placed at Re. 1-3⅝. Premier Constructions were placed Re. 1-12 lower at Rs. 91-4.

* * * *

Calcutta Stock Exchange

CALCUTTA, 19*th May*

There was a further marked improvement in conditions on the Calcutta Stock Exchange early during the week, and with the volume of business expanding prices also registered gains. Support for the market was pronounced in jute shares, which have now definitely gained their cheerfulness following the maintenance of steady conditions in the jute goods markets and the changed outlook for sacking. During the last two sessions, however, restricted trading erased part of the early gains.

Jutes being the barometer of the Calcutta market, other sections were also sympathetic to the liveliness in jute shares. Coals were in the forefront, and earlier in the week selected counters recorded impressive gains, operators having derived encouragement from the possibility of increased exports of coal following cancellation of the surcharges. Selected miscellaneous shares passed to the hands of institutions on investment buying. In the tea section, however, the profit-taking tendency of operators resulted in more sellers and there was a recession in prices. Speculative Indian Irons fluctuated within narrow levels. Sugars added substantial gains following satisfactory reports of the season.

Despite the steady conditions, it was difficult to believe that the gains could be maintained, as the market lacked funds which could be utilised in business to sustain rates. Outside buying support remained extremely cautious, and although genuine investors watched the international situation and noted the possibility of permanent peace, which could follow if the proposed Big Power Conference materialised, internal conditions were thought to have a better bearing on trade and commerce. Judging from the sums spent on the Five-year Plan during the first two years, genuine doubts were created whether the target of the Plan could be reached in view of the financial stringency.

Selected counters in the textile section provided a feature. Elgin Mills advanced from Rs. 17 to Rs. 17-4 and Dunbars were taken up at Rs. 132 as against a previous rate of Rs. 124-8. Bowreahs, however, were lower at Rs. 210, but Kesorams remained unchanged at Rs. 19-11.

Coals attracted buyers at hardening rates, but were somewhat quiet during the last two sessions. East Indians moved to Rs. 23-9 from Rs. 23-4, but at the closing level lost the gain partially by one anna. After being dealt with at Rs. 10-12, Burrakurs returned to Rs. 10-10, while Bengals were maintained at Rs. 535. In New Beerbhooms there was a two-anna improvement to Rs. 20-8, and Amalgamated advanced from Rs. 20-6 to Rs. 20-11. Raneegunges were steady at Rs. 9-5, Western Bengals at Rs. 5 and Central Indias at Rs. 4-15.

Jutes were the cynosure of the operators, and changed hands at advancing rates. However, during the last two sessions there was less enthusiasm. Budge Budges, at Rs. 174, disclosed a gain of Rs. 2, while Anglo-Indias after being higher at Rs. 238 moved down to Rs. 236. Lansdownes at Rs. 142-8 put on Rs. 6-8 to stand at Rs. 142-8, Kinnisons hardened from Rs. 201 to Rs. 205. Standards rose impressively from Rs. 145 to Rs. 155, Unions gained from Rs. 186 to Rs. 190, and Belvederes advanced from Rs. 208 to Rs. 218. Interest was shown in Aucklands at Rs. 139 and Nationals at Rs. 25-2. Ballys, however, receded from Rs. 181 to Rs. 175. Champadanies were brought to business at Rs. 160, while Indias were better at Rs. 136. Speculative Howrahs at one time touched Rs. 25, but closed lower at Rs. 24-10.

Nominal interest was provided to engineering shares, and Indian Irons did not move beyond Rs. 25-10, last Wednesday's opening and to-day's closing levels being Rs. 25-8 and Rs. 25-2, respectively. The lower level was influenced by reports of a strike in Burnpur. Jessops were held at Rs. 25-3, and Kumardhubis were transacted at Rs. 8-7.

In the miscellaneous group, sugar shares provided the star feature of the week. Carews gained strength from Rs. 6-9 to Rs. 6-12, while Champarans at Rs. 23-5 showed a rise of Rs. 2. Durbangas were fully steady at Rs. 9-11 and Cawnpores at Rs. 30-8. Indian Cables were pushed up to Rs. 19, while Rallis were unchanged at Rs. 75. Rohtas Industries changed hands at Rs. 9-5, Assam Saws at Rs. 6-12 and India Steamships at Rs. 6-5. Titaghur Papers were bought at Rs. 35-8 and Sone Valley Cements at Rs. 7-6.

Despite the improved prospects for tea gardens, tea shares continued to recede. Operators' interest was limited as they desired to wait and watch the price trends for tea for the new season commencing on 1st June. Bisnauths gave way from Rs. 25 to Rs. 24-12, while earlier Dimakusis were fractionally better at Rs. 31-8. Dufflaghurs realised Rs. 35-12 and Ethelbaris Rs. 5-8.

* * * *

Madras Stock Exchange

MADRAS, 19*th May*

For yet another week, the Madras Stock Exchange was generally lively. Plantings came in for active support. Tea scrips improved on encouraging advices from London. Rubber shares displayed a steady trend on continued reports of depletion of floating stocks of rubber. Coffees met with some enquiry. Banking scrips were active. Textiles witnessed selective buying, on further relaxation of power cut, this week. Miscellaneous scrips came in for some sporadic attention. The undertone of the market remained steady.

In the tea section, Parksides put on As. 10 to Rs. 12-12 and Peermades, As. 8 to Rs. 24-12. Kalasas gained As. 6 to Rs. 10-14. Devasholas hardened by As. 4 to close at Rs. 16 *cum-div.*, and Emerald Valleys, by As. 2 to Rs. 3-12. Periakarmalais were done at Rs. 26-2 *cum-div.*, as against Rs. 27-4 *cum-div.*

Among rubbers, Malankaras improved from Rs. 101-8 to Rs. 102-8. Vaikundams were higher by As. 2 at Rs. 13-14 and Velimalais, by an anna at Rs. 2-3. Thamarpallys gathered As. 4 to Rs. 14 and Kailas, an anna to Rs. 3-7½. Cochin Malabars, however, lost As. 2 to Rs. 6-8. Mercaras also were done lower by a similar amount at Rs. 3-4.

In the coffee section, Consolidated Coffees shot up by As. 10 to Rs. 18-2 and Coffee Lands, by As. 4 to Rs. 10-2. Rajendras, however, lost As. 2 to Rs. 7-12. Puthuthottams were slightly lower at Rs. 4-10½.

Among textiles, Coimbatore Kamalas, Rs. 50 paid-ups, improved by Rs. 3-8 to Rs. 46 and Rs. 100 paid-ups, by Rs. 2 to Rs. 93. Coimbatore Pioneers were higher by Re. 1 at Rs. 102 and Sri Krishna Rajendras, by Re. 1-8 at Rs. 42-8. Maduras advanced by As. 6 to Rs. 35-14. Metturs, however, lost Re. 1 to Rs. 191. Rajalakshmis eased by As. 4 to Rs. 76 *cum-div.*

In the miscellaneous section, Ranes, Rs. 100 paid-ups, advanced from Rs. 150 to Rs. 175 and Rs. 50 paid-ups, from Rs. 75 to 87-8. Radio and Electricals hardened by As. 5 to Rs. 4-13. Mysore Papers were fractionally better at Rs. 13-10. Andhra Cement B's lost an anna to Rs. 10-1 and Mysore Matches, As. 2 to Rs. 2-11. Parrys were fractionally lower at Rs. 5-9.

Banks were fairly cheerful. Indian Banks, Rs. 100 paid-ups, were up by Rs. 3 at Rs. 176, Rs. 80 paid-ups, by Rs. 2-8 at Rs. 137-8, and Rs. 55 paid-ups, by Rs. 3 at Rs. 99. Bank of Mysores were higher by Re. 1-8 at Rs. 283-8 and Indian Overseas, by Re. 1 at Rs. 88-8.

THE MADRAS STOCK EXCHANGE OFFICAL YEAR BOOK 1952

The need for authentic official publications by the principal Stock Exchanges of India to provide, in a brief compass, information about joint-stock companies and their working has been felt for a long time now although many unofficial publications have certainly met the need to a considerable extent. Till now there was only one such official year book in the field, namely, that of the Calcutta Stock Exchange. The Madras Stock Exchange Association has followed the Calcutta Stock Exchange by bringing out a year book devoted to the analysis of the working of joint-stock companies in India.

The *Year Book* contains an exhaustive analysis of nearly 200 companies, along with complete particulars about the various Central and State loans and Port Trust debentures dealt with on the Madras Stock Exchange. Every effort has been made to incorporate in the publication the latest available balance-sheets of the various companies. The comparative table giving the analysis of working of each company during the last ten years, should prove useful to all investors in gauging the progress of the Company concerned.

NEWS IN BRIEF

INDIA still has 21 private-owned railway lines with a total mileage of 1,033.74, valued at approximately Rs. 734 lakhs.

The Indian co-operative movement includes 1,73,000 societies with a membership of 12 million people and a working capital of Rs. 235 crores.

The Assam Government has appointed a five-man committee in each of the six Assam Valley districts for enquiring whether tea estates in the respective districts are uneconomic or not.

The Government of India has decided to extend the Community Project activities to cover the entire country within the next seven to eight years. It is proposed to start with 1,20,000 villages in the next three years.

The Economic Commission for Asia and the Far East (E.C.A.F.E.) has accepted the Mysore Government's invitation to shift its headquarters from Bangkok to Bangalore. The State Government has assured the Commission all facilities.

The Madras Government has further reduced the power-cut in the areas served by the Metturs-Pykara-Papanasam hydro-electric systems from 60 to 50 per cent. and in the area served by the Madras thermal systems from 20 to 10 per cent., with effect from the 16th inst.

The Madhya Pradesh Government has increased the guarantee for loans to co-operative banks by the Reserve Bank from Rs. 50 lakhs to Rs. 73 lakhs. Loans are now being distributed by the A and B class central banks which have already drawn Rs. 21 lakhs. The Reserve Bank charges, on this concessional loan, interest of only 1½ per cent., that is, 2 per cent. below the Bank rate.

The collection of sales tax in the Madras State has suffered a drop of Rs. 2.35 crores during the year 1952-53, as compared to the previous year. The total income from sales tax at the end of March, 1953, was Rs. 13.23 crores, as against Rs. 15.58 crores at the close of 1951-52. The Budget estimate for 1952-53 was Rs. 14.5 crores, as against Rs. 15.1 crores for the previous year.

The Government of Bombay has liberalised the conditions of granting *taccavi* loans in the case of poor agriculturists, who find it difficult to offer adequate security of land for such loans. In future, such agriculturists will be granted *taccavi* loans on joint bonds and on collateral or personal security of the borrowers after the sanctioning authority is satisfied that applicants cannot offer adequate security of lands for the loans required by them. However, only small amounts of loans under the Agriculturists Loans Act will be granted in this way. In the case of loans of bigger amounts under the Land Improvement Loans Act, security of lands will have to be offered.

The Government of Bombay has restricted the production of tobacco to one-fourth of any cultivator's holding in some areas in north Satara, Belgaum, South Satara, and Kolhapur Districts for a period of one year. This step has been taken in view of the need for increased production of scheduled food crops. The Government has also prescribed one-sixth as the proportion in excess of which tobacco should not be grown in any cultivator's holding in some areas in Kaira and Baroda Districts, Jehsana District, north Satara District, South Satara District, Kolhapur District and Belgaum District, for a period of one year.

The prices of a number of consumer goods have generally registered a downward tendency since the middle of 1952. In 15 out of 16 industrial centres, for which the Labour Bureau issues cost of living indices, there has been a downward trend since June-July, 1952. In other industrial centres, for which State Governments issue their own indices, some centres have occasionally shown an upward movement. These are attributable partly to the composition of these indices and partly to local conditions. The All-India average working class cost of living index combining 24 different indices, in keeping with the downward trend of prices of consumer goods, shows, on the whole, a declining trend since the peak attained in the last quarter of 1951.

The Government of Bombay proposes to make certain amendments in the rules under the Bombay Sales Tax Act, 1953. The main changes proposed in the rules are: (i) sales made by a dealer to a commission agent who sells goods on his behalf are proposed to be exempted from the general tax, subject to certain conditions, while the sales made by the commission agent would be made taxable; (ii) sales to the Canteen Stores Department (India) of goods intended to be supplied through canteen to members of armed forces of India, as well as sales of such goods by canteen contractors to members of the armed forces, would be exempted from general tax as well as special tax; (iii) sales of lucerne grass seed and sunn hemp seed would be exempted from general tax at all stages, except two, namely, the first sale and the last sale; and (iv) sales of processed yarn produced from artificial silk yarn purchased from a licensed dealer would be exempted from special tax.

From Abroad

The Bill to denationalise the British iron and steel industry became law when it received the Royal Assent on the 15th inst.

Japan is likely to ban imports of Western foods and goods considered as luxury items under the foreign currency budget which comes into force from October next.

The British Chancellor of the Exchequer, said last week, in reply to a question in the House of Commons, that he would not take steps to wind up the Capital Issues Committee.

The Population Reference Bureau of Washington has forecast that world population will probably reach 5,000 million in the next 70 years. It will be almost double the present population.

The primary output of the U.S. aluminium industries during the first quarter of the current year amounted to 574.01 million lbs. which is about 3 per cent. above the previous record of 558 million lbs. reached in the fourth quarter of 1943.

The Chilean Government has reaffirmed its intention to maintain its present copper price for as long a time as the current stationary situation in demand persists. At present, Chile prices its copper at 35½ cents (U.S.) per lb. f.o.b. Chilean ports.

The formation of a committee by Britain to develop the resources of the Commonwealth and thereby help solve the world's political and economic difficulties has been suggested by Lord Bruce of Melbourne, Chairman of the Finance Corporation for Industry.

The Finance Corporation for National Reconstruction, The Hague, concluded credit contracts during 1952 for a sum of 140.8 million guilders (as against 128 million guilders in 1951) which constitutes a record in the seven years of the Corporation's existence.

The industrialisation of the Netherlands has made considerable progress in the 4½ years from the middle of 1948 to the end of 1952. More than 5,500 million guilders (in terms of the prices in 1948) have been invested during this period in buildings, machinery and similar capital goods. On the basis of present-day prices, the value of this investment is more than 7,000 million guilders. The number of persons employed has risen by 9 per cent. during these 4½ years.

PERSONAL

DR. S. Radhakrishnan, Vice-President of India, left for the U.S. on Sunday last.

Mr. John Foster Dulles, Secretary of State, the United States, arrived in New Delhi on Wednesday.

Dr. L. N. Palar, who has been appointed Indonesian Ambassador to India, arrived in Delhi last week-end.

Signor Alberto Berio, who has been appointed Italian Ambassador to India, arrived in India on the 15th inst.

Mr. R. J. Walker, expert on man-power survey, who has been appointed Depute Aide of the I.L.O.'s Asian Field Office at Bangalore, has arrived.

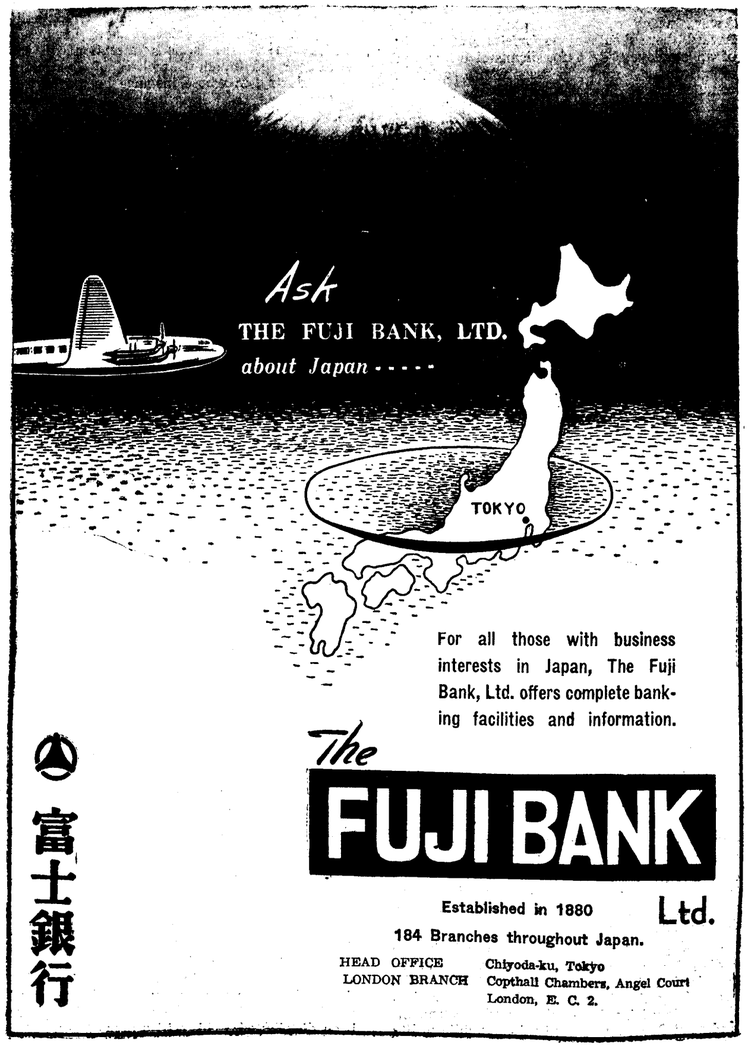
Mr. A. L. Saksena, Accountant-General, Punjab, has been appointed Accountant-General on Special Duty in connection with the establishment of the Andhra State.

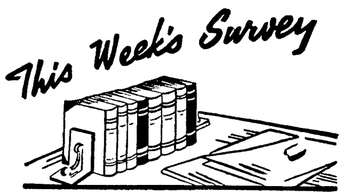
Mr. H. L. Jerath, Senior Deputy Director-General, Posts and Telegraphs, who represented India at the Universal Postal Union Conference held recently at Berne, has returned.

Mr. A. Saldanha, Senior Deputy General Manager, Central Railway, has been appointed to officiate as General Manager of the Railway, *vice* Mr. H. P. Hira, who is proceeding on two months' leave.

Mr. K. D. Jalan, prominent businessman of Calcutta and Director of the Bombay Gas Co., Ltd., left for London on the 16th inst., to study the British gas industry with a view to developing the industry in India.

Dr. Alexander Fleck, one of the Deputy Chairmen of the Imperial Chemical Industries Ltd., London, has been elected Chairman of the Company with effect from 1st July next, *vice* Mr. John Rogers who intends to resign from the Board.





APPEAL AGAINST BANK AWARD

WHATEVER may be the merits or otherwise of the Award of the All-India Industrial (Bank Disputes) Tribunal—the Sastry Award—it has apparently satisfied neither the bankers nor the employees. It has fallen below the expectations of both the bankers and their employees. Perhaps, the very fact that both the parties have something to say against the Award is evidence of its impartiality. The employees have condemned the Award outright, while managements have expressed dissatisfaction on the score that the Award provides no worthwhile relief to most of the banks in the present high cost of administration. It is not surprising, therefore, that the two parties have filed appeals before the Labour Appellate Tribunal, Bombay, against the provisions of the Sastry Award. In the meantime, the industrial and business community, which is not a party to the dispute, is left wondering whether it will eventually have to pay high bank service charges.

The banks employees' unions have listed innumerable points for the reconsideration of the Appellate Tribunal. Among these points, mention must be made of the classification of banks and the fixation of the scale of pay under the Award. The unions want the dearness allowance to be linked to the cost of living index. The managements of banks, on the other hand, have appealed against that part of the Sastry Award which relates to gratuity. Under the Award, there should be no forfeiture of gratuity of an employee "even for dismissal on account of misconduct, except in cases where such misconduct causes financial loss for the company and, in that case, to that extent only." They have also appealed against the decision asking the banks to recognise the All-India Bank Employees' Association and the U.P. Bank Employees' Association.

While the appeals filed by the respective parties to the dispute will shortly come up for hearing before the Appellate Tribunal, the Indian Banks Association has issued a statement to the Press, in which it reiterates the three basic considerations which have been emphasised by Mr. M. L. Tannan, a member of the Tribunal, in his well-reasoned minutes of dissent. The first consideration is that the emoluments and benefits, to be granted to employees, should be related to the capacity of banks to pay these benefits. This capacity has now been reduced consequent on fall in profits of banks generally, thanks to rapidly mounting establishment costs and higher interest charges. In this connection, the Association observes as follows:

"Even in 1951, which was a peak year so far as profits of banks in India were concerned, only 191 out of 462 banks could afford to pay any dividend. The net profits of a number of banks for 1952 were appreciably lower than those for 1951. The total net profits of 18 of the member banks of the Indian Banks' Association were Rs. 54 lakhs less in 1952 than in 1951. This shows that the trend of profit is downwards. Consequently, many banks have not been able to provide fully for the depreciation in the market value of their investments. If this process of a fall in the profits of banks continues, those banks which have not been able to pay dividends so far may not be able to pay them in future, and some of these banks which have been paying dividends may be compelled to reduce them in the near future. If this happens, banks may not be able to get the additional capital which they may require for the progress and expansion of banking that are essential for the economic development of the country."

Proceeding, the Association points out that the banks have already raised their charges to their clients and they are unable to raise them further, because the capacity of the clients to pay higher charges is strictly limited and, what is worse, a further rise in costs of bank credit will adversely affect trade and industry. In fact, it is stated, several banks have already closed down a number of their offices in the last three or four years and had even applied to the Sastry Tribunal for permission to close down a few more.

The second consideration to which the Indian Banks Association draws pointed attention is that the emoluments and other benefits granted by the Sastry Award are larger than those enjoyed by the employees of Government and semi-Government institutions, public utility concerns and large commercial concerns. Mr. Tannan has mentioned this specifically in his minute of dissent, giving figures in support of his statement. The third consideration is that the emoluments of all employees, whether belonging to Government or public or private bodies, should bear a definite relation to the nation's capacity to pay as judged from its national income or productive capacity.

In the meantime, 75 members of Parliament, claiming to represent *all* political parties, have submitted a memorandum to the Central Ministries of Finance and Labour urging the institution of a new enquiry into the grievances of bank employees. This move is certainly to be deplored. For, in their anxiety to better the lot of the bank employees, these members of Parliament have overlooked the fact that the revision or modification of the Sastry Award, if there is to be any, is a question purely for the Appellate Tribunal to examine. The argument that the Award has failed to satisfy the employees and as such a new enquiry should be instituted, therefore, is simply baseless. Moreover, a fresh enquiry would entail heavy expenditure, not to speak of the loss of time and the uncertainty to staff and banks involved in the proposal.

DISINTERESTED ADVICE

It is a fortuitous coincidence that the release of the Government's report on the progress under the Five-year Plan has synchronised with the publication of the report of Sir George Schuster, ex-Finance Member, Government of India, which gives the impressions of his recent tour of this country and the conclusions of his study of current Indian problems in the economic sphere. Sir George claims for the publication a no higher title than a mere resume of his speeches and discussions in India—a "sort of *aide memoire*," to quote his words. But this brief document contains plenty of neatly balanced views of an informed and sympathetic observer. From this point of view, his observations merit the serious attention of the Federation of Indian Chambers of Commerce and Industry, at whose instance he toured this country, and the Government of India, with which under a different political context, he was so intimately connected.

Sir George prefaces the report by an earnest appeal to the people of this country not to indulge in fruitless speculations about the validity of the assumptions on which the Plan is drawn up but to consider what they "should do here and now to make the maximum possible contribution to the successful implementation of the Plan." The immediate lines of action, on which the Federation is urged to concentrate its attention, are: (*a*) to establish a basis of co-operation between Government and private enterprise, (*b*) to create public confidence in the value of private enterprise, (*c*) to raise standards of managerial efficiency, (*d*) to create a favourable climate for attracting capital, external as well as internal, (*e*) to create good relations between management and labour. Sir George reiterates the thesis, which he has emphasised so frequently in the past, that the great expansion of industries, which India needs, can have no sure foundation unless there is a great improvement in agricultural production. He urges the Federation to keep the development of the major irrigation schemes, undertaken by the Government, under careful observation and to interest itself in the execution of the Community Development Projects.

The real problem of this country, he recognises, is that of providing opportunities of employment for the growing population; the rate of growth is as high as 4¼ million per year. He commends the Government-sponsored large industrial projects, such as Chittaranjan and Sindri, but observes that the chief problem in their execution is to evolve a system of "efficiency audit." Since a large part of the industrial field is left to private enterprise, the onus is on the industrialists to prove that they "deserve the confidence of Government and public opinion." In this connection, he offers a few constructive suggestions. In the first place, he wants the standards of managerial efficiency to be improved. He cites the U.K.'s example by referring to the work done there to improve efficiency through the aid of such institutions as the British Institute of Management, Administrative Staff College and the Anglo-American Council on Productivity. Secondly, there should be fuller publicity for the financial results of companies through presentation of accounts in a way that will enable the public to know how much has been earned by the companies and how the earnings have been distributed. This will remove the popular but erroneous impression that a large part of the earnings is absorbed in the payment of dividends. Thirdly, there should be a lively appreciation of consumer interests and of the need for developing responsible trade unions and for helping small industries. Finally, industrial associations should provide suitable machinery for collaboration with the Government and for the collection of accurate factual information affecting economic problems. They are advised to promote the establishment of independent study organisations such as the P.E.P. and the Acton Trust in the U.K.

Since economic progress is the result of joint endeavour by both the Government and industry, Sir George has taken care to point out that the Government, on its part, should review its taxation policy—this, fortunately, is being done—relax controls where necessary, avoid over-centralisation of functions and evolve "new and more intimate methods" of consulting industry. He recognises too that industrial progress depends on the ability of the people to save and invest in new economic ventures. He wants the Federation to stimulate effective action to attract individual savings, to help the National Savings Campaign and to evolve a plan, designed to plough profits into business, for favourable consideration by the Government. Since internal savings might not be adequate to meet the country's needs, he has suggested the need for creating a proper climate in which foreign capital would be attracted to India. He says: "Immediate prospects may be limited, but I believe that a country like India which can establish a reputation for fair dealing, for commercial integrity and for the scrupulous respect of obligations will have opportunities to attract foreign capital."

Sir George's report is, on the whole, as balanced a document as anything could be. There is sufficient material in it for being written up into a more imposing report. The fact that the report is brief does not, therefore, detract from its value as a guide to all those who are engaged in the task of India's economic reconstruction. What add to the value of this document are the disinterested nature of the opinions which are expressed, the clarity of their exposition and, above all, the author's genuine sympathy for the aspirations of a nation that is struggling to find a way to economic prosperity. It is sincerely to be hoped that the Government, industry and the workers will adopt the lines of action suggested by Sir George Schuster in his brief, but very convincing, report on the current economic problems of this country.

HYDROQUINONE INDUSTRY

The Tariff Commission has been enquiring into the question of continuance of protection to the hydroquinone industry. The industry's claim is that the two-year period of protection granted to it, according to Government Resolution, dated 28th July, 1951, was too short to establish itself on sound lines. In fact, it has asked for a greater measure of protection and also assistance.

From a review of the industry's position made by Dr. Narayanaswamy Naidu, Member, Tariff Commission, while opening the enquiry into the question of the continuance of protection to the industry last week, it is clear that the industry has an acceptable case for protection. The industry has found it difficult to sell its products. The Kesar Sugar Works had to stop production on 7th February, 1952, on account of difficulties in disposing of its stocks. Even Satya Dev Chemicals has complained of similar difficulties. All this is due, it is stated, to excessive imports of hydroquinone into the country. The producers have complained that the Tariff Commission's estimate of indigenous demand for hydroquinone at 26 tons is higher than the actual consumption requirements. It is, however, feared that although the quality of the indigenous product is generally acceptable, it is inferior to the foreign product.

Apart from the question of the continuance of protection to the hydroquinone industry, the Tariff Commission has to determine the domestic requirements of hydroquinone. The average indigenous production, taken together with average imports over a certain number of years, gives a fair estimate of demand. But figures of import of hydroquinone are being recorded separately only from July, 1951 and, therefore, they are available only for one complete calendar year, that is, 1952, which cannot be taken as a normal year, so far as imports are concerned. The aggregate import in 1952 was 42,372 lbs. and indigenous production 10,722 lbs. which together made the available supply during 1952 of 53,099 lbs. or about 24 tons. Estimates of demand received from various sources vary from 15.6 to 35 tons.

The next question which the Commission has to consider relates to the high price of the indigenous stuff. This is due to the high price of the raw materials. We are told that while it would be possible to produce aniline of a quality comparable with that of the imported material, its cost of production compared to imported aniline would be considerably high. Sulphuric acid is more readily available than aniline, though its price is "almost prohibitive," as compared with the price at which foreign producers of hydroquinone can obtain it. It is stated that the price paid for sulphuric acid, along with insurance and duty chargeable on aniline, accounts largely for the high cost of hydroquinone.

The quality of the indigenous product, it is stated, leaves something to be desired. The deficiencies mentioned by some consumers are: (1) the indigenous product is not stable; (2) the quality of the product changes from time to time; (3) the price is considerably higher than that of the imported product, and (4) the solution gets oxidised early. We understand that the Indian Standards Institution has finalised standard specifications for indigenous hydroquinone. It is hoped that the industry will adhere to these.

The main task of the Tariff Commission is to determine the quantum of protection and any assistance needed. The assessment of the quantum of protection will necessarily involve a comparison of fair ex-works price of indigenous hydroquinone with the c.i.f. price of the imported product. The Commission has to arrive at the level of import duty which will be adequate to safeguard the indigenous industry. There is a demand from a section of the industry that there should be a complete ban on all imports for a period of five years. But such a demand, in our opinion, is not based on sound arguments. For it will give a chance to the domestic producers to exploit the sheltered market to the detriment of consumers. So far as assistance required by the industry, other than protection, is concerned, it is suggested that the duty paid by the producers on all imports of aniline required for the manufacture of hydroquinone should be refunded and that Government assistance should be made available for the manufacture of 300 tons of aniline per year in order to enable the hydroquinone industry to become independent of foreign imports of aniline.

FIGHTING SCARCITY

A statement containing the recommendations of the teams of officials which recently visited scarcity areas in the country and the Central Government's attitude towards these recommendations was laid before Parliament last week. It will be recalled that, following frequent requests from State Governments for financial assistance to meet the cost of relief and other measures in scarcity areas, the Central Government decided, in October, 1952, to depute teams of its own officers to study in detail the nature and extent of distress and to recommend suitable measures for relief on permanent, as well as semi-permanent basis. Mr. S. V. Ramamurti, Adviser, Planning Commission, led the team which visited West Bengal, Mysore, Hyderabad and Bombay and Mr. P. C. Bhattacharya led the team which toured the scarcity areas in Madras.

From the statement, it is clear that a number of schemes for scarcity areas which fall outside the Five-year Plan have been recommended by the official teams. Presenting the statement to the House of the People, Mr. C. D. Deshmukh, Union Finance Minister, said that these schemes could be implemented only if they were included in the Plan. This means that any further action in the execution of these schemes depends upon the State Governments readjusting their plans so as to include the schemes recommended by the official teams. In that case Central assistance to these schemes will be available under the existing sanctioned programmes, such as the G.M.F. scheme, minor irrigation projects, etc.

The statement gives a brief account of the schemes recommended by the official teams and the action taken by the Centre towards their implementation. It appears from the statement that Madras is the only State which has failed to receive any aid so far with regard to any of the schemes recommended by the Bhattacharya team. Latest reports indicate that discussions have been taking place between the Madras State officials and the Centre on the question of larger aid to Madras.

OFF THE RECORD

(By "ROVER")

A WISE and benevolent Providence has so arranged things for our mental integrity that many of our childhood's unhappy and unpleasant experiences are wrapped up in a thick blanket, which psychoanalysts mysteriously call the subconscious. All the same, some of my memories of early school days are as vivid today, as the experiences themselves were fifty years ago. One of these relates to the first school I went to in a small, out-of-the-way village. The very meagre equipment of this little school consisted of a somewhat discoloured, blackboard, a stool, a so-called teacher and a long cane. By all accounts, the last object named by me was the most important item in the pedagogic set-up. It would be less difficult to conjecture a conductor of an orchestra without his baton than an old-time preceptor without his birch. It was then firmly held by parents and teachers alike that it was well-nigh impossible to knock some sense into the young devils without a generous use of this aid to education. At a pinch, you could discard the blackboard or the text-book, but it would be impossible to do away with the cane or the ruler which sometimes did duty for the poor pedagogue's prop.

During the last half century all this has changed, and the teacher who cannot do his work without the aid of thrashing, or threats of thrashing, is considered unfit to have a place in this profession. But whatever revolutionary transformation might have taken place in the world of education, our new and democratic Government of India has not advanced even an inch beyond the stage in civilisation of the dreaded schoolmaster and his still more dreaded correcting rod. I notice this particularly in its relations with the business community. Both the Finance Minister and the Minister for Commerce and Industry appear to regard business men as so many naughty children, whom they cannot trust beyond the limits of their vision, and to keep them glued to their allotted task of production, they must have more and still more drastic and penal powers to inflict punishment.

All this talk of co-operation and understanding, of mutual trust and confidence, of appeal to conscience and sense of honour ingrained in every human being is just so much empty palaver. They might agree to try these other enlightened methods in dealing with condemned criminals in prisons, but when it comes to controlling the bad boys in commerce and industry, they must rely on the tightened up provisions of the Income-tax Act, the Company Law and the Industries (Regulation and Development) Act. My teacher at school was at least content with a single slender cane; he did not ask for an armoury. Our Governments are not satisfied, unless they have a vast choice of weapons. And not unlike famous collectors of art treasures, they are eagerly and passionately on the lookout for adding more specimens of birches, rods and batons to their already rich collections. With this benighted and confirmed attitude of theirs of looking upon all industrialists as potential, if not actual, offenders, I am sometimes appalled at the thought of what would result, if some of our eminent Ministers like Messrs. C. D. Deshmukh, T. T. Krishnamachari, C. Rajagopalachari and Morarji Desai were let loose as preceptors for a time in some primary schools.

This vicious circle of suspicion and distrust on the part of the authorities and persistently repeated and retaliatory recalcitrance on the part of industrialists, I am afraid, will never be broken, unless there is a radical change in the relations of our Government and the business community, more or less of the same nature as the revolution which has overtaken our schools for the young. I do not think my little grandson is any the less of a devil at heart than I or his father was at his age. But I cannot help noticing that, unmanageable though he is at times, as any boy worth his salt would be, he is not a victim to most of those wicked impulses which the mere presence of the rod in the drawer of the teacher's desk gave rise to in me and to a less extent in his father. The only way one could rise in the estimate and esteem of one's fellows in those days was to do something forbidden (most things were forbidden to us in those days), behind the tyrant's back and to escape punishment by throwing dust in his eyes or by taking one's medicine, if caught, without flinching.

I doubt if many of the atrocious and preposterous pranks, I and my companions in crime played in those far-off days, did really interest us in the least. They were rendered interesting and vested with a kind of irresistible glamour, because doing them carried a risk of unmerciful flogging and satisfied our otherwise frustrated sense of adventure. Indeed, we were oftentimes cruel and wicked, but we were wicked because we were goaded by unseen forces released by the sight of this emblem of authority of our teachers. I am certain that we would have responded differently and our high spirits and our craving for adventure would have expressed themselves in more innocent and possibly even in more constructive ways, the same as children in schools and homes do to-day when handled differently, if the relations between the two sectors of the then educational world had not rested squarely on the basis of alternate bouts of defiance and flogging. I wonder if this candid confession of mine would convey anything worthwhile to our mentors in the various ministries at the Centre and in the States.

Even the best amongst us, the most unselfish and honest were affected adversely to a certain degree by the war psychosis and the general lowering of moral standards, which is an unavoidable concomitant of any prolonged international conflict involving frightfulness on a large scale. But in a subsequent healthier atmosphere and under conditions of freedom and confidence, this effect would have been worn out by the passage of years. I feel that if the Government had been a little more patient and understanding, if it had not come to rely more and more on penal methods for persuading those engaged in tax evasion, black-marketing and profiteering, if it had tried earnestly and effectively to replace the anti-social profit motive in industry by socially more helpful substitutes, if it had attempted by personal example to rouse amongst the more enlightened business men an urge towards achievement apart from profit, during the last few tragic years, our moral and economic rehabilitation would have been secured earlier and at a much lower price.

But unmindful of the oft-recurring tragic mistakes and blunders they themselves made, unmindful even of their mixed and not always above-board motives in their own public and private behaviour and that of their party men, blind to the defects of the other sections of societies, our Ministers unfortunately adopted and accepted this role of a dull and obnoxious pedagogue of the old school, towards the erring and unerring members alike of the business community. They no less than business men themselves are responsible for to-day's sorry state of affairs. The sense of irresponsibility and the attitude of unconcern displayed by those engaged in commerce and industry, towards all the welfare activities sponsored by some of these Ministers at the point of the police baton if not the bayonet, originate as much from the Government's stepfatherly treatment of the juveniles as from the infantile greed of its victims. An irrational puritan cannot but breed a despicable profligate.

I must confess that I was set on this line of thinking this week by an article I read in a periodical called *American Economy*, issued by the United States Information Service of the American Embassy and the Consulates General in our country. This article [it appears elsewhere in this issue.—ED.] bears the significant title of "Productivity Is An Attitude" and was written by Mr. Peter Drucker originally for an American publication called the *Nation's Business*. But for the U.S.I.S. reproducing it in one of its hand-outs (53-EC-12 of March 27, 1953), I should never have known about it. Curiously enough, it was brought to my notice by an intimate friend, who enjoys a very high status in the top circles of the Indian business community.

This article is inspired by what I might call a high sense of practical social idealism in American industry. That it was so highly appreciated by one of our own prominent business men, intimately associated with a couple of important industries, goes to prove that Indian industry is not as blind to social welfare if properly approached, as it is usually made out to be by some of our quixotic politicians. This article, as such, has nothing to do with anything of what I have said above, except that the philosophy underlying it mercilessly exposes by its vivid contrast some of the crudities and absurdities involved in our own Government's industrial policies as also the immaturities and selfishness plainly visible in the behaviour and attitude of our business men in the field of industry.—*All Rights Reserved.*

BUDGET SESSION OF PARLIAMENT CONCLUDES

CLAMOUR FOR FUNDS BY STATES

(From A Special Correspondent)

NEW DELHI, 19*th May*

DELHI LETTER

THE customary official exodus this part of the year, as a result of an enervating summer, has already begun. The President of the Indian Union is now in Pachamari, recuperating his health in that salubrious climate. The Vice-President has left for the U.S. on an official-*cum*-lecture tour. The Prime Minister and the Home Minister will be having a short holiday in Kashmir this week-end. The former will be leaving the Capital in the last week of May to attend the Coronation of Queen Elizabeth II. He will return some time at the end of June. Although he will be busy in that part of the world with conferences and ceremonial functions galore, it is expected that he will have some relaxation from the onerous official duties and responsibilities, since he is perhaps the most overworked man in the country at present. The Finance Minister has already proposed a tour of Maharashtra and Andhra areas. Many other Ministers and their deputies will also be out of the Capital under one pretext or another, avoiding the proverbial Delhi summer at least for some time. High officials, too, are trying to go out on leave, especially after a strenuous Parliamentary session, since they have had to bear the brunt of legislative and other kinds of work in this connection.

The Budget session of Parliament, which came to an end on the 15th inst., has left an impression on political pandits that the Parliamentary form of democracy has come to stay in India. Discussions, debates and interpellations have been of a constructive nature, and what is more important is the fact that even communist members of Parliament have begun to approach the various problems from a workable point of view. Parliament held nearly 72 sittings during the three-month period and the Treasury Benches answered nearly 4,000 questions, of which starred questions aggregated well over 2,250. As many as 29 Bills were considered and passed. In addition to the 22 Bills pending at the commencement of the session, 26 new Bills were introduced. This session disposed of a number of bills of considerable economic significance, of which mention may be made of the Tariff (Amendment) Bill, the Income-tax (Amendment) Bill, the Tea Bill and the Air Corporations Bill. The debate on the Estate Duty Bill, which was taken up at the fag-end of the session, is expected to be resumed at the next session, to be held in August. The part played by the Second Chamber, namely, the Council of States, either in legislative matters or in contributions to debating skill is somewhat unimpressive.

State Concerns and Accounting Procedure

Nationalisation of commercial concerns is, no doubt, an easy and tame affair by a Government commanding a substantial majority. But the administration of such concerns with ability, skill and foresight is indeed a difficult task. Government, like the proverbial Cæsar's wife, should not only be free from suspicion but also try to make available relevant information regarding the working of such concerns in an easily intelligible form to members of Parliament, Press, etc., twice a year, just as leading limited concerns of the country, especially many of the European-managed concerns of Calcutta, have been doing all these years. Now that some of the Ministries of Government have been entrusted with the management of a number of commercial concerns, they have to be particular about informing the public that the Government can also do the job as efficiently as the well-known commercial houses.

In this connection, the remarks of the Public Accounts Committee can be read with considerable interest. It points out that it "came across certain instances where the Ministry of Finance had not taken into account the element of interest on capital outlay and other overhead charges involved in the running of a particular scheme while calculating the amount of profit or loss accruing therefrom. This method is opposed to the normal commercial practice and is susceptible of giving only an illusory picture of the real state of affairs. So long as there is small surplus, it is very easy to say that scheme is being run at a profit. The Committee should, therefore, like to impress upon the Ministry of Finance and other Ministries sponsoring State trading schemes that no departure should be made from the commercial trading principles in the case of all trading operations undertaken by the State. They consider that, from the point of view of the economic working of any State enterprise, financial and accounts control and presentation and preparation of accounts from a commercial point of view is a *sine qua non* to its efficient and successful management." It is to be hoped that the Government will take early steps to become more informative in this respect.

Financial Help to States

It is good that the Government of India has laid down clearly the principle in regard to financial help that could be given to States afflicted by famine and scarcity conditions. The Planning Commission, it will be remembered, provided a bulk sum of Rs. 30 crores for grants to States in order to meet emergency conditions for the entire Plan period. From the way that calls are being made on the Centre in recent months, it may well-nigh become impossible for it to meet all the demands from different States. Incidentally, it may be mentioned that, during the last few months, one State after another has begun to give considerable publicity to the occurrence of famine within their territories, perhaps with a view to getting more financial help from the Centre. Thus, while the general food position in the country is reported to be satisfactory on the whole, reports have been received by the Centre of acute famine conditions prevailing in Bikaner, other parts of Rajasthan, Maharashtra, Gujarat, Mysore, Tamilnad, West Bengal, etc. The official team that visited these famine areas has made a number of recommendations, such as sinking of tube wells, execution of major and minor irrigation schemes, at an accelerated pace, building village roads, etc. Since the finances of the Centre are limited and are being distributed with the implementation of the Five-year Plan in mind, it may not be possible for the Government of India to provide fresh funds towards the schemes suggested by different States.

Mr. C. D. Deshmukh was, therefore, explicit when he observed in Parliament last week: "These plans can be implemented only if they are included in the Plan by readjustment. Further action in regard to them, therefore, will have to be taken by the State Governments themselves. Central assistance for these schemes on such inclusion will be given in the usual course under the existing sanctioned programme such as Grow-more-food, minor irrigation, etc." However, as people in the famine areas have become more conscious, demanding work instead of doles, the Centre and the States must have to examine afresh some of the irrigation and other development schemes with a view to providing help to these areas. Priority can be given to such of the schemes as those in which people of the area are prepared to share in part the financial burden. Further, the pace of development can be accelerated by redistributing the financial allocation of the different schemes, the sole criterion for the priority being the time factor in getting returns from the schemes.

The progress of the Five-year Plan for the first two years (1951-53), which was issued by the Government of India last week-end, is not unsatisfactory. A steady improvement is noticeable in a number of sectors—agricultural, industrial, transport, power-generation, and the like. Out of the total outlay of Rs. 2,069 crores, a sum of Rs. 585 crores have already been spent during this period. For the current year, the amount earmarked comes to Rs. 413 crores, the total for the first three years being Rs. 998 crores. The balance that should be expended during the last two years of the Plan is placed at Rs. 1,081 crores.

GRADUAL PRICE DECONTROLS

CURRENCY ARBITRAGE WITH BENELUX UNION

(From Our Own Correspondent)

LONDON, 16*th May*

LONDON LETTER

THE Government is now proceeding steadily if unobtrusively with the dismantling of a great many controls which have outlived their usefulness. Price controls over a wide range of manufactures have ruled since 1940: in the last few years as increasing supplies have made consumer exploitation less likely, they have been dropped one by one, and the last two to go have been those on linoleum and nylon stockings. Controlled prices, therefore, no longer obtain on any commodity of private trade, excepting foodstuffs where the primary sale is by the Government, in the case of rationed commodities, or where the commodities themselves contain an ingredient supplied through the Government at a subsidised price. It is an interesting commentary on the psychology of maximum price fixing that the removal of control has often meant a drop in price.

We have also just witnessed the abolition, once again, of steel rationing, last re-imposed in 1951, largely due to a steadily mounting production. Of the basic non-ferrous metals, copper is now the only one remaining under control and in three months' time this will be free. The freeing of grain imports has already been announced and to these are now added the freeing of rice imports in a couple of months' time.

Denationalisation is making much less dramatic news, but nevertheless, the process of turning steel back to private trade is about to commence and in a month would-be investors in steel companies will be able to bid for shares to the Treasury Liquidation Agency. Whether investors will take the risk remains to be seen, for the Opposition has stated categorically that there will be no second compensation payable. Just how serious this risk is depends on the view which investors will take of the life of the Government. A fortnight ago, there was a bear market in Government political stock, as a result of the Local Government elections which gave very substantial Labour gains at the expense of Conservatives right through the country. But the market has suddenly become bullish as a result of the Sunderland by-election when, for the first time in 30 years, the Government candidate has won at a by-election a seat previously held by a member of the Opposition. True the seat was very marginal and a third candidate intervened at the last moment, but the Government victory is there.

Murmurs of Autumn Election

There have been murmurs of an autumn general election to cash in on the prevailing lack of dissatisfaction with the Government and the atmosphere of tolerance and goodwill towards the Government of the day, as a result of the Coronation. At present, however, it seems much more likely that the Prime Minister will avoid any such obvious attempt to improve his party's position and rely rather upon a steady improvement in economic conditions and further budgets as successful, on the whole, as Mr. Butler's latest to bring his party back to power when the time is necessary for another appeal to the country.

Another piece of liberty is being given to the foreign exchange markets where currency arbitrage is being introduced between the United Kingdom and the Benelux group, France, Germany, Denmark, Sweden and Switzerland. In anticipation of this development, the wide cross rates which have hitherto ruled are now disappearing and the buying and selling of the seven currencies by United Kingdom banks in the different countries will henceforth keep these rates at an even level. These arrangements will in no way affect the ultimate monthly balances of the United Kingdom with the European Payments Union, for the transactions are only swops of one E.P.U. currency for another, and if, for instance, in May, the United Kingdom repeats its surplus of £15 million with E.P.U. which it earned in April, this surplus which could possibly be only in the currency of one country—if bank operations had made it profitable to liquidate other currency holdings in favour of a single currency—will accrue to the Bank of England.—*All Rights Reserved.*

PAKISTAN NOTES

ATTAINING SELF-SUFFICIENCY IN FOOD

CALL FOR PUBLIC CO-OPERATION

AN indication of the determination of the Government of Pakistan to solve what is perhaps the most disquieting situation confronting the country to-day, namely, food shortage, is provided by the recent pronouncements of the Governor-General, Mr. Ghulam Muhammad, and the Food Minister Mr. Khan Abdul Qayyum Khan. Thus, the Governor-General, in the course of his address while opening the Kheshgi Lift-irrigation Scheme, near Nowshera, Peshawar, said that the people of Pakistan would be able to overcome the food shortage. Pakistan, he said, had formerly only a small surplus of food—hardly two to three per cent.—but an erroneous impression had been created that the country had a very large surplus. The true position was realised when the country was faced with a temporary food shortage. This had a salutary effect, inasmuch as it had served to shake the people out of their complacency.

More or less similar views were expressed by the Food Minister of Pakistan. Addressing a large gathering at Mardan the other day, the Minister declared: "Pakistan will be self-sufficient, or even surplus, in one or two years." In support of this optimism of his, he alluded to the series of schemes undertaken, such as the Karram Garhi, Kheshgi, Warsak, Lower Sind Barrage and Punjab Tube-wells Scheme, besides the construction of new canals. He maintained that his Government was in right earnest to enforce the Grow-more-food Campaign. He called upon the people to help the Government in the implementation of its plans. He also appealed to the agriculturists not to grow more sugarcane or tobacco or cotton than what were strictly required, but to divert attention towards foodgrains. In this connection, the Minister disclosed that Pakistan had already purchased 500,000 tons of wheat and hoped that the U.S. would concede the Government's request for a million-ton food aid.

Assurance to Business

An assurance to the business community that its views would be given due consideration in the formulation of commercial policy was given by the Prime Minister of Pakistan, in the course of his address at a party given in his honour by the Committee of the Narayanganj Chamber of Commerce at Narayanganj last week. It would be his endeavour, he said, to bring about a co-ordination between the viewpoint of the Government and the commercial community, with a view to stimulating trade and commerce and promoting prosperity of the country. Earlier, Mr. Ferguson, the President of the Chamber, assured the Prime Minister of the business community's wholehearted support and unstinted co-operation to the Government in developing the economic life of Pakistan.

The Government of Pakistan's price control policy, and the formulation of concrete and constructive suggestions to be placed before the authorities are now being examined by a sub-committee, appointed at a convention of trade associations and chambers of commerce held in Karachi last week. The traders in Pakistan would appear to be rather highly critical of the various control measures. Addressing the Convention, Mr. G. Allana, one of Pakistan's leading business men and President of the Federation of Chambers of Commerce and Industries, Pakistan, characterised control in any form as an unwelcome imposition on a country's economy. For, in his opinion, controls "dwarf and throttle competition, initiative and enterprise, which are the bedrock of a progressive economic outlook in a society based on free enterprise." Speaking from the trade's experience of controls on this sub-continent, Mr. Allana said that they had never fully succeeded in their objective and often brought more hardships than benefits to the community.

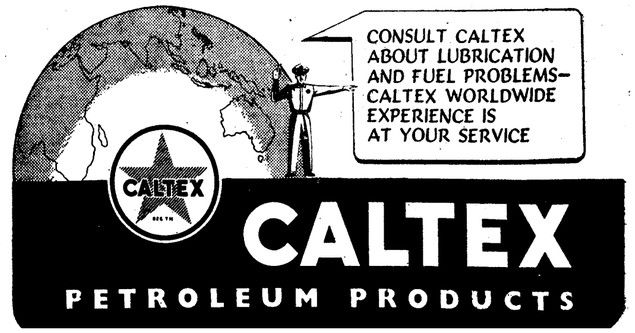
The President suggested the appointment of a high-power committee, consisting of officials and non-officials, "in order to ensure smooth working of controls." He felt that, without such a committee, which should concern itself with matters of policy, many of the decisions made by the Government would be unrealistic and might lead to clash of views between the Government and the trade. He also suggested that, before finalising its plans for the control of prices of any goods the Government must invite accredited representatives of the trade concerned and consult them on the matter.

The technical assistance requirements of Pakistan for the year 1953, which have been approved and forwarded by the Government of Pakistan to the different organisations dealing with the programmes, are training facilities for 449 candidates and advisory services of 93 experts. Of the training facilities, 159 are under the U.N. Technical Assistance Programme (including the I.L.O.), 215 under the Colombo Plan, 54 under Point Four and 18 under the Ford Foundation. Pakistan has also put forward certain requirements for equipment, such as seismological equipment, terrestrial magnetism equipment, laboratory and other equipment, and books for university libraries. The fields in which training facilities are required cover a wide range of subjects and are mostly technical.

The Canadian assistance to Pakistan under the Colombo Plan during the current year is expected to be of the order of $10 million. Among the projects which would be the recipients of aid from Canada are completion of the aerial survey of Pakistan ($1 million), local distribution scheme for electricity at Dacca and Chittagong, Ganges-Kobadak scheme in East Pakistan, tube-well scheme near Lahore, and scheme for the construction of a shipyard at Khulna. Last year, it may be recalled, Canada granted a sum of $10 million to Pakistan for the promotion of projects designed to augment food production.

AUSTRALIA

The Australian aboriginal is an interesting example of the survival into the 20th century of the primitive type. The tribes, who now mostly inhabit the Northern coastlands, live entirely by hunting as they did in the Stone Age. This link with the prehistoric past goes hand-in-hand with the essentially modern outlook of the country as a whole. The Australians are perhaps the most air-minded people in the world. With its great wool and cattle industries flourishing, and the rapid progress now being made in developing her heavy and light industries and increasing her farming, Australian prestige is rapidly increasing. Ready to meet the ever-increasing demand for high-quality petroleum fuels and lubricants, the Caltex organisation is constantly at the service of Australian Agriculture, Transport and Industry.



MONETARY SYSTEM OF UNITED STATES

HOW MONEY SUPPLY IS REGULATED

THE U.S. occupies such a predominant place in the international economic set-up that changes in its economic activity affect considerably the economics of other countries of the world. In so far as these changes are influenced by the variations in the credit and monetary policy of that country, a study of such policy, as administered by the Federal Reserve System, should evoke considerable interest. In fact, the study that has been undertaken by the Division of Research and Statistics of the Federal Reserve System should go a long way towards not only stimulating the interests further but also in understanding the system better.

As an introduction to the series of articles covering the operation of credit and monetary policy in the U.S. now being prepared, a brief description of the working of the monetary system in the U.S. has been given in the course of an interesting article appearing in a recent issue of the *Federal Reserve Bulletin*. The main emphasis in the survey is on the regulation of money supply, taking into account the major factors entering into changes in the quantity of money, the general forces underlying the need of the economy for money, and the nature of reserve banking measures that influence expansion of money supply. The salient features of the survey are dealt with in the paragraphs below.

The sole monopoly of issuing currency rests with the Federal Reserve (F.R.) System and the Treasury. The major part of currency consists of F.R. notes, the bulk of the rest in the form of silver certificates and coins being issued by the Treasury. The demand deposits held with commercial banks, which are transferred by means of cheques, have for many years constituted the major media of exchange. However, in the commonly accepted sense, only those demand deposits and currency that are held by the public are used as media of exchange. The monetary system in the U.S. is so organised that some forms of money, frequently referred to as "reserve money," serve as immediate or ultimate backing for the forms that are used as means of payment. Gold, which serves as a means of settling international accounts, is purely reserve money domestically. All gold in the U.S. is held by the Treasury, and it cannot be used legally for making domestic payments. Instead, the Treasury issues gold certificates to the F.R. Banks which serve as reserves behind the latter's note and deposit liabilities.

The deposits in the F.R. Banks are held almost exclusively by member commercial banks as reserves behind their deposit liabilities to the public. The major exception is deposits with the F.R. Banks held by the U.S. Government, which are used to make payments for goods and services. Vault cash held by commercial banks and their deposits with other banks generally serve as working reserves in the case of member banks and as both required and working reserves in the case of non-member banks.

Factors Directly Affecting Money Supply

Under the U.S. monetary system, the reserve position of the banking system is the major determinant of the supply of money. The lending activity of commercial banks is the principal source of new money and the amount of lending in which banks can engage is limited by their reserves. The important factors which directly affect the quantity of money supply in the U.S., besides bank credit operations, are foreign transactions, reserve banking transactions with non-bank investors, and, of less significance, changes in the amount of silver certificates and other Treasury currency. Foreign payments to this country, reserve banking credit, extensions to non-bank investors, and issues of Treasury currency result directly in an increase in the volume of money. Since these changes also affect the reserve positions of commercial banks, they may result in a multiple expansion of bank credit. The direct effect, however, is likely to be of particular importance at a time when banks prefer to retire indebtedness to the F.R. System or to build up excess reserves rather than expand loans and investments. Conversely, payments made from this country to other countries, reduction in reserve banking credit *via* non-bank investors and withdrawals of Treasury currency result directly in decreases in the money supply. Changes in bank capital accounts also have an influence on the level of deposits.

The member banks of the F.R. System, which have about 85 per cent. of demand deposits of all banks in the U.S., must hold their legally required reserves in the form of deposits with F.R. Banks. The non-member banks generally hold a large part of their reserves as deposits with member banks. If the member banks expand deposits on the basis of increased reserves, the non-member banks will generally find themselves with larger reserves and hence be in a position to expand deposits also.

The most important domestic factor influencing the level of bank reserves is changes in the amount of F.R. credit outstanding. Such changes may offset the effects of changes in other factors that influence the level of reserves, or they may result in an increase or a decrease in total reserves. Changes in the quantity of F.R. credit occur immediately on the initiative either of the F.R. System or of bank borrowers. Since F.R. Banks make payment to borrowers or to sellers of investment securities by creating deposit liabilities, the F.R. System can supply additional reserves by making advances to banks or by buying securities from either bank or non-bank investors. Since non-bank investors hold their deposits with commercial banks, they build up their deposits with commercial banks when they sell securities which are bought by the F.R. System, and the commercial banks in turn receive increased deposits with F.R. Banks. The F.R. Banks can absorb reserves by selling securities or by bringing about a decline in bank borrowing.

Currency Held by Public

Another important factor influencing bank reserves is changes in the amount of currency held by the public. Member banks meet the currency needs of their depositors by drawing down their reserve balances with the F.R. Banks and they return currency not needed by depositing it with the Reserve Banks. Thus an increase in the amount of currency held by the public exerts a drain on bank reserves, while a decline supplies the banks with reserves.

Changes in the deposits of the Treasury with banks also affect the volume of bank reserves. The Treasury, however, endeavours to manage the distribution of its deposits between commercial banks and F.R. Banks in such a way as to minimise the effect on bank reserves of the fluctuations in Treasury receipts and expenditures. Changes in cash held by the Treasury in its own vaults, and also in Treasury currency outstanding, affect the level of bank reserves, but such changes are generally small.

Another domestic factor influencing the level of bank reserves is the amount of credit extended by F.R. Banks in connection with the clearance of cheques. This type of credit, which is generally referred to as "float," arises because the accounts of commercial banks at Reserve Banks are credited for cheques which are deposited before these cheques are actually collected from the banks on which they are drawn. Although the amount of float has increased in recent years, it fluctuates mainly with seasonal factors.

The most important international factor affecting the amount of bank reserves is the movement of gold arising from surpluses or deficits in the country's international accounts. The Treasury pays for gold by drawing down its deposits with the F.R. Banks, which it then replenishes by issuing gold certificates to the F.R. Banks. Thus, an inflow of gold and the transactions giving rise to it result in additional deposits and bank reserves, while an outflow of gold contracts deposits and bank reserves. The amount of gold certificates held also places a ceiling on the volume of credit that can be extended by the F.R. System, under its reserve requirements, without penalty. In general, however, this reserve ratio has not been a limiting factor, and credit and monetary policies have been determined by the needs of the economy rather than the amount of gold certificates held.

Multiple Deposit Expansion

The member banks of the F.R. System are at present required to hold reserves behind demand deposits which range from 14 to 24 per cent., depending on whether the bank is classified as a country bank or a reserve city bank or a central reserve city bank. Since the reserve requirements average slightly under 20 per cent., the member bank demand deposits can expand —assuming adequate demand for bank credit— *by about five times the amount of any net increase in bank reserves.* This means that the demand deposit liabilities of member banks, as a group, can rise at the rate of about $500 for every $100 added to reserves. With each bank lending the reserve funds, which it has left after meeting the additional revenue requirements behind its increased deposits, the deposits of all banks will increase. Of this increase, 20 per cent. can be attributed directly to the gold inflow and the remaining 80 per cent. to the expansion in bank loans and investments. The entire increase of 20 per cent. in reserves will be absorbed by the additional reserve requirements behind the gross increase in demand deposits. The converse is the case when there is a fall in reserves.

The 5 to 1 ratio used for computing the potential for bank deposit expansion (or contraction), on the basis of a given initial change in reserves, is, of course, only a rough average. For it is subject to modification, especially because of the probability of the increase or decrease in demand deposits being accompanied by changes in the same direction in the demand for currency and time deposits, which influence the average reserve requirements behind the money supply. The limit on deposit expansion is also influenced by the fact that the non-member banks generally hold reserves partly in the form of deposits with member banks and also of the fact that the reserve requirements vary among the member banks.

If expansion in the total money supply is accompanied by an increase in the dollar volume of transactions, it will generally lead to additional demand for currency for retail transactions and for wage payments. Since demand for currency involves a drain of equal amount on commercial bank reserves, this demand reduces the potential for expansion on the basis of a given initial increase in reserves. It is probable also that some of the newly created deposits will find their way into the hands of savers who will convert them into time deposits. Time deposit liabilities of member banks of the F.R. System are subject to reserve requirements which are now set at 6 per cent. Conversions of demand to time deposits, therefore, result in a decline in the potential for expansion of demand deposits but an increase in the potential for expansion of total deposits.

Moderation of Changes in Money Supply

To take now the question relating to moderation of changes in the money supply through reserve banking. The F.R. System, through its operations, can offset the effects of gold and currency movements when such movements tend to result in an undesirable expansion or contraction in money supply. It can also bring about a change in the quantum of bank reserves, when other factors, such as changes in the intensity of use of existing deposits by the public or in the willingness of banks to hold excess reserves or in their pressure to repay borrowings, make a change in the reserve position desirable.

PRODUCTIVITY IS AN ATTITUDE

BASIC CAUSES FOR SUCCESS OF INDUSTRY IN THE U.S.

(By PETER DRUCKER)

DURING the past few years the American business system has been examined, probed and dissected as no other economic system has ever been. Several thousand handpicked experts —business men, technicians, educators, workers and union officials, from every country of Western Europe and from almost every industry—have been touring the United States since 1949 to find out for themselves what influences American productivity. Organised in some 200 "productivity teams" under the Marshall Plan, and financed by funds which the European Governments provided, they have looked at foundries, textile mills, business schools, breweries, printing companies and labour unions. Most of them have stayed long enough to get more than a tourist's view.

Officially the programme goes by the name of "Technical Assistance" and the purpose is to find American techniques for European use. The bias toward techniques is emphasised by the selection of teams who normally come either from one industry, locomotive building, for instance, or from one technical specialty, such as cost accounting or industrial engineering. The teams arrive in the United States expecting to find the cause of American productivity in techniques and processes. Yet, I know of no team which did not speedily discover for itself that techniques are not the really important thing, and certainly are not the real cause of productivity.

"Productivity is an attitude of mind," the report of the team from the British letterpress printing industry stated; and, in one way or another, every team has said the same. Attitude, social organisation and moral value, these, the visiting experts report, underlie and explain the industrial achievement of the United States.

Even in such a technical area as the use of machinery, visitors see attitudes rather than the abundance of capital, the lack of war-time destruction, or some other material factor as the main cause for such achievement. A British team investigating the making of brushes, for instance, remarks that machinery is being used successfully in the United States in operations normally regarded in British practice as unsuitable for mechanisation.

Five things, in particular, impress the visitors as being fundamental, and at the same time as presenting the greatest contrast to Europe.

Discovery of Management

"The United States has made a major discovery—that it is management which makes the wheels go round," a successful French manufacturer said. "We are still largely organised on the belief that all business needs is a supply of capital after which it will run itself. In the United States, basic decisions are made by men who knew the business from the ground up, who consider it their main interest in life, and who got their jobs because of their competence. As a result, business attracts the best minds in the country, and that, more than anything else, explains how Americans got where they are to-day."

Every report stresses the central importance of a management, responsible for the success of the business, familiar with it and chosen for competence. The most glowing tribute to management and to its importance came from a group of British labour leaders: "We are convinced that it is efficient management who set the pace of productivity in American industry. American trades union officials can rely on management to be sufficiently progressive." Every trade unionist on the teams comments upon the confidence in management's competence, fairness and integrity that he finds among American workers and trade union leaders.

Productivity as a Social Principle

Every team believes that its own country must raise productivity to survive. Yet most of the visitors, whether labour or management men, still tend to look upon increased productivity as primarily a way to increase individual business profits. Visitors find that Americans look upon profits not as the rationale of increased productivity, but as the reward for the social benefits such productivity brings: higher wages, cheaper prices and more goods for the consumer. They report that managements of profitable companies, hardly mention profits when they discuss productivity, but stress the duty of business to increase productivity, even if no immediate increase in profits results. The visitors also find that American industry not only talks this way but acts it too. They find it taken for granted in labour negotiations that an increase in productivity justifies a corresponding increase in wages. They find in companies, large and small, that management salaries and business take into account performance, efficiency and productivity rather than profit figures alone. They find elaborate attempts, such as the suggestion system which they mention over and over again, to reward individual workers for contributions to productive efficiency. It is to this concept of productivity that visitors attribute the basic American attitude toward technological progress. Precisely because, in the United States, increased productivity is a social, if not a moral, responsibility, American industry and American labour —so visitors report—believe in, and accept, technological change rather than resist it.

Attitude Towards the Market

Visitors cannot be blamed for believing, when they reach the United States, what has been told them: that the major factor in the American distributive system is the continental span of the market. Few productivity teams have departed without having learned better. Of course, the United States is a market larger in territory, and in numbers, than any country of Western Europe, but it is not the width of the market which constitutes the real difference; France, Italy, Germany, and England each offers a larger market than that actually covered by the majority of American businesses with their concentration on one region or area. It is in depth that the American market differs basically from other concepts and business practice—a qualitative rather than a quantitative difference.

One example—and it is given again and again by visitors—is the structure of the American automobile market in which last year's car will compete directly with a new model. Another is the television market. What impressed one team the most was a comparison between a mail-order catalogue and that of an expensive sporting goods store definitely in the luxury class. They found that practically every kind of merchandise offered by the latter store also was to be found in the mail-order catalogue. "That 'wealth' is not just an economic term, but a social one in the United States, that it means that there are the same things for the rich and for the poor, this none of us understood—and it is important." Closely connected with the concept of the mass market is the American attitude toward the capacity of the market. "We put our stress on the actually existing market which we tend to take for granted. You look for the potential market," is one way some of the visiting teams put it. "We consider it our job to fill existing demands, you in the United States go out to create demands."

Basically the visitors' usual concept is that of a given, static market. Hence a new product is seen as cutting into the markets of all the existing products; competition as taking away sales. The American concept, so visitors report, is that the market is indefinitely expandable; new products create their own demand; competition broadens the market for all. It is to this that visitors attribute, for instance, emphasis on research: technical, market, product, the pricing policy of progressive companies who often price a new product according to present cost or immediate sales, or the willingness to develop a new product first and to consider its market later. All of these visitors consider significant factors in America's high level of productivity.

Diversity and Experimentation

Practically every team starts its tour by asking: "What is the standard American cost-accounting system?" "Does the typical labour contract give the union a voice in the setting of production standards?" "What is the typical American pricing policy?" "What is the fore-

EXPORTS OF INDIAN COTTON TEXTILES

REMOVAL OF EXPORT DUTY ON COARSE AND MEDIUM CLOTH URGED

THE deliberations of the Export Advisory Council which is meeting in New Delhi to-day are being watched with considerable interest by exporters of cotton textiles. This is only to be expected, considering the changed and rapidly changing conditions in the world trade in cotton textiles. Many sterling area countries have decided to relax restrictions on imports of piecegoods from Japan. Burma is reported to have decided to terminate, with effect from 30th September next, the system of preferential system now enjoyed by India (and also the U.K. and Pakistan), and the Indo-Burmese Trade Agreement. Further, Japan is making renewed efforts to regain the predominant position which it once held in the international cotton textile market. This development must affect India's competitive position abroad. So must the Supreme Court's recent decision that the last purchase by the exporter of goods for the purpose of exporting comes under the purview of the sales tax law.

In view of these factors, much concern is felt in export circles over the prospects for cotton textile exports. The prospects of large and substantial trade, it is felt, seem to be rather gloomy. To quote one report: "The export trade in cotton piecegoods which forms one of the biggest items of foreign trade, is out for a bad time and there does not seem to be any hope of India completing even two-thirds of the export target of 1,000 million yards during the current (1953) year." These apprehensions have lent additional support to the plea for the abolition of the remaining 10 per cent. export duty on coarse and medium cloth, as also for the adoption of measures designed to step up exports of cloth. The All-India Exporters' Association has already submitted a representation to the Government of India to this effect.

A Justifiable Plea Indeed

That the plea for the abolition of export duty is quite justified will be evident from the low level of exports at present. The quantity of cloth actually exported during the first four months of this year is not more than 200 million yards, which, on the basis of the 1,000 million yards target, should have been at least 330 million yards. Here, again, it must be noted that the quantity of 200 million yards includes shipment which represents past commitments as well, particularly some business booked against ready goods for immediate shipment. The following table indicates the trend of exports in the past four months of the current year, as compared with that in the corresponding months of 1952 and 1951:

(In million yards)

	1951	1952	1953
January	120.15	30.7	43.4
February	160.05	29.4	38.6
March	156.96	22.4	63.9
April	74.96	26.0	62.5

It is thus seen that exports of cloth during the first four months of this year compare favourably with those a year before, but, as compared to exports in 1951, they reveal a substantial decline. The figures relating to exports during April, 1953, and the first six days of the current month—India is reported to have exported over 14 million yards during the period—might lead one to think that exports of cloth have picked up and that the upward trend would be maintained in the coming months. But such a view would not be fully correct. For the little improvement that is now noticeable is due to the "seasonal and spasmodic" demand from certain destinations, which may not endure for a long time.

Be that as it may, of the total of 200 million yards of cotton piecegoods exported during the first four months of this year, coarse cloth accounts for the major portion, the quantity actually exported being about 82.2 million yards. Next in importance come the medium varieties, with 66.3 million yards to their credit. Fine cloth accounts for 46.5 million yards and superfine cloth for 3.5 million yards. In view of the predominance of coarse and medium varieties in the cloth export trade of India and of the considerations of maintaining adequate supplies of these varieties for domestic consumption, the Government of India may be inclined to feel that the plea for the complete abolition of export duty is not justified. But the abolition of export duty will not result in shrinkage in supplies available for domestic consumption, inasmuch as the trend of cloth (and also yarn) output in recent months has been highly encouraging, as will be seen from the figures of production (provisional) given below:

	Cloth (Million yards)		*Yarn* (Million lbs.)	
	1953	1952	1953	1952
January ...	416	345	131	114
February ...	378	341	115	111
March ...	400	346	119	112
April ...	419	363	122	116
Total ...	1,613	1,395	487	453

The foregoing figures reveal that the production of mill-made cloth in April, 1953, amounted to as much as 419 million yards, which compares favourably with 400 million yards in the previous month and 346 million yards a year before. The aggregate production during the first four months of 1953 was 1,613 million yards, as against 1,395 million yards during the same period in 1952. The average monthly output thus works out to 403 million yards, as compared with 349 million yards last year. On this basis, the production for the whole of 1953 may be estimated at 4,836 million yards, the figure for 1952 being 4,609 million yards.

Improvement Likely to Persist

The improvement in the output of cotton textiles in recent months has been the cumulative effect of a number of favourable factors, such as comfortable raw cotton supply position, improved labour situation, better transport facilities, and relaxations of restrictions on distribution and exports. The improvement may be expected to persist in the coming months too. The Government of India also seems to share this optimism, as witness its recent decision to decontrol, with effect from the 1st inst., two more varieties of cloth, namely, *sucis* and shirtings.

The upward trend in cloth output noted above, however, has not been accompanied by any perceptible rise in offtake in local and export markets. The little improvement that is now noticeable is only a normal feature on the eve of the monsoon. When the monsoon sets in, the offtake will be only at a moderate level, and if the rise in output is well maintained, a time will come when the cotton mills and the traders will be faced, once again, with the grim problem of heavy stocks, entailing locking up of considerable amount of finance. If such a situation is to be prevented, the mills will be compelled to curtail output. This is by no means a desirable solution of the problem. The need for stimulating domestic consumption and exports cannot, therefore, be overemphasised. As we have ere now pointed cut, domestic consumption can be stepped up by lowering the price, which is possible only if the many tax burdens on the industry are reduced. As regards exports, the Government should examine, in a dispassionate manner, the case for the removal of the export duty on coarse and medium cloth and for the rebate of the import duty of As. 2 per lb. on cotton used in the manufacture of fine and superfine cloth meant for export. A favourable decision on these two issues will undoubtedly pave the way for a larger export trade in textiles.

Have the pulse of the
COTTON WORLD
in your hand by subscribing to the American "Weekly"
THE COTTON TRADE JOURNAL
This international "weekly" serves the cotton trade proficiently and, as a mirror, reflects the cotton situation in the United States and other cotton-producing and consuming countries.
A year's sea-mail subscription (Rs. 28-12 only) or air-freight subscription (Rs. 100-7 only) includes an Annual Textile Number, reporting developments and progress in the textile industry, and an International Edition of over 200 beautifully illustrated pages, giving a resumé of conditions in each of 22 countries as they affect cotton and world trade in general. This International Edition, otherwise, by itself costs $3.00 or Rs. 14-6-0 plus postage.
Substantial reductions for 2-year and 3-year subscriptions.

LONDON WOOL TOPS FUTURES MARKET

The London wool tops futures market—the first of its kind to be organised in Britain—opened for trading at the headquarters of the London Wool Terminal Markets Association (L.W.T.M.A.) on 29th April, 1953. The Bank of England has announced special exchange control arrangements for participants to facilitate operations on an international scale. Futures market contracts will be based on Bradford-style 64s Merino tops, noble combed from Australian wool, and the minimum contract will be for 5,000 lbs., with larger dealings in multiples of that weight. Business is being done by open outcry on the floor of the exchange and the call-over takes place thrice daily. Quotations are in pence per lb. and quotations on opening go as far ahead as September of next year, the first month against which deliveries may be made being September, 1953. Although the market is centred in London, all appraisals, deliveries and warehousing will be dealt with by the Bradford offices of L.W.T.M.A.

Wool tops represent a big proportion of Britain's exports, under the heading of "woollen and worsted yarns and manufactures," over a quarter for the first three months of this year. During that period, the value of Britain's wool tops exports was £8,724,000. The biggest customer was Canada, which received 3,304,000 lbs. of wool tops worth £1,672,000. India came second, receiving 2,177,000 lbs. of the value of £983,000.

ELECTRONIC SPINNING MULE

An important step has been taken in the evolution of textile spinning machinery with the development of an electronic spinning mule by research workers at the University of Leeds. Little or no important change has been made in the basic design of the spinning mule for nearly a century, but recent discoveries have made it possible to design and build a practical machine which controls the essential movements of the mule by electronic means.

Research workers designed and built the electronic spinning mule mainly to assist them in the various aspects of spinning research rather than to develop a completely new machine for commercial use. Results were so encouraging that the heads of textile organisations and trade associations expressed their approval and a large-scale model is now being built by a textile machinery firm for trial in a Yorkshire mill.

The planning and building of the machine represents three years of work by a team of experts at the university, led by Dr. N. H. Chamberlain, Senior Lecturer in Rayon Technology.

EXPORT OF COTTON SEWING THREAD

Quotas for the export of cotton sewing thread for the licensing period July-December, 1953, have been announced by the Joint Chief Controller of Exports, Bombay. Accordingly, the new-comer exporters who had to their credit either pre-basic or post-basic year exports will be given quotas equal to 28 per cent. of their exports. New-comer dealers who are in the internal distribution trade and whose turnover is Rs. 5 lakhs and over will be given a quota equivalent to 0.75 per cent. of their actual turnover, subject to a maximum of 5,000 lbs. For purposes of conversion of turnover on weight basis, Rs. 5 will be taken as equivalent to 1 lb. of sewing thread. The new-comer manufacturers will be eligible to receive licences up to 3 per cent. of their actual production, subject to a maximum of 5,000 lbs.

INDIAN COTTON TEXTILES TO ITALIAN SOMALILAND

Italian Somaliland has evinced interest in the purchase of Indian cotton textiles—mostly in small quantities. If the Indian manufacturers and exporters wish to gain the markets in Somaliland, they should be ready to give the importers special facilities and accept orders for small quantities at competitive prices comparable with the wholesale prices for such supplies on a large scale. The fact that the importers often do deal in sundries, alongside their main item of import, namely, textiles, may also be noted. Owing to the want of direct shipping facilities from India to Mogadicio, the importers there get their supplies of Indian textile goods mostly through the Aden markets, so that they are not in direct touch with the Indian manufacturers and exporters. A certain amount of propaganda for Indian goods in the markets of Italian Somaliland may enable the importers there to know of India's products.

What is claimed to be a new and revolutionary process for making wool which is unshrinkable has been announced by the Commonwealth Scientific and Industrial Research Organisation (C.S.I.R.O.). The process involves depositing a small amount of synthetic resin on the wool, "spot welding" wool fibres to one another and stabilising the fabric, thus preventing shrinkage caused by wear and washing.

The Government of India has decided to dispense with the condition of production of a certificate from the steamship company indicating the entry of the vessel outwards, at the time of submitting shipping documents for export of hard cotton waste. The other conditions, however, will remain unaltered.

FUTURE OF BRITISH RAW COTTON COMMISSION

EXPORTS OF TEXTILE MACHINERY

(From A Special Correspondent)

MANCHESTER, *12th May*

SPECULATION over the future of raw cotton buying in Britain has died down since the appointment of the Cotton Import Review Committee but is reviving as the closing stages of the investigation are reached. It is now only a matter of weeks before the report of the Committee is made, as it will be presented to the President of the Board of Trade and Minister of Materials before the Whitsuntide holiday.

MANCHESTER LETTER

One of the features of the first Hopkins Committee report was the fact that it was unanimous. That is not to say that differences of opinion did not arise during the discussions but the members, whatever their personal or official viewpoint, felt that it was in the interests of the trade as a whole that the final recommendations should be agreed by all.

On this occasion the prospects of general approval for the next step are not so promising. As the trade progresses steadily towards complete freedom for importation of the raw material, with the consequent liquidation of the Raw Cotton Commission in its present form, opposition to such moves must be anticipated from certain quarters, notably the trade union members of the Committee.

The representatives of the raw cotton merchants are naturally anxious to see a swift return to freer trading methods but the re-establishment of the Liverpool futures market in its pre-war form is generally regarded as well-nigh impossible in existing circumstances, chiefly because of the difficult national currency situation.

In any case, the complete abolition of the Raw Cotton Commission is unlikely to be put forward as a solution because it would be outside the terms of reference of the Committee. These were: "To consider whether any change would be desirable in the obligations and duties at present imposed on the Commission." The most that could be expected in this connection would be that a distant date might be fixed for the termination of the Commission's activities.

Problems of Stocks

Even if this was recommended, it is almost certain that some other organisation would have to be formed to carry on some of its duties. One of the main obstacles to progress is the large volume of stocks of cotton held by the Commission, amounting to about 1,000,000 bales of widely varying grades and qualities. Private merchants would find it very difficult to finance the transfer of these supplies at the same time as they are endeavouring to build up stocks for themselves.

The fact that the Commission has given three months' formal notice to end its cover agreement with contracting-out spinners has created some misunderstanding. It is merely a precautionary measure taken to safeguard itself pending any recommendations of the Review Committee. The Government is already pledged to provide some form of cover next season on the same lines as has been available this year. What the trade wants to know is whether this cover will be available again through the Commission's auspices or whether the next step is for the Government itself to begin to assume responsibilities of this kind.

Such an important move would involve a principle which might well cause repercussions in other industries. It would mean that the Government was prepared to risk losing or gaining money according to the fluctuations in world cotton prices, a matter on which the British taxpayer might have something to say.

A Firm Stand

After leaving unanswered for several months the many adverse comments and criticisms directed against the Yarn Spinners' Agreement, Mr. W. T. Winterbottom, President of the Association, was at special pains at the annual meeting to defend the organisation against its attackers. From his comments it appears that the Association has had quite a queue of other trade bodies proposing a number of amendments to the existing conditions of sale for yarns. All have returned empty-handed, although the spinners have given the requests consideration.

It is clear that there have been several organised attempts to persuade the Yarn Spinners' Association to make concessions in their minimum prices without in any way expecting individual firms to break the agreement. The importance of this attitude lies in the strength of purpose which has been displayed by the members and the leaders of the Association at a time when it must have been very tempting to consider easing conditions in order to obtain business.

However gratified he must be by the response from the rank and file of spinners, Mr. Winterbottom thought it wise to make an official pronouncement on the aims and aspirations of the Association. "It is not a closed shop into which spinners have been forced by the action of a powerful minority," he declared. "Our operating cost prices are not, and never have been, set at such a level as to provide an easy living to the least efficient of our members. They are intended solely to prevent prices from falling to such a level that spinners are unable to maintain their capital intact."

At this point Mr. Winterbottom challenged the critics of minimum prices to put their money into the spinning industry to support their apparent contention that the operating cost prices now in force contain "fat profits" for the mills. On the allegation that savings in costs resulting from greater efficiency are not passed on to the consumer but are retained by spinners as higher profits, Mr. Winterbottom said that full investigations into spinning costs over the whole industry had been made in 1948 and in 1950.

He announced that it was the Association's intention, if possible, to hold a cost enquiry every two years in order to keep its basic information up to date. The reason why no survey was taken last year was because any information obtained would have been misleading, owing to the prevalence of short-time working.

Turning to re-equipment, Mr. Winterbottom repeated the statement from the textile machinists that the cotton industry in Britain has progressed further with re-equipment since the war in relation to its size than any cotton industry in Europe. Lancashire has bought 2,500,000 ring spindles in this period and, according to the machinery makers, year by year the general trend of re-equipment is rising and no slackening of this effort has been observed during the past difficult 12 months.

Purchases of Plant

It seems that the recent peak of activity in exports of British textile machinery has for the moment been passed. In the first quarter of the current year foreign trade has fallen back from the high levels achieved in 1952, both in volume and earnings. To the end of March exports amounted to 471,511 cwts., valued at £11,281,645, against 568,120 cwts. worth £12,448,128 in the same period last year.

India and Pakistan remain the chief buyers of British-made textile plant. India has absorbed 99,337 cwts. in the quarter, an increase of more than 20,000 cwts. compared with last year, while Pakistan has taken 51,805 cwts., a slight fall on 1952. Brazil is the only other big purchaser, with 50,208 cwts., an increase of 10,000 cwts.

Shipments to Italy have fallen from over 66,000 cwts. last year to below 30,000 cwts., but a large number of countries in Europe and the Middle East have continued to buy fair quantities of machinery from Britain. Of some interest in view of political developments is the fact that China has raised its imports from 3,430 cwts. in 1952 to 8,547 cwts. this year.

The main fall in textile machinery shipments has been in spinning plant, which accounts for 269,883 cwts. compared with 320,822 cwts. last year. Exports of looms and other weaving machinery have dropped from 88,391 cwts. to 77,045 cwts.

While shipments of textile plant abroad have declined, so have imports of foreign machines for British mills. In the first quarter, arrivals aggregated 28,175 cwts., valued at £1,219,239 against 57,543 cwts. worth £2,429,448 last year. The volume of imported looms for weaving has fallen from 13,692 cwts. to 4,258 cwts. and hosiery and other knitting machines have accounted for 9,388 cwts. against 19,039 cwts.

The main suppliers of textile plant remain the United States and Switzerland, although in each case shipments have been substantially reduced. Those from America have been halved at 12,114 cwts., while machines from Switzerland represent only one-third of the 1952 level at 4,460 cwts.—*All Rights Reserved.*

INTERNATIONAL TRADE IN COTTON

GROWING INFLUENCE OF PRICE FACTOR

AMONG the factors which influence the international movement in cotton, mention must be made particularly of the price of cotton, exchange difficulties, and the rate of consumption in the chief consuming countries. During periods of acute shortage, the price factor does not exercise considerable influence over the imports of cotton. During the current cotton season, however, the price factor has exercised a relatively greater influence on the volume and distribution of world trade, thanks to the better supply conditions and the somewhat depressed state of the cotton textile industry. Commenting on these conditions, *Cotton*, the journal of the International Cotton Advisory Committee, says that the buying policy of importing countries was "largely hand-to-mouth and exports were less than at any time in the last three seasons." The journal estimates that cotton shipments, in the 1952-53 season, will be less than the 11.1 million bales exported last season.

The decline in cotton exports must be viewed against the background of the larger availability of dollars in the importing countries and the special efforts made by the Mutual Security Agency and the Export-Import Bank, to provide dollar exchange for cotton imports, in order to realise that the price factor has assumed a new significance in relation to international trade in cotton. Emphasising the importance of the price factor, the journal says:

"The growing influence of price and the decline in importance of exchange factors are further exemplified by the fact that exports from Mexico have actually increased this season. During the early months of the season, cotton prices in Mexico were quoted at a discount on comparable United States' cottons.

"Finally, price has been the fundamental reason why exports from Brazil have been only a very small fraction of the normal volume.

"In spite of the relatively better trade position in other cotton-growing countries, competition has been keen due to the much larger export availability and the caution displayed by foreign buyers. Some difficulties have been experienced, particularly in the earlier part of the season, which have had important repercussions on trade technique. Greater emphasis has been placed on sales promotion; delegations or representatives from most of the major exporting countries have been actively campaigning in importing countries in recent months. Allied to this development, a much greater proportion of total cotton sales and purchases has been negotiated via Government or official agencies, particularly in those countries where the price supporting agencies had acquired large stocks on a falling market."

Since the price factor has not been as favourable to the cotton producing countries as in the past, they have been compelled to conclude barter agreements with the cotton consuming countries. The journal notes that the outstanding feature of recent international dealings in raw cotton has been the increase in barter trade. Many factors have contributed to this development, but very often it is the corollary of the difficulties being encountered in world markets for cotton and cotton derivatives. Thus, Pakistan and Japan have recently concluded a trade arrangement which seeks to relate cotton exports from the former with textile exports from the latter. It is reported that 530,000 bales of cotton will be involved. Turkey and Italy have also concluded an agreement based on this principal. Sometimes barter has been used by cotton exporting countries to supplement deficiences in domestic food production. For instance, Egypt has exported cotton to the U.S.S.R. in recent years in return for wheat. In some cases, barter has provided the means of circumventing difficulties arising out of unfavourable price differentials. This was particularly the case in the recent aircraft/cotton agreement between the United Kingdom and Brazil. Other similar agreements are reported to be under consideration.

Fundamentally, however, barter trade in cotton, according to the journal, nas been only part of a trend towards bilateralism in world trade as a whole. A spate of general trade agreements has been concluded in which cotton (and textiles) is included among the respective commodity schedules. The inevitable result has been, of course, a change in the pattern of world trade—to cite only a few examples, a reduced trade in the United States cotton, an increase in European imports of Egyptian cotton and a larger import of Pakistan cotton into Japan.

The broad conclusions which emerge from the journal's survey of the price-trends in the world's cotton markets, are:

1. the first half of the 1952-53 season was a repetition of the last half of 1951-52 but with this important difference, the trend to lower prices was accelerated in the United States and at one time, prices in this market actually fell momentarily under the loan rate;

2. with the major exceptions of India, Mexico and Brazil, cotton prices are now lower than immediately preceding the outbreak of war in Korea;

3. prices of most American type cottons outside the United States are now at parity with or at a discount on the United States equivalent grades and staples;

4. cotton prices in general are now much more competitive and a truer reflection of their relative spinning values; and

5. cotton prices have remained fairly stable in recent weeks with a slight firming tendency in some markets.

The fall in cotton prices has induced the Governments of the cotton producing countries to extend support to cotton, to take over the cotton meant for export, or to fix minimum prices for exportable varieties. Also export taxes, which in the earlier years of high cotton prices did not bear heavily on cotton exporters, have turned out to be a real burden, so that the concerned Governments have either abolished them or reduced their rate. The immediate outlook for cotton prices, according to the journal, will be influenced principally by the progress recorded in new crop production in the Northern Hemisphere, by the volume of export trade and by the international situation. The journal, therefore, concludes that it "would seem that the tenor of world markets is still bearish and prices should not move far away from present values."

REFINING COTTONSEED OIL

A simple process for refining crude cottonseed oil has been worked out at the National Chemical Laboratory, Poona. India probably ranks next to the U.S.A., Russia and China as regards cottonseed production. Little attention is, however, being paid to fully utilise cottonseed and its products, particularly the oil. At present only 5 per cent. of the country's annual production of cottonseed is consumed for the production of oil. One of the main reasons for the lack of interest in cottonseed processing in India is that, unlike most other edible oils like groundnut, coconut, sesame, or mustard, crude cottonseed oil cannot be used for edible purposes without refining. The crude oil is too dark in colour and is not amenable to ordinary methods of refining.

The process developed at the National Chemical Laboratory consists in treating the crude oil with a 15 per cent. solution of caustic soda sufficient to neutralise the free acidity of the oil, and provide half per cent. excess alkali. After settling overnight the lower aqueous layer is removed and the oil washed with hot water. The oil is then decolourised with various decolourising agents. Activated carbon prepared at the National Chemical Laboratory was found very suitable for the purpose.

SUDAN COTTON

The following figures, issued by the Department of Statistics, Sudan Government, indicate the exports of raw cotton during 1952 to various destinations:

Country of destination	*Cotton exports in 1952* Tons
U.K.	36,442
India	5,672
France	4,624
Italy	1,969
Japan	1,349
Germany	1,339
Hong Kong	1,129
Netherlands	107
Others	2,319
Total ...	54,950

PAKISTAN COTTON

Exports from Karachi upto 30th April are returned at 1,157,725 bales as compared with 932,704 bales last year. At the current level of prices for Pakistan cotton, it is generally believed that there is not much room for recession. Out of an estimated exportable surplus of 1,700,000 bales this season, over 1,150,000 bales have already been exported, while an estimated 100,000 bales have been earmarked for export against sales. This leaves a balance of 450,000 bales still to be sold for export during the next five months, when new crop would be available. The position of Pakistan cotton has also been strengthened as a result of the recent bilateral trade agreements with Japan and France.

IMPORTS OF U.S. COTTON

EXTENSION OF SHIPMENT PERIOD OPPOSED

AN important question, which has been engaging the attention of cotton traders in Bombay, is the one that relates to the shipment period for importing American cotton. A section of the trade is of the opinion that there is no need to extend this period beyond the date already fixed, namely, 30th June, 1953. This section feels strongly that any extension of the period would harm the interests of the Indian cotton producer.

The Government of India permitted the import of 900,000 bales of U.S. cotton of 500 lbs. each during the 1951-52 season. Of this quantity about 780,000 bales, it is stated, arrived in India between the date on which this permission for import was granted and the end of April, 1953. Thus, about 120,000 bales are still to be imported. The question which now arises is whether it would be necessary to extend the shipment period beyond 30th June, 1953, in order to allow the balance to be imported.

The trade feels that it is not necessary to extend this period. The reasons advanced in support of the view are many. In the first place, it is pointed out that the end of this season will see a low level of carry-over stocks of Indian cotton. Thus, Indian cotton stocks, as on 31st August, 1953, will, according to current estimates, aggregate only 1.3 million bales as compared with 1.9 million bales at the end of the 1951-52 season. Although the arrival of American cotton would help the country to tide over the shortage of cotton during the impending critical months, especially those intervening between the last few days of the current season and the beginning of the new crop movement, it is feared that the arrival of American cotton would tend to depress the prices of Indian cotton. Secondly, the extension of the period, it is pointed out, would entail higher carrying charges and therefore a larger drain on dollar exchange resources. Finally, the mills are now in a fairly comfortable position, as contrasted with the financial difficulties in which they found themselves a year ago, so that they would be both willing and able to lift cotton, if it arrives before June, 1953. If the period, on the other hand, is extended to a later date, it is difficult to say whether the mills will continue to evince interest in the imported cotton.

These considerations have, therefore, prompted certain sections of traders to suggest that it would be inadvisable to extend the period of shipment beyond June, 1953. There is no doubt that if the arrival of large quantities of American cotton synchronises with the new crop movement in the country, it will depress the prices of Indian cotton. But it is also true, at the same time, that the imported cotton—provided prices are reasonable—will be a welcome addition to the depleted stocks. The Government's decision on this question will therefore be awaited with interest.

COTTONSEED (CONTROL) ORDER

The Government of India has imposed restrictions on the exports of cottonseed from the Belgaum and Bijapur Districts of Bombay State, by extending the Cottonseed (Control) Order, 1952, to these districts. The Order has also been amended so as to require every dealer in cottonseed and every owner of a cotton ginning factory in the controlled districts, to furnish such information regarding stocks of cottonseed as may be required by the District Collectors.

Bombay Cotton Annual 1951-52. Published by the East India Cotton Association Ltd., Bombay. Price: Rs. 4.

This annual publication of the East India Cotton Association is, as the short explanatory note on the title page points out, an authoritative compendium on all matters relating to every branch of the cotton trade. It contains statistical tables relating to crops, exports, imports, prices, stocks, and consumption of cotton. The publication, which is designed to meet the requirements of all those who are interested in cotton, both Indian and foreign, is an invaluable—one might say, indispensable—reference book on the subject.

The Government estimate of the 1953 AR Mwanza crop is 25,000 bales as against private estimates of 35,000 bales. Marketing of the Mwanza crop is not expected to commence until August and the cotton will be available for export in October. The method of selling has not been announced so far, but it is believed that Mwanza cotton will be sold by auctions at Kampala.

NATIONAL RAYON CORPORATION LIMITED

MR. KASTURBHAI LALBHAI'S ADDRESS AT ANNUAL MEETING

PROSPECTS FOR RAYON INDUSTRY BRIGHT

BRIGHT prospects for the rayon industry in India were held out by Mr. Kasturbhai Lalbhai, in the course of his presidential address at the Sixth Annual General Meeting of the National Rayon Corporation, Ltd., held in Bombay on the 21st inst. There was, Mr. Kasturbhai maintained, sufficient scope for either the expansion of the three existing units or the establishment of new ones, in order to meet the present-day requirements of rayon yarn in India. He commended the Government of India's import policy in respect of both yarn and raw materials. In his opinion, the policy had not only stabilised the art silk yarn industry but also brought about an understanding between the consumers and the producers. Mr. Kasturbhai also held out the hope that the ordinary shareholders who had waited so long and so patiently could now expect a steady return on their capital. "I have no doubt," to quote him, "that the investors who made possible the starting of this large-scale venture will, in course of time, be amply rewarded for their confidence in this industry and its management."

The following is the full text of Mr. Kasturbhai Lalbhai's speech at the meeting:

"The Directors' sixth annual report and the audited statement of accounts for the last year have been in your hands for some time now and I believe that you will have no objection to my taking them as read.

"Before reviewing the working of the Company, I wish to refer to the sad demise of Mr. Walchand Hirachand, a Founder-Director of the Company, after prolonged illness at Sidhpur. Mr. Walchand was an outstanding industrialist of great courage and foresight, and his contribution in the industrial development of the country is not a small one. Your Board of Directors have recorded their appreciation of his services and conveyed their sympathies to the members of his family.

Provision for Taxation

"I do not think it necessary to analyse the different items of the statement of accounts, as corresponding figures for the preceding year have been given side by side for comparison. The provision of Rs. 54,833-2-0 made in the profit and loss account for taxation requires an explanation. As you may be aware, the Company, being a new concern, will not be called upon to pay income-tax until depreciation, according to the Income-tax Act, has been provided for. But this amount has been provided for against the income accrued to the Company during the last three years by way of interest on investments, call moneys, etc.

"During the year under report, the Company constructed a new club house and made additions to staff and labour quarters, and has also extended the factory building. The total capital expenditure incurred on this account has not been shown in the balance-sheet, as the bills of the contractors are being scrutinised by the architects.

"You will notice a large stock of finished yarn at the end of the year in the balance-sheet. This has been largely due to the paucity of demand in December. Since then, however, conditions have improved and I am glad to inform you that the stocks have been cleared.

Stabilisation of Yarn Prices

"The import policy followed by the Government of India has stabilised the prices of art silk yarn and liquidated the large overstocked position both in our concern and in the country. I am confident that the policy that is likely to be followed by the Government in the years to come will be permitting of imports to the extent that local producers cannot produce. Government have also decided to stop the imports of lower grades of yarn, such as III, IV, rejected, etc., in 120 and 150 deniers.

"The policy followed by the Government in permitting the imports of raw materials required by this industry, such as wood-pulp, rayon grade caustic soda and sulphur, is commendable, because the industry can procure its requirements without any difficulty.

"Government's solicitude in stabilising the art silk yarn industry in the country has been responsible also in bringing about an understanding between the consumers and the producers.

"We started with the smallest economic unit we could for the rayon yarn production. In order to bring down the overheads, your Board of Directors decided to expand the productive capacity of the plant and have placed orders for additional equipment which will be erected and will be in production before the end of March, 1954. This is likely to increase the productive capacity of the Company by about 25 per cent. The additional finance needed for this expansion will be found from the resources of the Company.

"One important event of the year was the publication of the Five-year Plan by the Government of India. It is encouraging to note that the expansion of the rayon industry has found a place in the first Five-year Plan of the nation. I agree with the viewpoint of the Planning Commission that it is necessary to start the pulp industry in the country at the earliest possible moment. This, however, requires very large finance and, therefore, until the financial position in the country eases, it is doubtful whether this plant can be installed.

Scope for Expansion

"At present, there are two units in the country which are producing viscose rayon—ours and Travancore Rayon. I understand that arrangements have been agreed to whereby the acetate rayon plant in the State of Hyderabad is likely to be started in the near future. The production of these plants will be about 35 per cent. to 40 per cent. of the requirements of the country. Therefore, there is sufficient scope for either expansion of these three units or establishing new ones in order to meet the present-day requirements of rayon yarn in India.

"The policy followed by the Government of India in making liberal allowance for depreciation for the new industries, as also in making them not liable for tax upto 6 per cent. return on the invested capital, has been a real help in the case of concerns like ours. A plant like ours is also exempt from starting provident fund for workers for a period of three years from the day of commencement of production. These have gone a long way towards encouraging establishment of large concerns for the production of items hitherto being imported. I wish the Government of Bombay will show the same solicitude for the establishment and promotion of new industries as the Government of India has done. The sales tax has been militating against the industry and representations were made to the Government of Bombay, in view of the infancy of this industry, to exempt the Company's sales from the payment of the tax at least during the first few years. The Government of Bombay have not responded to our appeal. We hope that we shall be able to convince them of the justness of the cause and get relief in the matter of sales tax.

"A reference has been made in the Directors' Report that Skenandoa Rayon Corporation have opted out for receiving cash for the moneys due to them for the services rendered. If the income-tax regulations had been less stringent, we would have succeeded in persuading them to take shares of the Company, instead of cash, as they ultimately decided. If they had opted to take shares, instead of cash, practically a large portion of that amount would have had to be paid out in the form of tax to the Government of India. This anomaly requires to be amended.

Optimism

"I am happy to state that the results of the last year's working have made it possible for the Company to wipe out all the arrears of dividend on preference shares, including those for the year 1952. Without being unduly optimistic and barring unforeseen circumstances, I believe that the ordinary shareholders who have waited so long and patiently can now expect a steady return on their capital. Those who very glibly are apt to to underrate the role of private enterprise in this country forget that large-scale industries of this character are only made possible by the sacrifice which investors are prepared to make by way of forgoing a return on their capital for a number of years till the enterprise makes good. It is, therefore, but natural that such risk capital should earn its deserved reward in the long run and I have no doubt that investors who made possible the starting of this large-scale venture will, in course of time, be amply rewarded for their confidence in this industry and its management.

"I am sure I am voicing the feelings of every one of you when I say that the results obtained for the working of this year have been largely due to the loyalty and ability of the workers and the technical and non-technical staff of the Company. It is a matter of no small pride to the management that we have been able successfully to run a chemical plant of this nature entirely by Indian personnel with a very little assistance from foreign technicians, except during the initial stages which did not last for more than 8 to 10 weeks.

"With these words, I commend the report and the statement of accounts for adoption."

WHY ARE SUGAR PRICES HIGH?

CONTROL OVER "GUR" NOT FEASIBLE

A REFERENCE to the Government of India's warning to the sugar industry that if the prices of sugar continued to be high, the Government would be constrained to take such steps as it might deem necessary to maintain prices at a reasonable level, was made in these columns last week. Soon after we went to press, the Indian Sugar Mills' Association, Calcutta, came out with a statement to the Press clarifying the position. The Association refuted the charge that the hoarding tendency on the part of the sugar industry had brought about scarcity in sugar supplies and spurt in prices lately. In support of this contention, it made a few interesting observations on fluctuation in sugar prices which are reproduced below:

"Sales and despatches of sugar by factories during the last five months have been unprecedented in the history of the sugar industry. There has been no case of mills wilfully withholding sales and despatches. . . . In the Eastern and Southern Indian markets, the prices (of sugar) had increased by about Re. 1-4 per maund, but they have started going down and are now only about ten to twelve annas higher than those prevailing a month back. In other areas also, prices have been declining. It would be appreciated that some amount of fluctuation is inevitable in the price of a decontrolled commodity."

Proceeding, the Association sought to impress upon the fact that there need be no apprehension in the minds of consumers about the availability of sugar, as there was enough sugar to meet the requirements of the country. The Association has issued, we are told, a circular to factories urging them to make the utmost efforts to step up sales and despatches. This is indeed reassuring.

What then are the factors responsible for the high prices of sugar still prevailing, despite the comfortable supply position, as was indicated last week? The Association attributes the rise to four causes and these are: (1) Inevitability of certain amount of fluctuation in prices of a decontrolled commodity such as sugar; (2) smuggling to neighbouring regions (evidently Pakistan); (3) rigidity of wagon allotments which stand in the way of quick relief to areas where prices start going up; and (4) advance in prices of *gur* (and *khandsari*), the sugar substitute. The Association accordingly feels that, if smuggling were prevented, wagon facilities improved, and prices of *gur* (and *khandsari*) kept in check, there will be no possibility of any rise in sugar prices.

Effect of Higher Gur Prices

Few would dispute these reasons put forward by the Association for the recent increase in prices of sugar. It is no doubt true that the price of *gur* has a close relationship to the prices of agricultural products and, consequently, it depends more upon the relative price levels of staple crops such as rice, wheat, etc., than those on sugar. But, notwithstanding this, it must be admitted that, at certain level of prices, sugar and *gur* are substitutes for each other. Thus, when the price of *gur* rises too high relatively to that of sugar, then sugar is likely to be substituted for *gur* over a certain sector of the demand and the sugar price may, therefore, tend to go up. As the Association has pointed out, increase in *gur* price has a psychological and sympathetic effect on price of sugar.

This is precisely what has happened recently. *Gur* prices in all parts of India, particularly in the South, have been moving up. Thus, the price of *gur* is now quoted at Rs. 18 to Rs. 19 per maund—it is quoted still higher at Rs. 18 to Rs. 22-8 per maund in Madras and Rs. 20-8 to Rs. 27 in Bombay—as against Rs. 12 to Rs. 12-8 a month before. The increase in *gur* prices has been due to depletion of stocks, on the one hand, and good enquiries from importing countries, on the other, not to speak of expectation of better prices based on apprehensions of a lower output of *gur* during the remaining part of the current season. Arrivals in most of the markets have either stopped altogether or are only nominal. Stock movements are poor, owing to railway booking difficulties.

The rise in *gur* prices is certainly not desirable, inasmuch as it tends aversely to affect sugar production. For the cane cultivator finds it more profitable to convert cane into *gur*, instead of supplying it to the factory. This tendency may be illustrated thus: Assuming that 10 maunds of cane would yield, on an average, one maund of *gur* or sugar, the grower of cane would have before him two alternatives, of either selling the cane to a sugar factory at the control price of Re. 1-5 per maund or converting it into *gur*. If he decides in favour of the first alternative, his 10 maunds of cane would fetch him a return of (Re. 1-5 x 10) Rs. 13-2 only. But if he decides to convert his 10 maunds of cane into *gur*, then, at the current market quotations, his return on the one maund of *gur* will be Rs. 18. From this is to be deducted the cost of manufacturing *gur*, which is about Rs. 2-10 per maund. His net return will thus be Rs. 15-6, which is Rs. 2-4 more than what he gets by selling the cane to the factory. In the circumstances, the grower is bound to manufacture *gur*, thereby diverting supplies of cane from sugar. In the event, factories would have to pay either a higher rate for cane or go without it. If this tendency were to persist, not only would sugar production be reduced but prices of sugar would also go up.

Sugar Prices to be Reduced

If, therefore, the competitive position of the *gur* producers is to be weakened, either the minimum price for sugarcane must be raised or rise in *gur* prices checked. The former is not at all desirable, in that it will enhance the cost of sugar manufacture which is already high in all conscience. With regard to *gur* prices, any measure that will be taken for checking the upward trend may not meet with adequate success. For *gur* manufacture is scattered throughout the country, in far-off corners, that it would be rather difficult to effect vigorous enforcement.

In the circumstances noted above, the only alternative is that efforts should be made to reduce sugar prices. A lower sugar price will mean a lower price for *gur*. For, when the price of sugar goes down, its consumption will increase, as a large number of those who consume *gur* will then prefer the clear white sugar. This in turn will occasion a fall in the price of *gur*, thereby reducing the capacity of *gur* manufacturers to compete with factory owners. If sugar prices are to be reduced, it is necessary that the factories should cut down unnecessary costs and raise their efficiency. There is also the need for a downward revision in taxes by the Governments.

(Concluded from next column)

considerable damage to India's exports of coal. It is stated that already Australian coal is being exported to Hong Kong and to Chittagong in competition with India. And further delay would have been disastrous, because it is further feared that subsidised rail freights and ambitious development projects of coal mines in South Africa would result in increased competition of South African coal with Indian coal in South-East Asian markets. Besides, if hostilities in Korea were to end, China would also enter as a competitor to Indian coal. The Government's response to the strong demand for the abolition of surcharge on coal by the industry indicates that it is alive to the dangers ahead of the export market for Indian coal.

SURCHARGE ON COAL EXPORTS

GOVERNMENT DECIDES ON ABOLITION

REPORTS from New Delhi disclose that the Government of India has decided to abolish surcharge on coal being levied on exports to countries other than Pakistan and Ceylon. It is stated to have conveyed this decision to the importing countries. It will be recalled that surcharge on coal exports to Pakistan was abolished with effect from 25th March, 1953, following the new Trade Agreement entered into by India with that country. Surcharge on exports of coal to Ceylon was abolished in the later half of 1951, as Ceylon could not bear it.

The Government's decision to abolish the surcharge on exports of coal from India occasions the need for a brief review of the history of the surcharge. It was in February, 1951, that the Government of India first imposed a surcharge of Rs. 11 per ton on all coal exported to foreign destinations. The motive of this levy was to derive a higher price for the coal with a view to offsetting India's foreign exchange disadvantage which it suffered with countries such as Pakistan. It was specifically provided in the Indo-Pakistan Trade Agreement that coal should be supplied to Pakistan at no less advantageous terms than to other foreign consumers. While this surcharge secured additional earnings on those quantities of coal which were despatched to Pakistan, whether by sea or by rail, it proved a very severe handicap to India's legitimate coal exports to countries other than Pakistan in that it caused an immediate setback in demand from them. The Government of India, therefore, withdrew the surcharge, subsequently, on the then existing business with Burma, Malaya, Hongkong and Ceylon, on the grounds that they were "continuing" contracts. It, however, made it clear that surcharge applied to any new business with those countries. On the conclusion of the agreed despatch of coal under the Indo-Pakistan Trade agreement, in October, 1951, the Government notified different rates of surcharge as between different countries, the amount of surcharge depending upon the difference between controlled price in India and the capacity of the importing country concerned to bear the charge.

The annual loss of revenue to the Government as a result of the abolition of surcharge is estimated at Rs. 1.5 crores. Of this, loss on account of withdrawal of surcharge on coal exports to Pakistan alone is said to account for Rs. 1.2 crores. But this loss is expected to be more than compensated by increase in demand from overseas countries. The abolition of surcharge will certainly remove the prejudice in importing countries that India has been discriminating against them, as compared with Pakistan. This will also help stabilise India's export markets for coal.

The present decision of the Government to abolish the surcharge has not come a day too soon. For its continuation has already done

RAILWAY FUEL ECONOMY COMMITTEE REPORT

REGIONAL CONTROL POLICY RECOMMENDED

THE Report of the Railway Fuel Economy Enquiry Committee under the chairmanship of Mr. D. C. Driver—a brief outline of which was given in *Commerce* some time ago—is as comprehensive as it is illuminating. Although the terms of reference were somewhat restricted to the examination of the supply, consumption and reserve stocks of coal on railways and to make recommendations for economy in expenditure on coal used as fuel, the Driver Committee appears to have taken a broader view of the whole problem, enunciating, as it were, a coal policy for the Government of India. Even the recommendations of the Planning Commission on the problems facing the coal industry are somewhat meagre, as compared with those contained in the Driver Committee Report. It has, therefore, become necessary for the Planning Commission to examine *de novo* the problems connected with this industry and to make suitable adjustments in the Plan in the light of the above Report during the operation of the Five-year Plan.

The consumption of coal on railways absorbs nearly one-third of the country's total production, and has a powerful influence on the conditions of production, supply and transport of coal. Total intake of coal by railways at present has now been running at the rate of 10.5 million tons, out of which 83.5 per cent. is consumed by locomotives, 9.5 per cent. is used for non-loco purposes, and the balance of 7 per cent. is lost in handling and pilferage. In terms of value, the annual expenditure on railway coal amounts to Rs. 30.5 crores. This sum is made up of Rs. 16.8 crores as the cost of coal at pithead and Rs. 13.7 crores for transport and handling charges. The amount of Rs. 16.8 crores may be further divided into Rs. 14.0 crores for coal consumed by locomotives, Rs. 1.6 crores for coal used in non-loco purposes and Rs. 1.2 crores for losses on account of handling and pilferage losses. Similarly, the incidental expenditure of Rs. 13.7 crores is made up of Rs. 12.6 crores for operating costs for transport of coal and roughly Rs. 1.1 crores for the cost of handling operations, that is, unloading, stacking and reloading.

20 Per Cent. Cut in Consumption

An analysis of all the direct and indirect factors affecting the consumption of coal in loco and non-loco purposes, the losses of coal by pilferage and in handling, and the expenditure incurred in handling coal, indicates that fuel consumption (including losses) can be reduced by about 20 per cent. of the total railways supplies by the adoption of the proper economy measures dealt with in the Report. These measures can be progressively enforced only through adequately staffed and independent fuel control organisations. A saving of about Rs. 6 crores annually will result in the course of the next five years, on the basis of the present railway fuel bill. Additional economy can be achieved through improvement in steam locomotive design and application of fuel saving devices. These features constitute a continuous and long-term process and the extent of resultant economies will depend largely upon experimental investigations and research.

In order to effect economy on fuel consumption by the railways, the Driver Committee has examined alternative uses of electric, diesel and gas turbine tractions. Electrification for a section of railways is recommended for a total of 2,187 miles, as, for instance, suburban services in the Howrah and Sealdah Divisions and main lines between Burdwan and Gaya, and Gaya and Moghulsarai in the Eastern Railways, between Igatpuri and Bhusaval in the Central Railways, between Quilon and Ernakulam, Madras and Trichinopoly, Madras and Bangalore and Madras and Bezwada in the Southern Railways, between Virar and Ahmedabad in the Western Railways and between Delhi and Ambala in the Northern Railways. Diesel traction is preferred on the Saurashtra section (Gondal Division) of the Western Railways. The Committee has also recommended the introduction of diesel light railcar services on suitable sections and diesel power on shunting services.

The Driver Committee has urged the setting up of a standing Railway Power and Electrification Planning Committee, consisting of representatives of the Ministry of Railways, the Planning Commission and the Central Water and Power Commission for ensuring co-ordination and execution of railway electrification and dieselisation schemes in a specific order of priority. The Committee has pleaded for the intensification of power and fuel research for the purpose of developing steam and other locomotives suitable to the growing requirements of the country. It is convinced that an effective and continuous economy campaign cannot be organised without adequately staffed and independent fuel control departments and without proper training of staff. For this purpose, it has recommended the immediate setting up of (*a*) six regional fuel control departments, (*b*) a central fuel directorate, (*c*) six regional training schools, and (*d*) a central training school. The annual expenditure on this account is estimated to be Rs. 29 lakhs against the expected annual saving of Rs. 6 crores. Considerable emphasis is placed on the strengthening of the statistical organisations in regard to fuel accounts and statistics so that adequate accounts for coal purchases, stocks, issues, etc., are maintained properly.

Coal Production Policy

The Driver Committee has advocated a dynamic policy in regard to production and distribution of coal. It is of the opinion that demand for coal will show a gradual increase from the current level of 34 million tons to 52 million tons by 1961. It has recommended that production of coal in the country must be developed in a planned manner region-wise so that the 10 zones into which the country has been divided for the purpose of coal supplies, attain self-sufficiency as far as practicable. Emphasis is placed on the development of the outlying fields, particularly in Vindhya Pradesh, Madhya Pradesh and Hyderabad State in order to meet, as far as practicable, the requirements of Western and Southern India and a part of Rajasthan. Northern India and the rest of Rajasthan may draw upon the coalfields of Bengal and Bihar. High priority is given to the development of the lignite resources in South Arcot, Madras. Coal production in Assam and Orissa must be encouraged, so that it could meet the requirements of these States. Special qualities of coal, however, may be obtained from outside sources. Production of high grade non-coking coals should be increased in the Raniganj and Karanpura coalfields in order to release coking coals for metallurgical purposes and feeding the export markets. Government collieries at Kurasia, Deulbera and Talcher should be developed and extended by acquiring new areas without delay, wherever possible. Properties should be immediately acquired and Government mines opened up in the Karanpura and Korba coalfields.

Regrading of Coal Seams

The Committee has stressed the need for regular and frequent regarding of coal seams, and for continuous testing at pitheads of the quality of coal loaded. It is, therefore, recommended that an official committee under the Coal Board should be appointed immediately to examine in detail new proposals for coal grading and pricing. The Fuel Research Institute and the Ministry of Railways should be represented on this Committee. Prompt steps should be taken to grade the coals of the outlying fields, and arrangements also must be made to ensure continuous testing at pitheads (by collieries) of the quality of coal loaded. The conservation of the country's fuel consumption and the economy in fuel consumption have received attention at the hands of the Driver Committee. The adoption of coal preparation measures such as washing and sizing of coal is also recommended. For instance, different types of pilot washing plant should be installed at the Fuel Research Institute without delay to obtain evidence on the most suitable and economical types for coals of different washability characteristics. At the same time, the Government should take steps to explore the possibilities of coal washing and to set up washing plants at selected sites. Under the existing arrangements individual sheds in railways receive coal from numerous sources, resulting in irregular supplies and lack of consistency in grade and physical characteristics of coal used. A plea has, therefore, been made for the reorganisation of loco coal supplies. As far as possible, coal for any consuming point on a railway should be obtained from the nearest group source. The group and the connected base station are such as will permit the movement of coal to districts or zones without entailing much marshalling at base stations (and *en route*) and without involving cross movements.

Another important recommendation of the Committee is that railways should, in future, select their own coals by inviting offers from collieries and by arranging for supplies on contract basis. The responsibility in respect of quality should be fixed on the collieries themselves, and railway supplies should be obtained under suitable contract conditions. A standing Loco Coal Committee should be set up to undertake all work connected with the framing of loco coal programmes, inviting offers from collieries for scrutiny and acceptance, and the allocation of their approved offers according to the supplies and transport available. The Committee should consist of representatives of railways, the Ministry of Railways and the Coal Commissioner, the Chairman of the Railway Board or his nominee may act as Chairman and the Chief Mining Engineer, Railway Board, as member-Secretary of the standing Loco Coal Committee. In order to simplify and rationalise transport and to ensure regular and reliable supplies of coal to railways, steps should be taken to introduce the system of grouping collieries, with distributing centres to serve as primary receiving points in respect of supplies to railway zones.

Development of Outlying Mines

To relieve fuel shortage in the South, a five-year plan has been suggested, indicating the necessary development of the outlying fields and rail transport. On the completion of the abovementioned plan, a net saving in the cost of loco coal is estimated to be of the order of about Rs. 33 lakhs annually. The Driver Committee wants Government to expedite the development of Talcher, Singareni and Madhya Pradesh collieries. At the same time, the Ministry of Railways should immediately undertake the development of the junction yards and line capacities along the rail routes from the abovementioned outlying fields to the South.

A standing Coal Committee is recommended for the revision of the existing system of allocating and allotting coal supplies and wagons. The members of the Committee must be recruited from the Ministry of Railways, Production and the Planning Commission. The existing practice of allocating coal orders and wagons should be modified to give effect to regional distribution of coal as far as possible, says the Committee. The appointment of a railway officer of senior administrative rank (Director) is recommended so that he could function as liaison transport officer and make day-to-day allotment of wagons in collaboration with the Coal Commissioner. The Driver Committee is of the firm opinion that railway fuel problems cannot be considered as a detached issue since they exercise a powerful influence on the conditions of production, supply, and transport of coal. Government must, therefore, have to approach the problems both from the short and long-term point of view and should try to implement them gradually so as to achieve economy coupled with efficiency in the distribution and consumption of coal.

COAL BLENDS AND THEIR COKES

The second Report of the Coal Blending and Coking Research Sub-Committee of the Council of Scientific and Industrial Research has been published. It deals with results of investigations carried out between 1947 and 1951. The investigations included pilot and full-scale coking tests, experiments on the use of coke-breeze in coking, the making of metallurgical coke from non-coking coals by the two-step carbonisation process, the methods of determination of apparent specific gravity of coke, as also caking index of coal. The coals tested came from Jharia, Raniganj, Madhya Pradesh and Surguja State and East Bokaro coalfields. Coal samples of varying characteristics were obtained from the U.K. and tested for comparison with Indian coal.

The general procedure in testing the coals included (1) proximate analyses, (2) determination of caking index, swelling properties, sulphur and phosphorus, (3) screen analyses and (4) determination of bulk density. Proximate analyses and screen analyses were also done on the various blends of coal used. The pilot-scale coking tests were carried out in the Russell and Simon-Carves ovens, and a few tests were done in full-scale ovens. The resulting cokes were subjected to screen analyses, and to Shatter, Breslau and Haven tests. The apparent and real specific gravities were determined and the porosity calculated. The analytical and test results are given in detail in the Report.

It may be noted that the first Report of the Sub-Committee "Blending of Coals for Coking" was published in 1948. It reviewed investigations carried out by the Coal Blending and Coking Research Sub-Committee, Jamshedpur, since the inception in 1940 upto 1947.

JUTE DELEGATION RETURNS

RECOVERY OF AUSTRALIAN MARKET HOPEFUL

THE Indian Jute Mills Association's trade delegation to Australia and New Zealand to enquire into factors affecting the demand for Indian gunnies has returned to Calcutta. It will be recalled that this delegation, consisting of Mr. J. G. Walton, Deputy Chairman, I.J.M.A., Mr. D. P. Goenka, Vice-Chairman, I.J.M.A., and Mr. L. K. Jha, Joint Secretary, Ministry of Commerce and Industry, left on the 15th April, on a four-week fact-finding tour, in furtherance of a policy of exploring means for actively and aggressively developing the dwindling markets for Indian jute goods abroad.

The findings of the fact-finding tour of the delegation is not yet made available to the public. But Press reports from Calcutta aver that the delegation has been a success. It has brought the heartening news that there is a "secure and expanding market" for Indian jute goods in Australia and New Zealand. But the maintenance of such a market is dependent on a guarantee of regular supply of goods at stable prices. Wherever the delegation went, for instance, Melbourne, Adelaide, Dunedin, Auckland and Wellington, consumers of jute goods are said to have complained of the violent fluctuations in prices and periodical shortage of goods.

Active Competition Absent

There seems absence of any active competition to jute goods, especially in the field of storing grains in Australia and New Zealand, according to the delegation. It is stated that the farmers do not pack at all, if there is not enough jute sacking to pack their produce. They resort to bulk handling techniques right from the field to the rail-head and then to the port. It is further reported that 80 per cent. of New South Wales' wheat crop and 99 per cent. of West Australia's crop are handled in bulk. But paper packing has entered other spheres. Cement is now entirely packed in paper. Paper packing has also made inroads into the fertiliser industry. Sugar interests have resorted to increased bulk handling of sugar. It is just possible, even now, for jute to recover the ground it has lost to its substitutes in these industries. If a regular supply of jute goods at reasonable prices is not assured, there is no denying the fact that the substitutes for jute will spread their tentacles, thereby restricting the area of jute goods consumption. According to the I.J.M.A. delegation, there is reported to be still time for the jute industry to recover its original position as well as expand the area of its activity there. A large measure of goodwill exists towards India in these two countries, which will render no small aid to the jute industry towards establishing its reputation as the best packaging material, leaving no ground for the consumer to think of substitutes.

The return of the jute delegation to Calcutta has been greeted with further rally in prices of jute goods. The prospects that appeared dark at the time when it departed, for various reasons, have given way to remarkable improvement which in fact was noticed some three weeks ago. At present, the outlook for jute goods appears to be somewhat encouraging. For there have been some orders for hessian from the U.K., Australia and New Zealand. Some enquiries for sacking are reported from Africa, Cuba and Middle East countries. The prospect of a barter agreement with Burma, involving exchange of jute goods for rice, among others, has also been a contributory factor. Further, rumours are persistent that the U.S. is likely to increase its business in Indian jute goods in the coming months. Large orders are expected to flow from Argentina for hessian.

The improvement in jute goods, noted above, in a way explains the small decline in stocks of jute goods from 138,797 tons at the end of March, 1953 to 137,474 tons at the end of April 1953. But as compared with figures at the end of April, 1952, stocks are higher by 21,105 tons. The following table gives a detailed position of jute goods stocks at the end of April, 1953, as compared with those at the end of the two preceding months, and on 30th April, 1952.

(In tons)

	As on			
	30-4-1953	31-3-1953	28-2-1953	30-4-1952
Civil				
Hessian	45,005	40,755	37,786	47,394
Sackings	87,024	92,406	92,228	59,861
Others	2,031	2,144	2,340	1,557
Total ..	1,34,060	1,35,305	1,32,354	1,08,812
Government				
Hessian	761	1,119	846	1,984
Sackings	2,630	2,336	2,772	5,573
Others	23	37	134	..
Total ..	3,414	3,492	3,752	7,557
Grand total ..	1,37,474	1,38,797	1,36,106	1,16,369

The aggregate production of jute goods during April, 1953 was 74,292 tons, as against 74,430 tons at the end of the previous month and 81,681 tons on 30th April, 1952. Of this, sackings accounted for 39,802 tons, as against 40,049 tons and 54,833 tons, and hessians 31,827 tons, as compared with 31,635 tons and 24,298 tons. The fall in the output in April would have been higher still but for a rise of 192 tons in hessians, as the output of the fall in sackings has declined as much as 247 tons. Mills evidently have been switching over from the production of sacking to hessian in recent days. The following table gives a summary of the output of jute production during each of the three months ended April, 1953, as also on 31st April, 1952:

(In tons)

	As on			
	30-4-1953	31-3-1953	28-2-1953	30-4-1952
Civil

Others	2,663	2,746	2,419	2,549
Total ..	72,861	71,859	66,244	77,986
Government				
Hessian	1,254	2,082	2,165	164
Sackings	177	489	102	3,530
Others	..	..	14	1
Total ..	1,431	2,571	2,371	3,695
Grand total ..	74,292	74,430	68,615	81,681

The consumption of raw jute by mills, calculated on the basis of production, can be placed at 3.77 lakh bales in April 1953, as against 4.31 lakh bales in the previous month and 4.74 lakh bales in the corresponding month of 1952. Consumption during the ten months ended April 1953, accounted for 42.74 lakh bales, as against 45.74 lakh bales during the same period in 1952.

(*Concluded from next column*)

over synthetic plants, would be able to make a profit, with improved methods of production, even at the present price of 23 cents.

ENQUIRY INTO MALAYAN RUBBER INDUSTRY

The Malayan Federal Government has announced that an independent fact-finding mission from the U.K. will investigate the competitive position of the Malayan rubber industry and make recommendations. This decision to appoint an independent body is a modification of the Government's earlier decision to appoint an official commission, following the strong opposition from the Rubber Producers' Council to the appointment of an official commission on the ground that the decisions and recommendations of the Government Commission would be binding on the producers. It was also felt that the public enquiry might result in unnecessary disclosure of secrets and that such disclosures might adversely affect the price of rubber. The Government seems to have been convinced that the issues involved in this investigation are of such importance that it should be carried out by a body independent of the Government and of the industry. The Rubber Producers' Council has agreed to this step and has offered its co-operation to the Government.

The terms of reference of the Mission will be to investigate the competitive position of the rubber industry in the Federation with particular reference to: (1) The taxation of the industry in relation to costs of production; (2) the maintenance of existing capital in the industry and the attraction of fresh capital for development; (3) replanning; (4) the marketing and processing of small holders' rubber; and (5) unemployment in the industry in the event of a recession in price.

EXEMPTION FROM MINIMUM WAGES ACT

A plea to exempt small rubber-growers in the State from the purview of the Travancore-Cochin Minimum Wages Act has been made by owners of small rubber plantations in the State. It is felt by these small holders that rubber production might be affected adversely in the near future, in view of the obstacles placed before small planters both by the Government and labour. According to them small rubber growers are hard hit on account of the unbearable demands made on them by the introduction of the State Minimum Wages Act and they have, therefore, sought that estates below 150 acres, should be exempted from the provisions of the Act. The aims and spirit underlying the Act are appreciated by them, but practical difficulties experienced by small growers are stated to be such that they cannot carry on their business without loss. They have decided to send a deputation of small rubber growers to the Government for representing their grievances.

WORLD BUFFER STOCK OF RUBBER

RUBBER STUDY GROUP MEETING ENDS IN DEADLOCK

THE deliberations of the International Rubber Study Group (I.R.S.G.) which began in Copenhagen on Monday last week, to consider the proposal for an internationally controlled buffer stock of natural rubber to avoid excessive fluctuations in supplies and prices of the commodity, are reported to have ended in a deadlock on Friday last week, the Participating countries being unable to come to an agreement. This deadlock will be a matter of disappointment for producers of natural rubber, inasmuch as they have been looking forward to some kind of assistance from this international body for a guaranteed market for an average crop and a stable price for latex. It is just over a year since the question was first considered by the I.R.S.G. and the fact that it has not been able to arrive at a constructive decision indicates that opinion is sharply divided on the question.

The Study Group which first discussed this question in May, 1952, could not come to a decision, due to the unwillingness of the U.S. to agree to any form of price support scheme. The Study Group, however, appointed a working party to make further efforts at reaching international agreement on world control of rubber supplies. But much hope was not entertained in informed circles in London on the successful outcome of the deliberations. These fears proved to be correct, as the Working Party did not take any decision, but postponed further consideration till January this year. The January meeting of the Working Party considered a draft agreement on buffer stock and merely suggested that the scheme on the lines of their draft agreement would be practicable. It was, however, considered that the question of the necessity for such an agreement should be left to be decided by the Study Group itself. Accordingly, this subject came up for discussion at the Copenhagen meeting of the Group last week and the indecisive conclusion of the deliberations will, therefore, be widely deplored. Opinion in London before the meeting concluded, on the outcome of the discussions, was that it would to a large extent depend on the attitude of the American delegates. But in the absence of any details of the deliberations it is difficult to say what attitude the American delegates took on this question. It is believed, however, that U.S. opinion could not have been anything but unsympathetic to the suggestion of building up a world buffer stock. An indication of American opinion, though not of the Government, is available from a statement issued by Mr. P. W. Litchfield, Chairman of the Board of Goodyear Tyre and Rubber Co., in New York last week. He said: "The proposed international buffer stockpile of natural rubber will not work. A free competitive market, on the other hand, encourages improvement and efficiency in rubber-growing and that is the only road to a sound and stable economy. Having watched the working of the cartel arrangement of 1922 and the later programme of 1934, I am convinced that the free market principle is best for all concerned, including the rubber producing countries." It is nonetheless held in certain circles that the American Government representatives at the Copenhagen meeting would have, in all probability, been induced to throw some light on their intentions about synthetic rubber. It is also considered that the position of natural rubber could be improved, even without building up a buffer stock, by closing down the high-cost alcohol-based plants producing over 100,000 tons a year or by putting up the selling price of synthetic rubber.

The worry of the natural rubber producers is only in respect of the immediate future. The years 1953 and 1954 are considered the most critical period. For the U.S. Government's stockpiling of natural rubber has now ceased and it will be eighteen months before the U.S. synthetic rubber plants are handed over to private ownership. It is for this short period of eighteen months that the estates are seeking some stability in prices. In this connection, a notable suggestion is that, pending the handing over of control of the U.S. synthetic plants to private industry, the American Government should put the price for synthetic rubber on a commercial basis, which, in other words, means raising the price from 23 cents to 26 cents a pound. Those who oppose such a move consider that private industry, when it takes

When we showed our latest STATES OF INDIA booklet to a very good friend of ours the other day he said, "Ah! so you have produced

ANOTHER OF THOSE USEFUL LITTLE BOOKS!"

—which we thought, with becoming modesty, would make as good a heading to our advertisement as any.

This time, we have dealt with the State of Travancore-Cochin, home of the famous Kathakali school of dancing. For the ancient Dravidian mariners Kerala, or Malabar, was the gateway to the western world. Philistines, Egyptians, Syrians, Jews and Romans visited this coast of India long before the arrival of the British, the French or the Dutch. Already India had started to exchange both her culture and her goods—of small bulk but of great value—with the western world.

Our booklet deals very briefly with the history and art of Travancore-Cochin and goes on to describe the natural resources, the agriculture and the new industries which have grown up recently in the State. If you would like to have a copy let us know so that we can put your name down on the list. When you write, please ask for the booklet by name "STATES OF INDIA—Travancore-Cochin", and address your letter to the nearest Burmah-Shell office in Bombay, Calcutta, Madras or Delhi or to any one of our 21 Divisional Offices.

IRRIGATION AND POWER PROJECTS IN INDIA

MULTI-PURPOSE SCHEMES MAKE HEADWAY

THE progress of the implementation of irrigation and power projects during the first two years of the Five-year Plan makes interesting reading. The actual amount spent on these projects was Rs. 190 crores, as against a planned outlay of Rs. 206 crores, during the period under review, that is, Rs. 16 crores less than the target. The additional area irrigated during the period was 1.42 million acres. As compared with the target of 1.89 million, this is less by only .47 million acres. But the progress in the sphere of generation of power was significant inasmuch as it exceeded the target. The power generated was 315,000 kw., as against the target of 239,000 kw. On balance, however, there had been substantial progress.

On the basis of information available, good progress is stated to have been recorded in the implementation of the multi-purpose projects as well as of some projects in Bombay, Madras and Saurashtra. Mysore, Hyderabad and Rajasthan, however, failed to record substantial progress on account of financial reasons. Of the five new projects included in the Plan, viz., the Chambal, the Koyna, the Kosi, the Rihand and the Krishna, little progress in actual construction was visible during the period 1951-53. The Committee appointed by the Planning Commission to examine the Krishna Project submitted its report recently and further investigations recommended by the Committee are in progress. Negotiations between the Governments of Madhya Bharat and Rajasthan in connection with the Chambal project have led to an agreement between the two States on the distribution of irrigation waters to be made available by the project on a fifty-fifty basis.

A bird's-eye view of the progress of Central Multi-purpose projects discloses that they irrigated 106,000 acres of land and produced 54,000 kw. of power during the first two years of the Plan. A brief account of the progress so far made on the Central Multi-purpose projects is as follows:

Bhakra Nangal Project:—A sum of Rs. 31.14 crores had been spent during 1951-53. The aggregate expenditure upto the end of March, 1953 was about Rs. 55 crores. At the Bhakra dam site, the two 50' diameter diversion tunnels are in an advanced stage of completion. The Nangal dam has been completed except for the installation of gates which will be in position within a year. On the Nangal power channel, work is proceeding according to schedule on the excavation of the canal, its lining and the construction of cross drainage works. At the two power houses on the Nangal canal, the excavation foundation has been completed and a good part of the superstructure of power house No. 1 has been completed. Part of the generating equipment for these power houses and the material for the transmission lines will be commissioned by the middle of 1954. Work on the Bhakra canals, comprising 518 miles of main and branch canals and 2,000 miles of distributary channels, is also proceeding, according to schedule. It is expected that most of the channels will be completed in time to provide non-perennial supplies to the Bhakra areas during 1954. Partial irrigation has already commenced. About 19,000 acres were irrigated in 1951-52 and about 10,000 acres during 1952-53.

Harike Barrage:—The barrage at the confluence of the rivers Sutlej and Beas has been completed except for the installation of gates. Work on the Ferozepore Feeder and Bakhu Canal is proceeding satisfactorily.

Damodar Valley Project:—An expenditure of Rs. 29.22 crores was incurred during 1951-53, thereby bringing the total up-to-date expenditure to Rs. 46 crores. The construction of Bokaro thermal station with 3×50,000 kw. generating sets and 6×300,000 lbs./hr. boilers is nearing completion. The supply of power from this station commenced early in 1953, when one unit of 50,000 kw. was put into commission. The construction of Tilaiya dam has been completed. The hydro-power station with two generating sets of 2,000 kw. each has also been commissioned. An area of about 5,000 acres was irrigated from the waters of this dam during 1952-53. The Konar dam, the reservoir behind which will provide cooling water for the Bokaro thermal station, will be ready by June, 1953. More than half of the earthwork and about two-thirds of the concrete work has been completed. The construction of Maithon dam is in full swing. The entire work is scheduled to be completed by 1954 and the hydro-electric station, by March, 1955. The construction of Panchet Hill Dam and the Durgapur Barrage and Canals is in the early stages. Over 150 miles of the main transmission lines have been erected and good erection on a further 92 miles is well on the way. Five grid sub-stations with three distribution centres have already been brought into operation. The entire system is expected to be ready by June, 1953.

Hirakud Project:—The up-to-date expenditure on the project is over Rs. 24 crores of which Rs. 18.08 crores had been spent in the period of 1951-53. The preliminary works have been completed and work on earthen and concrete dams is stated to have made some progress. More than half of the work of excavation of the canal system has been completed. The construction of masonry works and cross drainage is in progress. The first phase of power development from the dam provides for the installation of 1,23,000 kw. of which 48,000 kw. will be installed in the period of the Plan. According to present expectations, both irrigation and power will be available from the Hirakud project in 1955, as envisaged in the Plan.

So far as certain recommendations of the Planning Commission relating to raising finances for the projects are concerned, the proposal to establish an Irrigation Development (Ways and Means) Fund has met with general approval, but no definite action has been taken by any State Government, except Madhya Pradesh, where a non-lapsable fund has been established with a small contribution of Rs. 10 lakhs a year. Following the recommendation of the Planning Commission regarding the levy of betterment fee on all new irrigation projects, legislation has been enacted in Bombay, Punjab and Hyderabad. Madras, U.P., West Bengal, Rajasthan and P.E.P.S.U. have drafted Bills which are under consideration. The necessary legislation already exists in Mysore. The Governments of Bihar, Orissa, M.B. and Travancore-Cochin have accepted the principle of betterment fee. A study of the economics of tube-well schemes borne, existing and proposed, has been initiated by the Planning Commission. We are told that it would be necessary to levy a betterment fee on all tube-well projects with a view to avoiding the losses in their operation.

IRRIGATION RATES IN U.P. RAISED

The Government of Uttar Pradesh has ordered enforcement of 50 per cent. increase in irrigation rates with effect from this month. The enhanced rates will be collected along with land revenue for *rabi* crops in May and June and the *kharif* crops in November and December. Although this increase was forecast in the Budget proposals, it had been reported that there was strong opposition to it among Congress M.L.As. and it was even said that official assurances had been given at a recent party meeting that the new rates recommended by the Irrigation Rates Committee would not be enforced. The original recommendation of the Irrigation Rates Committee, consisting of both Houses of the State Legislature, was for 100 per cent. increase, on the ground of the greater amenities for the cultivators, but the Cabinet decided to limit the increase to 50 per cent. The enhanced rates will apply to land served by wells as well as canals. It is emphasised in official quarters that the new impost is in no sense a new tax but only payment for services rendered, and that payments made by the agriculturists will be considerably less than what they would have had to pay for similar arrangements either among themselves or with other parties.

ELECTRIC POWER TARIFF COMMITTEE SET UP IN ORISSA

The Government of Orissa has constituted a Power Tariff Committee with Mr. Radhanath Rath, Finance Minister, as Chairman, to examine the whole question of the economics of power supply and to work out rate structures for power to be supplied to different classes of consumers from the Hirakud Dam Project. The Committee will take into consideration the rates prevalent at the different load centres in India and, if possible, also the world rates, especially in respect of big industries consuming large blocks of power, such as aluminium, manganese and other electro-metallurgical industries. (The appointment of the Committee is in connection with the expected completion by 1955-56 of the first stage of the Hirakud Dam Project to generate 85,000 kilowatts out of the ultimate capacity of 200,000 kilowatts.) The Committee will also examine the question of rates for 30,000 kilowatts imported, as Orissa's share, from the Machkund Hydro-electric Project for utilisation in Orissa and suitable tariff structure for the same. They might, in this connection, consider the rate structure offered by the Madras Government, with whom the Project is being executed jointly.

NON-FERROUS METALS INDUSTRY

REVISION OF EXPORT POLICY DEMANDED

A NUMBER of problems facing the non-ferrous metals industry in India came in for critical review at the hands of Mr. Bhawani Das Binani in the course of his presidential address at the eighth annual general meeting of the Metal Exchange Association, Ltd., Bombay, held in the city last week. Chief among them related to the export policy of the Government of India. He made out a strong case for permitting free export of non-ferrous metals such as alloys of copper, lead, tin, scrap materials, borings, residues, dresses, slags, etc. He opined that free exports of these metals was necessary because there were no facilities for the treatment of most of the non-ferrous metals in the country and because they fetched better prices in overseas markets. This contention of Mr. Binani needs closer examination. It is, of course, true that the establishment of plants for treatment of these metals is quite a necessity in India. But until such time as these facilities are available, few can deny that the best policy is the regulation of exports in consonance with the market conditions in India and elsewhere. A factor to be noted in this connection is that the Government of India has been frequently disposing of huge quantities of non-ferrous metals through tenders and auctions, but in the absence of export licences for these goods, they are bid at prices 30 to 50 per cent. and in some cases even 100 per cent. lower than the prices that could be procured, if export licences were assured for them. Mr. Binani, therefore, pleaded for free exports which, in his opinion, would certainly help the realisation of greater value by the Government of India for its auctions of non-ferrous metals.

Dealing with imports of non-ferrous metals, Mr. Binani characterised the present policy of the Government of India, which permits free imports of most of the items of non-ferrous metals under O.G.Ls XXIX and XXX, as a step in the right direction. But he did not approve of the restrictions on the import of antimony. The Government of India has fixed the price of antimony at Rs. 340 per cwt. in pursuance of its policy of protection. But the landed cost of the metal is about Rs. 176 per cwt. only, according to Mr. Binani, and the local price is about Rs. 200 per cwt. Mr. Binani contended that the margin between the local and the Government fixed prices was too big and, therefore, the interests of consumers were sacrificed. Consequently, he pleaded for free import of antimony. He, however, averred that, if need be, import duty might be suitably increased. This is a point which the Government will have to consider and find out whether even in the existing circumstances such a high price as Rs. 340 per cwt. is warranted.

