* Include purchases of cotton and stores. D = Dividend and B = bonus.

The Company would have shown still better results but for the fact that its working was "adversely affected by a continued rise in manufacturing costs and by the after-effects of the sudden slump in prices of raw materials and finished goods, which manifested itself early in 1952."

The Company's balance-sheet as on 31st March, 1953, discloses that the paid-up capital is unchanged at Rs. 36.70 lakhs. Reserves and surplus at Rs. 11.23 lakhs are higher by Rs. 2.22 lakhs, of which Rs. 1.50 lakhs are accounted for by the transfer of the unclaimed dividends forfeited. Current liabilities have declined by nearly Rs. 10 lakhs to Rs. 36.86 lakhs, mainly on account of the reduction in the Company's loans from banks to the extent of Rs. 12.09 lakhs. The gross block of the value of Rs. 57.42 lakhs (including the addition of Rs. 4.87 lakhs during the year) has been well written down to Rs. 12.46 lakhs. The current assets amount to Rs. 72.33 lakhs, at which level they provide ample cover to current liabilities.

A new up-to-date blow room machinery was erected and commissioned during the year. Most of the new spinning machinery of a unit of 5,544 spindles has been received at site and the erection of the same is progressing satisfactorily.

SHARP FALL IN PARRY'S PROFIT

DIVIDEND CUT FROM 32½ TO 15 PER CENT.

THE reduction in the dividend of Messrs. Parry & Co., Ltd. (Secretaries: Parry's Holdings Ltd., Madras), from 32.5 per cent. paid for 1951 to 15 per cent. for the year ended 31st December, 1952, is in tune with the contraction in its profit. The manufacturing and trading profit for the year under review amounts to Rs. 57.78 lakhs, representing a decline of about 32 per cent., from Rs. 84.54 lakhs earned in 1951. The cut in dividend could by no means be a big surprise to the shareholders, inasmuch as the Directors had prepared them for such an eventuality in June, 1952, when they submitted their report for the year 1951. Thus, they had observed then: "Business conditions have not been easy during the early part of this year, and it is considered inevitable that turnover and profits will show some degree of contraction from the inflated figures of the post-war years." Adverting to this, they say, in their latest report: "As was foreshadowed in the last report of your Board, business conditions were difficult during 1952 and the recession in trade, which first began to make itself felt in the early part of last year, persisted, with the result that the Company's gross earnings for 1952 were heavily reduced when compared with those of previous years. Considerable economies were effected during 1952 and should have their full effect in 1953."

The following comparative table of the salient features of the Company's profit and loss account for the last four years gives an idea of its progress since 1949:

(In lakhs of rupees)

	For the year ended 31st December			
	1952	1951	1950	1949
Profit on manufacturing, trading, etc.	57.78	84.54	88.64	67.61
Other income	8.68	4.60	3.94	3.47
Expenses	43.33	40.36	36.33	27.73
Secretaries' remuneration ..	..	4.15	5.46	4.11
Depreciation	3.13	3.14	1.84	1.74
Taxation	7.33	15.50	20.30	15.25
Net profit	12.68	21.71	28.65	22.45
To general reserve	5.00	7.00	11.78	8.00
Dividends—				
Preference 5%	1.50	1.50	1.50	1.50
Ordinary	6.00 (15%)	13.00 (32½%)	16.00 (80%)	12.50 (62½%)
Carry forward	1.58	1.94	1.78	2.36

This 164-year old company had a very prosperous period of trading till 1950 since its shares were issued to the public early in 1947, its trading profit having jumped up from Rs. 30.34 lakhs in 1947 to Rs. 88.64 lakhs in 1950. The dividend was also raised from 20 per cent. for 1947 to 80 per cent. for 1950. This was reduced to 32.5 per cent. for 1951, but it was on a capital doubled during the year by the issue of bonus shares and, therefore, actually represented a dividend of 65 per cent. on the old capital. This cut in dividend followed the fall in earnings, as indicated in the foregoing table, and the further rise in cost of business over the preceding year. In the year under review, the decline in trading profits is rather sharp, but that is inevitable in a business which is largely in the nature of a middleman and which has to hold huge stocks. The absence of any provision for Secretaries' remuneration is due to their having waived the same for the period from 1st January, 1952 to 31st May, 1953, in consideration of their being allowed to be relieved of their duties. The recession in profit has not resulted in any drastic reduction in the allocation to reserves.

The Company's latest balance-sheet shows that there has been no change in its capital structure since the bonus issue in November, 1951, when the paid-up capital was raised from Rs. 50 lakhs to Rs. 70 lakhs by enhancing the ordinary share capital from Rs. 20 lakhs to Rs. 40 lakhs by the issue of bonus shares. The reserves and surplus amount to Rs. 25.53 lakhs. A sum of Rs. 3.49 lakhs is outstanding on account of the 4½ per cent. debenture capital. Current liabilities aggregate Rs. 355.28 lakhs. The gross block of the value of Rs. 46.39 lakhs has been written down to Rs. 28.64 lakhs. Current assets amount to Rs. 405.52 lakhs and cover the current liabilities by a margin of Rs. 50.24 lakhs. Of the current assets stock-in-trade and stores alone account for Rs. 240.10 lakhs; the Directors report that these stocks have since been reduced to Rs. 200 lakhs as on 30th April.

As indicated above, the Secretaries of the Company, Parry's Holdings Ltd., have asked to be relieved of their duties from the 1st inst. The Directors have accepted this request and have appointed the Coromandal Investment Trust Ltd. as Secretaries on a reduced remuneration of 7½ per cent. on the profits in place of 10 per cent. previously payable to Parry's Holdings Ltd.

Points From The Chair

Insurers' Investments in Industry

"CONSIDERABLE attention has been given to the question as to the extent to which insurance companies should assist industry in the provision of capital, bearing in mind the importance of their operations as a medium for savings in an economy, which, in recent years, has been deprived of the benefit of substantial personal savings as a source of capital. It will interest you to know that since 1945 we have invested more than £6,000,000 in industrial and commercial securities, a significant proportion of which has been in equity stocks. Our investment policy, however, must have due regard to the liabilities we have to face and we have neither the organisation nor the close contact to justify our providing risk capital for the *entrepreneur* for new industrial development, and while we do not isolate ourselves from wider considerations, our first duty must be to ensure, as far as we can, the security of the funds we administer. The real solution of the problem of the provision of capital for industry is a progressive lessening of the burden of taxation. I am glad that a start has been made in the last Budget, but in my view the process must be carried substantially further, if we are to regain the solid advantages of a thrifty community and an industry able to maintain its efficiency and competitive power in the highly competitive world in which we live."

LORD BLACKFORD,
Guardian Assurance Co., Ltd.

Effect of Power Cut on South Indian Mills

"Turning to the prospects of the Company for the current year, it is not easy to forecast, particularly after a year which witnessed a world textile slump and evidence of only a partial recovery so far. Cotton supply is likely to be much more difficult, in view of the adverse effect of the drought conditions and the lower acreage planted out. The severe power cut will substantially reduce our production for the first half of the year and this will only partially be made up by the diesel generating set which we have installed. On the other hand, we have recently concluded export sales of yarn to the maximum extent permissible at remunerative prices and it is hoped that our waste plant will partially offset the loss in production due to power cut."

W. W. KILGOUR,
Cambodia Mills Ltd.

Nationalisation

"I am not one of those people who believe that all threats of nationalisation are over. I marvel at the attitude of some industrialists who are most cetainly vulnerable, yet who seem to consider that the best policy is to hide one's head in the sand, hoping that by keeping very quiet indeed they will not be noticed. I have heard it said that one must not introduce politics into business. I fail to understand the amazing attitude that to defend one's property against the despoilers is to indulge in politics. The same people advocate that we should wait until we are attacked; the attack has already opened, and we have been amply warned that if the boys ever get back with a sufficient majority, further large schemes for nationalisation will be introduced. Now is the time to make the people of Britain realise what nationalisation means—unhappy conditions under impersonal rule for the workers, bad service and inefficiency for the general public, resulting in loss of overseas trade and higher prices for consumers."

LORD LYLE OF WESTBOURNE,
Tate and Lyle, Ltd.

Lack of Confidence Regarding Raw Material Prices

"Some months ago, there was a noticeable change from a sellers' to a buyers' market and competition, especially in overseas markets, is now particularly keen. This, with the general shortage of finance, very marked in certain overseas countries, and almost everywhere a varying lack of confidence in the immediate future, has resulted in a substantial falling off in the rate of intake of new orders. Probably, the greatest single factor in our business contributing to this lack of confidence is the present uncertainty regarding the basic prices of raw materials (and copper particularly) with a natural and understandable tendency for customers to use up to a maximum their existing stocks. People cannot, however, continue to live indefinitely on stocks, but it is difficult to see any quick swing back to more normal purchasing until there is a greater stability than now in the basic prices of important raw materials."

SIR ALEXANDER ROGER,
British Insulated Callender's Cables, Ltd.

Marine Underwriting Not Profitable

"The outlook for marine underwriting is not good, as the cost of repairs has been increasing over the last few years at a greater rate than the market has been able to obtain increases in premium, and while the recent general market agreement of a 10 per cent. surcharge on all hull renewals will help underwriters to offset this position, the underwriting of hull business to-day remains a highly skilled operation with the chance of very little profit at best and a certain loss, if major casualties are heavier than usual. The rates paid on cargo business have continued to decline and much of this business is at present being written at under cost."

G. J. STEWART,
London and Edinburgh Insurance Co., Ltd.

INSURANCE

(*Concluded from page* 1086)

lakhs, from the miscellaneous department Rs. 8.17 lakhs and from the marine department, Rs. 30,584. The profits from the miscellaneous and marine sections compare favourably with those for 1951, while that from fire is somewhat lower.

The foreign business of the Company, the only Indian insurer with a large and growing overseas business to its credit, is steadily growing, as will be evident from a perusal of figures relating to the premium income derived from business effected outside India. In the fire department, such business brought in Rs. 200.39 lakhs, as against Rs. 184.55 lakhs in 1951. The corresponding figures for the miscellaneous and marine departments are Rs. 27.86 lakhs and Rs. 65.88 lakhs, as against Rs. 21.09 lakhs and Rs. 58.03 lakhs in 1951.

After taking into account the profits mentioned above, and also the net income by way of interest (Rs. 5.56 lakhs) and the profit of Rs. 2.63 lakhs from the shareholders' life profit account, as well as other sundry items of income, such as profit on sale of furniture, etc., there is a sum of Rs. 50.37 lakhs to the credit of the profit and loss account. The net outgo, including the transfer of Rs. 9 lakhs to investment reserve and about Rs. 1 lakh to depreciation on buildings, is Rs. 14.25 lakhs, leaving a sum of Rs. 36.12 lakhs for being transferred to the appropriation account. This sum, together with Rs. 71,262 brought in from the previous year, gives a total of Rs. 36.84 lakhs. A sum of Rs. 10.65 lakhs has been transferred to the reserve for taxation, Rs. 10 lakhs to general reserve and Rs. 1 lakh to the dividend equalisation fund, leaving a balance of Rs. 15.18 lakhs. The Directors have recommended payment of Rs. 2 per share (the same as that for 1951), which absorbs Rs. 14.24 lakhs, leaving Rs. 94,167 to be carried forward to the current year's account.

The strong financial position of the Company will be evident from the fact that, as against a capital of Rs. 106.81 lakhs, the reserves and funds stand at an impressive total of Rs. 22.06 crores which consist of: Fire insurance fund Rs. 155 lakhs, miscellaneous insurance fund Rs. 51 lakhs, marine insurance fund Rs. 132 lakhs, life insurance fund Rs. 1,700 lakhs, leasehold redemption assurance and sinking fund Rs. 2 lakhs, general reserve Rs. 66 lakhs, premium on shares Rs. 36 lakhs, investment reserve Rs. 34 lakhs, exchange reserve Rs. 12.46 lakhs and dividend equalisation fund Rs. 16 lakhs. As a result of the year's operations, the Company's total funds have increased by over Rs. 290 lakhs.

HINDUSTAN CO-OPERATIVE INSURANCE SOCIETY LTD.

A somewhat larger volume of new life business, amounting to Rs. 16.38 crores for the year 1952, has enabled the Hindustan Co-operative Insurance Society Ltd. Secretary: Mr. N. N. Datta, Calcutta) to attain a total business of Rs. 86.71 crores as at the end of December, 1952. During 1951, it may be noted here, the Company had written Rs. 16.29 crores worth of new life business. The increase in new life business during a year, such as 1952, which was generally a difficult one for all insurers, must be deemed a satisfactory feature of the working of the Society. It is also noteworthy that, although the new business showed a slight expansion during 1952, the actual number of policies was slightly higher at 62,183 as compared with 61,436 in the previous year.

The annual premium income on the new business for the period, after deducting reassurance premiums, is Rs. 83.74 lakhs as against Rs. 84.11 lakhs in the previous year. The premium income in respect of all the life assurance business amounted to Rs. 3.94 crores, as compared with Rs. 3.72 crores in 1951. The following table gives a synoptic view of the progress made by the Society during the last three years:

(In crores of rupees)

		1952	1951	1950
New business		16.39	16.29	13.75
Total business (at end of each year)		86.72	81.02	73.17
Policies in force ..	No.	3,87,939	3,69,809	3,47,538
Total premium income		3.94	3.72	3.40
Life assurance fund		19.72	17.61	15.92
Expense ratio ..	Per cent.	14.71	14.89	14.73
Rate of interest earned ..	Per cent.	3.37	3.36	3.58

Two features of the above table deserve special notice. It will be seen, in the first place, that the expense ratio, calculated in accordance with the Insurance Rules, has declined between 1951 and 1952, though the decline is only a small one, from 14.89 per cent. to 14.71 per cent. Secondly, during the same period, there has been a slight improvement in the rate of interest earned from 3.36 per cent. to 3.37 per cent. These two trends, if maintained in future years, should strengthen further the financial position of the Society which should, in its turn, enable it to give more attractive terms to its policyholders. The high status which the Society already occupies among the insurers in the country will be evident from the fact that its life fund exceeds Rs. 19 crores and that it is one of the few insurance companies which write over Rs. 3 crores worth of new life business in a year.

The Society's income under the profit and loss account amounted to Rs. 80,597, to which has been added a sum of Rs. 2,00,677 being the balance brought forward from the previous year. After meeting expenses of management, depreciation, payment of dividend for 1951 and transfer of a sum of Rs. 24,250 to general Reserve, the net balance at the end of the year is Rs. 1,25,879. The Directors have recommended a dividend of 10 per cent., the same as was paid for 1951, which would absorb Rs. 68,284, leaving a balance of Rs. 57,595 to be carried forward.

The Society is one of the oldest life insurance companies in India, this year's annual meeting being the 46th of its kind. The greater part of the Society's history (since 1913 to be precise) has been shaped by that far-sighted leader, Mr. N. R. Sarker, whose death, which occurred on 25th January, 1953, is a great loss to the Society. In a well deserved tribute to his services, the Directors observe: "He joined the Society at a time when it was passing through a great crisis, but, due to his able guidance, the Society was enabled to overcome all obstacles and rise to the pre-eminent position it now occupies in the field of Indian insurance. In fact, he may truly be called the builder and architect of this institution. The Directors consider his loss irreparable."

TEXTILES

(*Concluded from page* 1076)

which is said to be the second highest on record—the first highest was in 1950-51—thanks to strong buying competition, especially in the last three months. The aggregate wool cheque for the season under review is estimated at £A.374 million, as against £A.307.8 million for the previous season and £A.636.3 million for 1950-51. The current season's clip is estimated at 3.7 million bales, which is an increase of 309,000 bales as compared with 1951-52. The marked rise in aggregate realisation has followed an advance in the average price, from 72.89*d.* per lb. in 1951-52 to 81*d.* in 1952-53. The price in 1950-51 was still higher at 144.34*d.* per lb.

There has, as already stated, been strong buying support for wool. The U.K. has continued to be a leading buyer with Continental countries and Japan being in keen competition. The woollen mills in Australia also have been a factor, with occasional U.S. support. Competition has, of late, become keener still, owing to the fact that the buyers for Russia and its satellites have suddenly increased their orders and bid strongly for quality fleece. The wool sales are particularly facilitated by absence of industrial troubles, ready availability of shipment, marked reduction in wharf disputes, and prompt export, although producing and transport costs have moved upwards.

WORKING HOURS IN JAPANESE TEXTILE MILLS

There has been some comment in Lancashire on the comparative figures relating to the number of hours worked by weaving machinery in Britain and Japan given by the International Cotton Federation at the time of its loom census at the end of July, 1952. It is not denied that, due to abnormal conditions in Lancashire, the average figure of 32.66 hours worked was a fair reflection of the troubled state of the industry midway through last year, but the Japanese average of 84.7 hours is held to be excessively high.

According to the latest statistics compiled by the All-Japan Cotton Spinners' Association, that is, for January this year, the number of looms owned by spinning companies was 70,549, while that of looms owned by independent weaving concerns amounted to 236,309. As is their custom, the spinning companies worked their looms on shifts and on the basis of machines operating at 400 hours per month, comprising 16 hours per day for 25 days; their looms were working 70.2 hours weekly. The smaller independent weaving firms maintained the single-shift system and were operating 42.4 hours weekly. In view of the preponderance of machinery controlled by independent concerns, it is felt that the figures quoted by the Federation are liable to give a misleading picture. There is a mistaken idea, not only in Lancashire but in other parts of the world, that all the Japanese mills are operating double and treble shifts. It should be recognised that the majority of looms, at any rate, are engaged in single-shift working and the combined average of working hours was 48.8, as compared with Lancashire's estimated figure of 40 hours per week.

JAPAN'S TEXTILE EXPORTS

The aggregate quantity of cotton cloth that Japan is expected to export during the current (1953-54) fiscal year is estimated at 944 million square yards, valued at $170 million. The estimate is based on the high level of exports during the first two months of the year under review. Thus, contracts for cotton cloth exports improved from 70.1 million linear yards in April, 1953, to 84.5 million linear yards in the following month, and those for yarn from 1,000,000 lbs. to 1,600,000 lbs. The increase in cloth contracts is ascribed to larger sales to Indonesia and Hong Kong, which together account for nearly half the contracted quantity. The new trade agreement between Japan and Pakistan is said to have been responsible for larger yarn exports. Out of the 1,600,000 lbs. of yarn contracted for export during the first two months of the year under review, Pakistan accounts for 740,000 lbs.

In addition to cotton cloth and yarn, Japan also exports other items of textiles. The total value of all textile goods to be exported by Japan during the current year is estimated at $461.6 million, as against $410 million in 1952-53. The bulk of the textile exports—to the extent of $236.7 million—will go to the sterling and the rest of the open account area, and $126.2 million worth to dollar areas. In 1952-53, the sterling and dollar areas purchased $206 million and $117.2 million worth of Japanese textiles, respectively. The remainder went to the open account area.

BALMER LAWRIE'S PROFIT DECLINES

JAY SHREE TEA MAINTAINS DIVIDEND FOR FIFTH YEAR

Balmer Lawrie & Co., Ltd.

THE directors of the above Company (Director: O. T. Jenkins, Esq., Calcutta) submit the audited accounts of the Company for the year ended 31st December, 1952.

Turnover in 1952 was below the high level achieved in the previous year and gross profits were correspondingly reduced. From April onwards the first signs of a recession in business began to appear. The full effect of this is likely to be felt in the current year. Tea prices also fell steadily throughout 1952 and all the Company's tea interests were more or less affected. An indirect sufferer from the slump in the tea industry was the British India Electric Construction Company which lost its market for tea machinery. In common with other engineering concerns this Company also found difficulty in disposing of its electric motors and centrifugal pumps. The other two subsidiary Companies had a satisfactory year. The Bengal Paper Mills and the Indian Galvanizing Company were on strike from October and November respectively. Both disputes have been settled. The Indian Galvanizing Company's new plant in Bombay is now complete and ready to run.

The profit for the year, after providing for depreciation, taxation and an appropriation to property reserve was Rs. 13,45,999 (Rs. 21,96,338), to which is added the balance brought forward from 1951 of Rs. 5,19,159 (Rs. 3,97,996) making a total of Rs. 18,65,158 (Rs. 25,94,334). Out of this total, the directors paid the preferential dividend on the ordinary shares amounting to Rs. 1,50,035 (Rs. 1,50,035) on 20th October, 1952. They have transferred Rs. 6,00,000 (Rs. 10,00,000) to the reserve fund, leaving a balance of Rs. 11,15,123 (Rs. 13,19,299) available for distribution, which they recommend be dealt with as follows:—

Final dividend of 7½ (10) per cent. on the ordinary and deferred shares Rs. 3,00,052 (Rs. 4,00,070), bonus of 7½ (10) per cent. on the ordinary and deferred shares Rs. 3,00,052 (Rs. 4,00,070) and balance carried forward Rs. 5,15,018 (Rs. 5,19,159).

The directors did not consider that they would be justified in maintaining the dividend at the increased rate, made possible by last year's exceptional results. They have made the usual substantial contribution to reserve.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	40,00,700	Block ...	24,00,000
Reserves ...	90,78,000	Stocks ...	1,04,66,702
Provision for taxation ...	7,93,900	Stores, etc. ...	3,26,543
Liabilities ...	2,16,24,018	Goods in transit ...	18,10,385
Profit and loss account ...	5,15,018	Debts, deposits and advances ...	1,52,64,169
		Investments	54,02,281
		Cash ...	3,41,556
Rs.	3,60,11,636	Rs.	3,60,11,636

Jay Shree Tea Gardens Ltd.

The directors of the above Company (Managing Agents: Messrs. Birla Brothers Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December, 1952.

After providing depreciation amounting to Rs. 10,493 (Rs. 2,99,374), a balance of Rs. 1,12,743 (Rs. 2,10,125) remains at the credit of profit and loss account. To this has been added Rs. 70,905 (Rs. 95,056) being the balance brought forward from the previous year and also Rs. 1,00,000 (*nil*) transferred from the reserve fund to the profit and loss account. Thus there remains Rs. 2,83,649 (Rs. 3,05,181) at the credit of profit and loss account which the directors recommend be dealt with in the following manner:—

To transfer to reserve for contingencies Rs. 25,000 (*nil*), to pay dividend on 3,90,460 ordinary shares at 6 (6) per cent. per annum free of income-tax Rs. 2,34,276 (Rs. 2,34,276) and to carry forward the balance of Rs. 24,373 (Rs. 70,905) to the current year's account.

The directors regret that the result of the period under review is not satisfactory. This is mainly due to the fact that the prices of tea during 1952 were extremely uneconomic. Since the last few months, however, the market has taken a turn for the better and the position now seems to be fairly satisfactory.

The directors have given mature consideration to the question of payment of dividend. In view of the satisfactory financial position of the Company and fair prospects of the current year's working, the directors recommend that the dividend be maintained at the previous level of 6 per cent.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	39,04,600	Block ...	44,75,000
Reserves ...	24,25,000	Stocks ...	11,01,660
Provision for taxation ...	6,01,251	Stores ...	5,37,215
Liabilities ...	10,71,311	Other assets	33,330
Profit and loss account ...	24,372	Debts, deposits and advances ...	13,73,552
		Investments	4,19,635
		Cash ...	86,142
Rs.	80,26,534	Rs.	80,26,534

Bengal Bhatdee Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st December, 1952.

After providing Rs. 8,175 (Rs. 4,225) for depreciation, Rs. 4,000 (Rs. 5,000) for taxation and bringing in Rs. 9,000 (*nil*) from the taxation provision account no longer required, there is a balance of Rs. 10,786 (Rs. 8,769) at the credit of profit and loss account from which the directors recommend payment of a dividend at As. 2 (As. 2) per share absorbing Rs. 5,617 (Rs. 5,617) leaving to be carried forward the balance of Rs. 5,169 (Rs. 3,152).

Raisings were 33,770 tons as compared with 41,861 tons in the previous half-year and despatches 31,565 tons as compared with 43,411 tons.

Mr. K. M. Shethia retires from the Board by rotation and being eligible offers himself for re-election.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	4,49,350	Block ...	3,24,456
Reserves ...	70,000	Stores ...	309
Provision for taxation ...	9,720	Debts, deposits and advances ...	1,00,656
Liabilities ...	1,05,389	Cash ...	2,14,207
Profit and loss account ...	5,169		
Rs.	6,39,628	Rs.	6,39,628

Searsole Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Gillanders Arbuthnot & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st January, 1953.

The result of the year's working, after providing for taxation, is a net profit of Rs. 53,298 (Rs. 35,551) to which has to be added the undisbursed balance brought forward from the last account of Rs. 18,451 (Rs. 17,900) making a total of Rs. 71,749 (Rs. 53,451). The directors recommend that the above sum be disposed of in payment of a dividend at the rate of 25 (20) per cent. per annum without any deduction in respect of income-tax payable by the Company for the year ended 31st January, 1953 Rs. 31,250 (Rs. 25,000), transfer to development reserve Rs. 20,000 (Rs. 10,000) and leaving to be carried forward the balance of Rs. 20,499 (Rs. 18,451).

Raisings and despatches of all classes of coal for the last three years are as follows:—

Year ended	*Raisings*	*Despatches*
	Tons	Tons
31st January, 1953	50,033	43,058
31st January, 1952	45,476	41,968
31st January, 1951	41,555	40,049

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.

		Cash ...	6,199
Rs.	5,65,542	Rs.	5,65,542

Kunchunpore Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Duncan Brothers & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December, 1952.

The accounts disclose a loss of Rs. 3,64,320 (loss of Rs. 1,38,549). On transfer of this sum to profit and loss account and after sundry adjustments, including a transfer of Rs. 80,000 (Rs. 1,20,000) from revenue reserve and Rs. 39,493 (*nil*) from buildings and machinery reserve there is a balance at debit of profit and loss account of Rs. 1,76,871 (credit of Rs. 1,169).

The disappointing result is due to an unfavourable market, shortfall in crop caused by early drought and finer plucking during the latter part of the season coupled with the high cost of statutory concessions to labour.

Crop was 3,691 maunds as compared with 4,393 maunds in 1951. The average selling price was As. 12 per lb. against Re. 1-1-1 per lb. in the previous year. Planted area remains at 599.53 acres.

Estimates for 1953 provide for a crop of 4,000 (4,500) maunds at an outlay of Rs. 3,99,030 (Rs. 6,89,300) including inland freight and sale charges.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	3,60,000	Block ...	2,40,000
Provision for taxation ...	218	Stores and supplies ...	64,487
Liabilities ...	3,07,105	Tea sales receivable ...	1,17,872
		Advances and deposits ...	54,010
		Cash ...	14,083
		Profit and loss account ...	1,76,871
Rs.	6,67,323	Rs.	6,67,323

Okayti Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Duncan Brothers & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December, 1952.

The accounts disclose a loss on the season's working of Rs. 1,10,750 (loss of Rs. 35,677). On transfer of this sum to profit and loss account and after sundry adjustments including a transfer of Rs. 17,000 (Rs. 33,000) from revenue reserve, Rs. 36,800 (*nil*) from buildings and machinery reserve and Rs. 25,000 (*nil*) from hail reserve there is a balance at debit of that account of Rs. 31,979 (credit of Rs. 853).

Enhanced production costs, mainly due to the implementation of the Minimum Wages Act, coupled with lower prices obtained for produce caused by the depressed state of the tea market in 1952, contributed largely to this unfavourable result.

Crop weighed out at 2,135 maunds as compared with 2,350 maunds estimated and 2,089 maunds in 1951. The average selling price was Rs. 2-0-1 per lb. as against Rs. 2-2-4 per lb. in the previous year. Planted area is 505 acres.

Estimates for 1953 provide for a crop of 2,250 (2,350) maunds at an outlay of Rs. 3,21,300 Rs. 4,85,710), including inland freight and sale charges.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	1,50,000	Block ...	1,50,000
Provision for taxation ...	15,487	Stores and supplies ...	58,531
Liabilities ...	2,40,142	Tea sales receivable ...	1,15,955
		Advances and deposits ...	29,748
		Cash ...	31,979
Rs.	4,05,629	Rs.	4,05,629

Putinbaree Tea Association Ltd.

The directors of the above Company (Managing Agents: Messrs. Duncn Brothers & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December, 1952.

The accounts disclose a loss on the season's working of Rs. 95,638 (loss of Rs. 11,166). On transfer of this sum to profit and loss account and after sundry adjustments, including a transfer of Rs. 67,500 (*nil*) from revenue reserve and Rs. 20,000 (*nil*) from buildings and machinery reserve there is a balance at credit of that account amounting to Rs. 44 (credit of Rs. 5,801).

The loss is mainly attributable to the persistence of a disastrously low market during the major part of the season and although latterly a sharp improvement was evident, this failed to offset the unremunerative prices obtained earlier for the bulk of the crop.

Crop weighed out at 2,844 maunds, as compared with 2,304 maunds in 1951.

The average selling price was As. 15 per lb. against Re. 1-7-3 per lb. in the previous year. Planted area is 255.32 acres.

Estimates for 1953 provide for a crop of 2,500 (2,500) maunds at an outlay of Rs. 2,49,770 (Rs. 3,13,680) including inland freight and sale charges.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	1,00,000	Block ...	1,00,000
Reserves ...	9,854	Stores and supplies ...	24,368

Liabilities ...	1,61,450	Advances and deposits ...	36,858
Profit and loss account ...	44	Cash ...	6,994
Rs.	2,76,707	Rs.	2,76,707

Bridge and Roof Co. (India), Ltd.

The directors of the above Company (Managing Agents: Messrs. Balmer Lawrie & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the half-year ended 31st December, 1952.

The profit for the half-year, after providing for debenture interest, depreciation and taxation, was Rs. 1,13,131 (Rs. 2,58,077) to which was added the balance brought forward of Rs. 91,200 (Rs. 76,900) making a total of Rs. 2,04,331 (Rs. 3,46,084). Out of the total of Rs. 2,04,331 the directors set aside Rs. 25,000 (Rs. 1,75,000) to general reserve. There was a balance of Rs. 1,79,331 (Rs. 1,71,084), at the credit of profit and loss account, which the directors disposed of as follows:—

In paying a dividend at the rate of 15 (15) per cent. per annum Rs. 90,000 (Rs. 90,000) and in carrying forward Rs. 89,331 (Rs. 81,084).

There was a falling off, of orders booked during the half-year, but at the time of making this report the position improved considerably.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	12,00,000	Block ...	8,41,601
Debentures ...	2,00,000	Stock ...	27,43,820
Reserves ...	10,55,000	Goods in transit ...	443
Provision for taxation ...	5,23,200	Debts, deposits and advances ...	17,31,690
Liabilities ...	29,66,347	Investments	29,418
Profit and loss account ...	89,331	Cash ...	6,86,906
Rs.	60,33,878	Rs.	60,33,878

Walford Transport Ltd.

The directors of the above Company (Manager: Mr. E. A. Smith, Calcutta) submit the audited accounts of the Company for the year ended 31st December, 1952.

After writing off Rs. 32,842 (Rs. 63,091) for depreciation and setting aside Rs. 73,428 (Rs. 3,29,854) for taxes, the available profit for the year is Rs. 2,73,239 (Rs. 4,62,506) including Rs. 1,38,488 (Rs. 1,16,418) carried forward from the last account. The directors recommend that this sum be dealt with as follows:—

Payment of a dividend of 8½ (11) per cent. per annum on 2,10,200 preferred ordinary shares, absorbing Rs. 17,867 (Rs. 23,122), payment of a dividend of 7 (12) per cent. per annum on 8,40,800 ordinary shares, absorbing Rs. 58,856 (Rs. 1,00,896) and carry forward Rs. 1,96,536 (Rs. 1,38,488).

It was emphasised in the directors' report, last year that the impact of certain events would be felt during the year 1952. Shareholders will see that this forecast was correct and that trading conditions during the year under review were adversely affected by the following:—

Diminishing supplies and (in March, 1953) disappearance from the market of the popular Chevrolet passenger car, probably for some long time to come. The almost total elimination of what was known as the home delivery business, which represented a large proportion of the Company's trading volume. The continued falling off in customer purchasing power without corresponding reductions in the price of products that are already high and a contraction in vehicle availability due to the non-issue of import licences during the second half of 1952 and, subsequently, pending a report by the Tariff Enquiry Commission into the Indian automobile industry as a whole.

With the very vague day-to-day position of the automobile distributing business, and in the absence of any decision pending the publication of the Tariff Enquiry Commission's Report, the directors have recommended curtailment in the rates of dividends and the carry forward of as large a sum as possible to the next trading account.

Accounts in brief are as under:—

Mothola Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Kettlewell Bullen & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December, 1952.

The accounts, after writing off for depreciation Rs. 25,723 (Rs. 25,000), shows a loss of Rs. 89,099 (profit of Rs. 64,426). From this has to be deducted the balance brought forward from the last account, of Rs.17,132 (Rs. 30,206) and provision for taxation no longer required Rs. 4,000 (*nil*) giving a debit balance of Rs. 67,967 (Rs. 94,632). There has been transferred from reserve account Rs. 70,000 (to reserve account Rs. 25,000) leaving a balance of Rs. 2,033 (Rs. 17,132), to be carried forward to the next account.

In view of the adverse results for the year and the fact that the forthcoming season's working must necessarily be financed by the Company's bankers the directors have not felt justified in recommending any dividend distribution, in respect of the past season.

In April, 1952 the Government of India declared the export allotment for the year 1952-53 at 452,720,021 pounds being 130 per cent. of India's standard export figure and representing 86.5 per cent. of the crop basis of estates in this country.

A sharp decline in prices was recorded at the Calcutta auctions towards the close of the 1951 season, and the downward tendency continued throughout the year under review. By the time the second flush teas had been marketed average prices realised for Assam varieties were down by 10 annas per pound as compared with the corresponding period of 1951, and in September, when offerings for export had risen to more than 70,000 chests a week, the market was quite unable to absorb such large quantities, resulting in a further decline in prices and large scale withdrawals from the auctions. In October, export offerings were restricted by the trade to 55,000 packages a week, but supply continued to exceed demand, and in spite of further limitations in catalogues during November, withdrawals became so heavy that in both Calcutta and London sales were suspended entirely during the second half of December. When the market reopened in 1953 prices tended to harden, but the balance of the crop remaining for disposal was insufficient to effect any appreciable improvement in the overall average for the year.

At the commencement of the new season, as a result of persistent representations from producers with regard to the economic difficulties affecting all tea growing districts, the Government of India appointed an official team to enquire into the financial position of the tea trade and to advise them generally on any relief to be accorded. In spite of the urgency of the matter the report of this team was not published until 8th November, and it is to be regretted that their recommendations afforded little scope for immediate relief.

With effect from the 7th September, 1952 the tea ration in the U.K. was increased from 2½ ozs. to 3 ozs. a week and on 2nd October the ministry of food abolished tea rationing altogether. At the same time price ceilings were removed and the tea trade in England has since been free from all restrictions. Whilst the ending of controls was warmly welcomed by all sections of the trade, the immediate results were disappointing and in the later months of the year offerings on the London auctions had to be regulated in view of the weak demand. There was, however, a welcome increase in the quantities of tea exported from Calcutta to the principal out markets and compared with 1951, Australia and New Zealand nearly doubled their purchases, whilst the dollar markets also took more.

The area under cultivation remains unchanged. Plucking extended to 382 acres, which includes 17 acres of young tea plucked for the first time, the average yield per acre being 18.14 maunds. During the year a further nursery was put out and 5 acres were replanted. The final outturn for the season was 6,781 maunds representing an increase of 327 maunds as compared with 1951. The cost of production was As. 26.27 per pound against As. 24.55 per pound for the previous season, the increase being accounted for largely by the implementation of the Assam Minimum Wages Act. The export quota allotted to the Company for 1952 amounted to 4,470 maunds, and additional rights were acquired towards the close of the season to cover the increase in crop. Coal supplies were a constant source of anxiety, being not only inadequate for the Garden's needs but also of inferior quality, thereby making the task of obtaining satisfactory firing extremely difficult.

On 11th March, 1952, the Government of Assam announced that minimum wages had been fixed for tea plantations in Assam, in spite of protests made by the I.T.A., and this matter has continued to be a subject of concern particularly in the light of the economic crisis, with which the industry has been faced. The increase in wages is estimated to have added As. 2 per pound, to the overall cost of production and is a serious addition to the burdens with which producing interests have to contend.

The outstanding feature of the past season has been the substantial increase in production costs which coincided with a heavy slump in tea prices. As foreshadowed in last year's report it became obvious during the year that production had outstripped effective demand, and this fact led to the necessity for arranging some form of crop restriction for the forthcoming season. Plans to effect this reduction have now been finalised by the I.T.A. on the basis of a voluntary restriction amounting to 12½ per cent. of the best crop of the years 1947-1952 and have been referred to all the interests concerned for confirmation. In the meantime the Government of India has announced a reduction in the export allotment to be made to estates for 1953-54 from 130 per cent. to 115 per cent. of the standard export figures.

Accounts in brief are as under:—

Arrah-Sasaram Light Railway Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Martin Burn Ltd., Calcutta) submitted the audited accounts of the Company for the half-year ended 31st March, 1952.

Gross earnings for the half-year were Rs. 7,49,737 (Rs. 6,60,506) which is Rs. 85,231 more than the earnings of the corresponding period ended 31st March, 1951. There are increases of Rs. 51,833 (Rs. 2,645) under coaching and Rs. 31,012 (Rs. 29,388) under goods and Rs. 2,386 (Rs. 192) increase under miscellaneous.

The working expenses for the half-year were Rs. 5,98,194 (Rs. 5,85,647) plus Rs. 60,447 (Rs. 1,98,068) set aside to renewal reserve, making a total of Rs. 6,58,641 (Rs. 7,83,715) which is Rs. 1,25,074 (Rs. 1,29,308) less more than the figure for the corresponding period ended 31st March, 1951.

The net earnings for the half-year were Rs. 87,096 (Rs. 1,23,209).

The following comparative gives the progress of the Company during the last six half-years:—

Half-year ending	*Gross earnings*	*Working expenses*	*Allocation to renewal reserve*	*Due to + due from— district board*	*Dividend per cent. per annum less tax*
	Rs.	Rs.	Rs.	Rs.	Rs.
30-9-1949 ..	7,06,151	5,04,237	27,370	+ 42,041	6
31-3-1950 ..	6,92,731	5,60,727	98,680	+ 6,283	6
30-9-1950 ..	7,54,483	5,19,598	44,087	+ 6,821	6
31-3-1951 ..	6,60,506	5,85,647	1,98,068		6
30-9-1951 ..	8,55,028	5,70,218	28,337	+ 22,484	6
31-3-1952 ..	7,45,737	5,98,194	60,447		6

The balance available for distribution was Rs. 77,514 (Rs. 73,293), including net profit of Rs. 37,513 (Rs. 25,206) and balance brought forward from previous half-year of Rs. 40,001 (Rs. 48,087). The directors disposed of this amount in payment of a dividend for the half-year ended 31st March, 1952, at the rate of 6 (6) per cent. per annum less income-tax costing Rs. 47,995 (Rs. 47,996) and carried forward the balance of Rs. 29,519 (Rs. 25,297).

Accounts in brief were as under:—

SHREE DIGVIJAY CEMENT CO., LTD. Dividend of Rs. 6 per ordinary share, for the year ended 31st December, 1952.

SLIGHT STRINGENCY IN MONEY

(From Our Own Correspondent)

BOMBAY, 10*th June*

The large cash subscriptions to the new loan of the Central Government, which were of the order of about Rs. 23 crores, imparted a slight touch of stringency to the short-term money market. The volume of floating funds shrunk appreciably and the market had to fall back on the Reserve Bank for fresh supplies. Barring this development, the money market was featureless during the week under review. The inter-bank call money rate among the Exchange banks and big Indian banks was unchanged at 2¼ per cent., with very little offering. The rate among the small Indian banks was maintained at 3 per cent.

Term deposits for one to three months were sought at 2½ to 2¾ per cent. and for over three months at 2½ to 2¾ per cent.

The Government of India's borrowings against three months' Treasury Bills at yesterday's tender were on the cheapest terms for over five months. The amount offered at Rs. 209.50 lakhs was a little higher than that offered last week at Rs. 201.50 lakhs. Tenders at Rs. 99-6-6 were accepted in full and those at Rs. 99-6-3 were allotted approximately 27 per cent. The average rate of accepted tenders was Rs. 2-6-5, as against Rs. 2-6-6 last week. The last occasion on which tenders were available at this low price was on 6th January this year.

After a lapse of three weeks, notes in circulation have once again shown a sharp rise. The statement of affairs of the Reserve Bank for the week ended 6th June, 1953, discloses an expansion of Rs. 10.74 crores in active notes. Notes held in the Banking Department show a contraction of Rs. 11.51 crores and the consequent decline of Rs. 77.61 lakhs in total notes issued is covered by a similar fall in rupee coin. As against these main variations in the Issue Department, the Banking Department records a contraction of Rs. 9.40 crores in Central Government's deposits and of Rs. 17.48 lakhs in those of other Governments. Deposits of banks show a negligible increase. On the assets side, cash balances have dwindled by Rs. 11.59 crores, while balances held abroad are higher by Rs. 80.94 lakhs. Loans and advances to Governments show no change, but other loans and advances have declined by Rs. 2.04 crores, of which advances to Scheduled Banks against usance bills account for Rs. 1.09 crores. The total amount of advances availed of by Scheduled Banks against usance bills so far during the year aggregates Rs. 47.34 crores, which shows an increase of Rs. 6.25 crores over the week.

The consolidated statement of position of Scheduled Banks for the week ended 29th May, 1953, as compared with that for the previous week, shows no worthwhile variations, except for a sizable decline in their cash balances. Demand deposits have dropped by Rs. 84.17 lakhs and the decline in time deposits is no more than Rs. 10.58 lakhs. Borrowings from banks also show a decrease of Rs. 50.65 lakhs. Borrowings from the Reserve Bank of India are lower by Rs. 26 lakhs, while those from the Imperial Bank are up by Rs. 86 lakhs. Advances and bills purchased and discounted together are higher by Rs. 55.84 lakhs. Investments have declined by Rs. 44.53 lakhs and cash balances, including, balances with other banks in current account, and money at call and short notice, show a contraction of Rs. 4.11 crores.

As indicated above, the Central Government's new loan was opened on Monday this week for public subscription and was closed on Tuesday afternoon after it was "fully subscribed." Out of the total sum of Rs. 75 crores issued, the public subscription in cash amounted to as much as Rs. 23.30 crores. A sum of Rs. 51.81 crores was taken up by conversion of 3 per cent. 1953-55 loan which is due for redemption on the 15th of next month. Unofficial estimates place the amount of conversion by the public, including the Imperial Bank, at about Rs. 20 crores.

The Gilt-edged market presented an easy tone, with all-round decline in quotations. The short and short-medium dated loans were the worst sufferers. 3 per cent. 1957 was marked down by As. 4 to Rs. 98-5, as also 3 per cent. 1958 to Rs. 98-3, 3 per cent. 1959-61 declined by As. 3 to Rs. 96-6. 3 per cent. 1963-65 was placed an anna lower at Rs. 92-11. 3 per cent. 1964 was also an anna down at Rs. 92-15, despite the proximity of interest payment. 3 per cent. 1966-68 and 3 per cent. 1970-75 each shed an anna to Rs. 90-8 and Rs. 86-9, respectively. 3 per cent. 1986 Conversion Loan was steady at Rs. 82-8, but shaded off to Rs. 82-7 at the close.

There was no change in the rupee-U.S. dollar rate. In New York, there was a fractional hardening in the rates for £ sterling in both spot and forward positions. The spot rate was placed yesterday at $2.81 5/16-2.81 7/16 per £, as against £2.81¼-2.81⅜ on the 2nd inst. The rate for three months moved up from $2.80 5/16-2.80 7/16 to $2.80½-2.80⅝ and that for six months from $2.79 13/16-2.79 15/16 to $2.79 15/16-2.80 1/16.

METALS INACTIVE

(From Our Own Correspondent)

CALCUTTA, 9*th June*

There were no worthwhile price movements in the metal market during the week. The peace moves dit not, however, affect quotations, and thus it would appear that the present rates are about the minimum replacement levels. Electrolytic copper was throughout quoted at Rs. 180. The fire-refined material was unquoted, as stocks stood entirely exhausted. Supplies of electrolytic ingots remained limited, and no arrivals in ports are likely in the near future. The resumption of work at the Indian Copper Corporation from last Friday, following settlement of the three-month old strike, is welcomed, and production there would relieve the stock position to some extent. Tin opened at Rs. 494 and, after improving to Rs. 496, following higher advices from Singapore, soon receded to Rs. 494. Lead was quiet at Rs. 61, but electrolytic zinc improved from Rs. 51-8 to Rs. 53-8.

BULLION FIRM

(From Our Own Correspondent)

BOMBAY, 10*th June*

After a mid relapse early in the week due to the pronounced weakness of the cotton and commodity markets, a bullish fervour came to manifest itself in the bullion market and prices of both the metals hardened considerably. This firmness was attributed to renewed buying induced by reports of excellent offtake and bear covering. The decline in the arrivals of gold also strengthened the bullish fervour. In the result, silver disclosed a gain of Rs. 2-2 per 100 tolas and gold of Rs. 3 per tola for forward delivery and Re. 1-8 per tola for ready.

The Government of Bombay has approved of certain amendments to the by-laws of the Bombay Bullion Association made by the Board and accepted by the general body in March last. The amendments mostly relate to the powers of the Board to call for statements of outstanding positions from all members and to punish any member for failure to pay margin and/or to submit a true statement of outstanding transactions. One of them adds a proviso to the by-law relating to the rate of margin payable on the outstanding positions. According to this proviso, no margin is payable by a member in respect of sale of gold or silver tenderable against forward business which may be lying in a bank or safe deposit vault in Bombay on his account and for which certificate of the bank or vault concerned is submitted to the Association with his statement. Another amendment introduced permits a member having a surplus amount of margin in his gold or silver margin account to transfer the same to his silver or gold margin account, as the case may be.

Silver for forward delivery (June settlement) opened at Rs. 155-11 and, after a reaction to Rs. 153-8, rebounded to a high of Rs. 159-14 yesterday and closed at Rs. 158-8 to-day.

Ready silver (.996 fine) moved down from Rs. 157-11 to Rs. 155-8, but advanced to close at Rs. 160-8, thus maintaining a premium of Rs. 2 over the forward rate throughout the week. The floating stocks of silver are estimated at 1,800 bars. The daily average offtake was 80 bars.

Gold for forward delivery (June settlement), after an initial marking down from Rs. 88-4 to Rs. 86-14, hardened to Rs. 89-13 to-day before finishing at Rs. 89-6.

Ready gold fell early in the week from Rs. 89-12 to Rs. 88-4, but recouped to close at Rs. 91-6. The floating stocks of gold are placed at 20,000 tolas. The daily average arrivals were 4,000 tolas, while the offtake was 6,000 tolas on an average.

In distinct contrast to the bullish trend in gold in Bombay, the international market price for gold showed a quiet trend. Thus, in Europe, gold which was quoted at $36.75 on the 1st inst. came to be placed yesterday at $36.50 per fine ounce.

The following comparative table shows the trend of the market during the week under review:

	10-6-53	Highest	Lowest	3-6-53
	Rs. a.	Rs. a.	Rs. a.	Rs. a.
GOLD				
Ready (.99 fine Mint)	91 6	92 1	88 4	89 14

PEPPER EASY

(Messrs. Parekh & Co.)

BOMBAY, 10*th June*

During the earlier part of the week, in spite of the growers at Alleppey showing resistance to lower prices, the pepper market in Bombay showed easier tendency in sympathy with other commodities which were affected consequent on the favourable development for Korean truce. In A.S.T.A. section, June shipment was traded at as low as $1.35, while July shipment was done at $1.32½. In the delivery section, June was done at as low as Rs. 2,490, while July was offering at Rs. 2,470. There was no notable business with New York during the week, as the market there was depressed under selling pressure from Lampong and Sarwak. It is reported that Lampong sold some parcels for shipment during the first half of June at $1.32, while Sarwak was said to be anxious sellers for July shipment at $1.30. In the later part, however, reactionary improvement in the prices was noticed and, at the time of writing, there are buyers for June at $1.38 and July at $1.36 with few sellers. Alleppey is also reported to have improved from Rs. 3,100 to Rs. 3,200. The news from Tellicherry area is not so encouraging as growers there are reported to be sellers at lower prices in comparison with Alleppey. Export during the month of May from India to New York is reported to be below 500 tons and there appears little chance for improvement over this figure during the current month, if the present poor foreign enquiries continue to persist. With such poorer export the present stiff attitude of the Indian growers is really confusing and one does not know how the market will take shape when keen competition from Sarwak in New York begins next month.

Following are to-day's nominal quotations:—Ready delivery Rs. 370 per Bengal maund, and June Rs. 2,540-70, and July Rs. 2,550-80 per candy of 5¼ cwts.

RECOVERY IN COTTON

(From Our Own Correspondent)

BOMBAY, 10*th June*

For a couple of days after the last review was written, the slump in cotton prices went deeper and it then appeared as if there was no bottom to this market short of the floor prices. But just as the hour before dawn is the darkest, the price movement took a turn for the better after it had touched Rs. 667 on Friday. That it could recover within a couple of days of active trading by as much as Rs. 25 per candy goes to show that not only the slump was overdone, as was the boom a little earlier, but that internally the market is still healthy. It also went to prove that just as real holders of goods could shake the market by indulging in large-scale selling against purely speculative holders of contracts, effective buying by persons credited with enough resources to take delivery of large quantities, if required, could lift prices up substantially.

In the last resort, in moments of crisis, it is not the big operator who counts but the less spectacular dealers who command the goods or cash and credit necessary to back up their deals. With comparatively small purchases of about 5,000 bales each by a couple of substantial parties in the trade, the rot which had appeared in the market was checked and prices were pushed up to a more normal and healthy level. This does not mean to say that there are no doubts, misgivings and hesitations in the market now, but the sentiment has changed from alternate bouts of exuberance and panic to one of restrained and cautious confidence. Reckless speculators on either side of the ring have been punished fairly and it would be some time before they are in a position to sway the market one way or the other.

The spot market could not naturally be expected to escape the effects of such a heavy catastrophe in the forward market. Premia in most cases were pruned severely. Even the imported varieties suffered in the epidemic. Demand disappeared almost completely for a time. Mills were naturally confused by the behaviour of the market and they kept away from it during the period of crisis. But consumption of cotton in industry will always be there, unless something happens to make cloth unsaleable and purchases will be made as stocks held by the mills get depleted. The statistical position is so strongly in favour of holders that there is little to fear for them in the next four months.

All eyes are now turned to the meeting of the Cotton Advisory Board to be held on the 12th this week, though very little of importance could emerge from this meeting. There are reports of various States going in for increased acreage during the coming sowing season. Madras is the latest to come out with its programme of expansion. On the other hand, production will depend as much on the monsoon as on the acreage. A delayed monsoon does not necessarily mean a reduced crop. Often, it is not the beginning of the rainy season which controls the outturn as the end of it, when a few good showers can make all the difference. In any case, the Government has nothing to go by at present, apart from some unreliable statistics, to formulate its cotton policies for the coming year. It must necessarily wait for future developments before finalising its policy.

The following is the trend of prices in the forward market over the week ended to-day:

	Opening	*High*	*Low*	*Closing*
I.C.C. August (Rs.)	691	695	685½	694

The following are the latest available quotations for the Sewri market: Bengal *Deshi* Rs. 530; Berar Jarilla Rs. 730; Khandesh Rs. 825; Vijay Rs. 865; Moglai Rs. 680; Oomra *Deshi* Rs. 680.

Prices at Karachi have been fairly well maintained during the week. In fact, there has been a slight rise in the case of 289F, as a result of some enquiries from the Continent, the Far East and Australia. There is, however, not much of good quality cotton left for export and because of this fact many of the enquiries do not fructify into actual transactions. Exports during the season are better by about quarter million bales than in the previous year and the stock position is, therefore, fairly comfortable. There are about 3 to 4 lakhs bales still unsold. The authorities at Karachi hope that most of these will find buyers by the time the new crop is in. With future trading in new crop prohibited, fluctuations in the spot market are likely to be within narrow limits during the rest of the season. The following are the latest available quotations for the Karachi cotton market:

Punjab *Deshi* Rs. 75; 4F Punjab R.G. Rs. 58; S.G. Rs. 63; L.S.S. Punjab R.G. Rs. 62; S.G. Rs. 67; N.T.R.G. Rs. 66½; S.G. Rs. 71½; 289F Punjab R.G. Rs. 71½; S.G. Rs. 76½.

With the slight increase in prices which the Egyptian Government have imposed, the buying fervour from abroad has necessarily slackened. All the same, there are enquiries from the Continent, U.S.A. and India. As there is going to be a heavy reduction in the production of Karnak and Ashmouni during the next year, what is left of these two popular varieties will readily find a market during the coming months. On the other hand, the production of Giza 30 which is in short supply to-day is expected to be up by a little less than 200 per cent., with Zagora and Menoufi remaining more or less at the same level.

At New York, the week under review has been marked by an attitude of waiting. The fluctuations during this period were narrow. Export demand has been weak, but this has not affected the prices. The same might be said of demand for internal consumption. But with most of the important factors discounted, in the absence of any new development, the prices are likely to maintain a steady front in the foreseeable future.

The following are the latest available quotations from New York as compared with those of a week and a fortnight before:

(In cents per lb.)

	10-6-53	3-6-53	27-5-53
Spot	34.10	34.15	34.20
July	33.58	33.63	33.77
October	33.75	33.77	33.80
December	33.85	33.80	33.77
March	33.87	33.85	33.83

IMPORT POLICY FOR ART SILK YARN ANNOUNCED

(From Our Own Correspondent)

BOMBAY, 10*th June*

The announcement of import policy for art silk yarn for the ensuing (July-December) half-year, made on the 8th inst., sprang a pleasant surprise on the art silk yarn market which remained in a state of despondency till then. Contrary to expectations of liberal imports, the Government has granted a bare 20 per cent. quota to established importers on the basis of half of best year's imports and just 5 per cent. quota to licence holders for import of 120 and 150 deniers yarn of bright finishes. This restricted import policy let loose, on Monday, a spell of speculative activity which overlooked reports of heavy arrivals of imported yarn. Hectic purchases by bulls and large covering by shorts, which followed, lifted up values of art silk yarn. The values would have gone up still higher, but for the Government's decision to remove the existing ban on imports of dull and semi-dull finishes in 120 and 150 deniers and to entertain applications immediately for the grant of import licences.

The weak conditions that prevailed in the market last week gathered further momentum during the first three sessions of the week under review, on reports of heavy arrivals of imported yarn and discouraging advices from consuming centres. Consequently, values of yarn suffered a sharp break which persisted till Monday last, when, following the announcement of the restricted import policy referred to above, the market picked up strength and values moved upwards. Not only were the previous losses completely erased, but the closing rates to-day were slightly higher than those at the end of last week.

In the forward section, 150D June delivery contract, which had receded from Rs. 785 to Rs. 765 on Saturday, gradually rose to touch Rs. 790 to-day. Likewise, July contract, after suffering a loss of 20 points, improved to Rs. 795. The net gain in both these contracts over the week was Rs. 5 each. In the ready section, 150 Italy receded from Rs. 3-15 to Rs. 3-13-6 on the 6th inst., thereafter, it advanced to Rs. 3-15-6. 150 Japan lost an anna and a quarter to Rs. 4-0-9 but finished higher at Rs. 4-2. 120 Japan, after losing an anna, improved to Rs. 4-6-6. 120 Italy was practically steady at Rs. 4-2.

The table below gives the prices of art silk yarn quoted to-day, as compared with those on the 3rd inst. and 27th May, 1953.

	10-6-53	3-6-53	27-5-53
	Rs. a.	Rs. a.	Rs. a.
150D May (per case of 200 lbs.) ..	790 0	—	799 0
150D June	795 0	785 0	806 0
150D July	—	790 0	—
120 Japan (per lb.)	4 6½	4 5½	4 7
150 Japan ,, ...	4 2	4 2	4 3
120 Italy ,, ...	4 2	4 1½	4 3½
150 Italy ,, ...	3 15½	3 15	4 0

As already reported, the import policy has caused utter disappointment among traders. Despite the doubling of their quota, the established importers feel that the quota is far short of the current demand for yarn. For, according to them, the stocks of yarn now available in the country and the quantity allowed to be imported during the coming half-year are small, considering the demand, which is at the average monthly rate of about 4 million lbs. If, therefore, the Government does not revise its decision and follow a more liberal import policy, the existing shortage will be aggravated, with prices tending to move up further. This, in its turn, will, it is feared, adversely affect consumers, especially handloom weavers.

The Silk and Art Silk Mills' Association Ltd., Bombay, at an extraordinary general meeting held last week, decided to enter into a bulk purchase agreement with exporters of yarn in overseas countries or their distributors in India, as was done early this year. In the meantime, negotiations are being held between the Association and the National Rayon Corporation for the renewal of the bulk purchase agreement which is to expire on 15th August next. Under the agreement, now in force, it may be noted, the Company has been supplying the Association 400,000 lbs. of yarn—200 lbs. each of 150 deniers and 120 deniers per month at Rs. 3-10 and Rs. 3-6 per lb., respectively.

The staple fibre yarn section continued to be weak, on reports of comfortable supplies. Expectation of larger arrival of yarn from South Indian market, as a result of a further reduction in power cut announced by the Madras Government on the 9th inst., also imparted weakness to the section. Consequently, prices of staple fibre yarn were generally downwards.

CASTORSEEDS EASY

(From Our Own Correspondent)

BOMBAY, 10*th June*

The oilseeds market depicted this week an irregular trend under the influence of speculative forces. The groundnuts section staged a sharp fall early in the week, on liquidation by bulls. But, subsequently, it recovered, following covering by shorts and revived demand from *vanaspati* interests. At close, prices were a shade better than those at the end of last week. The linseed section ruled in sympathy with groundnuts almost up to the end of the week, when renewed selling pressure adversely affected the sentiment of operators. Values, therefore, registered sizable losses. Castorseeds futures, however, ruled easy throughout on discouraging overseas advices. Quotations, therefore, showed substantial declines over the week.

Some attribute the sharp fall in groundnuts early in the week to the ban on further sales of groundnut oil against export quotas announced a week back. But that was not the cause, although it might have indirectly induced it. For, even the current quotations are higher than world prices. Moreover, even without exports, the present high level of prices is likely to be sustained, in view of the short crop this season. Bold ready which opened at Rs. 45-4, as against Rs. 47, declined to Rs. 45, before recovery ensued. The recovery persisted up to the end of the week, when it was quoted at Rs. 47-8. June-July and August-September deliveries were done at Rs. 47 and Rs. 45-2, as against Rs. 46-4 and Rs. 45-12. Khandesh quality gained As. 8 to Rs. 48-4. Groundnut oil ready, however, lost As. 2 to Rs. 24-6 and railway receipts As. 6 to Rs. 24-2. July delivery fell by As. 7 to Rs. 24-2.

In the castorseeds section, September delivery which opened at Rs. 155-12, as against Rs. 157-4, fluctuated between Rs. 156 and Rs. 141, before closing Rs. 8-8 lower at Rs. 148-12. Among spots, Madras quality eased from Rs. 31-12 to Rs. 31-8. Oil B.S.S. receded by As. 6 to Rs. 18. Oil I Pressure lost As. 4 to Rs. 17-12 and Commercials As. 2 to Rs. 17-4. There were reports that small business was done with the Continent in castor oil B.S.S. at £142 per ton.

Among linseed Bold ready fell from Rs. 33-4 to Rs. 30-12. June-July and August-September deliveries were done at Rs. 30-14 and Rs. 31-6, as against Rs. 33-5 and Rs. 33-14, respectively. Linseed oil changed hands at Rs. 16-10, as compared with Rs. 17-4. Buyers of linseed oil in the U.K. are reported to be hesitant to commit themselves in view of a possible review of the import licence system from 1st July by the U.K. Government. Meanwhile, there is stated to be large stocks of linseed oil in that market.

The following table shows the prices of oilseeds and oil on the 10th inst., as compared with those at the end of the previous two weeks.

	10-6-53	3-6-53	26-5-53
	Rs. a.	Rs. a.	Rs. a.

JUTE GOODS IRREGULAR

(From Our Own Correspondent)

CALCUTTA, 9*th June*

Conditions in the jute markets this week were somewhat irregular, and the strong possibility of a near-peace in Korea checked the upward movement. Although prices, as a result, closed below the best levels of the week, they compared favourably with the opening rates. Jute goods were in moderate demand. When prices began to recede, mills were not interested to sell, as they had already sold substantially both for the ready and the forward positions. Had it not been for this factor, the decline would have been more pronounced with a tendency on the part of buyers to keep away from the market. However, any drastic fall in quotations, either now or in the coming weeks, has to be ruled out. For, with the prospect of a much reduced supply of raw material this season, growers are ensured fair prices, and as such mills would be unable to sell, if prices for goods fell beyond a certain level. Further, it is the level of prices for the raw material in East Bengal which determines the world prices for jute goods, and Indian mills would buy 1.8 million to 2.5 million bales this season from East Pakistan, out of an estimated total availability of 6 million bales, including a carry-over of 2 million bales. No unfair competition from Continental mills is possible, and market circles are confident that, with clear understanding reached recently in the raw jute trade between India and Pakistan, and with the improved prospect for political relationship between the two countries, this season mills are not likely to face any major marketing problem.

To the relief of mills, an expectation is held in certain quarters that this year's crop in India would almost be the same as last season's. The argument behind this anticipation is that the lack of rain has so far prevented cultivators sowing in certain districts of West Bengal. In much of the districts where sowings have been completed, a reduced acreage is feared as at that time the very low prices which jute was realising was a great encouragement for growers to divert land either for other commercial crops or for foodgrains. But, wherever sowings have not yet commenced, growers have been afforded a chance to note the change of fortune for raw jute. Therefore, the expectation is that earlier losses in acreage would be made up by a possible increase in acreage in districts where sowings would commence from the current week. (The monsoon is expected to set in in West Bengal this week.) However, it is difficult to see how a reduced crop this season can be avoided in this country, and an estimate has it that the area that would be sown now would be comparatively smaller than the acreage already sown in April and May.

Raw jute prices fluctuated narrowly this week, but in view of the latest Korean news, closed fractionally easier. However, sellers were cautious and disinclined to discount prices. Stockists were not prepared to listen to an expectation that the 1953-54 season's crop was not going to be as bad in quantity as forecast earlier. The commitments in new crop could only be put through at the higher level, lower Assams realising as much as Rs. 32 a maund for forward delivery. Small quantities of the old crop passed into the hands of mills, on the basis of Rs. 28 to Rs. 28-8 for Assam bottoms, June-July delivery.

A feature in the goods market this week was the South American enquiries for sacking and hessian, as a result of which ready 40" 10 oz. hessian was lifted to Rs. 44-12 on Thursday from Rs. 44 on the previous day. At the higher rate, some quantity also passed into the hands of shippers and on Friday a recession to Rs. 44-8, following the sudden change of attitude of the Communists to the U.N. truce proposals on Korea. Despite selling pressure, mills were content to remain out of the market, and they were glad to see that their attitude raised the quotation to Rs. 44-8 on Saturday. This rate was maintained during yesterday's trading also. Eight oz. 40" hessian realised Rs. 35-6 f.a.s., and Rs. 42-2 f.o.b.

On Wednesday, lack of adequate enquiries made ready B. twills recede to Rs. 103-12 from Rs. 105-4, but this loss was made good on Thursday. However, since then the peace moves imparted an easing tendency and the week-end's closure at Rs. 103-8 was no surprise at all.

BUSINESS IN KIPS SPORADIC

(From Our Own Correspondent)

MADRAS, 8*th June*

Trading with U.K. in kips has been sporadic and importers have been choosy. Prices locally declined by an anna per lb., due to accumulation of stocks and are more or less in line with the U.K. levels for kips lightweights, but are one penny above for mediums and heavies. Tanned buff calf, buff heavies and cow calf rule firm.

Shippers have been active in the tanned skins market, despite lack of shipment business; and prices have ruled steady.

Shipments to U.K. during May were (in bales): 5,452 tanned cow hides, 410 tanned cow calf, 106 tanned buff hides, 447 tanned buff calf, 1,285 tanned goat skins and 899 tanned sheep skins; to the Continent 5 tanned cow hides, 1 tanned cow calf, 1 tanned buff calf, 291 tanned goat, 61 tanned sheep skins and 4 drysalted goat skins; to the U.S.A. 119 tanned cow hides, 2 tanned cow calf, 65 tanned buff hides, 65 tanned buff calf, 191 tanned goat skins, 14 tanned sheep skins, 166 drysalted goat skins, 22 tanned snake skins and 3 casks wet-salted alligators; and to Japan 12 tanned goat skins and 343 tanned sheep skins.

KANPUR HIDES FEATURELESS

(From Our Own Correspondent)

KANPUR, 8*th June*

Dull and featureless conditions characterised trading in the Kanpur hides and skins market during the week under review. Turnover was extremely limited, confining mostly to transactions of a squaring up nature. The undertone of the market was somewhat bearish on reports of peace move in Korea. The following are the latest quotations:—

Wet salted cow, 1st grade superior: Rs. 380 and inferior: Rs. 285; 2nd grade superior: Rs. 260 and inferior Rs. 180 per score; wet salted buff, 1st grade: 1 lb. 11 ozs. and 2nd grade: 2 lbs. 7 ozs. per rupee; goat, 1st grade: Rs. 245 and 2nd grade: Rs. 210 per 100 pieces; and sheep: Rs. 290 per 100 pieces.

MILLED DUSTS IN GOOD DEMAND

(Messrs. Forbes, Ewart and Figgis Ltd.)

COCHIN, 6*th June*

The offerings in dust sale "K" which was held on Tuesday, 2nd June, amounted to approximately 1,50,000 lbs. There was a good general demand, particularly for milled dusts, and prices were irregularly As. 2 dearer. Clean, grainy, black dusts, however, met with a quieter demand and were often easier.

London Market.—No sale this week.

Colombo Market.—6,000,000 lbs. Good demand. Barely steady rates, except fannings and best sorts dearer.

Calcutta Market—Export.—31,000 packages offered. Darjeelings irregular; many withdrawals; Dooars, except fannings, well supported; whole leaf and commonest strongest features.

Dust.—Market irregular. Medium Assam fairly steady, best liquoring sorts half anna easier; Middle East types strong; residues neglected again.

Export Quota.—There has been no extension of the validity of special licence. 1953-54 export quota has been keenly sought after and business has been done at 18 pies.

Forthcoming Auctions.—Dust sale "L" will be held on Tuesday, 16th June.

As we go to press, Messrs. Forbes, Ewart and Figgis Ltd., wire as follows:—

"*Sale* 12.—Approximately 2,000,000 lbs. Good general demand, but prices lower, following decline in quality. Best liquoring As. 2 to As. 4 easier. All others irregularly one anna to As. 2 lower. Whole leaf strong."

TEAS IRREGULAR

(From Our Own Correspondent)

CALCUTTA, 9*th June*

Although there was a good general demand during last week's internal sale, conditions were irregular. Dusts offered amounted to 33,850 packages, all of the old season. Prices for good

STOCK & SHARE QUOTATIONS

Abbreviations:—D=Deffered shares. G=Guaranteed shares. P=Preference shares. P.O.=Preferred Ordinary shares. R=Rebate shares. Y=Accounts published yearly. H=Accounts published Haf-yearly. Q=Accounts published once 15 months T=Company has Debentures. R.L.=Reserve Liability on shares. N=Nominal Quotation. i=Interim Dividend. f=Dividend for first half-year, y=Dividend for the year. x=Ex. Dividend c.d.=Cum. Dividend

Shares:—If a company has different classes of shares—as, for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under "Paid-up Per Share."

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12 indicate the months of June and December, respectively. "Reserves" includes general and other reserves and all other funds which a company may have as also depreciation on block items, when this is charged to separate account "Block" represents actual cost of land, buildings, machinery and all such other items on which depreciation is allowed, less sales, if any, and stands for the gross figure except where otherwise indicated.

Dividends:—Dividends for completed years are calculated at per cent. per annum, but, where quoted for portion of a year, they represent percentages of the dividend on the paid-up share value. For companies closing the books half-yearly in the first three months of the year, and for companies closing their books yearly during the first half of the year dividends are shown as for the previous year.

* The following explanatory notes relate to the abbreviations and marks shown on page 1112 in the debentures section:—

‡‡ Option to repay on six months' notice, on any interest date after 31st December, 1951, at 102 per cent. Also redeemable out of a cumulative sinking fund of 1½ per cent. per annum (commencing in 1938) by drawings at 102 per cent. or by purchase at or at 102 per cent.

(a) Option of repayment at any time at 3 per cent. premium.

(b) Bearer bonds of Rs. 1,000 each repayable at par.

(c) Bearer bonds of Rs. 1,000 each repayable on 31st July, 1959.

(d) Bearer bonds of Rs. 1,000 each with option of redemption in whole or in part at par on 30th June, 1952, or on any subsequent interest date at one month's notice.

(e) Returnable on or after 31st July, 1950, at Rs. 102-8 or at par after 31st July, 1955, on six months' notice in each case.

(f) Bearer bonds of Rs. 1,000 each with option of redeeming on 3 months' notice at ½ per cent. premium on 1st March, 1954, but before 1st March, 1957, and 1 per cent. premium on or after 1st March, 1957.

(h) Option of redemption on or after 1st July, 1949, at par.

(i) Option of repayment at any time at par at any time on or after 30th June 1947 on six months' notice

MARKET GOSSIP

(Concluded from page 1067)

Union Food Minister, Mr. Rafi Ahmed Kidwai, who stated this week, at Naini Tal, that he proposed to introduce measures to bring down sugar prices. He indicated that the Government might requisition sugar stocks at a given price in different areas and sell them to the consumers at a fixed retail rate. He revealed that the proposed measure would prevent hoarders from buying sugar from factories at prices higher than those justified and consistent with the reduced cane prices. He warned that since the country would be carrying over, at the close of this season, as much sugar stocks as were brought in and the hoarders too would be having large stocks, prices were bound to collapse unless sugar exports were permitted.

* * * *

Normally, the Minister's warning should have resulted in at least a slight fall in prices. Actually, the sugar market greeted the Minister's statement with a further small increase in prices. This strange behaviour of the markets is attributed to three causes: (1) Sugar output might conceivably be smaller next season than in this season. This is not a wholly incorrect surmise, for cane production is likely to suffer through water scarcity in the Deccan. In several other States too, there has been a fall in sugarcane acreage. (2) In anticipation of release orders, the factories have already sold in the forward market, so that actual stocks with mills, free from any commitments, are not appreciable. (3) The gur market is firm; firmness in gur always imparts strength to white sugar also. In these circumstances, Mr. Kidwai, it is to be feared, is only arguing with the market against its convictions. He will never succeed in realising his ideas of lower prices for sugar by mere arguments which carry no conviction. How is he going to use his buffer stocks of sugar successfully? Has he any machinery for it? In several States, rationing machinery has been dismantled. Past experience in rationing and controlled distribution by State Governments does not justify any hopes of success for his scheme. The very fact that his warning has been lost on the market shows what little importance it attaches to that warning. It is, therefore, obvious that he must do something more than holding out threats and sounding grave warnings. We still believe that the best way to arrest the upward trend in sugar and keep the anti-social elements at bay is to remove all controls on the sugar industry and to lift, at the same time, the ban on imports of sugar. He should boldly come forward and say that imports of sugar will be allowed under Open General Licence. There need be no fear of loss of foreign exchange, for actual imports may not be large, inasmuch as the country has enough sugar. The fear of imports will itself prove an effective deterrent against hoarding and attempts at creating artificial scarcity.

* * * *

The judgment, delivered by the Madras Chief Presidency Magistrate, Mr. M. A. Venkataramana Naidu, in the case arising out of the closure of business by the Madras Electric Tramways (1904) Ltd., with effect from 12th April, 1953, makes interesting and impressive reading. The charges against the two officers of the Company —Mr. P. G. Brookes, at present Receiver of the Company, and Mr. J. B. Beardsell, former Commercial Manager—were that they offended section 26 of the Industrial Disputes Act, which provides for punishment for strikes and lock-outs, illegal under the Act, as well as section 31 which provides for punishment for an employer for changing the service conditions of employees during the pendency of any dispute without the consent of the appropriate Industrial Tribunal. So far as section 26 is concerned, the main issue was whether the closure amounted to an illegal lock-out or whether it was actuated by bona fide business considerations.

* * * *

The Public Prosecutor contended that so long as the Company continued to exist with any idea of continuing the business on a future date, and so long as it was not wound up, there was no closure of business as such, and that the Company's action amounted to an illegal lock-out. The defence contention was that the closure was a bona fide business decision which was taken because the Company continued to incur losses since 1948 and that it could not pay even preference dividends since 1950. In 1952, the Company was compelled to obtain a moratorium from the debenture-holders both as regards interest and sinking fund. In November, 1952, it apprised the Government of its position and placed certain concrete proposals which, if they had been accepted, would have averted the Company's closure. The closure of the Company became inevitable and was precipitated by the fact that the Receiver for the debenture-holders took possession of the assets of the Company, thus divesting it of the power to carry on the business of running the tramcars. The Public Prosecutor, on his part, argued that the Company's financial troubles were greatly exaggerated and that there was a safe excess of assets over liabilities. The Defence Counsel met this argument by pointing out that the question was not one of assets and liabilities but was whether the Company was commercially solvent and able to meet the current demands made on it. The Magistrate upheld the defence contention, stating that he refused to disbelieve the auditors' statement on the Company's financial position. He held that the decision to close the business was a bona fide business decision, and said: "I refuse to believe that the Company cut its nose to spite its face." He agreed that the Company had, at one time, toyed with the idea of restarting the tram services if proposals for retrenchment were accepted. But this attitude did not amount to intimidation, or belligerency or subterfuge. He, therefore, acquitted the Company's officers of the charge of having ordered an illegal lock-out.

The next charge, covered by section 31, related to the management's failure to obtain the permission of the Tribunal for the closure which amounted to a change in the employees' service conditions during the pendency of the dispute before the Tribunal. The Defence Counsel argued that the need for permission would arise only if there was continuance of business, and that, in the present case, the contract became impossible of performance under section 56 of the Indian Contracts Act. The Magistrate stated that he did not agree with the defence contention about the application of the Contracts Act inasmuch as the discharge of the workers was the "result of the volition of the employer and not due to any act of God." Since such discharge meant alteration in service conditions, it required the prior permission of the Tribunal. The officers had, therefore, offended section 31. He accordingly sentenced them to pay a fine of Rs. 500 each.

* * * *

Apart from the purely legal aspects of the judgment—important as they are—there are certain economic issues involved, which deserve serious consideration. There is no doubt whatever that the Company has continued, for some time past, to work under losses. Irrespective of legal considerations about closure, it is hardly to be expected that a company, which works under a loss, could continue to exist. It is, therefore, worthwhile to consider why the Company fell on evil days. The misfortunes of the Company, we are told, started with the nationalisation of the Electric Supply Corporation which owned the Tramway Company. Nothing was done to reduce the workshop staff even after the Government took over the Corporation. The rate of electricity charge was also increased, thereby raising the cost of operating the tramways. In 1948, wages and dearness allowance payable to workers were increased heavily. There was also a large increase in the prices of stores. In the meantime, the income from passenger traffic also began to decline. In these circumstances, it would have been a miracle if the Company had continued to operate its services. No company could be expected to do that. It was clearly the duty of the Madras Government itself to devise or agree to measures which would have enabled the Company to keep its 1,700 employees, now unemployed, in service. This was certainly an act of negligence.

* * * *

What then is the way out of the present impasse? It is not only true of this Company but of several other industrial units, that the Governments' failure to agree, promptly enough, to slight retrenchment or small reduction in wages has often resulted in the total closure of sources of employment. There are at least three ways in which the Madras Government could even now find a solution: (1) It could take over the tramways and work them, making up the losses in this section by the profits in bus transport and the electricity section. (2) It could denationalise the electricity section and hand it back to the Company on the condition that it should continue to work the tramways. (3) It could agree to a reasonable scheme of retrenchment of workers and reorganisation of wage scales which would enable the Company to operate its services. It will be difficult for the Government to implement the first solution in the present state of its finances. The adoption of the second solution might imply some loss of prestige, while that of the third might cause a certain amount of unpopularity with those workers who have to be retrenched. But where a vital public utility service is concerned and the interests of a large number of workers are at stake, it would be idle to stand on prestige or be afraid of unpopularity. Incidentally, the adoption of the second course will enable the Government to raise some funds which we know it badly needs. What is required is a statesmanlike decision, taken with a deep sense of economic realism. The Madras Chief Minister has often shown himself capable of such decisions. It is to be hoped that he will not fail to take such a decision this time.

Since 1939, a rise in the prices of agricultural commodities has tilted the balance in favour of the rural areas in the distribution of purchasing power. The first result of the change was a decrease in the under-consumption of food in the villages, causing scarcity in urban areas. In the second place, a little more is being spent on improvements in housing accommodation. The third feature appears to be almost revolutionary. The liberal educational policy followed by the State Governments has resulted in the establishment of Higher Secondary Schools, not only in the towns and big villages, but even in the small villages. At a distance of every five or ten miles, one may come across such institutions. The change is very important for two reasons: First, these villages have come to possess such institutions, for the first time, in the history of the country. I have personal knowledge of some such village institutions. In one village there is a Higher Secondary School teaching arts, science, commerce and agriculture and is recognised upto Intermediate standard in certain subjects. The staff consists of 17 or 18 teachers and there are about 7 or 8 subordinate employees. The monthly salary bill comes to about Rs. 1,500 and the Principal draws Rs. 260 per month. The number of students is between 400 and 500. The population of this village may not be more than 250. Such small villages are having an officer drawing over Rs. 250 perhaps for the first time in the history of the country. The residence of about half a dozen graduates is also a strange experience for such villages.

Secondly, the enthusiasm of the rural population for organising these institutions is also admirable. The leadership is certainly in the hands of educated young men, who happen to be principals or headmasters but the people of all classes and communities are contributing money very generously. In many places puccabrick buildings are coming into existence but the majority of these institutions is housed in tin or straw-thatched kachcha buildings. Each of these institutions creates a demand for maunds of paper, exercise books, pens, pencils, etc., besides hundreds of textbooks and readers. These institutions thus create a good deal of new industrial employment.

But there is another side of the picture also. Although these institutions are creating a great awakening in the rural areas, in a couple of years, they are likely to create a very grave problem of unemployment. Our Employment Exchanges all over the country are already showing that large numbers of matriculates are without any jobs. At present more than one lakh boys are annually appearing at the High School Examination in the U.P

SUGAR MUDDLE

FROM one muddle to another. This has been the characteristic feature of the Government of India's sugar policy throughout. The latest policy announced by the Government on Tuesday the 16th inst., is no exception. It will surely drag the Government into a much bigger muddle, unless it decides to leave the sugar industry and trade alone as early as possible.

The control on sugar prices and distribution was introduced when production fell short of demand. The object of this control was to ensure an equitable distribution of the available supplies of sugar to consumers at a reasonable price. This control was never a complete success and the weakness in it enabled the introduction, in 1951-52, of a double-price system, purposely designed to boost production of sugar. The object of introducing this system was to abolish the control ultimately. The consumer was made to pay a heavy price for this experiment and it did succeed, to a considerable extent. Production shot up from 1.1 million tons in 1950-51 to nearly 1.5 million tons in 1951-52. There was plenty of sugar by the beginning of 1952 and the time was opportune for the Government to give up all controls. But it wavered and finally succumbed to the pressure from vested interests which were frightened by the prospect of a glut in the market. This happened in the first quarter of 1952. The object of control thus underwent a change then; the control was retained for protecting the interests not of consumers but of producers.

Six months later, that is, at the time of the commencement of the current season (1952-53), the Government decided to relax the control substantially, but it was not abolished completely. The price control was given up and so also the control on distribution. Releases from factories, however, were subject to the control of the Government. The price of sugarcane was reduced from Re. 1-12 to Re. 1-5 per maund. The Government told the public that the price of sugar would come down appreciably; in fact, in the belief that the fall in price would be so substantial, it decided to neutralise a part of the reduction in the price of cane by levying an additional excise duty.

This expectation never materialised. Right from the beginning of the season, the price of sugar has remained at Rs. 4 to Rs. 5 per maund above the level that would have prevailed, had the price control been continued on the basis of the reduced price for cane. This is an extraordinary development, extraordinary because it has happened in a season in which the sugar supply has been of the order of 1.77 million tons, the highest supply on record since the Partition. At no time during the season did the supply of sugar in the country fall below the demand for it, for, even at the beginning of the season, there were stocks of the order of 500,000 tons.

How is it that the price of sugar has managed to remain at unexpectedly high levels in the face of such a large supply of the commodity? It is stated that merchants and traders have been hoarding large quantities in expectation of lower output in the next season. There is some truth in this explanation; for, despite the fact that the Government has issued release orders to the tune of a little over 1 million tons out of a total supply of 1.77 million tons, the physical stocks with the factories are still over 67.91 per cent. This is the average for all India, but, in the case of factories in U.P. and Bihar, the figure is as high as 71.48 per cent. and 73.63 per cent., respectively. In Deccan, more than two factories have delivered about 70 per cent. of their production, while the rest of them have delivered about 30 per cent. only. The truth is that the majority of factories has been holding on to their stocks in the hope of getting higher prices. In saying this, we do not mean to suggest that the wholesale trade is not guilty of this charge. It is also equally guilty of it. A point, however, to be noted, in this direction, is that there is close affinity between the producers and the distributors. There are several instances where the producers and the distributors are one and the same parties, though they may appear in different names.

Another explanation given for the high level of prices is the absence of adequate rail transport to move sugar. As no reliable statistics are available it is difficult to say how far this explanation is correct. But it looks as though this factor is being exaggerated. There is, however, one explanation which has not received adequate attention and that is the failure of the Government to decontrol sugar one hundred per cent. right at the commencement of the season itself. The policy of gradual releases, more than any other factor, has made it possible for merchants and factories to hoard sugar and prevented the operation of the natural law of supply and demand. This policy has resulted in large supplies of sugar being withheld from the market and has thereby helped the anti-social elements to create artificial scarcity in many parts of the country and to indulge in heavy speculation. If the Government had completely decontrolled sugar, leaving the previous season's stocks and the current year's production to be marketed without any interference, we are sure that the present situation would not have arisen. Thus, it is the Government which is fundamentally responsible for the high level of prices during the current year.

The Government has now announced a three-point plan to bring down the prices of sugar. The three features of the plan are:

(1) Flooding the important markets like Bombay, Calcutta, Kanpur and Delhi with sugar released from factories by arranging special trains for its movement.

(2) Allotment of sugar from factories from their reserve stock at a statutory *ex*-factory price of Rs. 27 per maund to State Governments, and other agencies for distribution through "fair price shops."

(3) As a supplement to the above measures, arrangement for importing sugar from abroad, to the extent necessary to defeat hoarding, if any, on the part of the trade.

Like the curate's egg, this plan is good only in parts. Its effect will depend on the speed with which the whole plan is implemented. The first part of the plan is feasible. The second part may not be as effective as the Government expects it to be, for not all the States have efficient machinery through which it can sell cheap sugar to consumers; in fact, if past experience is any guide, it will fail miserably. The third part of the plan is too vague and restricted to be effective.

The best way to end the sugar muddle is to abolish all controls on sugar, including sugarcane, and to announce categorically that imports of sugar will be freely allowed. The country has now nearly 800,000 tons of unallotted sugar, over and above the stocks with the hoarders. And, in another 5 or 5½ months, the 1953-54 season production will come on the market. The existing stocks are too large to permit any body of merchants and factories to indulge in sustained hoarding in these days when credit is not easily available. Only such a bold policy will enable the Government to solve the sugar tangle. The alternative to this is, of course, complete control. But such a control had failed to prevent sugar crises in the past. Why not then give a trial to complete decontrol, implementing, at the same time, the Tariff Board's three-year old recommendation to de-protect the sugar industry which was promptly accepted by the Government and warmly endorsed by the Press?

NEW LABOUR LAWS IN THE OFFING

FROM the programme of the Central Labour Ministry outlined by Mr. V. V. Giri, Union Labour Minister, at a Press Conference in Madras on the 14th inst., it looks as though the respite which industry has had from fresh labour legislation by the Centre for the past one year will soon come to an end. Mr. Giri's statement reveals that the forthcoming session of Parliament will be asked to take up for consideration several Bills, some of which appear to be of far-reaching importance. The Bills fall under two categories; while some of them will take the form of amendments to the existing Acts in the light of experience gained in recent years, others will constitute new legislation. Notable among the Acts that are proposed to be amended are the Factories Act, the Payment of Wages Act and the Minimum Wages Act. The contemplated new legislation covers "fair wages," labour welfare fund and conditions of service in shops and establishments. The proposed amendments to the Factories Act have been characterised as "useful," but it remains to be seen as to how useful they will be and to whom.

The amendment to the Minimum Wages Act are, we are told, meant to remove certain anomalies in it and to make it easy to fix minimum wages in sweated industries, where workers generally have no bargaining power regarding the conditions of their service. The seventeen-year-old Payment of Wages Act is sought to be amended with a view to making its provisions to be consistent with the present trends in industries.

In order to ensure uniformity in the conditions of service of shop assistants in the country, an all-India Act, acceptable generally to employers and workers, is being mooted by the Central Labour Ministry. Mr. Giri proposes to place before the Standing Committee of the Tripartite Conference certain concrete proposals for advice. While the move is laudable, Mr. Giri will do well to remember that there has been no uniformity in the economic development in the various parts of

the Union and that, therefore, what is considered as quite reasonable to the well developed parts of the country may prove rather burdensome to the underdeveloped areas. Again, the same point holds good in regard to conditions of service in shops and establishments in cities, semi-urban and rural areas belonging to the same State. The principle of uniformity should not, therefore, be the sole, or even the main, criterion for determining the service conditions of employees in shops and establishments.

There is nothing new in the move to introduce legislation for fixing fair wages in industries. A Bill for this purpose had been approved by the previous Cabinet. It is Mr. Giri's intention to introduce this Bill in Parliament as early as possible, after making certain modifications, the details of which have not yet been revealed. In the present context of growing unemployment, it is doubtful whether this move is opportune, however desirable it may be. It is true that our Constitution provides for a "living wage," which is something more ambitious than a "fair wage," and it may be that fixation of a "fair wage" is a step further in the direction pointed to by the Constitution. But is the country ready to take that step, without aggravating the unemployment problem? If employers are asked to pay a "fair wage," it is but natural that they should have freedom to dispense with surplus labour and to demand of the workers to render fair service, consistent with the wages that are paid to them. Further, the move to fix fair wages may lead to a certain measure of controversy which may upset the peace that prevails in the industrial sector. As readers are aware, a wage fixing board consisting of representatives of employers and workers, with a neutral chairman, will have to be constituted to make an appraisal of fair wage in each one of the industries concerned, taking into consideration their capacity to pay. This enquiry, we are afraid, may lead to heated controversies, inasmuch as it involves quite a few complicated issues such as return on capital employed, etc., and considerable heartburning among the workers and the employers alike.