Proper and flexible import and export policies would stabilise the market by assuring a regular flux of the metal as warranted by circumstances in the country. The policies should be so linked to the policy of protection to indigenous industry that the consumer is not unnecessarily harassed. One view is that the Government, apart from its import and export policies, can also help stabilisation of the market by following a policy of regular purchases from it. Private enterprise can, by forming a single organisation of all sections of the non-ferrous metals industry in India, also contribute substantially towards the stabilisation of prices. This is an aspect which has been emphasised by almost all enlightened metal interests in the country.

Mr. Binani urged upon the Government of India to intensify the activities of the Geological Department towards exploration of fresh ores, with a view to encouraging the development of mining and metallurgical industries in non-ferrous metals, as far as possible. There can be no two opinions on the need for intensification of the activities of the Geological Department, for India is deficient in non-ferrous metals, whereas it has enough raw materials for iron and steel industry. The Five-year Plan has schemes to increase the production of only primary aluminium from 3,700 tons in 1950-51 to 12,000 tons in 1955-56. This is because India has large deposits of bauxite ores and aluminium scattered throughout the country. The Plan could not envisage production of other non-ferrous metals, perhaps due to absence of sufficient data regarding the ores, etc.

INSURANCE POLICIES UNDER ESTATE DUTY BILL—I

ANALYSIS OF MAIN PROVISIONS

THAT insurance interests should be opposed to the Estate Duty Bill, in its present form, is only natural, considering that it includes insurance policies within the meaning of the term "estate," despite the fact that the insurance habit is not so widespread in the country as in the West. Insurance does deserve a more generous treatment than has been given to it by the authors of the Bill, although it must be admitted that at the Select Committee stage an attempt has been made to improve the Bill from the insurers' point of view. It is, therefore, small surprise that the place of insurance policies under the Bill figured prominently in the discussions at the recent Insurance Conference at Calcutta, where as many as four papers on this subject were read by some of the leading insurance executives—Mr. K. L. Gupta, Mr. V. Sesha Ayyar, Mr. C. M. Sharma, and Mr. H. M. Chakravarti. The full text of these papers has now been made available to us through the courtesy of the Indian Life Assurance Offices Association. These papers, together with the representation made to the Government by the Association—a representative body of life insurers in the country—bring into sharp focus the problem which faces insurers and policyholders—both existing and prospective policyholders—in the context of the Estate Duty Bill.

Main Provisions

The main provisions of the Bill with which insurers and policyholders are concerned are to be found in clauses 8, 9 and 10 which deal with gifts, clause 13 which deals with joint investments, clauses 14, 15 and 16 which deal with insurance policies and annuities, clause 32 which deals with exemptions and clause 33 which deals with the principle of aggregation. It must, however, be remembered that estate duty will become payable only when the estate exceeds Rs. 75,000 in value, in the case of individuals, and Rs. 50,000, in the case of Hindu joint families. All estates above this limit are liable to duty, inclusive of the insurance policies which have been taken out by the deceased person. Before attempting a fuller review of the clauses of the Bill, it is perhaps useful to set down, in brief, the position of insurance under the Bill. This has been done, ably indeed, by Mr. R. N. Chopra who, in a letter to the *Hindustan Times*, Delhi, says:

"1. Life assurance policies of an amount (howsoever big) equal to the extent of the duty payable by the deceased will be free and exempt from estate duty, provided the policies are either assigned to the Government for the said purpose or are taken out for the purpose of paying estate duty. This is a great relief to the landed aristocracy and industrial magnates who can make arrangements in their lifetime to salvage their estates from the rigours of this duty. For instance, a person who knows that he is definitely going to leave an estate worth Rs. 25 lakhs standing in his own name (even after making gifts to his sons and relatives two years before his death), and assuming further that the rate of duty on Rs. 25 lakhs will be about 25 per cent. on his death, will be well advised to purchase policies of about Rs. 6 lakhs on his own life and either assign them immediately in favour of the Government or earmark them for the purpose by some disposition, settlement or otherwise.

"2. A policy of assurance assigned unconditionally and irrevocably from commencement in favour of a third person is, under clause 33 of the Bill, treated as a separate estate and, therefore, not aggregated with the rest of the property.

"3. A fully paid-up policy irrevocably assigned by the deceased at least two years before death will be free from duty on his death.

"4. A policy taken out by a third party out of his own funds on the life of the deceased is not dutiable.

"5. Clause 14 of the Bill is almost a verbatim copy of the English law on the subject. Consequently, on the analogy of the English law, it can be taken as good law, that where the policy was held for a time by the deceased and then transferred to an assignee and subsequent premiums are paid by the assignee, the policy will be proportionately free from duty on the death of the deceased. Consequently if the deceased had paid four out of 15 premiums, 4/15ths of the policy money will be dutiable.

"6. Life policies upto Rs. 5,000 have been completely exempted but it is a pity that even they have been subjected to the mischief of clause 33 (aggregation).

"7. Policies of assurance by a deceased parent or natural guardian taken as gifts for dependent female relatives to the extent of Rs. 5,000 in respect of the marriage of each such relative are, under clause 32, free of duty."

Now, to the different clauses of the Bill which deals with insurance. Clauses 8, 9, 10 deal with gifts. Under clause 8 property taken as a gift made in contemplation of death is deemed to pass on the donor's death. Clause 9 says that property taken under a disposition made by the deceased as an immediate gift *inter vivos*, which has not been made two years or more before the death of the deceased, shall be deemed to pass on the death, provided that in the case of gifts made for public charitable purposes the period shall be six months. Clause 10 brings under charge property given in gift but in which the donor retains some interest. Where the donor retains such an interest in a part of the property estate duty would be payable on that part only but, if such an interest is surrendered two years before the death, no estate duty would be payable. These clauses should be read with clause 32 which deals with exemptions. The exemptions covered by this clause include property taken under a gift made by the deceased for a public charitable purpose within a period of six months from his death, to the extent of Rs. 2,500 in value, and property taken under a gift made by the deceased for any other purpose within a period of two years before his death to the extent of Rs. 1,500 in value.

Joint Investments

Clause 14 of the Bill deals with joint investments, and reads as follows:

"Where a person, having been absolutely entitled to any property or to the funds with which any property was purchased, has caused it to be transferred to or vested in himself and any other person jointly, whether by disposition or otherwise, either by himself alone, or in concert, or by arrangement, with any other person so that the beneficial interest in some part of that property passes or accrues by survivorship of his death to the other person, the whole of that property shall be deemed to pass on the death."

Commenting on this provision, Mr. Gupta says:

"In terms of this, a joint life policy the proceeds of which would vest by survivorship would fall under this charge. Generally, joint life policies are taken by husbands and wives and in India the premium on such policies are met by the male partner. In view of this, if the husband were to die, the policy money which the widow would receive would be chargeable to duty. In case the wife were to die, the proceeds of the policy money payable to the husband would probably be not chargeable to duty. Then again if it were a case of a joint policy wherein the joint tenants were two partners in a firm and premium on the policy was being met out of the income of the partnership business, it seems that the policy money payable to one of the partners on the death of the other would only be subject to death duty in the proportion the partner who died contributed towards the share of the premium. This would, it seems, be contrary to the note given under this clause which clearly says that it does not apply to a case where the transferor was entitled only to a portion of the property or of the funds with which the property was purchased. The liability of the whole property to duty arises only in case where a person, having been absolutely entitled to any property, has caused it to be transferred to or vested in himself and in any person jointly so that the beneficial interest in some part of the property passes, or accrues by survivorship on his death to the other person."

BHARAT FIRE AND GENERAL INSURANCE CO., LTD.

The audited accounts of the Bharat Fire and General Insurance Co., Ltd. (General Manager: Mr. P. P. Gupta, New Delhi), for the year ended 31st December, 1952, disclose that the total business underwritten by the Company during the year has been nearly maintained at the previous year's level, despite the adverse business conditions which prevailed during the year. Thus, the aggregate premium income from its three classes of business, namely, fire, motor and miscellaneous and marine, amounts to Rs. 13.34 lakhs, as against Rs. 13.85 lakhs for 1951; but the 1952 figure reflects a more satisfactory progress than the business in 1950 when the premium income amounted to Rs. 11.76 lakhs. The slight fall in premium income in 1952 is accounted for by motor and miscellaneous and marine businesses. The difficult conditions that prevailed during the year are reflected in the all-round rise in claims, those in motor and miscellaneous and marine businesses, in particular, being much heavier. The higher loss ratio has been accompanied by larger expense ratio in fire and motor and miscellaneous departments. A satisfactory feature disclosed by the accounts is that the Directors have taken care to maintain the reserve ratio in 'fire' at the same level as in the previous year and those in the other two departments at a higher level. The profit has, no doubt, shrunk from Rs. 4.89 lakhs to Rs. 3.11 lakhs, but the decline is not serious in the light of the foregoing experience.

The premium income less reinsurances of the fire department shows a small increase from Rs. 7.33 lakhs to Rs. 7.50 lakhs. Claims paid and outstanding are also higher at Rs. 2.63 lakhs, representing a loss ratio of 35.1 per cent., as against Rs. 2.13 lakhs or 29 per cent. of the premium income in 1951. Commission and expenses of management, at Rs. 2.84 lakhs, represent 38 per cent. as compared with 35.7 per cent., at Rs. 2.62 lakhs, in 1951. Reserve for unexpired liability and additional reserve at the end of the year amount to Rs. 7.50 lakhs, or 100 per cent. of the premium income. The working of the department has resulted in a profit of Rs. 2.14 lakhs, which compares favourably with Rs. 1.88 lakhs for 1951.

The experience of the Company in the motor and miscellaneous insurance department has not, however, been equally satisfactory, inasmuch as the claims experience has been heavier than in the previous year. Thus, as against a premium income of Rs. 3.89 lakhs, the claims paid and outstanding amount to Rs. 2.78 lakhs or 71.4 per cent., as compared with Rs. 4.17 lakhs and Rs. 1.41 lakhs or 33.8 per cent., respectively. Commission and expenses of management amount to Rs. 1.70 lakhs, the same as in 1951, but in terms of the premium income, they are higher at 43.7 per cent. (as against 40.8 per cent). The reserve for unexpired risks and additional reserve, though slightly lower at Rs. 5.16 lakhs, as compared with Rs. 5.34 lakhs at the close of 1951, represent 132.6 per cent. of the premium (127.9 per cent.). The working of the department has resulted in a small loss of Rs. 17,409 in contrast to the profit of Rs. 2.18 lakhs earned in the previous year.

The marine business has brought in a premium income of Rs. 1.95 lakhs, which shows a decline of Rs. 40,000 from that for 1951. Claims, on the other hand, have gone up from Rs. 61,359 (26 per cent.) to Rs. 1.01 lakhs (51.8 per cent.). Commission and expenses of management have come down from Rs. 1.18 lakhs (50.2 per cent.) to Rs. 80,020 (41 per cent.). Reserve for unexpired risks is maintained at Rs. 2.58 lakhs, but in terms of the premium it shows an increase from 110 per cent. to 132.6 per cent. The profit earned by the department shows an increase from Rs. 10,144 to Rs. 25,638.

To the aggregate profit of Rs. 2.40 lakhs from fire and marine business are added the interest and dividend (not applicable to any particular account) and other income amounting to Rs. 2.35 lakhs. Against these are set off the loss of Rs. 17,489 on marine account, and the loss on sale of investments and other expenses amounting to Rs. 1.46 lakhs, leaving a profit of Rs. 3.11 lakhs, as compared with Rs. 4.90 lakhs for the previous year. The provision for taxation has been reduced from Rs. 2.25 lakhs to Rs. 1.50 lakhs. Whereas a sum of Rs. 1 lakh had been set aside last year for investment reserve, no such provision has been made this year, but the dividend on ordinary shares is maintained at 3 per cent., after paying a dividend of 5 per cent. on preference shares.

EMPLOYEES' STATE INSURANCE

The Employees State Insurance Scheme is being implemented in Punjab State from 17th May, 1953, in its second stage. The first stage of the Scheme was implemented in Delhi State and Kanpur area of U.P. in February, 1952, when the Prime Minister inaugurated it at Kanpur. In Punjab, the Scheme will cover the areas of Amritsar (including the Notified Area of Chheharta), Ambala, Ludhiana, Jullundur, Abdullapur, Jagadhari, Batala and Bhiwani.

About 30,000 employees will be benefited by the Scheme. The Labour Minister of the State, Chowdheri Sunder Singh, formally inaugurated on the 17th inst., the implementation of the scheme in Punjab by unveiling a map of the State, showing the places where the Scheme will come into operation. For the administration of the Scheme, six local offices and two sub-offices have been set up at various places. Sixty-two doctors have already been selected for the Panel list by the State Government, who will provide medical benefit to insured employees. The rate of employers' special contribution is not to be increased, but the factories in the areas where it is implemented will be required to pay ½ per cent. more from the date of implementation in lieu of their liability under the Workmen's Compensation Act and the Maternity Benefit Act.

Inaugurating the Scheme, which will benefit the workers of eight industrial centres of the Punjab, Chowdheri Sunder Singh, said: "Industrial workers in this State will no longer have to face the miseries of sickness and employment injury helplessly. They will have the services of doctors free, and, in addition, will get monetary aid from the Employees' State Insurance Corporation when they are sick or disabled." Urging the Medical Association not to be critical of the Scheme at this stage, the Labour Minister asked them to give the system a chance to work for some time.

Dr. C. L. Katial, Director-General, Employees' State Insurance Corporation, who earlier welcomed the Minister and explained the implications of the Scheme, said that arrangements were being made to extend it to the families of workers and that the Scheme would be administered on democratic principles by associating representatives of workers and employers.

IMPLEMENTATION OF FIVE-YEAR PLAN

FINANCING OF OPERATIONS DURING FIRST TWO YEARS ASSESSED

[A review of the progress of the Five-year Plan during the first two years of its operation, namely, 1951-52, was presented to Parliament on the 15th inst. by Mr. Gulzarilal Nanda, Minister for Planning and Irrigation and Power. The review shows the progress in the sphere of agriculture, irrigation and power, industry, transport and communications, social services and public co-operation.

In an introduction to the review, Mr. V. T. Krishnamachari, Deputy Chairman, Planning Commission, observes that although the Commission has obtained considerable data concerning the progress of individual schemes, a clear enough picture will take some time, as the financial year 1952-53 has just expired. This review should, therefore, be considered, he says, as a preliminary document to be followed subsequently, by a number of special studies.

*The following paragraphs deal with the review in so far as it relates to the economic and financial aspects of the Plan during the two-year period. Readers will, however, note that a reference to the achievements under the Plan in the spheres of (a) agriculture and (b) irrigation and power has been made separately elsewhere in this issue.—*ED.]

DEVELOPMENT expenditure during the first two years of the Plan of the Centre and the State Governments combined amounted to Rs. 585 crores against the total outlay contemplated in the Plan of the order of Rs. 2,069 crores. The Centre's share of the expenditure has been according to schedule, but it appears that additional resources will have to be raised by the States in order to maintain the rising *tempo* of expenditure which implementation of the Plan demands. Among the important economic developments during the period are:

(*a*) A general improvement in the levels of domestic output. Production of raw materials, particularly of jute and cotton, increased which helped in a fuller utilisation of the installed capacity of the existing mills. Industrial output also went up about 15 to 20 per cent. over the level of 1950-51. Precise data on the output of foodgrains are not yet available, but there has been an expansion of the acreage under cultivation and in consequence there has possibly been an increase in production; and

(*b*) inflation—latent as well as open—has been brought under control. This was partly the result of external influences but the financial policy of the Government enforced through budgetary, credit and foreign trade measures, has been an important contributory factor in making it possible to take advantage of the change in external conditions.

The Beginning

The Five-year Plan came formally into operation as from April, 1951. In appraising the progress of the Plan in the first two years, it is necessary to keep in mind that the first draft of the Plan was published only in July, 1951, and that the development expenditure for the year 1951-52, visualised in the Plan, was based on the provisions already made in the Central and State budgets for that year. The economic situation in the latter half of 1950 and the early part of 1951 was characterised by high inflationary pressures, and it was necessary, therefore, to keep down public investment to the minimum consistent with the commitments already made. By 1952-53, the break in the Korean War boom had considerably reduced these pressures. It was also becoming evident that the programme of development framed earlier would fall short of the needs of the country and would have to be strengthened at points. In consequence, in 1952-53, a beginning was made with some new schemes such as community projects, and larger provisions were also made for projects already under implementation. Thus, the outlay on development in 1952-53 was over Rs. 60 crores higher than in 1951-52 and nearly Rs. 90 crores higher than in 1950-51.

Total Expenditure

Over the two years 1951-52 and 1952-53, the expenditure on the Plan has been approximately Rs. 585 crores. Over 70 per cent. of the proposed developmental outlay of Rs. 2,069 crores remains to be incurred in the remaining three years. A substantial increase of nearly Rs. 80 crores over the 1952-53 level has been budgeted for in the current year, but the *tempo* of expenditure will have to be stepped up further in 1954-55 and 1955-56.

In these first two years, a few schemes such as the Sindri Fertiliser Factory and the Chittaranjan Locomotive Works, which were already well under way when the Plan started, were completed and went into production. But, these apart, few of the major projects in the Plan were due for completion in this period. Heavy investments have been made and important stages reached in the construction of many of the projects, but they will be completed, and benefits will begin to accrue, on a large scale, only in the fourth and fifth years of the Plan.

Though the impact on production of the major projects in the Plan has still to show, there are signs of a general improvement in the levels of domestic output. Production of raw materials—particularly jute and cotton—has registered significant increases. The greater availability of raw materials has, in turn, helped to make possible fuller utilisation of installed capacity in the manufacturing industries, which was one of the major objectives of the Plan, and industrial output has gone up by about 15 to 20 per cent. compared to 1950. Precise data are not available on the output of foodgrains, but there is evidence of recent expansion in acreage under cultivation and, in consequence, there has possibly been an increase in production. These increases, together with the improvement in railway transport, are beginning to create conditions in which higher rates of investment can be sustained without imposing excessive pressures on the consumption standards of the people.

Unemployment Situation

In the general economic situation, the more serious development has, however, been the appearance of signs of growing unemployment. The precise nature of this phenomenon can be assessed only with more complete information on the location and extent of the unemployment. There has always been, and undoubtedly continues to be, the chronic underemployment which is the result of insufficient economic development; to this there is no quick or easy solution. The extent of the additional unemployment which has come up, and the points at which it has tended to show itself, need careful study.

In assessing the economic trends of these last two years, it is important to bear in mind that this period has seen, in India as elsewhere, a quick transition from the inflationary conditions of over a decade to more normal conditions of production and trade. The Plan came into operation at a time when the post-war inflation was at its peak. The index of wholesale prices (year ended August 1939=100) which was about 301 in August, 1947, and had been stabilised after the decontrol experiment late in 1947 at around 390, touched 458 in April, 1951. In the two years that have passed since, inflation—latent as well as open—has been brought under control. This was partly the result of external influences but the financial policy of the Government—enforced through budgetary, credit, and foreign trade measures—has been an important contributory factor in making it possible to take advantage of the change in external conditions. These policies have been broadly in conformity with the suggestions of the Planning Commission.

The disinflation has undoubtedly been beneficial. The price level has fallen below the pre-Korean War level and the structure of relative prices within the economy is more in balance. In particular, the price parities are more conducive to the attainment of the targets in food production. With the increase in production that has already taken place in agriculture and industry, these price movements have helped to strengthen the balance of payments position of the country.

Financing of the Plan

In the scheme proposed in the Commission's Report for financing the Plan, the normal budgetary resources of the Central and State Governments were to meet, over the five years, Rs. 1,258 crores of the planned developmental outlay of Rs. 2,069 crores. After allowing for deficit financing to the extent of Rs. 290 crores (corresponding to the import surplus that could be financed from the releases from India's sterling balances), there remained a gap of Rs. 521 crores. This was to be covered by external assistance and, to the extent necessary, by measures of additional taxation and borrowing or further deficit financing.

In the two years the Plan has been in operation, the outlay on development has been Rs. 584 crores. Of this, approximately Rs. 363 crores is estimated to have been found by the Central and State Governments through savings from current revenue, surpluses of Government owned enterprises, and through loans, small savings, deposits and other miscellaneous sources. The net sum from foreign loans and grants taken credit for in this period amounts to Rs. 106 crores. The balance of Rs. 115 crores, it is estimated, would be covered by the Central and State Governments by sale of securities held in reserve and by drawing down their cash balances.

Budgetary Resources

The main heads under which budgetary resources were expected to become available for the Plan, and the amounts which they are estimated to yield in the period 1951-53 and in 1953-54 as compared to the estimates for the five years, are shown in the following summary statement:

(In crores of Rs.)

	1951-52 (*Accounts*)	1952-53 (*Revised*)	1953-54 (*Budget*)	1951-56 (*Plan*)
Savings of public authorities—				
(*a*) From current revenues ..	189.9	61.3	92.5	571.7
(*b*) From railways	37.7	20.7	20.4	170.0
Private savings absorbed through				
(*a*) Loans from the public ..	—22.7	13.9	—2.6	115.0
(*b*) Small savings and other unfunded debt (excluding floating debt) ..	48.6	54.4	55.7	270.0
(*c*) Deposits, funds and other miscellaneous sources ..	—48.8	7.7	28.5	130.8
Total ..	204.7	158.0	194.5	1,257.5

It will be seen from this that, though there has been marked shortfalls under certain heads, budgetary resources, as a whole, have not fallen seriously short of expectation and that the lags in evidence so far are small enough to be made up by suitable adjustments in the scheme of financing and additional effort in the remaining period of the Plan.

Central Resources

Within this broad picture, there have been wide variations in performance not only between the Centre and the States but also among the various States themselves. As compared to a total of Rs. 726 crores which the Centre is to raise over the five years by way of savings from revenue, railway surpluses, loans from the public, small savings, deposits, and other miscellaneous sources, it has already found about Rs. 262 crores in the first two years. This is in spite of the fact that the Centre has lost and States have gained to the extent of Rs. 20 crores annually as from 1952-53, as a result of the award of the Finance Commission.

In the case of the States, however, the corresponding figure for the five years is Rs. 532 crores, while the actual performance, in the first two years, is only about Rs. 101 crores. Among the States, Part "A" States have done, on the whole, slightly better than Part "B" States, this being mainly because the expectations of the latter in regard to loans from the public have remained unfulfilled. Taking Part A and B States together, the lag in budgetary resources (excluding Central assistance) raised for the Plan is largely traceable to a few States, viz.

(In crores of Rs.)

	1951-53	*Target for* 1951-56
Madras	3.2	93.8
Bihar	7.0	32.3
West Bengal	9.7	42.6
Mysore	3.1	27.1
Saurashtra	—3.0	12.4
Total ..	20.0	208.2

In other States also (except in the case of one or two such as Madhya Pradesh and Orissa), there have been shortfalls compared to the amounts that should have been raised in these two years at the average annual rate visualised in the Plan, but these have been relatively small.

The comparatively satisfactory progress of the Centre is explained mainly by the additional measures for raising revenues taken in 1951-52 (which, on an average, were expected to yield over Rs. 40 crores per annum) and the large yield in that year from export duties on account of the Korean War boom. The additional revenue from export duties was in the nature of a share in the gain to the country from the temporary improvement in terms of trade, and it has naturally vanished with the boom. From 1952-53, receipts from other heads have also tended to fall on account of recessionary conditions. This new factor, which not only affects the revenues of the Central and State Governments but has also other repercussions on the economy, needs to be watched closely. Measures taken to correct these conditions will also tend to correct, to some extent, the trends in Government revenues.

In the States, apart from the fact that their share in Central income-tax and excise duties has increased, their own tax receipts have tended to go up in the last few years. From about Rs. 222 crores in 1950-51 these latter have gradually risen to Rs. 227 crores in 1951-52, and Rs. 230 crores in 1952-53 and Rs. 243 crores in 1953-54.

At the time the State Plans were framed the main consideration in the case of States like Madras, for instance, where developmental outlay was already comparatively high, was to maintain, at least, the rate of development attained in 1950-51 and, in the case of others where the rate of outlay was less satisfactory, to provide for a moderate stepping-up of the rate of development. The "Central assistance" fixed for the State Plans was a measure of the extent to which the Central Government could be expected, consistently with its other commitments, to furnish resources for this purpose. It was understood that there would be additional assistance from the Centre to the States for schemes like multi-purpose river valley projects, rehabilitation of displaced persons, community development projects, etc. (which were not part of the State Plans). But, given the limited resources available to the Centre, there was no prospect of Central assistance for the State Plans as such being raised very much further. The raising of additional resources by State Governments was, therefore, prerequisite for the successful implementation of the State Plans.

Since the original estimates were made, the Finance Commission's award has effected, as from 1952-53, a transfer of about Rs. 20 crores per annum to the States which had not been visualised before. Although the resources of the Centre have not expanded correspondingly, it might not be possible in practice to reduce Central assistance to the extent that States have gained from the award. A recasting of the scheme of finance outlined in the Commission's Report is, therefore, called for. But the point that must be emphasised here is that there is no possibility of making any substantial increases in the transfers from the Centre in this period without adverse repercussions on the implementation of the Plan at other points. The raising of additional resources by States must be regarded, therefore, as an essential condition for the implementation of the State Plans to schedule. The fact that most of the States have now hardly any reserves left to draw upon makes this a prime necessity.

Central Assistance

During the last two years, Central assistance to the States amounted to Rs. 71.7 crores as against a total of Rs. 187 crores in the five-year period. The assistance has been of the following order:

(In crores of Rs.)

	1951-53	1951-56 (*Five-year Plan*)
PART A		
Assam	0.8	15.0
Bihar	5.7	15.0
Bombay	7.0	16.0
Madhya Pradesh	5.8	12.0
Madras	16.4	20.4
Orissa	3.5	10.0
Punjab	1.8	11.0
Uttar Pradesh	7.4	15.0
West Bengal	7.3	20.5
Total ..	55.7	140.5
PART B		
Hyderabad	5.9	10.0
Madhya Bharat	1.0	4.0
Mysore	4.8	8.0
Pepsu	1.2	2.5
Rajasthan	1.2	9.0
Saurashtra	1.8	6.0
Travancore-Cochin	0.1	7.0
Total ..	16.0	46.5
Grand total ..	71.7	187.0

It will be seen from the above that, while assistance for the State Plans, as a whole, has been going more or less according to schedule, there are considerable differences from State to State. On the one hand, Madras has received more than four-fifths of the assumed assistance in the first two years; Uttar Pradesh, Hyderabad and Mysore have also been receiving assistance at a rate faster than the annual average rate of the assumed Central assistance. On the other hand, some States such as Assam, Rajasthan and Travancore-Cochin have so far received only a small proportion of the Central assistance assumed in the State Plans.

Variations Inevitable

These variations were to some extent anticipated and have been inevitable, since the extension of Central assistance is in many cases tied up with the progress of particular schemes. It was, for instance, expected that since the *tempo* of expenditures on the Lower Bhavani and the Tungabhadra schemes in Madras would reach a peak in the first two years of the Plan, a considerable part of the Central assistance to the State would have to be given in this period. In the case of West Bengal, Rs. 12.5 crores of the Central assistance is tied up with the Mayurakshi Project, and the rate at which Central assistance under this head can be given is, therefore, naturally conditioned by the progress of the scheme itself.

While differences in the rate at which Central assistance has been extended to different States in the first two years are not in themselves a matter of serious concern, the position in regard to particular States, which have received very much in excess or very much below the average rate of the assumed Central assistance, needs attention.

The Position of Madras

In the case of Madras, the serious deterioration in its financial position as compared to original estimates, together with the forthcoming partition of the State, makes it necessary to attempt, at an early stage, a complete re-appraisal of the development programme in relation to possible sources of finance. In the case of Assam, the problem has been the paucity of loanable schemes in the State Plans, on the basis of which Central assistance could be extended. The problem has been partly met by the award of the Finance Commission which has increased the grants to the State, but the possibilities of increasing Central assistance to the State through other ways need also to be examined. The above observations in regard to Madras and Assam hold good in varying degrees to some of the other States as well.

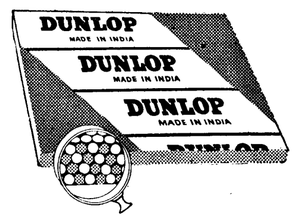
After taking credit for the budgetary resources that are likely to become available to the Central and State Governments for financing the Plan, and after allowing also for deficit financing to the extent of Rs. 290 crores, there still remains, for the five-year period, a gap of the order of Rs. 521 crores. In the two years under review, foreign grants and loans extended to India amount to about Rs. 189 crores. These include loans from the World Bank, U.S. Food Loan, and T.C.A. assistance, Colombo Plan assistance and assistance from Norway and the Ford Foundation.

The Outlook

In the remaining three years of the Plan, programmes costing Rs. 1,485 crores, as against the total planned outlay of Rs. 2,069 crores over five years have to be implemented. For 1953-54, an expenditure of Rs. 413 crores has been budgetted for; the budgetary resources of the Central and State Governments are estimated to meet about Rs. 200 crores of this expenditure. It is difficult to make a precise assessment at the present stage of the extent to which these estimates will be realised, but if budgetary resources become available in the remaining three years of the Plan at the rate estimated for 1953-54, they would finance only about Rs. 600 crores of the balance of expenditure of Rs. 1,485 crores. Allowing for the deficit financing that has been done in the first two years (and assuming it for the present to be about Rs. 75 crores), further deficit financing against import surpluses financed from sterling balances may be expected to provide another Rs. 215 crores. The unutilised portion of foreign grants and loans extended to date amounts to about Rs. 75 crores. There would still be left a gap in resources of the order of Rs. 600 crores. Additional taxation and borrowing, further external assistance and—in the last resort—additional deficit financing are the main sources of finance for meeting this gap. The extent to which reliance will have to be placed on each of these will depend on a variety of circumstances, but it is clear that even if external assistance on a larger scale than hitherto becomes available, the need for raising additional resources internally will remain paramount.

"The gap in resources," the Report says, "is not so large as to raise doubts as to the country's ability, with reasonable external assistance, to implement the Plan to schedule. But, undoubtedly, the substantial stepping up of investment programmes, which the full execution of the Plan will necessitate, will require determined effort on the part of the country. To this end, budgetary resources will have to be augmented to the fullest extent possible; increase in non-development expenditures, or in expenditures of a developmental character but outside the Plan will have to be kept minimum, if not rigorously avoided; and the executive machinery of planning will have to be strengthened so as to complete the development outlay to schedule and in furtherance of the real targets set out in the Plan."

DUNLOP
transmission
belting
[Square Edge]



Specially constructed from hard type closely woven fabric (silver duck) and skim-coated between plies. This construction ensures that Dunlop Belting is:—
★ practically immune from edge wear ★ ideal both for high-speed drives subject to severe flexing and heavy drives necessitating shock load resistance. ★ extremely economical and suitable for almost all industrial and agricultural applications.

ELECTRIC LAMPS INDUSTRY

PLEA FOR CONTINUATION OF RESTRICTION ON OUTPUT

A STRONG plea for extending the period of restriction on production of the Indian electric lamps industry was put forward by Mr. S. K. Roy, in the course of his presidential address at the annual general meeting of the Indian Lamp Factories Association, held at Calcutta a fortnight ago. This plea, on the face of it, appears to be not without justification. For, despite the uniform cut of 25 per cent. in the production of lamp factories having a capacity of more than one million pieces, determined by Mr. T. T. Krishnamachari, Minister for Commerce and Industry, at the instance of the Indian lamps industry, in November last, the market conditions since have not changed appreciably. There are still, we learn, large unsold stocks of lamps with the majority of the factories. In fact, any decision with regard to the abolition or relaxation of restriction at any time should depend on the stock position, in relation to demand, with the industry. There is, therefore, the need for effective action to help the factories to reduce these stocks. But reduction of stocks through continued cuts in production provides no permanent remedy. Besides leading to continued unemployment, such cuts always offer scope for substitutes to expand their production and to make inroads into the sphere of manufacture created by the cuts. The industry should, therefore, try to cut costs, increase efficiency and expand sales, and thus effect reduction in stocks. This alone is a source of remedy for the crisis which the lamp industry is facing now. Such a process will, in fact, pave the way for further expansion of production which is to the ultimate benefit of the industry. Reduction in taxation and provision of transport at concession rates are some of the measures by which the State can help the industry to tide over the crisis better.

Our contention, as indicated above, that substitutes expand, when production is cut, is justified by the complaint of Mr. Roy himself that increased production by factories, of lamps other than G.L.S., which could be used for general purposes, had been rendering control on production of G.L.S. lamps ineffective. Some of the varieties coming under the category of "other lamps" have virtually invaded the market for G.L.S. lamps. But as production statistics of various types of lamps coming under the category of "other lamps" are not available, it has not been possible to form an idea as to the extent to which the market for G.L.S. lamps is being captured by others. This calls for the factories to furnish the types of lamps produced by them and their production statistics separately and in greater detail. Such information will, of course, be helpful in ganging the extent to which the G.L.S. lamps have yielded ground to substitutes.

Imports

The Government of India can also help the industry through other ways. It can regulate imports of other lamps, such as, flashlights or torches and parts thereof and the like. The import of "other lamps" into the country during 1952 was 1,495,115 pieces and of flashlights or torches and parts thereof 5,824,915. Mr. S. K. Roy felt that imports had been too much on the higher side. He even suspected that it was just possible for even G.L.S. type lamps to have found surreptitious entry under the coverage of "other lamps." He was not sure whether the figures of imports coming under the category of "flashlights and parts thereof" included imports of torch bodies. He wanted the Government to show the import statistics relating to torch bodies and flashlights separately. This will help the domestic producers to know the exact volume of consumption of these articles in India. There is also absence of figures relating to domestic production and imports of fluorescent tubes and fittings. The adverse consequences of free imports of auto-lamps are still fresh in our memory. It is true that import of auto-lamps has been prohibited this year, but such prohibition appears to have come after much damange had been done to the industry, in the absence of proper import statistics to guide import policy.

The Planning Commission has estimated the internal requirements of electric lamps in the country at 20 million pieces in 1952-53, and 30 million pieces in 1955-56. It is of the opinion that the annual rated capacity of the electric lamp industry in the year 1955-56 would be 32.5 million pieces, as against 26 million pieces of G.L.S. lamps, as at present. In regard to the manufacture of miniature lamps, the Commission envisages an increase in the number of units from one in 1950-51 to eight in 1955-56, and the increase in the annual rated capacity from 0.9 million in 1950-51 to 27.5 million in 1955-56. The production of miniature lamps only, as distinct from G.L.S. lamps, is estimated at 16 million pieces in 1955-56. Information, however, about the current production of such lamps in the country is not made available.

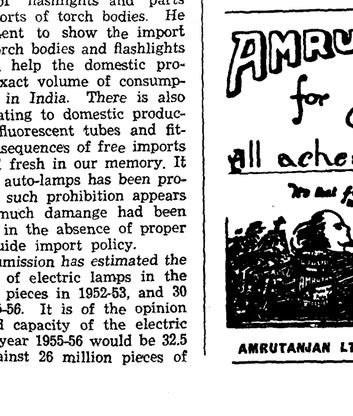
Internal Consumption

Commenting on the Planning Commission's estimates above, Mr. Roy opined that the estimate of internal requirement for G.L.S. lamps in 1955-56 was too optimistic. As market indications went, it was hard to believe that the internal consumption, which was 16 to 18 million pieces at present, would nearly double itself in the course of next two to three years, he added. He admitted that some progress had been made towards the generation of more thermal and hydro-electric power. The Bokaro Thermal Electric Station had already gone into commission and some surplus power was also being offered for general consumption by the Sindri Fertiliser Company. Efforts being made to expedite the completion of the Bhakra, Nangal, Hirakud and D.V.C. projects were making good progress. It was, therefore, natural, he remarked, to expect increase in consumption of electricity. But he questioned the quantum of increase, in the context of the present high cost of insulating cables, transmission and distribution equipment, household wiring and the like. Unless aluminium cables were introduced for transmission and distribution of electricity as also for domestic wiring purposes, he averred, it would be difficult to record any appreciable increase in the offtake of electricity. These remarks of Mr. Roy deserve to be carefully noted. At any rate, his warning that the sole dependence on copper for transmission and distribution will have to be abandoned, in view of the high price of copper, is timely. There is also the need for the Supply Corporations to reduce their charges per unit and install distribution centres in rural areas with a view to popularising consumption of electric lamps.

Raw Materials

The development of electric lamps industry depends again on the availability of indigenous raw materials, such as brass and other metallic components. Mr. Roy advocated the flotation of a new company for the purpose of production of raw materials needed by the industry, indigenously. He desired that all the units of the industry should take shares in the proposed new factory. He said that the distribution of raw materials produced by such a company might be made in proportion to the share subscribed by the various units or on the basis of their share in the total production of lamps in the country or on the basis of a combination of these factors. The management and production policy of the company should be governed by the representatives of all the units of the industry, he added. In this connection, he referred also to the amalgamation permitted by the Government of India to Hind Lamps Ltd. with a number of foreign parent bodies of the constituents of the Electric Lamp Manufacturers Association of the U.K. for the production of raw materials and components of electric lamps such as brass caps, glass rods, tubes, etc. As an inducement, the combine is given an additional capacity of 3 million pieces of lamps per year. In view of the fact that Hind Lamps had not yet started production of these materials, Mr. Roy suggested that the industry take over whatever investment has already been made in the new enterprise and develop it as a common enterprise of the industry, as a whole.

Finally, a few words may be added here regarding the quality of the products of the industry. With the return of the buyers' market, this aspect has assumed significance. The industry is producing mostly according to B.S. specifications. It cannot, however, be said that the quality of indigenous products, as a whole, is on a par in all respects with that of foreign lamps. The position, of course, needs rectification. It is to be hoped that the Indian Standards Institution, which is already engaged in the work, will formulate the specifications at an early date and enable the industry to produce quality lamps.



CUSTOMS PROCEDURE IN U.S. TO BE SIMPLIFIED

A new Bill drafted by the United States Treasury Department for simplifying the Government's customs machinery is now before the Congress. The new Bill fits in with President Eisenhower's aim to stimulate foreign trade, and make it a partial substitute at least for U.S. foreign aid. In his State of the Union Message, it will be recalled, the President specifically called for "revising our customs regulations to remove procedural obstacles to profitable trade."

The new Bill will not affect tariff rates. But it proposes to eliminate complexities which impede import of foreign goods. With the removal of the procedural obstacles, foreign producers and U.S. importers will be encouraged to ship more goods into the U.S. This will increase the dollar earnings of the non-U.S. producers. There is no way of telling precisely what foreign-manufactured goods will benefit the most from simpler U.S. customs regulations. The idea of the Administration measure is to make it easier to bring in all types of goods. Much of the present complexities in the customs procedure are due to the difficulty in assessing the quantum of levy on each item.

The most important of the proposed revisions relates to the way the "value" of an item is figured out for duty-levying purposes. Under present rules, customs agents must first determine the "export value" of the item, that is, the price for export to the U.S. Then they must determine the "foreign value," that is, the price the item would command in the domestic markets of the exporting country. Whichever is the higher figure is used for calculating the duty. The new Bill proposes to eliminate consideration of the "foreign value" and take into account only the export price. This, in turn, will end the need for a steady flow of price data on foreign domestic markets and end also the delays that result, while this information is being gathered in each case. These delays, according to a recent official report, constitute a serious hindrance to business, because long after an importer has sold his goods, the final customs appraisal may assess duties so high as to wipe out profits altogether. The second change is designed to boost the value of the shipment of goods which may enter duty-free from the present $1 to $3. Another proposed revision proposes to eliminate extra duties when an importer undervalues incoming goods. Still another important revision relates to the marking by foreign countries of the goods they ship to the U.S. Under the terms of the new Bill, only the name of the country where the goods are made will have to be marked on the goods.

COTTAGE INDUSTRIES EXHIBITION

Various foreign countries like America, Britain, Italy, Portugal, Sweden, Argentina and Ceylon, besides several State Governments and the Government of India are expected to participate in the Handloom and Cottage Industries Exhibition to be held in Madras between 15th June and 2nd August next. This Exhibition is the first of its kind to be held in India. The Tamilnad Handloom Weavers Congress is organising this Exhibition for encouraging and aiding handloom and other cottage industries. The Exhibition, which is to be held on an area of 23 acres, will have 620 stalls, an amusement park, an open-air theatre, an art gallery and a fish pond, besides other sections for archæology, geology and agriculture. Demonstrations of the various processes in the manufacture of handloom and cottage industries and the durability of these products will be an important feature of the Exhibition. Other features of this Exhibition include a "beauty parlour" containing a section showing the evolution of dresses and styles during the ages. The Government of India and the Government of Madras have extended their co-operation and afforded certain facilities to the organisers of this Exhibition.

A cardboard factory at Veendam (Holland) has produced a new type of box which is rightly called the collapsible square barrel. This Holton container is made of a new, particularly strong and tough board, the outer layers of which are water-repellent. The shape, the size and the strength of board can be adapted to any special purpose for which the packing is to be used. As a rule, the boards employed have a weight of about 1,700-1,800 g/sq. m. and a bursting strength of 24-30 kg./sq. cm. Besides being low in initial cost, the Holton containers, on account of their collapsibility, low weight and small volume, ensure considerable economy in cost of despatch, storage and transport when filled.

AGRICULTURE UNDER FIVE-YEAR PLAN

PROGRESS DURING FIRST TWO YEARS REVIEWED

AVAILABLE statistics disclose that the progress of the Five-year Plan in the agricultural sector, during 1951-52 and 1952-53, is encouraging. And this is so despite scarcity conditions in many States. In reviewing the progress made, it is necessary to bear in mind that, inasmuch as a large number of schemes included in the Five-year Plan are of a long-term nature, the physical achievements during the first two years cannot indicate the entire *tempo* of the development works undertaken. This is particularly so with regard to multi-purpose projects. The highlights of the progress, in the period under review, are substantial increases in the production of jute, cotton and sugarcane, construction of a large number of minor irrigation schemes and tube-wells, reclamation by the Central Tractor Organisation of nearly 4.14 lakh acres of land, distribution of large quantities of fertilisers, measures towards consolidation of holdings and increased loans to cultivators for agricultural purposes.

Detailed estimates of the additional production have not yet been framed by the State Governments, but the Ministry of Food and Agriculture has made tentative estimates of the increased production potential, as a result of the schemes financed from Grow More Food funds, during 1951-52. The total achievement for the year 1951-52, according to these estimates, works out at 8.8 lakh tons in terms of foodgrains. Besides this, 2.7 lakh tons in term of foodgrains are estimated to have been produced, as a result of major irrigation schemes which increased the area receiving irrigation during 1951-52 by 8 lakh acres. No estimates are available in respect of agricultural schemes which were not financed under G.M.F. The results of all the schemes will, however, be reflected more fully and accurately in the production for 1952-53 than for 1951-52.

Increase in Acreage

All-India estimates of actual production during 1952-53 are not yet available in respect of most crops. During 1951-52, foodgrains did not record much progress over the preceding year. This was largely due to the fact that scarcity conditions prevailed in Bihar, Eastern U.P., and Rayalseema areas of Madras and Saurashtra. In 1952-53, an increase of about 6 million acres (about 5½ per cent. of the total) in the area under *kharif* cereals is reported, and though production data are not yet available, it is believed that compared with 1951-52, there has been an appreciable increase. Despite some increase in the sown areas, production of oilseeds has declined slightly, mainly due to bad climatic conditions in the groundnut areas. In the case of sugarcane, there was a large increase in the area sown during 1951-52 and production advanced by about 0.3 million tons. Provisional figures indicate that, during 1952-53, there was a decline, due mainly to marketing difficulties. Final estimates which are now available in respect of a number of States for rice, *jowar*, *bajra* and maize indicate the following increases during 1952-53, as compared with 1951-52.

Crop	*Production (Million tons)*		*States for which estimates not included*
	1951-52	1952-53	
Rice	15.5	16.3	Bihar, Orissa, Jammu and Kashmir and Travancore-Cochin.
Jowar	3.4	3.6	Bombay, Madras, Punjab and Rajasthan.
Bajra	1.7	1.8	Bombay, Punjab and P.E.P.S.U.
Maize	1.5	1.7	Punjab, P.E.P.S.U., Jammu and Kashmir and Rajasthan.

In gram and pulses, there has been no progress.

The production of commercial crops is influenced by price changes to a greater extent than that of foodgrains. There was increase in the production of jute and cotton during 1951-52. In the case of jute, under the stimulus of high prices, production rose by 1.4 million bales—from 3.3 to 4.7 million bales. In the case of cotton, production increased by over 3.9 lakh bales, from 2.97 million to 3.3 million bales. From the forecasts available for 1952-53, it seems that these gains have been more or less held, but there has been no increase over 1951-52.

Financial Aspect

The total expenditure on agricultural development in the States was Rs. 20.6 crores in 1951-52 and Rs. 22 crores in 1952-53. The Centre assisted to the extent of Rs. 17.4 crores (loan Rs. 10.4 crores and grants Rs. 7.0 crores) in 1951-52, and Rs. 21.0 crores in 1952-53. More than 60 per cent. of the Central assistance made available to the States during 1951-52 and 1952-53 was granted for schemes of irrigation. These schemes include construction and repair of wells, construction and repair of tanks, installation of pumps, construction and improvement of dams and channels and other similar minor irrigation works. It is estimated that, as a result of schemes executed during 1951-52, nearly 2.05 million acres will be brought under irrigation as against 8.28 million acres programmed for five years. Information regarding the progress of these schemes during 1952-53 is not yet available.

The States in which large number of wells were sunk, or repaired, in 1951-52, were U.P. (8,687), Madras (7,288), Madhya Bharat (3,297), and Punjab (2,001). The work was for the most part undertaken by private persons who were allowed a subsidy (shared equally by the Centre and the State) up to 25 per cent. (formerly 50 per cent.) of the cost and who were also allowed to obtain *taccavi* loans to cover the balance. In some States, the recovery of such loans made previous to the commencement of the Plan was not satisfactory and this may necessitate some modification of the programme.

Water Lift Appliances

Water lift appliances, such as, pumping sets are growing in popularity and during 1951-52 nearly 2,850 engines and pumping sets were installed in Madras, Madhya Pradesh, West Bengal, Punjab, Hyderabad and Madhya Bharat. Besides these sets, which were supplied to individual cultivators, the Agriculture Departments in U.P. and Madras maintain 200 and 739 pumping sets, respectively, which are installed and run by the departments at convenient places, and the cost of running is realised from the cultivators. The Bombay Government is doing, we are told, much to encourage co-operative lift irrigation societies. Two hundred and fifty-one such societies are now in existence.

In the eastern zone, namely, West Bengal, Assam, Orissa, Bihar and the Eastern part of U.P., the repair of tanks, construction of channels, and the execution of small drainage schemes assist production considerably. West Bengal undertook 975 such small projects at a cost of Rs. 27.42 lakhs in the year 1951-52. The State also spent Rs. 22.5 lakhs on the repair of 500 tanks. In Assam, 650 projects were undertaken at a cost of Rs. 36.51 lakhs. In the U.P., Rs. 12 lakhs were spent on drainage schemes which are stated to have benefited 9,700 acres. Madras spent Rs. 1.62 crores on tank improvement schemes and Rs. 1.34 crores on small irrigation works.

A special provision of Rs. 30 crores for additional minor irrigation is made in the Plan. A considerable portion of this provision has to be utilised for financing the 2,650 tube-wells for which agreements have been entered into under the Indo-U.S. Technical Co-operation Programme. These tube-wells will be concentrated mainly in the four States of the Gangetic Plain, namely, Bihar, U.P., Punjab and P.E.P.S.U. Arrangements for construction have now been made in respect of 2,000 tube-wells approved under the 1952 programme.

Besides the T.C.A. tube-wells, a programme for the construction of about 1,365 tube-wells has been undertaken in the States of U.P., Bihar, Punjab and Bombay. Of these, 481 have been completed.

The Plan has envisaged the reclamation of 1.4 million acres through the Central Tractor Organisation and 1.2 million acres through State Tractor Organisation. The Central Tractor Organisation reclaimed 2.55 lakh acres during 1951-52 and 1.59 lakh acres upto April, 1953, in Madhya Pradesh, U.P., Madhya Bharat and Bhopal.

Reclamation programmes offer opportunities for settlements along new and progressive lines. In the Nainital Tarai of Uttar Pradesh, for instance, about 100,000 acres infested with wild animals and malignant malaria have been converted into prosperous co-operative colonies and flourishing State farms. As many as 2,613 families consisting mainly of displaced persons, political sufferers and ex-servicemen have been settled in well-laid-out colonies. Adequate provision for communications has been made by the construction of 38 miles of metalled and 43 miles of unmetalled roads. For irrigation, 29 tube-wells have been sunk. A large part of the area has also been provided with electrical power. A large State farm of about 16,500 acres divided into three blocks has also been started in the reclaimed area. In Madhya Bharat, Madhya Pradesh and Bhopal, much of the land belongs to cultivators. In these States, it is understood that 99 per cent. of the area reclaimed by the Central Tractor Organisation is now under cultivation. Many of the assumptions made in working out the cost and economics of the programme of the Central Tractor Organisation need re-examination. A committee has recently been set up to go into all these matters.

Besides the Central Tractor Organisation, many States Governments also maintain tractors with which they undertake not only reclamation but also mechanical cultivation of land for the benefit of private parties, and in Madhya Pradesh and Madhya Bharat, follow-up cultivation, in areas reclaimed by Central Tractor Organisation, is carried out.

Contour bunding which is most valuable in areas of scanty rainfall has been carried out on an extensive scale in Bombay where during the year 1951-52 about 50,000 acres were bunded at a cost of Rs. 30 lakhs. The U.P. Government spent about Rs. 6.67 lakhs on bunding 6,300 acres in Bundelkhand. In Madhya Pradesh, a number of schemes for the construction of new paddy bunds and *rabi* embankments have been undertaken. A sum of Rs. 10 lakhs was spent and about 10,000 acres of land were benefited.

Distribution of Fertilisers

The use of fertilisers has developed fairly rapidly during the past few years, and by 1952 annual consumption of ammonium sulphate and superphosphate appeared to have reached about 2.5 lakh tons and 30,000 tons, respectively. Among Part A States, Madras uses about 100,000 tons and U.P. and Bombay about 30,000 tons of ammonium sulphate every year. But in some other States where there is great scope for the use of fertilisers, e.g., Bihar, Orissa and Madhya Pradesh, the cultivators have been slow to take to them. One chief difficulty experienced in the popularisation of fertilisers is the cultivator's lack of adequate purchasing power. A scheme of deferred payment has, therefore, been evolved to enable the State to supply fertilisers to the cultivators on loan, the payment being collected either in cash or kind after the harvest.

In 1951-52, distribution of improved seeds was undertaken in most of the States. Information received from U.P., Madras, Madhya Pradesh, Assam, Hyderabad and Madhya Bharat indicate that during the year nearly 54,000 tons of good quality seeds were distributed.

The "key village" scheme, the establishment of *gosadans*, the campaign against rinderpest, and the opening of more veterinary dispensaries are the principal items in the programme for the improvement of livestock.

During the period under review, 222 key villages and 96 artificial insemination centres were organised. As many as 18 *gosadans* were sanctioned. It is hoped to eradicate rinderpest by large-scale vaccination with the newly evolved lapinised vaccine. Arrangements have been made at Izatnagar for large-scale manufacture of this vaccine and the necessary equipment has been obtained through F.A.O. and by direct purchase. As regards dairying, a pilot project has been taken up by the I.C.A.R. to provide milk of good quality at a reasonable price to the citizens of Delhi. A dairy equipped with a pasteurising plant has been established under the I.C.A.R. with 40 sales depots in the town.

Schemes for the consolidation of holdings have been incorporated in the plans of P.E.P.S.U., Punjab, Uttar Pradesh and Bombay. In P.E.P.S.U. and U.P., the preliminary arrangements are being completed, but the work has not yet started. In the Punjab, about 12 lakh acres are reported to have been consolidated by 1951-52. Information concerning the work done in Bombay has not yet been received.

Agricultural Finance

Owing to the operation of land reform legislation and Moneylenders' Acts, the private sources of agricultural finance have been cur-

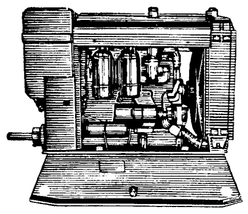
Cummins *Heavy Duty* Diesels cg/2
have lower operating costs


H.R.P. 400 Industrial Power Unit. Continuous Rating 72 H.P. at 1600 R.P.M.
The better—built engine for better power profits
Cummins Diesels reduce bills because the exclusive mechanical features of the Cummins fuel system assure accurate metering of fuel, efficient preparation and controlled injection. This means the engine operates more efficiently on less fuel during a given period.
Designed and built for years of service on the toughest jobs they last longer and reduce maintenance costs because of their rugged construction.
For any job requiring economical power and the minimum of care - Cummins Diesels are ideal.

ALCOCK ASHDOWN MAINTAINS DIVIDEND LEVEL

FINANCIAL POSITION IMPRESSIVE

THE declaration of a dividend of 17½ per cent. for the year ended 31st December, 1952, by the Directors of Alcock Ashdown and Co., Ltd. (Managing Agents: Messrs. Turner, Morrison & Co., Ltd., Bombay), seems to indicate that the management is desirous of following a steady dividend policy. For, the year 1952 is the sixth year in succession for which the above dividend is being repeated. The first year for which this dividend was paid was for 1947; the dividend was stepped up successively from 10 per cent. paid for 1944 to 12 per cent. for 1945 and to 15 per cent. for 1946. The dividend for 1947 was, it may be noted, on the capital of Rs. 33.42 lakhs, doubled during the year by the capitalisation of Rs. 16.71 lakhs. For the year 1948, however, the dividend had to be reduced to 6⅔ per cent. in order to comply with the Dividend Limitation Act. The Directors, however, set apart a sum of Rs. 3.55 lakhs, representing the difference due to the shareholders, to the dividend equalisation reserve. Consequent on the withdrawal of the Act in 1949, they wrote back this sum and distributed the same to the shareholders at the rate of 10⅔ per cent. in addition to the regular dividend of 17½ per cent. paid for that year, making a total distribution of 28⅓ per cent. This additional dividend, which was, in fact, paid out of the earning for 1948, actually belonged to 1948. If this is added to the actual distribution made for 1948, instead of to that for 1949, it will be seen that the dividends for the years 1948 and 1949 will be the same, that is, 17½ per cent. per annum.

The steady character of the dividend policy follows the pattern of the Company's earnings in the post-war years, during which they have not undergone any markedly wide fluctuations. The trading profit for the year under review amounts to Rs. 42.75 lakhs, representing a decline of only Rs. 2.50 lakhs from that of Rs. 45.25 lakhs for 1951, and compares with a high of Rs. 54.13 lakhs for 1947 and a low of Rs. 33.37 lakhs for 1946, in the post-war period. Except for the year 1946, when the net profit, after making provisions for depreciation and taxation, amounted to Rs. 4.29 lakhs, the net profit has been maintained on an even keel, the highest and lowest profit during the period being Rs. 10.96 lakhs and Rs. 8.87 lakhs, respectively. The net profit for the year under review, at Rs. 10.06 lakhs, therefore, does not show any marked deviation from these levels.

The salient features of the profit and loss account for the last four years are presented in the following table which will enable readers to get an idea of the Company's progress in recent years:

(In lakhs of rupees)

	For the year ended 31st December			
	1952	1951	1950	1949
Sale proceeds and work done ..	113.03	120.65	106.64	137.92
Stock-in-trade	21.00	13.24	14.50	12.15
Work-in-progress	35.68	24.19	32.14	42.27
Manufacturing expenses	90.43	66.19	59.83	94.36
Trading profit	42.75	45.25	39.03	49.21
Other income	1.05	2.13		
Other expenses	23.81	22.11	20.72	20.69
Managing Agents' remuneration.	2.52	3.29	2.44	3.51
Provision for—				
Depreciation	1.82	1.78	1.99	3.01
Taxation	6.50	9.25	7.00	14.00
Net profit	10.06	10.96	8.87	9.42
To reserves	4.00	5.00	3.05	3.50
Dividend	5.85 (17½%)	5.85 (17½%)	5.85 (17½%)	9.40* (28⅓%)
Carry forward	0.88	0.62	0.51	0.53

* Includes Rs. 3.55 lakhs representing an additional dividend at the rate of 10⅔ per cent. paid out of the dividend equalisation fund.

A notable feature of the accounts for the year under review is the sharp rise in manufacturing expenses, mainly accounted for by the rise in the cost of stores and wages paid. The table also shows that the management has been following a prudent policy in the matter of appropriation of profits. As a result of this policy it has been able not only to maintain a steady dividend but also strengthen the various reserves by as much as Rs. 15.55 lakhs in the last four years. Out of the sum of Rs. 4 lakhs added to the reserves from the profit for 1952, Rs. 2 lakhs represent the addition to the general reserve and Rs. 2 lakhs to the machinery rehabilitation and replacement reserve.

The history of the Company's capital structure makes interesting reading. In 1918, the authorised, issued and paid-up capital of the Company was raised from Rs. 5,75,000 to Rs. 8,62,500 by the creation and issue of 2,875 shares of Rs. 100 each at a premium of Rs. 400 per share. In April, 1943, the authorised capital was further raised from Rs. 8,62,500 to Rs. 40,00,000. This was done by the creation of 31,375 additional shares, of which only 8,086 were issued at a premium of Rs. 100 per share, thereby raising the paid-up capital to Rs. 16.71 lakhs. In the year 1947, the authorised capital was again raised, to Rs. 2 crores, by the creation of 1,60,000 shares of Rs. 100 each. At the same time a sum of Rs. 16,71,100, from out of the premium of Rs. 19,72,075 got from the above two new issues, was capitalised and issued as bonus shares in the proportion of one new share for every one share held, bringing the paid-up capital to the present level of Rs. 33,42,000.

Even after the capitalisation of a sum of Rs. 16,71,100 in 1947, the Company's reserves and surplus stand at Rs. 47.84 lakhs, which is over 143 per cent. of the paid-up capital of Rs. 33.42 lakhs. Reserve for taxation amounts to Rs. 25.78 lakhs. The gross block of the value of Rs. 91.14 lakhs has been written down to Rs. 13.35 lakhs. The current assets amount to Rs. 154.38 lakhs, represented by stock-in-trade Rs. 21.00 lakhs, work-in-progress Rs. 35.68 lakhs, debts, deposits and advances Rs. 65.23 lakhs, investments Rs. 21.50 lakhs and cash balance Rs. 10.95 lakhs. These current assets cover the current liabilities, including provision for taxation, aggregating Rs. 86.47 lakhs, by a wide margin of Rs. 67.91 lakhs.

The Rs. 100 paid-up shares of the Company are being currently quoted at Rs. 318-12 *cum-div.*, at which rate and on the basis of the latest dividend, the shares give a yield of 5.5 per cent. per annum, free of income-tax.

MAFATLAL FINE SPINNING AND MANUFACTURING CO., LTD.

The decline of Rs. 22.88 lakhs to Rs. 30.52 lakhs in the gross profit or of Rs. 6.98 lakhs to Rs. 4.44 lakhs in the net profit of the Mafatlal Fine Spinning and Manufacturing Co., Ltd. (Managing Agents: Messrs. Navinchandra Purshotamdas & Co., Ltd., Bombay) for the year ended 31st December, 1952, has not affected the distribution to the shareholders. A dividend of 17½ per cent. on the ordinary shares of the Company has been declared by the Directors for the year under review, as against 35 per cent. paid for the previous three years; but the latest dividend is on a capital doubled during the year under review, so that it is equal to the dividend on the old capital. The net profit, at Rs. 4.44 lakhs, does not permit of the distribution of such a dividend and the Directors have, therefore, had to draw a sum of Rs. 7 lakhs from the dividend equalisation fund to make up the deficiency.

The Company's sale proceeds of cloth, yarn and waste show a decline from Rs. 270.74 lakhs for the year 1951 to Rs. 255.04 lakhs. Closing stocks of cloth, yarn, waste and process stock are lower at Rs. 21.75 lakhs, as compared with Rs. 33.03 lakhs at the end of 1951. Manufacturing and other expenses too show a fall from Rs. 253.14 lakhs to Rs. 217.06 lakhs. Gross profit, as already noted, has suffered a shrinkage from Rs. 53.40 lakhs to Rs. 30.52 lakhs. Following the contraction in earnings, the Agents' commission also has been reduced from Rs. 9.24 lakhs to Rs. 8.78 lakhs. The Company has been following a liberal policy in making provision for depreciation and in accordance with this policy, a sum of Rs. 14.30 lakhs (out of a gross profit of Rs. 30.52 lakhs) has been provided for this purpose, as against Rs. 17 lakhs (out of Rs. 53.40 lakhs) in 1951 and Rs. 20.60 lakhs (out of Rs. 42.26 lakhs) in 1950. Taxation, for which a provision of Rs. 15.70 lakhs was made last year, is now provided with Rs. 3 lakhs. The net profit of Rs. 4.44 lakhs, available after these appropriations, along with the sum of Rs. 7 lakhs drawn from the dividend equalisation fund, has been utilised to pay the 4½ per cent. first and second preference shareholders Rs. 65,250 each and the ordinary shareholders Rs. 10.15 lakhs.

The sound financial position of the Company is indicated by the following synopsis of its balance-sheet as on 31st December, 1952:

Liabilities	Rs.	Assets	Rs.
Capital ...	87,00,000	Gross block ...	1,36,31,396
Reserves and surplus ...	1,15,99,452	*Less*—Depreciation ...	79,40,000
Provision for taxation ...	25,45,167	Net block ...	56,91,396
Liabilities ...	33,44,835	Stock-in-trade	45,79,237
		Stores, spares, etc. ...	13,43,597
		Debts, deposits and advances ...	61,40,088
		Investments	73,55,570
		Cash ...	10,79,566
Rs.	2,61,89,454	Rs.	2,61,89,454

The Company's paid-up capital is made up of an ordinary capital of Rs. 58 lakhs and a 4½ per cent. preference capital of Rs. 29 lakhs. It will be interesting to note that the major part of the capital of Rs. 87 lakhs has been built up by the capitalisation of reserves. The original capital of the Company, was only Rs. 7.25 lakhs. The balance of Rs. 79.75 lakhs (Rs. 50.75 lakhs of ordinary capital and the entire preference capital of Rs. 29 lakhs) was issued as bonus shares, the latest issue having been made in April, 1952, by capitalising a sum of Rs. 29 lakhs from out of the post-war rehabilitation and development fund and issuing ordinary bonus shares. The present reserves and surplus are made up of, in the main, a reserve fund of Rs. 33.50 lakhs, post-war rehabilitation and development fund of Rs. 61 lakhs, investment fluctuation fund of Rs. 9.54 lakhs, machinery renewal fund of Rs. 6 lakhs and capital reserve of Rs. 3.92 lakhs. It may be noted here that at the end of 1949, the Company's post-war rehabilitation and development fund stood at Rs. 1 crore, out of which a sum of Rs. 10 lakhs was transferred in 1950 to provision for taxation and another sum of Rs. 29 lakhs was capitalised, as already stated, in April, 1952. During the year under review, a sum of Rs. 9.69 lakhs was spent on extensions to buildings and purchase of new machinery. A few new machines have already been installed and are stated to be working satisfactorily. It may be added that the value of the machinery, telephone installation, furniture and fixtures, etc., have been taken at the book value of Rs. 94.98 lakhs (instead of at cost as in the case of the other items of the fixed capital expenditure) since the original cost of these items is stated to be unascertainable.

INDIAN WOOD PRODUCTS CO., LTD.

The Indian Wood Products Co., Ltd. (Managing Agents: Messrs. Gillanders Arbuthnot & Co., Ltd., Calcutta), had another successful year of working during the year ended 30th September, 1952. The trading profit for the year at Rs. 17.94 lakhs, compares well with Rs. 17.64 lakhs for 1950-51 and Rs. 17.69 lakhs for 1949-50. The net profit, at Rs. 9.22 lakhs, represents an increase of Rs. 1.52 lakhs over that for the previous year. This is not due to any reduction in the essential appropriations, such as depreciation and taxation, but is mainly due to the receipt of a sum of Rs. 1.03 lakhs from the Government, being the post-war refund of excess profits tax. A sizable part of the net profit has, as usual, been placed to the general reserve. The Company has already paid, for the year under review an interim dividend of 15 per cent. on a capital of Rs. 15 lakhs, the same as in the previous year. The final distribution of 15 per cent. for the year under review, that has now been proposed by the Directors, is on a capital of Rs. 20 lakhs, increased since the close of the year ended 30th September, 1952, by the capitalisation of Rs. 5 lakhs from out of the reserves, whereas the corresponding distribution for the previous year was at the rate of 20 per cent. on the old capital of Rs. 15 lakhs. This, however, represents a dividend of 20 per cent. on the old capital, so that the total distribution for the year is the same as in the previous year.

The Company's production is stated to be slightly lower than in the previous year due to the lower extraction percentage of *katha* obtained from the khair wood consumed during the year. The demand for the manufactured products has been satisfactory and the whole output is stated to have been disposed of steadily throughout the year. These are reflected in the increase in the sale proceeds from Rs. 32.74 lakhs for 1950-51 to Rs. 34.94 lakhs and the decline in the stock of manufactured goods from Rs. 73,043 to Rs. 62,970. Manufacturing cost has gone up by Rs. 1.84 lakhs to Rs. 17.01 lakhs, but the increase on this account is not as large as that of Rs. 3.33 lakhs noted in the previous year. Managing Agents' commission absorbs Rs. 1.74 lakhs (as against Rs. 1.73 lakhs in the previous year), depreciation Rs. 1.12 lakhs (Rs. 1.04 lakhs), taxation Rs. 6.27 lakhs (Rs. 6.36 lakhs). The Company has had to pay, for the last several years, a higher royalty to the Government for its trees. The Company's stock of cheap timber, it is stated, is getting depleted. The finance required to enable the Company to hold adequate stocks of raw material has, therefore, increased. It is expected to go up further. The Directors have, therefore, thought it wise to strengthen the general reserve and have, accordingly stepped up the allocation to the reserve from Rs. 2.50 lakhs to Rs. 3 lakhs. After distribution of Rs. 5.25 lakhs to the shareholders, a sum of Rs. 1.70 lakhs is proposed to be carried forward, as against Rs. 73,653 brought in.

The financial position of the Company is quite satisfactory, as will be seen from the following synopsis of the latest balance-sheet:

Liabilities	Rs.	Assets	Rs.
Capital ...	15,00,000	Gross block ...	16,83,461
Reserves and surplus ...	20,13,478	*Less*—Depreciation ...	11,63,013
Provision for taxation ...	7,42,303	Net block ...	5,20,448
Liabilities ...	11,20,768	Stocks ...	28,10,459
		Stores, spares, etc. ...	2,67,747
		Debts, deposits and advances ...	3,97,390
		Investments	10,46,881
		Cash ...	3,33,624
Rs.	53,76,549	Rs.	53,76,549

Out of a sum of Rs. 14 lakhs standing to the credit of the general reserve, the Directors capitalised, as already stated, in March this year, Rs. 5 lakhs and issued bonus shares in the proportion of one new share for every three shares already held. This was the second time in the history of the Company that the capitalisation of a part of the reserves was effected. In June, 1948, a sum of Rs. 3 lakhs was thus capitalised and issued as bonus shares in the proportion of one share for every four shares already held.

Points From The Chair

Employment of Permanent Capital in Business

"IT is a matter of considerable difficulty to decide from time to time how much permanent capital can properly and profitably be employed in the business. It is clearly not appropriate to raise permanent share capital for a purely temporary need. For such a need, reliance can properly be placed upon the bank, and many first-class companies do so, but a time does arrive when business development and expansion demonstrate that the increased requirements of the company are of a permanent nature. When this arises, steps should be taken to raise further permanent capital. As materials become in better supply and with a more regular flow, it is obvious that we shall not have so much capital tied up in stocks and work-in-progress —we may, in fact, think of getting back to the ratio of stocks to sales which we had before the war. There is, however, clearly a limit to the releasing of capital from stocks and work-in-progress in a progressive company, such as this, where we are steadily expanding from year to year. Beyond that figure, the requirements of the business should be met on a permanent footing."

G. LESLIE WATES,
Johnson and Philips, Ltd.

Competition to U.K. Shipbuilding

"To-day we are met in every direction with import restrictions which have a very serious effect on your industry. They have become almost universal and have certainly had their effect in producing the reaction in the deep sea trade that has taken place during the last 12 months. Both Germany and Japan are again getting back into their stride. They are building ships and their ships are now beginning to compete once more in the world market. Competition makes for healthy trade, but the trouble is that it is so often unfair competition—one side being subsidised in one form or another to the detriment of the other side who receive no such benefits. I do not believe the British mercantile marine has any fears on the matter of competition so long as it is fair."

KENNETH R. PELLY,
Wm. France Fenwick & Co., Ltd.

Future of Departmental Stores

"When considering the past and looking forward to the future one must not overlook the great difficulties under which departmental stores worked from very early in the war until last year. During those years their percentage rates of profit were rigorously controlled, while their expenses constantly mounted. This reminder is necessary because there would appear to be an idea among some people that the day of the big departmental store is over. Your Directors, by no means, hold this view, but have confidence in the future of your business provided that it moves with the times. We have felt for some time, however, that a store working from one point only in central London is not, under modern conditions, in as good a position for successful trading as it would be with its business well spread over London, the suburbs and the provinces. We have definite plans."

COMMANDER S. C. LYTTELTON,
Army and Navy Stores, Ltd.

Outlook for Light Engineering Works

"There are hesitancies to-day in some sections of light engineering which may be due in part to a certain surfeit of consumer stocks, which I believe to be temporary and in part to the fact that certain metals and other commodities have still to get through the upsetting process of adjustment to free trading and to revised world market prices. I expect that the further process of adjustment will not be of long duration and that we shall soon see once more a firm outlook all round, but with retention of the salutary force of competition, in place of that constant over-pressure of orders to which industry had become long accustomed and which, when prolonged, is against the interest of development and, therefore, against our position in world trading."

J. S. HUTCHISON,
British Oxygen Co., Ltd.

(*Continued in previous column*)

ment. It becomes quite obvious in talking to visiting teams that the major reason for the stranglehold of the cartel system on an economy is not protectionism, but simply the absence of management. The cartel largely eliminates the need for management by eliminating problems of pricing, merchandising, competition, labour relations or technical efficiency. For this reason the emphasis on the training and development of management on all levels which recently has emerged in the Marshall Plan countries represents a major victory; but it also means that progress will be slow. After all, though Americans to-day take for granted the basic attitudes to which productivity is credited, every one of them was, 30 or 40 years ago, nothing but the pet obsession of a few visionaries. Certainly, the productivity teams supply something which neither American dollars nor arms can supply: a constructive programme, a goal and a vision.—*By courtesy of Nation's Business.*

PRODUCTIVITY IS AN ATTITUDE

(*Continued from page 939*)

man training programme?" When told that there is no such thing as "the American policy" they are incredulous. It is not only that they are steeped in the prevailing myth of American uniformity. In their own country or their own industry such things are usually uniform, set by Government, by an industry-wide labour contract, a nation-wide labour law, compulsory nation-wide arbitration, or by trade association or cartel. In fact, most of the teams cannot, at first, imagine that important practices and policies could be anything but uniform. However, most of the teams eventually come to the conclusion that diversity is a major cause of American productivity. It means constant experimentation with new methods, ideas and approaches. "Almost every company we have seen," wrote a Scandinavian team, "was working on something new, something it was experimenting with in foundry techniques or in personnel methods, in accounting or in merchandise. No two companies were alike. As a result, the entire industry is for ever questioning its methods, working on improvements trying to find a better way."

A group of trade union leaders stressed in their talk the value of diversity and experimentation in American labour relations, even though it runs counter to their trade-union tradition. "As long as you maintain the union local and the individual management as the centres of labour relations," they said, "you not only will be safe from communism; you will be able to make labour relations productive socially and economically. Bad labour relations can be made on an industry-wide or nation-wide basis. Sound labour relations, you have taught us, require vigorous and imaginative unionism at the bottom as well as at the top. They require a national union policy, but also constant experimentation, constant adaptation in the actual plant."

Even less expected and more baffling to visitors is the prevailing co-operation and the free interchange of ideas and experiences. They know when they arrive that American business is highly competitive; they find even more competition than they usually expected. Intensive competition, they believe, must mean secretiveness. It must mean refusal to disclose anything which might help the competitor. Thus a group of automobile men considered its visit to the annual meeting of the Society of Automotive Engineers its most interesting experience. "There were men from all the companies reading papers and telling everybody what they were doing, how it worked out, what difficulties they were having and what future plans they had. Everybody answered the most searching questions frankly, and each finished the discussion of his paper by inviting the men in the meeting to write to him or to call on him should they have any further question. Every one sounded as if he really meant it."

Importance of the Human Being

Industrial training, management development programmes, the opportunity for workers to rise to the top, are important factors in America's productive capacity. Such factors as the informality in plants and offices, the attention paid to making work easy for the worker, the skill of the foreman in leading his people, are only a few of the things every visiting team noticed. American labour relations seem to them to be based on deep respect for human beings. The close co-operation between stewards and management is remarked upon again and again; and several teams have underlined the friendly and relaxed atmosphere of American labour negotiations. That they are sincere in the compliments is shown by the fact that the United States always is asked to include a labour relations expert in the American management teams which go to Europe. Most visitors believe that the United States avails itself of a much larger percentage of its human resources than their own nations do.

How much of the American attitudes have the productivity teams taken home with them? Techniques and processes have been adopted wholesale and with good success in many cases. The productivity teams would be the first to stress, however, that techniques and processes without the underlying attitudes would not do much good. Yet precisely, because attitudes are important, success has been slow. Attitudes do not transplant fast or well. The greatest obstacle, however, has been that the American beliefs and principles require something of which most nations have a shortage; manage-

DIRECTORS' REPORT AND STATEMENT OF ACCOUNT FOR THE YEAR ENDING 31st DECEMBER, 1952

NOTICE IS HEREBY GIVEN THAT THE Forty-fifth Ordinary General Meeting of the Company will be held at the Registered Office of the Company at Clive Buildings, Netaji Subhas Road, Calcutta, on Wednesday the 17th June, 1953, at 12 noon.

(1) To receive the Directors' Report and Statement of Account.

(2) To sanction the declaration of a Dividend.

(3) To elect three Directors.

(4) To appoint Auditors for the ensuing year.

The Ordinary Share Transfer Books of the Company will be closed from 3rd June, 1953, to 17th June, 1953, both days inclusive.

By Order of the Board,
MESSRS. STEEL BROTHERS & CO., LTD.,
Managing Agents.

CLIVE BUILDINGS,
NETAJI SUBHAS ROAD,
CALCUTTA, 12*th May*, 1953.

SURAT ELECTRICS' PROFIT HIGHER

MYSORE CHEMICAL MANUFACTURERS MAINTAIN DIVIDEND

Surat Electricity Co., Ltd.

THE directors of the above Company (Agents: Messrs. Killick Industries Ltd., Bombay) submit the audited accounts of the Company for the year ended 31st December, 1952.

The issue of 18,750 ordinary shares of Rs. 100 each which was made at par on the 7th July, 1952, was oversubscribed. Since the close of the year, the first call of Rs. 25 per share was made payable on 2nd January, 1953, making the issue Rs. 50 per share called up. The second call of Rs. 25 per share has been made payable on 1st June, 1953.

Supply of power to the Company from the Government's coal-fired Utran steam station commenced on a commercial basis, from 1st December, 1952. In order to achieve the best overall results, the Company is making use of the South Gujarat Electric Grid supply on a supplementary basis and continuing the use of its own diesel plant for peaking purposes.

Owing to the unexpectedly high rates charged to the Company by the Grid, it was not found possible to effect any reduction in the Company's existing charges for supply to its consumers. From 1st December, 1952, the Company's basic rates for all classes of supply were revised, on an interim basis, in order to adjust them to a coal. in place of a fuel oil, cost component. With the availability of supplementary power from the Grid, all restrictions on the supply of electricity in Surat, which were first introduced from May, 1942, were withdrawn by Government from 29th December, 1952. As many as, 1,114 new consumers were connected to the mains during the year, bringing the total number of consumers to 20,448, being 5.76 per cent. more than at the end of 1951. The following table indicates the development of sales of energy since 1950:—

For the year ended 31st December	*Public and private lighting and fans*	*Motive power and domestic purposes*	*Total*	*Percentage of increase on previous year*
1950 kilowatt hours sold.	4,728,066	8,186,234	12,914,300	8.46
1951 ,, ,, ,, ..	5,084,899	9,734,563	14,819,462	14.75
1952 ,, ,, ,, ..	5,302,041	11,350,568	16,652,609	12.37

The sales for private lighting and fans registered an increase of 3.97 per cent. The supplies made for motive power at low tension and at high tension increased by 13.39 per cent. and 22.99 per cent. respectively. Two more high tension consumers were connected to the mains during the year, bringing the total number of such consumers to nine.

The maximum load demanded from the Company's diesel generating station during the year was 4,050 kw. All the sets, with the exception of No. 5, were in commission throughout the year and gave excellent service. The replacement crankshaft for No. 5 set is expected shortly. The maximum load on the Company's system during the year was 4,850 kw., as against 3,900 kw. during the previous year. The Company's transmission and distribution systems were maintained in good and efficient order, and gave trouble-free service. To relieve existing overloads, to improve voltage conditions, and to cater for new loads, a number of modifications and reinforcements were carried out in the Company's distribution system. 1.03 miles of cables were laid during the year, making the total length of streets served 74.29 miles by underground, and 29.86 miles by overhead mains. Three new sub-stations were commissioned during the year.

The gross profit for the year amounts to Rs. 5,57.542 (Rs. 3,63,764) after charging depreciation, in accordance with the provisions of the Electricity (Supply) Act, 1948, amounting to Rs. 2,14,366 (Rs. 1,94,187). After providing Rs. 1,32,000 (Rs. 82,000) for taxation, Rs. 40,267 (Rs. 17,477) for statutory contingencies reserve and writing off Rs. 1,489 (Rs. 596) from new share capital issue expenses, it is proposed to take Rs. 85,000 (Rs. 50,000) to equalisation of dividends reserve and Rs. 28,388 (Rs. 25,804) to employees' retiring gratuities reserve. There remains a balance of Rs. 2,70,398 (Rs. 1,86,444) and this together with Rs. 2,552 (Rs. 3,878) brought forward from last year's accounts makes a total of Rs. 2,72,950 (Rs. 1,90,322). From this sum an ad-interim dividend of Rs. 2-8 (Rs. 2-8) per share, free of income-tax, proportionate to the amounts called up on the ordinary shares and the half-yearly dividend on the preference shares which together absorbed Rs. 90,952 (Rs. 66,250) are to be deducted. The balance thus available amounts to Rs. 1,81,998 (Rs. 1,24,072), which the directors propose to dispose of as follows:—

In payment of a dividend for the second half-year ended 31st December, 1952, at the rate of 6½ (6½) per cent. per annum, free of income-tax, on preference shares Rs. 16,250 (Rs. 16,250), payment of a dividend for the second half-year ended 31st December, 1952, at the rate of Rs. 4-8 (Rs. 4-8) per share (making 7 (7) per cent. for the year), free of income-tax, proportionate to the amounts called up, on ordinary shares Rs. 1,60,570 (Rs. 1,05,300) and leaving to be carried forward the balance of Rs. 5,178 (Rs. 2,522).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	42,15,475	Block ...	54,44,697
Reserves ...	10,48,887	Stores, tools, etc. ...	19,22,974

Liabilities ...	33,18,013	Debts, deposits and advances ...	8,11,872
Profit and loss account ...	5,178	Investments	1,00,500
		Cash ...	2,93,923
Rs.	85,98,616	Rs.	85,98,616

Mysore Chemical Manufactures, Ltd.

The directors of the above Company (Managing Agents: Messrs. Krishna & Co., Ltd., Chikbanavar) submit the audited accounts of the Company for the year ended 31st March, 1953.

After providing a sum of Rs. 19,382 (Rs. 20,149) for depreciation and Rs. 36,000 (Rs. 30,500) for taxes out of the current year's profits, the net profit of the Company amounts to Rs. 55,106 (Rs. 49,329), which, together with the balance of Rs. 29,283 (Rs. 21,953) brought forward from last year's account makes up a total of Rs. 84,388 (Rs. 71,282). The directors propose to dispose of this amount as follows:—

In payment of a dividend of 6 (6) per cent. per annum for the year under report on 20,000, 6 per cent. cumulative preference shares, free of income-tax Rs. 12,000 (Rs. 12,000); in payment of a dividend of 10 (10) per cent. per annum for the year under report on 30,000 ordinary shares, free of income-tax Rs. 30,000 (Rs. 30,000), and in carrying forward to next year's account Rs. 42,388 (Rs. 29,282).

The loss on redemption of the investments on 4 per cent. Mysore Government loan bonds is expected to be Rs. 31,406 which is amply covered by the amount carried forward.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	5,00,000	Block ...	2,17,903
Reserves ...	4,00,000	Stocks ...	1,39,445
Provision for taxation ...	37,384	Stores, etc ...	1,38,145
Liabilities ...	46,931	Debts, deposits and advances ...	1,17,430
Profit and loss account ...	84,388	Investments	3,35,406
		Cash ...	1,20,374
Rs.	10,68,703	Rs.	10,68,703

Radha Krishna Mills, Ltd.

The directors of the above Company (Managing Agents: Messrs. A. G. Gurusamy Naidu & Co., Peelamedu, Coimbatore) submitted the audited accounts of the Company for the year ending 31st December, 1952.

After providing for all expenses and depreciation on assets on normal basis, the year's trading resulted in a net profit of Rs. 1,42,064 (Rs. 14,63,747) adding a sum of Rs. 11,306 (Rs. 56,647) brought forward from last year, the total profits available for distribution was Rs. 1,53,370 (Rs. 15,20,394). The directors utilised this amount in paying a dividend at the rate of 6 (16) per cent. free of tax on the paid-up shares of A and B classes Rs. 1,51,308 (Rs. 4,03,488), and carried forward to next year Rs. 2,062 (Rs. 11,306).

During the year, the price control measures for yarn was prevalent throughout the end. The directors further reported, that owing to power cut, the average number of spindles worked during the year was lower than that of last year, whereby the production of yarn was affected. The prices of foreign cotton declined considerably low and the yarn manufactured out of such cotton had no demand in the market and so, had to be sold much below the ceiling prices at a loss.

The installation of power looms and new machinery under post-war expansion scheme could not be brought into production owing to the difficulties of power supply and sanction of both the State and Central Governments for working of the same. As such, the Company did derive any return on such heavy investments. The Company at present, is able to work the entire new machinery to the fullest capacity, and the directors feel that they may expect a decent return out of the new investment.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	25,30,420	Block ...	28,48,821
Reserves ...	16,65,842	Stocks ...	30,02,468
Provision for taxation ...	8,69,788	Stores ...	3,33,268
Liabilities ...	20,39,582	Debts, deposits and advances ...	5,87,719
Profit and loss account ...	1,53,370	Investments	3,93,782
		Cash ...	92,944
Rs.	72,59,002	Rs.	72,59,002

Hyderabad Construction Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Babu Khan & Sons, Hyderabad-Deccan) submit the audited accounts of the Company for the year ended 31st December, 1952.

The total turnover receipts Rs. 46.6 lakhs (Rs. 40.4 lakhs) and payments Rs. 46.6 lakhs (Rs. 39.3 lakhs) for the year was about O.S. Rs. 93.2 lakhs (Rs. 79.7 lakhs) and after allowing for all working and management expenses and providing for depreciation Rs. 29,626 (Rs. 29,753), contribution to employees provident fund Rs. 17,374 (Rs. 19,142) and commission to the managing agents Rs. 22,496 (Rs. 20,372) the working has resulted in a net profit of O.S. Rs. 2,02,468 (Rs. 1,83,347). This profit though very low compared to the turn-over of work, has shown an improvement over the profit of Rs. 1,83,347, for the previous year (1951).

The aforesaid profit added to the sum of Rs. 737 (Rs. 840) brought forward from last year, makes up O.S. Rs. 2,03,206 (Rs. 1,84,187), but in order to enable a reasonable appropriation under different heads being made in keeping with the traditions of the Company, it is proposed to transfer the balance of the dividend stabilisation reserve which now stands at Rs. 40,000 (Rs. 1,15,000), thereby the total amount available for distribution will be O.S. Rs. 2,43,206 (Rs. 2,59,187). This, the directors propose keeping in view provision of clause 161 of the constitution of the Company, to appropriate as under:—

Dividend on 20,000 4 per cent. preference shares of Rs. 100 each fully paid up O.S. Rs. 80,000 (Rs. 80,000), dividend of Rs. 2 (Rs. 3) per share of Rs. 100 fully paid and Re. 1-8 (Rs. 2-4) per partly paid at Rs. 75 free of income-tax in each case, Rs. 52,500 (Rs. 78,750), bonus to employees Rs. 18,500 (Rs. 19,300), taxation reserve Rs. 66,500 (Rs. 57,400), contingency reserve Rs. 10,500 (Rs. 1,000), reserve against fall in value of investments Rs. 10,000 (Rs. 20,000), general benefit reserve Rs. 2,313 (Rs. 1,000), general reserve Rs. 2,312 (Rs. 1,000) and balance to be carried forward to next year's account Rs. 581 (Rs. 737).

The directors report that the Nizam Sugar Factory and the Power Alcohol Factory at Shakarnagar under the Company's management, are working quite satisfactorily.

Accounts in brief are as under:—

Liabilities	O.S. Rs.	Assets	O.S. Rs.
Capital ...	45,91,800	Block ...	14,66,039
Reserves ...	11,56,417	Stock ...	2,30,154
Provision for taxation ...	91,544	Debts, deposits and advances ...	10,20,704
Liabilities ...	18,54,948	Investments	50,02,956
Profit and loss account ...	2,03,205	Cash ...	1,78,061
O.S. Rs.	78,97,914	O.S. Rs.	78,97,914

Deoria Sugar Mills Ltd.

The directors of the above Company (Managing Agents: Messrs. Karamchand Thapar & Bros., Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st August, 1952.

The Mills crushed during the year under review a total quantity of 21,08,885 maunds of cane as compared to 15,43,026 maunds during the season 1950-51, and 15,06,630 maunds average annual crush for the last ten years. The Company's own fleet of tractors, trailers and trucks helped greatly in augmenting transport of cane from distant centres, besides reducing the overall cost of transport. The results of planned cane development in the previous year are also reflected in this figure. It is to be admitted, however, that comparatively lower *gur* prices were a great indirect help in Company's efforts to increase the production.

The overall production in the country registered an unprecedented rise of 4 lakh tons of sugar. The market naturally reacted strongly to the situation and movement of stocks under the Government rationing scheme at Government controlled rates became very slow and tradv. Both the quality and production, and the sales organisation were naturally put to a very severe test during this crisis, and we are glad to say that on the whole the Company stood the test very well. The controlled prices of sugar had since been reduced in respect of 1951-52 sugar and rationing and controlled price have been completely abolished for 1952-53 sugar. The cane price for 1952-53 season has also been fixed at As. 7 per maund lower than the cane price fixed for the year under review. A policy to subsidise export has also since been announced by the Government.

For the year 1952-53 efforts in development work were intensified, particularly in augmenting irrigation facilities by means of tubewells sunk at suitable sites. Five tubewells have already been sunk with the help of loan advanced by the Company to the Co-operative Societies, and efforts are being made to sink further tubewells to supplement Government plans in this direction. Considerable activity took place in the matter of distribution of seeds and manures to farmers by way of loan recoverable from the price of cane.

A well thought out and co-ordinated plan has also been taken in hand to increase the crushing capacity and efficiency of the Mills. One multitubular boiler, one 150 k.v.a. turbo generating set and a vacuum pan are under installation. It is expected that the performance of 1952-53 season will record further improvement in the quantity of crush and a marked improvement in the quality of our product.

The accounts after meeting all expenses, managing agents' commission and allowance and after allowing interest, depreciation, etc., showed a profit of Rs. 2,11,998 (Rs. 2,60,933). A sum of Rs. 1,10,000 (Rs. 1,20,000) was set aside for provision for taxation, leaving a balance of Rs. 1,18,867 (Rs. 1,46,831) in the profit and loss account, including Rs. 16,869 (Rs. 5,898) brought forward from the previous year, which the directors distributed by paying a dividend at As. 8 (As. 8) per share for the year ended 31st August, 1952, Rs. 29,962 (Rs. 29,962), transfer to general reserve Rs. 50,000 (Rs. 50,000) and carried forward Rs. 38,904 (Rs. 16,869).

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	5,99,452	Block ...	6,87,346
Debentures ...	5,12,576	Work-in-progress ...	1,29,954
Reserves ...	5,68,562	Stock ...	26,97,156
Provision for taxation ...	5,64,302	Stores, etc. ...	5,06,911
Liabilities ...	31,97,889	Debts, deposits and advances ...	4,14,760
Profit and loss account ...	1,18,867	Investments	8,73,150
		Cash ...	2,52,371
Rs.	55,61,648	Rs.	55,61,648

Nasik-Deolali Electric Supply Co., Ltd.

The directors of the above Company (Managing Agents: The Rajputana Textiles (Agencies) Ltd., Bombay) submit the audited accounts of the Company for the year ended 31st December, 1952.

The performance of the power plant during the year was satisfactory and a steady, continuous supply of energy was maintained. The 750 k.v.a. voltage regulator that was ordered out in 1949 for purpose of improving the distribution voltage in the Nasik city area, was received and installed during the year under review. While this greatly helped in improving the lighting, it has also put an added strain on the plant and this situation is receiving the serious attention of the directors.

In the last report it was informed, that the increase in plant capacity by the commissioning of the 1,155 b.h.p. mirrlees-brush set was expected to be quickly absorbed by the pent-up demand. This has proved only too true and enquiries have already been instituted for the purchase of an additional generating set of suitable make and capacity.

The distribution system has been well maintained and short extensions were made wherever necessary to connect new consumers, bringing the total of the Company's mains to 52.6 miles, as follows:

High-tension overhead mains 13.4 miles, high-tension underground mains 1.9 miles, and low-tension overhead mains 37.3 miles. The Company now serves three local authorities for purposes of street lighting, viz.: The Nasik Municipal Borough, the Deolali Cantonment Board and the Nasik-Road and Deolali Village Municipality. The street lighting installations served as at 31st December, 1952 comprised a total of 1,328 fixtures. The progress of the Company during the past five years is reflected in the following tabulation:

Year	*Number of consumers*	*Connected load k.w.*	*Units of energy sold*	*Revenue from energy sold* Rs.
1952	5,679	3,672	3,802,026	10,33,684
1951	4,228	3,275	3,419,791	8,24,579
1950	3,638	2,940	3,249,916	7,68,219
1949	3,554	2,913	3,247,438	6,88,364
1948	3,557	2,187	3,078,176	6,02,275

There is an all round satisfactory improvement in business, and it may be mentioned that there is good scope for further expansion provided the requisite plant capacity is available. In regard to the increase in revenues from energy sold, a study of the rate structures was undertaken during the year under review and permission of the Government of Bombay obtained for the introduction of a fuel clause in all the rate schedules, whereby the rates charged would increase or decrease according to fluctuations in the price of fuel oil. The price of fuel oil has increased tremendously in recent years—from Rs. 50 per ton in 1938 to Rs. 265 in 1952—and the fuel clause embodied in the rate schedules with effect from August, 1952 billings will partly compensate for this big increase in costs. Of course, if the price of fuel oil were to go down to a reasonable level, that clause would operate in reverse and to the advantage of consumers.

Capital expenditure during the year amounted to Rs. 2,31,059 (Rs. 1,16,771).

The profit and loss account shows that the result of the year's operations, compared with the previous year, was as follows:

	1952 Rs.	1951 Rs.
Revenue from sales of energy	10,33,684	8,24,579
Revenue from other sources	34,869	27,125
Total gross revenue ...	10,68,553	8,51,704
All charges including depreciation and taxes	8,69,083	7,41,614
Net profit	1,99,470	1,10,090

It will be noted that both revenues from energy sales and all charges including depreciation and taxes show substantial increases over the figures for the preceding year. While the higher revenues are due to a larger number of consumers the increased expenses, apart from the higher provision for depreciation, are principally due to the item "Stores, fuel, oil, etc., consumed" resulting from the higher price of fuel oil and the additional consumption due to increased generation. The net profit for the year at Rs. 1,99,470 shows a satisfactory increase over that for the preceding year.

As a result of the above factors, the net balance available for disposal after making the several appropriations, and adding the amount brought forward from 1951, as also the excess provisions for taxation and bonus made in the previous years and the balance resulting from adjustment of the 1950 profits, amounts to Rs. 1,05,956 (Rs. 29,624). The directors have recommended, that this balance be utilised as follows:

To payment of dividend on preference shares at 7 per cent. per annum for the year ended 31st December, 1952 (free of income-tax) Rs. 7,000 (nil) and dividend on ordinary shares at 8 (2.96) per cent. for the year ended 31st December, 1952 (free of income-tax) Rs. 93,472 (Rs. 20,990) leaving to be carried forward a balance of Rs. 5,484 (Rs. 8,634).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	12,68,400	Block ...	22,87,826
Debentures ...	5,00,000	Stores ...	2,98,362

NEW WESTERN CHEMICAL INDUSTRIES LTD. (First Director: Mr. Chandrakant Harilal Dave.) Business: Manufacturers and Dealers in Heavy Acids, Chemicals and Fertilisers, Salts, Tannin extracts, etc. Authorised capital: Rs. 15,00,000. Private company. Address: Sonawalla Estate, Goregaon (East) Bombay.

SARVODAYA ELECTRONICS LTD. (First Director: Mr. Mahendra B. Trivedi.) Business: Electricians, Mechanical Engineers, Suppliers of Electricity, etc. Authorised capital: Rs. 5,00,000. Private company. Address: Head Office: Nadiad, Kaira District, Bombay State.

RADIUM FILMS LTD. (First Director: Mr. R. L. Jandial). Business: Cinematograph Industry and Trade. Authorised capital: Rs. 5,00,000. Private company. Address: 196/20-1 Tilak Road, Poona.

PARAMOUNT AUTOMOBILES LTD. (First Director: Mr. U. Panachand Sanghani.) Business: Manufacturers, Dealers, Hirers, Repairers, Cleaners and Warehousers of Motor Cars, Motor Cycles, etc. Authorised capital: Rs. 5,00,000. Private company. Address: 14, New Bhatwadi Street, Sandhurst Road, Bombay 4.

HIND SILK MILL LTD. (First Director: Mr. Kevalchand Avichal Sheth.) Business: Weavers of Silk, Artificial Silk, Cotton, Wool, Flax, Hemp, etc. Authorised capital: Rs. 5,00,000. Private company. Address: Dhanukar Building, New Silk Bazar, Kalbadevi Road, Bombay 2.

D. ABRAHAM AND SONS LTD. (First Director: Mr. M. D. Abraham.) Business: Clearing, Forwarding and Shipping Agents. Authorised capital: Rs. 5,00,000. Private company. Address: Hague Building, Sprott Road, Ballard Estate, Bombay.

QUESTION HOUR IN PARLIAMENT

Aid to Madras

AID to the extent of Rs. 10 crores was asked for some time last year. The Government of India has promised no loan so far. I have had informal talks with Mr. T. T. Krishnamachari, but I have not yet received from him quantitative assessment of the situation. When that is received the Government will try to see how far the requirements of the scarcity areas in the south of Madras can be met. The famine area in Andhra has been dealt with last year. I am not aware of any outstanding problem excepting measures of a permanent character to eliminate recurrence of famine. There is no controversy between the Centre and Madras in regard to the medium of control of the Central grant or loan.

—Finance Minister

Managing Agency System

The Government has no plans in view to abolish the managing agency system, but it is actively considering the recommendations of the Company Law Committee which suggested that the system should be suitably regulated, so that the abuses in its working which have sometimes occurred may be checked and its efficiency as an instrument of industrial development may be increased. The new Companies Bill which is now under preparation will embody the views of the Government on this subject. Mr. E. H. Marker, who was lately Under-Secretary in the Board of Trade. was invited to India under the Colombo Plan to advise the Government of India generally on the working of the English Companies Act, 1948, and the applicability of some of its provision to the circumstances of this country. He stayed in the country only for about six weeks. His knowledge and experience of the working of the English Companies Act, 1948, threw a good deal of light on comparable problems in India and his advice was of great value to the Department.

—Deputy Finance Minister

Newsprint Factory

The Government of India has decided to appoint a team of Finance Ministry officials to proceed to Madhya Pradesh and examine the economics of the newsprint factory project there. The Government has decided that this Committee should examine the economics of the project before any further assistance is promised to the State in respect of the project. The total loan so far advanced to the Government of M.P. for financing the newsprint project was Rs. 63 lakhs in 1951-52 and Rs. 34 lakhs in 1952-53. The total amount given to the factory was about Rs. 240 lakhs. Part of the machinery has arrived and the rest is expected.

* * * *

Tea Exports

The International Tea Committee has fixed the permissible exportable quantity of tea from the countries participating in the International Tea Agreement at 135 per cent. of the standard exports, during 1953-54. It is unlikely that India will export that quantity of tea, particularly in view of the fact that India's exports, even in the peak years, never reached this figure. In 1951-52, India exported, as against a permissible quota of 470 million lbs., 425 million lbs., and in the next year 305.25 million lbs. India had been urging a smaller quota, but the majority wanted a larger quota.

—Commerce Minister

State Undertakings

A proposal for the constitution of a central authority for the management of State industrial undertakings is under the consideration of the Government of India.

—Minister for Production

Loan to Bombay

The Government of India has agreed to grant Rs. 210 lakhs as a loan to the Government of Bombay for the tube-well projects in North Gujerat. The number of tube-wells which are to be sunk under the scheme is 400, of which 250 have already been sunk. Each tube-well is expected to cost about Rs. 50,000. Sinking is being done under contract by an agency. No payments will be made for unsuccessful wells. On an average, every successful well is expected to irrigate 300 to 400 acres.

* * * *

Japanese Cultivation

The Japanese method of rice cultivation is likely to be utilised this year on more than 600,000 acres of land in India. It is too early to give any estimates regarding area sown and possible output as the sowings in many places have not yet begun. Japanese implements are not indispensable for use of the method, but they are useful and the Government is trying to manufacture some of them.

—Minister for Agriculture

P. & T. Capital Outlay

The accumulated surplus and the capital outlay of the Posts and Telegraphs Department has increased from Rs. 857 lakhs and Rs. 3,571 lakhs respectively in 1947-48, to Rs. 1,519 lakhs and Rs. 6,381 lakhs in 1952-53. The question of separation of Post and Telegraph finances from general finance is receiving consideration. It is premature to say anything now.

—Deputy Minister for Communication

FURTHER DROP IN TREASURY BILL RATE

(From Our Own Correspondent)

BOMBAY, 20*th May*

Conditions in the short-term money market reported last week remained unchanged this week also. Demand from banks continued to be moderate. Exchange banks were reported to be not keen borrowers, due to absence of export and import bills. They were, however, active at Calcutta where the money rates stood relatively higher owing to pressure of demand for funds. Enquiries from leading Indian banks continued to be on fair scale due to persistent trade demand. Advances by these banks against commodities such as cotton, cloth, sugar, etc., would appear to have enlarged in recent weeks. The inter-bank call money rate among the Exchange banks and big Indian banks, held steady at 2¾ per cent. The smaller Indian banks were keen borrowers of call money at 3 per cent., but the supply of funds in this sector was meagre and they had, therefore, to seek help from the Reserve Bank of India.

Term money was quoted at 2¾ per cent. for one to two months. Three months' money did not fetch more than 2¾ per cent., while 4 to 6 months' money was quoted at 2¼ to 2½ per cent.

There was a further fractional decline in the Treasury Bill rate this week to Rs. 2-6-8 per cent. per annum from Rs. 2-6-10 per cent. in the previous week. The amount offered, against the usual invitation of tenders for Rs. 1 crore, was better at Rs. 194.50 lakhs, as compared with Rs. 163.25 lakhs last week.

In contrast to the expansion of Rs. 15.26 crores noted in the previous week, the week ended 15th May, 1953, witnessed a fall of Rs. 5.28 crores in notes in circulation. The weekly statement of the Reserve Bank of India for the week under review, which discloses this, shows an increase of Rs. 5.43 crores in notes held in the Banking Department. The fractional rise in total notes issued is covered by a corresponding increase in rupee coin. In the Banking Department, deposits of the Central Government have gone up by Rs. 2.13 crores, while those of other Governments have declined by Rs. 1.30 crores. Deposits of banks also show a rise of Rs. 2.44 crores. On the assets' side, cash balances disclose a rise of Rs. 5.44 crores and balances held abroad of Rs. 69.90 lakhs. Loans and advances to Governments are lower by Rs. 44 lakhs. Other loans and advances have recorded a decline of Rs. 2.73 crores. Advances to Scheduled Banks against usance bills are lower by Rs. 90 lakhs.

A sharp fall of Rs. 11.62 crores in demand deposits is a feature of the statement of position of Scheduled Banks for the week ended 8th May, 1953. Time deposits are better by Rs. 75.08 lakhs. Borrowings from banks have declined by Rs. 1.16 crores. Borrowings from the Reserve Bank reveal a rise of Rs. 7.79 crores, of which those against usance bills account for Rs. 5.40 crores. Borrowings from the Imperial Bank also show an increase of Rs. 1.04 crores. Advances have gone up by Rs. 3.17 crores and bills purchased and discounted by Rs. 47.42 crores. But investments have declined by Rs. 19.59 lakhs. Cash-on-hand and balances with the Reserve Bank together are lower by Rs. 1.97 crores, balances with other banks by Rs. 1.63 crores and money at call and short notice by Rs. 2.15 crores.

The Gilt-edged market showed, once again, signs of recovery during the week under review. There was a certain amount of cautious buying, as a result of which prices hardened, particularly, in the 3 per cent. 1986 Conversion Loan. The revival of demand was attributed to the attempt by the Reserve Bank at preparing the ground for the issue of a new loan. The Bank put up the selling rates of 3 per cent. 1963-65 and 3 per cent. 1964 by an anna and suspended sales of 3 per cent. 1970-75. The volume of business put through in the market was, however, small.

3 per cent. 1953-55 held the ground at Rs. 100-1. 3 per cent. 1957 was marked up by an anna at Rs. 98-11. 3 per cent. 1958 remained at Rs. 98-9, but 3 per cent. 1959-51 was in request to go up by an anna to Rs. 96-11. 3 per cent. 1963-65 and 3 per cent. 1964 each rose by an anna to Rs. 92-15. 3 per cent. 1966-68 had buyers at Rs. 90-10. 3 per cent. 1970-75 improved by an anna to Rs. 86-11. 3 per cent. 1986 Conversion Loan advanced by As. 5 to Rs. 82-9.

There was a further mild weakening of the rupee in terms of the U.S. dollar during the week under review. The dollar was costlier by ¼ to ½ rupee per $100. In the New York market, the spot rate for £ sterling was ¼ cent higher over the week at $2.81½-2.81⅝ and the forward rates for 3 months and 6 months ⅛ cent better at $2.80⅜-2.80⅞ and $2.80 3/16-2.80 5/16, respectively. The following are the variations in the spot and forward rates for U.S. dollar in terms of rupee:

	12-5-53	14-5-53

SILVER CLOSES BETTER

(From Our Own Correspondent)

BOMBAY, 20*th May*

Activity on the Bullion Exchange during the week was once again dominated by silver, which experienced wide fluctuations in values due to keen tussle between leading bulls and bears. During the major part of the week, there was a gradual recession in prices of the white metal owing to bear pressure and liquidation by bulls. Towards the close, the trend was, however, reversed and a sharp upswing in price was noted. On balance, however, silver lost Re. 1-6 per 100 tolas.

Gold, on the other hand, was relatively more steady, with fluctuations confined to a narrow range under the influence of the day-to-day statistical position of the yellow metal.

It is stated that the demand for silver in Bombay is poor, but the offtake in up-country centres continue to be good, due to persistent seasonal demand. It is also stated that the demand from up-country centres will continue up to the end of the current month. May being the last month of the current season, operators on the Bullion Exchange appeared to be keen on making the best use of the situation till the demand persisted. This accounts for the continued hectic activity in silver.

Silver for forward delivery (end of May settlement) opened at Rs. 165-15, as against last week's closing of Rs. 164-15. But the weakness of the cotton market and selling by a Calcutta bear operator as well as liquidation by bulls pressed the value of the metal gradually to a low of Rs. 160-6 yesterday. To-day, however, purchases by bears in the ready section lifted the price to Rs. 163-9 at the close. Business for the next settlement opened on Thursday last at Rs. 164-8 and reacted to Rs. 158-6 yesterday, but closed better to-day at Rs. 161-2.

Ready silver (.996 fine) began at Rs. 166-3 and, after moving down to Rs. 160-10 due to weakness of the forward section and to the arrivals of *kutcha* metal, it regained partially to Rs. 163-13 at the close. The floating stocks of silver were placed at 1,000 bars. The daily average offtake was 15 bars.

Gold for forward delivery (end of May settlement) opened at Rs. 87-14 and slided down to Rs. 87-1 on the next day on lower offtake. After recovering to Rs. 87-9 on Saturday, consequent on the slackness in arrivals, the yellow metal once again displayed a softening tendency and moved down to Rs. 86-13 yesterday. The arrivals and offtake having been kept balanced in the last two days, gold hardened to Rs. 87-13 to-day before closing at Rs. 87-11.

Ready gold (.99 fine) opened at Rs. 88-7 and touched a low of Rs. 87-3 yesterday. It, however, gained some strength to-day and finished at Rs. 88-2. The floating stocks of gold are estimated at 35,000 tolas. The daily average arrivals are about 9,000 tolas and offtake about 7,000 tolas.

The following comparative table shows the trend of the market during the week under review:

	20-5-53	Highest	Lowest	13-5-53
	Rs. a.	Rs. a.	Rs. a.	Rs. a.

PEPPER FULLY STEADY

(Messrs. Parekh & Co.)

BOMBAY, 20*th May*

Pepper market in all primary centres during the week remained very steady, in spite of poorer export demand, the buyers' idea at New York and on the Continent being below the replacing parity. Throughout the week, Alleppey remained fully steady at Rs. 3,300, while Calicut was reserved seller at Rs. 3,500. Looking to the present behaviour of the market, the Indian exporters are chary to shade their prices to meet foreign buyers, as it proved difficult to buy any sizable quantity in the free market unless at sellers' price. Last year's heavy claims for infestations demanded by New York on shipments of pepper during the monsoon are still green in the minds of the Indian sellers and as such they are not willing to offer anything without reserving enough margin for such an eventuality. Some of them are reported to have decided to do only limited business for shipments during the monsoon. Experts in the trade are unable to hazard any definite opinion regarding the future, as smaller shipments of pepper during monsoon will have bearish tendency here, while at New York, it will have opposite effect.

In A.S.T.A section, May, June and July shipments were traded at progressively improved prices. The highest paid for May was $1.45 and June and July were done at $1.44 and $1.42, respectively. The Indian growers are so far unaffected by the reports that some business in Sarawak at lower limit was done at New York, because prices for Sarwak obtainable in the U.S.A. are always cheaper by about 5 cents, due to its poorer flavour and lower volatile oil contents. The political trouble in Indo-China is also likely to keep back free selling of Lampong and Sarwak in the world market.

To-day's nominal quotations are: Ready delivery Rs. 380 per Bengal maund; May, June, and July deliveries Rs. 2,655-85, Rs. 2,670-2,700, and Rs. 2,640-70 per candy of 5½ cwts., respectively.

FORWARD COTTON RECOVERS

(From Our Own Correspondent)

BOMBAY, 20*th May*

The debacle in the forward cotton market came earlier than expected. Only last week it was suggested in this column that, if the buyers in August delivery feared that they would be faced with the problem of finding necessary finance to meet the tenders, they would get into a panic and rush to divest themselves of the contracts collected by them. Frightened by some of the awkward offerings against their purchases in the current delivery, the longs in August realised their peril and unloaded their holdings on the market long before they were faced with this necessity. As a result of this, there was a good shake out, with prices tumbling down during the latter part of the last week and the situation would have been much worse, if the bears had not come to the rescue of their opponents by covering their sales.

In any case, the tone of the market, after the recent fall, is healthier and replacement buying by those who had secured their profits earlier at high rates has again lent an upward swing to the market. It is believed that fresh efforts will be made by certain operators with good resources at their command to rig up the market once again. But their recent experience will render them more cautious in their dealings. It is also likely that the rank and file in the shape of small operators will not follow their lead to the same extent as before the shake out. In this hectic spell, not much was being heard of trading in the new crop. All hopes of Government permission being secured for this at an early date are now given up.

The easy conditions in the cotton futures market witnessed towards the close of last week were carried a stage further during the first two sessions of this week. On Saturday, however, values tended to improve, on short-covering and support from spot houses. The recovery persisted till to-day. Not only were the previous losses completely erased but the closing quotation stood higher than those at the end of last week. The following is the trend of prices during the week:

	Opening		*High*		*Low*		*Closing*	
	Rs.	a.	Rs.	a.	Rs.	a.	Rs.	a.
I.C.C. May	719	8	728	0	707	0	727	8
I.C.C. Aug.	733	0	735	0	720	0	734	8

In the spot market, it was but natural that a precipitate fall in prices in the forward section should be followed by hesitancy on the part of mills to make fresh purchases. Apart from this, absence of unfulfilled quotas also came to deter mills from making fresh purchases of Indian cotton. However, with steady prices now regaining the field in the forward market, enquiries in the spot market have revived and this was in evidence yesterday when the total turnover came approximately to 2,000 bales. Cloth market for internal consumption has been fairly active and this has also led to a fresh demand for cotton by mills. At the same time, it is realised that the home market in textiles can continue to be active, only if there is no rise in prices. Cotton men have come to realise this and are, therefore, not in favour of pushing up prices for spot cotton, lest this should affect the output of cloth by the mills and its consequent effect on the total volume of consumption of cotton by mills.

The spot section was also encouraged by some modest business with Japan in one of the short-staple varieties. On the debit side, the spot market is worried about transport. Cotton from Bombay is not moving satisfactorily to consuming centres like Ahmedabad. But the railway authorities are now more sensitive to public and business criticism on such score, and it is believed that the position in this respect will ease soon. The price recession in Indian cotton also affected the prices of ready lots of imported cotton. But the effect was more psychological than real and prices are likely to revert to the original levels, as soon as the mills come forward to make some purchases.

Stalemate continues at Karachi unrelieved by any important developments. There is, however, a hope of France fulfilling its earlier contracts, for which the authorities there had refused to issue import permits. This has affected the sentiment to a certain extent at Karachi and ruling prices now are a little higher than in the previous week in the case of L.S.S. Punjab. It is, however, believed that, as stocks are depleted in several smaller markets such as Syria, Turkey and Sudan, consumers in Europe will turn towards Pakistan for their requirements. On the other hand, if the grant of export subsidies is decided upon as a matter of policy in the U.S.A., it might go to affect Karachi prices adversely. The latest available quotations from the Karachi cotton market are: Punjab *deshi* Rs. 66; 4F Punjab R.G. Rs. 56-8; S.G. Rs. 63; L.S.S. Punjab R.G. Rs. 60-8; S.G. Rs. 65; N.T. R.G. Rs. 63; S.G. Rs 68; 289F Punjab R.G. Rs. 68; and S.G. Rs. 73.

A slight decline of activity also marked the Alexandria market. Foreign demand has naturally declined, with the severe fall in the premia offered to sterling countries, from 11 per cent. a month ago to 5 per cent., or even less, during the week under review. There is also a tendency on the part of dealers to tender cotton to Government rather than to trade among themselves and this has affected the general turnover in the market. Except for Karnak, most of the popular varieties such as Menoufi, Zagora and Giza 30, have been sold out. Alexandria has welcomed the entry of Canada as a buyer in this market, although the quantity negotiated has been only nominal.

The market in New York had again a bullish swing, partly because of the gloomy outlook of the Korean peace negotiations and partly because of reports regarding uncongenial weather from certain production centres. A part of the revival in prices has to be attributed also to the proposal to give subsidies on exports. This revival has been more widespread, inasmuch as both the new crop and the current crop deliveries have gained this time. It is, however, believed that the market is likely to be swayed by contrary considerations and the movements, instead of being all along in favour of longs, is bound to be two-sided.

The following are the latest available quotations from New York, as compared with those of a week and a fortnight before:

	(In cents per lb.)		
	19-5-53	12-5-53	5-5-53
Spot	34.60	34.05	34.45
May	—	33.62	34.07
July	34.22	33.74	33.96
October	33.83	33.60	33.62
December	33.83	33.58	33.52
March	33.93	—	—

ART SILK YARN IRREGULAR

(From Our Own Correspondent)

BOMBAY, 20*th May*

The art silk yarn market was devoid of any fresh development this week too. With traders evincing very little interest in business, activity was greatly restricted. Transactions were mostly of a squaring up nature. The undertone of the market, however, was slightly bearish, to-day's closing quotations being a shade lower than those eight days ago.

Movement in values of yarn in the forward section was irregular. Thus, 150D May delivery contract opened the week higher by Rs. 5 at Rs. 817, but reacted to Rs. 806 on Saturday, on reports of heavy arrivals of imported yarn. A part of the loss was, however, recovered during the last three sessions, on rumours of a rise of 15d. per lb. in the Italian twisted yarn. Values, as a result, registered an improvement. But profit-taking that ensued towards the close to-day, brought down the quotation to Rs. 808. The net loss in this contract over the week was to the extent of Rs. 4. June contract improved from Rs. 820 to Rs. 825 on the 14th inst. After receding to Rs. 813 on Monday, it recovered to Rs. 819 to-day, but finished lower at Rs. 813. In the ready section, 120 Japan fluctuated between Rs. 47 and Rs. 4-8 before closing at Rs. 4-7. 150 Italy advanced from Rs. 4-0-6 to Rs. 4-1-6, but finished lower at Rs. 4-0-9. 150 Japan and 120 Italy were practically unchanged at Rs. 4-3 each.

The table below gives the prices of art silk yarn quoted to-day, as compared with those on the 12th and 6th inst.

	20-5-53	12-5-53	6-5-53
	Rs. a.	Rs. a.	Rs. a.
150D May (per case of 200 lbs.)	808 0	812 0	815 0
150D June	813 0	820 0	821 0
120 Japan (per lb.)	4 7	4 7½	4 7½
150 Japan ,,	4 3	4 3	4 3½
120 Italy ,,	4 3	4 3	4 3½
150 Italy ,,	4 0½	4 0½	4 0½

The tendency of the market remains rather uncertain. A section of the trade, however, believes that there would be a downward trend in values of yarn in the near future. Very heavy arrivals of art silk yarn from Japan, Italy and other countries in the last few weeks have, it is reported, created a sort of nervousness among dealers and consumers. Poor offtake in art silk fabrics—indigenous and export—is also stated to have been acting as a damper on the yarn section. "The situation in the market as a whole," to quote one report, "seems to be rather confused and it appears as if the prices will have to undergo a gradual decline in due course."

GROUNDNUTS FIRM

(From Our Own Correspondent)

BOMBAY, 20*th May*

Once again, speculative activity made history in the oil and oilseeds market by causing groundnut prices to shoot up to high levels not reached since May 1951. Several factors were responsible for the hectic speculative activity. First, there was unabated demand from *vanaspati* interests. Secondly, there were rumours of a ban on export of groundnuts and groundnut oil by sea from Saurashtra. The order is said to have invalidated export permits already issued. Thirdly, the effect of the short crop this season is being felt by the alarming decline in floating stocks. In sympathy with the hectic rise in groundnuts, the linseed and castorseeds sections also forged ahead. The rumour that the Government would permit mixture of 50 per cent. linseed oil with groundnut oil for the manufacture of *vanaspati* helped to harden the sentiment of operators. The cumulative effect of all these was sizable gains in the values of oilseeds.

With a short crop in groundnuts this season, a considerable portion of which is already absorbed, there is no fear of a sharp recession in groundnuts. This explains the headlong action of the bulls in tightening their grip on the market at times. Bold ready which opened at Rs. 48-8, as against Rs. 47-8, shot up to Rs. 50-4, before closing at Rs. 49-8. June-July delivery was higher by Re. 1-8 to Rs. 49. August-September delivery was done at Rs. 49, as against Rs. 47-12. Khandesh quality rallied Re. 1-8 to Rs. 49-12. Groundnut oil ready was higher by As. 10 at Rs. 25-8. Business was done in June and July deliveries at Rs. 25-7 and Rs. 25-9, as against Rs. 24-11 and Rs. 24-13, respectively.

Although linseed and linseed oil are priced out of world markets, the local market has displayed surprising strength due to overall shortage of oil in India this season which has led to the utilisation of the oil as an adulterant. The rumour that the Government would allow 50 per cent. mixture with groundnut oil for *vanaspati*, as stated at the outset, only stimulated the upward trend. Linseed Bold ready gained Rs. 2-4 to Rs. 34-12, June-July delivery changed hands at Rs. 35, as against Rs. 33, and August-September delivery had deals done at Rs. 35-12, as against Rs. 33-10. Linseed oil hardened by Re. 1-8 to Rs. 18.

In the castorseed section, May delivery, which opened the week at Rs. 159-8 as against Rs. 157-12, fluctuated between Rs. 167 and Rs. 159-4, before closing at Rs. 165-8. September delivery gained Rs. 6-4 to Rs. 163-8; the highest and the lowest touched during the week were Rs. 165 and Rs. 159-8, respectively. Madras delivery improved from Rs. 31-4 to Rs. 32-8. Castoroil, Commercials advanced by As. 3 to Rs. 17-8 and I Pressures, by As. 6 to Rs. 18-8. B.S.S. was done at Rs. 18-12, as against Rs. 18-6.

The following table shows the prices of oilseeds and oil on the 20th inst., as compared with those at the end of the previous two weeks.

Commercial (per quarter)	17 8	17 5	17 8

MERINO WOOL STRONG

(Messrs. J. Hardacre & Co.)

BOMBAY, 18*th May*

Merino wool prices in Australia this week have advanced sharply, under the influence of spirited competition from Japan, Russia and Near East countries. Average-to-shabby combing types have been dearer by 6d. per clean lb. since our last report and Bradford top quotations are now further out of line than ever with raw wool costs.

Most qualities of merino tops have risen by 3d. per lb., but the wool required for making these tops is costing much more, with the result that topmakers are by no means anxious to sell substantial weights at the prices now asked. Fine crossbreds have also advanced by about 1d. per lb.

There was strong bidding at the sale of British wools held in London yesterday and a general increase of 5 per cent. was registered on the last sale at Exeter.

Values at Sydney were fully firm at advanced rates. Melbourne current wool sales series closed, with values higher by 5 per cent., as compared with the opening rates. At Perth and Wanganui, values were fully firm, the tendency being against the buyer.

To-day's quotations for Bradford oil-combed tops (in pence per lbs., c.i.f. Bombay) are given below.

48s carded (August 1953)	89d.
58s super (August 1953)	129d.
60s super (August 1953)	155d.
64s super (July-August 1953)	179d.
70s super (July 1953)	194d.
Fibro (3D. 4") (July 1953)	43½d.
46/48s scoured clothing wool (July 1953)	80d.

The tendency of the market is very strong, with prices advancing daily.

COMMONEST TEAS DEARER

(Messrs. Forbes, Ewart and Figgis Ltd.)

COCHIN, 16*th May*

The offerings in sale 10, which was held on Tuesday, 12th May, amounted to approximately 13,25,000 lbs. Quality again showed a seasonal decline and this was particularly evident amongst the high-grown teas, many of which lacked body and flavour. The sale opened to a fair general demand at rates which were easier all round with the exception of commonest kinds. These met with keen competition and were often dearer. Low medium brokens and fannings were half to 1 anna easier, whilst medium descriptions were As. 2 easier. High-grown teas were difficult of sale and prices were lower by As. 2 to As. 3. High-grown fannings were neglected. Whole leaf teas were about steady at last rates. There were a number of withdrawals, but the majority of these have been taken up since the sale. The following are the quotations:—

	1953
	Rs. a. p.
Low grown Travancore B.O.P.	1 11 0
Medium Travancore B.O.P.	1 12 0
Anaimallais B.O.P.	1 15 6
Best liquoring Nilgiris B.O.P.	2 8 3
Clean black leaf O.P.	1 15 0

As we go to press, Messrs. Forbes, Ewart and Figgis, Ltd., wire as follows:—

"*Dust Sale J.*—1,04,000 lbs. Good general demand. Market irregular. Milled and fine dusts As. 2 dearer. Clean black dusts inclined easier."

TEA DUSTS IN GOOD DEMAND

(From Our Own Correspondent)

CALCUTTA, 19*th May*

Dusts offered during last week's internal sale aggregated 20,441 packages, and leaf grades 2,398 packages. General demand was again strong. There were ready buyers for medium Assams, and a rise by ½ to 1 anna in the prices of colourry Dooars and common varieties was recorded. However, prices of residual stalky sorts were pushed down by an anna, while lack of demand brought down the price for the best liquoring types by As. 2 below brokers' valuations. Quotations were: best Assam C.T.C. Re. 1-14, medium Assam grainy Re. 1-9-6, and medium Dooars Re. 1-8. The leaf market was dull, and prices eased in view of the decline in quality of the offerings.

METALS EASY

(From Our Own Correspondent)

CALCUTTA, 19*th May*

Conditions in the metal market somewhat eased this week, and although consumers continued replenishing their depleted stocks, business could not be finalised in quantities according to the expectations of stockists. This was the main reason for this week's recession in prices. Tin was enquired in large quantities, and although it closed higher on balance at Rs. 524 it was unable to carry the previous week's gain. Stockists were encouraged by the higher advices from Singapore. Mercury was featureless at Rs. 500 a flask. Supplies being plentiful in the country and being sufficient to meet India's requirements for five to eight years, some amount of surprise was caused when a consignment of 30 flasks from Great Britain was unloaded in the docks this week.

Electrolytic copper changed hands at Rs. 175, and all available scraps having found their way to consumers' godowns during recent weeks, attention was given this week to ingots, the supply position of which is unsatisfactory. The fire-refined material was bought at Rs. 170. Star metal antimony was quiet, and the stocks with producers were quoted at Rs. 210. Electrolytic zinc realised Rs. 51, and lead eased to Rs. 59 from Rs. 60.

JUTE GOODS STEADY

(From Our Own Correspondent)

CALCUTTA, 19*th May*

Prices of jute goods continued to improve further during the week under review, and a moderate amount of business was put through. Sacking goods determined the market trend, and received keen attention from speculators. Rumours that Burma is in need of more sacking bags and expectations that exports of bags to Australia can improve, following the I.J.M.A.'s efforts in that country, fanned the enthusiasm of bazar dealers.

Sacking was bought for export to Middle East countries, Cuba and Africa, while purchases for internal consumption accounted for some quantity. Last Wednesday, B. twills gained from Rs. 96 to Rs. 97-4, and mills booked good business at the higher level. The cautious attitude adopted by mills raised the quotation further to Rs. 98, but a recession to Rs. 97-12 was the feature of the trading on Saturday due to profit-taking. This tendency continued yesterday also and the rate eased further to Rs. 96-12. Judged from the market trend of the last two weeks and from the export figures for March and April, sacking has definitely turned the corner, and with stocks and production showing declines further improvement in prices is generally expected. This explains why bazar operators wanted to get possession of any amount of sacking goods. Enquiries from foreign countries show signs of increasing business in coming weeks, but materialisation would depend on the maintenance of steady conditions. Mills are alive to this aspect, but past experience has shown that it is the speculator who invites easier conditions by releasing huge stocks on the hint that prices would move down. The smaller the quantity the speculator possesses the better.

Prices for hessian were maintained. Business was done with the United States, New Zealand, Britain, and Australia. More business with America is expected. Ready 40" 10 oz. hessian was steady at Rs. 43-4 on Wednesday and despite initial profit-taking the rate closed better at Rs. 43-6 on Thursday, but gave way to Rs. 42-12 on Saturday, following a New York report that American consumption of burlap during April was 67.7 million yards, as against 69 million yards in March. Yesterday the rate was lower at Rs. 42-6. Hessian 40" 8 oz. was offered at Rs. 33-6 f.a.s., and at Rs. 40-2 f.o.b. No particular notice was taken of the increase in hessian production to 32,200 tons in April from 31,900 tons in March. Apart from the increase being too small, present stocks are not considered abnormal. The higher trend in raw jute prices, and the disproportionate rise in prices of jute goods make the mills postpone entering into commitments for current production.

The raw jute market was fully steady. Prices were raised substantially. The lack of relationship between the advances in the prices of jute goods and raw jute is to be regretted, as support to the market has to come from mills which will have to ensure economic production. Here also speculators accepted many offers, but good quality jute was difficult to obtain. Stockists and sellers were reserved. Assam bottoms gained two points to Rs. 26. However, in sympathy with the recession in the prices of jute goods, Assam bottoms eased to Rs. 25 yesterday. Latest quotations for other varieties are: Kissanganj Rs. 25-12. Murshidabad dist. tossa bottoms Rs. 24, Muriliganj Rs. 21-4, Bimli f.a.q. Rs. 20, and Pakistani jat Rs. 27. *Pucca* bales first marks ready were priced at Rs. 150 a bale.

LINSEED PRICE ADVANCES

(Messrs. A. Bradley & Co.)

CALCUTTA, 18*th May*

Considerable excitement has followed the reduction of export duties on linseed and linseed oil and there has been a disproportionate advance in prices, owing to keen activity on the part of speculative elements. Export interests view the present situation gloomily, as the advance in price has been far in excess of the reduction allowed in export duty. In effect, shippers find themselves in the same position as before, with overseas buyers showing no interest.

Meanwhile, much interest has been aroused in the oil market by strong buying activity on the part of certain *vanaspati* manufacturers. Large business has been reported for ready as well as forward delivery, and plans appear to be well laid

MARKET REPORTS

(Concluded from page 961)

for the mixture of linseed oil with groundnut oil, now at a prohibitive price, in the manufacture of *vanaspati*, the Government permission for this purpose having been obtained. Supplies of linseed from up-country appear fairly plentiful for the time being and there are regular arrivals of new crop goods daily. The daily turnover has shown an increase, local merchants and stockholders having entered the market, in addition to crushers. General conditions appear rather unsettled at the moment. Latest quotations are: May Rs. 22-8 and June-July Rs. 23 per maund.

TRADING IN KIPS RESTRICTED

(From Our Own Correspondent)

MADRAS, 18th *May*

Trading in kips was slow, as U.K. buying was restricted to immediate requirements and U.K. dressers were unwilling to follow Madras prices. Prices are, therefore, likely not to harden. There was good demand for cow calf and buff calf and the market firmed up in consequence. Buff hides were unchanged. There was patchy demand for tanned buff calf and lights from the U.S.

In the London tanned skins public sales, prices of goat skins declined by 1*s.* to 1*s.* 6*d.* for prime class and by 6*d.* for mediums, while those for commons were unchanged. As regards sheep, primes and middle class declined by 6*d.* to 1*s.* and others were unchanged to 3*d.* up over March levels. There was a fair attendance of buyers, but demand was rather restricted. In the local market, goat skins are a shade easier and sheep unchanged. There were good enquiries for sheep fifths from the Continent but none from Japan.

CONSIDERABLE HIDES ARRIVALS

(From Our Own Correspondent)

KANPUR, 17th *May*

The conditions in the hides and skins market remained unaltered during the week under review. The volume of new arrivals was quite considerable, keeping in view the hot season of the year. The local tanners, headed by the Cooper Allens, were the main purchasers. The Madrasee dealers were a shade lukewarm. Latest quotations are: Wet salted cow 1st grade superior Rs. 380 and inferior Rs. 280 per score; wet salted cow 2nd grade superior Rs. 260 and inferior Rs. 180 per score; wet salted buff 1st grade 1 lb. 12 ozs. and 2nd grade 2 lbs. 2 ozs. per rupee; goat 1st grade Rs. 250 to Rs. 300 and 2nd grade Rs. 210 per 100 pieces; sheep Rs. 300 per 100 pieces.

COARSE GRAIN SUPPLIES SATISFACTORY

(From Our Own Correspondent)

HAPUR, 18th *May*

In Uttar Pradesh, foodgrains markets have remained quiet to bearish. Prices have shown downward trend, particularly for wheat. Abundant supplies are flooding the markets. Wheat sales from Government depots, even in rationed towns, have been paralysed. There is a rumour in the market that the State Government proposes to reduce the rate of last year's carry-over of indigenous wheat in conformity with free market prices. There is no move to reduce imported wheat price which is even higher. The Government would thus be enabled to build good reserve of wheat to meet any future emergency in the State. At many places which include Hapur, old wheat is being sold these days at a much lower rate than ration wheat and the loss is being borne by the former ration shop establishments. Coarse grains supplies are satisfactory.

The following are the latest quotations in the local market: wheat Rs. 15-8 to Rs. 16-8, gram Rs. 14-8 to Rs. 15-8, barley Rs. 11-8, *bejhar* Rs. 11-14, maize Rs. 13-8, *bajra* Rs. 13, *jowar* Rs. 11-8 to Rs. 14, *guwar* Rs. 15, peas Rs. 13-11, *arhar* Rs. 14-8, *urd* Rs. 23, *moong* Rs. 22 to Rs. 24, *masoor* Rs. 16 to Rs. 19; Rice: *basmati* Rs. 34, *sela* Rs. 28 and coarse Rs. 23. Traders are building stocks after a lapse of many years and very healthy normal trade channels are fast reviving. As foodgrain movements within the State are free, small scarcity pockets are being well covered by the trade.

LESS AGGRESSIVE OFFTAKE IN SUGAR

(From Our Own Correspondent)

HAPUR, 18th *May*

Crystal sugar markets developed a quiet to bearish undertone during the week under review. There was less aggressive offtake on the part of hoarders who had hoped for a barter deal between India and Burma for the exchange of rice with *gur* and sugar. Encouraged by this rumour, everybody bought sugar and prices were forced to go up. This rumour having now been officially contradicted, the winds are knocked out of the stockists' sails. Besides, the sugar mills are eager to liquidate their stocks also.

The latest quotations are: Ambala Rs. 31-12, Amritsar Rs. 31-10, Delhi Rs. 33-4, Jullundur Rs. 31-1, Agra Rs. 31-12, Hapur Rs. 32, Kanpur Rs. 30-14, Mathura Rs. 32-1, Meerut Rs. 31-10, Muzaffarnagar Rs. 30-14, Patna Rs. 30-14, Madras Rs. 32-5 and Bombay Rs. 32-2.

Khandsari markets ruled quiet to firm with moderate trade enquiry in most of the exporting centres. Current prices varied between Rs. 25 to Rs. 32 per maund.

Gur markets remained very quiet during the week under review and prices have eased in some of the centres. The local market, after an earlier decline, improved on resumption of railway loading of *gur* from the local station after a lapse of many weeks. Prior to this, *gur* had to be transported by road to Agra before it could be loaded to Central Railway stations. The manufacturing season has come to a close everywhere and market arrivals are very poor on that account. There are no heavy stocks in exporting west U.P. *mandies*, as despatches have been fairly regular this season. The overall production has been less than the previous year, because of the damaged sugarcane crop in west U.P. Hapur stock is put at about 25,000 maunds. The latest quotations in the important markets: Ambala Rs. 15 to Rs. 16, Amritsar Rs. 16 to Rs. 18, Delhi Rs. 16 to Rs. 20, Jullundur Rs. 18 to Rs. 19-8, Agra Rs. 16 to Rs. 20, Hapur Rs. 17-8 to Rs. 18, Kanpur Rs. 18 to Rs. 20, Mathura Rs. 16 to Rs. 18, Meerut Rs. 17 to Rs. 18-10, Muzaffarnagar Rs. 16 to Rs. 19-8, Patna Rs. 15, Calcutta Rs. 18 to Rs. 20-8, Madras Rs. 18-8 to Rs. 22-8 and Bombay Rs. 20-8 to Rs. 27.

STOCK & SHARE QUOTATIONS

Abbreviations:—D=Deferred shares. G=Guaranteed shares. P=Preference shares. P.O.=Preferred Ordinary shares. R=Rebate shares. Y=Accounts published yearly. H=Accounts published Hat-yearly. Q=Accounts published once 15 months. T=Company has Debentures. R.L.=Reserve Liability on shares. N=Nominal Quotation. i=Interim Dividend. f=Dividend for first half-year, y=Dividend for the year. x=Ex. Dividend c.d.=Cum. Dividend.

Shares:—If a company has different classes of shares—as, for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under "Paid-up Per Share."

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12 indicate the months of June and December, respectively. "Reserves" includes general and other reserves and all other funds which a company may have as also depreciation on block items, when this is charged to separate account "Block" represents actual cost of land, buildings, machinery, and all such other items on which depreciation is allowed, less sales, if any, and stands for the gross figure except where otherwise indicated.

Dividends:—Dividends for completed years are calculated at per cent. per annum, but, where quoted for portion of a year, they represent percentages of the dividend on the paid-up share value. For companies closing the books half-yearly in the first three months of the year, and for companies closing their books yearly during the first half of the year dividends are shown as for the previous year.

• The following explanatory notes relate to the abbreviations and marks shown on page 972 in the debentures section:—

‡‡ Option to repay on six months' notice, on any interest date after 31st December, 1951, at 102 per cent. Also redeemable out of a cumulative sinking fund of 1½ per cent. per annum (commencing in 1938) by drawings at 102 per cent. or by purchase at or 102 per cent.

(a) Option of repayment at any time at 3 per cent. premium.

(b) Bearer bonds of Rs. 1,000 each repayable at par.

(c) Bearer bonds of Rs. 1,000 each repayable on 31st July, 1959.

(d) Bearer bonds of Rs. 1,000 each with option of redemption in whole or in part at par on 30th June, 1952, or on any subsequent interest date at one month's notice.

(e) Returnable on or after 31st July, 1950, at Rs. 102-8 or at par after 31st July, 1955, on six months' notice in each case.

(f) Bearer bonds of Rs. 1,000 each with option of redeeming on 3 months' notice at ½ per cent. premium after 1st March, 1954, but before 1st March, 1957, and 1 per cent. premium on or after 1st March, 1957

(h) Option of redemption on or after 1st July, 1949, at par.

(i) Option of repayment at any time at par at any time on or after 30th June 1947 on six months' notice.

BANKING

(Concluded from page 938)

One means by which the Reserve System can influence bank reserve positions is through its handling of the discount mechanism by which it lends to member banks. Reserve funds acquired through borrowing at the F.R. Banks are residual funds for member banks; it is to this source that banks resort when they find themselves with temporary reserve deficiencies for any reason. When a bank is obliged to borrow to maintain its reserves, it tends to be more restrained in credit operations than when reserves are otherwise available. As total bank borrowing tends to increase—that is, as more banks borrow at any one time and as individual banks resort to borrowing more frequently and for larger amounts—the strength of this restraint multiplies. By raising the discount rate, the Federal Reserve System can reinforce bank reluctance to increase reserves through borrowing; by lowering the rate, the System can lessen somewhat the reluctance of banks to borrow when it is necessary to make adjustments in reserve positions.

Government Securities

Another and closely related way in which reserve banking operations can expand or contract bank reserves is through purchases and sales of eligible paper or securities in the market. Actually, the Reserve System does this largely through operations in U.S. Government securities. As has already been indicated, if the F.R. System purchases Government securities from bank or non-bank investors, it supplies the banking system with the reserve basis for multiple deposit expansion. Although the reserve funds may be used immediately to build up excess reserves or to repay indebtedness to the Reserve Banks, the increased liquidity of the banks will make them more willing to accommodate the credit demands of their customers. Contrariwise, when the F.R. System sells securities, bank reserves are reduced. Unless the banking system has been operating with excess reserves, available reserves will no longer meet the legal requirements and the commercial banks will be obliged to replenish reserves by borrowing temporarily from the Reserve Banks. As such borrowing occurs or increases, banks will be under pressure to retard the expansion of credit and money.

The Reserve Bank transactions in Government securities with non-bank investors, as already stated, have a direct effect on the volume of money which is independent of action by commercial banks. Even without a response from banks, therefore, the System is able to operate directly to change the quantity of money. The multiple effect of such open market transactions on the money supply, however, depends on their effect on bank reserves and the response of bank lending policies to increases or decreases in the volume of reserves. Reserve banking policy can affect too the reserve position of banks by altering, within the limits set by statute, the percentage of deposits which the banks are required to hold in reserves. If reserve requirements are lowered, reserves are free and the stage is set for a process of multiple deposit expansion. If, on the other hand, the reserve requirements are raised and there are no excess reserves, new reserves must be acquired or deposits reduced until the available reserves meet the requirements. At the present time, the potentialities of F.R. action, through changes in reserve requirements, are almost altogether in the direction of easing reserve positions, for reserve requirements are already at the legal maximum for all member banks, except for a relatively small leeway in authority to raise the requirements further at central reserve city banks.

The F.R. System has also the authority to regulate the use of credit for the purpose of purchasing or carrying listed securities. It has had, too, in the past authority to regulate the terms for the extension of consumer instalment and real estate credit. This type of selective credit influence does not operate through bank reserves and affects the volume of money indirectly.

AGRICULTURE

(Concluded from page 954)

filled. Efforts have, therefore, been made by the State and Central Governments to provide credit facilities in other ways, more especially by increasing co-operative credit. The Reserve Bank, which advanced only Rs. 1.5 lakhs in 1946-47, loaned out about Rs. 12 crores to agricultural societies in 1951-52. All-India figures of the loans advanced by co-operative societies are available only up to the year 1950-51, but figures relating to the States of Madras and Bombay show that, as compared with 1950-51, advances made by co-operative societies in 1951-52 increased by about 25 per cent. Membership has also been enlarged. Other states have progressed but at slower rates. To ensure progress on sound lines, the Reserve Bank of India has examined the condition of the co-operative credit movement in almost all the States and in consultation with them is working out a programme for expanding credit facilities.

The exploitation of the North Andaman forests has progressed satisfactorily and about 7,500 tons of hard and soft wood were extracted and exported to the main land during 1951-52. An expedition to the Nicobar Islands has revealed that India can obtain about 30,000 tons of timber annually from these islands.

Soil Conservation

The Plan includes a special provision of Rs. 2 crores for soil conservation. A desert afforestation research station has been established at Jodhpur to deal with the problems created by the advance of the Rajputana desert and a soil conservation branch has been created at the Forest Research Institute, Dehra Dun. Soil conservation demonstration centres are being set up in Hyderabad, Madhya Bharat, P.E.P.S.U., and Delhi.