The proposed programme of labour legislation does not end with the above list. For it includes also the highly controversial and strongly opposed measure, the Industrial Relations Bill, with its provisions for "retrenchment and lay offs." Although the relative provisions have been arrived at after prolonged consultations with the various Ministries and after the approval of the employers' and workers' organisations, their total effect on industry, especially those nascent industries that are now struggling to survive, will be deleterious. Clause 88 of the Bill, for instance, requires that no employee, who has been in continuous employment for not less than one year, can be retrenched without being given one month's notice in writing or wages for the period of notice and gratuity at the rate of not less than 15 days' average pay for every completed year of service or any part thereof in excess of six months. Again, under clause 90, employees are ordinarily to be discharged on the principle of "last to come, first to go," and such retrenched employees are entitled to preference over others in the matter of re-employment. In theory, these two provisions appear quite sound, but in practice, they would prove a serious handicap to the development of industries. The principle of "last to come, first to go," for instance, does not take into consideration the technical skill and productivity of a worker who may happen to come in last. No fair-minded person, with a practical outlook, will disagree with the view that considerations of technical skill or ability should be the first criterion for determining the question of rejection of personnel in an establishment. To disregard this principle will be to endanger the growth of industries, especially of those which require men with a high technical skill and knowledge, on sound lines.

Then, there is also the question of payment of compensation for involuntary unemployment arising from temporary stoppage or reduction of work due to shortage of coal, power, raw material, etc., or overproduction. Although this is not covered by the Labour Relations Bill, it is stated to be under the consideration of the Labour Ministry. The Indian Labour Conference considered this question in 1943 and 1945 and recommended to employers a scheme for adoption on a voluntary basis. Because adjudicators have, from time to time, granted compensation, often on the pattern of this scheme, the Labour Ministry intends to evolve a uniform procedure for payment of compensation for involuntary unemployment. This is, of course, a move in the right direction, considering that the problem of involuntary unemployment has been gathering momentum, mainly on account of failure of power in many parts of the country. The only point that we should like to urge, in this connection, is that the circumstances resulting in involuntary unemployment of workers also adversely affect the owners of capital who, in the case of the majority of industries in this country, are drawn mainly from the ranks of the middle class. Consequently, in giving relief to workers, the interests of investors also require to be borne in mind.

To sum up, the list of impending labour measures as noted above, is, indeed, a very tall one. Each of them, considered individually, may appear to impose only a small burden on industry, but their cumulative effect is bound to be crushing, if proper safeguards are not provided in the law to protect investors. That there is scope for changes in the existing labour laws cannot be denied. It is common knowledge that labour legislation in India suffers from a multitude of defects such as incompleteness, ambiguity, lack of uniformity in many provisions as also of diversity wherever necessary. Sometimes the same set of laws is applicable to industries which have many uncommon factors warranting almost a different set of laws. It is, therefore, necessary to review the entire field of the existing labour legislation. But, in the absence of full details of the proposed amendments, it is difficult to say to what extent they will rectify the defects in the existing statutes as we see them. One has, therefore, to wait and see. It is, however, to be hoped that the amendments contemplated by Mr. Giri will not make the present position still worse. It is no exaggeration to say that legislation in the sphere of labour, both by the Centre and the States, has already been overdone. Attempts have been made to legislate for every conceivable contingency and nothing has been left to the sense of fair play in industry. Consequently, the existing enactments have become so complicated and burdensome that, not infrequently, they are known to result in unemployment—a contingency which these laws are so anxious to avoid. Caution and realism should, therefore, be the watchwords of the Government of India, while formulating labour laws.

WHEAT SURPLUS

THE report that the U.S. will soon have a bumper wheat crop has already unnerved the wheat markets in that country. The price of wheat, which has been sagging for some time past, has now slumped to less than two dollars a bushel—$1.88 to be precise—or well below the American support price of $2.20, and a little above the floor level of $1.55 per bushel under the International Wheat Agreement which comes into force from August next. A Korean armistice will, it is now stated, take the price to still lower levels, in which case more farmers than at present would be coming forward to sell their produce to the Government at guaranteed prices. It would be perfectly natural, therefore, if the U.S. authorities were to turn their thoughts, as, indeed, they are reported to be doing, to the question of limiting their commitments under the price support programme, without, at the same time, injuring the interests of farmers. This is doubtless a difficult problem even for the U.S., its large financial resources notwithstanding.

This is a broad picture of the wheat position in the U.S. The details are, of course, easily filled in. The U.S. wheat crop this year is estimated at 1,132.5 million bushels, as compared with the 1952 crop of 1,291.4 million bushels. Despite the fall in production, there is considerable concern about the future for wheat, as the stocks of this grain that are expected to be carried over into next year are substantially larger. There will be, according to latest available estimates, a carry-over of nearly 600 million bushels, a quantity which is about 2½ times the stocks—254 million bushels—brought in.

One result of the low prices of American wheat is that the official stocks of "mortgaged" grain held by the Commodity Credit Corporation (C.C.C.) and not redeemed by the farmers have increased. Stocks of wheat held by the C.C.C. now amount to about 117 million bushels. Since prices continue to fall, the farmers will give up much of their wheat to the Corporation in preference to repaying their loans. In consequence, most of this year's wheat surplus, it is feared, will be owned by the Government. The immediate problem for the Government is one of finding the necessary storage facilities for holding the stocks. Emergency warehouses in the shape of cargo vessels belonging to the Maritime Commission have been created. But there is no doubt that these makeshift arrangements will not be sufficient to store all the wheat that the Corporation will soon have to carry, and that fresh storage space must be found.

The fall in wheat prices in the U.S. and in the export demand for wheat acquires a new significance when placed against the background of the world wheat position. Stocks of wheat with the three major countries participating in the International Wheat Agreement, namely, the U.S., Canada, and Australia, and with Argentina, which is not a member of the Agreement, are together expected to reach 34 million tons at the end of this month, as against 16 million tons a year before. To some extent, the increase in stocks is offset by lower estimates of exportable surplus for the next crop year, that is, 1953-54. It is said that the exportable surplus in the U.S., Canada and Australia during 1953-54 will be no more than 46 million tons, as against 66 million tons in 1952-53. Nevertheless, the overall supply position of wheat in the 1953-54 wheat year is expected to be moderately comfortable.

In retrospect, the U.K.'s decision not to enter the Agreement on the terms demanded by the wheat producing countries in regard to price seems to have been a wise move. This year, when the Agreement came in for review, the importing countries offered a maximum price of $1.75 a bushel as against the present maximum agreement price of $1.56, but the exporting countries, led by the U.S., demanded $2.25 a bushel. After protracted negotiations, the leading importing countries were prepared to go as far as $2 per bushel, whereas the U.S. would not take any price less than $2.05. For some time, the U.K. and India put up a strong resistance to this demand, but finally India, along with a score of other countries, agreed to a ceiling of $2.05. The U.K., however, consistently maintained its stand that the U.S. demand was not reasonable and chose to remain outside the new Agreement. This decision was obviously prompted by a consideration of the fairly comfortable wheat supply position in the world. And it now looks as though the U.K.'s reading of the wheat price trends will prove correct.

The U.S. authorities are now concerned about preventing larger wheat surpluses. Already, the wheat held by the Commodity Credit Corporation, it is stated, is the single largest item, by value, in the C.C.C's investment. The U.S. Government cannot go on supporting wheat at a highly artificial level without imposing fresh and unnecessary burdens on the taxpayer. The law on the price support programme, however, provides that the support price might be lowered, if the farmers fail to agree to quota restrictions on wheat acreage. The limitation on acreage, it may be noted in passing, would require two-thirds majority agreement by the farmers. As lower prices will not possibly appeal to farmers—and this is a political issue too—the U.S. House Agricultural Committee has approved of a Bill designed to reduce the wheat acreage. The net effect of this Bill would be, it is pointed out, to reduce the farmer's quota to about 80 per cent. of his land under wheat.

An artificial restriction on wheat acreage will certainly have its ill-effects on the world supply position. From this point of view, the proposals for transporting the surplus to countries which are in need of food and for carrying a larger surplus by the C.C.C. must be welcomed. The Senate has already approved of a Bill designed to give one million tons of wheat to Pakistan. This would not, of course, solve the entire problem of wheat surplus. Even if the C.C.C. were enabled to absorb larger stocks of wheat, it would provide no lasting solution to the problem of recurring shortages and surpluses. The price support policy, it should be clear, imposes a heavy strain on the Treasury during periods of low prices. It is true that the farmers derive considerable benefit from this policy. But the advantage is derived at the expense of the general taxpayer. Moreover, such an advantage can at best only be of a temporary nature; for continued high level of prices in the U.S., sustained by acreage restriction and/or price support programme, will constitute an indirect encouragement to producers of wheat in other parts of the world to step up their production. To the extent they succeed, the U.S. will lose its export markets for wheat. These considerations indicate the need for the U.S. Government to re-examine the economics of its price support programmes and other restrictionist policies.

SLUMP IN COTTON HITS SHARES

NEW STATE LOANS—JUTE EXPORTS TO AUSTRALIA

THURSDAY, 5 P.M.

FOR the second time in the past fortnight, developments in the cotton market have exercised a considerable influence over the Stock Exchange, though they have not had any perceptible effect on the bullion and other commodity markets. Since last week, the hedge contract in cotton (August delivery) has dropped 26 points, that is, from Rs. 694 to Rs. 668; in fact, at one time, it had declined to as low a level as Rs. 662. This fall is chiefly due to speculative activity which nowadays is tending to ignore the statistical position of cotton. Even the constructive recommendations of the Cotton Advisory Board have failed to have any bullish effect on the market. At one time, the market was worried whether continuity of futures trading would be assured by the Government through permitting transactions in the new crop in good time, that is, before the August settlement came to a close. The Board's suggestion to the Government on this question is in favour of the trade. Yet, the operators have greeted it by depressing the contract. The main grounds on which they are doing so appear to be two: (1) the fear that the Government may not accept the Board's suggestion, and (2) the feeling that, in view of the satisfactory rains in the cotton-growing areas during the past two days, the crop in the next season would be a good one. Neither of these grounds appears to be of such great importance as to be interpreted in such a bearish manner. Nobody yet knows what the Government is going to say on futures trading in the next season's crop. So far as the size of the 1953-54 crop is concerned, it is too early to make even a guess. But, even if India is fortunate enough to have a 16 annas crop next year, the statistical position will remain sound, provided production of cloth is kept up at the current level.

MARKET GOSSIP

* * * *

The slump in cotton has adversely affected the speculative counters in the share market, because a group of speculators is said to have gone long both in shares and cotton. There are, of course, other causes too for the setback in the share market, the most important of which are detailed on the next page. Reference, however, must be made here to one of them. A two-month old circular of the Central Board of Revenue found its way into the market yesterday. It is a mystery as to how the market did not know about it earlier. This circular relates to grant of tax credit under section 18(5) of the Indian Income-tax Act to holders of shares on blank transfer. It is an offshoot of a circular issued by the Board on 5th May, 1949, wherein certain types of cases, in which the registered holders and beneficial owners of shares were not the same persons, were considered and instructions were issued regarding the treatment of such cases. This circular of 1949 was itself a sequel to a judgment of the Bombay High Court (in the case of *Shree Shakti Mills Ltd.* vs. *C.I.T.*), wherein the Court defined the use of the word "shareholder" in section 18(5). The Court held that the benefit of this sub-section could be claimed only by a registered shareholder and not by a beneficial owner of shares, e.g., a purchaser of shares who has not got the shares transferred to his name in the books of the company. This judgment gave rise to the question whether the principle underlying it should be applied to cases where a nominee held shares on behalf of another person. Pending the amendment of the law, the Board decided that the Bombay High Court judgment should not be followed in certain types of cases. One of these pertained to shares belonging to one person but held in somebody else's name under circumstances which do not warrant any suspicion of any intention to conceal, evade or defraud the revenue. This exemption was intended to cover cases of persons holding shares on blank transfer.

* * * *

The Board has obviously reconsidered the question of grant of tax credit under section 18(5) to holders of shares on blank transfers, as is evident from the circular mentioned at the outset. Explaining the position in this regard, the circular says that the question of giving credit under section 18(5) arises long after the declaration and payment of dividends. The Board has, therefore, decided that, if at the time of the assessment, the assessees claim to be still real owners of the shares, but the shares have not been registered in the names of the assessees even by then, in the books of the company, no credit should be allowed. In other words, the circular says that credit in respect of blank transfers may be allowed, if the holding on blank transfer is for a short interval only and there is no reason to doubt the *bona fides*. If an assessee wants to hold shares on blank transfer for long periods without incurring the transfer charges or to suit his own ends, the circular points out, he should take the other consequences also. It is upto the assessee, asserts the circular, to get the shares registered in his name before the assessment, pending or current, if he claims tax credit. Speculators in the market have interpreted this circular in a bearish manner, because they consider it as an attack on the system of blank transfer. They infer, perhaps correctly, that the Government is not in favour of this system. But one fails to see how this factor can have any immediate effect on the value of shares.

* * * *

The Gilt-edged market is still distinctly quiet. The gradual downward trend in prices, which began soon after the announcement of the new loan, gathered further momentum during the week. The following table shows the extent of the fall in prices since the beginning of this month. The new loan, which is not included in the table, is being quoted at a discount of one anna:

	30-5-53	9-6-53	18-6-53
	Rs. a.	Rs. a.	Rs. a.
3% 1957	98 11	98 6	98 3
3% 1958	98 9	98 4	98 1
3% 1959-61	96 14	96 6	96 3
3% 1963-65	93 0	92 11	92 7
3% 1964	93 0	92 15	92 6
3% 1966-68	90 10	90 8	90 2
3% 1970-75	86 11	86 9	86 7
3% 1986 Con. Loan ..	82 11	82 8	82 2*

* After touching a low of Rs. 81-14 on 13th June 1953.

* * * *

The behaviour of the Gilt-edged market during the past few days clearly shows that, instead of the new loan going into a premium, as was anticipated by many an operator, the existing loans are adjusting themselves to the pattern of the yield on the new loan. That is only as it should be, inasmuch as the bulk of whatever investible funds there were in the market has already been invested in the new loan and in the Stanvac debentures. Further, there are many more borrowers of long-term capital, as, for instance, the State Governments, local bodies and a few large industrial concerns. The aggregate finance required by these borrowers is placed at not less than Rs. 30 crores. Some of the banks have already borrowed from the Reserve Bank to meet the demand on them arising from the Government of India's new issue and Stanvac debentures, the total borrowings by Scheduled banks against usance bills last week being well over Rs. 10 crores. By doing so, they have drawn in advance against the possible repayment of loans and advances and cash credits (given to trade and industry) in the coming weeks. In these circumstances, it is difficult to see how the new loan will be able to command any sizable premium in the near future.

* * * *

Arrangements for new State loans have begun. While the terms of the loans are yet to be decided, the State Governments have started canvassing, as they did last year. It is stated that the Reserve Bank will give permission to five or six States to approach the market, the aggregate amount being restricted to Rs. 18 crores or Rs. 20 crores. Of this, Madras and Bombay account for Rs. 6 crores and Rs. 5 crores, respectively. West Bengal will be the next largest borrower, its share being Rs. 3 crores. Uttar Pradesh also is likely to be allowed to borrow the same or a slightly smaller amount. The rate of interest will be no more than 4 per cent., but the issue price and the year of maturity have yet to be determined. It is likely that the authorities may choose either 1963 or 1965; if the former year is chosen, the issue price may be fixed at par; if the latter, it may be at a slight discount. It is understood that the State loans will be followed by a debenture issue for Rs. 2 crores by Dunlop Rubbers.

* * * *

London discount houses are sorely exercised over the official refusal to let them quote more competitive rates for discounting commercial bills. It was decided in March 1952, when the Bank rate was raised to 4 per cent., that the houses should not quote less than 3 per cent. for discounting 2-3 months' commercial bills, 3¼ per cent. for four months' bills and 3½ per cent. for six months' bills. The discount houses now contend that the Government's refusal to permit lower rates has meant increased cost for exporters who finance their trade through bill transactions. If present restrictions were removed the rate for 3 months' commercial paper, it is stated, would move down to 2½ per cent. which would mean considerable saving for exporters. It would appear that the present high discount rates for commercial paper has resulted in the diversion of bill business to centres other than London, and in the clients switching over from bills to overdrafts. Consequently, the discount houses have had to face a fall of 50 per cent. in their bill portfolio. The British monetary authorities, however, are of the view that the fall in bill business is not due to the high discount rates but to lower commodity prices, the reduction in stocks and the general increase in cash resources of traders. The authorities argue that a reduction in commercial bill rates would provide scope for more speculation against sterling and assist the flow of money from Britain.

* * * *

Since exports of jute goods are by no means in a comfortable position to-day, it is of the utmost importance that the market for these products should form the subject of careful study and investigation. The Indian Jute Mills Association, therefore, did well to depute two of its office-bearers, Mr. J. B. Walton, Deputy Chairman, and Mr. D. P. Goenka, Vice-Chairman, to study the market conditions in Australia and New Zealand. Their report reveals that these two men have made a thorough job of their work. Incidentally, they have been able to report on their study in a remarkably short period of time. They left India in the middle of April, 1953, for a tour of the two countries. And their report was released to the Press this week. It is a model for speed in reporting and publication, of which only commercial men and trade bodies are capable.

* * *

Although neither Australia nor New Zealand is the single largest importer of jute goods, they are potentially good markets on which India will do well to concentrate its attention. Both countries have large schemes of economic development. And jute goods are needed by both the countries because of the agricultural and pastoral character of their economy. In recent months, there has been a significant fall in the offtake of jute goods by these two countries, both in quantitative and qualitative terms. Out of India's jute goods exports, valued at over Rs. 110 crores for the first 11 months in the year 1952-53, Australia took no more than Rs. 10 crores worth of jute goods, while New Zealand's share was less than Rs. 2 crores. As compared with the corresponding period in the previous year, there has been a fall of more than 50 per cent. in value, and a similar decline in the quantity of goods taken by these countries. The problem is thus not so much one of expanding these markets as of holding them.

* * * *

The Report throws a flood of light on the general economic conditions in the two countries, the present position of jute goods trade there, and the prospects for the wider marketing of jute goods. In both countries, agricultural and industrial production has shown signs of rapid expansion, though, in the case of New Zealand, there has been a fall in wheat output in recent years. In both countries, bulk handling of goods and the use of substitute materials constitute a serious threat to the market for jute goods. Referring to bulk handling of goods in Australia, the Report says:

"The installation of bulk handling facilities for the movement of wheat constitutes the jute industry's largest and most serious loss in the Australian market. It seems almost certain that, once bulk handling equipment has been installed, there is little or no chance of the market being regained for jute and it would be unrealistic to think otherwise. Although we have argued that the case in favour of bulk handling is not so strong as might appear at first sight, there are nevertheless substantial arguments in its support; and we must record our opinion that, despite the objections which we have noted, the trend, on a long-term basis, will be towards a further extension of the bulk handling system.

"Bulk handling does not, however, mean the complete elimination of jute bags. As we have said, at some stage or other, wheat may well still have to be packed in bags as, for instance, immediately after harvesting on the small farm where bulk handling equipment is too costly, or at a later stage when it is manufactured into flour. Furthermore, there still remain important areas where bulk handling has not been developed. This is particularly the case in South Australia and Queensland; it also applies entirely to Australia's production of oats and barley and, as we have said, bulk handling is not suited to premium wheat. Despite the inroads of bulk handling there is, therefore, still a large market for cornsacks and we believe that there will continue to be a large outlet here for many years to come."

* * * *

The problem is, therefore, one of making the use of jute goods more attractive than the installation of bulk handling equipment. How can this be done? Normally, one would think that the price of jute goods would be an important consideration. It is so, but not nearly as much as is often supposed. What is far more important is an assured and steady supply of jute goods to the market. In this connection, the authors of the Report observe:

"The primary consideration for the purpose not only of extending our Australian markets but even of maintaining them at all, is the security of supply of jute goods. We have mentioned this subject repeatedly during the course of our report and we are convinced that its importance cannot be over-emphasised. The entire Australian economy is built upon her large-scale production of primary agricultural commodities and these commodities must be packed for their storage, transport and distribution. If packaging resources fail, the commodities are useless and the economy is in very grave danger. In the circumstances, and having regard to Australia's recent experience of danger to her supply lines during the Second World War, it is easy to understand the constant fear of a shortage of jute goods and it can be readily appreciated that, if the supply is endangered, no effort will be spared in, and no economic obstacle will be allowed to prevent, a search for substitute methods and materials. Australia must be assured that she will receive all the jute goods she requires and will receive them in ample time for her packaging requirements. Generally speaking, price is a secondary consideration to security of supply at the present time and in Australia's present economic circumstances. Price, however, assumes added importance where there is competition to be met from substitutes; and it will also become much more important if there is any general fall in the commodity prices upon which Australia's economy depends."

* * * *

The authors' main emphasis is thus on prompt supplies of jute goods to these markets at competitive prices. Fortunately, there is now plenty of jute goods in the country and it should, therefore, be possible to arrange for a steady flow of goods to these markets. So far as selling jute goods at attractive prices is concerned, the Indian jute industry labours under the handicap of an export duty. The duty might have been necessary during a period of boom in export trade. It might have had a semblance of justification when India enjoyed, for all practical purposes, a monopoly in jute goods market. But these conditions no longer hold good to-day. Competition is developing in an acute form. Indian jute goods must hold their own against serious and fast-developing rivals. The duty serves only to curb its competitive ability. A loss in this ability is too heavy a price to pay for the revenue the duty might bring to the Government. What is now needed is not anymeticulous calculation about the industry's ability to pay the duty. Perhaps, it can pay the duty to-day. But the question must be viewed from the angle of the long-term effects of the duty on the industry. If it prevents the establishment of firm and enduring export markets, it must be

(*Continued on page 1155*)

EQUITIES REACT AT CLOSE

UNDERTONE REMAINS QUIET

(From Our Own Correspondents)

BOMBAY, 18*th June*

AFTER presenting an irregular pattern during the major part of the week under review, equities on the Bombay Stock Exchange took a decisively downward course during the closing sessions. Under alternate bouts of buying and selling, following conflicting rumours about increase in retention prices of steel, values kept moving both ways till Tuesday. But subsequently several adverse factors combined themselves to depress the sentiment of operators. The delay in the announcement of steel retention prices, the shake-out in cotton futures market, easier trend in bullion in the last two days, rumours of labour unrest in the Indian Iron and Steel Co., Ltd., misgivings regarding a circular issued by the Central Board of Revenue in respect of tax-credits on dividends on shares held in blank transfer for long periods and end of account considerations, were all factors which cumulatively induced selling pressure. On balance, equities disclosed moderate losses over a wide front.

In the steel section, Tata Deferreds opened at Rs. 1,883-12 and soon buoyed up to Rs. 1,908-12 on sizable purchases by a few prominent operators, but receded to Rs. 1,887-8 on Monday due to lack of confidence at higher levels. On Tuesday, however, the scrips were concerned in an enlivened activity which took them up to Rs. 1,911-4. The weakness of Indian Irons, the setback in cotton and bullion prices brought about a liquidation in Deferreds, which, as a result, retreated to Rs. 1,862-8 to-day, before closing better at Rs. 1,870. Tata Ordinaries were relatively more steady, the loss over the week being Re. 1-4 at Rs. 328-4. Indian Irons dropped As. 8½ to Rs. 24-9.

The marked steadiness in Kohinoors due to strong speculative position in the shares were a feature of trading in textiles. Moving within a small range between Rs. 303-12 and Rs. 299, the shares finished the week with a fractional gain at Rs. 300-8. Bombay Dyeings fell from Rs. 383-2 to Rs. 376-14, after touching a high of Rs. 385-10 during the week. Centurys were concerned in some keen biddings and, therefore, rose from Rs. 274-4 to Rs. 278-8, but wound up the week lower at Rs. 273, in sympathy with the general trend. Central Indias receded from Rs. 163-8 to Rs. 160-8. Finlays moved down by Rs. 6 to Rs. 316, Gokaks by Rs. 2-8 to Rs. 213, Indo-Malwas by Rs. 6-4 to Rs. 87-8 and Lakshmis by as much as Rs. 13-12 to Rs. 558-12. New Greats drifted lower by Rs. 4 to Rs. 148, Simplex by Rs. 2-8 to Rs. 179, Standards by Rs. 5 to Rs. 301-4 and Svadeshis by Rs. 3-4 to Rs. 346-12. Tatas shed Re. 1-8 to Rs. 42-8 and Vishnus Rs. 5-10 to Rs. 157-8.

There was little or no interest in bank shares, and price variations were negligible. Barodas were maintained at Rs. 111-8. Centrals were a fraction lower at Rs. 64 and their new shares were held at Rs. 65. Imperials (Fully Paid) were stagnant at Rs. 1,865 and Indias at Rs. 156-8, but United Commercials lost As. 4 to Rs. 36.

Public utilities were quiet with minor recessions in select shares. Ahmedabad Electrics were done, As. 5 lower, at Rs. 108-2, Bombay Suburbans declined by As. 10 to Rs. 128-10. Surats were maintained at Rs. 130-10. Andhra Valleys shed Rs. 2-8 to Rs. 1,425. Tata Hydros were unchanged at Rs. 150, but Tata Powers reacted by Rs. 10 to Rs. 1,488-12.

The miscellaneous section was generally colourless, with activity restricted. Associated Cements had a fractional decline to Rs. 170-8. Belapurs receded by Rs. 4 to Rs. 231-8. Bombay Burmahs were picked up at Rs. 376-14 early in the week, as against the opening of Rs. 373-12, but closed at Rs. 371-4. B.I.Cs. were quiet at Rs. 8-8¼. Tata Chemicals shed As. 4½ to Rs. 9-0½ and Tata Oils Re. 1-8 to Rs. 31-8. The section was, however, not entirely devoid of any features. National Rayons continued to be the favourites of operators on rumours that an interim dividend of Rs. 4 would be declared for the current year. Walchandnagars were another exception to the general trend with a rise of Rs. 2-8 to Rs. 141-4. Wimcos were taken up, Rs. 2-8 higher, to Rs. 212-8.

In the transport section, Scindias were quiet with a loss of As. 5½ to Rs. 12-13½. Bharat Lines dropped a rupee to Rs. 90. Air-Indias advanced from Rs. 85-8 to Rs. 88 and Air-India Internationals from Rs. 105 to Rs. 108-8.

In the mining and engineering group, Alcocks sustained a loss of Rs. 6-4 to Rs. 291-4 and Premier Constructions Rs. 2-8 to Rs. 79-12. Shivrajpurs were steady at Rs. 54-4, but Indian Coppers were quiet at Rs. 2-15. Hindustan Motors were dull at Rs. 4-5 and Premier Automobiles at Rs. 45.

* * * *

Calcutta Stock Exchange

CALCUTTA, 16*th June*

With more attention to tea shares, firm conditions were maintained on the Calcutta Stock Exchange during the week. However, the volume of transactions was somewhat limited, as operators were cautious in entering into new commitments, pending an appreciation of the exact effects on trade, which would follow peace in Korea.

Peace in Korea in the near future is almost a certainty, and may bring about stiffer trade competition among countries producing and exporting consumer goods. Indian industries, too, would have to face such peace-time competition, and price adjustments in cloth and jute goods and industrial items which are being exported to adjacent countries would probably have to be made. The emergence of a clear picture in this regard would take a few months and, as such, although steady conditions prevailed in the market during the week, expansion of activity was conspicuous by its absence.

The disappointment over the delay in announcing higher retention prices for steel continued to be reflected in the engineering section. For the present, keen attention is paid to tea shares, and the voluntary increase in wages granted by the Dooars and the Terai gardens indicates the improving nature of the tea industry. A feature of trading during the last two days was the tendency among operators to show preference to teas and neglect other counters.

Sectionwise, textiles were quiet. Kesorams were transacted at the fractionally improved rate of Rs. 19-8, while Benares Cottons declined from Rs. 3-6 to Rs. 2-10. Dunbars were better at Rs. 193.

Coals were not any the better. Bengals changed hands at Rs. 539. Dhemo Mains receded from Rs. 11-4 to Rs. 10-4, and Amalgamated from Rs. 21-8 to Rs. 21-2. New Beerbhooms recorded a loss of As. 5 on balance at Rs. 20-1. East Indians were featureless at Rs. 24, and Bharat Collieries at Rs. 5-15.

In the jute section, the volume of transactions suffered a setback during the week, and, although prices of jute goods recorded a healthy trend, the caution of operators coupled with the diversion of funds to teas made the section featureless, especially during the last two sessions. Opening at Rs. 24-6, Howrahs were taken up to Rs. 24-10, while enquiries for Kankanarrahs "B" raised the quotation to Rs. 149 from Rs. 140 earlier. Interest was shown to Anglo-Indias at Rs. 232-8, while Champadanies came to business at the lower rate of Rs. 159-8. Chitavalsahs were impressive with a three-point gain to Rs. 32-5, but Megnas eased from Rs. 109 to Rs. 107. In transactions, Rameshwaras improved from Rs. 5-6 to Rs. 6. Lansdownes at Rs. 194 were better by Re. 1, but Barnagores were lower at Rs. 163. Nationals changed hands at Rs. 25-4, and Orients at Rs. 183.

Engineerings were a quiet market, and Indian Irons hovered around Rs. 25-4. Indian Steel and Wire Products were fractionally lower at Rs. 60-14. At Rs. 26-3, Jessops maintained the improvement recorded in the previous week.

There were many features in the tea section. Jutlibaris gained from Rs. 10 to Rs. 11-8. Basmatias were higher by three points at Rs. 27. Namburnadies moved from Rs. 7 to Rs. 8-2. Teliaparas were as high as Rs. 105, as against a previous rate of Rs. 82. Hantaparas advanced from Rs. 150 to Rs. 162, Nagaisurrees from Rs. 119 to Rs. 143-8, and Gungarams from Rs. 185 to Rs. 203. Other features are shown in the following table:

	Latest quotation 16-6-53	*Rate on* 9-6-53
	Rs. a.	Rs. a.
Bhatkowa	26 12	25 8
Bishnauth	28 10	27 8
Chamong	8 8	7 8
Dimakusi	34 0	31 8
Eastern Cachar	4 1	3 12
Ethelbari	6 12	6 0
Hattikhira	11 13	10 12
Huldibari	22 4	21 4
Killcott	12 4	11 2

Teloijan	10 14	10 10

* * * *

Madras Stock Exchange

MADRAS, 16*th June*

Barring a little activity in select textile and planting scrips, trading on the Stock Exchange was devoid of any notable features. Activity even in these two sections could not gather momentum on account of hesitancy created by the undecisive trends in the principal share and commodity markets in the country. However, on good demand for mill yarn, shares of textile mills producing yarns were in favour. In the planting section, select tea shares were picked up, following better advices from Calcutta, where tea scrips were keenly bid. Business was rather restricted, due to absence of sufficient offers, but prices in many cases were generally a shade higher than those last week.

Bank shares were steady. There were good buying enquiries for Indian Banks, with Fully Paids advancing by Rs. 3 to Rs. 179. The Rs. 85 paid-up scrips and Rs. 60 paid-ups were unchanged at Rs. 143 and Rs. 104, respectively. Stray transactions were noted in Indian Overseas at Rs. 88-4 but the final quotations were placed at Rs. 88. Mysore Banks and Travancore Banks were in demand, but the quotations were unchanged at Rs. 282 and Rs. 11-6, respectively.

Among electric shares, South Arcots continued to be favoured and business passed As. 8 higher at Rs. 93-8. South Madras were bid at Rs. 10-10, a rise of As. 3 over the week. At an extraordinary general meeting of the shareholders of the Nellore Power and Light Ltd., held on the 6th inst., it was resolved to liquidate the company voluntarily. An extraordinary meeting of the shareholders of the Vizagapatam Electric Supply Corporation Ltd. will be held on the 23rd inst. in connection with the sale of the Company's assets to the Government of Madras.

Confidence in the outlook for tea having been restored, tea shares continued to attract enquiries. Balanoor were put up by As. 2 to Rs. 13-4 *cum-div.* Blue Mountains were picked up As. 1½ higher at Rs. 2-11. Coorg Teas added As. 1½ to Rs. 5-13½. Haileyburias hardened by As. 3 to Rs. 13-8, highland Produces by an anna to Rs. 9-15 and Nonsuch Teas by As. 4 to Rs. 26-4. Good support was extended to Peermades which added As. 8 to Rs. 28 and Periakarmalais improved by as much to Rs. 27. Rubber shares accounted for a small business at hardened rates. Cochin Malabars improved by As. 4 to Rs. 6-10. Rajagiris hardened by As. 2 to Rs. 10-8. Thirumbadis added an anna to close at Rs. 2-12. Travancore Rubbers put on As. 2 to Rs. 13-8 and Vaikundams As. 2 to Rs. 14. Among coffee shares, Consolidated Coffees were a feature with a rise of As. 7 to Rs. 18-11.

Reduction in the power cut, announced last week, was welcomed by textile circles in Coimbatore, as it would enable the mills to work throughout the week and meet the good demand for mill yarn, particularly of higher counts, in the market. Mills are now said to have no stocks of yarn or cloth. Balasubramanias advanced by a rupee to Rs. 34 and their 'B' shares by Rs. 2 to Rs. 56. Coimbatore Pioneers rose by Rs. 6 to Rs. 114. Dhanalakshmis hardened by Rs. 2 to Rs. 178. Maduras could, however, add only As. 8 to close at Rs. 36-12. Metturs finished at Rs. 192 *cum-div.*, as against Rs. 191. The Company has maintained the dividend for the year ended 31st March, 1953, at 12½ per cent. Palaniandavars 'A' put on Rs. 2 to Rs. 47 and their 'B' shares as much to Rs. 65.

In the miscellaneous section, cement shares were in request. Dalmia Cements (Rs. 2-8 paid-up) gained As. 3 to Re. 1-5 and India Cements As. 6 to Rs. 16-10. Among other scrips, Mettur Chemicals were prominent with a rise of As. 4 to Rs. 4-4. Parrys were a fraction better at Rs. 4-8.

OUTLOOK FOR INSURANCE

The Chairman of the Hindusthan Co-operative Insurance Society Ltd., Kumar K. C. Mullick, struck an optimistic note in his address at the recent annual meeting of the Society, held in Calcutta. He said that there was "unlimited scope" for the growth of life insurance companies in the country. He was, however, careful enough to add that the future was bright only for the companies run on "sound and scientific" lines. He based his optimistic view of the future of life business on the ground that the implementation of the Five-year Plan would lead to an improvement in national income which, in its turn, would naturally influence the course of life business. But he did well in emphasising that the increase in life assurance business could not take place without effort. Insurance business, he pointed out, requires a high degree of "vigour and aggressiveness" in securing policies. In this connection, he rightly held that insurance under State ownership and management could not possibly retain that initiative which is so necessary for progress in insurance business. He was opposed to nationalisation of insurance on other grounds too. He argued that, inasmuch as nearly all branches of the insurance industry were already controlled by the Government, it was a semi-nationalised industry. What was now needed was some real help from the Government. He deplored the fact that the provision for relief from estate duty in the proposed Bill on this subject fell short of what insurers legitimately expected. He argued, with considerable force, that, although such a duty on insurance policies might be excusable in a country where the Government itself provided different forms of social security for its citizens, it was inappropriate in the Indian context in which the responsibility for providing against old age and death had to be borne entirely by the people.

BOMBAY STEAM NAVIGATION MERGER SCHEME MODIFIED

The merger of the Bombay Steam Navigation Co., Ltd., with the Scindia Steam Navigation Co., Ltd., has become a *fait accompli* (subject to the sanction of the Bombay High Court) with the approval of the scheme, with some modifications, by the debenture-holders, the preference shareholders and the ordinary shareholders of the former Company, as well as by the ordinary shareholders of the latter. The salient features of the proposal put forward by the Directors of the Scindia Steam were referred to in our issue of the 25th April, 1953 (*vide* page 739). The original scheme was modified by the debenture-holders and the ordinary shareholders of the Bombay Steam and the modifications were accepted by the Directors of Scindias. The modified scheme was finally approved by the ordinary shareholders of Scindias held last week.

According to the modification made by the debenture-holders of the Bombay Steam, they will be entitled to receive interest not only up to 30th June, 1953 (as proposed under the original scheme) but up to such later date on which the High Court finally sanctions the scheme. A section of the ordinary shareholders of the Bombay Steam, who were vitally concerned with the ratio of exchange of Scindia shares for the ordinary shares of the former, pressed for a higher ratio and this was accepted by the Directors of Scindias. Accordingly, the ordinary shareholders of the Bombay Steam will receive three shares of the Scindia, each of Rs. 15, credited as fully paid, for every one ordinary share of the Bombay Steam. This eliminates the necessity for issuing fractional certificates of Series I as provided in the original scheme.

NEWS IN BRIEF

CONSENT was given for the issue of foreign capital in India amounting to Rs. 21.66 crores, between 15th August, 1947 and 31st December, 1952.

The Government of Madras has again declined to recommend to the Government of India the proposal for construction of a railway line from Tellicherry to Mysore via Coorg.

When the Government of India takes over the Barsi Light Railway on 1st January, 1954, out of a total mileage of over 34,000 of Indian railways, only 553 miles will be under non-Government management.

The Union Government will charge a lower price for wheat supplied to the States from the Central Pool from July next. The prices will be reduced by As. 12 to a rupee a maund and will be sold to the States at a price ranging between Rs. 16-8 and Rs. 16-12 per maund.

The Norwegian Scheme for aiding fisheries development in Travancore-Cochin State is only an experimental measure and, if it goes off well, the scheme may be extended to other areas along the coast, according to Mr. K. Lykes, Norwegian Minister to India.

A consultative committee for the improvement of intermediate ports in Andhra State (Kakinada and Masulipatam) has been formed at Vizagapatam. The Consultative Committee will periodically visit these ports and render necessary technical help for their improvement.

Preparations are under way for the celebration of the Centenary of the Indian Telegraphs in November this year. The highlight of the celebrations will be an exhibition of the progress not only of telegraphs but of all systems of telecommunication in the country during the last one hundred years.

A 100 per cent. power cut has been enforced in Kolar Gold Fields with effect from the evening of the 16th inst., as a result of the generating station at Sivasamudram having come to a standstill and the Shinsha hydro-electric station having been crippled, following the failure of rains in the Krishnarajasagara reservoir area.

The Uttar Pradesh Government has reduced its target of raw jute acreage in the State during 1953-54 from 1,35,000 acres to 50,000 acres in view of the steep fall in the prices of jute and the difficulty of marketing the fibre, according to the Indian Central Jute Committee. Of the 50,000 acres, only 22,359 have been put under jute till the end of April.

The Government of India has appointed a committee consisting of three Government of India officials and four non-officials, mostly from private industry, in order to make a preliminary survey to assess the capacity lying idle in the engineering field in India and the degree to which rationalisation of production of machinery and spare parts is possible. The Committee has started functioning from the 12th inst.

The Cotton Seed (Control) Order, 1952, which prohibits the free movement of cotton seed from any place in the districts of Belgaum, Bijapur, Dharwar, East Khandesh, Panchmahals, Poona, Sholapur and West Khandesh of Bombay State to any other place within or outside that State, has been further extended by three months. The order which was to expire on 17th June, 1953, will now remain in force upto 17th September, 1953.

The Government of India has decided to discontinue the further issue of Five-year Post Office National Savings Certificates with effect from the close of business on 30th June. 1953. The Government has also decided that, until further orders, the holders of Five-year Post Offices National Savings Certificates may be allowed, at their option, to hold these certificates after maturity for a further period of seven years.

The West Bengal Government has decided to make wheat available to people in the distressed areas of the State at subsidised rates. From the first week of July, wheat will be sold in the districts where there is no statutory rationing at a rate which will be three rupees less than the controlled rate of Rs. 18-12 per maund. The cost of this subsidy is expected to be Rs. 50 lakhs and the State Government has approached the Central Government to bear half of it.

The Government of India has, on a reciprocal basis with the Pakistan Government, decided to allow, with effect from 15th June, 1953, full rebate of customs duty on aviation spirit uplifted in India by aircraft on outward flights. This rebate will be allowed on aviation spirit put on board under customs supervision at the last airport of departure from India for an outward flight from India to Pakistan or from India to a foregin country via Pakistan.

The Indian Council of Agricultural Research has brought out a bulletin on soil survey in India. It is a report based on the data and information collected as a result of soil surveys carried out throughout the country. The publication which is the first of its kind, contains information on different types of soils and is therefore likely to be of interest to soil chemists, agronomists, foresters, research workers, soil scientists, administrators and revenue officers.

As against an average consumption of about 2,50,000 tons of ammonium sulphate per annum in India, about 5,00,000 tons are planned to be used during the current year. A special drive is being undertaken for increasing the use of fertilisers in the Japanese method of paddy cultivation. The use of phosphatic manures is also being increased. The services of Dr. Frank W. Parker, one of the world's leading authorities in the science of soils and fertiliser research, have been obtained by the Union Ministry of Food and Agriculture under the T.C.A. programme for two years for advising the Government on the organisation of research and demonstration in the manuring of crops and the use of fertilisers.

* * * *

From Abroad

An international sugar conference is scheduled to open in London on 13th July next under the auspices of the United Nations. The conferees will study ways of bringing about greater stability through production and movement of sugar in the open world market.

The U.S. Agriculture Department has set this year's U.S. wheat crop estimate at 1,132,500,000 bushels. The expected harvest compares with last year's crop of 1,291,447,000 bushels—the third highest on record. The average crop for the period 1942-51 was 1,088 million bushels.

A new trade agreement between Japan and Nationalist China has been signed in Tokyo, which provides for an increase in the trade between the two countries from $50 million to $75 million. Japan will mainly export machines, fertilisers, textiles, metallic and farming products and will import sugar, rice, bananas and coal.

Government and private research in the United States is constantly developing better cotton fabrics, according to the Department of Agriculture. New processes include making waterproof cotton bags, flame-proof blankets, heat-resistant covers, a cotton that dissolves in water for making special lace effects and a long-lasting cotton shade cloth to shield growing tobacco from the sun's hot rays.

The U.S. Federal Reserve Board has recommended legislation requiring all bank holding companies to get rid of their ownership or control of non-banking enterprises. The proposal also will require that a bank holding company should obtain approval from a Federal agency before buying any additional bank stocks or before merging with another bank holding company. These are stated to be the two most serious gaps existing in the regulation of such holding companies.

The Government of New Zealand has liberalised its import policy for the year 1954 and has made increased provision for exchange allocation for imports into New Zealand. Subject to certain exceptions, the exchange allocation for the year 1954 will be 50 per cent. of the basic exchange allocation made to individual importers during the year 1950. This is 25 per cent. more than the exchange released for the current year. Among the commodities which will be released from the necessity of obtaining allocations of exchange, of particular interest to India are: tea, corn-sacks, woolpacks and wool-pockets, tubular woven or knitted cotton cloth specially suited for use as meat wraps, cheese bandages or caps, unmanufactured tobacco for manufacturing into cigarettes or snuff and cigars, fresh fruits, salt, printed books, papers, music or advertising matter.

PERSONAL

SIR Alexander Clutterbuck, British High Commissioner in India left for London on the 14th inst., for consultations and medical treatment.

Mr. James Gilbert Evans, American Consul and Chief of the Economic Section of the U.S. Consulate-General in Bombay, left for Washington on Monday last.

Mr. M. A. Sreenivan, Chairman of the Kolar Gold Mining Companies, left for Geneva on the 16th inst. He is expected to return by the end of this month.

Mr. J. R. D. Tata has been appointed Chairman of the Air-India International Corporation, which will run the external air services. The other members of the Corporation are: Mr. B. C. Mukherji, I.C.S., Mr. K. C. Mahindra, Mr. Michael John, Mr. K. C. Bakhle, Mr. K. R. K. Menon, Mr. B. N. Jha, I.C.S., and Mr. L. C. Jain, I.C.S.

Mr. B. C. Mukerji, I.C.S., Managing Director, Sindri Fertilisers and Chemicals Ltd., has been appointed Chairman of the Indian Airlines Corporation, which has been formed to take over the internal air services. The other members of the Corporation are: Mr. J. R. D. Tata, Mr. M. L. Khaitan, Mr. Michael John, Mr. B. N. Jha, I.C.S., Secretary, Ministry of Communications, Mr. K. R. K. Menon, Secretary, Revenue and Expenditure Department, Ministry of Finance and Mr. L. C. Jain, I.C.S., Director-General, Civil Aviation.

Mr. S. Jagannathan, Director-General of Shipping, Government of India, has been appointed Joint Secretary, Union Ministry of production.

Mr. N. M. Buch, Director-General of Supply and Disposals, who has been appointed to succeed Mr. Jagannathan, is expected to assume office early in August.

Mr. P. R. Subramaniam, Deputy Director-General of Shipping, will act as Director-General till Mr. Buch assumes office.

Sardar Datar Singh, Production Commissioner and Additional Secretary, Union Ministry of Food and Agriculture, left for Rome on the 12th inst., to attend the 17th session of the Council of the F.A.O. now being held there. Sardar Datar Singh will also spend about a week in the Netherlands. The Dutch Government has invited him to study the working of the Netherlands Company, a society of agriculturists, which aims at helping farmers in various fields of agricultural development and production.

Mr. A. K. Chanda, Secretary, Union Ministry of Production, will be leaving for Europe on the 23rd inst. to make arrangements for the commencement of initial production in the Union Government sponsored factories for producing machine tools, dry core cable, penicillin and D.D.T. Mr. Chanda will also negotiate with German interests for technical and financial participation in a new steel plant to be set up in India.

OBITUARY

Mr. K. Subba Rao Naidu

We regret to record the demise of Mr. K. Subba Rao Naidu, Director-in-charge of the Hindustan Ideal Insurance Company Ltd., Madras, at Madras on the 4th inst. Mr. Subba Rao Naidu was also Deputy Chairman of the Andhra Bank Ltd.

"INDIAN RAILWAYS: ONE HUNDRED YEARS"

pp. viii + 200; 76 plates

Price **Rs. 15** (postage extra)

A commemoration volume prepared on the occasion of the Centenary of Indian Railways, reviewing their history from the earliest beginnings, subsequent expansion, and their recent emergence as the largest nationalized undertaking in the country.

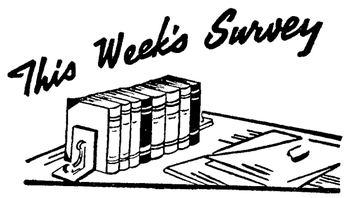
Central Railway, Victoria Terminus, Bombay.

CENTRAL AND WESTERN RAILWAYS



WORLD SOAP INDUSTRY

THE Indian soap manufacturers, who have been at pains to work the idle part of the existing capacity of the indigenous soap producing units, will note with comfort that there is a vast scope for expanding the markets for their products. Sir Geoffrey Heyworth, Chairman of Unilever Ltd. (one of the largest soap manufacturing concerns in the world), revealed, in the course of his recent address at the annual meeting of the Company, that from a study of the consumption of soap in 28 principal countries of the world, he found that (1) four countries, with a total population of 533 million and a *per capita* national income of under $100, had a soap consumption averaging 1 lb. per head per annum; (2) four countries with a population of 67 million, whose income per head lay between $100 and $200, consumed, on an average, about 5 lbs. per head per annum; (3) five countries, with a population of 142 million and a *per capita* income of $200 to $400, consumed on an average 10 lbs. per head per annum; and (4) 15 countries, with a population of 382 million and a *per capita* income of over $400, had an average consumption of about 25 lbs. per head per annum.

It will be thus noted that the variation in consumption is closely linked to the *per capita* income; it ranges from 1 lb. to 25 lbs. for income varying from $100 to over $400 per annum. In other words, the consumption of soap and, therefore, the size of the trade in any locality, depends primarily on the economic circumstances of the people. The influence of purchasing power on the consumption of soap has always been known to the soap-maker. Sir Geoffrey averred that even a small increase in purchasing power in a typical Eastern market might permit a substantial expansion in that market. In the wealthier countries, too, any increase in the standard of living had generally led to an increased use of soap.

The major part of Sir Geoffrey's address this year was devoted to the examination of the competitive ability of soaps *vis-a-vis* synthetic detergents (cleansing agents). He believed that each had its place in this expanding market. While synthetics might tend to replace soap in some parts of the world, soap was likely to continue as the principal washing medium in other parts.

The preference for synthetic detergents in some parts of the world, particularly in North America and Europe, is due to the fact that the former eliminates the physical effort involved in washing and the non-formation of insoluble precipitates, as is the case with soap. Because of these advantages, consumers of synthetics are prepared to pay higher prices for them. The position is, however, quite different in countries where the purchasing power of the population is low, as in India and West Africa. The washing habits—washing in a river or pond will not, for instance, admit the use of powders—in these countries are different and soap powders and synthetic detergents are of little use there. The soap industry has yet to discover a cheap and effective synthetic tablet. Even when an increase in living standards takes place, blended synthetic products are, according to Sir Geoffrey, unlikely to be consumed to any great extent. Apart from the question of price and cost, another limiting factor in the use of synthetics, even in countries with a high purchasing power, is the fear that they affect the hands. One effect of the development of synthetic detergents on the soap industry is that it has made the latter more dynamic and has created new and fundamental problems which require the industry to re-examine its methods. This may well lead to greater possibilities of expansion.

Of wider implications to the soap industry is the effect of the development of synthetic detergents upon the world demand and market for oils and fats. According to Sir Geoffrey's estimates, the total world sales (excluding Russia) of blended synthetic products in 1952 was more than 1 million tons, of which North America accounted for about 800,000 tons and Europe for nearly 300,000 tons. Sales of soap during the same year amounted to more than 5 million tons. It cannot be said, with any amount of precision, that, if synthetic detergents had not been discovered, world consumption of soap would have been greater by over 1 million tons. However, the Unilever Chairman estimated that, if this additional demand were to be met entirely by soap, it would require an additional world production of oils and fats of about half a million tons. World production of oils and fats (other than butter) aggregated about 19.5 million tons in 1952. The extra production of half a million tons, or 2½ per cent. of the output in 1952, could be achieved, but, as Sir Geoffrey said, only by offering a higher price. The conclusion that emerges from Sir Geoffrey's analysis is that, but for the development of synthetic detergents, the price of soap would have been higher than it is now. It is also probable that some of the additional oils and fats required could have been obtained only from the U.S. at the cost of a wider dollar gap or a reduced expenditure of dollars on other commodities. Thus, the fact remains that the development of synthetic detergents is a blessing in disguise, in that it has eased the post-war problem of meeting the world demand for oils and fats at a reasonable level of prices. It is needless to add that the greatest beneficiaries of this advance in the utilisation of scientific knowledge are the backward countries like India where oils and fats are not only the raw materials of the soap industry but also constitute food for the people. Any further increase in the prices of oils and fats would have made their life more miserable than it has been all along.

SINDRI'S LAUDABLE AIM

From the account given by Mr. A. K. Chanda, Chairman, Sindri Fertilisers and Chemicals Ltd., at the annual meeting of the Company held at New Delhi on the 16th inst., Sindri seems to be making a determined bid to hold a place of pride in our expanding national economy. For, in the first place, the working of the Company in the very first year of production shows a small profit, a feature which is commonly absent in most industries started even under private enterprise. Secondly, when an intensive campaign to popularise the use of fertilisers was launched in the country, this national enterprise responded to the call by reducing its selling price by Rs. 65 per ton, thus fulfilling the role assigned to it in the development of the country's national economy. Thirdly, the Company had a large number of requests for exports at prices much higher than those charged for the home market and it would have certainly shown large profits, if it had accepted these requests. It, however, did not do so, as it ran counter to the national policy of making the country self-sufficient in foodgrains by intensive cultivation with the help of fertilisers.

The management of Sindri is continuing its endeavours to reduce its cost of production to the minimum. An idea of the success that has so far been achieved in this direction will be evident from the reduction in the selling price of fertilisers from Rs. 350 to Rs. 285 per ton. Further reduction in production cost is being aimed at by making arrangements for the utilisation of its by-products. With this end in view, it has concluded an agreement with the Associated Cement Companies, Ltd., for the sale of calcium carbonate sludge which is a by-product of ammonium sulphate production. The Associated Cement Companies will use the sludge as raw material in the manufacture of cement, for which a plant with an installed capacity of 600 tons of cement a day will be erected shortly at Sindri. Plans are also under consideration for utilising the coke oven gases of the Sindri factory for the manufacture of urea and ammonium nitrate. The potentialities of industrial development at Sindri, particularly in the field of heavy chemicals and allied industries, are thus being tapped. Another factor which should help reduce costs is the proposal to install a battery of coke ovens for the production of 600 tons of coke a day. These ovens will make Sindri self-sufficient, besides assisting the factory in effecting substantial economies in costs.

Sindri also derives immense cost advantage from its favourable location. Thus, situated in the heart of the country's coal belt, within easy reach of abundant sources of cheap electrical power and water, and served by the main trunk line of the major Indian railway, Sindri enjoys all the prerequisites for making a business enterprise a financial success. But it can hardly succeed, unless it has its own agency to handle the distribution of its products. Commenting on the need for having its own distributing agency, we wrote as early as on 14th February this year:

"There is something radically wrong with the system of distribution of fertilisers. The present system is stated to be cumbersome and wasteful on account of overlapping of expenditure in transport, handling and sales tax . . . The biggest snag in the organisation of the Sindri Fertilisers is that their sales depend on the State Departments of Agriculture, an agency which cannot be expected to show the same initiative and energy as private sales organisations can and do. Those in charge of the Sindri Factory will, therefore, do well to pay attention to the question of getting their product sold to the consumer more efficiently and cheaply than at present."

Now it is gratifying to note that the authorities of Sindri have paid some thought to this suggestion of ours. Thus, Mr. Chanda said:

"It is evident that a manufacturing unit of the size and importance of Sindri, cannot rest content with distribution arrangements controlled by an outside authority, and it must necessarily be self-reliant in the marketing of its own production. A proposal for taking over of the distribution responsibilities by Sindri with effect from 1st January, 1954, is under examination. There are difficulties, however, such as the pooling of higher cost production of smaller units which must be retained in production in national interest, and the sale of fertilisers to agriculturists and small consumers on credit. It should be possible, however, to evolve a proper scheme to meet the special situation. Steps are also being taken for popularising the use of fertilisers for intensive cultivation. A co-ordinated scheme, in association with the Food and Agriculture Ministry, is in the making."

It is to be hoped that these efforts will succeed and that consumers will have the benefit of an efficient selling organisation as from next year.

In his survey, Mr. Chanda did well in pointing out candidly that not all the problems of Sindri had been solved. He, for instance, said:

"The teething difficulties have not, as yet, been completely eliminated. A certain measure of imbalance in production facilities have come to notice, existing maintenance arrangements have proved to be inadequate to current requirements, and the technical efficiency and, therefore, productivity, of labour has fallen short of expectations. The management of Asia's largest fertiliser plant, incorporating the most modern technique in production, requires constant care and watch. The loss of sources of gypsum in Pakistan, on which the plant had been designed, necessitated last minute adjustments, reacting on production."

It is, however, reassuring to be told that all these problems are being dealt with with fortitude and determination and that the production target will be attained in the near future and consistently maintained.

ENGINEERING RESEARCH

Although India enjoys the reputation of possessing, in absolute terms, a larger irrigated area than any other country in the world, the area forms only 18 per cent. of the total area sown in a year. Thus, the irrigated area is a small proportion of the cultivated area. From another standard—from the standard of hydro-electric and other forms of power production—the country is particularly backward. India can boast of only half a million kw. That there is vast scope for development of both irrigation and power resources will be evident from the fact that we now utilise hardly 2 to 3 per cent. of the annual run-off water for irrigation purposes and less than 3 per cent. of the power potential for generating electricity. That the authorities are aware of the importance of power and irrigation to the country's future is evident from the fact that they have set apart, in the Five-year Plan, as much as 27 per cent. of the total outlay on the Plan for expenditure on the multipurpose projects. The projects included in the Plan are expected to cost Rs. 765 crores. These figures ought to give one some idea of the magnitude of the projects, and of the need for providing for their efficient execution. Incidentally, it provides the necessary background against which to consider the importance of research in irrigation and power. From this point of view, the deliberations of the twenty-third annual meeting of the Research Committee of the Central Board of Irrigation and Power, which was held at Bangalore this week, under the chairmanship of Mr. Kanwar Sain, Member, Central Water and Power Commission, acquire a new significance. Research workers could certainly contribute to the economic execution of the giant multipurpose projects. As Mr. Sain remarked, it is the duty of these men to see that they "make every rupee go to the farthest limit that it can."

The Board, which came into existence in 1927, has done much to co-ordinate and guide research and to improve irrigation practices and designs of structures. The number of irrigation research stations has increased from 3 to 12. Research in power has also come within the purview of the Board. These research stations have interested themselves in carrying out hydraulic model tests for river valley projects, river training works, designs of dams, spillways, canal falls and other structures, improvement of habours and estuaries and soil survey work. The Central Water and Power Research Station, Poona, did good work on the Hooghly estuary model. The Station also utilised the services of the U.N.E.S.C.O. experts on photo-elasticity and navigation. The Amritsar Research Station has initiated important investigations into the control of streams, *nallas* and *khuds*. The West Bengal Research Station has, it is stated, been doing intensive and valuable research work on river control and other problems, while the Poondi Research Station, Madras, has undertaken the study of the lining of canals. Mr. Sain deplored that "practically little research" had been done on the hydel side, and he felt gratified, therefore, that the Institute of Science, Bangalore, had added a power engineering department to its other branches of research activity.

All this work is certainly commendable, but the research work in the sphere of irrigation and power suffers from certain serious limitations. In the first place, there are fields in which it would be desirable to undertake more extensive work but which have not received the attention they deserve. This was pointed out in a masterly address on the subject which Mr. M. S. Thirumalai Iyengar, President of the Central Board of Irrigation and Power, delivered last year. He deplored that little work had been done in subjects connected with total volume of run-off, hydrographs and their analysis, constructional materials, designs of canals, transport of water at different velocities and lining of canals. It is to be hoped that these gaps in research work will soon be filled. Secondly, there is, as Mr. Sain said, need for more fundamental research. He said: "We cannot afford to ignore systematic and integrated research on various fundamentals involved in the applied research as distinct from basic research." Thirdly, there is no effective machinery for the dissemination of research information. Mr. Sain suggested that the lessons of research should be made available in "short popular pamphlets." After all, the engineer who fails to keep abreast of research work runs the risk of becoming antediluvian in his field.

Further, there is need—a very urgent need at that—for the co-ordination of all research work. The need for co-ordination is particularly urgent because the funds that are set apart for it are strictly limited. Opening the new Canal and Hydraulic Wing of the Indian Institute of Science, Mr. K. Hanumanthiah, Mysore Chief Minister, pointed out that the provision made for research in the Five-year Plan works out to less than one-quarter per cent. of the total outlay. He rightly said that, "if every pie of this small provision is to be utilised in the best and most productive manner, it is essential to avoid any duplication of effort among the various laboratories." Mr. Sain suggested the appointment of a small committee to review the available facilities for irrigation research and to make proposals for extension of these facilities so that they could be considered for inclusion in the second Five-year Plan. This seems an eminently sensible suggestion which deserves to be examined by the Board in the interest of co-ordination of all research work in the sphere of irrigation and power.

OFF THE RECORD

(By "ROVER")

I WONDER if the Indian business community in general is not a little overburdened with the spirit of adventure. While it is true that very little of importance could be achieved by those who are afraid to take risks and are constantly wedded to security, a misplaced and misused spirit of reckless adventure in trade and industry might, besides compassing the ruin of the adventurers themselves, involve millions of others in the catastrophe, which overtrading and heavy speculation invariably invite sooner or later, more often sooner than later. In a closely linked and interwoven economic structure, the waves set in motion by frequent booms and crashes in forward markets, often overwhelm innocent consumers and genuine investors, besides undermining the confidence of the Government and the public in the usefulness of this community itself in the prevailing social pattern. Business men are already about as unpopular to-day as a heat wave in summer; they would render themselves almost unbearable if they persist in using forward trading in various commodities and goods in making life more difficult and distressing for the average citizen.

When forward trading ceases to reflect the actual position with regard to genuine and effective supply and demand of goods, when groups of unthinking and irresponsible speculators try to drive future markets at a tangent away from spot conditions, when disasters in one market begin to overflow and engineer a crash in other markets because of interlocked speculation, it is time important business organisations sat up and put a stop to such unholy manipulations in cotton, sugar, oil, etc., in their own interests. If they fail to do so, the authorities are bound to come down on unbridled gambling, as they did this week in the case of sugar, to the permanent detriment of the internal autonomy of the bodies sponsoring and controlling these markets. Forward trading can have justification only so long as it serves the interests of the producers, spot markets and consumers. By their very nature and mode of working, futures markets cannot help overemphasising, to a small degree, the price trends in either direction so as to reach a workable balance. But, when they begin to swing beyond the limits set for a pendulum in an anti-social and anti-economic manner in the true spirit of a desperate gambler, they lose their *raison d'etre* and invite interference, if not suppression.

For some time, I have been watching the antics of some of the operators in cotton. I was neither impressed when they ran the price up to over Rs. 742 per *khandi* and saw only the official ceiling as the limit, nor was I depressed, when they crumbled up like a pricked balloon, at the first touch of reality, of having to find cash for taking delivery of even a moderate quantity against their unduly heavy commitments. By the time this happened, the producers had no cotton left and those who held stocks of cotton for sale or spinning had naturally taken the precaution to hedge them when the rates went up. In their headlong flight or fall, the operators only bruised their own skin or broke their own bones. But, when they found that, in their mad frenzy, they had got themselves caught into a vicious trap, they soon began to whine and wheedle for a fresh contract in the new crop to escape into, so that they might start their old nefarious game once again. They looked up to the Cotton Advisory Board to come to their rescue and help them extricate themselves from their self-invited predicament.

They wanted the Board to recommend to the Government that forward trading in the new crop, when this crop is not even sown and nobody knows even approximately what its size would be, might be allowed in good time before the August contract in cotton came to maturity. These people were forced to accept delivery of thousands of bales or squeezed mercilessly by the bears whom they had themselves planned to crush, thinking that the bears would have no cotton to deliver against their sales. In view of the fact that such premature trading in a hypothetical crop which is not even in the ground was sure, in the present prevailing atmosphere, to depress the rates for the new contract to the detriment of the growers, I was not a little surprised when the Board, which is otherwise a level-headed body in all its deliberations, decided to do so.

The Board must have had its own good reasons for taking this line, but to me it appeared that it attached rather an exaggerated importance to the continuity of the contract in forward trading in cotton. I really did wonder if the earth would cease to rotate round its axis and to revolve round the sun in its orbit, if there were a gap between forward trading in the old crop and the new crop. After all, it has to be conceded that the Government should be in full possession of the requisite data before allowing such trading and the first week of July is too early, especially with the delayed monsoon of this year, for it to assess accurately the position for the next year.

When I say this, I have no intention of minimising the importance of the forward market in a commodity like cotton; it only amounts to saying that forward trading in cotton is not run solely for the convenience of, or providing opportunities for speculators to make or to lose money. The speculators, it may be noted, are not necessarily concerned primarily with the interests of the producers, trade and/or industry and often are not even closely associated with one or the other of these. If there were to be no cotton to play with to-morrow, they would desert Kalbadevi, as they did once before, and repair to other street corners and gamble in mercury or art silk yarn futures. Besides, whatever little claim these people had for consideration was forfeited by the way in which the market had been rigged by them, in spite of clear warnings, more than once, by so wise and experienced a man as Mr. Purshotamdas Thakurdas. It is just like them to flock round such leaders when they wanted to secure permission from the Government for forward trading, which had remained suspended for a long time, but to ignore them when it comes to listening to their advice about not indulging in overtrading.

While it is far from my mind to accuse so tranquil and wise a body as the Cotton Advisory Board of having a soft corner somewhere in its corporate heart for speculators in cotton, I really do feel a little bewildered at the way it has rushed to the rescue of the speculators, instead of leaving them alone to clear the sorry mess they have made in a matter of six months in the trading ring of the E.I.C.A. skyscraper. Perhaps, the Board was concerned about the fate of the hedge contracts entered into by spot dealers and the mills against their holdings, but there was no cause for apprehension in this respect, considering the small carry-over expected to last only till about the time the new cotton actually came into the market. This stock, at least the greater part of it, which is likely to be used by the textile mills in the country, needs no protection by way of hedging during the interval between the expiry of the present August contract and the time when the Government is really in a position, after ascertaining the prospects of the new crop, to take a comprehensive decision about all aspects of its cotton policy including that for forward trading for the next year.

Leaving the speculators in cotton futures aside for a moment, I have another sound reason to urge against hustling the authorities into allowing formal trading in the new crop cotton. The Board itself appears to be in doubt about the Government's intention as to the continuance or otherwise of price control in cotton. Had it not been so, it would not have said that, if cotton control were to be continued for the next year, the present floors and ceilings also should remain unaltered. Even the Board would admit that the Government would not be in a position to decide this question finally, till it had some idea about the size of the new crop. This would mean that it should allow forward trading in the new crop to start at present, with the present floors and ceilings in force and to remove them and the protection granted by them to the operators some time later in mid-season, with a large number of unliquidated contracts entered into with the knowledge of a fixed floor and ceiling standing at the time. If price control were to be removed thus, the whole basis of the contract would change and the standing contracts would have to be squared up in some arbitrary manner. It looks to me that the Board, in trying to secure the continuity of the hedge contract, has failed to take note of this likely complication, if the Government were to accept its recommendation.

TREND OF INDUSTRIAL PRODUCTION HALTING

ADVERSE TRADE GAP NARROWS DOWN

(From A Special Correspondent)

NEW DELHI, 16*th June*

THE upward trend in industrial production during the last few months does not appear to be of such a magnitude as to offset the growing unemployment which is becoming intensified in the country with every passing day. During the first quarter of 1953, the average monthly industrial production index stood at 122.1 (1946=100), as against the annual monthly average of 128.9, the increase over last year being hardly 2.4 per cent. For the corresponding quarter a year ago, the average monthly index worked out to 126.0, while, in the second quarter of that year, it receded to 123.3. A similar trend is likely to be revealed by the figures for the current quarter when they are published. Although the output of cloth has been showing an encouraging trend during this year, the same cannot be said of many other industries at the present time. Steel production is now running below that of last year. The output of cement, which showed a progressive increase during the last few years, has now become relatively stagnant, apparently as a result of repairs and overhauling in some factories in the country. The decline in industrial employment and the increase in wholesale prices, as also living costs, have been exercising an adverse influence in the demand for many consumer goods. Prominent among the industries where production has been downward, mention may be made of superphosphates, rayon yarn, plywood, diesel engines, machine tools, electric lamps, etc.

DELHI LETTER

Impressive Cloth Production

Production of cloth has been impressive, the figure for the first quarter being 1,199 million yards, as against 1,030.8 million yards for the corresponding quarter a year ago. Latest production figures indicate that the output for the second quarter will show a further increase, taking up the aggregate figures to the record level of about 2,440 million yards for the first half of 1953. Production of yarn for the first quarter was substantially higher at 363.0 million lbs., as against 337.0 million lbs. for the same period in the preceding year. The output of jute goods was marked down moderately from 258,400 tons to 216,000 tons during this period. Steel production continued to sag, the figure for the first four months of the year being 332,086 tons, as against 356,400 tons for the corresponding period last year. The reduction in this sphere is attributable to the go-slow policy adopted by labour. It is, however, expected that there will be some improvement during the second half of this year. The output of cement is placed at 11.61 lakh tons for the first four months of 1953, the figure for the corresponding period of 1952 being 11.20 lakh tons. Paper production also appears to have become static, the total for the first four months being 44,348 tons, as against 45,836 tons on the basis of the monthly average of 11,459 tons in 1952.

Coal has been able to maintain a satisfactory trend, although here too the increase in production is not very marked. For the first quarter of 1953, the output amounted to 9.28 million tons, as compared with the monthly average of 3.02 million tons, a year ago. *Vanaspati* output for the first quarter came to 55,009 tons, as against 46,591 tons for the same period last year. In the chemical section, the shortage of sulphur continued to hamper the output of sulphuric acid, the production of which is now standing at slightly above 8,000 tons per month, while the installed capacity is at 15,750 tons. Although the production of caustic soda has been looking up, being at about 1,615 tons per month, the rate of output is just half of the installed capacity. Soda ash was moderately better at 13,563 tons for the first quarter of 1953, as against the monthly average of 3,694 tons last year. Ammonium sulphate production is now running at slightly above 30,000 tons per month, as against last year's monthly average of 18,359 tons. Production of matches has been steadily upward and that of soap steady. The trend of production in regard to diesel engines has been definitely discouraging, the present rate of output being about 20 per cent. of the installed capacity.

Foreign Trade

The gap in India's foreign trade in 1952-53 tended to narrow to some extent as against the preceding year. Imports on sea- and air-borne account dropped from Rs. 862.84 crores to Rs. 632.95 crores, the decline being Rs. 229.89 crores. This recession is attributable not only to the reduced foodgrain and raw cotton imports, but also to the discriminating import policy pursued by Government from time to time. To a small extent, it is also due to the lower prices prevailing for some of the imported goods. Total exports during this year amounted to Rs. 556.78 crores as against Rs. 715.56 crores in the previous year, the actual drop being Rs. 158.78 crores. The adverse trade balance on the sea- and air-borne account in 1952-53 worked out to Rs. 76.17 crores, as against Rs. 147.28 crores last year. There was a sharp decline in the imports on land trade account which in 1952-53 amounted to Rs. 26.16 crores, as against Rs. 80.45 crores in the previous year. In this Pakistan has had a major share, the respective figures being Rs. 21.23 crores and Rs. 76.96 crores. Exports to Pakistan declined from Rs. 27.14 crores to Rs. 18.84 crores. The adverse trade balance on this account in 1952-53 amounted to only Rs. 7.32 crores, as against Rs. 53.31 crores in the previous year. On both accounts, the adverse trade gap came to Rs. 83.49 crores, as against Rs. 200.59 crores in 1951-52.

Imports of foodgrains in 1952-53 amounted to Rs. 153.10 crores, as against Rs. 228.12 crores in the previous year, the actual quantity being 2.92 million tons and 4.79 million tons, respectively. While imports of rice were marked up from Rs. 38.19 crores to Rs. 43.03 crores, those of wheat came down from Rs. 152.03 crores to Rs. 81.82 crores. Imports of raw cotton also recorded a substantial decline from Rs. 137.13 crores to Rs. 76.69 crores. During this period, the quantum of raw cotton imports receded from 11.94 lakh bales to 7.75 lakh bales. On the land frontier trade account, imports of raw jute from East Pakistan declined from 23.72 lakh bales in 1951-52 to 13.16 lakh bales in 1952-53, their respective value being Rs 66.99 crores and Rs. 16.41 crores.

Curb on Desert Expansion

The frequent and irritating dust-storms in the capital during this summer have brought to the forefront the urgent necessity of checking the advance of the Rajasthan desert. Measures in this regard are expected to be taken during the impending rainy season by the Government of India by the distribution of seeds and seedlings which grow successfully in the desert regions and have the capacity to check soil erosion also. Since the Rajasthan desert has been spreading during the last few decades to some of its adjacent States like the Punjab, U.P., etc., a co-ordinated action to tackle this menacing problem is being contemplated. It may be mentioned here that the Planning Commission has earmarked a crore of rupees for purposes of creating a forest belt of 400 miles long and five miles wide to prevent winds coming through the Thar desert. Along with this, measures for the prevention of soil erosion are also expected to be put into action by constituting a special board for this purpose which will be entrusted with the task of initiating schemes in different States after due consultation with them. Special enthusiasm towards these problems will be generated among the public taking advantage of the forthcoming *Vana Mahotsava* festival.

Rising Prices

The Government of India is anxiously watching the behaviour of not only the sugar but also of many other commodity markets where prices are being pushed up gradually to high levels by a section of the speculative operators. Since the keymen who are in charge of the economic policy of the Government of India are at present away from the Capital, it is likely that Government will not take any decisive steps in the next few days. As far as sugar is concerned, although there is a strong case for full decontrol which might prove beneficial to the much harassed consumers, Government will take some more time to come to a decision on this subject. For the present, it will be taking some energetic action to prevent hoarding, smuggling and other tactics that are being adopted by a section of unscrupulous merchants and manufacturers.

Industrial Development

Now that under the Industries (Development and Regulation) Act, 1951, it has become necessary for industrial concerns to obtain licences, either before starting production or before any large-scale expansion, the proceedings of the Licensing Committee constituted under this Act provide some indication of the lines of industrial development taking place in the country at the present time. Recently, the Commerce and Industry Minister stated that, during the last few months, the Licensing Committee had recommended the grant of licences in 80 cases—11 relating to cotton textiles, 8 to cement, 8 to electrical equipment, 14 to *vanaspati* and vegetable oils, etc. Most of the licences granted to the last mentioned industry related to the solvent extraction of oilcake. It is generally known that nearly 5 to 10 per cent. of oil is left in the oilcake at the time of crushing by the mills and *ghanies*, and this type of industry is long overdue in the country. According to one estimate, it is possible to increase the output of vegetable oils by about 200,000 tons. Most of the industries are to be located in Madras, Hyderabad and Bombay, the major oil-producing States in the Indian Union. Generally, the Government is not in favour of extending the capacity of the *vanaspati* industry, since its present productive capacity is more than twice the domestic demand for *vanaspati*.

Licences are continued to be granted to the cotton textile industry, most of the proposed extensions and new units being in Madras, West Bengal, etc. The Government's policy, in this connection, is that it does not want to entertain applications for additional looms. Additional spindles are allowed only in those cases where allotments have already been made under the post-war expansion plan. Under this plan, only about 350,000 spindles still remain to be distributed and the quantity is being allotted on the recommendations of the State Governments concerned. In addition, mills of uneconomic size are also allowed to increase their capacity upto the economic limit.

After the enforcement of the Industries (Development and Regulation) Act, licences were granted to a few sugar mills, some of them being allowed to shift their present location to places where they could get adequate supplies of cane. One welcome trend in this connection is the shifting of a sugar factory from U.P. to South India which has considerable potentiality for the production of sugar at cheaper and competitive rates. Uneconomic units, especially in the South, are allowed to expand their capacity so as to reduce their production costs. At the present time, the Government does not propose to encourage the establishment of new units. The cement industry is allowed to expand production, and licences are expected to be given both for expansion and the location of new units.

Among other industries, mention may be made of the expansion of paper insulated power cables, power transformers, conductors, etc. Licences are being readily granted for the expansion of non-ferrous metal industries. Efforts are being made to augment the output of aluminium ingots appreciably. The paper industry is also being expanded steadily, and new firms are being advised that they should establish mills of economic units. A sort of discriminating policy is followed in respect of the pharmaceutical industry. Wherever there is already adequate capacity in the country for the manufacture of patent medicines which are quite suitable substitutes for the type of goods proposed to be manufactured, licences are being withheld for such enterprises from foreign countries. Although until now licences have been granted for the manufacture of diesel engines, it is likely that the Government will be shortly reviewing the entire capacity of this industry in the country and will consider whether it should discourage further expansion in view of the fact that supply has begun to exceed the demand substantially. The Government is also expected to take steps in due course for calling a meeting of the principal manufacturers of radio receivers and components in order to make a proper assessment of the existing capacity of the industry and the demand for these products. The agricultural implements manufacturing industry, glass industry, etc., are being encouraged to develop new lines of production.

PAKISTAN NOTES

QUALITY OF COTTON TO BE RAISED

BARTER DEAL FOR SUGAR IMPORTS

THE cotton ginning and pressing industry, consisting of about 425 factories, constitutes the biggest industry in Pakistan and its national importance as a component part of the cotton industry is considerable. The quality and price of raw cotton depend largely on good ginning and pressing. Of late, reports have been current that the quality of ginning and pressing of Pakistan cotton has deteriorated. The deterioration in ginning and pressing not only affects the quality but also brings down the value of cotton and thus causes loss of income to the cotton-growers as well as to the Government. The question of improving the efficiency of the ginning and pressing factories and placing the industry on a firm footing received considerable attention at the hands of the Pakistan Central Cotton Committee at its recent meeting held in Karachi.

The recommendations of the Committee are: (1) The Technical Co-operation Administration should be requested immediately to lend the services of a ginning expert, who should visit the ginning factories run by allottees and report to the Committee on the condition of the existing machinery and the repairs and replacements which should be made to ensure proper ginning and pressing of Pakistan cottons. (2) The Governments of Sind and Khairpur should be asked to enact Control Acts as expeditiously as possible. (3) The Governments of Punjab and Bahawalpur should enforce Cotton Controls Acts strictly in their respective areas with a view to eradicating the existing malpractices relating to bad ginning and false packing. (4) Provincial and State Governments should allot ginning factories only to those persons who are either in the cotton trade or have previous experience of running a ginning and pressing factory. Proper maintenance of the machinery should be made obligatory on them. (5) Representatives of cotton control boards in Provinces and States should be associated with the authorities concerned in making allotments of ginning factories. (6) Allottees themselves should run ginning factories and should not be allowed to sublet them to others. (7) Ginning factories may be allotted to co-operative societies and cotton mills which may be interested in running them. (8) The services of an expert grader should be obtained through the T.C.A. and training in grading should be given to Pakistanis abroad. (9) The Punjab Government should be asked to examine the question of modifying the clause in the Punjab Cotton Control Act relating to admixtures of seed and other foreign substance in lint, which are at present permissible up to 10 per cent.

Reports that the Pakistan Government had decided to abolish the Cotton Board have been denied by official sources in Karachi. The Cotton Board has two sections, one dealing with the price support scheme and the other doing research work and collecting data in regard to world cotton trade. The first section is being wound-up, consequent on the abolition of the price support scheme several months ago. The Economy Committee appointed by the Government of Pakistan has, however, yet to make its recommendations in regard to the future of the Board.

* * * *

The Pakistan Government is reported to have arranged for import of enough sugar to meet the requirements of the country till the end of the year. The Government recently concluded two barter deals with Spain under which it would receive 30,000 tons of sugar in exchange for jute and cotton. This quantity, along with the stocks held by the Government and local output, is stated to be adequate to meet the country's requirements till December.

* * * *

The Pakistan Government has received foreign aid to the extent of $23.5 million and £2 million during 1952-53. These include $12.25 million from the U.S., $10 million from Canada, $1.26 million from the Ford Foundation, £1.7 million from Australia and £0.25 million from New Zealand. Besides these, a loan of $3.25 million was obtained from the World Bank for the purchase of tractors and other equipment for the reclamation of 660,000 acres of land in the Thal desert. Pakistan is expected to receive, during 1953-54, about $10 million from Canada, £0.25 million from New Zealand, besides £2 million for which Australia will give wheat and $5 million worth of wheat from Canada.

1953

Edition of the Calcutta Stock Exchange Official Year Book is endorsed alike by the Press and the Public as the most indispensable work of reference on investment. The very fact that the Central and State Governments, the Reserve Bank of India, all Exchange and Scheduled Banks, Insurance and other financial institutions, and leading business houses use it is a proof positive of its superiority over any other publications of a similar nature.

The work is more comprehensive than others. It presents information not only about all the shares dealt in on the Calcutta market but about the leading scrips of other markets as well. The information given relate to the date of registration, nature of business, managing agents—their names, addresses and remuneration, directors—their names and share qualification, details of capital and shares, share registration fee, name of auditors, periods to which accounts close, date of meetings, summary of balance sheets, and progress statement containing provisions for taxation, depreciation, allocations to reserves, net profit, amount carried forward, dividends, highest and lowest prices, etc. Each section is also prefaced with an informative historical introduction. Besides, there are also lots of information relating to such matters of vital importance to shareholders as income-tax and super-tax rates, stamp duty on share transfers, sterling-rupee exchange calculator, interest table, members of the Stock Exchange, Stock Exchange Committee, Stock Exchange holidays, Stock Exchange rules and regulations and so forth. Price Rs. 12/8/- per copy (postage Rs. 1/8/- extra). Order from The Secretary, Calcutta Stock Exchange Association Ltd., 7, Lyons Range, Calcutta.

BANK CREDIT IN SOUTH-EAST ASIA

CONTRACTION IN MONEY SUPPLY

THE Economic Commission for Asia and the Far East (E.C.A.F.E.), to which goes the credit for making available to the world authentic information on the economic developments in South-East Asian countries, has, in its latest *Survey of Asia and the Far East*, 1952, given a brief outline of the money and credit position in the region during the past year. A perusal of the relevant chapter discloses the effects of the decline in prices and profits which took place in most countries of this region in the money and credit sectors. The countries covered by the *Survey* are Burma, Ceylon, China (Taiwan), India, Indo-China, Indonesia, Japan, Korea (South), Malaya, Pakistan, the Philippines and Thailand. Although there was a large measure of similarity in credit and monetary trends in all these countries, a somewhat different trend was noticeable in the major rice-exporting countries.

In 1952, the demand for commercial bank loans in most countries of the region continued to be high. Caught in the price fall, business men tried to avoid losses by holding on to stocks in the expectation of better prices. As demand increased, commercial banks in the region became more cautious in view of the uncertain earnings and outlook and the low cash reserves. Total bank credit during 1952, therefore, expanded at a slower rate than before; it even declined in some countries, especially in those dependent on exports of raw material. Pakistan, however, was an exception. The decline in bank credit generally affected speculators and inventory investors more than those needing finance for genuine trade or industrial transactions.

In the major rice-exporting countries, credit in 1952 continued to expand at the same rate as, if not at a faster rate than, in 1951. In Burma, however, credit expanded at a slower rate in 1952 (after making allowances for seasonal variations), owing to the increase in interest rates charged by commercial banks since the end of 1951 and the easing of the demand for loanable funds to finance imports.

In Japan, borrowers had difficulty in making repayment, with the result that the amount of overdue loans increased. Failures of discount bills in Japan also increased significantly. The overall expansion of credit in Japan during 1952 proceeded, however, at a slightly lower rate, as in previous years. While the total amount of industrial bank loans rose, equipment loans hardly expanded, and for a few industries they declined. This affected investment in industry, although, to a certain extent, this was offset by an increase in public investment and in loans granted by public financial institutions.

Interest Rates

As credit expansion did not keep pace with the increase in the demand for loanable funds, interest rates in many countries in the region continued to rise. To a certain extent, the rise reflected the dearer money conditions prevailing in the London money market, especially in countries where British banks play an important part in the local money market. In Burma, credit conditions remained tight in the first quarter of 1952 and the call money rate increased still further from 1½ to 2 per cent. per annum. In India, where the Central bank's dearer money policy contributed to the rise in interest rates, the call money rates among the larger Scheduled banks in the busy season of 1952 were quoted for many weeks around 2¾ and 3 per cent. while among the smaller banks they were occasionally quoted at as high as 3½ per cent. This might be compared with the call rate among the larger Scheduled banks during the busy season of 1951, when it hardly reached 1⅛ per cent. In Pakistan, partly owing to tighter conditions in the money market and partly to a decrease in the inflow of banking funds into Pakistan, inter-bank call money rates rose continuously from November, 1951, until it reached an all-time record of 2¾ per cent. towards the end of January, 1952. By June, however, conditions had eased slightly and call rates were at 1¾ per cent. as compared with a nominal ¼ per cent. rate in the corresponding period of the previous year. In Japan, various public and semi-public financial institutions reduced, during 1952, their interest charges on loans granted for specific projects, and there was also a decline in the average "free market" money rate from 18.2 per cent. at the end of 1951 to 14.6 per cent. in the third quarter of 1952. But the official rates of interest of the Bank of Japan and of the city banks remained unchanged.

Monetary Policy

The deterioration in business conditions was not regarded by the various Governments as serious enough to warrant the adoption of a general policy of monetary expansion. Moreover, balance of payments consideration would have made it difficult to take such a course. India and Japan which had taken disinflationary measures in 1951, by raising their Bank rates, did not change them. The impact of dear money policy was softened in India by the Reserve Bank's selective policy of rediscounting usance bills of commercials banks at ½ per cent. below the new Bank rate of 3½ per cent. Further, the Government guaranteed to purchase, if necessary from Scheduled banks, at prescribed prices, American and East African cotton held by the banks as security against loans. In Japan, the internal loans of the Bank of Japan to commercial banks increased, but foreign exchange loans declined owing to the abolition of the usance system of financing imports. On balance, the Bank of Japan's lending increased. The Government also granted loans to industry and trade, through its own financial institutions, namely, the Japan Development Bank, Reconversion Finance Bank and Export-Import Bank of Japan.

In Pakistan, the Government requested banks to assume a price of Rs. 90 per maund of cotton with the normal 25 per cent. margin for the exporter in support of its cotton price support policy in March, 1952. The banks were not to ask for repayment of loans for additional collateral, even if the price fell below Rs. 90, and the Government undertook to make good any losses which might occur because of the additional risks taken by the banks. In order to restrict the volume of imports, Pakistan used selective credit controls.

Money Supply

In the raw material exporting countries and in India, balance of payments deficits and credit contraction tended to reduce the supply of money. This was offset, to a certain extent, by the reappearance of budget deficits. As the strength of these factors varied from country to country, there were divergent movements in money supply. Thus in India it decreased by Rs. 1,720 million, that is by 9 per cent. Money supply in Malaya was lower by 10 per cent. in June, 1952, than it was at the end of 1951. In the Philippines, the decline was of the order of 15 per cent. On the other hand, in Indonesia, Japan and Pakistan, money supply increased, though at a slower rate than in 1952. In Indonesia, it rose by 18 per cent. while in Pakistan, there was a net increase of 6 per cent. in the year ended June, 1952. There was a rapid expansion in the money supply in China (Taiwan) and Korea (South) in 1950 and 1951. In the following year, it expanded at a much lower rate than in the preceding years. Inflationary pressure was reduced in these countries by means of large imports in that year. Payments for these imports were found from the foreign aid received and/or from foreign exchange earned through U.N. forces stationed there. Money supply increased in Burma and Thailand owing to continued accumulation of foreign exchange earned through exports of rice and expansion of commercial credit. Budget deficits too contributed to increase supply of money in these countries. Summing up the position, the E.C.A.F.E. *Survey* observes:

"Taking the whole period from 1950 to 1952, money supply in relation to price levels has changed as follows: During the years following the outbreak of the Korean War, money supply and credit generally expanded at a much faster pace than wholesale prices and/or the cost of living. With the collapse of the boom in the second half of 1951 and in 1952 money supply and credit contracted in a few countries, notably India, Malaya and the Philippines, but allowing for the lower price levels, the real value of cash balances has increased."

THE DEVELOPMENT OF SWISS BANKING

There could be no better proof of the development of the credit system in Switzerland than the fact that, for a population of 4.7 million inhabitants, there are no less than 450 banking establishments with more than 3,600 branch offices, without counting the 903 co-operative banks (Raiffeisen). Except for the field of mortgage loans, Swiss banks do not, as a rule, specialise to the same extent as banks in other countries. However, there is a certain amount of division of labour, as a result of the historical evolution and, to a certain extent, as a result of the political organisation of the country, the very marked decentralisation found in Switzerland and also the legal structure of the banking establishments.

The research and statistics department of the Swiss National Bank classifies the various credit establishments as follows: cantonal banks, large commercial banks, local banks, savings banks, Raiffeisen co-operative banks. To these must be added the private banks the returns of which are not included in the statistics of the Swiss National Bank; for, they are not published.

Whereas the local banks, the savings banks, the co-operative banks and, to a certain extent, the cantonal banks, only handle, as a general rule, investments and loans in Switzerland, the other credit establishments, either of a commercial character or dealing mainly in real estate transactions, extend the field of their financial activity abroad. These banks, through their issuing departments, act as intermediaries for the long-term investments abroad of Swiss savings, while, at the same time, trying to facilitate foreign trade.

The essentially commercial character of the large banks prevents them from dealing, to any great extent, in long-term investments either in Switzerland or abroad. To meet the calls they receive for capital, they place loans at home and have, in collaboration with the Swiss industries concerned, founded financial companies which, in their turn, often issue shares or bonds for public subscription.

Since the end of the war, foreign loans issued in Switzerland have aggregated some 655 million Swiss francs. Moreover, quite apart from the credit granted in connection with export transactions in particular, a group of Swiss banks has granted credit abroad amounting to 136 million francs.

The difficulties against which many countries are having to struggle and the restrictions that they have introduced, particularly in the field of exchange, have slowed down the rhythm of Swiss investments abroad. The let-downs often experienced by creditor nations since the 1914 war have led them to be cautious.

In order to facilitate their development abroad, several industries have had to open up branches in Europe and overseas, depending directly on the parent firm of forming part of an industrial holding company. Investments of this kind are not limited to the supplying of capital but also include the provision of working stock and materials for production, the sending out of technicians and the exploitation of Swiss patents and licences.

RESERVE BANK BRANCH AT BANGALORE

The Bangalore Branch of the Reserve Bank of India will start functioning as from 1st July next. The Branch will take over the cash work of the State Treasury in the City. As a consequence, the Government of Mysore has ordered the abolition of the Civil Station and the Bangalore District treasuries. Transactions handled there will be transferred to the State Huzur Treasury. The treasury of the Bangalore South Taluk will be abolished, its work being transferred partly to North Taluk Treasury and partly to the Huzur Treasury. These changes in the treasury arrangements in Bangalore are a sequel to the appointment of the Reserve Bank of India as the State's banker.

WORLD GOLD PRODUCTION IN 1952

FRESH POST-WAR PEAK ESTABLISHED

THE world output of gold, which had suffered a small setback in 1951, resumed the post-war upward trend again in 1952. Expressed in terms of U.S. dollars at $35 per ounce, the production last year amounted to $851 million which is nearly 3 per cent. more than that in 1951 at $828 million. In fact, the production of gold established a new post-war peak in the year under review. The increase in production was shared more or less proportionately by most of the large producing countries, the principal exceptions among these countries being Australia, Mexico and the Philippines where production rose very much more than 3 per cent. But the production in Gold Coast and Columbia showed a slight fall. These estimates, compiled by the Statistics Division of the International Monetary Fund, do not, however, include the production of the U.S.S.R. and other Iron Curtain countries.

The statistics relating to world gold production since 1937 (barring a brief period of three years, 1942-44), are published in the May issue of the *International Financial Statistics*. This information is condensed in the following comparative table showing the output in the various gold producing areas and in some of the important countries during the four years ended 1952:

(In millions of U.S. dollars at $35 per ounce)

	1949	1950	1951	1952
World Total	**817**	**844**	**828**	**851**
Sterling Area	**503.28**	**500.98**	**497.60**	**511.20**
Union of South Africa	409.68	408.23	403.08	413.65
Gold Coast	23.69	24.13	24.45	24.20
Southern Rhodesia	18.49	17.89	17.04	17.39
Tanganyika	2.42	2.33	2.32	2.26
Australia	31.12	30.14	31.34	34.00
India	5.74	6.89	7.92	8.86
Canada	**144.32**	**155.44**	**153.75**	**156.52**
United States	**67.27**	**80.10**	**66.32**	**67.82**
Latin America	**59.84**	**61.68**	**58.83**	**61.00**
Mexico	14.19	14.28	13.66	15.97
Nicaragua	7.80	8.27	9.06	9.16
Chile	6.27	6.49	6.08	6.16
Columbia	12.58	13.28	15.08	14.78
Peru	3.98	5.18	5.05	..
Other Africa	**16.67**	**16.59**	**16.61**	..
Belgian Congo	11.68	11.88	12.33	..
Other Asia	**18.72**	**21.90**	**25.55**	**30.10**
Japan	4.62	5.44	6.62	7.98
Philippines	10.07	11.69	13.77	16.43
Europe	**6.94**	**7.82**	**8.80**	..

The increase in the volume of gold production in 1952 does not go very far towards matching the pre-war peak. Gold production in 1952 was only about three-fourths as large as in the pre-war peak 1937 through 1941, although it was about as large as the average of 1934-35. It may be noted here that world production of gold touched an all-time record of $1,264 million, the figures for the preceding years being $1,034 million (1937), $1,118 million (1938) and $1,190 million (1939). In 1941, the output was $1,247 million but in the very next year it was as low as $736 million. Since then, it has been well within $850 million. Analysing the significance of the output in 1952, the I.M.F. bulletin says: "The importance of the increase in production was somewhat more than is indicated by the increase in the physical volume of production. Gold production, like exports, earns foreign exchange for the producing countries. During 1952, the value of world exports declined about 5 per cent. and the value of exports of the outer sterling area which produces about 60 per cent. of the world's gold, declined by about 15 per cent. Hence, at its constant official price, the value of newly mined gold amounted to about 5.5 per cent. of the outer sterling area's exports in 1952 compared to about 4.5 per cent. in 1951."

The official gold stocks grew during the year by only 30 per cent. of the amount of the new production. Some of the remainder was used, it is stated, for industrial and artistic purposes—for example, industrial and artistic uses in the U.S. are approximately as large as U.S. production, but the major part must have gone into private hoards.

The apparent growth of official stocks is very little more than in 1951 when official gold stocks apparently grew by only about 25 per cent. of the amount of gold mined in that year. This contrasts with a growth in gold stocks equal to about 50 per cent. of new gold production in earlier post-war years and to very much larger increases in official stocks in pre-war years. These estimates, however, are of very low reliability, since they depend on the differences between estimated world gold stocks at various dates. The official holdings of a number of countries are not published and the growth of official gold stocks is necessarily very small compared to the stocks. Small changes in the availability of information on stocks can, therefore, make very large difference in the calculation of year-to-year increases. The gold holdings of such important countries as the United Kingdom and France are not published by their Governments. Errors in the estimates for these countries alone can more than outweigh any true changes in the flow of gold to private hoards. Furthermore, nothing is known about changes in production, official stocks, or industrial or artistic consumption of gold in the Soviet bloc. Any net absorption or release of gold by the Soviet bloc, either of which could be large, would make a great difference in the estimate of hoarding.

It will be helpful to record here world gold production in terms of weight, that is, in fine ounces, also. An estimate of this has been made by Messrs. Samuel Montague & Co., the well-known firm of bullion dealers. The table below gives the figures in the major gold producing countries during the three years 1950 to 1952:

(In thousands of fine ounces)

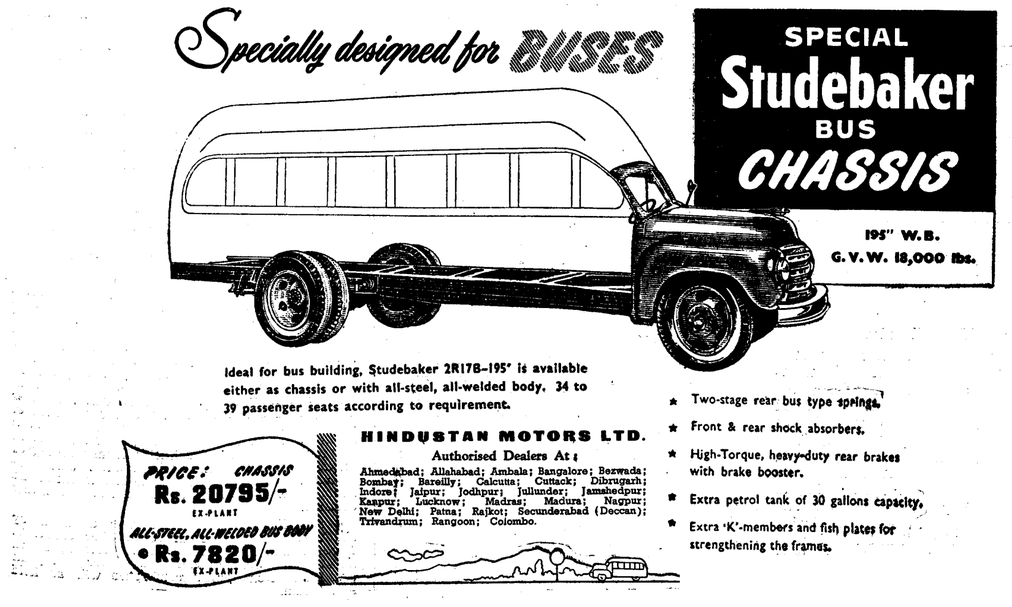
	1950	1951	1952	*Percentage increase of 1952 over 1951*
Union of South Africa	11,664	11,516	11,800*	+ 2.5
Canada	4,441	4,392	4,450*	+ 1.3
U.S.S.R.	2,000*	2,000*	2,000*	..
U.S.A.	2,289	1,895	1,938	+ 2.3
Australia	861	896	978	+ 9.2
Southern Rhodesia	511	487	497	+ 2.1
India	197	226	243	+ 7.5
World total	26,579	26,018	26,400*	+ 1.5
British Empire	18,758	18,604	19,100*	+ 2.7
,, ,, percentage	76.6	71.5	72.3	+ 1.1
Union of South Africa percentage	43.9	44.3	44.7	+ 0.9

* Estimated or provisional figure.

It will thus be seen that the production of gold in 1952 amounted to 11,800,000 ounces as compared with 11,516,000 ounces in 1951. It is estimated that the intake of gold by the free gold markets during 1952 was over 12 million fine ounces of which approximately 10 million ounces came from freshly mined gold. In the previous year, the free market had absorbed 9½ million ounces of gold. All Commonwealth gold producers, excepting South Africa and Canada, have been released from the obligation to sell gold in processed form with a maximum of 11/12 fineness and are now free to deliver fine bar gold to free markets, with the permission of their respective Governments. South Africa observes a self-imposed rule that its free sales should be restricted to 40 per cent. of its output. In Canada, the legislation which links subsidy to output of gold from mines with high cost of production, acts as a restriction on sales of gold to free market by the mines. If these restrictions are removed, more gold may flow into the free market.

Gold Prices

The Bank of England in London continued to maintain its buying rate at 248s. per fine ounce for bar gold. It issued gold at 252s. per fine ounce. The Bank allowed London firms to act as its agents for selling newly mined gold in the Commonwealth to buyers against dollars. In the Far Eastern markets, the Thailand Government created a syndicate at Bangkok to import gold for free sale internally. The Canton gold market in China ceased to function owing to firm action by the Government to end business in bullion. In Europe, the free market price, which stood at $39 per ounce early in March, 1952, declined to $37.00 early in May. After improving temporarily to $37.50 it declined to $36.75 in November. The rate, however, stood at $37.50 by the end of December, 1952. Since then, there has been a further fall in this price, after an erratic trend, the latest rate being $36.45 to $36.50.



WORLD'S COTTON POWER LOOMS

CHANGES IN DISTRIBUTION SINCE 1936 ANALYSED

A STRIKING feature revealed by a review of the position of the world's cotton power looms during the last 16 years is the marked decline in the number of looms. The aggregate number of cotton power looms that existed as on 31st July, 1952, according to the latest census of the International Federation of Master Cotton Spinners' and Manufacturers' Association (Manchester), was 2,730,382, a fall of 339,523 looms as compared with that on 31st December, 1936, when the last census was taken. Despite this decline, production of cloth has recorded an impressive increase. This is due to intensive utilisation of equipment. It is well known that, in a number of countries of the world, cotton mills are being worked double and treble shifts. That relatively small equipment is now producing sufficient textiles to meet the full requirements of the world is supported by the fact that, during the cotton season ended 31st July, 1952, the quantity of cotton actually consumed by mills amounted to as much as 32.66 million bales, which compares very favourably with only 25.39 million bales during the season 1935-36.

There has also been a decline in the number of cotton spindles in the world during the period under review. The number of spindles as on 31st July, 1952, was 127.99 million, as against 151.75 million at the end of 1936. The reduction in spindles, however, is more than proportionate to that in looms, being 16 per cent., as against 11 per cent.

Of the total decline of 339,523 looms, the Continent of Europe accounts for 236,126, with the major portion of the loss taking place in the United Kingdom. North America also lost 167,360 looms. South America and Africa, on the other hand, report an addition to the loomage, the figures as at 31st July, 1952, standing higher by 42,949 and 17,711, respectively, as compared with the position on 31st December, 1936. Asia and Oceania, too, report an increase of 3,303 looms, despite a substantial decline of 42,371 looms in Japan.

Modernisation of Equipment

The reduction in the number of looms noted above is shared entirely by ordinary looms; their number as on 31st July, 1952, was 1,830,289, as against 2,343,693 at the end of 1936. The number of automatic and automatic attachment looms, on the other hand, rose from 662,167 and 64,045 to 834,743 and 65,350, respectively. This indicates that the trend of development in the sphere of the cotton industry in the past 16 years has been towards modernisation of equipment by replacing ordinary looms with automatic looms

The table below gives the estimates of the number of looms in place in the different countries as on 31st July, 1952, as compared with the position that existed in 1936:

(In thousands)

	31st December, 1936			31st July, 1952		
	Ordinary	*Automatic*	*Automatic attachment*	*Ordinary*	*Automatic*	*Automatic attachment*
U.S.A.* ..	181	392	..	..	399	..
U.K.	484	15	6	30	34	6
Japan ..	293	40	..	238	52	..
U.S.S.R. ..	216	25	9	235	30	10
India	197	4	..	189	9	..
France	153	38	3	93	64	..
W. Germany†	170	18	13	141	7	..
Italy	92	34	22	51	50	37
Brazil ..	74	4	2	70	22	8
Czechoslovakia.	101	2	1	78	2	..
Spain	61	5	..	59	7	..
Other countries	322	85	8	366	166	3
Total ..	2,344	662	64	1,830	835	65

* Ordinary looms not available. The total figure of 398,501 does not include 115,639 looms exclusively on rayon, silk, nylon and other synthetic fibres. It, however, includes looms producing cotton fabrics in rayon mills but does not include woollen and worsted looms producing cotton fabrics.

† No sub-division of looms into ordinary and automatic is available. The 1936 figures relate to undivided Germany.

Looms Under Erection

The period subsequent to 31st July, 1952, has witnessed a notable expansion in the weaving capacity of the cotton textile industry the world over. An indication of this is provided by the number of looms under construction as on that date which was as much as 27,006, of which 13,395 were automatic. There were, besides, 10,129 looms being erected to replace older ones. The bulk of these, amounting to 7,703, is accounted for by automatic looms. The number of looms expected to be erected during the period 1954-57 is estimated at 27,549, including 13,669 automatic and 13,298 ordinary. It is interesting to note that more than three-quarters of the looms will be installed in the countries of Asia and South America, particularly in India, Hong Kong, Pakistan and Brazil, as will be seen from the following table:

	As increase		As replacement	
	Automatic	*Ordinary*	*Automatic*	*Ordinary*
India	1,817	3,652	3,064	2,737
Hong Kong ..	4,539	..	..	..
Pakistan ..	2,143	1,100	..	..
Brazil	1,738	1,395	..	..
Korea	..	3,510	..	..
Columbia ..	1,695	466	..	..
U.K.	220	439	1,156	1,056
Holland ..	..	..	1,500	400
S. Africa ..	..	2,123	..	..
Egypt	..	..	790	..
Sweden	113	..	118	64
Norway	109	..	106	52
Finland	..	..	100	..
Mexico	87	..	..	..
Argentine ..	774	..	..	..
Israel	300	..	..	..
Uruguay ..	98	..	..	..
Iran	300	..	..	..
Turkey	35	..	..	..
Other countries	..	53	..	89
Total ..	13,963	13,298	6,834	4,398

It will be evident from the foregoing figures that, while the cotton textile industry in Europe is concerned more with rehabilitating their worn-out machinery, the industry in the Asian and South American countries has attached greater attention to the expansion of the size of the units by adding more looms

Idle Looms and Hours Worked

As the date on which the census was taken coincided with the world recession in the textile industry, the average hours worked per week was lower than what is generally considered as normal. As already mentioned, in most countries, double-shift and even treble-shift working is now almost normal. The number of idle looms as on 31st July, 1952, was abnormal, especially for Europe. Thus, out of a world total of 294,776 idle looms, the European countries account for as much as 231,297. In India, the number of looms remaining idle was 8,549, of which ordinary, automatic and automatic attachment looms accounted for 8,448, 97 and 4, respectively.

OUTLOOK FOR BRITISH RAYON

That the outlook for rayon staple is quite bright is confidently expressed by the spokesmen of the majority of the British rayon industry. Their confidence is based on the high level of demand from all sections of the textile industry. "The outlets for both yarn and staple," to quote one report, "are well spread between the different sections of the textile industries, as well as over fashion and industrial uses." A big range of counts and qualities of spun rayon yarn is being turned out and directed into a great many sections of the textile industries. In fact, it is reported that, in some instances, customers are working on a hand-to-mouth basis, and there is heavy pressure on producers for increased supplies, so that stocks can be built up.

The hosiery trade in the U.K., according to the *Financial Times*, London, is actively interested in yarns made of rayon staple and Pruvian cotton blended together, and these are being taken up strongly by the interlock underwear manufacturers, some of whom have important Government contracts on hand for this type of underwear for the various branches of the Services. Another favourite line used by the hosiery trade is yarn made from blends of spun-dyed staple (that is, coloured in the chemical spinning process) with cotton, which are being made into knitted outerwear fabric for children's and women's garments. These produce attractive garments at popular prices. These garments first became prominent immediately after the textile recession last year when they helped to bring about a revival in trade generally.

The confidence among producers as to the outlook for rayon is borne out by the maintenance of a high level of rayon output in the U.K. Thus, despite the Easter holidays, the aggregate output during the month of April, 1953, was as high as 32.7 million lbs., which compares favourably with 16.6 million lbs. a year before, and which is only 3.6 million lbs. below the peak output reached in the previous month. The slight fall in output during the month under review, as compared with the previous month, is shared by both staple fibre and continuous filament yarns, the production of which during April, 1953, amounted to 17.9 million lbs. and 14.8 million lbs., as against 19.1 million lbs., and 17.2 million lbs., respectively, in March, 1953.

Reports from London say that orders for both filament rayon yarn and staple are now being booked for August delivery. The tendency in the making up and distributive trades is said to be for buyers to refrain from placing orders as long as possible, because of the tight money position and absence of help from the banks in financing stocks. This, it is stated, makes it difficult for rayon manufacturers to plan ahead and is causing congestion in the dyeing and finishing works, as every order for fabrics is wanted quickly.

EXPORTS OF JAPANESE CHEMICAL FIBRE FABRICS

Exports of chemical fibre fabrics from Japan during the calendar year of 1952, according to a survey by the Japan Silk and Rayon Fabric and Yarn Exporters' Association, registered an increase over the preceding year, notwithstanding import restrictions in the sterling area, the quantity actually shipped during that year being 269,580,000 square yards of rayon fabrics and 91,094,000 square yards of staple fibre fabrics. These figures represent an increase of 4 per cent. and 21 per cent., respectively, over the 1951 figures.

Classified by destination, Singapore and Hongkong occupied first and second places, respectively, with regard to rayon yarn, while Ceylon maintained the third place with an increase of about 70 per cent. Particularly noticeable is the fact that Pakistan, which held the eighth place in the preceding year, jumped up to fourth place with an increase of 55 per cent., and the Republic of Panama, though in twelfth place, showed a fourfold increase. On the other hand, Thailand and Britain showed a decrease of 68 per cent. and 66 per cent., respectively.

With regard to staple fibre fabrics, Pakistan rose to the first place, with an increase of more than four times the preceding year's figures, while Ceylon also rose to the fourth place with an increase of more than three times and Indonesia bought twice as much as in the preceding year. Britain, which occupied the first place in 1951 with 7,131,000 square yards, purchased only 1,204,000 square yards and Kenya and South Africa also showed a marked decrease. Exports by destination for 1952 were as shown below:

Rayon Fabrics

(In 000 sq. yds.)

Singapore	58,981
Hongkong	35,258
Ceylon	32,176
Union of South Africa	19,076
Indonesia	16,570
Pakistan	15,516
Iraq	10,479
Burma	10,079
Nigeria	6,881
Malaya	5,833
Others	58,731
Total	269,580

Staple Fibre Fabrics

(In 000 sq. yds.)

Pakistan	7,929
Nigeria	7,423
Singapore	7,102
Ceylon	6,184

INTERNATIONAL WOOL CONFERENCE

One of the highlights of the twenty-second annual conference of the International Wool Textile Organisation (I.W.T.O.), a five-day session of which ended at Estoril (near Lisbon, Spain) on the 12th inst., was the adoption of a resolution condemning the action of the Governments of some of the wool producing countries to grant export subsidies as a means of promoting exports. This is perhaps a sequel to the complaints made by some of the wool growing countries which have been hit hard by severe competition in the world wool market. Export subsidies, it is pointed out, have led to "unfair" competition which, if not checked, would adversely affect international trade. Another highlight of the Conference was the approval of the admission of Japan into the organisation as a member. Yet another feature was the adoption of the revised rules for the international working of public conditioning and testing houses. The Conference also heard reports on the integration of the European wool industry, but did not announce any decision.

The I.W.T.O. Conference was attended by about 400 delegates from 16 member countries. These included Australia, New Zealand, South Africa, and Scandinavian and other European countries. Next year's conference will be held in Belgium.

Have the pulse of the
COTTON WORLD
in your hand by subscribing to the American "Weekly"
THE COTTON TRADE JOURNAL
This international "weekly" serves the cotton trade proficiently and, as a mirror, reflects the cotton situation in the United States and other cotton-producing and consuming countries.
A year's sea-mail subscription (Rs. 28-12 only) or air-freight subscription (Rs. 100-7 only) includes an Annual Textile Number, reporting developments and progress in the textile industry, and an International Edition of over 200 beautifully illustrated pages, giving a resumé of conditions in each of 22 countries as they affect cotton and world trade in general. This International Edition, otherwise, by itself costs $3.00 or Rs. 14-6-0 plus postage.
Substantial reductions for 2-year and 3-year subscriptions.

BRITISH TEXTILE INDUSTRY BUILDS UP ITS LABOUR FORCE

PROSPECTS FOR STARTING COTTON FUTURES TRADING

(From A Special Correspondent)

MANCHESTER, *9th June*

MANCHESTER LETTER

IT is unusual for Whit week to bring much business to the Manchester market when so many traders are working short time—or at least with skeleton staffs. This year, however, both the period immediately before and after the holiday proved the exception to the rule. A sudden revival of confidence seemed to affect buyers and the flow of small, quick-delivery contracts blossomed forth into something more substantial. The movement was led by the Egyptian fine spinning section, where rumours of a prospective rise in prices were later confirmed. Users who heard of the development naturally dropped their policy of keeping short and entered the market.

Buying over the past two or three weeks has not only been for the home trade, where so much of the recent recovery in turnover has taken place. Export customers, too, have been more disposed to look for supplies, although there remains some timidity in certain directions. Whether the strength of current prices for cotton in New York can be maintained in the face of a possible truce in Korea is the key to the whole situation. So far, the orders booked by Lancashire traders in this new phase of activity will keep a proportion of the industry's machinery busy for four or five months ahead. Any renewal of the upward movement in values might well provide the basis for even wider interest in Lancashire products.

Output and Employment

Lancashire weaving mills are building up their labour force almost as fast as the spinning section of the cotton industry. Cotton Board recruitment and production figures show that since last August when the recession began to ease, almost 7,000 full-time workers have been added to the manpower in cotton weaving mills. In four months this year, 2,400 workers have taken up jobs in the weaving industry, bringing the labour force to 137,100.

Output of cotton cloth in the five weeks ended 2nd May was affected by Easter holidays, but the average weekly production of 48,070,000 yards compared with 42,330,000 yards a week in the corresponding period last year. But the weekly production fell short by 1,530,000 yards on output in the previous month.

Over in the spinning section, for the first time for 15 months more than 100,000 operatives are at work in Lancashire mills. The new milestone in the cotton spinning industry's recovery has been achieved as a result of steady manpower gains over the last nine months. In that period over 7,000 full-time operatives have been recruited to the mills. Output is rising accordingly and in the week ended 16th May, the mills produced 19,240,000 lbs. of cotton and rayon yarns—the best results since the first week of February, 1952.

The Ministry of Labour figures, issued in Manchester, show that unemployment in North-West Britain is down to 60,650, the lowest level since January, 1952. A drop of 6,100 in the month to mid-May was chiefly due to an improvement in the cotton trade and more building work. The cotton jobless total has fallen to 4,090—least since December, 1951. Of that total over 2,000 are only temporarily stopped. The area has one vacant job for every two unemployed, biggest demands for workers being in the clothing, engineering and textile industries.

Contracts for Cotton

Whatever the outcome of the present investigation into raw cotton buying, the re-establishment of a futures market in Liverpool, even on a limited scale, will be a task which will severely try the patience of those who eventually attempt it. Even the most enthusiastic supporters of private enterprise are wise enough to recognise the complex problems involved. Mr. James Reynolds, President of the Liverpool Cotton Association, is fully aware of the dangers which could arise if a premature attempt was made to introduce the system. He said: "This could lead to a market fiasco that would be a disaster from which we could never recover."

The main difficulty revolves round the problem of convertibility of currencies. The effect on a Liverpool futures market at times when sterling might be under pressure cannot be accurately gauged and might easily cause a drain on dollar reserves. Another problem which needs solution is the technical question of what types of contracts should be provided. A purely American contract would be comparatively easy to arrange but this would merely be an extension of the existing New York market expressed in terms of sterling. The real need is for a mixed contract against which any cotton with a comparable spinning value to American could be tendered.

If such a contract was drawn up with sufficiently tight quality clauses it might provide buyers with their requirements for near months but the uncertainties surrounding production and marketing of outside growths would make it almost impossible to assess the value of distant months. In general, raw cotton circles in this country believe that a mixed contract, however desirable in theory, could not be relied upon in practice. It may be that an experimental mixed contract could be tried out in the event of the re-establishment of a futures market, alongside an American contract quoted only for a few months forward.

While the representatives of users and raw cotton merchants are thinking along the lines of freer cotton buying, the leaders of the trade unions are by no means impressed with the idea. Mr. Charles Schofield, Secretary of the Operative Spinners' Amalgamation, has gone so far as to say that the unions will resist to the utmost a return to pre-1940 conditions. In this, he does not wholly oppose private buying but is supporting his contention that working conditions during the centralised purchasing have been "immeasurably better" for the operatives.

Selling the Goods

The adoption of a vigorous policy of sales promotion for cotton goods is very much in the air at the moment. The Americans, with their innate sense of salesmanship, have apparently impressed on the European textile industries the need for advertising their wares as much as possible and widening the field of possible consumers.

For some weeks, officials of the National Cotton Council of America have been touring European textile centres expounding the virtues of widening trade prospects. The result has been summed up by the sales promotion Director of the Council in the words: "The world's cotton industries are on the verge of a new and important period of development in which the job of selling cotton products will be recognised and vigorously acted upon as a primary factor in industry, progress and welfare."

America's interest in the methods of processing the cotton grown in her fertile fields is also shown by the arrival of a mission of textile scientists and technologists. This team, which opens a European tour in Manchester at the end of the week, is to confer with representatives of textile industries in Sweden, Germany, Switzerland and France during the month. Their object is to consider methods of improving the processing of American-grown cotton in the mills of Europe.

The visit follows approaches made on the subject at last year's Buxton Conference and is yet another indication of the willingness of the world's textile men to get together and discuss mill problems. These research conferences take the national exchange of information on to an international level. But the technical men from America will undoubtedly be told by several European countries that United States cotton would be used in larger quantities on this side of the Atlantic if it were cheaper and currency difficulties did not intrude upon normal trading.

Cotton for Jets

More than half the 85,000 bales of Brazilian cotton exchanged for jet planes in the barter deal has now reached Britain. Arrivals of a further 9,288 bales of cotton from Brazil this week brought total imports to 43,487 bales, according to figures released by the Raw Cotton Commission.

Arrivals of cotton from all quarters this week aggregated 39,891 bales of which 30,236 bales were on Raw Cotton Commission account. Chief suppliers, other than Brazil, were the Sudan 7,830 bales, America 6,018 bales and Pakistan 5,259 bales. Among the 75,914 bales of cotton still at sea for Britain are 28,257 bales from Brazil and 10,817 bales from West Africa.—*All Rights Reserved.*

DELIBERATIONS OF COTTON ADVISORY BOARD

NO ANXIETY FELT ABOUT SUPPLY POSITION

THE general consensus of opinion among the members of the Cotton Advisory Board, which met in Bombay last week to review the cotton situation in the country, was that there is no need to fear any acute shortage of cotton either during the remaining part of the current season or during the next season. The Board, it is stated, examined the relevant data relating to the cotton situation in this and in the next season. The Board estimated that, at the end of the current season, the country would have as much as 1.9 million bales which should, by and large, be sufficient to meet the industry's requirements for more than four months by which time the new cotton crop would have arrived in the market.

The following table gives the official estimate of the commercial cotton crop for the 1952-53 season in the different cotton-growing States of the Indian Union:

(In 000 bales of 400 lbs. each)

Uttar Pradesh 10; East Punjab 255; P.E.P.S.U. 230; Rajasthan and Ajmer 150; Assam 10; Madhya Bharat and Bhopal 300; Madhya Pradesh 725; Hyderabad 340; Saurashtra Cutch 160; Bombay* 960; Madras† 300; Mysore 20—Total 3,460.

*This consists of Khandesh 160; Broach-Surat 425; North Gujerat 160, Comptah (Laxmi, Jayadhar, Pandarpur, Baramati Western) 215.

†This consists of Tinnevelley, Karungani 75; Cambodia Uganda 216F 100; Coconada 15, Western 110.

It would appear that, since these estimates were made, some notable improvement in cotton output has been reported from the Madras, Assam and Punjab regions. This improvement is estimated at an additional quantity of 45,000 bales. But it is also feared that the increase might be offset by a slight decline in output in certain other regions. The overall production figure might not, however, fall below 3.46 million bales. But it is significant that unofficial estimates place the crop at a slightly lower level, that is, at about 3.35 to 3.40 million bales.

The Board considered, it is stated, the balance-sheet for cotton for the 1952-53 season, that is, the estimated supply and distribution position of cotton (Indian and foreign) based on the estimates of crop, likely imports, exports and mill consumption. The following is the official version of the cotton balance-sheet for 1952-53 season:

(In 000 bales of 400 lbs. each)

	East Indian cotton	*Foreign cotton*	*Total*
Supply—			
Carry-over with the mills and trade on 31-8-1952	1,913	490	2,403
1952-53 season's commercial crop	3,460	..	3,460
Import of cotton (from 1-9-'52 to 31-5-'53)	..	453	453
Anticipated imports (from 1-6-'53 to 31-8-'53)	..	272	272
Total supply	5,373	1,215	6,588
Distribution—			
Mill consumption—			
Actual consumption (from 1-9-'52 to 30-4-'53)	2,381	556	2,937
Estimated consumption (from 1-5-'53 to 31-8-'53)	1,120	300	1,420
Estimated mill consumption, 1952-53	3,501	856	4,357
Exports—			
Actual exports (from 1-9-'52 to 31-5-'53)	290	..	290
Anticipated exports (from 1-6-'53 to 31-8-'53)	10	..	10
Total exports	300	..	300
Total disappearance	3,801	856	4,657
Estimated carry-over on 31-8-1953	1,572	359	1,931
Total distribution	5,373	1,215	6,588

The carry-over stocks of cotton, at the end of the current season, as the above table shows, will be of the order of 1.9 million bales. Assuming that consumption by the Indian mills remains at an increased level of 300,000 bales of Indian cotton and 75,000 bales of foreign cotton per month—the actual consumption of these two varieties during April, 1953, has been estimated provisionally at 280,151 bales and 75,000 bales respectively—the estimated carry-over of 1.57 million bales of Indian cotton and 359,000 bales of foreign cotton as on 31st August, 1953, will enable the mills, it is confidently predicted, to maintain normal production upto the end of January, 1954, by which time the mills will also be receiving the initial supplies of the 1953-54 crop.

The Board was, therefore, convinced, it is learned, that the overall supply position in the next season should not cause any great anxiety, provided, of course, the Indian crop for the season turns out to be a normal crop. The Board's optimism is justified in the context of the general improvement in the cotton position both in India and in other cotton-producing countries. The position has certainly improved since the country passed through the three critical years 1948-49, 1949-50 and 1950-51. The two chief features of those years were the smaller acreage under cotton in India—the position was aggravated by failure of the monsoon in certain parts—and the higher level of world cotton prices. These factors interfered seriously with the Government's efforts to augment supplies to the mills through larger domestic production or increased imports. Thus, during 1948-49, the land under cotton was only 11.29 million acres, and the output was no more than 1.77 million bales, according to the official crop forecast, which is always very much below the trade estimate. It is true that the carry-over stocks at the beginning of the 1953-54 season will be only 1.9 million bales, as against 2.4 million bales at the commencement of the 1952-53 season. But this shortfall in carry-over stocks should be compensated by a larger crop, given a good monsoon.

Apart from the increase in cotton acreage, the favourable factors—that is, factors favourable to the cotton supply position—are: (1) *Deshi* varieties are being replaced by staple varieties. (2) The restriction on mills' consumption of staple fibre has been liberalised. The Textile Commissioner has, by a recent notification, permitted mills to put 10 per cent. of the spindles or 5,000 spindles, whichever is higher, on staple fibre as against the previous stipulation of a similar proportion of spindles or 3,000 spindles (whichever is higher). (3) Mills are encouraged to use soft cotton also. (4) World cotton situation is now easier than formerly, both in terms of prices and carry-over stocks. In these circumstances, it is hardly surprising that the Board showed no excessive anxiety over the cotton situation in the country.

On the question of prices, the Board recommended to the Government that if control were to be continued during the next season, the present floor and ceiling prices should apply to the 1953-54 crop also.

The Board also recommended that the Government should consider, with a view to maintaining continuity in hedge trading, the advisability of permitting hedge trading in the 1953-54 crop at an early date and that the announcement should not be delayed beyond 15th July, 1953. Other recommendations made by the Board were purely of an administrative character, it is stated. One of these was that a provisional quota for new crop should be given to the mills. Another was to the effect that an additional quota should be granted to those mills which have bought at least 80 per cent. of the quotas already granted to them. But the major issue which figured prominently in the Board's discussions was the overall supply position in cotton, about which it convinced itself, as already stated, that there need be no alarm or anxiety.

COTTON IMPORTS

Imports of foreign cotton into India from 1st September, 1952, to 31st May, 1953, aggregated 452,830 bales. The details are:

(In bales of 400 lbs. each)

Country of origin	*Quantity*
U.S.	57,767
Egypt	169,314
East African	188,327
Sudan	34,866
Others	2,556
Total	452,830

The details of import licences for foreign cotton issued during the same period are:

(In bales of 400 lbs. each)

Egyptians	210,529
East African	259,230
Sudan	74,113
Others	2,625
Total	546,497 *

* In addition to this quantity, the Government has extended the validity of licences for 155,000 bales (400 lbs. each) of U.S. cotton upto 31st December, 1953. The Government has also licensed the import of 50,000 bales (400 lbs. each) of staple fibre.

EGYPTIAN COTTON

The Egyptian Government's third estimate of the 1952-53 cotton crop places it at 9,922,240 kantars. Total sales of cotton by the Egyptian Cotton Commission (E.C.C.) for the season till the end of May are placed at about 610,000 bales. Exports for the season till the end of May aggregated 5,200,000 kantars as against about 3,541,000 kantars during the corresponding period of last season. The E.C.C. has so far taken, according to the Cairo correspondent of the *Financial Times*, possession of 765,304 bales at a total cost of £E.74 million and has recouped £E.44 million from sales. Discussing the prospects for Egyptian cotton, he says:

"Next season's crop is estimated privately at between 7 million and 7½ million kantars, which, together with this season's estimated carry-over of under 3 million kantars, should be disposed of without undue difficulty by 31st August, 1954. Following the announcement of the Government's buying policy next season, there has been much speculation whether the Government intends to "nationalise" the whole crop by taking away the growers' present freedom of choice either to sell to the E.C.C. or on the free market if better prices are available as at present. Questioned about the truth of these reports, Ahmed Naguib, Under-Secretary of Finance for Cotton Affairs, said that so far no such decision had been taken.

"Meanwhile, the Cabinet has approved the scheme for the creation of a 'trust fund' for the textile industry. The main object of the fund will be to help in the disposal, on the Egyptian and foreign markets, of locally-made cotton textiles and thread, to direct and pay for a technical research programme, and to make loans to factories 'if funds are available.' A permanent 11 man-committee composed of delegates of mills and the Ministries concerned will be in charge of the administration of this fund. The committee will also have to draw up specifications which must be met by goods for export and for the local market.

"The money for the fund will be provided out of a special tax on cotton purchased by mills from the E.C.C., banks or merchants. The tax will be fixed by the fund's control committee at between 2½ per cent. and 5 per cent. of the value of the cotton purchased until the fund reaches £E.1 million. After that the tax will be 2½ per cent. All factories refusing to pay the tax will be fined £E.50—200 which will be doubled should the offence be repeated within a period of three years."

The active demand for Sudan cotton which was witnessed for some time past has dwindled to a considerable extent at the moment, it is stated. The fact of the matter is that mills have covered practically all their requirements of Sudan growths and local investors are ready to unload their holdings at prices below replacement cost. The total Sudan crop (all varieties) is estimated at 435,000 bales of 400 lbs. each. Marketing of the 1952-53 Gezira crop is now almost complete. The U.K. Raw Cotton Commission is believed to have bought about 90,000 bales of the remaining stocks and India most of the balance. The bulk of the Nile-Cash crops, however, has yet to be disposed of and 80,000 bales are on offer against tender.

The Gezira Board has advised all buyers that the production of certain Gezira types has not come up to expectations, notably G5L and G6S. In consequence, these marks have been oversold and buyers will be obliged to take lower cotton in replacement at an allowance.

The sudden deterioration in the condition of the crop which occurred close to harvesting time and the very rigid classification at Port Sudan are held responsible for this miscalculation which now puts buyers in an awkward position *vis-a-vis* certain spinners who are unable to use lower cotton.

Just a matter of **ROAD GRIP!**

Even when walking along at no more than 4 m.p.h., a wet pavement may often prove treacherous. How much more so a wet asphalt road for a vehicle travelling at 40 m.p.h. or more! You are best prepared for the monsoon with Dunlop. The wider and flatter tread ensures greater road stability, while the unique non-skid tread pattern wipes away the water, allowing dry rubber to grip the dry road.

AUDITOR'S REPORT.

1. I beg to report that I have examined the above Balance Sheet of THE PRABHAKARA BANK, LIMITED as on 31st December, 1952 and the Profit and Loss Account for the year ended 31st December, 1952 with the Books and Vouchers of the Head Office and the certified returns from the Branches and that I have obtained all the information and explanations I have required. 2. In my opinion, such Balance Sheet and Profit and Loss Account are drawn up in conformity with the Law and the Balance Sheet exhibits a true and correct view of the state of affairs of the Bank according to the best of my information and the explanations given to me and as shown by the books of the Bank. Further, in my opinion, the books of Accounts have been maintained by the Bank as required by section 130 of the Indian Companies Act. 3. The information and explanations required by me have been found to be satisfactory. 4. The transactions of the Bank which have come to my notice have been within the powers of the Bank. 5. The returns received from the Branch Offices of the Bank have been found adequate for the purposes of the audit, and 6. The Profit and Loss Account shows a true balance of Profit and Loss for the period covered by such account.

PAREL, BOMBAY, *5th April*, 1953.

PALM "GUR" INDUSTRY IN INDIA

MORE ATTENTION TO RESEARCH ON IMPROVED METHODS EMPHASISED

THE deliberations of the fifth session of the All-India Palm *Gur* Workers' Conference, held at Tuticorin last week, clearly emphasises the importance of the palm *gur* industry as a source of national wealth and utility. The industry provides employment for 60,000 workers—tappers and their families. The *gur* produced from the date and palmyra trees is an excellent energy-giving article of diet, preferred, in many respects, to white sugar by doctors. In fact, it is claimed that palm *gur* is "all food." If, therefore, the production of this commodity is augmented and its use popularised, one can expect to get, as Mr. C. Rajagopalachari, Chief Minister of Madras, stated, in the course of his inaugural address at the Conference, all the sugar we require from these trees "which look after themselves." The importance of the industry also lies in the fact that we can use more of good irrigated land to produce rice without putting it, as we now do in certain parts of India, under sugarcane cultivation to the detriment of rice production.

It is estimated that there are about 50 million palm trees in India—these flourish on waste land, hillocks and field margins—which can yield nearly 1.8 million tons of *gur*. At present, all palms are not being tapped for producing *gur*. No reliable data regarding annual output of palm *gur* in the country is available. According to one estimate, however, the production of palm *gur* is at a very low level. It is placed, for instance, at about 12,000 tons in Madras State and 5,000 tons in West Bengal. Palm *gur* is now obtained from only 10 million palms in the country. If all the palms are tapped, the annual yield would rise to 11 lakh tons worth Rs. 50 crores and capable of giving employment to two million workers—10 times the number presently employed. If all the palms were fully utilised, nine lakh acres of fertile land under sugarcane cultivation could be relieved, thus helping to produce two and a half lakh tons of wheat or three lakh tons of rice in addition. There is thus considerable scope for the expansion of the industry in these two States, as well as in other parts of the country, but its further development depends, to a considerable extent, on proper planning and State aid. Realising the importance of such planning, doubtless, the Planning Commission has accorded a high place in its development programme for village industries. The scheme for the development of palm *gur* envisages an increase in production to the extent of 81,852 tons to 253,252 tons by the end of the plan period, 1955-56. The recurring additional annual production after four years will be 40,143 tons. The scheme, estimated to cost Rs. 1 crore, provides for training and research. The Commission admits that an element of subsidy may also be necessary.

Progress in Different States

The need for developing the palm *gur* industry on a stable and sound footing would appear to have been well recognised by some of the State Governments, as witness the active steps taken by them. The progress made in the State of Madras needs particular mention. With the help of the Centre, the Government of this State has launched an intensive scheme of training ex-toddy tappers in improved methods of *gur* production. The industry has been organised on a co-operative basis and several technical improvements, it is claimed, have been effected. That these efforts have not been without avail is indicated by the following brief account furnished by one of the delegates from Madras to the Conference.

During the year ended March, 1953, palm *gur* instructors conducted training at 718 centres and trained 4,733 ex-tappers in the manufacture of palm *gur* by improved methods. Another 43,015 tappers, other than trainees, were acquainted with the improved process of *gur* production. Demonstrations—numbering 8,321—explaining improved processes were conducted in villages by instructors and they were witnessed by 7,839 members of *gur* co-operative societies and lakhs of others interested in the industry. As a result of the training imparted and the demonstrations conducted, 2,916 maunds (imperial) of better quality *gur* were produced by trainees and 80,300 maunds by ex-tappers. The Government sanctioned Rs. 10,000 for ensuring supplies of implements to ex-tapper members of the societies. Co-operative marketing federations were formed in four districts, besides the organisation of sales through primary *gur* manufacturing societies.

Good progress is reported to have also been made in Rajasthan. A sum of Rs. 90,000 was spent last year on palm *gur* development in the State and 100 candidates were trained in manufacture at five newly started centres. An additional scheme, involving Rs. 20,000, for *adivasis* has been put into operation. Under this scheme, a new training centre has been opened, at which about 25 candidates are given training. A Bill seeking to develop the palm *gur* industry is under the consideration of the Government. The Rajasthan Government has also formulated and forwarded to the Centre a palm and date research scheme costing Rs. 1.92 lakhs. Steps are also being taken to include palm *gur* industry in the Community Project Scheme.

In Uttar Pradesh, the industry is recognised as a potential one for absorbing landless labourers. The palmyra season in this State is too short and lasts only for three months. Efforts are being made to prolong it for nine months. Under the training scheme, the trainees, after completion of the course, get a subsidy in the shape of juice boiling pans, small tanks and other implements so that they can establish themselves in the industry. There are several training-*cum*-demonstration centres in the State of Hyderabad. With a view to enabling the trainees to make a start in the industry individually, necessary equipment worth Rs. 100 per head has been given as subsidy to 19 interested trainees, out of which 10 have already taken to individual production. Good progress is reported in other States like West Bengal, Travancore-Cochin, Orissa, Madhya Bharat and Saurashtra too.

Pressing Problems

Despite the series of measures taken by the State Governments for developing the palm *gur* industry, as noted above, it must, however, be said that much still remains to be done in solving some of the most pressing problems confronting the industry. Crude methods of tapping and boiling of palm juice continue to be adopted in some States. These methods vary from State to State. It is, therefore, essential to standardise tapping tools, method of tapping and boiling processes. As the Tariff Board (1950) has pointed out, the industry needs technical advice and guidance. It is also necessary to establish agencies for applying results of research to palm *gur* manufacture and make the cultivator actively conscious of the need for technical improvement. The Board, therefore, considered it essential to organise research on palm *gur* under the administrative control of the Central Government. In this connection, it observes as follows:

"We have been informed that a beginning has already been made to train skilled workers in the technique of palm *gur* manufacture and the Government of India have started a Central Palm *Gur* Training School at Cuddalore in the Madras Province. Government should also consider the desirability of starting a Central Palm *Gur* Research Laboratory at a suitable place to conduct research into the various problems of the palm *gur* industry. A beginning in this direction can be made by establishing a section on palm *gur* manufacture in the Indian Institute of Sugar Technology at Kanpur. It may be necessary also to start a few regional laboratories under the palm *gur* section of the Sugar Institute, taking into consideration the different types of palms, as all the varieties of palms which can yield sugar, viz., coconut, date and palmyra, are not found in the same locality. We recommend that adequate funds should be made available, both by Central and Provincial Governments, for such training and research in palm *gur*. We also recommend that the subsidy granted at present by the Government of India for Provincial palm *gur* development schemes should not be reduced."

The palm *gur* industry is said to be encountering difficulties in regard to marketing, as, for example, lack of adequate facilities for storing *gur* for a sufficiently long period. As a result, *gur* gets spoiled during the off-season and the producer has to suffer loss. If this is to be avoided, it is imperative that new ways of stocking *gur* are devised so that it may not deteriorate even during the winter.

It is appropriate to refer here to the new process of manufacturing palm *gur* by solar energy which was inaugurated at Tuticorin on the 10th inst., on the occasion of the Madras Conference of palm *gur* workers. The idea of harnessing solar heat for evaporating palm juice, it will be recalled, was first conceived by Mr. Gajanan Naik. Palm *Gur* Adviser to the Government of India. Since then, several attempts have been made, but none was a success until recently, owing to two main obstacles. First, a longer period is required for exposure —ordinarily, 15 to 20 gallons of juice could be boiled into *gur* within two to three hours. Secondly, a tapper, on an average, handles 15

(*Continued on page* 1155)

COLLIERY LABOUR PROBLEMS

NEW CONCILIATION BOARD IN THE OFFING

THE task of the new Conciliation Board, which is expected to be constituted shortly by the Government of India, to enquire into the various demands of colliery labour, will be formidable. The chief subject of enquiry will be the revision of the wage structure. The National Mine Workers' Federation has demanded, in its latest memorandum to the Ministry of Labour, a minium basic wage of Re. 1 and As. 13 for unskilled male and female labour, respectively. It has further sought an increase in dearness allowance proportionate to the rise in the cost of living since 1947 and the calculation of provident fund contributions on the basis of basic pay plus dearness allowance, as provided in the Employees' Provident Funds Act, 1952.

There is some force in these demands. It is true that the present basic wage of about As. 8 per day with 150 per cent. dearness allowance is very low, especially when workers engaged in other occupations in the same locality are getting more. Male and female workers in Kumardhubi Engineering Works in Manbum (Bihar), for instance, are getting a basic wage of Re. 1 and As. 13, respectively. That the dearness allowance should be proportionate to the rise in the cost of living is also logical. So also the demand for calculating provident fund contributions on the basis of the Employees' Provident Funds Act, 1952.

But the acceptance of the justice of these demands theoretically is one and the capacity of the industry to pay another. So far as the coal industry is concerned, it is passing through very hard days. The following extract from the Directors' report of the Heilgers group of coal companies will give a correct picture of the present state of affairs of the coal industry:

"Current production figures are higher than ever before and it now appears that the available coal, of all grades, is in excess of the actual demand, especially when contracting export markets are taken into account. This, coupled with the unsatisfactory transport position, has led to a general increase in stock at pitmouth. Additional difficulties exist in the matter of securing a suitable outlet for the slack fraction of selected grade raisings."

In fact, the position is so bad that several collieries are on the verge of closure. The industry has already represented its difficulties to the Government. It has demanded an immediate restoration of the 1949 price-cut. This, it has held, is absolutely necessary, if the conditions of the industry are not to deteriorate further. It has also pleaded for relief from the burden of supplying foodstuffs to the workers at concessional rates, costing the industry something like Rs. 6 to Rs. 7 lakhs per week. The industry feels that wages should be linked to productivity, and any revision in the wage structure involving a higher wage not related to productivity is fraught with serious consequences.

It is evident that the task of the Conciliation Board is certainly not an easy one. It will have to weigh both the humanitarian aspect of the workers' demands and the capacity of the industry to pay, and arrive at a solution which would not only be logical but practicable. The Conciliation Board has also to examine the question of the basis of payment of bonus which is also a highly controversial issue. The workers have demanded that it should be based on aggregate emoluments, while the employers contend that it should be related to attendance and production.

There are a few more demands of colliery labour which are to be examined by the Board. These are: First, there should be 10 paid festival holidays, including 26th January and 15th August. Secondly, gratuity should be paid to all workers on completion of 15 years' service. Thirdly, there should be 21 days' privilege leave, 15 days' sick leave and 7 days' casual leave. All these holidays are to be with pay. Fourthly, colliery labour should be provided free with footwear and uniforms. Fifthly, there should be complete abolition of the contract system of recruiting labour. Sixthly, labourers should be provided with either houses or paid house rent. Seventhly, the food concessions should not be abolished and, finally, the standing orders should be revised.

It may not be difficult to arrive at some definite compromise regarding these demands, excepting perhaps that relating to foodgrains which is a severe drain on the finances of the collieries. It is to be hoped that all these matters will be mutually settled and an example set for other industries.

HINDUSTHAN CO-OPERATIVE INSURANCE SOCIETY LIMITED

KUMAR K. C. MULLICK ON SCOPE FOR LIFE INSURANCE

VIGOROUS SALESMANSHIP NECESSARY FOR GAINING NEW BUSINESS

THERE is practically "unlimited scope" for the growth of life insurance in this country, according to Kumar K. C. Mullick, Chairman of the Hindusthan Co-operative Insurance Society, Ltd. Addressing the Forty-sixth Annual General Meeting of the Society, held in Calcutta recently, the Chairman said that the completion of the Five-year Plan, which was expected to increase the national income by 11 per cent., must "surely be of great advantage for life insurance," because it would mean added prosperity to the clients of insurance companies. He paid a tribute to the Indian insurance industry which had made rapid strides of progress in recent years, although it had never received, till recently, the sympathetic attention of the authorities.

At the outset, Kumar K. C. Mullick referred to the death of Mr. N. R. Sarker on the 25th January, 1953, on the very day the opening ceremony of his marble statue was performed in the Hindusthan Buildings. The Chairman said: "Mr. Sarker might truly be called the architect of the Society who guided for over 30 years the affairs of the Society with the highest skill and business acumen. For all these years, in whichever other sphere of life he might be working—the benefit of his wise counsel and mature wisdom was always available to us. It, therefore, leaves a great void in the lives of all of us, who had known him so intimately for so many years as also in the counsels of Hindusthan, which it will be difficult to fill."

Continuing, the Chairman said:

"The year 1952 has been a very trying year for all who are in the business line and particularly for us, life insurance companies. Our operations are vitally connected with the prosperity of the general masses and anything which affects that adversely must also similarly affect us. In the beginning of the year under review there was a slump in wholesale prices, which started in February and continued unabated till May. From 433 in December, 1951, the wholesale price index fell to 415 in February and to 367 in May. Thence forward, the index fluctuated around this figure and in December, 1952, it stood at 372. The effect on trade and commerce of such drastic fall can easily be imagined and we found that such drastic fall had affected specially those classes of traders and merchants who are good prospects for life insurance. Throughout the year, at different points of time, three major industries of the country—jute, textiles and tea—remained depressed. The Society, which does very good business in Bengal and Assam and the neighbouring areas, was naturally hard hit by the depression in the tea and jute industries because the prosperity of these areas is largely bound up with the prosperity of these industries. All this had made the task of business procurement much more difficult, but by the grace of God and by the strenuous efforts of our office and field workers we have been able to maintain its progress.

New Business

"The new business completed during the year under review amounted to Rs. 16 crores 38 lakhs. Though this means an improvement over the previous year's figure, yet, in our view, the improvement is not in line with the expected usual progressive tradition of Hindusthan. We, however, hope that as economic conditions in the country improve, we shall be able to accelerate the pace of progress as recorded by us in the past.

"The total premium income, during the year under review, in respect of life insurance business, amounted to Rs. 3,94,04,504 which shows an increase of Rs. 21,96,233 over the 1951 figure. Income from interest, dividends and rents, including profits on landed properties in respect of life insurance business, amounted to Rs. 61,83,011. The rate of interest earning, including profit on sale of landed properties, worked out at 3.37 per cent. after deducting income-tax at source. The life assurance fund, at the end of the year, amounted to Rs. 19,72,50,871, recording an increase over 1951 by Rs. 2,11,53,632. The major heads of investments of the fund were: (i) Government and approved securities Rs. 12,65,49,465; (ii) debentures, stocks and shares Rs. 1,61,65,531; (iii) loans to policyholders Rs. 1,44,39,922; (iv) mortgages Rs. 2,30,57,791 and (v) land and houses Rs. 2,10,12,659. Government and approved securities represent 62.5 per cent. of adjusted liabilities.

"During the year under review claims by maturity, inclusive of bonus, amounted to Rs. 57,91,138 and by death, inclusive of bonus, to Rs. 30,71,708.

Expense Ratio

"Since the passing of the Insurance Amendment Act in 1950, providing a ceiling on the expense ratios of life insurers, the question of expense ratio occupies a pre-eminent place in the minds of all who are connected with the insurance business. The situation has been rendered rather difficult for the insurers because of the fact that just when the limit was imposed on them, circumstances have been compelling them to incur substantially larger outlay on many items included in the expenses of management. So far as Hindusthan is concerned, fortunately we have been able to keep our expenses within limits—the renewal expense ratio in respect of the Society's business in India in the year under review worked out at 14.71 per cent. as against 14.89 per cent. in the previous year. The overall expenses for the year have been 27.60 per cent. as against 27.90 per cent. of the year previous."

Outlook

Speaking on the prospect of future growth of life insurance, he said:

"In our view there is going to be unlimited scope for growth in future for life insurance companies run on sound and scientific lines. The Five-year Plan, when completed, is estimated to effect an increase of 11 per cent. in the national income which must surely be of great advantage for life insurers, because it will mean added prosperity to our clients. Insurance companies have a great part to play in providing finance for the Plan and, I may take well-deserved pride in stating that they are already playing their role in a satisfactory manner. As it is, the major proportion of the additions to funds of the life insurers are being invested in Government and approved securities, and, as has been stated by me earlier, this percentage for Hindusthan comes to 62.5 per cent., which is very much higher than the limit prescribed by the Government. Apart from this, the land development schemes undertaken by the Hindusthan are also works of major national importance.

Nationalisation of Insurance

"In this context, it is really disquieting to us to see references lightly made to nationalisation of insurance on the assumption that if insurance is run by the Government it would be conducive to larger national interests. Indian insurance is only about 50 years old, and till we won independence this national enterprise received very little active support or encouragement from the then authorities. We had to work in competition with mighty foreign insurers whose resources were incomparably superior to ours at that time. It is indeed a matter of great credit for Indian insurers, that in the face of heavy odds they have been able to popularise insurance to such a large extent amongst our countrymen. Insurance is a peculiar type of business; it not only requires a lot of constructive work, but a large degree of vigour and aggressiveness in securing policies, which is not necessary in any other form of business. When we consider the question of nationalisation, we must not lose sight of the fact that under State management the degree of initiative and enterprise, which is essential in the insurance business, may not be forthcoming. I do not exactly see what would be gained in the way of better safeguarding of the interests of policyholders by putting life insurance under State management. Already, the degree and extent of control and supervision, exercised under law, over various aspects of a life insurance company's working, such as investments, expenses, etc., are so much that we would perhaps be justified in stating that insurance is already semi-nationalised, as Government has taken large control over the life insurance company's workings.

Taxes on Insurance

"Difficulties that the insurers have to face are manifold. In respect of many of the difficulties, redress can come about only gradually; but there are some in respect of which the Government can come to our help in a more direct manner. I have in mind the question of income-tax of insurance companies which has been a hardy annual for us all. The Income-tax Investigation Committee had recommended that life insurance companies should get an exemption of 80 per cent. of the amounts paid to or reserved for or expended on behalf of the policyholders from the surplus. This has appeared in the proposed amendment to the Income-tax Act, and when given effect to, will ensure considerable relief to us. The relief will come none too soon because life insurers have had to experience heavy depreciation in their funds lately because of the raising of the Bank rate by the Reserve Bank of India.

"Similarly, in respect of the provisions which have been inserted in the Estate Duty Bill, life insurance policies have not been given the exemption which is their due. In a country like India, where the insurance habit is still to grow to its fullest extent, would it not be natural for us to expect that the Government should do everything possible to encourage the habit of thrift involved in the taking out of insurance policies instead of making legislations which will have, to say the least, detrimental effect on the growth of insurance habits? One can understand a State imposing such taxation in a country where there are schemes of social security for all and sundry, run under the auspices of the Government. In India, there is no such scheme and each man is left to himself to provide for his dependents against destitution and poverty through loss of income on account of his death. Life insurance, at the present moment, provides the only scope for ensuring such security to the common man. By taxing the proceeds of life insurance policies, Government will be doing something which, in our view, does not have a justifiable background to support it, at least till such time as the Government can provide such schemes of social security as obtain in other countries.

"You will be pleased to know that our Jamshedpur building is complete and last month we performed the opening ceremony. Sir Jehangir Ghandy, Resident Director of the Tata Iron and Steel Company Ltd., performed the opening ceremony. We have in hand construction of several other offices in different parts of the country and we expect that at least the Gauhati building will be completed within this year.

"The position of the shareholders continues to be satisfactory and a dividend of 10 per cent., free of income-tax, is being recommended for payment to the holders of ordinary shares in proportion to capital paid up."

PAKISTAN SELLS BURLAP TO U.S.

STOCKS IN INDIA STILL HIGH

THE first commercial shipment of Pakistan-made burlap to America, which is now on its way, heralds a new era of competition between India and Pakistan in the U.S. markets. The consignment is the product of new jute mills, the erection of which began in East Pakistan immediately after the Partition. The mills are equipped with plant and machinery of the latest improved model and hence enjoy a decided advantage over the mills in India which are old and worn out on account of the excessive strain to which they were subjected during the war years. Indian mills, however, have other factors in their favour, namely, long experience of the U.S. market, old business contacts and an up-to-date publicity machinery to regain the ground lost in U.S. markets. With these advantages and with a programme of gradual renovation of their plant and machinery, India should be able to maintain its own in the U.S. burlap market.

The U.S. markets appear to be satisfied with the entry of Pakistan as a new exporter of jute products to the U.S. To mark the occasion, a meeting was organised last week, at Pakistan House, New York, at which Mr. Ghulam Faruque, Chairman of the Pakistan Industrial Development Corporation, and Mr. Abdul Wahed Adamjee, Chairman of the Adamjee Jute Mills, East Pakistan, were present. Welcoming the first consignment, Mr. C. E. Elsas, President, Textile Bag Manufacturers' Association of the U.S.A., stated, in the course of his message to the meeting, that "this first consignment will be the forerunner of an increasing quantity of Pakistan jute products to the U.S.A. and to world markets." Similarly, the President of the Burlap and Jute Association of the U.S.A., Mr. J. C. Daly, welcoming Mr. Faruque and Mr. Adamjee, observed: "This is the most significant occasion in the happy course of Pakistan-American trade relations. It marks the era of a new trade between our countries created by men of vision and determination."

While jute mills in India are now facing an additional threat in the shape of competition from Pakistan, their position, as represented by the figures of stocks at the end of May, 1953, does not seem to be encouraging. For total stocks of jute manufactures amounting to 139,072 tons held by mills as at 31st May, 1953, are the highest for some years now. Of the total stocks, hessians account for as much as 47,971 tons as against 46,193 tons in the preceding month and 41,874 tons in March, 1953. Sacking stocks stood at 89,166 tons in May, 1953, as compared with 89,278 tons in April, 1953, and 94,742 tons in March.

The foregoing figures indicate that, since March, while stocks in hessians have gone up, stocks of sackings have staged a slight recession. The fall of over 5,000 tons in the latter since March, 1953, is due partly to the inflow of orders for sacking from Australia, Cuba, Burma, the U.K. and other countries, and partly to a fall in the production of sacking from 40,049 tons in March to Rs. 38,292 tons in May.

The table below gives a summary of the stocks of the three different varieties of jute goods with Indian jute mills as at the end of May, 1953, as compared with those at the end of April and March, 1953, and May 1952:

(In tons)

	As on			
	31-5-1953	30-4-1953	31-3-1953	31-5-1952
Civil				
Hessian	47,024	45,432	40,755	42,575
Sacking	86,904	86,648	92,406	54,908
Others	1,935	2,042	2,144	1,451
Total ..	1,35,863	1,34,122	1,35,305	98,934
Government				
Hessian	947	761	1,119	1,326
Sacking	2,262	2,630	2,336	3,573
Others	..	23	37	8
Total ..	3,209	3,414	3,492	4,907
Grand total ..	1,39,072	1,37,536	1,38,797	1,03,841

The variations in the stocks of hessians and sackings are, however, so small that it will be inadvisable to draw any positive conclusions about the future of these goods. Some have not hesitated to state that the sackings position is improving, while that of hessians has begun to deteriorate. This inference is not quite warranted. In this context, it will be interesting to recall here the observations on the trade in jute goods, of Mr. George A. Mason, Chairman, Samnuggur Jute Factory Co., Ltd., in the course of his speech at the latest annual meeting of the Company held last month. He said: "Turning now to the jute goods section—the most encouraging feature is the considerable increase in consumption of hessians in the U.S.A. during 1952. In 1951, the average monthly figure was only 44 million yards, whereas for the last year, it was 69 million yards. Another centre which is showing more active interest is Argentina, and the prospects, on the whole, so far as hessians are concerned, are brighter. In regard to sackings, the immediate outlook is uncertain and we must await developments." The fact that hessian stocks remain as high as 89,166 tons indicates that there is still no room for any complacency till they are reduced to half of what they are at present.

The output of jute goods in May amounted to 72,544 tons, as against 74,292 tons and 74,430 tons in the preceding two months. With the output for the month, the total production of jute goods for the 11 months of the jute season, 1952-53, amount to 818,793 tons, as compared with 871,223 tons. The consumption of raw jute calculated on the basis of production may be placed at 4,748,199 bales as against 5,053,093 bales in the 11 months of the season 1951-52.

The table below presents the position of jute production of various types in May, 1953, as compared with not only the output in the preceding two months but also in the same month a year ago:

(In tons)

	As on			
	31-5-1953	30-4-1953	31-3-1953	31-5-1952
Civil				
Hessian	29,154	30,573	29,553	23,899
Sacking	38,206	39,625	39,560	52,646
Others	2,568	2,663	2,746	2,706
Total ..	69,928	72,861	71,859	79,251
Government				
Hessian	2,530	1,254	2,082	129
Sacking	86	177	489	2,948
Others	..	..	..	9
Total ..	2,616	1,431	2,571	3,086
Grand total ..	72,544	74,292	74,430	82,337

An analysis of the different types of production discloses that the output of hessians remained more or less stationary around 31,600 tons in each of the three months ended May, 1953. But the production of sackings, as already stated, registered a gradual decline from 40,049 tons in March to 39,802 tons in April and to 38,292 tons in the month under review. Similarly the output of other varieties also declined, albeit slightly, from 2,746 tons in March to 2,568 tons in May, 1953.

The Philippines is reported to have made a good beginning in production of jute bags. The Industrial Textile Manufacturing Co., Manila, which is now producing at the rate of 500,000 bags, proposes to increase its output to 1,500,000 bags a month by working two shifts. The Company uses both Philippine *kenaf* and Pakistan jute.

ALUMINIUM—
THE WONDER METAL

Whether in the manufacture of aircraft or tea kettles, aluminium has challenged established metals in almost every industry. The Indian Aluminium Company at Alwaye in Travancore-Cochin is making a vital contribution to the growth of India's industries by producing from Indian Bauxite, aluminium ingots nearly 2,400 tons annually, the major portion of India's total production of 3,700 tons. In the production process, electricity is to aluminium what coal is to steel and the Alwaye plant is equipped with General Electric substation, motors, switchgear and rectifiers. With the additional General Electric equipment to be installed shortly, the production figure is expected to be doubled in 1956.

Inaugurated 75 years ago in U.S.A., when its parent company was first established, General Electric's unlimited resources, skill and research have been used and are available to India for the development of her industrial potential.

This is General Electric's 50th Anniversary of Service in India.

Six G-E Rectifier Units each rated at 5,000 amps., 535 volts.

International EXHIBITION

ON LOW-COST HOUSING

NEW DELHI

JANUARY 20 — MARCH 5, 1954

The problem of low-cost housing can be met by developing and utilising indigenous building materials by better designs and specifications and by improving the technique of construction. In order to provide a forum for the demonstration of such attempts an Exhibition on Low-cost Housing will be held in New Delhi during January–March, 1954, in which foreign countries will also participate.

The Exhibition is divided into different sections — Model Houses, Building Materials, Construction Technique, Tools and Light Machinery, Heavy Machinery, Domestic Services, Town Planning, Miscellaneous.

For detailed information, intending Exhibitors and firms who wish to advertise their goods may write to Director, International Housing Exhibition, Ministry of Works, Housing and Supply, 'P' Block, New Delhi for a copy of the 'Prospectus and Guide'.

Enquiries relating to bookings in the Amusement Park of the Exhibition should be sent in early to the Director.

Issued by the Ministry of Works, Housing and Supply, Govt. of India, New Delhi. AC 473

PROSPECTS FOR EUROPEAN STEEL EXPORTS

REPORT OF ECONOMIC COMMISSION ON NEED FOR STABLE PRICES

THE Report of the U.N. Economic Commission for Europe on European steel exports in the next few years, made available to us just now, is of considerable importance not only to India but to all the steel importing and exporting countries of the world. For Western Europe is one of the important exporters of steel, the others being the U.S. and Japan. And with the implementation of the steel development plans under contemplation, it may not be long before Europe increases its competitive capacity *vis-a-vis* other steel exporting countries. The Report throws some light on the possible development of steel demand outside Europe and the prospective level of steel exports in the years 1956 to 1960.

As substantial export surplus from Eastern Europe in the next few years is virtually ruled out, the Report has confined itself to exports from Western Europe. It is noteworthy that the Report holds considerably bright prospects for European steel exports. But the expectation is based upon certain important assumptions. First of all, it is assumed that present world tensions will not ease significantly, but that a world war will be avoided and that defence production will be stabilised at a somewhat lower level than at present. Secondly, world scarcity of steel will be overcome and Europe will be in a position to supply all its overseas customers. Thirdly, a high level of economic activity in industrialised areas of the world will result in a growing demand for primary raw materials from underdeveloped regions and increasing flow of foreign capital to these regions. Fourthly, the increased flow of capital to underdeveloped countries will result in an average increase in steel consumption of some 6 per cent. a year over the level reached in 1951. Fifthly, necessary measures will be taken to reduce steel costs in all major European exporting countries, particularly so far as exploitation and use of raw materials are concerned.

Future for Steel Exports

On the basis of these assumptions, the Report has estimated a somewhat bright future for European steel exports to regular as well as irregular markets. The regular markets are: (1) Underdeveloped countries: Africa, the Middle East, Asia and the Far East and Latin America; and (2) certain Commonwealth countries: Australia, New Zealand and the Union of South Africa. The following table gives the possible upper and lower limits which exports to regular and irregular markets might reach, as compared with the actual exports in 1951, 1950, 1949, 1929 and the average of 1936-38:

(In million tons)

Exports	1956		1960		1929	Average 1936-38	1949	1950	1951
	High	Low	High	Low					
To regular markets ..	7.0	5.9	8.4	5.4	6.8	4.3	4.8	6.3	6.7
To irregular markets ..	3.5	1.8	3.5	1.8	2.4†	1.8†	0.9	2.3	3.5
Total ..	10.5	7.7	11.9	7.2	9.2	6.1	5.7	8.6	10.2

† Including small tonnages exported by Eastern European countries.

A critical analysis of the assumptions and the figures referred to, in the above table, discloses that the Report has made no attempt to form a judgment as to the likelihood of their materialising. The aim has been not to prophesy the future course of events but to find out what level steel exports from Western Europe can reach in favourable but realisable circumstances so that those responsible may take appropriate policy measures to meet demand. Whether or not favourable circumstances leading to a high level of steel demand will actually prevail depends to a considerable extent upon how successful the more industrialised countries will be in carrying out their policies of high employment and increased production. It also depends on how far they are prepared to foster economic development in less developed countries through proper technical and financial assistance, and through better organisation of the market for the principal commodities.

Long-term Development of Consumption

Notwithstanding the primary importance of the world level of economic activity for overall steel demand in under-developed regions, Western European steel exporting countries should, in their own interest, promote the long-term development of steel consumption in these regions. Moreover, their share in the supply of steel requirements of importing countries will be affected by the steps they take to improve their competitive position. Exporting countries can further these aims by adopting the following measures:

(1) *Adequate Supplies.*—(i) Exporting countries should make periodic review of their production capacities, in order to ensure that they are in a position not only to meet their home demand but also to meet the maximum anticipated requirements of importing countries. Although, at the present time, planned capacity would appear to be ample, it by no means follows that, with the rapid industrialisation going on in other parts of the world, the situation will remain static; and

(ii) the position of the importing countries might be made more stable by arranging supplies of steel to these countries on the basis of longer-term contracts and stabilised prices. At the same time, consideration might be given towards ensuring greater stability in the prices and supply of steel-making raw materials.

2. *Costs and Prices.*—(i) Much can be done to reduce production costs, particularly by better exploitation and use of steel-making raw materials, by maintaining sound competition, and by the rationalisation of production; and

(ii) far-sighted policies should be adopted to maintain reasonable and stable prices and to organise the sale of steel in such a way as to prevent disruption of the market by unnecessary intermediaries.

3. *Marketing.*—(i) Consideration should be given, when necessary, to payment facilities, with the support of national or international credit institutions when appropriate;

(ii) technical advice to steel users should be organised on a larger scale; and

(iii) more publicity should be given to current export prices and freight rates in order to facilitate the task of those responsible for arranging import licences.

Although in the last resort, the overall level of steel consumption in less-developed areas is dependent on the policies of the industrialised countries, the growth of steel consumption in each individual country is greatly influenced by the ability of its Government to mobilise as large a share as possible of the national income for investment purposes, to promote sound development and industrialisation schemes and to attract foreign capital, either public or private. The growth of steel consumption will be directly influenced by the measures these Governments take to ensure the abundant, regular and cheap supply of steel necessary for the economic development of their countries.

Steel Prices

A significant feature of the Report is its observations regarding steel prices. The Report has expressed concern over the instability of steel prices. It has warned against its long-term adverse consequences to both exporters and importers. Surely, few will dispute the need for this warning. It would be in the interest of both importers and exporters to see that export prices are more stable and are kept in reasonably close relationship with home prices. But stable prices could be more easily maintained, if steps could be taken to diminish the effect of short-term variations by the use of longer-term contracts, both for steel exports and for raw materials used in steel making. Governments in importing countries, according to the Report, should not discourage the use of a basic material essential to economic development by imposing high customs duties or sales taxes or permitting other excessive distribution costs to be added to the price of steel. Greater publicity should be given to current export price quotations and freight rates, so that the authorities responsible for issuing import licences may be better informed of the current state of the steel market.

The Report has devoted a whole chapter analysing the trends in the demand for steel in under-developed countries. It has pointed out that the development of consumption of particular products is extremely erratic owing to the different conditions in each country; but the general tendency is likely to be a gradual increase in consumption of semis, bars and sections and wire-rods, as the country's economy develops. Consumption of uncoated sheets and plates may increase rather more rapidly, in keeping with the general tendency for the consumption of flat products to rise. Uncoated sheets will probably regain their pre-war importance, but consumption of tinplate, which is now in plentiful supply, is likely to be concentrated mainly in countries which have exportable surpluses of foods suitable for canning. Coated and uncoated sheets and plates are most economically produced in large integrated steelworks using modern methods and will probably continue to make up to 25 to 30 per cent. of export to undeveloped countries.

The demand for railway-track material is likely to increase very considerably in future in nearly all countries, since the great majority of railways are now reaching the age where regular replacement is essential if they are to continue in operation. The Report concedes that owing to the heavy capital investment involved, it is unlikely that any country will decide to scrap existing railways; it will rather proceed with a policy of systematic renewal and maintenance. But it considers that even if the average rate of renewal over a long period is only 3 per cent. corresponding to an average life of 30 to 35 years, there will be considerable increase in consumption, compared with the level in pre-war years. Countries with underdeveloped railway systems will probably not invest in railways on a large scale and are more likely to concentrate on road and air traffic. This will alter the pattern of consumption by products, compared with consumption in countries the basic transport needs of which are met by railways.

In the oil-producing countries, consumption of tubes for pipe-lines will depend on the strength of world demand for both crude and refined oil. The development of an oilfield entails a massive demand for tubes and usually for other steel products as well, in particular, railway track material and bars and sections. The expansion of European refinery capacity may result in some decrease in consumption by oilproducing countries of bars and sections, which are primarily required for construction of refineries and ancillary buildings. Tubes are therefore likely to increase still further in importance, not only for the conveyance of crude oil but also for drilling and replacement.

COMMITTEE TO SURVEY ENGINEERING CAPACITY

The Government of India has appointed a committee consisting of three Government of India officials and four non-officials, mostly from private industry, to make a preliminary survey to assess the capacity lying idle in the engineering field in India, and the degree to which rationalisation of production of machinery and spare parts is possible. This committee which started functioning on the 12th inst. is expected to finish its labours in three months. The committee consists of the following persons:

Mr. S. Moolgaokar of Tatas, Mr. S. L. Kirloskar of Messrs. Kirloskar Oil Engines Ltd., Mr. K. Gopala Iyengar, retired Superintending Engineer, Madras Public Works Department, Mr. S. E. Golledge of the Associated Chambers of Commerce, Mr. Jang Bir Singh, Industrial Adviser (Engineering), Ministry of Commerce and Industry, Mr. P. C. Kapur, Joint Director, Mechanical Engineering, Ministry of Railways and Mr. I. N. Dar, Assistant Director General, Ordnance Factories, Ministry of Defence.

UNUSUAL TAPE RECORDER

Weighing less than 13 pounds, an unusual tape recorder, equipped for recording, playing back, erasing, monitoring and battery recharging has been marketed by Ectro Incorporated of Delaware, Ohio. The unit will record for two hours before recharging is required. The portable unit lends itself to a variety of on-the-spot uses where "plug-in" current is not available. For example, the "Cub Corder," as it is called, permits newspaper reporters and radio-television news-casters to compile material more quickly than it could be written down. The unit can also be used for spot interviews. The battery can be charged from an automobile cigarette lighter outlet or any household outlet without removing it from the recorder.

PREVENTING CLOSURE OF UNECONOMIC INSURANCE UNITS

MR. H. K. SEN EMPHASISES NEED FOR GOVERNMENT-SPONSORED CORPORATION

THE increase in governmental interference in almost every sphere of economic activity has been so much taken for granted in this, as in many other countries, that it is seldom that people choose to question the validity or the basis of such intervention. This is a deplorable development which is not in the public interest, for a continuously critical attitude of mind is *the sine qua non* of the democratic way of life. A happy instance of this attitude is to be found in the address, which Mr. H. K. Sen delivered at the recent annual meeting of the Indian Insurance Institute, Calcutta, in his capacity as its President. In the course of his speech, he subjected the Government's control of expense ratios of insurance companies to a critical examination. His address was particularly noteworthy for the way in which he sought to prove how a blanket and indiscriminate control over expense ratios was not the best way of ensuring the growth of the insurance industry, as well as for the constructive suggestion he made for tackling the problem of uneconomic insurers.

Mr. Sen prefaced that part of his address, which was devoted to the examination of the Government's intervention in insurance business, with the remark that the "present grip of the Government was by no means merely an attempt to control the industry for doctrinaire reasons." He agreed that it was a measure to end "certain ills and malpractices" in the sphere of Indian insurance. He also agreed that the Government's intention was "honest and laudable." Nevertheless, he felt that the Government's remedy had been too drastic and inexpedient, with the result that it was more likely to "corrode than contribute to legitimate and healthy growth in many cases." Explaining his observations by a reference to the Government's control over expense ratios, he said:

"For example, a simple series of index ratios for expenses, with very minor variations due to size, as envisaged in the statute, is unscientific and goes counter to the principles on which the entire structure of insurance stands. My observations will be borne out by the answers to two simple questions. Firstly, there are two offices, one earning consistently a larger profit than another, both charging the same premiums. Is it pertinent to suggest that the former is better managed than the latter? Secondly, two offices charging the same premiums make identical profits. Does it indicate that the experiences of the two offices are identical? The answer in each case is an unqualified "no." The indications in the first case are that the proportions of risk of different types in the two offices are not the same and also the excess of premiums charged over the actual cost of cover are different in the two offices. The office making a lower profit may not shift over to the same proportion of risks as the other, for the simple reason that a shift over to a different class of prospect can hardly be feasible without serious repercussion on its business. It has been my professional experience that the mortality experience of different offices vary widely and the difference between the highest and the lowest may be as high as 30 per cent. The reasons are not far to seek. Mortality differs from State to State and also from class to class in the same State. Variation in mortality experience of different offices is not due to carelessness or indiscreet selection of risks but because the constituents to whom the offices cater differ. Coming to the second question, the profit is, as you all know, the resultant of several factors and the sources of profits of two offices may be entirely different. One office may be experiencing a loss on mortality and earning a profit from expenses. Another office may lose on the expense account and the loss might be fully compensated by the profits disclosed from mortality and interest."

Mr. Sen emphasised that the control over the expenses of insurance companies had prevented the healthy growth of several "smaller and middle-sized" insurers, because they have found it difficult to conform themselves to statutory limits for the expense ratio in view of the persistence of inflationary trends. He quoted some figures to show how quite a larger number of insurers failed to conform to the law on the expense ratio. He said:

"In 1951, out of all the Indian insurers 45 per cent. of the companies failed to remain within the statutory limit of expenses and of these 44 per cent. showed surplus in the last valuations, 34 per cent. revealed a deficit covered by paid-up capital and only 22 per cent. were insolvent. It would be a pity if these 78 per cent. of the defaulter companies which otherwise by all standards of test would be considered as solvent and have a reasonable chance of survival, are compelled to close their doors due to non-compliance with the statutory provisions for expenses. The only safeguard under which these insurers can seek shelter in the present set-up is the leniency of the governmental administrative machinery. It would, however, be difficult for the Government to exercise its discretionary powers and 'dole out its favour of leniency without subjecting itself to public criticism on the score of discrimination; nor can it do so without a thorough knowledge of each individual insurer deserving such favour."

The main cause for the high expense ratio which, in its turn, tends to make the insurance companies uneconomic is, as Mr. Sen rightly pointed out, the craze for new business through unhealthy competition. This craze for quantity, as distinct from quality, of business has led to "inordinately high cost of procuration and heavy lapsation." Mr. Sen pointed out that a regular flow of profitable premium income is one of the yardsticks against which the success of an insurer should be measured. The Insurance Executive Council has formulated a voluntary code of conduct to combat the evils of high procuration cost and heavy lapses in policies. While it is the duty of all insurers to conform to this code, it is also the duty of the authorities to see, as Mr. Sen suggested, that the code is modified from time to time to conform to changing conditions in the industry.

Most of these small-sized insurers have certainly a dark future. But it must be recognised that statutory limitations on expenses, as Mr. Sen himself recognised, have come to stay. Unless the insurers, whether big or small, abide by the law, it is clear that they will have sooner or later to "close their doors." This is not a prospect which the Government can contemplate with equanimity. The closure of business by an insurance company has far larger economic and social consequences than the closure of a factory or any other industrial establishment. Referring to the position of these uneconomic and marginal units in the sphere of Indian insurance, Mr. Sen said:

"What does the Government propose to do about them? Can it allow these companies to go into liquidation one after another and remain a disinterested witness to the detriment of the poor policyholders and of the industry? The solution is to rationalise companies with premium income below the economic level, and the method that would immediately suggest itself is amalgamation of small companies to form bigger units. But until now such rationalisation has not been possible and also the bigger companies are often reluctant to absorb companies carrying a bad name."

Here then is a dilemma. The small insurers cannot be allowed to close their doors. Nor can they be amalgamated so as to form larger units, for two or more uneconomic units do not always make up a single economic unit. And the really solvent insurers are not generally willing to absorb the under-sized and uneconomic units on the brink of disaster. If extinction, amalgamation or absorption are thus to be ruled out, what is the solution for the problem of these insurers? Mr. Sen's suggestion was that the Government should itself take the initiative in order to see that these insurers are not allowed to go into liquidation. He added:

"My own view is that the Government should start immediately an insurance corporation to which the business of all defaulting or insolvent insurers may be transferred before their funds are frittered away and the loss increased. Such a corporation should not be allowed to do direct business but for its own sustenance and self-sufficiency it should have the monopoly of re-insurance business. All reinsurance business in the first instance should pass through this corporation which will redistribute amongst other insurers the excess over its own retention. Thus, the corporation would serve the double purpose of protecting the policyholders of sinking companies and preventing reinsurance premiums from flowing out of our country."

It remains to be seen how far Mr. Sen's suggestion is practicable, for an insurance corporation cannot possibly discharge the functions of a reinsurance corporation and also take upon itself the responsibility for giving aid and succour to uneconomic insurers. In any case, Mr. Sen's general principle that the Government cannot wholly divest itself of all responsibility towards those insurers seems to be unexceptionable. From this point of view, the Government would perhaps be well advised to investigate, without delay, the conditions of all these uneconomic and marginal insurers, and not merely wait until their financial position deteriorates to such an extent as to compel it to appoint Administrators.

UNION INSURANCE SOCIETY OF CANTON LTD.

The Union Insurance Society of Canton Ltd. (General Manager: Mr. L. B. Stone), established in 1835, is a general insurance company, transacting business in marine, fire, accident and general spheres of insurance. It has branches in nearly all parts of the world, including the U.K., Canada, Australia, New Zealand, Africa, the U.S. and in several Eastern countries, and agencies throughout the world. The report and accounts of the Society for the year 1952 show that there has been an all-round increase in the premium income. Thus, the net premium income in the marine department has increased from £3.28 million to £3.40 million, while the income in the fire and the accident departments has gone up from £2.44 million and £1.36 million for 1951 to £2.70 million and £1.49 million, respectively, for the year under review. Although the marine business has continued to expand, the rate of progress has been somewhat retarded. Whereas the increase in net premium income in 1951, as compared with the previous year, was as much as £0.72 million, the increase during 1952 was only of the order of £0.12 million. This is attributed to a decline in commodity values, and, in a lesser degree, to a general recession of business in the world market which occurred during the year under review.

From the marine account, a sum of £150,000 has been released to the profit and loss account, as against £200,000 released last year. The Society's fire business yielded a profit of only £195,310, as against £230,615 in 1951. A slightly larger sum of £147,819 has been transferred from the accident section to the profit and loss account this year. Thus, the transfers from the three underwriting accounts amounted to £493,129, which, together with the income from interest and dividends (£329,345), amounts to £822,474. After charging certain outgoings, making provision for taxation (£307,311) and allowing for the minority interests of the outside shareholders of the subsidiary companies, the profit of the Society for the year is £486,581. After deducting profit retained in subsidiary companies amounting to £143,379, there remains a distributable profit of £343,202. To this has been added the balance of £342,872 brought forward from the previous year. The payment of dividend at £2 per share, as against £1 17s. 6d. paid last year, absorbs £270,000. After transferring £50,000 to exchange and investment equalisation account, £15,000 to accident and general account additional reserve, and £7,000 to provision for staff pensions, there remains a balance of £344,074 to be carried forward.

The Society's reserve and funds position is very sound. Apart from a capital of £1,350,000, the Society's reserves and funds are: General reserve £1,000,000, reinsurance fund £500,000, exchange and investment fluctuation account £468,610, leasehold reserve account £57,374, marine fund £447,225, fire fund £1,488,665, accident and general fund £722,485.

TITANIUM DIOXIDE INDUSTRY CLAIMS PROTECTION

TARIFF COMMISSION EXAMINES ISSUES

THE case of another small but very useful industry, namely, the titanium dioxide industry, for assistance, was lucidly presented by Dr. B. V. Narayanaswamy, Member, Tariff Commission, opening the enquiry into its claims for protection. This industry has some distinctive and special features which entitle it to both tariff protection and State assistance. The industry is at present represented by a single firm, namely, the Travancore Titanium Products Ltd. This Company is not privately owned, as the major portion of the capital is held by the State Government of Travancore-Cochin jointly with five or six private companies. After a promising start, it has gone "into a state of suspended animation." The problem before the Commission is the question of bringing the industry back to life and activity.

Titanium dioxide is an important white pigment used in a number of industries, including paints, printing ink, rubber, enamelware, soap and cosmetics, rayon and linoleum. Its main worry is that it has to compete with several substitutes which hold a strong grip over the Indian market. These substitutes are lithopone, zinc oxide and white lead. Nevertheless, it has an advantage over others in that its principal raw material, namely, ilmenite, is available within the country itself.

There are two types of titanium dioxide, namely, anatase and rutile. The activity of the Travancore Titanium Products Ltd. is confined to the manufacture of anatase, but it has also equipped itself to produce the other type, namely, rutile. Among the reasons which led the Company to choose anatase were: (1) lower cost of production of this type as compared with rutile; (2) the preference of the Indian consumers for white pigment, as they got used to the imported anatase; (3) the availability of export market for the anatase type in Australia; and (4) the necessity to buy additional plant and equipment for producing rutile type which meant delay in commencing production. As titanium dioxide is not used directly by consumers in India but by other industries, the question of protection for the industry requires a cautious approach.