Detailed proposals for the setting up of the Central Organisation for land utilisation and soil conservation recommended by the Planning Commission are at present under consideration. Other schemes for soil conservation will be initiated by this organisation in consultation with State Governments. In Bombay where the major part of the area is rain-fed and a number of districts are exposed to scarcity conditions, contour bunding and dry farming programmes are being expanded.

Fisheries

In respect of marine fisheries, construction of two large cold storage and ice plants at Calicut and Bangalore is nearing completion. Mechanisation of country craft in Bombay is making satisfactory progress. Danish trawlers belonging to the West Bengal Government are bringing in increased catches and the Japanese trawler operating in the Arabian Sea is reported to be doing well. As regards inland fisheries, the stocking of the Mettur reservoir is in progress. In U.P., the State Government has undertaken to stock canal reservoirs. Steps have been taken in Orissa and Bihar for large-scale collection of fry for stocking new area.

During the years 1951-52 and 1952-53, some of the States experienced scarcity conditions. To assist them in affording relief, the Central Government sanctioned loans and grants as shown below:—

(In lakhs of Rs.)

	1951-52	1952-53	
	Grant	*Loans*	*Grant*
Assam	18.84	..	10.63
Bihar	22.50	..	13.50
Madras	..	200.00	47.03
West Bengal	..	..	40.51
Rajasthan	12.98		3.92
Saurashtra	50.00		30.50
Ajmer	..	..	75.34
Total ..	41.34	262.98	221.43

During the year 1952-53, the Government of India deputed teams of officers to tour scarcity affected areas and study in detail the nature and extent of the distress and to recommend suitable measures for providing relief. The teams visited Madras, Mysore, Hyderabad, West Bengal and Bombay and submitted their reports which are under consideration.

MARKET GOSSIP

(Concluded from page 931)

in the U.S. has gone up from 1.8 per cent., at this time last year, to 2.3 per cent. now. It is true that the rise in interest rates in the U.S. is only a modest one when compared with the rise which was recorded in the U.K. soon after the introduction of the new monetary policy. Nevertheless, the increase is not without its significance. The U.S. has withdrawn, it is stated, about $200 million of American money from Canada in the last few weeks. And it is feared that American institutions might be compelled, if the present trend in interest rates persists, to withdraw their liquid funds from overseas countries to the home country either because money fetches better interest or because they wish to escape from the developing credit squeeze in the home country. It is true that interest rates have, in recent years, lost their significance so far as capital transfers are concerned. Even so, the American tendency to repatriate funds from overseas countries shows that money is beginning to fulfil its pre-war role in which it flowed to places where it was most in demand.

ISSUE OF TAX CLEARANCE CERTIFICATES

PROCEDURE EXPLAINED

THE Indian Income-tax (Amendment) Bill is likely to come into force from next week. One of the provisions of the Bill relates to the production of tax-clearance or exemption certificates by people travelling abroad, unless they have been specially exempted by the Government of India. No certificates or formalities will, however, be necessary for persons leaving India before 24th May, 1953, and it is not necessary for them to obtain any certificate from the income-tax authorities. But such certificates will, be required of persons (unless, of course, they belong to the excepted categories) who travel on or after 24th May, 1953. In order that no inconvenience be caused to such persons, arrangements have already been made, as announced by the Government on 1st May, 1953, for the issue of tax-clearance and exemption certificates by income-tax officers at the principal air and set ports.

Persons of Indian domicile and other persons who are already assessed should make the application on a prescribed form to the income-tax officer within whose jurisdiction they reside or by whom they are assessed. This officer will give an authorisation form which can be exchanged for a clearance certificate or an exemption certificate, as the case may be, from the officer designated as Income-tax Officer (Foreign Section) at any one of the following places:

Bombay, Delhi, Calcutta, Madras, Visakhapatnam, Negapatam, Tuticorin, Cochin, Mangalore, and Porbunder.

All other persons, that is, those of non-Indian domicile, who are not already assessed in India, should apply directly to one of the Income-tax Officers (Foreign Section) on a prescribed form (Form B), copies of which

PROMOTION OF EXPORTS

IN the sphere of foreign trade to-day, India is concerned not so much with the import policy as with the policy for exports; for the former has ceased to be a problem-policy. Thanks to the improvements effected in the administration of import controls, from time to time, in the light of experience gained over a decade, the scores of difficulties, which the Indian import trade has had to face, have now been reduced to a minimum. The few that remain include such issues as extension of validity of licences from six to twelve months, delays in the disposal of applications for import licences, abuse of import licences by actual users, etc. The disturbing part of the administration of import controls is frequent failure on the part of the authorities to balance the claims of the import traders with those of nascent industries. The recent proceedings of the Import Advisory Council were largely confined only to these drawbacks of the present import policy. By and large, no serious complaints were made. This might be taken as an indication that the policy of liberalisation, designed to safeguard the interests of the consumer, has yielded some satisfactory results. In this context, the remarks of Mr. T. T. Krishnamachari, Minister for Commerce and Industry, in his address to the Council, merit attention. He said: "The stability which we have achieved in our import policy will continue. I cannot foresee our being compelled to impose drastic cuts on imports all round. On the contrary, if anything, we hope to ease the position wherever genuine shortages are known to exist or seem likely to develop. An increase in imports is also necessary to meet the increased demand for goods which might arise, as a result of a rising *tempo* of developmental expenditure." These remarks indicate the guiding principles of the import policy for the coming half-year.

The Government's export policy, on the other hand, does not seem to receive the same support as its import policy. The importance of a sound export policy lies in the need for conserving foreign exchange, for maintaining employment and for raising the standard of living. Unfortunately, the absence of such a policy in India has been responsible for the unsatisfactory position of exports from this country. There has, as is evident from the figures quoted by Mr. Krishnamachari at the meeting of the Export Advisory Council held last week, been considerable setback in export earnings. Thus, in 1952-53, India's export earnings showed a drop of Rs. 159 crores over those of the preceding year. The average monthly value declined from Rs. 60.75 crores in 1951-52 to Rs. 47.5 crores in the following year. This drop of 22 per cent. in the earnings is attributed to a fall of 29 per cent. in export prices. But the most unsatisfactory feature is the lopsided structure of exports, which underlines the extreme dependence of the country only on a few items of exports such as jute and tea. This is indicated by the fact that, of the total drop of Rs. 159 crores in our export earnings, as much as Rs. 140 crores are accounted for by jute goods and Rs. 7 crores by tea. It is, however, gratifying to note that, in a number of other commodities such as coal, cashewnuts, manganese ore, groundnuts, castor oil, raw cotton and raw wool, the country's export earnings in 1952-53 were higher than those in the preceding year.

Among the causes which have been responsible for the decline in exports, the one relating to prevalence of malpractices in textile exports needs special mention. It is stated that poor salesmanship, bad packing and lack of confidence on the part of importers about the quality of goods exported from India are operating to India's disadvantage in the South-East Asian markets. It may be recalled that the Narielwala Delegation, sent by the Government of India to those countries in 1950, made similar observations. After a five-week tour in South-East Asian countries, the Delegation is reported to have stated in the course of its report: "The most deplorable feature of India's trade in cotton piecegoods within this region is in respect of the quality of cloth and certain undesirable practices adopted by both trade and industry. These practices relate, *inter alia*, to demand for illicit premium on yardage, shortages in length and width, and variations in quality from approved samples. This is a serious reflection on the business morality and the integrity of the Indian manufacturer and exporter." It is not clear whether any action was taken by the Government on the recommendations of the Delegation. The fact that the malpractices still persist is a reflection on the Government's policy —or lack of it—in regard to the drive for export of goods. Both the Federation of Indian Chambers of Commerce and Industry and the Millowners' Association, Bombay, have, it is gratifying to note, initiated moves in the matter of ensuring the export of quality goods from India. Apparently these moves have not taken any concrete shape as yet.

Apart from the malpractices of unscrupulous traders, the Government's unhelpful export policy has itself been responsible for the decline in exports. Failure to take prompt decisions on the part of the Government has deprived the country of the advantage of price fluctuations in world markets, resulting in the loss of foreign exchange. Its tax policies too have not been favourable for the rapid promotion of export industries. Again, the sales tax laws of the States, despite section 286 of the Constitution of India, have been detrimental to the interest of exporters. The organisation of the statistics relating to India's foreign trade and the supply of trade information leave much to be desired. The railway rates policy also is not suited to expand India's exports, apart from the occasional bottlenecks created by delays in the supply of wagons.

In view of the foregoing considerations, the measures enunciated by the Commerce Minister for promoting exports deserve to be commended. The most outstanding of these is the decision to set up an organisation to promote exports under the charge of Mr. D. P. Karmarkar, Minister for Commerce, who is to give "more or less undivided attention to this question." The creation of the organisation fulfils one of the recommendations made by the Gorwala Committee on Export Promotion, appointed in 1949. Secondly, the Minister has initiated legislation for the repayment of drawbacks of import duty on raw material used in Indian manufactures exported abroad. Thirdly, he has promised to make available, in an increasing measure, the services of Indian Trade Commissioners to industries which are seeking an export market. Fourthly, the Government will make representations to Governments of importing countries regarding liberalisation of import controls for specific exports from India. Fifthly, a policy of free licensing will be adopted in respect of goods such as textiles, which India can afford to export abroad without causing any disturbance to domestic prices. Finally—and this is an important decision—the Government has agreed to arrange weekly meetings between the Assistant Secretary of the Federation of Indian Chambers of Commerce and Industry and the Deputy Secretaries of the Ministry of Commerce and Industry; these meetings are designed to promote mutual collaboration for solving difficulties in regard to the export trade. These steps which are calculated to increase the country's exports are certainly in the right direction. It is hoped

that full advantage will be taken of these measures by the representatives of industry and trade in India.

The meeting of the Export Advisory Council provided an opportunity to the Government for enunciating its policy regarding vegetable oils. It is evident from the Minister's statement that the Government aims at safeguarding the interests of the domestic consumer of oilseeds. As prices of groundnut oil have risen abnormally high, it has been decided that the quota of the oil earmarked for release to newcomers this year will not be released. Consequently, the export quota for groundnut oil for the current half-year may well prove to be the total quota for the whole of this year. An indication has also been given that there is no likelihood of further export quota being announced, until after the next crop begins to move and its size is known. An attempt is also made to discourage the use of edible oils for industrial purposes. With this end in view, imports of palm oil, coconut oil and copra kernel will be allowed in large quantities. Although these measures are welcome, the real solution to the shortage of edible oils and oilseeds lies in encouraging intensive cultivation of oilseeds with a view to increasing their per-acre yields. This problem has no doubt found adequate emphasis at the meetings of the Indian Central Oilseeds Committee, but there is little evidence to show that concrete measures have been adopted in the matter of improving the cultivation of the oilseed crops.

THE OUTLOOK FOR STEEL

NOW that the legislation for handing over the British steel industry to private enterprise has been completed and the West European steel industry has been integrated into a single unit for all practical purposes, it is certainly worthwhile to take stock of the existing position of the steel industry and to assess its prospects. It is true that it will be some time before the effect of these two developments in the European steel industry begins to be felt on the world's steel markets. The return of the British steel industry to private enterprise has not been carried out in its entirety, because the Iron and Steel Bill received the Royal Assent only this month. The industry was nationalised by the Socialist Government in 1951. And denationalisation of the industry has since then formed part of the election promises of the Conservative Party. The new Act, which has emerged accordingly, sets up an Iron and Steel Holding and Realisation Agency which is charged with the responsibility for disposing of the Government's holdings in the nationalised companies. The assets, now in the possession of the Iron and Steel Corporation, will be taken over by the Agency. It is no simple task which the Agency faces to-day. Over 90 companies were bought out by the Labour Government as a sequel to its policy of nationalisation of the steel industry. The Agency has to market the shares of these companies, now held by the Government, under conditions which are somewhat different from those which the steel industry faced when it was nationalised. Whether it will do so successfully will depend on many factors, of which the political factor of the possible re-nationalisation of the industry if Labour comes to power is not the least important. It would, however, appear—and fortunately, for the Agency—that the Labour Party has lost some of its earlier enthusiasm for the nationalisation of the steel industry. Nevertheless, the Agency's task is a big one. The magnitude of the task will be evident when it is remembered that the Agency's total operations will involve some £300-£350 million. And the entire process of the disposal of the Government holdings in the industry will, it is stated, be spread over a fairly long period of time.

Commenting on the prospects for disposing of the Government's holding in the steel companies, the *Financial Times* says:

> "Just as the Act itself has been passed with less fuss than at one time seemed likely, so the political difficulties of marketing the shares, which at one time seemed almost insuperable, have shrunk. There are three reasons for this. First of all, increased confidence in the Government, strikingly illustrated by the victory at the Sunderland by-election, has taken the sting out of the Labour Party's threats to re-nationalise without further compensation. Political brokers now estimate the Conservative Party's life to be a good risk. Secondly, there have been definite signs within the Labour Movement that the realists are moving away from the idea of nationalisation as such. It is evident that the Trade Union wing regards the idea with diminishing enthusiasm. Finally, the idea of partial Government ownership, which is taking root as an alternative to nationalisation—whatever may be thought of it as such—would presumably not penalise existing shareholders, if in the future it were ever put into practice. These changes in the political balance of power and in political sentiment are of the greatest importance. They open the way to a steady assessment of the purely economic problems of marketing the shares."

It remains to be seen how far the British steel industry, under the new dispensation, will adjust itself to the new conditions in the steel world. It is not the industry of the pre-nationalisation period. Nor is it a completely State-owned industry. Its present form has been described as a "hybrid mixture" of State control and private ownership. State control over the industry is to be exercised through the agency of the Steel Board. The Board's duty is to control the policy and the price level of the steel industry as a whole. The Act demands the "efficient, economic and adequate supply under competitive conditions of iron and steel products." It will be the Board's responsibility to translate these well-meaning words of rather vague import into practice. Fortunately, the Government has secured for the Board tried men of proved ability who have served the industry, in the past, with distinction. This should inspire confidence about the industry's future.

There is no doubt, however, that the British steel industry must, in course of time, face some competition in the overseas markets. The outlook for steel now is less cheerful than it appeared in the early post-war years, though it is much less depressing than was feared as recently as in 1949. The Economic Commission for Europe (E.C.E.) reached, in 1949, the somewhat pessimistic conclusion that the export demand for European steel might reach a bare 4.1 million tons before 1952 and that Europe might soon be faced with a steel surplus of eight million tons, after all demands, both home and export, had been satisfied. This prediction has proved false. Exports of steel from Western Europe, according to the Commission's latest report, might reach 10½ million tons in 1956 and 12 million tons in 1960. But any discussion about the future outlook for steel must necessarily take into account the position relating to supply and the effective demand. Steel is one of those commodities which have recorded a sizable increase in output in recent years. Over the last five years, the world output of steel has increased by over 70 million tons to 208 million tons, the estimated world output of steel in 1952. But the latter figure does not give the correct picture, in view of the fact that it includes the U.S. production which had been unduly depressed in that year by the prolonged strike of steel workers. If there had been no steel strike, the world total for steel production would have reached 225 million tons. Of the estimated total of 208 million tons for 1952, the U.S. accounted for 83 million tons, the U.K. 16 million tons, Western Europe (other than the U.K.) 45 million tons, the U.S.S.R. 34 million tons, Eastern Europe 11 million tons and the rest of the world 18 million tons. Despite the large increase in output, which has already taken place since 1947, most countries have either taken in hand, or contemplate taking in hand, plans for further increase in output. Before 1958, the output of steel in the U.S. alone is, as a result, expected to go up to 107 million tons, while the output in the U.K. and Western Europe, it is stated, will increase to 20 million tons and 57 million tons, respectively. The U.S.S.R. plans to increase its steel production to 50 million tons. Indeed, when the steel plans in these and other countries are completed, world steel production is expected to reach, before 1958, an impressive total of 270 million tons.

It is against this background that the outlook for steel must be assessed. It is true that the steel industry has now a fairly comfortable market, thanks to the rearmament programmes which are under way in many countries. But can these programmes be expected to last for ever? Is it not also true that there has been, since the early days of the post-Korean boom, a certain lull in these defence programmes? And if the appetite of the defence industries for steel becomes less keen than it is at present, the steel industry will have found the first real challenge, since the war, to its ability to market its products. The steel industry must meet this challenge which must come sooner or later. And it is to be hoped that the industry will not be caught napping when it arrives.

The E.C.E. report gives two estimates for the import demand for W. Europe's steel—the "high" and the "low" estimates. The "high" estimate of 12 million tons by 1960 is based, among other considerations, on the expectation that the average rate of increase in steel consumption in the under-developed countries—including, in this category, Australia, New Zealand and South Africa—would increase at the rate of six per cent. per annum. The "low" estimate of about 7 million tons by 1960, on the other hand, is based on the view that steel consumption in underdeveloped areas will increase only by three per cent. per annum. Whether it is the "high" or the "low" estimate that prevails in the end, will naturally depend on the price factor for steel and the economic development of the underdeveloped countries. The conclusion seems inescapable that the future of steel will be profoundly influenced by economic development in the underdeveloped countries of the world. Again, since the price factor is, as always, going to be an important criterion when competitive conditions return, a special responsibility is cast upon the steel producers to see that production costs are pruned to a safe minimum. The validity of this conclusion applies, with no less force, to the Indian steel industry also. Indian steel industry's plans for expansion are much too modest from world standards; it seeks to expand output by a little over half a million tons to 1.65 million tons before 1958. And Indian steel prices are attractively low. But it would be unwise to overlook the possibility of world competition, or the need for meeting that challenge through successful attempts at increasing man-hour productively.

QUEEN ELIZABETH II

NEXT week the world will witness yet another Coronation in British history, the Coronation of Elizabeth II. To many millions in the Commonwealth, and to many others in the free world, the event symbolises an act of faith, of faith in the permanence of the Crown amidst the clash of interests and of ideas. It has an abiding significance to the Commonwealth as a unifying force. The Commonwealth's importance has not diminished with the passage of time. On the contrary, its strength, derived from its free character, is continuously growing. With one quarter of the world's population and with a trade equivalent to one-quarter of the total world's trade, the Commonwealth remains even to-day the single largest group of free nations in the world. It spreads across widely different regions, from the wilds of Central Africa to the plains of New Zealand, from the tin mines of Malaya to the gold mines of South Africa. To many outside the Commonwealth, particularly to those outside the free world, it is incomprehensible that widely different peoples should be held together—with no formal ties, no written constitution—within the Commonwealth. But those who know this group of nations know only too well that the Commonwealth is a growing concept, that it is rooted in the belief that freedom is not merely a means to an end but an end in itself, and, above all, that the mystic symbol which unites the peoples of this unique family of nations of divergent castes, creeds and colour, is the Crown. And yet, the Commonwealth, over whose destinies Queen Elizabeth II presides, is in many ways a far different institution from the one over which the Queen's ancestors presided. It is, more than ever it was, an association of free people. The Crown has become, as Sir Winston Churchill once said, the "mysterious link" which unites the "loosely bound but strongly interwoven Commonwealth of Nations, States and races." It is over this Commonwealth that the young Queen Elizabeth reigns. In English history, the reigns of queens have synchronised with periods of remarkable expansion—the reign of Queen Elizabeth I, the reign of Queen Anne and the reign of Queen Victoria. And it is the fervent hope of the Commonwealth's citizens that the reign of the new Queen will usher in a fresh era of peace and prosperity.

TROMBAY POWER SCHEME HELD UP

MONEY COMFORTABLE—TENSION IN SILVER —FINANCE FOR SHIPPING

THURSDAY, 5 P.M.

SPECULATIVE counters on the Stock Exchange have recorded a mild recession this week under the leadership of steels. Liquidation by longs, followed by short-selling by bears since this Monday—when prices had reached attractively high levels—has been responsible for the recession. Rumours that the Government's decision on retention prices of steel may not be announced for another four or five weeks seem to have induced certain tired longs to reduce their holdings in Tata Deferreds. Consequently, these shares which stood at Rs. 1,945 at one time on Monday came down to Rs. 1,915 to-day before closing at Rs. 1,925. The declining trend seems to have affected adversely the sentiment of operators in the textile section. Most favourite mill shares, as a result, came to suffer minor losses. And this happened despite expectations of better financial results of mills producing fine and superfine varieties of cloth. A notable feature of trading this week, however, is the marked gains recorded by a number of counters in the cash section on selective buying support. In the absence of any encouraging factors, the undertone of the market has remained quietly steady.

MARKET GOSSIP

* * * *

The stringency in the short-term money market witnessed two or three weeks ago seems to have yielded place to generally comfortable conditions this week. The pre-monsoon demand for goods having subsided, borrowing pressure on funds would appear to have eased considerably Exchange banks, it is stated, are not keen on borrowing at rates above 2¼ to 2¾ per cent. in the inter-bank call section. This trend, however, is not taken as an indication of the commencement of the easy season usually associated with the onset of the monsoon next month. For, some big Indian banks are reported to have offered on occasions 3 per cent. for call money on account of spasmodic demand for funds from their clients, while small banks continue to pay 3 per cent. It is generally felt that this request for accommodation may continue for some weeks more.

* * * *

In this context, the trend of weekly Treasury Bill results make interesting reading. For, during the last five weeks, not only has the aggregate amount tendered steadily gone up but the average rate of accepted tenders has registered a gradual decline. Thus, as against an invitation of Rs. 1 crore each week, the total offers which amounted to Rs. 1.01 crores in the week ended 28th April have risen to Rs. 2.26 crores this week. Similarly, the average rate of tenders has come down from Rs. 2-7-0 to Rs. 2-6-6 per cent. per annum in the same period. Although some observers are cautious in expressing a definite opinion on the behaviour of the Treasury Bill section, others seem to feel that certain institutional investors might have preferred to divert their surplus funds to this section in anticipation of slackening conditions in the coming weeks.

* * * *

In the Gilt-edged market long-dated loans continue to remain neglected. 3 per cent. Conversion loan, for instance, has staged a retreat from Rs. 82-9 a week ago to Rs. 82-7. 3 per cent. 1970-75 loan remains dull at Rs. 86-11, and so also 3 per cent. 1966-68 at Rs. 90-10. The position of medium-dated loans, however, is far better in that some institutional support has been forthcoming for these loans, especially for the 3 per cent. 1959-61, 1963-65 and 1964. The first mentioned has had buyers this week upto Rs. 96-13, as compared with Rs. 96-11 this day last week. The other two loans for which the selling rate was put up by an anna each by the Reserve Bank on Monday this week, have remained steady at Rs. 93. The market's interest in these two loans would appear to have been occasioned by the expectation that the terms of the new loan issue, to be announced in the next fortnight, have a close bearing on the yield of these loans. For, it is felt that if the new loan is to be a success, it will have to be issued on terms that will give a yield of about 3.78 per cent. for 10 or 11 years. Since 1964 is the most convenient year from the point of view of repayment—the outstanding of the loan maturing in that year being Rs. 30.3 crores—it would be easy to repay the new loan in that year. The consensus of opinion, therefore, favours the possible issue, as we have all along maintained since Budget day, of 3½ per cent. cash-cum conversion loan maturing in 1964, at a discount of Re. 1-8 to Rs. 2. Market circles do not rule out also the possibility of the issue of 3½ per cent. 1962 loan at a small discount.

* * * *

Many investors are wondering as to why there has been delay in the announcement of the loan issue of the Tata group of three electric companies for financing the setting up of the proposed thermal station at Trombay. It will be recalled that, speaking at the annual general meeting of the Tata Hydro-Electric Power Supply Co., Ltd., held on 24th November last, the Chairman, Mr. J. R. D. Tata, informed the shareholders that the Government of Bombay had agreed not only to extend the licences of the three Companies up to 1975 but also to entrust them with the setting up of a thermal station at Trombay of a maximum capacity of one unit of 100,000 kw. He revealed further that steps had been taken to obtain a loan of Rs. 6 crores from the World Bank and of an additional amount of approximately Rs. 6 crores from the capital market by borrowing or by the issue of new share capital. This statement had induced hopes in recent weeks that the Companies would come to the capital market for raising the loan. The fact that no announcement regarding the issue has so far been made by the Companies seems to have caused considerable disappointment among investors.

* * * *

Enquiries in market circles disclose that the Managing Agents of the three Companies have yet to overcome certain difficulties before appearing in the market for the proposed loan. It is stated that the total cost of setting up of the thermal station would now, according to current prices, be about Rs. 13 crores instead of Rs. 12 crores as originally estimated. Of this, a sum of Rs. 7 crores is expected to be borrowed from the World Bank and the balance of Rs. 6 crores to be raised from the capital market. The Companies' loan application has been forwarded to the World Bank for consideration, while sanction is awaited from the Controller of Capital Issues for raising the sum of Rs. 6 crores locally. Meanwhile, the Bombay Government would appear to have decided to permit a capacity of no more than 50,000 kw. for the proposed thermal station at Trombay, as against the Companies' application for a licence to set up a unit of 100,000 kw. The decision would appear to have hindered the Companies' efforts at implementing the plan. For, it is stated that from their point of view, the operation of a thermal unit with a capacity of only 50,000 kw. would be an uneconomic proposition. Unless the Bombay Government reverses its decision, the chances of implementing the Trombay Power Scheme by the Companies are considered bleak.

* * * *

With hardly two days to go for the expiry of the current forward contract in silver, the tension in the white metal section of the bullion market has almost reached a climax. With the leading bear operator sitting tight on his sales, the bulls have succeeded in keeping the daily closing forward rate for the current settlement below the basic rate of Rs. 162-10 and at the same time widening the *budla* charges by depressing the prices for the next settlement. This process was carried to such an extent that, at one time during the week, the daily closing rate for the next settlement threatened to go down more than Rs. 7 below the basic rate of Rs. 164-8 for that settlement. The bears would then have been compelled to pay a margin of Rs. 500 per bar. But the alertness of the bears saved them from such a contingency. For, they were able to rig up the prices once again. But the strength of the bulls helped them to prevent the rate for the current settlement going up above the basic rate, while the *budla* continued to mount up to Rs. 3-10. To-day, however, the trading took an interesting pattern and the forward rate for the current settlement moved up to Rs. 163 and the *budla* rate rose to Rs. 4. If the bears had been successful in keeping the closing rate to-day above Rs. 162-10, the bulls would have been forced to pay a margin of Rs. 1,000 per bar. Towards the close the bulls again gained the upper hand and brought down the price to Rs. 162-8.

* * * *

It is stated that the bears have been sitting tight on their sales on the presumption that the bulls might not take delivery of the metal on the settlement day. But it is also rumoured that the bulls have made arrangements to take delivery of as many bars as are offered and that the bears might not be able to deliver more than 1,200 bars against their outstanding sales of 3,200 bars. It is not known whether the bulls will insist on the bars being tendered or they will allow the bears to carry forward the sales. If they insist on taking delivery of the bars, a crisis may be expected, as it is said that the bears have got with them only 1,200 bars. In that case, the bears will be completely at the mercy of the bulls. A section of the market is of the opinion that the bulls may not take delivery of the bars even if tendered, since they would then be carrying a heavy load through an off-season, and that they would be content with a high *budla* charge.

* * * *

The address which Mr. C. R. Srinivasan delivered at the recent annual meeting of the Bharat Line Ltd., in his capacity as Chairman of the Company, raises quite a few issues of considerable significance to the Indian shipping industry. The main theme of his address was that the present system of aid to the industry, which the Government had adopted, was capable of further liberalisation, and that unless the necessary changes were made the industry might find it difficult to make satisfactory progress. It would be necessary to consider a few figures in respect of the Indian shipping industry in order to appreciate Mr. Srinivasan's line of reasoning. Indian-owned shipping (as at the end of 1951) consists of 2.11 lakh tons (g.r.t.) in the sphere of coastal trade and 1.73 lakh tons (g.r.t.) in the sphere of overseas trade. The Five-year Plan aims at a target of 3.15 lakh tons for the coastal trade and 2.83 lakh tons for the overseas trade. Thus, Indian shipping industry will have to augment its capacity by an additional one lakh tons in the coastal sphere, and by a similar tonnage in the overseas sphere. Lest anyone should run away with the impression that all this would make a tremendous difference to the Indian shipping industry, it is necessary to add that all this increase would hardly raise the share of the industry in world tonnage to one per cent. Nor will that increase solve all the problems of replacing the existing ships as they become worn out. And the industry's capacity would still be found insufficient to reach the target of 50 per cent. of the overseas trade; it now carries hardly 5 per cent. of this trade. The targets are, if anything, modest.

* * * *

But will the industry really be able to reach even the admittedly modest targets set for it? Mr. Srinivasan gave a few illuminating figures. He calculated that the cost of buying the ships (one lakh tons (g.r.t.) or 20 ships of 5,000 g.r.t. each) which might be manufactured by the Vishakapatnam shipbuilding yard will be Rs. 12 crores at the rate of Rs. 60 lakhs per ship. This would leave a gap of one lakh tons for reaching the target to be filled through purchase of second-hand ships. Since such ships cost Rs. 36 lakhs each, it would require another Rs. 7 crores to buy them at the prevailing market prices. Thus, the industry would require in all Rs. 19 crores in order to enable it to play its part in the Plan. Since the companies cannot, in the present state of the money market, expect to raise this amount, the burden would necessarily fall on the Government. He expressed the hope that the Government would readily give the industry the assistance it needs.

* * * *

The Government has, on its part, provided for Rs. 4 crores of loans to the industry for assistance to coastal shipping (Rs. 2 crores to be provided by the industry) and for Rs. 6.5 crores for assistance to the industry in the "overseas" sphere (Rs. 2.2 crores to be provided by the industry). Mr. Srinivasan pointed out that in order that the Government loans may be attractive to shipping companies, it "should not stipulate the large proportion of the purchase price which the companies are now required to provide in the case of each loan." Secondly, the loans should not carry a high rate of interest. He suggested that the loans, which are now given at 4, 4½ and 5 per cent. interest, should carry a smaller rate of interest, and the conditions of repayment should be more liberal. He said: "It will be a farsighted and fruitful policy, if the Government will give the loans a currency of 20 years, allow the first five years free of interest and charge 3 per cent. per annum from the sixth year when repayment by instalments of one-fifteenth of the whole amount may also start." He also emphasised the need for relief in taxation. Surely, these concessions, which are modest when compared to those that have been demanded by the shipping industries all over the world and conceded, in a spirit of economic statesmanship, by the Governments of the maritime nations, deserve the sympathetic consideration of the Government of this country which has still a long—in fact, a very big—leeway to make up before it can claim an honoured place in the world's maritime map.

* * * *

The statement (circulated along with the report and accounts for the year ended 31st December, 1952) to the stockholders of the Anglo-Iranian Oil Co., Ltd., by the Chairman Sir William Fraser, contains a comprehensive review of the Anglo-Iranian oil dispute. The Chairman points out that there have been no less than five separate attempts to settle the dispute, which, as readers are aware, arose out of the Iranian Government's action in taking over the Company's interests in Iran, in contravention of the terms of the 1933 Agreement between the Company and the Government. The Company has thus been deprived of the benefit of extracting and disposing of Iranian oil for the remaining period of the Agreement. In this connection, Sir William observed: "The proper observance of contracts is a fundamental factor in international trade, and Her Majesty's Government and the Company have stood on the principle, well established in international law, that compensation for losses resulting from expropriation must be prompt, adequate and effective." Explaining the legal position in respect of the oil delivered from the area of the Company's operation in Iran, he said that inasmuch as the Iranian Government had neither paid compensation nor agreed to a satisfactory basis for compensation, the Company "continues to claim the title to all oil" derived from the Company's oilfields of which the Iranian Government is now the *de facto* owner. Legal proceedings have already been taken in Aden, Italy and Japan against concerns or individuals who deal in such oil.

* * * *

In the meantime, the Company's management has taken steps to augment its refinery capacity and to build tankers. In this connection, the Company's issue of £20 million, 5 per cent. debenture stock in January last, it is stated, was largely oversubscribed. This issue has been made in order to supplement the Company's funds which are needed for financing its expansion programme. This large expansion programme on which expenditure during 1952 was about £57.4 million and on which expenditure during 1953 is estimated to aggregate £75 million, is designed to maintain the "Company's position in the forefront of the highly competitive and progressive world petroleum industry." The statement gives much encouraging information to the stockholders. Thus, crude oil production in Kuwait, Iraq and Qatar increased during 1952, when the Company's offtake from these sources amounted to 25.6 million tons, compared with 16.6 million tons in 1951. During 1953, the Company expects to make available 35 million tons from these sources. The Company has, in co-operation with certain other interests, such as the Shell group, extended its exploration activities to several new areas, including Nigeria, Tanganyika, Zanzibar and Sicily. Work is proceeding satisfactorily at the Company's two large new refinery projects at Aden and at Kwinana. The Company's post-war programme for increasing the refinery capacity in the U.K. is being brought to fruition;

EQUITIES RULE QUIETLY STEADY

TATA DEFERREDS DRIFT LOWER

(From Our Own Correspondents)

BOMBAY, *28th May*

QUIETLY steady conditions came to prevail on the Stock Exchange during the week under review. In the absence of fresh incentive and follow up support, leading speculative counters could not consolidate their gains made in previous weeks. On the other hand, technical considerations and the downward trend in other markets of the city induced some pressure on the market. Some operators, who were inclined to go bullish in recent weeks, found the position somewhat overbought and as a corrective measure they had to unload their holdings. Further, leading bull operators who were heavily involved in other markets, such as bullion and cotton, had to liquidate their commitments in shares in order to cover their positions in other markets. Reports that the U.S. and Britain were in accord on the United Nations' new peace proposals for a Korean truce and that the U.N. delegations as a whole were presenting a united front against continuance of war were not calculated to encourage the longs. Further, the heavy delivery of some of the textile shares in the last clearing also affected the sentiment. In the result, leading speculative counters disclosed minor losses. Most cash scrips, however, were steady with modest gains.

In the steel section, Tata Deferreds opened cautiously and declined on Friday from Rs. 1,935 to Rs. 1,925 due to end of account considerations. The new account opened on Monday on a slightly cheerful note and the shares, after improving to Rs. 1,945, reacted to a low of Rs. 1,915 this morning. Towards the close, however, they steadied up to Rs. 1,925. Tata Ordinaries moved between Rs. 337 and Rs. 331-12 before finishing at Rs. 334. Indian Irons recovered to Rs. 26-2½ on Tuesday after touching a low of Rs. 25-3½ earlier, but closed at Rs. 25-10½.

Barring moderate losses in leading speculative counters, textile shares presented a steady front due to favourable outlook for textile mills. The announcement by the Commerce Minister on Saturday of the Government's decision to allow export of Indian cotton textiles freely for shipments till the end of December, 1953 and to increase the export quota of mineral khaki from 25 per cent. to 33 or 33⅓ per cent. of the mills' production strengthened the hopes of buyers. Bombay Dyeings moved up from Rs. 400-10 to Rs. 406-4, but reacted to close at Rs. 397-9. Kohinoors retreated from Rs. 311-12 to Rs. 305-12 before closing at Rs. 307-4. Central Indias disclosed a loss of Rs. 5 over the week at Rs. 169, Century of Rs. 3 at Rs. 279, Indu Ordinaries of As. 4½ at Rs. 10-11 and New Greats Rs. 2-8 to Rs. 156. Gokaks were Re. 1-8 lower at Rs. 221-8. Edward Textiles, on the other hand, were taken up from Rs. 248-12 to Rs. 253-12 and Finlays by Rs. 4 to Rs. 328. On expectations of favourable results, Simplex were in demand, moving up by Rs. 4-12 to Rs. 185. Standards advanced by Rs. 3-2 to Rs. 316-14, Svadeshis by Rs. 3-8 to Rs. 255 and Swans by Rs. 5 to Rs. 455. In the cash section, Bradburys were better by Rs. 11-4 at Rs. 742-8, Dawns by Rs. 2 at Rs. 61 and Phoenix by Rs. 3-12 at Rs. 110. Sholapurs were lifted up from Rs. 1,750 to Rs. 1,822-8 before closing at Rs. 1,800. New Citys were held at Rs. 150.

Select counters in the public utility section were in demand and finished with small gains. Ahmedabad Electrics, after being a shade lower at Rs. 109-6, regained to close at Rs. 109-11, while their new shares were a fraction lower at Rs. 28-4. The Company has made a call of Rs. 25 per share on these new shares which is payable on 1st June, 1953. Bombay Suburbans improved by Re. 1-14 to Rs. 129-6. Poona Electrics were maintained at Rs. 121-4, while Surats scored a gain of As. 10 at Rs. 133-12. In the Tata Hydro group, Tata Hydros were fractionally lower at Rs. 150-8, Tata Powers receded by Rs. 12-8 to Rs. 1,507-8. Andhra Valleys disclosed no change at Rs. 1,430.

Bank shares were steady, but business done was little. Barodas added As. 8 to close at Rs. 112. Centrals Old shed As. 8 to Rs. 64-4, but their new shares showed no change at Rs. 65-8. There was some selling pressure in Imperial Fully Paids which brought down the quotation from Rs. 1,867-8 to Rs. 1,855, but a fresh enquiry pushed it up to Rs. 1,880. Indias were in demand, but the quotation hardly moved up by more than As. 4 to Rs. 156-4. United Commercials were steady at Rs. 36.

A rise of Rs. 63 over the week to Rs. 7,225 in Orientals was a feature in the insurance section. New Indias hardened by As. 8 to Rs. 43-8. Jupiters had business at Rs. 7-2. Indian Mercantiles were down by As. 12 at Rs. 38-4.

In the miscellaneous group, Associated Cements were listless, moving between Rs. 173 and Rs. 171-12, and closed at Rs. 172-4. Belapurs were marked down by Rs. 2 at Rs. 237. Bombay-Burmahs lacked interest and closed at Rs. 384-6. B.I.Cs. were steady at Rs. 8-12½. Killick Industries were done As. 8 higher at Rs. 158, while their Partly Paids were firmed up by Rs. 6-12 to Rs. 94. After last week's hectic rise, National Rayon Ordinaries retreated by Rs. 4-12 to Rs. 98-8. Tata Chemicals were steady at Rs. 9-9, while Tata Oils were bid As. 12 lower at Rs. 33-12. Wimcos shed Re. 1-4 to Rs. 225.

In the transport group, Scindias were quiet at Rs. 13-8½, but Bombay Steams were fractionally higher at Rs. 36-4. Bharat Lines were done Re. 1 higher at Rs. 91 and Indian Steams were put up by As. 2 at Rs. 6-7½. Air-Indias were unchanged at Rs. 84, but Air-India Internationals were somewhat lower at Rs. 104-8.

In the mining and engineering group, Alcocks were better by Re. 1-4 at Rs. 316-14, but Premier Constructions which were quoted *ex-div.* on the 25th at Rs. 87 finished at Rs. 84-8. Shivrajpurs shed a rupee to Rs. 55, while Indian Coppers were in demand after a long time to go up by As. 1½ to Rs. 2-15½. Tata Locomotives changed hands at Rs. 82-8, as against Rs. 84.

* * * *

Calcutta Stock Exchange

CALCUTTA, *26th May*

Although steady conditions were witnessed on the Calcutta Stock Exchange during the week under review, trading was on a cautious note. The volume of transactions was, therefore, limited. Such a trend was due to the lack of adequate funds available in the market, and also to the anxiety of buyers to extend commitments only after making sure that gains would be maintained.

The market received some measure of support from Korean reports about the difficult negotiations for a truce. Enthusiasm was also derived from the efforts which Government is making for increasing India's exports of finished goods and which Mr. T. T. Krishnamachari detailed during his address to the Export Advisory Council early this week. Textile shares provided a feature this week, as the increasing rate of exports and the popularity of Indian piecegoods in the neighbouring countries had a healthy effect on share prices. The Commerce Minister's report that in April as much as 63 million yards of cloth were exported, induced greater support to textile shares.

Sugar shares continued the advance, and selected counters rose impressively. The improved prospects for tea resulted in more enquiries for tea shares, and small gains were recorded. Jutes were also in the forefront, but advances were cautious. The American Secretary of State's statement that the Republican Administration would continue to recommend to Congress financial assistance for India's industrial development was a factor which increased the confidence of operators. The Pakistani Prime Minister's hope for a settlement, by discussion, of all outstanding Indo-Pakistani disputes, naturally resulted in expectations of better trade relationship between the two countries. This was also a factor why, despite inadequate funds in the market, gains tended to stabilise.

In the textile section, Bowreahs were pushed up from the previous rate of Rs. 210 to Rs. 285 following moderate enquiries and fair turnover. The star feature of the section, however, was Dunbars which at Rs. 220 gained as much as Rs. 88 this week. Elgin Mills changed hands at Rs. 17-12, while Cawnpore Textiles were fractionally better at Rs. 9-4. Kesorams after easing to Rs. 19-8, recovered to Rs. 20-5, and New Victorias were steady at Re. 1-9. Basantis invited transactions at Rs. 4-8.

Among bank shares, Imperial Fully Paids eased to Rs. 1,854. United Commercials at Rs. 35-8 showed a gain of As. 12, and Hinds gained by one point to Rs. 19-12.

Coals were steady. Raneegunges at Rs. 9-6 maintained the improvement, and Bengals were unchanged at Rs. 535. Standards at Rs. 18-10 were better by As. 2, while New Beerbhooms and Dhemo Mains were fractionally lower at Rs. 20-6 and Rs. 10-12 respectively. East Indias changed hands at Rs. 23-9, Western Bengals at Rs. 5-4, Burrakurs at Rs. 10-11, and Central Indias at Rs. 5-1.

Although during mid-week the earlier interest in jute shares was given up, trading resumed a cheerful note on Monday and to-day. Gains, on balance, for the week are impressive. Opening at Rs. 24-12, speculative Howrahs improved to Rs. 24-15 on Saturday and rose further to Rs. 25-5 to-day. Fort Glosters spurted from Rs. 292 to Rs. 311, while Indias, after receding from Rs. 136 to Rs. 134, not only recovered the loss but rose further to Rs. 138. Unions at Rs. 185 lost the recent gain, but Kinnisons, after declining to Rs. 200, improved to Rs. 210. Megnas were supported at Rs. 107, representing a gain of Rs. 5. Dalhousies hardened from Rs. 131 to Rs. 148. Deltas were taken at Rs. 239 and Alliances at Rs. 162 added seven points. Other counters that showed gains included Nellimarlas and Chitavalsahs, while Ballys at Rs. 175 and Budge-Budges at Rs. 171 showed some easiness. Anglo-Indias were better at Rs. 237.

In the engineering section, Indian Irons were shown moderate attention, as the labour unrest at Burnpur was thought to be less serious than at first feared. Opening at Rs. 25-6 last Wednesday, the quotation gained to Rs. 25-10 on Saturday, and was even better to-day at Rs. 25-15. Texmacos changed hands at Rs. 6-3, Kumardhubis at Rs. 8-9 and Jessops at Rs. 25-3.

Tea shares met with some interest, and Hasimaras were fractionally better at Rs. 25, while Duffiaghurs eased from Rs. 35-12 to Rs. 35-8 and Gungarams from Rs. 158 to Rs. 152-8. Birparas were steady at Rs. 55.

Sugar mill shares were in good demand, and gains were impressive. Carews advanced further from Rs. 6-11 to Rs. 7-3, and Belsunds added As. 4 to close at Rs. 8-6. Champarans closed Rs. 24-12, disclosing a gain of one point, and Cawnpores were better at Rs. 32-8.

In the miscellaneous section, a feature was the steadiness in India General Navigations which, at Rs. 91, were better by Rs. 2-8. Rohtas Industries were steady at Rs. 9-7. Indian Cables met with business at Rs. 19. Martin Burns were sought at Rs. 18-14. Airways India were between Rs. 11-4 and Rs. 12-4. Among paper shares, Titaghurs maintained their usual steadiness and were in demand at Rs. 36-12, and Shree Gopals were better at Rs. 19-7. India Paper Pulps were taken at Rs. 174. Metal Boxes realised Rs. 20-5. Assam Saws Rs. 6-10, and Sone Valley Cements Rs. 7-10.

* * * *

Madras Stock Exchange

MADRAS, *26th May*

The Madras Stock Exchange presented cheerful conditions this week also. There was considerable broadening of activity more or less in all sections. The planting scrips were very active. Among these, particularly tea shares spurted on sustained buying activity. But rubbers and coffees found moderate support. Textile scrips met with selective enquiry, and so also miscellaneous scrips. Banks, however, ruled slightly easy. On the whole, the volume of business done was fair, and prices in almost all the sections recorded sizable gains.

Market circles seemed to expect greater offtake of Indian tea by the U.S. this year, following the advertising campaign being carried on jointly by tea producing interests and the Tea Council of the U.S. This considerably enthused operators and as a result, Peermades shot up from Rs. 24-12 to Rs. 25-8 and Parksides from Rs. 12-12 to Rs. 13-4. Devasholas gathered As. 8 to Rs. 16-8 *cum-div.* and Kalasas, As. 4 to Rs. 11-2. Mysore Plantations were higher by As. 2 at As. 10.

The steady demand for rubber shares was due to the reported improvement in the condition of rubber plantations. Thamarpally shot up from Rs. 14 to Rs. 14-12. Peninsulars gathered As. 2 to Rs. 8. Thirumbadis and Rajagiris were better at Rs. 2-13 and Rs. 10-6, respectively. Nelliampathys (Tea and Rubber) were higher by As. 2 at Re. 1-14 and Midlands (Tea and Rubber) by As. 3 at Rs. 10-7. Vaikundams, however, lost As. 4 to Rs. 13-10. Teekoys lost a similar amount to Rs. 6-8.

In the Coffee section, Coffee Lands improved by As. 3 to Rs. 10-5. Nil Neergundis were up by As. 2 to close at Rs. 3-4. Ouchterlonys (Tea and Coffee) were done better at Rs. 4-1. Consolidated Coffees, however, lost As. 2 to Rs. 18.

Among textiles, Bangalore Woollens were done higher at Rs. 250, as against Rs. 247-8. Buckinghams improved by Re. 1-8 to close at Rs. 117. P Andvars 'B' were enquired at Rs. 63 as against Rs. 59-4. P Andvars 'A' were done As. 8 higher at Rs. 45. Maduras gained As. 6 to Rs. 36-4 and Lakshmis 'A' As. 4 to Rs. 39-4. Coimbatore Spinnings improved by As. 12 to finish at Rs. 39-12. Radhakrishnas, however, lost Re. 1 to Rs. 142.

In the miscellaneous section, Andhra Cements gained Re. 1 to Rs. 101. Deccan Sugars, Rs. 25 paid-ups, were also up by a similar amount at Rs. 23-8. Dalmia Cements, Rs. 2-8 paid-ups, hardened by As. 3½ to close at As. 15½. Mysore Papers were better at Rs. 13-11. But Indian Alluminiums lost Rs. 12 to Rs. 110. Mysore Golds were fractionally lower at Rs. 2-2½.

In the banking section, Imperial Banks advanced by Rs. 5 to Rs. 1,845. Indian Banks, Rs. 80 paid-ups gathered Re. 1 to Rs. 138-8. But for these, most of the remaining scrips were on the down-trend. Bank of Mysores lost Re. 1-8 to Rs. 282. Indo-Commercials 'A' fell by Re. 1 to close at Rs. 75 and 'C' by As. 12 to Rs. 37-8. Indian Overseas eased from Rs. 88-8 to Rs. 88-4.

NEWS IN BRIEF

THE President has given his assent to the Indian Income-tax (Amendment) Bill, 1952, as passed by both Houses of Parliament and the measure now becomes law. The Act brings into operation, among others, the provisions of section 46A relating to the production of tax-clearance or exemption certificates by persons leaving India.

The Madras Government has decided to extend the Tanjore Tenants and *Pannaiyal* Protection Act to Chidambaram taluk in South Arcot District.

The Madras Government will not extend the State Government Transport service beyond Madras City for the next five years. The Government will not stand in the way of the Coimbatore Municipal Council, if it wanted to take over the town bus service.

An import control policy announcement by the Government of India says that the import of diesel engines of upto 35 h.p. will continue to be banned during the licensing period, January-June, 1953. For diesel engines of over 35 h.p., applications from actual users will be considered on an *ad hoc* basis.

Assam will produce 5,911,752 lbs. of cotton this year, according to official forecasts. This represents an increase of 455,202 lbs. over last year's production. The area under cotton crop this year is estimated at 33,880 acres—a rise of 58 per cent. over the previous year.

The Calcutta Railway Enquiry Committee has recommended an electrified circular railway system for Calcutta. The Ministry of Railways is now examining the various recommendations of the Committee. The scheme is likely to be linked up with the plan for electrification of the Calcutta suburban sections and the Eastern Railway main lines between Calcutta and the coalfields.

The Geological Survey of India will assist the Government of India's scheme to sink 2,000 tube-wells in various States, according to a scheme drawn up by the Union Ministry of Food and Agriculture. Among the States which come under the scheme are Bombay, Saurashtra, P.E.P.S.U., Orissa, Bihar, U.P. and Madras. A reconnaissance survey of the States before sinking tube-wells has already been undertaken by one of the U.S. experts sent to India under the Point-Four Programme.

An Indo-Egyptian payments and trade agreement was finalised on Tuesday last in Cairo and initialled by Mr. H. V. R. Iengar, Secretary, Ministry of Commerce, on behalf of the Government of India. After the Egyptian Cabinet and the Council of Revolution formally ratify it, it will be signed by the Indian Ambassador to Egypt on behalf of India. The agreement is for an indefinite period and subject to modification at any time after three months' notice by either country.

The All-India *Khadi* and Village Industries Board has prepared schemes for developing various village and cottage industries for 1953-54. The schemes include development of hand-pounding of rice, soap-making with indigenous oil, hand-made paper, bee-keeping, palm *gur*, *gur* and *khandsari*, leather, match and village oil industries. The Board has also provided for financial aid to needy industries wherever possible.

Problems confronting operators on the Africa-India Ocean region air routes will be discussed by operational experts of leading international airlines, at a meeting of the International Air Transport Association in Paris, from 15th June. The meeting is expected to last for eight days. Air-India International, which is operating a scheduled air service on the India-East Africa route *via* Pakistan and Middle East, will send two experts for the meeting. The experts will place before the meeting, problems relating to lack of meteorological radio and aeronautical communication facilities which hamper air operations along certain sectors on the India-Africa run.

The Central Government is of opinion that it will not be in the public interest to apply any of the prohibitions contained in sub-section (1) of section 91B of the Indian Companies Act, 1913 (VII of 1913), to the Standard-Vacuum Refining Company of India. Accordingly, it has directed, in exercise of powers conferred by sub-section (4) of section 91B of the said Act, that the said section 91B shall not apply to the Standard-Vacuum Refining Company of India, Limited, Bombay. The section relates to the prohibition of voting by an interested director.

Sixty British and other foreign firms in India have given a "gentlemen's undertaking" not to employ new young British and foreign employees where Indians are available and trained for the same posts. According to a spokesman of the Commerce and Industry Ministry, these firms will continue to appoint Europeans where Indians with suitable experience are not available for posts of technical skill or experience. This agreement is an outcome of the Government's efforts to get more Indians appointed to higher paid posts in foreign firms. Answers to the Ministry's questionnaire issued to the 1,200 foreign firms last year had revealed that 75 per cent. of executive and higher paid posts in these firms were being held by non-Indians.

Reports from Tokyo reveal that the Government of Japan is preparing for talks with the Indian Government with a view to concluding a new trade agreement providing for increased trade between the two countries. According to sources close to the Ministry of International Trade and Industry (Japan), it is now studying the feasibility of discussing with India the following points in drawing up a new trade agreement: (1) exchange of goods worth £20,000,000 each way, annually; (2) Japan to export to India machinery, iron and steel, chemicals, textiles, equipment for cottage industries and sundry goods; (3) Japan to import from India mainly iron ore, coking coal, bituminous coal, scrap iron and raw cotton; and (4) Japan to extend technical aid to India for harbour construction and for the development of cottage industries.

Owing to the improved supply position of ammonium sulphate and superphosphate, the Government of Bombay has removed all restrictions on the prices and distribution of both these fertilisers. They are now available to cultivators through the normal trade channels, including co-operative societies, which are expected to undertake wholesale and retail distribution. The Government does not now stock these fertilisers at departmental depots for distribution to cultivators through the Agricultural Department. Cultivators are, therefore, advised to enquire of local fertiliser dealers for their requirements of these fertilisers. Sulphate of ammonia is available through the Government at the rate of Rs. 320 per ton, ex-godown, in Bombay. The minimum quantity that may be released in favour of any party at any one time is 20 tons. Superphosphate is available with the the manufacturers in Bombay State at a price of about Rs. 200 per ton ex-works. Enquiries regarding further particulars of the price and the conditions of delivery may be addressed to the manufacturers direct. Distribution of manure mixture and groundnut cake is no longer undertaken by the State Government, except in respect of stocks of manure mixture and groundnut cake which are still with the Agriculture Department. Preparation of manure mixture has also been discontinued by the Agricultural Department. These two fertilisers will now be available through the normal trade channels. Groundnut cake, which is, at present, procured by the Government from the oil mills in the State, is only to be used for supplying as cattle food in the scarcity-affected areas.

From Abroad

The Burma Government is stated to have issued licence for export of 2,500 tons of rubber to Communist China. Last March, Burma shipped 1,500 tons of rubber to China.

The prices of ordinary and rapid-hardening Portland Cement has been raised in the U.K. by 2s. per ton with effect from the 20th inst. This is due to increases in costs of the cement industry.

Shipbuilders in Japan have asked the Government to grant subsidy loans aggregating more than 27,000 million yen (£27 million) from the Development Bank to help secure contracts for the construction of 300,000 gross tons of vessels during the first half of the current fiscal year—March, 1953 to April, 1954.

For the first time in the history of the refined oil producers in the U.K., the tonnage of refined oil production exceeded the total of inland oil consumption in 1952. The U.K. refinery production during the year amounted to 22.49 million tons, an increase of over 35 per cent. over that of the previous year, while total inland consumption rose by a relatively small amount to 17.52 million tons.

The U.S. is expected to produce well over 110 million tons of steel this year, provided there are no strikes in the industry. Production so far has averaged just about 100 per cent. of the capacity, and the output in 1953 will probably set up a new record. The previous record for any year was reached in 1951 when steel companies produced 105.1 million tons.

India is prominent among the 29 nations represented in a free world trade exhibit which opened last week in Washington. The exhibit displays arts, crafts, manufactured goods and raw materials from around the world and is attracting thousands of visitors. The India exhibit—with samples of India's varied arts and industries—drew wide attention from the opening day visitors.

Australia is becoming too unattractive for overseas industrial leaders with money to invest, according to Mr. L. Luxton, acting Managing Director of the Shell Company of Australia. Though overseas capital was vital to Australian development, investors were not interested in putting risk capital into Australia, if they could not get even the bank rate of interest, he said.

PERSONAL

DR. Ladislav Durdil, Czechoslovak Ambassador-designate to India, has arrived.

Mr. D. D. Sathe, Motor Transport Controller, Bombay, has returned to Bombay after a tour of England and the Continent for eight months.

Dr. A. Lakshmanaswamy Mudaliar, Vice-Chancellor of the Madras University, has returned to Madras from Geneva after attending the meeting of the sixth World Health Assembly.

Mr. Abid Ali, Union Deputy Minister for Labour, who is the leader of the Indian delegation to the thirty-sixth session of the I.L.O., left for Geneva on Sunday last to attend the I.L.O. session.

Mr. R. T. Chari, Deputy High Commissioner for India in Ceylon, has been appointed Deputy Secretary, Union Ministry for External Affairs, in charge of External Publicity, *vice* Mr. S. Sen proceeding on leave.

Mr. K. C. Neogy, lately Chairman of the Finance Commission, and former Minister for Commerce, Government of India, has been appointed Member of the Planning Commission. Mr. Neogy took over charge on the 21st inst.

Mr. Jawaharlal Nehru, Prime Minister of India, left for London on the 28th inst. to attend the Coronation of Queen Elizabeth II of Britain and the Commonwealth Prime Ministers' Conference to be held in London.

Mr. Hariharnath Shastri, Member of the Indian delegation representing labour to the annual conference of the I.L.O., left for Geneva on Tuesday last.

"COMMERCE" 1928

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, *2nd June*

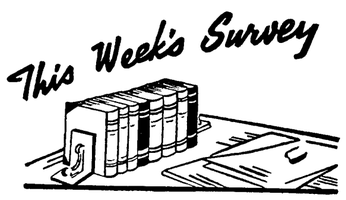
Gold as Circulating Medium

If gold went again into circulation there would be no immediate danger of financial panic, the commencement of a long period of falling prices, disastrous to trade. This, apparently is the view of Sir E. Hilton-Young, expressed in a speech delivered last month in the House of Commons during the discussion on the Currency and Bank Notes Bill. Lord Hugh Cecil declared that the Bank of England should not be empowered to issue notes unless they were convertible, but Sir E. Hilton-Young asserted, in reply, that the case against gold returning to circulation was overwhelming. Loan interest alone would cost £7,000,000 or £10,000,000 yearly. He mentioned that at the recent enquiry into the currency system of India evidence was given by leading authorities in Britain, Germany, France, the United States that it was necessary to husband the world gold supply. In making the foregoing observations, Sir E. Hilton-Young was obviously inspired by the report issued in 1926 by the Royal Commission on Indian Currency. An interesting feature of that report was the evidence given by Mr. Benjamin Strong, Governor of the Federal Reserve Bank of New York. It was a notable event that the chief executive banking authority in the United States should have visited London in order to assist a British enquiry into the currency of India. No more striking proof could have been given of the closeness with which the countries of the world are being knit together by the bonds of financial organisation. Truly, in matters of currency and high finance, we are all members of the one great family. The incident was regarded at the time as a good augury for the scientific development of the currency systems of the world that so much goodwill was manifested between the chief monetary centres of civilisation.

Australia and the United States have signed three conventions for avoidance of double taxation between the two countries. The conventions, which cover income-tax and estate and gift duties, are expected to result in attracting additional American capital investment in Australia. The agreement with the U.S. follows the lines of the reciprocal pact between Australia and the U.K.

The Burma Government has announced a 10-year plan for a "new order" for the Burmese peasants, which includes free distribution of ten million acres of land to the landless peasants in the next two years. These areas will be taken over from non-agricultural holders and distributed free to the peasants. Under the plan, two million acres are to be distributed in the current year through a land committee elected by the peasants themselves. Each family will be allocated about ten acres on an average.

The Pakistan Government has prohibited forward buying and selling of foodgrains. Speculative buying and selling of gram is prohibited under the Foodgrains (Futures, Options and Prohibition) Order, 1942 which is still in force. The Government, however, in supercession of the said Order, has promulgated a fresh Foodgrains (Futures, Options and Prohibition) Order prohibiting forward buying and selling of foodgrains, namely, wheat, rice, paddy *jowar*, *bajra*, maize, barley, gram of all varieties, pulses of all varieties (whole and split) and products of all these grains. All Provincial Governments have been requested to enforce this Order vigorously.



CO-OPERATIVE MOVEMENT

THE statistical statements relating to the Co-operative Movement in India for the year 1950-51, just published by the Reserve Bank of India, serve to spotlight the lines on which the Movement has been developing and also to indicate the obstacles which should be removed, if the pace of progress has to be quickened in future.

A glance at the innumberable statistical tables reveals that the year 1950-51 witnessed notable expansion in the activities of the Co-operative Movement, as compared with the previous year. The number of co-operative societies of all types at the end of 1950-51 was higher at 181,189 with a total membership of 13.7 million, which compares favourably with 173,094 societies with a membership of 12.6 million a year before. Taking the average size of an Indian family as five, it may roughly be estimated that 68.5 million, or 19.1 per cent. of the population, were served by the Movement during the year under review, as against 62.9 million or 18.2 per cent. in 1949-50. Allowance should, of course, be made for persons who are members of more than one co-operative society.

The increase in the number of societies in 1950-51 was followed by a sizable rise in the aggregate working capital, the figure as on 30th June, 1951, being 275.85 crores, as against Rs. 233.10 crores at the end of 1949-50. This improvement is due, in the main, to a rise in loans from Governments, from Rs. 6.36 crores, representing 2.7 per cent. of the total working capital, to Rs. 11.70 crores (4.2 per cent.). Similarly, loans from the Reserve Bank of India were larger, the amount outstanding as on 30th June, 1951 being Rs. 3.15 crores, as against Rs. 1.60 crores a year before. Deposits of co-operative institutions, primary societies, individual and other sources, etc., also rose, although their share in the total working capital was slightly lower at 40.8 per cent., as against 44 per cent. in the previous year. Owned funds formed 71 per cent. of the total deposits and 29 per cent. of the working capital.

As regards provision of short-term finance, the Co-operative Movement registered notable progress during the year under review. There was a rise in the amount of loans disbursed during the year, as well as in outstandings at the end of the year. The deposits attracted by different types of co-operatives, however, do not show a proportionate rise, with the result that there was greater dependence for loans on central financing institutions. In the sphere of long-term credit structure, progress was well maintained. Long-term credit is generally the responsibility of the central land-mortgage banks. The number of such banks was unchanged at five. They advanced loans to the tune of Rs. 1.33 crores in 1950-51, as against Rs. 1.01 crores in the previous year. Satisfactory progress was recorded by the non-credit, non-agricultural credit, and non-agricultural non-credit societies, too.

The foregoing account gives some idea of the progress of the Co-operative Movement in India. But there are, at the same time, certain sore spots. The Movement, for instance, is not evenly spread; nor is it of the same texture and quality everywhere. While the Movement has made considerable progress in some of the Part A States, it is not adequately developed in others and practically undeveloped in a few Part B and C States. Thus, out of the aggregate number of primary agricultural credit societies in the country, the three States of Madras, Uttar Pradesh and Bombay alone account for nearly 45.4 per cent. It is not surprising, therefore, that the mobilisation of local resources or banking and credit services rendered by the co-operative sector should have been extremely uneven as between the different parts.

A conclusion that can be drawn from this is that, if the Co-operative Movement in India is to fulfill the purpose for which it is designed, it is imperative that State co-operative banks should be established in all those States where such banks do not exist at present. Even the apex banks that are already functioning should be thoroughly reorganised. The central or district banks also need reorganisation. There is the need, too, for improving the primary credit co-operative societies in the underdeveloped areas. Considering these disquieting features, it is indeed gratifying that the Reserve Bank of India has now fully addressed itself to the task of formulating appropriate steps for reorganising the entire co-operative credit structure. Practically all the States, we are told, have now been covered by the programme; in many cases, plans of reorganisation and development of the Co-operative Movement suitable to the needs of individual States have been worked out and agreed upon.

The role of co-operative societies in the formation of capital in India, particularly in the agricultural side, has assumed special importance in the present context of the abolition of *zamindars* and the consequent drying up of the flow of capital from these sources. In the circumstances, increasing reliance has come to be placed on the Co-operative Movement as a chief source of finance for agriculture. The Planning Commission has laid down certain targets for agricultural credit to be attained by 1955-56, that is the last year of the Five-year Plan. The targets (per annum) are Rs. 100 crores for short-term loans, Rs. 25 crores for medium-term loans and Rs. 5 crores for long-term loans. This implies, as Mr. K. Subrahmanyan, Chief Officer of the Agricultural Credit Department, Reserve Bank of India, aptly remarks in his preparatory note, "the expectation that the Movement will make a concerted effort to mobilise and tap savings, and extend the scope and efficiency of its organisation."

UNEMPLOYMENT

The concern expressed by the Working Committee of the Indian National Trade Union Congress, which concluded its two-day session at Indore, last week, over the marked deterioration in the employment situation, is quite appropriate. For the latest figures relating to employment situation are alarming. In the month of April, 126,706 persons got registered in various employment exchanges in India, the highest figure for any month in the last eight years. It must be remembered that this figure does not include all the employable persons. All regions in the country excepting Bihar, Orissa and West Bengal have contributed to this steep increase in the unemployment figures. There are also indications that the situation might grow worse in the near future. With the permission of the Government of India to close the Oorgaum Gold Mining Company, after 31st May, unemployment in the Kolar Gold Mines area will increase. It is true that the leases are to be transferred to Champion Reef Gold Mines, India, Ltd., which would exploit the residuary ore by the extension of its workings there, but this involves a continued employment of only about 980 employees out of the 3,400 employees who would be thrown out of employment next month. Then again, retrenchment of 4,115 workers in railway collieries is almost a *fait accompli*. They would have been retrenched by now had it not been for the recent decision of the Appellate Tribunal which held void the permission granted by the Dhanbad Industrial Tribunal on certain technical defects only. Again, Defence employees and the Vishakhapatnam Shipyard workers are facing the threat of unemployment any day. There is besides, retrenchment in private concerns following the decline in price trends in the domestic markets for commodities.

This is a very distressing picture indeed. But can it be avoided? A careful review of the existing situation in the industries concerned discloses that, it will be positively dangerous to freeze employment at present levels, when the world price levels for manufactured products are on the down-trend. For instance, the textile industry in India cannot hope to hold, in the long run, even its present position against Japanese competition in overseas markets, if it does not carry out rationalisation measures which involve necessarily retrenchment of labour. The railway collieries have been suffering an unnecessary expenditure of about Rs. 50 lakhs as a result of maintenance of surplus labour. The Visakhapatnam Shipyard cannot be economical, unless rationalisation measures are effected forthwith. The same holds good with reference to Defence and all other establishments. After all, it gives no pleasure to anyone to retrench and see the unemployed subject to misery. And truly rationalisation is a necessary process in the long-term interests of the country. It is gratifying to note that even the I.N.T.U.C., in pleading the workers' case against retrenchment, is not totally opposed to schemes of rationalisation. However, it urges the Government to stop when it goes against the "accepted principles and procedures." Unfortunately the term "accepted principles and procedures" is not defined and in the absence of a clear cut definition, it lends itself to elastic interpretation.

All this may lead to a feeling that we are arguing for unqualified retrenchment, but this is not so. We are quite aware that unemployment means for the person concerned, from the human standpoint, something more personal and catastrophic. It marks a complete stoppage of his regular income and, unless there is a substitute for this, unemployment usually means a drastic reduction in his standard of living and that of all his dependents. In addition, it will seriously impair his morale by making him feel that the society no longer has need of his services. We are also aware that it is the bounden obligation of the State to provide employment opportunities to one and all. But, despite the benevolent wishes of the Government of India, it has not been able so far to combat the evil of unemployment. And this is essentially more due to lack of financial and technical assistance needed to stimulate general economic development than to a lack of internal effective demand for goods and services. The problem is very grave and needs for its solution the co-operation of both the Government and the public, including employers and employees. Mr. V. V. Giri, the Union Labour Minister, only recently announced that he might appoint an expert committee to recommend measures for tackling the problem of growing unemployment. Surely, the constitution of such a body is urgent and deserves high priority.

FINANCES OF MADRAS

The report that the Government of Madras is grappling with grave financial difficulties will not cause much surprise to those who know what the launching of the prohibition policy has meant to the State's finances. It is true that this has been particularly aggravated in the past few years by the recurrence of scarcity conditions, thanks to failure of monsoon. But the rigours could have been lessened, if not avoided altogether, if only the authorities had taken care to see that the State's financial position did not suffer through their anti-drink policy.

The Government is also spending large sums on several schemes of development which lie outside the State plan which has had the effect of reducing the savings available from State revenues for expenditure on the Five-year Plan itself—and this, despite the increase in tax revenue. Taking the revenue and capital accounts together, Madras has spent during the first two years of the Plan as much as Rs. 5 crores on such schemes. It is a pity that the Government should have ignored the main consideration that weighed at the time the State plan was framed, namely, that attention should be focussed on the maintenance of the rate of development attained in 1950-51 and on its increase in sectors where an increase was indicated. It is surprising that, although the Government knew the imperative need for spending sums to combat famine conditions and the limitations to the raising of additional resources, the Madras Government should have insisted on an upward revision of the target of expenditure under the Five-year Plan, from Rs. 126 crores to Rs. 140.8 crores. This has been mainly responsible for the serious lag in resources that has now become evident. The lag would have been much wider but for the gain of Rs. 2.5 crores per annum from the Finance Commission's award.

Whatever may be the sins of omission and commission on the part of the Madras Government, the need for substantial assistance from the Centre seems to be inevitable, particularly in the present context of acute distress in the famine-stricken areas of the State which has necessitated spending of huge sums on relief works. But the point is whether, even with such assistance, the Government of the State would be able to tide over the crisis. Now that fruitful sources of revenue have dried up, taxes are high and expenditure on schemes of Welfare State is mounting up, the Government of Madras is certainly having a most trying time. One, therefore, wonders if there is any justification at all for the Government to throw away, at one stroke, a large slice of excise revenue, however much it may be opposed to the levy on ideological grounds. Indeed, it is high time the Government revised its prohibition policy. Again, the State should attempt, *at an early stage*, a complete reappraisal of the development programme in relation to possible sources of revenue. Otherwise, the Madras Government would find it difficult to complete its capital works which are envisaged in the Five-year Plan.

NEW DRUG PLANT

The opening of a new pharmaceutical plant at Bulsar, last week, erected by Lederle Laboratories (India) Ltd., constitutes an important development in the history of India's pharmaceutical industry. The plant, costing Rs. 20 lakhs is dedicated to the memory of Dr. Yellapragada SubbaRow, the famous Indian physician, who as the Research Director of Lederle Laboratories in the U.S. from 1940 to 1948, contributed substantially to the discovery of aureomycin, the miracle drug for curing rickettsial diseases. He was the discoverer of folic acid, that is now widely used for preventing and curing tropical sprue and other anæmic diseases. Teropterin, for use in cancer, was also developed under his direction.

The new plant is situated next to the big Atul Plant which was opened last year. According to a working arrangement entered into between the Atul and Lederle *entrepreneurs*, the former will supply to Lederle Laboratories the raw materials for sulfadiazine, aureomycin and folic acid. The Lederle Laboratories will manufacture them into capsules, tablets, powder and ointment, as the case may be. A notable equipment in the Laboratory is the encapsulation machine capable of turning out one million sealed capsules per day. This machine is one of the five similar machines which exist in the world.

The establishment of a factory by the Lederle enterprise in India is significant for more than one reason. First, it guarantees the supply of certain vital medicines from indigenous sources. The effect of this on the health index of the country will be felt as production increases and prices drop. This will help India save substantial dollar exchange. Secondly, the Bulsar Plant may signalise the starting point of the flow of American private capital into India. Mr. George V. Allen, American Ambassador to India, while opening the plant, welcomed U.S. participation in the development of the pharmaceutical industry in India. At the same time, he rightly observed that American participation was not so important as the fact that India could itself manufacture the new wonder drug, aureomycin, in large quantities on its own soil and from its own native products.

RELIGION—1951 CENSUS

One of the fundamental rights guaranteed by the Constitution of India is that "all persons are equally entitled to freedom of conscience and the right freely to profess, practise and propagate religion." Apart from this right, the authors of the Constitution have not made any special concession to individual religious groups. On the contrary, India has been declared a secular State. In other words, religion as such is no longer recognised for purposes of ensuring safeguards or granting concessions. The community-wise figures of population, recently published by the Registrar-General of India—Census of India Paper No. 2 of 1953—therefore, are of purely social interest and do not, as in the past, arouse any political interest. Even so, the Census Organisation would have done well to attempt a classification of the religious groups according to occupation and trade. The information now given by the Registrar-General is restricted merely to the numbers of religious groups, without any reference to the principal means of livelihood of these groups. Nor does it contain any reference to the state of literacy among the different religious groups.

There are, however, one or two aspects in the census report which may said to be of some interest. For instance, the figures of population according to religion serve to indicate certain social trends. A comparison of the figures for 1951, as compared with those for 1931, reveals that the religious pattern has not undergone any material changes in the past two decades, except that larger numbers of members of tribal groups have returned themselves as professing the Hindu or Christian religion. This represents the broad picture for all the States, but excluding the State directly affected by the Partition. The Hindus (30,32 lakhs) constitute the majority. The other religious groups are: Muslims 3,54 lakhs, Christians 82 lakhs, Sikhs 62 lakhs, Jains 16 lakhs, Buddhists 2 lakhs, Zoroastrians 1 lakh, tribal people 17 lakhs, and other non-tribal people 1 lakh.

OFF THE RECORD

(By "ROVER")

A HOSTILE, invading army, or one of occupation after victory, often, though not always, lives on the land it invades or occupies. The armies of occupation in Western Germany and Japan after World War II changed this tradition and went even to the length of importing food and other necessities from their homelands not only for their own use, but also to feed the populations of the conquered countries. But I have never heard of victorious political parties, forming Governments after their victories at the polls, trying to live on the land and helping themselves to what they require, except under due process of law and as prescribed by the constitution of the country. Duly constituted Governments in democracies, however extravagant they might be, and whatever their majorities in the legislatures, just do not grab what they fancy or commandeer supplies under executive orders. Apart from being highly unjust in the distribution of the burden over various sections of the population, this high-handed procedure of requisitioning supplies at nominal prices from those who are unfortunate enough to possess or trade in them, is unseemly and unlikely to foster respect for, and confidence in, Governments, which indulge in such practices.

If there is any truth and logic in this line of argument, the Congress Government of Bombay appears to regard itself and behave more as an army of invasion or occupation than a democratic Government with deep regard and respect for traditionally accepted forms of equity and good administration. In spite of my somewhat extensive and intimate experience of various grades and types of administrations set up by the large number of Princes in various parts of the country in pre-Independence India, even the worst and the most arbitrary and irresponsible of these never indulged openly in some of the questionable ways of obtaining supplies needed by them employed by this allegedly democratic and popular Government functioning under the republican Constitution of our country. I doubt, if some of its ways of requisitioning supplies of materials could be covered even by the mere letter of the law and Constitution, let alone their spirit.

The Government of Bombay found that it stood in need of a large quantity of cotton-seed cake about the middle of this month. The purpose for which it needed this supply or the fact of its self-created financial stringency are immaterial and altogether irrelevant in judging the manner in which it proceeded to obtain this cake. The obvious thing for any authority to do this would be to invite tenders and to place an order with the source which offered the lowest rate. If it had no time for this cumbrous procedure, it should have gone into the market and purchased what quantity it wanted at the ruling market rates. But the Government of Bombay is out to create a Welfare State, and it appears that one of the ways of doing this is for the Government to acquire what it wants at a nominal rate to keep its own expenditure down and to allow its victims to make good the loss so suffered, by squeezing other sundry consumers of cotton-seed cake and oil from the populace to any extent they can. A Government, which can itself indulge in an atrociously high scale of profiteering amounting to crores of rupees in skimmed milk powder, is naturally not to be expected to have any qualms of conscience, about cotton-seed crushing mills being driven to charge inordinately high prices to the few unfortunate users of this oil and cake.

Inspired by this new concept of public morality of its own making, the Government issued an order to the crushers to deliver half its produce of cotton-seed cake at a price of Rs. 75 per ton, to enable the authorities to feed famished cattle in the famine areas in the State. The rate at which cotton-seed was being dealt in at this time was Rs. 225. As I have observed above, the purpose for which the Government wanted this cake has nothing to do with the rights or wrongs of this issue. This is so because, in the first place, the initial or final responsibility for feeding starving cattle in famine areas was not exclusively that of the crushers or the limited class of consumers of this oil or cake. By no stretch of civic responsibility could they be saddled exclusively with this burden. It was a public responsibility and lay squarely on the public purse. Besides, the Government had not applied this principle in the case of obtaining supplies of hay or other forms of fodder for these very cattle, which were required in far greater quantities than oil-cakes.

In the second place, apart from its applying a similar procedure for securing supplies of groundnut cake earlier in the year, this very Government had issued a similar order two years ago for groundnut cake and cotton seed, when there was no question of cattle dying in numbers of starvation. It is, therefore, obvious that the Government regards this as a normal and legitimate method of obtaining whatever it happens to want. I should not be in the least surprised, if tomorrow it proceeds to commandeer its requirements of office stationery, building materials, furniture, cloth and a million other articles needed by a big Welfare State, by asking those producing or dealing in these goods, to supply a fixed proportion of their stock at prices fixed by the Secretariat, leaving them free to raise the prices of the balance left with them for the general run of other non-official users.

If the Government considered the prevailing market rate of groundnut cake or cotton-seed cake unduly high, it was open to it to fix a ceiling price for either, or both of these, at a level which it considered fair for the industry and the consumers. Such a step, however unwise economically, would have been morally unassailable. What is wrong with the Government's policy is to fix the price for its own benefit and callously to leave the small consumers, who are in no position to bear it, to pay an unjustly inflated price. This leads me to wonder if the Bombay Government holds, for some mysterious reason, that the frequent occurrence of famine in parts of the State is due to some devilish machinations or black magic practices of those who crush groundnut and cotton-seed or indulge in the unholy consumption of cake from these varieties of oil-seeds. If it were so, this policy of Mr. Morarji Desai's Ministry to make them pay for the relief measures would be perfectly understandable, if not any the more defensible. In the Middle Ages, Governments used to burn witches for entering into an alliance with the Devil. Compared with this, the treatment meted out to these disciples of the Prince of Darkness, who scheme to embarrass our pious and puritanical Government by inflicting famines in large tracts of its domain, can certainly be regarded as more enlightened and merciful.

I have an impression that our Constitution contains a clause, which guarantees that no movable property shall be taken possession of, or acquired for public purposes, under any law authorising the wresting of such possession from its owner, unless such a law provides for compensation for the property so acquired and either fixes the amount of the compensation or specifies the principles on which and the manner in which this compensation is to be determined and paid. I am pretty certain that under whatever law the Government has based its present order this law has neither fixed the amount of compensation or specified the principles on which this compensation has to be determined. I, therefore, hold, though I am no lawyer, that, if any of the crushers were to seek protection from a court of law against this unjust and illegal commandeering of supplies, he would be able to get relief for himself, for his fellow victims and once for all put an end to this tyrrany of the Executive.

I understand that the millers are perfectly aware of this legal position, but are afraid to earn the wrath of the authorities. They fear that as they have to carry on this industry under a licence, anyone, who takes a lead in belling the cat by seeking redress, might find himself pilloried in a hundred ways by the bureaucracy for his temerity. The legal position must be equally clear to the Government as well, but possibly it counts on a docile and demoralised business community, who would not dare to challenge the validity and the legality of its unjustifiable fiat, in the High Court. Nevertheless, it is scandalous that the Government itself should treat one of the sacred fundamental rights conferred by the Constitution with such scant courtesy and respect. No Government, which holds its authority under this very Constitution, and

MORE AMERICAN AID TO INDIA LIKELY

MADRAS PLEADS FOR LARGER FINANCIAL ASSISTANCE

(From A Special Correspondent)

NEW DELHI, *26th May*

CONSIDERABLE significance is attached to the visit of Mr. John Foster Dulles, the U.S. Secretary of State, Mr. Harold Stassen, Mutual Security Administrator, and their party to the Capital this week. During their three-day stay in this city, they had a busy programme. Mr. Dulles met the Indian Prime Minister on more than three occasions and had intimate discussions with him on various political problems confronting the world to-day. Equally important were their meetings with the Finance Minister, Mr. C. D. Deshmukh, and the members of the Planning Commission. Mr. Stassen, accompanied by the American Ambassador, visited a typical community project in working near Delhi.

DELHI LETTER

The visit of the American statesmen to this part of the world must have made them more realistic about the importance of these areas for the purpose of future stability of the world. Until now, U.S. interest has been centred around Western Europe where the administrators of that country have been spending billions of dollars in order to arrest the onward march of Communism. Mr. Dulles is reported to have recognised the pivotal position of India in this part of the world in the light of recent international developments. He is convinced that the future of democracy in Asia and the future of the world will depend, to a large extent, on the economic stability of India in the coming years. His talks with the Prime Minister are reported to have enabled him to appreciate the *raison d'etre* of India's foreign policy in the last few years. He expressed his conviction when he stated, in the course of a Press Conference, that he was "thoroughly convinced that India is acting according to its best judgment to promote democracy in the world and to prevent the spread of totalitarianism."

Mr. Dulles' observations on the Five-year Plan is of much interest. He remarked that his Government was studying the Plan as a whole and that, under the American system, it would not be possible to have a three-year appropriation for financing the Plan. He appreciated very much that India itself would be expected to provide most of the funds. Although he was not prepared to give an assurance that at no stage would the Five-year Plan be held up for lack of funds, he stated that "the friendly relations between our people will result in continuing co-operation and aid of your Five-year Plan."

U.S. Interest in India's Plan

There are, however, possibilities that these American statesmen might take greater interest in the progress of the Plan, especially its financial requirements, and be in a position to recommend to the American Congress for increased allocation to India, in view of its important political and economic position in the world. During the first two years of the Plan, India received external assistance to the extent of Rs. 189 crores, nearly half of which was accounted for by the U.S. wheat loan. If India were to secure about Rs. 200 crores more than the normal external assistance that it has now been receiving from the U.S. and other countries during the remaining period of the Plan, its implementation, from the financial point of view, will be greatly facilitated. Now that tremendous goodwill has been created between the U.S. and India on account of visits of some of the leading powerful figures from the former to the latter, it is likely that more U.S. aid will be forthcoming for increasing the pace of economic progress in India.

Return of Normalcy in Trade

One noteworthy feature of the Import and Export Advisory Council meetings held this week was the absence of any stringent criticism of Government's trade policy. Generally, trade and industry were in a co-operative mood and their criticisms and suggestions were mainly constructive. There was, however, considerable difference of opinion between importers and manufacturers and between consumers and producers. The speech of Mr. T. T. Krishnamachari, Minister for Commerce and Industry, on both the occasions reflected largely the return of normalcy in trade. In view of the improvement in overall trade balance, the Minister hoped that the Government would be able to liberalise its import policy during the next half-year. He was of the opinion that the policy of limited liberalisation, particularly with regard to the high import duties now applicable to most items, could not hurt an industry, unless it was wholly uneconomic. He repeated, again, that his policy would spur industrialists to pay increasing attention to the need for improving quality and lowering production costs.

Export Promotion Department

Mr. Krishnamachari's announcement that Government would be shortly establishing an Export Promotion Department under the sole charge of Mr. D. P. Karmarkar, Minister for Commerce, is welcome, albeit late. It is inexplicable as to why Government has not done this, although, as early as in 1949, the Gorwala Committee on Export Promotion suggested that such a department should be set up forthwith. The Export Promotion Department, when duly constituted, has to view the problem from two angles—positive and negative. From the former aspect, exports can be augmented only when the Government steps up the industrial and agricultural production in the country, for, without higher production, there cannot be increased exports without unduly restricting internal consumption. For this purpose, the Government should keep a close liaison with industry and States producing exportable agricultural commodities such as raw cotton, pepper, etc., and assist them to produce quality goods, etc., which could find ready sale abroad. From the negative angle, the Government can take steps to prevent abuses that had crept in when there was a sellers' market all the world over.

The question of financial assistance by the Centre to needy States has once again come to the forefront with the presence of the Madras Finance Ministry officials in the Capital this week. Although it is a fact that Madras has received substantial assistance from the Centre during the last two years for the implementation of the Plan, the actual assistance being Rs. 16.4 crores out of Rs. 20 crores earmarked for the entire five years, this State has again begun to look up to the Centre for further assistance, due to the recurrence of famine conditions for the last five years. Famine has two-fold adverse effects on the economy of this State: it has curtailed receipts to the Government Treasury and it has made the State spend more on relief measures. Since it has hit the State doubly, its reserves are practically exhausted. It will be remembered that, in October last, there was a conference of Finance Ministers of States and the Centre at which the former, under the leadership of the Madras Chief Minister, were able to prevail on the latter for increased help. Since then, most States have failed to raise the promised additional resources from the public, being reluctant to incur their displeasure by taxing them more. It is the view of the Centre that States like Madras have begun to chew more than they could easily digest and that the alternative is that they should recast their projects in the light of latest developments. The contentions of Madras officials are that many of the projects included under the Plan are very necessary for safeguarding the economy of the State, besides meeting the claims of various regions, and that the Centre should exert more pains to come to the rescue of famine-ravaged States. Their plea is that the Centre has got considerable scope in effecting economy in defence expenditure and could allocate the funds arising from this saving for development projects in the States. This line of argument will gain further strength in the coming months, especially if some understanding were to be reached between the Prime Ministers of India and Pakistan in regard to many of the disputed questions. Pending this, the Centre is likely to allocate more funds to Madras, with a direction that the State authorities should refrain from spending money on schemes not included in the Plan. Defence expenditure is now maintained at the high level of Rs. 200 crores, and even if it is brought down by about Rs. 50 crores per annum, the Centre may be in a position to save more than Rs. 100 crores during the remaining period of the Plan and utilise them for filling the gap that is found in financing the Plan.

PREPARATION FOR THE CORONATION

"GREATEST SHOW ON EARTH"

(From Our Own Correspondent)

LONDON, *22nd May*

WESTMINSTER, the heart of the Commonwealth, has now disappeared beneath a mass of scaffolding and awnings. Every principal thoroughfare of Central London is banked high with towering stands successfully concealing the buildings behind; so much so, that the *Punch* cartoonist can be forgiven for picturing a postcard seller doing brisk business in Parliament Square selling his wares to wondering foreign visitors of "what London used to look like."

LONDON LETTER

Back in January the City began to look more and more like a carpenter's workshop. In those grey days of winter, it seemed unnecessary to begin covering up the open spaces with so much scaffolding and timber, but the miles of processional route which had to be furnished have absorbed the time of the army of workmen so that now with little more than a week to go there is still an enormous amount to be done. But the last week has already brought about an immense transformation. The bare boards of the stands have been clothed in bright awnings which the unkind showers of the past few days have not unduly troubled. The armorial emblems of the counties of the United Kingdom and the arms of the Colonies and Commonwealth countries are being bolted into place where the representatives of these parts of the Queen's Dominions will sit. Most striking of all are the decorative motifs which have been chosen to liven up the processional route.

Army of Sightseers

Every evening now an army of sightseers assembles in the principal thoroughfares to watch the progress of the fascinating, even if somewhat esoteric, symbols which an imaginative Ministry of Works has produced. To each thoroughfare they have tried to bring something appropriate, so that Whitehall has an array of poles bearing what look like the trophies of the Horse Guards—golden helmets with fixed flying plumes, bandoleers and epaulettes, march six by six down the centre of the roadway. In Pall Mall the normal anonymity of the Clubs has taken on an even deeper disguise as a facade of red, white and blue bunting drape the stands which now cover all those grey Victorian frontages. Here, in the centre of the thoroughfare, poles bear palm fronds whose significance in clubland is difficult to understand. Piccadilly is gay with enormous baskets pouring out roses from the tops of becrowned poles. Regent Street is probably the least successful, since the designers have spotted it with a sort of wall-paper pattern which suggests that an unsuccessful flowers seller has stuck the remainder of his pink roses on every public building. At night the anæmic pink vanishes and the illumination in the centre of the roses gives a much gayer effect.

What do the sightseers make of all this? They gaze wonderingly at these unusual signs of London brightening itself up, or sit on the unfinished stands and watch the other sightseers. Few of them will have a place on these stands when the Queen goes by though many of them will crowd the open spaces from before six in the morning (when the siege barricades guarding the processional area will be closed and seal up two million watchers) till five in the evening to watch the mile-long procession pass and repass, but many will stay at home and watch the procession on their television sets. It is difficult to look for a Commonwealth angle in the decorations that line the route and some critics complain that this looks altogether a Londoner's affair but the answer to that will be in the ceremony and procession themselves where all the parts of the Queen's Dominions have proper representation. Every day now there are rehearsals by State coaches, troops or police and it only remains to pray for fair weather for what the Government is successfully producing as "the greatest show on earth"!—*All Rights Reserved.*

AMERICAN LETTER

EXTENSION OF EXCESS PROFITS TAX IN U.S.

GOVERNMENT'S MOVE RESENTED

(From Our Own Correspondent)

NEW YORK, *21st May*

AMERICANS have followed with interest the reported conversations that their Secretary of State, Mr. Dulles, has had with the Indian Prime Minister and other leaders in the Middle and Far East. So far as popular reaction is concerned, the overall response can be described as negative. Among Republicans, in fact, there is a keen sense of disappointment of what is regarded flatly as a lack of leadership. It is admitted that the new Administration is still groping for facts to formulate a policy, but, in the meantime, nothing is being done in Washington, simply for fear of making mistakes.

This is understandable in the perspective of President Eisenhower's background. As a military man, he is sensitive to any possible accusations of "commanding." Instead, he leans over backward in his desire to persuade; moreover, he dislikes hasty actions not based on factual studies. Thus, an endless series of staff studies are still being made, which are to guide the Administration in all matters relating to domestic and foreign affairs. And as matters stand now, many decisions will be postponed farther and farther into the future.

In the meantime, the Treasury is the only department which has been making concrete recommendations. Aside from the design for higher interest rates, Government spokesmen have now come out with requests for an extension of the excess profits tax. This is regarded as unfortunate in several respects; chiefly because expiration of E.P.T. was considered to be one of the Republican campaign promises. Secondly, so many members of Congress are committed to a reduction of taxes to their constituents that the extension of excess profits levy looks like a practical impossibility which can only give the Administration a popular setback, except that a compromise may be reached whereby the tax is renewed for, say, six months, except for the requested period of a full year.

Potential Blunders

The episode is a practical reminder to many that President Eisenhower, as well as most members of his Cabinet, knows virtually nothing about American politics and, therefore, expose themselves to potential blunders. Moreover, the President's desire for amity between the executive and legislative branches of the Government are held to be somewhat utopian in concept and incapable of accomplishment in the long run. If it were not for such philosophy, the White House would have exerted some pressure long ago to stop the international embarrassment caused by the doings of Senator McCarthy which has led to unnecessarily strained relations with Great Britain in recent weeks.

Domestically and internationally, the Eisenhower honeymoon seems to be over. The Korean truce negotiations seem to be stalemated as tightly as ever; the American Federal budget is still out of balance; taxes remain high; Russia still has the initiative; and little progress has been made in creating a true Western alliance in Europe, despite the ratification of the defence pact by the West German Parliament. Among Cabinet members, the Secretary of State, Mr. Dulles, is especially under fire, but, up to this point, still appears to enjoy his chief's confidence, though he may be succeeded by Governor Dewey eventually.

The most troublesome problem facing the present regime may well be that of commodities. Some have declined about 35 per cent. from their post-Korean highs, which were probably too high, but politically, the drop is important. The chances are that, in the near future, the Administration may have to resort to controls again and tell growers to produce 175 million fewer bushels of wheat and 4 million fewer bales of cotton. Besides, tobacco and peanuts—tightly regulated for years—will also stay under control. In fact, Republicans, after promising farming prosperity with less regulation, are now preparing to increase controls in the face of slumping prices.

In the field of finance, a rather violent controversy is raging as to the effect of the new fiscal policies. The new 3¼'s Treasury bonds have led to a natural decline in outstanding bond prices and many portfolio losses by banks and insurance companies. No support has been forthcoming from the Federal Reserve Bank open market operations. Spokesmen say that they are interested in, but not concerned with, the fall in bond prices. All they want is to keep bank reserves and, thus, lending power, at the present disinflationary levels. Such a course will be pursued until the monetary authorities become convinced that present economic boom conditions are waning.

No Signs of Slackening

So far, there are no signs of slackening. New corporate securities, issued in the first quarter to finance expansion, amounted to $2,100 million, the same as last year. However, there has been a shift in the demand for capital.

Issues of manufacturing firms were less than last year, while public utilities and finance companies increased their offerings of securities. The former group is still undergoing a long range expansion programme. The rise in flotations by finance companies stems from increased demand for consumer credit in recent months which has been causing some alarm in official quarters. Finance companies' issues amounted to $300 million in the first three months, as against $515 million in the whole of 1952.

One of the practical complications arising from the outstanding consumer debt may be that many people working steadily overtime engaged in instalment purchases which they will have difficulty in paying off if a slight marginal contraction in business should put them back to normal salaries.

In the heavy goods industries, the situation is unchanged. Steel production continues at top-speed. Most steel consumers are now in the process of building up heavy inventories, against the contingency of another prolonged steel strike this year. So far, wage negotiations have been inconclusive, but union demands have been far heavier than expected, particularly in view of the relatively stable cost of living. Automobiles are being poured out by the assembly lines at a record rate and buyers still favour the more expensive, more fully equipped models, while the yards are bulging with second hand cars of all descriptions, creating a somewhat serious problem for many dealers.

In the overall picture, there is little to worry about for either the American wage earner or for foreign nations which depend on American prosperity for their own level of well-being.—*All Rights Reserved.*

PAKISTAN NOTES

INDO-PAKISTAN DIFFERENCES

SETTLEMENT IN THE OFFING

THE meeting of the Prime Ministers of India and Pakistan in London early next month is being watched with considerable interest. The political and economic relations between India and Pakistan have never been too cordial. The biggest hurdle in the way of Indo-Pakistan amity has all along been the deadlock over the Kashmir question. On the economic front, there still remain unsolved a score of disputes as, for example, the evacuee question, the canal waters dispute and trade relations. Now that the Prime Minister of Pakistan, Mr. Muhammad Ali, has taken the initiative in improving the relations between the two countries and that the Prime Minister of India, Mr. Jawaharlal Nehru, has fully reciprocated the former's gesture, many are hoping that the two countries would come closer together. Such a friendly relationship, it is needless to add, would be in the common interest of both the countries which have so much in common historically and geographically.

At the forthcoming London Conference, the two Prime Ministers are expected to hold preliminary talks on Kashmir, review the working of the Agreement on Minorities, examine the question of evacuee property payment and discuss the other issues having a bearing on Indo-Pakistan relations. This meeting, it is presumed, will be of a purely exploratory character. According to the Press note issued by the Government of India, the two Prime Ministers will meet again "at the earliest possible occasion" and will carry on their discussions for the purpose of arriving at a settlement of all Indo-Pakistan differences.

In the meanwhile, the Governments of India and Pakistan have agreed to issue a directive to the officers of the departments concerned to tackle immediately the outstanding issues between the two countries. In order to keep the two Prime Ministers fully informed of the progress made in these discussions, it has also been decided to set up a Steering Committee of two officials nominated by each Government. This Committee will receive regular reports of the progress made in the direction of settling outstanding issues. It will meet from time to time to consider them and to devise ways and means by which any outstanding issue remaining unsettled might be resolved to the mutual satisfaction of both the Governments. The first meeting of the Steering Committee will be held in Karachi soon after the return of the Pakistan Prime Minister from London.

Evacuee Property

The Government of India's decisions on compensation to displaced persons, announced recently, certainly augurs well for better Indo-Pakistan relations. Compensation is to be confined to the utilisation of evacuee property in India, as well as any amount realised from Pakistan on account of the difference between the values of evacuee properties in the two countries. The loans so far advanced to displaced persons from West Pakistan, the properties built by the Government for their rehabilitation, and the provisions already made for these items for the future under the Five-year Plan or otherwise, will be utilised for giving grants to displaced persons having claims and others needing further help. In framing the scheme for the distribution of these assets, the desirability of classifying individuals into groups on the basis of their needs and for making grants according to such needs is to be kept in view.

Devaluation Rumours

Rumours of the devaluation of the Pakistan rupee have once again gained some ground. This is an indication of the growing concern among the business and commercial community over the persistence of the none-too-happy balance of payments position, notwithstanding the recent marked recovery in the prices of raw jute and cotton, the two most precious earners of foreign exchange. True, the foreign trade position of Pakistan on private account has now turned out to be favourable, the balance of trade during the ten months ended January, 1953 being favourable to the extent of as much as Rs. 34.72 crores. But this has been more than neutralised by the heavy adverse balance on Government account, as a result of substantial imports of foodgrains, etc. Consequently, the overall balance of payments has continued to be adverse.

(Continued in previous column)

(Concluded from next column)

This is clearly reflected in the marked decline in the foreign assets of Pakistan, which, as on 8th May, 1953, amounted to only Rs. 80.94 crores, as against Rs. 150.52 crores in the beginning of 1952.

U.S. Wheat for Pakistan

A report from Washington avers that President Eisenhower and the Republican Congress leaders have agreed to back legislation for a loan of 1 million tons of wheat to Pakistan. The details regarding prices, etc., are being worked out. If the legislation is approved by the Congress, the transactions will be handled by the Commodity Credit Corporation.

The U.S. Wheat Mission, which was recently sent to Pakistan by the U.S. State Department and the Mutual Security Administration, with a view to making an on-the-spot study of the wheat situation in Pakistan, following Pakistan's request for a million ton wheat loan, left for Washington last week. Prior to its departure from Karachi, the Mission expressed the confidence that its Government and the people would assist Pakistan in overcoming its wheat shortage. It, however, declined to indicate its estimate of the wheat shortage in Pakistan. Only it said: "There is no question in our minds that, for the second successive year, Pakistan's foodgrain production has fallen substantially short of its needs. Under the conditions of the weather and the inadequate rainfall, this was understandably the case."

PROBLEM OF RESTORING CURRENCY CONVERTIBILITY

WORLD COMMERCE BODY URGES SPEEDY ACTION

RESTORATION of currency convertibility as a pre-essential for a sound international economy has gained growing support at the hands of a considerable section of the business community the world over. This is clearly borne out by the fact that currency convertibility (and international trade expansion) formed one of the predominant items on the agenda of the biennial Congress of the International Chamber of Commerce held in Vienna last week. After a threadbare discussion, the Congress unanimously approved the programme of action for a speedy return to currency convertibility, which had been adopted by the Council of the Chamber at its meeting in February last.

More than a year ago—in January, 1952, to be precise—the plan for restoring convertibility of the pound and other currencies was first evolved at the London Conference of Commonwealth Finance Ministers. The issue has since been discussed and debated upon extensively, in the Press and on the platform, throughout the world. The two aspects of the issue which have aroused keen controversy are whether the pound sterling should be made freely convertible into other currencies, especially the dollar, and whether, if this is done, the convertibility should be at fixed rates of exchange or at rates varying from day to day.

This controversy apart, the plan for convertibility includes three lines of action: first, permitting holders of sterling—who are at present not free to convert it—to have it legally converted into other currencies; secondly, divorcing the rate of exchange between the sterling and the dollar—though not set free in the sense of being liberated from all control—from the present parity of $2.80 to £1; thirdly, the insisting on the U.S. Government, or international institutions possessed of large dollar resources, to put up a guarantee fund for ensuring the success of the operation.

Conditions for Convertibility

Although more than a year has elapsed since the "Convertibility Plan" was evolved, it has not still been possible to implement it, thanks to various obstacles, such as import restrictions, balance of payments disequilibrium, and last put not least, inadequate monetary reserve which have to be got over, before a move is made towards convertibility. Yet convertibility, as Mr. Rolf von Heidenstam, President of the International Chamber of Commerce, has aptly remarked, in an introductory statement made in *World Trade*, the Chamber's monthly journal, has always been an expression of the confidence in a currency, both abroad and within national frontiers; this confidence, in turn, rests on balanced internal economic conditions, strength of the currency reserves of the Central Bank, and stability of political and economic conditions. "A prosperous world economy," to quote Mr. von Heidenstam, "is unthinkable without convertible currencies," inasmuch as it is the key to the present difficulties.

Barring a small minority which believes in control for its own sake, all countries have fully recognised the need for ensuring free convertibility of currencies. Opinions, however, are divided on methods of freeing the currencies, about the timing of the various steps, and about the order in which they should be taken. In fact, this aspect figured prominently in the debate held at the recent biennial Congress of the I.C.C. Opening the debate, Sir Dennis Robertson, Professor of Political Economy at Cambridge University, laid down four requisite conditions for making the pound convertibile. These are:

(1) Sustained efforts by the sterling area countries to make and keep the pound competitive by the use of appropriate fiscal, monetary and other policies;

(2) a quasi-revolution in the U.S. commercial policy and administration in the direction of greater freedom of trade;

(3) active co-operation by the other West European countries, in order to prevent convertibility of the pound, leading to intensification of restrictions on dollar and other trade—a substantial advance on trade front must be parallel with, but, if anything, outstripping the advance on the monetary front; and

(4) a deliberate increase, by some means or other, of shrunken international monetary reserves.

These are indeed very pertinent suggestions. If the Convertibility Plan is to be successfully implemented, it is imperative that the conditions referred to above should be satisfied first. It is here that the part played by the International Monetary Fund assumes special significance. Reassuring is the statement of Mr. Ivar Rooth, Managing Director of the I.M.F., made in the course of his speech at the Congress, that he would extend his full support to the members of the Fund who will strive for the restoration of currency convertibility and free multilateral trade. Also reassuring is his statement that the Fund can do the job in the period immediately ahead without revising its articles and without creating additional machinery for supplementing monetary reserves. The interesting observations which he made in this context are worth reproduction. Said Mr. Rooth:

"The Fund has now gold and convertible currency reserves of more than $3,200 million. Opinions may vary about the amount of supplementary reserves necessary to support general convertibility, but $3,200 million are certainly a large part of what would be needed for this purpose. The question engaging monetary authorities in member-countries is whether these reserves will be put at their disposal in a volume adequate to support major steps towards convertibility. I think that conditions to-day warrant the expectation of our members that the picture in this respect will be different from that of the past."

The Role of I.M.F.

The Fund, it may be recalled, has already adopted two policies designed to facilitate the use of its reserves by the members. Thus, the Fund gives the benefit of any doubt to members wishing to purchase foreign exchange within the "gold slice," that is, an amount equivalent to the part of the member's subscriptions paid in gold. Again, it is prepared, in appropriate cases, to enter into stand-by arrangements with members—arrangements in which the members are assured of the right to purchase a stated amount of foreign exchange during a period of six months with the possibility of renewal. Lately, the Fund has come out with its move to abolish dollar retention quotas (under which exporters are allowed to retain part of the dollar proceeds) and other similar "obnoxious practices" that are standing in the way of achieving "true" convertibility. Indeed, these steps indicate the earnestness of the I.M.F. to bring about convertibility of currencies. To quote the significant words of Mr. Ivar Rooth: "People have become more and more dissatisfied with the rigid controls imposed during the war, and Governments are more and more willing to adjust their policies in accordance with the principles of the Fund, the basic aim of which is general currency convertibility."

Reaction of E.P.U. Countries

While on this subject, it is interesting to refer to the reaction of the European Payments Union (E.P.U.) countries to Britain's move towards early return to the convertibility of the pound sterling. The initiative taken by Britain towards a wider and freer system of international trade has, no doubt, been appreciated by the E.P.U. countries. But the plan for granting convertibility to sterling or any other European currencies as such would appear to have not found favour with these countries. In fact, great apprehensions have been expressed that convertibility is bound to result in the Continental importers holding back the currencies from the monthly clearings. Such would mean, it is pointed out, that the U.K. and its partners in any convertibility experiment might become large enough creditors in the E.P.U. "to wreck the whole mechanism." This is precisely the warning that has been administered by the Consultative Assembly of the Council of Europe in the report on the present position of the scheme for convertibility adopted at its meeting held in Strasburg recently. Observes the Assembly: "This (convertibility) would, sooner rather than later, force the country granting conversion to leave the Union. Countries would prefer to convert any monthly net balance in the convertible currency into dollars or gold, rather than settle it with the Union which would dilute it with credit."

In the considered opinion of the Assembly, the chief conditions for convertibility are equilibrium in the balance of payments and adequate foreign exchange reserves. As one of the first steps that should be taken by individual States to extend the Continent's trade and payments sytems, without jeopardising European integration, the Assembly urges the re-establishment of European commodity markets in which the E.P.U. countries can buy commodities from the cheapest source of supply. In this connection, it observes as follows:

"Countries able to do so should follow the example of the United Kingdom and reopen private commodity markets by issuing licences to their traders to import from whatever is the cheapest source of supply. The U.K. could continue to enlarge the number of dollar commodities that can be imported in this way. The result would be that other countries could buy more dollar commodities for E.P.U. currencies. This system has the advantage, to the country adopting it, of yielding trading profits and putting the cheapest raw materials at the disposal of industries."

The Consultative Assembly has also stressed the need for increasing the proportion of gold in which the surpluses and deficits of E.P.U. countries are settled. At present, the overall proportions of gold received or paid at the point where the quota is exhausted is 40 per cent. The proportion should be raised, perhaps to begin with, to 50 per cent. and afterwards even further. This would tend to ease all E.P.U. countries together towards convertibility. At the point where the proportion becomes 100 per cent., convertibility would be fully achieved in the E.P.U. area. The other possible measures suggested in connection with the raising of the gold proportions are: (1) Removal of some of the strains on cumulative debtors by increasing the quotas (beyond which settlement of surpluses and deficits are paid 100 per cent. in gold); (2) wider margins of fluctuation in exchange rates; and (3) increased assistance by the International Monetary Fund to countries in special difficulties. In conjunction with the suggested measures, extension of the liberalisation programme of the Organisation for European Economic Co-operation has been advocated too.

Lower U.S. Tariffs

It must be said here that convertibility by itself cannot solve the dollar problem of the European countries. For the disequilibrium between the U.S. and the rest of the world is largely fundamental in character and can, therefore, be redressed only by fundamental changes in the patterns of production and trade. The two most effective ways of making these changes are the development of East-West trade and the co-operative development of the European countries' overseas territories. The resolution adopted by the Consultative Assembly appealing to the U.S. to lower tariffs and simplify customs procedure is indeed quite timely. Surely, this indicates the anxiety of the European nations to expand their trade with the U.S. which is now handicapped by the maintenance of high U.S. tariff barriers. And it is to be hoped that the U.S. Government would pay due heed to the appeal and announce reduction in tariffs and simplification of customs procedures. Several of the business and commercial agencies in the U.S. themselves have been repeatedly emphasising this aspect.

DOLLAR RETENTION QUOTAS

I.M.F.'S MOVE FOR ABOLITION

THE International Monetary Fund's decision to initiate talks with individual member-countries, in an effort to agree on programmes for abolishing the systems of dollar retention quotas and similar practices, will be widely welcomed. This decision is a sequel to the resolution, adopted by the Board of Governors at the Fund's annual meeting in Mexico last September, which directed the Executive Board to make a special study of retention quotas and allied practices. The resolution was proposed after Mr. Frere, Governor of the National Bank of Belgium, had denounced retention quotas as detrimental to orderly exchange arrangements and demanded their abolition. Mr. Ivar Rooth, Chairman and Managing Director of the Fund, has explained the Fund's attitude towards the system of dollar retention quotas in his letter to the members. Although he has not condemned the practice outright, he has pointed out that the Fund's Articles require members to consult and obtain the Fund's approval, if they wish to employ restrictive or discriminatory devices. Mr. Rooth says that members who wish to maintain, introduce or enlarge those retention quotas, are expected to "act in accordance with existing Fund requirements." He also points out that, since it is not practicable to deal with these practices in a "general fashion," it proposes to examine these arrangements on a "case-to-case basis." The Board's decision, which is couched in mild language, says:

"Members should work toward and achieve as soon as feasible the removal of these retention quotas and similar practices, particularly where they lead to abnormal shifts in trade which cause unnecessary damage to other countries;

"Members should endeavour to replace these practices by more appropriate measures leading to currency convertibility."

Proceeding, the Board observes that the Fund will enter into consultations with each member concerned, with a view to agreeing on a programme for carrying out the Board's policy statement, "including appropriate attention to the timing of any action which may be decided upon."

Complaints Against Currency Practices

The Board's decision follows complaints against the currency practices, allegedly unfair, adopted by certain countries in order to stimulate their export trade. Thus, certain countries allow the exporters to retain a part of their dollar earnings. In some countries—Germany, for instance—the exporters are allowed to deduct a small proportion of these export earnings when calculating profits for income-tax. In certain other countries—France, for instance—exporters are allowed to claim reimbursement of social security charges. In Austria, Italy and Scandinavia, similar practices have been adopted. These concessions are ostensibly intended to provide sufficient incentive to exporters in order to enable them to devote more attention and effort to export trade, in general, and exports to dollar countries, in particular.

The above practices, however, have led to two evil results. In the first place, the existence of these practices enlarges the scope of operation in the "grey" markets for dollar. There is a steady flow of "illegal" dollars into these markets from sources which utilise the currency concessions to deflect the retained portion of their dollar income to these markets. Secondly, the exporters in the countries which do not adopt these practices are at a competitive disadvantage *vis-a-vis* exporters in other countries which give such concessions. It must be remembered that the net effect of such concessions is a sort of selective devaluation of currencies, and devaluation, by the back door at that. It remains to be seen as to how far the I.M.F. will be able to correct these practices. But Mr. Rooth has made it clear that the Fund does not envisage itself as a policeman, but rather as a friend who will help countries to eliminate retention quotas as one of the many obnoxious practices that must be abolished before true convertibility can be achieved.

SMALL SAVINGS

The decision to set up a permanent non-official voluntary organisation to propagate the Small Savings Movement among women, taken at a conference of women social workers held in New Delhi last week, is to be welcomed. The proposed organisation, the establishment of which has been inspired by the Women's Savings Week organised in March last, is expected to launch a savings campaign throughout the year. To begin with, 100 important voluntary bodies will participate in the programme. The broad framework of the machinery of the organisation is as follows:

(*a*) A Committee at the Central level which will provide the guidance and direction for propagating the Movement on sound lines will be set up.

(*b*) The organisations which will be asked to participate in the movement will include important all-India bodies, such as the All-India Women's Conference, the National Council of Women in India, the Kasturba National Memorial Trust, the Indian Red Cross, the Bharat Sewak Samaj, etc.;

(*c*) In order to ensure that the organisations are in a position to undertake this work on a continuous and permanent basis and, as an incentive to their efforts, a commission on the collections made will be given to them. The granting of commission to the voluntary organisations will have the additional effect of adding some extra resources to these organisations, many of which are not in affluent financial condition and their welfare work suffers because of lack of funds. The cumulative effect would be more resources for the Government for financing the Plan and greater impetus for welfare work; and

(*d*) The voluntary organisations will work in close co-operation with the National Savings Organisation of the Government of India, which, in addition to providing advice on methods of collection of money, etc., will help by giving publicity literature. It is also proposed that the organisers appointed by the voluntary organisations will have a short training course under the auspices of the National Savings Organisation, with a view to getting familiar with the various national savings schemes in operation, procedural details, etc.

With a view to enabling the participating organisations to start work immediately, the Central Ministry of Finance has sanctioned a grant of Rs. 3 lakhs, to be distributed to the organisations after scrutinising their requirements. This amount will be utilised for making payment to organisers, setting up of a small office, ensuring transport facilities and the like. The amount so advanced will, however, be deducted from the commission that the organisations ultimately get on the actual collections made.

Inasmuch as the successful implementation of the Five-year Plan depends, to a considerable extent, on the mobilisation of the domestic resources, the need for establishing a permanent machinery for inculcating the savings habit among women needs hardly any stress. There is a gap between the requirements of finance for completing the implementations of the Plan and the resources available. The gap, as Mrs. Durgabai Deshmukh, Member, Planning Commission, aptly remarked, in the course of her address while presiding over the Conference, must be made up primarily by the people's own efforts. Surely, women can contribute substantially to the success of this national programme by making small savings popular. As was pointed out in these columns only recently, it is the housewife whose decisions on domestic expenditure have a close bearing on family savings. That the savings movement among women, if properly organised, has vast potentialities is clearly indicated by the remarkable success of the Women Saving Week organised recently. Thus, although the Week was organised at a very short notice and, as such, not more than a dozen organisations could participate, the amount actually collected is said to be about Rs. 50 lakhs—approximately an equivalent amount has been promised—a sizable sum indeed. But this can be certainly multiplied several times more if women's associations in the country take upon themselves the question of setting up branch organisations all over the country on a taluk basis for purposes of drawing the savings from mofussil areas.

COMPTOIR NATIONAL D'ESCOMPTE DE PARIS

The full statement of accounts of the Comptoir National D'Escompte De Paris—French Bank—(Manager for India: M. Minne, Bombay), for the year ended 31st December, 1952, a text of which is published elsewhere in this issue, indicates a shrinkage in the turnover of the Bank, as compared with that in 1951. Though the Bank's deposits as at the close of the year disclose a sizable increase over those at the end of 1951, there has been a sharp decline in advances, bills for collection and acceptances on behalf of customers over the year. These trends in the Bank's main sources of income are reflected in a recession in the Bank's profit from Rs. 8.73 lakhs to Rs. 3.83 lakhs. The expansion in deposits has been well utilised by the Bank to strengthen its liquid resources, as indicated by the rise in its liquidity ratio from 41.4 to 55.3 per cent.

The gross income of the Bank has gone down from Rs. 33.28 lakhs to Rs. 30.08 lakhs. This decline is mainly accounted for by the fall in commission and exchange. Interest and discount earned show an increase of Rs. 3.23 lakhs to Rs. 17.41 lakhs, evidently due to the higher rates of interest that prevailed during the year. This increase has been more than offset by the decline of Rs. 6.37 lakhs to Rs. 12.58 lakhs in commission and exchange earned. The decline is understandable in view of the fall in the Bank's bills business. Interest paid on deposits and borrowings has risen sharply from Rs. 4.90 lakhs to Rs. 9.31 lakhs. Administrative and other expenses have recorded a decline of Rs. 2.71 lakhs to Rs. 16.94 lakhs. This is mainly due to a fall of Rs. 3.56 lakhs in expenses other than administrative expenses, including provision for income-tax. The profit after providing for all expenses records a shrinkage of Rs. 4.90 lakhs to Rs. 3.83 lakhs. The whole of this profit has been merged with head office and inter-branch balances, whereas, in the previous year, out of the profit of Rs. 8.73 lakhs, a sum of Rs. 4.35 lakhs was utilised for making provision for expenses to be incurred and the balance was merged into head office and inter-branch balances.

As already stated, the Bank's deposits as at the close of the year under review have gone up by Rs. 103.11 lakhs to Rs. 337.68 lakhs, of which fixed deposits account for an increase of Rs. 28.92 lakhs and current and other accounts for Rs. 74.20 lakhs. There has been no outstanding borrowings from banks at the end of 1952, whereas a sum of Rs. 166.83 lakhs was outstanding on this account on 31st December, 1951. Bills for collection have declined from Rs. 103.71 lakhs to Rs. 73.98 lakhs and acceptances from Rs. 279.71 lakhs to Rs. 110.86 lakhs. Advances have gone down from Rs. 411.80 lakhs to Rs. 210.50 lakhs, bringing down the advance ratio from 188.3 per cent. to 62.4 per cent. A break-up of the advances discloses that loans, cash credits and overdrafts account for a drop of Rs. 152.01 lakhs to Rs. 128.14 lakhs and bills purchased and discounted for Rs. 49.30 lakhs to Rs. 82.35 lakhs. The increase in the Bank's deposits and the decline in its advances have been responsible for an expansion in investments from Rs. 39.56 lakhs to Rs. 60.99 lakhs. The Bank's investments are all in Gilt-edged securities, of which securities of the face value of Rs. 20.50 lakhs are deposited with the Reserve Bank of India under section 11 (2) of the Banking Companies Act, 1949. It is to be noted here that last year the investments were shown at below cost, while they are shown now at market value. The market value of the investments at the end of 1951 did not, however, show any change from that at cost. Cash balances have enlarged from Rs. 57.56 lakhs to Rs. 125.62 lakhs. The combined ratio of investments and cash balances to deposits stands at the close of 1952 at 55.3 per cent., as against 41.4 per cent. at the end of 1951.

EMERGENCY CREDIT AND EXCHANGE MEASURES IN ECUADOR

The Monetary Board of the Central Bank of Ecuador has taken several credit and exchange measures to assist in making effective the Government's emergency measures called for by the interruption of land traffic between the coastal and the mountain regions of the country. A line of credit of 5 million sucres has been extended to the State Railroad Administration for repairs of tracks damaged by the flood of the Chanchan River; temporary credit facilities have been granted to importers to enable them to clear through customs merchandise already imported; and the issue of an unspecified amount of Government bonds has been authorised in connection with relief and public works (improvement of airports, road reconstruction, and supply of electricity for the city of Cuenca). Foodstuffs and fuels, free importation of which has been decreed by the Government, have been shifted to List A in the import classification. The Central Bank provides exchange for this category of imports at the official rate of 15 sucres per U.S. dollar, without any import tax. Some of the items which were granted temporary relief were formerly subject to 33 per cent. (List B) or 44 per cent. (List C) *ad valorem* taxes.

CANADIAN GOLD SUBSIDY

Under recent legislation, the Canadian Government will increase the subsidy to marginal gold mines may choose between accepting the subsidy The total cost of the subsidy will thus be increased by $5 million to $15-16 million in 1953. Canadian mines by $2.00 with a maximum of $13.50 per ounce and selling their output on the free market. In 1952, 11 mines sold on the free market, of which, however, eight have decided to accept the subsidy in 1953. Free market sales by the remaining three mines are expected to reach 500 ounces.

FOREIGN TRADE IN COTTON TEXTILES

COMMERCE MINISTER ON STEPS TO ENCOURAGE EXPORTS

THE problem of stimulating exports of cotton textiles figured prominently in the speech of Mr. T. T. Krishnamachari, Union Minister for Commerce and Industry, at the meeting of the Export Advisory Council held in New Delhi on Saturday last. This should cause little surprise, considering the unique position that cotton textiles occupy as one of India's major earners of foreign exchange. Moreover, Mr. Krishnamachari must have been prompted by the series of developments on the world cotton textile front in the past year or two, which have, of late, done much harm to India's export trade in this commodity.

It is worthwhile to remember that cotton textiles, which were the largest earner of foreign exchange in 1950-51, now occupy only third place, next to jute goods and tea. Thus, the value of cotton yarns and manufactures exported during the year 1952-53 was Rs. 61.88 crores, as against Rs. 136.71 crores two years before, while that of jute goods and tea during the same year was higher at Rs. 129.60 crores and Rs. 91.20 crores, which compare favourably with Rs. 113.95 crores and Rs. 79.87 crores, respectively, in 1950-51.

The progressive relaxation in control measures, leading to free licensing, with effect from July, 1952, has enabled the export of cotton textiles, as Mr. Krishnamachari pointed out, to move up considerably in the latter half of last year. Thus, the average monthly rate of exports in this period was of the order of 62 million yards, as against 37 million yards in the first half of 1952 and 22 million yards in the second half of 1951. One will also agree that the upward trend has been maintained in recent months, as witness the substantial quantity of 63 million yards exported during the month of April. But the point is whether this improvement is real or only apparent. There are indications to suggest that the improvement is not very real. As was pointed out in these columns only last week, the quantity of cloth exported in the last few months includes shipment which represents past commitments as well, particularly some business booked against ready goods for immediate shipment. Indeed, the little improvement that is now noticeable has been due to seasonal and spasmodic demand from certain destinations which may not endure for a long time in the face of the import restrictions imposed by the Governments of several importing countries and the fierce competition from Japan.

Licensing Policy Extended

Considering these factors, it is certainly gratifying to note that Mr. Krishnamachari should have realised the need for helping exporters of cloth to maintain a high level of exports in the coming months. The two important decisions of the Government which he announced at the meeting were: (1) extension of the period of free licensing policy for exports upto the end of the year (1953) and (2) increase in the export quota of mineral khaki from 25 per cent. of mill's production to 33 per cent., besides providing for extra 1 million yards for small possessors of such khaki. These decisions have been widely welcomed by exporters. Other welcome features of the Government's textile export policy are: (*a*) Creation, without delay, of Governmental machinery for the promotion of exports with Mr. Karmarkar, at present Minister for Commerce, in sole charge, (*b*) assumption of statutory powers by the Government of India to ensure that the export trade is not handicapped by import duties on raw materials, and (*c*) appointment of commercial travellers.

Of these decisions, the second is of particular significance to India's export trade in cotton textiles. The import duty of As. 2 per lb. on raw cotton used in the manufacture of cloth has largely been responsible for the high export prices of fine and superfine cloth. In fact, this is one of the serious handicaps adversely affecting exports of mill-made cloth. Score of representations have been made by the cotton mill industry to the Government of India urging the rebate of import duty on cotton used in the production of cloth meant for export. The latest, albeit belated, move of the Government of India to take statutory powers to grant rebate of import duty will, therefore, be widely welcomed in the country.

It would, of course, be too optimistic to suggest that the foregoing measures will, by themselves, stimulate demand for Indian cloth in overseas countries. What is urgently required is a more farsighted export policy based purely on economic considerations. At a time when new and vigorous efforts are being made by Governments in other countries to step up exports by giving active encouragement, restrictions continue to be placed in this country on export of cloth. How else can one explain, for instance, the retention of export duty on coarse and medium cloth. It is a pity that the Commerce and Industry Minister should not have referred to it in his speech. If the Minister feels that, despite the export duty on cloth, the upward trend in exports will be maintained, it is likely that he will be disillusioned. Now that the sellers' market has practically come to an end, the need for enhancing the competitive position of Indian cloth in world markets assumes special significance. As we have so often pointed out in these columns, the best way of achieving this objective is to lower export prices by abolishing the export duty.

Sales Tax on Exports

It is also a pity that the Minister should not have alluded to the Supreme Court's decision to the effect that the last purchase by the exporter of goods for the purpose of exports comes under the purview of the sales tax law. As we pointed out on an earlier occasion, a prosperous export trade in cloth, or, for that matter, any other commodity, is too precious a consideration to be sacrificed at the altar of sales tax revenue. It is to be devoutly hoped that the Government of India would give such relief from sales tax as is necessary for the purpose of stimulating exports. The suggestion made by the All-India Exporters' Association in this regard deserves mention. According to the Association, all dealers who have registered themselves under the Sales Tax Acts should be allowed to purchase cloth for export to foreign countries, free of general sales tax, subject to their signing a declaration that the cloth so purchased is intended for export only. Such registered exporters should become liable to sales tax only when the cloth is diverted to local consumption. The dealers may be called upon to submit quarterly statements in respect of cloth already exported and cloth still held for export.

There is the need, too, for liberalising further the restrictions on exports of textiles. For instance, exports of mill-made *lungis* are at present banned. It is true that this measure is designed to give encouragement to the handloom industry. But the question is whether the export markets should be starved of supplies, when handlooms have failed to meet the demand. That these observations are not at all exaggerated will be evident from the statement of Mr. Krishnamachari himself. Said he: "Owing partly to the high prices of handloom fabrics and partly to the restrictions placed on the import of such fabrics by countries which have been our traditional markets, the export of our handloom products has suffered a severe setback." It is a well-known fact that handloom-made *lungis* are costly and cannot compete successfully with mill-made *lungis* from other countries. Moreover, there are certain countries—as, for example. Australia and New Zealand—which do not use *lungis* but which are interested in certain varieties of mill-made cloth resembling *lungis*. Surely, it should be possible to allow exports of at least a small part of the *lungis* produced by mills. This will enable the mills to make good a part of the loss they are compelled to suffer for the sake of the handlooms. Similarly, now that the supply position of pseudo-fine cloth is quite comfortable, one wonders if the Government cannot lift the ban on exports of these varieties.

While the foregoing are matters which need prompt action on the part of the Government, there is another important aspect of the problem which requires immediate attention. It is the problem of ensuring the maintenance of proper standards of cloth exported from this country. Poor salesmanship, bad packing and lack of confidence on the part of importers about the quality of goods exported have already done a lot of avoidable harm to India's export trade in textiles. Mr. Krishnamachari did well, therefore, to make a pointed reference to this disturbing feature. His warning that, if we are to retain our hold in foreign markets, not to mention improving our position, "it is imperative that our exporters should spare no efforts to maintain quality and service and create a sense of confidence in our customers" is indeed quite timely.

Export of Cotton Yarn

Exporters of cotton textiles are somewhat disappointed by the absence, in Mr. Krishnamachari's speech, of any reference to the policy of cotton yarn exports for the ensuing half-year, namely, July-December, 1953. The Government's present policy of restricting the allotments of quotas for yarn exports only to mills (or their nominees) has evoked bitter criticism at the hands of exporters. The policy is characterised as being highly discriminatory and harmful to the long-established trade channels which have been instrumental in building up trade connections with overseas markets for the past several years. They have, therefore, urged, for some time past that the Government should give an equal opportunity to established exporters to cater to the needs of foreign markets. One fails to understand why the Government should not revise the yarn export policy in such a way as to include established exporters also.

The mills are anxiously awaiting the announcement of the yarn export policy for the next half-year. Barring counts above 36s, the export demand for which is at present reported to be almost non-existent, export quotas for counts below 36s are said to have been practically exhausted. This factor, coupled with the steady upward trend in yarn production (unaccompanied by any rise in the yarn offtake by the handloom industry), has been responsible for the accumulation of large stocks of yarn with the mills. The Government will perhaps do well to announce a further quota of cotton yarn for exports. Latest market reports aver that there is good overseas demand for Indian cotton yarn. Enquiries have been received by Indian exporters from Hong Kong for counts below 36s, while Burma is eager to purchase a fairly large quantity of 20s. It will be unwise to lose the export trade in yarn, especially when the internal market for yarn does not show signs of brisk offtake.

Have the pulse of the
COTTON WORLD
in your hand by subscribing to the American "Weekly"

THE COTTON TRADE JOURNAL

This international "weekly" serves the cotton trade proficiently and, as a mirror, reflects the cotton situation in the United States and other cotton-producing and consuming countries.

A year's sea-mail subscription (Rs. 28-12 only) or air-freight subscription (Rs. 100-7 only) includes an Annual Textile Number, reporting developments and progress in the textile industry, and an International Edition of over 200 beautifully illustrated pages, giving a resumé of conditions in each of 22 countries as they affect cotton and world trade in general. This International Edition, otherwise, by itself costs $3.00 or Rs. 14-6-0 plus postage.

Substantial reductions for 2-year and 3-year subscriptions.

SYNTHETIC FIBRES

The view that the immediate competition of newer synthetic fibres should not be over-stressed has been reiterated by the International Cotton Advisory Committee, Washington, in its latest review of cotton prospects. This view is based on two considerations. First, the prices of synthetic fibres are much higher than those of natural fibres. Secondly, the synthetics are available only in small quantities. To add to these, some of the fibres have certain disadvantages and present serious technical difficulties to textile manufacture. They are, for instance, non-absorbent to moisture, being difficult to dye, or having a low melting point.

Although aggregate world output of non-cellulosic man-made fibres (that is excluding rayon) in 1953, if capacity is fully employed, is estimated substantially higher at 600 million lbs., as compared with 260 million lbs. in 1951, it is not more than one-twentieth of the world cotton supplies. This includes a large number of different fibres, with a wide variety of characteristics; the fibres are all considerably dearer than cotton.

WORLD CENSUS OF COTTON LOOMS

CAMPAIGN FOR HIGHER WAGES

(By A Special Correspondent)

MANCHESTER LETTER

MANCHESTER, 19*th May*

THE first world census of cotton looms for 16 years, issued in Manchester this week, underlines the sharp contraction in the size of the United Kingdom cotton weaving industry in recent years. From a total of 504,000 looms in 1936 the figure had fallen to 349,000 by last July, when the census—conducted by the International Federation of Cotton Spinners and Manufacturers, Manchester—was carried out.

The world total also showed a contraction, from 3,069,000 in 1936 to 2,730,000 by last year. Of the total international reduction of 339,000 looms, European mills lost 236,126 and North America 167,360. The Federation says:

"At first glance this reduction is perhaps astonishing, in view of the increase in the world's population and the general improvement in the standard of living. It should, however, be noted that working hours have been increased in most countries during this period, double and treble shifts being quite normal in very many countries. That less equipment is now producing sufficient textiles to satisfy the requirements of the world is supported by the fact that for the cotton season ended 31st July, 1952, the world's cotton mills consumption amounted to 32,662,000 bales as against only 25,389,000 bales for the season ended 31st July, 1936."

While the adoption of double and treble-shift working may account for the loomage decline in some countries, it cannot explain the sharp fall in Lancashire, which is still substantially a single-shift industry. Commenting on this, Mr. Norman Pearse, International Federation's General Secretary, said in Lancashire's case it was probable that the basic cause was the industrialisation of agricultural countries which hitherto provided markets for Lancashire-made textiles.

This industrialisation policy is indicated by loom installation plans up to 1957, also covered by the census. More than three-quarters of the new looms scheduled for installation during this period will go into mills in Asia and South America, particularly in India, Hong Kong, Pakistan and Brazil.

Increased mechanisation by the installation of automatic looms in Lancashire has gained impetus in the past few years and the number of automatics is now given as 34,282 against 15,224 in 1936. Ordinary looms have declined from 483,984 to 309,427. In France a similar pattern can be observed, automatic machinery rising from 37,700 before the war to 64,247 looms last year and ordinary looms being reduced from 152,800 to 92,697.

Among those areas where weaving plant has increased are Africa, where looms in place now number 20,990 against 3,279 before the war, and South America where the respective totals are 138,972 and 96,023 looms. The main advance in Africa has been machinery installed in Egyptian mills but a start has been made at weaving in the Belgian Congo, Rhodesia and North and South Africa.

Brazil remains by far the largest producer in South America, having 100,146 looms, of which 21,823 are automatics. This compares with 80,903 looms in 1936, including 4,160 automatics. The move towards cloth self-sufficiency in the Argentine is also obvious, where looms now number 14,239, of which two-thirds are automatics, against 3,646 before the war.

Comparative figures showing the number of looms in the United States are not available, although there has been a slight increase in the volume of automatic machinery from 392,329 to 398,501 looms. In Asia the total figures show little variation compared with 16 years ago, although there has been a decline in the quantity of weaving machinery in Japan from 332,564 to 290,193 looms, automatics increasing from 40,000 to 51,843. This reduction in productive capacity, however, has been made good by increases in other areas, notably India, Pakistan and Hong Kong.

Statistics of production and man-power in industry are continually used as a barometer of conditions to show the prevailing activity. Another aspect, which in the past 18 months has been an unwelcome addition to figures of this kind in the cotton trade, has been the total of unemployed.

The following table, extracted from returns issued by the Ministry of Labour for Britain's cotton areas, shows the number of unemployed persons over the recent period of depression:

	Total unemployed	*Temporarily stopped*
1951		
December	2,100	1,200
1952		
January	9,900	8,600
April	76,600	71,762
May	79,300	72,600
June	74,100	66,600
July	51,500	43,700
August	46,800	39,000
September	37,200	30,400
October	26,100	20,634
November	18,300	13,800
December	14,400	10,600
1953		
January	13,200	9,800
February	10,545	7,745
March	7,696	5,090
April	5,000	2,220

In the figures the number of operatives temporarily stopped represents those on short-time who are, of course, included in the full total of unemployed. The latest Cotton Board returns of those available on the books of employers indicate a labour force for spinning and weaving of above 276,000. This compares with the peak of over 320,000 towards the end of 1951. More than 40,000 workers who have left the cotton industry have obviously made up their minds not to return and any further gains must be made good from school-leavers and other new recruits. This underlines the efforts now being made by certain groups and individual mills to stimulate a bigger entry into the trade.

First moves in a new wage campaign in the Lancashire cotton industry are to be made this week. Leaders of all the cotton trade unions, meeting in Manchester on 21st May, will formulate a new claim on behalf of 280,000 cotton spinning and weaving workers. Four months ago a £7,000,000-a-year claim by the unions was rejected by the Industrial Disputes Tribunal, to which it had been submitted by the unions after the employers had turned it down. The demand was for an all-round increase of 2*s.*-in-the-£ on current earnings.

Employers argued that with a return to harder selling conditions in world markets, and keener competition from overseas rivals, a general wage increase would create added difficulties for the textile industry. The unions based their case for an increase on the dearer cost of living since the last increase in 1951. In the new campaign they are expected to declare that Budget tax reliefs did not benefit thousands of lower-paid cotton workers.

Final approval of the report on raw cotton buying was given this week by the Cotton Import Review Committee. The document has now been submitted to Mr. Peter Thorneycroft, President of the Board of Trade, and Sir Arthur Salter, Minister of Materials.

Despite earlier reports that the committee of fourteen experts under the chairmanship of Sir Richard Hopkins, had failed to find agreement, Mr. R. R. D. McIntosh, Joint Secretary of the Committee, said that there would be no minority report.

The Committee has been discussing what steps should be taken to continue the movement towards freedom in cotton buying. A similar body last year recommended the revival of cotton imports by private firms for the first time since the early days of the war. The new report will provide the Government with the views of the trade on the future of the State-sponsored Raw Cotton Commission and will advise on the best methods of continuing to provide cover against price fluctuations for Lancashire spinning mills.

Recovery of the cotton industry from last year's trade recession has been slow but persistent, states the Annual Report of the Amalgamated Weavers' Association, the largest of the cotton industry unions. "The export trade still remains quiet and one does not look for any tangible improvement until the Commonwealth countries, having overcome their currency problems, start buying on a large scale," the Report comments. "There are already signs that this is taking place and it is to be hoped for our sakes that interflow of trade will be quickly resumed." The industry had suffered the loss of a substantial number of experienced textile operatives and the shortage of labour was a serious matter.

Mr. Andrew Næsmith, one of Lancashire's outstanding trade union figures for more than a quarter of a century, has officially announced his intention to retire as General Secretary of the Weavers' Amalgamation at the end of August on reaching the age of 65. During a total service of more than 40 years to the cotton trade union movement, Mr. Næsmith has held many important appointments and served on numerous delegations and Government committees. He is a Director of the Bank of England, a Cotton Board member and a member of the General Council of the T.U.C.—*All Rights Reserved.*

COTTON CULTIVATION IN RUSSIA

PLANS FOR INCREASING YIELD AND OUTPUT

A REMARKABLE feature of recent agricultural development in Soviet Russia is the rapid expansion in cotton cultivation. From a mere one million bales in 1928, the output has increased to well over 3.5 million bales. A more striking development is the increase in the per-acre yield which, in certain regions, is believed to reach a record total of 772 lbs., though the average for all regions is much less than this figure. The Soviet authorities are continuously planning and working for a further expansion in cotton production. The new Soviet plan envisages, it is learned, increase in production through raising the yield and further extending the land under cotton cultivation. In this connection, a note on cotton cultivation in Soviet Russia, by I. Varuntsyan, member, U.S.S.R. Academy of Sciences, which has been published by the Indian branch of the Tass News Agency, will be read with particular interest.

In Tsarist Russia, cotton was grown on a small area, and owing to primitive methods of cultivation the yields were low. The country's total cotton crop in 1913 was but 223,200 tons. For lack of domestic supplies, its textile mills had to import cotton from abroad, namely, America, Egypt, and other countries. In recent years, the U.S.S.R. has become one of the biggest cotton producers in the world and has outstripped all other countries in average per hectare yields. Even before the war, the Soviet Union became independent of cotton imports from abroad.

This year's cotton crop in the U.S.S.R. exceeds the pre-war output by 46 per cent. In 1951, collective farms and State farms in the Soviet Union's principal cotton belt, Central Asia, had under irrigation obtained an average of 21 centners of raw cotton per hectare. In that year, the per hectare yields in Egypt were only 11.5 centners; in the U.S.A. 8.3; in Turkey, 7.2; in Iran, 4.5. And it should be noted that the Central Asian Soviet Republics produce more cotton than Egypt, Iran, Turkey and Afghanistan combined. This improvement, according to the author, is due to the socialist system of economy, which permits the widest use of modern highly-productive machines and advanced scientific farming methods.

Use of Tractors

For the technical facilities of their farms, the Soviet Eastern Republics, it is claimed, are far in advance of the most developed capitalist countries of Europe. Thus, for example, while Soviet Uzbekistan has 14 tractors per 1,000 hectares of crop land, France has only seven tractors, Italy but four, and of much smaller capacity, at that. Whereas Soviet Uzbekistan has one tractor per 70 hectares of crop land; in Iran, for example, there is a tractor for 18,000 hectares. The Soviet Government spends enormous funds on the development of science in the sphere of cotton-growing. There are in the U.S.S.R. special cotton-growing research institutes with a wide network of experimental stations in Central Asia, in Azerbaijan, in the U.S.S.R., in the Ukraine. Besides these institutions, the central institutes under the V. I. Lenin All-Union Academy of Agricultural Sciences carry on cotton-growing research. In the Uzbek Soviet Socialist Republic alone, more than a thousand scientific workers are in one way or another conducting research in cotton-growing.

Soviet scientists are developing and bringing to the farms advanced methods of cultivating cotton under various natural and climatic conditions; and progressive methods of irrigating cotton crops and of applying fertilisers. Using progressive plant-breeding methods of the "great remarker of nature," I. V. Michurin, Soviet plant breeders, it is stated, have developed the world's best cotton varieties. These are distinguished from foreign varieties by their higher yields, early ripening, and better technological qualities of the staple. The new early ripening varieties and new scientific farming methods have enabled the Soviet Union to push cotton cultivation further north than any other country. A new large base of cotton growing has been created and is being expanded in the southern districts of the European part of the U.S.S.R.

The fifth Five-year Plan for the development of the U.S.S.R. in 1951-55 poses as one of agriculture's chief tasks the further increase of per hectare yields of all agricultural crops. Farming is to become still more productive and more efficient, with developed grass-growing, proper crop rotations and larger areas under industrial crops. The new Five-year Plan provides for a 55-65 per cent. increase in the gross output of raw cotton with a 35 per cent. increase in the area under this crop. Thus, the greater part of the increase in cotton production is to come from stepping up the average per hectare yields. In the cotton-growing republics of Central Asia, and in Southern Kazakhstan, the average per hectare yields of cotton will in 1955 reach 26-27 centners; and in the Transcaucasus, 25-27 centners.

Collective Farms

Socialist agriculture possesses, according to the author, unlimited facilities for increasing agricultural output. The collective farms and State farms have great latent resources also for increasing per hectare yields of cotton. This is borne out by the experience of leading collective farms and State farms which have already surpassed the average per hectare yield envisaged by the Five-year Plan. A large cotton producer, the "Pakhta Aral" State farm has this year obtained an average of 30 centners of raw cotton per hectare from an area of 5,300 hectares. In the Uzbek Soviet Socialist Republic, hundreds of collective farms and many whole districts register yields of 30 and more centners per hectare. A new stream of agricultural machines will flow from Soviet factories to the State farms, and to the machine-and-tractor stations which serve the collective farms in the cotton-growing districts. This will make it possible, in the course of the fifth Five-year Plan, completely to mechanise such labour-consuming jobs as ploughing, fertilising and sowing cotton.

The new Five-year Plan provides likewise for the further development of cotton-growing in new districts. The average per hectare yields of cotton in the southern districts of the European part of the U.S.S.R. will be brought up to 5-7 centners on non-irrigated land, and to 11-13 centners on irrigated land. Extensive irrigation development work is proceeding in the Southern Ukraine, in the Crimea, in the Caspian lowland and in the Kara Kum desert. With the completion of the great Stalin construction projects—the South Ukranian and North Crimean Canals, and the Main Turkmen Canal, the cultivation of cotton will be developed on a new and still more sweeping scale. The newly irrigated land will produce, it is calculated, an additional 3,000,000 tons of raw cotton a year.