The construction of the Travancore Titanium dioxide factory was started in 1949, and the dioxide was first produced in October, 1951. The factory worked for nine months and had to close down by the end of June, 1952, as there was not enough demand for its products in the country. The installed capacity was 1,800 tons per annum and the actual production during the nine months was 386.65 tons. The peak monthly production of 75.15 tons was attained in November, 1951.

The crucial problem of the Travancore Titanium is the creation of sufficient volume of demand for its products. It has been found difficult to estimate the present demand correctly, because titanium dioxide, in many of its applications, is interchangeable with other pigments such as lithopone, zinc oxide and white lead, and because of its more recent origin it has to meet and overcome consumer resistance. The Company has estimated actual consumption of the product at 394 tons in the country. It places the current demand for both types at 420 tons, of which 240 tons are for anatase and 180 tons for rutile variety. The Ministry of Commerce and Industry has estimated the present demand for titanium dioxide at 500 tons. The Imperial Chemical Industries put it at 924 tons.

The quality of titanium dioxide produced by the only firm mentioned above, according to Dr. Naidu, compares favourably with that of the imported product, but some consumers seem to feel that it suffered from certain deficiencies. It is stated, for instance, that it imparts a yellowish colour to enamelware. Further, its manganese content is stated to be higher and its covering power slightly less.

As regards the principal raw materials for titanium dioxide, the industry is well placed in respect of ilmenite. Raw materials such as glue, icipol oil, caustic soda, aluminium sulphate, zinc oxide and soda ash are available from indigenous sources. Others such as titanium tetrachloride, antimony oxide, sodium sulphide, monoammonium phosphate, zinc dust and potassium sulphate have to be imported. Again, sulphuric acid accounts for the bulk of the cost of raw materials used by the industry, and this raises the question of economising the cost in regard to this material. Among the imported raw materials titanium tetrachloride is subject to a duty of 27.3 per cent. *ad valorem*.

The imports of titanium dioxide amounted to 193.1 tons, valued at Rs. 5.3 lakhs, in 1951, and in the following year they declined to 137.81 tons valued at Rs. 3.8 lakhs. As regards the rates of customs duties, titanium dioxide is assessed to a standard rate of duty of 37 4/5 per cent. *ad valorem* and preferential rate of 25 1/5 per cent. *ad valorem*.

The industry has asked for an adequate protective duty on titanium dioxide and lithopone until such time as the consumption of the indigenous titanium dioxide had increased sufficiently to permit production at a competitive price.

From the facts thus placed by Dr. Naidu, it is evident that this industry has good scope for playing a useful role as a source of raw material to a number of important industries. Many of its own raw materials too are available locally. Of course, in regard to those which it imports, the State can certainly reduce, if not abolish, the duties on them, as the amount involved is very small. The Commission, however, must thoroughly examine this issue before making its recommendation. Persistent publicity given to the products produced by the factory should ensure a wider demand for them. Again, by means of further research, new uses for titanium dioxide can be found and this provides a field for the National Chemical Laboratory to organise research in order to assist the industry in expanding the market for its product.

BHARAT ELECTRONICS INDUSTRY

To the list of manufacturing concerns owned by the Government of India which are already numerous and varied in character will be added one more, namely, a factory to manufacture radio equipment and certain types of radio valves and components. The proposed factory will be located at Jalahalli, Bangalore. The scheme covers the manufacture of a wide range of wireless and radar equipment capable of meeting most of the requirements of the armed forces and Ministries and Departments of the Central and State Governments. In order to be able successfully to manufacture such a wide range of products, it is considered necessary that the industry should be capable of meeting the requirements of all component parts which go to make up radio equipment. It is, therefore, proposed to manufacture electronic valves of all types, transmitters, receivers (excluding those intended for broadcast and television reception), trans-receivers, amplifiers and ancilliary equipment required for use by the armed forces. As the manufacture of these highly specialised products needs skilled and technically well qualified staff, suitable persons have been selected for undergoing specialised training in the factories of the Compagnie Generale de Telegraphic Sans fil Organisation in manufacturing, testing, development and other departments. On their return, these persons will instruct locally recruited personnel at the factory so that properly trained technical personnel would be available without delay.

A site for the construction of the factory has been selected, as stated above, in the Jalahalli area. This site has been selected, it is stated, after a careful consideration of a number of factors such as dust-free atmosphere, temperate climate, availability of skilled labour, training facilities, cost of building construction, availability of raw materials, transportation, proximity to other industrial undertakings of which advantage could be taken, availability of essential supplies such as, electricity, water, etc., and security. The factory is expected to go into production in 1956.

The factory will be under the management of a new company, known as the Bharat Electronics Industry. The capital of this company will be fully provided by the Government of India. The Company will have a Board of Directors consisting of both official and non-official members.

KARADA BARK FOR TANNING

Karada bark has been found to be a good substitute for wattle in tanning leather upon investigations conducted by the Central Leather Research Institute, Madras. The Indian leather tanning industry uses wattle bark which is not found in India. Formerly, 30,000 tons of wattle bark were imported annually from South Africa. At present, 60 to 70 per cent. of the quantity required by the industry comes from East Africa. Karada is a small tree found all over India except in Bombay and Mysore States. Every year, 10,000 to 12,000 tons of this bark can be collected from Madhya Pradesh, Chhota Nagpur, Orissa and Madras.

Karada bark contains 57 per cent. of mixed tannin and 4 per cent. of free tannin, while the figures for wattle bark are 64 per cent. and 5 per cent. respectively. Identical leather was processed both by the product of the karada bark and by that of the wattle bark. The results show that karada can be successfully used as a substitute for the imported material.

SINDRI FERTILISER REPORTS PROFIT

NITRATE AND UREA PRODUCTION LIKELY TO BE TAKEN UP

NEW Delhi Press messages on Sindri Fertilisers Limited make quite heartening reading. The accounts of the first 14 months' operations of the Company up to 31st March, 1953, are understood to show a gross profit of Rs. 271 lakhs. After setting aside a sum of Rs. 160 lakhs for depreciation, the net profit is expected to amount to Rs. 111 lakhs. This works out to about 5 per cent. on the capital of Rs. 23 crores invested on the entire project. It remains to be seen whether this profit has been arrived at after making provision for taxation which the Company would have had to provide had it been a private company. However, for fuller details of the financial results one has to await the balance-sheet and accounts of the Company placed at the annual meeting of the Company held at New Delhi on Tuesday this week. It must, however, be admitted that even the performance, as reported from New Delhi, is indeed a creditable one, considering that the report covers the first 14 months of the factory's working and that the Company was able to work only 58 per cent. of the installed capacity during the period under review. Another point to be noted is that Sindri has been subsidising the other fertiliser producers through the Central Fertiliser Pool. In this connection, it is pointed that, a year ago, Sindri was selling ammonium sulphate at Rs. 350 per ton, the cost of imported fertiliser being Rs. 400. Since January this year, the pool price has been reduced to Rs. 285 per ton as against Rs. 370 for the imported variety. The factory contributes, it is stated, to an equalisation fund.

The Company has suggested to the Government of India that it should be given the responsibility of marketing its products. This question is reported to have received attention at the annual meeting of the Board of Directors of the Company. It is expected that, in all probability, the Government may permit the Board to have its own selling organisation for taking over the sale of 3,00,000 tons of fertilisers produced by the factory from 1st January, 1954, from the Ministry of Agriculture which is now looking after the distribution. It is stated that a scheme is being worked out at present for equalisation of freight charges, so that the fertiliser is made available at any place in India at a uniform price.

Incidentally, it is appropriate to mention here that the four-man Technical Fertiliser Mission is expected to submit a report on the manufacture of ammonium nitrate and urea in Sindri on the 21st inst. It will be recalled that the four-man Fertiliser Mission toured the world in order to study the process of fertiliser manufacture, with particular reference to the manufacture of ammonium nitrate and urea in Sindri. It was charged with the task of recommending to the Government whether the two fertilisers could be manufactured in India. As a result of its study it is expected to recommend to the Government the setting up of an economic unit capable of producing 32 to 35 tons a day. The cost of the plant is estimated at about Rs. 10 crores. The production of urea and nitrate is designed to utilise the by-products of 10 million cubic feet of gas from the proposed coke oven daily and will serve as an excellent fertiliser for rice cultivation, banana, citrous fruits, tea and tobacco crops. The manufacture of the two fertilisers is still in an experimental stage in some of the countries visited.

The Mission was headed by Mr. B. C. Mukherji, I.C.S., Managing Director of the Sindri Fertilisers, the other members being Dr. Nagaraja Rao, Industrial Adviser to the Ministry of Commerce and Industry, Dr. Van Evera on behalf of the Technical Co-operation Administration and Mr. K. C. Sharma, Manager of the Sulphate Plant at Sindri. The tour was undertaken at the instance of T.C.A. which has promised aid for the manufacture of more fertilisers in India.

INDO-JAPANESE TRADE

The Government of India is reported to have declined Japan's proposal for a bilateral trade pact in accordance with the terms of the Peace Treaty signed on 9th June, 1952. In doing so, the Government would appear to have pointed out that the treaty provisions would no longer apply to Japan, as that country has been admitted to the General Agreement on Trade and Tariffs, and, therefore, enjoys most-favoured-nation treatment. The Government seems to have also been guided by the fact that the country is obliged to manage its trade more on considerations of conserving foreign exchange than anything else.

IMPLEMENTATION OF FOREST POLICY

RECOMMENDATIONS OF CENTRAL BOARD

SEVERAL resolutions relating to forests and forest policy, of far-reaching significance, were adopted by the Central Board of Forests, at its five-day session, which concluded at Dehra Dun, on the 8th inst. It is true that these resolutions are only recommendatory in character inasmuch as the Central Board of Forestry is an advisory body and any recalcitrant State might disregard its suggestions with impunity. Forestry, after all, is a State subject, and the Centre does not enjoy any formal powers to ensure co-ordination and control of State forest policies. But, as the Central Board is composed of State Ministers, and the resolutions have been adopted voluntarily by them, it is to be hoped that it will not be difficult to secure co-ordination of the States' forest policies. In fact, the value of the Board's resolutions, as Dr. Punjabrao Deshmukh, Deputy Minister for Agriculture, pointed out, lies not in their rigidity but in their "resilience."

The main resolution passed at the Conference requested the States to implement the National Forest Policy, as enunciated by the Government of India, in May, 1952. The Forest Policy, among others, aims at the maintenance of at least two-thirds of land area under forests; it lays down, more specifically, that about 60 per cent. of the land should be under forests in the Himalayan, the Deccan and other mountainous tracts. The importance of the resolution needs no emphasis, in view of the part forests play as effective agents in the conservation of soil and water regime of land, which are interconnected with each other. It is high time, therefore, that the States decided the proportion of land that must be under forests.

Conservation of Soil

The Central Board has urged the need for expediting the implementation of the soil conservation scheme drawn up in accordance with the recommendation of the Planning Commission. It considers it essential that the soil conservation board envisaged in the scheme should be associated with the conservation scheme at the time of consideration of river valley projects. The Five-year Plan, it may be mentioned, proposes the establishment of a land utilisation and soil conservation board in each State and a Central Board to co-ordinate the activities of State boards. The Commission has urged a programme of soil conservation in the catchment areas. The co-ordination of the two is essential for evolving a uniform national pattern for the whole country. The immediate implementation of the suggestion for setting up State and Central boards of soil conservation is the need of the hour. For, the boards have a major role to play in increasing the living standards in the country. Soil conservation serves to increase the yield per acre and to lower the cost of production, both of which, in their turn, bring in a whole chain of benefits such as increased income for the farmer, larger revenue for the Government, more trade for both rural and urban communities and wider employment for professional, skilled and unskilled workers.

The Board has recommended that the Central Government should undertake the responsibility of training superior forest officers, rangers and other subordinates for employment in all the States. It has considered it inadvisable for the States to attempt to run their own training centres for rangers and officers. These recommendations are made with a view to ensuring uniformly high standards of training. Moreover, since the number of candidates to be trained for each individual State is small, it would involve unnecessary expense, if each State were to have its own training institute.

The Board has recommended that the schemes relating to the prevention of the encroachment of desert in various States should be co-ordinated with the central scheme of the "immobilisation of Rajputana desert." This co-ordination is sought to be effected through a committee on which the States concerned are represented. Desert and semi-desert conditions prevail over a large area in Western India—in Rajasthan and the adjoining areas of Punjab, P.E.P.S.U., Saurashtra, and Kutch. As a number of States is thus affected by the advance of the desert, and as successful tackling of the problem would depend in a large measure upon co-ordinated action by various States concerned, the need for inter-State co-operation in this sphere cannot be over-emphasised. In this connection, the Board has done well in suggesting that the consolidation of holdings should also be so effected as not to endanger the safety of trees growing on village lands. It has further felt the need for establishment of community projects to wean forest tribes from their age-long practice of shifting cultivation from place to place.

The Board also adopted a series of resolutions, which when implemented, will go a long way towards establishing a sound national forest policy. One of them pleads for the enactment of legislation, on a common pattern, by the States concerned to control the sale and trade in *biri* leaves, as uncontrolled sale of these leaves on private lands is detrimental to the *biri* industry and prejudicial to the interests of the workers engaged in it. *Biri* leaves, it may be noted, account for a revenue of over Rs. 1 crore to the States, and an equal amount to private owners as well as workers engaged in the industry. Another resolution advocates early constitution of wild life boards in States, where they have not yet been formed, with a view to preserving wild life. The Board has also emphasised the necessity for planning production of wood sleepers on a three-year basis, fixing the number of sleepers to be supplied to railways annually; the prices to be paid for such sleepers should be fixed by negotiation for a period of three years for a given State or a group of States. Again, stress is laid on the plantation of babul trees on waste lands wherever possible. Besides, the States have been requested to undertake experiments regarding introduction of Malayan type of cane in suitable localities in various States. The States have also been requested to take up investigation into the utilisation of wood chips, saw-dust and agricultural wastes such as paddy husks and groundnut shells, not fully utilised at present, for compressing them into suitable briquettes for use as fuel.

From the foregoing account, it will be seen that the Board has not gone into the question of supplying raw materials of the paper industry such as bamboo and sabai grass. The industry has been clamouring for the adoption of a more enlightened forest policy in respect of these two materials by the State Governments. It has been demanding that the Governments should make available to it the bamboo and sabai grass areas in forest regions, on a long-term lease, at reasonable royalty, in order to ensure a regular supply of the raw materials. This question too does not seem to have received the attention of the Board. In view of the importance of the paper industry to the country, it is to be hoped that the Board will consider this question sympathetically.

Notices

SOORAH JUTE MILLS COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT THE 116th Ordinary General Meeting of the Shareholders of the Company will be held at the Principal Office of the Company at No. 8, Royal Exchange Place, Calcutta, at 2-30 p.m. on Wednesday the 8th July, 1953, for the following purposes:

1. To receive and consider the Report of the Directors and to pass the audited accounts for the year ended 31st December, 1952.
2. To declare Dividend on Preference Shares.
3. To elect Directors in place of those retiring by rotation.
4. To appoint Auditors and fix their remuneration.
5. To transact any other business which may be brought before the meeting with the permission of the Chairman.

The Share Transfer books of the Company will remain closed from 24th June, 1953, to 8th July, 1953, both days inclusive.

By Order of the Board,
HINDUSTHAN INVESTMENT CORPORATION LTD.,
Managing Agents.

CALCUTTA, 10*th June*, 1953.

In particular to Mr. Alexander Holmes King and Mr. Kasam Ahmad Vaiz.

Note.—If dividend on shares as recommended by the Directors is declared at the meeting THE DIVIDEND WILL BE PAYABLE ONLY TO THE REGISTERED SHAREHOLDERS, whose names are on the Company's Register on the 8th July, 1953. No application need be sent for dividend as relative Dividend Warrants will be posted to such Shareholders in due course.

The Shareholders are advised to notify any change of address.

BENGAL NAGPUR COTTON MILLS LIMITED

NOTICE IS HEREBY GIVEN THAT THE One Hundred and Twelfth Ordinary General Meeting of the Members will be held at the Registered Office of the Company, No. 4, Bankshall Street, Calcutta, at 3-15 p.m. on Monday the 29th June, 1953, for the following purposes:—

(1) To receive the Directors' Report and the Audited Accounts for the half-year ended 31st December, 1952.
(2) To declare Dividends on the Preference and Ordinary Shares.
(3) To elect a Director.
(4) To appoint Auditors for the current year.

The Transfer Register will be closed from the 22nd June to the 29th June, 1953, both days inclusive.

By Order of the Board,
SHAW WALLACE & COMPANY, LTD.,
Managing Agents.

CALCUTTA, 13*th June*, 1953.

NEW INDIA INVESTMENT CORPORATION LTD.

NOTICE IS HEREBY GIVEN THAT THE Sixteenth Ordinary General Meeting of the shareholders of New India Investment Corporation Ltd., will be held at the Registered Office of the Company, at 9, Brabourne Road, Calcutta, at 4 p.m. on Friday the 3rd July, 1953, for the purpose of receiving the Directors' Report, passing the Audited Accounts for the year ended 31st December, 1952, declaring dividends recommended by the Directors, electing Directors, appointing Auditors and for transacting any other ordinary business of the Company.

The Share Transfer Register of the Company will be closed from 25th June to 3rd July, 1953, both days inclusive.

By Order of the Board,
RAMDUTT RAMKISSENDASS,
Secretaries.

9, BRABOURNE ROAD,
CALCUTTA, 9*th June*, 1953.

(Please note.—Dividend warrants are payble to registered shareholders against appliations only.)

THE KALIGHAT FALTA RAILWAY COMPANY, LIMITED

THE FORTY-FOURTH ORDINARY GENERAL Meeting of the Shareholders will be held at the Registered Office of the Company, No. 3, Netaji Subhas Road, Calcutta, on Friday the 3rd July, 1953, at 4-15 p.m., to transact the following business:—

1. To receive the Directors' Report and the Auditors' Report and to pass the Accounts for the year ended 31st March, 1952.
2. To declare a Dividend.
3. To elect a Director.
4. To elect Auditors and fix their remuneration.

The Share Transfer Books of the Company will be closed from the 20th June to 3rd July, 1953, both days inclusive.

By Order of the Board,
McLEOD & CO., LTD.,
Managing Agents.

3, NETAJI SUBHAS ROAD,
CALCUTTA. 16*th June*, 1953.

Note.—Payment of the proposed dividend, if declared, will be made to those members whose names are registered in the Books of the Company on 3rd July, 1953, or to their Mandatees.

Dividend warrants will be despatched as soon as possible after the General Meeting. Applications for warrants will not be necessary.

THE KATAKHAL LALA BAZAR RAILWAY COMPANY, LIMITED

THE FORTY-SECOND ORDINARY GENERAL Meeting of the Shareholders will be held at the Registered Office of the Company, No. 3, Netaji Subhas Road, Calcutta, on Friday the 3rd July, 1953, at 4-20 p.m., to transact the following business:—

1. To receive the Directors' Report and the Auditors' Report and to pass the Accounts for the year ended 31st March, 1952.
2. To declare a Dividend.
3. To elect a Director.
4. To elect Auditors and fix their remuneration.

The Share Transfer Books of the Company will be closed from the 20th June to 3rd July, 1953, both days inclusive.

By Order of the Board,
McLEOD & CO., LTD.,
Managing Agents,

3, NETAJI SUBHAS ROAD,
CALCUTTA, 16*th June*, 1953.

Note.—Payment of the proposed dividend, if declared, will be made to those members whose names are registered in the Books of the Company on 3rd July, 1953, or to their Mandatees.

Dividend warrants will be despatched as soon as possible after the General Meeting. Applications for warrants will not be necessary.

BURN AND COMPANY, LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Board of Directors has sanctioned payment of the Dividend on 6 per cent. and 7 per cent. Preference shares of the Company for the half-year ending 30th June, 1953. Payment will be made on or after the 10th July, 1953, to those shareholders whose names appear on the Company's Registers on the 30th June, 1953, or in accordance with their instructions.

By Order of the Board,
MARTIN BURN LTD.,
Managing Agents.

12, MISSION ROW,
CALCUTTA, 16*th June*, 1953.

THE BURDWAN CUTWA RAILWAY COMPANY, LIMITED

THE FORTY-SIXTH ORDINARY GENERAL Meeting of the Shareholders will be held at the Registered Office of the Company, No. 3, Netaji Subhas Road, Calcutta, on Friday the 3rd July, 1953, at 4 p.m., to transact the following business:—

1. To receive the Directors' Report and the Auditors' Report and to pass the Accounts for the year ended 31st March, 1952.
2. To declare a Dividend.
3. To elect Directors.
4. To elect Auditors and fix their remuneration.

The Share Transfer Books of the Company will be closed from the 20th June to 3rd July, 1953, both days inclusive.

By Order of the Board,
McLEOD & CO., LTD.,
Managing Agents.

3, NETAJI SUBHAS ROAD,
CALCUTTA, 16*th June*, 1953.

Note.—Payment of the proposed dividend, if declared, will be made to those members whose names are registered in the Books of the Company on 3rd July, 1953, or to their Mandatees.

Dividend warrants will be despatched as soon as possible after the General Meeting. Applications for warrants will not be necessary.

THE AHMADPUR KATWA RAILWAY COMPANY, LIMITED

THE FORTY-FIFTH ORDINARY GENERAL Meeting of the Shareholders will be held at the Registered Office of the Company, No. 3, Netaji Subhas Road, Calcutta, on Friday the 3rd July 1953, at 4-05 p.m., to transact the following business:—

1. To receive the Directors' Report and the Auditors' Report and to pass the Accounts for the year ended 31st March, 1952.
2. To declare a Dividend.
3. To elect Directors.
4. To elect Auditors and fix their remuneration.

The Share Transfer Books of the Company will be closed from the 20th June to 3rd July, 1953, both days inclusive.

By Order of the Board,
McLEOD & CO., LTD.,
Managing Agents.

3, NETAJI SUBHAS ROAD,
CALCUTTA, 16*th June*, 1953.

Note.—Payment of the proposed dividend, if declared, will be made to those members whose names are registered in the Books of the Company on 3rd July, 1953, or to their Mandatees.

Dividend warrants will be despatched as soon as possible after the General Meeting. Applications for warrants will not be necessary.

THE BANKURA DAMOODAR RIVER RAILWAY COMPANY, LIMITED

THE FORTY-SIXTH ORDINARY GENERAL Meeting of the Shareholders will be held at the Registered Office of the Company, No. 3, Netaji Subhas Road, Calcutta, on Friday the 3rd July, 1953, at 4-10 p.m., to transact the following business:—

1. To receive the Directors' Report and the Auditors' Report and to pass the Accounts for the year ended 31st March, 1952.
2. To declare a Dividend.
3. To elect Directors.
4. To elect Auditors and fix their remuneration.

The Share Transfer Books of the Company will be closed from the 20th June to 3rd July, 1953, both days inclusive.

By Order of the Board,
McLEOD & CO., LTD.,
Managing Agents.

3, NETAJI SUBHAS ROAD,
CALCUTTA, 16*th June*, 1953.

Note.—Payment of the proposed dividend, if declared, will be made to those members whose names are registered in the Books of the Company on 3rd July, 1953, or to their Mandatees.

Dividend warrants will be despatched as soon as possible after the General Meeting. Applications for warrants will not be necessary.

ENCOURAGING RESULTS OF JARDINE HENDERSON JUTE GROUP

RELIANCE AND BALLY RESUME DIVIDEND

JUTE shares have provided a lively feature of trading on the Calcutta Stock Exchange in recent weeks. This is attributed partly to the revival of demand for jute goods and partly to the encouraging results published by some of the jute mills. Prominent among the latter are the Howrah Mills Co., Ltd., the Reliance Jute Mills Co., Ltd., and the Bally Jute Co., Ltd., all under the management of Messrs. Jardine Henderson Ltd., Calcutta. The results of these Companies for the half-year ended 31st March, 1953, reveal an all-round improvement. All the three have recorded a smart rise in their trading profits. as compared with those for the previous six months, the performance of Reliance Jute being the most impressive of the three.

The trading profit of the Howrah Mills has risen from Rs. 15.16 lakhs for the six months ended 30th September, 1952, to Rs. 20.47 lakhs. But it may be noted here that the profit for the latest half-year is sizably lower than that of Rs. 28.75 lakhs for the corresponding half-year of 1952. After providing a higher sum for depreciation and taxation, the net profit shows an advance from Rs. 4.61 lakhs for the previous half-year to Rs. 7.54 lakhs. The Directors had provided in the previous two years a sum of Rs. 7 lakhs from out of the profits for machinery renewal reserve, in addition to Rs. 20 lakhs set apart a year ago from out of the reserve for E.P.T. deposits, for purpose of financing modernisation of the Company's No. 2 Mill. In accordance with their policy of conserving the Company's resources for carrying out this programme, the Directors have strengthened this reserve further by the addition of Rs. 2 lakhs from the profit for the half-year under review. After making this provision, the profit does not permit of an increase in the dividend level. It has, therefore, been just maintained at As. 14 per share of Rs. 10 or 17½ per cent. per annum.

The trading profit of the Reliance Jute Mills for the half-year under review is substantially higher than that for either of the two previous half-years. As compared with the results for the previous six months, the trading profit shows an advance from Rs. 1.46 lakhs to Rs. 9.85 lakhs, a rise of Rs. 8.39 lakhs. It records an increase of Rs. 5.73 lakhs over that of Rs. 4.12 lakhs for the half-year ended 31st March, 1952. Depreciation has been more than doubled to Rs. 1.50 lakhs. No provision for taxation has been made. In distinct contrast to the net loss of Rs. 1.07 lakhs suffered in the previous half-year, the net profit for the six months under review amounts to Rs. 6.06 lakhs. The net loss for the previous half-year was wiped out by the additional income of Rs. 3.45 lakhs but no dividend could be paid. In pleasant contrast to this, the net profit for the half-year under review has enabled the Directors to place Rs. 1.50 lakhs to the debenture redemption fund, to wipe off all the arrears of dividend on preference shares (including for the latest half-year) and to declare a dividend of As. 4 per share of Rs. 10 or 5 per cent. per annum. This is the first return to the ordinary shareholders of this Company after a break of four years, the last half-year for which a dividend was paid was the one ended 30th September, 1948. At that time, the shareholders received a dividend of 10.4 per cent. per annum, in addition to a scrip bonus of one share for every two shares held.

The trading profit of the Bally Jute, at Rs. 4.22 lakhs, shows an expansion of Rs. 1.79 lakhs and Rs. 1.60 lakhs over those for the two preceding half-years. After providing a slightly higher sum for depreciation, the net profit of Rs. 1.75 lakhs compares favourably with that of Rs. 77,064 for the previous six months and Rs. 1.15 lakhs for the corresponding period of last year. The satisfactory performance during the half-year under review has enabled the Directors to resume payment of dividend on the ordinary shares, after a break of two half-years. They have, accordingly, declared a dividend of Rs. 4 per share of Rs. 100 or 8 per cent. per annum, as compared with the token dividend of 2 per cent. per annum paid for the half-year ended 30th September, 1951.

A more detailed picture of the results of the three Companies for the last three half-years is given in the table below:

(In thousands of rupees.)

• For the five half-years ended 31st March, 1953. † For the half-year ended 30th September, 1950. ‡ For the half-year ended 31st March, 1950.

Describing the trading conditions that prevailed during the half-year under review, the Directors, in their report to the shareholders, observe as follows:

"The general downward trend of prices of both raw jute and finished goods referred to in our last report continued throughout the period under review. On 28th February, 1953, the Government further reduced the export duty on sacking goods by Rs. 95 per ton. Since the closing of the accounts all markets have improved with, however, a rather disproportionate rise in the price of raw jute. On 25th March, 1953, discussions were concluded between the Governments of India and Pakistan, as a result of which the latter agreed to abolish the discriminatory licence fee of Rs. 2-8 per maund on the export of all jute to India and to decrease, by As. 12 per maund, the export duty on all exports of jute to India packed in *kutcha* bales. These measures have resulted in an easier flow of such qualities of jute as are necessary to maintain a good standard of production."

The latest balance-sheet of the Howrah Mills Co., Ltd., discloses that the Company's capital of Rs. 91.87 lakhs is supplemented by reserves and surplus amounting to Rs. 52.39 lakhs. Of the latter, general reserve accounts for Rs. 17.84 lakhs and machinery renewal reserve for Rs. 29 lakhs. The gross block of the value of Rs. 165.46 lakhs has been written down to Rs. 56.09 lakhs. The current assets amount to Rs. 149.07 lakhs (of which stocks and stores alone account for Rs. 94.05 lakhs and cash balances for Rs. 40.73 lakhs) and cover the current liabilities, at Rs. 60.91 lakhs, by a wide margin of Rs. 88.16 lakhs.

The Reliance Jute Mills Co., Ltd., has a paid-up capital of Rs. 69.50 lakhs, and a debenture issue of Rs. 25 lakhs. There are no reserves, except a debenture redemption reserve of Rs. 1.50 lakhs. The gross block, of the value of Rs. 123.46 lakhs, has been provided with a depreciation of Rs. 55.08 lakhs. The current assets at Rs. 68.66 lakhs exceed current liabilities (Rs. 40.56 lakhs) by Rs. 28.10 lakhs.

The Bally Jute Co., Ltd, has reserves and surplus to the extent of Rs. 30.50 lakhs which is more than 76 per cent. of the paid-up capital of Rs. 40 lakhs. Current liabilities aggregate no more than Rs. 11.29 lakhs. The gross block, aggregating Rs. 97.37 lakhs, has been well written down to Rs. 33.85 lakhs. Current assets amount to Rs. 47.94 lakhs and exceed current liabilities by a large margin of Rs. 36.65 lakhs.

BENGAL PAPER PASSES OVER DIVIDEND

An unbroken record of dividend covering a period of nearly 27 years is certainly an achievement of which any industrial concern can justifiably be proud. The Bengal Paper Mill Co., Ltd. (Managing Agents: Messrs. Balmer Lawrie & Co., Ltd., Calcutta), held this distinction until six months ago. This enviable record has now been broken with the Directors' decision to pass over the dividend for the half-year ended 31st December, 1952. This decision has become inevitable, in view of the sizable loss the Company has incurred during the period under review, due to factors which the Directors could not possibly control. This may be a little surprising to the shareholders, though they may not have been wholly unprepared for it. For the Directors of the Company, in their report for the previous half-year (published in December last), had informed the shareholders that a sit-down strike had been resorted to by the Company's labour force causing the mills to be closed since mid-October.

The direct result of this "illegal" strike on the Company's financial results for the half-year under review has been a gross loss of Rs. 7.47 lakhs, in distinct contrast to the profit of Rs. 8.63 lakhs for the previous six months and of Rs. 12.30 lakhs for the corresponding half-year of 1951. This loss has enlarged further to Rs. 9.57 lakhs, consequent on the provision of Rs. 2.10 lakhs for depreciation, as compared with Rs. 3.59 lakhs and Rs. 4.12 lakhs, respectively, provided for this purpose in the preceeding two half-years. This net loss of Rs. 9.57 lakhs compares unfavourably with the net profit of Rs. 3.76 lakhs earned in the half-year ended 30th June, 1952, and of Rs. 5.43 lakhs for the six months ended 31st December, 1951. The deficit has, however, been covered to the extent of Rs. 4.87 lakhs, thanks, in large measure, to the sum of Rs. 3.22 lakhs brought in from the previous six months and to Rs. 1.65 lakhs, representing excess of income-tax provided last half-year, refund of Managing Agents' commission, etc. The balance of Rs. 4.70 lakhs has been carried forward to the current half-year. Nevertheless, the Directors have decided not to hold in arrears the dividends on the preference shares. They have, accordingly, drawn a sum of Rs. 81,000 required for this purpose from the general reserve.

As already observed, for the first time since 1925, the Directors have passed over the dividend on the ordinary shares. For the preceding three half-years, they had maintained the dividend at 12½ per cent. per annum. During its long dividend record since 1925, the Company paid the highest dividend of 45 per cent. per annum in the war years and the lowest dividend of 7½ per cent. per annum in 1926.

Commenting on the labour trouble and its effect on the Company's production, the Directors, in their report to the shareholders, observe as follows:

"The root cause of the trouble was, undoubtedly, the retrenchment of redundant workers, to which reference was made in our last report. The retrenchment was made as sparingly and sympathetically as possible and, although at the time it was accepted without an open breach, the labour force in some sections of the Mill adopted a non-co-operative attitude which badly affected production and contributed to the loss. This unhappy state of affairs persisted and, in early October, the men in the sulphate recovery plant staged a sit-down strike, which shortly afterwards culminated in a total closure. Your Directors have to report with regret that the strike lasted until 23rd March, 1953, apart from a resumption of work for one week in January. Consequent upon our labour troubles, production fell by some 3,400 tons, as compared with the previous half-year, and cost of production increased. Further, the average sale price of our paper declined, as we had to supply a disproportionately high share of our much reduced production to the Government."

The following synopsis of the Company's latest balance-sheet reflects its financial position:

LIABILITIES	Rs.	ASSETS	Rs.
Capital ...	71,00,000	Gross block ...	1,95,77,779
Reserves ...	28,54,000	*Less*—Depreciation ...	1,28,90,079
Debentures ...	5,38,413	Net block ...	66,87,700
Provision for taxation	22,30,500	Stocks ...	75,300
Liabilities	48,81,708	Stores, etc. ...	65,01,237
		Debts, deposits and advances ...	36,55,346
		Investments	84,408
		Cash ...	1,30,771
		Profit and loss account ...	4,69,859
Rs.	1,76,04,621	Rs.	1,76,04,621

An idea of the prospects for the current year can be gained from the following extracts from the Directors' report:

"Advantage was taken of the shut period to bring the Mill into a good state of repair. This concentration on repairs will prove extremely valuable to the Company and will be amply repaid. The work could normally have only been done gradually at week-ends and consequently the cost has been charged in this one half-year instead of being spread over a long period. Since the resumption of work, the Mill has been running smoothly, but No. 2 sulphate recovery plant is not yet functioning efficiently. Although experts are now working on it, it is unlikely that we shall realise any material benefits from it in the current half-year."

AIR-INDIA INTERNATIONAL LTD.

It would have been a happy culmination to the record of public service as the pioneer in this country in the field of international aviation if Air-India International Ltd. (Secretaries and Treasurers: Messrs. Tata Industries Ltd., Bombay) had wound-up its full final year of operation (that is, the year ended 31st December, 1952), as a private enterprise by following up the maiden dividend of 3½ per cent. paid for 1951 with another distribution. But, unfortunately, the year's operations have resulted in a net loss of Rs. 2.14 lakhs (after providing for depreciation), as against a profit of Rs. 37.55 lakhs earned in 1951. A sum of Rs. 38.36 lakhs has been set aside for depreciation, which is Rs. 2.84 lakhs more than that provided last year.

Of course, this small loss would be reimbursed by the Government of India, in accordance with the terms of the agreement between the Company and the Government. But it must be recorded that it has been beyond the control of the Company to avert it. The main cause of the loss has been the steep rise in expenditure. As against an increase of Rs. 9.44 lakhs to Rs. 262.22 lakhs in traffic revenue, expenditure shows a rise of Rs. 30.84 lakhs to Rs. 232.31 lakhs. Moreover, in 1951 the Company had earned a net profit of Rs. 15.04 lakhs on assets sold or scrapped. There has, however, been no such income during the year under review. The increase in expenses is accounted for by increase in salaries and wages (Rs. 7.68 lakhs), by increase in prices and reduction in rebate of customs duty costing as much as Rs. 12.46 lakhs, by substantial increase of Rs. 7.65 lakhs in operational and traffic department expenses, etc. The Directors report that the Company's operations during the year under review would not have resulted in a loss if its activities had not been curtailed on two occasions during the year, once owing to Government's restrictions on consumption of aviation fuel and the second time due to labour trouble. The Company would have earned a substantial profit if the Posts and Telegraphs Department of the Government of India had paid to the Company mail rates "on a basis similar to that adopted by other Governments for such payments to their own national carriers.

Under the scheme of nationalisation (which has now come into force), the shareholders of the Company are expected to receive, wholly or mainly in the form of 3½ per cent. negotiable bonds of Air-India International Corporation (the nationalised company which takes over the services run by the Company), an amount exceeding 120 per cent. of the par value of their shares.

Points From The Chair

World Consumption of Oil Products

"Of the total world consumption in 1952 of some 635 million tons of oil products, approximately one-third represents new consumption since 1947. The capital which the industry has found since the end of the war in order to meet these requirements and to provide for the foreseeable future, though impossible to assess accurately, cannot be less than the equivalent of £6,500 million. As to future needs, at to-day's level of consumption of oil products even a small percentage increase represents an additional requirement of many millions of tons of oil and of finance on a commensurate scale. However, progress cannot be measured in terms of expansion of consumption alone. Keen and active competition forces the industry to direct a continued effort of research and new investment towards increased efficiency and lower costs. Technological advance often brings about an earlier obsolescence of existing plant and equipment."

SIR FREDERICK GODBER,
"Shell" Transport and Trading Co., Ltd.

Future of World Production of Glycerine

"I do not know whether the future demand for oils and fats for soap-making purposes will increase or decrease. One would expect a further decrease in North America and Europe but, as I suggested earlier, the increase in the tropical countries might be very great, if the standard of living there were to rise by even a small amount. If demand for soap contracts, it will, of course, have an important effect on the world production of glycerine, a by-product of soap-making. Between 1950 and 1952, world glycerine production (excluding Russia) has already been reduced from about 230,000 tons to 210,000 tons, although not all this reduction can be attributed to a lower soap production. This has not so far led to a glycerine shortage, as the demand has not been maintained at the high level which prevailed in 1950. But it is clear that there is now little margin of safety. A further reduction in supply, coupled with an increase in demand, could easily result in quite a serious shortage."

SIR GEOFFREY HEYWORTH,
Unilever, Ltd.

Diamond Trade

"Another erroneous impression that exists in some quarters is that even though we may not have large stocks, we mine in such a way as to restrict production to a level calculated to cause an artificial shortage and keep the price of diamonds at unreasonably high levels. This view is contradicated by two important principles which operate in the diamond trade. The first is that the selling arrangements in force contain provisions by which each producer is guaranteed, over a period of years, that however bad the general trade conditions are, his sales will not fall below an agreed minimum. As a result, there is always continuity of production, and diamond mines are kept in operation through bad times as well as good. The second is that the industry has always equipped its mines to operate at their optimum capacity. When the trend of prices and demand has warranted it, considerable sums have immediately been spent in reopening old mines which previously could not be exploited economically."

SIR ERNEST OPPENHEIMER,
De Beers Consolidated Mines, Ltd.

Joint-venture in Burma Oil Industry

"I told you last year that plans for a joint venture between the Government and the oil industry in Burma had progressed to the point, where a draft agreement had been initialled, subject only to acceptance by the Union Government of the valuation of £15 million which was put on the undertakings concerned. After a survey of the assets by a Commission appointed for the purpose, the Government accepted our valuation, but progress was then held up by a reference to the Supreme Court in Burma regarding the validity under the Constitution of Burma of the proposed joint venture procedure. The Supreme Court's ruling was favourable and we are informed the negotiations to finalise the joint venture will soon be resumed."

SIR KENNETH B. HARPER,
Burmah Oil Co., Ltd.

tability in Paper Pulp Market

"There are now some signs of stability in the ulp market and this is the all-important consideration, both for producer and consumer, of the nished product. The demand for paper is likely increase, although, in the case of newspapers, tocks are fairly high. Fortunately, with the decrease in value of the large quantity of raw aterials which mills have to maintain, the risk heavy losses in this direction has considerably iminished."

VISCOUNT CAMROSE,
Amalgamated Press Ltd.

Notices

THE GANGES MANUFACTURING COMPANY, LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Seventy-fifth Ordinary General Meeting of the Shareholders of the above Company will be held at the Registered Office of the Company, No. 2, Fairlie Place, Calcutta, on Monday the 6th July, 1953, at 11 a.m., for the following purposes:—

(1) To receive and consider the Directors' Report and the Accounts for the half-year ended 31st March, 1953.
(2) To elect a Director.
(3) To transact any other competent business that may be brought forward.

The Share Transfer Books of the Company will be closed from the 30th June to 6th July, 1953, both days inclusive.

PROFIT OF SHAW WALLACE DECLINES

BISRA STONE MAINTAINS DIVIDEND

Shaw Wallace and Co., Ltd.

THE directors of the above Company (Managing Director: Mr. J. E. Waterfield, Calcutta) submit the audited accounts of the Company for the year ended 31st December, 1952.

The Company's profit after the inclusion of Rs. 3,47,991 (Rs. 2,62,138) brought forward, is Rs. 25,80,900 (Rs. 25,64,086) and after making provision for taxation of Rs. 6,92,409 (Rs. 12,84,221) there remains Rs. 18,88,491 (Rs. 22,79,865). Out of this sum the directors have placed to general reserve account Rs. 3,00,000 (Rs. 7,00,000), placed to investment reserve account Rs. 1,50,000 (Rs. 1,50,000), declared as interim-dividends, payable for the year 1952 on the cumulative preference shares as under:—

On 15th July, 1952, 3 (3) per cent. less income-tax Rs. 1,65,937 (Rs. 1,65,937), on 15th January, 1953, 3 (3) per cent. less income-tax Rs. 1,65,938 (Rs. 1,65,937), and recommend the payment of a dividend on the ordinary shares of 10 (10) per cent. free of income-tax, absorbing Rs. 7,50,000 (Rs. 7,50,000), leaving to be carried forward Rs. 3,56,616 (Rs. 3,47,991).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	1,50,00,000	Block ...	9,94,781
Reserves ...	35,00,000	Other assets	1,76,59,924
Provision for taxation ...	6,50,000	Stocks ...	11,14,544
Liabilities ...	90,59,534	Stores ...	1,14,173
Profit and loss account ...	3,56,616	Debts, deposits and advances ...	54,95,991
		Investments	29,67,704
		Cash ...	2,19,033
Rs.	2,85,66,150	Rs.	2,85,66,150

Bisra Stone Lime Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Bird & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 30th September, 1952.

Raisings of limestone at 4,45,575 tons showed a small increase of 6,281 tons, over the previous half-year. Sales too at 4,32,228 tons, compared favourably with 4,26,595 tons, in the previous half-year. The steel manufacturers have accepted the Company's claim for an increase in price of 3 annas per ton with effect from the 1st June, 1952. This covers increases given to labour from that date. Despatches showed a slight improvement but wagon placements were again short and irregular.

Raisings of dolomite were 11,271 tons, a decrease of 1,604 tons, over the previous half-year due to concentration and development work. Sales, of which 1,448 tons were of first quality dolomite, dropped by 1,760 tons to 11,196 tons.

The output of lime at 4,31,739 maunds showed a most satisfactory increase of 36,913 maunds over the previous half-year. Sales increased by 94,409 maunds to 4,14,282 maunds, due mainly to the increased wagons supplied for the Calcutta market. The Company is now regaining its market for industrial lime.

There was an illegal strike from the 25th June, 1952, to the 5th July, 1952, both dates inclusive, due to the Union maintaining that the Company had no intention of implementing the conciliation agreement entered into with them in November, 1951. The fact that the Union refused to co-operate when the Company's proposals were put before them, rendered the position untenable.

Output and despatches of limestone, dolomite and lime would have been considerably higher but for this strike.

The profit and loss account after providing Rs. 42,032 (Rs. 44,420) for depreciation, Rs. 1,00,000 (Rs. 1,15,000) for taxation and taking Rs. 52,705 (Rs. 51,599) for quarry overhang reserve, Rs. 25,000 (Rs. 25,000) for mechanisation reserve, Rs. 14,283 (Rs. 14,174) for Workmen's Compensation Act reserve, Rs. 23,000 (Rs. 14,000) for tax contingency reserve and writing off Rs. 7,024 (*nil*) for bad debts and including Rs. 28,729 (Rs. 8,332) brought forward from the previous half-year, shows a credit balance of Rs. 1,03,180 (Rs. 1,12,735) which the directors propose to dispose of in payment of a dividend of As. 14 (As. 14) per share (without any deduction for income-tax paid by the Company) Rs. 87,500 (Rs. 87,500) and in carrying forward Rs. 15,680 (Rs. 25,235).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	10,00,000	Block ...	21,36,350
Reserves ...	21,89,785	Work-in-progress ...	50,888

Profit and loss account ...	19,680	Debts, deposits and advances ..	18,63,272
		Investments	13,069
		Cash ...	94,000
Rs.	48,73,516	Rs.	48,73,516

Mirzapur Electric Supply Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Octavius Steel & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December, 1952.

The revenue account shows a profit on the year's working of Rs. 87,491 (Rs. 89,458) and after deducting arrears of depreciation Rs. 4,189 (Rs. 4,192), gratuity to retired employees Rs. 1,108 (Rs. 1,684), bonus to staff Rs. 3,907 (Rs. 3,955) contribution to Vallabhbhai Patel National Memorial Fund Rs. 193 (*nil*), provision for taxation Rs. 15,000 (Rs. 16,000), reserve for deferred taxation Rs. 15,490 (Rs. 17,000) and appropriations under the Electricity (Supply) Act, 1948 Rs. 7,004 (Rs. 7,152), there is a net profit for the year of Rs. 40,600 (Rs. 39,475). After adding thereto the credit balance of Rs. 677 (Rs. 4,527) brought forward from the previous year and deducting therefrom Rs. 3,866 (Rs. 1,071) payable on coal cost adjustment there is a credit balance of Rs. 37,412 (Rs. 43,177) on profit and loss account, which the directors recommend be disposed of as follows:—

Transfer to general reserve Rs. 15,000 (Rs. 15,000) and carry forward Rs. 22,412 (Rs. 677 after paying dividend at As. 8 per share absorbing Rs. 27,500).

The directors have not recommended the payment of any dividend this year. This decision has been taken in view of the fact that finance is required for the expansion of the Company's business by the provision of additional plant and equipment to cater for the considerable further prospective load which exists within the area but which cannot be connected until such time as the present capacity of the Company's system has been augmented. The directors are of the opinion that to set aside funds for the purpose in question is not only the correct procedure to adopt in the interests of the general public, but is also likely to be of ultimate benefit to the Company.

The accounts for the year have been prepared in a form which differs slightly from that adopted in previous years in order to comply with the latest requirements of Government in the matter of allocations.

A continuous supply of electricity was maintained during the year and there was a small increase in the number of units sold as compared with the previous year. This increase is not, however, reflected in the profit earned due to the continued upward tendency in production costs.

The number of consumers connected to the Company's system at the close of the year was 1,489 with a connected load of 1,631 k.w., as compared with 1,284 with a connected load of 1,543 k.w., at the close of the previous year. The surcharge of 15 per cent. allowed by the State Government on energy bills still remains in force.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	4,95,000	Block ...	5,34,433
Reserves ...	2,04,528	Stores ...	2,09,115
Provision for taxation ...	38,891	Debts, deposits and advances ...	1,12,622
Liabilities ...	1,28,759	Investments	3,618
Profit and loss account ...	37,411	Cash ..	44,801
Rs.	9,04,589	Rs.	9,04,589

Saugor Electricity Supply Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Martin Burn Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st December, 1952.

Notification has been received from the Madhya Pradesh Electricity Board that it is prepared to grant the Company a loan to erect a thermal generating station and the work will be taken in hand as soon as formalities have been completed.

The following table shows the progress that has been made during the past three years, which has been on a restricted basis due to the insufficiency of the capacity of the generating plant.

Half-year ended	Units sold	Revenue Rs.
30th June, 1950	481,226	1,43,181
31st December, 1950 ...	472,382	1,41,994
30th June, 1951	552,147	1,66,745
31st December, 1951 ...	578,197	1,73,221
30th June, 1952	614,313	1,85,801
31st December, 1952 ...	586,692	1,91,828

After complying with the provisions of the Electricity (Supply) Act, 1948, and making adequate provision for liabilities and setting aside Rs. 6,000 (*nil*) to development and extensions account, there remains a balance of Rs. 10,749 (Rs. 10,214) including Rs. 2,755 (Rs. 2,747) brought forward from the previous half-year available for distribution and this the directors recommend be disposed of in paying of a dividend at the rate of 5 (5) per cent. per annum free of income-tax absorbing Rs. 7,500 (Rs. 7,500) and in carrying forward to next half-year Rs. 3,249 (Rs. 2,714).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	3,00,000	Block ...	2,86,145

		Cash ...	62,231
Rs.	5,79,103	Rs.	5,79,103

Balasoor Tea and Rubber Co., Ltd.

The directors of the above Company (Managing Agents: Young India Agencies, Ltd., Bangalore City) submitted the audited accounts of the Company for the year ended 31st March, 1953.

The Company's working for the year showed a profit of Rs. 2,64,744 (Rs. 2,74,942) to which was added the balance brought forward from last year Rs. 46,299 (Rs. 11,351) making a total of Rs. 3,11,044 (Rs. 2,86,293). After deducting dividend on preference shares at 7½ (7½) per cent. paid already Rs. 18,750 (Rs. 18,750) and 10 (10) per cent. of the net profit to managing agents Rs. 26,474 (Rs. 27,494) there was left a balance of Rs. 2,65,820 (Rs. 2,40,049).

The directors disposed of this amount as under:—

In paying a dividend of 12½ (12½) per cent. on ordinary shares Rs. 68,750 (Rs. 68,750), transfer to bad debt reserve Rs. 5,000 (*nil*), transfer to dividend equalisation reserve Rs. 50,000 (Rs. 75,000), transfer to taxation reserve Rs. 10,000 (Rs. 50,000), reserve fund Rs. 1,00,000 (*nil*) and in carrying forward the balance of Rs. 32,070 (Rs. 46,299).

The total acreage of the estate amounts to 1,913. Tea crop for the year was 3,85,925 pounds as against previous year's crop of 3,63,695 pounds. FOB cost of tea was 128 (125) cents and the average sale price realised was 183 (205.6) cents. Estimate for the next year is 3,50,000 (3,00,000) pounds. Rubber crop for the year was 34,699 pounds against previous year's crop of 35,835 pounds. FOB cost of rubber was 45 (45) cents per pound and the average sale price realised was 112.6 (112.7) cents. Estimate for the next year is 30,000 (35,000) pounds. Coffee crop was 1,241 cwts. (180 cwts. arabica and 1,061 cwts. robusta) as against previous year's crop of 839 cwts. (538½ cwts. arabica and 300½ cwts. robusta).

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	8,00,000	Block ...	10,04,877
Reserves ...	6,05,000	Stocks ...	2,30,697
Provision for income-tax	33,804	Stores ...	1,31,162

Profit and loss account ...	3,11,043	Debts, deposits and advances ...	1,52,434
		Investments	9,951
		Cash ...	2,88,448
Rs.	18,23,058	Rs.	18,23,058

Dehri-Rohtas Light Railway Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Sahu Jain Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 30th September, 1952.

The total capital expenditure as at 30th September, 1952 is Rs. 53,96,854 (Rs. 55,89,229) as shown by the accounts. The gross earnings amounted to Rs. 9,31,198 (Rs. 9,04,657) and the working expenses to Rs. 5,92,301 (Rs. 4,60,909) leaving a surplus of Rs. 3,38,897 (Rs. 4,43,748) and by adding unclaimed wages written off Rs. 830 (*nil*) and interest Rs. 432 (*nil*) the amount comes to Rs. 3,40,159 (Rs. 4,43,748). After deducting managing agents allowance Rs. 9,000 (Rs. 9,000), directors fees and travelling expenses Rs. 1,180 (Rs. 636), debenture and other interest Rs. 56,140 (Rs. 40,447), irrecoverable advances written off Rs. 1,403 (*nil*), loss on sale of investment Rs. 73 (*nil*), debenture trustee fee Rs. 750 (*nil*), depreciation reserve Rs. 2,35,957 (*nil*), managing agents commission Rs. 7,503 (*nil*), provision for Government cess Rs. 7,000 (*nil*) and provision for taxation Rs. 13,000 (*nil*), there remains a balance of Rs. 8,154 (Rs. 2,24,327) to the credit of profit and loss account for the half year's working. To this sum is added balance of the last account Rs. 1,89,336 (Rs. 1,36,123) making a total of Rs. 1,97,490 (Rs. 3,60,450). Deducting dividend at As. 10 (As. 10) per share for the year ended 31st March, 1952, (since declared) Rs. 1,40,625 (Rs. 1,12,500) and amount transferred to general reserve Rs. 45,000 (*nil*) there remains a balance of Rs. 11,865 (Rs. 2,47,950) at the credit of profit and loss account which is carried forward.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	22,52,600	Block ...	53,96,854

Provision for taxation ...	32,101	Investments	5,361
Liabilities ...	7,72,937	Cash ...	68,656
Profit and loss account ...	11,865		
Rs.	68,46,488	Rs.	68,46,488

Alliance Jute Mills Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. McLeod & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st December, 1952.

The profit for the half-year after providing for depreciation Rs. 2,39,000 (Rs. 1,25,000) amounts to Rs. 1,96,939 (loss of Rs. 11,05,274). Deducting from this, the debit balance brought forward from the previous half-year of Rs. 13,63,074 (credit balance of Rs. 70,912) there is a net debit balance of Rs. 11,66,135 (Rs. 10,34,362), which is carried forward.

Jute stocks are shown at cost. Sold stocks of goods have been calculated at contract sale price and goods unsold on 31st December, 1952, have been valued at market rates.

In accordance with the main and supplementary working time agreements of the Indian Jute Mills Association the mills worked 42½ hours per week throughout the half-year with 12½ per cent. of the total looms complement sealed. The mills labour force was quiet during the period under review and due to reorganisation, efficiency in most departments has shown fair improvement.

Highly speculative and fluctuating markets for raw jute and gunnies have made trading difficult during the period under review. Since the end of the year prices have steadily declined, and Government in an effort to remedy the position reduced sacking export duty on 28th February, 1953 by Rs. 95 per ton. This reduction did not arrest the decline in prices.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	45,00,000	Block ...	30,91,589
Reserves ...	2,10,000	Stocks ...	55,03,764
Liabilities ...	81,03,079	Stores ...	13,42,550
		Debts, deposits and advances ...	11,31,598
		Investments	4,55,202
		Cash ...	1,22,241
		Profit and loss account ...	11,66,135
Rs.	1,28,13,079	Rs.	1,28,13,079

Presidency Jute Mills Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. McLeod & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st December, 1952.

The managing agents have again offered to waive Rs. 50,000 (Rs. 50,000) of their commission and which has been accepted by the directors. The profit for the half-year, after providing for depreciation Rs. 1,02,500 (Rs. 1,12,000) amounts to Rs. 92,800 (Rs. 51,289) from which is deducted the debit balance brought forward from the previous half-year of Rs. 4,76,887 (credit of Rs. 17,027) and raw jute tax paid in respect of the year 1950 Rs. 8,919 (*nil*), leaving a debit balance of Rs. 3,93,006 (credit balance of Rs. 5,816, after paying a dividend of 2½ per cent. on ordinary shares, absorbing Rs. 62,500), which is to be carried forward.

In accordance with the main and supplementary working time agreements of the Indian Jute Mills Association, the mills worked 42½ hours per week with 6⅔ per cent. of the total complement of looms sealed up to 15th December, 1952, and thereafter 45 hours per week with 12½ per cent. of the looms sealed.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	25,00,000	Block ...	20,31,385
Debentures	8,00,000	Stocks ...	17,73,241

		Profit and loss account ...	3,93,006
Rs.	53,41,953	Rs.	53,41,953

Indian National Airways, Ltd.

The directors of the above Company (Managing Agents: Messrs. Govan Bros., Ltd., New Delhi) submitted the audited accounts of the Company for the year ended 31st December, 1952.

The gross revenue for the year amounted to Rs. 1,13,36,453 (Rs. 52,21,528). After meeting all working expenses and providing Rs. 7,53,388 (Rs. 4,57,832) for depreciation, the net position is a profit of Rs. 36,302 (loss of Rs. 5,672). The total loss balance has, therefore, been reduced to Rs. 12,62,971 (Rs. 15,72,246), after making adjustments in respect of reserve for doubtful debts, valuation of accessories and other stock in the appropriation account and the profit for the year under review.

The directors were able to live upto their promise inasmuch as instead of a small loss in the last year, the Company was able to show a little profit in spite of difficulties and handicaps in the form of increase in the price of petrol and spares; reduction in the subsidy on petrol consumed as well as heavy reduction in the rate of carriage of military mails from Delhi to Jammu and Srinagar and back. But for the above, the directors would have been in a position to show better results.

In the scheme of nationalisation of the Air transport industry in India, the undertaking belonging to the Company will also be acquired by the proposed Corporation "Indian Airlines" in accordance with the terms and conditions of Air Corporations Bill, 1953, which has been passed by the House of the People. All the companies which are going to be nationalised will receive compensation in accordance with the provisions of the proposed Bill.

The Company continued to be general sales agents for K.L.M. Royal Dutch Airlines at Delhi and traffic handling agents for Air Services of India at Karachi.

The Company's aircraft fleet as at the end of the year under report consisted of 5 Vickers Viking, 7 Dakotas, 1 Twin Beechcraft and 1 Single Beechcraft.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	88,82,441	Block ...	22,07,260

		Cash ...	11,69,467
		Profit and loss account ...	12,62,971
Rs.	1,01,43,890	Rs.	1,01,43,890

Kalapahari Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 28th February, 1953.

After providing Rs. 12,500 (Rs. 10,000) for depreciation, Rs. 25,000 (Rs. 25,000) for cesses and Rs. 70,000 (Rs. 92,000) for taxation and transferring Rs. 8,000 (Rs. 20,000) to reserve against amortisation of land and mining rights there is a balance of Rs. 91,300 (Rs. 99,928) at the credit of profit and loss account, from which the directors recommend payment of a dividend at Re. 1 (Re. 1) per share and bonus of As. 12 (As. 12) per share Rs. 61,250 (Rs. 61,250), and to carry forward Rs. 30,050 (Rs. 38,678).

Raisings during the half year were 37,227 tons, as compared with 40,148 tons during the previous half year and despatches were 40,305 tons, as against 36,666 tons.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	3,50,000	Block ...	6,67,062

		Cash ...	7,100
Rs.	15,76,568	Rs.	15,76,568

Devon Tea and Produce Co., Ltd.

The directors of the above Company (Managing Agents: Young India Agencies, Ltd., Bangalore City) submitted the audited accounts of the Company for the year ended 31st March, 1953.

The Company's working for the period showed a profit of Rs. 72,195 (Rs. 1,58,140) to which was added the balance brought forward from last year of Rs. 41,959 (Rs. 19,633) making a total of Rs. 1,14,154 (Rs. 1,77,773). After deducting dividend on preference shares at 7½ (7½) per cent. paid already Rs. 15,000 (Rs. 15,000) and 10 (10) per cent. of the net profit to managing agents Rs. 7,219 (Rs. 15,814) there was a balance of Rs. 91,935 (Rs. 1,46,959). The directors disposed of this amount as under:—

In paying a dividend of 12½ (12½) per cent. on ordinary shares Rs. 25,000 (Rs. 25,000), transfer to general reserve Rs. 25,000 (*nil*), transfer to dividend equalisation reserve Rs. 15,000 (Rs. 35,000) and in carrying forward the balance of Rs. 26,935 (Rs. 41,959). The total acreage of the estates amount to 1,887.94 . Tea crop for the year was 2,08,648 pounds as against previous year's crop of 2,28,254 pounds. FOB cost of tea was 137 (125) cents per pound and the average sale price realised was 178 (204.3) cents. Estimate for the next year is 2,20,000 (2,40,000 pounds). Coffee crop was 316.75 cwts. (arabica 176.75 and robusta 140 cwts.) against 279 cwts. (arabica 226 cwts. and robusta 53 cwts.). Estimate for the next year is 800 (600) cwts. (700 cwts. arabica and 100 cwts. robusta). Owing to unfavourable seasonal conditions the crop of tea and coffee was lower during the year and hence the lower profit. The Company's estates are well maintained.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.

		Cash ...	1,28,408
Rs.	9,33,163	Rs.	9,33,163

Phaskowa Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Duncan Brothers & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December, 1952.

The accounts disclose a loss of Rs. 1,78,104 (Rs. 77,158). On transfer of this sum to profit and loss account and after sundry adjustments, including a transfer of Rs. 1,50,000 (Rs. 50,000) from revenue reserve and Rs. 27,000 (*nil*) from buildings and machinery reserve, there is a balance at credit of profit and loss account of Rs. 781 (Rs. 3,754) to be carried forward.

Enhanced production costs due to the high cost of statutory concessions to labour, coupled with the depressed state of the tea market in 1952 contributed mainly to this unfavourable result. Crop was 2,587 maunds as compared with 3,144 maunds in 1951. The average selling price was Re. 1-2-2 per lb. as against Re. 1-2-4 per lb. in the previous year. Planted area remains at 347.62 acres.

Estimates for 1953 provide for a crop of 3,000 maunds for an outlay of Rs. 3,04,320 including inland freight and sale charges.

Accounts in brief are as under:—

MONEY FEATURELESS

(From Our Own Correspondent)

BOMBAY, 17th *June*

The short-term money market was narrow during the week under review. There was no replacement of the floating funds which were taken up by the subscriptions is cash to the Central Government's loan and the debentures of the Stanvac Refinery. Although the subscriptions to the Stanvac debentures augmented the funds of the Company's bankers, the funds of others were depleted. However, in the absence of any sizable demand for funds from trade and industry, activity in the inter-bank call money sector was greatly limited. The rate for day-to-day money among the Exchange banks and big Indian banks remained unchanged at 2¾ per cent. and among the smaller Indian banks at 3 per cent.

There was no change in the term-deposit rates either, one to three months' money being quoted at 2½ to 2¾ per cent. and four to twelve months at 2¾ to 2¾ per cent. The only change in short-term money rates during the week was the fractional increase in the Central Government's Treasury Bill rate. Thus, the average rate of accepted tenders at yesterday's offerings was Rs. 2-6-6 per cent. per annum, as against Rs. 2-6-5 per cent. last week. Another feature of this week's tenders for Rs. 100 lakhs was the further increase in the amount offered to Rs. 222.5 lakhs, as compared with Rs. 209.50 lakhs a week ago and Rs. 201.50 lakhs a fortnight ago.

The Reserve Bank's statement for the week ended 12th June, 1953 discloses no notable features in the Issue Department. As against a decline of Rs. 2.13 crores in notes in circulation, there has been an increase of Rs. 2.14 crores in notes held in the Banking Department. In the Banking Department, the most arresting feature is the rise in the Central Government's deposits to the tune of Rs. 28.04 crores, the bulk of which is obviously due to the subscriptions to the National Plan bonds. Deposits of other Governments, on the other hand, have recorded a fall of Rs. 4.19 crores. Deposits of banks show only a decline of Rs. 96.63 lakhs. As against these variations on the liabilities side, the assets show an enlargement of Rs. 2.16 crores in cash balances, Rs. 3.42 crores in balances held abroad, Rs. 36 lakhs loans and advances to Government, Rs. 14.24 crores in other loans and advances, Rs. 86.07 lakhs in investments and Rs. 3.22 crores in Government Treasury Bills purchased and discounted. Of the increase of Rs. 14.24 crores in other loans and advances noted above, Rs. 10.30 crores are accounted for by advances to Scheduled Banks against usance bills. This suggests that the banks must have borrowed from the Reserve Bank in order to subscribe to the new loans.

Very minor variations are disclosed by the consolidated statement of position of the Scheduled Banks for the week ended 5th June, 1953, as compared with that for the previous week. An increase of Rs. 11.01 lakhs is noted in demand deposits and Rs. 59.32 lakhs in time deposits. Inter-bank borrowings are higher by no more than Rs. 47.38 lakhs. Borrowings from the Reserve Bank have gone down by Rs. 2.67 crores and those from the Imperial Bank by Rs. 75 lakhs. Advances show a fall of Rs. 73 lakhs, accompanied by a decline of Rs. 1.48 crores in bills purchased and discounted. Investments are better by Rs. 46.21 lakhs. Cash balances, including balances with other banks and money at call and short notice, have advanced by Rs. 2.99 crores.

Apathetic conditions were witnessed in the Gilt-edged market during the week. The downward trend in prices, engendered by the flotation of the new Central Government loan last week, was more pronounced this week due to preponderance of sellers and absence of buyers. 3 per cent. 1957 and 3 per cent. 1958 were placed As. 2 lower at Rs. 98-3 and Rs. 98-1. respectively. 3 per cent. 1959-61 declined by As. 4 to Rs. 96-2, 3 per cent. 1963-65 reacted from Rs. 92-11 to Rs. 92-7. 3 per cent. 1964, which became *ex-voucher* on the 15th inst., closed at Rs. 92-6 *ex-voucher* as against Rs. 92-15 *cum-voucher* a week ago. 3 per cent. 1966-68 receded by as much as As. 8 to Rs. 90-1. 3 per cent. 1970-75 were on offer and moved down by an anna to Rs. 86-8. 3 per cent. 1986 Conversion Loan fell from Rs. 82-7 to a low of Rs. 81-14, before hardening to Rs. 82-2 at the close.

The foreign exchange section of the money market was again featureless with no change in the rupee-U.S. dollar rate. In the New York market, the pound sterling was priced a fraction of a cent lower over the week. Thus, the spot rate declined from $2.81 5/16-2.81 7/16 per £ on the 9th inst. to $2.81¼-2.81⅜ yesterday. The forward rates also were a little lower, at $2.80 7/16-2.80 9/16, as against $2.80¼-2.80⅜ for three months and at $2.79 13/16-2.79 15/16, as against $2.79 15/16-2.80 1/16 for six months.

TRADING IN KIPS DULL

(From Our Own Correspondent)

MADRAS, 15th *June*

Trading in kips with the U.K. has been patchy and several *mandi* merchants have left Madras for their villages to celebrate *Ramzan*. Demand for cow hides has been slow, but for buff calf and buff hides good. Shipment business is possible, if shippers meet the dressers' ideas in regard to price. There has been good clearance of tanned goat and sheep skins in the local market and prices have ruled steady for goat and firm for sheep.

In the next London public sales, which commence on the 29th instant, 3,00,000 tanned goat and equal quantity of tanned sheep skins will be offered for sale, and prices are expected to rule steady.

BULLION ERRATIC

(From Our Own Correspondent)

BOMBAY, 17th *June*

The bullion market was a little erratic during the week under review, though the undertone was steady to firm during the major part of the week. Early in the week, the trend was somewhat reactionary but, with the operators turning their attention to gold, a firm trend came to prevail. But no hectic activity was witnessed due to the weakness of cotton. Towards the close again, the market turned quiet and both the metals finished sizably lower than the best levels of the week.

Activity in the market was more confined to gold, as operators received a fresh stimulus this week from reports that the inflow of gold from the Kolar Gold Fields would ere long stop consequent on the 100 per cent. power cut imposed in that area. The effect of this was that yesterday, the premium of ready position over the forward widened to nearly Rs. 3 from Re. 1-6 earlier. By a coincidence, the quantity of Mysore gold sold yesterday by the National Bank of India was also lower than in previous days. This gave the impression that no more supplies would come from that source. But a fresh large offering by the Bank to-day, brought down the premium to less than Rs. 2 at the close.

A feature of the trading in silver was the narrowing of the premium of ready over the forward from Rs. 2 at the close of last week to just a rupee. This was due mainly to dwindling offtake. Another feature was the large and widening carry-over charges against sellers from the current settlement to the next settlement. The *budla* charges, which were quoted at Rs. 2-14 against bears on Monday this week, stood to-day at Rs. 3-2 at the close.

Silver for forward delivery (30th June settlement) opened at Rs. 158-7 and reacted to Rs. 157-4 at one time on Saturday on full liquidation and lack of fresh support. But the statement of the Deputy Finance Minister that the Estate Duty Bill will be brought into force in September, the firmness of gold and covering operations by short sellers due to widening *budla* charges against them, all combined to lift the price to a high of Rs. 162-2 yesterday. The higher level brought some realising. There was also some selling due to the weakness of cotton. Consequently, the quotation dropped to Rs. 159-12 to-day before closing at Rs. 160-4.

Ready silver (.996 Bombay Mint) began at Rs. 160-7 and fell to Rs. 158-4 on Saturday. After rebounding to Rs. 163-2 yesterday, it moved down to Rs. 161-4 at the close to-day. The floating stocks are estimated at 1,000 bars. The daily average offtake was 35 bars.

Gold for forward delivery (29th June settlement) reacted early in the week from Rs. 89-3 to Rs. 88-5, but advanced to Rs. 91-2 yesterday. To-day, however, it receded to close at Rs. 90-5.

Ready gold opened at Rs. 90-14 and, after a dip to Rs. 89-15, came up to Rs. 93-10, but wound up the week at Rs. 92-3. The floating stocks of gold are placed at 20,000 tolas. The daily average arrivals were 7,000 tolas, while the offtake amounted to 6,000 tolas on an average.

The weak trend of the free world markets for gold persisted during the week under review, the quotation in the European markets dropping a further 10 cents to $36.40.

The following comparative table shows the trend of the market during the week under review:

	17-6-53	Highest	Lowest	10-6-53
GOLD	Rs. a.	Rs. a.	Rs. a.	Rs. a.
Ready (.99 fine Mint)	92 3	93 10	89 15	91 6

New York Ready ..	85½*c.*	—	—	85½*c.*

OLD SEASON'S TEA WELL SUPPORTED

(From Our Own Correspondent)

CALCUTTA, 16th *June*

Steady conditions prevailed during yesterday's export sale when offerings aggregated 31,550 packages including 1,750 packages from stocks of the old season. Quotations were: clean common B.P. Re. 1-11-6 and clean black pekoe Re. 1-12-6. Demand was generally moderate, but only poor attention was paid to plain liquoring Darjeelings. The old season's teas were met with good support. Prices for bright liquoring Dooars were raised by one anna, as were those for fannings and whole leaf grades. A firm tendency was in evidence in clean common teas and the plainest varieties.

LINSEED PRICES DECLINE

(Messrs. A. Bradley & Co.)

CALCUTTA, 15th *June*

There has been quite an appreciable decline in prices during the week, whilst very little trading has been recorded, and market conditions are generally much easier. Upcountry despatches to this centre have been small, but sellers have shown some interest for small quantities. The local offtake, however, has been poor. The demand from crushers has been rather feeble on the whole and a small daily turnover has been recorded at reduced prices. The oil market is dull with prices declining owing to lack of demand. The latest quotations are as follows:—June Rs. 20-12 and July/August Rs. 21-4 per maund.

DECLINE IN COTTON

(From Our Own Correspondent)

BOMBAY, 17th *June*

While the Cotton Advisory Board, which met last Friday, was significantly silent with regard to the estimate of the cotton crop next year, it made a number of important policy recommendations to the Government of India after reviewing the consumption and carry-over policy for this season. Judging by the amount of cotton consumed during the first eight months of the current season, it is now certain that the overall consumption as well as the consumption of Indian cotton during this year will be higher than last year, even though the proportion of Indian cotton to foreign cotton might not remain the same as at present at the end of the year.

The total consumption for the whole season is estimated at 43.57 lakh bales in the proportion of 35 lakh bales of Indian cotton and 8.57 lakh bales of imported cotton Exports are not likely to exceed 3 lakh bales, leaving a carry-over of 19.31 lakh bales at the end of the year with the trade and the mills together. This is judged to be sufficient for meeting the requirements of the industry till the new crop cotton is available to it. Those who are nervous about cotton prices during the next year seem to have forgotten to take into account the increased use of Indian cotton by the mills of more than 35 lakh bales. The smaller carry-over with an average new crop might, however, create a tight supply position with regard to usable styles of cotton during the next year. Of course, the whole question will turn round the 1953-54 production.

The forward market has been further demoralised during the week under review. After showing good strength for a while, the I.C.C. August tottered again and fell with a crash yesterday to Rs. 672½ with occasional and spasmodic efforts to rise again. It declined still further to touch a low of Rs. 663 to-day. The market is obsessed with the fear of having to take delivery in August and as there are floating stocks of cotton not favoured by the mills which can be tendered this year, this apprehension is likely to operate and influence trading for the rest of the delivery period. Even if forward trading in the new crop were to be allowed by the middle of July at the latest as recommended by the Cotton Advisory Board, there are wild rumours in the market of cotton going below the initial price of Rs. 620 where it started when forward trading was allowed. This will have a deleterious effect on the forward and spot prices of the new crop cotton during the earlier months and it is mainly the producers who will suffer from such an eventuality.

Curiously enough, the position in the spot market is fairly satisfactory and comparatively healthy though there has been an appreciable reduction in the premia for certain desirable varieties. The mills have returned to the market and if a 5 per cent. additional quota, as recommended by the Cotton Advisory Board, is allowed soon, some fresh demand from the mills is likely to materialise. Enquiries for imported cotton are also there and the spot market has nothing to complain about or to be disappointed over, considering the carry-over and the likely size of the 1953-54 crop. With an appreciable reduction in the Pakistan crop next year and no immediate prospects of depreciation of the Pak currency, misgivings in the spot market about the moderate stocks left in the hands of dealers are misplaced, especially as the new crop is likely to be delayed because of the late monsoon.

Opening the week at Rs. 691½ the I.C.C. August moved up, on speculative support and encouraging reports from other commodity markets, to Rs. 693 on 12th instant. Thereafter, it began to decline on profit-taking and favourable weather reports. The following is the trend of prices over the week ended to-day:

	Opening	*High*	*Low*	*closing*
I.C.C. August ...	Rs. 691½	693	663	668

The following are the latest available quotations from the spot market:

Bengal *Deshi* Rs. 550; Berar Jarilla Rs. 710; Khandesh Rs. 760; Vijay Rs. 845; Moglai Rs. 665; Oomra *Deshi* Rs. 670.

At Karachi, the position continues to be satisfactory if not comfortable. Enquiries from the Continent for N.T. and 289F continue to come in modest measures. The U.K. is naturally interested in Pak cotton and will go on buying reasonable quantities from the supplies available at present. Karachi cannot cease to be an important supply centre for Japan, Hongkong and Australia. Whatever the world position of the cotton market in the next year, the Pakistan Government has wisely decided not to allow forward trading which might impede the flow of exports by raising rates unjustifiably. With official price support absent and forward trading in abeyance, prices are likely to remain at an attractive level for buyers from abroad when the new crop comes into the market. Altogether, the prospects, if not buoyant for Pakistan cotton, are at least encouraging, compared to what happened during the earlier part of the 1952-53 season. The following are the latest quotations from the Karachi cotton market:

Punjab *Deshi* Rs. 77; 4F Punjab R.G. Rs. 59½; S.G. Rs. 65½; L.S.S. Punjab R.G. Rs. 63½; S.G. Rs. 69½; N.T. R.G. Rs. 69½; S.G. Rs. 75½; 289F Punjab R.G. Rs. 72½; S.G. Rs. 78½.

At Alexandria, while only small quantities of desirable varieties of cotton are in stock, demand at a reasonable scale continuous from various Continental centres and from Canada. The Government has allowed shipments of cotton beyond the originally stipulated date of 31st August with certain conditions. Exports up to the end of May showed an increase of nearly a quarter of a million bales, from 491,000 to 730,000 bales this year. The provision of the Indo-Egyptian trade agreement regarding payment for cotton imported by India from Alexandria has not yet come into force, but it is likely to do so at an early date. Some fresh barter transactions with Spain is reported from Alexandria.

Irregular fluctuations have marked trading at New York. The tendency in the near July delivery continues to be easy and holders of contracts are prone to liquidate them at every rise. Spot demand is also reduced, as cloth sales have been on a lower scale during recent weeks. Other commodity markets such as wheat are weak and if further weakness develops in these markets, it is bound to have an adverse effect on cotton.

The following are the latest available quotations from New York as compared with those of a week and a fortnight before:

(In cents per lb.)

	16-6-53	10-6-53	3-6-53
Spot	34.15	34.10	34.15
July	33.58	33.58	33.63
October	33.80	33.75	33.77
December	33.88	33.85	33.80
March	34.02	33.87	33.85

ART SILK YARN WEAK

(From Our Own Correspondent)

BOMBAY, 17th *June*

Distinctly weak conditions prevailed in the art silk yarn market this week. This was the result of several bearish factors. First, the report of forward sale in art silk yarn produced by the National Rayon Corporation to the Silk and Art Silk Mills' Association, Bombay, created a hesitant tendency in the market. Under the agreement entered into, the Corporation has agreed to sell 2.4 million lbs. of yarn of 150 deniers for delivery during the period October, 1953 to March, 1954, at Rs. 3-10 per lb. As these would be hedged, the traders feel that it would be an additional burden on the market. The announcement of the bulk purchase agreement for Rs. 2 crores worth of art silk yarn by the Association with the Italian firm Italviscos, reports regarding Korean peace, further heavy arrivals of imported yarn and weak advices from cotton market combined to impart weakness to the market. Selling pressure that ensued, as a consequence, brought about a break in values of yarn yesterday. The market remained closed to-day, as a mark of respect to a member who died.

In the forward section, 150D June delivery contract suffered a loss of 18 points to Rs. 772 yesterday; in unofficial trading to-day, it was quoted still lower at Rs. 760. July contract receded by a like amount to Rs. 777. In the ready section, 150 Italy declined by an anna and a half to Rs. 3-14. 120 Japan and 150 Japan lost an anna each to Rs. 4-5-6 and Rs. 4-1, respectively. 120 Italy, however, proved an exception, the quotation yesterday being higher at Rs. 4-2-9, as against Rs. 4-2.

The Government of India's import policy for art silk yarn for the coming half-year, referred to in the previous week's report, has been vehemently criticised by a section of traders. "The most important feature of the policy," to quote one report, "is that the Government has restricted, perhaps through misconception, the import of 150 and 120 deniers (bright finish) only to 5 per cent. of the total licence. The Government is either not able correctly to appreciate the consumption figures in these deniers and finish or possibly ill-advised, since it seems to have committed a serious error in its judgment." In this connection, it is pointed out that, although 150 and 120 deniers are standard counts in our country and they are substantially consumed not only by silk mills but also by handloom weavers as well as other small and big consumers. Out of this, the consumption of dull and semi-dull yarns in these deniers is only to the extent of 30 or 35 per cent., whereas the consumption of bright finish in these deniers extends to over 65 to 70 per cent. The indigenous production in these deniers is not even one-tenth of the requirements of this country, whereas the imports have been drastically restricted to only 5 per cent., i.e., about one-twentieth of the actual 10 per cent. licence to be granted to established importers.

In view of these factors, it is felt that, if this situation is allowed to continue any longer, a very awkward situation in the trade, as well as in the industry, will be inevitable in course of time, in that the prices of such coarser deniers as 150 and 120 may be higher when the prices of finer deniers, such as 100s and others, will be lower. It is accordingly hoped that, in the interests of trade and industry, the Government will see to it that such serious defects in the details of the policy are removed without any undue delay.

The table below gives the prices of art silk yarn quoted yesterday, as compared with those on the 10th and 3rd inst.

	16-6-53	10-6-53	3-6-53
	Rs. a.	Rs. a.	Rs. a.
150D May (per case of 200 lbs.) ..	772 0	790 0	—

150 Italy ,, ...	..	3 15½	3 15

OILSEEDS FULLY STEADY

(From Our Own Correspondent)

BOMBAY, 17th *June*

After remaining hesitant during the first two sessions of the week, owing to lack of fresh buying, the oilseeds market put on a cheerful tone during the subsequent sessions. The castorseed section was particularly bright, following reports of good enquiries for oil from Continental countries. In fact, some business (about 300 tons) was reported done at £142 per ton for Commercial oil and £148 10s. for B.S.S. The groundnut section too elicited support from *vanaspati* interests and staged an improvement in values. The improvement was further assisted by firmness in the oil section, thanks to poor arrivals. The linseed and niger seed sections could do no more than react in sympathy with the rest. Kardi seed prices were fully maintained, on expectation that business with Australia was possible at £45 10s. and on scattered support from indigenous crushers. The undertone of the market was fully steady and values on balance disclosed major gains over the week.

In castorseeds futures, there was short-covering induced by encouraging advices from the oil section. September delivery contract, which had receded from Rs. 148-12 to Rs. 143-12 on Friday, on discouraging advices from Brazil and New York, spurted to Rs. 152-4 to-day. Among shorts, F.A.Q. and Madras quality moved up, by a rupee each, to Rs. 32 and Rs. 32-8, respectively. Kanpur quality was higher by As. 4 at Rs. 30. Oil Commercial improved from Rs. 17-4 to Rs. 18-4. Oil B.S.S. and 1st Pressure also staged a rise of As. 12 and As. 10 to Rs. 18-12 and Rs. 18-6, respectively.

While the general sentiment of trading in the castorseeds section is slightly better, the traders appeared to be somewhat intrigued at the growing competition from Brazil and also at the report of the sale of a large quantity—about 500 tons, according to one report—of German castor oil to the U.S. at 17¼ cents c.i.f. July-August delivery. This, it is feared, may result in the possibility of the Continental traders dumping their goods in world markets, thus helping further to widen the gap between Indian and foreign rates.

In the groundnut section, Bold ready, after receding from Rs. 47-8 to Rs. 46-8 on the 12th inst., recovered to finish higher at Rs. 47-12. August-September delivery improved by As. 8 to Rs. 45-10. Coromandel ready rose by a rupee to Rs. 48-8 and Khandesh quality by Re. 1-4 to Rs. 48-8. Groundnut oil ready and railway receipts advanced from Rs. 24-6 and Rs. 24-2, respectively, to Rs. 25-8.

Among linseed, Bold ready gathered Re. 1-5 to Rs. 31-6. June-July delivery improved by Re. 1-8 to Rs. 31-6. August-September delivery was a shade better at Rs. 31-10. Indore improved from Rs. 31-6 to Rs. 31-12. Sutna was fully maintained at Rs. 29, although, at one time, it had receded to Rs. 27-12. Kanpur, on the other hand, was marked down at Rs. 27-14 on Friday, as against Rs. 29, but recovered to close at Rs. 28-8, the net loss over the week being As. 6. Linseed oil was slightly easy at Rs. 16-6, as against Rs. 16-10, in the absence of demand from overseas countries, particularly the U.K., following accumulation of large stocks.

Among other seeds, niger seed F.A.Q. was firm at Rs. 36-8, as against Rs. 35-8, on reports of shortage of floating stocks. Ready Madras was also fully maintained at Rs. 37. Kardi seed Bold ready gained As. 12 to Rs. 25-12 and August-September delivery As. 6 to Rs. 25-10.

PEPPER STEADY

(Messrs. Parekh & Co.)

BOMBAY, 17th *June*

During the earlier part of the week, pepper market exhibited improved tendency in sympathy with New York, where prices advanced, owing to the withdrawal of sellers from Sarawak and Lampong and to some repurchases by Indian interests. Small purchases for June shipment were reported done by New York dealers at prices ranging from $1.38 to $1.40. On hearing that New York is in the market for nearby shipment and that some Indian houses have sold June shipment below cost, pepper growers at Alleppey became stiff sellers and refused to sell below Rs. 3,200. Looking to the present behaviour of the market, it appears that the growers in India would remain free sellers at round about Rs. 3,200.

In the later part, however, when New York reduced its buying limit and refused to pay higher prices, the Indian growers once again began to offer lower quotations but without result, as the prices in India are above New York's quotations. Though the Korean truce seems to have been discounted by the Indian growers, New York market appears to be very sensitive, and at times, moves both ways, as the dealers there, in general, are expecting sizable fall in all the international commodities. With the advance of monsoon, and in view of the poor export enquiries, it will be no wonder, if growers become nervous and come out to press sales in the near future.

Following are to-day's nominal quotations: Ready delivery Rs. 370 per Bengal maund. June delivery Rs. 2,520-50, July delivery Rs. 2,520-50, and August delivery, Rs. 2,450-80 per candy of 5½ cwts.

TEAS IRREGULARLY LOWER

(Messrs. Forbes, Ewart and Figgis, Ltd.)

COCHIN, 13th *June*

The quantity printed for sale 12, which was held on Tuesday, 9th June, amounted to approximately 19,92,000 lbs. Quality amongst the low-grown teas again showed a decline. One or two of the high-grown invoices showed slight improvement and had a touch of flavour. There was a good general demand, although prices were irregularly easier following quality. Commonest kinds were well supported and were half to one anna easier. Low medium teas were irregularly As. 1 to As. 2 easier. Medium brokens showed a decline of fully As. 2, whilst high grown descriptions must be quoted As. 2 to As. 4 lower. There were some withdrawals. Fannings generally were well supported and there was a strong demand for whole leaf grades which were As. 1 to As. 2 dearer.

The following are the quotations:—

	1953 Rs. a. p.
Low grown Travancore B.O.P. ...	1 9 6
Medium Travancore B.O.P. ...	1 10 6
Anaimallais B.O.P.	1 13 0
Best liquoring Nilgiri B.O.P.	2 2 6
Clean black leaf O.P.	2 1 0

As we go to press, Messrs. Forbes, Ewart and Figgis Ltd. wire:—

"*Dust Sale L.*—1,50,000 lbs. Good general demand, but market irregular. Milled dusts steady. Better sorts easier."

WOOL QUIET

(Messrs. J. Hardacre & Co.)

BOMBAY, 16th *June*

The Bradford market this week has been rather quiet and showing a somewhat easier tendency with quotations moving in buyer's favour. This results from the sales at Sydney this week which show declines of about 5 per cent. It is pointed out though that there is very little business being done in tops, and also that the offering at Sydney has not been of the best descriptions. A better test will be at Brisbane and Adelaide next week, when we understand, some of the better top making wools will be offered.

The woollen section of the trade is similarly affected, but all round business has been so quiet that the market has not been tested.

The following are to-day's quotations for Bradford oilcombed tops. All prices are c.i.f. Bombay in pence per lb.

48's carded, 86*d.* (September, 1953) and 58's super, 120*d.*, 60's super, 143*d.*, 64's super, 165*d.*, 70's super, 178*d.*, fibro (3D.4") 43½*d.*, and 46/48's scoured clothing wool, 75/76*d.* (August, 1953).

Market tendency.—Merino prices easier, market may fluctuate either way.

ARGENTINE ORDER FOR JUTE GOODS

(From Our Own Correspondent)

CALCUTTA, 16th *June*

An impressive feature of this week's trend in the jute goods markets was the moderate business that was put through in hessian with foreign buyers and the consequent improvement in prices. The long expected order from Argentina was at last placed, and this week about 20,000 tons of hessian were bought for delivery during the three months to September. Argentina is expected to purchase more, and stockists have regained confidence. The anxiety felt by mills following publication of the stock figures as at the end of May, according to which hessians held by the I.J.M.A. mills increased from 46,200 to 48,000 tons, has now disappeared, and it is thought that this month's stock would record a decrease. Shipments to the United States in the coming months, market circles state, would gradually increase in quantity, as the third quarter of the year is generally the period when consumption in America reaches higher levels.

Opening at Rs. 45-8 last Wednesday, ready hessian 40" 10 oz. fractionally receded to Rs. 45-6 on the next day on account of profit-taking but subsequently, on moderate business, the quotation improved to Rs. 46-10. This rate was maintained during yesterday. A recession in arms production in the United States following a cease-fire in Korea is likely, but it is hardly expected that the jute industry would be affected by it as, in view of a limited jute crop, production in mills would almost be below demand.

Sackings were steady, but not much business could be put through. B. twills opened at Rs. 104 and after declining temporarily to Rs. 103-12, rose again to Rs. 105-4. The closure yesterday was, however, Rs. 104.

Although there were no price movements, raw jute was steady. Mills were buyers of a moderate quantity, and Assam bottoms realised Rs. 27 to Rs. 27-8 a maund. Other quotations were: Murshidabad tossa bottoms Rs. 26, Kissanganj Rs. 27, *Bimli* f.a.q. Rs. 22-8, Murliganj Rs. 20-8, and Pakistani jat bottoms Rs. 28. *Pucca* bales, first marks ready, changed hands at Rs. 155 a bale. There were moderate enquiries for the new crop, but traders were reluctant to enter into commitments. The offer of premiums also could not persuade them.

METALS STEADY

(From Our Own Correspondent)

CALCUTTA, 16th *June*

Although conditions in the metal market were steady during the week, quotations were mostly unchanged and nominal in view of lack of moderate business. The change in the Korean situation continued to have no effect on prices. Manufacturers of non-ferrous metal products continued to cover their day-to-day requirements only, but it is expected that they would soon have to cover for Government tenders which would be accepted. Electrolytic copper was unchanged at Rs. 180. Activity was confined mostly to scrap, and dealers were unwilling to release the meagre stocks of the ingots material. Mercury remained quiet, and the trade feels strongly that unless the export duty is abolished or reduced considerably, the outstanding portion of the re-export quota for which the trade so very vociferously demanded, cannot be used. The quotation was Rs. 430 a flask. Star metal antimony was quoted at Rs. 210. Tin opened at Rs. 466, and after moving to Rs. 478 receded to Rs. 476, when it was realised that Singapore advices were rather discouraging. Electrolytic zinc was traded at Rs. 52. Although supplies are comfortable it is noted that imports have declined compared to last year, arrivals during the first five months of this year equalling those in the first quarter of last year. Lead was quiet at Rs. 61.

FOOD STOCKS COMFORTABLE

(From Our Own Correspondent)

HAPUR, 15th *June*

Despite late arrivals of monsoon, the general food situation in the country continues to be satisfactory, except in certain areas where the failure of last year's rains and the fears of late rains

(*Continued on page* 1155)

STOCK & SHARE QUOTATIONS

Abbreviations:—D=Deffered shares. G=Guaranteed shares. P=Preference shares. P.O.=Preferred Ordinary shares. R=Rebate shares. Y=Accounts published yearly. H=Accounts published Half-yearly. Q=Accounts published once 15 months T=Company has Debentures. R.L.=Reserve Liability on shares. N=Nominal Quotation. i=Interim Dividend. f=Dividend for first half-year, y=Dividend for the year. x=Ex. Dividend c.d.=Cum. Dividend

Shares:—If a company has different classes of shares—as, for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under "Paid-up Per Share."

Accounts:—Figures in the "*Accounts Closed*" column represent the months of the year in which the respective companies close their accounts. 6 and 12 indicate the months of June and December, respectively. "Reserves" includes general and other reserves and all other funds which a company may have as also depreciation on block items, when this is charged to separate account "Block" represents actual cost of land, buildings, machinery and all such other items on which depreciation is allowed, less sales, if any, and stands for the gross figure except where otherwise indicated.

Dividends:—Dividends for completed years are calculated at per cent. per annum, but, where quoted for portion of a year, they represent percentages of the dividend on the paid-up share value. For companies closing the books half-yearly in the first three months of the year, and for companies closing their books yearly during the first half of the year dividends are shown as for the previous year.

SUGAR IMPORTS

INDIA'S Food Minister, Mr. Rafi Ahmed Kidwai, it must be said to his credit, has acted boldly and quickly this week in his fight against hoarders and speculators in sugar by carrying his three-point programme, announced last week, a step further. One of the three points of this programme, it will be recalled, sought to allow imports of foreign sugar. This point, however, was so vaguely indicated in that programme that it did not have much effect on the trade; in fact, many in market circles thought that Mr. Kidwai was merely bluffing. These circles must have been sorely disappointed now. Mr. Kidwai did not bluff, but meant serious business, for, on Monday this week, the Government reduced the import duty on sugar from the then existing level of Rs. 14-14 per cwt. to Rs. 7 per cwt. and announced that licences for import of sugar would be given by the Chief Controller of Imports, New Delhi to importers, large dealers and establishments consuming sugar. For all practical purposes, sugar is now in the O.G.L. import list. This is undoubtedly a step in the right direction, though a little belated.

The Government's decision to allow imports of sugar is significant in more than one respect. It means that the Government now realises that considerations of foreign exchange should not be given such a high priority as to cause severe hardship to consumers and that the need for ensuring supply of goods to consumers at reasonable prices is equally important. It also means that it is always desirable to allow a certain measure of competition from external sources even in respect of those goods which are produced in the country in quantities sufficient to meet domestic consumption. Both these conclusions will be hotly disputed by planners in this country. They will doubtless decry that policy on the ground that it will result in a waste of foreign exchange. But those who argue thus invariably forget the practical aspects of the problem and the limitations of human beings. There would have been no need to import sugar had a section of the industry and trade not been too greedy or had the Government completely decontrolled the industry in October last. The oft-repeated criticism that controls breed corruption and create artificial shortages is very well borne out by the developments in the sugar industry in recent years.

As was mentioned in these columns last week, the sugar industry was deprotected three years ago. But the then existing level of duty was converted into a revenue duty. The question whether the rate of duty was high or low did not arise, because, in the absence of imports, it was only of academic importance. Now that imports are being allowed and are quite possible, it will be pertinent to raise that question. When the Government decided to import sugar, it found that the old duty at the rate of Rs. 14-14 per cwt. could not be continued, as it raised the cost of foreign sugar to a level well above the domestic prices of sugar and thereby rendered import of sugar an impossibility. A reduction in the rate of duty, therefore, became inevitable. But the reason behind the fixation of the duty at Rs. 7 per cwt. (or about Rs. 5-2 per maund) may not be so obvious to the public. In fact, some may wonder as to why a duty should at all be levied on imports of sugar when the industry is not protected. This latter question is easily answered and that answer itself will explain, to some extent, as to why the authorities have fixed the duty at Rs. 7 per cwt.

Indian sugar, as readers are aware, is subject to a heavy Central excise duty of Rs. 3-12 per maund. Besides, it has to bear the incidence of cess on sugarcane at the rate of As. 3 per maund collected by State Governments. This works out to Re. 1-14 per maund of sugar. Thus, the Central and the State levies amount to no less than Rs. 5-10 per maund. The sugar industry cannot be expected to compete effectively with duty-free imported sugar so long as it is subjected to such a heavy impost. If competition is to be fair, the imported sugar must also be subjected to a duty at a level sufficient to countervail the Central and State imposts. On the basis of this principle, imports should bear a minimum duty of Rs. 5-10 per maund. But, actually, the Government has decided to levy a duty of only Rs. 5-2 per maund. The authorities have thus shown no soft corner for the domestic industry in fixing the level of import duty at this level. The effect of this decision may not be felt by the industry so long as the current prices for imported sugar, to which we shall refer presently, are maintained. If, however, they were to go down, the imports would have a perceptible effect on the industry, unless, of course, the authorities promptly raise the level of duty or stop imports or reduce the rate of excise duty. The necessity for such adjustments in future could have been avoided, had the authorities fixed the import duty at a level at which it counterbalanced the excise duty and the cane cess.

It is the decision of the authorities to allow imports of sugar, more than anything else, that has put an end to the profiteering and speculation that had gathered some momentum in recent months. That there was an artificial boosting of prices is evident from the sharp fall in the price of sugar (for forward delivery) in the Bombay market from Rs. 92, just before the Government's three-point programme was announced, to Rs. 84 per bag on Wednesday this week. During the same period, the price of spot sugar has come down by Rs. 4 per bag to Rs. 88. These rates are doubtless higher than the cost of imported sugar by a substantial margin. We are told on reliable authority that the position of world sugar market is easy and that Formosa, Cuban and Continental sugar is being offered by shippers at rates which are equivalent to Rs. 72 per bag *ex*-godown, Bombay. Thus, the domestic sugar (forward delivery) is still at a premium of Rs. 12 per bag over the imported sugar. This is possibly due to the fact that it will take at least two months for imported sugar to reach Bombay. But it may also be due to a defect in the procedure which the Government proposes to follow for allowing imports.

The Press note issued by the Government on this subject says that "licensing will

way as to allow imports in smaller lots. Such a decision will also be in keeping with the Government's statement that establishments consuming sugar can also import their requirements direct. How many consumer establishments are there which can place orders for a shipload of 6,000 tons at a time?

It may be argued by the Government that, if imports are allowed in big lots of 6,000 tons, the cost will be definitely cheaper than what it will be if they are allowed in small lots. There is, of course, some force in this contention. But we are told that the ex-godown rate of Rs. 72 per bag, referred to above, is based on quotations for small lots and that it is Rs. 5 less than the rate assumed by the Government, perhaps on the basis of a shipload. In short, the contention of market observers is that the Government has been misled by its advisers and that sugar can be imported at rates substantially lower than the rate of Rs. 28 per maund assumed by the Government. It is alleged that, by allowing imports to be concentrated in a few hands, the Government will be facilitating profiteering by importers, inasmuch as the domestic sugar, according to present indications, is not likely to be sold below Rs. 27 per maund. There is also another possibility. And that is that, having obtained foreign sugar at a cheap rate—at current prices in the world sugar markets, they should be able to buy cheaper than Rs. 72 per bag, the rate for small lots—the few importers will be in a position to offer unfair competition with the mills in case a real slump in sugar trade develops. In such an event, the worst sufferers will be the mills in the Deccan and Madras. It is to be hoped that the Food Minister will go into all these points and carefully consider the merits of allowing imports to be spread over a larger number of merchants than he has in view at present.

Two suggestions were made by us last week for solving the sugar tangle. One was imports and the other complete decontrol. The Government has accepted the first suggestion and is vigorously implementing it now. It does not, however, see eye to eye with us in regard to the second, and the more important, suggestion. Nevertheless, it is necessary to emphasise again that, if normalcy is to be restored in sugar trade and industry and if recurrence of crises from time to time is to be prevented, it will be better to free the industry from all controls, including the one on the price of its raw materials. Such a step will, in course of time, automatically eliminate the necessity for importing sugar, as it will enable the industry to grow on healthy lines. In the initial years, there may be a few occasions when conditions may not be quite normal and some hardship be caused, but a change-over from official controls to freedom cannot always be a painless affair. The price is worth paying, because such a change promises to place the industry on an economic footing.

PRIVATE ENTERPRISE

IN India, where private enterprise has for some time past lain under a cloud of suspicion and distrust, there is urgent need to publicise its achievements. This task has never before been performed well enough, presumably because private enterprise has taken its freedom for granted and never found it necessary to vindicate itself before the bar of public opinion. Apparently, it now finds the need to stem the tide of criticism. It is never too late to argue a good cause. And the Employers' Association has attempted a good task by adding to its series of interesting pamphlets on current economic affairs yet another booklet entitled *Achievements of Private Enterprise in* 1947-52. The publication of this pamphlet is in itself a creditable achievement, for much painstaking research has gone into it. But where it errs—and errs grievously—is to make far too many untested assumptions, to derive conclusions not always in consonance with economic realities. Again, a proper appraisal of private enterprise ought to include not merely its assets side but the equally important, even if somewhat disturbing, liabilities side. A balanced account should include both aspects, if only to avoid the trite criticism that private enterprise in this country has developed a blind spot towards its own deficiencies.

Private enterprise in India bases its claim for greater appreciation and better recognition on three grounds: the improvement in the rate of industrial production and increase in installed capacity of existing industries, the setting up of new industries, and the financing of all improvements, expansions, and new installations, at a time when capital was difficult to get. That industrial production during recent years has increased considerably is common knowledge. Between 1947 and 1952, the index number of industrial production rose by nearly 35 points to 140.5 (Base: 1937=100). Among established industries, the cotton mill industry increased its output during the period from 3,762 million yards to 4,609 million yards, cement industry from 1.4 million tons to 3.5 million tons, sugar industry from 0.9 million tons to 1.5 million tons, steel industry from 0.8 million tons to 1.1 million tons. The magnitude of the increase in industrial output dwarfs, in fact, some of the targets under the Five-year Plan. Thus, textile output is already at an annual rate of 5,000 million yards, as against the target of 4,700 million yards set by the Plan.

The performance of private enterprise in new industries too is impressive. The engineering, light and heavy, chemical, rayon and other industries have made "noteworthy" progress. A "phenomenal" increase has been recorded in the production of sewing machines, storage batteries, electric motors, centrifugal pumps, diesel engines, ball and roller bearings, radio receivers, electric fans, transformers, rayon yarn, and capital goods, such as spinning frames and looms, boilers, etc. Self-sufficiency, it is stated, has been attained in a number of chemicals such as alum, aluminium sulphate, ferric sodium and potassium bichromate, sodium and potassium acetate, sodium and potassium citrate, calcium chloride, chlorine liquid, chrome alum, and other chrome compounds, ferrous salts, sulphuric acid, hydrochloric acid and several other chemical products. A beginning has been made in the production of fine chemicals such as calcium lactate.

Private enterprise has achieved the increase in production through augmenting and modernising industrial equipment. Figures have been cited in the pamphlet to convey some idea of the magnitude of machinery imports. Between 1947-48 and 1951-52, India imported over Rs. 441 crores worth of machinery and millwork. During the same period, it imported Rs. 141 crores worth of auxiliary goods, such as machine tools, diesel engines, electrical machinery and boilers. But these figures, as the authors of the pamphlet themselves admit, include the "cost of purchases on account of the Government, railways and non-industrial users." Since no attempt has been made to differentiate between the imports of machinery utilised by private enterprise and those by State-owned undertakings, it is, of course, difficult to give the entire praise for these imports to private enterprise only.

An analysis has been made of the capital invested for securing the increase in industrial capacity during the first quinquennium of India's independence. A sample study of 138 industrial enterprises, made by the Association, reveals that, between 1946 and 1950, there was an increase of Rs. 87 crores in the companies' assets, of which the increase in gross block alone accounted for about Rs. 47 crores, and stocks and stores for Rs. 34 crores. On the "assumption" that the sample study represents 20 per cent. of the total installed capacity in the country, the Association estimates that there was an "increase in the aggregate resources of the industrial sector in 1946-50 of Rs. 430 crores, while expenditure on account of block, stocks and stores and immobilisation of funds in outstandings was Rs. 495 crores." It is difficult to appreciate either the assumption that the total industrial sector is five times the sector covered by the sample study, or the applicability of the results of a sample study to cover the entire sector. From a further analysis of these figures, the Association reaches the conclusion that the annual rate of addition to fixed assets has been 8 per cent. which, according to it, is "creditworthy," considering that the rate of national saving during 1919-38 was only 7 per cent. The analysis by which the figure of 8 per cent. is reached is by no means very clear. And the claim that it is impressive when compared to the 7 per cent. in the 1919-38 period, which covered over a decade of depression years, is a tall one.

The Association has, however, done well to dispell the popular impression that industrial prosperity has not been adequately shared by the workers. Between 1947 and 1951, the number of workers employed in industrial establishments in the private industrial sector rose from 2.01 million (excluding plantation and mine labour) to 2.30 million. As against the increase in the number of workers by 14.2 per cent. in 1947-51, the wage bill of those earning below Rs. 200 per month has risen by as much as 48 per cent. This increase is distinctly higher than the rise in cost of living which, in Bombay and Calcutta, was only 19 and 20 per cent., respectively. Further, this improvement in workers' income does not take into account free medical benefits and other amenities. It is sometimes contended that the increase in income does not compensate the increase in living costs and that there has been a fall in the real income of the workers. Although the Association makes only a passing reference to this issue, there is no truth in the popular view that real income has fallen. This has been brought out, it may be mentioned here, in a recent issue of the *Indian Labour Gazette*. The index of real earnings (of workers below Rs. 200 per month), according to the *Gazette*, rose between 1946 and 1949 from 97.1 to 122.1 (Base: 1944=100). And there is no reason to believe that it has fallen since then.

Impressive as these achievements are, it would nevertheless be wrong to over-estimate them. They are not large as compared with the size of the country, or with what could have been done or still remains to be done. There has been no significant improvement in living standards and, until this happens, the man in the street will not be impressed with all the tall claims of private enterprise. Also, it is a pity that, although the title of the pamphlet indicates that it covers private enterprise in general, it speaks in its inside pages mostly of Indian enterprise, and does not give the necessary credit to foreign private enterprise that has been participating in India's industrial development. Apart from the fact that a substantial part of the old-established industries is still being owned and managed by foreign private enterprise, many new Indian undertakings, notably those connected with dyestuffs, chemicals, non-ferrous metals, light engineering industries, automobiles, cycles and others have been started with the aid of foreign capital.

Any appraisal of the role of private enterprise should take into account not only its achievements but its lapses also. There have been far too many unfortunate instances of anti-social behaviour in this country. The "get-rich-quick" psychology has been the bane of Indian private enterprise. This has resulted in two evils. In the first place, no sustained effort is made to develop new lines, for fear that it may not yield quick and easy profits. This explains why Indian capital is not only willing but often extremely anxious to buy over established foreign undertakings even at fancy prices. The same explanation holds good for the insistent demand by a section of Indian private enterprise that only the most difficult fields of industrial activity should be reserved for foreign capital and that all consumer goods industries, in which the profit-margins are generally fairly large, be kept solely for indigenous capital. Secondly, this psychology engenders an element of fear complex and results in loss of self-confidence. At the slightest turn of fortune, there is a tendency to beat a hasty retreat, to curtail production, or to make frantic appeals to Government for protection. This betrays a certain immaturity which Indian enterprise should learn to outgrow.

Finally, a quantitative achievement, however big it may be, is worse than useless if it is unaccompanied by qualitative improvement. What matters is not how much of a thing is produced or how many are the articles that are produced. How high is the quality of the goods and at what cost are they made available to the consumers are vital considerations. So long as the Tariff Commission is compelled to continue its practice of loading a special quantum of protection to offset the "prejudice" factor, Indian industry cannot lay claim to real achievement. It is true that quality cannot be improved in a day. But it would be wrong to ignore the value of producing quality goods or to make no, or only half-hearted, attempts at establishing sound industrial traditions. All this is not to belittle the heights which Indian enterprise has scaled but to indicate the long way it has still to go. It is to be sincerely hoped that Indian enterprise will not be found wanting in courage to face the challenge of the times.

OPPOSITION TO CONVERSION OF TATA DEFERREDS DWINDLING

OUTLOOK FOR TEA—TROMBAY POWER SCHEME

THURSDAY, 5 P.M.

THE share market is steady but listless. During mid-week, it looked as though the market was likely to experience a fresh downward trend, but towards the close a steady undertone came to prevail. Over the week, a large number of counters have recorded small gains. The volume of business, however, has been small throughout, there being no fresh buying either by speculators or investors. A pleasant feature of the behaviour of the share market during the week is that it has managed to remain unaffected by the continued weakness of the futures section of the cotton market. It is hard to say whether the link between the two markets, referred to in these columns last week, has been cut. If the link is still there and yet the shares have been able to present a steady front, it must be attributed partly to the technical position of the latter and partly to renewed expectations of some developments favourable to the bulls.

MARKET GOSSIP

* * * *

One of the expected developments relates to the issue of retention price for steel which has been hanging fire for a long time now. It is felt by some that the Government's decision on this issue may be known by the end of this month or in the first week of next month, by which time the important Ministers of the Central Government, who are now away, are likely to be back at the Capital. Another development is the possibility of the Tata Iron and Steel Co., Ltd., issuing bonus shares. It is reported that, at the meeting which Mr. J. R. D. Tata had to-day with the members of the Action Committees of the Deferred and Ordinary shareholders, on the question of conversion of Deferred shares, the Chairman threw a hint about this. He made, it is stated, a fervent appeal to these representative shareholders to accept the award of the mediator, Mr. M. C. Setalvad, and said that, by doing so, they would enable the Board to reconstruct the capital structure and raise it by capitalisation of reserves. One report has it that Mr. Tata clearly stated that it was their intention to issue one ordinary bonus share for every two shares. If this report is correct, it means that the management of the Company is offering a bait to the shareholders to agree to the conversion scheme.

* * * *

The majority of those who attended the meeting is reported to be in favour of accepting the mediator's award. At a meeting held a week before, the Action Committee of Ordinary shareholders strongly urged the shareholders of the Company to accept the mediator's award fixing the ratio of conversion of 6:1. No opposition is expected from the industrialist who holds a very large block of Ordinary shares running into several thousands. At one time, it was believed that he might not give his assent to the proposal. And all these days, he took no interest in the work of the Action Committee. Nevertheless, he is said to be absolutely disinterested now, even though he holds some strong views on this subject. The rest of the Ordinary shareholders too may not raise any serious objection. Among the Deferred shareholders, the biggest single holder is also stated to be in no mood to oppose the award. There are, no doubt, a few of them who have been inclined to challenge the award, but, as a result of the bait offered by Mr. Tata to-day, their number may fall still further. Even this fractional minority may finally come round, seeing that the vast majority of shareholders is in favour of accepting the award. Thus, the chances of the Deferred shares conversion scheme going through, without the intervention of the Government, have greatly improved. This, however, does not mean that the Deferred shares will cease to be in existence in a few weeks. The legal formalities to be completed will take several months. One estimate places this period at as many as nine months from the first move made by the management of the Company. This means that, by about May or June next, the Deferred shares may go off the list of the Bombay Stock Exchange.

* * * *

Among the commodity markets, while oilseeds have been ruling quite steady, cotton has slumped further. I.C.C. August, which had gone up to Rs. 683 early in the week from the previous week's closing rate of Rs. 668, has declined to as low as Rs. 660. This recession seems to be due purely to the unhealthy technical position of the contract and to the fear that, in view of the good beginning of the monsoon, trading in new crop Contract may begin at a discount. Although it is too early to say what will be the size of the crop in the coming season, the feeling in market circles at the moment is that it may be a little bigger than the current season crop. Further, it is stated that, generally speaking, no one would like to weigh over cotton during the rainy season, as there would be a loss in weight later when the rains are over and as the quality of cotton tendered would be poor. It is, therefore, believed that the bulls would prefer to square up their outstanding position by selling out rather than by taking delivery of actual cotton.

* * * *

While Indian cotton has thus been losing in value, the cotton market in Karachi has been displaying a remarkably steady trend for several days now, though the turnover is very poor. This steadiness in the face of any new business is due to greater confidence in the statistical position. Stocks by now are probably not more than 400,000 bales and there is time for further reduction before the new crop comes forward in the autumn. There are now some rather adverse crop reports which suggest that output may be affected by a shortage of canal water in Sind and Bahawalpur. Traders treat these reports with some reserve, since it is too early yet to judge crop prospects. Nevertheless, it seems that the statistical position of Pakistan cotton is strengthening.

* * * *

The long-awaited report of the U.K.'s Cotton Import Committee—the Hopkins Committee—has now been published. The Committee, it may be recalled, was appointed to review cotton import arrangements in the U.K. and to suggest modifications, if any. The Committee has suggested "modifications in cover and administrative arrangement for the cover and supply of raw cotton." It agrees that currency and other difficulties in the way of a free market are substantially unchanged from the position 18 months ago. The Committee has recommended the continuance of the dual system of raw cotton purchases, under which spinners are permitted to utilise the services of the Raw Cotton Commission or to make their own arrangements for the purchase of cotton. But it holds that it is intrinsically undesirable that cover for private trading should be provided at the risk of public funds. In the House of Commons, Mr. Peter Thorneycroft, President of the Board of Trade, said that the Government had accepted the Committee's recommendations for continuance of operations and cover and that there would be early discussion with the trade on future cover facilities.

* * * *

This announcement has engendered hopes of the early revival of the Liverpool futures market. The opening of the market will depend on the attitude of spinners who, if they contract out of the Commission, would naturally require cover facilities. The biggest mill group in Lancashire, the Lancashire Cotton Corporation, has announced that it would contract out of the Commission. A free cotton market would, however, mean the existence of free import facilities. But so long as currency difficulties—that is, dollar shortage—last, it is difficult to think of a completely free cotton market in the U.K. It is, however, felt that exchange difficulties may be overcome by September, 1954. Cotton men in that country are inclined to believe that it would be possible to have a futures market some time next year.

* * * *

There has been a good demand for selective tea scrips in recent weeks, which reflects the slight improvement in the outlook for tea. Tea prices are improving. Indeed, latest reports from London indicate that, in the last week's auction, Indian common tea fetched as much as 3s. 6d. per lb., the highest price to be recorded since the resumption of auctions in 1951. This represents an increase of 2s. from the bottom of 1s. 6d. per lb. touched in September last, at which price, Indian tea growers were losers of over 1s. on every pound of tea produced. The present strength of tea is based more on the statistical position of Indian tea than on any other factor. The new North Indian tea crop as at the end of May is stated to be 12 million lbs. less than the output a year ago. South Indian tea production for the first four months of 1953, at 32.01 million lbs. (subject to revision), is 6.15 million lbs. less than that for the corresponding period of 1952. This shortage in supplies is of a temporary nature, as the bulk of the new crop will be available in a few months.

* * * *

It was generally expected that the curtailment of supplies, as a result of the crop restrictions by 50 million lbs. during the current season, would come only a few months later, but weather conditions seem to have already restricted the output. It is also stated that the old season's crop, in which the London market is now dealing, will not be disposed of till the end of August. During July and August, the weekly offerings will be cut to 25,000 packages or about a third of the amount that is now being offered. All these factors would appear to have created a shortage of tea stocks in London.

* * * *

The present level of prices cannot, however, be taken as a measure of the prospects for tea growers during the current year. For these prices relate to the 1952 crop from North India and early 1953 crop from South India. The full weight of the new crop will not be felt by the market till September-October this year and the fortunes of tea growers during 1953 will depend more on the prices that will rule during these months and later. While judging the prospects for the tea industry on the basis of the present market prices for tea, a factor to be taken into consideration is the rising costs of production. Even those who are intimately connected with the tea industry find it difficult to give a forecast of the industry's fortunes. Mr. W. H. Marr, Chairman of Messrs. James Finlay & Co., Ltd., and the Consolidated Tea & Lands Co., Ltd., for instance, says, in his statement to the shareholders of the two companies, that it is very difficult to give any indication of the prospects for the current year. But he enumerates certain factors on which depends the outlook for tea. In the first place, the chances of any substantial reduction in costs of production are extremely remote. Whatever reductions in working costs the tea producers have been able to effect, are at the expense of full maintenance of the properties. Secondly, the International Tea Committee has agreed that member countries' export quotas should not be reduced from 135 per cent. of the standard exports, at least until July, when the matter will be reviewed. But the Government of India has, in the meantime, announced that it will issue export quota on the basis of only 115 per cent. of the standard exports, though this is also subject to review. Thirdly, India, being one of the greatest potential markets for its own tea, the quantity of tea available for export depends on the internal consumption. Fourthly, tea prices do not depend on supplies from India alone. They are also largely influenced by crops of other producing countries.

* * * *

While on the subject of world supplies of tea, it will be interesting to recall here the trend of production since 1946, which provides an interesting background to last year's crisis. The production of tea by the main producers of the world which stood at 905 million lbs. in 1946 rose uninterruptedly to 1,144 million lbs. in 1951, but fell to 1,108 million lbs. in 1952. The following table gives the production in the leading tea producing countries during these years.

(In million lbs.)

	1946	1951	1952
India	592	625	621
Pakistan	—	53	53
Ceylon	283	326	317
Indonesia	—	102	81
Africa	30	38	36
Total	905	1,144	1,108

Mr. W. H. Marr traces the root of the tea crisis in 1952 to the years 1946-47 when Indonesia was again able to produce and export tea and the continuation of the policy of larger output adopted by Indian tea producers during the war years. The system of bulk buying by the U.K. Ministry of Food resulted in a greater emphasis being laid on production of quantity, rather than on quality. There was overproduction of tea. The position was aggravated by tea rationing in the U.K. Mr. Marr is of the opinion that a large part of the losses of production might have been avoided, if the control over tea had been removed early last year, instead of in October, 1952.

* * * *

While investors have been awaiting the debenture issue of the Tata Hydro-electric group of companies, there appears to be no indication yet of an announcement, in the near future, of the issue by the Managing Agents of the three companies. For the Bombay Government would appear to have so far not revised its decision, as reported in these columns on 30th May last, to grant permission to the Companies for erecting at Trombay only one power generating unit of 50,000 kw., instead of two units, of 50,000 kw. each applied for by the Companies and agreed to by the Government in the beginning. In their application for licences, the companies had pointed out that the complete power station installation would cost Rs. 11.5 crores, if both the units were installed consecutively and Rs. 7 crores, if only one unit were installed. If the second unit were to follow as a separate installation, the additional costs would approximately be Rs. 50 lakhs, without making allowance for increases in plant prices and construction costs. Besides, it was pointed out that, if the two units were ordered together and if the erection of the second set were to follow that of the first, after an interval of four to six months, the job could be handled economically by the same expert foreign personnel. Moreover, the second unit would enable the station at Trombay to take on generation of most of the thermal energy required in the system, before the Koyna power project goes into commission three years after, namely, 1959. This would reduce the operating costs of the power system and give relief to the over-burdened railways. There were, again, possibilities of effecting further economies in operation costs, as the plant was designed to generate very efficiently at the equivalent of less than 1.15 lbs. of coal per net kw. hr. This, it may be noted, compares with 2.2 lbs. of coal of the 250 lbs. pressure and 1.75 lbs. of coal of the 400 lbs. pressure system plant at Kalyan. Between 1956-57, when Trombay commences operation, and 1959, when the Bombay Government anticipates Koyna supply to commence, the greater efficiency in the production of power at Trombay is expected to effect savings in fuel costs of the order of about Rs. 1.5 crores. In view of these advantages, Tatas requested the Bombay Government to give permission for proceeding with their plan for erecting two units.

* * * *

According to Tatas, there would appear to be no doubt at all about the demand for all the energy produced under their scheme. The two oil refineries, the penicillin factory and the Naval Dockyard expansions will require large supplies of power. There will be new demand for power in this region for refrigeration, air-conditioning, housing, refugee rehabilitation, and extensions of suburban railways in addition to continual general increase in the electricity requirements of all classes of consumers supplied from the Tata system. Again, it is believed that the region served by the Bombay-Poona roadway and railway holds great possibilities of industrialisation and development of small towns.

* * * *

But the Government of Bombay, which had agreed last year to permit the construction of the power station at Trombay in two units of 50,000 kw. each, seems to have changed its mind subsequently. So far, no statement has been issued by the Government explaining the reasons for this change in its stand. According to an official spokesman, however, the Government seems to be of the view that the total demand for electric

(Continued on page 1203)

SHARE MARKETS RULE DULL

UNDERTONE STEADY

(From Our Own Correspondents)

BOMBAY, 25*th June*

CONDITIONS on the Stock Exchange were far from lively, but, owing to the absence of any big adverse factor to affect the sentiment of operators, the undertone remained steady. Movements in prices were confined to a very narrow groove. The discouraging trend of commodity prices with the onset of the monsoon acted as a damper on trading in shares. There was, however, no setback in prices, because of the corrected technical position of the market. The volume of trading was at a low ebb.

In the steel section, Tata Deferreds opened at Rs. 1,877-8 and advanced to Rs. 1,905 on Monday on higher Calcutta advices and the confused situation in Korea. Profit-taking stalled further advance and in the mild reaction that followed due to adverse trends in bullion, commodity and cotton markets, the shares were taken down to Rs. 1,873-12 yesterday. To-day, there was small buying support on reports that the conversion ratio for Deferred shares would be finalised at the meeting of the deferred and ordinary shareholders scheduled to be held this evening. Consequently, the shares were lifted up to Rs. 1,887-8 at the close. Tata Ordinaries looked up from Rs. 328-4 to Rs. 329-12, before closing at Rs. 329-4. Indian Irons had a mild upturn from Rs. 24-9 to Rs. 25-2½ early in the week, but shed most of its gain to close at Rs. 24-10½.

Dealing in textile shares depicted the same pattern as that of steels and most of the counters were concerned in a moderate advance. Bombay Dyeings came up from Rs. 376-14 to Rs. 382-8, but closed at Rs. 380. Kohinoors continued to be a bright spot of the section with a further advance of Rs. 5 to Rs. 305-8. Central Indias showed no variation at Rs. 160-8. Centurys hardened by Rs. 3 to Rs. 276. Finlays were marked down by Rs. 4 to Rs. 255, but Gokaks were a rupee better at Rs. 214. Indu Ordinaries added As. 7 to close at Rs. 10. Lakshmis reacted by Rs. 11-4 to Rs. 547-6. New Greats put on a rupee to Rs. 149, but Simplex showed no change at Rs. 179. Standards were done Rs. 5 higher at Rs. 306-4 and Svadeshis passed hands, Re. 1-4 better, at Rs. 248. Swans drifted back by Rs. 3-12 to Rs. 435 and Vishnus by Re. 1-4 to Rs. 156-4.

Activity in bank shares was restricted, but the undertone was steady, with some counters revealing fractional advances. Imperials had a rise of Rs. 5 on balance at Rs. 1,870. Centrals put on As. 8 to Rs. 64-8 and the new shares added As. 8 to Rs. 65-8. Bank of Indias gained Re. 1-8 to Rs. 158, but Barodas were maintained at Rs. 111-8.

Sentiment in electricity shares was bright with fair gains in a number of counters. Ahmedabad Electrics were in demand to go up by Re. 1-9 to Rs. 109-11. Poona Electrics rallied from Rs. 121-4 to Rs. 127-8. Surat Electrics hardened by As. 10 to Rs. 131-4. Bombay Suburbans were maintained at Rs. 125-10. Tata Hydros put on Re. 1-8 to Rs. 151-8 and Tata Powers advanced from Rs. 1,488-12 to Rs. 1,502-8, but Andhra Valleys reacted by Rs. 5 to Rs. 1,420.

In the miscellaneous section, Associated Cements were dull at Rs. 170-4. Sugar shares were adversely affected by the Government's announcement allowing imports of sugar. Belapurs lost Rs. 4 before closing at Rs. 227-8 and Walchandnagars Rs. 2-8 at Rs. 138-12. Bombay-Burmahs were affected by the declaration of lower interim dividend. The Directors have decided to make an interim payment of Rs. 5 on each share of Rs. 125 and Rs. 2 on each of the Rs. 50 paid-up shares for the year ended 31st May, 1953. These compare with Rs. 7-8 and Rs. 3, respectively, paid for the previous year. Consequently, the higher value shares dropped Rs. 3-12 to Rs. 367-8. The Rs. 50 paid-ups, however, remained unchanged at Rs. 136-14. B.I.Cs. had a sharp set-back from Rs. 8-8½ to Rs. 8-2 on rumours of a change in management. National Rayons were well held at Rs. 103-8. Tata Chemicals added As. 1½ to Rs. 9-2 and Tata Oils As. 8 to Rs. 32. Wimcos smartly advanced by Rs. 6-4 to Rs. 218-12. Among engineerings, Premier Constructions were marked up by a rupee to Rs. 80-12. Alcock Ashdowns were better by Re. 1-4 at Rs. 292-8. Among mining shares, Indian Coppers were quiet at Rs. 2-14½, but Shivrajpurs put on Re. 1-4 to Rs. 55-8.

* * * *

Calcutta Stock Exchange

CALCUTTA, 23*rd June*

In the absence of any fresh incentive, lethargic conditions prevailed on the Calcutta Stock Exchange during the week. Trading remained suspended to-day as a mark of respect to the late Dr. S. P. Mookherjee. Turnover for the week, as a whole, was limited. However, despite profit-taking and a reduction in the number of transactions, the maintenance of recent gains in tea shares was a feature.

The Delhi report that the surplus capacity of ordnance factories would be utilised for producing goods for civilian consumption was a factor which encouraged operators to exercise extreme caution in entering into new commitments in industrials. The problem facing the textile mills in Northern India has to be solved by the Government, and market circles look forward to an early cancellation of the New Delhi edict which restricts production of *saris* and *dhotis* by mills. Developments in this regard are awaited, and it was no surprise that interest in textile shares remained subdued. Some losses, just fractional, were incurred in shares of sugar mills, as an air of uncertainty has been created regarding the future policy of Government on sugar, following the recent increase in the prices of the sweet commodity.

Coals were again quiet, but operators were heartened to note the possibility of Egypt importing Indian coal for the first time. Burrakurs were at one time lower at Rs. 10-1, but soon recovered to the opening level of Rs. 10-3. Bengals were a shade better at Rs. 5-11, while Standards featured with a rise from Rs. 19-9 to Rs. 20-12. East Indians were fractionally better at Rs. 24-3, but Equitables eased from Rs. 44-12 to Rs. 43-4. At Rs. 8-12, Raneegunges lost As. 10.

The heavy decline in sacking prices kept operators away from the jute section, and shares that were transacted recorded declines. Fort Glosters gave way from Rs. 347 to Rs. 341, Nuddeas from Rs. 49-8 to Rs. 47-8, and Agarparas from Rs. 19 to Rs. 18-11. Howrahs were maintained throughout at Rs. 24-6, Champadanies remaining quiet at Rs. 160. Baranagores at Rs. 162 recorded a loss of one point. Kelvins lost as much as Rs. 11 to Rs. 245.

Sugar shares recorded an easing tendency. Darbhangas, at Rs. 10-1, showed a loss of As. 5. From Rs. 25-2, Champarans were pushed down to Rs. 24-11. Cawnpores changed hands at the fractionally lower rate of Rs. 33-6, while Ramnugger Canes were unchanged at Rs. 18-1.

Teas were steady, and not only recent improvements were maintained but further features were provided. At Rs. 109, Teliaparas recorded a further gain of Rs. 4. Central Cachars jumped from Rs. 55-8 to Rs. 60. Bishnauths improved from Rs. 28-10 to Rs. 29-2, Teen Alis from Rs. 21-4, to Rs. 22, and Gillaphukaris from Rs. 16-10 to Rs. 18.

Miscellaneous shares shared the general dullness. Angelo Bros. received attention at Rs. 13-10, while Rohtas Industries showed a two-anna loss at Rs. 9-12. Indian Cables were quiet at Rs. 19-2. Rallis were wanted at Rs. 75, as against Rs. 74-4 earlier. Martin Burns realised Rs. 18-10.

* * * *

Madras Stock Exchange

MADRAS, 24*th June*

Sentiment of operators on the Stock Exchange revealed a hardening tendency this week and it looked as though there was a revival of confidence in equities. It was in evidence in textile scrips which came in for good enquiry. The support was attributed to reported recommendation of the Textile Control Committee to abolish all controls over distribution and prices of cotton textiles. Renewed demand for mill yarn too fanned the buying fervour further. Tea scrips also elicited stout support on firm advices from Calcutta and bright outlook for tea. Rubber and coffee shares too were keenly sought. Shares of sugar companies and other miscellaneous scrips could do no more than react in sympathy with the rest. Bank shares, however, were dull, although values were generally fully maintained. On balance, equities recorded handsome gains over a wide front.

The textile section evoked considerable interest. Lakshmis and Pankajas advanced by a rupee each to Rs. 80-8 and Rs. 66-8, respectively. Dhanalakshmis picked up As. 8 to Rs. 178-8. Vasantas and Radhakrishnas also gathered a like amount, the former closing at Rs. 150-8 and the latter at Rs. 142-8. An equal sum was put on by Cannanores to Rs. 100-8, by Coimbatore Kamalas to Rs. 93-8 and by Lakshmi 'A's to Rs. 39-8. Bangalore Woollens were fully steady at Rs. 252-8. Rajalakshmis were unchanged at Rs. 72 and Janardhanas at Rs. 58. Coimbatore Spinnings had deals at Rs. 40-8. Business in Maduras was reported at Rs. 36-12. Cambodias were quoted at Rs. 10-10 and Trichinopolys at Rs. 9-2. Coimbatore Pioneers were transacted at Rs. 115-8 *cum-div.*, as against Rs. 113-8.

In the planting section, tea shares registered sizable improvement. Devasholas were prominent with a rise of Re. 1 to Rs. 16-8. Peermades and Periakaramalais gathered As. 8 each to Rs.29-8 and Rs. 27-8, respectively. Blue Mountains, Chandramalais and Nil Nirgundis were all higher by an anna each at Rs. 2-11, Rs. 2-12 and Rs. 3-13, respectively. United Nilgiris, on the other hand, were neglected, the closing quotation being lower at Rs. 196-8, as against Rs. 198. Chembras and Coorg Teas also were a shade lower. Among rubber shares, Cochin Malabars and Vaikundams added As. 8 to close at Rs. 6-10 and Rs. 14-6. Rajagiris were better by an anna at Rs. 10-8. Thirumbadis were a shade higher at Rs. 2-11-9. Nenmenys were done at Rs. 9-12, as against Rs. 9-14 *cum-div.* Coffee shares received good support. Puthuthottams moved up from Rs. 4-14 to Rs. 5-12. Consolidated Coffees improved by an anna to Rs. 18-12.

Equity values in the banking section were maintained but transactions were very few. Indian Bank Rs. 85 Paids, however, proved an exception and gave way to Rs. 143, as against Rs. 145 last week. Bank of Mysores were another exception with a loss of As. 12 to Rs. 281-4.

Interest in the miscellaneous section centred round certain selected scrips. Mysore Papers were impressive with a gain of As. 10 at Rs. 14-8. Andhra Cements were transacted higher by As. 8 at Rs. 101-8. The Directors of the Company have maintained the dividend for the year ended 31st December, 1952, at 7½ per cent.

BANK OF RAJASTHAN LTD.

The year 1952 was a difficult one for Indian banks, thanks to the adverse business conditions created by the slump in commodities. To banks in Rajasthan, in particular, there was an additional difficulty on account of drought conditions. It is, therefore, not surprising that the profit of the Bank of Rajasthan Ltd. (General Manager: Mr. D. L. Gupta) for that year has suffered a drop from Rs. 2.06 lakhs for the year 1951 to Rs. 84,710. Despite this fall in profits, the Bank has placed a small, but useful, sum to the reserves, before distributing to the shareholders a dividend of 3½ per cent. Though this rate is lower than that of 4½ per cent. paid for the previous year, the sum required for this purpose is higher, consequent on the increase in the paid-up capital of the Bank during the year.

The gross income of the Bank for the year shows a drop from Rs. 8.40 lakhs to Rs. 7.88 lakhs, of which interest and discount account for a decline from Rs. 5.84 lakhs to Rs. 5.63 lakhs and commission and exchange from Rs. 2.38 lakhs to Rs. 1.98 lakhs. Interest paid, on the other hand, has gone up from Rs. 1.72 lakhs to Rs. 2.29 lakhs, due to increase in the Bank's fixed and savings bank deposits. Expenses have risen slightly from Rs. 4.41 lakhs to Rs. 4.63 lakhs. Out of the profit for the year, the Directors have set aside Rs. 17,062 for reserve fund, Rs. 7,500 for investment reserve and Rs. 4,500 for bad debts account. The dividend at 3½ per cent. absorbs Rs. 28,510 as against Rs. 25,698 at 4½ per cent. on a lower capital.

The following comparative table gives an idea of the progress in the Bank's financial position since 1949:

(In lakhs of rupees)

	As at the close of 31st December			
	1952	1951	1950	1949
Capital	9.22	7.45	5.15	5.15
Reserves	4.82	4.56	2.58	1.85
Deposits	150.22	152.81	149.89	136.20
Advances and bills discounted and purchased.. ..	70.23	63.33	49.64	56.15
Investments.. ..	55.81	55.76	47.68	30.77
Cash	48.26	57.32	66.79	60.87
Balance-sheet total..	190.23	197.24	183.39	163.36
Ratio to deposits of—	%	%	%	%
Advances ..	46.7	41.4	33.1	41.2
Investments ..	37.1	36.5	31.8	22.6
Cash	32.1	37.3	44.5	44.7

During the year the paid-up capital of the Bank was raised by Rs. 1.77 lakhs, being the receipt of calls due on the new shares. Reserves also stand strengthened at Rs. 4.82 lakhs. The Bank's deposits in current and contingency accounts show a decline of Rs. 23.83 lakhs to Rs. 70.57 lakhs. This has been offset to the extent of Rs. 21.24 lakhs by the rise in fixed and savings deposits, which together stand at Rs. 79.65 lakhs. Consequently, the total deposits show a contraction of Rs. 2.59 lakhs. As against this decline in the main resources of the Bank, advances have risen by Rs. 6.90 lakhs, so that their ratio to deposits is higher at 46.7 per cent. Of the advances, Rs. 12.74 lakhs represent ways and means advances to the Government of Rajasthan. Investments are more or less unchanged at the previous year's level. The market value of these investments, which consist of only Gilt-edged securities, is lower than the value at cost by Rs. 2.05 lakhs. This depreciation is amply covered by a similar sum provided in the investment reserve. It may be noted that 55.5 per cent. of the Bank's investments are in short-dated securities, 29.5 per cent. of investments have a maturity between 5 to 10 years and the rest have a maturity date ranging between 10 to 15 years. Cash balances are lower by Rs. 9.06 lakhs, at Rs. 48.26 lakhs, but they give a coverage of 32 per cent. to the deposits. Investments and cash together provide as high a liquidity ratio as 69 per cent.

Notice

BHARTIA ELECTRIC STEEL COMPANY, LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Twenty-fourth Annual General Meeting of the Shareholders of Bhartia Electric Steel Co., Ltd., will be held at the Registered Office of the Company at No. 42, Shibtolla Street, Calcutta, on Friday the 10th July, 1953, at 4 p.m., to receive the Directors' Report, to pass the Audited Accounts for the year ended 31st December, 1952, to elect Directors, to appoint Auditors and fix their remuneration, to declare Dividend payable on application and to transact any other business that may be brought forward.

The Share Transfer Register of the Company will be closed from 1st July to 10th July, 1953, both days inclusive.

By Order of the Board,
BHARTIA COMPANY LIMITED,
Managing Agents.

42, SHIBTOLLA STREET,
CALCUTTA, 12*th June*, 1953.

NEWS IN BRIEF

THE Pharmaceutical Enquiry Committee assembled at Bangalore on 25th June, 1953, instead of at Hyderabad (Deccan) on 22nd June, 1953, as previously notified.

Gold mining operations in the Kolar Gold Fields, which were suspended early last week, have been resumed with effect from the 23rd inst., consequent on the withdrawal of the 100 per cent. power-cut imposed in that area.

The Trade Agreement between India and Iraq which was signed at Baghdad on 6th May, 1953, has been ratified by both the Governments. The Agreement has come into force with effect from 14th June, 1953, and shall remain in force until 31st December, 1954, and for such successive periods as may be mutually agreed upon before its expiry.

A Rs. 21-crore plan to raise the standard of living of the rural masses under the Five-year Plan has been drawn up by 36,000 village *panchayats* in U.P. The plan will not entail any burden on the State Exchequer, as the village bodies will raise the money from their own resources in the shape of donations, voluntary labour, etc. The plan envisages repair of 73,000 miles of roads, construction of 36,000 *panchayatghars*, 36,000 wells and 18,000 libraries.

According to the Directorate of Economics and Statistics, Ministry of Food and Agriculture, the all-India second estimate of gram for 1952-53 puts the current year's areas and production at 16,008,000 acres and 3,206,000 tons, as against 16,916,000 acres and 3,071,000 tons in the corresponding adjusted estimate for 1951-52. This shows a decrease of 908,000 acres or 5.4 per cent. in area and an increase of 134,000 tons or 4.4 per cent. in production.

There is a great demand for cheap quality bunting cloth, either handloom or mill-made, in New Zealand for use during the forthcoming visit of Queen Elizabeth to that country. It is necessary that goods should be shipped by July, 1953. Samples with firm quotations on c.i.f. basis must be sent by air mail to the leading importers in New Zealand. The width and length of the cloth that would be acceptable are 9"×40 yards.

Under section of 20 of the Air Corporation Act, 1953, every officer or other employee of a company, except a director, managing agent, manager or any other person entitled to manage the whole or a substantial part of the business and affairs of an existing air company under a special arrangement appointed before 1st July, 1952, becomes an employee of the relevant Corporation constituted under the Act on the same terms and conditions on which he was employed in the company.

In pursuance of the recommendation of the Grow-more-food Enquiry Committee, appointed in 1952, the Government of India has decided to form a Standing Expert Committee on Seeds. The functions of the Committee will be: (1) To review every year the steps taken in every State for the evolution, multiplication and distribution of improved strains of seeds of the main food crops, and (2) to make recommendations, from time to time, which will ensure that as large areas as possible are brought under improved seeds.

A preliminary investigation conducted by the Geological Survey of India in the Dehra Dun-Mussorie area has revealed that reserves of limestone and marble in that area may be sufficient to warrant the establishment of a portland cement factory at Dehra Dun. It has, however, recommended further detailed exploration. There is a great demand for limestone of this area for refining sugar and paper pulp. Annually 20 tons of high-grade limestone are exported to Calcutta for the preparation of medical lime.

The Indo-Burmese trade conference, which was originally scheduled to be held in Naini Tal on 22nd June, will now be held in New Delhi towards the end of this month. There seems to have been some delay in the briefing of the Burmese delegates and it is learned that the leader of the Burmese delegation, U Tin, has informed the Government of India that his party would not be able to reach New Delhi before 27th June. The exact date at which the conference is to be inaugurated by the Central Food Minister, Mr. Kidwai, has not yet been fixed, but, in all probability, it will start on 27th June.

The Madras Government has restored the 10 per cent. salary cut imposed on officers under their control drawing over Rs. 300 per month on 1st January this year. This is consequent on the Central Government's refusal to agree to the imposition of the cut on salaries of officers of the all-India services employed in the State. The cut was enforced on the assumption that the Central Government would agree to a similar cut in the case of all-India service officers in the State. The amount so far recovered by the State Government from such cut would be credited into the provident fund account of the officers concerned.

The Uttar Pradesh Government has decided to enhance, by 50 per cent. irrigation rates in the State from the *kharif* season this year, according to a spokesman of the State Government. This would bring to the State exchequer an additional revenue of Rs. 3.3 crores, which will be utilised for various developments schemes, which are either already in progress or to be launched shortly by the Government. Last year the State obtained over Rs. 3.4 crores by way of irrigational charges. A Development Fund is to be shortly constituted from these extra revenues. The Government is, however, not considering at the moment an early proposal for the imposition of a betterment levy.

The Himachal Pradesh Legislative Assembly has passed the Himachal Pradesh Abolition of Big Landed Estates and Land Reforms Bill, 1953. The Bill seeks to fix a ceiling for owning land up to an area for which the assessed land revenue does not exceed Rs. 125 per annum. It enables the State Government to acquire all lands above the ceiling on payment of suitable compensation, in order to distribute those lands among the landless and poor tenants. The Bill also seeks to confer proprietary rights in land on occupancy tenants, and gives an option to the occupancy tenant to surrender one-fourth of his occupancy land to his landlord, in lieu of compensation for the acquisition of proprietary rights in the remaining three-fourths of the land.

The Union Labour Minister, Mr. V. V. Giri, is understood to have submitted a memorandum to the Cabinet, asking for a policy announcement by the Centre on the unemployment position facing the Government, due to rationalisation and lay off. Mr. Giri has suggested that at least 15 days' wages for every year of service should be given to workers involuntarily retrenched. According to Mr. Giri, some measure has to be adopted for providing relief to the retrenched employees. The Industrial Relations Bill, which is scheduled to be introduced in the forthcoming session of Parliament, provides for such relief. Since it will be long before the Bill is passed, Mr. Giri thinks that a policy decision in this regard should be announced which should hold good till the Bill is enacted.

Eighteen minor irrigation and land improvement schemes are being undertaken in Gujerat, utilising a major portion of the Rs. 40 lakh loan from the Government of India. A few more works for execution, with the remaining amount of the Central loan, are under consideration. The 18 works now selected will cost about Rs. 32 lakhs and, when completed, are expected to raise the State's food production by about 7,500 tons. This loan, which is repayable in 15 equated annual instalments of principal and interest, is sanctioned by the Government of India on the recommendations of the central team of officers led by Mr. S. V. Ramamurthy, which toured the scarcity areas of Bombay State, some months ago. On the recommendations of this team, the Central Government had earlier sanctioned a loan of Rs. 117 lakhs, out of which minor irrigation works, mainly in the scarcity areas of Maharashtra and Karnatak, were undertaken.

* * * *

From Abroad

The Government of Burma has given formal notice of the acquisition of the undertakings of the Rangoon Electric Tramway and Supply Company, with effect from 1st October next.

Demand for electricity in the U.S. has grown phenomenally. The industry proposes to increase the generating capacity by 50 per cent. by the end of 1956. The cost of such a programme is estimated at $12,000 million.

Steel production in the U.S. during May this year touched 9,998,000 net tons of ingots and castings. This is stated to be the second largest monthly output in the history of the steel industry. The peak was 10,168,000 tons in March last.

The U.S. Government has removed all controls on eight alloying materials, namely, boron, calcium, manganese, silicon titanium, (as an alloying material), tungsten, vanadium and zirconium. The metals are now considered to be in adequate supply.

European coal production can be expected to increase by 12.1 million tons in 1953, that is, from 475.1 million tons to 487.2 million tons, if the efforts made by the producing countries in 1951 and 1952 are continued, according to the findings of the Coal Committee of the O.E.E.C.

Wheat growers in Australia have refused to accept the stabilisation plan for wheat sold for home consumption, agreed upon by the Australian Agricultural Council. If the stabilisation plan collapses, the Wheat Board will control exports and sell locally at prices permitted by the Price Commissioners.

The American Bankers' Association has advised its member-institutions to reappraise their instalment credit policies. The Association's note to member banks is a warning to them to go easy on the financing of new and old cars, either on dealers premises or for purchase by consumers.

The Australian Government is likely to announce a general easing of import restrictions next September. Larger quotas will be applicable from October, the beginning of an import licensing quarter. Import restrictions were imposed in March, 1952, to stop the drain on the country's monetary reserves.

Chile has refused to accept a world price of 30 cents. per pound of copper, generally accepted by other foreign producers, notably Canadian and African. It intends to maintain the price at 35.50 cents, plus transportation charges—a total of 36.50 cents per lb. It has, however, indicated that, if its premium priced copper cannot be disposed of for cash, barter deals might be developed for such essential supplies as machinery.

The U.K. Government has not abandoned hopes of obtaining double taxation agreements with certain countries, particularly India. Negotiations with India started in 1949, but there were a number of technical difficulties in arriving at an agreement. Under these agreements nationals and companies of one country will not be taxed twice, in their own country and in the country of residence.

The establishment of a coffee marketing board in Uganda and greater participation of Africans in marketing and processing the crop are the main recommendations of the *ad hoc* committee appointed by the Uganda Legislative Council, with a view to reorganising the coffee industry. The Committee has also recommended that African growers should, in future, receive world prices and not those laid down under the terms of the Coffee Price Assistance Fund.

The world refinery capacity of crude oil at the end of 1952 amounted to 683 million metric tons (excluding the 25 million capacity of the Anglo-Iranian Plant at Abadan), as compared with the actual production of 640 million tons of petroleum in 1952. American interests owned the largest share, with a capacity of 460 million metric tons, British and associated Dutch interests just over 100 million metric tons and all other nationalities 123 million tons.

Canada has given 110,000 tons of high quality wheat worth $10 million as a gift to Pakistan under the Colombo Plan. Early this spring, the Canadian Cabinet agreed to make a gift of $5 million worth of high quality wheat. Steps were taken to ship 55,000 tons of wheat. Realising the crisis through which Pakistan is passing, the Canadian Government agreed last week to make under the Colombo Plan a further contribution of 55,000 tons. Shipments of this second lot will begin shortly. This month 51,490 tons of Canadian wheat have already arrived in Karachi.

PERSONAL

MR. Ivan Benedictov, Soviet Ambassador-designate to India, has arrived.

Mr. C. C. Desai, Indian High Commissioner in Ceylon, left for Colombo on Thursday this week.

Mr. A. K. Chanda, Secretary, Union Ministry of Production, left for Geneva on Tuesday this week.

Dr. P. W. E. Curtin, Senior Inspector of the Australian Government Commonwealth Public Service Board, has been appointed Director of the Colombo Plan Bureau of Technical Co-operation, in succession to Mr. Geoffrey Wilson of the British Treasury.

Mr. P. M. Lad, Secretary, Legal Department, and Remembrancer of Legal Affairs to the Bombay Government, has been appointed to act as Chief Secretary to the Government, in place of Mr. M. D. Bhansali who is proceding on three months' leave from 1st July.

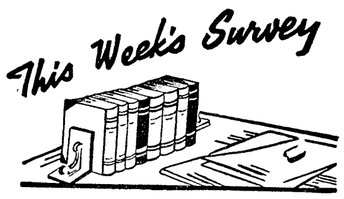
"COMMERCE" 1928

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, 30*th June*

The Oil War Ends

Ere the Indian Tariff Board, which was—if we may say so—switched off from some other important enquiry into which it has delved deep, to hold an investigation into the oil rate war, has had time to report upon the results of its investigation, "the war" between the Royal Dutch Shell group and the Standard Oil Company of New York, waged since September last, has come to an end. This is rather unexpected, nay, to a certain extent, disconcerting, but, nonetheless, welcome. All's well that ends well; and we hail the news of the cessation of hostilities between important oil interests with delight. That an agreement between the Burmah Oil Company, the Royal Dutch Petroleum Company, and the Standard Oil Company, regarding the price of kerosene in India has been reached was inferred in London last week-end from Sir Henri Deterling's statement concerning the purchase of Russian oil. Sir Henri said, at the annual meeting of the Royal Dutch Petroleum Company, that they had reason to hope that further discussions would convince all parties that the principle of compensating the owners of confiscated properties should be upheld in the interests of everyone. He added that the knotty question of purchases in Russia would no longer be handled in public. The terms of agreement, we are told, include an undertaking on the part of the Standard Oil Company to compensate owners of Russian oil properties seized by the Soviet in future contracts for the purchase of Russian oil. The Royal Dutch Petroleum Company is, therefore, likely to receive large compensation. The reader will recollect that, in a recent rejoinder to the criticism of Sir Henri Deterling, the Standard Oil Company of New York characterised the attempt to exclude Russian oil from the Indian market as "uneconomic" and detrimental to the country's real interests. The statement then proceeded to quote the Burmah Oil Company as authority for the well-known fact that India does not, at present, produce enough kerosene to satisfy its own requirements, and suggested that the Russo-American effort to meet this want by means of the Russian product was not only legitimate business but, rightly considered, a most praiseworthy philanthropy. We do not know what view the Government of India took; all we are concerned with, at present, is that it was prevailed upon to remit the Indian oil companies' claim for protection against the Soviet product for immediate enquiry, by the Indian Tariff Board.



AIR TRANSPORT IN RETROSPECT

THE well-worn adage has it that, in economics, what is past is past. It ought to be well, therefore, to forget the nationalisation of air transport, since it has been decided upon by the Government and accepted by Parliament. Even so, it would do grave harm to the cause of free and private enterprise in the country if the impression were allowed to gain ground that the State ownership of air transport was inevitable. Both Mr. J. R. D. Tata, Chairman of Air-India Ltd., and Mr. Tulsidas Kilachand, Chairman of Air Services of India, Ltd., have, therefore, done well, in their addresses—the last of the addresses which they have delivered for several years now—at the recent annual meetings of the shareholders to point out that, if the Government's policy had been consistent from the beginning and if it had agreed to accept its own enquiry committee's findings, there would have been no need for it to take over the industry. Clearly, nationalisation was not inevitable. If it seemed so to the Government, it was less because of any inherent defects in the industry than of the Government's own utter disregard of the industry's interests. It is true that nationalisation is now irrevocable except through another vote of Parliament. But it is necessary to correct the popular view that the Government, in its decision to take over the industry, acted like a mediæval knight-errant engaged in the rescue of some damsel in distress.

The chief causes of the decline in the industry's fortunes were neatly summed up by Mr. Kilachand; they are: "indiscriminate licensing, exorbitant taxation, niggardly mail payment, ever-rising costs, falling revenues." None of these evils were of the industry's own making. Tracing the history of the air transport industry, Mr. Tata pointed out that although Sir Frederick Tymms' original plan for the industry envisaged the setting up of only four companies, the Government lost no time in licensing as many as 14 companies. This proved too much of a good thing. The industry was weighed down by its own weight. There was a scramble for available traffic which was strictly limited. The Government was generous neither in its fares and mail rates policy nor in its tax measures. The fares were fixed at a low level and the mail rates paid to the industry were only Rs. 3 per ton-mile as against Rs. 5 per ton-mile paid to the B.E.A. by the British Government. As if all this was not enough burden, the Government loaded the industry with a tax on petrol which, by any standards, would be adjudged exorbitant. No better indication of the magnitude of this burden can be had than the fact that the revenue from the tax on aviation spirit between 1947 and June, 1953, has amounted to Rs. 6½ crores as against the subsidy of Rs. 1.80 crores distributed by way of petrol rebate. Indeed, Mr. Tata calculated that the revenue collected from the industry during the last seven years actually "exceeds the total price they will now pay for the assets of the entire industry on nationalisation." Here is a curious paradox of an industry which has paid its own purchase price.

Despite all these handicaps from which the industry suffered and the losses which it incurred, it might have rescued itself from the difficulties, not of its creation, if only the Government had chosen to implement the recommendations of the Rajadhyaksha Committee which suggested that the grant of financial aid to the industry. The Committee, on which the industry was not represented, also warned against State ownership of the industry. Its recommendations and its warnings were most unceremoniously rejected by the Government and its closely reasoned document was confined to undeserved oblivion.

When the industry knew the Government's intentions, it put forward, we are told, several concrete plans for amalgamation which, had they been implemented by the Government, would have placed the industry on a sound footing. From all this it is now clear that the Government had made up its mind on nationalisation and that it did not care to have a discussion of the issues connected with so drastic a measure as State ownership of such a complicated field of activity as civil aviation. What is most reprehensible about the whole affair is that the Government has not thought it fit to consult the industry even on the question of compensation. The principles of compensation, now adopted, run counter to all accepted notions of the subject. Neither the world market price for the assets nor their Indian market price, has been taken into account. Nor will any credit be given for the industry's silent and painful efforts in developing the industry. Mr. Tata was certainly not indulging in any exaggeration when he said that the terms of compensation contained an "element of expropriation."

Mr. Tata drew a few morals from the unhappy episode of the nationalisation of airlines. He said that private enterprise should not rush into a new field without making sure that productive capacity will not exceed the available demand, and that the industry will be allowed to function with a reasonable measure of freedom and that the Government will neither go back on its own economic policies nor interfere with the working of statutory authorities. **These are lessons for the future.** There is also one more lesson which we would like industry to learn—the need for the utmost publicity of its own point of view. The air transport industry never sought to publicise its own views on nationalisation, much less to place its alternative proposals before the public. By its failure to take the public into confidence and by treating the entire issue as if it were a private transaction between two individuals, the industry has not only allowed its own excellent case to go by default but also rendered little service to the cause of private enterprise in the country. Free enterprise in this country must know, as its confreres in other countries have known, that eternal vigilance and appeal to people's reason constitute the price that it must pay for economic freedom.

JAPANESE CABLES

The Japanese Cable Investigation Committee has submitted its findings to the Government of India. The report has not been released to the Press yet. From the reported version of the findings, however, it is gathered that the Committee has recommended that, while making purchases of cables, the Government may extend to the Japanese cable manufacturers the same consideration as it has extended to others. This recommendation is based on the view that the construction of the Japanese telephone cables (up to the lead sheath) conforms to that of the cables produced by well-known firms in the U.K. and the Continental countries.

The above view fully vindicates the position and reputation of the Japanese cable manufacturers, Messrs. Furukawa Electric Co., Ltd. It was this firm, it may be noted, which had supplied to the Government of India, some time ago, about 687 miles of paper-insulated armoured underground telephone cables at a cost of Rs. 82 lakhs. This transaction was subjected to vehement criticisms on the ground that the jute covering of the cables were pealing off. This defect was cited as an instance of irregularity and malpractice on the part of the Administration. Following these criticisms, the Post and Telegraphs Department conducted an investigation and expressed the view that, though nothing serious was wrong with the cables, the outer covering of jute had not been up to the standard. The Auditor-General, however, was not satisfied with this view and objected to the Government of India spending a large amount "without knowing how the cables from a new manufacturer would prove in the long run." The Government of India accordingly appointed, in September last year, a committee, with Mr. B. Das, M.P., as Chairman, to enquire into the merits of the transaction. The Committee obtained samples of Japanese cables from various places in India and sent them to the National Physical Laboratory for scientific examination. The cables, it is stated, stood the tests fairly satisfactorily and there is no apprehension that they will not last their normal life.

The investigation has led the Committee to the following three important conclusions:

(1) The Japanese cables were not inferior in any way to the cables supplied by British and Continental manufacturers. The defect in the outer jute covering was due to defective specification. The supply was made strictly in accordance with Government specification.

(2) The Government of India's decision to purchase Japanese cables was made primarily with a view to saving public money, as the tender quoted by Japan was lower by about Rs. 30 lakhs, which is a very substantial amount.

(3) As the purchase was from a new source for the first time, the Government had taken all the necessary precautions to safeguard public interest by insisting on preliminary tests, guarantee for replacement in the event of the cables failing within the period of their normal life which is about 35 years.

It follows from the foregoing observations of the Committee, which included such veteran Parliamentarians and strong critics of irregularities and malpractices in public affairs as Mr. B. Das and Mr. S. Das, that the doubts that had been expressed about the quality of Japanese cables were not well founded. If the quality of Japanese cables compares favourably with that supplied by other countries and if the price also is very much lower, there is no reason why the Government of India should not continue to buy equipment of this type from Japan and thereby introduce a certain element of competition, which, it is alleged, is lacking at present, thanks to "false propaganda made by interested parties for motives of business rivalry." According to a section of importers, all the important manufacturers of telephone cables in the U.K. and the Continent have formed a ring, under which they quote identical prices and that there is, therefore, no element of competition in the trade. The entry of Japan into this business will, it is argued, result in healthy competition and lower prices for telephone cables.

EXPORTS NEED MORE STIMULUS

The figures relating to India's foreign trade during 1952-53 reveal a considerable improvement. Thus the adverse balance for the year amounts to only Rs. 76 crores, as compared with Rs. 147 crores in 1951-52. This performance should prove better still, if the measures for export promotion contemplated by the Commerce and Industry Ministry are implemented promptly. These measures, it may be noted, include legislation for repayment of drawbacks of import duty on raw material used in indigenous manufactures exported abroad, finalising the scheme for appointment of commercial travellers, opening of emporia for marketing handloom products in foreign countries and reorganisation of the Trade Commissioners' service abroad. A step that has already been taken is the appointment of Mr. Karmarkar, Minister for Commerce, as the chief of the export promotion body, so that he could devote undivided attention to the important question of improving India's export trade.

Besides what is contemplated above for stimulating the export trade, there are measures to be taken in certain other directions too. These were spotlighted by Mr. Sankalchand G. Shah, in his presidential address at the quarterly meeting of the All-India Exporters' Association held in the city last week. Production in major industries, as also in a fairly large number of minor industries, has increased but there has not been a corresponding rise in sales both in domestic and export markets. In the result, there has been accumulation of stocks and threat of serious unemployment. In fact, in engineering industries this threat has materialised to a considerable extent. With a view to assisting them, there is need not only to study the export problem of these industries but also to relax, if not to abolish, controls on exports. The Government should address itself to this work, as was emphasised by Mr. Shah. He felt that exports could be fostered by suitable reductions in export duties on a number of items, particularly those on coarse and medium variety of cloth.

Mr. Shah contended that raising the export quotas in the case of certain commodities and placing of several other items on the O.G.L. or under free licensing were needed in order to stimulate exports of Indian merchandise. He was dissatisfied with the tax policies in India which he said were not conducive to expansion of trade. Nor was he satisfied with the policy of railway freights. Apart from the occasional bottlenecks created by delays in the supply of wagons, the rates in many cases were unhelpful to the promotion of export trade in such goods as manganese, kyanite and iron ore.

Another pertinent point made by Mr. Shah was that, as in the case of import trade, export trade also was subjected to great inconvenience for want of co-ordination between the Export Control and Customs authorities. This is stated to have held up exports on many an occasion, as much delay occurred in deciding as to which item of customs tariff a particular commodity belonged and whether it was dutiable or not. These delays, it is needless to add, should be avoided in the interest of the country's export trade.

PROGRESS OF D. V. C.

Much criticism, even some bitter criticism, of the Damodar Valley Corporation (D.V.C.) has been made by several responsible spokesmen on the ground of wasteful expenditure and extravagance. It must, however, be admitted that the D.V.C. has some solid achievements to its credit. The P.T.I. correspondent who toured the D.V.C. areas recently, avows that "one cannot but be impressed about the immensity of the job done or proposed to be done and the enormous benefits these will yield to the people at large in the areas." The Damodar Valley Project envisages construction of four dams—two each across the Damodar River and its tributary, Barakar River. Of these four dams, the Tilayia dam has already been completed and was inaugurated by the Prime Minister recently. As much as 90 per cent. of the progress has been made in regard to the concrete dam in the upper reaches of Konar River; the construction of this dam is expected to be completed by the end of the year. For the present, the dam serves as a storage for the supply of cooling water to the biggest thermal power station at Bokaro. It is proposed to generate power also. According to a plan drawn up, which is awaiting approval of the Government, an underground hydro-electric system is to be set up 450 feet below ground level. The annual capacity of the station is estimated at 40,000 kw.

The third dam, namely, the Maithon dam, is designed primarily for flood control. The dam is 162 feet high and will create a reservoir of 26,000 acres, storing 1.1 million acre-feet of water. It will help irrigate 270,000 acres of land and its attached power house is expected to produce 40,000 kw. of power. The last and the biggest of the D.V.C. dams, the Panchet Hill dam, is also mainly concerned with flood control. The dam, the height of which is 133 feet, is scheduled to be completed by June, 1955. It has already been raised to a considerable height above the foundation level, while the river has been diverted for the purpose of facilitating its further construction.

The Bokaro thermal station will be the principal source of power to the D.V.C. The station is located on the bank of the river Konar, just below its confluence with the Bokaro River. It has three thermal generators with 50,000 kw. power. Of these, one has already been completed and is producing, on an average, 30,000 kw. of power. The other is likely to go into action very shortly. The D.V.C. power transmission system consists of 350 miles of main transmission lines capable of serving an area of 25,000 square miles.

The construction of the D.V.C. dams is in charge of Mr. Komora, the builder of the famous Norris Dam in the U.S. With regard to the economics of the project, the reported observations of Mr. Komora are worth noting. According to him, the return to the Government on the capital investment—the overall estimate is placed at Rs. 89 crores—may run to 4 per cent, on an average and the receipts from irrigation and power will, in the initial stages, be 4.5 per cent. The entire capital will be returned to the public in about 40 years. The direct benefits from the first phase of the D.V.C. project amounts to Rs. 38.26 crores (at current prices) per annum. Of this, the value of additional foodgrains produced accounts for Rs. 30.80 crores and sale of power for Rs. 4.18 crores.

YEAR OF TRANSITION

Once again, the important reference book, *Annual Market Review*, by the well-known firm of share, finance and bullion brokers, Messrs. Premchand Roychand and Sons, Ltd., Bombay, has been brought up to date. The latest issue of this customary annual publication covers the year 1952 which, in the words of its authors, could "best be described as a year of transition." The publication which does not merely record but reviews, in a critical manner, the economic events of the past year, both in India and abroad, devotes its earlier chapters to the description of the changes in the national economies of the U.K., U.S., West European countries and India. These are followed by reviews of the more important of the Indian markets, such as exchange, money, bullion and share markets. These are followed by chapters on the Five-year Plan and on industrial production. The chapter on industrial production discusses the trends in the output of India's chief industries such as cotton textile, sugar, paper, steel and tea. The publication includes much statistical information, arranged in tabular form, relating, among others, to India's

(*Continued on page* 1203)

OFF THE RECORD

(By "ROVER")

THE anxiety of the powers-that-be to establish a closer link with the business community in the country can be easily understood. With the usual and exasperating contrariness of things in general, economic affairs are not moving in the direction the Government wants them to do. Unemployment is rising in spite of the official claim that the Five-year Plan is being implemented satisfactorily. Even though the inflationary pressure from deficit financing of this Plan has not yet begun, prices have risen and the cost of living is mounting up. Though production has remained at a fairly high level, the cost of production is also rising. This cost is likely to rise further, because the full force of the impact of all the wage and welfare policies of the Governments in favour of industrial and agricultural workers has not yet been felt by the producers. Even when profits are pruned to the bare bone, the reduced purchasing capacity of the people will not be able to absorb the whole of this production. On the other hand, the Government dare not suggest to the workers or the producers of raw materials to accept even temporarily, a cut in their wages or price.

The economic *malaise* is complete and vicious, in spite of the unconvincing pose of complacency put on by the Finance Minister about high prices prevailing at present, which he considers as being only a feature of the transition period between the change-over from the sellers' market to a buyers' market. That is what he said at Poona early this week, when he met the Committee of the Mahratta Chamber of Commerce. He dare not engineer a heavy slump now as he did in February-March of 1952. So all that is left to him, with the usual fatality of the Indian mind, is to hope that prices would readjust themselves to a reasonable level. They certainly would and must in the long run, but they would do so only at a heavy cost and sacrifice on the part of large sections of the public. Besides, this talk of prices adjusting themselves automatically, after they have worked their full havoc on the economy of the country in the course of this adjustment ill becomes such an enthusiastic exponent and advocate of controlled economy as Mr. Deshmukh.

But I have no intention of engaging myself in a controversy about the price trends and production. All I know is that the Government has half knowingly and half in the manner of a somnambulist allowed itself to slide easily into what appears to be an ugly economic situation. It is, however, a good sign that the authorities are alive to the need for a closer understanding with the private sector of industry, which after all, is an important factor in the present economic set-up. Three months ago, about the time of the annual meeting of the Federation of Indian Chambers of Commerce and Industry, it certainly looked as if the Government and this sector had come closer than ever before. But the Government, perhaps through some mistaken notion about ministerial prestige or through a false fear of antagonising other interests if it got very cordial with capitalist interests, gradually reverted back to its attitude of coolness, aloofness and superiority.

I was, therefore, heartened when I read that there was a move now, once again, to forge a new link on a less official and more informal basis between those Ministers who are in charge of important economic activities and private industry. The idea appears to be to bring together, without a set agenda, the Ministers for Finance and Commerce and Industries and business men, two or three times a year, when there can be a free and frank exchange of views on broad questions of policy. Would it not be better to include the Ministers for Labour and Railways also in the ministerial team? The emphasis at these peace gatherings would naturally be on securing a higher rate of investment and establishment of new industries of national importance in the private sector.

The idea for this is believed to have originated at the meeting of the Central Advisory Council for Industry held at New Delhi early this month, when Mr. T. T. Krishnamachari, without taking the trouble to acquaint himself with the volume of new and additional capital invested in new and existing industries since 1947, indulged in the Government's usual lament about capital being shy and the industrialists being afraid of competition, in his now familiar forthright manner. Mr. Krishnamachari is possibly one of those people who believe that it is no use being a Minister and having great authority, if one cannot afford to dispense with tact and circumspection and be unpleasant to people who are important but in no position to retaliate. It is quite possible, however, that he may not prove to be so brusque and assertive when one meets him informally and when his utterances are not likely to be reported in the columns of the newspapers the next morning.

In any case, it is a promising scheme, if there is cordiality and a genuine desire to understand the misgivings and difficulties of each other on either side. At the same time, the manner in which it is proposed to establish this contact and to maintain it unbroken is not calculated to secure the desired result. There has been no dearth of contacts, formal and informal, official and off the record, during the six years since independence, between important members of the Central Government and top-ranking industrialists in the country. They have been meeting again and again in committees, conferences, advisory boards individually and in groups to discuss important issues arising from time to time. They have been meeting more frequently at social functions and at individual interviews when exchange of views on the general economic policy as well as on specific issues is bound to take place almost without a break. If contact between ministers, dealing with economic problems, and recognised leaders of industry could bring about a better understanding and realisation of each other's aims, there should have been no misunderstanding and no need for fresh exploration to-day.

But as in politics, so also in business and industry, a stage has gradually been reached, where the leaders in either camp have ceased to represent the views of the large number of smaller men in commerce and industry. Because of the glare of publicity under which political activities are conducted, this gulf between leaders and followers is easily noticed. Helpless and unorganised, back benchers in the legislatures are time and again compelled to vote against their conscience for unpopular policies of Governments at the behest of the Party Whip and under the name of Party discipline. While the same conditions prevail in business organisations, they are not revealed to the general public, because the public is not interested directly in such developments. As a matter of fact, every walk in public life in India to-day is vitiated by this unrepresentative character of the leaders and their arrogant aloofness from their mute and unhappy, at heart, followers. There is a strange irony in the situation where the so-called leaders turn their backs on those whom they are supposed to lead. This allows them to claim with some truth that the crowds, whom they really shun, are really at their back. In terms of space, they are!

The reason why there is such an enervating sense of frustration in the country to-day is reflected in this stragedy of leadership. The so-called top-ranking leaders in commerce and industry are too busy, first, with their own affairs and, secondly, with their manifold public engagements, to maintain an intimate contact with the rank and file of business men. Under a semi-controlled economy, difficulties of smaller units in industry are not the same as those of big concerns controlled by these leaders with their prestige and personal influence helping them to surmount many of these. Similarly, the problems besetting the work of the smaller units are often very much different from big organisations with wide resources and teams of experts at their beck and call. In addition, industries are becoming more and more specialised nowadays and conditions regarding the same problems, such as finance, labour, marketing, rehabilitation, etc., are very different in each industry and even in the same industry for the top and the bottom layers. It is, therefore, impossible for half a dozen selected leaders from the private sector to speak either with full authority or knowledge for all the industries.

What we see at most of the conferences and advisory committees is a band of some 8 or 10 leaders, with very little variation in its composition. Nominating the same set of people on numerous committees and councils naturally fails to secure that intimate and detailed study of affairs, which is necessary to acquaint Government with conditions as they prevail. It is, therefore, very imperative that the Government should cast its net far and wide, while making selections for the personnel of such advisory bodies. There are silent men, studious and well-informed, with neither the knack nor the desire for seeking publicity and emerging into the limelight, in every industry, small or great. In limiting the field of selection to a small but vocal and pushing coterie, Government is not only robbing commerce and industry of real and genuine representation, but depriving itself of a chance to get good and useful advice. It is a pity that the Government has come to regard these important conferences and committee meetings as so many beauty parades for the star performers of the same circus for displaying their charms and talents. If you eat sweets at all meals, even sweets can turn nauseating. I am surprised that men in high places in the Government should be blind to this simple psychological and culinary truth, which every housewife in the country knows so well.

If this new scheme of establishing a closer link with the business community on an informal level is going to be a replica of what happens at all such meetings I can prognosticate without being an astrologer that it will be one more failure added to all the many efforts in this direction in the past. From Press reports, I gather that the selection of men to take part in these informal meetings is to be confined to half a dozen top-ranking leaders of the business community. You and I can predict, with only a very small margin of error, who these six or seven top-ranking representatives are going to be. If the selection is going to be in consultation with the President of the Federation of Indian Chambers of Commerce and Industry, as indicated in sections of the daily Press, such a guess would be easier still.

I am certain that the Ministers who are to take part in these confabulations at intervals of three to four months, will not be in a better position than they are to-day to formulate and revise their economic policies as a result of such talks, because these leaders have said and repeated over and over again all that they could say on any subject of importance. On the other hand, if these Ministers were to make a genuine effort to find not top-ranking leaders but other men equally sound but in closer touch with their fellow business men but who are eclipsed into oblivion by these tall poppies, they might get something more worth their while by way of advice and guidance. If nothing else, they would at least find more entertainment by looking for these contacts farther afield.—*All Rights Reserved.*

CAPITAL GOODS FOR DOMESTIC RESOURCES

GROWING DEMAND FOR BRITISH MACHINERY

(By PHILIP WEATE)

CAPITAL goods have been the heart of Britain's export drive. They have made an exciting and considerable contribution to the United Kingdom's export earnings, and when the trend of world economies is analysed, there is every reason to think that this will continue. The emphasis in practically every country today is on the development of domestic resources and, since these policies require tools and plant and massive machinery if they are to succeed, there has been a steady demand in the post-war world for a wide range of capital goods.

However confidently the economists tell us that it is the capital goods industry which will be most prone to order fluctuations and outlook uncertainties, the business man who makes carpets or cigarette lighters will tell you that his business has been most badly hit by the more or less new phenomenon of recklessly pursued economic self-sufficiency. In short, while it is easy for a country to make consumer goods, it needs capital goods to do it and the U.K. has proved to be one of the most satisfactory sources for this equipment. The same reasoning applies to plant for great development plans.

Before looking at the value and range of U.K. capital goods exports, it will be interesting to consider some of the contracts gained by U.K. companies in the past against international competition.

Sugar Factory Contract

A Manchester firm recently won a 250,000-dollar (Rs. 12.2 lakhs) order for a large open-side milling machine against considerable American and European opposition. The machine was ordered by a Canadian company, and the makers claim that it is the largest of this type ever built. Another engineering order, worth more than four million dollars (Rs. 2 crores) has been landed by a U.K. company to build a sugar factory in Venezuela, a hard currency country. The company was able to satisfy the quick delivery requirements and the factory should be operating on schedule. Delivery of the plant is planned for about November, 1954. Practically all the equipment in the factory will be made in Britain and it is designed to produce 300 tons of sugar a day.

Then in the contracting and road-making plant field, there have been some sizable contracts. A British firm is now working on an order for £150,000 (Rs. 20 lakhs) worth of contracting machinery of various types for the Government of Iraq; a Leicester manufacturer, three-quarters of whose output goes overseas, is supplying most of the gravel washing and crushing plant to Australia for the Wambo River hydro-electric scheme. The same company has delivered £35,000 (Rs. 4.7 lakhs) worth of this type of machinery and spares to Siam well ahead of the contract deadline. Orders for both new equipment and spares are also coming through from India and Malaya.

Market surveys are an important aspect of selling overseas and at least one firm who makes contractors' equipment has been alive to its uses. This company preceded the recent U.K. Government trade mission to the Caribbean and foreseeing the immense amount of work which will be done in this area, set up a permanent representation in Mexico City. The same company made an exhaustive tour of Japan, India and the Far East when trade slackened from Australia and this has produced useful information on the prospects in these areas.

Another of the almost endless types of goods covered by the umbrella heading "capital goods" are wharf cranes and cargo handling equipment. The Auckland New Zealand Harbour Board is spending almost £500,000 (Rs. 67 lakhs) on cranes for some new import wharfs that are being built. The order comprises 18 five-ton cranes to be delivered in 18 months.

Iron and Steel Plant

Looking at the really heavy engineering products, the most recent outstanding contract gained against strong competition is a £6 million (Rs. 8 crores) contract for equipment for the new Spanish iron and steel works at Aviles. A group of U.K. companies has taken this on. Since the first order was announced these companies have been asked to supply the soaking pits and they are confident that they will win many of the orders still to come. This new iron works will double Spain's steel production.

Before the Spanish order, industry in Britain had taken a large part in the steel expansion plans of a number of other countries. The Caen, Normandy, France, steelworks bought £1 million (Rs. 1.3 crores) worth of equipment and a Turkish iron and steel construction project imported almost £500,000 (Rs. 67 lakhs) worth of engineering goods. Another company has made a large contribution to the Norwegian heavy industry expansion plans. More significant is the £1 million (Rs. 1.3 crores) order for a complete iron and steel handling plant in Yugoslavia which was placed with a U.K. company last year. The handling equipment will form part of a completely new iron and steel making plant.

Oil Refining Equipment

These examples sketch something of the work overseas of Britain's heavy industry. Mention should be made of a valuable new industry which has come into its own since World War II —that of oil refining equipment. U.K. manufacturers have been completely at home in this relatively new and difficult field and there are few Middle East refineries built in the last year or so which do not have a large proportion of U.K. plant.

The list is endless, but the following value figures of exports for 1952, with 1951 figures in brackets, show a glimpse of the picture: compressors, mainly to Commonwealth countries, Norway and Brazil £5.3 million (£4.4 million); boilers and plant £7 million (£6.9 million); cement and concrete machinery £3.2 million (£2.7 million); excavating and earth moving £14.3 million (£9.8 million); mechanical handling £15.8 million (£12.5 million).

(Concluded from next column)

privately, Administration spokesmen are still pleading for disinflation, if not for outright deflation. In effect, they want a little unemployment, but not too much, to curb the demands of labour. They talk officially of "adjustments," but they mean recessions in various lines to stop wage increases and price rises which could disrupt the disinflationary policy of the Treasury. Strangely enough, nearly everyone agrees that these officials do not seem to fear the psychological mass reaction of a downturn in business which is so easily transmitted to the volatile American public by all means of communications and which would be extremely difficult to arrest by monetary measures. The best brains here seem to realise that the U.S. economy has been in a precarious balance for so long that the next turn cannot be anything but downward, even marginally so. It behoves countries abroad to recognise this possibility, it seems to me.

Politically, the only bright spot on the horizon is the intervention of Prime Minister Nehru of India in the Korean struggle. American publicists are full of praise over his efforts, even though leaders of the South Korean Republic have, somehow, inhibited peace efforts. Nearly everyone in the Eisenhower Administration has now become an apologist for what has occurred since they took office in January. Despite election promises, tax relief is as far away as ever, the corporate excess profits tax is supposed to be renewed, the European defence community is no nearer a solution as it was before and nobody in this country is better off than he or she was before, even though nothing much has changed since the Truman regime went out of office.

Despite all the criticism and, perhaps, pessimism emanating from the foregoing despatch, the United States should not be sold short at this point. It is at the crossroads. General Eisenhower is still trying to reconcile differences of opinion within his own Party, as he did so successfully as commander of the Allied forces in Europe. Whether he will succeed in the final analysis remains yet to be seen. He still has the complete confidence of the average American, even though there are lots of complaints and disappointments. What is more, the General has the respect of everyone, even of his political opponents.—*All Rights Reserved.*

AMERICAN LETTER

U.S. AT THE CROSSROADS

MONEY MARKET IN UTTER CONFUSION

(From Our Own Correspondent)

NEW YORK, 18*th June*

SERIOUS confusion reigns in the American money market. Even stout Republicans are mad at their own Party and at the Treasury. The latter's decision to issue a 3¼ per cent. bond and meet market terms has led to a complete disruption of all bond values. Outstanding Treasury obligations, carrying lower interest, have declined substantially in price. Thus, substantial book losses in surplus were sustained by thousands of the smaller country banks. The net effect, it seems, is that many Treasury portfolios are virtually frozen. Until prices rise again, many of the smaller institutions dare not sell nor even pledge securities to raise funds for loans. The only alleviating feature, at the moment, is that savings are still rising at an extraordinary rate.

The Federal Reserve system is, however, back in the market buying Treasury securities. Spokesmen say that this is being done merely to keep bank reserves at their present disinflationary levels and not to support prices in a "free market," but the fact is that Federal open market operations have eased bank reserves appreciably and have lifted the Government bond market out of its tail-spin.