EGYPT'S COTTON POLICY FOR 1953–54

NEW CROP PRICES

THE Egyptian Government's announcement that there is no intention, at present, on the part of the authorities to re-open the Alexandria futures market will not come as a surprise to those who have followed the recent developments in cotton trading in that country; for, the Government has shown no inclination to relax its control on the cotton market. The announcement, which was published last week-end, stated that the Government would continue to sell cotton on its own account in accordance with its long-term policy which "will not be limited to next year but whose effect will be felt in the years to come."

The cotton futures market in Alexandria, it may be recalled, was closed by a decree issued by the Egyptian Government, on 23rd November, 1952. The Government announced that it would buy all Egyptian cotton that was offered on the basis of the quotations of spot middling 15/16" cotton on the New York Cotton Exchange. Holders of all cotton stocks were asked to declare their stocks and exporters were asked to make special returns to the Government. An official spokesman later clarified the position by saying that the closure of the market did not mean nationalisation of the cotton trade. The next important announcement relating to cotton trade was made on 13th February, 1953, when it was stated that Egyptian cotton would be sold by the Egyptian Cotton Commission on the basis of closing prices in the New York futures market on the preceding day plus a premium of 5 per cent. for medium staple and of 30 per cent. for long staples. The previous basis for selling prices was the New York middling 15/16" spot price plus 10 per cent. for medium and 30 per cent. for long-staple cotton varieties. In March, the Government announced certain changes in the regulations concerning the repatriation of proceeds from export sales, which were designed to facilitate export trade in cotton. The latest announcement, made last week-end, fixes the prices the Government will pay for next year's cotton crop. The price for short-stapled Ashmouni has been fixed at 50 tallaries (about £10-4-6) per kantar during the months, September to November, 51 tallaries during December and January; and 52 tallaries from February to end of the season. Long-stapled cotton Karnak has been fixed at 58 tallaries (about £11-12-0) per kantar from September to November, 59 tallaries from December to January and 60 tallaries from February to the end of the season.

New Prices

It remains to be seen how far the new prices will enable the Government to market its new cotton crop more expeditiously than it has been able to market the country's current crop. The 1952-53 cotton crop, it is now stated, will reach 10 million kantars, compared with 7.84 million kantars in the 1951-52 season. Thus, the current crop output is a record crop. In fact, the only seasons in which production ever reached or exceeded the nine-million mark were in 1936-37 (9.11 million kantars), in 1937-38 (10.87 million kantars) and in 1940-41 (9.00 million kantars). Exports of cotton from the beginning of the season till the end of April, 1953, aggregated 4.42 million kantars, as against 3.06 million kantars during the corresponding period in the 1951-52 season. Domestic consumption has been placed at over one million kantars, so that the total disappearance of cotton works out to about 5.5 million kantars. The Egyptian Cotton Commission has now about four months left in which to dispose of the remaining 4.5 million kantars of the present crop and of last August's carry-over of 2.15 million kantars.

It is, however, expected that the Government will be able able to dispose of at least 1.5 million kantars before the end of the current season so that the carry-over stocks at the end of this season are likely to be in the neighbourhood of 3 million kantars. These expectations are based on the consideration that, while the world textile situation was gradually improving, Egyptian cotton itself was being offered at competitive prices. It would appear that although the prices of Egyptian cotton are linked to the New York Cotton Futures Exchange quotations with a premium of 5 per cent. on these quotations, the price of Ashmouni (the main medium-staple variety) works out at lower levels than those of comparable American growths.

ANGLO-IRANIAN OIL COMPANY, LIMITED

PRODUCTION AND REFINING DEVELOPMENTS

SIR WILLIAM FRASER ON IRANIAN DISPUTE

IN his statement, with report and accounts, circulated to the stockholders of the Anglo-Iranian Oil Co., Ltd., the 44th Annual General Meeting of which is scheduled to be held in London on 11th June, 1953, Sir William Fraser, C.B.E., LL.D., Chairman, has indicated that the volume of the Company's sales during the early months of 1953 has shown an "encouraging expansion." Since market conditions are more difficult, profit margins, according to him, are smaller than in 1952. He also refers to the large expansion that will shortly take place in the Company's refinery capacity.

The following is an extract from the statement:

"The consolidated trading profit for 1952 was £45,354,732 after provision of £14,198,946 for depreciation on fixed assets, allied companies and other trade investments, and oil exploration interests. The gross trading profit thus aggregated £59,553,678, comparing with £71,377,882 for 1951, from which depreciation and other write-offs aggregating £23,682,949 were provided. 1952 was the first full year during which we had no oil production from Iran and the effect of this deprivation on our business, despite the greatly increased supplies which we obtained from other sources, is reflected in the reduction in our trading profits.

"After providing £22,666,344 for taxation on profits, the amount available for reserves and dividends is £25,165,966, compared with £24,233,050 for 1951. Your Directors have allocated £1,000,000 to preference stock reserve, bringing the total to £10,000,000, and have placed £16,000,000 to general reserve, which now stands at £97,000,000. They have recommended a final dividend on the ordinary stock of 25 per cent., and in addition a cash bonus per £1 stock of 1s., both less income-tax. The total distribution for the year would approximate 7 per cent. on the ordinary stock plus general reserve.

"The Company's issue of £20,000,000 5 per cent. debenture stock in January last was largely oversubscribed. The purpose of this issue was to supplement the Company's existing resources in financing the current programme of capital expenditure, mainly on construction and extension of refineries and building of tankers. This large programme on which expenditure during 1952 was approximately £57,400,000 and during 1953 is estimated at £75,000,000, is designed to maintain the Company's position in the forefront of the highly competitive and progressive world petroleum industry.

Observance of Contracts

"Events regarding the Company's interests in Iran since my last statement have been extensively reported in the Press. There have now been no less than five separate major attempts to settle the dispute. On each occasion the proposals were rejected by the Iranian Government.

"The proper observance of contracts is a fundamental factor in international trade, and Her Majesty's Government and the Company have stood on the principle, well established in international law, that compensation for losses resulting from expropriation must be prompt, adequate, and effective. While the Company would be ready to accept payment by instalments the International Court of Justice must, if the principle regarding compensation is to be preserved, be free to give unfettered consideration to the Company's claims in respect of the loss of the 1933 Agreement. That Agreement remained the unchallenged legal basis for the Company's operations in Iran for eighteen years, the Company, on the strength of it, being encouraged to make an investment in a foreign country of unprecedented magnitude. The facts speak for themselves and entirely contradict Dr. Musaddiq's contention that the 1933 Agreement was never valid.

"The Company is at present dispossessed of its property, rights and interests in Iran, thereby suffering grievous losses. The Iranian Government has neither paid compensation nor agreed to a satisfactory basis and procedure for the future assessment and payment of compensation, and the practical effect of the Iranian Nationalisation Laws of 1951 has thus amounted to confiscation.

"The Company, therefore, continues to claim the title to all oil derived from the area of its operations in Iran, and has accordingly published announcements in many countries stating that it will take all such action as may be necessary to protect its rights should any concerns or individuals participate in transactions affecting such oil. Legal proceedings have already been taken in Aden, Italy and Japan.

Production and Refining

"Crude-oil production in Kuwait, Iraq and Qatar was largely increased during 1952, when our offtake from those sources of supply totalled some 25,600,000 tons, compared with 16,600,000 in 1951. During 1953 we expect to have available some 35,000,000 tons from Kuwait, Iraq and Qatar.

"The Company's post-war programme for increasing its refinery capacity in the United Kingdom is being brought to fruition. The result will be to have expanded this capacity over tenfold, from under 1,000,000 tons per annum pre-war to 10,500,000 tons per annum by the end of this year, with a corresponding improvement in the diversity and quality of products."

The statement also details the Company's expanding refinery operations in Belgium, France, Germany, Italy, Israel, Kuwait, Australia and Aden.

Sales

"The difficulties which we have been facing due to the denial to us of supplies from Iran were accentuated in the earlier part of the year by a world scarcity of tanker tonnage available for prompt chartering. Nevertheless, the A.I.O.C. group's sales of crude oil and refined products in 1952, aggregating just over 32 million tons, showed a decrease of only 3 million tons, or 8.6 per cent., compared with 1951. Our sales of refined products in the markets supplied through our subsidiary and associated marketing companies were above those for 1951, though only by some 2½ per cent.

"The commissioning of our Kent refinery early in 1953 has effected an important increase in our availability of products of our own manufacture. But the problems of supplying economically our market outlets east of Suez will remain considerable until we can bring into operation the refineries now being constructed at Aden and Kwinana in Western Australia. These are large undertakings; construction work is being pressed forward as rapidly as possible, but we cannot expect these new plants to be on stream before the end of 1954. When they are completed, we shall, in conjunction with the expansion of our other refineries, have a total refining capacity of some 30,000,000 tons per annum. Not only will this allow for an appreciable extension of our Group's sales of products, which in 1952 amounted to just under 23,000,000 tons, but also we shall have a chain of refineries well placed to supply our markets throughout the Eastern Hemisphere.

"The volume of our sales during the early months of 1953 has shown an encouraging expansion. On the other hand, market conditions are more difficult. Selling prices have been reduced as a result of lower freight levels and, in addition, the more ample availability of refined products has led to very competitive conditions. Consequently, profit margins to-day are smaller than was the case in 1952."

SUGAR INDUSTRY UNDER THE PLAN

PROGRESS DURING FIRST TWO YEARS REVIEWED

THE Progress Report of the Planning Commission on the Five-year Plan during the first two years—1951-52 and 1952-53—contains very little about the implementation of the development programme for the sugar industry in India. From the little information furnished, however, it is evident that there has not so far been any expansion in the size of the industry. This is only to be expected, in view of the fact that the development programme does not envisage any addition of new units for manufacturing sugar. Even the increase in the rated capacity of the existing units, the target for which is stipulated at hardly 10,000 tons by 1955-56, has not been attained yet. The aggregate capacity of the sugar industry in 1952 remained the same as in the basic year of the Plan, namely, 1.54 million tons. The principal factor responsible for the lack of expansion has been heavy requirements of working capital, thanks to rise in cost of raw materials, fuels, stores and higher interest charges, following the rise in Bank rate in November, 1951. Another important factor is the remarkable rise in output without a corresponding increase in offtake. This, in turn, has led to the accumulation of stocks with sugar mills, resulting thereby in the locking up of considerable amount of finance. The observations made by the Planning Commission in its Progress Report deserve to be mentioned in this connection. Says the Commission: "The failure of demand to respond, in a significant manner, to increase(s) in production of sugar (and textile) in the recent past is a significant pointer to the importance of reducing costs simultaneously with increase(s) in production."

The sugar industry, just as so many other industries, has large arrears of replacements. The problem of finance for replacement and expansion needs to be solved. The general issues in regard to taxation which have a bearing on the problem have been referred to the Taxation Enquiry Committee. The suggestions made by the Federation of Chambers of Commerce and Industry on the problem of replacement finance, it is stated, are at present under the examination of the Planning Commission in consultation with the Central Ministries.

"Concealed" Taxation

Incidentally, we would like to point to the tendency on the part of certain State Governments to raise revenue from the sugar industry in an indirect manner as a substitute for taxation. To take an instance, the Government of Bombay has been requisitioning a certain percentage of production of molasses from the sugar factories for the purpose of subsidised distribution to certain classes of users, or for its own consumption, and sometimes for resale at a profit. True, there is nothing objectionable in this, if the price at which the Government acquires molasses is notified as the ceiling price for all consumers. But when the Government, without in any way regulating the price of molasses for sale in the market, acquires a part of the production at a price lower than the ruling market price, it is to be regarded as indirect or "concealed" taxation on the industry without the necessary legislative sanctions required under the provisions of the Constitution. The Taxation Enquiry Committee should examine this question also, while determining the burden of taxation on the sugar industry.

To revert to the progress in the implementation of the development programme for the sugar industry which is indicated below:

(In thousand tons)

Basic year (1950-51)—	
Rated capacity	1,540
Actual production	1,120
Plan period (1951-56)—	
Additional capacity	10
Additional production	384
Progress during 1951-52—	
Additional capacity	..
Additional production	602
Actual production—	
1951-52	1,489
1952-53 (estimated)	1,310

Despite the lack of expansion in size, as noted above, it is gratifying that the production of sugar during 1951-52—the first year of the Plan—registered, as stated already, a remarkable rise, the quantity actually produced being as much as 1.49 million tons. This was not only a record in the history of the Indian sugar industry but also almost equalled the target of 1.5 million tons fixed for 1955-56. Apart from adequate supplies of sugarcane and high prices of sugar prevailing, the rehabilitation programme also helped in raising the output of sugar. Such was facilitated not only by improvement in transport and Government's free market sales policy but also by the substantial financial assistance rendered by the Industrial Finance Corporation. Thus, out of the Rs. 445.25 lakhs granted by the Corporation to different industries, the sugar industry alone accounted for Rs. 95 lakhs.

Scope for Further Expansion

This may no doubt lend support to the Planning Commission's view that the existing rated capacity of the sugar industry is sufficient to achieve the target fixed for 1955-56. But whether the level of output can be taken as the index of the future trend of production is a moot point. This is especially so when the trend depends on so many factors that cannot be sized up at present. As was stated in these columns two weeks ago, some, however, are inclined to feel that the production of sugar during 1951-52—an abnormal year for this industry—was due to many special factors and, therefore, cannot be taken as an index. They point to the downward trend in sugar output during the current (1952-53) season, the quantity estimated being 1.3 million tons, as shown in the table above. In fact, according to them, there is considerable scope for further expansion of the industry.

Be that as it may, if the production of sugar is to be maintained at a high level in the coming years, it is imperative that some of the recommendations made by the Planning Commission are implemented in right earnest. For instance, some of the sugar factories at present located in areas where sufficient cane supplies are not available should be enabled to shift to other areas in the same State or even outside the State, depending on facilities for the supply of cane. A careful examination by an expert committee of all the factories which did not work or worked at low capacities during the preceding seasons, due to inadequate supplies of cane, is necessary for determining the factories which should be shifted from their existing location. It is understood that some assistance in the form of railway facilities for shifting factories, issue of import licences for new machinery, and the extent of financial help, if any, to be given to such factories is already under examination by the Government. It is necessary to work out and finalise such arrangements as soon as possible for helping the industry to shift the necessary factories to new locations and achieve full production. It may be noted, in this connection, that the Licensing Committee, set up under the Industries (Development and Regulation) Act, 1951, has already decided to grant sanction for shifting sugar factories to more favourable locations.

The process of manufacture is another aspect requiring careful technical examination, particularly in regard to new factories. Consistent with the availability of adequate quantities of limestone at the new locations, the question of adopting the carbonatation process or any other technique which would reduce the requirements of sulphur should be carefully examined. The State Governments should arrange to utilise the entire cane cess collected by the factories for cane development and help to meet the full requirements of early, medium and late ripening varieties of cane to the sugar factories to enable them to work at least for 100 days per season during 1952-53 and 120 days per season during 1953-56. Co-operative societies for cane supply should be reorganised to ensure proper co-ordination between cane cultivators and sugar factory management in the matter of harvesting and supply of cane to the factories. In the event of surplus cane being available in any area, after meeting the full requirements of the existing factories, specific schemes for new factories or substantial expansion of existing units may be permitted after careful examination of each case. Facilities should be given to the industry to secure adequate supplies of machinery for replacement and maintenance and also for stepping up the capacities of the uneconomic units at the time of replacement or modernisation, consistent with the possibility of increased cane supplies being made available in each area.

COAL MINES PROVIDENT FUND SCHEME

MOVE FOR REVISION UNWARRANTED

THE move of the Government of India to bring the Coal Mines Provident Fund Scheme, 1948, in line with the Employees' Provident Fund Scheme, 1952, in regard to recovery of contributions on the basis of basic wage plus dearness allowance, is highly objectionable in the existing circumstances. For, if the intention were to be translated into action, it would seriously affect the economic position of the coal industry which is already bad enough. The existing scheme, as it is, is acting as a serious drain on the resources of the industry. At present, the employer and the worker are each contributing 6¼ per cent. of basic wages. Besides, the employer is required to pay an administrative charge of 5 per cent. of the aggregate contributions, which accounts for 10 per cent. of his own contribution. The industry is, therefore, complaining against this high administrative charge. The Indian Mining Association has urged that the administrative cost should be debited to the Fund and paid out of the interest accruing. Alternatively, it has argued that the administrative cost should be equally shared by the employer and worker, each paying a set percentage of his contribution.

But instead of giving any relief on the lines suggested by the industry, if it is now called upon to bear further burdens, its position will go from bad to worse. The proposed move is indeed deplorable. If the provident fund contributions are recovered on the basis of basic wage plus dearness allowance, it will involve the industry in increased expense of between As. 2½ and As. 3½ per ton of coal produced. On the basis of 36 million tons of coal per annum, the burden on the industry will increase between Rs. 56.2 lakhs and Rs. 78.7 lakhs per annum. Most certainly, the industry cannot bear such an increase in cost, especially now when a number of mining units are on the verge of extinction.

Dividends

It is sometimes argued that dividends paid by some coal companies are so high that the argument that the coal industry is unable to bear any further burden is baseless. But we are afraid that these arguments are based on very wrong premises. It may well be that a few dividends paid appear high when expressed as a percentage on the original capital of the companies concerned, but it is often forgotten that some of these companies are a hundred years or so old and they have for many years been ploughing back their profits into the business instead of wantonly distributing them and, therefore, the original capital bears no relation whatsoever to the sums actually employed in business to-day. The correct yardstick is certainly the aggregate working capital. An analysis of the balance-sheets of many mining companies discloses that their aggregate profits work out to no more than 2½ per cent. of the total working funds, which is indeed small. As such, there is no gainsaying the fact that the industry cannot bear any more burden without relief in other directions. It is stated that contemplation of any measure which increases the burden of the industry without first restoring the 1949 price, which is necessary to make the industry break-even, is unjustifiable on all counts.

CONCILIATION BOARD FOR COAL MINES

The Government of India is expected to announce shortly its decision regarding the setting up of a new board of conciliation for coal mines. Announcing this through a Press Note, the Labour Ministry has asked coal mine workers to reconsider their attitude in regard to their proposed token strike on the issue of the setting of the new board. The Press Note says: "The Government has received information that the workers in coal mines propose to have a token strike on the issue of their request for the setting up of a new board of conciliation. Various demands have been put forward by the trade unions from time to time and these have been under the careful consideration of the Government. The issues are such that they require some time for proper examination of all aspects and while regretting the delay, the Government expects to reach and announce its decision shortly. The Government trusts that the unions concerned will, in the light of this, reconsider its attitude in regard to the proposed token strike."

ALLOTMENT OF WAGONS FOR TRANSPORT OF COAL

The average allotment of wagons for transport of coal from collieries in India to consuming centres during April, 1953, was 3,078 per day, as against 3,116 per day, in the previous month. This discloses a fall of 38 wagons per day. The highest allotment on any day during the month was 3,537 and lowest 2,778. The daily average loadings in Bengal/Bihar coalfields were 3,111 including the supply of uneconomical wagons.

SEVENTH ANNUAL MEETING OF BHARAT LINE LIMITED

MR. C. R. SRINIVASAN'S ADDRESS

PLEA FOR CAPITAL FACILITIES FOR ACQUIRING SHIPS

ADDRESSING the shareholders of the Bharat Line Ltd., at their Seventh Annual General Meeting held at Bhavnagar on the 26th inst., Mr. C. R. Srinivasan, Chairman of the Company, acknowledged the Government of India's assistance by way of loans to shipping companies for purchasing additional tonnage. He, however, felt that the Government should see its way to reduce the rate of interest it charges on these loans, as otherwise it would be difficult for operating companies to take full advantage of the loans. He opined that the need for substantial concessions to the shipping industry would be keenly felt by the companies during the period of the Five-year Plan, and, therefore, offered some valuable suggestions to meet the difficulty.

The following is the full text of Mr. Srinivasan's address:

"GENTLEMEN,

"It gives me great pleasure to welcome you to the seventh ordinary general meeting of the Company. The Directors' report and the audited balance-sheet and profit and loss statement have been in your hands for some time now. I trust, I have your permission to take them as read and proceed to make a few comments on broad aspects of policy.

"In my speech last year, I had stated that it was the policy of your Board to replace old tonnage with fresh tonnage, as and when opportunity occurred, and I had indicated also that two of the Company's ships were due for replacement. One of these, the s.s. *Bharatratna*, has since been sold and delivered to the buyers in March, 1953. In releasing this ship for sale the Government of India have directed us to replace the same within a period of 12 months. This has our attention.

"In addition to the *Bharatvijaya* and *Bharatmitra*, purchased under the Government of India's Ships Purchase Loans Project mentioned in your Directors' report and to which I had referred also in my speech last year, your Directors have purchased under this project a further ship the s.s. *Goalpara*, which joined the Company's fleet in April, 1953. Your Directors have also placed an order with the Visakhapatnam Shipyard for another ship with the assistance of a loan from the Government. This ship is expected to be delivered early next year.

"As pointed out last year, these additions to the fleet have been made without calling any additional capital, the requisite funds being raised through loans to be repaid from current earnings. Your Directors have fully availed themselves of the Government of India's Ships Purchase Loans Project which, in their view, is calculated to give dynamic form to the good intentions of the Government. It may, however, be pointed out in this context that, unless the Government see their way to effecting a substantial reduction in the rates of interest they charge on these loans, it will be difficult for operating companies to take full advantage of the Loans Project.

"The Company has to-day a fleet of 12 vessels of 82,165 d.w.t. (55,117 g.r.t.), besides the one now on order at the Vizag Shipyard of 7,960 d.w.t. (5,130 g.r.t.).

Results of Working

"During the report year, the Company made a gross profit of Rs. 49,59,304-8-11, and, after providing Rs. 45,17,534 as depreciation, your Directors have recommended a dividend of Rs. 5 per share, as against Rs. 4 paid in the previous year.

"The cost of all services continued during the year under report at the previous high levels and in view of the tensions prevailing in other parts of the world which affected shipping in general, there appears to be no immediate prospect of any abatement in our working costs. Freight schedules have been maintained more or less at the levels attained in the previous year. Abnormal delays in the turnround of ships at Calcutta during a period of three months were responsible for considerable loss of earnings. Even so, with watchful care and all-round economy in our spending departments, the Managing Agents have been able to show substantial increase in the Company's earnings which has enabled your Directors to recommend a further increase in the rate of dividend. With the additions to the Company's fleet referred to above, your Directors confidently hope that the improvement will be maintained in the years that lie ahead.

Planned Progress

"The Government of India have not overlooked the claims of the shipping industry in the first Five-year Plan they have placed before the country. With the reservation of coastal trade to Indian-owned tonnage and the desire progressively to participate in the overseas trade, it is but natural that they should have devoted time and thought as to ways and means of expanding Indian-owned tonnage. The Indian National Steamship Owners' Association has made detailed representation in this behalf whenever occasion or opportunity offered and I am glad that some of these suggestions are now being given effect to.

"In the first Five-year Plan, the Government expect to reach a target of about 6,00,000 g.r.t., in 1955-56. Indian-owned tonnage operating in the coastal trade at the end of 1951 was of the order of 2,10,976 g.r.t., Indian-owned tonnage operating in the overseas trade at the end of 1951 was 1,73,424 g.r.t. It is presumed that the additional tonnage contemplated in the Plan will add 1,00,000 tons each for the coastal trade and the overseas trade. In taking note of this additional tonnage, the fact cannot be overlooked that nearly 50 per cent. of the existing Indian-owned tonnage will require to be replaced as soon as possible, if economy and efficiency in service are to be maintained.

"According to the Plan, the Visakhapatnam Shipyard is expected to build about 1,00,000 g.r.t. during the Plan period, quite a substantial part of which will go for replacement of tonnage and only about 40,000 tons may add to the tonnage now operating. The ships from the yard are intended to be sold to shipping companies at standard prices, the difference between the construction cost and the sale price being paid by the Government to the yard as a construction subsidy.

"In order to assist the shipping companies to replace obsolete tonnage operating in the coastal trade and add new units to their fleet the Government propose to provide Rs. 4 crores as loans to shipping companies. The companies are expected to provide a further Rs. 2 crores out of their own resources. Similarly, to assist acquisition of additional tonnage required for overseas trade, the Plan provides Rs. 6.5 crores as Government loans, supplemented by Rs. 2.2 crores to be raised by shipping companies operating in the overseas trade.

Cost to the Companies

"The Plan contemplates that all the 1,00,000 g.r.t., that is roughly about 20 ships of 5,000 g.r.t. each, that might be built by the Yard during the period will be taken by the Indian shipping companies. On the present price basis of Rs. 60 lakhs per ship, the cost of these 20 ships to the companies concerned will be about Rs. 12 crores. If the Plan target of 2,00,000 tons additional tonnage is to be attained, a further 1,00,000 g.r.t. will have to be acquired from the second-hand tonnage market which, on the basis of prices ruling to-day for second-hand ships, namely, about Rs. 36 lakhs per ship, would involve a further capital outlay of Rs. 7 crores.

"Few of the existing Indian shipping companies possess adequate resources of their own to play their allotted part in these expansion schemes and, therefore, the whole of the investment called for, namely, Rs. 12 crores plus Rs. 7 crores, i.e., Rs. 19 crores, would have to be raised by way of shares or loans. In the present state of the money market equity issues either by way of shares or debentures hold little prospect of success. In consequence, the burden of finance will largely fall on the Government and it is hoped that this assistance will be readily forthcoming in public interest.

"In this context, there are two points which call for the Government's attention and their sympathetic consideration. Government loans to shipping companies, to be attractive and usable, should not stipulate the large proportion of the purchase price which the companies are now required to provide in the case of each loan. Government should advance at least three-fourths of the cost of ships purchased, if they cannot see their way to buy the ships themselves and offer the companies long-spread hire purchase terms. Secondly, the loans so far advanced by the Government carry interest at 4, 4½ and 5 per cent. per annum. If these rates are applied to future loans also, the interest alone on the Rs. 19 crores investment called for would amount to Rs. 76 to Rs. 95 lakhs per year. This obviously will impose a very heavy burden on the infant shipping industry. It will be a farsighted and fruitful policy if the Government will give the loans a currency of 20 years, allow the first five years free of interest and charge 3 per cent. per annum from the sixth year when repayment by instalments of one-fifteenth of the whole amount may also start.

Tax Relief Needed

"Apart from the provision of capital facilities for the acquisition of tonnage by Indian companies, the industry itself has prayed for relief from the burden of tax in respect of its stores and bunker oil supplies, but so far no action has been taken in these respects. Now that a planned campaign has been initiated to stimulate and sustain the shipping industry, I hope that auxiliary and ancillary measures to this end will receive due attention and sympathetic consideration. I do not want to detain you with a list of these subsidiary issues which have found detailed enumeration in the memoranda submitted by the shipping interests from time to time. I am only concerned to stress the point now that we are working to a plan and everybody is interested in making the Plan a success.

"The relations between the Government of India and the shipping industry are now on a well co-ordinated level and I am glad that the consultations and conferences between the two so far have yielded satisfactory results and hold promise of further and fuller success in the future. A full-fledged shipping board as recommended by the Reconstruction Policies Committee might have created integrated relations with the Government and materially quickened the pace of progress; but if the Consultative Committee now functioning will serve as well, we shall be content. So far as the Company is concerned, your Directors have steadily pursued a progressive policy, leavened their action with caution and courage, and may be depended on to give of their best in the service of your interests.

Conclusion

"Your Directors have referred to the demise of their former colleague, Mr. N. R. Sarker, who had been one of your first Directors and had to resign from the Board when he joined the West Bengal Ministry in 1948. With his wide experience and knowledge of affairs he was a tower of strength to the Board and even after severing his formal connection with the Company, he continued to take keen interest in the progress of Indian shipping, in general, and our Company, in particular. His unexpected death has created a void in the country not easy to fill. I take this opportunity of expressing my personal loss also, as I had been in intimate friendly relations with him during the past 30 years.

"Our thanks are due to the Managing Agents to whose vigilant and watchful care we owe the Company's heartening progress. Our thanks are also due to Messrs. J. & C. Harrison Ltd., our London Correspondents, for their continued co-operation and help as and when required. I take this opportunity also to express my warm acknowledgments to my respected colleagues on the Board for the uniform help they have extended in the direction of the Company's affairs; and last but not least, may I take this opportunity of expressing the warm appreciation of the Board for the work of the Company's staff, both ashore and floating.

"With these words, I beg to move that the Directors' report and the audited balance-sheet and profit and loss account for the year ended 31st December, 1952, already duly sent to the shareholders, be and are hereby adopted."

DEVELOPMENT OF HOME MARKET FOR TEA

EFFICIENT MACHINERY FOR PROPAGANDA URGED

THE Indian tea industry has so far had three crises within living memory in its history which dates back to the early thirties of the last century. All these three crises have taken place in the last quarter of the century, the first one having come in 1919 after World War I. In a little over a decade after the first crisis—that is in 1930—the industry was faced with a second one. The third one occurred in 1952. The basic causes of all the three crises is over-production. The impetus given by the two world wars and the prosperity of the twenties of this century witnessed a rapid development of the tea industry, in that new areas were brought under cultivation. Consumption of tea, however, did not keep pace with the increase in production, resulting in a precipitous fall in prices. The two earlier crises were overcome by a voluntary restriction of crops in the first instance and by limiting the extension of tea plantation and setting up of a machinery for regulating exports by the three countries, India, Ceylon and Indonesia, under the International Tea Agreement signed in 1933. Between that year and 1951, production of tea in India rose by about 75 per cent. and of that in other countries by about 50 per cent., while imports by consuming countries have risen by only 12 per cent. The alarming fall in tea prices in 1952 has been the cause of much concern to producers in India. The lesson of the previous two crises forced the Indian tea producers in December, 1952, to agree upon a voluntary scheme of crop restriction for 1953. This gave the signal for a rise in prices since the beginning of the year.

The foregoing account of the three crises in the Indian tea industry by Mr. Satyendra Prosad Ray, Member, Council of States, and Chairman of the Indian Tea Planters' Association, Jalpaiguri, in his address at the annual general meeting of the Association held on the 16th inst., seems to be intended as a preface for condoning the Central Government's inaction in rendering help to the extent required by the industry during the last crisis. According to him, the tea industry of India had been presenting a rosy picture ever since the national Government came into office, and the Central Government had such complete confidence in the capacity of the industry to weather any storm by the strength of its own organisation that, in the early stages of the tea crisis, it had not taken it so seriously as it would otherwise have done. He found that the circumstances and the results of the crisis had served to awaken the consciousness of the Government about the innate weakness of the industry. He felt confident that it would be more appreciative of the industry's difficulties than it had been in the past. The latest "gesture" shown by the Government in reducing the excise duty on tea payable when it leaves the gardens from As. 3 per lb. to an anna seems to have induced Mr. Ray's faith in Government's appreciation of the industry's difficulties.

The tea estates' decision to restrict production was not considered by Mr. Ray as a permanent remedy to overcome the crisis. It was an artificial one as it arrested the industry's natural progress. Further, its success even in the fulfilment of its immediate objective was dependent on the co-operation of other producing countries by toeing the line; but that was extremely problematic in the complex world conditions of to-day. He, therefore, stressed the need for carrying on intense propaganda, both in India and abroad, for consumption of tea. The void created by India's withdrawal from the International Tea Market Expansion Board was to be filled by setting up a suitable machinery with the least possible delay for continuing the functions of the Board.

The dependence of Indian tea on foreign markets to the extent of 75 per cent. of the production was considered by Mr. Ray as the basic weakness of the industry. "So long as the export markets remained unsaturated," he said, "the industry had a career of prosperity; now with the world production exceeding the world demand, the industry has been confronted with a crisis, which has shaken it to its very foundation." He viewed with concern the "weaknesses" of the industry from a long-term point of view. For, if Britain, which alone consumed 50 per cent. of Indian tea, were to change its habit or if the other producing countries succeeded in ousting India substantially from this stronghold, the Indian tea industry would topple down like a house of cards, he said. He, therefore, wanted to develop a strong home market, which offered vast potentiality, along with our efforts to develop overseas markets.

At present Indian consumption runs to about 150 million lbs. or 0.42 lb. per head. If this could be raised to a *per capita* consumption of 1 lb., the internal market would absorb an additional 200 million lbs. In such cases, Mr. Ray added, there would be no need at all for restricting production of Indian tea. On the contrary, he averred, a splendid field would be opened out to the industry for its legitimate expansion. With an assured home market for over 50 per cent. of its production, the industry would stand on firm ground and would have enough capacity in reserve for competition in foreign markets. Mr. Ray, therefore, urged upon the Government to concentrate its efforts on building up an efficient propaganda organisation to increase consumption of tea in India.

The tea crisis has brought to light the plight of estates with area of less than 500 acres. Before the second crisis of 1930, conditions were favourable for the growth of small tea estates. Prices of raw materials were low and uncontrolled; labour was cheap and contented. There was also an assured market for tea. So even an estate of 150 acres with its own factory was considered an economic unit, with ability to pay its way and give a far return on the capital invested. But there was a change in conditions after the second crisis. However, these small units were able to get on because tea continued to enjoy a sellers' market. Circumstances changed considerably since the latest crisis. With a fall in prices, these small estates found the incidence of costs heavier. As compared with larger estates, the smaller units were found to suffer with an enhanced cost of As. 2 to As. 3 per lb. With the proposed cut in production and fine plucking, the difference in costs between the high and low producing units will increase, and the latter will be faced with the problem of survival. The Indian Tea Planters' Association has, therefore, submitted a memorandum to the Central Government emphasising the need of State aid for the development of uneconomic units, as without such aid these will, in course of time, be completely extinguished. The memorandum has proposed a limit of 500 acres for the expansion of these estates either singly or in groups, according to their geographical condition and other factors. The rehabilitation of these gardens, according to the memorandum, would necessitate an extension of plantations not exceeding 60,000 acres, which might in the course of the next 15 years, result in an additional production of 60 million lbs. of tea or 10 per cent. over India's current potentiality. Mr. Ray sees, therefore, no reason why, with an increase of 200 million lbs. in home consumption, and with a rise in the standard of living, this additional production of the rehabilitated small estates should not be absorbed.

TEA BILL

In our issue dated 18th May, 1953 (*vide* page 883), it was stated that the Chairman of the Tea Board, contemplated by the Tea Bill passed by Parliament recently, would be elected instead of being nominated. We are now informed that the amendment accepted by the Government was in regard to the election of the Vice-Chairman of the Board, and not to that of the Chairman, as stated by us. The Vice-Chairman of the Board will now be elected from among the members of the Board, instead of being appointed by the Government as originally provided in the Bill. The Chairman of the Board will, however, be appointed by the Government by notification.

(*Concluded from next column*)

balance being imported. The Company proposes to increase its plant capacity to 1,100 looms at an investment of approximately LE. 3,000,000 with a view to achieving, within a few years, production of the total Egyptian requirements for twilled and hessian packings. According to a director of the firm, the amount of LE. 3,000,000 would make possible construction of a factory housing 1,000 modern looms and provide operating capital of LE. 500,000. The proposed development has been discussed with the Egyptian Minister of Finance, and the Egyptian Government is said to have promised all possible co-operation to attract foreign capital participation.

INDIAN JUTE INDUSTRY

DEMAND GATHERS VOLUME

IN the course of his address to the Export Advisory Council on the 23rd inst., Mr. T. T. Krishnamachari, Minister for Commerce and Industry, expressed confidence in the future of the jute industry. He said that the demand for jute goods was not a static thing. He added that with the economic progress taking place all round in the backward countries, no less than in advanced countries, the total demand for jute goods in the years to come was likely to increase rather than decrease. He welcomed the efforts of the Indian Jute Mills Association towards developing direct contacts with the consuming markets, by sending missions to the U.S.A., Canada, the U.K., Australia and New Zealand, for exploring avenues for increased marketing of Indian jute goods.

The observations of Mr. Krishnamachari make encouraging reading in view of the fact that the industry till very recently had been facing one of the worst crises in its history with poor offtake of its goods, sharp decline in prices and heavy accumulation of stocks. The effect of this is seen in the export figures given by the Minister. Thus India's exports, at 705,000 tons of jute goods in 1952-53, have been the lowest on record since 1947. Further, they reveal a decline of 100,000 tons as compared with the exports in the previous year, namely, 1951-52. But a silver lining to the cloud is seen in the fact that, even in this bad year, the country was able to improve its exports to dollar countries from 254.000 tons in 1951-52 to 304,000 tons in 1952-53. Besides, the crisis in prices, particularly of the raw material, which had existed in the beginning of the year is almost a thing of the past. The price trends are once again favourable. There has been considerable demand for hessian from Argentina and for sackings from the Middle East including East Africa and West Africa. Australian orders are expected to pour in, and according to the Indian jute mission which recently returned after a four-week tour of Australia and New Zealand, there is a "secure and expanding market" for Indian jute goods there. The market can be assured for Indian jute goods only if India could guarantee regular supply of goods at stable prices. Latest indications are that the stocks of jute goods in overseas countries, especially in Europe and the U.K., are fast depleting. This is in evidence by the large orders being placed for jute goods with Dundee mills in the U.K. If the present state of affairs were to continue, it would not be difficult to recover the loss in exports of 100,000 tons of jute goods referred to above.

It was in view of these considerations that Mr. Krishnamachari observed at the meeting above that outbursts of optimism followed by periods of pessimism had become a chronic feature of this industry, and he reminded the industry not to let short-term fluctuations obsess the enthusiasm of jute interests. To quote him: "It will not do to cry wolf every time the price of raw jute goes down or stocks of jute goods go up. Let us, instead, look ahead, take long-term problems and make a determined effort to expand our exports of jute goods."

There is a feeling that paper and cotton and even bulk handling might replace jute manufacture in course of time. But this feeling is born out of this misconception. Jute goods can certainly hold their own against all these substitutes provided they are advantageously priced in relation to their substitutes. Moreover, every effort should be made to erase violent fluctuations in the prices of jute goods which have been responsible recently for the inroads of paper, textiles, etc., into their province. As such, the need of the hour is harnessing every effort for stabilising prices of jute manufactures at a level which will be within the purchasing power of the consumer. The price of Indian jute manufactures can be brought down to a considerable extent provided the jute mills are rationalised. This will help India to expand markets for its jute goods and thus eliminate all chances of substitution.

EGYPT AIMS AT BAG SELF-SUFFICIENCY

Egypt is said to be planning for near self-sufficiency in its bag requirements during the next few years. The Egyptian Jute Company, the only jute mill at present in operation, has invited U.S. capital investment for purposes of expansion. The mill has 110 looms and supplies about 8 per cent. of Egypt's requirements of fibre bags, the

REPORT OF THE AUDITORS

We have audited the foregoing Balance Sheet of the Indian Branches of Comptoir National d'Escompte de Paris, as at 31st December, 1952, and also the foregoing Profit and Loss Account for the year ended on that date, in which are incorporated the audited returns of the Calcutta Branch, and report that:—

(a) we have obtained all the information and explanations which we have required;

(b) in our opinion, the foregoing Balance Sheet and Profit and Loss Account are drawn up in conformity with the law;

(c) such Balance Sheet exhibits a true and correct view of the state of the Branches' affairs according to the best of our information and the explanations given to us and as shown by the books of the Branches; and

(d) in our opinion books of account have been kept by the Branches as required by Section 130 of the Indian Companies Act, 1913.

Chartered Accountants.

BOMBAY, 14th April, 1953.

INDIAN IRON AND STEEL INDUSTRY

PROSPECTS FOR WITHDRAWAL OF IRON AND STEEL CONTROL BLEAK

ADDRESSING a meeting of the Indian Council of Economic Affairs at Calcutta recently, Mr. C. R. Natesan, Iron and Steel Controller, declared that the Government of India was not keen on continuing iron and steel control and that the moment it was satisfied that the supply was catching up demand the control would be abolished. Although the statement appears to be encouraging, the statistics provided by Mr. Natesan indicates that it is unlikely that control will be done away with in the near future. However, the possibilities of further relaxation of controls on certain items of iron and steel in which the country has reached, or is on the point of reaching, the state of self-sufficiency, may not be ruled out. The estimated demand in the country for steel is 2.5 million tons while production accounts for slightly over a million tons. It is true that imports are permitted freely, but they account for only about 250,000 to 300,000 tons a year on account of their exorbitant price. The price of imported steel is higher by about Rs. 50 to Rs. 200 per ton.

Mr. Natesan availed himself of the opportunity to review the present position and prospects for expansion of the iron and steel industry in India. Although this review covers somewhat familiar ground, the refreshing manner in which he has presented the picture along with comparative statistics makes interesting reading. Consumption of steel in India is very low, as compared with that in the highly advanced industrial countries of the world. As against the *per capita* consumption figure of 1,300 lbs. in the U.S. and 630 lbs. in the U.K., the consumption in India is only 12 lbs. On the production side too, it is the same tale. As against 120 million tons per year in the U.S., 17 million tons in the U.K. and 35 million tons in the U.S.S.R., it is just over a million tons per year in India. And this state of affairs is extremely deplorable especially in view of the fact that India has large deposits of high grade iron ore and considerable quantities of other suitable raw materials including metallurgical coal, limestone and the like. Clearly, the reason why India has lagged behind other countries in steel production is paucity of finance.

Expansion Schemes

The Five-year Plan provides for development of steel industry. The implementation of the expansion schemes of Tatas and the Indian Iron and Steel Company—the two major iron and steel producers—is expected to increase the capacity of finished steel in India to 1.6 million tons in 1956-57. This leaves a deficit still of one million tons to catch up India's steel requirements by domestic production. The Tata Scheme proposes to increase its production from the existing capacity of 750,000 tons per annum to 950,000 tons. The estimated cost of expansion works is Rs. 35 crores. The newly amalgamated Indian Iron and Steel Company will step up its production from the existing 280,000 to 650,000 tons a year, besides the setting up of a blast furnace capable of producing about 450,000 tons of pig iron every year. The cost of the expansion plan is estimated at Rs. 35 crores. The Bhadravati Iron and Steel Works, Mysore, has also an expansion scheme to step up its production from the existing 40,000 tons to 100,000 tons a year.

So far as the Tata Iron and Steel Company is concerned, the major portion of the amount needed for expansion will be met by its own resources and the balance from the Equalisation Fund with the Government of India. To finance the expansion of the Indian Iron and Steel Company, already a World Bank loan of Rs. 15 crores has been negotiated. The remaining portion of Rs. 20 crores will be met, to a large extent, by Government loans, the rest being made up by the Company's own resources.

An important feature of the Tata Iron and Steel Company is the proposed manufacture of strips for making pipes for which India is entirely dependent upon foreign imports. With Tatas launching its project, India can hope to be self-sufficient so far as this item is concerned. There is also a scheme formulated by Bharatiyas, National Iron and others, for manufacturing certain high-grade alloy steel which the country so badly needs to-day. Mr. Natesan welcomed this scheme and emphasised that it would be in the interest of everyone if the Association of Engineering Industries could bring about co-ordination in the schemes for the manufacture of high-grade alloy steel to avoid any possible duplication.

New Steel Works

The Five-year Plan provides for the setting up of a new steel works within six years from the date of announcement of the Plan. It will be remembered that as early as in 1948, the Government appointed three eminent steel firms, two from the U.S. and one from the U.K., to make a survey of the position in India and submit reports to the Centre in this matter. These three firms submitted their reports early in 1949, but owing to lack of finances, no action was taken on them. As some of the foreign firms as well as the World Bank evinced keen interest in the new project, the Government appointed a technical mission consisting of Dr. Lambert, representative of the World Bank, Mr. E. W. Hill, a representative of Koppers Inc., and of the Government of India to investigate into this matter some time back. The Mission submitted its report to the Government recently which is now under its active consideration. Alluding to this aspect, Mr. Natesan said: "You may rest assured that Government is fully alive to the need for the new steel works and will do all in its power to set up the plant at the earliest possible time."

Asked whether the technical mission had given any estimate of the capital cost of setting up the new steel plant, Mr. Natesan said that the cost would depend to a considerable extent upon the site chosen for it. He, however, thought that India could have this new steel works established at a cost of about Rs. 60 to Rs. 70 crores. He was of the opinion that what India needed was flat products like sheets and plates. The Technical Mission had recommended to the Government that a mill for manufacturing flat products should be installed as part of the new steel plant scheme.

Answering a question as to whether the Mission had suggested any site for the new steel plant, Mr. Natesan said that it had discussed various alternative sites but had not made any definite choice in its recommendations. The intention of the Government was to leave the matter open at present, and if any foreign firm or the World Bank came in with sufficient capital, it would be consulted and given a choice for the selection of site for the plant, he added.

INTERNATIONAL EXHIBITION OF LOW-COST HOUSING

Early next year, New Delhi will be a centre of world-wide interest on matters relating to cheap housing. During January and February, 1954, it will be the venue of an International Exhibition of low-cost housing, a seminar on housing to be held by the United Nations Technical Assistance Administration, and a Regional Conference of the International Federation for Housing and Town Planning. India will also be the host for the second meeting of the E.C.A.F.E. Inter-Secretariat Working Party which will discuss housing.

The Exhibition will primarily be concerned with showing, through various ways and media, the advances made in different parts of the world in low-cost housing. The most important exhibits will be full-scale model houses for rural and urban areas. These houses will be put up by and at the cost of participating Governments or private *entrepreneurs*. The Government of India will, in suitable cases, provide local materials and unskilled and semi-skilled labour necessary to construct houses at the cost of the exhibitors. The upper limit of the cost of a house has been fixed at Rs. 5,000. The aim will, however, be to build cheaper houses.

It is hoped that the participating foreign countries and the different States in India will be able to leave behind their full-scale housing exhibits on the site. These will form a permanent museum of low-cost housing.

USE OF LIGNITE IN IRON AND STEEL INDUSTRY

Lignite can be utilised in the direct reduction processes in the iron and steel industry, according to recent investigations carried out under the auspices of the Lignite Investigation and Development Department, Government of Madras.

High grade coking coal is largely used at present for the production of iron and steel from iron ores. Indian resources of good coking coal are limited and this quality coal occurs mostly in Bihar. Iron ore occurs in a number of places in India where coking coal is not available, and unless an alternative to coking coal is made available, the economic production of iron and steel is not practicable in these regions. The recent investigation, therefore, is of great interest, especially in the case of the Madras State were lignite and iron ores occur in close proximity to each other.

The reactivity of the different forms of lignite examined for their efficiency as reducing agents is found to depend on the treatment they have undergone prior to their use. Steam-dried lignite is more reactive than natural lignite and oven-dried is as reactive as steam-dried lignite.

COACH BUILDING FACTORY AT PERAMBUR

A delegation from the Swiss Car and Elevator Corporation has arrived in India to finalise an agreement with the Centre for the supply of machine tools and plants for building all-steel lightweight railway coaches at the Integral Coach Factory, Perambur. Dr. D. V. Reddy, Deputy Chief Mechanical Engineer of the Integral Coach Factory, who was deputed by the Government of India to study, on the spot, the technique of lightweight coaches in the U.K., France, Italy, Germany and Switzerland and to assess the machinery requirements of the Factory in collaboration with the Swiss Corporation, has just returned to India. While in Switzerland, he is stated to have made a special study of the design of coaches built by the Swiss Corporation, as coaches of the same type would be built at Perambur. The Swiss Factory, it may be noted, has built for India 100 all-steel lightweight coaches, of which 50 have already been received and are running on Indian railways.

The Railway Budget for 1953-54 has provided a sum of Rs. 1.3 crores for the construction of the Integral Coach Building Factory at Perambur. The construction of the Factory, which was taken in hand towards the end of 1951-52, is progressing fairly well. The total estimated cost of the project is Rs. 4 crores approximately. The Factory building is likely to be completed by the middle of 1954. The target of the Factory is 350 coaches a year.

UTILISATION OF LOW GRADE MANGANESE ORES

A method for the utilisation of low grade manganese ores has been evolved at the National Metallurgical Laboratory, Jamshedpur. Manganese ore containing over 40 per cent. manganese and a very low phosphorus content—less than 0.3 per cent.—is required for the production of ferro-manganese. Such high grade manganese ore is generally hand-picked from the manganese ore burden after blasting, leaving the low grade ore which has no prospect of commercial utilisation. The process developed at the National Metallurgical Laboratory consists in separating iron from the low grade manganese ore by thermal reduction. A slag rich in manganese is obtained which can be used for the production of ferro-manganese, which is an important element in the composition of industrial steel.

CONTROL OVER ATOMIC ENERGY

The Government of India has announced new controls over five substances, used in the production of atomic energy, namely, radium, zirconium, graphite, lithium and deuterium. According to them, no person can deal in any of these substances or in any plant designed for the production and use of atomic energy without Government licence. Substances already controlled by the Government under the Atomic Energy Act of 1948 are uranium, thorium, plutonium, neptunium and beryllium. The new order also extends Government control over 10 other minerals from which atomic substances can be obtained, namely, pitchblende, columbite, samarskite, uraniferous allanite, monazite, ilmenite, zircon, rutile, beryl and uranium-bearing tailings left over from ores after extraction of copper or gold.

TOURIST OFFICE FOR SRINAGAR

The Union Ministry of Transport has opened a Tourist Office in Srinagar in view of the importance of Kashmir as a focal point of tourist interest. This is one of the chain of offices which the Government of India has proposed to establish in important tourist centres in the country to promote tourism. The Srinagar Tourist Office will have a film exhibition room, where films of tourist interest and informative documentaries will be shown. It will also have a library of books on Indian culture and history. It may be noted that last year, 13,100 tourists visited the Kashmir Valley, as against 10,579 in 1951 and 6,783 in 1950.

INSURANCE POLICIES UNDER ESTATE DUTY BILL—II

NEED FOR MODIFICATIONS URGED

THERE are three clauses in the Estate Duty Bill which deal specifically with insurance policies and annuities. These are clauses 14, 15 and 16. Of these, clause 14 deals with policies kept up for donee and the rest with annuities. Clauses 15 and 16, which deal with annuity or other interests purchased or provided by the deceased, are intended to prevent a person from escaping estate duty by reducing his estate, during his lifetime, by money or money's worth paid as premiums which, after his death, reappear in the form of a beneficial interest accruing or arising on death. It is necessary to consider the effect of clause 14 on insurance, for it refers to the general class of policies taken out by insured in this country.

Clause 14 brings under charge the money received under a life insurance policy kept up by a person for the benefit of the donee. The premium may be payable by the person out of any property settled by him or out of income arising under a settlement made by him. If it is only a part of the premium that is so paid, then it is only the proportionate amount received under the policy that will be taken for purposes of the levy of the duty. Referring to this clause, Mr. Gupta says:

"In India, most of the policies taken are kept up for the benefit of the donee but the premiums are met by the donor himself. In all such cases, therefore, the policy moneys would be subject to duty. In England and other foreign countries, in a large number of cases, the donees, who may generally be the wives, have separate properties from which they are able to meet the premiums and the policy moneys that they so get are not subjected to death duty. In view of the provisions of this clause, whatever benefits were conferred on the policyholders under clauses 9 and 10 have been mostly taken away."

Criticism of Clause 14

Clause 14 has been criticised on the ground that, while it has been lifted from the English law on the subject, the authors of the Bill have not made sufficient allowance for the difference between the conditions in the two countries. It would appear that this point was stressed by the Indian Life Assurance Offices Association in the representation on the Bill which it submitted to the Government. The chief difference between the Indian and British practices is that whereas it is fairly common in the U.K. for the wife to have separate property and separate income wherewith she would be in a position to pay the premiums on a policy gifted to her by her husband, there are very few men in India, whose wives are in such a fortunate position. It is further pointed out that even in the case of policies where a nomination or assignment in favour of a donee was made two years before the death of a policyholder, the premium subsequent to the date of gift will be actually paid by the policyholder himself with the result that the benefit of clause 9, namely, exemption from estate duty, will not be available in actual practice. Perhaps, this anomaly is only one of the many others which must result from transferring a legislation, developed in one particular national context, to another country.

Exemptions

Clause 32 deals with exemptions, that is, property on which no estate duty is payable. From the point of view of insurance business as well as from that of property holders, in general, the following exemptions are noteworthy:

Property taken under a gift made by the deceased for a public charitable purpose within a period of six months from his death, to the extent of Rs. 2,500 in value;

Property taken under a gift made by the deceased for any other purpose within a period of two years before his death, to the extent of Rs. 1,500 in value;

Moneys payable under one or more policies of insurance effected by the deceased on his life for the purpose of paying estate duty or assigned to the Government for the said purpose, to the extent of the amount of duty payable;

Moneys payable under one or more policies of insurance effected by the deceased on his life, to the extent of Rs. 5,000;

Gifts made by a deceased parent or natural guardian in consideration of the marriage of any of his female relatives dependent upon him for the necessaries of life, or moneys earmarked for such purpose under policies of insurance or declarations of trust or settlements effected or made by the deceased, to the extent of Rs. 5,000 in respect of the marriage of each of such relatives.

Gifts to Relatives

The exemption of moneys payable under policies which are clearly designed to provide funds for the payment of the estate duty is indeed a notable provision. Indian insurers will do well, when the Bill becomes law, to bring the significance of this provision to the notice of all those who are likely to leave behind properties of the value which would attract estate duty. However, the exemption limit in the case of insurance policies is very small. And there is scope for making the provision relating to gifts to female relatives more liberal than it is at present. In his closely reasoned minute of dissent, appended to the Select Committee Report on the Bill, Mr. Tulsidas Kilachand, member of the Committee, says:

"The exemption in respect of moneys payable under one or more insurance policies effected by the deceased on his life has been limited by the Select Committee to Rs. 5,000. The limit should be raised to Rs. 25,000. This will give a fillip to insurance companies apart from being necessary from the point of view of the family of the deceased.

"The Select Committee have provided that in the case of gifts made in consideration of marriage by a deceased parent or a natural guardian in respect of each female dependent, an exemption should be granted to the extent of a sum not exceeding Rs. 5,000 for each person. The exemption would be available not only for gifts but also for moneys earmarked for such purposes under policies of insurance or declarations of trust or settlements made by the deceased. It is necessary to extend this relief to male members also and it is also necessary to provide for exemption of education expenses of any member of the family or a dependent person, if necessary, a limit of Rs. 5,000 might be placed for exemption in respect of educational expenses also."

Clause 33 of the Bill deals with aggregation of property for purposes of the levy of estate duty. Under this clause, all property, excluding the property for which exemption limit has been fixed (that is, Rs. 50,000 in the case of Hindu joint families and Rs. 75,000 in the case of others) but including property exempted from the duty under clause 32, will be aggregated so as to form one estate. The following [clause 33 (4)] is the relevant section for purposes of computing the duty on an estate which includes exempted property:

Where an estate includes any property which is exempt from estate duty, the estate duty leviable on the property which is not so exempt shall be an amount bearing to the total amount of duty which would have been payable on the whole estate had no part of it been exempted the same proportion as the unexempted value of the property bears to the value of the whole estate.

For the purposes of this sub-section property which is exempt from estate duty means any property which is exempt from estate duty under section 32 and also any agricultural land situate in any State not specified in the Schedule.

No Real Relief

The proviso to clause 33 allows that any property in which the deceased never had any interest will not be aggregated with any other property but will be an estate by itself and the duty will be leviable at the rate or rates applicable in respect of the principal value thereof. It is true this proviso would exempt from aggregation life assurance policies which are absolutely and irrevocably nominated from their commencement in favour of another person. It would, however, appear that the relief would apply only to the policies taken out under the Married Women's Property Act for the benefit of a person's wife and/or children. Since nominations are not generally made under this Act but only under the Insurance Act (under which nominations are neither irrevocable nor absolute), it is feared that the relief, that is sought to be given, will not be available to a large number of policyholders. It is further stated that the relief might not be available to persons who have taken out insurance policies before the commencement of the Estate Duty Act. The Indian Life Offices' Association, it is stated, has, therefore, emphasised that the relief envisaged in this proviso to clause 33 will prove illusory in actual practice.

It would thus appear that the Estate Duty Bill contains provisions which might conceivably affect the growth of insurance business in India. The need for preventing the incorporation of clauses which might have a deleterious effect on insurance, cannot be overemphasised. In this connection, Mr. Gupta says:

"While drafting the provisions relating to the life insurance policies the essential difference between the estate represented by investments and that represented by the proceeds of the life insurance policies has not been kept in the Bill. In the case of life assurance policies, some amount by way of premium is set apart every year in a spirit of self-denial and love for children so that they may at least be able to meet their barest necessities, in case of their parents' premature death. If estate duty is payable even on such policies the incentive to buy policies would considerably diminish from the very feeling that a part of it is likely to be taken by the State in the form of duty. Already, insurance consciousness in this country is very low as compared to other advanced countries. It is very evident from the fact that, while in India *per capita* insurance was Rs. 21, it was Rs. 7,500 in the U.S.A. In order that life insurance should be able to afford social security in the form of provision for one's old age and for the family in the event of his premature death, it is very necessary that life insurance policies should be exempted from death duty or at any rate, policies upto a fairly large denomination should be exempted from payment of death duties."

Insurance and Investment

Both Mr. Chakravarti and Mr. Sesha Ayyar have urged, in the course of their papers read at the recent Insurance Conference, the need for special and liberal exemptions for insurance policies from the scope of the Bill. Thus, Mr. Sesha Ayyar says:

"It will be easily appreciated that there is a difference between assets represented by investments and an estate arising out of the proceeds of life insurance policies. In the case of the former the investor gets the use of his investments during his lifetime while a life insurance policy is taken for a specific purpose and is properly regarded as an economic and social necessity. A periodical sum is set aside which accumulates and makes good the financial loss to a family in case of the premature death of the breadwinner. This differentiation has been recognised and in order to encourage thrift through life insurance, insurance premia are exempt from the levy of income-tax subject to certain limits. It is only reasonable to expect that this principle should apply to proceeds of life insurance policies in relation to estate duty; the Bill does not provide for exemption even to a reasonable extent."

Mr. Chakravarti too strikes the same note when he says:

"People of this country are yet to be taught the utility of insurance. Everyone will agree with me that insurance business in India is still lagging behind. All facilities are to be extended to every policyholder so that persons at large may be interested in policies in order to cover full risk on their lives. But instead of encouraging the policyholders in every respect, if more restrictions come in and duties like this are charged on policies, it is apprehended, there will be a great setback in insurance business that can enhance the social service and industries in the State."

Special Consideration Needed

The need for special consideration for insurance policies arises from two considerations. In the first place, insurance habit has, as is well known, still to spread to many sections of our people. Secondly, it would be unwise to import *in toto* the estate duty legislation from other advanced countries without making suitable alterations to meet India's special needs. After all, it must be remembered that in the West, the State takes upon itself a large proportion of the responsibility for providing relief against death of the breadwinner and old age, whereas, in India, this responsibility has almost entirely to be borne by the individual citizen. It is, therefore, essential to see that nothing is done to impair the chances of the individual citizen providing, by his own unaided effort, against contingencies such as death and old age. If the Government in this country cannot take upon itself the entire responsibility for providing social security to all its citizens—the Government cannot accept this responsibility at the present stage of the country's economic development—it should not, even unwittingly, discourage the spread of insurance habit. On the other hand, a special responsibility is cast upon the State to see that sufficient encouragement is given to private insurers in order that the latter might be enabled to evolve the best forms of security, at reasonable cost, for the benefit of the people. It is, therefore, to be hoped that the Government will give its earnest attention to the problem which the Bill, in its present form, creates for the insurers, and that it will introduce, during the passage of the Bill through Parliament, such amendments as might be necessary for purposes of removing the disincentive effects of the Bill on insurance business in India.

• • • •

In last week's article on the subject, "Insurance Policies under Estate Duties Bill," the number of the clause relating to joint investments is 13 and not 14, as stated therein.

BORROWING ON LIFE POLICIES

A healthy economic sign in Australia is the comparatively small amount of borrowing on life policies, the Chairman of the Mutual Life and Citizens Assurance Company of Sydney, Sir Henry Manning, told shareholders recently. The Chairman said that at the close of the 1931 depression, policy loans amounted to 8.94 per cent. of the Company's total assets. At the end of 1952, they constituted only 2.64 per cent.

SHREE NIWAS COTTON MILLS LTD.

MR. G. D. SOMANI'S ADDRESS AT ANNUAL MEETING

A WARNING against the adoption of any attitude of complacency about the present high level of production of cotton textiles in India was given by Mr. G. D. Somani, in the course of his address to the shareholders of the Shree Niwas Cotton Mills Ltd., at their Annual General Meeting held in Bombay on the 21st inst. For the maintenance of the production at current levels, he rightly stressed, would depend on the ability of the industry to bring down cloth prices within the purchasing power of consumers and to compete with those of foreign producers. He, however, opined that the various burdens cast on the industry did not offer any scope for reduction in the manufacturing cost. The rehabilitation of the industry could, to some extent, bring down costs, but this needed, according to him, revision of the Government's taxation policy.

The following is the full text of Mr. Somani's address:

"GENTLEMEN,

"I have great pleasure in welcoming you all to this eighteenth annual general meeting of the Company. The Directors' report and the audited accounts for the year ended 31st December, 1952, have been in your hands for some time past and I shall, therefore, with your permission take the same as read.

"The results achieved during the year under review, though not so favourable, have to be judged in the context of the circumstances which faced the textile industry, in general, and your Company, in particular. Our quota of East African cotton under the bulk purchasing programme of the Government was very heavy and the steep fall in the prices of foreign cotton affected the result adversely. Added to this, the early part of the year saw the severe slump in all commodities and the cloth during this period was not saleable even at considerable discount over the ex-mill prices. You would please appreciate that the result under the circumstances could not have been better.

"In view of the consumers' resistance in the internal market and the growing competition in the overseas markets, the greatest need of the textile industry at present is to bring down the cost of manufacturing to a competitive level. While the present high level of production is welcome, it cannot be too strongly stressed that the maintenance of this production will in the long run depend upon the ability of the industry to bring cloth prices within the limit of the low purchasing power of our people in the internal market and the severe competition levels of the markets overseas. Unfortunately, the industry is to-day having more and more burdens thrust upon itself and one really wonders whether the breaking point has not already been reached.

"Over and above the heavy burdens imposed by several labour legislations like the Provident Fund and the Employees' State Insurance Act, there have been recently heavy additional increases in the cost of manufacturing like the tremendous rise in D.F.A., the multi-point sales tax of the Bombay Government, the levy of additional three pies per yard on mill-made cloth to assist the *khadi* and other handloom industries and the drastic upward revision in the excise duty on fine and superfine cloth.

"The importance of cloth is next only to that of food and there can be no justification for such heavy burden of taxation on such an essential commodity of consumption of the people. Moreover, the incidence of such heavy burdens has to be judged from a long-term point of view, in the context of the buyers' market that has emerged all round.

"It is, therefore, hoped that the Enquiry Committee, which is at present engaged in an elaborate review of all sectors of textile production, will go deeply into the various problems facing the industry and will recommend such measures as will enable the premier national industry to keep its wheels of production moving smoothly.

"Another important matter which calls for urgent attention is the question of rehabilitation of the industry. This matter has now been referred to the Taxation Enquiry Commission and I am confident that the expert body, which

INDIAN PENCIL INDUSTRY

IS THERE CASE FOR CONTINUATION OF PROTECTION?

THE question of continuance of protection to the pencil industry is now before the Tariff Commission. It will be recalled that the industry was first granted protection in December, 1950, on the recommendation of the Tariff Board. As a result, the then existing revenue duties of 25 per cent. *ad valorem* or one anna per dozen, which ever was higher, plus one-fifth of the total duty on black lead pencils and 37½ per cent. on coloured and copying pencils, were converted into equivalent protective duties. The rate of alternative specific duty on black lead pencils was revised upwards from one anna to As. 3-6 per dozen in order to bring it in conformity with the then prevailing c.i.f. prices of imported pencils. While the Government of India granted protection for two years, the continuance of protection beyond the first year was, however, made conditional on a review of the progress made by the industry during the first year.

In pursuance of this decision, the Tariff Board reviewed the progress of the pencil industry during 1951 and recommended continuance of protection upto the end of December, 1952. Protection was, however, further extended upto the end of 1953, as an interim measure, pending further enquiry by the Tariff Commission for continuance of protection to the industry. It may be noted that under the Finance Act, 1953, the protective duty leviable on all types of pencils was enhanced to 66⅔ per cent. The alternative specific duty on black lead pencils was revised upward to As. 8 per dozen. The enhancement of duties, along with fixation of floor c.i.f. prices for the purpose of regulation of imports of all types of pencils, has provided a higher quantum of protection to the industry.

From a review of the conditions of the industry, as made out by Dr. B. V. Narayanaswamy Naidu, member, Tariff Commission, while opening the enquiry into the continuation of protection last week, at Bombay, it is clear that the claim for the continuation of protection is justifiable. For, the period of three years including the present extension upto the end of 1953, is a short one for any industry to establish itself on sound lines. The industry is capable of standing on its own legs provided sufficient aid is given to it now. One point to be borne in mind is that the productive capacity of the industry is not being used sufficiently. Thus, as against an increase of 4.55 lakh gross to 11 lakh gross in the productive capacity during the last three years, the actual output of the industry increased from 1,17,691 gross in 1950 to 2,42,599 gross in 1951, but it fell sharply to 1,50,589 gross in 1952. It is thus evident that the proportion of production to capacity was much lower in 1952 than in 1950.

Liberalisation of Import Policy

It is stated that one of the chief reasons for the decline in production in the year 1952 is progressive liberalisation of import policy. A brief review of the import policy discloses that imports of all types of pencils except artists' pencils were completely banned during 1950. But, in the first half of 1951, the policy was liberalised only in respect of black lead pencils and a quota of 10 per cent. of one half of the best year's imports was fixed for import from soft currency areas only. This was further liberalised in January-June, 1952, and again in January-June, 1953, when the quota for black lead pencils was raised to 20 per cent. and 30 per cent., respectively. On 20th December, 1952, a floor c.i.f. price of Rs. 16 per gross was fixed in respect of black lead pencils and the same is continuing even now. So far as coloured and copying pencils are concerned, the ban on imports since January, 1950, was lifted in January-June, 1952, when a quota of 40 per cent. of one half of best year's imports was fixed, and the quota was based on all items of stationery. The same policy is effective even during the current half-year, namely, January-June, 1953, subject, however, to the modification of a floor c.i.f. price of Rs. 20 per gross fixed for regulating the imports of coloured and copying pencils in respect of additional licences. The imports were 34,927 gross in 1950-51, 149,992 gross in 1951-52, and 377,208 gross during the ten-month period ended January, 1953. The Tariff Commission has to enquire how far liberalisation of import policy has affected the industry.

The extent of imports should cover the excess of demand over the quantum of indigenous production. The estimates of demand for pencils, however, vary largely from 3.5 lakh gross to 6 lakh gross. The major producers consider the distribution of demand for different types of pencils to be 75 per cent. for black lead, 15 per cent. for copying, and 10 per cent. for coloured pencils. The Commission has to examine the various estimates and strike a reasonable estimate of the demand.

It is stated that although the quality of pencils manufactured in India has recorded some improvement since the Tariff Board's last enquiry, it is still inferior as compared with imported pencils and that there is considerable scope for further improvement. The quality of the pencils has a vital bearing on the future of the industry, as only its ability to satisfy consumers in this respect will secure its stability.

Raw Materials

There is one more aspect of the industry which the Tariff Commission has to consider and that relates to the supply position of raw materials. The continuance of the O.G.L. in respect of wood-slats and graphite, which are by far the most important raw materials, is of great help to the industry. But too much dependence on imports will not, in the long run, be in the interests of the industry. The Tariff Board in its Report (1950) had recommended that imports of pencil wood from soft currency sources should be permitted liberally, until the manufacture of slats from indigenous timber is established in the country. Since then, the State Governments of U.P. and the Punjab have made a modest beginning in the direction of starting wood-slat manufacturing units in their States. A slat-manufacturing factory, called Kapur's Industrial and Research Laboratory, has been established in Calcutta. It is understood that this factory has been manufacturing, on a large scale, chemically treated and pressure-dyed slats from deodar and kail for pencil manufacture but that the indigenous manufactures have not extended their co-operation to this unit. We consider that protected industries should make utmost efforts to utilise indigenous raw materials and thereby encourage development of the feeding industries. The Tariff Commission has to examine the possibility of utilising indigenous slats from the point of view of economic price and quality.

So far as indigenous graphite is concerned, considerable research has yet to be directed towards its refinement so as to make it suitable for the pencil industry. We are told that the National Physics Laboratory is evolving certain formulæ for the testing of pencil leads in respect of resistance to wear, strength and writing quality. The Laboratory is now actively busy in beneficiation of graphite ores and indigenous producers can get their samples of graphite ores tested on payment of certain charges. It is to be hoped that the manufacturers would utilise the laboratory to the best possible advantage of the industry.

U.K.'S TRADE WITH INDIA

The trade of the United Kingdom with India during the first three months of the current year shows a sizable decline in the values of both exports and imports, as compared with those during the corresponding period in 1952. Thus, exports from the U.K. to India declined from £30.3 million during January-March, 1952, to £26.4 million during the first quarter of 1953. The recession was occasioned by a fall in exports of machinery, vehicles, chemicals, drugs, dyes and colours, while exports of electrical goods and apparatus recorded a sizable gain. Imports from India during the first quarter of 1953 were valued at £24.8 million, as against £40.2 million during the corresponding period in 1952, thus showing a decline of £15.4 million. The drop was due to a drastic fall in the imports of tea, jute manufactures and seeds and nuts for oil, oils, fats, resins and gums. But imports of leather and manufactures recorded a considerable increase in value. The following table (from the *Trade and Navigation Accounts of the U.K.*) gives the summary in values of the principal exports and imports during January-March, 1953, as compared with those in the corresponding period, as also the statistics for the full year 1952:

(£ 000's)

	Full year 1952	*3 months Jan.-March* 1952	1953
Total, all exports	112,149	30,358	26,479
Of which :—			
Machinery	35,626	9,359	8,781
Vehicles (including ships and locomotives)	16,823	4,800	3,609
Electrical goods and apparatus ..	11,391	2,601	3,084
Chemicals, drugs, dyes and colours ..	9,987	3,701	1,739
Total, all imports	114,554	40,228	24,881
Of which :—			
Tea	48,732	18,098	10,639
Jute manufactures	13,256	7,572	657
Seeds and nuts for oil, oils, fats, resins and gums	6,144	2,069	1,622
Leather and manufactures	9,284	2,472	3,276

INDIA'S EXPORTS IN 1952-53

India's exports to the dollar area in 1952-53 were valued at Rs. 137.65 crores, as against Rs. 170.65 crores in 1951-52. Exports to other currency areas were Rs. 431.93 crores in 1952-53, as against Rs. 558.05 crores in the previous financial year.

By far the biggest item of export was jute manufactures, of which the dollar area bought 304,600 tons for Rs. 57.93 crores and other currency areas, 405,200 tons for Rs. 71.67 crores. In 1951-52, when jute manufactures fetched higher prices, the dollar area took 254,000 tons for Rs. 87.30 crores and the other currency areas 555,300 tons for Rs. 183.08 crores.

The next biggest item was tea. India sold 427,700,000 lbs. for Rs. 81 crores, the dollar area's share of it being 52 million lbs. for Rs. 10.20 crores.

Of cotton piecegoods, India sold a total quantity of 614,300,000 yards for a price of Rs. 61.88 crores. Most of this went to the soft currency areas, the dollar area taking not more than 4,300,000 yards for Rs. 48 lakhs. In 1951-52, India sold 427,400,000 yards for Rs. 52.20 crores, the dollar area taking as much as 33,200,000 million yards for Rs. 3.37 crores.

Other items were hides and skins (24,300 tons valued at Rs. 21.51 crores), manganese ore (1,357,400 tons valued at Rs. 20.69 crores), cotton (70,800 tons valued at Rs. 19.32 crores), pepper (246,200 cwts. valued at Rs. 15.96 crores), tobacco (83,600,000 lbs. valued at Rs. 15.18 crores), cashew kernels (27,400 tons valued at Rs. 12.76 crores), groundnut oil (1,365,100 cwts. valued at Rs. 10.46 crores) and coal (2,668,400 tons valued at Rs. 10.01 crores).

SWEDISH-JAPANESE TRADE AGREEMENT

A Swedish-Japanese trade agreement foreshadowing a commodity exchange of about Kr. 50,000,000 (£3,448,000) in each direction from the period April 1953—March 1954 has been signed in Tokyo. Exports from Sweden include cellulose, iron and steel, machinery, instruments and other engineering industry products, while imports mainly consist of textiles, ship-building material, chemicals, pottery, machines and instruments.

REPORT OF THE AUDITORS TO THE SHAREHOLDERS.

We have audited the foregoing Balance Sheet of the Elphinstone Spinning and Weaving Mills Co., Ltd., as at 31st December, 1952, and also the foregoing Profit and Loss Account of the Company for the year ended upon that date, from both of which annas and pies have been eliminated and report that :

(a) We have obtained all the information and explanations we have required ;

(b) In our opinion the foregoing Balance Sheet and Profit and Loss Account are drawn up in conformity with the Law ;

(c) Such Balance Sheet exhibits a true and correct view of the state of the Company's affairs according to the best of our information and the explanations given to us and as shown by the Books of the Company ; and

(d) In our opinion Books of Account have been kept by the Company for the period under report as required by Section 130 of the Indian Companies Act, 1913.

S. B. BILLIMORIA & CO.,
Chartered Accountants.

BOMBAY, 30th April, 1953.

The above Balance Sheet to the best of our belief contains a true account of the Capital and Liabilities and of the Property and Assets of the Company.

WORLD LABOUR PROBLEMS

I.L.O. CONFERENCE TO MEET NEXT WEEK

THE thirty-sixth General Conference of the International Labour Organisation will open on 4th June. Government, employers' and workers' delegates from the sixty-six member countries of the I.L.O. will consider, among others, the adoption of international standards for the protection of health of workers in places of employment, for fixation of minimum age for underground workers in coal mines and for holidays with pay. As usual, the Conference will also discuss an annual survey of the world economic and social trends that will be submitted by Mr. David A. Morse, Director of the I.L.O.

The question of adopting international regulations to safeguard the health of workers in industrial establishments has been, of late, gaining increasing attention. It was first discussed by the General Conference last year and it was agreed that this year's Conference shall pursue it further on the basis of a report to be prepared by the I.L.O., following consultations with the Governments which are members of I.L.O. At the same time, it was decided that the 1953 Conference should determine whether the proposed regulations should take the form of a Recommendation or (2) one or more Conventions supplemented by a Recommendation.

The International Labour Office has therefore, prepared two alternative sets of texts for the consideration of the Conference One of these is in the form of a Recommendation, the other comprises two proposed Conventions to be supplemented by a Recommendation. The proposed Recommendation deals with technical measures for the control of health hazards, medical examination and notification of occupational diseases. One of the Conventions seeks to regulate medical examination of workers and the other requires the notification of cases of occupational diseases.

The proposed Recommendation on holidays with pay provides that, where conditions permit, workers should be granted, after one year of continuous employment, an annual paid holiday of not less than 12 working days or not less than ten days where the week consists of only five working days. It also proposes that the right to holidays, on some stipulated basis, proportionate to the number of full months' service should be acquired after six months of continuous service. It further suggests that effect may be given to the Recommendation by public or voluntary action, legislation, collective agreements or arbitration or by any other way consistent with national practice.

If the Conference decides to pursue the question further, the matter will come before the 1954 session for final consideration. If adopted, the proposed Recommendation will supplement a Convention (treaty) and a Recommendation on holidays with pay, which were approved in 1937. The Convention which came into force in 1939 provides that workers in industry and commerce shall be entitled to an annual paid holiday of at least six working days.

The adoption of a formal Recommendation that young persons under sixteen should not be employed underground in coal mines was placed on the agenda by the decision of the International Labour Conference last year. At that time, the delegates approved a resolution suggesting standards governing the employment of young persons in underground coal mining. This resolution proposed that the minimum age of employment should be sixteen. The proposed Recommendation, as drafted by the Office, also provides that young persons under sixteen years of age should not be employed underground in coal mines. Young persons who have attained the age of 16 years but are under 18 years should not be employed underground except for purposes of apprenticeship or other systematic vocational training provided, under adequate supervision, by competent persons with technical and practical experience of the work, or under conditions determined by the competent authority prescribing the places of work and occupations permitted and the measures of systematic medical supervision to be applied by Governments "as rapidly as national conditions allow."

The annual survey of the world's economic and social trends refers to the proposal which the International Labour Office made to the I.L.O. Conference as long ago as 1950, namely, that the dollar countries should make large-scale loans to underdeveloped countries, which should be free to use these loans to purchase materials and capital equipment from Europe as from dollar countries, their choice depending on the relative prices and quality of goods available. This proposal is designed to provide Europe an opportunity to obtain needed dollars from the underdeveloped countries for financing its own deficit and help re-establish such a system of multilateral clearing of trade balance as existed before the war.

Mr. Morse, in his annual report to the Conference has also stressed the need for continual increase in productivity. He has highlighted four most essential conditions under which higher productivity will result in increased welfare. First, there should be the fullest possible consultation and co-operation between employers and workers. Secondly, the benefits of higher productivity should be fairly distributed. Thirdly, effective action should be taken to ensure that higher productivity does not lead to unemployment. Fourthly, higher productivity should be sought by means which only require of workers the speed and intensity of work which they can maintain without increased fatigue, strain or risk to health or safety.

PAY STRUCTURE
You have been obliged to make numerous changes in pay scales and special allowances in recent years, and no end to these alterations is in sight. However well thought out your pay structures may have been originally, the probability is that they are now out of balance and full of anomalies. One of the functions of Unions is to pick out these anomalies and place them before you for correction. In rationalising one existing anomaly it is dangerously easy to create fresh ones, and the process can go on indefinitely. You must have felt the need for an all-embracing review of your basic pay structures to adjust them in relation to each other and to take into account the latest rules governing taxation on incomes. Furthermore, you would like the pay for each job to be part of a flexible and permanent structure which will not have to be scrapped and rebuilt the next time pay has to be generally raised.
The way to attain these objectives is to prepare a plan in co-operation with management and the Unions for the evaluation of every job, followed by grouping into grades and the calculation of a graded incremental pay structure.

INDO-BURMA PETROLEUM PAYS HIGHEST DIVIDEND SINCE 1940

RESULTS SATISFACTORY—FINANCES SOUND

AN increase of Rs. 2.38 lakhs in gross profit, that is from Rs. 47.09 lakhs to Rs. 49.47 lakhs, and a rise in the dividend from 10 per cent. to 15 per cent. per annum are the two notable features of the working of the Indo-Burma Petroleum Co., Ltd. (Managing Agents: Messrs. Steel Brothers & Co., Ltd., Calcutta) for the year ended 31st December, 1952. The increase in gross profit over the year, albeit small, is a welcome one, in that it is a reversal of the downward trend noted in the Company's profit during the preceding two years. The increase in the dividend level which involves an additional distribution of Rs. 5 lakhs may appear to be incommensurate with the expansion in profit noted above, but the Company has had an additional income of Rs. 8.01 lakhs by writing back the provisions made in the earlier years and by the receipt of the E.P.T. post-war refund. The Directors have thought it fit to pass on the benefit of this extra income which was provided out of the earnings for the previous years and which, in the ordinary course, might have been utilised to raise the dividend in the earlier years.

The following comparative table gives, at a glance, the progress in the Company's financial results during the past three years:

(In lakhs of rupees)

	For the year ended 31st December			
	1952	1951	1950	1949
Sale proceeds	607.05	572.75	569.35	478.21
Other income	19.90	14.90	9.70	6.42
Expenses	577.48	540.56	521.47	402.29
Gross profit ..	49.47	47.09	57.58	82.35
Managing Agents' remuneration	3.36	3.00	2.22	5.13
Depreciation	4.35	9.21	11.19	1.86
Taxation	27.16	22.30	28.00	36.00
Net profit	14.60	12.58	16.17	39.36
Other income	14.66	8.63	0.67	
Bonus to staff	0.25	0.25	0.31	0.07
Reserves	9.50	10.00	1.70	23.00
Dividend—				
Preference	2.58	2.58	2.62	2.41
Ordinary	15.00 (15%)	10.00 (10%)	10.00 (10%)	10.00 (10%)
Carry forward	4.03	2.10	4.33	2.72

It will be noted that the sale proceeds for 1952 have gone up by a sizable amount due to a small overall increase in the volume of the Company's sales of oil products in all spheres, over that of the previous year. The expansion in sales is attributed to the steady trading conditions which prevailed during the year under review. "Other income," amounting to Rs. 19.90 lakhs, includes Rs. 5.21 lakhs being the profit on sale of one of the Company's oil tankers. The benefit of this income has been more than offset by the provision of a sum of Rs. 6.10 lakhs for contingent liability shown under expenses. Even if these two extra items of income and expenditure are excluded, the gross profit for 1952 will still show a small improvement over that for 1951. A disquieting feature of the Company's working is the continued rise in expenses. Thus, in the course of the last three years alone, the expenses have gone up by Rs. 175.19 lakhs, while sale proceeds have expanded by Rs. 128.84 lakhs only. The net profit of Rs. 14.60 lakhs is supplemented by other income amounting to Rs. 14.66 lakhs, represented by adjustments relating to trading in previous year Rs. 6.66 lakhs, provision made in earlier years, against cost of a special survey docking which had then been contemplated for the Company's tanker, now written back, Rs. 7.20 lakhs, and post-war E.P.T. refund Rs. 80,902. Evidently, the management must have found that it would be uneconomical to effect repairs to this tanker and has disposed of it. The management has, accordingly, written back the provisions made earlier for the purpose of special survey docking of the tanker. Out of the sum of Rs. 29.26 lakhs thus available for disposal, the Directors have placed to the dividend equalisation reserve Rs. 1 lakh and general reserve Rs. 8 lakhs. Last year, they had not provided any sums for these two reserves, but, instead, had set aside Rs. 5 lakhs for special survey docking of the tanker, Rs. 4.60 lakhs to investment depreciation reserve and Rs. 1 lakh for writing off the Company's holding in N.F.B. Displacement Pump Co., Ltd. The interim dividend of Re. 1-8 per share of Rs. 40 on the ordinary shares for the year under review was the same as that paid for 1951, but the final dividend has been stepped up from Rs. 2-8 to Rs. 4-8 per share. The total dividend of Rs. 6 per share or 15 per cent. per annum is the highest paid since 1940 when a dividend of 17½ per cent. was paid.

The Company's latest balance-sheet reflects a satisfactory financial position, as the following synopsis will show:

Liabilities	Rs.	Assets	Rs.
Capital ...	1,50,00,000	Gross block ...	1,04,61,324
Reserves and surplus ...	1,57,51,440	*Less*—Depreciation ...	77,70,533
Provision for taxation ...	46,41,348	Net block ...	26,90,791
Liabilities ...	1,76,46,215	Merger expenses ...	1,50,44,995
		Stocks ...	37,41,238
		Stores ...	25,61,560
		Debts, deposits and advances ...	24,91,054
		Investments	53,77,579
		Cash ...	2,11,31,786
Rs.	5,30,39,003	Rs.	5,30,39,003

The Burma Government's negotiations with the oil companies in Burma regarding the former's participation in the oil industry of the country advanced considerably during the year, but there was some delay at the end of the year on account of a reference made to the Supreme Court of Burma to test the validity, under the Union Government Constitution, of the Government's participation in the industry on the suggested basis. The Directors report that a "satisfactory decision was given recently."

The construction of the additional units to increase the output of refined products from the distillation plant at Chauk could not be completed during 1952. The Directors now expect that these will not be ready for commission until the second half of 1953.

SEN-RALEIGH INDUSTRIES OF INDIA LTD.

The year ended 30th September, 1952, was a notable one for the three-year old Sen-Raleigh Industries of India Ltd. (Chairman: Mr. Sudhir Kumar Sen, Calcutta), inasmuch as it saw the fruition of the management's efforts to complete the first stage in their manufacturing programme and to finalise the plan for embarking upon the second stage. The Company's agency commission on sale of Raleigh products shows a sharp rise from Rs. 1.68 lakhs to Rs. 3.58 lakhs. After meeting all operational costs and establishment expenses, the gross profit for the year amounted to Rs. 88,603 as compared with Rs. 36,472 for the previous year. After writing off Rs. 17,477 from preliminary expenses and brokerage, the profit at Rs. 71,126 compares well with Rs. 40,990. Whereas a sum of only Rs. 9,648 was provided last year for depreciation, the Directors set aside this year Rs. 9,39,303 for that purpose, in accordance with their policy of taking the fullest advantage of the extra depreciations permitted in the initial year. This sum represents not only the full normal depreciation on all assets but also full initial depreciation at the rate of 20 per cent. on plant and machinery and 15 per cent. on new buildings, as well as additional depreciation. The provision of this substantial sum for depreciation resulted in a net loss of Rs. 8,68,177, as a consequence of which the Directors had to pass over the dividend on the 5 per cent. cumulative preference shares.

The Company's most modern and up-to-date factory was completed during the year, as also the erection and installation of plant and machinery for production of frames, forks, backstays and mudguards. The manufacture of these items formed the Company's first stage of production. This target was reached towards the end of the year under review. Considerable progress was also made in planning the second stage of expansion which included the manufacture of chains, spokes, hubs, pedals, handle bars and saddles, as also full plating facilities. In this connection, the Company entered into agreements during the year with the Union and Wittkop factories in Germany for technical assistance. The plant and machinery for this purpose have already been shipped from the U.K. and Continent. It is expected that some components will be manufactured before the end of 1953.

During the year under review—in June, 1952, to be precise—the Company made a second issue of capital, consisting of 15,000 preference shares and 3,50,000 ordinary shares, of which 3,373 preference shares and 95,680 ordinary shares were subscribed. This raised the Company's paid-up capital from Rs. 50 lakhs to Rs. 57.43 lakhs, of which calls in arrears at the end of the year amounted to Rs. 1.97 lakhs. The Company had to borrow a large sum for financing its expansion programme, the outstanding liability on this account at the end of the year being Rs. 16.16 lakhs. Of this, Rs. 12.12 lakhs were secured by investments and the balance was guaranteed by Raleigh Industries Ltd. The latter loan has since been repaid. The value of the gross block at the end of the year was Rs. 35.42 lakhs, of which additions during the year accounted for Rs. 24.24 lakhs. The total depreciation provided on the gross block amounted to Rs. 9.50 lakhs. The current assets (including stock-in-hand and work-in-process, Rs. 25.99 lakhs and investment at cost, Rs. 14.78 lakhs) amounted to Rs. 46.31 lakhs and provide ample cover to current liabilities at Rs. 25.43 lakhs.

ELPHINSTONE SPINNING AND WEAVING CO., LTD.

The financial results of the Elphinstone Spinning and Weaving Mills Co., Ltd. (Agents: Messrs. Chidambaram Mulraj & Co., Ltd., Bombay), for the year ended 31st December, 1952, reveal a decline in its gross profit from Rs. 16.37 lakhs for 1951 to Rs. 8.65 lakhs, representing a fall of Rs. 7.72 lakhs or 47.1 per cent. This setback in earnings should occasion no surprise, in view of the depressed state of the market for cloth. In fact, this recession is not so precipitous as in the case of several other mills in the country. Further, the year's gross profit is a fraction better than that for the year 1950 when the Company, in common with many others, suffered a fall in earnings due to a prolonged strike of workers and non-availability of cotton at economic prices. A dividend of 6 per cent. has been declared by the Directors for the year under review on a capital of Rs. 30 lakhs raised, during the year, by the issue of bonus shares, as compared with 8 per cent. on a capital of Rs. 25 lakhs paid for 1950. The dividend for 1952, therefore, is equal to 7.2 per cent. on the old capital. The year's dividend is the lowest declared by the Company since the present management took over the Mills in 1943. No dividend was paid for 1951; but, instead, a bonus issue of one share for every five shares held was made. The satisfactory feature of the dividend distribution for 1952 is that it has not, unlike in the case of several other mills, necessitated drawing on the reserves.

The salient features of the Company's results for the year under review are compared with those for the previous three years in the following table:

(In lakhs of rupees)

	For the year ended 31st December			
	1952	1951	1950	1949
Sale proceeds	182.09	190.90	138.74	167.57
Stocks	51.32	57.16	49.86	49.61
Expenses*	174.01	174.87	130.34	154.72
Gross profit ..	8.65	16.37	8.56	13.47

Carry forward	0.64	0.07	0.52	0.09

* Only approximate.
† No cash dividend was paid; instead, a scrip bonus of one ordinary share for every five shares held was issued.

In spite of the recession in profit, the provision for depreciation has not been reduced, but is kept up at the same level of Rs. 4 lakhs as in the previous three years. The lowering of the provision for taxation from Rs. 3.25 lakhs to Rs. 30,000 is in consonance with the fall in profit. The Directors' decision to set aside Rs. 5 lakhs from the profit for 1951 for capitalisation and distribution as bonus shares was carried out during the year under review. In terms of cash distribution, this sum represented a dividend of 20 per cent. on the old capital of Rs. 25 lakhs. The cut in dividend from this level to 6 per cent. on the enhanced capital (or 7.2 per cent. on the old capital) is in confromity with the decline in earnings.

After the capitalisation of the sum of Rs. 5 lakhs, the paid-up capital of the Company stands, as on 31st December, 1952, at Rs. 55 lakhs, made up of 60,000 ordinary shares of Rs. 50 each and 25,000 7 per cent. cumulative preference shares of Rs. 100 each. Reserves and surplus aggregate Rs. 13.35 lakhs. Current liabilities amount to Rs. 42.21 lakhs, of which provision for taxation accounts for Rs. 8.19 lakhs. The gross block of the value of Rs. 110.05 lakhs has been written down to Rs. 36.05 lakhs. Current assets aggregating Rs. 74.51 lakhs exceed the current liabilities by a handsome margin of Rs. 32.30 lakhs.

DUNLOP RUBBER CO., LTD.

The trading results of the Dunlop Rubber Co., Ltd., London, for the year ended 31st December, 1952, disclose a setback in the net profit, after providing for taxation. Thus, the net profit amounts to £1,969,358 which, as compared with that of £2,339,712, shows a fall of £370,354. The addition to the general reserve has been reduced from £960,000 to £520,000, but the distribution to the ordinary shareholders has been maintained at 17½ per cent., made up, as usual, of a dividend of 15 per cent. and a bonus of 2½ per cent., leaving to be carried forward £1,472,438, as compared with £1,461,838 brought in.

Points From The Chair

A Cautious View of the Future of Cotton Textiles

"IT is really a matter of gratification that the production figures of the first four months of this year show some further increase over even the high figures of production of the corresponding period of last year, but I must utter a word of warning that this should not lead the Government or the industry to an attitude of complacence for the future. We have so many formidable problems facing the industry and unless a constant study and the necessary remedial action is taken in time to withstand the impact of the coming forces, we may easily lose the valuable ground that we have covered."

G. D. SOMANI,
Shree Nivas Cotton Mills Ltd.

Sales Tax on New Enterprises

"The policy followed by the Government of India in making liberal allowance for depreciation for the new industries as also in making them not liable for tax upto 6 per cent. return on the invested capital has been a real help in the case of concerns like ours. A plant like ours is also exempt from starting provident fund for workers for a period of three years from the day of commencement of production. These have gone a long way in encouraging establishment of large concerns for the production of items hitherto being imported. I wish the Government of Bombay will show the same solicitude for the establishment and promotion of new industries as the Government of India has done. The sales tax has been militating against the industry and representations were made to the Government of Bombay in view of the infancy of this industry to exempt the Company's sales from the payment of the tax at least during the first few years. The Government of Bombay have not responded to our appeal. We hope that we shall be able to convince them of the justness of the cause and get relief in the matter of sales tax."

KASTURBHAI LALBHAI,
National Rayon Corporation Ltd.

Investment of Life Funds

"In carrying out our responsibilities in the selection of investments we do not claim to be infallible, but we do claim that, as in all our problems, our judgment is unbiassed and unfettered. In any event, the great majority of the cases where we provide new finance must have received the approval of the Capital Issues Committee and must, therefore, be assumed to conform to the national interest. It is important to realise that the Government, through the Capital Issues Committee, exercises a considerable measure of restriction over the purposes for which new money can be raised. Should, however, the Government seek at any time to exercise positive control over the investment of insurance funds, a real danger to policyholders' interests would arise. Bearing in mind the growth of life insurance funds, it may be asked whether the terms which industrial and other borrowers may be required to accept for the capital they wish to raise will not be unduly onerous. It must be remembered that these funds are distributed among approximately 80 offices which compete among themselves in seeking suitable investments. The industrial borrower is much better placed in dealing with this number of competing investors than he would be, if this large section of the funds available for investment were combined in one State-controlled organisation. The need for life offices to invest their funds is strong and pressing, probably as strong as is the need which industry has for raising money."

SIR GEORGE LEWIS BARSTOW,
Prudential Assurance Co., Ltd.

Penalty on the Paint Industry in U.K.

"Another severe penalty on the industry is the fact that white spirit, a very important raw material, is taxed in the same manner as petrol. This tax costs large companies in the paint industry many thousands of pounds per annum and your company last year paid in taxation on this commodity £78,000, a profit in itself, and, since petrol is in plentiful supply, there is now no possibility of white spirit being used by the public as a substitute motor spirit. This it never was, as it is merely substitute turpentine and only used as such in the paint and other industries. We are now told that the Government cannot afford to take off the tax; the old argument and the real one having disappeared."

J. W. ADAMSON,
British Paints (Holdings) Ltd.

(*Concluded from page* 995)

has just started its important work of an elaborate review of the entire taxation structure, will make a detailed study of this vital problem and will recommend such measures as will enable the industry to renovate and modernise its plant and machineries on which the future of the industry so much depends.

"It is really a matter of gratification that the production figures of the first four months of this year show some further increase over even the high figures of production of the corresponding period of last year, but I must utter a word of warning that this should not lead the Government or the industry to an attitude of complacency for the future. We have so many formidable problems facing the industry and, unless a constant study and the necessary remedial action is taken in time to withstand the impact of the coming forces, we may easily lose the valuable ground that we have covered."

Notices

THE SOUTH MADRAS ELECTRIC SUPPLY CORPORATION LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Thirteenth Ordinary General Body Meeting of the shareholders of the Company will be held at the Registered Office of the Company at Tennur Railway Road, Tiruchirapalli, on Saturday the 1st August, 1953, at 4 p.m., to transact the following business.

ORDINARY BUSINESS

1. To receive and adopt the Directors' Report and the audited statement of accounts for the year ended 31st March, 1953.
2. To declare a Dividend.
3. To appoint Auditors for the current year and to fix their remuneration. The retiring auditors are eligible for re-election.
4. To elect Directors in place of the following who retire under Article 79 of the Articles of Association.

   The retiring Directors are eligible for re-election:

   1. Dewan Bahadur Sri S. Raghava Aiyangar, B.A., B.L.
   2. Sri Mooljee Ramjee.
   3. Sri A. Ganapathi Iyer
   4. Dewan Bahadur Sri S. Rajagopala Aiyangar, B.A., B.L.
   5. Sri M. P. RM. Irulandi Mudaliar.

SPECIAL BUSINESS

To consider and pass the following resolution as an Extraordinary Resolution:

"That the payment of the sum of Rs. 1,000 to the Rayalaseema Famine Relief Fund and the sum of Rs. 2,000 to the Cyclone Relief Fund as donations from the Company made by the Directors be ratified and confirmed."

All shareholders are requested to be present in person or by proxy.

The Register of Members and the Share Transfer Books of the Company will be closed from 8th July, 1953, to 1st August, 1953, both days inclusive.

(By Order),
SESHASAYEE BROTHERS LIMITED,
Managing Agents & Chief Engineers.

TIRUCHIRAPALLI, 20*th May*, 1953.

Note.—1 The printed Balance Sheets are expected to be posted to the members on or about 8th July, 1953.

2. Holders of blank transfers are advised to have the shares registered in their names in time before closure of books.

3. Early intimation should be given to the Company of any change of address.

TO THE SHAREHOLDERS OF BOKARO AND RAMGUR, LIMITED

NOTICE IS HEREBY GIVEN THAT THE Eighty-ninth Ordinary General Meeting of the Shareholders of Bokaro and Ramgur, Limited, will be held at the Registered Office of the Company, No. 7, Wellesley Place, Calcutta, on Saturday the 30th May, 1953, at 11.30 a.m., to transact the following business:—

CALCUTTA, 14*th May*, 1953.

KATRAS JHERRIAH COAL REPEATS DIVIDEND

PROFIT OF PULLANGODE RUBBER WELL MAINTAINED

Katras Jherriah Coal Co., Ltd.

THE directors of the above Company (Managing Agents: Messrs. Andrew Yule and Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st January, 1953.

After providing Rs. 1,60,000 (Rs. 2,45,000) for taxation and cesses, Rs. 75,000 (Rs. 75,000) for depreciation and transferring Rs. 25,000 (Rs. 1,00,000) to development reserve, there is a balance of Rs. 1,89,822 (Rs. 1,88,937) at the credit of the profit and loss account, out of which the directors recommend a dividend at Rs. 2 (Rs. 2) per share Rs. 1,00,000 (Rs. 1,00,000) leaving to be carried forward Rs. 89,822 (Rs. 88,937).

Raisings during the half-year were 1,00,426 tons as compared with 1,23,883 tons during the previous half-year and despatches including purchased coal were 1,61,548 tons as compared with 1,68,819 tons.

The working of the Company was adversely affected by a strike at Laikdih Deep Colliery from 11th August to 23rd September, 1952.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	5,00,000	Block ...	10,16,660
Reserves ...	11,25,000	Stocks ...	2,02,568
Provision for taxation ...	3,38,907	Stores ...	3,14,831
Liabilities ...	17,09,857	Debts, deposits and advances ...	14,26,964
Profit and loss account ...	89,823	Investments	2,08,302
		Cash ...	5,94,262
Rs.	37,63,587	Rs.	37,63,587

Pullangode Rubber and Produce Co., Ltd.

The directors of the above Company (Managing Agents: Messrs: Aspinwall & Co., Ltd., Calvetty, Fort Cochin) submitted the audited accounts of the Company for the year ended 31st March, 1953.

The profit at Rs. 3,05,313 (Rs. 2,99,654), exceeded the previous highest figure, last year, by Rs. 5,659 (Rs. 1,93,931). As usual the necessary provision for depreciation on buildings and machinery were made, and rubber unsold at the time of closing the accounts were conservatively valued. It will be noted that the current year's profit and loss account bears no debit for income-tax reserve, as the esitmated liability for income-tax for the year was less than the surplus amount lying to the credit of income-tax reserve account.

Against an estimate of 5,70,000 pounds (6,47,000 pounds) the crop harvested amounted to 6,06,000 (6,11,000) pounds which was considered satisfactory and was only less than the record crop of the Company by 5,000 lbs. There were 30 fewer taps than last year and the exceptionally dry conditions at the beginning of this year affected crop. The following are the working results for the past five years:—

	Crop Lb.	Cents per lb. Estate expenditure	All-in cost	Average sale price	Net profit
1948-49 ..	5,80,000	55.13	61.34	75.32	15.40
1949-50 ..	5,79,000	57.29	62.86	75.94	12.95
1950-51 ..	5,22,000	65.10	72.23	90.87	20.25
1951-52 ..	6,11,000	63.25	73.17	118.72	49.04
1952-53 ..	6,06,000	67.90	77.75	126.26	50.38

The price of rubber in India continues to be controlled and at the end of October last was fixed by Government, after Tariff Commission enquiry, on the basis of Rs. 138 per 100 pounds of RMA 1 rubber, f.o.b. Cochin, to be in force for three years. Prior to end October prices were controlled per notification by Government on 21st May, 1951, on the basis of Rs. 128 per 100 pounds of RMA 1 rubber, same terms.

The Company's total acreage amounts to 3,641.5. During the year 106.45 acres were planted up with budded rubber, and 39.46 acres with cashewnuts. The visiting agent reported, that the Estate was being well and efficiently maintained. Further additions to quarters for staff and labour have been built during the year, also a Cretch-cum-Club.

During the year 110.40 acres were opened up and will be planted during the coming monsoon, whilst application has been made for a permit to fell and clear a further 134.19 acres of reserve jungle during the current year to extend the planting of budded rubber in the season 1954-55. It is estimated that during 1953-54 a crop of 5,75,000 pounds will be harvested at an estate expenditure of 75.19 cents per pound.

With the addition of Rs. 65,751 (Rs. 45,097) carried forward in profit and loss account in accordance with the report for the 1951-52 working and after deduction of preference dividend paid, the balance in profit and loss account amounted to Rs. 3,62,064 (Rs. 3,44,751) which the directors disposed of in payment of a first and final dividend of 20 (20) per cent. on the ordinary share capital which absorbed Rs. 2,20,000 (Rs. 2,20,000), and transfer to general reserve fund Rs. 50,000 (Rs. 50,000) leaving to be carried forward the balance of Rs. 92,064 (Rs. 65,751).

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	12,50,000	Block ...	11,70,219
Reserves ...	1,78,952	Stocks ...	1,67,090
Provision for taxation	3,658	Stores, spare parts, etc.	52,904
Liabilities ...	67,250	Advances and prepaid expenses	44,327
Profit and loss account ...	3,62,064	Investments	2,53,190
		Cash ...	1,74,194
Rs.	18,61,924	Rs.	18,61,924

New Commercial Mills Co., Ltd.

The directors of the above Company (Agents: Messrs: Tricumlal Bhogilal & Co., Ltd., Ahmedabad) submitted the audited accounts of the Company for the year ended 31st December, 1952.

During the year, the Company made a profit of Rs. 11,48,627 (Rs. 31,54,476) to which was added the amount brought forward from the previous account of Rs. 749 (Rs. 12,503), making a total of Rs. 11,49,375 (Rs. 31,66,979). From this amount the directors carried to the depreciation fund account Rs. 6,75,000 (*nil*) and made donations to the extent of Rs. 18,490 (Rs. 64,830). From the net available balance of Rs. 4,55,885 (Rs. 30,21,749) the directors transferred to special reserve fund Rs. 4,41,000 (*nil*) and charity account Rs. 10,000 (Rs. 10,000) leaving to be carried forward a sum of Rs. 4,885 (Rs. 749). The directors made payment of dividends as under by transferring an amount of Rs. 4,41,000 (*nil*) out of the reserve fund:—

Payment of dividend at the rate of 4 (4) per cent. on redeemable cumulative second preference shares for the year 1952 Rs. 21,000 (Rs. 21,000) and payment of dividend at the rate of Rs. 70 (Rs. 70) per ordinary share for the year 1952 Rs. 4,20,000 (Rs. 4,20,000).

The directors fixed the amount of Rs. 8,00,000 as remuneration, to be paid to the agents of the Company as per the provisions of the articles of agreement. The directors carried an amount of Rs. 8,50,000 (on which the income-tax has been paid) to the reserve fund account being the difference of the assessment at cost price at the end of the year and the prevailing fixed rate assessment system. During the year, an amount of Rs. 4,52,923 was received as refund of E.P.T. and was transferred by the directors to the income-tax provision account.

In the beginning of the year, the prices of foreign cotton touched highest levels affecting particularly the super fine and fine counts' working. Added to this, from the month of March, great country-wide financial crisis was experienced. The cost of production had to face higher prices of raw materials and increase in the freight rates of coal; while the cloth prices had to suffer a great deal. Under the circumstances, the directors considered the result of the working of the Company, as satisfactory.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	35,25,000	Block ...	88,67,870
Reserves ...	1,20,70,000	Stocks ...	1,01,12,108
Provision for taxation	2,67,096	Stores, etc.	14,95,975
Liabilities ...	91,23,099	Debts, deposits and advances ...	36,81,764
Profit and loss account ...	4,55,885	Investments	8,85,807
		Cash ...	3,97,556
Rs.	2,54,41,080	Rs.	2,54,41,080

Jawahar Mills Ltd.

The directors of the above Company (Managing Agents: Umaiyambika & Co., Salem) submit the audited accounts of the Company for the year ended 31st December, 1952.

After deducting all working expenses and interest and providing Rs. 2,03,752 (Rs. 2,12,694) for depreciation, the year's working resulted in a loss of Rs. 95,076 (profit of Rs. 88,933). Deducting therefrom Rs. 8,294 (Rs. 7,361) the balance of profit carried forward from last year, there was a sum of Rs. 86,782 (debit balance of Rs. 96,294) at the debit of profit and loss account. The directors carried forward this amount.

The directors paid a tax-free dividend of 6¼ (7½) per cent. out of profits and for that purpose appropriated of Rs. 40,000 standing to the credit of the dividend equalisation reserve and Rs. 12,500 from the contingency reserve. After appropriation of this sum of Rs. 12,500 from the contingency reserve, there was left a balance of Rs. 29,627 to the credit of that account.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	8,40,000	Block ...	15,19,000
Debentures	9,39,325	Stock ...	22,71,134
Reserves ...	7,43,480	Stores, tools, etc. ...	2,38,737
Provision for taxation ...	2,09,297	Debts, deposits and advances ...	4,61,003
Liabilities	19,31,733	Investments	35,618
		Cash ...	51,561
		Profit and loss account	86,782
Rs.	46,63,835	Rs.	46,63,835

Devashola (Nilgiri) Tea Estates Co., Ltd.

The directors of the above Company (Managing Director: R. A. Jenkins, Esq., Coonoor, R. S. Nilgiris) submit the audited accounts of the Company for the year ended 31st December, 1952.

The crop harvested during the season amounted to 272,620 pounds of made tea as against the estimate of 250,000 pounds and compared with 207,3664 pounds secured during the previous season. The all-in cost of production was Re. 1-8-3 (151.54 cents) per pound (Re. 1-5 (151.54 cents) per pound) and the net price realised was Re. 1-14-10 (192.71 cents) per pound (Re. 1-15-3 (195.31 cents) per pound), resulting in a profit of As. 6 ps. 7 (41.17 cents) (As. 10 ps. 3 (64.06 cents) per pound).

The net profit on the season's working after writing off depreciation on buildings and machinery and providing for income-tax and other overhead charges amounts to Rs. 117,169 (Rs. 2,14,044). The amount brought forward from last year was Rs. 9,494 (Rs. 5,450) which, together with this year's profit, makes Rs. 1,26,663 (Rs. 2,19,494). Out of this an interim dividend of 10 (10) per cent. absorbing Rs. 60,000 (Rs. 60,000) was declared in January, 1953 and paid in February, 1953 and there remains a balance of Rs. 66,663 (Rs. 1,59,494) which the directors recommend should be appropriated as under:—

To pay a final dividend of 10 (12½) per cent. (making in all 20 (22½) per cent. for 1952) Rs. 60,000 (Rs. 75,000) and to carry forward to next season the balance of Rs. 6,663 (Rs. 9,494).

The capital expenditure for the year was Rs. 51,982 (Rs. 67,608) spent on the following items:—Factory (stub chimney) Rs. 1,718; Machinery (trolley beam scale, wee megger insulation testing set) Rs. 301; motor cycle (ariel red hunter) Rs. 3,327; buildings (lines, staff quarters, chest assembly room, circular saw bench room etc.) Rs. 44,021; furniture (cot, chairs, etc.) Rs. 382 and development account Rs. 2,233.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	6,00,000	Block ...	7,69,796
Reserves ...	3,64,750	Stock ...	92,378
Provision for taxation ...	4,226	Stores and spare parts	40,080
Liabilities ...	77,479	Debts, deposits and advances ...	39,366
Profit and loss account ...	1,26,663	Investments	1,03,154
		Cash ...	1,28,344
Rs.	11,73,118	Rs.	11,73,118

Tropical Plantations, Ltd.

The directors of the above Company (Managing Director: P. T. Thomas, Esq., Kottayam) submitted the audited accounts of the Company for the year ended 31st December, 1952.

The tea crop harvested during the year amounted to 3,61,402 pounds (833 pounds per acre) 3,87,129 pounds (892 pounds per acre). The production cost was 131.813 cents (Re. 1-5-1.080) pound (114.452 cents (Re. 1-2-3.747) per pound) and the average price realised was 112.348 cents 118.968 cents) (Re. 1-1-11.708) (Re. 1-11-10.844) per pound thereby causing heavy loss in this section. The rubber crop obtained during the year was 8,15,107 pounds (449 pounds per acre) 7,38,137 pounds (406 pounds per acre) at a cost of 54.472 cents (8 as. 8.586 p.) 118.968 cents (Rs. 1-3-0.418) per pound and the average price realised is 120.661 cents (1-3-3.669) per pound.

After providing Rs. 1,48,414 (Rs. 2,41,403 for taxation and after charging depreciation, bonus to staff and remuneration to the managing director, the net profit for the year amounted to Rs. 2,07,346 (Rs. 4,04,921). This, together with Rs. 2,575 (Rs. 2,439) brought forward from the previous year aggregated to Rs. 2,09,921 (Rs. 4,07,360) which was available for distribution. The directors made payment of a dividend of 10 (12) per cent. Rs. 2-8 (Rs. 3) per share, free of income-tax and agricultural tax absorbing Rs. 2,00,000 (Rs. 2,40,000) and carried forward the balance of Rs. 9,921 (Rs. 2,575) to 1953 accounts.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	20,00,000	Block ...	18,70,453
Reserves ...	1,10,592	Stock ...	4,37,117
Provision for taxation ...	1,46,493	Stores, spare parts, etc.	1,18,610
Liabilities ...	1,92,423	Advances and prepaid expenses	23,461
Profit and loss account ...	2,09,921	Cash ...	2,09,788
Rs.	26,59,429	Rs.	26,59,429

N.B.—Figures within brackets relate to the corresponding period of the previous year.

COMPANY MEETINGS AND DIVIDENDS

MONEY FAIRLY COMFORTABLE

(From Our Own Correspondent)

BOMBAY, 27*th May*

The short-term money market continued to experience fairly comfortable conditions this week also. Exchange banks were reported to be not keen borrowers due to paucity of demand from trade circles. There were, of course, some enquiries from big Indian banks in the inter-bank call section, probably due to local trade demand. The demand was, however, fairly well satisfied although, at times, some of them had to seek help from the Reserve Bank. The inter-bank call money rate among the Exchange banks and by Indian banks, however, remained unchanged at 2½ per cent. Small Indian banks continued to offer 3 per cent., but funds were not easily available to them in the inter-bank call.

Term money was quoted at 2¾ per cent. for one to two months and 2½ per cent. for three months and above.

A notable feature of the money market this week is the sharp rise in the offerings for the three months' Government of India Treasury Bills. While tenders were invited for only Rs. 1 crore, as in the previous weeks, the amount offered came up to Rs. 226·25 lakhs, that is, more than 2¼ times the amount invited. In fact, the offerings have been on the increase during the last four weeks. In the previous two weeks, the average rate of accepted tenders had shown a declining trend and this was carried further this week when the rate fell to Rs. 2-6-6 per cent. per annum.

Following a decline of Rs. 5.28 crores in the previous week, notes in circulation have gone down further by Rs. 8.14 crores during the week ended 22nd May, 1953. Disclosing this the statement of affairs of the Reserve Bank of India for the latest week shows that notes held in the Banking Department have gone up by Rs. 8.60 crores. Total notes issued record an increase of Rs. 45.46 lakhs which is covered, on the assets side, by a similar rise in rupee coin. In the Banking Department, deposits of the Central Government show no worthwhile variation. Deposits of the other Governments are higher by Rs 1.44 crores. Deposits of banks and others have however, declined by Rs. 81.67 lakhs and Rs. 1.38 crores, respectively. On the assets side, cash balances have enlarged by Rs. 8.62 crores, but balances held abroad have dwindled by Rs. 4.43 crores. Loans and advances to Governments are lower by Rs. 47 lakhs and other loans and advances by Rs. 5.55 crores, of which loans to Scheduled Banks against usance bills, account for Rs. 3.05 crores.

The Scheduled Banks' statement for the week ended 15th May, 1953, discloses a rise of Rs. 1.86 crores in demand deposits and of Rs. 59.94 lakhs in time deposits. Inter-bank borrowings are lower by Rs. 64.36 lakhs, as also borrowings from the Reserve Bank and Imperial Bank by Rs. 2.44 crores and Rs. 31 lakhs, respectively. Advances have declined by Rs. 5.06 crores and bills purchased and discounted by Rs. 94.37 lakhs. Investments are almost unchanged, but cash-on-hand and balances with the Reserve Bank are together higher by Rs. 2.17 crores. Balances with other banks have improved by Rs. 31.33 crores. But money at call and short notice has declined by Rs. 14.49 lakhs.

There was not much of an activity in the Gilt-edged market during the week under review, but the undertone remained steady with medium-dated loans revealing fractional gains. The improvement is attributed to a further increase of one anna in the selling price of 3 per cent. 1963-65 and 3 per cent. 1964 by the Reserve Bank. 3 per cent. 1953-55 was unchanged at Rs. 100-1, as also 3 per cent. 1957 and 3 per cent. 1958 at Rs. 98-11 and Rs. 98-9, respectively. 3 per cent. 1959-61 hardened by As. 2 to Rs. 96-13 on good investment demand, but this issue was in short supply. 3 per cent. 1963-65 and 3 per cent. 1964 rose by an anna to stand at the Reserve Bank's latest selling price of Rs. 93. 3 per cent. 1966-68 showed no change at Rs. 90-10, and 3 per cent. 1970-75 at Rs. 86-11. 3 per cent. 1986 Conversion Loan, however, declined by As. 3 to Rs. 82-6.

In the foreign exchange section of the money market, there was no change in the rupee-U.S. dollar rate during the week. In the New York market, however, the sterling was a little quiet, the spot rate for the £ being quoted 3/16 cent lower at $2.81-5/16—2.81-7/16 and the forward rate for 3 and 6 months 5/16 cent lower at $2.80-7/16—2.80-9/16 and $2.79⅞—2.80.

EXPORTABLE DUSTS IN LESS DEMAND

(Messrs. Forbes, Ewart & Figgis Ltd.)

COCHIN, 23*rd May*

The total offerings in dust sale 'J', which was held on Tuesday, 19th May, amounted to approximately 1,04,000 lbs. There was a good general demand, although prices were irregular. Milled dusts and fine dusts met with keen competition and were irregularly As. 2 dearer. Clean, black, export portable types were in less demand and inclined easier. Buyers tended to show a preference for teas which had paid only one anna excise duty.

London Market.—Very good demand. Mediums fully half penny dearer. Commonest very strong.

Colombo Market.—6,000,000 lbs. Quality plain high and medium declined slightly. Others firm.

Calcutta Market—Dust.—Less general demand. Market irregularly one anna easier.

Export Quota.—1953-54 export quota was in more demand this week and business has been done at 11 pies. The quotation for special licence is still one pie nominal, sellers over. No announcement has been received of an extension.

Forthcoming Auctions.—Dust Sale 'K' will be held on Wednesday 3rd June.

As we go to Press, Messrs. Forbes, Ewart and Figgis Ltd., wire as follows:

"Sale 11.—17,00,000 lbs. Good general demand. Commonest and low medium brokens and fannings about steady. Mediums As. 1 to As. 2 easier. Best liquoring As. 2 to As. 3 easier, following quality. Whole leaf strong."

SILVER RATES DECLINE

(From Our Own Correspondent)

BOMBAY, 27*th May*

The silver section of the bullion market continued to be the scene of a tussle between the bulls and bears. As was reported in the "Market Gossip" columns of last week's issue of *Commerce*, the bulls persisted in depressing the white metal so as to exact as heavy carry forward charges as possible from the bears at the end of the settlement on Saturday next, when they seemed to expect that the bears would not be able to give delivery of the actual against their sales. There was, therefore, a sizable decline in prices of the white metal. Although towards the close, there was a partial recovery on sporadic bear covering, on balance, silver disclosed a loss of Re. 1-2 per 100 tolas.

Gold, on the other hand, was fairly steady, with a fractional loss on balance due to the fall in silver prices. The relative steadiness in gold was due to the fact that the offtake was fairly well balanced with arrivals.

As already indicated, the bulls succeeded in keeping the forward rate for the current settlement well below the basic rate of Rs. 162-10 for that settlement. At the same time, they saw to it that the carry forward charges from the current settlement to the next one, remained in their favour, widening from Rs. 2-6 at the close of last week to Rs. 3-10 at one time during the week. At the close, however, the rate stood at Rs. 3-7. The bears were in no mood to cover their sales on the assumption that at the time of settlement the bulls will not be in a position to take delivery of the bars tendered by them. However, when the rate for the current settlement touched a low of Rs. 160, at one time on Monday, that for the next settlement went down to Rs. 156-14, which was more than Rs. 7 below the basic rate of Rs. 164-8 for the next settlement. Apprehending that they would have to pay a margin of Rs. 500 per bar, if they allowed the closing rate for the next settlement on that day to remain below Rs. 157-8, (that is Rs. 7 below the basic rate for that settlement), some of the bears covered their sales, though the main bear operator continued to sit tight on his sales. This caused the prices to go up in the last two days. With hardly two days more to go for the expiry of the current settlement an interesting situation has thus developed. It will be interesting to watch the outcome of the tussle on Saturday when the current forward contract matures.

Silver for forward delivery (end of May settlement) opened at Rs. 163-11 and moved down to a low of Rs. 160 at one time on Monday. But covering purchases by some of the bears at this level lifted the price to Rs. 162-7 at the close. The rate for the next settlement began at Rs. 161-6 and reacted to Rs. 156-14 on Monday, before regaining to Rs. 159 at the close to-day.

Ready silver (.996 fine) retreated from Rs. 163-15 to Rs. 160-4, but staged a recovery to Rs. 162-11 at the close. The floating stocks of silver are placed at 1,000 bars. The daily average offtake was 15 bars.

Gold for forward delivery (end of May settlement) moved down from Rs. 87-11 to Rs. 86-12, but hardened to close at Rs. 87-5. The business for the next settlement opened on Thursday last at Rs. 87-7, but the rate drifted down to Rs. 86-9, before recovering to Rs. 87 at the close.

Ready gold commanded a premium of As. 7 over the forward rate for the current settlement. The floating stocks of gold are estimated at 35,000 tolas. The daily average arrivals were 7,500 tolas. The offtake was estimated at 7,000 tolas on an average.

The following comparative table shows the trend of the market during the week under review:

	27-5-53	Highest	Lowest	20-5-53
GOLD	Rs. a.	Rs. a.	Rs. a.	Rs. a.
Ready (.99 fine Mint)	87 12	88 5	87 3	88 2
Forward	87 5	87 14	86 12	87 11

New York Ready ..	85½c.	—	—	85½c.

BASE METALS STEADY

(From Our Own Correspondent)

CALCUTTA, 26*th May*

Prices for base metals were steady during the week, but consumers were interested only in small quantities. Manufacturers' need for raw materials continued to be for meeting only day-to-day consumption, since manufactured products were preferred either ready or for near delivery. Electrolytic copper recovered from Rs. 175 to Rs. 178 and although reports from foreign markets anticipated a decline in price in the near future, dealers were not worried as they derived encouragement from the acute tightness in supplies of the virgin material. Scrap was also in demand, and all available supplies would appear to have dried up. The fire-refined material was hardly located.

The price of tin was quietly steady, and the rates were between Rs. 522 and Rs. 510, before closing at the lower level. The lack of demand for mercury pulled down the price to as low as Rs. 460 a flask. Sentiment in lead was greatly assisted by higher advices from the overseas markets, and the local quotation for the virgin material hardened from Rs. 50 to Rs. 61. Although only small quantities changed hands in electrolytic zinc, the rise in the London rate by £3 a ton was answered locally by an advance of Rs. 2-8 a cwt. However, lack of adequate demand erased the gain by Re. 1-8, the rate closing at Rs. 51-8.

COTTON PRICES RECEDE

(From Our Own Correspondent)

BOMBAY, 27*th May*

Several factors have combined to upset both spot and forward cotton markets. The ball started rolling with the revival of talks about devaluation of currency in Pakistan. This factor has always loomed large on the horizon for affecting cotton prices in India bearishly. It is not known as to how far speculation regarding devaluation at Karachi will prove more correct this time than on any of the previous occasions. The possibility is always there, considering the anomalous position of the Pakistan Government in this respect and, if the Pakistan rupee is devalued to an extent where imports of cotton from Karachi would be a practical proposition for Indian mills, home prices cannot stay at present levels. When the cry of 'wolf' is raised repeatedly, according to the laws of probability, it might prove correct for once and a real 'wolf' might materialise. Operators, especially in the forward markets, cannot but help taking note of this development likely to arise suddenly some time overnight. They have wisely trimmed their sails.

The other factor which dealt a severe blow to the forward market was the news about the new agreement provisionally initialled regarding the payments system for cotton imported by India from Egypt. Some more cotton than previously is likely to be imported from this source in future, when this agreement is ratified, and the generous increase in supplies, whether of foreign growth or Indian, is bound to affect adversely prices of Indian cotton in general. India will be able to pay for nearly half the cotton from Egypt in rupees and the other half in sterling, instead of having to find the whole amount in sterling as at present. In addition to these specific causes, the longs are also believed to have adopted a new strategy, under which they keep the bears guessing, while unloading heavily at bulges for small profit, instead of adopting a straight bullish line and starting replacement buying at certain low levels. Apart from this being the usual strategy, it has been necessitated by fears that, if prices are pushed up beyond a certain level, forward trading in the new crop itself might be endangered.

Even as it is, it is being rumoured that the authorities in New Delhi are perturbed over the recent rise in spot prices. It is a pity that the E.I.C.A. authorities are not able to control *kerb* trading at such critical times, which is often responsible for sudden jumps and falls in the price level. This blight has now fallen on almost all forward markets and quoting of *kerb* rates is becoming a regular feature of the city pages of the newspapers. Besides this irregularity, the cotton market is also believed to have started clandestine trading in the February delivery contract for the new crop. Unless the authorities come down with a heavy hand on all such practices, it is obvious that the forward market is likely to degenerate into gambling dens with trading in American futures and *teji mandi* operations added to the other irregularities.

The futures market opened the week with a hesitant note, in the absence of any encouraging development, and values staged a decline. The decline persisted on the following day also, assisted by selling pressure by a spot house. On Saturday, however, the market picked up some strength, the buying fervour being fanned by the Commerce Minister's announcement of extension of the period of free licensing policy for cloth exports and of an increase in the export quota for mineral khaki. Consequently, prices continued to move up. The upward trend was halted yesterday on weak New York advices. To-day also, the market ruled distinctly bearish. The following is the trend of prices during the week:

	Opening	*High*	*Low*	*Close*
	Rs. a.	Rs. a.	Rs. a.	Rs. a.
I.C.C. May ...	723 8	736 8	721 12	740 0*
I.C.C. August ...	734 0	735 4	719 8	722 12

* On 25th May.

In the spot market, activity is confined to certain selected styles like Vijaya and Jarillas, together with trading in imported cottons. Demand for U.S. cotton has increased slightly. Prices of spot lots of Egyptian cotton has declined, as a result of the agreement referred to above. The turnover in the spot market, unlike that in the forward market, has not been affected and the trading, if not brisk, is fair. Enquiries for Bengals come in from time to time and the prices have been well maintained in this variety.

At Karachi, a feeling of complacency, instead of anxiety, is now in evidence. The stock position and the likely carry-over are not regarded as in any way heavy. The prices show an all-round improvement of Rs. 2 to Rs. 2-8 per maund on an average over a period of 2 to 3 weeks. This improvement has been partly due to short covering by exporters to France and China, who had sold against their commitments to buyers in these countries and partly to some trade with Australia and expectations of increased trade in the new year with this country. Exports from Karachi during the season up to the middle of May came to 1,220,183 bales, as against only 947,755 bales last year. Now that all cotton held by the Cotton Board has been cleared, it is believed that the Board will be wound up and trade will be placed on a different basis altogether for the new season. The latest available quotations from the Karachi cotton market are: Punjab *Deshi* Rs. 66; 4F Punjab R.G. Rs. 57; S.G. Rs. 62; L.S.S. Punjab R.G. Rs. 60-8; S.G. Rs. 65-8; N.T. R.G. Rs. 65; S.G. Rs. 70; 289F Punjab R.G. Rs. 68; and S.G. Rs. 73.

At Alexandria, it was announced during the last week-end by the authorities that they had no intention at present of reopening the forward market there, which was closed six months ago. The prices which the Government will pay for the new crop were also announced. The price for Ashmouni ranges from 50 tallaries per cantar during the first three months to 52 tallaries for the period February to the end of season, while that of Karnak begins at 58 tallaries for the earliest period and earns a premium of 2 tallaries for deliveries after February, 1954. The policy for selling cotton so held by the Government for exports and internal consumption will continue to be more or less the same as in the present year. Stocks held by the Cotton Commission at the beginning of this month amounted to 363,314 bales, of which Giza 30 could claim only 1,436 bales. The market continues to be active, as there is fair demand from India, the U.K., France and Spain.

The same seesaw movement continues at New York. The earlier part of the week under review witnessed a steady trend, which gave way after the week-end, and last Monday's trading showed a heavy decline of about 33 points in the July delivery. Part of this decline was due to absence of demand in the spot market for home consumption and exports and reports regarding improvement in weather from the cotton areas. There is, however, a steady feeling about earlier deliveries in the new crop.

The following are the latest available quotations from New York, as compared with those of a week and a fortnight before:

(In cents per lb.)

	27-5-53	19-5-53	12-5-53
Spot	34.20	34.60	34.05
May	—	—	33.62
July	33.77	34.22	33.74

December	33.77	33.83	33.58
March	33.83	33.93	—

ART SILK YARN FEATURELESS

(From Our Own Correspondent)

BOMBAY, 27*th May*

Dull and featureless conditions characterised trading in the art silk yarn market this week. Turnover was extremely limited, confining mostly to transactions of a squaring up nature. Over the week, prices of yarn in the forward section suffered a drop of Rs. 7 to Rs. 9 per case of 200 ibs.

The undertone of the market during the first two sessions of the week was somewhat bearish, on reports of actual arrivals of large quantity of imported yarn. Fears were also entertained regarding the possibilities of further receipts in the coming week or two. Selling pressure that ensued, as a result, led to a break in values. There was, however, a slight change for the better in the sentiment of the market on Saturday, when, on account of support at higher levels and bear covering, prices staged a recovery. But to-day, again, a reaction set in, with bulls being reluctant to hold on to their position, in view of the approaching end of the May delivery. The loss suffered, however, was negligible.

In the forward section, 150D May delivery contract receded from Rs. 808 to Rs. 788 on the 23rd inst., the lowest level for the past seven weeks. It improved to Rs. 800 yesterday, before finishing a shade lower at Rs. 799 to-day. June contract shed Rs. 14 to Rs. 799 on the 22nd inst., but recovered to close at Rs. 806 to-day. Values of yarn in the ready section were more or less unchanged.

The table below gives the prices of art silk yarn quoted to-day, as compared with those on the 20th and 12th inst.

	27-5-53 Rs. a.	20-5-53 Rs. a.	12-5-53 Rs. a.
150D May (per case of 200 lbs.)	799 0	808 0	812 0
150D June	806 0	813 0	820 0
120 Japan (per lb.)	4 7	4 7	4 7½
150 Japan	4 3	4 3	4 3
120 Italy ,, ...	4 3½	4 3	4 3
150 Italy ,, ...	4 0	4 0½	4 0½

In the staple fibre yarn section, prices have been well maintained, particularly in 2/40s, due to speculative buying support encouraged by scarcity of supplies. Offtake, however, continues to be very limited.

OILSEEDS EASY

(From Our Own Correspondent)

BOMBAY, 27*th May*

The oilseeds market ruled easy during the week under review. There was substantial decline in the prices of groundnuts and groundnut oil, following the statement of Mr. T. T. Krishnamachari, Union Minister for Commerce and Industry, regarding the policy of Government towards import and export of vegetable oilseeds and oils. The prices could have declined further had it not been for the anticipation of the Government's attitude earlier. The approaching rainy season and restricted buying enquiries from *vanaspati* interests also contributed to the easy trend. The linseed section declined in sympathy with groundnuts. Discouraging overseas advices for linseed oil also depressed the market. The castorseeds section too was inclined downwards despite the purchases both in spots as well as in futures by a prominent bull operator who had gone long in May contract which will expire at the end of this month. The all-round selling pressure which was in evidence as a result pressed down values. On balance the closing rates revealed sizable losses over the week. The oilseeds market remained closed to-day owing to the death of a Jain *sadhu*.

Sectionwise, buyers in groundnuts were extremely cautious. Every seller seemed inclined to go short in view of lack of demand at the existing level of prices. Bold ready, as a result, declined from Rs. 49-8 to Rs. 47-8. June-July delivery was lower by Rs. 2 at Rs. 47 and August-September by Rs. 2-4 at Rs. 46-12. Khandesh quality eased by Re. 1-4 to Rs. 48-8. Groundnut oil ready fell from Rs. 25-8 to Rs. 25 and railway receipts from Rs. 25-6 to Rs. 24-10. June and July deliveries were done at Rs. 24-8 and Rs. 24-11, as against Rs. 25-7 and Rs. 25-9, respectively.

In the linseed section, Bold ready fell from Rs. 34-12 to Rs. 33-14. June-July delivery was down by Re. 1 to finish at Rs. 34. August-September delivery too was lower by a similar amount to stand at Rs. 34-12. Linseed oil was enquired at Rs. 17-10, as against Rs. 18. At the present level of prices, there is little likelihood of any foreign enquiries.

In the castorseeds section, May delivery which opened at Rs. 165, as against Rs. 165-8, gradually receded to Rs. 160-4. Thereafter, it recovered, on purchases by the bull referred to above, and closed at Rs. 164. September delivery, which was done at Rs. 162-12 early in the week, as against Rs. 163-8, declined gradually to Rs. 158 before closing at Rs. 160-12. Madras quality was lower by As. 2 at Rs. 32-6, while F.A.Q. was steady at Rs. 31-8. Castoroil, Commercial quality, however, put on As. 4 to Rs. 17-12, while I Pressures were unchanged at Rs. 18-8.

The following table shows the prices of oilseeds and oil on the 26th inst., as compared with those at the end of the previous two weeks.

PEPPER STEADY

(Messrs. Parekh & Co.)

BOMBAY, 27*th May*

The pepper market in all the primary centres during the week moved within a narrow groove, the lowest and the highest at Alleppey being Rs. 3,250 and Rs. 3,300 respectively. In spite of the disappointing export to the U.S.A. during the month, the growers appeared sitting tight, disinclined to reduce the price. This has forced the exporters to cover their requirements at sellers' price. Most of them are under the circumstances now reported to be chary to sell short anything for a nearby position. The sales for export during the week proved poor. The opinion regarding the future of the market is divided. One thinks that if New York does not come to buy sizable quantity during the months of June and July, the growers in India will go tired-long and the market may decline some time in August. While, the other thinks that as the growers are stiff sellers whenever New York is in the market she shall have to pay growers' price for planters are unwilling to release a large quantity at the present price. Growers are generally expecting the repetition of last year's performance when New York had to increase their purchasing price by nearly 30 cents during the months of June and July in order to get enough supply from India.

In A.S.T.A. section, business for June and July was done at price ranging from $1.41 to $1.44½ for June, and $1.39 to $1.42 for July.

Neither Sarawak nor Lampong is said to be in a position to supply anything worthwhile to New York during the coming month or two, as the quality available for export during these months is not likely to come up to the standard.

Following are yesterday's nominal quotations: Ready delivery Rs. 375 per Bengal maund, June Rs. 2,700-30 and July Rs. 2,660-90 per candy of 5¼ cwts.

FURTHER RISE IN WOOL PRICES

(Messrs. J Hardacre and Co.)

BOMBAY, 26*th May*

The highest point of the recent advance in wool values in Australia, which was largely influenced by Russian competition, seems to have been reached at the early sales this week. Meanwhile, there has been, especially at Adelaide, a turn in favour of the buyer, and it has become easier to obtain wool within Bradford limits. At the same time, quotations are now higher than those a week ago, with merinos on a basis of 176*d.* for 64s warp. Some topmakers are quoting rather more. In fine crossbreds, prices are based on 122*d.* for a 58s super. In medium crossbreds, most topmakers are asking 85*d.* for 50s carded.

In the circumstances, it is not surprising to find business quiet in the top market. Users have covered their commitments so far ahead that they are disposed to await further developments in the wool market. The interpretation of the Bradford firms with regard to recent developments in Australia is that the Russians have bought all the wool they need, particularly at Adelaide, and have dropped out of the market.

Spinners' indifference to placing business in tops continues to be a feature of the market. They are evidently so well supplied with orders for which they are fairly well covered in the top market that they are quite content to push along with production and deliveries, especially in view of the approach of the holiday season, which this year, with the operation of the two-week holiday, is likely to dislocate production much more.

To-day's quotations (in pence per lb. c.i.f. Bombay delivery, for Bradford oilcombed tops are given below:

	July-August 1953
	d
48s carded	87
58s super	124
60s super	150
64s super	174
70s super	189
Fibro (3D.4″)	43½
46-48s scoured clothing wool	78-79

TEA DUSTS PRICES DECLINE

(From Our Own Correspondent)

CALCUTTA, 26*th May*

Although there was satisfactory demand during last week's internal sales, where dusts offered amounted to 29,837 packages and leaf 2,475 packages, buyers were prepared to support the market only at lower levels. With the result, almost all varieties registered declines in prices, Dooars varieties, good mediums and mediums eased by one anna below brokers' valuations, while the commonest varieties and best liquoring sorts were pushed down by two annas. Thus, best Assam C.T.Cs. dusts were priced at Re. 1-12, medium Assam grainy dusts Re. 1-8-6 to Rs. 1-9, and medium Dooars dusts Re. 1-7-6. Because of a decline in quality, prices for leaf teas were also pushed down.

JUTES FIRM

(From Our Own Correspondent)

CALCUTTA, 26*th May*

Jute markets continued to be supported at the higher levels again during the week, and prices added further gains. The Commerce Minister's encouraging remarks regarding prospects for increased exports of jute goods during his address last Sunday to the Export Advisory Council were received cheerfully in the markets. This factor gave strength to bazar dealers to continue stocking which, in turn, supported the gains. This trend was particularly in evidence during yesterday's trading, and prices hardened further over Saturday's closing levels. Throughout the week, there was moderate support from overseas buyers. The continuation of the dry weather, the lack of adequate rains for the progress of sowings, and the consequent fear of a much reduced crop, were all other factors which helped buyers, including speculators, to enter into commitments before prices went further, and mills booked business for delivery up to September.

While market circles have noted that a small consignment of hessian, manufactured by an East Bengal mill, has been shipped to the United States, they have rightly taken the view that it would be a few years before Pakistan becomes a competitor to India in the burlap market. The above news from East Pakistan is, therefore, taken as publicity to Pakistan's "coming" ability to meet orders for hessian. The threat to Indian hessian from Pakistani competition and the possibility of Pakistani mills underquoting Calcutta are possible in years to come, and although India should be aware of such possibilities, a section of market circles rightly feels that any "drastic" measures now to safeguard against possibilities in the future, will be not only foolish but are not called for, meased by any yardstick. Nevertheless, they are one with the opinion that there is need for modernisation of production in mills, improvement in the quality of raw jute grown, especially in the variety fit for the production of hessian, and expansion of India's markets in foreign countries. Efforts in these directions have been in hand now for some years now, and results have indeed been satisfactory. Hence the Pakistani report will, it is hoped, result in acceleration of the Indian efforts to place the jute industry on a better footing.

A feature in the sacking market was the support which sugar mills gave to A. twills. Sugar mills require more bags this season in view of a likely increase in production. Reports that this year Burma would be able to export more rice, that for this purpose she would require more bags, and that an Indo-Burmese barter agreement was likely soon, had an enlivening effect on prices. The market expects that again this month production of heavy goods would register a decline. Last Wednesday, dullness invaded prices and B. twills declined to Rs. 96, as bazar rumours that Pakistan was to devalue its rupee were circulated freely. These reports, as the previous numerous ones, proved false, but the persistent easiness was due to possibilities of cheaper fibre from East Bengal in the event of the rumour materialising. On Thursday, however, a recovery to Rs. 97-12 was reported, due to good covering demand and also to satisfactory business within shippers. Mills were not anxious to sell, and this coupled with good speculative demand raised the price to Rs. 98-12 on Friday. On Saturday, the price was further up at Rs. 101-8, and the July-September position held steady ground at Rs. 103. Demand was steady. Yesterday, the ready position moved further up by one point to Rs. 102-8.

Hessian prices were steady. The improvement was in sympathy with sacking, as business was only about average in volume. Ready 40″ 10 oz. hessian opened at Rs. 41-8 and on Thursday moved to Rs. 42-4, which was just maintained on the following day as poor turnover coupled with huge stocks with mills made buyers delay entering into commitments. There was a further rise on Saturday to Rs. 43-8, and the rise was in sympathy with the advance in quotations for heavy goods. During yesterday's trading, a further gain of As. 2 was recorded.

STOCK & SHARE QUOTATIONS

Abbreviations:—D=Deffered shares. G=Guaranteed shares. P=Preference shares. P.O.=Preferred Ordinary shares. R=Rebate shares. Y=Accounts published yearly. H=Accounts published Haf-yearly. Q=Accounts published once 15 months T=Company has Debentures. R.L.=Reserve Liability on shares. N=Nominal Quotation. i=Interim Dividend. f=Dividend for first half-year, y=Dividend for the year. x=Ex. Dividend c.d.=Cum. Dividend.

Shares:—If a company has different classes of shares—as, for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under "Paid-up Per Share."

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12 indicate the months of June and December, respectively. "Reserves" includes general and other reserves and all other funds which a company may have as also depreciation on block items, when this is charged to separate account "Block" represents actual cost of land, buildings, machinery and all such other items on which depreciation is allowed, less sales, if any, and stands for the gross figure except where otherwise indicated.

Dividends:—Dividends for completed years are calculated at per cent. per annum, but, where quoted for portion of a year, they represent percentages of the dividend on the paid-up share value. For companies closing the books half-yearly in the first three months of the year, and for companies closing their books yearly during the first half of the year dividends are shown as for the previous year.

* The following explanatory notes relate to the abbreviations and marks shown on page 1016 in the debentures section:—

‡‡ Option to repay on six months' notice, on any interest date after 31st December, 1951, at 102 per cent. Also redeemable out of a cumulative sinking fund of 1½ per cent. per annum (commencing in 1938) by drawings at 102 per cent. or by purchase at or 102 per cent.

(a) Option of repayment at any time at 3 per cent. premium.

(b) Bearer bonds of Rs. 1,000 each repayable at par.

(c) Bearer bonds of Rs. 1,000 each repayable on 31st July, 1959.

(d) Bearer bonds of Rs. 1,000 each with ption of redemption in whole or in part at par on 30th June, 1952, or on any subsequent interest date at one month's notice.

(e) Returnable on or after 31st July, 1950, at Rs. 102-8 or at par after 31st July, 1955, on six months' notice in each case.

(f) Bearer bonds of Rs. 1,000 each with option of redeeming on 3 months' notice at ½ per cent. premium, after 1st March, 1954, but before 1st March, 1957, and 1 per cent. premium on or after 1st March, 1957

(h) Option of redemption on or after 1st July, 1949, at par.