The U.S. Treasury is still hard-pressed for money. Its overdraft with the central bank exceeded more than $1,000 million on the 15th June, tax date, and its working cash balance was down to a mere $8 million. As a working account of the United States Government, this is almost ridiculous.

Tax receipts are still lagging and no one in authority seems to know why. One answer is that so many people have been dismissed from the Internal Revenue division of the Treasury that the processing of checks is much slower than heretofore. Unexpected demands are also high, as, for instance, Treasury support of farm prices by the Commodity Credit Corporation which is committed to this course of action by legislation until 1955. Several hundreds of millions of dollars have to be expended under this scheme for price supports, because of bumper crops and falling prices. The supply of mortgage money is drying up, too, not for lack of money, but because rates are pegged by the Government. Thus, lendable funds go into the unpegged private capital markets where handsome yields are now obtainable.

It is a very confusing picture in the midst of record employment and high business activity when the steel industry had no hesitation to increase wages by an average of 8½ cents per hour, when the automotive manufacturers granted increases in pay and when leading oil companies raised the price of crude.

Just as the late Franklin Delano Roosevelt, as incoming President of the United States, surrounded himself with economic purists of the academic world, Eisenhower is now aided by purists of the right wing who find themselves exasperated by the real facts of economic life.

Headed by W. Randolph Burgess, ex-Chairman of the Executive Committee of National City Bank, a former Federal Reserve official who has books on monetary matters to his credit, these purists want to lengthen the public debt and they cannot do it. They raise interest rates to create a "stable dollar" and they have created the greatest financial instability since the depression years. It is an extraordinary situation.

The banking community in the United States is split wide open on the new policy. One group says that, in the interest of the country, these severe measures have to be taken to ensure economic health. The other group has gone on record, time and again, to warn the Treasury that purist ideas will not work. The outlook, at present, is that about $8,000 million of financing will have to be done by the U.S. Treasury for the balance of the year. Under present conditions, it is virtually impossible to raise this amount in any other way but on a short-term basis through the banking system which is inflationary, regardless of what anybody of the purist school of thought says.

Perhaps, the most disturbing aspect for foreign friends of the United States is that,

(Continued in previous column)

PAKISTAN NOTES

SHIPMENTS OF U.S. WHEAT AUTHORISED

EXPERT COMMITTEE FOR COTTON APPOINTED

BY a unanimous vote, after only an hour's debate, the U.S. Senate passed and sent to the House of Representatives President Eisenhower's measure providing for a million-ton wheat aid to Pakistan. This has been warmly welcomed in Pakistan as an indication of the anxiety, on the part of officials and the public in the U.S., to avert a near-famine caused by two years of drought. The proposed legislation seeks to authorise an immediate shipment of 700,000 tons of wheat to meet the Pakistan emergency and a further 300,000 tons for being kept as a working reserve. Mr. Eisenhower has proposed that the first 700,000 tons should be given as gift and the remainder on either a gift or loan basis. For he feels that Pakistan's present grave financial difficulties do not permit repayment of a loan in dollars, or through exchanges in kind. The first 100,000 tons of the proposed gift of wheat to Pakistan is expected to be received by 15th August next.

The aggregate value of the wheat gift plus transportation charges is estimated at $95 million. The proceeds of wheat sale will be put into a special account, to be utilised exclusively for implementing irrigation projects and other works designed to prevent occurrence of famines in future. The wheat that the Pakistan Government receives from the U.S. will be distributed free to those who cannot afford to pay for it. This is in accordance with a specific clause introduced in the Bill by the Senate.

The sizable U.S. wheat aid to Pakistan will certainly avert what Mr. John Foster Dulles, the U.S. Secretary of State, recently characterised as "the heart-rending prospect of starvation." The Government of Pakistan is no doubt making every effort to solve this critical problem. But it has become clear that these efforts and the help rendered by other countries fall far short of bringing enough wheat into Pakistan.

Cotton Trade

A notable event in the sphere of Pakistan cotton recently has been the appointment of a Committee of experts, with Dr. Nazir Ahmad as Chairman, to undertake a study of the cotton market and to examine the many issues relating to the cotton trade. The Committee's terms of reference cover the following: (1) Whether or not there should be hedge contract in the Karachi cotton market and, if hedge trading is to be opened, what adequate safeguards are necessary; (2) whether or not sales on an unfixed basis should be allowed and what measures are necessary for preventing them; (3) whether the present control exercised by the Government through the Cotton Board is adequate or justified or should the functions of the Board be enlarged or curtailed; and (4) whether the existing laws and rules of the Cotton Association are adequate to prevent or reduce, to a minimum, malpractices and, if not, what additional measures are needed to facilitate smooth trading.

It is thus evident that the Committee's terms of reference are comprehensive. The deliberations of the Committee, the recommendations it will make and the Government of Pakistan's decisions thereon will naturally be watched with keen interest by the cotton traders not only in Pakistan but also in the importing countries. This is only to be expected, considering the fact that Pakistan is one of the world's leading suppliers of cotton. Moreover, cotton is a staple earner of foreign exchange. In view of these, the need for maintaining healthy trends of trading in the cotton market cannot be stressed too strongly.

Road Plan

A six-year plan for the development of roads has been drawn up by the Government of Pakistan. The plan envisages the construction of 2,246 miles of new roads and improvement of 8,266 miles of Federal highways at a total cost of Rs. 51 crores. The Provincial road development programme provides for the construction of 11,415 miles of new roads and improvement of 6,047 miles of existing roads at an aggregate cost of Rs. 91.4 crores. This plan is based on the recommendation of the Transport Advisory Council, which, at its session in November, 1950, had emphasised "that a very high priority must be given to roads, as the pace of our industrialisation progress, development and standard of living all depend, to a large extent, on the existence of road."

Government Loans

The public response to the two new loans, viz., 3 per cent. 1958 and 3 per cent. 1961, floated by the Government of Pakistan last week, is reported to have been quite encouraging. Thus, the preliminary figures released by the Government indicate that the subscriptions to the two loans amount to Rs. 46.62 crores. Of this, Rs. 17 crores are in cash and the remainder by conversion of the 2¾ per cent. 1953-54 loan. Of the two loans, subscriptions to the 3 per cent. 1958 loan amount to Rs. 34.56 crores and those to the other to Rs. 12.06 crores.

Five experts from Hollywood are arriving in Pakistan shortly to help the film industry to effect improvements and raise its technical and artistic standards. The services of these experts, it is understood, are being secured by the Pakistan Government under the technical aid programme of the U.N. and the U.S. Administration. The experts are expected to impart training and advice for a period of six months to the technicians and semi-technical personnel in the five essential departments, namely, camera, sound recording, processing, editing and production planning.

* * * *

A shipload of 7,500 tons of sugar has arrived in Karachi from Spain. This is the first consignment to arrive after the conclusion of two barter deals with Spain for 15,000 tons of sugar each in return for Pakistan jute and cotton. The balance of 22,500 tons is expected in Karachi in the next two months. With these imports of Spanish sugar, it is stated, the Pakistan Government will have enough supplies to meet the requirements of the country till the end of the year. The Ministry of Food is now understood to be examining the question of enhancing the sugar ration.

* * * *

The Government of Pakistan, in consultation with the Government of India, has agreed to allow, on a reciprocal basis, full rebate of customs duty on aviation spirit uplifted for all international flights from Pakistan to India or to destinations across India.

(Concluded from next column)

vertibility might be bought at the price of increased trade restrictions.

The Bank for International Settlements has issued its Report for 1952-53 at the same time as the Premiers issued their *communique*. "It is doubtful," says the Report, "whether a lasting equilibrium can be achieved so long as commercial and foreign exchange transactions continue to be restricted by administrative regulations which are by their very nature arbitrary." This is a plea for convertibility; but convertibility plus trade restrictions might reduce and not increase the exchange of goods.

Since last autumn, the United Kingdom has increased the list of freely importable items on open general licence from Europe to cover 60 per cent. instead of 44 per cent. of its trade with O.E.E.C. countries. It has also liberated the import of a number of raw materials on the grounds that these would either be re-exported or used for essential production. This, then, is the sort of development which the Commonwealth is looking towards at the moment. It is helped by the fact that, although the May figures showed some worsening in the British balance of payments, delivery dates quoted by British exporters are now far more favourable than they have been in recent years and that the exports are also strongly competitive on price with many dollar goods. This is particularly true for heavy capital equipment. With the slogan, therefore, "Increase trade when and where you can little by little," the Premiers have returned to their respective homes.—*All Rights Reserved.*

COMMONWEALTH ECONOMIC CONFERENCE

CONVERTIBILITY REMOTE

(From Our Own Correspondent)

LONDON, 13*th June*

THE Conference of Commonwealth Premiers which ended this week covered a good deal more ground than the Conference of Finance Ministers last December which was confined to economic problems, but the latter nevertheless formed an important part of the agenda on this occasion and the conclusions were generally awaited with interest.

LONDON LETTER

It is, however, not very surprising that no clear cut line of economic policy in fact emerged, and those Premiers who were looking for guidance had to content themselves with a general conclusion that every member of the Commonwealth would carry on on present lines trying generally to improve their economic position.

But what then are the "present lines"? No particular policy has been enunciated since December, but the British Government has been quietly taking whatever steps were practical to ease import restrictions, and also currency restrictions on a more limited scale, and consequently to expand trade. The Conference *communique*, in terms which might almost be described as platitudinous, did, in fact, say that the Commonwealth should seek to stimulate economic development, to expand exports, and to remove restrictions on trade particularly within the sterling area. Some commentators have seen an ambiguity in these terms, since it is not clear whether exports to the dollar area should be expanded or whether a general expansion is sufficient. If it is dollar income the Commonwealth is after, then removing restrictions on trade within the sterling area would also remove some of the incentives to sell goods outside that area. But is not this ambiguity in fact a practical approach to the problem of developing economic resources as fully as possible? It is all very well to talk of pushing exports to the dollar area, but the dollar area has not helped to make this easier, and, after years of exhortation, the business world can be left to do the best it can with such incentives as, for instance, special allocations of scarce materials for dollar exports afford.

Shift in Emphasis

The Commonwealth Premiers did in fact note the improvement which has been taking place in sterling area reserves and that still greater efforts were needed. But that did not deter them from advocating an expansion of trade within the sterling area. This, indeed, is a change of attitude since last December. Then, the stress was all on convertibility and the need to lift payments restrictions before trade restrictions on the argument that if sterling were made convertible import restrictions in the sterling countries would restrict the supply which would be offered against dollars to manageable proportions. The December *communique* did also recommend increased production of goods for export to the dollar area and increased production of commodities which are dollar savers such as grain, non-ferrous metals, pulp, paper, cotton, etc. This policy, although not specifically reiterated in the present *communique*, remains unchanged; but the reason for the drift away from the stress on convertibility is the lack of response from the U.S. and the International Monetary Fund on matters where their practical co-operation was looked for. The Finance Ministers in December indicated that it would not be enough for them to put their own houses in order but U.S. imports would need to be liberated, America would need to take steps to stabilise her purchases of sterling area raw materials, she would have to increase her overseas investments, and either the U.S.A. or the I.M.F., or both together, would have to give some financial assistance should that be needed in the early stages of convertibility.

Convertibility Remote

Nothing of what was looked for from the U.S.A. has materialised. Furthermore, the O.E.E.C. countries, who have increased the volume of intra-European trade, see in the conversion of sterling into a hard currency the loss for practical purposes of the United Kingdom to the European community. And both Europe and the Commonwealth fear that con-

(Continued in previous column)

CONVERTIBILITY OF CURRENCIES

B.I.S. ADVOCATES ACCELERATION OF PACE

THE desirability of bringing about early convertibility of currencies has been recognised by most countries including the Commonwealth. It cannot, however, be achieved overnight by any push-button methods. For convertibility will not be possible, unless the country wanting it has large reserves of gold and dollars and unless its internal economy is well balanced. Its exportable goods must be competitive and it should not be running a heavy deficit on current account. This means that the country concerned must be prepared to live within its means. But circumstances may be such that some countries may find it necessary to ignore this golden rule and indulge in expenditure beyond their current resources as, for instance, the West European countries that are spending far heavier amounts on defence measures than they can afford and India which has taken in hand a Five-year Plan, requiring much larger resources than it has, with a view to raising the living standards of its people. In such an event, countries with large credit balances on their trade account should come forward and help the countries in deficit by investing a part of their savings in these countries and by facilitating imports from them through liberalisation of customs and trade barriers. The world still seems to be far away from these prerequisites for convertibility of currencies. And yet the Bank for International Settlements (B.I.S.), Basle, is unrealistic enough to say, in its report for 1952-53, that "convertibility of currencies is no longer discussed as a problem of several interesting theoretical possibilities. but as a practical problem of the greatest urgency." This seems to be mere wishful thinking. No country in this hemisphere seems to be in a position to give up exchange controls and restrictions on import-export trade.

Barring the aforesaid assumption, the rest of the report on this subject is an essay on the importance of convertibility and on the urgency of taking steps for accelerating the movement towards early convertibility of currencies. The essential thing, at the present moment, says the report, is to see clearly not only what positive steps need to be taken, but also the very real dangers which would be entailed by excessive delays.

The B.I.S. considers that some of the measures now adopted by the various countries for attaining lasting equilibrium are not efficacious. Restrictions, for instance, on (*a*) commercial, and (*b*) foreign exchange, transactions imposed by administrative regulations, being arbitrary by their very nature, are unlikely to help, in the opinion of the Bank, to establish equilibrium in balance of payments. The Bank directs its main attack against exchange restrictions. It observes that exchange control "is powerless to prevent a crisis from spreading from one country to another, as has so often occurred during recent years," and provides no solution to the monetary problems of various countries. Unless dealings in foreign exchange markets are free, the Bank contends, the existence of free markets which are necessary for expanding trade and for building reserves, is unthinkable. Exchange control means rationing of foreign exchange. And, according to the report, "rationing tends to perpetuate shortages in the case of foreign exchange just as in that of any other commodity. Only through the establishment of wide and effective exchange markets, will it be possible to get back to realities and restore the necessary degree of equilibrium—an equilibrium which will then be constantly safeguarded by the ever-active forces operating in a genuine market."

The Bank sees yet another danger in allowing exchange control to continue. It points out that, if the distrust that so often attaches to non-convertible currencies, is allowed to continue and, at the same time, "a revival of international capital movements is impeded by excessively rigid systems of foreign exchange control, a number of countries are likely to be without resources which they need in order to maintain the rate of economic progress and the level of employment that modern opinion rightly considers to be essential." It contends, in this context, that there is evidence to prove that monetary rehabilitation, whether it be a reform undertaken by individual countries or a reorganisation on an international level, cannot come into being, semi-automatically, as a mere by-product of a physical increase in production.

The Bank does not feel that an international monetary system requires that the same monetary policy should be pursued in every sphere, but it lays stress on the fact that individual countries must abstain from using inflationary methods of financing and see to it that expenditure on consumption and investment does not exceed the currently available resources. It is beginning to be realised, it says, that inflationary investment financing soon defeats its own objects. It points out that even the U.S.S.R. has completely discarded the idea of having recourse to inflationary credit expansion in order to finance investment. On the contrary, the prices for consumer goods have been reduced by special cuts which have at the same time helped to strengthen confidence in the rouble. "There is to-day not a single country," it observes, in which the subject of saving and investment does not give rise to a certain amount of concern; and there is every reason why the authorities should give this whole complex of problems the closest attention."

The Bank is convinced that convertibility of national currencies is the best safeguard for the people of the world against inflation and mismanagement of national economies. Explaining this point, it observes:

"By the very fact of convertibility, countries will be compelled to maintain standards of monetary discipline which will, at one and the same time, give their own people an honest and reliable currency and make it possible for them to become members of an international monetary system. Convertibility is a flexible bond which constitutes the most effective and the least rigid form of integration."

The Bank feels that with the restoration of free trading in staple commodities, one of the elements necessary for currency convertibility is already present. It feels that the movement which has thus begun should not be allowed to lose its momentum but should, on the contrary, be accelerated.

U.S. EXPORT-IMPORT BANK

The U.S. Administration has decided to curtail the volume of new credits granted by its foreign lending agency, the Export-Import Bank. This decision, which is of considerable interests to the countries dependent upon direct financial assistance from the U.S., is the result of the Government's determination to balance its budget. As the disbursements of loans by the Bank are treated as budget expenditure, the Government feels that it can save a part of this expenditure by restricting the lending activity of the Bank. The Bank, we are now told, is primarily meant for facilitating international trade and not for serving as an investment institution. But the previous Administration allowed it to participate in financing development projects also—a function which is the sphere of the International Bank for Reconstruction and Development. In fact, it is stated that the latter had occasions to complain that the Export-Import Bank loans were undercutting the World Bank's efforts to establish sound investment programmes in member-countries.

The Export-Import Bank borrowed its requirements of funds from the Treasury, which, in its turn, borrowed from the public. The Eisenhower Administration has now come to the decision that, by making the Export-Import Bank concentrate on loans to facilitate trade, it can not only improve its position to balance its budget, but it can leave the work of providing investment capital to be done by private agencies.

It is felt that this decision will affect Latin America, since this area has been the major beneficiary of the Export-Import Bank credits.

The lending authority of the Export-Import Bank is limited to $4,500 million. At present the Bank has with it $1,000 million which is non-committal and, therefore, available for granting loans. Now that its lending activity has been curtailed, two consequences are expected to follow. First, to the extent to which its loans are curtailed, the world outside the U.S. will be deprived of the availability of dollars. Secondly, there will be, as a sequel to the first, greater pressure on the World Bank than now for accommodation which in turn may lead to higher interest charges. An additional cause for rise in interest rates is the decision of the U.S. Government to raise the rates of interest on Export-Import Bank loans. Hitherto, the Bank has been lending at about 4 per cent. but it is now stated that future loans will be made at about 5 per cent. It will be recalled that, early this spring, the rates of interest on commodity were raised from 2¾ per cent. to 3¼ per cent. The Government's intention in raising the rates of interest thus is to cover the cost of Treasury borrowing and of Export-Import Bank operations. In fine, it is the result of the present Administration's policy of dear money.

I.M.F. ON MONETARY RESERVES

Now that the chances of world peace are better, it is only natural for one to ask: If a recession were to occur, would the individual countries be able to protect themselves against its adverse effects? An analysis of the adequacy of monetary reserves prepared by the International Monetary Fund (I.M.F.), which answers this poser, is revealing. Since internal stability and confidence depend on monetary reserves, the Fund's study examines the actual reserves held by different countries against the background of their annual imports in pre-war and post-war years. According to its calculations, the ratio of gold and foreign exchange reserves held by all countries other than the U.S. to their annual imports has declined from 69 per cent. in 1938 to 39 per cent. in 1951. More or less similar declines are seen in the ratios of some of the leading countries. The decline in the case of the U.S.A. is pronounced in that it has dropped from 592 in 1938 to 191 in 1951. In the case of the U.K. the reserves, expressed in terms of the ratio, had fallen from 63 per cent. to 22 per cent. For the E.P.U. countries, the recession has been from 83 per cent. to 32 per cent. and for Latin America from 51 per cent. to 39 per cent. The only exception is Canada, the reserves of which have risen from 29 per cent. to 43 per cent. The report, however, points out that these figures cannot be taken at their face value; because, world trade in 1938 was lower in volume than that in the post-war year. Nevertheless, the difference is striking enough to support the inference that the reserves of the countries of the non-dollar world are inadequate either to support the general convertibility of currencies or to avoid the effects of depression, if one were to occur.

The Fund's technical experts, however, consider that the non-dollar countries are now in a better position to meet the shortage of reserves than before. For there has been, according to them, a marked improvement in the sources of dollar supply. First, the U.S. has increased its ratio of imports to world imports from 10 per cent. in 1938 to 15 per cent. in 1951. Secondly, dollar supply from sources other than the aid of one kind or another has also been rising every year. In fact, the annual dollar supply from such sources rose (in terms of market prices in 1952) from $14.2 billion in 1950 to $14.7 billion in 1951 and then to $14.8 billion in 1952. Again, between 1946 and 1952, as much as $125,900 million were provided to the outside world. But as expenditure in the non-dollar countries exceeded this total, their reserves dropped to a low of $3,300 million. It is thus argued by the Fund's experts that the dollar problem is not so grave as is feared by some.

From the foregoing assumption, the Fund has proceeded to suggest two courses for the avoidance and cure of depression. One is the desirability to increase the reserves of the countries outside the dollar area. Of course, such increase should be consistent with a progressive relaxation of trade and exchange restrictions and the maintenance of internal financial stability. Secondly, the countries should take steps to stimulate internal demand as well as other defensive measures. At the same time the experts admit that the I.M.F. should also supplement the efforts of these countries by providing assistance on liberal terms and in adequate amounts, subject to a guarantee for their early repayment.

AUDITORS' REPORT.

We beg to report that we have audited the Balance Sheet of the Bank of Rajasthan Ltd., Udaipur, as at 31st December, 1952, and the relative Profit and Loss Account of the Bank for the year ended on that date as above set forth with Books and Accounts of Udaipur and Jaipur Offices and Returns of Branches and Pay Offices and report that—

(a) We have obtained all the information and explanations we have required and the same were satisfactory.
(b) In our opinion, the above Balance Sheet and Profit and Loss Account are drawn up in conformity with the law.
(c) Such Balance Sheet exhibits a true and correct view of the state of affairs according to the best of our information and explanations given to us and as shown by the books of the Bank. Also such Profit and Loss Account shows a true balance of Profit for the year.
(d) In our opinion, Books of accounts have been kept by the Bank as required by Section 130 of the Indian Companies Act.
(e) All the transactions which came to our notice were within the powers of the Bank.
(f) The Returns received from Branches and Pay Offices for the year ended 31st December, 1952, were accepted as certified by Branch Managers.

B. D. GARGIEYA & CO.,
Chartered Accountants and Auditors, Beawar.

BEAWAR, 23rd March, 1953.

HARISINGH, Chairman.
G. S. PROHIT, AMARSINGH, } Directors.
D. L. GUPTA, Ex-Officio Director and General Manager.

NOTE.—The other Directors have not signed the Balance Sheet and Profit and Loss Account being absent.

WOMEN WORKERS IN TEXTILE INDUSTRY

I.L.O. URGES EQUALITY OF TREATMENT

AN important aspect of the textile industry which has figured prominently in the recent discussions on labour problems relates to the special factors affecting the employment of women. These discussions have centred round the report of the International Labour Office (I.L.O.) and the views expressed thereon by the I.L.O. Textile Committee at the latter's fourth session held at Geneva some time ago. The importance of this study will be evident from the vital role that women play in the textile industry. Thus, according to the I.L.O. report, the textile industry is, in most countries, the manufacturing industry which employs the largest number of women workers and in which the proportion of women in the total labour force is the largest.

The table below gives the number of women workers and their relative importance in the textile industry in the important textile producing countries:

Country	*No. of women*	*Percentage of women in total labour force of the industry*
Finland	28,833	83
Italy	N.A.	74
Denmark ...	19,038	64
Switzerland ...	43,900	62
Japan	1,270,000	59
U.K.	528,000	58
France	344,300	57
W. Germany ...	366,533	56
U.S.A.	553,300	43
Canada	24,247	36
India *	108,068	10

* Figure includes 41,192 women employed in jute industry and 906 in woollen industry—*Census of Manufactures*, 1948.

It will be seen from the above table that, in most of the countries listed, women workers form more than half of the total number of workers. In India, however, the proportion of women to the total labour force is very small. In the cotton industry, the proportion varies from one centre to another, ranging from a bare 2 per cent. in Kanpur to 33 per cent. in Travancore-Cochin. The all-India figure is 10 per cent.

Importance of Female Labour

In recent years, the relative importance of the female labour force in the textile industry has not altered to any considerable extent, although a slight downward trend is noticeable in the textile industry as a whole or in some of its branches in a number of countries. In fact, this trend has been apparent for some decades now in many industrial countries. The relative importance of the female labour force varies according to the mechanisation and modernisation of the industry in the different countries and the period when the industry was established in the country concerned. Within each country, the proportion of the female labour force varies also in the different branches of the textile industry.

The division of labour between women and men in the industry is rather strict in many countries, although men tend to be employed in certain traditional women's occupations and women are being replaced by men in some jobs, particularly those calling for heavy work. Women are mostly employed in textile operations proper, whereas men perform almost exclusively those jobs which require mechanical skill and use of chemicals. While women in many countries are found in skilled occupations, men are largely assigned to semi-skilled and unskilled work. Another characteristic of the female labour force is the employment of a relatively high proportion of women in the middle age groups. These factors and the position of women in the labour market generally account for the fact that women are relatively more affected than men by unemployment in the industry.

This brings us to the problem of recruitment and placement of women in the textile industry, including a survey of the needs of women textile workers as regards welfare facilities and services in relation to recruitment and placement. The basic principle upheld by the I.L.O. is that men and women should have equal opportunities for all jobs for which they are qualified. It is, therefore, emphasised that women and men should be recruited, in principle, on the basis of their individual merit, i.e., by a close matching of their qualifications and aptitudes with the requirement of the jobs "without discrimination on the ground of sex." It is also pointed out that the removal of artificial barriers between the field of men's employment and that of women would be conducive to greater efficiency of the labour force as a whole. Referring to this problem, the I.L.O. says:

"The need is felt for a more rational distribution of the female textile labour force, in view, particularly, of its relative importance in many countries. The recruitment of men and women workers on the sole basis of their qualifications and fitness for the job would promote the efficient utilisation of the labour force in the interests of all parties concerned. The recruitment and placement of women textile workers raise special problems as regards, particularly, young girls, women with home responsibilities and unemployed women. In order to ensure that women really have not only equal opportunities with men as regards employment but also equal possibilities of performing their work under equivalent conditions, attention may be given to improving the conditions of work of women (welfare provisions and maternity protection) and some conditions outside employment proper (provision of adequate social services)."

Vocational Training

The question of recruitment and employment of women workers is closely connected with the problem of vocational training facilities for women. The emphasis on this problem is based on a very important consideration. With the introduction of modern highly mechanised processes in the textile industry, if women and men are not given equal opportunities for training, those without the necessary vocational instruction will be at a disadvantage in doing their work, although there may be no basic difference in their abilities. The question of vocational training for women does not seem to involve special technical problems. The need, however, is apparent for developing adequate training facilities in those occupations in which women are extensively employed and for extending to women the training facilities available to men at every level of skill.

The I.L.O. also lays stress on the need for ensuring equality of remuneration for women and men for work of equal value, for, in its opinion, the absence of such equality is an "artificial obstacle" standing in the way of a rational and efficient distribution of the labour force. This principle, it is suggested, may be applied to the textile industry by various means, including (1) national laws or regulations, (2) legally established or recognised machinery for wage determination, (3) collective agreements between employers and workers and (4) a combination of these various means.

The question of equal remuneration may appropriately be considered against the background of the situation of women's earnings as compared to those of men in the textile industry. A short study of wage differentials by sex, made in the I.L.O. report *Textile Wages*, reveals that, in general, the average hourly earnings of all classes of female workers are substantially lower than those of men. The difference between men's and women's wages range, in most countries, from about 20 per cent. to 40 per cent. of the average for men. And the difference itself, it is stated, is lower now than before the war. "This reduction in gap," to quote the I.L.O., "indirectly improve conditions for the application, at least gradually, of the principle of equal remuneration."

In a number of countries, the above principle has already been applied by legislation. Such legal requirements are, in some cases, included in general labour laws and, in others, in special laws and regulations governing the relation between men's and women's remuneration. The number of countries in which legislation has been promulgated to adopt the principle has increased in recent years. For instance, such legal provisions are now in force in Brazil, Bulgaria, Canada, Chile, China, Czechoslovakia, France, Mexico, Peru, Poland, Rumania, the U.S., the U.S.S.R. and Venezuela. In the U.K., the extent of the application of the principle is fairly wide in the cotton industry. The Royal Commission on Equal Pay, in its report published in 1946, stated that, in cotton weaving (non-automatic looms), men and women workers were engaged on the same work and nominally paid on the same piece-rate list. This held true for beam warping also. Under the Aronson Card and Ring Room Agreement (1947), some jobs in cotton spinning are reserved for men but, in all cases, the wage rates are fixed for each job in terms of duties attached to it.

In the last 10 or 15 years, in most countries, women's earnings in the textile industry have increased to a larger extent than men's. This suggests that, whatever the reasons, the discrepancy between men's and women's wages is decreasing. While the extent to which equality of remuneration obtains in the textile industry is greater than in some other industries and the progress made in recent years has been considerable, it may be considered appropriate to examine the question, in order to accelerate the trend towards greater equality as between men and women textile workers in respect to remuneration for work of equal value. The Equal Remuneration Convention and the Equal Remuneration Recommendation of 1951 afford the basis on which the question should be approached. In addition, a substantial body of experience in the application of the principle in the textile industry now exists which might be used in order to determine the possible ways of tackling the problem in this particular industry.

"TERYLENE"—THE POLYSTER FIBRE

That "Terylene"—the synthetic polyster fibre—possesses vast potentialities of development is clearly borne out by the latest decision of Imperial Chemical Industries (I.C.I.), England, to expand the manufacturing capacity of the plant now under construction at Wilton (Canada). At the end of 1950, it will be recalled, I.C.I. announced that it would spend £10 million on the plant for producing "Terylene." This factory, it was then stated, would go into production at the beginning of 1955 and would have a planned capacity of 11 million lbs. of fibre per annum. I.C.I. has now decided to increase the plant's capacity to 22 million lbs. of fibre a year at a total capital cost of about £21 million. The decision to increase the size of the plant, it is stated, has been taken with a view to satisfying the "big demand" for "Terylene."

"Terylene" is a product of British research. It was first discovered in the laboratories of the Calico Printers' Association which licensed the world rights outside the U.S. to the I.C.I. The U.S. rights were acquired by Du Pont which manufactures and sells the fibre under the name of "Dacron." "Terylene" is a polyster fibre made from polyethylene terephthalate which is derived through various processes from cracking mineral oil. There are two types of "Terylene"—the filament yarn which is very much like silk or nylon and staple fibre which has a wool-like character capable of being processed on the worsted system. At present, yarn and fibre are being produced at the I.C.I.'s pilot spinning plant at Hillhouse near Fleetwood; the rate of output is now estimated at about a million lbs. per annum. About half the current output in staple form is being used for men's stocks, knitted outerwear and underwear. It is also being developed for men's and women's suitings. The filament yarn is being processed into ladies' dress fabrics and men's underwear, shirts and ties. "Terylene" is being used, too, for a number of purposes in the chemical, electrical, steel, textile, rubber and shipping industries.

Several outstanding proportions are claimed for the "Terylene." In domestic use, it is said to be crease-resistant, is easily washable and requires no ironing and is moth- and mildew-proof and immune to attack by insects and bacteria. It has a high resistance to abrasion and weather, and possesses high tenacity. In industrial uses, the fibre possesses outstanding resistance to heat, acids and oxidising agents.

Have the pulse of the
COTTON WORLD
in your hand by subscribing to the American "Weekly"
THE COTTON TRADE JOURNAL
This international "weekly" serves the cotton trade proficiently and, as a mirror, reflects the cotton situation in the United States and other cotton-producing and consuming countries.
A year's sea-mail subscription (Rs. 28-12 only) or air-freight subscription (Rs. 100-7 only) includes an Annual Textile Number, reporting developments and progress in the textile industry, and an International Edition of over 200 beautifully illustrated pages, giving a resumé of conditions in each of 22 countries as they affect cotton and world trade in general. This International Edition, otherwise, by itself costs $3.00 or Rs. 14-6-0 plus postage.
Substantial reductions for 2-year and 3-year subscriptions.

FUTURE OF COTTON AS TEXTILE RAW MATERIAL

STEADY INCREASE MAINTAINED BY YARN SECTION

(From A Special Correspondent)

MANCHESTER LETTER

MANCHESTER, 16*th June*

CONFIDENCE in the future of raw cotton as a textile raw material was expressed at the end of a two-day conference between a team of ten American cotton experts and representatives of 31 Lancashire cotton organisations last week. The conference—first of a series between the Americans and leaders of European cotton industries—discussed raw cotton cultivation, suitability for varied end-uses, processing in the spinning mill, and quality control.

A statement on the conference said lively discussions had taken place on the papers presented by the American team. Facts and figures had been given to illustrate how the characteristics of raw cotton were being developed by scientific breeding and growing so as to improve the strength and appearance of the finished cloth. Cotton was holding its own in competition with synthetic fibres and in some cases—such as shirtings, dress materials and underwear—was winning back the ground temporarily lost.

"Great emphasis was placed on the keeping down of costs at every stage of growing and manufacturing with an eye to the meeting of a widely-based consumer demand," the statement added. Summing up the conference, Mr. C. Henniker-Heaton, Director of the Master Spinners' Federation, said it had been a stimulus to action. Many of the latest techniques and machines mentioned by the Americans, he believed, were already being tried out or were already in use in Lancashire but the spreading of this knowledge to the great majority of concerns might tend to be slow.

Delivery Problems

The importance attached by overseas buyers to the speedy delivery of textile orders was stressed by Mr. Frank S. Winterbottom, the Chairman, in his speech to the annual meeting of the Cotton and Rayon Merchants' Association, representing 1,000 firms. The question of double day-shift working had raised controversial issues in Lancashire, he said, and an important aspect affecting textile merchants was involved—double-shift production meant almost halving the delivery time to them from the mills. Mr. Winterbottom went on: "This has become particularly important with more competition from other producing countries whose industries, by virtue of shift working, offer quicker delivery than we can."

Because of the quick political and economic changes of the present day, it was inevitable that buyers were forced to pay more regard to delivery than to any other factor. Reviewing the general situation in the cotton and rayon industry, Mr. Winterbottom said it was now brighter than at any time since 1951 but the recovery from the slump had been uneven. In spun rayon goods the conditions of a sellers' market had almost returned again.

Revival in demand for cotton piecegoods during the past 12 months had been almost entirely from the home trade and production figures seemed to indicate the possibility of a shortage of goods developing in the home market, although this could be offset by increased yardage of rayon production as well as by increased imports of cloth.

Yarn Output and Recruitment

In the present state of the cotton trade in Lancashire the manpower situation is as vital a factor as any in assessing the future prospects of increased trading. However wide the use of redeployment and the best systems of working machinery, the labour force itself must eventually have the most direct bearing upon output from the mills. The position has now been reached when doubts are being expressed as to whether the rise in manpower is sufficient to stimulate output to the extent required.

Already, there have been occasional reports that business has been lost because Lancashire cannot provide sufficiently early delivery terms to suit the needs of customers abroad. This can be put down to the labour shortage which is prevalent in particular sections of the industry. The absence of trained key men is also a stumbling-block which must be overcome if Lancashire is to be fully competitive.

At the same time, steady progress is being made in raising output. Yarn production in particular has shown an almost unchecked advance from week to week throughout the year. In the comparable period of 1952 the trend was unhappily in the reverse direction and the labour situation at that time was rapidly going from bad to worse. The table below shows the position in the weeks leading up to the Whitsuntide holiday:—

Week ending	*Yarn Production (In 000 lbs.)*		*Recruitment*	
	1953	1952	1953	1952
March 14	18,210	16,160	+ 45	— 965
,, 21	18,270	15,710	+ 18	—1,065
,, 28	18,450	14,570	+ 43	—1,170
April 4	*14,940	15,280	—279	— 931
,, 11	*15,560	*11,620	+229	—1,013
,, 18	18,850	* 7,010	+353	—1,119
,, 25	19,030	13,760	+ 46	—1,270
May 2	19,030	13,350	+187	—1,245
,, 9	19,090	12,370	+122	—1,127
,, 16	19,240	12,400	+109	—1,109
,, 23	19,270	12,360	— 84	— 962

* Holiday weeks.

During the first two months of this year yarn output was still running at a lower level than in 1952 and in the first ten weeks showed a deficit of nearly 20,000,000 lbs. compared with the quantity of yarn spun in the same period last year. Subsequently, however, the tables have been turned and a very substantially higher output has been secured, so that for the first 21 weeks the aggregate production was nearly 373,000,000 lbs. against 336,000,000 lbs. a year previously.

Recruiting labour for the mills is far from an easy task while the shadow of last year's unemployment still acts as a reminder that no job is a permanency. Yet the spinning mills have continued to attract young workers, although many feel that the flow is not strong enough for the industry's needs.

Rayon and Cloth Recovery

Conditions are not always comparable between the spinning and weaving sections of the industry and just as last year's depression overtook spinning mills earlier than it affected the manufacturing branch, so now spinners seem to have got back into their stride again quicker than the weaving trade. At all events, up to the end of April, production of cotton and rayon cloth was lower than in 1952, whereas yarn output had by then exceeded last year's level.

The following table shows cloth output during the first four months of this year and last, together with the manpower totals for the spinning and weaving trades, as issued by the Cotton Board:

Month	*Production in linear yds., Weekly Average*		*Manpower in Spg., Dblg. & Wvg.*	
	1953	1952	1953	1952
Jan. (5 weeks) ..	46,640,000	55,220,000	274,830	313,030
Feb. (4 ,,) ..	49,100,000	55,480,000	275,340	304,130
Mar. (4 ,,) ..	50,600,000	52,820,000	276,090	293,170
Apr. (5 ,,) ..	48,070,000	42,930,000	277,730	281,370

So far in four months the industry this year has turned out 854,470,000 linear yards of cloth compared with 902,910,000 yards in the same period of 1952. Early in May, the manpower total was roughly equivalent to the numbers employed in the industry 12 months previously.

The marked recovery of the rayon spinning industry from the trading setback in the early part of 1952 was outlined by Mr. W. T. Winterbottom, Chairman, in his address to the annual meeting of the spinners' section of the Rayon Staple Spinners and Doublers' Association.

From a critical trading position in the early months of last year the situation had changed until the present sentiment in the industry was "distinctly aggressive." The improvement during the last six months had been more than maintained and had spread to all sections.

Production of 100 per cent. spun rayon yarns had reached 2,370,000 lbs. weekly in May, against 1,500,000 lbs. in February, 1952, and the peak figure of 1,760,000 lbs. per week reached in November, 1951. The possibilities of further expansion were speculative and were largely bound up with the development of new types and new outlets. "We cannot overlook the fact that the enormous expansion of the last year is to some degree artificial and distorted because of the influence of purchase tax. This tax has given a stimulus to the sale of spun rayon goods, which are favourably treated by the price limits," stated Mr. Winterbottom.

Production of blended yarns of cotton and rayon staple had expanded in an even more striking way, the present level of over 700,000 lbs. weekly being more than double the production before the slump. Yarn stocks were virtually non-existent and order books for 100 per cent. spun rayon yarns extended as far ahead as the raw material position permitted.—*All Rights Reserved.*

PATTERN OF WORLD COTTON OUTPUT FOR 1953–54 SEASON

MOST COUNTRIES AIM AT INCREASING PER-ACRE YIELDS

ALTHOUGH it is too early yet to assess world cotton production prospects for the 1953-54 season, an attempt has been made by the International Cotton Advisory Committee to indicate, in broad outline, the dominant trends in cotton production in the world's leading cotton producing countries. The June issue of *Cotton*, the Committee's bulletin, carries a series of articles relating to cotton production prospects for the next season. These articles, which are written by the leading cotton men in each of the eight most important cotton-producing countries, Brazil, Egypt, India, Mexico, Peru, Turkey, Uganda and the U.S., will be read with interest. But it would be clearly wrong to overestimate the value of these views, since it will be several months before anything like a clear picture of the cotton output for the next season emerges.

Before assessing the prospects for the 1953-54 cotton season, it is perhaps useful to take another look at the 1952-53 cotton season which is now drawing to a close. World production of cotton during the 1952-53 season is now placed at 35.32 million bales, as against 35.70 million bales in the previous season. The follwing table gives the production statistics for the 1952-53 and 1951-52 seasons:

(In 000 bales of 478 lbs. each)

	1951-52	1952-53
U.S.	16,155	14,950
North Hemisphere	9,096	9,495
Mexico	1,280	1,250
India	3,160	2,900
Pakistan	1,320	1,475
Egypt	1,873	2,015
Turkey	615	760
Sudan	285	400
Uganda	318	265
Syria	225	230
Belgian Congo	220	200
South Hemisphere—		
Brazil	1,950	1,500
Argentina	550	550
Peru	427	450
Others	1,422	1,455
Total Free World	28,600	28,400
U.S.S.R.	4,000	4,000
China	3,000	2,800
E. Europe	96	120
World Total	35,696	35,320

It will be seen from the above table that U.S. production forms a significant proportion of the world output. Any forecast about the 1953-54 level of cotton output for the world must, therefore, primarily take into account the trends in U.S. production. But the first estimate of planted acreage will not be released until July and the official production forecast until August. In the meantime, therefore, the only guide to cotton production prospects lies in the various private acreage surveys which have been made recently and the official weather reports. In his article on cotton output prospects in the U.S., Mr. C. C. Smith estimates that, despite the request of the U.S. Secretary of Agriculture to the farmers for a reduction of the cotton acreage for the 1953-54 crop by 18 per cent., the actual output might turn out to be of the order of 15 to 15½ million bales, since the cotton farmers might not implement the request for acreage reduction. Much will depend on weather conditions, the cotton disease factor, and prices for cotton. The weather is always an uncertain factor. Boll weevil disease could cause much damage to the crop. But, supplies of boll weevil poisons, it is stated, are plentiful for farmers who wish to combat the disease. So far as the price factor is concerned, the present indications, according to Mr. Smith, are that the 90 per cent. support price for cotton from the 1953-54 crop is more attractive than the price for competing crops. Referring to the working of the law of support prices, Mr. Smith says:

"The Secretary of Agriculture must proclaim marketing quotas for the 1954 crop if the 'total supply' exceeds the 'normal supply,' and such proclamation must be made by 15th October, 1953. 'Total supply' is defined in the present law as the carry-over at the beginning of the marketing year, plus the estimated production of the crop and the estimated imports. 'Normal supply' is defined as the estimated domestic consumption of cotton plus the estimated exports, plus 30 per cent. of the sum of such consumption and exports as an allowance for carry-over. Marketing quotas for the 1954 crop seem inevitable unless the per-acre yields of the 1953 crop are much below the five-year average.

"The 1954 crop will be supported at 90 per cent. of the parity price of cotton unless producers have disapproved marketing quotas. The support price for the 1955 and subsequent crops, however, may vary between 75 per cent. and 90 per cent. of parity depending upon the supplies of cotton available to meet domestic consumption and exports. As an example, based upon the present parity price of 34 cents per pound, this would mean that the support price for the 1955 crop might vary between about 26 cents and 32 cents per pound for Middling 15/16" cotton depending upon the supplies of U.S. cotton in the carry-over and the prospective crop at that time. Any changes in the parity price of cotton would be reflected in the support price since the parity price prevailing at the beginning of the marketing year for which the support price is proclaimed will be the applicable parity price."

The next important cotton-producing country is India. Writing on the production prospects for the 1953-54 crop, Mr. Chimanlal B. Parikh, Vice-President, Indian Central Cotton Committee, emphasises the fact that agricultural crops in India, including cotton, are "mainly dependent on the vagaries of the monsoon." He estimates that the land under the new crop might remain "at about 15 million acres or the same as in 1952-53." He places the coming crop at "somewhere near 2.8 million bales" (of 478 lbs. each). But it should be clear that no reliable estimate, as Mr. Parikh himself recognises, could be given in a country like India, where the weather is so unpredictable a factor. Referring to the long-term trends in cotton output, Mr. Parikh says:

"According to my reading, the years 1952-53 and 1953-54 will be the last years with just marginal carry-over of, say, 1.2 million to 1.6 million bales of Indian cotton. This carry-over is almost depleted during the intervening period between the end of the cotton year in September and the movement of new crop in December. During 1954-55, the accumulated efforts of the Government of India and the State Governments are bound to bear fruit. Minor irrigation works all over the country will bring more and more acreage under irrigation. Also, in Punjab, the Bhakra scheme will start giving waters in the canals on the non-perennial basis. This is bound to revolutionise the whole agricultural economy of the country. With the help of irrigation, fertilisers will be used to greater advantage and the present poor yield of 105 pounds per acre will be substantially increased. With the present acreage under cotton, if the yield can be increased by 50 per cent., India can produce 4.5 million to 5 million bales. It will not be surprising if India reaches this figure gradually by 1960, when her major gigantic schemes of irrigation will be mostly completed. An immense quantity of cheap hydro-electric power will also encourage agriculture directly and indirectly.

In Egypt, the Government has decreed that cotton acreage during the next three seasons will be limited to 30 per cent. of the cultivable area. This would mean a reduction of at least 300,000 acres as compared with the 1952-53 cotton acreage. Irrespective of legislation, some reduction in cotton acreage in favour of wheat could be anticipated, in view of the fact that, whereas the guarantee prices for cotton have been reduced, those for wheat have been increased by 67 per cent. over the 1952 level. Mr. Salah El Dine El Gazaar, Deputy Director General, Ministry of Finance, Cairo, says that, in view of the Government's recent decision in regard to cotton acreage, the area under cotton this year might turn out to be about 1.66 million acres. Taking the average yield of 450 lbs. per acre, the prospective crop could be placed at 1.5 million bales. The deciding factor, according to the author, will be the "average yield which depends upon many factors." Egypt's cotton output is important for the world supply of cotton not because this country is a large producer of cotton—it accounts for only 6 per cent. of world output—but because it produces quality cotton; it is responsible for 60 per cent. of the world supply of long-stapled cotton.

Information on prospective production in Brazil, Argentina and Peru, which normally account for about 10 per cent. of the free world cotton output, is not available. It might, however, be noted that among these countries Peru is rapidly increasing its output. In 1934-38, it produced on an average 386,000 bales per year. By 1951-52, its output had gone up to as much as 446,000 bales from its 469,000 acres. In the current season, it is expected to contribute even more, 465,000 bales to be precise, to the world supply. When the important irrigation works which are now under way are completed, cotton output, it is stated, might increase to about 530,000 bales. Peru has very favourable natural conditions for cotton cultivation as is evidenced by the fact that yields per acre, as in Egypt, are the highest in the world.

The acreage sown to 1953-54 cotton in Turkey is estimated, according to the General Director of Agriculture in that country, Mr. Necati Turgay, at 1.6 million acres. No indication about the production prospects for the next season has been given. But the Government has taken in hand several schemes to promote cotton cultivation. A three-year programme has been instituted to classify and establish standards for Turkish cotton. Irrigation projects are being undertaken. Prospective acreage and production for 1956-57 are placed at 1.7 million (acres) and 202,300 tons, respectively.

No serious crop competitor to cotton is visualised in Uganda by Mr. C. C. Spencer, Chairman, Lint Marketing Board, Kampala, who contributes an article on the outlook for cotton production in Uganda. He says that the acreage goal for the season is 1.5 million, which would give a crop of 300,000-320,000 bales. Referring to the yield and output prospects, Mr. Spencer says:

"As a result of improved methods of agriculture which the peasant growers are being persuaded to adopt, and of the extension of seed dusting, it is held by the Agriculture Department that the yield of seed cotton per acre should be increased from 300 to a minimum of 500 pounds per acre within the next three years. If this is achieved on the basis of 1½ million acres, it seems probable that the Uganda crop will increase to half a million bales of lint. . . . Cotton production in Uganda over the next three to five years will undoubtedly be influenced to some extent by the trend of world prices but, as mentioned earlier, the existence of a Price Assistance Fund of £20,000,000, available to subsidise the growers and lessen the impact of any serious decline in world markets upon the cotton grower, will undoubtedly have an encouraging effect upon the industry and prevent any major decline in the volume of production."

Mexican cotton output, according to Mr. J. R. Adame, Director of Price Stabilisation, Mexico, might aggregate 1.2 million bales during the current season. Again, no indication about the 1953-54 output is available. But the author says:

"There is no official acreage goal for cotton but growers and their organisation have a real interest in producing 1,500,000 bales and there are good prospects that this volume will be grown next season if world market prices remain at present or higher levels.

"Indirectly, the Government is interested in the cotton situation since this staple is the most important Mexican export. From January through August, 1952, cotton represented 22 per cent. of total exports.

"The long-term prospects for cotton production will depend mainly on foreign markets as Mexican consumption is only from 380,000 to 400,000 bales. All remaining production will depend on foreign demand which will be subject to the availability of dollars in such importing countries.

"Provided that trade and payment agreements can be arranged in the coming years, the lack of dollars will be circumvented by barter transactions among exporters and importers of the staple. Cotton production, therefore, will depend upon what will happen in foreign markets, since domestic factors will permit Mexico to produce more than 1,500,000 bales."

Such, in broad outline, are the prospects for cotton output in the next and coming seasons. It is true that the account does not give any precise indication of the likely cotton output in the 1953-54 season. But this is understandable in view of the fact that the season has hardly begun. Although the contributors to the journal are the leading authorities in the subject which they have treated in their respective articles, they could not be expected to commit themselves to definite forecasts. Nevertheless, the articles show that, while two of the major producers, such as the U.S. and Egypt, are thinking in terms of reducing the acreage, most other countries, especially the smaller producers, are attempting to increase their cotton output. Another notable feature is that, in almost every cotton-producing country, measures are being adopted in order to step up the pre-acre yield. If these measures succeeded in their objective, significant additions to world cotton output would become a reality.

N.B.—In this review, all quantities are expressed in bales of 478 lbs. net weight, except in the case of the U.S. where they refer to running bales.

The Cotton Price Parity Table, prepared by Mr. Dwarkadas Jivandas and published by Readers' Service (Post Box No. 529, Bombay, price As. 4), is a very useful publication which will enable one to convert the Pakistan cotton prices, within a range of Pak Re. 1 to Rs. 225, into pence per lb., cents per lb., Pak Rs. per candy and Indian Rs. per candy. The table also gives some additional details, such as freight differentials and freight rates, knowledge of which is essential to calculate the import parity. It should, therefore, appeal to all those who are interested in importing Pakistan cotton.

THE WESTERN INDIA LIFE INSURANCE CO., LTD.

DR. M. N. AGASHE'S REVIEW OF BUSINESS PROSPECTS

THE view that the field for insurance business was likely to be widened, due to favourable conditions that would be created by the implementation of the Five-year Plan, Employees' State Insurance Scheme and the Employees' Provident Fund Act and the levy of estate duty, was expressed by Dr. M. N. Agashe, Chairman, the Western India Life Insurance Company, Ltd., in the course of his address at the Annual General Meeting of the Company held on the 21st inst. The following are extracts from Dr. Agashe's speech:

"GENTLEMEN,

"When we met last time a year ago, I had taken a review of the conditions prevailing in the country and sounded a note of caution pointing to the difficulties that lay ahead of us. There was business depression all round and the cost of living did not go down, as expected by all of us. Naturally, business conditions for us were very difficult and trying indeed. Against this background, we have every reason to feel satisfied that we have maintained, although narrowly, our tradition of increasing new business production from year to year. This will be evident from the fact that we could raise slightly the new business figure of about Rs. 2,68,00,000 for the year 1951 to just over Rs. 2,69,00,000 for the year 1952.

Business Prospects

"Although there has been continuous increase in business each year so far, we have never considered it as an end in itself. Great changes in business conditions loom large on the horizon and, I believe, it will not be out of place just to refer to the Government Year Book on the insurance business in India during the year 1951. Life insurance plays an important role in the economy of a man's life and it can well be taken as an indication of his trend of saving. Looking at the Government Year Book from this angle of vision I cannot but say that the picture is not much encouraging. Leaving aside the question of decline in the total new business in 1951, one cannot overlook the fact that the real capacity of the people in general to save systematically is showing signs of gradual decline owing to the high cost of living, with the effect that lapse ratio is gradually increasing. This is a disquieting situation. Along with the high cost of living the tendency to secure business at exorbitant cost is another reason for this situation. This gives no credit to the insurance industry. The craze for new business at suicidal cost should, therefore, stop now. So far as we are concerned, I feel glad that we have scrupulously denied this temptation. The boom period created by inflation has now definitely gone and one has to be content with the natural flow of quality business at low cost. I would commend all those connected with insurance, whether in the office or in the field, to educate the public not to judge a company by the volume of new business written from year to year, but to take into account its financial position, economic management, low lapse ratio, sound investments, steady yield on investment, etc.

"With a view, therefore, to achieving this end of educating the public and to rendering real service to our policyholders, we have already put into action our plans to send well trained and educated young insurance salesmen in the field and the scheme is bearing good fruit.

"I am also glad to point out that the field for insurance business is likely to be soon widened due to favourable business conditions created by the Five-year Plan, Employees' State Insurance Scheme and the Employees' Provident Fund Act. The Estate Duty Bill which is shortly expected to be placed on the Statute Book may facilitate business development still further and I hope all our representatives will try their level best to secure business from this new unexplored field.

"On going through the figures of the annual report, it will be seen that, as a result of the year's working, a sum of over Rs. 55 lakhs has been added to our life assurance fund which now stands at more than Rs. 5 crores and 60 lakhs. This shows the prosperous position of our Company. It may be noted that not only our funds but also our net interest yield have shown a steady increase during the last five years. Our net yield in 1952 came to about 4.27 per cent., which compares favourably with the net interest yield, viz., 3.30 per cent., of all companies taken together for the year 1951.

"Of particular interest to our policyholders is the fact that during 1952 payments by way of claims of over Rs. 26 lakhs were made by us to well over 1,700 policyholders or to their beneficiaries. Out of these, about 1,400 were maturity claims, and the rest were death claims. It is gratifying to note that in respect of death claims our experience is satisfactory and this must be attributed to the great care exercised by the Directors in the selection of the business.

"It is already known to you that we invest a small percentage of our funds in buildings and as loans on house properties with the sole object of securing remunerative rate of interest and securing sufficient accommodation for our growing office and staff. We have already our buildings at Satara, Bombay, Poona, Delhi and Indore. Our magnificent building on Laxmi Road, Poona, yet under construction, is expected to be ready for occupation by the end of September and it will add, it is hoped, greatly to our prestige."

WORLD SUGAR POSITION

FURTHER RISE IN CONSUMPTION DURING 1952–53 EXPECTED

THE rate at which world consumption of sugar has been increasing in the past few years would appear to have been retarded during the current (1952-53) sugar season, the *net increase* in consumption—in terms of raw value—estimated for this season being only about a million tons, as against 1.4 million tons in 1951-52 and 1.6 million tons in 1950-51. Sugar consumption during the season under review, according to the latest review of the world sugar position by Messrs. B. W. Dyer and Company, New York, might amount to 37.17 million tons, as compared with 36.17 million tons, 34.71 million tons and 33.11 tons in the three preceding seasons, respectively. When compared with consumption during 1938-39, the figure for this season is certainly improving, inasmuch as it is higher than the pre-war figure by no less than 6.01 million tons.

World consumption of sugar has continued to rise despite a marked fall in output. The aggregate production for the current season is estimated at 36.96 million tons, which is lower than the previous season's output by 2 million tons. It is, however, higher than the output of 36.51 million tons in 1950-51, of 32.47 million tons in 1949-50 and of 31.14 million tons (including non-centrifugal sugar) in 1938-39. Incidentally, it may be noted that these figures do not include the production of non-centrifugal sugar, which staged an advance from 6.24 million tons in 1949-50, 6.21 million tons in 1950-51 and 6.59 million tons in 1951-52 to 6.66 million tons (estimated) during the current season. Although sugar production has recorded a decline, the supply position has been quite comfortable, thanks to the huge quantity of 12.49 million tons brought in from the previous season, which compares very favourably with 9.74 million tons, 7.80 million tons and 7.90 million tons in the three preceding years, respectively. The pre-war figure stood at 11.61 million tons.

Stocks of Sugar

The continued increase in consumption, aided by the decline in output, has made the 1952-53 sugar season one of the few post-war years in which there has been no substantial increase in stocks. The following table gives the figures of opening stocks, production, consumption and end-season stocks in the four years ended 1952-53 and in 1938-39:

(Thousand short tons—raw value)

Season	Stocks at beginning of year	Production	Consumption	Stocks at end of year
1938-39	11,609	31,143	31,163	11,589
1949-50	7,999	32,469	33,107	7,796
1950-51	7,796	36,512	34,710	9,739
1951-52	9,739	38,958	36,167	12,486
1952-53	12,486	36,955	37,170	12,271

World production of sugar for the current season is estimated at a lower figure, mainly because the production in Cuba is expected to be cut to 5.07 million tons, as against 7.11 million tons in 1951-52. The trend in output in other countries is, however, expected to remain more or less unchanged. The production of sugar (including *gur*) in India during the current season is estimated at about 4 to 4.5 million tons (raw value).

Thanks to the comfortable sugar supply position, as noted above, the sharp distinction between the dollar and non-dollar sugar markets has largely been wiped out. And there are signs of a development of a new division in world markets. The world pattern now emerging, according to the *Financial Times*, London, seems to be one of the division between the barter trade markets, on the one hand, and commodity prices decided in the U.K. and the U.S., on the other.

The recent events in the world sugar market illustrate the sort of factors involved, although they also apply to cotton, grain and a few other commodities. The British Government recently concluded a special purchase of one million tons of Cuban sugar, with a view to ending rationing. The price at which the purchase was concluded was extremely low and the fact that the U.K. bargaining had been concentrated on this point "can now be seen as highly significant." The quantity of sugar required by Britain could have been secured in other ways. For instance, traders in that country had many offers involving barter business. They also had many opportunities for "triangular barter business," under which sugar will be supplied to other countries under complicated arrangements involving British exports as one facet of the transaction. These offers have been consistently turned down by the authorities as being contrary to the official policy. The traders, for their part, still prefer ordinary business and welcome the progress made towards the resumption of free U.K. sugar market. Yet, if Britain does not accept barter type of business, the other countries will do. In fact, the major sugar-producing countries, such as Cuba, "are apparently going to keep a foot in both trade camps." An indication of this is provided in the reported agreement between Cuba and France involving the sale of 165,000 tons of Cuban sugar. The agreement, it is understood, is on the basis of some kind of barter involving water-supply equipment.

Cuban Sugar

Cuba would appear to have somewhat intrigued at the successful efforts of Peru at entering into a contract with Chile for the supply of 30,000 tons of sugar at a price of 3.7 cents per lb. (f.o.s. Peru), which is higher than the price of 3.6 cents f.a.s. Cuba. There are indications that Cuba will compete strongly to secure business for the remaining 80,000 tons under the Chilean tender. Cuba is also receiving offers from Venezuela. The Venezuelan negotiations are said to be now in Cuba negotiating the purchase of 40,000 tons of sugar.

It may be noted, in this connection, that Cuba holds a special financed quota of 1.75 million tons (Spanish long) of sugar as reserve to be distributed to the U.S. at the rate of 350,000 tons per annum during the years 1954 to 1957. Excluding this reserve, Cuba's surplus stocks at the end of 1952 amounted to only 275,000 tons. The Cuba Sugar Stabilisation Institute announced some time ago that it had authorised a release of 350,000 tons to the U.S.

It seems clear, therefore, that sugar continues to figure prominently in the barter deals between several groups of countries. The precise effect of these deals on sugar prices cannot, of course, be assessed. But an increase in the number of such deals will certainly distort the pattern of sugar markets in a manner which would be difficult to predict.

(Concluded from next column)

Coalfields Committee, for instance, said: "In view of the shortage of transport, it is imperative that increased attention be given to the zonal distribution of coal." Again, the Working Party for the Coal Industry, in its Report (on page 27), observes: "We feel that a stage has come when zonal production should be resorted to in order to achieve rational production and distribution. It is impractical to think that, without taking such steps, the country's transport will be in a position to supply the coal requirements of such States as Assam, Saurashtra and areas of Southern India and North Bihar." These opinions of expert bodies are now being given concrete shape by the Coal Board. Its scheme should, therefore, be given a fair trial.

WESTERN INDIA LIFE INSURANCE CO., LTD. SATARA

ZONAL DISTRIBUTION OF COAL

CENTRAL BOARD'S SCHEME TO OPERATE FROM JULY NEXT

THE Central Coal Board has, after careful consideration, drawn up a scheme for distribution of coal raised in India on a regional basis. This scheme, which is to take effect as from 1st July next, is intended to reduce to the minimum the difficulties in hauling coal from the Bihar and West Bengal collieries to remote corners of the country. According to the scheme, no movement of coal other than selected grades, and coke will be permitted from these important coal-producing regions to the areas mentioned below:

(i) stations beyond Chakradhara Pura on ex-B.N. Railway. Consumers situated in areas outside this area are required to draw their supplies of coal from Vindhya Pradesh coalfields only;

(ii) stations on and south of the line Katni-Bina-Kotah;

(iii) all stations via Nagpur on the Central and Western Railways; and

(iv) all stations via Ujjain on the Central and Western Railways. These three areas are to get their requirements of coal from Madhya Pradesh or Vindhya Pradesh coalfieds;

(v) all stations on Southern railway; and

(vi) all stations south of Balharshah on the Central Railway. Consumers situated in these two areas are to obtain their coal requirements from Madhya Pradesh or Singareni collieries in Hyderabad.

In order to enforce the above regional distribution scheme, the Deputy Coal Commissioner's office has been directed not to accept, under any priority class, programmes which do not conform to the restrictions above, unless specially sanctioned by the Coal Commissioner on the merit of each case represented by State Coal Controllers. It is stated that, in imposing the aforesaid restrictions on movement of coal, the Board has carefully correlated the requirements of particular areas with the production capacity of the respective fields to which such areas have been attached.

The advantages expected to flow from the Coal Board's new region-wise coal distribution scheme are as follows:

(1) the scheme will reduce difficulties of moving coal to Western and Central India through such junctions as Agra East Bank, Cheoki, etc;

(2) it will meet adequately the difficulties created by the chronic shortage of wagons;

(3) it will improve the wagon turnround for the Bengal and Bihar fields;

(4) the necessity of hauling coal over long distances, thereby resulting in high cost of transport to outlying consumers of the country, will be avoided;

(5) consumers requiring selected grades of coal and coke will remain unaffected by it, as these varieties are excluded from the restrictions;

(6) production in Bihar and West Bengal coalfields will not be affected, as coal accumulated at pit's-mouth will be quickly transported with the improvement in the turnround of wagons;

(7) it will give impetus to coal producers in regions other than West Bengal and Bihar coalfields, as they are assured of a market for themselves.

(8) industries in the South which had to depend upon coal from Bihar and West Bengal will be able to effect considerable saving in railway freight on coal; and

(9) it will contribute towards a healthy growth of industrial development in areas situated at a long distance from the North Eastern coalfields.

Some Defects

In view of the foregoing advantages which the country stands to gain from the new distribution scheme, the Board's plan will doubtless receive a large measure of support from all parts of the country. This does not, however, mean that the scheme is free from defects. Some defects will no doubt reveal themselves in the course of its implementation, but they can be eliminated by making suitable adjustments in it. The quality of coal from Raniganj and Jharia mines, for instance, is superior, and the cutting off of this area from the regions mentioned above will mean enforced dependence for the industries in the regions upon the low quality coal raised by the collieries attached to them. This difficulty can be avoided to a great extent by proper gradation and modification of price control in such a way that the consumer pays according to the quality of coal supplied to him. Inconvenience will also be caused by dislocation of long-established contacts between collieries and their old customers. This, however, is an inevitable result of rationalisation and has to be endured. Moreover, this advantage will gradually disappear as and when new contacts are developed.

The new regional scheme should be judged not from the point of view of the inconvenience it causes or the few defects it has, but from the service it renders to the national cause. Regional distribution of coal is a national necessity and has been advocated by the enquiry bodies which went into the problems of the coal industry in recent years. The Indian

JUTE GOODS IN AUSTRALIAN MARKET

FURTHER ANALYSIS OF THE DELEGATION'S FINDINGS

IF every industry in India takes the same care and pains in studying its markets abroad as the jute industry has done in the case of the Australian and New Zealand markets, half of the problems relating to the winning of export markets for the products of Indian industries will be solved. The manner in which the report has been prepared and the rapidity with which it has been presented to the industry are worthy of emulation by other industries wishing to conduct surveys of export markets for their manufactures. This is the first impression that one gets as one reads the illuminating report of the I.J.M.A. delegation which visited Australia and New Zealand recently.

The delegation was accompanied by an official of the Government of India also. It is not yet known whether he too has submitted his report to the Government. If the Government and the I.J.M.A. were to exchange their respective reports, both stand to benefit considerably in their successful handling of the industry's export problems. Had the I.J.M.A. delegation which visited the U.S., Canada and the U.K. last year also prepared a comprehensive report similar to the one presented by the delegation to Australia, the country and the jute industry would have possessed a mine of valuable information about the major markets of the country's leading export industry.

The factors affecting the Australian market for jute goods as presented by the report of the delegation, to which a brief reference was made in our last issue, have been clearly brought out. The slump that followed the Korean boom placed Australia in an unenviable position, revealing, as it did, a serious economic disequilibrium. A review of the national economy was, therefore, undertaken and measures were adopted to effect a balance in its foreign trade. Imports were severely restricted, a drastic reduction was effected in the immigration quota and, having found that too much investment had taken place in secondary industries, development plans were reoriented so as to place greater emphasis on primary industries, especially agriculture. It was during this process of adjustment that the jute industry came to suffer most in the Australian market.

Price Factor

In the period referred to above, high international prices for agricultural commodities and raw materials, heavy capital investment in industries and a rapid and large-scale entry of immigrants, accompanied by labour shortage, all contributed to inflation. The result was that, in some directions, the degree of inflation obscured normal economic realities. It was, for instance, generally believed that high prices charged for jute goods by Indian mills were responsible for the setback in the sales of jute goods in Australia. That this has not been the case is now made evident by the report. It says: "The higher prices at which jute goods have sold at various times during the past few years have thus, in many cases, been offset by an even higher level for the commodities such as wool, which are packed in jute and we do not consider that, in these instances where markets have been lost to substitute materials, the price factor has been the main cause of the loss." In other words, what the delegation says is that the high prices secured by producers for their goods enabled them to bear the increase in the cost of jute manufactures. The delegation, therefore, says that in Australia the price factor did not constitute the most important reason for the fall in demand for jute goods in that country. Its conclusion is best expressed in its own words. Thus, it observes:

"It is true that almost everybody with whom we talked emphasised the basic fact about jute goods that, on the long-term view, their continued and widespread use is very largely dependent on their cheapness. Nevertheless, we believe that in the particular circumstances which prevailed, and to some extent still prevail, in Australia, the price of jute goods is not the most important consideration. There are, of course, exceptions to this generalisation, such as the specific fields where competition is being met from paper; but it should be appreciated that, generally speaking, price, while extremely important, is a secondary consideration to the security of supply of jute goods."

Another important economic factor which has a close bearing on sales of jute goods in Australia even now is labour. Labour is very expensive, with the minimum wage fixed at £A.11 15*s.* per week as in New South Wales. It is also scarce, and very powerful under an enlightened labour movement. For these reasons, the most important development in handling and transport of commodities is the adoption of labour-saving devices such as bulk handling methods, particularly in the wheat trade.

Control over jute goods in Australia for safeguarding security of supplies would appear to have been another important cause for restricting the demand for Indian jute bags. There have been numerous other controls for promoting planned development, born of the desire to be self-sufficient, and these too have affected the demand for jute goods. Besides, there are large stocks of jute goods with the Jute Controller, who bought them at high prices. He is distributing them to the consumer at average prices, and this has obscured the current cheapness of jute goods in the Calcutta market. The controlled distribution offers traders and importers a safe and steady return with no risks. Consequently, their initiative and enterprise have been killed, and they seem to be favouring the continuation of controls. When placing orders, the Jute Controller is generally guided by prices and not quality.

Having thus described the general factors affecting the jute trade in Australia, the report next proceeds to deal with the conditions in the markets for commodities which are packed in jute. These commodities include wheat, flour and coarse grains, wool, sugar and fertilisers.

Wheat Trade

Australia is a very large wheat producer and one of the world's principal grain exporting countries. The Australian grain trade has, therefore, provided a very important outlet for jute goods in the past. Despite a diminution suffered by the market, the trade is still a major consumer.

Wheat production in Australia amounted to 218.2 million bushels in 1950. The additional production target to be realised by 1957-58 under its Five-year Plan is 191 million bushels. The demand for jute bags for the movement of this enormous crop has, however, been seriously reduced by bulk handling methods. This is the largest and most serious loss which the jute industry has suffered.

Bulk handling exercises considerable appeal to the wheat trade as a commonsense and scientific method. The adoption of this method reduces the use of labour which is scarce, expensive and highly organised. Bulk handling is considered by Australians as a step towards national self-sufficiency. The fear that jute bags may not be had in adequate quantities and in time seems also to have driven the wheat trade to bulk handling. It is also cheaper in that the handling charges are believed to amount to 4*d.* a bushel as against 7*d.* in the case of bagged wheat. It protects the trader from the vagaries of the weather at harvest time, as wheat goes off the farm quickly, and from rodents and weevils. Bulk handling is suited to Australia because there are few variations within each State in grade or quality.

As against these advantages of bulk handling, there are also certain disadvantages. The construction of bulk handling facilities, for instance, involves large capital. The capital cost is important in installing the equipment on the farm. Trailers, field bins, augers, and bulk lorries all cost money and are outside the scope of many individual farmers. It is largely a static system, as the installations cannot be taken to where the grain is in the same way as bags. There is also a serious loss in moisture content. Wheat becomes extremely dry and must remain so when it is stored in bulk. But bags retain moisture and wheat in bags gains weight. Further, bulk handling is not suited for premium wheat, that is, a type of wheat with high protein content; this wheat must necessarily be packed in bags.

As the conclusions of this study have been given in the last issue of *Commerce*, there is no need to repeat them here. Suffice it to say that, at the present Calcutta prices for cornsacks, it may well be cheaper to continue to handle wheat in bags where they are still used than to engage bulk handling facilities.

Flour Trade

The Australian flour trade still uses jute bags for the packaging of its product. Coarse grains—oats and barley—are not at present handled in bulk because of wide variety of grades and of the limitations caused by the amount of investment that can be devoted to bulk handling installations. State Governments which have to finance the construction of bulk handling installations have not the wherewithal to undertake fresh installations. These grains should, therefore, continue to offer a good market for jute goods.

Wool still depends on jute packing. Ninety per cent. of Australia's wool production is shipped overseas and the packs in which it is contained are lost to the growers. Again, very few packs go back to the growers, as there is always a strong demand for second-hand packs for a multiplicity of uses. Replacements have to be made by fresh purchases. The importance of the wool pack market is thus obvious.

Experiments are taking place in the production of *kenaf* goods for the wool industry. As this is a long-term problem, there is no serious immediate threat from the substitutes so far as this section of the market is concerned.

The sugar industry is satisfied with jute goods, but there are dangers from substitutes such as calico, paper and consumer packaging. There is also the biggest threat from bulk handling. The market requires to be carefully cultivated, if jute is to take the fullest advantage of its opportunities, but the price at which jute goods are supplied counts most in winning the industry from substitutes.

The consumption of jute bags in the fertiliser industry has been seriously affected by shortages and high prices of fertilisers. In this market also, because of the fact that there is competition from substitutes, price takes on an added significance. The companies themselves prefer jute to paper for packing fertilisers, because jute bags are larger, relatively fewer to handle, stand rough handling better and do not dry and lose strength as paper does in hot climates. Again, some farmers prefer supply of fertilisers in jute bags because of the secondary uses of the bag.

FALL IN RAW JUTE OUTPUT EXPECTED

Press reports from Dacca indicate that the jute crop for 1953-54 will be about 3.5 to 4.0 million bales, as the growers have not cultivated jute in the entire licensed area. Mr. Hafizuddin Ahmed, Minister for Agriculture, East Bengal, warned the public and trade last week not to place reliance on any forecasts of next season's jute crop but to wait for the publication of the official preliminary forecast, likely to be released by the middle of July. He had strong reasons to presume that areas sown to jute, far from exceeding the licensed area, would fall far short of it. Besides, the farmer in East Bengal had every incentive to grow paddy rather than jute, considering that the price of the former was, and still continued to be, higher than those of jute. He stated that strict control had been exercised from the beginning of the sowing season over the licensed area for jute.

If the raw jute output is taken at 4 million bales on the basis of the entire licensed area as stated at the outset, the total raw jute supply, along with a carry-over of 2 million bales, for 1953-54 would be of the order of 6 million bales. This compares with about 11 million bales estimated for 1952-53.

Similarly, in India too, production of jute is expected to be low. According to the Union Minister of Agriculture, Dr. Punjabrao Deshmukh, the next season's output is expected to be about 4 million bales, as against 4.67 million bales in 1952-53. The fall is attributed to the low price of raw jute at the sowing time, as compared with the prices of other crops. There is stated to be a substantial reduction in jute acreage in Assam, West Bengal, Bihar and elsewhere.

BIG SPURT IN W. GERMANY'S SACK EXPORTS

Western Germany has entered the export markets for a considerable quantity of jute sacks. The industry's current production is placed far above internal requirements and more than half the annual output has to find markets abroad. From a trickle of 4,489 quintals worth DM.1 million in 1951, exports of jute sacks in 1952 rose to 41,880 metric quintals valued at DM.14.16 million. The Union of South Africa topped the list of importing countries, taking 28,560 quintals. The Netherlands came second with 5,925 quintals, Sweden third with 2,302 and Switzerland fourth with 1,955. Smaller quantities went to France, Norway, Austria and Brazil.

Exports of jute fabrics, which were insignificant in 1951, rose to 181,700 quintals valued at DM.47 million. The U.S.A. was by far the most important country of destination, taking 127,000 quintals. Other destinations were Denmark, 14,650 quintals; Turkey, 9,400; Norway, 8,460; the Netherlands, 7,900; Switzerland, 6,660, while smaller quantities went to Greece, the U.K., Italy, Argentina, Brazil and Austria. Exports of jute yarn came to 4,100 quintals worth DM.736.000, of which one half went to Norway, 1,330 quintals to the Union of South Afrira and the rest to Equador.

Western Germany imported nearly 13,000 metric quintals of jute yarn worth DM.2.85 million. Belgium supplied approximately 9,000 quintals, France 1,800, Denmark 1,700.

Imports of raw jute amounted to 778,329 quintals, valued at DM.111 million. Of this, 739,700 quintals came from Pakistan, 35,774 quintals from Belgian Congo, 1,653 quintals from India and 811 quintals from Persia.

SCOPE FOR INDIAN TEA PROPAGANDA IN THE UNITED STATES

ENQUIRY INTO COST OF PRODUCTION OF COFFEE BEGINS

(From A Special Correspondent)

WHAT is the scope for expansion of the sale of Indian tea in America? This question has been asked many a time in the past, and particularly during the period when tea propaganda was under the control and direction of the International Tea Market Expansion Board. Now that propaganda in the U.S. is going to be conducted directly by the Governments of the important producing countries, there is much speculation as to the extent to which such propaganda can become fruitful in the case of Indian tea.

It is well known that the U.S. is the second largest importer of Indian tea in the world—the first, of course, being the United Kingdom. There is, however, no comparison between the *per capita* consumption of tea in the U.K. and that in the U.S. While the *per capita* consumption in the U.K. is about 9 lbs., that in the U.S. is only a little more than half a pound. The important fact is that, despite all the propaganda that has been carried on in the last 10 years. there has been no significant rise in the *per capita* consumption of tea in the U.S. Our close rival in the matter of tea imports in the U.S. is Ceylon. In 1952, Ceylon accounted for some 44 per cent. of the total U.S. imports of tea, whereas India only accounted for 37 per cent. In one or two previous years, imports of Indian tea had well exceeded those of Ceylon tea, but the position in the last year or two appears to have turned more and more favourable to Ceylon.

Competition With Ceylon Teas

It is believed that the Government of India has been giving consideration to this matter for some time now, and that the causes of the relatively advantageous position of Ceylon are under careful investigation. It is said that the existence of better trade contracts between U.S. and Ceylon, and the better type of packing of Ceylon teas, are two of the main reasons for Ceylon acquiring a more favourable position than India in the U.S. markets. The fact that the steady improvement in the quality of Indian tea in recent months has paid good dividends in the U.S., as is reflected in the greater offtake of Indian tea in that country during the first three months of 1953, as compared with the same period of 1952, bears out this explanation. It is felt that by further maintaining the quality and by keeping prices comparable with those of Ceylon teas, it should be possible to secure an increase in the consumption of Indian tea in the U.S., though it would undoubtedly take a long time to see any substantial rise in the *per capita* consumption of tea in the U.S.

Outlook

Recent improvements in prices of Indian tea in the London and local markets have raised the question whether the improvement can be regarded as a permanent one or is likely only to be a short-lived one. Several well-known spokesmen of the tea industry and trade have recently expressed the view that there is much over-optimism shown over the improvement in tea prices, and that a careful study of the facts will clearly show that the improvement is by no means likely to be permanent. A writer in the *Tea and Rubber Mail* of London suggests that the price improvement was probably largely due to a greater local consumption more than anything else. The Chairman of a planters' association in Travancore said the other day that the improvement was due largely to a shortage of crop and seasonal factors, and that, with rush teas coming into the market just now, a further decline in prices must inevitably occur. There is also a claim that the price improvement that has taken place will hardly cover the actual costs of production in many areas. Some gardens in Cachar and Sylhet, for instance, have been sending to auction attractively made and well-plucked teas but have not been able to realise output costs.

Draft Rules Under Tea Act Awaited

Now that the Tea Bill has been passed by Parliament, the reconstitution of the Tea Board and the abolition of the present Tea Board and the Tea Licensing Committee may be expected to take place at any time. An order just issued by Government extends the life of the present Tea Licensing Committee up to the end of December, 1953, and it is surmised from this that the new Tea Board (which will also include the present Licensing Committee) may be set up not later than the end of 1953. Representatives of tea growers and growers' associations are anxiously looking out for the draft rules to be framed under the Tea Act. They have been told by the Hon. Minister in Parliament that the rules would make provision for some of their representations, including the most important one relating to the method of nomination of growers' representatives on the Board. The extent of representation of the various interests in the new Board is, of course, a matter of special concern to these interests.

The events leading up to the passing of the Tea Act and the difficulties experienced by growers in bringing their points of view to the notice of parliamentarians and the Government have spurred the growers of two other crops, coffee and rubber, to be more vigilant in the case of new legislation affecting those two crops. The Bills seeking to amend the Coffee Market Expansion Act and the Rubber Production and Marketing Act have already been introduced in Parliament some months ago, and it is believed that they will be discussed during the August session. In essence, these Bills seek to confer upon Government the same omnibus powers as those conferred by the Tea Bill, and also to reduce the powers of the Coffee and Rubber Boards drastically. It is understood that growers of coffee and rubber propose to put up very strong objections to many of the provisions of these Bills before the respective Select Committees, if and when these committees are appointed, and also to acquaint the public in general about

FUEL AND POWER IN ASIAN AND FAR EASTERN REGION

INCREASE IN ELECTRICITY PRODUCTION

THE level of production of power such as electrical energy in a country, is often a reliable index of its industrial prosperity. Closely allied to power is fuel, the consumption of which also provides a rough and ready index of a nation's economy. It is true that not even the highly industrialised countries produce all their requirements of fuel, that is, coal and petroleum. But they make up a part of the deficiency in fuel production by producing electric power. Generally speaking, the output of fuel and power provides some clue to the understanding of a nation's economy. From this point of view, the essential economic backwardness of the Asian and Far Eastern region might be seen reflected in the low level of the output of coal, petroleum and electricity. The region's share according to the U.N.'s *Economic Survey of Asia and the Far East*, in the world production of coal is no more than 6.81 per cent.; in petroleum, it is no larger than 2.43 per cent. and in electricity, a mere 6.18 per cent. of world output.

The region's share in world coal production, according to the *Survey*, increased from 5.9 per cent. in the first half of 1951 to 6.87 per cent. in the first half of 1952. The contribution of the region to world production of petroleum is still low, but it is rising. Between the second half of 1951 and the first half of 1952, the region's electricity production improved from 5.90 per cent. of world output to 6.18 per cent. The leading coal producers in the region are Japan and India. During the first half of 1952 Japan produced on an average 4.1 million tons and India 3.2 million tons. In several countries of this region new refineries are being established which will enable them to refine locally an increasing proportion of their petroleum requirements. The crude petroleum production in some leading countries is as follows:

Monthly average
(In 000 tons)

	Jan-June 1952
Brunei	429
Burma	9
Indonesia	653
Japan	26
Pakistan	14
Sarawak	4
Total ...	1,134

The region's electricity production figures are significantly influenced by figures of power production in Japan, inasmuch as this country accounts for nearly three-quarters of the electric power capacity of this region. Production of electricity, it is stated, increased throughout the region in the first half of 1952. After the passing of the abnormal drought which affected both Japan and India in the preceding months, the supply of electricity increased in the early part of 1952. In the following table, the monthly average electricity production in the leading countries of the region during the first half of 1952 is compared with that in the first half of 1951 and in the second half of 1951:

Electricity Production
(Monthly averages) (Million kw.h.)

	1951		1952
	Jan-June	July-Dec.	Jan-June
Burma	3	3	..
Cambodia	1	1	1
Ceylon	9	9	9
China (Taiwan)	104	110	108
Hong Kong	28	31	32
India	477	502	494
Japan	8,555	3,297	3,614
Korea, South	16	36	47
Malaya	64	68	79
Pakistan	17	20	22
Philippines	40	43	44
Thailand	5	5	5
Viet-Nam	16	18	19
Total ..	4,335	4,143	4,474

The *Survey* points out that the production of electric power in Japan during the second half of 1951 was severely affected by unusual weather conditions, but recovery was rapid after the new year. Government plans for hydro-electric development are on a very large scale. In June, a law "for the acceleration of electric power resources development" was passed. Under this law, the Electric Power Resources Development Company was established to develop electric power in areas where private companies are inadequate. Over one-half of the authorised capital of 100 billion yen is expected to be Government-subscribed.

In India, similarly, cuts imposed by the irregularity of the monsoon weather were discontinued, and new capacity came into operation, so that the first half of 1952 showed more electricity generated than in the corresponding period of 1951. The increased availability of electricity for rural use is a recent feature in India. The growth of tube-well irrigation in the United Provinces is sustained by power drawn from the Ganga canal stations. Other States in India have also tube-well programmes.

Generating capacity in Pakistan now totals nearly 100,000 kw. or about double the capacity at the time of the Partition, but is well below industrial needs. The development programme includes large hydro-electric projects.

Production in mainland China is reported to have increased from 72 per cent. of the "pre-liberation peak" in 1949 to an expected high of 115 per cent. in 1952. In Taiwan, electricity output shows a steady increase. Rehabilitation is declared to have been completed and a five-year expansion programme instituted, the aim of which is to raise output by 1957 to about double the present level.

The increase in the production of electricity in Korea (south) resulted partly from better weather conditions, but is mainly attributable to rehabilitation and renovation. Industrial consumption, at about 7 million kw.h. per month at present, is less than one-third of what it was four years ago. The increased availability of electric power, according to the *Survey*, is expected to stimulate the further restoration of industrial production.

TUNGABHADRA DAM

The first flow of water from the Tungabhadra Dam, one of the major river valley projects in the South, might commence on 1st July, 1953, it is stated. Simultaneously, on that day, water will be let out through the two main canals of the project, one on the Madras and the other on the Hyderabad side. The Tungabhadra Project, as is well known, is a joint venture of the Governments of Madras and Hyderabad and will serve the famine areas of Rayalaseema in Madras and the adjoining areas of Hyderabad. The masonry dam across the river Tungabhadra, which is a major tributary of the Kistna, is almost nearing completion. The reservoir created by the dam will spread over an area of 133 sq. miles and will have a gross storage capacity of 2.6 million acre-feet. There will be two canals on each side of the river. The right bank canal on the Madras side will be 225 miles long, while the left bank canal on the Hyderabad side will be 127 miles long. Power is proposed to be developed at suitable sites along the canals. The canal system commands an area of 2 million acres, of which 7 lakh acres are proposed to be brought under irrigation in the first stage. The joint cost of the first stage of the project is estimated at Rs. 51.18 crores, of which the share of the Madras Government is Rs. 27.64 crores and that of Hyderabad Rs. 23.54 crores.

The project is being constructed by the Governments of Hyderabad and Madras, each State carrying out the works lying in its own territory. The two Governments have agreed upon a common design for the dam and also on a line of demarcation. A unique feature of the construction of the dam is that it is being built entirely by Indians without any foreign assistance, either technical or financial.

The Hyderabad part of the Tungabhadra Project was inaugurated in 1945 but work actually started in 1948. Within about 3½ years, the dam has almost been completed. An important feature of the work on the Hyderabad side is the concrete lining of the canals which will reduce maintenance cost and eliminate weeds. Most of the main canal and part of the distributary system have been constructed, but full completion will take some more time. At present, a long 3,600-ft. tunnel through which the main canal will pass is under construction. Already 2,700 feet have been dug. The tunnel will be 62 feet in width.

Steel spans required for the dam are being manufactured at a factory specially set up for the purpose on the Madras side of the project. The factory, which was inaugurated by the Prime Minister in September, 1952, has already produced 33 spans each of 60 ft. length, and an equivalent number is expected to be produced within the next year or so. One unique feature of manufacture of spans in this factory, it is claimed, is that no bolts, screws and rivets are used, but the joints are welded. The first weld was operated by the Prime Minister on the inaugural day. In order to ensure that the joints have been properly welded, they have to be X-ray-tested. The new process is 25 per cent. cheaper than the ordinary process of riveting joints and it is twice as fast as in the case of nuts and screws.

PETROLEUM INDUSTRY

The petroleum industry has to face two sets of financial problems. In the first place, it has to meet the needs for replacement of worn-out machinery and also to keep abreast of technical advances in machinery. Secondly, it must provide against the day when the assets, from which it derives its income, namely, the oilfields, become exhausted, so that it could tap new sources of oil. These two aspects of the working of the industry were explained by Sir Frederick Godber, Chairman of the Shell Transport and Trading Company, Ltd., at the recent annual meeting of the Company. He said:

"Keen and active competition forces the industry to direct a continued effort of research and new investment towards increased efficiency and lower costs. Technological advance often brings about an earlier obsolescence of existing plant and equipment. Moreover, as reserves of crude oil are increasingly drawn upon, expenditures on exploration for additional reserves must be accelerated. A considerable proportion of our earnings, derivcd as they are from the use of a wasting asset, must therefore be retained and ventured again in the search for oil, for the future of our business depends largely upon our success in replacing our oil reserves."

Sir Frederick said that of the total world consumption in 1952 of some 635 million tons of oil products, approximately one-third represented new consumption since 1947. He estimated the additional capital which the industry had found since the end of the war at £6,500 million. Referring to world oil conditions in 1952, he said:

"The year was one of uncertainty and consequent hesitation. Nevertheless world consumption of oil products reached a total of some 635 million tons, an increase of almost 7 per cent. over 1951. This compares with increases of 10 per cent. in 1951 and 12 per cent. in 1950. I drew attention last year to the growing preponderance of the demand for fuel oil as compared with other products. In the year 1952, the demand for fuel oil was more greatly affected by the economic circumstances of that year than was the demand for any other main product. In the United States, fuel oil consumption in fact fell while in the rest of the world the rate of increase was well below that of the previous year. A surplus of fuel oil emerged with a depressing effect on the returns for this product and although there has been a slight improvement in the basic price since the end of the year, it is still below that ruling a year ago. During the years that have elapsed since the war the oil industry has been engaged in intensive construction of new plant and other facilities to meet the rapidly growing demand for oil products. This construction overtook, in 1952, the rate of increase of demand which was, as I have indicated, showing signs of pausing. The combined effect of these factors was a much freer supply of oil products. It is against this background that the industry has entered a period of growing competition which may perhaps be looked upon as a return to normal conditions."

RURAL HOUSING

Rural housing has acquired a new impetus in some of the community project areas of Hyderabad where the authorities and the people have embarked on a comprehensive construction programme to make the living conditions in the villages healthy and comfortable. In the Munirabad project area, where nearly 37 villages will be submerged this year by the water-spread of the Tungabhadra Dam, efforts are being made to rehabilitate the villagers in new locations. In that area, the Government, the people and the military have joined hands in what looks like a race against time—before the onrush of the Tungabhadra waters submerge the existing villages. In another project area, namely, Nizam Sagar, in a small village named Durki, nearly 70 houses have been renovated. The old constructions have been pulled down and well-ventilated, bright-looking tenements with red-tiled roofs have sprung up. In the Tungabhadra area, a scheme is on hand whereby the population of these 37 villages would be rehabilitated in 19 model villages and five work centres. Building work has started in all the villages, and in order to expedite construction and transportation of goods and the people the military has lent a helping hand.

AIR-INDIA LIMITED

MR. J. R. D. TATA'S FAREWELL ADDRESS TO SHAREHOLDERS

"THE nationalisation of air transport brings to a close an era of 21 years, during which from small beginnings the Indian air transport industry grew into the far-flung domestic and international system of to-day," observed Mr. J. R. D. Tata, Chairman of Air-India Limited, addressing the last of the annual general meetings of the Company, held in Bombay, on Monday, 22nd June, 1953. He added: "As it is fashionable in some quarters to decry free enterprise, let it be remembered that the highly developed Indian air transport system which Government are acquiring ready-made and at small cost was built up wholly by private enterprise in spite of the many difficulties and restrictions placed in its path." Paying a tribute to the investors in the air transport industry, Mr. Tata said:

"While giving full credit to all those who, by their hard and devoted work, sometimes at the cost of their lives, were mainly responsible for the growth and splendid record of Indian aviation, let us also remember the investor, the all too often forgotten man without whose support the industry could not have come into being. Judging from some of the speeches made in Parliament and elsewhere there seems to be little awareness that the investing public consists not of a handful of wealthy men but of thousands of simple people of moderate means whose hard-earned savings form the life-blood of private enterprise and have made this industry, amongst others, possible. Ignorance and misunderstanding have so grievously distorted the air transport picture in the post-war period, that I feel I must make an effort on this last occasion to correct it."

Chequered History

Mr. Tata then traced the history of Indian air transport which, he said, could conveniently be divided into two clearly defined periods separated by World War II. The first, from 1932 until 1940, was a hard but satisfying era of pioneering during which the industry, enjoying freedom of decision and action, grew slowly but steadily. "The second period," said the Chairman, "from 1946 to the present day has been marked by tragic mistakes and presents many valuable lessons for both the private and public sectors of industry."

The post-war period was influenced at the start by two important factors. The availability of larger and more efficient transport aircraft and Sir Frederick Tymms' excellent post-war plan of orderly development under State control, which would have been favourable to the industry, were turned into instruments of its ruin. It was also pointed out by Mr. Tata that the fundamental requirements under the Tymms' plan, which contemplated the licensing of only three or four airlines each with adequate route mileage, were rejected by the then Minister for Communications, Mr. Abdur Rab Nishtar, and a ruinous scramble for route licences by a large number of concerns created almost overnight. Instead of three or four strong companies, no less than 14 companies with capital issues far in excess of requirements were initially licensed and sometimes as many as three companies were given licences on the same or substantially the same routes.

As an illustration, Mr. Tata recounted what happened on the vital Bombay/Calcutta route. Government began by licensing two operators on this route, one of them being Air-India, and later added a third. When one of these two collapsed, Government went out of its way to revive the defaulting operator and re-licensed him and when he failed again, licensed a third.

Enquiry Committee

Referring to the glimmer of hope engendered by the appointment of the Air Transport Enquiry Committee in 1949, Mr. Tata said that it was shortlived and the authorities' intention to disregard the Committee's criticisms and recommendations and to continue their previous policies soon became evident.

"By the middle of last year," continued Mr. Tata, "it became obvious that drastic measures would have to be taken if the country's air transport system was to be saved from collapse and placed on a sound footing. It must be said to the credit of Mr. Jagjivan Ram, the present Minister for Communications, that on taking over the portfolio of Communications from his predecessor he quickly appreciated the need for decisive action. Where Government made a serious mistake, in my opinion, was in deciding upon complete nationalisation—and that too without giving the industry a hearing—and in refusing even to consider an alternative plan prepared by your Company. Based on the Air-India International pattern of joint private and State enterprise, it offered, in my opinion, a better and fairer solution of the problem.

"Although no purpose can now be served by discussing the merits or demerits of Government's decision, I should like once and for all to correct the widely held impression that nationalisation was made inevitable by the airlines' inability to operate at a profit or to raise fresh capital for new equipment.

"First of all, with the possible exception of Australia which enjoys unique geographical and air-traffic advantages, the operating costs of Indian airlines, other than in respect of fuel and spare parts over which they have no control, are amongst the lowest in the world. If they are higher than they could or should be, it is mainly because of the low intensity of operation imposed upon them by Government's licensing and other policies to which I have previously referred. The exceptionally low costs achieved by one Indian company which, as I mentioned last year, has been allowed to operate on a high intensity basis, prove this point.

"Taking the industry as a whole, the main causes of its losses are to be found, not in high operating costs, but in the uneconomically low fares and mail rates and the crushing burden of fuel taxation imposed upon it. The level of first class passenger fares in Europe and America is about a third higher than in India, while the mail rates paid by the Indian postal authorities are about 40 per cent. below those paid by the British Post Office to B.E.A. Furthermore, the abnormally low rates and fares enforced in India have remained substantially the same for five years in spite of mounting costs, while charges to the users of every other form of public service in the country have been substantially increased.

"As regards the petrol tax, the amount which Government have collected from the hard-pressed air transport industry over the last seven years, runs into many crores of rupees and actually exceeds the total price which they will now pay for the assets of the entire industry on nationalisation. The so-called subsidy granted by Government since 1949 has been nothing more than a partial and dwindling rebate on the petrol duty borne by the industry, and the relief so provided was, almost as soon as granted, offset by successive increases in fuel prices exceeding the value of the rebate. Even after deducting this rebate, Government collected Rs. 50 to Rs. 60 lakhs from the industry in 1952. In the face of these facts and figures the claim that the industry has been subsidised is difficult to accept. If the efficient and prosperous American air transport industry had to bear the petrol duty imposed on the Indian industry, it would make a loss overnight.

"If only three or four companies had been licensed as initially provided in Government's post-war plan, if passenger fares and mail rates had been fixed at reasonable levels and if the industry had been relieved of its heavy burden of taxation on fuel, it would to-day be in a flourishing condition and quite capable of raising the finance required to purchase new equipment."

Lessons for the Future

"As the dismal chapter closes for ever, I hope that some of its obvious lessons will be appreciated by all concerned and kept in mind for the future: for instance, that private enterprise should not rush into a new field without making sure that the total productive capacity so created will not exceed the available demand and that the industry will be allowed to function with a reasonable measure of freedom; that a detailed economic plan, once accepted by Government, should not be changed arbitrarily without careful consideration at the highest level and without consultation with those concerned; that the appointment of high power commissions does more harm than good if their recommendations are to be disregarded, as happened in the case of the Air Transport Enquiry Committee's Report. Finally, that safeguards instituted in the form of statutory authorities for control or licence purposes should not be allowed to be destroyed by constant interference by the executive, as happened in the case of the Air Transport Licensing Board. From the very date of its establishment, the Board was deprived of its freedom to exercise impartial judgment in its decisions and was subordinated to the wishes and directives of the Ministry. This reached an absurd climax when officials of the Civil Aviation Department were appointed members of the Board. From then on, its proceedings had little meaning."

Valuation

Mr. Tata then turned to discuss the basis of compensation payable by Government to each company under nationalisation, namely, the method of valuing aircraft. He said: "The use of the term 'compensation' in the debate in Parliament and in the Act has created the wrong impression in some quarters that compensation for the loss of business, licences, profits, etc., will be paid to the nationalised companies in addition to a reasonable price for their assets. Such compensation, if payable at all, will be purely nominal—the maximum is fixed at Rs. 10,000—while nothing will be paid towards the heavy development expenditure incurred by the operators in the course of opening new routes, etc.

"The principle of paying the market value for assets compulsorily acquired is an old, well-proven and accepted one which has been invariably adopted by Governments in the acquisition of private property and in the disposal of their own. The fact that the assets may have increased in value since their original purchase or creation by their owner has never upto now been allowed to invalidate this principle, as proved by innumerable instances of acquisition and sale by Governments and public authorities. In the case of the nationalisation of the airlines, however, it has been wholly set aside; in fixing the price payable for aircraft, Government have declined to take into account not only the world market price but even the internal price in India. As stated in the Directors' report, the nationalised companies will receive about one-fifth of the world price for Dakotas, Vikings and Skymasters and about 50 per cent. for Constellations. Even if we ignore world prices, the figures fixed for Dakotas will be about half the Indian market prices. To that extent, therefore, it may legitimately be contended that the terms on which the air transport industry is being taken over contain an element of expropriation.

"Having said this, it is due from me to recognise that once Government had decided on the basis of valuation, the Minister for Communications who piloted the Bill through Parliament and the Finance Minister resisted the pressure brought to bear on them to whittle down still further the amount of compensation. We are grateful for the stand they took.

Chairmanship of A.I.I.

"Before I leave the subject of nationalisation," observed Mr. Tata, "there is one personal matter to which I should like to refer. As you are aware, I have agreed to remain as Chairman at the head of Air-India International after nationalisation. This has given rise in some quarters to the criticism that in thus agreeing to remain associated with an industry after its nationalisation, I have let down free enterprise. Whatever validity there may be in this contention, as a general proposition, it can hardly apply in the case of Air-India International as Government already have a dominant participation in its capital and direction. The main consideration, however, which weighed with me was that I would be lacking in a sense of duty if I refused to continue to make whatever contribution I could to the maintenance of the high standard and prestige which Air-India International has established in India and abroad. This consideration acquired greater force when I found that, in the face of considerable opposition, Government had accepted the recommendation I had made to them, on grounds of efficiency and administrative convenience, to keep the international airline as a separate corporation and to retain intact the name of Air-India International.

"In the circumstances, and having regard to the Minister's assurance that the Board of the Corporation would have the required freedom to manage its activities on business lines and that the interests of the staff would be adequately safeguarded, I believe you will approve of my decision to assume, in an honorary capacity, the somewhat onerous duties of Chairman of the International Corporation."

INSURANCE LEGISLATION IN DIFFERENT COUNTRIES

MAXIMUM FREEDOM FOR COMPANIES ALLOWED IN U.K.

FOR several decades now most modern countries have accepted the principle that insurance, whether it is undertaken as a profitable or non-profitable enterprise, requires to be controlled in the public interest. This view is based on the ground that the failure or mismanagement of an insurance company is fraught with dangers of a far-reaching character. By ruining the hard-won fortunes of a thrifty public, the failure of an insurer would ruin the confidence of the public in financial and credit institutions beyond repair and would render even the really honest and well-managed companies suspect in the public eye. Although the principle of State interference with, and control of, insurance has thus gained general acceptance, there is, of course, no uniformity in the method, nor in the extent, of State control which varies from country to country. A comparative study of the control over insurers, which prevails in different countries, ought, therefore, to appeal to all students of insurance. It is such a study that has now been presented by Mr. N. T. Raju of the National Insurance Company, Ltd., who, in his paper on "State Interference in Life Insurance," read at the last insurance conference, made a comparative analysis of State regulations relating to insurers in four principal countries, the U.S., Canada, the U.K. and India. Within the compass of hardly 15 pages the author has compressed a great deal of study and comparative analysis so that the paper might justly be called a model of condensation of its kind.

Mr. Raju's introductory remarks were confined to the description of the historical background to the insurance legislation in the countries. This account shows that it took many years of frequent failures of insurers before the principle of State control of insurance was accepted in the West. But these years, painful and fruitless as they were, ended in the vindication of the principle that a certain element of State interference must be accepted in the interests of the common good of all the principal parties concerned—the companies themselves, the policyholders, and the Government which is ultimately responsible for the people's welfare.

The control of the State starts at the very commencement of an insurer's career. In all the four countries the insurance legislation of which Mr. Raju has studied, the law requires that deposits should be made before the companies can commence writing insurance business. In the U.K., "deposits requirement has been replaced by a requirement as to minimum paid-up share capital." In addition, insurance laws require that licences or certificates of registration have to be obtained. The licences or certificates may not be granted nor renewed—they may even be revoked—at the discretion of the State. No such provision, however, exists in the British law. In Canada, as in India, the law requires that a minimum proportion of the directors should be the representatives of policyholders. Several State legislations in the U.S. have restrictions on interlocking directorships and common managements.

The major financial restriction, which is common to the U.K., Canada and India, is that the life fund has to be kept separate from the funds of other classes of insurance business which a company transacts. In Canada, as in India, there is an additional stipulation that the assets of the life fund must be kept separate from all other assets. The control over the investment of a company's funds varies from country to country. In the United Kingdom there is complete freedom for the companies to invest as they think best. In spite of their unchartered freedom, offices in general have been maintaining very high standards in choosing avenues where their funds can be suitably and profitably employed. Investment practice is characterised by conservatism. Many companies sacrifice profitability to security to an extent which may "appear to some as far beyond what is absolutely necessary." In the other three countries, a life company's investments are the subject of detailed regulation and control. In New York State, companies may invest only in Government obligations, corporate obligations with a prescribed earnings and/or dividend record, mortgage loans and some other items enumerated in the insurance law. There are restrictions on the acquisition of real property and on the amounts which may be invested in any one institution. The investment powers of Canadian and Indian companies are restricted on similar, though not identical, lines. In New York and Canada, investments, not permissible under the laws, are ignored while determining the financial condition of a company. In Canada such non-admissible assets are limited to a maximum of three per cent. of the total "ledger assets" of a company. Indian provisions also are along similar lines and a maximum of 15 per cent. of the controlled fund is permitted to be put in unapproved investments.

Both in the U.S. and in India, standard policy forms have to be lodged with the Government before permission to transact business is granted. In India, special clauses are inserted in policies excluding or restricting liability in the event of death occurring in a specified manner, the more familiar of them being the first pregnancy clause in the case of female lives. The New York laws permit no such restrictions except those relating to suicide, war, aviation, occupational and residential risks.

British and Canadian statutes do not prescribe any regulations regarding insurance agents or their remuneration. But the New York and Indian laws have elaborate and detailed control over these aspects of the insurance industry. A noteworthy feature of the New York law is that an applicant for an agency licence has to submit himself to a written examination in order to enable the Superintendent of Insurance to judge his competence to act as an agent. Again, in the New York and Indian law, rebating and the offer of other inducements are strictly forbidden. Similar provisions, however, do not exist in the Canadian and British laws.

In the U.K. there is no specific provision for keeping the expenses of management at a prescribed level. In Canada, the authorities are empowered to investigate the financial position of a company which is suspected of indulging in extravagant expenditure. In the U.S., particularly in New York, as in India, ceilings for expenses are specifically prescribed by law. But the New York laws are flexible. Paying a tribute to the flexibility of the New York laws on insurance, Mr. Raju says:

"While the New York laws prescribe measures conducive to economy in expenses of life offices, set rigid limits on maximum expenses and penalise offending companies, they, at the same time, retain considerable amount of flexibility designed probably indirectly to encourage economic and efficient managements. For instance, as already mentioned, the ceiling on new business may be raised, if a company has been properly and economically conducting its business. Additional remuneration to insurance agents, otherwise than by way of commission, may be allowed with prior approval of the Government, provided the expense limit is not thereby infringed. The value of these provisions in regulating the competitive ability of a company to create an efficient, stable and contented agency force, through efficiency in management, cannot be under-rated and is worthy of serious attention of Indian insurance where high expense ratios are still a major problem and no preferences are shown for achieving economy in expenses. The absence of a limit for the overall expenses of a company before the 1950 Amendment Act and the freedom to appoint and remunerate intermediaries between the agent and the office rendered the restriction on agent's commission in India ineffective. Though the law in this respect has been strengthened, policies are still allowed to be issued at premium rates which do not enable the companies, considered in relation to their experience in the past and probable trends in future, to remain solvent or remain solvent only by eating into the bonus-loading of the with-profit business."

The regulations regarding the valuation of liabilities vary in different countries. In New York, life companies are required to value their liabilities annually, whereas in the U.K. and in Canada, once at least in every five years, and in India, once at least in three years such valuation must be undertaken. Of the valuation surplus, the Canadian companies allot 90 to 97½ per cent. to participating policyholders; in India, the proportion is a minimum of 92½ per cent. There is no restriction regarding the basis of valuation in the U.K. The New York and Canadian laws, however, prescribe the basis of valuation. The Indian law gives freedom to the actuary to choose the basis though the Controller of Insurance is empowered to order revaluation if he finds that the basis adopted by the actuary is faulty.

This brief account of the insurance legislation in the four countries reveals that the extent of State interference in insurance in the U.K. is very much less than in any other country considered in the review. But so pervasive is the influence of traditions and conventions on insurers in the U.K. that they manage their affairs along remarkably sound business lines, notwithstanding the absence of any rigorous legislation. In New York and Canada, there is no doubt stringent legislation in order to control the activities of insurers. But the New York laws, as the quoted passage from Mr. Raju's paper reveals, are flexible in that they allow some exceptions to be made to remedy individual cases of hardship. Perhaps the Indian authorities too will do well to adopt similar practices. What is necessary is to ensure freedom for insurers—not freedom to mismanage their affairs but freedom to manage them on sound lines.

NEW GREAT INSURANCE MAINTAINS PROGRESS

The year ended 31st December, 1952, has proved to be another period of progress in the working of the New Great Insurance Company of India Ltd. (head office: Baroda; General Manager: Mr. M. G. Mody), inasmuch as the improvement in the Company's general insurance business noted in the past few years was maintained in the year under review also. The life business, which had a small recession in 1951, has also recovered. Thus, the aggregate net premium income of the three general departments, namely, fire, accident and miscellaneous and marine, shows an advance from Rs. 36.76 lakhs in 1951 to Rs. 48.91 lakhs in 1952. As in the previous year, the improvement has been shared by all the three departments and more than half of the total business is accounted for by the fire department. The accident and miscellaneous business does not show any marked improvement, as in the case of fire and marine business. This is presumably because the management continues to exercise caution in accepting motor business, which constitutes the bulk of the business in this department and which is unremunerative. In the life section, the number of proposals which resulted into policies has increased from 2,235 to 2,454 and the sum assured has gone up from Rs. 66.90 lakhs to Rs. 77.87 lakhs.

The claims experience has not been uniform. The claims ratio in the fire department, which was a little more favourable in 1951 than in the preceding year, has risen in 1952. But, at 20.3 per cent., it is still lower than in 1950. The claims ratio in accident and miscellaneous business, which had gone up from 44.1 per cent. in 1950 to 52.1 per cent. in 1951, shows a welcome drop to 42.2 per cent. in 1952. A sharp rise in the claims ratio from 52.1 per cent. to 71 per cent. is noted in marine business.

An encouraging feature of the accounts is the further decline in the expense ratio in the fire business, indicating that the management's efforts at bringing down the costs year after year have succeeded. In the accident and miscellaneous business, the expense ratio has been kept at more or less the same level as in 1951. But in the marine business, the expense ratio, which had been declining in the previous two years, has risen during the year under review.

As in the previous year, the Directors have kept the fire and miscellaneous funds at 50 per cent. of their net premium incomes. The marine fund has, however, been raised from 90 per cent. to 100 per cent. of the premium.

A more detailed picture of the Company's working results for 1952, as compared with those for the previous three years, is shown in the following table:

(Value in lakhs of rupees)

	For the year ended 31st December			
	1952	1951	1950	1949
General Department				
Premium income (net)—				
Fire	24.54	18.49	13.03	11.81
Accident and miscellaneous	11.93	10.38	9.15	10.44
Marine	12.44	7.89	7.26	3.96
Claims paid and outstanding—				
Fire	4.97 (20.3%)	2.93 (15.8%)	3.15 (24.2%)	2.53 (21.4%)
Accident and miscellaneous	5.03 (42.2%)	5.41 (52.1%)	4.04 (44.1%)	4.31 (41.2%)
Marine	8.83 (71%)	4.11 (52.1%)	5.00 (68.9%)	1.22 (30.8%)
Commission and expenses—				
Fire	10.36 (42.2%)	9.02 (48.8%)	7.17 (55.0%)	6.66 (56.4%)
Accident and miscellaneous	5.55 (46.5%)	4.84 (46.2%)	4.28 (46.8%)	4.24 (40.6%)
Marine	4.57 (36.7%)	2.29 (29.0%)	2.32 (31.9%)	1.71 (43.2%)
Fire fund	12.27	9.24	6.51	5.91
Accident and miscellaneous fund	5.96	5.19	4.57	5.22
Marine fund	12.44	7.10	6.17	3.96
Life Department				
New business—				
No. of policies	2,454	2,235	2,363	2,338
Sum assured	77.87	66.90	85.28	75.62
Total business in force	351.33	325.74	298.50	255.14
Total premium	17.01	14.47	14.37	10.95
Claims	0.77	0.64	1.05	0.86
Life fund	46.24	34.64	26.51	18.33

A perusal of the various revenue accounts shows that the fire business has been the most profitable one. The profit of the department amounts to Rs. 6.40 lakhs and compares very favourably with Rs. 3.96 lakhs in 1951. The accident and miscellaneous business has brought a profit of Rs. 68,737, as against Rs. 38,016. The profits of the two departments have been largely offset by the substantial loss of Rs. 6.13 lakhs (as against a profit of Rs. 69,877 in 1951) suffered in marine business. The dividend on the ordinary shares has been maintained at Re. 1 per share of Rs. 20, after paying the 4 per cent. preference shareholders and maintaining the taxation reserve at Rs. 1 lakh.

WESTERN INDIA LIFE'S BUSINESS SATISFACTORY

A small increase in both the new policies effected and the sum assured is disclosed by the accounts of the Western India Life Insurance Company, Ltd. (head office: Satara City; Manager: Mr. K. Y. Joshi), for the year ended 31st December, 1952. The number of proposals which have resulted into policies shows an increase from 11,108 to 11,188 and the sum assured from Rs. 268.52 lakhs to Rs. 269.10 lakhs. This increase has been achieved in the face of "very difficult and trying" business conditions.

The following comparative table shows the progress of the Company in the last three years:

(Value in lakhs of rupees)

	For the year ended 31st December			
	1952	1951	1950	1949
New business completed—				
No. of policies	11,188	11,108	11,562	11,401
Sum assured	269.10	268.52	263.51	245.47
Premium income	13.25	14.10	13.02	12.75
Life fund at the end of the year	5,60.73	5,05.62	4,60.69	4,15.38
Interest yield on life fund	4.27%	4.42%	3.57%	3.44%
Claims—				
By death	6.77	7.08	6.68	6.43
By maturity	20.10	16.89	14.92	13.23
Expense ratio	23.89%	22.85%	23.08%	23.54%
Investments—				
Book value	4,87.08	4,40.95	3,98.76	3,64.46
Market value	4,62.38	4,18.21	3,96.64	3,64.82
Dividend to shareholders	30%	30%	25%	10%

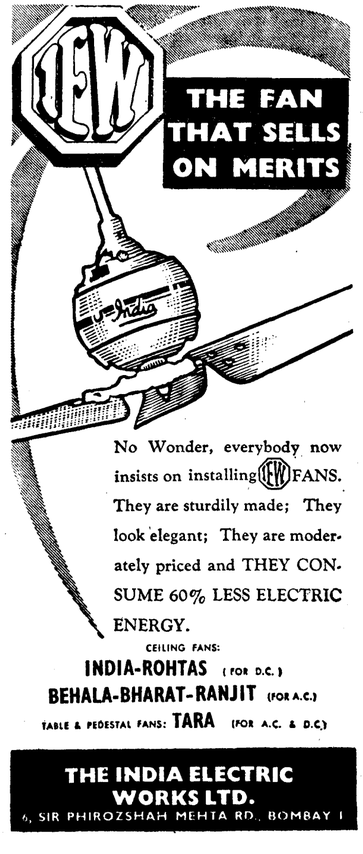
Though the pace of increase in new business has slowed down further during the year 1952, it is gratifying that the Company's tradition of increasing new business from year to year has been kept up. The annual premium income has gone down slightly, despite the small increase in new business, but that may be due to lapses in view of the decline in the saving capacity of the people, following the high cost of living. An increase of Rs. 2.90 lakhs is noted in claims; this is mainly due to the rise in claims by maturity. The experience of the Company in respect of claims by death is satisfactory, reflecting the "great care exercised by the Directors in the selection of business." Expense ratio also has gone up from 22.85 per cent. to 23.89 per cent., but this is in consonance with the general experience of all companies. In the case of Western India, even this higher ratio is stated to be within margin and compares well with the general average of 26.8 per cent. in 1951.

As a result of the year's working, the Company has added a sum of Rs. 55.11 lakhs to its life fund, bringing it to Rs. 5.61 crores. In the last three years alone, the Company has raised its life fund by over Rs. 1.45 crores. The net interest yield on the life fund has declined to 4.27 per cent., but it is substantially higher than the average interest yield of 3.30 per cent. earned by all insurance companies in 1951. The Company's investments, as will be noted from the foregoing table, as at the end of 1952, show a depreciation of Rs. 24.70 lakhs, of which the depreciation in 1952 is said to be Rs. 1.96 lakhs. This is mainly due to the marked fall in prices of debentures and shares of public bodies, public utility concerns and other industrial securities. The prices of Gilt-edged securities have not shown any appreciable fall. The Directors have transferred a sum of Rs. 2 lakhs to the investment reserve, thereby raising the reserve to Rs. 24.75 lakhs, at which level it amply covers the total depreciation. The fall in prices of debentures and ordinary shares has, however, not been an unmixed evil. For, the Chairman points out, "as the new investments are made at the reduced prices, there is an increase in the yield available on these investments, so that the average net yield on our investments continues to be good."

INDIAN LIFE ASSURANCE OFFICES ASSOCIATION

The Silver Jubilee Souvenir (published by the Indian Life Assurance Offices Association, Bombay) gives an account of the genesis of the idea of forming an association of Indian life offices, and the history of its growth and development during the last 25 years of the existence of this Association. The Association, as is well known, has been primarily responsible for promoting *esprit de corps* among its members. But the value of the Association, however, far transcends the limited scope of providing a meeting ground for all its members, for, it has played and continues to play a notable role in shaping the development of insurance in India. From time to time it has represented to the Government the views of insurers in a manner which has compelled the Government to take due notice of its opinions. The *Souvenir*, complied by Mr. K. C. Desai, one of the founders of the Association, and published this year to mark the completion of a quarter of a century of useful existence of the Association, will be read with interest by all those who would like to know the history of Indian insurance.

The *Souvenir* carries several eminently readable articles. Mr. L. S. Vaidyanathan reviews the scope and future of life assurance in India, while Mr. V. H. Vora describes the mechanisation of clerical work in life offices. Mr. R. S. Bhatt analyses the investment problems of life assurance companies. Mr. Vaidyanathan feels that the companies in India have touched only the "fringe of the problem as regards making the population insurance-minded." He has made several constructive suggestions for incorporation in the Estate Duty Bill so as to make it less rigorous in scope so far as the insured are concerned.



VICTORIA MILLS LTD., BOMBAY

CHAIRMAN'S SPEECH AT ANNUAL GENERAL MEETING

THE Fortieth Annual General Meeting of the Victoria Mills Limited, Bombay, was held on *Wednesday, 17th June, 1953*. Mr. Madanmohan Mangaldas, M.L.A., presided and delivered the following speech:

"GENTLEMEN,

"I have great pleasure in welcoming you to the fortieth ordinary general meeting and in placing before you the audited accounts of the Company for the year ended 31st December, 1952, and your Directors' report for the said year.

"From the profit and loss account, you will notice that the Company has made a profit of Rs. 12,16,793 which is smaller by roughly Rs. 8,00,000 than the profit of Rs. 20,02,399 for the year 1951. The reduction in profit is attributable to various factors.

Setback in Demand

"As indicated in the Directors' report, the prices for foreign cotton were extemely high and there was a slump in the demand for cloth. The conditions created by the setback in demand persisted in the market quite a long time and the mills had to dispose of their goods at a discount to prevent over-hoarding.

"In the year 1951, the Government of Bombay had imposed a power cut which continued during the year of accounts practically till June and the consequential reduction in working hours told on production.

"Another factor which affected the profits of the Company adversely was the rise in the prices of store materials and fuel. For the year 1951, the expenditure for stores and fuel had amounted to Rs. 21,58,772; whereas for the year 1952, the aggregate expenditure for these two items turned out to be Rs. 26,57,073 resulting in an increased cost of production, for the latter year by Rs. 5 lakhs.

Working Result Quite Good

"Considering all this, I may be permitted to say that the working result of the Company for the year under review has been quite good. The profit as shown by the profit and loss account gives a yield of 50 per cent. on the amount of the paid-up capital of the Company, which has made possible for your Directors to maintain dividend on the ordinary share capital at Rs. 15 per share and, at the same time, to make necessary provisions for depreciation and taxes.

"If you now refer to the balance-sheet, you will observe that the fixed assets of the Company stand at Rs. 43,73,029. The figure for the same at the end of 1951 stood at Rs. 35,87,825. The various additions made during the year to the plant and machinery of the Mills have been, in the main, mentioned in the Directors' report and I need not repeat them. Similar additions were made also in the years 1951 and 1950 to the extent of approximately Rs. 5½ lakhs and Rs. 3½ lakhs, respectively. This is being done in pursuance of a steady policy adopted by the management to renovate, replace and install such pieces of machinery and bring about such extension to buildings, as may be advisable, from time to time, for the achievement of greater efficiency and better results.

Burden on Industry

"The policy of the Union Government, inclined towards the creation of a Welfare State, has been responsible for imposing ever increasing burden on the industry by way of enacting laws for provident fund, State Health Insurance Scheme and other labour laws; the levy of a cess for subsidisation of the handloom industry and the impost on sales (State law). The cumulative effect of all this is bound to imperil its strength which is necessary to withstand competition from foreign sources.

"Before resuming my seat, gentlemen, let me express, on behalf of my colleagues and myself, our most sincere thanks for your reposement of trust in us, which we endeavour to live upto. I also convey our sincere thanks to all the members of the staff, without whose unflinching devotion to duty and steadfastness, the management would not have been able to achieve all what they have done so far.

"I now beg to move that the Directors' report and the audited balance-sheet and profit and loss account for the year ended 31st December, 1952, be and are hereby adopted."

NEW INDIA ASSURANCE COMPANY, LIMITED

NEED FOR RELAXING INVESTMENT RESTRICTIONS

MR. A. D. SHROFF'S ILLUMINATING SPEECH

PRESIDING over the Thirty-fourth Ordinary General Meeting of the New India Assurance Company, Ltd., held in Bombay on Wednesday, 24th June, 1953, Mr. A. D. Shroff, Chairman of the Company, emphasised, in the course of his speech to the shareholders, the need for a judicious relaxation of the investment restrictions on Indian insurers.

The following are extracts from his speech:

"GENTLEMEN,

"Since I addressed you last year, the economy of the country has been comparatively stable. After the precipitate fall in commodity prices in the first half of 1952, prices have settled down at a little higher level than the lowest seen during the slump. It is only recently that the price trend has firmed up to some extent. Again, on the whole, industrial production in 1952, as compared with 1951, showed a further increase, particularly in our major industries. A number of small industries, however, have been experiencing difficulties in marketing their products with the result that in recent months unemployment has been on the increase. The cotton textile industry has shown a substantial increase in production which cannot be absorbed within the country and, therefore, an intensive drive is called for in the interests of larger exports abroad. Exports in 1952 suffered a sharp setback from Rs. 742 crores to Rs. 586 crores and with imports remaining steady the balance of payments on current account would have shown a very substantial deficit but for the assistance obtained from the U.S.A. Perhaps the most encouraging feature during recent months is the food situation. Except in limited areas due to severe drought, the acute shortage of food has been relieved which will enable the Government in the coming year to reduce substantially the imports of foodstuffs from abroad.

"The Five-year Plan has received increasing attention from all over the country and although no spectacular results have yet been achieved, progress has been made on long-term projects, and if the anticipated financial aid from abroad is forthcoming, the main objectives of the Plan are likely to be reached. The Government have definitely accepted the principle of deficit financing to augment their resources for financing the Five-year Plan and I am of the opinion that within limits and under expert control it should stimulate further economic development.

Tax Structure

"I welcome the appointment by the Government of India of a Commission to inquire into the taxation structure of this country. It is generally hoped that under the able and distinguished chairmanship of Dr. Matthai this Commission will make a thorough, scientific and objective study of the present taxation structure and particularly its implications for the general objective of a large-scale and rapid economic development of the country. In my opinion, the future taxation structure of the country should, in the context of the present economic needs of the country, lay greater emphasis on providing conditions for accelerating capital formation rather than on eliminating inequalities of income and wealth. It was estimated that before the last world war national savings represented about 5 per cent. of the annual national income. With the ever-widening scope of the public sector, a larger and increasing part of the national savings is being diverted in recent years to expenditure in that public sector with the result that the private sector has been finding it increasingly difficult to raise new capital both for expansion of existing industries and for the promotion of new ones. I trust that as a result of this investigation the Government will be able, in future, to evolve a tax structure which will leave a substantial part of the country's savings for economic development through the private sector.

"In regard to the estate duty which will shortly be brought into force, I wish to invite the attention of the Government of India to one particular clause which has reference to insurance. It is proposed to exempt life policies from the estate of a deceased to the extent of only Rs. 5,000. I submit that the present-day value of money being what it is, the amount exempted is inadequate and may prejudicially induce persons intending to insure to reduce the amount of their life policies and with it, the effective protection of the dependents. It may well strike at the very root of the effort which life insurance companies in India are making to foster the growth of the habit of family protection through life assurance policies. I, therefore, earnestly appeal to Government substantially to raise this exemption limit.

Nationalisation

"During the year under review a number of important statements were made suggesting, if not nationalisation, increasing control of insurance business and particularly of the funds of insurance business in this country. Insurance, along with banking and shipping, has played in the past and will continue to play a vital role in the development of India's economy. As a matter of fact, the most effective instrument for mobilising the savings of the people of this country is provided by insurance companies and through this agency for capital formation Indian insurance companies are making a substantial contribution towards the implementation of the Five-year Plan. Whilst I would be the last to assert that the working of all insurance companies in India is on a solid and unimpeachable basis, the service which Indian insurance as a whole offers to-day in the various branches of India's economic life is the result of private enterprise actuated by a strong desire to make Indian insurance part and parcel of the national effort to raise the standard of living in this country. I believe that with a judicious relaxation of the restrictions imposed through section 27A of the Indian Insurance Act, well-managed Indian insurance companies can still make further and progressive contribution towards the rapid building up of the industrial structure of India, and in this connection I would earnestly request the Government of India to remove some of the anomalies inherent in the present restrictions and also to amend some of the restrictive clauses so that Indian insurance companies can be a source of financial assistance, particularly to small industries.

"In order to enable Indian insurance to play its rightful and increasing role in the development of the country's economy, it is an essential pre-requisite that Indian industries should lend their increasing support to Indian insurance. It is rather unfortunate that some large Indian industrial interests should still require to be persuaded to utilise the services of Indian insurance which offer to-day both service and security comparable to any obtainable elsewhere. In this connection, I have read with considerable interest the observations of the Hon'ble Minister for Commerce and Industry before the Associated Chambers of Commerce last December to the effect that foreign business houses in India should extend their patronage to Indian insurance, banking and shipping. Our relationships with non-Indian insurance companies operating in India have been most friendly and we have with a large number of foreign companies extensive arrangements which are operating to the mutual advantage of both parties. It is but fair that non-Indian business interests who, under the Indian Constitution and law, enjoy the same protection and treatment that is accorded to Indian interests should regard it as an obligation to treat Indian insurance companies on a par with foreign companies. This will further cement the friendly ties already existing between Indian and non-Indian business in this country and promote that spirit of reciprocity which will ultimately redound to the benefit of both.

New Types of Business

"Shareholders will be interested to know that, last year, we decided to embark on three new types of business. Your Directors consider that New India owes it to the country that it should provide increasing insurance facilities for types of risk which have not so far been covered in this country. With this object in view, we have made arrangements to start underwriting hull insurance, machinery insurance and cattle insurance. I wish to take this opportunity of expressing our gratitude to the patriotic and farsighted decision of the Directors of the Scindia Steam Navigation Company to place with Indian companies for the first time their entire hull insurance business. We have been able to satisfy Scindias that we are fully equipped to deal with this business and to render as good and efficient a service as they have so far obtained from abroad. I trust other Indian shipping companies will follow the lead given by Scindias.

Machinery Insurance

"Machinery insurance is comparatively new to this country. In this branch of our business which we have only recently started developing, we have been able to secure the assistance and co-operation of Munich Reinsurance and Allianz and Stuttgarter who have placed at our disposal a team of technical men and their fifty years' experience in this line of business. All new activities take time to develop. Our organisation has started educating interested parties both in the desirability and ultimate benefit afforded by this class of insurance, and I am not without hope that in course of time we shall build up a fairly substantial business in this new activity.

"Similarly, your Directors felt that the New India should start providing facilities for cattle insurance. In a country like ours where agriculture will always occupy a predominent position in the national economy, there is great scope for developing cattle insurance and although it is likely to make slow progress in the initial stages, we look forward to making substantial progress ultimately. In the development of these new lines of business we are offering a partnership interest to a number of Indian insurance companies without reserving any special advantage to ourselves and I am glad to say that some insurance companies have already availed themselves of our offer.

"I referred last year to the progress made by the Company in the field of our operations abroad. I am glad to inform you that this progress has continued satisfactorily and that the Company is now represented in 36 different countries either through our own branches or through agencies in those countries. Nearly 9 per cent. of our direct business in 1952 was secured from our operations abroad.

Foreign Branches

"I had the opportunity recently of inspecting our branches in the Far East and South East Asia, at Rangoon, Bangkok, Singapore, Hong Kong and Tokyo. I found all our offices well located and manned by personnel who have succeeded in establishing valuable contacts in those countries. We have recently been investigating the possibilities of opening branches at Manila and at Djakarta. I take this opportunity of expressing our grateful appreciation of the patronage and support we have received in these countries and wish to assure our clientele that the New India is always anxious to provide as adequate and efficient a service to them as may be found anywhere else. Without being unduly optimistic, I am confident that the organisation we have thus built up will prove fully adequate to the needs of our expanding operations in these areas.

"I shall now review the working of the Company in 1952. The results of our operations during the year 1952 were on the whole satisfactory. We secured a total premium income of Rs. 8.10 crores, of which Rs. 3.86 crores was in the general department and Rs. 4.24 crores in the life department as against a total premium income in 1951 of Rs. 7.49 crores made up of Rs. 3.64 crores and Rs. 3.85 crores in the general and life departments respectively. The profit of the general branch amounted to Rs. 41.95 lakhs, being 10.9 per cent. of the total premium income of that branch.

"The disbursements of the year's general premium income under various heads are as follows:

Claims Ratio 48.4 per cent. against 43.3 per cent. last year; commission, expenses and taxes ratio 38.7 per cent. against 32.0 per cent. last year; reserves for unexpired risks—on the basis of standard reserves for unexpired risks—resulted in a strain of 3.1 per cent. against 14.0 per cent. last year. There is thus a strain of 5.1 per cent. on claims, and of 6.7 per cent. on commission, expenses and taxes and a decrease in strain of 10.9 per cent. on reserves.

"In the fire department, premiums amounted to Rs. 229.28 lakhs, and show an increase of Rs. 6.00 lakhs, which is equivalent to 2.7 per cent. of the 1951 premiums. The cost of claims incurred by the department was 38.5 per cent. against 34.9 per cent. in the previous year. The ratio of commission, expenses and taxes to premium income was 46.5 per cent. as against 42.2 per cent. in 1951. After bringing interest to account, the department returned a profit of Rs. 36.4 lakhs, equal to 15.9 per cent. of the premiums, as against Rs. 41.3 lakhs, which was 18.5 per cent. for the preceding year.

"From the year's profit, Rs. 4,000 have been transferred to the reserve for unexpired risks to round off the reserve at Rs. 96 lakhs; Rs. 3 lakhs have been credited to the additional reserve, leaving Rs. 33.39 lakhs for transfer to the profit and loss account. The departmental reserves now amount to Rs. 155 lakhs, being 67.6 per cent. of the year's premium income, as against Rs. 150 lakhs or 67.2 per cent. in 1951.

Miscellaneous Department

"The working of the miscellaneous insurance department for the year has been satisfactory. The premium income amounted to Rs. 65.52 lakhs, registering an increase of Rs. 7.8 lakhs, being an increase of 13.5 per cent. of the 1951 premiums. The claims cost incurred by the department works out at 52.2 per cent. of the premiums, as against 44.7 per cent. for 1951. Commission, expenses and taxes amounted to 36 per cent. of the premiums, as against 28.8 per cent. in 1951. The profit shown by the department, after taking credit for interest, is Rs. 10.97 lakhs, equivalent to 16.7 per cent. of premium income, as against Rs. 7.8 lakhs or 13.6 per cent. respectively in 1951.

"From the year's profit, an amount of Rs. 79,000 has been credited to the reserve for unexpired risks to round it off to Rs. 27 lakhs. Rs. 2 lakhs have been credited to the additional reserve, leaving Rs. 8.17 lakhs for transfer to profit and loss account. The departmental reserves now amount to Rs. 51 lakhs, equalling 78 per cent. of the year's premiums, as against Rs. 46 lakhs, with a ratio of 79.7 per cent. last year.

"The premium income of the marine department for the year was Rs. 91.15 lakhs, and showed an increase of Rs. 8.45 lakhs, representing 12 per cent. of the premiums for 1951. The cost of claims works out at 70.6 per cent. of the premiums, as against 65.1 per cent. last year. Commission, expenses and taxes amounted to 26 per cent. of the year's premium income, as against 17.0 per cent. last year.

"After taking credit for interest and providing a reserve on 99.8 per cent. basis, the department showed a profit of Rs. 30,584, which has been transferred to profit and loss account. The departmental reserves now amount to Rs. 132 lakhs, and represents 144.8 per cent. of the year's premiums. I explained to you last year that it is normally not possible to set up the 100 per cent. reserve from the year's premium income on a substantial increase. The disagreeable profit of the account is, therefore, explained by this phenomenon.

"During the year under review, a loss of Rs. 90,457 was suffered on sale and redemption of securities. This loss has been debited to the profit and loss account. Further, the book value of our investments in the general department is Rs. 471.83 lakhs showed a depreciation of Rs. 8.93 lakhs. We have, therefore, transferred from the investment reserve Rs. 9.0 lakhs to cover this depreciation.

"The progress of the life department for the year has been satisfactory. We issued during the year 53275 policies assuring Rs. 18.04 crores, showing an increase of Rs. 1.35 crores over the previous year, equivalent to 8.1 per cent. of the new life business for the year 1951. The average sum assured per policy was Rs. 3,387 compared with Rs. 3,503 last year.

"The premium income of the department inclusive of consideration for annuities amounted to Rs. 4.24 crores as against Rs. 3.85 crores in 1951. The interest income after deducting income-tax was Rs. 56 lakhs, or 3.54 per cent., as against Rs. 45 lakhs or 3.29 per cent. last year.

"The renewal expense ratio for the year, calculated in accordance with the Insurance Rules, was 14.8 per cent. against 13.1 per cent. last year.

"Death claims for the year amounted to Rs. 30.85 lakhs. The mortality experience for the year has been quite satisfactory, the 'actual claims' working at 50 per cent. of the 'expected claims', compared with 51 per cent. last year.

"Surrenders have practically doubled, the surrender values paid amounting to Rs. 21.38 lakhs against Rs. 10.31 lakhs in 1951. The rate of surrenders is a good index of the stringent financial conditions which the insured as a class are experiencing.

"The lapse ratio was 9.5 per cent. against 6.9 per cent. last year. Your Directors are fully seized of the gravity of this problem and a concentrated drive is being organised to bring the lapse ratio under control.

"We have suffered during the year a loss of Rs. 1,43,318 on the sale of investments, and a further depreciation of about Rs. 30 lakhs. It must be appreciated that the Company's life department is relatively young, and that about Rs. 16 crores have been added to the life assurance fund during the war and post-war years. This period experienced low interest yields and severe inflation, followed by higher interest yields and depressed economic conditions. The net depreciation and loss we have suffered on our investments during the period 1940-52 amounted to Rs. 96 lakhs, which works out at 6 per cent. of the accretion to our life fund from 1st January, 1940, onwards. This compares favourably with the loss and depreciation suffered by other companies of equal standing.

"The life assurance fund now amounts to Rs. 17.01 crores, showing an increase of Rs. 2.27 crores during the year.

"Coming to the profit and loss appropriation account, the balance of profit brought in amounts to Rs. 36.1 lakhs. After transferring Rs. 10.7 lakhs to reserve for taxation, Rs. 10 lakhs to general reserve and Rs. one lakh to the dividend equalisation fund, we have a balance of about Rs. 15.2 lakhs, from which your Board recommend an income-tax-free dividend of Rs. 2 per share. This will absorb roughly Rs. 14.2 lakhs, and leave a balance of Rs. 94,167 to be carried forward to next account.

"The overall result of our operations in 1952 is reflected in a further strengthening of our financial resources by Rs. 2.9 crores with an aggregate total of Rs. 23.2 crores. I am sure shareholders will approve of the policy the Directors have consistently followed in conserving the financial resources of the Company so as to offer an increasing measure of security to our clientele in all departments of the Company's operations.

"I will now deal with some important problems the Company and Indian insurance are facing.

Training Young Men

"Last year, I explained to you that there were immense possibilities for further development for Indian insurance and for the New India. For this development, it is necessary for us to have well-trained men, both on the development and administrative sides of our business. Our main problem is, therefore, to build up a cadre of such men.

"In 1952, we selected 15 apprentices. We are giving them an intensive training on the theoretical and practical sides of our business. You will be interested to know that for training them we have organised a model office, which provides a representative model of a big organisation and its problems. This new training medium is now being tried and readjusted. Once it is perfected, the training of our new men will become far easier and more effective.

"Another important development has been in the field of management research. We have organised a management research department. The functions of this department are: preparation of operational manuals; study and research into administrative procedures with the object of simplification, rationalisation and mechanisation of various operations, and the conduct of operational audits. These activities are absolutely new to the Company, and probably to this country. We, therefore, face the problems every pioneering activity brings forth. However, I am pleased to say we are making good progress.

Private Enterprise

"Perhaps the most important task facing Indian insurance is to place this business on a healthy, sound and profitable basis. Indian insurance has reached its present stage through private enterprise and those engaged in the business are naturally anxious to have freedom to develop it and as little interference as possible in the day-to-day activities of the business. However, it has to be admitted that the management of a number of companies leaves very much to be desired and I should like to stress here that failure to maintain the highest standards of integrity and discipline will not only jeopardise the stability and growth of Indian insurance but will also prove a menace to the continued existence of private enterprise in this field. Apart, therefore, from any action which the Government may ultimately be compelled to take, I most earnestly appeal to all those who have the best interest of Indian insurance at heart to do their utmost to maintain proper standards of conduct in compliance with the provisions of the Insurance Act."

Mr. Shroff concluded by saying that the present set-up of the Insurance Act was sound and practical, and strict and scrupulous compliance with its provisions was bound to place insurance business in the country on a sound and healthy basis. The Executive Committee of the General Insurance Council had now formulated a Code of Conduct for all insurance companies with the primary object of enforcing the provisions of the Insurance Act. This Committee had set up voluntary machinery for inspecting of the working of companies to ensure that the provisions of the Act were duly complied with. A number of companies had resisted this move—an opposition which was difficult to comprehend, as, every company which was honestly resolved to comply with the provisions of the Act had nothing to fear. On the other hand, the machinery of inspection may help in drastically reducing, if not entirely eliminating, the abuses and malpractices which were prevalent at present. He wished to assure the authorities that in their effort to restore health and a high standard of conduct, the New India will extend fullest co-operation and support.

BUSINESS RECORD FOR 1952

GENERAL INSURANCE

	Rs.
Fire Premiums	2,29,28,452
Fire Insurance Fund	1,55,00,000
Marine Premiums	91,14,890
Marine Insurance Fund	1,32,00,000
Miscellaneous Premiums ...	65,51,666
Miscellaneous Insurance Fund ..	51,00,000

LIFE ASSURANCE

First Year Premiums	81,89,123
Renewal Premiums	3,37,66,102
Life Fund	17,00,71,472
New Business	18,04,24,858
Business in Force	83,85,01,092

RURAL RECONSTRUCTION IN INDIA—II

PRIORITY FOR WORK-GIVING PROJECTS NECESSARY

(By Prof. T. R. SHARMA)

THE real problem of rural reconstruction in India is not the rehabilitation of about 12 per cent. landless labourers but of absorbing surplus workers unemployed, partly employed, or unemployable on land. The number of such people is likely to increase much faster with the progress of education and economic development in the near future. Land redistribution offers no solution to this problem, and as such, it has only political significance and little economic importance. It cannot, however, be denied that, as explained earlier, it is desirable, to a limited extent, and that it may be difficult to resist it in certain regions.

How, then, can the problem of rural reconstruction be tackled? The first and the foremost, in my opinion, is the sector of rural education that requires earnest thought and action. As pointed out earlier, education appears to be spreading fast in the rural areas. But the vast majority of the new educational institutions is imparting instruction in the groups of subjects included under Arts or Commerce, because these subjects are the easiest to start and require least expenditure. This education, no doubt, increases literacy and awakening in the countryside, but in no way does it equip the youth for earning his bread. The educated youths are flocking to strictly limited Government posts like moths on a point of light on a hot evening after rain.

The Government has known this weakness of the educational system for quite a considerable period of time. A few years back the Government of Uttar Pradesh tried to make certain improvements in the primary education. Almost all the teachers of the primary schools, young and old, even on the verge of retirement, were almost compelled to attend refresher courses and and learn certain crafts like cardboard and clay work, book-binding, spinning and weaving. But to the dismay of all concerned, when these teachers return to their schools, almost no organising body (a District Board or a Municipal Board) could find funds to provide raw materials for the use of the pupils. Most of the schools had to content themselves by getting some models for demonstration. This is the ultimate shape which has been achieved by the primary education, which was supposed to centre round some craft. The condition in other States may not be very different.

In many States the Governments have tried to introduce agricultural education on a large scale in schools and colleges. In some of the States such as U.P., where an early start was made, almost saturation point has been reached. Agricultural Departments do not require many new recruits now. In the alternative no land is available for starting modern farms on a scientific basis; the family holdings are too small to permit any use of modern technique. As a result, most of the institutions are finding it difficult to maintain the classes in Agriculture for want of students prepared to take up the subject.

U.P. Experiment in Education

The Education Minister of Uttar Pradesh is again worried at the dismal results of the new educational policy, at least so far as the field of employment of the educated youth is concerned. A new scheme is likely to be introduced soon. The first trial will be given in the Government Higher Secondary School in two stages. The first stage will cover classes VI, VII and VIII of the junior high schools. The second stage, the real higher secondary stage, will comprise classes IX to XII as well as the training institutions. According to the scheme, all students are to take part in cleaning the school, dusting the furniture, spinning, digging, fence-making, vegetable and flower-gardening, etc. Besides these, weaving *durree*-making, repairing of cycles, etc., are some of the trades in which junior high school boys will be trained. The students of higher secondary classes will specialise in watch-repairs, electrical work, leather work, etc. School co-operative societies are to be formed to supply the raw materials and to sell the articles.

So far as the scheme is aimed at inculcating the ideals of self-help, social service and the dignity of labour, it is all right. But if we examine the scheme from the point of view of enabling the educated young men to take up some useful productive vocation, other than Government service, there may be many misgivings about it. When we are thinking of introducing certain crafts like leather-working or weaving, are we definite about the type of craft we have in mind? If the intention is to introduce training in existing Indian handicrafts, then probably there will be no dearth of technicians and tools. But then the question is whether the effort will be worthwhile, keeping in mind the condition of the handloom weavers, specially in Madras, and of the other similar craftsmen. On the other hand, if we intend to introduce modern methods of small-scale production on the Japanese model, will we be able to get enough technicians and tools to provide personnel and equipment for all the Government institutions? If such implications are not taken into consideration carefully, such schemes would share the fate of the existing wood work and manual training classes.

Youths in Countryside Helpless

The condition of our youth in rural areas is comparable exactly to the condition of shipwrecked people in the ocean, where nothing but water is to be seen all round; our rural youth sees nothing but deficit agriculture all around him. So far as the idea and thought of any other vocation is concerned, his mind is blank and void. To my mind it appears that it is not so much actual training in certain crafts as *familiarity* with them which arouses the imagination of the youth and prompts him to action. To make the idea a little more explicit, we may take the example of progressive countries. There boys and girls get familiar with most of the modern mechanical appliances from their very childhood. They find many small appliances in their own families and still more bigger appliances all around them. The familiarity impels them to choose one and then training facilities are available to make them expert workers in particular lines and jobs.

This kind of environment is entirely lacking for our youth. Is there anything that can be done to offer them opportunities of familiarising themselves with modern mechnical appliances?

Community Projects

This question leads us to an examination of rural development "community projects." The first pilot project was taken up at Mahewa in the U.P. under the guidance of Mr. Albert Mayers. The success of this project encouraged the Government to initiate similar projects throughout India. Under this scheme 55 projects covering an area of 26,950 square miles in 18,464 villages with a population of 15.19 million, were inaugurated in all the States of India on 2nd October, the birthday of Mahatma Gandhi. The main sectors of rural life on which efforts were concentrated at the pilot project and where substantial success has been achieved are agriculture and animal husbandry, housing and inter-village communication, public health and social life. In agriculture, as a result of supply of better seeds, the use of *sanai* green manuring and chemical fertilisers and improvements in irrigational facilities and agricultural practices, the yield per acre of foodgrains and potatoes is said to have increased from 20 to 25 per cent. In animal husbandry, the use of pedigree bulls, the use of *barseem* for fodder and mass-measures against diseases such as rinderpest have given very encouraging results. In public health measures against malaria, small-pox, cholera and scabies, and the provision of pure drinking water have proved very beneficial.

In the sphere of housing and village environment, the construction of private houses by individuals, and erection of school buildings, widening and paving of village lanes, and construction of some inter-village roads, have been achieved through voluntary and co-operative effort in the form of cash, kind or manual labour. For improving the social life of the villages, the organisation of *panchayats* and co-operative societies, the establishment of night-adult schools, and circulating libraries and the encouragement of folk music, folk dramas and village fairs are praiseworthy.

The Mahewa Centre was established in September, 1948, and these solid achievements during this brief period of four years are really very creditable. But these benefits have been made available only to the rural population of about 79,000 at a cost of over Rs. 15 lakhs. Some critics are very sceptic about the possibility of extending similar benefits to the total rural population throughout India on account of the heavy cost of these projects. When questioned about the period for which this expenditure will have to continue, Mr. Mayer is reported to have replied that it would continue for ever and ever. I feel very much inclined to concur with him, provided such expenditure is supported by a substantial increase in the earnings and production of the villages in the near future, i.e., if this expenditure can act on employment and production in rural areas in the way as the sprinkling of a pound of dry-ice produces masses of rain-giving clouds. An increase of 20 to 25 per cent. in agricultural output per acre is a very encouraging sign in that direction as, in the first place, it provides the first bricks for laying a solid foundation of the expanding modern edifice of rural economic life. Expanding earnings providing increasing additional purchasing power, the magic wand of modern economic progress to the rural masses, are the first sign of the dawn of hope on the dark horizon of rural poverty. In the second place, increased production of raw materials and food also widens the basis of industrial development. The results achieved are worthwhile and justify the intensification and extension of the effort.

A Few Other Problems

Tackling of certain other pressing rural problems such as land and tenancy reforms, reorientation of rural education and the provision of occupations other than agriculture, has not yet been attempted by the organisers of the community projects. Perhaps it is due to the fact that land reforms require legislative action and support; new educational methods cannot be introduced in small patches; and the line of action in the sector of new vocations is very dim. At Mahewa they appear to have tried cottage industries like *gur*-making, brick-burning, oil-pressing, weaving, leather-working, etc., without much success. From the reports, it appears that only brick-burning and *gur*-making could give some satisfactory results. It would not be wrong to suggest that the line of action in this field is yet very obscure. My own feeling is that none of the cottage industries carried on with old technique is likely to succeed. Perhaps we shall have to depend more on small-scale industries using modern technique and tools.

This weakness of the community projects is now being realised by our top-ranking people. Mr. Krishnamachari, Member of the Planning Commission, addressing the Delhi School of Economics some time ago, said that "at present there was a colossal waste of human energy in the rural life of the country. Some work has to be created for them. The national extension service visualised subsidiary and other occupations for the idle season." A very similar current of thought appears to be running at the Ford Foundation training-*cum*-extension project at Bakshi-Ka-Talab near Lucknow, where the officials and workers, who will man the community development projects in the major States of Northern India, commenced their second round of training on 2nd October, 1952. It is being felt that unless small work-giving projects are started and worked side by side with the theoretical and practical, agricultural, social, literary and other types of education which are being given, the problem before quite a sizable percentage of the population of villages will remain unsolved. Their problem is how to find productive work assuring regular earnings in the absence of any land or with only insignificant patches of it in their possession. It is learned that an important aspect of working at the centre, during the second phase, will be starting of small-scale industries providing employment to those who want work. Any specific industries, except the brick-kilns, do not appear to be planned in advance.

Selection of Industries

The problem of selecting industries suitable for rural areas is really a very difficult one. In spite of all efforts it has remained almost insoluble. The only industries which have reached the rural areas are either connected with the processing of agricultural produce, e.g., gins, presses, etc., or with the preparation of heavy housing materials, e.g., brick-kilns, lime kilns, etc. Any industry to be started in the rural areas must fulfil two very important conditions—(1) it must cater to supply some common need of the local people and (2) it must use the local raw materials. After food, cloth is the next commodity which is in universal demand and a considerable section of population throughout the country is dependent on weaving for its livelihood. But it cannot reasonably be hoped that the handloom industry can be sustained for long in modern times and, therefore, it seems desirable that efforts should be made to replace handlooms by powerlooms, wherever electric power has reached the rural areas. In a poor country like India, the cycle is the only road vehicle to become most common for individual conveyance, and the manufacture of spare parts may be encouraged and tried in electrified rural areas. Other similar useful industries can be recommended. The extensive rural electrification and road development programmes of the Government promise to provide congenial environment for small-scale rural industries.

Taking the needs of the local people and the local resources into consideration, it will never be possible to prepare any standardised plans suitable for rural industrialisation of all the regions of the country. Different industries will have to be selected or even devised for different regional environments. Certain regions such as the Eastern districts of the U.P. (Ballia-Ghazipur-Azamgarh) may present almost insoluble problems where there are almost no local industrial resources. In this region, aluminium is perhaps thousands of feet deep and, consequently, there is no trace of any minerals, almost no patches of forests and no important agricultural raw material like cotton. Nearly all cultivators are deficit farmers, not producing even enough for themselves.

It has been decided to start one project in Ballia-Ghazipur-Azamgarh region. This project is likely to put the ingenuity of the best brains to the severest test, and if substantial success is achieved here it will greatly hearten the workers in this field all over the country and will become a place of pilgrimage for these workers, perhaps greater than Mahewa or Nilokheri.

If some groups of small-scale, labour-intensive industries using modern tools and appliances, supplying local needs and as far as possible using local raw materials, come to be associated with the community projects, they may not only give employment to some people but above all may provide opportunities for familiarising our youth with modern appliances with the result that some of them may start their own independent workshops providing employment not only for themselves but, perhaps, for scores of others. The industries found to be successful at particular centres may be propagated through vocational institutions throughout the region concerned. Thus the object of all-round development and reconstruction of rural areas may be ultimately realised through the progress and extension of community projects.

Mr. A. E. Morgan, when he came to India as a member of the University Commission, tried to give most serious thought to the problem of rural reconstruction. He prepared a note on rural education and industrialisation. I had the privilege of going through the note before it was finally incorporated in the Report of the University Commission. It contains some very valuable suggestions on rural education and industrialisation and it is in the fitness of things that some of these suggestions and ideas are given a trial in the scheme of community projects. Finally, the basic aim of all schemes and methods of rural reconstruction should be the enhancement of agricultural production and the provision of employment, more employment, employment in spheres other than agriculture.—*All Rights Reserved.*

(Concluded)

1953

Edition of the Calcutta Stock Exchange Official Year Book is endorsed alike by the Press and the Public as the most indispensable work of reference on investment. The very fact that the Central and State Governments, the Reserve Bank of India, all Exchange and Scheduled Banks, Insurance and other financial institutions, and leading business houses use it is a proof positive of its superiority over any other publications of a similar nature.

The work is more comprehensive than others. It presents information not only about all the shares dealt in on the Calcutta market but about the leading scrips of other markets as well. The information given relate to the date of registration, nature of business, managing agents—their names, addresses and remuneration, directors—their names and share qualification, details of capital and shares, share registration fee, name of auditors, periods to which accounts close, date of meetings, summary of balance sheets, and progress statement containing provisions for taxation, depreciation, allocations to reserves, net profit, amount carried forward, dividends, highest and lowest prices, etc. Each section is also prefaced with an informative historical introduction. Besides, there are also lots of information relating to such matters of vital importance to shareholders as income-tax and super-tax rates, stamp duty on share transfers, sterling-rupee exchange calculator, interest table, members of the Stock Exchange, Stock Exchange Committee, Stock Exchange holidays, Stock Exchange rules and regulations and so forth. Price Rs. 12/8/- per copy (postage Re. 1/8/- extra). **Order from The Secretary, Calcutta Stock Exchange Association Ltd., 7, Lyons Range, Calcutta.**

PREVENTION OF LOCUST INVASION

PLAN FOR INTERNATIONAL CAMPAIGN PROPOSED

THANKS to the early warning given by the Anti-Locust Research Centre in London to India and the Middle East countries of a heavy invasion of desert locusts and large-scale summer breeding, the Government of Bombay is reported to be ready with preparations to destroy the locusts. The State's anti-locust organisation is now keeping a close watch on the situation in Gujerat districts. It has fully armed itself with locust fighting equipment and insecticides to meet all emergencies at very short notice. The organisation is expected to continue to function upto 28th February, 1954.

The precautions taken by the Bombay State are timely, for according to reports, swarms have already appeared in Pakistan, and once they cross the borders, they enter the Bombay State; in fact, a swarm is stated to be moving towards Rewa and Satna districts and another south-east of Rewa. Yet another mile-long swarm which passed over Sambalpur on its way to Badrama Division has, we are told, destroyed trees by settling on them for about half an hour. If these swarms are not exterminated, no crops will be left in these areas for harvesting. It is reported that insecticides, dusters and control equipment have been distributed to the district staff. A sum of Rs. 1,300 has also been sanctioned for preventive measures to be undertaken by the staff in Rewa.

During the past three years, the invasion of India by locusts from the Middle East countries has been a hardy annual. The swarms have been roaming Africa and countries of South-East Asia. They are very mobile, as swarms bred in East African deserts are known to have flown over the Red Sea to Arabia and to Syria, Iraq, Iran and even India. Swarms of Indian origin, in their turn, have flown westwards across Iran, Arabia, and reach African coasts. These swarm movements cover thousands of miles and are to a great extent regular in their seasonal pattern. It is, however, difficult to forecast their exact movement, as such depends on the weather, and there are, according to Mr. P. Uvaro, Director, Anti-Locust Research Centre (A.L.R.C.), no means yet of forecasting the weather some weeks ahead.

Locusts do not always fly; they hatch from eggs laid in sand moistened by rain, as small creatures, and develop wings after a few weeks. This period between hatching the eggs and the creatures developing wings is considered to be the best for destroying the locusts at the source. Unfortunately, the area covered is so vast and the means to fight the swarm so limited that the task of destruction has so far been no more than to warn the countries to be affected by them about the coming danger. Besides, political difficulties in the Middle East countries are stated to be in the way of taking effective measures by one or two countries affected by the locust invasion. The A.L.R.C. has to its credit considerable experience in the field but it feels that, unless the co-operation of all the countries is secured, it will not be possible to overcome the danger of locust invasion.

The Advisory Committee on Desert Locust Control convened by the Food and Agriculture Organisation of the U.N. met at Rome recently and recommended that the F.A.O. should attempt to organise a planned international campaign in Arabia in the 1953-54 winter-spring season. The proposal envisages the creation of a U.N. anti-locust force, comprising some 50 technical officers, 200 vehicles and large supplies of mechanised equipment and insecticides. The total cost of this operation is estimated at £1 million per annum, to be collected by contributions in cash or kind from the countries likely to be benefited by it. In assessing the contribution, it is proposed to take into account both the liability of each country to suffer damage and its ability to pay. Should all countries agree to this scheme, their individual contributions will certainly amount to a very modest insurance premium, but it is not yet

(Continued in previous column)

(Concluded from next column)

certain how the scheme will be received by the countries and the F.A.O. Council. Says Mr. Uvaro, mentioned above, in an article to the *Financial Times*, London: "Should this scheme fail, not only the countries round Arabia will be threatened by a plague such as is now remembered only by a few older people, but there will be every reason to expect its further extension over Africa, parts of which, such as French Equatorial, West and North Africa, have, so far, escaped invasion. Should, on the other hand, this experiment in practical international co-operation against locusts be a success, the experience gained will be of great value in planning a more permanent international organisation against the desert locust aiming at a lasting solution of this age-long problem." The case for having an international agency is so logical and convincing that we do not think that any of the affected countries will desist from supporting the scheme. The earlier the agency is brought into being the better for the countries which are suffering considerable losses as a result of the locust invasion.

INDIA'S FOREIGN TRADE IN FEBRUARY

TERMS OF TRADE UNFAVOURABLE

THE release of the February issue of *Foreign Sea- and Air-borne Trade of India* makes available details of the trade for the 11 months of the financial year 1952-53. A study of the accounts for the 11 months as compared with the corresponding period of 1951-52 discloses that the value of the total trade at Rs. 1,098.12 crores, shows a fall of 23.5 per cent. over that of the previous year, valued at Rs. 1,436.92 crores. Of this total, exports accounted for Rs. 511.07 crores, and imports Rs. 587.05 crores, as against Rs. 662.06 crores and Rs. 774.86 crores in the same period in 1951-52. The decline may be attributed to a decline in both volume and value of goods entering the foreign trade of India. There has also been a marked decline in the net unfavourable balance of trade on the sea- and air-borne accounts which at Rs. 75.98 crores represents a fall of 32.7 per cent. over that of the 11-month period of the previous year.

The figures of foreign sea- and airborne trade of India during February, 1953, disclose that the value of India's exports amounted to Rs. 38.80 crores as against Rs. 45.67 crores in February, 1952. Similarly, the value of goods imported also declined from Rs. 78.61 crores in February, 1952, to Rs. 38.64 crores in the month under review. The table below shows the trade of India for February, 1953, as also for the 11-month period, April-February, 1952-53, as compared with the corresponding periods of the preceding year.

(In crores of rupees)

	February		April to February (Eleven Months)	
	1952	1953	1951-52	1952-53
Exports	44.86	38.26	648.90	505.69
Re-exports	0.81	0.54	13.16	5.38
Total Exports	45.67	38.80	662.06	511.07
Total Imports	78.61	38.64	774.86	587.05
Balance of trade + or —	—32.94	+ 0.16	—112.80	—75.98

The indices of declared values of imports and exports of merchandise for January, 1953, the latest month for which these figures are available, reveal that the terms of trade were not generally favourable to India. Thus while the group index number of imports declined by 8.7 points, that is from 129.0 for January, 1952, to 120.3 for the same month this year, the group figure for exports from India dropped, during this period, by as much as 58.9 points, that is from 169.1 to 110.2. The terms of trade as expressed by these figures may be said to be about 6½ times more unfavourable to India. The fall of 8.7 points in the index figure for imports is mainly due to a fall in the groups (*a*) "articles wholly or mainly manufactured," and (*b*) "food, drink and tobacco." The fall would have been higher still, but for a rise of 5.4 points in the index for the group "raw materials and produce," from 139.3 to 144.7.

The fall in the index number of declared values of exports, as stated above, has been accounted for by a decline in all the three groups of export commodities. The decline was pronounced in the group "articles wholly or mainly manufactured" in that the figure dropped from 184.1 to 91.6. The figure for "food, drink and tobacco" receded from 151.8 to 131.3 and that for "raw materials and produce" from 149.3 to 130.

The trend of index number representing the quantum of trade shows that the terms of trade have been unfavourable to India during January, 1953, as compared with those in the same month a year ago. Thus the group index representing the volume of export rose by no more than 1.47 points, that is, from 38.10 to 39.57; but the figure for imports jumped down from 147 to 73.

The quantum indices and the indices of declared values, as noted above, reveal, in a broad sense, that India paid slightly less and received relatively a smaller volume of goods from abroad, while at the same time, the country despatched more or less the same volume of goods and earned comparatively a lower amount of foreign exchange in January, 1953, as compared with the value and volume of goods imported and exported in the same month last year.

An analysis of the principal items of exports during February, 1953, discloses that tea continued, as in the previous month, to top the list, with its exports valued at Rs. 7.41 crores as against Rs. 7.39 crores in January, 1953. Jute goods exports, which came next, amounted to Rs. 5.79 crores as against Rs. 6.83 crores in the preceding month. Cotton piecegoods declined from Rs. 3.93 crores in January to Rs. 3.05 crores in the month under review. Despatches of manganese ore aggregated Rs. 2.15 crores as compared with Rs. 1.72 crores. Shipments of hides and skins were lower at Rs. 2.01 crores as against Rs. 3.39 crores in January. Raw cotton and pepper accounted for Rs. 1.44 crores and Rs. 1.29 crores, respectively, as against Rs. 1.81 crores in each case. But groundnut oil exports in February, at Rs. 1.28 crores, were better than those a month previously by Rs. 87 lakhs. Shipments of iron or steel (old for remanufacture) were valued at Rs. 1.07 crores, as against Rs. 1.70 crores. Exports of castor oil, mica and lac amounted to less than a crore of rupees.

Among principal items of imports, wheat valued at Rs. 5.12 crores, held the first place. But in the previous month, wheat imports ranked second, accounting for Rs. 2.89 crores. Raw cotton imports which amounted to Rs. 4.14 crores in January declined to Rs. 2.47 crores. Petroleum imports remained more or less unchanged at Rs. 1.9 crores. Imports of copper unwrought were of the tune of Rs. 1.56 crores. Kerosene oil imports amounted to Rs. 1.48 crores, as compared with Rs. 1.7 crores. Imports of electric machinery, cashew nuts and fuel oil were all valued at between Rs. 1 crore and Rs. 1.5 crores. Imports of lubricating oil, paper, drugs and medicines and chemicals were in each case less than a crore of rupees.

A country-wise analysis of India's foreign trade discloses that among the countries from which India purchased its goods, the U.K. stood first with its despatches amounting to Rs. 10.80 crores in February as against Rs. 11.61 crores in the previous month. The U.S. came next with shipments valued at Rs. 7.14 crores as against Rs. 7.03 crores. The shares of Canada and Bahrein Islands were Rs. 1.53 crores and Rs. 1.42 crores respectively as against Rs. 1.27 crores and Rs. 1.63 crores. India's purchases from Mozambique and Egypt were of the order of Rs. 1.33 crores and Rs. 1.31 crores, respectively. Italy and Saudi Arabia despatched goods worth Rs. 1.29 crores and Rs. 1.20 crores respectively. The shares of Singapore, Japan and Australia were, in each case, less than a crore of rupees.

Among countries which purchased Indian merchandise, the U.K. proved to be the best market, its share being Rs. 10.21 crores as against Rs. 12.37 crores. The offtake of the U.S.A., which continued to hold second rank, was Rs. 7.46 crores as against Rs. 8.45 crores. Japan continued to occupy the third place by importing Indian goods valued at Rs. 2.70 crores, as against Rs. 3.02 crores in the previous month. Ceylon and Burma lifted goods worth Rs. 1.31 crores and Rs. 1.22 crores, respectively, as against Rs. 1.47 crores and Rs. 1.25 crores respectively. Shipments to Australia were of the order of Rs. 1.10 crores, as against Rs. 53 lakhs. Goods valued at more than Rs. 64 lakhs and below Rs. 1 crore were received by Canada, Singapore, W. Germany, Belgium, Netherlands and Italy.

POWER FOR MICA PRODUCTION IN BIHAR

The Bihar Government's scheme for electrifying the mica belt in two phases appears to be making good progress. The belt is spread over an area of about 1,000 square miles, mostly in the Hazaribagh district and produces about 80 per cent. of the world's mica.

Under the first phase, power supply was arranged by the State Government to the mica town of Jhumri Tilaiya in 1950 and to two mines at Sugti and Charki in 1951 from the diesel power station of the Damodar Valley Corporation at Tilaiya. The programme of supplying power to the Kodarma reserve forest area, Domchanch, Masnodih and Shibsagar has also been taken up under the first phase.

The second phase will be taken up only after the completion of the first. In the Kodarma reserve forest mining area, lines have already been taken right up to the mines which had applied for power but which have not yet been able to make full use of it, as their installations are not ready.

The State Government has suggested that the mine-owners should procure electrical equipment well in advance of the commencement of supply. The Government has also a programme of erecting lines for power supply from the DVC at Gaya as part of the scheme to feed the Nawada and Bihar Sharif areas in connection with the grow-more-food scheme, for which the Central Government has provided necessary funds. As the scheme of irrigation from surface wells by small electrically-worked pumps have been successful, efforts are being made to extend this scheme to irrigate the vegetable belts of Gaya and its neighbouring areas. Power from the DVC is also being taken to Jasidih and Deoghar where there is a prospect of getting over 1,000 k.w. of load.

PAPER INDUSTRY IN INDIA

CHANGE IN STATES' POLICY NEEDED

CONTINUED indifference of State Governments to look after the interests of the Indian paper industry would appear to be responsible for the industry being confronted with the same set of problems year after year. For bamboo and *sabai* grass, which are the principal raw materials of the industry, are forest products. And forests are under the control of States, which appear to be paying no consideration to the industry's appeal for the supply of these materials at reasonable rates. Even the Central Board of Forests, as pointed out in the last issue of *Commerce*, did not consider this question at its meeting. In the circumstances, it is not at all surprising to hear Mr. Brij Mohan Thapar, President, Indian Paper Mills' Association, Calcutta, complaining against the State's unhelpful forest policy in his address at the Association's latest annual meeting held in that city last week. He said that bamboo and *sabai* grass were available in adequate supplies in the country. Drawing attention to the recommendation of the Planning Commission that States should reserve specific forest areas for the paper industry and grant of long-term leases for working such areas, Mr. Brij Mohan observed:

"While the Government of India have accepted and endorsed the Planning Commission's recommendations, some of the State Governments have persistently refused to fall in line with this policy. Immediate revenue appears to be their only concern. They are neither interested in the development of forests nor in the development of the paper industry. If the industry is to maintain the present *tempo* of production and to reach the targets laid down for it under the Plan, it is imperative that paper mills should be assured of adequate supplies of principal raw materials, viz., *sabai* grass and bamboo, and these also at economical rates. It is high time that the State Governments co-ordinated their forest policy with the Central Government, and the latter took suitable measures to ensure adherence to their policy with respect to the grant of long-term lease of forests to the paper industry at reasonable rates of royalty."

It is superfluous to emphasise the importance of the paper industry to the country. Since assistance by State Governments can be of great help to the industry in its efforts to reduce costs, these Governments should change their attitude towards the industry.

The paper industry seems to be considerably handicapped by difficulties in getting adequate railway transport. Mr. Brij Mohan felt that railways should come to the rescue of the industry by stepping up the priority classification for paper and paper-making raw materials in the preferential traffic list. The production in mills would suffer seriously if the railways did not ensure each paper mill getting the supply of the required number of wagons for regular movement of finished paper from the factory to consuming centres and also for timely movement of raw materials and chemicals from their sources of supply to the factory. Besides, the rates of freight charged by the railways, especially for strawboards, were, according to Mr. Brij Mohan, very high. The industry, he revealed, had, therefore, filed a petition before the Railway Rates Tribunal for proper assessment of freight rates.

Commenting on the labour situation, Mr. Brij Mohan remarked that there was lack of willingness on the part of the worker to co-operate with the management in a combined effort to augment production in mills. In order to improve employer and employee relations, Mr. Brij Mohan stressed the need for State and Central mediation and conciliated service designed to promote the principle of free collective negotiations in good faith. He was opposed to compulsory adjudication, for, in his opinion, it was an open invitation to many paralysing evils.

The Planning Commission has recommended modernisation of production techniques to reduce costs. Commenting on this suggestion, Mr. Brij Mohan stated that modernisation required renovation of plant and machinery in most units, which again depended on capital. The paper industry also, as in the case of others, appears to be experiencing difficulties regarding adequate supply of funds.

Given proper assistance, the industry, according to Mr. Brij Mohan, can achieve the target of production fixed by the Planning Commission at 200,000 tons by 1955-56. The production of paper boards reached the peak figure of 137,504 tons in 1952 as against 131,915 tons in 1951. Mr. Brij Mohan expected this to be surpassed in 1953. Already in the first three months of the current year the production amounted to 45,506 tons, or at 182,024 tons per annum.

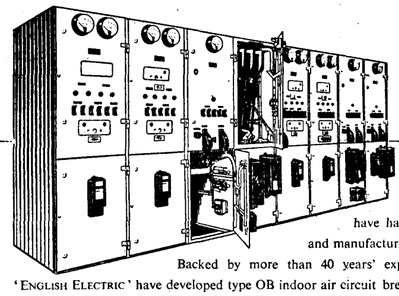
Air circuit breakers for medium voltages and 3.3 kV systems



'ENGLISH ELECTRIC' pioneers of heavy duty air circuit breakers, have had unrivalled experience in the design and manufacture of this highly specialised equipment.

Backed by more than 40 years' experience of switchgear manufacture, 'ENGLISH ELECTRIC' have developed type OB indoor air circuit breakers for use on medium voltage and 3.3 kV systems, in power stations and for industrial consumers.

The type OB.3 air circuit breaker illustrated has a rating of 1,600 amps., 660 volts and 25 MVA when tested to BS.116, and can be supplied in either single or double tier cubicles with hand or electrical operation.

'ENGLISH ELECTRIC' type OB air circuit breakers are designed for safe and consistent operation, for reliability under all conditions of service, with the minimum maintenance cost.

NATIONALISATION OF AIRLINES

HOLLOWNESS OF GOVERNMENT'S CASE EXPOSED

(By "RUDDERBAR")

AT the end of next month, free enterprise is due to give place in the Indian skies to a State-owned Corporation. This event is to be ushered in by a special commemorative postage stamp. Philatelists will doubtless welcome the issue of another stamp and all will wish the new Corporation well, whatever views may be held on the principles involved in nationalisation. Before the curtain is finally rung down on free enterprise, however, there is a duty to perform. That duty is to expose with facts and figures, the speciousness of the Government's oft-quoted arguments on which the case for nationalisation of the airlines rests.

These arguments can be condensed and set out as follows:—

The present conditions of traffic load and intensity of operations require drastic rationalisation of the industry if proper development is to be attained. In these circumstances, the only possible course is to integrate all the existing domestic operators into one nationalised corporation. Only in this way will the drain on the State's finances, occasioned by the payment of subsidies to the airline companies, be stopped and the industry placed in a position to pay its way. Furthermore, only the acquisition of air transport by the State can ensure the necessary capital required for re-equipment. Finally, the defence aspect of air transport would gain immeasurably.

This, in a nutshell, appears to be the sum of the arguments advanced. Now no one with a knowledge of the present state of affairs will deny that some degree of rationalisation is essential. Indeed, plans were worked out and presented to the Ministry concerned by certain companies which would have achieved the desired result. These plans, however, had, in the eyes of the Government, one fatal defect; they did not envisage State ownership and it was the ideology of nationalisation which was in fact the prime motive behind the Air Corporations Act.

This may be hotly contested but no intelligent person, who has read those paragraphs of the Rajadhyaksha Report which are devoted to the case for and against nationalisation, can possibly ascribe the Government's motives to any other reason.

Result of Government Policies

It is necessary to add that the present adverse circumstances of the air transport industry are more largely the result of Government's policies in the past than the fault of the operators. It is now ancient history, but nonetheless true, that by licensing a far larger number of companies than could possibly exist economically on our domestic routes, the Government created a situation where, logically, only the fittest could survive. This process of attrition has been operative since 1947, when the first victims succumbed, and has in a great measure been instrumental in weakening financially even the strongest units engaged.

Nevertheless, and in spite of these adverse circumstances, this infant industry, starting almost from scratch in 1946, has built up, in the course of seven years, a network of air transport services covering almost all important cities in the country and which annually carries 5,00,000 passengers, 50,000 tons of freight and a large proportion of the country's mail. But, say the protagonists of nationalisation, all this has only been achieved because the Government has paid huge sums of money, not only in the upkeep of aerodromes and other facilities, but in direct subsidy payments to the operators.

Here is a concrete argument which must be demolished. In the first place, every advanced country recognises the obligation of the State to provide and maintain aerodromes, radio facilities, direction-finding aids, etc., on its air routes. Indeed, India being a covenanting party to the I.C.A.O., is bound to provide such facilities for international airlines entering and crossing its territory. Similarly, India's own International Airline enjoys these facilities in other countries on its foreign routes. There can then be little question of the obligation to provide all these facilities.

Nevertheless, every country charges for the facilities provided and India is no exception to that rule. Charges are made for landing, for parking an aircraft on an airfield, for using a hangar, for rental of offices on aerodromes, etc. It is not claimed here that the total fees collected from domestic and foreign operators do in fact cover the total cost of providing all the facilities above mentioned; it is claimed, however, that India collects from operators as fair a proportion of the expenses incurred as does any other comparable country. It must also be remembered that the majority of airports in India (as in some other countries) were built during the war and were acquired by Civil Aviation at a very reduced initial cost.

It is difficult to obtain accurate figures of the amounts realised by the Government on account of landing fees, parking charges, hangar rental, etc., but here are fairly reliable figures for the year 1952, in respect of landing fees only. During that year, the Government of India collected from foreign and domestic operators a sum of Rs. 56,98,000 under that head alone. If we multiply this sum by six, that is to say for the years 1947 to 1952 inclusive, we find that the Government have derived a sum of Rs. 3,41,88,000 from the operating companies over this period and this formidable total takes no account of the substantial amounts also realised under the remaining heads.

Subsidies

Turning to the question of subsidies, which are, in fact, merely rebates of petrol duty paid by the various operators, the figures are even more revealing. In the first place, it was not until the year 1949 that the Government gave any rebate whatsoever. It has been computed that the annual income derived by the Government on the tax of 15 annas 9 pies levied on each gallon of aviation spirit is in the neighbourhood of Rs. 1 crore.

In mid-1949, a rebate of nine annas of this tax was sanctioned and this continued up to 1951, when it was reduced to eight annas and finally to six annas in 1952. In 1953, no rebate whatsoever has been allowed for the half-year upto 30th June. Simple mathematics show then, that, over the period 1947 to 30th June, 1953, the Government has paid in petrol rebate a sum approximating one crore and eighty lakhs of rupees out of its total income from this source of Rs. 6½ crores.

These figures speak for themselves and it must also be remembered that certain State Governments have "cashed in" on aviation by levying a purchase tax ranging from six annas to one anna on each gallon of aviation spirit uplifted in its territory.

It is quite clear from these figures that "private enterprise" air transport, far from being a burden on the country's finances, has, in fact, been a substantial contributor. This, once and for all, disposes of that particular argument for nationalisation.

There remains the question of capital development for re-equipment. Here the ground is, of course, less firm but had private enterprise been given a fairer deal, both in the matter of petrol taxation and mail payment, there is little doubt that, in the first place, the companies would not have been forced to the wall and, in the second place, a reasonable degree of amalgamation would have ensured two or three prosperous units, in which the public would have been ready to invest.

Mail Payment

The question of mail payment requires a little clarification. In India, payment of mail carriage is at the rate of Rs. 3 per ton-mile for first class mail and Rs. 1-12 for second class mail on all domestic routes. These figures should be compared with the 7s. 5d. per ton-mile earned by British European Airways on first class domestic mail and 10s. 2½d. on international transit and foreign mail. It is quite clear that the rates in India are fantastically low; were the same rates paid as in the U.K., our airlines would have earned very substantial additional revenues. For example, Deccan Airways, the night mail operator, carried some 12 lakh ton-miles of mails in 1952. An additional Rs. 2 per ton-mile, that is to say, the difference between our rates and those paid to B.E.A. for domestic carriage, would have earned the Company

(*Continued on page* 1189)

PLIGHT OF MIDDLE CLASSES

THE middle classes are subject to considerable privation and hardship during periods of economic boom as well as of depression. The earning capacity of these classes does not vary with the increase in the price level, whereas, during a period of fall in price level, their employment opportunities get restricted. The results of an enquiry into the living conditions of middle class families in the city of Madras—middle class here covers persons earning an income varying from Rs. 100 to Rs. 599 per month—recently conducted by Dr. B. Natarajan, Economic Adviser to the Madras Government, show how these classes have been adversely affected by the present high price levels. As much as 61 per cent. of the middle class families in the city, we are told, live beyond their means and only 31 per cent. are in a position to save something out of their incomes. Deficit budgets are found in all the strata of the middle class.

The average expenditure per family, according to the Madras enquiry, exceeds the average income in the case of families, the incomes of which range from Rs. 100 to Rs. 399 per month. The extent of over-reaching the income is the highest in the income group between Rs. 100 and Rs. 199 per mensem. As against an average monthly income of Rs. 152-8, the families in this group spend Rs. 169-3. It is not surprising, therefore, that the middle classes generally should always be in debt. The expenditure on debt services alone is said to amount to Rs. 5-14 per month in the income-group of Rs. 100 to Rs. 199 per month, though it is surprising that such expenditure works out to Rs. 22-11 on an average even in the group with an income of Rs. 600 and above. Although this brief account relates only to a very small section of middle classes in India and as such is not fully representative, it may generally be taken as a fair indication of the position existing at present. There is urgent need for improving the conditions of the middle classes. After all, the structure and size of the society depends on the position of these classes. In the interests of social progress, the position and value of the middle classes needs to be conserved, for they have always played an important role in national progress.