(l) Option of repayment at any time at par at any time on or after 30th June, 1947 on six months' notice

MARKET GOSSIP

(Concluded from page 975)

it aims at expanding this capacity from one million tons pre-war to 10.5 million tons. The Company's sales of refined products were above those for 1951, though "only by some 2½ per cent." The statement also makes an appreciative reference to the Company's research activities which have resulted in "important contributions towards efficient and economic operations."

* * * *

The pattern of trading in the art silk yarn market in the past few weeks does not show any marked change. In the absence of any aggressive force to influence the pattern either way, values have chosen to move within narrow limits. Occasional buying enquiry has no doubt appeared, but it has lacked strength. The undertone of the market has more or less been quietly steady, although, during the week under review, there was a slight setback. The prices of yarn are well maintained, the current level being very much higher than that in the slump period early last year.

* * * *

Traders in art silk yarn are closely watching the developments in the internal as well as world markets. Since there has been no event of any special significance to the art silk yarn market, it is difficult to hazard any statement about the future trend of prices. At what levels these prices would stabilise is anybody's guess. Some are of the view that prices of yarn should tend to decline. In support of this view, they point to the comfortable statistical position of yarn in world markets, prospects of better international political situation and highly encouraging trend of indigenous output. There are, however, others who feel that prices should improve. The optimism seems to be quite justified, considering the tight supply position in respect of yarn, especially yarn of 150 deniers (on hanks), notwithstanding the heavy arrivals of imported yarn in the past couple of months. Even assuming that art silk yarn production during the current calendar year will amount to 9 million lbs. and taking into account the imports of about 24 million lbs.—on the basis of the figures of imports during the first four months—the total available supply of yarn will be of the order of 33 million lbs., a quantity far below the present estimated consumption of 50 million lbs. It is, however, true that the consumption figure is subject to variations depending upon the state of the market for art silk yarn. Also, this estimate of consumption, according to certain observers, errs on the high side.

* * * *

In view of the tight supply position thus, and of the fact that the demand from the rayon fabric section continues to be brisk, one can confidently expect an upward trend in art silk yarn prices. An indication of this is provided by the report that the National Rayon Corporation, Bombay—the major producer of rayon yarn in India—has succeeded in striking a most favourable bargain by entering into forward contracts with several traders and consumers for the sale of the entire quality of yarn produced during the period, 16th August to 30th September, 1953, at "remunerative" prices. Further enquiries, it is stated, have also been received by the Company for the supply of yarn produced during the subsequent months. Incidentally, it may be noted that the major portion of the yarn now being produced is being sold to the Silk and Art Silk Mills' Association, Bombay, under the bulk purchase agreement which came into effect on 15th March, 1953. Under the agreement, the Company has been supplying to the Association 400,000 lbs. of rayon yarn—200,000 lbs. each of 150 deniers and 120 deniers—per month at a price of Rs. 3-10 and Rs. 3-6 per lb., respectively, for the two varieties. The quantity represents about 75 to 80 per cent. of the factory's output. As the agreement is due to expire on 15th August, next, negotiations are taking place between the two parties for its renewal.

* * * *

It is not known whether the quantity of art silk yarn that the Company will undertake to supply will be larger than that stipulated in the present agreement. Now that the trend of output is very encouraging and bids fair to be so in the coming months, thanks to the ease with which the Company has been able to procure imports of raw materials, such as wood-pulp, rayon grade caustic soda and sulphur, the Company should be able, it is stated, to supply a larger quantity of yarn to consumers. With regard to prices, there are indications to suggest that they will be higher than those agreed to in the present bulk purchase scheme. In fact, the Company is reported to have demanded a higher price for its supplies after 30th September, 1953. It is not known whether the demand will be conceded. Much will, of course, depend on the trend of art silk goods output and on the Government's import policy in respect of art silk yarn. If Indo-Pakistan economic relations are placed on a firm basis, it should lead to a satisfactory improvement in India's exports of these goods to the Pakistan market. Barring a general slump in the market for art silk fabrics, it is reasonable, according to market opinion, to expect the maintenance of at least steady conditions in the market for art silk piecegoods and for yarn. Being semi-luxury goods, the demand for art silk fabrics is subject to wide variations. So far as the Government's import policy in respect of art silk yarn is concerned, even if the Government were to adopt a more liberal policy for art silk yarn imports during the ensuing (July-December, 1953) half-year, prices might be well maintained. For any quantity that may be imported will not be so large as to flood the internal market with supplies and depress the prices. Generally speaking, the Government might be expected to permit imports only to the extent that local manufacturers cannot produce. Already, the Government has decided to stop imports of lower grades of yarn, such as III, IV, rejects, etc., in 120 deniers and 150 deniers.

OFF THE RECORD

(Concluded from page 979)

which flagrantly evades restrictions imposed by it, can hope to enforce respect from the citizens for its own laws and orders. Besides, it must be a poor democracy, where the citizens go about in fear of the executive to such a degree as to refrain from seeking legal relief even in the matter of fundamental rights clearly enumerated by the written Constitution of the country, for fear of reprisals from the minions of this executive.

So far, I have purposely refrained from discussing the purely economic implications and repercussions of this amazing order. I am not inclined to blame the Government for ignoring this important aspect, because I do not consider that either the Ministers concerned, or their *aides*, are capable of the intellectual effort involved in working them out. If the Government had cared to see a little beyond its nose, it would have known how their order would affect the small cotton-seed crushing industry, importing a good part of the raw material from other neighbouring States, when it has to sell its cake and oil in open competition with other oil mills in other States, which are not handicapped by any such order, compelling them to part with fifty per cent. of their cake at one-third its market price. In the case of groundnut cake, the price paid by the Government bore a slightly higher percentage and the mills could raise the price of the cake left on their hands. This is not possible in the case of cotton-seed cake or oil, because the produce in the State of these commodities forms a very small part of the total output and any raising of price would make their oil and cake unsaleable. They must either close down for the present or write off the difference in price paid by the Government and the cost of production as a dead loss.

The most surprising part of this business is that the Planning Commission has directed that special steps be taken to increase the volume of cotton-seed crushing, to relieve the pressure on other edible oils to bring down prices. This is, perhaps, the Bombay Government's idea of implementing the Five-year Plan. If they had wanted to prohibit cotton-seed crushing in the State, they could not have devised a more effective indirect method of doing so than that of issuing the present order.

MARKET REPORTS

(Concluded from page 1005)

A further rise in prices in raw jute was natural in view of the steady conditions in the goods markets and of the unfavourable weather reports. Mills were also in need of replenishing their stocks, and, in certain cases, had to satisfy their needs by paying premiums over quotations. Stockists are watching developments, and desire the prices to go up further to enable them to make good the losses they had incurred in recent months by being forced to sell jute purchased at higher prices. Assam bottoms rose to Rs. 28 from Rs. 25 for delivery within 30 days. Kissanganj jute hardened to Rs. 25, Murshidabad Dist. tossa to Rs. 26, Bimli to Rs. 22-8, and Pakistani jat to Rs. 30.

WHEAT ARRIVALS IN FULL SWING

(From Our Own Correspondent)

HAPUR, 26*th May*

An analysis of the final estimate of *kharif* cereals for 1952-53 released by the Government of India this week shows that, out of a total of 4 million tons increase in production over the previous year, nearly 2.7 million tons are in rice, the cereal which has been in extremely short supply for nearly a decade. This explains why India shows no anxiety to purchase foreign rice this year, except on its own terms.

An examination of the State-wise position reveals that the increase in rice production has been particularly marked in Orissa, where it is nearly one million tons more than the 1951-52 figure. Then came in order Bihar (871,000 tons), West Bengal (469,000 tons), U.P (325,000 tons), Bombay (175,000 tons), Punjab (53,000 tons) and Assam (40,000 tons). While there has been an overall increase of 94,000 tons in *jowar* production for the whole country, important consuming areas like Bombay, Madhya Pradesh and Madras show a decline over last year's figures.

It is now revealed that India has been allotted 4.5 million tons of wheat for three years under the International Wheat Agreement. New wheat shipments are expected to commence arriving in August this year.

The Punjab Government has decided not to issue permits for exports of wheat, as neither the Government of India nor the Delhi Government was in requirement of wheat. In order to prevent the smuggling of foodgrains from the Punjab to neighbouring deficit States in India and Pakistan, the Government has taken drastic measures. It has been decided to continue rationing in Simla and Kangra.

The latest foodgrains quotations in the Hapur market are: Wheat Rs. 15-12 to Rs. 17-12, gram Rs. 15-8, barley Rs. 11-6, *bejhar* Rs. 11-8, maize Rs. 13-6, *bajra* Rs. 13, *jowar* Rs. 11-8 to Rs. 13-8; Rice: basmati Rs. 35 to Rs.

AUTOMOBILE INDUSTRY

ANNOUNCING the Government's decision on the Tariff Commission's Report on the automobile industry, Mr. T. T. Krishnamachari, Minister for Commerce and Industry, stated, at a Press conference in New Delhi last week, that the country was now "beginning a new chapter." This is by no means an inappropriate claim. So far-reaching are the Commission's recommendations, as well as the Government's decisions thereon, from the consumers' point of view, and so helpful are they to the industry that they constitute a distinct landmark in the Government's industrial policy. The Government has taken a bold stand with faith in the future of the industry and confidence in those *entrepreneurs* who have ventured into it. It would, therefore, be a deeply deplorable event, if the manufacturers failed to deliver the goods. This is not to minimise the magnitude of their difficulties. They have had to begin from scratch and have to work their way up, even now, through some of the most challenging obstacles. Only their task has been lightened by the Government's sympathetic decisions.

The automobile industry in India has all along faced three chief problems, namely, of stimulating the demand for cars, of becoming economic production units, and of evolving itself into an independent industry, free, as far as possible, from the support of foreign firms for parts and spares. These are the problems which have continuously presented themselves in one form or another, and with which the industry has had to contend. That the automobile units should have survived at all is a matter for great relief, for, early last year, the prospect appeared so bleak that it seemed, for once, that this industry, the national importance of which has never been in doubt, would remain permanently crippled. This is the background against which the Commission's recommendations and the Government's decisions on the Commission's Report must be considered.

There is no doubt whatever that the Commission's Report is the most painstaking document that has come from that body. No important aspect of any problem connected with the industry has escaped the Commission's attention. No effort has been spared to tackle boldly, and in a truly national spirit, the admittedly intricate problems which the industry poses for the Government and the public to-day. The Commission has wisely recognised that, "unless protection in suitable form is granted to the automobile industry in the present stage of its development and other measures are taken for its encouragement, it cannot be established on a sound basis." This is the keynote of the Commission's approach to the problems facing the industry.

Since the Commission was rightly convinced that protection was necessary, its next task was to determine the quantum of protection. A connected issue was the thorny question, namely, how best the demand for cars could be stepped up. The Commission has come to the conclusion that the present high rates of import duty—94½ per cent. on certain components manufactured or expected to be manufactured in the country, 63 per cent. and 21½ per cent. on other components—have, far from helping the industry's progress, actually hindered it by raising the price of motor vehicles to the consumer. The Commission has recommended that the import duty on all components should be reduced to a flat rate of 40 per cent. *ad valorem*. The Government has accepted the substance of this recommendation. Its decision is designed to secure not a flat rate of 40 per cent. for all components but an average rate of 40 per cent. on a complete c.k.d. pack on all components, except those which come within the manufacturing programme of the automobile units and which will bear a slightly higher rate than 40 per cent. *ad valorem*.

This decision should go some way towards lightening the burden on the consumer of the cars manufactured in India by utilising, in part, the imported components. But it will not by itself stimulate demand to a satisfactory level. Two other issues deserve to be tackled, in this connection, and tackled without delay. In the first place, there is the problem of far too many types of cars for an all too limited market that India offers for them. The Commission has recognised this problem, for it has suggested that the manufacture of passenger cars be limited to four types—baby cars (upto 1.2 litres), light cars (1.2 to 1.5 litres), medium cars (1.8 to 2.5 litres), and big cars (2.5 litres), and also that the manufacture of commercial vehicles be limited to four types—light vans (upto 1 ton), light trucks (1.5 to 2 tons), medium trucks (3 tons), and heavy trucks (5 tons). The Commission has suggested a plan of manufacture for various types by different units. The Government "generally" accepts this recommendation, though it has decided that the manufacture of baby cars need not, as recommended by the Commission, necessarily be confined to one manufacturer. Accordingly, it would be prepared to consider a programme of manufacture from any one of the five firms allowed to manufacture, if such a programme is submitted before September, 1953. Regarding diesel vehicles, the Commission has come to the conclusion that they are more suitable for heavy transport and that the manufacture of a five-ton diesel vehicle should be encouraged, but that no diesel vehicles of lower tonnage should be allowed to be manufactured. The Government, however, doubts whether any firm would find it economical to manufacture five-ton vehicles only. It would be prepared to consider any concrete plan of manufacture which would include, besides the five-ton diesel trucks, engines for lighter vehicles or medium vehicles of a type not included in the manufacturing programme of the five units.

Secondly, there is the hotly debated question of heavy taxation on motor vehicles. With scant regard for the need for evolving an efficient system of motor transport, the State Governments have, as the Motor Vehicles Taxation Enquiry Committee demonstrates with abundant evidence, been loading the motor owner with a tax burden which is not only heavier than in any other country in the world but which bears no relation whatever to the amenities provided for him by these tax-grabbing Governments. The Commission has rightly emphasised that the Committee's recommendations should be implemented. The Government of India too has conceded that the "present system of taxation of road transport by different authorities at different rates—sometimes very high—has been a powerful factor in reducing the demand for vehicles, particularly transport vehicles." It has accordingly undertaken to examine this question further, in consultation with State Governments, in order to "evolve a system of taxation which will be conducive to the development of motor transport." It is to be hoped that the State Governments will realise the issues that are at stake and will agree to make the necessary changes in the tax burden on motor vehicles, although the past record of the State Governments—as witness their intransigent attitude towards sales tax and prohibition—does not justify this hope. It is not perhaps as clearly realised as it should be that the chief deterrent to the purchase of cars to-day is not so much the outlay on a car—though it is an important consideration—as the high cost of maintenance, thanks to the high level of taxation on motor vehicles. The future of the automobile industry is most intimately bound up with the reduction in this burden of tax on the vehicle.

The economic production of motor vehicles would be possible only if the industry adhered to some scheme of restriction on types. From this point of view, the scheme designed to limit the number of models, recommended by the Commission, whatever its other limitations ought to be welcomed. The Government has also accepted the Commission's recommendation that the demand for vehicles in the country should be concentrated on the firms with a manufacturing programme, namely, the Hindustan Motors Ltd., the Premier Automobiles Ltd., the Automobile Products of India Ltd., the Standard Motor Products of India, Ltd., and the Ashok Motors Ltd. This means that there will be no scope for the pure assemblers. The Government's reading of the situation is that within a period of three years, these firms will "cease their assembly operations and concentrate on the other activities still open to them—not the least important of which is the maintenance and servicing of the vehicles on the road." This is a regrettable necessity, for the national interest demands that encouragement should be given only to producers with a manufacturing programme. Much regret will nevertheless be felt for the loss of connection with these assemblers, some of whom are honoured names in this country and who have contributed so richly to the creation of automobile-consciousness in India. It is to be hoped that, when the operations of these

assemblers gradually decline, the automobile manufacturers will, in their own interest, take over the men trained by these assemblers.

A vital consideration for the sustained progress of automobile industry is that it should develop into full adulthood as quickly as possible and show sturdy independence by being able to manufacture nearly all the parts it needs. It is true that no single automobile unit in any part of the world manufactures all the parts; generally, each unit manufactures a part of a vehicle, buying its other requirements from ancillary industries. The Indian automobile industry is now manufacturing a greater proportion of its equipment than formerly, and has plans for increasing the proportion of the Indian-made content of the motor vehicles it manufactures. Nevertheless, there is scope, as the Commission has pointed out, for encouraging the ancillary industries in India, which, on their part, should strive to make available to the manufacturers of cars quality products. The Commission has rightly urged that it is in the "national interest" that the automobile units should "become independent of their foreign associates within as short a period as possible."

The path of progress for the automobile industry has thus been cleared of some at least of the major obstacles. The reduction in import duty, at an estimated cost of Rs. 3 to Rs. 4 crores to the Central Exchequer, should help encourage the manufacture of cars at lower prices. Mr. Krishnamachari warned that, if the vehicle prices did not come down before the end of this year, the Government would be compelled to "act." He also added that the idea of "sacrificing quality for the sake of producing something wholly in India is detestable" to him. It is, therefore, to be hoped that the manufacturers would strive by all the means within their power to maintain the quality of their vehicles. An equally important consideration is that they should provide ample and sustained servicing facilities. After all, a motor car is not a commodity which can be sold across the counter and about which the manufacturer can afford to forget after it has been sold. It requires considerable powers of salesmanship to sell a car. And an important sales point is that the customer should be convinced that he can look forward to prompt and efficient servicing facilities. To deny him such facilities is to lose scores of potential customers. A clear duty is cast upon the industry to show that it can not only deliver the goods, that is, quality goods at reasonable prices, but also give its customers no cause for complaint regarding the "servicing" of the cars they have bought.

CENTRAL ADVISORY COUNCIL MEETING

THE third meeting of the Central Advisory Council of Industries, held at New Delhi on the 29th of last month, provided yet another opportunity for the Government and the industrialists to know each other's mind on the general problems of industrial development in the country. The problems are well known and so also the views of both the interests on them. Nothing new, has emerged from that meeting. Nevertheless, the meeting was of some value in that the statements made by the Finance and the Commerce and Industry Ministers clarified the Government's viewpoint on certain important issues. These statements clearly show that the Government understands the needs of industries and that it is willing to assist them wherever it can with due regard to the interests of consumers and workers and subject to the limitations placed by the restricted financial resources at its command.

One of the issues discussed at the meeting related to the problem of finance for rehabilitation and modernisation of industries. In an interesting paper submitted to the meeting for discussion, the Federation of Indian Chambers of Commerce and Industry indicated the causes and the magnitude of the problem. The chief cause of the problem lies in the fact that the rates of depreciation on fixed assets allowed under the Income-tax Act have been inadequate to cover the cost of replacing the worn-out assets, in view of the increase in the cost of new plant and machinery in recent years. After a study of 138 production units, the Federation places the value of established industries at about Rs. 700 crores, of which Rs. 500 crores are said to represent the value of plant and machinery. The major portion of these capital assets requires to be replaced over a short period, as they are of pre-war origin. Assuming that the current prices of machinery are 3½ times the 1937-39 level, the finance required for replacing these assets will be, according to the Federation, of the order of Rs. 1,300 crores to Rs. 1,500 crores. As against this, depreciation on the original cost will have resulted in a provision of Rs. 630 crores, leaving a balance of Rs. 700 to Rs. 900 crores. As this includes Rs. 100 crores, being the estimated value of the plants installed between 1945 and 1950, the real deficit to be covered is put at Rs. 600 to Rs. 800 crores. Spread over a period of the next 12 years, this means an annual requirement of Rs. 50 to Rs. 65 crores. This sum is beyond the capacity of the existing industries and could, therefore, be found only with the assistance of the Government.

The Federation is of the view that, as the increase in prices of capital goods has been nearly three to four times the pre-war levels, at least those industries that are faced with the task of replacing the pre-war plant and machinery should be helped by the Government with loans at rates of interest not exceeding the Government borrowing rates and on such terms of repayment as will enable the industry to return the loan without undue financial strain. The Federation further suggests that such loans could be made through the Industrial Finance Corporation. This will enable the Government to make sure that loans are granted only in deserving cases and upto a proper limit and that they are used only for the purpose for which they are meant.

The case made out by the Federation makes convincing reading, though it must be pointed out that the figures mentioned by it are only rough estimates. In fact, the assistance that is being rendered by the Government to the iron and steel industry provides a precedent in support of the general principle underlining the Federation's suggestion. No wonder that the Finance Minister, Mr. C. D. Deshmukh, himself seems to have been impressed by it. He did not deny the need for some such assistance, even though he was a little circumlocutory in giving expression to it. The baffling factor, however, was finance and he did not know from where he could find it. Further, as the question was being examined by the Taxation Enquiry Commission, the Government had to wait for its suggestions. Nevertheless, it is gratifying to find that the Finance Minister gave the welcome assurance that the Government would consider all hard and deserving cases as they came along and take suitable steps which would keep them going till a permanent policy was evolved. He mentioned, in this context, the case of the jute industry as an instance, and said:

> "May be our supremacy in regard to export of jute goods is threatened. I believe the first consignment of Pakistan jute goods has already been sent abroad. They have a very great advantage, because their manufacturing costs on new looms are lower than ours and their raw material is at their doors more than at ours. Therefore, we have to consider very seriously how we should retain what we have left of the market. We have to face that problem no matter when the Taxation Enquiry Commission is going to report or when we are going to change our depreciation allowance system."

The foregoing extract from the Finance Minister's statement, as well as his other observations on this subject, referred to on a subsequent page of this issue, reveals that he appreciates the importance and the urgency of the problem and recognises the need for doing something about it.

The Commerce and Industry Minister, Mr. T. T. Krishnamachari, in his speech at the meeting, explained the significance of the amendments made to the Industries (Development and Regulation) Act. What he said, in this connection, was nothing but a reiteration, perhaps in clearer language, of what he stated in Parliament a few days ago. He vigorously denied that these amendments constituted a radical change in the Government's policy towards industry. He did not even admit that they had resulted in an expansion in the general powers of control which the Government already possessed. "All that has been done," he remarked, "is a certain degree of streamlining and amplification—administrative and legal—besides providing for action to be taken quickly under certain contingencies." Now that the amendments have gone on the Statute Book, a debate on their significance is of no consequence. The fact remains that the Government has assumed enormous powers to regulate industries and with it also the responsibility for ensuring orderly development of industries. If things were to go wrong, the Government would have to share the blame, even though it might not have been directly responsible for it. The Minister has, of course, repeated the assurance he gave to Parliament that "it is not the intention of the Government to treat this (the Act) as a punitive measure and the emphasis will throughout be on keeping the wheels of industry moving." Industrialists will doubtless welcome this assurance, but, considering that the Government recently decided to nationalise the civil aviation industry without any cause for such a provocation, it will not be surprising if all the industrialists do not feel reassured by this soothing statement of the Minister about the intentions of the Government. Nevertheless, business men will do well to go ahead with the tasks they have undertaken, hoping for the best.

A controversial subject which came up for discussion at the Council meeting was the question of foreign capital. Mr. Krishnamachari did well in availing himself of this opportunity to declare the Government's stand on this question unequivocally, because, in the name of *swadeshi*, a hue and cry is being raised by a section of industrialists against foreign-owned industries which have been operating in this country for a number of years now. If this agitation is allowed to continue without a statement of policy by the Government, it will have an adverse effect on the flow of badly needed foreign capital into the country. In view of the importance of this subject, the Minister's remarks deserve to be quoted *in extenso*:

> "I am in my mind a little distressed at certain trends in the minds of our industrialists or, at any rate, in the minds of some of them. Time was when they, as champions of private enterprise, spoke against controls and asked for less interference on the part of Government. Government might not have always agreed with that point of view. It might have had its own reasons on grounds of broader economic and social policy to restrict the freedom of the individual *entrepreneur*. But the philosophy of free enterprise was at least a consistent one, and even those who differed from it could respect it. There is now a new tendency. While the industrialist is still prepared to say that he stands for free enterprise and does not want any controls for himself, he goes on in the same breath to urge that others should be controlled or restricted for one reason or another. Thus, he claims that anything which he makes in the country should not be allowed to be imported, and import control, which has been introduced for the conservation of foreign exchange, should become an instrument of protection. He next asks that not only should he be protected from competition from goods made abroad, but even from goods made on Indian soil with the same type of raw material and labour which he himself is free to employ, merely because such enterprise contains an element, large or small, of foreign capital. In the extreme form, there are the cases of those who have set up an industry asking for protection even from their own countrymen and urging that no new capacity should be allowed, because the existing capacity can meet all demands. I want to take this opportunity of asking you to pause and consider whether this is not an unhealthy and even a dangerous tendency. If one believes in private enterprise, one must also accept its natural corollary and real justification, viz., competition. If there is to be a monopoly in any field, then, obviously, the monopolist cannot be a private party looking after its own interests, but must be the State which is responsible for social and economic welfare as a whole."

There is no doubt that this tendency is not in the interests of the country. It is positively harmful to the future of private enterprise itself, for the reason mentioned in the last sentence of the foregoing extract. It does not, therefore, deserve to be encouraged. The main considerations for allowing foreign capital into this country should be its beneficial effect on employment of manpower and indigenous resources and the advantages of efficient production to consumers. The question as to who should own the capital employed in industries is not of primary importance in the case of a capital-starved country like India, wishing to achieve rapid industrialisation, except, perhaps, in the case of strategic industries.

DOWNWARD TREND IN ALL MARKETS

PROSPECTS FOR NEW LOAN PROMISING

THURSDAY, 5 P.M.

MARKET GOSSIP

A DOWNWARD trend in prices has characterised the trading in all the principal markets of the city during the week under review. In the Share Market, Tata Deferreds have receded from Rs. 1,925 last week to Rs. 1,890 to-day and Bombay Dyeings from Rs. 397-8 to Rs. 393. Gilt-edged is distinctly quiet, with sellers in preponderance. In bullion, ready silver, at Rs. 157-7 now, shows a drop of Rs. 5-1 over the week; gold, however, is higher by Re. 1-8, for some special reasons. Among commodities, cotton has registered a sharp drop of Rs. 36-4 per candy in the futures section. Similarly, oilseeds too have sustained a fall in their values. Groundnuts, forward delivery, for instance, are now being quoted at Rs. 44-8 per cwt., as against Rs. 46-12 a week ago. Castorseeds (forward) have receded from Rs. 160-12 to Rs. 148-8 per candy of 5 cwts. Linseed (forward) has also gone down from Rs. 34-12 to Rs. 32-8. At the time of writing, the rates for all these three seeds in the kerb market are still lower.

* * * *

All this does not mean that the undertone of the markets has suddenly become bearish. There have been no new developments either in the political or economic field to cause such a change in the tone of the markets. The downward trend is purely the result of a certain amount of excessive speculative buying in April and early in May. This speculative position is now undergoing correction which is doubtless a desirable development. Apparently, the speculators who went long have now become tired of sitting on their purchases, with very little prospects of a further rise in prices. It is a sign of steady economic conditions in the country when speculators find it unprofitable to hold on indefinitely either as bears or bulls. Such a state of affairs in forward markets reflects the absence of any pronouncedly abnormal conditions.

* * * *

In the recent past, when the Share Market was moving up, genuine investment buying was only of a modest nature. On reports of satisfactory working conditions in all the major industries, investment enquiry for first class shares no doubt tended to broaden, but the volume was not sizable enough to sustain the boosting the scrips had received from speculators. On the other hand, the high levels attained by some of the scrips attracted fairly large deliveries. Further, with the closure of share transfer books of the Tata Iron and Steel Co., Ltd., imminent, even speculative support for the shares of the Company declined markedly, as heavy *budli* rates will have to be paid on outstanding purchases. Some operators believe that these shares will once again look up after the effects of the closure of transfer books are over, as the profit position of the Company is said to be quite satisfactory. Much, however, will depend upon the decision of the Tariff Commission on the Company's demand for a fresh increase in the price of steel and on the dividend results for 1952-53, about which there has scarcely been any speculation so far.

* * * *

Enquiries made in market circles reveal that the downward trend has spread from the cotton market. It would appear that, in recent weeks, there was heavy speculative buying of cotton. The strong technical position of Indian cotton and rising mill consumption had encouraged such buying. Even spot merchants had made paper purchases in addition to ready cotton. That was why I.C.C. August was quoted as high as Rs. 744 in the second week of May. In the subsequent three weeks, there was a gradual fall in the rate, which stood at Rs. 721 a week ago. Since then, there have been rumours that the Government of India is taking a serious view of the upward trend in prices, that the Textile Commissioner is not prepared to issue additional quotas to the mills who want to buy Indian cotton and that the Government might not give permission to commence futures trading in the next season's crop. All these rumours are said to have unnerved the bulls, encouraged the bears and induced the spot houses to hedge their purchases.

* * * *

Now, how has the fall in cotton adversely affected the other markets? It is stated that the leading bull in silver, who commands the major portion of the floating stocks of silver in the country, has been a bull in cotton as well as in shares. It is suspected that he might have some long position in oilseeds too. It is believed that, as this operator must have suffered a heavy loss in cotton, his position in other markets will be vulnerable. This impression might have induced the bears to hammer prices down. Or it is just possible that the operator referred to may himself be reducing his commitments.

* * * *

Rumours of imminent devaluation of the Pakistan rupee are also said to have pricked the bubble in the cotton market. Advices from Karachi, however, indicate that the present administration in Pakistan has weathered the economic storm. Prices of raw jute have looked up. Cotton, too, has been meeting with good enquiry from foreign countries. The balance of trade of Pakistan is also said to be improving. That being so, the chances of devaluation in the near future are becoming dimmer.

* * * *

A question of great interest to the cotton market at present is whether the Government of India will permit futures trading in the 1953-54 season crop and if so when. The Cotton Advisory Board is meeting on the 12th inst., when this will be one of the subjects for discussion. One does not know what advice the Board will tender to the Government. The issue is undoubtedly a delicate one. At present, there is not much cotton in the country to be hedged. The mills too have no quotas to buy. Nor are they selling cloth for forward delivery on such a scale as to need the protection of a hedge market in cotton. Further, one does not know what will be the size of the next crop. This point assumes considerable importance, in view of the fact that the carry forward will be very much less (about 6 lakh bales) than the quantity brought in. In these circumstances, if futures trading is allowed, it may lead to unnecessary speculation. There is, therefore, a good case for the Government to wait and see. But, at the same time, there is another side to the question. The Government has a responsibility to the cotton trade. Having permitted futures trading in the current crop, it must offer some protection to them in respect of the stocks they hold. If there is no continuity of futures trading, they will not be able to hedge their stocks. The risk here is disproportionately heavy, considering the fact that nowadays profit-margins of cotton traders are small. Again, continuity of futures trading is necessary in order to avoid unhealthy trading and abnormal situations. Perhaps, the best thing for the Government to do would be to assure the trade that futures trading in the next crop would be permitted in good time before the August settlement expires, provided there is good monsoon. This will give ample time for the authorities to get a fairly approximate idea of the acreage sown to cotton and the possible size of the crop, information about which is necessary for taking a final decision on the issue.

* * * *

The new loan announced by the Government of India on the 31st inst., has taken the Gilt-edged market by surprise in one respect at least. The terms are a little more favourable (to lenders) than expected. It was believed that the Government would offer the terms it has now extended to investors for a long medium-dated issue and not for a short medium-dated one. In other words, most people in the market were expecting a 3½ per cent. 1964 loan, with the issue price at a discount of a Re. 1-8. Instead of that, the Government has announced a 3½ per cent. 1961 loan, with the issue price at a discount of Re. 1-12. The year 1964 was chosen by them, because it is a year in which the outstanding of an existing loan is only a little more than Rs. 30 crores. The year actually selected by the Government has a maturity of Rs. 57 crores (2¼ per cent. 1961). Inasmuch as the new loan offered is for Rs. 75 crores, the Government will have to find Rs. 132 crores to repay the two maturing loans. Hitherto, market circles were under the impression that maturities over Rs. 100 crores would be too unwieldy for the Government. But this presumption has turned out to be wrong. Evidently, the authorities are not worried about this large maturity in one year.

* * * *

The new loan is a cash-cum-conversion issue. Subscriptions will be accepted both in cash and in 3 per cent. 1952-55 loan which falls due for payment on 15th July, 1953. Those who tender this loan for conversion will get interest upto and including 14th June, 1954, at the rate of 3 per cent. per annum, but, as interest on the new loan starts from 1st June, 1953, the holders of 1953-55 stand to get the benefit of double interest for a fortnight. Those who subscribe in cash also get this benefit, albeit for a week, as the list opens on 8th June, 1953. Apart from these minor advantages, the new loan compares favourably with all the existing loans, a fact which has induced some of the holders of the existing short-term and medium-term loans to think of switching over from these to the new loan. Since the announcement of the new loan, there have been keen sellers in the dated loans with maturities beginning from 1955 to 1962. But not much business has taken place, as there are no buyers. The redemption yield on the new loan is 3.75 per cent., taxable. It is true that this yield is more or less the same as that available on the existing 2½ per cent. 1961 loan. But the new loan has an advantage over the latter, as it has a running yield of 3.5 per cent., an important consideration for an investor.

* * * *

At Rs. 75 crores, the amount of the new loan, known as "National Plan Bonds—First Issue"—an appropriate name, for the proceeds of it are to be utilised for financing the Five-year Plan—falls short of the target of Rs. 100 crores announced by the Finance Minister in his 1953-54 budget speech. This, however, does not mean that the Government will not attempt again to reach this target. If everything goes well, it may approach the market again with a new issue later in the monsoon when conditions in the short-term money market are generally easier.

* * * *

The amount of the new loan is well within that of the maturing 3 per cent. 1953-55. The total outstandings of this loan are of the order of Rs. 114.60 crores. Of these, about Rs. 80 crores are said to be held by the Reserve Bank, the balance being with the public. Market circles expect that, of the latter, at least Rs. 30 crores may be tendered for conversion. Cash subscriptions are expected to be between Rs. 20 and Rs. 25 crores. The balance of Rs. 20 or Rs. 25 crores will be taken up by the Reserve Bank against its holdings of 3 per cent. 1953-55. Thus, the new loan will be fully subscribed.

By keeping the maturity at 1961, and offering a running yield of 3½ per cent., coupled with a capital profit of Re. 1-12 per cent., the authorities have made the loan attractive to all types of institutional investors, including banks. As the interest that will be earned on the new loan is not lower than what banks will have to pay to the Reserve Bank when they borrow from it, they do not stand to lose anything when they want to raise funds against this loan at the time of the busy season. If the loan had been timed a few weeks later, the response from banks might have been much more than what is expected at present, for, by then, the conditions in the short-term money market would have become a little more comfortable. In other words, the authorities could have waited for a fortnight or three weeks more. In all other respects, however, the new loan has been well planned and designed.

* * * *

There is one school of thought in this country which has been arguing that, if the Government were to offer a new loan on terms more attractive than the existing loans, it would not be a success, as investors might withhold their support to it in the hope of getting still better terms later. There are no indications to suggest that this theory will hold good for the present offer of the Government; on the contrary, investors seem to be very eager to take it, as many of them are not certain whether the next loan of the Government of India would carry better terms. Those who expect any further substantial increase in interest rates are, it may be mentioned here, in a minority now. The downward revision in bank rates in several countries, especially in Europe, and the prospects of a business recession in 1954 have strengthened the belief that the era of higher interest rates will soon be over. It, however, remains to be seen how far this belief will prove to be correct in the coming months.

* * * *

In his characteristically vigorous style, Mr. K. R. P. Shroff, Chairman of the Bombay Stock Exchange (the Native Share and Stock Brokers' Association), analysed, in the course of his address at the annual meeting of the Exchange, this week, the chief problems of India's national economy, of which the stock exchange is rightly described as the barometer. As a person who prides over the leading stock exchange in the country, Mr. Shroff has certainly great many opportunities to observe how this market reflects the changes in the monetary weather. Explaining the "vacillating mood" of the stock market, he said that it mirrored the current conditions under which profits have shown a tendency to decline. Inflation had put up costs. But the disinflation, which occurred last year, could confer no real benefit. Because of the rigidity in wages, coupled with rising costs of social security and welfare, as well as higher Central, State and local taxes and increased transportation charges, manufacturing costs, he said, had failed to match drops in selling prices. He warned: "There has been an inroad into profits but profit margins cannot be squeezed indefinitely. Failing a substantial improvement in productivity per man-hour and reduction in taxes, wages must fall or unemployment appear to compel the transition from a high-price to a low-price economy."

* * * *

Describing the disincentive effects of the present system and levels of taxation, Mr. Shroff quoted the Planning Commission to show how the direct tax sources have been over-exploited. About 28 per cent. of the total tax revenues come from direct taxation affecting directly ½ per cent. of the working force of the country, estimated at 133 millions in 1948-49, another 17 per cent. from import duties on luxuries and 8 per cent. more from excise duties on tobacco and cloth, so that more than one-third of the total tax revenue is "derived from a certain limited stratum of society." Similarly, income-tax and corporation tax, paid by one-eighth per cent. of the total population, accounts for 35 per cent. of the total central revenue. He was also sharply critical of deficit financing, although he agreed that it was useful for "cranking up the economic machine into activity." He warned that the inflationary forces, which would be created by the use of this weapon, could be held in check only if the surplus income over and above what is necessary for satisfying bare physical wants was fed back into the monetary and capital system. No monetary trick, he said in effect, could work miracles in the economic sphere. Mr. Shroff did well to emphasise too that production and expansion could come only by hard work and saving. This was his gospel—the gospel of work. He said: "Till now we have been inclined to worship many false gods. It seems we have yet to learn that work is worship."

* * * *

Two decades may not be a long period in the history of an industrial unit. But, for a unit in an industry, like the air transport industry, which has made rapid strides of progress only in the recent past, it is a long enough period. It is the proud privilege of the management of Air-India Ltd. (Secretaries and Treasurers: Messrs. Tata Industries Ltd.) to claim a twenty-year record of useful service in the cause of air transport. In their report for the year ended 31st December, 1952, issued this week, the Directors point out that the year 1952 saw the completion of 20 years of operation by the Company and its predecessors, Tata Air Lines. Normally, this would be an occasion for rejoicing. But the shareholders are now to be content with the thought that they have served the cause of air transport at no great benefit to themselves, for they are now called upon, under the new nationalisation laws, to surrender their company's assets to the Government. Thus, the year 1952, which sees the end of the 20-year period of the Company's useful existence, is also the last year of its life. Very soon—that is, as soon as the assets have been valued and the necessary preliminary steps for nationalisation have been taken—the Directors will initiate liquidation proceedings to wind up the affairs of the Company.

EQUITIES RULE DULL

SHARP REACTION IN UNOFFICIAL TRADING AT CLOSE

(From Our Own Correspondents)

BOMBAY, *4th June*.

LETHARGIC conditions prevailed on the Stock Exchange during the week under review. In the absence of any big influences and follow-up support, prices tended to move irregularly within a narrow range. But the trend was downward under a mild pressure of several bearish factors. Pessimism regarding the increase in steel prices, fears of possibilities of an armistice in Korea, the reports of slackened demand for cloth, the bearish trends in silver, cotton and seeds markets, the anticipated heavy *badla* charges (in to-morrow's settlement) on Tata Steel shares in view of the closure of the Company's books for transfer from 29th June to 28th July, 1953, brought some liquidation. This resulted in minor losses on a wide front over the week.

To-day, the Stock Exchange remained closed on account of the 21st day of *Ramzan*. In the unofficial trading, sentiment was badly affected by the sharp recession in silver and cotton, in which the chief bull operator was heavily involved. As a result, Tata Deferreds touched a low of Rs. 1,880, the lowest for the last four weeks.

In the steel section, Tata Deferreds opened on a quiet note at Rs. 1,916-4, as compared with the previous week's closing of Rs. 1,925, and backed away to Rs. 1,905 due to bull liquidation. Attempts at staging a recovery on small-scale enquiries were partially successful when the scrips touched Rs. 1,918-12 yesterday, before closing at Rs. 1,915. Tata Ordinaries were fairly steady, moving between Rs. 334 and Rs. 331-4 and closing at Rs. 333-8. Indian Irons reacted from Rs. 25-10½ to Rs. 25-6, but support from Calcutta restored them to Rs. 25-9 at the close.

Textile shares were a dull feature, with a tendency to lag behind on persistent small offerings. Bombay Dyeings receded from Rs. 397-8 to Rs. 391-4, but made a partial recovery to Rs. 393-2 at the close. Kohinoors disclosed a loss of Rs. 2-12 at Rs. 304-8, Central Indias Rs. 4 at Rs. 165, Century Rs. 2-8 at Rs. 276-8, and Gckaks Rs. 3 at Rs. 218-8, Indu Ordinaries were placed As. 3¼ lower at Rs. 10-7½. Lakshmis declined by Rs. 6-4 to Rs. 572-8. New Greats were featureless at Rs. 155-8. Standards sagged from Rs. 316-14 to Rs. 313-12. Simplex showed hardly any change at Rs. 184-8. The Company has declared a final dividend of Rs. 9 per share of Rs. 50 each for the year ended 31st March, 1953, as against a corresponding dividend of Rs. 10 paid for the previous year, both on a capital of Rs. 31.50 lakhs. The interim dividend of Rs. 6 per share paid for the latest year was also on the capital of Rs. 31.50 lakhs. But the corresponding dividend of Rs. 5 per share paid for the year ended 31st March, 1952, was on a lower capital of Rs. 21 lakhs. Finlays hardened by Re. 1-8 to Rs. 329-8. New Citys by Re. 1-4 to Rs. 151-4. Sassoon and Alliance Silks attracted attention to record a rise of Re. 1-8 to Rs. 25-8. Svadeshis showed an improvement of Rs. 3 to Rs. 252.

Bank shares were quietly steady. Imperial Fully Paids moved down by Rs. 12-8 to Rs. 1,867-8, despite proximity of dividend. Contributories fell by Rs. 5 to Rs. 455. Centrals Rs. 25 paid-up were fractionally lower at Rs. 64-8, but 'A' Ordinaries were unchanged at Rs. 65-8. Barodas were stagnant at Rs. 112, but India's were As. 12 higher at Rs. 157 and United Commercials As. 4 better at Rs. 36-4.

Little of selling was noted in electric shares. This, coupled with selective enquiries imparted a steady undertone to this section. Ahmedabads held their own at Rs. 109-11, Surat Electrics at Rs. 133-12.

Sprinkling of losses was witnessed in the miscellaneous section in sympathy with the general market sentiment. Associated Cements were quietly steady at Rs. 172. Belapurs disclosed no change at Rs. 237. Bombay Burmahs were a weak spot with a loss of Rs. 9-6 at Rs. 375, on rumours that the interim dividend would be passed over. B.I.Cs. were a fraction down at Rs. 8-11½. Killick Industries stood Rs. 5 lower at Rs. 153.

In the transport section, Scindias were uninspiring at Rs. 13-7, but Bombay Steams held their ground at Rs. 36-4. Bharat Lines were done at Rs. 91. Air-Indias were a rupee down at Rs. 83. Air-India *Internationals* were quoted at Rs. 104. A rise of As. 8 to Rs. 4-10 was recorded by Hindustan Motors on Government's acceptance of the Tariff Commission's recommendation of substantial assistance to the Indian automobile industry. Premier Automobiles found buyers at Rs. 45, as against Rs. 41-8.

Among engineering and mining shares, Alcocks were put up by a fraction at Rs. 317-8. Premier Constructions were maintained at Rs. 84-8. Shivrajpurs added a fraction to Rs. 55-4. Indian Coppers were dull at Rs. 2-15-3, as also B.B. Petrols at Re. 1-4.

* * * *

Calcutta Stock Exchange

CALCUTTA, *2nd June*

Trading on the Calcutta Stock Exchange struck a lively note during the week and, with jutes forging ahead, the volume of transactions recorded an increase. It is too early to say how far the issue of the new loan, bearing an attractive rate of interest and with near-maturity, would affect the stock market, but a guess is that a portion of the funds from the market would get diverted. There was only a short session to-day, as the market was closed for the afternoon on account of the Coronation in London.

Jute shares were a buoyant market, and sentiment was assisted by the declaration of satisfactory dividends of three companies belonging to the managing agency of Messrs. Jardine Henderson. Although the outlook for sacking goods has considerably changed, the increase in hessian production is slowly becoming a problem for mills. Nevertheless, active interest in jute shares is due to an expectation that mills would be able to show better results during the current working period.

Disappointment has been caused over the unaccountable delay in announcing higher retention prices for steel, and although speculative Indian Irons moved in line with the general market, operators' interest was guarded. With the result, the fluctuation was narrow, and there was no difference between the opening and the closing levels for the week. Coals provided some features, as earlier expectations that the withdrawal of the surcharges would result in an increase in exports of coal were materialising. Enquiries for tea shares were selective, and operators noted cheerfully the New York report that imports of tea to the United States are showing a marked increase.

Section-wise, textiles were quiet after a week of hectic trading. Even then, Dunbars were only lower by six points at Rs. 214, which, however, carried with it a considerable portion of last week's gains. From Rs. 20-3 Kesorams gave way to Rs. 19-15, as were Cawnpores from Rs. 9-4 to Rs. 9-2. New Victorias were quiet at Re. 1-7. Elgin Mills were transacted at the fractionally lower rate of Rs. 17-4.

In the coal section, prices tended to move up, and Bengals at Rs. 537 were a gainer by Rs. 2, while Standards spurted from Rs. 18-10 to Rs. 20-5. East Indians were fractionally better at Rs. 23-11. New Beerbhooms were unchanged at Rs. 20-6, while Raneegunges were easier at Rs. 9-3. Dhemo Mains realised Rs. 11-5, and Samlas strengthened from Rs. 6-14 to Rs. 7-8. Burrakurs were put through during the week at Rs. 10-10, but receded to Rs. 10-4 to-day.

Jutes were put through at advancing rates. Speculative Howrahs, opening at Rs. 24-13, invited transactions up to Rs. 25-3, following the declaration of dividend of As. 14 per share. Reliances, after a period of *nil* dividends, announced a dividend of As. 4. The market was apparently satisfied with this dividend and the shares, therefore, rose from Rs. 14-12 to Rs. 16-7. Bally's dividend for the six months ended March, 1953 is also As. 4 per share, as against nothing in the previous half-year; and in transactions the quotation advanced from Rs. 168 to Rs. 192. Fort Glosters were a prominent feature, and at Rs. 390 showed a gain of as many as 68 points. Kinnisons not only maintained the recent improvement, but recorded another point to Rs. 211. Nuddeas at Rs. 53 were a bright feature earlier in the week, but on profit-taking later gave way to Rs. 49-8. Other shares that showed gains included Ganges, Champadanies, Lansdownes and Nellimarlas, which had buyers at Rs. 82-8, Rs. 165, Rs. 151 and Rs. 31-8, respectively. Indias were better at Rs. 140, Gourepores at Rs. 321 and Deltas at Rs. 243.

Indian Irons, in the engineering section, fluctuated narrowly, and opening at Rs. 25-9 last Wednesday kept around that level throughout the week, and to-day's closing level did not show any change. Jessops were asked at Rs. 25-9 and Indian Galvanizing (New) met with business at Rs. 13-5. Sarans were fractionally better at Rs. 10-10, while Burns were unchanged at Rs. 280.

Cheerful attention was paid to miscellaneous shares. Ganges Ropes were in good demand, and gained from Rs. 198 to Rs. 203, while Indian General Navigations were pushed up to Rs. 93. B.I. Corporations were traded at Rs. 8-12, Indian Wood Products at Rs. 35-12 showing a four-anna recession. Dunlop Rubbers came to business at Rs. 28-12, F. & C. Oslers at Rs. 5-9, and National Tobaccos at Rs. 10-4. Among sugars, Ramnagger Canes were a feature for the improvement from Rs. 17 to Rs. 18-6. On account of profit-taking, Carews were lower at Rs. 7, while Dharbangas at Rs. 10-11 gained As. 3.

* * * *

Madras Stock Exchange

MADRAS, *2nd June*

Under the leadership of plantings, values on the Madras Stock Exchange generally made further advances during this week. The uptrend in plantings witnessed last week gathered momentum on considerable broadening of enquiry, induced by bright prospects for marketing the coming season's tea crop. Rubbers attracted good attention on sustained rumours of continued depletion of floating stocks with the chief consumers of rubber. Coffees ruled steadier, Textiles met with selective support on scattered overseas demand. Miscellaneous and banking scrips were moderately active. As a result, business done on the Exchange was substantial and gains recorded sizable.

Encouraging advices from Calcutta and overseas countries for tea leaves contributed to the firmness in tea scrips. United Nilgiris shot up from Rs. 187 to Rs. 195. Peermades gained Re. 1-8 to Rs. 27. Emerald Valleys and Twyfords gathered As. 4 each to Rs. 4 and Rs. 12-4, respectively. Nonsuch Teas advanced by As. 12 to Rs. 26. Parkssides were done at Rs. 13-8, as against Rs. 13-4. Devoshalas changed hands at Rs. 15-8 *ex-div.*, as against Rs. 16-8 *cum-div.* Kalpettas (tea and rubber) hardened by Re. 1 to finish at Rs. 18.

Among rubbers, Malankaras improved from Rs. 102-8 to Rs. 103-8. Vaikundams advanced by As. 4 to finish at Rs. 13-14. Be Bes and Rajagiris were better by an anna each at Rs. 1-14 and Rs. 10-7, respectively. Pullangodes were dealt at Rs. 2-6 *ex-div.*, as against Rs. 2-13 *cum-div.* Anandams were enquired at Rs. 10-6 *cum-div.*, as against Rs. 9-10. The Directors have recommended the maintenance of the dividend of 15 per cent. on ordinary shares for the year ended 31st December, 1952. Mercaras, however, lost As. 2 to Rs. 5-2. Nonmeny also receded by a similar amount to close at Rs. 9-14. Thamarapallys were dealt with at Rs. 15 *cum-div.*, as against Rs. 14-12. The Directors have recommended a dividend of 25 per cent. on ordinary shares for the year ended 31st December, 1952, as against 15 per cent. in the previous year.

In the coffee section, Consolidated Coffees were up by As. 2 to Rs. 18-2. Shevroys were better at Re. 1-3. Neelamalais (tea and coffee) advanced by As. 3½ to Rs. 4. But Ouchterlonys (tea and coffee) were slightly lower at Rs. 4. Savamalais were done at Rs. 36 *cum-div.* The Company has continued the dividend of 35 per cent. for the year ended 30th November, 1952.

Among textiles, Cannanores moved up from Rs. 92 to Rs. 95. Belasubramanias Rs. 50 and Rs. 70 paid-ups improved by Rs. 2 each to Rs. 32 and Rs. 52-8, respectively. Buckinghams rallied Re. 1-8 to finish at Rs. 118-8 and Dhanalakshmis Re. 1 to close at Rs. 176. Rangavilas and Travancore Rayons were better at Rs. 42-12 and Rs. 5-8, respectively. Trichinopolys, however, lost As. 3 to Rs. 9-2.

Notices

CALCUTTA GAS COMPANY (PROPRIETARY) LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Fifth Ordinary General Meeting of the Shareholders of the Company will be held at the Registered Office of the Company, No. 8, Dalhousie Square East, Calcutta, on Monday the 22nd June, 1953, at 4-30 p.m., for the purpose of receiving and passing the Directors' Report, the Audited Accounts for the year ended 30th September, 1952, and declaring the dividend recommended by the Directors and for transacting any other business that may be brought forward.

The Share Transfer Register of the Company will be closed from the 15th June, 1953, to the 22nd June, 1953, both days inclusive.

By Order of the Board,
For and on behalf of
CALCUTTA GAS COMPANY (PROPRIETARY) LIMITED.
SOORAJMULL NAGARMULL,
Secretaries.

8, DALHOUSIE SQUARE EAST.
CALCUTTA 1, *18th May*, 1953.

SHAW WALLACE AND COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT THE Seventh Ordinary General Meeting of the Members will be held at the Registered Office of the Company, 4, Bankshall Street, Calcutta, on Monday, 29th June, 1953, at 3 p.m., for the following purposes:—

(1) To receive and adopt the Directors' Report and Audited Accounts for the year ended 31st December, 1952.

(2) To declare Dividends.

(3) To elect Directors.

(4) To appoint Auditors and to fix their remuneration.

The Transfer Register of the Company's Ordinary Shares will be closed from 22nd June to 29th June, 1953, both days inclusive.

By Order of the Board.
J. E. WATERFIELD,
Managing Director.

CALCUTTA, *29th May*, 1953.

NEWS IN BRIEF

THE Rajasthan Government has been granted a sum of Rs. 56 lakhs by the Government of India for execution of the State's Grow-more-food schemes.

The U.P. Government has decided to increase the amount of *taccavi* loans granted to agriculturists from 40 to 60 times the annual revenue of their lands in the case of *bhumidars* and from 5 to 10 times in the case of *sirdars*.

The Madras Government has decided to take over the Visakhapatnam Electric Supply Corporation and has fixed the value of its assets at Rs. 6 lakhs. The Managing Agents of the Corporation have agreed to the price fixed by the Government, subject to ratification by the general body of the shareholders.

The Orissa Estates Abolition Act, 1952, has been declared a validly enacted legislation by a unanimous judgment of the Constitution Bench of the Supreme Court of India. Their Lordships have withdrawn the order of stay of the operation of the Act pending the decision of the appeals filed by six *zamindars* of the State.

The Railway Board is considering the West Bengal Government's scheme for the construction of a 54-mile mono-rail, 26 feet above ground level, to relieve traffic congestion in Calcutta. Under the scheme, the train will be composed of three coaches, each accommodating 100 passengers and will run every two minutes.

The Bombay Government proposes to amend the Bombay Tenancy and Agricultural Land Rules, 1949 for enabling the transfer of lands by any owner-cultivator to a non-agriculturist provided the recipient has obtained from the *mamlatdar* a certificate that he intends to take up the profession of an agriculturist and agrees to cultivate the land personally.

A further step in the construction of the Bhakra Dam was carried out with the completion of one of the canals to divert the Sutlej River after five years of work. The other canal is expected to be completed in August next. According to experts, the construction of these two large-sized tunnels was a very intricate and hazardous job.

Uttar Pradesh is now supplying 45 per cent. of the overall wheat produced in India. The State Agriculture Department has launched a drive to increase further the agricultural production of the State by popularising crop competitions, Japanese method of paddy cultivation, and sowing of green manuring crops in the monsoon fallow lands.

Before 1954 is out, Churk in Mirzapur district, which has been selected as the site of U.P.'s first nationalised cement factory, will have a rail link with Chunar—the nearest railhead at present. Work on the railway project, whose cost is estimated at Rs. 7 crores, has already begun. When completed, Churk will be linked with Chunar by a 32-mile track, with seven intermediary stations.

The Government of Mysore has imposed a cut of 75 per cent. on consumption of power generated at Sivasamudram and Shimsha hydro-electric works with effect from 31st May. This cut has been necessitated by the critical water level position at Krishnarajasagar Dam and the non-setting in of the monsoon. The working of the K.G.F. gold mines will be affected as a result of this cut.

The Minimum Wages Committee for the tea industry appointed by the West Bengal Government is reported to have recommended an increase in the grain allowance from Rs. 4 to Rs. 12 per month for the staff employed in tea gardens. This follows the increase granted in December last to tea garden workers in Darjeeling and the Dooars in order to allow the estates to increase the selling price of rice supplied to them from Rs. 8 to Rs. 17-8 per maund.

The Uttar Pradesh Government has finalised a Rs. 2-crore housing scheme for industrial workers of the State and has submitted it to the Central Government for approval and financial aid. The scheme envisages construction of 7,000 industrial workers' quarters in Kanpur, Agra, Ferozabad, Rampur and Hathras. The State Government has also decided to put into operation within the year another housing scheme for constructing 2,800 quarters for industrial labour at Kanpur and 600 for sweepers in big municipal towns.

The Ministry of Commerce and Industry, Government of India, has decided to publish an official monthly journal in Hindi called *Udyog Vyapar Patrika*. The first issue of this journal will be out this month. It is the first and only Hindi commercial journal issued by the Government. The journal will publish the Hindi version of important Government announcements and notifications and public notices relating to export and import trade controls, industrial controls, taxation, etc., besides articles on current economic and commercial topics and information on day-to-day developments in the field of trade and commerce.

Under the Welfare Officers (Recruitment and Conditions of Service) Rules, 1953, which was brought into force in Bombay from the 1st inst., the occupier of every factory having 500 or more workers employed ordinarily should appoint at least one welfare officer. In case the number of workers in a factory exceeds 2,000, an additional welfare officer will have to be appointed for every additional 2,000 workers or a fraction thereof. These officers are expected to establish contacts and hold consultations with a view to maintaining harmonious relations between the management and workers and bringing to the notice of the management the grievances of workers, in order to bring expeditious redress.

The Burmah-Shell Oil Refinery is expected to be in initial operation during the first quarter of 1955 and not early in 1956, as was announced earlier. Investigations into the design, procurement, delivery and construction schedules for the Refinery have made it possible to advance the initial operation date. It will be necessary to import crude oil for the Refinery during the fourth quarter of 1954. The capacity of the Refinery will be two million tons of crude oil per annum. This increase in the capacity has the consent of the Government of India.

A Division Bench of the Calcutta High Court has held that income derived from forests are exempted from taxation under the Indian Income-tax Act. The Court gave this decision in an income-tax reference under section 66(1) of the Indian Income-tax Act, made by the Income-tax Appellate Tribunal, on the point whether forest income, particularly income from *sal* trees, could be subject to taxation under the provisions of the Act, or it was income from agriculture, to be governed by the Bengal Agricultural Income-tax Act. The Court held that, in the case under reference, agricultural operations were carried on in the forest and the income derived was from agriculture. The income, therefore, was exempted from taxation under the Indian Income-tax Act.

* * * *

From Abroad

Iron ore production in Canada is expected to reach 33 million tons per annum within a decade. Production last year reached 5.2 million tons.

The Ministry of Materials, U.K., has reduced its selling price of electrolytic copper from £253 per ton to £250 per ton with effect from 29th May last.

An American oil expert has undertaken to advise the Turkish Government upon the rapid development and exploitation of oil resources. The expert is optimistic about the possibilities.

The United States is reported to have cut off $12 million already allotted for Burma's technical aid programme, because Burma has decided to terminate the agreement with the U.S. from 30th June, 1953.

Exports of American cotton from 1st August, 1952 to 31st March, 1953, amounted to 2,244,000 running bales, the monthly average quantity for the period being 281,000 bales. The U.S. Department of Agriculture expects that exports will not continue at this rate and the total for the season may be only about 3,250,000 bales.

The Government of Ceylon has decided to stop operation of the external services of the State-owned Air-Ceylon with effect from 1st October, 1953, because of the keen overseas competition and the heavy losses incurred by the Company. This year alone, the Company has incurred a loss of Rs. 10 lakhs and this is stated to be too great for the country to bear in view of its present economic condition.

The discount rates on Treasury Bills in the Union of South Africa have been raised with effect from the 3rd inst. The rates of discount will be: 12 months' currency 2¼ per cent. per annum (2 per cent. previously); 6 months' currency 2 per cent. (1½ per cent.); 3 months' 1½ per cent. (there was no issue of three months' Treasury Bills before the 3rd inst.). The rate of interest on loans and advances to some of State-aided projects, including housing, universities, soil conservation, has been raised from 4½ per cent. to 4¾ per cent.

The Pakistan Government has decided to issue two cash-cum-conversion loans on the 15th inst., for financing schemes of industrial and agricultural development. The targets for the two loans have not been fixed. The first loan, carrying interest at 3 per cent. and repayable in 1958, will be issued at par and the other, which will carry interest of 3 per cent. and be repayable in 1961, will be offered at Rs. 99-3 per cent. Holders of 2¾ per cent. 1953-54 loan are allowed to convert their holdings into the new loans.

PERSONAL

MR. C. C. Desai, High Commissioner for India in Ceylon, has left for London to be present during the Nehru-Senanayake talks to be held there.

Khwaja Nasrullah, Chief Government Whip, East Bengal Legislative Assembly, has been appointed Deputy High Commissioner of Pakistan in Calcutta.

Mr. A. Ramaswami Mudaliar, Chairman of the U.N. Commission on Forced Labour, has arrived from Geneva after attending the final session of the Commission.

Mr. Kanwar Sein, Chief Engineer, Hirakud Dam Project, has been appointed Chairman of the Central Power and Water Commission, in succession to Mr. A. N. Khosla.

Mr. G. L. Bansal, M.P. and Secretary, Federation of Indian Chambers of Commerce and Industry, has left for the U.S. on a study tour, on an invitation from the U.S. Government. Mr. Bansal will also visit Canada, the U.K. and some of the Continental countries.

Mr. Charles Alexander Innes, an ex-President of the Bengal Chamber of Commerce and Industry and the Associated Chambers of Commerce, Calcutta, has been conferred the title of Knight Commander of the Order of the British Empire (K.B.E.) by Her Majesty Queen Elizabeth II of Britain on the occasion of Her Majesty's Coronation.

"COMMERCE" 1928

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, *16th June*

India's Hall-Mark

It has been suggested that a positive remedy for the present state of affairs is for Indian manufacturers to mark their goods as "Made in India"; but the Committee of the Bombay Chamber of Commerce points out that goods so marked might be handicapped in the export trade, as Indian manufactures do not at present enjoy a particularly high reputation in foreign markets, though an improvement in this respect may be anticipated as a result of the activities of the Indian Trade Mission which is now on tour. The Committee of the Bombay Chamber of Commerce is not, therefore, prepared to recommend that certain classes of important goods must show the country of origin or that Indian manufacturers should stamp their goods as "Made in India." The country of origin, the Committee argues, will be shown on goods as soon as merchants realise that the sales thereof would be promoted by such marking. Meanwhile, the Committee considers it undesirable to go beyond the present legislation for the prevention of false descriptions. While admitting that the problem is a difficult one, we are not inclined to endorse the Bombay Chamber's view. It is no doubt true that Indian manufactures have not acquired such a high reputation that the words "Made in India" will promote the chances of their sale. Nay, we are also prepared to admit that such a description may even prejudice their sale. But what is the right remedy? If Indian manufacturers are ever to capture and hold outside markets, they must make their goods of such a standard that the description "Made in India" will be a distinct help to their sales. This should certainly be the aim of every Indian manufacturer when engaged in any business. If goods made in India achieve a high reputation, while they are not branded "Made in India," Indian manufacturers do not gain the benefit they should. Indian manufacturers must not fight shy of disclosing the place of origin of their goods, but must improve their quality to such an extent as will disarm all opposition to, and dispel all prejudice against, their ready and speedy sale in outside markets.

PROVISION FOR DEPRECIATION

THE problem of providing depreciation on plant and equipment on a scale that would enable the owners to replace, in course of time, such equipment has attracted the attention of company managements, accountants, administrators and economists alike. The difficulty in solving this problem arises principally from the fact that, whereas depreciation allowance is provided on the original cost of machinery its replacement costs, in these inflationary days, are considerably more than what has been set apart by way of provision for depreciation. Thus, the system of depreciation provisions, based on "historical" or original cost, which served the industry so well in the pre-war years, has failed to provide any real guidance to the post-war problem of replacement. Although the gravity of the problem has been recognised all the world over no country has, as the Finance Minister, Mr. C. D. Deshmukh, pointed out in his recent address to the Central Industries Advisory Council, as yet been able to hammer out an acceptable solution to this admittedly intricate problem. In the U.K., the subject continues to figure in the deliberations of professional bodies, such as accountants' organisations. But no real solution has yet been found. As Mr. Deshmukh crisply remarked, India has no "successful example" to copy.

In India, the problem is generally more acute than in other countries. This is because there is a shortage of capital in this country, so that it is difficult for industrial managements to finance the higher replacement costs through borrowings, even if one chooses to ignore the inherent defect of a borrowing operation for covering normal replacement needs. If it is agreed that when an asset has been worked out it should have earned not only some interest on the original cost but also the cost of replacing it, then it is certainly necessary to find some method whereby the finance for replacement is available for the investor. Mr. Deshmukh, on his part, ruled out the possibility of any alteration in the present basis of depreciation allowance, and said that if "funds have to be found they have to be found from some other source." He suggested the method of "special reserves for obsolescence," though he was not certain as to what extent "prudent concerns" adopted this method. It is true that prudent concerns do set apart more than normal depreciation as special reserves. But this implies that the concerns are in a position to earn much more than normal profit. Prudence, by itself, will not create profits, if economic and other conditions, such as control by Government, are not favourable to the concern.

It is, however, gratifying to note that Mr. Deshmukh realised the consequences of any failure, on the part of industry, to finance replacement. "The alternative to not replacing machinery," he said, "is to shut down a plant at some stage or other." And he added that the problem was therefore one of "common interest to every one." And yet, he would not countenance any demand for relief in taxation. Obviously, this attitude stems from an unwillingness to take a major decision on a question which comes within the purview of the Taxation Enquiry Commission. He said that the Commission might perhaps ask whether the Government should share in partially providing the finances necessary to cover the gap between the replacement cost and the original cost and, if so, whether it should take the form of tax readjustments such as larger depreciation allowances or low rates or any adjustments in income-tax and so on. He also said that the Commission would be entitled to ask what public justification industry had to offer for claiming these concessions.

It should not be difficult for industry to convince the Commission both of the need for concessions and the kind of tax relief that it wants. After all, industry's failure to provide replacement cost from its earnings affects economic progress in general. And industry asks for no more than facilities for implementing normal replacement programme. A point that is generally overlooked in a discussion on this subject is that, whereas the prices of most industrial products have been controlled—manufacturers have thus been prevented from earning higher profits—the prices of plant and machinery, normally imported from abroad, have remained outside the control of the Government. This is an additional reason why industry is entitled to special tax relief. Mr. C. V. Burns, a member of the Advisory Council, suggested that the Government would do well to grant tax relief on amounts set apart for rehabilitation; such amounts could be deposited with the Reserve Bank or invested in Government securities so that some control would be retained over them. This suggestion, if accepted by the Government, should go a long way towards solving industry's problems arising from the inadequacy of the present scale of depreciation allowances.

CENTRE'S AID TO MADRAS

Referring to the grave financial difficulties facing the Government of Madras, we observed in these columns last week that, whatever might be the sins of omission and commission on the part of the State Government, the need for substantial assistance from the Centre was clearly indicated. It is indeed gratifying to note that the Government of India has now announced its decision to advance a sum of Rs. 1 crore per month from 1st April to 30th September, 1953. This amount would, however, be adjusted against the State's share of income-tax and Union excises. The Government has also agreed to grant a ways and means advance of Rs. 1.5 crores per month to finance important capital expenditure till such time as the Andhra State is formed. Further, it has agreed to bear half the expenditure on gratuitious relief, besides providing ways and means accommodation to meet half the cost of relief works.

The Central Government's decision will be widely welcomed in the State, though the aid, it is to be feared, will not be sufficient to enable the State Government completely to tide over the financial crisis. For the crisis has not been brought about, as is made out, by one factor alone, namely, the acute distress in the famine-stricken areas of the State. It is the cumulative effect of several factors, the most important of which are the prohibition policy and the State authorities' decision to spend large sums of money on schemes of development which lie outside the State plan.

In view of these considerations, the Government of India has done well to lay down three specific conditions before the grant of assistance. First, the State Government should keep its expenditure as low as possible. Secondly, it should not enter into any new commitments. And finally, it should hold over such schemes as may be postponed till the financial situation improves. It is to be hoped that these conditions will be strictly adhered to by the authorities. If the State Government conserves its resources and exercises rigorous control over expenditure, there is no reason why it should not be able to prevent financial dislocation. It is precisely in this context that the need for revising the Prohibition policy and for attempting a complete reappraisal of the development programme in relation to possible sources of revenue assumes special significance.

NEAR SELF-SUFFICIENCY IN FOOD

The pessimistic predictions forecast this time last year, when controls on food were relaxed to a considerable extent, have, fortunately for the country, proved false. Since then nothing untoward has happened. On the contrary, according to the Minister for Food and Agriculture, Mr. Rafi Ahmed Kidwai, India is now rapidly approaching towards self-sufficiency in foodgrains. The main contributing factor appears to be an increase of four million tons in the production of *kharif* cereals, including rice, *jowar*, *bajra*, maize, and *ragi* in 1952-53, as compared with that in 1951-52. Of this increase, rice alone accounts for 2.68 million tons, the balance of 1.32 million tons being shared by the other crops, notably *bajra* and maize. Besides, rice imports amounted to 1.5 lakh tons, the carry-over being the same quantity. Procurement of rice is expected to be not less than 1.5 million tons.

This welcome change in the food position of the country is reflected in the decline in offtake of grains by the States from the Central Pool. West Bengal was importing 50,000 tons of wheat per month. Now its offtake is no more than 25,000 tons. This is also true of Madras. Again, Bombay had asked for 300,000 tons of milo for the current year, but it is now content with half the quantity. Madras indented for 500,000 tons of milo but now its requirements are stated to be no more than 100,000 tons. Assam, unlike in the past three years, is a surplus State this year. Not only has it not asked for any allotment, but it has agreed to supply 10,000 tons of rice to West Bengal and is ready to supply more.

A rise in the production of rice appears to be responsible for the general improvement in the food situation in the country. Increase in rice production was the largest in Orissa where it amounted to 1 million tons over the figure for 1951-52. Then comes Bihar (871,000 tons), West Bengal (469,000 tons), U.P. (325,000 tons), Bombay (175,000 tons), Punjab (53,000 tons), and Assam (45,000 tons). This increase in rice production has, in turn, reduced the demand for wheat. India now requires only 800,000 tons of wheat this year, although the imports are estimated at 1.8 million tons including 1.5 million tons under the World Wheat Agreement. Apart from this trend, there has also been an overall increase of 94,000 tons in *bajra*. The improved position is attributed also to decontrol measures introduced in the middle of last year.

The foregoing brief account explains largely the Bombay Government's decision to relax control over wheat outside the fully rationed areas as from the 1st inst. This decision is the natural sequence of the success of decontrol of certain wheat products—bakers' bread, *rava*, *maida* and *suji*. As a result of the latest decision, the movement of wheat outside the rationed area will be free and trade in wheat will be allowed under a system of licensing. The Government will, however, continue to purchase wheat on a voluntary basis until the next harvest at the existing procurement prices.

Encouraged by the present increase in production of foodgrains, Mr. Kidwai, in a recent Press interview, went so far as to state that he looked forward to the time when he would be able to sanction exports of rice. He considered that the time was not far off when he would be able to meet some of the rice and wheat requirements of the neighbouring countries. Robust hopes such as these, viewed against the dismal background of the country's sorrowful experience in the sphere of food all these years, may appear fantastic, but Mr. Kidwai is known not only for his habit of entertaining such hopes but also for his ability to realise them.

INDO-EGYPTIAN TRADE

The Indo-Egyptian Trade and Payments Agreement, finalised last week at Cairo, but not yet ratified, is expected to enlarge the volume of trade between the two countries. Although no specific period has been prescribed for the Agreement, it will be subject to modification at any time after three months' notice by either country. A notable feature of the agreement is the way in which the disparity in the existing Indo-Egyptian trade is sought to be removed. The agreement will do away with the existing method of foreign exchange control, known as "Import Entitlement Account Procedure," which has tended to aggravate India's trade deficit with Egypt. For, under the Procedure, Egyptian importers of sterling goods have to purchase the requisite sterling from Egyptian exporters, who are permitted to sell, at a premium, 75 per cent. of sterling, the remainder being surrendered to the Egyptian Government. And the premium has at times shot up to even 15 per cent., leading thereby to a proportionate increase in the cost of goods from the sterling area, which includes India. The defect of this system lies in the fact that while it encourages exports of Egyptian goods, it discourages imports from the sterling area.

The new agreement provides for payment of 60 per cent. in sterling and 40 per cent. in rupees for Indian purchases of Egyptian cotton. It is understood that it also provides for setting aside about 10 per cent. of sterling as special "Escalator Fund" which would be converted into rupees if Egyptian imports of Indian goods exceeded the 40 per cent. rupee payments. This arrangement, it is stated, meets the Indian viewpoint that Indian purchases of Egyptian cotton should be paid on a fifty-fifty basis in sterling and rupees.

As a result of this agreement, Egyptian importers of Indian goods will get the rupees they need at official exchange rates and not at a premium as now. Thus, the existing exchange bottleneck will be eliminated. Egypt is stated to have promised to issue licences freely for all Indian goods, except jute manufactures, of which it has at present a year's stock. Egypt will buy from India tea, locomotives, railway carriages, sewing machines, and cotton spindles and looms. India is expected to buy about 700,000 *cantars* of Egyptian cotton a year. In addition, it is expected to import large quantities of flax, phosphates and hooves used in making glue.

Market circles aver that the agreement might not materially alter the picture of India's imports of Egyptian cotton, as it is dependent on the requirements and capacity of the Indian mills and the price factor. They admit that, although the Egyptian Government has suspended the futures market, thereby curbing temporarily, at least, speculative rise in cotton prices, India might not increase its present rate of cotton purchases unless the prices of Egyptian cotton decline further. As regards exports to Egypt, Indian tea should be able to find a larger market though Egyptians have, so far, shown a preference for Ceylon tea. Perhaps, a definite programme for advertising Indian tea would help its export trade. It is, however, doubtful whether India will be able to export locomotives and railway carriages as it has no surplus of these goods. Egypt is expected to import from India considerable quantities of machine tools, diesel engines, water pumps, electric motors, tea, spices and fans. Egypt attaches, it is reported, considerable importance to this trade agreement with India. In fact, Egypt desires to make this agreement a model for similar payments agreements with other countries purchasing Egyptian cotton. Since Egypt is now suffering from want of foreign exchange, such agreements might be expected to improve its economy.

U. S. FOREIGN AID

Two important proposals designed to improve the machinery of U.S. foreign aid assistance and related economic operations have been put forward to the U.S. Congress by President Eisenhower. These relate to the creation of two new, separate organisations to administer foreign assistance and international information programmes, respectively. The proposals are contained in Re-organisation Plans 7 and 8 submitted under the Government Re-organisation Act, 1949. Mr. Eisenhower's move to create a new organisation for administering the foreign aid operations and to abolish the present Mutual Security Agency (M.S.A.) and certain offices is certainly to be welcomed, since it brings about a sort of realignment of U.S. foreign assistance and related economic operations. Thus, it centres in the head of the proposed organisation the functions vested in the M.S.A. and the Director for Mutual Security, including the Director's functions under the Mutual Defence Assistance Control Act. Such centralisation of authority may be expected to result in greater co-ordination of the various economic aid programmes of the U.S. Government and to ensure higher efficiency in administration. This means that the scope of expansion in the scale of economic aid operations will be wider and duplication in the performance of certain common functions, including recruitment of technicians and formulation of general policies, will be avoided.

The proposed Foreign Operations Administration will have, as its direct responsibilities, two major related technical assistance programmes which are now being administered separately—by the Technical Co-operation Administration in the Department of State and the Mutual Security Agency. The transfer of the Technical Co-operation Administration, it has been made clear by Mr. Eisenhower, is not intended to modify the character of the U.S. Technical Co-operation Programme as a long-range effort to co-operate with the Government and the peoples of other countries in developing their economies and raising their standards of living. Also reassuring is his statement, made in his message to the Congress, accompanying the proposed reorganisation plans, that the Technical Co-operation Programme will be carried out solely in furtherance of the purposes of the Act for international development.

(Concluded from third column)

While giving it full protection against harmful competition from abroad from long-established concerns worked on mass-production basis, what we have to do is to find plenty of potential buyers for cars and trucks. This would mean reducing the initial cost of vehicles, if necessary by giving generous subsidies at least for commercial vehicles. But more than this, it is the cost of maintenance and running these vehicles that has to be reduced to encourage the growth of road transport. If the Government of India does not merely want to pave the highways of the country with good intentions, it will have to have the courage to compel the States to abandon their policy of taxing the motorists and transport operators off the roads and to reduce or remove the excise duty on petrol.

—*All Rights Reserved.*

OFF THE RECORD

(By "ROVER")

NOT only the business community but many other interests are naturally intrigued over the question of the Governorship of the Reserve Bank of India, which is expected to fall vacant next year, when Mr. B. Rama Rau's term of office expires. I have noticed in my casual contacts that speculation is already rife, amongst circles connected with high finance and politics, as to the probable successor to Mr. Rama Rau.

On the one hand, the possibility of the extension or renewal of the present occupant's term cannot be ruled out, especially as he has made a distinct success of his job and his relations, both with the Government of India, on the one hand, and the Board of Directors on the other, are excellent. What gives the subject a speculative turn is the desire on the part of certain Congress leaders to turn this post into a party perquisite. In addition to this, one must also take account of the personal ambition of some of them to fill it themselves.

Many highly placed Congressmen in the Party cadre feel that the grip of the Congress over the Government of the country cannot be regarded as either complete or even comprehensive, so long as the two key portfolios of finance and defence are held by non-party men. Hence the hesitation on the part of the Prime Minister to nominate a successor to Mr. N. Gopalaswamy Ayyangar, though it is some months since he died and the constant run of small intrigues against Mr. Chintaman Deshmukh amongst diehard Party men. But as he is too firmly entrenched in the esteem and affection of his chief who can, within reasonable limits, snap his fingers at his scheming colleagues in the top hierarchy of the Party, it is not to be wondered at that efforts should be concentrated by these on securing the second best prize, namely, the Governorship of the Reserve Bank, so far as public finance is concerned.

It is being audibly whispered amongst business circles that one ambitious Minister, not unconnected at present with the economic administration of the country, is casting a longing eye on this glittering gift in Bombay in the hands of the Government, though Heaven alone knows what qualification or experience he has of banking, currency and public debt. These subjects and a host of others connected with the work of the Governor of this eminent financial institution, which is much more than a mere big bank, require expert handling to a much greater degree to-day, than it did a decade ago because of our controlled economy. Besides this, it does not require a great expenditure of intellectual effort to realise that the holder of this post has to have infinite tact and *finesse* in the handling of men and affairs and a cool, chisel-like brain, capable of analysing a situation into small shreds and evaluating it, before tendering his advice or opinion on momentous economic issues to the Government of India.

I cannot help recalling that the Minister in question has proved himself most lacking in all these indispensable qualities, during his short career of one year. By any known standards of personal evaluation, it is inconceivable to think of someone who is given to talking too much and talking out of turn at that, as a Governor of an apex bank of a great country. Not unlike the fate of everything else his tribe has touched during the last six years, an active but untrained and somewhat unbalanced politician at the helm of this important institution is sure to ruin its delicate mechanism, if not to sink it or to run it aground. Such an appointment is sure to cause consternation amongst business men in general and to torpedo the happy and cordial relations which exist to-day between the Reserve Bank and the business community.

On the other hand, banking circles must ruefully admit that they are not in a position to contribute a competent man from amongst the big established banks. Mr. Homi Mody is believed to be understandably reluctant to take up this heavy burden at his present age. Perhaps, the same is true of Sir Cowasjee Jehangir. Apart from the big banks, two other names suggest themselves from this field. One, though comparatively young, active and capable at Calcutta, is debarred by his present association and his not very reassuring past record and the other from Bombay. Mr. Pranlal Devkaran Nanjee, though eminently suitable in every respect, has to be ruled out because of his advanced age, personal disinclination for high office and other important preoccupations.

The business community, however, claims that it is not barren and it can offer a first class man, fitted for this job from every point of view, from outside the field of banking, but from within that of commerce and industry. This man is Dr. John Matthai. Mr. B. Rama Rau could be persuaded, if not to accept a renewed term, to continue till Dr. Matthai completes his labours as the Chairman of the Taxation Enquiry Commission in 1955. He can then leave the Reserve Bank into the safest possible hands in the country, unless Mr. Deshmukh, who is credited by those in the know with a desire to retire from active politics, can be persuaded to return to the comparatively more peaceful and restful scene of his old activities. This, however, appears to be extremely doubtful and so the only obvious choice, if the Reserve Bank is to be saved from political rampage and party depredations, is Dr. Matthai. The only question which pops up in this connection is whether the Prime Minister and the Congress Party can reconcile their private and personal predilections and prejudices with this very obvious choice.

Wanted—Protection For Users Of Automobiles

If proverbs can be credited with any substratum of truth, hell is popularly regarded as paved with good intentions. The Congress administrations in the country too can be safely taken as inspired by the very best of intentions. But their best intentions are perpetually at war with one another, and the outcome of these conflicts and tensions amongst the operative ideals of the party in power, is at times chaos, sometimes, neutralisation of one welfare scheme by another, often frustration and not infrequently results, which, if not contrary to expectations, are woefully disproportionate in comparison to the effort and sacrifice involved. A clear-headed person does not entertain contradictory ideals, however, good in themselves individually and in isolation. It is a sign of muddle-headedness, if not something much worse (insanity, for instance), when a fellow genuinely and piously aims at one thing and allows himself in conduct to be swayed by contrary motives and impulses.

I have no doubt about the sincerity of the Government's intentions to place the country on a basis of self-sufficiency in the matter of motor vehicles, for purposes of defence, travel and goods transport. But the so-called Central Government and our sovereign State Governments have been behaving, since they first came into power, as if they were intent on abolishing motor travel and transport of goods by these vehicles and to bring about a situation, at the earliest possible date, when the last motor car, bus and truck would go off the road. To begin with, conditions were difficult enough to discourage even the stoutest of hearts, into launching out on a private programme of developing road transport. There were few good roads and fewer bridges. Apart from accumulating crores from the public to make good this initial and primary deficit and drawing long lines denoting proposed highways and by-ways on blue prints, the authorities did little to build roads and bridges. As if this was not enough to frighten away intending road transport operators from sinking their precious capital in purchasing buses and trucks, they announced with a flourish that early, if not immediate, nationalisation of road transport was their goal, forgetting that few could be so foolish as to want to board a sinking ship.

Not satisfied with this perpetration, our rulers held that they must add substantially to the hazards of owning and operating a motor vehicle. To drive away the few hardy souls that still clung to their vehicles, they raised vehicles tax to an almost prohibitive figure. The purchase price of cars and trucks had, in the meanwhile, soared skyhigh, through an inane tariff policy which allowed assemblers to continue in operation, but raised duty on parts even before the manufacturing interests were ready to produce any of them. To add to the frightfulness of the whole situation, in spite of heavy excise duty already levied on motor fuel by the Central Government, the State Governments started piling up sales tax on petrol to unheard of heights. Mount Everest was scaled only early this week, but some of our State Governments had already attained much higher altitudes in their steep ascent on sales tax on petrol. I wonder why and for whom they want more motor vehicles manufactured in the country. As a matter of fact, sales fell precipitately and stocks increased to such an extent that one of the most important of the indigenous concerns had to suspend production for some time.

It is only when the situation grew truly alarming that the Government was moved to refer the whole question of protection and assistance to the automobile industry to the Tariff Commission. Within the rigid terms of reference and the Act governing the activities of this body, the Commission has done a good job of it. Its detailed recommendations, which are unexceptionable so far as they go or could go, are bound to be examined and dealt with editorially. What I want to stress here is that the question now facing the country and the Govenments is not merely one of protection to the automobile industry, but a much more comprehensive and important one of expanding the scope and volume of road transport as a whole.

It is not merely the automobile industry which stands in need of protection to-day. Unless there are vast numbers of buyers and users of motor vehicles, unless there are more roads to run these vehicles on, no amount of protection is going to help the nascent and tottering automobile industry, to maintain itself on its own feet even now or at a later date. More than even the automobile manufacturers, it is the motor car owner and the road transport operator who stand in dire need of protection to-day. It is they who are being exterminated to satisfy the mounting greed of the State Governments. When they are finally laid to rest, there will be nobody left to buy motor cars, buses and trucks, manufactured by the five factories which are to be allowed to operate in this field, especially as nationalised State Transport bodies have decided to boycott Indian-made vehicles, in the true spirit of *swadeshi*.

According to this very Commission's findings, the number of motor vehicles of all sorts plying on the roads in 1951 was 283,000. Not to say anything of expansion, even to maintain this meagre number, replacements should be at the rate of about 25,000 units per year. The Tariff Commission has found that the average sales per year during the last four years have not been more than 20,000 vehicles. This means that more cars are going off the roads than new ones coming on them. Apart from the ugly implications of these figures, it is simply not possible to build up an automobile industry on the basis of this dwindling demand. And still nobody would question the need for our having this industry.

FINANCE FOR REHABILITATION OF INDUSTRIES

FURTHER AID FROM U.S. LIKELY

(From A Special Correspondent)

NEW DELHI, *2nd June*

THE periodical meetings of the Central Advisory Council of Industries have now begun to provide a valuable forum for the spokesmen of industries, especially after the abolition of their special representation in the country's legislature under the new Constitution, to ventilate before Government their difficulties and handicaps. During the last week-end, an opportunity was provided to them in one of such meetings for drawing the attention of Government to a number of problems facing them, foremost among them being that of finance for the rehabilitation and modernisation of industry. Mr. T. T. Krishnamachari, Commerce and Industry Minister, who presided over the meeting, simply indicated the few prevailing opinions without telling his own views on this problem. One of them was that financing should be done mostly from the reserve and other depreciation funds of the individual units. According to some others, loans should be advanced by Government for this purpose at low rates of interest.

DELHI LETTER

The note circulated by the Federation of Indian Chambers of Commerce and Industry on this subject was not regarded as a balanced view by a section at the meeting. This body asked Government to assist the industrial rehabilitation by the grant of a higher depreciation allowance, long-term loans at reduced rates of interest and also by charging a still lower rate of tax on any profits ploughed back into industry. The other side of the medal was presented by an important semi-official person. According to him, the question of a cess to be levied on consumers for use as rehabilitation finance, which was being advocated from time to time by many industrialists, was not considered a very satisfactory arrangement either, especially at the present time when the purchasing power of the consumer did not show any appreciation. Even if funds became available by the levy of such a cess, it was difficult to justify, on principle, the sanction of a loan to any textile mill at a low rate of interest, if the present management, which had been responsible for the bad state of the mills in a number of cases, was to continue, the note added. In any case, application for such help might be considered only if there was reasonable prospect of such mills reviving under an entirely new management. Special help of this kind should not be granted unless the managing agents and shareholders agreed to an altogether new scheme of efficient management in which Government, as the helping party, should be represented.

It was suggested in some quarters that loans should be given to textile mills on the easy terms at which they were being given to the iron and steel industry. Such a step, the above spokesman pointed out, was not justified as the efficiency of the steel companies had never been doubted. The Government, during the war and the post-war years, helped the consumers of steel in the Indian market; and in consideration for such action, there was every justification for granting loans to these steel companies for rehabilitation and expansion of the industry on favourable terms.

Intricacies of the Problem

It was on account of various complexities of the problem that the Finance Minister, Mr. Chintaman Deshmukh, who participated in the meeting, plainly told the representative industrialists that Government would have to await the Taxation Enquiry Commission's recommendations before taking general decisions on the question of finding finance for the rehabilitation of industry. The allowance of higher depreciation allowance, according to him, involved principles affecting the interests of labour, management, shareholders, Government and consumer. He was, however, aware that, pending the Taxation Enquiry Committee Report, Government would have to take decisions in some hard cases, as, for instance, the jute industry which would have to face competition in foreign markets from better placed Pakistan. Similar cases of hardships would be dealt with expeditiously by Government, he said.

The Commerce and Industry Minister was earnest in speeding up his proposal to get a survey of the engineering capacity in the country in order to increase industrial production. He was able to secure full co-operation from the assembled industrialists in his laudable endeavour. Already Tatas and Kirloskars had nominated their technical personnel for a survey who would be joined by those from railway and other industries. This survey will at first be preliminary in character and later the personnel will be enlarged, including some foreign experts. It may be mentioned that Mr. K. C. Mahindra had recently submitted a memorandum to Government, advocating rationalisation of production in machinery manufacturing industries. In the case of the textile machinery industry, for instance, he wants to bring about some co-ordination in the matter of production through the help of Government. He suggests the establishment of a statutory body which could be entrusted with co-ordination of production at various levels in order to make use of each unit to its maximum efficiency and to install balancing equipments, etc. He has also pleaded for setting up a co-operative machine building industry to serve its respective plant requirements and to supply credit finance for individual units for purchase of locally manufactured machinery. If a few of the major industries, e.g., cotton textiles, jute and sugar, were to follow this suggestion (already introduced to a small extent by the cement combine), he says, there will be taken a great forward step in strengthening our production facilities and lessening our current dependence upon imports.

Help From the U.S.

The possibilities of greater external help for the implementation of the Five-year Plan are becoming brighter every day. It is, perhaps, on account of this factor that the Finance Minister was recently able to declare that, on the whole, prospects for the success of the Plan were bright and that India would be receiving substantial assistance from friendly nations. This help is expected to narrow the gap that was found in the interim Report on the progress of the Plan. The latest reports from the U.S.A. suggest that the American Administration has been seriously considering a plan that will authorise the Mutual Security Agency to sell surplus American farm commodities to foreign countries for local currencies. The proposal which has been developed by the American Farm Bureau Federation, calls for legislation that will permit the Commodity Credit Corporation to transfer up to $1,000 million of surplus stocks to the M.S.A. Director. He will be authorised in turn to offer the stocks through private traders for sale in local currencies. It may be mentioned that the stocks of farm products with the Commodity Credit Corporation has been mounting up, with prospects of a further increase in the coming months, due to favourable weather conditions in that country. It is stated that local currencies thus secured from the sale of surplus stocks can be used for loans to banking institutions in co-operating countries, to defray local costs of U.S. operations, such as defence establishments, and to assist in economic development or to acquire strategic materials. In case the present American proposal becomes a reality, the U.S.A. can sell a moderate quantity of wheat and cotton to India, the proceeds of which might be utilised for developing various economic projects. These apart, the Central Government is confident of securing more help from the U.S.A. either through aid or loan. Reports are already current in the Capital that, during the recent visit of Mr. Dulles, some informal discussions had taken place for the grant of a sizable loan to India at a moderate rate of interest. In case this proposal fructifies, the prospects for the implementation of the Plan become encouraging. If weather conditions during the current year remain satisfactory, it is possible that, during the fourth year of the Plan, the quantum of food imports might be greatly reduced and that the exchange resources of the country can be utilised for the advancement of the Plan. Some of these aspects must have been in the mind of the Finance Minister when he spoke optimistically about the Plan to the audience of his home State.

U.K.'S ECONOMIC POLICY

NO ISOLATED DOLLAR-STERLING DEAL CONTEMPLATED

(By PAUL BAREAU)

THE fears, widely prevalent a few weeks ago, that, in its economic policy, Britain might be drifting away from Western Europe have now been well and truly allayed. There was never real substance in them, but it should, nonetheless, be instructive to enquire why they arose and how they were finally set at rest—an event for which the recent meeting in Paris of the Council of the Organisation for European Economic Co-operation (O.E.E.C). provided the appropriate setting.

Let us carry our thoughts back to November, 1951, when the U.K. balance of payments had run into what appeared to be the worst of its post-war crises. Gold and dollars were being lost at a rate which would have emptied the reserve in a matter of months. Britain was running a persistent and heavy deficit with the European Payments Union (E.P.U.) and the resulting gold payments to the Union contributed a large part of the total drain on the reserves. Immediate steps were taken to meet this critical situation. The Government set in train fundamental measures, such as the revival of monetary and credit discipline and a reasonably tough Budget, which, as experience shows, had the necessary effect.

More immediate remedies were, however, necessary in the circumstances, and these had to take the form of drastic restrictions on imports. These may have appeared anti-European, but this was a deceptive appearance, because no worse disaster could have befallen Europe as a whole than irreparable damage to sterling, to the solvency of Britain and to the great system of payments and commerce which is anchored to sterling. If any proof were needed that these import cuts were no more than the bare minimum required to meet the grave situation that developed towards the end of 1951, it is surely provided by the recent decision to remove a significant part of the quantitative restrictions on imports from Europe.

Breaking A Vicious Circle

These recent concessions were, in some measure, an act of faith—the casting of bread on the waters in the hope of breaking a vicious circle of contraction in intra-European trade which might easily have developed, if Britain's import restrictions had remained in being much longer.

The concessions announced by Britain should not, however, be regarded as an indication that the balance of payments and economic situation has now improved to a point at which all former restraints can be cheerfully thrown off. Britain's economy is still faced with a burden of defence expenditure which accounts for 12 to 13 per cent. of the national income, a proportion larger than that borne by any other North Atlantic Treaty Organisation country other than the United States.

The gold and dollar reserves, which have to satisfy the needs, not of Britain alone but of the whole sterling area, are still at an inadequate level, despite their welcome reinforcement over the past six months. Britain still has an overdraft of close on £200,000,000 with E.P.U. and will be called upon to repay this over the months to come by striving to maintain a balance of payments surplus. Given this last fact, the concessions in imports from the O.E.E.C. countries must surely be regarded in a particularly meritorious light. Suspicions of a British drift away from Western Europe were mainly fomented by the rumours current in the latter part of 1952 and the early weeks of this year that sterling was moving towards convertibility with the dollar and that this goal would be reached, if necessary, in isolation.

Useful Exchange of Views

An isolated move of sterling to convertibility with the dollar would be fraught with far too much danger, far too many technical difficulties, to be a practicable proposition at present or in the foreseeable future. Unless it were hedged around by many restrictions which would be wholly foreign to the cause of convertibility, such an isolated move would merely invite a repetition of the disasters of 1947, when convertibility was made the means by which a great many other countries earned or acquired sterling for no other purpose than to convert it. In those terms, convertibility would be a formula for restriction, and not for the expansion of international trade.

The recent developments in Britain's commercial and financial policy do not, therefore, imply any departure from the often-declared intention of working as closely as possible with W. Europe. The fundamental problems which face Britain, the Commonwealth and the countries of W. Europe are in essence the same. They are dominated by the existence and the probable persistence of a considerable dollar gap. Those problems will yield far better to joint attack on the part of E.P.U. countries than to any isolated move towards convertibility.

At the same time, it is believed in Britain that the co-operation between European countries which has found constructive expression in organisations, such as the E.P.U., should not be regarded as an ultimate end. There should be no question of creating in Europe a self-sufficient bloc indefinitely insulated by trade restrictions from the dollar world. In other words, constant endeavour should be made to broaden the mechanism of the E.P.U. and to prepare it for the great day when, with co-operation from the dollar world, it can be merged into a much wider system of multilateral trade and payments.

PAKISTAN NOTES

U.S. FOOD SURVEY MISSION

SUBSTANTIAL WHEAT AID RECOMMENDED

PAKISTAN must have substantial aid in obtaining wheat, if the acute food shortage is to be averted. This is the recommendation made by the U.S. Food Survey Mission after its return to Washington from an on-the-spot study of the food situation in Pakistan. The Mission has reported that Pakistan is approaching a "very critical period" in its national economy. The most urgent problem is the assurance of food supply during the next twelve months. The Government of Pakistan has already taken a number of steps to solve the problem. The Mission has, however, clearly warned that the efforts of the Pakistan people will have to be supplemented by substantial outside assistance for the procurement of wheat.

The recommendation of this Mission and the Republican Congress leaders' support to legislation for a wheat loan to Pakistan have engendered hopes of an early solution of the food problem. Fortunately enough, there has been a move on the part of some American officials to see that the wheat assistance will be in the form of aid and not as a loan. In support of their move, the officials state: "Pakistan is virtually without dollars to repay a dollar loan—and the U.S. has too much wheat in surplus to accept repayment in wheat." They, therefore, ask: "Why not make it a gift?" It remains to be seen whether this suggestion will find favour with the U.S. Government. The form of the Bill proposed to be introduced in the U.S. Congress is said to be still "nebulous." Some observers are of the opinion that the gift idea has not been altogether dismissed. For, according to them, the utilisation of Pakistan's sparse dollar reserves to repay the American loan would prejudice its hopes of getting additional World Bank dollar loans for economic development, as Pakistan would be left without dollars to pay the interest on the loan.

Trade Agreements

The question of reviewing the several trade agreements with foreign countries, which have already expired or are expected to expire shortly, is now under the active consideration of the Government of Pakistan. As a preliminary step, the Finance Ministry, it is understood, is examining the foreign exchange position of the country, with a view to determining the extent to which imports could be allowed into Pakistan under the new trade agreements. Among the trade agreements now in force, those with India, France and Indonesia have yet to be ratified. Some of the important clauses of the Indo-Pakistan trade pact, however, have already been implemented, as, for example, the lifting of the discriminatory export levies by both the Governments and the releasing of certain films held up by the Pakistan Government.

The trade agreement between Pakistan and Japan, signed in Tokyo on 10th April, 1953, has been ratified by the Governments of the two countries. The agreement is for a period of one year—1st April, 1953 to 31st March, 1954. Under the agreement, Pakistan is to export to Japan 650,000 bales (400 lbs. each) cotton, 250,000 bales 400 lbs. each) raw jute, £500,000 worth of hides and skins, £500,000 worth of cotton seeds, and £450,000 worth of gypsum, cotton linters, ephedrina extract and herba ephedra, etc. Imports from Japan into Pakistan are as follows:

(In million lbs.)

Description	Value of imports into Pakistan against single country, import licences exclusively valid for Japan	Total estimated value of imports into Pakistan from Japan including value of imports in previous column
Cotton fabrics	5.5	5.5
Cotton yarn	1.0	3.5
Rayon yarn and other textile Yarns	0.5	1.0
Iron and steel and other metals..	1.5	4.0
Capital goods and machinery* ..	6.0	10.0
Others (including invisibles) ..	..	6.0

* Single country import licences up to £6.0 million will be issued only for capital goods against deferred payments.

The Governments of the two countries have agreed to settle all payments and charges in sterling. They have also agreed to provide maximum facilities for the transport of commodities and goods between the two countries to the vessels registered in either country. The working of the agreement is to be reviewed as soon after the first six months as possible and, thereafter, at the end of each quarter, if necessary. Adjustments in the terms of the agreements after each review shall be made, if necessary, with the mutual consent of the two Governments.

Pakistan had a favourable balance of Rs. 6.37 crores in its sea-borne trade on private account during the month of April, 1953. The value of exports accounted for Rs. 9 crores and that of imports for Rs. 2.63 crores. The import figures on private account are said to be the lowest for the past few years. The most important items of exports during the month under review were raw cotton and raw jute, the value of actual exports being Rs. 4.74 crores (118,724 bales) and Rs. 2.89 crores (105,594 bales), respectively. The other important items of exports were hides and skins (Rs. 41 lakhs), wool (Rs. 36 lakhs) and tea (Rs. 8 lakhs). On the import side, machinery and mineral oils were the largest private-account imports, valued at Rs. 78 lakhs and Rs. 52 lakhs, respectively. Metal imports were valued at Rs. 24 lakhs and vehicle imports at Rs. 20 lakhs.

The total private sea-borne trade passing through Karachi in April amounted to Rs. 8.09 crores. The Port of Chittagong handled Rs. 2.38 crores worth of cargo and Chalna Rs. 1.1 crores.

Cotton Committee Meets

Several important problems pertaining to the improvement of the cotton ginning and pressing industry, policy with regard to the future allotments of ginning and pressing factories, their proper management, and improvement in the pressing of cotton were discussed at a two-day conference of the Pakistan Central Cotton Committee held in Karachi recently. The Committee also framed recommendations for the consideration of the concerned authorities.

The Committee examined the economics of cotton production, with a view to reducing cost of production of cotton in conformity with the level of world prices and set up a sub-committee to work out a scheme for determining the economic cost of cultivation of cotton which would leave a reasonable margin of profit for the cotton grower and enable Pakistan cottons to compete with similar foreign growths in the world markets. The Committee further considered the steps required for developing export of cotton linters and waste produced in Pakistan and the question of standardising their quality for the convenience of foreign buyers. The other important matters considered by the Committee related to improving the system of preparing and issuing official forecasts of cotton crop, grading of cotton and propaganda for Pakistan cotton in the principal consuming countries. The Committee considered too research and development schemes aimed at breeding improved varieties of cotton suitable for the different tracts in the Thal Area in the Punjab and long-staple cotton in East Bengal, and also the extension work required to be done for propagating the improved varieties of cotton.

Food Production in N.W.F.P.

A report from Peshawar avers that the N.W.F. Government has chalked out a number of short-term measures designed to step up production of foodgrains under the Grow-more-food campaign. The schemes include distribution of fertilisers for the *kharif* crop and insect pest control, besides the projects for bringing additional area under cultivation by lift pumps, tube-wells and flood control. The successful execution of all these schemes is expected to yield more than 60,000 tons of foodgrains.

The total capital outlay on the schemes is estimated at Rs. 1.42 crores. The Provincial Government is reported to have asked the Centre to make available 50 per cent. of the amount as an outright grant and advance the other half as a loan. The Central Government has been informed that, if the grant and equipments were to be made available immediately, the schemes would be taken in hand and completed in time for the *rabi* sowing.

• • • •

A fresh Foodgrains (Futures, Options and Prohibition) Order, prohibiting forward buying and selling of foodgrains and products thereof, has just been promulgated. The Provincial Governments have been asked to enforce the Order vigorously.

• • • •

The Government of Pakistan, it is learned, has arranged to take delivery of 15,000 tons of ammonium sulphate from Sindri fertiliser factory for despatch to East Pakistan.

ERADICATING EVIL OF USURIOUS RATES OF INTEREST

SMALL LOAN BANKS MAY PROVE USEFUL

PERSISTENT emphasis has been laid in India on the need for mobilising domestic savings and for promoting investment. That the emphasis is not at all exaggerated is clearly borne out by the financial limitations of the Five-year Plan. When faced with insufficient budgetary resources and the dangers of deficit financing, there is always a possibility of attempting to find a way out through staggering of development expenditures. This is an undesirable course and has to be avoided at all costs. What then should be done? The answer to the poser is, of course, provided in the significant remark of the Planning Commission in its Progress Report on the working of the Plan during the first two years. Says the Commission: "Resources have to be mobilised to the *full* (italics ours) and care has to be taken to see that they are used fully for the implementation of the Plan." With a view to serving this end, the Government has initiated a number of small savings schemes, such as National Savings Certificates, Treasury Savings Deposit Certificates, etc. But the results have not been as much as one would wish.

The problem of mobilising domestic savings is not confined to our country alone. It is common to all underdeveloped countries. As readers are aware, the biggest obstacle in the way of swift economic development in these countries is paucity of savings. Naturally enough, the first step in the direction of such development is one of providing facilities for capital formation and the means by which the savings can be harnessed. The evolving of methods by which these savings can be created is still a problem for the Governments of the countries. Realising the importance of the problem, the Secretariat of the Economic Commission for Asia and the Far East (E.C.A.F.E.) has been undertaking, for some time past, a number of studies on the mobilisation of savings for productive purposes in this region. One outstanding feature revealed by these studies is the prevalence of usurious rates of interest, a feature considered to be a serious obstacle to the mobilisation of savings and their investment in development projects. In other words, according to these studies, profits in money-lending are so large that there is little economic incentive for investment in development projects. What is, therefore, wanted is an effective lowering of the interest rates by the provision of alternative sources of credit on reasonable terms. One of the solutions offered relates to the scheme for the establishment of what are called small loan banks.

Principal Purpose

The principal purpose of these banks, as their name itself implies, is to make small loans against security of movable goods. However, the possibility of their attracting deposits, particularly savings and time deposits, is not to be ruled out. The loans should be granted solely on the basis of security offered, not on the basis of productivity. This, however, is not to say that a discrimination between productive and consumptive loans is undesirable. It only means that such would greatly add to the costs of management and would thus stand in the way of combating usurious rates of interest. In this connection, the E.C.A.F.E.* Secretariat observes as follows:

"A pawnshop in Indonesia makes on an average a few hundred new loans every day. It would be impossible to put through such a large number of transactions, if the pawnshop were expected to make enquiries about the purposes for which the loans were required. It may, however, be argued that the provision of credit indiscriminately may encourage extravagant consumption expenditure which would not be in the best interests of the borrowers. In the first instance, the absence of a small loan bank would not prevent improvident borrowers from going to private pawnbrokers and getting credit on more onerous terms. Secondly, the facilities provided by a small loan bank should, by no means, be regarded as easy credit. A sacrifice in the form of the surrender of an article, which must be the source of some satisfaction to its owner, is necessary before a loan can be obtained from the Bank. The prospect of this sacrifice would ordinarily discourage unnecessary loans. Moreover, there is a considerable urge to recover the pledged article and the chances of its redemption must be regarded as fairly high. The experience of Indonesia shows that the percentage of unredeemed articles in the State pawnshops is very low in normal times and is only slightly higher in times of economic distress."

The financial requirements of the small loan banks are not likely to be very large. The raising of the funds required may, therefore, not be a difficult problem. As most of the loans are expected to be for short periods of time only, the turnover will be quick and it will be possible to handle a fairly large volume of business with a comparatively small working capital. The experience of Indonesia shows that the working capital of the State pawnshops seldom exceeds 40 per cent. of the aggregate loans made during any particular year; in fact, the proportion is stated to be very much less than this in several cases. The finance required by the small banks may be provided by the Government directly from its own resources or raised from the public.

Cost of Finance

Whatever may be the source, it must be emphasised that the cost of finance to the banks should be as low as possible. For it is on this that depends, to a large extent, the level of rates of interest which the banks charge to the borrowers. On the cost of service principle, the rate of interest should be determined after taking into account the following factors:

(1) The net rate of interest, that is, the rate at which the small loan banks can raise funds;

(2) insurance against risk—the most obvious risks are (*a*) a fall in the value of the articles accepted as pledges, so that, when they are auctioned, the sale proceeds are not sufficient to cover principal and interest and (*b*) losses due to theft, robbery, fire, incompetence or dishonesty of the staff;

(3) the costs of management, which include costs of maintaining the necessary staff, buildings, equipment, etc.; and

(4) a small profit—in normal times, the banks have to earn a small profit which should be transferred to a reserve fund with a view to offsetting any possible losses in future.

The small loan banks should be a State enterprise run on commercial lines. There should be central office for formulating and issuing, from time to time, detailed instructions regarding valuation of pledges, proper supervision of various operations and other matters for the guidance of the banks. The central office will also have to raise the necessary finance for the banks, unless the responsibility for it is assumed by the Government or some other agency.

The small loan banks, if properly organised and efficiently run, can be much more effective in combating usury than mere legislation. Besides, they may also be expected to encourage, albeit indirectly, investment of savings in the development projects. Although such banks usually provide "consumption" loans, they do prevent social degradation and overwhelming debt burdens in a period of crisis when needy people require immediate funds "at whatever cost."

Co-operatives Favoured

There are, however, some countries, such as India and Pakistan, which are opposed to the scheme for establishing small loan banks, for such, in their opinion, result in duplication and weakening of the existing institutions, especially the co-operatives. Other countries, like Burma and Malaya, also prefer co-operatives to small loan banks "which would be purveyors of credit rather than collectors of savings." There are still others—Ceylon, for example—which feel that the small loans banks may be tried "as a first measure," with a view to replacing them later by co-operatives. According to them, in areas where rates of interest are very high and co-operatives are hard to develop, such banks may be established for bringing down interest rates. But these countries find no reason why the banks should be set up in areas where co-operatives already exist. Apropos these divergence of views, the Working Party has drawn the following general conclusion:

"Every effort should be made to develop co-operatives in preference to small loan banks; the latter are only a second best means in places where, for one reason or another, co-operatives cannot be developed fairly quickly. Each country may investigate whether any advantage can be gained by starting small loan banks as an interim measure and as a preliminary to well-managed co-operatives. Small loan banks may usefully accept deposits and thus pave the way for the introduction of co-operatives."

It is no doubt true that co-operative credit movement possesses certain advantages which are not offered by the small loan banks. The co-operatives, for instance, take into consideration the purposes for which loans are required; loans may thus be restricted entirely to productive purposes. Further, co-operatives encourage thrift. They are expected to mobilise the savings of their members which are lent to other members who are in need of accommodation. They can be a great force, too, for the social and moral uplift of their members. Indeed, co-operatives play a vital role in mobilising rural savings. But the development of co-operatives is a slow and difficult process. For the active interest of the members, which is a pre-requisite for their success, cannot be created by compulsion; people have to be educated for the purpose. Besides, the running of a co-operative requires a certain amount of skill, particularly in the maintenance of accounts, which is generally lacking in backward communities. "Low percentage of literacy and lack of desire for self-help through co-operation," to quote the E.C.A.F.E. Secretariat, "are some of the basic factors which have held up the development of the Co-operative Movement." Inasmuch as the removal of these obstacles will take a very long time, there seems to be a good case for establishing small loan banks.

In the case of the small loan banks, it may be noted here, the active co-operation of the public is not essential. The organisational problems connected with the provision of credit through small loan banks are very much simpler than for the development of the co-operative movement. A single bank can serve a fairly large community which might require as many as ten to twenty co-operative credit societies to obtain the same service. It is certainly easier for Government to organise a small loan bank than to organise as many as ten to twenty co-operative societies. It may, therefore, be possible, within a few years, to have a network of such banks all over a country, to meet the credit requirements of the poorer sections of the community.

CURRENCY CHANGES IN CZECHOSLOVAKIA

The drastic currency changes effected by the Communist Government in Czechoslovakia this week show how totalitarian States, as opposed to democratic Governments, can reverse the order of things at a moment's notice. Under these changes, the country goes back to the gold standard overnight. The value of the new crown will be expressed in terms of the Soviet rouble. In future, 1.80 crowns will be worth 11.6*d.* sterling or slightly less than a shilling. A feature of this overnight change is that the Government will issue to its citizens, new coins and bank notes in exchange for old coins and notes. The rate at which the exchange will take place is in line with the revolutionary ideas associated with the Communistic countries. Thus, the citizens will exchange cash and bank notes at rates varying from five old crowns to one new crown for small sums, and 50 old crowns for one new crown for bank deposits over 50,000 crowns. Bank accounts blocked since the 1945 currency will be wiped out.

Wages, salaries, pensions and similar payments will be recalculated on the basis of one new crown for five old crowns. But there will be some exceptions, in that certain increases are permitted. For instance, miners are to have seven-tenths of a crown added to their basic hourly wage. Other workers get less. Monthly salaries will rise by a maximum of 60 crowns.

The changes noted above in regard to exchange of currency and wages have been followed by the end of rationing and by a cut in prices of commodities. The fear that hoarding of commodities, intended for daily consumption, would take place, following the abolition of rationing, seems to be responsible for the Government's decision to raise the value of the crown and to reduce the amount of cash in the pockets of the citizens generally to one-fifth in the case of small sums and to one-thousandth in the case of those holding bank deposits. An official news agency states that the measures have been made possible by the development of national economy. Thus the industrial output is stated to have doubled since before the war. The national income has gone up by more than two-thirds in comparison with 1948. This improvement is attributed to the socialisation of agriculture to the extent of 43.5 per cent. and of trade, 99 per cent.

Prices of commodities have been cut by an average of 31 per cent. below the former free market levels. These commodities include bread, sausages, potatoes, cigarettes, etc.

DEVELOPMENT OF CO-OPERATIVE MOVEMENT

The proceedings of the third meeting of the Standing Advisory Committee on Agricultural Credit held in December last, published this week, give an insight into the nature of work carried on by different States in connection with the reorganisation of the Co-operative Movement as recommended by the Reserve Bank of India. It is found that, in some States, there is no co-operative bank, in some others considerable organisation of the apex bank is necessary, and in others the intermediate and primary credit structure is weak. Recognising this weakness, the Reserve Bank deputed the officers of its Agricultural Department to tour different States, study and report the conditions and the working of the various co-operative institutions. On the basis of these studies, recommendations were made to each State as to the line of action it had to take to improve the condition of the Movement. As a result, State co-operative banks have been established in Saurashtra and P.E.P.S.U. In Rajasthan and Himachal Pradesh arrangements are in progress to implement the suggestion. In regard to certain other States, either the Registrars of Co-operative Societies are considering the Bank's suggestions or after consideration have submitted their report to the Bank.

With regard to the accommodation of credit to State co-operative banks under section 17 of the Reserve Bank of India Act, the Advisory Committee would appear to have come to the conclusion that there is no need to make any change in the present procedure. Further, the Committee had, at a previous meeting, suggested certain standards for adoption in connection with the establishment of new central financing agencies or reorganisation of old ones, maintenance of fluid resources by co-operative banks and audit classification of societies, etc. At the meeting under review, the Committee reviewed the position and felt that, in view of the varying conditions, it might not be possible to enforce the standards rigidly. It was, however, stressed that whenever an opportunity offered itself, the Reserve Bank should suggest the adoption of these standards.

It was emphasised by the Committee that the inspection of co-operative banks which borrowed funds from the Reserve Bank, by the officers of the Bank, should not be regarded as a substitute for departmental inspection. One of the objects of the Bank's inspection should be to ascertain how far a co-operative central bank is fulfilling its role as the financing agency of the Movement.

The Committee considered that the best way of using the sum of Rs. 10 lakhs—provided in the Five-year Plan for providing training in principles of co-operation—was to subsidise a part of the expenditure involved in setting up regional training centres.

ROLE OF I.M.F.

Speaking at the fourteenth congress of the International Chamber of Commerce held at Vienna recently, Mr. Ivar Rooth, Managing Director of the International Monetary Fund, alluded to the criticism that the Fund was an institution too rigid to be really useful and made a few interesting observations which may be read with profit. They are:

"The Fund has sometimes been criticised, particularly here in Europe, as being an institution too rigid to be really useful. Several suggestions have been made for the revision of our Articles or the establishment of various kinds of additional stabilisation funds. While I fully understand and appreciate the spirit in which these suggestions have been made, I believe that the Fund can do the job in the period immediately ahead without a revision of its Articles and without the creation of additional machinery to supplement monetary reserves. It is in a position to make substantial sums of convertible exchange available by purchasing other currencies and by extending lines of credit to monetary authorities.

"During the last two or three years, the Fund has engaged in relatively few exchange transactions. The volume of transactions has recently been slowly increasing. Some of those interested in our activities seem to believe that a permanent pattern of very limited operations has been established. They project the past into the future and assume that the Fund's resources will never be made available except on a small scale. For this assumption, however, there is no justification. It is more logical to suppose that the volume of Fund transactions will vary from time to time, in accordance with changes in world conditions. Already, the working rules which have guided our decisions on transactions have changed more than once, and undoubtedly they will require adjustment in the future.

"The manner in which the Fund works and the uses to which its resources are devoted necessarily depend on the attitudes of governments. The new economic climate that is now developing will undoubtedly have important effects for the operations and activities of the Fund. The instrument itself is potentially quite flexible. Sincere and active co-operation by our member governments on constructive and progressive policies can go far toward breaking down any rigidities that critics have seen in the machinery of the Fund. I do not think that any of our member governments will lack either the desire or the willingness to see the Fund provide a substantial volume of assistance for major steps toward the convertibility of currencies. I am convinced that, when any country has instituted basic preliminary measures to place its internal and external policies in order, and is prepared to take some of the risks involved in a move toward convertibility, its proposals will be sympathetically received by the Fund. Our Articles of Agreement will present no barrier. The Fund can be a useful institution in this context if governments are willing to understand each others' goals and to help each other to reach them. There is no reason to doubt that this willingness exists.

"Those who have suggested a revision of the Fund's Articles or the creation of additional machinery make an assumption which I do not find convincing. It is assumed that governments and parliaments could more easily agree on a revision of the Fund's Articles, or on the terms under which a new institution would operate, than on the elaboration of a set of policies that would enable the Fund *as it is to* operate effectively. In fact, the situation probably is precisely the reverse. Moreover, if the convertible assets at the Fund's disposal prove insufficient to support the moves toward convertibility that our members are prepared to take, it would be reasonable to hope that our resources could be increased either by a substantial loan to the Fund or by a general revision of quotas."

EXCHANGE SWAPS IN PARAGUAY

The Central Bank of Paraguay has instituted a system whereby it is authorised to enter into simultaneous contracts with a holder of foreign exchange for a spot purchase and a sale of future exchange, at established rates and for specified periods of time. The rate for these transactions has, for the time being, been set at 45 guaranies per U.S. dollar. It may be revised periodically so as to follow generally the fluctuations in the controlled free exchange market (where the current rate is about 57 guaranies per U.S. dollar). The period for these swap transactions is 180 days, and the contract may be renewed for further periods of 180 days. The Central Bank will charge 1.5 per cent. commission on these transactions and on any subsequent renewals.

The Central Bank guarantees to reverse the transaction at the end of one or more periods by reselling the exchange to the other party to the contract at the same rate as that for the original purchase. The other party, however, will also have the option of using the exchange to meet any obligation which he may have to surrender the exchange proceeds of exports. Alternatively, the transaction may be completed by the payment, by the Central Bank, of the difference between the rate applied in the original contract and the rate in the controlled free market at the time of the completion of the transaction. The guarani countervalue of these transactions may be invested in manufacturing or export industries. The investment income thus earned may be remitted abroad, without limitations, through the free market (the Central Bank does not undertake to supply exchange for this purpose).

The authorisation of these transactions is intended (1) to induce an inflow of foreign funds into Paraguay, (2) to encourage the conversion of exchange held abroad by Paraguayan residents into guaranies which may be used as working capital, and (3) to facilitate the operation of local firms with foreign connections which may be willing to finance the local firms, if there is a guarantee of stable exchange rates and the right to withdraw funds and income remittances.

PART OF BANK AWARD STAYED

The Labour Appellate Tribunal of India at Calcutta, has ordered staying of implementation of the Sastri Bank Award in respect of ten items, pending disposal of an application from the bank workmen.

The Tribunal in a rule has called upon the respondents, the Bank of India Ltd. and others, to answer why implementation of the Award by the All-India Industrial Tribunal (Bank Disputes) notified in the *Gazette of India* dated 20th April, last, should not be stayed till the hearing of the appeals filed against the same.

The rule has been made returnable in Calcutta on 29th June.

The Appellate authority presided over by Mr. Justice Majumdar considered the petition of the bank employees for staying implementation of the entire Award and ordered an interim stay in respect of ten items of dispute mentioned in the Award.

INDUSTRIAL FINANCE CORPORATION FOR WEST BENGAL

The West Bengal Government has drafted a scheme for the formation of an industrial corporation in the State to help medium-sized industries. The authorised capital of the Corporation will be Rs. 2 crores, and the paid-up capital Rs. 1 crore. The State Government will subscribe Rs. 30 lakhs, the Reserve Bank of India Rs. 20 lakhs, Scheduled Banks and insurance companies Rs. 40 lakhs and other parties Rs. 10 lakhs. The scheme has been submitted to the Union Government with a request to issue a notification extending the provisions of the State Financial Corporation Act to the scheme. This Act has provisions empowering the State Governments to start such corporations for aiding their industries.

The West Bengal State Corporation, when it comes into existence, will render financial aid to industries, the capital of which ranges from Rs. 50,000 to Rs. 20 lakhs. No individual industry will get aid of more than Rs. 10 lakhs. The loans will carry interest at Rs. 6½ per cent., with a rebate of half per cent. for prompt payment of interest.

GOVERNMENT OF INDIA

NATIONAL PLAN BONDS – FIRST ISSUE

Limited to Rs. 75 crores [Approximately]

Rate of interest—3½ per cent. per annum payable half-yearly

Repayable on 1st June 1961

Opening on 8th June 1953 and

Closing on 10th June 1953 or earlier without notice

Issue Price Rs. 98-4-0 per Rs. 100 (Nominal)

Subscriptions will be received in the form of (i) cash or (ii) 3 per cent. Loan 1953-55 which will be accepted at Rs. 100 per every Rs. 100 (Nominal) tendered for conversion.

Interest at 3½ per cent. per annum on the National Plan Bonds—First Issue will commence from 1st June 1953. Interest will be paid on the 3 per cent. Loan 1953-55 tendered for conversion up to and including 14th June 1953.

Applications will be received at the offices of the Reserve Bank of India at Bombay, Calcutta, Delhi and Madras and at the Imperial Bank of India branches in India.

For full particulars apply to any of these offices, branches or treasuries.

PLACE OF SILK AMONG FIBRES

LONG-TERM PROSPECTS LINKED WITH COMPETITIVE CAPACITY

FROM the way in which keen competition is developing on the world fibre front, it looks as though the unique position that silk is now enjoying as the queen of fibres may not be held for long. For silk is in competition with a wide range of materials, the most important of which are the man-made fibres, particularly rayon and nylon. Naturally enough, the long-term consumption prospects for silk are closely linked with its competitive capacity *vis-a-vis* the synthetic fibres. This, in brief, may said to be the conclusion arrived at by the U.N. Food and Agricultural Organisation, in its latest commodity report on the fibre, published recently.

According to the F.A.O. report, the place of silk among fibres, and also in world economy, has been receding during the last twenty-five years. Such has been due, as already noted, to the growing supply of man-made fibres—rayon and nylon, in particular—which have made great inroads into silk markets for apparel and decoration, although it is true that silk has a certain combination of desirable qualities. Further, since the last world war, the need for food production has held back mulberry cultivation and cocoon production in the major silk-producing countries, especially Japan. Thus, the aggregate world output of raw silk in 1952 was less than half of the pre-war volume, despite the marked rise in yields in recent years. Yet another contributory factor has been the loss of markets, especially in hosiery; international trade in raw silk is less than one-fifth of the pre-war volume. The bulk of the sharp recession is accounted for by the appreciable shrinkage in offtake by the U.S., the largest import market for silk.

Despite the narrower market, raw silk supplies have by no means been over-abundant in recent years. On the contrary, stocks are reported to be low and prices have been moving upwards. However, Japan has planned for a substantial improvement in cocoon and raw silk output. As this is realised, the measures already introduced to provide a higher degree of price stability at economic levels should become effective. What is more, in broad-woven fabrics, that is products offering wider scope for collaboration and style, silk will continue to show resistance to displacement. In fact, as standards of living of the people advance, the market for such products is bound to expand. This process may be accelerated to the extent that the market is supplied by silk-producing countries where raw material and manufacturing costs are liable to be reduced and prices become lower.

Progress in Rayon

Notwithstanding these favourable factors, the future of silk consumption and trade is, to some extent, overshadowed by the projected large expansion in the output of synthetic fibres in the U.S., the U.K. and elsewhere. That this view is not exaggerated will be evident from rapid development in the sphere of rayon textiles. New rayon manufacturing plants have continued to be built; the world capacity of the rayon industry, which amounted to only 4,135 million lbs. in 1950, rose to as much as 5,344 million lbs. in 1952. The pace of expansion would have been more marked, but for the world-wide recession in the early months of 1952. The capacity for the current celendar year is estimated still higher at 5,860 million lbs. Whether or not the capacity will be fully utilised, it is difficult to say. It is interesting to note that the quantity of rayon actually produced rose from 3,752 million lbs. (or 91 per cent. of the capacity) in 1950 to 4,249 million lbs. (94 per cent.) in 1951, but receded to 3,652 million lbs. (68 per cent.) last year.

The prospects of development in the sphere of rayon industry would appear to be quite bright. Rayon, according to *Cotton*, the official journal of the International Cotton Advisory Committee, has now nearly completely displaced cotton for tyres in the U.S. A new bureau to promote the use of rayon has recently been set up by five leading rayon producers. Rayon is replacing cotton in tyres in other countries also, as witness the growing trend towards increased use of spun rayon yarns, and cotton and rayon mixtures. In this connection, the journal observes as follows:

"The fact that rayon produced in cotton importing countries saves foreign exchange—some £200,000 for every million pounds of rayon in the United Kingdom—is cited as an important economic reason for its use in these countries. In addition, the use of rayon is fostered by the development of new rayon industries in such countries as Australia. China, Philippines, Egypt, India, Israel, Cuba, Peru, Uruguay, and Venezuela. Thus far, the vast increase in rayon consumption has taken place without any reduction in total world cotton consumption, but there can be little question that rayon competition will continue to be a serious problem for cotton in the future."

Nevertheless, it is felt that rayon does not enjoy any price advantage over cotton; on the other hand, cotton prices relative to rayon are more favourable than they have been for some time. For there are, it is stated, indications that the rate of technological improvements in the quality of rayon has slowed down in the last few years, and it is possible that, in this respect, competition between cotton and rayon is entering a more static phase. Although cotton prices, generally, are now as low as, or lower than, they were before the Korean crisis, most rayon prices are higher. In the clothing and household fields, cotton has at least held its own relative to rayon competition in the last two years, due, in large part, to the development of new and improved cotton products and successful advertising and promotional activities.

New Synthetic Fibres

The most dynamic of cotton's competitors are undoubtedly the new synthetics. From a small beginning just prior to the Second World War, the production of these fibres increased to more than 282 million lbs. in 1951. The aggregate production capacity is estimated to be about 645 million lbs. by the end of this year. The production and capacity of non-cellulosic man-made fibres in different countries are given in the table below:

(In million lbs.)

	Production		*Capacity**
	1950	1951	1953
U.S.A.	145.0	210.4	434.0
Japan	2.1	8.4	48.5
France	5.5	6.9	23.4
W. Germany ...	2.0	8.6	20.0
U.K.	9.0	10.0	17.0
Canada	5.0	6.3	10.0
Italy	1.3	4.4	8.0
Switzerland ...	—	0.4	1.0
Argentina ...	0.3	0.4	0.9
Czechoslovakia ...	0.1	0.1	0.3
Other countries	2.0†	5.0†	57.9
World total	172.3	260.9	645.0

* Annual rate, December, 1953.

†Refers only to five countries: Austria, Belgium, E. Germany, Netherlands and Poland.

There are quite a large number of non-cellulosic man-made staple fibres, as, for example, vinyon (polyvinyl acetate), dynel (polyvinyl acrylic), acrilan (acrylic), orlon (polyster), vicara (corn protein), nylon (polyamide) and dacron (polyester) fibres. All these have a wide variety of characteristics—the most outstanding are high strength and resistance to moisture—and a tremendous amount of research is being conducted to adapt them to various textile end-uses, the success of which would mean a loss for cotton. From this, however, one should not rush to conclusions about the future of cotton. For the prices of these synthetics are higher than those of natural fibres. Besides, the synthetics are available only in small quantities. Again, they suffer from certain disadvantages which restrict their use; thus, they are non-absorbent to moisture, being difficult to dye, or have a low melting point.

The textile scientists continue to be engaged in evolving new synthetic fibres and in improving the existing synthetic fibres. This will be evident from the statement of Mr. S. J. Allen of British Celanese Ltd., made in the course of his speech at the Textile Institute's annual conference held in Llandudno the other day, that there would be another new fibre in the next ten years. "It is," to quote him, "against all reason to think that there will not be." Speaking on the same occasion, Dr. D. Finlayson, also of British Celanese Ltd., remarked that the research work which was being done in textiles to-day paralleled, in a remarkable manner, what had been done in the last thirty years in metallurgy. The great advances made had been due partly to the vast array of alloys and partly to the appreciation of the importance of the port played in many instances by the addition of small proportions of a third constituent to a mixture of two constituents. It is expected that blends of the many textile fibres now available would yield results having an importance no less than that due to these alloys. Alone and in these blends, cellulose acetate seems destined to play a considerable part in textile economy in future.

Have the pulse of the
COTTON WORLD
in your hand by subscribing to the American "Weekly"
THE COTTON TRADE JOURNAL
This international "weekly" serves the cotton trade proficiently and, as a mirror, reflects the cotton situation in the United States and other cotton-producing and consuming countries.
A year's sea-mail subscription (Rs. 28-12 only) or air-freight subscription (Rs. 100-7 only) includes an Annual Textile Number, reporting developments and progress in the textile industry, and an International Edition of over 200 beautifully illustrated pages, giving a resumé of conditions in each of 22 countries as they affect cotton and world trade in general. This International Edition, otherwise, by itself costs $3.00 or Rs. 14-6-0 plus postage.
Substantial reductions for 2-year and 3-year subscriptions.
Sole Agents for India:

RAISING TEXTILE OUTPUT

The Government of India has extended the term of the I.L.O. Productivity Mission which has been in the country since December last, advising the industry on the problem of raising the output in the textile (and engineering) industries. With the extension of the term, the textile team will carry on its work till the end of November next. The chief consideration which has weighed with the Government in taking the decision, it is stated, is the need to consolidate the results achieved by the team and set up some machinery for continuing the good work done by it.

As readers are aware, the I.L.O. textile team has been demonstrating in selected factories in Bombay and Ahmedabad the methods by which higher productivity may be attained through the application of modern work-study techniques without retrenchment of labour and addition of any capital equipment. The team has shown, it is claimed, that the existing number of men and machines are quite sufficient to raise productivity by 20 to 250 per cent. in certain processes. Improvements already effected are reported to have led to a drop in production costs and also to elimination of wastage.

WOOL TEXTILE RESEARCH

Discussions covering a wide range of issues relating to wool production and a complete review of the activities of the International Wool Secretariat in the fifteen countries where the Secretariat has branches were the highlights of the deliberations of the conference of the Executives of the International Wool Publicity and Research Fund controlling the Secretariat held in London last week. In a statement released at the conclusion of the conference—the sixth post-war conference of representatives from the Wool Boards of Australia, New Zealand and South Africa, which, among them, account for more than 50 per cent. of the world apparel wool supplies—it was emphasised that the wool growers realised the benefits of an increase in wool production to the Commonwealth. in particular, and to the world economy, in general. According to the statement, there will be increased financial provision in the future for wool promotion throughout the world and the Secretariat will continue to encourage wool textile research in Europe, North America and elsewhere. Substantial financial contributions have been made by the wool textile industry in the U.S., Germany, France, Holland, Italy and Norway towards the trade promotion work of the Secretariat.

FRENCH TEXTILE EXPORTS

Exports of French textiles to foreign countries seem to have picked up in recent months. The value of textiles actually exported during the first quarter of this year amounted to Frs. 33,002 million, which compares favourably with Frs. 32,770 million in the previous quarter and Frs. 25,074 million a year before. Of the total exports, the U.K. accounted for Frs. 4,349 million, as against Frs. 2,272 million in the previous quarter. The exports comprised Frs. 569 million worth of cloth, Frs. 353 million worth of yarn and Frs. 2,987 million worth of textile raw materials. Exports of textiles to French overseas possessions during the period under review, on the other hand, were lower at Frs. 16,356 million, as against Frs. 20,135 million three months before and Frs. 22,065 million a year before.

MILLS URGED TO PAY £7 MILLION MORE TO WORKERS

INCREASE IN YARN OUTPUT

(From A Special Correspondent)

MANCHESTER, *26th May*

MANCHESTER LETTER

AN immediate all-round wage demand is to be tabled for 280,000 workers in Britain's cotton spinning and weaving industry. The claim is expected to be for a rise of 2*s.*-in-the-£ on present earnings, equal to £7,000,000-a-year for the industry as a whole. This was decided in Manchester this week at a meeting attended by 80 cotton trade union officials. Mr. Andrew Naesmith, General Secretary of the Northern Counties' Textile Trades' Federation, said the terms of the new application had been left to the general secretaries of the three main unions involved. "An immediate application will be submitted," he said.

The new claim "in substance" would be the same as that turned down by millowners earlier this year and subsequently rejected by the Industrial Disputes Tribunal. This was for an all-round increase of 2*s.*-in-the-£.

Increased living costs since the last cotton wage increase in 1951, the improvement in trade, and the fact that thousands of lower-paid cotton workers did not benefit from Budget income-tax reliefs will be the main arguments put forward by union negotiators.

More Yarn Output

Recruitment in the Lancashire cotton spinning industry in the first full week of May has taken manpower gains in the mills since the turning point of the recession past a new mile-post. Since the drift of workers from the industry was halted last August more than 7,000 full-time operatives have been added to the spinning labour force, Cotton Board returns showed this week.

Output of single yarn has mounted steadily in proportion to the rise in manpower and in the first full week of May the mills produced 19,090,000 lbs. of cotton and rayon yarn—their best result since mid-February, 1952. This represented an increase of 60,000 lbs. on the previous week's production and 6,720,000 lbs. on the corresponding week last year. Out of the 108,330 workers on spinners' books, 99,820 were at work during the week.

Cotton Supplies

Spinners and other users of raw cotton in Britain have been notified of preliminary arrangements concerning raw cotton supplies during the new season which opens on 1st September. A decision on whether to obtain supplies privately or through the Raw Cotton Commission must be made by 11th July for all growths of cotton other than Peruvian and Californian.

In a circular, the Ministry of Materials has advised the trade that these arrangements are subject to any recommendations made by the Cotton Import Review Committee, whose report has now been submitted to the Government. In the case of Peruvian and Californian cotton, the choice need not be made until September.

No quantitative limit is being placed on imports of non-sterling non-dollar cotton next season and, as a result, the only entitlements required in 1953-54 will be for dollar cotton. These will be calculated on a similar basis to that used last year, and will again be transferable among contracting-out spinners and merchants.

Change in the System

A change in the system adopted last year affects the concession to return to the Raw Cotton Commission within the first three months of the contracting-out period. On this occasion, the option to contract-out cannot be reversed for 12 months. The combines are again to be given the opportunity of contracting-out certain units if they wish.

Spinners who contract-out for the first time from 1st September and who find that they cannot make their own arrangements for new purchases quickly enough to ensure continuity of supplies will be supplied by the Raw Cotton Commission with cotton to bridge the gap until their direct purchases begin to arrive but they will receive not more than three months' consumption.

In the new season, the Commission will be buying the whole exportable surpluses of Nigeria, Aden, Nyasaland and Grenada under existing contracts and will supply contracting-out spinners who use these growths with a reasonable share of available supplies at its normal selling prices. Facilities will be continued next season to enable merchants to import a certain amount of dollar cotton on their own account for eventual sale to spinners against surrender of entitlements.

Mill Combine's Name

A proposal to change the name of Combined Egyptian Mills Ltd., of Atherton, one of Lancashire's biggest mill groups, is to be considered at a special meeting on 6th July. The Directors recommend changing the name of the Company to Combined English Mills (Spinners) Ltd. because of persistent confusion over the location of the group's mills.

The Directors state: "In recent years, we have from time to time been told that the word 'Egyptian' in the Company's name conveys the impression that our mills are situate in Egypt. Although it is common knowledge in this country and has been repeatedly stressed by the Company that the whole of its mills are situate in or near the County of Lancaster and within a radius of 20 miles of Manchester, the wrong impression still persists, especially among potential customers abroad."

When the Company's title was originally decided upon in 1929 there was little, if any, spinning in Egypt but this is no longer the case. The Directors add that although the Company's business remains in general the spinning of fine yarns, the title "Egyptian" is no longer fully descriptive of the trade of the group which makes extensive use of synthetic fibres and growths of cotton other than Egyptian.

Anglo-Ceylonese Trade

United Kingdom trade in cotton cloth with Ceylon last year fell by 2,000,000 yards compared with the previous year to a total of 9,000,000 yards, states the Cotton and Rayon Merchants' Association, representing 1,000 firms, in its Annual Report issued in Manchester. The report declares: "There is no doubt that the growing policy of Ceylon to look more to the East than to the West for supplies is now seriously affecting U.K. business with the market."

India was now by far the largest supplier of cottons to Ceylon and in rayons practically the whole of Ceylon's needs were being supplied by Japan. The position which U.K. rayons had established in Ceylon since the war had weakened.

American Textile Workers

The decision of the Textile Workers' Union of America (C.I.O.) to affiliate to the British-based International Federation of Textile Workers' Associations for the first time has been received with enthusiasm by all the affiliated organisations from Japan, Asia and Europe, says the International Federation in a report issued in Manchester. The report says: "This addition to the strength of the International Federation has resulted in over 1,700,000 textile workers in 16 different countries in the free world now being united in a common endeavour to raise the living standards of textile workers everywhere."

The significance of the entry of the T.W.U.A. into international textile affairs was indicated by the fact that they would be the biggest single organisation comprising the International Federation, a title previously claimed by British textile workers. Mr. John Greenhalgh, Manchester, International Federation Secretary, said: "We congratulate them on this progressive step and confidently expect the influence of their leaders on the various committees of the International Federation to be of the utmost value."—*All Rights Reserved.*

PAKISTAN BANS FUTURES IN NEW CROP COTTON

The Government of Pakistan has banned forward trading in the ensuing cotton crop. With a view to accelerating the disposal of cotton of the current crop, it has been decided to place it on Open General Licence up to the end of August, 1953. Exports of cotton will, however, continue to be subject to production of an irrevocable 100 per cent. letter of credit and export price control form as approved by the State Bank of Pakistan. The dealers in cotton had been directed to furnish to the Cotton Board, within seven days from the date on which the announcement was made—31st May, 1953—in the forms prescribed for this purpose and published in the *Gazette*, certain information relating to fulfilled and unfulfilled cotton contracts and agreements pertaining to the 1952-53 and 1953-54 season's cotton.

DETERMINATION OF STAPLE LENGTH OF COTTON

INDIAN GRADERS' FAULTS

MANY persons, who have not been initiated into the mysteries of the cotton trade, have never ceased to wonder at the existence of the numerous traders in the commodity, which surprises them because the consumers (the mills) are really so few in number. Apart from the fact that cotton is produced only in a few months in the year while it has to be held by the traders all the year round for ensuring the continuous supply of commodity to the mills, there is yet another reason why there are so many traders in cotton. Among industrial commodities cotton has the reputation of having a multitude of varieties so that it requires expert skill and handling and specialised selling technique before the product is finally marketed.

Indeed, had it not been for such expert technique in the grading and classification of cotton it would be an extremely hazardous proposition for consumers to buy their requirements of cotton. Although the manufacture of cloth has been mechanised from one end to the other, the selection of cotton for the manufacture of cloth has, in all countries remained an art. And it is an art in which mastery is gained only after considerable experience. In an interesting pamphlet on "Staple Length of Cotton," issued by the Indian Central Cotton Committee, Dr. C. Nanjundayya, Director of the Committee's Technological Laboratory, surveys the chief problems arising out of the determination of staple length of cotton. The pamphlet, which forms part of the Technological Bulletin Series of the Committee, gives a comprehensive—for obvious reasons, not very detailed—description of the commercial process of finding the staple length of cotton and compares the results obtained by this rough and ready method of determining the staple length of cotton with those obtained by laboratory measurements.

Variability in Cotton

The author introduces the subject by reference to the "enormous variability" of cotton. Some cotton plants produce naked seeds with no lint while others, such as the Sea Island plant, produce cotton fibres of more than 2" in length; all other varieties come within this range. Nor is this the whole story of variations in staple length. Even in a single plant of the purest strain of cotton grown under most perfect conditions, large differences exist "between fibres produced, between boll to boll, seed to seed in the same boll, different portions of the same seed and even at different parts along the length of a single fibre." Indeed, it may be wondered whether it is possible to take a sample of cotton, which would be fully representative of the bulk, say a bale, from which the sample is extracted. In this connection, the author says:

"A single seed has 5,000-10,000 fibres on its surface, a boll about half a million, and a bale hundreds of millions; it has been estimated that, if all the fibres in a bale are laid end to end, one could reach the moon and return. The problem of selecting a sample of cotton from the bulk and estimating its fibre characters is apparently baffling, but it is not really beyond a reasonable solution. This account of variability in cotton is, however, intended to emphasise two points; first, great care has to be exercised in selecting a test sample, and second, that the value of any fibre character would at best be a statistical estimate."

Fibre Quality

What is fibre quality? How can it be measured? These are simple questions. But it is difficult to provide easy answers to these questions. Trade in cotton is based on the grader's or selector's judgment. The estimate takes into account the grade and staple of cotton; the former includes the non-lint content, colour, bloom and ginning preparation, while the latter is an integrated impression of staple length and character which comprises strength, uniformity of staple, drag, etc. Referring to the inherent defects in this system of evaluating grades and staple, the author says:

"Obviously, such an estimation depends upon the visual impression and perception of the hands of the grader, atmospheric conditions of humidity and temperature prevailing at the time of grading and so on. Nevertheless, his judgment is almost correct in the case of cottons that he usually handles from year to year, but it is often erroneous in the case of new and improved varieties. Even to-day, he handles thousands of cottons in the market from day to day and instruments have not yet been invented to compete with his speed, though constant endeavour is being made in this regard.