To revert to the enquiry. The average income per head (including earners as well as dependents) among middle classes varies from Rs. 40 in the Rs. 100-199 group to Rs. 91 in the highest income group (Rs. 600 and above). The average expenditure per head—this includes expenditure on items of saving, such as insurance premium and provident fund contributions—works out to Rs. 49-9. The average expenditure per head increases with a rise in income, ranging from Rs. 35-13 to Rs. 86-3. The average expenditure per consumption unit—the average number of such units per family works out to 4.6, against the average family strength of 5.8—varies from Rs. 46-5 to Rs. 107-8. The magnitude of the expenditure per consumption unit is a more relevant consideration than expenditure per head in assessing living standards. Viewed thus, the standard of persons earning a monthly income of Rs. 600 and above is more than twice higher than that of the group earning a monthly income of Rs. 100 to Rs. 199.

The details relating to expenditure incurred by the middle classes reveal that food accounts for the largest share in all the income groups, ranging from Rs. 86-6 to Rs. 298 per family. The expenditure on the "miscellaneous" item, which includes education, recreation, domestic services, etc., varies from Rs. 38-6 to Rs. 243-8. Expenditure on housing figures as the third largest item in the lower groups, that is, with a monthly income between Rs. 199 and Rs. 399, while the third place is occupied by the expenditure on clothing in the higher groups.

An interesting feature revealed by the enquiry is that 61.9 per cent. of the families surveyed represent "natural families" (comprising the head of the family his wife and unmarried children), while the remaining account for joint families consisting of a group of relatives or others living together as one household. The average size of the family gets larger with the rise in income, being 4.72 in the Rs. 100-199 group and 8.75 in the Rs. 600 and above group. Another interesting feature is that literacy is very high among the middle classes; it is as high as 75 per cent. Literacy percentage, as is only to be expected, is higher in the three larger income groups, as compared with the lower income groups.

SIMPLEX MILLS' PROFIT SLIGHTLY LOWER

DIVIDEND REPEATED

A DECLINE of 14.9 per cent. in the profit (after providing for Managing Agents' remuneration), that is, from Rs. 22.32 lakhs to Rs. 18.99 lakhs, is disclosed by the financial results of the Simplex Mills Co.. Ltd. (Managing Agents: Messrs. Forbes Forbes Campbell & Co., Ltd., Bombay) for the year ended 31st March, 1953. This shrinkage in earnings is smaller than that of 24.4 per cent. noted in the profit for 1951-52. This comparatively smaller recession in the profit for 1952-53 is evidently due to the substantial relaxation of control over prices and distribution on textiles during the latter half of 1952. Thus, the major part of the Company's financial year under review must have experienced sufficiently favourable trading conditions, thereby offsetting the adverse trend of trade in the earlier months.

The rate of dividend has been maintained at 30 per cent., but the amount required for this purpose is higher by Rs. 1.05 lakhs. For both the interim (12 per cent.) and final (18 per cent.) dividends for the year under review are on a capital of Rs. 31.50 lakhs, increased in January, 1952, from the then capital of Rs. 21 lakhs. In the previous year, the interim dividend of 10 per cent. was on the capital of Rs. 21 lakhs, whereas the final one of 20 per cent. was on the increased capital. This larger distribution to the shareholders, despite the fall in earnings, has been rendered possible by the E.P.T. post-war refund amounting to Rs. 7.35 lakhs.

The following comparative table indicates the Company's progress during the past three years:

(In thousands of rupees)

	For the year ended 31st March			
	1953	1952	1951	1950
Sale proceeds	2,21,04	2,78,32	1,69,00	1,92,44
Stocks	28,97	37,40	25,68	18,92
Cotton and staple fibre consumed ..	97,80	1,84,67	79,81	78,65
Art silk and other yarn and waste purchased	3,31	5,75	7	4,80
Other expenses ..	89,04	74,27	61,87	72,80
Agents' remuneration ..	3,94	3,57	4,91	4,35
Profit	18,99	22,32	29,53	23,07
E.P.T. refund (net) ..	7,35	..	..	..
Provision for—				
Depreciation	5,00	5,00	5,00	3,00
Taxation	6,00	7,50	11,00	7,00
To reserves	6,00	1,47	6,00	5,97
To staff gratuity fund ..	3	12	65	50
Dividend	9,45 (30%)	8,40* (30%)	7,14 (34%)	5,88 (28%)
Carry forward	36	50	67	94

* The dividend consists of an interim distribution of Rs. 5 per share of Rs. 50 on a paid-up capital of Rs. 21 lakhs and a final dividend of Rs. 10 per share on the capital of Rs. 31.50 lakhs increased in January, 1952.

While on the subject of appropriation of profit, and the E.P.T. refund in particular, it may be recalled that, a little over two months ago, the Directors had made an application to the Controller of Capital Issues for sanction of their proposal to capitalise a sum of Rs. 10.50 lakhs from out of the reserves and distribute bonus shares (*vide* page 668, *Commerce* dated 11th April, 1953). For this purpose, a sum of Rs. 4 lakhs was proposed to be drawn from out of the post-war refund of E.P.T. (Rs. 7.35 lakhs) and Rs. 6.50 lakhs from the machinery renewal reserve which stands at Rs. 37 lakhs. But the Directors have now taken the whole of the E.P.T. refund to the profit and loss appropriation account and have utilised it, along with the profit for the year, as stated above. Presumably, their proposal was not sanctioned by the C.C.I. and the Directors' silence on the proposal (in their report for the year under review) strengthens this belief.

The Company's latest balance-sheet reflects a satisfactory financial position. The reserves and surplus stand at Rs. 49.38 lakhs and supplement the paid-up capital of Rs. 31.50 lakhs. As against a gross block of Rs. 78.77 lakhs, a depreciation fund of Rs. 63.69 lakhs has been built up. The current assets aggregate Rs. 98.70 lakhs and cover the current liabilities, at Rs. 32.90 lakhs, three times.

CALCUTTA ELECTRIC SUPPLY CORPORATION LTD.

For the eleventh year in succession, the Calcutta Electric Supply Corporation Ltd. (Secretary: Mr. I. A. Macpherson, Calcutta) has maintained its dividend at 6 per cent., the latest year for which it has done so being 1952. The Company's gross revenue for the year under review shows an increase of £423,044 to £4,773,561. The net profit is, however, slightly lower at £1,233,916, as compared with £1,358,231 for the previous year. The provision for debenture sinking fund has been raised from £96,337 to £101,089, and for contingency reserve from £62,845 to £65,744. Special appropriations absorb £438,540, which is lower than that of £542,087 set aside last year. The unappropriated surplus carried forward is £161,233, which compares with £170,268 brought in.

In his customary review for the year, accompanying the accounts, Sir James Donald, Chairman of the Company, makes some interesting remarks about the Electricity (Supply) Act, 1948, and the power position in the Calcutta area. Referring to the Electricity Act, Sir James utters a warning that, unless the Act is amended, there may be a shortage of electric power in many parts of India. Explaining this point, the Chairman recalls how the Electricity (Supply) Act limits the return that can be offered to investors, thereby making the creation of new capital difficult, and says that amendment of the law has been repeatedly suggested. "Action in this direction is, I understand, still under consideration," he observes, "but a year has passed and, as nothing has so far seen the light of day, it is unlikely that any change in the law will be effected within another 12 months. Meanwhile many companies, particularly the small ones, will be hampered under the existing provisions in obtaining capital sufficient to procure new generating plant with the result that the areas which they serve are likely to suffer a shortage of power for some years."

Referring to the power position in the Calcutta area, Sir James points out that the demand for electricity does not stand still, but is always on the upward trend, and says: "While there is at the moment sufficient generating capacity to meet present demands and for a few years to come, it will not suffice to meet the anticipated demand from 1956 onwards." Proceeding, Sir James reveals that the C.E.S.C. has gone ahead with its plans to build a new station in South Calcutta, but, while awaiting import licences for the plant, the Damodar Valley Corporation has offered to supply power from their generating station at Bokaro. "The proposal," to quote him, "has its attractions, since if it could be determined that the transmission of current from Bokaro—225 miles from Calcutta—would be adequate and uninterrupted, and, if the price at which the supply could be delivered within our area was comparable with the cost at which we could generate at our own stations, the construction of a new southern station could be deferred. We, therefore, entered into negotiations with the authorities of the Damodar Valley Corporation and, as a result, we have entered into a provisional agreement with them for a supply over a period of years commencing in 1956. The terms of this provisional agreement require the approval and sanction of higher authority. I will not at present comment further on the scheme, except to give a warning that, if there is delay in giving the necessary sanction, there is grave danger that Calcutta may suffer a serious shortage of electricity in 1956."

KAMANI ENGINEERING CORPORATION LTD.

After a break of a year, the Kamani Engineering Corporation Ltd. (Managing Agents: Messrs. Kamani Brothers Ltd., Bombay) has resumed the payment of dividend on its ordinary shares, with a distribution of As. 4 per share of Rs. 10, or 2½ per cent. for the year ended 30th September, 1952, thus restoring it to the level paid for the years 1948-49 and 1949-50. This follows the satisfactory increase in the trading profit for the year from Rs. 17.84 lakhs to Rs. 29.95 lakhs.

The Directors report that the Company succeeded in maintaining its progress in the face of economic recession. The Company successfully undertook engineering activities of specialised nature such as erection of transmission line towers, assembly of railway wagons, erection of heavy electrical plant, etc. The erection of the 10,000 kw. Japanese plant for the Madura thermal scheme has been completed and the erection of the four gigantic Mitsubishi boilers for the Chola power scheme of the Government of Bombay is nearing completion.

As already indicated, the trading profit of the Company for the year under review shows an increase of Rs. 12.11 lakhs to Rs. 29.95 lakhs. A substantial part of this has been offset by the rise of Rs. 10.72 lakhs to Rs. 25.02 lakhs in office establishment and other expenses. A sum of Rs. 1.87 lakhs has been provided for depreciation (as against Rs. 1.96 lakhs in the previous year) and, Rs. 1.30 lakhs (Rs. 1.40 lakhs) for taxation. The addition to the general reserve has been maintained at Rs. 50,000, but that for gratuity reserve has been raised from Rs. 20,000 to Rs. 25,000.

The following is a synopsis of the Company's balance-sheet as on 30th September, 1952.

Liabilities	Rs.	Assets	Rs.
Capital ...	59,96,250	Gross block ...	34,25,936
Reserves and surplus ...	3,18,113	*Less*—Depreciation ...	10,85,581
Reserve for taxation ...	3,16,020	Net block ...	23,40,355
Liabilities ...	1,11,63,392	Stock-in-trade ...	63,07,533
		Stores, raw materials, etc. ...	5,66,506
		Debts, deposits and advances ...	59,73,047
		Investments	11,93,957
		Cash ...	3,79,042
		Assets at Lahore ...	8,33,335
Rs.	1,77,93,775	Rs.	1,77,93,775

SHREE MADHUSUDAN MILLS LTD.

Apropos the report appearing in a section of the daily Press, to the effect that the management of the Shree Madhusudan Mills Ltd., has changed hands, Messrs. Hall and Anderson Ltd., who are the proprietors of the Mills, inform us that the correct position is that the Srinivas Cotton Mills Ltd., Bombay, has purchased the bulk of the ordinary shares of Messrs. Hall and Anderson Ltd. Consequently, there has been a change in the Board of Directors of the Shree Madhusudan Mills. The Board now consists of Messrs. Gokulchand Bangur, Narsingdas Bangur, Sohanlal Jajodia, Pannalal Jajodia, Jugal Kishore Somani and S. M. Bose.

BIRD-HEILGERS GROUP COAL COMPANIES

SETBACK IN EARNINGS

THE financial results of the group of coal companies under the management of Messrs. Bird & Co., Ltd., and Messrs. F. W. Heilgers & Co., Ltd., Calcutta, for the half-year ended 31st December, 1952, reflect the difficult conditions through which the industry passed during that period. Among these, the results of four companies, namely, the Borrea Coal Co., Ltd., Burrakur Coal Co., Ltd., Bhulanbararee Coal Co., Ltd., and Sendra Coal Co., Ltd., are briefly analysed in these columns. All these four companies have suffered a setback in their earnings, as compared with those for the previous half-year, as well as the corresponding period of the previous year. two of them, namely, Bhulanbararee and Sendra, disclosing small losses.

The dividend distributions of these companies for the half-year under review follow the pattern of their earnings. Borrea Coal has cut its distribution to 25 per cent. (including a bonus of 5 per cent.) per annum by reducing to half the bonus part of the payment (10 per cent. per annum) paid for the preceding two half-years. Burrakur has pruned it from 7½ per cent. per annum paid for the previous two half-years to 5 per cent. per annum. Bhulanbararee and Sendra have had to pass over the dividends. Bhulanbararee had paid 5 per cent. per annum for the half-year ended 30th June, 1952, and 7½ per cent. per annum for the six months preceding it. In the case of Sendra, this is the second half-year in succession that the shareholders have had to go without any return.

The main factors that have been responsible for the unfavourable working of the four companies mentioned above are: (1) inadequate and/or erratic wagon supply position, (2) overproduction of coal of all grades in the country (in excess of the actual demand), (3) general increase in stock at pitmouth as a result of the first two factors, (4) contraction of export markets, (5) difficulties in securing suitable outlet for the slack fraction of selected grade raisings and all sizes of lower grade coal, (6) increased tendency for colliery owners to offer their coal for sale at a rebate below the Government-controlled prices, and (7) increase in overall cost of production.

To analyse in brief the results of individual companies. The Borrea Coal Co., Ltd., has earned a gross profit (before making provisions for Managing Agents' commission, taxation and depreciation) of Rs. 2.73 lakhs, as compared with Rs. 4.37 lakhs for the previous half-year and Rs. 4.08 lakhs for the six months ended 31st December, 1951. To this has been added a sum of Rs. 63,743, being the net E.P.T. refund. After making provisions for depreciation and taxation, a sum of Rs. 30,000 has been added to the stock adjustment account and Rs. 30,000 to development reserve. The dividend on 6½ per cent. preference shares absorbs Rs. 13,000 and on ordinary shares Rs. 93,750, leaving Rs. 1.06 lakhs to be carried over.

The gross profit of the Burrakur Coal Co., Ltd., has declined from Rs. 14.99 lakhs for the half-year ended 30th June, 1952, to Rs. 13.92 lakhs. As compared with that for the corresponding six months of 1951, it shows a shrinkage of Rs. 5.05 lakhs. A sum of Rs. 3 lakhs had been placed to the various reserves. After paying Rs. 90,449 on the first and second preference shares and Rs. 2.27 lakhs on the ordinary shares, the surplus left to be carried forward, at Rs. 1.15 lakhs, compares with Rs. 1.55 lakhs brought in.

A gross loss of Rs. 24,706 (as compared with the profit of Rs. 75,386 and Rs. 1.95 lakhs, respectively, for the two previous half-years) is revealed by the results of working of the Bhulanbararee Coal Co., Ltd. This loss has been enlarged to Rs. 47,313 by the provision of Rs. 22,607 for depreciation. This is, however, reduced to a small extent by bringing in Rs. 3,437 from the previous half-year. The loss that has been brought forward to the current half-year amounts to Rs. 43,876.

The Sendra Coal Co., Ltd., reports a gross loss of Rs. 59,114 for the half-year under review, as against a profit of Rs. 22,992 for the previous six months and Rs. 21,383 for the corresponding half-year of 1951. The Directors have made a provision of Rs. 21,736 for depreciation which has enlarged the loss to Rs. 80,850. After taking into account a sum of Rs. 10,379 brought in from the previous half-year, a deficit of Rs. 70,471 has been carried over.

Points From The Chair

Lessons for Private Industry

"AS the dismal chapter closes for ever, I hope that some of its obvious lessons will be appreciated by all concerned and kept in mind for the future; for instance, that private enterprise should not rush into a new field without making sure that the total productive capacity so created will not exceed the available demand and that the industry will be allowed to function with a reasonable measure of freedom; that a detailed economic plan, once accepted by Government, should not be changed arbitrarily without careful consideration at the highest level and without consultation with those concerned; that the appointment of high power commissions does more harm than good if their recommendations are to be disregarded, as happened in the case of the Air Transport Enquiry Committee's Report. Finally, that safeguards instituted in the form of statutory authorities for control or license purposes should not be allowed to be destroyed by constant interference by the executive, as happened in the case of the Air Transport Licensing Board."

J. R. D. TATA,
Air-India Limited.

A Disquieting Situation in Life Insurance

"Life insurance plays an important role in the economy of a man's life and it can well be taken as an indication of his trend of saving. Looking at the *Government Year Book* from this angle of vision, I cannot but say that the picture is not much encouraging. Leaving aside the question of decline in the total new business in 1951, one cannot overlook the fact that the real capacity of the people, in general, to save systematically is showing signs of gradual decline, owing to the high cost of living, with the effect that lapse ratio is gradually increasing. In the case of many insurers a fairly large percentage of the business written during the past three or four years has lapsed. This is disquieting situation. Along with the high cost of living the tendency to secure business at exorbitant cost is another reason for this situation. This gives no credit to the insurance industry. The craze for new business at suicidal cost should, therefore, stop now. So far as we are concerned, I feel glad that we have scrupulously denied this temptation. The boom period created by inflation has now definitely gone and one has to be content with the natural flow of quality business at low cost."

Dr. M. N. AGASHE,
Western India Life Insurance Co., Ltd.

Threat of Nationalisation

"Of course, chemical production must expand, and this is exactly what has taken place in the industry, as a result of the enterprise shown by those in it. My speech to-day emphasises the expansionist policy which I.C.I. has consistently pursued. I.C.I. is meeting every demand for chemical materials made upon it in the United Kingdom, and the average level of prices is lower than that in the U.S.A. and Europe. In addition, its exports have increased very substantially in volume and in value since the war and are now running at over £1,000,000 per week. I can say, without qualification, that no company has a finer record of expansion and enterprise. Why then should public ownership be suggested as a safeguard against possible shortages, which do not exist, and which will never occur, if private enterprise is permitted to go ahead? Surely, the experience of the State-owned industries is convincing evidence that whatever else may be said about State ownership, it is no guarantee that production will keep pace with increasing demand."

J. ROGERS,
Imperial Chemical Industries Ltd.

Indian Cotton Textile Industry

"The Indian cotton textile industry increased its production to a record figure since the separation of Pakistan from the Indian Union and, after deducting exports, it is calculated that the quantity of cloth available for internal consumption was sufficient to distribute about 16 yards per head of the population. Before the last war, when the average price of cloth was very much lower than it is to-day, the consumption *per capita* did not exceed 16 yards and it is, accordingly, doubtful whether the country will be able to absorb the pre-war consumption at the present level of prices. It is very obvious that, if production is to be maintained, exports from India must be increased and the Government of India has reduced the export duty on coarse and medium qualities from 25 per cent. to 10 per cent. with effect from January this year. The three mills in the agency of our Bombay branch had another satisfactory year. Two of them maintained their dividends and the third mill increased the dividend slightly, so that, in our accounts for 1953, the income from this source will be slightly greater. It is always dangerous to make any forecasts for the future but, writing to us at the end of April, the Manager of our Bombay branch indicated that prospects for the current year appeared quite reasonable and that, unless something unforeseen occurred, it was hoped that the mills which we manage in Bombay would again show good results."

W. H. MARR,
James Finlay & Co., Ltd.

Notices

THE METAL BOX COMPANY OF INDIA LIMITED

NOTICE IS HEREBY GIVEN THAT THE Twentieth Annual Ordinary General Meeting of the Company will be held at 59C, Chowringhee Road, Calcutta, on Thursday the 16th day of July, 1953, at 4-30 p.m., for the following purposes:—

1. To receive the Report of the Directors, the Statement of Accounts for the year ended 31st March, 1953, and the Report of the Auditors thereon.
2. To declare a Dividend.
3. To elect Directors.
4. To appoint Auditors and fix their remuneration.
5. To transact any other ordinary business of the Company.

The Ordinary Share Register of the Company will be closed from 1st to 16th July, 1953, both days inclusive.

By Order of the Board,
S. K. CHATTERJIE,
Acting Secretary.

59C, CHOWRINGHEE ROAD,
CALCUTTA, 23*rd June*, 1953.

THE GOUREPORE COMPANY LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Half-yearly General Meeting of Shareholders of the above Company will be held at the Registered Office of the Company, No. 2, Fairlie Place, Calcutta, on Monday the 6th July, 1953, at 3 p.m., for the following purposes:—

(1) To receive and consider the Directors' Report and the Accounts for the half-year ended 31st March, 1953.

(2) To elect Directors.

(3) To appoint Auditors and fix their remuneration.

(4) To transact any other competent business that may be brought forward.

The Share Transfer Books of the Company will be closed from the 30th June to 6th July, 1953, both days inclusive.

MACNEILL & BARRY LTD.,
A. W. TAYLOR,
Managing Director,
Managing Agents.

2, FAIRLIE PLACE,

DIVIDEND ON PREFERENCE SHARES

THE DIRECTORS HAVE DECLARED AN Interim Dividend of 3 per cent. less Income-tax on the Company's Preference Shares in respect of the year 1953, payable to Members whose names appear on the Preference Share Register on the 15th July, 1953. Warrants will be posted on or after that date.

The Transfer Register of the Preference Shares will be closed from the 8th to 15th July, 1953, both days inclusive.

By Order of the Board,
J. E. WATERFIELD,
Managing Director.

4, BANKSHALL STREET,
CALCUTTA, 17*th June*, 1953.

LARSEN AND TOUBRO LIMITED

NOTICE IS HEREBY GIVEN THAT THE Eighth Ordinary General Meeting of the Shareholders of the Company will be held at the Registered Office of the Company, J.K. Building, Dougall Road, Ballard Estate, Bombay, on Friday the 17th July, 1953, at 5-00 p.m., to transact the following business:—

1. To receive the Directors' Report and the Audited Statement of Accounts for the year ended 31st March, 1953.
2. To sanction the declaration of a Dividend.
3. To elect Directors in place of Mr. H. Holck-Larsen and Mr. Dwarkadas H. Vora, who retire by rotation, but being eligible, offer themselves for re-election.
4. To appoint Auditors for the current year and fix their remuneration.
5. To transact any other business that may be transacted at an Ordinary General Meeting.

By Order of the Board,
P. W. NIELSEN,
Constituted Attorney.

BOMBAY, 27*th June*, 1953.

Note.—If Dividends, as recommended by the Directors, are passed at the Meeting, payment will be made on or after the 27th July, 1953, to those shareholders whose names are on the Company's Register on 17th July, 1953.

(*Concluded from page* 1186)

another Rs. 24 lakhs of revenue, thus completely altering the whole financial aspect of the Company.

Finally, we come to the assertion that nationalisation and integration will benefit the State from the point of view of defence. Now the needs of defence can best be served by a prosperous and progressive industry, employing the largest possible number of aircraft and personnel. This state of affairs can, in the final analysis, be brought about best by healthy competition. The creation of a State-owned monopoly, probably always the Cinderella when State money is to be disbursed, and consequently perennially cramped for finance, faced in the domestic sphere with no competition and, therefore, under no pressure to expand and improve its services, is not likely to add much to the requirements of defence in times of stress and urgency.

All that has now been said would have been unnecessary but for the ignorant, ill-informed and at times irrelevant criticism of the free enterprise operators of Air Transport, which was a feature of the debate on the Air Corporation Bill in Parliament. It remains to be seen how the new Corporations will progress if faced with the same financial burdens of exorbitant petrol tax, low mail carriage rates and fares which have no relation whatsoever to the costs of operation. It would certainly be no surprise if the drain on the State's finances, in succouring the new-fledged domestic corporation, is not, in fact, far heavier than was ever occasioned by so-called subsidies to the present companies.—*All Rights Reserved.*

BENGAL NAGPUR COTTON SUSTAINS LOSS

ASSAM SAW MILL CUTS DIVIDEND BY 50 P.C.

Bengal Nagpur Cotton Mills, Ltd.

THE directors of the above Company (Managing Agents: Messrs. Shaw Wallace & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st December, 1952.

The Company sustained a loss for the half-year of Rs. 4,24,149 (profit of Rs. 5,79,732), to which has to be added provision for balance of workers' bonus to 30th June, 1952 (since paid) Rs. 1,52,065 (*nil*), making a debit balance of Rs. 5,76,214 (credit balance of Rs. 3,09,732 after providing for taxation). The following credits have been brought to the account:—

Balance brought forward Rs. 40,045 (Rs. 30,708), provision for taxation no longer required Rs. 1,30,000 (*nil*), amount written off cotton stocks in previous periods now written back Rs. 3,00,000 (*nil*), transfer from contingencies reserve Rs. 1,50,000 (Rs. 1,50,000) and transfer for general reserve Rs. 50,000 (Rs. 25,000) leaving a credit balance of Rs. 93,831 (Rs. 1,65,440). Out of this the directors recommend the payment of the following dividends free of income-tax:—

On the preference shares at the rate of 7 (7) per cent. per annum Rs. 10,500 (Rs. 10,500) and on the ordinary shares at the rate of 5 (10) per cent. per annum Rs. 67,500 (Rs. 1,35,000) leaving to be carried forward Rs. 15,831 (Rs. 19,940).

During the half-year further considerable falls in the cotton market were registered and at the close of the period the market value of the cotton stocks, as taken in the accounts, was approximately Rs. 3 lakhs below cost. To counter-balance this loss a further Rs. 3 lakhs has been written back from the cotton reserve created in 1948 for this very purpose.

The serious slump in the cotton market caused Government to bring down the prices of cloth and yarn precipitately with the result that goods manufactured out of cotton purchased at high prices against quotas early in the season were sold at a loss. When Government introduced decontrol in October the situation did not immediately improve owing to the release by dealers of large stocks built up during the control period, resulting in an abnormally high accumulation of finished goods at the mill. Since the beginning of 1953 sales and prices have revived and there has been a steady demand for the Company's cloth and yarn at reasonable rates.

Re-equipment continues and the resultant improvement in quality and lowering of costs contribute to the confidence which the directors feel in the ability of the Company to hold its own in a highly competitive market.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	30,00,000	Block ...	20,81,000
Debentures ...	4,00,000	Stocks ...	46,30,973

Liabilities ...	24,54,175	Investments	36,500
Profit and loss account ...	15,831	Cash ...	3,70,206
Rs.	85,00,169	Rs.	85,00,169

Assam Saw Mills and Timber Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Bird & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 30th September, 1952.

The profit and loss account, including the credit balance of Rs. 60,887 (Rs. 30,837) brought forward from the previous year and Rs. 19,44,859 (Rs. 28,99,274) insurance claims for damage by earthquake in 1950 and loss due to floods in 1951, and after allowing for sundry charges, depreciation, commissions, taxation, etc., placing Rs. 1,00,000 (Rs. 7,25,000) to reserve for reconstructions, Rs. 53,000 (Rs. 27,500) to reserve for tax contingency, writing off loss of fixed assets to the extent of Rs. 4,967 (Rs. 5,52,628) and charging Rs. 31,642 (Rs. 6,20,876) for adjustments and loss of stocks, stores, etc., shows a credit balance of Rs. 1,86,645 (Rs. 2,94,220) which the directors propose to dispose of in paying a dividend on 4,66,666 ordinary shares at As. 4 (As. 8) per share, without any deduction for income-tax paid by the Company, absorbing Rs. 1,16,667 (Rs. 2,33,333) and in carrying forward Rs. 69,978 (Rs. 60,887).

The year under review has been one of reconstruction and the new Mills at Namsoi were opened for production in October, 1952. Despite the very considerable difficulties involved in setting up a modern factory in an area until recently covered with forest and with very difficult road and river communications, the directors' efforts have met with success and the Company can look forward to a satisfactory production of panels during the current year.

Unfortunately, coincident with the Company's misfortunes, the tea trade has suffered a severe slump and so gardens have tended to use existing stocks and to delay purchase of replacements, and this has made trading very difficult.

It does appear, however, as though the tea trade is recovering from its troubles and although the trading year of 1952-53 is bound to reflect the difficulties of restarting the Mills in a period of slump, the directors expect by 1953-54 to have overcome these difficulties and to have brought down the costs by an increase in production.

The relations with Government have been cordial although the directors have not yet been able to agree about suitable rates of royalty for timber from State and Central Government forests, *which is holding up the signing of the leases.*

In view of the present difficulties it has been decided to concentrate the Company's energies at Namsoi and leave the question of opening up again on the North Bank to await better times. The directors do not, therefore, propose to expand the small saw mills at Jonai at present.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	13,99,998	Block ...	8,55,100
Reserves ...	28,08,354	Work-in-progress ...	4,30,479
Provision for taxation ...	6,15,523	Stocks ...	1,67,403
Liabilities ...	8,03,268	Stores, etc. ...	16,15,309
Profit and loss account ...	69,978	Debts, deposits and advances ...	25,86,695
		Cash ...	41,635
Rs.	56,97,121	Rs.	56,97,121

United Provinces Sugar Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. James Finlay & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 30th September, 1952.

The accounts disclose a profit on sugar account of Rs. 5,28,406 (Rs. 8,06,345) and profit on zemindary account of Rs. 50,886 (Rs. 67,632), making a total of Rs. 5,79,292 (Rs. 8,73,977). From which has been deducted provision for Central and State taxation Rs. 3,14,534 (Rs. 4,00,000), leaving a balance of Rs. 2,64,758 (Rs. 3,31,907), to this is added the balance brought forward from last year of Rs. 11,907, leaving a balance available for distribution of Rs. 2,76,665 (Rs. 3,31,907), which the directors recommend to be dealt with as follows:—

Payment of a dividend of 15 (20) per cent. for the year to 30th September, 1952 Rs. 2,40,000 (Rs. 3,20,000) leaving a balance to be carried forward of Rs. 36,665 (Rs. 11,907).

The directors have not considered it necessary on this occasion to utilise any portion of the distributable profits to increase the general reserve which stands at the previous year's figure of Rs. 6,17,875.

Provision for depreciation at usual rates absorbed Rs. 54,096, and no capital expenditure was written off apart from a very small item of Rs. 39 spent on the acquisition of certain leasehold rights. The provision made for taxation fully covers Central and State liabilities on the profits for the year ended 30th September, 1952.

The Company's estates supplied 2,88,351 (3,01,456) maunds of cane and the cost of all cane delivered to the factory was Rs. 2-1-1 (Rs. 2-1-5) per maund. The minimum cane price was the same as in the previous year at Re. 1-12 per maund: cane cess and cane co-operative societies' *commissions* were also unchanged.

The Government control over the sale of sugar continued but larger quantities were allowed for free sale than previously and, late in the year when it was discovered that free market prices had fallen well below controlled rates and the State Government's nominees had declined to take up their allotments, the very large balance of controlled stocks was handed over to the factories to sell on the free market. With a carry over of about 2,00,000 tons from season 1950-51 stocks throughout the year were in excess of requirements and it was not possible to obtain the advantage from free market releases that had materialised in the previous year; furthermore, the balance at the end of the year could only be sold at below controlled rates, which largely accounts for the reduction in the profit figure.

A bonus to sugar factory workers in Uttar Pradesh was agreed upon and paid on the same scale as decreed for the previous year, which worked out in the case of Tamkohi factory at As. 4 per maund of sugar produced.

A canteen for workers was built and there were additions to the hospital, the workers' quarters and the club house; the total cost being Rs. 46,178. The only major capital expenditure on plant and machinery related to the new steel chimney. Results for the year were fairly satisfactory. One tractor was added to the fleet.

Prospects for season 1952-53. A small profit from the sugar factory can be anticipated, but crush and recovery were unsatisfactory due to adverse climatic conditions. The season closed on 7th April, 1953, with a crush of 25,24,444 maunds cane, producing 2,44,069 maunds sugar. Normal conditions were experienced until the 16th January, 1953, when a disastrous hail storm laid waste the district from which Tamkohi's cane supplies are drawn and did great damage to cane and other crops on the Company's estates and in the nearby areas. The quality of cane was very adversely affected, resulting in a recovery of only 9.67 per cent. average for the season. Despite these difficulties, the quality of sugar produced was fully maintained.

The prospects from the Company's farming operations are very poor and a loss must be expected as a result of the reduction in the cane price from Re. 1-12 to Re. 1-5 per maund and poor yields of cane and grain crops due to adverse weather conditions.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	16,00,000	Block ...	5,70,370

Liabilities ...	19,88,286	Debts, deposits and advances ...	18,42,429
Profit and loss account ...	36,665	Cash ...	1,17,671
Rs.	54,11,156	Rs.	54,11,156

Bengal-Nagpur Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st December, 1952.

After providing Rs. 31,000 (Rs. 7,250) for depreciation and Rs. 15,000 (*nil*) for taxation and transferring Rs. 7,332 (*nil*) to capital reserve, there remains a balance at the credit of profit and loss account of Rs. 19,345 (Rs. 21,372) out of which the directors recommend a dividend of Rs. 3-8 (Rs. 3-8) per share on preference shares Rs. 3,938 (Rs. 3,938) and a dividend of As. 6 (As. 2) per share on ordinary shares Rs. 8,437 (Rs. 11,250) leaving to be carried forward Rs. 6,970 (Rs. 6,184).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	3,37,500	Block ...	3,55,993
Reserves ...	5,21,767	Stores ...	4,788

Liabilities ...	1,10,313	Cash ...	63,109
Profit and loss account ...	6,971		
Rs.	10,26,143	Rs.	10,26,143

Eastern Manufacturing Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. McLeod & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st December, 1952.

The profit for the year after providing for depeciation Rs. 2,00,000 (Rs. 3,09,500) and bringing in the provision of Rs. 70,184 made in the previous year for possible loss on forward contracts and making sundry adjustments amounted to Rs. 59,794 (Rs. 3,49,107) to which was added the balance brought forward from the previous year of Rs. 16,074 (Rs. 4,467) making a total of Rs. 75,868 (Rs. 3,53,574). The directors transferred to general reserve account Rs. 30,000 (Rs. 3,00,000), leaving a balance of Rs. 45,868 (Rs. 53,574). The directors disposed of this sum in paying a dividend on 2,000 6 per cent. preference shares at Rs. 6 (Rs. 6) per share Rs. 12,000 (Rs. 12,000) and dividend on 8,500 ordinary shares at Rs. 3 (Rs. 3) per share Rs. 25,500 (Rs. 25,500) leaving to be carried forward Rs. 8,368 (Rs. 16,074).

Jute stocks are shown at cost price. Stocks of finished goods sold and unsold have been calculated at contract or market prices. Unfinished goods have been taken at cost price. Buildings, power plant and machinery have been maintained in thorough repair.

In compliance with the Award dated 9th September, 1952, of the special Tribunal which was constituted for these mills on 14th December, 1951, on the issue of temporary workers, the Company declared its permanent complement of workers on the 7th January, 1953 and proceeded with the due implementation of the Award. During the year the labour force remained quiet. The portion of the mill which was engaged in the manufacture of specialities like webbing, carpet, sashcord twine, etc., continued exempted from the working time agreement of the Indian Jute Mills Association.

Craig loom hours—with only 111 looms working out of the registered complement of 396 looms, these 111 looms worked 96 hours per week in terms of clause 10 of the working time agreement. The balance loom hours were sold.

The year started with a serious recession in the webbing trade with little or no orders from the principal overseas markets, particularly the U.K. which was silent until September, 1952, and shipment was suspended for large balances of orders. By the time permission was received from the Tribunal to reduce ribbon looms, large unsold stocks had accumulated which further added to our difficulties. With the fall in jute prices, it was found necessary to make substantial reductions in webbing prices, particularly for the second half of the year but the position improved subsequently. The directors report that most of the unsold stocks have since been cleared and the suspended balances shipped. Although affected by the general recession in the trade, export interest was revived due to the reduction in hessian duty. Sashcord continued to be in good local demand but only small shipments were made to East Africa.

During the period, there has been a steady decline in the prices of raw material and manufactured goods. Towards the latter half, highly speculative and fluctuating markets for raw jute and gunnies made trading difficult. Since the end of the year prices have steadily declined, and Government in an effort to remedy the position reduced sacking export duty on 28th February, 1953, by Rs. 95 per ton. This reduction did not arrest the decline in prices.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.

Mysore Stoneware Pipes and Potteries, Ltd.

The directors of the above Company (Managing Agents: The Mysore Industrial Development Co., Bangalore City) submit the audited accounts of the Company for the year ended 31st March, 1953.

The surplus for the year, after providing a sum of Rs. 35,321 (Rs. 41,117) for depreciation and Rs. 48,000 (Rs. 78,500) for income-tax and surcharge, is Rs. 55,599 (Rs. 1,07,166). With the amount carried over from last year, Rs. 9,812 (Rs. 7,646), the total sum available is Rs. 65,411 (Rs. 1,14,812). The directors recommend a dividend of 7½ (10) per cent. or As. 12 (Re. 1) per share, free of income-tax Rs. 45,000 (Rs. 60,000), transfer to general reserves Rs. 12,500 (Rs. 45,000), and carry over to next year Rs. 7,911 (Rs. 9,812). With the above addition, the general reserves amount to Rs. 2,32,500 (Rs. 2,20,000). The provision so far made towards depreciation on fixed assets is Rs. 4,55,140 (Rs. 4,19,698).

Although there was short supply of coal for two periods during the year and severe curtailment in electric power for two months continuously production was maintained. This necessitated the purchase of the costlier sea-cum-rail-routed coal.

Due to the State and Central Governments not drawing as much as expected, sales fell by 20 per cent. with the result that a heavy stock of finished products has accumulated. To face the competition that has been and the slackness in demand the margin has had to be reduced. Heavy increase in the cost of manufacture due to costlier coal, stores and services was off-set to a considerable extent by maintaining a steady output in spite of other difficulties above mentioned.

Though the acid jars turned out in the factory are of sound quality, further development of this section has had to be deferred on account of competition, and a fall in the general demand. There is, however, a good and growing demand for firebricks, and the expansion of this line of manufacture is under active consideration.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	6,00,000	Block ...	3,55,148

Liabilities ...	1,83,443	Debts, deposits and advances ...	2,65,735
Profit and loss account ...	65,411	Investments ...	35,000
		Cash ...	1,43,007
Rs.	11,17,354	Rs.	11,17,354

Travancore Ogale Glass Mfg. Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Ogale Brothers, Ltd., Trivandrum) submit the audited accounts of the Company for the year ended 31st December, 1952.

There was a prolonged strike in the factory in February and March, 1952 when there was no production while the establishment charges had to be met. There was a steep fall in production from Rs. 7,10,000 in 1951 to Rs. 5,70,000 in 1952. The result is a loss of Rs. 61,644. In keeping with the general market trend, the prices of glass articles had to be reduced, the working costs remaining at a high level.

Provision has been made for depreciation as usual in the profit and loss account. In addition, initial, extra and additional depreciation is being written off under the existing provisions of the Income-tax Act and the unabsorbed depreciation, carried over, and will be set off against future profits.

Labour conditions are far from satisfactory. Demands put up in November, 1952 are pending settlement. Labour does not realise the changed business conditions, sellers' market having given place to buyers' market and the slump conditions all round.

Out of the loan of Rs. 5,00,000 sanctioned by the Industrial Finance Corporation of India, the first instalment of Rs. 3,00,000 was received towards the end of June, 1952. Most of the necessary equipment has now arrived and as soon as the present electric power cut is restored, the automatic bottle plant will be put into production. This will result in increased production and there will be considerable saving in the cost of production.

Correspondence with the Central Government and the Industrial Finance Corporation of India regarding renewal of the managing agency agreement and alterations in the Articles of Association of the Company is in the final stage and it is hoped that it will be possible to place suitable resolutions before the shareholders at an extraordinary general meeting soon.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	9,98,380	Block ...	10,07,308

COMPANY MEETINGS AND DIVIDENDS

DHEMO MAIN COLLIERIES LTD. Half-yearly General Meeting, Calcutta, 29th June, 1953. Dividend: *Nil.* Transfer books closed from 20th to 29th June, 1953, both days inclusive.

HURRILADIH COAL CO., LTD. Half-yearly General Meeting, Calcutta, 29th June, 1953. Dividend: As. 12 per share. Transfer books closed from 20th to 29th June, 1953, both days inclusive.

WEST JAMURIA COAL CO., LTD. Half-yearly General Meeting, Calcutta, 29th June, 1953. Dividend: *Nil.* Transfer books closed from 20th to 29th June, 1953, both days inclusive.

BENGAL-NAGPUR COTTON MILLS LTD. Half-yearly General Meeting, Calcutta, 29th June, 1953. Dividend: As. 4 per share. Transfer books closed from 22nd to 29th June, 1953, both days inclusive.

UNITED PROVINCES SUGAR CO., LTD. Annual General Meeting, Calcutta, 3rd July, 1953. Dividend: Re. 1-8 per share. Transfer books closed from 18th June to 3rd July, 1953, both days inclusive.

AHMADPUR-KATWA RAILWAY CO., LTD. Annual General Meeting, Calcutta, 3rd July, 1953. Dividend: Rs. 2-11 per share, less income-tax. Transfer books closed from 20th June to 3rd July, 1953, both days inclusive.

BANKURA-DAMODAR RIVER RAILWAY CO., LTD. Annual General Meeting, Calcutta, 3rd July, 1953. Dividend: Rs. 2-11 per share, less income-tax. Transfer books closed from 20th June to 3rd July, 1953, both days inclusive.

BURDWAN-CUTWA RAILWAY CO., LTD. Annual General Meeting, Calcutta, 3rd July, 1953. Dividend: Rs. 3-8 per share, less income-tax. Transfer books closed from 20th June to 3rd July, 1953, both days inclusive.

KALIGHAT-FALTA RAILWAY CO., LTD. Annual General Meeting, Calcutta, 3rd July, 1953. Dividend: Rs. 2-11 per share, less income-tax. Transfer books closed from 20th June to 3rd July, 1953, both days inclusive.

KATAKHAL-LALA BAZAR RAILWAY CO., LTD. Annual General Meeting, Calcutta, 3rd July, 1953. Dividend: Rs. 5 per share, less income-tax. Transfer books closed from 20th June to 3rd July, 1953, both days inclusive.

GIELLE TEA CO., LTD. Annual General Meeting, Calcutta, 3rd July, 1953. Dividend: *Nil.* Transfer books closed from 27th June to 3rd July, 1953, both days inclusive.

DILARAM TEA CO., LTD. Annual General Meeting, Calcutta, 3rd July, 1953. Dividend: *Nil.* Transfer books close from 1st to 3rd July, 1953, both days inclusive.

NEW INDIA INVESTMENT CORPORATION LTD. Annual General Meeting, Calcutta, 3rd July, 1953. Dividend: Rs. 2 per share. Transfer books closed from 25th June to 3rd July, 1953, both days inclusive.

NUDDEA MILLS LTD. Half-yearly General Meeting, Calcutta, 6th July, 1953. Transfer books close from 30th June to 6th July, 1953, both days inclusive.

GANGES MANUFACTURING CO., LTD. Half-yearly General Meeting, Calcutta, 6th July, 1953. Transfer books close from 30th June to 6th July, 1953, both days inclusive.

RHOTAS INDUSTRIES LTD. Annual General Meeting, Dalmianagar, 7th July, 1953. Dividend: Re. 1 per share. Transfer books close from 1st to 7th July. 1953, both days inclusive.

SOORAH JUTE MILLS CO., LTD. Annual General Meeting, Calcutta, 8th July, 1953. Transfer books closed from 24th June to 8th July, 1953, both days inclusive.

KHARDAH CO., LTD. Half-yearly General Meeting, Calcutta, 8th July, 1953. Dividend: Rs. 15 per share. Transfer books closed from 24th June to 8th July, 1953, both days inclusive.

JESSOP & CO., LTD. Annual General Meeting, Calcutta, 17th July, 1953. Transfer books close from 29th June to 17th July, 1953, both days inclusive.

DALMIA CEMENT (BHARAT) LTD. Annual General Meeting, Dalmiapuram (Dist. Tiruchirapalli), 20th July, 1953. Transfer books close from 1st to 20th July, 1953, both days inclusive.

SEARSOLE COAL CO., LTD. Dividend of As. 10 per share for the year ended 31st January, 1953.

COMPANY REGISTRATIONS

PEDNEKAR INDUSTRIES LTD. (First Director: Mr. S. K. Pednekar.) Business: Manufacturers, Importers, Exporters and Dealers in Sewing Machines, both industrial and domestic. Authorised capital: Rs. 5,00,000. Private company. Address: 80, Girgaon Road, Swadeshi Mill Compound, Bombay, 4.

F. SAKKAR, LTD. (First Director: Fatema Basrai.) Business: Manufacturers, Importers, Exporters and Traders. Authorised capital: Rs. 5,00,000. Private company. Address: Badri Mahal, Hornby Road, Bombay.

AUTOMACHINES (INDIA) LTD. (First Director: Mrs. Meera Brahmwar.) Business: Importers, Exporters and Dealers in Electrical. Industrial and Agricultural Machinery and Accessories, etc. Authorised capital: Rs. 5,00,000. Private company. Address: 111A, Mahatma Gandhi Road, 2nd Floor, Fort, Bombay.

AIR-INDIA LIMITED

(*Concluded from page 1177*)

Bidding farewell to the officers and members of the staff of Air-India, some of whom had been with the Company and its predecessors since the start of operations over 20 years ago, the Chairman said he was happy to know that their services would be retained in the nationalised corporations whose success would now largely depend on their efforts and those of their fellow-workers from other airlines.

"And now my task is done. If I have dwelt at length on past events and misfortunes and if I have been forthright in directing criticism where I felt it was due, it is in no spirit of bitterness or rancour that I have done so. In laying down the stewardship of this Company's affairs, I consider it a duty to place the correct facts before you and to endeavour to draw from them lessons that may be of value in the future. Now that Parliament has expressed its will, we must all accept it in good part and I am sure you will join me in wishing success to the two State Corporations which will henceforth carry the flag of Indian aviation."

The Chairman thanked the shareholders of the Company for the support and confidence they had given the management all these years.

"Grieved as I am that this venture to which I devoted so much thought, energy and time and for the success of which I held such high hopes," concluded Mr. Tata, "has come to this end, my sorrow is tempered by the thought that our 21 years' endeavour has not been in vain, that the work we pioneered is being carried on and that in laying the foundations of Indian air transport and building upon them the greater part of the present edifice, your Company and its predecessors, Tata Sons Limited, served the country well."

PLANTING

(*Concluded from page 1175*)

the undesirability of these provisions. It is pointed out, in this connection, that a great deal of misrepresentation has recently been made about the activities of the Coffee Board and particularly against its marketing policy. The Chairman of a planters' association in a coffee-growing district in South India, in a recent speech, strongly repudiated these charges and pointed out that a great deal of harm to the industry, as well as the consumer, could have been avoided if the Government had paid heed to the advice of the Board in some important respects, and mainly in the matter of exports of coffee. One other spokesman of the coffee planters quite recently stated that, while the Board had been widely blamed, not only by consumers and the trade but also by the Government of India, it appeared open to doubt whether or not the trouble rested on them, at times, uncertain handling of complex economic issues by the Government itself.

Coffee Costs of Production

It seems that the Government of India has decided to carry out its investigation into the cost of production of coffee, and that a Cost Accounts Officer deputed by the Government has arrived in Coorg and started his investigations. Growers of coffee appear to welcome the enquiry, inasmuch as they are confident that it will reveal that the cost of production of coffee is still very high and will not permit of any further reduction in the basic price.

Rubber growers in South India have not yet secured the relief that the Government promised them in the matter of the accumulation of stocks with growers and dealers. The Minister for Industries and Commerce, Government of India, had, it appears, agreed to permit the export of another 1,000 tons of raw rubber to relieve the stock position, but so far, it is pointed out, no action has been taken in the matter.

PROSPECTS OF TEA GROWING IN NEW GUINEA

An overseas tea expert is stated to have reported favourably to the Australian Government on the prospects of growing tea in Papua and New Guinea. According to the expert, there seems to be no reason why yield results similar to those of Ceylon and India should not be possible if suitable technique were followed. The expert visited Papua and New Guinea earlier this year and presented his report to the Territories Minister, Paul Hasluck.

The Government is already growing tea at Garaina in the mountains of the Lae. About 70 acres are under cultivation, with the object of providing seed for new estates and also to provide economic and technical information for commercial tea producers of the future. Garaina seed should provide sufficient material to plant about 400 acres of tea annually. Most recent tea statistics show that the average Australian consumes about 6½ lbs. of tea per year, as compared with 7 lbs. just before the last war.

MONEY EASY

(From Our Own Correspondent)

BOMBAY, 24*th June*

By a coincidence, as it were, the onset of the monsoon in Bombay and other Western India centres, has been followed by an inflow of funds into the short-term money market. This, coupled with fewer borrowers, has brought about comfortable conditions. There has been a drop in the inter-bank call money rate among the Exchange banks and big Indian banks from 2¾ per cent. to 2½ per cent. In fact, on some days during the week, there were lenders of overnight funds even at 2¼ per cent. The rate among the smaller Indian banks, however, remained unchanged at 3 per cent. Short-term deposit rates are quoted at 2½ to 2¾ per cent. for one to three months and 2¼ to 2½ per cent. for four months and over.

Usually the monsoon months witness an easy trend in the short-term money market. But it is doubtful whether this traditional pattern will be repeated this year, even though the commencement of the season has been on traditional lines. The recent Central Government loan and the issue of the Stanvac debentures have already depleted a good part of the public funds and the expected State loans in the coming months will tell considerably on the money market. The volume of floating funds in the money market in the coming months will, therefore, be considerably restricted.

The response to this week's Government of India three months' Treasury Bills was very encouraging. The total amount offered was as high as Rs. 290.25 lakhs, as against Rs. 222.50 lakhs last week, thus maintaining the rising trend in the amount offered noted during the previous two weeks. Incidentally, it may be noted that this is the largest amount offered since the third week of November, 1952, when the offerings amounted to Rs. 291.50 lakhs. But that was against an invitation for Rs. 2 crores. This week's offering is, therefore, the highest since the amount of borrowing was reduced to Rs. 1 crore. The average rate of accepted tenders, however, remained unchanged at Rs. 2-6-6 per cent. per annum.

The slackness in the money market is fully reflected in a contraction of Rs. 13.12 crores in notes in circulation during the week ended 19th June, 1953, following a fall of Rs. 2.13 crores in the preceding week. The Reserve Bank's statement for the week shows an increase of Rs. 16.97 crores in notes held in the Banking Department. The consequent increase of Rs. 3.85 crores in total notes issued is covered by a rise of Rs. 1.85 crores in rupee coin. The rise of Rs. 28.04 crores in the Central Government's deposits, noted in the previous week, has been followed by a further increase of Rs. 8.74 crores during the week under review. Deposits of other Governments are also higher, but by only Rs. 83.38 lakhs. Deposits of banks do not show an increase of more than Rs. 38.02 lakhs. On the assets side, cash balances have risen by Rs. 17 crores, and balances held abroad by Rs. 21.23 lakhs. Loans and advances to Governments are lower by Rs. 36 lakhs and other loans and advances by Rs. 5.29 crores. Of the latter, advances to Scheduled Banks against usance bills account for a decline of Rs. 1.35 crores.

The withdrawal of funds from banks, consequent on the flotation of the Central Government loan, is reflected in the Scheduled Banks' statement for the week ended 12th June, 1953. As compared with that for the previous week, this statement reveals a fall of Rs. 7.53 crores in the Banks' demand deposits. Time deposits are however, better by Rs. 61.63 lakhs. Borrowings from the Reserve Bank show an increase of Rs. 14.20 crores, of which Rs. 10.30 crores are accounted for by borrowings against usance bills. Borrowings from the Imperial Bank also show a rise of Rs. 3.54 crores. Advances have fallen by Rs. 43.77 lakhs, while inland bills purchased and discounted have gone up by Rs. 1.05 crores. Investments are up by Rs. 12.17 crores, indicating the extent of support given by the banks to the new loan of the Government of India. Cash balances, including money at call and short notice, have dropped by Rs. 2.09 crores.

After a three-week spell of easiness, the Gilt-edged market steadied up during the week under review, with moderate gains in short and long-dated issues. The market, having adjusted itself to the new yield pattern of the National Plan Bonds, recovered, the easy conditions in the money market also assisting the process. There was a fair demand for short-dated loans. The short-medium dated loans were not in demand, obviously due to the better investment merits of the new loan. 3 per cent. 1957 hardened by As. 3 to Rs. 98-6 and 3 per cent. 1958 by As. 2 to Rs. 98-3. 3 per cent. 1959-61 recovered to Rs. 96-4, a rise of As. 2 over the week. 3 per cent. 1963-65 and 3 per cent. 1964 showed no change at Rs. 92-7 and Rs. 92-6 respectively. 3 per cent. 1966-68 added As. 2 to stand at Rs. 90-3. 3 per cent. 1970-75 stood at Rs. 86-7. 3 per cent. 1986 Conversion Loan made a sharp rally from Rs. 82-2 to Rs. 82-15, due to short-covering by bears and lack of floating stocks. The 3½ per cent. 1961 National Plan Bonds, which were quoted at Rs. 98-3, closed at Rs. 98-5, that is at a premium of an anna over the issue price.

POOR ARRIVALS OF KIPS

(From Our Own Correspondent)

MADRAS, 22*nd June*

Arrivals of kips have been small and clearance of stocks from the bazaar has been fair-sized. Tanners are probably covering in their earlier orders. Demand from the U.K. for kips has been small. Enquiries are chiefly for lower grade kips and shippers seem to be in an oversold position.

The market for tanned goat and sheep skins has ruled steady and demand has been chiefly for light weight goat and lining sheep. Prices locally are kept up by exporters' purchases daily, despite importers' levels being 6*d.* to 9*d.* below the prices at origin. Raw prices also have maintained, due to tanners' purchases.

BULLION SAGS AT CLOSE

(From Our Own Correspondent)

BOMBAY, 24*th June*

The trend of prices in the bullion market during the week under review was as indecisive as the weather in Bombay. Though movements were erratic, definite signs of easiness came to prevail towards the closing sessions. In silver, after an early quietness, due to slackening demand in the ready position, there was a recovery during the mid-week, on account of purchases by option dealers and the strength of gold. From Monday onwards, however, prices began to sag on liquidation by prominent bulls and option dealers. The bulls were reported to have indulged in sizable sales in the current settlement, with the result that the *budla* rates for the next settlement, which was standing at Rs. 3-2 at the close of last week, narrowed down to Re. 1-7 at the close to-day. The contraction in *budla* rates had a bearish influence on the trading public. Demand for silver in the ready position slackened considerably towards the close, which also acted as a damper.

Gold showed a hardening tendency till Monday on better demand, particularly from Calcutta. But the reports that the power cut in Kolar Gold Fields had been removed, coupled with a fall in demand, imparted an easy tone and prices sagged towards the close.

Silver for forward delivery (30th June settlement) opened at Rs. 160-10 and retreated to Rs. 159-5 on Friday. In the recovery that followed, the white metal touched a high of Rs. 162 on Monday. But this revival having proved to be a short-lived affair for reasons stated above, the trend became downward again and a low of Rs. 158-4 was touched to-day. The closing rate was, however, a shade better at Rs. 158-11.

Business in the next settlement (end of July) commenced officially on Friday at Rs. 157-1 and the closing price stood to-day at Rs. 157-3.

Ready silver (.996 mint) opened at Rs. 161-10 and touched a high of Rs. 162-4 on Monday, before winding up at Rs. 158-15. The floating stocks are placed at 1,000 bars. The daily average offtake was 10 to 15 bars.

Gold for forward delivery (29th June settlement) began at Rs. 90-5 and advanced moderately to Rs. 91-8 on Monday. Later on, it retreated by stages to close at Rs. 89-15.

Trading in the next settlement began on Friday at Rs. 89-3, that is, at a discount of Re. 1-6 below the current settlement, and finished at Rs. 88-12, that is, at Re. 1-3 below the current settlement.

Ready gold (.999 fine) opened at Rs. 91-15 and, after touching Rs. 93-5, closed at Rs. 90-11. The floating stocks of gold are estimated at 20,000 tolas. The daily average arrivals were 3,500 tolas, while the offtake was 4,500 tolas on an average.

The international free market gold showed signs of steadiness during the week. In Europe, the price, which stood at $36.40 on the 16th inst., looked up to $36.55 yesterday.

The following comparative table shows the trend of the market during the week under review:

	24-6-53	Highest	Lowest	17-6-53
	Rs. a.	Rs. a.	Rs. a.	Rs. a.

MILLED DUSTS STEADY

(Messrs. Forbes, Ewart and Figgis, Ltd.)

COCHIN, 20*th June*

The total offerings in dust sale "L" which was held on Tuesday, 16th June, amounted to approximately 1,50,000 lbs. There was a fairly good demand and prices for milled dusts were about steady. Better sorts, however, met with slightly less demand and were As. 1 to As. 2 easier.

London Market.—Strong demand, ½*d.* to 1*d.* throughout.

Colombo Market.—Good demand. Dimbula type brokens lower. Improved quality Uvas slightly dearer. Others firm.

Calcutta Market—Export.—31,000 packages. Good general demand for commonest and whole leaf grades, first flush Darjeelings irregular and plainer types neglected.

Dust.—Market irregular. Commons irregularly half to one anna easier. Residues neglected. New seasons Dooars Darjeeling and best liquoring Assams well supported.

Export Quota.—The market has eased slightly and the present quotation is 22 pies with buyers scarce.

Forthcoming Auctions.—Dust sale "M" will be held on Tuesday, 30th June.

As we go to press, Messrs. Forbes, Ewart and Figgis, Ltd., wire as follows:—

"*Sale* 13,—21,00,000 lbs. Good general demand all round, particularly for low and medium fannings, which are dearer. All others sold well at about last rates, with improved quality showing advances."

SET-BACK IN COTTON

(From Our Own Correspondent)

BOMBAY, 24*th June*

The demoralisation in the forward cotton market is now complete. Even the spot interests have lost their nerve and are prepared to offer their holdings in the August delivery at every rise above Rs. 680. The market has been reduced to playing a game of hide and seek. After the middle of last week, it appeared as if the market was on its legs again and there was an atmosphere of restored confidence in the belief that contracts had then passed into strong hands, who would come forward to sustain the market against speculative selling. But at the opening of this week these very elements started indulging in frantic selling after prices had registered some rise. It is obvious that the forward market is now completely in the hands of speculators who are divorced from spot conditions and on whom the statistical position of Indian cotton, mill consumption, etc., have little tangible effect.

Unless the Government accept the Cotton Advisory Board's recommendation of allowing forward trading at an early date, it is certain that the forward market, which started with a blare of trumpets last December, will end tamely, with all operators turning into buyers when prices go below Rs. 670 and into sellers when they rise above Rs. 680. On the other hand, there are prophets of gloom in the market who hold strongly that prices will end where they began, i.e., around Rs. 620. While this is an extreme view, one must be prepared to concede that the forward market in cotton is quite capable of springing a series of surprises during the course of the next two months, by which time the August contract will expire and there is as much chance of the price touching Rs. 720 as Rs. 620 during the interval.

In spite of this condition of the forward section, the spot market has maintained a comparative steadiness in turnover and prices. Enquiries for selected styles, both in Indian and imported cottons, continue to come in and if the mills are given soon to purchase the extra 5 per cent. quota, as recommended by the Advisory Board, a further demand might materialise. It cannot be repeated too often that the statistical position and the carry-over are all in favour of spot dealers with holdings. Even if the new crop were to be good as expected, consumption during the interval is bound to exert a pressure on the available stocks and the holders would be in a position to dispose of all their cotton of qualities which can be used by mills, before they are required to invest in the 1953-54 cotton. This is about as happy a position as any spot dealer can hope for.

The latest quotations available from the Sewri market are: Bengal *Deshi* Rs. 540, Berar Jarilla Rs. 720; Khandesh Rs. 835; Vijay Rs. 855; Moglai Rs. 665; Oomra *Deshi* Rs. 665.

In the forward market, I.C.C. August opened the week under review at Rs. 669 as against the closing rate of Rs. 668 last week. On persistent support from prominent mills the rate improved to touch a high of Rs. 683½ on 22nd inst. At this high level there was considerable unloading which resulted in a sharp setback in prices. The prices reacted to touch a low of Rs. 665¼, which was also the closing level for the week. The following is the price trend in the forward market for the week ended today.

	Opening	*High*	*Low*	*Closing*
I.C.C. Aug. (Rs.) ..	669	683½	664	665½

Considering the next crop prospects, they appear to be good, so far as can be judged at this early stage. Rainfall has been good, if delayed, in several of the important cotton-producing areas. The acreage is expected to be slightly higher than in 1952-53 and if the monsoon does not play any tricks later in the season, the yield per acre can be reasonably expected to be better than last year, especially with regard to good staple cotton in Gujerat, where the crop was very poor in the last season. If consumption continues anywhere near the rate during this year even this increased output will be readily absorbed by the mills and prices can be maintained at a reasonable and economic level for the producers, provided world prices hold. The only snag in the situation is with regard to mill consumption. Many people doubt if production of cloth can be continued next year at the level of 1953. As competition is bound to increase abroad and purchasing power within the country is steadily going down, there is little hope of the mills being able to reduce cost of production except by way of lower cotton prices. On balance, the prospects for the 1953-54 crop are not very rosy but not very depressing either.

The Cotton Buyers' Association has asked the Government to extend the period of export licences to 30th September. There is no reason to believe that this request will prove unacceptable to the Government. There are, however, no prospects of the export duties on Dholleras, Oomras, etc., being reduced, the licences for which have remained unused so far. At present prices there are no buyers abroad for this cotton. But there is a possibility of internal prices of these varieties going down in view of a good crop next season. Japan and the U.K. might in this case come forward to absorb this cotton. With regard to imports, activity at this time is naturally slack. With the increase in price of Egyptian cotton, demand for it from certain mills with which it is popular has naturally dwindled. There is no move to import cotton against valid licences from the U.S.A.

At Karachi, there is a certain amount of dissatisfaction amongst dealers because they are not being consulted with regard to the cotton marketing policy for 1953-54. During the week under review there have been no development of note apart from a slight hardening of prices.

The latest available quotations from Karachi are: Punjab *Deshi* Rs. 78; 4F Punjab R.G. Rs. 59; S.G. Rs. 64; L.S.S. Punjab R.G. Rs. 62½; S.G. Rs. 68½; N.T.R.G. Rs. 68; S.G. Rs. 74; 289F Punjab R.G. Rs. 71½; S.G. Rs. 77½.

At Alexandria, spot demand has gone down as the season is coming to an end. India, which was one of the main buyers, has been discouraged because the higher discounts for payment in sterling for this cotton are now absent. The premium for entitlement sterling has gone down and the discount offered to buyers like India, who pay in sterling, has ceased to be attractive. The market there is also awaiting the fixation of the basic prices for all varieties other than Karnak and Ashmouni, as well as the price differential for grades for the new crop. Before this is done it is not possible for shippers to offer cotton to foreign buyers. The Ministry of Finance is, however, expected to finalise these at an early date, after which some transactions with the Continent might be expected. The stock position is not such as to cause any anxiety to the authorities and the new crop is not expected to exceed one million bales.

At Kampala, the authorities have provisionally announced the minimum prices for cotton of the 1953-54 season for the growers. These are generally lower than those obtaining last year, but it is expected that they will be reviewed after three months or so, in the light of the developments in the world cotton market.

At New York, fluctuations during the week under review have been on a very limited scale and the market is awaiting indications with regard to the liquidation of the July contract and international political developments. There is a general recession in commodity prices in the U.S.A. and it is feared that when the present tension created by the unexpected step of the South Korean President is relaxed, prices might go down further. This will prevent, for the time being heavy fluctuations either way. But the price trend is likely to be lower if the political situation clears up within the next few days.

The following are the latest available quotations from New York as compared with those of a week and a fortnight before:

(In cents per lb.)

	24-6-53	16-6-53	10-6-53
Spot	34.15	34.15	34.10
July	33.45	33.50	33.50
October	33.85	33.80	33.75
December	33.95	33.88	33.85
March	34.14	34.02	33.87

WEAKNESS IN ART SILK YARN PERSISTS

(From Our Own Correspondent)

BOMBAY, 24*th June*

Under the influence of a spate of bearish factors the art silk yarn market continued to remain depressed this week also. Besides the bulk purchase agreement entered into by the Silk and Art Silk Mills Association with the National Rayon Corporation and Italviscosa—the Italian suppliers—and continued heavy arrivals of imported yarn, additional adverse forces, such as highly discouraging advices from rayon cloth markets, rumours regarding the further grant of Rs. 2 crores worth of yarn import licences to the Association, with permission to import 120 denier bright yarn, and reports of the possibility of a substantial downward revision in Japanese art silk yarn quotations cumulatively joined to induce liquidation by longs. This, coupled with the extremely cautious attitude on the part of buyers, led to a sharp break in yarn values, yesterday's quotations being lower *vis-a-vis* those at the end of last week. To-day the market remained closed as a mark of respect to the memory of the late Dr. Shyama Prasad Mookherjee.

The decline in prices was in marked evidence in the ready section. Thus, 120 Japan and 150 Japan receded by As. 2-6 and As. 2 to Rs. 4-3 and Rs. 3-15, respectively. 150 Italy lost an anna to Rs. 3-13. 120 Italy also was a shade lower at Rs. 4-2. Values in the forward section moved in sympathy. 150D June delivery contract staged a retreat from Rs. 772 to Rs. 759; in unofficial trading to-day, it was quoted even lower at Rs. 750, the lowest level for the past four months. July contract suffered a loss of 16 points to Rs. 761.

The table below gives the prices of art silk yarn quoted yesterday, as compared with those on the 16th and 10th inst.

	23-6-53	16-6-53	10-6-53
	Rs. a.	Rs. a.	Rs. a.
150D June (per case of 200 lbs.) ..	759 0	772 0	790 0
150D July	761 0	777 0	795 0
120 Japan (per lb.)	4 3	4 5½	4 6½
150 Japan ,, ...	3 15	4 1	4 2
120 Italy ,, ...	4 2	4 2½	4 2
150 Italy ,, ...	3 13	3 14	3 15½

Japan, it is reported, is making efforts to promote larger sales of art silk yarn in India, which is now buying largely from European countries, particularly Italy. It is to send a three-man mission which will visit India shortly to carry on negotiations. Italy has built up rayon yarn exports to India on a highly successful co-operative system of bulk marketing which has brought the ruling price to as low as 164 yen, as compared with the Japanese rate of 223 yen. The Japanese traders have now come to believe that, with a similar system and more attention to quality, they can lower prices and recapture the Indian market for art silk yarn.

The Yarn Merchants' Association, Bombay, is shortly making a representation to the Chief Controller of Imports to allow larger imports of 150 and 120 deniers of art silk yarn, as these, in its opinion, are greatly consumed by the handloom weavers. The Association is also meeting the Joint Chief Controller of Imports in connection with a clarification regarding imports of doubling yarns.

In the staple fibre yarn section, owing to cornering of stocks in certain qualities of 2/40s by certain parties, prices have been kept artificially steady for the time being. However, the very wide gap between the June delivery and the delivery for July and onwards, it is stated, is a clear indication of the weak tendency in future and recession in values. This will particularly be so after the large consignments of staple fibre against recent purchases by several cotton mills arrive in the market.

CASTORSEEDS IRREGULAR

(From Our Own Correspondent)

BOMBAY, 24*th June*

The undertone of the oilseeds market continued to be generally steady this week too, and values recorded further gains. The groundnut section received fresh support from crushers and upcountry interests who were eager to cover up their open positions. Linseed ruled strong, ignoring reports of a downward trend in prices in the U.S. and competition from Canada, Uruguay and Latin American countries. Niger seeds also shared the improvement in the sentiment. The castorseeds section, however, proved an exception, in that it depicted an irregular trend. Under a mild tussle between bulls and bears, prices oscillated frequently, with quotations drifting downward towards the close. This happened, despite rumours of a possible reduction in freight on castor oil shipment to the U.S., tight supply position of spot and encouraging advices from the oil section. This was due to lack of support from overseas buyers, as a result of reported supply of castor oil by China (2 per cent.) at £120 c.i.f. delivered weight, and castorseeds at £56. Kardi seeds also were somewhat neglected.

Sustained bull support pushed up prices of groundnuts. Bold ready rose by As. 12 to Rs. 48-8. Coromandel and Khandesh quality put on As. 8 each to Rs. 49. June-July delivery improved by Re. 1-8 to Rs. 49 and August-September delivery by As. 10 to Rs. 46-4. Groundnut oil ready and railway receipts, however, were slightly lower at Rs. 25-4 and Rs. 25-2, respectively.

In the linseed section, Kanpur gained a rupee to Rs. 29-8. Satna registered a rise of As. 10 to Rs. 29-10. Indores gathered As. 2 to Rs. 31-14. August-September contract was fully steady at Rs. 31-10. Bold ready and Bold June-July delivery, on the other hand, were somewhat neglected at Rs. 31-2 each, as against Rs. 31-6. Linseed oil picked up As. 10 to Rs. 17 on Monday, but finished lower at Rs. 16-10 to-day.

Prices of castorseeds and oil witnessed frequent fluctuations, with closing quotation marked lower than what they were at the beginning of the week. Ready F.A.Q. slided down from Rs. 32 to Rs. 31-4. Ready Madras and Kanpur quality were easy, each by As. 4, the former at Rs. 32-4 and the latter at Rs. 29-12. Oil Commercial sagged from Rs. 18-8 to Rs. 17-12. Oil 1st Pressure also lost As. 2 to Rs. 18-4. Castorseeds September delivery, on the other hand, lost Re. 1-8 to Rs. 152-8, although, at one time, it had gone down to Rs. 149-12.

Among other seeds, niger seed ready Madras was higher by As. 8 at Rs. 37-8, while ready F.A.Q. was steady at Rs. 36-8. Kardi seed Bold ready, however, declined by As. 2 to Rs. 25-10 and August-September delivery by As. 4 to Rs. 25-6.

The following table shows the prices of oilseeds and oil on the 24th inst., as compared with those at the end of the previous two weeks.

	24-6-53	17-6-53	10-6-53
	Rs. a.	Rs. a.	Rs. a.

SUGAR WEAK

(From Our Own Correspondent)

BOMBAY, 24*th June*

The forward section of the Bombay sugar market, which was stunned last week by the Government of India's decision to import sugar from abroad, collapsed this week, following the announcement of a reduction in import tariff which suggested that Government meant business. Thus, *Shravan* delivery was marked down to Rs. 84 per bag on Tuesday, as against Rs. 92 a fortnight ago. Towards the close, however, there was slight recovery to Rs. 84-12 on profit-taking. But the undertone of the market was distinctly weak, the demand being slack.

In the spot section, buyers were extremely hesitant to enter into commitments, while stockists were eager to reduce their holdings, having become scared by the Government's vigorous steps to permit imports at low prices. Small grain sugar was freely available at Rs. 85, medium grain at Rs. 86 and large grain at Rs. 88 to Rs. 90 per bag. It is anticipated that prices will stabilise at about these levels temporarily, that is, until the imported sugar actually arrives in the market or the U.P. millers become willing sellers at Rs. 27 per maund.

The arrivals of sugar into Bombay market during the month of May amounted to 90,000 bags and during this month (up to the 22nd inst.) to 52,000 bags. The opening stock with the trade on the 22nd inst. was 37,000 bags.

Sugar traders are somewhat intrigued at the Government's decision to grant import licences only to traders and consumers who can import a minimum shipload of 6,000 tons (i.e., 60,000 bags valued at about Rs. 40 lakhs). In their opinion, imports in smaller quantities also should be allowed. Latest reports from overseas markets reveal that Formosa sugar can be had even in small lots at £41. Continental sugar at £41 6*s.* and Cuban sugar at $100 per ton —all quotations are c.i.f. Bombay. In other words, the landed cost of imported sugar works out to about Rs. 72 per bag delivered *ex*-godown in Bombay and/or Madras, a rate Rs. 5 less than the Government's estimated landed cost.

BRADFORD TOPS DEARER

(Messrs. J. Hardacre and Co.)

BOMBAY, 23*rd June*

After initial weakness, the wool market recovered somewhat later in the week, or at least the decline was halted. What is more, there has been a good weight of business in merino tops, and a 64s B, which, on Monday, was down to about 158-160*d.*, could not now be bought under 162*d.*

Sales at Brisbane and Adelaide this week closed, with merino combing wools 3*d.* to 4*d.* per clean lb. dearer. Quotations for cross-bred tops likewise have regained most of the loss and are firm.

The woollen section of the trade is still quiet, as it has been for some weeks, and some of the shorter grades of slips are a shade cheaper.

To-day's quotations (in pence per lb. c.i.f. Bombay, July-August 1953 delivery) for Bradford oil-combed tops are given below:

48s carded 87*d.*, 58s super 119*d.*, 60s super 140*d.*, 64s super 168*d.*, 70s super 179*d.*, fibro (3D 4") 43½*d.* and 46/48s scoured clothing wool 77*d.*

The tendency of the market is very firm.

METALS FEATURELESS

(From Our Own Correspondent)

CALCUTTA, 23*rd June*

The metal market remained featureless during the week. Prices, wherever not maintained, moved down. Consumers were indifferent to replacement, and manufacturers of non-ferrous metal products were inclined to consume even an ounce of scrap available with them before covering their minimum requirements from the market. Electrolytic copper was throughout quoted at Rs. 180, with the fire-refined material remaining unquoted, in view of lack of supplies. Manufacturers believe that the price is bound to fall, and that the expected fresh arrivals would ease the supply situation. News of the price trend in London, following the forthcoming commencement of free trading there, is keenly awaited. However, it should be noted that the new turn in the Korean situation would resist any downward tendency. Wire bars changed hands at Rs. 173. Tin at Rs. 466, showed a loss of 10 points, but the quantity that changed hands was insignificant. Electrolytic zinc was quoted at Rs. 52. Supply exceeded demand. Virgin lead was steady at Rs. 63.

RICE SATISFACTORY POSITION

(From Our Own Correspondent)

HAPUR, 22*nd June*

The Union Food Minister and the Deputy Minister of Food have reiterated the view that the food position in the country is very satisfactory and that it would not be necessary to import rice this year. As regards imports of wheat, 19 lakh tons have so far been imported. The supply position is quite satisfactory.

Foodgrains markets in Uttar Pradesh have remained quiet to bearish, reflecting a very happy state of affairs. The State Government holds adequate stocks to meet rationing commitments and to face any emergency. It is now learned that the Government of India has agreed to take from the U.P. Government the 56,000 tons of imported wheat which has been lying with it. These wheat stocks have been allotted to flour mills for the purpose of making *atta* and *suji*. Since free market wheat prices are generally well below imported wheat prices, the latter's offtake has been virtually closed. Rationing in the U.P. is now confined to only 37 towns having more than one lakh population. There are a few scarcity pockets in the eastern districts of the State. They are being effectively covered by the trade. Wheat arrivals in principal assembling centres in the State have been poor. One suggestion is that big farmers have held back their surpluses in the hope of getting better prices hereafter. Prices, however, have recorded slight decline.

The Rajasthan Food and Civil Supplies Minister, recently toured the scarcity affected divisions. According to him, the overall food position in the State is quite satisfactory and fully under control. It is claimed that Rajasthan's experiment of partial decontrol, abandoning monopoly procurement direct from the cultivators, and continuance of free market system has proved successful and is working satisfactorily. Prices of foodgrains are reported to be very much lower than those in several other States.

The food position in Assam is reported to be quite satisfactory. Sufficient quantity of rice has already been stocked in the Government godowns and it is hoped that it would be possible to cope with any demand from any part of the State. The prospects of the *aus* crop in Assam this year is reported to be very satisfactory.

The Indian Food Minister recently met the West Bengal Chief Minister and Food Minister. The food position in West Bengal, he says, is generally satisfactory. The prices of rice in many districts are now much lower than those in the corresponding period last year. Although this State has produced 4 lakh tons of rice more than last year, the effects of the improved supply posi-

STOCK & SHARE QUOTATIONS

Abbrevations:—D=Deffered shares. G=Guaranteed shares. P=Preference shares. P.O.=Preferred Ordinary shares. R=Rebate shares. Y=Accounts published yearly. H=Accounts published Hal-yearly. Q=Accounts publishe nce 15 months T=Company has Debentures. R.L.=Reserve Liability on shares. N=Nominal Quotation. i=Interim Dividend, f=Dividend for first half-year, y=Dividend for the year. x=Ex. Dividend c.d.=Cum. Dividend

Shares:—If a company[has different classes[of shares—as, for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and B under "Paid-up Per Share."

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12 indicate the months of June and December, respectively, "Reserves ncludes general and other reserves and all other funds which a company may have as also depreciation on block items, when this is charged to separate account "Block" represents actual cost of land, buildings, machinery and all suc other items on which depreciation is allowed, less sales, if any, and stands for the gross figure except where otherwise indicated.

Dividends:—Dividends for completed years are calculated at per cent. per annum, but, where quoted for portion of a year, they represent percentages of the dividend on the paid-up share value. For companies closing the book alf-yearly in the first three months of the year, and for companies closing their books yearly during the first half of the year dividends are shown as for the previous year.

* The following explanatory notes relate to the abbreviations and marks shown on page 1204 in the debentures section:—

‡‡ Option to repay on six months' notice, on any interest date after 31st December, 1951, at 102 per cent. Also redeemable out of a cumulative sinking fund of 1½ per cent. per annum (commencing in 1938) by drawings at 102 per cent. or by purchase at or 102 per cent.

(g) Option of repayment at any time at 3 per cent. premium.

(h) Bearer bonds of Rs. 1,000 each repayable at par.

(c) Bearer bonds of Rs. 1,000 each repayable on 31st July, 1959.

(d) Bearer bonds of Rs. 1,000 each with option of redemption in whole or in part at par on 30th June, 1952, or on any subsequent interest date at one month's notice.

(e) Returnable on or after 31st July, 1950, at Rs. 102-8 or at par after 31st July, 1955, on six months' notice in each case.

(f) Bearer bonds of Rs. 1,000 each with option of redeeming on 3 months' notice at ½ per cent. premium as 1st March, 1954, but before 1st March, 1957, and 1 per cent. premium on or after 1st March, 1957.

(b) Option of redemption on or after 1st July, 1949, at par.

(f) Option of repayment at any time at par at any time on or after 30th June 1947 on six months' notice

MARKET GOSSIP

(*Concluded from page 1159*)

power in the State will fall far short of the total supply after the Koyna power project is implemented. The Rs. 33-crore Koyna project is designed to supply, in the first stage, only electric power and not water for irrigation. The Government, therefore, seems to have no inclination to permit, beforehand, the setting up of an additional power unit which would subsequently render the Koyna power plant a deadweight on it. How far the Government is right in holding this view can be judged only when all the relevant data, which the Government has in its possession, is made available. In the meanwhile, the management of the Tata Power Companies is believed to have suspended the idea of raising the funds required for financing the Thermal project by way of debentures. It seems to favour the issue of equity capital by offering new ordinary shares at par. The final decision on this question will be taken after the Bombay Government makes up its mind about the size of the scheme.

MARKET REPORTS

(*Concluded from page 1193*)

tion have not lasted long. This is accounted for partly by hoarding and partly by increased consumption of rice substituting wheat. The consumption of wheat and wheat products in the State has gone down by more than 3 lakh tons, as compared with last year.

The Indian Food Minister has given an assurance that sufficient quantity of broken rice and gram will be allotted to Bihar, in order to check the rise in foodgrains prices in the State. Broken rice is likely to be allotted to Bihar from Madhya Pradesh and Orissa and gram from the U.P. or the Punjab. The price of broken rice is not expected to be more than Rs. 12 per maund and of gram about Rs. 13 per maund, whereas the free market prices have risen to Rs. 26 and Rs. 16 per maund, respectively.

Current free market quotations at Hapur are: Wheat Rs. 16 to Rs. 18, gram Rs. 15-12, barley Rs. 11-8, *bejhar* Rs. 11-12, maize Rs. 12-12, *rajra* Rs. 12-8, *jowar* Rs. 12 to Rs. 15-8, *guwar* Rs. 15-8; rice: *basmati* Rs. 35, *hansraj* Rs. 31, *sela* Rs. 23-8 and coarse Rs. 23-8, peas Rs. 14-4, *arhar* Rs. 14-4, *urd* Rs. 22-12, *moong* Rs. 22 to Rs. 23 and *masoor* Rs. 16 to Rs. 19.

GOVERNMENT DECIDES TO IMPORT SUGAR

(From Our Own Correspondent)

HAPUR, *22nd June*

The most important event this week has been the announcement of the Government of India of the measures taken to check the rising spiral of sugar prices in the country, all Governmental warnings notwithstanding. It has been decided to sell sugar at a fixed price from approved shops in important cities throughout the country. The quantity will not, however, be restricted. The supply of sugar released by the mills will be rushed to all parts of the country. About 150 wagons are to be sent out every day. The mills have been asked to keep a reserve of 25 per cent. of the stock and hand over the rest to the Government. This quota, amounting to nearly two and a half lakh tons, will be sold in approved shops. The Government has also decided to import sugar from foreign countries, such as Formosa, Cuba and Britain. This imported sugar, which would be cheaper in price than the internally produced sugar, will be sold in all port towns.

The sugar mills, it is reported, are not utilising all the wagons allotted to them for the transport of sugar to key centres. This lends support to Mr. Kidwai's belief that wagon shortage is not the only sole contributory factor for the sudden rise in sugar prices. There is large-scale hoarding too.

The immediate reaction to the measures announced by the Government of India, stated above, has been a general fall in sugar quotations. Already prices have fallen to the extent of As. 12 to Re. 1 per maund. The offtake has been very small and the hoarder-stockists seem to be anxious to liquidate some of their possessions. It has been authoritatively stated that the total supplies of sugar available for the present season is 17.97 lakh tons. Even assuming that the average monthly consumption of one lakh tons of sugar has increased by 25 per cent., the carry-over stocks at the beginning of 1953-54 will be a minimum of 3 lakh tons.

RAW JUTE DECLINES

(From Our Own Correspondent)

CALCUTTA, *23rd June*

With the outbreak of the monsoon and subsequent moderate rains during the week in the jute-growing districts, prices for the unsold quantities of the old crop left with the stockists were brought down. Mills gave only poor support, but stockists were anxious for business. Another major factor for the decline was the fall in the prices of sacking goods, since jute still unsold to mills is mostly of the inferior varieties and only fit for the production of sacking. Of course, the commencement of rains does not change the expectation that this season's crop would register a decline, but has enabled cultivators to start weeding operations and thus save plants. In certain other districts, where sowing could not take place at the right time, ploughing and sowing were undertaken.

Prices in India are dependent on the market trends in East Bengal, where demand is expected to remain at a moderate level. The poor support which mills gave to the market this week was also due to their reluctance to increase stocks further. Reflecting these factors, Assam bottoms declined to Rs. 26-8 from Rs. 27, Pakistan jat bottoms being quoted at Rs. 28. The following latest quotations also indicate losses of Re. 1-8 each: Murshidabad district tossa Rs. 24-8, Kissangarj Rs. 25-8, Bimli f.a.q. Rs. 21, and Murliganj Rs 19. Assam bottoms new crop was quoted at R. 27 forward.

A further quantity of 10,000 tons of hessian was bought for export to Argentina, and it is expected that further orders would soon be forthcoming. The total quantity required by Argentina is estimated to be 65,000 tons which represents two months' production of mills. Up to date, half of this quantity has been bought. This was the major support this week, and prices were steady on the decline. Hessian ready 40" 10 oz. opened at Rs. 46 last Wednesday. Losses were fractional, and poor enquiries from the United States, coupled with the visible decline in prices for sacking, paved the way for the downward tendency, the quotation closing at Rs. 45-6. However, each day's decline met with strong resistance. Yesterday, the recovery to Rs. 45-14 was a feature. The despatch of hessian *from mills' godowns* during May amounted to 30,502 tons, which was only a little less than the month's output which was 31,900 tons. Sacking goods despatched were 39,312 tons which exceeded output by 1,012 tons. These figures indicate that demand during last month was almost equivalent to production; the expectation for this month is that hessian would show a similar, if not a better, trend, but stocks of sacking goods would indicate an increase.

Demand for sacking during the week was mainly for internal consumption, and bears were only too inclined to avail the opportunity to hammer down prices. Rumours that Burma would be requiring a sizable quantity continued, but orders could only follow the conclusion of the impending trade talks between Burma and India, which have now been postponed more than once. There is the need for expanding India's market for sacking goods, and the detailed report of the I.J.M.A. mission to Australia and New Zealand makes interesting reading. Trade circles feel that joint efforts by the Government and the industry are needed in these two countries to make the suggested publicity campaign a success. From Rs. 102-4, ready B. twills moved back to Rs. 100-2. What the industry needs to-day is a quick increase in exports, as otherwise even output of hessian, which is enjoying a steady demand would be affected, as mills have reduced their sacking production to the irreducible minimum.

The report that the Assam Government, in collaboration with a private *entrepreneur*, would soon establish a jute mill in that State has caused some surprise in market circles. Even the existing mills in this country are unable to function to capacity in view of the lack of adequate demand, and as such they contend that the setting up of another mill would only increase the problems of the industry as a whole, which has in a few years' time to compete with goods produced in East Bengal. No doubt, Assam is the second largest producer of jute in India, but it is felt that its Government could start some other industry in its border, the all-India production of which is unable to meet the country's needs.

LINSEED PRICES ADVANCE

(Messrs. A. Bradley & Co.)

CALCUTTA, *22nd June*

Linseed prices have advanced appreciably during the past week and a generally firmer trend has prevailed in the market. Very little business, however, has been recorded. Owing largely to transport limitations, supplies from up-country have been extremely scarce, and sellers have been reserved for both ready and forward deliveries. Crushers have shown a feeble interest and the turnover has been small. Oil prices have advanced in sympathy with seeds, but conditions remain very dull. No fresh business for export is possible, as long as prices remain at these levels.

Latest quotations are: June Rs. 22 and July-August Rs. 22-6 per maund.

OFFTAKE IN HIDES POOR

(From Our Own Correspondent)

KANPUR, *22nd June*

The hides and skins market remained unchanged during the week under review. Increased arrivals at terminal centres and lower offtake contributed to weaker trend towards the close of the week. As a result, there ensued selling pressure and prices declined, although they recovered afterwards. Following are the latest quotations: Wet salted cow hides, heavy superior Rs. 380 and inferior Rs. 280; light and medium superior Rs. 280 and inferior Rs. 180 per score; buffalo hides, heavy 1 lb. 10 ozs. and medium and light 2 lbs. 6 ozs. per rupee; goat skins, Deshi Rs. 250 and Oudh Rs. 210 per 100 pieces; sheep skins Rs. 300 per 100 pieces.

SURVEY

(*Concluded from page 1163*)

foreign trade, bank returns, crop output, Gilt-edged and semi-Gilt-edged securities.

In discussing the outlook for the current year, the authors warn that the general recession which was in evidence in many countries in the latter part of 1952 may develop as "a major deflationary force, especially if the peak of military expenditure in the U.S. is passed and the industrial output tends to decline in consequence during the course of the year." Peace, however, is not treated as a depressing factor, for the authors claim that "if prospects for peace improve there may be transitional recession, and world economy should speedily turn towards normal conditions." Referring to India, in particular, they emphasise the need for curtailment of Government expendi... the objectives laid down in the Five-yea... are to be achieved and economic stability m... tained. Other points emphasised in the *Review* are: (1) It is unwise to resort to ordinances except in periods of emergency; (2) wages must be linked to output; and (3) estate duty legislation will interfere with capital formation and investment. Finally, the authors make a strong plea for the development of traditions which "will prove a stabilising factor." It is true that the rich traditions in sound business administration, in financial and industrial policies, which