"Generally, length plays an important part in the estimation of quality and price of cotton. This is, however, mostly correct, as longer cottons are generally finer than short ones, though this relation is not invariable. Extensive investigations have been carried out in the U.S.A., the U.K., and India to correlate the measurable fibre characters of a cotton, such as length of staple, fineness, strength and maturity with its spinning value or quality which is defined as the finest yarn that could be spun economically from a cotton naving the requisite strength. So far as Indian cottons are concerned, fibre length makes the maximum contribution to the spinning value, fineness coming next, though this order may be reversed for other groups of world cottons."

Grader's Method

For purposes of estimating staple length the grader grips a lump of cotton by both hands—the hands touch each other—and breaks the lump by pulling the hands apart. While one portion held by one hand is discarded, the fringe of fibres from the other is pulled out between the thumb and the forefinger of the other hand. The tuft is then doubled and drawn between the fingers in order to stretch and parallelise the fibres. In this process, a few short and a few long fibres may get eliminated. Thus, the tuft may lose its representative character. There are also other shortcomings in this process so far as the measurement of staple length is concerned. In this connection, the author says:

"The tuft prepared in the manner gets less dense at the ends and blocking it or marking the two edges representing the typical length of the tuft is open to large subjective errors, as it depends upon the visual estimation of the grader. Each grader may have his own idiosyncrasies; one may have a systematic tendency to estimate more or less than the other. Assuming, however, that the tuft is prepared in the same manner by all graders, it is possible that the two lines defining staple length may be placed in the following ways: (i) that they run even through the tips of the longest fibres; (ii) that the edges may not be at the extremes of the tuft but intermediate between the tips of the fibres and the denser portion of the main bulk; (iii) that the edges may be so placed as to coincide with about half the density of fibres at the centre and (iv) that if the tuft prepared is about the same density the edges defining the staple length are kept at such a place that the fibre density bears a fixed proportion of the fibre density near the centre. Thus, at every stage of staple length estimation there is a play of personal errors."

Laboratory Method

Laboratory measurements of staple length are, however, free from "personal" errors. They are more objective and yield more accurate results. But the system, as the author himself admits, is "time-absorbing and laborious." This is why other methods, generally classed as "sorters," have been devised. A representative sample of cotton is sorted out into different group-lengths either by mechanical or optical methods and a frequency distribution by weight or by number is obtained. From these figures, the data relating to mean length, fibre length, effective length, etc., are worked out. Generally speaking, the staple length of cotton means the grader's or spinner's estimate of fibre length. Since the commercial estimation of staple length varies within wide limits attempts have been made to correlate this with some value which could be obtained from a scientific instrument.

The measure of staple length used in the U.K. is the effective length which is neither the mean length nor the modal length (the most frequent length) but a new measure closely approximating to the hand staple length (or grader's length). The apparatus used for determining the effective length is the Baer Sorter. In the U.S., the method for measuring the staple length of cotton is the fibre array method. The apparatus used is the Suter-Webb Duplex Fibre-Sorting apparatus. Recently, a new instrument, known as the Firbograph, has come into greater use. In India, the determination of the mean fibre-length and fibre-length distribution is done by the Balls Sorter, Ahmad-Nanjundayya Stapling apparatus and the Baer Sorter.

An investigation which has been made into the relations between the mean length and the grader's staple length of cotton (India), reveals that the Indian graders "generally underestimate the staple for short staples and slightly overestimate the staple for the larger longer types in comparison with the mean length." Also, the data collected by the Cotton Technological Laboratory show that the "line of demarcation between the long and short staples lies round about 0.90." Although no great harm to spinning performance is caused by underestimating the staple of any variety of cotton that is used for spinning there is an economic aspect to this problem, which cannot be altogether overlooked. In actual commercial practice, any variety of cotton, the staple length of which is underestimated, as Dr. Nanjundayya points out fetches a "low price especially in foreign markets, which is not commensurate with its real quality." The Indian grader is therefore urged to step up his estimated value of staple length in order that it may reflect more fully its correct length; this would enable the cotton grower to get a "proper monetary return for his cotton." Also, the correct estimation of staple length of these short-stapled varieties, it is rightly pointed out, will pave the way, so far as these varieties are concerned, for the "establishment of universal standards for staple length."

The final ginning return of 1952-53 Egyptian cotton crop is as under:

(In cantars of 90.05 lbs.)

	1952-53	1951-52
Karnak	4,297,695	2,630,978
Menoufi	164,997	481,059
Giza 30	1,294,957	1,233,897
Zagora	258,330	317,731
Ashmouni	3,663,108	3,158,080
Dendera	33,770	13,469
Others	3,842	5,399
Total	9,716,699	7,840,613

The U.S. *Journal of Commerce* has estimated the 1953 cotton acreage in the country at 26,819,000 which is only slightly above last year's harvested area of 25,664,000 acres. Weather conditions so far have been poor in several important areas. Under the circumstances, several traders are of the opinion that new crops may not decline below 33½ cents.

At the recent meeting of the International Cotton Advisory Committee in Washington, the Russian delegate stated that the Russian cotton crop during 1952 was almost 6.5 million bales, consumption about 5.25 million bales and exports to "satellite" countries 1.25 million bales.

PAYMENT BY RESULTS IN COTTON MILLS

LESSON GAINED FROM AHMEDABAD EXPERIMENT

(By Dr. V. R. TRIVEDI)

THERE are certain obvious advantages that accrue both to employers and workers through the adoption of the system of the payment, recently known as "payment by results." It will be seen that though "payment by results" is the best available scheme in that it takes into account differences in workers' ability and effort, it is not a foolproof system, if it is applied without safeguards. The system of payment by results is the same as payment on productivity. In the piece-rate system of wages also—the most common being the straight piece rate—the worker earns at a stipulated rate on production turned out by him. The piece-rate system of wages, which is the same as that of payment by results, has been in vogue in the Ahmedabad textile industry, since very early times, so that it is possible to draw some conclusions as to its merits relative to the alternative system of the time-rate system of wages. The following are some of the advantages of the system of payment by results, as it functions in Ahmedabad:

1. In the course of the last 30 years (since 1921), wages of the piece-rate jobs have increased by about 47 per cent. while those of the time-rate jobs have shown an increase of about 37 per cent. only.

2. When the 1948 Wage Award fixed wages of the different textile occupations in Ahmedabad the wages of the piece-rate jobs were raised by about 30 to 40 per cent., while the time-rate jobs could not get a wage increase of more than 20 to 30 per cent.

3. After the fixation of the piece rates by the 1948 Award, there was a further rise in the earnings of the piece-rate jobs by about 10 per cent. This occurred, because the piece-rate workers used to earn more than what they were expected to earn. This is true of almost all the piece-rate jobs in the industry.

4. The highest paid operative in the whole industry is the warper (or the automatic loom weaver, wherever automatic looms are working) whose wages are fixed according to piece rates.

5. There is no piece-rate job whose wage is fixed as low as the minimum wage fixed for the Ahmedabad industry.

Rise in Wages

The average wage of the textile worker is rising even after the 1948 Award. Just after the Award, it was estimated that the average textile wage increased from Rs. 35 to Rs. 42 per month. But to-day the average wage is believed to be around Rs. 45 per month. A still more correct figure of the average wage is near about Rs. 50 per month and this may be attributed chiefly to the ever-rising earnings of the piece-rate occupations. Piece-rate occupations receive higher wages, because, as in other textile centres, in Ahmedabad too the management is production-minded and would pay generously, if workers stepped up production. More than the management, the workers themselves have taken full advantage of this attitude. On the other hand, in piece-rate jobs there is relatively a greater degree of responsibility of workers with regard to work. Among these workers, the habit of "loitering" is not so widespread.

Several other reasons could be given to justify the comparative superiority of the piece-rate jobs with regard to wages. In the Indian textile industry, as a whole, it will be found that in the system of piece-rate wages there is an element of risk—the risk of earning lower wages. The possibility of earning lower wages in the cotton industry, is not due to defects in fixing rates—though they are there—but to lack of work itself or intermittent supply of work. Frequent or infrequent shortages of raw materials or tools, or delays in repairs or deterioration in the conditions of work act against the interests of the piece-rate workers. There is thus always a risk to the worker in earning less at the end of the pay period. Another risk in the piece-rate jobs is that there is no "fall back" or occupational minimum wage.

Piece-rate Jobs

Sometimes piece-rate jobs earn more in some units, because the rates are not very judiciously fixed. In an industry like the textile industry, no piece-rate wage should, as far as possible, be fixed from outside, which treats the working conditions and raw materials of all the units as uniform. When piece-rates have been fixed by the Award it is usually the workers of the good mills who derive benefit while the workers of the mills where conditions are unsatisfactory suffer. It, therefore, usually happens that piece-rate workers in good mills are at an advantage as compared to the piece-rate workers in the ordinary mills, in spite of the professed equity of wage rates. No piece-rate wage which does not take into account the breakage rate, speed, workload, raw materials, working conditions, etc., should be regarded as scientific or just.

Quality of Output

Another factor which the rate fixers in Ahmedabad have overlooked while fixing the piece-rate is attention to quality of the output. In piece-rate jobs, since no clear mention is made in respect of maintaining the quality of the output, there is a general tendency among the workers to be negligent about quality in their pursuit of higher production and of larger earnings. The piece-rate should, therefore, be so fixed that quality of the product is not sacrificed. The piece-rate workers must be held responsible for quality; otherwise the whole organisation will find itself in difficulty. If the bad quality of a product is passed on from one stage of manufacturing process to another, it affects the subsequent stage. This finally reduces efficiency of the mill and lowers the quality of the final goods.

If the system of payment by results, has to succeed it should be foolproof both from the side of the management and from the side of the workers. With the improvement in the quality of raw material, some change should be effected in the wage rates, so that management gets the advantage of the improvement. It should be possible under the system of payment by results to distinguish the results of productivity due to the efforts of workers, changes in machines, improvement of raw materials, introduction of new methods of work and so on, so that each contributing factor to productivity can be separated and evaluated separately when wage rates are being revised. Whenever new machines are introduced, the old wage rates should be revised so that the worker on such jobs does not get an unusually large share of productivity.

Work and Wages

Our ideas about the productivity of workers are still old with the result that sometimes wages are not correctly related to work. The job of an automatic loom tenter is an instance in point. Since the automatic loom weaver's job turns out vast quantities of production, the temptation is always to over-estimate the merits of the job with the result that he is paid unduly high wages.* Productivity should not be the main criterion of an increase in workers' wages. For, with the introduction of new machinery production might be easily stepped up five to six times the present output—as in the case of winding, warping or weaving operations—which would inflict a heavy burden of labour cost on the industry.

Neither Just Nor Judicious

In brief, the piece-rate system which does not take into account the breakage rate, speeds of machines, quality of machines, size of packages, doffings, creelings, humidity, lighting, and other working conditions, is neither just nor judicious. An equally important consideration is the maintenance of the quality of the product. The piece-rate should be so fixed that quality is taken care of by the workers. It is only after these essential requisites are fulfilled that any relation between the wage rates and productivity could be established, which is above challenge from the side of either labour or management.

---

*In the U.S.A., for example, the automatic loom-weaver does not earn more than the card grinder, while in Ahmedabad his average wage is 2½ times as much as the card grinder. Similarly, the warper (high speed) earns as much as the doffer (ring frame) in the U.S.A., while in Ahmedabad he earns about 2½ times the wage of the doffer. It is thus clear that in our industry too much importance seems to have been given to the productivity of jobs rather than the difficulty of performing the job. (Wages in New England, N.)

SUGARCANE CULTIVATION IN INDIA

INTENSIVE DEVELOPMENT, AN EFFECTIVE SOLUTION

A REVIEW of the progress of the Indian sugar industry during the first two years of the Five-year Plan, as contained in the Progress Report of the Planning Commission, was made in these columns last week. This week it is proposed to review the two-year progress in the sphere of sugarcane cultivation. The cursory reference to the implementation of the development programme for sugarcane reveals that the progress, during the years 1951-52 and 1952-53, has—just as on the industrial side—not only not been well maintained but has even been arrested, as will be shown presently. This is indeed a sad commentary on those who are in charge of cane development work.

The first year of the Plan, no doubt, witnessed notable progress in the direction of achieving the target set for sugarcane production. Thus, the yield of cane in the 1951-52 season, which corresponds with the first year of the Plan, was 58.95 million tons, as against 56.16 million tons in 1950-51, which represents a rise of 5 per cent. The revised Plan envisages an increase of 7 million tons in the aggregate yield of cane, as compared with the basic (1950-51) year. Accordingly, the production of sugarcane at the end of 1955-56 should be 63.16 million tons. But the improvement of 5 per cent., it must be noted, closely followed an increase in the area devoted to sugarcane cultivation, from 4.21 million acres to 4.73 million acres, or an increase of 12 per cent. As will be seen from these figures, the increase in the yield of sugarcane was less than proportionate to the rise in acreage, which indicates that the trend of average yield per acre must have been downwards. The all-India average yield during 1951-53 was lower at 12.2 tons, as against 13.3 tons in the previous season. This means that adequate attention was not paid to intensive cultivation of cane.

Pace of Progress Arrested

The pace of progress in sugarcane cultivation would appear to have been somewhat arrested during the second (1952-53) year of the Plan. An indication of this is provided in the downward trend in the aggregate production of cane, which is estimated to amount to 50.35 million tons (second estimate), as against the corresponding adjusted estimate of 52.88 million tons in the previous year, a decline of nearly 5 per cent. The decline becomes more perceptible when it is compared with a fall in the area under sugarcane cultivation from 4.33 million acres to 4.25 million acres, representing a decline of only a little over 1 per cent. A conclusion which naturally emerges from the figures is that the efforts at raising output of sugarcane by intensive cultivation under the sugarcane development schemes—a specific recommendation made by the Planning Commission—have not been met with any success.

The foregoing account highlights the importance of attaching greater attention to cane development. If, at the end of the Plan period, the yield of *quality* cane is to reach the target of 63.16 million tons, it is imperative that special stress should be laid on the provision for adequate irrigation facilities for sugarcane areas, for seed nurseries, for the supply of sufficient quantities of disease-free seeds of suitable varieties, for manures and fertilisers of the right type, efficient plant protection service, zonal centres, soil extension service, and, more than all, for qualified personnel to carry the results of research to the cane growers.

The need for stepping up—without raising the area, be it noted—cultivation of high quality sugarcane is of the utmost importance for maintaining a high level of sugar (and *gur*) output, with a view to providing, in full, the minimum that is considered necessary from the health point of view. The *per capita* consumption of sugar, including *gur*, required for a balanced diet is estimated by the Planning Commission at 2 ounces per day, as against the present level of 1.62 ounces. In order to raise consumption to this level during 1955-56—final year of the Plan—the additional quantity required is 2.2 million tons. In other words, the total production of sugar (including *gur*) should be 7.82 million tons. With a view to achieving this output, the country should produce a larger quantity of cane than what is envisaged in the Plan.

The real problem for Indian sugarcane, it cannot be over-emphasised, is not the acreage but the yield. With the food position precarious as ever, with the need for higher production of oilseeds and jute to earn or save foreign exchange necessary for essential imports, any additional transfer of land to sugarcane cannot even be thought of. It is doubtful if even the present acreage under sugarcane can be maintained in the future. On the other hand, to reach the modest target of 63.16 million tons fixed for the end of the Plan period (1955-56), sugarcane output will have to be raised by at least 25 to 26 per cent. The only way to achieve this target is by working hard towards increasing the much-too-poor average yield in our indifferently cultivated fields in the important sugarcane producing areas, as stated already.

Scientific Methods of Cultivation

Along with the need for raising larger yields through intensive cultivation, there is also the need for improving the quality of cane. In fact, our standard should be not sugarcane per acre but sugar per acre. Surely, that is the most effective way of bring down the cost of sugar manufacture which is at present high in all conscience. According to experts, the climatic conditions in India—especially in the tropical regions—permit the growth of plantation and ratoon canes to the extent of 25 tons and 18 tons, respectively, if only scientific methods of cultivation are adopted. Of particular significance, in this connection, is the need for bringing into practical application on a wider scale what has been found possible by research institutes and demonstrated in actual practice. It will be a failure on the part of the administrative machinery of the State Governments, if such valuable results of scientific research are not fully worked out and translated to the cultivators' fields.

SUGAR PRODUCTION IN ASIA

Sugar production in Asia during 1952-53 is estimated by the U.S. Department of Agriculture at 4.8 million short tons, (2,000 lbs. each), which represents an increase of 2.1 per cent. above the 1951-52 production of 4.7 million tons, and 33.3 per cent. above the 1950-51 production of 3.6 million tons. Asia is expected to achieve this increase, despite an estimated decline of 6.5 per cent. in world output, from 38.3 million tons in 1951-52 to 35.8 million tons in 1952-53.

India, with a surplus of sugar from the previous season, reduced the acreage under sugarcane during the current (1952-53) season. Production of sugar has decreased by nearly 220,000 tons. Sugar output in the Republic of Philippines is estimated at 1,165,000 short tons, as against 1,077,000 tons last year; in Formosa at 840,000 tons, as against 598,000 tons; in Indonesia at 505,000 tons, as against 472,000 tons; Pakistan at 90,000 tons, as against 83,000 tons; in Burma 20,000 tons, as against 16,000 tons; and in Japan 38,000 tons, as against 31,000 tons.

STANDARDS FOR SUGAR

The first step towards reducing the present series of sugar grades through introducing a limited number of standard grades has just been taken up by the Indian Standards Institution. The Sugar Sectional Committee of the Institution, which has been formed for the purpose, has decided to undertake this work with a view to eliminating the confusion arising from the existing large number of grades in colour and grain size series in the sugar standards issued by the Indian Institute of Sugar Technology, Kanpur. It has also decided to investigate more scientific methods for evaluating the various grades in addition to the visual methods at present in vogue.

The Committee includes representatives of the Indian Sugar Mills' Association, the Indian Central Sugarcane Committee, representatives of the Ministries of Food and Agriculture and Health, and of other producing and consuming interests in the country.

METALLURGICAL COAL CONSERVATION

OPENING NEW SEAMS PROHIBITED

THE Government of India is reported to have decided to refuse, as a general rule, permission to collieries for opening new seams or reopening seams containing coking coal. This decision would appear to have caused considerable consternation among collieries which seem to be feeling that there is serious interference with the management's freedom to develop mines on economic lines. It is considered that this decision will aggravate the difficulties of the collieries which are already suffering on account of the Government's present policy of pegging output of matallurgical coal. Under this policy, ceilings on production have been fixed for individual collieries. It is contended that ceilings, in the case of certain collieries, are so low that it has made working them uneconomical. And now with the latest decision restricting the opening of new seams or reopening old ones in these collieries, it is feared that they would be completely driven out of the field. They are, however, aware of the Government's promise that individual cases of collieries subject to hardship, as a result of the present decision, will be considered leniently, but they do not seem to be satisfied with the assurance. In their view, the present decision is not calculated to improve the health of the coal industry.

We are not yet aware of labour's reaction to the latest decision. But it is clear that it would be met with disfavour, for it might lead to restrict considerably the scope for employing colliery labour, which, as it is, has been adversely affected by retrenchment resulting from the present policy of pagging output of metallurgical coal. Mr. B. P. Sinha, Vice-President of the Indian National Mineworkers' Federation, has asserted that the present sort of pegging has been acting contrary to the assurances given repeatedly to the labour organisations by the Production Minister and the Coal Board to the effect that no pegging or restriction of output which would involve large-scale retrenchment of labour would be permitted. It is stated that the pegging policy has affected as much as 7,000 people in one of the collieries alone. If such is the result of the Government's policy of pegging output, certainly, the latest decision to prohibit opening new or reopening old seams, will widen further the possibilities of retrenching labour. One can, therefore, expect that the latest decision will definitely be opposed by labour interests.

Need for Simplified Procedure

Be that as it may, a critical analysis of the latest decision, taken together with the policy of pegging output of coal, discloses that although there is some truth in the opposite arguments, they do not constitute the whole truth. Few will dispute the need for considerable leniency towards collieries which would be subjected to a good lot of hardship, as a result of the decisions. The Government's assurances in this regard should, however, be enough to dispel all undue apprehensions. It is true that the collieries will have to undergo the cumbersome process of applying for permission to open new or reopen old seams and all the attendant red-tapism but that cannot be avoided as conservation of metallurgical coal must be given top priority in the national interest. The Government can, of course, help—and it must—by simplifying the procedure. If, however, the extent of retrenchment were to be the criterion, it would not be possible to carry out any programme aimed at conservation or rationalisation. A way should be found out to deploy the retrenched labour in other occupations. Retrenchment of labour must not stand in the way of conservation or rationalisation of collieries.

We have all along taken the stand that conservation does not mean reduction of output and that conservation can be achieved better through sand-stowing, washing and blending. But this should not be taken to mean that we favour indiscriminate opening up of new seams. The mining of the existing opened-up seams should be continued and fully worked, and the opening of new or reopening of old seams should be resorted to only when the opened-up seams are exhausted or absolutely useless. The point to be noted is whether the overall ceiling can or can not be attained economically, by working the existing seams.

NORTH INDIAN TEA IN 1952–53

MESSRS. THOMAS & CO. ON OUTLOOK FOR CURRENT SEASON

A NOTE of cautious optimism regarding the outlook for the tea industry in the current season is struck by Messrs. J. Thomas & Co., Ltd., one of the leading tea merchants and brokers of Calcutta, in their customary annual report for the season 1952-53. Summing up their impressions they say that "the industry may face the future with growing confidence in the reasonable hope that conditions during 1953 may resemble much closer those of 1951 than during the critical year that has passed." This is, of course, in line with the prevailing impression that the prospects for the current season are bright, but, at the same time, Messrs. Thomas & Co., have found it necessary to warn against any complacency in view of the fact that past experience has clearly demonstrated how delicate is the balance between world supply and demand.

The crisis of last year is described by them as the "most serious" the tea industry had ever experienced. The circumstances leading to the crisis and the efforts made by the industry to stabilise the prices have been described in an interesting manner. It is commonly believed that one of the major causes of the crisis was overproduction and the overproduction was brought about by the planters' desire to make quantity at the expense of quality. This belief, according to Messrs. Thomas & Co., is not entirely correct. There was a gradual expansion in the season's crop till it was 42.6 millions lbs. ahead of the previous season's output in the month of July. The bulk of this increase, it is stated, was due to extremely favourable climatic conditions and was not attributable to the producers' desire to make quantity at the expense of quality. The final crop figure at the end of the season, however, showed a small decline of 2.79 million lbs. from that for 1951. This was due to the planters' commendable action in whittling down the output month by month from August onwards by a policy of fine plucking.

The downward trend in prices from the peak levels of August, 1951, persisted till April-May, 1952, when the lowest averages were reached. The considerable quantity of poor liquoring stalky teas left over from the previous season had a depressing effect on the opening sales in June. The new season's teas which were of a better quality than that of the previous ones brought some improvement, but that was short-lived. Soon a rot set in on the news that the North Indian crop was 42½ millions ahead of the previous season and on the buyers' assumption that there was likely to be a world surplus of tea. The increase in the tea ration in the U.K. to 3 ozs. in September, 1952, and the subsequent freeing of tea in the U.K. from all rationing and sale restrictions failed to provide the expected stimulus to counteract the recession in prices. On the other hand, the accumulation of stocks by households in the U.K. during the ration period was released consequent on the abolition of controls. This brought about a sudden collapse. The depressing trend continued until November. At this time 50 per cent. of the offerings in sale was withdrawn without a bid, but the crisis was so acute that the last sale of November was cancelled and only half the quantity was offered in the next two sales in December. In an effort to stabilise prices it was decided that future export and dust sales would be restricted to 55,000 and 20,000 chests, respectively. Little tea was, therefore, offered for sale either in Calcutta or London during December. This gave time for retailers in the U.K. to reduce their stocks.

With a considerable diminution in stocks in the U.K. during Christmas, the New Year opened on a brighter note. The drop in the North Indian crop and the prospects of a short-fall of 20 million lbs. in Indonesia helped remove the earlier fears of a large surplus of tea in the world. There was keen competition between the U.K. operators and blenders for consumption in India towards the close of the season, with the result that the price of common B.P., for instance, which had touched a low of As. 11 in December recovered to Re. 1-12 per lb. in the last sale of the season. This phenomenally steep rise in price and the further improvement that took place subsequently have given a completely misleading picture. Messrs. Thomas & Co., therefore, warn that the crisis is not over; for, although attractive prices had been realised for all types of tea in the last few sales, the overall average for Cachar and the Dooars was still only As. 15-10 and Re. 1-2-7, respectively.

The output of tea by North-East India during the season under review amounted to 507 million lbs. representing a fall of 2.7 million lbs. from the previous season's production. At one time during the season, (that is, in July, 1952), the crop stood 42.6 million lbs. ahead of the previous season. The crop started falling from August onwards and the reduced plucking programme introduced in the latter half of the season, together with the closure of some estates, especially in Cachar, helped to end the season with a short-fall in crop, as mentioned above. South India, too, produced in 1952, 2 million lbs. less than in the previous season. Pakistan's crop, however, was maintained at the same level as in 1951. Ceylon harvested a crop of 316¾ million lbs. which was nearly 10 million lbs. less than in 1951. Indonesia produced 81¼ million lbs. which was about 20 million lbs. lower than that in the previous season. This short-fall was mainly responsible for the reduction in the supplies of black tea to be put on the world markets. The total world output of black tea in 1952 amounted to 1,070.5 million lbs., as compared with 1,105.25 million lbs. in 1951 and 1,042.5 million lbs. in 1950.

Although the year 1952 cannot be described as a vintage year for quality, Messrs. Thomas & Co., report that quality from all districts showed an improvement as compared with the previous year. Describing the quality of the season's tea and its effects on prices, Messrs. Thomas & Co., observe:

"Early in the season, exceptionally favourable growing conditions in North India militated against the production of any useful second flush teas. Indeed, the favourable weather combined with the concentrated fertilisation scheme forced the bushes to flush to such an extent that, at the end of July, the North Indian crop showed a vast increase compared to the same period in 1951. Fortunately, producers saw the red light and by imposing on themselves a voluntary restriction scheme, crops were drastically reduced by the end of the year. The policy of finer plucking introduced in all districts made possible the manufacture of teas with good, clean leaf appearance and the cleanliness of the sorting compared very favourably with the excessively stalky semi-residue grades that flooded the market at the end of the previous season. Very few teas of this description have been seen on the market this year and this has had a salubrious effect on the general trend of prices at the Calcutta auctions."

The consumption of tea in India is reported to have gone up in the past two years and is now estimated at about 200 million lbs. a year. There was no substantial difference between the export and internal price during the season. One of the unfortunate aspects of the sale of tea for internal consumption, according to Messrs. Thomas & Co.'s report, was the tendency to crush the Broken Pekoe quality tea and glut the market with a large quantity of artificially manufactured dusts. This was due to the low price fetched by Broken Pekoes. While the dusts enjoyed a satisfactory market throughout the season as compared with leaf and brokens, the artificial dusts, particularly the very grey powdery types, were completely out of favour with the buyers. The quantity of dusts made during the season is reported to be 13 per cent. of the total crop, as against 10.5 per cent. in the previous season. This was duly reflected in the drop in the average prices for dusts from Re. 1-9-9 per lb. in 1951-52 to Re. 1-5-11 per lb. in 1952-53.

The general outlook for the industry is brighter than it appeared a few months ago. But, for reasons already stated, an attitude of guarded optimism is recommended by Messrs. Thomas & Co. As regards the current season, in particular, they base their expectations of a better period for Indian tea on the following factors:

(1) In 1953, the voluntary crop regulation scheme coupled with the curtailment of heavy fertilisation should ensure that an excessive crop is not harvested and that the standard of production will not decline. (2) There seems little prospect of Indonesia increasing this year's output of 80 million lbs. since internal security in that country still remains far from satisfactory. (3) It can be expected that U.K. buying will continue on a more regular level during 1953, as the invisible stocks with housewives had depleted. Buyers will be able to plan their purchases on a more orderly basis than during the last few months of the previous year. There is, therefore, every hope that the pre-war *per capita* annual consumption of 9.6 lbs. may eventually be reached. (4) In April, the stock in the U.K. was 116 million lbs. which was considerably below the pre-war figure. This should ensure that U.K. buying will be on a substantial scale, at least during the early months of the season. (5) The prospects of America and Canada buying on this market seem favourable, since it is clear from 1952's increased purchases that the stockpile accumulated in previous years had largely been consumed. (6) As there is every likelihood of another barter agreement of cotton for tea, it would appear that the Egyptian market has come to stay. (7) It may also be reasonably anticipated that Turkey will again be a consistent purchaser on this market. (8) The absence of *ex*-factory sales of residue grades must have bolstered demand by approximately 20 million lbs. It is hoped that this policy will be continued since any secondary grades sold *ex*-garden have a decided adverse effect on the prices realised for the primary grades on the Calcuttia auctions. (9) The season 1953 enjoys the peculiar advantage, not experienced by any other post-war year, of being able to make a completely fresh start to the auction sales in June. Other years have had to compete with a glut of old season teas composed mainly of unattractive residue grades which naturally have had a depressing effect on early sales. A good start is, therefore, assured and with finer plucking, it is expected that cup quality and leaf appearance should be of a high standard. (10) Provided that the 1952 special export licences are not extended beyond 31st May, the decision of the Central Government to reduce exports by 15 per cent. to 115 per cent. of the standard export figure should have the effect of establishing larger and more representative offerings for consumption in India, as producers would be prepared to support the internal market with suitable grades in the event of export quota becoming appreciably dearer in price.

INDIAN JUTE GOODS

NEED FOR SUSTAINING THEIR COMPETITIVE ABILITY

WHEN a couple of months ago the jute industry requested permission to cut down production, the question which occurred to many was: what prompted the Government of India to refuse permission to seal more looms? The first official explanation for this question is provided in the course of a leading article in the latest *Jute Bulletin*, published by the Indian Central Jute Committee. It is noteworthy that the views presented therein closely follow the reasons we gave in *Commerce* dated 4th April, as to why the mills in their own interest should not cut down production. The writer of the article in the *Bulletin* states that any action towards curtailing a seeming overproduction might provide one more opportu for the Dundee, Continental and South-East Asian mills to expand their activities further, at the expense of the long-term interests of India. It is conceded that already India has been robbed of its monopoly of world catering of packaging, owing to high price of Indian jute goods since the post-Partition years. The price advantage gained by the Dundee and Continental goods from the purchase of raw jute from Pakistan, till recently for about a year, needs no mention. It is true that as some have argued, curtailment of sackings—if it had been permitted—would not have been of substantial advantage to Dundee, as it does not produce much heavy sacking. But that does not mean that it would not provide an incentive to expand its capacity for sackings and thereby increase production. But few can deny that a cut in sackings would have helped the few South-East Asian mills which mostly produce sacking cloth. In the event of curtailment of sackings, there again arises the question of redeploying labour that would be rendered surplus. If they are not to be thrown out, it will be difficult "to employ them gainfully" without inflating the cost of production of mills on the reduced turnover, as has been pointed out by the writer of the article above. He observes: "Labour will always pose a big question-mark in any effort at reducing production or rationalising it through modernisation."

Disposal of Surplus Stock

The next question that can be asked then is: How are the surplus stocks to be disposed of? We have repeatedly pointed out that the solution to this problem lies in the direction of expanding existing markets and exploring new markets. And this observation of ours seems to have since proved correct, as witness the increasing orders which the mills are having in recent weeks. The Indian Jute Delegation's visit to the U.S., Canada, the U.K., Australia and New Zealand is in itself a move in the right direction to overcome the difficulty of disposing of the surplus stocks. It is to be noted that the Delegation is of the view that India has still got enough time to recover its lost hold since the Partition of India. The recent Indo-Pakistan agreement which removed discrimination by the latter against the former in its sale of raw jute is also a further step in this direction; for, it has done away with the price advantage enjoyed by the U.K. and Continental manufacturers and has enhanced the capacity of the Indian jute goods to compete in overseas markets.

The leading article under review also spotlights attention on one more important factor and that relates to the modernisation of jute mills. It says that the big money earned from their sale of gunnies by the U.K. and the continental mills so far has brought them more circular looms and automatic cop-winding machines, among others. Consequently the cost of production there has been on the down-trend. A factor, however, to be noted is that India too could have modernised its mills had a portion of the large export duty levied during the period of high prices been allowed to the industry. In fact, as one of our contemporaries has aptly put it, and as we have emphasised in the past, "the export duty has virtually amounted to a subsidy to foreign manufacturers." Incidentally, it may be mentioned here that the Commerce Minister, who, in his address to the Export Advisory Council recently, spoke so much on the deterioration in the exports of jute goods from India, was peculiarly silent on this point.

If the industry is to be assured of a steady market, it is necessary that it should see to it that violent price fluctuations in the price of jute goods are eliminated by means of an uninterrupted flow of the goods into the market at stable prices. Latterly, however, there has been some increase in the price of raw jute on account of the prospect of short crops in Pakistan as well as in India, and in the price of jute manufactures. This should give room for considerable concern, as further increase in prices is sure to provide greater scope for substitutes such as paper, cotton, phormium flax and the like. This must be avoided at all costs.

AUTOMOBILE INDUSTRY IN INDIA

SPEEDY DEVELOPMENT HAMPERED BY RESTRICTED DEMAND

THE development of the infant automobile industry in India makes interesting reading, especially in the light of the action taken by the Government of India on the Report of the Tariff Commission, which forms the subject matter of an article in our editorial columns. The history of the industry dates back to 1926, when it is claimed that Mackenzie and Co., the sister company of the Peninsular Motor Corporation Ltd., Calcutta, started assembling cars and trucks from completely knocked down (c.k.d.) components and parts in its workshops at Calcutta. General Motors India, Limited, started assembling trucks and cars in 1928 and the Ford Motor Company of India Ltd. in 1930. Addison and Co., Ltd., commenced assembling c.k.d. components and parts in 1926.

It was however only in 1944 that the first attempt at automobile manufacture was made, for it was in that year that the Hindustan Motors Ltd., Calcutta, and Premier Automobiles Ltd., Bombay, were established, each with a programme for progressive manufacture of complete automobiles. The Standard Motor Products of India Ltd., Madras, Automobile Products of India Ltd., Bombay, and Ashok Motors Ltd., Madras, commenced their assembling operations in 1949 and 1950. All of them have programmes for the manufacture of motor vehicles of which only Standard Motor Products of India Ltd., has made some notable progress. Besides these firms, there are five other c.k.d. vehicle assemblers, namely, Dewar's Garage and Engineering Works, Calcutta, Peninsular Motor Corporation Ltd., Calcutta, French Motor Car Co., Ltd., Bombay, Mahindra and Mahindra Ltd., Bombay, and Addison & Co., Ltd., Madras.

Manufacture of Components

Thus, the automobile industry in India comprises, as in other countries, both automobile and component manufacturers. The progress made so far in automobile manufacture has not reached an advanced stage. Even the manufacture of components of ancillary character is in an early stage of development. Of the five firms which have manufacturing programmes, namely, Hindustan Motors, Premier Automobiles, Automobile Motor Products of India, Standard Motors and Ashok Motors, only the first two have so far taken effective steps for the manufacture of certain components. The total amount of capital invested in the industry in respect of seven units, out of the twelve, for which information is available, is about Rs. 8.8 crores, and the aggregate number of persons employed in the whole industry is 8,936 of which 6,413 are workers and the rest office staff. All these twelve firms assemble or/and manufacture cars under agreements entered into with foreign manufacturers. The aggregate annual assembling capacity of all the 12 firms is 84,014 vehicles (passenger cars and commercial vehicles). The total production of the industry's cars and commercial vehicles and their sales were 21,577 and 22,393 in 1951 and 14,873 and 15,723 in 1952. The average annual sales during the last four years were 19,788 vehicles consisting of 9,426 cars and 10,362 commercial vehicles. It is evident that only a small part of the total capacity of the industry is being utilised at present or, in other words, the present capacity is far in excess of what is required to meet existing demand.

The manufacturing programme of Hindustan Motors Ltd. is comprehensive and substantial progress has been made by the firm towards the manufacture of major components. The programme includes the manufacture of (a) Hindustan 14 passenger cars, (b) 3-ton trucks and (c) Studebaker passenger cars. The capacity of the factory is governed in the machine department by the cylinder block and crankshaft lines and in the assembly department by the paint shop. Mr. W. R. Vorwig, the automobile expert who was attached to the Tariff Commission, has estimated the capacity of the factory at 18,000 vehicles per shift per year. At present, only a fraction of the total capacity of the plant is being used. The Company has entered into an agreement with Morris Motors Ltd., England, for the assembly and manufacture of Hindustan 14's, and with the Studebaker Corporation, U.S.A., for the assembly and manufacture of their cars and trucks in India.

The Premier Automobiles have not so far made any significant progress in the manufacture of main components, viz., engine, transmission and rear axle. It has, however, made substantial progress in the manufacture of typical ancillary parts such as propeller shafts, radiators, leaf springs, mufflers, etc. Its capacity even for these parts is not being fully utilised for its own vehicles. The manufacturing programme includes 3-ton trucks with 115 B.H.P. petrol engines for civilian as well as army use. The rated manufacturing capacity of the plant is claimed to be 12,000 units on single-shift basis. Only 20 per cent. of the capacity of the plant is being utilised for the production of vehicles. The factory is trying to utilise the remaining capacity for producing components of other industries such as springs and shackles for Indian railways, filler necks for Ordnance factories, roller pins and crankshafts for diesel engines and load bodies for the Defence Ministry. The Premier Automobiles operate under an agreement with the Chrysler Corporation, U.S.A., for the assembly of Plymouth, Dodge, De Sotto and Chrysler cars and Dodge, De Sotto and Fargo commercial vehicles as well as with the Fiat S.P.A. of Italy for assembly and ultimate manufacture of Fiat cars.

Automobile Products of India

The Automobile Products of India Ltd., has not progressed beyond the stage of assembly, so far, although it has taken steps to implement its manufacturing programme. It is associated with the Rootes Group in U.K. for assembling Hillman Minx, Humber and Sunbeam-Talbot cars and Commer, Karrier and Tilling-Stevens commercial vehicles. The manufacturing programme lays stress on the production of Hillman Minx cars. It proposes to manufacture commercial vehicles at a later stage. The capacity of the factory on single-shift basis is 3,000 cars and 1,000 trucks per annum.

The manufacturing programme of Standard Motor Products of India has barely made a start and it would be some time before it is able to show appreciable progress. The programme is based on the Standard Vanguard car, six-seater with a rated 68 B.H.P., but its scope includes also manufacture of tractors and jeeps. The Company is associated with Standard Motor Co., Ltd., U.K.

No significant progress has been made so far in the manufacturing programme of Ashok Motors. It has recently started buying machine tools which will be installed in a new shop which is under construction. It also hopes to develop the manufacture of certain ancillary parts such as sparking plugs and other electrical equipments, as well as diesel fuel injection equipment through Motor Industries Co., Ltd., Madras. It is associated with Austin Motors. The total capacity of the factory is stated to be 7,540 vehicles per annum on single-shift basis.

There exists in India only a nucleus ancillary industry. The main ancillary parts that are being produced are pistons, piston rings, cylinder liners, leaf springs, batteries, tyres and tubes, other rubber components, cork and oil paper gaskets, thin wall bearings, wire harness, jacks, hairlok and coirlok seat covers, spring cases for buses, hand pumps, automobile bulbs and lamps, bus bodies, cabs and vans and truck bodies. In addition, Premier Automobiles Ltd. is producing radiators of the honeycomb type, propeller shafts and mufflers, but unfortunately, the well equipped ancillary capacity of this firm is part of an automobile factory so that practical difficulties exist in making it available to competing firms. Passenger car bodies which are an ancillary item produced by body-building firms in some automobile manufacturing countries are not being made in India at present.

The chief obstacles in the way of the development of automobile industry is the comparative smallness of annual demand which has, during the last four years, been less than 20,000 vehicles (of all types and categories) per annum. India is very backward in motor transport inasmuch as the registered motor vehicles are only 283,040, as against 1,523,300 in Australia, 2,635,700 in France, 3,321,428 in the U.K. and 51,425,647 in the U.S. The number of persons served by one vehicle in India is on the average 1,270, as against 3 in the U.S., 5 in Australia, 15 in the U.K. and 16 in France. In terms of mileage, the number of motor cars per 1,000 miles of road is 829 in India, as against 1,753 in Australia, 3,717 in France, 12,146 in the U.S. and 14,874 in the U.K. The demand for motor vehicles is expected to increase to 25,000, within the next three years.

It is an indisputable fact that the development of the automobile industry will be determined by the growth of the demand for cars. The development of the automobile industry is necessary in the interests of general economic development of the country. It is also an important strategic industry inasmuch as the industry could be easily switched over to defence needs. This explains why the Tariff Commission has recommended not only protection to the industry but also other forms of assistance.

PAINTS EXHIBITION

The "Home and Colour" Exhibition, now being held on the second floor of Whiteway, Laidlaw and Co., Ltd., is an outstanding piece of education in the art of home decoration. A casual visit is enough to impress the housewife how an average home can be transformed completely by the intelligent use of colour and decoration. The sections of various rooms painted and decorated are indeed a pleasant treat to the eyes.

Another distinguishing feature of the Exhibition is the demonstration of the practical side of painting which is of much significance to the housewife. She can easily learn how household articles of wood, metal or stone can be painted by herself with "Robbialac" Synthetic Enamel and Brushing Cellulose. The Synthetic Enamel paint sets overnight and dries with an impenetrable surface. It is unequalled for elasticity, hardness and resistance to sun, rain and petrol. It can be used for painting all kinds of things in and around the home, namely, cycles, cars, tables, chairs, almirahs, chests, etc. The other paint, namely, Brushing Cellulose, offers all the advantages of ordinary cellulose lacquer with none of its drawbacks. Care is to be taken, however, to see to it that the surfaces to be painted are dry, clean and free from rust or grease. It dries dust-free in 15 minutes and gets hard in an hour. A number of attractive shades can be obtained by mixing the colours in both the types of paints. The two paints are the latest additions to the field of painting, as a result of long research carried out by Messrs. Jenson & Nicholson, one of the leading manufacturers of paints in this country.

The firm has secured the services of Mr. Gibson Taylor, a British Master Painter, whose free advice on colour schemes in the exhibition should prove valuable to every enthusiast in home decoration who visits the show. The show will last till the 20th inst.

NEW-TYPE FLOORS

Building of residential flats in a Lancashire town has been speeded up and costs reduced by the introduction of a new-type wooden floor designed by the Deputy Borough Surveyor in conjunction with the British Department of Scientific and Industrial Research. This floor provides structural stability, and fire-resistance equal to concrete about five inches thick. The sound insulation shows that absorption of "aerial sound"—people talking, and radios—is similar to that for concrete floors, but "impact sound"—people walking on the floor—is slightly better. In addition to savings in cost, saving in building time is considerable as, instead of having to wait for concrete to set, builders lay the floors and go right ahead with the work. It is claimed that on each new flat built the floors save £80, and in the past 12 months nearly £11,000 has been saved by the local authority.

POSTAL INSURANCE SCHEME

NEED FOR WIDER PUBLICITY

IT is not as well known as it should be that the Postal Life Insurance Scheme offers to those who are entitled to participate in that Scheme certain important advantages. Because the Scheme is administered by the Government for the benefit of its employees, the payment of premia is easier and the settlement of claims causes little difficulty in regard to identification of the claimants. There is need for publicising the importance of the Scheme among all those who are entitled to claim its benefits. Indeed, the need for publicity is now greater than it was formerly, because the Scheme has been extended to employees in industrial undertakings which are either run by the Government or in which the Government has a major share. Thus, the Scheme, which was formerly meant only for Government employees, has now been extended to many thousands of persons in Government and semi-Government undertakings.

In this context, it is interesting to note that a meeting of the representatives of the Ministries and Departments of the Government of India and the State Government of Delhi was held recently to consider ways and means of making the advantages of Postal Life insurance known to Government and semi-Government employees. Mr. Raj Bahadur, Deputy Minister for Communications, inaugurating the meeting, pointed out the advantages of Postal Life Insurance as a cheap cover and profitable investment. Tracing the history of the Post Office insurance fund, the Minister stated that it was started 70 years ago when there was hardly any private Indian enterprise in the field. The Post Office was then the only commercial department under the Government, and it was thought that some facilities must be provided to enable the employees to make provision for old age and death. Its scope was limited to postal employees only. The maximum amount of insurance was also limited to Rs. 4,000. Both the scope and limit were gradually extended, so that to-day it embraces not only all Government servants but also employees of all semi-Governmental bodies and Government-sponsored organisations.

Absolute security was essential in the early years of the Scheme when the insurance habit had not yet made much headway. This security was provided by the Government guarantee. While this facility existed all along, no definite attempts were made to popularise its advantages. For it was felt that private enterprise in the field which was in its infancy, should not be stifled as a result of the Scheme. Mr. Raja Bahadur said that there were 163 private insurers in the life insurance field. He recognised that they had set up commendable standards and done yeoman service to the nation by promoting small savings and accumulation of capital. He added that they should not be afraid of competition from Postal Life insurance, as the Government was not approaching the problem in that spirit.

He recalled, in this connection, the words of Dr. S. Radhakrishnan, Vice-President, who declared the other day, in his inaugural address to the Silver Jubilee Conference of the Indian Life Offices Association that a "Welfare State must provide its citizens against hazards of unemployment, sickness, old age and death." It was in implementation of its duty, as the largest employer, to its employees that the Government had now decided to make known to its employees, the advantages of insurance in general and that of Postal Life insurance fund in particular. Continuing, the Minister said that the Scheme offered low premium rates and high profits—all profits being distributed among policyholders. The Minister further observed:

"Apart from its advantages to the insured and his family, I must draw your attention to the immense importance of this to the nation. It is the best form of small savings and, as pointed out by the Planning Commission, its importance cannot be over-estimated. It will help immensely the implementation of the Five-year Plan.

"I, therefore, considered it necessary to trouble you all to attend this Conference, so that I may request you to further the movement as a measure of welfare both for the staff and the State. We should see that none of our employees remains without providing adequately for himself and his family."

Mr. Arun Chandra Guha, Deputy Minister for Finance, also addressed the gathering when he suggested that the Postal Life insurance had double benefits, namely, by providing for the family at a minimum cost and also by helping our national Five-year programme with the provision of funds from the savings of Government servants. Mr. Krishna Prasada, Director-General of Posts and Telegraphs, who presided over the meeting, appealed to the representatives of the Ministries to bring the advantages of the Postal Life insurance to the notice of Government servants working under them.

Started by the Government of India 70 years ago, the Postal Life Insurance Fund is now Rs. 12 crores with a total business in force of over Rs. 23 crores. Designed exclusively for Government servants and those employed in semi-Governmental bodies, the number of policyholders now exceeds one lakh.

It is gratifying to note that the authorities in charge of the Postal Insurance Scheme are alive to the need for administering the Scheme on a commercial basis. After all, a certain amount of delay is inevitable in a Government department. But the authorities, it is stated, are trying to eliminate delays by effecting improvements in the working of the Department through mechanisation of clerical work. This should improve the speed of the work in the office which, in its turn, should make the Scheme itself more popular among employees in Government and in quasi-Government institutions.

RETIREMENT BENEFITS IN U.S.

There are now more than 13 million persons aged 65 or over in the United States, it is calculated. Passing years do not make any of them less interested in being self-supporting and independent. And the one great threat which faces many as they reach the end of their working years, is dependency. Of the 13 million, about four million are working or are the wives of working men, but the rest are without income from currrent work. The vast majority of retired persons, however, are not in a position to live on their savings. To take care of this vast majority, a comprehensive social security programme was established in the United States by the Social Security Act of 1935.

A major part of the programme is a system of insurance protection for the worker and his family against complete loss of income when wage income steps in old age or through death. This system is known as the Old Age and Survivor's Insurance (O.A.S.I.), and is administered by the Federal Government through the Social Security Administration. In addition, in recent years, several industries, such as coal, steel and automobiles, mainly through collective bargaining by powerful unions, have also set up their own pension schemes, which build on O.A.S.I. and provide additional benefits. Nine out of 10 U.S. civilian workers of all categories are now earning retirement protection, nearly eight out of 10 under O.A.S.I. Monthly benefits, based on their own past wages and period of service, are provided by O.A.S.I. to insured wage earners who stop work at any time after they reach 65 and to their wives at the same age. It also provides similiar payments for their widows at 65. As of January, 1952, about one out of five workers covered under O.A.S.I. were also covered by private plans designed to supplement the public system. State and local Governments, the Federal Civil Service and the armed forces, each has its own retirement plans independent of O.A.S.I.

To meet the needs of those not covered by any of these plans, there is also a nation-wide system by which individual States, with Federal help, pay monthly allowances to old people who are in need, according to standards set by each State. Together, these old age security plans cover a country-wide network of basic protection. Though payments may not be adequate in all cases, they are regular, and make the difference between the helpless dependence on others and a measure of independence. In contrast, scarcely 15 years ago only about six million persons (less than 15 per cent. of those employed) had protection under retirement systems, and the average was uneven. Most employees of business and industry were first protected under the Social Security Act in 1937. At that time about 25 million were covered. Coverage under O.A.S.I. grew with the labour force, until by 1950, just before it was extended, about 35 million persons were under that programme at one time. Now nearly 48 million are covered under O.A.S.I. alone, and another eight million under other public systems. Most supplementary plans of private industry are newer than the public programmes.

The cost of O.A.S.I. is borne equally by employers and employees. The rate, now 1.5 per cent. for each on the first $3,600 earned in a year, is scheduled to rise to two per cent. in 1954 and then gradually to 3.25 per cent. in 1970. The self-employed pay a rate equal to 1½ times the employee rate. All contributions go into a special trust fund of the Federal Government. When the worker retires from his regular work at the age of 65 or after, he starts to receive regular monthly payments from the fund. His wife also will receive monthly payments at 65 even though she had never earned money contributed to the fund. Together, a retired couple can receive as much as $127.50 a month for life. If the insured worker dies, his widow receives half of their original monthly benefits.

The magnitude of the programme is illustrated by the fact that the Social Security Administration, through its 510 field offices throughout the country, maintains some 100 million wage records under O.A.S.I. At the end of 1951, there was more than $15,000 million in the O.A.S.I. fund, but the amount represented only a fraction of the accumulated liability. The reserves of all private plans were estimated at about $12,000 million in early 1952. Among private pension plans, coal miners derive the most benefit. Since the wage agreement creating the United Mine Workers of America (U.M.W.A.) Welfare and Retirement Fund was signed in 1946, collections of 40 cents for each ton of coal mined had exceeded the $500-million mark by the close of 1952. It is the only plan paying a monthly pension of $100 exclusive of O.A.S.I. and other benefits. Coal miners now retire at a rate of 8,000 a year on pensions averaging $190 a month, including Social Security payments. Steel and auto workers are among other major beneficiaries under private pension plans. Old age security has thus become an integral part of the democratic society in the United States.

LIFE OFFICES AND TAX DEDUCTED AT SOURCE

CHANGE IN VALUATION PERIOD RESULTS IN LOSS

(By R. K. DALAL, B.Com., F.S.A.A, F.C.A.)

OWING to the amendment of the Insurance Act in 1950, requiring every insurance company to have an actuarial valuation of its affairs once every three years, instead of once every five years under the old Act, a very important question has arisen under the Income-tax Act.

I. Under section 10(7) of the Income-tax Act, it has been provided that "notwithstanding anything contained to the contrary in sections 8, 9, 10, 12 or 18, *the profits and gains of any business of insurance* and the tax payable thereon *shall be computed in accordance with the rules contained in the schedule to this Act.*" This provision gives rise to several considerations.

First, it means that the profits and gains of an insurance company shall be computed according to the schedule and not under sections 8, 9, 10, 12 and 18. The schedule sets out rules for the computation of profits of an insurance business and starts by saying in rule 1 that "in the case of any person who carries on, or at any time in the preceding year carries on, life insurance business, the profits and gains of such person from that business, shall be computed separately from income profits and gains from any other business"; and rule 2 says that "the profits and gains of life insurance business shall be taken to be either (*a*) the gross external earnings less management expenses, or (*b*) the annual average of the surplus after adjusting disallowables under section 10, whichever is more." The profit of life insurance company is thus regarded to be a conventional figure worked out in accordance with the above formula. It is because of the profits having to be worked out according to the schedule, section 10(7) has stated that sections 8, 9, 10, 12 and 18, *so far as they are contrary to the rules* shall have no effect.

Secondly, it is important to note that the wordings of section 10(7) does not suggest the entire exclusion *per se*. It makes them inoperative only so far as anything contained therein is contrary to the rules.

Thirdly, this means that, if there is anything in these sections which is not contrary, then, notwithstanding the rules, the section will continue to be operative and effective. Thus while applying the rules of the schedule, one has to study its contents and compare it with the contents of similar provisions in the Act. If in the provision, there is something found which is contrary to the rules, then that part is rendered inoperative, but not that part which is not so contrary. Such part must yet prevail in full. It is, therefore, submitted that profits and gains of insurance business are to be computed in accordance with the schedule read with sections 8, 9, 10, 12 and 18 of the Income-tax Act and that in case of conflict, the schedule is to prevail.

II. Credit for Tax Deducted at Source

Now the problem arises under rule 4 of the schedule. Rule 4 states that the credit for tax deducted at source shall not be given in accordance with section 18(5), but credit shall be given only on an average basis of tax paid by deduction at source during the valuation period. Rule 4 runs as follows:—"Where for any year, an assessment is made in accordance with annual average of a surplus disclosed by a valuation for an intervaluation period exceeding twelve months, then, in computing the tax payable for that year, *credit shall not be given* in accordance with sub-section (5) of section 18 for the tax paid in the preceding year, but *credit shall be given* for the annual average of the income-tax paid by deduction at source from interest on securities or otherwise during such period."

In order to find what is contrary in the above to section 18, let me quote the relevant part of this section *in extenso*. Section 18(3) reads thus:—"The person responsible for paying any income chargeable under the head 'Interest on securities' shall (unless otherwise prescribed in the case of any security of the Central Government), at the time of the payment, deduct income-tax (but not super-tax) on the amount of the interest payable at the maximum rate."

Again, section 18(4) runs:—"All sums deducted in accordance with the provisions of this section shall, for the purpose of computing the income of an assessee, be deemed to be income received," and section 18(5) reads:—"Any deduction made in accordance with the provisions of this section (and any sum by which a dividend has been increased under sub-section (2) of section 16) (i) *shall be treated as a payment of income-tax* (or super-tax) on behalf of the security (or of the shareholder), as the case may be, and (ii) *credit shall be given to him* therefor in the assessment, if any, made for the following year under this Act."

Now the effect of section 18(3) is that in case of interest on Government securities tax shall be deducted at source. And under section 18(4) all sums so deducted shall be deemed to be income received. Further, under section 18(5) any such deduction shall be treated as a payment of income-tax on behalf of such person from whose income the deduction was made and credit shall be given to him therefor in the assessment, if any, made for the following year.

In order to understand the operative effect of rule 4, it is necessary to study what these sections stipulate. Under section 18(3) tax is deducted at source. For this purpose section 18(3) is not abrogated, for it shall still entitle the Public Debt Office to deduct tax from the interest on securities held by a life insurance company. Section 18(4) says that that part of the interest deducted at source shall be deemed to be income of the assessee. This is also not contrary to the rule. And, therefore, must prevail in spite of rule 4. Next, analysing section 18(5) you find that it falls in two parts: (1) any deduction made shall be treated as payment of income-tax on behalf of the person from whose income the deduction was made and (2) credit therefor shall be given in the assessment made for the following year.

Now it is evident that what is contrary to the rule 4 of the schedule is part (2) of the section 18(5) and not the whole of the section. It is only in regard to giving of the credit that the rule 4 of the schedule supersedes section 18(5). It does not and cannot render inoperative the first part. Section 18(5), viz., the deduction made thereunder is to be regarded as tax paid on behalf of the owner of security, viz., life insurance company.

That being the case, the amount paid by the company at source must be regarded and continued to be regarded as payment of tax on their behalf. At any point of time, the assessee may well contend that all the amount deducted at source is paid by him as tax. Hence it is submitted that deductions made in accordance with section 16 and section 18(5) are to be treated as payment of tax on behalf of person carrying on business of insurance.

III. Credit for Tax on Average Basis

Now rule 4 says that credit shall not be given in accordance with section 18(5), i.e., tax paid in the preceding year shall be given credit for to the assessee in the following year, but credit shall be only on annual average of tax so deducted at source during the valuation period. Therefore, one must concede that an *insurance company cannot* under section 18(5) *claim credit* of the whole of the tax paid during the preceding year, but *only on an average basis as provided in rule 4.*

Now hitherto insurance companies were required to have valuation once every five years and, therefore, they got the credit of one-fifth of such taxes deducted each year during the period the quinquennium holds. By the time the new amendment to the Insurance Act came, such companies had already completed three years' assessment and had secured the credit of three-fifths of the amount of tax paid by them at source. *Two-fifths remained to be reclaimed.* And now that a compulsory triennial valuation has supervened, rule 4 in terms provides that (1) for the remaining two years the company will be subjected on one-third of the triennial surplus each year, and (2) credit shall be given to it of one-third tax paid at source during the triennial valuation period only. The effect of this is that the company's two-fifths tax paid at source during the previous quinquennium will remain unappropriated and unadjusted against the tax due by the company.

IV. Withholding Unappropriated Tax?

Can the Department withhold such unappropriated tax? In fact, if it does, it amounts to forfeiting the tax paid. And the serious question is: *Can such tax duly paid by deduction be* forfeited or lost to the company by reason of the operation of rule 4? Rule 4 speaks of giving credit, not forfeiting.

There is no gainsaying the fact that the assessee has paid the tax. It is also true that it is not appropriated against any tax due. Can the Government say that though tax is paid at source on behalf of the company and it is not adjusted against any tax due in the present and will not be adjusted against any tax to be due hereafter, it shall still continue to hold it forfeited or lost to the assessee merely because there is no section under which it can be reclaimed or refunded? *Income-tax Act provides* no section.

It is true that in the case of an insurance company, tax is to be computed in accordance with the schedule and having computed the income, the credit for tax can be given on the annual average of tax so deducted during the actuarial valuation when surplus is adopted as the basis under rule 2(*b*). Therefore, if under rule 2(*b*) the triennial surplus forms the basis of computation, the previous quinquennial surplus will not be taken into consideration, notwithstanding that the full five years' surplus had not by then exhausted in taxation.

It is, therefore, submitted that by this change of surplus valuation, two-fifths of tax deducted in accordance with sections 16 and 18 remain unappropriated and a person carrying on insurance business will be thus deprived of two-fifths deductions, for which in normal course he is entitled to credit.

It is true that these deductions are made with authority of law but Government has no right to retain the same. Hence a person carrying on insurance business is being deprived of credit for two-fifths deductions without any authority of law. It amounts to violation of fundamental right guaranteed by Article 31 of the Constitution of India.

V. Mode of Reclaiming Deductions

Finally, it is true that the Income-tax Act is silent as to the mode of getting back this two-fifths deductions. However, in view of what is stated above, it is submitted that it would be open to an aggrieved assessee either to file a suit or a writ under Article 226 of the Constitution of India. Suit would lie and section 67 of the Income-tax Act would be no bar to it. Some querists have sought advice on the following questions:—

(I) *Is the computation of income, profits and gains of any business of insurance to be exclusively in accordance with the schedule to the Income-tax Act?* or

Is it to be in accordance with the schedule read with sections 8, 9, 10, 12 or 18 and that to the extent of conflict between the schedule and the sections, the schedule is to prevail?

(II) *Is deduction made in accordance with section 18 and section 16(2) in respect of business of insurance to be treated as payment of tax under section 18(5) of the Income-tax Act?*

(III) *Does the change in valuation of actuarial surplus from quinquennial to triennial basis result in loss of two-fifths of deductions made in accordance with sections 18 and 16(2)?*

(IV) *Can this non-refund of this two-fifth deductions amount to deprivation of property without any authority of law and hence violation of fundamental right under Article 31 of the Constitution of India?*

(V) *Is a suit or a writ under Article 226 of the Constitution of India a proper remedy to recover this loss?*

On each of the questions posed above, the written opinion of an eminent counsel is given in the following paragraphs:

Question I.—The computation of income, profits and gains of any business of insurance and the computation of tax payable thereon are not to be only in accordance with the rules contained in the schedule to the Indian Income-tax Act to the entire exclusion of the provisions contained in the various sections of the Act. Section 10(7) of the Act provides that, notwithstanding anything to the contrary contained in sections 8, 9 10, 12 and 18, the profits and gains of any business of insurance and the tax payable thereon shall be computed in accordance with the rules contained in the schedule to the Act. On a proper construction of section 10(7), the position in law is that the rules contained in the schedule override the provisions of sections 8, 9, 10, 12 and 18 to the extent to which the provisions of those sections are inconsistent with the rules; but the provisions of the aforesaid sections continue to apply to the extent to which they are not inconsistent with the rules. In other words, the profits of insurance business are to be computed in accordance with the schedule read with the sections of the Act, and in case of a conflict between the two, the schedule is to prevail.

Question II.—Yes. Tax deducted at source, in accordance with the provisions of section 18 of the Act, from interest on securities and dividends, is to be treated as payment of tax on behalf of the insurance company which is the owner of the securities or the shareholder. Section 18(3) of the Act provides for two things: (*a*) treating the tax deducted at source as payment of tax on behalf of the owner of the securities or the shareholder, and (*b*) giving credit to such person for such tax deducted at source, in the assessment made for the following year under the Act. The former part of section 18(5) applies also in the case of insurance business, since there is nothing in the rules contained in the schedule to the Act which is inconsistent with the former part of section 18(5). The latter part of section 18(5) which deals with the giving of credit does not apply in the case of insurance companies, since it is inconsistent with rule 4 contained in the schedule to the Act. Thus in the case of insurance companies, the tax deducted at source is treated under section 18(5) of the Act as tax paid on behalf of the insurance company, but credit is to be given for such tax in the manner laid down in rule 4 and not in the manner laid down in section 18(5).

Question III.—On the facts of this case as set out in the Instructions, the change from quinquennial to triennial valuation would result in a loss of two-fifths of the tax paid at source during the period of the quinquennium. The quinquennial valuation was done as on the 31st December, 1945, and the triennial valuation as on the 31st December, 1948. In the assessments for the accounting years from 1st January, 1946 to 31st March, 1948, credit was given for three-fifths of the tax deducted at source during the quinquennium ended on the 31st December, 1945. Two-fifths of the tax remained to be given credit for. In the assessment for the year 1949-50 credit was given for one-third of the tax deducted during the triennium ended on the 31st December, 1948. Thus in the assessments for 1949-50 and subsequent years, having regard to the provisions of rule 4 of the schedule, no credit can ever be given for the balance of two-fifths of the tax paid during the quinquennium.

Question IV.—It is possible to argue in this case that the retention of the two-fifths of the tax deducted at source during the quinquennium amounts to depriving the assessee of its property without authority of law and, therefore, amounts to a violation of Article 31(1) of the Constitution, but the point is not free from doubt. Article 265 of the Constitution provides that no tax shall be levied or collected except by authority of law. In the present case the levy and collection of the tax deducted at source have been by authority of law and, therefore, Article 265 of the Constitution has not been violated. But the querist may argue that the Government have no right to *retain* the two-fifths of the tax under any law in force, and such retention being without authority of law amounts to depriving the assessee of its property in contravention of the fundamental right guaranteed by Article 31(1) of the Constitution. But even assuming that the Article 31(1) of the Constitution has not been violated, and that no fundamental right of the assessee has been infringed, the Government has no right under the law to retain the two-fifths of the tax, and the assessee would be entitled to take legal proceedings for recovery of the amount of tax in question.

Question V.—Three remedies are open to the querist: (*a*) a refund application under section 48 of the Act, (*b*) a suit for refund, and (*c*) an application under Article 226 of the Constitution in the Bombay High Court. The assessee would be entitled to file a refund application under section 48 of the Act, but the only difficulty is that such an application would be treated as time-barred having regard to the provisions of section 50 of the Act. The two other remedies open to the querist, viz., a suit and an application under Article 226 of the Constitution, would be equally efficacious. On the whole, we advise the querist to seek redress from the Commissioner of Income-tax. If the Commissioner of Income-tax refuses to grant any redress, the assessee should without delay file a petition under Article 226 of the Constitution. At the same time the querist should also give a notice to the Government under section 80 of the Civil Procedure Code. If the petition is dismissed by the Court on the ground that no fundamental right of the assessee has been violated and that a suit would be the proper proceeding in the circumstances of the case, the querist should, upon dismissal of the petition, file a suit against the Government, after expiry of the period of the notice under section 80 of the Code of Civil Procedure. In order to avoid further delay of two months which the statutory period of the notice, the notice should be given at the same time as the filing of the petition under Article 226 of the Constitution, as suggested above.

The proceedings suggested above should be taken after a proper demand for justice is made on the Commissioner of Income-tax and the Government of India. We may further point out that the suit would not be barred under section 67 of the Act, since the suit would not be to set aside or modify any assessment made under the Act.

An application for refund under section 48 of the Act would be the most appropriate remedy. But we do not advise the making of such an application on account of the bar of limitation laid down in section 50 of the Act.—*All Rights Reserved.*

NEW PUBLICATIONS

Income-tax Pleadings. By Mr. R. Bbargava. Published by the Taxation Publishing Co. (India) Ltd., Delhi 7. Price : Rs. 15.

AMONGST the many books on income-tax, this book on income-tax pleadings deserves special mention, because it supplies the need of a practical tax manual containing forms, drafts of all applications, appeals, returns, claims and statements which have to be filed at one stage or another in income-tax assessment and appellate proceedings, with guiding notes and latest case law reference.

The title of the book, *Income-tax Pleadings*, fills the need for a book in which are collected all the special forms necessary for the purpose of income-tax pleadings before both the income-tax officer and the appellate authorities.

Part I of the publication under review deals with income-tax return, application for registration of a firm under the new rules, application for renewal of registration, application for refund under section 48, estimate of income under section 18A, and form of return under section 21.

Part II deals with appeals before the Appellate Assistant Commissioner giving various forms, as, for example, appeal against the order of the income-tax officer refusing to reopen an assessment under section 27, appeal in the case of a person denying his liability to deduct tax under section 18(3A), (3B) or (3C), appeal against an order under section 25(2) imposing penalty for not giving information regarding discontinuance of business, form of appeal against an order claiming disruption under section 25A, appeal to the Appellate Assistant Commissioner against an order under section 28, appeal against an order refusing to register a firm under section 26A or cancelling its registration under section 23(4) and the like. Part (B) of Part II deals with appeals to the Income-tax Appellate Tribunal, reference petitions to the Appellate Tribunal and revision application to the Commissioner of Income-tax.

Part III deals with application for adjournment, application for inspection of file, application for change of "previous year," application under sections 25(3) and 25(4), application claiming partition under section 25A, application under section 27, intimation regarding discontinuance of business under section 25(2) and reply to a notice under section 28 regarding imposition of penalty.

Part IV deals with statements of accounts which have to be filed at one stage or another in income-tax proceedings. It also gives hints as to how to prepare profit and loss account, depreciation claim, obsolescence claim, a bad debt chart, some typical income-tax calculations, how to calculate gross salary for assessment purposes where salary is paid tax-free, how to gross up dividend when the company is operating in Part A as well as Part B States. It also shows illustration showing calculation of rebates, rules for the computation of capital employed in an undertaking, etc.

Part V deals with miscellaneous matters of interest to the assessee firms, viz., deed of partnership, introduction of a new partner to an existing partnership, deed of dissolution, deed of partition, release deed, release by a coparcener, form of power-of-attorney and specimen of rules relating to a recognised provident fund and the trust deed. Part V(a) deals with reference petition to the High Court and rules of the Allahabad, Bombay, Calcutta, Madras, Nagpur and Patna High Courts.

Part VI gives deductions digest. Part VI(a) contains total exemptions, partial exemptions, depreciation rates chart, and rules relating to provident funds.

The book, therefore, fulfils this special need of income-tax pleadings and is bound to be of great use to lawyers, accountants, income-tax practitioners, company promoters and taxpayers who are interested in knowing all about the procedure of income-tax pleadings. I heartily commend this book to the taxpaying public—both lay as well as professional.—*R.K.D.*

India—Economic and Commercial Conditions in India. By Mr. Rowland Owen. Her Majesty's Stationery Office, London. Price : 11s. net.

It is the onlooker who sees most of the game. His observations and remarks should have a greater weight than those who are actually in the drama. The latter are prone to magnify small mistakes and failings and to overlook the brighter side of the play. It is, therefore, heartening indeed to go through the publication entitled *India*, which is a survey of the economic and commercial conditions of the country since 1949 by Mr. Rowland Owen, U.K. Senior Trade Commissioner. In an interesting introduction, Mr. Owen observes:

"Three years ago, India was going through a period of transition and the economic future was, if not dark, at least obscure. . . . In mid-1947, she faced peculiarly intractable economic problems; developing inflation; declining production, both agricultural and industrial; an alarming deficit in her balance of payments. To-day she can claim that inflation has been curbed, that industrial production is increasing, that plans for the development of agricultural production, so long on paper, are taking practical shape, that the food shortage has eased, even if only temporarily, with a prospect of some reduction in the trade deficit . . . Fighting has ceased in Kashmir. The Constitution is in full operation. The Indian princely States have been absorbed into the body of India politically, nearly absorbed financially and partly absorbed administratively. The back of the refugee problem has been broken. Industrial policy has been formulated in reasonable and practical terms. A permanent Tariff Commission has been constituted. Economic controls have eased and their administration, particularly in the case of import licensing, has been stabilised. A muddle of plans and planning has given way to the Five-year Plan."

The economic picture at the moment is a better one than it would have been possible to paint at any time in the past five years, says the survey. It further says: "Devaluation and the effects of the Korean War did a great deal to stimulate the economy of the country and to shake off the depression of the first years of independence. India's political leaders showed a praiseworthy temperateness of judgment in economic policy, the control administration did not relax its grip and the administrative and political success of the elections created poise and self-confidence." According to the survey, a new and favourable factor appeared in the shape of external assistance, assistance, moreover, in a form which shows promise of being more than merely temporary. The Colombo Plan or the Plan for the Co-operative Development of South-East Asia caught the imagination of the world in a way which no other national or international presentation of the needs of "underdeveloped" countries had succeeded in doing. The Senior Trade Commissioner concludes:

"Behind the rosier picture of 1952 there are, however, a number of disturbing spectres. The problem of securing internal financial resources is one: the balance of payments in climatically unfavourable years, the mounting population, the reluctance of politicians and trade unions to see the economic implications of a large and static labour force insured against retrenchment and unemployment and with security financed by industry in bad as well as good years—all are problems for which no permanent long-term solution is yet in sight."

This report was written in the summer of 1952 and since there is evidence of improvement of the Indian economy in a number of sectors, agricultural, industrial, food, etc., India is now in a position to take a steady onward march in the economic sphere. The publication can be obtained from British Information Services, India.

PROTECTION AGAINST INFRINGEMENT OF TRADE MARKS

CENTRAL ASSOCIATION CONSTITUTED

THE constitution of the Trade Marks Owners Association of India, last week, fulfils a long-felt want of industry and trade in India. Although primarily intended to protect trade mark owners against offenders, the Association will ultimately protect the general public from being exploited by unscrupulous manufacturers who do not hesitate producing and putting on sale under false labels, spurious goods. For it will ensure concerted action against those who infringe the trade marks on patented goods. It will also help amendment of the existing laws relating to trade marks, namely, the Trade Marks Act, the Indian Merchandise Marks Act, the Drugs Act, etc. As most of the infringements are due to advantage taken, by bogus manufacturers, of loopholes in the existing legal system, the Association will immediately concern itself with the task of securing the necessary amendments. The main defects in the existing law, as put forward by trade marks owners. are as follows:

(a) The Trade Marks Act only assists in establishing the owners' title, whereas the main problem is to detect infringements and counterfeits, trace the guilty parties and inflict deterrent penalties upon them;

(b) offences against trade marks are not cognisable by the police and, consequently, the burden of detecting infringers and counterfeiters is thrown upon the aggrieved party. This is equally true of the co-related offences under the Drugs Act and most of the Pure Foods Acts;

(c) considerable delay in the disposal of matters in civil and criminal courts;

(d) lack of specialised knowledge on the part of judges and magistrates;

(e) general reluctance to grant interim injunctions in civil suits and search warrants in criminal cases;

(f) absence of any obligation to disclose the correct name and address of the manufacturers and the proper quality of the product;

(g) absence of generally accepted standards of quality in many industries;

(h) inadequate enforcement staff even where standards have been laid down, as, for instance, in the case of drugs and foods, and

(i) leniency in punishment.

Inconvenience to Traders

As a result of the above defects, it is stated, there have been several cases of infringements and counterfeits. The quantum of these infringements will increase when goods are in short supply, prices are high and demand is large for most of the manufactured goods. It is pointed out that as the offences against trade marks are non-cognisable, and the burden of detecting the offence and proving the guilt rests with the plaintiff, considerable inconvenience is caused to the manufacturers. And it so happens, they say, that by the time offences are traced and legal proceedings instituted, either the offenders will not be found or they will escape with light punishment. In view of these considerations, there is a strong demand on the part of the trade marks owners for amending the legal system existing to-day in such a manner as to provide for the following:

(1) infringement of trade marks should be made a cognisable offence under the Indian Merchandise Marks Act;

(2) it should be obligatory for producers of consumer goods to disclose their correct names and addresses on their products. This may be done by suitable amendments to the Merchandise Marks Act;

(3) in the enforcement of criminal law, magistrates should be empowered to impose deterrent penalties on offenders, in cases where the infringements or counterfeits have been intentional;

(4) in civil law, the plaintiff should be granted the right to obtain a temporary injunction and orders for seizure of stocks against the vendor of goods sold under an infringing trade mark, as well as the right to proceed against the manufacturer of the infringing product;

(5) summary trials might be provided for disposal of criminal complaints in respect of infringements of trade marks;

(6) there should be early enforcement of quality controls, particularly in respect of the items more commonly infringed; and

(7) the Government should issue a directive to the Courts, either itself or through the Chief Justices or the Supreme Court, that proceedings in cases arising out of infringements should be expedited.

The Government of India is not in favour of amending the present law. Its views on the subject are recorded in the course of a letter to the Associated Chambers of Commerce dated 6th June, 1952. The letter reads as follows:

"The Government of India brought to the notice of all State Governments the difficulties experienced by trade marks owners in securing search warrants and injunctions and generally in the prosecution of such cases in courts. In the light of the replies received from State Governments, the Government of India has further considered the matter.

"The two main aspects of the problem may be stated as follows:

"(i) infringement of trade marks, which is a civil wrong and actionable under the Trade Marks Act, 1940; and

"(ii) criminal offences relating to trade marks, viz., those covered by the following sections of the Indian Penal Code: 480 (using false trade mark), 481 (using false property mark), 482 (punishment for using a false trade mark or property mark), 483 (counterfeiting a trade mark or property mark used by another), 485 (making or possession of any instrument for counterfeiting a trade mark or property mark), 486 (selling goods marked with a counterfeit trade mark or property mark), 487 (making a false mark upon any receptacle containing goods), 488 (punishment for making use of any false mark), and 489 (tampering with property mark with intent to cause injury).

"Suggestions have repeatedly been made in various quarters that offences under the Indian Penal Code should all be made cognisable, with a view to enabling the police to act without a complaint from an aggrieved party and without a warrant from a magistrate. The Government of India has given careful consideration to these suggestions, but is of the view that such an amendment of the law would be inadvisable.

Sale of Spurious Goods

"On the other hand, the sale of spurious goods under false trade marks, or in containers of the original manufacturers, is punishable as an offence, of 'cheating' under section 420 of the Indian Penal Code which is cognisable. Manufacturers of spurious goods, printers of false labels, and even collectors of the empty containers of well-known brands, are thus liable under this section as 'abettors.' Even the display of spurious goods in a shop with intent to sell might be brought within the purview of this section. The offence under section 420 of the Indian Penal Code being cognisable, it is considered that the police can take effective action to put down the traffic in spurious goods by taking recourse to their power under section 157 of the Criminal Procedure Code.

"In view of the legal position as stated above, the Government of India considers that, in the first instance, action for cheating should be taken against sellers of spurious goods, and that, whenever possible, manufacturers of the goods, printers and counterfeiters of false labels, and suppliers of empty containers should be dealt with as abettors. For this purpose, it would be necessary for aggrieved persons to lay information and complaint with the police, and assist in the matter of prosecution."

The foregoing account as a whole discloses briefly the complicated nature of the issues involved. It is to be hoped that the Government and the industry, particularly the Association, would sit together and thrash out the issues in an amicable manner.

Apart from getting the existing law amended, the Association in its wider sphere will promote and secure mutual support and co-operation amongst trade marks owners and traders in India and foreign countries in all matters relating to trade names and other analogous rights affecting their general or common interests of such trade marks owners and traders in relation to any of the matters concerned.

The constitution of the Trade Marks Owners Association under reference provides for a Council consisting of a Chairman and Vice-Chairman and not less than eleven and not more than twelve persons elected for the purpose. Provision is made for the formation of zonal committees to deal with matters of a zonal nature. They will function under the general supervision and control of the Council. Subject to the decision of the Council, there will be a zonal committee for each zone in which at least fifteen members have their principals or their offices. The committee for each zone is to consist of not less than five and not more than eleven persons, of whom two are to be maintained by the Council and the rest to be elected by members having their principal or other offices in the zone.

BINOCULAR MAGNIFIERS

A factory named *N. V. Instrumenten-en Apparatenfabriek Tri-Ergon* at Harderwijk (Holland) has been turning out two types of binocular magnifiers. These instruments are equipped with two prismatic lenses with aquadratic enlargement of 2½ times (f. 195 mm.) (f. 7⅝ inches). The advantage of using these magnifiers is that both hands will be free all the time. Moreover, owing to the system of two lenses, depth can be perceived, so that distances can be judged. The optical quality of these lenses meets the highest demands that can be made in connection with the use of magnifiers of this kind.

In one type, these lenses are fitted in a bakelite headpiece with an adjustable celluloid band, which is fastened round the head. In the other, cheaper type, the two lenses are mounted in a plastic front plate, which is hinged and can be turned up. Both types are constructed in such a way that sufficient room is left for wearing spectacles while using the magnifier.

The binocular magnifiers are used by doctors, dentists and in beauty parlours. They have also proved their usefulness in the precision instrument industry, in seed-grading concerns, in the textile industry for the detection of weaving faults and for many similar uses.

EXPORT DRIVE OF AUSTRIA'S PLASTICS INDUSTRY

Several of the smaller enterprises of Austria's plastics industry have been successful in obtaining direct export orders. The export of spectacle frames, for instance, registered a figure of approximately Rs. 13 lakhs in 1952, and the goods went mostly to Germany, Switzerland, Yugoslavia, and smaller quantities to the United States. At present a sizable order from the United States for Pez candy boxes made of polystyrole is on hand. The order amounts to about Rs. 11 lakhs. Current exports of collar and sleeve buttons are going to Finland, Sweden, Norway, Denmark and Germany. Thermos flask casings of plastics are exported to North European countries.

The big success on the home market achieved by polystylene foils has encouraged manufacturers to try to open up export channels. The Australian soap manufacturers have increased their sales of soft soap to more than double after using these foils for wrapping. Quite recently the production of bottles made of polystylene has been taken up in this country.

FOREIGN TRADE OF INDIA BY LAND DURING MARCH

According to the land customs trade returns received in the Department of Commercial Intelligence and Statistics, the provisional figures of total value of foreign trade of India by land with Pakistan, Afghanistan, Iran and Burma during the month of March, 1953 were as follows:

Merchandise: Exports	Rs. (lakhs)
To Eastern Pakistan	21
To Western Pakistan	8
To other countries	10
	39
Merchandise: Imports	
From Eastern Pakistan	133
From Western Pakistan	1
From other countries	24
Total trade ...	158
Total ...	197

The total value of exports fell short of the total value of imports by Rs. 119 lakhs.

DEPRECIATION ALLOWANCES UNDER RISING PRICES

HIGH REPLACEMENT COSTS SHOULD COME FROM OWNERS' INCOME

(By Prof. D. R. SAMANT)

ADEQUATE provision for capital consumption under rising prices of capital assets has become a problem of great controversy between Governments and private enterprise since World War II. Recently, the Employers' Association of Calcutta has made an attempt to present the whole situation, in so far as Indian conditions are concerned, in its pamphlet *Depreciation Allowances and Replacement Costs* (referred to in this article as the Association and the pamphlet). The Association pleads for more liberal tax-free depreciation allowances on the basis of the present replacement costs of the capital assets; and also certain relief in the case of undistributed profits. All these reliefs, according to the Association, will not cost the Central Exchequer more than, say, Rs. 15 crores a year.

Apart from the accuracy of the figures given by the Association, the main problem is whether the claim for relief at a cost to Government, that is, ultimately to the community, is a just one. Under the system of private enterprise, it is, no doubt, necessary for the consuming community, if it desires an adequate supply of the goods and services consumed, to pay such price as would leave for the producer, after covering the value of the consumed assets, a reasonable rate of profits on the required investments. As all taxes mean appropriation of private income by the community, care must be taken to see to it that it does not result in reducing the income of private producers below the abovementioned level. In such a case alone, a claim for reducing taxes may be justified. Secondly, it must be remembered that the present consumer can be asked to cover the current and anticipated costs, including a reasonable rate of profit on the basis of those costs. They cannot be asked to cover historical costs. If on this basis, the older producers are not able to maintain production at a desired level, new producers will come in, inasmuch as the prices paid are adequate, considering the current and anticipated costs. From the point of view of the community, it is a matter of indifference whether the supply comes from the old or new producers.

Prices of Machinery

The whole problem has been stated by the Association in a nutshell as: "It is the yawning gap between original and replacement costs that is bothering industrial producers at the present moment." This gap has been caused by a rise in the prices of capital equipment since the time of its original purchase. At the outset, it must be stated here that the gap has been exaggerated by the Association, according to which the prices of "all heavy machinery are not less than three and a half times the pre-war prices." This comparison has been based on the present American prices converted into rupees at the present rate of exchange. As part of the machinery can certainly be purchased from those countries that devalued their currencies along with ours, we may well deflate that index to 300. It should also be remembered here that a large part of the machinery can now be fabricated in the country itself. Secondly, the base year for the Association's index number, though not specifically stated, can be taken as 1938. Now it may be noted that prices of machinery in the thirties were at least 25 per cent. lower than the prices in the twenties when most of the machinery was purchased. Even in the case of machinery purchased during the thirties, there is no reason why business men, who must necessarily take a long-range view, should have provided for depreciation on the basis of depressed prices. So it will not be correct to take the rise in the cost of machinery to be anything more than 225 per cent. of the original cost.

Now the question is: whether the present price level is adequate to cover the present and anticipated capital costs? Turning to facts, there is no doubt that Indian consumers are quite adequately paying for the increased costs of the capital equipment. This will be clear from the following figures. According to the Census of Production for 1948 (the latest available), the total value of production of the 29 industries covered by the census amounted to Rs. 954 crores. The total cost of this production under the heads of wages, salaries, materials, fuels and depreciation, at the rates allowed for the purposes of income-tax, amounted to Rs. 796 crores. To these items we may add Rs. 12 crores for interest on the working capital of Rs. 300 crores. Thus the total value produced net of all these items of cost is Rs. 146 crores. From this let us deduct approximately Rs. 62 crores for income and corporation tax. This leaves an income of Rs. 84 crores. From this we may further deduct Rs. 20 crores for additional depreciation on account of increase in the price of the total capital assets. As the original depreciation allowance was of Rs. 13 crores, this addition of Rs. 20 crores will mean covering 250 per cent. rise in the capital costs. So, after all these deductions, we get Rs. 64 crores as net income on the total fixed assets worth Rs. 200 crores. Assuming all these assets are financed out of owned capital and that their value has now risen to Rs. 500 crores, the profits amount to 13 per cent. free of income-tax. This certainly is not a meagre return. Incidentally, it should be remembered that the prices of the products are valued at lower than the present prices, while the capital assets are valued at the present prices. Even supposing that the prices of materials and fuels have risen in the meantime, this rise is bound to be more than fully compensated by the rise in the price of finished products.

Industrial Management Too Costly

If the shareholders of industrial concerns are not getting dividends in keeping with the value produced, that is because we have too costly a system of industrial management in this country, the Managing Agents take away too big a slice of the earnings of the industrial concerns. Here are some illustrative figures based on the latest available annual accounts of some of the industrial concerns picked up at random. It was found that in the case of nine engineering concerns, the managing agents' commission amounted to 10.25 per cent. of the total paid-up capital. Corresponding ratios in the case of 18 jute companies and 43 cotton mill companies were 22.6 per cent. and 14 per cent., respectively. For all the 70 companies taken together, the managing agents' commission amounted to 15 per cent. of the total paid-up capital. Ordinarily, the remuneration of the chief executive of an industrial concern need not exceed one per cent. of the paid-up capital and there is no reason at all why it should exceed two per cent. of the paid-up capital. In that case, shareholders' dividends would have increased by 13 to 14 per cent. of the paid-up capital. Even after making allowance for income-tax and corporation tax, it would mean a net return of 8 per cent. on paid-up capital. Managing agents are also notorious for making money in other ways than their regular stipulated commission. All this is earned ultimately at the cost of the shareholders. If all this money flows back to its real owners, namely, the shareholders, industrial investments will expand quite rapidly without any change in the present tax structure. The shareholders, therefore, before approaching the Government for any tax relief, should try to set their own house in order. If necessary, the Government should assist them to get rid of the present excessively costly and very inefficient system of industrial management.

The Association has stated its case in the following words: "It is unthinkable that there should be an increase in capitalisation merely to retain intact capacity for earnings on the former scale. It is here the Government have a clear duty and should help device ways and means which would enable the various industrial producers to carry on their good work." Now, when capital costs rise, to keep the earnings on the same scale means to increase total earnings in proportion to the increase in capital costs. If capital costs rise, the prices of finished products are bound to rise; if they do not rise, the supply will go on decreasing, until, because of scarcity, the prices rise to a level where they can cover the increased capital costs. If the prices do not rise, there is no sense in maintaining the former production capacity. Even supposing the production capacity is maintained intact at Government cost, it will mean living on capital, and consequently, highly uneconomic on the part of Government to finance the maintenance. It will be quite unbusinesslike to maintain a productive asset by spending three times its original cost, if its capitalised value is going to be one-third of its cost, as is bound to happen if the income remains the same as before. The income must rise at least to such amount as would pay, over and above the rise in depreciation charges in proportion to rise in the price of the capital asset, interest on additional cost plus the original amount of profit. Even with this, under private enterprise, there will be no expansion of the original production capacity; for that, the earnings must so rise that a reasonable rate of profit on the current cost of the assets would be available. And there is no doubt that industrial earnings in India have increased to that extent, otherwise, there would have been no increase in industrial investments. According to the Association's figures, at least Rs. 140 crores worth machinery was imported during 1947-52 for industrial expansion. In the cotton textile industry alone the paid-up capital rose from Rs. 67 crores in 1948 to Rs. 107 crores in 1952.

All these new investments clearly point out that investors consider it worthwhile to acquire new capital assets, even though their price, according to the Association, has risen by 350 per cent. And they do so because under the present price level, they hope not only to realise their investments but also to earn reasonable profits on those investments. This view is admitted even by Mr. Jaidyal Dalmia when he, according to the Association, pointed out that "the major problem of industrial finance is not so much the capital needs for new expansion but that needed for renovating and modernising the plant and equipment of the existing industries." What this means is that consumers are paying such prices as are adequate for keeping up incentive for new investments. The only difficulty is that the older producers have not been able to accumulate enough funds to replace their production capacity by new assets. But to help these producers to replace their pre-war production capacity means to increase their property and income by a proportion equal to the rise in the price of the assets, that is, according to the Association by 350 per cent. Now it cannot certainly be considered a duty on the part of the Government to help these people increase their property and income to that extent.

Social Injustice

This will lead to social injustice from another point of view also. Let us suppose the present producers had financed a part of their fixed assets by issuing debentures. In that case, the property and income of the debenture-holders will not rise in the same proportion as the property and income of the shareholders. Let us take a concrete illustration; suppose an industrial concern was started in 1930 with Rs. 10 lakhs of capital equipment, Rs. 5 lakhs being raised by shares and another Rs. 5 lakhs by debentures. According to the Association, the replacement cost of these assets will be Rs. 35 lakhs. Now if the Government, at the cost of the community, grants certain reliefs to this concern and enables it to accumulate Rs. 35 lakhs, it will mean that, while the property of the shareholders increases from Rs. 5 lakhs to Rs. 30 lakhs, the property of the debenture-holders will remain at the same original figure of Rs. 5 lakhs. This is social injustice. If the shareholders have borne greater risks, they have earned more returns during the investment period. If the shareholders wish to increase their property, they should do it at their own cost and not at the cost of the community.

In fact, during the past ten years, the consumers in India have been paying for the goods and services consumed by them sufficiently high prices to leave enough margin for covering the costs of currently consumed assets even at rising prices. This should have enabled the producers, whatever the depreciation rate allowed under the income-tax rules, to cover more than 60 per cent. of the rise in the prices of the capital assets. If they have not done that, it is their fault, and the community cannot be asked to pay for the short-sighted policy of these producers. If they cannot maintain production at a proper level, new units will be started by others, inasmuch as the consumers are paying a price which leaves sufficient room to earn profits even on the basis of the present capital costs and taxes.

Of course, it is true that with all the additional accumulations, the concerns may not be able to have enough money to replace the old assets at the present level of prices. In that case, the deficiency should be covered by long-term borrowing. Here the Government should come to the assistance of the producers by sup-

HOW MANY PEOPLE CAN THE EARTH FEED?

VIEWS OF MR. HAINSWORTH ENCOURAGING

THE biggest problem facing the world to-day is the estimate of the capacity of the world to feed the growing population. This problem is of particular importance to India and other South-East Asian countries which are chronically deficient in foodgrains. The various aspects relating to the problem of food deficits dealt in by Mr. R. G. Hainsworth, an Economic Geographer, in one of the latest issues of *Foreign Agriculture*, a publication of the Office of Foreign Agricultural Relations of the United States Department of Agriculture, should, therefore, be of interest to the administrators in these countries. Of particular interest to them will be the heartening conclusion of Mr. Hainsworth that, considering the present ability to produce food and the improvements being effected in its production, the earth, with its available resources, can feed three times the present population in reasonable comfort. The way in which he has discussed the whole issue leading to this conclusion is, indeed, thought-provoking. The following paragraphs give the line of reasoning followed by Mr. Hainsworth.

During the past half century in the United States, population has more than doubled. Yet, only 10 per cent. more land has been put into crops. Nevertheless, Americans are eating better to-day than they did 50 years ago, and there are large surpluses of food for export. Increase in farming efficiency is what has made it possible for agricultural production to outpace population growth in the U.S. This fact is an encouraging one for the world, for population has been increasing in other countries, too, often at a rate which has exceeded food production increases.

Since the beginning of the nineteenth century, world population has increased by about 165 per cent. In that time, the number of European peoples has increased tenfold. To-day, nearly a third of all the people in the world are of European origin; in 1800 the figure was less than one-eighth. More than two-thirds of the English-speaking people now live in North America; only one-fifth of them lived there in 1800. This growth in Europe and America began with the Industrial Revolution, when the applications of mechanical power increased the production of manufactured goods and so led to an increase in the population of the industrial areas. Increased food demands by the rising populations first were met by intense cultivation of the land. But, by the "hungry forties" of the last century, that effort was not providing enough food and thousands of families emigrated to the New World. Then, fiscal barriers which had hindered the free importation of food were removed and the population of Europe began to grow again. Great Britain is an excellent example of a country the population on which has multiplied on imported food supply.

Increase in Population

During the past decade, population has multiplied particularly rapidly. Every minute of every day, 32.6 persons have been added to the world's population. In that time the population in the U.S. has increased by more than 5,200 persons a day—about 3.6 a minute. For the year from October 1951 to October 1952, the rate of increase in that nation was 4.4 a minute. The number of inhabitants in Far Eastern countries has grown even more rapidly in this decade. In the small country of Japan, for example, there are nearly 3,000 new mouths to feed each day—about 1,000,000 a year. And India has added more than 50,000,000 people to world population figures in the decade.

The United Nations estimates that on the earth's 55,000,000 square miles of land, there were 2,400,000,000 persons in 1950. About 10,000,000 square miles of the land area is covered by ice and snow or is too wet or too dry to be habitable, and about half of the remaining 45,000,000 square miles is very sparsely settled. This leaves about 22,500,000 square miles to support most of the human population. Nearly 95 per cent. of the earth's inhabitants live in the so-called land, or people's hemisphere, the centre of which is at 50 degrees North and O degrees longitude. This hemisphere contains more than six-sevenths of the earth's land and yet is more than half water.

From the point of view of population developments, the areas of the world can be divided into three groups:

1. Areas which have slowly increasing populations. About one-fifth of mankind is in these areas—chiefly in Western Europe, North America, Australia and New Zealand;

2. areas which have declining birth and death rates, and yet have increasing populations. Another fifth of the world's population is in these areas, mainly those of Eastern and Southern Europe, the U.S.S.R. and Japan (plus certain classes of the population in some Asian, African and Latin American countries); and

3. areas which have not as yet experienced a decline in birth rates and in which the introduction of the cheaper and more easily applied mass mortality controls has lowered the death rates sufficiently to result in a large measure of population growth. The remaining three-fifths of mankind, mainly the inhabitants of Asia, Africa and Latin America, live in these areas.

The cultivated land (2,500,000,000 acres) amounts to about 7.7 per cent. of the earth's land area (32,600,000,000 acres not including the Antarctic and the arms of the oceans and seas extending inland). To state it another way, there is one acre of cultivated land for every person in the world. The two countries having the largest areas of cultivated land are the U.S., with 18.2 per cent., and the Soviet Union, with 16.9 per cent. The U.S. not only has the largest area of cultivated land in the world, but also has extensive areas of permanent meadows, pastures and range lands, which are used for grazing livestock. The abundant supply of products derived from the livestock industry and the crops produced on the cultivated land give the U.S. a well-balanced agriculture, which only a few countries are fortunate enough to have. Fifty years ago, the cultivated land *per capita* in the U.S. was nearly 5.4 acres; to-day it is about three acres; yet the food produced on this smaller acreage feeds twice the number of people at home and provides for large exports. The 15 countries having more than 75 per cent. of the total cultivated land also have about two-thirds of the population of the world. Canada has the largest number of acres *per capita*, about 6.5, and China has the smallest, only 0.39 acre. Canada has 3.6 per cent. of its land cultivated with a small population (13,845,000); China (22 provinces) has 12.4 per cent. of its land cultivated and a very heavy population (463,500,000).

Topography

The topography of the world's land area can be divided into four principal classes of land forms: plains, 41 per cent.; plateaus, 33 per cent.; hills, 14 per cent. and mountains, 12 per cent. If topography alone is considered, about two-thirds of the land area of the world are adapted to agriculture, 95 per cent. of the plains, 75 per cent. of the plateaus, 25 per cent. of the hills and 5 per cent. of the mountains. But, when climate and soils also are considered, only about one-fourth of the land area can be used for agricultural purposes. Most farming is carried on at elevations below 1,500 feet, on the expansive plains and flood plains and on the lower plateaus and hill lands. Not all plains are suitable for crop production. Some are too swampy and some have poor soils while others are too dry, too wet, too cold, or are otherwise unsuitable. Plains may have soils of high natural fertility and still not be adapted to agriculture, for temperature and moisture conditions also must be suitable for the growth of crops. When reliability of rainfall is taken into account, only about one-third of all land is adapted to food production. This statement is based on a requirement of 15 inches of rainfall annually and crops are grown in some areas with less rainfall. Sometimes even 10 inches are satisfactory, when most of the rain falls in the growing season. On the other hand, as much as a 40-inch annual rainfall generally is required in the tropics, where evaporation is high.

Temperatures also limit the areas which can be used for crops. Where the temperature is near the freezing point, all plant activity is extremely low. Dr. J. B. Kincer suggests the average "zero of vital temperate point" is 6 degrees Centigrade or 42.8 degrees Fahrenheit. This point varies, of course, with different plants, in accordance with their temperature requirements. Many areas of the world with good soil and ample moisture cannot produce the major farm crops, because, even between the last killing frost in spring and the first killing frost in fall, temperatures often drop below the danger points for the crops. Here and there in the world—in the Amazon Basin and in parts of Burma, New Guinea and Sumatra, for example—there is still land available for farming. It has not been utilised fully, because there are not enough people in the areas to do the type of work necessary. Additional new lands in much of the world also can be brought into agricultural production by means of irrigation and drainage systems.

Irrigated land now supports about 10 per cent. of the population of the world; an estimated 200,000,000 acres of land are irrigated and another 200,000,000 acres can be irrigated. Irrigation projects are planned or are under way in China which will bring water to 89,500,000 acres, in India to 42,000,000 acres, in the U.S. for 26,000,000 acres and in Pakistan for 20,000,000 acres. Much progress has been made in irrigation in the last half century. In Egypt, for instance, the system of irrigation has been changed from basin irrigation, or a one-crop agriculture, to perennial irrigation, under which several crops can be grown each year on the same area of land. The system has been developed extensively with great storage reservoirs and dams, of which the Aswan Dam is the leading example. Long-time storage of water in Lake Victoria is also a possibility. India, too, is improving and expanding its irrigation systems. It plans to increase irrigation 150 per cent. as soon as possible. Almost every State in India has areas in which seasonal rainfall is uncertain. By harnessing water resources, these areas can be made more steadily productive. Another way in which the crop-bearing areas of the world may be increased is illustrated by the northward extension of the Wheat Belt in Eurasia and North America during the past 50 years. This extension has been made possible by the use of faster-growing and earlier-ripening varieties of wheat.

Agricultural production per acre has been declining in many countries, such as Australia, Argentina, Canada and even countries as new as South Africa and Venezuela. Some once highly productive areas like those of North Africa, which was the granary of the Roman Empire, the valleys of the Tigris and the Euphrates and vast areas of India and China have ceased to grow sufficient food for the local population or have been turned virtually into deserts. In addition to increasing food output by using the land wisely, it is possible to add to it by producing concentrated foods. High-protein foods or food pellets can be produced by processing wood and other crude products into food for people and livestock. The science of hydroponics (the culture of plants in minerally saturated solution) is a widely discussed means of adding to world food supplies, but it has not yet proved economically feasible because it is costly and limited to a comparatively small range of vegetables.

Other Answers

Increased production is not the only answer to the problem of feeding the world's growing population. Other answers are concerned with distribution and waste, high prices and artificially created surpluses. In considering how many people the world's resources can support, we know, of course, that the number depends on living standards. Still, we may make some general calculations based on the following assumptions:

1. We may assume that farming methods will stay as they are to-day and that the only increase in food supplies will be the result of raising the standards of cultivation in backward areas, using improved strains of food plants and animals and making full use of all the cultivated land. On this assumption, we may calculate the world's population at 6,500,000,000 people—about two and three-fourths times the present number.

2. We may make the additional assumption that the pressure of increasing populations and falling living standards will compel mankind to utilise all the cultivable land in the Hot Belt, as fully at least as the small areas now in use are utilised. At this rate, the 4,000,000 square miles which would be added to the world's cultivated land area might be capable of producing food for a population as dense as that of Java, where there are 42,000,000 people on 50,000 square miles of land, less than 60 per cent. of which is cultivable. If we take France as our basis for the mid-latitude lands and Java for the Hot Belt, the possible population of the world becomes 9,600,000,000.

3. We may guess at more or less speculative advances in the development of science applied to food production. We may consider the statements of an eminent geographer who said there are no limits to the productivity of the land and claimed

Notices

THE KELVIN JUTE COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT THE Ninety-first Ordinary General Meeting of the Shareholders of THE KELVIN JUTE COMPANY, LIMITED, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Friday the 19th June, 1953, at 3 p.m., for the following purposes:—

(1) To receive the Directors' and the Managing Agents' Report and the Auditors' Report and to pass the Accounts for the half-year ended 31st December, 1952.

(2) To declare Dividends.

(3) To elect a Director. Mr. H. D. Kitching retires by rotation and, being eligible, offers himself for re-election.

(4) To elect Auditors.

The Share Transfer Books of the Company will be closed from 6th to 19th June, 1953, both days inclusive.

By Order of the Board,
McLEOD & CO., LTD.,
Managing Agents.

3, NETAJI SUBHAS ROAD,
CALCUTTA, *29th May*, 1953.

Note.—Payment of any dividend declared will be made only to those members whose names are registered in the Books of the Company on the 19th June, 1953, or to their Mandatees.

No application for Warrants will be necessary. Claims on behalf of holders of shares on blank transfer will not be entertained.

CHITAVALSAH JUTE MILLS COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT THE Fifty-third Ordinary General Meeting of the Shareholders of CHITAVALSAH JUTE MILLS COMPANY, LIMITED, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Friday the 19th June, 1953, at 3-15 p.m., for the following purposes:—

(1) To receive the Directors' and the Managing Agents' Report and the Auditors' Report and to pass the Accounts for the half-year ended 31st December, 1952.

(2) To declare Dividends.

(3) To elect a Director. Mr. C. L. Jatia retires by rotation and, being eligible, offers himself for re-election.

(4) To elect Auditors.

The Share Transfer Books of the Company will be closed from 6th to 19th June, 1953, both days inclusive.

By Order of the Board,
McLEOD & CO., LTD.,
Managing Agents.

3, NETAJI SUBHAS ROAD,
CALCUTTA, *29th May*, 1953.

Preference Share Transfer books will be closed from 24th June to 30th June, 1953, both days inclusive.

By Order of the Board,
ASPINWALL & CO. (TRAVANCORE) LTD.,
Managing Agents.

ALLEPPEY, *6th June*, 1953.

PROFIT OF MINERVA MILLS DROPS BY 65 PER CENT.

FINANCIAL POSITION SATISFACTORY

INVESTORS in cotton textile shares have now ceased to view with concern the results of the mills during the past year and have already turned their attention to the industry's prospects for the current year. Little surprise will, therefore, be expressed at the shrinkage in the profit of the Minerva Mills Ltd. (Managing Agents: Messrs. N. Sirur & Co., Ltd., Bombay) for the year ended 31st December, 1952. On the other hand, the Company's shareholders have every reason to feel satisfied that the setback in its results has not seriously affected the financial position of the Company, except that the reserve fund has been slightly depleted nor has it brought about any drastic cut in the return to them. The gross profit of the Company for the year under review amounts to about Rs. 85,000, as compared with Rs. 2.43 lakhs for the previous year. This profit is not even adequate to cover fully the depreciation for the year. The Directors have, therefore, had to draw Rs. 2 lakhs from the reserve fund in order to make up the deficiency in the provision for depreciation. This leaves an adequate sum to pay a dividend of 5 per cent., as against 6 per cent. paid for the preceding two years.

"The low profit was mainly due to the sudden slump which set in about March, 1952," the Directors observe in their report to the shareholders. Explaining the difficult trading position during the year, they add: "After the bulk of the cotton quotas had been purchased at ceiling rates, the prices of the raw material declined precipitously and the Government at once slashed down the prices of yarn and cloth, with the result that, for quite a long time, goods manufactured out of high-priced cottons had to be sold at considerable losses. It was only when the Government, realising the gravity of the situation, relaxed the export controls that the mills could sell some of their manufactures at better margins in the overseas markets. What little profit the mills have made was derived from the export sales of cloth during the year under report."

The following table brings out clearly the effects of the foregoing adverse factors on the earnings of the Company during 1952, as also the comparative results for the preceding three years:

(In lakhs of rupees)

	For the year ended 31st December			
	1952	1951	1950	1949
Sale proceeds	131.47	133.26	101.97	103.78
Stocks of cloth and yarn ..	36.17	27.73	16.35	18.18
Value of cotton and stores consumed	98.90	107.17	64.49	63.19
Wages and other expenses ..	30.56	34.91	31.67	32.55
Gross profit	0.85	2.43	3.34	10.64
Managing Agents' commission ..	0.09	..	0.33	1.07
Provision for—				
Depreciation	1.08	0.60	0.79	2.06
Taxation	0.18	0.10	0.10	3.90
Net profit (+) or loss (—) ..	—0.50	+1.73	+2.12	+3.61
Transferred from reserves and provisions written back ..	2.02	..	..	..
To reserves	..	..	0.50	1.00
Dividend	1.48 (D. 5%)	1.78 (D. 6%)	1.78 (D. 6%)	2.37 (D. 6% +B.2%)
Carry forward	0.26	0.23	0.27	0.42

Despite the unfavourable trading situation during the major part of the year, the Company would have shown a better profit than in the previous year but for the rise of Rs. 4.65 lakhs in wages and other expenses. Of this rise, salaries, wages and dearness allowance account for Rs. 3.50 lakhs. Though the decline in the profit for 1952 is in conformity with the general trend of profits of textile mills, in the case of the Minerva Mills, this is the fourth year in succession to witness a contraction in profit. After providing for Managing Agents' commission, writing back a small sum of Rs. 1,679, being the surplus provision for bonus to staff made in the years 1942 to 1945, the sum (inclusive of the unappropriated surplus of the previous year) available for appropriation is only Rs. 1.01 lakhs. This permits of making a provision of Rs. 18,500 for taxation and of Rs. 82,115 for depreciation. This leaves a sum of Rs. 26,055 to be covered on account of depreciation. The Directors, as already stated, have, therefore, drawn a sum of Rs. 2 lakhs from the reserve fund in order to make up the deficiency in depreciation and also to declare a dividend of Rs. 5 per share of Rs. 100. This dividend represents, it may be noted, a drop of only Re. 1 per share, when compared with that for the previous year. The shareholders have every reason to feel gratified at the declaration of this dividend inasmuch as it is higher than the previous lowest dividend of Rs. 3-8 paid in 1940 on a lower capital, although the gross profit for 1952 is much lower than that earned in 1940.

It is true that the Company did not pay any dividend for 1947, but it distributed instead a capital bonus of Rs. 4.93 lakhs in the form of one share for every five shares held by the shareholders. In terms of cash distribution, this represented 20 per cent. on the then paid-up capital of Rs. 24.66 lakhs. On the basis of this old capital, the latest dividend is equal to 6 per cent.

The Company's financial position, as revealed by the balance-sheet as on 31st December, 1952, is satisfactory. Even after the capitalisation of Rs. 4.93 lakhs in 1948, the reserves and surplus stand at Rs. 25.16 lakhs, as against a paid-up capital of Rs. 29.81 lakhs. The gross block of the value of Rs. 73.68 lakhs has been written down to Rs. 31.74 lakhs. The current assets at Rs. 102.66 lakhs cover the current liabilities amounting to Rs. 79.43 lakhs by a margin of Rs. 23.23 lakhs.

The Rs. 100 paid-up ordinary shares of the Company are being currently quoted at Rs. 100-8, at which rate and on the basis of the latest dividend, the yield works out to 4.98 per cent. per annum, free of income-tax.

INDIA SUGARS AND REFINERIES LTD.

The sugar industry in India has, as a whole, had a favourable period during the year ended 30th September, 1952, resulting in substantial increase in overall production and a higher percentage of recovery. These factors, coupled with the grant of freedom to sugar factories for selling a part of their output in the free market, have resulted in larger profit for many units in the industry. Although the India Sugars and Refineries Ltd. (Managing Agents: India Sugar Agencies Ltd., Hospet), has not been able to record any increase in profit, the sugar production by the Company's factory has, in tune with the general trend, gone up. The earnings of the Company, in fact, show a shrinkage, due to a drop in recovery and an increase in working costs. Thus, the gross profit for the year under review amounts to Rs. 20.17 lakhs, at which it records a drop of Rs. 8.74 lakhs or 30.2 per cent. Nonetheless, the profit, after making provisions for depreciation and taxation, and placing a sizable sum to the general reserve, permits of maintaining comfortably the dividend to the ordinary shareholders at 25 per cent., to which level it was raised last year from 15 per cent. paid for the year 1949-50.

The Company has had a longer crushing period during the year under review, resulting in an increase in the quantity of cane crushed from 1,11,529 tons during 1950-51 to 1,32,634 tons. The output of sugar also shows a rise from 11,946 tons to 12,502 tons, but the recovery of sugar has declined. The Company's distillery produced 1,01,140 gallons of spirit, as compared with 1,05,062 gallons in 1950-51. The marketing of spirit, it is stated, has not come up to the Company's expectations.

Out of the gross profit of Rs. 20.17 lakhs, the Managing Agents' remuneration takes up Rs. 1.96 lakhs, as against Rs. 2.86 lakhs. Provision for depreciation and taxation amounts to Rs. 1.37 lakhs and Rs. 7.50 lakhs, respectively, the corresponding sums provided in the previous year being Rs. 1.15 lakhs and Rs. 10.50 lakhs. A sum of Rs. 5 lakhs has been added to the general reserve, which compares with Rs. 8.76 lakhs transferred in the previous year. The distribution of dividend on the 7½ per cent. preference shares requires Rs. 9,218 and that on the ordinary shares Rs. 3.25 lakhs, leaving Rs. 3.71 lakhs to be carried over, as against Rs. 2.71 lakhs brought in.

The balance-sheet of the Company, as on 30th September, 1952, discloses a satisfactory financial position. The paid-up capital of Rs. 14.23 lakhs is supplemented by reserves and surplus aggregating Rs. 33.97 lakhs. Provision for taxes amounts to Rs. 18.02 lakhs. The gross block of Rs. 24.52 lakhs has been well written down to Rs. 9.96 lakhs. The current assets, at Rs. 94.09 lakhs, cover the current liabilities (including provision for taxation) amounting to Rs. 55.85 lakhs by a wide margin of Rs. 38.24 lakhs.

The Directors report that the Company's outlook for the current year is to be regarded as satisfactory. They also state that the Company has financed to a large extent the reconstruction of the factory of the Salar Jung Sugar Mills Ltd. at Munirabad, which is situated just three miles from the Company's own factory. They feel that, when the Munirabad factory is rationalised and brought to economic working, for which steps are being taken, definite advantages will result to the India Sugars and Refineries in joint technical supervision and marketing.

A cash return of As. 4-6 per share, being fourth and final dividend has been declared by Borooah Timber Co., Ltd. and the same will be paid on or after 10th June, 1953. Payments will be made to to those shareholders whose names appear in the Register on 29th May, 1953. The share transfer books remain closed from 30th May, 1953.

Thamarapally Rubber Co., Ltd. has decided to reduce the preference share capital of the Company from Rs. 1,50,000 to Rs. 75,000 by re-paying Rs. 5 per preference share, making the preference shares Rs. 5 fully paid.

Kalpetta Estates Ltd., Alleppey, has decided to reduce its capital from Rs. 6 lakhs to Rs. 4 lakhs by refunding the entire 5 per cent. preference share capital of Rs. 2 lakhs to holders on 15th June, 1953. The accrued interest from 1st May to 15th June will also be paid by that date.

ENCOURAGING PROGRESS OF BHARAT LINES

DIVIDEND RAISED AGAIN

YET another year of successful working was completed by the Bharat Line Ltd. (Managing Agents: Messrs. Dinshaw Ltd., Bhavnagar) during the 12 months ended 31st December, 1952. The Company has earned a gross profit of Rs. 53.99 lakhs as against Rs. 42.75 lakhs in 1951 and Rs. 31.28 lakhs in 1950, thus maintaining the progress made in the previous year. As a result of the impressive rise in earnings, as noted above, the Directors have thought fit to step up the dividend to the shareholders from 4 per cent. paid for 1951 to 5 per cent. This is the second year in succession for which the dividend has been raised. Last year, the distribution to the shareholders was increased to 4 per cent. from 3 per cent., a rate which the Company had been paying in the preceding four years.

The improvement in earnings was due to expansion in the Company's fleet and the successful participation in the coastal trade of India and also in the Conferences handling the Burma-Ceylon, Burma-India, Ceylon-India, and Pakistan-India-Burma-Ceylon trades, in association with the other Indian and non-Indian interests. The Company's ships were employed regularly in these trades. The Directors report that despite the persistence of great delays at Calcutta and other loading and discharging ports and high maintenance costs which continued to affect the Company's earnings, the improvement in the employment of its ships was maintained. With watchful care and all-round economy in the spending departments, the management was able to show a substantial increase in the Company's earnings. Availing itself of the Government of India's scheme of granting loans for purchase of ships for employment in coastal trade, the Company added two more ships to its fleet during the year under review. After the close of the year—in April, 1953—it purchased another ship under the same scheme and placed an order for yet another with the Visakhapatnam Shipyard, with the assistance of the Government's loan under the scheme of assistance to Indian companies for construction of ships at the Vizag yard. The Company has thus to-day a fleet of 12 vessels of 82,165 d.w.t. beside the one now on order at the Vizag yard of 7,960 d.w.t.

The following comparative table shows the progress of the Company's earnings and their disposition during the last three years:

(In lakhs of rupees)

	For the year ended 31st December			
	1952	1951	1950	1949
Freight	205.95	162.24	160.29	127.01
Charter hire and other income ..	7.11	7.21	4.26	0.08
Expenses	158.86	126.70	133.27	109.52
Gross profit	53.99	42.75	31.28	17.57
Managing Agents' remuneration ..	4.40	2.59	0.36	..
Depreciation	45.17	35.36	28.30	13.93
Taxation	..	1.00	..	..
Net profit	4.42	3.80	2.62	3.64
Dividend	5.00 (5%)	4.00 (4%)	3.00 (3%)	3.00 (3%)
Carry forward	0.59	1.17	1.37	1.75

The increase of Rs. 43.71 lakhs in freight earned was due to the larger employment of the Company's ships and not to any increase in the freight schedule which was maintained more or less at the levels attained in the previous year. The high cost of services is reflected in the rise of Rs. 32.04 lakhs in expenses, more than half of which (Rs. 16.68 lakhs is accounted for by coal, fuel oil, stores and victualling, Rs. 3.85 lakhs by salaries and wages and Rs. 3.14 lakhs by repairs, survey expenses and dry dock charges. The provision of Rs. 45.17 lakhs for depreciation made out of the year's profit is represented by an initial depreciation of Rs. 30.20 lakhs on 10 ships and a normal depreciation of Rs. 14.72 lakhs on 12 ships (including the two purchased in 1952). The initial depreciation on the two ships which were added during the year 1952 will be provided out of future profits.

The Company's latest balance-sheet shows that the paid-up capital of the Company is unchanged at Rs. 1 crore. No reserve fund has yet been built up. The Company's borrowings, secured and unsecured, have gone up from Rs. 37.65 lakhs to Rs. 66.42 lakhs, mainly on account of the increase in loans taken from the Government of India for purchase of two ships secured by mortage of the two ships. The total current liabilities at the end of the year 1952 stand at Rs. 102.91 lakhs. As against a gross block of Rs. 300.23 lakhs, the depreciation provided so far is Rs. 145 lakhs. Current assets (excluding deferred revenue expenditure amounting to Rs. 6.96 lakhs), which aggregate Rs. 41.30 lakhs, are lower than current liabilities by Rs. 61.61 lakhs.

Points From The Chair

Future of Tea Industry

"IN speaking of the truly spectacular improvement that has taken place in the industry's circumstances in a few short months, I must not be taken as meaning that our difficulties are at an end. Far from it. Last year's cuts in expenditure can be temporary only, as some of them are of a kind inimical to the ultimate welfare of the properties and justifiable only by reason of the severity of the crisis—and it would be sanguine to suppose that labour will be content indefinitely to accept the cuts and restrictions which have had to be imposed. There can be no present expectation, therefore, of a permanent lowering of costs; and while current prices should ensure that all efficiently managed concerns can be conducted at a profit, the fact must not be lost sight of that it will take many years fully to make good the heavy losses of 1951—and, in some cases, 1952—and that careful financing will continue to be necessary. It was so after the last great depression in the industry, in 1930-31, and it will be much more so now, when so much of a company's earnings goes in taxation and so comparatively little remains for all other purposes, including the restoration of depleted reserves."

R. W. B. DUNLOP,
Walter Duncan and Goodricke Ltd.

Capital Cost of Replacing Ships

"The cost of new tonnage gives your Board and the Boards of our allied companies the greatest anxiety. The policy which the group has followed ever since the war ended, and even during the war period, is that of replacement of lost and obsolescent ships. In normal pre-war times, the risk the shipowner ran was a trading one; since the war and to-day there are other risks—political and economic—not the least of which is that the final capital cost of new ships is unknown when they are ordered, and indeed until after they are delivered. The gap in time between order and delivery has been as much as five years. The rise in cost in five post-war years has been as much as 80 per cent. Nothing that the owner can do will limit this possible increase. It will thus be seen that the normal hazards of a business engaged wholly in the unprotected world markets are immeasurably increased when it is impossible to foretell the cost of the ships whose services we are selling. It is true that ships, which were delivered up to last year, look cheap compared with similar ships to-day. But there comes a time when one has to consider with special care the pros and cons of this capital cost risk."

SIR WILLIAM CRAWFORD CURRIE,
Peninsular & Oriental Steam Navigation Co.

Future of Indian Jute Industry

"Now that Pakistan has removed the discriminatory levies imposed last August on all jute entering India—equivalent to Rs. 4-10 per maund—a comprehensive trade agreement has been concluded between the Governments of these two countries which will permit the mills to purchase annually up to 2½ million bales for the next three years commencing 1st July this year—a real step in the right direction which augurs well for the future. Mills will now have more freedom for selective buying, but, as Pakistan has not devalued its currency, this may mean that the mills may again, from an economical point of view, have to confine purchases largely to Indian-grown jute. Much, however, will depend on the future trend of markets."

GEORGE A. MASON,
Samnuggur Jute Factory Co., Ltd.

Effects of Raw Materials' Prices on Manufacturing

"During a time of rising prices and scarcities, buyers tend to place orders in excess of requirements, while, on the other hand, when prices fall there is a tendency for them to hold off and live on stocks. With the natural desire of everyone in our trade to keep their machines running, these are the conditions which must lead to competition and price cutting. This recession will pass in due time, like others, of which we have had experience in the past, but while it lasts and until some stability is reached in price levels, it must necessarily have a serious effect on our results."

F. LE NEVE FOSTER,
Davis and Timmins, Ltd.

Prospects for British Aircraft Industry

"Our present national superiority in pure jet and turbo propelled airliners is acknowledged, and it would appear to be obvious that the American operator should take advantage of this fact to order from this country so as to gain experience and to fill the gap before American production of these types is available. To make a sale of British civil aircraft in the U.S.A. is a challenge to our technical salesmanship; it is also a challenge to common sense for the United States authorities. On the other hand, there is a large civil aircraft market outside the U.S. so long dominated by the American aircraft industry, for us to supply and for which we can give good delivery, and we are making great efforts to capture that market before the Americans come into the field with their own jet-propelled aircraft."

LT. GEN. SIR RONALD M. WEEKS,
Vickers Ltd.

Notices

HOWRAH MILLS COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT THE One hundred and twenty-fifth Half-yearly Ordinary General Meeting of Shareholders of Howrah Mills Co., Ltd., will be held at the Registered Office of the Company, No. 4, Clive Row, Calcutta, on Friday the 26th June, 1953, at 12-00 noon, for the following purposes:—

(1) To receive and adopt the Directors' Report and Audited Accounts for the half-year ended 31st March, 1953, and the Balance Sheet as at that date.
(2) To declare Dividends.
(3) To elect a Director.
(4) To appoint Auditors and to fix their remuneration.

The Share Transfer Books of the Company will be closed from 12th June to 26th June, 1953, both days inclusive.

By Order of the Board,
JARDINE HENDERSON, LTD.,
D. FORDWOOD,
Secretary,
Managing Agents.

CALCUTTA, *29th May*, 1953.

Note.—Payment of any Dividend declared will be made only to those members whose names are registered in the Books of the Company on the 26th day of June, 1953, or to their Mandatees.

No applications for warrants will be necessary. Claims on behalf of holders of shares on blank transfer will not be entertained.

THE BURRAKUR COAL COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT THE One hundred and fourth Ordinary General Meeting of the Shareholders of The Burrakur Coal Company, Limited, will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, at 11-30 a.m. on Friday the 26th June, 1953, for the purpose of receiving the Directors' Report, passing the Audited Accounts for the half-year ended 31st December, 1952, declaring the Dividends recommended by the Directors, electing Directors and Auditors, and for transacting any other ordinary business of the Company.

By Order of the Board,
SAHU JAIN LTD.,
Managing Agents.

CALCUTTA, *26th May*, 1953.

SASSOON AND ALLIANCE SILK SUFFERS LOSS AFTER EIGHTEEN YEARS

HIGHLAND PRODUCE CUTS DIVIDEND SHARPLY

Sassoon and Alliance Silk Mill Co., Ltd.

THE directors of the above Company (Managing Agents: Messrs. David Sassoon & Co., Ltd., Bombay) submitted the audited accounts of the Company for the year ended 31st December, 1952.

The result of the year's working showed a loss of Rs. 20,049 (profit of Rs. 2,59,862). Against this loss, the directors credited the following sums to the profit and loss appropriation account:—

E.P.T. post-war refund received during the year Rs. 49,920 (*nil*) and surplus provision for taxation Rs. 43,082 (*nil*), making a total of Rs. 93,002 (*nil*). After adding the balance brought forward from the previous year of Rs. 3,162 (Rs. 6,300) there was a sum of Rs. 96,164 (Rs. 2,66,162), from which was deducted the loss for the year 1952 amounting to Rs. 20,049 (*nil*), out of the balance of Rs. 76,115 (Rs. 2,66,162) the directors appropriated to replacement of machinery reserve Rs. 10,000 (Rs. 20,000) and made payment of a dividend of Re. 1-4 (Rs. 2) per share, free of income-tax, absorbing Rs. 62,500 (Rs. 1,00,000), leaving a credit balance to be carried forward of Rs. 3,615 (Rs. 3,162).

The directors regret that after many years the working of the mill, resulted in a loss. This was due to the continued depression in the industry, affecting both the demand and prices for artificial silk cloth. As a result, clearances of cloth slackened, and prices realised were unremunerative, while on the other hand, labour costs showed no signs of any decrease. In the circumstances, a further cut in production had to be imposed.

The difficult times, through which the art silk industry is passing, are still causing anxiety and although the immediate prospects appear brighter, the future remains obscure. During the year the Employees' State Insurance Scheme and Employees' Provident Fund Scheme came into force, the former on the 24th February, 1952, and the latter on 1st November, 1952. All taxation upto and including the Company's year 1951, has been finalised and paid to the income-tax authorities.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	5,00,000	Block ...	2,24,121
Reserves ...	8,93,779	Stock ...	5,06,997
Provision for taxation ...	398	Stores, spare gear, etc. ...	1,91,143
Liabilities ...	3,24,000	Debts, deposits and advances ...	2,85,084
Profit and loss account ...	3,615	Cash ...	5,14,447
Rs.	17,21,792	Rs.	17,21,792

Highland Produce Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. A. V. Thomas & Co., Ltd., Alleppey) submit the audited accounts of the Company for the year ended 31st December, 1952.

The total acreage of the estates of the Company amounts to 2,047 and the crop harvested during 1952, was 7,37,966 pounds, as against 8,26,401 pounds in 1951.

A crop of 1,465 pounds of cardamom was harvested from the new cardamom areas on Carady Goody Estate. The total tea crop harvested is less than the estimate for the year though it was in excess of the estimate last year because weather conditions before, were more favourable. To that extent this year, adverse weather conditions have been responsible for the shortfall in crop. It will be noticed that Carady Goody Estate suffered more and it is the short-fall in this estate's crop that was responsible for the over-all lower output. It also became necessary to have finer plucking as the price for tea had generally flopped and quality teas alone fetched better prices.

The f.o.b. cost for the year was Re. 1-5-4, as against the estimated cost of Re. 1-1-1 per lb. and the all-in cost was Re. 1-8-4 per lb. as against last year's all-in cost of Re. 1-9. The net average price realised is Re. 1-11-10 as against Re. 1-15-0 for the previous year.

The net profit for the year amounted to Rs. 2,12,348 (Rs. 3,55,065) after providing for depreciation on buildings and machinery and also a reserve of Rs. 40,000 (Rs. 2,50,000) for taxation. This profit together with the balance of Rs. 66,448 (Rs. 64,383) brought forward from the previous year makes a total of Rs. 2,78,797 (Rs. 4,19,448). The entire dividend of 6 per cent. on preference shares and an interim dividend of 5 (10) per cent. on the ordinary shares on account of the year 1952 amounting in all to Rs. 1,08,000 (Rs. 78,000) have already been paid leaving a balance of Rs. 1,70,797 (Rs. 3,41,448) available for distribution which the directors recommend be disposed in payment of 5 per cent. (35 per cent. including 10 per cent. second interim dividend) final dividend on ordinary shares (making 10 per cent. (45 per cent. on old capital) for the year) Rs. 90,000 (Rs. 2,10,000) and in carrying forward Rs. 80,797 (Rs. 66,448).

An extraordinary general meeting was held on the 30th of April, 1952, and the scheme of issue of bonus shares was sanctioned by the necessary extraordinary resolution. The shares were issued in terms of the decision of the general body, and to that extent the subscribed and paid up capital has been shown inclusive of the issue of bonus shares in the accounts.

Crop for 1953 is estimated at 7,75,000 pounds of tea and 2,500 pounds of cardamom.

Tea had to be sold in a buyers' market during the year and not in a sellers' market as the industry had enjoyed for some considerable time. There have been several fluctuations in the price during the year, and the fall has been as much as As. 10 to As. 12 in certain parts of the year. A small recovery was in evidence during the early part of 1953, but how far it will be maintained is unpredictable in the present set up of things.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	21,00,000	Block ...	16,95,771
Reserves ...	6,21,355	Stock ...	1,69,365
Provision for taxation ...	1,42,785	Stores, etc. ...	1,49,088
Liabilities ...	2,84,021	Debts, deposits and advances ...	2,00,164
Profit and loss account ...	1,70,796	Investments	2,52,158
		Cash ...	8,52,411
Rs.	33,18,957	Rs.	33,18,957

Vijaya Mills Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Haridas Achratlal & Co., Ltd., Ahmedabad) submit the audited accounts of the Company for the year ended 31st December, 1952.

During the year the Company made a profit of Rs. 8,43,408 (Rs. 20,37,916), with last year's balance of Rs. 20,958 (Rs. 39,362) there is a total sum of Rs. 8,64,366 (Rs. 20,71,278). After deducting donations made to public charitable institutions amounting to Rs. 16,507 (Rs. 24,720) there remains a balance of Rs. 8,47,859, from which the directors recommend allocations as under:—

To machinery and buildings depreciation fund account Rs. 5,50,000 (Rs. 6,50,000), special reserve fund account Rs. 2,71,600 (*nil*) and charity fund account Rs. 10,000 (Rs. 10,000), leaving to be carried forward to next year's account Rs. 16,259 (Rs. 20,958).

The directors recommend to transfer a sum of Rs. 2,71,600 from the reserve fund of the Company for the payment of dividends as under:—

To payment of income-tax free, interest on 3,500 2nd cumulative preference shares of Rs. 100 each at 4 (4) per cent. for the year, 1952, Rs. 14,000 (Rs. 14,000), payment of, subject to income-tax, interest on 2,800 3rd cumulative preference shares of Rs. 100 each at 4½ (4½) per cent. for the year 1952 Rs. 12,600 (Rs. 12,600) and payment of dividend at Rs. 22 (Rs. 22) and bonus at Rs. 13 (Rs. 13) making the total of Rs. 35 (Rs. 35) per share, both income-tax free on 7,000 ordinary shares of Rs. 400 each for the year 1952, Rs. 2,45,000 (Rs. 2,45,000).

During the year, the rates of cotton were extremely high, whereas the prices realised of cloth were not at all remunerative on account of the unusual depression in all the markets. Moreover due to higher dearness allowance and rise in the prices of stores and fuel, the cost of production kept on increasing. Considering all these factors, the working of the Company will be found satisfactory.

The Company's machinery, buildings, stores, cotton, cloth, etc., have been insured against fire. Profits and standing charges insurances have been covered. Only a small risk has been carried by the Company. The mill has worked two shifts during the whole year. There are 34,576 ring spindles, 776 looms, 40 art silk looms and the necessary processing plants.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	34,30,000	Block ...	91,15,078
Reserves ...	79,16,324	Stocks ...	43,98,980
Provision for taxation ...	6,28,257	Stores ...	8,41,779
Liabilities ...	47,85,494	Debts, deposits and advances ...	15,74,622
Profit and loss account ...	8,47,859	Investments	7,14,647
		Cash ...	9,62,828
Rs.	1,76,07,934	Rs.	1,76,07,934

Palani Andavar Mills Ltd.

The directors of the above Company (Managing Agents and Secretaries: Messrs. Baghyalakshmi & Co., Udamalpet) submitted the audited accounts of the Company for the year ended 31st December, 1952.

After deducting all working expenses and interest and providing Rs. 1,15,000 (Rs. 98,595) towards depreciation including initial depreciation, this year's working, resulted in a net profit of Rs. 59,710 (Rs. 8,74,153). With Rs. 19,670 (Rs. 44,517) the balance of profit brought forward from last year, the amount available under profit and loss account was Rs. 79,380 (Rs. 9,18,670). After transferring the sum of Rs. 88,000 (*nil*) from the dividend equalisation fund as proposed by the directors, the amount available for distribution was Rs. 1,67,380 (Rs. 9,18,670). The directors disposed of this amount by paying a tax-free dividend of 7 (7) per cent. on preference shares Rs. 14,000 (Rs. 14,000) and a tax-free dividend of 15 (16) per cent. on ordinary shares Rs. 1,50,000 (Rs. 1,60,000), leaving to be carried forward the balance of Rs. 3,380 (Rs. 19,670).

No provision was made for taxes in view of the large balance carried forward in that account. During the year the Company had committed itself to large purchases of foreign cotton, the prices of which declined heavily. Price control measures over yarn were prevalent throughout the year and in addition the yarn market was very dull during the later half of the year.

Further due to the imposition of cuts in electricity, the Company could work only 246 days as against 299 days in the previous year. The directors considered that the profit earned, under the circumstances, was satisfactory.

Accounts in brief were are under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	12,00,000	Block ...	12,45,286
Reserves ...	7,25,363	Stocks ...	12,32,615
Provision for taxation ...	3,12,708	Stores ...	4,00,934
Liabilities ...	10,40,273	Debts, deposits and advances ...	4,14,411
Profit and loss account ...	79,380	Investments	21,087
		Cash ...	43,391
Rs.	33,57,724	Rs.	33,57,724

Poona Electric Supply Co., Ltd.

The directors of the above Company (Managing Agents: The Rajputana Textiles (Agencies) Ltd., Bombay) submitted the audited accounts of the Company for the year ended 31st December, 1952.

The Company's plant, distribution system and other physical properties were adequately maintained. In order to efficiently meet the increased demand many additions and improvements were made to the distribution system. Seven additional transformer sub-stations were brought into service and the capacities of some of the older ones were increased. Also, several important extensions and alterations were made to the transmission and distribution mains.

The additional restrictions in the form of a power cut, which were imposed by Government of Bombay in October, 1951, were entirely lifted by October, 1952. However, some of the restrictions designed to control the over-all demand on the Company's bulk suppliers are being continued. Plans for the shifting of the Company's main receiving station from the present congested Rasta Peth locality, to the site which has already been acquired at Ganeshkhind, were completed and the requisite building work is expected to be commenced very shortly.

In continuation of the Company's programme for the conversion of the supply from dc to ac, a total of 289 installations with a connected load of 112 kw and an estimated maximum demand of 50 kw were converted during the year, thus reducing the dc maximum demand on the system at the Company's receiving station to approximately 100 kw at the end of the year. The street lighting installations served by the Company at the end of the year under review totalled 7,122 fixtures, reflecting a net increase of 53 fixtures during the year.

Capital expenditure incurred during the year amounted to Rs. 5,41,313. The profit and loss account showed that the revenue from sales of energy amounted to Rs. 34,79,412 (Rs. 37,18,955) and revenue from other sources Rs. 2,32,939 (Rs. 2,23,781), making a total gross revenue of Rs. 37,12,351 (Rs. 39,42,736). After deduction of all charges including depreciation and taxation Rs. 30,77,918 (Rs. 31,77,549), the net profit amounted to Rs. 6,34,433 (Rs. 7,65,187).

While the expenses were somewhat lower than in the preceding year, the net profit showed a decrease of more than Rs. 1,00,000 due to the fall in revenue from sales of energy, which was due partly to the restrictions on sale of energy during the first eight months of the year and partly to the higher amount authorised for refund to consumers.

Schemes for the payment of gratuities on a progressive scale to all employees have been approved and an adequate provision has been made in the accounts to meet this liability as and when it may arise. Provision has also been made for the payment of a suitable bonus in keeping with the usual practice of the Company.

As a result of the above factors, the net balance available for disposal, after making the several appropriations and deducting the adinterim dividend paid on 27th August, 1952, and adding the amount brought forward from 1951, as also the excess provision for taxation and bonus made in previous years and the post-war refunds of E.P.T. for 1943, amounted to Rs. 2,08,317 (Rs. 1,93,416). The directors disposed of this amount in payment of a final dividend on preference shares at the rate of Rs. 3-8 (Rs. 3-8) per share, after deduction of income-tax Rs. 10,325 (Rs. 10,325) and a final dividend on ordinary shares at the rate of Rs. 4 (Rs. 3-8) per share, (making Rs. 8 (Rs. 7-8) per share, free of income-tax for the year) Rs. 1,95,560 (Rs. 1,71,115) leaving to be carried forward the balance of Rs. 2,432 (Rs. 11,976).

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	52,89,000	Block ...	95,85,707
Debentures ...	7,37,000	Stores, tools, etc. ...	4,75,404
Reserves ...	48,57,765	Other assets	40,724
Provision for taxation ...	1,79,521	Debts, deposits and advances ...	6,43,054
Liabilities ...	24,98,961	Investments	17,88,904
Profit and loss account	2,432	Cash ...	10,30,886
Rs.	1,35,64,679	Rs.	1,35,64,679

Thamarapally Rubber Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. A. V. George & Co., Ltd., Kottayam) submit the audited accounts of the Company for the year ended 31st December, 1952.

The total acreage under rubber, coconut, cashew, etc., amounts to 534.78. Both Malyakal and Thamarapally estates are reported to be in good condition.

The rubber harvested during the year was 2,28,967 lbs. (2,29,433 lbs.) at 45.74 (41.70) cents per pound against an estimate of 2,00,000 (1,92,000) lbs. at 49.99 (45.00) cents per pound. The crop estimated for 1953 is 2,15,000 (2,00,000) lbs. at 58.74 (49.99) cents per pound. The average price realised was 121.12 (119.54) cents per pound. The price of raw rubber was enhanced and fixed by the Government of India in October 1952, at Rs. 138 per 100 lbs. of R.M.A1 rubber with suitable differentials for the low grades. Sale of rubber during the year was very difficult due to the selective buying by the manufacturers.

The net profit after providing for taxes, depreciation, etc., is Rs. 84,899 (Rs. 86,925) to which is added the balance brought forward from last year of Rs. 66,520 (Rs. 26,845) making a total of Rs. 1,51,419 (Rs. 1,13,770). The directors recommend the following distribution:—

Dividend of 6¼ (6¼) per cent. on the preference shares Rs. 9,750 (Rs. 9,750), dividend of 25 (15) per cent. dividend on the ordinary shares Rs. 62,500 (Rs. 37,500) and transfer to general reserve Rs. 37,500 (*nil*), leaving a balance of Rs. 41,669 (Rs. 66,520) to be carried forward.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	4,00,000	Block ...	5,01,634
Reserves ...	1,62,500	Stock ...	1,14,150
Provision for taxation ...	49,049	Stores, etc. ...	12,611
Liabilities ...	23,196	Debts, deposits and advances ...	1,347
Profit and loss account ...	1,51,419	Cash ...	1,56,422
Rs.	7,86,164	Rs.	7,86,164

New Beerbhoom Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st October, 1952.

After providing Rs. 1,50,000 (Rs. 1,50,000) for depreciation and Rs. 36,800 (*nil*) for cesses and transferring Rs. 75,000 (Rs. 4,90,000) to development reserve, there remains a balance at the credit of profit and loss account of Rs. 1,55,421 (debit balance of Rs. 5,06,379) from which the directors recommend:—

A dividend of 7 (*nil*) per cent. per annum on 20,000 preference shares for the half-year ended 31st October, 1952 Rs. 7,000 (*nil*), a dividend of As. 8 (*nil*) per share on 1,77,623 ordinary shares Rs. 88,812 (*nil*), provision for commission to directors Rs. 3,810 (*nil*) leaving to be carried forward the balance of Rs. 55,799 (Rs. 7,079).

Raisings for the half-year ended October, 1952, totalled 2,46,202 tons compared with 2,53,976 tons in the previous half-year, and 2,12,637 tons in the half-year ended October, 1951. Despatches, which include purchased coal, totalled 2,91,745 tons compared with 2,18,785 tons in the previous half-year, and 2,34,834 tons in the half-year ended October, 1951.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	19,76,230	Block ...	35,01,560
Reserves ...	10,67,000	Stock ...	39,441
Provision for taxation ...	81,462	Stores ...	10,15,397
Liabilities ...	46,52,954	Debts, deposits and advances ...	32,20,890
Profit and loss account ...	55,799	Investments	7,347
		Cash ...	48,810
Rs.	78,33,445	Rs.	78,33,445

Seebpore Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st December, 1952.

After providing Rs. 1,05,000 (Rs. 79,000) for depreciation and Rs. 1,01,000 (Rs. 45,000) for taxation and cesses, the directors have placed Rs. 40,000 (Rs. 60,000) to general reserve and there remains a balance at the credit of profit and loss account of Rs. 80,584 (Rs. 71,848) out of which the directors recommend payment of a dividend on 4,000 5 per cent. non-taxable cumulative preference shares absorbing Rs. 10,000 (Rs. 10,000), and dividend of Re. 1 (Re. 1) per share on 40,000 ordinary shares Rs. 40,000 (Rs. 40,000) leaving to be carried forward a sum of Rs. 30,584 (Rs. 21,848).

Raisings were 73,523 (65,661) tons as compared with 78,731 tons in the previous half-year and despatches were 88,132 (72,735) tons as against 67,665 tons.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital	6,80,000	Block ...	13,71,128
Reserves ...	5,43,826	Stock ...	60,690
Provision for taxation ...	1,61,902	Stores ...	1,60,306
Liabilities ...	7,74,740	Debts, deposits and advances ...	4,38,019
Profit and loss account ...	30,584	Investments	1,54,002
		Cash ...	6,907
Rs.	21,91,052	Rs.	21,91,052

N.B.—Figures within brackets relate to the corresponding period of the previous year.

COMPANY MEETINGS AND DIVIDENDS

By Order of the Board,
O. T. JENKINS,
Director.

21, NETAJI SUBHAS ROAD,
CALCUTTA, 29*th May*, 1953.

CENTRAL GOVERNMENT'S NEW LOAN

(From Our Own Correspondent)

BOMBAY, 3rd *June*

The fairly comfortable conditions in the short-term money market experienced last week gave place to a certain amount of stringency in the early part of the week under review. But this was due more to end-of-month operations than to any large-scale trade demand. The tightness in the market was, therefore, short-lived and from Monday the 1st inst. onwards, the position was once again comfortable. The inter-bank call money rate was, however, maintained at 2¾ per cent. among the Exchange banks and big Indian banks, due to persistent call for funds from a section of these banks. Very little business passed among the smaller Indian banks, the call money rate among whom still remained unchanged at a 3 per cent.

In the term money section, there was no better bidding than at 2¾ per cent. for one month and at 2½ per cent. for 2 to 12 months.

The offerings for the three months' Government of India Treasury Bills this week were a little less than in the previous week, these having amounted to Rs. 201.50 lakhs, as against Rs. 226.25 lakhs, in response to the usual tenders for Rs. 100 lakhs. The average rate, however, underwent no change at Rs. 2-6-6 per cent. per annum.

For the third week in succession, the notes in circulation show a fall, the latest decline being of the order of Rs. 7.51 crores in the week ended 29th May, 1953. The Reserve Bank's statement of affairs for the week under review discloses an expansion of Rs. 8.05 crores, the consequent rise in total notes issued being Rs. 54.62 lakhs. This is covered, on the assets side, by a similar increase in rupee coin. In the Banking Department, deposits of the Central Government and State Governments have risen by Rs. 2.62 crores and Rs. 1.16 crores, respectively, accompanied by an increase of Rs. 1.14 crores in those of banks and of Rs. 76.83 lakhs in other deposits. Cash balances have improved by Rs. 8.06 crores, but balances held abroad are lower by Rs. 4.29 crores. Loans and advances to Governments and other loans and advances disclose no variations. The outstanding loans to Scheduled banks against usance bills show a decline of Rs. 1.60 crores, but the total of such advances availed of by the Banks during the current year so far reveal a rise of Rs. 1 crore over the week. In other words, there has been a repayment of Rs. 2.60 crores by the Scheduled banks, during the week.

The consolidated statement of position of Scheduled Banks for the week ended 22nd May, 1953, bears indications showing that the busy season is drawing to a close. Thus, the Banks' demand deposits have improved by Rs. 4.01 crores and time deposits by Rs. 64.89 lakhs. There has been an increase in the inter-bank borrowings, but such is of the order of only Rs. 97.63 lakhs. Borrowings from the Reserve Bank have dwindled by Rs. 5.45 crores and those from the Imperial Bank by Rs. 1.17 crores. Advances which had gone down by Rs. 5.06 crores in the previous week, have dropped by another Rs. 1.99 crores in the week under review and bills purchased and discounted by Rs. 1.10 crores. Investments are lower by Rs. 47.42 lakhs, but total cash balances including money at call show an enlargement of Rs. 2.42 crores.

The outstanding development of the week under review in the Gilt-edged market was the announcement of the terms of the new loan by the Government of India. The new loan, which is called National Plan Bonds—First Issue, is for a sum of Rs. 75 crores and will bear interest of 3½ per cent. per annum. The issue price is Rs. 98-4 per cent., the loan being repayable on 1st June, 1961. The issue will be open for subscription for two days from 8th June. Holders of 3 per cent. 1953-55 loan, which is due for redemption on 15th June, have been given the option of tendering them towards subscriptions for the new loan.

The terms of the new loan being slightly more favourable than the expectations of the market, a quiet trend has come to prevail, the medium-dated loans being the worst sufferer. Even the 3 per cent. 1986 Conversion Loan, which found favour in the earlier part of the week, reacted slightly after the announcement of the loan. 3 per cent. 1953-55 was an anna better at Rs. 100-2. 3 per cent. 1957 and 3 per cent. 1958 each shed As. 2 to Rs. 98-9 and Rs. 98-7, respectively. 3 per cent. 1959-61 lost As. 4 to Rs. 96-9. 3 per cent. 1963-65 was quoted at Rs. 92-12 *ex-voucher*, as against Rs. 93 *cum-voucher* last week. 3 per cent. 1964 was unchanged at Rs. 93. 3 per cent. 1966-68 and 3 per cent. 1970-75 shed an anna each to Rs. 90-9 and Rs. 86-10, respectively. 3 per cent. 1986 Conversion Loan, which improved from Rs. 82-6 to Rs. 82-11 early in the week, moved down to Rs. 82-8 at the close.

LINSEED STEADY

(Messrs. A. Bradley & Co.)

CALCUTTA, 1st *June*

A general steadiness has been the main feature during the major part of the week. Owing to the absence of buyers prices declined to lower levels after a firm opening, although a upward reaction towards the close brought price levels up again. Arrivals from up-country are very poor and sellers are rather reserved both for ready and forward deliveries. Activity has been limited on the whole, although crushers have shown a small interest. Dull conditions have prevailed in the oil section with only local buyers showing a small interest; there have been no fresh enquiries for export. The latest quotations are as follows:—June Rs. 22-4 and July-August Rs. 22-12 per maund.

SILVER WEAK, GOLD FIRM

(From Our Own Correspondent)

BOMBAY, 3rd *June*

The tension in the silver section of the Bullion market became acute during the middle of the week as the first settlement fell due. But later in the week, trading passed off smoothly without any untoward development, the outstanding positions having been settled between the bulls and bears. Of course, both the sections of the speculators have had to pay a heavy price for indulging in overtrading. Quieter conditions, therefore, came to prevail towards the close with prices on balance showing fair losses.

Gold, on the other hand, was firm, due to shortage of floating stocks and a fall in arrivals. There was also an expectation of a further decline in arrivals from Mysore due to power cut in Kolar Gold Field and lesser smuggling with the onset of the monsoon.

Silver for forward delivery (30th May settlement) began at Rs. 163-1 and reacted to Rs. 161-9 on Friday. The efforts of the bears to lift up the price so as to involve the bulls into paying a margin of Rs. 1,000 per bar (such a margin is payable, if the daily closing rate went up above the basic rate and if the rate for the next settlement was below the current settlement by over Rs. 3) were successful as the closing rate on Saturday stood at Rs. 163-9 and the *budla* rate was Rs. 6-6. The bulls were, therefore, obliged to pay the said margin. The settlement ran out on Saturday.

Business in the next settlement (30th June) commenced at Rs. 159-1 and reacted to Rs. 157-3 at the close on Saturday. As this rate was more than Rs. 7 below the basic rate for that settlement namely, Rs. 167-4, the bears had to pay a margin of Rs. 500 per bar. It may be noted here that some of the leading bulls deliberately sold short in this settlement with a view to exacting heavy *budla* charges from the bears even though this meant their having to pay a margin of Rs. 500 per bar in this settlement also. The rate for this settlement, however, moved up to Rs. 158-5 on Monday, but finished the week at Rs. 156-6.

Ready silver (.996 fine) wound up the week with a loss of Rs. 4-5 per 100 tolas at Rs. 158-6. The floating stocks of silver are placed at 1,500 bars. The daily average offtake was 35 to 40 bars.

Gold for forward delivery (29th May settlement) opened at Rs. 87-6 and closed at Rs. 87-14 on Friday when the settlement ran out. The rate for the next settlement (29th June) began at Rs. 87 and moved between Rs. 87-7 and Rs. 86-14, before firming up to Rs. 88-9 to-day. The closing, however, was a shade lower at Rs. 88-6.

Ready gold advanced from Rs. 87-12 to Rs. 90-1 to-day before closing at Rs. 89-14, the premium over the forward widening from As. 7 at the close of last week to Re. 1-8 to-day. The floating stocks of gold are estimated at 30,000 tolas. The daily average arrivals were 4,500 tolas, while the offtake was 7,500 tolas on an average.

The following comparative table shows the trend of the market during the week under review:

	3-6-53	Highest	Lowest	27-5-53
GOLD	Rs. a.	Rs. a.	Rs. a.	Rs. a.
Ready (.99 fine Mint)	89 14	90 1	87 10	87 12
Forward	88 6	88 9	86 14	87 5

London Ready ..	74*d.*	—	—	74*d.*
London Forward .	74*d.*	—	—	74*d.*
New York Ready .	85½c.	—	—	85½c.

PEPPER DECLINES

(Messrs. Parekh & Co.)

BOMBAY, 3rd *June*

Pepper market this week showed declining tendency in sympathy with New York, where the market became extremely quiet and buyers withdrew owing to selling pressure of Sarwak Pepper by Singapore interests. The change in the French Ministry and the new Prime Minister's policy of conciliatory approach to Viet Minh was responsible for the change in the attitude of the Chinese sellers in Singapore. Indian growers in all the primary markets reduced their price when they saw that no new demand was coming forward but the American buyers, having further reduced their prices, the disparity between the two markets continued. No business except of small lots on speculative basis for June and July shipments was reported done. The tendency of the market was very uncertain and one did not know how long the growers could sit back if the present lull in the export demand continued for a fortnight.

In A.S.T.A. section, June shipment declined to $1.38, the highest being $1.45, while July shipment went down to $1.35, the highest being $1.42. Alleppey after touching Rs. 3,300 is now hovering around Rs. 3,100 with small buying interest. In the delivery section, the prices for *Jeth* and *Ashad* went down as low as to Rs. 2,580 and Rs. 2,530 respectively.

Following are to-day's nominal quotations:—Ready delivery Rs. 370 per Bengal maund and June delivery Rs. 2,600-2,630 and July delivery Rs. 2,570-2,600 per candy of 5¼ cwts.

FURTHER DECLINE IN COTTON

(From Our Own Correspondent)

BOMBAY, 3rd *June*

The slump in cotton in the forward market, referred to in this column last week, went further during the latter part of that week. The steadiness experienced around Rs. 720 for the August delivery contracts proved to be only a transitory stage and after a slight upward reaction there was a headlong fall in the price once again, taking it to below Rs. 700. Since then it crept up by a few rupees partly because of profit-taking by bears and some small replacement buying, only to slump heavily again yesterday to Rs. 694 per candy. There was a further fall to-day, the August delivery touching a low of Rs. 685. The morale of the market has been badly shaken and the operators are now naturally very wary. An average day's turnover has dwindled to less than half after the shake out.

The debacle has been partly a result of the market's own illicit trading in the new crop. February delivery for the 1953-54 cotton was believed to have been clandestinely dealt in, at a discount of about Rs. 30 to Rs. 40 per candy, compared to the prices of the last delivery in the current season's cotton. This appeared to have unnerved spot interests holding large stocks, who came in a body to hedge them in the market. With the actual holders of stock selling in the market for August delivery, the bulls were naturally apprehensive of being forced to take delivery, in the absence of the subsequent delivery for carrying over their commitments. Even if trading in February delivery had been there, the prices would have suffered a heavy fall with holders of stock as sellers. It is one thing for bullish speculators to collect contracts from bears with no cotton to deliver and quite another to have to face the possibility of actual cotton being delivered by sellers when the time for it came.

This goes to show the very unreal basis of the whole futures market, as the market collapses as soon as there is real hedge selling as distinguished from purely speculative selling by operators. The forward market is after all supposed to provide facilities for hedging. But it seems to fight shy of real hedging. The E.I.C.A. authorities would do well to pay attention to this aspect of forward trading which is going on under their auspices and control. There is already a body of public opinion growing up against forward trading in general and if such trading is carried on in an irresponsible manner, it would give a handle to the Government, if not to stop forward trading, at least to impose further restrictions and exercise greater control over such activities.

In the spot market also premia for various cottons were reduced considerably for want of demand from mills. This is explained by the fact that the mills have got sufficient stocks for months to carry on with and that, in any case, they have not the licences for fresh purchases. Lower New York prices also helped the downward movement in the spot market. Spot prices, however, will depend, during the rest of the season, on the production of cloth, which, if it is maintained at the present *tempo*, must mean further purchases by the mills. With the statistical position in favour of holders of stocks, there is not much room for reduction in spot demand. If it does not come now, it is bound to come later, always provided that the production of cloth does not show a drastic fall. In this connection, it may be noted that though the textile markets are ruling fairly firm at present, the export position is not very encouraging.

There will be a meeting of the Cotton Advisory Committee at the end of the next week, when the statistical position will be reviewed and some indication with regard to the marketing policy to be recommended to the Government for the new crop might be available from the deliberations of the Committee. In any case, it will be too early to expect any official announcement regarding this in the near future. The rains, according to meteorological reports, are likely to be delayed and this may cause a further postponement in the date for the declaration of official policy for the coming cotton year by the authorities.

I.C.C. August has followed a downward trend, thanks to persistent liquidation by bulls. After opening the week at Rs. 721, which is also the highest level touched during the week, it gradually receded to touch a low of Rs. 685 to-day, though it was somewhat higher at Rs. 691½ towards the close of the week.

The spot market also ruled easy. The latest quotations from the spot market are: Bengal *Deshi* Rs. 530; Berar Jarilla Rs. 730; Khandesh Rs. 825; Vijay Rs. 865; Moglai Rs. 680; Oomra *Deshi* Rs. 680.

At Karachi, the Pakistan Government has announced that there will be no forward trading in new crop cotton. This is bound to have a slightly bearish effect on the spot market prices. On the other hand, cotton has been placed on the O.G.L. for exports for the current season. But the shippers are required to comply with certain conditions imposed by the Government with regard to the prices for export and opening of a letter of credit by the purchaser for the full amount of his purchases. Apart from complying with previously booked orders, no fresh activity of importance is reported from Karachi and prices have remained fairly steady, as can be seen from the latest available quotations from Karachi, which are as under: Punjab *Deshi* Rs. 68½; 4F Punjab R.G: Rs. 58½; S.G. Rs. 63½; L.S.S. Punjab R.G. Rs. 61; S.G. Rs. 66; N.T. R.G. Rs. 65; S.G. Rs. 70; 289F Punjab R.G. Rs. 69½; S.G. Rs. 74½.

In the Alexandria market, the spot market has been active as usual with enquiries from the Continent and India. The turnover, however, is now likely to be decreased in view of the restricted choice left for buyers. Karnak, however, will be freely available for the rest of the season.

At New York, the market has ruled weak with a further fall in prices taking place after last Wednesday. The Government of India has informed holders of import licences for U.S. cotton that the period for availability of these licences has been extended to the end of December, 1953. This, together with the lower ruling prices at New York, might induce some of the importers to make fresh purchases. This, however, is not likely to affect the trend of prices in the U.S. The point to be noted, however, in this connection is that the early positions in the new crop are comparatively steady and the weakness is noticeable more in the July delivery.

The following are the latest available quotations from New York, as compared with those of a week and a fortnight before:

(In cents per lb.)

	3-6-53	27-5-53	19-5-53
Spot	34.15	34.20	34.60
July	33.63	33.77	34.22
October	33.77	33.80	33.83
December	33.80	33.77	33.83
March	33.85	33.83	33.93

ART SILK YARN WEAK

(From Our Own Correspondent)

BOMBAY, 3rd *June*

Continued arrivals of imported yarn and expectation of liberal import policy for the coming half-year imparted weakness to the art silk yarn market during the week under review. There were, besides, bearish advices from other commodity markets. The disinclination to take delivery, thanks to difficulties of securing finance, was another unhelpful feature of the market. The cumulative effect of all these factors was heavy unloading by bulls, which resulted in the downward movement of yarn values. To-day's closing rates were, therefore, not only substantially lower than those at the end of last week, but the lowest for the past eight weeks.

The weakness was in evidence in both forward and ready sections. In the forward section, 150D June delivery contract suffered a loss of 21 points to touch a low of Rs. 785 to-day. Business in July contract commenced at Rs. 803 on the 2nd inst. There was an overnight loss of 13 points, to-day's closing rate being Rs. 790. Trading in May contract was terminated on Saturday last at Rs. 790. Business in this contract opened at Rs. 808. The highest and the lowest levels reached during the period of the contract were Rs. 838 and Rs. 788 on 15th April and 23rd May, respectively. The net loss was to the extent of Rs. 18. In the ready section, 120 Japan and 120 Italy receded by an anna and a half each to Rs. 3-5-6 and Rs. 4-1-9, respectively. 150 Japan and 150 Italy declined by an anna each, the former to Rs. 4-2 and the latter to Rs. 3-15.

The table below gives the prices of art silk yarn quoted to-day, as compared with those on the 27th and 20th May.

	3-6-53	27-5-53	20-5-53
	Rs. a.	Rs. a.	Rs. a.
150D May (per case of 200 lbs.)	—	799 0	808 0
150D June	785 0	806 0	813 0
150D July	790 0	—	—
120 Japan (per lb.)	4 5½	4 7	4 7
150 Japan ,, ...	4 2	4 3	4 3
120 Italy ,, ...	4 1½	4 3½	4 3
150 Italy ,, ...	3 15	4 0	4 0½

Following the deliberations of the recent meeting of the Import Advisory Council, traders in art silk yarn seem to feel that the Government of India would liberalise its import policy for yarn during July-December, 1953 in so far as actual consumers are concerned. This view is based on scarcity of supplies in finer deniers, such as 60, 75 and 100, despite heavy arrivals of imports in recent weeks. Established importers are rather intrigued at the meagre quota of imports—10 per cent. of half of best year's imports during the period 1945-46 to 1950-51—granted to them for the current half-year. The Yarn Merchants' Association, Bombay, has addressed separate communications to the Textile Commissioner and the Chief Controller of Imports urging them to grant more liberal licences for import of art silk yarn.

Conditions in the staple fibre yarn section also remained weak. Supplies of yarn are reported to be somewhat comfortable and are expected to improve still further in the coming weeks. The expectation is based on the score of heavy arrivals of yarn from South Indian markets, consequent on the partial restoration of power cut, as also of good imports of staple fibre which has enabled the yarn producers to increase their output of yarn.

OILSEEDS EASY

(From Our Own Correspondent)

BOMBAY, 3rd *June*

A mild wave of selling pressure was in evidence in the oilseeds market during this week. It was pronounced in the castorseeds section, on reports of heavy sales of castorseeds by China in world markets. Groundnuts declined on virtual withdrawal of enquiries from *vanaspati* manufacturers. Linseed ruled easy in sympathy with the other two sections. *Kardi* and *niger* seeds sections followed suit. Business done in the market was also not encouraging. Prices, consequently, declined, registering thereby sizable losses over the week.

The most important event in the castorseeds section was the maturing of May delivery contracts on 30th May. Of the outstanding transactions of nearly 7,500 candies, about 2,700 candies were said to have been delivered, while about 2,000 candies were settled through compromise. Regarding the remaining 700 candies, penalty at the rate of Rs. 5 per candy was collected from defaulters. May delivery which opened at Rs. 166-4, as against Rs. 164, shot up to Rs. 166-8, before closing at Rs. 158. It may be noted that May delivery, which opened at Rs. 140 on 27th July, 1952, fluctuated between Rs. 124 and Rs. 167, before closing at Rs. 158. September delivery this week finished at Rs. 157-4, as against Rs. 160-12. The highest and the lowest touched during the week were Rs. 163 and Rs. 156, respectively. Among spots, Madras quality lost As. 10 to Rs. 31-12 and F.A.Qs., As. 12 to Rs. 30-12. Oil I Pressures eased from Rs. 18-8 to Rs. 18 and Commercials, from Rs. 17-12 to Rs. 17-6. It was reported that Germany and Brazil held the market in castor oil in the United States last week at about 17.25 cents for First quality.

In the groundnuts section, Bold ready declined from Rs. 47-8 to Rs. 47. June-July deliveries disclosed a loss of As. 12 to Rs. 46-4 and August-September Re. 1 to Rs. 45-12. Khandesh quality was done at Rs. 47-12 as against Rs. 48-8. Groundnut oil ready receded by As. 8 to Rs. 24-8 and Railway receipts, by As. 2 to Rs. 24-8. June and July deliveries were slightly lower at Rs. 24-7 and Rs. 24-9, respectively.

Among linseed, Bold ready fell by As. 10 to close at Rs. 33-4. June-July and August-September deliveries changed hands at Rs. 33-5 and Rs. 33-14, as against Rs. 34 and Rs. 34-12, respectively. Linseed oil suffered As. 6 to Rs. 17-4.

Niger and *kardi* seeds too were out of favour. *Niger* Madras dropped by Re. 1-8 to Rs. 36-8. *Kardi* Bold fell by As. 14 to Rs. 25-4 June-July delivery also lost a similar amount at Rs. 25-6.

The following table shows the prices of oilseeds and oil on the 3rd inst., as compared with those at the end of the previous two weeks.

	3-6-53	26-5-53	20-5-53
	Rs. a.	Rs. a.	Rs. a.
Groundnuts—

JUTE STEADY

(From Our Own Correspondent)

CALCUTTA, 2nd *June*

Jute markets maintained a cheerful note, and although prices of jute goods did not visibly move further up, demand was moderate and mills were reserved. The increase in raw jute prices has become a problem for mills, but if the prices of jute goods move further up, there is the danger of Continental mills under-quoting Calcutta and thus diverting business. Even if there is going to be any such diversion, it would only prove temporary since Continental manufacturers have to pay the same price for raw jute as Indian mills. All the same, at this juncture, even a temporary diversion would not be to the interests of mills. Consumers should not also, however, feel that jute goods have become again dearer, and try to meet a portion of their requirements of packaging materials from paper and cloth bags. Already reports from America show that consumers there are delaying entering into commitments in burlap in the belief that the uptrend in Calcutta would not be maintained.

On Wednesday last, B twills gave way to Rs. 104 from Rs. 105. The lower trend followed bulls' anxiety to take profits, although conditions were relatively steady and buyers were interested in moderate quantities. This tendency continued on Thursday also, and the price was taken further down to Rs. 102-12. On Friday, however, the rate recovered to Rs. 103-12, and the difficulty to locate supplies of cornsacks even at Rs. 108 for ready delivery was a factor for all-round steadiness. Over the week-end, Rs. 104-12 was touched, and in yesterday's transactions, the rate moved still further up to Rs. 105-4. Heavy goods would appear to have ceased to be a headache for mills, and in addition to sales for export as well as for internal consumption, another factor which influenced the steady conditions was the tendency on the part of raw jute sellers to buy heavy goods as a hedge against raw jute, following anticipation of a shortage in sacking. The weather continues to be extremely bad for sowings, and it is expected that, in view of a smaller crop both in India and Pakistan, raw jute prices would only tend to move up. This explains why hedging is preferred by raw jute sellers.

In hessian, some business was done with the United States and Great Britain, but in view of the expectation that rising stocks, following the transfer of sacking looms to hessian and Government's disinclination to effect any overall cut in production, would be reflected by a decline in prices, buyers are postponing entering into commitments. Ready hessian 40" 10 oz. opened for the week at Rs. 43-4, and following profit-taking by speculators eased to Rs. 43 on Thursday, when small quantities were taken by Britain at cut rates for June-September shipment. More business with Britain followed, and this factor, coupled with the reluctance of mills to accept business at lower rates forced a recovery to Rs. 43-10 on Friday. On Saturday, month-end considerations resulted in some covering demand and the rate rose to Rs. 44. The market believed that Burma was about to place a huge order, and was also expecting an order from Uruguay for 2,000 bales. Yesterday, a further improvement to Rs. 44-4 was recorded, on reported transactions. Ready 40" 8 oz. realised Rs. 35-4, with the f.o.b. rate at Rs. 42. The steep rise in prices for Pakistani jute fit for producton of hessian has not been accompanied by an equal advance in the prices of hessian. It would appear, therefore, that the better returns which sacking goods could bring now to mills could only neutralise the losses in hessian.

A fair quantity of raw jute was bought by mills which were anxious to have as much of the raw material as possible before prices advanced further. Assam bottoms were at one time as high as Rs. 28-8, with *pucca* bales first marks ready at Rs. 165 a bale. Kissanganj jute advanced to Rs. 28-8 from Rs. 25, and *bimli* f.a.q. to Rs. 23 from Rs. 22-8. Murliganjs were offered at Rs. 28, Pakistani jat advancing to Rs. 31 from Rs. 30.

METALS DULL

(From Our Own Correspondent)

CALCUTTA, 2nd *June*

Prices for metals were mostly unchanged during the week, but wherever quotations changed they tended towards lower levels. Consumers, as usual, were interested in buying only their immediate requirements, and manufacturers of products were disinclined to quote for delivery rather too far. Electrolytic copper ingots were throughout quoted at Rs. 180, but ready supplies were not available. The market would appear to await the reaction of the price trend in world markets, consequent on the commencement of free trading in the United States in copper as from the 1st of this month. London would be allowing free trading in August, and it would appear that fears that these developments would make the price fall is baseless judging from overseas reports that copper is in good demand. Local demand for copper scrap could not be fully satisfied, and consumers noted traders entering into commitments for some imports of the fire-refined material.

Opening at Rs. 521, tin abruptly gave way to Rs. 500, and thereafter irregularly fluctuating, closed quiet at Rs. 502. The improvement in the Singapore market could not be reflected here in view of the confidence of consumers that their requirements could at any time be met at lower level. Electrolytic zinc eased from Rs. 52 to Rs. 51-8, and despite an enquiry for a substantial quantity the price could not improve in view of the availability of abundant supplies. Virgin lead was unchanged at Rs. 61, and was featureless.

GOOD OFFTAKE IN KIPS

(From Our Own Correspondent)

MADRAS, 1st *June*

Arrivals of kips in the local market have been fair-sized and offtake has been good. Trading has been slow due to Whitsun and Coronation holidays. Demand centred round inferior selections. Importers declined to accept 60d. for lights, 48d. for mediums and 42d. for heavy cow hides and are not making any counter offers. Prices of cow calf, buff hides and buff calf have ruled unchanged.

In the tanned skins section, enquiries were patchy for prime sheep and goat. Prices in the local market declined by As. 2 for goat and As. 4 for lining sheep and clearances have been excellent.

HIDES IRREGULAR

(From Our Own Correspondent)

KANPUR, 1st *June*

Kanpur hides and skins market was devoid of any fresh development this week too with traders evincing very little interest in business activity was greatly restricted. Transactions were mostly of squaring up nature. The undertone of the market was, however, slightly bearish. Following are the latest quotations: Wet salted cow 1st grade superior Rs. 380 and inferior Rs. 290; 2nd grade superior Rs. 250 and inferior Rs. 180 per score; wet salted buffalo 1st grade 1 lb. 12 ozs. and 2nd grade 2 lbs. 2 ozs. per rupee; goat 1st grade Rs. 250 to Rs. 300 and 2nd grade Rs. 210 per 100 pieces; and sheep Rs. 300 per 100 pieces.

BRIGHT LIQUORING DOOARS IN GOOD DEMAND

(From Our Own Correspondent)

CALCUTTA, 2nd *June*

The first export sale for the new season was held yesterday. Offerings consisted of 27,700 and 3,300 packages of the new and old seasons' teas, respectively. Demand was satisfactory, but features were limited. Buyers paid good attention to bright liquoring Dooars, while Cachar teas were rather quiet. Assams, of the new season's represented indifferent quality. Darjeelings on offer were mainly of the new season's, and good demand was in evidence for the flavoury varieties. However, plain liquorings were quiet, and had to be withdrawn in large quantities. The old season's offerings were very steady. Clean common BP of the new season's was quoted at Re. 1-11-6.

During last week's internal sale (No. 49) dusts offered aggregated 31,400 packages, and leaf grades 759 packages. There was a good general demand, but, although prices gained during the sales, the closing levels were low. Prices for Dooars and medium Assams eased by one anna, but best liquoring varieties maintained rates. Keen attention was paid to black leafy types, suitable for export. The rates were: best Assam CTC Re. 1-11 to Re. 1-12, medium Assam grainy Re. 1-8 to Re. 1-8-6, and medium Dooars Re. 1-6-6 to Re. 1-7. The leaf market was firm.

DEMAND FOR TEA WEAKENS

(Messrs. Forbes, Ewart & Figgis Ltd.)

COCHIN, 30th *May*

Sale No. 11, which was held on Tuesday, 26th May, contained approximately 17,00,000 lbs. Quality was generally plain and there were a number of offerings which showed a deterioration in leaf appearance with an increase in stalk and fibre. The sale opened to a good general demand which weakened towards the close. Common and low

STOCK & SHARE QUOTATIONS

Abbreviations:—D=Deffered shares. G=Guaranteed shares. P=Preference shares. P.O.=Preferred Ordinary shares. R=Rebate shares. Y=Accounts published yearly. H=Accounts published Hat-yearly. Q=Accounts published once 15 months T=Company has Debentures. R.L.=Reserve Liability on shares. N=Nominal Quotation. i=Interim Dividend. f=Dividend for first half-year, y=Dividend for the year. x=Ex. Dividend c.d.=Cum. Dividend.

Shares:—If a company has different classes of shares—as, for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under "Paid-up Per Share."

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12 indicate the months of June and December, respectively. "Reserves" includes general and other reserves and all other funds which a company may have as also depreciation on block items, when this is charged to separate account "Block" represents actual cost of land, buildings, machinery and all such other items on which depreciation is allowed, less sales, if any, and stands for the gross figure except where otherwise indicated.

Dividends:—Dividends for completed years are calculated at per cent. per annum, but, where quoted for portion of a year, they represent percentages of the dividend on the paid-up share value. For companies closing the books half-yearly in the first three months of the year, and for companies closing their books yearly during the first half of the year dividends are shown as for the previous year.

* The following explanatory notes relate to the abbreviations and marks shown on page 1064 in the debentures section:—

‡‡ Option to repay on six months' notice, on any interest date after 31st December, 1951, at 102 per cent. Also redeemable out of a cumulative sinking fund of 1½ per cent. per annum (commencing in 1938) by drawings at 102 per cent. or by purchase at or 102 per cent.

(a) Option of repayment at any time at 3 per cent. premium.

(b) Bearer bonds of Rs. 1,000 each repayable at par.

(c) Bearer bonds of Rs. 1,000 each repayable on 31st July, 1959.

(d) Bearer bonds of Rs. 1,000 each with option of redemption in whole or in part at par on 30th June, 1952, or on any subsequent interest date at one month's notice.

(e) Returnable on or after 31st July, 1950, at Rs. 102-8 or at par after 31st July, 1955, on six months' notice in each case.

(f) Bearer bonds of Rs. 1,000 each with option of redeeming on 3 months' notice at ½ per cent. premium after 1st March, 1954, but before 1st March, 1957, and 1 per cent. premium on or after 1st March, 1957.

(h) Option of redemption on or after 1st July, 1949, at par.

(l) Option of repayment at any time at par at any time on or after 30th June 1947 on six months' notice.

MARKET GOSSIP

(Concluded from page 1019)

Some fresh light on the Government's nationalisation policy is thrown by the report. The policy, as readers are aware, was not an election issue; it had, in fact, been strongly opposed by the Government-sponsored Air Transport Enquiry Committee which contained no representative of the air transport industry. It would appear that the Company was informed in November, 1952, of the Government's decision to take over the industry. The Directors, it is stated, protested to the Government both against the nationalisation scheme and the manner in which it had been decided upon, without prior consultation with the industry. The protest was of no avail; the Government stated that its decision to nationalise was irrevocable. The Directors were, therefore, compelled to confine themselves in all their subsequent meetings with the Government to the task of evolving a basis of compensation. But the Government would not agree to take the world prices of aircraft into account but fixed, instead, a scale of prices on the basis of original cost, less certain rates of depreciation. This method of valuation, it is stated, will enable the Government to take over aircraft at one-fifth of world prices and in the case of Dakotas at about half the Indian market price. The Directors were, however, at no time a "willing party to this formula and the Government's decision was, therefore, not in the nature of a negotiated settlement." Even if this is not total expropriation, it is greatly to be feared that the method of taking over assets, adopted by the Government was thus unhelpful to the industry's just claims for compensation, the industry's leaders too have not served the cause of free enterprise which they represent by their failure to take the public and the Press into confidence. It was certainly their duty to have shown that they had other constructive suggestions to offer, and that nationalisation was by no means the only, or even the most desirable, way out of the impasse. This was done in the U.K. by the steel industry when the Government decided to take it over under its control. In any case, it was their duty, at least, to place the issues clearly before the public and demonstrate the inequitous nature of the Government's compensations proposals. By their studied neglect of the need for publicity—even during the time that the Bill for nationalising the industry was on the legislative anvil—the industry's leaders have exposed themselves to the charge that, if they capitulated, it was because they wanted to capitulate.

* * * *

The Company's shareholders must, however, be thankful for small mercies. For, it would appear that they will now receive, under the present system of valuation, in the form of bonds of the proposed Air Corporations, an amount approximately equal to the par value of their shares. Although this represents a marked advance on the abnormally low share market values, it is considerably less than the amount to which shareholders would have been entitled on the basis of the real present-day value of their assets.

MARKET REPORTS

(Concluded from page 1053)

Medium brokens and fannings were well supported at rates which were about steady. Medium teas were irregularly As. 1 to As. 2 easier, whilst high grown descriptions declined by As. 2 to As. 3. There were some withdrawals amongst the high grown teas. Whole leaf grades met with a good response and were slightly dearer. The following were the quotations:—

	1953 Rs.	a.	p.
Low grown Travancore B.O.P.	1	10	6
Medium Travancore B.O.P.	1	11	0
Upmalliais B.O.P.	1	14	6
Best liquoring Nilgiri B.O.P.	2	5	0
Clean black leaf O.P.	1	15	6

London Market.—No sale this week.

Colombo Market.—6,000,000 lbs. Low-growns firm. Others slightly easier.

Calcutta Market—Dust.—Good general demand. Market half to one anna easier, strengthening towards close. Residues unwanted.

Export Quota.—The market for 1953-54 export quota has hardened due to the lack of news of an extension of special licence and business has been done at 14 pies.

Quality.—With the continued lack of rain in many districts, quality has shown an improvement in forward musters from estates. The leaf appearance, however, is still a little disappointing.

Forthcoming Auctions.—Sale No. 12 will be held on Tuesday, 9th June.

As we go to press, Messrs. Forbes, Ewart and Figgis, Ltd., wire as follows:

"*Dust Sale K.*—1,50,000 lbs. Good general demand. Market irregularly As. 2 dearer."

DEPRECIATION ALLOWANCES UNDER RISING PRICES

(Concluded from page 1043)

plying them long-term loans at a reasonably low rate of interest, say, 4 per cent. To provide finance for all desirable production at a low cost is no doubt a social responsibility.

What has been said so far is obviously under the assumption of a free market. Under the policy of price controls, the prices will have to be so raised that they would provide for increase in depreciation allowances and profits in proportion to increased capital costs. Without this, production in controlled industries will go on decreasing. For even supposing that the controlled prices are high enough to leave sufficient margin for higher depreciation allowances, the accumulated funds will not be invested in the controlled lines, unless enough profits are available on the increased costs of the assets. In short, the only duty that the Government should accept is to maintain the prices of all the desired goods and services at such level, as would leave enough surplus, after meeting all other costs and paying all necessary taxes, to cover depreciation costs on the basis of current prices and reasonable profits on the basis of currently required investments.

The Association pleads for tax relief not only for accumulating replacement costs but also for financing expansion. But inasmuch as expansion of business concern means increase in the property of its owners, it should be financed by savings out of the owners' income. Just as an individual increases his property by saving a part of his net income, so also the owners of a business should increase their property by saving a part of their net income. Increase in private property must necessarily come at the cost of its owners, and the Government cannot be asked to contribute to it.

AGRICULTURE

(Concluded from page 1044)

that the food production of England and other countries could be doubled easily by the application of intensive methods of cultivation at higher costs. It is true that agricultural productivity can be increased by such expenditures and by scientific investigation. Although many optimistic forecasts have been made as to the limits of such productivity, there appears to be no data sufficient to justify an intelligent estimate of the limits.

These calculations indicate that the world as a whole is capable of supporting a population much more numerous than the population of to-day. The immediate problems of overpopulation are limited to a few areas; and the present-day pressure of population is not against the limited resources of the earth but against the various barriers, natural and artificial, which hinder access to those resources.

World potentiality of agricultural production measured by a strictly economic yardstick, which demands immediate returns on new developments, is, no doubt, rather limited. But when favourable and corrected physical factors are coupled with long-time financing, the potentiality is great. Future areas of production will have to be developed at great cost in many cases, but other factors will outweigh the cost, as the pressure grows for new land to be cultivated. The present cultivated-crop and grazing areas of the world have a long way to go before the greatest yields per acre will have been obtained. Soil conservation and improvement, commercial fertilisers and manuring, the best land utilisation, proper seed and suitable use of mechanisation—all can contribute to increased production from presently cropped and grazed land areas.

(Concluded from next column)

and oilseeds crops in the country, the two semi-Governmental bodies, namely, the Central Oilseeds Committee and the Central Coconut Committee, should encourage, through a more vigorous policy than at present, the cultivation of both these crops.

Among the soap industry's other suggestions, mention must be made of the reduction of import duty on essential oils, the revision of import policy relating to caustic soda, the ban on forward trading in coconut oils, and the upgrading of priority for the transport given to soap by the railways. These demands should be conceded—with suitable safeguards for other interests, if necessary—by the Government. Although each of these suggestions is simple in itself, cumulatively they should, when they are implemented, encourage the industry to utilise its present idle capacity. Further, the soap producers have requested the Government to appoint a Development Council for the industry. This request also can be met forthwith without having to wait for gaining experience of the working of the two Councils which have been set up already. For, a Development Council should be able to tackle the problem of this industry more easily than the Councils for Heavy Chemical and Combustion Engines industries by reason of the simpler process, adopted by the soap industry, and the comparatively fewer technical problems which it faces. Moreover, it is easier to secure technical personnel to serve on the Council, since a large number of persons, with considerable experience in the working of the industry, can be easily found in the country.

No assistance from any external agency will, however, be of much help to the industry unless it sets its own house in order by taking such measures as will ensure economy, efficiency and low production costs. Mr. Karmarkar's advice to the industry in this context is worthy of the attention of soap producers. He said: "Increased production has to follow increased demand, and as demand can be stepped up only on the basis of making such consumer goods available at the lowest price possible to the public, it is necessary for the manufacturers to make every effort to bring down the cost of such goods. As you will appreciate, such reductions can be brought about in several ways, the most important being improvement in the efficiency of manufacturing operations and recovery of by-products to the maximum extent." Herein lies the key to the remedy for the soap industry's malady.

SOME PROBLEMS OF SOAP INDUSTRY

THE problems of the soap industry in India, which figured prominently in the proceedings of the Nineteenth Annual Conference of the Indian Soap and Toiletries Makers' Association, held in Bombay on the 3rd inst., indicate the unsettled period through which the industry is passing. Although it has been in existence for the past two or three decades, it looks as though its attempts till now at attaining economic stability have not succeeded. Nevertheless it has every reason to feel proud of its achievements. In spite of intense competition among its units, the industry has managed to survive without any tariff or other Government protection. The industry has demonstrated, as was pointed out by Mr. S. P. Godrej, Chairman, Reception Committee, in his welcome address at the Conference, "a high sense of social obligation, which was clearly manifest during the boom years when there was a sellers' market; and although the costs were very high all round—eightfold for vegetable oils, by far the major cost item—the prices of soaps were kept under check." Indeed, soap prices in India, it is stated, are generally lower than those prevailing in many advanced countries.

Apart from serving the consumer, the industry plays an important role in the country's economy. According to the fifth Census of Manufactures, there were in 1950 in India 47 soap factories of all sizes with a fixed capital investment in plant and machinery to the extent of about Rs. 1 crore, providing employment for about 5,500 workers. Actual production of soap of all organised factories, according to Mr. S. C. Ghose, President of the Conference mentioned above, was 86,400 tons in 1952 as compared with 83,400 tons in 1951 and 72,000 tons in 1950. In view of its importance to the country, the industry has found a place in the list of 42 industries for which targets have been fixed by the Planning Commission. The target of production to be achieved by this industry in the final year of the Plan, namely, 1955-56, is fixed at 200,000 tons. At the end of this period, the total capital invested in the industry by the organised units, it is computed, will be in the neighbourhood of Rs. 3 crores. In deference to the wishes of the industry, it has been included in the schedule to the Industries (Development and Regulation) Amendment Act, 1953, passed by Parliament last month.

Although the Indian soap industry merits the recognition it has thus gained, it has still not been in a position to play a fuller role in our national economy. Owing to several difficulties which it faces to-day, the industry has not been able to utilise more than 30 per cent. of its installed capacity. Many factors have been cumulatively responsible for keeping idle 70 per cent. of its plant and machinery. Thus, the Partition deprived it of its former markets in East and West Pakistan. The general decline in purchasing power, as a result of inflationary conditions, reduced the effective demand for soaps and toilets in both the domestic and external markets. Prices of coconut and groundnut oils, as also of *mowrah* oil, which are the principal raw materials of the industry, have not shown any decline, despite the recent reduction in the duty on palm oil imports. There has, besides, been evidence of indifference on the part of State Governments to the question of protecting *mowrah* trees from indiscriminate felling in certain parts of the country. Finally, it is stated that competition from a controlled unit by foreign interests has adversely affected the indigenous sector which, as a result, has been compelled to keep the bulk of its installed capacity idle. This last complaint of the industry involves major issues of national economic policies. In fact, it figured prominently in the deliberations of the Central Industries Advisory Council at its meeting held at Delhi last week. As this question has to be examined at some length, we reserve our comments on it to a subsequent issue. But it is proposed to deal, in this issue, with the other handicaps of the industry mentioned above.

Both Mr. Godrej and Mr. Ghose put forward a series of suggestions calculated to help place the Indian soap industry on an even keel which we hope will receive the support of the concerned authorities. The prices of vegetable oils, which are intimately related to the price of soap, have been higher, and this constitutes a deterrent factor in increasing the demand for soaps. In fact, oils cost nearly 90 per cent. of the total cost of raw materials used in the manufacture of soaps. Consequently the industry is justified in requesting the

TAXATION AND ROAD TRANSPORT

ROADS, transport system, automobile industry and taxation on motor vehicles are all connected topics which should be treated as a whole; for each impinges on the others at so many points that it would be difficult to isolate any one of them for special treatment. It will, therefore, require all the ingenuity of the Taxation Enquiry Commission to reconcile the conflicting interests of the State, which requires revenues for road development, the motor vehicle owners, who are among those now bearing a disproportionate burden of taxation, and the general community, which bears the burden of protection to the automobile industry, besides sharing the taxation burden on the road transport industry. But the Commission's task has been lightened by the Motor Vehicle Taxation Enquiry Committee whose report is a model of its kind for close reasoning, clear analysis and constructive recommendations. And the Commission will also find that the memorandum submitted recently by the Indian Roads and Transport Development Association, sets forth succinctly enough the broad lines of fiscal reform that is necessary for a sustained and progressive development of road transport.

The importance of road transport arises not only from the fact that the railways are not in a position to take all the traffic offered to it but also from the consideration that the development of road transport is vital for opening up the vast internal market in the country and for providing quick and sufficient facilities for movement of agricultural crops which, under the Five-year Plan, are expected to record a marked increase. Further, the maintenance of an efficient system of motor transport is a prerequisite for the success of the automobile industry. In pre-war years, the Government was often confronted with the problem of road-rail competition which prevented it from taking bold decisions for the development of the one or the other. All this is now happily a thing of the past, as the volume of traffic has increased enormously and promises to increase further. The cost of moving goods by road has gone up so high that there is no need for railways to fear unequal competition from road transport. It is estimated that the cost of goods transport by road works out to 40 to 48 pies (based on 1950 rates) per ton-mile, as against an average rate of 9.18 pies per ton-mile charged by the railways. There have been many changes in the tax system since these calculations were made so that it is now calculated that the cost of transport of goods by road varies from 48 to 72 pies per ton-mile. These figures show that the odds are heavily against the road transport system and that, if any competition were to develop in those routes where both railways and road transport operate, the former would have a walkover. A debate on this issue, however, will be an unreal one, for, as already mentioned, there is so much traffic to be moved that there is hardly any prospect of competition in the foreseeable future. On the contrary, there is an urgent need to expand both the railway and the road transport systems.

The problem of road transport is a twofold one. In the first place, the roads themselves should be developed, for without more and better roads there could be no improvement in vehicular transport. Secondly, the tax burden on motor vehicles should be reduced in the interest of larger flow of automobiles into the road. The Nagpur Plan (1947) set a modest target of 24,000 miles of national highways, 62,000 miles of State highways, 58,000 miles of major and 96,000 miles of minor district roads and 145,000 miles of village roads, to be reached within ten years from the commencement of the execution of the Plan. The Plan was never taken up in earnest. It is computed that only about 8 per cent. of the target figures have been reached. The Planning Commission has allotted about Rs. 105 crores for road development during 1951-56 or Rs. 21 crores per year, as against an estimated road revenue of three times this figure. The Commission's allotment would hardly cover one-eighth of the Nagpur Plan's targets for road development at current prices.

The incidence of taxation on motor vehicles has now reached a stage at which it prevents the growth of motor transport industry. The M.V.T. Enquiry Committee calculated that the average goods lorry pays by way of Central and State taxes alone twice the average earnings per ton-mile of goods carried by rail. Bad roads, the Committee further pointed out, constituted an additional tax on the motor vehicle user, inasmuch as they imposed on the owner of a motor vehicle the burden of excessive repairs. It estimated the cost of this "invisible tax" at Rs. 10 crores a year. These figures are a sad commentary on the care and thought bestowed by the State on this important mode of transport in the country.

The motor transport industry has been the victim of simultaneous attack by all the three principal taxing authorities—the Centre, the States and the Local. Little regard has been paid by them to the industry's need for expansion. It is true that the capital investment in road transport industry already, estimated at Rs. 1,000 crores, is higher than the sum of about Rs. 840 crores expended on the railways. Nevertheless, it cannot be denied that the industry deserves to expand further in the national interest. From this point of view, capital investment for the improvement of the country's transport system has been pitifully inadequate since the war. And the reason must be sought in the system of taxation. In its resolution on the Tariff Commission's recent report on the automobile industry, the Government has itself conceded, as we pointed out last week, that the "present system of taxation of road transport by different authorities at different rates—sometimes very high—has been a powerful factor in reducing the demand for vehicles, particularly transport vehicles." It has also agreed to consult the State Governments with a view to evolving a "system of taxation that will be conducive to the development of *motor transport*."

The acceptance of a common transport policy by the Centre and the States must form the foundation of an efficient road transport system. There is now no guarantee that the States will not, through penal taxation of motor vehicles, set at naught the measures adopted by the Central Government to assist road transport and the *motor* industry. The M.V.T. Enquiry Committee rightly held that there could be no scientific system of taxation designed to promote the development of cheap, rapid and efficient transport so long as each taxing authority is mainly concerned with collecting as much revenue as possible from the motor vehicle user. This, in other words, is a plea for the reversal of the present policy of sacrificing the entire motor transport industry at the altar of revenue on the ostensible ground of road development. The Association has urged the need for recognising the principle that, while the Central Government should be responsible for the provision, maintenance and development of roads, the motor transport operators should be responsible for the running of vehicles. Again, it has suggested that inasmuch as railways, ports and canals cannot be built out of current revenues, a national road plan also cannot be financed through tax revenue but by loans from the market.

This provides the background for consideration of the Association's more specific suggestions which deserve the sympathetic attention

of the Taxation Enquiry Commission. Broadly, the Association has suggested that all non-Central taxes, such as sales tax on vehicles and accessories, wheel tax, octroi, etc., should be abolished. The Central taxes should consist of two elements—a "duty element" for general revenues based on the same rate as for essential commodities and a "development element" to produce sufficient income for the development of the road transport industry on a long-term plan. The "duty element," which should be earmarked for the Central Exchequer, should consist of an import duty on imported cars, tyres, etc., on the same scale as for essential commodities (that is, 30 per cent.) and an import duty on imported public carriers and their accessories on the same scale as for railway imports (i.e., about 15 per cent. on the average). The "development element" should consist of an excise duty on tyres, a fuel tax on motor spirit in addition to an import duty as recommended under the "duty" element. The M.V.T. Enquiry Committee, it will be recalled, suggested that there should be only two taxes imposed by the States on the motor vehicle user, namely, State's fuel tax and State's motor vehicle tax. Commenting on this suggestion, the Association says that it would help evolve some order out of the present chaos in the sphere of motor vehicle taxation, provided that the fuel tax was linked to a reciprocal agreement by the States, that they would relinquish all claims to further taxation of fuel by way of sales taxes or other imposts, and provided, further, that the tax itself was limited by law to the maximum of As. 6 per gallon proposed by M.V.T. Enquiry Committee.

The Association has further suggested that the Central taxes on road transport should come from the interests for whose benefits roads are required, namely, owners of agricultural lands, carters, owners of animal-drawn vehicles, motor transport owners and the general community. Although the Association insists that, in assessing the incidence of taxation, the relative damage caused to road surfaces by the concerned interests should be taken into account, it recognises that it would not be fair to throw on the cart, the poor man's vehicle, anything more than a nominal burden. The apportionment of the cost of road maintenance should be on the basis of 50 per cent. for motor transport and the rest for the community. Other suggestions made by the Association include: (1) The administration of roads should be in the hands of a powerful organisation—a body similar to the Railway Board. (2) There should be a single non-lapsable road fund for financing road works in the country.

Such, in brief, are the suggestions made by the Association. It will be seen that the Association has done no more than indicate the outlines of the fiscal reform that is needed in the interests of development of road transport. These suggestions merit careful consideration by the Taxation Enquiry Commission, for they correspond closely to the conclusions reached by M.V.T. Enquiry Committee, whose report has earned (except, perhaps, in governmental quarters) a reputation for fairness and sound economic judgment. But neither the Government's road policy nor the tax system of the Central and State Governments, has so far been influenced by the Committee's Report. There have been few signs of a major change in the States Governments' attitude towards the industry. Fundamental needs of the industry have been barely touched. Capital investment for improvement of roads and transport is, as already stated, too inadequate for a country of continental size such as India. It is true that investment on roads does not yield immediate returns. But it is capable, as experience in other countries has shown, of paying very rich dividends over a long period. Indeed, parsimony on roads now will, in the future, prove to be the worst form of economy. It is also necessary to add here that it would be a grievous mistake to think that owners of motor vehicles alone should—or even could—provide the finance for the development of roads. The Governments too must play their part.

BRITAIN TOWARDS A NEW ERA

IN the absence of any momentous happenings in the economic field, the Coronation has drawn to it the thoughts and comments of British financial and economic commentators; even the business world itself, so we are told, has had no time or desire to consider other problems. As an aftermath of the Coronation, journals such as the London *Times* and the *Economist* have found themselves obliged to talk in terms of the end of a holiday and the beginning of a new period—not so much a return to the old as a time when policies must be reconsidered and real efforts made to put the economy on a stronger basis. But the difficulty in translating such a general principle into practical proposals is that, for the time being, the economy has put itself on a reasonably sound basis. Both externally and internally, it is not only stable but has that slight buoyancy which makes for good health. It is, moreover, so obviously difficult for the Government or for industry and commerce to do much more than they are doing that makes exhortation to greater efforts fall a little flat. It is, nevertheless, worthwhile considering the three principal facets of the British economy and what problems are likely to arise in each.

First, there is the question of domestic monetary policy; here a high 4 per cent. Bank rate continues to rule and the question is asked whether credit should not now be made a little easier but, while there are very good arguments for special credit facilities in aid of a particular programme such as that of expansion of farm production, the case for a general easing is harder to make out. The national monetary circulation continues to increase and in Coronation week the fiduciary issue rose to a new peak of £1,600 million. Bank deposits in May showed a further rise and, though bank advances showed a drop, such is traceable to the repayment of a block of corporation advances out of new money raised from the market; on balance, the general trend of advances appears to be upwards. In other words, the domestic economy seems to have reconciled itself to the dearer price of money and, apart from the special cases referred to, monetary stringency does not seem to be holding back investment.

The second facet is that of home industrial production, which as our London Correspondent explains in his despatch this week, published elsewhere in this issue, has now reached a new high level. There is, for the time being, nothing on this front to show concern about.

The third facet is that of external monetary and trade policy. The external economy is about in balance, and sterling is strong both relatively to the E.P.U. and the dollar area. But its strength does depend upon the present control over imports which is still more rigid than it was two years ago. It is true that the Treasury has been able to make some concessions such as allowing the import of dollar feeding stuffs without restriction, but this has been done because of certain peculiar circumstances. The import of dollar feeding stuffs is an interesting example of how a dollar problem can be exaggerated. The Treasury had previously tried to restrict imports of feeding stuffs from the dollar area so as to encourage them from non-dollar areas. But now that prices of feeding stuffs have fallen substantially, the total import cost is lower, although imports from the dollar area are relatively dearer. With the domestic farmer having a protected market for his home-produced feeding stuffs, the total import of feeding stuffs is limited by the power to consume and the freedom of dollar purchases has not caused a flood of dollar buying.

It would, however, be wrong to assume that the "derationing" of dollars would have the same effect as it seems to have had for most domestic commodities, that is, inviting a drop instead of a rise in demand. The external economy of the sterling area, in general, and of Britain, in particular, is still too precariously balanced for it to be safe to allow a substantial increase in dollar spending. This is the facet of the economy on which most attention is likely to be concentrated in the near future—and no doubt the facet which the Commonwealth Prime Ministers will be particularly considering these days. The early hopes of special American aid towards sterling convertibility would appear to have vanished, and the sterling area would be well advised to maintain its present satisfactory state of balance, in spite of the need for the continuance of the present restrictions as a matter of general principle. There should, nevertheless, be relaxations, in specific cases, for example, for commodities such as timber for housing where substitutes are so much more costly. Such a policy of weighing the advantage of increasing the imports of particular commodities is much likelier to pay good dividends than any indiscriminate policy of currency relaxation. The same applies to the general question of import policy, that is, if there is to be more liberality in imports, let this be applied to particular commodities and not as a general principle.

U. S. AID TO INDIA

THE recent visit to this country of two prominent Americans, Mr. John Foster Dulles, the U.S. Secretary of State, and Mr. Harold E. Stassen, Director of the Mutual Security Agency, seems to have resulted in a better understanding of India's economic needs by that country which has distinguished itself by acts of generosity unparalleled in the world's economic history. Although India cannot expect aid as a matter of right, many have often compared the munificent gifts which the U.S. has given to Europe with the tiny sums made available to this country. The comparison is chiefly the result of lack of appreciation of the European economic and political problems. Europe had suffered relatively more than India from the effects of war, and was also, in a sense, more susceptible to extremist political ideologies than this country. European needs were, therefore, deemed more urgent. But there has been a realisation, albeit somewhat belated, that exclusive preoccupation with European rehabilitation carries the danger that equally urgent needs in other parts of the world might be neglected. In his nation-wide broadcast from Washington last week, Mr. Dulles stated that the U.S. Government should pay more attention to the Near East and South Asia. He added: "Our post-war attention has been primarily given to Western Europe. That area was and is very important; but not all-important."

A concrete result of this new outlook is that, despite the measures of stringent economy which are being pursued in the sphere of governmental expenditure, the U.S. Government has decided to provide, during the 1953-54 fiscal year, $110 million for economic and technical aid to India. Giving this information in the course of a recent Press Conference at Washington, Mr. Stassen stated that of the total aid of $110 million, about $80 million would be in the shape of economic aid and the balance, namely, $30 million, in technical aid. Mr. C. D. Deshmukh, India's Finance Minister, welcomed this announcement. He said: "It is a good sum, and I cannot feel dissatisfied. That is the order of the sum which I should say is both adequate and capable of being absorbed. It is about the right size." In making these remarks, Mr. Deshmukh was merely endorsing what Mr. Stassen had stated in the Press Conference referred to above. The latter had stated: "We think that the figure of $100 million is about right for the country's capacity."

It is true that the aid—large as it is—falls short of what some of the leading Americans have themselves thought desirable. Mr. Chester Bowles, a former U.S. Ambassador to India, mentioned recently that an aid of the order of $600 million would assist India in implementing its plans for economic development. Mr. Paul Hoffman, the former head of the European Co-operation Administration, states, in an article to the American magazine *Systems*, that, if the U.S. were to spend 200 million dollars a year over the next five years in aid to India and Pakistan it would contribute significantly towards making a success of two of the most vital political world experiments—the experiment in democratic way of life. He held that the communist victory in China could have been avoided in 1945 with an expenditure of $1,000 million on a five-year rural reconstruction programme.

It would, however, be wrong to overemphasise the mere magnitude of financial aid. What really matters are the capacity to absorb such aid and its utilisation on the right lines. If India utilises wisely the aid it has received so far from the U.S. and the one now promised and shows evidence of political stability, it will be justified in expecting and asking for further aid from the U.S. Mr. Stassen had probably this consideration in mind when he said: "We will look at the situation again next year and the co-operation we receive (from India) in the meantime will have a lot to do with our attitude then." Mr. Deshmukh expressed both the anxiety and the hopes of all lovers of freedom and of all those who have the country's interests at heart when he said that, as India's Plan developed and its needs increased, the aid might be stepped up in the "light of the use we make of the funds and other circumstances." It is to be hoped that all those who are entrusted by the electorate with the responsibility of governing this country will take note of the necessity for spending the resources in their hands prudently and in a manner that will produce maximum results in the drive for raising the living standards of the people.

POSITION OF MARKETS HEALTHY

SOLUTION FOR SUGAR MUDDLE—AN IMPRESSIVE JUDGMENT—STANVAC DEBENTURES

THURSDAY, 5 P.M.

MARKET GOSSIP

AT the time we wrote the notes for this page last week, there was no fresh news about Korea. We had not the slightest inkling that the Communists would so suddenly give up their intransigent attitude as they did on Friday last by practically accepting all the terms of the United Nations on the question of prisoners of war and thus pave the way for an early armistice in Korea. Nevertheless, the dramatic developments on the Korean front have not brought about any material change in the fundamental trends of markets. The downward trend in values, which had commenced a few days earlier, was no doubt accelerated a little by the news about Korea envisaging an early end of the three year-old shooting war. But the downward trend did not last long; it proved to be a very short-lived affair. Prices in all the markets that had witnessed a fall are higher again, though not as high as they were before the recession began last week. The table in the centre of this page will show the extent of recovery that has taken place from the lowest levels registered early in the week.

* * * *

In all the markets, the fluctuations in prices were principally the result of speculative activity. As was mentioned by us last week, the recession was due mainly to liquidation by tired bulls. There was also a certain amount of short-selling but it was of a secondary nature. The subsequent recovery was due chiefly to bear covering and partly to some replacement buying. The fact that markets recovered as quickly as they lost ground reflects their inherent strength and sound technical position. An analysis of the position of the principal industries and commodities will show that the markets are right. Steel, sugar, textiles, coal, cement, and many branches of engineering industries are doing fairly well. Even the tea and jute industries, which had been passing through an acute depression not long ago, are looking up once again. Similarly, the commodities also are in a relatively better position than they were a year ago. Stocks of none of the principal commercial crops grown in India are plentiful now. The technical position of cotton is very sound. Stocks at the end of the current season will be appreciably less than those brought in, while consumption by mills is running at a high level. A smaller crop in groundnut has imparted strength to oilseeds as a whole but, unlike cotton, the prospects for this crop are somewhat uneasy, in view of the fact that Indian oilseeds are out of parity with world prices; there is no doubt that, at some time or other, they would fall in line with world prices. Raw jute has moved up considerably from the rock-bottom low levels to which they had slumped in March-April last. Absence of rains during sowing time and the earlier low prices seem to have adversely affected the size of the jute crop for the next season. This in turn has helped the raw jute market to regain much of its lost ground. Tea is earning good prices, the first auction of the 1953-54 season revealing a firm trend. The price of sugar is still standing at high levels, despite the Food Minister's statement that he proposes to take special measures to bring it down. In the case of both tea and sugar, the outlook for the next year has changed in favour of producers, owing to deliberate steps taken to cut down production in the principal producing countries. This brief round-up of markets should be sufficient to indicate that the end of the Korean war will make no material difference to them and that the chances of a fall in prices are slender.

* * * *

After staging a recovery from the low levels recorded last Friday, the share market in Bombay is once again listless. Not much activity is reported in its confrere at Calcutta either. Some enquiries are reported for jute and tea shares in the latter centre, but they are of a highly selective nature. Operators in Dalal Street are now looking forward to the Government's decision on the retention price for steel. It is reported that the Tariff Board has already forwarded its findings and recommendations to the Government. Some operators in the market are expecting an announcement at any time now, but, considering that the Prime Minister and the Finance Minister are away from the Capital, it will not be surprising if their expectations do not materialise. It looks as though a delay of a few weeks more is inevitable. Well-informed circles in the market expect an increase of about Rs. 32 per ton for 1952-53 and of about Rs. 50 per ton for 1953-54.

* * * *

There is yet no speculation in the market on the dividends of the Tata Iron and Steel Co., Ltd., for 1952-53, even though the closure of the share transfer books has been announced. Perhaps, this is due to the firm belief that the management of the Company is not likely to alter the dividend level either way. In fact, it will be true to say that there is hardly anyone who expects the Company to enhance further the already handsome level of dividends. Such an act, they feel convinced, will be frowned upon by the Government. It would, therefore, be a pleasant surprise to the vast majority of shareholders of the Company if the Directors were to recommend dividends higher than those paid for 1951-52. Be that as it may, the meeting of the Company's Directors for deciding the dividend are still weeks ahead. Last year, the dividends were announced on 17th July. There is no reason to expect that it would be announced earlier this year. If anything, it might be delayed by a week, the date tentatively fixed for it being 24th July, 1953.

* * * *

After a shake-out early in the week, silver, in the bullion market, has improved. Over the week, ready silver has gone up by nearly Rs. 2 and forward silver by about Rs. 3. News about Korea has been ignored. The rise in the price of the white metal is explained partly by the technical position of the market and partly by good offtake by up-country centres. It would appear that the main bull operator, who had cornered large stocks at the time of the last settlement, has been selling in the ready section and buying in the forward. It is believed that he must have already unburdened himself of a substantial part of his holdings of actual silver, while accumulating, at the same time, fresh purchases in the forward contract. In this task, he seems to have been helped by the excellent demand for spot silver from up-country markets most of which had become bereft of stocks as a result of the corner in the last settlement. Following this operation, the premium for ready silver has narrowed down. But it may rise again if this operator decides to squeeze the bears again in the next settlement. For a person with large cash resources, such squeezes will not create much difficulty inasmuch as the floating stocks of silver in the whole country are said to be less than 5,000 bars and as there are still countless operators who prefer to play the role of bears even when they know that the odds are against them. They would appear to be banking on the belief that the rate of consumption of silver in the country has declined to such an extent that even the small stock of 5,000 bars is more than sufficient to meet it. While the future alone can show how far this view is correct, the fact remains that the country is not getting any silver from outside and that its requirements will have to be met only from the limited supplies within the country.

* * * *

Gold has been steadily gaining ground. In the previous week, its value showed a net gain of Re. 1-8; there has been a further appreciation of Re. 1-4 this week, raising the total gain in the last fortnight to Rs. 2-12. This improvement is attributable to diminishing stocks in the market, larger offtake and poor arrivals. Smuggling of gold into the country is said to be practically nothing now, while some of it, it is said, is being smuggled out of India into Burma. So far, the supply of Mysore gold to the market has not fallen, but it is expected to do so after three or four months, consequent on the closure of one of the Kolar mines and the cut in power supply in Mysore. In a way, this is a significant development. The closure of the Ooregaum mine belonging to the Kolar group means that the price of gold has now reached a stage at which mining of low-grade ore or working of deep high-cost mines ceases to be a paying proposition. When this happens, the production of gold will decline and with it the supplies for sale in the market. This, in turn, will impart a steady, if not bullish, tone to the market. In fine, there seems to be a floor below which gold in India cannot go; this floor will always be well above the rupee equivalent of $35 (the rate at which the U.S. Government buys gold) at the official rate of exchange.

* * * *

While the trend of gold in India has been firm, it has been downward in the international free markets. Far Eastern, Middle Eastern and European centres are all depressed, with prices in these markets standing near the pre-Korean low levels. In European markets, the rate for free gold is now as low as $36.45 an ounce, the lowest level seen for many years. The depression in all these markets is attributed to the bright prospects of peace in Korea. Since cessation of hostilities in Korea will lead to an easing of the international political tension, European market observers feel that there may be not only an end of hoarding of gold as a war hedge, which has been such a big factor in the free gold markets in recent years, but also some liquidation of stocks which gold hoarders in many parts of the world have been building up.

How far will the price of gold go down in the free markets of the world? Will the premium which gold commands in these markets over the U.S. support price of $35 completely disappear? The following extract from the *Financial Times*, London, gives pertinent answers to these queries:

"It is possible, indeed, that there will soon be nothing to stop the free market price of gold moving down to within close distance of the official parity. One result of such a change in the market situation would, of course, be to put gold-producing countries under a pressure to resume the marketing through official channels of a substantial part of their output, a development that would doubtless be welcome by central banking institutions anxious to obtain supplies of new gold for reinforcing official reserves. There is a view in the market, however, that the theory that the world official price of gold must eventually rise will continue to give rise to purchases of the metal for private account whenever the free price moves down to within close distance of the official parity figure—on the argument that such transactions give a modest chance of showing a substantial profit without running any risk of loss. The argument assumes, of course, that any reduction in the official price of gold now or in the future is quite out of the question."

* * * *

The response to the first issue of the 3½ per cent. National Plan Bonds was encouraging. It is not the fact that the issue was fully subscribed that is the cause for satisfaction, because, being a cash-cum-conversion issue for an amount well within the oustanding of the maturing loan, there was no question of the new loan being not fully subscribed. The real cause for satisfaction is provided by the large cash subscriptions to the new loan. These aggregated as much as Rs. 23.3 crores, an amount which is upto our expectations; we had indicated in these columns last week that cash subscriptions were likely to be between Rs. 20 and Rs. 25 crores. Some observers had pitched their expectations as high as Rs. 45 crores; they may, therefore, feel that the new loan is not such a great success. But those who feel thus are not many. In any case, the Government and the Reserve Bank are fully satisfied with the result of this loan.

* * * *

The balance of the new loan not covered by cash subscriptions, namely, Rs. 51.81 crores, was taken up by the holders of the 3 per cent. 1953-55 loan, including the Reserve Bank, by conversion. In the absence of information as to the exact amount converted by the Reserve Bank and the Imperial Bank, it is difficult to judge the extent of response from the public holding the maturing loan. Unofficial estimates place this figure at Rs. 19 crores, but this includes the conversion done by the Imperial Bank also. If this figure is correct, it means that more holders than we expected have elected to receive payment for the maturing loan in cash. According to present indications, it seems that cash repayment of the 1953-55 loan will be of the order of Rs. 10 to Rs. 12 crores. This sum is, however, well within the total cash subscriptions.

* * * *

Enquiries made in market circles reveal that the major portion of cash subscriptions to the new loan was accounted for by banks. Five or six of the big banks themselves are reported to have taken up a little over Rs. 10 crores. Although it was clearly evident that the Government's intention in offering a cash-cum-conversion loan was to obtain as much cash as possible, there seems to have been a certain amount of "stagging" in the belief that there would be partial allotment and that the issue would be quoted at a premium soon after the list was closed. This was purely an error of judgment, which no experienced market man would have made. After all, immediately after the announcement of the new loan, the Gilt-edged market became distinctly quiet, with an all-round fall in prices. In these circumstances, it is difficult to understand as to how some expected the new loan to be quoted at a premium. Their calculations having gone awry, the "stags" seem to be in a hurry to liquidate their purchases. Hence, the slight discount of half anna, at which the new loan is being quoted at present.

* * * *

The long-awaited debenture issue of the Stanvac Refining Company of India Ltd. is now on the market. The list formally opens on the 15th inst., but, as the entire issue has already been privately subscribed, there is nothing left for the public. The total amount of the issue is for Rs. 4 crores, of which Rs. 1½ crores have been sold in Bombay and Rs. 1 crore in Calcutta. The balance of Rs. 1½ crores has been absorbed by foreign institutional investors—mostly British and Canadian—operating in India. The debenture carries interest at the rate of 3½ per cent. and is repayable by drawings in instalments of Rs. 80 lakhs in 1964, 1965 and 1967 and the entire balance in 1968. The Company, however, has the option to redeem all the debentures on 1st May, 1963, at a premium of 1 per cent. The whole issue has been guaranteed by the parent Company, the Standard Vacuum Oil Company, in the U.S. The issue is so popular with investors that it is already commanding a premium of 2½ to 3 per cent.

* * * * *

Sugar is in the news again. During the last three months the price of a bag of sugar has shot up by about Rs. 7 to Rs. 90-96½. This gave rise to some speculation about the possible reimposition of controls on sugar. The inordinate delay in the announcement of release orders to sugar factories also provided some basis for this speculation. The delay was clearly inexcusable. At any rate, it was inexplicable. The result is that, despite the release orders to the tune of 1,50,000 tons—had these come earlier the situation might have eased considerably—there are no signs of any decline in sugar prices. All this has roused the wrath of the

IRREGULAR TREND IN EQUITIES

UNDERTONE QUIET

(From Our Own Correspondents)

BOMBAY, 11*th June*

AN irregularly downward trend in equity values was noted on the Stock Exchange during the week under review. Early in the week, the market suffered a landslide by a wave of selling pressure, brought about by better prospects of peace in Korea, following the Communists' acceptance of the U.N. plan for armistice. The news hit almost all the principal markets in the City, hammering down prices over a wide front. Having suffered the damage thus, the share market remained unaffected when, on Monday this week, the actual announcement came to the effect that an agreement had been signed at Pau Mun Jon on the issue of exchange of prisoners of war. On the contrary, equities regained equilibrium and speculative counters, under the leadership of Tata Deferreds, displayed a rallying tendency from Monday onwards on revival of speculative support and short covering. The firmness in the bullion and commodity markets provided a stimulus to trading in shares. But the rise in share values did not persist long as operators preferred to liquidate their holdings.

The market could not make a decisive pattern in the absence of any sustaining factor. Pending the announcement of the Government's decision on the retention prices for steel, operators showed an apathy to extend commitments. Of course, from a long-term point of view, the Indo-Pakistan and Indo-Ceylon talks, with a view to settling the outstanding issues, are expected to bring about better trade relationships between India and the two countries. The same was also expected of the proposed trade talks between India and Burma. Yet operators preferred to await further progress in this direction. Activity on the Exchange was, therefore, on a restricted scale.

In the steel section, Tata Deferreds nose-dived on Friday last from Rs. 1,915 to Rs. 1,845, but in the recovery which started on Monday they came to touch Rs. 1,906-4 yesterday. With the tapering off of support and intervention of profit-taking at this level, the scrips reacted to close to-day at Rs. 1,887-8. Tata Ordinaries moved down from Rs. 333-8 to Rs. 322-8 early in the week and after hardening to Rs. 333, softened once again to Rs. 329-8 at the close. Indian Irons suffered a setback in early dealings from Rs. 25-9 to Rs. 24-11. It, however, came up to Rs. 25-5 before finishing at Rs. 25-1½.

Textile shares suffered heavy reverses early in the week, and the subsequent recovery process did not result in any consolidation of the gains, as selling pressure pressed down values towards the close. Bombay Dyeings were hammered down from Rs. 393-2 to Rs. 372-8 on Friday last. It, however, came up to Rs. 388-12 yesterday, before being brought down again to Rs. 383-2 at the close. Kohinoors wound up with a loss of Rs. 4-8 at Rs. 300, after touching Rs. 303-12 yesterday, Central Indias dropped Re. 1-8 to Rs. 163-8, Century Rs. 2-4 to Rs. 274-4, Finlays lost as much as Rs. 7-8 to Rs. 322 and Gokaks shed Rs. 3 to Rs. 215-8. Indore Malwas disclosed a loss of Rs. 3-2 to Rs. 93-12 and New Greats of Rs. 3-8 to Rs. 152. Simplex was marked down by Rs. 3 to Rs. 181-8 and Standards were pressed down by Rs. 7-8 to Rs. 306-4. Svadeshis stood at Rs. 250 with a loss of Rs. 2. Swans fell sharply by Rs. 13-12 to Rs. 440. Morarjis moved down by Rs. 6-4 to Rs. 195 and Podars by Rs. 2 to Rs. 127-8.

Bank shares were a quiet feature with widespread fractional losses. Barodas were placed at Rs. 111-8, showing thereby a loss of As. 8 over the week. Central Old were fractionally lower at Rs. 64-4 and their new shares suffered a loss of As. 8 at Rs. 65. Imperial Fully Paids drifted lower by Rs. 2-8 to Rs. 1,865 and the Contributories by as much to Rs. 452-8. Indias eased by As. 8 to Rs. 156-8. United Commercials were, however, unchanged at Rs. 36-4.

Public utility shares were no exception to the general trend. Ahmedabad Electrics reacted to lose Re. 1-4 to Rs. 108-7. Bombay Suburbans lost Re. 1-4 to Rs. 126-4. Surat Electrics dropped from Rs. 133-12 to Rs. 130-10. Tata Hydros shed a rupee to Rs. 150. Tata Powers declined from Rs. 1,511-4 to Rs. 1,498-12. Andhra Valleys moved down by Rs. 5 to Rs. 1,427-8. Their Preference shares, on the other hand, advanced sharply from Rs. 1,162-8 to Rs. 1,188-12.

A general downward trend was visible in the miscellaneous section. Associated Cements were placed a rupee lower at Rs. 171. Belapurs finished with a loss of Re. 1-8 at Rs. 235-8, after having touched Rs. 238 yesterday. Bombay Burmahs were taken down to a low of Rs. 360 from last week's closing of Rs. 375, but finished at Rs. 373-12. B.I.Cs. were quiet at Rs. 8-11. On rumours that an interim dividend would be declared, National Rayons came to be favoured and the shares were lifted from Rs. 99-8 to Rs. 103-8, before closing at Rs. 103-2. Tata Chemicals lost As. 3½ to Rs. 9-5 and Tata Oils As. 12 to Rs. 33. Wimcos receded by Rs. 10 to Rs. 210.

In the transport group, Scindias finished with a loss of As. 4 at Rs. 13-3. Air-Indias were in demand to go up by Rs. 2-8 to Rs. 85-8 and Air-India Internationals by a rupee to Rs. 105. Premier Automobiles were a shade better at Rs. 45-8. Hindustan Motors, however, eased from Rs. 4-10 to Rs. 4-6. In the engineering and mining group, Aicorks were done at Rs. 297-8 *ex-div.*, as against Rs. 317-3 *cum-div.* Premier Constructions shed, on balance, Rs. 2-4 at Rs. 82-4. The termination of the labour strike in Indian Copper Corporation led to a small revival in its shares from Rs. 2-15½ to Rs. 3-0½, but relapsed to Rs. 2-15½. Shivrajpurs dropped Re. 1-4 to Rs. 54.

Calcutta Stock Exchange

CALCUTTA, 9*th June*

Steady conditions were maintained on the Calcutta Stock Exchange during the week. Gains were confined to selected counters only, and to tea shares generally. The upward movement was arrested by reports of heavy losses on the Bombay market, following the near-conclusion of peace in Korea. The recovery since then was painful, but losses were erased to some extent.

The keen attention shown to tea shares and the investment support in evidence for Dooars and Assam gardens, indicate that the industry has passed the recent crisis, and that there has been a revival of confidence. A large number of transactions took place in jutes, and this was no surprise at all in view of the steadiness in the goods market and doubts regarding the raw jute output this season.

Bank shares were extremely quiet. Imperial Fully Paids receded to Rs. 1,850 from Rs. 1,855, and United Banks were lower at Rs. 3-12. Hindustan Mercantiles at Rs. 10-8 lost As. 4, while Hinds were fractionally better at Rs. 20.

Only nominal interest was provided to coal shares, Western Bengals being steady at Rs. 5-1. Burrakurs were put through at Rs. 10-5, while East Indians eased fractionally to Rs. 24-8 and again to Rs. 24-4. Samlas were unchanged at Rs. 7-8, Dhemo Mains at Rs. 11-4, lost one anna only, Standards at Rs. 20-4 maintained last week's improvement, and Pench Valleys were better at Rs. 21-4.

Tea shares were bought at hardening rates. Sonai Rivers advanced to Rs. 5-15 from Rs. 5-7, New Dooars to Rs. 291 from Rs. 278, and Betjans to Rs. 25 from Rs. 24. There were buyers for Gungarams at the higher rate of Rs. 185, Bishnauths changing hands at Rs. 27-8, as against Rs. 25-8 earlier. In transactions, Teloijans improved to Rs. 10-10 from Rs. 9-14, Dhelakhats to Rs. 11-8 from Rs. 9-10, and Naga Hills to Rs. 13-5 from Rs. 12-4. Other counters that showed advances were Bormahajans, Engos, Tezpores, Murphalanis, Tezpores, Hantaparas, East Indians, Patrakolas, Choonabhuttis, and Gopalpurs. Hanzqua were wanted at Rs. 14-13, Brooke Bonds realised Rs. 11-8.

Jutes were an interesting section, and claimed a good portion of the funds available to the market. A recession set in during mid-week, but the losses were made good in part by a subsequent recovery. Speculative Howrahs opened at Rs. 25-4 and after going up to Rs. 25-6 gave way to Rs. 24-12, but later improved to close at Rs. 25-8. After being higher at Rs. 140, Indias receded to Rs. 136, Reliances remaining steady at Rs. 16-5. Ganges were shown attention at only Rs. 78, while Fort Glosters were lowered to Rs. 347 on profit-taking. Anglo-Indias were lower at Rs. 236-8, Lansdownes at Rs. 147, Naihattis at Rs. 126, and Caledonians at Rs. 171.

There was nothing spectacular in the engineering section, where Indian Irons after falling to Rs. 24-14 from Rs. 25-11, recovered to close at Rs. 25-3. During May, the Company produced 57,180 tons pig iron, 32,850 tons steel ingots and 19,700 tons semis and finished steel. Jessops were steady and taken up to Rs. 26-2 as against Rs. 25-11 earlier. Indian Standard Wagons came to business at Rs. 89, but later declined to Rs. 88.

A number of features was provided in the miscellaneous section. Following news of resumption of work, Indian Coppers were attended at the fractionally improved rate of Rs. 3-1, while Rohtas Industries were systematically pushed to Rs. 10-1 from Rs. 9-11. Digwarrah Rubbers were supported at Rs. 18-8, and Dharbhanga Sugars were raised to Rs. 10-15 from Rs. 10-10. Indian Cables were traded at Rs. 19, Titaghur Papers at Rs. 36-2 being steady.

* * * *

Madras Stock Exchange

MADRAS, 9*th June*

The notable event during the week was the partial restoration of the power cut in the Southern districts of Madras and the restoration of full supply in the city of Madras. This did not, however, have any appreciable effect on the sentiment of operators, as it had already been anticipated by the market. Besides, there were no encouraging factors to stimulate activity on the Exchange. Consequently, business done was comparatively low. Off and on the market, however, came in for selective enquiry, particularly in textiles and teas, induced by favourable advices. There was, also, some selling pressure in a few other scrips. As a result, prices generally depicted a sprinkling of both losses and gains, on balance.

Textiles proved the bright spot among the various sections. Coimbatore Pioneers shot up from Rs. 102 to Rs. 108. Cannanores gained Rs. 5 to Rs. 100. Buckinghams firmed up by Rs. 3-8 to finish at Rs. 122 and Bangalore Woollens by Rs. 2-8 to Rs. 252-8. Balasubramanias 'B' gained Re. 1-8 to Rs. 54 and 'A' Re. 1 to Rs. 33. Saradas, however, lost Rs. 4-8 to Rs. 71. Janardanas and Jawhars were slightly lower at Rs. 38 and Rs. 4-10, respectively.

Among plantings, teas came in for some enquiry, on encouraging advices from London. Peermades improved by As. 8 to Rs. 27-8. Chandramalais were higher by As. 2½ to Rs. 2-11. Parksides, however, lost As. 8 to Rs. 13. Ouchterlonys suffered As. 2 to Rs. 3-14. Chembras were fractionally lower at Rs. 2-13½.

Rubbers were comparatively better. Nilamburs gained As. 2 to Rs. 9. Be Bes were higher by As. 1½ at Rs. 1-15½. Velimalais and Pullangodes improved by an anna each to Rs. 2-6 and Rs. 2-7, respectively. Mercaras, however, lost As. 2 to Rs. 3. Cochin Malabars receded by an anna to Rs. 6-6. Rajagiris were slightly lower at Rs. 10-6.

Coffees were steady. Nil Neergundis improved by As. 4 to Rs. 3-12. Consolidated Coffees gained As. 2 to Rs. 18-4 and Coffee Lands an anna to Rs. 10-10. Rajendras, however, lost As. 8 to Rs. 7-4.

Among miscellaneous scrips, Guntur Electrics shot up from Rs. 90 to Rs. 99. Cochin States gained As. 3 to Rs. 8-14. Travancore Sugars improved by As. 6 to close at Rs. 5. India Cements were up by As. 2 at Rs. 16-4. Mysore Glass and Enamels, however, fell by As. 8 to Rs. 4 and Bruntons by As. 2 to Rs. 3-1. Mysore Stonewares were unchanged at Rs. 10. The Directors have announced a dividend of 7½ per cent. for the year ended 31st March, 1953, as against 10 per cent. in the previous year.

Notices

KAMANI ENGINEERING CORPORATION LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Seventh Ordinary General Meeting of the Shareholders of the Company will be held at the Registered Office of the Company, Kamani Chambers, Nicol Road, Ballard Estate, Bombay, on Friday, 26th June, 1953, at 4 p.m. (S.T.), to transact the following business:—

1. To receive and adopt the Directors' Report and the Audited Profit and Loss Account and Balance Sheet for the year ended 30th September, 1952.
2. To declare dividends on Preference and Ordinary Shares.
3. To elect a Director in place of Shri Nyalchand Moolchand Sheth who retires by rotation and is eligible for re-election under Article 120 of the Articles of Association.
4. To elect a Director in place of Major General Shanta Shumsher Jung Bahadur Rana who retires by rotation and is eligible for re-election under Article 110 of the Articles of Association.
5. To appoint Auditors for the current year and to fix their remuneration.

The Transfer Books of the Company will be closed from 13th June, 1953, to 26th June, 1953, both days inclusive.

By Order of the Board.
For KAMANI BROTHERS LIMITED,
R. KAMANI,
Director,
Managing Agents.

BOMBAY, 21*st May*, 1953.

Note.—The dividends, if sanctioned, will be paid at the Company's Registered Office at Kamani Chambers, Nicol Road, Ballard Estate, Bombay, on and from Monday the 20th July, 1953, to those shareholders whose names stand on the Company's Register on the 26th June, 1953.

THE CALCUTTA TRAMWAYS COMPANY, LIMITED

(Incorporated in England)

NOTICE IS HEREBY GIVEN THAT THE Preference Shares Transfer books will be closed from the 17th to 30th June, 1953 (both days inclusive), for the preparation of Dividend Warrants in respect of the Interim Dividend of 2½ per cent., less Income-tax, payable on the 1st July, 1953, on account of the profits for the year ending 31st December, 1953.

By Order of the Board,
A. C. T. BLEASE,
Agents.

P-4, MISSION ROW EXTENSION,
CALCUTTA, 9*th June*, 1953.

NEWS IN BRIEF

THE Bhakra and Nangal projects are expected to serve electricity to Rajasthan on two points at Ganganagar and Rajgarh in Bikaner Division by next year.

Fifty-seven per cent. of the 74.67 million acres in India under paddy in 1952-53 was accounted for by the States of Bihar, West Bengal, Madras and Orissa.

The West Bengal Government has reintroduced a system of modified rationing as a result of increased distress in some parts of the State. More than nine lakhs people have been brought under rationing.

The first stage in the construction of the dam across the Tungabhadra at Mallapuram will be completed by the end of this month. It has been decided to open the reservoir on 1st July for irrigation.

The Union Food Minister has proposed to take measures to bring down the prices of sugar, by which the Government can requisition sugar stocks at a given price in different areas and sell them to consumers at a fixed retail rate. He does not propose to reimpose controls.

It has practically been decided to take up the Tungabhadra Hydro-electric Project, but the point that remains to be settled is whether it is to be included in the first Five-year Plan or the second. The matter is engaging the attention of the Government of India and the Planning Commission.

The Government of India has decided to withdraw the dearness allowance granted to those of its officers drawing salaries exceeding Rs. 1,000 per month in three stages spread over two years, subject to necessary marginal adjustments. This will involve a saving of about Rs. 40 lakhs to the Central Exchequer.

The Railway Board has approved of the construction of the Kandwa-Hingoli metre-gauge line. This line, when built, will provide a through connection between Bhatinda in Patiala in the North and Trivandrum and Tuticorin in the South. The proposed link is 187 miles long. The total cost of the link is estimated at Rs. 7 crores.

The Government of India has invited 45 countries to take part in the International Exhibition of Low-cost Housing which will be opened in New Delhi next winter. Private firms and associations connected with house-building abroad are also being contacted to secure their participation. The exhibition will be the first of its kind in the East.

The Madras Government has restored in full the cut in power supply in Madras City and in part in the southern districts. A 50 per cent. cut is operating now on all but essential services. This will be reduced to 25 per cent. This follows the improvement in water storages of the three hydro-electric reservoirs in the State.

Inadequate transport facilities during the last six weeks are reported to have created a "grave situation" in respect of supplies of cotton and coal to textile mills in Ahmedabad. In a statement to the Press, the Ahmedabad Millowners' Association has urged the Railway Ministry to expedite the movement of cotton and coal to Ahmedabad to avert the "avoidable unemployment" of textile workers.

Consequent on the fall in the price of spelter, the controlled selling prices of galvanised, telegraph, signal and barbed wire produced by the Indian Steel and Wire Products Ltd. have been reduced with effect from 1st June, 1953. The reduction in price is Rs. 80 per ton in the case of tested wire and Rs. 50 per ton for untested wire.

The Pharmaceutical Enquiry Committee will hold its third meeting at Hyderabad on the 22nd June, 1953. After visiting some of the pharmaceutical establishments at Hyderabad and holding discussions with the representatives of the State Government and other interested parties, the Committee will proceed to Bangalore, the Nilgiris and Madras for studying the present conditions of the pharmaceutical factories in these places. During its stay at Hyderabad, Bangalore, and Madras, the Committee will have consultations with the State Governments and associations of industries and trade.

The Government of India has extended the date of suspension of the operation of clauses 25 and 26 of the Cotton Textiles (Control) Order, 1948, from the 30th inst. up to 30th September, 1953. The effect of this decision is that mills and dealers will continue to buy or sell or have in their possession time-barred cloth or yarn in packed or open condition till the 30th September, 1953. Dealers can dispose of time-barred cloth or yarn in loose condition without getting it T.C.B. stamped by State Textile Controllers. Dealers can also dispose of any T.C.B. stamped cloth or yarn, even though the time limit for disposal of such cloth or yarn has expired.

The Governments of the U.S. and India signed, last week, two supplementary operational agreements under the supplementary Indo-U.S. Technical Co-operation Agreement of November, 1952. One of the agreements seeks to provide technical assistance, equipment and supplies for the Chambal River Valley Project and the Pathri Power Plant of the Ganga Canal; the joint cost of these projects will be $1,669,873 and Rs. 1 crore. The other agreement relates to a project for the establishment of a Central Labour Institute in India. The contribution of the U.S. Government will be $100,000 and that of the Government of India Rs. 5 lakhs. With the signing of the two agreements, the entire sum of $38.35 million, provided by the U.S. Government under the supplementary Indo-U.S. Technical Co-operation Agreement of November last, has now been allocated.

The Central Board of Revenue, Union Ministry of Finance, has brought out a small booklet entitled *How to Fill in Your Return of Income*. Printed in a dozen regional languages, this booklet of official instructions is intended to help the taxpayer in preparing his return. It summarises the important requirements of the income-tax law and rules and draws the assessee's attention to exemptions and deductions to which he may be entitled and which may reduce his tax. Apart from explaining when and where a return is to be filed, this "guide book" contains precise information on the rights of appeal and the way a return is to be filled. It gives definitions of technical words relating to income-tax, which should help in obviating some of the common difficulties that a taxpayer usually encounters. A copy of the booklet can be obtained free on request by any assessee from his Income-tax Officer.

The Bombay Agricultural Produce Markets (Amendment) Act, 1953, and the Bombay Land Acquisition (Bombay Amendment) Act, 1953, have been published in the *Bombay Government Gazette* of 6th June, 1953. The Agricultural Produce Markets (Amendment) Act redistributes the seats on the Market Committees among the various constituencies, so as to give increased representation to agriculturists. Further, it modifies the procedure for acquisition of land for the market yard, so that such proceedings can be started by the Government on its own behalf, and even completed, if possible, before the Market Committee is established. The Land Acquisition (Bombay Amendment) Act amends the definition of "public purposes," so as to include acquisition of land for the purposes of the development of areas and the subsequent disposal of the land with the object of securing further development. It also empowers the Government to take immediate possession of land required for the maintenance of road communications in an emergency and in connection with emergent works caused by breaches in rivers, channels and tanks.

* * * *

From Abroad

The Japanese Government is reported to be seriously considering relaxation of regulations governing foreign investment.

The world's airlines flew more passenger miles in 1952 than in any previous year, while maintaining the best world-wide safety record in aeronautical history, according to the International Civil Aviation Organisation.

The U.S. has slipped from the position it held at the end of last year as the leading exporter of cotton textiles, according to the President of the Textile Export Association. Both the U.K. and Japan have moved ahead of the U.S. and India has become a "vigorous runner-up," especially in Africa and the Far East.

The British Board of Trade has announced that imports at the rate of one ton of linseed oil (or three tons of linseed) for every two tons of linseed oil bought from the Ministry of Food will be allowed from 1st July, 1953, and will continue until further notice. Imports of linseed and linseed oil can be made from any source.

The freezing of the general interest rate at its present level and continued credit restrictions for another year were decided upon by the Swedish Riksdag in a recent debate on the Government's economic policy. The Liberal and Conservative Party leaders favoured an increase in the general interest rate.

Post-war expansion of the U.S. steel industry has increased mill capacity by 26,000,000 tons. The estimated 1953 capacity of the industry is more than 117,500,000 tons. Additional capacity installed since World War II alone is more than two-thirds of Soviet Russia's annual steel production, according to the American Iron and Steel Institute.

Republican leaders in the U.S. Senate have agreed to withdraw an amendment to the State Department Appropriations Bill which would bar U.S. financial aid to the United Nations if Communist China is admitted to membership. The decision has been reached at a White House conference between President Eisenhower and key Congressional leaders.

The Economic Planning Committee of the Ceylon Cabinet has recommended the lifting of the ban on exports of scrap iron, which was imposed six years ago. The ban was originally imposed with a view to conserving raw materials for a Government steel rolling factory. Before the ban was imposed, Britain Japan, India and European countries were the principal buyers of scrap iron.

The U.S. Government has signed a contract with a private company of Tucson (Arizona) for the production of 12.96 million lbs. of refined copper over a three-year period. The Government will buy the refined copper at 31 cents per lb. f.o.b. Middle Western markets. The Government will lend the company upto $473,665 which is repayable over 4½ years. The company itself will spend $90,000 on the project.

With effect from 10th May, 1953, considerable reductions have been introduced in the rates for special goods on all K.L.M. freight services between Europe and the United States. These reductions range from 55 per cent. to 60 per cent. and they apply to certain goods on specified routes, when they are shipped in consignments of over 100 lbs. This involves more than 140 special rates for articles, such as clothing, leatherware, pharmaceuticals and chemicals, microscopes, cameras, etc., to stimulate air freight traffic between Germany, Italy, Austria, Switzerland and the U.S.A.

A syndicate of leading Swiss banks has offered for public subscription an issue of Swiss franc bonds of the International Bank for Reconstruction and Development. The issue, which is for a sum of Sw. fr. 50 million (approximately $11.5 million), is known as 3¼ per cent. Swiss Franc Bonds of 1953 and will be redeemed on 1st July, 1968. The issue price is at 99 per cent., to give a yield of 3.59 per cent. The list was open for subscription on the 10th inst. and will be kept open till the 16th inst. inclusive. This is the third public offering of World Bank bonds in Switzerland. The first, made in July, 1951, was for Sw. fr. 50 million at 3¼ per cent. with a maturity of 12 years. The second was made in November, 1952 and was for Sw. fr. 50 million at 3½ per cent. with a maturity of 10 years.

PERSONAL

DR. Alberto Berio, Italian Ambassador to India, presented his credentials to the President on Friday last week.

Mr. Luang Bhadravadi, Thai Ambassador to India, presented his credentials to the President on Monday this week.

Mr. D. Freeman, an expert in foreign exchange banking, who was associated with one of the "Big Five" of Britain for several years, has arrived in Bombay to organise the foreign department of the Canara Bank Ltd.

Mr. L. C. Jain, Director-General of Civil Aviation, Government of India, left for the U.K. last week to attend the triennial meeting of the Assembly of International Civil Aviation Organisation to be held in Brighton on the 16th inst.

Mr. P. E. Fielding, Bombay Manager of the North British and Mercantile Insurance Co., Ltd., will retire from service on the 30th inst. He will be succeeded by Mr. R. W. Cole, now attached to the Calcutta Office of the Company.

Mr. M. S. Thirumale Iyengar, retired Chief Engineer of the Tungabhadra Project (Madras), has been appointed as full-time Chief Engineer, Hirakud Project. Mr. Iyengar will relieve Mr. Kanwar Sain, I.S.E., Member (Designs), Central Water and Power Commission, of the additional charge.

Mr. Horace Holmes, Head of the Agricultural Division of the U.S. Technical Co-operation Mission in India since its beginning, has been promoted to the newly created post of Regional Agricultural Adviser for South Asia. He will continue to have his headquarters in New Delhi and will make available to other countries in South Asia, as well as India, his large experience with American and Asian agricultural problems.

OBITUARY

Mr. E. S. Joel

We regret to record the death of Mr. E. S. Joel, Manager for India of the Baloise Marine Insurance Company, Ltd., on Thursday last week. A well-known figure in insurance circles, the late Mr. Joel started his career in the Bombay Life Assurance Company, Ltd., and before he was appointed Manager for India of the Baloise Marine Insurance Company, Ltd., of Switzerland, he held the post of General Manager of the Jupiter General Insurance Company, Ltd.

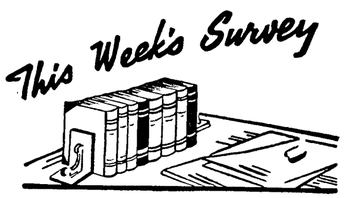
"COMMERCE" 1928

FROM OUR FILES OF TWENTYFIVE YEARS AGO

CALCUTTA, 23*rd June*

Indian Trade Mission

While India is a potential market for many of South Africa's staple products, particularly coal, wattle-bark and citrus fruits, it is equally certain that the Union of South Africa is capable of absorbing a much greater proportion that at present of Indian manufactures. Hence there is every reason to believe that the visit of the mission to South Africa will be of mutual benefit to both countries. And the time may come—sooner than later—when South Africa will be able to send a similar delegation to India. Statistics show that India sends more goods to South Africa than she imports from the Union. While it is true that South Africa has been saved by its minerals, it is not unreasonable to expect that more development will be made in agriculture. South Africa is a great fruit-growing country and India with her huge population can certainly grow a great deal of that produce. Of course, London is a better market for first grade produce; but India can take second and third grades. The season for fruit in the two countries differs and it is opined that importation into this country of South African fruits will be hailed with delight by the large number of vegetarians we have. Sugar is another commodity that is likely to find a ready sale in India. Natal last year had an exportable surplus of 100,000 tons, which could be readily consumed in India which paid customs duties of £5,000,000 on sugar alone last year. This is certainly an indication of the amount of sugar used by the people of India. There is none, however, bold enough to hold out much hope for South African coal in India, which has not had sufficient markets for her own coal; but she can use wattle extract from South Africa instead of wattle-bark. India, on the other hand, can send more gunny bags and cotton textiles than she does at present. The value of the Union's annual cotton imports is in the neighbourhood of four million pounds sterling, of which India's share is only £40,000. There is also room for development in tea, coffee and teak.



MAHRATTA CHAMBER OF COMMERCE

IT is hardly surprising that Mr. G. L. Natu, President of the Mahratta Chamber of Commerce and Industries, should have devoted so large a proportion of his address, at the recent annual meeting of the Chamber, held at Poona, to a discussion of the measures that are necessary to relieve famine conditions in Maharashtra. This region, otherwise well endowed by nature, has been the scene of recurring famines. Indeed, if the region were enabled to augment its agricultural output through a systematic exploitation of its water resources and power potential, it should not be long before Maharashtra becomes the granary of the Deccan. It is well known, for instance, that the region could, if it were suitably developed, supply the sugar requirements of the entire country. And yet, for want of adequate irrigational facilities, the living standards as well as industrial and agricultural output of Maharashtra have continued to remain, for several decades now, at a low level. Although the Koyna multi-purpose project has found a place in the Five-year Plan, there are quite a few projects, such as the Vir dam, Khadakwasla dam, Kuhadi Valley project, Mula Valley project and Girna Valley project, which find no place therein. Mr. Natu rightly urged that the Government should tackle the "problem of recurring famines in the Deccan" without delay. Whether he meant it or not, the emphasis here should fall on the word "Deccan," for Maharashtra's problem must be treated as part of the problem of the Deccan, of which it is an important region. Famines know no man-made bounds and cut across linguistic frontiers. The economy of the Deccan region deserves to be treated as a whole, so that the common problems, irrespective of the political divisions of this region, might be subjected to a simultaneous attack.

Maharashtra has a large powerloom industry. Mr. Natu showed the inherent inconsistency in the Government's industrial policy when he pointed out how it was trying to protect the handloom against powerlooms. He quoted approvingly from the Planning Commission's Report which states that the handloom industry should be encouraged to take advantage of power. He pointed out that handlooms and powerlooms were only two sections of the independent weaving sector of the textile industry. He deplored that a "cleavage" should have been created between these two sections. He quoted figures to show that powerloom could not be a danger to the handloom industry, since the number of powerlooms was only 24,000—or roughly equivalent to about 72,000 handlooms in production capacity—as against the 28 lakhs handlooms in the country. It is a pity that, in its anxiety to protect the handloom industry, the Government should have offended not only the mill industry but also the far less influential rival, the powerloom industry. It looks as though all technical progress is suspect in this country.

In his inaugural address at the meeting, Mr. Pranlal Devkaran Nanjee gave yet another exposition of the doctrine of *swadeshi*. He has, as is well known, done much to revive and foster this movement. He said that the country is "losing the battle in the economic sphere to the extent that the zeal and missionary devotion to the cause of *swadeshi* have been on the wane." He held that the *sine qua non* of the success of the *swadeshi* movement lay in ensuring ready consumption of goods and services which are truly national. Nor did he confine the scope of the movement to the industrial sphere alone; he urged that encouragement should be given to Indian services in the sphere of banking, insurance and shipping. But he did not advocate economic autarchy, for he made it clear that he was not oblivious of the fact that no country could live in isolation. But he was sharply critical of Government's action in permitting the setting up of new foreign-owned units or the expansion of existing foreign-owned units in lines of manufacture, such as soaps and tooth paste, in which the Indian-owned units had already made significant progress. We feel that a line should be drawn between foreign-owned units already operating in India and new units, and that, whatever be the justice of the criticism in respect of the Government's attitude towards new units, it seems hardly fair to suggest that foreign-owned units already operating in India should be arbitrarily prevented from enlarging the scope of their activities by using Indian labour, Indian resources—and, as is often the case, Indian capital as well.

MANGALORE PORT

The reported decision of the Government of India to develop Mangalore into an *all-weather* port is welcome. At present, the Port has practically to remain closed for four to five months during the monsoon season when the sea at the anchorage is too rough for the handling of cargo and passengers. The Government's decision, when implemented, will, therefore, help increase the traffic of the port and reduce congestion at Bombay and Cochin. An important port under the control of the Principal Port Officer, Madras, Mangalore ranks next to Tuticorin in the volume of trade handled.

It is true that the decision falls short of the demand that Mangalore should be developed into a major port. Adverse marine conditions in the port explain why the West Coast Major Port Development Committee rejected the claim for the development of Mangalore as a major port. Mangalore suffers from all the disadvantages of a river mouth; it lies at the confluence of the rivers Netravati and Gurupur. It is feared that it may not be possible to maintain a deep dredged channel through the bar that forms at the mouth without excessive expenditure on maintenance dredging. The question, however, is receiving the attention of the Hydraulic Research Laboratory at Poona. The rejection of Mangalore as a site for a major port should not, therefore, be regarded as final. It may be so developed if, in the opinion of the Hydraulic Research Laboratory, a dredged channel could be maintained at Mangalore at economic cost.

The Central Water and Power Research Station has constructed a model of Mangalore port and investigations are in progress to solve the problems in planning the harbour as an all-weather port. When Mangalore is developed into an all-weather port, it will serve not only its immediate hinterland but the whole of Karnatak, including Mysore, and other regions, which are exporters of cashewnuts, cardamom and other valuable materials. Mangalore port could command a larger trade if Mysore were linked with Mangalore through rail via Chikkamagalur. At present, Mangalore is ill-served by roads also from the hinterland.

Little is known about the finances required for the development of Mangalore into an all-weather port. At present, Mangalore is under the jurisdiction of Madras State and it will continue to be so even after it is converted into all-weather port. The State Government has not made any provision in its budget for the improvement of this port on the lines implied in the Centre's decision. Further, the financial position of the State is not comfortable and will be still worse after the formation of Andhra State. In these circumstances, the Centre's decision will only remain on paper, unless it assumes financial responsibility for developing the port into an all-weather one and adjusting the account with the Madras State later, when circumstances are more favourable.

JAPANESE ECONOMY

Since Japan has come to occupy, once again, a predominant place in the world economy, particularly in the sphere of trade, any change in the economic situation of that country is bound to influence events on the world front. It is no wonder, therefore, that the developments in the Japanese economy are always watched with considerable interest by industrialists and business men the world over. The interest has, of late, gathered momentum, with the note of bleak economic outlook for Japan struck by the Economic Counsel Board—the Japanese Government's top advisory body—in its forecast made recently. Japan, it is stated, must face, during the next five years, a fall in the living standards, an increase in unemployment and a crisis of "market limitation" for exports. This view is reported to have been endorsed by most of the leading lights of Japanese industry who have all along been urging the authorities to adopt a planned economy, independent of U.S. help and windfalls from the Korean war.

The Board's note of pessimism is based on a few assumptions. First, the U.S. defence spending will be cut from 1955 onwards, which means that exports from Japan to that country will be adversely affected. Secondly, Japan's trade with Communist China will not increase on the scale anticipated by the majority of business leaders, who are fretting at the disadvantages, which they believe they are suffering, as a result of the U.K.'s efforts to build up East-West trade. Further, the world demand for textiles will fall sharply, as consumer countries become more self-sufficient. The demand for iron and steel also will be lower. "The world," to quote the Board, "is probably already over-producing raw cotton, iron and steel, and other metal products. Japan will reach a limit of practicable trade expansion in the export of plant and equipment and shipping. The machinery industry has no hope of meeting German and European competition, unless drastic rationalisation in methods is enforced. . . . Japan's prospects for trade development in South-East Asia will be measured in terms of U.S. and Colombo Plan aid to that region and governed by the ruling prices of raw materials, now declining and reducing the already low purchasing power of the whole area."

The Board fixes the maximum level at which Japanese exports will stabilise at the end of five years at $1,400 million; the export target for the current fiscal year is an optimistic $1,200 million. The income from invisible trade is expected to decline to $400 million by 1958—half of the present income—as a result of Japan's dwindling international accounts. The decline follows a downward revision in the annual expenditure of the U.S. in special procurement orders, from $780 million to $200 million.

In view of these circumstances, the Board maintains that the estimated amount of investment within the framework of a balanced budget will not be enough to meet the demand. It, therefore, clearly points out that there is no alternative but to rely upon foreign investments or to raise funds by bond flotation. In this connection, the Board urges the adoption of certain measures, the most important of which are:

(1) The current Five-year Plan—designed to reduce rice imports by 600,000 tons per annum, together with dairy products—should be extended and developed at the risk of *austerity and hardship* (italics ours).

(2) There should be still greater concentration on production of chemical fibres to cut back imports of raw cotton and wool.

(3) There should be a shift from coal to hydro-electric power and more intensive study of the supplementary uses of petroleum, natural gas, fuel wood and charcoal as sources of energy.

(4) More workers must be laid off, as the policy of essential streamlining of industry progresses.

(5) The Government should try to meet shrinkage of world markets with a subsidy policy and other measures.

These are indeed very pertinent suggestions and it remains to be seen how far they will be implemented. The Japanese industry, at any rate, has realised the gravity of the situation, as witness some of the earnest steps it has already taken. The industry is, for instance, redoubling its pressure for domestic action to modernise equipment and methods of production, with the simultaneous sacrifice of labour standards introduced at the time of the occupation, to reduce inefficiency and production costs throughout the industry.

SPECIAL BRANCH AND SHELTERED INDUSTRIES

The spate of complaints against the protected and other industries in India which enjoy a sheltered market, has led the Government of India to set up a Special Branch in the Ministry of Commerce and Industry to deal with these industries. The Special Branch will be assisted, in the work of investigation into the behaviour of these industries, by a number of officers in important industrial centres who will undertake economic intelligence work and make a special study of market trends apart from carrying out any investigation that might be necessary. The officer-in-charge of the Industrial Intelligence Section, Ministry of Commerce and Industry, will receive complaints and representations about these industries, accompanied, as far as possible, by documentary evidence.

Industries, protected or otherwise, are known to have taken advantage of sheltered markets. Grant of protection to an industry is often followed by a rise in prices of the production of that industry, deterioration in quality and/or shortage of supplies. It may be mentioned here that under section 13 of the Tariff Commission Act, 1951, the Tariff Commission is required *suo motu* to make enquiries where a protected industry is taking undue advantage of the tariff protection granted to it. But the scope of the Tariff Commission's work in this sphere is confined only to industries for which it has recommended protection. It does not cover many other industries which on account of the exigencies of foreign exchange, do not face any serious competition in the home market. Consequently, the Government feels that it is desirable to have a suitable machinery for taking quick and effective action, whenever there is a genuine and justifiable complaint, and hence the setting up of the Special Branch mentioned above.

The appointment of suitable candidates to this Special Branch, however, gives rise to certain issues. It is stated that this agency will be required to take necessary action even in the case of the protected industries. This means duplicity of work, as there is already an agency, namely, the Tariff Commission, to attend to this work. And the Commission's staff, with its experience of conducting investigation, could certainly act more effectively and speedily than the Special Branch now set up by the Ministry. Secondly, the Commission's vast experience in investigation work entitled it to be a comparatively better equipped body to deal even with industries which are outside the scope of its work as laid down in the Act referred to above. While it takes a long time for the Special Branch of the Commerce Ministry to know the technique of the job on hand, the Commission's staff, with some reorganisation, could be trusted to perform, more expeditiously and with greater facility, the function now sought to be given to the Special Branch of the Ministry. If the Commission had been allowed to handle the job it would not only have enhanced the prestige of the Commission, but also its knowledge of the industries it protects. It would also have saved expenditure on maintaining two agencies for carrying out very nearly similar functions. The establishment of the Special Branch might conceivably lead to duplication of duties. The Branch might, in effect, sit in judgment over the Commission's wisdom in granting protection to certain industries.

CENTRAL LABOUR INSTITUTE

The proposal to establish a Central Labour Institute, at Bombay, to deal with problems relating to labour welfare, is a step in the right direction. In fact, it fulfils a long-felt want. It will help tackle the problems of growing physical and mental strain caused by modern mechanisation of production in factories. Experience has shown that the strain caused by work in these factories under unwholesome conditions has the effect of weakening the morale of the worker and, thereby, reducing considerably his productive capacity.

The Institute is expected to conduct research on problems relating to labour welfare, and impart specialised training to labour welfare officers in industrial welfare problems. Thus, it answers the call of the All-India Council of Labour Welfare Officers, at its meeting, held in Bombay two months ago, for the establishment of a similar institute. This Institute will further provide facilities for trade unionists by assisting them in the organisation of periodical courses in techniques of management of trade unions, bargaining methods and other aspects affecting labour. It is also expected to serve as a common meeting ground for Government, management and labour groups for the purposes of discussions relating to their respective roles in an atmosphere free from the usual stress and conflict. The Institute will thus be a comprehensive one. But its success will depend on the type of personnel it is equipped with. Such an Institute will be of utility to the nation only if persons connected with it approach labour problems with a religious zeal.

The founding of this Institute is made possible by the contribution of $100,000 by the U.S. Government and Rs. 5 lakhs by the Government of India. These contributions form part of a supplementary operational agreement entered into between the U.S. and the Indian Governments under the Indo-U.S. Technical Co-operation Agreement last week.

OFF THE RECORD

(By "ROVER")

THE longer one lives, the more is one liable to be disillusioned. For long years, I had laboured under a mistaken belief that Mr. K. G. Milne of Killick Industries, apart from being a man of the world, was a shrewd business man, who knew what was what. After reading his speech to the shareholders of the Surat Electricity Company, in his capacity as Chairman of this concern, I was under the painful necessity of revising my earlier impression. Mr. Milne now appears to me to be afflicted with the inconvenient and somewhat uncomfortable faith of a simple, God-fearing and law-abiding man, which, in these days of awakening and enlightenment, is not to be found even amongst missionaries or fervent advocates of jail reform. I found myself wishing, as a friendly critic of the business community, that Mr. Milne had not betrayed such remarkable naivete when he was presiding over what was an essentially business meeting and not an annual convention of monks of some ancient and celebrated religious order.

What irritated me most in Mr. Milne's speech was his child-like assumption in the goodness and efficiency of our Congress Governments. But for such an unwarranted assumption, he would not have been shocked at the Bombay Government's exceeding their original estimate of Rs. 70 lakhs for a thermal electric power station at Utran near Surat, by a paltry sum of thirty to forty lakhs of rupees. In the first place, this excess of only about 50 per cent. in cost over the initial figure was only a flea-bite, as compared with the huge additions in the estimates at the time of every revision in the case of the Damodar Valley, Hirakud and other multi-purpose projects, even before the work on these had hardly shown any progress. Nobody knows till this day what these are going to cost ultimately and when they are going to be fully in commission.

In the face of this, the achievement of the Bombay Government in the case of the Utran power station is something highly commendable. As to the little delay of only about four years in the execution of the work, anybody, who has even the slightest acquaintance with the ways of officialdom in such matters, should feel like shouting with joy at the fact that it was really completed and that, unlike the project for manufacturing prefabricated houses, this power house should actually supply electric power. Anyone more sophisticated than Mr. Milne and less of an idealist where Governments are concerned would have complimented the late P.W.D. Minister and his subordinates on the extraordinary efficiency and economical management they displayed in the execution of this work of public utility of such vast magnitude. In view of the fact that it was in the power of the former, in his capacity as the Finance Minister, to facilitate the reduction in the rate charged by the Government to the Company for the bulk supply of power to it, a man more worldly wise than Mr. Milne would certainly have taken this line instead of the critical attitude adopted by him.

I consider it highly unfair on the part of successful and experienced business men to subject official undertakings in the public sector in the matter of efficiency, economy, business integrity and quality of service to consumers, to a comparison with capitalist enterprise. How can there be any comparison between cabbages and kings? Are we not taking too much for granted, to begin with, in expecting Ministers and bureaucrats to be equally businesslike, efficient and economical as seasoned business men? If they were so, if they were capable of building up an industry on a paying basis, on a basis which would earn a fortune for them, most of them would not have opted for a political or administrative career.

Besides having to fight against this initial advantage of natural gifts, training and outlook, our poor politicians and officials are further handicapped in the race at almost every stage. As against a private industrialist confined to work with limited resources of capital, which serves as an incentive to economy and efficiency, Ministers are required to work with a plethora of funds. If these prove inadequate, they could always raise more by imposing new taxes or increasing the yields from existing ones. As if this were not enough to lead them astray and to tempt them into extravagance about the capital cost of their industrial undertakings, we expect them to produce the same results in running these concerns under the crippling conditions of a State monopoly.

Virtually robbed of the invigorating air of competition from rival concerns, which lends a keen edge to a man's ability, deprived of the spur to inventiveness and exercise of imagination which, working within a strictly limited price range, imposes on a private producer, it is cruel to expect Ministers and State executives, to supply cheap service to the community. In my opinion, the dice are loaded far too heavily in favour of the private sector and Mr. Milne started with altogether wrong premises and untenable axioms and postulates when he entered upon an evaluation of the work of the South Gujerat Grid of the Government of Bombay. I, however, grant that he did so unwittingly, without malice, circumscribed as he was by his experience of the working of purely capitalist concerns of standing and experience.

I find Mr. Milne equally guilty of unjustifiable naivete in his criticism of the Bombay State authorities with regard to discrimination in the price charged for power. Mr. Milne's complaint was that the Surat Electricity Company was charged at a higher rate of tariff for power supply than certain other consumers. He characterised this as preferential treatment, which was expressly forbidden under the laws governing generating and supply of electric power. He also considered it as contrary to all tenets of commercial practice and fair dealing. Here again, he starts with wrong assumptions and, therefore, naturally arrives at conclusions which are not valid. If Mr. Milne was sitting in judgment over a sister capitalist concern, his castigations would be perfectly valid and well-deserved and even the politicians themselves would have supported him.

But Mr. Milne has no right to apply "tenets of commercial practice and fair dealing" to purely non-commercial and political activities of a Government. It has taken decades, if not centuries, for the business world to evolve these norms and standards of business behaviour. Honesty and integrity might be essential where markets have to be won and customers to be kept satisfied. The goal in politics is not wide markets and numerous customers but large blocks of votes and it is perfectly in keeping with political practice and fair dealing, as distinct from commercial, to tilt the scales in favour of consumers who command a large number of votes. If Mr. Milne had been aware, as I am, that the Government of Bombay believes in requisitioning supplies for its use at considerably lower rates from producers and suggesting to them to make up any loss suffered by them from other sundry consumers by charging them higher than the fair price, he would not have been taken aback at this Government charging one price to one set of consumers and prescribing a lower tariff for another.

All may or may not be fair in love and war but this proverb holds good so far as politics in our democracy is concerned. And as to Mr. Milne's reference to the ban on preferential treatment in the body of legislation regulating marketing of electricity, this was obviously meant for the private sector operating in the field of public utility and could not be binding on official undertakings, which have always to work with one eye on general elections. I may inform Mr. Milne that this is not the only case of its kind. Such discriminatory treatment is already in operation in the case of irrigation charges in Maharashtra, where sugar factories are charged a much higher rate for water supplied to them for their sugarcane plantations than the private cultivators of cane. Just as there is a fundamental difference between business ethics and the ordinary citizen's unwritten code of behaviour, there is a wide gulf which demarcates the concept of commercial integrity from what is euphemistically called political morality, but which in essence is not far removed from the law of the jungle in all its crudity and rawness.—*All Rights Reserved.*

COTTON RESEARCH IN SOUTH AMERICA

MANY INTERESTING LESSONS FOR INDIA

(From A Special Correspondent)

NEW DELHI, 10*th June*

DELHI LETTER

THE steady increase in the consumption of indigenous cotton by the mills during the last few months must by now have bestirred the Government of India's Agricultural Ministry to a fresh appraisal of its cotton production policy for the next few years. With cloth production by the mills now exceeding 5,000 million yards rate per annum, the intake of Indian cotton by the mills is now nearing the annual rate of 39 lakh bales, with possibilities of a further rise. Allowing ex-factory cotton consumption at about 2.75 lakh bales and exports of short staple cotton at about five lakh bales per annum, the minimum output required is about 46.75 lakh bales. Since imports of long-staple foreign cotton at about 10 to 12 lakh bales per annum during the last few years, valued well above Rs. 100 crores per annum, have been acting as a great drain on the valuable exchange resources of the country, it has become imperative for Government to take special measures to intensify the output of better staple cotton, so that it could reduce the quantum of foreign cotton imports. Taking into account all these facts, a production of about 55 lakh bales for the Indian Union cannot be considered excessive because there is always a good potential demand for Indian short-staple Oomra and other varieties from Japan, Europe, etc. The target production of 42 lakh bales set by the Planning Commission has now become woefully out of date and has to be radically revised in an upward direction.

The increase in cotton output can be quickly brought about by bringing more land under irrigated cotton, by using intensive methods of cultivation such as the use of fertilisers, etc., and also by planting improved varieties evolved by the research section of the Central Cotton Committee. Although definite improvement in cotton production can only be brought about in this country by the extension of irrigation, greater attention should also be paid to the research side, for it is only by doing so that a gradual reduction in the quantum of long-staple cotton imports might be possible. It may be noted that, until the Partition, a substantial portion of the funds allocated towards cotton research was spent in the present Pakistan area and that only during the last three or four years, the Government has begun to evince increasing interest in cotton research in the country.

Although it was suggested about three years ago that an expert delegation should be sent to South America in order to study the method and manner of cotton research in that part of the world, particularly in regard to the perennial cotton tree, no such body has been sent there for purposes of utilising the experience gained by that sub-continent in this direction for the benefit of improving both the quality and quantity of cotton production in India. The publication, *Cotton in South America*, by Mr. Frank D. Barlow, Jun., of the National Cotton Council of America, gives us interesting details in regard to the progress of cotton research in that country, a study of which will not only provide inspiration but also throw fresh light on the research workers in cotton in this country.

Cotton research is being carried on with considerable vigour and interest in Peru, South Brazil, and, to some extent, in Argentina. There are two principal types of cotton in Peru at the present time. Tanguis, the principal variety falling in the ordinary long-staple length group from 1⅛" to 1⅜", accounts for 80 to 90 per cent. of total production. For all practical purposes, the production of extra long-staple cotton, 1⅜" and over, accounts for the remainder of the commercial crop. The principal extra long-staple variety is of American-Egyptian origin and is known as Peruvian Pima. In the last two or three years, Karnak has been introduced from Egypt, and its success, both production and quality-wise, indicates broad acceptance by farmers and the cotton trade, and it is believed that this variety may soon displace Pima as the principal extra long-staple cotton. Besides, there are two native cultivated Peruvian tree cottons (*G. Barbadense*), namely, the Aspero and semi-Aspero varieties, which grow into a large tree 15 to 20 feet high and produce for a period of 20 years or more. The fibre is white, coarse, harsh and staples upto 1½" in length. Tanguis cotton is cultivated on a three-year basis, although this cotton plant can be kept on for five or six years, the yield, however, declining after the third year. During the last few years, it is stated that several superior selections of Tanguis have been developed and are being made available for commercial production.

Brazil is perhaps the most important cotton-producing State in South America. In North Brazil, there is no organised programme for the distribution of pure seed, as is the case in South Brazil, particularly in Sao Paulo. It is stated that the Cruzeta Experiment Station in North Brazil has been doing some very interesting work in improvement and in reproduction by cuttings. This establishment, we are told, already possesses plants which rival the best Egyptian varieties. It has fine seed fields. North Brazil, it may be mentioned, is also noted for its long-staple tree cottons. In South Brazil, considerable research was done by Dr. Martins who had evolved, from different American upland varieties, three important strains, namely, Texas Big Boll, Express and Stoneville 2B, all slightly above one inch staple, which have now been able to adapt themselves under different growing conditions prevailing throughout the State.

In Argentina, cotton is produced mainly in the Chaco Territory where the present acreage stands about 1.4 million acres. The potential area for cotton in this country is considerable, being estimated well above eight million acres after clearing and also after the provision of drainage, health and transport facilities, around the Province of Chaco. The commercial cottons grown in Argentina are almost wholly of American upland varieties, the present dominant variety being Deltapine 14 (1.03" staple).

Cotton research is being carried on in a small way in Paraguay, Ecuador and Columbia also. In the last two mentioned countries, perennial tree cotton (Bourbon species) is very familiar. In these areas, the perennial cotton is ratooned or pruned annually. Cotton once planted is kept in production for a number of years, frequently much longer than it should be to maintain a vigorous producing plant. Cotton production in other States remains insignificant, as also developments in research.

From the above, it will be noticed that important cotton varieties which have now become acclimatised in North and South Brazil, Peru, Argentina and Columbia offer a rich source of raw material for cotton research workers in this country. In this connection, particular mention may be made of the perennial cotton tree of Tanguis type in Peru and tree cottons in North Brazil. Since the Cruzeta Experiment Station in the latter has already some excellent varieties comparable to the best strains in Egypt, it is likely that importation of superior seed from this station will enrich the scope of research work in India. It is possible that leading strains now grown in South and North Brazil might readily acclimatise themselves to the climate prevailing south of the Vindhyas in this country and as such these varieties may be tried both under irrigated and rain-fed conditions.

Large-scale experiments for the cultivation of perennial cotton trees from the imported seed from South America, if carried on in this country, are likely to yield good dividends in due course. Immediate steps can be taken by the Agriculture Ministry under the direction of its dynamic Minister, Mr. Kidwai. The Minister of State, Dr. Punjab Rao Deshmukh, who has done some pioneering work in cotton marketing as a non-official, must evince more interest in the development of cotton research in the country. The perennial cotton tree, if fruitfully introduced in the outlying mountainous areas in India, may serve a double purpose to individual States like Madras, Bombay, Madhya Pradesh and Hyderabad. Besides enriching Government coffers, these cotton trees can check the menacing soil erosion in hill areas. Now that the Government of India has embassies in Brazil and Argentina, they may be instructed to contact the research stations in North Brazil and Peru and obtain, as speedily as possible, a large quantum of various types of cotton seeds so that experiments can be conducted from now on in this country. Again, an experienced team of cotton research workers can be sent to South America for the acquisition of sufficient raw material for the advancement of research in this country.

OUTPUT MAINTAINED AT HIGH LEVEL

TERMS OF TRADE FAVOURABLE

(From Our Own Correspondent)

LONDON, 30*th May*

LONDON LETTER

ALL the excitement of Coronation cannot keep the Stock Exchange buoyant and the close of business for the month showed a further small sag in a representative list of securities following the heavier falls of a month previous. Of course, in the U.S. the falls in industrials have been much more marked and accompanied by substantial drops in the commodity indices, a reflection of the dependence of the economy on armament orders. But even here, in spite of the need to maintain production for export, the "danger" of a slackening in the flow of Service contracts, coupled with a fear of what an American depression might do to world prices, is insistently raising the bogey of a possible slump.

To the layman this fear seems very ill-based; he sees the housing target of 300,000 houses a year being reached, but knows that that figure must be exceeded and a high output maintained for at least ten years before the present shortage can be eliminated (some pessimistic estimates put the rate of wastage of old dwellings, whose low controlled rents do not pay for their maintenance in repair, at two-thirds the level of new house construction)—and a housing programme safely financed by Government money is one of the best antidotes to slump; he reads the report of the Transport Commission on the steady deterioration in road traffic movement and notes that London has had no major improvements in its circulation system for nearly 50 years, and he is aware that no more money can be devoted to expanding the country's road system while building and manufacture demand all the resources possible—again road works are one of the simplest anti-slump shots to have in one's locker; but, above all, he is aware that the country is now working at a higher general level of productivity than ever before.

Over the past five years, industrial production has increased 25 per cent. Last summer came the first major setback when the index (1948=100) fell to 105. But, by the late autumn, the losses had all been made good and this spring the past bests have been just exceeded, i.e., the past six months have shown a rise in the level of industrial output of 17 per cent. The increase has not been evenly spread over all industries, fuel and power—especially coal—making a poor showing. But manufacturing industry has shown striking resilience: this is best seen in the textile group which hit a depression level in July last year only to recover output by no less than 50 per cent. Steady gains have been made in the engineering industries and motor car production and exports have also been very satisfactory in terms of daily output, after allowing for the special holidays in April and May. This activity and the steady rise in wage rates which continues does not suggest that forward prospects are immediately in peril.

Retail prices have also once again resumed their upward drift. A year ago, the post-war rise levelled off and the indices stayed steady for six months, apart from a very brief drop in the late summer. But, with the turn of the year, the upward rise has been resumed and now prices are 2 per cent. higher than in January. On the other hand, the prices of U.K. imports have continued to fall faster than export prices so that the terms of trade are still moving gently in this country's favour. However, it is unfortunately true that the terms of trade could move even more rapidly in favour of the U.K. and yet the volume of trade slump away—or even the volume of exports alone fall—and face the Government with the need for bold anti-slump measures. But, at the moment, Ministers are in no mind to consider theoretical problems of that sort and the mood of Britain is one of high festivity, with no visible economic clouds to alloy the pleasure.—*All Rights Reserved.*

Krishi Pandit certificates, medals and prizes are now being awarded to those who produce record foodgrains such as wheat, millets, rice, etc., as also some commercial crops like potatoes. Similar certificates and prizes must be awarded to agriculturists who produce important varieties of long-staple cottons, as also to such research workers as are successfully able to evolve superior commercial long-staple cotton strains.

AMERICAN LETTER

AMERICAN BANKERS SUPPORT POLICY OF HIGHER INTEREST RATES

FEAR OF OVERPRODUCTION PERSISTS

(From Our Own Correspondent)

NEW YORK, 4*th June*

IN contrast to growing criticism from the opposition Party and from professional economists, an increasing number of bankers and other segments of the American financial community are now going on record as approving the new U.S. Treasury policies. While somewhat bemoaning portfolio losses which result from lower bond prices, the supporters of the policy believe this price has to be paid in order to achieve a return to a sound dollar and for what may be called "flexible stability." In fact, having demanded such a policy for 20 years, the banking community feels honour-bound to stand behind it until sufficient time has elapsed to either prove or disprove the new theories of higher interest rates which benefit more, it is felt, than they take away in the form of bond prices.

The New York Clearing House member banks have just issued a joint study, entitled *The Federal Reserve Re-examined*. While recommending certain changes in the law, most of these banks through their dozens of senior officers have gone on record in this 165-page book as endorsing the tight monetary regime of the central bank and the U.S. Treasury. These banks' emphasis, too, is on a sound dollar which they feel has to be reconciled with full employment and other desirable social goals. It is the first such study ever made by the New York Clearing House banks. The work has been in preparation since the early months of 1952. It represents an important endorsement of Republican policies from one of the essential segments of the American economy.

So far as the general business outlook is concerned, financial opinion is that the present situation is one of healthy adjustment. Astute observers are not bothered particularly by the drop in commodity prices—yet. While American farmers have less income, they are also not too much in debt. Thus, there is a borrowing cushion. Even small dairy farmers, despite lower milk prices, are doing all right though not quite as extraordinarily well as they have for many years past.

Consumer Credit Not Too High

There also seems to be general agreement that consumer credit is not too high. In fact, it has been reported from many sections of the country that there has been an improvement in the delinquency ratio. This opinion is somewhat contrary to that held by the Treasury and the Federal Reserve managers who, privately, are a little worried about outstanding consumer debt. And there is some justification for this view.

It is quite clear that many special people have been buying quite an array of goods on the instalment plan and have done so because for years they have worked overtime. In other words, many purchases were made on overtime money in anticipation that this state of affairs would continue.

But, in the present era of adjustment, many firms are cutting out overtime and household belts have to be tightened to meet outstanding loan commitments. This element is offset, in part, by the large-scale return of women into the working ranks whose earnings help to swell family pocket books.

The mortgage situation, which was such a troublesome feature during the last depression, is not only thoroughly sound at the present time, but under full control. This applies to both home and industrial properties. Informed opinion here also tends to feel that costs are still rising and that the pressure for industrial wage increases would continue. This latter factor is the strongest point of those who fear a revival of inflationary pressures. They would emanate from the industrial and social sphere and would be, virtually, beyond the control of the Treasury in its current broad disinflationary aims.

Some very well informed men here, frankly, continue to be apprehensive about overproduction, notably in automobiles. This, in turn, they think, might lead to curtailed production in the second half and to some unemployment—not too great but marginal. Since the marginal setback of 1949 led to considerable setbacks here and overseas, the voices of pessimism have a leg to stand on. However, even those who view with alarm think that 1953 overall business earnings in the United States will, perhaps, be as good as ever. And if the present adjustment should become more severe, it might logically express itself in lower 1954 profits rather than this year.

In my judgment, these views are fairly sound. They come from people whose opinions are based on actual operating experience and they are very little coloured by wishful thinking. Everyone is keeping his fingers crossed, however—so far so good—at present, all is well, economically.

Stumbling Blocks To President

Politically, the pot is still boiling. President Eisenhower, with the approval of most of those who supported him, finally had the courage to contradict Senator Taft who suggested that the United Nations be ignored so far as the Korean war was concerned. It was inevitable that such a rift should occur between the liberal Republican faction and the conservative, isolationist one represented by the Senator.

The question is whether this step by the President will remain an isolated one or whether he will make his opinion felt also *vis-a-vis* Senator McCarthy and others of his own Party in Congress who have been continual stumbling blocks to the programme outlined by the Executive branch of the Washington Government.

It is felt that much of this sound programme could still be saved, if the President would apply as much pressure as his predecessor did who was well versed in the art of politics. The General has been trying to cooperate and persuade, rather than to demand and dictate and, therefore, has accomplished very little so far.

Important pieces of legislation are uncertain of even getting a fair hearing in the present session of Congress. Among them are foreign aid, military appropriations, customs simplification, the admission of displaced persons and innumerable other subjects. Another measure demanded by the White House, but opposed by business, is the extension of the excess profits tax law. Unless conditions should change, radically, the chances are that only a fraction of the Administration's new programme will be enacted by Congress before the lawmakers adjourn for their summer holiday.—*All Rights Reserved.*

(Concluded from next column)

wheat. This will be in addition to the 46,000 tons that Australia has already offered under the Colombo Plan. Negotiations are also said to be almost complete for the import of 8,000 tons of wheat from Bulgaria in exchange for Pakistan cotton. In the meantime, Pakistan has arranged to import 100,000 tons of wheat from Canada.

* * * *

The Government of Pakistan has sanctioned Rs. 43.5 lakhs as assistance to the N.W.F.P. Government for the latter's grow-more-food schemes. The Frontier Government has drawn up a number of short-term schemes with an aggregate outlay of Rs. 1 crore.

* * * *

An order to burn all the standing sugarcane crop in the N.W.F.P. has just been issued, with a view to preventing the further spread of pyrella pest, which is threatening the maize crop in the Province.

* * * *

Sind, it is learned, has a surplus of 22,000 tons of wheat from the 1953-54 crop. The Provincial Government has already launched a procurement drive to obtain the surplus wheat at Rs. 12-8 per maund.

* * * *

Four more items have been included in the Export Open General Licence No. 7, bringing the total number of freely exportable items to 102. These are exposed cinematograph films, canvas and rubber shoes, bone-dust and bone-sinews, and ladies' hand-bags made of cloth and leather.

PAKISTAN NOTES

NEW IMPORT POLICY

ANNOUNCEMENT EXPECTED SOON

THE import policy of the Government of Pakistan for the ensuing (July-December) half-year, which is expected to be announced in a couple of weeks' time, is being awaited with considerable interest by both trade and industry. The Ministry of Commerce, it is reported, is drawing up, in due consultation with the Ministry of Finance, the import schedule. While the details of the proposed schedule are not known, it is gathered that a system of "controlled import" will continue to be the main feature of the policy. A return to open general licence appears wholly unlikely. In order, however, to enable the industries to keep up the continuity of their imports, the Ministry of Commerce is now issuing import licences for the essential raw materials for the July-December period. Besides, most of these licences are made valid for the months of May and June, 1953, also.

The contemplated decision of the Pakistan Government to pursue a policy of "controlled imports" is evidently a sequel to the none-too-happy balance of payments position. Although the trade balance on private account has been favourable in the past few months—this was to the extent of Rs. 6.37 crores during the month of April, 1953 alone—the overall balance of payments has all along been adverse, thanks to heavy imports of foodgrains and defence equipment on Government account. The adverse balance is fully reflected in the substantial fall in Pakistan's foreign assets, from as high as Rs. 150.52 crores in the beginning of 1952 to Rs. 79.68 crores as on 17th April, 1953, although it stood a little higher at Rs. 80.98 on 22nd May, 1953.

The continuance of the present policy of "controlled imports" is bound to affect adversely India's trade with Pakistan. As it is, the trade between the two countries has been very much restricted. The one item which has been hit the most is cotton textiles, for which Pakistan, for long, was an important market. Imports of Indian cotton textiles into Pakistan have practically been banned. Perhaps, the earnest efforts of the Prime Ministers of the two countries to settle the many Indo-Pakistani disputes which are still unsolved, will result in an early removal of some of the impediments standing in the way of a freer movement of goods and commodities between the two countries.

Cotton Situation

The crisis in the cotton situation in Pakistan seems to have definitely ended. This is borne out by the marked improvement in prices in the past few weeks, following good enquiries from Australia, France, China and Japan. The statistical position of Pakistan cotton is now more comfortable, the stocks of unsold current crop having been reduced from over a million bales a few months ago to only 300,000 to 400,000 bales.

The total supply of cotton available in Karachi during the current (1952-53) cotton season amounts to 1,660,000 bales, including the previous season's carry-over of 370,000 bales. Of this, 1,234,137 bales have already been exported (up to 21st May, 1953)—the figure for the corresponding period last year was 992,430 bales—and 100,000 bales have been consumed internally. Of the balance, 250,000 bales are to be shipped against sales and 50,000 bales consumed, during the remaining part of the season. The quantity that is still left to be sold thus comes to 380,000 bales. The prospects of selling this balance are held to be bright. Japan is expected to lift a further 150,000 bales and China 50,000 bales. Australia also is expected to purchase 30,000 bales, and Liverpool and certain European countries about 50,000 to 75,000 bales. The closing stocks for the current season will, therefore, not be more than 80,000 bales.

Incidentally, it may be noted that, with a view to stimulating exports of the balance of the current cotton crop, the Government of Pakistan has placed this commodity on the Open General Licence till 31st August, 1953. But all transactions in new crop cotton have been banned.

Wheat Imports

It is understood that the Government of Pakistan is negotiating with the Australian Government for the purchase of 43,000 tons of

(Continued in previous column)

OWNERSHIP OF BANK DEPOSITS

LATEST TRENDS ANALYSED

THE latest issue of the Reserve Bank of India *Bulletin* carries the customary study on ownership of bank deposits in India, this time as at December 1952, conducted by the research staff of the Bank. The study reveals that total deposits registered a fall from Rs. 871.79 crores in June, 1952, to Rs. 858.30 crores in December, 1952. This fall of nearly Rs. 13.5 crores compares with that of Rs. 23.92 crores in the corresponding period of 1951. It would have been steeper still, had there not been an improvement of Rs. 1 crore in savings deposits and of Rs. 12 crores in time deposits, as against a sharp fall of Rs. 26 crores in demand deposits.

While thus deposits of banks in the second half of 1952 showed a decline, an analysis of their position in the first half of 1952 showed that they had improved from Rs. 850.02 crores in December, 1951, to Rs. 871.79 crores in June, 1952. This improvement in deposits in the first half of 1952 was shared by demand deposits (Rs. 49 lakhs), savings deposits (Rs. 2.80 crores) and time deposits (Rs. 18.58 crores).

A striking feature of the behaviour of deposits in the period under review is that, while the fall of total deposits was as much as Rs. 23.92 crores in the second half of 1951, it amounted to only Rs. 13.5 crores in the second half of 1952. This trend signifies that, during June-December, 1952, money was less usable than it was in June-December, 1951, because of a fall in prices, following the commodity slump in the first half of 1952. It may also be due to withdrawal of funds from banks by industrial concerns to meet their continued high level of expenditure, as their earnings generally showed a decline, owing to fall in prices of their manufactures. Again, it may be due also to money being locked up in stocks accumulated with manufacturers as, for example, in the tea, jute and textile industries. Further, merchants who were not inclined to replenish their stocks through purchases in a falling market might have preferred to keep their funds in time deposits rather than in current account. This shift in holdings from current to time deposits is reflected in the increase of Rs. 12 crores in time deposits as against a fall of Rs. 26 crores in demand deposits in the second half of 1952.

An analysis of the ownership of deposits discloses that the fall of Rs. 26 crores in demand deposits referred to above is mainly due to a reduction of Rs. 16.5 crores to Rs. 224 crores in business demand deposits, which, in fact, had increased in the first half of the year 1952. Over the year, business demand deposits declined by Rs. 11.5 crores, but their ratio to total demand deposits (52.5 per cent.) was slightly higher at the end of 1952 as compared with that in December, 1951.

Among business deposits, those of trading concerns, at Rs. 113 crores, were lower by Rs. 5 crores, although they continued to account for one-half of business demand deposits. Deposits of manufacturing concerns and financial concerns also declined by about Rs. 5 crores each to Rs. 43 crores and Rs. 50 crores, respectively in December, 1952, and formed, as hitherto, one-fifth and one-fourth, respectively, of business demand deposits.

A decline of Rs. 5 crores to Rs. 116 crores was registered in personal deposits under the category of non-business demand deposits. This is partly due to a shift from demand to time deposits. Deposits of "others" (Governments, quasi-Government bodies, clubs, charitable institutions, etc.) accounted for the rest of the decline in total demand deposits.

In the first half of 1952, time deposits had increased by Rs. 10 crores; in the second half they rose by another Rs. 10 crores. This continued expansion was mainly due to the attractiveness of the high rates of interest paid on them. The greater part of the increase in the second half was in respect of "other deposits." Personal time deposits also rose, but by only Rs. 2 crores to Rs. 135 crores.

Breakdown figures of deposits, according to class of banks, show that major Indian Scheduled banks registered an increase of Rs. 9 crores in their total deposits in the first half of 1952. But, in the second half, they declined by Rs. 19 crores to Rs. 490 crores. On the other hand, deposits of Exchange banks and other Scheduled banks reported increases in the second half by Rs. 2½ crores and Rs. 1½ crores, respectively, to Rs. 167 crores and Rs. 157 crores.

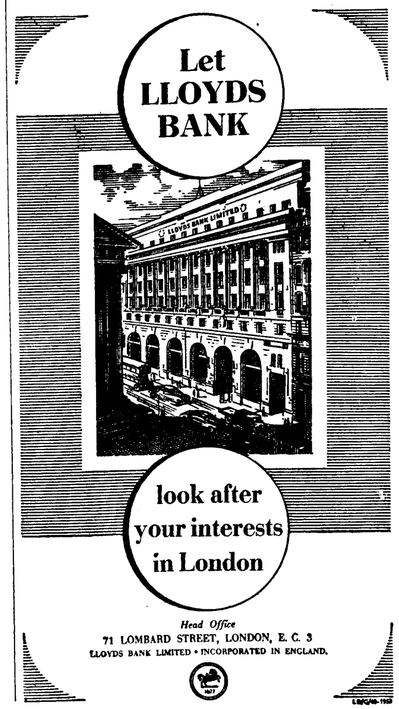
The decline in total deposits of major Indian Scheduled banks in the second half was chiefly in respect of demand deposits, their savings and time deposits showing no variation. Demand deposits of Exchange banks also recorded a fall of Rs. 5 crores, but this was more than made up by an increase of Rs. 7 crores in their time deposits.

Out of the decline in business demand deposits of all Scheduled banks, major Indian banks accounted for over Rs. 14 crores. Again, the entire decline in total deposits of manufacturing and trading concerns was in the case of major Indian banks. Deposits of public utilities and financial concerns with these banks also declined, though only by Rs. 4 crores and Rs. 1 crore, respectively. Exchange banks saw a decline of Rs. 3 crores in their demand deposits of financial concerns.

Personal demand deposits declined by Rs. 3.5 crores to Rs. 77 crores in the case of major Indian Scheduled banks and by Rs. 1.4 crores to Rs. 25 crores in the case of Exchange banks. They, however, remained unchanged at Rs. 14 crores with other Scheduled banks. "Other" demand deposits of major Indian Scheduled banks showed no variation but declined by Rs. 2 crores and Rs. 1.5 crores respectively in the case of Exchange and other Scheduled banks.

Time deposits of Scheduled banks increased by Rs. 10 crores during June-December, 1952, owing mainly to an increase of Rs. 8 crores in other time deposits. "Other" time deposits rose for all groups of banks, the rise being Rs. 3 crores for Exchange banks, Rs. 4 crores for major Indian Scheduled banks and Rs. 1 crore for other Scheduled banks. The rise in the case of major Indian Scheduled banks was, however, offset by a decline of Rs. 2 crores each in their business and personal time deposits. In the case of Exchange banks, both personal and business time deposits rose by Rs. 2 crores each. In the case of other Scheduled banks also, personal time deposits increased by Rs. 2 crores.

It will be seen from the foregoing account, that the Exchange banks and other Scheduled banks had fared distinctly better than the 10 major Indian banks. This must have been due chiefly to the slightly higher rates of interest offered by the first two groups of banks. Another factor that must have assisted the Exchange banks in retaining more deposits than they could, in the first half of 1952, is the improvement in India's export trade, most of which is financed by them.



RESERVES OF STERLING AREA MOVE UP

SURPLUS OF $48 MILLION IN MAY

STATISTICS relating to the sterling area gold and dollar reserves released by the British Treasury a few days ago show an addition of another $48 million to the area's gold and dollar reserves in the month of May, 1953. This surplus compares with a surplus of $107 million in April, $63 million in March, $125 million in February and $132 million in January this year. Thus, the surplus for May is the lowest since the commencement of the current year.

The surplus of $48 million for May is made up of receipts under three accounts, namely, defence aid, E.P.U. payments and inflow resulting from trade and currency movements. Thus, defence aid received in dollars from the U.S. in May was $13 million, the lowest monthly amount for over a year. From the European Payments Union, Britain received $21 million as part settlement of the country's April surplus. The balance of $14 million was received on account of trade and currency movements in favour of the sterling area.

With the month's surplus of $48 million, the central gold and dollar reserves of the sterling area improved to $2,321 million or almost to the level that prevailed at the end of 1951, namely, $2,335 million. They were, however, far less than the peak of $3,867 million witnessed in the middle of 1951.

Provisional figures for May show that Britain had a surplus of £7.1 million on account of trade with the E.P.U. countries. This surplus compares with £15.2 million in April, £7.5 million in March and £9.9 million in February. Now the U.K. position has reached a stage where half of any surplus or deficit with E.P.U. is met in gold and half by a reduction or increase in book debt to member-countries of the E.P.U. countries. The May surplus will thus be adjusted accordingly. At the end of May, the U.K.'s book debt to the Union stood at about £190 million.

As regards the U.S. defence aid, a sum of $400 million was earmarked by the U.S. Government as aid to be granted to Britain on defence account in 1952-53. Of this sum, upto the end of May, $365 million had been received. As there is always a time lag between allocations and actual movement of funds, the balance of $35 million may or may not be received in the current month at the end of which the U.S. financial year 1952-53 expires.

In the next financial year, namely, 1953-54, as only half of the amount appropriated for defence in the current accounting year has been ear-marked for this purpose, Britain's share on U.S. defence aid account will be about $200 million. If to this is added a sum of $100 million expected towards payments for deliveries under the offshore purchasing programme, the actual amount of dollars receivable should be $300 million. The present American Administration has indicated its intention of bringing defence aid pure and simple to an end as quickly as possible after 1953-54. The aid then is expected to depend on the progress of the offshore programme.

The reduction in the surplus from the comparatively high totals of more than $100 million in earlier months of the year is causing no undue concern in financial circles in London. Actually a fall in the reserves had been anticipated for the summer months. Moreover, the results for any single month, it is pointed out, are seldom indicative of any definite trend, as the surpluses, as indicated at the outset, change from month to month.

Although during the last eight months, the sterling area reserves have been rising, the rate of expansion has been very slow. The total reserves are still not adequate to make the pound sterling convertible. The key to convertibility, of course, lies in increasing reserves through the expansion of export trade of the sterling area with hard currency countries.

WORLD BANK EXAMINES GERMANY'S CREDITWORTHINESS

After a thorough examination, the International Bank for Reconstruction and Development has decided that West Germany is sound enough economically to receive a dollar loan from the Bank if the country needs it. Announcing this information, Mr. Eugene Black, President of the Bank, stated that he had not had any concrete negotiations during his four-day visit to West Germany but some of the German industries had been mentioned to him as willing to take up credits.

It is stated that the Study Commission, which had accompanied Mr. Black to Germany, is still there to complete its report on Germany's eligibility for loans from the Bank.

SPECIAL U.N. FUND FOR ECONOMIC DEVELOPMENT

NINE-MEMBER COMMITTEE'S RECOMMENDATIONS

A DETAILED plan for a Special Fund for grants-in-aid and low-interest, long-term loans to underdeveloped countries for their economic development, is contained in the Report*, made public a few weeks ago, of a nine-member Committee appointed by the Secretary-General of the United Nations. The Report does not discuss the possibility or advisability of establishing such a fund but deals only with the technical problems of how such a Fund, if established, would be organised and how it would work. No estimate of the size of the Fund is made, but the Report recommends that, should the establishment of the Fund be decided by the competent organs of the United Nations, it should only come into being by the voluntary pledging of the equivalent of a minimum of $250 million by at least 30 countries. This is one of 88 specific recommendations—all unanimous—put forward by the authors who served on the Committee in their personal capacities.

The terms of reference of the Committee were drawn up by the Economic and Social Council and by the General Assembly. The Report will first be considered by the Council at its sixteenth session opening in Geneva on the 30th inst., after which it will go to the Assembly.

Notable Step

In a preface to the Report, the Secretary-General states that the financing of economic development "has been foremost among the problems of economic development which have commanded the attention both of Governments and of the United Nations." He recalls that, in a memorandum which he submitted to the fifth session of the General Assembly on the development of a 20-year United Nations peace programme, it was suggested that "member-Governments should develop a sound and active programme for the encouragement of broad-scale capital investment for economic development, using all appropriate private, governmental and inter-governmental resources." The Secretary-General adds that "an effective concerted effort aimed at promoting the economic development of underdeveloped countries, of which financial assistance would be an integral part, should constitute a sound investment in peace and stability and lead to a mutually beneficial expansion of world productivity and world trade." This unanimous report, adds the Secretary-General, is a "notable step forward" and he expresses the hope that the concept of a Special Fund "will gain the support of the United Nations as an additional important instrument of economic and social progress throughout the world."

Prefacing in turn its unanimous recommendations, the Committee declares that the Fund should, in its essence, be an expression of the principles of the United Nations; it should be an effort of a co-operative character undertaken in the spirit of international solidarity for the purpose of fighting poverty, raising standards of living and increasing the output and productivity of the peoples of underdeveloped countries. The Fund, it says, should have the duty of encouraging in every way the development of methods of self-help so that the assistance given by it may be doubly fruitful. Finally, if the international community is to give further substantial aid to the underdeveloped countries, that aid must be so administered and applied that its prudent use and most fruitful application can be assured so far as is humanly possible.

The specific recommendations of the Committee relate to four main problems: (1) the income of the Fund, (2) operations—principles and policies involved, (3) disbursement of resources, and (4) structure of the Fund—control and management.

The Income of the Fund

The Committee recommends that a fully paid-up capital fund should not be established in the first instance but that the Special Fund should be started by contributions covering an initial period of two years, afterwards replenished by annual contributions. Contributions by Governments should be voluntary. During the initial period of the Fund, one-quarter of the amounts pledged for the first two years' allocations should immediately be paid into the account of the Fund so as to provide an initial operating fund.

Pledges or policy statements should be made in advance by members of the Fund for at least one further year beyond the initial two-year period to give a reasonable assurance of the Fund's continuity of operations. The administrators of the Fund should also be authorised to accept non-governmental or private contributions, and to appeal for such contributions. The contributions of a country would be in its local currency and convertible only as agreed. They should be available for the purchase of any goods and services obtainable in that country, except to the extent that the Government of that country feels obliged to restrict the use of its contribution in the purchase of specific goods and services.

Operations

The Committee recommends that a country, in order to qualify for assistance from the Fund, should be a member of the Fund, subscribing to its policies and principles and making an appropriate voluntary contribution to the operational budget, and its assessed contribution to the administrative budget. The Governments assisted by the Fund, the Report recommends, should strive for the effective use of their internal and external resources to promote their economic development. They should, within the framework of their general economic policies, develop fiscal and monetary policies adequate for their needs, and endeavour to keep inflationary pressures under control. They should move towards integrated economic development programmes, and avail themselves fully of the technical assistance services offered by the U.N., its specialised agencies, other intergovernmental organisations and other sources, public and private.

Governments, in requesting assistance from the Fund, should present firm statements on their intended use of the Fund's aid, as well as evidence of a technical nature regarding the projects for which assistance is requested. They should show that other means of external financing are either inappropriate or have proved unavailable. From their own resources, they should provide part of the finance for projects assisted by the Fund, or for related projects or in other sectors of economic development.

Assisted Governments, the Committee further recommends, should maintain and present records to enable the Fund to verify that effective use is being made of the assistance for the purposes for which it was granted. The Fund's operations should not serve as a means for foreign economic and political interference in the the internal affairs of assisted countries. Nor should the Fund be influenced by considerations relating to the political structure of a country requesting assistance, says the Report. The Fund's operations should be directed towards economic development which raises the welfare of the population as a whole. They should not be restricted as to the type of project, provided the assistance contributes to the economic development of the country.

While the Fund should not set up excessive standards of performance as a qualification for assistance, it should have authority to suspend disbursements if assisted Governments fail to fulfil the terms of agreement without sufficient cause.

Disbursement of Resources

The Committee recommends that, in the early phase of the Fund's operations, guiding considerations in allocating resources among Governments should be: (*a*) the merits of individual applications submitted; (*b*) projects promoting the purposes of the United Nations or special objectives given high priority by U.N. organs, such as those designed to increase food production; (*c*) projects capable of yielding early results; and (*d*) the maintenance of a reasonable geographical balance in allocations.

Applications from countries which have not received an appropriate share of aid in earlier periods should be given a higher priority in later stages of the Fund's operations. The Fund should have authority to agree with the assisted Governments in each individual case whether assistance should be rendered wholly in the form of a grant or a loan, or be given as a combination of the two.

The Fund should not attempt to recover principal or ask for interest where this would jeopardise the country's economic development. On the other hand, the Fund should require repayment of principal, payments of interest, or both, where a country is in a position to make these. In any case, an assisted Government should be able to ask for revision of the terms of principal and interest payments. The terms of loans from the Fund should be more liberal to the borrower than the best terms currently available, either commercially or from the International Bank, says the Committee. Loans should normally be in the currency needed to secure the goods and services required by the assisted Government. The Fund should be authorised, in agreement with the assisted Government, to carry part or the whole of the exchange risk arising out of devaluations of currencies of assisted countries.

Structure of the Fund

The Committee recommends that the Fund should be open to any member of the U.N. or of any specialised agency which is prepared to subscribe to the principles and policies of the Fund, and is willing to pledge its contribution to the operational budget of the Fund, and to pay its share of the administrative budget. Membership should also be open to any other Government which is not a member of the U.N. or any specialised agency, provided it is willing to accept the same requirements and is acceptable to the General Council of the Fund.

The Fund should be established as a separate administration but within the framework of, and in close proximity to the United Nations, as is the case with U.N.I.C.E.F. All the Governments participating in the Fund, meeting annually as the General Council of the Fund, should constitute the source of authority. The General Council would elect an Executive Board, consisting of 8-12 Directors, each designated by one of the Governments elected to the Board.

There should be equal representation in the Executive Board of the major contributors to the Fund, on the one hand, and of other members of the Fund, on the other hand, with reasonable geographic distribution among the latter. The Executive Board would appoint the Director-General of the Fund, in consultation with the Secretary-General of the United Nations. The Fund should transmit annually a report on its activities to the Economic and Social Council. Representatives of the Secretary-General of the United Nations, the International Bank, the Monetary Fund, and the T.A.B. should be invited to attend all meetings of the Board with full right of participation in discussion, but without vote.

Members should be required to make contributions in convertible currency to the administrative budget each year on the basis of quotas approved annually for each country by the General Council of the Fund. At every third meeting of the General Council of the Fund, a survey should be undertaken on which could be based a longer-term forecast of the Fund's requirements and prospects.

Non-technical Chapter

In addition to its more technical chapters, the Report also includes a non-technical chapter entitled "How the Special Fund might work." This chapter contains a picture of how the technical recommendations of the Committee might work out in actual operation. This chapter presents something like the history of an application for assistance from "S.U.N.F.E.D."

Starting from the preliminary discussions between the staff of the Fund and applying Governments, this chapter follows the application as it is placed before the Executive Board of the Fund, describes the machinery of investigation and decision-making, the working out of the agreement between the Government and the Fund, the currency operations required, the process of execution and follow-up.

*Available at all U.N. Sales Agents throughout the world. Price: 3s. 9d.

DEARER BORROWING IN U.S.

New York City dealers have raised interest rates on commercial paper they sell to investors for the fourth time in the past three months. Commercial paper is the money market name for short-term unsecured notes of business concerns. Notes of the biggest borrowers with best credit ratings now are quoted at 2¼ per cent., an increase of ¼ per cent. Notes of lesser-known borrowers now are offered at 2½ per cent. to 3 per cent.

WAGES IN THE TEXTILE INDUSTRY

I.L.O. COMMITTEE URGES GUARANTEED ADEQUATE MINIMUM

IT was seven years ago, in 1946 to be precise, that the Textile Committee of the International Labour Organisation recommended international policies aimed at guaranteeing adequate minimum weekly wages in the textile industries. Since then, discussions have been held among the employers' and workers' organisations with a view to determining such a minimum. These discussions, however, do not seem to have yielded appreciable results, as witness the fact that the scheme for implementing the recommendations is still in an experimental stage in the majority of countries, especially in the backward regions. (India, however, is an exception in that its workers in the textile industry are assured of a minimum basic, though not a hundred per cent. guaranteed, wage.) This is only to be expected, considering the score of limitations—financial and others. It is not surprising, therefore, that these figured prominently in the deliberation of the recent session of the I.L.O. Textile Committee held at Geneva. The discussions on guaranteed wages in the textile industry centred round the report prepared by the I.L.O. to assist the Committee in its consideration of the subject. In view of the importance of the subject, it is proposed to review here briefly the salient features of the I.L.O. report.

The characteristic feature of a guaranteed wage is that it assures the worker of a certain amount of employment or income. Such guarantees may take different forms. For the purpose of the report under reference, a guaranteed wage scheme is defined as an arrangement whereby, subject possibly to certain limitations, employers, individually or collectively through an organisation acting on their behalf, undertake, in advance, to provide employment at the ordinary rates of pay for a specified number of hours, days or weeks; or undertake to pay a specified amount of wages during the period, whether or not they are able to provide employment for the whole of the period.

Need for Guaranteed Wages

The need for guaranteed wages in the textile industry arises from the fact that, in many branches of the industry, recurring fluctuations in employment and earnings cause hardship and insecurity to the workers. From the point of view of needs alone, guaranteed wages are desirable as a protection against the consequences of both long-term cyclical economic changes and short-term variations in output and employment. Indeed, guaranteed wages may serve not only to eliminate waste of human resources but also to increase the workers' feeling of security. To quote *Guaranteed Wages*, the official U.S. report: "The guaranteed wage, used with care, with full recognition of its limitations, and with full eyes open to dangers in exceeding these limitations, can become an integral part of a rounded programme for greater security, for harmonious relations, and for a more lasting prosperity."

The scheme of guaranteed wages in the textile industry, however, has to be implemented only in stages. Such progressive implementation will be facilitated by measures designed to lower the cost of guaranteeing wages. This can be done, without impairing the value of a guarantee to the workers, by reducing temporary stoppages of or fluctuations in plant operations. Naturally enough, negotiations for guaranteed wages should be accompanied by a thorough investigation of practical stabilisation measures. It is of great importance that the workers should co-operate with the employers in attempts at such stabilisation; they should be willing to accept any reorganisation and reallocation of work that may be necessitated by measures essential to ensure stability.

The task of stabilising plant operations and employment will be facilitated by analysis of the nature and causes of short-term fluctuations in production. These fluctuations are often a serious problem to the industry, although there are other industries where they make themselves felt even more strongly. In the textile industry, they have a tendency to become considerably less marked in times of high activity, though the threat of their recurrence is never really absent. An analysis of the various causes of the fluctuations reveals that, while the original sources of instability are external and found in the instability of raw material prices and of demand for textile products, the degree of instability experienced within the industry depends, to a substantial extent, on policies with regard to inventories, advance orders and capacity utilisation.

Output to be Regularised

The greatest hope of achieving increased stability of production would appear to be in earnest efforts to regularise output by production planning and manufacturing to stock in periods of slack demand. The difficulties presented by changes in styles and fashion may be overcome by manufacturing, to the extent possible, fashion textiles in addition to non-style textiles and by concentrating on the output of non-style goods during off-seasons.

Finally, even with fluctuating production, there are some limited opportunities of stabilising labour requirements, for example, by deferring certain work on maintenance to slack periods of the year. It is also possible, in some cases, to reduce the number of lay-offs by transferring workers between departments according to changing needs. Workers might be trained for a variety of different jobs. Mobile teams of workers might be established. In the field of raw material prices, the hope for stabilisation must be put on international action involving the operation of buffer stock schemes. Neither with regard to raw material prices nor in the field of consumers' demand can the individual manufacturer do much to increase stability, but there appear to be certain opportunities for manufacturers to act concertedly in persuading final consumers to buy textiles more regularly. As for intermediate demand, it may be suggested that buying and ordering in slack periods should be further encouraged by devices, such as price concessions and price guarantees.

In order to keep down the costs of a guaranteed wage plan and to facilitate its introduction, it may be necessary, in the initial stages, to limit coverage only to certain categories of workers. Limitation of coverage, it must, however, be stressed, should be very carefully applied, lest it should create dissatisfaction among workers who are not covered.

It is desirable that the guarantee periods provided for in wage plans are as long as possible. The guarantees which are intended to alleviate the impact of seasonal variations will, in many cases, have to extend over several months, if they are to serve their purpose and prevent workers from being laid off in protracted slack seasons. While the value of a guarantee depends on the length of the period (other things being equal), even a guarantee, as short as one week, may be of great value. A guarantee period of just one week will certainly improve the position of workers where it is not already the practice to give one week's notice of lay-offs. Owing, however, to the length of production processes, very few textile mills run their production on a day-to-day basis and the requirement to give one week's notice will probably not necessitate any revision of production programmes towards increased stability.

The cost of guaranteed wage will vary according to the proportion of workers covered by the guarantee, the percentage of earnings guaranteed, the limitations on the employers' liability provided for in the agreement, and the extent of fluctuations in labour requirements which actually occur. On the assumption of a given degree of fluctuations, it may be possible to frame a wage guarantee, so that potential costs will be kept within a certain limit, equal to the amount the employer is willing to pay during a year or any other period. Closely allied to this question is the problem of preventing the cost of a wage guarantee in a bad year from impairing the financial stability of the guaranteeing firm. A solution offered to this problem is the scheme for financing the operation of the guarantee on the basis of a reserve fund. There are advantages and disadvantages with both pay-as-you-go financing and reserve fund approach. On balance, however, it seems that the latter makes it more likely that the employer will be able to guarantee his workers their wages when they need them most.

An important question that is to be considered while examining the scheme for introducing guaranteed wages is whether such should be by legislation or by wage-determining authorities or by collective bargaining between employers and workers concerned. Inasmuch as matters relating to wages and other conditions of employment are being mostly determined by means of awards of industrial tribunals or other wage-determining authorities, the I.L.O. feels that it would be preferable to introduce guaranteed wages by similar methods. But, of late, there has been a shift in the emphasis from compulsory arbitration to voluntary negotiation, which means that provisions of guaranteed wage schemes will have to be subject to collective bargaining. It is desirable to regard a guaranteed wage plan as having continuity, subject to revision only when and as the need arises, instead of having a specific duration.

Basis of Introduction

Another question that is to be considered is whether a guaranteed wage should be formulated on a "branch or an industry-wise basis," or whether it should involve single employers only. Discussing this question, the I.L.O. makes the following interesting observations:

"Guaranteed wages might be conceived on an industry or a branch basis when industry-wide collective bargaining exists, particularly in cases where the union has come to perform a major function in improving the conditions of the workers in the industry. In general, branch agreements might be preferable, because, if only isolated firms introduce guaranteed wages, some of them may abandon their plans prematurely, and others refuse to introduce them at all, because of the fear of worsening their competitive positions. On the other hand, although the various textile firms are organised on a highly competitive basis, the differences between them may be so great that it is difficult to formulate a guaranteed wage plan which will suit all of them.

"Governments might well, in collaboration with employers' and workers' organisations, conduct investigations into the costs of operating guaranteed wage schemes in the textile industry and methods of reducing such costs, with a view to the adoption of such schemes in the textile industry after consideration of the problems involved by the employers' and workers' organisations concerned. Matters which would call for attention are the steps which might be taken by employers and workers to reduce any additional costs which might result from the introduction of guaranteed wages and, in particular, the measures or policies which Governments and employers, acting collectively and individually, might adopt to stabilise production and employment, as far as possible, by reducing cyclical fluctuations and seasonal or other short-term variations in production and employment. In cases in which the immediate introduction of a guaranteed wage may not prove feasible, a certain amount of stabilisation of employment may be obtained by investigating seasonal variations in demand and by taking steps to counteract the influence of such variations upon output."

Have the pulse of the
COTTON WORLD
in your hand by subscribing to the American "Weekly"
THE COTTON TRADE JOURNAL
This international "weekly" serves the cotton trade proficiently and, as a mirror, reflects the cotton situation in the United States and other cotton-producing and consuming countries.
A year's sea-mail subscription (Rs. 28-12 only) or air-freight subscription (Rs. 100-7 only) includes an Annual Textile Number, reporting developments and progress in the textile industry, and an International Edition of over 200 beautifully illustrated pages, giving a resumé of conditions in each of 22 countries as they affect cotton and world trade in general. This International Edition, otherwise, by itself costs $3.00 or Rs. 14-6-0 plus postage.
Substantial reductions for 2-year and 3-year subscriptions.

AUSTRALIAN WOOL

The current (1952-53) wool selling season in Australia, which comes to an end on the 30th inst., has been quite an eventful one. For the season has not only proved to be "smooth-running and relatively stable," but also yielded an income

BRITISH EXPORTS OF CLOTH AND YARN

COTTON TRADE AWAITS REVIEW COMMITTEE'S REPORT

(From A Special Correspondent)

MANCHESTER, 1st *June*

MANCHESTER LETTER

IT is a slow uphill struggle to expand shipments of cotton goods from Britain this year. Manufacturers and merchants alike are well aware of the reluctance of foreign buyers to anticipate their requirements and although cloth exports seem to have settled down at a steady level it is below the average recorded last year and makes the Buxton target look even more unattainable. In April the value of all cotton goods exported was £11,274,338 as compared with £13,657,014 last year and the value of exports for the four months ended April, was £43,497,336 as against £63,544,973 in the same period of 1952.

Although cotton cloth shipments in April were the highest since January they only just exceeded the 1952 monthly average and so far this year have amounted to 232,767,000 square yards valued at £29,348,844. The corresponding 1952 figures were 270,613,000 square yards worth £42,245,229. The following table shows the details:—

	Piecegoods Sq. yds.	*Value* £	*Average price per Sq. yd.* d.
Monthly Average in			
1939	116,115,000	2,665,000	5.51
1949	75,298,000	8,809,000	28.07
1950	68,539,000	8,358,000	29.26
1951	72,090,000	11,016,000	36.67
1952	59,234,000	8,404,647	34.05
1953*	58,192,000	7,337,211	30.26
January	64,796,000	8,223,374	30.46
February	52,027,000	6,611,090	30.49
March	56,283,000	7,136,820	30.43
April	59,526,000	7,372,000	29.72

* Four months' average.

British Commonwealth markets continued as the leading consumers of Lancashire-made cotton cloth during April and for the four months the chief customers have been (in square yards, with 1952 comparisons): West Africa 51,213,000 (63,007,000); South Africa 32,025,000 (17,461,000); Australia 17,796,000 (44,275,000) and Malaya 10,822,000 (8,656,000).

Imports of cotton goods into Britain this year continue to be not only cheaper but very much smaller in volume than in 1952. The value of arrivals has been £4,776,695 in the four months, against £16,510,125 a year ago. About half the cost has been in grey cloth, the volume involved being 27,975,000 square yards, against 65,840,000 square yards.

The April total of imports of grey unbleached material was 8,829,000 square yards, a slight increase on the previous months and the highest since September last. Japan was again the main supplier, providing 7,555,000 square yards, bringing its total for the year to 19,730,000 square yards.

Small Yarn Sales

The quantity of cotton yarn exports from month to month now shows very little change. As in the case of cloth, the figures for April were the highest since January but the variation over the past six months has been negligible. To the end of April shipments aggregated 13,171,300 lbs. compared with 15,295,100 lbs. last year, the comparative values being £5,466,575 and £8,113,892. Details are given below:

	Yarn lb.	*Value* £	*Average price per lb.* d.
Monthly Average in			
1939	9,471,800	745,500	18.89
1949	6,838,400	1,962,500	68.88
1950	5,915,500	2,127,900	86.33
1951	5,547,900	2,648,500	116.46
1952	2,976,800	1,479,163	119.25
1953*	3,292,800	1,366,644	99.60
January	3,467,700	1,427,349	98.79
February	3,268,900	1,434,904	104.77
March	3,114,500	1,241,552	95.67
April	3,292,200	1,358,790	99.06

* Four months' average.

The Irish Republic continues as the chief buyer of cotton yarn from Britain, having absorbed this year 1,744,600 lbs., against 1,168,100 lbs. in the same period of 1952. Other leading consumers have been, with 1952 comparisons in brackets: Canada 1,490,800 lbs. (748,700 lbs.) Australia 1,415,400 lbs. (1,616,500 lbs.).

Cotton Buying Plans

Events are now moving more swiftly in connection with raw cotton buying prospects for next season. The Review Committee has finished its work and its recommendations are in the hands of the appropriate Ministers, whose comments are eagerly awaited by the trade. It is understood that there will be no minority report, either by the trade union members of the committee or other interests.

The likely outcome seems to be a further compromise allowing more freedom of enterprise without stipulating any distant intention of reopening a futures market. In some quarters, it is being urged that the Government should make its eventual objectives quite clear, and announce here and now how soon it proposes to re-establish futures trading in Liverpool. It is more than doubtful whether such a declaration, which can only be conjecture, will be made. It is asking too much in the face of present-day reversals of anticipations to expect such a vital pronouncement to be made when so many unpredictable factors can intervene, especially in the realm of currency problems.

Whatever the Government plans on the advice of its investigating committee, spinners now look forward to an early statement to give them adequate time to consider their position. A deadline of 11th July has been fixed for notification of whether private or Commission buying is to be adopted in the new season. Until more details of the cover facilities available are made known the choice will be in the balance for many firms, although it is probable that a larger number of mills will contract-out from the Commission this year.

Japan's Working Hours

There has been some comment in Lancashire on the comparative figures given by the International Cotton Federation for the number of hours worked by weaving machinery in Britain and Japan at the time of its loom census at the end of July, 1952. It is not denied that due to abnormal conditions in Lancashire the average figure of 32.66 hours worked was a fair reflection of the troubled state of the industry midway through last year, but the Japanese average of 84.7 hours is held to be excessively high.

According to the latest statistics compiled by the All-Japan Cotton Spinners' Association for January this year, the looms owned by spinning companies numbered 70,549 while those owned by independent weaving concerns amounted to 236,309. As is their custom, the spinning companies worked their looms on shifts and on the basis of machines operating at 400 hours per month, comprising 16 hours per day for 25 days, their looms were working 70.2 hours weekly. The smaller independent weaving firms maintained the single-shift system and were operating 42.4 hours weekly.

In view of the preponderance of machinery controlled by independent concerns it is felt that the figures quoted by the International Federation were liable to give a misleading picture. There is a mistaken idea, not only in Lancashire but in other parts of the world, that all the Japanese mills are operating double and treble shifts. It should be recognised that the majority of looms, at any rate, are engaged in single-shift working and the combined average of working hours was 48.8 compared with Lancashire's estimated figure of around 40 hours per week.

Anglo-Argentine Trade

The British Government is fully alive to the need to do everything to assist Lancashire's export trade and will miss no opportunity to secure openings for the United Kingdom cotton goods in Argentina. This assurance, it would appear, has been given by Mr. Thorneycroft, President of the Board of Trade, to a Manchester Chamber of Commerce deputation which travelled to London to see him.

The deputation expressed "deep concern" at the continued exclusion of U.K. cotton cloth from the Argentine market under the new trade agreement. "They urged in the strongest terms that every effort should be made to provide opportunities for the importation of Lancashire goods into this important long-term market," according to a statement issued by the Chamber.

Raw Cotton Imports

Imports into the United Kingdom during the past fortnight aggregated 30,358 bales comprising 9,600 bales Braziiian, 4,409 bales West African, 3,904 bales Pakistan, 2,768 bales Egyptian, 2,297 bales American, 1,436 bales Peruvian, 1,147 bales Sudan, 1,002 bales Mexican, 790 bales East African, 775 bales Indian, 660 bales Argentine and 1,570 bales sundries.—*All Rights Reserved.*

COTTON IS A HEAVILY TAXED COMMODITY

TRADE BODY'S REPRESENTATION

FEW commodities are more "international" in character than cotton. Its prices are not determined by any particular producing or consuming country, but they represent the interaction of numerous world forces, so that it is the one commodity which does not admit of serious interference from governmental quarters. It is, however, true that cotton's "international" character has been modified greatly in recent years, thanks to the shortage of this commodity and the expansion of the domestic textile industry in most of the large consuming countries which were formerly dependent upon imported textiles. Nevertheless, it retains, even to-day, some of its original global characteristics. This explains why the control and tax burdens imposed upon it in any particular part of the world tend to affect the international trade in this commodity. Against this background, it is easy to appreciate the Indian cotton trade's dissatisfaction with, if not positive resentment of, the tax burdens imposed upon cotton by the Central and State Governments. It is small surprise then that the Cotton Buyers' Association should have been impelled to submit a closely reasoned reply to the Taxation Enquiry Commission's questionnaire, setting forth the main taxes which have been imposed on cotton, and the extent to which these tax burdens distort cotton trade and cotton prices.

Among the tax burdens on cotton in India, the least oppressive is the export duty. This is because the duty applies only to short-staple varieties which are the only varieties that are allowed to be exported. Even so, the burden has proved excessive in recent years. The Government has recognised the burden of this tax, as is evident from the fact that it announced a reduction in the duty. This short-staple varieties which are allowed for export are Bengal *Deshi*, Oomra *Deshis*, Mathia, Kalajin, Dhollera, C.P.I, C.P.II, Central India *Deshi*, Coconada and Assam-Comillas. The previous export duty of Rs. 200 per bale on these varieties has been reduced to Rs. 125 per bale on Bengal *Deshi* cotton, whereas the export duty on Assam-Comillas has been totally removed. The duty on the other varieties has been kept unaltered at the original level. The effect of this discriminating reduction in export duties has been that, whereas the export quota for Bengals has been exhausted, a large part of the quotas released for other varieties remains undisposed. The Association does not, of course, suggest that there should be no export duty on cotton. Only, it emphasises that the duty should be revised to correspond with the actual situation prevailing in overseas markets.

There is next the import duty. The duty applies to all varieties of imported cotton at a rate which works out to about As. 2.1 per lb. It is interesting to recall the history of this levy. An import duty of six pies per lb. on foreign cotton was originally imposed, with the idea of protecting Indian cotton. This was done at a period when American cotton was cheaper than similar varieties of Indian cotton. In the early thirties, the duty was raised to one anna and, subsequently, to As. 2 per lb. Out of the duty of As. 2, one anna was earmarked for the Cotton Fund and the balance went to augment the general revenues. Later, even this distinction was removed, the entire duty being taken to general revenues. Subsequently, a further 5 per cent. surtax was added to the duty. The original purpose of the duty, namely, its protective character, has no relevance to modern conditions since Indian cotton is actually cheaper than American cotton. Nevertheless, the duty remains. The Partition of the country has further increased the dependence of India on foreign cotton. Since the duty has thus outlived its utility, the Association feels that it should either be abolished or reduced substantially.

The sales tax on cotton is the latest addition to the list of imposts on cotton, but threatens to be the most oppressive of the burdens. Under the Bombay Sales Tax Act, 1952, a levy of one per cent. on sales is imposed on raw cotton at the first stage. The tax is also applicable, as the position stands at present, to foreign cotton sold to a mill by an importer. Cotton dealers, especially importers, it is stated, would be particularly affected. The importers conduct their business on a small margin of profit—about one per cent.—so that any new burden on this commodity will reduce even this small margin of profit.

Finally, there are certain sections of the Income-tax Act, which, it is stated, have jeopardised the interests of cotton dealers, particularly the cotton importers. These are sections 42(1) and 43 of the Act. Under section 42, the agent of a non-resident principal is personally liable to assessment in respect of the non-resident's income which is deemed to accrue in India under that section. Section 42(1) gives the tax authorities the option either to charge the non-resident direct or to make an assessment in the name of his agent. For the purposes of the Act, the agent himself is deemed an assessee in respect of the tax. Section 43 restricts the appointment of statutory agents to three classes of persons: those that are employed by or on behalf of a non-resident, those having business connection with a non-resident and those through whom a non-resident is in receipt of any income, profits or gain. The expression "business connection" which occurs in this section, it is alleged, has been variously interpreted by the tax authorities with the result that the interests of both the foreign shipper as well as the importer of foreign cotton in India are made to suffer. The Association has urged the Commission to examine the effect of these two sections on the cotton trade.

Apart from these burdens, there are certain indirect levies which bear heavily on cotton. It is not perhaps as clearly realised as it should be that any increase in the tax burden on cloth manufacturers, that is, the mills, or any special imposts on cloth, tends to have an indirect effect on cotton prices. After all, the scope for lowering the wages of mill workers is strictly limited, thanks to the labour laws. Inevitably, these measures affect the mill industry's capacity to pay high prices for cotton. Thus, the burden, at least a part of it, on the mill industry is shared by the cotton farmer. If this does not happen, the consumer is compelled to pay higher prices, provided there is no serious resistance to higher prices on his part. But such resistance is already being witnessed, so that there is need to encourage production of cloth at lower prices. One of the ways in which it could be done is to reduce the burden of tax on cotton.

Again, it should not be forgotten that it is unwise to subject an industrial commodity such as cotton to heavy tax burdens, since such policies result in reducing the competitive ability of the manufactures in foreign markets. Also, cloth is a commodity which is next in importance only to food. It is the Central Government's recognition of this importance of cloth in the national economy that induced it to include cotton under the list of essential commodities on which no sales tax is to be imposed. Nevertheless, the State Governments continue to levy sales tax on cotton. It will thus be seen that there is an urgent need to examine the tax burden on cotton with a view to evolving a rational fiscal system which would weigh less heavily on this commodity. If such examination reveals—as it seems to reveal—the need for relief, it would be wrong on the part of the Central and State Governments not to take suitable action.

EGYPTIAN COTTON

The first estimates of the coming Egyptian (1953-54) crop show that while there will be a sharp decline in Karnak and Ashmouni cotton, there will be a rise in Giza 30. Nevertheless, the size of the entire crop will be appreciably smaller than the current season's crop. The following are the particulars of the first estimate:

(In bales of 730 lbs.)

	1953-54 *crop*	1952-53 *crop*
Karnak	260,250	520,500
Giza 30	260,250	96,000
Menoufi	27,500	24,500
Zagora	27,500	27,500
Ashmouni	343,000	535,000
Others	—	24,000
Total ...	918,500	1,227,500

PENINSULAR AND ORIENTAL STEAM NAVIGATION COMPANY

HEAVY COST OF FLEET REPLACEMENT CAUSES GREAT ANXIETY

SIR WILLIAM C. CURRIE'S REVIEW

ADDRESSING the 113th Ordinary General Meeting of the Peninsular and Oriental Steam Navigation Company, held in London recently, Sir William C. Currie, G.B.E., Chairman of the Company, pointed out how the large increase in the cost of new ships had increased the difficulties of shipowners. He held that the "normal hazards of a business engaged wholly in the unprotected world markets are immeasurably increased when it is impossible to foretell the cost of the ships whose services we are selling."

The following are extracts from Sir William's address:

"Contrary to the view I ventured to express in this room last year, the results for the year to 30th September, 1952, have exceeded those of the previous year which, in their turn, had exceeded those of any year since we began to publish group accounts. Our thanks for this result are due to certain of our subsidiary companies, in the main those engaged either in the tramp trades or in trades closely affected by the tramp market.

"The cost of new tonnage gives your Board and the Boards of our allied companies the greatest anxiety. The policy which the group has followed ever since the war ended, and even during the war period, is that of replacement of lost and obsolescent ships. In normal pre-war times the risk the shipowner ran was a trading one; since the war and to-day there are other risks—political and economic—not the least of which is that the final capital cost of new ships is unknown when they are ordered, and indeed until after they are delivered. The gap in time between order and delivery has been as much as five years. The rise in cost in five post-war years has been as much as 80 per cent. Nothing that the owner can do will limit this possible increase. It will thus be seen that the normal hazards of a business engaged wholly in the unprotected world markets are immeasurably increased when it is impossible to foretell the cost of the ships whose services we are selling. It is true that ships which were delivered up to last year look cheap compared with similar ships to-day. But there comes a time when one has to consider with special care the pros and cons of this capital cost risk. If price stability could be achieved, it would be a great encouragement to shipowners to continue forward programmes. For a 9,000-ton cargo ship of the 'S' class which is employed in the P. & O. Far Eastern trade, we are having to pay to-day about £1,400,000, a figure which before the war would have been regarded as expensive for a passenger ship of the 'Strath' class. Fifteen years ago the price of the cargo ship would probably have been about £350,000. For seven out of the 15 years shipping was either requisitioned at strictly regulated rates of hire or operating under controlled rates of freight. During the seven years since 1946 taxation on company profits has been well above the level of 50 per cent., relieved only by initial allowances.

"It is traditional that the shipping companies of this country should be built up by ploughing back profits in good years so that they may be able to weather the storms of the lean years. This policy the group so far has been able to follow, despite the war and the restrictions that accompanied it, and seven years of crippling taxation never before experienced in times of peace. This has only been achieved by a conservative dividend policy and by setting aside cash for the replacement of ships.

Initial Allowances

"It must be mentioned in this connection that our cash position has benefited materially by taxation relief flowing from the introduction of initial allowances. The cash benefit to the group as a whole has been about £12 million, which is nearly one half of its invested funds. And yet this sum is nothing more than the receipt of depreciation allowances in advance. The point has been repeatedly stressed that initial allowances are not a form of subsidy from the Exchequer; they represent merely the allowance of depreciation at the beginning of a ship's life instead of at the end. We have recently seen that initial allowances can be withdrawn at comparatively short notice—fortunately, they have been reinstated in part, but with no guarantee of permanence. One hesitates to say very much more than has been said already about taxation, but I must confess to a feeling of alarm about the taxation burden in the years to come, when, through the operation of initial allowances which we are receiving now, there will be no annual wear and tear allowances on ships which will still have one-third of their useful lives to run. The Report of the Royal Commission on Taxation is anxiously awaited by the business community and by none more than the shipping industry.

"In spite of the enormous sums spent on new ships, 21 per cent. of the group fleets was over 20 years of age last September and was thus ripe for replacement. The average age of the passenger ships of the group is 16 years and of the cargo ships nine years. A constant programme of shipbuilding is necessary if the fleets of the group are to be maintained at a high standard of efficiency; the gross tonnage of ships building or contracted for is 359,000 tons.

"I have said nothing about the development of new interests. No one who is in business can afford to stand still. He must either go forward or backward and it is my hope that the P. & O. Company and the other members of the group will go forward. This envisages that one day or another we may wish to embark on some new project, and the present scale of taxation is such that it is difficult to finance worthwhile extensions out of taxed profits. We, therefore, visualise that we may wish to raise new capital, though I cannot say when. Let me emphasise that at the present time the Board have before them no projects which would necessitate the raising of new capital and, should the need arise, we cannot say whether it will be more appropriate to issue new deferred stock or new debenture stock. We feel, however, that it is in the best interests of the Company and its stockholders that the Board should have unissued stock available. If we do not increase the authorised capital now but wait until a need actually arises, the resultant delay which would ensue from having to call a meeting and the consequent publicity which would be given to our intentions, might well prejudice negotiations and be to the Company's disadvantage. It is for these reasons that I shall shortly propose a resolution to increase the authorised capital, of which notice has been given when calling this meeting.

The Trades to India, Pakistan and Ceylon

"The demand for freight space outwards from this country was generally firm, and on the whole the ships were well filled until the end of 1952. Since the beginning of this year cargo has been less plentiful, and there is now the competition of German ships which have re-entered the trade.

"As regards congestion at Colombo, to which I referred a year ago, some ships have received better despatch, but there is still little sign of a permanent improvement in the near future.

"Homeward loadings at Calcutta and Colombo were satisfactory during the year covered by the accounts, but latterly there has been a tendency for Calcutta cargo to fall away a little. Freight through the East Pakistan ports has declined owing to the smaller volume of jute sold overseas. From West Coast ports conditions have been steadily declining, and ships are now leaving with vacant cargo space.

Far East

"The Far Eastern passenger ships have terminated their voyages at Hong Kong, and the cargo ships in Japan. Trading conditions to the Far East for the first six months of the financial year were good, and the full effect of the recession in world freight rates in April, 1952, was not felt by the Company in that trade, the level of gross earnings being well maintained.

"The Company's Far Eastern trade is particularly subject to political as well as economic stresses, and although the political situation in Malaya has much improved, on the economic side there has been a steep fall in the price of rubber, one of that country's principal exports.

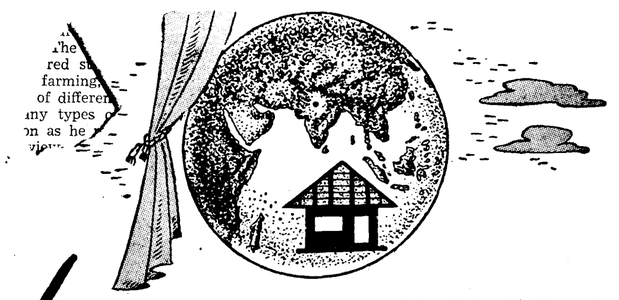
"The continued restrictions on trade with China and the Korean War have reduced the entrepot trade of Hong Kong. Owing to disturbed conditions the Company made no calls at ports in China during the financial year. This has made difficult the securing of homeward cargo for which in the past we relied on China to a large degree.

"Fortunately the loss of homeward cargo from China was in part made good by a movement of steel from Japan. This movement was but temporary and to-day has almost come to a standstill. The full effect of the competition of Japanese shipping has not yet been felt.

Passenger Traffic

"Passenger traffic has now returned to a seasonal pattern and most passenger ships are sailing with vacant accommodation in one direction or the other. Fortunately the Tourist class accommodation outwards to Australia has been well filled throughout the year owing to the continued flow of migrants."

The report and accounts were adopted and the resolution to increase the authorised capital, as mentioned, was passed.



International EXHIBITION

ON LOW-COST HOUSING

NEW DELHI

JANUARY 20 — MARCH 5. 1954

The problem of low-cost housing can be met by developing and utilising indigenous building materials by better designs and specifications and by improving the technique of construction. In order to provide a forum for the demonstration of such attempts an Exhibition on Low-cost Housing will be held in New Delhi during January—March, 1954, in which foreign countries will also participate.

The Exhibition is divided into different sections — Model Houses, Building Materials, Construction Technique, Tools and Light Machinery, Heavy Machinery, Domestic Services, Town Planning, Miscellaneous.

For detailed information, intending Exhibitors and firms who wish to advertise their goods may write to Director, International Housing Exhibition, Ministry of Works, Housing and Supply, 'P' Block, New Delhi for a copy of the 'Prospectus and Guide'.

Enquiries relating to bookings in the Amusement Park of the Exhibition should be sent in early to the Director.

Issued by the Ministry of Works, Housing and Supply, Govt. of India, New Delhi. AC 473

DISPERSAL OF SUGAR FACTORIES

HOW FAR IS IT PRACTICABLE?

ONE of the specific recommendations made by the Planning Commission, in its development programme for the sugar industry, relates to the shifting of some of the factories which are at present located in areas where sufficient cane supplies are not available to areas which are assured of adequate supplies of cane or which are suitable for growing cane. This requires a careful examination by an expert committee of all the factories which are not working or working at low capacity, with a view to determining the units that need to be shifted. Although it is quite a long time since this recommendation was put forward, no worthwhile move has yet been made to implement it. It is reported that even on such issues as assistance in the form of railway facilities for shifting factories and issue of import licences for new machinery, no decision has been taken by the Government.

There is nothing new in the recommendation of the Planning Commission, inasmuch as it has been made, time and again, by many of those who have paid some thought to the future of the Indian sugar industry. One of the most disquieting features of the development of the sugar industry is, as readers are aware, that it is unduly concentrated in the two States of Uttar Pradesh and Bihar—these together account for 102 factories out of a total of 159—which are not so well suited for the production of sugarcane as Bombay Deccan and South India. Consequently, the factories are not assured of adequate supplies of high quality cane at reasonable prices. This has rendered the cost of sugar manufacture in these States very high *vis-a-vis* that elsewhere. It is not, therefore, surprising that several factories are either idle or working below capacity.

Defects of Location

A conclusion that emerges from the above study is that if the Indian sugar industry is to be stabilised on a sound footing—and this will not be possible unless sugar is produced at a cheaper cost than now—it is imperative that the defects in the location of the industry are removed as early as possible. The one common remedy suggested is, as already noted, the shifting of sugar factories to other regions. Few would dispute the reasoning behind this suggestion. For it is one of the essential principles of economics that an industry should be located in a region which is best suited for it in the matter of availability of adequate raw material, transport facilities, and proximity to consuming markets. But the point in so far as the sugar industry is concerned is whether the dispersal of the factories is a practical solution, what with the present serious financial difficulties facing the industry. Wholesale transplanting of factories from one region to another is a costly affair, not to speak of the transport bottlenecks and the loss of production during the process of such shifting. According to one estimate, the cost of shifting a factory amounts, on an average, to Rs. 10-15 lakhs. In fact, this was the conclusion arrived at in an expert survey undertaken jointly by Government officials, technical experts and others directly connected with the sugar industry some time ago. In any case, however desirable it may be, it is bound to be a very slow process and such should not be relied upon as the only solution for the ills of the industry. Alternative solutions capable of producing quicker results, therefore, deserve to be explored. For instance, efforts may be made to get the best out of the existing units, either by bringing them up to economic levels or, if there are any inherent defects in the set-up of factories, they could be remodelled.

A solution that is even more important and practicable than the one suggested above relates to measures for improving production of cane and accelerating the pace of its flow into the factories. Perhaps the most important way in which the present shortage of sugarcane can be relieved lies, as we have so often stressed in these columns, in intensifying the cultivation of cane, especially in the neighbourhood of the factories, in improving the quality of cane and in creating conditions that would make cane flow more to the production of sugar than to that of *gur*. Two suggestions which assume special significance in this context are: (1) Reorganisation of the existing machinery of cane-growers' co-operative societies in the U.P. and Bihar in such a way as to secure active participation of the sugar millowners in those bodies; (2) consolidation of small peasant farms into large-scale sugarcane plantations which would permit the use of modern agricultural methods for producing cane. The recent move of the U.P. Government to consolidate agricultural holdings is indeed a step in the right direction. The work of intensive research and cane development can be financed entirely out of the cane cess collections derived by the State Governments. Considerable scope also exists for reducing the cost of sugar production by abolishing co-operative societies' commission on cane supplied to factories and revising taxes—Central and State—downwards.

There may, however, be a few factories working on very uneconomic lines, owing to the fact that they are situated at places far distant from the sugarcane-growing areas and, as such, are forced to incur additional heavy transport charges for getting their requirements of cane supplies. In such cases, dispersal should be resorted to within the narrowest possible regions in which they already exist, as, for instance, shifting of a few uneconomic units in the eastern districts of Uttar Pradesh to more suitable sites in the western parts of the State. Care must be taken to ensure that they make arrangements to have their own sugarcane farms, as is the case now with the factories in the Deccan. Unless that is done, the hope of these factories securing adequate supplies of cane and producing maximum quantity of sugar at economic prices will not be fulfilled.

LEVULINIC ACID FROM MOLASSES

A method for obtaining levulinic acid from molasses, an important by-product of sugar, has been evolved at the Central Laboratories for Scientific and Industrial Research, Hyderabad. At present, alcohol is the only material which is being manufactured on a large scale from molasses. Substantial quantities of molasses are still available after meeting the requirements of the alcohol industry.

Levulinic acid is obtained by diluting molasses which has a sugar content of 55 to 56 per cent. to a sugar content of 27 to 42 per cent. acidifying with requisite amount of hydrochloric acid and then heating the solution under pressure. Levulinic acid is separated from the reaction mixture either as the calcium salt or by solvent extraction or vacuum distillation. Yields up to 45 per cent. of levulinic acid based on the sugar present in the molasses have been obtained.

PALM "GUR" WORKERS' CONFERENCE

The fifth session of the All India Palm *Gur* Workers' Conference will be held at Tuticorin from the 10th to 13th inst. The Conference will bring together the palm *gur* workers and those interested in this cottage industry to consider problems of common interest, exchange views on the difficulties experienced, and determine the ways and means for furthering the development of the industry which has a definite place in the economy of the country. Besides the general discussions on the problems confronting the industry, there will be discourses on technical subjects connected with palm *gur*.

A palm *gur* exhibition, in which the different State Governments and the Central Demonstration Squad will have their stalls, will be held along with the open session of the Conference. Practical demonstrations on palm *gur* and sugar-making will be given, but the highlight of the exhibition will be the inauguration of a new process of manufacturing palm *gur* by utilising solar heat.

WASHING INDIAN COAL

COMPLICATED ECONOMIC PROBLEM

ONE of the controversial questions now facing the eight-man Coal Washeries Commission is the determination of factors that encourage washing of coal. A section of coal interests is of the view that coal washing could be made attractive, provided a bonus of something like Rs. 2 to Rs. 3 per ton above the present controlled prices is given. This is the view of the Indian Mining Association also. Mr. D. C. Driver, President of the Coal Consumers' Association of India, is also of similar opinion. He says that the steady ash percentage, that is, consistency in ash content, should be rewarded by what may be called "consistency extra" over and above the controlled price for the grade reached by washed coal. He has also suggested certain adjustments in freight charges on coal transported to central washeries. He is of the view that the freight of Re. 1-14 per ton of coal transported to central washeries from whatever distance within a radius of 20 miles has been discouraging the collieries nearer the washeries from washing coal. The Indian Chamber of Commerce, in a communication to the Coal Washeries Committee, has, however, pointed out that any price distinction between washed coal and coal beneficiated by hand preparation will have "undesirable effects on both the producer and the consumer." The producer, it states, is not entitled to a surcharge for the supply of any coal to the consumer. There, however, seems to be an alternative to the bonus scheme. It will be recalled in this connection, that, a few months ago, Mr. W. H. S. Michelmore advocated a revision of the present price structure in such a way as to reflect more correctly the relative fuel values of the various grades. This means that, while the selling prices of the better grades should be appreciably increased, those of lower grades should be reduced.

Cost of Washing

There is also one more aspect of this problem, an equally difficult one. The economics of washing coal depends on two factors, namely, the nature of raw coal used and the price of clean coal. If good quality raw coal is used, the cost of washing will be less than when inferior quality is used. The complication arising from this fact was explained by Mr. Michelmore as follows:

"If the desired quality of clean coal were 15 per cent. ash, it might take, say, 120 tons of good quality raw coal to produce 100 tons of washed coal of this quality, whereas if inferior coal were being washed, it might need 130 or even 140 tons of raw coal to yield this tonnage. Now the cost of mining the raw unwashed coal varies little, other things being equal, as between the better and the inferior grades, so, paradoxically, to secure an adequate return to the colliery owner, a higher price should in theory be paid to him for washed coal produced from inferior seams than for similar coal arising from the better seams. But the value to the consumer is identical."

It will be interesting to see how the Coal Washeries Committee will meet this enigma.

Coal washing is a very expensive process. A 100-ton per hour plant will cost about Rs. 15 lakhs and a 200-ton plant Rs. 24 lakhs. These are large sums and the present state of the coal industry is such that colliery owners have little hope of finding the money from their own resources. Moreover, in the present plight of the capital market, it will be difficult to raise such finance. The cost of operating these plants is inversely proportionate to their size. The Indian Chamber of Commerce, Calcutta, is of the view that coal washing could be easily adopted if the Government itself were to set up central washeries. Alternatively, it has suggested the constitution of a corporation financed jointly by the Government and the industry for the purpose of setting up washeries at suitable centres and encouraging coal washing.

COAL STATISTICS FOR APRIL, 1953

During the month of April this year, 829 collieries and eight coke plants were reported to have worked. On an average, 346,544 persons were employed daily and 8,746,282 man-shifts were worked. The overall percentage of absenteeism was 12.86. The output per manshift for miners and loaders was 1.05 tons for all persons employed in underground and open-workings 0.57 and for all persons employed 0.37 ton. As much as 3,244,402 tons of coal were produced during the month. Besides 121,417 tons of soft coke, 175,935 tons of hard coke and 13,345 tons of other kinds of coke were also manufactured. Despatches during the month under review accounted for 2,560,844 tons of coal, 116,012 tons of soft coke, 38,866 tons of hard coke and 3,064 tons of other kinds of coke. The coal stocks at the collieries on the last day of the month were 3,657,726 tons.

RURAL RECONSTRUCTION IN INDIA—I

TREND OF CHANGES IN SOCIO-ECONOMIC FABRIC ANALYSED

(By Prof. T. R. SHARMA)

MODERNISATION of the economic structure of India began about a century ago with the introduction of railways, foreign trade and commerce. In the beginning, raw materials such as, jute and cotton were exported, and manufactures such as, cotton cloth were imported. The first impact of these changes was felt by the artisan classes like the spinners, weavers, carders, etc., who were dislodged from their traditional occupations and swelled the ranks of agriculturists and agricultural labourers. A secondary effect of the new changes was the regional specialisation of agriculture; Western India specialised in cotton, Bengal in jute, the U.P. in sugarcane and the Punjab in wheat. No new or improved methods of agriculture were introduced.

Later on, some of the imported articles including cotton cloth or jute goods began to be manufactured in India itself. The modern industries provided employment to some of the displaced artisans like weavers and to some of the surplus agricultural workers. In spite of a fair progress in the process of modern industrialisation, a very small fraction of the total population is supported by modern industries and over 68 per cent. of the people are still dependent upon agriculture.

In England and other countries the changes in industrial and agricultural sectors were almost simultaneous. But in India, throughout the century since 1850, the process of industrialisation did not affect the organisation of agriculture and the rural areas to any appreciable extent.

The second instalment of modernisation of economic organisation appears to be coming now, almost after a century from the time of the beginning of modern industrialisation near about 1850. The countryside seems to be astir, and talk of rural reconstruction is in the air. In most of the States of India, the intermediate interests in land, between the Government and the cultivator, are being eliminated and the land is passing into the hands of the tiller of the soil. It is recognised on all hands that this is not an end, but rather the beginning of agricultural and rural reorganisation in this country.

Relationship Between Man and Land

This question of agricultural and rural reorganisation presents many complicated and knotty problems in densely populated underdeveloped lands like India. Perhaps most thinkers would agree that modern economic advancement implies two important changes in the man-land relationship. First is the attachment of man to land. In this respect there is almost a perfect analogy between man and his mother, on the one hand, and man-kind and mother-earth on the other. The infant suckles at the breast of its mother, as a boy he cannot be away from his mother for long, but as an adult, his dependence on mother, except for the sentimental attachment, disappears entirely. Nations or societies were and are almost inseparable from mother-earth in the earliest stages of civilisation and economic advancement; in the secondary stages, increasingly larger numbers take up occupations not directly connected with land; and in advanced industrial societies, man's bond with arable land is almost completely broken. Even as a farmer he is not bound to the soil in the manner in which his confrere is in the under-developed lands. Farms are purchased and sold and the farmer retires from farming as other people do from service or any other business or occupation. Generations or centuries-old relationship of a particular family with a particular piece of land may not be found in advanced countries. The entire working population is much more fluid, mobile and effective than in under-developed societies.

The second change is concerned with the proportion of working population, following different categories of occupations. In backward societies, the majority of people, sometimes over 80 per cent., is engaged in producing primary necessities of life. As the society advances economically, the proportion of people following primary occupations decreases progressively till, in the highly advanced societies, only 10 to 25 per cent. of the people produce enough of the primary requirements of the whole nation. The rest of them is left free to work for the higher and refined needs of the society.

I hope all of us accept this double aspect of land and rural reform and reorganisation; first, the proportion of such people who are inextricably bound with land and certain obnoxious professions should be progressively reduced; secondly, the entire requirements of food, raw materials, etc. at progressively rising standards should be supplied by a constantly decreasing proportion of population, thereby providing a broader basis for the development of higher occupations.

If we accept these two objectives, we may proceed to examine some of the new trends in land and rural reforms and reorganisation. First of all, with the elimination of intermediaries such as the *zamindars* and *jagirdars*, the land is passing directly into the hands of the cultivator. Generally, the right of selling a part or the whole of his holding, is also being conceded to him. We all know that a very large proportion of holdings in India is of a very small and uneconomic size. These holdings do not provide sufficient income or employment to the families of the farmers who own them. Mr. S. Trone, a production engineer of world reputation, who visited India some time ago, was of the opinion that nine-tenths of the agriculturists are deficit farmers, who normally do not produce enough for themselves.

Under these conditions, it is desirable that very small and uneconomic holdings are sold to such neighbours, who are in a position to purchase them and put the enlarged holding under better and improved agricultural practices to give more produce to the nation. This process should ultimately lead to consolidation of holdings and co-operative methods of production. These changes are likely to be of great economic importance. The pattern of holdings, consisting of scattered strips, belongs to the era of subsistence farming, in which every farmer held pieces of different types of land for growing as many types of crops required for his consumption as he possibly could. But as this point of view changes and the subsistence farming pattern yields to commercial farming, agriculture tends to be more specialised. A farmer possessing all his land in one block would devote it to the cultivation of fewer crops for which the land is suitable and would get better yields. For obtaining commodities not produced by himself, the process of mutual exchange would be adopted. This pattern is sure to give better results. Besides, numerous hurdles in the path of consolidation, open-field system, compelling all farmers of a village to grow all their *kharif* crops on one side, and all the *rabi* crops on the other side of the village, is the most difficult one to cross. Even when consolidation is achieved, considerable capital expenditure may be required for fencing. Without consolidation and co-operation, improved methods of agriculture cannot be introduced even by those farmers who own enough land. Such trends, no doubt, would go to swell the ranks of landless labourers.

Problem of Land Redistribution

An opposite tendency is also discernible. Many people are demanding a redistribution of land so that the landless labourers may be provided with land. Not only in India, many eminent scholars even outside, think that the acute land-hunger in most of the underdeveloped lands of the world, specially in South-East Asia, is at the root of most of the leftist political tendencies and troubles. Dr. Parson, Professor of Land Economics in the Wisconsin University (U.S.A.), has, for some time, been studying the land problems in different States of India. He appears to conclude that some sort of redistribution is a necessary link in the process of agrarian reforms and may be irresistible in certain regions of the country. But he thinks that this is not a solution to the problem. The efforts of *Acharya* Vinoba Bhave in the direction of land-redistribution are too well known to need any amplification.

If we accept any unqualified scheme of land-redistribution to all the landless labourers, we shall be moving diametrically opposite to well considered principles of economic advancement, as we may be creating thereby an army of deficit ryots, tied up with tiny fragments of land, neither serving themselves, nor the nation. This is likely to happen, because there is little land available for redistribution. In Uttar Pradesh nearly 90 per cent. of the cultivated land is held in holdings of 25 acres or less. The position is not materially different in other States of the Union.

After the abolition of intermediary interests, a certain amount of land which was directly in their possession as *sir* or *khudkasht*, still remains with them. Some of the *sir* or *khudkasht* holdings are just of the size of those of other farmers. The question of disturbing these holdings does not arise. Some of the bigger holdings of a compact nature have been turned into well organised and well managed farms, providing steady employment to the landless labourers of the neighbourhood and giving good per-acre returns in the form of agricultural produce. The total number of such successful farms may not be large but they should be regarded as national assets. So long as these farms are being run efficiently, the question of withdrawing any land from them would not arise. The holdings of big progressive farmers have not been touched, even in communist countries like China. Quite a substantial number of farms are in the organisational stage. They are going through their teething troubles and deserve the assistance of the Government.

Apart from these two categories, in many cases the land is being held in fragmented parcels, either by absentee ex-proprietors of *zamindaris*, or by other persons whose real occupation is not agriculture. In several such cases, on enquiry it may be found that they hold more land than they can manage. Sometimes they are getting it cultivated even at a loss, simply because they are afraid of losing its possession. Withdrawal of a certain amount of land from this third category of holdings would lead to more economic utilisation of land. A careful enquiry by the Departments of Agriculture would be necessary to establish this threefold classification of private farms.

Besides some land obtained from these sources, certain amount of new land may be made available in certain regions by reclamation of weed-infested land or *terai* land. But the grand total of all such land would be insignificant when compared to the minimum requirements of settling the landless class, keeping in mind the fact that each such family would be given a holding which would at least provide work for an ordinary team of two bullocks and a family of average size and no family would be allotted any fragments of land. In such circumstances, the process of land redistribution may not touch even the fringe of the problem of rehabilitating the landless labourers. But nevertheless, the step is desirable for bringing about a better utilisation of land.

There are, however, certain other economic factors which are always adding more people to the class of landless workers. In many parts of the country, certain amount of machinery and mechanical appliances is finding its way into the rural areas. In the gradual process of economic advancement, this is inevitable. An increasingly larger number of modern farms owned by *zamindars*, *jagirdars*, ex-military officers, etc. is being equipped with tractors, certain amount of farm machinery, mechanical pumps, etc. Under the scheme of community projects also, a certain amount of agricultural machinery is being introduced in rural areas. In co-operation with Mr. Mason Vaugh of Naini Agricultural Institute, the famous Mahewa Project of Etawah District (U.P.) has begun to use a few improved varieties of implements, such as the Olpad threshers, seed-drills and drill-cultivators. Chaff-cutters are becoming quite common. Most of the light machines are bullock-driven and the chaff-cutters are operated by hand. Most of these appliances cannot be repaired by village blacksmiths and carpenters. Research students engaged in field enquiries report that these artisans are taking to agricultural labour as a subsidiary occupation. At Mahewa, a central workshop has been established to repair the new implements. Similar developments should be expected in other regions where new implements are brought into use. They are likely to dislodge a certain number of artisans from their normal occupations. Small mills for grinding grain form another new feature of the rural areas.

(Continued on page 1111)

TREND OF WORLD RUBBER POSITION

PROSPECTS FOR NATURAL RUBBER

A BRIEF analysis of the trend of world production and consumption of natural rubber during the last three years and the prospects for latex is given by Sir Eric Macfadyen, Chairman, the Rubber Plantations Investment Trust, London, in his annual statement to the shareholders. This statement reveals that, during the last three years, although both the output and consumption of natural rubber showed a decline, the output was in excess of consumption by a wide margin. The following table brings out the position clearly:

	Production (Tons)	*Consumption* (Tons)
1950	1,860,000	1,705,000
1951	1,875,000	1,500,000
1952	1,780,000	1,455,000

The excess of production over consumption which had stood at 155,000 tons in 1950 increased to 375,000 tons in 1951. It, of course, decline to 325,000 tons in 1952, but was still far bigger than in 1950. The aggregate excess of production for the three years amounts to a substantial figure of 355,000 tons. The stocks available to industry, however, increased by only 72,500 tons (from 720,000 tons to 792,500 tons). It is inferred that the balance of 782,500 tons had gone to increase the strategic stockpiles (almost wholly in the U.S.A.) for which natural rubber alone was acceptable. The widening of the gap between production and consumption, as indicated above, is attributed to the increase in the utilisation of synthetic rubber.

Commenting on the repercussions of synthetic rubber's progress on natural rubber, Sir Eric says that, fostered by the U.S. Government's policy, in respect of both manufacture and mandatory use, synthetic rubber's rapid progress has made heavy inroads into the natural rubber market. No doubt, the U.S. stockpiling lifted the price of natural rubber above the level of synthetic which was available throughout in the U.S. at less than commercial cost. Thus, in 1951, the corresponding grade of natural rubber, which has recently been sold for less than the price of GR-S, was worth more than twice the value of GR-S. The high price that ruled for natural rubber and the availability of synthetic at less than commercial cost had the effect of pricing out latex for normal use and the use of synthetic rubber in industry was stimulated in unprecedented fashion.

Competitive Position

According to Sir Eric, American industry is consuming three tons of synthetic to two tons of natural rubber. He is, however, of the opinion that this rate of consumption of synthetic rubber by the industry will not last. For once the U.S. Government divests itself of the ownership of the synthetic plants and these pass into the hands of commercial operators, the real cost of producing the synthetic product will, for the first time, be established. In the competitive position that will ensue, as a result of this, Sir Eric is confident that natural rubber is likely to be valued at over, rather than under, the price at which GR-S is marketed. But a point to be noted in this connection is the high cost of production of natural rubber. The high prices ruling for a year or two led to inflation of costs and this is proving difficult to be brought down again. In the process of adjustment, Sir Eric feels, a stage may be reached at which the less advantageously placed growers will find themselves on the margin, or below the margin, of production. But no such fear is entertained by him in regard to well-founded plantations. With an increasing proportion of modern high-yielding rubber, these plantations will be able to hold their own against the synthetic rubber.

The latest statistics of world rubber position released by the International Rubber Study Group Secretariat show that world production of natural rubber during April, 1953 amounted to 132,500 tons which shows a slight decline from that of 135,000 tons in March. This brings the total production for the first four months of the current year to 550,000 tons, as against 587,500 tons in the corresponding period of 1952. World consumption also fell to 132,500 tons in April from 140,000 tons in March this year. It included the estimated imports of 6,500 tons by Russia and 3,250 tons by China. For the four months ended 30th April, 1953, world consumption aggregated 537,500 tons, including Russian imports of 35,250 tons and Chinese imports of 22,000 tons. World stocks of natural rubber as on 30th April amounted to 790,000 tons, made up of 217,500 tons in producing areas, 360,000 tons in consuming areas (excluding Government-held rubber) and 212,500 tons of floating stocks.

World production of synthetic rubber rose from 73,700 tons in February, and 88,500 tons in March to 90,000 tons in April. For the four months to April, production of synthetic rubber amounted to 329,500 tons. Consumption during April was unchanged at 85,000 tons and reached a total of 327,500 tons for the first four months. Stocks at the end of the period disclosed a rise of 2,500 tons since 1st January this year to 140,000 tons.

RUBBER PRODUCTION IN CEYLON DECLINES

The output of rubber in Ceylon during the year 1952 suffered a decline of 8,500 tons, that is, from 105,000 tons in 1951 to 96,500 tons. The area under rubber cultivation in 1952 is estimated at 615,583 acres, on which basis, the average overall yield per acre during the past year was 351 lbs. The corresponding yields for 1950 and 1951 were 412 and 380 lbs., respectively.

Disclosing this, the Administration Report for 1952, issued by the Rubber Controller last week, says that the fall in prices had an adverse effect on production, though it is not the only cause for the progressive decline in the average yield per acre. The decline, according to the Rubber Controller, underlines the need for replanting Ceylon's worn-out rubber areas. About 200,000 acres, it is stated, have been rendered uneconomic by intensified tapping brought about by boom prices in 1951. Describing this trend as unfortunate, the Rubber Controller says that the general decline in the industry would be disastrous for individual producers and for the country as a whole. Rubber is the Island's second largest industry, with over half a million people depending on it for their living.

MALAYAN EXPORTS OF RUBBER

The preliminary figure of exports of rubber from Malaya for the month of May shows a decline from 73,751 tons in April to 63,375 tons, which is stated to be the lowest monthly total since June, 1949. For the first five months, exports amounted to 348,111 tons, as compared with 383,185 tons in the corresponding period of 1952.

TEA CESS IN AUSTRALIA

The Australian Government has imposed a cess of about As. 6 per lb. on all tea bought by wholesalers with effect from the 8th inst. There was a rush to buy tea by housewives in anticipation of a rise in price. Most shopkeepers are reported to have restricted sales to one pound for each customer.

ECONOMICS OF JUTE GROWING

CENTRAL JUTE COMMITTEE'S REVIEW

AN idea of the progress of work carried on by the Economic Research Section of the Indian Central Jute Committee in 1951-52 is provided by the Annual Report of this section released last week. It throws light on the economics of jute growing, improved methods of cultivation, mofussil prices of raw jute, jute substitutes grown in India, prices of loose jute in Calcutta, jute transport, American market for jute, etc. The contents of the Report is the result of the studies conducted by the staff of the research section and covers the work done in the fourth year of investigation, namely, 1951-52. The research was carried out in five centres, namely, Manoharpur, Belakoba, Purnea, Kendrapara and Nowgong.

Commenting on the cost of production, the Annual Report says that the yield of jute crop per acre was better in 1951 than in 1950 in all the centres except Nowgong and that the overall average yield for the five centres was the highest in that year since the investigation was started in 1948. The break-up of the cost of jute production showed that both the operational cost and the rent per acre were higher in 1951 than in 1950, the rise being more sharp in the amount of rent. This rise was obviously due to higher value of rent on account of better yield and higher price of the crop. Unfortunately, the Report does not give comparative figures relating to either the yield of jute per acre or the cost of jute production. The absence of this information reduces the utility of the book. It is to be hoped that, in a subsequent issue of the Report, the lacuna will be filled up.

Improved methods of jute cultivation were introduced in 17.60 acres in 1951 distributed over the five centres. The plots under the improved methods had a better yield than their counterparts under the traditional methods in four out of the five centres. Here again we are kept in the dark as to the knowledge regarding the actual figures.

U.S. Market

An analysis of the causes underlying the changes in demand for hessian in the U.S.A., conducted by the research section, shows that, as demand for hessian is positively correlated to the industrial production in the civilian sector in the U.S.A. and as the latter shows a declining trend, hessian consumption in the U.S., according to the Report, is not likely to reveal any significant upward movement in the near future. "Such an assumption," the Report remarks, is all the more justified, particularly because the recent precipitate fall in raw jute prices, coupled with a considerable reduction in the export duty on jute goods, has not been able to push up hessian consumption in the U.S.A. to any great extent." Although this conclusion is justifiable in a way, it does not appear to have been based on a comprehensive study of the market. It is disappointing to note that no data are made available as to the total imports of jute goods into the U.S., the share of India and other countries in these imports, the effects of export duties levied by the Government of India on U.S. imports of Indian jute manufactures, etc. The absence of any reference to these factors, which have a close bearing on U.S. consumption of Indian goods, deprives the study of its value.

Supply of wagons for transporting jute was not uniform during the season under review.

Growers are stated to have received a good return on their jute crop during the season and, as such, they would have been in a very affluent position had they not been compelled by circumstances, as usual, to buy a large proportion of their requirements of cereals at high prices. There was considerable rise in jute prices during January, 1952, but a downward trend started during the latter half of that month. In February and March there was a further recession in prices, as a result of general slump in the commodity markets, and with the exception of a slight recovery in April, prices declined steadily during May and June. The slump touched the prices of rice and paddy but the decline in prices was not as much as that in raw jute. The majority of growers, however, was not affected by the slump, as they had by then disposed of a large portion of their crop.

BUT THEY BOTH WENT TO COOKS ... NATURALLY

BUILDING AND MAINTAINING ROADS with 'CATERPILLAR' Diesel Motor Graders

There are thousands of miles of unpaved roads in India, the maintenance of which constitutes a major problem to Government and Municipal bodies. Construction, too, is a part of this problem, Widening, realignment, grade improvement and resurfacing must be carried out if roads are to keep pace with changing needs.

"CATERPILLAR" Diesel Motor Graders are becoming increasingly recognised in India for road building, ditching, bunding and other construction work. They are built not only to perform a wide variety of work but to continue to do that work over extended periods.

"CATERPILLAR" Motor Graders do better work, in less time, at a substantial saving in cost.

POWER AND TRANSFORMER INDUSTRY

GOVERNMENT ACCEPTS TARIFF COMMISSION'S RECOMMENDATIONS

THE Government of India has accepted generally the recommendations of the Tariff Commission on the grant of protection to the power and distribution transformer industry and decided to take steps to implement them, as far as possible. The chief recommendation of the Commission, which enquired into the conditions of the industry on an application by the National Electrical Industries, Ltd., Bombay, is that the import duty on power and distribution transformers upto 2,500 k.v.a. and 37.5 k.v. on the high tension (H.T.) side (primary voltage being over 250), excluding furnace, rectifier and flameproof transformers, should be increased from the present level of 5 per cent. *ad valorem* to 10 per cent. *ad valorem*, exclusive of surcharge, and should be converted into a protective duty. The protective duty should remain in force upto 31st December, 1955. The implementation of this recommendation is expected to provide considerable protection to expand indigenous production.

The next important recommendation of the Commission is that the domestic producers of transformers should be given a refund of so much of the customs duty on transformer oil as is in excess of 5½ per cent. *ad valorem* on the quantity of the oil actually used by them in the manufacture of transformers. If, however, there were to arise any serious difficulties in giving this refund, transformer oil imported with transforms should be assessed at the rate of duty applicable to transformer oil imported separately. The duty on transformer oil, it may be noted here, is 27 per cent. *ad valorem* on a tariff value of Rs. 3-12 per gallon. No duty was, however, levied separately on transformer oil contained in complete transformers. The duty on that oil was, therefore, the same as that on the transformer itself, namely, 5½ per cent. *ad valorem*. The difference of 21½ per cent. definitely placed the indigenous manufacturers at a disadvantage by reducing the competitive position of local manufactures, with the foreign-made ones. The Government of India has, therefore, accepted forthwith the alternative suggestion of the Commission and has accordingly increased the rate of import duty on transformer oil imported with protected categories of transformers to 27 per cent. *ad valorem*. This will not involve any administrative difficulties.

The Tariff Commission has recommended the grant of protection to the power and distribution transformer industry subject to certain conditions. One of them is that the industry should try to meet domestic demand for the types of power and distribution transformers upto 2,500 k.v.a. and 37.5 k.v. (plus the usual tapping allowance) on the H.T. side. The aggregate demand for transformers upto 2,500 k.v.a. and 22 k.v. on the H.T. side is put at 550,000 k.v.a. in the current year, as against about 430,000 k.v.a. in 1952, according to the Central Water and Power Commission. It is expected to shoot upto 630,000 k.v.a. in 1954. Other estimates vary from 400,000 k.v.a. to 2 to 2.5 million k.v.a. The total demand for power and distribution transformers upto 33 k.v. which is likely to result from the projected expansion of power supply during the period of the Five-year Plan is estimated at 2.65 million k.v.a. As against this demand, the annual rated capacity is 370,000 k.v.a. which is expected to increase to 485,000 k.v.a., per annum, shortly, on the completion of two new and certain other expansion projects. The production of the industry of three-phase transformers was 183,164 k.v.a. in 1951, as against 153,181 k.v.a. in 1950. The production of single-phase transformers was 28,132 k.v.a. in 1951, as compared with 24,683 k.v.a. in 1950. These figures disclose the scope for the expansion of the power and transformer industry. The Government of India has drawn the attention of the industry to the following recommendations of the Tariff Commission:

(1) The grant of protection to this industry should be subject to the conditions that the industry will maintain its prices at a reasonable level, strive for reduction in costs and improvement in quality and endeavour to meet the domestic demand for the types of power and distribution transformers covered by the enquiry to the fullest possible extent;

(2) the prices quoted by the Sankey Electrical Stampings for transformer laminations are reasonable, but the firm should try to reduce the percentage of wastage in the manufacture of lamination with a view to reducing its costs; and

(3) the industry should continue its efforts to improve upon its delivery dates.

The Tariff Commission has made the following other important recommendations with which the Government is in general agreement:

(1) Imports of stalloy sheets and laminations should be so regulated as to promote a fuller utilisation of the domestic capacity for the production of these materials;

(2) the present system of import restrictions, though imposed for balance of payments reasons, has been of much benefit to this industry. So long as the quality of domestic transformers continues to be satisfactory and the prices and delivery periods are reasonable, import restrictions should be so administered as to ensure the fullest utilisation of domestic capacity;

(3) the Development Wing of the Ministry of Commerce and Industry should carry out a technical investigation into the extent of facilities available at each unit, with a view to obtaining more accurate data about the highest ratings upto which transformers can be produced by each unit;

(4) the Central Glass and Ceramic Research Institute, Calcutta, should try to bring about an improvement in the quality of indigenous bushings by giving the porcelain factories necessary technical advice and assistance;

(5) the Central and State Governments should adopt a policy of purchasing their requirements of transformers from indigenous producers, as far as possible. The major electric supply undertakings should also be requested to adopt a similar policy;

(6) the Government of Mysore should make every effort to expedite the completion of their scheme for the expansion of the porcelain factory at Bangalore;

(7) the prices charged by the Indian Cable Company for D.C.C. and D.P.C. wires and strings and those charged by the National Insulated Cable Company for D.C.C. wires are excessive. The two companies should be asked to reduce their prices, so as to bring them in fair relation to their costs. Government should keep a watch over the prices of indigenous D.C.C. and D.P.C. wires and strips with a view to ensuring that they are maintained at a reasonable level;

(8) some of the manufacturers of transformers have stated that the indigenous stalloy sheets suffer from lack of uniformity in thickness. Tatas should try to remove this defect and also continue their effort to produce adequate quantities of sheets with a watt loss comparable to that of high grade imported sheets; and

(9) the industry should take note of the defects pointed out by consumers, particularly the leakage of oil from tanks and inferior workmanship, and endeavour to remove the defects, wherever they still exist. The manufacturers who do not have adequate arrangements for testing finished transformers and parts should make such arrangements as early as possible.

AUTOMATIC TELEPRINTER EXCHANGES

The Posts and Telegraphs Department has taken another big stride forward in modernising the communication network of India with the installation of two auto-teleprinter exchanges at Bombay and Ahmedabad. These exchanges, the first of their kind in the East, provide direct teleprinter communication between any two parties connected to the exchange through direct dialling. Thus, a teleprinter subscriber connected to the exchange at Bombay can get connected to any other teleprinter subscriber either at Bombay or at Ahmedabad by dialling as in an automatic telephone system.

This new mode of communication, which has proved extremely popular in the West, has several advantages over the existing methods. The inevitable delays due to booking, circulation, transmission and delivery of telegrams as at present handled will be entirely cut out. As the parties concerned are in direct touch, replies can be had immediately. There is greater secrecy than in the existing system as connections are established by direct dialling without intervention of the operators. The calls, both local and trunk, are metered automatically by an efficient system of time zone metering which permits the charging of calls based on both the duration of the call and the distance between the stations.

(Concluded from next column)

for a modern petro-chemical industry, utilising numerous by-products from the refineries. Direct benefits to the Indian exchequer in the shape of taxation are also likely to be considerable.

The cost of petroleum products in India, however, will not tend to come down, to any appreciable extent, as a result of indigenous refining, since it costs more to refine a barrel of oil away from the source of production. For one thing, for every ten barrels of crude oil that will be shipped to a refinery, about nine barrels will be recovered as product, the rest will be used in the refinery itself as fuel. Shipment of this extra barrel of oil to the refinery will increase transportation cost and this is one important factor in the total manufacturing cost as compared with that of a refinery located near the wells.

STANVAC BOMBAY REFINERY

FIRST LARGEST DOLLAR INVESTMENT IN INDIA

THE unveiling of the commemorative tablet of the Stanvac Bombay Refinery by Mr. Girija Shankar Bajpai, Governor of Bombay, last week, marked the end of the preliminary stages of construction of the Rs. 17½-crore refinery. The refinery is the first largest investment to be made by American private enterprise in India. Mr. George V. Allen, U.S. Ambassador to India, speaking on the occasion, observed: "The 25,000-barrels-per-day oil refinery we see under construction here is the best possible proof that these American businessmen have calculated the risk in India and have found it worth taking," and added that "this project may set the pattern for much of the future industrialisation of India."

The Stanvac project, the first modern oil refinery capable of producing a full range of quality fuels, will have a charging capacity of 25,000 barrels of crude oil a day, a quantity sufficient to supply about one-third of India's total daily needs. The principal products and approximate yields of the refinery will be as follows:

(In millions of Imperial gallons)

	Output per year
Gasoline	90.00
Kerosine	40.00
Automative diesel oils	18.00
Industrial diesel oils	40.00
Industrial fuel oil	55.00
Bunker fuel oil	45.00

The establishment of the refinery will represent a major step in making India self-sufficient in petroleum products. The country's aggregate requirements in 1952 were 80,000 barrels per day, of which India's present refining capacity supplied approximately 5,000 barrels. When the Stanvac plant goes into operation next year, it will have increased the refining capacity by 500 per cent. When the other refineries projected by Burmah-Shell for 1955 and Caltex for 1956 are ready, the total refining capacity of India will be approximately 80,000 barrels per day—a substantial part of India's estimated consumption of 105,500 barrels per day in 1956.

No modern nation can build its economic future without an assured supply of petroleum. Of some 50 countries in the world with petroleum refining facilities, India ranks at present among the last ten. When all the three refineries go into production, it will advance to hold a place among the first 20 in rated capacity. The Stanvac plant will be one of the most modern plants in the world. It will incorporate certain important modifications and improvements over the prototype Model IV unit which went "on stream" at Edmonton, Canada, last December. It will provide employment for 500 workers. Of these, 450 will be Indians, that is, nine out of ten employed by Stanvac. The remaining 50 will be specialists from overseas, all of whom have very long experience in operating the complex refining equipment. The Company, we are told, will plan to fill even these 50 posts with Indians, as soon as possible, by giving them adequate training.

Basically, the establishment of a modern refining industry in India means that the country will become much less dependent on other countries for the supply of its petroleum products. As India does not possess petroleum reserves, there are many who seem to feel that India's dependence on others for oil will not be minimised by the establishment of these refineries and that, in the event of war, the position would be no better than it was in the last war when India had no facilities for refining. This view is not a correct appreciation of the advantages of the refineries in the offing. In the first place, India will not be so seriously affected as in the last war, because crude oil is available from many parts of the world. In the U.S. and Canada alone, for example, there are 30 billion barrels of proven reserves of underground oil and elsewhere in the free world not less than 65 billion barrels. Further, there are relatively more sources of crude oil, some of which are nearer to India and that too in the soft currency area, than there are refineries upon which to draw should the necessity arise. It is not impossible, too, that India has oil reserves of its own yet undiscovered and efforts are being made to locate them. The second important benefit of the refineries to India will be a substantial saving of foreign exchange as the cost of crude oil purchased abroad will be lower than the cost of finished products from the same sources. Besides, they will serve as the basis

THE PHILIPPINES

The people of the Philippine republic are closely related to the Malays, though the source of much of their culture was China, with whom they traded as far back as the 14th century. Handed over to the U.S.A. under the terms of the armistice following the Spanish-American war, the Philippines were granted their independence on July 4, 1946. They thus pleasantly reflect the influences of the East and West. The Philippine archipelago is very fertile and the rice terraces of Northern Luzon are a marvel of the East. Here also is grown the famous Manila hemp, used for ropes. The Caltex organisation distributes high-quality petroleum products throughout the islands, and their expert information service is readily available to the Philippine nation.

INVESTMENT POLICY OF LIFE OFFICES

LENDING SUPPORT FOR PRODUCTIVE ENTERPRISE

SIR George L. Barstow, Chairman of a leading British insurance company, namely, the Prudential Assurance Company Ltd., devoted a large portion of his very interesting address at the recent annual meeting of the Company to a discussion of the problems arising out of the investment policy of life offices. The address of the Prudential's Chairman always arouses great interest in insurance circles, both in the U.K. and abroad, because he presides over the largest life office in the U.K. Some idea of the magnitude of the investment problem of this Company will become evident when it is remembered that the total assets of the Company are now about £664 million. The Company wrote £112 million (Rs. 100 crores) worth of new business in 1952; all the Indian life offices together write about Rs. 115 crores worth of new business in a year

Sir George prefaced his remarks by saying that, as the Chairman of the largest life office in the U.K., he felt it was his duty to remind the shareholders of the care that the management devotes to its "investment responsibilities" and the important principles upon which its investment policy is based. He added: "The investment of accruing funds is a vitally important part of the conduct of the business of life assurance and the careful scrutiny and investigation of every proposition put to us is in the hands of officials of long experience in these matters. The control and direction of investment policy is the aspect of our business to which your Directors devote the greater part of their time and thought."

Proceeding, Sir George pointed out that the chief criterion which governed the Company's financial policy was that investments must be made in the interests of its policyholders. He said: "We cannot ourselves create opportunities for investment; we can only take advantage of such as present themselves." Nevertheless, the management maintains a "widely spread distribution of investments yielding the highest rates of interest compatible with security of the policyholders." The success the Company achieves in this policy determines the bonus additions to its with-profit policies.

Insurance companies are now performing a service which individuals were performing in a remoter period when it was largely the *entrepreneurs* who started or financed businesses. But the growth in the burden of taxes on private incomes has diminished the importance of the private investor. The ordinary citizen's savings now flow into insurance companies, because an insurance policy represents, for most men of ordinary means, the only safe investment which has the additional advantage of providing cover against sickness and death. So far as the richer classes of investors are concerned, their importance to the capital market has diminished, as already stated, with the increase in the burden of direct taxes. Thus, joint-stock companies and insurance companies are gradually succeeding to the place of the private investor. Of these two classes of new investors, insurance companies play a particularly important role, since the nature of their business brings in large funds for which they must find suitable investment outlets. Referring to the role which insurance companies should play in the national economy, Sir George said:

"It is in the national interest that capital should be provided for the expansion and modernisation of industry of this country. We are ready and anxious to play a full share in the finance of productive enterprise provided it is financially sound. No industry can be the worse for being on sound financial lines. In fact, any undertaking which is not operated on a sound economic basis must prove detrimental to the true national interest.

"Our readiness to support productive enterprise is evidenced by our investments in ordinary shares in particular in 1952. These largely arose out of the new issues which were made by important industrial companies. We continued our policy of giving support to such issues although some of these were made at times when market conditions were difficult, owing to the uncertainties arising from the nation's financial problems. In carrying out our responsibilities in the selection of investments we do not claim to be infallible, but we do claim that, as in all our problems, our judgment is unbiassed and unfettered."

It is sometimes argued by those political extremists who believe that because insurance companies hold funds which could be diverted for national purposes, it is necessary that the insurance industry should be taken over by the State. This argument deserves to be examined from the point of view of insurance companies as well as that of the concerns which need capital, that is, industrial and other borrowers. Is it correct to assume that insurance companies would not behave in the national interest? After all, they too have the interests of the policyholders to serve and would like to combine both good yield and security for their investments. So far as the new undertakings in which some insurers invest their funds are concerned, it is not as if insurers who invest their funds in such concerns ignore national interests. In this connection, Sir George said:

"In any event, the great majority of the cases where we provide new finance must have received the approval of the Capital Issues Committee and must, therefore, be assumed to conform to the national interest. It is important to realise that the Government through the Capital Issues Committee exercises a considerable measure of restriction over the purposes for which new money can be raised. Should, however, the Government seek at any time to exercise positive control over the investment of insurance funds, a real danger to policyholders' interests would arise."

It is also necessary to consider the question of the investment of life funds from the point of view of industrial and other borrowers. If life funds were owned entirely by the State, as they would be when insurance is nationalised, would the interests of industrial borrowers receive greater consideration than at present? This is, in many ways, a most crucial question. Sir George made some very interesting observations on this subject. He said:

"It must be remembered that these funds are distributed among approximately 80 offices which compete among themselves in seeking suitable investments. The industrial borrower is much better placed in dealing with this number of competing investors than he would be if this large section of the funds available for investment were combined in one State-controlled organisation. The need for life offices to invest their funds is strong and pressing, probably as strong as is the need which industry has for raising money.

"In these circumstances, there is no reason to suppose that the terms negotiated tend to be more favourable to the lender than to the borrower. In fact, it is in our own interests that the terms of a public issue of capital should be as fair as possible to both parties. Clearly, we do not wish the terms to be too favourable to the borrower, but it is also true that terms which are too favourable to the lender bring about such a heavy oversubscription that we get a much smaller investment than we would like . . . . There appears to be a widespread belief that because of the admitted shortage of national savings, there must be a lender's market in the investment world; that too much investment potential must be chasing too little savings. Our own experience as long-term investors is rather the reverse. At no time in the last few years have we been in the position of turning away sound offers of investment because of a shortage of funds on our part."

From what is stated above, it should be clear that industrial borrowers should welcome the existence of a large number of strong insurers. It is certainly not in their interest that all funds should be concentrated in the State. Nationalisation of insurance would definitely reduce their bargaining ability in respect of their borrowings.

BIG RISE IN NEW INDIA'S LIFE BUSINESS

FUNDS EXCEED RS. 20 CRORES

AN impressive rise of nearly Rs. 136 lakhs to Rs. 18.04 crores in new life business and a substantial increase of Rs. 227 lakhs to Rs. 17.01 crores in the life fund are the notable features of the working of the New India Assurance Co., Ltd., Bombay (General Manager: Mr. B. K. Shah), for the year ended 31st December, 1952. There has also been good improvement in the Company's general business, as is shown by the increase in the premium income of the fire, miscellaneous and marine departments. All this would, in itself, constitute a creditable record. But it is the more creditable because it has been achieved in the face of very difficult economic conditions which prevailed during 1952.

During the year under review, 53,275 proposals resulted in policies for Rs. 18.04 crores, as against 47,639 proposals which resulted in policies for Rs. 16.68 crores in the previous year. The total number of ordinary policies in force is 2,31,204, assuring a sum of Rs. 83.85 crores, of which Rs. 3.08 crores has been reassured. The net premium income amounts to Rs. 4.24 crores, and the life fund is Rs. 17 crores. The expense ratio is, however, higher at 29.3 per cent., as against 28.6 per cent. in 1951. The following figures reflect the progress in the Company's life business over the three years ended 1952:

(In crores of rupees)

Life Department	1952	1951	1950
Premium income	4.24	3.85	3.25
Funds	17.00	14.74	12.82
New business	18.04	16.68	13.44
Business in force	83.85	75.07	63.01

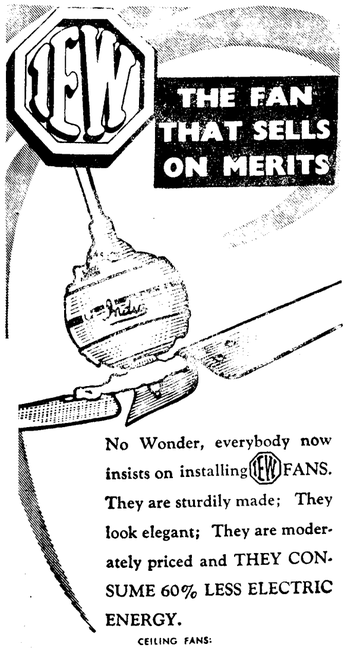
New India continues to maintain its well-deserved reputation of being the leading general insurer. The total premium income in the general department increased by Rs. 21 lakhs to Rs. 3.85 crores. Although the improvement is less spectacular than in the previous year when the increase in premium income was as much as Rs. 60 lakhs, it must be remembered that the general business conditions during 1952 were of a most difficult nature in recent years so that even a moderate improvement must, as already stated, be regarded as a creditable achievement. And it is particularly noteworthy that the increase in premium income in the general department is shared by all departments, as will be clear from the following figures:

(In crores of rupees)

	1952	1951	1950
Premium income			
Fire department	2.29	2.23	1.70
Miscellaneous department	0.65	0.38	0.38
Marine department ...	0.91	0.83	0.62
Total ...	3.85	3.64	2.25
Funds			
Fire department	1.55	1.50	1.21
Miscellaneous department	0.51	0.46	0.35
Marine department ...	1.32	1.24	1.03
Total ...	3.38	3.20	2.59

The expense ratio has gone up, as already noted, in the life department from 28.6 per cent. to 29.3 per cent. In the general department too, there has been an increase under the item "commission, expenses of management and foreign taxes." This item represented 46.6 per cent. of the premium income in the fire department, as against 38.2 per cent. in 1951, and 29.4 per cent. in the miscellaneous department, as against 28.8 per cent. in 1951 and 24.6 per cent. as against 17.0 per cent. in the marine department. The profit from the fire department amounted to Rs. 33.39

(*Continued on page* 1097)



THE FAN THAT SELLS ON MERITS

No Wonder, everybody now insists on installing (IFW) FANS. They are sturdily made; They look elegant; They are moderately priced and THEY CONSUME 60% LESS ELECTRIC ENERGY.

CEILING FANS:

MEANING AND MEASUREMENT OF PRODUCTIVITY

PROBLEM OF GREAT COMPLEXITY

(By Dr. M. M. MEHTA)

UNFORTUNATELY, the term "productivity" is one of those few words in industrial economics that have aroused many different and conflicting interpretations. Indeed, the term "productivity" has been used in such a variety of senses that it is difficult to find out what this term precisely connotes. Some have defined "productivity" as "output-input" ratio (ratio of output to resources expended); some have viewed "productivity" as the "overall effectiveness" of a productive unit, while some have confined the use of the term "productivity" to denote the "ratio of output to the corresponding input of labour" frequently expressed as "man-hours expended per unit of output (unit labour requirements)" or "production per man-hour" (P.M.H.). A critical observer may, however, discover considerable degree of uniformity and constancy in all these apparently different interpretations, for they all tend to portray one common characteristic, namely, someone's ability to produce more economically and efficiently. Yet for clarity and precision, it is essential to find out what the term "productivity" precisely connotes; whether "productivity" is quantitatively measurable, and if so, what should be the standard of measurement which could be applied with reasonable accuracy.

The most prevalent and widely accepted definition of productivity is the "ratio of output to the corresponding input of labour." The popularity of this definition undoubtedly rests on the widespread interest in labour-saving devices because such devices can affect costs, prices, profits, jobs, wages, and even a nation's military security and level of living. Another, but in no way less convincing, argument in favour of this measure is that labour time is more readily measurable than other input factors, and that it possesses a universal element common to all plants, processes and industries. This universality provides a common basis for measuring and comparing the relative productivity not only of different units but also of different sectors of a country's economy. In recent years, therefore, productivity is frequently used without qualification as "ratio of output to the corresponding input of labour." It may be expressed either as "output per unit of labour-time expended" or in its reverse sense as "labour-time expended per unit of output."

Not Quite Satisfactory

This definition, despite its simplicity and widespread usage, has not, however, removed confusion either from analysis or interpretation, and the reasons are manifold. It is difficult to dislodge the deep-rooted notion from the minds of the common men inexperienced in the technique and methodology of productivity analysis that "labour productivity data measure the productivity of labour and not the productivity of all the combined input factor." Indeed, labour productivity indices do not reveal changes in the intrinsic efficiency of labour, but rather the changing effectiveness with which labour is utilised in conjunction with other factors. As such, labour productivity is not a measure of the specific contribution of labour, or capital or any one factor of production. It reflects the cumulative influence of the operation of a large number of separate, though interrelated, influences such as technological improvements, the rate of operation, the degree of efficiency achieved in different processes, the availability of supplies and the flow of materials and components, as well as the employer-employee relations, the skill and effort of the workers and the efficiency of management. Changes in the ratio between output and man-hours of work have, therefore, no definite or precise significance. They may indicate the overall changes in the productivity of an enterprise, or they may only reflect the changes in production composite or type of machinery and technical equipment used. Definition of productivity as "output-man-hour" ratio has, therefore, serious limitations, and its implications to be viewed in the light of numerous reservations and qualifying conditions.

But more important and significant are the difficulties involved in the statistical use of "productivity" concept. To define "productivity" as "output-man-hour" ratio, is to leave the two terms, namely, "output" and "man-hours" to a number of different interpretations, often rendering the productivity data incomparable, and raising new problems and difficulties of interpretation. Some of the difficulties in the statistical use of this concept look almost insuperable, such as the measurement of the heterogeneous output (varying in quality, shape, texture or design); lack of any differentiation in the quality of labour utilised; the abstractive character of the "man-hour" concept—all these statistical bottlenecks militate against the use of "output-man-hour" ratio as indicative of the trends in productivity performances of different units. Indeed, such a definition of "productivity" raises insurmountable difficulties of "construction and interpretation of aggregates," and exposes the researcher to what Professor Boulding calls the "fallacies of aggregation." The lack of any common agreement as to what "labour" and "output" precisely signify, and the statistical difficulties encountered both in the aggregation of variable and even heterogeneous quantities, and in the interpretation of the "ratios" having no precise signification, have rendered this concept of "labour productivity" of extremely doubtful utility.

Modified Concept

Similarly, the expression of "productivity" as a ratio between output and any single input factor like the invested capital or units of horse-power consumed, is subject to the same limitations and qualifying conditions as the labour productivity ratio. Indeed, no single input factor can correctly portray or describe the influence of large number of separate, though interrelated, forces, often working in different directions. The inadequacy of any single factor to describe correctly the nature and magnitude of productivity changes have led to the evolution and development of slightly modified concept of "labour productivity." Indeed, some investigators have advanced the view that total input can be expressed in terms of labour time, including both actual and embodied labour. By embodied labour is meant that labour which is represented in the materials, fuel, machine and other "non-labour" elements used. In other words, it refers to labour which has actually gone into the production of machinery and technical equipment used, and raw materials and fuel consumed in the manufacturing processes.

Even this modified concept of labour productivity has neither removed confusion in analysis and interpretation, nor has it provided a fairly accurate and reliable measure of total input. Aside from the numerous statistical complications involved in the quantitative expression of machinery, material, fuel and other input factors in their "labour equivalents," there is the fundamental difficulty of reducing some basic elements having no labour content (like the capital invested or risk-bearing) into their "labour equivalents." There seems little justification, therefore, to treat the total labour-time (actual and embodied) as indicative of the changes in the total input factor.

The principal conclusion which emerges from the foregoing analysis is that no single input factor can reflect the nature and character of changes in all the input factors, nor can it be substituted to represent the combined input factors. The inadequacy and inappropriateness of a single input factor to measure correctly the nature and extent of productivity changes, has led to the development of a new technique by which all the input factors could be quantitatively measured, if not with scientific precision, at least with reasonable accuracy. The basic problem in measuring the combined input factor is that of finding some common numerical measure in terms of which the diverse resources involved in production, could be quantitatively expressed. The multiple resources, representing different physical characteristics and expressed in different units, cannot be combined together by the simple mathematical rule of aggregation. "Man-hours cannot be added to kilowatt-hours, tons of steel, and dollars of capital equipment for a resource total. Nor could an electrical manufacturer, for example, add up numbers of motors, number of refrigerators, pounds of insulated wire, and thousands of dozens of electric lamp bulbs to get a measure of his total product." There seems to be only one common unit in terms of which the diverse resources, representing different physical characteristics, could be reduced to a common denomination, and aggregated into meaningful totals. This is the common unit of valuation—the national unit of value.

Despite the fact that cost of production may furnish a fairly satisfactory and useful index of measuring the relative productivity of different units or industries, little attempt has been made so far to apply this technique of cost-analysis in the field of productivity measurement, and the reasons are manifold. Unfortunately, there is no complete unanimity of opinion with regard to the meaning and significance of "costs" and the "costing data." Indeed, the term "costs" has been interpreted so diversely by accountants, business men and economists that it is virtually difficult to find out what this term precisely connotes. The accounting "concept" of cost is entirely different from the economic "concept" of cost. "Whereas the accounting 'costs' are influenced by accounting practices and conventions, and by the accepted rules of income statements and balance-sheets, as also by managerial convenience and expenses of accounting records, 'costs' in the economic sense ordinarily presume rather simplified situation, conducive to logical elegance." Thus, it might look surprising that the concept of "marginal cost," which is of so vital importance and significance in all theoretical discussions, has received so scant attention either from accountants or business men. This is presumably because of the insuperable difficulty of translating the theoretical structure into statistically measurable concept.

Another difficulty which has prevented the use of the technique of cost-analysis in productivity measurement is, however, the extreme paucity and inadequacy of statistical information relating to cost of production. It is a well-known fact that costs are always regarded as "trade" secret to which an outsider can hardly have any access. Even the Tariff Commissions and other statutory bodies, despite their written undertakings and all possible assurances that neither the identity of mills, nor the cost-statements supplied by them would be disclosed in their published reports, were unable to secure all the information they needed. The stupendous task involved in the collection of the accounting statements and the general indifference and apathy of industrialists and business men towards such cost-studies, have discouraged, in no small measure, the application of the technique of cost-analysis in the field of productivity measurement.

Other Difficulties

Other difficulties that stand in the way of inter-comparison of cost-structure of different units are of a technical character. They include the variations in the terminal dates of accounts, the divergent accounting methods and practices followed in the preparation and presentation of financial accounts, the varying meaning and content of different cost items, the practice of pooling together a large number of miscellaneous items and presenting them in consolidated form, the different methods adopted for making provision for depreciation, repairs and replacements, and the practice of keeping secret or hidden reserves. These subterfuges are being used with such a degree of perfection that one may find himself, at times, completely baffled at the intricacy and complexity of the costing data.

Another problem of still greater complexity and magnitude is that of revaluing the various input factors in terms of constant dollars, sterling, rupees or any national unit of currency. Since all the input factors are to be expressed in terms of "monetary costs," it is essential that the standard of valuation must remain unchanged, so that the variations in productivity, arising from fluctuations in the intrinsic value of the currency could be completely ironed out. The adoption of the "constant" dollar, sterling or rupee technique is of paramount importance in the study of temporal variation in the productivity of two different units, or of the same unit during different periods of time or under different conditions. Similarly, adequate arrangements must be made to take into account all possible variations in the production composites.

The principal conclusion which emerges from the foregoing survey is that even the cost of production as a measure of industrial productivity has serious limitations, and that the conclusions drawn or facts established are to be

NEW PUBLICATIONS

The Bombay Money Market. By H. T. Parekh. Published by the Oxford University Press, Bombay. Price: Rs. 10.

BOOKS on monetary and financial problems are usually written by academic persons, who possess a sound knowledge of economic theory, but who are often deficient in the knowledge of the practical aspects of such problems, on account of the lack of personal touch with them. Consequently, most of such books, although sound in their examination of the theoretical aspects of the problems, deal inadequately with their practical aspects. The above book is an exception to this general rule, because Mr. H. T. Parekh, who is a B.Sc. in Economics of the London University and a partner of a leading firm of share and security brokers in Bombay for several years, is well versed in both aspects of the problems. Having been in close touch every day for the last 15 years with the Bombay financial markets, he has dealt in this book with matters which are not to be found in any other book dealing with the same subject. The book covers a much wider field than is indicated by its title. The expression "money market" is usually understood in the sense of the short-term money market. The book, however, deals with call money, re-discount facility and *hundi* business, the stock exchange, the Gilt-edged market, treasury bills and small savings, capital market, joint-stock banks, the Reserve Bank of India, interest rates, bullion market and foreign exchange market. In the opinion of the reviewer, therefore, a more appropriate title for the book would have been *The Bombay Financial Markets*. The book describes the structure of these markets and analyses their working. It explains how they function from day to day. The treatment is factual and does not contain much abstract discussion. Yet, in order that the varied activities of the financial markets may be understood properly by the reader, the author has tried to cover their entire range, bearing in mind that a comprehensive study of these markets is not available to the public. The author has dealt with the Bombay financial markets, not only because he has been in close touch with them for the last several years, but also because, for all practical purposes, they may be regarded as synonymous with the Indian financial markets. Bombay may be regarded as the financial capital of India and Calcutta as the industrial capital of the country. These two cities are the nerve-centres of Indian industry, trade and finance and, taken together, epitomize Indian economy.

In dealing with the above markets, the author has dealt with a wide range of matters such as money at call and short notice, term money and house money, private deposits, re-discount policy of the Reserve Bank, multani *hundis*, re-discounting of *hundis*, bills for agricultural finance, investment, speculation, gambling, forward dealing and margin system on the stock exchange, blank transfers, listing of securities, promissory notes and stock certificates, switches in Government loans, tender and tap issues of treasury bills, treasury deposit rates, national savings certificates, personal saving, corporate saving, depreciation funds, new capital issues, capital issue control, underwriting, offer for sale, Industrial Finance Corporation of India, direct State aid to industries, bank rate, short-term and long-term rates of interest, interest rates in Bombay and Calcutta, gold as an international currency reserve, gold and the International Monetary Fund, world price of gold, gold import parity, margins and *teji mandi* business in the bullion market, financing of exports and imports, dollar exchange, Pakistan rupee, fixed and flexible exchanges, exchange control, Dollar Pool, sterling balances, International Monetary Fund and World Bank.

The author has shown that the financial markets in Bombay are, on the whole, well integrated and that relatively low interest rates prevail there. He has, however, pointed out that the supply of funds falls far short of demand outside Bombay and Calcutta and that the disproportionately high rates of interest prevailing in money markets in the mofussil compared with the rates in the central markets in Bombay and Calcutta are largely due to this factor. He has emphasised that, if the genuine need for working capital of trade and industry outside the organised sector is to be duly met, the volume of funds flowing through the Bombay financial markets needs to be augmented. It is a pity that the official policy so far has been to provide for the requirements of large-scale trade and industry only and that little is being done to attend to the needs of the small *entrepreneur*. The author has stated that as the small *entrepreneur* predominates in Indian trade and industry, meeting his requirements should be regarded a primary aim of official policy in India.

The book is written in simple language and the treatment is very lucid. It is printed very nicely in big type. It goes a long way in bridging the gap between the market place and the classroom and presenting a precise and full picture of the Bombay financial markets.

Economic Survey of Asia and the Far East, 1952. Published by the United Nations. Available in India from Oxford Book and Stationary Co., Scindia House, New Delhi. Price: $ 1.

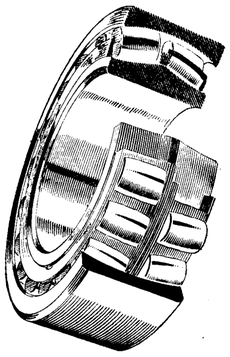
The *Economic Survey of Asia and the Far East* is the sixth in a series of annual economic reports prepared by the Research and Statistics Division of the Secretariat of the Economic Commission for Asia and the Far East. These reports have established a reputation for comprehensive review of economic conditions in the E.C.A.F.E. region. The latest report maintains the reputation of its predecessors in the series. But it will be read with additional interest, because the year 1952, to which it refers, was in many ways a critical year for this region. The fall in export prices—the prices of the chief commodities such as natural rubber, tea, cotton, oilseeds and vegetable oils, hemps, hides and skins—led to a sharp setback in the balance of payments position of most of the countries of this region, with inevitable deflationary results for the domestic economy of the countries. These and other aspects of the economic problems which this region faced during 1952 have been described in detail in the Report, which surveys the Asian region's economy under three divisions: Production, International Trade and Payments, and Monetary and Fiscal Development. The following general description of economic conditions in the region will be read with interest, because the passage might be taken as an accurate account of conditions in India as well: "During 1951 and for the greater part of 1952, industries serving home markets generally turned out more goods. . . . . Home supplies therefore generally expanded. But, as money income from exports declined, buying power did not keep pace with the increase in home supplies . . . . In consequence, and as a result also of other influences, inflationary pressures were gradually neutralised and finally gave way to a *tendency for prices to weaken*."

All who read this book should benefit from this valuable contribution to the economic literature on South-East Asia.

Major Industries Annual—1952-53. Editor : M. P. Gandhi. Published by M. P. Gandhi & Co., Jan Mansion, Sir P. M. Road, Fort, Bombay. Price : Rs. 10.

Mr. M. P. Gandhi, the well-known editor of the *Indian Textile Annual* and the *Sugar Industry Annual*, has now published the second volume of the *Major Industries Annual*—1952-53. The publication gives a comprehensive picture of India's industrial development. Since this *Annual* comes after the publication of the Five-year Plan, the articles contributed to it naturally take into account the programme for industrial development envisaged by the Plan. The contributors are persons who are known in this country for their intimate knowledge of the subjects they deal with. Mr. E. P. Moon, Adviser, Planning Commission, reviews the role of industries under the Five-year Plan, while Mr. G. L. Mehta, Ambassador of India to the U.S., and Mr. Chester Bowles, ex-U.S. Ambassador to India, write respectively on "India's Commercial Policy and Indo-American Trade Relations" and "America's Aid to India's Economic Development," respectively. Other contributors to the *Annual* include Mr. C. H. Bhabha on "Importance of Productivity in India's Industrialisation," Mr. K. C. Mahindra on "Future of Aluminium Industry," Mr. G. D. Somani on "Cotton Mill Industry" and Mr. W. H. S. Michelmore on "India's Coal Industry." The publication will appeal to all those who are interested in Indian industrial conditions.

News from SKF



For over thirty years, SKF spherical roller bearings have remained unchanged and unsurpassed. Now, however, another important advance in rolling-bearing design has been made by SKF with the introduction of a new type of spherical roller bearing.

With up to 40 per cent more carrying capacity than the old design, this new spherical roller bearing will be found particularly useful for heavily loaded bearing arrangements where space is limited. For three years this new bearing has been tested and proved in rolling mills and railway axleboxes under the most arduous conditions of service. From these tests it has emerged with flying colours.

It is now being included in the SKF manufacturing programme, and will be made together with the old design.

Already a number of sizes are available, and this number will be steadily increased.

TECHNICAL DATA

There are no fixed flanges on the new bearing. Instead, the rollers are guided by a comparatively high, loose guide ring between the rows of rollers, and by the roller cage.

The length of contact between the rollers and track is considerably greater—the roller length is increased, and there are no grinding reliefs on the inner ring.

The rollers are symmetrical. Independent of the direction of the bearing load, they automatically adjust themselves in an axial direction so that the resultant bearing load always acts at the centre of the roller. Since the rollers adjust themselves automatically, the bearings can be made with such close conformity between rollers and tracks that the load is distributed evenly over the whole roller length and material stresses are kept as low as possible.

The design of the roller cage permits an increase in the width of the bearing, which is of value when radial space is limited.

USE OUR EXPERIENCE...

It has long been appreciated by industrialists that the cost of paint per gallon is by no means the best guide to the economics of painting. Production and maintenance costs merit careful study by all who aim to improve quality and efficiency.

I. C. I. have always advocated a realistic approach to this problem and in furthering this aim have recently produced two booklets entitled *"Improving Paintshop Productivity"* and *"Better Housekeeping in the Paintshop"*

Interested executives may obtain copies of these publications from the sole selling agents.

INDIAN SOAP INDUSTRY

NO NEED FOR RESTRICTION ON FOREIGN UNIT

READERS will recall that, while dealing with some of the problems of the Indian soap industry in the last issue of *Commerce*, we had to defer—for considerations of space—a critical examination of the complaint by Indian soap manufacturers of unfair competition from a leading foreign unit in the country. It is now proposed to deal with this important problem which, as we stated last week, involves a series of national economic policies.

Addressing the Indian Soap and Toiletries Makers' Association at its meeting held in Bombay last week, the President of the Association, Mr. S. C. Ghose, observed that, owing to the activities of a foreign combine operating in the line, a considerable part of the existing capacity of the indigenous soap producing units, representing as much as 70 per cent. of the total capacity, has been forced to keep idle. Mr. Ghose observed as follows:

"By far the biggest unit in the industry, a subsidiary of a mighty international combine, having vastly superior capital and control over enormous resources, is not in the least affected by this colossal problem (idle capacity), inasmuch as it is working almost to the full extent of its capacity, which is estimated at about 60,000 tons by working three shifts. In fact, the monopolistic operations of the Combine and the consequential cut-throat and unequal competition to which the Indian manufacturers have been exposed are, to a large extent, responsible for the pressing problem of the utilisation of the idle capacities of the indigenous sector.

"In this unbalanced background, we have been literally taken aback by the move of the International Combine for obtaining the sanction from the Government of India to their reorganisation scheme under which it proposes to import new machinery worth Rs. 27 lakhs for manufacturing soaps by replacing the existing plant at Bombay. In the national interest, and more particularly, in the wider interests of the industry, there is not the least economic justification for the proposed reorganisation. The matter has been taken up at length with the Government of India by our Association.

"From the latest available information, it seems that the matter has been referred to the highest level for disposal, and I feel constrained to reiterate, on this occasion, that if the Government are anxious 'to let us live,' it is indispensably necessary that the proposed importation of the new plant by the Combine must not only be stopped but the production of soap in the country must be so regulated as would enable the idle part of the existing capacity to be utilised to the maximum possible extent."

The foregoing quotation is rather lengthy, but we make no apologies for reproducing the views of the President of the Association, as it gives a clear picture of the attitude of the indigenous sector. It is evident from the remarks that the crux of the problem of the soap industry is the bringing back into use the installed capacity of indigenous units, which is remaining idle now. At a time when unemployment is growing fast, it is certainly not in the interests of the country to let go unutilised its idle capacity in any sector of industry, and much more so in the case of the soap industry which has before it vast opportunities for expansion. The question facing the country, therefore, is: how to utilise the idle capacity?

Mr. Ghose attributes the slump in the Indian sector of the soap industry, among others, to (*a*) unbalanced nature of its development resulting in the predominance of one single foreign unit, and (*b*) "unfair competition" from this unit. He, therefore, proceeds to the conclusion that the idle capacity can be brought back into use (1) by not allowing the foreign concern to rehabilitate its plant and machinery and (2) by regulating production of soaps manufactured by this unit. Accordingly, he demands that the Government should refrain from issuing the licence necessary for importing plant and machinery for this concern. This attitude against foreign units operating in India is not peculiar to the soap industry only. It is in abundant evidence in a few other sectors of private enterprise in India. To mention a few: the Indian lamps industry and the Indian paints industry have sections in them which are opposed to the existence of foreign units in their respective spheres. This attitude originates more from a parochial approach than from a careful appreciation of the needs of the people of this country as a whole. As consumers of soap, we do not find any signs of cut-throat competition. There has been no significant fall in prices of soap nor a glut of this article. Barring vague statements of unethical and unfair competition, the Indian manufacturers of soaps have produced no tangible evidence of such competition. If there is any competition at all, it seems to be of a type which is in the interests of consumers. Further, the field is so wide and vast that there is room enough for all soap manufacturers who know the art of producing soap at economic prices and of salesmanship. If still there are certain units which are unable to stand on their own feet without special protection against an economic unit, they must be either uneconomic or inefficient, or unable to withstand the difficulties arising from a high cost economy. In such cases, the demand for penalising the most efficient and economic unit in the country is an unreasonable one. The Government has, therefore, done the right thing in not taking any notice of it.

That apart, the present demands of the soap industry for adopting measures which, in effect, will result in the ultimate closure of the foreign unit, are not in the interests of the country. For one thing, its closure would mean increase in unemployment, decrease in production and undesirable rise in the price of soaps. For another, it will not solve the problem of utilising the idle capacity, as the closure of the unit means allowing to rust plant and machinery which can be used to the best advantage of the country. Again, the treatment meted out to the foreign unit will have a serious effect on the flow of foreign capital into this country. As India needs foreign capital for rapid development of its economy, it is necessary to see to it that no hasty and ill-advised measures are adopted to arrest the flow of capital into this country from abroad.

By demanding protection against competition from a bigger unit, the indigenous soap industry seems to have overlooked the fact that it is cutting the ground under its own feet. For the same arguments put forward by Mr. Ghose may be used by the cottage units of the soap industry for getting shelter from the competition of the units he represents. Such tendencies are amply visible in the demands of the village *ghani* against oil mills, and the handloom industry against the textile mills. And now there are indications that the village cobbler also desires that the manufacture of a particular line, namely, *chappals*, should be reserved for himself by preventing footwear factories from producing the same. It is in view of these disquieting tendencies that the Commerce and Industry Minister, Mr. T. T. Krishnamachari, gave a timely warning at the meeting of the Central Advisory Council when he said: "Unfortunately, the conditions prevailing in the last decade, a sellers' market sheltered from all competition, internal and/or external, have made people forget the many virtues on which private enterprise has built great industries. If there is a fall in sales, the producer does not stop to ask whether his salesmanship is faulty or his advertising defective. He does not consider whether he is making what the consumer wants. Instead, he goes to the Government and asks for some help, usually in the form of some restriction on other people." These remarks deserve to be pondered over by every industrialist in the country.

The answer to the full utilisation of the soap manufacturing capacity in the country lies in the manufacturers knowing the nature and the requirements of the market and then adjusting the manufacture of the product to suit the market. This vast country offers a very wide field. The tastes of the people too vary, and for the size of the country, the capacity that is required is more than the total capacity of the units owned by indigenous and foreign capital. What is needed is not restriction on the production of one or the other unit, but expansion of production in such a way as the country can absorb it. In this task, the Government has certainly a great responsibility, in that it should extend assistance in all the ways referred to by us last week.

IMPORTS OF CAUSTIC SODA

The Government of India has announced quota licences for the import of caustic soda and soda ash. Established importers, according to the announcement, will get quota licences for caustic soda at 35 per cent. of half their best year's imports during any one of the five financial years ended 1950-51. These quotas are not valid for the import of rayon grade caustic soda.

Actual users will be granted licences for half of their certified requirements only. If, however, actual users are eligible to apply as established importers by reason of their imports when the item was subject to free licensing or in the O.G.L., the value of their quota will be deducted from the value of half of their requirements, and actual user licences will be issued for the balance only. If the value of the quota licences is higher than half of their requirements, an actual user licence will not be granted. Licences will, however, be granted to actual users for their full requirements of rayon grade caustic soda.

The import quota licences will no doubt be very much appreciated by the consumer industries, especially the soap industry. For, it was experiencing difficulties as a result of shortage of caustic soda in the country. A reference to this feature was made at the recent meeting of the Indian Soap and Toiletries Makers' Association. The indigenous production of this article is far short of the country's industrial needs and it continues to depend on imports to the extent of about 40,000 tons. Actual users are getting licences for importing half of their certified six-monthly requirements, subject to certain conditions. This operates against the soap manufacturers, as they are left to meet the remaining part of their needs from the indigenous manufacturers whose output amounted to 15,916 tons in 1952 and 14,724 tons in 1951 as against industrial requirements of about 58,000 tons, estimated by the Planning Commission, for 1952-53. On account of scarcity of ready stock, prices of caustic soda have gone up recently to as high as Rs. 58 per cwt. This is due partly to the permission given in April by the Export Trade Controller, Calcutta, for exporting some quantities of caustic soda to the neighbouring countries. However, as fresh quotas of import licences have now been given, as stated above, the supply position should improve considerably.

The grant of quota licences as above is unlikely to affect the indigenous manufactures of caustic soda. For production in the indigenous factories is stated to have gone down owing to power cut in South India. The industry has a capacity of about 36,000 tons but production has been low at about 15,900 tons in 1952, as stated at the outset.

As regards soda ash, the established importers will get quota licences at 20 per cent. of their best year's imports in any one of the five financial years ended 1950-51. The licences will not be valid for the import of heavy natural soda ash.

The licensing authorities have been instructed to entertain applications for those items in advance of the commencement of the ensuing licensing period and to issue import licences on a priority basis.

U.S. CUSTOMS SIMPLIFICATION BILL

The Customs Simplification Bill, introduced in the U.S. Congress by Representative Thomas A. Jenkins, is expected to have a smooth passage in the present session of Congress. The Bill generally follows the recommendations drafted by the Treasury Department for removing procedural obstacles in the U.S. customs regulations that have been impeding imports. It is somewhat similar to a Customs Simplification Bill that was passed by the House of Representatives in the last session of Congress but did not get the consent of the Senate. It, however, departs from Administrative suggestions in two important aspects dealing with countervailing duties and anti-dumping provisions. It is because the Bill does not deal with these controversial methods that it is expected to be acceptable to Congress.

The Bill seeks to reform customs procedure in several ways. An analysis of the Bill shows that it would, among others, repeal accounting provisions that are either obsolete or covered by more modern statutes, clarify effective dates on which rates of duty become applicable, and make substantial changes to ease marking provisions. It authorises the Secretary of the Treasury to issue new regulations for covering the sampling and analysing of imported lead-bearing and zinc-bearing ores. The Bill further authorises the Secretary to exempt from duties items where the expense and inconvenience to the Government in determining the duty would be disproportionate to its amount. It seeks to liberalise the provisions for the temporary free entry under bond of samples and other articles and to extend to foreign ships the privilege of importing equipment and repair parts duty-free. It increases from $1 to $3 the difference between deposited or assessed duties which may be disregarded by the Customs Service and raises the ceiling from $1 to $3 on duty-free single entries of imported goods sent to an individual for personal use and not for resale. It further permits duty-free entry of *bona fide* gifts for personal use up to $10.

INDO-TURKISH TRADE AGREEMENT

India has signed a trade agreement with Turkey with a view to promoting trade between the two countries. The value of India's exports to Turkey in 1952-53 was about Rs. 4 crores, while India's imports from that country were valued at Rs. 83,000 only, but it was as much as Rs. 12.77 lakhs in 1951-52.

The main items of export from India include coir yarn and manufactures, drugs and medicines, dyeing and tanning substances, pepper, tea, jute yarn and manufactures and lac. The main items of imports are chemicals and dry fruits.

Both the countries have agreed to accord each other all facilities in the granting of import and export licences within the framework of their general regulations in force from time to time. A special clause has been inserted in the agreement binding both the countries to do their utmost to expand trade in commodities listed in the schedule. The list of commodities which India has agreed to import from Turkey include dried fruits, coarse grains and pulses, millets, chick-peas, lentils beans, silk yarn and silk cocoons, raw cotton, quicksilver, carnuba wax, acorn and acorn extract (a tanning material). The list of exports from India to Turkey include tea, jute goods, hessians, jute bags, coir yarn, motor tyres and tubes except giant tyres, rubber goods, medical instruments (hot water bottles, rubber sheets, etc.), spices, medical castor oil, nutmegs, and cotton goods.

The agreement will not prejudice in any way the exchange of articles not mentioned in the schedule.

PRODUCTIVITY IN MANUFACTURING INDUSTRIES

REPORT OF I.L.O. EXPERTS REVIEWED

THE Report of the I.L.O. Meeting of Experts on productivity in manufacturing industries, held in December, 1952, has been placed for consideration before the thirty-sixth International Labour Conference, which is now in session, at Geneva. It consists of a comprehensive set of conclusions on practical methods of increasing productivity. The Governing Body of the I.L.O. after considering this Report, had requested the various member-Governments to draw the attention of employers' and workers' organisations, productivity centres and other interested bodies to the contents of the Report. It had also authorised its communication to the thirty-sixth session of the International Labour Conference, to inter-governmental organisations concerned with the raising of productivity and to International Committee of Scientific Management. It is in accordance with this communication of the Governing Body that the Report is now before the present I.L.O. session.

Any study relating to productivity is important because one of the most urgent needs of the world is an increase in the output of goods and services to raise the living standards of the peoples of the world, especially underdeveloped and undeveloped, and to provide capital equipment that will keep them rising in the future. And it is becoming more and more widely realised that, if this need is to be met, the world's productive resources must be used more effectively than they are at present.

That apart, there is nothing new or original in the Report. It is only a compilation of what is known but hardly implemented by many nations. Thus, for instance, there is nothing new in the observation that the Governments have a responsibility for creating conditions favourable to higher productivity by promoting a balanced programme of economic development and by adopting appropriate economic and social policies. Again, it is common knowledge that the primary responsibility for action to raise productivity in individual undertakings, as pointed out by the Report, rests with managements. So also the observation of the Experts that the achievement of higher productivity calls for action on the part of Governments, employers and workers. Consequently, the utility of the Report lies only in the fact that it brings under one comprehensive volume all the known factors needed to raise productivity and emphasises its value to the nations concerned, in particular.

A point of interest to be noted is the definition of the term "productivity." It is used throughout the Report to signify the ratio between output and input in a plant, an industry or an economy, as a whole. This ratio can be expressed in terms of different input factors such as labour, capital or raw material. For several reasons, including greater availability of manpower data, labour (man-hours, man-days or man-years) is frequently used as the denominator in this ratio. Although it has limitations, this ratio has much value for practical purposes. But the changes in productivity revealed by this ratio may be, and often are, influenced by changes in machinery, equipment, plant organisation and raw materials, as well as by changes in the quantity and quality of labour. It is highly important, while analysing productivity changes, to keep all such factors in mind, as they all affect final cost figures.

Some of the salient measures which call for action to increase productivity may be enumerated. The Report calls for every effort in the field of organisation and control of production to achieve greater degree of (1) simplification (the process of reducing the number of types and varieties of products made), (2) standardisation (the process of organising agreement on (*a*) a standard for a particular product, range of products or procedure, and (*b*) the application of that standard) and (3) specialisation (the devoting of particular productive resources exclusively for the manufacture of a narrow range of products). It has urged attention to work-study techniques including method study and work measurement, as a means of improving organisation of work and simplifying processes and, in suitable cases, as a basis for systems of payment by results. It has further highlighted the need for marketing policies.

In the field of personnel policy, the Report states that the first and foremost consideration is the appointment of properly qualified office personnel and, where the size of the undertakings permits, the organisation of personnel departments or services.

It spotlights attention on the contribution that foremen and supervisors can make to higher productivity. As is clear, it emphasises also the importance of education and vocational training in increasing productivity. The Report does not consider the introduction and development of industrial engineering as a substitute for the normal process of wage negotiation between trade unions and managements at the plant, regional or industrial level. It, therefore, lays stress on the fact that trade unions should, where practicable, have fully trained personnel on their staff capable of exercising the function of negotiation as experts independent of management. In the determination of wages, it is notable that the Report focusses attention on the desirability—subject to the payment of adequate remuneration to the lower-paid worker—of maintaining such differentials, between the wages of supervisors, skilled, and semi-skilled and unskilled workers, as will provide them with adequate incentives.

Finally, the Report advocates special care to the maintenance of machinery, modification of equipment or improvisation, wherever needed, and replacement of obsolete plants and the like. It points to the scope for saving labour at relatively little expense through the mechanisation of auxiliary equipment, for example, the use of powered hand-tools.

LABOUR IN INLAND TRANSPORT

Comprehensive data on an all-India basis relating to labour conditions in inland water transport is available for the first time in a report published in the March issue of the *Indian Labour Gazette*. Inland water transport in India is mainly confined to the States of Assam, Bihar, Bombay, Madras, Orissa, U.P., West Bengal and Travancore-Cochin. Mechanically propelled vessels as well as country crafts ply in the inland waters carrying passengers and goods. Country crafts account for the bulk of inland water transport and employ the largest number of persons.

The major inland water transport companies in North-East India employ about 12,000 persons as floating staff and over 20,000 persons in their shore establishments. In country crafts plying in the Hooghly River alone, about 60,000 persons are employed. The number of persons employed in inland water transport in the Buckingham Canal in Madras could be estimated at about 15,000 and in the main navigable rivers in Orissa at 5,000. In Travancore-Cochin, their number has been estimated at 55,000.

Persons employed in passenger transport are generally paid monthly wages but those engaged on transport of goods are paid according to the freight charges received. In country crafts, the crew is not provided with any special living accommodation. Only a few leading companies provide free medical facilities to the workers. Welfare facilities such as facilities for recreation, education of children, etc., are, nowhere provided. The workers in North-East India and Travancore-Cochin have organised themselves into trade unions.

BSY-690A

NOT GUILTY!

Oil leaves no thumbprints behind on the many textiles produced in India. This is not so easy as it sounds, for one of our many problems in life is to devise ways and means of keeping oils and greases *on* textile machinery, and *off* the yarns they handle.

Shell research has developed special lubricants for the textile industry and many Indian manufacturers have found them more than satisfactory. Their machines run smoothly and their fabrics stay clean.

But this is not a static problem. As textile machinery improves so the demand for special lubricants increases. The distribution of these improved industrial lubricants for specialized purposes is one of the many ways in which we demonstrate our leadership in the Petroleum Industry

A. R. CHISHOLM,
Managing Director.

BOMBAY, 14*th May*, 1953.

RESULTS OF MCLEOD JUTES BETTER

ALEXANDRA AND WAVERLEY, HOWEVER, PASS OVER DIVIDEND AGAIN

THE financial results of six out of eight jute companies under the management of Messrs. McLeod & Co., Ltd., Calcutta, for the half-year ended 31st December, 1952, are uniformly better than those for the previous six months, though the extent of improvement varies from company to company. The aggregate trading profit of these six companies has recorded an increase from Rs. 14.17 lakhs for the half-year ended 30th June, 1952, to Rs. 43.45 lakhs for the half-year under review. Their combined net profit (after providing for depreciation and taxation wherever applicable) stands at Rs. 15.28 lakhs, in distinct contrast to the loss of Rs. 2.99 lakhs suffered by them in the previous six months. This performance is particularly gratifying in view of the difficult trading conditions during the six months under review, due to "highly speculative and fluctuating markets" for both raw jute and gunnies.

None of the companies, however, has raised the dividend level. On the contrary, while two of them, namely, Empire and Kelvin, have maintained their dividend levels at 10 per cent. and 15 per cent. per annum, respectively, two others have reduced them by half. Thus, Chitavalsah has cut it from 50 per cent. per annum paid for the previous half-year to 25 per cent. per annum and Nellimarla from 40 per cent. to 20 per cent. per annum. The two others, Alexandra and Waverley have not returned to the dividend list. The last occasion they paid a dividend related to the six months ended 30th June, 1951 (10 per cent. per annum). In fact, they have to pay arrears of preference dividend for the last two half-years.

Alexandra

Alexandra's sale proceeds of gunnies show a fall from Rs. 73.67 lakhs for the previous half-year to Rs. 56.72 lakhs, and closing stocks from Rs. 7.68 lakhs to Rs. 6.07 lakhs. Expenses too have gone down from Rs. 74.67 lakhs to Rs. 49.73 lakhs. The trading profit amounts to Rs. 5.40 lakhs, which is in refreshing contrast to the loss of Rs. 48,566 suffered in the previous half-year and of Rs. 1.65 lakhs in the corresponding half-year of 1951. After providing Rs. 2.20 lakhs for depreciation, as against Rs. 1.60 lakhs six months ago, and without making any provision for taxation, the net profit amounts to Rs. 1.61 lakhs, which compares well with the net loss of Rs. 3.36 lakhs in the half-year ended 30th June, 1952. This serves to reduce the deficit of Rs. 3.30 lakhs brought in from the previous half-year to Rs. 1.64 lakhs, which is being carried over.

Chitavalsah

Chitavalsah has earned a trading profit of Rs. 8.80 lakhs for the half-year under review, which shows an increase of Rs. 2 lakhs over that for the previous six months. Sale proceeds have declined sharply from Rs. 130.29 lakhs to Rs. 91.61 lakhs and stocks from Rs. 33.85 lakhs to Rs. 14.03 lakhs. A decline of Rs. 67.47 lakhs, that is from Rs. 130.64 lakhs to Rs. 63.17 lakhs, is noted in expenses. Provision for depreciation has been raised from Rs. 1.10 lakhs to Rs. 1.70 lakhs and that for taxation from Rs. 1.30 lakhs to Rs. 2.10 lakhs. The net profit of Rs. 3.15 lakhs is supplemented by a sum of Rs. 1.50 lakhs being the excess provision made in previous years now written back. But a like sum has been placed to the taxation reserve. The general reserve has been strengthened with the addition of Rs. 1.25 lakhs, following the sum of Rs. 50,000 added six months ago. With the addition of Rs. 2.75 lakhs to the reserves, the ordinary dividend has had to be reduced from 50 per cent. to 25 per cent. per annum, which requires Rs. 1.26 lakhs. The 7 per cent. preference dividend takes up Rs. 17,500, leaving to be carried forward Rs. 1.07 lakhs, as against Rs. 60,392 brought in.

Empire

A decline of Rs. 44.06 lakhs to Rs. 61.28 lakhs is noted in sale proceeds of gunnies, of Rs. 6.43 lakhs to Rs. 2.30 lakhs in closing stocks and of Rs. 41.69 lakhs to Rs. 48 lakhs in expenses, is revealed by the statement of accounts of the Empire Jute. Trading profit shows an impressive rise of Rs. 4.77 lakhs to Rs. 6.93 lakhs. Depreciation and taxation have been provided with Rs. 1.20 lakhs and Rs. 1.75 lakhs (as against Rs. 1.05 lakhs and Rs. 6,000), respectively. Out of the net profit of Rs. 2.37 lakhs, a sum of Rs. 1.25 lakhs (as against *nil*) has been added to the general reserve. After paying Rs. 35,000 on the 7 per cent. preference shares, the dividend on the ordinary shares has been maintained at 10 per cent. per annum, absorbing Rs. 75,000. The balance left to be carried forward is Rs. 47,730.

Kelvin

An increase of 116 per cent. in the trading profit, that is, from Rs. 4.22 lakhs to Rs. 9.13 lakhs, is the notable feature of the results of Kelvin. The fall in sale proceeds of gunnies from Rs. 138.25 lakhs to Rs. 83.51 lakhs has been accompanied by a decrease of Rs. 48.79 lakhs in expenses at Rs. 65.12 lakhs. Provision for depreciation is Rs. 15,000 more at Rs. 1.15 lakhs. Similarly, the reserve for taxation has been stepped up from Rs. 85,000 to Rs. 2.65 lakhs. The net profit at Rs. 3.51 lakhs compares well with Rs 1.17 lakhs for the previous half-year. The transfer to the general reserve has been raised from Rs. 1 lakh to Rs. 1.50 lakhs. The ordinary dividend is repeated at 15 per cent. per annum, requiring Rs. 1.57 lakhs. The 7 per cent. preference dividend takes up Rs. 35,000, leaving to be carried forward Rs. 1.16 lakhs, as compared with Rs. 1.07 lakhs brought in.

Nellimarla

The results of Nellimarla Jute are the most impressive of all in the group, the trading profit recording an expansion from a mere Rs. 86,789 in the previous half-year to Rs. 9.20 lakhs. It may, however, be noted that this falls short of Rs. 31.54 lakhs earned in the half-year ended 31st December, 1951. The net loss of Rs. 1.38 lakhs suffered in the previous six months has been converted into a surplus of Rs. 4.92 lakhs in the half-year under review. In tune with the general trend, sale proceeds, closing stocks and expenses all show a sizable shrinkage. Sales have declined from Rs. 88.84 lakhs to Rs. 56.42 lakhs, stocks from Rs. 16.92 lakhs to Rs. 13.01 lakhs and expenses from Rs. 83.33 lakhs to Rs. 43.42 lakhs. Depreciation is provided with Rs. 1.20 lakhs (Rs. 87,000). Whereas there had been no necessity to provide for taxation in the previous half-year, a sum of Rs. 2.14 lakhs has now been provided for that purpose. No addition to the reserves had been made in the previous half-year, but a sum of Rs. 3 lakhs has been added to the general reserve now, besides Rs. 1 lakh to the taxation reserve. The 6 per cent. dividend on preference shares and the ordinary dividend at 20 per cent. per annum together absorb Rs. 90,000, leaving Rs. 1.24 lakhs to be carried forward.

Waverley

Despite a trading surplus of Rs. 3.99 lakhs, as compared with Rs. 60,196 for the previous half-year, Waverley has suffered a small net loss of Rs. 27,649. This has been mainly due to the provision of Rs. 2.70 lakhs for depreciation, as against Rs. 75,000 provided in the previous half-year. After writing back a sum of Rs. 9,922, representing over-provisions in respect of liabilities made in previous years, and bringing in the previous half-year's deficit of Rs. 47,909, there is a loss of Rs. 65,636 which is being carried forward.

SRI KRISHNARAJENDRA MILLS RAISE DIVIDEND

The distribution of a dividend of 6 per cent. and a bonus of 2 per cent. recommended by the Directors of the Sri Krishnarajendra Mills Ltd. (Secretary: Mr. B. S. Visweswaraiya, Mysore) for the year ended 31st March, 1953, represents a welcome increase in the return to the Company's shareholders from the dividend of 4½ per cent. and the bonus of 1½ per cent. paid for the previous year. It also represents the first increase since the year ended 30th June, 1946—the Company changed its accounting year in 1951—when the total distribution was enhanced from 15 per cent. to 24 per cent. In 1947, this was reduced to 16 per cent., again in 1949 to 8 per cent. and for the third time in 1952 to 6 per cent. The Company's profit does not, however, show any marked increase over the year, the profit, before providing for depreciation and taxation, amounting to Rs. 6.75 lakhs, as compared with Rs. 6.66 lakhs for the previous year. Nonetheless, the distribution to the shareholders has been raised only after providing a small sum of about Rs. 24,000 to the general reserve and placing Rs. 50,000 to the dividend equalisation fund.

The following comparative table shows the progress in the Company's working since the year ended 30th June, 1949.

(In lakhs of rupees)

	Year ended 31st March		Nine months ended	Year ended
	1953	1952	31-3-51	30-6-50
Sale proceeds	85.39	78.31	60.21	73.01
Other income	1.81	0.69	0.41	0.66
Closing stocks	22.65	26.21	17.50	18.60
Expenses*	76.89	81.05	53.68	62.63
Profit	6.75	6.66	5.75	8.10
Provision for—				
Depreciation	2.10	1.80	1.42	1.24
